and Livingston, S. by Wyoming, and W. by Erie counties. The surface is undulating, and watered by Allen's, Black, and Tonawanda Creeks. On each side of the last-named stream is an Indian reservation lying mostly in this county. The soil is chiefly rich, sandy and gravelly loam, peculiarly adapted to the growth of wheat. The Tonawanda Railroad crosses the W. part of this county to Batavia.

Genesee Falls, N. Y., Wyoming co. Incorporated in 1846. Situated at the falls of the Genesee River, and contains some of the most beautiful and romantic scenery in the W. part of the state.

Genesee, N. Y., Alleghany co. Swan and Little Genesee Creeks water this town, the surface of which is elevated and broken; the soil sandy loam. 20 miles S. W. from Angelica, and 280 W. by S. from Albany.

Genesee, N. Y., c. h. Livingston co. Watered by some small tributaries of the Genesee River. The surface is diversified; the soil remarkably rich and fertile in the valley of the Genesee. 225 miles W. from Albany.

Geneva, N. Y., in Seneca township, Ontario co. Beautifully situated at the N. W. extremity of Seneca Lake. 199 miles W. from Albany, and 126 E. from Buffalo. The ground on which it is built rises gradually from the lake shore, until it attains to an elevation of about 100 feet. The business part of the place lies at the foot of this declivity, near to the lake shore. That which is chiefly occupied for residences by the inhabitants lies upon the more elevated ridge, and the plain above it, parallel to the border of the lake; affording a fine view of this lovely sheet of water, which is one of the largest and most beautiful lakes of New York, and is here about two miles wide. The land W. of the village rises in a succession of terraces, as though formed at different periods by the lake shore, when this body of water may have been more elevated, and covered more ground than it now does. These slopes are highly cultivated, and ornamented here and there with handsome buildings. The village itself, in its natural situation, in the picturesque and charming scenery which surrounds it, and in the accessories which art, culture, and wealth have added to its embellishments, combines almost every feature of attractiveness that can be desired as a place of residence.

The following, from the notes of a traveller through this part of the country in 1800, while it will add something to our description, illustrates the taste and judgment which were exercised in laying out the place: "Geneva," he says, "is divided into upper and lower town. The first establishments were on the margin of the lake, as best adapted to business; but Captain Williamson, struck with the peculiar beauty of the elevated plain which crowns the high bank of the lake, and the many advantages which it possesses as a site for a town, began here to lay out his building lots parallel with and facing the lake. These lots are three quarters of an acre deep, and half an acre in front. One article in the agreement with Captain Williamson is, that no buildings shall be erected on the east side of the street, that the view of the lake may be kept open. Those who purchase a lot have also the option of purchasing such land as lies between their lot and the lake,—a convenience and advantage which I suppose few will forego,—the

quantity not being great, and consisting principally of the declivity of the bank, which, for the most part, is not so steep as to unfit it for pasturage or gardens."

This wise forecast of the proprietor, not to mention any thing else, has secured to Geneva one of its most beautiful ornaments, in those terraced gardens, or hanging gardens, as they have sometimes been called, which, in the south part of the upper street, extend, in front of the dwellings, quite down to the margin of the lake. Few places in this country afford such beautiful situations for residences as this part of Geneva.

The village was incorporated in 1812. It has from 15 to 20 streets, a beautiful public square enclosed, and many large and elegant buildings. The buildings of Geneva College are situated on the summit of the elevation which rises from the lake, at the southern extremity of Main Street, a site rarely surpassed for all the purposes of such an institution. The buildings are three in number, besides a building on the same street for the medical department. See *Colleges*.

There are churches in Geneva of the Presbyterian, Dutch Reformed, Associate Reformed, Episcopal, Methodist, Baptist, Universalist, and Roman Catholic denominations. There are several excellent hotels, banking and insurance offices, numerous stores, a steam flouring mill, furnaces, breweries, and many other mechanic and manufacturing establishments.

A steamboat plies regularly upon the lake, running up and down daily to Jefferson, at its southern extremity. At that end the lake is connected by a canal with Crooked Lake, and thence by the Chemung Canal and feeder with the railroad at Corning, leading to Blossburg, Pa. By this channel of communication a large quantity of coal from the Blossburg mines passes through Geneva to market. The Cayuga and Seneca Canal unites the waters of the lake at Geneva with Cayuga Lake, and with the Erie Canal at Montezuma, a distance of 20 miles. The railroad from Albany to Buffalo passes through the N. part of the village, near the canal basin. Such are the facilities of business and travel by which this beautiful spot is rendered accessible from all parts of the country. See *Seneca Lake*.

Gentry, Mo., c. h. Gentry co.

Gentry County, Mo., c. h. at Gentry. On the N. W. border of the state, on the head waters of Grand River.

Georgetown, D. C. City and port of entry. On the N. E. side of the Potomac, 200 miles from its mouth, and 2 E. of Washington, from which it is separated by Rock Creek. It is the seat of Washington College, and has also a nunnery, attached to which is a private academy. Georgetown is situated at the head of navigation, on the Potomac, and communicates with the interior by the Chesapeake and Ohio Canal. It has considerable trade and navigation, but has been nearly stationary for the past 30 years. Population in 1850, 8366.

Georgetown, De., c. h. Sussex co. Between the sources of Nanticoke and Indian Rivers. 41 miles E. of S. from Dover.

Georgetown, Ky., c. h. Scott co. On the N. branch of Elkhorn River. 17 miles E. from Frankfort. Georgetown College is here. See *Colleges*.

Georgetown, Me., Lincoln co., comprises two islands at the mouth of the Kennebec, between

that and the Sheepscot. It has an excellent harbor. 46 miles S. from Augusta.

Georgetown, Ms., Essex co. On a branch of Parker River. 31 miles N. by E. from Boston, with which it connects by railroad. Noted for the manufacture of boots and shoes.

Georgetown, Mo., c. h. Pettis co. On the E. side of the S. fork of La Mine River. 67 miles W. from Jefferson City.

Georgetown, N. Y., Madison co. Watered by the head branches of Ostelic River. The surface is hilly; soil favorable to the growth of grass. 10 miles S. W. from Morrisville, and 105 W. from Albany.

Georgetown, O., c. h. Brown co. 1 mile from White Oak Creek, about 7 from the Ohio River, and 107 S. S. W. from Columbus.

Georgetown District, S. C., c. h. at Georgetown. Bounded N. by Williamsburg and Horry districts, E. by the Atlantic Ocean, S. by Charleston district, and W. by Williamsburg district. Watered by Great Pedee and Waccamaw Rivers, and the Santee River, which flows along its S. boundary. Surface level, and in parts marshy; soil fertile.

Georgetown, S. C., c. h. Georgetown district. A port of entry on the W. side of Winay Bay, at the mouth of Sampit Creek, and 152 miles E. S. E. from Columbia. Vessels drawing 11 feet of water come into the harbor, and it receives the trade of an extensive back country by the rivers flowing into Winay Bay.

Georgia, Vt., Franklin co. On Lake Champlain. 40 miles N. W. from Montpelier.

German, N. Y., Chenango co. Surface hilly. 126 miles from Albany.

German Flats, N. Y., Herkimer co. On the S. side of the Mohawk River. The surface is undulating, except on the borders of the river, where are extensive alluvial flats. The Erie Canal passes through this town. 3 miles S. from Herkimer village, and 83 N. W. from Albany.

Germanton, N. C., c. h. Stokes co. On the S. side of the Town Fork of Dan River. 123 miles N. W. from Raleigh.

Germanton, N. Y., Columbia co. The surface of this town is undulating; soil clay loam of good quality. 10 miles S. from Hudson, and 39 from Albany.

Germantown, Pa., Philadelphia co. Watered by Wissihickon and Wingohocking Creeks. Surface hilly; soil alluvial and loamy. A battle took place here in October, 1777, in which 700 Americans and 500 British were killed. 6 miles N. W. from Philadelphia, and 104 E. S. E. from Harrisburg.

Germany, Pa., Adams co. Watered by Piney and the head branches of Conewago Creek. Surface level; soil gravel and calcareous loam. 10 miles S. E. from Gettysburg.

Gerry, N. Y., Chautauque co. Cassadaga Creek and some of its branches flow through this town. Surface undulating; soil gravelly loam. 13 miles E. from Maysville, and 326 W. by S. from Albany.

Gettysburg, Pa., seat of justice of Adams co. 35 miles E. N. E. from Harrisburg, 52 N. W. from Baltimore, and 114 W. from Philadelphia. It is situated on elevated ground, in the midst of a fertile and well-cultivated country, and at the intersection of several important turnpike roads. It is a plain town, but neatly and well built. The public buildings, besides the usual

county buildings, are a bank, an academy, the edifices of the Pennsylvania College, and of the theological seminary of the German Lutheran church, and churches of the Presbyterian, Lutheran, Seceders', and Methodist denominations. These buildings are all of brick, except the county prison. Considerable business is done here in the various mechanical pursuits. The place was formerly celebrated for the manufacture of carriages of all kinds, but this branch of business has very much declined with the changes in the mode of travelling. For an account of the college and theological seminary at Gettysburg, see *Colleges*.

Ghent, N. Y., Columbia co. Drained by Clavcrack Creek. The surface is somewhat uneven; soil gravelly loam. 8 miles N. E. from Hudson, and 26 S. E. from Albany.

Gibson County, Ia., c. h. at Princeton. Incorporated in 1813. Bounded N. by White River, separating it from Knox co., E. by Pike and Warrick counties, S. by Vanderburg and Posey, and W. by the Wabash River, separating it from Illinois. Surface undulating, and drained by Patoka and Big Pigeon Creeks.

Gibson, Pa., Susquehanna co. This is a hilly town, drained by Tunkhannock and Lackawannock Creeks. Soil gravel and clay. 177 miles N. N. E. from Harrisburg.

Gibson County, Tc., c. h. at Trenton. Bounded N. by Obion and Weakley counties, E. by Carroll, S. by Madison and Haywood, and W. by Dyer co. Surface undulating, and watered by branches of Obion and Forked Deer Creeks. Soil fertile.

Gilead, Me., Oxford co. Between two mountains, on both sides of Androscoggin River. There is some good land on the river, but the chief part of the township is fit only for grazing. The expense of transportation of fuel down the mountains, in a slippery time, is very trifling. Gilead lies 71 miles W. from Augusta, and 25 S. S. W. from Paris. Incorporated 1804.

Gilead, O., Wood co. On the S. E. bank of Maumee River. 136 miles N. N. W. from Columbus. There is great water power obtainable here. The river is navigable for small steamboats above this place to Fort Wayne, though between this and Perrysburg below it is not navigable. The Maumee Canal passes by it.

Giles County, Tc., c. h. at Pulaski. Bounded N. by Maury and Marshall counties, E. by Lincoln co., S. by Alabama, and W. by Lawrence co. Watered by Richland and some other branches of Elk Creek. Surface slightly uneven; soil fertile.

Giles County, Va., c. h. at Parisburg. Incorporated in 1806. Bounded N. by Botetourt and Monroe counties, E. by Montgomery, S. by Pulaski, Wythe, and Tazewell, and W. by Mercer co. Watered by New River, on the banks of which are some celebrated white sulphur springs. The surface is elevated and mountainous; soil rocky and sterile on the high lands, but fertile in the valleys.

Giles, Va., c. h. Giles co. On the S. bank of New River, just above its passage through Peter's Mountain, and 240 miles W. by S. from Richmond.

Gilford, N. H., c. h. Belknap co. The soil is generally productive. There are two ponds here, Little and Chattleboro'. Gunstock and Miles Rivers, rising in Suncook Mountains, and flowing

N. into Lake Winnipiseogee, are the principal streams. There are two islands in the lake, belonging to Gilford, one of which has been connected to the main land by a bridge 30 rods in length. Four bridges across the Winnipiseogee connect the town with Meredith. First settlers, James Ames and S. S. Gilman. The Concord and Montreal Railroad passes through this town. 25 miles from Concord.

Gill, Ms., Franklin co. Gill was taken from Greenfield in 1793, and is separated from it by Fall River, a good mill stream. It is opposite to Montague, which lies on the E. side of Connecticut River, and between which and Gill are Turner's Falls, alike celebrated for their beauty and magnitude. The town was named in compliment to Moses Gill, lieutenant-governor of the state. The Connecticut at this place turns abruptly in its course, and spreads out a large tract of intervals of great value. Around this town are lofty elevations, from which splendid landscapes are obtained. 5 miles N. E. from Greenfield.

Gillespie County, Ts., c. h. at Fredericksburg. A central county.

Gilmer County, Ga., c. h. at Ellijay. Bounded N. by Tennessee and North Carolina, E. by Union and Lumpkin counties, S. by Cherokee, and W. by Cass and Murray counties. The Coosawatee and Aquoque Rivers and their branches water this county.

Gilmer County, Va., c. h. at Glenville. In the W. part of the state. Rough and hilly. Drained by the Little Kenhawa and its confluent, which pass through it from E. to W.

Gilmanton, N. H., Belknap co. Besides the Winnipiseogee, this town is watered by the Suncook and Soucook Rivers. The Suncook rises in a pond near the top of one of the Suncook Mountains, elevated 900 feet above its base. The water of this pond falls into another at the foot of the mountain, of 1 mile in length and half a mile wide. Passing from this it falls into another, covering about 500 acres, from which it meanders through the town. This town is hilly and rocky; soil hard, but fruitful. There are several mineral springs here. An academy was founded here October 13, 1762. Porcupine Hill, in this town, exhibits a romantic precipice. First settlers, Benjamin and John Mudgett, Orlando Weed, and others, in 1771. 20 miles N. N. E. from Concord, and 8 S. S. W. from Gilford.

Gilman, N. Y., Hamilton co. This town contains several small lakes. Mount Emmons is situated in the N. part. A large part of the town is wilderness. 6 miles E. from Lake Pleasant, and 68 N. W. from Albany.

Gilsum, N. H., Cheshire co., is a small township, 10 miles E. from the Connecticut. The soil is fertile, and produces good crops of grass and grain. Ashuelot River affords a good water power. Gilsum was granted to Messrs. Gilbert, Sumner, and others. From the combination of the first syllable of the names of those men, it derives its name. First settlers, Josiah Kilburn, Pelatiah Pease, Obadiah Wilcox, Ebenezer Dewey, and Jonathan Adams, in 1764. 80 miles S. W. by W. from Concord, and about 9 N. from Keene.

Glasgow, Ky., c. h. Barren co. A little E. of the Beaver branch of Green River, and 123 miles S. W. from Frankfort.

Glastenbury, Ct., Hartford co. This town, previous to its incorporation in 1690, had been attached to Wethersfield. It lies on the E. side of Connecticut River, opposite to Wethersfield. It has some fine land on Connecticut River; and the river road, through its entire extent, from East Hartford to Portland, is one thickly-settled and pleasant street. The face of the uplands is rough, but generally productive. About a mile and a half from Connecticut River, and 8 miles from Chatham Freestone Quarry, in a romantic spot between the hills, is a beautiful village connected with the Hartford Manufacturing Company. Roaring Brook, at this place, passes through a very narrow defile, affording a great and constant water power. From the hills around this village a great variety of delightful scenery is observable.

"In the eastern part of the town there is a pond of about a mile in circumference, called Diamond Pond, from the circumstance of there being small pebbles or stones around its margin having a peculiar brilliancy. Near the centre of the town there is a mineral spring, which, though it has acquired no celebrity abroad, has been thought, by men of science who have examined it, to possess valuable medicinal qualities; and for more than 100 years has been known by the name of the 'Pool of Neipsaic.'

Eastbury is an ancient ecclesiastical parish, embracing the eastern portion of the town.

Glastonbury, Vt., Bennington co. This is a township of mountainous land, more fit for the residence of wild beasts than human beings. Its waters flow both into Deerfield River and Walloom's Creek. The town was chartered in 1761. 9 miles N. E. from Bennington, and 25 N. W. from Brattleboro'.

Glen Cove, N. Y., Queen's co. On the E. side of Hempstead Harbor, at the head of Glen Cove. 176 miles S. by E. from Albany. A place of resort from New York city in the summer months.

Glenn, N. Y., Montgomery co. Bounded on the N. by the Mohawk River, and E. by Schoharie Creek. The surface is hilly; soil mostly clay loam. 3 miles S. from Fonda, and 44 N. W. from Albany.

Glenburn, Me., Penobscot co. Formerly called Dutton. On both sides of the great bend of the Kenduskeag, which affords water power. Soil good. 10 miles N. N. W. from Bangor.

Glenn's Falls, N. Y., Warren co. On the N. side of the Hudson River, 54 miles N. from Albany. The falls here have a descent of 50 feet, affording a great water power, which is improved for mills and manufactories of various kinds. The scenery at the falls is very picturesque. A bridge, 500 feet in length, crosses the Hudson at this point, affording a fine view of the water tumbling over the rocks. An abundance of the finest black marble is found here.

Glenville, N. Y., Schenectady co. On the N. side of the Mohawk River. Watered on the E. by Aelplass Creek. The surface is rather hilly; soil sandy loam. 4 miles W. from Schenectady.

Glenville, Va., c. h. Gilmer co. On the Little Kenhawa, about 40 miles S. W. from the Ohio.

Gloucester, Ms., Essex co., is an important maritime town. The Indians called it Wingarsheek. This was the first spot inhabited by English settlers on the N. side of Massachusetts Bay, its harbor having been improved as a fish-

ing station as early as 1624. Gloucester Harbor is capacious, easy of access at any season of the year, and of sufficient depth of water for the largest merchantmen. Nautical men pronounce it one of the best harbors on the coast. Until the incorporation of Rockport in 1840, this town comprised the whole of Cape Ann, which was named by Prince Charles out of respect for his mother. There are a number of small islands at its eastern extremity, on one of which, Thatcher's Island, are two light-houses. The village of Anisquam, or Squam, lies on the N. side of the cape; it has a safe harbor. Near this village is a beach of between 2 and 3 miles in length, composed of white sand, which is much used, and makes a beautiful appearance as you approach the shore. The village of Gloucester Harbor is beautifully located on the S. side of the cape, 32 miles N. E. from Boston by water, 14 from Salem, and 28 from Boston by land, with both which places it is connected by railroad. Gloucester is rapidly becoming a fashionable resort in summer months. The sea views from the village are very extensive. The cod and mackerel fisheries, particularly the latter, are extensively carried on from this town, which takes the lead in this business. It has also an extensive trade with the southern ports, with Surinam, and with the British provinces.

Gloucester County, N. J., c. h. at Woodbury. Bounded N. E. by Camden, S. E. by Atlantic, S. W. by Salem co., and N. W. by the Delaware River, separating it from Pennsylvania. Drained by Cooper's, Mantua, Big Timber, and Racoon Creeks, and the head branches of Great Egg Harbor River. The soil is sandy and unproductive, except on the borders of the Delaware, where it is very fertile.

Gloucester, N. J., Gloucester co. Cooper's and Big Timber Creeks drain this town. Surface level; soil sand and loam, the N. part yielding good harvests of vegetables and fruit. 10 miles S. E. from Woodbury.

Gloucester, R. I., Providence co. The surface of the town is somewhat broken by hills, but the soil is well adapted to agricultural purposes, particularly to grazing. Gloucester furnishes large supplies of various products for market. There are fine forests in several parts of the town, and large quantities of ship and other timber are conveyed to Providence and other places. The Chepachet and some smaller streams give Gloucester a good water power.

Gloucester County, Va., c. h. at Gloucester. Incorporated in 1652, and bounded N. by Middlesex co., E. by Matthews co. and Chesapeake Bay, S. W. by York River, separating it from York and James City counties, and N. W. by King and Queen co.

Gloucester, Va., c. h. Gloucester co. 85 miles E. from Richmond.

Glover, Vt., Orleans co. This town is hilly, and the soil is more fit for grazing than tillage. There are in the town branches of Barton's, Passumpsic, Lamoille, and Black Rivers, and several ponds. The settlement was commenced about the year 1797, by Ralph Parker, James Vance, Samuel Cook, and Samuel Conant. 10 miles S. E. from Irasburg, and 38 N. E. from Montpelier.

Glynn County, Ga., c. h. at Brunswick. Bounded N. by the Alatamaha River, separating it from

McIntosh co., E. by the Atlantic Ocean, S. by Scilla River, separating it from Camden co., and W. by Wayne co. Drained by Turtle River and Buffalo Creek, its main branch. Surface flat, and in some parts marshy. St. Simon's and Jykill Islands belong to this county.

Gnadenhütten, O., Tuscarawas co. Some Moravian missionaries first established this town. It lies on the eastern bank of Tuscarawas River. 50 miles N. E. from Zanesville, and 90 E. by N. from Columbus. Lock No. 17 of the Ohio and Erie Canal is one mile above this town, on the W. side of the river.

Goffstown, N. H. Hillsboro' co. Piscataquog is the principal river. Large quantities of lumber are floated down this river to the Merrimac. There are two considerable elevations in the town, named by the Indians Un-can-nu-nuc. On the rivers are tracts of valuable intervals. Back from them are extensive plains, producing abundant crops. The village of Amoskeag is in this town, on the W. side of Merrimac River, opposite Manchester, to which it is connected by a bridge. At this place are the celebrated Amoskeag Falls. Amoskeag is a place of considerable business, and must eventually become the mart of large manufacturing operations. 12 miles N. by E. from Amherst, and 15 S. from Concord.

Golansville, Va., Caroline co. 33 miles N. from Richmond. In the neighborhood of this place are two mineral springs.

Golconda, Is., c. h. Pope co. On the S. side of Lusk Creek. 215 miles S. S. E. from Springfield.

Goldsboro', Me. See *Appendix*, No. 7.

Goliad County, Ts., c. h. at Goliad. Southern part. On both sides of the St. Antonio.

Gonzales County, Ts., c. h. at Gonzales. S. central. On both sides the Guadalupe.

Gonzales, Ts., c. h. Gonzales co.

Goochland County, Va., c. h. at Goochland. Bounded N. by Louisa and Hanover counties, E. by Henrico, S. by the James River, separating it from Powhatan and Cumberland counties, and W. by Fluvanna co. Drained by Tuckahoe, Dover, and Byrd Creeks, and several other small streams, affording hydraulic power. The surface is diversified, and much of the soil of good quality. Coal of superior quality and gold exist here.

Goochland, Va., c. h. Goochland co. 1 mile N. from James River, and 30 W. N. W. from Richmond.

Goodhope, O., Hocking co. A township in the northern part of the county.

Gordon County, Ga. New. In the N. W. angle.

Gordonsville, Va., Orange co. At the E. base of South-West Mountain, on a head branch of North Anna River, N. W. from Richmond 74, and S. W. by W. from Fredericksburg 50 miles. The Louisa Railroad passes through it.

Gorham, Me., Cumberland co. 9 miles W. N. W. from Portland, and 63 S. W. from Augusta. The Cumberland and Oxford Canal passes through it. The soil is superior, and it has manufactures of cottons, woollens, leather, stoves, and gunpowder. Connected with Portland by railroad.

Gorham, N. H., Coos co., is a rough and unproductive township, lying on the northerly base of the White Mountains. Several streams descend from the mountains through this town into the Androscoggin. It was formerly called Shelburne Addition. 96 miles N. E. from Concord, and 20 E. from Lancaster.

Gorham, N. Y., Ontario co. Watered by Flint

Creek, and some small tributaries of Canandaigua Lake. The surface is gently undulating; soil fertile. 8 miles S. E. from Canandaigua, and 187 W. from Albany.

Goshen, Ct., Litchfield co. First settled 1738; incorporated 1749. Ivy Mountain, in Goshen, is considered the most elevated point of land in the state; its summit presents an extensive and delightful prospect. "Goshen is the most elevated township in the state, but not generally mountainous; the surface being undulating, affording an interesting diversity of hills and vales. The soil is a gravelly loam, deep, strong, and fertile, admirably adapted for grazing. This is one of the best towns for the dairy business in the state. Large quantities of cheese are annually made, the fame of which is widely and justly celebrated, and the inhabitants are generally in prosperous circumstances. In neatness, in and about their dwellings, and in the appearance of general comfort and prosperity, they are not exceeded, if equalled, by any town in the state." 32 miles W. from Hartford.

Goshen, Ia., c. h. Elkhart co. On the E. side of Elkhart River. 152 miles N. by E. from Indianapolis.

Goshen, Ms., Hampshire co., is a small mountainous township, from which several branches of the Westfield River take their rise. There is much fine timber land in the town. Although the surface is rough, the soil is excellent for grazing. 12 miles N. W. from Northampton, and 102 W. from Boston.

Goshen, N. H., Sullivan co. From Sunapee Mountain, in the E. part of this town, spring many small streams, which unite in forming Sugar River. Rand's Pond is in the N. E. part of the town. The soil is good for grass. The crops of the first settlers were sometimes entirely destroyed by early frosts. At a certain time of scarcity, Captain Rand went to Walpole after grain, and being detained by a violent snow storm, his family were obliged to live, without provision, for 6 days, during which time Mrs. Rand sustained one of his children, 5 years old, by the milk from her breast, having a short time before buried her infant child. First settlers, Captain Benjamin Rand, William Lang, and Daniel Grindle in 1769. From Concord 42 miles W. by N., and about 10 S. E. from Newport.

Goshen, N. Y., c. h. Orange co. It is watered by a few small streams, and contains the "Drowned Lands," lying on the banks of the Walkill. The surface is hilly in some parts, with extensive flats in others. The soil is favorable to the growth of grass, and this vicinity is celebrated for its fine dairies. 104 miles S. S. W. from Albany.

Goshen, Vt., Addison co. Leicester and Philadelphia Rivers supply this town with mill privileges. The lands along the rivers are very good, but in general they are too mountainous for profitable cultivation. Some minerals are found in this town. A part of Goshen was annexed to Rochester, in 1847. No permanent settlement was commenced here till 1800. 31 miles S. W. from Montpelier.

Gosport, N. H., Rockingham co. See *Isle of Shoals*.

Gouverneur, N. Y., St. Lawrence co. Watered by the Oswegatchie River, which makes a great bend in this vicinity. The surface is generally level; soil mostly of a good quality. 18 miles

S. W. from Canton, and 180 N. W. from Albany.

Grafton, Me., Oxford co. A new town. Incorporated in 1852.

Grafton, Ms., Worcester co., was formerly an Indian reservation, and until 1735 was called Hassanamisco. The surface is uneven, and in most parts rocky. The most prominent hills are Chestnut, near the centre, George, on the E., and Brigham Hill, on the W. part of the town. The soil is moist, strong, and very productive of all sorts of grain and grass. This is one of the best townships of land in the county. Grafton has an hydraulic power of great extent and value. The Blackstone River and Canal pass through the southern section of the town. The Quinsigamond, the outlet of a pond of that name, in Shrewsbury, passes from N. to S. through the town, with a descent of between 50 and 60 feet. On this stream, in the N. part of the town, is New England Village; and at its junction with the Blackstone, at the S. part of the town, is the village of Farnumsville. These villages are distant from each other about 4 miles; they possess an abundant water power, and are very neat and flourishing manufacturing villages. The central village is on elevated ground, and very pleasant. It lies 3 miles S. E. from New England Village, through which the Millbury Branch Railroad passes. From New England Village, about a mile from the Grafton depot, on the Boston and Worcester Railroad, to Worcester, is 7 miles N. W., and to Boston 37 miles E. N. E.

Grafton County, N. H. Haverhill and Plymouth, county towns. It is 58 miles in length, and its greatest breadth is 30 miles. Bounded N. by the county of Coos and the Connecticut River, E. by Coos, Carroll, and Belknap, S. by Merrimac and Sullivan, and W. by the state of Vermont and Connecticut River. Grafton co. is watered by Connecticut, Pemigewasset, Lower Amonosuck Rivers, and many smaller streams. Squam and Newfound Lakes are the largest collections of water. There are numerous elevations, the principal of which are Gardner's, Peaked, Moosehillock, Cushman's, Blue Mount, Carr's, Morse, and Cardigan. A large portion of this county is mountainous and hilly, but it is productive. The first settlement was made at Lebanon. It received its name in honor of Augustus Henry Fitzroy, Duke of Grafton.

Grafton, N. H., Grafton co., is watered by branches of Smith's and Mascomy Rivers, also by Heard's River. There are 5 ponds. The largest is from 200 to 300 acres, and is called Grafton. Two are named Mud Ponds. The surface is hilly, and in some parts mountainous; the soil rocky. In this town is a remarkable ledge, called the Pinnacle. At Glass Hill, a valuable quarry of isinglass or mica is found. First settlers, Captain Joseph Hoyt, and Captain Alexander Pixly and wife, in 1772.

Grafton, N. Y., Rensselaer co. The Poeston Kill, and some other small streams, water this town. The surface is hilly; soil clay loam. 14 miles E. from Troy, and 20 N. E. from Albany.

Grafton, Vt., Windham co. Grafton is finely watered by Saxton's River, which is formed in the town by the union of several streams, and by a branch of Williams River. Soapstone of an excellent quality is very abundant in this place. This town contains two pleasant and flourishing villages, and a great variety of mineral treasure.

It is 90 miles S. from Montpelier, and 18 N. from Newfane. The Rutland Railroad passes through this town.

Granby, Ct., Hartford co. 16 miles N. N. W. from Hartford. It was formed from Simsbury, in 1786, and comprises that part of it which contained the famous Simsbury mine, the old state prison of Connecticut. This cavern once occupied as a prison is again worked, as formerly, as a copper mine.

Granby, Ms., Hampshire co., was formerly the second parish of South Hadley. From a pond in the N. E. corner of the town originates a pleasant stream, passing the foot of Mt. Holyoke on the S., and empties into the Connecticut at South Hadley. The surface is pleasant, and the soil productive. There is a pleasant village near its centre. 85 miles W. by S. from Boston, and 12 N. by E. from Springfield.

Granby, N. Y., Oswego co. Oswego River, and some other small streams, water this town, the surface of which is undulating, and the soil sandy loam. 15 miles S. from Oswego, and 158 W. by N. from Albany.

Granby, Vt., Essex co. Granby is nearly allied to Ferdinand, both in location and the character of the soil; it lies the next town S. of it. This town was settled a few years previous to 1800. 12 miles W. from Guildhall, and 68 N. E. from Montpelier.

Granger, N. Y., Alleghany co. Drained by the Genesee River and several small tributaries. Surface undulating; soil sandy and clay loam. 10 miles N. from Angelica, and 250 W. from Albany.

Granger County, Tc., c. h. at Rutledge. Bounded N. by Clinch River, separating it from Claiborne co., E. by Hawkins co., S. by Holston River, separating it from Jefferson co., and W. by Knox and Anderson counties. Surface rough and hilly; soil of superior quality on the margins of the rivers.

Grand Gulf, Mi., Claiborne co. On a bend in the Mississippi River, called Grand Gulf. 360 miles by river above New Orleans, and 65 miles S. by W. from Jackson.

Grand Haven, Mn., Ottawa co. On Grand River, 80 rods from its entrance into Michigan Lake. Steamboats touch here. 213 miles W. by N. from Detroit.

Grand Isle County, Vt., c. h. at North Hero. This county comprises a group of islands in Lake Champlain, and a point of land jutting into the N. part of that lake, on the S. side of the Canada line, on which Alburg is situated. Most of the land is level, and excellent for grazing and tillage. Grand Isle has no considerable streams, but its navigable facilities are very great. It was first settled about the close of the revolutionary war.

Grand Isle, Vt., Grand Isle co. The soil is very fertile; it produces fine crops of grain, and an abundance of fruit and cider. Marble, limestone, rock crystals, &c., are found here. Grand Isle contains the only water mill in the county. This is a fine place for fishing and fowling. The settlement was commenced about the year 1783, by emigrants from New Hampshire and the southern part of Vermont. 50 miles N. W. from Montpelier, and 18 N. by W. from Burlington.

Grant County, Ia., c. h. at Marion. Incorporated in 1831, and is bounded N. by Wabash and Huntington counties, E. by Wells and Blackford, S. by Delaware and Madison, and W. by Rich ardvile and Miami counties. The surface is

level, and drained by the Missisnewa and its branches.

Grant County, Ky., c. h. at Williamstown. Bounded N. by Boone and Kenton counties, E. by Pendleton, S. by Pendleton and Owen, W. by Owen and Gallatin. Watered by Eagle Creek, a branch of the Kentucky River.

Grant County, Wn., c. h. at Lancaster. Bounded N. by the Wisconsin River, separating it from Crawford and Richland counties, E. by Iowa and La Fayette counties, S. by Illinois, and S. W. and W. by the Mississippi River, separating it from Iowa. Drained by Blue, Platte, and Grant Rivers. The soil is very fertile, and lead ore abundant.

Grantham, N. H., Sullivan co. There are 7 or 8 ponds here, the largest of which is called Eastman's, and contains nearly 300 acres; another contains nearly 200. Croydon Mountain is in this town; on its summit is a natural pond, of about 80 acres. On the E. side is a medicinal spring, visited by hundreds in the summer season. The soil is productive, especially on the W. of the mountain, and is most favorable for wheat. First settlers, William Symmes and 63 others. 12 miles S. E. from Dartmouth College, and 40 N. W. from Concord.

Granville, Ms., Hampden co., is quite mountainous. In the valleys are some tracts of good land for cultivation, and the highlands produce good pasturage. Valley Branch and Hubbard's River unite in this town, and form an important tributary to Farmington River. This township was sold to James Cornish, in 1686, by Toto, an Indian chief, for a gun and 16 brass buttons. It was first settled in 1738. Granville East village is neatly located on elevated ground, 17 miles W. S. W. from Springfield, and 115 W. S. W. from Boston.

Granville County, N. C., Oxford shire town. Bounded N. by Va., E. by Warren and Franklin counties, S. by Wake, and W. by Orange and Person counties. Drained by Tar, and branches of Neuse and Roanoke Rivers.

Granville, N. Y., Washington co. Watered by Pawlet River. The surface is uneven; soil of good quality. 16 miles N. from Salem, and 63 N. E. from Albany.

Granville, Pa., Bradford co. 147 miles N. E. from Harrisburg.

Granville, Pa., Mifflin co.

Granville, Vt., Addison co. White River is formed here, by the union of several considerable branches. One of these has a fall of 100 feet. A considerable part of the surface of the township is mountainous. The settlement was commenced soon after the close of the revolution, by Reuben King and others. 22 miles S. W. from Montpelier, and 16 S. E. from Middlebury.

Graves County, Ky., c. h. at Mayfield. Bounded N. by McCracken co., E. by Marshall and Calloway counties, S. by Tennessee, and W. by Hickman and Ballard counties. Surface level, and drained by Mayfield Creek; soil productive.

Gravesend, N. Y., King's co. Surface level and marshy, broken near the shore by some barren sand hills. Coney Island, which forms a part of the town, is much resorted to for sea bathing and fishing during the summer. 8 miles S. from Brooklyn, and 153 from Albany.

Gray, Me., Cumberland co. This is a fine farming town, watered by branches of North Yarmouth and Presumpscot Rivers, and containing a large part of Little Sebago Pond. It lies 17 miles N.

by W. from Portland, and 44 S. W. from Augusta. Incorporated 1778. Gray is a pleasant town, and a place of considerable trade and some manufactures.

Grayson County, Ky., c. h. at Mayfield. Bounded N. by a branch of Green River, separating it from Breckenridge co., E. by Hardin, Laurel, and Hart, S. by Edmonson and Butler, and W. by Ohio co.

Grayson, Ky., c. h. Carter co., lies half a mile W. from Little Sandy River, and 123 miles E. from Frankfort.

Grayson County, Ts. On the northern border, on Red River, opposite the mouth of the Lower Wachita.

Grayson County, Va., c. h. at Greenville. Bounded N. by Smythe and Wythe counties, E. by Carroll co., S. by N. C., and W. by Washington co. Drained by New River and its branches. Surface elevated and mountainous.

Grayson, Va., c. h. Grayson co. On the S. bank of New River, 261 miles S. from Richmond.

Great Barrington, Ms., Berkshire co. This large and ancient town was the seat of the county courts from 1761 to 1787, and was once known by the name of Housatonoek. It is finely watered by the Housatonic, Williams, and Green Rivers. Near the N. W. corner of the town lies Long Pond, whose outlet, joined with Seeknonk Brook, makes a good mill stream. The surface is uneven; some parts are mountainous, and unfit for cultivation. But the greater part of the township is under cultivation, and its soil is strong and fertile on the banks of the rivers and brooks. Good iron ore is found in the town, and beautiful variegated marble. There are many mountains in this town, which render its general features highly picturesque and romantic. Monument Mountain has a greater interest than the rest, on account of a beautiful Indian maiden having thrown herself from a cliff of it, through the influence of a passionate love for a cousin, whom the religion of the natives would not allow her to marry. By the Housatonic and Western Railroad, it is 50 miles to Albany, and 174 to Boston.

Great Bend, Pa., Susquehanna co. At the junction of Salt Lick Creek with the Susquehanna River. 191 miles N. E. of Harrisburg.

Great Crossings, Ky., Scott co. On the S. side of Elkhorn Creek, 15 miles N. E. from Frankfort. The Choctaw Academy is here, sustained by the United States out of the Indian annuities for the instruction of Indians.

Great Falls, N. H., Strafford co. In the town of Somersworth. 34 miles E. from Concord. A large and beautiful manufacturing village. See *Somersworth*.

Great Valley, N. Y., Cattaraugus co. Watered by the Allegheny River, and Great Valley and Tunangwant Creeks. The surface is somewhat diversified; soil various. Rock City, a great natural curiosity, is situated in the N. W. part of this town. It is crossed by the New York and Erie Railroad. 6 miles S. from Ellicottville, and 299 W. by S. from Albany.

Greece, N. Y., Monroe co. Bounded on the N. by Lake Ontario, E. by the Genesee River, and watered by several small streams. The surface is undulating; soil mostly sandy. 6 miles N. from the city of Rochester, and 255 N. of W. from Albany.

Greene County, Aa., c. h. at Eutaw. Bounded N. by Pickens and Tuscaloosa, E. by Perry, S. by Marengo co., and W. by the Tombigbee River,

separating it from Sumpter co. Surface hilly, and drained by the Black Warrior or Tuscaloosa River. Soil bordering on the rivers very fertile.

Greene County, As., c. h. at Gainsville. Bounded N. by Missouri, E. by St. Francis River, separating it from Missouri and Mississippi co., S. by Poinsett co., and W. by Lawrence and Randolph counties. Surface level, and watered on the W. by Cache River and its branches.

Greene County, Ga., c. h. at Greensboro'. Bounded N. by Clarke and Oglethorpe counties, E. by Taliaferro, S. by Hancock co., and W. by the Oconee River, separating it from Putnam and Morgan counties. Surface slightly uneven; soil fertile.

Greene County, Is., c. h. at Carrollton. Incorporated in 1821. Bounded N. by Scott and Morgan counties, E. by Macoupin, S. by Jersey co., and W. by the Illinois River, separating it from Calhoun and Pike counties. Surface mostly level, and drained by creeks flowing into the Illinois River. Soil fertile.

Greene County, Ia., c. h. at Bloomfield. Bounded N. by Clay and Owen counties, E. by Monroe and Lawrence, S. by Martin and Davies, and W. by Sullivan co. Drained by Eel River, the W. fork of White River, and Richland Creek. Surface mostly level; soil fertile.

Greene County, Ky., c. h. at Greensburg. Bounded N. by Laurel and Marion counties, E. by Casey and Adair, S. by Adair and Barren, and W. by Hart co. Surface undulating, and watered by Green River and its branches; soil fertile.

Greene, Me., Kennebec co. Greene has several ponds, but no good mill privileges. It lies on the E. side of Androscoggin River. 6 miles above Lewiston, and 22 S. W. from Augusta. It is an excellent farming town. Incorporated in 1788.

Greene County, Mi., c. h. at Leakesville. Bounded N. by Wayne co., E. by Alabama, S. by Jackson, and W. by Perry co. Drained by Pascagoula River and its branches. Soil sandy and sterile.

Greene County, Mo., c. h. at Springfield. Bounded N. by Polk and Dallas counties, E. by Wright, S. by Taney, and W. by Lawrence and Dade counties. Watered by branches of Osage and White Rivers. Surface hilly; soil chiefly fertile.

Greene, N. J., Sussex co. Watered by branches of Pequest Creek, and by Hunt's and Grass Ponds. Surface hilly and mountainous. 7 miles S. W. from Newton.

Greene County, N. Y., c. h. at Catskill. Taken from Albany and Ulster counties in 1800. It is bounded N. by Albany co., E. by the Hudson River, S. by Ulster, and W. by Delaware and Schoharie counties. Watered by Catskill, Coxsackie and Schoharie Creeks. Surface hilly and mountainous on the S. and W., being covered by the Catskill Mountains, the highest peaks of which are in this county. The soil of the mountains is sterile, that of the lower lands and valleys very fertile.

Greene, N. Y., Chenango co. Chenango River and some of its branches water this town, the surface of which is hilly, and the soil mostly of good quality. 20 miles S. W. from Norwich, and 126 from Albany.

Greene County, O., c. h. at Xenia. Clark co. bounds it on the N., Fayette on the E., Clinton and Warren on the S., and Montgomery co. on the W. Yellow Springs, a fashionable watering-place, is found in this county. Little Miami and

Mad River, and numerous small streams, furnish it with an abundant supply of water. It is settled mostly by farmers, and is a very prosperous, healthy county.

Greene County, Pa., c. h. at Waynesburg. Bounded N. by Washington co., E. by the Monongahela River, separating it from Fayette co., and S. and W. by Virginia. Drained by Ten Mile, Drunkard's, Fish, and Wheeling Creeks. Surface rough and mountainous; soil fertile.

Greene County, Te., c. h. at Greenville. Bounded N. by Hawkins and Sullivan counties, E. by Washington co., S. by North Carolina and Union co., and W. by Jefferson co. Watered by Nolachucky River and Licking Creek. Surface high and much diversified.

Greene County, Va., c. h. at Stanardsville. Bounded N. E. by Madison, S. E. by Orange, S. W. by Albemarle, and N. W. by Rockingham co. Surface hilly; soil productive.

Greene County, Wn., c. h. at Monroe. Bounded N. by Dane and E. by Rock co., S. by Illinois, and W. by Lafayette co. Drained by Peckatonakee River and Sugar Creek. A considerable part of the surface is prairie land. Copper and lead ores are found here.

Greenbrier County, Va., c. h. at Lewisburg. Bounded N. by Nicholas and Pocahontas counties, E. by Alleghany, S. by Monroe, and W. by Fayette co. Watered by Greenbrier and the branches of Gauley River. Surface rough, elevated, and mountainous.

Greenbush, township and village, N. Y., Rensselaer co. On the E. side of the Hudson, opposite Albany. The village is the terminus of the Western Railroad from Boston to Albany, with which it connects by ferry. There is also a railroad communication with the city of New York and with Troy. The township is hilly, with a soil of clay loam, gravel, and sand.

Greenburg, N. Y., Westchester co. On the E. side of the Hudson, and watered by Bronx and Saw Mill Rivers. The surface is hilly; soil of good quality. 5 miles W. from White Plains, and 130 S. from Albany.

Green Castle, Ia., c. h. Putnam co. On high table land. 1 mile E. from the Walnut Fork of Eel River, and 47 miles W. from Indianapolis.

Greenfield, Ia., c. h. Hancock co. Half a mile W. from Brandywine Creek, and 20 miles E. from Indianapolis.

Greenfield, Me., Hancock co. This town was incorporated in 1834. It was No. 38 on the Bingham Purchase.

Greenfield, Ms., c. h. Franklin co., is delightfully situated on the W. bank of Connecticut River. It was formerly a part of Deerfield, and was taken from it in 1753. Previous to that time it was called Green River. Fall River passes the eastern border of the town from the N., and falls into the Connecticut; Green River also, from the N., passes through the town, and meets the Deerfield. These rivers afford the town a fine hydraulic power. The surface is generally plain; it has some rising grounds, but none abrupt. There are large intervals on Green River, of superior excellence. The other lands produce good crops of grain, and afford excellent pasturage. The village of Greenfield is situated on an elevated plain, on the margin of Green River, and surrounded by beautiful intervals. The Greenfield Institute, a seminary for young ladies, is in this town. 90

miles W. N. W. from Boston, and 41 N. from Springfield.

Greenfield, N. H., Hillsboro' co. Contoocook River forms part of the W. boundary, and separates this town from Hancock. The soil is fertile. The hills afford excellent pasturage; the valleys and plains are favorable for grain. Hops are raised in great abundance. Part of Crotched and Lyndeboro' Mountains are in this town. There are 5 ponds: the largest is about 1 mile in length and half of a mile in width. First settlers, Captain Alexander Parker, Major A. Whittemore, Simeon Fletcher, and others, in 1771. 14 miles W. N. W. from Amherst, and 38 S. W. from Concord.

Greenfield, N. Y., Saratoga co. Drained by Kayaderoseras Creek. The surface is broken by ridges of the Kayaderoseras and Palmerton Mountains. The soil is generally fertile. 10 miles N. from Ballston Spa, and 40 N. from Albany.

Greenfield, O., Highland co. Situated on elevated land, on the W. bank of Paint Creek, and is considered a healthy place. Near the town limestone quarries are found. 17 miles from Hillsboro', and 55 S. by W. from Columbus.

Greenfield, Pa., Bedford co. This town is drained by Bob's and Dunning's Creeks, and the Frankstown branch of the Juniata River. Surface hilly and broken, having some spurs of the Alleghany range on the N. E., Dunning's Mountain on the E., and the Alleghany on the W. Soil loam and clay. 23 miles N. from Bedford.

Greenfield, Pa., Erie co. Watered by the N. fork of French Creek. 352 miles N. from Harrisburg.

Greenfield, Pa., Luzerne co. On the S. bank of the Susquehanna River, and drained by Elkwood Brook and the branches of Tunkhannock and Lackawannock Rivers. Soil fertile, and well adapted to grazing. 30 miles N. E. from Wilkesbarre.

Greenland, N. H., Rockingham co. The soil is remarkably good. The orchards, farms, and gardens are valuable. 5 miles W. S. W. from Portsmouth, and 45 E. S. E. from Concord. The Eastern Railroad passes through this town.

Greenport, N. Y., Suffolk co. It is near the N. E. end of Long Island. There is a railroad from this place to Brooklyn, opposite New York. It has a good harbor, and is engaged in the whaling and coasting trade. 246 miles S. E. from Albany.

Greenport, N. Y., Columbia co. The Hudson River waters this town, the surface of which is hilly, and the soil clay, gravel, and loam. It partly environs the city of Hudson. 30 miles from Albany.

Greensboro', Ga., c. h. Greene co. 44 miles N. by E. from Milledgeville.

Greensboro', Ia., c. h. Decatur co.

Greensboro', Ky., c. h. Greene co. 89 miles S. S. W. from Frankfort.

Greensboro', La., c. h. St. Helena.

Greensboro', Mi., c. h. Choctaw co. Watered by a head branch of Big Black River. 110 miles N. E. from Jackson.

Greensboro', N. C., Guilford co., lies between the N. and S. forks of Buffalo Creek. 82 miles W. N. W. from Raleigh.

Greensburg, Pa., c. h. Westmoreland co. 168 miles W. from Harrisburg.

Greensboro', Vt., Orleans co. The surface is

uneven, but the elevations are not generally abrupt. The land is well timbered; the soil of a middling quality. The River Lamoille is formed by the union of several streams in this town. Caspian Lake, or Lake Beautiful, lies in the S. part, and discharges its waters to the E. into the Lamoille, affording a number of valuable mill privileges, around which has grown up a beautiful little village. This pond is about 3 miles long and 1½ broad. Elligo Pond, lying mostly in the western part of the town, is about 1 mile long, and forms the head waters of Black River. These ponds produce abundance of fine trout. There are several other small ponds in the north part of the town, which, at present, form the head waters of the Lamoille. The first settlement was begun in the spring of 1789, when Messrs. Ahbel and Aaron Shepard removed, with their families, from Newbury to this place. 15 miles S. from Irasburg, and 27 N. E. from Montpelier.

Greenville County, Va., c. h. at Hicksford. Incorporated from Brunswick co. in 1784. Bounded N. by Dinwiddie and Sussex counties, E. by Sussex and Southampton, S. by North Carolina, and W. by Brunswick co. Watered by Nottoway, Brunswick, and Meherin Rivers.

Greenup County, Ky., c. h. at Greenupsburg. Bounded N. by the Ohio River, separating it from Ohio, E. by the Big Sandy, separating it from Virginia, S. by Carter co., and W. by Lewis co. Surface hilly, and watered by Little Sandy and Tyger's Creeks. The soil bordering the streams is fertile, and coal and iron ore abound among the hills.

Greenup, Ky., c. h. Greenup co.

Greenville, Aa., c. h. Butler co. On the W. side of Sepulgah River. 141 miles S. S. E. from Tuscaloosa.

Greenville, Ga., c. h. Meriwether co. 102 miles W. from Milledgeville.

Greenville, Ia., c. h. Bond co. On the E. fork of Shoal Creek. 74 miles S. from Springfield.

Greenville, Ky., c. h. Muhlenburg co. On a branch of Green River. 105 miles W. S. W. from Frankfort.

Greenville, Mi., c. h. Washington co.

Greenville, N. C., c. h. Pitt co. On the S. side of Tar River, 35 miles from its mouth, and 102 miles E. by S. from Raleigh.

Greenville, N. Y., Greene co. Drained by Provost and Catskill Creeks. The surface is broken and hilly; soil clay loam, suitable for grass. 15 miles N. W. from Catskill, and 26 S. W. from Albany.

Greenville, O., c. h. Dark co. On a creek of the same name, just below its junction with Mud Creek, on the site of old Fort Greenville, where General Wayne concluded the Indian treaty of August 3, 1795, which insured tranquillity on the western frontier. It is 93 miles W. from Columbus, and 75 N. from Cincinnati.

Greenville, S. C., c. h. Greenville district, lies near the source of Reedy River. 107 miles W. N. W. from Columbia.

Greenville District, S. C. N. W. part. Drained by branches of the Saluda, which washes it on the W. It contains the sources of many of the north-western tributaries of the Congaree. Soil undulating and fertile.

Greenville, Tc., c. h. Greene co., is the seat of Greenville College, and lies 258 miles E. from Nashville. See *Colleges*.

Greenwich, Ct., Fairfield co. The settlement of this town commenced in 1640. It was incorporated by Stuyvesant, the Dutch governor at New York, in 1665. It comprises three parishes or villages — West Greenwich, Greenwich on the E., and Stanwich on the N. West Greenwich, on Horse Neck, so called from a peninsula on the Sound formerly used as a horse pasture, is the largest and most important part of the town. Greenwich is watered by Byram River, the boundary line between the town and the state of New York, and the most southern part of New England. At the outlet of Byram River, on the New York side, is a place called *Sawpits*, a noted landing-place on the Sound, 28 miles N. E. from New York. Miannus Creek and other smaller streams water the town.

"Putnam's Hill is situated in West Greenwich, about 5 miles W. from Stamford, on the main road to New York. This place is celebrated for the daring exploit of General Putnam, who descended this precipice when pursued by the British dragoons."

Greenwich is a rough and uneven township, with a productive soil. It presents some wild scenery along the road, and many beautiful views of Long Island Sound.

Greenwich, Ms., Hampshire co. There are some elevated lands in this town, and the surface generally is rugged and uneven, but the soil is strong and fertile. Two branches of Swift River water the town abundantly. Its Indian name was Quabin. The first settlers were from the north of Ireland. 20 miles E. N. E. from Northampton, and 73 from Boston.

Greenwich, N. J., Cumberland co. Newport, Stow, Mill, Cohansey, and Pine Mount Creeks water this town, the surface of which is level, and the soil of excellent quality. 73 miles S. S. W. from Trenton.

Greenwich, N. J., Gloucester co. Mantua, Reppau, Clommel, Raccoon, and Crab Creeks drain this town. 7 miles S. W. from Woodbury.

Greenwich, N. J., Warren co. On the E. side of the Delaware River, and drained by Lopatcong, Pohatcong, and Musconetcong Creeks, and crossed by the Morris Canal. Surface hilly, containing marble, soapstone, and iron; soil fertile. South Mountain lies in this town. 10 miles S. from Belvidere.

Greenwich, N. Y., Washington co. On the E. bank of the Hudson. Watered on the S. by the Battenkill. The surface is rather hilly; soil fertile, gravelly loam. 10 miles W. from Salem, and 35 N. E. from Albany.

Greenwich, Pa., Berks co. Saconcy, Mill, and other small creeks, affording water power, drain this town. Surface hilly; soil gravelly loam. 18 miles N. E. from Reading.

Greenwood, Me., Oxford co. A township of good land. 58 miles W. by S. from Augusta.

Greenwood, N. Y., Steuben co. Bennett's Creek waters this town, the surface of which is hilly, and the soil well adapted to grass. 30 miles S. W. from Bath, and 251 from Albany.

Greenwood, Pa., Columbia co. Drained by branches of Fishing Creek. 92 miles N. N. E. from Harrisburg.

Greenwood, Pa., Perry co. 10 miles N. E. from Bloomfield.

Gregg, Pa., Centre co. Drained by Sinking Creek. Surface mountainous; soil calcareous loam.

Greig, N. Y., Lewis co. Drained by Otter and Fish Creeks, and Moose River, all tributaries of Black River. The surface is broken and hilly; soil various. 12 miles S. E. from Martinsburg, and 123 N. W. from Albany.

Griggstown, N. J., Somerset co. It is on the E. side of Millstone River. 20 miles N. N. E. from Trenton. The Delaware and Raritan Canal passes here. A copper mine has been wrought in the vicinity.

Griggsville, Is., Pike co. Near Illinois River. 4 miles W. from Phillips Ferry, and 61 miles W. from Springfield.

Grimes County, Ts.

Griswold, Ct., New London co. This town was taken from Preston in 1815, and is separated from Lisbon by Quinnebaug River. The Po-chang, a sluggish stream, passes through the town. The principal village, which is very neat and pretty, containing about 900 inhabitants, is called Jewett City. The city lies on the E. side of the Quinnebaug, at this place a very powerful stream. This little city is said to be very prosperous in its manufacturing and commercial concerns. Surface hilly; soil a gravelly loam. 46 miles E. S. E. from Hartford.

Groton, Ct., New London co., lies at the mouth of the River Thames, in the harbor of New London, and opposite to that city, on the E. The lands are generally hilly and rocky, with some fertile tracts on the margin of the Thames. There are several villages — Groton Bank, opposite New London, Portersville, on Mystic River, and Pequonnuck. The Pequonnuck and Mystic Rivers pass through the town, and empty into Long Island Sound. Previous to its incorporation, in 1705, Groton was a part of New London.

On Groton Heights is Fort Griswold, one of the defences of New London Harbor. A granite monument, placed 130 feet above tide water, and 127 feet high, commemorates Colonel Ledyard and the other brave defenders of this place, massacred in 1781, after its surrender to the traitor Arnold.

Groton, Ms., Middlesex co. This beautiful town, watered by the Nashua, is pleasantly variegated; the soil is fertile, and exceedingly productive. There are valuable paper mills in the town, and a fine quarry of soapstone. The village, in the centre of the town, is handsomely situated on one principal street, which runs from S. E. to N. W. It is on an extensive and regular swell of land, and commands delightful views of the surrounding country. The Groton Academy, in this place, was incorporated in 1793. 32 miles N. W. from Boston, 14 W. by S. from Lowell, and 3½ N. from the depot of the railroads which pass through the S. part of the town, affording communication with Boston, Lowell, Worcester, and Nashua.

Groton, N. H., Grafton co. Baker's River and several small streams, which fall into Newfound Lake, water this town. There is but one pond of any consequence lying wholly in this town. First settlers, James Gould, Captain E. Mellen, Jonas Hobart, Phineas Bennett, and Samuel Farley, in 1779. Groton was granted, in 1776, to George Abbott and others, by the name of Cockermonth. 10 miles S. W. from Plymouth, and 45 N. W. from Concord.

Groton, N. Y., Tompkins co. Watered by Fall Creek and some other small streams. The surface is undulating; soil gravelly loam of good

quality 13 miles N. E. from Ithaca, and 160 W. from Albany.

Groton, Vt., Caledonia co. On Wells River, and some of its branches, which afford mill privileges. The surface is uneven, rough, and stony. 16 miles E. by S. from Montpelier.

Grove, N. Y., Alleghany co., is watered by Cashaque and Canaseraga Creeks. Surface undulating; soil chiefly sandy loam. 13 miles N. from Angelica, and 257 W. from Albany.

Groveland, Ms. Incorporated in 1852. Taken from Bradford.

Groveland, N. Y., Livingston co. Watered on the N. E. by Conesus Lake, and S. by Canaseraga Creek. The surface is high and uneven; soil various. 6 miles S. from Geneseo, and 232 W. from Albany.

Grundy County, Is., c. h. at Morris. Bounded N. by Kendall co., E. by Will, S. by Livingston, and W. by Lasalle co. Surface level, and watered by the Illinois River and its branches; soil of excellent quality.

Grundy County, Mo., c. h. at Trenton. Bounded N. by Mercer co., E. by Sullivan and Linn, S. by Livingston, and W. by Davies and Harrison counties. This county consists mostly of fertile prairie land, and is watered by the E. fork of Grand River, Medicine and Muddy Creeks.

Grundy County, Te., c. h. at Altamonta.

Guadalupe County, Ts., c. h. at Sequin. S. central. On the Upper Guadalupe.

Guernsey County, O., c. h. at Cambridge. Tuscarawas bounds it on the N., Belmont on the E., Morgan on the S., and Muskingum and Coshocton counties on the W. It was settled by some emigrants from the Island of Guernsey, from which place it derives its name. The land is of good quality, but hilly, and is watered by Wills Creek and its branches; it has a variety of soil.

Guilderland, N. Y., Albany co. Drained on the E. by Norman's Kill. The surface is mostly level; soil sandy, and rather sterile. 10 miles W. from Albany.

Guildhall, Vt., c. h. Essex co. On the W. side of Connecticut River, and is united to Lancaster, N. H., by two bridges across the river. The town is watered by several small streams, and the surface is quite uneven and stony, except a tract of intervals on the river. Cow and Burnside Mountains are considerable elevations. There is a pleasant village in the N. E. part of the town. The settlement was commenced in 1764. 68 miles N. E. from Montpelier.

Guilford, Ct., New Haven co. This town, the *Menunkatuc* of the Indians, was first settled in 1639. The town was settled by a party of Non-conformists from England, at the head of which was the Rev. Henry Whitfield. *Guilford borough* was incorporated in 1815. It is handsomely located, two miles from Long Island Sound, on a tract of alluvial plain, and near a small stream called the *Menunkatuc*. *Guilford* is a place of resort for sea air and bathing. The accommodations are very good. The scenery in the vicinity of *Sachem's Head* is wild and picturesque. The soil of *Guilford* is well adapted to agricultural pursuits. 16 miles E. from New Haven.

Guilford, Me., Piscataquis co. Watered by the *Piscataquis* and some of its upper branches. 71 miles N. E. from Augusta, and 45 N. W. from Bangor.

Guilford County, N. C., c. h. at Greensboro'.

Bounded N. by Rockingham, E. by Orange, S. by Randolph, and W. by Davidson and Stokes counties. Watered by the head branches of Deep and Haw Rivers. Here was fought, in 1781, the celebrated battle of *Guilford Court House*.

Guilford, N. Y., Chenango co. Bounded on the E. by Unadilla River. The surface is hilly and broken; soil generally productive. 10 miles S. E. from Norwich, and 105 W. by S. from Albany.

Guilford, Pa., Franklin co. Bounded on the W. by the E. branch of Conococheague Creek, and drained by several mill streams. Surface level; soil based upon limestone and slate. 6 miles S. E. from Chambersburg.

Guilford, Vt., Windham co. The soil is warm and fertile. There are in this town good mill sites on Green River, and branches of Broad Brook, a medicinal spring, and various kinds of minerals. This town was chartered April 2, 1754, to 54 proprietors, principally of Massachusetts. The first settlement was made by Micah Rice and family, in September, 1761. 50 miles S. from Windsor, and 31 S. E. from Bennington.

Guyandotte, Va., Cabell co. On the point of land at the junction of Ohio and Guyandotte Rivers, 359 miles W. N. W. from Richmond.

Gwynedd, Pa., Montgomery co. Drained by *Wissahickon* and *Towamensing* Creeks. Surface undulating; soil sandy loam. 95 miles E. from Harrisburg.

Gwinnett County, Ga., c. h. at Lawrenceville. Bounded N. E. by Hall and Jackson counties, S. E. by Walton and Newton, S. W. by De Kalb, and N. W. by the *Chattahoochee* River, separating it from Forsyth co. Drained by branches of *Chattahoochee*, *Ockmulgee*, and *Oconee* Rivers.

Habersham County, Ga., c. h. at Clarksville. Bounded N. by Union co., N. E. by South Carolina, S. E. and S. by Franklin and Hall counties, and W. by Lumpkin co. Watered on the N. E. boundary by the *Turoree*, a branch of *Tugaloo* River, and drained by the head branches of the *Chattahoochee* River. Surface mountainous.

Hackensack, N. J., Bergen co. On the W. side of *Hackensack* River. 76 miles N. E. from Trenton.

Haddam, Ct., Middlesex co. Incorporated 1668. This is one of the county towns, and lies on both sides of Connecticut River. *Haddam Society*, on the W. side, is the largest part of the town, and is the seat of justice. That part of *Haddam* on the E. side is called *Haddam Neck*. There is but little alluvial land in *Haddam*. The principal part of the township is hilly and stony, with considerable forests. There are valuable quarries of flagging stone on both sides of the river. There are many vessels built at *Haddam*. The timber in this quarter of the county is well adapted for that purpose. The village of *Haddam* is pleasant, and has a good prospect of the river. 23 miles S. from Hartford.

Hadley, Ms., Hampshire co., is a pleasant town on the E. bank of Connecticut River, and united to Northampton by a handsome bridge, 1080 feet in length. The village is situated on a peninsula formed by a bend of the river. It has a wide street of about a mile in length, well built and shaded by beautiful elms. *Hadley* contains extensive tracts of the finest land in the state. Its meadows, which are annually overflowed by the river, are very fertile, and exceedingly pro

ductive. Two small streams afford the town some water power. Its Indian name was Norntock. Hadley was a retreat for the celebrated Goffe and Whalley, two of the judges who condemned Charles I. 88 miles W. from Boston.

Hadley, N. Y., Saratoga co. Situated at the junction of Sacandaga and Hudson Rivers. A branch of the Kayaderosseras Mountains crosses this town. 26 miles N. from Ballston Spa, and 56 N. E. from Albany.

Haerlem, N. Y., New York co. $7\frac{1}{2}$ miles N. from New York. See *New York City*.

Hagerstown, Md., c. h. Washington co. On the W. bank of Antietam Creek. 101 miles N. W. from Annapolis, and 26 N. W. from Frederick.

Hague, N. Y., Warren co. Bounded on the E. by Lake George. The surface is broken by the Kayaderosseras Mountains, which cover a large part of the town. 28 miles N. from Caldwell, and 90 N. N. E. from Albany.

Hains, Pa., Centre co. Watered by 2 small creeks, which disappear among the crevices of Limestone Rock. Surface mountainous; soil calcareous loam in the valleys. 19 miles E. from Bellefonte.

Half Moon, N. Y., Saratoga co. Bounded on the E. by the Hudson River. The surface is mostly level; soil sandy loam and clay of good quality. 15 miles S. E. from Ballston Spa, and 18 N. from Albany.

Half Moon, Pa., Centre co. Bald Eagle Creek and Half Moon Run water this town. Surface mountainous, a ridge of the Alleghany Mountains forming the W. boundary; soil calcareous loam in the valleys. 99 miles N. W. from Harrisburg.

Halifax, Ms., Plymouth co. Halifax was formerly part of Plympton, Middleboro', and Pembroke. Its Indian name was Monposnit. Two branches of Taunton River, the Winetuxet and another, give this town a water power. There are 2 villages in the town, and several ponds, which cover about 1700 acres. The Monposnit, a small part of which lies in Hanson, is a beautiful sheet of water, more than 2 miles long, and half a mile wide. Pickerel have been taken from this pond weighing more than 7 pounds each. The Old Colony Railroad passes through the town. 28 miles S. S. E. from Boston, and 9 N. W. from Plymouth.

Halifax County, N. C., c. h. at Halifax. Bounded N. and E. by the Roanoke River, separating it from Northampton and Bertie counties, S. by Edgecombe and Nash, and W. by Warren co. Watered by Roanoke River and Fishing Creek and branches. Soil fertile.

Halifax, N. C., c. h. Halifax co. Situated on the W. bank of Roanoke River, at the head of sloop navigation, and 6 miles below the great falls. 80 miles N. E. from Raleigh. A canal round the falls renders the river navigable for boats 130 miles above this place.

Halifax, Pa., Dauphin co. Located on the E. bank of the Susquehanna River, and drained by Armstrong Creek. Surface hilly, having Peter's Mountain on the S.; soil red shale. 23 miles N. from Harrisburg.

Halifax, Vt., Windham co. This township is watered by North and Green Rivers. They are both large and commodious mill streams. In the branch of North River is a succession of cascades, extending about 100 rods. The falls are from 15 to 20 feet each. The surface is uneven,

but there are no mountains worthy of notice. On the margin of North River is a cavern, called Woodward's Cave, or Dun's Den. The soil is generally of a good quality, well adapted to the production of grass. The settlement was commenced in 1761, by Abner Rice, from Worcester co., Ms. 125 miles S. from Montpelier, and 15 S. from Newfane.

Halifax County, Va., c. h. at Halifax. Bounded N. by Staunton River, separating it from Campbell and Charlotte counties, E. by Mecklenburg co., S. by North Carolina, and W. by Pennsylvania co. Watered by Dan and Bannister Rivers and their tributaries. Soil fertile.

Halifax, Va., c. h. Halifax co. On the S. side of Bannister River. 127 miles S. W. from Richmond.

Hall County, Ga., c. h. at Gainesville. Bounded N. by Habersham co., E. by Habersham and Jackson, S. by Gwinnett, and W. by Forsyth and Lumpkin counties. Watered on the W. border by the Chattahoochee River, and N. W. by its two head branches, the Sooque and Chestatee. Surface hilly and mountainous; soil very fertile in some portions.

Hallowell, Me., Kennebec co. This city is situated on both sides of the Kennebec River, between Augusta and Gardiner, 2 miles below the former, and 4 miles above the latter. The houses are mostly on the W. side of the river. The streets run parallel with the river, and the ground ascends 200 feet from the lower street or business part of the city. On this street are numerous stores, constructed principally of brick. Most of the dwelling houses are on the back, or elevated streets; they are built, as are the churches, with good taste, and being surrounded by beautiful groves, make a fine appearance. The varied views of the river, of the neighboring towns, and of a fertile country of hills and vales, presented from the high grounds on each side of the village, furnish an exhibition of scenery of uncommon beauty. Hallowell is about 3 miles in width, and extended back, on each side of the river, 5 miles, but the part on the eastern bank became, in 1850, the town of Chelsea. Incorporated in 1771, and then included all the territory of Augusta, and a part of Gardiner. From this place the brave but traitorous Arnold marched on an expedition against Canada, in 1776.

There are 6 or 7 churches in Hallowell, of as many different denominations. There exists a flourishing academy here, which has held a preëminent rank ever since it was incorporated, in 1791.

About 4 miles from the village, and on the E. side of the river, is the "Togus Mineral Spring," which, within a few years past, has become much frequented by invalids and others seeking health, or amusement and relaxation. The waters, which are impregnated with sulphur, have been found very efficacious. A spacious house of entertainment has been erected near the spring, which is often thronged in the summer months. The principal public house, in the centre of Hallowell, is the Hallowell House, which is a large and elegant granite building, furnishing every desirable accommodation.

Steamboats ply from this place to Portland and Boston during the season of navigation. The Eastern Railroad, from Boston and Portland, extends through it as far as Augusta. A number of vessels, owned here, are engaged in the freighting business, and others run as packets to various places. Vessels drawing 9 feet of

water can come to the wharves, in the centre of the village. The granite quarries at Hallowell have been worked for twenty years or more, with great success. The granite is of a light color, and easily wrought. In some years \$100,000 worth of it have been transported. The Hall of Justice, in New York, familiarly known as "the Tombs," is constructed of this stone.

As Hallowell and Augusta are so closely united in all their various interests and pursuits, what we have said of the favorable position of Augusta, and of its future prospects, is applicable here. With common success in our national affairs, and with a continuation of that spirit of enterprise, every day manifested on the banks of the Kennebec, it is safe to predict that within a very few years there will be a continuous village from the Kennebec dam to the mouth of the Cobbesecontee, at Gardiner. Population in 1820, 2919; 1850, 4769.

Hamburg, As., c. h. Ashley co.

Hamburg, N. Y., Erie co. Watered by Smokes, Rush, and Cayuga Creeks, tributaries of Lake Erie, which bounds it on the W. The surface is undulating; soil fertile, yielding large crops of grass, grain, and fruit. 8 miles S. from the city of Buffalo, and 281 W. from Albany.

Hamburg, Pa., Berks co. Near the Schuylkill Water Gap. 68 miles E. N. E. from Harrisburg.

Hamburg, S. C., Edgefield district. On the E. side of Savannah River, opposite Augusta, Ga., with which it is connected by a bridge 1000 feet long. It is divided into the upper and lower towns. The upper is on an abrupt acclivity, 60 or 70 feet in height, and the lower part, where most of the business is done, is on the bank of the river. It is regularly laid out, handsomely built, and has a large business. 79 miles S. W. from Columbia.

Hamden, Ct., New Haven co. This town was taken from New Haven in 1786. It is situated between the E. and W. Rock ranges of mountains, the southern terminus of the Green Mountain range. The soil in many parts is easy of cultivation, but in general it is more adapted to grazing than tillage. Minerals are found here, among which are specimens of very pure copper. Mill River affords numerous sites for water works. Whitneysville, about 2 miles from New Haven, is admirably located for manufacturing operations. Mount Carmel, a noted elevation, 8 miles N. from New Haven, affords an extensive prospect.

Hamden, N. Y., Delaware co. Drained by the W. branch of the Delaware River. A broken and mountainous town, with quite a variety of soil. 7 miles S. from Delhi village, and 85 S. W. from Albany.

Hamilton County, Fa., c. h. at Jasper. Bounded N. by Georgia, E. and S. by the Little Suwannee River, separating it from Columbia co., and W. by the Withlacoochee River, separating it from Madison co. Watered, through the interior, by the Allapahaw River. Soil fertile.

Hamilton, Ga., c. h. Harris co. At the W. extremity of Oak Mountain. 126 miles W. S. W. from Milledgeville.

Hamilton County, Is., c. h. at McLeansboro'. Incorporated in 1821, and bounded N. by Wayne co., E. by White, S. by Gallatin, and W. by Franklin and Jefferson counties. Drained by branches of Little Wabash River and Saline

Creek. In the N. part is a swamp of some size. Soil of rather poor quality.

Hamilton County, Ia., c. h. at Noblesville. It is bounded N. by Richardville, E. by Madison, S. by Hancock and Marion, and W. by Boone co. Drained by the W. fork of White River and its branches. The surface consists partly of prairies.

Hamilton, Ms., Essex co., was formerly a part of Ipswich, and called Ipswich Hamlet. Ipswich River passes its western and northern border, and Miles's River, running N., passes into it. The town was named in honor of Alexander Hamilton. The people of this town are mostly agriculturists, and they cultivate an excellent soil, with a pleasant surface. Hamilton lies, by the Eastern Railroad, 20 miles N. by E. from Boston, and 14 S. from Newburyport.

Hamilton, Mi., c. h. Monroe co. About a mile E. from Tombigbee River, and 156 miles N. E. from Jackson.

Hamilton, N. J., Atlantic co. This town is watered by Great Egg Harbor. Surface level; soil sandy. 30 miles S. E. from Woodbury.

Hamilton County, N. Y., c. h. at Lake Pleasant. Incorporated in 1838. Bounded N. by St. Lawrence and Franklin, E. by Essex and Warren, S. by Fulton, and W. by Herkimer co. Its principal lakes are Indian, Racket, Long, Piseco, and Lake Pleasant; its rivers, Indian, Sacandaga, Moose, and Racket. Surface elevated, and in parts hilly and mountainous; soil fertile along the borders of the rivers and lakes.

Hamilton, N. Y., Madison co. Drained by the head branches of Chenango River. The surface is somewhat hilly; soil fertile, calcareous loam. 10 miles S. E. from Morrisville, and 96 W. from Albany.

Hamilton County, O., c. h. at Cincinnati. It is bounded N. by Butler, E. by Clermont co., S. by the Ohio River, and W. by the state of Indiana. It is a small but populous county, and is watered by the Little and Big Miamies and Whitewater Rivers, Mill and Deer Creeks, and their branches. The land is of a good quality, and well adapted for the cultivation of grain.

Hamilton, O., c. h. Butler co. On the S. E. bank of the Great Miami River. 102 miles W. S. W. from Columbus. Connected with Cincinnati by the Miami Canal, which passes through it. A large and flourishing place.

Hamilton, O., Franklin co. On the E. side of the Scioto River, S. of, and adjoining, Montgomery. It is a rich farming township. The Columbus lateral canal and the stage road to Chillicothe pass through it from N. to S.

Hamilton, Pa., Adams co. Bounded N. and W. by Conewago Creek, and drained by Beaver Run. Surface level; soil reddish gravel and flint. 12 miles N. E. from Gettysburg.

Hamilton Ban, Pa., Adams co. Bounded E. by Marsh Creek, and N. by its S. branch, and is drained by Toms and Middle Creeks and Muddy Run. Surface level; soil calcareous loam and gravel. Iron and copper ores and a few mineral springs are found here.

Hamilton, Pa., Monroe co. Drained by McMichael, Cherry, and Pokon Creeks, branches of the Delaware River. Surface much diversified; soil gravelly.

Hamilton, Pa., Franklin co. Watered by the main branch of Conococheague Creek and its tributary Black Creek. Surface hilly; soil calcareous loam and slate.

Hamilton, Pa., McKean co.
Hamilton County, Tc., c. h. at Dallas. Bounded N. by Bledsoe and Rhea counties, E. by Bradley co., S. by Georgia, and W. by Marion co. Watered by the Tennessee River and several small tributaries, the largest of which is Chickamauga Creek.

Hampmond, N. Y., St. Lawrence co. Bounded on the W. by the St. Lawrence River, and watered on the E. by Black Lake. The surface is level; soil very productive. 26 miles S. W. from Canton, and 184 N. W. from Albany.

Hampden, Me., Penobscot co. On the W. bank of Penobscot River, below and adjoining Bangor. A flourishing town, 62 miles E. N. E. from Augusta.

Hampden County, Ms., c. h. Springfield. This county, until 1812, was the southern part of Hampshire co. It is bounded N. by Hampshire co., E. by Worcester co., S. by Tolland and Hartford counties, Ct., and W. by Berkshire co. Connecticut River passes from N. to S. through the centre of the county; the Westfield from the W., the Chickopee from the E., with the Quinnebaug and other rivers in different parts of the county, afford it an immense water power. The Western Railroad and Connecticut River Railroad pass each other in this county, nearly at right angles. With these facilities, the county of Hampden takes a high stand among the manufacturing and agricultural districts in New England. Some parts of this county are mountainous, but the principal part is rather undulating than hilly. Its highlands produce excellent food for cattle, and its intervale lands are very superior in fertility and production.

Hampshire County, Ms., c. h. at Northampton. This ancient county, although its limits have been greatly reduced by the erection of Franklin and Hampden counties, is still increasing in agricultural, commercial, and manufacturing strength. Located in the centre of the alluvial basin of the noble Connecticut, blessed with a rich and variegated soil, and great water power, this must ever remain one of the most independent counties in New England. The Western Railroad passes the western boundary of the county, and a series of railroads, extends from its centre to Long Island Sound. This county is bounded S. by Hampden, W. by Berkshire, N. by Franklin, and E. by Worcester counties.

Hampshire County, Va., c. h. at Romney. It is bounded N. by the N. branch and main stream of the Potomac River, separating it from Maryland, E. by Morgan and Frederick counties, and S. and W. by Hardin co. Drained by the S. branch and some other tributaries of the Potomac River. Surface mountainous, particularly in the E. part; but the soil in the valleys is of excellent quality.

Hampstead, N. H., Rockingham co. This town lies partly on the height of land between Merrimac and Piscataqua Rivers. Wash, Argly, and Island Ponds are in this town. In Island is a valuable farm, containing 300 acres. This town was granted by Governor Benning Wentworth, and named by him after a village 5 miles N. of London, England. First settlers, Messrs. Emerson, Ford, Heath, and others, in 1728. 30 miles S. E. from Concord, and 12 S. W. from Exeter.

Hampton, Ct., Windham co. This town was taken from Windham and Pomfret in 1786. The people are generally agriculturists, with a good

strong soil of an uneven surface. The village is pleasantly situated on high ground. Hampton has good mill seats on a branch of Shetucket River. 35 miles E. of Hartford.

Hampton, N. H., Rockingham co. The soil is well adapted to tillage and mowing, and about one fifth of the territory is a salt marsh. Hampton is pleasantly situated; many eminences afford romantic views of the ocean, Isle of Shoals, and sea-coast from Cape Ann to Portsmouth. Its beaches have long been the resort of invalids and parties of pleasure. Boar's Head is an abrupt eminence, extending into the sea. The Indian name of this town was Winnicomet. First settlers, emigrants from the county of Norfolk. 10 miles S. W. from Portsmouth, and 46 S. E. from Concord.

Hampton Falls, N. H., Rockingham co. The soil is generally good. This town was originally a part of Hampton. First settlers, see *Hampton*. 50 miles S. E. from Concord, and 6 S. E. from Exeter.

Hampton, N. Y., Washington co. Separated on the N. from the state of Vermont by Poultney River. The surface is somewhat hilly; the valleys fertile. 26 miles N. from Salem, and 73 N. E. from Albany.

Hampton, Va., c. h. Elizabeth City co. Situated on the W. side of Hampton River, about 1 mile from its mouth, and 94 miles E. S. E. from Richmond.

Hamptonburg, N. Y., Orange co. Bounded on the W. by the Wallkill, and watered by Murderer's Creek. The surface is undulating; soil very fertile. 4 miles N. E. from Goshen, and 100 S. S. W. from Albany.

Hancock County, Ga., c. h. at Sparta. Bounded N. by Greene and Taliaferro counties, E. by the Ogeechee River, separating it from Warren co., S. by Washington and Milledgeville counties, and W. by the Oconee River, separating it from Putnam co. Drained by branches of the Oconee and Ogeechee Rivers.

Hancock County, Is., c. h. at Carthage. Incorporated in 1825, and bounded N. by Henderson co., E. by McDonough and Schuyler, S. by Marquette and Adams, and W. by the Mississippi River, separating it from Mississippi and Iowa. Watered by Bear and Crooked Creeks and branches, the former a tributary of the Mississippi, and the latter of the Illinois River. Soil rich in the W. part.

Hancock County, Ia., c. h. at Greenfield. Incorporated in 1828, and bounded N. by Hamilton and Madison counties, E. by Henry and Rush, S. by Shelby, and W. by Marion. Watered by Blue River and Sugar and Brandywine Creeks, good mill streams. Surface mostly level; soil fertile.

Hancock County, Ky., c. h. at Hawesville. Bounded N. by the Ohio River, separating it from Indiana, E. by Breckenridge co., S. by Grayson and Ohio counties, and W. by Owen co. Watered on the S. boundary by Rough Creek, a branch of Green River, and W. by Blackford's River. Surface hilly, containing coal and iron ore.

Hancock County, Me., c. h. at Ellsworth. E. part of the state bordering on Penobscot Bay and River, and the coast to the eastward, which is deeply indented with many islands and excellent harbors. Union River flows S. through the middle of it.

Hancock, Me., Aroostook co.

Hancock, Me., Hancock co. On the head waters of Frenchman's Bay. 85 miles E. from Augusta.

Hancock, Md., Washington co. On the N. bank of the Potomac River. 125 miles N. W. from Annapolis.

Hancock, Ms., Berkshire co., is a mountainous town; and in some parts of it the mountains are so abrupt that the inhabitants, in passing from one end of it to the other, are obliged to travel out of the town, and even through a part of the state of New York. Although the surface of the town in many parts is too rough for cultivation, yet there is much good grazing on the sides of the mountains. There is a narrow valley in Hancock, about 7 miles in length, of great beauty and fertility. Here are some of the best farms in the county, and here are seated, in a delightful village, a family of more than 200 Shakers. 10 miles N. W. from Pittsfield, whence to Boston is 151 miles, by the railroad.

Hancock County, Mi., c. h. at Shieldsboro'. Bounded N. by Marion co., E. by Harrison, S. by the Gulf of Mexico and Lake Borgne, and W. by Pearl River, separating it from Louisiana. Surface undulating on the N., and level on the S.; soil of poor quality.

Hancock, N. H., Hillsboro' co. The soil is various, but generally productive. The land is diversified, and affords many good farms. Con-toocook and its branches furnish this town with water. There are two ponds here, which furnish a variety of fish. This town was named after Governor Hancock, of Boston, who was one of the original proprietors. First settler, John Grimes, in May, 1764. 36 miles S. W. from Concord, and 22 N. W. from Amherst.

Hancock, N. Y., Delaware co. A large town, situated at the junction of the Papacton branch with the main stream of the Delaware River. The surface is broken and mountainous. 24 miles S. from Delhi, and 129 S. W. from Albany.

Hancock County, O., c. h. at Findlay. Seneca and Crawford counties bound it on the E., Wood on the N., Hardin on the S., and Putnam co. on the W. It has a good soil, which is well watered by tributaries from Blanchard's River.

Hancock, Vt., Addison co. Emerson's branch of White River, the sixth branch of the same, and Leicester River, all rise near the S. W. corner of this township. Middlebury River also heads in the western part. These streams afford several very good mill privileges. The whole of the township lies upon the Green Mountains, but the principal ridge is on the western side. The surface of Hancock is high and broken, and but a small portion of it suitable for tillage; it, however, produces good grass. The settlement was commenced in the year 1778. 15 miles S. E. from Middlebury, and 30 S. W. from Montpelier.

Hancock County, Aa. New.

Hancock County, Te. New. Taken from Claiborne. On the N. E. border of the state.

Hancock County, Va. New. Taken from Brooke. In the extreme N. W. corner of the state, between the Ohio and the Pennsylvania line.

Hannibal, N. Y., Oswego co. Watered by several small creeks, which flow into Lake Ontario. The surface is undulating; soil fertile. 12 miles S. from Oswego, and 168 N. W. from Albany.

Hanover, Ms., Plymouth co. The North River separates this town from Pembroke, on the S.,

and affords it a good water power. The surface is quite level, with gentle swells, affording white oak and pine timber; the soil is diluvial, and with good management is made quite productive. The anchors of our favorite ship, "Old Ironsides," were made in this place. "Hanover Four Corners," a handsome village on the banks of the river, is quite a business place, and lies 22 miles S. E. from Boston, and 14 N. W. from Plymouth. The Old Colony Railroad passes near it.

Hanover, N. H., Grafton co. The Connecticut River separates Hanover from Norwich, Vt., to which place it is connected by a bridge across the river. This is the principal stream; there are, besides, Mink, Slate, and Goose Pond Brooks. In the Connecticut River are several islands; the largest is called Parker's. The surface is diversified, well improved, and the greatest part suitable for farms. There is but a small proportion of waste land, less, perhaps, than in any other town in the county. It is estimated that nearly one half is under improvement. Moose Mountain is a considerable elevation, extending across the town from N. to S. The principal village is in the S. W. corner of the town, on a beautiful and extensive plain, half a mile from Connecticut River, and 180 feet above the level of its waters. Vegetable substances are found in this plain from 50 to 80 feet deep. Most of the houses of the villages are built round a square, level area of 12 acres, upon which, also, the buildings of the college front, making together a very handsome appearance. See *Colleges*. First settlers, Colonel Edward Freeman, Benjamin Davis, Benjamin Rice, Gideon Smith, and Asa Parker, in 1765. 69 miles N. from Concord, and 30 S. from Haverhill.

Hanover, N. J., Burlington co. Watered by Black's, Crosswick's, and a branch of Rancocus Creeks. Surface level; soil sand and sandy loam. 12 miles N. E. from Mount Holly.

Hanover, N. J., Morris co. Watered by Whippany and Parsipany Rivers, flowing into the Rockaway, which bounds it on the N. Surface hilly on the N. W.; soil clay, gravel, and loam 5 miles N. from Morristown, and 57 N. N. E. from Trenton.

Hanover, N. Y., Chautauque co. Bounded on the N. by Lake Erie and Cattaraugus Creek, and is drained by Silver and Black Walnut Creeks. The surface of the S. part is elevated and hilly; the soil in the valleys and on the borders of the lake is rich alluvion. This vicinity is celebrated for its large forest trees. 26 miles N. E. from Maysville, and 315 W. by S. from Albany.

Hanover, Pa., Northampton co. Bounded on the S. E. by Manokissy Creek. Surface level; soil fertile calcareous loam.

Hanover, Pa., Washington co. Drained by Herman's and Indian Creeks, branches of the Ohio River. Surface hilly, abounding with coal; soil loam. 22 miles N. W. from Washington.

Hanover County, Va., c. h. at Hanover. Bounded N. and E. by North Anna River, separating it from Caroline and King William counties, S. by New Kent and Henrico counties, and W. by Goochland and Louisa counties. Watered on the S. by a branch of James River. Surface hilly; soil much diversified.

Hanover, Va., c. h. Hanover co., occupies an elevated position near Pamunky River, and 20 miles N. from Richmond.

Hanover, Pa., Beaver co. Drained by Big and Little Traviss, branches of Raccoon Creek. Surface undulating; soil calcareous loam.

Hanover, Pa., Dauphin co. Bounded W. by Beaver Creek, and drained by Manaday Creek and Bow Run, branches of Swatara Creek. Surface undulating; soil argillaceous loam and sandstone. 15 miles S. E. from Harrisburg.

Hanover, Pa., Luzerne co. Drained by Nanticoke and Soloman's Creeks, mill streams flowing into the Susquehanna River, which bounds it on the N. W. Surface mountainous, abounding with anthracite coal.

Hanover, Pa., Lehigh co. Drained by Callesque Creek, a branch of the Lehigh River. Surface level; soil rich calcareous loam.

Hanson, Ms., Plymouth co., was taken from Pembroke in 1820. There are several large and handsome ponds in the town, and several small streams, which give it some water power. Part of Monponset Pond lies in Hanson, from which, and other ponds in the town, a variety of fish are taken. In these ponds are large beds of bog iron ore. 24½ miles S. E. from Boston, and 12¾ N. W. from Plymouth by the Old Colony Railroad.

Harbor Creek, Pa., Erie co. Drained by a number of small streams flowing into Lake Erie, which bounds it on the N. 6 miles N. E. from Erie, and 219 N. W. from Harrisburg.

Hardeman County, Te., c. h. at Bolivar. Bounded N. by Haywood and Madison counties, E. by McNairy co., S. by Mississippi, and W. by Fayette co. Watered by the Big Hatchy River and its tributaries. Surface mostly level; soil sandy and sterile.

Hardin County, Is., c. h. at Elizabethtown. Bounded N. and N. E. by Gallatin co., S. E. and S. by the Ohio River, separating it from Kentucky, and W. by Pope co. Drained by Big Creek, a mill stream flowing into the Ohio River. Surface rough and elevated. Iron and lead are abundant.

Hardin, Is., c. h. Calhoun co.

Hardin County, Ky., c. h. at Elizabethtown. Bounded N. by the Ohio River from Indiana, E. by the Rolling Fork of Salt River, separating it from Jefferson and Bullitt counties, S. by Laurel and Grayson, and W. by Breckenridge and Meade counties. Drained by branches of Green River.

Hardin County, O., c. h. at Kenton. Bounded N. by Hancock, E. by Crawford and Marion, S. by Union and Logan, and W. by Allen counties. It was organized in 1833, and has much valuable land, which is watered by the Scioto, Miami, and Tymochtee Rivers, and Blanchard's and Hoy Creeks.

Hardin, O., c. h. Shelby co. 85 miles W. N. W. from Columbus.

Hardinsburg, Ky., c. h. Breckenridge co. Half a mile E. from Hardin's Creek. 10 miles from the Ohio River, and 115 W. S. W. from Frankfort.

Hardin County, Te., c. h. at Savannah. Bounded N. by Henderson and Perry counties, E. by Wayne co., S. by Alabama and Mississippi, and W. by McNairy co. Watered by White Oak River, Swift Creek, and other small streams flowing into the Tennessee River, which traverses this county from N. to S.

Hardwick, Ms., Worcester co. Although the face of this town is rough, it has no very high lands, and its soil is deep, loamy, moist, and very fertile. This is one of the best grazing townships

in the county. It was settled in 1736, and was first called Lambstown, from the name of one of its first proprietors. Its Indian name was Wombemesisecook. There are a number of small streams in the town. Ware River washes its E. and S. boundaries, and 2 large ponds, one of which is called Pottabong, 2 miles in length, is well stored with fish. From Furnace village, in Hardwick, to the Brookfield depot, on the Western Railroad, is about 8 miles S.; from thence to Boston is 67 miles.

Hardwick, N. J., Warren co. Pelinskill, Beaver Brook, and the Bear branch of Pequest Creek water this town, the surface of which is hilly, and the soil fertile. 15 miles N. E. from Belvidere.

Hardwick, Vt., Caledonia co. Hardwick is finely watered by Lamoille River, which gives the town valuable mill sites. The soil is generally very good, and produces a variety of exports. There are in this town 3 small villages, called the Street, or Hazen's Road, Stevensville, and Lamoilleville; the latter is the largest. There is a mineral spring in the S. part of the town. About the year 1790, the first permanent settlement was made, by several families of the name of Norris, from New Hampshire. 12 miles N. W. from Danville, and 28 N. E. from Montpelier.

Hardy County, Va., c. h. at Moorefield. Bounded N. by the N. branch of the Potomac River, separating it from Maryland, and by Hampshire co., E. by Frederick and Shenandoah counties, S. by Rockingham and Pendleton counties, and W. by Randolph co. Watered by the N. and S. branches of the Potomac River, and by streams flowing into them. Some of the land bordering the streams is fertile, but the greater part is rough, rocky, and sterile.

Hardyston, N. J., Sussex co. Watered by the Walkkill River, and two of its branches rising in ponds in this town. Surface mountainous, being crossed by the Hamburg or Walkkill Mountains.

Harford County, Md., c. h. at Belair. Bounded N. by Pennsylvania, E. by the Susquehanna River and Chesapeake Bay, separating it from Cecil co., S. by Chesapeake Bay, and W. by Baltimore co. Watered by Deer Creek, Binum's and Winter's Runs, and the Little Falls of Gunpowder. Some of these streams afford good mill sites. The soil is diversified, and on Deer Creek the scenery is very beautiful and singular, the banks being formed of perpendicular rock from 200 to 300 feet in height. Limestone, iron, and chromate of iron are abundant in some portions of this county.

Harford, Pa., Susquehanna co. Watered by Martin's, Partner's, and Van Winkle's Creeks, all mill streams, and branches of Tunkhannock Creek. N. E. from Harrisburg 175 miles.

Harlan County, Ky., c. h. at Mount Pleasant. Bounded N. by Perry and Letcher counties, E. and S. by Virginia, and W. by Knox co. Watered by the Cumberland River and its branches. Surface very high, and broken by the Laurel Ridge on the N. W., and the Cumberland Mountains on the E. and S.

Harlan, Ky., c. h. Harlan co.

Harmar, O., Washington co. It is on the site of old Fort Harmar, on the S. bank of the Muskingum River. 164 miles E. S. E. from Columbus. The first fortification erected by the Americans in Ohio.

Harmony, Me., Somerset co. A fertile township, 53 miles N. by E. from Augusta.

Harmony, N. J., Warren co. 58 miles N. by W. from Trenton.

Harmony, N. Y., Chautauque co. Bounded on the N. E. by Chautauque Lake, and drained by Goose and Little Broken Straw Creeks. The surface is rolling; soil sandy loam and clay. 10 miles S. from Maysville, and 338 W. by S. from Albany.

Harmony, Pa., Susquehanna co. The Susquehanna River, and Starucca and Conewanta Creeks, its tributaries, water this town. Surface hilly, having Oquaga Mountain on the N. W.

Harper's Ferry, Va., Jefferson co. At the passage of Potomac River through the Blue Ridge. 173 miles N. from Richmond. See *Fashionable Resorts*.

Harpersfield, N. Y., Delaware co. Delaware and Charlotte Rivers water this town, the surface of which is hilly and broken, and the soil rich loam. 18 miles N. E. from Delhi, and 62 S. W. from Albany.

Harpwell, Me., Cumberland co., comprises a promontory in Casco Bay, and several islands surrounding it. The soil is fertile, and in summer the town is resorted to by invalids and parties of pleasure. 22 miles N. E. from Portland by water, and 4 S. E. from Brunswick.

Harwich, Ms., Barnstable co. This town is situated upon the S. side of the cape, and formerly included the town of Brewster, from which it was separated in 1803. It was settled by emigrants from Eastham and Plymouth in 1647. Harwich is most abundantly supplied with pure fresh water, having within its limits no less than 8 ponds, of from 1 to 6 miles in circumference, besides a considerable number of inferior ones. Long Pond, which divides Brewster from Harwich, is the source of Herring River. It is 3 miles long, and abounds with fish, and is on an elevation of 10 feet above the sea. All these ponds are of the greatest purity. The surface is gently undulating, more level than that of other towns on the cape, and is mostly covered with oak and pine wood. The soil is light, and well adapted to fruit trees. Harwich contains 3 handsome and thriving villages. The academy in the central village is a beautiful specimen of architecture, of the Doric order. 30 miles N. from Nantucket Harbor, from which island it is separated by the "Shoals" and the Vineyard Sound Channel. 14 miles E. from Barnstable.

Harrietstown, N. Y., Franklin co. This town contains Lower Saranac and several other small lakes, which are the sources of Racket and Saranac Rivers. It was incorporated from Duane in 1841, and a large part of it is a wilderness. 35 miles S. from Malone, and 190 N. by W. from Albany.

Harrington, N. J., Bergen co. Bounded on the E. by Hudson River, and drained by the Hackensack and its branches. Along the Hudson extend the Palisades, which are here elevated 400 feet. The surface elsewhere is level, and the soil rich loam.

Harris County, Ga., c. h. at Hamilton. Bounded N. by Troup, E. by Talbot, S. by Muscogee co., and W. by the Chattahoochee River, separating it from Alabama. Drained by Long, Flat Shoal, Mulberry, Pine, and other creeks flowing into the Chattahoochee. Pine Mountain traverses the N. part of this county.

Harris County, Ts., c. h. at Houston. S. E.

part. Touches Galveston Bay. Watered by San Jacinto and Buffalo Bayou.

Harrisburg, N. Y., Lewis co. Drained by Deer Creek, and has a productive soil. 12 miles N. W. from Martinsburg, and 140 from Albany.

Harrisburg, capital of the state of Pennsylvania, and seat of justice for Dauphin co., is situated on the E. bank of the Susquehanna River, about 100 miles N. W. by W. from Philadelphia. Population in 1800, 1472; in 1810, 2287; in 1820, 2990; in 1830, 4311; in 1840, 6020; in 1850, 8000. The town is built on a peninsula formed by the Susquehanna on the W. side, and Paxton Creek on the E. The northern part of the site is a gently-swelling hill, while the southern gradually sinks to a level plain, extending towards the junction of the creek with the river. It is regularly laid out, with several streets running parallel to the river, and others crossing them at right angles. The situation commands a fine view of the river and of the surrounding country. The Pennsylvania Canal passes along the vale of the Paxton Creek, E. of the town.

The Susquehanna is here divided into two channels by an island called Foster Island; and a fine bridge, nearly a mile in length, including the crossing of the island, connects Harrisburg, from the foot of Market Street, with Cumberland co., on the opposite side of the river. This bridge was finished in 1817, at a cost of \$192,000. Another bridge over the Susquehanna, built in 1837 for the Cumberland Valley Railroad, but having also a way for ordinary travel, enters the town two squares below. This is an immense structure, nearly 4000 feet in length, having 23 spans, averaging 173 feet, and two arched viaducts, one 53 and the other 84 feet wide. The railroad track passes upon the top of the bridge, and a double carriage way is beneath. The cost of this bridge was but a little short of \$100,000. This railroad connects Harrisburg with Chambersburg, 56 miles, W. by S., and there unites with the Franklin Railroad, extending to Hagerstown, in Maryland. Harrisburg is also connected by lines of railroad communication with Philadelphia on the E., and with Pittsburg on the W. It is brought into connection with a large portion of the interior of the state, as well as of the adjoining states, and of the west, by the great Pennsylvania Canal, with its various branches.

The State House at Harrisburg is a building of imposing appearance, having the advantage of a fine situation in the most elevated part of the town, facing towards the river, to which the ground gradually descends. The edifice consists of a main building, and two wings which were intended to be connected with the centre by walls, and are so placed that their porticoes are all in a range upon the front. The main building is 180 feet front by 80 feet deep, and two stories high. The chambers of the legislature are in the lower story, and the upper is appropriated to the Governor's room, and two rooms for the state library, which contains about 10,000 volumes. The wings are appropriated to the public offices.

The front of the main building is decorated with a circular portico of six Ionic columns, 4 feet in diameter and 36 feet high. The edifice is surmounted by a beautiful dome, the top of which is 108 feet from the ground. From the cupola is presented one of the finest prospects in the state.

The other public edifices are the Court House,

formerly occupied as a State House; the Masonic Hall, which is a large and handsome building; two Banks; the new Penitentiary, which is one of the most substantial and elegant buildings in the state, built in the style of a Norman castle; and the Lancasterian School House, a large two-story brick edifice, erected by the state; and several handsome church edifices. Of religious denominations in Harrisburg there are the Lutheran, Presbyterian, Episcopalian, German Reformed, Methodist, Baptist, Unitarian, and Roman Catholic.

There is an aqueduct for supplying the town with water from the Susquehanna River, called the Mount Airy Waterworks. The water is forced into the reservoir by a steam engine, and distributed over the town in iron pipes. The reservoir is on a hill N. of the capital, 90 feet above the river, and will contain 1,532,195 gallons. These works cost about \$120,000.

Harrisburg was laid out, to be the shire town of Dauphin co., in 1785. The original proprietor of the soil was John Harris, from whom the town is named. The ground on which the Capitol now stands was given by him for the public use. It was established as the seat of government for the state February 21, 1810.

Harrison County, Ia., c. h. at Corydon. Bounded N. by Washington co., E. by Floyd, S. E. and S. by the Ohio River, separating it from Kentucky, and W. by Crawford co. Drained by Blue River, and Big and Little Indian and Bucks Creeks. Surface hilly or uneven; soil tolerably good, and on the streams quite rich.

Harrison County, Ky., c. h. at Cynthiana. Bounded N. by Pendleton and Bracken counties, E. by Nicholas, S. by Bourbon, and W. by Scott co. Watered on the N. E. by Licking River, and drained by its S. fork and branches. Soil mostly fertile.

Harrison, Me., Cumberland co. Crooked River passes the E. side of this town, and the waters of Long Pond are its western boundary. This is a good township of land. Incorporated 1805. Harrison has Otisfield on the E., and is 75 miles W. S. W. from Augusta, and 45 N. W. from Portland.

Harrison County, Mi., c. h. at Mississippi City. Bounded N. by Perry co., E. by Jackson, S. by the Gulf of Mexico, and W. by Hancock co. Drained by Wolf and Red Rivers, and the Beloxi and its branches. Surface level; soil sandy.

Harrison, N. J., Hudson co. Situated between the Hackensack and Passaic Rivers. Has a level and marshy surface.

Harrison, N. Y., Westchester co. Drained by Mamaroneck Creek and Blind Brook. The surface is generally level, and the soil productive. 3 miles E. from White Plains, and 134 S. from Albany.

Harrison County, O., c. h. at Cadiz, is bounded on the N. by Carroll, Tuscarawas, and Jefferson, E. by Jefferson, S. by Belmont and Geunsey, and W. by Tuscarawas. The land is elevated, and has no large streams of water.

Harrison County, Ts., c. h. at Morehall. Near the E. border, on the Upper Sabine.

Harrison, Te., c. h. Hamilton co.

Harrison County, Va., c. h. at Clarksburg. Bounded N. by Tyler and Marion counties, E. by Barbour, S. by Lewis, and W. by Ritchie and Tyler counties. Drained by the W. fork of the Monongahela River and its branches, and by the

head branches of Middle Island Creek. Surface uneven; soil fertile.

Harrisonburg, La., c. h. Catahoola parish. On the W. side of Ouchitta River. 236 miles N. W. from New Orleans.

Harrisonville, Is., c. h. Monroe co. On the E. bank of the Mississippi River. 127 miles S. S. W. from Springfield.

Harrisonville, Mo., c. h. Cass co.

Harrodsburg, Ky., c. h. Mercer co. On a small branch of Salt River, 8 miles S. from Kentucky River, and is the seat of Bacon College. S. from Frankfort 31 miles. See *Harrodsburg Springs*, and *Colleges*.

Hart County, Ky., c. h. at Mumfordsville. Bounded N. by Laurel co., E. by Greene, S. by Barren, and W. by Edmonson. Surface level, and watered by Green River and Bacon Creek; soil of excellent quality.

Hartford County, Ct., c. h. at Hartford. This county is bounded N. by Hampden co., Ms., E. by Tolland co., S. by the counties of Middlesex and New Haven, and W. by the county of Litchfield. This is considered the most important and valuable county in the state, in regard to the variety and richness of its soil, and the high state of culture it has attained. It was constituted in 1666, since which, Tolland co. and parts of Middlesex, Windham, Litchfield, and New London have been detached. Its present limits comprise an area of about 727 square miles. Besides the Connecticut, which traverses its whole length, the Farmington, Hackanum, Podunk, Scantic, and other streams, water the county in almost every direction. On these streams important manufacturing establishments have sprung up, and unite with the agricultural interest and river trade in rendering this county the centre of a large and flourishing business.

Hartford, Ct., city, c. h. Hartford co. On the W. side of Connecticut River, 50 miles above its mouth, at the head of steamboat and coasting navigation. The river is navigable as far as Hartford by steamboats of 1000 tons' burden, and other coasting and sea-going vessels of light draught. It is 34 miles N. N. E. from New Haven, 44 N. W. from New London, 73 W. from Providence, R. I., 124 W. S. W. from Boston, 128 S. E. from Albany, and 118 N. E. from New York. It is one of the capitals of the state, the legislature meeting here and at New Haven alternately, in May of each year, the odd years at Hartford and the even years at New Haven. The state offices and records are kept at Hartford. The corporate limits of the city extend along the river from N. to S., over a mile, and from the river W. three fourths of a mile, embracing about 700 acres. In 1810, the population was 3955; in 1820, 4726; in 1830, 7076; in 1840, 9468; in 1850, 17,966. It is pleasantly situated upon a gently-rising eminence, sloping eastwardly to Connecticut River, and broken into graceful undulations on its western limits. It contains 73 streets and lanes, a portion of them running nearly parallel to the river, and others generally crossing them E. and W. Main Street, which extends from N. to S. quite through the city, and divides it into nearly equal divisions, is the great thoroughfare, and the seat of the principal retail trade. It is broad and nearly straight, and for more than a mile presents an almost unbroken range of brick and stone edifices, many of which are elegant. On this street

are the principal public buildings and churches. State Street, also a broad avenue extending from Main Street E. to Connecticut River, contains many elegant buildings, and is the seat of an active business. Near its junction with Main Street, it divides into two branches, enclosing the State House and the Public Square. Commerce Street runs along the bank of the river, is connected by a branch track with the several railroads entering the city, and has a large and commodious freight depot upon the wharf, at the terminus of the branch track, substantially built of brown freestone and brick. Asylum Street, extending W. from Main Street to the general railroad depot, is compactly occupied by large brick and freestone edifices, and is the seat of a very extensive and heavy business, chiefly in cotton and woollen domestic fabrics. The city, as a whole, is substantially and compactly built, of brick and stone, and exhibits a larger number of elegant edifices and more elaborate architecture than most cities of its size.

Hartford Bridge, which connects the city with East Hartford from the foot of Morgan Street, is a substantial wooden structure, 1000 feet in length.

Among the public buildings, the State House is conspicuous. It stands in the centre of the city, enclosed in a beautiful park surrounded by an ornamental iron railing, and adorned with fine shade trees. It is built of stone and brick; order Roman Doric, length 114 feet, width 76 feet, height of walls 54 feet, with two porticoes each 38 by 17 feet. On the basement a hall extends through the building from E. to W., having on the N. side a court room, and on the S. the public offices of the comptroller, treasurer, and school commissioner, and the governor's room. On the second floor, on the N. side of a corresponding hall, is the House of Representatives chamber, on the S. the Senate chamber, and in the western portico the office of the state secretary. In the Senate chamber is one of the best original paintings of Washington ever executed, painted by Stewart. The State House was erected in 1792. The cupola of this building commands one of the richest and most extensive landscape views in the country, embracing the scenery of the Connecticut River with its broad alluvial valley, crowned with luxuriant vegetation for many miles in every direction, and terminating only with the far distant blue highlands.

The City Hall, on Market Square, is an elegant structure of Grecian architecture; the basement occupied as a city market, the second floor as the city and police court rooms and other public offices, and the third floor as the public city hall.

Wadsworth Athenæum, standing on the W. side of Main Street, is a noble building, of light-gray granite, in the castellated Gothic style of architecture, devoted to historical and literary purposes. The north compartment is occupied by the "Young Men's Institute," the basement as lecture rooms, and the second floor for their library, containing some 10,000 volumes; the centre compartment contains a gallery of paintings, and other rooms devoted also to the fine arts and sculpture; the south compartment is appropriated to the use of the Connecticut Historical Society, and contains in its archives a large and highly interesting collection of histori-

cal antiquities, besides some 5000 volumes, and multitudes of ancient documents, pamphlets, and manuscripts. This building derives its name from the late Daniel Wadsworth, Esq., who gave the site upon which it stands.

Trinity College is situated on a gentle eminence in the S. W. part of the city. See *Colleges*.

The American Asylum for the Deaf and Dumb is in the immediate vicinity of the city, though outside of the corporate limits, as is also the Retreat for the Insane. The Asylum was the first institution for the instruction of deaf mutes ever established in this country. It was founded in 1817, chiefly through the instrumentality of the late Rev. Thomas H. Gallaudet, LL. D., its first principal, who visited Europe for the purpose of obtaining the requisite information. On his return in 1816, he was accompanied by Mr. Laurent Clerc, a deaf mute, who had been a successful teacher for several years in Paris, under the Abbé Sicard. He was at once secured as an associate instructor with Mr. Gallaudet, and the institution rose rapidly into public favor and confidence—the number of 7 deaf mutes, with which it commenced, soon increasing to 140, from all sections of the Union. Congress, in 1819, granted to the Asylum a township of land in Alabama, which has since been invested in a permanent fund. The main building was erected in 1820. It is 130 by 50 feet, and 4 stories high. Several other buildings, workshops, &c., have been since erected. The number of pupils averages about 200. This institution is an ornament to the city, the state, and the country, and an enduring monument of the Christian philanthropy and wisdom of its now departed founder.

The Retreat for the Insane, but little less interesting in the scale of human benevolence, stands on a commanding but easy eminence half a mile S. W. of the city. The site is admirably chosen, overlooking one of the most serene and lovely landscapes which can any where be found. In one direction, the eye embraces the city, with its spires, turrets, and towers; in others, extensive views of the Connecticut Valley and River, with its floating burden of steamers and other vessels; in others still, a number of thriving farming villages, embowered amid orchards and deep foliage, from whence the numerous white cottages and farm houses seem to peep forth; and in the immediate foreground the scenery is enriched by the ornamental and tasteful lawns and gardens of the institution, embracing some 17 acres, beautifully adorned with shrubbery and trees, and diversified with serpentine walks and carriage ways. The main building is about 410 feet long, consisting of a centre building 50 feet square, 3 stories above the basement, flanked with wings extending N. and S. 2 and 3 stories high, 144 by 30 feet, and terminating with two angular end buildings or halls, one at each end, 120 by 36 feet. The males occupy the north, and the females the south wings and halls, exclusively, except such patients, of both sexes, as have separate attendants, and rooms in the centre building. The institution accommodates 200 patients, and is considered a model one of its highly-beneficent class. It was founded in 1822.

The celebrated "Charter Oak" is among the objects of interest in Hartford. The original charter which it concealed and saved is still in a good state of preservation, in the office of the

state secretary. Within the ample scope of the capital C with which the manuscript charter commences, there is a spirited likeness of Charles II., executed by the original scribe, entirely with a pen.

There were, in 1852, 21 churches of the various denominations, and one Jewish synagogue.

There are 2 savings institutions, with a joint capital and deposits of over \$2,000,000; 5 fire insurance companies, with an aggregate capital of \$1,750,000; 5 life insurance companies, with an aggregate original and accumulated capital of \$2,138,100. The railroads which centre here, and whose stock is to a great extent owned in the city, are the Hartford, New Haven, and Springfield, and the Hartford, Providence, and Fishkill; the former connecting at New Haven with the New York and New Haven Railroad, and at Springfield with the Connecticut River Railroad, and the Western Railroad between Boston and Albany. The junction or main depot of these roads is an elegant structure of brown freestone, in the Italian Campenilli style of architecture; length from N. to S. 360 feet; width, fronting S. on Asylum Street, 94 feet; cost, \$60,000. For Banks, See *Banks*.

There are also 18 other incorporated companies, having an aggregate capital of about \$2,000,000, engaged in manufacturing and commercial enterprises, besides a vast number of heavy manufacturing and mechanical establishments, unincorporated, among which the pistol factory of Samuel Colt, Esq., for the manufacture of his world-renowned "revolver," Sharp's celebrated rifle factory, Tracey and Fales's extensive car factory, and Woodruff and Beach's mammoth iron foundery, stand conspicuous. The amount of articles manufactured within the city, for the year ending June 1, 1850, as appears from the last census returns, was \$3,619,389; and from the rapid increase of this interest in the city it is now (1852) estimated at one quarter more. The book trade is also very extensive.

The city is divided into six wards, and is under the corporate government of a mayor, chosen once in two years, six aldermen, twenty-four common councilmen, a clerk, treasurer, auditor, collector, judge, and two sheriffs, chosen annually. The Court of Common Council, which is the municipal legislative body, is composed of the mayor, aldermen, and councilmen, who meet in one assembly semi-monthly.

The Indian name of Hartford was *Suckiaug*. It was first settled by the English in the autumn of 1635, who gave it the name of Newtown, after the town of that name in Massachusetts, (now Cambridge,) from whence they migrated. In February, 1637, the General Court gave it the present name of Hartford, in honor of Mr. Stone, one of the principal settlers, who was born in Hartford, England. The Dutch had, however, explored the river, and had erected a rude fort on what is still called "Dutch Point," in the S. E. part of the city, prior to 1633. It was incorporated as a city in 1784.

Besides its college, it has the best system of public schools in the state, entirely free to every resident pupil, embracing every grade from the little "Primary," up to the noble "Free High School," furnished with an ample scientific and philosophical apparatus, and prepared to advance students of either sex to a high grade of scientific or classical educational attainment; all

supported partly from the public fund, and partly by a general tax on property.

A project is on foot for bringing to Hartford the water of the Connecticut from Enfield, 12 miles above, where the river has a rapid of 32 feet descent, as well to supply the city with water as for hydraulic use. This would give to the city immense advantages for manufacturing purposes. See *Windsor Locks*.

Hartford, Ky., c. h. Ohio co. On the S. side of Rough Creek, near the junction of Mead Creek, and 154 miles W. S. W. from Frankfort.

Hartford, Me., Oxford co. This excellent township is watered by ponds and small streams. It lies 31 miles W. from Augusta, and 15 N. E. from Paris.

Hartford, N. Y., Washington co. Drained by some small branches of Wood Creek. The surface is mostly hilly; soil clay and sandy loam. 14 miles N. from Salem, and 56 N. N. E. from Albany.

Hartford, Vt., Windsor co. Hartford is watered by White and Quechee Rivers, which are the only streams of consequence. They both afford very valuable privileges for mills. The surface is broken, but the soil is rich and warm. The timber is principally white pine, beech, maple, and birch. The gulf formed by the passage of Quechee River, through a considerable hill, is a curiosity. There are several villages in the town; the largest are White River village and Quechee village. The former is pleasantly situated on the banks of White River, about 1 mile from its mouth. The river is here crossed by a handsome bridge. Quechee village is situated around a considerable fall in Otta-Quechee River, about 5 miles from its mouth. The first settlers were Elijah, Solomon, and Benajah Strong. They emigrated from Lebanon, Ct., and came into this township with their families in 1764. 42 miles S. E. from Montpelier, and 14 N. from Windsor. The railroad from Boston to Burlington, via Montpelier, crosses the Connecticut here, and is crossed by the road up and down the river.

Hartland, Ct., Hartford co. It lies in a mountainous part of the state; most of the land is cold, and fit only for grazing. A branch of Farmington River passes through the town, and forms what is called *Hartland Hollow*, a deep ravine, presenting some bold and picturesque scenery. 22 miles N. W. from Hartford.

Hartland, Me., Somerset co. A good township. 42 miles N. by E. from Augusta.

Hartland, N. Y., Niagara co. It is drained by Johnson's and Eighteen Mile Creek. The surface is level; soil calcareous and sandy loam. 8 miles N. E. from Lockport, and 272 W. by N. from Albany.

Hartland, Vt., Windsor co. This is a rich farming township. Surface pleasantly diversified with hills and valleys. Connecticut River washes the eastern boundary, and at Quechee Falls, on this stream, are several mills. Quechee River runs across the N. E. corner, and Lull's Brook through the southern part of the town, and afford some of the best mill privileges in the state. A valuable bed of paint has been discovered here. The settlement of the township was commenced in May, 1763, by Timothy Lull, from Dummerston, Vt. 50 miles S. S. E. from Montpelier, and 9 N. from Windsor. The Connecticut River Railroad passes through the town.

Hartsville, Mo., c. h. Wright co. On the N. side of Wood's Fork of Gasconade River.

Hartwick, N. Y., Otsego co. The Susquehanna River and Otsego Creek water this town, the surface of which is hilly, and the soil sandy loam, very fertile in the valleys. 5 miles S. W. from Cooperstown village, and 75 W. from Albany. In the E. part of the town, on the bank of the Susquehanna, 73 miles W. from Albany, is the seat of a literary and theological seminary under the care of the Lutherans. See *Theological Schools*.

Harvard, Ms., Worcester co., was taken from Stow, Lancaster, and Groton in 1732, and received its name in honor of the founder of Harvard College. The town has a warm, strong, and fertile soil, but its surface is somewhat rocky and broken by hills. The Nashua washes its western boundary. The town is also watered by a small stream called Still River, and some ponds. Barc Hill Pond, a fine sheet of water, 3 miles in circumference, containing 2 small islands and affording some water power, lies a little to the eastward of Still River village. Hell Pond, so called from its great depth, 90 feet, and Robbins's Pond lie at the N. part of the town. These ponds contain fine perch and pickerel. A fine blue slate is found here. Still River village, in Harvard, lies 6 miles W. from the Littleton depot, on the Fitchburg Railroad, and 31½ miles from Boston. A society of Shakers reside in the N. part of the town.

Harwinton, Ct., Litchfield co. Har-winton derived its name from 3 syllables taken from the names of Hartford, Windsor, and Farmington. It was first settled in 1731, incorporated 1737. Harwinton is situated on high ground, abounding with granite rocks, and more fit for grazing than tillage.

Hastings, N. Y., Oswego co. Drained by Salmon Creek and several small tributaries of Oneida Lake. The surface is level; soil favorable to the growth of grass. 20 miles S. E. from Oswego, and 150 N. W. from Albany.

Hatfield, Ms., Hampshire co., was formerly a part of the town of Hadley. It lies on the W. side of Connecticut River. The surface is level, with a soil of an excellent quality, a good part of which is choice interval. Haydensville, at the S. W. part of the town, is a neat village, watered by Mill River. 5 miles N. from Northampton.

Hatfield, Pa., Montgomery co. Watered by Neshaming and Towamensing Creeks. Surface undulating; soil sandy loam.

Havana, Is., c. h. Mason co., occupies a high, sandy ridge on the E. bank of Illinois River, opposite the mouth of Spoon River, and 45 miles N. N. W. from Springfield.

Haverford, Pa., Delaware co. Watered by Cobb's and Darby Creeks. Surface hilly; soil rich sandy loam. 95 miles S. E. from Harrisburg.

Haverhill, Ms., Essex co., is a town of uncommon beauty. It is situated on the N. side of Merrimac River, over which are two handsome bridges. It is at the head of navigation on the Merrimac River. Little River and other streams give Haverhill a fine hydraulic power. The soil is very good and highly cultivated. From "Golden Hill," and "Silver's Hill," two of the most commanding eminences in the town, the landscape scenery is delightful. Near the centre of the town are Plug, Round, and Great Ponds; and, in the W. parish, Creek Pond. The two

latter are celebrated for their beautiful scenery and fine fish. These ponds cover an area of 780 acres. At the N. part of the town, on the brow of a hill, is a large rock called the "Corner Stone," located at the corner of 4 towns. 16 miles N. E. from Lowell, and 32 N. from Boston, by the Boston and Maine Railroad.

Haverhill, N. H., Grafton co. This is one of the shire towns, and is watered by Oliverian and Hazen Brooks. The soil is suited to every species of cultivation common to the climate. There is a quarry of granite suitable for mill stones and buildings, and a bed of iron ore, on the W. side of Benton, bordering this town. The principal village is called Haverhill Corner; in it is a beautiful common, of an oblong square; the situation is elevated, overlooking the adjacent country for many miles. There is also another village, on a street nearly a mile in length, straight and very level. Several of the early settlers were from Newbury and Haverhill, Ms., from which latter place this town derived its name. Fine crystals are found here. First settler, Captain John Hazen, in 1764. Distances 31 miles N. W. from Plymouth, and 99 N. N. W. from Concord, by railroad. It also has railroad connection with New York, Montreal, and Boston.

Haverstraw, N. Y., Rockland co. Watered by 2 or 3 small tributaries of the Hudson River, which bounds it on the E. Stony Point, an important military post during the revolutionary war, is in this town. The surface is hilly and mountainous, being partly covered by the Dunderberg Mountain. The soil in the valleys is chiefly clay loam of good quality. 7 miles N. from New City, and 116 S. from Albany.

Havre de Grace, Md., Hartford co. On the W. bank of Susquehanna River, at its entrance into Chesapeake Bay. It is on the railroad between Wilmington and Baltimore, and at the termination of the Susquehanna Canal.

Hawkins County, Te., c. h. at Rogersville. It is bounded by Virginia, E. by Sullivan co., S. by Greene and Jefferson, and W. by Grainger and Claiborne counties. Surface mountainous, and drained by Holston and Clinch Rivers and branches.

Hawley, Ms., Franklin co. This town lies on the Green Mountain range, and is the source of some of the head waters of Deerfield River. The surface is rough, but the soil good. There is good iron ore in the town. 14 miles W. by S. from Greenfield, and 104 W. by N. from Boston.

Haywood County, N. C., c. h. at Waynesville. On the western border. A highly-elevated tract; in its lowest portions 1500 feet above the ocean. Separated from Tennessee by the Smoky ridge. Touches the Blue Ridge on the S. Drained by the Big Pigeon branch of the French Broad, one of the south-eastern tributaries of the Tennessee. Among the inhabitants are 710 Cherokee Indians.

Haywood County, Te., c. h. at Brownsville. W. part watered by the Forked Deer and Hatchee, tributaries of the Mississippi, which flow through it. Flat and fertile.

Hayz County, Ts., c. h. at San Marcus.

Heard County, Ga., c. h. at Franklin. Bounded N. by Carroll co., E. by Coweta, S. by Troup, and W. by Alabama. The Chattahoochee River traverses this county. Surface level; soil tolerably good.

Heath, Ms., Franklin co. Heath is a mountainous township. Some of the head waters of

the W. branch of Deerfield River flow through it. 13 miles N. W. by W. from Greenfield, and 103 N. W. by W. from Boston.

Heathsville, Va., c. h. Northumberland co. Near the head of Coan River. 98 miles E. by N. from Richmond.

Hebron, Ct., Tolland co. Hop River, a branch of the Willimantic, waters this town. The village of Hebron, with its Gothic church, is pleasant and commands a good prospect. The surface of the town is hilly, but fertile. North Pond, in the S. part of the town, is a handsome sheet of water. Hebron was first settled 1704; incorporated 1707. 20 miles S. E. from Hartford.

Hebron, Me., Oxford co. This is a good farming town, lying S. E. from Paris about 7 miles, and 42 W. S. W. from Augusta. Incorporated 1792.

Hebron, N. H., Grafton co. A considerable part of Newfound Lake lies in the S. E. part of this town. It has no river, nor any important streams. Nearly one half of the town was included in the grant of Cockermonth, now Grotton. The remaining part was taken from Plymouth. 9 miles S. W. from Plymouth, and 40 N. W. from Concord.

Hebron, N. Y., Washington co. Watered by Black Creek. The surface is hilly; soil sandy loam, yielding good crops of grass and grain. 8 miles N. from Salem, and 52 N. E. from Albany.

Hebron, O., Licking co. At the intersection of the Ohio Canal with the national road. It is 9 miles from Newark, and 27 from Columbus.

Hector, N. Y., Tompkins co. On the S. E. border of Seneca Lake. Drained by several small creeks. The surface is high and somewhat uneven; soil suitable for grass. 14 miles W. from Ithaca village, and 186 W. from Albany.

Heidelberg, Pa., Berks co. Tulpehocken Spring, and Cacoosing Creeks water this town. Surface hilly in some portions; soil rich calcareous loam and gravel, well suited to the growth of grass and grain.

Heidelberg, Pa., Lebanon co. Drained on the N. E. by Mill, a branch of Tulpehocken Creek, and on the S. W. by Hammer Creek, a branch of the Conestoga River, both mill streams. Surface level; soil good.

Heidelberg, Pa., Lehigh co. Bounded on the E. by the Lehigh River, and drained by Trout and Jordan's Creeks. The Blue Ridge crosses the N. part of this town, and at the N. E. extremity is the Lehigh Water Gap. Soil gravelly.

Heidelberg, Pa., York co. Codorus and Hammer Creeks water this town, the surface of which is level, and the soil a rich calcareous loam. 15 miles S. W. from York.

Helena, As., c. h. Phillips co. On the W. bank of Mississippi River. 122 miles E. from Little Rock.

Hellam, Pa., York co. Bounded N. W. by Codorus Creek, and N. E. by the Susquehanna River, and drained by Grist Creek. Surface level; soil fertile, being based upon limestone. 29 miles S. from Harrisburg.

Hemlock, Pa., Columbia co. Mahoning, Great and Little Fishing, and Hemlock Creeks drain this town, and along its S. border run the Susquehanna River and State Canal. Surface varied; soil clay and loam.

Hempfield, Pa., Westmoreland co. Bush, and Big and Little Sewickly Creeks water this town. Surface hilly; soil gravel and loam.

Hempstead County, As., c. h. at Washington.

Bounded N. by Pike co., E. by Clark and Washita, S. by Lafayette, and W. by Sevier co. Watered on the N. E. by the Little Missouri and branches, and W. by Red River. Soil mostly poor.

Hempstead, L. I., Queen's co., N. Y. Situated 22 miles E. from the city of New York, and 167 miles S. by E. from Albany. The township is large, extending across Long Island, including several villages, and an extensive heath of 15,000 acres, called Hempstead Plains, which lies untilled, and is occupied as a common pasturage ground. The surface is level, and the soil light, but capable of being rendered highly productive by cultivation. It is drained by several streams running S. into Hempstead Bay, Jamaica Bay, and the Atlantic. There are several islands belonging to this town, the largest of which are Hog Island and Great Island, near the Atlantic shore. On the same shore are Rockaway Beach and Long Beach, which are places of much resort from the cities of New York and Brooklyn during the summer months.

The principal village, and that which bears the name of the town, is delightfully situated on the southern margin of the great Hempstead Plains. It contains a Presbyterian, an Episcopal, and a Methodist church, an academy and a female seminary. A branch railroad, 2 miles long, connects this place with the Long Island Railroad. It is a most agreeable and healthful place of residence in the summer season.

North Hempstead is another village in this town, situated at the head of Hempstead Harbor, on the N. side of Long Island, where there is a small population, and considerable business in manufacturing, and in sloop navigation on the Sound.

Henderson County, Ky., c. h. at Henderson. Bounded N. by the Ohio River, separating it from Indiana, E. by Owen co., S. by Madison, and W. by Union. Green River traverses the N. E. part of this county, and forms a part of the E. boundary. Canoe River waters the central portions, and Highland Creek waters its S. W. border.

Henderson, Ky., c. h. Henderson co. On the S. bank of the Ohio River, 44 miles above the mouth of the Wabash, and 197 miles from Frankfort.

Henderson County, N. C., c. h. at Hendersonville. Bounded N. by Buncombe, and E. by Rutherford co., S. by South Carolina, and W. by Macon and Haywood counties. Watered by French Broad River and tributaries. Surface mountainous; soil good, and particularly well adapted to grazing.

Henderson, N. Y., Jefferson co. This town comprises Stony, Gallop, and Little Gallop Islands, in Lake Ontario. It is drained by Stony and Little Stony Creeks. The surface is level; soil rich sandy loam. 15 miles S. W. from Wartetown, and 162 N. W. from Albany.

Henderson, Pa., Huntingdon co. The Juniata River forms the S. W. and W. boundary of this town.

Henderson County, Te., c. h. at Lexington. Bounded N. by Carroll, E. by Perry, S. by Hardin and McNairy, and W. by Madison co. Drained by Big Sandy River, the head branches of Beech River, and the S. fork of Forked Deer River. Surface mostly level; soil fertile, yielding good crops of grass, grain, and grapes.

Henderson County, Ts., c. h. at Buffalo. In the N. E. angle. On the upper waters of Trinity.

Henderson County, Is., c. h. at Oquaka. On the N. W. border. Washed by the Mississippi.

Hendersonville, N. C., c. h. Henderson co. On French Broad River. 490 miles W. of Raleigh.

Hendricks County, Ia., c. h. at Danville. Bounded N. by Boone, E. by Marion, S. by Morgan, and W. by Putnam and Montgomery counties. Drained by Eel River, and White Lick and Mud Creeks, affording good hydraulic power. Surface undulating; soil fertile.

Hennepin, Is., Putnam co. On the E. bank of Illinois River, at the great bend, and on the border of De Pru prairie. N. from Springfield 118 miles. At a moderate stage of water, steamboats go up to this place.

Henniker, N. H., Merrimac co. Few places afford better prospects for the successful operation of water machinery than this town. Contoocook River passes through its centre. There are several ponds of considerable size. Long Pond is the largest, being between 1 and 2 miles in length, and from 40 to 80 rods wide. Craney Hill is the principal elevation. It is mostly in a state of cultivation. The soil of the hills is favorable for wheat; the valleys produce good crops of corn. Henniker received its present name from Governor Wentworth, in honor of his friend Henniker, probably John Henniker, Esq., a merchant in London, and a member of the British Parliament. First settler, James Peters, in 1761. Distances, 23 miles N. W. from Amherst, and 15 W. from Concord.

Henrico County, Va., c. h. at Richmond. Bounded N. and N. E. by the Chickahominy River, separating it from Hanover and New Kent counties, S. E. by Charles City co., S. and S. W. by James River, separating it from Chesterfield co., and N. W. by Goochland co. Surface undulating; soil various.

Henrietta, Mn., Jackson co.

Henrietta, N. Y., Monroe co. Watered on the W. by the Genesee River. The surface is rolling; soil very fertile. 10 miles S. from Rochester, and 228 W. by N. from Albany.

Henrietta, O., Lorain co. This township is situated on the great E. and W. mail road. 35 miles W. from Cleveland, and 133 N. E. from Columbus.

Henry County, Ga., c. h. at Abbeville. Bounded N. by Barbour co., E. by the Chattahoochee River, separating it from Georgia, S. by Florida, and W. by Dale co. Soil sterile, and watered by branches of the Chattahoochee River.

Henry County, Ga., c. h. at McDonough. Bounded N. by De Kalb, E. by Newton and Butts, S. by Pike, and W. by Fayette co. The Ockmulgee River forms its N. E. boundary. Drained by branches of Ockmulgee and Flint Rivers.

Henry County, Is., c. h. at Morriston. Bounded N. by Whitesides, E. by Bureau, S. E. by Stark, S. by Knox, and W. by Mercer and Rock Island counties. Watered by Rock, Green, and Edwards Rivers. The N. part of this county is low and marshy, but in some portions the soil is fertile.

Henry County, Ia., c. h. at New Castle. Bounded N. by Delaware co., E. by Randolph and Wayne, S. by Fayette and Rush, and W. by Hancock and Madison counties. Drained by Flat Rock and Blue Rivers and Fall Creek, affording some water power. Surface slightly uneven in some parts, but mostly level.

Henry County, Io., c. h. at Mount Pleasant.

Bounded N. by Washington and Louisa counties, E. by Des Moines, S. by Lee, and W. by Van Buren and Jefferson counties. Watered by Checaque or Skunk River and its branches, and Big Brush and Little Cedar Creeks. Surface high and rolling; soil very fertile.

Henry County, Ky., c. h. at New Castle. Bounded N. by Carroll co., E. by Owen and Franklin, S. by Shelby, and W. by Oldham and Trimble counties. The Kentucky River forms its N. E. boundary, and its branches, with those of the Little Kentucky, drain the surface of this county.

Henry County, Mo., c. h. at Clinton. Bounded N. by Johnson co., E. by Benton, S. by St. Clair, and W. by Bates and Van Buren counties. Drained by Grand, a branch of Osage River.

Henry County, O., c. h. at Napoleon. This county is in the north-western part of the state, and is well watered by several small streams and the Maumee River, which passes through its centre from W. to E. In some parts, the soil is very rich and productive. It is a flourishing county, and has the Wabash and Erie Canal passing through it.

Henry County, Te., c. h. at Paris. Bounded N. by Kentucky, E. by the Tennessee River, separating it from Steward co., and by Benton co., S. by Carroll, and W. by Weakley co. Drained by the Big and Little Sandy Rivers, and the middle and S. forks of Obion River.

Henry County, Va., c. h. at Martinsville. Bounded N. by Franklin, E. by Pittsylvania co., S. by North Carolina, and W. by Patrick co. Drained by Smith's and Mary's, and branches of Dan River.

Henry Clay, Pa., Fayette co. The Youghiogony River and branches water this town. Surface mountainous; soil gravel.

Hepburn, Pa., Lycoming co. Watered on its boundaries by Plunket's, Loyalsock, and Lycoming Creeks. Surface hilly and mountainous; soil gravel and slate. 9 miles N. from Williamsport.

Herculaneum, Mo., Jefferson co. On the W. bank of Mississippi River. 30 miles below St. Louis, and 160 miles from Jefferson City. A great mart of the surrounding lead region. There are several shot factories here.

Hereford, Pa., Berks co. Watered by Perkiomen Creek and its W. branch. On the N. E. is Shroub's Mountain. 80 miles E. from Harrisburg.

Herkimer County, N. Y., c. h. at Herkimer. This county was incorporated in 1791, but has since been enlarged. It is bounded N. by St. Lawrence, E. by Hamilton, Fulton, and Montgomery, S. by Otsego, and W. by Oneida and Lewis counties. It contains numerous lakes and ponds, which are the sources of Black, Moose, Independence, and Beaver Rivers, and West Canada Creek. The Mohawk River also crosses its S. part. Surface hilly and mountainous, being traversed by Adirondack range; soil extremely fertile in the valley of the Mohawk, and in the N. parts well adapted to the growth of grass. This county affords iron ore, gypsum, lead, and in the vicinity of Little Falls are found most exquisite specimens of rock crystal. The Utica and Schenectady Railroad here follows the N., and the Erie Canal the S. shores of the Mohawk River.

Herkimer, N. Y., c. h. Herkimer co. On the N. bank of the Mohawk River, and watered

by West Canada Creek. The surface is hilly on the N., and the soil extremely fertile along the valley of the Mohawk. 80 miles N. W. from Albany.

Hermon, Me., Penobscot co. A good township of land, 7 miles W. from Bangor. A large pond and the Sowadabscok River water its S. W. corner. Incorporated 1814.

Hermon, N. Y., St. Lawrence co. The surface of this town is rolling, and drained by a few small streams; the soil clay loam, favorable to the growth of grass. 15 miles S. from Canton, and 199 N. W. from Albany.

Hernando, Mi., c. h. De Soto co. 18 miles E. of Mississippi River, and 202 from Jackson.

Herrick, Pa., Susquehanna co. Drained by the head branches of Lackawannock River. Surface hilly, Elk Mountain lying in the S. W. part; soil clay and gravel. 20 miles S. E. from Montrose.

Hertford County, N. C., c. h. at Winton. Bounded N. and E. by the Chowan River, separating it from Gates and Chowan counties, S. by Bertie, and W. by Northampton co. Drained by branches of the Chowan River.

Hertford, N. C., c. h. Perquimans co. On the S. side of Perquimans River, near its entrance into Perquimans Bay. 194 miles N. E. by E. from Raleigh.

Hewletton, N. Y., St. Lawrence co. On Oswegatchie River. 7 miles from Ogdensburg, and 203 N. W. from Albany.

Hickman County, Ky., c. h. at Clinton. Bounded N. by Ballard, E. by Graves co., S. by Tennessee, and W. by the Mississippi River, separating it from Missouri. Watered by Little Obion River and branches, and Bayou Desha Creek.

Hickman County, Te., c. h. at Centreville. Bounded N. by Dickson co., E. by Williamson and Maury, S. by Lawrence and Wayne, and W. by Perry and Humphrey counties. Watered by Duck River and its tributaries.

Hickory County, Mo., c. h. at Hermitage. S. W. central. Pomme de Terre River, a tributary of the Osage, runs N. through it.

Hicksford, Va., c. h. Greenville co. On the S. W. of Meherin River, 62 miles S. from Richmond. The Petersburg Railroad here crosses the Meherin, on a magnificent stone viaduct.

High Falls, N. Y., Ulster co. On Rondout Creek, 69 miles S. from Albany. It has a good water power. The Delaware and Hudson Canal passes here.

Highgate, Vt., Franklin co. The Missisco River passes through the township. About 6 miles above Swanton Falls is a fall in the river of about 40 feet, affording some excellent mill privileges. Rock River is in the N. part of the township. The soil is mostly sandy, and covered with pine, except along the course of the Missisco River, where the timber is hemlock, ash, &c., and in the S. E. corner, which constitutes a part of what is called Hog Island, and is marshy. Bog iron ore is found in great abundance. The first settlers were Germans, mostly soldiers who had served in the British army during the revolution, but the time of their settlement is not known. The town was chartered in 1763. 70 miles N. W. from Montpelier, and 12 N. from St. Albans.

Highland County, O., c. h. at Hillsboro'. Clinton and Fayette counties bound it on the N., Ross and Pike on the E., Adams and Brown on the S., and Brown co. on the W. It takes its name from its elevated position, and has rolling land,

well watered by permanent springs and the head waters of Paint, Brush, and Whiteoak Creeks, and the E. fork of Little Miami.

Highland County, Va., c. h. at Monterey. North-east central part. On elevated table land, rough and sterile, containing the interlocking head springs of the Potomac, (S. branch,) and of the James River.

Hill, N. H., Grafton co. Watered by Pemigewasset and Smith's Rivers, and several small streams. Eagle Pond is the only one of note. Ragged Mountain is of considerable elevation. The soil in some parts is rich and fertile; it is generally good. At the S. E. section is a flourishing village, situated on a spacious street, 1 mile in length. This town was granted, September 14, 1753, to 87 proprietors, who held their first meeting at Chester. As most of the inhabitants belonged to that place, it was called New Chester, until January, 1837. First settlers: Captain Cushing Favor and Carr Huse, Esq., settled in 1768. 24 miles N. N. W. from Concord, and 44 S. S. E. from Haverhill.

Hillsboro' County, Fa., c. h. at Tampa. Bounded N. by Benton, E. by Musqueto, S. by Monroe co., and W. by the Gulf of Mexico. Watered in the N. interior by Tampa Bay, and drained by Hillsboro', Alafia, and Asterol Rivers. Soil various, being very fertile in some parts.

Hillsboro', Is., c. h. Montgomery co. 64 miles S. from Springfield.

Hillsboro', Mi., c. h. Scott co.

Hillsboro', Mo., c. h. Jefferson co. On the E. side of Big River. 132 miles E. from Jefferson City.

Hillsboro', N. C., c. h. Orange co. On the Eno, a branch of Neuse River. 40 miles N. W. from Raleigh.

Hillsboro' County, N. H., c. h. at Amherst. Merrimac co. is on the N., Rockingham on the E., the state of Massachusetts on the S., and Cheshire co. on the W. The surface is generally uneven, though there are but few lofty mountains. Lyndeboro', Unconconock, and Crotched are of considerable altitude. This county is well watered by Merrimac, Nashua, Souhegan, and Piscataquog Rivers. Massabesick Lake lies on the E. boundary of Manchester. There are numerous ponds here; the largest are Gregg's, Pleasant, Babboosuck, and Potanipo. This county possesses many advantages for manufacturing establishments. Its settlement was made at Nashua, lately Dunstable, some years before the war with King Phillip, in 1665. It received its name from the Earl of Hillsboro', one of the privy council of George III.

Hillsboro', N. H., Hillsboro' co. This town is well watered by Contoocook and Hillsboro' Rivers, which streams form a junction on the S. line of the town. The land is uneven, but affords many good farms. Fine plumbago is found here. Four pleasant villages are in this town. The largest is called Hillsboro' Bridge, is situated on both sides of Contoocook River, and has considerable trade. First settlers, Jas. McCalley, Sam. Gibson, Robt. McClure, Jas. Lyon, and others, in 1741. 23 miles N. W. from Amherst, and 30 W. S. W. from Concord.

Hillsboro', N. J., Somerset co. Bounded N. by the S. branch of the Raritan, and E. by Millstone River, and drained by Roy's Brook, a branch of Millstone River. Surface level on the E., and hilly on the W; soil red shale and clay loam.

Hillsboro', O., c. h. Highland co. Near the source of Rocky Fork of Paint Creek, and is noted for its elevated and healthy situation. 62 miles S. W. from Columbus, and 36 W. by S. from Chillicothe.

Hillsboro', Pa., Washington co. 203 miles W. from Harrisburg. On the national road on the high land, 1002 feet above the Ohio River at Wheeling.

Hillsdale County, Mn., c. h. at Jonesville. Incorporated in 1835. Bounded N. by Calhoun and Jackson counties, E. by Lenawee co., S. by Ohio, and W. by Branch co. Drained by St. Joseph River, of Lake Michigan, St. Joseph, a branch of Maumee River, Hog and Sandy Rivers, Little St. Joseph, Goose and Tiffin's Creeks, and the S. branch of the Kalamazoo River. Surface high and undulating; soil fertile sandy loam. This county contains iron ore, and sandstone suitable for grindstones.

Hillsdale, Mn., c. h. Hillsdale co. This village is on the outlet of St. Joseph, or Baubese Lake, near the mouth of French Creek, on the Southern Michigan Railroad, and 98 miles W. S. W. from Detroit. It has extensive water power.

Hillsdale, N. Y., Columbia co. Copake and Aneram Creeks water this town, which is partly covered by the Taghkanic Mountain. The soil consists chiefly of clay and gravelly loam. 13 miles E. from Hudson, and 43 S. E. from Albany.

Hilltown, Pa., Bucks co. Watered by branches of Nishaminy Creek. 100 miles E. from Harrisburg.

Hinds County, Mi., c. h. at Raymond. Bounded N. by Madison co., E. by Pearl River, separating it from Franklin co., S. by Copiah, and W. by Claiborne and Warren counties. The Big Black River forms the N. W. boundary. Surface level; soil mostly fertile.

Hinesburg, Vt., Chittenden co. There is in the N. part of the town a high ridge of rough land, called Richard Mountain. The W. part has generally a level surface, interspersed with small hillocks. In the eastern part the land is hilly and broken, containing, however, a good share of feasible, fertile, and valuable land. The forests consist of hard timber, generally. There were some beaver meadows, one of which contained between 100 and 200 acres. The principal streams are Lewis Creek, Laplat River, and Pond Brook, which afford an abundant water power. The first inhabitants were a Mr. Isaac Lawrence and family, from Canaan, Ct. They came here before the revolutionary war, left when the war commenced, and returned in 1783. 12 miles S. S. E. from Burlington, and 36 W. from Montpelier. The Rutland Railroad passes through this town.

Hinesville, Ga., c. h. Liberty co. 14 miles N. E. from Riceboro', and 196 S. E. from Milledgeville.

Hingham, Ms., Plymouth co. Hingham is a pleasant town on Boston Harbor. It was first settled in 1633, and named after a town in England. This town is remarkable for the health and longevity of its inhabitants. There is a well-endowed academy here, named, from its founder, Derby Academy. An elegant steam packet plies between Hingham and Boston for 9 months of the year. The passage among the islands is truly delightful. Turkey, Baker's, Otis, Pleasant, and Squirrel Hills present extensive and delightful views of the bay and sur-

rounding country. 12 miles S. E. from Boston by water, and 14 by land, over the South Shore Railroad.

Hinsdale, Ms., Berkshire co. This town lies on the west side of the Green Mountain range, and is watered by a branch of Housatonic River. On the banks of this stream and its tributaries is excellent meadow land. This town was formerly a part of old Partridgefield, now Peru, and was first settled about the year 1762. It was named after the worthy and Rev. Theodore Hinsdale, who came and gathered a church in 1795. 143 miles W. from Boston, and 8 E. by S. from Pittsfield.

Hinsdale, N. Y., Cattaraugus co. Drained by Ischua and Olean Creeks, and contains a small lake, called the Reservoir. The surface is hilly; soil favorable to the growth of grass. 15 miles S. E. from Ellicottville, and 281 W. by S. from Albany.

Hinsdale, N. H., Cheshire co. This town is well watered with springs and rivulets of the purest water. The Connecticut washes its western border, and the Ashuelet runs through the centre, forming a junction with the Connecticut a little below the bend called Cooper's Point. Kilburn and Ash Swamp Brooks are found here. There are several islands in the Connecticut in this town. On the N. line of Hinsdale is West River Mountain; in it are found iron ore and some other minerals. S. of Ashuelet is Stebbin's Hill, a tract of excellent land. On the point of a hill not far from the Connecticut River are to be seen the remains of an Indian fortification. Hinsdale was originally a part of Northfield, and received its name from Colonel Ebenezer Hinsdale, one of the principal inhabitants. 75 miles S. W. by W. from Concord, and about 15 S. W. from Keene, with which it is connected by a railroad.

Hiram, Me., Oxford co. This town lies on both sides of a branch of Saco River, 86 miles W. S. W. from Augusta, and 40 S. W. from Paris. The township is fertile, and productive of wool and wheat. Incorporated 1807.

Hiram, O., Portage co., is a fertile, well-cultivated township, having Geauga on the N. It is 148 miles N. E. from Columbus.

Hitchcockville, Ct., Litchfield co. On the W. branch of Farmington River, which affords good water power. N. W. from Hartford 26 miles. An enterprising manufacturing place.

Hoboken, N. J., Hudson co. This fine summer resort lies on the W. bank of Hudson River, opposite New York city, and 60 miles N. E. from Trenton. See *Fashionable Resorts*.

Hocking County, O., c. h. at Logan. Fairfield and Perry counties bound it on the N., Athens on the E., Jackson on the S., and Ross co. on the W. Part of the land is hilly and broken, but that which lies on the Hocking River is fertile and valuable. The head waters of Raccoon and Salt Creeks are found here. The county was established in 1818.

Holmesville, Ga., c. h. Appling co. 177 miles S. S. E. from Milledgeville.

Holmesville, Mi., c. h. Pike co. On the W. side of Bogue Chitto River. 87 miles S. from Jackson.

Honeybrook, Pa., Chester co. Drained by branches of Brandywine River. Surface gently sloping; soil sandy loam. 38 miles N. W. from Philadelphia.

Hodgdon, Me., Aroostook co. Incorporated 1832. 179 miles from Augusta.

Holden, Me., Oxford co. A new town. Taken from Brewer in 1852.

Holden, Ms., Worcester co., was formerly a part of Worcester, and was called North Worcester until 1740. The surface of this town is broken by hills; the soil is very good, producing a variety of hard wood and some pine. There are several beautiful ponds in the town, some of which are the sources of Quinepoxet River, and which, united, form the S. branch of the Nashua. These waters, with branches of the Blackstone, give the town a good hydraulic power. 6 miles N. N. W. from Worcester, and 50 from Boston.

Holderness, N. H., Grafton co. The soil is hard, and not easily cultivated, but when subdued is quite productive. The Pemigewasset and Squam Rivers, and several other streams, fertilize the soil. There are three ponds here; also beautiful scenery and fine fishing. First settler, William Piper, in 1763. 6 miles N. E. from Plymouth. The Concord and Montreal Railroad passes through the town. 36 miles from Concord.

Holland, Ms., Hampden co. This is a small, mountainous, well-watered town, and was formerly a part of Brimfield. The Quinebaug River passes nearly through the centre of the town, and receives the waters of Mill and Stevens's Brooks. Gould and Holland Ponds are handsome sheets of water, and add much to the highland scenery of the town. The soil is strong. 23 miles E. by S. from Springfield, and 70 S. W. by W. from Boston.

Holland, N. Y., Erie co. Drained by Cazenove and Scueca Creeks. The surface is elevated; soil sandy loam and moist clay. 24 miles S. E. from Buffalo, and 281 W. from Albany.

Holley, N. Y., Orleans co. The Erie Canal passes over Sandy Creek at this place, by means of an embankment 75 feet above the bed of the stream. W. N. W. from Albany 240 miles.

Hollidaysburg, Pa., c. h. Blair co. The termination of the eastern section of the Pennsylvania Canal.

Holland, Vt., Orleans co. This is an excellent township of land, producing in great abundance all the varieties common to the climate. There is a large pond situated in the N. E. part of the town, and several small ponds. The streams are small, part flowing N. into Canada, and part S. into Clyde River. The settlement was commenced in 1800, by Edmund Eliot and Joseph Conal. 18 miles N. E. from Irasburg, and 58 N. E. from Montpelier.

Hollis, Me., York co. This town lies on the W. bank of Saco River, and contains numerous mill sites. It lies 30 miles N. from York. It is bounded on the W. by Waterboro', and on the N. by Limington and Buxton. Quantities of lumber of various kinds, and wood, annually pass to market from this place by the Saco River.

Hollis, N. H., Hillsboro' co. Nashua and Nisitissit Rivers water this town. There are four ponds, named Flint's, Penichork, Long, and Rocky Ponds. There is a pleasant village near the centre of the town. The original name of Hollis was Nisitissit, its Indian name. It has a variety of soils. First settler, Captain Peter Powers, in 1731. 8 miles S. from Amherst, and 38 S. from Concord.

Holliston, Ms., Middlesex co. The surface is pleasantly diversified; the soil good and well cul-

tivated. A number of small streams give the town some water power, and Winthrop's Pond some pleasant scenery. This town was formerly the western parish of Sherburne. It was first settled in 1710, and named, at its incorporation in 1724, after Thomas Hollis, of London, a patron of Harvard College. 20 miles S. from Concord, and 23 S. W. by S. from Boston.

Holmes, Va. New.

Holmes, Md., c. h. at Lexington. Bounded N. by Carroll co., E. by the Big Black River, separating it from Attala co., S. by Yazoo co., and W. by the Yazoo River, separating it from Washington co.

Holmes, Mi., c. h. Pike co.

Holmes, Ms., Dukes co. A safe and spacious harbor on the N. side of Martha's Vineyard, in the town of Tisbury, much resorted to by ships passing between New York and the eastward. There is a sufficient depth of water for vessels of the largest class. S. S. E. from Boston 89 miles.

Holmes, O., c. h. at Millersburg. Wayne co. bounds it on the N., Stark and Tuscarawas on the E., Coshocton on the S., and Knox and Richland on the W. The soil is good. It was organized in January, 1825, and is watered by the Killbuck, Lake Fork of Mohican, Paint Creek, Salt Creek, Martin's Run, Double Eyes Fork, Honey Run, Casey's Run, Indian Creek, Rush Run, Shrimlin's Run, Wolf Creek, and Crab Apple. Iron ore and coal stone abound.

Holmesville, Ga., c. h. Appling co.

Holyoke, Ms., Hampden co. Situated on the right bank of Connecticut River, 9 miles above Springfield, and 107 miles W. from Boston.

This flourishing place has been created from nothing, within a few years past, by the enterprise of a number of capitalists, who projected, and have brought to an advanced stage of its execution, a magnificent scheme for the founding of a manufacturing city on the falls in the Connecticut at this spot, long known as the "Hadley Falls." The village of South Hadley Falls, in the town of South Hadley, is on the opposite side of the river, where some application of this incomparable privilege has been in use, for manufacturing purposes, for several years. It was not, however, until 1848, that any thing was done of all which is now to be seen on the Holyoke side. Up to that time, this spot, which lay within the precincts of the rural parish of Ireland, in the N. part of West Springfield, was one of the most retired and quiet spots on the banks of the Connecticut. The Hadley Falls Company, acting under a charter granted by the Massachusetts legislature, April 28, 1848, with an authorized capital of \$4,000,000, has here developed the most extensive water power which has ever been brought into operation in the United States. This company owns about 1200 acres of land, and by the erection of a dam 30 feet in height, and placed at the head of natural rapids, commands a head and fall of about 60 feet within the distance of three fourths of a mile. The power which is thus rendered available for manufacturing purposes is estimated to be sufficient to drive 1,250,000 spindles for No. 14 cotton yarn, with looms and preparatory machinery. So that 56 mills of the first class, each containing 18,500 spindles, may be supplied with land and water power, besides machine shops and other works.

The dam across the Connecticut River is 1018

feet in length between the abutments, and 30 feet high. Through suitable guard gates the water is admitted to the canals, which are 140 feet wide and 15 feet deep. The power being divided between two levels, the whole water may be used twice. The length of the two canals, when fully extended, will be about 7000 feet each, with a raceway of the same dimensions; and every 1000 feet of the canals will supply convenient location for four mills.

The Hadley Falls Company have erected two large mills, each 268 feet long, 68 feet wide, and 5 stories in height; one of which contains about 19,000 spindles, with looms for the manufacture of heavy cotton goods; and the other about 30,000 spindles, with looms for the manufacture of fine lawns and muslins. Their machine shop is 448 feet long, 60 feet wide, and 3 stories high, besides a large furnace and blacksmith's shop, and is filled with machinery and tools of the best description. A large number of brick boarding houses of the first class, offices, storehouses, &c., have been erected by the company, besides numerous dwelling houses and stores by the increasing population of the place.

On a finely-elevated portion of the plot, lying W. of the canals and mills, and exempt from all annoyance by the business operations of the place, is that portion of the town which is occupied with dwellings, hotels, churches, and other public buildings. This is laid out, with beautiful regularity, into public squares and streets, at right angles with each other. A hotel has been erected 162 feet in length, and 4 stories high, well arranged and conveniently situated for the accommodation of visitors; and houses, stores, churches, and buildings of every description required by the inhabitants, are being rapidly multiplied.

The town is supplied with water for the use of the inhabitants, from a reservoir constructed on the most elevated ground, into which the water is raised by a forcing pump, operated by a water wheel at the dam. The reservoir has a capacity of two and a half millions of gallons.

The Connecticut River Railroad passes through the place, and the greatest part of it is built at such an elevation as to allow the avenues of the town to pass beneath; thus avoiding the danger and inconvenience of a railroad on the same grade with the streets. A continuous railroad communication is open through this place to Montreal on the N. and New York on the S., to Boston on the E., and to the great lakes on the W.

The great amount of water power here available, the convenience of its development and application, and the admirable situation of the town, are advantages which render Holyoke one of the most desirable locations for the establishment of manufactures in the country.

Homer, La., c. h. at Claiborne.

Homer, N. Y., Cortland co. Watered by Tioughnioga River and some of its branches. The surface is level; soil fertile sandy and clay loam. 5 miles N. from Cortland, and 141 W. from Albany.

Honeoye Falls, N. Y., Monroe co. On Honeoye Creek, which has a perpendicular descent of 30 feet in the centre of the village. W. by N. from Albany 214 miles. Here are numerous manufactures, and an extensive quarry of fine building stone.

Honesdale, Pa., Wayne co. A flourishing place on Lackawaxen Creek. 172 miles N. E. from

Harrisburg. At the junction of the Lackawaxen Railroad with the Delaware Canal.

Hooksett, N. H., Merrimac co. The River Merrimac passes through this town. Hooksett Falls are here; the descent of water is about 16 feet in 30 rods. From an eminence called the Pinnacle there is a delightful landscape. There is a pleasant village on the W. side of the river. Over the river, at this place, are two bridges, one of which is for the Concord Railroad. Hooksett Canal is in this town. It is a quarter of a mile in length. 8 miles S. S. E. from Concord, and 9 N. from Manchester by the Concord Railroad. It is already a flourishing manufacturing place, though much of the water power remains unemployed.

Hoosic, N. Y., Rensselaer co. Drained by Hoosic River and some of its branches. The surface is hilly; soil well adapted to grazing. 22 miles N. E. from Troy, and 28 N. E. from Albany.

Hoosic Falls, N. Y., Rensselaer co. On both sides of Hoosic River, which falls 40 feet at this place, affording fine privileges. N. E. from Albany 35 miles.

Hope, Me., Waldo co. A good township. 44 miles E. S. E. from Augusta.

Hope, N. J., Warren co. Watered by a branch of Beaver Brook. 66 miles N. by W. from Trenton.

Hope, N. Y., Hamilton co. The Sacandaga River flows through this town, the surface of which is somewhat hilly, and the soil rather sterile, except in the valley of the Sacandaga. 15 miles S. E. from Lake Pleasant, and 60 N. N. W. from Albany.

Hopewell, N. J., Cumberland co. Bounded on the E. and S. by Cohansey Creek, and drained by Mount's and Mill branches of Cohansey Creek. Surface undulating; soil clay loam.

Hopewell, N. Y., Ontario co. The outlet of Canandaigua Lake and some of its tributaries water this town. Surface rolling; soil clay loam upon a basis of lime. 5 miles E. from Canandaigua, and 190 E. by N. from Albany.

Hopewell, Pa., Cumberland co. A hilly town, with a slaty soil. 21 miles W. from Carlisle.

Hopewell, Pa., Bedford co. Watered by the Rayston branch of the Juniata River and its tributaries. Surface mountainous, containing abundance of bituminous coal; soil calcareous loam in the valleys. 15 miles N. E. from Bedford, and 104 W. from Harrisburg.

Hopewell, Pa., Huntingdon co. A mountainous town; soil calcareous loam in the valleys 13 miles S. W. from Huntingdon.

Hopewell, Pa., Washington co. Brushy Run, and Buffalo and Cross Creeks, water this town. Surface hilly; soil loam. 12 miles N. W. from Washington.

Hopewell, Pa., York co. Watered by the head branches of Deer Creek. Surface undulating; soil a rich loam. 14 miles S. E. from York.

Hopkins County, Ky., c. h. at Madisonville. W part of the state. Has the Green River on its northern border.

Hopkins County, Ts., c. h. at Tarrant.

Hopkinsville, Ky., c. h. Christian co. On the E. side of Little River. 204 miles S. W. from Frankfort.

Hopkinton, Ms., Middlesex co. This town was first settled about 1710, and named in honor of Edward Hopkins, a donor to the funds of Harvard University. Its Indian name was Maguncook.

The soil is very good, and the surface variegated and elevated. Branches of the Charles, the Concord, and the Blackstone rise in this town, and, although their streams here are not large, they afford the town a good water power. The mineral springs in this town have become celebrated. They contain carbonic acid, and carbonate of lime and iron. These are 3 in number, each differing in its properties from the other. They are situated near White Hall Pond, which abounds in fine fish of various kinds. 30 miles W. S. W. from Boston, and 14 E. by S. from Worcester.

Hopkinton, N. H., Merrimac co. Contoocook River and its branches, Warner and Blackwater, pass through the town. On these streams are valuable intervals and meadow land. The principal village is 7 miles from the State House in Concord. In the W. part of the town is a thriving village, on Contoocook River, known as Hill's Bridge or Contoocookville, where is a valuable water power. First settlers, emigrants from Hopkinton, Ms., in 1740. 28 miles N. from Amherst, and 7 W. from Concord.

Hopkinton, N. Y., St. Lawrence co. Watered by the Racket and St. Regis Rivers. The surface and soil are extremely varied, the S. part being the most level, and having the best soil. 25 m. E. from Canton, and 234 N.W. from Albany.

Hopkinton, R. I., Washington co. Wood River, a valuable mill stream, passes through this town. The soil of the town is generally well adapted for grazing and the cultivation of grain. It produces large quantities of fruit and excellent cider. Shad and alewives are taken in Paucatuck River. There are several ponds within the town. Considerable wood and timber are sent to market from this place.

Hopkinton City, at the S. part of the town, on the Tommaquag branch of Charles River, is very pleasant and flourishing.

Horicon, N. Y., Warren co. On the E. side of the Hudson. Watered on the N. by Schroon Lake, which lies mostly in this town. It contains also Brant, and several other small lakes. The surface is hilly and mountainous, a large part being waste. 28 miles N. from Caldwell, and 90 N. from Albany.

Hornby, N. Y., Steuben co. Drained by Mead's Creek and some smaller streams. Surface hilly; soil well adapted to grazing, 18 miles S. E. from Bath, and 196 W. by S. from Albany.

Hornellsville, N. Y., Steuben co. Watered by Canisteo River and some of its branches. The surface is somewhat hilly and broken. 20 miles W. from Bath, and 236 W. by S. from Albany.

Horry District, S. C., c. h. at Conwaysboro'. Little Pedee forms its W. boundary, and the Waccamaw, a branch of the Great Pedee, drains the S. and E. portions. Surface level; soil sandy and wet.

Horsham, Pa., Montgomery co. Drained by Pennypack and a branch of Neshaminy Creek. Surface level; soil calcareous loam. 118 miles E. from Harrisburg.

Hot Springs County, As., c. h. at Hot Springs. Bounded N. by Perry co., E. by Saline, S. by Dallas and Clark, and W. by Montgomery. Surface rough and hilly. Watered by the Wachita River and branches.

Houghton County, Mn., includes the mining district on Keewaiwona Point, projecting into Lake Superior. The principal settlement is at Eagle River.

Houlton, Me., c. h. Aroostook co. About 90 miles W. of N. from Calais, with which it is connected by a good road, and 120 N. N. E. from Bangor. It is on the boundary of New Brunswick, and is a U. S. military station. The distance to Fredericton, N. B., is 75 miles W. N. W. The land is fertile, and the town thriving.

Houma, La., c. h. Terre Bonne parish. On the W. side of Bayou Terre Bonne. 132 miles S. W. from New Orleans.

Houndsfield, N. Y., Jefferson co. Bounded on the N. by Black River, and W. by Lake Ontario. Surface mostly level; soil clay and sandy loam. 6 miles W. from Watertown, and 160 N. W. from Albany.

Houston County, Ga., c. h. at Perry. Bounded N. by Bibb co., E. by the Ockmulgee River, separating it from Twigg's co., and by Pulaski co., S. by Dooley, and W. by Macon and Crawford counties. Drained by branches of the Ockmulgee River.

Houston, Mi., c. h. Chickasaw co. On the head branches of Octibbeha Creek. 145 miles N. E. from Jackson.

Houston, Mo., c. h. Texas co.

Houston County, Ts., c. h. at Crockett. E. central, between Trinity and Neches Rivers.

Houston, Ts., c. h. Harris co. This flourishing place is situated on the Buffalo Bayou, which opens into the N. W. arm of Galveston Bay, and about 80 miles from the city of Galveston, with which it is connected by regular steam communication. Being in the centre of an extensive cotton-growing region, it has a large and increasing business as a depot for this important article of commerce.

Howard County, Ia., c. h. at Kohomo.

Howard County, Mo., c. h. at Fayette. Bounded N. by Chariton and Randolph counties, E. by Boone co., S. and W. by the Missouri River, separating it from Cooper and Saline counties. Drained by Great Manito and Bonne Femme Rivers, and Salt Creek.

Howard, N. Y., Steuben co. Drained by several small branches of Canisteo and Conliocton Rivers. Surface undulating; soil clay loam, well adapted to the growth of grass and grain. 10 miles W. from Bath village, and 228 W. by S. from Albany.

Howard, Pa., Centre co. Watered by Bald Eagle Creek and its branches, and by Marsh and Beach Creeks. The main ridge of the Alleghany Mountains passes through this town. Soil calcareous loam in the valleys. 97 miles N. W. from Harrisburg.

Howell, Mn., c. h. Livingston co. 51 miles W. by N. from Detroit.

Howell, N. J., Monmouth co. Drained by Shark, Metteck, and Manasquan Rivers. Surface level; soil chiefly sandy loam and clay.

Howland, Me., Penobscot co. This is a large township of good land, in which the Piscataquis and Sebocis Rivers form a junction. At the mouth of the former, about 50 rods from the Penobscot, are several saw mills. The banks of the river are low and very beautiful. Howland was incorporated in 1826. It lies 117 miles N. E. from Augusta, and 94 N. from Bangor.

Hubbardston, Ms., Worcester co. Formerly a part of Rutland, named after Thomas Hubbard, of Boston, a principal proprietor. Hubbardston is pleasantly situated on the height of ground between Connecticut River and the

sea, and about 1000 feet above them. The surface is varied by hills and valleys, commanding wide and beautiful prospects. There is probably no town in New England, so elevated, which possesses so great a water power. There are springs, brooks, and rivers in almost every direction. Meadow and Canneeston Brooks, Burnshirt and Otter Rivers, are good mill streams. There is some choice meadow land in the town, and the soil is generally good. About a mile and a half S. E. from the handsome village, near the centre of the town, lies Great Asnaconcomick Pond, covering about 300 acres. About a mile N. E. from this is Moose Horn Pond, circular in form, and around which there are appearances of an ancient wall. 20 miles N. N. W. from Worcester, and 52 W. by N. from Boston, by the old road.

Hubbardston, Vt., Rutland co. 50 miles S. W. from Montpelier, and 10 N. W. from Rutland.

Hudson, N. H., Hillsboro' co. The land is easy of cultivation. On the Merrimac are fine intervals, of a deep, rich soil. Distant from the river, the land is hilly and broken. There are 2 ponds, Little Massabesick and Otternick. The Merrimac River forms its western boundary, and on its banks the first settlements were made. This town was formerly called Nottingham West. First settlers, Messrs. Blodgett, Winn, Lovewell, Colburn, Hill, Greely, Cross, Cumings, Pollard, Marsh, and Merrill. 17 miles S. E. from Amherst, and 40 S. from Concord.

Hudson, N. Y. City and seat of justice for Columbia co. Situated on the E. bank of Hudson River, on fine navigable waters, 116 miles N. from New York city, and 29 S. from Albany. Population in 1820, 2900; in 1830, 5392; in 1840, 5672; in 1850, 6289. The ground on which the city stands is elevated about 60 feet above the river, terminating in a bold promontory in front, upon the brow of which a beautiful public ground has been laid out, and ornamented with trees and shrubs, commanding a fine view of the river, of Athens opposite, and of the distant landscape, extending to the Catskill Mountains on the N. and W. Upon either side of this promontory, which is formed of a silicious slate rock, the river makes up, and forms the two considerable bays called South Bay and North Bay, and which have a sufficient depth of water for large vessels. Around the margins of these bays, and at the foot of the promontory along the river bank, are the quays, which are carried out on a line with the base of the hill.

From the promenade on the lofty bank of the river, the city extends back, by a gradual ascent, about one mile, to a smoothly rounded hill, called Prospect Hill, about 200 feet high, which commands an entire view of the place. The streets are straight, and cross each other at right angles. The central and principal street, running S. E. from the promenade, is Warren Street, which is closely and handsomely built upon, and near its upper end, upon the N. side, has an extensive public square. The court house in Hudson is a spacious and handsome structure, situated on a small public square near the centre of the S. side of the city. This building, including the wings, presents a front of 116 feet. The main edifice, 40 feet by 60, and 60 feet high, is surmounted by a dome 40 feet high, towering above the other buildings of the city. The front entrance is decorated by a portico with 6 Ionic

columns. The material used for the front is the Stockbridge marble; and for the other parts the blue limestone of the neighborhood, which furnishes here a fine material for ornamental architecture. There are a number of handsome church edifices, of which the Presbyterians, the Episcopalians, the Methodists, the Baptists, and the Universalists have one each. There are 2 markets, 2 banks, an academy, a female seminary, and 3 or 4 extensive public houses, besides others of less note. The city is well supplied with pure water, which is brought in iron pipes from a fountain at the foot of Becraft's Mountain, 2 miles distant.

Hudson was founded in 1784, by a company of 30 enterprising emigrants from Providence, R. I., and from Nantucket and Martha's Vineyard, in Massachusetts. It had a rapid growth, and great prosperity in business, for many years, until the interests of commerce, and especially of the whale fishery, in which it had a large capital invested, experienced a check; after which its prosperity declined for a time, until its enterprise had found new channels to some extent. It is now rising again by a gradual and healthful advancement.

The construction of the Hudson and Berkshire Railroad, which connects this place with the Western Railroad between Boston and Albany, 34 miles long, has opened new facilities of travel and trade to this pleasant city. The resources of Berkshire co., in iron, lime, and marble, are abundant, and are in demand in all the Atlantic cities. By this road an eligible route of travel is opened from New York to the New Lebanon Springs, and to many of the most important places in Massachusetts. Hudson was incorporated as a city in 1785, the year after its settlement was commenced, with a mayor, aldermen and recorder; but the charter has been repeatedly amended since that time.

Hull, Ms., Plymouth co. This town comprises the peninsula of Nantasket, which forms the S. E. side of Boston Harbor. It extends N. by W. from Cohasset, nearly 5 miles, and is celebrated for its beautiful beach 4 miles in length, and for its shell fish and sea fowl. The town lies between two hills of fine land, near Point Alderton, opposite Boston light-house. On one of the hills in this place is a well, 90 feet deep, which is frequently almost full of water. Hull was a mart of commerce, and the residence of eminent men, six years before Boston bore its present name, and four years before Salem became a town. The steamer which plies between Boston and Hingham stops at this place. 9 miles E. S. E. from Boston by water, and 21 by land.

Hume, N. Y., Alleghany co. Watered by the Genesee River and some of its branches. Surface undulating; soil clay loam, producing large crops of grass and grain. 14 N. from Angelica, and 26 W. from Albany.

Humphrey, N. Y., Cattaraugus co. The Five Mile Run and Great Valley Creek water this town, the surface of which is undulating, and the soil suitable for grass. 8 miles S. E. from Ellcottville, and 300 W. by S. from Albany.

Humphreys County, Te., c. h. at Reynoldsburg. Bounded N. by Steward, E. by Dickson and Hickman, S. by Perry co., and W. by the Tennessee River, separating it from Benton co. Drained by Duck Creek and its branches.

Hunt County, Ts., c. h. at Grenville.

Hunter, N. Y., Greene co. Drained by some of the head branches of Schoharie Creek. The surface is mountainous, being covered by the Catskill range of mountains. The highest peak, called Round Top, is elevated 3804 feet above the Hudson. Soil mostly sterile. 18 miles W. from Catskill, and 55 S. W. from Albany.

Hunterdon County, N. J., c. h. at Flemington. Bounded N. by Warren and Morris counties, E. by Somerset, S. by Mercer co., and W. by the Delaware River, separating it from Pennsylvania. Drained by the S. branch of the Raritan and its tributaries, and by small creeks flowing into the Delaware. Surface mountainous in the N. and level in the S. portions; soil mostly of excellent quality.

Huntingdon County, Pa., c. h. at Huntingdon. Incorporated in 1787, and bounded N. by Centre co., E. by Mifflin, Juniata, and Perry, S. by Bedford, and W. by Blair co. Watered by the main and Raystown branch of the Juniata River. The Pennsylvania Canal runs parallel to the Juniata River through this county. Surface mountainous in some parts; soil mostly fertile. Iron ore, lead, bituminous coal, alum, and salt exist here.

Huntingdon, Pa., c. h. Huntingdon co. On the W. side of the Franktown branch, at its entrance into Juniata River, and 92 miles W. N. W. from Harrisburg. The Pennsylvania Canal and the Pennsylvania Railroad pass through it.

Huntingdon, Pa., Adams co. Bounded W. by Bermudian Creek. Surface level; soil gravel and calcareous loam. 12 miles N. E. from Gettysburg.

Huntingdon, Pa., Luzerne co. North Mountain lies in the N., and Knob Mountain in the S. E. part of this town. The rest of the surface is undulating, and the soil fertile.

Huntingdon, Te., c. h. Carroll co. On the S. fork of Obion River. 98 miles W. from Nashville.

Huntingdon, Ct., Fairfield co. This is a township of uneven surface, but well adapted to agricultural purposes, to which the inhabitants are principally devoted.

Huntingdon County, Ia., c. h. at Huntington. Incorporated in 1832, and is bounded N. by Whitely co., E. by Allen and Wells, S. by Grant, and W. by Wabash. Watered by the Wabash and its branches, Salmalina and Little Rivers. The Wabash and Erie Canal also traverses this county. Surface level or undulating.

Huntingdon, Ia., c. h. Huntington co. On the N. side of Wabash River. 105 miles N. N. E. from Indianapolis.

Huntington, N. Y., Suffolk co. A large town, extending across the widest part of Long Island, and including Oak Island Beach. It is indented by several large bays on the N., and watered on the S. by some small streams flowing into the Great South Bay. The surface is somewhat hilly; the soil various. 35 miles W. from Riverhead, and 198 S. E. from Albany.

Huntersville, Va., c. h. Pocahontas co. On Knapp's Creek, 6 miles from its mouth, at an elevation of 1800 feet above the Atlantic. W. 190 N. W. from Richmond 190 miles.

Huntsville, Ala., shire town of Madison co. About 180 miles N. by W. from Montgomery, and 150 N. by E. from Tuscaloosa. It is a neat and thriving place, situated in the northern part of the state, about 10 miles N. of the Tennessee River, and 30 miles from the railroad at Decatur, which runs to Tusculumbia. It is principally built of brick, and many of the houses are elegant and

costly. Among the public buildings, it contains a court house of Grecian architecture, which cost \$45,000; a banking house of hewn stone, with an Ionic portico, built at a cost of \$80,000; a handsome market house; a U. S. land office; an academy; and several churches. The streets are McAdamized, and kept remarkably clean. The town is abundantly supplied with pure and cool water from a spring, which breaks out at the foot of a rock with force sufficient to drive a forcing pump for elevating and distributing it to all the dwellings. A fine McAdamized road, commencing 4 miles N. of the town, passes through it, and extends to the Tennessee River.

Hurley, N. Y., Ulster co. Esopus Creek waters this town, the surface of which is hilly, and the soil fertile. 6 miles W. from Kingstown village, and 60 S. S. W. from Albany.

Huron, N. Y., Wayne co. Bounded on the N. by Lake Ontario. Port Bay lies wholly, and East and Sodus Bays partly, within this town. Surface level; soil sandy and gravelly loam. 14 miles N. from Lyons, and 195 N. W. from Albany.

Huron County, O., c. h. at Norwalk. It is bounded N. by Lake Erie, is very fertile, and is watered by the Huron and Vermilion Rivers, La Chapelle, Old Woman's, Pipe, and Cold Creeks. Sandusky Bay is on the northern boundary, and it has two excellent harbors on the shore of Lake Erie. Emigrants from Connecticut and other N. E. States were the first settlers. All the tract called *fire land* lies within this county. The railroad from Cincinnati to Lake Erie passes through the county, and it is a rising, prosperous region.

Huron County, Mn., includes the projection between Saginaw Bay and Lake Huron.

Huron, O., Huron co. The situation of this town causes it to be a place of great importance; it is located on the shore of Lake Erie, at the mouth of Huron River, and has an excellent artificial harbor. Commercial business is carried on here to a large extent; it has improved rapidly for a few years past. 47 miles W. from Cleveland, and 120 from Columbus.

Hyannis, Ms., Barnstable co., in the town of Barnstable. 5 miles S. E. from Barnstable court house, and 77 S. E. from Boston.

Hyde County, N. C., c. h. at Lake Landing. Bounded N. by Washington and Tyrrell counties, E. and S. by Pamlico Sound, and W. by Beaufort co. Surface flat and marshy.

Hyde Park, N. Y., Dutchess co. On the E. bank of the Hudson. Watered by Crum Elbow Creek and some other small streams. The surface is somewhat hilly and uneven, and the soil of a good quality along the border of the river. 6 miles N. from Poughkeepsie village, and 68 S. from Albany.

Hydepark, Vt., c. h. Lamoille co. The Lamoille, Green, and other rivers give this town a great water power. The soil is generally of a good quality, and easily cultivated. There are in the N. E. part of the town 12 ponds, containing from 1 to 50 acres, besides several smaller ones. Some of them have names, such as Great, Clear, George's, Zack's, and Mid Pond. Hydepark village is situated in the S. W. part of the town, on a beautiful elevated plain. This town has a valuable water power, and is surrounded by a country rich in agricultural and mineral productions. The settlement was commenced by John McDaniel, Esq., who removed his family here July 4, 1787. He emi-

grated from Northfield, N. H. The town was named Hyde's Park in the charter, as a compliment to Captain Jedediah Hyde, the first named in that instrument. 27 miles N. from Montpelier.

Iberville Parish, La., c. h. at Plaquemine. Bounded N. by Point Coupee, East and West Baton Rouge parishes, E. and S. E. by Ascension parish, and S. and W. by the Atchafalaya River, separating it from St. Martin's and St. Landry parishes. Drained by outlets of the Mississippi River, which flows through the E. part. Surface level, and too low for cultivation, except on the borders of the streams, where the soil is fertile.

Iberville, La., c. h. Iberville parish. 92 miles W. N. W. from New Orleans.

Independence County, As., c. h. at Batesville. Bounded N. E. by Lawrence co., E. by Big Black and White Rivers, separating it from Jackson co., S. by White co., W. by Van Buren, and N. W. by Izard co. White River crosses this county from N. W. to S. E.

Independence, Ia., c. h. Buchanan.

Independence, Ky., c. h. Kenton co. 82 miles N. N. E. from Frankfort.

Independence, Mo., c. h. Jackson co. It is situated 6 miles S. from the Missouri River, near the W. boundary of the state, 134 miles W. from Jefferson City, the capital, and 264 miles, by the nearest land route, W. from St. Louis. The distance from St. Louis, by the river, is about 370 miles. This is the place of departure for the Santa Fe traders, and a point from which many of the emigrants to California start on their overland route, through the S. pass in the Rocky Mountains; and many of their supplies, of course, are obtained here.

The distances from St. Louis, by Independence, on this entire route, to Astoria, at the mouth of the Columbia River, on the Pacific Ocean, as given in Appleton's United States Traveller's Guide, published in 1850, are as follows:—

Independence, N. J., Warren co. Watered by Pequest Creek, and its tributary Bacon Creek. Surface hilly on the E. and W., with a valley between. 14 miles N. E. from Belvidere.

Independence, N. Y., Alleghany co. Cryder's and Independence Creeks water this town, the surface of which is elevated and rolling; soil clay loam. 20 miles S. E. from Angelica, and 258 W. by S. from Albany.

Independence, Va., c. h. Grayson co.

Indian Key, Fla., Dade co. This village is situated on a pleasant island containing about 7 acres. The foundation is entire Madrepore rock, but it has been covered with rich mould from the channel, and is cultivated with good success. It lies 75 miles N. E. from Key West, and 75 S. W. from Cape Florida.

Indian River, Fla., St. Lucie co. The only post office in the county is here.

Indian Springs, Ga., Butts co. This favorite watering-place is situated 10 miles W. from the Ockmulgee River, at the confluence of two small streams, which form one of its tributaries. W. from Milledgeville 52 miles. The waters are impregnated with sulphur, and are efficacious in cutaneous complaints.

Indiana, Pa., c. h. Indiana co. 155 miles W. N. W. from Harrisburg.

Indiana County, Pa., c. h. at Indiana. Bounded N. by Jefferson, E. by Clearfield and Cambria, S. by Westmoreland, and W. by Armstrong co. Drained by the head waters of the W. branch of the Susquehanna and by branches of Conemaugh River. Surface hilly, containing abundance of coal and salt, and small quantities of iron ore. The soil is mostly very fertile, being composed of loam, gravel, sand and clay.

Indiana, Pa., Alleghany co. Drained by Deer, Long, Squaw, and Pine Creeks. Surface hilly; soil loam. 10 miles N. E. from Pittsburg.

Indianapolis, capital of the state of Indiana, and seat of justice for Marion co. It is situated very near the geographical centre of the state, on the E. side of the W. fork of White River, which is navigable, except at low water, for steamboats from the Ohio and Wabash Rivers to this place. The ground on which it is built, together with the suburbs, embracing, all together, four sections of land, according to the government surveys, was secured to the state of Indiana by a compact with the United States, in 1820, when it was covered with a dense forest, as a permanent seat of government. In the spring of 1821, the town was laid out and surveyed by commissioners appointed for that purpose. The original plat of the town, which is on an extended plain, was a mile square; but it has since been extended in different directions beyond these limits. It was laid out into regular four-acre squares, each to contain 12 lots; and these squares were divided through the middle by alleys, from E. to W., 30 feet wide, and from N. to S. 15 feet wide. The streets, in general, were laid out 90 feet in width. Washington Street, which passes through the centre, and is the great business street, is 120 feet in width. Through this street the great national road passes. Near the centre of the town a square has been appropriated, as a site for the mansion of the governor of the state. In the centre of this square stands the Governor's House, on ground slightly elevated, 60 feet square, and having four elegant fronts. A circular street, 80 feet wide, encompasses this enclosure, and four

streets extend from it diagonally, towards the four corners of the city. The streets, with the exception of these four, all intersect each other at right angles. They bear the names of the different states of the Union.

The State House at Indianapolis is beautifully located, in the centre of one of the 40 acre squares, handsomely laid out and enclosed. It is one of the most splendid buildings in the west. It is 180 feet long, 80 feet wide, and 40 feet high, to the top of the cornice, and is surmounted with a handsome dome. It is on the model of the Parthenon at Athens, with the omission of the columns on the sides; for which pilasters, 13 in number, are substituted. On each front there is a beautiful portico, with 10 Doric columns. The two halls for the legislature are in the second story, to which the entrance is through a hall and rotunda in the centre. The Court House, which was formerly occupied as the State House, is also a handsome building. Some of the church edifices are large and of fine appearance.

Indianapolis is the centre of a number of stage routes from different sections of the west, and is fast becoming a place of extensive business. It is connected by railroad with Madison, on the Ohio River, a distance of 86 miles; being by this route about 150 miles from Cincinnati, and about the same distance from Louisville, Ky. The railroad will soon be completed to connect it with Peru, on the Wabash and Erie Canal.

Indiana, Ia., c. h. Warren co.

Industry, Me., Franklin co. This town borders N. W. on Sandy River, and is a valuable tract of land. It lies 32 miles N. W. from Augusta, and is bounded S. W. by Farmington. Industry was incorporated in 1803: it has a pleasant village.

Ingham County, Mn., c. h. at Vevay. Incorporated in 1838. Bounded N. by Clinton and Shiawassee counties, E. by Livingston, S. by Jackson, and W. by Eaton co. Watered by Pine, Swampy, and Portage Lakes, and Red Cedar, Willow, Mud, and Sycamore Creeks. Surface mostly level, and soil fertile.

Ionia County, Mn., c. h. at Ionia. Bounded N. by Montcalm, E. by Clinton, S. by Eaton and Barry, and W. by Kent co. Drained by Grand River and its tributaries. Surface slightly undulating; soil of excellent quality.

Ionia, Mn., c. h. Ionia co. On both sides of Grand River. 136 miles W. N. W. from Detroit.

Iowa City, Io. Capital of the state, and seat of justice of Johnson co. It stands on the E. bank of Iowa River, 88 miles N. by W. from Burlington, and 50 miles W. from Davenport, these towns being on the Mississippi. This place was hunting ground for the Indian until 1839, when it was selected by the legislature to be the seat of government. Within one year from that time it contained between 500 and 700 inhabitants, with two hotels, stores, mechanics' shops, &c., and it has continued ever since rapidly to increase. The first plateau from the river, about 100 yards in width, is reserved as a public promenade. There is then an elevation of about 12 feet, and a second elevation of about 18 feet, upon which the city is built. Upon the brow of this second natural terrace, Capitol Street is laid out, 120 feet in width, and is intersected at right angles by Iowa Avenue, of the same width. The State House, on Capitol Street, and fronting Iowa Avenue, is an elegant building, constructed of "birdseye marble," at a cost of about \$120,000;

and is every way worthy of being the capitol of a great and wealthy state, such as Iowa in the future must become. It is 120 feet long by 60 feet wide, and two stories high above the basement. It is of the Grecian Doric order of architecture, and is surmounted with a dome resting on 22 Corinthian columns. Among the other public buildings are the court house and jail, and academy, and seven very handsome church edifices. The location is a beautiful and healthy one. By an act of the Iowa legislature, the State University is to be located here.

The Davenport and Council Bluffs, and the Dubuque and Keokuk Railroads will pass through Iowa City. Steamboats frequently ascend the river to this place. About a mile above the city there is an excellent water power, which is improved to drive a large merchant and custom flouring mill, a saw mill, and other machinery.

Iowa County, Io., c. h. at Marengo. S. E. part. Watered by the Iowa and branches.

Iowa County, Wn., c. h. at Mineral Point. Bounded N. by the Wisconsin River, separating it from Richland and Sauk counties, E. by Dane co., S. by Lafayette, and W. by Grant co. The N. part is drained by small tributaries of the Wisconsin, and the S. part by Pekatoneke and Fever Rivers. There are some fertile prairies in this county, and lead and copper ores abound.

Ipswich, Ms., Essex co. This town was bought by John Winthrop, Jr. in 1638, of an Indian sagamore, named Masconnocet, for 20 pounds. It was first settled in 1633, and named after the town of Ipswich, in England. Its Indian name was Agawam, signifying a fishing station. Ipswich is one of the shire towns of the county, a port of entry, and a place long noted for its enterprise in commerce and manufactures. Ipswich River passes through the town, and flows into a bay of the same name. The river affords a good water power, and at its mouth is an excellent harbor. The surface is pleasantly interspersed with hills and vales; the soil is of a good quality. The village of Ipswich is very pleasant. It lies on both sides of the river, which is crossed by a stone bridge, with two arches, built in 1764, at a cost of 1000 pounds. The Ipswich Female Seminary is situated in the centre of the village. Distances, 25 miles E. from Lowell, and 25 from Boston by the Eastern Railroad.

Ira, N. Y., Cayuga co. The surface of this town is undulating, and watered by a few small streams; soil mostly sandy loam of good quality. 20 miles N. from Auburn, and 160 W. by N. from Albany.

Ira, Vt., Rutland co. This township is elevated; it contains good land for rearing cattle. Castleton River and Ira Brook wash a part of the town, but afford no valuable mill privileges. The town was organized in 1779. From Montpelier 40 miles S. W., and 8 S. W. from Rutland.

Irassburg, Vt., Orleans co. Irassburg is somewhat diversified with gentle hills and valleys. The soil is easy to cultivate, and, in general, produces good crops. Black River passes through the township in a north-easterly direction, and Barton River just touches upon the eastern corner. Nearly in the centre of the township is a small village. The settlement was commenced a little previous to the year 1800. Distance from Montpelier, 42 miles N. E.

Iredell County, N. C., c. h. at Statesville. Bounded N. by Wilkes and Surry counties, E. by Davie and Rowan, S. by Mecklenburg, and W. by Ca-

tawba and Caldwell counties. Watered on the S. W. border by Catawba River, and drained by branches of the South Yadkin.

Irondequoit, N. Y., Monroe co. Bounded on the N. by Lake Ontario, E. by Irondequoit Bay, and W. by the Genesee River. The surface is chiefly level; soil gravelly and sandy loam. 5 miles N. from the city of Rochester, and 220 W. by N. from Albany.

Iroquois County, Is., c. h. at Montgomery. Bounded N. by Will co., E. by Indiana, and S. and W. by Vermilion co. Watered by the Iroquois River and branches, Kankakee River, and Sugar and Spring Creeks. Much of the land is fertile prairie.

Irvine, Ky., c. h. Estill co. On the N. side of Kentucky River. 68 miles S. E. from Frankfort.

Irwin County, Ga., c. h. at Irwinnville. Bounded N. by Dooly, Pulaski, and Telfair, E. by Telfair and Ware, S. by Lowndes, and W. by Baker and Lee counties. Watered by the head branches of Santilla, Alapahaw, Withlacoochee, and Oclockony Rivers; the Ockmulgee River also runs along its N. E. boundary.

Irwin, Pa., Venango co. This is a level town, watered by Scrub Grass Creek; soil loam. 12 miles S. W. from Franklin.

Irwinsville, Ga., c. h. Irwin co. On the E. side of Alapahaw River. 105 miles S. from Milledgeville.

Irwinton, Ga., c. h. Wilkinson co. 4 miles W. from the Oconee River, between Commissioner's and Big Sandy Creeks, and 20 miles S. from Milledgeville.

Isle La Motte, Vt., Grand Isle co. An island in Lake Champlain, in the western part of the county. It was chartered by this name to Benjamin Wait and others, October 27, 1789. The settlement was commenced about the year 1785, and the town was organized about the year 1790. There are no streams on the island. A marsh extends across it, which abounds with excellent cedar. The rocks are limestone. 28 miles N. W. from Burlington, and 13 nearly W. from St. Albans.

Isle of Wight County, Va., c. h. at Isle of Wight. Bounded on the N. by Surry, and on the E. by Nansemond counties, on the N. E. by James River, separating it from Warwick, and W. by Blackwater River, separating it from Southampton.

Islesboro', Me., Waldo co., comprises several islands in Penobscot Bay. 56 miles E. from Augusta.

Islip, N. Y., Suffolk co. Washed on the S. by the Great South Bay. Surface level; soil light and sandy. 28 miles W. from Riverhead, and 197 S. S. E. from Albany.

Issaquena County, Md., c. h. at Tallulah. New Italy, N. Y., Yates co. Watered by Flint Creek, and on the N. W. by Canandaigua Lake. Surface somewhat hilly; soil clay loam upon a basis of slate. 15 miles W. from Penn Yan, and 198 from Albany.

Itasca County, Ma., includes the sources of the Mississippi.

Ittawamba County, Md., c. h. at Fulton. Bounded N. by Tishamingo co., E. by Alabama, S. by Monroe co., and W. by Pontotoc. Surface slightly uneven, and watered by the head branches of the Tombigbee River; soil fertile.

Ithaca, N. Y., shire town of Tompkins co., lies at the head of Cayuga Lake, 170 miles W. by S. from Albany, and 277 miles, by railroad, N. W. from New York. The lake extends S. into the town about 2 miles. Around its head are fine

alluvial flats, containing about 3000 acres. Back of these flats the hills rise gradually, on three sides, to an elevation of about 500 feet, exhibiting some of the most magnificent scenery, especially as the landscape presents itself to the eye upon the lake. Back of the hills the surface is undulating, and the soil of excellent quality. Several considerable streams, which drain the township, pour their waters over the hills in their course towards the lake; and by their beautiful cascades and stupendous cataracts, add much to the picturesque features of the scenery. The largest of these are the Cascadilla, Fall Creek, and Six Mile Creek. The Cascadilla, in one place, tumbles over a succession of ledges, in the form of a gigantic stairway, through a descent of 100 feet. Near the N. end of the village, Fall Creek descends over rocks, within a distance of one mile, 438 feet; in the course of which the whole sheet of water is at once precipitated over a perpendicular fall of 116 feet.

The village of Ithaca, founded about 1800, by Simeon De Witt, surveyor general of the state, and incorporated in 1821, is very beautifully situated, about a mile and a half above the head of the lake. Small vessels and steamboats can come up to the village by the Cayuga Inlet. It lies partly on the alluvial plain, and partly on the rising acclivities behind it. It is handsomely laid out, having two or three fine avenues running from the lake to and through the village, and forming a part of the streets, which are numerous, and cross each other at right angles. The houses are tastefully and neatly built; and many of the streets are lined with beautiful shade trees, forming vistas which open charming views of the adjacent hills. That portion of the place which lies upon the hill commands a fine view of the lake, the valley, the inlet, and the surrounding country, which is highly cultivated.

Within the chartered limits of Ithaca, there exists hydraulic power equal to any in the state, for extent and facility of application. The water power on Fall Creek alone, it is said, is capable of operating 133,000 spindles, at all seasons of the year. There are at present on this and the other streams which pass by Ithaca into the lake, several large manufacturing establishments, among which are cotton and woollen mills, flouring mills, furnaces and machine shops, plaster mills, and mills for the manufacture of paper, sashes and blinds, oil, tobacco, &c.

This place is very advantageously situated for trade. By means of Cayuga Lake, and the Cayuga and Seneca Canal, it communicates with the Erie Canal. A beautiful steamboat for conveying passengers, runs daily on the lake, from Ithaca to Cayuga Bridge, a distance of 42 miles, where it meets the railroad from Albany to Buffalo. A railroad extends S. 29 miles to Owego, on the Susquehanna River, where it intersects the Great Erie Railroad, and thus opens a continuous railroad communication from Ithaca to Jersey City, opposite New York.

Izard County, As., c. h. at Athens. Bounded N. by Fulton co., E. and S. by Lawrence, Independence, and Van Buren, and W. by Searcy co. Watered by White River and its tributaries, and by some streams flowing into the Big Black.

Jacinto, Mi., c. h. Tishamingo co. At the head of Tuscombria Creek. 233 miles N. N. E. from Jackson.

Jacksonboro', Te. c. h. Campbell co.

Jackson County, Ala., c. h. at Bellefonte. Bounded N. by Tennessee, E. by De Kalb co., S. by Marshall, and W. by Madison. Tennessee River flows near its E. and on its S. border, and Flint River on its S. W. It is also watered by Raccoon Creek and Paint Rock Creek and branches. Surface mountainous.

Jackson County, As., c. h. at Elizabeth. Bounded N. by Lawrence, E. by Poinsett, S. by St. Francis co., and W. by White and Big Black Rivers, separating it from White and Independence counties. Cache River runs nearly through the centre of this county.

Jackson County, Fa., c. h. at Marianna. Bounded N. by Alabama, E. by the Chattahoochee and Appalachian Rivers, separating it from Georgia and Gadsden co., S. by Washington co., and W. by the Choctawhatchee River, separating it from Walton co. Drained by Spring, Holmes, and Sandy Creeks. Surface somewhat uneven on the W., but elsewhere level; soil rich on the margins of the streams, and of excellent quality in some other portions.

Jackson County, Ga., c. h. at Jefferson. Bounded N. E. by Madison co., S. E. by Clarke, S. W. by Gwinnett, and N. W. by Hall. Branches of Oconee and Appalachian Rivers traverse its surface.

Jackson, Ga., c. h. Butts co. A few miles W. from Ockmulgee River, and 67 miles W. from Milledgeville.

Jackson County, Is., c. h. at Brownsville. Incorporated in 1816, and bounded N. by Perry, E. by Franklin and Williamson, S. by Union co., and W. by the Mississippi River, separating it from Missouri, and by Randolph co. Drained by Muddy River and its branches, on the border of which, near Brownsville, salt is found. The N. E. portions are partly prairie land.

Jackson County, Ia., c. h. at Brownstown. Incorporated in 1815, and bounded N. by Brown and Bartholomew counties, E. by Jennings, S. by Washington, and W. by Lawrence co. Surface undulating, and drained by Muscatuck River and the Driftwood Fork of White River, and Salt and White Creeks. Soil fertile.

Jackson County, Io., c. h. at Bellevue. Bounded N. by Dubuque co., E. by the Mississippi River, S. by Clinton, and W. by Jones co. The Maccoquets River and branches drain the surface, which is rich in mineral products, the chief of which are iron, tin, copper, zinc, gypsum, and porcelain clay. The water in this county is remarkably pure, and the soil very fertile.

Jackson, Ky., c. h. Breathitt co.

Jackson Parish, La. Northern central. On the height of land between the Wachita and Dugdeмона.

Jackson, La., c. h. East Feliciana parish. On the E. side of Thompson's Creek, and is the seat of Louisiana College. 124 miles N. W. from New Orleans.

Jackson, Me., Waldo co. An interior township of good land. 49 miles N. E. from Augusta.

Jackson County, Mn., c. h. at Jackson. This county was incorporated in 1832, and is bounded N. by Eaton and Ingham counties, E. by Washenaw, S. by Lenawee and Hillsdale, and W. by Calhoun co. Grand River and branches, Kalamazoo and Raisin Rivers, and Portage, Goose, and Sandstone Creeks, besides several small lakes, water the surface, which is chiefly undulating. Limestone abounds here. Soil fertile.

Jackson, Mn., c. h. Jackson co. On Grand River, which affords a good hydraulic power. 79 miles W. from Detroit.

Jackson County, Mi., c. h. at Jackson. Bounded N. by Greene co., E. by Alabama, S. by the Gulf of Mexico, and W. by Harrison and Perry counties. It is well watered by the Pascagoula River and branches, but the soil is sterile, producing little but pine trees and cotton.

Jackson, Mi., capital of the state, and seat of justice of Hinds co. It stands on the W. side of Pearl River, which is navigable for boats to this place. It is about 45 miles E. of Vicksburg, on the Mississippi River, with which point it is connected by a railroad. The town is regularly laid out, upon a level spot about half a mile square, and distant about a quarter of a mile from the river. The State House is an elegant structure, which is said to have cost \$600,000. Besides this the State Penitentiary, a large and handsome building, the Governor's House, the United States land office, the Court House, the Methodist and Baptist Churches, are public buildings which are ornamental to the place. A railroad extends E. to Brandon 14 miles.

Jackson County, Mo., c. h. at Independence. Bounded N. by the Missouri River, separating it from Clay co., E. by Lafayette and Johnson, S. by Van Buren co., and W. by Indian territory. Surface undulating, and drained by Big and Little Blue Rivers, and Fire Prairie Creek; soil productive.

Jackson, Mo., c. h. Cape Girardeau co. 10 miles W. from Mississippi River, on a branch of White-water River.

Jackson, N. C., c. h. Northampton co. 108 miles N. E. from Raleigh.

Jackson, N. H., Coos co. On the E. side of the White Mountains. The surface is uneven, but the soil rich and productive. Ellis's River is the principal stream. The principal elevations are Black, Baldface, and Thorn Mountains. Jackson was formerly called Adams. Excellent tin ore is found in this town. First settler, Benjamin Copp, in 1779. 90 miles N. E. from Concord, and 40 S. E. from Lancaster.

Jackson, N. Y., Washington co. The surface of this town is somewhat hilly; soil clay and sandy loam. 5 miles S. from Salem, and 42 N. E. from Albany.

Jackson County, O., c. h. at Jackson. Hocking and Athens bound it on the N., Athens and Gallier on the E., Lawrence and Scioto on the S., and Pike and Ross counties on the W. It was established in February, 1816. The land is well adapted for farming, although it is hilly and uneven. Little Raccoon, Little Scioto, Salt and Symmes Creek, are the most important streams. Millstone grit and stone coal are found in great plenty. Iron ore is also found in some parts.

Jackson, O., c. h. Jackson co. 63 miles S. S. E. from Columbus, and 28 S. E. from Chillicothe.

Jackson, Pa., Cambria co. Surface undulating; soil calcareous loam and clay.

Jackson, Pa., Columbia co. Watered by branches of Fishing Creek.

Jackson, Pa., Dauphin co. Drained by Powell's and Armstrong's Creeks, branches of the Susquehanna River. Surface diversified with hills and valleys, having Berry Mountain on the N., and Peter's on the S.; soil gravelly on the hills, and sandy loam in the valleys.

Jackson, Pa., Lebanon co. Tulpehocken and

Swatara Creeks water this town, and the Union Canal crosses it from E. to W. Surface level; soil calcareous loam. 7 miles E. from Lebanon.

Jackson, Pa., Susquehanna co. Lackawannock and Tunkhannock Creeks water this town, the surface of which is hilly; soil gravel and clay. 181 miles N. E. from Harrisburg.

Jackson, Pa., Tioga co. Surface hilly, and watered by Seely's and Mill Creeks; soil loam and gravel.

Jackson County, Te., c. h. at Gainesboro'. Bounded N. by Kentucky, E. by Overton co., S. by Putnam, and W. by Smith and Macon counties. Cumberland River and its branches water this county.

Jackson, Te., c. h. Madison co. On the N. side of Forked Deer River. 134 miles W. S. W. from Nashville.

Jackson County, Ts., c. h. at Texana. On La Vaca River.

Jackson County, Va., c. h. at Ripley. Bounded N. E. by Wood co., S. E. by Kanawha, S. W. by Mason, and N. W. by the Ohio River. Big Sand and Big Mill Creeks, and a tributary of Little Kanawha River, drain this county.

Jackson, Va., c. h. Jackson co. 336 miles W. N. W. from Richmond.

Jacksonboro', Ga., c. h. Scriven co. On the W. side of Brier Creek. 116 miles E. S. E. from Milledgeville.

Jacksonville, Aa., c. h. Benton co. 2 miles E. from Tallasseechatchee Creek, and 139 E. N. E. from Tuscaloosa.

Jacksonville, Fa., c. h. Duvall co. On the N. W. bank of St. John's River. 252 miles E. from Tallahassee.

Jacksonville, Is., c. h. Morgan co. 33 miles W. from Springfield, in the midst of a fertile prairie, the seat of Illinois College. See *Colleges*. One of the largest inland towns in the state, and connected with the Illinois River and with Springfield by railroad.

Jaffrey, N. H., Cheshire co. The Grand Monadnock lies in the N. W. part of this town, and in Dublin. Innumerable streams of water issue from it; the largest rises 100 rods from the summit, and descends in a S. E. direction. The soil of Jaffrey is uneven, affording numerous meadows and rich pastures. There are several ponds in Jaffrey. Out of 3 issue streams sufficient to carry mills. In the largest, which is 400 rods long, and 140 wide, is an island comprising about 10 acres. About $1\frac{1}{2}$ miles S. E. from the mountain is the "Monadnock Mineral Spring." It preserves so uniform a temperature as never to have been known to freeze. The spring is slightly impregnated with carbonate of iron and sulphate of soda, and where it issues from the earth yellow ochre is thrown out. Jaffrey received its name from George Jaffrey, Esq., of Portsmouth, one of the original proprietors. First settlers, Mr. Grant and John Davison, in 1758. 46 miles S. W. by S. from Concord, and about 15 S. E. from Keene.

Jamaica Plains, Ms., in the town of West Roxbury, Norfolk co. $\frac{3}{4}$ miles S. W. from Boston, by railroad. Has many beautiful country seats.

Jamaica, N. Y., Queen's co. This town contains the greater part of Jamaica Bay, into which flows several small streams. The surface is hilly on the N., and on the S. are extensive salt marshes. The soil is chiefly sandy loam of good quality. Its W. part contains the Union Race

Course. 8 miles E. from Brooklyn, and 158 S. from Albany.

Jamaica, Vt., Windham co. West River passes through this township, and, together with its tributaries, affords excellent mill privileges. The surface is broken and mountainous, and the elevations rocky; but the soil is in general warm and productive. A range of primitive limestone passes through the township. There is a pleasant and flourishing village near the centre of the town. The settlement was commenced in 1780, by people from Mendon, Ms., and its vicinity. 90 miles S. from Montpelier, and 14 N. W. from Newfane.

James City County, Va., c. h. at Williamsburg. Bounded N. E. by York River, separating it from Gloucester co., S. E. by York co., S. and W. by James and Chickahominy Rivers, separating it from Surry and Charles City counties, and N. W. by New Kent co.

Jamestown, N. Y., Chautauque co. On the S. E. end of Chautauque Lake, at its outlet. 331 miles W. by S. from Albany. A manufacturing place, in the shops of which are produced almost every variety of fabrics, wares, agricultural implements, and household utensils. A steamboat runs to Maysville, 21 miles, at the western end of the lake.

Jamestown, R. I., Newport co. This town comprises Conanicut, a beautiful island in Narraganset Bay, about 8 miles in length; its average breadth is about a mile. The soil is a rich loam, and peculiarly adapted for grazing, and the production of Indian corn and barley. The inhabitants of this island are remarkable for their industry and agricultural skill, which, united with the fertility of the soil and the location of the island, renders it a delightful place. The distance from the town or island to Newport and South Kingstown is about a mile each way; to each of those places a ferry is established. The island was purchased of the Indians in 1657.

Jamestown, Va., James City co. This is the oldest English settlement in the United States, having been made in 1608. It was located on a point of land extending into James River, 32 miles above its mouth, and is now in ruins, containing the remains of a church steeple and graveyard, some ancient fortifications, and 2 or 3 old houses. 8 miles S. W. from Williamsburg, and 65 E. S. E. from Richmond.

Janesville, Wn., c. h. Rock co. On Rock River. A flourishing place, 30 miles S. W. from Madison.

Jasper County, Ga., c. h. at Monticello. Bounded N. by Newton and Morgan counties, E. by Putnam, S. by Jones co., and W. by the Ockmulgee River.

Jasper County, Is., c. h. at Newton. Bounded N. by Cumberland, E. by Crawford, S. by Richland, and W. by Clay and Effingham counties. Surface flat, and rather low, two thirds being prairie. Embarrass River drains this county.

Jasper County, Ia., c. h. at Rensselaer. Bounded N. by the Kankakee River, separating it from Lake and Porter counties, E. by Stark, Pulaski, and White counties, S. by Benton co., and W. by Illinois. Drained by the Iroquois River, and Pine and Sugar Creeks.

Jasper, Ia., c. h. Dubois co. On the N. W. side of Patoka Creek. 124 miles S. S. W. from Indianapolis.

Jasper County, Io., c. h. at Newton. S. central
Jasper County, Mi., c. h. at Paulding. Bounded

N. by Newton co., E. by Clarke, S. by Jones, and W. by Smith. Drained by tributaries of Leaf River.

Jasper County, Mo., Jasper shire town. Bounded N. by Bates co., E. by Cedar, Dade, and Lawrence, S. by Newton co., and W. by Indian territory. Surface undulating, and watered by a branch of Neosho River; soil fertile.

Jasper, N. Y., Steuben co. Watered by Bennett's and Tuscarora Creeks. Surface undulating; soil gravelly loam and clay. 18 miles S. W. from Bath, and 240 W. by S. from Albany.

Jasper, Te., c. h. Marion co. On the W. side of Sequatchy River. 114 miles S. E. from Nashville.

Jasper County, Ts., c. h. at Jasper. On the middle E. border, between the Sabine and Naches.

Java, N. Y., Wyoming co. Drained by Seneca and the head branches of Cattaraugus Creek. The surface is rolling; soil clay loam. 15 miles S. W. from Warsaw, and 263 W. from Albany.

Jay County, Ia., c. h. at Jay. Bounded N. by Wells and Adams counties, E. by Ohio, S. by Randolph, and W. by Delaware and Blackford counties. Drained by Salamis River. Soil chiefly fertile.

Jay, Ia., c. h. Jay co. On the N. side of Salamis River. 100 miles N. E. from Indianapolis.

Jay, Me., Franklin co. Jay lies at a bend of Androscoggin River, 29 miles W. by N. from Augusta, and 12 S. S. W. from Farmington.

Jay, N. Y., Essex co. The E. branch of the Au Sable River waters this town, the surface of which is broken by the Adirondack range of mountains. Along the borders of the river are some extensive and fertile plains. 18 miles N. from Elizabeth, and 153 N. from Albany.

Jay, Vt., Orleans co. A part of this town is very mountainous—Jay's Peak, lying in the S. W. part; the other part is good arable land, and would produce good crops if well cultivated. A number of streams issue from the mountain, and produce an ample water power. Previous to the last war with Great Britain, 5 or 6 families had settled in this township, but during the war they nearly all left it. A few families have since returned, and the settlement has been advancing. 16 miles N. W. from Irasburg, and 50 N. from Montpelier.

Jefferson City, Mo. Capital of the state, and seat of justice of Cole co. 130 miles W. of St. Louis. It is situated on the S. side of the Missouri River, about 9 miles above the mouth of Osage River. The distance to St. Louis by steamboat is 154 miles. It is built on elevated and uneven ground, offering many handsome situations for private residence. The public buildings are the State House, a spacious and elegant house for the governor, the state penitentiary, an academy, and churches of various denominations. The place is rapidly growing in population, business, and wealth.

Jefferson County, Aa., c. h. at Elyton. Bounded N. by Blount co., E. and S. by St. Clair and Shelby, and W. by Tuscaloosa and Walker counties. Drained by Locust Fork of Black Warrior River and its tributaries.

Jefferson County, As., c. h. at Pine Bluffs. Bounded N. by Pulaski, E. by Arkansas, S. by Desha and Dallas, and W. by Dallas and Saline counties. The Arkansas River flows nearly through the centre of this county, which is also watered by branches of Bayou, Bartholomew, and Saline Rivers.

Jefferson County, Fa., c. h. at Monticello. Bounded N. by Georgia, E. by Oscilla River, separating it from Madison co., S. by Appalachian Bay, and W. by Wakulla and Leon counties. Mickasuky Lake lies in the W. part, and its outlet, united with several other streams, and affording some water power, sinks into the earth, and disappears 2 miles S. E. from the lake. Soil fertile in many portions.

Jefferson County, Ga., c. h. at Louisville. Bounded N. and E. by Warren, Richmond, and Burke counties, S. by a branch of Ogeechee River, separating it from Emanuel co., and W. by Washington co. Brier Creek runs on its N. E. border, and Ogeechee River and branches. Reedy and Mill Creeks, drain the interior.

Jefferson, Ga., c. h. Jackson co. On the W. side of Oconee River. 95 miles N. from Milledgeville.

Jefferson County, Is., c. h. at Mount Vernon. Bounded N. by Marion, E. by Wayne and Hamilton, S. by Franklin, and W. by Berry and Washington counties. Branches of Big Muddy and Little Wabash water this county, of which one third of the surface is prairie, and the soil tolerably fertile.

Jefferson County, Ia., c. h. at Madison. Incorporated in 1809, and bounded N. by Jennings and Ripley, E. by Switzerland co., S. by the Ohio River and Clark co., and W. by Scott co. Surface diversified and drained by branches of Muscatuck River, by Indian Kentucky, and Big and Lewis Creeks. Soil fertile.

Jefferson County, Io., c. h. at Fairfield. Incorporated in 1839, and bounded N. by Keokuck and Washington counties, E. by Henry, S. by Van Buren, and W. by Warrallo co. Drained by Checaque or Skunk River and tributaries. Soil fertile. Limestone and anthracite coal are found here.

Jefferson County, Ky., c. h. at Louisville. Bounded N. by Oldham co., E. by Shelby, S. by Bullitt co., and W. by Salt River, separating it from Hardin co., and the Ohio River, separating it from Indiana. Floyd's Fork and Pond Creek, branches of Salt River, water this county, opposite which are the rapids of the Ohio, having a canal around them.

Jefferson Parish, La., c. h. at Lafayette. Bounded N. by the Mississippi River, separating it from Orleans parish, E. by Plaquemine parish, S. by Barrataria Bay, and W. by La Fourche Interior and St. Charles parishes. The surface is mostly too low for cultivation, except on the borders of the rivers.

Jefferson, Me., Lincoln co. Jefferson lies at the head of Damariscotta River, and embraces a large body of water. It is otherwise watered by several ponds, producing streams for mill seats, which give to Jefferson great facilities for sawing and transporting lumber. This is a flourishing town in its trade and agricultural pursuits. It is bounded N. by Washington, and S. by Newcastle. 28 miles E. S. E. from Augusta.

Jefferson County, Mi., c. h. at Fayette. This county is bounded N. by Claiborne, E. by Copeiah, S. by Franklin and Adams counties, and W. by the Mississippi River, separating it from Louisiana. Drained by Bayou Pierre and Homochitto Rivers, and Fairchild's and Cole's Creeks and branches. Soil poor in the E., but fertile in the W. portions.

Jefferson County, Mo., c. h. at Hillsboro'.

Bounded N. by St. Louis co., E. by the Mississippi River, S. by St. Genevieve and Francois, and W. by Washington and Franklin counties. Drained by Big River and Joachim Creek. Surface rough and hilly; soil diversified. Minerals of different kinds and mineral springs are abundant.

Jefferson Barracks, Mo., St. Louis co. This U. S. military station lies 142 miles E. from Jefferson City.

Jefferson, N. C., c. h. Ashe co. On the W. side of New River. 202 miles W. N. W. from Raleigh.

Jefferson, N. H., Coos co. Pondicherry Pond, in this town, is about 200 rods in diameter. Pondicherry Bay is about 200 rods wide and 100 long. Around the base of Mount Pliny is excellent grazing and tillage land, and on its S. W. side are several fine farms, which command a delightful view of the White Mountains. Israel's River passes through Jefferson, and here receives a considerable branch. First settlers, Colonel Joseph Whipple, Samuel Hart, and others, in 1773. 98 miles N. from Concord, and 10 S. E. from Lancaster.

Jefferson, N. J., Morris co. This town is drained by Rockaway River, a good mill stream, and contains Hurd's Pond, which is $1\frac{1}{2}$ miles long and 1 mile wide, and enters Hopatcong Lake, which is from 3 to 4 miles long and 1 mile wide, covering about 3000 acres. This lake is a feeder to the Morris Canal. Iron ore abounds in the mountains. 15 miles N. W. from Morristown.

Jefferson County, N. Y., c. h. at Watertown. Incorporated in 1805. Bounded on the N. by St. Lawrence, E. by Lewis, S. by Oswego co., and W. by Lake Ontario and the St. Lawrence River, and is watered by Black, Chaumont, and Perch Rivers, and Sandy and Stony Creeks, besides several small lakes. The surface is generally level, or slightly uneven, and the soil mostly a rich sandy loam. This county is one of the richest in the state in mineral productions, containing immense quantities of iron ore, besides several localities of lead and copper.

Jefferson, N. Y., Schoharie co. Drained by the branches of Schoharie Creek, and some of the head branches of the Delaware River. Surface hilly and mountainous; soil sandy loam of indifferent quality, except in the valleys. 20 miles S. W. from Schoharie village, and 57 from Albany.

Jefferson County, O., c. h. at Steubenville, is bounded N. by Carroll and Columbiana counties, E. by the Ohio River, S. by Belmont, and W. by Harrison and Carroll counties. It has a fertile soil, which produces fine crops of wheat, and is watered by Yellow, Cross, and Short Creeks.

Jefferson, O., Scioto co., borders on the Scioto River, and is a township well adapted to raising grain and timber. In the early settling of the country, a sycamore tree, on the farm of Abraham Miller, admitted at one time within the hollow of the trunk 14 horses, all mounted.

Jefferson, O., c. h. Ashtabula co. 10 miles from Lake Erie, and 204 N. E. from Columbus.

Jefferson County, Pa., c. h. at Brookville. It is bounded N. and N. E. by Warren and Elk counties, E. by Clearfield, S. by Indiana, and W. by Armstrong and Clarion counties. Watered by Toby's and Clarion Rivers, Manoning and Big and Little Sandy Creeks. Surface hilly, abounding with iron and coal; soil mostly fertile in the valleys.

Jefferson, Pa., Greene co. On the W. side of the Monongahela River, and watered by Ten

Mile Creek. Surface undulating; soil loam. 204 miles W. by S. from Harrisburg.

Jefferson County, Tc., c. h. at Dandridge. Bounded N. by Hawkins co., E. by Greene and Union, S. by Sevier co., and W. by Holston River, separating it from Grainger co. The French Broad River runs on its S. W. border. Surface rough and uneven; soil rich in some portions.

Jefferson County, Ts., c. h. at Beaumont. In the S. E. corner.

Jefferson County, Va., c. h. at Charleston. Bounded N. E. by the Potomac River, separating it from Maryland, S. E. by Shenandoah River, separating it from Loudon co., S. W. by Clarke, and N. W. by Berkely co. Watered on the W. boundary by Opequan Creek. Surface rough and hilly; soil various.

Jefferson County, Wn., c. h. at Jefferson. Bounded N. by Dodge, E. by Waukesha, S. by Walworth and Rock, and W. by Dane co. Drained by Rock River. Surface marshy in some portions.

Jeffersonton, Ga., c. h. Camden co. On the S. bank of St. Illa River, at the head of navigation. 270 miles S. S. E. from Milledgeville.

Jeffersonton, Va., Culpepper co. On the W. side of Rappahannock River. 112 miles N. N. W. from Richmond. Lee's Sulphur Springs are near this place.

Jeffersonville, Ia., Clark co. On the N. bank of Ohio River, just above the rapids, and opposite Louisville, Ky. S. by E. from Indianapolis 117 miles, with which it is connected by railroad.

Jenner, Pa., Somerset co. Surface undulating, and drained by Beaver Dam Run, on the borders of which coal is found; soil clay. 12 miles N. W. from Somerset.

Jennings County, Ia., c. h. at Vernon. Incorporated in 1816, and bounded N. by Bartholomew and Decatur, E. by Ripley, S. by Jefferson and Scott, and W. by Jackson co. Watered by Graham's and the N. fork of Muscatuck River and Sand Creek, which afford valuable hydraulic power. Surface hilly; soil calcareous loam. The Madison and Indianapolis Railroad passes through this co.

Jericho, Vt., Chittenden co. Jericho is watered with springs and brooks. Winooski River washes the S. W. boundary, and Brown's River, Little River, and Mill Brook are within its limits. The soil and timber are various in different parts. It is a good farming town, and well adapted to raising most kinds of grain and grass. There is a village at the centre of the town, and another at the corner, in the W. part of the town. The settlement of Jericho was commenced in 1774, by Messrs. Messenger, Rood, and Brown, with their families, from the western part of Massachusetts. 25 miles N. W. from Montpelier, and 12 E. from Burlington.

Jersey County, Is., c. h. at Jerseyville. Bounded N. by Greene and E. by Macoupin co., S. by Madison co. and the Mississippi River, separating it from Missouri, and W. by the Illinois River, separating it from Calhoun co. Watered on the N. by a branch of the Illinois River.

Jersey City, N. J. City and seat of justice for Hudson co., situated on the W. bank of Hudson River, opposite the city of New York. The ground on which it is built projects into the river, having a bay both N. and S. of it. This peninsula, or point of land, was called by the Indians *Areseck*, by the Dutch, sometimes, *Areseck-*

Houck, and afterwards *Paulus-Hoeck*, from which comes *Powles Hook*. From a remote period, this territory belonged to the Van Vorst family. In 1804 the title was conveyed to the "Association of the Jersey Company," which received an act of incorporation that year, and on the 28th of January, 1820, an act was passed to incorporate the "City of Jersey," under which, with various alterations and amendments, it still continues with a city government. At the time of its incorporation it was a mere village, with about 300 inhabitants. Since that time various causes have contributed rapidly to increase the business and population of the place. This is now the principal starting-point of the great line of southern travel. The New Jersey Railroad commences here, which connects with other railroads to Philadelphia. The Ramapo Railroad also commences here, uniting with and making a continuous line with the Erie Railroad. This also is the terminus of the Morris Canal, which, after a circuitous route of 101 miles, and a total rise and fall of 1669 feet, unites the waters of the Delaware with the harbor of New York.

The city, though small, is well laid out, with wide and convenient streets, crossing each other at right angles, and has many handsome buildings. It contains five or six churches, of different denominations; a high school for boys, and a female academy, both of which have an excellent reputation. Several branches of manufacture are carried on in Jersey City and its suburbs, upon an extensive scale. There is a pottery, where the beautiful Delft ware is made; a flint glass factory, employing not less than 100 hands; a ropewalk, a starch factory, two or three iron founderies, and two or three steam mills for the manufacture of carpets. Being closely connected with the city of New York, with which it has communication by steam ferry boats every 15 minutes, it is, in fact, though in a different state, a suburb of that city. It is connected with the collection district of New York, as a port of entry, together with all that part of New Jersey lying N. and E. of Elizabethtown and Staten Island. The British line of ocean steamers, running between New York and Liverpool, have established their dock at Jersey City. Population in 1840, 3050; in 1850, 6856.

Jersey Shore, Pa., Millin, Lycoming co. On the N. side of the W. fork of Susquehanna River. 99 miles N. N. W. from Harrisburg. This place is on the western branch of the Pennsylvania Canal, and has considerable business.

Jerusalem, N. Y., Yates co. Watered by a part of Crooked Lake and a small stream flowing into its W. branch. Bluff Point lies in this town, the surface of which is rather hilly, and the soil productive. 5 miles W. from Penn Yan, and 192 from Albany.

Jessamine County, Ky., c. h. at Nicholasville. Bounded N. and E. by Fayette co., S. and S. W. by the Kentucky River, separating it from Madison and Garrard counties, and W. by Woodford co. Drained by Jessamine, Hickman, and branches of Clear Creek. Surface somewhat uneven; soil productive.

Jewett City, Ct., in the town of Griswold, New London co. On the E. side of Quinebang, at its junction with Patchaug River, and on the Norwich and Worcester Railroad. 47 miles E. by S. from Hartford. There is a fine water power here, and an active business in manufacturing.

Jo. Daviess County, Is., c. h. at Galena. Named from an officer who fell in the battle of Tippecanoe. The county is bounded N. by Wm., E. by Stephenson co., S. by Carroll co., and W. by the Mississippi River, separating it from Iowa. Surface undulating or hilly, and drained by Fever River and Rush's, Apple, and Pine Creeks; soil productive. Lead and copper ores are abundant.

Johnson County, N. C., c. h. at Smithfield. Bounded N. E. by the Moccasin River, separating it from Nash co., E. by Wayne co., S. by Sampson, S. W. by Cumberland, and N. W. by Wake co. Watered by the Neuse River and its tributaries.

Johnson County, As., c. h. at Clarksville. Bounded N. by Newton co., E. by Pope, S. by Yell, and W. by Franklin co. Watered by the Arkansas River and some of its branches. Surface rough and hilly; soil fertile on the borders of the streams.

Johnson County, Is., c. h. at Vienna. Incorporated in 1812, and bounded N. by Williamson co., E. by Pope, S. by Massac and Alexander, and W. by Union co. It is well watered. Surface generally level; the soil in some parts fertile, but, being low, is rather unhealthy.

Johnson County, Ia., c. h. at Franklin. Incorporated in 1822, and bounded N. by Marion, E. by Shelby, S. by Bartholomew and Brown, and W. by Morgan co. Surface undulating, and drained by Sugar, Young's, Stott's, and Indian Creeks. Soil of excellent quality. The Madison and Indianapolis Railroad passes through it.

Johnson County, Io., c. h. at Iowa City. Bounded N. by Linn co., E. by Cedar and Muscatine, S. by Louisa and Washington, and W. by Iowa co. Surface uneven, and watered by Iowa River and branches; soil fertile.

Johnson County, Ky., c. h. at Paintville. In the E. part of the state. Drained by affluents of the W. fork of Big Sandy, which flows through its eastern border from S. to N. Hilly.

Johnson County, Mo., c. h. at Warrensburg. Bounded N. by Lafayette, E. by Pettis, S. by Henry, and W. by Van Buren and Jackson counties. Watered by Blackwater River and its branches, and a branch of La Maine River.

Johnson County, Te., c. h. at Taylorsville. Bounded N. by Virginia, E. and S. E. by North Carolina, S. W. and W. by Carter and Sullivan counties. Watered by Watauga, a tributary of Holston River and its branches. It consists mostly of valley land, having mountain ridges on its N. W. and S. E. borders.

Johnson, Vt., Lamoille co. The River Lamoille enters this township near the S. E. corner, and running westerly about 2 miles, through a rich tract of intervals, falls over a ledge of rocks about 15 feet in height into a basin below. This is called McConnell's Falls. Thence it runs north westerly over a bed of rocks about 100 rods, narrowing its channel and increasing its velocity, when it forms a whirlpool, and sinks under a barrier of rocks which extend across the river. The arch is of solid rock, about 8 feet wide. The surface of this township is uneven; the soil is a dark or yellow loam mixed with a light sand, is easily tilled, and very productive. In the north-eastern part, soapstone has been discovered. The village in Johnson is very pleasant. It was first settled in 1784, by a revolutionary hero of the name of Samuel Eaton. 5 miles N. W. from Hydepark, and 32 N. W. from Montpelier.

Johnson, R. I., Providence co. This town

lies 5 miles W. from Providence, from which it was taken in 1759. It is pleasantly variegated by hills and vales, with a soil adapted to the culture of corn and barley, and particularly to all sorts of vegetables and fruits, of which large quantities are annually sent to Providence market. The quarries of freestone in Johnston are valuable; they supply the wants, not only of the city and immediate vicinity, but distant places, with that useful material. The Wonasquatucket and Pochasset Rivers, with their tributary streams, give this town a good hydraulic power. Beautiful manufacturing villages are scattered along the banks of these waters, presenting to the eye of the traveller the pleasant union of our agricultural and manufacturing interests.

Johnstown, N. Y., Fulton co. Garoga and Cayudutta Creeks water this shire town. The surface is hilly; soil argillaceous loam. 45 miles N. W. from Albany.

Johnstown, Pa., Conemaugh, Cambria co. At the entrance of Stony Creek into Little Conemaugh River. 150 miles W. from Harrisburg. This is the western terminus of the Portage Railroad, running to Hollidaysburg. It connects here with the W. division of the Pennsylvania Canal, which has a large basin in the centre of the village.

Jones County, Ga., c. h. at Clinton. Bounded N. by Jasper and Putnam counties, E. by Baldwin and Wilkinson, S. by Twiggs, and W. by Bibb and Monroe. The Ockmulgee River runs on its W. border. Drained by Cedar Creek and its branches, a tributary of the Oconee River, and Falling and Walnut Creeks, tributaries of the Ockmulgee River.

Jones County, Io., c. b. at Edinburg. Bounded N. by Delaware and Dubuque counties, E. by Jackson, S. by Cedar, and W. by Linn. Watered by Wapsipineon and Makoqueta Rivers and branches. Surface slightly undulating, comprising extensive prairies; soil fertile.

Jones County, Mi., c. h. at Ellisville. Bounded N. by Smith and Jasper counties, E. by Wayne, S. by Perry, and W. by Covington. Watered by branches of Leaf River.

Jones County, N. C., c. h. at Trenton. Bounded N. and E. by Craven co., S. by Carteret and Onslow, and W. by Duplin and Lenoir counties. Trent River and its branches water this county. Surface level, and marshy in many parts.

Jonesboro', Is., c. h. Union co.

Jonesboro', Me., Washington co. This town has Chandler's River and the head of Englishman's Bay on the E. Jonesport on the S., and the town of Addison on the W. Incorporated 1809. It lies 134 miles E. by N. from Augusta, and 12 S. W. from Machias.

Jonesboro', Te., c. h. Washington co. On Little Limestone Creek, 1 mile from its source, and 283 miles E. from Nashville.

Jonesport, Me., Washington co., includes the promontory and several islands on the W. side of Englishman's Bay. It has an excellent harbor. 138 miles E. by N. from Augusta, and 16 S. W. from Machias.

Jonesville, Mn., Hillsdale co. On the E. bank of St. Joseph River, of Lake Michigan. 92 miles W. S. W. from Detroit. The Michigan Southern Railroad passes through it.

Jonesville, Va., c. h. Lee co. On a branch of Powell's River. 384 miles W. by S. from Richmond.

Jordan's Saline, Ts., c. h. Vanzant co.

Juniata County, Pa., c. h. at Mifflin. Incorporated in 1831, and bounded N. by Mifflin and Union counties, E. and S. by Northumberland and Perry, and W. by Huntingdon and Mifflin. Surface hilly and mountainous, and watered by Juniata River, Licking, and Tuscarora Creeks; soil fertile in the valleys.

Juniata, Pa., Perry co. Raccoon, Buffalo, and Little Buffalo Creeks water this town. Surface mountainous; soil, in the valleys, slate, gravel, and calcareous loam. 39 miles W. N. W. from Harrisburg.

Junius, N. Y., Seneca co. The surface of this town is diversified, and the soil very fertile in some portions. 8 miles N. from Waterloo, and 173 W. by N. from Albany.

Kalamazoo County, Mn., c. h. at Kalamazoo. Incorporated in 1830, and is bounded N. by Allegan and Barry counties, E. by Calhoun, S. by St. Joseph, and W. by Van Buren co. Surface level, or slightly uneven, and drained by Kalamazoo and Portage River, and Four Mile, Bear, and Gull Creeks; soil rich black loam.

Kalamazoo, Mn., shire town of Kalamazoo co. 143 miles W. from Detroit, and about 132 E. by S. from Lansing, the capital of the state. It is a flourishing place, on the great route of the Michigan Central Railroad, between Detroit and Chicago. The village contains a court house, jail, a branch of the Bank of Michigan, a branch of the Michigan University, the Huron Literary Institute, and churches of several denominations. An active business is done here, by one flouring mill, several saw mills, distilleries, and tanneries, and by a considerable number of mercantile establishments.

Kalida, O., c. h. Putnam co.

Kanawha County, Va., c. h. at Kanawha Court House, otherwise called Charleston. Bounded N. by Jackson and Lewis counties, E. by Braxton and Nicholas, S. by Fayette and Logan, and W. by Cabell and Mason. Watered by Kanawha River and its branches, Elk and Coal Rivers, and numerous creeks. This county contains valuable saline springs and large quantities of coal.

Kanawha, Va., c. h. Kanawha co., otherwise called Charleston. On the N. bank of Great Kanawha River, at its junction with Elk River. 313 miles W. N. W. from Richmond. The river is here 300 yards wide and 20 feet deep, and is navigable for steamboats to this place. There are large steam flouring mills and other mills here.

Kanawha Saline, Va., Kanawha co. On the N. W. side of Kanawha River. 307 miles W. N. W. from Richmond. This village is connected with the salt trade in the vicinity.

Kane County, Is., c. h. at Geneva. Formed from De Kalb, in 1836. Bounded N. by McHenry co., E. by Cook and Du Page, S. by Kendall, and W. by De Kalb. Fox River and its branches afford hydraulic power.

Kanesville, Io., c. h. Potawatomie co. Founded by the Mormons after their expulsion from Illinois, and the point from which they despatch their emigrant trains to the Great Salt Lake valley. It was formerly the seat of a Catholic mission.

Karthaus, Pa., Clearfield co. On the N. bank of the W. fork of Susquehanna River. 114 miles N. W. from Harrisburg. Salt springs in the

vicinity, iron works, and coal give this place considerable trade.

Kaskaskia, Is., c. h. Randolph co. On the river of the same name, 11 miles from its junction with the Mississippi, and 142 S. from Springfield. This is one of the oldest places in the valley of the Mississippi, having been settled by the French in 1683. It contained as many as 100 families when it was ceded to Great Britain in 1763. In the early times of the country this was a place of great importance. A more beautiful site for a town can hardly be imagined. It is on an extensive plain, in the centre of a gently-sloping basin, drained by a fine navigable stream, and surrounded by a country of fertility and beauty unsurpassed. The Kaskaskia, at this point, approaches within about 6 miles of the Mississippi, and afterwards recedes again; so that the territory of this town occupies a sort of neck between the two rivers. The Roman Catholics have a nunnery here, and a church, and the inhabitants are mostly of the French descent to this day.

Kaufman County, Ts., c. h. at Kaufman. In the N. E. angle of the state. On the head waters of the Sabine.

Keating, Pa., McKean co. Traversed by the Alleghany River and its tributary, Potato Creek. Surface hilly and uneven, with broad, fertile alluvial bottoms.

Keene, N. H., c. h. Cheshire co., is one of the most flourishing towns in the state. The soil is various and generally good. Ashuelot River has its source in a pond in Washington, and discharges itself into the Connecticut at Hinsdale, 20 miles distant from Keene. The principal village is situated on a flat, E. of the Ashuelot, nearly equidistant from that and the upland. It is particularly entitled to notice for the extent, width, and uniform level of its streets. The main street, extending one mile in a straight line, is almost a perfect level, and is well ornamented with trees. Keene has ever been an important site for inland trade; but since the construction of the Cheshire Railroad, great additions to its business must be the consequence. First settlers, Jeremiah Hall, Elisha Root, Nathaniel Rockwood, Josiah Fisher, and Nathan Blake, in 1734. From Concord, by stage, 55 miles, and about four hours' ride from Boston by railroad.

Keene, N. Y., Essex co. This large town is watered by the E. and W. branches of the Au Sable River, which afford immense water power, also by Placid and several smaller lakes. The highest peaks of the Adirondack Mountains are in this town, Mount Marcy being elevated 5467 feet above the tide waters of the Hudson. Iron ore is found among these mountains in great quantities. 12 miles W. from Elizabeth, and 138 N. from Albany.

Keesville, N. Y., Essex and Clinton counties. On both sides of Au Sable River, in the towns of Au Sable and Chesterfield. 4 miles W. from Lake Champlain. Here is an extensive water power, on which are large manufactories of iron.

Kelly, Pa., Union co. Buffalo Creek and its branches water this town, the surface of which is slightly uneven, and the soil calcareous loam. 9 miles N. from New Berlin.

Kemper County, Mi., c. h. at De Kalb. Bounded N. by Winston and Noxubee counties, E. by

Pennsylvania, S. by Lauderdale co., and W. by Neshoba. The Sookanitchie and a branch of Oktibbeha River water this county.

Kendall County, Is., c. h. at Yorkville. The surface is undulating, and watered by Fox River.

Kenduskeag, Me., Penobscot co. A new town, taken from Levant in 1852. 10 miles N. W. from Bangor.

Kendall, N. Y., Orleans co. On the shore of Lake Ontario. 250 miles W. by N. from Albany.

Kennebec County, Me., c. h. at Augusta. South-eastern central, extending from the Androscoggin across the Kennebec, which flows S. through the middle of it. Surface undulating; soil excellent.

Kennebec, Me., Kennebec co. A new town, formed from parts of Hallowell, Augusta, Redfield, &c., in 1850.

Kennebunk, Me., York co. On the S. W. side of Kennebunk River, which affords some water power. It is a port of entry, but the harbor is barred, and its commerce, once considerable, has greatly declined. 80 miles S. W. from Augusta, and 25 S. W. from Portland.

Kennebunk Port, Me., York co. On Kennebunk River opposite Kennebec, and distant from it 4 miles N. E.

Kennet, Pa., Chester co. Watered by Red Clay Creek. Surface hilly; soil rich calcareous loam. 28 miles S. W. from Philadelphia.

Kenosha County, Wn., c. h. at Kenosha. In the S. E. corner of the state.

Kenosha, Wn., c. h. Kenosha co. Formerly called Southport. A flourishing place, with considerable trade.

Kensington, N. H., Rockingham co. This town has no streams of any note; its surface is pretty even. There is much good land fit for grazing and tillage. It is a pleasant place, and was formerly a part of Hampton. 44 miles S. E. from Concord, and 6 S. of Exeter.

Kent, Ct., Litchfield co. First settled 1738; incorporated 1739. This is a mountainous township, with some fine land on the banks of the Housatonic, which passes through its western border. Good iron ore is found here. The Housatonic, calm and still, winding gracefully at the foot of a high and rugged mountain, renders the scenery from the neat and quiet village highly picturesque and beautiful.

"There is in this town," says Dr. Trumbull, "convincing evidence that it was a grand seat of the native inhabitants of this country, before Indians, who more lately inhabited it, had any residence in it. There are arrow heads, stone pots, and a sort of knives, and various kinds of utensils, frequently found by the English, of such curious workmanship as exceeds all the skill of any Indians since the English came into this country, and became acquainted with them. These were not only found when the town was first settled, but they are still found on the sides of Housatonic River." 50 miles W. from Hartford.

Kent County, De., c. h. at Dover. Bounded N. by New Castle co., E. by Delaware Bay, S. by Sussex co., and W. by Maryland. Surface slightly uneven, and drained by Jones, Little Duck, and Mother Kill Creeks; soil fertile.

Kent County, Md., c. h. at Chester. Bounded N. by an arm of Chesapeake Bay, separating it from Cecil co., E. by Delaware, S. by Chester River, separating it from Queen Anne co., and W. by Chesapeake Bay. Surface somewhat uneven; soil diversified.

Kent County, Mn., c. h. at Grand Rapids. Bounded N. by Neeewaggo and Meccoosta counties, E. by Montcalm and Ionia, S. by Barry and Allegan, and W. by Ottawa co. Grand River and its branches water this county, affording good water power. Surface hilly or uneven; soil rich vegetable loam. It contains limestone and salt springs.

Kent, N. Y., Putnam co. Croton River waters this town, the surface of which is hilly and mountainous, and the soil favorable to the growth of grass. 4 miles N. from Carmel, and 101 S. from Albany.

Kent County, R. I., c. h. at East Greenwich. Extending from Narraganset Bay to the Connecticut line. E. part level; W. part rough and hilly; fertile. Traversed by the Stonington Railroad.

Kenton County, Ky., c. h. at Independence. Bounded N. by the Ohio River, separating it from Ohio, E. by the Licking, separating it from Campbell co., S. by Pendleton and Grant counties, and W. by Boone co. Surface slightly uneven; soil fertile.

Kenton, O., c. h. Hardin co. On the W. side of Scioto River. 71 miles N. W. of Columbus.

Keokuck County, Io., c. h. at Lancaster. In the S. E. part of the state. Skunk River flows through it from W. to E.

Keokuck, Io., Lee co. On the W. side of Mississippi River, just below the lower rapids.

Keosauqua, Io., c. h. Van Buren co.

Kershaw District, S. C., c. h. at Camden. Bounded N. by Lancaster co., E. by Chesterfield and Darlington, S. by Sumpter and Richland, and W. by Fairfield co. Watered by Wateree River and branches, and Lynch and Little Lynch Creeks. The soil of the uplands is sandy, but productive, while that bordering on the rivers is remarkably fertile.

Keytesville, Mo., c. h. Chariton co. 2 miles W. from Grand Chariton River, and 15 miles from its mouth. N. W. from Jefferson City 91 miles.

Key West, Fla., c. h. Monroe co. On the N. W. end of Key West, or Thompson's Island, which is one of the Florida keys. The island is about 4 miles in length by 1 mile in width. This place has a good harbor, admitting vessels requiring 27 feet of water. The village was incorporated in 1829, and has considerable trade. Salt is manufactured here in large quantities by solar evaporation. Many of the inhabitants are employed as "wreckers," in saving the effects of the numerous vessels which are wrecked every year on the Florida Reef. For services thus rendered, these persons receive from 80,000 to 100,000 dollars annually. The entire island rests upon a bed of limestone, which is but a foot or two beneath the surface.

Kilkenny, N. H., Coos co. This place was granted in 1744. It is a poor town. 120 miles N. from Concord, and about 15 N. E. from Lancaster.

Killbuck, O., Holmes co. A township on Killbuck Creek, adjoining Coshocton co., S. from Millersburg.

Killingly, Ct., Windham co. This town is rough and hilly, but there is a great deal of beauty about it, and its history is full of romantic stories relating to the first settlers and the red men. The town is well watered by the Quinebaug and its branches. There are three villages, Pleasant Valley, Daysville, and Danielsonville, all pleasant and flourishing manufacturing places. Killingly contains excellent quarries of freestone, and

of a slate rock, soft, and easily wrought; also of a slate rock composed of granular quartz, almost white. A rich bed of porcelain clay is found on Mashentuck Hill, said to equal French or Chinese clay. 45 miles E. from Hartford.

Killingworth, Ct., Middlesex co. This town, the Indian Hammonnasset, was first settled in 1663. It lies on Long Island Sound, with a harbor for small vessels. Many vessels are built at this place. There are 1000 acres of good salt meadow in Killingworth, and the soil of the uplands, although hard and uneven, is rendered productive by industry and skilful management. The village is very pleasant, with a wide street a mile and a half in length, crossed about midway by Indian River, a small stream which enters the harbor. Killingworth is a healthful, interesting place. 38 miles S. E. from Hartford.

Kilmarnock, Me., Piscataquis co. This town is well watered by Piscataquis River and the outlet of Scootum Lake. It lies 103 miles N. E. from Augusta, and 22 N. N. E. from Dover. Incorporated 1824.

Kinderhook, N. Y., Columbia co. About 18 miles S. by E. from Albany. The surface of this township is agreeably diversified, with a soil of sandy loam and clay, generally fertile and well cultivated. It is drained by Kinderhook Creek, which is a large and important mill stream.

The village of Kinderhook is delightfully situated on a plain, 5 miles E. of the Hudson, and 20 S. from Albany. It was incorporated as a village in 1838. No place in the vicinity of the Hudson exceeds this for the beauty of its location and salubrity of its climate. This is the birthplace and residence of Ex-President Van Buren. His country seat is handsomely situated, about 2 miles S. of the village.

Kings County, N. Y., c. h. at Brooklyn. It is bounded on the N. by the East River and New York Harbor, E. by Queens co., S. by the Atlantic Ocean, and W. by New York Bay and the "Narrows." Surface chiefly level; soil very productive when well tilled. It is watered by a few small streams, and contains a number of bays, of which Gravesend and Jamaica are the principal. The Long Island Railroad crosses the N. part of this county.

King and Queen County, Va., c. h. at King and Queen. Bounded N. W. by Caroline, N. E. by Essex and Middlesex, S. E. by Gloucester, and S. W. by New Kent and King William counties. Piankatank and Mattapony Rivers, branches of York River, form the N. E. and S. W. boundaries.

King and Queen, Va., c. h. King and Queen co. On a plain three quarters of a mile from Mattapony River, and 53 E. N. E. from Richmond.

King George County, Va., c. h. at King George. Incorporated in 1720, and bounded N. and N. E. by the Potomac River, separating it from Maryland, E. by Westmoreland co., S. by the Rappahannock, separating it from Essex and Caroline counties, and W. by Stafford co. Surface hilly; soil diversified.

King George, Va., c. h. King George co.

Kingfield, Me., Franklin co. A fine farming township, E. of Mount Abraham, and watered by Seven Mile Brook and one of its tributaries. It lies 55 miles N. W. by N. from Augusta, and 25 N. from Farmington. Incorporated 1808.

Kingsbury, Me. Piscataquis co. 70 miles E. of N. from Augusta.

Kingsbury, N. Y., Washington co. Half shire town with Salem. Watered by the Hudson River and a branch of Wood Creek. The surface is mostly level; soil generally fertile. 55 miles N. from Albany.

King's Bridge, N. Y., New York co. At the N. end of Manhattan Island, near a bridge crossing Spuyten Duval Creek, which connects the East and North Rivers. N. from City Hall 13 miles, and S. from Albany 136. The Hudson River Railroad passes through it.

Kingsessing, Pa., Philadelphia co. This town comprises several islands lying in the Delaware River, which bounds it on the S. E. The Schuylkill River also runs on its E., and Darby Creek on its W. border. Mud Island, in the Delaware, was the site of Fort Mifflin, which made an obstinate defence against the British in 1777. Bordering on the Schuylkill is a fine botanical garden, founded by the celebrated naturalist Bartram. The surface of the town is level; soil alluvial. 7 miles S. W. from Philadelphia, and 98 E. by S. from Harrisburg.

Kingston, Aa., c. h. Autauga co. On the W. side of Autauga Creek. 86 miles from Tuscaloosa.

Kingston, Ms., Plymouth co., was formerly a part of Plymouth, and set off and called Jones's River Parish, in 1717. The harbor of Kingston, in common with that of Duxbury, lies within the Gurnet, which forms the northern boundary of Plymouth Harbor. Jones's River, a small stream, the outlet of several ponds, gives the town good mill privileges. Monk's Hill, near the line of Plymouth, commands delightful views on every side. The village, which is elevated, presents fine views of the harbor and sea. $4\frac{1}{2}$ miles N. N. W. from Plymouth, and $33\frac{3}{4}$ S. E. from Boston by the Old Colony Railroad.

Kingston, Mo., c. h. Caldwell co.

Kingston, N. H., Rockingham co. There are several ponds in this town. The largest, Great Pond, contains upwards of 300 acres, with an island of 10 or 12 acres, covered with wood. There are no high hills; Great Hill and Rockrimmon Hill are the highest. The soil is generally loamy. First settled in 1694. 38 miles S. E. from Concord, and 6 S. from the railroad depot at Exeter.

Kingston, N. J., Middlesex and Somerset counties. On Millstone Creek, midway between Philadelphia and New York, and 14 miles N. E. from Trenton. The Delaware and Raritan Canal passes through it.

Kingston, N. Y., c. h. Ulster co. Bounded on the E. by the Hudson, and watered by Esopus Creek. Surface rolling; soil fertile sandy loam upon a basis of lime and slate. 58 miles S. S. W. from Albany. This is a landing place for visitors to the Catskill Mountains.

Kingston, Pa., Luzerne co. Bounded on the S. E. by the Susquehanna River. Surface uneven; soil productive. 127 miles N. E. from Harrisburg.

Kingston, R. I., c. h. Washington co. 32 miles S. by W. from Providence.

Kingston, Te., c. h. Roane co. At the junction of Clinch and Tennessee Rivers. 143 miles E. by S. from Nashville.

Kingstree, S. C., c. h. Williamsburg district. On Black River. 105 miles E. S. E. from Columbia.

King William County, Va., c. h. at King William. This county lies between Mattapony River

on the N. E., separating it from King and Queen co., and the Pamunkey on the S. W., separating it from New Kent and Hanover counties. Caroline co. bounds it on the N. W. Drained by tributaries of Mattapony and Pamunkey Rivers.

King William, Va., c. h. King William co. 38 miles N. E. by E. from Richmond.

Kingwood, N. J., Hunterdon co. Watered by Loakatong Creek. Surface hilly and undulating; soil fertile, consisting of red shale, clay, and loam. 29 miles N. W. from Trenton.

Kinston, N. C., c. h. Lenoir co.

Kirby, Vt., Caledonia co. There are some tracts of good land in Kirby, but the township is generally either wet and cold or too mountainous for cultivation. It has a number of springs, brooks, and a good fish pond. The settlement was commenced about the year 1799, by Phineas Page and Theophilus Grant. 15 miles N. E. from Danville, and 45 N. E. from Montpelier.

Kirkland, Me., Penobscot co. 15 miles N. N. W. from Bangor.

Kirkland, N. Y., Oneida co. Oriskany Creek waters this town, the surface of which is varied, and the soil fertile calcareous loam. 10 miles S. W. from Utica, and 105 W. by N. from Albany.

Kirksville, Mi., c. h. Adair co.

Kiskiminitas, Pa., Armstrong co. Bounded on the S. E. by the Kiskiminitas or Conemaugh River. Salt is found in this town, and the Pennsylvania Canal traverses a part of it. 187 miles W. N. W. from Harrisburg.

Kittanning, Pa., c. h. Armstrong co. On the Alleghany River. 187 miles W. N. W. from Harrisburg.

Kittery, Me., York co. A seaport town on the N. E. bank of the Piscataqua River, being the extreme south-western boundary of the state, on the Atlantic, adjoining York on the N. E., and Elliot on the N. W. It is one of the earliest settlements in the province, or state, and had its share of trial and suffering with others of their days, from repeated incursions of the Indians. The river, or inlet, called Spruce Creek, affords a convenient harbor for vessels usually employed in the coasting trade and fishery, and formerly considerable trade was carried on with the West Indies from this place; but at present there is little done in the way of navigation, except in ship building and the fishery. Kittery is divided from Portsmouth, N. H., by the Piscataqua. A bridge connects it with that place. Another bridge connects it with Badger's Island, on which is the United States navy yard. Kittery lies 50 miles S. W. from Portland.

Knowlton, N. J., Warren co. Paulin's Kill, Beaver Brook, and Shawpocussing Creek water this town, and on its N. border lies Blue Mountain, where is the celebrated Water Gap. Surface hilly; soil calcareous loam in the valleys, and slaty in the elevated portions. 66 miles N. by W. from Trenton.

Knox County, Is., c. h. at Knoxville. Bounded N. by Henry, E. by Stark and Peoria, S. by Fulton, and W. by Warren and Mercer counties. Watered by Spoon and Henderson Rivers and branches. A large part of the surface is prairie; soil fertile.

Knox County, Ia., c. h. at Vincennes. Incorporated in 1802, and bounded N. by Sullivan and

Greene counties, E. and S. by White River, separating it from Daviess and Pike counties, and W. by the Wabash, separating it from Illinois. Soil very fertile.

Knox County, Ky., c. h. at Barbourville. It is bounded N. by Laurel and Clay counties, E. by Harlan co., S. by Tennessee, and W. by Whitley co. The Cumberland River traverses this county from E. to W., and with its branches waters the surface.

Knox, Me., Waldo co. 32 miles N. E. by E. from Augusta. A good farming town.

Knox County, Mo., c. h. at Edina. In the N. E. angle of the state, crossed by the North, Middle, and South Fabius, and the N. fork of Salt River.

Knox, N. Y., Albany co. Watered by the Boz-kill and a branch of Foxes Creek. Surface broken and hilly, being partly covered by the Helderberg limestone ridge, in which there is quite a large cavern. Soil mostly productive. 18 miles W. from Albany.

Knox County, O., c. h. at Mount Vernon. Richard bounds it on the N., Coshocton and Holmes on the E., Licking on the S., and Delaware and Marion counties on the W. The eastern part is uneven, and the soil rather poor; the western is level, and both are watered by fine streams. The central part has a pleasant variety of hills and vales, and the beautiful Vernon River, with its streams, waters the whole of it. In this and the western part is found a vegetable mould, based upon yellow clay mixed with sand.

Knox County, Tc., c. h. at Knoxville. Bounded N. by Anderson and Grainger counties, E. by Sevier, S. by Blount, and W. by Roane. Watered by the Tennessee River, and Holston and French Broad Rivers, its head branches, and by Beaver Creek, a branch of Clinch River. Surface mostly mountainous; soil very fertile on the streams.

Knoxville, Tc. City and seat of justice of Knox co. This fine city is located on the N. bank of Holston River, at the head of steamboat navigation, and 4 miles below the entrance of French Broad River. It is laid out with regularity, and handsomely built. The court house is a fine building. This is the seat of East Tennessee College. (See *Colleges*.) There are also two academies here, one for males and one for females. A railroad route from Charleston, S. C., through Augusta, Ga., has nearly reached this place. 183 miles E. by S. from Nashville.

Knoxville, Ga., c. h. Crawford co. 50 miles S. W. by W. from Milledgeville.

Knoxville, Is., c. h. Knox co. On an elevated prairie. 100 miles W. N. W. from Springfield.

Kohomo, Ia., c. h. Howard co.

Kortright, N. Y., Delaware co. The surface is hilly and mountainous; soil fertile loam, yielding large crops of grass. 15 miles N. from Delhi, and 68 S. W. from Albany.

Kosciusko County, Ia., c. h. at Warsaw. Tippecanoe River and other streams afford hydraulic power.

Kosciusko, Mi., c. h. Attala co. 67 miles N. E. from Jackson.

Lackawannock, Pa., Mercer co. Uneven. 6 miles S. W. from Mercer.

Lackawaxen, Pa., Pike co. Watered by the Delaware River and Lackawaxen and other Creeks. 182 miles N. E. from Harrisburg.

La Clerk County, Mo. S. central. Crossed from S. to N. by the head waters of Gasconade.

The N. W. part is drained by tributaries of the Osage.

Lacon, Is., c. h. Marshall co. On the E. side of Illinois River. 99 miles N. from Springfield.

La Crosse County, Wn. On the Mississippi. Drained by the La Crosse.

Lafayette County, As., c. h. at Lewisville. Watered by Red River and tributaries. S. W. corner.

Lafayette, Ia., c. h. Tippecanoe co. On the E. side of Wabash River, at the head of steamboat navigation. The Wabash Canal connects this growing place with Lake Erie. 10 miles below the mouth of Tippecanoe River, and 70 N. W. from Indianapolis.

Lafayette Parish, La., c. h. at Vermilionville. Bounded N. by St. Landry co., E. by St. Martin's and St. Mary's counties, S. by Vermilion Bay, and W. by Vermilion co. Surface flat, and mostly too wet for agriculture.

Lafayette, La., city and seat of justice of Jefferson parish. This city borders on the Mississippi River, and is a suburb of the city of New Orleans. It is crossed by the New Orleans and Carrollton Railroad, and lies 2 miles W. by S. from New Orleans.

Lafayette County, Mi., c. h. at Oxford. Bounded N. by Tallahatchie River, separating it from Marshall co., E. by Pontotoc co., S. by Chickasaw and Yalabusha, and W. by Ponola co. Watered by Tallahatchie and Yocanapufa Rivers and branches. Surface undulating; soil productive.

Lafayette County, Mo., c. h. at Lexington. Bounded N. by the Missouri River, separating it from Bay and Carroll counties, E. by Saline co., S. by Johnson, and W. by Jackson co. Drained by several mill streams flowing into the Missouri. Surface slightly undulating; soil rich.

Lafayette, N. Y., Onondaga co. Onondaga Creek waters this town, the surface of which is hilly, and the soil clay loam. 10 miles S. from Syracuse village, and 134 N. of W. from Albany.

Lafayette, O., Williams co. Pleasantly situated on Beaver Creek; the land is rolling, and of an excellent quality. 22 miles from Napoleon, and 21 from Defiance.

Lafayette, O., Deer Creek township, Madison co., is located on the national road, about 21½ miles W. from Columbus.

Lafayette County, Wn. On the southern border of the state. Watered by the head streams of the Pictonica.

La Fourche, Interior Parish, La., c. h. at Thibodeauxville. Bounded N. by Assumption, St. James, and St. John Baptist parishes, E. by St. Charles and Jefferson parishes, S. by the Gulf of Mexico, and W. by Terrebonne parish. Watered by the Bayou La Fourche and other streams. The surface is flat, and mostly too wet for cultivation, except on the borders of the streams, where the soil is rich, producing sugar and cotton.

Lagada, Te., Wilson co. 30 miles E. from Nashville.

La Grange, Aa., Franklin co. On high ground. 16 miles S. from Tennessee River, and 136 N. by W. from Tuscaloosa. Site of La Grange College. See *Colleges*.

La Grange, Ga., c. h. Troup co. 6 miles E. from Chattahoochee River, on one of its small tributaries. 121 miles W. from Milledgeville.

La Grange County, Ia., c. h. at Lima. It is bounded N. by Michigan, E. by Steuben co., S. by Noble, and W. by Elkhart co. Watered

by Pigeon, Fawn, and Little Elkhart Rivers, and several small lakes. Surface undulating, consisting of prairies on the N.; the soil is fertile.

La Grange, Ia., c. h. La Grange co.

La Grange, Me., Penobscot co. This town is watered by Birch Stream and its branches. 95 miles N. E. from Augusta.

La Grange, N. Y., Dutchess co. Sprout and Wappinger's Creeks water this town, the surface of which is somewhat hilly and uneven, and the soil productive gravelly loam. 7 miles E. from Poughkeepsie, and 80 S. from Albany.

Lake County, Is., c. h. at Little Fort. Bounded N. by Wisconsin, E. by Lake Michigan, S. by Cook, and W. by McHenry co. Watered by Des Plaines and Fox Rivers. Surface undulating, being mostly prairie land.

Lake County, Ia., c. h. at Crown Point. Bounded N. by Lake Michigan, E. by Porter co., S. by the Kankakee River, separating it from Jasper co., and W. by Illinois. Drained by Deep River and Cedar and Eagle Creeks. Surface mostly level, and in parts marshy; along the lake is a ridge of bluffs and sand hills.

Lake County, O., c. h. at Painesville. N. E. part of the state. Has Lake Erie on the N. W. Watered by Grand and Chagrin Rivers.

Lake Pleasant, N. Y., c. h. Hamilton co. This is a large township, about 50 miles in length. It is watered by Sacandaga and Indian Rivers, and other branches of the Hudson. It also contains Lakes Emmons and Pleasant, and Round Lake, besides several smaller ones. The surface is greatly diversified, being mostly a wilderness. 72 miles N. W. from Albany.

Lake Providence, La., Carroll parish. The sheet of water from which this village takes its name was formerly the bed of the Mississippi River, and its outlet, flowing to the S., now forms Tensas River. 366 miles N. N. W. from New Orleans.

Lamar, Pa., Clinton co. Watered by Big Fishing and Cedar Creeks. Surface mountainous; soil calcareous loam in the valleys.

Lamar County, Ts. In the N. E. angle of the state, bordering on Arkansas.

Lamoille County, Vt., c. h. at Hydepark. This county was established in 1836. It is bounded N. by Franklin and Orleans counties, E. by Orleans and Caledonia counties, S. by Washington co., and W. by Chittenden and a part of Franklin counties. This county lies on the Green Mountain Range, and is the source of many streams. The River Lamoille passes nearly through its centre, and, with its tributaries, gives the county a great hydraulic power. The elevation of the county renders the soil more adapted for grazing than for tillage; yet there are large tracts of excellent meadow bordering its streams.

Lampeter, Pa., Lancaster co. Bounded S. E. by Pecquea Creek, N. W. by Conestoga River, and drained by Mill Creek, a branch of Conestoga River.

Lancaster, Io., c. h. Keokuck co.

Lancaster, Ky., c. h. Garrard co. Located a few miles E. from Dick's River, and 57 miles S. by E. from Frankfort.

Lancaster, Mo., c. h. Schuyler co.

Lancaster, Ms., Worcester co. This is the *Weshakim*, or *Washaway*, of the Indians, and is the oldest town in the county. Lancaster lies on both sides of Nashua River, and has a remarkably fine alluvial soil, in a high state of cultivation. The village is very beautiful; it is

neatly built on an alluvial plain, shaded by elms, surrounded by hills, and watered by a large and placid stream. The N. and S. branches of the Nashua meet near the centre of the town, and produce a valuable water power. George Hill, on the westerly side of the town, comprises some good farms. Turner's, Spectacle, Fort, Sandy, and other ponds, add much to the scenery of this delightful town. 34 miles W. N. W. from Boston, and 25 S. W. from Lowell. A railroad passes in the neighborhood.

Lancaster, N. H., c. h. Coos co. On the southeastern bank of Connecticut River, which forms and washes its N. W. boundary, a distance of ten miles. Besides this the town is watered by Israel's River, and several brooks. Across this river a bridge and several dams are thrown, forming a valuable water power. There are several ponds; the largest is called Martin Meadow Pond, from Martin, a hunter. This communicates with Little Pond. Lancaster is situated near lofty mountains, but is not itself mountainous. There are 3 hills in the S. part, called Martin Meadow Hills. The soil along the Connecticut is alluvial, the meadows extending back nearly three fourths of a mile. The village lies on a street extending from the bridge across Israel's River northwardly. It is pleasant, and is the site of considerable trade. First settlers, Captain David Page, Emmons Stockwell, and Edward Bucknam, in 1763. 95 miles N. from Concord, and about 40 N. E. from Haverhill.

Lancaster, N. Y., Erie co. Seneca, Ellicott's, and Cayuga Creeks water this town. The surface is undulating; soil fertile, yielding large crops of grass and grain. 12 miles E. from Buffalo, and 272 W. from Albany.

Lancaster, O., c. h. Fairfield co. This town was laid out in 1800. It is a thriving place, pleasantly located near the source of Hocking River, in a fertile valley, surrounded by very valuable land. This town is connected with the Ohio Canal by the Lancaster Canal, 8 miles distant; it is also connected with it by the Hocking Canal. 34 miles N. E. from Chillicothe, and 28 S. E. from Columbus.

Lancaster County, Pa., c. h. at Lancaster. It is bounded N. by Dauphin, Lebanon, and Berks counties, S. E. by Chester co., and S. W. by the Susquehanna River, separating it from York co. This was the 4th county formed in the state, and is admirably located, the Susquehanna River running more than 40 miles on its border. It is also drained by Conestoga, Pecquea, Conewago, and other creeks, affording fine water power. Iron ore and sulphate of magnesia, or epsom salts, are the principal minerals.

Lancaster, Pa. City, and seat of justice for Lancaster co. Situated near the right bank of the Conestoga Creek, 12 miles E. of where it empties into the Susquehanna, at Columbia. It is 70 miles W. from Philadelphia, and 37 miles S. E. from Harrisburg, the capital of the state. Population in 1820, 6663; in 1830, 7704; in 1840, 8417; in 1850, 12,382.

This place was for many years the seat of government of Pennsylvania, until the capital was removed to Harrisburg, in 1812. It was first chartered as a borough in 1754, and incorporated as a city in 1818. It is located on elevated ground, about a mile and a half W. of the creek, and is handsomely laid out with broad streets, crossing each other at right angles, which are

chiefly paved and curbed, and are neatly kept. The two principal streets are King and Queen Streets, at the intersection of which, in the centre of the city, is a handsome square, containing the court house. Many buildings still remain in the ancient style, as built by the German settlers, which are principally one story brick houses, with wide roofs and dormer windows; but the houses of more recent date are lofty, and many of them elegant, with every modern convenience and embellishment. Besides the peculiarities above mentioned, which had their origin in the fashions of the olden time, a stranger is struck with the number and character of the tavern signs which are hung out in the principal streets, and which, as one writer remarks, "form a sort of out-door picture gallery," in which "may be seen half the kings of Europe — the king of Prussia, of Sweden, and the prince of Orange; then the warriors — Washington, Lafayette, Jackson, Napoleon, William Tell, and a whole army of others; and then the statesmen — Jefferson, Franklin, and others; and then comes the Red Lion of England, leading a long procession of lions, bears, stags, bulls, horses, eagles, swans, black, white, dun, and red; not to mention the inanimate emblems, the globe, the cross-keys, the plough, the wheat sheaf, the compass and square, and the hickory tree." These numerous inns were formerly much more in demand than at present; when the whole business of transportation was carried on in wagons, over the great Western Turnpike, passing through this place from Pittsburg to Philadelphia.

Lancaster is an illustration of the change made in the prospects of many an inland town in our country by the introduction of railroads. When spoken of by Governor Pownall, who visited it in 1754, as already a "growing town," with fair promise of increase, some one, in alluding to this opinion, remarked, that "from its local situation, *remote from water*, Lancaster was not, *nor could it ever possibly become*, a place of business." Such, until recent times, would have been the natural conclusion from the fact that a place had not been located upon a large navigable river. But the era of internal improvements, especially the construction of railroads, has changed all this. Speaking of Lancaster as it now appears, a descriptive author observes, "This place well deserves the title of a city; there is nothing rural in its aspect. The streets, laid off at right angles, are paved and lighted; the houses, generally of brick, are compactly arranged; and those of modern date are lofty and well built; . . . the place is supplied with water by an artificial basin and waterworks; stores, taverns, and shops abound in every quarter; railroad cars, stages, canal boats, and wagons are constantly arriving or departing; and all together there is that rattle and din that remind one of city life."

Among the manufactures of this place are two for cotton fabrics, which employ about 900 persons.

Lancaster has had the benefit of every species of internal improvement in the order in which they have arisen. The turnpike from this place to Philadelphia, completed in 1794, at a cost of \$465,000, paved at first with stone, and since McAdamized, was the first road of the kind built in the United States. The splendid stone bridge over the Conestoga Creek, built by in-

dividual enterprise, in 1799, was a work of which, at that early period, the state might have been proud, and which contributed, in no small measure, to the prosperity of the place. Then followed, in 1829, the improvements for rendering the Conestoga Creek navigable from Lancaster to the Susquehanna River, a distance of 18 miles, which was accomplished by means of a series of 9 locks, creating slack water pools, at a cost of about \$75,000. By means of this work, in connection with a tide water canal to Port Deposit, a navigable communication was opened to Baltimore. In 1834, the Philadelphia and Columbia Railroad, passing by Lancaster, was opened; and, in 1838, the railroad from Lancaster to Harrisburg, since extended to Pittsburg, and in another direction to Hagarstown, in Maryland.

A college was established at Lancaster in 1787, called "Franklin College," for which spacious buildings were erected; but it afterwards declined to the rank of an academy or high school.

Lancaster District, S. C., c. h. at Lancaster. Bounded N. by North Carolina, E. by Lynche's Creek, separating it from Chester district, S. by Kershaw district, and W. by Catawba River, separating it from Chester district. Drained by branches of Catawba River and Lynche's Creek.

Lancaster, S. C., c. h. Lancaster district. On a small branch of Catawba River. 72 miles N. N. E. from Columbia.

Lancaster County, Va., c. h. at Heathville. It is bounded N. by Richmond co., E. by Northumberland co. and Chesapeake Bay, and S. and W. by the Rappahannock River, separating it from Middlesex co.

Lancaster, Va., c. h. Lancaster co. 38 miles E. by N. from Richmond.

Landgrove, Vt., Bennington co. This town is on elevated land, at the N. E. corner of the county. Some of the head branches of West River have their sources here. The lands are too rough and high for much improvement. The settlement was commenced by William Utley and family, in June, 1769, emigrants from Ashford, Ct. 33 miles N. E. from Bennington, and 70 S. from Montpelier.

Landaff, N. H., Grafton co. Wild and Great Ammonoosuck Rivers pass through this town. Landaff Mountain, Cobble and Bald Hills are the principal elevations. The farmers here are very industrious, and the soil well rewards them for their labor. The town of Landaff was granted, in 1764, to James Avery and others. 12 miles N. E. from Haverhill, and 95 N. by W. from Concord.

Lanesboro', Ms., Berkshire co., was incorporated on the 20th of June, 1765, and then included a large part of the present town of Cheshire. The soil is of an excellent quality, mostly clay loam. The S. branch of the Hoosic rises in the S. E. corner of the town, the W. branch of the Housatonic passes by the centre and runs through Lanesboro' Pond into Pittsfield. This pond is partly in the latter town. It abounds with fish. The scenery, from various points, is picturesque and delightful. This town affords iron ore, and extensive beds of beautiful white and clouded marble, and graphic slate. There is in Lanesboro' a large rock, so equally balanced upon another that it can be easily moved. The settlement of this town commenced in 1754. 5

miles N. from Pittsfield, from which, by the Western Railroad, is 151 miles to Boston.

Langdon, N. H., Sullivan co. The principal village is 3 miles E. from Connecticut River, and 6 from Bellows Falls. A branch of Cold River passes S. W. through the town, and unites with the main branch, near the S. line. Langdon was named in honor of Governor Langdon. First settlers, Seth Walker, Nathaniel Rice, and Jonathan Williard, in 1773. 18 miles S. S. W. from Newport, and 56 W. by S. from Concord.

Lanier, Ga., c. h. Macon co. On the W. side of Flint River. 76 miles S. W. from Milledgeville.

Lanier, O., Preble co., was named for a citizen of the county, Alexander C. Lanier, Esq. The township was organized in 1811, and has well-cultivated, well-watered lands.

Lansing, Mn. Capital of the state. Situated on Grand River, about 55 miles N. from Jackson, which is on the Michigan Central Railroad, and 132 miles W. by N. from Detroit, via Jackson. In 1847 the place upon which it stands was covered with a thick forest. Now there are about 400 buildings, including several large hotels. Both steam and water power are used for driving several flouring mills and saw mills. The state house is finely situated upon an eminence about 50 feet above the river, overlooking the town. It is a large and handsome edifice, and is surrounded by an ample enclosure, to be tastefully laid out and ornamented. Many things, in a town so recent, must be yet rough and incomplete; but their outline is sufficiently developed to indicate the beauty which will speedily adorn the new capital of this rich and enterprising state.

Lansing, N. Y., Tompkins co. Drained by Salmon Creek and its branches. Surface hilly; soil productive. 8 miles N. from Ithaca, and 166 W. from Albany.

Lansingburg, N. Y., Rensselaer co. On the E. bank of the Hudson; the surface is hilly, except on the border of the river, where is an extensive plain; the soil mostly gravelly and clay loam, of good quality. 3 miles N. from Troy, and 9 N. N. E. from Albany.

Lapeer County, Mn., c. h. at Lapeer. Bounded N. by Tuscarora and Sanilac counties, E. by St. Clair, S. by Macomb and Oakland, and W. by Genesee co. Watered by Flint River and branches, Belle River and Mill Creek. Surface slightly uneven; soil fertile.

Lapeer, Mn., c. h. at Lapeer co. Situated at the junction of Flint River and Farmer's Creek. 61 miles N. from Detroit.

La Pointe County, Wn. In the N. W. corner of the state, on the S. shore of Lake Superior.

La Porte County, Ia., c. h. at La Porte. Bounded N. W. by Lake Michigan, N. by Michigan, E. by St. Joseph co., S. by Stark, and W. by Porter co. Drained by Kankakee, Little Kankakee, and Gallien Rivers and Trail Creek.

Laredo, Ts., c. h. Webb co.

Lorissa, Ts., Cherokee co. This pleasant and thriving town is situated in Eastern Texas, 25 miles N. from Rusk, in the same county, and 30 miles E. from Palestine, in Anderson co. It is decidedly the most prosperous inland village in Eastern Texas. It is situated in the centre of a large body of fertile lands, well watered and densely populated by thrifty farmers. The state of society is one of the chief attractions of the

place. In a population of about 400, there are three regularly-organized churches—a Presbyterian, a Cumberland Presbyterian, and a Baptist.

Larue County, Ky. Central part. Washed on the N. by the Rolling Fork of Salt River.

La Salle County, Is., c. h. at Ottawa. Incorporated in 1831. Bounded N. by Lee and De Kalb counties, E. by Kendall and Grundy, S. by Livingston and Woodford, and W. by Putnam and Bureau counties. Drained by Illinois, Fox, and Vermilion Rivers, and their branches, which afford water power. Land mostly fertile prairie. The Illinois and Michigan Railroad traverses this county.

La Salle, Is., La Salle co., at the head of navigation on the Illinois River, 213 miles from its mouth, where the Illinois and Michigan Canal terminates by a conjunction with the river. This is a new place, created entirely by its being made the terminus of the canal, and is destined from this circumstance to become a place of considerable importance. Steamboats on the river, and canal boats from the lake, are continually arriving and departing; and a number of steamers are almost always lading and unloading at the wharves. The distance on the canal, from this place to Chicago, on Lake Michigan, is 102 miles.

Latimore, Pa., Adams co. This is a level town, watered by Bermudian Creek and branches. Soil red shale. About two miles S. from the village are York Sulphur Springs. 15 miles N. E. from Gettysburg.

Lauderdale County, Aa., c. h. at Florence. Bounded N. by Tennessee, E. by Limestone co., and S. and W. by the Tennessee River, separating it from Lawrence and Franklin counties and Mississippi. Drained by Blackwater, Shoal, Second, Cypress, and other creeks flowing into the Tennessee. Surface uneven; soil of excellent quality. A canal here extends around the Muscle Shoals in the Tennessee River.

Lauderdale County, Mi., c. h. at Marion. Bounded N. by Kemper co., E. by Alabama, S. by Clarke, and W. by Newton co. Watered by Oktibbeha River and branches.

Lauderdale County, Te., c. h. at Ripley. Bounded N. by Dyer co., E. by Gibson, S. by Haywood and Tipton counties, and W. by the Mississippi River. Soil very fertile, and watered by Forked Deer and Big Hatchee Rivers and Coal Creek.

Laurel County, Ky., c. h. at Loudon. Bounded N. by Madison co., E. by Clay, S. by Knox and Whitely, and W. by Rockcastle Creek, a head branch of Cumberland River. In the S. E. part of the state. Watered by several tributaries of the Cumberland, namely, South Fork, Little Rockcastle, and Laurel Creeks. The surface is hilly.

Laurens County, Ga., c. h. at Dublin. Bounded N. E. by Emanuel, S. E. by Montgomery, S. W. by Pulaski, and N. W. by Wilkinson and Washington counties.

Laurens, N. Y., Otsego co. Watered by Otego Creek. The surface is elevated and hilly; soil rich sandy loam. 15 miles S. W. from Cooperstown, and 84 W. from Albany.

Laurens District, S. C., c. h. at Laurensville. Bounded N. E. by Ennoree River, separating it from Spartanburg and Union districts, S. E. by Newberry district, S. W. by Saluda River, separating it from Abbeville district, and N. W. by Greenville district.

Laurens, S. C., c. h. Laurens district. On the ridge which separates the waters of Ennoree and Saluda Rivers. 70 miles N. W. by W. from Columbia.

Lausanne, Pa., Northampton co. Watered by Lehigh River and Laurel Run. Surface mountainous; soil gravelly and sterile. The Beaver Meadow coal mine is in Spring Mountain, in this town. 100 miles E. N. E. from Harrisburg.

La Vacca County, Ts. S. central part of the state.

Lawrence County, Aa., c. h. at Moulton. Bounded by the Tennessee River, separating it from Lauderdale co., E. by Morgan, S. by Walker, and W. by Franklin co. Watered by Big Nance and Town Creeks and branches, and by the head branches of Black Warrior River.

Lawrence County, As., c. h. at Jackson. Bounded N. by Missouri and Randolph co., E. by Cache River, separating it from Greene co., S. by Jackson and Independence, and W. by Izard and Fulton counties. Drained by Big Black, Current, and Strawberry Rivers. Surface level in the E. and uneven in the W. portions.

Lawrence County, Ky., c. h. at Louisa. Bounded N. by Carter co., E. by Big Sandy River, separating it from Virginia, S. by Johnson, and W. by Morgan co. Little Sandy River and Blane's Creek drain this county, affording important water power. Soil fertile.

Lawrence County, Is., c. h. at Lawrenceville. Incorporated in 1821. Bounded N. by Crawford co., E. by the Wabash River, separating it from Indiana, S. by Wabash co., and W. by Richland co. Watered by Fox and Embarrass Rivers and Raccoon Creek. The land is excellent in some portions, but that on the borders of the streams is liable to inundation.

Lawrence County, Ia., c. h. at Bedford. Bounded N. by Monroe, E. by Jackson and Washington, S. by Orange, and W. by Martin and Greene counties. White river, Salt, Guthrie's, Leatherwood and Beaver Creeks water the surface, which is mostly hilly. The streams afford water power.

Lawrence, Ms., Essex co. 26 miles N. $\frac{1}{2}$ W. from Boston. Population, 1850, 8500. Projected by the Essex Company, in 1844, and incorporated as a town in 1847. It contains 1980 acres on the S. side of Merrimac River, taken from Andover, and 2050 acres on the north side, taken from Methuen. The Essex Company was organized in April, 1845, and the following officers constituted its first board: Hon. Abbott Lawrence, president; Messrs. Patrick T. Jackson, William Sturgis, Nathan Appleton, John A. Lowell, and Ignatius Sargent, directors; and Charles S. Storow, treasurer and chief engineer. The Essex Company have created a water power, by the erection of a stone dam, laid in cement, 35 feet thick at base, 12 feet 6 inches at crest, 900 feet long between abutments, with wings respectively 324 feet and 405 feet, giving an effective head and fall of 28 feet for the whole Merrimac River, and a water power equal to that at Lowell, which is about 10 miles above, on the same river. Cost of dam, \$250,000. From this dam they convey water for manufacturing purposes, by a canal on the N. side of the river, 5330 feet in length, 100 feet wide at the upper end, 60 feet wide at the lower end, and 12 feet deep in the centre. This canal is parallel with the river, at a distance of 400 feet, giving that space for mill

sites. The following manufacturing companies are in operation:—

Atlantic Cotton Mills. Capital, \$1,800,000. Manufacture coarse sheetings* and shirtings. 45,000 spindles, 1200 looms, employ 1000 operatives, and consume 13,000 bales of cotton per annum.

Bay State Mills. Capital, \$1,800,000. Manufacture woollen goods of all kinds. 98 sets of cards, 379 broad, 213 narrow looms, employ 2100 operatives. Amount of wool consumed equal to 12,000 lbs. American fleece per day.

Essex Company's Machine Shop. Make steam engines, locomotives, cotton and woollen machinery of all kinds; employ 500 to 800 hands.

Charter Paper Company. Manufacture printed paper hangings.

Besides these concerns, there is a mill of the Plymouth Duck Company, which contains about 5000 spindles.

The Pacific Mills, for the manufacture of fine lawns and barege de laines for printing. 50,000 spindles, 1000 looms.

The Essex Company are still the owners of the principal part of the land and water power. Capital, \$1,500,000.

The Lawrence Gas Light Company furnish gas for lighting the mills and public buildings. Present capital, \$55,000.

Other smaller manufactures, of various kinds, are in operation, the most prominent of which are a steam saw mill, card factory, file shop, a piano-forte factory, a carriage factory, and a steam planing mill.

The school department consists of 1 high school, 2 grammar, 2 mixed, 6 middle, and 7 primary schools. 28 teachers are employed, and 1700 scholars are enrolled. Annual cost \$10,000. The Town Hall is a handsome brick edifice, 121 feet by 64 feet, and 55 feet high, containing the town offices on the lower floor, and the town hall above, with seats for 1500 people.

Ten religious societies have been organized; seven of which have built handsome churches. A reservoir has been constructed, at a height of 150 feet above the level of water in the canal, containing 1,395,000 gallons, to supply water in case of fire. This reservoir is kept filled by the force pumps of the different mills.

Six lines of railway diverge from this place to Boston, Salem, Newburyport, Dover, Portland, Manchester, N. H., and Lowell, affording unsurpassed facilities for intercourse and business.

A common, of 18 acres, in the centre of the town, has been presented to it by the Essex Company, and trees have been planted, and walks laid out, for the benefit of future inhabitants.

A generous donation of 4 acres of land, in the centre of the town, has been made by the Hon. Daniel A. White, of Salem, the proceeds to be applied to the maintenance of a course of public lectures, and also of a public library, for the benefit of the citizens.

This town received its name in honor of the Lawrence family, well-known merchants of Boston, originally from Groton, to whose intelligence and enterprise the progress of Massachusetts in manufactures has been greatly indebted. The Hon. Abbott Lawrence, one of its members, has ably represented the country at the court of St. James, and, as well as his elder brother, Amos, the founder of the family, has been greatly dis-

tinguished for a liberal, philanthropic, and public-spirited employment of his ample income.

Lawrence County, Mi., c. h. at Monticello. Bounded N. by Cophah and Simpson counties, E. by Covington, S. by Marion and Pike, and W. by Franklin co. Soil various, and watered by Pearl River and branches, and the head branches of Homochitto River.

Lawrence County, Mo., c. h. at Mount Vernon. In the S. W. angle of the state, on the height of land between the Sac, Neosho, and White Rivers.

Lawrence, N. J., Mercer co. Assunpink Creek and Stony Brook drain this town. Surface undulating; soil clay and loam. 6 miles N. E. from Trenton.

Lawrence, N. Y., St. Lawrence co. Drained by Deer and St. Regis Rivers. Surface uneven; soil of good quality. 25 miles N. E. from Canton, and 230 N. N. W. from Albany.

Lawrence County, O., c. h. at Burlington. Jackson co. bounds it on the N., Gallia on the E., Scioto on the W., and the Ohio River on the S., which, with Symmes and Indian Guyandot Creeks, are the principal streams. The land is barren and hilly. Irish and Dutch emigrants from Pennsylvania and Virginia first settled here about the year 1800. 42 miles of this county are bounded by the Ohio River. The land near it is good and productive. Iron ore and stone coal are found here in great abundance. There has also been found a valuable bed of clay for stone ware.

Lawrence County, Pa., c. h. at New Castle. On the western border of the state. Watered by Chenango Creek, (the E. branch of Beaver River,) which passes through it from N. to S. Hilly.

Lawrence County, Te., c. h. at Lawrenceboro'. Bounded N. by Hickman and Maury counties, E. by Giles co., S. by Alabama, and W. by Wayne co., Shoal Creek and its branches, some branches of Sugar Creek and Buffalo River, drain this county.

Lawrenceburg, Ia., c. h. Dearborn co. On the N. bank of Ohio River, 1 mile below the mouth of Great Miami river, and 86 miles S. E. from Indianapolis.

Lawrenceburg, Te., c. h. Lawrence co. On the E. side of Shoal Creek. 75 miles S. S. W. from Nashville.

Lawrenceville, Ga., c. h. Gwinnett co. Near the sources of Yellow River. 84 miles N. W. from Milledgeville.

Lawrenceville, Is., c. h. Lawrence co.

Lawrenceville, Va., c. h. Brunswick co. Watered by a branch of Meherin River. S. S. W. from Richmond 73 miles.

Lawsville Centre, Pa., Susquehanna co. On Snake Creek. 187 miles N. N. E. from Harrisburg. On a branch of the creek is a salt spring.

Leacock, Pa., Lancaster co. Pecquea Creek forms the S. E., and Conestoga River the W. boundary of this town, which is also watered by Mill Creek. Surface level; soil clay and calcareous loam. Distant 44 miles E. S. E. from Harrisburg.

Leake County, Mi., c. h. at Carthage. Bounded N. by Atala co., E. by Neshoba, S. by Scott, and W. by Madison. Watered by Pearl River and tributaries.

Lebanon, Aa., c. h. De Kalb co. On the N. side of Big Wills Creek. 112 miles N. E. from Tuscaloosa.

Lebanon, As., c. h. Searcey co. On the S. side

of the Buffalo Fork of White River. 95 miles N. by W. from Little Rock.

Lebanon, Ct., New London co. First settled about 1700. The surface of the town is uneven — moderately hilly. The soil is of a chocolate color; — a rich deep mould, very fertile, and well adapted for grass. Husbandry is the principal business of the inhabitants. The village is on a street more than a mile in length, wide, pleasant, and interesting. 30 miles S. E. from Hartford.

Lebanon, Is., St. Clair co. 71 miles from Springfield. The seat of McKendree College. See *Colleges*.

Lebanon, Ia., c. h. Boone co. 25 miles N. W. from Indianapolis.

Lebanon, Ky., c. h. Marion co. On a small branch of Salt River. S. W. by S. from Frankfort 59 miles.

Lebanon, Me., York co. This town is bounded W. by Salmon Fall River, on the line of New Hampshire. It is a large agricultural township, with some trade and manufactures. It lies 50 miles S. W. by W. from Portland, and is bounded S. E. by North Berwick.

Lebanon, N. H., Grafton co. The Connecticut and Mascomy Rivers water this town, and afford many valuable mill sites. The principal village is situated on a plain at the head of the falls of Mascomy River. It is a pleasant village, and has become an important place in consequence of the Northern Railroad passing through it. Olcott's Falls, in the Connecticut, in this town, afford a great water power, — 40 feet fall in one mile. These have been locked and canalled by the White River Company. Lyman's Bridge connects this town with Hartford, Vt. A medicinal spring, a lead mine, and a vein of iron ore have been discovered here. Lebanon was the first town settled on Connecticut River to the north of Charlestown. First settlers, Wm. Downer, Wm. Dana, Levi Hyde, Charles Hill, Silas Waterman, and Nathaniel Porter. 4 miles S. from Dartmouth College, and 65 N. W. from Concord by the Northern Railroad.

Lebanon, N. J., Hunterdon co. The south branch of Raritan River and Spruce Run water this town. Surface hilly and mountainous; soil rich clay and loam. 40 miles N. by W. from Trenton.

Lebanon, N. Y., Madison co. Chenango River and some of its branches water this town. The surface is hilly; soil clay loam. 10 miles S. from Morrisville, and 103 W. from Albany.

Lebanon, O., c. h. Warren co. Between two branches of Turtle Creek, on a branch of Little Miami River, and 85 miles W. S. W. from Columbus.

Lebanon County, Pa., c. h. at Lebanon. Bounded N. E. by Schuylkill and Berks counties, S. E. by Lancaster, and S. W. and N. W. by Dauphin co. Drained by Swatara Creek and branches. Surface slightly uneven; soil rich. The Union Canal passes through this county.

Lebanon, Pa., Wayne co. Watered by branches of Dyberry Creek. Surface hilly; soil gravelly loam.

Lebanon, Te., c. h. Wilson co. On a branch of Cumberland River. 32 miles E. from Nashville. Cumberland University is located here. (See *Colleges*.) There is a large steam cotton factory near this place.

Lebanon, Va., c. h. Russell co. On a branch of Clinch River. 325 miles W. by S. from Richmond.

Ledyard, Ct., New London co. This town was taken from Groton in 1836. It was formerly called North Groton. There is a pretty village, of some thirty houses, at Gale's Ferry, on the Thames. This town was named in honor of two brothers, natives of Groton — Colonel Ledyard, the brave defender of Groton Heights, in 1781, and John Ledyard, the celebrated traveller, who died at Cairo, in Egypt, in 1789, aged 38. John Ledyard was probably as distinguished a traveller as can be found on record. 7 miles N. by E. from New London.

Ledyard, N. Y., Cayuga co. Bounded on the W. by Cayuga Lake, and watered by several small streams flowing into it. Surface rolling; soil fertile clay loam and marl. 12 miles S. W. from Auburn, and 168 W. from Albany.

Lee County, Ga., c. h. at Starkville. Bounded N. by Sumpter co., E. by Dooley, S. by Irwin and Baker, and W. by Rantolph co. Flint River and branches water this county.

Lee County, Is., c. h. at Dixon. Bounded N. by Ogle co., E. by De Kalb, S. by Lasalle and Bureau, and W. by Whitesides. Drained by Rock, Green, and Bureau Rivers.

Lee County, Iowa, c. h. at Fort Madison. Incorporated in 1837. Bounded N. by Henry and Des Moines counties, E. and S. E. by the Mississippi River, separating it from Illinois, S. W. by Des Moines River, separating it from Missouri, and W. by Van Buren co. Skunk River runs on its N. E. border, and Sugar, Halfbreed, and Lost Creeks drain the interior. Surface undulating; soil productive.

Lee, Me., Penobscot co. It lies 120 miles N. E. from Augusta.

Lee, Ms., Berkshire co., was settled by Mr. Isaac Davis, in 1760. The town was named for General Lee, of the revolutionary army. It presents a diversified appearance, and forms part of the interval between the Taconic and Green Mountain ranges. The Green Mountain range runs partly within the eastern limits of the town; these mountains are for the most part of gentle acclivity, and are cultivated, in some places, quite to their summits. From the base of these mountains the surface is rather uneven, occasionally rising into hills of considerable height, but generally descending, until it reaches the plain upon the banks of the Housatonic. At the N. E. corner of the town enters the Housatonic, and it passes out at the S. W. corner, dividing the town into two nearly equal parts. It receives, in its passage, the waters of Washington Mountain, Scott's Pond, Greenwater Pond, and Goose Pond, also, on the summit of the mountain, the waters of Hop Brook, as well as several other streams of less size. On each side of the Housatonic are extensive plains of rich alluvial land. The soil of the uplands is a loam, interspersed with gravel and stones. Limestone and white and clouded marble are found here. This is one of the most flourishing towns in the county or state; its villages are neat and handsome. 10 miles S. from Pittsfield.

Lee, N. H., Stafford co. In the N. part of this town lies Wheelwright's Pond, containing about 165 acres, and forming the principal source of Oyster River. This pond is memorable for the battle which was fought near it, in 1690, between a scouting party of Indians and two companies of rangers, under Captains Floyd and Wiswall. Lamprey, Little, North, and Oyster Rivers water

this town. 31 miles E. S. E. from Concord, and 12 S. W. from Dover.

Lee, N. Y., Oneida co. Drained by Canada and Fish Creeks. Surface undulating; soil sandy loam and clay. 22 miles N. W. from Utica, and 115 from Albany.

Lee County, Va., c. h. at Jonesville. Bounded E. by Russell and Scott counties, S. by Tennessee, and W. and N. by Kentucky. This county is situated in the valley between Cumberland and Powell's Mountains, and is drained by Powell's River and branches.

Leeds, Me., Kennebec co. This is a large and flourishing agricultural town, finely watered by a large and beautiful pond. The outlet of this pond into the Androscoggin gives the town a good water power, for saw mills and other manufactories. The villages in Leeds are very neat and pleasant. The soil is fertile and productive. Leeds was incorporated in 1802. It lies 30 miles W. S. W. from Augusta.

Leesburg, Va., c. h. Loudon co. On an elevated plain at the base of Kittoctan Mountains. 1½ miles N. from the Potomac River, and 153 N. from Richmond.

Lehigh County, Pa., c. h. at Allentown. Bounded N. E. by the Lehigh River, separating it from Northampton co., S. E. by Bucks co., S. W. by Berks, and N. W. by Carbon. It lies mostly in the valley between South and Blue or Kittany Mountains. Surface diversified, and watered by branches of the Lehigh River; soil very fertile in some portions.

Lehigh, Pa., Northampton co. Bounded W. by the Lehigh River, and drained by Indian Creek. In the N. W. corner of this town is the Lehigh Water Gap. Surface hilly in parts; soil calcareous loam and gravel.

Lehigh Gap, Pa., Carbon co. At the passage of Lehigh River through Blue Mountain. 104 miles E. N. E. from Harrisburg. The chasm through which the river here passes is 1200 feet deep, and the scenery of the most romantic description.

Lehighton, Pa., Carbon co. On an elevated table land, on the W. bank of Lehigh River, half a mile above Mahoning Creek, and 96 miles N. E. by E. from Harrisburg, at the point of junction of the Lehigh Canal with the railroad leading to the coal miles. The old Moravian village of Gnadenhutzen stood about three quarters of a mile from this place, near the mouth of the Mahoning Creek, and an old church is still standing on the spot.

Lehman, Pa., Luzerne co. Watered by Harvey's, Bowman's, and Mahopeny Creeks, all fine mill streams, and by Lehman's Lake, and its outlet Lehman's Creek. Surface uneven. 121 miles N. N. W. from Harrisburg.

Leicester, Ms., Worcester co., was first settled about the year 1713. It was at first called Strawberry Hill. Its Indian name was Towtaid. This town is situated on the height of land between the ocean and Connecticut River, and is famed for its hills. These hills are of a strong, deep soil, rather cold and wet, but well adapted to the cultivation of the various grains, grasses, and fruits common to the climate. The most noted elevations are Strawberry, Indian, Bald, Moose, and Cary's Hills, and Mount Pleasant. The town is watered by springs, rivulets, and several large brooks, which take their rise in this town, and empty into the Chicopee, the Quinebaug, and

the Blackstone. These, with the aid of several large reservoirs which have been constructed, afford valuable mill sites. The village on Strawberry Hill, near the centre of the town, is very pleasant, and commands delightful views for many miles around. Here is situated an academy, founded in 1784. Clappville, a busy, pleasant village, on the Western Railroad, lies 4 miles S. from Strawberry Hill village, and 53 W. S. W. from Boston.

Leicester, N. Y., Livingston co. On the W. side of the Genesee River. The surface on the W. is elevated, sloping towards the river; soil of good quality. 5 miles W. from Genesee, and 232 W. from Albany.

Leicester, Vt., Addison co. Leicester is watered by a river of its own name, by Otter Creek, and by a part of Lake Dunmore. These waters are too sluggish to afford the town much water power. The soil is of a sandy loam, interspersed with some flats of clay. Along the rivers the soil is rich and productive. The highlands are hard and fit for grazing. There are in this town several beautiful ponds, which abound in trout and other fish. The first settlement was commenced in 1773, by Jeremiah Parker, from Massachusetts. 36 miles S. W. from Montpelier, and 10 S. by E. from Middlebury. The Rutland Railroad passes through this town.

Leimington, Vt., Essex co. This is a mountainous township, on the W. side of Connecticut River, with a small portion of intervalle. There are several brooks in the town, and a beautiful cascade of 50 feet. There is a mountain in the town called the "Monadnock of Vermont." Generally not adapted to cultivation. 25 miles N. from Guildhall, and 64 N. E. from Montpelier.

Leipster, N. H., Sullivan co. The surface is uneven, and the eastern part mountainous. The soil is moist, and better suited for grass than grain. The town is well watered, although its streams are small. One branch of Sugar, and the S. and W. branches of Cold River, afford conveniences for water machinery. Near the W. boundary line is a pond, 320 rods long, and 80 wide. Sand Pond lies in this town and Marlow. First settlers, emigrants from Connecticut, in 1770. 42 miles W. from Concord, and about 12 S. E. from Newport.

Lenawee County, Mn., c. h. at Adrian. Bounded N. by Jackson and Washtenaw counties, E. by Monroe co., S. by Ohio, and W. by Hillsdale co. Surface slightly undulating, and watered by Raisin and Ottawa Rivers; soil fertile, consisting of sand and argillaceous loam. Iron ore is found here.

Lenoir County, N. C., c. h. at Kingston. Bounded N. by Greene co., E. by Pitt and Craven, S. by Jones, and W. by Duplin and Wayne counties. Watered by Neuse River and tributaries.

Lenoir, N. C., c. h. Caldwell co. On the S. side of Yadkin River, near its head.

Lenox, Ms., c. h. Berkshire co. It was first settled in 1750, and received the family name of the Duke of Richmond. The land in the N. and W. parts is hilly, in some parts stony, and in some broken. The soil is more favorable to grass than grain. The town abounds in limestone, also various kinds of marble, and an abundance of iron ore. The Housatonic passes through the town from N. to S., and furnishes a small water power. The centre of the town is very handsome. It is built upon a hill, on two streets,

intersecting each other nearly at right angles. Lenox has fine mountain air, and is surrounded by equally fine mountain scenery. 6 miles S. from Pittsfield, and 157 W. from Boston, by Pittsfield and the Western Railroad.

Lenox, N. Y., Madison co. Partly bounded on the N. by Oneida Lake, and is watered by Cowasalon and Oneida Creeks. The surface is level, or slightly uneven; the soil mostly fertile. 12 miles N. from Morrisville, and 125 W. by N. from Albany.

Lenox, Pa., Susquehanna co. Drained by Tunkhannock Creek and branches. Surface hilly; soil gravel and clay. 170 miles N. N. W. from Harrisburg.

Leominster, Ms., Worcester co., was formerly a part of the town of Lancaster. The first house was built by Gorham Haughton, in 1725. The surface is rather plain than hilly; the greatest elevation is Wauhnoosnook Hill, in the westerly part of the town. The soil is clayey, and generally of a good quality. The town is well watered in every part by springs and rivulets. The Wauhnoosnook, a branch of the Nashua River, and the N. branch of the Nashua produce fine mill privileges. A rich alum rock has been found in this town. The village in the centre of the town makes a fine appearance. It lies about a mile and a half S. from the Fitchburg Railroad; from thence to Boston is 43 miles.

Leon County, Fla., c. h. at Tallahassee. Bounded N. by Georgia. Some of the land is fertile.

Leon, N. Y., Cattaraugus co. Conewango Creek waters this town, the surface of which is elevated, but chiefly level, and the soil productive. 310 miles W. by S. from Albany.

Leon County, Ts., c. h. at Leona. E. central part of the state, between the Navasota and Trinity Rivers.

Leonardtown, Md., c. h. St. Mary's co. On a small branch of the Potomac. 87 miles S. from Annapolis.

Le Ray, N. Y., Jefferson co. Watered by Indian and Black Rivers. Surface undulating; soil easily cultivated and very productive. 158 miles N. W. from Albany.

Le Roy, N. Y., Genesee co. Drained by Allen's Creek. Mostly a level town, with a fertile soil, yielding large crops of grain. 10 miles E. from Batavia, and 234 N. of W. from Albany.

Letcher County, Ky., c. h. at Whitesburg. Taken mostly from Perry co., and incorporated in 1842. Bounded N. and N. E. by Perry and Floyd counties, S. E. and S. by Virginia, and W. by the head branch of Kentucky River, separating it from Harlan and Perry counties.

Letterkenny, Pa., Franklin co. Surface chiefly level, and watered by Conedogwinit and Raccoon Creeks. Soil slaty. Blue Mountain covers the W. part of this town, which lies 7 miles N. W. from Chambersburg.

Levant, Me., Penobscot co. A fertile township on the Kennebec. 10 miles N. W. from Bangor.

Leverett, Ms., Franklin co., was formerly a part of Sunderland. The surface is somewhat mountainous; the soil is strong and well adapted for pasturage. The town is watered by Roaring Brook, and several small streams. Roaring Brook is a rapid stream, on which is a cascade, and some wild scenery. 10 miles S. E. from Greenfield, and 80 W. by N. from Boston.

Lewis County, Ky., c. h. Clarksburg. Bounded N. by the Ohio River, separating it from Ohio, E. by Greenup co., S. by Craven and Fleming, and W. by Mason co. Drained by Salt Lick and Kinniconick Creeks, branches of the Ohio River.

Lewis County, Mo., c. h. at Waterloo. Bounded N. by Clark co., E. by the Mississippi River, S. by Marion and Shelby counties, and W. by Knox co. Drained by Fabius and Wyaconda Rivers. Surface undulating; soil excellent.

Lewis County, N. Y., c. h. at Martinsburg. Bounded on the N. by Jefferson and St. Lawrence, E. by Herkimer, S. by Oneida, and W. by Oswego and Jefferson counties. It is watered by Black, Beaver, Independence, Moose, Indian, Oswegatchie, and Salmon Rivers, and Salmon and Fish Creeks. Surface hilly and broken; soil diversified, being very fertile on the borders of Black River. Iron ore and galena are mined to a considerable extent.

Lewis, N. Y., Essex co. Watered by Boquet River and its branches. The surface is diversified with hills and mountains; the soil tolerably good. 10 miles N. from Elizabeth, and 141 from Albany.

Lewis County, On. N. of the Oregon River.

Lewis County, Te., c. h. at Newburg. New.

Lewis, Vt., Essex co. Lewis is an uninhabited township in the N. part of Essex co. It was chartered June 29, 1762. It is mountainous, and has no streams of consequence excepting the N. branch of Nulhegan River, which crosses the N. E. corner.

Lewis County, Va., c. h. at Weston. Bounded N. by Ritchie, Harrison, and Barbour counties, E. by Randolph, S. by Braxton and Kanawha, and W. by Wood co. Watered by the Little Kanawha River and branches, and by the W. and branches of the E. fork of the Monongahela River. Surface rough and broken.

Lewisboro', N. Y., Westchester co. Watered on the W. by Croton River and some of its branches. Surface rather broken; soil clay and sandy loam. 18 miles N. from White Plains, and 119 S. from Albany.

Lewisburg, Pa., Union co. On the W. bank of Susquehanna River, just below the entrance of Buffalo Creek, on the West Branch Canal, and 67 miles N. from Harrisburg. A place of much manufacturing business.

Lewisburg, Te., c. h. Marshall co. 54 miles S. of Nashville.

Lewisburg, Va., c. h. Greenbrier co. 9 miles W. from the White Sulphur Springs, and 214 miles W. from Richmond. Here are the celebrated White Sulphur Springs of Virginia. See *Mineral Springs*.

Lewiston, Me., Lincoln co. On the E. side of the Androscoggin, which here descends 47 feet in the distance of 12 or 15 rods, producing a great water power, which is already availed of for cotton factories, and which promises to render Lewiston one of the great manufacturing towns of New England. The Waterville Railroad, branching from the Portland and Atlantic, passes through it. The town extends along the river 13 miles, and at the foot of the falls is connected with Minot by a bridge 1000 feet long. 33 miles W. of N. from Portland.

Lewiston, N. Y., Niagara co. On the Niagara River, opposite Queenstown, U. C., at the head of navigation, 7 miles from Lake Ontario. The surface is level, with the exception of a high ridge

extending from E. to W. 15 miles W. from Lockport, and 10 by railroad from Niagara Falls.

Lewistown, Pa., c. h. Mifflin co. On the N. side of Juniata River, at the entrance of Kishcoquillas Creek. 57 miles N. W. from Harrisburg. A large and handsome place, with streets crossing each other at right angles. The Pennsylvania Canal passes here.

Lewisville, As., c. h. Fayette co. A few miles E. of Red River.

Lexington, Ga., c. h. Oglthorpe co. 70 miles N. from Milledgeville.

Lexington, Ia., c. h. Scott co. 11 miles W. from the Ohio River, on the head branches of the Mus catauck Fork of White River. S. by E. from Indianapolis 89 miles.

Lexington, Ky., city, and seat of justice for Fayette co., is situated on the Town Fork of Elkhorn River, 24 miles E. S. E. from Frankfort, and 74 miles E. from Louisville. Population 7000.

It is one of the handsomest places in Kentucky, and was formerly the capital of the state. The city is laid out two miles square, with broad streets intersecting each other at right angles, many of them paved and well built. The main street is about a mile and a half in length, with a width of 80 feet. There are upon this street many splendid buildings. In the centre of the city is a public square, upon which is a market house, richly supplied from the surrounding country. The district of country in which Lexington is situated is highly fertile and beautiful. Few towns have in this respect a more delightful location than this. It has also, within itself, an air of neatness, opulence, and repose, which is grateful to the eye and to the heart of a stranger. The churches and public edifices are built mostly of brick, as are a great number of the stores and private dwellings. Besides the court house and county prison, the city contains the buildings of several literary and philanthropic institutions, which are highly ornamental in their architectural effect, as well as indicative of intelligence and refinement in the citizens. Transylvania University was established here by the legislature of Kentucky, in 1798, and continued, until within a few years, to be a state institution. It has lately passed into the hands of the Methodist Episcopal church. The "Transylvania Seminary," which preceded the university, and which, with the Kentucky Academy, was merged in that institution when the state took it up, was established by the legislature of Virginia in 1780, and was the first literary institution of the kind established in the west. The university has a medical department, whose graduates are more numerous than those of any other institution in the country, excepting two in Philadelphia. The University Hall and the Medical Hall are both beautiful buildings. The Lunatic Asylum, at Lexington, is one of the noblest institutions in the state. The buildings are very extensive and commodious, with grounds embracing 30 acres, handsomely improved and ornamented. Another handsome edifice is that of the Masonic Hall. In the vicinity of the city are numerous country seats, including that of our late distinguished statesman Henry Clay. Ashland, as the late domicile of Mr. Clay is named, is on the turnpike road leading to Richmond, a mile and a half S. E. of the court house in Lexington. The house is a spacious brick mansion, with wings, surrounded with lawns and pleasure grounds, which are planted with

almost every variety of American shrubbery and forest trees. The whole estate consists of 500 or 600 acres of the best land in Kentucky, upon which its distinguished proprietor, as a recreation amidst the cares of public life, bestowed much skillful and successful husbandry.

In the year 1775, a party of hunters, while temporarily encamped on one of the branches of the Elkhorn, received intelligence of the first blood shed in the war of the revolution, at the battle of Lexington. As expressive of their deep interest in this event, they gave this name, ever after to be memorable in their country's history, to the place of their encampment. Upon this spot has arisen one of the most beautiful cities west of the Alleghany Mountains. The settlement commenced about four years later, by the erection of a block house, and three rows of cabins, the two outer serving as the walls of the fortification. It was first incorporated by Virginia, in 1782. It received its charter as a city from the legislature of Kentucky, in 1831. A railroad, by way of Frankfort, connects Lexington with Louisville, on the Ohio River, thus establishing an easy communication with the great channels of business and travel in the west. Several fine McAdamized roads diverge from this city towards different sections of the state.

In 1798, 9 years before Fulton's experiment upon the Hudson, a Mr. West, an ingenious mechanic of Lexington, having constructed a steamboat upon a small scale, tried it in the presence of hundreds of persons, upon the Town Fork of the Elkhorn, which had been dammed up for the purpose; when it is said to have "moved through the water with great velocity." This is believed by many to have been the first successful illustration of the application of steam to navigation. Several of the identical parts of Mr. West's miniature engine are now to be seen in the museum of the Adelpi Society, in the Transylvania University.

Lexington, Ms., Middlesex co., was formerly a part of Cambridge, and is watered by several branches of the Shawshen River. The surface is varied by hills and valleys, and the soil is rendered productive by the industry and skill of its proprietors. There is considerable woodland in the town, and extensive meadows. Lexington will ever be an interesting place, as here the first blood was shed in the cause of American independence. A monument is erected on the village green, and on the site of the battle. 11 miles by railroad N. W. from Boston, and 15 S. S. E. from Lowell.

Lexington, Mi., c. h. Holmes co. On the N. side of a branch of Yazoo River. 62 miles N. from Jackson.

Lexington, Mo., c. h. Lafayette co. 1 mile S. from the Missouri River, and 132 W. N. W. from Jefferson City.

Lexington, N. C., c. h. Davidson co. It is on the W. side of Abbott's Creek, a branch of Yadkin River. 117 miles W. from Raleigh.

Lexington, N. Y., Greene co. Watered by Schoharie Creek and some of its head branches. The surface is broken by the Catskill range of mountains. 23 miles W. from Catskill, and 50 S. W. from Albany.

Lexington District, S. C., c. h. at Lexington. Bounded N. and E. by Broad and Congaree Rivers, separating it from Fairfield and Richland districts, S. by Orangeburg district, and W. by

Edgefield and Newberry districts. Drained by Saluda, which unites with Broad River on the W. border of this district to form the Congaree. The E. fork of Edisto River also runs on its S. W. border.

Lexington, S. C., c. h. Lexington district. On a small branch of Saluda River. 12 miles W. from Columbia.

Lexington, Va., Rockbridge co. 146 miles W. of Richmond, on an elevated bank of the W. side of North River, the seat of Washington College, and of the Virginia Military Institute. See *Colleges*.

Leyden, Ms., Franklin co., is a mountainous township, on the line of the state. It was formerly a part of Bernardston. Two branches of Deerfield River, Green River, and Budington Creek pass through the town, on which are good sites for mills. There is some good arable land in the town, but the greater part is fit only for grazing. On Green River is a narrow, rocky passage, called the "Glen," a curious place, much admired for its romantic scenery. Distances, 9 miles N. by W. from Greenfield, and about 100 W. N. W. from Boston.

Leyden, N. Y., Lewis co. Black and Moose Rivers water this town, the surface of which is hilly, and the soil productive. 15 miles S. from Martinsburg, and 116 N. W. from Albany.

Liberty County, Ga., c. h. at Hinesville. Bounded N. and N. E. by Bryan co., S. E. by the Atlantic Ocean, S. by McIntosh co. and the Alatamaha River, separating it from Wayne co., and W. by Tatnall co. Surface level, and watered by Little Cannonchee River and Taylor's Creek.

Liberty, Ia., c. h. Union co. On the E. side of Silver Creek. 72 miles E. by S. from Indianapolis.

Liberty, Me., Waldo co. 29 miles E. from Augusta, and 18 W. S. W. from Bangor.

Liberty, Mi., c. h. Amite co. On the E. side of the W. fork of Amite River. 101 miles S. S. W. from Jackson.

Liberty, Mo., c. h. Clay co. 159 miles W. N. W. from Jefferson City.

Liberty, N. Y., Sullivan co. Watered by the Callicoon and other small tributaries of the Delaware River, which bounds this town on the S. W. Surface mountainous; soil mostly gravelly loam. 15 miles N. W. from Monticello, and 128 S. W. from Albany.

Liberty, Pa., Columbia co. Watered by Chilisquaque and Mahoning Creeks. Surface mostly level; soil clay.

Liberty, Pa., Tioga co. The surface of this town is hilly; soil clay and gravel. 123 miles N. by W. from Harrisburg.

Liberty County, Ts., c. h. at Liberty. In the S. E. angle of the state. On Galveston Bay and both banks of the Trinity.

Liberty, Va., c. h. Bedford co. On a branch of Otter River. W. by S. from Richmond 142 miles.

Licking County, O., c. h. at Newark. Bounded N. by Knox, E. by Muskingum, S. by Perry and Fairfield, and W. by Franklin and Delaware counties. The soil is fertile, and is finely watered by Licking Creek, which runs through every part of the county. Emigrants from Pennsylvania and Virginia settled here in 1800, and they were soon followed by people from New England. Large beds of iron ore are found here.

Ligonier, Pa., Westmoreland co. This town lies in a valley watered by Loyahanna Creek and

branches. Soil calcareous loam. 149 miles W. from Harrisburg.

Lima, N. Y., Livingston co. Honeoye Creek and one of its branches water this town. Surface rolling; soil fertile. 12 miles N. E. from Geneseo, and 213 N. of W. from Albany.

Lima, O., c. h. Allen co. On Ottawa River, 20 miles from its mouth, and 100 miles N. W. by W. from Columbus.

Limerick, Me., York co. Little Ossipee River waters this town. It lies 28 miles W. from Portland, 85 S. W. from Augusta, and 15 N. by W. from Alfred. This is a good farming town, with a pleasant village, and an academy, incorporated in 1812. The town was incorporated in 1787.

Limerick, Pa., Montgomery co. Bounded S. by the Schuylkill River. 78 miles E. from Harrisburg.

Limestone County, Aa., c. h. at Athens. Bounded N. by Tennessee, E. by Madison co., S. by the Tennessee River, separating it from Morgan and Lawrence counties, and W. by Lauderdale co. Elk River and its branches, Swan River, and Piney and Limestone Creeks drain this county.

Limestone, Pa., Columbia co. A level town, watered by Chilisquaque Creek and Limestone Run. Soil calcareous loam. 10 miles N. W. from Danville.

Limestone County, Ts., c. h. at Springfield. A central county. Between the Brazos and Trinity Rivers.

Limington, Me., York co. This town is bounded on the S. by Limerick, and is watered by Saco River on the S. and W. The town has a good soil, very productive of hay, wheat, and other grain. It lies 28 miles W. N. W. from Portland.

Lincoln County, Ga., c. h. at Lincolnton. Bounded N. by Broad River, separating it from Elbert co., E. by the Savannah River, separating it from South Carolina by Little River, separating it from Columbia co., and W. by Wilkes co. Drained by Fishing and Soap Creeks, branches of the Savannah.

Lincoln County, Ky., c. h. at Stanford. Bounded N. by Doyle, E. by Garrard and Rockcastle, S. by Pulaski, and W. by Casey co. Watered by Dick's River and branches, and the head branches of Green River. Surface elevated table land.

Lincoln County, Me., Topsham, Wiscasset, and Warren shire towns. In the S. W. part of the state. Bounded S. by the Androscoggin and the coast between the Kennebec and the Penobscot, comprising many rivers, inlets, and excellent harbors. The Kennebec, Muscongus, Damariscotta, Sheepscot, and St. George's Rivers flow S. through it. The soil is tolerably fertile, but commerce and the fisheries chiefly engross attention. The Kennebec Railroad passes N. and S. through it.

Lincoln, Me., Penobscot co. A large township on the E. side of the Penobscot, at the mouth of Matanawcook, where is a pleasant village. 45 miles N. by E. from Bangor.

Lincoln, Ms., Middlesex co. Though rough, it contains some of the best farms in the county. Flint's or Sandy Pond, containing about 197 acres, derived its name from its being situated on the farm of Ephraim Flint, one of the original owners of Lincoln. It is a favorite resort for pickerel. From the depot of the Fitchburg Railroad, in this town, to the centre village, is about a mile and a half; to Boston 16½ miles.

Lincoln County, Mo., c. h. at Troy. Bounded N. W. and N. by Pike co., E. by the Mississippi River, S. by St. Charles and Warren counties, and W. by Montgomery co. Watered by Cuivre River and branches.

Lincoln County, N. C., c. h. at Lincolnton. Bounded N. by Catawba co., E. by Great Catawba River, separating it from Iredell and Mecklenburg counties, S. by South Carolina, and W. by Cleveland co. Drained by Little Catawba River and branches, Dutchman's Creek, and Buffalo Creek, a branch of Broad River.

Lincoln, N. H., Grafton co., is a mountainous township. The middle branch of the Pemigewasset passes through the town. Bog, Fish, and Loon Ponds are here. There are many elevations, of which Kinsman's Mountain is the largest. In the N. part of the town are two large gulfs, made by an extraordinary discharge of water from the clouds, in 1774. The numerous "slips" from the mountain commence near the summit, and proceed to its base, forcing a passage through all obstructions. The soil here is poor. Wild animals are very numerous. First settlers: this town was granted, in 1764, to James Avery and others. 80 miles N. from Concord, and about 20 E. from Haverhill.

Lincoln County, Te., c. h. at Fayetteville. Bounded N. by Marshall and Bedford counties, E. by Franklin co., S. by Alabama, and W. by Giles co. Watered by Elk River and branches.

Lincoln, Vt., Addison co. Lincoln is considerably uneven. The western part is watered by New Haven River, which is formed here; and several small branches of Mad River rise in the eastern part. The timber is principally hard wood, with some tracts of spruce. The settlement was commenced about the year 1790. The first settlers were mostly Quakers. 21 miles S. W. from Montpelier, and 15 N. E. from Middlebury.

Lincolnton, N. C., c. h. Lincoln co. On the E. side of Little Catawba River. 172 miles W. by S. from Raleigh.

Lincolntonville, Me., Waldo co. On the W. side of Penobscot Bay. 10 miles S. from Belfast and 51 E. from Augusta.

Linden, Aa., c. h. Marengo co. 8 miles E. from Tombigbee River, on the S. side of Chickasaw Bogue Creek. S. by W. from Tuscaloosa 80 miles.

Lindley, N. Y., Steuben co. Watered by Tioga River. Surface hilly; soil sandy loam and clay. The Corning and Blossburg Railroad passes through the centre of this town. 25 miles S. E. from Bath, and 221 from Albany.

Linklean, N. Y., Chenango co. Watered by some tributaries of Ostelic River. Surface slightly uneven; soil argillaceous loam. 18 miles N. W. from Norwich, and 110 W. from Albany.

Linn County, Io., c. h. at Marion. Incorporated in 1837. Bounded N. by Buchanan and Delaware, E. by Jones, S. by Johnson, and W. by Benton co. Watered by Wabesipimica River, Buffalo Creek, and the Cedar Fork of Iowa River. Surface slightly undulating; soil excellent.

Linn County, Mo., c. h. at Linneus. Bounded N. by Sullivan, E. by Macon, S. by Chariton, and W. by Livingston and Grundy counties. Watered by Locust and Yellow Creeks.

Linn, Mo., c. h. Osage co.

Linneus, Mo., c. h. Linn co.

Lisbon, Ct., New London co. This town is 7 miles N. from Norwich, from which it was taken in 1786. It is watered by Quinebaug and She-

tucket Rivers, which unite in the S. part of the town. The soil is a gravelly and sandy loam, with some alluvial meadow. This is an excellent farming town.

Lisbon, Me., Lincoln co. On the E. side of the Androscoggin, 6 miles below Lewiston Falls. There are also falls here, called the Five Miles Falls. There are some manufactures of cotton and wool, and many saw mills. 30 miles S. S. E. from Augusta.

Lisbon, N. H., Grafton co., is watered by Amonoosuck River and several smaller streams. Here are several ponds; the most noted is called Mink, and affords mill sites at its outlet. The meadows on Amonoosuck are generally very productive; the plain land has a light, thin soil, requiring considerable manure to make it productive; and the uplands have a strong, good soil, which affords many good farms. Blueberry Mountain is the principal elevation. Large quantities of iron ore and of limestone are found here. Franconia Iron Works receive their supply of ore from this town. This town was called Concord until 1824. First settlers: Lisbon was granted, in 1763, to Joseph Burt and others. 20 miles N. E. from Haverhill, and 95 N. W. from Concord.

Lisbon, N. Y., St. Lawrence co. Bounded on the N. W. by the St. Lawrence River; and watered by Grass River and several small streams. Surface undulating; soil fertile and heavily timbered. Isle au Gallope, lying in the St. Lawrence, belongs to this town. 10 miles N. W. from Canton, and 211 from Albany.

Lisle, N. Y., Broome co. Watered by Tioughnioga River and some of its branches. Surface undulating; soil well adapted for grazing. 18 miles N. from Binghamton, and 140 S. of W. from Albany.

Litchfield County, Ct., c. h. at Litchfield. This is the largest and most elevated county in the state. The surface is hilly, and in some parts mountainous; the soil is chiefly a gravelly loam, under good cultivation, and very productive of butter, cheese, beef, and pork. It abounds in iron ore, which is extensively manufactured. This county is watered by numerous ponds, by the beautiful Housatonic, and by many rivers rising in the high grounds. The streams give a valuable water power, and flourishing manufacturing establishments are found in almost every town. Litchfield county was incorporated in 1751. It is bounded N. by Berkshire co., Ms., E. by Hartford and New Haven counties, S. by the counties of New Haven and Fairfield, and W. by the state of New York.

Litchfield, Ct., c. h. Litchfield co. This town, the Indian *Bantam*, is elevated, and its surface presents a diversity of hills and valleys. Bantam was first settled in 1720, and incorporated by its present name in 1734. The soil is a gravelly loam, deep, strong, and admirably adapted for grazing. Great Pond is a beautiful sheet of water; it comprises an area of 900 acres, and is the largest pond in the state. The waters of the Naugatuck, Shepung, and Bantam give the town a good water power.

Litchfield village, on "Litchfield Hill" is a delightful place. It is situated on an elevated plain, surrounded by interesting scenery, and affords extensive prospects. In the W. part of the town, Mount Tom rears a front of 700 feet above the Naugatuck, presenting a panoramic landscape of great beauty and vast extent. Near

this town is a mineral spring "which is saturated with iron and sulphur." A law school of great respectability was established in this town, by the Hon. Tapping Reeve, in 1784. 30 miles W. from Hartford.

Litchfield, Ky., c. h. Grayson co. 109 miles S. W. by W. from Frankfort.

Litchfield, Me., Kennebec co. A good farming township. 16 miles S. S. W. from Augusta.

Litchfield, N. H., Hillsboro' co., is a small, fertile township on the E. bank of Merrimac River. It has an excellent soil. There are 2 ferries—Thornton's, on the post road from Amherst to Portsmouth, and Read's, 3 miles above. This town was originally known by the Indian name of *Natticott*, and by the English one of *Brenson's Farm*. 8 miles E. from Amherst, and 30 S. by E. from Concord. The Concord Railroad passes on the opposite bank of the river, where there is a station.

Litchfield, N. Y., Herkimer co. Drained by one of the head branches of the Unadilla, and several small tributaries of the Mohawk River. Surface hilly; soil calcareous loam. 10 miles S. W. from Herkimer, and 83 N. W. from Albany.

Litchfield, Pa., Bradford co. Surface hilly, and drained by branches of Wepassing Creek; soil gravelly loam. 156 miles N. from Harrisburg.

Little Compton, R. I., Newport co. This very pleasant town, the Indian *Seaconnet*, lies on the ocean, at the eastern entrance into Narraganset Bay. The soil of the town is uncommonly fertile. Seaconnet Rocks, at the south-eastern extremity of the town, where a breakwater has been erected by government, are well known to sailors, and memorable as the place where a treaty was made between the English and the queen of the powerful Seaconnet tribe in 1674. That tribe is now extinct. Seaconnet Rocks are their only monument. Little Compton is becoming celebrated as a place of resort, in summer months, for sea air and bathing, and very justly so, for very few parts of our coast exhibit a more interesting location. 9 miles E. by N. from Newport.

Little Beaver, Pa., Beaver co. A branch of Little Beaver Creek waters this town. Surface undulating; soil rich calcareous loam.

Little Falls, N. J., Passaic co. The Passaic River has a fall of 33 feet at this place, affording great hydraulic power. The Morris Canal passes here. 79 miles N. E. by E. from Trenton.

Little Rock, As. Capital of the state, and seat of justice of Pulaski co. On the S. side of the Arkansas River, about 150 miles from its mouth, where it enters the Mississippi. The river is navigable for steamboats to this place at all stages of the water. The town is built upon a high bluff, from 150 to 200 feet above the river. It is said to be the first place above the mouth of the river in which rocks are found. It is laid out upon a regular plan, and contains the state house, court house, jail, and other public offices for the state and county, a United States arsenal, a United States land office, a penitentiary, and churches of all the principal denominations. This place was laid out and settled in 1820.

Littleton, N. H., Grafton co. Littleton extends on the Connecticut River about 14 miles. There are 3 bridges over the river. The beautiful Connecticut, in passing down the rapids called Fifteen Mile Falls, extending the whole length of Littleton, runs in foaming waves for miles together, which renders it impossible to ascend or

descend with boats in safety. The Amonoosuck waters the S. part, having on its banks small tracts of excellent intervale. The principal village is on this river, and is called Glynville. Raspberry, Black, Palmer's, and Iron Mountains are the most prominent elevations. Near Amonoosuck River is a mineral spring, the water of which is said to be similar to the Congress Spring at Saratoga. Hone slate is found here in great abundance and purity. Littleton is an important point for travellers passing from the Connecticut River to and from the White Mountains. First settler, Captain Nathan Caswell, about 1774. 30 miles N. by E. from Haverhill, and 100 N. N. W. from Concord.

Littleton, Ms., Middlesex co. This township was granted in 1714, and named for George Littleton, a member of the British parliament. Its Indian name was *Nashobah*. The surface is pleasantly variegated, containing a number of beautiful ponds; the soil is not very strong. There are 2 pleasant villages in the town. The Fitchburg Railroad passes through the town. 13 miles N. W. from Concord, and 31½ N. W. from Boston.

Livermore, Me., Oxford co. A good township of land on both sides of the Androscoggin, with 3 pleasant villages and falls on the river, producing a large water power. 25 miles W. from Augusta.

Liverpool, N. Y., Onondaga co. On the E. side of Onondaga Lake, in the township of Salina, 5 miles N. of Syracuse. Incorporated as a village in 1830. The principal business of the village is the manufacture of fine salt from the saline springs situated here, and belonging to the state, from which vast quantities are produced. See *Salina*. The Oswego Canal passes through this place. 136 miles W. by N. from Albany.

Liverpool, O., Medina co. 125 miles N. E. by N. from Columbus. A flourishing place, with salt springs, a petroleum spring, and iron ore.

Liverpool, Pa., Perry co. Bounded E. by the Susquehanna River, and watered by a small creek flowing into it. Surface hilly; soil slate and gravel on the hills, and calcareous loam in the valleys. 29 miles N. by W. from Harrisburg.

Livingston, Aa., c. h. Sumpter co. On the N. side of Sucarnachee River. 68 miles S. W. from Tuscaloosa.

Livingston County, Is., c. h. at Pontiac. Bounded N. by Lasalle and Grundy counties, E. and S. by Vermilion and McLean, and W. by Woodford co. Watered by Vermilion River and tributaries. Surface slightly undulating; soil fertile.

Livingston County, Ky., c. h. at Salem. Bounded E. by Crittenden and Caldwell, S. by Marshall and McCracken counties, and W. and N. by the Ohio River, separating it from Illinois. Tennessee River runs on its S. border, and Cumberland River passes through it. Surface mostly level; soil fertile.

Livingston Parish, La., c. h. at Springfield. Bounded N. by St. Helena parish, E. by St. Tammany, S. by St. John Baptist and Ascension, and W. by East Baton Rouge parish. Watered on its S. E. border by Lakes Maurepas and Pontchartrain, and on its S. and W. by Amite River, flowing into Lake Maurepas. Drained by small rivers flowing into the lakes.

Livingston County, Mn., c. h. at Howell. Bounded N. by Shiawassee and Genesee counties, E. by Oakland, S. by Washtenaw, and W. by Ingham co. Watered by Shiawassee, Cedar, and Huron

Rivers. Surface slightly undulating; soil fertile. Iron ore is found in the S. E., and salt in the central portions.

Livingston County, Mo., c. h. at Chillicothe. Bounded N. by Grundy, E. by Linn and Chariton, S. by Carroll, and W. by Caldwell and Daviess counties. Watered by Grand River and tributaries. Surface level; soil of fine quality.

Livingston, N. J., Essex co. Bounded on the W. by Passaic River, and drained by small streams flowing into it. Surface mountainous and uneven, except on the border of the Passaic. 9 miles N. W. from Newark, and 58 N. E. from Trenton.

Livingston County, N. Y., c. h. at Genesee. Formed from Ontario and Genesee counties in 1821. It is bounded N. by Monroe, E. by Ontario, S. by Alleghany and Steuben, and W. by Genesee and Wyoming counties, and watered by Genesee River, Canaseraga Creek, and Conesus and Hemlock Lakes, with their outlets. Surface much diversified; soil mostly of good quality, and in the Genesee valley very fertile. Gypsum and bog iron ore exist here in large quantities, and the Avon Sulphur Springs have long been celebrated. The Genesee Valley Canal and a side branch pass through this county.

Livingston, N. Y., Columbia co. On the E. side of the Hudson, and watered by Ancram or Roeliff Jansen's Creek. The surface is varied; soil gravel, clay, and loam, based upon lime and slate. 10 miles S. from Hudson.

Livingston, Te., c. h. Overton co. 100 miles E. by N. from Nashville.

Livonia, N. Y., Livingston co. Watered by the outlet of Hemlock Lake and a few small streams flowing W. into Conesus Lake. Surface slightly uneven; soil productive. 8 miles E. from Genesee, and 217 W. from Albany.

Locke, N. Y., Cayuga co. Watered by the inlet of Owasco Lake. The surface is hilly; soil gravelly loam, based upon slate. 20 miles S. from Auburn, and 153 W. from Albany.

Lockhaven, Pa., c. h. Clinton co. On the S. side of Susquehanna River. 107 miles N. W. by N. from Harrisburg.

Lockport, Is., Will co. On the Illinois and Michigan Canal. 34 miles W. from Chicago, and 170 N. E. by N. from Springfield. It is at the termination of the lake level, and here the canal has a fall of 20 feet, by two locks. From the surplus water of the canal, and likewise of the Des Plaines River, which has a fall of 15 feet at this place, a large amount of hydraulic power is obtained.

Lockport, N. Y., c. h. Niagara co. It is watered by Tonawanda and a branch of Eighteen Mile Creek. The surface is hilly; soil sandy and calcareous loam. This town contains several large quarries of fine building stone. 277 miles W. by N. from Albany.

Lodi, N. J., Bergen co. This town is bounded E. and S. E. by the Hackensack, and W. and S. W. by the Passaic River. Surface level. 5 miles S. W. from Hackensack.

Lodi, N. Y., Seneca co. On the E. shore of Seneca Lake. Watered by several streams flowing into Seneca and Cayuga Lakes. Surface rolling; soil clay loam, based upon lime and slate. 20 miles S. from Waterloo, and 175 W. from Albany.

Logan County, Is., c. h. at Postville. Bounded N. by Tazewell and De Witt counties, E. by De

Witt and Macon, S. by Sangamon, and W. by Menard and Mason counties. Drained by Sugar Creek and other branches of Sangamon River. Surface level, including much prairie land.

Logan County, Ky., c. h. at Russellville. Bounded N. by Muhlenburg and Butler counties, E. by Simpson co., S. by Tennessee, and W. by Todd co. Watered by branches of Green and Cumberland Rivers. Surface table land.

Logan County, O., c. h. at Bellefontaine. Hardin co. bounds it on the N., Union on the E., Cham-paign on the S., and Shelby on the W. Miami and Mad Rivers, Boques, Mill, and Darby Creeks rise here, and water the land, which is level and fertile. This county was named for General Logan, of Kentucky, and was organized in 1818. The first settlers came from North Carolina, Pennsylvania, and Kentucky, about the year 1806.

Logan, O., c. h. Hocking co. On the N. bank of Hocking River, 1 mile below the Great Falls. It was laid out in 1816, and is 46 miles S. E. from Columbus, and 18 S. E. from Lancaster.

Logan, Pa., Clinton co. Watered by Big Fishing Creek. Surface mountainous; soil calcareous loam in the valleys. 20 miles N. E. from Bellefontaine.

Logan County, Va., c. h. at Logan. Bounded N. by Cabell and Kanawha counties, E. by Fayette and Mercer, S. by Tazewell, and W. by the Tug Fork of Sandy River, separating it from Kentucky, and by Wayne co. Drained by Guyandotte and Coal Rivers. Surface rough and uneven.

Logan, Va., c. h. Logan co. On the E. side of Guyandotte River. 351 miles W. from Richmond.

Logansport, Ia. City, and seat of justice of Cass co. Situated on the Wabash River, at the junction of Eel River. 68 miles N. of Indianapolis. The Wabash and Erie Canal passes through it, giving it a fine advantage of position for business. It has a valuable water power, on which are several flouring mills and saw mills. The site of the town is on ground gradually rising from the junction of the rivers, where it is about 10 feet above high-water mark, for the distance of 100 rods, to an elevation of 30 or 40 feet, which is about the altitude of the highest bluffs along the Wabash River. Bridges here cross both the Wabash and Eel Rivers. The town contains a court house, jail, an academy, and churches of the leading Christian denominations. It promises to become one of the principal towns in northern Indiana.

London, O., c. h. Madison co. 27 miles W. by S. from Columbus.

Londonderry, N. H., Rockingham co., adjoins the E. line of the county of Hillsboro'. This town has a very fertile soil, and contains but little waste land. The principal stream is Beaver River, issuing from Beaver Pond, a beautiful body of water, nearly circular in form, and about 300 rods in diameter. 3 miles N. W. from this pond are 3 other small ponds, Scooby's, Upper, and Lower Shields. Small streams issuing from these unite and fall into Beaver River, on which are extensive and valuable meadows. There are several other ponds in the town. Londonderry was settled in 1719, by a colony of Presbyterians from the vicinity of the city of Londonderry, in the north of Ireland. 16 families, accompanied by Rev. James McGregor, on the day of their

arrival performed religious services under an oak, on the E. shore of Beaver Pond. They introduced the culture of the potato, a vegetable till then unknown in New England; also the manufacture of linen cloth. In 1828 part of this town was taken to form Derry. 26 miles S. S. E. from Concord, and 35 S. W. from Portsmouth.

Londonderry, Pa., Chester co. Surface level, and watered by Doe Run, a branch of Brandywine River, and by the head branches of Elk and White Clay Creeks. Soil sandy loam.

Londonderry, Pa., Dauphin co. Watered by Conewago and Spring Creeks, the latter affording water power. Surface somewhat hilly; soil gravel and calcareous loam. 14 miles S. E. from Harrisburg.

Londonderry, Pa., Lebanon co. Bounded N. by Swatara Creek, and drained by Conewago and Quitapahilla Creeks and Klinger's Run. Surface hilly on the N. and S., but more level in the central portions. Soil gravel and calcareous loam. 8 miles S. W. from Lebanon.

Londonderry, Vt., Windham co. West River passes through this town, and receives several tributaries in it. The land on the streams is rich and fertile; the uplands are good for grazing, except those parts that are mountainous. There are in this town 2 pleasant villages. The settlement was commenced in 1774, by people from Londonderry, N. H. 28 miles S. W. from Windsor, and 30 N. E. from Bennington.

London Grove, Pa., Chester co. Watered by White Clay Creek and branches. Surface undulating; soil calcareous loam. 71 miles E. by S. from Harrisburg.

Long Branch, N. J., Shrewsbury, Monmouth co. A long beach, on the Atlantic, 50 miles E. from Trenton, a place of fashionable resort for persons seeking the recreations of sea air and bathing.

Long Lake, N. Y., Hamilton co. The territory of this large town is mostly a wilderness, watered by numerous streams and lakes. The surface is somewhat uneven; soil tolerably fertile. 35 miles N. from Lake Pleasant, and 100 N. W. from Albany.

Longmeadow, Ms., Hampden co. This town was formerly the second parish of Springfield. It was first settled about 1644, and derived its name from the long meadow within the town. Its Indian name was *Massacsick*. Longmeadow is finely located on the eastern bank of Connecticut River, and has some rich meadow land. The town is watered by some small streams. The village is delightfully situated about a mile from the river; it is built on one wide, level street, beautifully shaded by tall native elms. The Hartford and Springfield Railroad passes through here, about 21 miles from Hartford: to Springfield it is 4 miles, and from Springfield to Boston, by the Western Railroad, it is 98 miles.

Long Swamp, Pa., Berks co. Drained by Little Lehigh River. Surface hilly; soil gravel and calcareous loam. 72 miles E. by N. from Harrisburg.

Lorain County, O., is bounded N. by Lake Erie, E. by Cuyahoga and Medina counties, S. by Wayne and Richland, and W. by Huron co. The branches of Black River and Beaver Creek rise in the county. It was organized in 1824, and has a rich, productive soil. The fall in Black River furnishes the county with an immense water power.

Lorraine, N. Y., Jefferson co. Watered by Sandy Creek and its branches. Surface hilly; soil sandy loam and clay. 15 miles S. from Wattertown, and 145 N. W. from Albany.

Los Angeles County, Ca., c. h. at Puebla de Los Angeles. In the S. part of the state.

Los Angeles, Ca., c. h. Los Angeles co. Former Mexican capital of California.

Loudon, N. H., Merrimac co. Suncook River passes through Loudon, furnishing valuable mill privileges. There is some good intervals on its borders. Loudon was originally a part of Canterbury, and lies on the E. side of Merrimac River. First settlers, Abraham and Jethro Batchelder and Moses Ordway. About 10 miles N. E. from the state house in Concord.

Loudon County, Va., c. h. at Leesburg. Bounded N. E. by the Potomac River, separating it from Maryland, S. E. by Fairfax co., S. W. by Prince William and Fauquier, and N. W. by Clarke and Jefferson counties. Drained by Killoctan and Goose Creeks, and branches, which afford good water power. Surface mountainous, the Blue Ridge lying on the N. W. border. Soil of various qualities.

Louisiana County, Io., c. h. at Wappello. Bounded N. by Johnson and Muscatine counties, E. by the Mississippi River, separating it from Illinois, S. by Des Moines and Henry, and W. by Washington co. Drained by Iowa River and branches, which afford hydraulic power. Soil of fine quality, especially on the borders of the rivers.

Louisa, Ky., c. h. Lawrence co. Located on the W. side of Big Sandy River. 158 miles E. from Frankfort.

Louisa County, Va., c. h. at Louisa Court House. Bounded N. and N. E. by Pamunkey River, separating it from Orange and Spottsylvania counties, S. E. by Hanover, S. W. by Goochland and Fluvanna, and N. W. by Albemarle co.

Louisburg, N. C., c. h. Franklin co. On the N. side of Tar River. 36 miles N. E. from Raleigh.

Louisville, As., c. h. Lafayette co.

Louisville, Ga., c. h. Jefferson co. On Rocky Comfort Creek, just above its junction with Ogeechee River, and 53 miles E. from Milledgeville.

Louisville, Ky. City, port of entry, and seat of justice of Jefferson co. It is 52 miles W. by N. from Frankfort, the capital of the state. The population in 1800 was 800; 1810, 1357; 1820, 4012; 1830, 10,336; 1840, 21,210; 1850, 43,000. Louisville is situated on the S. side of the Ohio River, at the head of the rapids. Opposite to the city the river is a mile wide, and for many miles above spreads out into a most beautiful sheet of water. The city is built on a gradual ascent from the river, about 75 feet above low-water mark, with streets running parallel to the river, nearly E. and W., from 60 to 120 feet wide, intersected at right angles by streets running up from the river, which are uniformly 60 feet wide. The areas enclosed by the intersecting streets are 420 feet square; which, however, are in most instances subdivided by narrower streets and alleys. The public buildings of Louisville are, many of them, of the most convenient and elegant construction. The City Hall, for the accommodation of the municipal courts and offices, is a spacious and magnificent building. The city and county prison is constructed on the most approved model of modern improvements, combining health, convenience, and security.

The Marine Hospital is a fine building, erected in 1820, by a grant of \$40,000 from the state; a donation for the site, containing about 7½ acres of ground, having been made by two noble-minded citizens. The establishment is well endowed, admirably regulated, and abundantly sufficient for all the purposes of its design. There is in Louisville a Medical Institute, which is well furnished with books and apparatus, and has been in very successful operation for a number of years. There is here a school for the blind, endowed by the state. There are two orphan asylums, and a Magdalen asylum; a city workhouse, a hospital, a prison, several markets, and banking houses. It has several spacious hotels, which are among the best in the country. Some of the church edifices are fine specimens of architecture, of which there are in the city 3 Presbyterian, 6 Methodist, 4 Baptist, 1 Campbellite Baptist, 2 Episcopal, 2 Roman Catholic, 1 Friends, 1 Unitarian, 1 Universalist, several colored churches, 1 free church, and a Jews' synagogue. The Mercantile Library Association has a library of between 4000 and 5000 volumes. The Kentucky Historical Society has accumulated a large and valuable collection of books, pamphlets, and manuscript documents, connected with the settlement and history of the state. An Agricultural and a Horticultural Society have been organized. The system of free schools was introduced into Louisville earlier than any where else west of the mountains; and the city is well provided with the means of education, which are open to children of every age, and of all classes. Large banking facilities have been provided.

The principal business of Louisville is foreign and domestic commerce. It is extensively resorted to by merchants from the river towns above and below, and from the interior of the adjacent states, as an eligible wholesale market for dry goods and groceries. In this commerce are employed more than 300 steamboats, besides boats of other descriptions with which the western rivers are navigated. The import and export trade of Louisville, in 1850, amounted to near \$50,000,000. The exports consist of tobacco, bagging, and bale rope, pork, lard, bacon, flour, whiskey, feathers, flaxseed, beeswax, and live stock; to which should be added steam engines, sugar mills, and various kinds of machinery manufactured here. There are several large foundries and machine shops, in which engines and machinery of the best description are produced. Many steamboats of the largest class, every year, are built at Louisville and the adjoining towns, and furnished with engines from these establishments. Two extensive steam bagging factories are in full operation, and several ropewalks, converting tons of raw hemp daily into bagging, cordage, and bale rope. There are manufactories of cotton and woolen; a number of flouring mills, breweries, and distilleries. White lead, linseed and lard oil, starch and hydraulic cement, tobacco, snuff, cigars, &c., are manufactured here in large quantities. The book trade, printing, binding, and paper making, are carried on with great energy and success. All, or nearly all, these branches of manufacture are rapidly extending their business.

The city is abundantly supplied with excellent water, and gas works have been established for lighting the city

The greatest falls in the Ohio River are those just below this city; which are caused by a bed of limestone extending across the river, over which the waters pour with a broken and irregular current, for a distance of 2 miles, making a descent of 22 feet, and, excepting one or two months during the period of the highest flood, entirely intercepting the passage of loaded boats up and down the river. To overcome this obstruction to the important commerce of the Ohio, the Louisville and Portland Canal was constructed, extending from the city to Portland, a village lying at the foot of the falls, which was formerly the port at which the boats and shipping from below were obliged to stop and discharge their cargoes. The length of the canal is between 2 and 3 miles, 50 feet wide at the surface, and overcoming 22½ feet of fall by 4 locks, sufficiently capacious to admit steamboats of the largest size. Almost the entire line is excavated out of the solid limestone rock, to the average depth of 10 feet. This great and useful work was finally completed in 1833, in a most thorough and substantial style of execution. The cost was \$1,000,000. The United States are stockholders to the amount of \$290,000. The amount of business done upon this river is so great, that this large outlay has proved a most judicious and profitable investment. In 1843, the tolls received, since the canal began to be used in 1830, had amounted to \$1,225,350. It is believed that these falls may be made available for the purpose of obtaining an incalculable amount of water power; and that, at some future period, Louisville may become one of the greatest manufacturing cities in the Union.

In 1778, a fort was built at this place, and a settlement commenced. For several years the inhabitants were harassed by Indian hostilities. In 1780, the legislature of Virginia authorized the laying out of a town at the falls of the Ohio, to which they gave the name of Louisville, in honor of Louis XVI., of France, the first ally of the republic. The next year a fort was built, and the place was made secure against the assaults of the Indians. For many years, owing to the miasmata arising from several surrounding swamps and ponds, Louisville continued to be exceedingly unhealthy. But, in 1823, these local causes were effectually removed; since which time, it is believed that no large city in the country has been more uniformly healthy than Louisville.

Louisville, Mi., c. h. Winston co. On the head branches of Pearl River. N. E. from Jackson 92 miles.

Louisville, N. Y., St. Lawrence co. Bounded on the N. W. by the St. Lawrence, and watered S. by Grass River. Several islands lying in the St. Lawrence River belong to this town. The surface is undulating; soil fertile loam, based upon limestone. 20 miles N. from Canton, and 231 N. W. from Albany.

Lovell, Me., Oxford co. This town embraces Kezer Pond, a large sheet of water, and other ponds whose outlet is into the Saco, at Fryeburg. Lovell lies 10 miles N. from Fryeburg, 20 W. S. W. from Paris, and 67 W. S. W. from Augusta. Incorporated 1800. "In this town are Lovell's Falls, a great natural curiosity. Where the water makes over into the tremendous basin below, it falls perpendicularly 40 feet. Above the falls, there is a chain of 8 ponds, partly in Lovell and partly in Waterford, connected by small natural dams, 1 or 2

rods in width, through which there are sluiceways, which will admit the passage of a common sail boat. The scenery of the mountains and ascending lands in the vicinity is rural and beautiful."

Lovington, Va., c. h. Nelson co. 105 miles W. by N. from Richmond.

Lowell, Me., Penobscot co. Formerly called *Huntsville*. Incorporated by its present name in 1838. 30 miles E. of N. from Bangor.

Lowell, Ms. City, and one of the seats of justice of Middlesex co. Situated on the Merrimac River, at the point where it receives the Concord River. 26 miles N. W. from Boston, 45 N. N. E. from Worcester, 13 S. W. from Lawrence, and 50 S. S. E. from Concord, N. H. The rapid growth of this city, the variety and richness of its manufactures, and the peculiar character of its population, have rendered it an object of interest and inquiry throughout the world. In these respects, it stands unrivalled in this country, and is well entitled to the appellation of the "Manchester of America."

The township was taken from Chelmsford in 1826, and embraces a territory, including the village of Belvidere, on the opposite side of the Concord River, which has since been annexed to Lowell from the corner of Tewksbury, of about 5 square miles. The number of inhabitants on this territory in 1820 was less than 200; and the whole valuation of property did not exceed \$100,000. The first purchases, with a view to the establishment of manufactories here, were made in 1821. The Merrimac Company, which was the first incorporated, was established in 1822, with a capital of \$1,500,000; and the first cloth woven was in one of their mills, in 1823. There are now 12 incorporated companies in Lowell, employing a capital of nearly \$14,000,000, besides about \$500,000 more of other manufacturing and mechanical investments, which is employed by individual enterprise. The population in 1830 was 6477; in 1840, 20,796; in 1850, 33,385; and at the present time, (1852,) not less than 35,000.

All the principal water privileges at Lowell are owned by a company called "The Proprietors of the Locks and Canals on Merrimac River." This company was incorporated in 1792, for the purpose of constructing a canal from the head of Pawtucket Falls, so called, in the Merrimac River, to the Concord River, near its junction with the Merrimac, for the purpose of affording a passage to boats and rafts navigating the river. This canal is a mile and a half long, 60 feet wide, and 6 or 8 feet deep. It is still used to some extent for the purpose originally intended. But when the design was entertained of applying the immense water power thus created to manufacturing purposes, this company, having secured the title to a considerable area on the south side of the river, sold out to other companies the sites for mills, agreeing to furnish them with a certain amount of water for a stipulated annual rent. They also erected an extensive shop for the manufacture of machinery, from which, in as short a time as three months, they can furnish the machinery complete for a cotton mill of 6000 spindles; and in the same time, if required, they also build the mill itself, to the orders of a new company, and furnish it ready to be operated. The facilities thus afforded contributed

rapidly to build up the place, and the energy and foresight of these enterprising capitalists were largely rewarded.

This old canal having, of late years, proved in some degree insufficient, a new one was constructed in 1847, of great capacity and superior workmanship, costing \$640,000. This canal is nearly 1 mile in length, averaging 100 feet wide and 15 feet deep; and for size, solidity, and the completeness of all its arrangements, is said to exceed any thing of the kind in the United States.

The whole number of mills belonging to the 12 manufacturing corporations of Lowell, on the 1st of January, 1851, was 50; containing 325,500 spindles and 9906 looms; the number of males employed, 3702; females, 8274; pounds of cotton consumed per week, 575,400; pounds of wool consumed per week, 69,000; making of cotton cloth, per week, 2,190,000 yards; of woollen cloth, 20,477 yards; and of carpeting, 15,000 yards. The average wages earned by males, clear of board, is 80 cents per day; and by females, clear of board, \$2 per week. — These mills are all now lighted with gas, and warmed by steam. Besides these there are extensive powder mills, paper mills, and mills for making batting, the Lowell bleachery, a foundry and planing mill, with a variety of other manufactures, carried on by individual proprietors of large means, which together employ as many as 1500 hands.

The public buildings of Lowell are a Court House, City Hall, Market House, a Hospital, a Mechanics' Hall, the houses for public worship, which are generally handsome, and the edifices for the public schools. The Mechanics' Hall was erected by an association of mechanics, incorporated as early as 1825. It is a spacious and expensive building, in the heart of the city, furnished with a fine library and reading room, with philosophical apparatus and a mineralogical cabinet. Courses of lectures, literary and scientific, are delivered here. There is also a valuable library of 7000 volumes belonging to the city, which is open to all persons for the small fee of fifty cents per annum. The Hospital was established in 1839, by the several manufacturing companies, for the convenience and comfort of persons employed by them, when sick; where, for a very small price, an experienced physician and nurses are provided.

Perhaps nothing has contributed more to encourage industry, frugality, and thrift, among the operatives, than the Institutions for Savings, of which there are now two in Lowell. The laborers are the principal depositors in these banks, the greater part being females. The number of depositors November 1, 1851, was 6224; and the amount of deposits \$812,598.63.

The fire department in this city is very efficient and well organized. A reservoir of great capacity has been constructed on the high ground in Belvidere, for the purpose of furnishing a ready supply of water to any part of the city in case of fires. The water is carried into the reservoir by forcing pumps from the Lowell Machine Shop, and thence distributed through pipes to the hydrants in the city.

The number of churches in Lowell of all denominations is 23. The population, although so largely composed of young persons but recently removed from the counsels and restraints of the parental roof, is superior to that of most cities,

for general intelligence, sobriety and correct deportment

For nothing, perhaps, does Lowell deserve more credit than for her liberal provision for the public schools. This wise policy was early adopted, and has perseveringly enlarged its operations with the growth of the city. From \$1200, the amount appropriated for the support of the public schools in 1827, the annual appropriation in 1850 had risen to \$43,000. These schools consist of a high school, 10 grammar schools, and 46 primary schools. The total expenditures of the city for 1850 was \$178,614.

The place where Lowell stands was known in the early annals of the country as one of the best fishing grounds of the Indians in all New England. The "Apostle Eliot" speaks of one or two excursions which he made to "Pawtucket Falls," to become acquainted with the tribes of Indians from the interior, and to teach them the principles of Christianity. They continued even to a late day, after the country around began to be settled, to retain their title to a right at this fishing ground. There are still evident marks, it is said, of a trench which once enclosed a large area, about the junction of Merrimac and Concord Rivers, which was expressly reserved for the use of the Indians. How altered now the scene! How different the enterprise, which brings such multitudes to sojourn at these falls!

Lowell must be considered as a magnificent and most successful experiment of an American manufacturing city, upon which our countrymen look with pride and foreigners with admiration. To its founders, a few Boston capitalists, belongs the credit of establishing a wise system of means to produce at once the most successful pecuniary, social, and moral results; in a great measure precluding the evils of ignorance, degradation, and vice, which were once thought inseparable from large manufacturing towns. No community, for the period of its existence, has enjoyed more of the substantial comforts of life, or possesses better intellectual and moral advantages, than Lowell. It has become an honor to the state in which it is located, and a model to the manufacturing cities springing up around it, and in other parts of the land. May this great and industrious city always continue to be worthy of the title given it by the Hon. Edward Everett, in his Memoirs of FRANCIS C. LOWELL, from whom it derives its name — "*The noble City of the Arts.*"

Lowell, Vt., Orleans co. The Missisco River originates in a small pond, nearly on the line between this township and Eden, and taking a northerly course, and receiving a number of considerable tributaries, enters Westfield near its S. E. corner. Although encompassed by mountains on all sides, except the N. E., much of the township is handsome land, easy to till and generally productive. At the grist mill near the centre of Lowell, the whole river passes through a hole in the solid rock. This natural bridge is situated at the foot of a fall in the river of about 10 feet. The first permanent settlement was made in 1806, by Major William Caldwell. 9 miles S. W. from Irasburg, and 40 N. from Montpelier.

Lower Chichester, Pa., Delaware co. Surface level, and watered by Hook, a branch of Naaman's Creek; soil loam.

Lower Dublin, Pa., Philadelphia co. Penny

pack Creek and Saw Mill Run flow through this town, affording water power. Surface gently uneven; soil sandy loam.

Lower Macungy, Pa., Lehigh co Surface level; soil calcareous loam.

Lower Mahantango, Pa., Schuylkill co. Deep and Swatara Creeks water this town, which is crossed by Broad and Sharp's Mountains. Soil red shale, and fertile in the valleys. Anthracite coal exists here. 55 miles N. E. from Harrisburg.

Lower Makefield, Pa., Bucks co. Bounded on the E. by Delaware River. Surface undulating; soil clay and sandy loam.

Lower Merion, Pa., Montgomery co. Schuylkill River and Mill and Cobb's Creeks water this town, which has an undulating surface and rich, loamy soil. It lies 93 miles E. from Harrisburg.

Lower Nazareth, Pa., Northampton co. Watered by Manookisy Creek. Surface level; soil calcareous loam.

Lower Oxford, Pa., Chester co. Drained by branches of Octarara and Elk Creeks. Surface somewhat uneven; soil loam.

Lower Paxton, Pa., Dauphin co. Beaver and Paxton's Creeks water this town, and Blue Mountain lies on its N. border. 6 miles N. E. from Harrisburg.

Lower Providence, Pa., Montgomery co. Perkiomen Creek, on the borders of which lead is found, and Shippack Creek, water this town. Surface hilly; soil red shale.

Lower Salford, Pa., Montgomery co. Watered by branches of Perkiomen and Shippack Creeks. Surface undulating; soil loam and red shale.

Lower Saucon, Pa., Northampton co. Watered by Lehigh River and Saucon Creek and branches. Surface hilly; soil gravel and calcareous loam. 99 miles E. N. E. from Harrisburg.

Lower St. Clair, Pa., Alleghany co. Bounded on the N. by Monongahela and Ohio Rivers, and drained by Chartier's Creek and Saw Mill River. Surface hilly; soil loam. Coal is abundant.

Lower Swatara, Pa., Dauphin co. Bounded S. W. by the Susquehanna River, and drained by Spring and other creeks. Surface hilly; soil slate and calcareous loam. 5 miles S. E. from Harrisburg.

Low Hill, Pa., Lehigh co. Surface hilly; soil gravel. 88 miles E. N. E. from Harrisburg.

Lowndes County, Ala., c. h. at Haynesville. It is bounded N. by Alabama River, separating it from Autauga co., E. by Montgomery and Pike counties, S. by Butler, and W. by Wilcox and Dallas counties. Drained by branches of Alabama River.

Lowndes County, Ga., c. h. at Troupsville. It is bounded N. by Irwin co., E. by Ware, S. by Indiana, and W. by Thomas and Baker counties. Alapaha and Withlacoochee Rivers, branches of the Suwannee, flow through this county.

Lowndes County, Mi., c. h. at Columbus. It is bounded N. by Monroe co., E. by Alabama, S. by Noxube, and W. by Oktibbeha co. Watered by Tombigbee River and branches. Surface undulating; soil productive.

Lowville, N. Y., Lewis co. On the W. side of Black River. Surface rolling; soil good, and, on the banks of the river, very fertile. 7 miles N. from Martinsburg, and 132 N. W. from Albany.

Lubeck, Me., Washington co. In the N. E. corner of the state, at the entrance of Passamaquoddy Bay. It has an excellent harbor, easy

of access, and never obstructed by ice. The principal village occupies a point of land jutting into the harbor, and makes a fine appearance. It is largely engaged in navigation, and has a thriving business. 3 miles S. from Eastport, 31 S. E. from Calais, and 173 E. by N. from Augusta.

Lucas County, Io., c. h. at Chariton. Southern central.

Lucas County, O., c. h. at Maumee City. Situated in the N. W. part of the state, having the Maumee River for its S. E. boundary, and for its N. boundary the state line, dividing it from Michigan. It has been recently constituted a county, being a part of the former territory of Wood and Henry counties. The surface is generally level, a portion of it covered by the Black Swamp, and a portion of the northern part dry and sandy. In this county, not far from the present locality of Maumee City, was fought, August 20, 1794, the "Battle of the Fallen Timbers," in which the Americans, under General Wayne and General Scott, gained an important victory over the Indians, assisted by Canadian militia and volunteers. This part of the Maumee valley was also the theatre of important operations in the war of 1812. This county is at present but sparsely settled, but is destined, at no distant day, to become populous and wealthy.

Ludlow, Ms., Hampden co. This was formerly a part of Springfield, and called Stony Hill. The town is watered by branches of Chicopee River, and by that river itself, at the S. part of the town, where is situated a flourishing manufacturing village. The surface of the town is pleasant, with some elevations on its eastern section. The soil is good and productive. The North Wilbraham depot, on the Western Railroad, is near the village in Ludlow. 9 miles from Springfield, and 89 from Boston.

Ludlow, Vt., Windsor co. Black River passes through the centre of the town, and has many valuable mill sites. In the upper part of its course it widens into 4 large basins, the largest in Ludlow being nearly circular, and 1 mile in diameter, known as the Ludlow and Plymouth Ponds. In the N. W. corner of the town is the "Tiney Pond," several hundred feet above the level of the river, and nearly half a mile in diameter. There is another large collection of water in the western part of the town, and several extensive bogs upon both sides of the river. The soil upon the river is alluvial, and throughout the town is fertile. The prevailing rock is mica slate. The settlement was commenced in 1784-5, by emigrants from Massachusetts. 61 miles S. from Montpelier, and 18 S. W. from Windsor.

Ludlowville, N. Y., Tompkins co. On Salmon Creek, which has a fall of nearly 100 feet at this place. W. by S. from Albany 172 miles.

Lumberland, N. Y., Sullivan co. Bounded on the S. W. by the Delaware River, and watered by Mongoup River and several other tributaries of the Delaware. The surface is hilly, and heavily timbered; soil gravelly loam. 12 miles S. W. from Monticello, and 125 from Albany.

Lumberton, N. C., c. h. Robeson co. On the E. bank of Lumber River. 91 miles S. by W. from Raleigh.

Lumpkin County, Ga., c. h. at Dahlonega. It is bounded N. by Union, E. by Habersham and Hall, S. by Forsyth, and W. by Cherokee and Gilmer counties. Watered by Etowah and Chastatee Rivers and branches. Surface hilly; soil

very rich on the streams. Gold dust of a superior quality is found here.

Lunenburg, Ms., Worcester co. This was originally a part of "Turkey Hills," or Fitchburg, and was so called in compliment to George II., or to his title of Duke of Lunenburg. Many of the first settlers were emigrants from Scotland and Ireland. The soil is fertile. Though the land is generally high, yet by reason of its cohesive texture, and having a clayey stratum within a few feet of its surface, it retains moisture sufficient for vegetation through the whole summer, unless in seasons of severe drought. There are 3 handsome ponds, but the town is singularly destitute of water power. Lunenburg is a flourishing town, with a pleasant village near its centre. This village is 5 miles N. W. from Shirley depot, on the Fitchburg Railroad, and 37 from Boston.

Lunenburg, Vt., Essex co. On the W. side of Connecticut River, and watered by Neal's Branch and Pond, and Catbow Branch, good mill streams. Some of the land is very good, but the most of it is stony. It is good for grazing. This town was probably settled as early as 1770. 13 miles S. from Guildhall, and 55 N. E. by E. from Montpelier.

Lunenburg County, Va., c. h. at Lewistown. It is bounded N. by Nottoway River, separating it from Prince Edward and Nottoway counties, E. by Dinwiddie and Brunswick counties, S. by Meherin River, separating it from Mecklenburg, co., and W. by Charlotte co. Drained by small streams flowing into Nottoway and Meherin Rivers.

Lunenburg, Va., c. h. Lunenburg co. 78 miles S. W. from Richmond.

Lurgan, Pa., Franklin co. Watered by the N. and S. branches of Conedogwinit Creek. Surface mostly slaty valley land. 13 miles N. from Chambersburg.

Luray, Va., c. h. Page co. It is situated on Hawksbill Creek. 130 miles N. W. from Richmond.

Luzerne, N. Y., Warren co. On the E. side of the Hudson River, and watered by a chain of small lakes extending from Lake George to the Hudson. It is a hilly town, the E. part being covered by the Palmertown Hills. 6 miles S. W. from Caldwell, and 55 N. from Albany.

Luzerne County, Pa., c. h. at Wilkesbarre. Bounded N. by Wyoming and Susquehanna counties, E. by Wayne and Monroe, S. by Carbon and Schuylkill, and W. by Northumberland, Columbia, and Lycoming counties. Watered by Susquehanna and Lehigh Rivers. The surface is much diversified, and anthracite coal is abundant; soil fertile in the valleys.

Luzerne, Pa., Fayette co. In the great bend of the Monongahela River, which bounds it N. and W. It is also watered by Dunlap's Creek. Surface level; soil calcareous loam. 12 miles N. W. from Uniontown.

Lycoming County, Pa., c. h. at Williamsport. Bounded N. by Tioga and Bradford counties, E. by Wyoming and Luzerne, S. by Columbia, Northumberland, and Union, and W. by Clinton co. Watered by the W. branch of the Susquehanna and its tributaries. A canal passes through this county, and unites with the Pennsylvania Canal at the mouth of the Juniata. Surface rough and mountainous; soil fertile in the valleys.

Lycoming, Pa., Lycoming co. Watered by Lycoming Creek, a branch of the Susquehanna River. Surface mostly mountainous; soil rich calcareous loam in the valleys.

Lykens, Pa., Dauphin co. Wiconisco, Little, and Mahantango Creeks water this town. Surface mountainous, containing coal; soil red shale. 26 miles N. from Harrisburg.

Lyman, Me., York co. This is a pleasant town, watered by several ponds, which empty, some into the Saco, and others into the Kennebunk and Mousum. It lies 87 miles S. W. from Augusta, 5 E. from Alfred, and 6 N. N. W. from Kennebunk.

Lyman, N. H., Grafton co., is situated on Connecticut River. Lyman's Mountain is in this town: from it the N. W. branch of Burnham's River has its source. There are several ponds in the E. part of Lyman, through the largest of which Burnham's River has its course. The lower bar of Fifteen Mile Falls is in this town. Carleton's Falls are several miles below; and below these is Stevens's Ferry, which communicates with Barnet. The scenery in this town is wild and romantic. Lyman was granted, in 1761, to a number of proprietors, of whom was Daniel Lyman, from whom it probably received its name 13 miles N. from Haverhill, and 100 N. E. from Concord.

Lyme, Ct., New London co. Lyme is situated at the mouth of Connecticut River, on the E. side, opposite to Saybrook. It is a pleasant town, generally of good soil, but greatly diversified in regard to surface; some parts are mountainous and rocky, while others are level, with large tracts of salt meadow. The town is watered by several streams and ponds, and the shores on the sound and river are indented by small bays and harbors, which afford the town some navigable privileges. There are several neat villages in the town. Incorporated 1667. Its Indian name was *Nehantic*. Among the first settlers was Matthew Griswold, the ancestor of two governors, and of a numerous and highly respected family in the state. 40 miles S. E. from Hartford.

Lyme, N. H., Grafton co. The soil here is similar to that of other towns on Connecticut River, with this difference, that there is a less proportion of intervals, and a less difference between that directly adjoining the river and the other parts of the town. Three small streams pass through the town. There are two small ponds; the largest is called Port's. Here is an elevation called Smart's Mountain. The town received its name from Lyme, Ct. First settlers, Walter Fairfield, John and William Sloan, and others, from Connecticut. 20 miles S. from Haverhill, and 55 N. W. from Concord.

Lyme, N. Y., Jefferson co. Watered by Chamont and St. Lawrence Rivers, and comprises Fox and Grenadier Islands, lying in Lake Ontario, which bounds the town on the S. Surface slightly uneven; soil fertile sandy and marly loam. 12 miles W. from Watertown, and 172 N. W. from Albany.

Lynchburg, Va., Campbell co. On the S. side of James River, 20 miles below its passage through the Blue Ridge, and 116 W. from Richmond. The James River and Kanawha Canal is in operation between this place and Richmond, with five packet boats for passengers, leaving and arriving every day except Sundays. The town is handsomely situated, on ground ascending from the river in

the midst of bold and beautiful scenery, within view of the Blue Ridge and the Peaks of Otter. It was incorporated in 1805, and has risen to the rank of a flourishing commercial mart. The buildings, both public and private, are substantial and elegant, indicative of the wealth, intelligence, and taste of the inhabitants. Seven or eight of the prevailing religious denominations have churches here. There are six or seven large hotels, a large cotton factory, an iron foundry, several extensive flouring mills, and about thirty tobacco factories, in which from 35,000 to 40,000 boxes of tobacco are manufactured annually. Lynchburg has an extensive trade with the N., the N. W., and S. parts of Virginia, and with the adjacent parts of Ohio, Kentucky, Tennessee, and North Carolina. A bridge crosses the James River in front of the town; and by a dam, some distance above, water is taken out of the river, and raised, by machinery, through an ascending pipe 2000 feet long, to an elevation 253 feet above the stream, for the supply of the inhabitants. A water power is also created by this dam which is capable of extensive application to manufacturing purposes.

Lyndeboro', N. H., Hillsboro' co. This is an elevated township, having a considerable mountain, which divides it from E. to W. There is below the mountain a plain, where there is a small village, pleasantly situated near Piscataquog River. The soil, though stony, is deep and strong, and excellent for grazing. The streams are small. In 1753, Benjamin Lynde, Esq., of Salem, purchased a large part of the township and adjoining lands. From him the place took the name of Lyndeboro'. First settlers: the earliest names were Putnam, Chamberlain, and Cram. 10 miles W. N. W. from Amherst, and 30 S. W. from Concord.

Lyndon, N. Y., Cattaraugus co. Drained by Ischua and Oil Creeks. Surface undulating; soil sandy loam and clay. 18 miles E. from Ellicottville, and 274 S. of W. from Albany.

Lyndon, Vt., Caledonia co. Lyndon is one of the best townships in the state; its surface is undulating, with a soil of rich loam, free from stone, and easy to cultivate. It is well watered by the Passumpsic and some of its tributaries. Two important falls of that river are in the town, one of 65 feet in the distance of 30 rods, the other of 18 feet. These are called Great and Little Falls, and afford a water power of great extent. Agaric mineral, used for chalk, and a good substitute for Spanish white, is found here. The principal village is very pleasant, and the seat of considerable business. The settlement was commenced by Daniel Cahorn, Jr., in 1788. 14 miles N. E. from Danville, and 44 N. E. from Montpelier.

Lynn, Ms., Essex co. This city lies on the N. shore of Massachusetts Bay, 9 miles, by the Eastern Railroad, N. N. E. from Boston, and 5 miles S. from Salem. It extends 6 miles on the sea, this portion of the township being a plane, bounded on the N. by a chain of bold, rocky hills, chiefly composed of porphyry. Beyond this rocky barrier lies an extensive tract of woodland, into which Lynn extends about 5 miles. Its Indian name was Saugus. It is surrounded almost by water, having the River Saugus on the W., the harbor on the S., the ocean on the S. E., and a chain of large ponds, called the "Lakes of Lynn," on the N. From the S. side a peninsula,

with a splendid beach, extends four miles into the ocean, at the extremity of which is the celebrated watering-place Nahant. See *Fashionable Resorts*. On another projection of this romantic shore, is Phillips's Point, which also is a place of fashionable resort in the summer season. A mineral spring in the N. part of the town is also a place of much celebrity.

The city is neatly built, on wide and pleasant streets, and is one of the most flourishing and beautiful places in New England. The population in 1790 was 2291; 1800, 2837; 1810, 4087; 1820, 4515; 1830, 6138; 1840, 9367; 1850, 14,257.

There are in Lynn 15 churches of various denominations, nine or ten principal school houses, an academy, banks, insurance offices, and a large number of literary, social, and beneficent societies. This place has risen to wealth and importance by the industry and enterprise of its people in the manufacture of shoes, for which it has been longer celebrated than any other town in the country. The manufacture of ladies' shoes was commenced here before the revolutionary war. Previous to the war, the market for Lynn shoes was principally confined to New England, except that a few were sent to Philadelphia. Many individuals with small capital carried on the business in their own families; fathers, sons, apprentices, with one or two journeymen perhaps, all in one small shop, forming the whole establishment. After the revolution, the business assumed a different aspect. Enterprising individuals embarked in it on a more enlarged scale, building large shops, and employing a great number of journeymen. Master workmen exported their shoes to the south, and to other parts of the country, so that the shoes from Lynn soon took the place of the English and other imported shoes.

There are in Lynn upwards of 130 principal shoe manufacturers and merchants, giving employment in this species of industry to about 10,000 persons, of both sexes. More than 3,000,000 pairs of ladies' and misses' shoes are made there annually. From 300,000 to 400,000 pairs besides are purchased from other towns for the trade, making an annual business, in this article alone, of nearly \$2,500,000.

The other principal business of Lynn is the cod and mackerel fishery, which is often very productive.

From the eminences back of the city a most enchanting prospect is presented to the eye, comprehending the harbors of Boston and Salem, with their numerous islands; the spires and domes of those cities, and nearly the whole compass of Massachusetts Bay, with the Blue Hills and the outline of Cape Cod stretching along the southern horizon. Jutting out into the sea, a few furlongs on the S., appear the rugged cliffs of Nahant, and the hard, polished beach leading to it, like a narrow footpath of sand upon the waters.

Lynn County, On. In the valley of the Willamette.

Lynnfield, Ms., Essex co. This was formerly the N. parish of Lynn, and called Lynn End. The town is watered by Ipswich and Saugus Rivers and two very handsome ponds. The surface is uneven, but the soil is strong and fertile. Lynnfield contains large tracts of woodland, and no town, so near the city, presents more wild and romantic scenery. 13 miles N. from Boston, and 8 W. by N. from Salem.

Lyons, Mn., Ionia co. On both sides of Grand River, 100 miles from its mouth, and at the head of steamboat navigation. The river has a fall at this place, affording good hydraulic power. 134 miles W. N. W. from Detroit.

Lyons, N. Y., c. h. Wayne co. At the junction of Mud Creek and the Canandaigua outlet, which form Clyde River. Surface hilly; soil fertile sandy and calcareous loam. 171 miles N. of W. from Albany.

Lysander, N. Y., Onondaga co. Bounded on the S. by Seneca River. Surface chiefly level, and soil of good quality. 15 miles N. W. from Syracuse, and 158 from Albany.

McArthurstown, O., c. h. Vinton co. 71 miles S. E. from Columbus.

McConnellsville, O., c. h. Morgan co. On the E. bank of Muskingum River, on a pleasant spot, from 10 to 30 feet above high water. 75 miles S. E. from Columbus, and 38 N. W. from Marietta.

McCraken County, Ky., c. h. at Paducah. Bounded N. by the Ohio River, separating it from Illinois, E. by Marshall, S. by Graves, and W. by Ballard co. Drained by Clark's River and branches. Surface level; soil fertile.

McDonald, Mo., c. h. Barry co. On the N. side of a small branch of White River. 200 miles S. W. from Jefferson City.

McDonald County, Mo. In the S. W. corner of the state. Watered by branches of Elk River, a tributary of the Neosho.

McDonough, Ga., c. h. Henry co. Between Towlaggera and South Ockmulgee Rivers. 65 miles W. N. W. from Milledgeville.

McDonough County, Is., c. h. at Macomb. Incorporated in 1829. Bounded N. by Henderson and Warren counties, E. by Fulton, S. by Schuyler, and W. by Hancock co. Watered by Crooked River and branches. Most of the land is fertile prairie.

McDowell County, N. C., c. h. at Marion. In the W. part of the state. On the eastern slope of the Blue Ridge. Contains the westernmost sources of the Catawba.

McHenry County, Is., c. h. at McHenry. Bounded N. by Wn., E. by Lake co., S. by Kane and De Kalb, and W. by Boone co. Watered by Des Plaines and Fox Rivers and branches, and the N. branch of Chicago River. The soil on the E. side of Fox River is clay, and on the W. rich sandy loam. Limestone is abundant.

McIndoes Falls, Vt. In the town of Barnet, Caledonia co. At the head of navigation on the Connecticut, and on the Passumpsic Railroad. 46 miles E. by N. from Montpelier.

McIntosh County, Ga., c. h. at Darien. Bounded N. W. and N. E. by Liberty co., S. E. by the Atlantic Ocean, and S. W. by the Alatomaha River, separating it from Glynn and Wayne counties. South Newport River runs on its N. E. border, and Sapelo River, Jones and Doctor's Creeks drain the interior. Surface level; soil productive. Sapelo, Black Bend, Wolf, and several other islands, belong to this county.

McKean County, Pa., c. h. at Smithport. Incorporated in 1804. Bounded N. by New York, E. by Potter and Clinton counties, S. by Elk, and W. by Warren co. Watered by Alleghany River and branches, and by Sinnemahoning Creek, a head branch of the W. fork of the Susquehanna. Surface hilly, abounding with iron, coal, and salt; soil suitable for grazing.

McKean, Pa., Erie co. Watered by Walnut

Creek and branches, and by Elk Creek. Surface hilly; soil gravelly loam. 9 miles S. from Erie, and 265 N. W. by W. from Harrisburg

Machias, Me., c. h. Washington co. On Machias River. It contains numerous saw mills, and has an extensive trade in lumber. It is also a place where ship building is largely carried on, and the falls of the river above the tide water afford considerable water power. It formerly included Machias Port and East Machias. 143 miles E. N. E. from Augusta.

Machias Port, Me., Washington co. 146 miles E. N. E. from Augusta, and 3 S. of Machias. It has an excellent harbor, and a great number of saw mills.

Mackinac County, Mn., c. h. at Mackinac. This county embraces the whole upper peninsula of Michigan lying beyond the Straits of Mackinac, and between parts of Lakes Michigan and Superior, containing about 13,500 square miles, and likewise several islands in the straits, which are about 40 miles long, between Lake Michigan and Lake Huron, and 4 miles wide, in the narrowest part. Mackinac Island is elevated about 300 feet above the lake. A settlement was commenced here in 1764. The interior is yet, to a great extent, a wilderness.

Mackinac, Mn., c. h. Mackinac co. This village, 300 miles N. W. from Detroit, occupies the S. E. extremity of an island of the same name, at the W. extremity of Lake Huron. It has a fine, spacious harbor, is the centre of an extensive fur trade, and exports large quantities of fish. Fort Mackinac stands on a rocky eminence, 150 feet above the village, commanding the passage of the straits. This has long been a station of the Roman Catholic missions. The Protestant mission of the A. B. C. F. M. have also established schools here.

McLean County, Is., c. h. at Bloomington. Bounded N. by Woodford and Livingston counties, E. by Vermilion and Champaign, S. by Platt, De Witt, and Logan, and W. by Tazewell co. Watered by Mackinaw River and Kickapoo and Salt Creeks. Surface slightly undulating, a large part being prairie; soil fertile.

McLeansboro, Is., c. h. Hamilton co. On a head branch of the N. fork of Salina Creek. S. S. E. from Springfield 156 miles.

McMinn County, Te., c. h. at Athens. Hiwassee River and its branches water this county.

McMinnville, Te., c. h. Warren co. 75 miles S. E. from Nashville.

McNairy County, Te., c. h. at Purdy. Bounded N. by Madison and Henderson, and E. by Hardin co., S. by Mississippi, and W. by Hardeman co. Drained by tributaries of Big Hatchee.

McNutt, Mi., c. h. Sunflower co.

Macomb County, Mn., c. h. at Mount Clemens. Incorporated in 1818. Bounded N. by Lapeer and St. Clair counties, E. by St. Clair co. and Lake St. Clair, S. by Wayne, and W. by Oakland co. Drained by Clinton River and its branches. Surface level in the E., but more hilly and uneven in the W. portions. Soil mostly very fertile, and well adapted to grass and grain. Saline springs are found here.

Macon County, Aa., c. h. at Tuskegee. Bounded N. by Tallapoosa and Chambers, E. by Russell, S. by Barbour and Pike, and W. by Montgomery co. Watered by Tallapoosa River and branches, and by branches of Chattahoochee and Choctaw-hatchie Rivers.

Macon County, Ga., c. h. at Lanier. Bounded N. by Talbot and Crawford counties, E. by Houston, S. by Dooly and Sumpter, and W. by Marion co. Flint River traverses this county from N. to S., and with its branches waters the surface.

Macon, Ga. City, and seat of justice of Bibb co., at the head of steam navigation on the Ockmulgee River, 30 miles S. W. from Milledgeville. The town is built on both sides of the river, over which there is a bridge, about 400 feet in length. This place has had a very rapid growth since 1822, when there was but a single cabin on the site where it now stands. By its population it now ranks among the largest places in the state. Besides the county buildings, which are large and handsome, there is an elegant market house, and 5 or 6 churches. A great amount of cotton is shipped from this place, employing 8 or 10 steamboats on the Ockmulgee, besides tow boats and pole boats. There are 10 or 12 foreign commission houses, with a large capital employed, and many stores occupied with an extensive retail trade. This city is connected by railroads with Savannah, 191 miles; Augusta, 165 miles, and Charleston, 300 miles; with Montgomery, on the navigable waters of the Alabama, 276 miles; and with other important points on the Chattahoochee and Tennessee Rivers.

Macon County, Is., c. h. at Decatur. Bounded N. by De Witt, E. by Platt and Moultrie, S. by Shelby and Christian, and W. by Christian, Sangamon, and Logan counties. Watered by Kaskaskia River, by the N. fork of Sangamon River, and by Salt Creek. The surface is chiefly level, and soil fertile.

Macon County, Mo., c. h. at Bloomington. Bounded N. by Adair and Knox, E. by Shelby, S. by Randolph and Chariton, and W. by Linn co. Chariton and East Chariton Rivers, and the branches of Salt River, water this county.

Macon County, N. C., c. h. at Franklin. Bounded N. by Tennessee, E. by Haywood and Henderson counties, S. by South Carolina and Georgia, and W. by Cherokee co. Watered by the head branches of Tennessee River. Surface elevated, and in parts mountainous.

Macoupin County, Is., c. h. Carlinville. Incorporated in 1829. Bounded N. by Morgan and Sangamon counties, E. by Montgomery, S. by Madison, and W. by Jersey and Greene counties. Watered by Macoupin Creek and branches, and by the head branches of Cahokia and Wood Creeks. Surface gently undulating; soil mostly of excellent quality.

Macungy, Pa., Lehigh co. Surface level, and watered by Jordan and Little Lehigh Creeks. Soil fertile calcareous loam. 83 miles E. N. E. from Harrisburg.

Madawaska Plantation, Me. Aroostook co. On the St. John's, opposite the mouth of the Madawaska.

Madbury, N. H., Strafford co. The soil is generally productive. In some parts of the town, bog iron ore and red and yellow ochre have been found. Bellamy Bank River is the only stream of any magnitude, and Barbadoes Pond the only considerable body of water. This pond lies between Dover and Madbury, and is 120 rods long and 50 wide. Madbury was formerly a part of Dover. 36 miles E. S. E. from Concord, and about 3 miles from the railroad depot at Dover.

Madbury, N. H., Strafford co. 36 miles E. S. E. from Concord.

Madison County, Aa., c. h. at Huntsville. Bounded N. by Tennessee, E. by Jackson co., S. by the Tennessee River, separating it from Marshall and Morgan counties, and W. by Limestone co. Watered by Flint River and other branches of the Tennessee. Surface somewhat hilly; soil very fertile.

Madison County, As., c. h. at Sevierville. It is bounded N. by Missouri, E. by Carroll and Newton, S. by Franklin, and W. by Washington and Benton counties. Watered by White River and branches.

Madison, Ct., New Haven co. This town was taken from Guilford in 1826. The soil is stony, and naturally hard to cultivate; but it is made quite productive by the use of *whitefish*, ploughed in. These fish appear in the Sound about the 1st of June, and continue 3 or 4 months. They are taken in great quantities, and are considered an excellent manure. They were first thus used about the year 1798. This place has a small harbor and some navigation. Ship building is the most important mechanical pursuit. 18 miles E. by S. from New Haven.

Madison County, Fa., c. h. Madison. Bounded N. by Georgia, E. by Suwanee River, separating it from Columbia, Alachua, and Levy counties, S. and S. W. by the Gulf of Mexico, and W. by Oscilla River, separating it from Jefferson co. This county contains numerous small lakes, and has good water. Surface undulating; soil sterile in the central portions, but fertile elsewhere.

Madison, Fa., c. h. Madison co.

Madison County, Ga., c. h. at Danielsville. It is bounded N. by Franklin, E. by Elbert, S. by Oglethorpe and Clarke, and W. by Jackson co.

Madison, Ga., c. h. Morgan co. 41 miles N. N. W. from Milledgeville.

Madison County, Is., c. h. Edwardsville. It is bounded N. by Jersey, Macoupin, and Montgomery counties, E. by Bond and Clinton, S. by St. Clair co., and W. by the Mississippi River, separating it from Missouri. Drained by Cahokia, Silver, and Wood Creeks, and their branches.

Madison County, Ia., c. h. at Andersontown. Bounded N. by Grant, E. by Delaware, S. by Hancock, and W. by Hamilton and Richardville counties. Watered by White River and its tributaries, which afford hydraulic power. Surface level; soil productive.

Madison, Ia. City, and seat of justice of Jefferson co. On the N. side of the Ohio River. 86 miles S. from Indianapolis, 92 W. from Cincinnati, and 41 E. from Louisville. This place is well situated on a bend of the river, above the reach of the highest floods. In the rear of the city the hills rise abruptly to the height of 250 feet. This is the S. terminus of the Madison and Indianapolis Railroad, which extends by branches in different directions beyond Indianapolis, N. and W. Madison is handsomely built, mostly with brick. The streets are broad and straight, and several of them are paved. The principal public buildings are a court house, jail, a branch of the State Bank, and 5 or 6 church edifices. It is a place of much enterprise and success in business. Large manufacturing operations are carried on here by steam power, among which are iron foundries, cotton factories, a steam-engine factory, flouring mills, oil mills, &c. A great business is done here in the

slaughtering and packing of hogs, which are driven in large droves from the interior. The advantages for commerce which this place possesses must secure to it, as the resources of the state are more and more developed, a steady increase of prosperity and wealth.

Madison County, Io., c. h. at Winterset. S. central part of the state.

Madison County, Ky., c. h. at Richmond. It is bounded N. by Kentucky River, separating it from Jessamine and Fayette counties, E. by Estill co., S. by Laurel, and W. by Branchcastle and Garrard counties. Drained by branches of the Kentucky River.

Madison Parish, La., c. h. at Richmond. It is bounded N. by Carroll parish, E. by the Mississippi River, separating it from Missouri, S. by Tensas parish, and W. by the Bayou Macon, separating it from Franklin and Carroll parishes. Drained by Roundaway Bayou.

Madison, Me., Somerset co. On the E. side of Kennebec River. 34 miles N. from Augusta.

Madison County, Mi., c. h. at Canton. Bounded N. by Atala, and E. by Leake co., S. E. by Pearl River, separating it from Franklin co., S. by Hinds co., and W. by the Big Black River, separating it from Yazoo co.

Madison County, Mo., c. h. at Fredericktown. Bounded N. by Francois, E. by Cape Girardeau, S. by Wayne, and W. by Reynolds co. Watered by St. Francis and Whitewater Rivers and branches.

Madison County, N. Y., c. h. at Eaton. Formed from Chenango co. in 1806. It is bounded on the N. by Oneida, E. by Oneida and Otsego, S. by Chenango, and W. by Onondaga co. Watered by Oneida Lake, which lies on the N. boundary, and by the streams flowing into it, and S. by the head branches of Unadilla, Chenango, Ostelic, and Tioughnioga Rivers. Surface rather level in the N. parts, but more hilly in the S., being crossed by an elevated ridge. Soil fertile, especially in the valleys. Gypsum and water limestone are the most important mineral productions, and marl and bog iron ore are found in several places. Near Chittanooga village are 2 celebrated sulphur springs. The Erie Canal, and Syracuse and Utica Railroad pass through the N. part of this county.

Madison County, O., c. h. at London. Union bounds it on the N., Franklin and Pickaway on the E., Fayette on the S., and Greene, Clark, and Champaign counties on the W. It was settled in the year 1815; the land is excellent for grazing, and is watered by Darby and Deer Creeks.

Madison, Pa., Columbia co. Watered by Little Fishing and Mahoning Creeks. Surface quite uneven; soil loam and clay. 10 miles N. from Danville.

Madison County, Te., c. h. at Jackson. Bounded N. by Gibson and Carroll, E. by Henderson, S. by McNairy and Hardeman, and W. by Haywood co. Drained by the S. fork of Forked Deer and its branches.

Madison County, Va., c. h. at Madison. Bounded N. E. and E. by Rappahannock and Culpepper, S. E. by Orange, S. W. by Madison, and N. W. by Page co. Watered by Robertson's, and other branches of Rapid Ann Rivers. Surface somewhat uneven; soil of medium quality.

Madison, Va., c. h. Madison co. 97 miles N. W. from Richmond.

Madison, Wn. Capital of the state, and seat of justice of Dane co., 80 miles W. from Milwau-

kie, and 90 miles N. E. from Galena, Illinois. It is pleasantly situated between two small lakes, which constitute the third and fourth of the chain denominated "the Four Lakes," which are among the sources of the Rock River. There is a regular and gentle descent each way from the site on which the town is built to the lakes on either side, affording a delightful prospect of the water. The town is regularly laid out, with a handsome central square, 914 feet on a side, and streets intersecting each other at right angles. The first improvements here were made by the general government, when Wisconsin was organized as a territory. Having selected this spot as the territorial seat of government, appropriations were made for laying out the town, enclosing the public square, and erecting a capital in its centre. This handsome edifice is of stone, two stories high above the basement, surmounted with a dome, which can be seen at the distance of 10 miles in every direction. In 1837, the contractor with the government for building the capital, with 40 men and 5 females, started from Milwaukee, and cut their way through the wilderness in a tedious journey of 11 days, to commence their undertaking. The growth of the place has been rapid, and its prosperity substantial. It has now churches for several of the principal religious denominations, many handsome hotels, stores, and public buildings, and is a great thoroughfare of travel between important points on Lake Michigan and Green Bay on the E. and N., and the Upper Mississippi on the W.

Madison Springs, Ga., Madison co. 99 miles N. from Milledgeville. The chalybeate waters here are efficacious in the cure of many complaints; and good accommodations are provided to render a residence at the springs agreeable.

Madisonville, Ky., c. h. Hopkins co. On high land between Green and Tradewater Rivers. 127 miles W. S. W. from Frankfort.

Madisonville, La., St. Tammany parish. A seaport on Chefonte River, a northern tributary of Lake Pontchartrain. 35 miles N. from New Orleans.

Madrid, N. Y., St. Lawrence co. Watered by Grass River and several small streams flowing into the St. Lawrence, which bounds it on the N. W. The Isle au Rapid Plat and some smaller islands are attached to this town. Surface slightly undulating; soil fertile loam. 12 miles N. from Canton, and 227 N. N. W. from Albany.

Mahaska, Io., c. h. at Askalooa. S. central.

Mahoning County, O., c. h. at Enfield. On the N. E. border. The N. E. corner is traversed by the W. fork of Beaver River and the Ohio and Pennsylvania Canal.

Mahoning, Pa., Mercer co. Bounded S. by the Susquehanna River, and drained by Mahoning Creek. Surface varied; soil gravel and clay.

Mahoning, Pa., Indiana co. Watered by Great and Little Mahoning Creeks, and on the borders of the latter iron ore is found. Surface hilly; soil clay. 173 miles W. by N. from Harrisburg.

Maiden Creek, Pa., Berks co. Watered by the Schuylkill River and its tributary, Maiden Creek. Surface level; soil calcareous loam. 60 miles E. from Harrisburg.

Maidstone, Vt., Essex co. Watered by Paul's Stream and Maidstone Lake. The settlement here is mostly confined to the margin of Connecticut River, along which a road passes through the township. The settlement was probably com-

menced about the year 1770. 3 miles N. from Guildhall, and 71 N. E. from Montpelier.

Malden, Ms., Middlesex co. This town is connected with Charlestown by a bridge across Mystic River, of 2420 feet in length, built in 1787. It was formerly a part of Charlestown, and called Mystic Side. Malden has a rich soil, varied surface, and good water power. There are two delightful and flourishing villages in the town, through both of which the Maine railroad passes. 5 miles from Boston.

Malden, N. Y., Ulster co. On the W. bank of Hudson River, 43 miles S. by W. from Albany. Leather and flagging stone pavements are exported from this place in large quantities.

Malone, N. Y., c. h. Franklin co. It is bounded on the N. by Canada, and is drained by Salmon and Trout Rivers. The Ogdensburg Railroad passes through it. 61 miles E. from Ogdensburg, and 212 miles N. N. W. from Albany.

Malta, N. Y., Saratoga co. Drained by the outlet of Round and Ballston or Long Lakes, and by Anthony's Kill. Saratoga Lake also lies on the N. E. boundary. Surface undulating; soil clay loam and sand. 6 miles S. E. from Ballston Spa, and 24 N. from Albany.

Mamakating, N. Y., Sullivan co. Watered by Bashe's Kill, nearly parallel to which runs the Delaware and Hudson Canal. The surface is hilly and mountainous, Shawangunk Mountain lying in the E., and a high ridge in the W. part. 12 miles E. from Monticello, and 101 S. S. W. from Albany.

Mamaroneck, N. Y., Westchester co. Bounded on the S. by Long Island Sound, and drained by Mamaroneck Creek. Surface hilly; soil clay and sandy loam. 7 miles S. from White Plains, and 138 S. from Albany.

Manayunk, Pa., Philadelphia co. On the E. bank of the Schuylkill River. 7 miles N. N. W. from Philadelphia, and 99 miles E. by S. from Harrisburg. The waste water of the Schuylkill Canal makes a large water power. The Norristown Railroad passes through this place. There is a large amount of manufacturing and other business done here.

Manchester, Ct., Hartford co. An important manufacturing town on the Hockanum. The first cotton mill in this state was built here in 1794. The face of the town is uneven, but the soil, a sandy and gravelly loam, is quite productive. 9 miles E. from Hartford.

Manchester, Ky., c. h. Clay co. On the W. side of Goose Creek, a branch of Kentucky River, and 119 miles S. E. from Frankfort.

Manchester, Ms., Essex co. This town was formerly a part of Salem, called Jeffrey's Creek, and was settled by William Jeffrey, as early as 1628. The surface of the town is rocky, but pleasantly diversified; the soil is various, but generally good. Massachusetts Bay is on the S. of this town. The harbor here is well protected. The village is pleasantly situated on a southern declivity towards the harbor. Manchester is celebrated for producing the magnolia, a beautiful flowering tree, rarely found in New England. It is about a dozen feet in height, with deep-green leaves and white flowers. It possesses a delicious fragrance, and flowers about the first of July. 8 miles N. E. from Salem, and 22 N. E. from Boston. The railroad between Beverly and Gloucester passes through the town.

Manchester, N. H., Hillsboro' co. This town lies

on the E. side of Merrimac River, on which it is bounded, 9 miles; it is otherwise bounded N. by Hooksett, E. by Chester, and S. by Litchfield.

Massabesick Lake lies at the E. of the town. It is a fine sheet of water, with many islands, and presenting some of the finest prospects in this part of the state. This lake or pond is divided into two nearly equal parts by a narrow strait crossed by a bridge; each of these parts is about 3 miles long by 1 mile wide. Its outlet, the Cohas Brook, is a fine mill stream, and the only considerable stream rising in the town.

The soil of a considerable part of the town is light and sandy. The intervals on the river are inconsiderable, but of easy cultivation and productive, and the swells afford some fine farms.

The Amoskeag Falls, between Manchester and Goffstown, are the largest on the Merrimac. At an ordinary stage of the water, the fall to the foot of the locks is 47 feet, and the whole fall in the distance of a mile is 54 feet. A permanent stone dam is erected across the river at the head of the falls, and on the E. side, guard gates of most substantial masonry are constructed, through which the water passes into a spacious basin connected with the upper canal for the use of the mills, and with the Amoskeag Canal for purposes of navigation.

The upper canal is 4950 feet long, 75 feet wide at the basin, from which it is gradually narrowed to 45 feet, is 10 feet deep, and walled throughout with stone. The lower canal, which occupies the place of the Amoskeag Canal, is 7500 feet long, of a size and depth corresponding with the upper canal, and constructed in a similar manner. The fall from the upper into the lower canal is 20 feet, and from the latter into the river varies from 20 to 30 feet. The water power is estimated by competent engineers to be sufficient to drive 216,000 spindles, with all the machinery to complete the manufacture of the cloth. The rapid fall of the river below prevents any obstruction from back water.

There are now in operation at this place 7 large cotton mills, 4 owned and operated by the Amoskeag Manufacturing Company, and 3 by the Stark Mills Corporation, containing 105,000 spindles and 3000 looms, employing 640 males and 3500 females, consuming annually 36,000 bales cotton, 635,000 pounds potato starch, 31,000 gallons sperm oil, 6700 cords wood, 1200 tons anthracite coal, and producing 39,500,000 yards of sheeting, shirting, ticking, denims, merino stripes, and cotton flannel.

There are connected with these mills an extensive blue dyeing establishment, long ranges of cotton warehouses and buildings for repair shops and counting houses, numerous blocks of boarding houses for the operatives, containing 166 tenements, all of which buildings are built of bricks in the most substantial manner, with slated roofs, and well adapted for the purposes for which they are used.

There is a large machine shop and foundry owned by the Amoskeag Manufacturing Company, in which are employed 500 hands, and consumes 350 tons bar iron and steel, 400 tons anthracite coal, 3000 tons pig iron, 30,000 bushels charcoal, and can furnish annually 25 locomotives and the machinery necessary for a 25,000 spindle mill. There are blocks of houses containing 66 tenements for the help employed in the shop and foundry, and more in contemplation.

The mousseline de laine works owned by the Manchester Print Works Corporation include two large mills, print works, dye house, and bleach house, with the necessary appurtenances. These mills contain 48,000 spindles, 1230 looms, and together with the print works connected therewith give employment to 600 males and 1150 females, and consume annually about 600,000 pounds of cotton, 1,100,000 pounds of wool, 4000 cords of wood, 1000 tons of coal, 10,000 gallons of olive oil, 8000 gallons of sperm oil, 6000 gallons of whale oil, 60,000 pounds of oil soap, and 60,000 pounds of starch, and produce about 10,000,000 yards of mousseline de laines and fine prints, that are celebrated for the brilliancy of their colors and the taste displayed in the patterns.

Since the beginning of the year 1839, a large village has grown up near the mills, in which are 8 meeting houses erected at an expense of more than \$50,000, for the use of the Congregationalists, Baptists, Universalists, Methodists, Freewill Baptists, Episcopalians, and Unitarians. Several of these are large and handsome buildings. 9 school houses afford accommodations for 15 schools, and upwards of 900 scholars. There are 4 large hotels, 75 stores, and more than 400 private dwellings. A town house 90 by 68 feet, 2 stories high, with a spacious town hall, cupola, clock, bell, &c., erected in 1841, at an expense of \$23,000, was destroyed by fire in August, 1842, and is now rebuilt.

The village is beautifully situated on a plain about 90 feet above the river, the boarding houses of the corporations occupying the slope towards the canals. It is laid out upon a plan at once neat and convenient. The principal street is 100 feet wide, and extends more than a mile N. and S., and from 60 to 100 rods distant from the river; 10 other streets intersect this at right angles, and 4 others run parallel to it. These streets are about 50 feet wide. Four large squares have been laid out for public use, some of which are enclosed and planted with trees.

A public cemetery, called the Valley, containing 20 acres, at a short distance from the village, is a beautiful spot. It is intersected by a deep valley and a running stream, and is laid out with winding paths and avenues. It is always a place of great resort, and of just pride to the citizens.

An Athenæum was established in January, 1844, which has a library of 2200 volumes, and a reading room for periodicals and newspapers; and a law library has been commenced, which has now about 400 volumes.

Two free bridges across the Merrimac connect this town with Goffstown and Bedford. These are new and handsome structures, erected at an expense of more than \$28,000.

The villages of Piscataquog and Amoskeag, on the W. side of the river, are connected by these bridges with Manchester, and, in fact, constitute with it but one place of business.

At the mouth of the Cohas is a thriving village growing up around the mills on that stream.

The growth of the city of Manchester is unrivalled by any place in this country except Lowell, and is a magnificent specimen of the enterprise and skill of the New England people. The population within the limits in 1838 was about 50; in 1848, it contained 12,000 inhabitants; in 1850, 13,933. Manchester was incorporated as a city in 1846.

Manchester is on the great Northern Railroad,

58 miles from Boston and 17 from Concord. It is also connected by railroad with the Boston and Maine Railroad, direct to Lawrence, Ms., 27 miles, and thence to Salem, Ms., 23 miles, where it is connected with the Eastern Railroad.

Manchester, N. J., Passaic co. Incorporated in 1836. It is watered by Ramapo, Pompton, and Passaic Rivers, which afford extensive water privileges. Surface hilly and mountainous.

Manchester, N. Y., Ontario co. Drained by the Canandaigua outlet. Clifton Springs, situated in the E. part of this town, are quite celebrated. 8 miles N. E. from Canandaigua.

Manchester, Te., c. h. Coffee co. On the head waters of Duck River. 68 m. S. E. from Nashville.

Manchester, Vt., Bennington co. One of the county towns. Situated between the Green Mountains on the E., and Equinox Mountain on the W. There are two neat villages in this valley. The town is watered by the Battenkill and its branches, and affords good mill sites. The soil along the watercourses is good, but the principal part of the town is better for grazing than tillage. Here are large quarries of beautiful marble, and a curious cavern; also a variety of minerals. 25 miles N. by E. from Bennington, and about 40 W. from Bellows Falls, across the mountains.

Manchester, Va., Chesterfield co. On the S. side of James River, opposite Richmond. There are numerous manufactories here, among which are those of cotton seed oil, tobacco, and flour.

Manhattanville, N. Y., New York co. On the E. side of Hudson River, and has a good landing. 8 miles N. from the City Hall, New York. The New York Lunatic Asylum is located near this village. There is an extensive white lead factory here. The Hudson River Railroad passes through it.

Manheim, N. Y., Herkimer co. Bounded on the S. by the Mohawk River, and drained by East Canada Creek, one of its tributaries. This is a hilly town, with a fertile soil. 10 miles E. from Herkimer, and 70 N. W. from Albany.

Manheim, Pa., Lancaster co. Watered by Great Conestoga on its E., and Little Conestoga Creek on its S. W. border. Moravia Creek also traverses its N. E. corner. Surface undulating; soil calcareous loam and clay. 33 miles E. S. E. from Harrisburg.

Manheim, Pa., York co. Watered by Hammer, a branch of Codorus Creek. Surface undulating; soil rich loam. 16 miles S. W. from York.

Manheim, Pa., Schuylkill co. Watered by the Schuylkill and tributaries; gravelly and barren.

Manitowoc County, Mn., c. h. at Manitowoc. On the W. shore of Lake Michigan, opposite Lake Winnebago.

Manlius, N. Y., Onondaga co. Chittenango and Limestone Creeks water this town, the surface of which is somewhat rolling, and the soil uncommonly fertile. 10 miles E. from Syracuse, by railroad, and 120 N. of W. from Albany.

Mannington, N. J., Salem co. Surface level, and watered by Salem River and Mannington Creek; soil rich loam. 6 miles N. E. from Salem.

Manny, La., c. h. Sabine parish. 30 miles S. W. from Natchitoches.

Manor, Pa., Lancaster co. Drained by streams flowing into Conestoga River, which forms its S. E. boundary. 6 miles S. W. from Lancaster.

Mansfield, Ct., Tolland co. Mansfield, the Indian *Nawbesetuck*, was taken from Windham in 1703. The face of the town is uneven, and some of the hills have considerable elevation. The

town is watered by Willimantic River, and the Natchaug and its tributaries — Mount Hope and Fenton. A larger quantity of silk is manufactured here than in any other place in the United States. This branch of industry was introduced into the country by Dr. Aspinwall, of this place, above 70 years since, who established the raising of silk worms in New Haven, Long Island, and Philadelphia. 27 miles E. from Hartford.

Mansfield, La., c. h. De Soto co.

Mansfield, Ms., Bristol co., was originally the north parish of the town of Norton. Mansfield is watered by several branches of Taunton River. The soil is thin, and the surface level. About the year 1836, a mine of anthracite coal was discovered here in digging a well. Among a variety of berries, which flourish in Mansfield, is the white whortleberry, rarely known to exist in any other place. The New Bedford and Taunton Railroad meets the Boston and Providence Railroad in the centre of the town. 11 miles N. W. from Taunton, and 24 S. from Boston.

Mansfield, N. J., Burlington co. Drained by Black's, Craft's, and Assisicunk Creeks, branches of the Delaware River. Along the river is a kind of clay which makes superior fire bricks. Surface level; soil sand, clay, and loam of good quality. 7 miles N. from Mount Holly.

Mansfield, N. J., Warren co. Musconetcong and Pohatcong Creeks water this town, which is also traversed by the Morris Canal. Surface mountainous, containing iron ore and a chalybeate spring. Soil rich calcareous loam. 48 miles N. N. W. from Trenton.

Mansfield, N. Y., Cattaraugus co. Watered by branches of Cattaraugus Creek and of the Alleghany River. Surface undulating; soil sandy loam, yielding good crops of grass and grain. 5 miles W. from Ellicottville, and 297 S. of W. from Albany.

Mansfield, O., c. h. Richland co. Pleasantly situated on elevated ground. 63 miles N. E. from Columbus.

Marathon, N. Y., Cortland co. Watered by Tioughnioga River and some of its branches. Surface undulating; soil sandy loam. 15 miles S. E. from Cortland, and 145 W. from Albany.

Marblehead, Ms., Essex co., was originally a part of Salem, and for some time after its settlement was called Marble Harbor. It is bounded on the N. by Salem Harbor, E. and S. by Massachusetts Bay, and W. by Salem and Salem Harbor. The surface is exceedingly irregular and rocky, and considerably elevated. The harbor, in front of the town, a mile and a half long, and half a mile wide, formed by a narrow neck at the S. W., which separates it from Lynn Bay, and connects the town with Great Neck, is deep and excellent, capable of being entered at all times by ships of the largest size, and by a breakwater, constructed in 1845, for the protection of Little Harbor, will be rendered a safe retreat from storms. This harbor is protected by Fort Sewall, near its entrance. Marblehead has always been noted for the enterprise of its people in the fisheries. The village is very pleasant in summer, and an excellent place to witness the raging of the ocean in a storm. A railroad passes from this town to Salem, 4 miles, and to Boston, 16 miles.

Marbletown, N. Y., Ulster co. Drained by Esopus and Rondout Creeks, and is crossed by the Shawangunk Mountain. The soil is productive. 7 miles S. W. from Kingston, and 65 S. S. W. from Albany.

Marcellus, N. Y., Onondaga co. Drained by Nine Mile Creek. A hilly town, with a fertile soil. 10 miles S. W. from Syracuse, and 140 N. of W. from Albany.

Marcy, N. Y., Oneida co. Watered by Nine Mile Creek, a branch of the Mohawk River, which forms its S. boundary. Surface hilly, the Hassen-cleaver Mountain partly covering it; soil chiefly clay and sandy loam. 6 miles N. from Utica, and 100 miles N. W. from Albany.

Marengo County, Aa., c. h. at Linden. Bounded N. by Greene, E. by Perry, Dallas, and Wilcox, S. by Clarke co., and W. by the Tombigbee River, separating it from Washington and Sumpter counties. The Warrior River runs on its N. W. border. Soil sterile.

Marengo, Io., c. h. Iowa co.

Marianna, Fa., c. h. Jackson co. On the W. side of Chipola River. 77 miles W. N. W. from Tallahassee.

Marietta, Io., c. h. Marshall co.

Marietta, O., c. h. Washington co. On both sides of the Muskingum, at its entrance into the Ohio. It is regularly laid out with wide streets, and neatly and compactly built. It is the oldest town in the state, having been laid out in 1788, and named after the unfortunate Marie Antoinette, queen of Louis XVI. After 50 years of very slow progress, it has recently taken a decided start, and the arrangements for railroad communication with Cincinnati, Wheeling, Pittsburg, Baltimore, and Philadelphia promise to enhance its importance. 104 miles E. S. E. from Columbus, and 300 by the river above Cincinnati.

Marietta, Pa., Lancaster co. On the N. E. bank of Susquehanna River, above the junction of Little Chiques Creek, and 27 miles S. E. from Harrisburg.

Marion County, Aa., c. h. at Pikeville. Bounded N. by Franklin co., E. by Walker, S. by Fayette co., and W. by Mississippi. Watered by Bear Creek, a branch of the Tennessee River, and by Buttahatchie River and branches.

Marion, Aa., c. h. Perry co. 58 miles S. from Tuscaloosa.

Marion County, As., c. h. at Yellville. Bounded N. by Missouri, E. by Fulton co., S. by Searcy, and W. by Carroll co. Drained by White River and its branches.

Marion, As., c. h. Crittenden co. 6 miles W. from the Mississippi River, and 140 E. N. E. from Little Rock.

Marion County, Ca. In the N. peninsula, between the Bay of San Francisco and the Ocean.

Marion County, Fa. In the centre of the peninsula.

Marion County, Ga., c. h. at Tazewell. Bounded N. by Talbot, E. by Macon, S. by Sumpter and Stewart, and W. by Muscogee co. Drained by branches of Flint River.

Marion, Ga., c. h. Twiggs co. 41 miles S. S. W. from Milledgeville.

Marion County, Is., c. h. at Salem. Incorporated in 1823; and is bounded N. by Fayette, E. by Clay and Wayne, S. by Jefferson, and W. by Washington, Clinton, and Fayette counties. Watered by Kaskaskia River and branches, and the Skillet Fork of Little Wabash River. A large part of the surface is prairie land.

Marion, Is., c. h. Williamson co. 172 miles S. S. E. from Springfield.

Marion County, Ia., c. h. at Indianapolis. Bounded N. by Boone and Hamilton counties,

E. by Hancock and Shelby, S. by Johnson and Morgan, and W. by Hendricks co. Drained by the W. fork of White River, and by Fall and Eagle Creeks. Surface level; soil of excellent quality.

Marion, Ia., c. h. Grant co. On Missisquoi River, 25 miles from its junction with the Wabash, and 73 N. N. E. from Indianapolis.

Marion, Io., c. h. Linn co. 4 miles E. from Cedar River.

Marion, Io., c. h. at Knoxville. S. central.

Marion County, Ky., c. h. at Lebanon. A central county. Watered by the Rolling Fork of Salt River and its tributaries.

Marion, Ky., c. h. Crittenden co.

Marion, As., c. h. Crittenden co.

Marion, Ms., Bristol co. A new town, taken from Rochester.

Marion County, Mi., c. h. at Columbia. Bounded N. by Lawrence and Covington, E. by Perry, S. by Harrison and Hancock counties, S. W. by Louisiana, and W. by Pike co. Drained by Pearl and Leaf Rivers and Black Creek. Soil fertile on the borders of the streams.

Marion, Mi., c. h. Lauderdale co. On the head branches of Oktibbeha Creek. E. from Jackson 110 miles.

Marion County, Mo., c. h. at Palmyra. Bounded N. by Lewis co., E. by the Mississippi River, separating it from Illinois, S. by Ralls and Monroe, and W. by Shelby co. Drained by South Fabius and North Rivers, branches of the Mississippi. Surface undulating; soil very rich.

Marion, Mo., c. h. Cole co. On the S. bank of Missouri River. 15 miles N. W. from Jefferson City.

Marion City, Mo., Marion co. The landing for the town of Palmyra. It extends $1\frac{1}{2}$ miles along the W. bank of the Mississippi.

Marion County, N. C., c. h. at Monroe. Midway of the southern border.

Marion, N. C., c. h. McDowell co.

Marion, N. Y., Wayne co. Surface uneven; watered by a branch of Mud Creek; has a soil well adapted for grain, 14 miles N. W. from Lyons, and 195 N. of W. from Albany.

Marion County, O., c. h. at Marion. Cranford is on the N., Richland on the E., Hardin on the W., and Delaware and Union counties on the S. It was constituted in February, 1820, and settled the same year; but it was not organized until January, 1824. The principal waters are the Scioto, Little Scioto, and Whetstone Rivers. The land is rich and fertile, and part of it is an open plain; it is well improved.

Marion County, On. In the valley of the Willemette.

Marion District, S. C., c. h. at Marion Court House. Bounded N. E. by North Carolina, S. E. by the Little Pedee River, separating it from Horry district, S. W. by Great Pedee River and Lynch's Creek, separating it from Georgetown and Williamsburg districts, and N. W. by Darlington and Marlboro' districts. Surface level, and in some portions marshy.

Marion, S. C., c. h. Marion district. On the E. side of Catfish Creek, a branch of the Great Pedee River, and 146 miles E. from Columbia.

Marion County, Te., c. h. at Jasper. Bounded N. by Warren and Bledsoe, and E. by Hamilton co., S. by Georgia and Alabama, and W. by Franklin and Coffee counties. Drained by Tennessee and Sequatchie Rivers and branches.

Marion County, Te. New; taken from Smith co. In the N. central part of the state.

Marion County, Va., c. h. at Fairmount. N. W. part. Includes part of the valley of the Upper Monongahela, the two forks of which unite in the S. part of the county, and thence flow N. through it. Hilly. Crossed from E. to W. by the Baltimore and Ohio Railroad.

Marion, Va., c. h. Smyth co. On the Middle Fork of Holston River. W. by S. from Richmond 275 miles.

Mariposa County, Ca. About the banks of the San Joaquin.

Marksville, La., c. h. Avoyelles parish.

Marlboro', Ct., Hartford co. Marlboro' was taken from 3 towns which belonged to 3 different counties, in 1803. The surface of the town is hilly and stony, and the lands best adapted for grazing. Dark Hollow, in the western part of the town, presents some wild scenery of more terror than beauty. 14 miles S. E. from Hartford.

Marlboro', Ms., was granted to some people at Sudbury in 1655. Its Indian name was *Okonmakamesitt*. The town is remarkable for its fine undulating surface and fertile soil. The Assabet River waters the western part of the town, and affords Feltonville, a flourishing manufacturing village, a fine water power. The town is otherwise watered by several small streams, and a number of beautiful ponds. The villages are handsome, and largely engaged in the shoe trade, and other manufactures. 27 miles W. from Boston, and 14 S. W. from Concord.

Marlboro', N. H., Cheshire co. There are several ponds in this town, which are the sources of some of the branches of Ashuelot River. The soil is rocky, but good for grazing. 6 miles S. E. from Keene, and 58 S. W. from Concord. The Cheshire Railroad passes through the town.

Marlboro', N. Y., Ulster co. Bounded on the E. by the Hudson River, and is watered by the Old Man's Kill, one of its branches. Surface hilly; soil clay loam, based upon slate. 20 miles S. from Kingston, and 88 S. S. W. from Albany.

Marlboro', Pa., Montgomery co. Watered by Perkiomen and Swamp Creeks. Surface undulating, containing iron ore; soil red shale.

Marlboro' District, S. C., c. h. at Bennettsville. Bounded N. and N. E. by North Carolina, S. E. by Marion district, S. W. and N. W. by the Yadkin River, separating it from Darlington and Chesterfield districts.

Marlboro', Vt., Windham co. The town is well watered by the W. branch of West River, Whetstone Brook, and Green River. It has a good soil, and is very productive in grain. Here are a pleasant village, several fine trout ponds, various kinds of minerals, and medicinal springs. The settlement was commenced in the spring of 1763, by Abel Stockwell, from West Springfield, Ms., and Thomas Whitmore, from Middleton, Ct. 8 miles S. from Newfane, and 24 E. from Bennington.

Marlow, N. H., Cheshire co. Ashuelot River passes through almost the whole length of this town. There are no ponds of note, nor any mountains. The soil is wet, but productive. There are excellent tracts of meadow land on Ashuelot River, and other streams. The land is uneven, and produces the various kinds of grain. First settlers, Joseph Tubbs, Samuel and John Gustin, N. Royce, N. Miller, Nathan Huntley,

and others. 15 miles N. from Keene, and 50 W. by S. from Concord.

Marquette County, Wn., c. h. at Marquette. Bounded E. by Winnebago and Fond du Lac, and S. by Dodge and Portage counties, and W. and N. by Puckaway Lake and Fox River, separating it from Portage co.

Marshall County, Aa., c. h. at Warrenton. Bounded N. by the Tennessee River, separating it from Madison and Jackson counties, E. by De Kalb co., S. by Blount, and W. by Morgan co. Drained by small streams flowing into the Tennessee River.

Marshall County, Is., c. h. at Lacon. Illinois River runs on the W. border of this county.

Marshall, Is., c. h. Clarke co. 123 miles E. S. E. from Springfield, on the national road.

Marshall County, Ia., c. h. at Plymouth. Bounded N. by St. Joseph co., E. by Kosciusko, S. by Fulton, and W. by Stark co. Watered by Yellow and Tippecanoe Rivers.

Marshall, Io., c. h. at Marietta. Central.

Marshall County, Ky., c. h. at Benton. W. part of the state. Washed on the N. E. by the Tennessee River.

Marshall, Mn., c. h. Calhoun co. 105 miles W. of Detroit. On the Northern Michigan Railroad.

Marshall County, Mi., c. h. at Holly Springs. Bounded N. by Tennessee, E. by Tippah and Pontotoc counties, S. by the Tallahatchie River, separating it from Lafayette co. and W. by Poino and De Soto counties. Watered by the head branches of Tallahatchie and Coldwater Rivers. Surface undulating; soil productive.

Marshall, Mo., c. h. Saline co. 87 miles N. W. from Jefferson City.

Marshall, N. Y., Oneida co. Drained by the Oriskany Creek, and is also crossed by the Chenango Canal. The surface is rolling; soil rich sandy loam. 12 miles S. W. from Utica, and 106 N. of W. from Albany.

Marshall County, Te., c. h. at Lewisburg. Bounded N. by Williamson co., E. by Bedford, S. by Lincoln and Giles, and W. by Maury co. Watered by Duck River and tributaries. Surface undulating; soil productive.

Marshall County, Va., c. h. at Elizabethtown. Bounded N. by Ohio co., E. by Pennsylvania, S. by Tyler co., and W. by the Ohio River, separating it from Ohio. Drained by Grave Creek and other small branches of the Ohio. Surface hilly; soil well adapted to grazing and the growth of grain.

Marshfield, Ms., Plymouth co. Until its incorporation in 1641, this town was a part of Duxbury, and was called Green's Harbor, or Rexham. Its Indian name was *Missanecatucket*. North River separates Marshfield from Scituate on the N., and Massachusetts Bay bounds it on the N. E. The surface is pleasantly diversified. South and North Rivers give to Marshfield a good water power. The lamented WEBSTER's country seat was situated in the S. part of the town, about 12 miles N. from Plymouth.

Marshfield, Vt., Washington co. The surface of this township is very uneven. That part of it W. of the river is timbered with hard wood, and the soil is good. E. of the river the timber consists principally of evergreens, and the surface is broken, wet, and stony. The town is watered principally by Winooksi River. Here in this stream is a fall, said to be 500 feet in the

distance of 30 rods. In the N. E. part of the town is a considerable natural pond. The rocks are principally slate and granite. In the N. part of the town is a pleasant village. The town was granted to the Stockbridge tribe of Indians October 16, 1782, and chartered to them June 22, 1790. The township was purchased of the Indians by Isaac Marsh, Esq., of Stockbridge, Ms., from whom the town derives its name, for £140, and was deeded to him July 29, 1789. The improvements were commenced here in the spring of 1790, by Martin and Calvin Pitkin, from East Hartford, Ct. 15 miles N. E. from Montpelier.

Marshpee District, Ms., Barnstable co. A tract of 22 square miles, reserved for the Marshpee Indians. It was incorporated in 1834 as a district, the people having the privilege of choosing their own officers, and managing their own affairs, assisted by a commissioner appointed by the state. The land cannot be sold without the consent of all the inhabitants, who are only 102 by the census of 1850,—the largest remnant of New England Indians west of the Penobscot,—and of these only five or six are of pure blood.

The land is good for grain, and is well watered by Marshpee and Quoshmet Streams, and numerous ponds. It lies on the ocean, 12 miles S. W. from Barnstable.

Martie, Pa., Lancaster co. Beaver, Muddy, and Pecquea water this town, affording good hydraulic power. The Susquehanna River also runs on its S. W. border. Surface hilly; soil calcareous loam. 10 miles S. from Lancaster.

Martin County, Ia., c. h. at Mount Pleasant. Bounded N. by Green, E. by Lawrence and Orange, S. by Dubois, and W. by Daviess co. The E. fork of White River drains this county, its branches affording water power. The surface E. of White River is rough and hilly, and W. level, or slightly uneven.

Martin County, N. C., c. h. at Williamston. Bounded N. by the Roanoke River, separating it from Bertie co., E. by Washington co., S. by Beaufort and Pitt, and W. by Edgecombe co. Surface level, and some portions marshy.

Martinez, Ca., c. h. Contra Costa co.

Martinsburg, N. Y., c. h. Lewis co. Watered by Martin's Creek, a branch of Black River, which bounds it on the E. Surface undulating; soil rich loam, well adapted to the growth of grain. 142 miles N. W. from Albany.

Martinsburg, Va., c. h. Berkley co. 21 miles N. W. from Harper's Ferry, and 169 N. by W. from Richmond.

Martinville, Ia., c. h. Morgan co. On a beautiful plain about half a mile E. from the E. branch of White River.

Martinville, Va., c. h. Henry co. On Smith's River, a branch of Dan River. 194 miles S. W. from Richmond.

Maryland, N. Y., Otsego co. Schenevas Creek waters this town, the surface of which is hilly, Crumhorn Mountain lying in the W. part. The soil, consisting of clay loam, is fertile in the valleys. 12 miles S. from Cooperstown, and 66 W. from Albany.

Marysville, Ca., c. h. Yuba co. On the Yuba, just above its confluence with the Feather River.

Marysville, O., c. h. Union co. On the S. side of Mill Creek, a branch of Little Scioto River. 30 miles N. W. from Columbus.

Maryville, Te., Blount co. On a branch

of Pistol Creek, a tributary of Little River. 18 miles S. S. W. from Knoxville. This is the seat of the Southwestern Theological Seminary. See *Theological Seminaries*.

Mason County, Is., c. h. at Bath. W. central part of the state. In the angle formed by the junction of the Sangamon with the Illinois.

Mason County, Ky., c. h. at Washington. Bounded N. by the Ohio River, E. by Lewis, S. by Fleming, and W. by Nicholas and Bracken counties. Drained by North Lick, a branch of Licking River.

Mason County, Mn. On the E. shore of Lake Michigan, half way from the head to the foot.

Mason, N. H., Hillsboro' co. The surface is uneven; the hills are chiefly large swells, with narrow valleys between them. The streams are rapid. There are no natural ponds. Souhegan is the principal stream, affording many fine mill sites. The soil in the E. part is light; in the W. is a strong, deep soil, but stony. 15 miles S. W. from Amherst, and 45 S. S. W. from Concord.

Mason County, Va., c. h. at Point Pleasant. Bounded N. E. by Jackson co., S. E. by Kanawha, S. W. by Cabell co., and N. W. and N. by the Ohio River, separating it from Ohio. Great Kanawha River and its branches, and some small branches of the Ohio, water this county. Surface rough; soil mostly fertile. Salt is found near the Kanawha.

Masonville, N. Y., Delaware co. Watered by some small branches of the Delaware and Susquehanna Rivers. The surface is hilly and mountainous. 23 miles W. from Delhi, and 105 S. W. from Albany.

Massanutton, Va., Page co. 188 miles N. W. from Richmond. Near this village is a stream from Massanutton Mountain, which has an unbroken fall of nearly 50 feet, presenting a most beautiful spectacle.

Massena, N. Y., St. Lawrence co. Racket and Grass Rivers water this town, which comprises 2 large islands, lying in the St. Lawrence River, and contains a sulphur spring of some celebrity. Surface slightly uneven; soil fertile loam, based upon lime. 28 miles N. from Canton, and 236 N. N. W. from Albany.

Massillon, O., Stark co., is on the Ohio Canal 65 miles S. from Cleveland, and 116 N. E. from Columbus. This place was laid out in 1826. It is now one of the most flourishing and inviting places in the interior of Ohio. It is the seat of a large commercial and manufacturing business, contains iron works and flouring mills extensive business blocks, good hotels, fine churches, a model Union School, splendid private residences, and all the adornments of shrubbery, shade, and good taste, which characterize an intelligent, enterprising, and prosperous people. The location of the town on the Tuscarawas River is a beautiful one, and affords good soil and a variety of landscape, with choice, sightly building spots in abundance. Many of these are occupied and improved with rare taste. Superior building stone abounds in the immediate vicinity of Massillon, and the public and private improvements are of the most durable character. A substantial stone bridge has recently been finished over the Tuscarawas.

The Union School at Massillon is deservedly the pride of all the citizens. It was one of the first established in Ohio, and stands first in site, building, and good management. All the chil-

dren of the town are free scholars, and may advance from the primary to the highest department. Over 500 attend regularly.

Massillon is known as the Wheat City, and justly so. No town in the state, or in the Union, it is said, is the market of such large quantities of wheat, direct from the hands of the producers, as Massillon. The receipts from wagons alone some days have been as high as thirty thousand bushels. The Ohio and Pennsylvania Railroad running from this place to Pittsburg, Pa., and connecting with the railroad from Cleveland to Pittsburg, brings Massillon into connection with all the great lines of steam communication through the east and west.

Matagorda County, Ts., c. h. at Matagorda. S. part. On the coast and includes both banks of the Lower Colorado.

Matteawan, N. Y., Dutchess co. On Fishkill Creek, a mile and a half from the landing on the Hudson River. The creek falls 40 feet, and gives a great water power, improved for the manufacture of stuffs for hats, machinery, &c.

Mathews County, Va., c. h. at Mathews. This county consists of a peninsula situated between Piankatauck Bay on the N., Chesapeake Bay on the E., Mobjack Bay on the S., and Gloucester co. on the W.

Mauch Chunk, Pa., Carbon co. Township and village. In the midst of the Schuylkill coal fields. The surface is mountainous, the soil gravel. The village is on the W. bank of the Lehigh River, at the head of the Lehigh Canal, in a deep and romantic ravine, between rocky mountains, which rise precipitously 800 or 1000 feet. An inclined plane and a railroad 9 miles long extend to the coal mines.

Maumee City, O., c. h. Lucas co. On the W. side of Maumee River, and at the head of navigation, which is here interrupted by the rapids. The place has considerable trade, for which its location on the river, and on the Wabash and Erie Canal, gives it good facilities. The canal is here connected with the river by a side cut. The water power at this place is very extensive, and is partially improved for several flouring mills and factories. 8 miles S. from Toledo, and 124 miles N. N. W. from Columbus.

Maurice River, N. J., Cumberland co. Bounded S. by Delaware Bay, and W. by Maurice River, and drained by Tuckahoe and Tarkill Creeks, tributaries of Maurice River. Surface level; soil clay and loam on the streams, and sandy elsewhere. 20 miles S. E. from Bridgeton.

Maury, La., c. h. Sabine parish.

Mary County, Te., c. h. at Columbia. Bounded N. by Williamson co., E. by Marshall, S. by Giles and Lawrence, and W. by Hickman co. Well watered by Duck River and branches.

Maxatowny, Pa., Berks co. Drained by Maiden Creek and its tributary Sacony Creek, both mill streams. Surface level; soil rich calcareous loam and gravel. 74 miles N. E. from Harrisburg.

Mayfield, N. Y., Fulton co. Watered by several streams flowing into the Sacandaga River. It is a hilly and mountainous town, the N. part being traversed by a range of hills called the Mayfield Mountains; soil chiefly sandy and clay loam. 8 miles N. E. from Johnstown, and 52 N. W. from Albany.

May's Landing, N. J., c. h. Atlantic co. Situated on both sides of Great Egg Harbor River, at the head of sloop navigation. 16 miles from

the ocean, and 73 miles S. from Trenton. It has a considerable wood and lumber trade.

Maysville, Is., c. h. Clay co. Near the Little Wabash River, on the margin of Twelve Mile Prairie. 122 miles S. E. from Springfield.

Maysville, Ky., Mason co. This city is located on the S. bank of the Ohio River, and is enclosed in the rear by a ridge of high hills. It has 3 streets running parallel with the river, and others crossing them at right angles. The harbor for boats is good; and a large part of the goods imported into the N. E. section of the state are landed here. There are some manufactures of leather, cotton, flour, &c. 81 miles N. E. by E. from Frankfort.

Maysville, Mo., c. h. De Kalb co.

Maysville, N. Y., c. h. Chautauque co. At the N. end of Chautauque Lake. 344 miles W. by S. from Albany. A steamboat plies on the lake between this place and Jamestown, at the other end of the lake.

Mead County, Ky., c. h. at Brandenburg. Bounded N. W. and N. E. by the Ohio River, separating it from Indiana, E. by Hardin co., and S. and W. by Breckenridge co. Drained by Otter and Spring Creeks, and other small branches of the Ohio.

Meadville, Mi., c. h. Franklin co. On the W. bank of Homochitto River. 80 miles S. W. from Jackson.

Meadville, Pa., seat of justice of Crawford co., 37 miles S. from Erie, and 234 N. by W. from Harrisburg. Pleasantly situated on the E. side of French River, from which it gradually rises to its central part, where is a handsome public square, containing about 5 acres. On the E. side of the square stands the court house, which is a fine edifice of brick and hammered stone, ornamented with a cupola. The place has 7 or 8 churches, an academy, a state arsenal, and a considerable number of stores. It is the seat of Alleghany College. See *Colleges*.

Mechanicsburg, O., Champaign co. 36 miles W. by N. from Columbus.

Mecklenburg County, N. C., c. h. at Charlotte. Bounded N. by Iredell co., E. and S. E. by Cabarrus and Union counties, and S. W. and W. by Catawba River, separating it from South Carolina and Lincoln co. Drained by branches of the Catawba River. Surface undulating; soil fertile. Rich gold ore is found here.

Mecklenburg County, Va., c. h. at Boydton. Bounded N. by Meherin River, separating it from Lunenburg co., E. by Brunswick co., S. by North Carolina, and W. by Halifax and Charlotte counties. Drained by the Roanoke River and its branches.

Medfield, Ms., Norfolk co. This was a part of Dedham, and called Dedham village until its incorporation. It is a pleasant, flourishing town, watered by Charles and Stop Rivers, containing a good soil and diversified surface. 8 miles S. W. from Dedham, and 17 S. S. W. from Boston. The Norfolk County Railroad passes near this town.

Medford, Ms., Middlesex co. This beautiful town is situated at the head of navigation on Mystic River. The soil is very fertile, and in a high state of cultivation. Winter Hill, memorable as the place of encampment of General Burgoyne and his army, after their capture at Saratoga, borders the town. It is 125 feet above tide water, and presents a view of great extent and

beauty. Medford has long been, and still is, distinguished for ship building. It is connected with Boston by railroad, and is the locality of many beautiful country seats. 5 miles N. W. from Boston, and 14 E. by S. from Concord.

Medina County, O., c. h. at Medina. Bounded on the N. by Cuyahoga and Lorain, E. by Portage, S. by Wayne and Stark, and W. by Lorain counties. The Ohio Canal passes through the S. E. corner of it, and the other waters are Black and Rocky Rivers.

Medina County, Ts., c. h. at Castroville. In the W. central part of the state. Watered by the Medina, an upper tributary of the San Antonio.

Medway, Ms., Norfolk co. This was attached to Medfield until its incorporation as a town in 1713. The surface is undulating, with soil of a moderate quality. Medway is finely watered by Charles River on the E. and S., and otherwise by its branches. There are a number of pleasant villages in Medway. Factory village is a place of considerable business. There are manufactures of cotton, woollens, boots, shoes, scythes, bells, cabinet wares, ploughs, &c., to the annual value of half a million dollars or more. 22 miles S. E. from Boston, with which it communicates by the Norfolk County Railroad.

Meigs County, O., c. h. at Pomeroy. Washed by the Ohio River, and the interior parts by Shade and Leading Creeks.

Meigs County, Te., c. h. at Decatur. Bounded W. by the Tennessee River, separating it from Rhea co. Surface hilly; soil productive.

Melendez, Ts., c. h. Benton co.

Melnore, O., Eden township, Seneca co., is a thriving place on the N. bank of Honey Creek. 80 miles N. from Columbus, and 8 S. E. from Tiffin.

Melrose, Fa., c. h. Orange co.

Melrose, Ms., Middlesex co. A new town, formed from the N. part of Malden, on the Maine Railroad. 7 miles from Boston. A new and handsome village, principally inhabited by persons doing business in Boston.

Memphis, Te., Shelby co. On the Mississippi River. 135 miles W. S. W. from Nashville. It is built on the site of old Fort Pickering, upon an elevated bluff, called the Fourth Chickasaw Bluff, immediately below the mouth of Wolf River, near the S. W. corner of the state. This place is increasing rapidly, and becoming an important mart of trade. Large quantities of cotton are brought from the interior to this port, and sent off in various directions. This place is favorably situated to obtain timber for ship building, and the river is deep enough to float the largest ships, when built, down to New Orleans. A U. S. naval depot is located here, to which is attached a ropewalk 1400 feet in length.

Menard County, Is., c. h. at Petersburg. It is bounded N. by Mason co., E. by Logan, S. by Sangamon and W. by Cass co. Watered by Sangamon River and its branches.

Mendham, N. J., Morris co. Watered by the head streams of the N. branch of the Raritan River, and by branches of Whippany River. Surface hilly and mountainous; soil clay and calcareous loam. 56 miles N. from Trenton.

Mendon, Ms., Worcester co. Mendon is the oldest town in the county, except Lancaster. It was originally settled by people from Braintree and Weymouth. *Nipmug* was its original name. May 15, 1667, this plantation, which was then called *Quinshepaug*, was incorporated by the

name of *Mendon*, probably after Mendham, in the county of Suffolk, England. The face of the town is fertile, producing large crops of hay and grain, and has for a long time been noted for the variety and abundance of its winter apples. This is a pleasant, healthy, and flourishing town. 32 miles S. W. from Boston, and 18 S. E. from Worcester.

Mendon, N. Y., Monroe co. Irondequoit and Honeoye Creeks water this town, the surface of which is undulating, and the soil of good quality. 12 miles S. from Rochester, and 209 N. of W. from Albany.

Mendon, Vt., Rutland co. There is some good land in the town, but it is generally too high up the Green Mountains for cultivation. Mendon was chartered to Joseph Banker and others, February 23, 1781, by the name of *Medway*. Parker's Gore was annexed to it, and the whole incorporated into a township by the name of *Parkerstown*, November 7, 1804; and, November 6, 1827, the name was altered to *Mendon*. 47 miles S. S. W. from Montpelier.

Mentz, N. Y., Cayuga co. Bounded on the N. and W. by the Seneca River, and watered by the Owasco outlet. The Erie Canal crosses the Owasco outlet by a stone aqueduct, in this town, and the Montezuma Salt Springs lie a short distance N. from the canal, and communicate with it by a side branch. Surface undulating; soil rich, sandy loam. 8 miles N. from Auburn, and 156 N. of W. from Albany.

Mercer County, Is., c. h. at Millersburg. It is bounded N. by Rock Island co., E. by Henry and Knox, S. by Warren and Henderson counties, and W. by the Mississippi River, separating it from Iowa. Drained by Edwards and Pope River and the N. fork of Henderson River. Surface undulating, much of the middle and E. portions consisting of prairies; soil very fertile.

Mercer County, Ky., c. h. at Harrodsburg. It is bounded N. by Anderson, E. by Woodford and Garrard, S. by Lincoln and Casey, and W. by Marion and Washington counties. Bounded N. E. by Kentucky River, and drained by head branches of Salt River. Soil of excellent quality.

Mercer, Me., Somerset co. 32 miles N. N. W. from Augusta.

Mercer County, Mo. On the N. border, of the state. On the upper waters of Crooked Fork of Grand River.

Mercer County, N. J., c. h. at Trenton. Bounded N. by Somerset co., E. by Middlesex and Monmouth, S. by Burlington, W. by the Delaware River, separating it from Pennsylvania, and N. W. by Hunterdon co. Drained by Assunpink Creek, a tributary of the Delaware, and by a head branch of Millstone River, a tributary of the Raritan.

Mercer County, Pa., c. h. at Mercer. Is distinguished for its large extent of water power, for its bituminous cannel coal, iron ore, lime, and fine soil, and especially for its being the county where the Chenango or Mercer potato was first produced from the potato ball. They were produced upon the banks of the Neshanock Creek, which enters into the Chenango, and are called there the Neshanock potato. Bounded N. by Crawford co., E. by Venango and Butler, S. by Beaver co., and W. by Ohio. Drained by Mahoning River, by Chenango Creek and branches, and by Deer, Sandy, and Slippery Rock Creeks. Surface uneven; soil fertile, and particularly adapted to grazing.

Mercer County, O., c. h. at St. Mary's. Vanwert bounds it on the N., Dark on the S., Allen and Shelby counties on the E., and the state of Indiana on the W. The land is level, rich, and fertile, and is watered by the St. Mary's and Wabash Rivers and their branches.

Mercer, Pa., c. h. Mercer co. Near Neshanock Creek. 57 miles N. by W. from Pittsburg, and 234 W. N. W. from Harrisburg.

Mercer County, Va., c. h. at Princeton. Bounded N. E. by New River, separating it from Monroe co., S. E. by Giles, S. by Tazewell, and W. and N. W. by Logan and Fayette counties. Drained by Blue Stone and East Rivers, and Lick Creek, all branches of New River.

Mercersburg, Pa., Montgomery township, Franklin co. On a branch of Conococheague Creek. 15 miles S. W. from Chambersburg, and 62 S. W. from Harrisburg. Marshall College is located here. See *Colleges*.

Meredith, N. H., Belknap co. There is in this town a pond adjoining Centre Harbor, about 2 miles long and 1 wide, emptying into the lake near the village. Besides this, there are several smaller ponds. There is probably no town in the country more pleasantly and advantageously situated, or of a better soil, than Meredith. The Winnipiseogee Lake and River bound it on the N. and E. Near the upper part of the town, the traveller passing along the road is presented with a beautiful landscape. On the E. and S. E., the placid Winnipiseogee, the largest lake in New Hampshire, with its numerous islands, arrests the eye, and bounds the circle of vision in a S. E. direction. On the N. E., Ossipee Mountain rises to view. On the N., the prospect is intercepted by Red Hill. Meredith Bridge is a handsome and flourishing village, and the seat of much business. The water power of Meredith is immense. It is connected with the principal village of Gilford, by a bridge over the Winnipiseogee. The railroad from Concord to Montreal passes through this town. By the Concord and Montreal Railroad, 24 miles N. from Concord, and 1 mile N. W. from Gilford.

Meredith Village, N. H., in Meredith, Belknap co. At the outlet of Winnipiseogee Lake, 37 miles N. from Concord. See *Meredith*, N. H.

Meredith, N. Y., Delaware co. Drained by several small tributaries of the E. branch of the Delaware, and by Oleout Creek, a branch of the Susquehanna River. Surface hilly; soil suitable for grazing. 6 miles N. from Delhi, and 77 S. W. from Albany.

Meriden, Ct., New Haven co. 17 miles N. E. from New Haven, 17 S. W. from Hartford, on the Quinepiac River, and the Hartford and New Haven Railroad. Hilly, but fertile. A flourishing manufacturing town, particularly of hardware, of which it produces a large value and great variety.

Merveether County, Ga., c. h. Greenville. Bounded N. by Coweta co., E. by Flint River, separating it from Pike co., S. E. by Talbot, S. W. by Harris, and W. by Troup co. Drained E. by branches of Flint, and W. by branches of Chatahoochee River.

Merrimac County, N. H., c. h. at Concord. N. by Grafton and Belknap counties, E. by Strafford and Rockingham, S. by Hillsboro', and W. by Sullivan. Its greatest length is 36 miles; its breadth, at the broadest part, 26 miles. The surface is uneven; the soil very fertile. The

northerly part is rough and mountainous. Kearsage is the highest mountain, its summit being about 2400 feet above the level of the sea. The Ragged Mountains, so called from their appearance, lie N. E. of Kearsage, and between Andover and Hill. They are nearly 2000 feet high, at the N. points of the range. Bear's Hill, Sunapee, Catamount, and Peak are the other most considerable elevations. A part of Lake Sunapee lies in Newbury; and there are numerous ponds interspersed throughout the whole territory. The Merrimac River meanders through nearly the centre of the county, and forms the boundary some distance at the N. E. part. It receives from the W. Blackwater and Contoocook Rivers, and from the E. Soncook and Suncook, and other smaller streams.

Merrimac, N. H., Hillsboro' co. The Merrimac waters the E. borders of this town, opening a communication by water from this place to Boston. Souhegan also passes through it, and has fine water privileges. Babboosuck Brook empties into Souhegan River, and Penichook Brook forms the southern boundary. The soil is fertile, and there are fine intervals on the Merrimac. This town claims the first manufacture, in this region, of Leghorn bonnets. They were first made by the Misses Burnaps. Some of their bonnets sold at auction for \$50 each. The first house in this town was erected on the margin of the river for a house of traffic with the Indians. 6 miles S. E. from Amherst, and 28 S. from Concord, by railroad. The railroad between Lowell and Concord passes through this town.

Methuen, Ms., Essex co. On the N. bank of the Merrimac. It was taken from Haverhill in 1725. In this town is a pleasant and flourishing village, on both sides of Spigot River, which here has a fall of 36 feet, over a rocky precipice. The natural resources of the town are various—a fertile soil, abundance of wood, and inexhaustible beds of excellent peat. The site of the village is very elevated, and commands an extensive prospect of the beautiful and romantic scenery with which it is environed. It adjoins the city of Lawrence on the N. 25 miles N. by W. from Boston, and 20 N. W. by N. from Salem.

Metropolis City, Is., c. h. Monroe co. On the Ohio River.

Mexico, Me., Oxford co. This town lies on the N. side of Androscoggin River, and is watered by two of its tributaries. It has a good soil and a good water power. It lies 47 miles W. N. W. from Augusta, and 20 N. from Paris. Incorporated 1818.

Mexico, Mo., c. h. Audrain co. On the E. side of Salt River. 47 miles N. from Jefferson City.

Mexico, N. Y., Oswego co. Drained by Salmon Creek, a tributary of Lake Ontario, which bounds this town on the N. Surface undulating; soil productive. 16 miles E. from Oswego, and 152 N. W. from Albany.

Miami County, Ia., c. h. at Peru. Bounded N. by Kosciusko co., E. by Wabash and Grant, S. by Richardville, and W. by Cass and Fulton counties. Drained by Wabash, Eel, and Missis-sinewa Rivers. The Erie and Wabash Canal also passes through this county. Surface undulating; soil very fertile.

Miami County, O., c. h. at Troy. Shelby is on the N., Champaign and Clark on the E., Montgomery on the S., and Dark on the W. The county was organized in 1807, and settled in 1799,

by John Knorp, from Pennsylvania, and Shadrach Hudson, from New Jersey. It is well improved, very productive, and is watered by the Miami Canal and River, South-west Branch, Spring, Honey, and Lost Creeks.

Miami, O., Hamilton co. 119 miles W. S. W. from Columbus. It is on the W. bank of Miami River, about 15 miles from its junction with the Ohio. The Miami is here crossed by a bridge. A McAdamized turnpike leads to Cincinnati, 14 miles E.

Miamisburg, O., Montgomery co. This is a very flourishing, pleasant town, on the E. bank of the Great Miami River. The Miami Canal passes through it, and a very large artificial mound is within its limits. 80 miles from Columbus, and 40 from Cincinnati.

Michigan City, Ia., Laporte co. 157 miles N. N. W. from Indianapolis. This place, which is on the S. shore of Michigan, is the only harbor in the state. It is at the mouth of Trail Creek, and was laid out in 1835. It is well situated for trade, as a lake port, and is now connected both with the Michigan Central and the Michigan Southern Railroads, which unite, and pass through this place to Chicago, 41 miles W.

Middleboro', Ms., Plymouth co. This is the largest town in the commonwealth. Middleboro' was so named from the circumstance that Nemasket, the central Indian village in the town, was half way between the seat of the Pilgrims in Plymouth and the seat of the great Indian sachem, Massasoit, towards Mount Hope, near Bristol, Rhode Island. The Nemasket River flows through the town, and there are several handsome villages in different parts. The great ponds, for which this town has been distinguished, are Sowampset, Quiticasset, Perksha, and Poekaninna; also Long Pond. Some of the streams on which the manufactures are conducted are these: Whetstone, Ravens, Bartlett, Fall Brook, Trout Brook, and Stillwater. On the rocks in this town are the prints of naked hands and feet. The first planters of Middleboro' came mainly from Plymouth. Middleboro' Four Corners, a large and handsome village, lies 36 miles S. S. E. from Boston. The railroad between Boston, Fall River, and Wareham passes through this village. From the Four Corners to Central village, is about 2 miles N. E.; to Eddyville, 4 miles N. E.; to Muttock village, 1 mile N.; to Titicut, 4 miles N. W.; and to Sowampset village, near the Great Pond, is 4 miles S. W. The New Bedford and Taunton Railroad passes through the S. part of the town.

Middlebourne, Va., c. h. Tyler co. On the E. side of Middle Island Creek. 307 miles N. W. from Richmond.

Middlebury, N. Y., Schoharie co. Watered by the head branch of the Catskill Creek, and a large pond or marsh called the Vly, from which flows a powerful mill stream, emptying into Schoharie Creek. Surface hilly; soil, in the valleys, very fertile loam. 6 miles S. from Schoharie, and 37 S. W. from Albany.

Middlebury, N. Y., Wyoming co. Allen's Creek and a branch of the Tonawanda water this town, the surface of which is rolling, and the soil sandy and clay loam, yielding large crops of grass and grain. 6 miles N. from Warsaw, and 248 W. from Albany.

Middlebury, Vt., shire town of Addison co., is a large and flourishing town on both sides of

Otter Creek, 31 miles S. W. from Montpelier, and 33 S. S. E. from Burlington. The fathers of this town were Colonel John Chipman and the Hon. Gamaliel Painter, who came here and settled in 1773. The settlement advanced but slowly until after the revolutionary war; it then began to increase, and is now one of the most important towns in the state. In 1791 it became the shire town of the county, and in 1800 Middlebury College was founded here. See *Colleges*. The surface of the town is generally level. Chipman's Hill, 439 feet above Otter Creek, is the highest elevation. The soil is fertile and productive, and furnishes large quantities of wool, beef, pork, butter, and cheese. The town is admirably watered by Otter Creek and Middlebury River. At the falls on Otter Creek, the site of this flourishing village, are extensive manufacturing establishments; and large quantities of white and variegated marble, with which the town abounds, are sawed and polished for various uses, and transported to market.

Middlebury is well built, on ground ascending gradually each way from the creek, and presenting many eligible sites for the location of dwellings and public buildings. There are five or six churches of different denominations; also one or two flourishing academies. The Rutland and Burlington Railroad passes through Middlebury, and connects it with all the other great routes, N., S., and E.

Middle, N. J., Cape May co. Bounded E. by the Atlantic Ocean, W. by Delaware Bay, and is drained by Goshen, Dyer's, Green, and Fishing Creeks, which empty into Delaware Bay. Hereford Inlet also extends from the Atlantic inland 4 miles. Surface level and marshy; soil sandy.

Middlefield, Ms., Hampshire co. Previous to 1783, this town was a part of Worthington and other towns. The features of this town are bold and rough, but the soil is strong and well adapted for grazing. The town is well watered by a number of the upper branches of the W. branch of Westfield River. 135 miles W. from Boston, and 16 from Pittsfield.

Middlefield, N. Y., Otsego co. Watered on the W. by Otsego Lake and its outlet, and on the E. by Cherry Valley Creek. It is a hilly town, with a soil of sandy, calcareous loam. 3 miles E. from Cooperstown, and 59 W. from Albany.

Middle Haddam, Ct. In the town of Chatham, Middlesex co., on the E. side of Connecticut River. 21 miles S. S. E. from Hartford.

Middle Paxton, Pa., Dauphin co. Drained by Fishing, Stony, and Clark's Creeks. Surface mountainous; soil gravel. 9 miles N. E. from Harrisburg.

Middleport, c. h. Iroquois co. 192 miles N. E. of Springfield.

Middlesex County, Ct., Middletown and Haddam, shire towns. This county is bounded N. by Hartford co., E. by Hartford and New London counties, S. by Long Island Sound, and W. by New Haven co. The general surface of the county is uneven. The soil is generally good, particularly adjacent to Connecticut River. There are many small streams which afford mill privileges, fertilizing the soil and giving beauty to the county. The waters of the Connecticut afford it an important business in navigation, especially in the coasting trade.

Middlesex County, Ms., Concord, Cambridge,

and Lowell, shire towns. Surface uneven, growing hilly on the W.; soil various, though generally light. Highly cultivated. The Merimac enters the N. E. border, by the affluents of which, including the Nashua and Concord Rivers, the county is crossed from S. W. to N. E. In the S. E. is the Charles River, flowing into Boston Harbor. The Maine, Lowell, Fitchburg, and Worcester Railroads, with their branches, afford easy communication with Boston. This county abounds with manufacturing establishments.

Middlesex County, N. J., c. h. at New Brunswick. Bounded N. by Essex co., E. by Staten Island and Sound, and Monmouth co., S. by Monmouth and Mercer counties, and W. by Somerset co. Drained by Raritan River and its branches, Millstone and Rahway Rivers. Raritan Bay, in the E. part, forms a fine harbor, communicating with the ocean and with Staten Island Sound. Surface level in the S. E., and undulating in the N. and N. E.; soil diversified, being very fertile in some parts.

Middlesex, N. Y., Yates co. Bounded on the W. by Canandaigua Lake, and drained by West Creek. Surface somewhat hilly; soil very rich gravelly loam. 12 miles W. from Penn Yann, and 194 from Albany.

Middlesex, Vt., Washington co. The S. part of Middlesex is watered by Winooski River, which furnishes here one of the best stands for mills in the county. The N. branch of this river runs across the N. E. corner of the town. Middlesex is uneven, but the only mountain of consequence lies along the line between the town and Waterbury, and is called the Hogback. The timber is such as is common to the mountain towns, and the soil generally good. The channel worn through the rocks by Winooski River, between this township and Moretown, is a considerable curiosity. On the bank of the Winooski River, at the falls, near the middle of the S. line of Middlesex, is a flourishing village. Mr. Thomas Mead was the first settler. He began improvement, in 1781 or '82, and the next year moved his family here from Chelmsford, Ms. 6 miles N. W. from Montpelier. The Central Railroad passes through the town.

Middlesex County, Va., c. h. at Urbanna. Bounded N. E. and E. by the Rappahannock River, separating it from Lancaster co., S. E. by Chesapeake Bay, and S. and W. by Piankattank River, separating it from Matthews, Gloucester, and King and Queen counties, and N. W. by Essex co.

Middletown, Ct. City, port of entry, and half shire town of Middlesex co., lies on the W. bank of Connecticut River. 14 miles S. from Hartford, and 24 miles N. E. from New Haven. The town ship was originally about 9 miles N. and S., varying from 4 to 10 miles E. and W., and embracing four parishes; but that part of the town formerly known as Upper Middletown, has recently been constituted a distinct township, by the name of Cromwell. The soil of Middletown, which rests on a base of secondary red sand stone, is generally good; and the surface is undulating, and in many parts highly picturesque. There are fine meadows, on a considerable stream entering the river N. of the city, which contain about 650 acres. On this and other streams there are several manufacturing establishments; among which are two or three, on a large scale,

for the manufacture of arms for the United States. A range of hills with a base of granite, about two miles below the city, crosses the Connecticut, compressing the channel into a strait of about 35 rods in width, and rising from 400 to 600 feet above the river. At this point occurs an inexhaustible deposit of the finest feldspar, used in the manufacture of porcelain ware. Masses of several hundred weight are often found, without any admixture of other minerals.

The city of Middletown is very beautifully situated on ground gently rising from the river, which is here from 80 to 100 rods in width. The main street runs parallel with the river, on which are the principal retail stores, the hotels, which are large and handsome, most of the houses of worship, the court house, custom house, and other elegant buildings. Parallel with this are other streets, both above and below, which are intersected by several, running up from the river, at right angles. The more elevated portion of the city, W. of the main street, is adorned with some of the most splendid private mansions in the state, having an advantage of position, for beauty and extent of prospect, rarely equalled.

The public edifices of handsomest architectural appearance are the custom house, of Chatham freestone; the court house, with a Grecian portico, and the Episcopal Church, also of the Chatham stone. The meeting house of the South Congregational Church is a neat specimen of the Grecian style. The buildings of the Wesleyan University are on elevated ground in the rear of the city, overlooking the surrounding country, and presenting a handsome appearance as they are seen from a distance. See *Colleges*.

The wharves at Middletown are commodious for the shipping, there being 10 feet of water, which is sufficient for all vessels that can cross the bar at the river's mouth. Steamboats stop here daily on their trips between Hartford and New York. A branch railroad connects this place with the railroad between Hartford and New Haven.

In March, 1650, the lands in Mattabesett, the Indian name of Middletown, were explored with a view to a settlement. Three years later the place received its present name. In 1760, there were over 50 families. The ancient burial ground, near the river, N. of the city, contains many interesting memorials of the early settlers. Here, under a handsome monument, repose the remains of Commodore Macdonough, the hero of Lake Champlain.

Middleton, Ms., Essex co. This town was taken from Salem, Topsfield, Boxford, and Andover, in 1728. It was formerly called Wills Hill. This is a small, but pretty town. Its soil is not by nature of the first quality, but the industry of the people has made it quite productive. The surface is varied by hill and dale. Ipswich River passes along its southern and eastern borders, and receives the waters of three small tributaries. There are some fine ponds in the town, and a neat village near its centre. From this village to Salem is 8 miles S. E., to Boston 18 S.

Middleton, N. H., Strafford co., is a level township, having no high ground except a part of Moose Mountain, which separates it from Brookfield. There are no rivers nor ponds, and the soil is rocky. Settled a short time before the revolution. It was incorporated as a town in 1773. 25

miles N. W. from Dover, and 40 N. E. from Concord.

Middletown, N. J., Monmouth co. Watered on the S. by Sandy Hook Bay, and drained by Swimming and Neversink Rivers. Bounded E. by the sand beach called Sandy Hook, and S. W. by the highlands of Neversink. Surface hilly in the E. and central portions, and elsewhere level; soil sand, clay, and loam. Situated 51 miles E. N. E. from Trenton.

Middletown, N. Y., Delaware co. Watered by the Papacton branch of the Delaware River. A mountainous town, with a productive soil. 16 miles S. E. from Delhi, and 79 S. W. from Albany.

Middletown, O., Butler co. On the E. side of Miami River, 30 miles N. from Cincinnati, and 90 W. S. W. from Columbus. The Miami Canal passes through this place. It has some manufactures.

Middletown, Pa., Bucks co. Bounded W. by Neshaminy Creek, and drained by one of its branches and Bristol Creek. Surface undulating; soil clay.

Middletown, Pa., Dauphin co. Near the junction of Swatara and Susquehanna Rivers. 10 miles S. E. from Harrisburg. The Pennsylvania and Union Canals unite here. The place has an active trade in iron, coal, and lumber.

Middletown, Pa., Delaware co. Bounded E. by Ridley, and W. by Chester Creek. Surface level; soil clay and loam.

Middletown, Pa., Susquehanna co. Drained by Wyalusing Creek and branches. Surface hilly; soil clay and gravel.

Middletown, R. I., Newport co. This is the middle township on the Island of Rhode Island. The surface of the town is undulating, and affords many interesting and beautiful landscapes. The soil is a rich loam, very productive, and under a high state of cultivation; the lands are highly valued, and command a great price. The inhabitants of the town are principally farmers.

Middletown, Vt., Rutland co. This town lies between two mountains, is watered by Poultney River, and has a good soil for grazing. It has a neat and flourishing village. A settlement was commenced here, a short time before the revolution, by Thomas Morgan and others. 14 miles S. W. from Rutland, and 45 N. from Bennington.

Middletown Point, N. J., Monmouth co. A port of entry, situated on an elevated bank of Middletown Creek. 3 miles from Raritan Bay, and 43 E. by N. from Trenton.

Mifflin County, Pa., c. h. at Lewiston. Bounded N. by Centre and Union counties, E. by Juniata co., and S. and W. by Huntingdon co. The Juniata River flows on the S. E. and S. border of this co., and parallel to it runs the Pennsylvania Canal. Surface rough and mountainous; soil very fertile in some portions.

Mifflin, Pa., Dauphin co. Watered by Wiconisco Creek. Mahantango Mountain forms the N., and Berry's Mountain the S. boundary. Soil red shale. 23 miles N. E. from Harrisburg.

Mifflin, Pa., Cumberland co. Bounded on the N. by Blue Mountains, and S. by Conedogwinit Creek. Surface hilly; soil slaty. 17 miles N. W. from Carlisle.

Mifflin, Pa., Allegheny co. Bounded N. E. and S. E. by the Monongahela River, and drained by Thompson's and Struf's Runs and Peter's Creek. Surface hilly; soil loam. 8 miles S. from Petersburg.

Mifflintown, Pa., c. h. Juniata co. On the E. bank of Juniata River. 45 miles N. W. from Harrisburg.

Milan, N. H., Coos co. The Upper Amonoosuck and Androscoggin Rivers pass through this town. There are several ponds, and some considerable mountains. It was called Paulsburg until 1824. First settlers: this town was granted in 1771 to Sir William Mayne and others. 150 miles N. by E. from Concord, and 22 N. E. from Lancaster.

Milan, N. Y., Dutchess co. Watered by the Sawkill and a branch of Roeliff Jansen's Creek. Surface hilly; soil clay and gravelly loam, upon a foundation of limestone and slate. 18 miles N. from Poughkeepsie, and 66 S. from Albany.

Milan County, Ts., c. h. at Nashville. On the left bank of the Brazos.

Milford, Ct., New Haven co. This is one of the towns which composed the "Old Jurisdiction of New Haven." The settlement commenced in 1639. The first purchase of land was made of the Indians for the consideration of "6 coats, 10 blankets, 1 kettle, besides a number of hoes, knives, hatchets, and glasses." The Indians made a reservation of 20 acres in the town, which was sold by them, in 1661, for 6 coats, 2 blankets, and a pair of breeches.

The Indian name of the place was *Wepawaug*. The town is generally level, and the soil productive. There is a quarry of beautiful serpentine marble in the town, and a harbor for small vessels.

Poconock or Milford Point is a noted place, where are a number of huts on the beach, occupied by persons engaged in the oyster and clam business.

Milford village is very pleasant, and the scenery variegated and interesting. 10 miles S. W. from New Haven, on the railroad to New York.

Milford, Ms., Worcester co. Milford was once the E. parish of Mendon. It was called *Wopowage* by the Indians, and Mill River by the whites. The surface is uneven, and the soil of an excellent quality. A branch of Charles River on the E. side of the town, Mill River, a branch of the Blackstone on the W., with numerous brooks and ponds, water the town in every part, and give it a great water power. The village in the centre of the town is neat, and pleasantly situated near Cedar Swamp Pond. The Fraternal Community, at Hopedale, in this town, own 400 acres of land. 28 miles S. W. from Boston, by the old road, and 18 S. E. from Worcester.

Milford, N. H., Hillsboro' co. Milford lies on both sides of Souhegan River, which runs through the town from W. to E., forming a rich meadow or interval, from a quarter to half a mile wide. The banks of this river are annually overflowed, by which means the soil, which is black and deep, is much enriched. This town has extensive water privileges, and has become the seat of large manufactures, and an active trade, being connected with Nashua, Lowell, and Boston by railroad. 32 miles S. by W. from Concord, and about 5 S. W. from Amherst.

Milford, N. Y., Otsego co. The Susquehanna River and some of its branches water this town. The surface is hilly; soil in the valleys fertile loam. 13 miles S. from Cooperstown, and 73 W. from Albany.

Milford, Pa., Somerset co. Drained by Castleman's River and branches and Laurel Hill Creek.

Iron ore and anthracite coal are abundant. 7 miles S. W. from Somerset.

Milford, Pa., c. h. Pike co. Situated on the W. side of the Delaware River. 162 miles N. E. by E. from Harrisburg.

Milford, Pa., Bucks co. Watered by Swamp, a branch of Perkiomen Creek. Surface undulating; soil clay and gravel.

Milbury, Ms., Worcester co. This is one of the most beautiful and flourishing towns in the county. It was formerly the N. parish in Sutton. The Blackstone River and Canal pass through the town. The Blackstone River, and Singletary Pond, which lies mostly in Sutton, furnish excellent water privileges. The soil is fertile, well cultivated, and yields abundance of all the varieties of agricultural products common to this fruitful region. The surface is delightfully varied by hills and valleys, decorated by lovely ponds, and spread out with neat and prosperous villages. The Worcester Railroad has a branch to the centre of the town. 6 miles S. S. E. from Worcester, and 42 W. S. W. from Boston.

Miller County, Mo., c. h. at Tuscumbia. Bounded N. by Moniteau and Cole counties, E. by Osage and Pulaski, S. by Pulaski and Camden, and W. by Camden and Morgan counties. Watered by Osage River and branches. Soil very fertile on the streams.

Millersburg, Is., c. h. Mercer co.

Millersburg, O., c. h. Holmes co. On the E. side of Killbuck Creek. 87 miles N. E. from Columbus.

Millersburg, Pa., Dauphin co. On the E. bank of Susquehanna River, at the mouth of Wiconisco Creek. 31 miles N. from Harrisburg. There is a railroad to the river at this point from the coal mines in Lyken's Valley.

Milledgeville, Ga. City, capital of the state, and seat of justice of Baldwin co. 187 miles N. W. from Savannah, and 89 W. S. W. from Augusta. It is situated on the W. side of Oconee River, at the head of navigation, and at the junction of Fishing Creek, 193 miles N. from Darien, at the mouth of the river. The city is built upon an uneven surface, but is laid out with great regularity, having 10 streets running parallel with the river, and 10 others intersecting them at right angles, all of which are 100 feet wide, except Washington Street, in the centre, which is 120 feet in width. There are 3 public squares, each 450 feet on a side, called State House Square, Governor's Square, and Penitentiary Square. In the centre of State House Square, which is in an elevated part of the city, about three fourths of a mile from the river, stands the state house; which is a handsome Gothic edifice, erected in 1828, at a cost of \$115,000. On this square also is an academy, an arsenal, and a powder magazine. There are churches of the Presbyterian, Methodist, and Baptist denominations.

Milledgeville was laid out in 1803. The first house, of logs, was built the next year, and the first framed house in 1805. A railroad, 17 miles long, to Gordon, connects Milledgeville with the long railroad route from Savannah to Macon.

Mills County, Io., c. h. at Coonville. In the S. W. angle, on the Missouri.

Millsfield, N. H., Coos co. Clear Stream waters its N. extremity, and Philips River, with several small streams, the other parts. Here are several ponds: the largest is about 300 rods long, 140 wide. This town was named from Sir

Thomas Mills, a grantee. The surface is too rough and the climate too cold for cultivation. First settlers: Millsfield was granted, in 1774, to George Boyd and 81 others. 150 miles N. from Concord, and about 35 N. E. from Lancaster.

Milville, N. J., Cumberland co. Drained by Maurice River and its branches, the principal of which is Manantico Creek. Surface level; soil sandy and rather sterile. 67 miles S. by W. from Trenton.

Milo, Me., Piscataquis co. This is a beautiful township, on the fertile banks of Sebec and Pleasant Rivers, at their union with the Piscataquis. It lies 103 miles N. E. from Augusta, and 15 N. E. from Dover. Incorporated in 1823.

Milo, N. Y., c. h. Yates co. Bounded W. by Crooked Lake, and N. by its outlet. Surface undulating; soil very productive. 189 miles W. from Albany.

Milton, Me., Piscataquis co. 94 miles from Augusta.

Milton, Ms., Norfolk co. Milton was a part of Dorchester until 1662. The Indians called the place *Unquety* or *Uncaquatisset*. Neponset River washes its northern border, and affords the town numerous valuable mill sites. Milton possesses fine granite. The soil of the town is strong and fertile; and the surface presents many finely-cultivated farms, and large tracts of wood and meadow lands. Milton contains many elegant country seats, and much delightful scenery. The views from Milton Hill, near the head of the Neponset, and Blue Hill, a celebrated landmark for sailors, 635 feet above the sea, in this town and Canton, are among the most admired in our country. The village called the "Mills," comprising a part of Dorchester, at the head of navigation on the Neponset, is a wild, romantic place, and the seat of considerable trade and manufacture. The village at the railroad, near the granite quarry, in Quincy, is very pleasant and flourishing. By a new and beautiful bridge, called the Granite Bridge, across the Neponset, the distance to the city is reduced to 6 miles. There is an academy in this place. The first paper mill in New England was erected in this town. This interesting and pleasant town lies 7 miles S. from Boston, and 6 E. from Dedham.

Milton, N. H., Strafford co. The Salmon Fall River washes its whole eastern boundary, a distance of 13 miles. Teneriffe, a bold and rocky mountain, extends along the eastern part of Milton, near which lies Milton Pond, of considerable size, connecting with Salmon Fall River. This town was formerly a part of Rochester. 40 miles N. E. from Concord, and 20 N. W. by N. from Dover.

Milton, N. Y., Saratoga co. Shire town. Watered by Kayaderosseras Creek and some of its tributaries. Surface chiefly level; soil sandy and clay loam. 30 miles N. from Albany.

Milton, Vt., Chittenden co. Milton is bounded on the W. by Lake Champlain, and is finely watered by the River Lamoille. The soil is generally good. A little distance from the neat and flourishing village are the Great Falls, on the Lamoille. In the course of 50 rods the whole river falls 180 feet. About the middle of the rapid is a small island, by which the water passes on each side, with great violence and loud roaring. There is another pleasant village 2 miles W. of the falls, called Checker Berry. The immense water power of this town, and the facilities afforded it

by Lake Champlain for an extensive commerce, added to the advantage of railroad communication with Burlington, Montreal, and Boston, will, doubtless, render this place a site of important business. A bridge, called the Sand Bar Bridge, connects this town with South Hero. The settlement of this place was commenced February 15, 1782. 12 miles N. from Burlington, and 40 N. W. from Montpelier.

Milwaukee County, Wn., c. h. at Milwaukee. Bounded N. by Washington co., E. by Lake Michigan, S. by Racine, and W. by Waukesha co. Drained by Milwaukee, Manewakee, Root, Des Plaines, and Fox Rivers, and branches of Rock River.

Milwaukee, Wn., c. h. Milwaukee co., situated on the W. shore of Lake Michigan. 95 miles N. from Chicago, and 80 miles E. from Madison, the capital of the state. The town lies on both sides of the Milwaukee River, which here runs nearly parallel to the shore of the lake, and empties into it just below.

This place is the natural outlet of one of the finest regions for the production of cereal grains in the United States. Its growth has been remarkably rapid. In 1834 it contained only two log houses. A census of the town, taken in June, 1846, showed a population of 9508; and another in December, 1847, only 18 months afterwards, of 14,071. The population in 1850 was 22,137.

The site of Milwaukee is eligible in various respects. It commences about a mile above the mouth of the river, at a point called Walker's Point, and extends from a mile and a half to two miles up the river, which is sufficiently wide and deep, to a point some distance above the town, to accommodate a large amount of shipping. At the head of this navigable portion of the river, a dam, erected by the Milwaukee and Rock River Canal Company, for the purpose of producing a slack water navigation about two miles farther up the stream, throws a large body of water into that section of the canal which courses into the town, creating there a water power which is estimated to be equal to about 100 runs of millstones. The manufactories erected on this canal have the advantage of being also located on the bank of the navigable river, which almost washes their foundations in the rear, so that they may be approached by the largest vessels and steamboats from the lakes.

The ground occupied by the town is elevated and uneven, rising from the river to the height of 50 to 100 feet, and affording beautiful situations for residences, commanding a full view of the river, the bay, the lake, and the body of the town itself.

The Bay of Milwaukee is an elliptical indentation of the lake shore against the town, of about three miles in depth, and extending about six miles between its N. and S. points or capes, sufficiently separated from the body of the lake to protect the shipping from the effect of all the storms or gales of wind except such as come from the east, which here seldom occur. The river enters this bay about half a mile below its centre, and the whole distance between the mouth of the river and the commencement of the town is occupied by a low, impassable marsh, by some supposed once to have been a part of the bay.

This place, for one of such rapid growth, is finely built. From a certain quality of the clay which abounds here, the brick made from it,

instead of being of the usual red, are of a light yellow or cream color, which gives to the warehouses and solid portions of the town, where this material is used, a peculiarly bright and beautiful appearance. Steamboats ply continually between this place and Buffalo, in the season of lake navigation; and also to connect it with Chicago and other ports south, on Lake Michigan, and with the termini of the Michigan Central and Southern Railroads. Plank roads are rapidly extending from this point into the interior; a railroad is in progress to the Mississippi, and one is proposed to Chicago.

Mina, N. Y., Chautauque co. Watered by French Creek and Finley's Lake, a small sheet of water. Surface uneven; soil gravelly loam and clay. 15 miles S. W. from Mayville, and 348 S. by W. from Albany.

Minden, La., c. h. Claiborne parish. 404 miles N. W. from New Orleans.

Minden, N. Y., Montgomery co. Bounded on the N. by the Mohawk River, and drained by Otsquake Creek. The surface is diversified and the soil fertile, particularly in the valley of the Mohawk, where are some rich alluvial marshes. 15 miles W. from Fonda, and 67 N. W. from Albany.

Mineral Point, Wn., Iowa co. On a head branch of Pekatonica River. 52 miles W. S. W. from Madison. Here are several smelting furnaces for copper and lead.

Minersville, Pa., Schuylkill co. 66 miles N. E. from Harrisburg. In the Schuylkill coal field.

Minerva, N. Y., Essex co. The Hudson River and some of its branches water this town, the surface of which is hilly and mountainous, being partly covered by the Adirondack range, and the soil fertile in some of the valleys. 30 miles S. W. from Elizabeth, and 92 N. by W. from Albany.

Minot, Me., Cumberland co. A large township, on the E. side of the Androscoggin, opposite Lewiston, with two pleasant villages. 33 miles S. W. from Augusta, and 35 N. from Portland.

Minster, O., Mercer co. 94 miles W. N. W. from Columbus.

Mississippi County, As., c. h. at Osceola. Bounded N. by Missouri, E. by the Mississippi River, separating it from Tennessee, S. by Crittenden co., and W. by St. Francis River, separating it from Poinsett and Greene counties. Whitewater River waters the interior.

Mississippi County, Mo., c. h. at Osceola. On the eastern border, opposite the mouth of the Ohio.

Mobile County, Ala., c. h. at Mobile. Bounded N. by Washington co., E. by Tombigbee and Mobile Rivers and Mobile Bay, separating it from Clarke and Baldwin counties, S. by Pascagoula Bay, and W. by Mississippi. Drained by branches of the Mobile River on the E., and of the Pascagoula on the W. Surface hilly in the N., and undulating in the S. portions; soil sterile.

Mobile, Ala. City, port of entry, and seat of justice of Mobile co. Situated on the W. side of Mobile River, at its entrance into Mobile Bay, 30 miles N. of Mobile Point, at the entrance of the bay. 217 miles S. by W. from Tuscaloosa, 160 E. N. E. from New Orleans, and 55 W. by N. from Pensacola, Fla. Population in 1830, 3194; 1840, 12,672; 1850, 20,500.

It is the only town of much importance in the lower part of Alabama. It is pleasantly situated

on an extended plain, elevated 15 feet above the highest tides, and has a beautiful prospect of the bay, extending 30 miles, with an average width of 12 miles, to the Gulf of Mexico. Access to the town is rendered somewhat difficult by a swampy island opposite, so that vessels drawing more than 8 feet of water cannot come directly in, but must pass up Spanish River, six miles, round this island, into Mobile River, and then drop down to the city, into a harbor perfectly secure from winds, storms, or enemies. It has about 50 wharves, and, next to New Orleans, is the largest cotton market in the United States. Its business and prosperity have increased with great rapidity since it came under the government of the United States. Although one of the earliest settled towns in the country, it never became, under the French and Spanish régime, which continued to 1813, any thing more than a military post. The churches of the city are of the Presbyterian, Baptist, Methodist, and Roman Catholic denominations. There is an academy, called Barton Academy, a court house, jail, custom house, a United States naval hospital, and a city hospital. An aqueduct, by which water is brought through iron pipes 2 miles, supplies the city abundantly with this element of life, purity, and comfort. There are many steamboats running between Mobile and the more important places above it, on the Mobile, Tombigbee, and Alabama Rivers; and also a line of communication by steamboats with New Orleans, by the way of Lake Pontchartrain. There are also a great number of packet schooners, which run between Mobile and New Orleans; some by the way of the lake, and some by the Mississippi. The great project, now in a state of hopeful progress, of constructing a railroad from this city to Cairo, at the junction of the Mississippi and Ohio Rivers, to connect with the Illinois Central Railroad, running thence, and terminating by its northern branches at Dubuque, on the Upper Mississippi, and at Chicago, on Lake Michigan, cannot fail, when accomplished, of bringing an immense increase of business and prosperity to Mobile.

This place was ceded to the Americans by Spain in 1813, chartered as a town in 1814, and incorporated as a city in 1819. It has suffered repeatedly by desolating fires. In 1827, 170 buildings were consumed; and in 1839, 600. But the town has been rebuilt with increased convenience and beauty.

Mohawk, N. Y., Herkimer co. On the S. side of the Mohawk River, on the Erie Canal. 79 miles W. N. W. from Albany.

Mohawk, N. Y., c. h. Montgomery co. Bounded on the S. by the Mohawk River. The surface is hilly on the N., and the soil fertile in the Mohawk valley. 42 miles N. W. from Albany.

Moir, N. Y., Franklin co. The Little Salmon River waters this town, the surface of which is level, and the soil sandy loam. 13 miles W. from Malone, and 225 N. N. W. from Albany, on the Ogdensburg Railroad, from which latter place it is distant 47 miles.

Monteau County, Mo. In the central part of the state. On the S. bank of the Missouri.

Monkton, Vt., Addison co. The western part of the town is watered by Little Otter Creek, and the eastern part by Pond Brook. Lewis Creek runs a short distance in the north-eastern part. These streams afford but few mill privi-

leges. Monkton Pond lies in the N. part of the town, and is about a mile in length and half a mile wide. A mountain, called the Hogback, extends along the eastern boundary of Monkton, and there are several other considerable elevations. Iron ore is found in the S. part of this township in large quantities. About a mile N. of the iron ore bed is an extensive bed of racin, or porcelain earth. In the S. part of this township is a pond, curiously located on the summit of a considerable hill. In the north-western part is a remarkable cavern. Monkton was settled in 1774, by John and Ebenezer Stearns, Barnabas Burnham, and John Bishop. They left during the war, but returned in 1784. 27 miles W. from Montpelier, and 16 N. from Middlebury. The Vermont Central Railroad passes through the town.

Monmouth, Me., Kennebec co. On the sources of the Cobbessecontee. 15 miles S. W. from Augusta.

Monmouth County, N. J., c. h. at Freehold. Bounded N. by Staten Island Sound, E. and S. E. by the Atlantic Ocean, S. W. and W. by Burlington, Mercer, and Middlesex counties. Drained by Millstone and South Rivers, branches of the Raritan, by Assumpink, Crosswick's, and Rancocus, branches of the Delaware, by Neversink, Tom's, Shrewsbury, and Forked Rivers, and Manasquan, Cedar, Oyster, Westecunk, and Manahocking Creeks. Surface mostly level; soil alluvial, being a mixture of sand, clay, gravel, and vegetable mould. Marl is abundant in some parts.

Monongahela, Pa., Greene co. Bounded E. by Monongahela River, and drained by Whitley Creek. Surface undulating; soil loamy. 14 miles S. E. from Waynesburg.

Monongahela County, Va., c. h. at Morgantown. Bounded N. by Pennsylvania, E. by Preston, S. by Marion, and W. by Tyler co. Drained by the Monongahela and its tributary, Cheat River. Surface uneven; soil fertile.

Monroe County, Aa., c. h. at Monroeville. Bounded N. by Wilcox co., E. by Butler and Conechu, S. by Baldwin co., and W. by the Alabama River and Clarke co. Drained by the Alabama and its tributaries; soil bordering on some of the streams fertile.

Monroe County, As., c. h. at Lawrenceville. Bounded N. by St. Francis and Pulaski counties, E. by Phillips, S. by Desha, S. W. by Arkansas, and W. by Pulaski co. Drained by Cache and White Rivers, and branches.

Monroe, Ct. Fairfield co. This town was taken from Huntington in 1823. The soil is good, and well adapted for grazing, but the surface is rough and stony. Agriculture is the principal business of the inhabitants. There are excellent orchards of various kinds of fruit in the town, a pleasant village on elevated ground, and a classical school. 15 miles W. by N. from New Haven.

Monroe County, Fa., c. h. at Key West. The main land of this county is bounded E. by Dade co., S. by the Florida Channel, and W. by the Gulf of Mexico. It also embraces the islands called the Florida Keys, and an inundated tract of land called the Everglades. In the N. W. part is some good land.

Monroe County, Ga., c. h. at Forsyth. Bounded N. by Butts co., E. by Jasper, Jones, and Bibb, S. by Crawford, and W. by Upson and Pike counties. Drained by small streams flowing into

the Ockmulgee River, which forms its N. E. boundary.

Monroe, Ga., c. h. Walton co. Situated at the head of Ockmulgee River. 61 miles N. W. by N. from Milledgeville.

Monroe County, Is., c. h. at Harrisonville. Bounded N. E. by St. Clair, S. E. by Randolph co., and S. W. and N. W. by the Mississippi River, separating it from Missouri. Drained by Horse, Eagle, De Long, and Prairie Creeks. The surface is rough and hilly in the W. portions, but in the E. there is much good land.

Monroe County, Ia., c. h. at Bloomington. Bounded N. by Morgan co., E. by Brown and Jackson, S. by Lawrence, and W. by Green and Owen counties. Drained by branches of the E. and W. forks of White River.

Monroe, Io., c. h. at Albia. S. E. part. Watered by Cedar Creek and other southern tributaries of the Des Moines.

Monroe County, Ky., c. h. at Tompkinsville. Bounded N. by Barren co., E. by Cumberland, S. by Tennessee, and W. by Allen co. Watered by Cumberland River, and the Big Barren and its branches.

Monroe, La., c. h. Wachita parish. On the E. bank of Wachita River, at the head of steamboat navigation, and 300 miles N. W. by N. from New Orleans.

Monroe, Me., Waldo co. This town is watered by Marsh River, a branch of the Penobscot. It lies 59 miles N. E. from Augusta, and 14 N. from Belfast.

Monroe, Ms., Franklin co. Monroe was formerly a part of Rowe, and an unincorporated tract called the "Gore." There is some land in the town fit for the plough; but being very mountainous, the greater part is adapted only to grazing. Monroe was named in honor of James Monroe, late president of the United States. 28 miles W. N. W. from Greenfield, and 115 W. by N. from Boston.

Monroe County, Mn., c. h. at Monroe. Bounded N. by Washtenaw and Wayne counties, E. by Lake Erie, S. by Ohio, and W. by Lenawee co. Drained by Raisin River, and Otter, Plum, Stony, Sandy, and Swan Creeks. Surface level; soil fertile.

Monroe, Mn., c. h. Monroe co. This city is located on Raisin River, 2½ miles from its mouth, and has great water privileges. It is connected by a canal with Lake Erie. 37 miles S. S. W. from Detroit, and is one of the eastern termini of the Southern Michigan Railroad.

Monroe County, Mi., c. h. at Athens. Bounded N. by Itawamba co., E. by Alabama, S. by Lowndes co., and W. by Chickasaw co. Watered by Tombigbee and Battahatchee Rivers.

Monroe County, Mo., c. h. at Paris. Bounded N. by Shelby and Marion counties, E. by Ralls, S. by Audrain, and W. by Randolph co. Drained by Salt River and its branches. Surface undulating; soil fertile.

Monroe, N. C., c. h. Union co.

Monroe County, N. Y., c. h. at Rochester. Taken from Ontario and Genesee counties in 1821. It is bounded N. by Lake Ontario, E. by Wayne co., S. by Ontario and Livingston, and W. by Genesee and Orleans counties. Surface chiefly level, or slightly uneven, being crossed by the Mountain Ridge and Alluvial Way, or Ridge Road, and watered by the Genesee River, and several streams flowing N. into Lake Ontario;

soil mostly very fertile, being particularly adapted to the growth of wheat. Iron ore, gypsum, marl, and sulphur springs are abundant. The Erie and Genesee Valley Canals form a junction at Rochester; also the Auburn and Rochester and Tonawanda Railroads.

Monroe, N. Y., Orange co. The Ramapo River, a branch of the Passaic, waters this town. Surface hilly and broken, being partly covered by the Highland range, and abounding in some places with iron ore. 14 miles S. E. from Goshen, and 117 S. S. W. from Albany.

Monroe County, O., c. h. at Woodsville. Belmont co. is on the N., Washington on the S., Morgan on the W., and the Ohio River on the E. The most important streams are Little Muskingum, Sunfish, Duck, and Wills Creeks. The soil is good. In some parts the land is level, in others hilly and rough. Stone coal and iron ore are found in great plenty.

Monroe County, Pa., c. h. at Stroudsburg. Bounded N. by Wayne and Pike counties, E. by the Delaware River, separating it from New Jersey, S. by Northampton and Carbon, and W. by Carbon and Luzerne counties. Bounded N. W. by the Lehigh, and drained by branches of Lehigh and Delaware Rivers. Surface rough and hilly; soil fertile.

Monroe, Pa., Cumberland co. Yellow Breeches Creek waters this town, affording hydraulic power. Surface level; soil calcareous loam. 7 miles S. E. from Carlisle.

Monroe County, Te., c. h. at Madisonville. Bounded N. by Roane co., E. by the Tennessee River, separating it from Blount co., S. E. and S. by North Carolina, and W. by Polk and McMinn counties. Drained by tributaries of the Tennessee.

Monroe County, Va., c. h. at Union. Bounded N. by Greenbrier co., E. by Alleghany and Botetourt, S. by Giles co., and W. by New River, separating it from Mercer co. Drained by Greenbrier River. Surface elevated and mountainous, the Alleghany range traversing the E. part; soil fertile calcareous loam, particularly adapted to grazing.

Monroe, Wn., c. h. Greene co. Watered by a branch of Pekatonia River. 81 miles S. from Madison.

Monroeville, O., Huron co. On Huron River. Connected with Sandusky City by railroad. 97 miles N. from Columbus. The river affords good water power.

Monroe Works, N. Y., Orange co. On the Erie Railroad. 105 miles S. by W. from Albany. Iron ore of good quality is found in the region, which furnishes the material for large iron works at this place.

Monson, Me., Piscataquis co. This town is watered by Piscataquis River and Wilson's Stream. Monson comprises a fine tract of land, and is settled by a worthy class of people. Incorporated 1822. It lies 83 miles N. by E. from Augusta, and 20 N. W. from Dover. A stage runs between this town and Bangor three times a week. Distance from Monson to Bangor, 60 miles; to Moosehead Lake, 15.

Monson, Ms., Hampden co. Before its incorporation, in 1760, Monson was a part of the town of Brimfield. The surface is agreeably diversified by hill and dale, with much good soil, and many excellent farms. The position of its central village, in a vale running N. and S., and

bounded on either hand by sloping hills, is beautiful and romantic. A branch of the Chicopee runs through the centre of the town. Nearly a mile from the centre of the village is an inexhaustible quarry of granite of a beautiful quality. 17 miles E. from Springfield, and 80 W. S. W. from Boston.

Montague, Ms., Franklin co. This town, previous to 1753, was the north parish in Sunderland, and was called *Hunting Hills*. The town contains some fine plains, and large tracts of good meadow on Connecticut River, on the E. side of which the town is situated. It is bounded on the N. partly by the Connecticut, and partly by Miller's River. Turner's Falls, at the northerly part of the town, are more interesting than any in the state. The canal for passing these falls, 3 miles in length, and 75 feet lockage, with an immense dam across the river, greatly facilitates the navigation on Connecticut River. This place has great water power and romantic scenery; but the water power remains as yet unimproved. The village in the centre of the town lies 83 miles W. by N. from Boston, and 7 S. E. from Greenfield. It is on the railroad from Greenfield to Fitchburg.

Montague, N. J., Sussex co. Mountainous in the S. E. portions. Soil fertile, being partly alluvial. 91 miles N. from Trenton.

Monterey County, Ca., c. h. at Monterey. On the coast, S. of Monterey Bay.

Monterey, Ca., c. h. Monterey co. Situated on the S. side of the Bay of Monterey, about 150 miles S. of San Francisco. This is an old Spanish town, and was for a long time the principal one in California. The houses are built on a broad, gentle slope of land, about 2 miles from Point Pinos, the southern extremity of the bay. The land rises fast behind it, the coast range approaching within 4 miles of the town. The harbor is equal to any in California. The climate is fine, and the town, though not immediately connected with the mining region, is growing rapidly.

Monterey, Ms., Berkshire co. Taken from the S. part of Tyringham in 1847. A mountainous township. 15 miles S. by E. from Lenox.

Monterey, Va., c. h. Highland co. About 30 miles N. W. from Staunton.

Montezuma, Io., c. h. Poweshick co.

Montezuma, N. Y., Cayuga co. At the junction of the Cayuga and Seneca and Erie Canals. It contains important salt springs, and is in the vicinity of the Montezuma Marshes, which extend 14 miles along the outlet of Cayuga Lake, and along Seneca River. They are from 2 to 3 miles wide, and are covered with high grass. The village lies 162 miles W. by N. from Albany.

Montgomery County, Aa., c. h. at Montgomery. Bounded N. by Coosa co., E. by Macon and Pike, S. by Pike and Lowndes, and W. by Lowndes and Antauga counties. Watered by Coosa and Tallapoosa Rivers and branches.

Montgomery, Aa. City, capital of the state, and seat of justice of Montgomery co. Situated at the head of steamboat navigation on the Alabama River. The town is built on a high bluff. It contains the state house, the usual county buildings, churches for 5 or 6 denominations, stores, and other buildings, which are of handsome appearance. A large amount of cotton is annually shipped from this place. It is connected by steamboat navigation with the Gulf of Mexico on the S., and, by continuous lines of

tributary, the Auchenahatchee, on its S. and S. W. border. Drained by the Oconee and branches, and Pendleton Creek.

Montgomery County, Is., c. h. at Hillsboro'. Bounded N. by Sangamon and Christian counties, E. by Shelby and Fayette, S. by Bond and Madison, and W. by Macoupin co. Shoal Creek and its branches, the head waters of Macoupin Creek, and a branch of the S. fork of Sagamon River water this county. Surface high and undulating; soil fertile.

Montgomery County, Ia., c. h. at Crawfordsville. Bounded N. by Tippecanoe, E. by Boone and Hendricks, S. by Putnam, and W. by Parke and Fountain counties. Sugar, Big and Little Raccoon Creeks drain this county. Surface undulating; soil fertile.

Montgomery County, Ky., c. h. at Mount Sterling. Bounded N. and N. E. by Bourbon and Bath counties, E. by Morgan, S. by Breathitt and Owsley, and W. by Estill and Clark counties. Drained by Red River and branches, a branch of Kentucky River, and a branch of Licking River.

Montgomery County, Md., c. h. at Rockville. Bounded N. E. by the Patuxent River, separating it from Ann co., S. E. by Prince George co. and the District of Columbia, S. W. by the Potomac River, separating it from Virginia, and N. W. by Frederick co. Drained by branches of Potomac and Patuxent Rivers. Surface somewhat uneven; soil rather poor, except on the streams.

Montgomery, Ms., Hampden co. This is a mountainous township, well watered by Westfield River and Moose Meadow Brook, and produces rich pasture. Montgomery lies, by the Western Railroad, which passes the S. W. border of the town, 18 miles N. W. from Springfield, and 116 W. by S. from Boston.

Montgomery County, Mo., c. h. at Danville. Bounded N. by Audrain and Pike counties, E. by Lincoln and Warren, S. by the Missouri River, separating it from Gasconade co., and W. by Callaway co. Drained by Au Cuivre and Loutre Creeks. Surface undulating; soil diversified.

Montgomery County, N. C., c. h. at Lawrenceville. Bounded N. by Randolph co., E. by Moore, S. by Richmond, and W. by the Yadkin River, separating it from Stanley co. Surface hilly and mountainous, and drained by branches of the Yadkin; soil fertile.

Montgomery, N. J., Somerset co. Beden's Brook and branches, and Stony Brook, water this town. Surface hilly; soil clay, sand, and red shale. 12 miles S. W. from Somerville.

Montgomery County, N. Y., c. h. at Mohawk. Formed from Albany co., in 1772, but since reduced in size by the formation of new counties. Bounded N. by Fulton, E. by Saratoga and Schenectady, S. by Schenectady and Schoharie, and W. by Herkimer co. It is watered by the Mohawk River and its branches, the principal of which are East Canada, Otsquake and Schoharie railroad communication, with Charleston and Savannah on the Atlantic coast. It has thus become a great thoroughfare for travellers between the north and south. This city was laid out and began to be settled in 1817.

Montgomery County, Ga., c. h. at Mount Vernon. Bounded N. E. by Emanuel co., S. E. by Tatnal and Appling, S. W. by Telfair, and N. W. by Laurens co. It has the Ockmulgee and its

Creeks. Surface rather hilly and mountainous, being partly covered by a range of the Highlands and the Klips, a branch of the Mayfield Mountain; soil mostly good, and along the margins of the streams remarkably fertile. A fine quality of building stone is quarried here in large quantities. The Erie Canal runs along the N., and the Utica and Schenectady Railroad the S. side of the Mohawk River, through this county.

Montgomery, N. Y., Orange co. Watered by the Walkill. Surface hilly; soil well adapted to grass and grain. 10 miles N. from Goshen, and 95 S. S. W. from Albany.

Montgomery County, O., c. h. at Dayton. Miami is on the N., Green on the E., Preble on the W., and Warren and Butler counties on the S. It was constituted and organized in 1803. The land is generally level, and is watered by the Miami, South-West Branch, and Mad Rivers, besides Wolf, Hole's, Bear, and Trim Creeks. This county is fast improving in wealth and population.

Montgomery County, Pa., c. h., at Norristown. Bounded N. E. by Bucks, and S. E. by Philadelphia co., S. W. by the Schuylkill River, separating it from Chester co., and N. W. by Berks co. The Schuylkill River affords extensive water power, and it is also drained by Manatawney, Perkiomen, Wissihickon and Pennypack Creeks. Surface slightly uneven; soil fertile, especially along the Schuylkill.

Montgomery, Pa., Franklin co. Drained by Conecoheague Creek and branches. Surface level; soil mostly calcareous loam. 16 miles S. W. from Chambersburg.

Montgomery, Pa., Montgomery co. Drained by Wissihickon, a branch of the Schuylkill, and by the W. fork of Neshaminy Creek, a branch of the Delaware. Surface level; soil loam and red shale.

Montgomery County, Te., c. h. at Clarksville. Bounded N. by Kentucky, E. by Robertson co., S. by Dickson, and W. by Steward co. Drained by Cumberland River and its branches, the chief of which is Red River.

Montgomery County, Ts., c. h. at Montgomery. On the E. banks of the Brazos and Navasota and upper waters of San Jacinto.

Montgomery, Vt., Franklin co. This town lies in a mountainous country, but it has a valuable tract of land on Trout River, a good mill stream, a branch of the Missisco. Montgomery was granted March 13, 1780, and chartered October 8, 1789, to Stephen R. Brantley and others. Captain Joshua Clap, a revolutionary officer, removed his family from Worcester co., Ms., into this town, in March, 1793. 40 miles N. from Montpelier, and 27 E. N. E. from St. Albans.

Montgomery County, Va., c. h. at Christiansburg. Incorporated in 1777. Bounded N. by Giles and Roanoke counties, E. by Roanoke and Franklin, S. by Floyd co., and W. by New River, separating it from Pulaski co. Drained by branches of New and head branches of Staunton River. Surface rough and mountainous, having the Blue Ridge on its E. border; soil fertile on the streams.

Monticello, As., c. h. Drew co.

Monticello, Fa., c. h. Jefferson co. On a ridge 4 miles E. from Mickasook Lake, and 29 E. N. E. from Tallahassee.

Monticello, Ga., c. h. Jasper co. 35 miles W. N. W. from Milledgeville.

Monticello, Ia., c. h. White co. On the W. bank of Tippecanoe River. 73 miles N. N. W. from Indianapolis.

Monticello, Is., c. h. Piatt co. On the E. side of Sangamon River.

Monticello, Ky., c. h. Wayne co. On the N. side of Beaver Creek, a branch of Cumberland River. 110 miles S. from Frankfort.

Monticello, Mi., c. h. Lawrence co. On the W. side of Pearl River. 85 miles S. of Jackson.

Monticello, Mo., c. h. Lewis co. On the N. E. side of North Fabius River. 145 miles N. by E. from Jefferson City.

Monticello, N. Y., c. h. Sullivan co. 110 miles S. W. from Albany.

Monticello, S. C., c. h. Fairfield district. 31 miles N. from Columbia.

Montour County, Pa., c. h. at Danville. In the N. angle of the state, between the E. and W. branches of the Susquehanna. Washed on the S. by the former.

Montrose, Io., Lee co. Beautifully situated on a prairie, on the W. side of the Mississippi, opposite the late Mormon city of Nauvoo, and commands a fine view of the river and surrounding country for 20 miles. Interesting remains of ancient mounds abound here.

Montrose, Pa., c. h. Susquehanna co. Near the sources of Wyalusing and Mishoppen Creeks, branches of the Susquehanna River, and 175 miles N. N. E. from Harrisburg.

Montpelier, Vt., Washington co. The capital of the state, and shire town of the county. 206 miles N. W. by N. from Boston by railroad. Montpelier became the seat of government in 1805, and the shire town of the county in 1811. It is finely watered by Winooski River, and by several branches of that stream. These streams afford a good water power, on which are manufacturing establishments of various kinds. The surface of the town is very uneven and hilly, but not mountainous. The soil is very good along the streams, and the highlands produce excellent pasture. This township was granted October 21, 1780. The *village* of Montpelier is surrounded by hills of considerable elevation; and although it is too low to command an extensive prospect, is very pleasant, and quite romantic in its appearance. It is located very near the centre of the state: it is a great thoroughfare from all directions, and commands a large and valuable interior trade. The buildings are in good style, and some of them are very handsome.

The state house stands on an elevated site, about 325 feet from State Street, on which it fronts, and is alike beautiful in design and execution. The yard and grounds pertaining to it are large and spacious, and, in the manner they are laid out, give great importance to the building. Through the whole design, a chaste architectural character is preserved, which, combined with the convenient arrangement of the interior and the stability of its construction, renders this edifice equal in every respect to any in New England, and probably to any in the United States. The building is in the form of a cross, showing in front a centre, 72 feet wide, and two wings, each 39 feet, making the whole length 150 feet. The centre, including the portico, is 100 feet deep; the wings are 50 feet deep. The six columns of the portico are 6 feet in diameter at their base, and 36 feet high, supporting an entablature of classic proportions. The dome rises 36 feet above the ridge, making the whole height from the ground 100 feet. The order of architecture used is the Grecian Doric, and is made to conform to the peculiar arrange-

ment necessary in this building. The walls, columns, cornices, &c., are of dark Barre granite, wrought in a superior manner: the dome and roofs are covered with copper.

In the interior, the lower story contains an entrance hall, rooms for the secretary of state, treasurer, auditor, and numerous committee rooms. The second or principal story contains a vestibule, and stairways, a representatives' hall, 57 by 67 feet, with a lobby, and galleries for spectators; a senate chamber, 30 by 44 feet, with lobby and gallery; a governor's room, 24 by 20 feet, with an anteroom, and a room for his secretary adjoining; a library room, 18 by 36 feet; rooms for the several officers of the Senate and House of Representatives, and several committee rooms. The cost of this building, including all expenses, was about \$132,100; of which the inhabitants of Montpelier paid \$15,000.

Montville, Ct., New London co. On the W. side of the Thames. 35 miles S. E. from Hartford, and 8 N. from New London. Here is a reservation of 2700 acres for the use of the Mohegan Indians, and a few descendants of that tribe still dwell upon it.

Montville, Me., Waldo co. A fine township on the head branches of Sheepscot River. 26 miles E. N. E. from Augusta.

Montville, N. J., Morris co. In a deep valley, 67 miles N. by E. from Trenton. The Morris Canal passes through this valley by two inclined planes.

Moers, N. Y., Clinton co. Bounded on the N. by Canada, and is watered by Chazy and English Rivers. The surface is hilly, being traversed by the Chateaugay range; the soil various. 18 miles N. from Plattsburg, and 182 N. from Albany.

Moore County, N. C., c. h. at Carthage. Bounded N. by Randolph and Chatham counties, E. and S. by Cumberland and Richmond, and W. by Montgomery co. Watered by Deep and Haw, and the head branches of Lumber River. Soil mostly fertile on the borders of the streams.

Moore, Pa., Northampton co. Drained by the head branches of Hockendoque and Monokissy Creeks. Blue Mountain lies on its N. border, in which is the opening called Smith's Gap. Surface undulating; soil gravelly.

Moorefield, Va., c. h. Hardy co. In a rich valley on the E. bank of the S. branch of Potomac River, at the junction of the S. fork. 178 miles N. W. from Richmond.

Moravia, N. Y., Cayuga co. Watered by a part of Owasco Lake, and by its inlet, a fine mill stream. The surface is somewhat hilly; the soil very fertile in the valleys. 16 miles S. from Auburn, and 160 W. from Albany.

Moreau, N. Y., Saratoga co. The Hudson River bounds this town on the N. and E. Surface chiefly level; soil various. 20 miles N. from Ballston Spa, and 48 N. from Albany.

Morehouse Parish, La., c. h. at Bastrop. In the N. E. angle, bordering on Arkansas.

Morehouse, N. Y., Hamilton co. Watered by a great many lakes and ponds, which are the sources of numerous streams. The surface is diversified, and the soil productive, although a large part of the town is as yet a wilderness. 20 miles W. from Lake Pleasant, and 82 N. W. from Albany.

Morehouseville, N. Y., c. h. Hamilton co. Near the S. bank of Canada Creek. 117 miles N. W. from Albany.

Moreland, Pa., Lycoming co. Surface hilly, and watered by Little Muncy Creek. Soil gravelly. 94 miles N. from Harrisburg.

Moreland, Pa., Montgomery co. Drained by Pennypack Creek and its branches. Surface undulating; soil rich loam. 94 miles N. from Harrisburg.

Moretown, Vt., Washington co. Mad River, a branch of the Winooski, waters this town, and gives it good mill sites. The surface is mountainous, and a great part of the soil unfit for cultivation. The settlement was commenced about the year 1790, and the town was organized 3 or 4 years after. 13 miles S. W. from Montpelier.

Morgan County, Aa., c. h. at Summerville. Bounded N. by the Tennessee River, separating it from Limestone and Madison counties, E. by Marshall co., S. by Blount and Walker, and W. by Lawrence co. Drained by Flint River and Cotaco Creek and branches.

Morgan County, Ga., c. h. at Madison. Bounded N. E. by a head branch of Oconee River, separating it from Clarke and Greene counties, S. E. by Putnam co., S. W. by Jasper, and N. W. by Walton co.

Morgan County, Is., c. h. at Jacksonville. Bounded N. by Cass co., E. by Sangamon, S. by Macoupin and Greene, S. W. by Scott co., and W. by the Illinois River, separating it from Pike and Brown counties. Drained by Indian, Mauvaiseterre, Apple, and Sandy Creeks, all mill streams. Soil very fertile.

Morgan County, Ia., c. h. at Martinsville. Bounded N. by Hendricks and Marion, E. by Johnson, S. by Brown and Monroe, and W. by Owen and Putnam counties. Drained by the W. fork of White River and its branches. Surface hilly or undulating; soil of fine quality.

Morgan County, Ky., c. h. at West Liberty. Bounded N. by Fleming and Carver counties, E. by Lawrence and Johnson, S. by Floyd and Breathitt, and W. by Montgomery and Bath counties. Drained by Licking River and its branches.

Morgan County, Mo., c. h. at Versailles. Bounded N. by Cooper, E. by Moniteau and Miller, S. by Camden, and W. by Benton and Pettis counties. Watered by the S. fork of La Mine River, Osage River and its branches, and Moreau Creek. It contains some minerals, and the soil is fertile on the borders of the streams.

Morgan County, O., c. h. at McConnellsville. Muskingum and Guernsey counties are on the N., Monroe and Washington on the E., Washington and Athens on the S., and Perry on the W. The land is hilly, and the soil fertile. Muskingum River runs across the county, and it is also watered by several creeks which rise here.

Morgan County, Te., c. h. at Montgomery. Bounded N. by Fentress and Campbell counties, E. by Anderson, S. by Roane, Rhea, and Bledsoe, and W. by White and Putnam counties. Watered by Emery River and its branches, and by the head branches of the S. fork of Cumberland River. Surface mountainous, being crossed by the Cumberland range.

Morgan, Te., c. h. Morgan co. On the W. side of Emery's River. 156 miles E. from Nashville.

Morgan, Vt., Orleans co. The surface of the town consists of swells and valleys, and is mostly susceptible of cultivation. Timber, generally hard wood. Soil good. A head branch of Clyde River, called Farrand's River, passes through

the E. part of Morgan, and Seymour's Lake, which is about 4 miles long and nearly 2 wide, lies in the central part. It discharges its waters to the S., through Echo Pond, into Clyde River. The settlement was commenced about the year 1800, by Nathan Wilcox. 18 miles N. E. from Irasburg, and 60 N. E. from Montpelier.

Morgan County, Va., c. h. Bath. Bounded N. W. and N. E. by the Potomac River, separating it from Maryland, S. E. by Berkely co., and S. W. by Frederick and Hampshire counties. Drained by Cacapon River and Sleepy Creek, branches of the Potomac. Surface rough and rocky; soil fertile in the valleys.

Morganfield, Ky., c. h. Union co. 10 miles S. of the Ohio River, and 221 W. S. W. from Frankfort.

Morgantown, Ky., c. h. Butler co. On the S. side of Green River. 143 miles S. W. by W. from Frankfort.

Morgantown, N. C., c. h. Burke co. On the S. side of Catawba River. 197 miles W. from Raleigh.

Morgantown, Va., Monongalia co. On the E. bank of Monongahela River, at the head of steamboat navigation, and 295 miles N. W. from Richmond. The centre of an extensive manufacturing region.

Morris, Is., c. h. Grundy co.

Morris County, N. J., c. h. at Morristown. Bounded N. by Sussex and Passaic counties, E. by Essex, S. by Somerset and Hunterdon, and W. by Warren co. Watered by Passaic River and its tributaries, Rockaway and Whippany Rivers, and by the head branches of Raritan River. Surface hilly and mountainous in the N. portions, abounding with magnetic iron ore; soil principally red shale. The Morris Canal traverses this county.

Morris, N. J., Morris co. Drained by Whippany River and by small streams flowing into the Passaic River, which bounds it on the W. and S. Surface hilly in the N. and central, but more level in the S. portions.

Morris, Pa., Tioga co. The surface of this town is hilly; soil gravel and clay. 133 miles N. by W. from Harrisburg.

Morrisania, N. Y., Westchester co. On the N. E. side of Haerlem River.

Morristown, Is., c. h. Henry co. 4 miles S. from Green River, and 141 N. N. W. from Springfield.

Morristown, N. J., seat of justice of Morris co. 53 miles N. by E. from Trenton. Situated on an elevated plain, and commanding a fine view of the adjacent country. It is one of the most beautiful villages in the Union. It is regularly laid out, with streets crossing each other at right angles, on which are many elegant private dwellings, with tasteful yards and gardens, giving an air of neatness and comfort. There is in the centre of the town a large public square, enclosed with a handsome fence, and ornamented with trees, on which front many of the stores, hotels, and other buildings. The Morris County House, located here, is one of the most magnificent hotels in the country. The First Presbyterian Church fronts upon the square, besides which there are four or five other churches in the village.

There are extensive manufactories of carriages in Morristown, and a great variety of mechanic shops. The Speedwell Iron Works are here. The Morris and Essex Railroad connects this

place with Newark, 19 miles E., and thence, by the Jersey Railroad, with New York, from which the distance is 26 miles.

The American army under Washington had their winter quarters twice in Morristown and the vicinity. The dwellings occupied on these different occasions as the general's head quarters are objects of interest to the visitor. The remains of an old revolutionary fort are still seen in the rear of the court house.

Morristown, N. Y., St. Lawrence co. Bounded on the S. E. by Black Lake, and N. W. by the St. Lawrence River. Surface undulating; soil chiefly clay loam. 25 miles S. W. from Canton, and 194 N. W. from Albany.

Morristown, O., Belmont co. 105 miles E. from Columbus.

Morristown, Vt., Lamoille co. The soil is of a good quality, and easily cultivated. Morristown is, in point of agricultural products, the second in the county. Lamoille River and several other streams pass through the town. Along the river are some fine tracts of intervals, and on it are two excellent mill sites. Morristown is a pleasant, flourishing village, situated near the Great Falls. At the falls, a few rods W. of the village, holes are worn in the solid rock by the water, some of which are nearly 8 feet deep and 4 broad. The river at this place pours itself into a channel, cut directly across the stream, 20 feet deep and 30 broad. This channel the early settlers denominated the pulpit, from the resemblance of the rocks at the N. end. Cadysville is situated 2 miles below Morristown, and bids fair to become a place of considerable business. At the centre of the town is a small village, pleasantly located. In the S. E. corner of the town is Joe's Pond. The People's Academy, in this town, was incorporated in 1847. Mr. Jacob Walker, from Bennington, commenced a settlement here in the spring of 1790. Morristown lies 3 miles S. from Hydepark, and 30 N. from Montpelier.

Morrisville, N. Y., c. h. Madison co. 102 miles W. by N. from Albany.

Morrisville, Pa., Bucks co. On the W. bank of Delaware River, opposite Trenton. 125 miles E. from Harrisburg. It has a good water power. The Delaware is here crossed by a bridge 1100 feet long. The Delaware Canal and the railroad from Bristol to Newark both pass through it.

Morrow County, O., c. h. at Mount Gilead. S. central part of the state. Traversed by the railroad from Cleveland to Columbus.

Moscow, Me., Somerset co. On the E. side of the Kennebec. 53 miles N. from Augusta.

Moscow, N. Y., Livingston co. Situated on high ground, 1 mile W. from Genesee Flats, and 236 miles W. from Albany.

Mottville, N. Y., Onondaga co. At the outlet of Skaneateles Lake. 149 miles W. by N. from Albany.

Moulton, Aa., c. h. Lawrence co. On the E. side of Big Nance Creek. 20 miles S. from Tennessee River, and 103 miles N. from Tuscaloosa.

Moultrie County, Is. E. central part of the state. Watered by the Upper Kaskaskia River and its affluents.

Moultonboro', N. H., Carroll co. This town lies on the N. W. shore of Winnepesaukee Lake. Its surface is broken by mountains and ponds. Red Hill, 2000 feet above the sea, lies wholly in this town, commanding most beautiful prospects of the lake and country. Squam Lake lies partly

in this town, and Long Pond, both beautiful sheets of water. Red Hill River passes through this town, emptying into the Winnepesaukee. First settlers, Ezekiel Moulton and others. 50 miles N. from Concord.

Mount Airy, Va., Pittsylvania co. S. W. by W. from Richmond 145 miles. Little more than a mile from this village is a sulphur spring.

Mount Carmel, Is., c. h. Wabash co., occupies high ground on the W. side of Wabash River, opposite the mouth of White River. 166 miles S. E. from Springfield.

Mount Carroll, Is., c. h. Carroll co.

Mount Clemens, Mn., c. h. Macomb co. On the N. bank of Clinton River. 18 miles N. E. from Detroit. Small vessels come to this place, and a steamboat runs to Detroit.

Mount Desert, Me., Hancock co. On the island of that name. 100 miles E. from Augusta. It has a good soil, and a number of excellent harbors.

Mount Gilead, O., c. h. Morrow co.

Mount Holly, N. J., c. h. Burlington co. On Rancocas Creek, at the head of navigation. 18 miles S. from Trenton. A pleasant town, with considerable commerce and manufactures.

Mount Holly, Vt., Rutland co. Mill River is the only stream of consequence. In the northeastern part is a considerable pond, called Palche's Pond. The soil is similar to that of the mountain towns, being better adapted to grass than grain. In 1848, the two tusks, one grinder, and several of the bones of a fossil elephant were found in this town, at the summit of the Green Mountains, 1360 feet above the sea. They were found in the bottom of a muck bed, 13 feet below the surface. The settlement was commenced in 1781. 60 miles S. W. from Montpelier, and 17 S. E. from Rutland.

Mount Joy, Pa., Adams co. Between Willoway's Creek on the E., and Rock Creek on the W. Surface level; soil red shale. 6 miles S. from Gettysburg.

Mount Joy, Pa., Lancaster co. Bounded E. by Chiques Creek, and N. W. by Conewago Creek. Surface undulating; soil calcareous loam. 25 miles S. E. from Harrisburg.

Mount Morris, N. Y., Livingston co. The surface is diversified; soil good clay loam. 10 miles S. from Genesee.

Mount Pleasant, Ia., c. h. Martin co.

Mount Pleasant, Io., c. h. Henry co. A flourishing place, with good schools.

Mount Pleasant, N. Y., Westchester co. It is bounded E. by Broux River, W. by Tappan Bay, an expansion of the Hudson, and by Croton River, while Saw Mill River waters the central part. A somewhat celebrated mineral spring is situated 3 miles E. from Sing Sing village. Surface chiefly hilly; soil of good quality. There are extensive marble quarries in the neighborhood of Sing Sing, and a copper mine was formerly worked in this town. (See *Sing Sing*.) 6 miles N. W. from White Plains, and 125 miles S. from Albany.

Mount Pleasant, Pa., Adams co. Drained by Plum and White Runs, branches of Rock Creek, and Swift and Bush Runs, branches of Conewago Creek. Surface level; soil red shale. 17 miles E. from Gettysburg.

Mount Pleasant, Pa., Westmoreland co. Drained by Big Sewickly and Jacob's Creeks. Surface slightly uneven; soil gravel and loam. 170 miles W. from Harrisburg.

Mount Pleasant, Pa., Wayne co. Watered by the head branches of Lackawaxen, Dyberry, and Great Equinunk Creeks.

Mount Sterling, Ky., c. h. Montgomery co. On a small branch of the S. fork of Licking River. 59 miles E. from Frankfort.

Mount Tabor, Vt., Rutland co. Otter Creek rises in this town, by a branch on each side of a mountain. Most of the land is unfit for cultivation, it being so high on the Green Mountain range. Although the surface is elevated and uneven, it affords good pasturage for cattle. The town was chartered in 1761. A part of Danby was annexed to it in 1848. 66 miles S. by W. from Montpelier, and 19 S. by E. from Rutland.

Mount Vernon, Aa., Mobile co. 3 miles W. from Mobile River, and 184 miles S. by W. from Tuscaloosa.

Mount Vernon, Ga., c. h. Montgomery co. 112 miles S. E. by S. from Milledgeville.

Mount Vernon, Is., c. h. Jefferson co. 129 miles S. S. E. from Springfield.

Mount Vernon, Ia., c. h. Posey co., occupies very high land on a N. bend of Ohio River. 188 miles S. W. by S. from Indianapolis.

Mount Vernon, Ky., c. h. Rock Castle co. 75 miles S. S. E. from Frankfort.

Mount Vernon, Me., Kennebec co. This town lies W. of Belgrade, E. of Vienna, and 15 miles N. W. from Augusta. Incorporated 1792. There are three pleasant villages in the town; the soil is remarkably good, and is watered by a number of beautiful ponds and small streams.

Mount Vernon, N. H., Hillsboro' co. There is but one stream of any note, and this was called by the Indians *Quohquinapassakessanagnog*. The situation is elevated, and on the highest point is a flourishing village. This town was taken from Amherst in 1803. First settlers, see *Amherst*. 3 miles N. W. from Amherst, and 29 S. W. from Concord.

Mount Vernon, O., seat of justice of Knox co. Situated 45 miles N. E. of Columbus, on ground slightly ascending from Vernon River, which is one of the best and most durable streams in the state, affording at this place a good hydraulic power. The town is substantially and compactly built, and some of the structures are elegant. The principal business street is about a mile long, on which there are many brick blocks 3 stories in height. The court house is a superior building of its kind. The Episcopal Church is an elegant stone edifice, near the public square. Besides this church, the town contains churches of the Presbyterian, Baptist, Methodist, Lutheran, and Roman Catholic denominations. A railroad, to connect Sandusky with Columbus, is completed as far as Mount Vernon. A canal has been constructed about half the distance, to connect this place with the Grand Ohio Canal at Roscoe. This town, with the country around it, has always been considered as among the most healthy sections of the state. Population in 1840, 2363; in 1850, 3710.

Mount Washington, Ms., Berkshire co. See *Fashionable Resorts*.

Muhlenburg County, Ky., c. h. at Greenville. Bounded N. and E. by Green River and one of its branches, separating it from Owen, Ohio, and Butler counties, S. by Logan and Todd counties, and W. by another branch of Green River, separating it from Madison co.

Muncietown, Ia., c. h. Delaware co. On the S.

bank of White River, at an elevation of 30 feet. 58 miles N. E. from Indianapolis. There is a good water power here.

Muncy, Pa., Lycoming co. Bounded E. by Muncy and W. by Loyalsock Creek. Surface mountainous; soil diversified. Situated 13 miles N. E. from Williamsport.

Muncy Creek, Pa., Lycoming co. Drained by Big and Little Muncy Creeks, tributaries of the W. branch of Susquehanna River. Surface hilly; soil clay. Distance S. E. from Williamsport 13 miles.

Murfordsville, Ky., c. h. Hart co. On the N. bank of Green River. 111 miles S. W. from Frankfort.

Murfreesboro', Tc., c. h. Rutherford co., occupies an elevated position in a fertile country, on a branch of Stone Creek. S. E. from Nashville 34 miles. It was once the capital of the state.

Murphy, N. C., c. h. Cherokee co. At the junction of Hiawassee and Valley Rivers, 367 miles W. by S. from Raleigh.

Murray County, Ga., c. h. at Spring Place. Bounded N. by Tennessee, E. by Gilmer co., S. by Cass, and W. by Floyd and Walker counties. Drained by Oostanula River and tributaries. Surface mountainous; soil productive.

Murray, N. Y., Orleans co. Watered by Sandy Creek. It is a level town, with a good soil. 8 miles E. from Albion village, and 245 N. N. W. from Albany.

Muscoogie County, Ga., c. h. at Columbus. Bounded N. by Harris and Talbot counties, E. by Marion, S. by Stewart co., and W. by the Chattahoochee River, separating it from Alabama. Upotoi Creek and branches, tributaries of the Chattahoochee, drain this county.

Muscatine County, Io., c. h. at Bloomington. Bounded N. and E. by Cedar and Scott counties, S. E. by the Mississippi River, separating it from Illinois, S. by Louisa, and W. by Johnson co. Drained by Red Cedar River and its branches, and Pine Creek, a good mill stream. Soil rich, particularly in the E. portions, and in the Mississippi is a large fertile island, belonging to this county, and called the Muscatine Slue.

Muskingum County, O., c. h. at Zanesville. Situated towards the S. E. part of the state, having Coshocton county on the N., Guernsey on the E., Morgan on the S., Perry on the S. E., and Licking on the W. It is about 27 by 28 miles in extent. It was organized in 1804. Persons began to settle in several places in this county as early as 1798, and after the lands came into the market, in 1801, the county was rapidly settled by emigrants, principally from the Eastern States. Its principal streams are the Muskingum and Licking Rivers, which unite at Zanesville, and several other smaller streams or creeks. The whole county lies in the coal region of Ohio; but in the neighborhood of the Muskingum River that mineral is found in great abundance and in great purity. Pipe clay, and also a peculiar kind of clay suitable to be used for crucibles, cellula-quartz, of which the burr-millstones are made, and iron ore, are found in different sections of the county. Salt is manufactured to a considerable amount from water obtained by boring into a stratum of whitish sandstone, which lies at the depth of from 350 to 700 feet, dipping from the N. in a southerly direction.

The national road passes through this county, and crosses the river at Zanesville. Upon this road

there is a vast amount of travel. The Muskingum is navigable for small steamboats to Dresden, 16 miles above Zanesville; from which point a canal, 2 miles long, forms a connection with the Ohio Canal, which itself traverses 3 of the north-western townships of the county.

Mystic, Ct. In the town of Stonington, New London co. On the E. bank of Mystic River, opposite Portersville. 52 miles S. E. from Hartford. The two places are connected by a bridge.

Mystic Bridge, Ct. In the town of Groton, New London co. 56 miles S. E. from Hartford. Connected with Mystic village by a bridge. The river is navigable to the bridge for vessels of 400 tons. The people are employed in coasting and the whale fishery. Several vessels are employed as wreckers along the coast. Considerable business is done here in ship building.

Nacogdoches County, Ts., c. h. at Nacogdoches. In the E. part of the state. On the N. E. bank of the Neches.

Nahant, Ms., Essex co. See *Fashionable Resorts.*
Nansemond County, Va., c. h. at Suffolk. Bounded N. by Isle of Wight and York counties, E. by Norfolk co., S. by North Carolina, and W. by Southampton co. Watered on the N. E. border by James, and S. W. by Blackwater Rivers. Drained by branches of Nansemond River. It contains a part of Dismal Swamp, and Lake Drummond in this swamp supplies the Dismal Swamp Canal by means of a feeder 5 miles in length. Soil fertile in many portions.

Nanticoke, N. Y., Broome co. Watered by Nanticoke Creek, a branch of the Susquehanna River. Surface undulating; soil suitable for grass. 14 miles N. W. from Binghamton, and 144 S. of W. from Albany.

Nanticoke Springs, N. Y., Broome co. Here is a sulphur spring of considerable note. W. S. W. from Albany 142 miles.

Nantucket, Ms., county and town. On an island of the same name in the Atlantic Ocean, about 30 miles S. of Cape Cod. This island is about 15 miles in length from E. to W., and about 4 miles in average breadth, containing about 50 square miles. It is mostly a plain, varying from 25 to 40 feet above the level of the sea, entirely destitute of trees and shrubbery, or any sign of them, although it was once covered with forest. The highest point of elevation on the island is 80 feet above the sea. The land is owned in common by proprietors, and not fenced, excepting a few house lots adjoining the town. As many as 500 cows and 7000 sheep used formerly to feed together in this large pasture. They are now excluded, however, by the proprietors from the common field.

In 1759, the title to this island was granted by Governor Mayhew, whose ancestor, Thomas Mayhew, had obtained it of William, Earl of Stirling, at New York, in 1641, to 27 proprietors, many of whom settled at Nantucket. Among them was Peter Folger, — a man of great influence, whose daughter became the mother of Dr. Franklin, — and three men by the name of Coffin. Both of these names have numerous representatives on the island at the present day. The Coffin School at Nantucket originated in a donation by Admiral Sir Isaac Coffin, of the British navy, who visited this place in 1826; and finding that a large part of the inhabitants were more or less remotely related to him, expressed a desire to confer on

his kindred some mark of his attachment. By his liberality, after taking measures to ascertain the preference of the people in regard to the way in which it might be most acceptably applied, a building was provided for a school of a high order, and a fund of about \$12,500 invested for its permanent support. For many years past, great attention has been paid to education in Nantucket, and the public schools, as well as others, will not suffer in comparison with any in the state.

The town is situated at the bottom of a bay, on the N. side of the island, made by two points of the beach, nearly three fourths of a mile apart, on one of which, called Brant Point, is a lighthouse. The harbor of Nantucket is good, with seven and a half feet of water at low tide on the bar at its mouth. The town is built on a site where the ground ascends more rapidly from the water than at almost any other part of the shore. It embraces nearly all the houses on the island, and is very compactly built. Many of the streets are very narrow, and the houses are mostly constructed of wood. There are many handsome buildings, however, both of wood and of brick; and some of the churches, of which there are nine or ten in number of various denominations, are tasteful edifices. There are several fine buildings for the public schools. The Nantucket Athenæum, incorporated in 1834, has a commodious building, with an Ionic portico in front; erected in 1847, after the burning of the former edifice, in which are contained a library of over 2500 volumes, and a large number of interesting curiosities, chiefly from the islands in the Pacific Ocean. In the upper story is a fine hall for public lectures.

The whale fishery commenced at Nantucket in 1690; and this place is more celebrated than any other for the enterprise and success of its inhabitants in that species of nautical adventure. Indeed, it has been the mother of this great branch of wealth in America, if not in the world. The first establishments in New Bedford were started by persons from Nantucket. Of late a considerable diversion from this business has been occasioned by the tide of adventure setting to California; so that the statistics of the whale fishery, if taken now, would not perhaps exhibit fairly the amount of energy and of capital ordinarily embarked in it. In the year ending April 1, 1844, Nantucket employed 78 vessels in the whale fishery, the tonnage of which was 26,684 tons; 1,086,488 gallons of sperm and whale oil were imported, the value of which was \$846,000. The number of hands employed was about 2000. The capital invested was \$2,730,000, including the ships and outfits only.

There are manufactures, on the island, of vessels, whale boats, bar iron, tin ware, boots, shoes, oil casks, and candle boxes. The whole amount of the manufactures of oil and candles, in 1844, was \$1,375,745.

On the night of the 13th of July, 1846, a fire broke out in the most compact part of the town, and in a few hours it destroyed not less than 350 buildings; among which were two banking houses, a church, the Athenæum, seven oil and candle factories, &c. The loss was estimated at \$900,000.

The village of Siasconset is situated at the S. E. extremity of the island, about 7 miles from the town, and contains about 70 houses. The cod fishery was carried on there a few years since, but of late it has been nearly relinquished. The

houses, with few exceptions, are occupied only in the warm season. A fine hotel is maintained here, affording the most genteel accommodations during the season of company. The village is compactly built on a level grass plat, near the edge of a steep cliff, the land rising in the rear so as to cut off a view of the town of Nantucket. This place presents uncommon attractions in the warm season for invalids and persons seeking recreation. It has a fine bracing air and excellent water. In front of the village "the eye rests on a broad expanse of the Atlantic, and below, the surf, rolling and breaking, gives animation to the scene by day, and lulls to repose by night."

An excellent steamboat plies between Nantucket and New Bedford, touching at Holmes Hole, on Martha's Vineyard, and Wood's Hole, 5 miles from Falmouth. The distance from Boston to Nantucket is 110 miles, of which one half is travelled by railroad, and the other half by steamboats.

Naples, Is., Scott co. Located on Illinois River, 2 miles above the entrance of the Mauvaise-terre, and 56 miles W. from Springfield. The trade of this place is extensive. Steamboats in great numbers arrive here.

Naples, Me., Cumberland co. This town was formed from Otisfield and Raymond, and incorporated in 1834. It is watered by Sebago and Songo Ponds, and Crooked and Muddy Rivers. It has good mill privileges and a productive soil. Naples lies 63 miles W. S. W. from Augusta, and 27 N. N. W. from Portland.

Naples, N. Y., Ontario co. The outlets of Canandaigua and Honeoye Lakes water this town, the surface of which is hilly, and the soil clay loam, based upon slate. 18 miles S. from Canandaigua, and 211 W. from Albany

Napa County, Ca. On the height of land between the Sacramento and the coast.

Napoleon, O., c. h. Henry co.

Napoli, N. Y., Cattaraugus co. Coldspring Creek waters this town, which has an elevated and rolling surface and productive soil. 12 miles W. from Ellicottville, and 307 S. of W. from Albany.

Nash County, N. C., c. h. at Nashville. Bounded N. by Halifax co., E. by Edgecombe, S. by Johnson, and W. by Franklin co. Drained by Moccasin River, and Tar River and branches.

Nashua, N. H., Hillsboro' co. This town, which was called Dunstable until 1836, originally embraced a large extent of territory.

In the N. E. corner of the town, (and in Nashua,) on Nashua River, is the flourishing village of Nashua, the centre of a large trade and the seat of important manufactures. The village lies partly in Nashua and partly in Nashville, the river forming the dividing line. (See *Nashville*.) That part of the village lying in Nashua contains 4 churches, a beautiful town house, a large number of handsome dwelling houses, stores, public houses, &c.

The Nashua Manufacturing Company was incorporated in 1823. It has 4 mills, two 155 feet in length, 45 in breadth, and 6 stories in height; two about 190 feet in length, 50 feet in breadth, and 5 stories high. They contain 37,000 spindles, 100 looms, and manufacture 13,000,000 yards of cloth per annum, use 10,000 bales cotton, weighing 4,000,000 pounds, and their pay roll is about \$16,000 every 4 weeks. Their canal is 3 miles long, 60 feet wide, and 8 feet deep, head

and fall 36 feet. There are about 1000 females and 200 males employed in these mills.

In 1845, the Nashua Company built a large machine shop; the main building is 150 feet long, with an addition of 153 feet, used for a blacksmith's shop, furnace, &c. The main building is occupied by shuttle and bobbin makers, locksmiths, gunsmiths, manufacturers of axes, hoes, ploughs, and by artisans in other branches; there are about 300 men employed in this concern. About \$40,000 worth of mortise locks and latches for dwelling house doors, and rose-wood and brass knobs for the handles of the same, are manufactured annually.

In 1845, a large and extensive iron foundry was erected; more than 4000 pounds of castings per day are manufactured from pig iron; 18 tons can be melted in 12 hours; more than 30 men are employed, and the business exceeds \$40,000 a year.

The same year a cotton manufacturing establishment went into operation in the Salmon Brook, at the "Harbor," so called; about \$30,000 worth of goods are annually manufactured. There are also other valuable manufactures on Nashua River and the waters of Salmon Brook. In the spring of 1848, an extensive concern went into operation for making railroad iron.

The soil of Nashua has considerable variety. The land in the E. part of the town, on Merrimac River, is level and fertile, as well as some portion of the valleys of the Nashua and Salmon Brook, but a considerable part of the town is sandy or uneven. It is watered by Salmon Brook, a small stream flowing from Groton, Ms., and emptying into the Merrimac, and by the Merrimac and Nashua Rivers.

This was the earliest settlement in the southern part of New Hampshire. It was incorporated in 1673, and settled before that time. Since 1679 it has had a settled minister. It was a frontier settlement for 50 years, and as such peculiarly exposed to Indian attacks. In 1675, during Philip's war, it was abandoned. In 1691, several persons were killed in town by the Indians. From this time to 1706, frequent attacks were made, and ravages committed, in one of which, the celebrated friendly Indian, Joc. English, was killed. In 1724, 2 persons were captured in Nashua, and carried away. A party of 11 persons started in pursuit, but were soon waylaid by the Indians, and 10 of them killed. The only survivor was Josiah Farwell, who was the next year lieutenant in Lovewell's expedition.

In 1725, Captain John Lovewell, of this town, raised a company of volunteers, and marched northward in pursuit of the enemy. In his first expedition, they killed 1 Indian and took 1 prisoner; in his second excursion, they killed 10 Indians, but in his third expedition, he fell into an ambuscade at Lovewell's Pond, in Fryeburg, Me. Captain Lovewell, Lieutenant Farwell, and Ensign Robbins, all of this town, were killed, as also the chaplain, Mr. Frye, and 12 others, and 11 wounded. In this conflict the noted chief Pangus was killed. The blow fell heavily upon the feeble settlement, but it was a triumph for New England. The power of the Indians was broken forever, and song and romance have embalmed the memory of the heroes of "Lovewell's Fight."

Dunstable belonged to Massachusetts till the division line between the two provinces of Massachusetts and New Hampshire was settled in

1741. It was incorporated by New Hampshire, April 1, 1746, and the name altered to Nashua, in December, 1836.

Distances, 35 miles S. of Concord, and 40 N. from Boston by railroad, and about 12 miles S. E. from Amherst. A railroad passes from this place to Worcester and Providence.

Nashville, Ia., c. h. Washington co. On an elevated prairie, at the head of Little Crooked Creek, and 118 miles S. by E. from Springfield.

Nashville, Ia., c. h. Brown co. On the N. side of Salt Creek, 54 miles S. from Indianapolis.

Nashville, N. C., c. h. Nash co. On the S. side of Peach Tree Creek, a branch of Tar River, and 44 miles E. by N. from Raleigh.

Nashville, N. H., Hillsboro' co. This town was taken from Nashua and incorporated June 23, 1842. The soil on the rivers and other streams is rich, but elsewhere is light and sandy. In the S. E. corner of the town is a considerable portion of Nashua village. The cemetery in this village is beautiful. It lies in a grove in the rear of the Unitarian Church, occupying about two acres. Cost of ground, fences, walks, &c., about \$3000. In this place are large manufactories, on the Nashua River, opposite to Nashua. See *Nashua*.

Nashville, city, capital of the state of Tennessee, and seat of justice for Davidson co., is situated on the S. side of Cumberland River, 120 miles from its mouth, and at the head of steamboat navigation. Population in 1830, 5566; in 1840, 6929; in 1850, 10,500.

The city is pleasantly located upon a high and healthy site, of undulating surface, varying from 50 to 175 feet in elevation from the level of the river. The foundation is rocky, the soil thin, and dotted here and there with beautiful groves of cedar, giving to the environs a pleasing variety of landscape scenery. Owing to the salubrity of its situation, Nashville is the resort of considerable numbers from the lower parts of the country during the sultry heats of summer. The city was originally laid out upon a ground plot of 200 acres, with building lots of one acre each, four acres being reserved for the public buildings. But these boundaries have been subject to many variations. There is a public square in the centre of the city, in which the court house is placed, which is a handsome edifice, 105 feet in front by 63 feet in depth, and two stories high, besides the basement. It is surmounted by a dome, the top of which is 90 feet from the ground, supported by eight Ionic columns. The market house, situated also in the public square, is one of the finest buildings in the west. There are spacious apartments in the building occupied as a city hall and recorder's office. The Episcopal Church is a fine stone building, in the Gothic style of architecture. The Presbyterian and the Methodist Churches, and some others, are large and elegant buildings. There are ten or twelve churches in the city, of the various denominations. The state house has a commanding location on the highest ground in the city. The site, consisting of four acres of ground, was purchased by the city at a cost of \$30,000, and presented to the state for the purpose. There is a female academy, situated in the western part of the city, which is a flourishing institution, and several other schools for young ladies, of a high order of excellence. The primary schools for both sexes are numerous and good. Few cities are better provided with means of instruction for the young.

This city is the seat of Nashville University, which was founded in 1806. The main college building is 200 feet long, 50 feet wide, and three stories high. This building has wings, and is accompanied by a spacious building for the accommodation of the chemical laboratory. All the university buildings, except the president's house, are within the college campus, which includes eight acres. The Lunatic Hospital is a large and commodious building, which will accommodate over 100 patients. Vauxhall Garden, in the S. part of the city, is a pleasant place of resort for promenading and for popular recreations. It is provided with a circular railway, upon which a light pleasure car is propelled by the hand of the rider. In the suburbs of the city is a spring strongly impregnated with sulphur, with accommodations provided for cold and warm baths.

A number of steamboats of the first class are owned in Nashville, which ply between this city and Cincinnati, and other places. A railroad is in process of construction from Nashville to Chatanooga, in the southern border of the state, a distance of 150 miles, which, when completed, will afford an uninterrupted railroad communication between Nashville and Charleston, S. C., and also by a separate line part of the way between Nashville and Savannah, Ga.

About 12 miles distant from Nashville is the retired and quiet country seat of the late president of the United States, Andrew Jackson, familiarly known as the "Hermitage." As the name he gave to it implies, the place which he had selected for his private residence was in a rural situation, rather remote from other habitations. The house is stately in its size, and symmetrical in its proportions, but makes no great architectural display. To this quiet home, after retiring from the presidential chair in 1836, General Jackson withdrew to pass the remainder of his days in the bosom of his family, continuing still, through the great popularity of his name, to exert a silent but extensive influence upon the politics of the country. Here, on the 8th day of June, 1845, he breathed his last, in the 79th year of his age.

Nassau County, Fa., c. h. at Fernandina. Is bounded W. and N. by St. Mary's River, separating it from Georgia, E. by the Atlantic Ocean, and S. by Nassau River, partly separating it from Duval co., and by Columbia co. Surface level, and somewhat marshy. Amelia Island extends along its sea-shore on the E. boundary.

Nassau, N. Y., Rensselaer co. Watered by Kinderhook Creek and its branches. The surface is rather hilly; soil very fertile. 16 miles S. E. from Troy, and 12 S. by E. from Albany.

Natchez. City, and seat of justice for Adams co., Mi. Situated on a high bluff on the E. bank of the Mississippi, 100 miles S. W. from Jackson, the capital of the state, and 279 miles by the river above New Orleans. The bluff on which Natchez is built is in some parts nearly 300 feet above the river, and is entirely composed of clay, unmixed with the smallest pebble; the whole resting on a substratum of pudding stone rock, which appears in view only when the water in the river is at a very low stage.

Natchez under the Hill, as it is called, is a portion of the place which lies upon the margin of the river, consisting of warehouses, stores, and shops, for the accommodation of the landing. But the

greater portion of the city is situated on the elevated ground, and is laid out in a rectangular form, with broad streets, which are extensively ornamented with the China tree. The surface of the ground on which the city stands, and of the whole adjacent country, is uneven, undulating like the rolling of the sea in a storm, and presents a strong contrast to low and level surfaces of the boundless cypress swamps of Louisiana seen on the opposite side of the river. Many of the houses are elegant, though generally the style of building is plain. They are mostly of wood, one story high, with a piazza and balcony. The houses of the more wealthy are situated widely apart, each occupying a square, surrounded with the palmetto, orange trees, and other beautiful shrubbery. This class of the inhabitants is distinguished for intelligence, refinement, and hospitality.

The city contains a court house and jail, a hospital, an orphan asylum, a masonic hall, a theatre, two or three banks, and several churches. There are oil mills here, operated by steam, for manufacturing oil from the cotton seed. The cotton crop is extensively cultivated in the vicinity, and Natchez was formerly the principal mart in this region for this important product. In 1820, the exports of cotton exceeded 35,000 bales. The business and prosperity of the place, however, has, from various causes, materially declined from what it once was. The hurricane of 1836, which destroyed a vast amount of property, the failure of the banks, which followed soon after, the depression in the price of cotton, accompanied by the emigration to Texas, which about this time drew off many of the most enterprising inhabitants, have had a disastrous effect upon the prosperity of Natchez. Its trade, however, is still considerable, as indicated by the steamboats which are continually arriving and departing on the river.

Natchez was first settled by the French in 1716. From its geographical position, and the wealth which has been expended upon its decorations, it has long been considered as one of the most beautiful places in the lower valley of the Mississippi. Its elevated site affords a fine view of this majestic river, with the numerous craft moving to and fro upon its waters, of the village of Concordia on the opposite bank, and the vast region of country spreading out beyond. Although the city is liable occasionally to be visited with the bilious and intermittent fevers of the climate, yet its location is comparatively advantageous in this respect, and in most seasons it proves a healthful and an agreeable place of residence.

Natchitoches Parish, La., c. h. at Natchitoches. Bounded N. by Claiborne parish, E. by Catahoola and Rapides, S. by Rapides, and W. by Sabine and Caddo parishes. Drained by Red River and its tributaries. The soil is mostly sterile, but bordering on the streams is some good land, well adapted to the growth of cotton.

Natchitoches, La., c. h. Natchitoches district.

Natick, Ms., Middlesex co. This township was originally granted by the General Court to the Indians, as a place for a permanent residence. It was incorporated into an English district in 1761, and into a town in 1781, by the name of *Natick*, a word in the Indian language signifying "the place of hills." It is watered by Charles River, and contains numerous fish ponds. There are 2 villages, upwards of a mile apart.

Natural Bridge, N. Y., Jefferson co. A natural bridge 15 feet wide, and 6 feet above the water, crosses Indian River at this place. 153 miles N. W. from Albany.

Naugatuck, Ct., New Haven co. A flourishing manufacturing town, on the Naugatuck River. 27 miles by railroad N. by E. from Bridgeport, and 55 N. W. from New Haven. A railroad, connecting with the New York and New Haven Railroad at Stratford, runs up the Naugatuck valley.

Nauvoo City, Is., Hancock co. 124 miles N. W. from Springfield. It is situated on the E. bank of the Mississippi, about 180 miles above the mouth of the River Illinois. This is the site of the celebrated Mormon city founded by Joe Smith and his followers in 1840. It is located on elevated ground, gradually rising from the river to an unusual height, and presenting a smooth and regular surface, which, with the plain at its summit, might amply suffice for the erection of a large city. Upon this beautiful ground Nauvoo was laid out on a very magnificent scale, and many of the houses erected were handsome structures. The streets are of ample width, crossing each other at right angles. Three years after the settlement was begun, the city contained 1000 houses, a large part of which were log cabins, whitewashed. The great Mormon Temple, which stood in fair view from the river, was 128 feet long, 88 feet wide, and 65 feet high to the top of the cornice. The top of the cupola was 163 feet from the ground. It was built of compact, polished limestone, quarried near the spot. It was calculated to contain 3000 people, and was built at a supposed cost of about half a million of dollars. On the 9th of October, 1848, this Temple was destroyed by fire, and now presents only a blackened pile of ruins. Four years previous, the Mormon leader had been arrested, and put in prison, where, soon afterwards, he came to his end by the violence of a mob. The Mormons have since left the place. The population, which at one time was as high as 16,000, is now much less.

Neashock, Mo., c. h. Newton co.

Needham, Ms., Norfolk co., was a part of Dedham until 1711. It is surrounded for more than two thirds of its limits by Charles River. Broad Meadow, lying partly in this town, and the towns of Dedham and Newton, is said to be one of the largest in the state. The town is uncommonly well watered, and is diversified with hills and plains. In the course of the river, which separates this town from Newton, there are 2 falls, called the Upper and Lower Falls, which afford valuable water privileges. At the Upper Falls is the largest cataract in the whole of Charles River. The water here falls 20 feet upon a bed of rocks. There is a manufacturing village at both of these falls, lying partly in this town and partly in Newton. The soil is good, and the encircling river presents much beautiful scenery. 5 miles N. W. from Dedham, and by the Worcester Railroad 13 S. W. from Boston.

Nelson County, Ky., c. h. at Bardstown. Bounded N. by Spencer co., E. by Anderson and Washington, S. by Marion and Laure, and W. by Bullitt co. Drained by the Beech and Rolling Forks of Salt River and their tributaries.

Nelson, N. H., Cheshire co. This town is situated on the height of land between Connecticut and Merrimac Rivers. The surface is hilly, but good for grazing. A branch of Ashuelot and

one of Contoocook River water this town. The best mill privileges are furnished by streams issuing from ponds, of which there are 4, containing 1800 acres. First settlers, Breed Batchelder, and Dr. Nathaniel Breed, in 1767. 40 miles S. W. from Concord, and 8 N. E. from Keene.

Nelson, N. Y. Madison co. Chenango Creek and the head branches of Chenango River water this town, the surface of which is high and slightly uneven, and the soil clay and calcareous loam. 106 miles W. from Albany.

Nelson County, Va., c. h. at Livingston. Bounded N. E. by Albemarle co., S. E. by James River, separating it from Buckingham co., S. W. by Amherst, and N. W. by Augusta co. Drained by Rock, Rockfish, and Tyre Rivers. The Blue Ridge lies on the N. W. border of this county.

Nesho, Mo., c. h. Newton co. 175 miles N. W. from Jefferson City.

Neposet Village, Ms., in the town of Dorchester, Norfolk co. See *Dorchester*.

Nescopeck, Pa., Luzerne co. Watered by the Susquehanna River and its tributaries, Big and Little Walpawlopen, and Nescopeck Creeks. Surface uneven, and some of the bottom land on the streams fertile. 98 miles N. E. from Harrisburg.

Neshoba County, Mi., c. h. at Philadelphia. Bounded N. by Winston co., E. by Kemper, S. by Newton, and W. by Leake co. Drained by Pearl River and its head branches.

New Albany, Ia. City, and seat of justice of Floyd co. 126 miles S. by E. from Indianapolis. Situated on the N. bank of the Ohio River, about 2 miles below the foot of the falls in that river, at Louisville. This is one of the largest places in the state. It is laid out with entire regularity, having 6 streets parallel with the river, nearly E. and W., and eleven running back from the river, intersecting them at right angles. It has churches of the Presbyterian, Episcopal, Methodist, Baptist, Campbellite Baptist, and Roman Catholic denominations. There are a male and a female seminary, a lyceum, and other excellent provisions for the education of the young. A donation of \$5000 was made by the original proprietors to constitute a fund for the support of a public school. There are several ship yards at New Albany, in which a number of steamboats are built annually, and a large business is done in various branches of manufacture. Population in 1840, 4226; in 1850, 10,000.

New Albion, N. Y., Cattaraugus co. Well watered by branches of Cattaraugus Creek on the N., and of the Alleghany River on the S. The surface is high and rather uneven; the soil favorable to the growth of grass and grain. 11 miles W. from Ellicottville, and 306 S. of W. from Albany.

Newark, N. J., city, port of entry, and seat of justice for Essex co., is situated on the W. side of the Passaic River, 3 miles from its entrance into Newark Bay, and 9 miles W. from the city of New York. It stands on a fertile plain, with a rising ground on the W., to which the suburbs of the city extend. Population in 1830, 10,950; in 1840, 17,290; in 1850, 38,893. This is the most populous and flourishing place in the state of New Jersey. The city is regularly laid out, with broad and straight streets, generally crossing each other at right angles. Many of the streets are bordered by lofty and beautiful shade trees, which give an air of elegance and

comfort to the place. There are two large and pleasant public squares, in the heart of the city, which are in like manner adorned with majestic elms. Broad Street, running through the middle of the city from N. to S., is one of the most extensive and beautiful avenues to be met with in any of our populous towns. Newark is well built, having several handsome churches, and other public edifices. The court house, situated upon a commanding site, in the W. part of the city, is a large and elegant building, of brown freestone, in the Egyptian style of architecture. Some of the church edifices are of stone; among which are the First Presbyterian Church, on Broad Street, and the Episcopal Church, on the lower green, or Park, as it is now called. The dwelling houses which front upon this beautiful public parade are among the handsomest in the city. The elevated ground on the W. affords some of the finest situations for gentlemen's seats, many of which are occupied with elegant buildings, and surrounded with the evidences of luxury and taste.

Among the literary institutions in Newark are the Mechanics' Association for Literary and Scientific Improvement, which has a library and philosophical apparatus; the Mercantile and Literary Association, which sustains a course of public lectures; the Newark Library Association, which has accumulated a library of 3000 volumes, open to the public on the most liberal terms; and the New Jersey Historical Society. The Newark Academy was established in 1792, and was distinguished, for many years, as one of the largest and most prominent institutions of the kind in the country. Previous to this date, there had been an academy at Newark, whose building, — a stone building, two stories high, — then standing upon the upper green, was burned by a party of 500 British soldiers from New York, on the night of January 25, 1780.

Newark is very extensively engaged in manufactures, a great part of the products of which are sent to distant markets. Although there are no peculiar natural facilities here for this kind of industry, this want has been abundantly supplied by steam power and other artificial agents, under the direction of human skill and enterprise. About the year 1676, measures were taken to invite mechanics to this place. The first shoemaker appears to have been induced to come into the settlement from Elizabethtown, having been "formally admitted a member of the community, on condition of his supplying it with shoes." The manufacture of shoes, boots, saddles, harness, and the various fabrics of leather, have constituted an extensive branch of the business of Newark in modern times. The tanneries here have been very extensive, the first of which was established as long ago as 1698. Other manufactures, in great variety and abundance, have been produced, the most important of which are hats and caps, carriages, omnibuses, and wagons, cutlery, and jewelry. The number of persons and the amount of capital employed in these large manufacturing operations is such as to constitute this the leading interest of the place although, by its position at the head of ship navigation from the Atlantic, its facilities for commerce, and its investments in that line, have been by no means inconsiderable. The coasting trade employs from 60 to 80 vessels of 100 tons. In 1833, a whaling company was incorporated

here, which has prosecuted the business with success.

The New Jersey Railroad, on its route between New York and Philadelphia, passes through Newark, thus bringing it within half an hour's distance of New York. The Morris and Essex Railroad connects this place with Morristown, in the interior of New Jersey. The Morris Canal also terminates here.

Newark, in its origin, was eminently a New England town, having been settled, in 1666, by a company consisting of 30 families, from Guilford, Branford, Milford, and New Haven, Ct. These families had been preceded by four persons as agents, commissioned to select and lay out the township, who were Captain Robert Treat, John Treat, Jasper Crane, and John Curtis. To the good judgment of these men Newark is indebted for the beautiful location and plan of the city, and for its broad streets and handsome public squares. Nor are these the most important, nor the most characteristic features of its preëminence, derived from its Puritan ancestry. Captain Robert Treat, above named, is the same who was afterwards governor of Connecticut.

Newark, N. Y., Tioga co. Drained by East and West Owego Creeks. Surface hilly; soil fertile in the valleys. 8 miles N. from Owego, and 161 S. of W. from Albany.

Newark, O., c. h. Licking co. On the Ohio and Erie Canal, at the junction of the three main branches of Licking River, and 39 miles E. N. E. from Columbus. A place of large and flourishing business. 176 miles from Cleveland, by the canal.

Newark, Vt., Caledonia co. The Passumpsic River is formed in this town by a collection of streams issuing principally from ponds. The town is not mountainous, but the soil is cold, and generally unproductive. The settlement was commenced about the year 1800. 26 miles N. E. from Danville, and 56 N. E. from Montpelier.

New Ashford, Ms., Berkshire co. This township is situated principally on the steep and rugged hills which make from Saddle Mountain on the E., and the Taconic range on the W., and which here approach each other. In the narrow valley between these hills, along the rise of the western branch of the Housatonic, and the eastern branch of Green River, are some small tracts of feasible land, producing grain, grass, &c.; though the soil in general is hard and gravelly. By these streams, with the connected springs and brooks, the town is well watered. The people of this town pay considerable attention to rearing sheep. Much variegated marble is found here. 13 miles N. from Pittsfield, and by the Western Railroad from Pittsfield, 164 miles W. from Boston.

New Athens, O., Harrison co. The seat of Franklin College. 115 miles E. by N. from Columbus. See Colleges.

New Baltimore, N. Y., Greene co. On the W. side of the Hudson. Drained by Dieppe and Haiwnakraus Creeks. Surface hilly and broken; soil rich clay and sandy loam. 18 miles N. from Catskill, and 15 S. from Albany.

New Barbadoes, N. J., Bergen co. This town is mostly level, and is watered by Hackensack River. Soil red shale and a sandy loam.

New Bedford, Ms. Port of entry, and one of the shire towns of Bristol co. 55 miles S. from Boston. Population in 1790, 3313; 1800, 4361;

1810, 5651; 1820, 6947; 1830, 7592; 1840, 12,087; 1850, 16,464. It stands on the W. side of a small estuary, called Accushnut River, which makes up in a northerly direction into the land from near the western extremity of Buzzard's Bay. The township is 10½ miles in length by about 1 mile in average width. The situation of New Bedford is very beautiful. It is built upon ground which rises rapidly from the water, and the view from Fair Haven, on the opposite side of the River, and from the harbor as the town is approached from the S., is not excelled by that of any other place in the country. It is laid out with much regularity, the streets crossing each other at right angles. The buildings are generally of wood, although several of the finest houses, stores, and other edifices are of brick and stone. The buildings in the upper part of the town are much admired for their neatness and beauty; and many of them have the additional attractions of splendid ornamental grounds and gardens. County Street, which runs the whole extent of the thickly-inhabited part of the town, along the summit of the rising ground upon which it is built, is allowed to be without a rival in this country for its splendid combination of the finest features of natural and artistic beauty.

Among the public buildings most worthy of notice are the town hall, the court house, and the custom house. The town hall is a magnificent structure of granite, 100 feet long, 61 feet wide, and 3 stories high. The lower story is occupied as a market, the second as a hall for public meetings, and the third for offices. This edifice, which, with the land, cost \$60,000, is by many regarded as the handsomest building in New England devoted to civil purposes. The court house is a structure of brick, and near it are the jail and house of correction. The custom house, which is of granite, is of a beautiful design, and makes an imposing appearance. The Friends' Academy is a handsome structure, pleasantly situated on County Street, and environed with beautiful grounds. This institution is exclusively for young ladies.

Few places have been more liberal in providing the means of education in the public schools. These consist of a high school, and about 30 other schools, requiring the services of about 50 teachers. The Social Library, owned by an incorporated association, contains between 4000 and 5000 volumes.

The churches in New Bedford are numerous, and several of the church edifices are handsome and substantial structures. Two of the largest are of stone.

The whale fishery, and the manufacture of the product of that fishery, are the principal branches of business in which the inhabitants of this town are engaged.

As early as the year 1764, we find the settlers in the village of Bedford sending out their small vessels after these monsters of the deep, some of which reached as far south as the Falkland Islands. Suspended by the war of the revolution, the business was vigorously and successfully renewed at its close; and excepting the interruption caused by the second war with England, it has been constantly pursued, and continually increasing.

Much of the sperm oil imported is here prepared for use by the different processes by which spring, summer, fall, and winter oil, as the different kinds are called, are produced, before it

finds its way to the various markets of the country; and from the spermaceti, an article exclusively the product of the sperm whale, is manufactured the spermaceti candle, so universally admired for its beauty, and esteemed for its pleasant light. There are upwards of 20 oil and candle manufactories now in operation in the town. A large proportion of the right whale oil is exported to the north of Europe.

Quite a number of ships were lately withdrawn from the whaling business for the California trade. They were generally of the older class, soon to be replaced by others.

As a necessary appendage to the fisheries, the coopering business is extensively carried on.

Ship building and ship repairing employ many of the mechanics of the town. No better ships float the ocean than some of those which have been launched from the ship yards of New Bedford.

The New Bedford Railway and Wharf Company have a capital of \$50,000, and on a small island, owned by the company, they have a marine railway, which affords great facilities for cleaning and repairing the smaller class of vessels.

There is an extensive steam cordage factory, the machinery of which is moved by 2 engines of 20 horse power each, and turning out annually 400 tons of cordage. There is also in operation a manufactory of Prussian blue.

An immense building has lately been erected for manufacturing and mechanical purposes. The power is steam. Apparatus for grinding grain, working iron, and planing and sawing, is in operation here.

Another planing mill, a large blacksmith shop, a block manufactory, a foundry, a coppersmith establishment, a frame factory, and 1 or 2 other mechanics' establishments, have steam engines connected with them.

The harbor of New Bedford is safe and capacious, though not very easy of access. It has 3 to 4 fathoms of water. A wooden bridge and causeway, three fourths of a mile in length, connect this town with Fair Haven.

New Bedford is connected by railroads with Boston, Providence, and Fall River. A steamboat plies regularly between this place and Nantucket, touching at Wood's Hole in Falmouth, and Holmes Hole on Martha's Vineyard. The distance to Nantucket is the same as to Boston, 55 miles. The whale fishery has proved very lucrative, and New Bedford is thought to be one of the richest cities in proportion to the number of its inhabitants any where to be found.

New Berlin, N. Y., Chenango co. Watered S. and E. by the Unadilla River. Surface undulating; soil moist clay loam of good quality. 8 miles N. E. from Norwich, and 100 W. from Albany.

New Berlin, Pa., c. h. Union co. On the N. side of Penn's Creek. 69 miles N. from Harrisburg.

Newbern, N. C., c. h. Craven co. This is a port of entry, on the S. W. bank of Neuse River, at its junction with the Trent. It was formerly the capital of the state. It is a pleasant and healthy town, and a place of considerable trade. 120 miles E. S. E. from Raleigh.

Newberry District, S. C., c. h. at Newberry Court House. Bounded N. by Union district, E. by Fairfield and Lexington, S. by Edgefield, and W. and N. W. by Laurens district. Watered on

its E. and S. borders by Broad and Saluda Rivers, and drained by their branches; soil fertile in many portions.

New Bloomfield, c. h. Perry co. 34 miles W. by N. from Harrisburg.

New Boston, N. H., Hillsboro' co. Several streams water this town; the largest is the S. branch of Piscataquog River. This town consists of fertile hills, productive vales, and some valuable meadows. The soil is fertile. In the S. part is a considerable elevation, called Jo. English Hill, one side of which is nearly perpendicular. Its height is 572 feet. Beard's and Jo. English Ponds are the only ones of note. From Amherst 9 miles N. N. W.

New Braintree, Ms., Worcester co. 6000 acres of this township were granted to people in ancient Braintree, for services rendered to the public in 1670; the residue of the township was taken from Brookfield and Hardwick. It was called "Braintree Farms," until its incorporation, in 1751. The surface is uneven, and the soil generally good. The town is celebrated for good farmers, and the abundance of excellent beef, butter, and cheese produced. The township is finely watered by brooks, rivulets, and springs. Ware River passes its western border. In the W. part of the town is Wenimasset Brook, formed entirely by springs from the adjacent hills. On this brook is an extensive and luxuriant meadow of several hundred acres, called Wenimasset, the name given it by the Indians when a hideous swamp. 18 miles W. N. W. from Worcester, and 62 W. from Boston.

New Brighton, N. Y., Richmond co. On the N. end of Staten Island, 6 miles from New York city. It is much resorted to during the summer. See *Staten Island*.

New Brighton, Pa., Beaver co. A flourishing place on the E. bank of Beaver River, 3 miles above its junction with the Ohio. Here is a good water power, and active manufacturing operations are carried on. The Pennsylvania and Ohio Canal passes through it.

New Britain, Ct., Hartford co. A flourishing village in the town of Berlin. 10 miles W. by S. from Hartford. This place is distinguished for the intelligent enterprise of its inhabitants, who, without water privileges of any amount, or any other peculiar advantages of natural situation, have established and prosperously carried on a greater variety of manufactures than almost any other town in New England. Commencing on a small scale at first, they have rapidly enlarged their operations as the demands of the market have called for and rewarded their exertions. There are now several large establishments where steam power is employed, besides a great amount of labor in shops where little or no assistance from machinery is required. A numerous list of articles in brass, tin ware, plated ware, buttons, hooks and eyes, jewelry, &c., is the produce of this well-directed industry; in which a large amount of capital and a multitude of laborers are constantly employed.

There are two large Congregational churches in New Britain, which have handsome houses of worship, and one each of the Baptist and Methodist denominations. The village is pleasantly situated, and has all those marks of thrift, wealth, and good taste which would be indicated by the facts already mentioned. The Hartford and Fishkill Railroad passes through this place. The

Hartford and New Haven Railroad also has a station within a mile and a half of the village.

New Britain, Pa., Bucks co. Drained by several mill streams flowing into Neshaminy Creek. Surface undulating; soil sandy loam. 96 miles E. from Harrisburg.

New Brunswick, N. J., Middlesex co. City and seat of justice. Situated at the head of steamboat navigation on the Raritan River, 15 miles from its entrance into the bay of the same name. It is 26 miles N. E. from Trenton. The city lies partly in Somerset co., Albany Street being on the dividing line between the counties of Middlesex and Somerset. The ground on which it is built rises rapidly from the river. The streets close upon the river are narrow and crooked, and the ground low; but those in the upper part of the city are broad and regular; and many of the houses are neat and elegant, surrounded by ornamental yards and gardens. Upon the highest part of the city stands the fine edifice of Rutgers' College, founded in 1770, under the name of Queen's College. The present building is constructed of dark red sandstone, and was completed in 1811. The view from the commanding eminence on which it stands is extensive and beautiful; terminated by mountains on the N., and by the Raritan Bay on the E.

The Delaware and Raritan Canal commences at New Brunswick, and extends to the Delaware River, at Bordentown, a distance of 42 miles, intended to furnish an uninterrupted and direct communication between New York and Philadelphia by water. It is 75 feet wide, and 7 feet deep; with 14 locks, 24 feet wide, and 110 feet long; admitting the passage of sloops of 75 or 100 tons' burden. The cost of building this canal was about \$2,500,000.

The New Jersey Railroad, between New York and Philadelphia, passes through New Brunswick; this point being distant from New York 31 miles, and from Philadelphia 56 miles. The railroad is carried into the city over the Raritan, and the canal by its side, upon a fine bridge, constructed upon stone piers.

This city contains 8 or 10 churches of the various denominations. The first established was the Dutch Reformed church, in 1717. The first edifice of the Presbyterian church, erected some time before 1726, was burned down by the British during the revolutionary war.

Through the multiplied means of commerce and communication which New Brunswick enjoys, it is favored with great facilities for business. It is a constant thoroughfare on the great route between New York and Philadelphia and the more southern cities, both by railroad and canal; and vessels of 200 tons come up to its wharves from the Atlantic coast by the Raritan Bay and River.

The first European inhabitants of New Brunswick were from Long Island. "About 1730," the historian tells us, "several Dutch families emigrated from Albany, bringing with them their building materials, in imitation of their ancestors, who imported their tiles, &c., from Holland." They gave the name of Albany Street to the high road on which several of their company settled. One of the first houses is said to be still standing; and others will be noticed by the stranger in Albany and Burnet Streets, which, from their antique structure, are evidently of an early date. New Brunswick was incorporated as a city in 1784. Population in 1850, 10,000.

New Braunfels, Ts., c. h. Comal co.

New Buffalo, Mn., Berrian co. On Lake Michigan, where the Michigan Central Railroad strikes the lake. Connected also by railroad with Chicago.

Newburgh, Me., Penobscot co. This is a good township of land, 54 miles N. E. from Augusta, and 14 S. W. from Bangor. Incorporated 1819. Watered by a branch of the Sowadabscok.

Newbury, Ms., Essex co. This ancient and respectable town, the mother of Newburyport and West Newbury, although reduced in territory, still retains its former reputation and beauty. It was first settled in 1633, and was called by the Indians *Quassacumcon*. This town is well watered by Parker River and the Merrimac. The soil of this town is not naturally of great fertility, but is of that kind which well rewards the industrious cultivator. There are a number of smiling villages in the town. That portion of the town which lies on the S. E. side of Newburyport, and which comprises a part of High Street, so celebrated for its beauty, has recently been annexed to Newburyport. The village of Byfield, partly in Rowley, lies at the S. W. part of the town, 7 miles S. S. W. from Newburyport, while Bellville constitutes the north-western boundary of that town. There is a curious cave in Newbury, called the "Devil's Den," which contains specimens of asbestos, limestone, marble, serpentine, and amianthus. In a pond in the town is a floating island, of about half an acre in extent. Its annual rise and fall is from 4 to 8 feet. Dummer Academy is situated in the parish of Byfield. By the Eastern Railroad, which passes through the town, Newbury lies 3 miles S. from Newburyport, and 31 miles N. by E. from Boston.

Sunapee, N. H., Merrimac co. The S. part of Sunapee Lake lies in the N. W. part of this town. Todd Pond, 500 rods in length, and 60 in width, affords a small branch to Warner River. From Chalk Pond issues a small stream communicating with Sunapee Lake. The land is mountainous; the soil hard and rocky. Newbury was originally called Dantzie; in 1778 it took the name of Fishersfield; in 1837, its present name. First settler, Zephaniah Clark, in 1762. From Concord 30 miles W. by N.

Newbury, N. Y., half shire town of Orange co., lies on the W. side of Hudson River, 85 miles S. from Albany, and 60 N. from the city of New York. It is 20 miles N. E. from Goshen, the other half shire town, which is near the centre of the county. The surface of the township is hilly and somewhat broken, containing, however, much arable land, with a soil well adapted to grass, and much of it well cultivated and productive. It is drained by two or three small streams flowing into the Hudson River.

The village of Newburg has a commanding and beautiful location on the acclivity of a hill rising from the shore of the Hudson to an elevation of about 300 feet. Thus situated, it makes a fine appearance from the river, and itself enjoys, from its upper terraces, an extensive and delightful prospect, embracing West Point and the most prominent summits of the Highlands on the S., the noble river in front, with the village of Fishkill on the opposite side, and the fertile and picturesque valleys beyond, and the Newburg Bay, and a broad champaign country towards the N. On the river margin, about 600 feet in extent, are constructed convenient quays and docks for the accommodation of a large business which centres

here, and for the steamboats which make their regular stops in passing up and down the river. A railroad connects this place with the great Erie Railroad at Chester, about 20 miles S. W.; and a railroad is in progress from Fishkill, on the opposite side of the river, to unite with this branch, and form a connection by way of Hartford, Ct., between Boston and the Erie Railroad.

Newburg was incorporated as a village in 1800. There is here an incorporated academy, a high school, two female seminaries, and a number of select schools, all in a flourishing condition. The Presbyterians, Presbyterians Reformed, Dutch Reformed, Associate Reformed, Methodists, Baptists, Episcopalians, and Roman Catholics have each a church, and some of them 2 each. A great variety of manufacturing operations are carried on here, the heaviest of which are iron foundries, steam engine factories, machine shops, cordage factories, flouring mills, plaster mills, tanneries, carriage and chair factories, an extensive brewery, &c., &c. The population in 1840 was about 6000; in 1850, 11,415.

For a period, near the close of the revolutionary war, Newburg was the head quarters of Washington, and the old stone house, at the S. part of the village, in which the general and his family were accommodated, is still in a good state of preservation. Here it was that the celebrated "Newburg Letters" were addressed to the army, by some of the officers, anonymously, designed to excite them to mutiny; and that Washington, by his great influence, so nobly defeated the design, and secured the confidence and affections of the army for the government. Here, at the close of the war, on the 23d of June, 1783, the army, which had achieved and endured so much in establishing our national independence, was finally disbanded.

Newburg, Te., c. h. Lewis co.

Newburg, Pa., York co. Bounded S. by Cone-wago Creek, and W. by Beaver Creek and Stony Run. Fishing Creek also waters its N. E. corner. Surface undulating; soil gravel and calcareous loam. 12 miles N. from York.

Newbury, Vt., Orange co. This is a beautiful town on the W. side of Connecticut River, and supplied with mill privileges by Wells River and Hariman's and Hill's Brooks. These brooks have their sources in ponds of considerable size. Newbury comprises the tract commonly called the Great Oxbow, on a bend in Connecticut River. This tract is of great extent, and celebrated for its luxuriance and beauty. The town contains a number of mineral springs, of some celebrity in scrofulous and cutaneous complaints. The villages of Newbury and Wells River are very pleasant. This town is connected with Haverhill, N. H., by two bridges. The settlement was commenced in the spring of 1762. The first family was that of Samuel Sleeper. 27 miles S. E. from Montpelier, and 20 N. E. from Chelsea. The Passumpsic Railroad passes through this town.

Newburyport, Ms. City, port of entry, and a shire town of Essex co. 34 miles N. by E. from Boston. Population in 1790, 4837; 1800, 5946; 1810, 7634; 1820, 6852; 1830, 6375; 1840, 7161; 1850, 9572. It is beautifully situated upon a gentle acclivity, on the S. bank of the Merrimac, near its junction with the ocean. Its population occupies an area of about 2 miles in length by about one quarter of a mile in breadth. At the two extremities of this area, upon the river, and so

closely connected with the town as to appear one with it, are two populous villages, lately annexed to Newburyport from the town of Newbury. The territory of Newburyport proper is smaller than that of any other town within the commonwealth. It contains somewhat more than a square mile, and was taken from Newbury in 1764.

The town is laid out with great regularity, in the form of a parallelogram. Water Street, at the head of the wharves and docks, follows the margin of the river. High Street runs nearly parallel to the river, at a distance of 1000 feet from it, and at an elevation of nearly 100 feet above its level. This has always been admired as a finely-located and most beautiful street. Near the centre of the town, adjoining High Street, is a fine pond, of about 6 acres, the level of which is 60 feet above the river. This has been beautifully embellished, by surrounding it with a mall and terraced promenade. This elevation, in its whole extent of about 3 miles, overlooks a delightful prospect on the opposite side of the river, embracing a view of the harbor, Plum Island, and the Atlantic Ocean. From the mouth of the harbor Plum Island extends 9 miles, to the mouth of Ipswich River.

The houses in Newburyport are generally neat, and many are elegant, being surrounded often with beautiful grounds and gardens. The town has 10 or 12 houses of public worship; and its other public buildings are numerous and elegant. The custom house is of rough granite, with a fine wrought portico of the Grecian Doric order, which cost \$25,000. A beautiful cemetery has been recently established in the immediate vicinity of the town, in a grove of venerable oaks, and forms a most inviting resort to the contemplative.

This town was early noted for its commerce and ship building. The vessels built here attained a high reputation throughout the colonies, and in the mother country. After a decline of many years, during the peculiar reverses of the place, the business of ship building is again on the increase. Some of the finest packets and swift-sailing merchantmen of New York have been recently built here. Several of these packet ships have been upwards of 1000 tons' burden. There were built, for freighting and packet ships, during the year 1844, 6200 tons, besides about 1000 tons of smaller vessels, including one steamer.

No place in New England has experienced severer commercial vicissitudes than this town. The commercial restrictions fell upon it with disastrous effect. Its capital had become largely invested in the fisheries and freighting business, and the suspension of its commerce and ship building was long and severely felt. In 1811, before it had recovered from these severe losses, it was visited with an extensive conflagration. Its central and most compact and valuable portion, covering an area of 16 acres, was laid in ashes. Superadded to these accumulated disasters, the war of 1812 greatly checked its prosperity; and at the conclusion of peace its wealth and population had greatly diminished. It continued to decline till about 1830. Since that time it has been gradually recovering its former prosperity, and is now advancing in wealth and population. In 1830, the manufacture of cotton by steam power was commenced here. There are now several incorporated companies for this purpose. Their mills are 4 stories high, and their aggregate length is

1300 feet. In addition to cotton goods, there are other manufactures, of machinery, castings, hats, shoes, organs, soap, candles, &c., to an amount of upwards of half a million annually.

This town is distinguished for a liberal extension of the common school system, and for superior means of free education. It has, in addition to the schools supported by the town, two liberally-endowed free schools. One of these was endowed by the late Moses Brown, Esq., a merchant of the place, known as a distinguished benefactor of the Andover Theological Seminary, and is designed to furnish an institution for classical studies. The other, designed for the higher branches of an English education, is founded on a munificent bequest of the late Oliver Putnam, Esq., of Boston, formerly a resident of this town. This bequest amounts, at the present time, to upwards of \$70,000. The privileges of free education in Newburyport equal, if they do not exceed, those of any other place in Massachusetts, and are only inferior in their results to those of a collegiate course of instruction.

The celebrated George Whitefield died in this town, September 21, 1770. His remains repose under the pulpit of the First Presbyterian Church, and a beautiful marble cenotaph, erected within the church to his memory, by Hon. William Bartlet,—another of the munificent benefactors of the Andover Seminary from Newburyport,—records, among other things, that, “in a ministry of 34 years, he crossed the Atlantic 13 times, and preached more than 18,000 sermons.”

The Eastern Railroad from Boston to Portland passes through Newburyport. It crosses its northern section by a tunnel under High Street, and thence by an embankment to the river, below the town. There is also a railroad up the Merrimac to Bradford, by Georgetown, crossing from the Eastern to the Boston and Maine Railroad. By whatever avenue this beautiful town is approached, it cannot fail to make a favorable impression upon the visitor; and while, on account of the bar at the mouth of its harbor, and from other causes, it may not hope to possess the commercial consequence which it once had, during the comparative infancy of our maritime interests, it will always continue to be the seat of much wealth and refinement, and one of the most eligible places for genteel residence in New England.

New Canaan, Ct., Fairfield co. This town was taken from Norwalk and Stamford in 1801. The surface is rough and mountainous; the soil is a hard, gravelly loam, but generally productive.

An academy was established here in 1815, and has acquired a high reputation. It stands on an elevated and commanding situation, having a fine prospect of Long Island Sound and the intervening country. Pestles and other Indian implements have been found at the N. part of the town, which probably was the resort of the natives. 37 miles W. S. W. from New Haven.

New Canton, Va., Buckingham co. On a high bank of Slate Creek, a quarter of a mile from James River, and 64 miles W. from Richmond. The manufacture of flour at the Virginia Mills, 4 miles from this place, is extensive.

New Carlisle, O., c. h. Clarke co. 102 miles W. of Columbus.

New Castle County, De., c. h. at New Castle. Bounded N. by Pennsylvania, E. by the Delaware River, S. by Kent co., and W. by Maryland. Drained by Noaman's, Red Clay, Brandywine,

Christiana, St. George's, Appoquinimink, Blackbird, and Duck Creeks. Surface low and marshy on the E., but elsewhere somewhat hilly; soil fertile. The Philadelphia and Baltimore and Delaware and Chesapeake Railroads traverse this county. It is also crossed by the Delaware and Chesapeake Canal, which is 66 feet wide.

Newcastle, De., c. h. New Castle co. A considerable town, on the W. bank of Delaware River. 5 miles S. S. W. from Wilmington, and 42 N. from Dover. The Newcastle and Frenchtown Railroad opens a communication between Delaware and Chesapeake Bays.

New Castle, Ia., c. h. Henry co. On Blue River. 47 miles E. by N. from Indianapolis.

New Castle, Ky., c. h. Henry co. 25 miles N. W. from Frankfort.

New Castle, Me., Lincoln co. On the W. side of Damariscotta River, 15 miles from its mouth, and 36 S. E. from Augusta.

New Castle, N. H., Rockingham co. On a rough and rocky island, situated in Portsmouth Harbor, and formerly called *Great Island*. A handsome bridge connects this town with Portsmouth, of which it constitutes a fishing suburb. On it stand Fort Constitution and the light-house. About 2 miles from Portsmouth.

New Castle, N. Y., Westchester co. Watered by branches of Croton and Saw Mill Rivers. Surface hilly; soil sandy loam and clay. 10 miles N. from White Plains, and 121 S. from Albany.

Newcastle, Pa., c. h. Lawrence co. At the confluence of the Shenango and Neshannock, tributaries of the Beaver, on the Erie Canal. 230 miles W. N. W. from Harrisburg.

Newcomb, N. Y., Essex co. This town contains several beautiful lakes and waterfalls, the sources of the head waters of the Hudson. The surface is mountainous, the principal peaks of the Adirondack range lying in this and the adjoining town of Keene. This vicinity is celebrated for its mineral wealth, the mountains containing immense quantities of fine iron ore. 30 miles S. W. from Elizabeth, and 92 N. from Albany.

New Durham, N. H., Strafford co. The surface is very uneven; soil moist, and well adapted to grazing. There are 5 ponds here; the largest is Merrymeeting Pond, about 10 miles in circumference, from which a copious and perpetual stream runs into Merrymeeting Bay, in Alton. Ela's River flows from Coldrain Pond into Farmington, on which is a fine waterfall. The Cocheo also has its source here. Mount Betty, Copplecrown, and Saw's Mountains are the principal eminences. On the N. E. side of the latter is a remarkable cave, the entrance of which is about 3 feet wide and 10 feet high. The outer room is 20 feet square; the inner becomes smaller, until, at the distance of 50 feet, they are too small to be investigated. The sides are solid granite. They bear marks of having been once united. There is a fountain, over which a part of Ela's River passes. By sinking a small-mouthed vessel into it, water may be procured extremely cold and pure. Near the centre of the town is Rattlesnake Hill, the S. side of which is almost 100 feet high, and nearly perpendicular. Several other hills contain precipices and cavities, some of considerable extent. First settlers: New Durham was granted, in 1749, to Ebenezer Smith and others. 35 miles N. E. from Concord, and 32 N. W. by N. from Dover.

New England. This is a name which may be

said, on the one hand, to have no legalized modern authority for its use, and yet, on the other, to be traditionally or historically unavoidable. It is not recognized, of course, in the enumeration of the states of the American Union; and the same may be said of the convenient division of Middle States, Southern States, Western States, &c.; but although not specifically authorized in the national constitution, we repeat, it is in another view necessary. And this shall be explained.

The discovery of the northern part of the American continent was effected by Cabot in 1497, five years after Columbus had landed in the West Indies. But France, in 1524, became emulous of sharing with Spain and England, and efforts were made for that end. However, neither of these powers made any permanent settlement in North America for many years afterwards. Some Protestants, authorized by the celebrated Coligny, then admiral, attempted to form a colony in Florida, 1562, with permission of Charles IX., then king; but it was frustrated. (See *Holmes's Annals*, under the respective dates, &c.) At length, in 1604, after the coast had been repeatedly visited, a settlement of Frenchmen was made in that part of Canada which received the name of "Acadie," afterwards called "Nova Scotia," but then denominated "Nouvelle France."

Between these two, Florida and Canada, or New France, the country had, from 1584, been called "Virginia," in compliment to the Queen of England; but no permanent settlement was effected until 1607, although repeated attempts had been made towards the close of the previous century, under the able but unfortunate Sir Walter Raleigh, at great sacrifice of money and of men.

In 1609, the Dutch, then a strong maritime power, were invested with the possession of the territory named by them "New Netherlands," and now constituting a part of the state of New York. In 1606, King James I. had divided Virginia into the north and south portions, and authorized distinct companies for effecting settlements in each of these divisions, who were not inactive, but in the northern part unsuccessful; their effort at the mouth of the Kennebec proving abortive. But Captain John Smith, the hero of Virginia, and its governor, having explored, in 1614, the coasts between the Penobscot, or Pentagoet, and Hudson Rivers, presented his chart of them to the Prince of Wales, afterward Charles I., who gave to the territory the name of "New England."

Now, the settlement at Plymouth, in 1620, being made by native but exiled Englishmen, whose nearest European neighbors on the American coast were French or Dutch, the name of "New England" became precious to them; and, as distinctive, it was necessary; not an arbitrary assumption, or arrogated exclusively, in reference to other colonies from the same country, either by themselves or their posterity under the Stuarts. If, since that period, it has been familiarly employed, that circumstance is due principally to the fact, that the inhabitants of the six sovereign states of our Union which now occupy the territory, namely, Massachusetts, New Hampshire, Connecticut, Rhode Island, Vermont, and Maine, sometimes denominated the Eastern States, were mostly of kindred blood until a recent period, being generally of unmixed English descent, and, for the most part, sympathizing in religion, both as regards its privileges and the reproaches it may have been called to sustain

As Virginia, being first settled from England, is often called the "Ancient Dominion," so the territory connected with Plymouth is called the "Old Colony;" having, until 1686, sustained a separate government, independent of Massachusetts. At that time, also, all the New England governments then existing were placed under a president, as they had been previously united for mutual defence by the memorable confederacy of 1643, of which an interesting account has been given by the second President Adams, published in the 29th volume of Collections of the Massachusetts Historical Society.

New England Village, Ms., Worcester co. In the town of Grafton. See *Grafton*. 38 miles W. from Boston.

New Fairfield, Ct., Fairfield co. This is a small township, rough and hilly, with a hard and gravelly soil. 64 miles S. W. from Hartford.

Newfane, N. Y., Niagara co. On the border of Lake Ontario. Drained by Eighteen Mile Creek. The surface is mostly level, sloping gradually towards the lake; soil argillaceous and sandy loam. 10 miles N. from Lockport, and 287 N. of W. from Albany.

Newfane, Vt., c. h. Windham co. This town is watered by a branch of West River, and several other streams. The surface is diversified; the soil good, and produces white oak and walnut in abundance. There is but little waste land in the town. Newfane exhibits a great variety of minerals, among which are some of value. There are two pleasant villages in the town. The court-house village is called Fayetteville. The settlement was commenced in the month of May, 1766, by Deacon Jonathan Park, Nathaniel Stedman, and Ebenezer Dyer, who emigrated from Worcester co., Ms. 115 miles S. from Montpelier, and 12 N. W. from Brattleboro'.

Newfield, Me., York co. Watered by Little Ossipee River. A good farming town. 99 miles S. W. by W. from Augusta.

Newfield, N. Y., Tompkins co. Watered by Cayuga Creek and the inlet of Cayuga Lake. Surface hilly and broken; soil productive. 6 miles S. W. from Ithaca, and 175 W. from Albany.

New Garden, Pa., Chester co. Watered by Red Clay and White Clay Creeks. Surface level; soil calcareous loam. 74 miles E. S. E. from Harrisburg.

New Geneva, Pa., Fayette co. On Monongahela River, at the mouth of George Creek, and 196 miles W. by S. from Harrisburg.

New Gloucester, Me., Cumberland co. A fertile township. 23 miles N. from Portland.

New Hampton, N. H., Belknap co. Pemigewasset River is the only stream of magnitude in the town; over it is a bridge which unites the town with Bristol. There is a remarkable spring on the W. side of Kelly's Hill, from which issues a stream that is never affected by rains or droughts. Pemigewasset Pond lies on the border of Meredith. There are four other ponds in this town. The soil, though the surface is broken and uneven, is remarkably fertile, producing grain and grass in abundance. In the S. part of the town is a high hill, of a conical form, which may be seen, in almost any direction, from 10 to 50 miles. The academical and theological institution in this town is finely located. First settler, Samuel Kelly, in 1775. 30 miles N. by W. from Concord, and 15 N. W. from Gilford

The Concord and Montreal Railroad passes through this town.

New Hanover County, N. C., c. h. at Wilmington. Bounded N. by Sampson and Duplin counties, E. by Onslow co., S. E. and S. by the Atlantic Ocean, and W. by Cape Fear River and one of its tributaries, separating it from Brunswick and Bladen counties. Drained by the N. E. branch of Cape Fear River. In the E. part of this county is a large swamp, and along the coast is a chain of low, narrow islands.

New Hanover, Pa., Montgomery co. Swamp Creek waters this town, the surface of which is hilly, and the soil loam and red shale, of medium quality. 74 miles E. from Harrisburg.

New Harmony, Ia., Posey co. On the E. side of the Wabash River. 16 miles N. from Mount Vernon, on the Ohio River, and 172 S. W. from Indianapolis. It is situated on a wide and rich plateau or second bottom, and has a healthy and pleasant location. Its position on the river is very favorable for trade. It was first settled in 1814, by a religious sect of Germans under George Rapp, who denominated themselves "Harmonists." They came in a body from Beaver Creek, Pa., where they had previously settled on their first arrival from Germany. After remaining here a few years, during which they made great improvements, turning the wilderness into a garden, they returned again to the place of their first settlement, now called *Economy*, on the Ohio River, 18 miles below Pittsburg. To the community of George Rapp succeeded that of Robert Owen, of Lanark, Scotland, who purchased the village of New Harmony of its original proprietors, the Harmonists, and commenced here his experiment of a new "social system." After about a year, Mr. Owen returned to Europe, and the "society" which he had gathered, of about 800 persons, was soon abandoned.

New Hartford, Ct., Litchfield co. This town was first settled in 1733. The surface of the town is hilly and mountainous. The lands are best adapted to grazing. It is watered by Farmington River and other streams, on which are several mills. In the eastern part of this town there is a rough and mountainous district, formerly designated *Satan's Kingdom*. 20 miles N. W. from Hartford.

New Hartford, N. Y., Oneida co. The Sadagunda Creek, one of the most valuable mill streams in the state, waters this town on the N. Its surface is varied; soil fertile calcareous loam. 4 miles S. from Utica, and 98 N. W. from Albany.

New Haven County, Ct., c. h. at New Haven. New Haven co. is bounded N. by Litchfield and Hartford counties, E. by Middlesex co., S. by Long Island Sound, and W. by Litchfield co. and the Housatonic River, which separates it from Fairfield co. This county, lying on Long Island Sound, has a very extensive maritime border, but its foreign trade is chiefly confined to New Haven harbor. Its fisheries of oysters and clams, and other fish, are valuable. It is intersected by several streams, none of them of very large size, but of some value for their water power and fish. Of these the principal are the Pomperaug and Naugatuck, on the W.; Quinnipiac, Menunkatuck, West, and Mill Rivers on the E. The Quinnipiac is the largest, and passes through extensive meadows. The county is intersected centrally by the Canal Railroad, which

passes through this county from N. to S. There is a great variety of soil in this county, as well as of native vegetable and mineral productions. The range of secondary country, which extends along Connecticut River as far as Middletown, there leaves that stream, crosses into this county, and terminates at New Haven. This intersection of the primitive formation by a secondary ridge affords a great variety of minerals, and materials for different soils.

New Haven, Ct., city and c. h. New Haven co., lies at the head of a harbor which sets up 4 miles from Long Island Sound. It is, by railroad, 76 miles from New York, 36 from Hartford, and 101 from Boston. It is the capital of a county of the same name, and the semi-capital of Connecticut, and contains a larger population than any other town in the state. The site of New Haven is on a large and level plain, surrounded by hills and mountains, except at the S., in the direction of the harbor. The harbor is formed by the confluence of three rivers, Quinnipiac and Mill Rivers on the E., and West River on the W. The most striking objects which arrest the attention of the traveller in approaching the city from the S. are the East and West Rocks, two bold, perpendicular precipices of rude, naked trap rock, the former 370, and the latter 400 feet in height. These rocks have a reddish appearance, and from this circumstance the Dutch, who appear to have been acquainted with the locality before the arrival of the English, called the place "Red Rock." Its Indian name was *Quinnipiac*, the name of a tribe who occupied the place and its vicinity. New Haven was first settled in 1638, by a company, of whom John Davenport and Theophilus Eaton were leaders. Mr. Davenport was a celebrated minister in London, and Mr. Eaton an eminent merchant, and most of the settlers were persons of piety, wealth, and influence, and it was their intention to plant a mercantile colony.

The original town was laid out in a plot half a mile square, which was subdivided into 9 squares, by streets four rods in width. As the population increased, these squares were subdivided into smaller ones, and other streets were laid out, extending in every direction from the original town plot. The central square, usually styled the Green, containing the state house and three churches, is enclosed by an iron fence, surrounded on all sides by rows of stately elms, and is considered as one of the most beautiful parks or greens in the United States. The principal edifices of Yale College, four stories in height, face the entire length of the western boundary of the green, presenting an imposing aspect. Yale College, from which New Haven derives much of its celebrity, was founded in 1700, and is one of the oldest and most distinguished literary institutions in this country, and more students are annually educated here than in any other place in the United States. The whole number of students in 1851, connected with the college, was 558. The number of graduates, to 1850, is 5932. The general management of the college is committed to the corporation, consisting of the president, the governor and lieutenant governor of the state, the six oldest members of the state senate, and ten clergymen of the state, chosen by the clerical part of the corporation. The faculty, to whom is intrusted the government and instruction of the students, consists of the president, the professors, and tutors.

The whole course of instruction occupies four years. In each year there are three terms or sessions. Commencement is held on the last Thursday in July. Instruction is given in all the higher branches of education by able professors, and connected with the college is a law, medical, and theological department. Immediately back of the line of the college buildings is the library, a Gothic structure 151 feet long, with towers, the extreme height of which is 91 feet. It contains the college library, now become one of the most valuable in the country, which was during the last century enriched by donations from distinguished men, among whom were J. Dummer, Sir John Davie, Governor Yale, (from whom the college derives its name,) and Bishop Berkeley. Besides this, the building contains the large and valuable libraries belonging to the different college societies. The total number of volumes in the edifice is 52,000. The mineralogical cabinet, another large building, is situated in the rear of the line of college edifices. It contains the great cabinet of Colonel Gibbs, consisting of 10,000 specimens, collected by him in Europe during the revolutionary period there, at the commencement of the present century, together with very large subsequent additions.

The Trumbull Gallery, erected in 1831, standing back of the line of the college buildings, contains the paintings of Colonel John Trumbull, the aid of Washington, and the father of American historical painting. His remains, with those of his wife, are interred in a vault beneath this building. Besides eight principal subjects of the American revolution, there are nearly two hundred and fifty portraits of persons distinguished during that period, painted by him from life. Back of the centre church, on the public square or green, are buried the remains of Colonel John Dixwell, one of the judges of King Charles I., and near by, if tradition be correct, those of the regicide generals, Goffe and Whalley. Colonel Dixwell's remains, after a lapse of 161 years, were reinterred by his relatives in 1849, and a tasteful and durable monument was erected, and placed in the charge of the public authorities. The public burying ground, at the north-western corner of the original town plot, is tastefully laid out with trees and shrubbery, and is surrounded by a high and durable stone wall, with an elegant Egyptian gateway and iron fence in front. Within the enclosure are the monuments of Colonel Humphreys, the aid of Washington, Eli Whitney, the inventor of the cotton gin, Jehudi Ashmun, the first colonial agent at Liberia, Noah Webster, the author of the American Dictionary of the English Language, and other distinguished men.

The harbor of New Haven is protected from winds, but is rather shallow. To remedy its defects, a wharf has been constructed extending into the bay 3943 feet. The commercial business of the city is considerable, particularly with the West Indies, and by the recent construction of railroads in various directions its general business has been much extended. The manufacturing business of the city is quite important, particularly that of carriage making. Besides the twelve college edifices situated at the W. side of the public square, the city contains twenty-two churches, viz., eight Congregational, three Episcopal, five Methodist, three Baptist, two Catholic, and one Universalist; a medical college, state

house, custom house, five banks, a jail, state hospital, and the large and elegant railroad station building in the central part of the city. The new Green, or Wooster Square, is destined to be a beautiful place, and the new burying ground, Evergreen Cemetery, situated at the western extremity of the city, is laid out with much taste. New Haven covers a great extent of ground for a city of its population. A large proportion of the houses have court yards in front and gardens in the rear. Besides Yale College, there is in this place quite a number of high schools for the education of both sexes, among which are seven seminaries or schools for the education of young ladies. The superior literary advantages to be found in New Haven, and the high standing of the resident professors, in the various departments of science, have given the place a wide literary reputation.

The village of Fair Haven, two miles E. from the court house, lies partly within the limits of New Haven, and is situated on both sides of the Quinnipiac. It contains three churches: one Congregational, one Methodist, and one Episcopal, and about 2000 inhabitants. The oyster trade is the leading business of the place, large quantities being brought here from various places and laid down in beds, giving employment to quite a number of vessels, which are owned in the place. Westville, another village in New Haven, is situated at the foot of West Rock, about 2 miles N. W. of the court house, containing about 1000 inhabitants. About a mile from the village, near the summit of a rock or mountain, is the Judges' Cave, a place where the regicides, Generals Goffe and Whalley, concealed themselves from their pursuers. Population of the city in 1850 was 20,341; population of the city and town, 22,529.

New Haven, N. Y., Oswego co. Drained by Catfish Creek, a tributary of Lake Ontario, which bounds it on the N. Surface undulating; soil well adapted to grass. 10 miles E. from Oswego, and 157 N. W. from Albany.

New Haven, Vt., Addison co. The soil of this town is various, and generally productive. The waters of Otter Creek, Middlebury River, and Little Otter Creek give the town a good water power. Quarries of excellent marble are found here. The settlement was commenced in 1769, by a few emigrants from Salisbury, Ct., on that part which is now set off to Waltham. The settlement was broken up during the revolutionary war, but the settlers returned at the close of it, and in 1785 the town was organized. 40 m. W. S. W. from Montpelier, and 7 N. W. from Middlebury.

New Hudson, N. Y., Alleghany co. Black Creek and some other small streams water this town, the surface of which is high and undulating, and the soil favorable to the growth of grass. 14 miles W. from Angelica, and 270 from Albany.

Newington, N. H., Rockingham co. The soil is generally sandy and unproductive, excepting near the waters. At Fox Point, in the N. W. part of the town, Piscataque Bridge is thrown over the river to Goat Island, and thence to Durham shore. The bridge was erected in 1793, is 2600 feet long and 40 wide, cost \$65,401. Piscataqua River bounds this town on the N. E., Great and Little Bays on the W. and N. W., and Greenland and Great Bay on the S. 44 miles E. S. E. from Concord, and 5 W. from Portsmouth.

New Ipswich, N. H., Hillsboro' co. This town is watered by many rivulets, but principally by Souhegan River. Over this river is a stone bridge, built in 1817. It is 156 feet long, 22 wide, and 42 high, resting on a single arch of split stone; cost \$3500. The first cotton factory in the state was built in this town in 1803. New Ipswich has become an important manufacturing town. Pratt's and Hoar's Ponds contain about 50 acres each. Here is fine pasture land under cultivation. The New Ipswich Academy was incorporated June 18, 1789. The principal village is in the centre of the town, in a pleasant and fertile valley. 50 miles S. S. W. from Concord, and about 18 S. W. from Amherst.

New Kent County, Va., c. h. at New Kent Court House. This county is bounded N. and E. by Pamunky River, separating it from King William and King and Queen counties, S. E. by James City co., S. W. by Chickahominy River, separating it from Charles City and Henrico counties, and N. W. by Hanover co.

New Kent, Va., c. h. New Kent co. 3 miles S. from Pamunky River, and 30 E. from Richmond.

New Lebanon, N. Y., Columbia co. Watered by Lebanon and Kinderhook Creeks, and contains the celebrated Lebanon Springs, also an extensive Shaker settlement. The surface is hilly and mountainous, being traversed on the E. by the Taghkanic Mountains, and W. and S. by the Peterboro' Hills, leaving a large and fertile valley between. 25 miles N. E. from Hudson, and 24 S. W. from Albany.

New Lebanon Springs, N. Y., Columbia co. 25 miles S. E. from Albany. See *Fashionable Resorts*.

New Lisbon, N. Y., Otsego co. Butternut and Otego Creeks water this town. Surface diversified with hills and broad valleys; soil sandy loam. 82 miles S. W. from Cooperstown, and 13 W. from Albany.

New Lisbon, O., c. h. Columbiana co. On the N. bank of the Middle Fork of Little Beaver River. 150 miles E. N. E. from Columbus. A prosperous and beautiful place; has some of its streets paved.

New London County, Ct. New London and Norwich are the county towns. New London co. is bounded N. by Windham, Tolland, and Hartford counties, E. by Windham co. and the state of Rhode Island, S. by Long Island Sound, and W. by the county of Middlesex. This county possesses superior maritime advantages, having an extensive border on Long Island Sound, which affords numerous bays, inlets, and harbors. Excepting a small section, principally in the town of Lyme, no portion of the county can be considered as mountainous; but it is generally hilly and elevated, and comprises a small proportion of alluvial. The hills and elevated tracts are considerably rough and stony. The lands in general are not adapted to grain culture, although upon the intervals and other tracts, Indian corn is raised to advantage and to a considerable extent. The principal agricultural interests depend very much upon grazing. The waters of the county are abundant and valuable. On the S. it is washed more than 30 miles by Long Island Sound, part of its western border by Connecticut River, and the interior of the county is watered and fertilized by the Thames and its branches. The fishing business is more extensively carried on in this county than in any other section of the state, and is an important branch of industry.

New London, Ct., c. h. New London co. Town

and city. The first English settlement in New London commenced in 1646. It is situated on the W. bank of the River Thames. In its territorial limits it is much the smallest of any town in the state, being about 4 miles in length from N. to S., and averages about three fourths of a mile in breadth. The city of New London is situated 3 miles from Long Island Sound, and is a port of entry. The city is principally built on a declivity, which descends to the E. and S. It is irregularly laid out, owing to the nature of the ground on which it is built, being much encumbered with granite rocks. Some of the streets have been straightened and levelled, by blasting the granite rocks with which they were disfigured. The harbor is one of the best in the United States, being large, safe, and commodious, having 5 fathoms of water. It is 3 miles long, and rarely obstructed with ice. During the extreme cold in January, 1835, while the navigation of the harbor of New York was closed by the ice, the harbor of New London remained open and unobstructed. This handsome place has long been distinguished for the enterprise of its inhabitants in navigation and commerce, especially in the whale fishery. Besides ship building, and the manufacture of oil and candles, it has a variety of other manufactures; and now that the railroads, built and in progress, afford it an easy communication with the interior, and with the great marts of commerce, it has received a new impulse, and is rapidly increasing in wealth and population. Population in 1850, 9006. 61 miles S. E. from Hartford, and 53 E. from New Haven. Connected by railroad, via New Haven, with New York, 130 miles; with Boston, via Worcester, 118 miles; with Hartford, via Norwich and Willimantic, 61 miles.

New London, Mo., c. h. Ralls co. On the S. side of Salt River. 98 miles N. N. E. from Jefferson City.

New London, N. H., Merrimac co. Lake Sunapee separates this town from Wendell, and is the principal source of Sugar River. Little Sunapee, Pleasant, Harvey's, and Messer's Ponds are in this town. Harvey's and Messer's are separated by a bog. The settlements of New London are formed principally on three large swells of land. The soil is deep and good. In the N. part are several elevations. In some parts the land is rocky. The damage by the violent whirlwind of September 9, 1821, was estimated at \$9000. A large rock, lying out of the ground, 100 feet long, 50 wide, and 20 high, was rent into 2 pieces, and thrown about 20 feet asunder. 30 miles W. N. W. from Concord.

New London, Pa., Chester co. Watered by Elk and Clay Creeks. Surface gently sloping; soil sandy loam.

New Madrid County, Mo., c. h. at New Madrid. Bounded N. and N. E. by Scott and Mississippi counties, E. and S. by the Mississippi River, separating it from Kentucky, and W. by Dunklin co. The surface is level, and the soil, in parts not liable to inundation, is fertile.

New Madrid, Mo., c. h. New Madrid co. On the N. side of a considerable bend in the Mississippi River. 271 miles S. E. from Jefferson City. In 1811 and 1812 this place was visited with earthquakes.

New Market, N. H., Rockingham co. Piscataqua, Lamprey, and Swampscot Rivers water this town. The soil is good, and agricultural pursuits

are crowned with success. There are several pleasant and thriving villages, in which are large and valuable manufactures. Mrs. Fanny Shute, who died in this town September, 1819, was respected for her excellent qualities, and celebrated for the adventures of her youth. When 13 months old, she was taken to Canada by a party of Indians, and disposed of to the French, educated in a nunnery, and after remaining 13 years in captivity, was redeemed and restored to her friends. This town was originally a part of Exeter. 36 miles S. E. from Concord, and 12 W. by S. from Portsmouth by railroad.

New Market, Va., Shenandoah co. 1 mile E. from the N. fork of Shenandoah River, a little W. from Massanutten Mountain, and 139 miles N. W. from Richmond. Large manufactures are carried on here. Iron is found in abundance in the region. A beautiful cascade upon the mountain is much admired.

New Marlboro', Ms., Berkshire co. The first improvements in this town were made in 1739, by Mr. Benjamin Wheeler, from Marlboro'. The surface is uneven, hilly, and stony. In the N. W. part of the town is Six Mile Pond, so called by some Indians, who lived 6 miles distant from it, in Great Barrington, and who resorted to it for the purposes of fishing. The outlet from this pond is called *Konkapot*, from an Indian family of that name, who lived by its side. Umpachene Stream rises in the E. part of the town, and passing by the centre, runs S. W., and empties in the Konkapot. This stream derives its name from an Indian. In the S. E. part of the township is a pond nearly 2 miles in circumference, called Hermit Pond, which is the source of a stream, which runs S. W. into Canaan. This pond derived its name from the circumstance that a hermit lived for several years on the south-eastern side. In the W. part of the town is a cave. It has several apartments of various dimensions, whose sides and roof are limestone, on which stalactites are continually forming. About a quarter of a mile S. W. of the south meeting house is a rock, judged to weigh 30 or 40 tons, so equally balanced on another rock, that a man may move it with his finger. 24 miles S. from Pittsfield, and 133 W. by S. from Boston.

New Milford, Ct., Litchfield co. This township is hilly and broken, several mountainous ridges extending through it. The soil is much diversified, and where susceptible of cultivation, it is generally good; but on the whole more distinguished for grass than grain. There are, however, large quantities of excellent meadow ground; and the pasturage is, on the whole, not abundant. It is essentially a farming town. For some time after the white people came here, an Indian chief, or sachem, named *Werauhamaug*, had a palace standing near the Great Falls, where he resided. On the inner walls of this palace (which were of bark, with the smooth side inwards) were pictured every known species of beast, bird, fish, and insect, from the largest to the smallest. The town of New Milford was purchased of the colony of Connecticut by a company of individuals chiefly belonging to Milford, and was first settled in 1707. The first bridge that was ever built over the Housatonic River, from the sea to its source, was built in this town in 1737. The village of New Milford is very handsome; the streets are wide and well shaped. The territory of this town is larger than any other in the state. Large quan-

ties of granite and marble are found here. 35 miles from Bridgeport by the Houstonic Railroad.

New Milford, Pa., Susquehanna co., is drained by Mitchell's and Salt Lick Creeks. Surface hilly; soil clay and gravel. 185 miles N. from Harrisburg.

Newnan, Ga., c. h. Coweta co. 106 miles W. by N. from Milledgeville.

Newnanville, Fa., c. h. Alachua co. 72 miles W. from St. Augustine, and 120 E. S. E. from Tallahassee.

New Orleans, La. City and port of entry in the parish of Orleans. Situated on the left bank of the Mississippi River, about 100 miles from its mouth, about 950 miles below the mouth of the Ohio, and 1100 below the mouth of the Missouri. It is distant from Baton Rouge, the capital of the state, 131 miles. For the distance from other important places, see *Grand Distance and Table*. The population, in 1810, was 17,240; in 1820, 27,176; in 1830, 46,310; in 1840, 102,193; in 1850, 119,285. The site of New Orleans, in conformity to other parts of the banks of the Mississippi in the same vicinity, is on an inclined plane; the declivity falling very gently from the margin of the river towards the swamp in the rear. When the river is full, the surface of the water is from 2 to 4 feet above the streets of the city; and at any stage it is above the swamps in the rear of the back streets. To prevent inundation, an artificial embankment, called the *Levee*, has been built upon the river, at a great expense, extending from Fort Plaquemine, 43 miles below the city, to 120 miles above it, which is 4 feet high, and 15 feet wide. Directly in front of the city, it affords a very pleasant promenade. The city is built upon the concave side of a bend in the river, extending, with its incorporated faubourgs, not less than 5 miles parallel to it, and, at right angles to the river, from a quarter of a mile to a mile, giving to its outline the form of a crescent, from which New Orleans is familiarly denominated the "Crescent City." The city proper lies near the middle of the curve, extending along the river 1320 yards, and 700 yards back, having the faubourgs of St. Mary, Duplantier, and Annunciation above, those of Marigny and De Clouet below, and another more detached, in the rear, on the Bayou St. John. The city proper is a parallelogram, with its side upon the river. At each extremity of the length of the city, the streets make an angle, to bring them more nearly into the direction of the river in those parts; but between these points the streets are straight. The city proper is traversed by 22 streets, forming 84 principal and 14 minor squares. The houses are principally of brick; and the more modern buildings, especially in the upper part of the city, or second municipality, are generally 3 and 4 stories high, with elegant granite fronts. Many of the houses in the outer parts are surrounded with gardens, and ornamented with orange trees. The view of the city, in ascending or descending the river, is beautiful. During the season of business, between the 1st of November and the 1st of July, the Levee, in its whole extent, is crowded with vessels of every size, from all quarters of the world, and with hundreds of large and splendid steamboats, barges, flat boats, &c. The river opposite the city is half a mile wide, and from 100 to 160 feet deep. It preserves the same width almost to its entrance into the Gulf of Mexico. Any vessels

which can pass the bars at the mouth of the river, can be laid alongside of the Levee; and at high water are generally, when loading or unloading, attached to the shore with cables and a platform. The harbor and the bank of the river are commensurate with each other, especially opposite the city proper. Nothing can present a more animating and busy scene, during the season of business, than the Levee at New Orleans, from the loading and unloading of vessels and steamboats, and the passing in all directions of an apparently countless number of drays, transporting cotton, sugar, and tobacco, and all the varied and immense products of the great western valley. The position of this city, as a great commercial emporium, is scarcely inferior to that of any in our country. The Mississippi, with its tributaries, brings to it, as a market, the products of more than 20,000 miles of navigation; nor is it possible yet to conjecture how vast this trade must become when the resources of the whole Mississippi valley shall be fully developed. To expedite the passage of ships to and from the gulf, large and powerful steam tow-boats are employed; some of which will take several large vessels in their train. By a canal and a railroad connecting New Orleans with Lake Pontchartrain, $4\frac{1}{2}$ miles distant, the trade of the country bordering on that lake and on Lake Borgne, and of all the coast of the N. part of the Gulf of Mexico, as far as Florida, is brought to the city.

A considerable fleet of sloops is often seen in the basin, which is formed in the city to receive the transports from the canal. At the termination of the railroad also, at Lake Pontchartrain, a harbor has been formed, and a considerable village has sprung up. The route passed over by these lines of artificial communication is almost a perfect level; there being not more than 16 inches of variation from it in the whole distance of $4\frac{1}{2}$ miles. The facilities for trade at New Orleans are great, and are well improved.

The exports, including the foreign and coasting trade, are greater than those of any other city of the United States, excepting New York. In 1850, about 750,000 bales of cotton were exported to foreign parts and coastwise. The imports to this port, however, are much less; for a large part of the western country, which sends its exports by the way of New Orleans, receives its imported goods by the Atlantic cities.

The government of the city is administered by a mayor and a city council, elected by the freeholders. In 1836 the legislature passed an act dividing the city into three municipalities, ranking them according to their population; but, in 1851, these municipalities were again consolidated into one body politic. No city in the United States, perhaps, contains such a variety of inhabitants, from every state in the Union and from every nation in Europe, as well as from the West Indies and the Spanish countries in Mexico and South America. One half of the population, probably, is black or colored. Of the white inhabitants, the French yet constitute a large proportion. The intercourse of New Orleans with New York is greater than with any other American city. That with Havana and Vera Cruz is great and constantly increasing. The unhealthiness of the situation of New Orleans is against it; though, from the occasional ravages of malignant epidemics to which it is exposed, an exaggerated idea has sometimes been formed of the

insalubrity of the climate. The same is true of the morals of the city. From certain flagrant features of open abandonment and disregard of the institutions of religion among a population so little American in its composition, it is not strange that an impression extremely unfavorable to the morals of the city should be produced. It is said, however, to be an orderly and peaceable city; and its inhabitants are distinguished for their politeness, hospitality, and kindness to the distressed.

There are fewer churches in New Orleans than in most large cities of this country. There are 3 Roman Catholic and 2 Protestant Episcopal Churches. The Presbyterians, the Congregationalists, the Baptists, and the Methodists have 1 each. A Protestant congregation has been gathered among the French population of the city, who have preaching in their own language. There is also a Mariners' Church.

Among the public buildings, the Cathedral, or Church of St. Louis, on the Place d'Armes, or Parade Square, is one of the most imposing, from its venerable and antique appearance. It was founded in 1792, and so far completed as to be occupied in 1794. The lower story is of the rustic order, flanked at each of the front angles by hexagonal towers projecting one half of their diameter, and crowned by low spires. The second story is of the Roman Doric order. Above, on the apex of the pediment of this story, rises the principal turret, square below for about 20 feet, and hexagonal above, with a belfry surmounted by an elevated pinnacle. By the conditions of the erection of this Cathedral, masses are offered, every Saturday evening, for the soul of its founder, Don Audré; and the tolling of the bell at sunset of that day recalls his memory to the citizens. On the right and left of this church edifice are two public buildings of the city, in the Tuscan and Doric orders, two stories high, occupied in their lower stories by the police prison, city guard room, and various offices, and in their second stories by the offices of the mayor, and of the city treasurer and comptroller, and the common council chamber, and by the District and Criminal Courts of the parish, with the offices of their respective clerks. The Second Presbyterian Church is finely located, fronting on Lafayette Square, the handsomest public place in the city. It has a fine portico of the Grecian Doric order. A neat obelisk has been erected, in the court in front of this church, to the memory of Rev. Sylvester Larned, the first Presbyterian pastor in the city, who died in 1820, at the early age of 24. The new Methodist Church, on the corner of Poydras and Carondelet Streets, is a fine building, copied from the Temple of Theseus at Athens. It has a fine portico, and a steeple rising 170 feet from the ground. This building was completed in 1837. The First Congregational Church is a brick edifice, in the Gothic style of architecture, finished in 1819. The building, which was formerly the charity hospital, and more recently the state house, is a fine piece of architecture, consisting of a centre building and two detached wings, occupying an entire square between Canal Street and other streets. The new Charity Hospital is a large building, 290 feet long and 3 stories high, entered from Common Street. The cupola of this building presents a magnificent view of the city and its environs. The grounds around it are handsomely laid out, and neatly

kept. It is calculated to contain 540 patients. This noble charity is rendered peculiarly necessary by the sickness which prevails at certain seasons at New Orleans, especially among strangers. The Franklin Infirmary is a private hospital, fronting on the Pontchartrain Railroad. It is a beautiful building, and can accommodate 100 patients. Several of the markets are large and expensive structures. The meat market, on the Levee, built of brick, and extending from Ann to Main Streets, is a prominent object as the city is approached by water. St. Mary's Market, in the second municipality, is 480 feet long and 42 feet wide. Washington Market, in the third municipality, is also a fine structure. The theatres are among the most splendid buildings of New Orleans. The St. Charles Theatre, standing on the E. side of Charles Street, is 132 feet long by 175 feet deep, and cost \$350,000. The Orleans Theatre is a spacious edifice, which cost \$180,000. The performances in this theatre are in the French language. The Camp Street or American Theatre, in the second municipality, is 60 feet wide, and 160 feet deep, and cost, with its furniture, and the ground on which it stands, \$120,000. It can accommodate 1100 persons. Among the imposing structures peculiar to this city are several extensive cotton presses. The New Orleans cotton press occupies ground 632 feet long and 308 feet wide, which is nearly covered by the buildings. The centre building is 3 stories high, surmounted by a cupola, which overlooks the city. The wings are 2 stories high, and very extensive. 150,000 bales of cotton, on an average, annually, are pressed at this establishment. There are, besides this, other presses. Some of the banks have fine buildings; and some of the hotels are among the most costly and magnificent in the country. The St. Charles Hotel, which was burned in 1850, and is to be rebuilt, cost about \$600,000. The United States Branch Mint is an edifice 282 feet long and 108 feet deep, with 2 wings, 29 by 81 feet, the whole 3 stories high. The custom house and U. S. land office are also handsome buildings. A new custom house is now in process of erection at New Orleans, which, when completed, will be one of the largest buildings in the United States. It is to include the United States court rooms, together with the necessary warehouses, for the use of the government, and will, it is stated, be one third larger than the Capitol at Washington, when completed with the new wings. The granite for this immense building is to be furnished from the quarries in Quincy, Ms.

The water with which New Orleans is supplied is raised by a steam engine from the Mississippi River. The reservoir into which it is received is constructed on an artificial mound, and is 21 feet high at its base, and 250 feet square. From this reservoir, divided into four compartments, the water, after becoming clear, is distributed over the city in iron pipes. These waterworks belong to the Commercial Bank, and were built at a cost of \$722,000. The city authorities have also built an aqueduct, at an expense of \$110,000, for the purpose of bringing running water in hot weather through the gutters of the streets, thereby to promote the cleanliness and health of the city.

The early historical annals of New Orleans, of the greatest importance, are the following. The city was laid out in 1717, and named in honor of the then Duke of Orleans, regent of France dur-

ing the minority of Louis XV. In consequence of an extraordinary rise of the Mississippi, a year or two later, the spot on which several buildings had been erected was overflowed, and was for a time abandoned. In 1722 the settlement was again commenced, with a view of making it the chief town of the province. The next year, when Charlevoix arrived from Canada by way of the river, the place contained about 100 cabins, without much order, 2 or 3 dwellings of a better class, a miserable storehouse occupied as a chapel, a shed being converted into a house of prayer, 1 large wooden warehouse, and a population of about 200. Soon after this, an accession was made to the population by the arrival of a company of Germans, whose descendants still remain, occupying what is called the German Coast. In 1727, the Jesuits and Ursuline nuns arrived, and were accommodated on a tract of land in the lowest part of the Faubourg St. Mary. In 1763, the pope expelled the Jesuits from the dominions of France, Spain, and Naples. They were obliged to leave Louisiana, and their property in New Orleans was seized and sold for about \$180,000; which now is worth some \$15,000,000. In 1764, British vessels began to visit New Orleans, and to trade with the inhabitants. The exports during the last year of its subjection to France amounted to \$250,000; and the population was 3190. The commerce suffered at first by the restrictions of the Spanish; but shortly afterwards, through a more liberal policy, revived again. In 1785, the population of the city proper was 4980. In 1788, a great fire consumed 900 houses. In 1791, academies and schools began to be opened by some of the immigrants, the education of the young having previously been in the hands of the priests and nuns. In 1792, Baron Carondelet arrived, who divided the city into four wards, and recommenced lighting it and employing watchmen. He erected new fortifications, and organized the militia. In 1794, the first newspaper was published here. In 1801, Louisiana was ceded by Spain to the French, and in 1803, by purchase from the French, it became a possession of the United States. The population of New Orleans at this time did not much exceed 8000; and its revenues were less than \$20,000. In 1804, it was made a port of entry and delivery; and in 1805, it received a charter of incorporation as a city. January 10, 1812, the first steamboat arrived from Pittsburg. During the war of 1812 with Great Britain, New Orleans was invaded by a British force of about 8000 men, approaching it through the Lakes Borgne and Pontchartrain; and in the battle of the 8th of January, 1815, the city was defended, and the enemy repulsed with great loss, by the skill and bravery of General Jackson and the troops under his command. Immediately after this event, intelligence arrived of peace having been concluded previous to the date of the battle. All things have since conspired, in the state of the country, in the rapid settlement of the Mississippi valley, and in the new and extensive application of steam power to the navigation of its mighty rivers, to hasten, with almost incredible strides, the growth and prosperity of New Orleans.

New Paltz, N. Y., Ulster co. Bounded on the E. by the Hudson River, and watered by the Walkkill. The surface is rather hilly, the W. part being partly covered by the Shawangunk Moun-

tain. The soil is various, but mostly productive. 14 miles S. from Kingston, and 75 from Albany.

New Philadelphia, O., c. h. Tuscarawas co. On a beautiful plain on the E. bank of Tuscarawas River, opposite the entrance of Sugar Creek, and 115 miles E. N. E. from Columbus.

Newport, Ia., c. h. Vermilion co. On the S. side of Vermilion River, 2 miles above its confluence with the Wabash, and 78 W. from Indianapolis.

Newport, Ky., c. h. Campbell co. On the Ohio River, opposite Cincinnati, and just above the mouth of Licking River. 86 miles N. N. E. from Frankfort. Here is a United States arsenal.

Newport, Me., Penobscot co. A fine farming town. 56 miles N. E. from Augusta, and 24 W. from Bangor.

Newport, Mo., c. h. Franklin co., occupies high bluffs. 1 mile from the Missouri River, and 70 miles E. from Jefferson City.

Newport, N. H., c. h. Sullivan co. Its central situation and its water power have rendered it a place of considerable business. Near the centre of the town, and the confluence of the E. and S. branches of Sugar River, and the Croydon Turnpike, is a handsome village. The soil is rich and productive. Sugar River flows through the town. Bald, Coit, and East Mountains, and Blueberry Hill, are in Newport. This town is noted for its good schools and charitable societies. First settlers, Jesse Wilcox, Ebenezer Merrit, Jesse Kelsey, and Samuel Hurd, in 1763. The settlers were mostly from Killingworth, Ct. 40 miles W. by N. from Concord, and about 35 N. from Keene.

Newport, N. Y., Herkimer co. Watered on the E. and S. by West Canada Creek. It is a hilly town, with fertile valleys. 10 miles N. from Herkimer, and 88 N. W. from Albany.

Newport, Pa., Luzerne co. Nanticoke River waters this town, and at the falls affords great hydraulic power, besides feeding the North Branch Canal. Anthracite coal and bog iron ore abound here. 8 miles S. W. from Wilkesbarre.

Newport, Pa., Perry co. On the W. bank of Juniata River, and on the Pennsylvania Canal. 28 miles N. W. from Harrisburg.

Newport County, R. I., c. h. at Newport. S. E. part, including several fertile islands in Narraganset Bay, and the continental portion of the state. S. of Mount Hope Bay.

Newport, R. I. Port of entry, semi-capital of the state, and seat of justice of Newport co. This ancient town is situated on the S. W. side of the Island of Rhode Island, in Narraganset Bay, about 30 miles S. by E. from Providence. The three towns of Newport, Middletown, and Portsmouth include the whole area of the island, Portsmouth being on the N. part, and Middletown in the centre. In Portsmouth are the Rhode Island coal mines; also a bed of plumbago has been discovered here. The soil of all these towns is rich, and is brought under excellent cultivation. The inhabitants of the two latter are not numerous, are chiefly occupied with the pursuits of husbandry, and are distinguished for their habits of industry and economy. The settlement of the island was first commenced at the N. E. part, and Portsmouth was the first town laid out; but some of the settlers, the next spring, with others who were about to unite with them, went to the S. end, and began the settlement of Newport. This was in 1638. Of this beautiful island Neal says,

"It is deservedly esteemed the paradise of New England for the fruitfulness of the soil and the temperateness of the climate. Though it is not above 60 miles S. of Boston, it is a coat warmer in winter; and, being surrounded by the ocean, is not so much affected in summer with the hot land breezes as the towns on the continent."

The harbor is considered one of the best on the coast of America, and is admirably defended by Forts Wolcott, Green, and Adams. The latter, on Brenton's Point, is a fortification of great strength and costliness, not yet entirely completed. The town is built upon a gentle declivity, fronting the harbor, and looking towards the S. W., which presents it handsomely to view as it is approached upon the water. The principal street is over a mile in length. There is a public square, called Washington Square, on which the state house stands. The buildings generally are neat, and some of them very handsome. The first buildings were erected around a spring, where the fountain now is, in the rear of the state house. The stone house is still standing on the E. side of Spring Street, which was built by Henry Bull, one of the original purchasers, and one of the early governors of the colony, who died in 1693. This house was one of the first built in Newport. The marks of antiquity which some of the buildings bear, with the excellent state of preservation in which they appear, give them a grace and dignity not often found in those of more modern construction. Within a few years, however, the town has undergone great changes; many new buildings have been erected — churches, cotton factories, hotels, and dwelling houses; old houses have been repaired and painted; new streets have been opened, and old ones put in order; wealthy persons from other cities have purchased situations, and built tasteful dwellings for summer residence; and the place has been greatly improved in its appearance.

Among the public buildings, the State House is a handsome brick edifice, two stories high, above a basement story of stone. Over the centre is a handsome octagonal cupola. In this building, besides the halls and offices for the legislature, are the rooms for the different courts of the county, the state, and the United States. In the senate chamber is a fine picture of Washington, painted by Stuart for the town.

The building of the Redwood Library and Athenæum, on East Truro Street, erected in 1750, is a handsome specimen of architecture, suited to its design. It consists of a centre building, with two small wings. The centre building is ornamented in front with a portico of four Doric columns, 17 feet in height. It appears, from a historical sketch of this institution, that it originated in a literary and philosophical society, which was established in Newport in 1730, and which the celebrated Bishop Berkeley, who resided in Rhode Island from January, 1729, to September, 1731, encouraged in its formation, "often participating in its discussions, and, by the charm of his conversation, giving a delightful interest to its meetings." The library contains about 4000 volumes. A number of valuable pictures and busts adorn the room.

The Market House, or Granary, as it is called, because originally intended to serve the purpose of a granary as well as of a market, built in 1762, is a very neat and tasteful building, three stories high, built in strict conformity to the rules of the

Ionic order. Its location, however, on Thames Street, near the Long Wharf, is not favorable to its full appreciation as a building.

The Custom House is also on Thames Street, is a large brick building, with wings projecting in front and in the rear, and is open to the harbor. The Masonic Hall, on School Street, and the Amory Hall, on Clarke Street, are handsome edifices.

There are numerous religious denominations in Newport. The first regularly-organized Baptist church in this country was gathered here about 1641. Their first meeting-house was at Green End, now in Middletown. Subsequently they occupied the lot in Tanner Street, now used as a burial-place for the pastors of the church. Their first pastor, Dr. John Clark, was buried here. Their present house of worship, on Spring Street, is a neat and commodious edifice. The Baptists have likewise two or three other churches.

There were formerly two Calvinistic Congregational churches, of which some of the most learned and eminent of the New England divines have been the pastors. Among them were Dr. Styles, afterwards president of Yale College, and Dr. Hopkins, author of a System of Divinity. A few years ago, these churches were united in one.

There are also Unitarian Congregationalists, Episcopalians, Freewill Baptists, Sabbatarians, or Seventh-day Baptists, Methodists, Quakers, Moravians, and Roman Catholics. The present Quaker meeting house was built in 1700; at which date it is stated that one half the population were Quakers. Edmundson, in his Journal of Religious Visits, says that the dispute between Roger Williams and some of the ministers of that denomination, in 1672, was held in the Friends' meeting house; Mr. Williams having come from Providence in his log canoe for that purpose.

There was formerly a considerable body of Jews in Newport. Those who first came were of Dutch extract, from Curaçoa. The deed of their burial-place is dated February 28, 1677. But those of that nation who were subsequently among the most enterprising of the Newport merchants were from Spain and Portugal, about 75 years later. These last built the synagogue, now standing just E. of Spring Street, which was once thronged with worshippers. Dr. Waterhouse says, "Newport was the only place in New England where the Hebrew language was publicly read and chanted by more than 300 of the descendants of Abraham." There are no Jews now remaining in Newport; but their synagogue and burial-place remain, and are handsomely enclosed with iron fence; the former from the avails of a fund of \$10,000, bequeathed to the town council by Mr. Abraham Touro, of Boston, son of their former priest, to keep it, with the burial-ground and the avenue leading to it, in perpetual repair; and the latter by the liberality of Mr. Judah Touro, of New Orleans, a brother of the first mentioned. These interesting relics are thus preserved from profanation, and rendered ornamental to the town.

As a place of trade and commerce, previous to the American revolution, Newport was highly distinguished. Having the advantage of a safe and commodious harbor, never obstructed with ice, easy of ingress and egress with all winds, the people early turned their attention to navigation. "For one hundred and fifty years from

the arrival of the first emigrants," observes Benjamin B. Howland, Esq., an intelligent citizen, to whom we are indebted for many of the facts for this article, "Newport and Boston were the chief cities of New England; and their commerce rendered each of them superior to New York. Several of the first settlers on the island were possessed of great wealth; some of them were from the commercial cities of Europe, and others from Massachusetts. Many who came here to reside were learned and refined, and the society of the place was literary and polite, giving tone to that of the surrounding country, who looked to Newport for their fashions and manners. Previous to the revolution, the prosperity of the town was almost unequalled in the history of the world. 'Her streets were thronged with the intelligent and enterprising of distant lands, and the canvas of different nations whitened her capacious and delightful harbor.'"

Unfortunately, some of the capitalists of Newport entered into the African slave trade, which, strange and humiliating as it now appears, was then prosecuted and considered reputable by the mother country, and by other European nations.

At the commencement of the revolution, the population of Newport had increased to nearly 10,000. But with that momentous struggle came a day of sad disaster to this beautiful town. The first act of popular resistance to the encroachments of the British government was in the destruction of his Britannic majesty's sloop Liberty, in 1769, stationed in the harbor of Newport to enforce the revenue laws, which was followed, a few years later, by the ejection from its waters of the squadron sent here under the command of Wallace, to watch over the British interests. But in December, 1776, the British army commanded by Sir Henry Clinton landed at Coddington Cove, and obtained possession of the town, which they held during the war. Owing to the interruption of its prosperity thus produced, connected with other changes consequent upon the commencement of a new era in the commercial relations of the country, and especially the impulse given to the growth of other cities, Newport has never recovered the rank which it held before as a mart of trade. The population fell off during the war to 5500. The business, which had somewhat revived during the wars in Europe, was again almost extinguished by the long embargo preceding our war with England in 1812.

Since the application of steam to machinery, a number of large cotton and woollen manufactories have been established here, and considerable activity has been given to business in this new channel. The domestic fishery is an important resource to Newport, quite beyond the reach of political fluctuations. About sixty different kinds, comprising almost every species of fin and shell fish regarded as luxuries for the table, are taken in the greatest abundance in the waters of the Narraganset.

Progress is making in an enterprise to connect this place with Fall River, Bristol, and Providence, by railroad. This, when completed, will give a great impulse to the business of Newport, and add much to the advantages which it now enjoys as a place of fashionable resort. For further particulars, see *Fashionable Resorts*.

Newport, Te., c. h. Cocke co. On the S. W.

side of French Broad River. 232 miles E. by S. from Nashville.

Newport, Vt., Orleans co. Newport is separated from Derby by Memphremagog Lake, and is watered by a branch of Missisco River. The settlement was begun before the year 1800. 10 miles N. from Irasburg, and 52 N. E. from Montpelier.

New Portland, Me., Franklin co. This town is finely watered by two branches of Seven Mile Brook. This is one of the finest farming towns in the county. This town has a pleasant village, a number of saw mills and other manufactories. It lies 48 miles N. N. W. from Augusta, and 18 N. by E. from Farmington. Incorporated 1808.

New Providence, N. J., Essex co. Hilly and mountainous on the W.; soil red shale and clay loam. 13 miles S. W. from Newark, and 56 N. E. by N. from Trenton.

New Richmond, O., Ohio township, Clermont co. In 1814 this town was laid out, and in 1828 incorporated. It is located on an extensive tract of bottom land, on the northern bank of the Ohio River, just above the mouth of Muddy Creek. It is a thriving town, and the land around it is well improved. 20 miles S. E. from Cincinnati, and 106 S. W. from Columbus.

New Rochelle, N. Y., Westchester co. This town is washed on the S. by Long Island Sound. The surface is chiefly level; soil clay loam, favorable to the growth of grass. 8 miles S. from White Plains, and 140 S. from Albany.

Newry, Me., Oxford co. A branch of Androscoggin River waters this town, and affords it good mill privileges. It lies 63 miles W. from Augusta, and 25 N. W. from Paris. Incorporated 1805.

New Salem, Ms., Franklin co. This town is elevated, and some parts of it are mountainous; but the surface and soil are generally well adapted to agricultural purposes, particularly for grazing. It is well watered by Miller's River on the N., and a fine mill stream, the head waters of Swift River, rises in a pond in the town, and passes through it. The town comprises two handsome villages, and some pleasant ponds. 17 miles E. S. E. from Greenfield, and 70 W. by N. from Boston.

New Scotland, N. Y., Albany co. Coeyman's Creek and a branch of the Normanskill water this town. Surface hilly; soil chiefly sand and clay, based upon slate and limestone. 8 miles W. from Albany.

New Sewickly, Pa., Beaver co. Big Beaver River has falls in this town, which afford extensive water power. The surface is hilly; soil loamy. 5 miles E. from Beaver.

New Sharon, Me., Franklin co. This town is watered on the N. W. side by Sandy River, and is bounded N. by Industry, E. by Mercer, S. by Vienna, and W. by Farmington. The soil is admirably adapted to agricultural purposes.

New Shoreham, R. I., Newport co. This town comprises the Island of Block Island. The island lies in the open sea. It is about 8 miles in length, and varies from 2 to 4 in width. It has several ponds, which cover about a seventh part of the island. The surface of the town is uneven, in some parts elevated; the soil is a sandy, gravelly loam, and quite productive. The island was once famous for its cattle and good dairies. The people are mostly fishermen; they have no har-

bor, and peat is their only fuel. Its Indian name was *Manisses*.

Newstead, N. Y., Erie co. Watered by Elliott's and some branches of Tonawanda Creek. Surface slightly uneven; soil calcareous and gravelly loam. 20 miles N. E. from Buffalo, and 264 W. from Albany.

Newton, Aa., c. h. Dale co.

Newton County, As. In the N. W. angle of the state, on the height of land between the waters of the White River and the Arkansas.

Newton County, Ga., c. h. at Covington. Bounded N. E. by Walton co., S. E. by Jasper co., S. and S. W. by Yellow and Alcopatchee Rivers, separating it from Butts and Henry counties, and N. W. by De Kalb and Gwinnett counties.

Newton, Ga., c. h. Baker co.

Newton, Is., c. h. Jasper co. On the W. side of Embarrass River. 130 miles S. E. from Springfield.

Newton, Ms., Middlesex co. This is a beautiful town, encircled by Charles River on the N., W., and S., and bounded on the E. by Brighton and Brookline. It was at first a part of Cambridge, and at its incorporation it adopted the old name of that venerable town, which it has never disgraced. This is the celebrated *Nonantum* of the Indians, a hallowed spot, where the red men of the forest first listened to the teachings of Christianity in New England, and where was erected for their use the first house of prayer. There are 2 falls on Charles River, in this town, of considerable extent and great value, called Upper and Lower Falls, about 2 miles apart. At these falls are beautiful manufacturing villages. The village at the Lower Falls is partly in Needham. It is a singular fact, that such is the winding of the river, that the Lower Falls are farther from its mouth and the city than the Upper Falls. The soil is good and highly cultivated; the surface is varied. In this town is an academy and a normal school. *Nonantum Hill*, in Newton, commands some of the most delightful scenery in the vicinity of Boston. The Newton Theological Institution (Baptist) is located at Newton Centre village. The Worcester Railroad connects the various villages with Boston. Distant from Newton Corner, 7 miles; from West Newton, 9 miles. Newtonville lies between the two.

Newton County, Mi., c. h. at Decatur. Bounded N. by Neshoba co., E. by Lauderdale, S. by Jasper, and W. by Scott co. Drained by the head branches of Chickasawha, Leaf, and a tributary of Pearl River.

Newton County, Mo., c. h. at Neosho. Bounded N. by Jasper co., E. by Lawrence and Barry counties, S. by Arkansas, and W. by Indian Territory. Drained by tributaries of Neosho River.

Newton, N. C., c. h. Catawba co.

Newton, N. J., Gloucester co. This is a level town, watered by Cooper's and Newton Creeks. Soil sandy. Situated 6 miles N. E. from Woodbury.

Newton, N. J., c. h. Sussex co. Watered by the Paulinkill. Its surface is level in the centre, but elsewhere hilly. 70 miles N. from Trenton.

Newton, Pa., Delaware co. Crum and Darby Creeks water this town, the surface of which is hilly, and the soil loamy.

Newton, Pa., Cumberland co. Big Pond lies on the W. border of this town, and its outlet,

Yellow Breeches Creek, drains the surface, which is chiefly level; the soil is a calcareous loam. 16 miles W. from Carlisle.

Newton County, Ts., c. h. at Burkeville. In the western part of the state.

Newton Falls, O., Trumbull co. At the confluence of the 2 branches of Mahoning River. 162 miles N. E. from Columbus. The rivers here afford a good water power. The Pennsylvania and Ohio Canal passes this place.

Newton Lower Falls, Ms., Middlesex co., lie principally on the E. side of Charles River. 11 miles W. from Boston. See *Newton, Ms.*

Newton Upper Falls, Ms., Middlesex co. On the E. side of Charles River. 9 miles W. from Boston. See *Newton, Ms.*

Newtown, Ct., Fairfield co. This town was incorporated in 1708. It is watered by Patatuck River, the Indian name of the place. The surface of the town is hilly; many of the eminences are extensive and continuous; the soil is principally a gravelly loam, generally fertile and productive. It is well adapted to the culture of grain, and is also favorable for fruit, there being many valuable orchards in the town. The borough of Newtown is beautifully situated on high ground.

The flourishing village of Sandy Hook is situated about $1\frac{1}{2}$ miles N. E. of the central part of Newtown, at the foot of a rocky eminence or bluff, from the top of which is a fine prospect of the surrounding country. A fine mill stream (the Patatuck) runs in a northerly course through the village, at the base of the cliff, which rises almost perpendicular to the height of 160 feet. Near a cotton factory, at the northern extremity of the village, some traces of coal have been discovered. 25 miles W. N. W. from New Haven.

Newtown, N. H., Rockingham co. Country Pond lies in Newtown and Kingston, and 2 other small ponds connect, by outlets, with its waters. The soil produces good crops of grain or grass. First settler, in 1720, Joseph Bartlett. 40 miles S. E. from Concord, and 27 S. W. from Portsmouth, by the Boston and Maine Railroad.

Newtown, N. Y., Queens co. This town comprises 2 or 3 islands lying in the East River, which bounds it on the N., and is watered on the W. by Newtown Creek. The surface is diversified; soil clay loam and sand, well adapted to fruit. 12 miles W. from Hempstead, and 153 S. from Albany.

Newtown, Pa., Bucks co. Newtown, a branch of Neshaminy Creek, waters this town, and affords hydraulic power. Surface level; soil rich clay loam. 118 miles E. from Harrisburg.

New Utrecht, N. Y., Kings co. On the W. extremity of Long Island, separated from Staten Island by the "Narrows." 6 miles S. from Brooklyn and 152 from Albany.

New Vineyard, Me., Franklin co. 40 miles N. W. from Augusta.

New Windsor, N. Y., Orange co. Drained by Murderer's Creek, a branch of the Hudson, which bounds it on the E. The surface is hilly and uneven, but the soil mostly arable and fertile. 3 miles S. from Newburg, and 89 from Albany.

New York, city and county. Principal city of the state of New York. In population, wealth, and commerce, New York is the principal city in the United States. It is situated on Manhattan Island, at the confluence of North River with the strait called East River, which connects Long Isl-

and Sound with the harbor of New York. It is distant 145 miles S. from Albany, the capital of the state. The population, in 1790, was 33,131; in 1800, 60,489; in 1810, 96,373; in 1820, 123,706; in 1830, 202,589; in 1840, 312,710; in 1850, 515,394.

Manhattan Island, the whole of which is embraced in the chartered limits of the city, is bounded on the N. by Haerlem River, a small strait, which passes from the East River to the Hudson, navigable for small vessels; on the E. by East River, or strait, which separates it from Long Island; on the S. by the harbor; and on the W. by the North River, which separates it from New Jersey. Its length, from the Battery, at the southern point, to Kingsbridge, the most northern limit, is thirteen and one third miles: its average breadth is one mile and three fifths. Its widest part is on the line of Eighty-Eighth Street, where the distance from river to river is about two miles and one third. The whole contents of the island is about 22 square miles, or 14,000 acres.

The natural surface of the island was uneven, as is still the case in the northern part, with occasionally low valleys and marshes. But as far as the building of the city has extended, the hills have been graded and the low places filled up. As early as 1804, this necessity was anticipated by the legislature, and a plan was established by law for locating the streets, cutting down the hills, and filling up the valleys to a regular and uniform grade for a distance of 8 miles in extent. The highest elevation of the ground above tide water, in any part of the island, is 238 feet. Many of the creeks and inlets on the shores of the rivers have disappeared; and the entire water line has been materially changed from what it originally was. In the S. part of the city, a large part of Water, Front, and South Streets, on the East River, and of Greenwich, Washington, and West Streets, on the North River, are built upon ground which has been made by encroaching upon those rivers. The portion of city which is compactly built covers the whole southern part of the island for a distance of about 4 miles from the Battery, each way, upon the rivers, and is continually extending its limits to the N.; while nearly the whole of that part of the island has been surveyed and laid out into streets, upon a regular and convenient plan, ready for occupancy as fast as any part of it may be required. The streets in the older portions of the city were laid out in conformity to the original surface of the ground and the diverging direction of the 2 river margins. Some of them are crooked, narrow, and inconvenient; and some of the most important, which were formerly so have been widened and straightened at great expense. Much improvement, in this respect, was effected in the building up of that portion of the lower part of the city, covering between 30 and 40 acres, which was burned down by the great fire of the 16th December, 1835. Broadway, which is at once the most elegant and fashionable street, and the greatest thoroughfare of the city, traverses its length for $2\frac{1}{2}$ miles in a straight line, from N. to S. commencing at the Battery and terminating at Union Square, where it is connected with the Fourth Avenue, running N. at only a slight deviation from the same line. This splendid street which is 80 feet wide, occupies the natural crown of the island between the two rivers. There are only three or four streets S. of the termination of

Broadway at Union Square, which open avenues entirely across the city, from river to river, though there are several others through which a continuous course may be pursued for nearly the whole distance. Such are Grand, Broome, Houston, and Fourth Streets, which are continuous from the East River to that section of the city on the North River side called Greenwich. No city can exhibit a more regular and beautiful plan than this, in all that portion of it which has grown up since the survey completed in 1821. This survey, which occupied about 10 years, under the direction of Gouverneur Morris, De Witt Clinton, and others, commissioners appointed by the legislature for the purpose, was extended as far N. as One Hundred Fifty-Fourth Street, $9\frac{1}{2}$ miles from the Battery.

It is impossible here to notice all the important streets in this London of America. Broadway is the great promenade of the city, and one of the grandest streets in the world. It is elegantly built, with many houses, hotels, stores, and church edifices, which are costly and beautiful specimens of architecture. Here may be found the most extensive and brilliant display of dry goods and fancy articles, at wholesale and retail, particularly the latter. The Bowery is a wide street E. of Broadway, running from Chatham Square N., connecting with the Third and Fourth Avenues, and forming the principal entrance into the heart of the city from Haerlem, on the N. E. The Haerlem Railroad is laid on the Fourth Avenue and the Bowery; and the Third Avenue is a McAdamized road to Haerlem. Chatham Street, connecting the Bowery through Chatham Square with Broadway at the Park, and which, in early days, while the Park was a pasture for cattle, and Broadway extended no farther N., was laid out and designated as the "High Road to Boston," is a great and crowded thoroughfare, distinguished for its numerous clothing stores. East Broadway, running from Chatham Square parallel to the East River, and Henry, Madison, and Munroe Streets, between this and the river, are broad and straight streets, handsomely built. Pearl Street, between Broadway and East River, is in a crescent form, over a mile in length, and is the principal seat of the wholesale dry goods and hardware business, which also extends into Cedar, Pine, and other adjacent streets. South Street, running along the margin of East River, contains the warehouses and offices of the principal shipping merchants. In front of it are docks and slips, and a dense forest of masts. Wall Street extends from Broadway to the East River, and is occupied with banks, brokers', insurance, and newspaper offices. The Custom House and the Merchants' Exchange are here. This street is the centre of the heaviest money operations in the United States. Greenwich Street, W. of Broadway, is a long, wide, and nearly straight street, extending from the Battery, parallel to the Hudson River, nearly $2\frac{1}{2}$ miles. Hudson Street, running parallel to this, from Chamber Street to the Ninth Avenue, is wide, straight, and well built in many of its parts. It is over $1\frac{1}{2}$ miles in length. Canal Street, half a mile N. of the City Hall, is a wide street, commencing at Centre Street, crossing Broadway, and extending to the North River, and is the seat of an extensive retail business. There is a large covered canal under this street. This was the northern terminus of Broadway in 1800, and far

beyond the thickly-settled part of the city. It is now much below the centre of population. Grand, Broome, and Houston Streets are extensive and important streets above Canal Street. Bleeker, Bond, and numerous other streets, in the N. part of the city, are beautifully built, and fashionable places of residence. The avenues, so called, are 16 in number, extending, as they are laid out, from the upper parts of the city, N., to Haerlem River. They are generally 100 feet wide, but are not all graded. They are crossed, above Twelfth Street, by streets running from river to river. The streets in this direction are numbered First, Second, Third, &c., commencing with the first street N. of Houston Street.

New York, in the lower part of the city, is rather deficient in public grounds; yet there are several of importance. The Battery, at the south-eastern point of the island, from which Broadway begins, is the most beautiful of these grounds, and the most serviceable to the citizens and to strangers, as a healthful and delightful promenade. It contains about 11 acres, beautifully laid out with grass plats, and gravelled walks, shaded with ornamental trees. From this ground there is a fine view of the bay, with its shipping, and of the adjacent shores, cities, and villages of New Jersey, Long Island, and Staten Island. This is considered, by many, the most delightful promenade in the United States.

Castle Garden is built on a mole, and is connected with the Battery by a bridge. It was originally erected as a fortification. It is used occasionally for public meetings, and 10,000 people can be accommodated within its walls, as in a great amphitheatre. — The Bowling Green, at the lower end of Broadway, is a small elliptical area, 220 feet long by 140 broad, enclosed by an iron fence. Before the revolution it contained a leaden statue of George IV., which, during the war, was converted into bullets. — The Park is a triangular area, including $10\frac{1}{2}$ acres, between Broadway, Chatham, and Chamber Streets. It contains the City Hall, and two or three other splendid public buildings. It is laid out in walks, convenient to be used as crossings, and set with trees. A beautiful fountain, supplied from the Croton waterworks, here sends up a single *jet d'eau* between 60 and 70 feet. — St. John's Park, comprising the entire square between Beach, Laight, Varrick, and Hudson Streets, is private property, belonging to Trinity Church, but reserved as a permanent open ground to the dwellers on its margin. It is enclosed with a costly iron fence, is beautifully laid out, and has a fountain in the centre. The trees in this park are of considerable age and size. — Washington Square, $1\frac{1}{2}$ miles N. of the City Hall, contains a little over 9 acres. A part of this square was formerly the Potter's Field. — Union Square is an elliptical opening at the upper terminus of Broadway, ornamented with a fountain. — Grammercy Park, near Union Square, and Tompkins Square, in the N. E. part, and the largest in the city, are handsomely laid out, and shaded with trees. There are other squares, further N., laid out for public grounds, but not yet regulated.

There are in the city of New York some of the most costly and superb public buildings in the country. Among these the City Hall, from its beautiful location in the Park, where all its fine proportions stand in open view, will be one of the first to attract the notice of the stranger. This

magnificent building was commenced in 1803, and completed in 1812, at a cost to the city of \$538,734. It is 216 feet long, 105 feet wide, and 2 stories high, above the basement, with a third or attic story to the centre building. Including the attic story, it is 65 feet in height. Over the centre of the edifice there rises a lofty cupola, upon which stands a colossal statue of Justice. The entire structure, which consists of a centre building and two wings, covers 29,896 square feet of ground. The walls of the front and ends are of white marble, and that of the rear of the Nyack brown freestone. The front is ornamented with columns and pilasters, in ranges rising one above another, of the Ionic, Corinthian, and composite orders. A flight of 12 marble steps, extending the whole length of the central building, leads to the hall of entrance. In the centre of this hall is a double staircase, with marble steps, ascending to a circular gallery connecting with the halls and passages of the second story. The staircase is lighted from a dome above, to which, for its support, 10 marble columns, of the Corinthian order, ascend from the marble floor of the circular gallery. The City Hall contains all the rooms and offices requisite for the accommodation of the courts, the mayor and aldermen, and common council, and other municipal functionaries. There is a splendid room, called the Governor's Room, appropriated for the use of the governor of the state whenever he visits the city. This room is 52 feet in length, and 20 feet in width; and its walls are hung with the portraits of the governors of the state, including some of the old Dutch governors, the mayors of the city, and a number of the military and naval heroes of the country. The chamber of the common council contains several fine, full-length portraits of distinguished personages, belonging to the period of the revolution, painted by Trumbull. That of Washington, taken when he was in the prime of life, is thought by many to be the best likeness in existence. The chair occupied by the president of the common council, under a canopy at the head of the room, is the identical chair occupied by Washington when he presided over the first American Congress, assembled in New York.

East of the City Hall, and also included in the Park, is the Hall of Records, erected for the purpose of receiving and keeping in security all records and public documents of the city. It is a large and handsome building, decorated with a lofty Ionic portico on each front. In the rear of these buildings is one formerly occupied as an almshouse, but now fitted up to contain city offices. Here are the Marine Court room, and the rooms of the American Institute.

The Merchants' Exchange, in Wall Street, is probably the largest, the most costly, and in some respects the most beautiful of the public buildings of New York. It covers the entire block bounded by Wall Street, William Street, Hanover Street, and Exchange Place, and has a front upon Wall Street of 198 feet. Its other dimensions are 196 feet on Exchange Place, 171 feet on William Street, and 144 feet on Hanover Street. Its height from the foundation wall to the top of the cornice is 77 feet, and to the top of the dome 124 feet. It stands partly on the site of the old Merchants' Exchange, which was burned in the great fire on December, 1835. From its confined situation, if the heart of the most crowded portion of the city, its immense proportions do not produce their proper

architectural effect, as a whole, like those of the City Hall, which has an ample space around it. The front, however, on Wall Street, has a most imposing and beautiful effect. It is constructed of a dark-blue Quincy granite, and has a splendid colonnade, of the full length and height of the building, with a recess in the centre, in which the ranges are repeated, making in the whole 18 of these massive columns, 38 feet high, and 4 feet 4 inches in diameter, each formed from a solid block of granite, and weighing 43 tons. They are of the Grecian Doric order, finely wrought and fluted. It is stated that these columns, with but one exception, that of a church at St. Petersburg, are the largest in the world. Their cost, delivered in New York, was \$3000 each. The Exchange Room, or Rotunda, in the centre of the building, is the most magnificent of its apartments. It encloses an area of 7000 square feet, and is calculated to accommodate 3000 persons. The height of the room, to the springing of the dome, is 51 feet, above which the dome ascends 30 feet, terminating in a skylight 37 feet in diameter. 8 Corinthian columns, of polished Italian marble, support the dome within; behind which there are recesses, enlarging materially the area of the room. Upon the floor of this magnificent hall the merchants of New York meet daily during the hours of change. On the roof is a marine telegraph, communicating with a station on Staten Island, and sending down an hourly report to the news room of the movements of the shipping inward or outward bound. Admonished by the destruction of the former Exchange, the company have made the present building absolutely incombustible; have used no wood in its construction, excepting for the doors and window frames. The whole, including the dome, is of solid masonry. The Merchants' Exchange Company was incorporated in 1823, with a capital of \$1,000,000. The entire cost of the new Exchange, including the ground, is stated, in round numbers, at \$1,800,000.

The Custom House, in New York, is one of the most perfect buildings of its size in the world. It is finely located on the corner of Wall and Nassau Streets, affording a view of its entire perspective, when seen from opposite its south-western angle. The building is modelled after the Parthenon at Athens, with the omission of the columns on the sides. It is 200 feet long by 90 feet wide, and about 80 feet high from the bottom of the foundation wall to the top. The front portico, on Wall Street, has 8 fluted columns of the Grecian Doric order, 5 feet 8 inches in diameter, and 32 feet high, supporting a full entablature and pediment above. The ascent to this portico from the street is by 18 granite steps, which is the elevation of the basement on this end. The ground gradually rising as it recedes on Nassau Street, leaves but 3 or 4 steps for the ascent to the portico on the opposite end. This portico is similar to that on the front on Wall Street. On each of the sides are 13 pilasters, which are in keeping with the columns on the two fronts. The building is two lofty stories high above the basement. The entire exterior, including the roof, is constructed of white marble, excepting the steps, which, for greater durability, are of light-colored granite. Some of the largest blocks of marble used weigh no less than 33 tons. The marble slabs for the roof weigh from 300 to 400 pounds, and are matched with an under and upper lip of 8 inches, making

it perfectly water tight. There is no wood in any part of the building; and there is not perhaps another structure in the world so entirely proof against fire.

In the centre of the building is the great Rotunda, or large circular room used as the collector's office. This splendid room has a diameter of 60 feet in the clear, and 80 feet in the recesses. 16 beautiful Corinthian columns, 30 feet high, support the dome above it, which is richly ornamented with stucco, and crowned at the top with a skylight. There are many other large and elegant apartments suited to the purposes of the building. The architect of this splendid edifice was Mr. John Frazee. It was commenced in May, 1834, and finished in May, 1841. The cost, including the ground, was \$1,175,000; that of the building alone, \$950,000.

The ground on which the Custom House stands was formerly the site of the old City Hall, or Federal Hall, as it was called; in which the American Congress held their sessions in New York, and in the balcony of which, looking down upon Wall Street, Washington, on the 13th of April, 1789, was inaugurated first president of the United States, in the presence of assembled thousands of the joyful people, shouting at the close, with one voice, "Long live George Washington!"

The Hall of Justice, which, with its enclosure, including the House of Detention, occupies the entire space between Centre, Elm, Leonard, and Franklin Streets, 253 feet long by 200 feet wide, is an elaborate and beautiful specimen of the Egyptian style of architecture. It is constructed of a light-colored granite from Hallowell, Me. The main building, which fronts on Centre Street, has a dystyle portico of four massive Egyptian columns. From this there is an ascent by 12 steps, between two other columns, to an area 50 feet square, having the ceiling above supported by 8 more of these massive pillars. From this area the various apartments of the building are entered. The Court of Sessions occupies a hall, with a gallery extending back from the main building, the roof of which is also supported by lofty Egyptian columns. The house of detention, towards the rear of the enclosure, is 142 long and 45 feet wide, containing 148 cells for prisoners. This building, from the style of architecture adopted and the associations connected with it, has obtained the name of the Egyptian Tombs; or, in common parlance, the Tombs. Though a handsome structure of its kind, it has a heavy and gloomy aspect. Its massive Theban columns, with their gigantic palm-leaved capitals, and its cornices, ornamented with winged globes and serpents, give a singular and funereal effect to this sombre pile. This edifice was completed in 1838.

The City Penitentiary, on Blackwell's Island, about 5 miles from the City Hall, is a stone building of simple architecture, but of very imposing effect from its large dimensions and its comparatively insulated position. The main or centre building is 4 stories high, surmounted by a square tower; and the wings, also 4 stories high, but somewhat less elevated, extend on either side 200 feet; presenting, in the whole, a line of nearly 500 feet in extent. It is seen to fine advantage, upon both sides, from the decks of the numerous steamboats passing to and from Long Island Sound.

Towards the eastern end of this island, which is about a mile and a half in length, stand the buildings of the New York Lunatic Asylum,

which are constructed of a dark-colored stone, in a beautiful style of architecture, upon the plan of 4 radii from a large central edifice. The number of patients in this asylum, in 1850, was about 500.

There is also on Blackwell's Island a workhouse, for the employment of the able-bodied inmates of the almshouse, comprising an extensive and beautiful group of buildings, arranged on the plan of radii.

One of the most splendid buildings in the city is the edifice of the New York University, which is beautifully situated on the E. side of Washington Square. It is constructed of white marble, in the Gothic style of English collegiate architecture, and is 180 feet in length by 100 in width, composed of a centre building with octangular turrets on the 4 corners, and wings right and left, 4 stories high, flanked with square towers on the 4 corners, which rise 1 story above the body of the building. The central building, or chapel, triumphs over all the rest, in depth, height, and character, and bears some resemblance to that of King's College, Cambridge, England. It occupies 55 feet of the breadth of the building, and is 85 feet deep, including the turrets. The two ends are gabled, and, with the sides and all the other parts of the building, crowned with an embattled parapet. The principal entrance is through a deeply-recessed and richly-moulded portal under the great W. window. Through this window, which is 24 feet wide and 50 feet high, filled with stained glass, the interior of the chapel receives the principal portion of its light. This chapel is truly a splendid room, in which the various details of a Gothic interior are carried out in great perfection and beauty. The whole building, without and within, is quite a masterpiece among the specimens of this kind of architecture in the country.

Columbia College is situated on a beautiful square a little W. from the park, between Chapel, Church, and Murray Streets, and has one venerable and handsome edifice, 200 feet long and 50 feet wide, with wings projecting at each end, in which the families of the professors are accommodated. For a more particular account of this college, and of the university, see *Colleges*.

Among the other literary institutions are the New York Theological Seminary, which has a convenient building located near the university, and a library of 17,000 volumes; the General Theological Seminary of the Episcopal Church, which has two handsome buildings of stone at the corner of Ninth Avenue and Twenty-First Street; the Rutgers Female Institute, in Madison Street, which has a fine granite building, containing a valuable library and philosophical apparatus; and the College of Physicians and Surgeons, whose handsome edifice is in Crosby Street. The New York Society Library, founded in 1745, is the oldest literary association in New York. It has a neat and substantial edifice on the corner of Broadway and Leonard Street, which cost, with the land, \$117,000. The library at present contains 35,000 volumes, and, with the exception of the Astor Library, is the largest and most valuable in the state. In this building, rooms are furnished for the annual exhibitions of the National Academy of Design. This institution, founded in 1826, exhibits annually a large collection of the paintings of living artists, which is always new, as the same picture is not allowed to appear a second time, and is patronized by a great number of visitors. The Histor-

ical Society, founded in 1804, which occupies rooms in the university, has a library of 17,000 volumes. It has published several volumes of Historical Collections. This society contemplates the erection of a building soon, and has obtained considerable funds for that purpose. The Mercantile Library Association, formed in 1820, for the special benefit of merchants' clerks, maintains an attractive and well-furnished reading room, and has accumulated a library of about 32,000 volumes. A building was erected for the association in 1830, at a cost of \$53,000. The society provides for an able course of public lectures in the winter. There is also the Apprentices' Library, in Crosby Street, of 14,000 volumes, established in 1820 by a society of mechanics and tradesmen founded in 1785; the library of the Mechanics' Institute, 3000 volumes; and of the American Institute, for the encouragement of agriculture, commerce, manufactures, and the arts, embracing about 6000 volumes. The American Institute holds an annual fair at Niblo's Garden, which is one of the most interesting exhibitions of the city. The Lyceum of Natural History in New York, established in 1818, has rooms, containing its library and cabinet, in the medical department of the university, on Broadway. This cabinet contains extensive collections in all the departments of natural history. The society has done much for the promotion of science in this country.

But one of the noblest gifts to learning and science, and one of the most splendid instances of public beneficence, for which not only the city of New York, but the whole country, owe a debt of lasting gratitude to the memory of the munificent donor, is that of the Astor Library. This library was endowed by the bequest of the late John Jacob Astor, of New York, who, in a codicil to his last will, bearing date the 4th of July, 1836, devised as follows: "Desiring to render a public benefit to the city of New York, and to contribute to the advancement of useful knowledge and the general good of society, I do, by this codicil, appropriate *four hundred thousand dollars*, out of my residuary estate, to the establishment of a public library in the city of New York." The will then directs as to the disposal of the money, "in the erection of a suitable building;" "in furnishing and supplying the same from time to time with books, maps, charts, models, drawings, paintings, engravings, casts, statues, furniture, and other things appertaining to a library for general use, upon the most ample scale and liberal character;" and "in maintaining and upholding the buildings and other property, and in defraying the necessary expenses of taking care of the same, and of the accommodation of persons consulting the library;" "the said library to be accessible, at all reasonable hours and times, for general use, free of expense to persons resorting thereto." Of the funds given, Mr. Astor directs that "a sum not exceeding \$75,000 may be expended in the erection of a building," for which he authorizes the trustees "to select a site on the E. side of Lafayette Place, to contain 65 feet front and rear, and 120 feet deep." \$120,000 are then to be expended in the first outlay for books and other objects, in establishing the library; and the residue, about \$200,000, to be permanently invested as a fund for its maintenance and gradual increase.

The building for the Astor Library is a hand-

some ornament to the city. It is built of brown freestone and brick, in the Byzantine style of architecture, or rather in that of the royal palaces of Florence; and presents a strongly imposing appearance, both in its external and internal structure. Its dimensions, on the ground, are as above stated; and its height, from the sidewalk to the top of the parapet, 67 feet. The great library hall, occupying the second floor, is 100 feet in length, 60 in width, and 50 feet high. The side walls form one continuous shelving, sufficient to contain 100,000 volumes. The light is from windows in the front and rear walls, and from a skylight of large dimensions. Midway between the floor and ceiling is an iron gallery, resting upon 14 beautiful columns; from which, and from other intermediate and lighted galleries, ascended by spiral stairways, the shelves are reached. The floor is composed of a richly wrought mosaic, resting on iron beams. Among the other apartments of the building are a reading room, and a lecture room, with accommodations for 500 persons. Between 55,000 and 60,000 volumes have been already purchased for this splendid library, at a cost of about \$63,000.

New York is liberally provided with institutions for the relief of the poor and distressed of every description. Besides the Lunatic Asylum, on Blackwell's Island, already noticed, the New York Hospital has a fine situation on the W. side of Broadway, opposite the head of Pearl Street. The buildings, which are extensive, stand in the rear of a beautiful yard, and seem pleasantly retired, although in the very heart of the city. Connected with this hospital is the Lunatic Asylum, located at Bloomingdale, on the Hudson River, 5 miles from the City Hall; attached to which are 40 acres of ground, beautifully laid out into gardens and pleasure grounds. This accommodates about 250 patients. Here also is one of the Orphan Asylums. A new institution, styled the State Hospital of the City of New York, has lately gone into operation, occupying a spacious square, bounded by Forty-Second and Forty-Third Streets, and the Fifth and Sixth Avenues. The New York Dispensary, established in 1790, the Northern Dispensary, in 1829, and the Eastern Dispensary, in 1834, answer the purpose of hospitals to some extent. These useful establishments are supported by annual subscriptions. On Staten Island are three large and excellent institutions for the relief of sick and disabled seamen: the Marine Hospital, at Tompkinsville, adjacent to the quarantine ground, which has three spacious buildings; the Seamen's Retreat, situated half a mile farther south; and the Sailor's Snug Harbor, on the N. side of the island, which provides a home for aged and decayed seamen. This noble charity was founded by the liberality of Captain Randall, who bequeathed to it an estate now reputed to be worth \$1,000,000. The funds of the Sailor's Snug Harbor, in 1852, amounted to \$87,000.

The New York Asylum for the Deaf and Dumb, a noble institution of its kind, incorporated in 1817, is on Fiftieth Street, near the Fourth Avenue, or Haerlem Railroad. The principal building is 110 feet long by 60 wide, and 4 stories high above the basement. The New York Institution for the Blind is on the Eighth Avenue, and has about 50 pupils.

At Bellevue, on the East River, $2\frac{1}{2}$ miles from the City Hall, is the New Almshouse, which is a very extensive establishment, having a hospital

connected with it. Here also is a House of Refuge for juvenile delinquents; and a Penitentiary for female convicts. There is another almshouse on Blackwell's Island. But it is scarcely possible for the city to meet all the demands upon it in this department of eleemosynary aid. The burdens of this kind are induced to far the greatest extent by the immigration of paupers, or of those who soon become paupers, from Europe. How large this item is liable to be may be inferred from the fact, that there is continually going on a shipment of paupers, direct from the poorhouses in Europe. On board of one British vessel, arriving at New York in 1851, the whole number of passengers, 230, were derived from this source. "On what principles of comity, humanity, or justice," to adopt the words of the commissioners of immigration, "the poorhouses of Europe, and sometimes the prisons, are emptied on our shores, it is difficult to say. The fact itself is notorious. Ship loads of these helpless and often vicious persons are sent here, sometimes in the depth of winter, without means or place of destination beyond this city, and become a permanent burden from the moment of their arrival." The whole number of foreigners who arrived at the port of New York in 1851 was 289,601; of whom 163,256 were from Ireland, 69,883 from Germany, and 56,462 from other countries.

It was probably fortunate for us as a nation, that, in the earlier period of our republic, the peoples of foreign nations had so little confidence in the success of our political experiment, in the capacity of free institutions to sustain themselves, and secure a permanent prosperity to the people under them. This distrust kept back the tide of foreign immigration, until it may be hoped that, even in our large cities, the native American element of the population has become too strong in numbers, intelligence, and wealth to be greatly modified by the admixture of foreign elements. But with our continued stability and prosperity, the people of other nations, especially the more oppressed and poor among them, are beginning to regard this country "as the haven of the poor man from the fears of want; as the mine whence the enterprising and adventurous are to draw wealth; as the theatre wherein the political economist is to realize his theories; as the church of all creeds, wherein those deprived of liberty of conscience in their native land may worship without fear of molestation." Hence, as one has said, "the tide of the world's population is tending to our shores; and the safe and beautiful harbor of New York receives the ships of all nations, bearing their freights of men and goods from every part of the earth."

The foreign residents in New York have various associations among themselves for humane and charitable purposes; as the St. George's Society, composed of Englishmen; St. Andrew's, of Scotch; St. David's, of Welsh; also societies of Germans, French, Spanish, and Hebrews. The St. Nicholas Society is composed of the descendants of the early Dutch inhabitants. Besides these, there are the Orphan Asylum, at Bloomingdale, a very large institution, established in 1806; the Protestant Half Orphan Asylum, on Twelfth Street; the Roman Catholic Orphan Asylum, on Prince Street; the Asylum for Colored Orphans; the Lying-in Asylum; the Female Assistance Society for the sick poor; and the Society for aiding Respectable, Aged Indigent Females.

Several of our great national institutions of Christian benevolence have their seat of operations in New York. Such are the American Bible Society, founded in 1816, in which the several evangelical denominations cooperate; the American Tract Society, and the American Seamen's Friend Society, of which the same is true; the American Home Missionary Society, and the Society for aiding Colleges at the West, supported more especially by the Presbyterians and Congregationalists; the American and Foreign Bible Society, for circulating a Baptist version of the Scriptures; and the American Society for meliorating the Condition of the Jews. Other organizations of this class exist, which are auxiliary to their parent institutions in Boston, Philadelphia, and Washington. Such are the Agency of the American Board of Foreign Missions; the Central American Education Society; the New York Colonization Society; and the Sunday School Society. The operations of all these associations are very extensive, and constitute a noble feature of the religious enterprise of the age and country. Their anniversaries, which are celebrated during the second week in May, are occasions of great and general interest.

The number of churches in the city of New York, as enumerated in 1852, is 250; Presbyterian, 46; Episcopal, 45; Methodist 40; Baptist, 31; Roman Catholic, 21; Dutch Reformed, 20; Jews, 12; Trinitarian Congregational, 10; Lutheran, 5; Friends, Primitive Christians, and Universalists, 4 each; Unitarian Congregational, Second Advent, and New Jerusalem, 2 each; Moravians, 1.

Some of the houses of public worship are among the most splendid ornaments of the city. The rapid increase of business in all the lower parts of the city, for a number of years past, and the consequent demand for a larger proportion of the space for its accommodation, has necessarily led to the abandonment of most of the localities, on which the earliest houses of worship were erected, and to the removal of their respective congregations up town. Hardly any of the church edifices of New York existing at the present day bear the impress, or are clothed with the associations, of a venerable antiquity. Only three, or at most four, built before the revolution, are now occupied for public worship. These are the Brick Presbyterian Church, Beekman Street, built in 1767; the John Street, Methodist, the first of that denomination in America, built in 1768; the North Dutch, corner of William and Fulton Streets, built in 1769, at the then northern border of the city; and St. Paul's, Episcopal, Broadway, nearly opposite the Park. During the occupation of New York by the British, all the churches, except the Episcopal, were either destroyed or used for barracks, hospitals, or riding schools, by the soldiers. The old building of the Middle Dutch Church, on the corner of Nassau and Cedar Streets, now occupied as the post office, with very little change in the exterior, presents perhaps the most accurate specimen remaining in the city of the former style of ecclesiastical buildings, particularly among the Dutch settlers. St. Paul's Church and the Brick Presbyterian occupy two of the finest positions in the city, and are among its handsomest ornaments, particularly the former. This beautiful structure is adorned with a portico of the Ionic order, consisting of 4 fluted columns of red sandstone,

supporting a pediment with a niche in the centre filled with the statue of St. Paul. The spire of this church rises, with graceful proportions, to the height of 200 feet. Beneath the portico is a monument, erected by order of Congress, to the memory of General Montgomery, under which his remains were deposited in 1819; and in the adjoining cemetery, a few feet from Broadway, stands an obelisk which commemorates the talents and fame of Emmet, the Irish barrister. The new building recently erected by Trinity Church on Broadway, opposite Wall Street, may be regarded as the finest specimen of pure Gothic architecture in the United States. This edifice is the third in succession which this church has erected upon the same site; the first having been burned in the great fire of 1776, and the second having been taken down in 1839, to give place to the present magnificent structure. It is constructed throughout, even to its minutest details, of a lightish brown sandstone, finely hammered, and, in its tracery and ornament of every description, elaborately and delicately wrought. It is 189 feet long, 84 feet wide, and 64 feet high, to the eaves of the clear story. It is without galleries, and superbly finished within. The height of the tower and spire is 264 feet. Access may readily be had to this lofty tower, for the prospect it affords, which is one of the most splendid panoramic views to be had on the whole continent. From a great height, but entirely secure and at his ease, the beholder sees this vast city, full of life and animation, as it were at his feet, while in every direction, as far as the eye can reach, the harbor, with its shipping, the islands, the rivers, the country, the cities and villages, and boundless ocean, are spread out before him in all the attractions with which nature, art, and luxury have invested them. The tower of this church contains a chime of bells. This beautiful building, erected at a cost of nearly \$400,000, will seat only about 800 persons.

St. John's Chapel, also built with the funds of Trinity Church, and beautifully situated on Var- rick Street, fronting St. John's Park, is one of the most costly church edifices in New York, "more than \$200,000 having been expended upon it." It has an elegant spire 220 feet in height, and a splendid portico in front of 4 Corinthian columns. There are other Episcopal churches in the upper part of the city, which are among its handsomest specimens of architecture. The houses of worship erected by the other denominations are generally plainer and less expensive. But there are among them many costly and beautiful structures. The Scotch Presbyterian Church on Grand Street is a stone building, with a fine Ionic portico of 6 stone columns, erected, it is said, at a cost of \$114,000. The Duane Street Church has an imposing Ionic portico. The building of the First Baptist Church, on Broome Street, is a fine stone edifice, of Gothic architecture. It has two octagonal towers on the front corners, with an immense window between them, 22 feet wide and 41 feet high. The interior is very imposing. The Reformed Dutch Church, on Washington Square, is a large Gothic structure, finished with great costliness and beauty. The new house of worship, erected by the Collegiate Reformed Dutch church on the corner of Lafayette Place and Fourth Street, has a most beautiful Ionic portico and spire. It is in the form and proportions of a Grecian temple, and about 100 feet in

length. It is built of the eastern granite. St. Peter's, Roman Catholic Church, on Barclay Street, has a very imposing Ionic portico, of 6 granite columns, with a statue of St. Peter occupying a niche in the pediment. The French Protestant Church, on Franklin Street, is built of white marble, and has a fine portico, with a double range of marble Ionic columns. The Presbyterians, on Mercer Street, and the Congregationalists, on Union Place, have beautiful houses of worship. Besides these there are many others in the city, which we cannot here describe, which will not fail to attract the attention of the admirers of handsome architecture.

New York contains many large and splendid hotels. One of the most spacious and elegant of these is the Astor House, on Broadway, opposite the Park. This great hotel, furnished with a magnificence and taste corresponding to the simple grandeur of the structure, is, with the exception of one other in New York, the largest in the country, if not in the world. It was erected by the late John Jacob Astor, at an expense, including the ground, of \$750,000. It is built of the Quincy granite, 5 stories high, with a front of 201 feet on Broadway, 146 on Vesey Street, and 154 on Barclay Street. It contains upwards of 300 rooms. The dining hall is 108 feet in length. The American Hotel is a large house, also opposite the Park. The Irving House, at the corner of Broadway and Chamber Street, is among the most elegant and fashionable of the hotels. Several are conducted on the European plan, affording rooms to their guests, with meals or not, as they may wish. Such are Libby's and Tammany Hall, near the Park, Delmonico's, near the Battery, and Florence's, in Broadway. We can do little more than to name a few of the principal hotels, in addition to those which have been mentioned. The United States, at the corner of Pearl and Fulton Streets, is constructed of stone, 6 stories high. Howard's Hotel is at the corner of Maiden Lane and Broadway. The Merchants, Rochester, Western, and National Hotels, are all in Courtland Street; Rathbun's Hotel is on Broadway, between Courtland and Liberty Streets. The Pacific Hotel is in Greenwich Street, convenient to the boats arriving and departing upon the North River. The New York Hotel, high up Broadway, is more retired, but eligibly situated. More recently opened, and exceeding every other in size and splendor, is the new Metropolitan Hotel, situated towards the upper part of the city, on the spot formerly known as "Niblo's Garden." This stupendous structure fronts on Broadway, Prince, and Crosby Streets, having a front, all together, of 600 feet. It is 6 stories high, built of fine brown freestone, with heavily-carved cornices over the almost innumerable windows. It stands on the highest ground in the city, and is a most noble and imposing edifice. To give an idea of the magnitude of the establishment, it may be stated that it contains over 500 rooms, over 100 of which are suits of rooms; being supplied throughout with gas, with hot and cold water, steam, &c., through a service, in the aggregate, of more than five miles of pipes. It contains one mile of elegantly painted halls and passages. Its 550 mirrors, to say nothing of its other furniture, cost \$15,000. Two of the largest of these, at each end of the great dining hall, cover within a fraction of 100 square feet each,

being the largest mirrors ever imported into the United States. The plate glass for the windows alone cost \$35,000; and the entire cost of the building, independent of the furniture, was about half a million of dollars.

Many of the stores, banks, and other buildings for purposes of business, in New York, are among the most elegant architectural ornaments of the city. These are too numerous to be described in this place. As an example of the largest class of stores, it may suffice to instance the splendid palace on Broadway, built and occupied by A. T. Stuart as a silk store. Fronting upon Broadway, it covers the entire block between Chamber Street and Reed Street, having a front upon Broadway of 150 feet, and a depth up both the other streets of the same extent. It is built of polished white marble, six stories high, in a style of architectural beauty, without and within, corresponding to the costliness of the materials.

Many of the private residences in the upper part of the city are of the most costly and beautiful description. Long streets consisting of stately blocks and terraces, and separate mansions, with every accessory of architectural splendor, excite the admiration of the beholder. "Under the smiles of fortune," says a writer of New York, "most classes of our citizens have been prosperous, many have grown wealthy, and the style and expense of living, and the beauty of some of the principal streets of the city, have proportionally improved. The buildings now generally in course of construction by our wealthy inhabitants, for their private residences, are among the most splendid and costly city dwelling houses in the world. The several styles of architecture are conceived by architects of great ability, and the designs of the buildings and interior decorations are in many instances carried out without regard to cost. \$100,000 for the cost of a single city lot, freestone house and furniture, is not an unrequited expenditure. The support of many private establishments requires an outlay of \$10,000 to \$20,000 a year, some ranging much higher."

The number of theatres and places of amusement in New York is not considered large in comparison with that of European cities of the same size. The principal theatres are the Park Theatre, opposite the Park; the Bowery Theatre, Bowery, above Bayard Street; Astor Place Opera House, near the upper part of Broadway; Olympic Theatre, Broadway, above Canal Street; National Theatre, near Chatham Square; Burton's Theatre, Chamber Street, and Niblo's Theatre, at the corner of Broadway and Prince Streets. The American Museum, opposite the Astor House, is an excellent and very extensive establishment of its kind, founded in 1810, and enriched with curiosities of nature and art from all parts of the world. Its immense collections occupy five large saloons 100 feet in length. From the observatory on the top of the building, which is very high, one of the finest views of the city, bay, and surrounding country is obtained. Peale's Museum and Gallery of Fine Arts, founded in 1825, contains four spacious apartments, filled with choice specimens in the departments of natural history, painting, statuary, &c. The cosmorama views in these museums are equal to any in the world for number and variety, and for the truth and perfection of art with which they are prepared. The Chi-

nese Museum, at 359 Broadway, contains a very extensive collection of curiosities, illustrative of the arts and the customs of life in China.

Castle Garden, off the Battery, and Vauxhall Garden, at the upper end of the Bowery, are places of pleasant resort for recreation. There are also in the vicinity of the city several places of daily resort in the summer season. The principal of these is Hoboken, on the opposite bank of the Hudson, between which and New York, in pleasant weather, there are continual currents of persons going and returning by the boats, which seem, as it were, to bring these places nearer to the city than if they were within its limits. The grounds at Hoboken are beautifully laid out, and shaded and supplied with various means of innocent and healthful recreation. Haerlem Village, on the N. end of the island, included within the city limits, was founded, we are told, as long ago as 1658, "with a view to the amusement and recreation of the citizens." The Haerlem Railroad, 8 miles in length, connects this village with the very heart of the city. The cars start from the City Hall several times a day, passing through Centre and Broome Streets, the Bowery, and Fourth Avenue, as far as Twenty-Seventh Street, with horses, and thence with steam to Haerlem, and beyond to other places to the N. and E. of it. The ride to Haerlem is pleasant, affording a view of much of the city, the East River, and surrounding country, and passing through a tunnel excavated in the solid rock, 595 feet long. Manhattanville and Bloomingdale, on the W. side of the island, and Astoria, on the E. side, are also much frequented. Many of the pleasant places in New Jersey, on Staten Island, and on Long Island are also brought by the numerous ferries, railroads, and steamboats diverging from the city, within a convenient distance for pleasure excursions.

The markets in New York are numerous, and well supplied with every necessary and luxury which the country produces. They are not situated, as in some other cities, in one or two central localities, this being impracticable from the great extent of the city. The principal markets are the Fulton, Catharine, Washington, Franklin, Clinton, Tompkins, and Essex. The value of the country produce brought to market, and consumed annually by the inhabitants, has been estimated at \$15,500,000.

The city is lighted to a great extent with gas. The first experiment was made in the Park in 1812. The works of the New York Gas Light Company, organized in 1823, are in Canal Street, from which between 30 and 40 miles of pipe have been laid into all parts of the city. The light produced is strong and beautiful, imparting to Broadway, and to other streets in which the stores are generally lighted in the evening, almost the splendor of midday.

But the greatest of the public works of New York is the Croton Aqueduct, by which, after much suffering from the want of it, the blessing of an abundant supply of pure water has been secured to the inhabitants. This great undertaking was decided upon by a vote of the citizens at the charter election in 1835, and it was so far completed that the water was brought into the city on the 14th of October, 1842. The aqueduct commences at a point on the Croton River, about 6 miles from the Hudson, in Westchester county, and about 40 miles from the City Hall.

The dam across the Croton is 250 feet in length, and 40 feet high; 70 feet thick at the bottom, and 7 at the top, built of stone and cement. A pond is thus created about 5 miles long, covering 400 acres, and estimated to contain 500,000,000 gallons of water. Its elevation above tide water is 153 feet. From the gateway in the dam the aqueduct proceeds, sometimes crossing valleys by embankments, sometimes beneath the surface, and through tunnels in solid rocks, until it reaches Haerlem River, which it crosses on a magnificent stone bridge, 1450 feet in length, and 124 feet high. This bridge is supported by 14 stone piers, 8 of the arches being of 80 feet span, and the remaining 6 of 50 feet. The aqueduct throughout is built of stone, brick, and cement, arched over and under, 8 feet 5 inches high, 6 feet 3 inches wide at the bottom of the side walls, and 7 feet 8 inches at the top. It has a descent of 13½ inches per mile, and will discharge 60,000,000 gallons of water in 24 hours. It delivers its water into a receiving reservoir at Eighty-Sixth Street, 38 miles from the dam, which covers 34 acres, and contains 150,000,000 gallons of water. From this to the distributing reservoir on Murray's Hill, at Fortieth Street, 2½ miles from the receiving reservoir, the water is conveyed in iron pipes. This reservoir is a massive and beautiful piece of stone masonry, laid in cement, 43 feet high above the street, containing 25,000,000 gallons. Its surface is 115 feet above tide water. Thence the water is distributed over the city in iron pipes. The great mains are 36 inches in diameter. In 1852, 215 miles of pipe had been laid. The head is sufficient to carry the water into the upper stories of the houses, and to sustain several beautiful *jets-d'eau* in different parts of the city. At the fountain in the Park, when the water is forced into the air in a single column, it rises to the height of between 60 and 70 feet. There are a great number of free hydrants in all parts of the city, from which the poor supply themselves, and water is furnished for cleansing the streets. The supply from the river is considered adequate to meet the wants of a population three or four times greater than the city now has. The daily consumption is now about 30,000,000 of gallons.

The following is the result of an analysis of the Croton water by Prof. Benj. Silliman, Jr.:

Chloride of sodium, and a trace of potassium,167
Sulphate of soda,153
Chloride of calcium,372
Chloride of aluminum,166
Phosphate of alumina,832
Carbonate of lime,	2.131
Carbonate of magnesia,662
Sulphate of lime,235
Silica, colored by manganese,077
Carbonate of soda, equivalent to nitrates and crenates of do. and loss,	1.865
Total solid, in one gallon, after ignition	6.66
Carbonic acid in ditto, in cubic inches,	17.817

Of the action of this water upon lead, after an experiment of 5 weeks' continuance, the professor says, "The lead in this water looks as bright and fresh as the day it went in, and the water itself is not in the least turbid."

The entire cost of the aqueduct to the city has been about \$13,000,000. The revenue now

amounts to half a million annually, and is rapidly increasing.

New York has now an effective system of public schools, by which all the children between the ages of 4 and 16 are free to receive instruction as a common right. A society, called the "Free School Society," was formed in 1804 by many principal citizens, and afterwards incorporated, "to provide for the education of poor children, not belonging to, nor provided for, by any religious society." In 1826, the charter of this society was modified, and its title changed to the "Public School Society of New York," and it was required "to provide, so far as its means might extend, for the education of *all children* in the city of New York, not otherwise provided for, whether such children be or be not the proper objects of gratuitous education." To this society, until within a few years past, was intrusted the management of all the public schools of the city. They had under their care 16 schools, for which large and convenient buildings were provided; and 48 primary schools, for which apartments were leased in other buildings, besides several for colored children. By a law of the state, of comparatively recent date, public district schools have been established, in addition to those under the direction of the School Society, which are also well instructed and flourishing. The number of public schools of New York, in 1851, was 207; the number of children taught, 107,000. The whole expense of maintaining the schools for that year was \$274,794.59; which is an average of \$6.86½ per scholar. The funds for defraying these expenses are derived partly from the Common School Fund of the state, of which the city received its due proportion; partly from an assessment upon the citizens for an amount equal to their appropriation from the fund, as a condition of receiving the same; and partly by a special tax of 4-80ths of 1 per cent. on the valuation of property in the city.

In 1846 the city of New York resolved, by a very large majority in a popular vote, to establish a free school of a higher order, perhaps, than any which had been hitherto projected in our country; to be known by the name of the "Free Academy." For this school a noble building has been erected on the corner of Lexington Avenue and Twenty-Third Street, and the institution was opened January 27, 1849. It was established by the Board of Education, under an act empowering them to establish a free academy, "for the purpose of extending the benefits of education gratuitously to those who have been pupils in the common schools of the city and county of New York." A thorough knowledge of the branches taught in the common schools qualifies for admission into the academy, where the education of the pupils is to be continued onward, branching, as it proceeds, towards the various divisions of the field of knowledge, as their preferences respectively may lead them. The plan of the institution is designed to be intermediate between the college system and that of the Polytechnic schools of Europe, embracing portions of both of these systems. It was organized with a corps of 10 instructors, embracing, besides the principal, professors of Latin and Greek, of mathematics and natural philosophy, of chemistry, of history and belles-lettres, of the French, Spanish, and German languages, and of drawing.

The building erected for the Free Academy is

on Twenty-Third Street, corner of Lexington Avenue. It is a spacious and elegant structure, in which utility and ornament are admirably united. In its external architecture it is in the style of the Gothic town halls of the Netherlands. Its dimensions on the ground are 125 feet by 80. It consists, exclusive of the basement, of three lofty stories, which are intersected by two wide passages running at right angles through the middle of the building; above which is the great hall, extending over the entire building, and lighted by windows in the roof. This fine building will accommodate 1000 scholars, with all the necessary appliances; and has cost, exclusive of the ground and furniture, about \$50,000.

The total value of real and personal property in the city of New York, as assessed in 1851, was \$320,108,358. This was an increase from the value, as assessed in 1850, of \$34,022,941. The amount of taxes authorized to be raised in 1850 was \$2,578,325.

The number of buildings erected in the city in 1850 was 1912. The aggregate of new buildings erected for 10 years, from 1840 to 1850, was 15,409.

The whole number of dwellings in New York, in 1850, was 37,677, and the number of families 93,608. The largest number of persons are in the various descriptions of manufacturing and mechanical employments. The number of productive establishments of this kind, in 1850, was 3387, employing 83,620 persons, of whom 29,917 were females. The capital invested in these operations was \$34,232,822; and the annual value of manufactured articles, \$105,218,308. — For the statistics of commerce, banks, &c., see *Statistical Tables*.

New York enjoys peculiar advantages for being a great commercial city. The harbor, for capacity, security, and beauty of scenery, is one of the finest in the world. It consists of an outer and an inner harbor; the outer extending from Sandy Hook and the bar, about 18 miles S. from the city, to the Narrows, formed by the approaching extremities of Long Island and Staten Island, and constituting the Raritan Bay. On the bar there are 27 feet of water at high tide, and 21 at low tide, and within the bay there is good anchorage for vessels. The inner harbor, or that which is more properly known as the bay or harbor of New York, extends from the Narrows, 8 miles, to the city, and several miles on each side of it, up both the North and the East Rivers, particularly the latter. It has a width of from $1\frac{1}{2}$ to $5\frac{1}{2}$ miles, and is about 25 miles in circumference. It has a depth of water sufficient for the largest ships of war, in every part, and the largest merchant vessels come directly to the docks and slips with which the whole of the lower part of the city, excepting the Battery, is bordered, for a length, in all, of about 7 miles. The inner harbor is entered, not only from the ocean at Sandy Hook and through the Narrows, which is the usual channel for large vessels bound inward from sea, but, on the N. E., from Long Island Sound, and, on the S. W., through the Kills and Staten Island Sound. The passage at the Narrows is about a third of a mile wide. The harbor is every where well protected against the influence of storms; but especially within the East River, which is the part most closely landlocked. Here the largest number of vessels always lie, presenting, in the multitude of their

masts and spars, the appearance of a leafless forest. The harbor is generally open for the free ingress and egress of vessels at all seasons of the year. In very severe winters, it is occasionally obstructed for a few days with ice; but the tide sets through from the East River with such force, that it is only at rare intervals that the ice, though running from above, stops and closes over. There are several beautiful islands in the inner harbor, which are attached to the city. Governor's Island is 3200 feet distant from the Battery, and contains 70 acres. On this island are three fortifications — Fort Columbus on the S., star-shaped; Castle Williams on the N. W. point, which is a round tower, 60 feet high, with 3 tiers of guns; and likewise a battery on the S. W. side, commanding the entrance of Buttermilk Channel. Here are barracks, and houses for the officers, for a considerable garrison. On Bedlow's and Ellis's Islands also are strong fortifications. At the Narrows, Forts Hamilton and Lafayette, on the E. side, and Forts Tompkins and Richmond, on Staten Island, well defend the entrance of that important channel. The entrance from the Sound, on the East River, is defended by Fort Schuyler, on Throg's Neck. Blackwell's, Great Bar, and Randall's Islands are in the East River.

The immediate communication between New York and the surrounding country is maintained by no less than 15 steam ferry boats, which are constantly running from different points of the city to Brooklyn, Williamsburg, Staten Island, Jersey City, Hoboken, and other points. These, with the continual arrival and departure of vessels of every class, of steamboats on the numerous routes of travel, and of sailing boats with parties of pleasure, render the harbor a scene of bustle and animation scarcely less exciting than the city itself; while the variegated scenery upon its shores, the neatly-built cottages, the elegant country seats of opulent citizens, surrounded with luxuriant groves and pleasure grounds, and the fine view of the islands, furnishing each the site of noble public institutions, or of strong works for military defence, render all the approaches to the city upon its waters beyond description beautiful. The distances to the most important suburbs of New York by the different ferries is as follows: South ferry to Brooklyn, 1063 yards; Fulton ferry, 731 yards; Catharine ferry, 735 yards; Walnut Street ferry, 635 yards; Peck Slip ferry, 2800 yards; Williamsburg ferry, 950 yards; Hoboken ferry, 1955 yards; Jersey City ferry, 2746 yards; Staten Island ferry, 6418 yards. The suburbs thus connected with the city of New York are all, in an important sense, an integral part of this great commercial emporium, being created by its prosperity, and affording residence to its overflowing population. The suburbs of New York, consisting of Brooklyn, Williamsburg, Jersey City, and Hoboken, contain, in round numbers, 150,000 inhabitants, which, added to the population of the city proper make a total of at least 650,000.

In this connection, it may be proper to refer to the extensive public accommodations in the city proper for conveying persons from place to place by means of omnibuses, or cheap coaches for the million. The greatest number of these are drawn by two horses; but many of them, of large capacity, have four. They have seats for from 12 to 24 persons inside, and for others on

the top. There are no less than 24 established routes between different points in the city, on which they run, with a great number of vehicles belonging to each route. The total number of licensed omnibuses, February-1, 1851, was 568; yielding a revenue to the city of \$10,700. Besides these, the Haerlem Railroad cars, which run as omnibuses from the Park through the city, starting every 15 minutes, accommodate an immense number of persons. The number of hackney coaches, licensed in 1851, was 341.

The lines of communication between New York and the great interior of the country, both by water and by land, are numerous and extensive. Those on the North River are connected, by canals and railroads from Albany and Troy, with Lake Champlain and Canada on the N., and with Western New York, the great lakes, and the Mississippi Valley on the W. The Erie Railroad opens a communication from Jersey City, opposite the city of New York, to Dunkirk, on Lake Erie; and will soon be connected, by a continuous chain of railroads, with the west, as far as the Mississippi, and ultimately far beyond. A railroad from the heart of the city, running along the eastern bank of the Hudson to Greenbush, opposite Albany, now establishes a communication, at all seasons, with the railroads going thence N., E., and W. The Haerlem Railroad is extended W., to connect with others running through the Connecticut and Housatonic valleys, and reaching the metropolis of New England, and the British provinces, on the N. and E. Several lines of steamboats, through Long Island Sound, connect with lines of railroad at the E., and form routes to Boston. With Philadelphia, Baltimore, and the cities S., to New Orleans, similar lines of communication are established, connection by steam being already continuous through this whole extent. Frequent and regular communication is maintained, by the various lines of packet ships and ocean steamers, between the principal ports of Europe, the West Indies, Mexico, and California. Some of these vessels are now almost daily arriving and departing, with a precision and despatch which, a few years ago, would have been thought incredible. The Collins line of steamships to Liverpool have a contract with the government for carrying the mails.

The central position of New York, in reference to the other parts of the Union, having New England on the N. E., the Middle and Southern states on the S. W., and much of the vast interior of the Mississippi Valley brought into free communication with it by canals and railroads, in connection with the navigation of the Hudson, gives to this city preëminent advantages for being a great commercial mart for the whole country. Its first selection by the Dutch, as a place of settlement, was influenced, no doubt, by the circumstances of its lying at the mouth of a navigable river, having a good harbor, and being easy of defence against the Indians. A communication with the interior by navigable streams, until within a few years past, has been thought essential to the existence of a commercial city. It is true, indeed, that since the introduction of canals and railroads, particularly the latter, this consideration has sunk into one of secondary importance; and it must be granted that, in this respect, New York has not now the advantage which she once had over some of her sister cities. By means of

railroads and canals, Philadelphia, Baltimore, and Boston will obtain a large amount of the western trade, which, before these new facilities arose, would have found its way to New York. Still the central position of New York, and the extensive growth to which she has attained, must continue to secure to her the name and rank which she already possesses of being the commercial emporium of the nation. When we consider the prospective advances of this country, the vast resources of its enterprise and wealth which remain to be developed, and the power which New York will have to increase her facilities of traffic with our own interior, and with foreign ports, to any requisite extent, we cannot doubt that she is destined to become, perhaps, the most flourishing and extensive mart of commerce in the world.

The first settlement made on Manhattan Island, with a view to permanent occupancy, was by the Dutch in 1615. In 1629, being resolved to establish a colony at New Amsterdam, as New York was then called, they appointed Walter Van Twiller governor, who held the office nine years. In 1635, the governor erected a substantial fort; and in 1643 a house of worship was built in the S. E. corner of the fort. In 1644, a city hall, or stadt house, was erected, which was on the corner of Pearl Street and Coenties Slip. In 1653, a wall of earth and stones was built from Hudson River to East River, designed as a defence against the Indians, immediately N. of Wall Street, which from that circumstance received its name. The first public wharf was built in 1658, where Whitehall Street now is.

The administration of Governor Stuyvesant, the last of the Dutch governors, terminated, after a continuance of 17 years with the capture of the colony by the English, in 1664, when the city was named New York, in honor of James, Duke of York. The property of the Dutch West India Trading Company was all confiscated. The number of inhabitants was then about 3000.

In 1673, the Dutch retook the city from the English, it having been surrendered by Captain Manning without firing a gun. It was restored to the English the next year; and Manning was tried for cowardice and treachery, and sentenced to have his sword broken over his head. The inhabitants were all then required to take the oath of allegiance to the English government. As descriptive of the commercial condition of the city at that period, Governor Andros, in his report to the government in England, in 1678, says, "Our principal places of trade are New York and Kingston, except Albany for the Indians. Our buildings most wood, some lately stone and brick; good country houses, and strong of their several kinds. A merchant worth £1000, or £500, is accounted a good substantial merchant, and a planter worthe half that in moveables accounted rich; all estates may be valued att about £150,000; there may lately have traded to ye colony, in a year, from 10 to 15 ships or vessells, of about together 100 tunns each, English, New England, and oure own built, of which five small shippes and a ketch now belonging to New Yorke, foure of them built there."

In 1686, James II. abolished the representative system, and prohibited the use of printing presses. A meeting of commissioners, denominated a congress of the several colonies, was this year assembled at New York. A regulation for light-

ing the city was established in 1697, requiring that lights be put in the windows of the houses fronting on the streets, on a penalty of ninepence for every night's omission; and that a lighted lantern be hung out upon a pole at every 7th house, the expense to be borne equally by the 7 intervening houses. In 1703, Wall Street was paved from William Street to the English (Trinity) Church. The Presbyterian ministers were prohibited from preaching by Governor Cornbury, in 1707, and two of their number were arrested and tried for violating this prohibition; but they were discharged on their paying \$220 costs. In 1719, a Presbyterian Church was built in Wall Street. In 1725, the *New York Gazette*, a weekly newspaper, was established. The first stage began to run between New York and Boston in 1732. It made its trips once a month, and was 14 days on the journey. In 1745, Lady Murray owned the only coach in New York. The city, the next year, contained 1834 houses, and 11,717 inhabitants, all lying below the Park, having increased about 1000 in 9 years. A theatre was opened in 1750. From this time to the period of the revolution, streets were laid out, and built upon more or less, as far N. as Murray Street.

In consequence of the disastrous issue of the battle of Long Island, soon after the commencement of the war, in 1776, the city was taken possession of by the British army, under Lord Howe, and occupied by them until November 25, 1783, when they evacuated it, upon the independence of the United States being established. On that day, General Washington, at the head of the American army, entered the city. The British had erected works across the island, near Duane Street. After the devastation committed by the British upon the houses of worship, the college, and other public institutions, and in consequence of the loss of the books and accounts of the corporation, which had been carried off by the treasurer, who joined the British and left the country, much difficulty was found in tracing out and securing various descriptions of the public property. The whole increase of the population of New York, during a century of the English rule, did not exceed 20,000, which at the present day must seem greatly disproportionate to its commercial advantages in relation to the American colonies, and under the auspices of such a nation as Great Britain. But when we consider the strange and unnatural restrictions thrown around the colonies by the mother country, our surprise is diminished. Governor Cornbury, writing from New York to his superiors at home, in 1705, says, "I hope I may be pardoned if I declare my opinion to be that all these colonies, which are but twigs belonging to the main tree, ought to be kept entirely dependent upon and subservient to England; and that can never be if they are suffered to go on in the notions they have, that as they are Englishmen, so they may set up the same manufactures here as people may do in England." In conformity with this policy, the people of New York were not allowed to manufacture cloths of any kind, except for their own use. After the close of the revolution, the city contained 23,614 inhabitants, being an increase of about 2000 in 15 years.

In 1785, the first Congress after the war was organized in New York, in the City Hall, where the Custom House now stands; and here, four years later, when the constitution had been

adopted, Washington was inaugurated president of the United States.

From this time, in our country, commences the period of modern history, so to speak; and the most important events in the annals of the city must be comparatively familiar to the reader. For a place of such magnitude, New York cannot be considered unhealthy. It has enjoyed as great an exemption as cities of this class in most countries from the ravages of epidemic diseases. It has been four times visited by yellow fever, viz., in 1742, in 1798, in 1805, and in 1822. The disease was the most fatal in 1798, when it prevailed from July to November, and the deaths amounted to 2086. The city, with other cities large and small, suffered severely from Asiatic cholera in the years 1832, 1834, and 1849. The deaths in July and August, 1832, numbered 4673; and during the year, 9975. The deaths during the year 1850, a year of ordinary health, were 15,377; which is a ratio of 1 to 33 of the population. This ratio does not vary materially from that of other northern cities of the largest class.

The most extensive and destructive fire which has ever occurred in New York was that of the 16th of December, 1835, which swept over between 30 and 40 acres of the most valuable part of the city, densely occupied with stores and filled with the richest merchandise. About 650 buildings were consumed, and the amount of property destroyed was estimated, by a committee appointed to ascertain the loss, at nearly \$18,000,000. Under this heavy calamity, the wealth and recuperative energies of the city were in a wonderful manner demonstrated, as in an incredibly short time the whole burned district was covered again with stores and with public edifices, more costly, convenient, and elegant than before.

The first formal charter of the city was granted June 12, 1665. This has been superseded by a second, and also by a third, granted in 1730, which, though much changed by acts of the legislature, forms the basis of the present rights and privileges of the city. The present charter, by the New York legislature, was granted in 1831. The city is divided at present into 19 wards, each of which annually elects an alderman and an assistant alderman, to each of the two boards respectively, which constitute the common council. The mayor is chosen annually by the electors of the city.

It is now (1852) 237 years since the passengers of a Dutch emigrant vessel established their rude habitations on the southern extremity of Manhattan Island. The annals of the city, during the period which has intervened, and more especially since the country became an independent nation, illustrate its unexampled progress in population, wealth, and commercial greatness. "In these respects," to adopt the words of the editor of the *New York Manual of the Corporation for 1851*, "it may be safely said, that history affords no equal example of prosperity; and, if we may anticipate the lapse of another century, its extent and population will stand with scarcely a rival among the cities of the world."

New York Mills, N. Y., Oneida co. An important manufacturing village on Sadaquada Creek. 96 miles W. N. W. from Albany.

Niagara County, N. Y., c. h. at Lockport. Formed from Genesee co. in 1808. Lake Ontario bounds it on the N., Orleans co. on the E.,

Erie on the S., and the Niagara River, which separates it from Canada, on the W. It is also watered by Tonawanda Creek, which separates it from Erie co., on the S. The surface gradually descends from the Mountain Ridge to the lake, and between the two extends the Alluvial Way, or Ridge Road, which is elevated 130 feet above the waters of the lake. The soil is mostly good, being well adapted to the growth of grass and grain. This county contains several important mineral and gas springs. It is crossed by the Erie Canal, which unites with the Tonawanda Creek at Pendleton village, and by the Lockport and Niagara Falls, and Buffalo and Niagara Falls Railroads, which unite at Niagara Falls village.

Niagara, N. Y., Niagara co., is separated from Canada by the Niagara River, which bounds it on the W., and is drained by a few small streams. Goat and some smaller islands belong to this town, which also embraces a part of Niagara Falls. It is situated on the Mountain Ridge, and slopes towards the S. The soil is calcareous sandy loam, upon a foundation of gypsum and lime. 16 miles W. from Lockport, and 298 from Albany.

Niagara Falls, N. Y., Niagara co. On the E. side of Niagara River, at the falls, and 297 miles W. by N. from Albany. See *Fashionable Resorts*.

Nicholas County, Ky., c. h. at Carlisle. Bounded N. by Harrison and Mason, E. by Fleming and Bath, and S. and W. by Bourbon and Harrison counties. Drained by Licking River and branches.

Nicholas County, Va., c. h. at Nicholas. It is bounded N. by Kanawha and Braxton counties, E. by Randolph and Pocahontas, S. by Greenbrier and Fayette, and W. by Kanawha co. Watered by Great Kanawha, Gauley, and Elk Rivers, and branches.

Nicholas, Va., c. h. Nicholas co. 310 miles W. by N. from Richmond.

Nicholasville, Ky., c. h. Jessamine co. On a small branch of Kentucky River. 36 miles S. E. from Frankfort.

Nichols, N. Y., Tioga co. Bounded on the N. by the Susquehanna River. The surface is hilly, except on the river border, where are broad and fertile flats. 8 miles S. W. from Owego, and 175 W. by S. from Albany.

Nicholson, Pa., Luzerne co. Tunkhannock Mountain crosses the N. part of this town. 161 miles N. E. from Harrisburg.

Niles, Mn., Berrien co. On the E. side of the St. Joseph's, on the Michigan Central Railroad. 191 miles W. from Detroit.

Niles, N. Y., Cayuga co. Bounded on the E. by Skaneateles, and W. by Owasco Lake, and watered by some small streams. Surface rolling; soil clay and sandy loam, underlaid by lime and slate. 10 miles S. E. from Auburn, and 160 W. from Albany.

Nine Eagles, Io., c. h. Decatur co.

Nippenose, Pa., Lycoming co. Bounded W. by Nippenose Creek, and N. by the N. branch of the Susquehanna River. Surface hilly; soil calcareous loam. 96 miles N. from Harrisburg.

Niskayuna, N. Y., Schenectady co. This town lies on the S. side of the Mohawk. The surface is somewhat hilly near the river, but more level and sandy on the S. 4 miles E. from Schenectady, and 12 N. W. from Albany.

Noble County, Ia., c. h. at Augusta. Bounded

N. by La Grange, E. by De Kalb, S. by Allen and Whitley, and W. by Kosciusko and Elkhart counties. Watered by Elkhart and Tippecanoe Rivers, and numerous small lakes.

Noble, Ia., c. h. Noble co. A little N. E. from Elkhart River, and 159 miles N. N. E. from Indianapolis.

Nobleboro', Me., Lincoln co. On the upper waters of Damariscotta River, E. side. 38 miles S. E. from Augusta. A ship-owning and ship-building place.

Nockamixon, Pa., Bucks co. Bounded E. by Delaware River, and N. by its tributary, Gallows Run. The Delaware flows between high perpendicular banks, composed of red sandstone. Surface hilly; soil gravelly, and in parts swampy. 14 miles N. from Doylestown.

Nottaway County, Mo. In the N. W. angle, bordering on Iowa. The head streams of the Platte run S. through it, and the Nottaway above its western border.

Norfolk, Ct., Litchfield co. The settlement of Norfolk began in 1744. This town is elevated and mountainous. The soil is a primitive gravelly loam, generally cold and stony, but has considerable depth, and affords good grazing. A stream, called Blackberry River, runs near the centre of the place, and a little westward of the Congregational Church falls over a ledge of rocks 30 feet in height. There is a handsome village, with an open square or green in front of the church, which is uncommonly neat and beautiful in its appearance. About half a mile N. is another village. 25 miles W. N. W. from Hartford.

Norfolk County, Ms., c. h. at Dedham. This county is bounded N. E. by Boston Harbor, N. by Suffolk co., W. by the S. E. corner of Worcester co., S. by the N. E. corner of the state of Rhode Island, and S. S. E. and E. by the counties of Bristol and Plymouth. This county has a maritime coast on Boston Harbor of about 12 miles, which is indented with many small bays and navigable rivers. Its surface is uneven, and in some parts hilly; its soil strong and rocky. Great quantities of the dark-colored granite are found here. A large part of Norfolk co., particularly those towns near Boston, is under a high state of cultivation, and affords fruits and vegetables in great abundance. The proximity of this county to the capital gives it many facilities, and the towns in this and in the county of Middlesex, that border on Boston Harbor, may be called the gardens of Boston. The Charles, Neponset, and Manatiquot are its chief rivers.

Norfolk, N. Y., St. Lawrence co. Rackett River and some of its branches water this town. Surface undulating; soil fertile loam. 18 miles N. from Canton, and 224 N. W. from Albany.

Norfolk County, Va., c. h. at Norfolk. Bounded N. by Chesapeake Bay, E. by Princess Anne co., S. by North Carolina, and W. by Nansemond co. Hampton Roads lie on the N. border of this county, which also contains the greater part of Dismal Swamp. It is drained by Elizabeth and Pasquotank Rivers.

Norfolk, Va. Port of entry and shire town of Norfolk county. This place is situated on the N. E. bank of Elizabeth River, just below the confluence of the two branches of which that river is formed, and 8 miles above its entrance into Hampton Roads. It is 32 miles from the ocean, 106 miles E. S. E. from Richmond, 110 miles, by water, below City Point, at the junction

of the James and Appomattox Rivers. Population, in 1810, 9193; 1820, 8478; 1830, 9816; 1840, 10,920; 1850, 14,320.

The site of Norfolk is low, and in some parts marshy; but the principal streets are well paved, lighted, and clean, though others are less commodious and pleasant. The general style of the buildings is not distinguished for elegance. The public buildings are a court house, jail, market house, theatre, banks, insurance offices, an orphan asylum, an academy, and an athanæum, which has a respectable library. There are 8 or 10 churches, 2 of which are Episcopal, 2 Methodist, 1 Presbyterian, 1 Baptist, 1 Roman Catholic, and 1 African.

The harbor of Norfolk is spacious, easy of access, and deep enough to admit vessels of 18 feet draught. The entrance, between Old Point Comfort and the Rip Raps, is more than a mile wide, defended by Fort Monroe and Fort Calhoun. The former, on Old Point Comfort, including the ditch or moat, covers 70 acres of ground; and the whole peninsula ceded by the state to the United States contains 250 acres. This work is calculated to mount 335 guns, the most of which are either 42's, 32's, or 24's, and about 130 of them under bomb-proof covers. Fort Calhoun, on the opposite side of the river, covers about 7 acres, for which a solid foundation was prepared by throwing stones into the flats near the channel, and suffering them to settle for several years before erecting the superstructure. This work will mount 265 guns, 32 and 24 pounders, nearly all under cover. These fortifications completely command the entrance to the harbor from Hampton Roads. Opposite to Norfolk is Portsmouth, immediately above which is Gosport, one of the most important navy yards in the United States, having a splendid dry dock, constructed of hewn granite, at a cost of \$974,356. About a mile from Norfolk, on Washington Point, between the E. and W. branches of Elizabeth River, stands the United States Marine Hospital, which is a handsome edifice of brick.

The Dismal Swamp Canal, which connects the waters of Albemarle Sound with Chesapeake Bay, opens to Norfolk the commerce of the great basins of the Roanoke and Chowan, and, consequently, some of the finest sections of North Carolina and Virginia. The James River, which is navigable for sloops 150 miles, to Richmond, and for bateaux 220 miles above that place, opens a valuable trade into an extensive and productive country. This port has more foreign commerce than any other place in Virginia.

Norridgewock, Me., c. h. Somerset co. On both sides of the Kennebec, 28 miles N. from Augusta. The village is situated on the N. side of the river, directly in the bend, 5 miles W. of Skowhegan Falls. It is a pleasant place, the main street being broad, and shaded by fine trees. Norridgewock is famous in history as the residence of the Norridgewock Indians, and the seat of a French Jesuit mission.

Norristown, As., c. h. Pope co. On the Arkansas. 71 miles N. W. from Little Rock.

Norristown, Pa., c. h. Montgomery co. 16 miles from Philadelphia. The town is handsomely built. Many of the buildings being covered with stucco gives it a bright and lively appearance. Besides the usual county buildings, and several handsome churches, there is an academy, a private seminary for boys, and public library. The princi-

pal growth of this place has been within the last 15 or 20 years, since the erection of a dam across the Schuylkill, which has created an immense water power, giving rise to several large manufacturing establishments. These consist of extensive cotton factories, iron works, shops for building locomotives, saw mills, grist mills, &c.

A bridge across the Schuylkill, 800 feet long, was built in 1830, at a cost of \$32,000. The Norristown and Philadelphia Railroad, opened about 1835, connects these two places, passing through Conshocken and Managunk. The railroad from Philadelphia to Reading and Pottsville passes along the opposite bank of the river. On that side of the river also are the locks of the Schuylkill Navigation Company, around which, and at the station of the Reading Railroad, a small village has sprung up. About 3 miles W. of this place are extensive marble quarries, from which a part of the stone was obtained for the Girard College. A saw mill, for cutting it into merchantable forms, is in operation at Norristown. This place was laid out in 1784, and incorporated as a borough March 31, 1812.

Norriton, Pa., Montgomery co. Watered by the Schuylkill River, which affords extensive water power, and by some small streams flowing into it. Surface level; soil fertile red shale.

North Adams, Ms., Berkshire co. See *Adams, Ms.*

Northampton, Ms., shire town of Hampshire co. 93 miles W. from Boston, by the old stage route, and 115 miles by railroad, via Springfield, from which it is 17 miles N. Population in 1790, 1628; 1800, 2190; 1810, 2631; 1820, 2854; 1830, 3613; 1840, 3750; 1850, 5278.

This town is delightfully situated, on the W. side of the Connecticut, on elevated ground, about a mile from the river, between which and the town are large tracts of meadow land, the most fertile and beautiful to be found in this or any other country. These meadows comprise between 3000 and 4000 acres. A fine bridge, 1080 feet long, connects this town with Hadley.

This territory, with that of the towns adjoining, was purchased, in 1653, of "the chief and proper owners," and conveyed to John Pynchon, for the planters, for the consideration of one hundred fathoms of wampum, ten coats, and some small gifts, and also for ploughing up 16 acres of land on the E. side of *Quonnecticut* river. The Indian name of the territory was *Nonotuck*.

Since the first settlements in the Connecticut basin, this town has been an important point of attraction. It was the third town settled on Connecticut River in Massachusetts. The soil of the town is alluvial, and its products exuberant. Both before and since the division of the old county into three, this place has been the seat of justice. The buildings of the county and town are handsome, and the most important county offices are *fire proof*.

The town is irregularly but handsomely laid out, and is regarded as one of the most pleasant for an elegant residence of any in New England. The ground rises, W. of the village, into a considerable elevation of regular form, called Round Hill, which is the site of several of the finest edifices in this part of the country. Above them all, and crowning the summit of the hill, is the celebrated water cure and boarding establishment, which occupies an extensive range of buildings originally constituting three separate

private mansions. The meeting house of the First Congregational Church in Northampton is one of the largest in the United States. It is an imposing edifice of wood, 100 feet in length by 76 in width, so constructed that the voice of the speaker easily fills its large dimensions. It is ordinarily well filled with intelligent worshippers. There is also another Congregational Church, besides churches of the Unitarian, Episcopal, Baptist and Methodist denominations.

There are many institutions of a literary and religious character in this town, and its schools are of the first order.

The country around Northampton is enchanting; and those who visit Mount Holyoke, 830 feet high, on the E. side of the river, or Mount Tom, 1214 feet high, on the W. side, will find a wonderful variety of landscape scenery, probably unsurpassed in beauty by any in the New England States. The view from the situations on Round Hill is extensive and very beautiful. The college buildings at Amherst, 7 miles to the N. E., are within the horizon of this lovely prospect.

The ancient cemetery at Northampton is much visited by strangers, who feel an interest to stand by the grave of David Brainerd, the devoted missionary among the Indians, who died, October 10, 1747, at the house of the Rev. Jonathan Edwards, afterwards President Edwards, but at that time pastor of the First Congregational Church in this town. "If the greatness of a character," as a writer justly observes, "is to be estimated by the object it pursues, the danger it braves, the difficulties it encounters, and the purity and energy of its motives, David Brainerd is one of the greatest characters that ever appeared in the world. Compared with this standard of greatness, what little things are the Alexanders, the Cæsars, the conquerors of the whole earth!"

A fine stream passes through the centre of this town, possessing a good water power, on which are manufactories and mills of various kinds. About 2 miles W. of the centre, on the river, a flourishing manufacturing village has sprung up. The manufactories of Northampton consist of woollen and silk goods, boots, shoes, leather, paper, brooms, chairs, iron, tin, cabinet wares, &c. The manufacture of sewing silk and ribbons is on a large scale.

By the Connecticut River Railroad Northampton has an easy communication with all the principal lines of travel N., S., E., and W. The passage in the cars from Springfield to Northampton offers a fine treat to the lovers of splendid scenery. We pass the whole distance on the banks of the river, by the falls at South Hadley and the great Holyoke dam, through the gorge between Mount Holyoke and Mount Tom. The Canal Railroad, along the course of the old Hampshire and Hamden Canal, affords an inland route to New Haven.

Northampton County, N. C., Jackson shire town. Bounded N. by Virginia, E. by Gates and Hertford counties, S. by Bertie co., S. W. by Roanoke River, separating it from Halifax co., and W. by Warren co. Watered on the N. E. by Meherin River. Soil mostly fertile.

Northampton, N. H., Rockingham co. This town lies on the sea-coast. It was formerly a part of Hampton, called North Hill. Little River rises here, and flows into the sea between Little Boar's Head, in this town, and Great Boar's Head, in Hampton. Winnicut River rises near

the centre, and passes N. W. into Great Bay. 47 miles S. E. by E. from Concord, by stage, and 9 S. by W. from Portsmouth by the Eastern Railroad.

Northampton, N. J., Burlington co. Watered by Rancocus Creek and branches of Little Egg Harbor. Surface mostly level; soil sand and sandy loam; sterile, except in the N. W. part.

Northampton, N. Y., Fulton co. Watered by the Sacandaga River, which unites at this place with the Vlaie, or Mayfield Creek. A part of the Great Fly, or marsh, (*Vlaie*, in Dutch,) lies in the S. part of this town. It covers from 15,000 to 20,000 acres, and is frequently overflowed by the Sacandaga and other streams. The surface is chiefly level; soil sandy, but productive. 18 miles N. E. from Johnstown, and 53 N. W. from Albany.

Northampton County, Pa., c. h. at Easton. Bounded N. by Monroe co., E. by the Delaware River, separating it from New Jersey, S. by Bucks and Lehigh, and W. by Lehigh and Carbon counties. Drained by the Lehigh River and numerous small branches of the Delaware. Surface mountainous and uneven, affording much picturesque scenery; soil fertile.

Northampton County, Va., c. h. at Eastville. Bounded N. by Accomac co., E. by the Atlantic Ocean, and S. and W. by Chesapeake Bay. This county comprises several islands, and is indented by numerous small inlets. Surface varied.

North Beaver, Pa., Beaver co. Drained by Hickory Creek. Surface undulating; soil rich, calcareous loam.

North Bend, O., Hamilton co. 16 miles below Cincinnati, on the N. side of the Ohio River, at the point where the bend in the river northward attains its highest latitude. In the early settlement of this part of the country, this place was selected as the site of the chief city, and for a time it had the advantage of Cincinnati. Circumstances, however, having led to the selection of the latter as a military post, turned the scale in its favor as the principal centre of business.

In later years, this place has been invested with a national interest, as the residence, and the place of sepulture, of the late president of the United States, William Henry Harrison. The mansion of the president stands in full view from the river, about 300 yards distant, amidst agreeable scenery, and is a spacious two-story building, with wings. One half of the main building is built of logs, but covered with clapboards, and painted, so that the whole presents a uniform and handsome external appearance. About a quarter of a mile S. of the family mansion, on the summit of a small, oval-shaped hill, rising about 100 feet from the plain, is the tomb of Harrison. It is built of brick, and is without any inscription upon its portal. The view of the river and surrounding country, to a person standing on this hallowed spot, is one of great serenity and beauty.

North Berwick, Me., York co. This town was incorporated in 1831, and was taken from the E. side of Berwick. It comprises a fine tract of land; it is well watered, and very pleasant. It lies 91 miles S. W. from Augusta, and 13 N. W. from York.

Northboro', Ms., Worcester co. *Northboro'* was first settled in 1700, and, until 1766, was the N. parish of Westboro'. This is a good farming town, lying between the highlands of Marlboro' on the E. and those of Shrewsbury and Boylston

on the W. This town is well watered by several small streams and ponds, and by the Assabet River, which passes through it. On the banks of the Assabet are large tracts of good meadow. 10 miles N. E. from Worcester, and 32 from Boston.

North Branford, Ct., New Haven co. This town was incorporated in 1831, and was taken from Branford. A range of mountains from the S. W. to N. E. passes through the central part of the town. The inhabitants are generally substantial farmers, and property is very equally distributed. The face of the township is generally hilly, but the soil is strong and fertile. About a mile S. E. of the Northford Church, on Tetoket Mountain, there is the appearance of having been, at some remote period, some violent convulsions in nature; the rocks appear to have been rent asunder, and are thrown about in great disorder. 9 miles E. from New Haven.

Northbridge, Ms., Worcester co. Until 1772, this town was the N. part of Uxbridge. The surface is somewhat rocky and rough, but the soil is generally rich, strong, and good. It is finely watered by springs, streams, and rivers. Of these Blackstone and Mumford Rivers are the largest. On these rivers are tracts of good intervalle land. The Worcester and Providence Railroad passes through the town. From Whitneysville, near the centre of the town, to Boston, is 36 miles N. E., to Worcester, 13 miles N. W.

North Bridgewater, Ms., Plymouth co., is well watered by Salisbury River, and another small stream, which empties into the Taunton. Its surface is uneven, but the soil is of a good quality, particularly for grazing. This town was the first of the three Bridgewater towns that have sprung from Old Bridgewater, named after a celebrated English duke. 20 miles S. from Boston, and 24 N. W. from Plymouth.

North Brookfield, Ms., Worcester co. This town, formerly the second parish of Brookfield, was incorporated in 1812. It is on elevated ground, has good soil, well cultivated, well watered, and filled with many beautiful swells. There is an artificial pond in the town, covering 700 or 800 acres, raised for water power. The village of East Brookfield, partly in this town and partly in Brookfield, lies, by the Western Railroad, 64 miles from Boston, and 20 W. S. W. from Worcester. From East Brookfield to the village in the centre of the town is 4 miles N. W.

North Castle, N. Y., Westchester co. Watered by Byram River. Surface hilly and stony; soil clay and sandy loam. 6 miles N. from White Plains, and 129 S. from Albany.

North East, N. Y., Dutchess co. This town contains Indian Pond and several smaller ponds, and is drained by Ten Mile Creek and some of its tributaries. It is partly covered by the Taghkanic Mountain. The soil is diversified, but mostly arable and of good quality. A vein of lead ore, which is crossed by one of copper, commences in this town. 25 miles N. E. from Poughkeepsie, and 75 S. E. from Albany.

North East, Pa., Erie co. In the N. E. corner of the county. Bounded N. by Lake Erie, and E. by the state of New York. Drained by Sixteen and Twenty Mile Creeks. 10 miles N. E. from Erie, and 281 N. W. by W. from Harrisburg.

Northfield, Ms., Franklin co. This town, the

Indian *Squeakeag*, was first settled in 1673. This is a fine township of land, on both sides of Connecticut River. The town contains large tracts of fine alluvial land, on the banks of the river; and the uplands, with an undulating surface, are generally of a good quality. There are some small streams in the town, and some handsome ponds. The pleasant village of Northfield is situated on an elevated plain, about a mile from the river, on the E. side. 37 miles W. by N. from Fitchburg, by railroad, and 87 from Boston.

Northfield, N. H., Merrimac co. The soil is in some parts good. Chestnut and Sondogardy Ponds are in this town. Winnipiseogee River is on the N., and the Merrimac on the W. Near Webster's Falls, the Winnipiseogee falls into the Pemigewasset, and the united streams form the Merrimac. The principal elevation, Bean Hill, separates the town from Canterbury. First settlers, Benjamin Blanchard and others, in 1760. From Concord 16 miles N., on the Concord and Montreal Railroad.

Northfield, N. Y., Richmond co. Bounded on the N. and W. by the Kills. The surface and soil are diversified, and bordering on Staten Island Sound are some broad marshes. 3 miles N. from Richmond, and 156 S. from Albany.

Northfield, Vt., Washington co. The principal stream in this town is Dog River; it affords a great number of valuable mill privileges. The timber is various. The soil is generally good, and the surface uneven. There are 4 villages in this town. The Central Railroad between Boston and Burlington passes through it. The first settlement was made here, in 1785, by Amos and Ezekiel Robinson and Staunton Richardson, from Westminster. The first land was cleared by Hon. Elijah Paine. 10 miles S. W. from Montpelier.

North Haven, Ct., New Haven co. North Haven was taken from New Haven in 1786. The town lies on both sides of the Wallingford, or Quinnipiac River, and comprises the valley and a part of the bordering hills. The valley is partly rich intervalle land, and more extensively sand, covered with a thin stratum of loam, light, but warm. Near the northern line of the town, it is so light as, in two or three places of small extent, to be blown into drifts. The soil of the hills is good, being a reddish loam. From the vicinity of this town to New Haven, and from its light and warm soil, which is favorable for early vegetation, there are various culinary vegetables, particularly peas, cultivated for the New Haven market. But the most striking feature in the township is the large and beautiful tract of salt meadows on both sides of the Quinnipiac. These meadows produce large quantities of grass, which is mowed and stacked upon the land, from whence, when the ground is frozen sufficiently solid in the winter, it is removed. Upon the salt marsh, the hay is salt; but on those meadows which are protected from the salt water by means of dikes, the grass is fresh and of a better quality. These are called *dike* marshes or meadows.

North Hempstead, N. Y., Long Island. See *Hempstead*.

North Hero, Vt., c. h. Grand Isle co. The soil is of an excellent quality, and produces grain of all kinds in abundance. This town has no streams of any consequence. It was organized in 1789. The settlement was commenced in 1783, by Enos and Solomon Wood, the former

from Bennington, Vt., and the latter from Norwich, Ct. 57 miles N. W. from Montpelier, and 28 N. N. W. from Burlington.

North Kingston, R. I., Washington co. This is a wealthy township, on the W. side of Narragansett Bay. The surface of the town is uneven; the soil is a gravelly loam, well adapted for the culture of grain and vegetables, and the productions of the dairy. There are some forests in the town, of good ship timber. It is watered by several small streams, which produce a good water power, on which are numerous manufacturing establishments. These streams afford bass and other fish in abundance. There is considerable navigation owned at North Kingston, which is employed in the coasting trade and fishery. Wickford village, in this town, is very pleasant and flourishing; it has a good harbor, and is a place of considerable trade. It lies about 2 miles E. of the Stonington Railroad. 30 miles S. from Providence.

North Middleton, Pa., Cumberland co. Watered by Conadogwinit Creek and its branches, and is bounded N. by Blue Mountains, in which occur Sterret's and Long's Gaps. Surface level in some portions; soil calcareous loam and slate.

Northport, Me., Waldo co. On Penobscot Bay. 46 miles E. from Augusta, and 6 S. from Belfast.

North Providence, R. I., Providence co. This ancient and wealthy town was a part of Providence until 1767.

The surface of this town is uneven, consisting of moderate elevations and gentle declivities. The rocks are primitive and transition; some limestone is found.

The prevailing soil is a gravelly loam, which is interspersed with tracts of sandy loam, and some of calcareous. The forests consist of oak, walnut, and some pine.

The waters of the town consist of the Seekonk River, which washes its eastern border; the Wanasquatucket, which forms its western boundary; and the Mashasuck, which intersects the interior of the township. These streams afford numerous sites for hydraulic works, some of which are almost unrivalled. There are some valuable shad and herring fisheries in the Seekonk.

The village of Pawtucket is situated in the N. E. section of the town, four miles N. E. from Providence, on the border of the Seekonk River; its site being principally the declivity of a hill, and it is highly romantic and picturesque. The river here affords numerous natural sites for manufacturing establishments, mills, and hydraulic works of almost every description, which are scarcely rivalled, and which are occupied to a great extent. The rapid march of manufacturing and mechanical industry, which the short annals of this place disclose, has few examples in our country, and has produced one of the most considerable and flourishing manufacturing villages in the United States. The river here forms the boundary line between Massachusetts and Rhode Island, and the village is built upon both sides of it, being partly in each state. That part of the village which is in Rhode Island is principally built on four streets, and comprises a large number of handsome buildings. 4 miles N. of Providence, and 38 S. W. from Boston by the Boston and Providence Railroad.

North Salem, N. Y., Westchester co. Watered by Titicus Creek or River, a branch of the Cro-

ton, which bounds it on the W. Surface rather hilly; soil gravelly and clay loam. 24 miles N. from White Plains, and 122 S. from Albany.

North Sewickly, Pa., Beaver co. Slippery Rock and Conquenessing Creeks unite in this town, and flow into Beaver River. Surface undulating; soil calcareous loam. 233 miles W. by N. from Harrisburg.

North Stonington, Ct., New London co. This town was taken from Stonington in 1808. It is watered by the Pawcatuck and its branches, which afford good mill sites. The surface is uneven, hilly, and abounding in granitic rocks. The soil is a gravelly loam, and generally productive of good pasturage. Agriculture is the principal employment of the inhabitants. Milltown is a pretty village, with some trade. 13 miles S. E. from New London, and 50 S. E. from Hartford.

North Strabane, Pa., Washington co. Chartier's and Little Chartier's Creeks flow through this town, and unite on its N. border. Surface hilly; soil loamy.

Northumberland, N. H., Coos co. On the E. bank of Connecticut River. The soil along the river is very productive, perfectly free from stone and gravel, and originally covered with a growth of butternut. A portion of the upland is also good, and covered with pine, spruce, &c. Cape Horn, an abrupt mountain, 1000 feet in height, lies near the centre of the town. At the falls in the Connecticut, below the mouth of the Ammonoosuck, a handsome bridge connects this town with Guildhall, Vt. A dam is thrown across the river at this place, at both ends of which are pleasant villages, and mills of various kinds are erected. The scenery of Northumberland is very wild and beautiful. First settlers, Thomas Burnside and Daniel Spaulding, with their families. Settled in 1762. 130 miles N. from Concord, and 7 N. E. from Lancaster. On the Montreal and Atlantic Railroad.

Northumberland, N. Y., Saratoga co. Bounded on the E. by the Hudson River. A level town, with a soil of sandy loam. 15 miles N. E. from Ballston Spa, and 36 N. N. E. from Albany.

Northumberland County, Pa., c. h. at Sunbury. Bounded N. by Lycoming and Columbia counties, E. by Luzerne and Schuylkill, S. by Dauphin co., and W. by Susquehanna River, separating it from Perry, Juniata, Union, and Lycoming counties. Drained by the main and some smaller branches of the Susquehanna. Surface rough and mountainous, except on the border of the river, where it is more level, and the soil fertile.

Northumberland, Pa., Northumberland co. 59 miles N. from Harrisburg. It is situated at the confluence of the N. and W. branches of the Susquehanna River. It is connected by bridges across both of these branches with the opposite shores. The country spreads out behind the town in a semicircular area, rising gradually towards Montouss ridge, which crosses from one river to the other, about 3 miles distant. The village is regularly laid out with broad streets, and is a quiet and pleasant place of residence. Business has been in some measure withdrawn from this place by the facilities offered for passing up the respective branches between which it is located by the Susquehanna North and West Branch Canals, which meet here. Each branch has its respective trading town at a point farther up. There is, nevertheless, considerable trade

here. The celebrated Dr. Priestley, the philosopher and theologian, spent the last ten years of his life in Northumberland. He died here February 6, 1804, in his 71st year. With him also came from England Dr. Thomas Cooper, who, after residing here some time, went south, and became distinguished as a politician, philosopher, and political economist.

Northumberland County, Va., c. h. at Heathsville. Bounded N. by the Potomac River, E. by Chesapeake Bay, and S. and W. by Lancaster, Richmond, and Westmoreland counties. Drained by branches of Potomac River, and by Wicomico River, a tributary of Chesapeake Bay.

Northville, Mn., Wayne co. On the W. side of the W. branch of Rouge River, at the mouth of the outlet of Walled Lake, and 28 miles W. N. W. from Detroit. It has extensive water power, which is improved for flouring mills, iron works, &c.

North Whitehall, Pa., Lehigh co. Coply and Jordan Creeks, and some small branches of Lehigh River, water this town. Surface level; soil rich calcareous loam. 95 miles E. N. E. from Harrisburg.

Northwood, N. H., Rockingham co. There are a number of ponds in this town, and excellent fishing. Suncook Pond, 780 rods long, 100 wide; Jenness's, 300 rods long, 50 wide; Harvey's, 200 rods long, from 40 to 80 wide; a part of Great Bow Pond is also in this town, and a part of North River Pond, Pleasant Pond, and Little Bow Pond. The N. branch of Lamprey River has its rise in this town, near Saddleback Mountain, a high ridge between this town and Deerfield. On the E. side of this ridge are found crystals and crystalline spars of various colors and sizes. This town has an elevated site. The soil is generally moist, and well suited to grazing. Northwood was originally a part of Nottingham. First settlers, Moses Godfrey, and John and Increase Batchelder, from Northampton, in 1763. 20 miles E. from Concord, and 20 N. W. from Exeter.

North Yarmouth, Me., Cumberland co. On Casco Bay and the Atlantic and St. Lawrence Railroad. See *Yarmouth*.

Norton, Ms., Bristol co. Before its incorporation, this town was the N. part of Taunton. It began to be settled in 1670. Among its first settlers was George Leonard, Esq. He discovered iron ore in the town, and there being a number of good streams, branches of the Taunton, whereon could be erected extensive iron works, he commenced the business. By him and his posterity it has been continued to the present day. The surface is pleasantly diversified, but the soil is not of the first quality. The village is pleasant, and remarkably healthy. About 3 miles to the eastward of it is Winnicunnet Pond, a handsome sheet of water. There is a literary seminary in this town for the education of young ladies. The New Bedford and Taunton Railroad passes through the town. 28 miles from Boston, and 27 from New Bedford.

Norton, Vt., Essex co. An uninhabited township in the N. W. corner of the county. The land is said to be good, and well timbered, considerable tracts of it with pine. The charter of the township was burned, and it is difficult getting a valid title to the lands. There are 2 considerable ponds lying partly in the town. The outlet of Norton Pond is the head branch

of Coatocook River. Farrand's River also heads here, and runs S.

Norwalk, Ct., Fairfield co. This pleasant town lies on Long Island Sound. It originally included part of the present towns of New Canaan and Wilton, and part of Westport. For this tract the following articles were given, viz.: "8 fathom wampum, 6 coats, 10 hatchets, 10 hoes, 10 knives, 10 scissors, 10 jewsharps, 10 fathom tobacco, 3 kettles, 3 hands-about, and 10 looking glasses." The following articles were given to the Indians for the tract "from Norwalk River to Five Mile River, from sea, Indian one day in country," viz.: "10 fathom wampum, 3 hatchets, 3 hoes when ships come, 6 glasses, 12 tobacco pipes, 3 knives, 10 drillers, 10 needles." The name of Norwalk is derived from the above bargain, viz.: the northern bounds of the lands purchased were to extend from the sea one day's "north walk" into the country.

The soil in this town is excellent; the surface is uneven, being pleasantly diversified with hills and valleys. On the border of the sound the hills are generally moderate, and in the interior more elevated.

"The valley, which lies along Norwalk River, and in which the town is built, is beautiful." Norwalk contains 2 considerable and flourishing villages — Norwalk Borough and the village of Old Well. The borough is built on both sides of a small river or creek, which is much contracted in width at the bridge which connects the two parts of the village; and the buildings on each side of the stream are so near each other, that the passage of the river from the N. is not readily perceived at a short distance. Vessels drawing 6 feet of water can get up to the bridge in the most compact part of the borough.

The flourishing village of Old Well is situated about $1\frac{1}{2}$ miles S. of the central part of Norwalk Borough, on the W. side of the creek. This is the principal landing-place for steamboats for Norwalk and the vicinity, there being a daily line from and to New York. A boat every other day leaves Norwalk Bridge for New York. 32 miles from New Haven by railroad.

Norwalk, O., c. h. Huron co. 100 miles N. by E. from Columbus.

Norway, Me., Oxford co. A fertile township. 47 miles W. by S. from Augusta.

Norway, N. Y., Herkimer co. Some tributaries of West Canada Creek water this town, the surface of which is elevated and hilly; soil sandy loam and clay. 14 miles N. from Herkimer, and 79 N. W. from Albany.

Norwegian, Pa., Schuylkill co. Watered by the Schuylkill and its tributaries. This is a hilly and mountainous town, and the centre of an important coal region.

Norwich, Ct. One of the shire towns of New London co. Norwich city is situated at the head of navigation of Thames River, at the point of land formed by the junction of the Shetucket and Yantic Rivers, whose united waters constitute the Thames. The main part of the city is built on the southern declivity of a high and rocky hill; the houses are built in tiers, rising one above another. The city, as it is approached from the south, presents one of the most beautiful, interesting, and romantic prospects in the state. There are in this city (or, as it was formerly called, Chelsea or Norwich Landing) a court house and town hall, a high school for boys, and a female

academy. About a mile eastward of the landing is situated the flourishing village of Greenville, at the eastern extremity of which a dam has been constructed across the Shetucket. The first paper manufactured in Connecticut was made in this town, by Colonel Christopher Leflingwell.

Above the cove, which sets up about a mile from the river, "the bed of the river consists of a solid rock, having a perpendicular height of 10 or 12 feet, over which the whole body of water falls in an entire sheet upon a bed of rocks below. The river here is compressed into a very narrow channel, the banks consisting of solid rocks, and being bold and elevated. For a distance of 15 or 20 rods, the channel or bed of the river has a gradual descent, is crooked, and covered with pointed rocks. The rock, forming the bed of the river at the bottom of the perpendicular falls, is curiously excavated, some of the cavities being 5 or 6 feet deep, from the constant pouring of the sheet of water for a succession of ages." At the bottom of the falls there is the broad basin of the cove, where the enraged and agitated element resumes its usual smoothness and placidity. 15 miles N. from New London, with which, and with Hartford and Worcester, it is connected by railroad.

Norwich, Ms., Hampshire co. A branch of Westfield River, and a number of its tributaries, give this town an excellent water power. Many parts of the town are fit for cultivation, the soil being strong and fertile; but the larger part of it, rough and hilly, is fit only for grazing. The Western Railroad just touches the south-western corner of the town, at Chester village depot, 119 miles W. from Boston. To Northampton it is 12 miles. From Chester village to a pleasant village, in the centre of the town, is 4 miles.

Norwich, N. Y., Chenango co. Shire town. Situated on the Chenango River. The surface is hilly, with a broad, fertile valley bordering the river. The hilly parts are well adapted to grazing. 110 miles W. from Albany.

Norwich, Vt., Windsor co. The Connecticut River washes the eastern boundary of this township, and is from 30 to 40 rods in width. The Ompomponooc River and Bloody Brook pass through Norwich. The latter is said to have had its name from a bloody battle fought there during the French war. The surface is uneven, but nearly all admits of cultivation. It produces all kinds of grain and grass, and some of the finest orchards in the state. Extensive beds of iron ore are found in the N. W. corner of the town. On the bank of Connecticut River, about 70 rods above the mouth of the Ompomponooc, is an Indian burying-ground. Between the Connecticut and the Ompomponooc is a high bluff, where explosions were formerly heard, like the report of cannon. Norwich village is pleasantly situated on a plain, near Connecticut River. In 1762, the township was partly lotted, and the next year Jacob Fenton, Ebenezer Smith, and John Slaughter came here from Mansfield, Ct., built a camp, and began improvements. 40 miles S. E. from Montpelier, and 19 N. from Windsor. The Passumpsic Railroad passes through the town.

Nottingham, N. H., Rockingham co. There are several ponds in this town, mostly of small size. Little River and several other streams rise here, and North River passes through the town. The soil is in many parts good, though the surface is rough and broken. Several mountains extend

along the western part of the town, forming parts of the range called Blue Hills. Nottingham Square is a pleasant village on an elevated site. Bog iron ore is found here in great quantities. Mountain ore, crystals and crystalline spars, and ochres are also found. First settlers, Captain Joseph Cilley and others, in 1727. From Concord, 25 miles E. S. E., and 20 W. from Portsmouth.

Nottingham, N. J., Mercer co. Drained by Assunpink and Crosswick's Creeks and branches. Surface mostly level; soil much diversified. Located 17 miles N. E. from Mount Holly.

Nottingham, Pa., Washington co. Drained by Peter's, Mingo, and Little Mingo Creeks. Surface hilly, abounding with coal; soil loamy. 13 miles E. from Washington.

Nottoway County, Va., c. h. at Nottoway. Bounded N. by Amelia co., E. by Dinwiddie, S. by the Nottoway River, separating it from Lunenburg co., and W. by Prince Edward co. Drained by branches of the Appomattox and Nottoway Rivers.

Nottoway, Va., c. h. Nottoway co. On Nottoway River. 67 miles S. W. from Richmond.

Novarro County, Ts., c. h. at Corsicana, an E. central county, on the W. bank of the Trinity.

Noxubee County, Mi., c. h. at Macon. Drained by the W. fork of Tombigbee River and its tributaries.

Nueces County, Ts., c. h. at Corpus Christi. On the S. bank of the Nueces, at its mouth.

Nunda, N. Y., Alleghany co. Canseraga and Cashaqua Creeks water this town. Surface undulating; soil fertile and well adapted to wheat. 20 miles N. from Angelica, and 225 W. from Albany.

Oakdale, Mo., c. h. Shelby co.

Oakham, Ms., Worcester co. This was once a part of Rutland, and called "Rutland West Wing." The surface is uneven, rough, and stony, but not mountainous; its soil is moist, and affords uncommonly sweet pasturage for cattle. Ware River passes its north-western border, and it is otherwise watered by a number of rivulets, streams, and ponds. 15 miles N. W. from Worcester, and 59 W. from Boston.

Oakland County, Mn., c. h. at Pontiac. Bounded N. by Genesee and Lapeer counties, E. by Macomb, S. by Wayne and Washtenaw, and W. by Livingston co. Drained by Clinton River and its tributaries, and by the head branches of Huron, Flint, Rouge, and Shiawassee Rivers. Surface undulating; soil fertile.

Oberlin, O., Lorain co. A village situated in the southern part of Russia township, 32 miles S. W. from Cleveland, and 11 miles S. from the port on Lake Erie, called "Black River Port." This place was laid out and settled, in 1832, to be the seat of the literary institution located there, and named Oberlin, in honor of the Rev. John Frederic Oberlin, a distinguished philanthropist of Switzerland. The village is located upon a level plain, in the midst of a tract 3 miles square, embraced in the original purchase, and to a great extent yet covered with the primitive forest. The site was selected because it was supposed to be healthy, could be easily approached by the western lakes and other avenues of travel, and yet was sufficiently remote from the vicinity of large towns to secure an exemption from the temptations to dissipation and vice which they offer. Another consideration was, that extensive and fertile lands could be obtained for the purposes of

the seminary, which was to be made a manual labor institution; and for the settlement of a colony around it, which, by the lease or purchase of the property at a value which would be created in a great measure in the progress of the enterprise, should supply the means of an ultimate investment for the college.

Oberlin is now a pleasant and thriving village, with a population of over 2000 souls, with stores, mechanics' shops, &c., suited to the condition of such a place. The sale of ardent spirits has never been permitted within its limits.

The houses in Oberlin are generally two stories in height, built of wood, and painted white; giving to the place a striking resemblance to a New England town. The Presbyterian Church edifice is one of the largest in the state. Near it, upon a green of about 12 acres, stands the principal edifice of the college, named Tappan Hall, in honor of Arthur Tappan, Esq., of New York, an early and liberal benefactor of the institution. Facing the Green are Oberlin Hall, Ladies' Hall, and Colonial Hall, all of which, with other buildings, belong to the institution. The distinguishing objects proposed in the establishment of this seminary are, "to secure the development of a sound mind in a sound body, by the aid of a judicious system of manual labor," and to afford "thorough instruction, in all the branches of an education, for both sexes; and to which colored persons, of both sexes, shall be freely admitted, on the terms of equality and brotherhood." The institution possess 500 acres of land at Oberlin, and 10,000 acres in Western Virginia. See *Colleges*.

Obion County, Te., c. h. at Troy. Bounded N. by Kentucky, E. by Weakley co., S. by Gibson and Dyer counties, and W. by the Mississippi River, separating it from Arkansas. Drained by Obion and Reelfoot Rivers and branches. The land bordering on the Mississippi is liable to inundation.

Ocean County, N. J. On the sea coast. Taken from Monmouth — southern half. Flat and sandy.

Oceola, As., c. h. Mississippi co. On the W. side of Mississippi River. 130 miles E. N. E. from Little Rock.

Oconto County, Wn. Taken from Brown in 1851.

Ogden, N. Y., Monroe co. The Erie Canal passes through this town, which is chiefly level. 10 miles W. from Rochester.

Ogdensburg, N. Y., St. Lawrence co. Port of entry and delivery, on the E. side of the St. Lawrence River, at the mouth of the Oswegatchie, 60 miles below Kingston, at the outlet of Lake Ontario. 204 miles N. from Albany, and 130 S. from Montreal. Ogdensburg is considered as being at the foot of the lake, because there is little descent in the river to this place, below which the rapids commence, and the river navigation ends.

The town is built upon a beautiful plain, and is laid out with much regularity in broad streets, with many handsome buildings, and some which are highly ornamental. The material used for the most substantial structures is limestone and a calcareous sandstone. This is the largest town in the county, and was formerly the county seat, until that was removed to Canton for a more central position. It is a place of much trade, and from the various facilities for transportation and business which are concentrating here, it is destined inevitably to a speedy and very extensive enlarge-

ment. Its advantages for manufacturing are very great from the falls in the Oswegatchie River; on which there is a natural dam, a short distance from its mouth, which, being raised somewhat higher, gives a head of about 14 feet. By locks at this fall, and improvements in the river above, it is rendered navigable for boats to Black Lake. There are at Ogdensburg large flouring mills, iron founderies, machine shops, saw mills, an extensive brewery, distillery, tannery, &c. Besides the shipping, there are lines of steamboats daily running through Lake Ontario, and touching at all its ports, and also passing down the rapids, and, by canal, to Montreal. The communication by railroad is now complete between Ogdensburg and Boston, in consequence of which a vast amount of the traffic of the Western States and Canada is drawn to this port in finding its most eligible direction to the eastern and the foreign markets. Heretofore, the trade of Ogdensburg has been almost exclusively with Montreal; but now a new channel has been opened which brings it into commercial connection with some of the most important seaports of the Atlantic States. The distance to Boston by railroad is 403 miles. The distance to New York, via Rouse's Point, Lake Champlain, and Albany, 458 miles. From Ogdensburg to Oswego by water, on Lake Ontario, 110 miles, thence to Albany, by railroad, 178 miles, and thence to New York, 145 miles — total, 433 miles. There is also a continuous railroad route from Ogdensburg to New York, via Rouse's Point, Burlington, Rutland, Whitehall, Saratoga, and Albany, the whole distance being 482 miles. Situated at the foot of ship navigation on the great lakes, possessing an almost unbounded water power, surrounded by a fertile country, and having now a direct communication at all seasons of the year to our principal eastern markets, and, through them, to the great marts of trade in Europe, Ogdensburg can hardly fail of becoming, like another Buffalo, a principal outlet of the riches of the W. and N., and consequently a place of immense prosperity and wealth.

Ogle County, Is., c. h. at Oregon. Bounded N. by Stephenson and Winnebago, E. by De Kalb, S. by Lee, and W. by Whitesides and Carroll counties. Rock River and its tributaries water this county,

Oglethorpe County, Ga., c. h. at Lexington. Bounded N. by Madison and Elkhart counties, E. by Wilkes and Tallahassee, S. by Greene, and W. by Clarke co. Bounded N. E. by Broad River, and drained by its branches, and watered on the S. W. border by a head branch of Oconee River.

Ohio County, Ky., c. h. at Hartford. Bounded N. by Hancock co., E. by Grayson, S. E. by Butler co., S. W. by Green River, separating it from Muhlenburg co., and W. by Owen co. Drained by Rough and Panther Creeks, branches of Green River.

Ohio, N. Y., Herkimer co. Watered by West Canada Creek and some of its tributaries. Surface elevated and hilly; soil favorable to grass. 20 miles N. from Herkimer, and 90 N. W. from Albany.

Ohio City, O., Cuyahoga co. Situated on Lake Erie, at the mouth of Cuyahoga River, opposite Cleveland. 145 miles N. N. E. from Columbus. It is built on elevated ground, and enjoys a commanding and beautiful view of the lake, and of the city of Cleveland opposite, with which it is connected by a bridge. It was for-

merly called Brooklyn Village, being included within the township of that name. For a few years after 1830, it had the most rapid increase of any town in the state, and bade fair to outstrip its older and wealthier sister and rival in the spirit of enterprise and improvement, if not in amount of business. It was incorporated as a city in 1836. It has many elegant mansions, and extensive blocks of stores, shops, warehouses, &c. The edifice of the Episcopal Church here is a Gothic stone building, of great beauty. There are other churches of the Presbyterian and Methodist denominations. Population in 1840, 1577; in 1850, including the township, 6375.

Ohio, Pa., Allegheny co. Little Beaver Creek flows through this town, and enters the Ohio River at its S. W. corner. Surface undulating; soil rich alluvion and loam. 10 miles S. W. from Beaver.

Ohio County, Va., c. h. at Wheeling. Bounded N. by Brooke co., E. by Pennsylvania, S. by Marshall co., and W. by the Ohio River, separating it from Ohio. Drained by Wheeling Creek and other small branches of the Ohio. Surface rough and hilly; soil fertile, and the alluvial bottoms on the Ohio are very rich.

Oil Creek, Pa., Crawford co. Oil Creek and its branches water this town, which is situated 227 miles N. W. by W. from Harrisburg.

Oktibbeha County, Mi., c. h. at Starksville. Bounded N. by Clickasaw and Monroe counties, E. by Lowndes, S. by Noxubee and Winston, and W. by Choctaw co. Watered by Oktibbeha River and Runaway Creek.

Old Codorus, Pa., York co. Codorus Creek and its branches water this town. Surface undulating; soil gravelly, and rather poor. 10 miles S. W. from York.

Oldham County, Ky., c. h. at La Grange. Bounded N. by Trimble, E. by Henry and Shelby, S. by Jefferson co., and W. by the Ohio River, separating it from Indiana. The head streams of Floyd's Fork, of Salt River, Harrod's Creek, and other small branches of the Ohio, water this county.

Oldtown, Me., Penobscot co. See *Orono*.

Old Point Comfort, Va., Elizabeth City co., occupies the N. point at the entrance of James River, lying opposite and 3 miles distant from Willoughby Point. The fort, called also Fortress Monroc, is 1 mile from Fort Calhoun, on the Rip Raps. The village beach is a favorite summer resort. 97 miles E. S. E. from Richmond.

Old Washington, Aa., c. h. Washington co.

Olean, N. Y., Cattaraugus co. The Allegheny River and some of its tributaries water this town. Surface hilly, and heavily timbered with pine; soil sandy loam. 20 miles S. E. from Ellicottville, and 288 S. of W. from Albany.

Oley, Pa., Berks co. The head branches of Manatawny and Manookisy Creeks water this town, the surface of which is level, and the soil fertile calcareous loam. 62 miles E. from Harrisburg.

Olive, N. Y., Ulster co. Watered by Esopus Creek. Surface mountainous and uneven, being broken on the W. by spurs of the Catskill Range. Soil gravel and clay loam. 12 miles W. from Kingston, and 68 S. W. from Albany.

Olney, Is., c. h. Rutland co.

Oneida County, N. Y., Rome, Utica, and Whites-town shire towns. It was formed from Herkimer co. in 1798. Bounded N. by Lewis, E. by Herkimer, S. by Madison, and W. by Madison and

Oswego counties, and watered by Black and Mohawk Rivers, Oneida Lake, and Oneida, Oriskany, Sadaquada, Fish, and Wood Creeks. Surface pleasantly diversified with hills and fertile valleys; soil mostly very fertile, being well adapted to grain. Iron ore, argillaceous clay, gypsum, water limestone, peat, and marl occur in great abundance. There are also many mineral and gas springs of considerable importance. The Erie and Chenango Canals, and Utica and Schenectady, and Syracuse and Schenectady Railroads pass through this county.

Oneonta, N. Y., Otsego co. Watered by the Susquehanna River, and Charlotte River, and Otego Creek, flowing into it. Surface hilly and broken, with broad and fertile flats along the borders of the Susquehanna. 20 miles S. from Cooperstown, and 80 S. of W. from Albany.

Onondaga County, N. Y., c. h. at Syracuse. Formed from Herkimer co. in 1794. It is bounded on the N. by Oswego, E. by Madison, S. by Cortland and Cayuga, and W. by Cuyuga co. Watered by Oneida Lake on the N. E., near the centre by Onondaga Lake, and W. by Cross, Skanateles, and Otisco Lakes. Seneca and Oneida Rivers unite to form Oswego River in this county, which is also watered by several other fine mill streams. Surface level on the N., but more hilly on the S.; soil chiefly a mixture of calcareous loam and vegetable mould, and very fertile. Brine springs are very numerous, giving employment to a great number of people, and yielding a large revenue to the state. There are also several sulphur springs, and oxide of iron, marl, gypsum, and water limestone exist in abundance. The Oswego Canal unites at Syracuse with the Erie Canal, which extends through the county. The Syracuse and Utica and Auburn, and Syracuse Railroads also run nearly parallel with the Erie Canal.

Onondaga, N. Y., Onondaga co. Watered by a creek of the same name. Surface hilly; soil rich clay loam. 5 miles S. from Syracuse, and 135 W. from Albany.

Onslow County, N. C., c. h. at Onslow. Bounded N. and E. by Jones and Carteret counties, S. by the Atlantic Ocean, and W. by New Hanover and Duplin counties. Drained by New River and its tributaries. Surface low and flat.

Onslow, N. C., c. h. Onslow co.

Ontanagon River Settlement, Mn. Ontanagon River Settlement is situated at the mouth of that river, and is about 20 miles to the westward of Ké-waiwona Point. This place owes its prosperity to the discovery of several valuable mines, about 15 miles up the stream. These were discovered by miners between the years 1845 and 1848, and have been opened to considerable extent, and some of them have begun to give returns that indicate that they will prove profitable to the stockholders. Notwithstanding the failure and disappointment of many of the mining companies, the fact of valuable deposits of copper in this vicinity is now established beyond question, and the mining operations are extending from year to year. The Ontanagon is one of the largest rivers that pour their waters into Lake Superior. Its waters are quite dark colored, from peaty matter taken up by the water in its course. The dark-brown hue of this stream may be traced in Lake Superior for some miles from the mouth of the river. There is no bar that will prevent boats from entering this stream, but they cannot go up far on account of the falls. The soil on

this river, though coarse, is good, and produces excellent potatoes. Other vegetables thrive well farther inland, where they escape the cold winds from the lake.

A small village, with a town store and post office, will be found at the mouth of the river. In the course of a few years, a considerably larger town will be built here, if the mines should, as it is hoped they will, prove productive. Water power, suitable for saw mills, can be readily obtained on this large stream, so full of rapids and falls. The copper is found mostly in veins, running in the direction of the strata, or trends of the rocks, and epidote is frequently found to be the matrix of the copper, which also is found in trap rocks of an amygdaloidal character.

Ontario County, N. Y., c. h. at Canandaigua. Incorporated from Montgomery co., in 1789, but has since been greatly reduced in size. It is bounded on the N. by Monroe and Wayne, E. by Seneca, S. by Yates and Steuben, and W. by Livingston and Monroe counties. Surface pleasantly diversified; soil mostly fertile loam and mould, yielding large quantities of fruit and grain. Its principal waters are Seneca, Canadice, Honeye, Hemlock, and Canandaigua Lakes, and their outlet, and Flint and Mud Creeks. It contains several sulphur springs, and at one place carburated hydrogen, or inflammable gas, is given forth in large quantities. Iron ore, gypsum, and marl also abound. The Erie, and Cayuga and Seneca Canals run a short distance on the boundaries of this county, and the Auburn and Rochester Railroad crosses it from E. to W.

Ontario, N. Y., Wayne co. Watered by several small streams flowing into Lake Ontario, which bounds it on the N. Surface level; soil sandy and gravelly loam. 22 miles N. W. from Lyons village, and 208 N. of W. from Albany.

Opelousas, La., St. Landry parish. Near the head of Vermilion River; the seat of Franklin College. (See *Colleges*.) 217 miles W. N. W. from New Orleans.

Oppenheim, N. Y., Fulton co. Watered by East Canada Creek and several small streams. Surface somewhat hilly; soil various. 14 miles W. from Johnstown, and 63 N. W. from Albany.

Orange, Ct., New Haven co. This town was taken from New Haven and Milford in 1822. The name was adopted in honor of William, Prince of Orange, in commemoration of the benefits received from him by the colony of Connecticut; particularly for the restoration of their charter after the usurpation and tyranny of Edmund Andros. 4 miles S. W. from New Haven.

Orange is a pleasant town, with a productive soil. The inhabitants are principally farmers. Savin Rock, in this town, is a romantic spot, and a place of resort in the summer. There are mines of silver and copper in the town, and asbestos is found in abundance in serpentine rocks.

Orange County, Va., c. h. at Melonville. On the Atlantic shore of the peninsula.

Orange County, Ia., c. h. at Paoli. Bounded N. by Lawrence, E. by Washington, S. by Crawford, and W. by Dubois and Martin counties. Drained by Lost River and Lick and Patoka Creeks, which afford good hydraulic power. Surface rough and hilly. The McAdamized road leading from Albany to Vincennes traverses this county.

Orange, Ms., Franklin co. 72 miles W. from Boston, and 20 E. from Greenfield. Miller's River

affords good water power, and it has a variety of manufactures.

Orange County, N. C., c. h. at Hillsboro'. It is bounded N. by Caswell and Person counties, E. by Granville and Wake, S. by Chatham, and W. by Guilford co. Haw and Neuse Rivers and branches water this county.

Orange, N. H., Grafton co. 40 miles N. W. from Concord. In this town are found many mineral substances. There is in the S. E. part a small pond, in which is found paint, resembling spruce yellow; in it is also found chalk, intermixed with magnesia. In 1810, a valuable species of ochre was discovered. The surface is uneven, but the soil, in many parts, is productive. Cardigan Mountain lies in the eastern part of the town.

Orange, N. J., Essex co. Drained by Second, and branches of Rahway River. Surface undulating or mountainous; soil red shale. 4 miles N. W. from Newark, and 53 N. E. from Trenton.

Orange County, N. Y., Newburg and Goshen shire towns. Originally incorporated in 1683. It is bounded N. by Ulster co. E. by the Hudson River, S. by Rockland co. and the state of N. J., and W. by Sullivan co. and the Delaware River, which separates it from Pennsylvania. Watered by the Hudson, the Walkill, the Delaware River and its branches, and the head branches of the Ramapo. The S. E. portions are covered by the Highlands, and the W. by the Shawangunk Mountains; the rest of the surface is covered with gentle hills and broad, fertile valleys. The soil is well adapted to grazing, and this county has long been celebrated for its fine dairies. It is also rich in mineral productions, the most important of which are ilmenite and magnetic iron ore. It is crossed by the Delaware and Hudson Canal and New York and Erie Railroad.

Orange, N. Y., Steuben co. Watered by Mead's Creek. Has a high and rolling surface, and a soil suitable for grass and grain. 16 miles E. from Bath, and 205 S. of W. from Albany.

Orange County, Vt., c. h. at Chelsea. This county is bounded N. by Washington and Caledonia counties, E. by Connecticut River, S. by Windsor co., and W. by Addison and Washington counties. The eastern range of the Green Mountains extends along the north-western part of the county. The principal rivers, besides the Connecticut, are the Pompoonoosuc, Wait's branches of the White, and Stevens's branch of the Winooski. The lands in Orange co. are generally good for grazing; there are some excellent tracts on the banks of the Connecticut. Iron and lead ores, slate and granite, are abundant.

Orange, Vt., Orange co. Knox Mountain, in the north-easterly part of the town, is a considerable elevation, and affords inexhaustible quantities of granite for building stone. The timber is chiefly hard wood, except along the streams. The soil in some parts of the town, particularly on the heights, is rather cold and wet; in other parts and on the streams it is rich and productive. The principal stream of water is Jail Branch; it receives a considerable stream from the north, called Cold Branch. Orange possesses a large and valuable water power. The first settlement was commenced by Ensign Joseph Williams in 1793, on the S. line of the town. 12 miles S. E. from Montpelier, and 12 N. from Chelsea.

Orange County, Va., c. h. at Orange Court

House. Bounded N. by Rapidan River, separating it from Culpepper co., E. by Spottsylvania co., S. by Pamunkey River, separating it from Louisa co., and W. by Albemarle and Greene counties. Drained by tributaries of North Anna and Rivanna Rivers. Surface hilly; soil fertile.

Orange Court House, Va., c. h. Orange co. At the base of South West Mountain. 84 miles N. W. from Richmond.

Orangeburg District, S. C., c. h. at Orangeburg. Bounded N. by Lexington and Richland districts, E. by Sumpter, S. by Charleston and Barnwell, and W. by Barnwell and Edgefield districts. The Congaree River runs on a part of its N. and the Santee on its E. border. The South Edisto washes its S. W. border, and the North Edisto and branches drain the interior.

Orangeburg, S. C., c. h. Orangeburg District. On the E. bank of North Edisto River. 43 miles S. by E. from Columbia.

Orangetown, N. Y., Rockland co. Bounded on the E. by Tappan Bay, an enlargement of the Hudson River, and is drained by the Hackensack. Surface hilly; soil a mixture of red shale and clay. 123 miles from Albany.

Orangeville, N. Y., Wyoming co. Tonawanda Creek and some of its branches water this town. Surface hilly; soil clay loam. 7 miles W. from Warsaw, and 254 from Albany.

Orangeville, Pa., Columbia co. On Fishing Creek. 5 miles N. from Bloomsburg, and 81 N. by E. from Harrisburg.

Oregon County, Mo., c. h. at Eleven Points. Bounded N. by Texas and Shannon counties, E. by Ripley co., S. by As., and W. by Ozark co. Drained by Eleven Points and Spring Rivers.

Oregon, Mo., c. h. Holt co. On the N. E. bank of Missouri River.

Oregon City, On., c. h. Claquemans co. On the Willamette River, near its entrance into the Oregon.

Orford, N. H., Grafton co., lies on Connecticut River, over which is a bridge connecting it with Fairlee. The soil is fertile, and there are beautiful intervals farms on the Connecticut. Mount Caba and Mount Sunday lie near the centre of the town. There are 4 or 5 ponds of considerable size, one of which, called Baker's Upper Pond, lies within 3 or 4 miles of Connecticut River. Indian Pond lies 1 mile W. from it. Limestone is found in great abundance at the foot of a mountain, about 400 or 500 feet above Connecticut River. Soapstone and granite abound, and some lead ore has been discovered. Orford contains a pleasant village, situated on a beautiful plain on the main road, on the bank of the Connecticut. There is also another pleasant village, at a distance of 2 miles, called *Orfordville*. The Passumpsic Railroad crosses the Connecticut at this place. 91 miles by Railroad from Concord.

Oriskany Falls, N. Y., Oneida co. On both sides of Oriskany Creek, which has a fall of about 30 feet at this place, affording good water power. 100 miles W. N. W. from Albany.

Orland, Me., Hancock co. On the E. side of Penobscot River. 64 miles E. from Augusta.

Orleans Parish, La., c. h. New Orleans. Bounded N. by Lake Pontchartrain, E. by Lake Borgne, S. by Plaquemine, and W. by Jefferson co. The surface is too low and marshy for profitable cultivation, except on the margins of the streams. The principal productions are cotton, sugar, rice, Indian corn, oranges, figs, peaches.

Orleans, Ms., Barnstable co. Orleans was the S. part of Eastham until its incorporation in 1797. Its Indian name was *Naumskeket*. It extends across the cape, and is indented with coves and creeks on both sides, and contains a number of fine fresh-water ponds. Nanset Harbor is at the N. E. part of the town, and Pleasant Bay opens at the S. E. corner of the town, and lies partly in Chatham. In this bay are several islands. There is a very pleasant village near the centre of the town, from which, to Barnstable court house, is 24 miles.

Orleans County, N. Y., c. h. at Barre. Formed from Genesee co. in 1824. It is bounded N. by Lake Ontario, E. by Monroe, S. by Genesee, and W. by Niagara co. Watered by Oak Orchard, Johnson's, and several other creeks flowing into Lake Ontario. Surface mostly level, with the exception of the mountain ridge, which runs nearly parallel with the lake shore; soil well adapted to grass and grain. There are a few salt and sulphur springs in this county, and bog iron ore is found in small quantities. The Erie Canal passes through it from E. to W.

Orleans, N. Y., Jefferson co. Watered by Chaumont and Perch Rivers. Surface slightly undulating; soil chiefly rich clay and loam upon a foundation of limestone. 12 miles N. from Watertown, and 172 N. W. from Albany.

Orleans County, Vt., c. h. at Irasburg. This county is bounded N. by Lower Canada, E. by Essex and Caledonia counties, S. by Caledonia co., and W. by Franklin and Lamoille counties. It lies between the eastern and western ranges of the Green Mountains. The surface is generally handsome, and the soil well adapted for wheat, rye, and grass; the climate is rather too cold for corn, and some parts of the county are low and marshy. Orleans co. is watered by Missisco, Black, Barton, and other rivers. It contains more ponds than any other county in the state. Much of its trade goes to Canada by the way of Memphremagog Lake, which lies in this county and Canadas.

Orono, Penobscot co. This town lies on the W. side of Penobscot River, and is watered by Dead Stream and a large part of Pushaw Lake. It is 74 miles N. E. from Augusta.

This town borders on the Great Falls in Penobscot River, and contains a great number of saw mills, which manufacture a vast amount of lumber annually for the Bangor market. A railroad, 12 miles in length, between Bangor and the villages of Stillwater and Oldtown, in Orono, was opened for travel in 1836. The Penobscot River, at Oldtown, above the falls, is 40 feet higher than at Bangor. The village of Stillwater is 4 miles below Oldtown. Above the falls, and about a mile above the village of Oldtown, near the mouth of Dead Stream, on "Oldtown Island," is the Indian settlement. This settlement is very pleasantly located, and secure from approach, except by boats or canoes. It contains a number of framed houses, and a neat chapel with a bell. In 1837, John Neptune, the lieutenant governor, and other officers of the Penobscot tribe of Indians, finished taking, by families, a very particular census of all who belong to the tribe, for the purpose of a just and equal distribution of the annuities and other moneys paid to them. It was found that the families in all were 95 — the list exhibiting the head of each family by name, and the number of individuals each

one contains annexed thereto. The whole number of souls in the tribe was 362. Their officers are, a governor, lieutenant governor, a colonel, 4 captains, 1 squire, and 1 deacon. In religion they are Catholics. Several of them can read, and a few can write, though in a poor hand. The tribe own, collectively, all the islands in the Penobscot River, beginning with that of Oldtown, where their village is, and including all up as far as the forks, several miles above the Mattawamkeag, many of which are exceedingly pleasant and fertile. The Indians are not poor, having sold some of their lands for large sums. To such a remnant, however, is this tribe reduced—a tribe anciently and uniformly called the Tarratines, who could bring into the field more than 2000 warriors, and who claimed the lands on both sides of the Penobscot River, from its sources to its mouth.

Orrington, Me., Penobscot. A fine township, with a handsome village, on the E. side of Penobscot River, opposite Hampden.

Orwell, Vt., Addison co. Some of the land is broken and hilly; the remaining part is very level, handsome land, and produces abundant crops of all kinds of grain. The principal streams are East Creek and Lemonfair River. On these streams are several mill privileges, which are good during a part of the year. The waters, where the land is clayey, are slightly impregnated with Epsom salts, or the sulphate of magnesia. There is a spring on the lake shore, about 180 rods S. from the N. W. corner, the waters of which are strongly impregnated. The average width of Lake Champlain against Orwell is about 1 mile, and the widest place 2 miles. May 13, 1820, a piece of land in the town, of more than 5 acres' area, sunk about 40 feet, and slid into the lake. The impulse made upon the water was so great as to raise the lake 3 feet at the opposite shore, a mile and a half distant. A part of Benton was annexed to Orwell in 1847. The first permanent settlement of this place was made in 1783. 20 miles N. W. from Rutland, and 47 S. W. from Montpelier.

Orwigsburg, Pa., c. h. Schuylkill co. On a rising ground, in a valley surrounded by high hills of fertile land, and near a small branch of the Schuylkill River. N. E. from Harrisburg 62 miles.

Osage County, Mo., c. h. at Linn. This county is bounded N. by the Missouri River, separating it from Callaway co., E. by Gasconade co., S. by Crawford and Pulaski counties, and W. by Miller co. and Osage River, separating it from Cole co. Drained by Gasconade River.

Oskaloosa, Io., c. h. Mahaska co.

Ossian, N. Y., Alleghany co. Watered by Cansera Creek and some of its tributaries. Surface undulating; soil fertile, argillaceous loam. 20 miles N. E. from Angelica, and 233 W. from Albany.

Ossining, N. Y., Westchester co. Incorporated in 1845. The name is of Indian origin, signifying "the place of stone."

Ossipee, N. H., c. h. Carroll co. The W. and S. W. parts are hilly and mountainous, presenting a beautiful contrast with the N. and E. parts, which are moderately uneven or level. Ossipee Lake is in this town and Freedom. (See *Ossipee Lake*.) 60 miles N. N. E. from Concord.

Osterville, Ms., in the town of Barnstable, Barnstable co. On the E. side of Oyster Bay. 72 miles S. S. E. from Boston.

Oswegatchie, N. Y., St. Lawrence co. Watered by the Oswegatchie River, a branch of the St. Lawrence, which bounds it on the N. W., and by Black Lake, which lies partly in this town. Surface slightly undulating; soil clay loam. 16 miles W. from Canton, and 200 N. W. from Albany.

Oswego County, N. Y., Oswego and Pulaski, shire towns, was taken, from Oneida and Onondaga counties in 1816. Bounded N. by Lake Ontario, E. by Lewis and Oneida, S. by Madison and Jefferson counties, and W. by Lake Ontario and Cayuga co. Watered by Oneida Lake, Oswego and Salmon Rivers, and many small streams flowing into Lake Ontario. Surface chiefly level; soil very productive. There are no important minerals in this county. The Oswego Canal runs along the E. bank of the Oswego River.

Oswego, N. Y., port of entry, and seat of justice, alternately with Pulaski, of Oswego co. Situated on both sides of Oswego River, at its entrance into Lake Ontario. 35 miles N. W. from Syracuse, and 178 W. by N. from Albany. This place, incorporated as a village in 1828, is partly in the township of Oswego, and partly in that of Scriba, the river being the dividing line. The two parts are connected by a bridge 700 feet in length; and as the ground ascends in both directions from the river, a beautiful view of each division of the place is presented from the opposite side. On both sides it is regularly and handsomely laid out, with streets 100 feet wide, crossing each other at right angles, and with public squares, around which some of the churches and other public buildings are located. The court house is on the E. side of the river. The First Presbyterian and the Episcopal Churches are beautifully situated on elevated ground, on the W. side. There is an incorporated academy and a flourishing female school in the place, and many of the mansions of the more wealthy citizens are elegant, and richly adorned with embellishments of taste and luxury.

The facilities which Oswego possesses for trade, commerce, and manufactures, are very great. Its harbor, next to Sackets Harbor, is the best on the S. side of Lake Ontario. It is formed, at the mouth of the river, by a pier 1290 feet in extent, built by the United States at an expense of nearly \$100,000. The harbor within the pier is spacious and safe, having a depth of water of from 10 to 20 feet. Several steamboats and a large number of sailing vessels are owned here. An excellent marine railway has been constructed. The Oswego Canal connects this harbor with the Erie Canal at Syracuse, employing the Oswego River for a part of the distance, and the canal boats are generally so constructed as to strength, and the form of their decks, that they may be taken in tow, with their cargoes, through the lake. A considerable portion of trade between New York and the west passes through this channel, and hence, by the Welland Canal, into Lake Erie. The railroad from Syracuse brings other facilities of business to Oswego, while it opens through this place one of the most desirable routes of travel from the eastern cities to the west by the way of Niagara Falls. From Oswego to Port Dalhousie, at the mouth of the Welland Canal, is about 150 miles; to Ogdensburg, about 110 miles.

The water power at Oswego, afforded by the

river and the canal, is immense. Many large manufacturing establishments are in operation on both sides of the river, and much more power remains to be applied. The quantity of flour turned out daily by 5 or 6 extensive flouring mills at Oswego is very large.

Fort Oswego, near the lake, on the E. side of the river, is a strong fortification for the defence of the harbor, occupying the site of the old fort of the same name, celebrated in the colonial wars with the French. This place has been the scene of sanguinary conflict, in every period of hostilities with a foreign enemy.

Otego, N. Y., Otsego co. The Susquehanna River and Otsdawa Creek water this town, the surface of which is somewhat hilly, with extensive flats along the borders of the Susquehanna; the soil well adapted to grass and grain. 22 miles S. W. from Cooperstown, and 86 from Albany.

Otisco, N. Y., Onondaga co. Bounded on the W. by Otisco Lake and its inlet. Surface hilly; soil clay loam. 15 miles S. from Syracuse, and 134 W. from Albany.

Otisfield, Me., Cumberland co. This town is watered by Crooked River, which empties into Sebago Lake. The soil is very good. It lies 82 miles S. S. W. from Augusta, and 32 N. N. W. from Portland.

Otis, Ms., Berkshire co. The territory of Otis comprises that of the old town of Loudon, which was incorporated in 1773, and the old district of Bethlehem. The two were united by an act of incorporation, in 1810, and named in honor of the venerable Harrison Gray Otis, of Boston, then speaker of the House of Representatives. The surface is uneven, and in some parts too elevated for cultivation. There are, however, many tracts of good tillage land, and an abundance of feed for cattle. The town is well stored with forests of hard wood, and granite. There are in the town a number of large and beautiful ponds, which, with a small stream from Becket, form the head waters of Farmington River. These waters furnish the town with good mill seats. From the village in the S. part of the town to the Becket depot, on the Western Railroad, is about 10 miles; from thence to Boston, 135 miles.

Otsego, Mn., Allegan co. Watered by the Kalamazoo River, which here affords good water power. 149 miles W. by N. from Detroit.

Otsego County, N. Y., c. h. at Otsego. Formed from Montgomery co. in 1791. It is bounded N. by Oneida, Herkimer, and Montgomery, E. by Schoharie and Delaware, S. by Delaware, and W. by Chenango and Madison counties. Watered by Otsego and Canaderaga or Schuyler's Lakes, from which flows the E. branch of the Susquehanna River, by Cherry Valley, Otego, and Butternut Creeks, and by the Unadilla River, which forms its W. boundary. Surface elevated, hilly, and in some parts mountainous; soil various, but mostly fertile. This county contains abundance of fine marble, and several sulphur springs.

Otsego, N. Y., c. h. Otsego co. Bounded on the E. by Otsego, and N. W. by Canaderaga Lake, and drained by Oak Creek, a fine mill stream, and the outlet of the last-named lake. Surface hilly; soil well adapted to the growth of grass and grain. 66 miles W. from Albany.

Otselic, N. Y., Chenango co. Otselic River

waters this town, the surface of which is hilly, and the soil clay loam, well adapted to grass. 15 miles N. W. from Norwich, and 105 W. from Albany.

Ottawa County, Mn., c. h. Grand Haven. Bounded N. by Oceana and Neeewaggo counties, E. by Kent co., S. by Allegan co., and W. by Lake Michigan. Drained by Grand River and its branches, and Maskegon River. Surface undulating, with sand bluffs bordering the lake; soil fertile.

Ottawa County, O., c. h. at Port Clinton. N. W. part of the state. Has Lake Erie on the N., and Sandusky Bay on the S. E. Watered by Portage and Touissiant Rivers. Level and fertile.

Vinton County, O., c. h. at McArthur. West central part of the state.

Otto, N. Y., Cattaraugus co. Bounded on the N. and W. by Cattaraugus Creek and its branches. The surface is rough and elevated; soil well adapted to grass and grain. 10 miles N. W. from Ellicottville, and 300 W. from Albany.

Ottowa, Is., La Salle co. On both sides of the Illinois at the confluence of Fox River. For 8 or 9 miles below this place, the Illinois is not navigable for steamboats, except at high water, owing to the rapids. 133 miles N. N. E. from Springfield. Possesses an extensive water power. The Illinois Canal passes through it.

Ottumwa, Ia., c. h. Wapello co.

Ouachita County, As., c. h. at Camden. Southern part. The Ouachita flows through it from N. to S.

Outagamie County, Wn. Taken from Brown in 1852.

Overton County, Te., c. h. at Livingston. Bounded N. by Kentucky, E. by Fentress co., S. by Putnam, and W. by Jackson co. Drained by Obies River and tributaries and Roaring Creek.

Ovid, N. Y., Seneca co. Half shire town, lying between Cayuga and Seneca Lakes, and watered by several fine mill streams. The surface is elevated in the centre, sloping E. and W. towards the lakes; the soil suitable for grass and grain. 171 miles W. from Albany.

Owasco, N. Y., Cayuga co. Bounded on the W. by Owasco Lake, and drained by a few small streams. Surface rolling; soil fertile loam. 3 miles S. E. from Auburn, and 164 W. from Albany.

Owego, N. Y., c. h. Tioga co. The Susquehanna River here receives Owego Creek and several other streams. The surface is somewhat hilly, with extensive flats along the Susquehanna; soil fertile. 167 miles S. W. from Albany.

Owen County, Ky., c. h. at Owenton. Bounded N. by Carroll and Gallatin counties, E. by Grant and Pendleton, S. by Scott and Franklin, and W. by the Kentucky River, separating it from Henry co. Drained by Eagle Creek.

Owen County, Ia., c. h. at Spencer. Bounded N. by Putnam, E. by Morgan and Monroe, S. by Green, and W. by Clay co. Drained by the W. fork of White River and its branches, and by Mill Creek, a branch of Eel River, which afford great hydraulic power. Surface undulating, containing iron ore; soil fertile.

Owensboro', Ky., c. h. Daviess co. On the S. side of Ohio River. 56 miles W. S. W. from Frankfort.

Owenton, Ky., c. h. Owen co.

Owingville, Ky., c. h. Bath co. On a branch of

Licking River, a little W. from Slate Creek, and 73 miles E. from Frankfort.

Owsley County, Ky., c. h. at Boonville. New.

Oxford, Ct., New Haven co. Oxford was taken from Derby in 1798. It is watered by Housatonic and Naugatuck Rivers. The surface of the town is diversified with hills and valleys; the soil is generally a gravelly loam, fertile and productive. The water power at this place is excellent. From Governor's Hill a fine view of the neat village of Quaker Farms and the surrounding country is presented. About a mile S. of the central part of the town is a remarkable mineral spring, called "The Pool," from the circumstance of its waters being efficacious and much used for the cure of the salt rheum and other complaints. "Once in a month a yellowish scum will collect upon the surface of the water, which in a few days runs off, and leaves the pool perfectly clear. In the coldest weather, this spring never freezes; in the driest season it is as full as at other times."

Oxford, Ia., c. h. Benton co.

Oxford County, Me., c. h. at Paris. On the western border of the state. The Upper Androscoggin flows through it from W. to E. Lake Umbagog, the source of the river, is in the N. part, which is still unsettled. Rough and mountainous in some parts, but with much good land.

Oxford, Me., Oxford co. This town is watered by Little Androscoggin River and several ponds. It contains some excellent land, and two flourishing villages. Oxford lies 52 miles S. W. from Augusta, and 8 S. from Paris.

Oxford, Ms., Worcester co. This town was granted to Joseph Dudley and others, in 1683, for the accommodation of about 30 French Protestant families, who had escaped from France after the revocation of the edict of Nantz. They settled here about 1686, and built a fort on a hill in the eastern part of the town, now called Mayo's or Fort Hill, where its remains are still visible. The Indian name of the town was *Mancharge*. The surface is not very hilly; in its centre is a fine plain, a mile and a half in length, and a mile in width. From this plain the lands gently rise on all sides. The soil is strong and fertile, and under good cultivation. About three quarters of a mile W. from the plain, on which is a large and handsome village, runs French River, from the N. to the S., and falls into the Quinebang. This river (so named from the first settlers) and its tributaries give to Oxford a great hydraulic power. Woollen and Thread Villages, about a mile apart, on French River, are important manufacturing places. The Norwich and Worcester Railroad passes through the town. 11 miles S. from Worcester, and 58 S. W. by W. from Boston.

Oxford, Mi., c. h. La Fayette co. 160 miles N. N. E. from Jackson.

Oxford, N. C., c. h. Granville co. On the W. side of Fishing Creek. 6 miles N. from Tar River, and 45 N. from Raleigh.

Oxford, N. J., Warren co. Bounded on the W. by Delaware River, and drained by Pequest Creek and its tributary, Beaver Brook, both mill streams. Surface rough and mountainous; soil fertile in the valleys.

Oxford, N. Y., Chenango co. The Chenango River, and, nearly parallel to it, the Chenango Canal, pass through this town. Surface rolling;

soil very fertile. 10 miles S. from Norwich, and 118 S. W. from Albany.

Oxford, O., Butler co. 105 miles W. S. W. from Columbus. The seat of Miami University, to which the land belongs. See *Colleges*.

Oxford, Pa., Philadelphia co. Bounded S. E. by the Delaware River, and drained by Tacony Creek, a mill stream, and by Sissisocksink Creek. Surface gently sloping; soil sandy loam.

Oyster Bay, N. Y., Queens co. This large town is watered by Oyster Bay on the N., and the Great South Bay on the S. Surface somewhat hilly and stony on the N., and level and sandy on the S. 10 miles E. from North Hempstead, and 175 S. from Albany.

Ozark, As., c. h. Franklin co. On the N. side of Arkansas River. 121 miles N. W. from Little Rock.

Ozark County, Mo., c. h. at Rockbridge. Bounded N. by Wright and Texas counties, E. by Oregon co., S. by Arkansas, and W. by Taney co. Drained by the N. fork of White River.

Paducah, Ky., McCracken co. On the S. bank of Ohio River, immediately below the mouth of the Tennessee, and 284 miles W. S. W. from Frankfort.

Page County, Io., c. h. at Nowaday. In the S. E. angle of the state, bordering on Missouri.

Page County, Va., c. h. at Luray. Bounded N. by Warren co., E. by Rappahannock and Madison, S. by Rockingham, and W. by Shenandoah co. Drained by the S. fork of Shenandoah River. Surface hilly, the Blue Ridge forming its E. boundary; soil chiefly fertile.

Pahaquarry, N. J., Warren co. Blue Mountain bounds this town on the W., and on its S. W. boundary the Delaware River passes through the mountain, forming the Delaware Water Gap. A road has been constructed through this Gap, by excavating the mountain, which was formerly nearly impassable on the Jersey side. The surface of the town is mountainous, except on the Delaware, where are rich bottom lands. 15 miles N. from Belvidere.

Painted Post, N. Y., Steuben co. At the junction of Conhocton and Tioga Rivers, on the site of an old Indian burial-ground, in which a painted post was erected by them in memory of a distinguished chief. 212 miles W. by S. from Albany. It has large water power, and 3 miles N. a mineral spring. The Erie Railroad passes through it.

Painesville, O., c. h. Lake co. A very flourishing place on the southern shore of Lake Erie, and contains many valuable farms. Grand River bounds the south-eastern part, then runs N., and flows across the township into the lake. 170 miles N. E. from Columbus, and 30 E. from Cleveland.

Paintsville, Ky., c. h. Kentucky co.

Palatine, N. Y., Montgomery co. Watered by Garaoga Creek, a branch of the Mohawk River, which bounds it on the S. Surface hilly, and the promontory called Anthony's Nose is situated in this town. The soil is remarkably fertile and productive in some parts. 10 miles W. from Fonda, and 52 N. W. from Albany.

Palermo, Me., Waldo co. A good farming town, embracing the head waters of the Sheepscot River. 16 miles E. N. E. from Augusta.

Palermo, N. Y., Oswego co. Catfish Creek waters this town, the surface of which is undu-

lating; soil sandy loam. 15 miles S. E. from Oswego, and 162 N. W. from Albany.

Palestine, Is., c. h. Crawford co. On the border of Lamotte prairie. 3 miles from Wabash River, and 155 S. E. from Springfield.

Palmer, Ms., Hampden co. The Chicopee, the Ware, the Swift, and some smaller streams, water the town, and give it a great hydraulic power. On the banks of these rivers are situated the pleasant and flourishing villages of "Three Rivers," Thorndike, Sedgwick, and Palmer Depot. There is a pleasant village in the centre of the town, 2 miles N. from the depot. The surface is somewhat broken, but the soil is strong and productive, particularly along the streams, where are tracts of fine intervals. From Palmer Depot, on the Western Railroad, to Boston is 83 miles E. by N., and to Springfield is 15 miles W. S. W.

Palmyra, Me., Somerset co. On Sebasticook River. The soil is rich, and there are water privileges. 81 miles N. N. E. from Augusta.

Palmyra, Mn., Lenawee co. Watered by Raisin River and Bear Creek. Soil very favorable to the growth of grain. 75 miles S. W. from Detroit.

Palmyra, Mo., c. h. Marion co. A place of considerable trade. 3 miles from the Mississippi, and 111 N. N. E. from Jefferson City.

Palmyra, N. C., Halifax co. On the W. side of Roanoke River. 115 miles N. E. from Raleigh.

Palmyra, N. Y., Wayne co. Watered by Mud Creek. Has a slightly undulating surface, and a productive soil. 12 miles W. from Lyons, and 196 N. of W. from Albany.

Palmyra, Va., c. h. Fluvanna co. On Rivanna River, 14 miles from its mouth, and 62 W. N. W. from Richmond.

Pamelia, N. Y., Jefferson co. Watered by Perch and Black Rivers. Surface chiefly level; soil productive. 4 miles N. from Watertown, and 168 N. W. from Albany.

Panola County, Mi., c. h. at Panola. Bounded N. by De Soto, E. by Marshall and La Fayette, S. by Yallabusha and Tallahatchee, and W. by Coahomo and Tunic counties. Cold Water and Tallahatchee Rivers and branches drain this county.

Panola County, Ts. On the E. border. Between the Sabine and Caddo Lake.

Panton, Vt., Addison co. Panton is bounded W. by Champlain Lake, and E. by Otter Creek. A sluggish stream passes through it. A part of Ferrisburg was annexed to Panton in 1847. A settlement was commenced here in 1770. It was abandoned during the war; after the war, the settlers returned, and, in 1784, the town was organized. 40 miles W. S. W. from Montpelier, and 13 N. W. from Middlebury.

Paoli, Ia., c. h. Orange co.

Paoli, Pa., Chester co. 78 miles E. S. E. from Harrisburg. It is on the railroad between Philadelphia and Lancaster, 21 miles from the former, and 49 from the latter. About 2 miles S. W. from this place is the battle ground where General Wayne sustained a defeat by a superior British force, September 20, 1777. A monument has been erected on the spot to the memory of those American soldiers who fell in the conflict.

Paris, Is., c. h. Edgar co. On the margin of a fertile prairie. 114 miles E. from Springfield.

Paris, Ky., c. h. Bourbon co. On the S. fork of Licking River. 36 miles E. from Frankfort.

Paris, Me., c. h. Oxford co. Paris is well wa-

tered and supplied with mill privileges by Little Androscoggin River, on which are several mills in the town. The soil is excellent, although in some parts uneven and mountainous. The principal village is well built, and pleasantly located. Paris lies 40 miles N. by W. from Portland.

Paris, Mo., c. h. Monroe co. 70 miles N. of Jefferson City.

Paris, N. Y., Oneida co. The Sadaquada Creek, an important mill stream, waters this town. Surface high and uneven; soil calcareous and sandy loam. 8 miles S. from Utica.

Paris, Te., c. h. Henry co. On the S. side of a branch of Little Sandy River. 98 miles W. from Nashville.

Parish, N. Y., Oswego co. Salmon Creek and its branches water this town, the surface of which is undulating; soil good sandy loam. 22 miles E. from Oswego, and 145 N. W. from Albany.

Parishville, N. Y., St. Lawrence co. This large town is traversed by the St. Regis, Grass, Racket, and Oswegatchie Rivers. Surface rolling on the N. and hilly on the S.; soil sandy loam of good quality. 15 miles E. from Canton, and 226 N. W. from Albany.

Parkersburg, Va., c. h. Wood co. On the N. side of Little Kanawha River, at its confluence with the Ohio, and 335 miles N. W. by W. from Richmond. The Baltimore and Ohio Railroad is to have a branch to this place.

Parkman, Me., Piscataquis co. A good township. 64 miles N. by E. from Augusta.

Parsonsfield, Me., York co., lies at the N. W. corner of the county, and is bounded W. by the state of New Hampshire, and N. by Ossipee River. It is 36 miles W. by N. from Portland, and has Newfield on its S. It was first settled 1774. The surface of the town is rough and hilly; but the soil, though hard, is productive of good crops of hay and grain.

Pasquotank County, N. C., c. h. at Pasquotank Court House. Bounded N. and E. by Camden co., S. by Albemarle Sound, and W. by Perquimans co. Pasquotank River runs on its N. E. border. Surface level, and the soil, where it is not marshy, mostly of good quality.

Passaic County, N. J., c. h. Paterson. Bounded N. by Sussex co. and New York, E. by Bergen co., S. by Essex, and W. by Morris co. Watered by Passaic River and its branches. Surface uneven; soil mostly fertile.

Passyunk, Pa., Philadelphia co. This town lies below the city of Philadelphia, between the Delaware on the E. and the Schuylkill on the W., and embraces League Island, lying in the Delaware. The surface is level; the soil highly cultivated alluvion and loam.

Patchogue, N. Y., Suffolk co. On the S. side of Long Island, near the Great South Bay. 60 miles E. from New York, and 204 S. S. E. from Albany. A great resort for fishing and fowling.

Patrick County, Va., c. h. at Taylorsville. Bounded N. by Flood and Franklin counties, E. by Henry co., S. by North Carolina, and W. by Carroll co. Some tributaries of Smith's, S. Mayo, and Little Dan Rivers water this county, and the Blue Ridge runs on its N. W. boundary.

Patrick, Va., c. h. Patrick co. 226 miles W. S. W. from Richmond.

Paterson, N. J. Seat of justice of Passaic co. 13 miles N. from Newark, and 75 N. E. by N. from Trenton. Situated on the Passaic River, near the

falls, about 4 miles from its entrance into Newark Bay. It is on the railroad which, passing through New Jersey, connects the Erie Railroad with Jersey City, opposite New York, from which Paterson is 17 miles distant. The early history of this place is interesting, in connection with the subject of manufacturing enterprise in this country. It was established by a society, incorporated in 1791, for the purpose of fostering this important branch of political economy, and is said to have been projected by Alexander Hamilton. This was soon after the first experiment of spinning cotton by machinery had been made at Pawtucket, R. I., which was in December, 1790, by Samuel Slater, who is not improperly styled the "parent of the American cotton manufacture." The company entered upon the execution of their plans at Paterson, upon a liberal scale, with a capital of \$1,000,000; but from want of experience, and from various other disadvantages, they were not at first successful. A number of years afterwards, however, the work was taken up by others, and prosecuted with great success.

"The advantages derivable from the great fall in the river here have been improved with much judgment. A dam $4\frac{1}{2}$ feet high, strongly framed and bolted to the rock in the bed of the river above the falls, turns the stream, through a canal excavated in the trap rock of the bank, into a basin, whence, through strong guard gates, it supplies, in succession, three canals on separate planes, each below the other, giving to the mills on each a head and fall of about 22 feet." Upon this fine water power a great manufacturing place has grown up, which enjoys the varied and important advantages of an abundant and steady supply of water, a healthy, pleasant, and fertile surrounding country, and a near proximity to the city of New York, with which it is connected by the sloop navigation of the Passaic, the Morris Canal, and the railroad above mentioned. The largest establishments here are the cotton factories, which are about 20 in number; besides which there are woollen factories, dyeing and printing establishments, extensive machine shops, paper mills, fulling mills, &c. The factories are built chiefly of stone.

Paterson contains about 15 churches of the various denominations, a Philosophical Society, with a valuable library, and a Mechanics' Society for the advancement of science and the mechanic arts, with a library and philosophical apparatus.

It is connected by two bridges with the village of Manchester, opposite, which, in a general view, may be considered as a part of this place, and contains several manufacturing establishments.

Patterson, N. Y., Putnam co. Croton River waters this town, the surface of which is hilly; the soil mostly good, and in the valleys very fertile. 6 miles N. E. from Carmel, and 102 S. from Albany.

Pattonsburg, Va., Bottetourt co. It is on the N. side of James River, opposite Buchanan, with which it is connected by a bridge, making, in fact, one village. 166 miles W. from Richmond.

Paulding County, Ga., c. h. at Van Wert. Bounded N. by Floyd and Cass counties, E. by Cobb, S. by Carroll co., and W. by Alabama. Watered by the head branches of Tallapoosa River, and by branches of the Etowah.

Paulding, Mi., c. h. Jasper co. Located at the head of Leaf River. 109 miles E. S. E. from Jackson.

Paulding County, O., c. h. at Charloe, situated in the N. W. part of the state, having Defiance co. on the N. and N. W., Putnam on the E., Van Wert on the S., and the Indiana state line on the W. The whole surface is level, and covered with the Black Swamp. It was constituted a county in 1820, and named in honor of John Paulding, one of the captors of Major Andre. It is drained by the Maumee and Auglaize Rivers. The Wabash and Erie Canal traverses the whole extent of its northern border, and the Miami Canal, forming a junction with the Wabash and Erie, 5 miles N. of Charloe, traverses its eastern border. The county seat is situated on this canal.

Pavilion, Mn., Kalamazoo co. Watered by branches of the St. Joseph's River and by the Sandy Lakes. Soil fertile, and favorable to the growth of grain. 138 miles W. from Detroit.

Pavilion, N. Y., Genesee co. This town was formed on the division of the county in 1841, having formerly constituted a part of the town of Covington. It is watered by Allen's Creek, has a rolling surface, and a soil very favorable to the growth of wheat. 12 miles S. E. from Batavia and 232 W. from Albany.

Pawlet, Vt., Rutland co. Pawlet and Indian Rivers pass through this town; the latter abounds in trout, and takes its name from the great number of Indians who formerly resorted here for the purpose of fishing. Pawlet is divided nearly in the centre by a range of mountains, extending through it from S. to N. The most remarkable summit is called Haystack Mountain. The soil is dry and warm, easily cultivated, and produces good crops of grain and grass. The settlement was commenced in 1761, by Simeon Barton and William Fairfield. 21 miles S. W. from Rutland and 27 S. E. from Whitehall, N. Y.

Pawlings, N. Y., Dutchess co. The Croton River and Swamp Creeks have their sources in several lakes and large swamps in this town. The Fishkill Mountains also traverse it, and an extensive valley extends from N. to S. Iron ore of a good quality is found here, and the soil, although not naturally very fertile, may be made quite productive. 20 miles S. E. from Poughkeepsie, and 95 S. E. from Albany.

Pawtucket, Ms., Bristol co. On Pawtucket or Blackstone River. 4 miles N. from Providence, and 39 miles by railroad S. from Boston. The territory of the town comprises an area of only about 2 miles square. It lies upon the boundary of the state, and is separated from Rhode Island by the river; which, above the Pawtucket Falls, is called Blackstone, and below Seekonk River.

Pawtucket Village is situated at the falls, on both sides of the river, partly in Pawtucket, and partly in North Providence, R. I. The first manufacture of cotton cloth in this country, by water power machinery, was commenced at this place, by Samuel Slater, an English emigrant, in December, 1790. The hydraulic power here is very great, the fall in the river within a short distance being about 50 feet. Below the falls the river is navigable, from its entrance into the bay at Providence, for vessels of considerable burden. This has long been an important manufacturing place. It contains numerous and extensive cotton mills and print works, and shops for the manufacture of cotton machinery, bobbins, spools, &c. The manufacture of boots, shoes, chairs, cabinet wares, and carriages is also carried on to considerable extent, and something is done at ship building.

The village itself is pleasant, and the scenery around it delightful. The railroads between Boston and Providence, and Providence and Worcester, pass through this place.

Pawtucket, R. I., Providence co. It is the seat of extensive cotton factories, propelled by the water power of Pawtucket Falls. On the Worcester and Providence Railroad. See *Pawtucket Village*.

Pawtuxet, R. I., Kent co. Port of entry, and manufacturing village. Situated on both sides of Pawtuxet River, partly in the town of Warwick, and partly in Cranston. 5 miles S. from Providence. Water power great. Harbor safe and convenient.

Paxton, Ms., Worcester co. Previous to 1765, the territory of this town comprised the N. part of Leicester and the S. part of Rutland. It was first settled about 1720. The surface is elevated, so much so, that the numerous fine rivulets, by which it is watered, flow some to the Nashua, and some to the Connecticut. There are but two hills in the town of any note: they are the Bumsket and Turkey, and although quite elevated, are arable to their summits. The soil is strong, moist, and well adapted to the purposes of agriculture. 7 miles N. W. by W. from Worcester, and 51 W. from Boston.

Peach Bottom, Pa., York co. Watered by the Susquehanna River, by Muddy Creek and its branches, Fishing Creek and Neel's Hole Run. Surface level; soil slate and gravel. 26 miles S. E. from York, and 62 S. E. from Harrisburg.

Peacham, Vt., Caledonia co. Onion River Pond, so called from its giving rise to one of the principal branches of Onion or Winoski River, lies in the western part of the town, and covers about 300 acres. There are two considerable streams passing off to the E. into Stevens's Branch, which afford numerous mill privileges. A ridge of land passes through the western part, but there is no very considerable elevation in the town. The western part is a hard soil, but the eastern is rich and pleasantly diversified. There is, in the eastern part of the town, a natural bog meadow, containing an inexhaustible quantity of shell marl. There is plenty of limestone found here. There is a pleasant village in the town. In the spring of 1775, Jonathan Elkins came to Peacham, with several hired men, and began improvements upon the lot he had selected the year before. 6 miles S. W. from Danville, and 30 E. from Montpelier.

Pekin, Is., Tazewell co. On the E. side of Illinois River. 12 miles below Peoria, and 62 N. from Springfield.

Peekskill, N. Y., Westchester co. On the E. side of Hudson River. 46 miles N. from New York, and 106 S. from Albany. Manufactures iron and leather. A stopping-place for steamboats. The Hudson River Railroad passes through it.

Pelham, Ms., Hampshire co. Before its incorporation as a town, in 1743, Pelham bore the name of New Lisburne, or Stoddard's Town. The ancestors of the first settlers were from the N. of Ireland. The surface is elevated and uneven. It is well watered by Swift and Fort Rivers and their branches; the soil is good both for tillage and pastures. 14 miles N. E. from Northampton, and about 76 W. from Boston.

Pelham, N. H., Hillsboro' co. There are 3 ponds

here, called Gumpas, Island, and North. Beaver River passes through the town. On this river and the tributary streams there is much valuable meadow. The inhabitants depend principally on agriculture for the means of support. This is a very pretty town, and contains many excellent farms. First settlers, John Butler, William Richardson, and others, in 1792. From Concord 37 miles S., and 19 S. E. from Amherst.

Pelham, N. Y., Westchester co. Hart's and Hunter's Islands, lying in East River, are attached to this town. Surface chiefly level; soil sandy loam and clay. 10 miles S. from White Plains, and 140 S. from Albany.

Pemberton, N. J., Burlington co. On the N. branch of Rancocus Creek. S. from Trenton 22 miles.

Pembroke, Me., Washington co. It lies 178 miles N. E. from Augusta.

Pembroke, Ms., Plymouth co., was taken from Duxbury in 1711. North River separates it from Hanover; and some branches of that stream, rising from ponds in Pembroke, give it a good water power. Pembroke is at the head of navigation on the North River, and possesses superior advantages for ship building. The North River is deep, narrow, and so crooked that it meanders 18 miles in its course from Scituate Harbor, when the distance by land is less than 6 miles. Pembroke contains a pleasant village near the centre of the town, and, in connection with Hanson, some fine fish ponds. 12 miles N. N. W. from Plymouth, and where the Old Colony Railroad passes, 24 miles from Boston.

Pembroke, N. H., Merrimac co. This town is generally well watered. The Suncook, on the S. E. boundary, furnishes many valuable water privileges. The main street extends nearly on a parallel with the Merrimac River, in a straight course, about 3 miles, and is very pleasant. On this are situated the academy and the principal village. Pembroke has a variety of soils, mostly very productive. It is the ancient *Suncook* of the Indians. First settlers: this town was granted to the brave Captain John Lovewell, and 60 of his associates, and was settled by some of them in 1729. 6 miles S. E. from Concord.

Pembroke, N. Y., Genesee co. Watered by Tonawanda Creek and its branches. Surface chiefly level; soil gravelly loam and clay. 12 miles W. from Batavia, and 257 N. of W. from Albany.

Pendleton, Ia., Madison co. At the falls of Fall Creek. 31 miles N. E. from Indianapolis.

Pendleton County, Ky., c. h. at Falmouth. Bounded N. by Campbell co. and the Ohio River, separating it from Ohio, E. by Bracken co., S. by Harrison, and W. by Owen, Grant, and Kenton counties. Drained by Licking River and its tributaries.

Pendleton, S. C., Anderson district, lies on a branch of Savannah River. 136 miles W. N. W. from Columbia.

Pendleton County, Va., c. h. at Franklin. Bounded N. by Hardy co., E. by Rockingham and Augusta, S. by Bath, and W. by Pocahontas and Randolph counties. Watered by the S. branch of the Potomac. Surface rough and mountainous, being situated between two ridges of the Alleghany Mountains; soil sterile.

Penfield, N. Y., Monroe co. Irondequoit Creek and some other small streams water this town. Surface undulating; soil sandy loam and clay.

8 miles E. from Rochester city, and 211 N. of W. from Albany.

Penn, Pa., Chester co. Drained by branches of Elk and White Clay Creeks. Surface level; soil sandy loam. 36 miles S. W. from Philadelphia.

Penn's Neck, Lower, N. J., Salem co. Bounded on the W. and S. W. by the Delaware River. Surface level, and in parts marshy; soil clay and sandy loam.

Penn's Neck, Upper, N. J., Salem co. Surface level; soil light sandy loam.

Penn Yan, N. Y., c. h. Yates co. On the outlet of Crooked Lake, which affords good water power. Is traversed by the Crooked Lake Canal. W. from Albany 192 miles.

Penobscot County, Me., c. h. at Bangor. E. central part. On both banks of the Penobscot, which flows S. through it. The northern part is still unsettled. Undulating and fertile.

Penobscot, Me., Hancock co. On the E. side of Penobscot Bay, nearly opposite Belfast. 75 miles E. by N. from Augusta.

Pensacola, Fla. City, port of entry, and seat of justice of Escambia co. 242 miles W. from Tallahassee, and about 64 miles E. from Mobile. Situated on Pensacola Bay, 10 miles from its entrance into the Gulf of Mexico. It is on a dry and sandy plain, gently rising 40 or 50 feet above the level of the water. It is regularly laid out, in the form of a parallelogram, more than a mile in length, having 2 public squares, and streets crossing each other at right angles. It contains a court house, jail, custom house, public storehouse, &c. The shore at Pensacola is low and sandy; and vessels only of a light draught can reach the city. But the bay affords one of the most safe and capacious harbors in the Gulf of Mexico. The United States government has established a naval station and depot near this place, for which it is well fitted by its excellent harbor and the facilities for obtaining ship timber in its vicinity. The navy yard is on the bay, 8 miles from the city, and covers 80 acres of ground, enclosed by a high brick wall.

Pensbury, Pa., Chester co. Drained by Pocopson Creek and other small streams flowing into Brandywine Creek, which forms its E. boundary. Surface gently declining; soil calcareous loam.

Peoria County, Is., c. h. at Peoria. Incorporated in 1825. Bounded N. by Stark and Marshall counties, E. and S. E. by the Illinois River, separating it from Woodford and Tazewell counties, and S. W. and W. by Fulton and Knox counties. Drained by Spoon River, and Copperas, Kickapoo, and Senatchwine Creeks. Surface undulating; soil very fertile.

Peoria, Is., c. h. Peoria co. On the W. bank of Illinois River, at the outlet of Peoria Lake. The river here has 2 shelving banks: the first, rising gradually from 6 to 12 feet above high-water mark, extends back from the river a quarter of a mile; the second bank then rises 5 or 6 feet, and extends back to the bluffs, which rise abruptly to a height of from 60 to 100 feet. 70 miles N. from Springfield.

Pepperell, Ms., Middlesex co. This is a pleasant town, with a good soil, variegated surface, and beautiful villages. It is watered by the Nashua River, which gives it a good water power. This town derived its name from Sir William Pepperell. 20 miles N. W. from Concord, and 37 N. W. from Boston.

Pequannock, N. J., Morris co. Pequannock Creek runs on the N. E., and Pompton River on the E. boundary of this town, which is also drained by a branch of Rockaway Creek, and contains Green Pond, a beautiful sheet of water, 3 miles long, and half a mile wide, and abounding with fish. Surface hilly and mountainous, iron ore being found in the N. W. portions, and sulphate of iron in Copperas Mountain. The Morris Canal passes through the S. part of this town. 10 miles N. of Morristown.

Perquimans County, N. C., c. h. at Hertford. Bounded N. by Gates co., E. by Pasquotank co., S. by Albemarle Sound, and W. by Chowan co. Drained by Little River, which runs on its N. E. boundary, and by Perquimans River.

Perrinton, N. Y., Monroe co. Watered by the Irondequoit Creek and some of its branches. Surface hilly; soil productive. 10 miles E. from Rochester, and 209 N. of W. from Albany.

Perry County, Aa., c. h. at Marion. Bounded N. by Tuscaloosa and Bibb counties, E. by Bibb and Autauga, S. by Dallas, and W. by Marengo and Greene counties. Watered by the Catawba River and branches, and by branches of the Black Warrior.

Perry, Ga., c. h. Houston co. On the N. bank of Indian Creek, nearly equidistant between Flint and Ockmulgee Rivers, and 59 miles S. W. from Milledgeville.

Perry County, Is., c. h. at Pinckneyville. Bounded N. by Washington, E. by Jefferson and Franklin, S. by Jackson, and W. by Randolph co. Drained by St. Mary's River and Big Beaucoup and Little Muddy Creeks. Surface level; soil tolerably fertile.

Perry County, Ia., c. h. at Troy. Bounded N. and N. E. by Dubois and Crawford counties, E. and S. by the Ohio River, separating it from Kentucky, and W. by Spencer co. Drained by Anderson's, Deer, Bear, and Oil Creeks.

Perry County, Ky., c. h. at Perry. Bounded N. by Breathitt, E. by Letcher and Floyd, S. by Letcher and Harlan, and W. by Clay co. The N. fork of Kentucky River and its branches drain the interior of this county, and the Middle Fork runs on its W. border.

Perry, Me., Washington co. On the St. Croix 5 miles N. W. from Eastport, with which it is connected by a bridge. There is an Indian reservation in this town, the residence of the remnant of the Passamaquoddies, about 100 in number.

Perry County, Mi., c. h. at Augusta. Bounded N. by Jones, E. by Greene and Jackson, S. by Harrison, and W. by Marion co. Drained by Leaf River and Black Creek, and their branches. Surface uneven; soil rather sterile.

Perry County, Mo., c. h. at Perryville. Bounded N. E. and E. by the Mississippi River, separating it from Illinois, S. by Cape Girardeau co., and W. and N. W. by St. Francois and St. Genevieve counties. Drained by several streams, affording excellent hydraulic power. Surface diversified; soil very rich on the bottoms.

Perry, N. Y., Wyoming co. Watered by Silver Lake and its outlet. Surface undulating; soil well adapted to grass and grain. 7 miles E. from Warsaw, and 239 W. from Albany.

Perry County, O., c. h. at Somerset. Licking co. is on the N., Muskingum and Morgan on the E., Athens and Hocking on the S., and Fairfield on the W. The land is hilly and good for wheat.

Some Germans, from Pennsylvania, settled here about the years 1802 and 1803. Muskingum and Hockhocking Rivers are in this county. Stone coal is found in some parts.

Perry County, Pa., c. h. at Bloomfield. Bounded N. W. and N. by Juniata co., E. by the Susquehanna River, separating it from Dauphin co., S. by Cumberland and Franklin counties, and W. by Huntingdon co. Drained by Juniata River and Sherman's Creek. On Sherman's Creek, 11 miles N. from Carlisle, is a warm spring, beneficial in cutaneous and other disorders, which discharges 90 gallons of water in a minute. Surface rough and mountainous; soil very fertile.

Perry, Pa., Armstrong co. The Alleghany River, and its tributary, Clarion River, water this town, which contains iron ore.

Perry, Pa., Jefferson co. Watered by Mahoning and Little Sandy Lick Creeks. Surface undulating; soil gravel and loam.

Perry County, Te., c. h. at Perrysville. Bounded N. by Benton and Humphreys counties, E. by Hickman, S. by Wayne and Hardin, and W. by Henderson co. Drained by Tennessee River and several small branches, and by Buffalo, a tributary of Duck River.

Perry's Mills, Ga., c. h. Tatnal co. 144 miles S. E. from Milledgeville.

Perryburg, N. Y., Cattaraugus co. Drained by several small streams flowing into Cattaraugus Creek, which bounds it on the N. Surface broken; soil well adapted to grass and grain. 20 miles N. W. from Ellicottville, and 306 W. from Albany.

Perryburg, O., c. h. Wood co., was laid out in 1817. On the Maumee River, at the head of steamboat navigation, on an inclined plane, 60 feet above the S. E. bank of Maumee River, from which is one of the most delightful prospects in the United States. 184 miles N. from Cincinnati, and 64 S. from Detroit. The Wabash and Erie Canal passes on the opposite side of the river.

Perryville, As., c. h. Perry co. On the N. side of La Fève, a branch of Arkansas River. 55 miles N. W. from Little Rock.

Persia, N. Y., Cattaraugus co. Watered by some branches of Cattaraugus Creek, which bounds it on the N. Surface undulating; soil good clay and gravelly loam. 16 miles N. W. from Ellicottville, and 300 W. from Albany.

Person County, N. C., c. h. at Roxboro'. It is bounded N. by Virginia, E. by Granville, S. by Orange, and W. by Caswell co. Some branches of Dan River, and the head branches of Neuse River, water this county.

Perth Amboy, N. J., Middlesex co. City and port of entry. Situated at the head of Raritan Bay, at the junction of the Raritan River with Arthurkill, or Staten Island Sound. It has a fine spacious harbor, containing 12 feet of water at the mouths of the rivers, and from 24 to 26 in the main channel. The town was laid out in 1698, and incorporated as a city in 1784. 25 miles from New York by water, and 65 from Philadelphia by the New York and Philadelphia Railroad.

Perth, N. Y., Fulton co. Drained by Chuctunda Creek. Has a rolling surface; soil clay loam. 10 miles E. from Johnstown, and 40 N. W. from Albany.

Peru, Ia., La Salle co. Situated on the right bank of the Illinois River, at the foot of the

rapids, 212 miles above its mouth, and about 250 miles above St. Louis. This, in ordinary stages of the water, was formerly considered as the head of steamboat navigation; but by an improvement of the channel, the boats now pass about a mile farther up, to the village of La Salle, where the canal from Lake Michigan unites with the river. There is a considerable village here, the principal street of which is low, running along the river bank, while other portions of it are spread over the elevated grounds immediately behind. The locality is favorable to business.

Peru, Ia., c. h. Miami co. On the N. bank of Wabash, and is crossed by the Wabash and Erie Canal. 90 miles N. from Indianapolis.

Peru, Me., Oxford co. Peru is bounded on the N. by Androscoggin River, and contains some pleasant ponds and mill streams. It has a good soil. Incorporated 1821. Peru lies 38 miles W. by N. from Augusta, and 17 N. by E. from Paris.

Peru, Ms., Berkshire co. This township included the greater part of Hinsdale until 1804. The whole was purchased at auction, at Boston, June 2, 1762, for 1460 pounds. It went into the hands of Oliver Partridge and Elisha Jones, and in honor of the former gentleman, was called Partridgefield, from its incorporation, in 1771, until 1806, when it received its present name. The settlement commenced about 1764. This town, occupying the height of land on the Green Mountain range, has a cold, severe climate. The surface is uneven, and the soil hard and stony, and best adapted to grazing. There is an excellent limestone quarry here. 12 miles E. from Pittsfield, and 143 from Boston.

Peru, N. Y., Clinton co. On the border of Lake Champlain, and watered by Great and Little Au Sable Rivers. Surface mostly level on the E., and hilly on the W.; soil sandy and clay loam. 10 miles S. W. from Plattsburg, and 153 N. from Albany.

Peru, Vt., Bennington co. This is a Green Mountain township, high and broken. It contains 2 large fish ponds, from which issue beautiful mountain streams. The settlement was commenced about the year 1773, by William Barton, from Woodstock, Ct. 30 miles N. N. E. from Bennington, and 30 S. W. from Windsor.

Peterboro', N. H., Hillsboro' co. Peterboro' lies in a N. E. direction from the Grand Monadnock, and is bounded on the E. by a chain of hills, called Pack Monadnock. Contoocook River passes through the centre of the town. The N. branch affords a never-failing supply of water, and furnishes those noble falls, on which are situated several factories. There are extensive and valuable meadows on this branch, above these falls; and the soil, generally, is excellent. In the centre of the town is a high hill, 200 feet above the river. The chain of hills on the E. is distinguished by two principal summits. Between these is a depression of a quarter part of the mountain's height. About 60 rods W. of the ridge of this depression, on a terrace of the mountain, is a pond of about 9 acres' extent, very deep, and replenished with fish. There is another pond near the foot of the southern summit, of 33 acres, from which, during the dry season, there is no visible outlet. Excellent iron ore has been discovered. First settlers, William Rolfe, Alexander Scott, Hugh Gregg, William Scott, and

Samuel Stinson, about 1793. This town lies midway between Amherst and Keene, being 20 miles from each. It is 40 miles S. W. from Concord.

Peters, Pa., Franklin co. The W. branch of Conecocheague Creek waters this town, the surface of which is level, and the soil calcareous loam. It contains a singular cave, a sulphur spring, and some iron works.

Peters, Pa., Washington co. Watered by Charrier's and Peter's Creeks. Surface hilly; soil loam. 11 miles N. E. from Washington.

Petersburg, N. Y., Rensselaer co. Little Hoosic Creek waters this town, the surface of which is hilly and mountainous, with the exception of a fertile valley, through which the river flows. Soil chiefly loam, based upon limestone and slate. 20 miles E. from Troy, and 26 N. E. from Albany.

Petersburg, Va., Dinwiddie co. Port of entry, on the S. side of Appomattox River, 9 miles above its entrance into James River, at City Point, and 22 miles S. from Richmond. The river is navigable to this place for vessels of considerable draught, and ships come up to Walthall's Landing, 6 miles below the town, with which there is a railroad communication. Petersburg is on the great southern railroad route between Baltimore and Wilmington, N. C. The falls in the river here afford an extensive water power, and this is one of the largest and most flourishing manufacturing towns in the state. It has also a lucrative commerce, and exports largely tobacco and flour. There are 7 or 8 companies engaged in the manufacture of cotton goods, whose fabrics have a high reputation. Woollens are also manufactured to some extent; besides which there are iron works, cordage factories, tobacco factories, flouring mills, grist mills, saw mills, &c. A number of large commercial firms and commission houses are engaged in foreign trade.

This town was devastated by a fire in July, 1815, and property to the amount of \$2,000,000 was destroyed. It was soon rebuilt, with many improvements. Being situated at the extreme N. E. angle of the county, the borough includes, besides Petersburg, the villages of Blandford, in Prince George co., and of Pocahontas, in Chesterfield co. Blandford is said to be the oldest part of the place, and was once the best built and most fashionable part of it. An old ivy-mantled church in this part of the town is one of the most picturesque ruins in the country.

There are many interesting reminiscences of the revolution connected with this place. It was twice visited by the British; and here their commander, General Phillips, died of a bilious fever, on the 13th of May, 1781. He was lying at the point of death while the town was cannonaded from Archer's Hill, by the Americans under the Marquis Lafayette.

Petersham, Ms., Worcester co. The situation of this town is elevated, but not hilly or uneven. The centre of the town lies upon the highest land in it, which is a large, long, flat hill. The soil is rich and fertile. Though the town is high, yet the land is not dry, but stony and moist, abounding with springs and brooks. West Brook, a considerable stream, rises in the town, and Swift River passes its eastern and southern borders. Petersham was first settled about the year 1738. Nichenog Hill was the Indian name of the town. There are several handsome villages in the town: that in the central part is very beautiful; it lies

27 miles N. W. from Worcester, and about 65 W. by N. from Boston.

Pettis County, Mo., c. h. at Georgetown. It is bounded N. by Saline co., E. by Cooper and Morgan, S. by Benton, and W. by Johnson co. Drained by La Mine River and its tributaries. Surface level, embracing extensive prairies; soil of excellent quality.

Pharsalia, N. Y., Chenango co. Watered by Ostelic River and Genegansletta Creek. Surface hilly; soil argillaceous loam. 12 miles W. from Norwich, and 124 from Albany.

Phelps, N. Y., Ontario co. Flint Creek and the Canandaigua outlet flow through this town, forming a junction in the W. part. Surface undulating; soil rich clay loam, underlaid with lime. Gypsum is extensively quarried in this vicinity. 15 miles E. from Canandaigua, and 185 W. from Albany.

Philadelphia, N. Y., Jefferson co. Indian River and some of its branches water this town, the surface of which is rolling, and the soil sandy and clay loam. 16 miles N. E. from Watertown, and 177 N. W. from Albany.

Philadelphia County, Pa., c. h. at Philadelphia. Bounded N. E. by Bucks co., E. and S. E. by the Delaware River, separating it from New Jersey, S. W. by Delaware co., and W. and N. W. by Chester and Montgomery counties. Besides the city of Philadelphia, and the adjacent municipalities, usually reckoned a part of the city, the county contains several other townships, of which the population is also counted with that of the city. See *Tables of Population*.

Philadelphia, Pa. City, and port of entry. Situated between the Delaware and Schuylkill Rivers, about 5 miles above their junction, and 55 in a direct line N. W. from the Atlantic coast; although the distance from the mouth of the Delaware, following the course of the river, is 120 miles. Population in 1800, 70,287; in 1810, 96,287; in 1820, 119,325; in 1830, 167,325; in 1840, 228,691; in 1850, 409,352, including the county. The city is the seat of justice.

The city was originally laid out in the form of a parallelogram, extending across the neck of land between the two rivers, at a point where their courses curve inward towards each other, and where, at their nearest approximation, they are about 2 miles distant. The streets were laid out straight, from river to river, in a direction which varies but slightly from the true meridian, with transverse streets, over the whole width, crossing the others at right angles. With the exception of Front Street on the E., which somewhat deviates from a right line, conforming to the shore of the Delaware, and one other short street, called Dock Street, which occupies the site of a former navigable creek, all the streets in the city proper, included between Vine Street on the N. and Cedar Street on the S., are accurately delineated in the above description. This regularity of arrangement is less exact in the districts, which have extended N. and S. far beyond the city proper, although it is there, also, a prevailing characteristic. These districts are the Northern Liberties, Kensington, and Spring Garden, on the N., and Southwark, Moyamensing, and Passyunk, on the S., embracing more than one half of the population contained in the aggregate given above. Including the whole of the densely-built portions in one description, as they properly belong to one uninterrupted area,

it may be said that Philadelphia has a circumference of nearly 9 miles, stretching about $4\frac{1}{2}$ miles along the shore of the Delaware. The ground on which the city is built rises gradually, from each of the rivers, to an elevation of 64 feet above high-water mark. It is divided nearly in the centre by Market Street, 100 feet broad, running E. and W. from river to river, and transversely by Broad Street, 130 feet in width, which crosses Market Street at right angles, a little W. of the middle. Front Streets, on both of the rivers, are 60 feet wide; Arch Street, running parallel with Market on the N., is 66 feet wide; and the other principal streets generally are 50 feet wide. The streets running from river to river, in the city proper, were originally 9 in number; to all of which, except Market Street, were given the names of the trees of the forest. Thus on the S. of Market are Chestnut, Walnut, Spruce, Pine, and Cedar; and on the N., Mulberry, Sassafras, and Vine. In one or two instances these names have given place, in popular usage, to others more convenient, as Mulberry to Arch, and Sassafras to Race; while the names of other trees have been given to some of the secondary streets, running parallel with these, by which the original sections have been subdivided. The memory of the stranger is often much assisted in finding the localities in Philadelphia by the popular rhyme into which these names so naturally fall, reading them each way from the central avenue:—

Chestnut, Walnut, Spruce, and Pine,
Mulberry, Cherry, Race, and Vine.

The great streets at right angles with these are numbered First, Second, Third, &c., inward from their respective rivers, towards Broad Street, which is the central avenue running N. and S. Those on the Schuylkill side are distinguished from the others by prefixing the name of that river; and the sections on each side of Market Street, throughout, by the addition of North or South. So that, out of the indefiniteness and uncertainty at first resulting from such an entire uniformity of plan, there soon arises a beautiful simplicity in the system, by which the stranger learns to guide his steps.

The gradual inclination of the ground, each way, towards the rivers, favors the most perfect drainage of the city, which is effected by common sewers or arched culverts constructed under most of the principal streets. From the same cause, also, the streets are easily washed superficially by rains, and by the abundant supply of water from the hose attached to the water pipes. Philadelphia is consequently one of the cleanest cities in the world.

The blocks of stores and houses throughout the city are chiefly of brick, in a plain and uniform style of architecture; characterized by order and neatness rather than by variety and by showy decorations. Besides brick, a beautiful species of white marble is used in building, of which the steps and basements of the dwellings are, to a considerable extent, constructed, contrasting finely with the color of the walls. The entire exterior of some of the public edifices is faced with this fine material; which is quarried in the neighboring counties of Montgomery and Chester, and has contributed much to ornament the city.

Of the public buildings, the first to be mentioned, on account of its venerable antiquity and

interesting historical associations, is Independence Hall, in which the Declaration of Independence was framed and signed by that venerable body of patriots, whom William Pitt, in the British Parliament, pronounced to be "the most distinguished for wisdom of any body of men of whom he had read in ancient or modern times." This building, formerly the State House, fronts upon Chestnut Street, having Independence Square in the rear. From the steps of the building descending into this spacious area, the Declaration was first promulgated to the assembled people, called together by the joyous tones of the old bell in the cupola, which, as if prophetic of its future use, had been inscribed, when it was cast, 20 years before, with the text in Leviticus, xxv. 10 — *Proclaim liberty throughout this land, to all the inhabitants thereof.* The foundations of the main building were laid in 1729, and it was completed in 1733. The wings, which now extend on each side to Fifth and Sixth Streets, are of more modern construction. The hall or chamber in which the Declaration was signed is on the first floor in the east end of the old building. Although it has been refitted within since that day, it has been carefully preserved nearly in the same style of decoration with which it was originally finished. The present steeple, which was erected in 1828, to replace the old one, which had, on account of its decay, been taken down many years before, was made to correspond as nearly as possible with the original structure. The old bell, too, is carefully preserved in the cupola as an interesting relic. There is in Independence Hall a statue of Washington, said to be an excellent likeness. It was sculptured in wood by Rush. This venerable hall shares, with Faneuil Hall in Boston, the honor of having witnessed those momentous deliberations which issued in the establishment of American liberty and independence.

One of the finest buildings in Philadelphia is the Custom House, on Chestnut, between Fourth and Fifth Streets, built originally for the United States Bank. It is of the Grecian Doric order, after the pattern of the Parthenon at Athens, with the omission of the colonnades upon the sides. Its portico has 8 marble columns $4\frac{1}{2}$ feet in diameter. The width of the edifice is 87 feet, and its depth 161 feet. The room in the centre, for the transaction of business, is 81 feet long by 48 wide, richly decorated with beautiful Ionic columns. This building was commenced in 1819, and completed in 1824, at a cost of about \$500,000.

Some of the banks in Philadelphia are provided with costly and beautiful edifices. The Pennsylvania Bank is of white marble, a fine specimen of Grecian architecture, having a portico on each front, with 6 Ionic columns. It stands in an enclosure, surrounded by an iron railing, and ornamented with plants and shrubbery. The Girard Bank, formerly the Old United States Bank, has a marble front, adorned with a portico of 6 Corinthian columns. The Bank of North America, originally incorporated by Congress in 1781, and the first institution of its kind in the United States, has erected a new banking house on Chestnut Street, above Third, which is one of the most chaste and elegant buildings in the country. The Merchants' Exchange, situated in the triangular space between Dock, Walnut, and Third Streets, is a beautiful structure of white marble. A semicircular portico on the eastern front, support

ed, upon a basement about 12 feet high, by 6 Corinthian columns, presents an imposing appearance.

Some of the public and philanthropic institutions for which Philadelphia is distinguished have buildings which are an ornament to the city. Of these we shall speak in connection with the institutions themselves. One of the oldest of these is the Pennsylvania Hospital. It was founded in 1750, by the exertions of Dr. Franklin and Dr. Bond. The buildings and grounds occupy the entire square, between Spruce and Pine, Eight and Ninth Streets. The front is on Pine Street. The east wing was erected in 1756, the west wing in 1796, and the central building in 1804. In the beautiful area in front of the building is a colossal bronzed statue of William Penn. In the rear, fronting on Spruce Street, is a small building containing West's celebrated picture of Christ Healing the Sick, presented by the painter to this hospital. The funds of this institution, derived from individual benefactions and public endowments, are ample; and its spacious buildings furnish accommodations for indigent patients as well as others. A branch of this hospital is the Insane Asylum, situated about 2 miles W. of the Schuylkill, which has spacious buildings, and is enclosed in beautiful grounds containing about 40 acres. The United States Marine Hospital, situated on the Schuylkill, below Cedar Street, is an institution provided for invalid seamen and officers disabled from the United States service. It has an elegant and extensive edifice, built of white marble, consisting of a centre building of 146 feet in front, and 175 feet deep, and 2 wings; the whole presenting a front of 386 feet. The front of the centre building is embellished with a fine Doric portico of 8 columns. The whole building can receive about 400 residents. The Almshouse, designed for the poor of the city and the adjoining districts, is situated on the western bank of the Schuylkill, opposite Cedar Street, and furnishes from its windows a fine view of the city and surrounding country. The edifice, in the form of a parallelogram, covers and encloses an area of 10 acres; and the front on the Schuylkill, with its portico of 8 columns, 30 feet high, presents an imposing appearance. The Pennsylvania Institution for the Deaf and Dumb has extensive buildings on the corner of Pine and Broad Streets. The Pennsylvania Institution for the Blind is situated on Race Street, near Schuylkill Third Street. The main edifice occupies a lot of 247 feet on Race Street, and 220 feet on Third Street, having beautifully decorated ground in the front and rear. There are many other charitable and humane institutions in Philadelphia, which are less extensive, but very important in their place. Few cities in the world are better supplied, in proportion to their magnitude, with the means of alleviating human want and suffering.

Among the literary institutions, one of the oldest and most respectable is the university of Pennsylvania. It comprises three departments, the academical, the collegiate, and the medical. The medical school connected with this university is the oldest and largest in the Union, having between 400 and 500 students. The university buildings are situated upon Ninth Street, between Market and Chestnut, and consist of two handsome edifices, 112 feet by 85, surrounded by open grounds, and enclosed in front by an iron railing. Jefferson Medical College, founded

in 1825, has ample buildings on Tenth Street, between Chestnut and Walnut. The Pennsylvania Medical College is located on Filbert Street, above Twelfth. It was founded in 1839. Philadelphia is distinguished above all other cities in the country as the emporium of medical science and instruction.

Among the literary institutions of Philadelphia, the Girard College for Orphans holds a distinguished place. It was founded by the late Stephen Girard, who died in 1831, and bequeathed a large amount of his real and personal estate in trust to the "mayor, aldermen, and citizens of Philadelphia," for the establishment of an institution for the support and education of "poor male white orphan children," belonging either to that city, or to the state of Pennsylvania, or to the cities of New York and New Orleans, in the order of preference here observed, until the number so provided for should be full. Of the property bequeathed, \$2,000,000, and more if necessary, were to be expended "in erecting a permanent college, with suitable outbuildings, sufficiently spacious for the residence and accommodation of at least 300 scholars, with the requisite teachers," &c., "the said college to be constructed with the most durable materials, and in the most permanent manner, avoiding needless ornament," &c. The will contained specific directions with regard to the structure and dimensions of the college edifice, and also the devise of a lot of land of 45 acres, on the ridge road in the N. E. part of the district of Spring Garden, as a site for its location. The buildings which have been erected are five in number, of which the centre building is the grand college edifice, and the two others upon each side are designed for the residences of the pupils and their instructors. The college edifice is one of the most superb buildings in the country. Its length is 218 feet, its width 160 feet, and its height 90 feet. It is surrounded by 34 columns of the Corinthian order, 55 feet high, including the capital and base, and 6 feet in diameter, standing 15 feet distant from the body of the building. These columns stand upon bases 3 feet high and 9 feet in diameter, and are crowned with gorgeous Corinthian capitals, upon which rests a full entablature. The entrances are at each end of the building, through lofty doors, decorated with massive architraves and sculptured cornices. The interior, excepting the portions required for the vestibules and stairs, is divided into four spacious rooms in each of the two stories, which are used for the purposes of giving instruction to the different classes of the pupils. No wood is used in the construction of this edifice, excepting for the doors. The other four buildings are each 125 feet long, by 52 feet wide, and two stories high, above their basements. The most eastern, including four distinct houses, is the one occupied by the families of the professors. The orphans are received into the college at any age between 6 and 10 years, and they may continue, if it is deemed desirable, until they are 18 years of age. When they leave, they are to be apprenticed by the city authorities to some useful trade or business. The institution is in full operation, with above 300 pupils in 1852. The amount of appropriations for defraying the current expenses of the institution for the year 1851 was \$62,900. Of this sum \$30,500 was for the clothing and subsistence of the pupils.

A singular restriction in the will of Mr. Girard, in regard to the clergy, is in these words: "I enjoin and require that no ecclesiastic, missionary, or minister, of any sect whatsoever, shall ever hold or exercise any station or duty whatever in the said college; nor shall any such person ever be admitted for any purpose, or as a visitor, within the premises appropriated to the purposes of the said college. In making this restriction, I do not mean to cast any reflection upon any sect or person whatsoever; but as there is such a multitude of sects, and such a diversity of opinion amongst them, I desire to keep the tender minds of the orphans, who are to derive advantage from this bequest, free from the excitement which clashing doctrines and sectarian controversy are so apt to produce. My desire is, that all the instructors and teachers in the college shall take pains to instil into the minds of the scholars *the purest principles of morality*; so that, on their entrance into active life, they may, *from inclination and habit, evince benevolence towards their fellow-creatures, and a love of truth, sobriety, and industry*, adopting at the same time such religious tenets as their *matured reason* may enable them to prefer." This restriction of Mr. Girard, as explained by himself, and taken in connection with his requisition to secure the inculcation of the *purest principles of morality* in the minds of the scholars, has justly been construed as not only not prohibiting, but rather rendering obligatory, the use of the Bible, and other means of general religious instruction and training in the school. In the rules for the government of the college, adopted by the board of directors, it is made the duty of the president "to conduct the family worship morning and evening, which shall consist of singing a hymn, reading a portion of Scripture, and prayer. He shall also be responsible for the performance of public religious services in the college on the forenoon and afternoon of every Sunday. These services shall consist of singing hymns, prayers, reading the Scriptures, and moral and religious discourses. The president is permitted to invite any member of the board of directors, or other competent layman approved by the board, to take his place, or assist him in the public worship. Prayers and hymns, or psalms, shall be prepared or selected by the president, with the approbation of the directors, which shall be framed so as to form a full and appropriate service, without sectarianism, but calculated to awaken or preserve true devotion."

The public schools of Philadelphia are organized upon a comprehensive and efficient system. By a law of the state passed in 1818, the city and county of Philadelphia was constituted a separate school district, in order that the benefits of one consistent scheme, adapted in the best manner to the circumstances and wants of such a population, might be secured. The schools, most of which, of course, are in the city, and incorporated districts, are divided into eleven sections. At the head stands a high school, and a model school. The next in rank are the grammar schools; then the secondary; and last, the primary schools. The high school is among the best institutions of the kind in the country. It provides instruction in the ancient and modern languages; in theoretical and practical mathematics; in natural history, natural philosophy, and chemistry; in mental, moral, and political science; and in writing, drawing, &c., and is designed to serve the highest

ends of popular education. It is under the tuition of a principal and 10 professors. In all the other schools about 500 teachers are employed, four fifths of whom are females; and the aggregate of the pupils, who are between the ages of 5 and 15, cannot be less than 50,000, embracing a very large proportion of all the children of this age in the city. The average annual expense of maintaining the public schools is not far from \$200,000. The school houses are substantial buildings, generally 3 stories high, and capable of accommodating from 600 to 1000 scholars each.

There are several valuable libraries and literary and scientific associations in Philadelphia, which owe their origin to the enlightened, inventive, and practical philanthropy of Dr. Franklin. One of these is the Philadelphia Library, founded in 1731, to which, in 1792, the valuable private library of Dr. Logan was added. This library now contains over 60,000 volumes. The building, erected in 1791, is on South Fifth Street, fronting upon the E. side of Independence Square. The American Philosophical Society, the oldest of the scientific associations in the United States, was founded principally through the exertions of Dr. Franklin, in 1742. Its hall, erected in 1786, is on South Fifth Street, below Chestnut. It has a rare and valuable library of 20,000 volumes, and a cabinet of minerals, fossils, and antiquities. The published Transactions of this society amount to several volumes. The Academy of Natural Sciences, incorporated in 1817, has a new and splendid hall in Broad Street, between Chestnut and Walnut. Its library contains about 12,000 volumes. Its cabinet, containing every variety of specimens in Natural History, is perhaps the best in the United States. The collection of birds is said to be the largest in the world, containing about 25,000 specimens. The Athenæum has erected a beautiful structure on Sixth Street, below Walnut, 50 feet front by 125 in depth. It is an excellent specimen of the Italian style of architecture, treated with spirit and taste. The library contains about 10,000 volumes; to which, as well as to the reading room, strangers are freely admitted. Among the curiosities of literature in these rooms is a collection of pamphlets, bound in 148 volumes, which belonged to Dr. Franklin, some of them containing his marginal notes and remarks; and also a regular series of the *Journal de Paris*, bound in volumes, continued during the whole eventful period of the French revolution. The Historical Society of Pennsylvania, founded in 1825, occupies rooms in the 3d story of the Athenæum building. It has a library of nearly 2000 volumes. The Mercantile Library, on the corner of Fifth and Library Streets, has a library of over 12,000 volumes, founded in 1822, for the objects indicated by its name. There is also the Apprentices' Library, of about the same number of volumes, on the corner of Fifth and Arch Streets, open to youth of both sexes. The Franklin Institute, formed about 1830, for the promotion of the mechanic arts, has a library of between 4000 and 5000 volumes, situated on Seventh Street, below Market. Other institutions for the diffusion of knowledge, in a more local and limited sphere, likewise exist.

There are in Philadelphia about 160 churches of different denominations—Presbyterian, 25; Episcopal, 27; Methodist, 28; Baptist, 16; Reformed Presbyterian, 4; Associate Presbyterian,

4; Associate Reformed, 2; German Reformed, 3; Lutheran, 5; Independent, 2; Dutch Reformed, 2; Roman Catholic, 12; Friends, 7; Jewish Synagogues, 3; Mariners, 2; Universalist, 2; Unitarian, 1; New Jerusalem, 1; Moravian, 1; Disciples of Christ, 1; and 12 of various denominations for colored persons. Only a few of the church edifices make pretensions to architectural beauty. Very many of them are without towers or steeples to distinguish them from the general mass of buildings. St. Stephen's Church, (Episcopal,) situated on Tenth Street, is a fine specimen of Gothic architecture, 102 feet long and 50 feet wide, with two octagonal towers 86 feet high. Christ Church, built in 1691, and enlarged in 1810, is the oldest church edifice in the city. It is situated on Second Street. It has a spire 196 feet high, erected in 1753, in which is a chime of bells. St. John's Church, (Roman Catholic,) situated on Thirteenth Street, below Market, is an elegant Gothic structure, with square towers on each of its front corners. The First Presbyterian Church, fronting on the S. side of Washington Square, is the handsomest church of this denomination. It is in the Grecian style of architecture, after the model of a temple on the Ilissus, having a portico of six Ionic columns in front. The Fifth Presbyterian Church, on Arch Street, is also distinguished for the beauty of its architecture. There are also other church edifices which are neat and handsome structures.

The United States Mint in Philadelphia was founded in 1790, and first occupied the building where the Apprentices' Library now is. In 1830 it was removed to the fine building which it now occupies, on Chestnut Street, below Broad Street. This edifice is of white marble, 123 feet long, having a portico of 6 columns, and 60 feet in length in the centre of its front, on Chestnut Street, and a similar one on the opposite side, which looks out upon Penn Square. Visitors are admitted to witness the interesting processes of assaying and coining the precious metals, on the forenoon of every day, upon application to the proper officers. The United States navy yard is located in the S. E. quarter of the city, fronting on the Delaware. The enclosure contains about 12 acres. Some of the largest vessels for the U. S. service have been built here. The Eastern Penitentiary, in the N. W. section of the city, not far distant from the Girard College, is one of the most imposing structures. It occupies a square of 10 acres, which is enclosed by a wall 30 feet high, upon the angles of which, and at the entrance, watch towers are erected, from which all parts of the enclosure can be observed. In the middle of this area is an octagonal tower, from which the ranges of cells extend on every side like radii, and from which the passages leading to them can all be inspected by a sentinel posted at the centre. Each cell opens in the rear into a little yard, 18 feet by 8, surrounded by a wall 12 feet high. The discipline of this penitentiary is that of solitary confinement, each prisoner being kept in his separate cell and yard both day and night.

There are several theatres in the city, of which the largest are the Chestnut Street Theatre, the Walnut Street Theatre, and the Arch Street Theatre. Peale's Museum, founded by Charles Wilson Peale, in 1784, occupies the upper story of an edifice on the corner of Ninth and George Streets, 238 feet long and 70 feet wide. This is

one of the most distinguished institutions of the kind in the country.

Philadelphia is celebrated for its excellent markets, having the advantage of various and abundant supplies, not only from the interior of its own state, but also of New Jersey, lying across the Delaware. As a fruit market it is among the best in the world. The principal market-place is in Market Street, extending along the middle of the street from the Delaware to Eighth Street. There is another market further W., in the same street, between Schuylkill Seventh and Eighth Streets; and there are four or five others in different quarters of the city.

There is quite a number of public squares in the city, which are generally ornamented with fine shade trees, and laid out in other respects with much taste and beauty. Penn Square lies about in the centre of the city proper, and is intersected by the two great streets, Market and Broad Streets, which divide the city into its four quarters. Independence Square, in the rear of the old State House, has been referred to above. Washington Square, not far from this, is a delightful public ground. Franklin Square is between Race and Vine Streets, having Sixth Street on the E. In the centre of this square is a beautiful fountain. Other squares are Logan Square, also between Race and Vine Streets, and Rittenhouse Square, between Walnut and Locust Streets.

Among the principal hotels of Philadelphia are the United States Hotel, Jones's Hotel, Washington House, Columbia House, Congress Hall, Franklin House, and the Morris House, all in different parts of Chestnut Street. Besides these there are the Madison House, the Merchants' Hotel, the Mansion House, the White Swan Hotel, the Indian Queen, and many other excellent houses in various parts of the city.

Philadelphia is abundantly supplied with water from the Schuylkill River. The present waterworks are known as the *Fairmount Waterworks*, the reservoirs being constructed upon the summit of a small mount which had received that name, on the western border of the district of Spring Garden, near the eastern bank of the Schuylkill, and about two miles from the centre of the city. These works were the first of the kind erected in this country, and, for simplicity of design and entire efficiency, are not exceeded by any that have been since constructed. The reservoirs, which are 4 in number, occupy about 6 acres upon the top of this mount, at the height of 100 feet above the water in the river, and 56 above the most elevated portions of the city. They are 12 feet deep, lined with stone and paved with brick, laid upon a bed of clay, in strong lime cement, water tight, and are capable of containing more than 22,000,000 gallons. One of these reservoirs is divided into three sections, for the purpose of filtration. The water is forced up from the river by a power obtained from the river itself, a dam being thrown across, 1600 feet in length, and a raceway cut in the solid rock, 400 feet long and 90 feet in width, by which a machinery of eight water wheels, operating an equal number of forcing pumps, may be driven night and day. Each of these pumps will lift about 1,250,000 gallons into the reservoirs in 24 hours. The machinery is covered by a building of stone, 238 feet long by 56 feet wide. The water is carried from the reservoirs to the city in 3 main iron pipes, one 20, another 22, and another

er 30 inches in diameter, and then is distributed through the streets by about 113 miles of iron pipe, from 6 to 10 inches in diameter. The average daily consumption of water in the city and districts, in 1851, was 5,690,744 gallons. Three thousand families are supplied from the public pumps, which take their water from cisterns filled from the aqueduct. These works have been constructed and maintained, up to 1852, at a cost of \$1,707,550. The expenses of the year 1851 were \$92,380. The whole cost for water-works to the city of Philadelphia, including the previous works, and the experiments which have been abandoned, is \$3,174,267. The amount received for water rents, in 1851, was \$150,107. The total receipts since 1801 have been \$2,953,316.

Fairmount and its vicinity is a favorite place of resort for the citizens, and for persons visiting Philadelphia. A fine gravel walk surrounds the reservoirs, from which a beautiful view of the city and of the scenery in other directions is obtained. A light and graceful wire suspension bridge is carried across the Schuylkill at this place, which is itself an object of curiosity, while it affords, in crossing, a pleasing view of the dam, the river, and its banks.

Analysis of the Schuylkill water by Professor Benjamin Silliman, Jr.:—

Chloride of sodium,1470
Chloride of magnesium,0094
Sulphate of magnesia,0570
Carbonate of lime,	1.8720
Carbonate of magnesia,3510
Silica,0800
Carbonate of soda, from decomposed crenates and nitrates, and loss on analysis,	1.6436
<hr/>	
Total solid matter,	4.2600
<hr/>	
Carbonic acid in one gallon in cubic inches,	3.879

"No living animalcules were visible. Inodorous, and nearly or quite insipid, perfectly sweet, and like distilled water to the taste." Of lead subjected five weeks to the action of this water the professor notes—"Quite bright, and not much acted upon."

The situation of Philadelphia between the Delaware and Schuylkill Rivers, makes it a kind of double port; that on the Delaware being its port of foreign commerce, and that on the Schuylkill, its port for the domestic or internal trade. The principal harbor is upon the Delaware, where large vessels come up from the ocean, and where the foreign commerce centres. Its imports, in 1851, amounted to \$14,000,000. The great business of the city was originally done upon the Delaware. But since the opening of the coal trade, which has become extensive within the last 30 years, the business upon the Schuylkill has grown into great importance. That river affords a convenient harbor for small vessels, and many wharves are built for their accommodation below the bridge, which is at the termination of Market Street. This bridge, which was built in 1805, to connect the important suburbs on the W. side of the river with the city, was originally a toll bridge, but is now free. There are two other bridges over the Schuylkill besides the suspension bridge before mentioned, one above and the other below the city, built for the

railroads, which also accommodate foot passengers and vehicles. By means of railroads and canals, an extensive communication has been established between Philadelphia and the south and west, affording great facilities of trade with the interior of the country. The principal of these are, the railroad to Baltimore, 97 miles, whence there is a wide communication S. and W.; the Columbia Railroad to Columbia, on the Susquehanna River, 82 miles, thence by the Pennsylvania Central Railroad to Harrisburg, the capital of the state, 28 miles, and thence by canal and railroad to Pittsburg, 399 miles from Philadelphia; the Philadelphia, Reading, and Pottsville Railroad, extending to Pottsville, in the region of the coal formation, 94 miles from Philadelphia. The following links of railroad are intended, when complete, to connect Philadelphia with the extreme western boundary of Missouri, viz.: from Philadelphia to Pittsburg, 358 miles; from Pittsburg to the Indiana state line, 300 miles; from the Indiana line through Indianapolis, to Terre Haute, 150 miles; from Terre Haute to St. Louis, 160 miles; from St. Louis to Independence, 300 miles; which, when completed, will make a continuous railroad route of 1268 miles. Between Philadelphia and New York there are two routes, one by railroad throughout, and the other by railroad and steamboat, whence there are extensive communications E. and N., via Boston and Albany. The time, by either route, to New York is about 4 hours. As a comparison with this, it may be mentioned that, in 1766, a "third line" of stages from Philadelphia to New York was established, called the "Flying Machine," which was to go through in *two days*.

The manufactures of Philadelphia constitute one of its most important interests. For the variety and amount of its products in this department, this city ranks first among the cities of the United States. And many of them are of the most valuable description, and of exquisite texture and workmanship.

Philadelphia was first laid out in 1682, under the direction of its celebrated founder, William Penn. For some notice of this distinguished benefactor of his race, and of his connection with the history of Pennsylvania, the reader is referred to our general description of the state, p. 125. An appropriate monument now marks the spot in the district of Kensington, where the great elm tree once stood, near the bank of the Delaware, under the shadow of which Penn, soon after his arrival, acting upon the pacific principles of his religious creed, so successfully negotiated with the Indian chiefs, disarming their apprehensions and jealousies by his calm, benevolent demeanor, and by the presents of useful implements and goods which he offered, and establishing the most amicable relations of intercourse between them and his infant colony. "Great promises," he says, "passed between us, of kindness and good neighborhood; and that the Indians and English must live in love as long as the sun gave light." "Under the shelter of the forest," says Bancroft, "now leafless by the frosts of Autumn, Penn proclaimed to the men of the Algonquin race, from both banks of the Delaware, from the borders of the Schuylkill, and it may have been even from the Susquehanna, the same simple message of peace and love which George Fox had professed before Cromwell, and Mary Fisher had borne to the Grand Turk. The Eng-

lish and the Indian should respect the same moral law, should be alike secure in their pursuits and their possessions, and adjust every difference by a peaceful tribunal, composed of an equal number of men from each race."

The ground so judiciously selected by its founder for the site of his new city having been previously claimed by three Swedish emigrants by the name of Swenson, under a grant from the Dutch governor of New York, Penn had to extinguish their claim by giving them in exchange a tract of land higher up on the Schuylkill. Late in the year 1682, assisted by Thomas Holme, a surveyor, he laid out the city proper on the land so purchased, with substantially the same outline and divisions which it now has. When he departed for England, two years afterwards, the city contained 300 houses and 2500 inhabitants. On board the ship, he wrote a farewell letter to his infant colony, replete with his characteristic benevolence. In this letter he says, "And thou *Philadelphia*, the virgin settlement of this province, what service and what travail has there been to bring thee forth! O that thou mayst be kept from the evil that would overwhelm thee; that, faithful to the God of thy mercies, in the life of righteousness, thou mayst be preserved to the end. My soul prays to God for thee, that thou mayst stand in the day of trial, that thy children may be blessed of the Lord, and thy people saved by his power."

It would seem that, from the first, Penn had the idea that a large city would be built up on the site which he had selected. Dr. Prideaux, in his work on the "Connection of the Old and New Testaments," after describing the plan of ancient Babylon, says, "Much according to this model hath William Penn, the Quaker, laid out the ground for his city of Philadelphia, in Pennsylvania; and were it all built according to that design, it would be the fairest city in America, and not much behind any other in the whole world." It is little, now that this beautiful design has been so happily executed, to say that posterity honors the judgment of the learned critic. Philadelphia is undoubtedly one of the fairest cities in America, or in the world.

In 1699, after an absence of 15 years, during which time, in consequence of the revolution in England which drove James II. from the throne, Penn had been deprived of his authority over Pennsylvania, and had it restored to him again, he revisited this country. Having made some changes in the government, he sailed again for England in 1701, where he remained until his death, in 1718. In 1719, the mayor and aldermen employed Jacob Taylor to stake out the 7 streets of the city, in order to prevent encroachments by building thereon. This year the first Weekly Gazette was published by Andrew Bradford. In 1727, Benjamin Franklin started another weekly paper, called "The Pennsylvania Gazette." In 1738, Benjamin Franklin instituted the first fire company in Philadelphia. In 1743, the first Lutheran Church was built, and the first Dutch Reformed Church in 1747. In 1749, agreeably to a suggestion of Dr. Franklin, a portion of Second Street, from Market Street to Chestnut Street, was paved; a horse having been mired there, and his rider having been thrown and broken his leg. At this time the city contained about 15,000 inhabitants; and for some time afterwards Fifth Street might be considered

as its western limit. St. Paul's, the first Episcopal Church, was founded in 1760; and the same year, the Pennsylvania Hospital, and also the first public library, by the influence of Dr. Franklin. In 1773 the first stage coaches were established to run to New York; the previous lines having been post wagons. Now came on that series of events connected with the American revolution, in which this city so largely and honorably participated. In 1780 the Bank of Pennsylvania was established, for the purpose of supplying the army of the United States for two months, by a subscription of £300,000, by 90 persons; among whom were Robert Morris and Blair McClellanachan, who subscribed £10,000 each. Dr. Franklin died on the 17th of April, 1790, leaving, among other public benefactions, £1000 sterling, to be loaned to unmarried mechanics, under 25 years of age, upon certain conditions adapted to secure and encourage individual enterprise and thrift. This constituted the foundation of the public fund known as the *Franklin Fund*, which now amounts to about \$25,000. Dr. Franklin was born in Boston, January 17, 1706, and became a resident of Philadelphia about 1723. His practical wisdom and philanthropy originated many of its early economical improvements, and brought into being some of its most distinguished literary and humane institutions. His fame as a man, a patriot, and a philosopher is an everlasting legacy of honor to the city of his adoption. His unostentatious grave is in the N. W. corner of the churchyard of Christ Church, at the corner of Fifth and Arch Streets; which is covered with a plain marble slab resting upon the ground, in strict accordance with the directions in his will, which were as follows: "I wish to be buried by the side of my wife, if it may be; and that a marble stone, to be made by Chambers, 6 feet long, 4 feet wide, plain, with only a small moulding round the upper edge, and this inscription —

BENJAMIN }
and } FRANKLIN,
DEBORAH }
178—,

— be placed over us both." The only change necessary to be made was in the figure 8, Providence having prolonged his life, beyond his expectations, until 1790.

Philadelphia received its charter from the proprietary, October 25, 1701. The government of the city proper is in the hands of a mayor, a select council of 12, and a common council of 20 members. One third of the select and the whole of the common council are chosen annually by the people, and the councils elect the mayor. The aldermen, 15 in number, are appointed by the governor to act, with the mayor and recorder, as judges, during good behavior; and the aldermen act as justices of the peace. The whole legislative power is in the councils, of which the select council is the upper house.

The several districts, or liberties, of Philadelphia, N. and S. of the city proper, are separate municipalities; having, at different dates within a comparatively modern period, received their respective charters of incorporation. They are governed each by a body of commissioners, elected for three years, one third of them being chosen annually.

Philadelphia was the seat of the United States

government for a period of ten years, from the close of the first congress, in 1790, to 1800, when the capital was removed to Washington.

Of the environs of Philadelphia, which are very beautiful, much might be said. The territory included between the rivers below the city is highly improved and cultivated in farms and gardens, for the supply of the rich vegetable market. There are many attractive places in the immediate vicinity of the city, to which the inhabitants resort for rides and recreations, or for their country residences. Camden, on the opposite bank of the Delaware, and accessible at several points by steam ferry boats, besides being a place of considerable population and business, has much of its soil under high cultivation, for raising the delicious fruits, which, during their season, are so tempting to the eye and to the taste in the stalls of Market Street. Kaigns Point, Gloucester Point, and Greenwich, all of them a little below the city, on the Delaware, are favorite places of resort, to which steamboats are constantly running. The banks of the romantic Wissahickon Creek, about 6 miles above the city, offer a delightful excursion for parties of pleasure. Laurel Hill Cemetery, in the neighborhood of Fairmount, is one of the most beautiful places of the kind in the country. The naturally-diversified surface of the ground, including about 20 acres, the trees, shrubs, foliage, and fragrant flowers with which it is adorned, and the costly and finely-sculptured monuments with which it is interspersed, render this a retreat at once of pleasing and of solemn interest. There are also Germantown, Manayunk, Norristown, and other places, a few miles distant from the city, which invite the citizens to pleasant drives over beautiful roads, and amidst scenes of rich luxuriance and beauty.

Phillippa, Va., c. h. Barbour co. On the E. fork of the Monongahela, about 20 miles S. of the Baltimore and Ohio Railroad.

Phillips County, As., c. h. at Helena. It is drained by the St. Francis and its tributary Lanquille River. The N. portions of this county have a fertile, sandy soil, while the S. are liable to inundation. Bounded E. by the Mississippi.

Phillips, Me., Franklin co. This town is watered by Sandy River. It lies 53 miles N. W. from Augusta, and 15 N. W. from Farmington. Incorporated 1812.

Phillipston, Ms., Worcester co. This town was formerly part of Templeton and Athol. At its incorporation in 1786, the legislature gave it the name of Gerry. In 1814, it took its present name. This town is finely watered by streams and rivulets which flow into Swift and Miller's Rivers. The surface is uneven, consisting of hills and valleys, but the soil is productive. Prospect Hill, in this place, is a large hill, and overlooks all the highlands for many miles around. Upon it are many excellent farms. About a mile from the centre village is Factory Village and a fine pond. 27 miles N. W. from Worcester, and 58 N. W. by W. from Boston. The railroad from Fitchburg to Vermont passes through this town.

Phillipstown, N. Y., Putnam co. Watered by a few small streams flowing into the Hudson, which bounds it on the W. Some of the highest peaks of the Highlands, such as Breakneck, Bull, and Sugar Loaf Hills, are situated in this town, and afford great quantities of excellent iron ore. 14 miles W. from Carmel, and 96 S. from Albany.

Phipsburg, Me., Lincoln co. This is a maritime town at the mouth of Kennebec River, on the W. side. It consists of a peninsula of land of about 15 miles in length, and from 2 to 4 miles in width, lying between Kennebec River, on the E., and New Meadows, or Stevens's River, on the W., and extending from Small Point, the eastern boundary of Casco Bay, to the city of Bath on the N. It contains a United States fort, and Seguin and Pond Islands, on which are light-houses. 40 miles S. from Augusta.

Phipsburg was taken from the ancient town of Bristol in 1816, and named in honor of Governor Phips, who was born in Bristol.

Phipsburg has considerable trade and navigation. Ship building is pursued, and fishing is a source of profit. There is no better site for fishing establishments on the coast. It is a very pleasant town, and an agreeable location to court the sea breezes in summer.

Pickaway County, O., c. h. at Circleville. Situated a little S. of the centre of the state, with Franklin co. on the N., Fairfield on the E., Ross on the S., Fayette and Madison on the W. It was constituted in 1810, from Ross, Fairfield, and Franklin. The name *Pickaway* is a corruption of *Piqua*, the name of a tribe of the Shawanese Indians. The surface of the county is generally level, and the soil very fertile. The staple productions are wheat, corn, oats, grass, neat cattle, pork, and wool. It is divided nearly through the centre, N. and S., by the Scioto River. The Ohio Canal also traverses the valley of the Scioto through the entire length of the county. This county has all the four varieties of woodland, barren, plain, and prairie. The barrens were originally covered with shrub oak, and were at first considered as of little value; but they are found to produce excellent pasturage. The prairies are best for corn and grass. The plain lands equal, and perhaps exceed, any other in the western country, for the production of wheat.

About 3 miles S. of Circleville are the celebrated *Pickaway Plains*, in their natural state, without a tree or shrub within reach of the eye, including an elliptical area of about 7 miles in the longest diameter, and $3\frac{1}{2}$ in the other, and said to contain the richest body of land in the state. The soil, the result of vegetable decomposition through an indefinite period, was very black when first cultivated. Corn for many years grew to the height of 12 or 15 feet, and produced 100 bushels to the acre. It lies on both sides of the Scioto River, but chiefly on the E.

"Of all places in the west," says the author of the Historical Collections of Ohio, "this preëminently deserves the name of classic ground. Here, in olden time, burned the council fires of the red man. Here the affairs of the nation in general council were discussed, and the important questions of peace and war decided. On those plains the allied tribes marched forth and met General Lewis, and fought the sanguinary battle at Point Pleasant. Here it was that Logan made his memorable speech; and here, too, that the noted campaign of Dunmore was brought to a close, by a treaty, or rather a truce, at Camp Charlotte."

Pickens County, Aa., c. h. at Carrollton. It is bounded N. by Fayette, E. by Tuscaloosa, S. by Greene and Sumpter counties, and W. by Mississippi. The Tombigbee River and its tributaries traverse this county.

Pickens District, S. C., Pickens Court House, seat of justice. Bounded N. by North Carolina, E. by the Saluda River, separating it from Greenville district, S. by Anderson district, and W. by the Tugaloo River, separating it from Georgia. Drained by Seneca River, a branch of the Tuga-oo. Surface hilly and mountainous.

Pickens, S. C., c. h. Pickens district. 130 miles N. W. by W. from Columbia.

Piermont, N. H., Grafton co. The soil, especially on the Connecticut, is good. The intervals are extensive, and favorable to the growth of grain. Back from the river is fine grazing and mowing land, well watered with brooks and springs. In the N. E. part of the town are 3 considerable ponds, called Eastman's Ponds. From these issue Eastman's Brook, valuable for mill sites. Indian Brook, on which mills are erected, is in the S. part. A mine of valuable iron ore is found here. This town was granted, in 1764, to John Temple and 59 others, and was first settled in 1770. 75 miles N. N. W. from Concord, and about 10 S. from Haverhill.

Piermont, N. Y., Rockland co. A village in Orangetown, on the W. side of the Hudson River, 24 miles N. from the city of New York. The Erie Railroad, extending from Dunkirk on Lake Erie, a distance of 445 miles, strikes the Hudson at this place, whence is a communication to New York by steamboats. For the accommodation of this route, a long pier has been erected, extending about a mile from the main land, over which the cars run to the extreme end, thus connecting with the boats and barges which run to and from the city at all seasons of the year. The freight trains pass this way. The mail and passenger trains from the W. take the railroad through New Jersey, from a point 18 miles W. of Piermont, to Jersey City. See *Dunkirk*.

This flourishing village lies in a narrow valley, through which flows the Sparkill Creek, affording a considerable water power, which is improved to some extent for mills and manufactories. The Palisades terminate here, towards the N., in an abrupt hill, which circumstance, in connection with the piers erected at this place, very naturally suggested the name of Piermont.

Pierrepont, N. Y., St. Lawrence co. This large town is watered by Racket, Grass, and Oswegatchie Rivers. The surface and soil are diversified. 8 miles E. from Canton, and 213 N. W. from Albany.

Pike County, Aa., c. h. at Troy. Bounded N. by Montgomery and Macon counties, E. by Pea River, separating it from Barbour co., S. by Dale and Coffee, and W. by Butler and Lowndes counties. Drained by Conecuh River and branches.

Pike County, As., c. h. at Murfreesboro'. It is bounded N. by Montgomery, E. by Clark, S. by Hempstead, and W. by Sevier and Polk counties. Watered by branches of the Little Missouri River.

Pike County, Ga., c. h. at Zebulon. Bounded N. by Fayette and Henry counties, E. by Butts and Monroe, S. by Upson co., and W. by Anhan, a branch of Flint River, separating it from Merriwether and Coweta counties.

Pike County, Is., c. h. at Pittsfield. Bounded N. by Adams, Marquette and Brown counties, E. by the Illinois River, separating it from Morgan, Scott, and Greene counties, S. by Calhoun co., and S. W. and W. by the Mississippi River, separating it from Missouri. Drained by several

small creeks, which afford hydraulic power. Snycartee Slough passes along the Mississippi River through this county; and on McKee's Creek is a salt spring 20 feet in diameter.

Pike County, Ia., c. h. at Petersburg. Incorporated in 1816. Bounded N. by White River, separating it from Knox and Daviess counties, E. by Dubois co., S. by Warwick, and W. by Gibson co. Drained by Tatoka River and Flat Creek. Surface undulating; soil fertile.

Pike County, Ky., c. h. at Piketon. Bounded N. by Johnson co. and Big Sandy River, separating it from Virginia, E. and S. by Virginia, and W. by Floyd co. Traversed by the W. fork of Big Sandy River. The Cumberland Ridge crosses its S. W. corner.

Pike County, Mi., c. h. at Holmesville. Bounded N. by Lawrence co., E. by Marion co., S. by Louisiana, and W. by Amite co. Bogue Chitto River and its branches, and Tangiapho River water this county.

Pike County, Mo., c. h. at Bowling Green. Bounded N. E. and E. by the Mississippi River, separating it from Illinois, S. by Lincoln and Montgomery counties, and W. and N. W. by Audrain and Ralls counties. Drained by Salt, and a branch of Cuivr River.

Pike, N. Y., Alleghany co. Watered by Eastkoy and Westkoy Creeks. Surface rolling; soil rich mould. 20 miles N. from Angelica, and 255 W. from Albany.

Pike County, O., c. h. at Piketon. Ross co. is on the N., Jackson on the E., Scioto and Adams on the S., and Highland on the W. The most important streams are Pee Pee, Sunfish, Camp Creek, Wilson's Run, and Beaver Creek. The land is excellent for farming. Several antiquities are found here, one of which is supposed to have been a fort. It is about 1 mile W. of Piketon, and consists of 2 parallel walls of earth, about 15 feet high and 80 rods in length. Stone coal and iron ore are found in some parts of the county.

Pike County, Pa., c. h. at Milford. Bounded N. E. and S. E. by the Delaware River, separating it from New York and New Jersey, S. by Monroe co., and W. and N. W. by Wayne co. Drained by the Lackawaxen and several small mill streams. Along the valley of the Lackawaxen runs the Delaware and Hudson Canal. Surface rough and mountainous; soil fertile on the Delaware, but elsewhere rather sterile.

Pike, Pa., Berks co. Drained by the head branches of Manatawny Creek, which afford hydraulic power. Surface uneven; soil gravelly and sterile.

Pike, Pa., Bedford co. Wyalusing Creek and its branches water this town. Surface hilly; soil gravelly loam. 158 miles N. from Harrisburg.

Piketon, O., c. h. Pike co. On the E. side of Scioto River. 19 miles S. from Chillicothe, and 64 S. from Columbus.

Pikeville, Aa., c. h. Monroe co.

Pikeville, Te., c. h. Bledsoe co. On high ground, a little W. from Sequatchy River, and 112 miles E. S. E. from Nashville.

Piles Grove, N. J., Salem co. Salem Creek, a good mill stream, waters this town. Surface level; soil clay and loam. 10 miles N. E. from Salem.

Pilot Hill, As., c. h. Fulton co.

Pinckney, N. Y., Lewis co. Watered by Deer River and Sandy Creek. A level town, with a

good soil. 16 miles N. W. from Martinsburg, and 156 from Albany.

Pinckneyville, Is., c. h. Perry co. At the head of Four Mile Prairie, on the W. side of Big Beaucoup Creek, and 134 miles S. from Springfield.

Pine, Pa., Armstrong co. Bounded W. by the Alleghany River, and drained by its branches.

Pine, Pa., Alleghany co. Drained by branches of the Alleghany River. Surface hilly; soil loam. 11 miles N. from Pittsburg.

Pine Grove, Pa., Venango co. Watered by Swatara Creek, along the valley of which runs a navigable feeder of the Union Canal. It also contains a pond covering 700 or 800 acres, and formed by building a dam across the creek, in a gorge of the Blue Mountains. Surface mountainous, containing coal. 43 miles N. E. from Harrisburg.

Pine Plains, N. Y., Dutchess co. Watered by Chicomeco, a branch of Roeliff Jansen's Creek, and contains several small lakes, the principal of which, called Stissing's, supplies the head waters of Wappinger's Creek. Surface hilly and mountainous on the E. and W., with a broad fertile plain between, which gives name to the town; soil gravelly and sandy loam. 25 miles N. E. from Poughkeepsie, and 69 S. S. E. from Albany.

Piqua, O., Miami co. On the S. W. side of Miami River. 73 miles W. from Columbus. On the line of the Miami Canal, which affords good water power.

Piscataquis County, Me., c. h. at Dover. In the N. central part, including interlocking sources of the Kennebec, Penobscot, and St. John's. The settled part is in the S., on the Piscataquis, an eastern tributary of the Penobscot. Undulating and hilly, with some high mountains, and in the N. numerous lakes; soil good.

Piscataway, N. J., Middlesex co. Drained by Amherst and Cedar Brooks, branches of Green Brook. Surface level; soil clay loam and red shale. 5 miles N. from New Brunswick.

Pitcairn, N. Y., St. Lawrence co. The W. branch of the Oswegatchie River waters this town, the surface of which is slightly uneven, and the soil well adapted to grass. 30 miles S. from Canton, and 180 N. W. from Albany.

Pitcher, N. Y., Chenango co. Watered by Ostelic River and some of its branches. Surface hilly; soil argillaceous loam. 16 miles W. from Norwich, and 127 from Albany.

Pitt County, N. C., c. h. at Greenville. Bounded N. by Edgecombe and Martin counties, E. by Beaufort, S. by Craven and Lenoir, and W. by Greene co. Tar River traverses the interior of this county, and Neuse River runs on its S. W. border.

Pitt, Pa., Alleghany co. Bounded on the N. by Alleghany River, S. and W. by the Monongahela, and N. W. by the city of Pittsburg. The surface is hilly, abounding with coal; soil loam.

Pittsburg, N. H., Coos co., was incorporated December 10, 1840; before that it was called Indian Stream Territory. It lies on the borders of Canada, and has within its limits Lake Connecticut and several considerable ponds. It contains 160,360 acres. 150 miles N. from Concord, and 40 N. E. from Lancaster.

Pittsburg, Pa. City, port of entry, and seat of justice of Alleghany co. This place is 200 miles W. N. W. from Harrisburg. The population, in

1810, was 4768; 1820, 7248; 1830, 12,542; 1840, 21,115; 1850, 46,500. This is the population of Pittsburg proper; but if that of the adjoining cities and boroughs of Alleghany, Manchester, Birmingham, and Lawrenceville were included, which, both in a commercial and social point of view, are a part of the same community with Pittsburg, a more just idea of the size of the place, perhaps, would be obtained. The city stands at the junction of the Alleghany and Monongahela Rivers, which, by their union, form the Ohio. It is built upon the triangular plain, enclosed on two sides by these two rivers, extending partly up the highlands, by which the side opposite to the point is bounded. The distance from the point back to these highlands is about one mile; and the different prominences are known by the names of Grant's, Ayers's, and Quarry Hills. The place was laid out in 1765, on the bank of the Monongahela; with streets running parallel to the river, and others running back from the river at right angles with them. The same arrangement was followed when, afterwards, the town began to be built upon the bank of the Alleghany; so that the cross streets, starting at right angles from the two rivers, necessarily meet obliquely, at a point a few streets back from the Alleghany. Thus the city, in its outline, bears a strong resemblance to the lower part of the city of New York. The city is united to the adjacent country, beyond the two rivers, by a bridge over each, and by ferries. The site, says a writer on the spot, is a real amphitheatre, formed by the hand of nature. The rivers flow in channels from 450 to 465 feet below the highest peaks of the neighboring hills, which by accurate measurement have been found to vary thus slightly between these relative elevations. These hills surrounding the city are filled with bituminous coal, which is easily quarried and brought to the city, and affords unequalled facilities for manufacturing operations, for fuel, and for lighting the streets and dwellings with gas. The principal coal strata lie at an elevation of above 300 feet above the part of the city which is on the alluvial plain; and so uniform is this geological feature, that a levelling instrument, placed at the mouth of any of the beds, if carried round the horizon, carries the circle of vision along the openings of all the other mines. The coal formation is here, as in every other part of the Ohio valley, level; so much so as often to render the draining of the mines difficult. These hills, though steep, are not generally precipitous, and afford from their verdant slopes and peaks a series of rich and varied landscapes. The fertility of the soil continues to their very summits. There is nothing of barrenness visible, but the forests, fields, meadows, orchards, and gardens exhibit one panorama of beauty and abundance.

Pittsburg occupies the site of the former French fort Du Quesne, which the French held possession of from 1754 to 1758, and whence, by instigating the Indians to hostilities, they brought so much terror to the frontier settlements of Pennsylvania. It was here, in 1755, that General Braddock lost his life, and the army under him suffered a defeat, in an attempt to drive the French from this post, and that the youthful Washington displayed his military skill, and gave promise of his future greatness, by conducting in a masterly manner the retreat of the

shattered forces. A subsequent expedition, with a more formidable force, under General Forbes, was successful in striking terror into the enemy, so that they burned the fort and abandoned the place; though not without having routed and dispersed an advanced detachment of 800 men, sent forward under Captain Grant; which they did, with the aid of the Indians, by surrounding them, upon what is now Grant's Hill, and killing and capturing about 300 of their number. Among the prisoners taken was the captain himself. The English, having dispossessed the French, erected a temporary stockade, which they called Fort Pitt; and in 1759, General Stanwix commenced the construction of a more formidable work, which cost the British government £60,000 sterling. This fort sustained an attack from the Indians in 1763. Some remains of a brick redoubt, which was built in 1764, after peace was restored between the French and the English, are still visible. Until after the close of the revolutionary war, Pittsburg continued to be only a small place. In 1775, the number of dwellings within the present limits of the city was not more than 25 or 30. But in 1784, the ground, which belonged to Penn's manor, and was the property of the family, was laid out into town lots, and sold rapidly. Two years later, the first number of the Pennsylvania Gazette was published here, in which it was stated that the number of houses in the village was about 100. In 1788, the county of Alleghany was constituted, and in 1791, Pittsburg became the county town. The earliest authentic account of the population is in the Pittsburg Gazette for January 9, 1796; when, by a census just taken, it appeared that it amounted to 1395. It was during this year that Louis Philippe, afterwards king of the French, visited this place, and spent considerable time there.

Pittsburg is compactly built, with many handsome edifices, chiefly of brick; which, however, have a dark and smoky appearance, from the falling soot of the bituminous coal, which is used to such an extent by the manufactories and otherwise. Among the public buildings, the new court house, situated upon an elevation which commands an extensive view, is a splendid edifice, of the Grecian Doric order of architecture, 165 feet long and 100 feet deep. The height of the dome above the ground is 148 feet. The cost of this building was about \$200,000. A splendid Roman Catholic cathedral, located on Grant's Hill, makes an imposing appearance. The buildings of the Western University of Pennsylvania are also situated near Grant's Hill. The Third Presbyterian Church, several of the banking houses, and some of the large hotels, are also fine buildings. There are three market houses, and a museum containing many Indian curiosities. Three covered bridges cross the Alleghany River, one of which has a walk for foot passengers upon the top. A bridge also crosses the Monongahela, 1500 feet in length, which was erected at an expense of \$102,000. The harbor is chiefly in this river, because the depth of water is greater here than in the Alleghany. The Pennsylvania Canal is carried over the Alleghany in a viaduct 1200 feet long, built by the state, at an expense of \$104,000. After entering the city, it passes through a tunnel under Grant's Hill, and enters the Monongahela River. Another branch of the canal passes through Alleghany City, and

enters the Alleghany River a few hundred yards above where it unites with the Ohio. The water with which the city is supplied is raised 116 feet from the Alleghany River, by a steam engine, which raises 3,000,000 gallons daily. It is distributed through the city in pipes, which have an aggregate length of about ten miles. These waterworks cost over \$250,000. In 1836 an establishment was completed for lighting the city with gas; which is manufactured from the bituminous coal at a small expense, and gives a brilliant light.

Several of the places adjacent to Pittsburg deserve to be described with it, as they virtually belong to the same community, although under separate corporations. The most important of these is Alleghany City, on the opposite side of the Alleghany River. It contains many of the finest residences, in commanding situations, occupied by persons doing business in Pittsburg. Its commercial and manufacturing business, properly its own, is also considerable. It contains a number of churches of different denominations. The Western Theological Seminary is located here. It is under the direction of the Presbyterians, and has two professors and a library of 6000 volumes. The edifice, which is on a commanding eminence, is 140 feet long and 50 wide; the central part being four stories high, and the wings three. The Theological Seminary of the Associate Reformed Church is also located here.

Birmingham, borough, is another considerable suburb of Pittsburg, on the opposite side of the Monongahela, and connected by a bridge and ferry. It is about a mile from the centre of the city. It contains extensive manufactories of glass and iron. It has two churches, a Presbyterian and a Methodist. There are a number of flourishing villages, besides, in the vicinity of Pittsburg, some of which have been named in this article.

Pittsburg combines great advantages of position. The great line of canal and railroad from Philadelphia, over the Schuylkill and Susquehanna valley and the intervening mountains, which here connects with the Ohio River, is of great importance to Pittsburg, and to the whole west. In 1811, the first steamboat constructed on the western waters was built at Pittsburg. This was the commencement of a vast increase in the trade and business of this city. Whereas it was before the work of a whole season to make a trip to New Orleans and return, now many are made in a season. Nearly 100 steamboats, employed on the Ohio and connected rivers, are owned, either wholly or in part, in this city. Its manufactures, too, give it great importance. It has deservedly acquired the name of the Birmingham of America. To Philadelphia, by railroad and canal, 399 miles; to Erie, 130; to Cincinnati, 470 miles.

Pittsboro', N. C., c. h. Chatham co. On Robinson's Creek. 34 miles W. by S. from Raleigh.

Pittsfield, Is., c. h. Pike co., occupies elevated ground at nearly equal distances between Illinois and Mississippi Rivers, and 70 miles W. S. W. from Springfield.

Pittsfield, Me., Somerset co. A good township. 38 miles N. N. E. from Augusta.

Pittsfield, Ms., Berkshire co. 5 miles N. of Lenox, the shire town. 151 miles W. from Boston, and 49 E. from Albany, N. Y.

This is one of the handsomest and most flourishing towns in the western part of Massachusetts. It is situated at the junction of the Pontoosuc with the Housatonic River, and occupies a beautiful expansion of the valley between the Taconic and the Green Mountain ranges. It has no mountains within its territorial limits, except a point of Lenox Mountain on the S., which extends a short distance into the town. There is little or no waste land in the town. A large proportion of the land upon the rivers is of the best alluvial formation, especially on the Housatonic, which usually overflows its banks in the spring. The stranger at Pittsfield, finding himself set down in a valley of exceeding beauty and fertility, surrounded at a distance with high and picturesque mountains, while charming rivers are quietly meandering at his feet, sees nothing to remind him that he stands at an elevation of more than a thousand feet above the level of the sea. In the salubrity of its climate, and in loveliness of scenery and situation, Pittsfield can hardly be surpassed. The village in the centre is well located and handsomely built. There are two principal streets, which cross each other at right angles, on which are located many of the most beautiful buildings. At their intersection there is a public square containing about 4 acres. Fronting on the different sides of this square are the First Congregational Meeting House, recently rebuilt, in an elegant style of architecture, the Berkshire Medical Institution, two or three spacious hotels, with ranges of stores, &c. Besides these, there are also many other handsome streets and buildings. The meeting houses of the Second Congregational Church and of the Baptist Church, situated on the main street, running N. and S., are new and tasteful structures.

Pittsfield has become distinguished for its excellent schools and seminaries of learning. The Berkshire Medical Institution is a professional school of deservedly high reputation. It was established in 1822; and handsome and commodious buildings were erected for its use.

The Young Ladies' Institute, located here, is one of the best provided and most popular institutions of the kind in the country. It occupies a range of three beautiful buildings, most eligibly situated, a short distance N. of the village. The centre building, containing the chapel, library, recitation rooms, apparatus, &c., is an exact copy of a Grecian temple at Athens. The symmetry of the whole establishment is very fine. On a gentle elevation, overlooking the town towards the S., and the country far and wide, stand the buildings of the institute, with a number of acres laid out in a circular garden, sloping from the green in front, surrounded and intersected by spacious gravelled walks, ornamented with shrubbery and flowers, tastefully set off with parterres and arbors, and enlivened by an artificial fountain. The course of studies pursued in the Institute is liberal and extensive, and cannot fail, in all cases where it is diligently and systematically prosecuted, to exert a decided influence in furnishing the female mind with every desirable talent and accomplishment.

Pittsfield is quite a busy place in manufacturing as well as agricultural operations. As early as 1837, the various manufactures of the town amounted to about \$700,000, since which they have greatly increased. The principal manufactures now are cotton and woollen goods, castings, machinery,

musical instruments, hats, caps, harnesses, trunks, railroad cars, carriages, chairs, cabinet furniture, mechanics' tools, muskets, rifles, fowling pieces, &c. The amount of the product in these various branches is large.

The Western Railroad from Boston to Albany passes through Pittsfield. A railroad extends S. W. through Lenox and Stockbridge to connect with the Housatonic Railroad, and, connected with these, is a railroad to Hudson, New York. Another extends N. 20 miles to the flourishing manufacturing village of North Adams, a few miles S. of Williamstown.

Pittsfield was settled in 1752. Its Indian name was *Pontoosuc*, signifying, "a run for deer"—a name which one of its beautiful streams still bears. The territory of this town was granted to Boston in 1735. It was called "Boston Plantation," until it was sold to Jacob Wendell, in 1743; it then bore the name of Wendell's Town until its incorporation, in 1761, when it received its present name, in honor of William Pitt, the English statesman.

This beautiful town among the mountains is becoming quite a favorite resort for persons of wealth, intelligence, and refinement, as a place of residence. Many come here, especially from our cities and from the south, to spend the summer months. The salubrious climate, the charming scenery, and the agreeable society to be enjoyed in Pittsfield, constitute a union of attractions not often so happily combined.

Pittsfield, N. H., Merrimac co. The surface is pleasantly varied, with a good soil. Suncook River passes through the town, affording good mill privileges. Catamount Mountain is in the town. There are a number of ponds here, W. of which the magnetic needle varies materially. Berry's Pond is on the mountain; it is half a mile in length, and is supplied by mountain springs. There is a neat and flourishing village in Pittsfield, which possesses a fine water power. First settlers, John Cram and others. 15 miles N. E. from Concord.

Pittsfield, N. Y., Otsego co. Unadilla River and some of its branches water this town, the surface of which is hilly, with fertile valleys. 18 miles W. from Cooperstown, and 87 from Albany.

Pittsfield, Vt., Rutland co. Tweed River is formed in this town, by two branches, which afford mill sites: it empties into White River, which passes through the N. E. corner. The surface is mountainous, and the soil hard. The settlement was commenced in 1786. 35 miles S. W. from Montpelier, and 17 N. E. from Rutland.

Pittsford, N. Y., Monroe co. Watered by the Ironquoit Creek and some of its branches. Surface undulating; soil argillaceous and calcareous loam. 6 miles E. from Rochester, and 213 N. of W. from Albany.

Pittsford, Vt., Rutland co. Otter Creek is the principal stream, and its width here is from 40 to 50 yards. Furnace Brook is in Pittsford: on it and its branches are numerous mill privileges. Along these streams are extensive meadows of rich alluvial soil. There are 2 ponds in the town. The soil is generally loam, with some sandy tracts, and some of clay. The timber is oak, of several kinds. Iron ore and excellent marble abound here. In the eastern part of Pittsford is a deep cavern, in which ice may commonly be found in the months of July and

August. There are 2 pleasant and flourishing villages in the town; one near the centre, the other on Furnace Brook. The settlement was commenced in the year 1769. 44 miles S. W. from Montpelier, and 8 N. from Rutland. The Rutland Railroad between Boston and Burlington passes through Pittsford.

Pittston, Me., Kennebec co. Pittston is a pleasant town on the E. side of Kennebec River, opposite to Gardiner. It is a flourishing town, of good soil, and has several ponds and mill streams, and a considerable business in the lumber trade. It is bounded E. by Whitefield, and S. by Dresden. 7 miles S. by E. from Augusta.

Pittstown, N. Y., Rensselaer co. Bounded on the N. by the Hoosic River, and drained by Tomhannock Creek. Surface uneven; soil of good quality. 12 miles N. E. from Troy, and 18 from Albany.

Pittsylvania County, Va., c. h. at Pittsylvania. Bounded N. by Staunton River, separating it from Bedford and Campbell counties. E. by Halifax co., S. by North Carolina, and W. by Henry and Franklin counties. Drained by Dan, Bannister, and branches of Staunton River. Soil mostly fertile.

Pittsylvania, Va., c. h. Pittsylvania co. On a branch of Bannister River. 162 miles W. S. W. from Richmond.

Plainfield, Ms., Hampshire co. The territory of this town was called *Pontoosuc* by the Indians. It was the north part of Cummington. Incorporated as a district in 1785, and as a town in 1807. This township lies on the eastern side of the Green Mountain range. The surface is undulating, and in many parts rough and broken. The summit of East Hill, on which is the principal village, may be considered as level, through nearly the whole breadth of the town. The soil is good and strong, and well adapted for grass. The township is exceedingly well supplied with springs and rivulets. Mill Brook is the largest stream. There are 2 ponds, both in the N. W. part of the town; the North Pond, which is about a mile long, and half a mile wide, and the Crooked Pond, so called from its figure. The scenery around these ponds is wild, and may perhaps be said to partake of the gloomy. The North Pond is dotted with islands, and is a favorite place of resort for anglers and parties of pleasure. 27 miles N. W. from Northampton, and 117 W. by N. from Boston.

Plainfield, N. H., Sullivan co. There are valuable intervals and excellent meadows on the Connecticut River, and in other parts of the town. Here are 2 ponds. At the S. W. part of this town, in Connecticut River, is Hart's Island, which contains 19 acres. Quechee Falls are in this town. A bridge was erected here in 1807. A small stream, flowing from Croydon Mountains, waters the town. Plainfield has a pleasant village, situated on a handsome plain, called Plainfield Plain. Kimball Union Academy, in this town, incorporated June 16, 1813, is in the village called Meriden. First settlers, L. Nash and Russell, in 1764. 12 miles S. from Dartmouth College, and 60 N. W. from Concord.

Plainfield, N. Y., Otsego co. The Unadilla River and its branches water this town, the surface of which is hilly and undulating, and the soil very fertile. 15 miles N. W. from Coopers-town, and 75 W. from Albany.

Plainfield, Pa., Northampton co. Drained by

the E. branch of Bushkill Creek. Surface level, except in the N. part, where it is crossed by Blue Mountain.

Plainfield, Vt., Washington co. Plainfield is watered by Winooski River and Great Brook. At the junction of these streams is a neat village. There is a small pond in the eastern part, which is well furnished with excellent trout. There is also a mineral spring. It is situated so near the margin of Great Brook as to be overflowed at high water. The surface of the town is uneven, but well timbered. There is but little waste land, and the soil is generally of a good quality. The settlement was commenced about the year 1794. 9 miles S. E. from Montpelier.

Plaistow, N. H., Rockingham co., was originally a part of Haverhill, Ms. After it became annexed to New Hampshire, a charter was granted, in 1749. The soil is good, being a mixture of black loam, clay, and gravel. First settlers, Captain Charles Bartlett, Nicholas White, Esq., Deacon Benjamin Kimball, and J. Harriman. 40 miles S. E. from Concord, and 12 S. from Exeter by the Boston and Maine Railroad.

Plaquemine Parish, La., c. h. at Fort Jackson. Bounded N. by Orleans Parish, E. by St. Bernard Parish and the Gulf of Mexico, S. by the Gulf of Mexico, and W. by Jefferson Parish. The Mississippi River flows through this parish; on its coast are several bays. The surface is low, and in the S. portions is nowhere elevated more than 10 feet above the Gulf of Mexico. The soil is only arable on the margins of the river, where it is very fertile. The principal productions are cotton and sugar.

Platt County, Is., c. h. at Monticello. Bounded N. by McLean, E. by Champaign, S. by Moultrie, and W. by Macon and De Witt counties. Drained by Sangamon River.

Platte County, Mo., c. h. at Platte City. Bounded N. by Buchanan co., E. by Clinton and Clay counties, and S. and W. by the Missouri River, separating it from Indian Territory. Drained by Little Platte River.

Platte City, Mo., c. h. Platte co. On the W. side of Little Platte River.

Plattekill, N. Y., Ulster co. Watered by Old Man's Kill, a branch of the Hudson, and by some branches of the Walkill. Surface hilly and undulating; soil clay and gravelly loam based upon slate and limestone. 29 miles S. from Kingston, and 79 from Albany.

Plattsburg, Mo., c. h. Clinton co. On the W. side of Smith's Fork of Little Platte River. 180 miles W. N. W. from Jefferson City.

Plattsburg, N. Y., shire town of Clinton co., lies on the W. side of Lake Champlain. 162 miles N. from Albany, 25 miles N. W. from Burlington, and to Rouse's Point, where the Ogdensburg Railroad crosses the lake, 29 miles N. The surface of the township on the E. is nearly level, but towards the W. it becomes hilly. The soil is mostly a clay loam, and of a good quality in the neighborhood of the lake. It is drained by the Saranac River, and also on the S. by Salmon Creek.

Plattsburg Village, situated on the lake shore, at the mouth of the Saranac, is a port of entry, and contains the county buildings. It was incorporated in 1815, and has been subject to considerable fluctuations in its prosperity, consequent upon the vicissitudes of war and peace. It profited by the expenditures of the last war with

Great Britain, although twice captured by the enemy. After the stimulus of these causes was withdrawn, it languished for a time; but it is now thriving again, under the more healthful auspices of peace. The Saranac affords a valuable water power, having a succession of falls, in and near the village, amounting in the entire descent to about 40 feet. These privileges are partially improved for cotton and woollen factories, flouring mills, saw mills, and other works.

Plattsburg has been selected by the government as a military post; and extensive stone barracks have been erected along the lake shore, a little S. of the village. The United States have also erected a breakwater here for the protection of the harbor.

On the 11th of September, 1814, Plattsburg was the scene of an important conflict between the Americans and British forces, both on the land and on the water, in which the Americans were victorious. The land forces of the enemy, consisting of about 14,000 men, were led on to the attack by Sir George Prevost, and were successfully repulsed by about 3000 men, under the command of General Macomb. The engagement on the lake was between Commodore McDonough, of the American, and Commodore Downie, of the British navy. The fleet under McDonough carried 86 guns and 820 men, and the British fleet 95 guns and 1050 men. The action lasted, without any cessation, on a smooth sea, at close quarters, 2 hours and 20 minutes, in full view of both the armies fighting on land. The fortune of the day was in a great measure decided by the issue on the lake. When the British army saw their fleet completely conquered, they were at once dispirited, and commenced their retreat. Their loss, in the mean time, had been more than six times as great as that of the Americans. Among the slain in the naval engagement was the British commandant, Commodore Downie, who was a brave and skilful officer. The fact is stated as showing the frame of mind in which the brave McDonough entered the battle, and in whom he put his trust for success, that, "after the enemy's fleet hove in sight, the men of his ship were assembled on the quarter deck, when he knelt down, and, in humble and fervent prayer, commended himself, his men, and the cause in which they were engaged, to the God of battles." This favorable issue of the battle of Plattsburg was of great importance to this part of the country.

Pleasant Valley, N. Y., Dutchess co. Watered by Wappinger's Creek. Surface diversified; soil clay and sandy loam. 7 miles N. E. from Poughkeepsie, and 82 S. from Albany.

Plumb, Pa., Alleghany co. Bounded N. by the Alleghany River, and drained by Plumb and Turtle Creeks and Thompson's Run. Surface hilly; soil loam. 14 miles E. from Pittsburg.

Plumstead, Pa., Bucks co. Surface hilly, and drained by Tobickon and Neshaminy Creeks; soil sandy loam. 106 miles E. from Harrisburg.

Plymouth, Ct., Litchfield co. The surface of the town is rough and hilly, with a strong gravelly soil, well adapted for grazing. The Naugatuck affords an ample water power.

The manufacture of small wooden clocks, it is believed, originated with Mr. Terry, of this town, about 30 years ago; since that period, the manufacture of wooden clocks has been widely extended, and forms a very important branch of the

manufactures in this part of the state. 22 miles W. S. W. from Hartford.

Plymouth, Ia., c. h. Marshall co. 115 miles N. from Indianapolis.

Plymouth, Me., Penobscot co. This is a fine township of land, watered by beautiful ponds, and a valuable branch of Sebasticook River. 45 miles N. E. from Augusta.

Plymouth County, Ms., c. h. at Plymouth. The soil of this county is not so productive as that of many others in Massachusetts; yet there is considerable good land within its limits. It has a great water power, and an abundant supply of fine iron ore. This county has a sea-coast on Massachusetts Bay, of between 30 and 40 miles, and many ships are built in its numerous ports, of native white oak. This county has considerable foreign commerce, but its shipping is principally engaged in the fishing business and coasting trade. It is bounded N. E. and E. by Massachusetts Bay, N. by Norfolk co. and Boston Harbor, N. W. by Norfolk co., W. by Bristol co., and S. E. and S. by Buzzard's Bay and Barnstable co. The North River and numerous branches of the Taunton are its chief rivers.

Plymouth, Ms., c. h. Plymouth co. The township of Plymouth, though once much larger than at present, is still one of the largest in the state. It extends on the coast 11 miles from N. to S. The land is generally hilly, sandy, and barren, except a small strip of rich, loamy soil on the sea-board.

The harbor of Plymouth is extensive, but not deep enough for vessels of the largest class. It is formed partly by a narrow spit of sand, extending 3 miles northerly from the mouth of Eel River, S. of the principal village, where is a pleasant village, called Chiltonville, about 2 miles distant from the main village. This beach, exposed to all the fury of the Atlantic, has been in danger of being broken through, to the destruction of the harbor, and large expenditures have been necessary, as well on the part of the town and state, as by the general government, for its repair and preservation. Considerable shipping is owned in Plymouth, and the inhabitants are largely concerned in navigation and the fisheries. There is considerable water power, and some manufactures.

The village is in the N. part of the town, compactly built, and 37 miles S. E. from Boston by railroad. Not a dwelling house of ancient date or antique form now remains in the town. Those recently erected are in the style of modern architecture, and the largest proportion of the buildings are painted of a light color, and exhibit an air of neatness and elegance. Among the buildings most worthy of note are Pilgrim Hall, the Court House, and a Gothic structure for the church of the First Society. See *Plymouth Rock*, under *Fashionable Resorts*.

Plymouth, N. H., Grafton co. Plymouth is one of the shire towns. Besides numerous smaller streams, there are two rivers in the town, Pemigewasset and Baker's; both are of importance. Baker's is 30 miles in length. It takes its name from Captain Baker, who attacked the Indians at its mouth. In consequence of the great water power in this town, and the passage of the Concord and Montreal Railroad through it, it bids fair to become an important place of trade and manufacture. The soil is tolerably good. Holmes's Academy is in this town. First settlers, Zachariah Parker and James Hobart, in 1764. From Con-

cord, 51 miles N., and 31 S. E. from Haverhill by railroad.

Plymouth, N. Y., Chenango co. Canasawacta Creek waters this town. Surface undulating; soil of good quality. 7 miles N. W. from Norwich, and 118 W. from Albany.

Plymouth, N. C., c. h. Washington co. On the S. side of Roanoke River, 8 miles from its mouth, and 112 miles E. from Raleigh.

Plymouth, Pa., Luzerne co. Drained by Harvey's and Toby's Creeks. Surface mostly mountainous, abounding with coal. A portion of the town lies in the valley of Wyoming, and has a rich soil. Distant 124 miles N. E. from Harrisburg.

Plymouth, Pa., Montgomery co. This town is mostly inhabited by Friends. The surface is undulating, abounding with limestone and marble; soil calcareous loam.

Plymouth, Vt., Windsor co. The principal stream in this township is Black River. On it are several good mill sites, and a number of natural ponds, which abound in fish. Two considerable branches of Quechee River also rise in this town. A large share of the rocks are primitive limestone. Some of the limestone makes excellent marble. Steatite or soapstone is also found here. The surface of Plymouth is considerably broken. Two mountains extend through it, parallel to the river, and at no great distance from it. Plymouth Cave was discovered about the 1st of July, 1818. (See *Caves*.) The settlement of this place was commenced in 1777, by John Mudge, who was soon followed by Aaron Hewett and others. 52 miles S. from Montpelier, and 15 W. by N. from Windsor.

Plympton, Ms., Plymouth co. Before its incorporation, in 1707, Plympton comprised the N. W. part of Plymouth. Its Indian name was *Wenatuckset*. The Wenatuckset, a branch of Taunton River, passes through the western width of this town. There are two pleasant villages in the town. A noble white oak was cut here a few years ago. It contained 7 tons and 7 feet of ship timber, and 2 cords of firewood. The Old Colony Railroad passes through the town. 29½ miles S. E. by S. from Boston, and 7½ W. by N. from Plymouth.

Pocahontas County, Va., c. h. Huntersville. Bounded N. by Randolph co., E. by Pendleton and Bath, S. by Greenbrier, and W. by Greenbrier, Nicholas, and Randolph counties. Drained by Greenbrier River. Surface rough and elevated, being crossed by ridges of the Alleghany Mountains; soil sterile.

Poinsett County, As., c. h. at Bolivar. Bounded N. by Greene co., E. by the St. Francis River, separating it from Mississippi and Crittenden counties, S. by St. Francis co., and W. by Jackson co. Drained by a tributary of St. Francis River, by Laguille River, and by St. Francis Bayou.

Point Coupee Parish, La., c. h. at Point Coupee. Bounded N. by Avoyelles and Concordia parishes, N. E. and E. by the Mississippi River, separating it from West Feliciana parish, S. by Baton Rouge and Iberville parishes, and W. by the Atchafalaya, separating it from St. Landry parish. Drained by Perdouche Bayou, and in its S. E. part is Fause Riviere, a former bed of the Mississippi. Surface low and level; soil of excellent quality, where it is not liable to inundation.

Point Coupee, La., c. h. Point Coupee parish. On the S. side of Mississippi River, at the commencement of the levee or embankment, opposite

St. Francisville, and 140 miles W. N. W. from New Orleans.

Point Pleasant, Va., c. h. Mason co. On the E. side of the Ohio River, at the junction of the Great Kanawha, and 370 miles W. N. W. from Richmond.

Poland, Me., Cumberland co. On Little Androscoggin River, 6 miles above Lewiston Falls. It is 26 miles N. from Portland. This is an excellent farming town, with good mill privileges, several ponds, and a pleasant village.

A family consisting of about 70 of that curious people denominated "Shakers" reside in Poland. They possess about 600 acres of choice land. They are attached to the society at New Gloucester.

Poland, N. Y., Chautauque co. Watered by Chautauque outlet and Connewango Creek. Surface hilly; soil sandy and gravelly loam. 22 miles S. E. from Mayville, and 317 S. W. from Albany.

Polk County, As., c. h. at Liberty. On the western border.

Polk County, Io., c. h. at Fort Des Moines. S. central. The Des Moines flows through it from N. W. to S. E.

Polk, Io., c. h. Lucas co.

Polk County, Mo., c. h. at Bolivar. Bounded N. by Hickory, E. by Dallas, S. by Green, and W. by Dade and Cedar counties. Pomme de Terre, Sac, and Niangua Rivers water this county, and afford hydraulic power.

Polk County, Tc., c. h. at Benton. Bounded N. by McMinn co., E. by Monroe co. and North Carolina, S. by Georgia, and W. by Bradley co. Drained by Hiwassee River and branches. Surface mountainous.

Polk County, Ts., c. h. at Livingston. In the S. E. angle of the state. On the Trinity.

Pomeroy, O., c. h. Meigs co. A flourishing place on the Ohio River, a short distance above the mouth of the Kanawha.

Pomfret, Ct., Windham co. Its Indian name was *Mashamoguet*. The surface of the town is pleasantly diversified by hills and valleys; from some of the elevations delightful views are obtained. The soil is deep, strong, and fertile, and, although somewhat stony, is very productive, and exceedingly well adapted for grazing. The Quincebaug and several of its branches water the town. 40 miles E. by N. from Hartford.

Pomfret contains the "Wolf Den," celebrated for the bold exploit of the gallant Putnam, who resided here some years. He died at Brooklyn, in this state, in 1790.

Pomfret, N. Y., Chautauque co. Watered by Cassadaga Creek and its tributaries, and by some small streams flowing into Lake Erie. Surface hilly, sloping towards Lake Erie, which bounds it on the N. Soil very fertile. 12 miles N. E. from Mayville, and 315 S. of W. from Albany.

Pomfret, Vt., Windsor co. The surface is considerably uneven, but the soil is generally good. White River touches upon the N. E. corner, and Quechee upon the S. E. The other streams are small. The settlement was commenced in the spring of 1770, by Bartholomew Durkee, from Pomfret, Ct.; he came into town with his family on the 6th day of March, and in a few days they were joined by Mr. John Cheedle and family. 45 miles S. from Montpelier, and 20 N. N. W. from Windsor. The Central Railroad passes through the town.

Pompey, N. Y., Onondago co. Watered by

Limestone Creek, and the head branches of the Tioughnioga River. Surface hilly; soil fertile sandy and clay loam. 14 miles S. E. from Syracuse, and 132 W. from Albany.

Pompton, N. J., Passaic co. Watered by Ringwood River and several ponds. Surface hilly and mountainous, containing iron ore; soil clay and loam. 23 miles N. W. from Hackensack.

Pontotoc County, Mi., c. h. at Pontotoc. Bounded N. by Tippah, E. by Itawamba, S. by Chickasaw, and W. by Lafayette co. The Tallahatchee River and its branches, and some branches of the W. fork of Tombigbee River, water this county.

Pope County, As., c. h. at Nerisville. Bounded N. by Newton co., E. by Van Buren and Conway counties, S. by the Arkansas River, separating it from Yell co., and W. by Johnson co. Drained by small branches of the Arkansas. On the N. border are the Black Hills.

Pope County, Is., c. h. at Golconda. Bounded N. by Gallatin co., E. and S. by Hardin co. and the Ohio River, separating it from Kentucky, and W. by Massac and Johnson counties. Drained by Big Bay, Great Pierre, Lusk's, and Rock Creeks. Surface level; soil rich sandy loam.

Poplin, N. H., Rockingham co. Loon Pond is in the N. part. The town is watered by Exeter River and several small streams. The soil is of a good quality, and the surface is not broken by high hills. The inhabitants are principally industrious farmers. 24 miles W. S. W. from Portsmouth, and 30 S. E. from Concord.

Portage, N. Y., Alleghany co. The Genesee River and Genesee Valley Canal pass through this town, in the N. part of which are situated the celebrated Genesee Falls. The river descends about 300 feet in the distance of two miles, affording immense water power. Surface hilly on the E. and W. Soil very favorable to the growth of grain. 18 miles N. from Angelica, and 247 W. from Albany.

Portage County, O., c. h. at Ravenna. Cuyahoga and Geauga counties are on the N., Trumbull on the E., Stark on the S., and Medina on the W. This county is named from the circumstance of including within its limits the old portage, connecting the waters of Cuyahoga River with those of the Muskingum. These streams, with the head waters of Mahoning River, are the principal waters. The Pennsylvania and Ohio Canal passes through this county from E. to W. The land is high, elevated, and well improved.

Portage County, Wn., c. h. at Portage. This extensive county is bounded N. by Michigan, E. by Brown, Marquette, and Dodge counties, S. by Dane and Sauk, and W. by Crawford co. Drained by Wisconsin River and its branches. Surface mountainous in the N., and level in the S. portions.

Porter County, Ia., c. h. at Valparaiso. Bounded N. by Lake Erie, E. by La Porte and Stark counties, S. by Kankakee River, separating it from Jasper co., and W. by Lake co. Drained by Calumic River and Coffee and Salt Creeks. The surface on the N. is elevated and sterile, but on the S. level, and in parts marshy, and the soil of better quality.

Porter, Me., Oxford co. Porter is bounded W. by New Hampshire, and Ossipee River separates it from the county of York. It lies 99 miles S. W. from Augusta, 42 W. N. W. from Portland, and 37 S. W. from Paris. Incorporated 1807.

Porter, N. Y., Niagara co. Watered on the N.

by Lake Ontario, E. by Tuscarora Creek, and W. by the Niagara River, which separates it from Canada. At the mouth of the Niagara, in this town, is situated the old Fort Niagara. Surface chiefly level; soil argillaceous and sandy loam. 16 miles N. W. from Lockport, and 300 N. of W. from Albany.

Port Carbon, Pa., Schuylkill co. Situated in an important coal region, at the head of canal navigation, and at the junction of Mill Creek with Schuylkill River. 65 miles N. E. from Harrisburg. Connects with Philadelphia by the Schuylkill Canal and Reading Railroad.

Port Chester, N. Y., Westchester co. On the W. side of Byram River. 136 miles S. from Albany. Steamboats and vessels ply daily to New York. The New York and New Haven Railroad passes through it.

Port Clinton, O., Ottawa co. Located on the S. side of Portage River, at its mouth, and has a good harbor. N. from Columbus 120 miles.

Port Deposit, Md., Cecil co. Located on the E. side of Susquehanna River, at the lower falls, 5 miles from its mouth, and 68 miles N. E. from Annapolis. The termination of the Susquehanna Canal.

Port Elizabeth, N. J., Cumberland co. Situated near the mouth of Manamuskin Creek. 14 miles from Delaware Bay, and 73 S. S. W. from Trenton. Vessels of 120 tons come here. Exports, wood and lumber.

Port Gibson, Mi., Claiborne co. On Bayou Pierre, 30 miles above its mouth, 45 miles N. from Natchez, and 72 S. W. from Jackson.

Port Henry, N. Y., Essex co. has a good steamboat landing on the W. side of Lake Champlain. 118 miles N. from Albany. The vicinity abounds in iron ore.

Port Kent, N. Y., Essex co. On the W. shore of Lake Champlain. 12 miles S. from Plattsburg, and 151 N. by E. from Albany. There is a steam ferry between this and Burlington, Vt.

Portland, Me. City, seaport, and seat of justice of Cumberland co. 65 miles S. W. from Augusta, the capital of the state, 105 miles N. N. E. from Boston, and 290 miles S. E. from Montreal, by railroad. Population in 1790, 2240; 1800, 3704; 1810, 7169; 1820, 8521; 1830, 12,601; 1840, 15,218; 1850, 20,879.

Portland is very pleasantly situated, on a peninsula at the W. extremity of Casco Bay, between Casco River on the S., and Back Cove, which makes up the harbor, on the N. The length of this peninsula, from E. to W., is 3 miles, and its average width about three fourths of a mile, containing about 2200 acres of land. The ground on which the city is built rises, towards both its eastern and western extremities, into considerable elevations, which gives a beautiful appearance to the general outline of the place, as it is approached from the sea. The city is regularly laid out, especially the more modern portions of it, and several of the streets are among the handsomest in any of our cities. It is built mostly with brick; and the dwellings, always neat, are, many of them, spacious and elegant. Beautiful elms and other shade trees adorn several of the more retired avenues. The main street extends through the whole city, E. and W., upon the ridge of the peninsula, reaching from hill to hill. One of the latest and most important improvements within the city is the opening of a new street along the heads of the wharves and docks, in such a man-

ner as to form a connection between the termini of the principal railroad routes, and to give them a direct access to the shipping in the harbor, or to the large warehouses where the vessels are laden and unladen.

The principal public buildings in Portland, besides the churches, are the City Hall, under which is a market, standing at the junction of Middle and Congress Streets, built of brick, with a pediment and portico; the old Custom House, on Fore Street, of hammered granite; and the Exchange, an elegant structure, 136 feet in length by 72 in width, on the corner of Exchange and Middle Streets. The colonnade of the Exchange, in front, consists of 8 columns, 24 feet high, each shaft being a single stone, beautifully fluted, and crowned by an Ionic capital. The edifice is surmounted by a dome, the top of which is 75 feet above the ground. This building, erected by the city as an Exchange, was purchased by the United States government in 1848, and is now used for a custom house, post office, and the United States court rooms.

On a promontory at the eastern end of the city, rising about 100 feet above the water, stands a tower, 70 feet high, erected in 1807, by the merchants of Portland, for the purpose of observing vessels at sea. It is furnished with a large telescope, and with signals to be raised on the approach of vessels making this port. This position commands a most extensive and beautiful prospect in all directions, embracing the Atlantic Ocean as far as the eye can reach; Casco Bay, to the mouth of the Kennebec, with the numerous verdant and beautiful islands reposing upon its bosom; the Agamenticus Hills, in York; and the whole range of mountains on the borders of New Hampshire, from Ossipee, near Lake Winnipiseogee, to the White Mountains, which constitute the crowning feature of the landscape. The serene, majestic form of Mount Washington, as it stands in clear relief against the distant heavens, is here a most impressive object; while below, "in the immediate vicinity," as one has said of it, "lie the city and adjacent country, as a gem in its emerald setting."

The Portland Athenæum, incorporated in 1827, has a valuable library of over 6000 volumes, with a steady annual increase. It is kept in a convenient room, over the Canal Bank. The Society for promoting a Knowledge of Natural History has a valuable collection of minerals and shells, specimens in zoölogy, ornithology, &c.

There are 18 churches in Portland, belonging to nine different denominations. One of the church edifices is of stone, and several are of brick, generally in handsome situations. The first parish was organized in 1727, and has now, after a period of 125 years, only its third minister, never for an hour having been destitute of a pastor since the year of its formation.

The public schools of Portland, embracing about 3000 children, are of a high order of excellence. Among them are a classical school for boys, a high school for girls, and four grammar schools, two for boys and two for girls. These schools are supported at an annual expense to the city of 12,000 or \$15,000. There is also an academy, and numerous private schools, all affording superior privileges for instruction.

A company was incorporated in 1849 for lighting the city with gas, which is rapidly extending through all parts of it this pleasant improvement.

A new impulse has been given to the prosperity of Portland by the introduction of railroads. Her advantages as a seaport, and her relations to the surrounding country, are such, that her intelligent capitalists and merchants were not slow to perceive their inducements for enlisting earnestly in this branch of internal improvement. The Portsmouth, Saco, and Portland Railroad, completing the line from Boston to this city, was opened in 1842. In 1844, the movement was commenced towards the construction of the Atlantic and St. Lawrence Railroad, and two companies were organized, one in Maine and the other in Canada, which commenced, at their respective ends of the line, the great undertaking of uniting the waters flowing from the great lakes at Montreal and Quebec with the Atlantic at Portland, a distance, as the route runs, of 290 miles. This entire route is under contract to be finished in 1853, and large sections of it, on each end of the line, are already in operation. This great work will cost about \$5,000,000. Another great route, extending eastward, is opened from Portland as far as Waterville, within 45 miles of Bangor. This is expected hereafter to be continued to the British provinces of New Brunswick and Nova Scotia. The Kennebec and Portland Railroad is another route, independent of the above, extending E. to Augusta, 65 miles, passing through Brunswick, and connecting Portland with the Kennebec River at the prominent points of Bath, Gardiner, Hallowell, and Augusta. Besides these, another interior railroad is commenced, to extend from Portland, through Gorham, Buxton, Hollis, Alfred, &c., to South Berwick. This road is open to Gorham. A branch from the St. Lawrence road has also been opened from Mechanic Falls to Buckfield, a distance of 12 miles.

Among the enterprises of labor and skill which have come in to meet the demands created by these extensive improvements is that of the Portland Company, a large manufacturing establishment, in which are made the locomotives, cars, and all the apparatus and appurtenances for railroads, as well as other work in wood and iron. It is incorporated, with a fixed capital of \$100,000.

The Cumberland and Oxford Canal, extending through Sebago and Long Ponds, one 12 and the other 10 miles long, a distance of 50 miles from Portland, was a work of earlier construction than the railroads, which furnishes an inland navigation for the counties of Oxford and Cumberland to Portland Harbor.

The harbor of Portland is one of the best in the United States, being near the ocean, easy of access, safe and ample, with sufficient depth of water for the largest vessels. It is not obstructed with ice, except occasionally in the most extreme cold weather. This city, from its relative position, enjoys fine advantages for trade and commerce. When all the great projects for extending its internal communication shall be completed, it will offer very strong inducements, from its high northern latitude, and its nearness to the great marts of Europe, as a port for the shipment of the products of the great north and west, which are increasing in a ratio unparalleled in any other country.

The settlement of Portland was commenced in 1632, by George Cleaves and Richard Tucker, two adventurers from the west of England, who procured a grant of it, in 1637, from Sir Francis

Gorges, the proprietor of the province. In 1675, the settlement was destroyed by the Indians. That which afterwards grew up was again destroyed by the French and Indians, in 1690, after which the place lay waste for about 20 years. In 1718, it was incorporated, under the name of Falmouth, with the present towns of Cape Elizabeth, Westbrook, and Falmouth, by the Massachusetts legislature. This part of the town went by the name of "Old Casco." It was separated from Falmouth, and incorporated by its present name, in 1786. In 1832, it received a city charter.

On the 18th of October, 1775, the place was bombarded by a British fleet, and entirely prostrated; 136 of the principal dwellings, the Episcopal Church, the court house, and the town house having been laid in ruins. From the close of the revolutionary war, the growth of the town was rapid. Its tonnage had increased to 39,000 tons, and the amount received for duties to \$346,000, when it again received a severe check by the restrictions on commerce during the war of 1812. After the war, a new impulse was given to its prosperity; which has since been generally onward; though not without serious reverses, in one or two instances, from desolating fires and a misdirected spirit of speculation. With energies exercised and developed by so many vicissitudes, and with so many new facilities for trade as are now furnished, this beautiful city is certainly destined, in the future, to a large increase in population, wealth, and influence.

Portland, Ct., Middlesex co. On the E. side of Connecticut River, nearly opposite Middletown, and about 15 miles S. from Hartford. A new town, recently incorporated from Chatham. The village is pleasantly situated on elevated ground, looking towards the W. and S. W., and is the most populous towards the two extremities of a street running parallel with the course of the river, about 2 miles in length. At the southern extremity are the valuable freestone quarries, from which large quantities of a most beautiful reddish or dark-colored sandstone, of a fine quality for building, are exported to distant cities every year. The quarries lie directly upon the bank of the river, though the bed of stone appears to extend back for considerable distance. It is not perfectly solid, but lies in blocks 8 or 10 feet thick, and 50 or 60 feet long. For about 50 years past these quarries have been extensively worked, with a handsome profit to their proprietors. There are some delightful seats here occupied for private residence, from which views of the river and of the surrounding country are enjoyed which are scarcely surpassed by any in the country. At the northern part of the town there is a ship yard where vessels are built for the river navigation.

Portland, N. Y., Chautauque co. Watered by several small streams flowing into Lake Eric, which bounds it on the N. W. Surface hilly; soil sandy and argillaceous loam. 7 miles N. from Mayville, and 331 W. from Albany.

Portland, On., c. h. Washington co.

Portsmouth, N. H. Seaport and half shire town of Rockingham co. 47 miles E. from Concord, and 54 N. by E. from Boston. This important town is the only seaport in the state. It is built on a beautiful peninsula, on the S. side of the Piscataqua River, about 3 miles from the ocean. The ground rises gradually from the harbor,

affording for the town a peculiarly pleasant and healthful situation. Population in 1810, 6934; 1820, 7327; 1830, 8082; 1840, 7887; 1850, 9739.

Portsmouth is connected with Kittery, in Maine, by 2 bridges, 1 of which, built in 1822, at a cost of \$32,000, is 1750 feet in length, and is supported by 70 piers: the other is 480 feet long, supported by 20 piers. Under the longest of these bridges the water, at low tide, for an extent of 900 feet, varies from 45 to 53 feet in depth. The town is also connected by a bridge with Great Island, comprising the township of Newcastle. The streets of Portsmouth, though not laid out with much regularity, are neat and pleasant, and contain many beautiful buildings. In many parts of the town are beautiful gardens, and much rural embellishment. Few places more agreeably unite the advantages of the town and country. That part of it which lies around Church Hill, so called, was originally called Strawberry Bank. The proximity of Portsmouth to the ocean, its neatness, quietness, and beauty, render it a desirable place of residence, and a place of fashionable resort for visitors during the summer season.

Among the public buildings are 5 or 6 handsome churches, 2 market houses, an academy, an atheneum, an almshouse, and the state Lunatic Hospital. The Episcopal Church is a large and elegant brick edifice, from the cupola of which a very beautiful view is had of the town, the river, the harbor, the islands, and the surrounding country. One of the markets near the centre of the town is of brick, 80 feet long and 30 feet wide, having a spacious hall in the upper story for public uses. The Athenæum was incorporated in 1817, and has a handsome brick edifice 3 stories high, with a library of 7300 volumes. In the third story are valuable collections of minerals and of natural history. Besides the Athenæum library there are libraries belonging to St. John's Church, and to the Unitarian Church, of about 500 volumes each. The people of this town were early distinguished as the patrons of literature, and their institutions of learning, of every grade, are highly respectable.

The town is supplied with water of an excellent quality, brought by an aqueduct from a fountain 3 miles distant, and carried through all the principal streets.

The United States navy yard, situated on the harbor of Portsmouth, is admirably located for its objects, on an island called Continental, or Badger's Island, on the E. side of the river. Here is every convenience for the construction and repair of vessels of the largest class, among which are a dry dock of costly construction, and 3 immense ship houses, the largest of which is 240 feet long and 131 feet wide, having the roof covered with 130 tons of slate. Portsmouth has been long celebrated for the skill of its naval architects, as well as for its abundant supply of fine white oak timber and other materials for ship building. The merchant service, as well as the United States navy, is supplied from the ship yards here with many of their finest vessels. On Badger's Island, in this harbor, was built, during the revolutionary war, the first line of battle ship launched in the western hemisphere, called the North America. A very large number of vessels are owned at this port, which are constantly employed in the freighting and fishing business in other seas, and between other parts of this country

and the world. The consequence is, that much of the capital of this wealthy town is employed abroad; and there is but little show of business in the streets, compared with the amount of commerce, in the profits of which it is interested. The place has always been noted for its enterprise and commercial spirit, and is the immediate centre of a considerable trade. The Piscataqua is from half to three quarters of a mile wide where it passes the town, and although the current has so much rapidity as to prevent the river from freezing, it forms one of the most secure and commodious harbors in the United States, into which ships of any size may enter with perfect safety. It is well protected, by its islands, from the N. E. storms, which are the most to be dreaded on this coast, and can be easily defended, and rendered perfectly impregnable, in time of war. The main channel passes on the E. side of Great Island, on the N. W. point of which is Fort Constitution, and opposite, in Kittery, is Fort McClary. On two other islands are Forts Washington and Sullivan. There is another entrance on the S. side of New Castle, called Little Harbor, where the water is shoal and the bottom sandy. The Portsmouth pier, 340 feet long and about 60 feet wide, was built by an incorporated company in 1795.

The principal manufacturing establishments of Portsmouth are a machine shop and car factory, which employs a large number of men; an iron foundry; a manufactory of hosiery, which is extensive; a mill for the manufacture of fine twist, driven by an engine of fifty horse power, and the Portsmouth steam factory, erected in 1846-7 for making the finer class of cotton fabrics. This mill is located in a central part of the town, having the Boston and Portland and the Portsmouth and Concord Railroads immediately in the rear. The main building is 200 feet long, and 6 stories high, and for architectural character, as well as internal arrangement, this is one of the most attractive manufacturing establishments in the country.

At this port, in the spring of 1623, the first settlers of New Hampshire made a landing, and commenced their settlements here and at Dover. From the peculiar advantages of its situation, Portsmouth appears almost wholly to have escaped the invasion of the Indians. They could approach the place only by the isthmus which connects it with the main land, across which a stockade was extended for defence against them. The settlement was also compact, and the number of inhabitants at an early date considerable.

The Eastern Railroad from Boston to Portland, by way of Salem and Newburyport, passes through Portsmouth. A railroad has also been completed to connect this place with Concord, and thus with the great northern route extending to Burlington, on Lake Champlain, to Ogdensburg, at the outlet of the great north-western lakes, and to the River St. Lawrence, opposite Montreal. This road, which is only 47 miles in length, must open very important advantages to this port, by rendering it directly accessible to the northern and western trade, coming from a vast extent of the interior, with which it has heretofore had little or no connection.

Portsmouth, O. Seat of justice of Scioto co. Situated at the termination of the Ohio Canal, on the Ohio River, at the mouth of the Scioto. 90 miles S. of Columbus, and 110 miles, by the

river, above Cincinnati. The site of the town is rather low, exposing it to occasional injury from floods; but it has great and enduring advantages, from its position, as a commercial depot, and is a busy and flourishing place. Iron ore, coal, and building stone abound in the vicinity, and here are founderies, forges, and a rolling mill for the manufacture of iron. Several steamboats ply continually between this place and the iron region in the upper part of this county and St. Lawrence co. A commodious basin has been constructed in the old channel of the Scioto, with dry docks attached, for the building of steamboats.

There is in this place a well-conducted free school, supported chiefly by funds bequeathed for this purpose, yielding about \$2000 annually. The town is well built, and makes a handsome appearance from the river. In the immediate neighborhood, on both sides of the Ohio, are some very extensive ancient works, which will not fail to interest the intelligent tourist. From this place to Cleveland, on Lake Erie, by the canal, the distance is 305 miles.

Portsmouth, R. I. Newport co. The soil of this town, in common with all the lands on the Island of Rhode Island, is uncommonly fertile, well cultivated, and productive. The maritime situation of the town affords the people great facilities for the fisheries, which, with a fine soil, and industry, give them a great degree of independence. A number of islands are attached to this town, of which the beautiful and fertile one called Prudence is the largest. It is 6 miles in length, and about three quarters of a mile average width. In this town are the Rhode Island coal mines. A fine bed of plumbago has recently been discovered. A stone bridge, 1000 feet in length, connects it with Tiverton.

Portsmouth, Va., c. h. Norfolk co. On the W. side of Elizabeth River, at its mouth, and has one of the best harbors in the United States. It is opposite to and 1 mile distant from Norfolk, and 105 miles E. S. E. from Richmond. The United States navy yard, dry dock, and hospital are at Gosport, a suburb. There is daily communication with Charleston by the Portsmouth and Roanoke and Wilmington Railroads, and with Baltimore and Richmond, by steam.

Port Tobacco, Md., c. h. Charles co. Situated at the mouth of a small river, which empties through a bay into Potomac River. 72 miles S. W. from Annapolis.

Portville, N. Y., Cattaraugus co. The Alleghany River and some of its branches water this town. Surface broken; soil sandy loam. 24 miles S. E. from Ellicottville, and 296 S. W. from Albany.

Posey County, Ia., c. h. at Mount Vernon. Bounded N. by Gibson co., E. by Vanderburg co., S. by the Ohio River, separating it from Kentucky, and W. by the Wabash River, separating it from Illinois. Drained by Big and Flat Creeks. Surface undulating; soil fertile.

Potosi, Mo., Washington co. In a rich mineral region, abounding in lead, iron, and copper ores. 111 miles E. S. E. from Jefferson City.

Potter County, Pa., c. h. at Coudersport. Bounded N. by New York, E. by Tioga co., S. by Clinton, and W. by McKean co. Drained by the head branches of the Alleghany, Tioga, and Genesee Rivers, and of the W. fork of the Susquehanna River, and by Pine, Kettle, Driftwood,

and Sinnemahoning Creeks. Surface elevated, containing coal and iron; soil loam.

Potter, N. Y., Yates co. Flint Creek waters this town, the surface of which is hilly, and the soil fertile. 8 miles N. from Penn-Yan, and 200 W. from Albany.

Potter, Pa., Centre co. The surface of this town is mountainous, its soil calcareous loam. 10 miles S. E. from Bellefonte, and 71 N. W. from Harrisburg.

Potsdam, N. Y., St. Lawrence co. Watered by Racket and Grass Rivers. Surface undulating; soil fertile. 8 miles N. E. from Canton, and 206 N. W. from Albany.

Potts Grove, Pa., Montgomery co. Bounded S. by the Schuylkill River, and drained by Manatawny Creek and Sprogel's Run. Surface hilly; soil red shale.

Pottstown, Pa., Montgomery co., lies at the junction of Manatawny Creek and Schuylkill River. 71 miles E. from Harrisburg, and 37 N. from Philadelphia. The Schuylkill Canal passes through it.

Pottsville, Pa., Schuylkill co. 99 miles N. W. from Philadelphia, and 62 E. from Harrisburg. It is at the termination of the Schuylkill Canal, and of the Philadelphia, Reading, and Pottsville Railroad, in the midst of the anthracite coal region of Pennsylvania. It is situated just above the gorge where the Schuylkill breaks through Sharp Mountain, and is the largest town in the county. The immense coal trade has given it a rapid growth. The borough, as incorporated February 19, 1828, embraces, besides Pottsville proper, what were once the separate neighborhoods of Morrisville, Greenwood, Mount Carbon, Bath, Salem, and Allenville. Mount Carbon comprises the southern part of Pottsville, lying in the valley, between Sharp Mountain and Second Mountain. The surrounding scenery here is very romantic. The place, as a whole, contains many large warehouses and fine ranges of stores, and is now a compact, bustling place. Its trade has settled into a steady channel, well understood and well managed by capitalists, merchants, and miners. The place contains 5 or 6 churches, some of which have fine Gothic edifices, an academy, a town hall, a splendid hotel, called Pennsylvania Hall, and several other spacious hotels and handsome public buildings. Here are iron furnaces, forges, founderies, and rolling mills, in which the anthracite coal is successfully used. Steam engines and machinery are manufactured, and many boats are built for the river navigation.

Pottowattomie County, Io., c. h. at Kanesville. In the S. W. angle of the state, on the Missouri.

Poughkeepsie, N. Y., shire town of Dutchess co. Situated on the E. side of the Hudson River. 70 miles S. from Albany, and 75 N. from New York. It was first settled by the Dutch, in 1735, and is one of the handsomest places in the state. The population, in 1840, was 7500; in 1850, 13,944. No place on the Hudson, perhaps, exceeds this for the beauty of its location. The ground on which the principal part of the village is built is elevated about 200 feet above the river, and extends into it by two bold promontories on the N. and S., so as almost to cover the landing, which lies between them, from the view of the boats approaching, especially from below. Main Street, extending from the landing to the plain above, has been conveniently graded and paved. Many

of the buildings on this street are of the finest description, for the various purposes of their erection; and in every part of the village, which embraces about 40 streets, there are many beautiful mansions, affording evidence of the wealth, taste, and refinements of the inhabitants. There are churches in Poughkeepsie of the Dutch Reformed, Presbyterian, Episcopal, Congregational, Baptist, Methodist, Universalist, Quaker, and Roman Catholic denominations. Besides the court house, and other county buildings, there are banks, newspaper offices, and a great variety of manufacturing and mechanical establishments. A large water power is furnished by the Fall Kill, a stream which, winding through the village, descends by a ravine into the Hudson, over a fall, in the whole, of about 170 feet. There is here an incorporated company for the growth and manufacture of silk, which has erected an extensive establishment; another for the manufacture of locomotive engines, and other railroad machinery, with buildings not surpassed by any in the state; and another still, called the Dutchess Whaling Company, which owns a number of ships engaged in the whale fishery. One of the breweries in this place is perhaps the largest in the state, capable of making 30,000 barrels of ale annually. Some of the other manufacturing operations, of principal importance, are flouring mills, brass and iron founderies, tanneries, manufactories of carpets, guns, pins, sperm oil and candles, ploughs, carriages, &c.

The Poughkeepsie Collegiate School, a fine institution, opened in 1836, for fitting young men for college, or for teachers, or any of the active pursuits of life, is beautifully located upon a hill, about a mile from the Hudson, and half a mile northward from the business part of the village. The prospect from this spot extends through a compass of nearly 50 miles, and is one of surpassing beauty. The building is a handsome structure, 137 feet long, modelled after the Parthenon at Athens, with the colonnade carried entirely round, erected at a cost of about \$40,000. The Dutchess County Academy is also located here, and has a building in the S. E. part of the village, which cost about \$14,000. Proportionate attention is likewise given to the interests of female education, for which a number of schools exist, which are of high reputation.

Poughkeepsie was incorporated as a village in 1801, and is a part of a township of the same name. Its name is said to be a modification of the Indian word *Apokeepsing*, meaning a *safe harbor*. Being situated about half way between New York and Albany, this place was occasionally resorted to, in the earlier periods of its history, for popular deliberations, and here, in 1788, the state convention met to deliberate upon the federal constitution, and voted for its adoption.

Poultney, Vt., Rutland co. This township is watered by Poultney River and its numerous tributaries, which afford a number of valuable mill sites. The soil is generally warm and productive, and the surface pleasantly diversified. Along Poultney River the alluvial flats are extensive and very productive. The forest trees are mostly deciduous, there being but few evergreens. A violent freshet, in July, 1811, swept off a number of mills. There are two pleasant villages, called East and West Poultney: both are very flourishing. The settlement was commenced in 1771, by Thomas Ashley and Eben-

ezer Allen. 60 miles S. W. from Montpelier, and 13 S. W. from Rutland.

Poundridge, N. Y., Westchester co. Watered by a few small streams flowing into Long Island Sound. Surface hilly and stony; soil gravelly loam. 15 miles N. E. from White Plains, and 139 S. from Albany.

Poweshick County, Io., c. h. at Montezuma. S. E. central. Between Iowa and Skunk Rivers.

Powhatan County, Va., c. h. at Powhatan. Bounded N. by James River, separating it from Goochland co.. E. by Chesterfield co., S. by the Appomattox River, separating it from Amelia co., and W. by Cumberland co.

Powhatan, Va., c. h. Powhatan.

Pownal, Me., Cumberland co. This is a small town, of good soil, and bounded N. by Durham. It lies 35 miles S. W. from Augusta, and 19 N. from Portland. Incorporated 1808.

Pownal, Vt., Bennington co. The surface is uneven, but the soil generally good, and produces plentiful crops. Some of the finest dairies in the state are kept here. The principal stream is Hoosic River. Along this stream are some rich and beautiful tracts of intervals, and on it are several valuable stands for mills. Some of the head branches of Walloomscoik River rise in Pownal. The settlement of Pownal, under the New Hampshire charter, was commenced in the spring of 1762, there being at that time four or five Dutch families within the limits of the township, claiming under the Hoosic patent, granted by the government of New York. 30 miles W. by S. from Brattleboro', and 8 S. from Bennington.

Prairie Du Chien, Wn., shire town of Crawford co. On the E. bank of the Mississippi, about 90 miles W. of Madison, and 170 W. of Milwaukee. It is about 3 miles above the mouth of the Wisconsin River, 516 above St. Louis, and 276 below the Falls of St. Anthony. The prairie on which the town stands is 10 miles long and 3 in width; upon which are numerous mounds of all shapes and sizes. Rich copper mines are found here, and occasionally large masses of pure copper. The place contains a court house and jail, an academy, and three or four churches, with a considerable number of stores and mechanic shops. Fort Crawford, a United States military post, is immediately S. of the town. This place is well situated for business, and will doubtless be the point where a railroad from Milwaukee, on Lake Michigan, passing through the capital of the state, will strike the Mississippi.

Prattsburg, N. Y., Steuben co. Drained by some small branches of the Conhocton River. Surface rather hilly; soil well adapted to grass. 12 miles N. from Bath, and 202 W. from Albany.

Prattsville, N. Y., Greene co. Schoharie Creek flows through this town, and the soil on its borders is very fertile. Surface mostly broken and mountainous, the uplands being well adapted to grazing. 38 miles W. from Catskill, and 50 S. W. from Albany.

Preble, N. Y., Cortland co. Watered by a branch of the Tioughnioga River. Surface hilly; soil well adapted to grass and grain. 136 miles N. from Cortland, and 136 W. from Albany.

Preble County, O., c. h. at Eaton. Dark co. bounds it on the N., Montgomery on the E., Butler on the S., and the state of Indiana on the W. It was named after Commodore Preble. First settled in 1804, and established January 8, 1808. This county has good fertile land, which

is well timbered, and contains several mineral springs. Several mounds, from 50 to 80 feet in circumference, have been discovered here. The waters are Big Twin, Seven Mile, White Water, and Four Mile Creeks.

Preston, Ms., Hampshire co., was formerly part of Pelham and New Salem. The surface is rough and uneven, and in some parts quite hilly; but it has a strong soil, with considerable arable land: the greater part is better suited to grazing than tillage. There are some good mill streams in the town, branches of Swift River. 18 miles N. E. from Northampton, and 67 W. by N. from Boston.

Preston, Ct., New London co. This is an irregular, uneven, rocky town, of a pretty good soil for corn and grazing. It is bounded W. and N. by the Thames and Quinebaug Rivers. Poquetannuck, an ancient village, lies partly in Preston and partly in Ledyard. It has a water power, and small vessels pass within a short distance of it. Many of the inhabitants are employed in navigation, and considerable ship timber is taken from there down the river. *Preston City* lies in the eastern part of the town. Near this village is "Amos Lake," a handsome sheet of water, and a place of resort for parties of pleasure. 6 miles E. from Norwich.

Preston, N. Y., Chenango co. Watered by a few small branches of the Chenango River. Surface slightly uneven; soil productive in grass and grain. 5 miles W. from Norwich, and 115 W. from Albany.

Preston, Pa., Wayne co. Surface hilly; soil sandy loam. 184 miles N. E. from Harrisburg.

Preston County, Va., c. h. at Kingwood. Bounded N. by Pennsylvania, E. by Maryland, S. by Randolph and Barbour, and W. by Marion and Monongahela counties. Drained by Cheat River. Surface rough and mountainous; soil of excellent quality in some portions.

Prestonburg, Ky., c. h. Floyd co. On the W. fork of Sandy River. E. S. E. from Frankfort 120 miles.

Prince Edward County, Va., c. h. Prince Edward Court House. Bounded N. by the Appomattox River, separating it from Buckingham and Cumberland counties, E. by Nottoway, S. by Lunenburg, and S. W. and W. by Charlotte and Campbell counties. Soil fertile, and watered by branches of the Appomattox. In this county is Hampden Sidney College. See *Colleges*.

Prince Fredericktown, Md., c. h. Calvert co. On Parker's Creek, a tributary of Chesapeake Bay. S. by W. from Annapolis 46 miles.

Prince George County, Va., c. h. at Prince George Court House. Bounded N. by the Appomattox and James Rivers, separating it from Chesterfield and Charles City counties, E. by Surry, S. by Essex, and W. by Dinwiddie co. Drained by Blackwater River.

Prince George's County, Md., c. h. at Upper Marlboro'. Bounded N. E. and E. by the Patuxent River, separating it from Anne Arundel and Calvert counties, S. by Charles co., W. by the Potomac River, separating it from Virginia, and by the District of Columbia, and N. W. by Montgomery co. Surface uneven; soil fertile.

Princess Ann, Md., c. h. Somerset co. On the S. E. bank of Manokin River, near the head of tide water, and 110 miles S. S. E. from Annapolis.

Princess Ann County, Va., c. h. at Princess Ann

Court House. Bounded N. by Chesapeake Bay, E. by the Atlantic Ocean, S. by North Carolina, and W. by Norfolk co. It is drained by North River and the E. branch of Elizabeth River, and has Back Bay, a branch of Currituck Sound, in its S. part.

Princess Ann, Va., c. h. Princess Ann co. 132 miles S. E. from Richmond.

Prince William County, Va., c. h. at Brentsville. Bounded N. E. and E. by Occoquan River, separating it from Loudon and Fairfax counties. S. E. by the Potomac River, separating it from Maryland, S. by Stafford co., and W. and N. W. by Fauquier co. Surface hilly; soil tolerably fertile.

Princeton, As., c. h. Dallas co.

Princeton, Ia., c. h. Gibson co. 4 miles S. from Patoka Creek, and 142 miles S. W. from Indianapolis.

Princeton, Ms., Worcester co. This town was named for the Rev. Thomas Prince, a large proprietor, the chronologer of New England, and pastor of the Old South Church in Boston. It was formerly called the East Wing of Rutland. The surface is elevated, but agreeably diversified with undulating valleys. There are some noted high grounds in the town, the most prominent of which is Wachusett Mountain, the Indian name of the township. There are no large streams flowing in or through this town. The town is nevertheless well watered with brooks and small streams, which rise entirely within its limits. Wachusett Mountain is situated in the north-westerly part of the town. This mountain rears its conical head 2018 feet above Massachusetts Bay, and the prospect from the top of it is delightful. 18 miles N. by W. from Worcester, 9 S. W. from the Fitchburg Railroad at Leominster, and, by the latter, 52 W. by N. from Boston.

Princeton, Mi., c. h. Washington co. On the E. side of Mississippi River. 119 miles N. W. from Jackson.

Princeton, N. Y., Schenectady co. Norman's Kill waters this town, the surface of which is hilly, and the soil composed of clay, sand, and loam. 8 miles W. from Schenectady, and 23 N. W. from Albany.

Princeton, N. J., Mercer co. 10 miles N. E. from Trenton. The township of Princeton, formed from those of Montgomery and West Windsor, is about 5 miles long and broad.

The village of Princeton, incorporated as a borough in 1812, is pleasantly situated on an elevated ridge of land, commanding an extensive prospect towards the E. It is chiefly built on one extended street. The Delaware and Raritan Canal, and the railroad between New York and Philadelphia, pass about 1 mile S. E. of the central part of the village. It is 50 miles from New York, and 40 from Philadelphia. This was the scene of one of the battles of the revolution, January 3, 1777, which, for the time it lasted, and the numbers engaged, was one of the most bloody and fatal to our officers of any during the war. The heroic devotion of Washington on the field of Princeton is matter of history.

The College of New Jersey, and the Princeton Theological Seminary are situated in this place, and give to it at present its principal importance. See *Colleges*.

Prospect, Ct., New Haven co. This stony and mountainous town was taken from Cheshire and Waterbury in 1827. It derived its name from

its elevated situation. There is a pretty village in the town. The inhabitants are chiefly farmers. 17 miles N. by W. from New Haven.

Prospect, Me., Waldo co. This is a beautiful town, of good soil, on the W. side of Penobscot River. It is bounded on the S. by Belfast Bay, on the W. by Swanville, and on the N. by Frankfort. Prospect is very flourishing in its trade, ship building, and agricultural pursuits. 52 E. by N. from Augusta, and 18 from Bangor.

Providence, N. Y., Saratoga co. Sacondaga River and a few small streams water this town, which is partly covered by the Kayaderoseras Mountain. The soil is well adapted to the growth of grass. 15 miles N. W. from Ballston Spa, and 43 from Albany.

Providence, Pa., Luzerne co. Watered by Lackawannock Creek and Roaring Brook, both affording fine hydraulic power. Situated in a valley abounding with anthracite coal. 146 miles N. E. from Harrisburg.

Providence County, R. I., c. h. at Providence. Uneven, but fertile and well cultivated. The Blackstone or Pawtucket, the Pautuxet, and many smaller streams, furnish abundant water power, on which are numerous manufactures. Its E. border is traversed by the Worcester and Providence and Stonington Railroads.

Providence, R. I., city, shire town of Providence co., and the largest in the state of Rhode Island. It is situated at the head of navigation on Providence River, 35 miles from the sea, 30 N. N. W. from Newport, 40 S. W. from Boston, 169 N. E. from New York. Its area is about 9 square miles. The compact part is divided into two nearly equal parts by Providence River. The land on the E. side of the river is hilly, attaining, at its greatest height, 204 feet above tide water. The soil is rich and heavy. On the W. side of the river the land is more level, and the soil light and sandy, its greatest height above tide water being only 78 feet. It is bounded N. by the town of North Providence, on the E. it adjoins Massachusetts, from which it is separated by the Seekonk River, S. by the town of Cranston and by Narraganset Bay, and W. by the townships of Johnston and North Providence. It originally comprised all the towns in Providence county, except Cumberland.

The harbor of Providence is safe and commodious, but it is not safely approached by large vessels without a pilot. Commerce was the favorite pursuit of the citizens of Providence at an early period of its history. The East India business, before 1812, was pursued with great success for many years. Since that period, this and all foreign commerce has gradually declined. There is still a large amount of coasting business done in Providence. But of late years the attention of the money-making part of the community has been withdrawn from commerce and fixed on manufactures. Much of the capital and enterprise of Providence men is invested in the manufacturing establishments in and near its borders. The water power is occupied to its full extent, besides which there are in operation about 50 steam engines, some of them as large as 300 horse power. They are employed in grinding grain, sawing and polishing marble, printing, bleaching, calendering, and dyeing cloths, sawing and planing lumber, driving bellows in furnaces and foundries, manufacturing machinery, screws, nails, rubber shoes, small wares, furniture, power

loom pickers, carriages, jewelry, cotton and woolen goods.

The communication between Providence and adjoining states and towns is varied, commodious, and rapid, both for passengers and freight. Steamboats of superior construction and accommodation run constantly, and as frequently as the wants of the public require, to Warren, Bristol, Portsmouth, Newport, Fall River, and New York. There are three railroads running into Providence — one to Stonington, Ct., which connects there with a line of steamers for New York; one to Boston, and the third to Worcester, along the valley of the Blackstone River. Two other railroads have been chartered by the General Assembly of the state, one leading to Bristol, and the other to Plainfield, Ct., there connecting with the lines of railroads extending to the far west. The last of these will probably be soon commenced and finished. The passenger and merchandise stations of these railroads, in Providence, are in the immediate neighborhood of each other. They are united, and so arranged that passengers and freight pass from one to the other without changing cars. The station buildings are very large and commodious, and not excelled by any in the United States. Near the centre of the business portion of Providence, they are readily accessible, and yet are approached by the locomotives without seeming to interfere with any of the great ordinary avenues to the city. These station buildings, both for passengers and freight, are located on the W., S., and E. sides of a beautiful sheet of water of an elliptic form, and nearly a mile in circumference, which constitutes the head waters of Narraganset Bay or Providence River. This sheet of water is enclosed by a substantial stone wall, the small rivers, (the Moshassuch and the Moonsquatucket,) which enter it at the N. E. and the N. W., as well as the bay or river above named, which is its outlet, being crossed by substantial bridges. Between this basin and the station houses and railroad tracks, the city has laid out a beautiful park or promenade, 80 feet in width, and extending around the basin. This park is planted with shade trees of every desirable kind, and handsomely laid out with plots of grass and hard gravel walks, and the whole water side will soon be enclosed with an iron fence of a style appropriate to the place. When sufficient time has elapsed to give a proper growth to the trees, this will be one of the most delightful promenades in the country. Telegraphic communication is opened with Boston and New York, and through them to all other parts of the country.

Most of the dwelling houses in Providence are of wood. In the erection of them, taste has been consulted less than convenience. There are some exceptions to this remark, and others where the spirit of Yankeeedom has been indulged in, at the sacrifice of both taste and convenience. Owing to the material of which the buildings are mostly composed, Providence is greatly exposed to danger from fire, and is put to great expense in maintaining an efficient fire department. The number of firemen allowed by law is about 1000. A less number is generally attached to the engines and apparatus. These consist of 12 engines, 15 forcing stationary engines, 2 hook and ladder companies, 22 rotary engines, worked by water and steam, having about 8000 feet of hose. The annual expense is about \$20,000. It required

many and extensive conflagrations and great loss of property to induce the formation of the fire department in its present strength. It is now a matter of pride with the citizens generally, that their fire department is as strong and as effective as that of any other city in the Union.

The churches and public buildings of Providence are in good taste. The religious community is divided into Baptists, Friends, Congregationalists, both Orthodox and Unitarian, Episcopalians, Methodists, Universalists, Catholics, Christians, New Jerusalem, and Wesleyan Methodists. Upwards of 30 congregations engage in public worship every Sunday. Some of the meeting houses are beautiful specimens of architecture. That belonging to the First Baptist Society, the oldest worshipping assembly there, is a very chaste and beautiful wooden building. The First Congregational, built of granite in courses, St. John's Church, a natural face stone building, Grace Church, a fine Gothic structure, Westminster Congregational Church, the Beneficent Congregational Church, St. Peter's Church, and St. Patrick's Church, are among the most splendid and costly. Others less showy and less expensive accommodate many persons who are as humble and zealous Christians, and as true-hearted hearers, as those who frequent the edifices just named. The colored people own and occupy five churches.

The Providence Arcade is one of the most beautiful buildings in the country. It is situated on the W. side of the river, and extends from Westminster to Broad Street, fronting on both, being 122 feet in length and 72 in breadth. Its fronts are ornamented with massive granite columns, 25 feet high, the shafts of which are single blocks, 22 feet long. The lower floor is occupied by dry goods stores, and the upper stories by milliners, dress makers, offices, school rooms, &c. It was completed in 1828, and cost about \$130,000.

On the range of high land, on the E. side of the river, stands the Dexter Asylum, erected for the accommodation of the poor, on land given to the city for that purpose, by the late Ebenezer K. Dexter. The lands about the asylum, and belonging to it, comprise about 40 acres, surrounded by a wall 10 feet high, and 3 feet thick at the base, which cost about \$22,000. The asylum is of brick, 170 feet long, in three sections, a centre and two wings. The centre is 3 stories high, with a pediment; the wings are only 2 stories, with an attic. It is a plain, substantial building.

A little N. of the asylum, on the same range, is the New England Yearly Meeting Boarding School. It occupies a lot of 43 acres, given for that purpose by the late venerable Moses Brown. The buildings consist of a centre building, 54 feet square, 3 stories high, 2 wings, each 84 feet by 42, and another, more recently erected, 50 by 40 feet, 2 stories. The accommodations are ample for 75 scholars of each sex. The board and tuition is \$60 per year. This institution received a legacy of \$100,000 from the late Obadiah Brown, Esq. The object is to give to the children of Friends a "guarded" education.

A short distance N. E. from this, on the banks of the Seekonk River, is the Butler Hospital for the Insane. This institution originated with the late Nicholas Brown, of Providence. In a codicil to his will, bearing date the 3d of March, 1841, he gave the sum of \$30,000 towards the

erection or endowment of an Insane, or Lunatic Hospital, to be located in Providence or its vicinity.

This sum being insufficient for the erection of a hospital, Cyrus Butler, Esq. contributed for this purpose \$40,000, wisely coupled with the conditions that \$40,000 more should be raised from other sources, and that of the aggregate amount, \$50,000 should be kept as a reserved fund, the interest of which only should be used in defraying the expenses of the institution. An appeal was then made to the public, and nobly responded to by a subscription of over \$57,000, which, together with interest that subsequently accrued, swelled the amount of funds to nearly \$138,000. In 1850, the sum of \$20,000 was contributed to the funds of the hospital, by Alexander Duncan, Esq., of Providence.

In preparing their plans of building, the trustees were desirous of availing themselves of all the modern improvements, and not only visited most of the hospitals in New England, but they engaged the services of Dr. Bell, the superintendent of the McLean Asylum, who was peculiarly fitted by his great practical knowledge of insanity and the insane, and his correct architectural views, to obtain the information they wished; and in the early part of the year 1845, he visited the principal establishments in Europe, and obtained the plans of all the more recently constructed buildings. Accompanying his report, he submitted a plan of building, calculated, in his opinion, to meet all the requirements of the case, in the best possible manner, and embracing, as far as practicable, all the recent improvements. This plan, which provides for a greater amount of space per patient than any other hospital in the country, was adopted, with some unessential modifications, and the building was opened for the admission of patients on the 1st of December, 1847.

The grounds belonging to the hospital consist of about 60 acres of tillage, and 55 of native woodland, and embrace a great variety of soil and surface. The building stands in a clearing, on the western bank of the Seekonk River, which here widens into an expanse of a mile in breadth, and permits an extensive view of the country beyond. In every other direction, the eye rests on dense groves. The soil, to some distance around the building, is sandy, and affords clean, dry walks at every season of the year.

Brown University is to the southward and westward of the Dexter Asylum, on the high land E. of the river. See *Colleges*.

The Athenæum was incorporated in 1836. The late Hon. Nicholas Brown, and the heirs of the late Thomas P. Ives, Esq., offered the institution a suitable lot of land, at the corner of Benefit and College Streets, and \$6000 towards the erection of a building, and \$4000 towards increasing the library, on condition that other individuals would give \$10,000 towards the building, and \$4000 towards the library. The condition was complied with, and a spacious and elegant stone structure was erected on the lot in 1837. The library consists of about 12,000 volumes, most of which are books. A reading room is connected with this establishment. A share in the institution is limited at \$15, and the annual tax to \$5 per share.

"What Cheer" building, at the junction of North and South Main Streets, presents as hand-

some a freestone front as any building in New England. It is to be occupied by offices, banks, &c.

The Museum building, and Howard Hall, on Westminster, are fine buildings.

The old Market House stands in Market Square. It is a brick building, of fair proportions. The basement and lower stories are occupied for a market. The second floor contains the offices of the city government, such as mayor, city clerk, city treasurer, &c. The third story is owned by the Freemasons, and used by them for a hall. Prejudices are fast accumulating against the old market. It is an old-fashioned, useful building, with no pretensions to beauty, and is supposed to be in the way. The men are now living who will probably decree its demolition.

Providence has its full share of banking institutions. See *Banks*.

The cause of public education in Providence is well sustained. There are 46 schools maintained at public expense, employing 105 teachers, and giving instruction to about 6000 children. 22 of these are primary schools, 16 intermediate, 7 grammar, and 1 high. The amount annually expended on them is about \$40,000, of which about \$10,000 is received from the state.

In addition to these there are upwards of 30 Sunday schools, taught by nearly 500 teachers, and containing about 5000 scholars.

The Providence Reform School, an institution for the confinement, instruction, and reformation of juvenile offenders, and youth of idle, vicious, or vagrant habits, of from 8 to 18 years, was established in 1850.

Its location is the spacious building known as the Tockwotton House, built originally for a hotel, and very pleasantly situated on a rise of ground in the south-easterly part of the city, overlooking the Narraganset Bay, and sufficiently large to accommodate from 150 to 200 inmates.

The government of the institution is vested in a board of trustees, consisting of 6 gentlemen elected annually by the city council, who, with the mayor, a member *ex officio*, constitute the board; and its immediate management is committed to a superintendent, who receives his appointment from this board.

Roger Williams was the founder of Providence. He came from England to Massachusetts, and in 1635 was ordained pastor of the church at Salem. Here he promulgated opinions which the government of the colony of Massachusetts deemed to be schismatical and heterodox; such as, that civil government, as such, had no right to punish its citizens for any violation of duty towards God, and that the King of England could not confer on the settlers a valid title to the lands of the plantation, as against the natives. Being brought before the Court of Assistants, he justified his opinions and his conduct, and was sentenced to banishment; but the execution of the sentence was postponed until the following spring, (1636.) In January, (1636,) upon complaint that he had violated the conditions upon which this postponement was had, the court sent for him, in order to send him forthwith to England by a ship then ready to sail. The messenger found that he had left a sick bed to elude him, and was gone to seek a home and shelter among the Indians.

His first stopping-place was at Manten's Creek, in Seekonk, within the colony of New Plymouth. Here he was joined by his wife and family, and a

few others. They remained through the winter, until the latter part of spring, or early part of summer, when, being informed by Governor Winslow that he was within the jurisdiction of New Plymouth, they crossed the Seekonk, and commenced the settlement of Providence, on land which the Narraganset chief sachems conveyed to Mr. Williams for a settlement. William Harris, John Smith, Joshua Verin, Thomas Angell, and Francis Wickes were with Mr. Williams when he first crossed the river. Their place of landing is known as the "Slate Rock," on the tract of land called "What Cheer" by the early settlers, because they were saluted by the Indians with "What cheer?" when they approached. In relation to the name given to the settlement, Mr. Williams says, in a deed executed by him to his companions, that, "having a sense of God's merciful providence unto me in my distress, I called the place Providence." The first houses in Providence were built on what is now called North Main Street, near St. John's Church. A spring in that vicinity bears the name of Williams's Spring, and his remains are supposed to rest near there, though "not a stone tells where they lie." The distinguishing features of this settlement were, the acknowledgment of the Indian title preëminent over all others, and the refusal to legislate in relation to matters of religious belief, leaving each individual to worship God according to the dictates of his own conscience.

A formal town government was erected in 1640, by the voluntary subscription of all the inhabitants, which continued until 1649, when the town was incorporated by the General Assembly of the colony. It retained this form of government until 1832, when a new charter was obtained from the General Assembly for the city of Providence. The government of the city is vested in a mayor, a board of 6 aldermen, and common council, which consists of 4 members from each of the 6 wards into which the city is divided. These officers are chosen annually by the electors of the city. The other officers are chosen by joint vote of the board of aldermen and common council, acting together as the city council, the mayor presiding. The city clerk is registrar of deeds. The municipal court has probate jurisdiction.

During Philip's war, Providence suffered greatly. 30 houses were burned by the Indians at one time. The greater part of the inhabitants removed to the Island of Rhode Island. The list of those "that staid and went not away," now in the files of the city clerk's office, contains the names of only 28 men. Many of the inhabitants, allured by the greater safety from Indian foes which the insular situation of the towns of Portsmouth and Newport afforded them, never returned to their former homes.

In the revolutionary war, Providence furnished its full proportion of troops, and partook largely of the sufferings as well as glory of that struggle. Though never the seat of actual hostilities, yet, being approachable by the British fleet, it was subject to frequent alarms, and at several times levies, *en masse*, of all its citizens were required by the officer of the continental army in command in this part of the United States.

The population of Providence was, in 1730, 3916; 1748, 4128; 1774, 4321; 1782, 4306; 1790, 6380; 1820, 11,745; 1830, 15,941; 1840, 23,170; 1845, 31,753; 1850, 41,512; 1852, about 46,000.

Provincetown, Ms., Barnstable co. This noted harbor, and the first port the Mayflower made, on her passage with the Pilgrim Fathers, in 1620, is situated on the end of the peninsula of Cape Cod, and lies in the form of a hook. The township consists of beaches and hills of sand, 8 shallow ponds, and a great number of swamps. Cape Harbor, in Cape Cod Bay, is formed by the bending of the land nearly round every point of the compass, and is completely land locked and safe. It is of sufficient depth for ships of any size, and it will contain more than three thousand vessels at once. The village stands on the north-western side of the harbor, on the margin of a beach of loose sand. The houses are mostly situated on a single street, about 2 miles in length, passing round near the water's edge. A chain of sand hills rises immediately back from the houses, and in some places are partially covered with tufts of grass or shrubs. These hills, with the numerous wind or salt mills, by which the salt water is raised for evaporation, thickly studding the shore throughout the whole extent of the village, give this place a most singular and novel appearance. 110 miles E. S. E. from Boston by land, and 55 by water, and 45 N. from Barnstable by land.

Proutytown, Va., c. h. Taylor co.

Pulaski County, As., c. h. at Little Rock. Bounded N. by White co., E. by St. Francis, Monroe, and Arkansas counties, S. by Jefferson, and W. by Saline, Perry, and Conway counties. Watered by Arkansas and White Rivers, and branches.

Pulaski County, Ga., c. h. at Hawkinsville. Bounded N. by Twiggs co., E. and S. E. by Laurens and Telfair counties, S. by Irwin, and W. by Dooly and Houston counties. Watered by Ockmulgee River and branches, and by branches of Oconee River.

Pulaski County, Ia., c. h. at Winamac. Bounded N. by Stark, E. by Fulton, S. by Cass and White, and W. by Jasper co. Drained by Tippecanoe River and branches.

Pulaski County, Is., c. h. at Caledonia. In the Southern extremity of the state, between the Ohio and Mississippi.

Pulaski County, Ky., c. h. at Somerset. Bounded N. by Lincoln co., E. by Rock Castle, Laurel, and Whitley, S. by Wayne, and W. by Wayne, Russell, and Casey counties. Drained by Cumberland River and branches.

Pulaski, Mn., Jackson co. Watered by the S. branch of the Kalamazoo River, and contains a mineral spring and several ponds. 89 miles W. by S. from Detroit.

Pulaski County, Mo., c. h. at Waynesville. Bounded N. by Osage, E. by Crawford, S. by Texas and Wright, and W. by Camden and Miller counties. Watered by the head branches of Gasconade River, and by branches of Osage River. Surface hilly; soil productive.

Pulaski, Te., c. h. Giles co. On the E. side of Richland Creek. 74 miles S. by W. from Nashville.

Pulaski County, Va., c. h. at Newbern. Bounded N. E. by Montgomery co., S. E. by Floyd and Carroll, S. W. by Wythe, and N. W. by Giles co. Watered by New River. Surface partly mountainous; soil fertile.

Pultney, N. Y., Steuben co. Watered by some small streams flowing into Crooked Lake, which bounds it on the E. Surface chiefly level; soil

clay and calcareous loam. 15 miles N. E. from Bath, and 208 W. from Albany.

Purdy, Te., c. h. McNairy co. On a head branch of Hatchy River. 148 miles S. W. from Nashville.

Putnam County, Fa. On the Upper St. John.

Putnam County, Ga., c. h. at Edenton. Bounded N. by Morgan co., E. by the Oconee River, separating it from Greene and Hancock counties, S. by Baldwin and Jones, and W. by Jasper co. Surface level, and drained by branches of the Oconee; soil fertile.

Putnam County, Is., c. h. at Hennepin. Bounded N. by Bureau and La Salle counties, E. by La Salle, S. by Marshall, and W. by Bureau. The Illinois River and its branches water this county. Surface undulating; soil rich.

Putnam County, Ia., c. h. at Greencastle. Bounded N. by Montgomery, E. by Hendricks and Morgan, S. by Owen, and W. by Clay and Parke counties. Drained by the Walnut Fork of Eel River, and by Big Raccoon and Deer Creeks, which afford good mill sites.

Putnam County, Mo. On the northern border, Drained by the head waters of the Chariton.

Putnam County, N. Y., c. h. at Carmel. Formed from Dutchess co. in 1812. It is bounded N. by Dutchess co., E. by the state of Connecticut, S. by Westchester co., and W. by the Hudson River, and is, with the exception of Essex, the most mountainous county in the state. Soil fertile in the valleys. Its principal wealth is its mineral productions, which consist of superior iron ore, carbonate of lime, serpentine, and plumbago.

Putnam, N. Y., Washington co. Situated between Lakes George and Champlain, and mostly covered by the Palmetown range of mountains. 36 miles N. from Sandy Hill, and 90 N. N. W. from Albany.

Putnam County, O., c. h. at Kalida. Henry co. is on the N., Hancock on the E., Allen on the S., and Van Wert and Paulding counties on the W. Auglaise River and its two eastern branches furnish this county with a good supply of water.

Putnam County, Va. W. part of the state. The Great Kenhawa flows through it from S. E. to N. W. Broken, but fertile.

Putnam Valley, N. Y., Putnam co. This town contains several small lakes, and is watered by the Peckskill, the outlet of Redfire Lake. The surface is covered by the Highlands on the E. and W., with a broad, fertile valley between, giving name to the town. Iron ore and other minerals are found here in large quantities. 9 miles W. from Carmel, and 100 S. from Albany.

Putney, Vt., Windham co. This town is finely located on the W. side of Connecticut River, and embosoms a large tract of excellent intervale land, called the Great Meadows. There is also a good tract of intervale on Sackett's Brook, a fine mill stream, with beautiful falls. Sackett's Brook is a considerable stream, which falls 150 feet in the course of 100 rods. There are various mineral substances in the town. The village is pleasant, and bears the marks of taste and prosperity. On the 19th of August, 1788, a violent tempest prostrated a great part of the forest trees here. In 1770, the town was overrun by immense swarms of worms, which ate up every green thing; also, to a limited extent, in 1823 and 1824. A settlement was commenced and a fort built on the Great Meadows a little previous to the breaking

out of the French war, in 1744. 9 miles E. from Newfane, and 9 N. from Brattleboro'. A railroad passes through the town.

Quemahoning, Pa., Somerset co. Bounded E. by Stony Creek, and drained by McConaughy Run, and Quemahoning, Higgins's, and Will's Creeks. Surface hilly; soil gravelly. 11 miles N. E. from Somerset.

Queen Anne County, Md., c. h. at Centreville. Bounded N. W. and N. by Chester River, separating it from Kent co., E. by Delaware and Caroline co., S. by Talbot co., and W. by Chesapeake Bay. Watered on its S. E. boundary by Tuckahoe Creek. Kent Island, lying in Chesapeake Bay, belongs to this county.

Queens County, N. Y., c. h. at North Hempstead, was incorporated in 1683. It is bounded N. by Long Island Sound and East River, E. by Suffolk co., S. by the Atlantic Ocean, and W. by Kings co., and is watered by several small streams. Surface hilly on the N. and level on the S.; soil warm, productive sand and loam. The Long Island Railroad crosses this county.

Queensbury, N. Y., Warren co. Bounded on the S. by the Hudson River, and watered N. E. by Wood Creek. Surface hilly and undulating, being covered by the Palmetown Mountains on the W.; soil productive. 7 miles S. E. from Caldwell, and 53 N. N. E. from Albany.

Quincy, Fa., c. h. Gadsden co. 23 miles N. W. from Tallahassee.

Quincy, Is., shire town of Adams co. On the E. bank of the Mississippi River. 55 miles W. from Springfield, 172 N. W. from St. Louis, and 625 S. from the Falls of St. Anthony. This flourishing town has been in existence less than 30 years, and promises to become one of the principal towns of Illinois. It is situated on a beautiful bluff, 125 feet above the Mississippi, commanding a fine view of the river for 5 or 6 miles in each direction. It has one of the best steamboat landings on the Mississippi. Quincy was settled chiefly by emigrants from New England, and contains a highly-intelligent and enterprising community, distinguished for good morals, and for its liberality in sustaining the institutions of education and religion. The town is handsomely laid out, and well built, containing several churches, which have neat and tasteful edifices, a large number of stores and mechanics' shops, with steam saw mills, flouring mills, and other manufacturing establishments. There is a large and beautiful public square, on the E. side of which stands the court house, built of brick, at a cost of about \$20,000. The prairie in the vicinity of the town is beautifully rolling and rich, and the whole country forms one of the best agricultural districts in the state. This is a place already of extensive trade, and, as the resources of Illinois become more and more developed, is destined rapidly to grow in wealth and population.

Quincy, Ms., Norfolk co. On Braintree or Quincy Bay, which makes up from Boston Harbor. 8 miles S. by E. from Boston, by the Old Colony Railroad, and 10 E. by S. from Dedham.

This territory, in common with that of Braintree and Randolph, belonged to Boston until the incorporation of Braintree as a town, in 1640. It was the first part of Braintree that was settled, and had been generally called *Mount Wallaston*, for Captain Wallaston, one of the first settlers, in 1625.

In 1792, this part of Braintree was made a separate town, and called *Quincy*, to perpetuate the family name of one of its first proprietors, a name that will ever be dear to the lovers of American liberty.

The surface of the town is diversified by hills, valleys, and plains. The soil is generally of an excellent quality and under good cultivation. There are large tracts of salt meadow in the town, and many large and beautiful farms, which, in respect to soil and skilful management, may vie with any in the state. The Mount Wallaston farm is noted as the site of an early settlement, (1625,) and as the *Merry Mount* of Thomas Morton and his associates. This farm belongs to the Adams estate. The ancestral estate of the Quincy family comprises one of the most beautiful and well-cultivated farms in New England. It is the property of Josiah Quincy, LL. D., an eminent agriculturist, and president of Harvard University from 1829 to 1845.

The village, in the centre of the town, is situated on an elevated plain, and is remarkable for its neatness and beauty. In this village is a stone church, built in 1828, which cost \$40,000. Within its walls is a beautiful marble monument to the memory of the first President Adams and his wife.

The town house in Quincy is a noble building of granite, 85 feet by 55, and is a better specimen of the stone than the walls of the church.

About two miles E. from the village is Quincy Point, at the junction of Town and Weymouth Fore Rivers. This is a delightful spot, and contains some handsome buildings. This point of land, with a peninsula near it, called *Germantown*, are admirably located for ship building, and for all the purposes of navigation and the fishery. Here is a fine harbor, a bold shore, and a beautiful country, within 10 miles of the capital of New England.

In this town, between Quincy and Dorchester Bays, is a point of land called *Squantum*, celebrated as having been the residence of the famous Indian sachem Chichataubut. This place is the *Mos-uetuset*, "a few miles south of Boston," supposed, by some, to have originated the name of the state. Squantum is a rocky, romantic place, 6 miles S. of Boston, and a pleasant resort for fishing and bathing.

The manufactures of the town consist of boots, shoes, leather, vessels, salt, carriages, harnesses, hats, books, coach lace, granite, slatestone, &c., the annual value of which, with the fisheries, amounted, several years ago, to more than half a million of dollars. But the quarrying and working of the granite or sienite, so universally known and justly celebrated as the "Quincy Granite," is the most important and lucrative branch of business.

About two miles back from Quincy Bay is a range of elevated land, in some parts more than 600 feet above the sea, containing an inexhaustible supply of that invaluable building material, so much used and approved in all our Atlantic cities for its durability and beauty. This range of granite extends through Milton, Quincy, and Braintree, but more of it is quarried in Quincy than in either of the other towns. About 100,000 tons of this valuable article is annually quarried and wrought, by the most skilful workmen, into all forms and dimensions, both plain and ornamental. There are in the town about 20 companies engaged in the business,

employing near 1000 hands. Masses of granite have been obtained in these quarries weighing 300 tons each, from which were made the columns of the new Custom House and of the Merchants' Exchange, in Boston. By means of a railroad to the tide waters of Neponset River, and of a canal to the centre of the town, this stone is transported with great expedition and little cost. Several of these companies have contracted to furnish the stone for the new Custom House at New Orleans. It is to be dressed in the smoothest and best manner, and delivered at New Orleans, at a cost of about \$300,000. Further to show the high repute of this stone, we may mention that a contract has been made for the foundations and ornamental parts of a large Custom House at San Francisco.

These quarries of granite to the town of Quincy are of more value than a mine of gold; and it is fortunate for the public that the supply is abundant, as the demand for it from various parts of the United States is constant and increasing.

Quincy has been the birthplace and residence of some of the most distinguished sons of America. Among them were those early and devoted patriots, John Hancock, born here in 1737, and Josiah Quincy, Jr., born February 23, 1744; the two presidents of the United States, John Adams and John Quincy Adams, father and son, the first born October 19, 1735, the second July 11, 1767. The elder President Adams died in Quincy, on the 4th of July, 1826, with the same words on his lips which, on that day 50 years before, he had uttered on the floor of Congress—"Independence forever!" John Quincy Adams died in the Capitol at Washington, February 23, 1848, and was interred in the family tomb at Quincy.

Quoque, N. Y., Suffolk co. On the S. side of Long Island. 235 miles S. S. E. from Albany. It is a resort for sea bathing and sporting.

Rabun County, Ga., c. h. at Clayton. Bounded N. by North Carolina, E. and S. E. by South Carolina, and S. W. and W. by Habersham and Union counties. Watered by Turrore and Chatuga Rivers, which unite at the S. extremity of this county to form the Tugaloo. Surface elevated table land, having the Blue Ridge on its E. border.

Racine County, Wn., c. h. at Racine. Bounded N. by Waukesha and Milwaukee counties, E. by Lake Michigan, S. by Illinois, and W. by Walworth co. Des Plaines, Fox, Pike, and Root Rivers water this county, the surface of which is undulating, and the soil of excellent quality.

Racine, Wn., c. h. Racine co. On Lake Michigan, at the mouth of Root River. 112 miles E. by S. from Madison. A growing and flourishing place.

Rahway, N. J., Essex co. Rahway River and its branches water this town. Surface level; soil red shale. Situated 9 miles S. W. from Newark, and 39 N. E. from Trenton.

Raleigh, Is., c. h. Saline co.

Raleigh, city, and capital of the state of North Carolina, and seat of justice for Wake co., is situated 6 miles W. of the River Neuse, and 27 miles above Smithfield, the nearest ordinary limit of navigation on that river. In some stages of the water, boats ascend to a point within about 8 miles of Raleigh. The city is laid out with great regularity. From a square in the centre, called

Union Square, enclosing an area of 10 acres, 4 broad streets, 99 feet wide, extend, dividing the city into 4 quarters. In the centre of each of these quarters is another square of 4 acres, with streets running therefrom and intersecting the quarters in a similar manner. These streets are 66 feet wide.

The State House at Raleigh is considered as surpassing that of any other state in the Union in the completeness and beauty of its architectural design. It is finely located in the centre of Union Square, and is constructed after the model of the Parthenon at Athens. 166 feet long by 90 feet in width, and is surrounded by massive granite columns, $5\frac{1}{2}$ feet in diameter and 30 feet high. The building is crowned with a beautiful dome. The legislative chambers are spacious and convenient. The cost of erecting this splendid edifice was about \$500,000. The former State House at Raleigh was consumed by fire in 1831, and with it was destroyed a beautiful marble statue of Washington by Canova. The other public buildings are the court house and jail, the governor's house, the office of the secretary of state, a theatre, a market, 2 or 3 banks, and several churches. A railroad extends from Raleigh to Hicksford, about 90 miles N. E., where it connects with the railroad route from Wilmington to Petersburg, Va.

Raleigh, Te., c. h. Shelby co. 220 miles W. S. W. from Nashville.

Raleigh County, Va. New. Taken from Fayette. W. central. Mountainous. Watered by tributaries of the New River, or Upper Kenhawa.

Ralls County, Mo., c. h. at New London. Drained by Salt River and its branches. Surface undulating; soil fertile. Washed on the E. by the Mississippi River.

Ramapo, N. Y., Rockland co. Ramapo and Saddle Rivers water this town, the surface of which is hilly and mountainous, and the soil fertile in the valleys. The New York and Erie Railroad passes through this town. 132 miles S. from Albany.

Ramsay County, Ma., c. h. at St. Paul's. In the angle between the St. Croix and the Mississippi.

Randolph County, Aa., c. h. at McDonald. In the E. part of the State. Drained by the Tallaposa.

Randolph County, As., c. h. at Pocahontas. Bounded N. by Missouri, E. by Greene co., and S. and W. by Lawrence co. The head branches of Big Black River water this county.

Randolph County, Ga., c. h. at Cuthbert. Incorporated in 1828. Bounded N. by Stewart, E. by Lee, S. by Baker and Early counties, and W. by the Chattahoochee River, separating it from Alabama. Drained by Petawlah Creek and branches of Flint River.

Randolph County, Is., c. h. at Kaskaskia. This is the oldest county in the state, with the exception of St. Clair. It is bounded N. by St. Clair and Washington counties, E. by Berry and Jackson, S. and S. W. by the Mississippi River, separating it from Missouri, and W. by Monroe co. Drained by Kaskaskia River and tributaries, and by St. Mary, Horse, and other small creeks. The surface and soil are diversified.

Randolph County, Ia., c. h. at Winchester. Bounded N. by Jay co., E. by Ohio, S. by Wayne co., and W. by Henry and Delaware counties. It is drained by the Missisnewa and the W. fork of White River, has an undulating surface, and a fine soil.

Randolph, Ms., Norfolk co., was the S. parish

of Braintree until its incorporation, in 1793. It was named in honor of Peyton Randolph, of Virginia, the first president of the American Congress. Part of Punkapog Pond lies in the town, and the Manatiouk River rises here, but the town is quite destitute of water power. It is largely engaged in the shoe manufacture. The land is elevated between the waters of Massachusetts Bay and Taunton River. The surface is undulating, and the soil strong and productive. There are 2 pleasant and flourishing villages in the town, E. and W., a short distance apart, between which passes the Boston and Fall River Railroad. 14 miles S. from Boston.

Randolph County, Mo., c. h. at Huntsville. Bounded N. by Macon, E. by Monroe and Audrain, S. by Boone and Howard, and W. by Chariton co. Drained by the E. fork of Chariton River and Silver Creek, both branches of the Missouri. Surface level; soil fertile.

Randolph, N. H., Coos co. Until 1824 this town was called Durand. It is situated directly under the N. end of the White Mountains. Branches of Israel's and Moose Rivers pass through it. The soil is in some parts good. First settlers: this town was granted in 1772 to John Durand and others, of London. 120 miles N. from Concord, and about 20 S. E. from Lancaster.

Randolph, N. J., Morris co. A branch of Rockaway River and the head branches of Black River water this town. Surface mountainous, having Schooley's Mountain in the N., and Trowbridge Mountain in the S. part. Magnetic iron ore of excellent quality is found here. 7 miles N. W. from Morristown.

Randolph, N. Y., Cattaraugus co. Watered by the Alleghany River and some of its branches. Surface hilly; soil suitable for grazing. 20 miles S. W. from Ellicottville, and 312 S. of W. from Albany.

Randolph County, N. C., c. h. at Ashboro'. Bounded N. by Guilford co., E. by Chatham, S. by Moore and Montgomery, and W. by Davidson co. Deep River and branches, and some branches of the Yadkin, water this county. Surface varied; soil fertile.

Randolph, Vt., Orange co. Randolph is one of the best farming towns in the state, and is watered by the second and third branch of White River. These streams and their tributaries afford a number of advantageous situations for mills. There is a variety of timber. The surface is considerably elevated, and the soil productive. There are here 3 pleasant villages, one in the centre of the town, another in the eastern, and the other in the western part. The centre village is very handsomely situated on elevated ground. The West Randolph Academy was incorporated in 1847. This town was chartered in 1781, and was settled 3 or 4 years before. 23 miles S. from Montpelier, and 9 S. W. from Chelsea. The Central Railroad passes through the town.

Randolph County, Va., c. h. at Beverly. Bounded N. by Preston, E. by Hardy and Pendleton, S. by Pocahontas, and W. by Braxton, Lewis, and Barbour counties. Drained by Cheat River and East Fork, head branches of the Monongahela River. Laurel and Cheat Mountains traverse this county from N. to S.

Rangely, Me., Franklin co. This town lies on the Androscoggin River, and at the outlet of Oquossack Lake. It is about 40 miles N. W. from Farmington.

Rankin County, Mi., c. h. at Brandon. Bounded E. by Scott and Smith counties, S. by Simpson co., and W. and N. by Pearl River, separating it from Hinds and Madison counties. Drained by branches of Pearl River.

Raphoe, Pa., Lancaster co. Great Chiques Creek runs on the E. and S., and Little Chiques on the W. border of this town. Surface undulating; soil calcareous loam, sand, and gravel. 12 miles N. W. from Lancaster.

Rapides Parish, La., c. h. at Alexandria. Bounded N. W. and N. E. by Natchitoches and Catahoula parishes, E. by Avoyelles, S. by St. Landry and Calcasieu, and W. by Sabine parish. Drained by Red River and its tributaries, Boeuf and Crocodile Bayous. Soil fertile on the streams, but elsewhere sterile, and in some portions liable to inundation.

Rappahannock County, Va., c. h. at Washington. Bounded N. E. by Fauquier co., S. E. by Culpepper, S. W. by Madison, and N. W. by Page and Warren counties. Watered by the head branches of Rappahannock River.

Raritan, N. J., Hunterdon co. Drained by branches of the Raritan River. 20 miles N. from Trenton.

Ravenna, O., c. h. Portage co. Near a branch of the Cuyahoga, which affords water power, and on the Pennsylvania and Ohio Canal. 140 miles N. E. from Columbus.

Rawlingsville, Aa., c. h. De Kalb co. 153 miles N. E. from Tuscaloosa.

Ray County, Mo., c. h. at Richmond. Bounded N. by Caldwell co., E. by Carroll co., S. by the Missouri River, separating it from Lafayette and Jackson counties, and W. by Clay and Clinton counties. Drained by Crooked River and Fishing Creeks, tributaries of the Missouri.

Raynham, Ms., Bristol co. This town was a part of Taunton until 1731. It was first settled in 1680. Its Indian name was *Hockamock*. The surface is generally level; the soil light, and not very productive. On its southern and eastern borders Raynham is finely watered by Taunton River, which affords power for manufacturing operations, and it contains a number of large and beautiful ponds. 33 miles S. from Boston.

Raymond, Me., Cumberland co. Raymond is watered by Crooked River, and several ponds. This is a good farming town, with 2 villages, and some trade. The inhabitants are principally devoted to agricultural pursuits. It lies 22 miles N. N. W. from Portland. It is bounded on the W. by Naples, and contains some of the sources of Sebago Lake on its S.

Raymond, N. H., Rockingham co. Two branches of the Lamprey River unite in Raymond, and the waters of 2 ponds also fall into it. The Patackaway crosses the N. E. corner. The soil is various; that bordering on the river is productive. In the N. part of the town, near the summit of a hill about 100 feet high, is a natural excavation in a ledge, called the Oven, from the appearance of its mouth. It is a regular arch about 5 feet high, and of the same width, extending into the hill about 15 feet, and terminating in a number of fissures. 25 miles W. by S. from Portsmouth, and 28 S. E. from Concord.

Readfield, Me., Kennebec co. A good township of land. 11 miles W. from Augusta.

Reading, Ct., Fairfield co. This town was incorporated in 1767, and derived its name from Colonel John Read, one of its first settlers. The

soil of the town is good, but the surface is rough and hilly. The business of the people is chiefly agricultural, who live scattered about on their farms. Considerable attention is paid in Reading to the growing of wool. It is watered by Saugatuck and Norwalk Rivers. 60 miles S. W. from Hartford.

Reading, Ms., Middlesex co., was called Lynn Village, and was a part of Lynn until its incorporation in 1644. The surface is pleasantly diversified by hills and valleys. The soil is generally good, in some parts excellent, and the town is watered by Ipswich River. There are two villages in the town — Wood End Village, at the S. part of the town, through which the Boston and Maine Railroad passes, and West Village, about 3 miles N. of the other. 13 miles N. from Boston, and 10 W. from Salem. The shoe manufacture is large.

Reading, N. Y., Steuben co. Watered by a few small streams flowing into Seneca Lake, which bounds it on the E. Surface elevated and rolling; soil well adapted to wheat. 21 miles E. from Bath, and 186 W. from Albany.

Reading, Pa., Adams co. Conewago Creek and Muddy Run water this town. The surface of which is level, and the soil red shale and slate.

Reading, Pa., shire town of Berks co. Situated on the E. bank of the Schuylkill River. 58 miles N. W. of Philadelphia, and 52 E. of Harrisburg. It is built on ground gently rising from the river towards the base of a ridge of hills which passes behind it. The streets are wide and straight, crossing each other generally at right angles, and are dressed with a covering of white gravel, or disintegrated sandstone, which consolidates into a smooth and solid carriage way, superior to that of the McAdamized road. Besides the court house and jail, there are an academy, a female seminary, 3 public libraries, — one of which is German, — 3 banks, and from 12 to 15 churches of the different denominations. The principal churches are the Lutheran, German Reformed, Episcopal, Presbyterian, Methodist, Baptist, Friends, Universalist, and Roman Catholic. The Lutheran Church is a large and handsome structure, with a steeple 201 feet high. The German Reformed Church is of brick, and has likewise a lofty steeple. In these two churches divine service is performed in the German language. Of several weekly newspapers published here, 3 are in the language of the Germans. The court house is a fine building, on elevated ground, commanding an extensive prospect. It has a portico with six columns of red sandstone in front, and presents an imposing appearance.

A large business is done here in the manufacture of hats for the southern and western markets. A cotton factory is in operation here for making fine muslins, which turns out about 8000 yards a day. There is a rolling mill and nail factory, and large flouring mills in the place. White wines of an excellent quality are manufactured here to a considerable amount, from the grapes grown in the vicinity. Reading is supplied with water by an aqueduct from a spring on Penn's Mount, conducted into a reservoir, and distributed through the streets in iron pipes.

The Schuylkill Canal, which commences at Port Carbon, near Pottsville, in the coal region, passes through Reading, and terminates at Philadelphia. The Philadelphia, Reading, and Pottsville Railroad also connects these three places.

The distance of Reading from Pottsville and Port Carbon is about 36 miles. The Union Canal commences at Middletown, on the great Pennsylvania Canal, and unites that canal with the Schuylkill Canal at Reading, thus opening a line of transportation, through this place, between Philadelphia and Pittsburg. These facilities for business confer upon this place eminent advantages for the encouragement of the spirit of enterprise by which the people are distinguished.

This town was laid out in 1748, by direction of Thomas and Richard Penn, proprietors of the province. It was incorporated as a borough September 12, 1783, and reorganized March 29, 1813. It is said to be the largest borough in the United States. The original inhabitants of the place were principally German emigrants from Wirtemberg and the Palatinate, who, by their early preponderance in numbers, gave a decided character to the habits of society. The German language was commonly used in the ordinary transactions of life, in which it still maintains itself to a great extent. During the period of the revolution, Reading was a favorite place of resort for such persons and families from Philadelphia as wished to be somewhat retired from the stormy agitations and dangerous exposures of the city; and thus at that early day the place acquired a character for refinement and fashionable life for which it is still distinguished.

Reading, Vt., Windsor co. The surface of this town is uneven. Towards the W. part is an elevated tract of land, extending through the town from N. to S., from which issue its principal streams. It is worthy of remark that no water runs into this town. In the S. W. part is a natural pond, about 200 rods in length and 80 in breadth. The streams in Reading, though generally small, afford a tolerable supply of water for common mills. The soil is of a middling quality, and affords excellent pasturage. There are 3 villages in the town, Reading Centre Village, South Reading, and Felchville. The settlement was commenced about the year 1772, by Andrew Spear, who removed his family here from Walpole, N. H. 53 miles S. from Montpelier, and 10 W. from Windsor.

Readington, N. J., Hunterdon co. Drained by Rockaway Creek and branches, and by the S. branch of Raritan River. Surface level in the S. E. part, but elsewhere hilly; soil red shale, clay and loam. 8 miles N. E. from Flemington.

Readsboro', Vt., Bennington co. This is a mountainous township, watered by Deerfield River. Much of the land is too elevated to admit of cultivation. When it was first settled is unknown. 12 miles S. E. from Bennington, and 18 W. by S. from Brattleboro'.

Red Bank, N. J., Monmouth co. On the S. bank of Neversink River. 46 miles E. from Trenton. A summer resort for sea bathing and fishing.

Red Bank, Pa., Clarion co. Red Bank, Mahoning, and Beaver Creeks water this town. Surface undulating; soil loam. Alum is found here. 190 miles W. N. W. from Harrisburg.

Redfield, N. Y., Oswego co. It is watered by Salmon River and some of its branches. Surface undulating; soil well adapted to grass. 15 miles E. from Pulaski, and 131 N. W. from Albany.

Redford, Mn., Wayne co. The N. branch of Rouge River and Powers Creek water this town, which lies 13 miles N. W. from Detroit.

Redford, N. Y., Clinton co. On the N. side of Saranac River. 185 miles N. from Albany. Iron ore is found in the vicinity.

Redhook, N. Y., Dutchess co. On the E. side of the Hudson, and watered by a few small streams flowing into it. Surface rolling; soil clay and loam. 22 miles N. from Poughkeepsie, and 51 S. from Albany.

Refugio County, Ts., c. h. at Refugio. S. part, between Aransas Bay and Neuces River.

Red River County, Ts., c. h. at Clarksville. In the N. E. angle of the state, on Red River.

Red Sulphur Springs, Va., Monroe co. On Indian Creek. 40 miles S. W. from the White Sulphur Springs, and 249 miles W. from Richmond. See *Fashionable Resorts*.

Rehoboth, Ms., Bristol co. The original limits of Rehoboth were extensive, comprehending the present town, Seekonk, Pautucket, Attleboro', and part of Swansey; and Cumberland and Barington, R. I. The first white settler in the original limits of the town was William Blackstone, a nonconformist minister of England, who fled from persecution, and sought an asylum in the wilds of America. He was the first white man who lived on the peninsula where the city of Boston now stands. He located himself in what is now Cumberland, R. I., on the river which bears his name. The Indian name of the town was *Wannamoisset*. The surface is varied, with a thin soil, and well watered by Palmer's River, and other fine mill streams. 10 miles S. W. from Taunton, and 3 from the depot at Attleboro', from which to Boston is 31 miles.

Remsen, N. Y., Oneida co. Watered by Black River and some of its branches. A hilly town, with a soil of tolerably good quality. 18 miles N. from the city of Utica, and 96 N. W. from Albany.

Rensselaer County, N. Y., c. h. at Troy. It is bounded N. by Washington co., E. by the states of Vermont and Massachusetts, S. by Columbia co., and W. by the Hudson River. Watered by the Hoosic River, the Poestenkill and Wynantskill. Surface hilly and mountainous on the E., but more level as you approach the Hudson; soil generally good, and in the valleys very fertile. A few beds of marl and some sulphur springs comprise its mineral wealth. The Albany and West Stockbridge, Rensselaer and Saratoga, and Schenectady and Troy Railroads cross this county.

Rensselaerville, N. Y., Albany co. Watered by Catskill and Foxes Creeks. The surface is broken by spurs of the Catskill Mountains; soil mostly rich sandy loam. 24 miles S. W. from the city of Albany.

Reynolds County, Mo. S. E. central. Watered by the Big Black, which flows S. through it.

Rhea County, Te., c. h. at Washington. It is bounded N. E. by Roane co., E. by the Tennessee River, separating it from Meigs co., S. by Hamilton, and W. and N. W. by Bledsoe and Morgan counties. Drained by small streams flowing into the Tennessee.

Rhinebeck, N. Y., Dutchess co. Watered by Landman's Creek on the S. W., and by the Hudson River on the W. Has a level or rolling surface, and the central portions a fertile soil. 17 miles N. from Poughkeepsie, and 57 S. from Albany.

Rice, N. Y., Cattaraugus co. Incorporated in 1846.

Riceboro', Ga., c. h. Liberty co. On Newport

River. 32 miles S. S. W. from Savannah, and 194 S. E. from Milledgeville.

Richfield, N. Y., Otsego co. Watered by a few small streams flowing into Canadegera Lake, which bounds it on the E. Surface high and uneven; soil good sandy and calcareous loam. 13 miles N. W. from Cooperstown, and 69 W. from Albany. In this town, near the head of Canadegera Lake, there is a celebrated sulphur spring, much resorted to.

Richford, N. Y., Tioga co. Watered by East and West Owego Creeks. A somewhat hilly town, with fertile valleys. 17 miles N. from Owego, and 151 S. of W. from Albany.

Richford, Vt., Franklin co. This is a mountainous township, on the line of Canada, and watered by Missisco River and its branches. There is some good land along the river, and the upland, though rough, affords good grazing. The settlement was commenced in 1797, and the town organized in 1799. 50 miles N. by W. from Montpelier, and 24 N. E. from St. Albans.

Richland County, Is., c. h. at Olney. S. E. part.

Richland, N. Y., Oswego co. Shire town alternately with Oswego. It is watered by Salmon River and some smaller streams flowing into Lake Ontario, which bounds it on the W. Surface pleasantly diversified; soil damp, sandy loam, well adapted to grass. 153 miles N. W. from Albany.

Richland County, O., c. h. at Mansfield. N. by Huron, E. by Wayne, S. by Knox, and W. by Marion and Crawford counties. The surface is rolling, and the land excellent for wheat. The branches of Olentangy and Mohican Rivers are the principal waters.

Richland, Pa., Bucks co. Drained by Tihickon Creek and branches. Surface level; soil clay.

Richland District, S. C., c. h. at Columbia. Bounded N. by Fairfield district, E. by Kershaw and Sumpter, S. by Orangeburg, and W. by Lexington district. The Wateree River runs on its E., and the Congaree on its W. and S. border. The soil is very fertile.

Richland County, Wn. In the S. W. part of the state. Washed on the S. by the Wisconsin.

Richmond County, Ga., c. h. at Augusta. Bounded N. E. and E. by the Savannah River, separating it from South Carolina, S. by Burke co., S. W. by Brier Creek, separating it from Jefferson co., and N. W. by Columbia co. Its N. part is crossed by the Augusta and Decatur Railroad.

Richmond, Ky., c. h. Madison co.

Richmond, La., c. h. Madison parish. On the W. side of Roundaway Bayou, at its confluence with Brushy Bayou. 10 miles W. from Mississippi River, and 200 N. W. from New Orleans.

Richmond, Me., Lincoln co. On the W. bank of the Kennebec. 15 miles S. from Augusta.

Richmond, Ms., Berkshire co. The Indian name of this place was *Yokun*, and after its settlement, in 1760, it was called *Yoamtown*; but at its incorporation, in 1765, it took the name of the Duke of Richmond. This town comprises an extensive, fertile, and beautiful valley, enclosed by elevated hills on the E. and W. From these hills enchanting landscapes are presented. This town produces, in great abundance, all kinds of agricultural products common to the most fertile and best cultivated lands in the state, a great variety of woods, iron ore, good brick clay, limestone, and handsome marble. There is some water power in the town. In the valley in this

town is a wide street, extending some miles, on each side of which are neat farm houses and mechanics' shops, making a fine appearance. Through this valley the Western Railroad passes. 8 miles S. W. from Pittsfield, and 159 W. from Boston.

Richmond, Mo., c. h. Ray co.

Richmond, N. H., Cheshire co., is washed by branches of Ashuelot and Miller's Rivers, which fall into the Connecticut. The ponds are 3 in number, one of which is one of the sources of Miller's River. The soil is favorable for grain. The land is generally level. First settlers, people from Massachusetts and Rhode Island, about 1758. 12 miles S. from Keene, and 70 S. W. from Concord. The Cheshire Railroad passes through the town.

Richmond County, N. Y., c. h. at Westfield, was incorporated in 1683, and comprises the whole of Staten Island. It is bounded N. by Newark Bay and Kill Van Kull, E. by New York Bay and the Narrows, S. by Raritan Bay and New York Lower Bay, and W. by Staten Island Sound, which separates it from New Jersey. Surface hilly and broken, Richmond Hill, the highest peak, being elevated 307 feet above the Atlantic. Much of the land is of good quality, and on the shores are valuable fisheries. Hemic iron ore, granite, and several other minerals are found here.

Richmond, N. Y., c. h. Richmond co. Near the middle of Staten Island. 159 miles S. by W. from Albany.

Richmond, N. Y., Ontario co. Watered by Honeoye Lake and its outlet. Surface hilly; soil clay loam, based upon lime and slate. 14 miles W. from Canandaigua, and 209 from Albany.

Richmond County, N. C., c. h. at Rockingham. Bounded N. by Montgomery co., E. by Moore, Cumberland, and Robeson counties, S. by South Carolina, and W. by the Great Pedee River, separating it from Anson co. Lumber River runs on its E. border, and branches of the Little Pedee drain the interior.

Richmond, Pa., Berks co. Watered by Moslem Creek, a mill stream. Surface level; soil rich calcareous loam and gravel.

Richmond, R. I., Washington co. Richmond is bounded on the W. by Wood River, and on the E. by the River Charles. Other streams water the town, which, with the Wood and Charles, give it an excellent water power. Manufacturing establishments of various kinds flourish on its streams, particularly those of cotton. The soil is a gravelly loam, with an uneven surface. The agricultural productions of the town are very considerable.

This is an excellent township for grazing; a large amount of wool and of the productions of the dairy is annually transported. The Providence and Stonington Railroad passes through the S. E. corner of the town. 30 miles S. S. W. from Providence.

Richmond, Vt., Chittenden co. The town is finely watered by Winooski and Huntingdon Rivers, on the banks of which are good mill sites and large tracts of beautiful meadow. The village is neat, and is a healthy place, noted for the longevity of its inhabitants. The first permanent settlement was made here in the spring of 1784. 25 miles N. W. from Montpelier, and 13 S. E. from Burlington.

Richmond, Va. City, port of entry, capital of

the state and seat of justice of Henrico co. It is pleasantly situated on the N. side of James River, immediately below the falls, and at the head of tide water. It is 23 miles N. from Petersburg, and 117 W. from Washington. The population, in 1800, was 5737; 1810, 9785; 1820, 12,067; 1830, 16,060; 1840, 20,153; 1850, 27,483. This place was founded by an act of the state legislature in 1742; and the seat of government was removed here from Williamsburg, in 1780. At that time it contained about 300 houses. Directly opposite to Richmond, connected with it by two bridges, is Manchester, which may be regarded as a suburb of the city.

From its peculiarly-favorable situation, between the upper and the lower country, Richmond is one of the most healthy cities in the United States. Seldom, if ever, has it been visited with yellow fever, or any desolating epidemic. The city is divided into two unequal parts by a valley, through which passes the Shockoe Creek, to enter James River. It is chiefly built upon the more elevated grounds on either side of this depression, which present a beautiful variety of surface, and afford in many parts highly picturesque situations for dwellings and for public edifices. Shockoe Hill, on the W. part of the city, and Richmond Hill stand opposite to each other, with the creek between them; and near the eastern limit is Church Hill, which is also a commanding eminence. Over these elevated grounds, and the valley between them, elevated towards the river, the streets and buildings of the city are spread. The streets mostly cross each other at right angles, and are most commonly 65 feet in width. The city was laid out to contain about 3 square miles, much of which is not yet built up. As built, it covers an area about 3 miles long and three fourths of a mile wide. The city contains from 1500 to 2000 dwellings, something more than half of which are of brick, and the remainder of wood. Near the brow of Shockoe Hill, which is an elevated plain, and a favorite place of residence, is Capitol Square, a beautiful public ground, containing about 9 acres, surrounded by a handsome iron railing, ornamented with gravel walks, and shaded with a variety of trees. In the centre stands the State House, which has excited the admiration of travellers for its commanding position, and its chaste yet beautiful proportions. It was constructed after a model brought by Mr. Jefferson from Nimes, in France. It has a portico in front, with an entablature supported by lofty Ionic columns of fine proportions and imposing appearance. In an open hall, in the centre of the building within, is placed a marble statue of Washington, by Houdon, a French artist, which was erected in 1788, during the lifetime of Washington. The following is the inscription on its pedestal, from the pen of Mr. Madison: "The General Assembly of the commonwealth of Virginia have caused this statue to be erected, as a monument of affection and gratitude to George Washington, who, uniting to the endowments of the hero the virtues of the patriot, and exerting both in establishing the liberties of his country, has rendered his name dear to his fellow-citizens, and given the world an example of true glory."

Contiguous to the State House is the City Hall, an elegant and costly edifice of Grecian architecture, having a portico with 4 Doric columns at each end, containing accommodations for the city

courts, the common council, and various offices. The penitentiary, in the western suburbs of the city, is an immense building, surrounding a hollow square, 300 feet long and 110 feet broad. Several acres of ground enclosed, besides, are connected with it. The armory is another large edifice, 320 feet long and 280 feet wide. The almshouse, in the northern suburb of the city, has also a spacious edifice well adapted to its purpose. Among the charitable institutions of the city is a Female Orphan Asylum, supported partly by funds of the corporation, and partly by private munificence. There is likewise a public school for the education of poor children of both sexes, with a convenient edifice, which is under the superintendence of trustees appointed by the city council, and is sustained by annual appropriations from the literary fund of the state, and from the treasury of the city. Among the public institutions is the Virginia Historical and Philosophical Society, founded in 1831, and since incorporated.

Richmond contains from 16 to 20 churches of the various denominations; among which are 3 Episcopal, 2 Presbyterian, 3 Methodist, 3 Baptist, a Unitarian, a Campbellite, a Friends, a Roman Catholic, and a Jews' Synagogue. Some of these have large and elegant edifices. The Monumental Episcopal Church stands upon the site formerly occupied by the old Richmond Theatre, which was destroyed by fire during a performance, involving the destruction of many valuable lives, among which was that of the governor of the state, George William Smith. On the monument on its W. side is the following inscription: "In memory of the awful calamity that, by the providence of God, fell on the city on the night of the 26th of December, in the year of Christ 1811, whereby, in the sudden and dreadful conflagration of the Richmond Theatre, many citizens of different ages and both sexes, distinguished for talents and for virtues, respected and beloved, perished in the flames, and in one short moment public joy and private happiness were changed into universal lamentation, this monument is erected, and the adjoining church dedicated to the worship of Almighty God; that, in all future times, the remembrance of this mournful event on the spot where it happened, and where the remains of the sufferers are deposited in one urn, may be united with acts of penitence and devotion. Above 60 killed and many others maimed." There is now one theatre in Richmond, but it is said not to be extensively patronized.

Among the most splendid and useful of the public works of the city are its waterworks, commenced in 1830, and completed at an expense of about \$120,000. By 2 forcing pumps, worked by water power, 800,000 gallons of water, in 24 hours, are lifted from James River into 3 reservoirs containing 1,000,000 gallons each, from which it is distributed over the city in pipes, and at convenient points along these pipes are hydrants for the supply of the fire department.

Richmond is about 150 miles from the mouth of James River by the course of the channel, and 50 or 60 above City Point, where the Appomattox empties into the James River. Vessels drawing 14 feet of water can come up to the bar 5 or 6 miles below the city, and those drawing not more than 10 feet come to its wharves at the ordinary tides. The tide rises at Richmond 4 feet. The channel of the river is winding, which, with the distance from the ocean, is a considerable im-

pediment to navigation. Several steamboats are employed in towing vessels to and from City Point. About 100 vessels visit the port during the year. A line of 5 schooners sails once a week to Petersburg, and another line, of the same number, once a week for New York. 3 steamboats form a line for passengers to Norfolk; and 2 steampackets a line to Baltimore. The principal exports from Richmond are flour, tobacco, and coal, the annual value of which is between six and seven millions. A canal has been constructed from Richmond to Lynchburg, and beyond that place. It was first constructed to pass the falls in James River in 1794, and afterwards, in 1835, extended to Lynchburg. A railroad passes through Richmond from Fredericksburg to Petersburg, and thence to Weldon on the Roanoke River, where it connects with other southern railroads. It crosses James River, at Richmond, on a high bridge constructed for the purpose. The most important interest of Richmond, however, is comprised in its manufactures. In the falls, on the James River, extending about 6 miles, it possesses an immense water power, which, although largely improved, is capable of furnishing much greater advantages still to future enterprise. Upon these falls have been erected very extensive flouring mills, iron works of various descriptions, and a very large cotton factory.

The municipal government of Richmond is administered by a mayor, — who is elected by the city council, — a recorder, and 11 aldermen. The recorder and aldermen are chosen from 27 individuals elected by the people, and the remaining 15 compose the city council.

Richmond County, Va., c. h. at Richmond Court House. Bounded N. and E. by Westmoreland and Northumberland counties. S. by Lancaster co., and W. by the Rappahannock River separating it from Essex co.

Rich Woods, Mo., Miller co.

Ridgebury, Pa., Bradford co. Drained by Bentley and South Creeks, branches of Tioga River. Surface hilly; soil gravelly loam. 18 miles N.W. from Tonawanda.

Ridgefield, Ct., Fairfield co. Ridgefield, or, as the Indians called it, *Caudatowa*, a word signifying *high land*, is very elevated, and commands extensive views of Long Island Sound and of the surrounding country. The soil is a strong gravelly loam, and productive of grass and grain. It is watered by Saugatuck and Norwalk Rivers, and by a branch of the Croton. 31 miles W. by N. from New Haven.

Ridgeway, N. Y., Orleans co. Oak Orchard Creek waters this town, the surface of which is chiefly level, and soil fertile. 10 miles W. from Albion village, and 262 N. of W. from Albany.

Ridgeway, Pa., Bradford co. Drained by Clarion River, and Toby's and Kersey's Creeks and their branches. Surface undulating; soil fertile.

Ridgeway, Pa., c. h. Elk co.

Riga, N. Y., Monroe co. Watered by Black Creek. Surface undulating; soil productive. The Tonawanda Railroad passes through this town. 14 miles S. W. from Rochester, and 239 N. of W. from Albany.

Riley, Me., Oxford co. This is a township of rough and unprofitable land, with few inhabitants, near to and S. of Speckled Mountain, on the line of New Hampshire. It lies 30 miles N. W. from Paris.

Rindge, N. H., Cheshire co. This town is very

rocky, but productive of butter and cheese of a good quality. Its other productions are numerous and valuable. There are 13 ponds in this town, the largest of which are called Manomack, Emerson, Perley, Long, Grassy, and Bullet. These ponds abound with fish. Rindge is a favorite resort for anglers at the present day. There is a small elevation of land in Rindge, from which the waters, that issue on one side, descend into the Merrimac, and those on the other into the Connecticut. First settlers, Jonathan Stanley, George Herritt, and Abel Platts, in 1752. 20 miles S. E. from Keene, and 50 S. W. from Concord.

Ringold County, Io. On the southern border, W. *Rio Grand City, Ts.*, c. h. Starr co.

Ripley County, Ia., c. h. at Versailles. Bounded N. by Decatur and Franklin counties, E. by Dearborn and Ohio, S. by Switzerland and Jefferson, and W. by Jennings co. Drained by Langherty and Graham's Creeks, branches of the Ohio River. Surface mostly level; soil favorable to the growth of grain.

Ripley, Me., Somerset co. A good farming town. 60 miles N. by E. from Augusta.

Ripley County, Mo., c. h. at Van Buren. Bounded N. by Shannon and Reynolds counties, E. by Wayne co., S. by Arkansas, and W. by Oregon co. Watered by Big Black, Current, and Eleven Point Rivers. Surface hilly; soil fertile on the margins of the streams.

Ripley, N. Y., Chautauque co. Watered by Twenty Mile Creek and other small streams flowing into Lake Erie, which bounds it on the N., it being the most western town in the state, situated on the lake. Surface hilly; soil fertile. 10 miles W. from Mayville village, and 336 from Albany.

Ripley, O., Brown co. A considerable town, on the N. side of the Ohio. 56 miles above Cincinnati.

Ripley, Te., c. h. Lauderdale co. On Cane Creek, a branch of Big Hatchee River. W. from Nashville 175 miles.

Ripton, Vt., Addison co. This is a mountainous township, the surface and soil of which are too broken and cold for much cultivation. Middlebury River, and the turnpike from Royalton to Vergennes, pass through it. This town was granted in 1781, and chartered to Abel Thompson and associates. 26 miles S. W. from Montpelier, and 9 E. from Middlebury.

Ritchie County, Va., c. h. at Ritchie. N. W. part, near the Ohio. Surface broken. Watered by the two forks of Hugh's River, a tributary of the Little Kanhawa.

Ritchie, Va., c. h. Ritchie co.

Riverhead, N. Y., c. h. Suffolk co. It is washed on the N. by Long Island Sound, and S. by Great and Little Peconic Bays and Peconic River. Surface level, with the exception of a range of low hills extending E. and W. about one mile S. from the Sound; the soil is chiefly sandy loam. 90 miles E. from the city of New York, and 235 S. E. from Albany.

Roane County, Te., c. h. at Kingston. Bounded N. E. by Anderson co., E. by Knox and Blount, S. by Monroe, McMinn, and Meigs, and W. and N. W. by Rhea and Morgan counties. Drained by Tennessee and Clinch Rivers and branches.

Roanoke County, Va., c. h. at Roanoke Court House. Bounded N. by Botetourt co., E. by Bedford, S. by Franklin, and W. by Montgomery co. Watered by the head branches of Staunton River

Robertson County, Te., c. h. at Springfield. Bounded N. by Kentucky, E. by Sumner co., S. by Davidson, and W. by Montgomery co. Watered by Sycamore Creek and branches of Red River.

Robertson County, Ts., c. h. at Franklin. E. central. On the E. side of the Brazos.

Robeson County, N. C., c. h. at Lumberton. Bounded N. by Cumberland co., E. and S. E. by Bladen and Columbus counties, S. W. by South Carolina, and N. W. by Richmond co. Drained by Lumber River and other head branches of the Little Pedee.

Robeson, Pa., Berks co. Drained by Alleghany and Hay Creeks, branches of the Schuylkill River, which bounds it on the N. E. Surface hilly; soil gravelly and poor.

Robinson's, Is., c. h. Crawford co.

Robinson, Pa., Alleghany co. This town is bounded N. by the Ohio River, S. E. by Charlier's Creek, and W. by Montour's Run. Surface hilly; soil loam. Situated 6 miles N. W. from Petersburg.

Robinstown, Me., Washington co. On the St. Croix, opposite St. Andrews. 16 miles N. N. W. from Eastport. It is largely concerned in the lumber trade.

Rochester, Ia., c. h. Fulton co., lies a little S. from Tippecanoe River, and 95 miles N. from Indianapolis.

Rochester, Ms., Plymouth co. This is a large township on the N. W. side of Buzzard's Bay. It was called *Seipican* by the Indians, and signifies a *resting-place*. The location of Rochester for navigation and the fisheries is exceedingly favorable, it having 2 excellent harbors, Mattapoiset and Sippican. Mattapoiset River, which rises in Snipatuit Pond, a large sheet of water in the town, Sippican, and Weweantic Rivers afford a good water power. The surface is pleasantly varied; some parts are rocky and unfit for cultivation, while other parts vary from a tolerable soil to the very best. The 2 principal villages are Mattapoiset and Sippican. Part of Rochester has been incorporated as the new town of *Marion*. 9 miles E. from New Bedford.

Rochester, Mn., Oakland co. Near the junction of Paint Creek with Clinton River, both streams affording good hydraulic power. 128 miles N. W. from Detroit.

Rochester, N. H., Strafford co. Salmon Fall, Cochecho, and Isinglass Rivers are in this town. The two former afford valuable mill sites. The principal village stands on the Cochecho, and is called Norway Plains. There is another village, about 2 miles S. W. from this, called *Squamana-gonnick*, the Indian name of the falls in the Cochecho, at that place. Much of the soil is good; the surface is uneven, with several swells, the principal of which is Squamanagonnick Hill, on which are valuable farms. In the W. part is a large tract of oak land, which is hard and stony, and has a deep, rich soil. 10 miles N. W. from Dover by railroad.

Rochester, N. Y., city, port of entry, and seat of justice for Monroe co., is situated on both sides of the Genesee River, 7 miles S. from its entrance into Lake Ontario, 250 miles W. of Albany by the railroad, and 75 miles by railroad E. by N. from Buffalo. In 1810, this place had not an existence, and was not incorporated even as a village until 1817. Population in 1820, 1502; in 1830, 9269; in 1840, 20,191; in 1850, 36,561.

Rochester owes its rapid growth and present flourishing condition to the peculiar advantages of its location upon the falls at this place in the Genesee River, furnishing an amount of hydraulic power which is equalled by that of very few localities in the United States; and at a point so easily accessible, by every means of transportation and travel in use, from the west, from Canada, and the most important places in the Atlantic States. The Genesee River is navigable for schooners and steamboats from Lake Ontario to the landing at Carthage, 2½ miles below the centre of the city, to which point a railroad has been constructed. The great Erie Canal, uniting the waters of the western lakes with the Hudson at Albany, here crosses the river, and passes through the centre of the city. The Genesee Valley Canal is in progress to connect it with Olean on the Alleghany River, and thence, by that river, with the Ohio at Pittsburg. The chain of railroads from Boston and New York to Buffalo passes through this city, making it a great thoroughfare of travel between the eastern and western sections of the country, and giving it a ready access to the most important intermediate places.

The falls in the Genesee River, at Rochester, have an entire descent of 268 feet, consisting of 3 perpendicular pitches and 2 rapids. After passing over one of the rapids, the stream plunges down the first great cataract, perpendicularly, 96 feet. Owing to the peculiar configuration of the ledge here, which recedes up the river from the centre to the sides, the water is poured over the precipice in 3 distinct sheets, giving an exceedingly picturesque beauty to this splendid waterfall. From a rock, called *Table Rock*, in the centre of this fall, the notorious Sam Patch made his last and fatal leap. Below the first cataract the river flows broad and deep for a mile and a half to the second, where it makes a perpendicular pitch of 20 feet; and thence pursues a noisy and rapid course for about 25 rods, to the third and last fall, over which it pours its volume down a perpendicular descent of 105 feet. Through the entire distance from the upper to the lower fall, the river flows through a narrow ravine of more than 100 feet in depth. The river is here flowing N., and the railroad passes about 100 rods S. of the first fall; so that passengers in the cars are not apprised, by any thing which attracts their notice, of the interesting natural curiosity to which they are approaching.

The depression of the stream commences considerably above the first cataract, and in a distance of about 500 yards gives a fall of 12 feet, available for hydraulic purposes. Canals have here been excavated on each side of the river for the mills. On the W. side the water is again taken out below the rapids for the same purposes. Another power of considerable amount is created by the feeder for the Erie Canal, which comes from the river nearly 2 miles above. The falls at Rochester afford a water power estimated equal to 1920 steam engines, of 20 horse power which would amount, according to the valuator of steam power in England, to the great sum of \$9,718,272, for its annual use. The leading purpose to which a portion of this immense power has been applied is the flouring business, which is carried on here on a very large scale, and which succeeds, legitimately enough, to the first business ever established at Rochester—that of a grain mill, erected by a solitary pioneer, then many

miles distant from all other inhabitants. This man was an Englishman, a person of extraordinary enterprise, who had been the builder of Soho Square in London, but who, after proving peculiarly unsuccessful in that undertaking, had sought to repair his fortunes in this country. Having purchased the land, he located himself upon these falls, in what was then a wilderness, without civilized inhabitant for 50 miles to the eastward. In the year 1809, the author of this work, having penetrated to this spot, while as yet the nearest inhabitants on the E. or S. were about 30 miles distant, enjoyed the hospitality of this worthy gentleman, who, at that time, having been visited with affliction in the loss of his wife, which had left him with one only daughter as the companion of his loneliness, had become weary of his situation, and would have parted with his possessions, covering all which the city of Rochester now covers, with his improvements, his cabin, and his mill, for \$400. The author has been told that the Eagle Hotel now stands upon the spot which this house once occupied.

Rochester is handsomely laid out on both sides of the river, though not with entire regularity. The E. and W. parts of the city are connected by three bridges. Buffalo Street, which passes over the central bridge, is a straight and broad street, running through the centre of the city. The Erie Canal passes, in a serpentine course, through the city, and is carried over the river by a splendid aqueduct, 804 feet long, resting upon 11 arches, erected at a cost of \$80,000. The city is generally well built, chiefly with brick, and many of the blocks of stones, as well as private dwellings, are elegant structures. Some of the churches and other public edifices are handsome buildings. The principal hotels are the Eagle, American, New Mansion House, Congress Hall, Clinton, Rochester, Island House, &c. Some of the flouring mills and other manufactories are very large structures. Of these the Globe Buildings are the largest and most remarkable.

Rochester, N. Y., Ulster co. Watered by Rondout Creek and some of its branches. The Shannangunk Mountain partly covers this town; soil clay and loam. 16 miles S. W. from Kingston, and 74 S. S. W. from Albany.

Rochester, Pa., Beaver co. On the E. bank of Beaver River, at its confluence with the Ohio.

Rochester, Vt., Windsor co. The principal stream is White River; it receives a considerable tributary from the W. On each of these streams are good situations for mills. Rochester is mountainous and broken, but contains much good land. The timber is mostly hard wood. There is a pleasant village situated near the centre of the town, on the eastern bank of White River. A part of Goshen was annexed to Rochester in 1847. The settlement was commenced about the close of the revolutionary war. 30 miles S. S. W. from Montpelier, and 37 N. W. from Windsor.

Rock County, Wn., c. h. at Janesville. Bounded N. by Dane and Jefferson counties, E. by Walworth co., S. by Illinois, and W. by Green co. Drained by Rock River and branches. Surface level, a large part being prairie; soil fertile.

Rockaway, N. Y., Queens co. Near the Atlantic shore, on Rockaway Bay. 168 miles S. from Albany. Near by is the famous Rockaway Beach. See *Fashionable Resorts*.

Rock Bridge, Mo., c. h. Ozark co.

Rock Bridge County, Va., c. h. at Lexington. Bounded N. by Augusta co., E. by Amherst, S. by Bedford and Botetourt, and W. by Alleghany and Bath counties. Drained by North, a head branch of James River. Surface mountainous; soil very fertile in the valleys. The county derives its name from the celebrated natural bridge over Cedar Creek.

Rock Castle County, Ky., c. h. at Mount Vernon. Bounded N. and N. E. by Garrard and Madison counties, S. E. by Rockcastle Creek, separating it from Laurel co., S, W. by Pulaski, and N. W. by Lincoln co. Drained by branches of Dick's and Rockcastle Rivers. Surface elevated, separating the streams flowing into the Cumberland from those flowing into the Kentucky River.

Rockford, An., c. h. Coosa co.

Rockford, Is., c. h. Winnebago co. On a high prairie on the W. bank of Rock River. Steamboats ascend to this place, where they are stopped by the rapids, which afford immense water power N. from Springfield 203 miles.

Rockford, N. C., c. h. Surry co.

Rock Hill, Pa., Bucks co. Drained by Perkiomen and branches of Tohickon Creek. Surface hilly; soil gravelly. 111 miles E. from Harrisburg.

Rockingham County, N. H. Portsmouth and Exeter are the shire towns. Bounded N. by Strafford co., E. by the Atlantic, from the mouth of Piscataqua River to the line of Massachusetts, S. by the state of Massachusetts, and W. by the counties of Merrimac and Hillsboro'. Its greatest length is 34 miles, its greatest breadth is about 30 miles. There are no remarkable elevations in this county. The surface is uneven; soil fertile and very productive. The highest point is Saddleback Mountain, from which are fine views. The rivers are the Lamprey, Exeter, Beaver, and Spigot. Great Bay is the largest collection of water. Massabesick Pond is picturesque from its numerous islands and the surrounding elevations. The other principal ponds are Islandy, Country, and Pleasant.

Rockingham County, N. C., c. h. at Wentworth. Bounded N. by Virginia, E. by Caswell co., S. by Guilford, and W. by Stokes co. Drained by the head branches of Haw and Dan Rivers. Surface quite elevated.

Rockingham, Vt., Windham co. Connecticut River washes the eastern border of this township. It is also watered by Williams and Saxton's Rivers. These streams afford a great number of valuable sites for mills. The surface of Rockingham is somewhat broken, but the soil is in general warm and productive. Bellows Falls are in Connecticut River, near the S. E. corner of this town. In 1785, Colonel Enoch Hale erected a bridge over the Connecticut, at these falls. Around these falls is an interesting locality of minerals. The rocks are principally gneiss. There are in Rockingham several pleasant villages, Bellows Falls, Rockingham, Saxton's River, and Cambridge Port villages. These are very neat, and contain many handsome houses. The settlement was commenced in 1783, by Moses Wright, Joel Bigelow, and Simeon Knight, who emigrated from Massachusetts. 85 miles S. from Montpelier, and 18 N. E. from Newfane. This place communicates with Boston by the Cheshire and other roads, with Burlington by the Rutland Railroad, and also by railroad with the towns above and below it on the Connecticut River.

Rockingham County, Va., c. h. at Harrisburg. Bounded N. by Hardy co., N. E. by Shenandoah and Page, S. E. by Greene and Albemarle, S. W. by Augusta, and N. W. by Pendleton co. Drained by Shenandoah River and tributaries. Surface hilly, the Blue Ridge lying on the S. E., and Branch Mountains on its N. W. border; soil very fertile on the streams.

Rock Island County, Is., c. h. at Rock Island. Bounded E. by Whitesides and Henry counties, S. by Mercer co., and W. and N. by the Mississippi River, separating it from Iowa. The Mississippi and Rock Rivers enclose the N. part of this county, forming a large island. Surface diversified; soil fertile, particularly on the Mississippi, where it consists of rich alluvion.

Rock Island, Is., c. h. Rock Island co.

Rockland, Me., Lincoln co. 38 miles S. E. from Augusta. Formerly known as East Thomaston, and taken from Thomaston in 1848. Situated on the W. coast of Penobscot Bay, and includes the peninsula of Owl's Head. It has a fine harbor, and is famous for the manufacture of lime, obtained from the inexhaustible limestone ledges in the vicinity. There are annually made at this place, and sent to market, mostly in vessels owned here, near half a million casks of lime of superior quality, the reputation of which is well known on all the maritime coast of the United States.

Owl's Head presents many romantic sea views, and is a favorite place of resort during the summer season. It has steamboat communication with Boston and Bangor, from which latter place it is distant 55 miles S. Sometimes as many as 500 vessels pass it in a day.

Rockland County, N. Y., c. h. at Clarkstown. Taken from Orange co. in 1798. It is of a triangular form, being bounded on the W. and N. by Orange co., E. by the Hudson River, and S. by the state of New Jersey. Surface hilly and mountainous; soil chiefly fertile. Superior variegated marble, magnetic oxide of iron, and several other mineral productions are found in large quantities. The New York and Erie Railroad winds through this county.

Rockland, N. Y., Sullivan co. The Big Beaver Kill and its tributaries water this town; the surface of which is hilly and mountainous, and the soil gravelly loam, fertile in the valleys. 18 miles N. from Monticello, and 114 S. W. from Albany.

Rockland Lake, N. Y., Rockland co. The lake is 5 miles in circumference, abounds in fish, and furnishes the finest ice for New York market.

Rockport, Ia., c. h. Spencer co. On a high bluff on the N. W. bank of Ohio River. 162 miles S. S. W. from Indianapolis.

Rockport, Ms., Essex co. This was a part of the town of Gloucester until its incorporation in 1840, when it received the appropriate name of Rockport. It comprises all the seaward portion of the extremity of Cape Ann, with its islands, and that part of Gloucester long known as Sandy Bay. There are two pleasant villages in the town, Sandy Bay and Pigeon Cove, about a mile apart; at the latter village are inexhaustible quarries of excellent granite. Artificial harbors have been constructed at both villages. Although the town derives its name from the character of its shores and surface, it contains many large tracts of clear land. This town is a resort for many strangers during the summer months, who

here enjoy refreshing sea breezes and the sublimity of ocean views. 4 miles N. E. from Gloucester Harbor, and 32 N. E. from Boston.

Rockton, N. Y. Herkimer co. See *Appendix*.

Rocky Mount, Va., c. h. Franklin co.

Rockville, Ia., c. h. Parke co.

Rockville, Md., c. h. Montgomery co. At the head of Watts Branch of Potomac River. 56 miles W. from Annapolis.

Rodman, N. Y., Jefferson co. Watered by Sandy Creek. Surface undulating; soil fertile sandy and clay loam. 11 miles S. from Watertown, and 154 N. W. from Albany.

Rogersville, Te., c. h. Hawkins co.

Rollin, Mn., Lenawee co. Watered by Tiffin's and Bean Creeks. Soil very favorable to the growth of grain. 71 miles S. W. from Detroit.

Rollinsford, N. H., Strafford co. New; taken from Somesworth.

Rome, Ga., c. h. Floyd co. At the junction of Etowah and Oostanaula Rivers. 161 miles N. W. from Milledgeville.

Rome, Mn., Lenawee co. This town is watered by the head branches of Beaver Creek. Soil fertile, yielding fine crops of grain. 70 miles S. W. from Detroit.

Rome, N. Y., Oneida co. Half shire town. It is watered by the Mohawk River and Wood Creek, which are connected in this town by a portage of a mile in length. Surface level, or slightly uneven; soil fertile, particularly in the Mohawk valley. 107 miles N. W. from Albany.

Rome, Me., Franklin co. A good township. 19 miles N. N. W. from Augusta.

Romney, Va., c. h. Hampshire co. On the E. side of the S. branch of Potomac River. 138 miles N. N. W. from Richmond.

Romulus, N. Y., Seneca co., is bounded on the E. by Cayuga, and W. by Seneca Lakes. Surface high in the centre; soil fertile, and well adapted to wheat. 12 miles S. from Waterloo, and 176 W. from Albany.

Rondout, N. Y., Ulster co. On the N. side of Rondout Creek, 1 mile from its entrance into Hudson River, and 59 miles S. from Albany. It is a depot of Lackawana coal for the Delaware and Hudson Canal Company.

Root, N. Y., Montgomery co. 8 miles S. of the village of Fonda, and 48 W. of Albany. The township is drained by 2 or 3 small streams flowing into the Mohawk River, which forms its N. boundary. The soil is a fertile loam, resting on slate and limestone formation.

Mitchell's Cavern is a remarkable cave in the rocky cliffs near the river, first explored in 1821. 14 apartments, it is said, have been visited, some as deep as 500 feet beneath the surface; the ceilings, walls, and floors of which are ornamented with stalactites, stalagmites, and various incrustations.

On the Plattekill, a small stream which runs N. into the Mohawk, there is a waterfall with a perpendicular descent of 50 feet. About a mile above this fall a vein of lead ore, found at the bottom of the creek, has been wrought to some extent by a company incorporated for the purpose.

Roscoe, O., Coshocton co. Situated on the Ohio Canal, at the junction of the Walhonding and Tuscarawas Rivers, which unite to form the Muskingum, opposite to Coshocton, the county seat, with which it is united by a bridge crossing both rivers just above their junction. It is 83 miles N. E. from Columbus, and 30 N. from Zanesville. The Walhonding Canal, which extends to Roch-

ester, a distance of 25 miles, unites with the Ohio Canal at this place. Roscoe is therefore a great depot for wheat and other merchandise on these canals and rivers. In times of high water, steamboats occasionally run up to this point on the Muskingum. Roscoe, by its position on the canals, at an elevation of 40 feet above the level of the Muskingum, possesses excellent facilities for being made a great manufacturing place. There are at present flouring mills, saw mills, and other establishments of less note, but occupying only a small part of the privilege which might here be made available.

This town was first laid out in 1816, by James Calder, and went under the name of Caldersburg, until, an additional territory having been united with it, it was called Roscoe, from the English author of that name. From its natural situation this is a very healthful and beautiful place. From the hills back of the town a fine view is presented of the rivers and their valleys, above and below, which are here united.

Rose, N. Y., Wayne co. Watered by several small streams flowing N. into Lake Ontario. Surface undulating; soil gravelly loam. 7 miles N. from Lyons, and 181 W. from Albany.

Rosendale, N. Y., Ulster co. On the Rondout Creek, near the line of the Delaware and Hudson Canal, about 55 miles S. from Albany, and 90 N. from New York. It is 6 miles W. from Kingston. There is a very large water power at this place not yet occupied to any great extent. The best hydraulic cement is found here, and manufactured in large quantities.

Near the high falls of the Rondout, about 2 miles below this place, is a mineral spring of considerable celebrity. 53 out of 84 parts of its solid contents consist of chloride of sodium. The others are lime and magnesia, in various combinations. Of the gaseous contents, 12 cubic inches are sulphuretted hydrogen, and 14 carbonic acid.

Rotterdam, N. Y., Schenectady co. Bounded on the N. by the Mohawk River. Has a rolling surface and a fertile soil, composed of sandy loam and alluvion. 4 miles W. from Schenectady, and 18 N. W. from Albany.

Rouse's Point, Champlain, Clinton co. On the W. side of Lake Champlain. 51 miles N. from Burlington, and 205 N. from Albany. It is about half a mile S. of Canada line. At this point the great railroad route between Boston and Ogdensburg crosses the lake. It was a small place, possessing no special interest until the railroad was located here. This has made it an important landing-place for the boats on Lake Champlain, and a great depot and place of exchange for merchandise and produce. The distance from this place by railroad to Boston is 292 miles; to Ogdensburg, 118 miles; to New York, by steam communication, about 350 miles; and to Montreal, 48.

A short distance N. of this place, the United States, soon after the war of 1812, commenced the construction of a strong fortification, to guard the entrance to the lake from the Canada waters. But after having expended about \$400,000, it was found that the site so advantageously selected was within the Canada line, and the work was abandoned. The spot has since, however, been ceded to the United States, and this fine fortification may, at some future period, be completed.

Rowan County, N. C., c. h. at Salisbury. It is

bounded N. by Davie co., E. by Davidson, S. by Stanley and Cabarus, and W. by Iredell co. Watered by Yadkin River. Soil fertile.

Rowe, Ms., Franklin co. This is a mountainous town, with some arable land; but the lands generally are best adapted to pasturage. Deerfield River passes its western border. The ruins of Fort Pelham are situated in the centre of the town, on Pelham Brook, a small stream, being the only one passing through the town. Rowe has a neat village near the centre of the town, about 22 miles W. N. W. from Greenfield, and 112 W. N. W. from Boston.

Rowley, Ms., Essex co. This town was first settled by a party of industrious and pious persons from Yorkshire, England, in 1638. They erected the first fulling mill in New England, and manufactured the first cloth in North America. There are a great variety of soils in this town; a large part is salt meadow, and the residue is fertile and productive. It comprises a part of Plum Island, and large tracts of woodland. It is watered by Rowley River, which, before its junction with Plum Island Sound, forms a harbor for vessels of moderate draught of water, where many vessels have been built. By the Eastern Railroad, which passes through the town, Rowley lies 29 miles N. from Boston.

Roxboro', N. C., c. h. Person co.

Roxbury, Ct., Litchfield co. Roxbury was taken from Woodbury, and incorporated in 1801. The town is diversified with hills and vales. The soil is a gravelly loam, interspersed with some small tracts of sandy loam. It is watered by the Shepaug, a branch of the Housatonic. In digging for silver, a species of iron ore, called steel ore, was discovered. 32 miles N. W. from New Haven.

Roxbury, Me., Oxford co. The surface of this town is elevated, and well timbered, with some good soil. Roxbury is watered by a branch of Androscoggin River. It lies 30 miles N. from Paris, and is bounded S. by Rumford. Incorporated 1835.

Roxbury, Ms., Norfolk co. This beautiful and rapidly-growing city is closely connected with Boston on the S. by "Boston Neck," so called, over which there are now three broad and pleasant avenues. The distance between the two cities, centrally, is about 3 miles. This town and the town of Boston were both incorporated the same year, 1630. Roxbury received a city charter in 1846. Population in 1790, 2226; 1800, 2765; 1810, 3669; 1820, 4135; 1830, 5247; 1840, 9089; 1850, 18,373.

The natural surface upon which much of this city is built is rocky and uneven; and a great degree of taste and skill has been displayed here, both in horticultural and architectural embellishments, for which the "highlands" in the S. part of the city, especially, furnish a beautiful advantage. Many parts of Roxbury, which, until recently, were improved as farms or rural walks, are now covered with wide streets and beautiful buildings. Several of the church edifices in Roxbury, being located on elevated positions, make a beautiful appearance.

The first hourly coach in this part of the country commenced running between Boston and Roxbury in 1827. There are now a large number continually running between the two cities, and the number of passages back and forth amounts to nearly a million annually.

The natural alliance which subsists between Boston and Roxbury, their close connection by wide and beautiful avenues, the crowded state of one city, and the romantic beauties of the other, can leave no doubt on the mind of an observer of the rapid increase of Boston, that Roxbury, with its crystal springs and admirable sites for building, will soon become the location of no inconsiderable portion of the wealth and fashion of the metropolis.

There are in Roxbury, yet to be observed, some memorials of the revolutionary scenes, especially on one of the crowning eminences of the highlands, surrounded by some of the most beautiful cottages and ornamental gardens in that section of the city, where are to be seen, in a very perfect state of preservation, the breastwork and intrenchments of a large military fortress constructed at that period.

A little distance back from the city, on the Dedham Turnpike, is situated the beautiful rural cemetery called the *Forest Hills Cemetery*. The enclosure includes an area of about 70 acres, a large portion of which is covered with trees, shrubs, herbaceous plants, and flowers, embracing almost every variety indigenous to New England. The grounds are diversified in a very picturesque manner, by hills, valleys, glades, precipitous cliffs, masses of moss-grown rocks, dells, and lakes. When the gradings are entirely completed, there will be nearly 5 miles of avenues for carriages and 3 of footpaths. An Egyptian gateway ornaments the entrance, which is copied from the ancient portico at Garsery, above the first cataract of the Nile. A range of four eminences in the south-western portion of this beautiful ground has been designated as the "Eliot Hills," to commemorate the name and pious labors of the Rev. John Eliot, the venerated "apostle of the Indians," who was pastor of the first church in Roxbury, from 1632, for a period of nearly 60 years. Mr. Eliot was remarkable for his indefatigable labors and charities. He imbibed the true spirit of the gospel, and his heart was touched with the wretched condition of the Indians. He learned their language, preached to them in it, and translated the entire Scriptures into it. This would seem the business of a life, when we consider, for example, that the sense of the expression "Kneeling down to him," is conveyed in the Indian language by the compound word *Wutappesitukqusunnoowehktunkquoh*.

A large eminence in the Forest Hills Cemetery bears the name of the most honored of the native-born sons of Roxbury—General Warren, who fell on Bunker Hill, bravely contending for the liberties of his country, on the 17th of June, 1776. He was the first officer of rank who fell in this eventful conflict.

The business and wealth of Roxbury are intimately connected with the port of Boston; indeed, its entire interests, in this point of view, are hardly capable of being considered as separate from those of the metropolis. It has, however, considerable trade of its own, and its manufactures are various and extensive. These consist of carpeting; of worsted and silk fringe and tassels; of leather; of iron castings; steam engines and boilers; fire engines; cordage; paints; sheet lead; white lead and chemical preparations; shoes; hats; cabinet ware; and a great variety of other articles.

When viewed from the dome of the State

House in Boston, this beautiful city, together with the cities of Charlestown and Cambridge,—involved and blended as they are with Boston, from which they are in no part more than 5 miles distant, and from which no other lines of separation can be distinguished than such as are made by the Charles River and the several bridges and avenues running from one city to another,—seem all to be one great city; as in fact, from their relations of intercourse and commerce, as well as their proximity, they virtually are, as truly as the city and liberties of Philadelphia.

Roxbury, N. H., Cheshire co. The N. branch of Ashuelot River forms the boundary between this town and Keene. Roaring Brook waters the S. part, and empties into the Ashuelot at the S. W. corner. On the E. side is Roaring Brook Pond, at the outlet of which are mills. Roxbury presents a rough and uneven surface, rising into considerable swells, affording excellent grazing land. This town was formed of a part of Nelson, Marlboro', and Keene, and is the native place of Joseph Ames, Esq., a celebrated artist and portrait painter to the pope of Rome. 5 miles E. from Keene, and 50 S. W. from Concord.

Roxbury, N. J., Morris co. Bounded E. by Black River, and contains Budd's Pond, a sheet of water 2 miles long and 1 broad, the waters of which flow into the S. branch of Raritan River. The surface is mostly covered by Schooley's Mountain, and the soil is a mixture of clay and calcareous loam. 14 miles N. W. from Morristown.

Roxbury, N. Y., Delaware co. Watered by the Papacton branch of the Delaware River. Surface hilly and mountainous; soil good sandy loam, very fertile in the valleys. 20 miles E. from Delhi, and 63 S. W. from Albany.

Roxbury, Pa., Philadelphia co. On the Schuylkill River. Surface rough and hilly, the N. W. portions containing soapstone; soil clay and loam.

Roxbury, Vt., Washington co. Roxbury is situated on the height of land between Winooski and White Rivers, and has consequently no large streams. The surface is uneven, but the soil is well adapted to the production of grass, and in general yields good crops of grain. The timber is mostly hard wood. Iron ore is found in the south-eastern part. There is a small village in the N. E. corner, on a principal branch of Dog River. The settlement was commenced in 1789, by Christopher Huntington. 15 miles S. W. from Montpelier.

Royalston, Ms., Worcester co. This town was first settled in 1754, and named for Colonel Isaac Royal, one of its proprietors. The land in this town consists generally of hills and valleys, and the soil is excellent, being suitable for tillage or grazing. It is watered by Miller's River and its tributary streams, upon which is much good meadow. Several small streams, one of which has upon it a perpendicular fall of 20 feet, and descends 100 feet in 40 rods, unite and form Tully River, which pours into Miller's River a great quantity of water. These various streams afford a number of good mill sites. There is a handsome village near the centre of the town, and 2 ponds well stocked with fish. Although these ponds are within half a mile of each other, yet they vary in height 150 feet. 35 miles N. W. from Worcester, and 65 W. N. W. from Boston. The Boston and Vermont Railroad passes through Athol, 7 miles S. from the centre of this town.

Royalton, N. Y., Niagara co. Bounded on the S. by Tonawanda Creek. It has an undulating surface and productive soil. 8 miles E. from Lockport, and 269 W. from Albany.

Royalton, Vt., Windsor co. The surface is somewhat broken and hilly, but the soil is good, particularly along White River and its branches, where it is of a superior quality. White River runs through the town, and receives here its first and second branches. Royalton village is pleasantly situated near the centre of the town, on the bank of White River. The first permanent settlement was made in 1771, by Mr. Robert Havens, who this year moved his family into the town. 30 miles S. from Montpelier, and 25 N. W. from Windsor. The Central Railroad passes through this town.

Rumford, Me., Oxford co. On the N. W. bank of the Androscoggin, with a good water power. 51 miles W. N. W. from Augusta.

Rumney, N. H., Grafton co., is watered by Baker's River, and a branch of it called Stinson's Brook, which flows from Stinson's Pond. The pond is 400 rods long and 280 wide. Part of Loon Pond is on the E. line of this town. The principal elevations are Stinson's, Webber's, and Carr's Mountains; the latter here obtains the name of Rattlesnake Mountain, on its N. W. border. David Stinson was killed here by a party of Indians, and his name was given to a mountain, pond, and brook. There is much good land here, and the passage of the Concord and Montreal Railroad through it will add much to its value. There is a great variety of splendid scenery here. First settlers, Captain Jotham Cummings, Moses Smart, Daniel Brainard, James Heath, and others, in 1765. 8 miles N. N. W. from Plymouth, and 51 N. by W. from Concord.

Rupert, Vt., Bennington co. A part of this township is mountainous, but the soil is generally good for grazing. Rupert is watered by Paulet River and a branch of the Battenkill, on which streams are mills of various kinds. The settlement of this town was commenced in 1767. 78 miles S. W. from Montpelier, and 25 N. from Bennington.

Ruscumb Manor, Pa., Berks co. Bounded N. and N. W. by Maiden Creek. Surface hilly; soil rather poor.

Rush County, Ia., c. h. at Rushville. Incorporated in 1821. Bounded N. by Henry, E. by Fayette and Franklin, S. by Decatur, and W. by Shelby and Hancock counties. Watered by Big and Little Blue Rivers, and Big and Little Flat Rock Creeks. Surface undulating; soil fertile.

Rush, N. Y., Monroe co. Watered by Honeoye Creek, a branch of the Genesee River, which bounds it on the W. Surface undulating; soil fertile, and well adapted to grain. 12 miles S. from Rochester, and 229 W. from Albany.

Rush, Pa., Dauphin co. Surface mountainous; soil sterile. Situated 20 miles N. E. from Harrisburg.

Rush, Pa., Northumberland co. This is a hilly and mountainous town.

Rush, Pa., Susquehanna co. Watered by Wyalusing, Lake, and Deer Lick Creeks. Surface hilly; soil gravelly loam.

Rush County, Ts., c. h. at Henderson. E. part. Between the Upper Sabine and Upper Neches.

Rushford, N. Y., Alleghany co. Cold Creek

waters this town, the surface of which is undulating, and the soil very favorable to the growth of grass. 15 miles N. W. from Angelica, and 270 W. from Albany.

Rushville, Ia., c. h. Rush co. On Big Flat Rock Creek. 40 miles E. S. E. from Indianapolis.

Russell County, Aa., c. h. at Crawford. Bounded N. by Chambers co., E. by the Chattahoochee River, separating it from Georgia, S. by Barbour co., and W. by Macon co. Drained by branches of the Chattahoochee.

Russell County, Ky., c. h. at Jamestown. Bounded N. E. by Casey and Pulaski counties, S. E. by the Cumberland River, separating it from Wayne co., S. W. by Clinton and Cumberland, and N. W. by Adair co. Drained by Cumberland River, and its tributaries, Wolf and Fish Creeks.

Russell, Ms., Hampden co. This town was formerly the N. W. part of Westfield, and the S. W. part of Montgomery. This is a mountainous township, full of wild and romantic scenery, having Westfield River passing rapidly through it. The surface is more pleasant to the spectator than to the cultivator; yet the high lands afford excellent grazing, and along the valleys are tracts of fertile meadow. Russell possesses an immense water power, with an abundance of wood and stone and other building materials, and all within 6 hours' ride of Boston. The Western Railroad passes through the town. 18 miles W. N. W. from Springfield, and 118 W. by S. from Boston.

Russell, N. Y., St. Lawrence co. Watered by Grass River. Surface rather uneven; soil sandy and clay loam, suitable for grazing. 10 miles S. from Canton, and 203 N. W. from Albany.

Russell County, Va., c. h. at Lebanon. Bounded N. W. by Tazewell co., S. E. by Washington, S. W. by Scott co., and N. W. by Kentucky. Watered by Clinch River and the sources of the W. fork of Sandy River. Surface mostly rough and mountainous.

Russellville, Aa., c. h. Franklin co. On Cedar Creek, a branch of Bear Creek. 111 miles N. by W. from Tuscaloosa.

Russellville, Ky., c. h. Logan co. Between Green and Cumberland Rivers, about 35 miles from each. 172 miles S. W. from Frankfort.

Russia, N. Y., Herkimer co. Watered by West Canada Creek. Surface elevated and hilly; soil sandy loam and clay, well suited to grass. 16 m. N. from Herkimer, and 94 N. W. from Albany.

Rutherford County, N. C., c. h. at Rutherfordton. Bounded N. by McDowell co., E. by Cleveland co., S. by South Carolina, and W. by Henderson and Buncombe counties. Drained by the head branches of Broad River. Soil much diversified.

Rutherford County, Te., c. h. at Murfreesboro'. Bounded N. and N. E. by Davidson and Wilson counties, E. by Cannon, S. by Bedford, and W. by Williamson co. Drained by Stone's River and other branches of the Cumberland. Soil very fertile.

Rutland, Ms., Worcester co., was bought of the Indians, in 1686, for £23. Its Indian name was *Nagneag*. This town is situated on the height of land between the sea and Connecticut River, and is hilly and very uneven. It has no large stream, but is watered by a branch of Ware River, which affords power for several mills. This is a good grazing township. There is fine

fishing at Mustapaug and Long Ponds. About half a mile E. of the meeting house is a spring, the waters of which soon divide, part runs to the Merrimac and part to Connecticut River. In the central part of the town is a pleasant village, which lies 13 miles N. W. from Worcester, and 50 W. by N. from Boston.

Rutland, N. Y., Jefferson co. Black River and Sandy Creek water this town. Surface undulating; soil fertile loam, based upon limestone. In this vicinity are many interesting remains of Indian fortifications. 6 miles E. from Watertown, and 154 N. W. from Albany.

Rutland, Pa., Tioga co. This is a hilly town, with a gravelly soil. 151 miles N. from Harrisburg.

Rutland County, Vt., c. h. at Rutland. This county is bounded N. by Addison co., E. by Windsor co., S. by Bennington co., and W. by the state of New York. The principal streams are Otter Creek, Black, White, Queechy, and Paulet Rivers. There is some fine land in this county, along Otter Creek, but a large portion of it is elevated, and some parts mountainous. The soil is generally warm, and well suited for grazing. Excellent iron ore is found at the base of the mountains, and a range of marble quarries extends the whole length of the county, from N. to S. This marble is of the very best quality.

Rutland, Vt., c. h. Rutland co. The principal stream is Otter Creek. Tributary to this are West River and East Creek. In addition to these, there are 2 other streams of less magnitude, flowing in above East Creek, on the right bank. Near the N. W. corner of the town another stream, called Castleton River, enters. On all of these streams are convenient sites for mills. The soil of Rutland presents all the varieties from heavy loam to a light sand. Some minerals are found here, and in the W. part several quarries of very beautiful white and clouded marble have been opened. Rutland is divided into two parishes, denominated East and West Parish. Rutland Village, situated in the East Parish, is the most important place. In the West Parish are two small villages, called West Rutland and Gookkin's Falls. The village of Rutland was incorporated in 1847. This town was chartered in 1761. Through this town, during the revolutionary war, was the only military road from Charlestown, N. H., to Ticonderoga and Crown Point, on Lake Champlain. 50 miles S. W. from Montpelier. A railroad from Boston to Burlington passes through this town. There is also a railroad to Whitehall and Troy, N. Y.; to Burlington, 73 miles; to Troy, 85.

Rutledge, Mo., c. h. McDonald co.

Rutledge, Te., c. h. Granger co.

Rye, N. H., Rockingham co., is pleasantly situated on the sea-coast, which here is 6 miles in extent, being nearly one third of the coast in the state. On the shore are 3 pleasant beaches, Sandy, Jenness, and Wallis. There is here a small harbor, near Goss's Mill, into which vessels of 70 or 80 tons' burden may enter at high water. The boat fishery is carried on to considerable advantage. Breakfast Hill, between this town and Greenland, is distinguished as the place where a party of Indians were surprised at breakfast, at the time of their incursion, in 1696. Rye was taken from Portsmouth, Greenland, Hampton, and New Castle, chiefly the latter. 6 miles S. from Portsmouth, and 50 S. E. from Concord.

Ryegate, Vt., Caledonia co. This town is situat-

ed on the W. bank of Connecticut River, opposite to Bath, N. H. Ryegate is watered by Wells River, some smaller streams, and several ponds. There is not much intervale land on the river, but the soil is generally rich. Ryegate was first settled by emigrants from Scotland, in the year 1774. 15 miles S. from Danville, and 40 S. E. from Montpelier.

Sabine Parish, La., c. h. at Murray. On the W. border, middle. Watered by the Sabine and confluent.

Sabine County, Ts., c. h. at Milam. On the E. border, middle.

Saccarappa, Me., in Westbrook, Cumberland co. On the Presumpscot River, which affords extensive hydraulic power at this place. N. from Portland 4 miles, and S. W. from Augusta 56.

Sackett's Harbor, N. Y., Jefferson co. On Black River Bay, near the foot of Lake Ontario, about 12 miles from the lake, and 185 N. W. from Albany. This place has the best harbor on the lake, which is improved for ship building and as a naval depot. The progress of the settlement was very much accelerated during the war of 1812, during which it became an important military position. The United States have erected here three extensive stone barracks, a military hospital, &c., affording accommodations for 2000 troops. The New Orleans, a 110 gun ship, commenced during the war, remains upon the stocks, under a large building on Rocky Island. The place has considerable trade by the lake and the River St. Lawrence. A good water power has been created by a canal brought from the Black River, a distance of about 12 miles, to the village. The fall thus obtained is about 30 feet. This work was executed by the citizens, at a cost of about \$25,000, and is only partially improved, as yet, for saw mills, grist mills, and other manufacturing and mechanical operations. After the war, the business of Sackett's Harbor declined for a time, but it now partakes of the general prosperity of the country.

Saco, Me., port of entry, York co. Situated on the E. side of Saco River. 71 miles S. S. W. from Augusta, and 15 S. W. from Portland. The Saco River terminates its fantastic course at this place by a fall, within a short distance, of 42 feet, and mingling with tide water. The water power created by these falls is very extensive; and Saco enjoys the rare advantage of possessing a great hydraulic power, united with facilities for navigation close at hand. These fine privileges are extensively improved, and are capable of further development to an almost unlimited extent. 9 large cotton mills have been erected here, 1 woollen mill, a large number of saw mills, with a variety of other mechanical establishments. The advantages of this place for profitably carrying on manufacturing operations are considered as equal to those of any other place in New England.

From the mouth of the river a fine beach, called Old Orchard Beach, extends about 5 miles to the E., which is a place of considerable resort for summer recreations. Another beach, of less extent, connects Fletcher's Neck with the main land, and has a house of entertainment at a place called the Pool. Saco contains many handsome buildings, and the scenery around it is pleasant. There are 5 or 6 churches, some of which have handsome houses of worship.

The villages of Saco and Biddeford are so situated on both sides of the river, connected by bridges, and united by their business relations, that they can hardly be considered otherwise than as one place. Some of the mills and meeting houses above mentioned are on the Biddeford side, and the whole appears as one extended cluster of buildings.

The Eastern and the Boston and Maine Railroads having united before reaching this place, pass through Saco, and connect it with all the great routes of railroad communication.

Sacramento County, Ca., c. h. at Sacramento City. On the E. side of the Sacramento, between American River and the Moquelumne.

Sacramento City, Ca., c. h. Sacramento co. This town, the second in California, is situated on the E. bank of the Sacramento River, at the junction of the American Fork, on the S. bank of that stream. The Sacramento, which is a fine river, varying from 200 to 300 yards in breadth, its banks fringed with trees, is navigable to this point at all seasons. The distance from San Francisco is about 120 miles. The plan of Sacramento is very simple. The town plot embraces a square of about a mile and a half to the side, on a level plain of great extent, and but slightly elevated above the river. It is laid out in regular right angles, the streets running E. and W., being designated by the letters of the alphabet, and those running N. and S. by the numerals. In April, 1849, there were 4 houses in the place. Within six months it boasted a population, in tents and frame houses, of near 10,000. The original forest trees, still standing in all parts of the town, give it a very picturesque appearance. Many of the streets are lined with oaks and sycamores, six feet in diameter.

Though Sacramento has not suffered, like San Francisco, by fires, the low level of the plain on which it stands has exposed it to disastrous floods, which have made it necessary to enclose the entire circuit of the city with a levee or dike.

The position of Sacramento makes it the grand depot for the supply of all the northern mines. It is also the point to which the overland emigration is directed. The banks of the river in this vicinity furnish one of the best farming regions in California, though the crops on the low lands are exposed to great ravages from the periodical floods. These advantages of situation are such as to make it certain that Sacramento will maintain its position, as being, next after San Francisco, the first city in the state. It has regular daily steamboat communication with San Francisco.

The gold diggings commence about 30 miles E. from Sacramento, at the entrance of the hills, which rise rapidly to the eastward, till they terminate in the high ridge of the Sierra Nevada. The gold was first discovered on the S. fork of the American River, about 50 miles from Sacramento, and all that neighborhood is still much resorted to by miners.

Saddle River, N. J., Bergen co. Bounded E. by Saddle and S. by Passaic River, and is drained by Singac, Krokaevall, Preakness, Goffle, and Ackerman's Brooks. Surface level on the E., but elsewhere mountainous; soil fertile in the valleys, being composed of red shale and loam. 8 miles N. W. from Hackensacktown.

Sadsbury, Pa., Chester co. This town lies on the W. side of Brandywine River, between West Caln and East Fallonfield.

Sadsbury, Pa., Crawford co.

Sadsbury, Pa., Lancaster co. Bounded E. by Octara Creek, which affords hydraulic power. Surface hilly and undulating; soil clay and calcareous loam. 16 miles S. W. from Lancaster.

Sagadahock, Me. The ancient name of a section of country, at and E. of the mouth of Kennebec River.

Sag Harbor, N. Y., Suffolk co. This incorporated village is situated on a body of water of the same name, an inlet from Gardiner's Bay. It lies partly in the town of East Hampton, and partly in South Hampton, at the eastern extremity of Long Island, on the S. shore of Gardiner's Bay. It has a population of about 3000. The whale fishery is carried on to a considerable extent, there being engaged in it from this port, in 1851, 4434 tons of shipping. The whole tonnage of the district was 12,808 tons. 110 miles E. from New York, and 34 from Riverhead, the nearest point on the Long Island Railroad.

Saginaw County, Mn., c. h. at Saginaw. Bounded N. by Midland co. and Saginaw Bay, E. by Tuscola co., S. by Genesee and Shiawassee, and W. by Gratiot co. Drained by Saginaw River and branches. The surface is level or slightly uneven; the soil a fertile sandy loam underlaid with clay. Limestone and gypsum are found in the N. W. part.

Saginaw, Mn., c. h. Saginaw co. Pleasantly situated on Saginaw River, about 23 miles from its mouth, and at an elevation of 30 feet above the river. 97 miles N. by W. from Detroit.

St. Albans, Me., Somerset co. A good township. 46 miles N. N. E. from Augusta.

St. Albans, Vt., c. h. Franklin co. This handsome village, 3 miles from Lake Champlain, and 12 from the Canada line, is built on elevated ground, and commands a fine prospect. The soil is fertile, and, besides the lake navigation, the town enjoys railroad communication with Burlington, Montreal, and Ogdensburg.

St. Augustine, Fla. City, port of entry, and seat of justice of St. John's co. 200 miles E. by S. from Tallahassee, and on the Atlantic coast, about 30 miles S. of the mouth of the St. John's River. The city stands back about 2 miles from the coast on the side of a peninsula, and is shielded from the force of the main ocean by Anastasia Island, which lies before it, but is so low and narrow as not to intercept the sea breezes. The site of St. Augustine is itself low, being not over 12 feet above the level of the ocean; and the soil is rich in calcareous and vegetable deposits. The climate here is reckoned equally mild and grateful with that of Italy or the south of France. There are only one or two months in the year when frosts are ever experienced, and the winters are sometimes passed entirely without them. In the summer, too, the alternation of sea and land breezes both tempers the heats by day and renders the nights generally cool and pleasant. This is, therefore, a favorite resort for invalids seeking to avoid the more variable and rugged climate of the north.

The city lies in the form of a parallelogram, one mile long and three fourths of a mile wide, fronting E. on Matanzas Sound, which spreads a half a mile before it, forming a harbor, protected by Anastasia Island, of large capacity and of perfect security. Not more than one half the extent of the city is compactly built, and much of this has an antiquated and dilapidated appear-

ance. St. Augustine, indeed, is the oldest city in the United States, having been settled by the Spaniards 43 years earlier than Jamestown, in Virginia, by the English. The streets are generally very narrow, some not more than 10 feet wide, and the principal ones not more than 15 to 18 feet in width, and sometimes very crooked. The houses are on a line with the street, and are generally two stories high, with the second story projecting over the first. The first story is usually built of stone, covered with stucco, whilst the second is of wood. In the eastern part is a fine large square, opening from the sound, on three sides of which are the Court House, a splendid Roman Catholic Church, an Episcopal Church, a neat Gothic edifice, and several elegant residences. In front of the harbor is a fine market place. The city is embosomed in orange, lemon, olive, and palm trees, which grow here in great perfection, and which give to the place a rural rather than a commercial appearance.

About one half of the population of St. Augustine is made up of Spanish, French, and other nations. Since the cession of Florida to the United States, however, the foreign population is fast becoming Americanized. The old Spanish castle of St. Mark, now called Fort Marion, is quite an object of curiosity. It was built for the defence of the harbor, and completed about a hundred years ago. There are in it a number of Spanish guns, mortars, and howitzers, which came into possession of our government with the fort, one of which bears the date of 1735.

St. Bernard Parish, La. Bounded N. W. by Lake Borgne, N. and E. by the Gulf of Mexico, S. by Black Bay, and W. by Plaquemine parish. Surface level; soil, where it is sufficiently elevated for cultivation, very fertile. Productions, sugar and coffee.

St. Charles Parish, La. Lake Maurepas, Pass of Manchac, and Lake Pontchartrain bound this place on the N., the parish of St. Bernard on the E., and the parish of St. John Baptist on the W. (For general features, soil, and staples, see *St. Bernard*.) This parish is situated 50 miles above New Orleans, on the Mississippi River.

St. Charles County, Mo., c. h. at St. Charles. This county is bounded N. and N. E. by the Mississippi and Cuivre Rivers, S. E. by Missouri River, and W. by Montgomery co. It occupies the peninsula between the Mississippi and Missouri, above their junction.

St. Charles, Mo., c. h. St. Charles co. Pleasantly situated on the N. bank of the Missouri, on the first elevated land above the mouth of the River. St. Charles College is located here. (See *Colleges*.) 20 miles N. W. from St. Louis, and 110 E. from Jefferson City.

St. Clair County, Ala., c. h. St. Clairsville. Shelby bounds it on the S., Jefferson S. W., Blunt N. W., Cherokee lands N., and Casa River E. Its surface is hilly and broken, and it is drained by the Coosa and Cahaba Rivers.

St. Clair County, Is., c. h. at Cahokia. The Mississippi River bounds it on the N. W., Madison N., Washington E., Randolph S. E., and Monroe S. W. The principal part of the county lies S. E. from St. Louis, commencing opposite that town. The Mississippi and Kaskaskia Rivers supply it with water.

St. Clair County, Mn., c. h. at St. Clair. Bounded N. by Sanillac co., E. by Lake Huron and the River St. Clair, S. by Lake St. Clair and Macomb

co., and W. by Lapeer co. Drained by Pine, Black, and Belle Rivers. Surface undulating, soil productive.

St. Clair County, Mo., c. h. at Osceola. Bounded N. by Henry co., E. by Benton and Hickory, S. by Polk and Cedar, and W. by Bates co. Drained by Osage River and its tributaries.

St. Clair, Pa., Allegheny co. A township opposite Pittsburg, on the Monongahela and Ohio Rivers, and between Chartier and Street's Creeks.

St. Clair, Pa., Bedford co. A township situated on Dunning's Creek. 6 miles N. from Bedford.

St. Clairsville, O., c. h. Belmont co. Finely situated 116 miles E. from Columbus. 11 miles W. from Wheeling.

St. Croix County, Wn., c. h. at St. Croix. Bounded N. by Lake Superior, N. E. by Montreal River, separating it from Michigan, E. by Crawford co., and S. and W. by Mississippi, St. Croix, and St. Louis Rivers, separating it from Minnesota territory. Drained by Rum, St. Francis, and some other rivers.

St. Francis County, As., c. h. at Mount Vernon. Bounded N. by Jackson and Poinsett counties, E. by the St. Francis River, separating it from Crittenden co., S. by Phillips and Monroe counties, and W. by the White River, separating it from White and Pulaski counties. Drained by Cache and Languille Rivers.

St. Francis County, Mo., c. h. at Farmington. Bounded N. by Jefferson co., E. by St. Genevieve and Perry, S. by Madison, and W. by Washington co. Drained by St. Francis, Big, and Establishment Rivers. Surface hilly, containing iron ore; soil fertile.

St. Francisville, La., c. h. West Feliciana parish, on Bayou Sarah. 1 mile from the E. bank of Mississippi River, and 160 miles above New Orleans. By the bayou it communicates with the Mississippi. Many boats stop here, and great quantities of corn are shipped for market.

St. Genevieve County, Mo., c. h. at St. Genevieve. On the Mississippi, nearly opposite the mouth of the Kaskaskia.

St. Genevieve, Mo., c. h. St. Genevieve co. On Gabourie Creek, about 1 mile from the W. bank of Mississippi River. 61 miles S. by E. from St. Louis, and 190 E. S. E. from Jefferson City. The creek is sometimes boatable. A fertile prairie of 6000 acres lies below the village, which is enclosed and occupied in common. The population is mostly French.

St. George's, De., Newcastle co. A town on the N. side of St. George's Creek. 10 miles S. from Newcastle, and 9 N. from Cantwell's Bridge.

St. George, Me., Lincoln co. On the S. W. point of Penobscot Bay. 57 miles S. E. from Augusta.

St. George, Vt., Chittenden co. The surface is uneven, with considerable elevations. The timber is principally maple, beech, and birch. There are no streams of consequence. A part of Shelburne was annexed to St. George in 1848. The settlement was commenced here in the spring of 1784, by Joshua Isham, from Colchester, Ct. The next year several others joined the settlement. 28 miles W. by N. from Montpelier, and 8 S. E. from Burlington.

St. Helena Parish, La., c. h. at St. Helena. Lakes Pontchartrain and Maurepas and Amite River bound it on the S., Amite River and New Feliciana W., state of Mississippi N., and Tangipouo River, or Washington, and St. Tammany

E. This extensive parish is mostly covered with pine, with a sterile soil. It is drained by the Amite, Tickfoha, and Tangipoo Rivers.

St. Helena, La., c. h. St. Helena parish. On the Tickfoha River. 35 miles N. E. by E. from Baton Rouge.

St. Inoges, Md., St. Mary's co., lies on a small bay of St. Mary's River. 53 miles S. E. from North Carolina.

St. James Parish, La. This place lies on both sides of the Mississippi, and is bounded by St. John E., Amite River N., Ascension W., and Assumption S. W. For general features and staples, see *St. Bernard*.

St. John's County, Fla., c. h. at St. Augustine. Bounded N. by Duval co., E. by the Atlantic Ocean, S. by Orange and Marion counties, and W. by Alachua co. Watered by St. John's and North Rivers. Much of the land is fertile, producing cotton, maize, and sugar cane, beside many tropical fruits.

St. John Baptiste Parish, La., c. h. at Bonnet Carre. Situated above St. Charles and St. James, on both sides of the Mississippi River. For general features and staples, see *St. Bernard*.

St. Johnsbury, Vt., Caledonia co. The Passumpsic River runs through this town, and receives, just below the plain, the Moose River from the N. E., and Sleeper's River from the N. W. The amount of available water power furnished by these streams exceeds that of any other town in this part of the state, and affords facilities for manufacturing operations to any desirable amount. There are in this town a number of handsome villages. The village called the Plain is of superior beauty, and contains an excellent academy. The soil is rich and productive; the surface uneven and somewhat hilly, though not broken; and the farms are in a high state of cultivation. On the Passumpsic Railroad, 61 miles N. from the White River, and 37 N. E. from Montpelier.

St. Johnsbury presents a fine specimen of Yankee industry and perseverance in the enterprize of the Messrs. Fairbanks, in the manufacture of their celebrated platform scales. Although shut up in a cold region, amid the craggy mountains of the north, and hitherto a three days' toilsome journey to any Atlantic city, this mountain town has sent forth, throughout our whole country and to foreign lands, articles of manufacture which would vie in workmanship and utility with any of those produced in Europe.

Until the present day, the location of our cities and trading towns have been selected for their proximity to the ocean, or situated on some navigable stream. Now the great considerations are, in the choice of a location, Does the place possess a good hydraulic power? Is it situated in a fertile and healthy country? Does the monarch carrier pass that way? These three things attained, St. Johnsbury, like many other places similarly situated, throws into the shade many large towns, whose sites were selected solely for being situated on the banks of some shallow river, or at the head of some navigable creek.

The giant power which unites the business communities of states and distant countries, as it were, by magic, will take the burden of a ship's cargo and 500 passengers from Boston to St. Johnsbury, 170 miles, in less time than it takes the swiftest steamer to pass from Albany to New York, a distance of 145 miles, and that in any day of any season in the year.

St. Joseph's County, Ia., c. h. at South Bend. Bounded N. by Michigan, E. by Elkhart co., S. by Marshall and Stark, and W. by Laporte co. Watered by St. Joseph's, Kankakee, and some other rivers, affording good hydraulic power. The surface is level, having some fine prairies on the S., and the soil fertile.

St. Joseph, La., c. h. Tensas parish.

St. Joseph's County, Mn., c. h. at Centreville. This county was incorporated in 1829, and is bounded N. by Kalamazoo co., E. by Branch co., S. by Indiana, and W. by Cass co. Drained by St. Joseph's, Prairie, Portage, Rocky, and Pigeon Rivers. Surface undulating; soil of excellent quality.

St. Joseph, Mn., Berrien co. This important town is located on the E. border of Lake Michigan, at the junction of St. Joseph and Pawpaw Rivers, and 195 miles W. by S. from Detroit.

St. Landre Parish, La., c. h. at Opelousas. Bounded N. by Rapides and Avoyelles parishes, E. by Point Coupee, Iberville, and St. Martin's, S. by Lafayette and Vermilion, and W. by Calcasieu parish. The Atchafalaya Bayou runs on the E., and Bayou Nez Pique on the W. boundary. It is also watered by Teche and Vermilion Rivers. The surface and soil are diversified.

St. Landre, or Opelousas, La., c. h. St. Landre parish. The streets are laid out at right angles. The country is level, pleasant and healthy. Water is generally found only in wells: springs are rare, but the water is excellent, cool, and light. St. Landre is situated between two bodies of woods, in a prairie on a small stream, which forms part of the sources of both Teche and Vermilion Rivers, the Bayou Fasillice entering Teche, and the other, Bayou Bourbee, forming the head of Vermilion. This town is distant 3 miles S. W. of its port, Bayou Carron.

St. Lawrence County, N. Y., c. h. at Canton. Lying in the N. W. part of the state, on the River St. Lawrence, which separates it from Canada. This county has the largest amount of territory by 1000 square miles than that of any other county in the state. The surface, for a distance of 30 or 40 miles back from the river, is agreeably diversified with gentle elevations, broad valleys, and extensive tracts of champaign. The soil is equally rich and productive with that of any of the uplands in the state. The south-eastern part of the county is mountainous, being in part covered with the Adirondack Mountains. Most of this part of the county is but sparsely settled. These mountains abound with iron ore. The principal streams, all having a northerly course to the St. Lawrence, are the St. Regis, Racket, Grass, Oswegatchie, and Indian Rivers. They afford some inland navigation, and a great amount of water power not yet occupied. A natural canal from 30 to 80 yards wide, and about 6 miles in length, unites the waters of the Oswegatchie and Grass Rivers, in the town of Canton. This canal or creek is navigable for boats. There are several small lakes in the county, the largest of which is Black Lake. (See p. 172.) Lead ore is obtained in large quantities near the village of Rossie. Marble of superior quality is also found in abundance. The Ogdensburg Railroad passes across the northern section of this county, forming a part of a continuous railroad route from Ogdensburg to Boston. This, with the commerce of the St. Lawrence, will contribute to the rapid development

of the rich mineral and agricultural resources of the county.

St. Leonards, Md., Calvert co. On the W. side of Chesapeake Bay, about 10 miles N. W. of Drumpoint, and 55 from Annapolis.

St. Louis County, Mo., c. h. at St. Louis. This county is bounded by Missouri River N. W., Mississippi E., Merrimac S., and Franklin co. W.

St. Louis, Mo. City, and seat of justice of St. Louis co. On the W. bank of the Mississippi River, 18 miles below the mouth of the Missouri. 130 miles E. from Jefferson City, the capital of the state, and 1101 miles, by the course of the river, N. from New Orleans. Population in 1810, 1600; in 1820, 4598; in 1830, 6694; in 1840, 16,469; in 1850, 82,774. St. Louis is the commercial metropolis of Missouri, and was formerly the seat of government. It was first settled in 1764, but during its subjection to the French and Spanish colonial governments, remained a mere village. The site is a most eligible one, being elevated many feet above the floods in the Mississippi, and favorable in that, as well as other respects, to the salubrity of the place. It rises from the river by two bottoms, or plains; the first, which is alluvial, being 20 feet above the highest water, and the second, which is a limestone bank, ascending 40 feet higher than the first, to the level of the adjacent country, sweeping away towards the western horizon as far as the eye can reach. The ascent from the river to the first of these terraces is somewhat abrupt; but the second acclivity is more gradual, carrying the observer into the finest part of the city, from which is enjoyed a beautiful prospect of the river, the lower sections of the city itself, and the wide surrounding country.

The situation of St. Louis, in respect to its advantages for becoming a great commercial place, is unsurpassed, perhaps, by that of any other inland city in the whole world. Being located not far from the geographical centre of the Mississippi Valley, and almost at the very focus towards which its great navigable rivers, the Mississippi, Missouri, Ohio, and Illinois, converge their courses, it is not to be doubted that, as the resources of this immense region are more and more largely developed, this must become a mart of wealth and commerce scarcely inferior to any in the United States. Its trade already exceeds that of any other place on the Mississippi, except New Orleans. The steamboats, which ply from this place in every direction, seem almost numberless. A great number of these and of all descriptions of river craft, bound to every point on the navigable waters of the Mississippi Valley, are seen at all times in its harbor. This is also a great depot and point of departure for the American fur trade, and for the rich lead mines of the Upper Mississippi; and here hunters, trappers, miners, adventurers, and emigrants, of all characters and languages, meet in the prosecution of their various objects, and hence scatter towards the most distant parts of the great west.

The city was originally laid out on the first bank, consisting of three narrow streets parallel with the course of the river; but after its more rapid growth commenced, under the auspices of an American population, it soon extended itself to the upper plain by the grading of several streets back of the original plot. These are wide and airy, and are crossed at right angles by

about 20 other streets ascending directly from the river. N. and S. of the more compact portion of the city, which is built up now about 2 miles on the river, extensive suburbs have been laid out on the same general plan. Front Street, on the river bank, is built up on the side opposite the landing, with a range of stone warehouses, four stories high, which make an imposing appearance, and are the seat of a heavy business. The first street back of this is the principal seat of the wholesale dry goods business. The city is generally well built, the more recent portions being chiefly of brick, which are made in abundance in the immediate vicinity. Stone also for building is quarried from the limestone strata on the spot. Many of the residences, particularly in the upper parts of the city, are of costly and beautiful architecture, and are surrounded by ornamental yards and gardens.

Many of the public buildings are elegant and finely situated. The Court House stands in a public square, near the centre of the city. The City Hall is on a square reserved for the purpose at the foot of Market Street, the basement being occupied as a market. The edifice is a splendid structure of brick. The First Presbyterian Church, a large and handsome building, occupies a beautiful site upon the high ground of the city, where it is surrounded with ornamental trees. The Unitarian Church is a large and tasteful building. The Roman Catholic Cathedral is a spacious edifice, 136 feet long by 58 feet wide, with a massive Doric portico in front. The walls are 20 feet in height, above which rises a square tower, to the height of 40 feet, sustaining an octagonal spire, surmounted with a gilt cross. In the steeple of this church is a chime of bells, the largest of which weighs 2600 pounds. The several religious denominations in St. Louis have as many as 15 or 16 churches. There are a number of literary and benevolent institutions, whose labors and influence are important. Among these are the Orphan Asylum, under the direction of Protestant ladies, and the Roman Catholic Asylum for Orphans, conducted by the Sisters of Charity. The Western Academy of Sciences is established here, and has an extensive museum of natural history, mineralogy, &c. Besides this, there is a museum of Indian antiquities, fossil remains, and other curious relics. The medical department of the University of St. Louis has a building for its laboratory and lectures in the city. The university building itself is 4 miles N. of the city. (See *Colleges.*) Within the southern limits of St. Louis is the arsenal established here by the United States; also a few miles below are the Jefferson United States Barracks, capable of accommodating about 700 men.

St. Louis is supplied with water by the operation of a steam engine, raising it from the Mississippi into a reservoir, upon the summit of one of those ancient mounds for which this part of the country is remarkable. Thence it is distributed in iron pipes over the city. The streets, churches, stores, and dwellings, to some extent, are lighted with gas.

St. Louis was first settled by a company of merchants, to whom the French director general of Louisiana had granted the exclusive privilege of trading with the Indians on the Missouri. They built a large house and four stores here, which in 1770 had increased to 40 houses, and a small French garrison for their defence. In 1780

an expedition, consisting of British and Indians, was fitted out at Michilimackinac for the capture of St. Louis and other places on the W. side of the Mississippi, which was successfully repelled by the aid of an American force under General George Rogers Clark, which was providentially encamped on the opposite side of the river.

St. Lucie County, Fla. On the southern Atlantic coast of the peninsula. Indian River is the only settlement. Population, 139.

St. Marks, Fla., Wakulla co. Port of entry. 20 miles S. from Tallahassee. On St. Marks River, near its confluence with the Wakulla, which rivers unite to form the Appalachee, which is navigable to this place for vessels drawing 8 feet of water. It constitutes the port of Tallahassee, with which it is connected by a railroad. Several years ago, an appropriation was made by Congress for improving the navigation below St. Marks, which is very crooked, and is impeded by oyster bars. It is a place of considerable business.

St. Martin's Parish, La., c. h. at St. Martinsville. This parish, in Attacapas, is bounded by Opelousa N. W. and W., Gulf of Mexico S. W., St. Mary's Parish, in Attacapas, S. E., and the Atchafalaya River N. E. and E. From the Gulf of Mexico, the shores rise imperceptibly into dry, arable, prairie land, along the Teche and Vermilion Rivers, and some intervening strips. The whole is one almost undeviating plain. Where the land is arable, it is highly fertile. The south-western, middle, and southern sections present an expanse of prairie, with the exception of strips of woods along the margin of the streams. Near the Atchafalaya, it is liable to annual overflow.

St. Martinsville, La., c. h. St. Martin's parish, Attacapas. On the right bank of the Teche.

St. Mary's, Ga., Camden co. The position of this town renders it a place of considerable consequence as a commercial port, it being situated 9 miles above the mouth of St. Mary's River, on the left bank. A fine channel, of inland communication, exists between this place and Darien, from which it is 80 miles S. by land. It has lost some of its consequence as a naval and military station, since the accession of Florida to the United States. S. S. E. from Milledgeville 293 miles. Its harbor is good, and vessels drawing 21 feet of water come to its wharves.

St. Mary's Parish, La., c. h. at Franklin. Bounded N. and N. E. by St. Martin's parish, E. by Terre Bonne parish, S. by Atchafalaya, Cote Blanche, and Vermilion Bays, and W. by Lafayette parish. Watered by Atchafalaya Bayou, Teche River, and Chetimaches Lake. Surface flat, and liable to inundation in the S. E. part; soil arable and very fertile on the borders of some of the streams.

St. Mary's County, Md., c. h. at Leonard. Chesapeake Bay bounds this county on the S. E., Potomac River S. W., Charles co. N. W., and Patuxent River N. E. It is situated on the peninsula between the Potomac and Patuxent Rivers.

St. Mary's, O., c. h. Anglaize co. On the Miami Canal.

St. Paul, Ma. Capital of the territory. Situated on the E. bank of the Mississippi, 12 miles below the Falls of St. Anthony, and 5 miles E. from Fort Snelling, at the mouth of the St. Peter's. This place, like every other in this young but growing territory, is recent in its origin, but is

making very rapid progress. 200 or 300 houses are to be erected the present year (1852) within its corporate limits; many of them of brick or stone, of large dimensions. New wharves or building, landings are being improved, and streets graded. Population is pouring into this whole region with great rapidity, and it is certain that St. Paul, with such advantages of location as it possesses, must immediately become a place of great importance.

Besides its public buildings, which make a good appearance, and its churches, which are beginning to be multiplied, it has several large hotels, which are demanded by the increasing travel through this place. Some of the highest class were built more especially with a view to the entertainment of parties visiting the Falls of St. Anthony. Regular steamboats run between Galena, Stillwater, St. Paul, St. Peter's, and the falls. A boat leaves St. Louis daily for this place. Distance 695 miles.

St. Stephen's, Aa., Washington co. On the W. bank of Tombigbee River, at the head of schooner navigation. 120 miles above Mobile, and 149 S. by W. from Tuscaloosa.

St. Tammany Parish, La., c. h. at Madisonville. Pearl River bounds this parish on the E., Lake Borgne, the Rigolets, and Lake Pontchartrain S., River Tangipao or St. Helena W., and the parish of Washington N. Pearl, Borgne, Chito, Chifuncte, and Tangipao Rivers are the principal streams. Towards the S. the surface is level, in the northern parts undulating; soil generally sterile, and timbered with pine.

St. Thomas, Pa., Franklin co. A village on Black Creek, branch of Conococheague. 9 miles W. from Chambersburg.

Salem, Ct. New London co. This town was taken from the towns of Colchester, Lyme, and Montville; but the principal part from Colchester, and incorporated in 1819. It comprises an area of 6 by 5 miles of fertile and productive land. The inhabitants are generally good farmers, who live scattered about on their farms. Salem is well watered by small streams, and is bounded on the N. E. by a large and beautiful pond. 13 miles N. W. from New London.

Salem, Is., c. h. Marion co. On the margin of Grand Prairie. 108 miles S. S. E. from Springfield.

Salem, Ia., c. h. Washington co. At the head of Blue River, 93 miles from Indianapolis. Here are cotton and woollen factories, oil mills, and grist mills, moved by steam, and various other manufactories. 35 miles N. W. from Louisville, Ky.

Salem, Ky., c. h. Livingston co. 249 miles W. S. W. from Frankfort.

Salem, Me., Somerset co. This town is watered by a branch of Seven Mile Brook, and lies 52 miles N. N. W. from Augusta, and 28 N. W. from Norridgewock. Incorporated 1823. This is a good farming town.

Salem, Ms. City, seaport, and one of the seats of justice of Essex co. 14 miles N. N. E. from Boston. Population in 1790, 7921; 1800, 9457; 1810, 12,613; 1820, 12,731; 1830, 13,886; 1840, 15,082; 1850, 18,836.

Salem is nearly surrounded by water, being situated between 2 inlets of the sea, called the North and South Rivers. To the main and now inhabited part of the town is attached a peninsular portion of land, called the Neck. This was the first inhabited, and was formerly used for fishing and other purposes. It ultimately

became the property of the town, and in 1816, when the present almshouse was built, a large portion of it was enclosed, and has since been cultivated as the almshouse farm.

The situation of Salem is low, but pleasant and healthy. Its streets are quite irregular. Essex is the only street which runs through the town, and is very angular and crooked. Federal and Bridge Streets are broad, straight, and regular. Chestnut is esteemed the handsomest, though it is not the most public street. It has rows of fine elms on either side. Winter and Broad Streets are the widest. The first pavement was made in Essex Street, between Court and North Streets, in 1773. The compact part of the city is over a mile and a half in length, and three fourths of a mile in width, extending across the peninsula. A bridge over the North River, 1481 feet long, connects the city with Beverly, and with some of its own suburbs. North of this is the railroad bridge, which also connects with Beverly.

The history of Salem is identified with that of Massachusetts. Its Indian name was *Naumkeag*. It was first settled in 1626, by Roger Conant, Peter Palfrey, and others, who had failed in an attempt to plant themselves at Cape Ann. In 1628, a cession of Massachusetts was made to Sir Henry Roswell and others, with a view to establish a colony there. Of this company, Matthew Cradock was president, and in 1628, John Endicott was sent over to reside at Salem, as the company's agent. The next year the first church was formed, with Rev. Francis Higginson as its pastor, which was the first completely organized Protestant church formed in North America.

Salem has always been a commercial place. It has a convenient harbor and good anchorage. In point of wealth and commerce, it has always ranked as the second town in New England. Its rank, the character and number of its population, its facilities for commerce, and the advantage of being the chosen residence of many of the first and most distinguished settlers, made it early and seriously thought of as the capital, instead of Boston.

The commerce of Salem has been very much extended. There is hardly any part of the world which her ships have not visited. The number of vessels engaged in foreign commerce is over 100, besides a number in the whaling business.

This seaport has been more known for its East India trade than any other in the United States. The first ship from Salem engaged in this trade was the *Grand Turk*, owned by E. H. Derby. She was at the Cape of Good Hope in 1784, commanded by Captain Jonathan Ingersoll, and at Canton in 1786, commanded by Ebenezer West. A model of this ship, completely rigged, is preserved in the Museum. In 1818, there were 53 vessels employed in this trade belonging to Salem, the tonnage of which was 14,272 tons. But the East India trade is not carried on so extensively now as formerly from the port of Salem. Many of the vessels which are owned here bring their cargoes into Boston and New York. Yet, in proportion to its size, Salem is now one of the wealthiest places in the United States.

The city is well built, largely of wood, but partly also of brick and stone. Many of the houses are elegant, particularly on Chestnut Street; and likewise in the vicinity of the Common, which is a beautiful public ground in the E. part of the city, containing about 8½ acres. It

is enclosed, laid out in gravel walks, and bordered with noble elms. The principal public buildings, besides the churches, are the City Hall, the Court House, the Custom House, a Market House, an Almshouse, and a Hospital.

The City Hall was built in 1837. It has a beautiful granite front, and is handsomely finished and furnished within.

The Court House is likewise a new and beautiful building, handsomely situated.

There are about 20 churches in Salem of the various denominations. Several of the church edifices have much architectural beauty. The North Church is built of stone, with a beautiful front of the Gothic order.

The Salem Athenæum was incorporated in 1810. Its library contains about 11,000 volumes, and occupies a spacious hall in Lawrence Place. This is not only an excellent library for popular use, but it contains an unusually large proportion of works of standard value. Early theological and scientific works, and the transactions of learned societies, are more fully represented than in most libraries of this kind. The Essex Institute, uniting the objects of natural and civil history, has a library of over 2500 volumes, besides a good collection of maps, portraits, specimens, and relics.

Among the public institutions of Salem is the East India Marine Society, formed, in 1799, of those who, as captains or supercargoes, have doubled the Cape of Good Hope or Cape Horn. In 1823, there were 160 of these enterprising men resident in Salem. The Museum of this society, consisting of the curiosities of nature and art collected from almost every part of the world, is one of the most interesting and valuable in the country. There are about 5000 different articles, the history and use of which are described in the catalogue. This Museum is kept in a spacious hall, built for the purpose by the society, which is open daily for the reception of visitors.

Although Salem is without any important water power, and has ever been mainly devoted to maritime pursuits, yet its manufacturing enterprise has been by no means inconsiderable. The value of its manufactures at this time is probably between three and four millions of dollars. A very extensive steam cotton mill has been set in operation within a few years past.

Salem became a city in 1836. An aqueduct furnishes the city with a constant supply of soft spring water. The railroad between Salem and Boston was opened in 1838, which brings it within 50 minutes of that metropolis. There is another road opened to Boston, through Danvers, going from Reading over the Boston and Maine Railroad. On leaving the Salem station for the E., the trains pass through a tunnel built under Essex and Washington Streets, and thence over the North River. Other railroads respectively connect Salem with Marblehead on the S., with Cape Ann on the E., with Lawrence and with Lowell on the N. W.

The celebrated witchcraft delusion prevailed in Salem in 1692, during the continuance of which 19 persons were condemned and hanged as witches. The house in which the accused were tried is still standing, at the corner of Essex and North Streets, and the place of their execution is now known, as "Gallows Hill." From this now smiling eminence the most beautiful view of the city is to be obtained. Though common-

ly denominated "the Salem witchcraft," this unhappy delusion prevailed in other places long before it existed here. In England laws had been enacted against it, as a capital offence, which received the sanction of that learned and upright jurist Sir Matthew Hale. It was an error belonging to those times, and one not a whit more strange in its character, though liable to be visited with a direr punishment, than some of the delusions of the present day.

Salem was distinguished for its patriotism, and especially for its naval achievements in the cause of American independence. During the revolution, there were about 60 armed vessels fitted out from Salem, manned by 4000 men; and many were the daring and chivalrous exploits performed on the sea by her citizens during that eventful period.

Among the distinguished men, in almost every learned profession, which Salem claims as among its sons, the name of Nathaniel Bowditch, LL. D., F. R. S., author of the Practical Navigator, is identified with its fame and nautical achievements. The Practical Navigator has been translated into every European language, and its use is coextensive with maritime adventures.

Salem, N. H., Rockingham co. Policy Pond, partly in this town, and partly in Windham, is the largest collection of water. World's End, Captain, and other small ponds are also here. The Spigot River passes through the town, and receives in its course numerous branches; it furnishes excellent mill privileges. The soil is generally fertile, and the surface uneven. 40 miles S. from Concord, and about 20 S. E. from Exeter.

Salem County, N. J., c. h. at Salem. Delaware Bay bounds it on the S. W. and N. W., Gloucester co. N. E., and Cumberland co. S. E. The surface is generally level, and the soil sandy, but productive.

Salem, N. J., c. h. Salem co. This town is situated $3\frac{1}{2}$ miles above the mouth of Salem Creek. It has 4 churches and an academy. 34 miles S. S. E. from Philadelphia.

Salem, N. Y., Washington co. A half shire town. Watered by Black and White Creeks, branches of the Battenkill, which bounds it on the S., and, together with other streams, affords good water power. Surface undulating and hilly; soil sandy and clay loam. 46 miles N. W. from Albany.

Salem, N. C., Stokes co. This town was planted and inhabited principally by Moravians, who have an academy for young ladies. It is situated 5 miles E. by S. from Bethania, and about 100 W. by N. from Raleigh.

Salem, Pa., Luzerne co. A township on the right bank of Susquehanna River.

Salem, Pa., Mercer co. One of the northern townships on Little Chenango Creek.

Salem, Pa., Wayne co. A town on Waullenspank Creek. 10 miles W. from Mount Maria.

Salem West, Pa., Mercer co. The northern township of the county.

Salem, Pa., Westmoreland co. A township W. from Loyalhanna River, commencing 5 miles N. from Greenbury.

Salem, Vt., Orleans co. Clyde River runs through this town, and falls into Salem Pond, which is partly in Salem and partly in Derby. There is no other stream of consequence. There are two other ponds, and they are each about

one mile in length and three fourths of a mile in breadth. South Bay of Lake Memphremagog lies between Salem and Newport. The surface of this town is uneven, but not mountainous. The settlement was commenced by Ephraim Black, in March, 1798. The town was organized April 30, 1822. 10 miles N. E. from Irasburg, and 53 N. E. from Montpelier.

Salford, Lower, Pa., Montgomery co. A township between Skippack Creek and the N. E. branch of Perkiomen. 10 miles N. N. W. from Norristown.

Salford, Upper, Pa., Montgomery co. A township adjacent to Lower Salford, and W. from the N. E. branch of Perkiomen.

Salina, N. Y., Onondaga co. 144 miles W. from Albany. The township of this name embraces the region around Onondaga Lake, and the celebrated salt springs of the state of New York. Portions of the territory upon the margin of the lake, where the springs exist, are reserved as the property of the state. The villages of Salina, Syracuse, Liverpool, and Geddes are all within this township, and are all places at which salt is extensively manufactured. The village of Salina is situated on the E. border of the lake, about $1\frac{1}{2}$ mile N. from Syracuse. It was formerly the principal village, but is now overshadowed by the growth of Syracuse, and has virtually become almost blended with it. The salt manufacture commenced at this place; the earliest record of its being made, to any extent, being in 1787, when 10 bushels were made in a day. The great salt spring is here, which mainly supplies the works at Liverpool and Syracuse, as well as at Salina. The brine is six times and a half stronger than sea water. The water is forced into an elevated reservoir, at the rate of about 300 gallons a minute, whence it is distributed. The manufacture at this place and Liverpool is carried on wholly by boiling, by which process the fine salt is produced. At Syracuse and Geddes the coarse salt is produced by solar evaporation. For other important statistics of this manufacture, see *Syracuse*.

The manufacture of flour is also carried on extensively at Salina village, by a water power from the Oswego Canal. There are likewise an extensive furnace and machine shop, and other manufactures where the power employed is that of steam.

Saline County, As., c. h. at Benton. Bounded N. by Perry and Pulaski counties, E. by Jefferson, S. by Dallas, and W. by Hot Springs co. Drained by Hurricane Creek, and watered on its S. W. border by Saline River.

Saline County, Is., c. h. at Raleigh.

Saline County, Mo., c. h. at Marshall. Bounded N. by the Missouri River, separating it from Carroll and Chariton counties, E. by Howard and Cooper, S. by Pettis, and W. by Lafayette co. Drained by La Mine River. Surface undulating; soil of excellent quality.

Salines, Mo., St. Genevieve co. A village, 4 miles below St. Genevieve. Extensive salt works are in its vicinity.

Salisbury, Ct., Litchfield co. The Housatonic and Salmon Rivers give this town a great and constant water power. The surface of Salisbury is formed of lofty elevations and deep valleys; but the soil is excellent for all sorts of grain and pasturage. The valleys are generally limestone, and the hills granite.

Salisbury Centre is a pleasant village. The Indian name of the town was *Weatog*. 50 miles W. N. W. from Hartford, and 22 N. W. from Litchfield.

Salisbury has long been celebrated for its excellent iron ore and iron manufactures. The guns for some of the oldest ships of our present navy were made at the old furnace in Salisbury.

The Old Ore Hill, 2 miles W. of Wanscomppunc Lake, has been worked since the year 1732. The large and inexhaustible quantities of iron ore found in Salisbury, and the abundant supply of wood for charcoal, and other materials necessary for smelting the ore, together with the superior quality of iron, introduced other manufactures, and iron has continued from that time the staple commodity of the town.

Salisbury, Md., Somerset co. A village lying on the N. side of Wicomico River, near the confines of Delaware. 20 miles N. W. of Snow Hill, and 33 S. by W. of Lewistown, near Cape Henlopen.

Salisbury, Ms., Essex co. In 1638 this town was granted, by the name of Merrimac, to be a plantation, unto Simon Bradstreet, Daniel Denison, and others. The year following it was incorporated by the name of Colchester, and in 1640 assumed, by direction of the then General Court, the name of Salisbury. It is bounded southerly by the River Merrimac, westerly by Powow River, northerly by the New Hampshire line, and easterly by the sea. There are two considerable villages in Salisbury; the largest is at the westerly part of the town, upon Powow River, at the head of tide water. The village is divided by said river into two pretty equal parts, one in Salisbury, the other in Amesbury. 36 miles from Boston by the Eastern Railroad, and 2 from Newburyport. The other village is pleasantly situated on the bank of the Merrimac, on a point of land formed by the junction of that river with the 'Powow, and is called Webster's Point. Salisbury and Amesbury are finely located for business; the villages are neat, and the scenery around them very pleasant. Salisbury Beach is noted for its beauty, and is much frequented. It is about 5 miles from the town.

Salisbury, N. H., Merrimac co. Blackwater River passes through the W. part of Salisbury. There are 5 bridges across it in this town. On the river is some very fertile intervale. The Pemigewasset and Concord Rivers are on the E. boundary. The soil of the upland is strong, deep, and loamy. A considerable portion of Kearsarge Mountain is within Salisbury. There are 2 very pleasant villages here, situated on the Fourth New Hampshire Turnpike, about a mile and a half apart. First settlers, Philip Call, Nathaniel Meloon, Benjamin Pettengill, and John and Ebenezer Webster, in 1750. From Concord 16 miles N. The Concord and Montreal Railroad passes through the town.

Salisbury, N. Y., Herkimer co. Watered by East Canada and some branches of West Canada Creek. Surface diversified with hills, mountains, and broad valleys; soil well suited to grass. 15 miles N. E. from Herkimer, and 71 N. W. from Albany.

Salisbury, N. C., c. h. Rowan co. On a branch of the Yadkin River, 118 miles W. from Raleigh. An ancient stone wall has been discovered here, the top of which is about a foot beneath the surface of the ground, 12 to 14 feet high, 22 inches thick, and plastered on both sides. Its length, as far as it has been traced, is about 300 yards. A

few miles from this place a similar wall has been discovered, though of less height and thickness. The origin of these curious antiquities is unknown.

Salisbury, Pa., Lancaster co. This town is located on the head waters of Pequea Creek, 12 miles E. from the city of Lancaster.

Salisbury, Pa., Lehigh co. A township situated between Sancon Creek, Little Lehigh Creek, and Lehigh River.

Salisbury, Pa., Somerset co. A village. 20 miles S. from Somerset.

Salisbury, Vt., Addison co. Otter Creek forms the western boundary of this town. The other streams are Middlebury and Leicester Rivers. Lake Dunmore is about 4 miles long, and from half to three fourths of a mile wide, and lies partly in Salisbury and partly in Leicester. On the outlet of this pond, called Leicester River, are several falls, which afford fine mill privileges, around which is a thriving village. The surface is uneven, but the soil generally good. The eastern part extends on to the Green Mountains. In the western part are some fine tracts of meadow. In the mountain E. of Lake Dunmore is a cavern, thought to have been inhabited by the Indians, as some of their instruments have been found here. The first person who came into Salisbury with a view of settling was Amos Storey. Thomas Skeels and Abel Waterhouse were the next settlers. The 22d day of February, 1775, the widow of Mr. Storey, and eight or ten small children, moved into town. 34 miles S. W. from Montpelier, and about 6 miles S. from the Rutland Railroad depot in Middlebury.

Salt Lake City, Uh. See *Appendix, No. 3.*

Salt Sulphur Springs, Va., Monroe co. 232 miles W. from Richmond. See *Fashionable Resorts.*

Saltsburg, Pa., Indiana co. On the E. bank of Conemaugh River. 179 miles W. N. W. from Harrisburg. There are many salt works in the neighborhood. The Pennsylvania Canal passes through it.

Sampson County, N. C., is bounded S. E. by New Hanover, S. W. by Bladen, W. by Cumberland, N. by Johnson, N. E. by Wayne, and E. by Duplin. It is drained by Black River branch of Cape Fear River. The court house is about 55 miles N. N. W. from Wilmington.

San Antonio, Ts., c. h. San Antonio co.

San Augustine County, Ts., c. h. at San Augustine. On the E. border of the state.

San Augustine, Ts., c. h. San Augustine co.

Sanbornton, N. H., Belknap co. The bay between Sanbornton and Meredith is 3 miles in width. There are no rivers or ponds of magnitude in the town. Salmon Brook Pond, and a brook of the same name, its outlet, are the only ones worth mentioning. Sanbornton presents an uneven surface, but contains no mountains. The soil is almost universally good. There is a gulf here extending nearly a mile, through very hard, rocky ground, 38 feet in depth, the walls from 80 to 100 feet asunder. There is also a cavern on the declivity of a hill which may be entered, in a horizontal direction, to the distance of 20 feet. On the Winnipiseogee, at the head of Little Bay, are found the remains of an ancient fortification. First settlers, John Sanborn, David Duston, Andrew Rowan, and others, in 1765 and 1766. By the Concord and Montreal Railroad, this town lies 91 miles from Concord, and 8 from Gilford.

Sanders, Ky., Grant co. A village 50 miles N. N. E. from Frankfort.

Sandersville, Ga., Washington co. This village is the seat of justice, and lies 30 miles S. E. from Milledgeville.

Sanford, N. Y., Broome co. Oquaga Creek, a branch of the Delaware River, waters this town. Surface hilly and mountainous; soil favorable for grazing. 20 miles E. from Binghamton, and 135 S. W. from Albany.

Sandgate, Vt., Bennington co. The people of this town are favored with mountain air, and with crystal streams. Shetterack and Bald Mountains are in the N. W. part of the town; Spruce and Equinox are in the N. E., Red Mountain in the S. E., and Swearing Hill in the S. W. Between these elevations is some good land, which produces grass and grain. The settlement of this town was commenced in 1771, by a Mr. Bristol. 20 miles N. from Bennington, and 31 S. by W. from Rutland.

San Diego, Ca., c. h. San Diego co. This town, near the southern boundary of California, has, with the exception of Acapulco, the finest harbor on the Pacific. It is on a wide and spacious bay, the southern shore of which is low and sandy. From the bluff heights on the opposite side a narrow strip of shingly beach makes out into the sea, like a natural breakwater, leaving an entrance of not more than 300 yards broad. The town, which is inconsiderable, is situated on a plain, 3 miles from the anchorage, which is at the foot of the hills, just inside the bay, and from which the town is barely visible. It was the first place in Upper California occupied by the Spaniards. About 425 miles S. E. from San Francisco.

Sanford, Me., York co. On Mousum River. It has a good water power, and an establishment for the manufacture and printing of cotton goods. It is 35 miles W. S. W. from Portland.

Sandisfield, Ms., Berkshire co., was incorporated in 1762, and first permanently settled in 1750. The surface is hilly in general. The hills are of considerable height, but not abrupt, rising into large swells. In the S. E. section of the town, a considerable mountain rises on the western bank of Farmington River, known by the name of Hanging Mountain. Its highest point of elevation is 450 feet above the bank, and presents to the S. E. a mural perpendicular front, more than 300 feet high. Farmington River runs near the E. line of the town, through the whole extent, and affords many mill seats and water privileges. There are other small streams intersecting the town. In the N. part of the town, at the outlet of Spectacle Pond, the water privileges are excellent. The soil is various, but generally of a good quality; it consists of a moist loam, stony in many places, and principally adapted to grazing. 115 miles W. S. W. from Boston, and 27 S. S. E. from Pittsfield.

Sandiston, N. J., Sussex co. A township.

Sand Lake, N. Y., Rensselaer co. Watered by the Poestenkill and Wynantskill Creeks, and contains several small lakes. Surface hilly; soil fertile in the valleys, and generally good for grass. 41 miles S. E. from Troy, and 10 W. from Albany.

Sandover, S. C., Abbeville district. A village, by post road 90 miles W. from Columbia.

Sandown, N. H., Rockingham co. The surface is uneven, but the soil is well adapted to grain and grass. Phillips's Pond, in the S. part of the town, is the largest, being about 340 rods

long and 200 wide. Angle Pond, in the S. E. part, is 200 rods long and 90 or 100 wide. There are several other smaller ponds. Squamscot River flows from Phillips's Pond, and pursues a nearly level course for 1½ miles, where another stream unites with it; from this junction, whenever the waters are high, the current passes back with considerable force towards the pond. This town was originally a part of Kingston. First settlers, Moses Tucker, Israel and James Huse, and others, in 1796. 32 miles S. E. from Concord, and 26 S. W. from Portsmouth.

Sandusky, O. Port of entry, and seat of justice of Erie co. Situated on the S. side of Sandusky Bay, opposite to the opening of the bay into Lake Erie, from which it is about 3 miles distant. It is 105 miles N. from Columbus, and 60 W. from Cleveland. The town is based upon a quarry of the finest building stone, which furnishes the durable and ornamental material of which a large number of the handsomest blocks and edifices in the place are constructed. It is also an article of export to other places upon the lake. The ground on which the town is built rises gradually from the water's edge for about half a mile, thereby furnishing one of the pleasantest views of lake scenery any where to be enjoyed in the country. During the season of navigation upon the lake, which is interrupted for only about three months in the winter, the bay before the town presents a lively scene, with steamboats and other vessels arriving and departing, and the distant horizon upon the lake is whitened with the floating canvas. The building of vessels and steamboats is carried on here to considerable extent. As it is one of the great points of landing and embarkation for travellers between the North-eastern States and the valley of the Mississippi, as well as for the trade of the interior, it has had a very rapid growth, and must continue greatly to increase for years to come. A great impulse has been given to the prosperity of the place, by the construction of the railroads meeting here; by one of which it has been connected with Cincinnati, 218 miles distant, and by another with Newark, near the centre of the state, from which the connection will soon be made complete to Columbus and to Zanesville. Other lines of railroad are projected, which will, ere long, be built. A very heavy transportation business is done upon the roads above mentioned, and the whole commerce of the place is large and rapidly increasing.

Sandusky was laid out upon a regular and beautiful plan, in 1817, by two gentlemen from Connecticut, who were the proprietors of the soil, Hon. Zalmon Wildman and Hon. Isaac Mills. The first framed dwelling was erected in the fall of that year. The first church erected here was a small Methodist church, in 1830. Sandusky now contains four handsome churches, an academy, built of stone, three stories high, a large number of stores, several forwarding and commission houses, extensive machine shops for the manufacture of the iron for railroad cars, banks, printing offices, hotels, and other establishments required for the commerce and business of the place. A few hundred yards back from the bay is a large and handsome public square, upon which, looking towards the lake, are the principal churches and public buildings. On the farm of Isaac A. Mills, W. of the town, are to be seen the remains of some ancient works and mounds, of unknown origin. Population in 1850,

Sandusky County, O., c. h. at Lower Sandusky. Lake Eric and St. Lucas co. are on the N., Huron on the E., Seneca on the S., and Wood co. on the W. In January, 1820, it was organized. The land is low and level, and is watered by Sandusky Bay and River, also by Portage River, Green, Mud, and Muskalunge Creeks.

Sandwich, Ms., Barnstable co. This town was granted to Edmund Freeman and others in 1637. Its Indian name was *Shawme*. Sandwich is situated on the shoulder of Cape Cod, and although much of the soil is thin and sandy, yet there is not a little of an excellent quality. It is watered by a number of streams, which afford a good water power, and by numerous ponds, some of which are large, affording a variety of excellent fish. The forests afford an abundance of deer. Sandwich has a good harbor within the cape, and navigable accommodations in Buzzard's Bay. There are a number of flourishing villages in the town. There are in this town several branches of manufacture, but the most important is that of the New England Glass Company, who manufacture annually about \$300,000 in value, of glass, equal in quality, if not superior, to any manufactured in this country. 63 miles S. E. from Boston by the Cape Cod Branch Railroad, and 12 N. W. from Barnstable.

Sandwich, N. H., Carroll co. This town was originally granted by Governor Benning Wentworth, in 1763. Sandwich Mountains are a lofty range, extending N. E., and terminating in Chocoma Peak, in Albany. Squam Mountain is of considerable height. There are other mountains. The Bearcamp River passes E. into Tamworth; the W. branch passes through Bearcamp Pond. There is another pond, not far distant from this, from which issues Red Hill River, passing S. into Winnipiseogee Lake. A small stream passes W. into the Pemigewasset River. About one fourth of Squam Lake lies in the S. W. corner of Sandwich. This is a flourishing town, and its productions are numerous and valuable. 52 miles N. from Concord, and about 22 N. W. from Ossipee.

Sandy Creek, Pa., Mercer co. A township situated between French Creek and Salem townships. 10 miles N. from Mercer.

Sandy Creek, N. Y., Oswego co. Watered by Little Sandy Creek and other streams, flowing into Lake Ontario, which bounds it on the W. Surface undulating; soil sandy loam. 7 miles N. from Pulaski, and 159 N. W. from Albany.

Sandy Hill, N. Y., c. h. Washington co. 53 miles N. from Albany. On the E. bank of Hudson River. The river has a fall of 12 feet in the upper part of the village, and at Baker's Falls, 100 rods below, a perpendicular descent of 50 feet. The place is connected with the Champlain Canal by a navigable feeder. There are considerable manufactories here, and much more power to be improved.

Sandy Lake, Pa., Mercer co. This township is on the E. border of the county. S. from French Creek township.

San Felipe, Ts., c. h. Austin co.

Sandford, Me., York co. Sandford is watered by Mousum River. It has a good water power, and an establishment for the manufacture and printing of cotton goods. 35 miles W. S. W. from Portland, and is bounded S. W. by Alfred.

San Francisco County, Ca., c. h. at San Francisco. includes the peninsula between San Francisco Bay and the Pacific.

San Francisco, Ca., c. h. San Francisco co. The entrance to the Bay of San Francisco, known as the Golden Gate, is about 3 miles wide, and is formed by a gap or opening, extending 5 or 6 miles through the range of mountains that runs along the coast of California. Table Hill, not far from the northern shore of this strait, is 2500 feet high. Opposite the entrance, just as it opens into the bay, are the Islands of Alcatraz and Yerba Buena. 30 miles in the distance, nearly due W., rises the peak of Monte Diablo, the highest point of the second or interior coast range, and overlooking every thing between the ocean and the Sierra Nevada. It is between these two coast ranges that the Bay of San Francisco spreads out, extending in a direction E. of S., upwards of 50 miles, with a breadth varying from 6 or 7 miles, where it turns S., to near 20 in the middle, and diminishing to 2 or 3 at the southern extremity, into which flows the Guadaloupe River, on which, and on the shores of the bay, is some excellent land. At the N., the Bay of San Francisco communicates by a strait not unlike that of the Golden Gate, with San Pablo Bay, a basin of near 15 miles diameter, into which are discharged, through a deep navigable channel coming from the W. and extending in its course into Susan Bay, the united waters of the Sacramento and San Joaquin, the two principal rivers of California.

The peninsula between San Francisco Bay and the ocean consists chiefly of barren sand hills. The city of San Francisco lies just within the northern point of the entrance into the bay, upon a deep curve of the shore, and on the sides of three hills of sand, which rise steeply from the water, the middle one receding so as to form a bold amphitheatre.

The Bay of San Francisco was entered by Sir Francis Drake during his famous expedition to the Pacific, in 1578, before any settlements, except those at St. Augustine, had been formed on the Atlantic coast of the United States. It was known to the Spaniards 30 years earlier, but was neglected till their occupation of Upper California, which commenced in 1769, not long after which San Francisco was taken possession of, and was subsequently held by a small garrison, maintained in a little fort just at the entrance into the bay, a hamlet of a few houses growing up on the site of the present city. At the time of the transfer of California to the United States, in 1848, and even as late as April, 1849, San Francisco did not contain more than 30 or 40 houses. But the discovery of gold gave it a sudden impulse, and by the 1st of September, 1849, there were 500 houses, tents, and sheds, with a population, fixed and floating, of 5000 or 6000. Streets had been regularly laid out, and already there were 3 piers at which small vessels could discharge. New buildings, though of the most flimsy description, the oldest and most substantial of adobes or dried mud, the rest of boards and canvas, were held, as well as the city lots, at the most extravagant prices. The Parker House, an ordinary frame building, of 60 feet front, used as a hotel, rented for \$110,000 yearly, and other buildings in like proportion or at rates still more extravagant. These enormous rents led to a rapid and immense increase of buildings, and, notwithstanding the very high prices of building materials and labor, by the beginning of 1850, San Francisco had become a real city,

with some 20,000 inhabitants, spacious and convenient buildings, though mostly of wood, including extensive hotels and warehouses, many of the frames of which had been shipped round Cape Horn, and others from China. Speculation and prosperity went on increasing till the city received a severe check by three successive fires, by which a vast extent of frame and canvas buildings were swept away, and immense amounts of property destroyed. These fires led, however, to the erection of fire-proof buildings of brick. The city has also received a great extension by the filling up of shallow water lots by sand from the neighboring hills, upon which many solid and substantial buildings have been built; and though real estate has greatly declined from its former extravagant prices, to the ruin of many who thought themselves worth millions, the city continues to be improved by the erection of solid and substantial buildings. Great expenses have also been incurred by the city corporation in the improvement of the streets.

From its local situation in reference to the gold region, San Francisco must always remain the great seat of the ocean trade of California. Already it has extensive mercantile communications with all parts of the world. It is connected with New York by two lines of steam packets, one by the way of Panama, making the distance in about four weeks, a packet leaving either city every fortnight, and carrying the mail; the other, also a semi-monthly line, by the Lake Nicaragua, which accomplishes the distance in about four days' less time. The shortest passage from San Francisco to New York has been 21 days.

Not only is the trade with the Atlantic ports of the United States very great, but San Francisco has an extensive commerce with Chili, from which large supplies of flour are derived, and also with China, whence a great influx of emigrants is flowing to California.

The arrivals at San Francisco for the first six months of 1852, ending June 30, were 68 steamers, 108 ships, 101 barks, 130 brigs, 75 schooners, 40 sloops. Total, 522. Total tonnage, 201,473. The clearances were 77 steamers, 94 ships, 141 barks, 130 brigs, 229 schooners, 76 sloops. Total, 747. Total tonnage, 222,805.

The amount of duties paid is greater than at any port of the United States, except New York and Boston.

The arrival of passengers at San Francisco from July 1 to 29, 1852, was 9923; departures, 1140; for the first six months of the year 1852, the arrivals were 40,000. The present population of California is estimated at 240,000.

Official Report of Deposits of Gold from California.

At the various U. S. mints in 1848,	\$44,177
" " " " 1849,	6,147,509
" " " " 1850,	36,074,062
" " " " 1851,	55,938,232

Manifested shipments to U. S. ports in December, 1851, which did not reach the mints in 1851, 2,910,214

Importations into Chili in 1851, by official returns from that country, . . . \$2,372,000

Shipments per steamers in 1851, on freight to Europe and various countries, not including Chili, via Panama, so far as

destination was declared on manifests,	\$3,600,000
Add estimate of shipments by the same course and to same quarters in 1851, for which the destination beyond Panama was not declared—50 per cent. of above,	1,800,000
Known shipments by sailing vessels in 1851, to various foreign ports,	1,000,000
Add for amount not manifested, believed to be as large as	1,000,000
<hr/>	
Total estimate of exportation to foreign countries in 1851,	9,772,000
The early foreign trade was very large, particularly in 1849, from Pacific ports. Remittances in this early trade were made chiefly in gold dust. The aggregate shipment to foreign countries for 1848, 1849, and 1850, is therefore assumed for the 3 years to be as large as that of 1851,	9,772,000
Total estimate of exports to foreign countries to December 31, 1851, which would not reach U. States mint,	19,544,000
<hr/>	
	120,658,194
Estimated amount taken overland to Mexico, and by passengers to Europe, East Indies, Australia, South America, (exclusive of Chili.) manufactured in California and United States, and otherwise retained by individuals leaving the country, and therefore not represented in the mint deposits, say 5 per cent. on above,	6,032,909
In hands of bankers, merchants, and traders in San Francisco, per tabular statement prepared December 31, 1851,	5,000,000
In hands of bankers and traders in other parts of California and Oregon, December 31, 1851,	2,500,000

<hr/>	
Total estimated product to June 30, 1852,	\$174,780,877

Sangamon County, Is., c. h. at Springfield. On a river of the same name, and is bounded

S by Montgomery and Morgan, and W. by Fulton.

Sangerfield, N. Y., Oneida co. The Chenango River and Oriskany Creek water this town, the surface of which is hilly; soil fertile loam, underlaid by lime. 15 miles S. from Utica, and 89 N. of W. from Albany.

Sangerville, Me., Piscataquis co. This beautiful and thriving town is not mountainous, but it is so elevated between Penobscot and Kennebec Rivers that the waters of its ponds meet the ocean by both of those streams. Sangerville is 70 miles N. W. from Augusta, and is bounded by Dover on the W. Incorporated 1814.

Sanilac County, Mn., c. h. at Sanilac Mills. E. part. On the S. W. shore of Lake Huron.

San Joaquin County, Ca., c. h. at Stockton. On both sides of the lower course of the San Joaquin River.

San Jose, Ca., c. h. Santa Clara co., 50 miles from San Francisco, is situated in one of the most pleasant and healthy valleys in California. It is well watered, and for 20 miles N. and S. there is a perfect carriage road, with barely a mould of earth to lift a wheel. Its advantages for gardens, fruits, and grains are of the highest order. The quicksilver mines are about 20 miles S. of this city.

San Luis Obispo County, Ca., c. h. at San Luis Obispo. On the coast, opposite the head waters of the San Joaquin.

San Luis Obispo, Ca., c. h. San Luis Obispo co. On the coast, half way from Santa Barbara to Monterey. 200 miles S. by E. from San Francisco. An unsafe port in winter. It has an extensive seaboard district about it, but is not well watered.

San Patricio County, Ts., c. h. at San Patricio. In the S. E. angle, between the Nueces and the Rio Grande.

San Pedro, Ca., Los Angeles co. The port of Pueblo Los Angeles, from which it is 27 miles S. on the Bay of San Pedro, about 80 miles N. W. from San Diego Los Angeles, is a good farming district, celebrated for its grapes, and was the former Spanish capital of California.

Santa Barbara County, Ca., c. h. at Santa Barbara. On the coast S. of Cape Concepcion, towards the southern extremity of the state.

Santa Barbara, Ca., c. h. Santa Barbara co. A small sea-coast town, pleasantly situated, surrounded by mountains.

Santa Clara County, Ca., c. h. at San Jose. Around the southernmost waters of San Francisco Bay. Watered by the Guadalupe, near the head of which are the quicksilver mines. It contains one of the best farming tracts in California.

Santa Fe, N. M., c. h. Santa Fe co., and capital of the territory. The oldest town in the United States, next to St. Augustine, having been founded in 1580. It is situated on a small tributary of the Rio Grande called the Chichito, or River of Santa Fe, a short distance E. of the Rio del Norte, and is approached from the E. through a cañon or narrow pass of the eastern chain of the Rocky Mountains, commencing about 25 miles from the town, and extending 10 or 12 miles in length, the mountains rising on either side to a height of 1000 or 2000 feet, in all cases within cannon shot of each other, and in many places within point blank musket shot. This continues to within 12 or 15 miles of Santa Fe.

The elevation of Santa Fe above the level of

the sea is upwards of 6800 feet, higher than the highest summits of the White Mountains, and the neighboring peaks to the N. are many thousand feet higher. On leaving the narrow valley in which the town stands, varying in width from 1000 feet to a mile or two, and which is cultivated entirely by irrigation, the country presents nothing but barren hills, utterly incapable, both from soil and climate, of producing any thing useful. The river, 5 miles below the town, disappears in the granitic sands. The houses are of adobes or sun-dried bricks, in the Spanish style, generally of one story, and built on a square. The interior of the square is an open court, and the principal rooms open into it. These houses are forbidding in appearance, on the outside presenting the aspect of a collection of brick kilns, but are comfortable and convenient within. The thick walls make them cool in summer and warm in winter. The better class have good beds, but the inferior people sleep on untanned skins. The women appear to be the most refined and intelligent part of the population. Those of the upper class dress like the American women, except that, instead of a bonnet or cap, they wear, both in doors and out, a scarf over the head called a rebozo. The dress of the lower class of women is a simple petticoat, with the arms and shoulders bare, except what may chance to be covered by the rebozo. The men who have means to do so dress after the American fashion; but by far the greater part, when they dress at all, wear leather breeches tight round the hips and open from the knee down, shirt and blanket taking the place of our coat and waistcoat.

The town is dependent on the distant hills for wood, which is brought in bundles on diminutive jackasses; the only animal that can be subsisted in this barren neighborhood without great expense. The inhabitants manufacture sugar from the cornstalk, which sells at 30 or 40 cents per pound. Grain is always from \$2 to \$3 the bushel. The fruits of the place, including melons, the apple, plums, grapes, and apricots, are, all but the grapes and apricots, very indifferent.

The Rio del Norte itself in this neighborhood affords, in its narrow, sandy valley, little or no space for agriculture. On the W. side the banks are steep walls crowned by layers of basalt, forming the table lands. The E. side is composed of rolling sand hills rising gradually to the base of the mountains.

The whole valley of the Upper Del Norte, so far as it contains any ground cultivated, or capable of cultivation, may be considered as included between Taos, in about 36° 30' N. latitude, and Rio Cristobal, in 33° 30', a distance of about 200 miles in length, but every where very narrow. Beginning at La Goga, about 30 miles S. from Taos, the banks of the Del Norte exhibit a narrow, sandy bottom, so situated as to admit of irrigation; this lasts for about 160 miles. The river itself is scarcely more than 25 yards wide, and every where fordable.

30 or 40 miles S. of Santa Fe, amid the mountains, on the E. of the Del Norte, are gold washings, but not very productive or profitable.

The wealth of the country, which is very poor at best, consists of flocks of sheep and cattle, for which pasturage is found on the banks of the rivers, but which are exposed to constant depredations from the Indians.

Santa Rosa County, Fa., c. h. at Milton. It

is washed on the W. by the Escambia, and drained by tributaries of Pensacola Bay.

Saquoit, N. Y., Oneida co. On both sides of Sadaquada or Saquoit Creek, 90 miles W. N. W. from Albany. It contains an inflammable sulphur spring, yielding gas sufficient to light buildings.

Sarashville, O., Noble township, Morgan co. It lies near the Buffalo Fork of Wills Creek. 89 miles from Columbus, and 28 from McConnellsville.

Saranac, N. Y., Clinton co. The Saranac River waters this town, flowing through a valley of considerable size and fertility. Surface chiefly hilly and mountainous, abounding in iron ore. 15 miles W. from Plattsburg, and 180 N. from Albany.

Saratoga County, N. Y., c. h. at Milton. Formed from Albany co., in 1791. It is bounded N. by Warren co., E. by the Hudson River, S. by Albany and Schenectady, and W. by Fulton and Herkimer counties. Watered by Mohawk and Sacandaga Rivers, Kayaderosseras and Fish Creeks, and Saratoga, Ballston, and Round Lakes. The Palmetown and Kayaderosseras Mountains cover the N. W. part of this county; the rest of the surface is undulating and hilly, interspersed with sandy plains. Soil of various qualities, being chiefly composed of sandy or gravelly loam and clay. The mineral waters of this county are unrivalled, and the description of them will be found under the appropriate head. Agate and chalcodyon are found in the vicinity of Saratoga Springs, and there are several localities of marl and bog iron ore. The Saratoga and Schenectady and the Rensselaer and Saratoga Railroads cross this county, along the E. and S. borders of which extends the Champlain Canal.

Saratoga, N. Y., Saratoga co. Bounded on the E. by the Hudson River, W. by Saratoga Lake, and watered by Fish Creek, connecting the two; the Champlain Canal also passes parallel to the river through this town. Surface uneven, and soil gravelly loam, with the exception of some rich alluvial flats bordering the Hudson. It was in this town that General Burgoyne surrendered to the American army, October 17, 1777. 10 miles N. E. from Ballston Spa, and 34 N. from Albany.

Saratoga Springs, N. Y., Saratoga co. This town is watered by Ellis's Creek and some other small tributaries of Kayaderosseras Creek, which bounds it on the S. Surface hilly on the N. E., and chiefly level elsewhere; soil light sandy loam. For an account of the celebrated mineral springs in this town, see *Fashionable Resorts*.

Sardinia, N. Y., Erie co. Bounded on the S. by Cattaraugus Creek. A hilly town, with a soil well suited to grass. 28 miles S. E. from Buffalo, and 274 W. from Albany.

Sarecto, N. C., c. h. Duplin co. About 50 miles N. from Wilmington.

Saugerties, N. Y., Ulster co. Watered by Platterkill and Esopus Creeks, flowing into the Hudson, which bounds it on the E. The W. part is covered by the Catskill Mountains, but the E. is more level, and the soil good. 10 miles N. from Kingston, and 46 S. from Albany.

Saugus, Ms., Essex co. This town formed the W. parish of Lynn until 1815, when it was incorporated, and received the name of Saugus, the old Indian name of Lynn, and of the river that passes through the town. Most of the land on

the river is excellent and well cultivated. There are large tracts of salt meadow towards the sea, so large as to form one seventh part of the area of the town. The land back from the river is rough, and much of it covered with wood. Saugus River winds delightfully through the meadows, and makes a very picturesque appearance. 6 miles S. W. from Salem, and about the same distance N. from Boston.

Sauk County, Wn., c. h. at Prairie du Sac. Bounded N. and E. by Portage co., S. by Wisconsin River, separating it from Dane and Iowa counties, and W. by Richland co. Drained by Baraboo and other tributaries of Wisconsin River.

Sault de Sainte Marie. This village is situated upon the borders of Saint Mary's River, at the falls of Ste. Marie, and is an old Jesuit missionary station of the early French settlers of this country, and was occupied by them from 1626 until the cession of the French possessions in North America to Great Britain. It is a famous fishing station, immense quantities of white fish being caught and salted there for the markets of the West.

The American Fur Company have long had their factory there, and it is now one of the most important forwarding places for transportation of supplies to the miners on the shores of Lake Superior, and for transmission of cargoes of copper from the mines to the cities upon our sea-coast.

The Falls of St. Mary are merely rapids, there being only a fall of 20 feet in a mile. Boats easily and safely pass down these rapids, and there has been a single instance of a sail boat passing up the falls under a heavy press of sail.

Brook trout of the finest flavor and of large size are caught in great abundance in these rapids. White fish are taken by the Indians, by means of spears and scoop nets, directly under the falls.

It is proposed to cut a ship canal, at the expense of the United States government, so that the navigation of the lower lakes may pass readily by these falls into Lake Superior, and an appropriation has been made by Congress for this important work. The proposed canal will be only one mile long, and must be carried out into the lake above nearly half a mile in order to enable ships to enter it, and a secure sea wall will have to be built to prevent the surf and the ice from damaging the locks of the canal. The rocks are soft red and gray sandstone, and a canal may be cut in it with nearly as much ease as in earth or hard soil. Owing to the vast increase of business on Lake Superior, and the importance of the mines of that region, it seems highly desirable that the government should hasten to construct the ship canal at this place, and thus open the vast regions of Lake Superior and of the country between that lake and the River Mississippi for settlement.

The climate of the Sault Ste. Marie is mild and cool in summer, but very cold in winter, the thermometer sinking to the freezing point of mercury in the coldest weather.

There is an old fort at this place, where the United States government occasionally quarters a few companies of troops; but the day has long since past when their aid would have been required for the protection of the inhabitants from Indian depredations, the aborigines being far from hostile to the white people living among them.

It is difficult to say what is the present popula-

tion of the Sault Ste. Marie, for it is continually fluctuating with the trade of that region; but it is now certainly on the rapid increase.

One of the annual payments to the Indians is made here by the government, and in the autumn when this takes place, thousands of the native Americans throng the Sault to receive each his ten silver dollars, or its equivalent in blankets or arms, in payment for lands ceded to the United States. About \$40,000 are annually paid to the Indians at this place.

There are now two or three good hotels at the Sault, and travellers are hospitably entertained, and find abundant amusement in fishing for trout.

Savannah, Ga. The largest city in the state, a port of entry, and the seat of justice of Chatham co. It is 90 miles W. S. W. from Charleston, South Carolina, and 158 E. S. E. from Milledgeville. Population, in 1810, 5195; 1820, 7523; 1830, 7776; 1840, 11,214; 1850, about 17,000. The population of Savannah is subject to considerable fluctuations, with the change of the seasons from summer to winter. The place having been formerly very unhealthy in the summer months, many of the inhabitants were in the habit of visiting the north at that season. These not only were at home in the winter, but many visitors from the north, in turn, sought the benefits of a milder climate than their own, in this as well as in other cities of the south. According to a census of the city taken in the summer of 1838, the permanent inhabitants amounted to 12,758, to which, according to the computation of the officer employed to take the census, 3000 should be added for the transient winter population; making a total, during that season, of 15,758. Much improvement in the salubrity of the place during the hot season has been realized within the last 30 years, in consequence of the substitution of the dry for the wet cultivation of the rice crop in the low swamps of the vicinity, and of better building and other municipal regimen in the city. In the opinion of eminent physicians, the summer in Savannah is now even more healthy than the winter.

The city is built on the S. side of the Savannah River, 17 miles from the ocean, on a sandy plain 40 feet above the level of the river. This plain, which is nearly a perfect level, extends about a mile E. and W. upon the river, and for several miles S., increasing in width as it extends back from the river. The city is laid out with regularity and beauty, by streets crossing each other at right angles, and having between every other street a public square, generally enclosed and ornamented with trees. These open parks, 18 or 20 in number, with their verdant carpeting and shaded avenues, together with the rows of trees with which the streets generally are lined on both sides throughout, give to the city, during the spring and summer months, an airy, cool, and rural appearance. The space at present covered by the city is about a mile in length, by three quarters of a mile in breadth. The buildings are of wood, brick, and stone, and many of them are of fine architecture and elegant appearance. Formerly the great proportion of wooden buildings exposed this city to frequent ravages from fire. The year 1820 was rendered memorable by the most destructive conflagration, by which 463 buildings were consumed, occasioning a loss of property to the amount of \$4,000,000. It has since been rebuilt, chiefly of brick, with many im-

provements in the means of securing cleanliness, comfort, and health. Among the public buildings are the court house, jail, exchange, arsenal, United States barracks, a market house, several fine banking houses, an academy, a theatre, a female asylum, a widows' asylum, a hospital, and a poorhouse. One of the most splendid structures in the city is that of the Independent Presbyterian Church, which is constructed of a light-colored granite, and cost \$100,000. The city contains 12 or 14 churches, among which are a Presbyterian, an Independent Presbyterian, a Baptist, 3 African, (Baptist,) 2 Episcopal, a Methodist, a Lutheran, a Unitarian, a Mariners' Church, a church for the Roman Catholics, and a Jews' Synagogue. The warehouses are ranged along the bank of the river, 3 or 4 stories high on the river side, accessible to the lower story from the wharves, and to the upper from the city.

The position and the harbor of Savannah offer fine advantages for navigation and commerce. The harbor is one of the finest on the southern coast of the United States. The entrance from the sea, over the bar, is full a mile wide, affording, without change, a passage of from 18 to 21 feet of water at low tide. Vessels requiring 13 feet of water come up to the wharves of the city, and those requiring 15 or 16, to a good anchorage, called the Five Fathom Hole, 3 miles below. The navigator is guided to the entrance of the harbor by the light-house on Tybee Island, which having made, there is no difficulty, even for a stranger, with the assistance of the Coast Pilot, in effecting an entrance without risk, even during a heavy gale of wind. Some impediments to the navigation, which were placed in the river during the revolutionary war, to obstruct the approach of the British armed vessels, are not yet entirely removed, though their removal was undertaken by the United States, and is nearly effected. The tide flows up the river 55 miles. Steamboats go up to Augusta, 250 miles by the course of the river, and pole boats go up 150 miles farther. There are 2 companies employed upon the river, with 6 steamboats, 4 of which are of iron, and 30 tow boats, of 150 tons' burden each, running to Augusta. There are also 2 companies, with 11 steamboats and 42 tow boats, running through an inland coast navigation to Darien, and up the Alatamaha and Ockmulgee Rivers, 650 miles, to Macon. There are also running, through an inland coast navigation, 2 steamboats to and from Florida; and 4 to Charleston, 2 by the inland and 2 by the outside passage. These boats run steadily through the winter season, and during the summer whenever the state of the rivers permits. There are 3 lines of brigs, with 6 vessels in each line, sailing between Savannah and New York, making a departure from each place every 2 days, and occupying 7 days, on an average, in the passage. Savannah is already the centre of commerce for a large area of country, which must hereafter be very much extended. The commerce of the neighboring state of Florida is much better accommodated at the fine port of Savannah than in her own shallow harbors. The dangerous navigation round the Florida Cape, and the facility of making a railroad communication over land to Savannah, must give to this city an advantageous position in the south. There are railroads, already completed or in process of construction, to Macon, in the centre of the state, and 100 miles farther W., to connect with the Atlantic and Western

Railroad, which is completed, and runs 136 miles farther N. W., to Tennessee River, opening, by a direct route to Savannah, the commerce of the west; also a branch of the Monroe Railroad to the Chattahoochee River, at a point leading to a union with the Montgomery Railroad, in Alabama, and a railroad from the Flint to the Ockmulgee Rivers, which easily admits of an extension to the Chattahoochee, to drain the produce of Western Georgia, and a part of Alabama, to Savannah. A canal extends from Savannah to the Ogeechee River. Such are the advantages of inland trade which are already enjoyed by this city, or are fairly open to it in the future. Savannah is noted for its exports of tobacco and rice, but particularly for that of vast quantities of upland cotton.

This city was founded by General James Oglethorpe, in 1733, and incorporated as a city in 1761. Its charter was amended and enlarged in 1787. In December, 1778, the city was taken by the British, under Colonel Campbell, and held in their possession until 1782.

Savannah, Mo., c. h. Andrew co. 5 miles distant from Missouri River.

Savannah, N. Y., Wayne co. This town contains a small sheet of water called Crusoe Lake, the outlet of which flows E. into Seneca River. The surface is level, and partly covered by the Montezuma Marshes; soil on the N. and W. quite productive. 11 miles E. from Lyons, and 170 N. of W. from Albany.

Savannah, Tc., c. h. Hardin co.

Savoy, Ms., Berkshire co. A wild mountain township, whose soil and surface are better adapted to grazing than tillage. The people are generally farmers. The most compact settlement is in the S. part, at the confluence of the two streams which constitute the head waters of Westfield River. This is sometimes called Savoy Village, but more commonly Savoy Hollow. 15 miles N. E. from Pittsfield, and 114 W. by N. from Boston.

Saxonville, Ms., in Framingham, Middlesex co. 22 miles N. W. from Boston.

Saybrook, Ct., Middlesex co. This is one of the most ancient towns in the state. Lord Say and Seal, Lord Brook, and other gentlemen in England, dissatisfied with the government of Charles I., contemplating a removal to this country, procured, in 1632, of Robert, Earl of Warwick, a patent of all the country "which lies W. from Narraganset River, 120 miles on the sea-coast; and from thence, in latitude and breadth aforesaid, to the South Sea." In 1635, they appointed Mr. John Winthrop, a son of the governor of Massachusetts, to build a fort on Connecticut River, and appointed him governor for one year.

In the summer of 1639, Colonel George Fenwick, one of the patentees, arrived from England, and in honor of Lord Say and Seal, and Lord Brook, gave the tract about the mouth of Connecticut River the name of Saybrook. Colonel Fenwick superintended the affairs of the colony until 1644, when, his associates having relinquished the design of removal to America, he sold the jurisdiction of Saybrook to the Connecticut colony.

The original limits of the town extended upon the E. side of the river for several miles, and included a part of the town of Lyme. The township now comprises three parishes, viz., Saybrook, Westbrook, and Essex. Saybrook parish is the

S. E. section of the town. The Indian name for this place was *Pattaquasset*. W. of this is Westbrook parish, which was called by its Indian name, *Pochaug*, until October, 1810. N. of these two parishes is *Pautapoug*, or Essex.

The greater part of the township is uneven and stony. There are, however, some extensive levels, and tracts of rich soil, particularly in the vicinity of Saybrook village, in the southern part of the town. Some of the hills, near Connecticut River, have good granite quarries. There are several small harbors on the Sound, and on Connecticut River, at Saybrook Point and Pautapoug. The bar at the mouth of the Connecticut is an impediment to navigation. Saybrook Harbor is at the mouth of a handsome cove, making up from Connecticut River, and extending W. almost to Saybrook village. It is often resorted to by coasters in bad weather. Large quantities of fish are taken in this town. The shad fisheries are numerous, and a source of considerable wealth. Connecticut River shad are considered superior to any other in this country. White fish are taken upon the shores of the Sound, and are very valuable for the purposes of manure. The borough of Essex is about 7 miles from the mouth of Connecticut River, on the W. side. It is a place of considerable commerce, navigation, and ship building.

Saybrook Point is a peninsula, circular in its form, and connected with the main land by a narrow neck, over which the tide sometimes flows.

The land on the point was laid out with care, as it was expected to become the residence of great men, and the centre of great business and wealth.

About half way between the palisado was erected the first building designed for the collegiate school, since named Yale College. This institution was founded in 1700, and remained at Saybrook 17 years. It was desired by the founders and others, that the churches should have a public standard or confession of faith, agreeable to which the instruction of the college should be conducted. This led to the adoption of the "Saybrook Platform," after the commencement in 1708.

David Gardiner, born at Saybrook, was the first white child born in Connecticut.

Saybrook is a very pleasant town, and full of interesting associations.

Saybrook village is 40 miles S. S. E. from Hartford, 34 E. from New Haven, and 19 W. from New London. The New Haven and New London Railroad passes through this town.

Scarboro', Me., Cumberland co., lies between Saco and Portland. A part of this large town, called Black Point, lying upon the sea was granted by the council of Plymouth to Thomas Cammock, in 1631; this was soon after settled, and became of considerable importance on the coast in the fisheries and trade. The land is held under that ancient grant at the present day. Another settlement was early made by a family of Algiers, from England, near the centre of the town, and called Duastan Corner, which name it still bears. This was wholly destroyed in the Indian war of 1675. It was, however, revived by a descendant in the female line, through whom that race is still perpetuated.

Scarboro' is principally an agricultural town,

for which purpose it furnishes some rich soil, and has a large quantity of salt marsh. Ship building, however, continues to be pursued here, although not to the extent it formerly was. Nounsuck River passes through the whole length of the town. Its present name was given to it in 1653, when it submitted to the government of Massachusetts; previously the eastern side of the river and marsh was called Black Point, and the western Blue Point—names which are still in familiar use.

This town has the honor of being the birthplace of the distinguished statesman Rufus King, and his half brother, William King, the first governor of Maine. About 8 miles S. from Portland.

Schaghticoke, N. Y., Rensselaer co. Watered by the Hoosic River and Tomhantic Creek, tributaries of the Hudson River, which bounds it on the W. Surface undulating; soil fertile. 10 miles N. from Troy, and 15 N. from Albany.

Schellsburg, Pa., Bedford co., is a small village on the main road from Bedford to Pittsburg. 9 miles N. N. W. from the former.

Schenectady County, N. Y., c. h. at Schenectady. Formed from Albany co. in 1809. It is bounded N. by Montgomery and Saratoga. E. by Saratoga and Albany, S. by Albany, and W. by Schoharie and Montgomery counties. Watered by the Mohawk and Schoharie Rivers, and a few small streams. The surface and soil are various, the Mohawk valley containing broad and fertile alluvial flats. Bog iron ore is the only important mineral. This county is traversed by the Erie Canal, and Mohawk and Hudson, the Schenectady and Troy, the Utica and Schenectady, and the Saratoga and Schenectady Railroads.

Schenectady, N. Y. City and seat of justice of Schenectady co. On the S. bank of the Mohawk River. 16 miles N. W. from Albany. The Erie Canal, and likewise the railroad routes from Albany and Troy to Buffalo, pass through this city. Here also comes in the railroad from Whitehall, on Lake Champlain, via Saratoga Springs and Ballston Spa. This is the point of embarkation for passengers travelling W. by the canal. The city is built, with a good degree of regularity, on about 20 streets, several of which are intersected diagonally by the canal. It contains churches of the Dutch Reformed, Presbyterian, Episcopal, Baptist, Methodist, Cameronian, Universalist, and Roman Catholic denominations. This is the seat of Union College, the buildings of which are located on an open and elevated site, a little E. of the compact portion of the city. See *Colleges*.

The settlement of Schenectady dates back to the earliest period of our colonial history. When in possession of the aborigines, this was the site of an Indian village, the name of which, *Cou-nugh-harie-gugh-harie*, signified 'a great multitude collected together'; and it is supposed to have been the principal seat of the Mohawks, even before the confederacy of the Five Nations. The name Schenectady, from the Indian *Schagh-nac-taa-da*, signifying *beyond the pine plains*, denoted its local position in relation to Albany and the North River; between which and this place such plains intervene for several miles on the E. of it. A few Hollanders are said to have settled here as early as 1620, for the purpose of trading in furs with the Indians. The first grant of lands, as appears from the Dutch records, was made

here in 1661, to Arent Van Corlaer and others, on condition that they purchased the soil from the Indians. This was effected, and a deed signed by four Mohawk chiefs, in 1772.

On the 8th of February, 1690, the town, then consisting of 63 houses and a church, was the scene of a general conflagration and most barbarous massacre, by a party of French and Indians from Canada. A "ballad" of the times says,—

"They marched for two and twenty daies,
All through the deepest snow;
And on a dismal winter night
They struck the cruel blow.

"They then were muriner'd in their beddes,
Without shame or remorse;
And soon the floors and streets were strew'd
With many a bleeding corse.

"The village soon began to blaze,
Which showed the horrid sight:
But, O, I scarce can bear to tell
The miseries of that night.

"They threw the infants in the fire;
The men they did not spare;
But killed all which they could find,
Though aged, or though fair."

There is much more of this simple but touching ballad, of which the author, who had himself led a party from Albany in pursuit of the enemy, says, in closing,—

"I wish that it may stay on earth
Long after I am dead."

The cruelties which it details are but too faithful a representation of the atrocities committed by the French upon the English settlements during the wars of that period; in which they engaged the savages as their allies, and themselves resorted not unfrequently to their inhuman modes of warfare. In the subsequent French war, in 1748, Schenectady was again carried by the enemy, and 70 of the citizens slain.

Schenectady was incorporated as a city March 26, 1798. Previous to the opening of the Erie Canal, and the Albany and Mohawk Railroad, this was a great depository of the commerce of the west on its passage to the Hudson. In consequence of the rapids on the Mohawk, goods had to be transported in wagons over the turnpike to Albany, which had even at that early date become the greatest thoroughfare for persons and property between the Hudson River and the western country. To show the immense value of the internal improvements made by the state of New York, we may state that the freight of a barrel of flour by wagons from Schenectady to Albany was eight or ten times more than at the present time. It was natural to expect that much trade, which had centred at Schenectady before the opening of the canal, would afterwards be transferred to Albany and Troy. But the decline in the prosperity of the city, which began to be realized in consequence of this change, has been in a good measure prevented by the concentration of so many railroads here, and by its continuing still to be a depot for the packet boats on the canal, in which the travel, by emigrants and others, since that time, has been greatly increased. 16 miles W. from Albany and 80 E. from Utica.

Schodack, N. Y., Rensselaer co. Bounded on the W. by the Hudson River, and watered by a few small tributaries. Surface hilly and undu

lating; soil clay, loam, and gravel. 14 miles S. from Troy, and 7 S. by E. from Albany.

Schoharie County, N. Y., c. h. at Schoharie. Formed from Albany and Otsego counties in 1795. It is bounded on the N. by Montgomery, E. by Schenectady and Albany, S. by Ulster and Delaware, and W. by Otsego co. Watered principally by Schoharie Creek and its branches. Surface hilly and mountainous, the E. part being covered by the Catskill Mountains, and Helderberg Hills. Along the borders of the Schoharie Creek are broad, fertile, alluvial flats, and the soil of the uplands is mostly well adapted to grass. In this county are a number of caverns, containing beautiful specimens of stalactites and stalagmites; water, limestone, and bog iron ore also exist in small quantities, and there are several sulphur springs.

Schoharie, N. Y., c. h. Schoharie co. It is watered by Schoharie and Fox Creeks, which flow through broad, fertile valleys. Surface undulating and hilly. 32 miles W. from Albany.

Schroepfel, N. Y., Oswego co. Bounded on the S. and W. by Oneida and Oswego Rivers, and watered by tributaries of the former. Surface rolling; soil sandy loam. 16 miles S. E. from Oswego village, and 150 N. W. from Albany.

Schroon, N. Y., Essex co. This town contains many lakes and ponds, which are the sources of the Schroon branch of the Hudson River. The E. and W. parts are mountainous, being separated by a valley of considerable width. Soil chiefly sand and sandy loam. 22 miles S. from Elizabeth, and 95 N. from Albany.

Schuyler County, Is., c. h. at Rushville. Bounded N. by McDonough co., E. by Fulton, S. by Brown, and W. by Marquette and Hancock counties. Watered on the S. E. boundary by Illinois River, and drained by Crooked, Crane, McKee's, and Sugar Creeks. Surface undulating; soil of fine quality.

Schuyler County, Mo., c. h. at Lancaster. On the northern border. Drained by head streams of the Chariton and Fabius.

Schuyler, N. Y., Herkimer co. Bounded on the S. by the Mohawk River. Surface hilly; soil very rich in the valley of the river. 7 miles W. from Herkimer, and 87 N. W. from Albany.

Schuylerville, N. Y., Saratoga co. On the W. bank of Hudson River. 34 miles N. from Albany.

Schuylkill County, Pa., c. h. at Orwicksburg. Berks bounds this county on the S. E., Dauphin S. W., Northumberland and Columbia N. W., Luzerne N., and Northampton and Lehigh N. E. The surface is generally hilly, and some parts mountainous. Except near the streams the soil is rough, rocky, and sterile. It is drained by the streams of Mahony, Mahantango, and Swatara, flowing into the Susquehanna, and by the head branches of Schuylkill.

Schuylkill Haven, Pa., Schuylkill co. Situated just below the entrance of West Branch into Schuylkill River, and on the Schuylkill Canal. 58 miles N. E. from Harrisburg. West Branch Railroad extends from this place to the coal mines at the foot of Broad Mountain.

Schuylkill, Pa., Chester co. Located on Schuylkill River, and drained by French and Stony Creeks. Surface level; soil sandy loam. 78 miles S. S. E. from Harrisburg.

Scio, N. Y., Allegheny co. The Genesee River and some of its branches water this town. Sur-

face hilly and broken; soil moist clay loam. 15 miles S. from Angelica, and 261 S. of W. from Albany.

Scipio, N. Y., Cayuga co. Bounded E. by Owasco Lake, and is watered by streams flowing into this and Cayuga Lake. Surface somewhat undulating; soil rich loam, clay, and alluvion. 8 miles S. from Auburn, and 164 W. from Albany.

Scioto County, O., c. h. at Portsmouth. Pike co. bounds it on the N., Jackson and Lawrence counties on the E., the Ohio River on the S., and Adams co. on the W. The land is uneven, but very good. The most important streams are the Ohio River, which runs along the southern boundary 40 miles, the Big Scioto, Scioto Brush Creek, Pine Creek, and Pond, Turkey, and Twin Creeks. Stone coal and iron ore are the mineral productions.

Scituate, Ms., Plymouth co. This town, supposed to be named from its Indian name, *Satuit*, lies at the mouth of North River, in Massachusetts Bay, and has a convenient harbor, 2 miles N. from the mouth of the river, defended by rocky cliffs, and Cedar Point, on which is a light-house. The North River rises near the sources of the Taunton. It passes Pembroke, Hanover, and Marshfield, and meets the tide water here. This river is very deep, narrow, and crooked, and is noted for the fine ships built on its banks. The town extends back from the bay a considerable distance; it contains large tracts of salt meadow, and some valuable upland. In this large town are a number of handsome villages, and some pleasant ponds. The principal villages are those at the harbor, Liberty Plain, and Snappet, on the border of Hanover. Scituate Harbor lies 26 miles S. E. by E. from Boston, 5 miles from the railroad depot in Cohasset, and 17 N. N. W. from Plymouth.

Scituate, R. I., Providence co. This town was a part of Providence until 1731. The surface of the town is diversified by hills and valleys. In the N. part of the town the soil is a gravelly loam, better adapted to grazing than to tillage. Pawtuxet River, with several of its branches, gives Scituate a good water power, and large manufactories, particularly of cotton and wool, are found on their banks. There is a valuable quarry of freestone in the western part of the town. 12 miles W. by S. from Providence.

Scotland County, Mo., c. h. at Memphis. Bounded N. by Iowa, E. by Clark, S. by Knox, and W. by Schuyler co. Surface level, and drained by Wyaconda and North Fabius Rivers, and the N. fork of Salt River.

Scotland Neck, N. C., Halifax co. A bend of the Roanoke, which forms the eastern angle of the county, gives the village its name. It is situated 40 miles below Halifax by water, and by post road 100 N. E. from Raleigh.

Scott County, As., c. h. at Boonville. Bounded N. by Crawford and Franklin counties, E. by Yell, S. by Montgomery and Polk, and W. by Indian territory. Drained by the Petite Jean, a branch of the Arkansas River. The Washita hills lie on the S. border of this county.

Scott County, Is., c. h. at Winchester. Bounded N. and E. by Morgan co., S. by Greene co., and W. by the Illinois River, separating it from Pike co. Drained by small branches of the Illinois River.

Scott County, Ia., c. h. at Lexington. Jennings is on the N. E., Jackson N. W., Jefferson E.,

Washington W., Floyd S., and Clarke S. E. Several branches of White River cross the county.

Scott County, Io., c. h. at Davenport. Bounded N. by Clinton co., E. and S. by the Mississippi River, separating it from Illinois, and W. by Muscatine and Cedar counties. Wabesipinica River runs on its N. E. border, and Allen's, Duck, and Crow Creeks drain the interior.

Scott County, Ky., c. h. at Georgetown. The soil is very productive. The county has Owen on the N., Harrison N. E., Franklin W., Woodford S. W., and Fayette S. E.

Scott County, Mi., c. h. at Hillsboro'. Bounded N. by Leake, E. by Newton, S. by Smith, and W. by Jackson co. Watered by branches of Pearl, and by the head branches of Leaf River.

Scott County, Mo., c. h. at Benton. Bounded N. W. by Cape Girardeau co., N. E. by the Mississippi River, separating it from Illinois, S. E. and S. by Mississippi and New Madrid counties, and W. by Stoddard co. Surface diversified; soil mostly of excellent quality. Whitewater and James's Rivers drain this county.

Scott County, Mo., c. h. at Benton. S. E. part. Has the Mississippi on the E., and Whitewater on the W. Generally very fertile.

Scott, N. Y., Cortland co. Watered by the inlet of Skaneateles Lake and the head branches of the Tioughnioga River. Surface somewhat uneven; soil good argillaceous and calcareous loam. 10 miles N. from Cortland, and 146 W. from Albany.

Scott, Pa., Wayne co. Bounded W. by the Susquehanna River, and drained by Starucea, Shrawder's, and Shookokin Creeks. Surface hilly; soil gravel and loam. 199 miles N. E. from Harrisburg.

Scott County, Te., c. h. at Huntsville. New.

Scott County, Va., c. h. at Estillville. Tennessee bounds it on the S., Lee co., Va., W., Cumberland Mountains, or Virginia, N., Russell co., Va., N. E., and Washington S. E. Powell's, Clinch, and Holston Rivers, with their numerous confluent, drain this county. Surface generally hilly, or mountainous.

Scottsville, Ky., c. h. Allen co. On a small branch of Big Barren River. 45 miles E. from Russellville, and by post road 160 S. W. by S. from Frankfort.

Scottville, Ky., c. h. Allen co. On a branch of Green River. 148 miles S. W. from Frankfort.

Scriba, N. Y., Oswego co. Watered by several small streams flowing into Lake Ontario, which bounds it on the N., while Oswego River forms the W. boundary. Surface rather hilly; soil tolerably good sandy loam. 162 miles N. W. from Albany.

Scriven County, Ga., c. h. at Jacksonboro'. Effingham co. is on the S. E., Ogeechee River S. W., Burke N. W., and Savannah River N. E. The county is situated between Savannah and Ogeechee Rivers.

Seabrook, N. H., Rockingham co., was formerly a part of Hampton Falls. The rivers are Black, Brown's, and Walton's. Many of the rivulets abound with bog ore of iron. This town derives its name from the number of rivers and rivulets meandering through it. First settlers, Christopher Hussy, Joseph Dow, and Thomas Philbrick, in 1638. 17 miles S. W. from Portsmouth by railroad, and 50 S. E. from Concord.

Searcy County, As., c. h. at Lebanon. Bounded N. by Marion and Fulton, E. by Izard, S. by Van

Buren, and W. by Newton and Carroll counties. Drained by branches of White River.

Searcy, As., c. h. White co. On the S. W. side of Little Red, a branch of White River. 50 miles N. N. E. from Little Rock.

Searsburg, Vt., Bennington co. Searsburg is too elevated on the Green Mountains either for cultivation, population, or wool growing. It presents, from almost every point, wild and beautiful landscapes. 11 miles E. from Bennington, and 20 W. from Brattleboro'.

Searsdale, N. Y., Westchester co. Bounded on the W. by Bronx River. Surface rolling; soil sandy and clay loam. 4 miles S. from White Plains, and 135 from Albany.

Searsmont, Me., Waldo co. Searsmont has a good soil, and some beautiful ponds. It is a pleasant and flourishing town, 30 miles E. from Augusta, and 12 S. W. from Belfast.

Searsport, Me., Waldo co. On Penobscot Bay. Incorporated in 1845, from Prospect and a part of Belfast, which it adjoins on the N. It has a good harbor.

Seaville, Me., Hancock co. This town was incorporated in 1838, and was formerly a part of the town of Mount Desert. It includes Bartlett's, Robinson's, Hardwood, and other smaller islands on the coast.

Sebago, Me., Cumberland co. This town lies between Sebago Lake and Hancock Pond, and was taken from Baldwin in 1826. It lies 87 miles S. W. by W. from Augusta, and 30 N. W. from Portland. It has a good soil, and is watered by small streams.

Sebec, Me., Piscataquis co. A good township. 87 miles N. N. E. from Augusta.

Sedgwick, Me., Hancock co. On the W. side of Blue Hill Bay. 87 miles E. of Augusta.

Sequin, Ts., c. h. Guadalupe co.

Seekonk, Ms., Bristol co. In 1812, the W. part of Rehoboth was incorporated into a distinct township, by its Indian name of *Seekonk*, which is the Indian name for *wild* or *black* *goose*, great numbers of which used to alight in Seekonk River and Cove. The Seekonk and Providence Rivers bound this town on the W. There is considerable water power here. The Boston and Providence Railroad passes through the town. The distance to Boston is 38½ miles.

Selma, Ala., Dallas co. On the N. bank of Alabama River. 83 miles S. S. E. from Tuscaloosa.

Sempronius, N. Y., Cayuga co. Watered by Skaneateles Lake and several small streams. It has a rolling surface and productive soil. 16 miles S. E. from Auburn, and 156 W. from Albany.

Seneca County, N. Y., c. h. at Ovid and Waterloo. Formed from Cayuga co. in 1804. Bounded N. by Wayne, E. by Cayuga, S. by Tompkins, and W. by Ontario and Yates counties. Cayuga Lake forms a part of the E., and Seneca of the W. boundary, and across the N. part flows the Seneca River. Surface pleasantly diversified with hills and valleys; soil mostly fertile calcareous loam and mould. There are some important mineral springs in this county, and several extensive beds of gypsum. The Cayuga and Seneca Canal, and Auburn and Rochester Railroad run parallel with the Seneca River.

Seneca, N. Y., Ontario co. Bounded S. E. by Seneca Lake, and is watered by Flint Creek. Surface undulating and hilly; soil fertile clay

and sandy loam. 15 miles E. from Canandaigua, and 179 W. from Albany.

Seneca Falls, N. Y., Seneca co. Watered by Seneca River, and partly bounded on the E. by Cayuga Lake. It is also crossed by the Cayuga and Seneca Canal. Surface undulating; soil chiefly rich loam. 4 miles E. from Waterloo, and 167 N. of W. from Albany.

Seneca County, O., c. h. at Tiffin. Sandusky is on the N., Huron on the E., Crawford on the S., and Hancock and Wood counties on the W. It is a well-watered, fertile county, with a soil of rich loam, which produces excellent crops of grass and grain. The land is well timbered, and is watered by Mad River. In 1820, the county was constituted, but not organized until April, 1824.

Seneca, O., Margaretta township, Huron co.

Seneca, O., Monroe co. Guernsey co. on the N. of this township, Centre township on the E., Enoch township on the S., and Morgan co. on the W.

Sennett, N. Y., Cayuga co. Watered by several small branches of the Seneca River. Surface rolling; soil gravelly loam and clay. N. from Auburn village 4 miles, and N. of W. from Albany 154.

Sevier County, As., c. h. at Paraclyfta. Bounded N. by Polk, and E. by Pike and Hempstead counties, S. by Red River, separating it from Lafayette co. and Texas, and W. by Indian territory. Drained by North Little River and its tributaries, Saline, Casselose, and Rolling Fork Creeks.

Sevier County, Te., c. h. at Sevierville. In the E. part of the state. Drained by French Broad and Little Pigeon, its tributary. Great Smoky Mountain runs on its S. E. border.

Sevierville, Te., c. h. Sevier co. A village in the fork of French Broad River, on the road from Maryville to Dandridge. 25 miles S. E. from Knoxville.

Seward, N. Y., Schoharie co. Watered by the Cobleskill. Has a high and undulating surface, and a generally good soil. 15 miles W. from Schoharie, and 47 from Albany.

Sevichly, Pa., New Beaver co. A township extending from Beaver River, up the right side of Ohio River, to the limits of Allegheny co.

Seymour, Ct., New Haven co. A new town, lately the village of Humphreysville, in the town of Derby, on the Naugatuck River. 20 miles N. E. from Bridgeport, by the Naugatuck Railroad, and 12 N. W. from New Haven. A flourishing manufacturing town, the seat of one of the earliest manufactures of woollens in the country.

Shaftsbury, Vt., Bennington co. Shaftsbury lies between the Battenkill and Walloomsack Rivers; it has no large streams. Some tributaries of each of these rivers rise here, which afford several mill privileges. West Mountain lies partly in this town and partly in Arlington; it has a variety of timber. The soil is of a good quality. The minerals are iron ore, of excellent quality, and a beautiful white marble. The settlement was commenced about the year 1763. From Montpelier 97 miles S. W., and 8 N. from Bennington.

Shandaken, N. Y., Ulster co. Watered by the Neversink River and Esopus Creek. The Catskill Mountains cover a large part of the surface. 24 miles W. from Kingston, and 83 S. W. from Albany.

Shannon County, Mo., c. h. at Eminence. Bounded N. by Crawford co., E. by Reynolds, S. by

Ripley and Oregon, and W. by Texas co. Drained by Current River and branches.

Shapleigh, Me., York co. A level farming town. 103 miles S. W. from Augusta.

Sharon, Ct., Litchfield co. Sharon lies on the W. side of Housatonic River, opposite to Cornwall. The eastern part of the town is elevated, mountainous, and stony, but is suited for grazing; the western part, which borders on the state of New York, is a fertile tract of undulating land, and very productive of all sorts of grain. Agriculture is the chief business of the inhabitants. The village is situated principally on one street, on the eastern side of a beautiful valley. There is a beautiful village, called Hitchcock's Corner, partly in Sharon and partly in the state of New York; this also is situated in a beautiful valley, and rich in agricultural resources. 47 miles W. by N. from Hartford.

Sharon, Ms., Norfolk co. This town was originally the second parish of the old town of Stoughton, and was incorporated in 1765, by the name of Stoughtonham, but the name, becoming unpopular, was changed to the scriptural one of Sharon. The natural scenery of this town is exceedingly beautiful and picturesque. It is the height of land between Boston and Providence; and several streams of water here take their rise, which, running in opposite directions, fall into Massachusetts and Narraganset Bays. Mashapog Pond is a beautiful lake, more than a mile in length, containing 500 or 600 acres, and rests upon a bed of iron ore. Moose Hill is the most elevated of a range of hills in the westerly part of this town. It is easily accessible, and from its summit there is one of the richest, most commanding, and beautiful views in New England. The Boston and Providence Railroad passes near the centre of the town. 17 miles S. W. from Boston by railroad, and 9 S. from Dedham.

Sharon, N. H., Hillsboro' co. The streams in Sharon are small branches of Contoocook River, and rise near the S. E. corner of the town. Boundary Mountain lies on the line between this town and Temple, and has an elevation of 200 feet above the surrounding country. Sharon is better for grazing than for grain. 18 miles W. by S. from Amherst, and 48 S. S. W. from Concord.

Sharon, N. Y., Schoharie co. Watered by Bowman's Creek, has a high and undulating surface, based upon limestone, which is seen breaking through in the form of caverns, and displaying interesting stratifications. This town also contains a celebrated mineral spring. 14 miles W. from Schoharie, and 40 W. from Albany.

Sharon, Vt., Windsor co. White River passes through Sharon, and affords it an abundant water power. Sharon contains a handsome and flourishing village. The surface is broken, but the soil warm and productive. The settlement was commenced about the year 1765, by emigrants from Connecticut. 22 miles N. from Windsor, and 34 S. E. from Montpelier. The Vermont Central Railroad passes through Sharon.

Shaste County, Ca. In the extreme N., on Klamath River.

Shawangunk, N. Y., Ulster co. The Wallkill and Shawangunk Creek water this town. The N. W. part is covered by the Shawangunk Mountain, the E. level and rolling. Soil diversified. 24 miles S. W. from Kingston, and 87 S. by W. from Albany.

Shawneetown, Is., Gallatin co. On the N. W. bank of Ohio River, 10 miles below the entrance of the Wabash, and 195 S. S. E. from Springfield. As a place of trade this is among the largest in Southern Illinois.

Sheboygan County, Wn., c. h. at Sheboygan. Bounded N. by Calumet and Manitowoc counties, E. by Lake Michigan, S. by Washington co., and W. by Fond du Lac co. Drained by Sheboygan River and branches, and by branches of the Milwaukee. Soil of excellent quality.

Sheboygan, Wn., c. h. Sheboygan co. On the S. bank of Sheboygan River, at its entrance into Lake Michigan.

Sheffield, Ms., Berkshire co. The Indian name of this town was *Houssatonnock*. It was first settled in 1725, and at its incorporation in 1733, it was named after Sheffield in England. Mr. Obadiah Noble, from Westfield, was the first white man who resided in the town. He spent the first winter here with no other human being than the Indians. This town includes an extensive vale, and, except on the E., is generally level. In that part there is an extensive chain of considerable hills. On the W. it is mountainous. Saronic, or Mount Washington, is about 2500 feet in height, and presents a magnificent spectacle. A part of this mountain is in Sheffield. This town affords an abundance of white marble, and much of an excellent quality. The soil is productive, and in the vale easily tilled. The Housatonic, which passes through the length of the town, is here a silent, sluggish stream, from 6 to 8 rods in breadth. Sheffield is one of those delightful towns, so richly decorated with lovely valley and majestic mountain scenery. The village is on the W. side of the river. 180 miles from Boston by the Housatonic and Western Railroads, and 56 from Albany.

Sheffield, Vt., Caledonia co. This town lies on the height of land between Connecticut River and Memphremagog Lake. Branches of Passumpsic and Barton Rivers both rise here. It is watered by several ponds. The lands are broken, and not productive. The settlement was commenced about the year 1792. From Danville, 16 miles N., and 46 miles N. E. from Montpelier.

Shelburne, Ms., Franklin co. This town, until 1768, was a part of Deerfield, and called "Deerfield North-West." At its incorporation, it was named for Lord Shelburne. Deerfield River passes through the town, and in its course falls nearly 50 feet, in the distance of 40 rods, thereby producing a great hydraulic power. On the banks of this river, Shelburne Falls village has sprung up. It is neat, handsome, and surrounded by charming scenery. Among other buildings it contains a well-endowed academy. From Shelburne Falls village at the W. part of the town, to Greenfield, is 7 miles.

Shelburne, N. H., Coos co. Androscoggin River passes through the centre of this town, into which fall the waters of Rattle and some smaller streams. The soil on each bank of the river is very good, producing in abundance grain and grass; but as we rise from the river, the tracts are mountainous, and unfit for cultivation. Mount Moriah, an elevated peak of the White Mountains, lies in the S. part of Shelburne. Moses' Rock, so called from the first man known to have ascended it, (Moses Ingalls,) is on the S. side of the river, near the centre of the town. It is about 60 feet high and 90 feet long, very smooth, and rising in an

angle of nearly 50°. Shelburne presents much wild and beautiful scenery. In this town is an extensive and valuable mine of lead; also excellent zinc ore. First settlers, David and Benj Ingalls, in 1775. From Concord 123 miles N E., and about 30 S. E. from Lancaster.

Shelburne, Vt., Chittenden co. Shelburne is finely watered by La Platt River, a pond covering 600 acres, and by the waters of Lake Champlain. Shelburne Bay sets into the town, and affords a good harbor, and a depot for the interior trade on the beautiful Champlain. The soil is strong, fertile, and generally well improved. A part of this town was annexed to St. George in 1848. A small settlement was made in this town previous to the revolutionary war. The earliest settlers were two Germans by the name of Logan and Pottier, who commenced upon two points of land extending into Lake Champlain, which still bear the names "Pottier's Point," and "Logan's Point." 33 miles W. by N. from Montpelier, and 7 S. from Burlington.

Shelby County, Aa., c. h. at Shelbyville. This county is bounded by Coosa River E., Bibb co. S., Tuscaloosa S. W., Jefferson N. W., and St. Clair N. It is drained by the sources of Cahaba River.

Shelby County, Is., c. h. at Shelbyville. Bounded N. and N. E. by Macon and Moultrie counties, E. by Coles and Cumberland, S. by Effingham and Fayette, and W. by Montgomery and Christian counties. Drained by Kaskaskia River and branches, and by the head branches of the S. fork of Sangamon River. Surface level; soil very fertile.

Shelby County, Ia., c. h. at Shelbyville. Madison bounds it on the N., Rush E., Decatur S. E., Johnson W., Marion N. W., and Bartholomew S. Branches of the E. fork of White River drain this county.

Shelby County, Ky., c. h. at Shelbyville. Henry co. is on the N., Franklin E. and S. E., Jefferson W., and Spencer S. The soil is highly productive, and is drained by the N. E. fork of Salt River.

Shelby County, Mo., c. h. at Shelbyville. Bounded N. by Knox and Lewis counties, E. by Marion, S. by Monroe, and W. by Macon co. Drained by Salt River, on the banks of which coal is found, and by North Two Rivers, which affords hydraulic power. The surface is level, and the soil fertile.

Shelby, N. Y., Orleans co. Watered by Oak Orchard Creek. Mostly a level town, with a soil of calcareous loam. 10 miles S. W. from Albion, and 260 W. from Albany.

Shelby, N. C., c. h. Cleveland co. On the E. side of First Broad River. There is a fine sulphur spring in the vicinity.

Shelby County, O., c. h. at Sidney. Allen and Mercer counties are on the N., Logan and Champlain on the E., Miami on the S., and Dark and Mercer counties on the W. The soil is good, and is watered by Turtle, Loramie's, and Musketoe Creeks, and Miami River. The Miami Canal passes through the S. W. part of the county. In 1819 the county was constituted. In 1804 or 1805 it was settled by James Thatcher, on Loramie's Creek.

Shelby County, Te., c. h. at Raleigh. This county has a hilly surface, and is drained by Wolf River and its branches. Madison co., Te., bounds it on the N. and E., Mississippi River W., and

state of Mississippi S. It includes old Fort Pickering, now Memphis.

Shelby County, Ts., c. h. at Shelbyville. On the E. border, between the eastern heads of the Neches and the Sabine.

Shelbyville, La., c. h. Shelby co.

Shelbyville, Is., c. h. Shelby co. On the W. bank of the Kaskaskia River. 60 miles S. E. from Springfield. There is a copious sulphur spring in this place.

Shelbyville, Ia., c. h. Shelby co. On Blue River, branch of White River. 25 miles S. E. from Indianapolis.

Shelbyville, Ky., c. h. Shelby co. On Brashears Creek, 12 miles above its junction with Salt River, and 23 miles W. by N. from Frankfort.

Shelbyville, Mo., c. h. Shelby co.

Shelbyville, Te., c. h. Bedford co. A town located on the right bank of Duck River. It contains a bank, printing office, and the county buildings. 30 miles S. from Murfreesboro'.

Shelbyville, Ts., c. h. Shelby co.

Sheldon, N. Y., Wyoming co. Watered by Tonawanda and Seneca Creeks. Surface hilly; soil moist clay loam. 13 miles W. from Warsaw, and 262 from Albany.

Sheldon, Vt., Franklin co. This is a good township of land. The River Missisco passes through it, and Black Creek, a branch of that river, gives Sheldon an ample water power. The village is a thriving place. The settlement was commenced about the year 1790, by Colonel Elisha Sheldon and Samuel B. Sheldon, emigrants from Salisbury, Ct. 46 miles N. W. from Montpelier, and 32 N. by E. from Burlington.

Shelter Island, N. Y., Suffolk co. This town, lying between Gardiner's and Great Peconic Bays, is 6 miles long and 4 wide. Surface mostly uneven; soil light and sandy, but fertile in some parts. 20 miles E. from Riverhead, and 245 S. E. from Albany.

Shenandoah County, Va., c. h. at Woodstock. Blue Ridge, or Culpepper and Madison counties are on the S. E., Rockingham S. W., Hardy and Hampshire N. W., and Frederick N. E. The two main branches of Shenandoah River traverse this county, and it is drained by many minor tributaries. All parts of the county are hilly, except the space between the two great branches of the Shenandoah, which is very mountainous. The soil is productive in grain, pastureage, and fruits.

Shepherdsville, Ky., c. h. Bullitt co. On the N. side of Salt River. 1 mile from Paroquette Springs and 72 miles W. S. W. from Frankfort. At the springs are fine accommodations for visitors.

Sherborn, Ms., Middlesex co. Sherborn is watered by Charles River on its eastern boundary, and by several brooks and pleasant ponds. Its Indian name was *Boggeston*. The soil is good and productive. It contains many skillful farmers, and some delightful farms. The village is on elevated land; it is pleasant, and commands good prospects. 18 miles S. W. from Boston, and 16 S. from Concord.

Sherburne, N. Y., Chenango co. Watered by the Chenango River, parallel to which runs the Chenango Canal. Surface hilly; soil sandy and argillaceous loam. 12 miles N. from Norwich, and 92 W. from Albany.

Sherburne, S. C., Beaufort district. A village 214 miles from Columbia by post road.

Sherburne, Vt., Rutland co. Killington Peak,

3924 feet in height, several ponds, and Thunders Brook, with a handsome fall, lie in this town. Queechey River rises here, and along its banks is some good land, but the lands are generally too elevated even for pasturage. The settlement was commenced here, in 1785, by Isaiah Washburn. The town was organized in 1794. From Rutland 10 miles N. E.

Sheridan, N. Y., Chautauque co. Watered by Scott's, Walnut, and some other creeks flowing into Lake Erie, which bounds it on the N. W. Surface hilly; soil clay loam and sand. 20 miles N. E. from Maysville, and 307 W. from Albany.

Sherman, Ct., Fairfield co. Sherman was formerly the N. part of New Fairfield, and incorporated in 1802. 13 miles N. from Danbury. There is a variety of soils in the town, but they are generally strong, warm, and productive of grass and grain. A branch of the Housatonic waters the town. Iron ore is found here.

Sherman, N. Y., Chautauque co. French Creek waters this town, the surface of which is uneven, and the soil clay and gravelly loam. 10 miles S. W. from Maysville, and 340 S. of W. from Albany.

Shiawassee County, Mn., c. h. at Corunna. This county was incorporated in 1837, and is bounded N. by Saginaw, E. by Genesee, S. by Livingston and Ingham, and W. by Clinton co. Drained by Shiawassee, Looking Glass, and Meshtagayock Rivers, which afford hydraulic power. Surface level or undulating, and containing anthracite coal; soil fertile.

Shieldsboro', Mi., c. h. Hancock co. On the W. side of St. Louis Bay, which connects with Lake Borgne. S. by E. from Jackson 212 miles.

Shippen, Pa., McKean co. Drained by Driftwood Creek, on the margin of which are salt springs, and by another branch of Sunenmahoning Creek. The surface is rough and mountainous, but in the valleys is some good land. 171 miles N. W. from Harrisburg.

Shippensburg, Pa., Cumberland co. A town and borough, situated in the midst of a fertile country. It is 11 miles N. E. from Chambersburg, and 136 W. from Philadelphia.

Shippingport, Ky., Jefferson co., is a large village, 2 miles below Louisville, at the bottom of the Rapids of the Ohio. It is in reality the lower part of Louisville, and at low water is the head of steamboat navigation in the Ohio.

Shirley, Me., Piscataquis co. This town was incorporated in 1834. It was formerly No. 3 in the 4th range of the Bingham Purchase. It is watered by the higher branches of Piscataquis River, and lies about 76 miles N. by E. from Augusta.

Shirley, Ms., Middlesex co. Before its incorporation, in 1753, the territory of this town was the S. W. part of Groton. The lands are rather level and low; the soil of some part of them is cold and unproductive, but generally they make good farms; some parts of the town, particularly along the streams, are under a high state of cultivation, and very productive. Shirley is separated from Groton by Nashua River, and from Pepperell by the Squanicook, a branch of the Nashua. These streams afford a fine water power. In the S. part of the town is a pleasant village, through which the Fitchburg Railroad passes. This village lies 18½ miles N. W. from Concord, and 38½ N. W. from Boston. About a mile S. of this village is a family of more than a

a hundred Shakers, or United Society of Believers.

Shirley, Pa., Huntingdon co. A township opposite Hamiltonville, on the right side of Juniata River.

Shirleysburg, Pa., Shirley township, Huntingdon co. A village about 20 miles S. S. E. from Huntingdon.

Shococoe Springs, N. C., Warren co. A village, academy, and watering-place, about 60 miles N. E. from Raleigh.

Shoreham, Vt., Addison co. Shoreham lies on the E. side of Lake Champlain, and is watered by Lemonfair River, a good mill stream. The surface is level, and the soil remarkably good. There is a pleasant village on the banks of the lake. This is one of the best farming towns in the state. Most of the waters here are impregnated with Epsom salts. This is the site of Newton Academy. The settlement was commenced about the year 1766, by Colonel Ephraim Doolittle, Paul Moore, Marshal Newton, and others. The settlement was broken up during the revolutionary war, but was recommenced on the return of peace. 12 miles S. W. from Middlebury, and about 42 S. W. from Montpelier.

Shreveport, La., c. h. Caddo parish. On the W. bank of Red River, 380 miles N. W. from New Orleans.

Shrewsbury, Ms., Worcester co. This town presents to the eye an uneven surface, variegated with hills and valleys. A range of highland, extending from N. to S., passes through the middle of the town. The town is well watered by springs and rivulets, though there are no large rivers in the town. Long Pond, called by the natives *Quinsigamond*, lying in this town by the line of Worcester, is a beautiful piece of water. It lies in the form of a crescent, nearly 4 miles long as it runs, and from 100 rods to near a mile in width. The water in some places is 90 feet deep. There are 12 islands in this pond of various sizes. Stratton's Island, which contains 150 acres under cultivation, has several families living upon it. Some of the other islands are more or less cultivated. This pond is the principal feeder of Blackstone Canal. In the S. W. part of the town is a large meadow, which contains excellent peat. 36 miles W. S. W. from Boston, and 6 E. by N. from Worcester.

Shrewsbury, N. J., Monmouth co. This town is located near the sea-shore, and is resorted to in summer by the people of New York and Philadelphia as a bathing-place. It has a high and dry soil. 47 miles N. E. from Trenton, and 77 N. E. from Philadelphia.

Shrewsbury, Vt., Rutland co. Shrewsbury lies mostly on the Green Mountains, and the eastern part is much elevated. In the N. part is Shrewsbury Peak, which is one of the highest summits of the Green Mountains, and is more than 4100 feet above the tide water. Mill and Cold Rivers pass through the town, and both are sufficiently large for mills. Peal's and Ashley's Ponds are in the southerly part. Shrewsbury is well adapted to the production of grass, and the timber is such as is common to the mountain towns. The town was chartered in 1763. From Windsor 22 miles W., and 9 S. E. from Rutland.

Shrewsbury, Ms., Franklin co., was called Roadtown, from the time of its grant, in 1734, to its incorporation, in 1761. It was first settled by people from Sudbury, about the year 1738. The town is

well watered by branches of Mill River, which rise here, and by Swift River, which passes through the town, and several of its tributaries, which also rise here. The surface is elevated, and many parts of it are hilly and rocky; in some parts the soil is thin, and not very productive, but in other parts the soil is fertile, particularly along its numerous brooks and rivers. At the N. W. corner of the town, about 4 miles from the centre village, is Lock's Pond, covering about 700 acres, well stocked with fish of various kinds. Near this beautiful little lake is a neat village. There is a mineral spring of some note near the centre of the town. It is said to have been opened by an earthquake, in 1815, and it abounds in muriate of lime. 16 miles S. E. from Greenfield, and 74 W. by N. from Boston.

Sidney, Io., c. h. Fremont co.

Sidney, Me., Kennebec co. This is a very pleasantly situated town, on the W. side of Kennebec River, and watered by a large and beautiful pond lying in this town and Belgrade. 12 miles N. from Augusta.

Sidney, N. Y., Delaware co. Watered by Outlet Creek and some other branches of the Susquehanna River, which bounds it on the W. Surface rather hilly; soil well suited to grazing. 18 miles W. from Delhi, and 100 S. W. from Albany.

Sidney, O., c. h. Shelby co. 79 miles W. by N. from Columbus.

Sigourney, Ia., c. h. Keokuck co.

Silver Spring, Pa., Cumberland co. Conedogwinit Creek and branches water this town. Surface hilly; soil calcareous loam and slate, very fertile in the valleys. 7 miles N. E. from Carlisle.

Simpson County, Ky., c. h. at Franklin. Warren is on the N., Allen E., Logan co. W. and N. W., and Tennessee S. Two rivers rise in this county—Red, a branch of Cumberland, and Big Warren, a branch of Green River.

Simpson County, Mi., c. h. at Westville. Bounded N. by Rankin, E. by Smith, S. by Covington and Lawrence counties, and W. by Pearl River, separating it from Copiah co. Drained by branches of Pearl River.

Simsbury, Ct., Hartford co. The territory of this town was formerly a part of Windsor. Its Indian name was *Massacoe*, and it was incorporated in 1670. The surface of the town is greatly diversified by hills and valleys. A range of mountains passes through the town, and there is some level and good land within its limits, on Farmington River. Tariffville, a flourishing village, is situated at the north-eastern extremity of this town, on the W. bank of the Farmington River. 45 miles from New Haven by the Canal Railroad.

Sing Sing, N. Y., in Mount Pleasant township, Westchester co. On the E. bank of the Hudson River. 112 miles S. from Albany, and 33 miles N. from the city of New York. It is pleasantly situated, on uneven ground, rising in one part into an eminence 180 feet above tide water, overlooking Tappan and Haverstraw Bays, the Hudson and Croton Rivers, and the surrounding country, including views of the Palisades and the Highlands in the distance. It was incorporated as a village in 1813. Near the river is located the Mount Pleasant Academy, an incorporated institution for boys, which has an edifice, constructed of marble, three stories high; also the Mount Pleasant Female Seminary, an incorporated in-

stitution, beautifully located, and possessing every advantage for a female boarding school.

About half a mile S. of the village is located the Mount Pleasant State Prison, better known, perhaps, as the Sing Sing State Prison, which occupies 130 acres of ground. The buildings are in the form of a hollow square, enclosing a yard 500 feet by 250. The main prison is 484 feet in length and 44 in width, fronting westerly on the Hudson, being five stories high, and containing 1000 cells for prisoners. In the front and rear are the workshops, together with the keeper's house; and on the S., attached to the building, are a chapel, hospital, kitchen, and storerooms. These buildings, as well as the principal edifice, are all of rough dressed marble, quarried on the state farm. The prison for female convicts, a more recent structure, stands separate from that of the men, on an elevated site, and is a handsome marble building, of the Ionic order. These premises can be distinctly traced from the boats, in passing up and down the river. The average number of convicts at Sing Sing, in the year 1850, was 721, of whom 80 were females.

Sing Sing is celebrated for its marble quarries, which are worked, to a great extent, by the state prison convicts. The marble obtained here is of an excellent quality. The village derives its name, we are told, from the Indian words *Ossin-sing*, signifying a *place of stone*.

The Croton Aqueduct Bridge at this place, over the Sing Sing Creek, constructed of stone masonry, in a single arch of 88 feet span, and rising about 100 feet from the creek, is an object of much curiosity, for its massive strength and excellent workmanship.

Skaneateles, N. Y., Onondaga co. Watered by Skaneateles Lake, the larger part of which lies in this town, and by its outlet. Surface undulating; soil very fertile. 16 miles S. W. from Syracuse, and 146 W. from Albany.

Skowhegan, Me., Somerset co. On the N. side of Kennebec River, at Skowhegan Falls, which afford a great water power. 5 miles below Norridgewock, and 33 N. from Augusta.

Slatersville, R. I., town of Smithfield, Providence co. A factory village, on a branch of Pawtucket River. 19 miles N. W. from Providence. See *Smithfield*.

Smith County, Mi., c. h. at Raleigh. Bounded N. by Scott, E. by Jasper, S. by Jones and Covington, and W. by Simpson and Rankin counties. Drained by the head branches of Leaf River.

Smith County, Te., c. h. at Carthage. Kentucky is on the N., Jackson co. E., White and Warren S. E., Wilson S. W., and Sumner W. At Carthage, Caney Fork River joins the Cumberland. Surface rather rolling than hilly; soil generally productive.

Smithfield, N. Y., Madison co. Watered by Canascraga and Cowasalon Creeks. A hilly town, with a very fertile soil. 5 miles N. from Morrisville, and 106 N. W. from Albany.

Smithfield, N. C., c. h. Johnson co. On the E. side of Neuse River. 27 miles S. E. from Raleigh.

Smithfield, R. I., Providence co. This is a large town, containing a great variety of surface and soil.

Smithfield has generally an undulating surface, presenting an agreeable diversity of moderate eminences and gentle declivities; but in some sections it is considerably rough and broken.

The manufacture of lime is an important and

extensive business, and affords employment to a great number of persons. There is also a quarry of white stone at what is called Woonsocket Hill, that sustains heat remarkably well, which renders it very valuable for furnace hearths. About two miles distant from this, there is a quarry, containing excellent whetstones, for edge tools.

The soil is a gravelly and sandy loam, with some sections of a calcareous loam. It is generally rich and fertile, although in some places it has been reduced by an exhausting system of cultivation. There are, however, some low and marshy tracts, which are generally appropriated to mowing, and afford good crops of grass. The agricultural productions consist of the various articles common to the climate.

The waters of the town consist of the Blackstone, which washes its north-eastern border, and a branch of this river, nearly of equal size, which intersects the town, discharging its waters into the former, in the northern section of the town. After the union of these streams, the Blackstone is from 100 to 200 feet in width. At some seasons of the year, it overflows its banks, and has been known to rise from 15 to 20 feet above its usual height. Besides these, there are numerous small streams, some of which afford valuable sites for mills. In the S. part of the town, within about 4 miles from Providence, there is a considerable body of water, called Scots Pond. It is nearly a mile in length, about half a mile in width, and of great depth. What is remarkable in this pond is the steep descent of its shores. Cases have occurred of persons being drowned in attempting to water their horses at this pond.

There is a remarkable fall of water upon the Blackstone River, called Woonsocket Falls, which is considered as quite a curiosity. The fall is about 20 feet, not perpendicular, but over a precipice of rocks for some distance. The fall of the water upon these rocks, through a succession of ages, has occasioned numerous excavations, all of which are smooth and circular, and some of them very large, being sufficient to contain several hogsheds.

The beautiful village of Woonsocket is situated at these falls, on the line of Cumberland; the river dividing the towns and the village into nearly equal parts. This village is a beautiful place. 11 miles from Providence by the railroad from Worcester to Providence.

Slatersville is another beautiful village in this town, on Branch River, about 2 miles W. from Woonsocket.

Smithfield is a large manufacturing town, containing many other pleasant villages, almost exclusively devoted to manufacturing objects.

Smithfield, Va., c. h. Isle of Wight co. On a branch of James River. 15 miles above Hampton, and 65 S. E. from Richmond.

Smithport, Pa., c. h. McKean co. 196 miles N. W. from Harrisburg.

Smithtown, N. Y., Suffolk co. Washed on the S. by Long Island Sound, and drained by Nes-aquaque River. Surface chiefly level; soil sandy loam. 28 miles W. from Riverhead, and 197 S. E. from Albany.

Smithville, N. Y., Chenango co. Watered by Geneganslette and some other small branches of Chenango River. Surface undulating; soil sandy loam. 15 miles S. W. from Norwich, and 131 S. of W. from Albany.

Smithville, N. C., Brunswick co. A village on the right bank of Cape Fear River, near the mouth, and opposite Smith's Island. It has a good harbor, and is the seat of an academy.

Smithville, N. C., c. h. Brunswick co. On the W. bank of Cape Fear River, 2 miles from its mouth, and 173 from Raleigh. It has a good harbor.

Smithville, Te., c. h. De Kalb co. Near the Caney Fork of Cumberland River, and 61 miles E. from Nashville.

Smyrna, De., Kent co., was formerly the Duck Creek, Cross Roads village. The inhabitants carry on a considerable trade in grain. It is on Duck Creek. 12 miles a little E. of S. from Dover, and 35 S. from Wilmington.

Smyrna, N. Y., Chenango co. Watered by several branches of Chenango River. Surface hilly; soil mostly good, and rich in the valleys. 12 miles N. from Norwich, and 96 W. from Albany.

Smyrna, O., Freeport township, Harrison co. A town 16 miles S. W. from Cadiz, and 100 E. from Columbus.

Smythe County, Va., c. h. Marion. Bounded N. E. by Wytch co., S. E. by Grayson, S. W. by Washington, and N. W. by Tazewell co. Watered by the head branches of Holston and New Rivers. Surface uneven; soil fertile on the streams.

Smythfield, Pa., Somerset co., is a pleasant village, located on the right bank of Youghiogony River, and on the United States road, almost exactly midway between Brownsville, on Monongahela, and Cumberland, on Potomac. According to Shriver's map, Smythfield is 1405 feet above the Atlantic tides.

Snowhill, Md., c. h. Worcester co. On the S. E. side of Pocomoke River. A port of entry, and a place of considerable commerce. 60 miles S. E. from Easton, and 20 miles a little S. of E. from Princess Ann.

Snow Hill, Md., c. h. Worcester co. A port of entry, on Pocomoke River. 115 miles S. E. from Annapolis.

Snow Hill, N. C., c. h. Green co. By post road 96 miles S. E. from Raleigh.

Sodus, N. Y., Wayne co. Watered by Salmon Creek and several small streams flowing into Sodus Bay and Lake Ontario, which bound it on the N. Surface chiefly level; soil well suited to grass and grain. 12 miles N. from Lyons, and 176 N. of W. from Albany.

Solano County, Ca., c. h. at Benecia. North of the lower course of the Sacramento, and between that river and the Nappa.

Solesbury, Pa., Bucks co. A township between Upper Makefield and Plumstead, on the S. W. side of the River Delaware. This township contains New Hope.

Solon, Me., Somerset co. A good farming town, on the E. side of the Kennebec. 44 miles N. by W. from Augusta.

Solon, N. Y., Cortland co. Watered by Ostelic River and some of its branches. Surface undulating; soil fertile, and well adapted for grazing. 12 miles E. from Cortland, and 140 W. from Albany.

Solon, O., Cuyahoga co. Two streams unite in this township and form the Chagrin River. 40 rods below this junction commences a fall, which descends 20 feet in 80 rods, affording a valuable water power. $1\frac{1}{2}$ miles from this place,

up the Worster Branch, is another fall of 100 feet in a mile. On the Anrora Branch, half a mile above the forks, is another fall of 70 feet in 80 rods. 150 miles N. N. E. from Columbus.

Somers, Ct., Tolland co. First settled 1713. It was incorporated by Massachusetts in 1734, and named in honor of Lord Somers, at the request of Governor Belcher. Part of the town is level and productive of grass and grain, and part is quite elevated, producing good pasturage for sheep, and presenting delightful views of the valley of Connecticut River. It is watered by Scantic River. Somers has a very neat village. 22 miles N. E. from Hartford.

Somers, N. Y., Westchester co. The Croton River and some of its tributaries water this town, which contains some extensive plains and some uneven surface. Soil diversified, but generally adapted to grass or grain. 20 miles N. from White Plains, and 120 S. from Albany.

Somerset, Ky., c. h. Pulaski co. 5 miles N. from Cumberland River, and 84 S. S. E. from Frankfort.

Somerset County, Me., c. h. at Norridgewock. Extending from near the centre to the N. W. boundary of the state. The Kennebec flows through the southern and settled part. Much the larger portion is still unsettled. Surface varied with occasional mountains; soil good. The Portland and Montreal Railroad passes through it.

Somerset County, Md., c. h. at Princess Ann. This county is bounded by Worcester co., in Md., E., Dorchester co. N. W., Sussex co., in De., N. E., Pocomoke Bay S., and Chesapeake Bay S. W. The surface, though sandy, is generally level, and the soil very good. Nanticoke River is on the N. W. of this county, and Pocomoke S. E., and it is drained by Manokin and Wicomico Rivers.

Somerset, Ms., Bristol co. This was formerly the Indian *Shewamet*, and called the Shewamet Purchase, a part of Swansey, at its incorporation as a town in 1790. This town enjoys almost unlimited navigable facilities. It extends its whole length and breadth on the deep navigable waters of Taunton River and Mount Hope Bay; besides, a part of its western boundary is Lee's River, jutting up from Mount Hope Bay to Swansey village. This town comprises Long Point and Shawmut Neck, at the mouth of Taunton River. From Slade's Ferry, across Taunton River, to Fall River village, is about $1\frac{1}{2}$ miles S. For distances, see *Fall River*.

Somerset County, N. J., c. h. at Somersville. This county has Morris on the N., Hunterdon S. W. and W., Middlesex S. E., and Essex E. The different branches of Raritan River drain the entire county. The soil is productive in grain, pasturage, and fruit; the surface pleasantly diversified by hill and dale.

Somerset, N. Y., Niagara co. Drained by some small streams flowing into Lake Ontario, which bounds it on the N. Surface level; soil sandy and clay loam. 14 miles N. E. from Lockport, and 280 N. of W. from Albany.

Somerset, O., c. h. Perry co. 47 miles E. S. E. from Columbus.

Somerset County, Pa., c. h. at Somers. Cambria is on the N., Bedford E., Westmoreland N. W., Fayette co. W., and Alleghany co., Md., S. This county is not very hilly, though enclosed on two sides by mountains. The soil is

good, and is well adapted for the production of grain and meadow grasses. Youghiogany and Conemaugh Rivers drain it.

Somerset, Pa., c. h. Somerset co. On Cox's Creek. 40 miles W. from Harrisburg.

Somerset, Pa., Somerset co. Drained by Laurel Hill, Middle, and Cox's Creeks. Surface undulating; soil clay.

Somerset, Pa., Washington co. This township is situated between the eastern branch of Charter's Creek and Pigeon Creek.

Somerset, Vt., Windham co. Mount Pisgah and other elevations give to the surface of this township so rough and dreary an aspect, that but few are bold enough to attempt the cultivation of its soil. It is watered by the upper branches of Deerfield River. 14 miles N. E. from Bennington, and 16 N. W. from Brattleboro'.

Somers Point, N. J., Atlantic co. On Great Egg Harbor Bay, and port of entry for that district. S. from Trenton 91 miles. A place of summer resort.

Somersworth, N. H., Strafford co. The soil is well adapted to Indian corn, and most kinds of grain and grass. The tide flows on the E. side of this town, 4 miles, to Quampegan Falls. The S. part of the town bounds on Cocheco River. The White Mountains may be seen from the summit of Otis Hill. There are but 2 ponds of note in this town—Humphrey's, on the line of Dover, 200 rods long and 120 wide, and Cole's, 150 rods long and 75 wide. Red and yellow ochre, also iron ore, have been found here. At Great Falls, on Salmon River, is a large and flourishing village. The water falls 100 feet, and produces a power of great value. First settlers, William Wentworth, John Hall, William Stiles, and others. 12 miles N. by W. from Portsmouth, and 45 E. from Concord. The Boston and Maine Railroad passes through this town, with a branch to the village of Great Falls, whence a railroad extends towards Conway.

Somerville, Aa., c. h. Morgan co. 5 miles S. from Tennessee River, and 133 miles N. N. E. from Tuscaloosa.

Somerville, Ms., Middlesex co. This town was set off from Charlestown, and incorporated in 1842. A considerable part of it is elevated above the surrounding country. The celebrated hills, called Winter and Prospect, are comprised in the town of Somerville. The town is bounded in part by Mystic River, Miller's Creek, and an arm of Charles River. The McLean Asylum for the Insane is in this town. A small stream, called the Shawsheen, runs through the town. The Milk Row Bleaching Company have their extensive works in this place. The most extensive and beautiful views of the city and surrounding country are to be had from the tops of Winter and Prospect Hills. From Boston about 3 miles N. W. Three important lines of railroads pass through the town.

The Tufts College was chartered A. D. 1852, and is situated on land lying partly in Somerville and partly in Medford, given by Charles Tufts, of Somerville, after whom it is named. It is 5 miles from Boston, near the Lowell Railroad. Its site is one of the finest in the country, and commands a view of Boston, its neighboring cities and beautiful towns. Its funds amount at present to \$100,000, raised by subscription, through the exertions of Rev. Otis A. Skinner, D. D., of Boston. The Institution was established

by the Universalists, though it is not sectarian in its character, each student being left free to choose his own meeting, and to enjoy his own religious opinions. The system of instruction is adapted, not only to those who wish to fit themselves for one of the professions, but also to those who wish to pursue the business of a farmer, mechanic, or manufacturer, particular attention being paid to the natural sciences.

The buildings are in progress of erection, and will probably be completed in 1853.

Somerville, N. J., c. h. Somerset co., is a neat and well-built village, located in a fertile and highly-cultivated country, on Raritan River. 16 miles above New Brunswick, and 38 a little E. of N. from Trenton.

Somerville, Te., c. h. Fayette co. Half a mile S. from Loosahatchie River, and 185 miles W. S. W. from Nashville.

Sonoma County, Ca. N. of San Pablo Bay, the northern expansion of San Francisco Bay, and between the Petaloma Creek and Nappa River.

Sonoma, Ca., c. h. Sonoma co. About 20 miles N. W. from Vallejo. This is one of the best farming districts in the state. In the Sonoma, Napa, and Suisan valleys, the land is good, the country healthy, and the temperature is never very cold in winter—snow being seen only on the highest mountains. This part of the country contains the best of grazing land, many places being covered with clover and with wild oats.

Sonora, Ca., c. h. Tuolumne co. In the mountains, on the head waters of Tuolumne River.

Southampton, Ms., Hampshire co. This town was the second parish of Northampton until its incorporation in 1753. It is well supplied with mill sites, by Manham River, a considerable stream. The Canal Railroad to New Haven passes through the eastern part of the town. Lead is found here, and there is a subterraneous passage leading to a lead mine. This is an artificial excavation, mostly in solid rock, of 900 feet in length, and large enough to admit a boat. The soil is well adapted to agricultural pursuits. 12 miles N. W. from Springfield, and 118 from Boston by the railroads.

Southampton, N. Y., Suffolk co. Bounded on the N. by Great and Little Peconic Bays, and S. by the Atlantic Ocean. Surface chiefly level; soil light sand and sandy loam, very productive when well cultivated. 10 miles S. E. from Riverhead, and 247 from Albany.

Southampton, Pa., Bedford co. One of the southern townships. 8 miles S. from the borough of Bedford.

Southampton, Pa., Bucks co. A township opposite the N. W. angle of Philadelphia co., and the N. E. angle of Montgomery.

Southampton County, Va., c. h. at Jerusalem. This county is bounded by North Carolina S., Greensville S. W., Sussex N. W., Surry W., and Blackwater River of Isle of Wight and Nansemond E. Nottaway River crosses this county, and it is washed by Blackwater River on the E., and the Meherr on the S. W.

Southwark, Pa. See *Philadelphia*.

South Beaver, Pa., Beaver co. A township N. from Ohio River, and adjoining the state of Ohio.

South Bend, Ia., c. h. St. Joseph's co. On a high bluff on the S. bank of St. Joseph's River. Possesses great water privileges.

Southboro', Ms., Worcester co. Taken from Marlboro' in 1727. This is not a large town, but

is one of the prettiest in the county. The surface is gently undulating, with Pine and Breakneck Hills, just high enough to give a fair view of the delightful country surrounding them. The soil is a strong, gravelly loam, rich, well cultivated, and productive of all the fruits common to a New England climate. Sudbury River passes the southern border of this town. Stony and Angle Brooks, and some smaller streams, afford the town an ample water power for domestic use, and some to spare. Southboro' Centre and Fryville are neat and pleasant villages. The Centre village is about 5 miles from the Worcester Railroad depot at Westboro', from which to Worcester is 12 miles W., and to Boston 32 E. N. E.

Southbridge, Ms., Worcester co. Incorporated in 1816. It was taken mostly from Sturbridge, but considerable portions from Charlton and Dudley. It was formerly called Honest Town. The land is generally uneven and hilly, but of good quality for grain, fruit, pasturage, &c. Quinebaug River, an excellent and permanent mill stream, passes through the centre and principal parts of this town, uniting with French River, and other streams, to form a branch of the Thames. The town has a good, productive soil, with pleasant, attractive, and flourishing villages. 54 miles S. W. from Boston.

South Bristol, N. Y., Ontario co. Watered by Mud Creek and some small streams flowing into Canandaigua Lake. Surface hilly; soil tolerably good clay loam. 12 miles S. from Canandaigua, and 205 W. from Albany.

South Brunswick, N. J., Middlesex co. Drained by Lawrence's Brook and tributaries of Millstone River. Surface somewhat hilly on the W., but elsewhere level; soil fertile sandy loam and red shale. 12 miles S. W. from New Brunswick.

Southbury, Ct., New Haven co. The principal village in this town is pleasantly situated on the Pamperaug, a fine mill stream, which passes through the town.

The village of South Britain is about 4 miles S. W. from the principal or central village; it is a flourishing place. This village is surrounded by high hills and precipices, and has a romantic and picturesque appearance. The surface of the town is generally uneven; there is some good meadow land on Housatonic, Pamperaug, and Shepaug Rivers, and the uplands are warm and productive. Some traces of coal have been discovered.

The northern part of the town is called "White Oak," from an oak tree under which the first persons who explored the town encamped. 20 miles N. W. from New Haven.

Southeast, N. Y., Putnam co. Watered by Croton River. A hilly town, with a rich soil, yielding large crops of grass and grain. 5 miles E. from Carmel, and 113 S. from Albany.

Southfield, N. Y., Richmond co. Bounded on the S. E. by the Narrows and the Lower New York Bay. Surface hilly on the N. and level on the S., comprising some large salt marshes. On the E. are situated Forts Tompkins and Richmond, and some batteries for the protection of New York Harbor. 2 miles E. from Richmond, and 155 S. from Albany.

South Hadley, Ms., Hampshire co. This town was formerly the second parish of Hadley, and was first settled about the year 1721. It lies on the E. side of Connecticut River, and has a good

and productive soil. The surface is varied, from that of the rich and lovely meadows on the Connecticut, to the lofty summit of Mount Holyoke. The village in the centre of the town is very pleasant; it lies about 3 miles N. of the village at the falls. Hockanum is a small village nearly opposite to Northampton, where we cross over to visit Mount Holyoke. There is a canal in this town, 2 miles long, on the E. side of Connecticut River, and a dam across the river of 1100 feet, which is constructed to overcome a fall in the river of 50 feet. This dam produces a water power of great extent. The canal has 5 locks, and a cut through solid rock of 40 feet in depth, and 300 in length. 5 miles S. by E. from Northampton.

South Hampton, N. H., Rockingham co. The surface is uneven, and the soil of a good quality. Powow River passes through it, affording valuable mill sites. 50 miles S. E. from Concord, and 18 S. S. W. from Portsmouth. The Eastern Railroad passes near this town.

South Hero, Vt., Grand Isle co. Lake Champlain bounds this town on all sides. The town was formerly a part of North Hero, and was separated from it in 1788. It is supposed that all the lands of this island county were once covered by the waters of the lake, as clam shells are found incorporated with the rocks in the highest places. The scenery around these islands is beautiful. This vicinity was a favorite resort for the Indians. The Sand Bar Bridge connects this island with the main land at Milton. This town was chartered to Ethan Allen, Samuel Herrick, and others, October 27, 1779. From Burlington 12 miles N. W., and 16 S. S. W. from St. Albans.

Southold, N. Y., Suffolk co. This peninsula, constituting the N. E. extremity of Long Island, is bounded on the N. by Long Island Sound, and E. and S. by Gardiner's and Great Peconic Bays. It comprises Fisher's, Gull, Plum, Robbins's, and several smaller islands. Surface chiefly level; soil sandy. 15 miles E. from Riverhead, and 245 S. E. from Albany.

Southington, Ct., Hartford co. Southington was taken from Farmington in 1779. There are some elevations in the town, particularly in the eastern part; but the soil is generally very good for all kinds of grain and the pasturage of cattle. It is watered by the Quinnipiac, and contains a neat village. 21 miles N. from New Haven.

The inhabitants are generally engaged in agriculture; yet several kinds of manufactures receive considerable attention.

South Kingston, R. I., c. h. Washington co. This town was formerly a part of North Kingston. It is the largest town in the state, comprising 98 square miles, and within its limits is the noted Point Judith. It has an uneven surface, a soil of a gravelly loam, based on a granite foundation. This town possesses great navigable advantages; its eastern and southern borders being washed by the Atlantic Ocean and Narraganset Bay. It contains a great number of fresh water ponds, and a large salt pond; one of the fresh water ponds covers an area of between 3000 and 4000 acres.

The fisheries on the shores and in the ponds of South Kingston are of considerable extent and value. The fish taken are principally bass, alewives, perch, and smelts. Some portion of the inhabitants follow a maritime life for a livelihood.

The principal village in South Kingston is improperly called "Little Rest Hill," for it is quite a snug and comfortable place. 28 miles from Providence by railroad.

Southport, Ct., town of Fairfield, Fairfield co. 60 miles S. W. from Hartford, at the entrance of Mill River into a small bay of Long Island Sound. It has a good harbor for vessels of 100 tons, to improve which the United States government has erected an extensive breakwater.

Southport, N. Y., Chemung co. The Chemung River waters this town, forming a part of the N. boundary. Surface somewhat hilly, with broad fertile flats on the border of the river. 4 miles S. from Elmira, and 203 S. W. from Albany.

South Reading, Ms., Middlesex co. This town was formerly the south parish in Reading, and was first settled in 1639. South Reading has a varied, pleasant surface, with a good soil. The town is well watered by Saugus River and two delightful ponds. The village, near the centre of the town, is compact, neat, and flourishing. The Boston and Maine Railroad passes through the town. 10 miles N. from Boston, and 10 W. from Salem.

South Scituate, Ms., Plymouth co. A new town taken from Scituate. The Old Colony Railroad passes near it. A flourishing agricultural place.

South Thomaston, Me., Lincoln co., a new town; taken from Thomaston in 1848, lies on the E. side of George's River, and is largely engaged in ship building and the coasting trade. In the midst of a handsome, fertile, and well-improved country. 38 miles S. E. from Augusta.

Southwick, Ms., Hampden co. This town was formerly the south part of Westfield. It is elevated, but not mountainous; it comprises a varied surface, with much good land. It is watered by Little River and some small streams. There is a pleasant village in this town, which lies 6 miles S. of the Westfield depot, on the Western Railroad, 108 miles from Boston. The village in the S. part of the town is pleasant; it is about 3 miles from the other.

Spafford, N. Y., Onondaga co. Bounded by Otisco Lake and its inlet on the E., and Skaneateles Lake on the W. Surface hilly and broken; soil various. 18 miles S. W. from Syracuse, and 152 W. from Albany.

Sparta, Aa., c. h. Conecuh co. On Murder Creek, branch of Conecuh River, about 70 miles a little E. of N. from Pensacola, and 90 N. E. from Mobile.

Sparta, Ga., c. h. Hancock co. Between the Great Ogeechee and Oconee Rivers, on the dividing ground. 25 miles N. E. from Milledgeville. It contains 2 academies.

Sparta, Mo., c. h. Buchanan co. On a head branch of Bee Creek. 8 miles S. W. from Roubidoux Landing, on Missouri River.

Sparta, N. Y., Livingston co. Watered by Canesraga Creek. A somewhat hilly town. Soil rich clay loam on the hills, and sandy alluvion in the valleys. 12 miles S. from Geneseo, and 231 W. from Albany.

Sparta, Te., c. h. White co. On a branch of the Caney Fork of Cumberland River. 83 miles E. by S. from Nashville.

Spartanburg District, S. C., c. h. at Spartanburg. This district is bounded N. by North Carolina, York, and Union districts E., Ennoree River or Laurens S., and Greenville W. The soil is

productive, and the surface hilly. Broad River and its numerous branches drain this district.

Spartanburg, S. C., c. h. Spartanburg district. 98 miles N. W. from Columbia.

Spencer County, Ia., c. h. at Rockport. The Ohio River is on the S., Warwick co. W., Dubois N., and Perry E. Most of the soil is excellent. The land is hilly and broken, and drained by small creeks.

Spencer, Ia., c. h. Owen co.

Spencer County, Ky., c. h. at Taylorsville. This county has Shelby on the N., Anderson E., Nelson S., and Jefferson and Bullitt W. The northern branch of Rolling Fork River crosses this county, from E. to W.

Spencer, Ms., Worcester co. The whole of this town was included in the original grant of Leicester. It was made a parish in the year 1744, by the name of the West Parish of Leicester, and incorporated a town in 1753, by the name of Spencer. This town is elevated, and is said to be 950 feet above tide water. The surface is rough and uneven, but the soil is very fertile. It is watered by many streams, but none of them are of much size. Seven Mile River is the largest. 18 miles W. by S. from Worcester, by the Western Railroad, and 62 W. by S. from Boston.

Spencer, N. Y., Tioga co. Cattotung Creek and some of its branches water this town. Surface hilly; soil gravelly loam. 15 miles N. W. from Owego, and 181 S. W. from Albany.

Spencer, Te., c. h. Van Buren co.

Spottsylvania County, Va., c. h. Fredericksburg. Rapid, Ann, and Rappahannock Rivers are on the N. E. of this county, North Anna River on the S. W., and Caroline co. on the S. E. The surface is pleasantly diversified by hill and dale. The sources of Mattapony River are in this county.

Spottsylvania, Va., c. h. Spottsylvania co. On the Po, a branch of Mattapony River. 71 miles N. by W. from Richmond.

Springboro', O., Clear Creek, Warren co. On the N. side of Clear Creek. 84 miles S. W. from Columbus. It is named from a spring, which affords a water power sufficient for several mills.

Springfield, Is. Capital of the state, and seat of justice of Sangamon co. 105 miles N. by E. from St. Louis. Since this place was made the capital of the state, in 1840, it has had a rapid growth. It stands upon the confines of a rich and beautiful prairie, and is about 4 miles S. of the Sangamon River. It was laid out in 1822, upon a regular plan, with a public square in the centre, and wide streets, crossing each other at right angles. The State House, which stands upon the centre of the public square, is an elegant building, in the Doric style of architecture, for the erection of which the state appropriated \$50,000. The Court House and the State Bank are also beautiful buildings. Several of the churches have handsome edifices, many of the hotels and stores are spacious and well built, and there is great activity and prosperity in the business of the place. A railroad is in operation between Springfield and Naples, on the Illinois River, a distance of 53 miles. This road passes through Jacksonville.

Springfield, Ky., c. h. Washington co.

Springfield, Ms. City, and seat of justice of Hampden co. On the E. side of Connecticut River. 98 miles W. by S. from Boston, 102 miles E. by S. from Albany, N. Y., 25 miles

N. from Hartford, Ct., and 20 miles S. from Northampton. This is one of the most beautiful and important inland towns in New England. It was settled in 1635, then called by its Indian name, *Agawam*. In 1640 the name of Springfield was given to the town. Its limits, by successive purchases from the natives, and grants from the legislature, became very extensive, embracing a territory nearly 25 miles square, from which several of the surrounding towns, on each side of the river, have been constituted.

The natural situation of Springfield is beautiful. Along the river are rich alluvial meadows, highly productive, back of which the grounds rise gradually to a considerable elevation, and terminate in a plain extending several miles E. The business part of the city is chiefly on Main Street, which is broad, and nearly 3 miles in length, and contains many elegant buildings. This street runs parallel with the Connecticut, at some distance from it, and is intersected by a number of streets, at right angles, extending towards the river, and in the opposite direction, to the elevated plain, where the United States armory is located. Other streets, parallel or nearly so to Main Street, run between this and the height of land, along the rising ground, on which are situated many elegant private residences, overlooking the city and the valley of the Connecticut far to the S.

Springfield is the centre of a large inland and river commerce, its natural and artificial advantages rendering it one of the most important commercial depots on Connecticut River. Being nearly equidistant from Boston and Albany on the line of the Western Railroad and at the point of intersection between this and the route extending from New Haven N. through the Connecticut valley, it is brought into connection by railroad communication with the four cardinal points of the country, and becomes not only a great thoroughfare of travel between all these points, but of necessity, in passing, a place of much traffic and exchange. Several of the most celebrated hotels in New England have been established here, to answer the increasing demands of the travelling public on these great routes.

The United States armory, located here, is situated chiefly on the elevated ground about half a mile E. of Main Street. The principal buildings are of brick, and are handsomely arranged around a square, presenting a fine appearance. From twelve to fifteen thousand muskets are manufactured here annually, and from one hundred and fifty to two hundred thousand are stored in the arsenals of the establishment. This is the largest and most important arsenal of construction in the United States, and its establishment at Springfield early gave an impulse to the enterprise and prosperity of the place.

On Mill River, which flows into the Connecticut at the S. E. extremity of the city, there is an extensive water power, which is improved for paper and iron manufactures, mechanical establishments, and mills of various kinds. The machine shops of the United States armory, in which a power is required, are also here. These are advantageously located on three different sites along the stream, called the Upper, Middle, and Lower Water shops, the whole comprising 5 shops, in which are 18 water wheels, 10 trip hammers, and about 30 forges. These works, extensive as they are, are far from occupying the whole power which is owned here by the United States.

The W. part of the city, where the railroad station is located, is more rapidly advancing in population and business now than any other. A large manufactory of cars and other apparatus for use upon the railroads has been established at this point. Two or three of the first-rate hotels are located here.

Several of the church edifices in Springfield are handsome structures. That of the First Congregational Church enjoys the advantage of a beautiful location, on a green in the centre of the city, which is tastefully laid out, enclosed, and ornamented with shade trees.

During the insurrection in Massachusetts, in 1786, commonly known as Shays's rebellion, Springfield was in part the theatre of the movements of the insurgents. An attempt was made to get possession of the United States arsenal, and Shays, at the head of 1100 men, marched towards it for that purpose. Being warned to desist, by General Shepherd, who, with a considerable force, had taken his position near the arsenal for its defence, and paying no regard to this warning, they were fired upon, and three of their number killed, and one wounded, whereupon the whole body precipitately dispersed.

Springfield, La., parish of St. Helena. This is the seat of justice, and is located on Notalbany River, on the road between New Orleans and Natchez. 58 miles from the former, and 98 from the latter place.

Springfield, Mo., c. h. Greene co. On the head waters of James's Fork of White River. 158 miles S. W. from Jefferson City.

Springfield, N. H., Sullivan co. A branch of Sugar River, also one of Blackwater, have their sources in this town; the former empties into the Connecticut, the latter into the Merrimac. There are several ponds, viz., Station, about 250 rods long, 140 wide; Cilley, 240 rods long, and about 80 wide; Star, Stony, and Morgan's Ponds. The land is rough and stony, but good for grazing. First settlers, Israel Clifford, Israel Clifford, Jr., Nathaniel Clark, and Samuel Stevens, in 1772. 38 miles N. W. from Concord, and 13 N. E. from Newport.

Springfield, N. Y., Otsego co. Watered in the centre by the N. part of Otsego Lake, and W. by Canaderaga Lake. Surface elevated and hilly; soil fertile in the valleys. 8 miles N. from Cooperstown, and 601 W. from Albany.

Springfield, O., c. h. Clarke co. On the E. fork of Mad River, and has great hydraulic privileges. The national road, and the road from Cincinnati to Sandusky, passes through this place, which is also connected by railroad with Dayton. 43 miles W. from Columbus.

Springfield, Te., c. h. Robertson co. On the S. bank of the Sulphur Fork of Red River. 26 miles N. by W. from Nashville.

Springfield, Vt., Windsor co. The land is generally rich, with a deep soil. On the rivers are extensive intervals, forming some of the most beautiful farms in the state. The principal village is situated on Black River Falls, near the centre of the town. This is a flourishing town, and the scenery around its neat and handsome village is delightful. It was chartered August 20, 1761. Among the first settlers were Mr. Simeon Stevens, and the Hon. Lewis R. Morris. 70 miles S. from Montpelier, and 24 S. from Woodstock. A railroad passes by this town, on the E. side of Connecticut River.

Spring Garden, Va., Pittsylvania co. A village. By post road 130 miles S. W. by W. from Richmond.

Spring Place, Ga., c. h. Murray co.

Springport, N. Y., Cayuga co. Watered by small streams flowing into Cayuga Lake, which bounds it on the W. Surface rolling; soil fertile calcareous loam. 9 miles S. W. from Auburn, and 165 W. from Albany.

Springville, N. Y., Erie co. On Spring Creek. 287 miles W. from Albany. There is a valuable water power here, which is improved for flouring mills and manufactories of various kinds.

Springwater, N. Y., Livingston co. Watered by the inlet of Hemlock Lake. Surface hilly and broken; soil clay loam, yielding large crops of grass. 16 miles S. E. from Geneseo, and 223 W. from Albany.

Stafford, Ct., Tolland co. The surface of the town is rough; in some parts mountainous, abounding with rocks of primitive formation. Its soil is a coarse, hard, and dry gravelly loam, generally not very productive. There are several minerals in the town, but iron ore is the principal.

The town is watered by Furnace River and the Willimantic, which unite in Stafford, and afford a good water power.

Stafford Mineral Springs have acquired considerable notice, and are celebrated for their virtues in curing cutaneous diseases. The celebrated Dr. Joseph Warren, who fell at the battle of Bunker Hill, was the first person who analyzed these waters, and highly approved their virtues.

By the New London and Willimantic Railroad 16 miles from the Palmer depot on the Massachusetts Western Railroad, 50 N. from New London, 52 by railroad from Hartford, and 24 by stage. See *Fashionable Resorts*.

Stafford, N. J., Monmouth co. This township has some good farms, though the soil is generally sandy. Mannahankin is the principal settlement.

Stafford, N. Y., Genesee co. Allen's and Black Creeks water this town. the surface of which is chiefly level, and the soil clay and gravelly loam, based upon limestone. 5 miles E. from Batavia, and 238 W. from Albany.

Stafford County, Va., c. h. at Stafford. Bounded by Prince William N., Fauquier co. N. W., Rappahannock River S. W. and W., and King George co. S. E. It is situated between the Potomac and Rappahannock Rivers, and has a sandy soil and hilly surface. The principal towns are Stafford, Falmouth, and North Marlboro'.

Stafford, Va., c. h. Stafford co. On the N. bank of Rappahannock River, opposite Fredericksburg, and 73 miles N. from Richmond.

Stamford, Ct., Fairfield co. Its Indian name was *Kippowams*. It was purchased of the natives for "twelve coats, twelve hoes, twelve hatchets, twelve knives, two kettles, and four fathom of white wampum." The soil of Stamford is a rich gravelly loam, well cultivated, and very productive. The surface is undulating, presenting a great variety of delightful prospects. The town is well supplied with mill sites by Mill and Miannas Rivers, and within its bay, between Shippan and Greenwich Points, are good harbors for vessels of 8½ feet draught of water.

Stamford Borough is a neat village, beautifully situated near the Sound, and surrounded by a country full of interesting scenery. 40 miles by railroad from New Haven, 36 from New York.

Stamford, Ky., c. h. Lincoln co. Near Dick's River. 10 miles S. E. from Danville.

Stamford, N. Y., Delaware co. The head branches of the Delaware River water this town. Surface rather hilly and broken; soil well suited to grazing. 16 miles E. from Delhi, and 58 S. W. from Albany.

Stamford, Vt., Bennington co. A mountain township, on the line of Massachusetts. Branches of the Hoosic and Walloomsack rise here. There are several fine fish ponds among the mountains, and some good land, but the land is generally too elevated for culture. The township was chartered in 1753. 9 miles S. E. from Bennington, and 21 W. by S. from Brattleboro'.

Standish, Me., Cumberland co. Bounded on the N. and N. E. by Sebago Lake, and S. W. by Saco River. It lies 16 miles N. W. from Portland. This is a good farming town, with two pleasant villages. It has Buxton on the S., and Gorham on the N. E.

Stanford, N. Y., Dutchess co. Watered by Wappinger's Creek. A hilly and mountainous town. Soil chiefly sandy loam, suitable for grazing. 16 miles N. E. from Poughkeepsie, and 72 S. from Albany.

Stanhope, N. J., Sussex co. 60 miles N. from Trenton, on the Morris Canal, on Musconetcong River, which affords a good hydraulic power, by a fall of 30 feet, produced at this place by turning it from its natural bed. The canal, by an inclined plane, here overcomes an ascent of 76 feet.

Stanly County, N. C., c. h. at Albemarle. South central part. Washed on the W. by the Yadkin, and on the S. by Rocky River, branches of which flow through it from N. to S.

Stapleton, N. Y., Richmond co. On the E. side of Staten Island, 2 miles N. of the Narrows, at the entrance of New York Harbor. The Seamen's Retreat, a hospital for sick and disabled seamen, is located here. It was opened in 1831. The building is 208 feet long, and 3 stories high, with wings 32 feet deep, and 2 stories high. The grounds attached to it include 37 acres.

Stark County, Ia. In the N. W. angle. The Kankakee flows through it from N. to S. W.

Steuben County, Ia., c. h. at Angola. In the N. E. corner of the state.

Stark County, Is., c. h. at Towton. N. central part. Spoon River, a western tributary of the Illinois, flows through it.

Stark, N. H., Coos co. This town was formerly named Piercy. It was altered to compliment the memory of General Stark. In the N. E. part of the town the N. and S. branches of the Ammonoosuck form a junction. Nash's Stream falls into this river, in the N. part of the town. Piercy's Pond lies on the E. side of the town. The soil is extremely broken. Mill Mountain is in Stark, and a part of Pilot Mountain. There is also a singular ledge opposite Mill Mountain, called the Devil's Sliding-Place. On the S. it breaks abruptly into a precipice of nearly 300 feet, while on the N. cattle may be driven to the top. The scenery of this town is well worth visiting. First settlers, Caleb and Benjamin Smith, in 1788. 10 miles N. E. from Lancaster, and 135 N. from Concord.

Stark, N. Y., Herkimer co. Watered by Otsquaga Creek. Surface hilly; soil fertile calcareous loam. 12 miles S. E. from Herkimer, and 69 N. W. from Albany.

Stark County, O., c. h. at Orradeen. Portage and Medina counties are on the N., Columbiana and Carroll on the E., Carroll and Tuscarawas on the S., and Wayne on the W. The Ohio and Erie Canal crosses this county; the other waters are Sugar, Sandy, and some other Creeks. Emigrants from Pennsylvania and Maryland were the first settlers. Wells, Congress, Mead, Sippo, and Turkey Foot Lakes are found here. The land is excellent for raising wheat.

Starksboro', Vt., Addison co. This town is watered by Lewis Creek and Huntington River, which are good mill streams. There are three springs in the town, not more than 20 rods apart, which unite and form a stream of sufficient power for a number of mills. The town is rough and mountainous. Hog Back Mountain skirts its western border, and East Mountain passes through its centre, and divides the waters of the rivers. There is some good land in the town, but a large portion is too elevated for cultivation. Here are two pleasant villages. 22 miles W. by S. from Montpelier, and 18 N. by E. from Middlebury.

Starkey, N. Y., Yates co. Drained by some small streams flowing into Seneca Lake, which bounds it on the E. Surface hilly; soil clay loam. 10 miles S. E. from Penn-Yan, and 190 W. from Albany.

Starks, Me., Somerset co. A good township. 37 miles N. N. E. from Augusta.

Starkville, Mi., c. h. Oktibbeha co. 143 miles N. E. from Jackson.

Statesboro', Ga., c. h. Bullock co.

Statesburg, S. C., c. h. Sumpter co.

Statesville, N. C., c. h. Iredell co. 145 miles W. from Raleigh.

Stanton, Va., Augusta co. An old place, watered by Lewis Creek, a head branch of Shenandoah River. 166 miles W. N. W. from Richmond. The ground gradually rises from the creek. The streets are regular and straight, though narrow. A lunatic asylum is located here.

Steelsville, Mo., c. h. Crawford co. On the upper waters of the Moramie.

Stephenson County, Is., c. h. at Freeport. On the N. border. The Peetioncha branch of the Rock River flows through it from N. W. to E.

Stephentown, N. Y., Rensselaer co. Kinderhook Creek flows through this town. Surface mostly hilly and mountainous; soil fertile, and well suited to grazing. 22 miles S. E. from Troy, and 21 from Albany.

Sterling, Ct., Windham co. This town was taken from Voluntown in 1794. The soil is a light gravelly and sandy loam, and produces good grain. Sterling is watered by two branches of Moosup River, a good mill stream. "Near the centre of this town, there is a cavern, called the Devil's Den, possessing very singular and curious features." 44 miles E. by S. from Hartford.

Sterling, Ms., Worcester co. This was for many years the second parish of Lancaster, and was first settled in 1720. Its Indian name was *Chockset*. At its incorporation, in 1781, it was named in honor of Lord Sterling, of New Jersey, an American general. The surface is hilly and uneven, but there is very little broken or waste land in it. The soil is fertile. The land is naturally moist, and by the help of the rivulets the water may be turned over the sides of most of the hills. There is but one river in the town,

called Still River, from the placid motion of its waters. In the central part of the town there is an uncommonly beautiful little village. 12 miles N. from Worcester by railroad, and 40 W. by N. from Boston.

Sterling, N. Y., Cayuga co. Watered by Little Sodus Creek, flowing into a bay of the same name, which, with Lake Ontario, bounds it on the N. Surface level and undulating; soil chiefly sandy loam. 25 miles N. from Auburn, and 172 N. W. from Albany.

Sterling, Vt., Lamoille co. Sterling Peak, in the S. part of this town, ranks among the most elevated summits of the Green Mountain Range. Some streams issue from this mountain town. It was first settled in 1799. 5 miles S. W. from Hydepark, and 32 N. W. from Montpelier.

Steuben, Me., Washington co. A maritime township. 107 miles E. from Augusta.

Steuben County, N. Y., c. h. at Bath. Formed from Ontario co. in 1796. It is bounded N. by Livingston, Ontario, and Yates counties, E. by Seneca Lake and Chemung co., S. by Pennsylvania, and W. by Alleghany co. Watered by the Conhocton and Canistota Rivers, which unite in the E. part to form the Chemung, and by Seneca and Crooked Lakes. Surface diversified with hills and valleys; soil fertile, and well adapted to grazing. It contains some beds of iron ore, and several mineral springs. Seneca and Crooked Lakes communicate by canals with the Erie Canal, and the county is crossed by the Corning and Blossburg, and the New York and Erie Railroads.

Steuben, N. Y., Oneida co. Cincinnati Creek and some branches of the Mohawk River water this town. Surface hilly; soil moist clay loam, well suited to grass. 16 miles N. from the city of Utica, and 103 N. W. from Albany.

Steubenville, O., c. h. Jefferson co. On the W. bank of Ohio River. 141 miles E. N. E. from Columbus. It is regularly laid out, and contains, besides the county buildings, six or seven churches, an elegant town hall and market, several cotton and woollen factories, flouring mills, iron and brass foundries, and other large establishments.

Stewart County, Ga., c. h. at Lumkin. On the western border. The Chattahoochee separates it from Alabama.

Stewart County, Te., c. h. at Dover. Kentucky is on the N. E., Montgomery co. E., Dickson S. E., Humphreys S., and Tennessee River, or Henry co., W. This county is crossed by Cumberland River from S. E. to N. W., and is washed on one side by the Tennessee.

Stewartstown, N. H., Coos co. The Connecticut River is about 15 rods in width at this place. The other waters are Bishop's Brook, Dead Water, and Mohawk Rivers, and Hall's Stream. Little and Great Diamond Ponds are here; they are well stocked with salmon trout. There are no large mountains, although there are many elevations. The soil of the intervale is rich, and the uplands productive. The first settlements were made under grants from Colonel David Webster, soon after the close of the revolutionary war. 150 miles N. from Concord, and about 40 N. E. from Lancaster.

Stillwater, Me., Penobscot co. A very flourishing village on the Lower Falls of Penobscot River, in the town of Orono. An immense amount of lumber is sawed at this place, and

rafted down to the Bangor market. See *Orono*.

Stillwater, Ma. Situated on the W. side of St. Croix River, at its entrance into the head of Lake St. Croix, about 25 miles N. E. from St. Paul, the present capital of the territory, and about 20 miles E. by N. from the Falls of St. Anthony. These distances are by the land route direct. The trip by water, down the lake and up the Mississippi, to these places, is considerably longer, especially to the falls, but is the one usually chosen, for the accommodations afforded by the steamboats, which run regularly on this route.

Stillwater is a large and flourishing town, advantageously situated for trade. It has many fine buildings, cottages, churches, stores, &c. Travellers meet with fine accommodations at the hotels in this place, and find themselves in the midst of natural scenery the most beautiful.

Stillwater, N. Y., Saratoga co. Watered by Anthony's Kill and other small branches of the Hudson River, which bounds it on the E. Surface level and undulating; soil sandy and clay loam. In the N. part of this town is situated the battle ground where General Burgoyne was defeated by General Gates, the American commander, in 1777. Here also are Freeman's Farm and Bemus's Heights, both famous battle grounds; and the meadow where the British General Frazer was mortally wounded. 10 miles E. from Ballston Spa, and 20 N. N. E. from Albany.

Stockbridge, Ms., Berkshire co. The surface is exceedingly varied, from tall and majestic mountains to deep and lovely valleys. The soil in the valleys is rich, and produces great crops of grain and hay, and the higher grounds afford the sweetest pasturage. Its water power is large and very extensive. Stockbridge Mountain lies at the W., and Monument Mountain at the S. part of the town, and in the S. E. corner the Beartown Mountains rise. On the height of the N. W. spur of these mountains is a very narrow and deep ravine, perhaps a quarter of a mile long, where the rocks of every size and form are thrown together in the wildest confusion. This is called the "Ice Hole," from the fact that ice remains in this chasm through the year. On the E. side of the town, and wholly within its limits, is Rattlesnake Mountain, about 2 miles in length. The Housatonic passes through the town; its windings are many, and extensive meadows lie on its borders. This receives Konkapot Brook from the S., and Barnum's, Great Pond, and Mohawk Brooks from the N. There are a number of large and beautiful ponds in the town, which serve to swell the Housatonic. Near the centre of the town is a delightful village, situated on an elevated plain, between the river and a mountain. 7 miles S. E. from the depot of the Western Railroad at West Stockbridge, from which it is 11 miles to Pittsfield, and 162 to Boston.

Stockbridge, N. Y., Madison co. Watered by Oneida Creek. A somewhat hilly town, with a fertile soil. 5 miles N. E. from Morrisville, and 97 N. W. from Albany.

Stockbridge, Vt., Windsor co. White River runs through the northerly part of this town, and in its passage receives the Sweed River from the W. The mill privileges at the Great Narrows in White River are the best. The whole river is here compressed into a channel but a few feet in

width. Steatite is found here. The settlement was commenced in 1784 and 1785. From Montpelier 36 miles S. by W., and 26 N. W. from Windsor.

Stockholm, N. Y., St. Lawrence co. The St. Regis River and its branches water this town. Surface hilly and rather stony; soil fertile mould, based upon limestone. 18 miles N. E. from Canton, and 227 N. N. W. from Albany.

Stockport, N. Y., Columbia co. Watered by Kinderhook Creek, a branch of the Hudson River, which bounds it on the W. 5 miles N. from Hudson, and 25 S. from Albany.

Stockport, Pa., Wayne co. A village on the right bank of Delaware River. 180 miles N. from Philadelphia, and 40 E. from Montrose.

Stockton, Ca., c. h. San Joaquin co. The third city in California, ranking next to San Francisco and Sacramento. It is situated on the E. bank of the San Joaquin River, somewhat more than 100 miles by water from San Francisco, from which it lies due E. There is good navigation to this place, at all times, for steamers and vessels of 400 tons' burden. Stockton lies a little S. of the Calaveros River, a tributary of the San Joaquin, on an inlet, or, as it is called, a slough, which, at a little distance from the San Joaquin, divides into 3 branches. The city occupies the peninsula between the two northern branches, extending also S. to the third branch. It was laid out in 1849, by Mr. Weaver, who had emigrated to California 7 years before, and had obtained from the government a grant of 11 square leagues, about 50,000 acres, on condition of obtaining settlers within a specified time. In April, 1849, the site of the city was occupied by a solitary rancho in the midst of the marshes. The sale of the lots produced \$500,000, and by September, 1849, Stockton was a canvas city of 1000 inhabitants, with a fleet of merchant vessels lying before it. Since that period the population has greatly increased, and many substantial buildings have been erected. Its position is such as to make it the capital of the southern mining district, as Sacramento is of the northern.

The southern mines are situated among the hills and mountains forming the western slope of the Sierra Nevada, commencing some 20 miles E. of Stockton, and extending thence E. to the banks of the rivers.

The following account by Bayard Taylor of a journey, in the autumn of 1849, to the Mokelumne Diggings, N. E. from Stockton, will serve to give an idea of the mines. "The sun was shining hotly, the tent streets of Stockton glowing like a brick kiln. The thermometer stood at 98°, and the parched sandy soil burned through our very boot soles. We therefore resolved to wait till evening before starting. We started at four o'clock, when a pleasant breeze had sprung up, and rode over the level plain through beautiful groves of oak. The trail was crossed by deep dry arroyos, or watercourses, which in the rainy season make the country almost impassable. Now, however, the very beds of the Tule marshes were beginning to dry up. The bed of the Cararas River, which in the spring is 30 feet deep, was perfectly dry, and the trees above its banks made a roof which shut out the wind and sand, but let in the sunlight.

"We encamped in the very bed of the river, and heaping the loose ground for pillows enjoyed a delightful sleep. Leaving soon after sunrise,

we entered the hills. The country was dotted with picturesque clumps of oak, and as the ground became higher and more broken, with pines of splendid growth. Now, however, the ground was parched like a furnace, the vegetation snapped like glass under the hoofs of our mules, and the cracks and seams in the arid soil seemed to give out an intense heat. In the glens, where the little air stirring was cut off, the mercury rose to 110°. Crossing several steep spurs, we reached the top of the dividing ridge overlooking the Mokelumne valley, and here one of the most charming mountain landscapes in the world opened to our view. Under our very feet, as it seemed, flowed the river, and a little corner of level bottom wedged between the bases of the hills was clothed with the tents of the gold hunters, whom we could see burrowing along the water. The mountains, range behind range, spotted with timber, made a grand indistinct background in the murky air. Coming down the almost perpendicular side of the hill, near the bottom, we came upon the Sonorian town, as it was called, from the number of Mexican miners encamped there. Our first move was for the river bottom, where a number of Americans, Sonorians, Kanakas, and French were at work in the hot sun. The bar, as it was called, was nothing more nor less than a level space at the junction of the river with a dry arroyo or gulch, which winds for about eight miles among the hills. It was hard and rocky, with no loose sand, except such as had lodged between the large masses of stone, which must, of course, be thrown aside to get at the gold. The whole space, containing about four acres, appeared to have been turned over with great labor, and all the holes, slanting down between the broken strata of slate, to have been explored to the bottom. The first party we saw had just succeeded in cutting a new channel for the shrunken waters of the Mokelumne, and were commencing operations on about twenty yards of the river bed, which they had laid bare. They were ten in number, and their only implements were shovels, a rude cradle for the top layer of earth, and flat wooden bowls for washing out the sand. When I first saw the men carrying heavy stones in the sun, standing nearly waist deep in water, and grubbing with their hands in the gravel and clay, there seemed to me little virtue in resisting the temptation to gold digging; but when the shining particles were poured out lavishly from a tin basin, I confess there was a sudden itching in my fingers to seize the heaviest crowbar and the biggest shovel.

"A company of thirty, somewhat farther down the river, had made a much larger dam, after a month's labor, and a hundred yards of the bed were clear.

"I slept soundly that night, and went down early to the river, where I found the party of ten bailing out the water which had leaked into the river bed during the night. They were standing in the run, and had two hours of hard work before they could begin to wash. Again the prospect looked uninviting; but when I went to them again towards noon, one of them was scraping up the sand from the bed with his knife, and throwing it into a basin, the bottom of which glittered with gold. Every knife brought out a quantity of grains and scales, some of which were as large as the finger nail. At last, a two-ounce lump fell plump into the pan, and the diggers,

now in the best possible humor, went on with their work with great alacrity. It is only by such operations as these, through associated labor, that great profits are to be made in those districts which have been visited by the first eager horde of gold hunters. The deposits most eagerly reached are soon exhausted by the crowd, and the labor required to carry on further work successfully deters single individuals from attempting it. Those who, retaining their health, return home disappointed, say they have been humbugged about the gold, when, in fact, they have humbugged themselves about the work. If any one expects to dig treasures out of the earth in California without severe labor, he is woefully mistaken. Of all classes of men, those who pave streets and quarry limestone are best adapted for gold diggers."

Stockton, N. Y., Chautauque co. Bear Creek and some other small streams water this town. Surface undulating; soil well adapted to grass on the uplands, and in the valleys to the growth of grain. 7 miles E. from Maysville, and 323 S. of W. from Albany.

Stoddard County, Mo., c. h. at Bloomfield, in the S. E. corner, between the St. Francis and White Water, contains large lakes, and is largely subject to overflow.

Stoddard, N. H., Cheshire co., is situated on the height of land between Merrimac and Connecticut Rivers. It is mountainous, and very rocky. The soil is better adapted to grazing than tillage. The S. branch of Ashuelot River, and several other streams, water this town. There are 14 ponds here, some of which are of considerable magnitude. The first family was that of John Taggard, whose privations and hardships were very great. Their grain was procured at Peterboro', at the distance of 20 miles, which was conveyed by him on his back through the pathless wilderness. At one time, they had nothing for six days on which to subsist but the flesh of the horse. This town was formerly called Limerick. It was incorporated in 1774, when it received the name of Stoddard, from Colonel Samson Stoddard, of Chelmsford, to whom, with several others, it was granted. First settlers, John Taggard, Reuben Walton, Alexander Scott, James Mitchell, and others, in 1769. 14 miles N. N. E. from Keene, and 45 W. S. W. from Concord.

Stokes County, N. C., Germantown and Salem shire towns. This county is bounded N. by Rockingham and Guilford counties and Virginia, E. by Car. S. by Rowan, and W. by Surry. The sources of Dan and Yadkin Rivers drain the county.

Stoneham, Me., Oxford co. Stoneham was incorporated in 1834. It lies westerly of Albany, and comprises the grant to Fryeburg Academy.

Stoneham, Ms., Middlesex co., comprised the N. part of Charlestown until its incorporation, in 1725. There is some good land in Stoneham, and the soil is generally of a gravelly loam, but it is too rough and stony for easy cultivation. Spot Pond, a beautiful sheet of water, covering an area of 233 acres, lies in this town. It is 143 feet above sea level. 9 miles N. from Boston, and 2 E. from the Boston and Lowell Railroad, at Woburn.

Stonington, Ct., New London co. This town is situated at the eastern extremity of Long Island Sound, at the S. E. corner of the state, and on the line of Rhode Island. The land is rocky and un-

even, but fertile and productive. A considerable amount of agricultural products is annually sent from this town to Nantucket and other places. It is watered by the Mystic and Paucatuck.

The harbor of Stonington sets up from the Sound, opposite Fisher's Island, and is well protected by an expensive breakwater.

This place is noted for the commercial enterprise of its people. Large capitals are employed in the whale, seal, and cod fisheries. This place is accommodated with a marine railway, and a lighthouse at the entrance of the harbor.

Stonington borough is located on a narrow point of land, extending into the Sound about half a mile. It was incorporated in 1801. It is handsomely laid out, and is well built. 47 miles by railroad from Providence, and 112 from New York by water.

Stony Brook, N. Y., Suffolk co. On the N. side of Long Island, 197 miles S. S. E. from Albany. It has a good harbor, and ship building is carried on.

Stony County, Io. Central. Between the Iowa and Des Moines.

Stoughton, Ms., Norfolk co. This town was originally a part of Dorchester, and was named in honor of William Stoughton, lieutenant governor of the province of Massachusetts Bay from 1692 to 1702. Some of the head waters of Neponset and Taunton Rivers rise in this town. The highest land in the town is a hill called the Pinnacle. A large village of shoe manufacturers has, within a few years, "sprung up as if by enchantment." From this village is a railroad to the Canton depot of the Boston and Providence Railroad, distance 4 miles. This town lies 18 miles S. from Boston, and 10 S. E. from Dedham. The ancient records of this town are very interesting.

Stow, Ms., Middlesex co. This is an ancient town, and was first settled about the year 1680. The Indians had two names for it, from two hills, *Pompascitticut* and *Shabubukin*. The surface is varied, and the soil in many parts light and sandy; but it contains much good land for cultivation. The Assabet River passes through the town, and affords a good water power. 3 miles from the Fitchburg Railroad at Acton, which is 25 miles from Boston.

Stowe, Vt., Lamoille co. Waterbury River and its branches give this town a good water power. Stowe is situated between the Mansfield and Hog's Back Mountains, and contains a large tract of level, fertile land. Stowe is a flourishing town, and contains 4 neat and pleasant mountain valley villages. All that tract of land formerly called Mansfield was annexed to this town in 1848. The settlement was commenced about the year 1793. From Hydepark 10 miles S., and 37 N. from Montpelier.

Strabane, Pa., Washington co. A township on the head waters of Chartier Creek. 5 miles E. from Washington.

Strafford County, N. H., c. h. at Dover. Bounded N. by Belknap co., E. by the state of Maine, S. and S. W. by Rockingham and Merrimac counties. The larger rivers are the Piscataqua, Salmon Falls, and Cochecho. The soil is generally good. The lands are generally hard of cultivation, but the patient laborer finds an ample reward for his industry. This county possesses a large hydraulic power. Although this county has recently lost a large share of its territory by

the formation of the counties of Belknap and Carroll, it still retains, in consequence of its rapid increase in population and wealth, its former importance and power.

Strafford, N. H., Strafford co. Bow Pond is in the S. W. part of the town, and is about 650 rods long and 400 wide; its waters form one of the principal branches of the Isinglass River. Front Pond lies W. of the Blue Hills, and Wild Goose Pond between this town and Pittsfield. There is a great variety of scenery here. The range of Blue Hills crosses the N. W. part of the town. The soil is generally of a good quality. Strafford was formerly a part of Barrington. 15 miles N. W. from Dover, and 30 E. N. E. from Concord.

Strafford, Vt., Orange co. Strafford contains two pleasant villages. The surface is uneven, but the soil generally good. It is watered by a principal branch of Ompompanoosuc River, which affords several good mill privileges. In the north-easterly part is Podunk Pond, covering about 100 acres. In the S. E. corner of Strafford is an extensive bed of the sulphuret of iron, from which immense quantities of coppers are made. The settlement of this town was commenced just before the revolutionary war. 30 miles S. S. E. from Montpelier, and 11 S. E. from Chelsea.

Stratford, Ct., Fairfield co. Its Indian name was *Cupheag*. The township is mostly level and free from stone, and there is a very rich alluvial tract of meadows on the river and harbor. The principal street in the town is 1 mile in length, running N. and S., parallel to the Housatonic; it is level, pleasant, and ornamented with shade trees. This place lies at the mouth of Housatonic River, and has considerable inland and coasting trade. Stratford Point, jutting out into the Sound, is very pleasant, and a noted landing-place for passengers. 13 miles S. W. from New Haven by railroad.

Stratford, N. H., Coos co. This town lies on the E. bank of Connecticut River. The soil, except along the river, is rocky, gravelly, and cold. The Peaks, two mountains of a conical form, situated in the S. E. part of the town, are seen at a great distance. Bog Brook, Nash's Stream, and several smaller streams, furnish this town with water. There is a pond in the S. E. part of the town. First settlers, Isaac Johnston, James Curtis, James Brown, Josiah Lampkin, and A. Blodgett. 18 miles N. from Lancaster, and 137 N. from Concord.

Stratford, N. Y., Fulton co. Watered by East Canada Creek and its branches. A hilly and mountainous town, with a rather sterile soil. 15 miles N. W. from Johnstown, and 60 from Albany.

Stratham, N. H., Rockingham co., is about 8 miles from the sea. The land is even, and well calculated for agricultural purposes. Farming is so exclusively the employment of the people, that, although a navigable river adjoins it, there is little attention given to any other pursuit. In the E. part of the town, in a swamp, is perhaps the largest deposit of peat in the state. This town was a part of Hilton's Purchase. 43 miles S. E. by E. from Concord, and 3 E. N. E. from Exeter.

Stratton, Vt., Windham co. This is a mountainous town. Branches of Deerfield and Winhall Rivers rise here from two ponds. The soil is cold and generally unprofitable. Stratton was settled principally by emigrants from Massachu-

setts. 18 miles N. E. from Bennington, and 22 N. W. from Brattleboro'.

Strawtown, Pa., Bucks co. On Tohicon Creek, about 40 miles W. of N. from Philadelphia.

Strong, Me., Franklin co. A good township. On both sides of Sandy River. 45 miles N. W. from Augusta.

Stroudsburg, Pa., c. h. Monroe co. On the N. bank of Smithfield Creek. 3 miles N. W. from the Delaware Water Gap, and 124 N. E. by E. from Harrisburg.

Sturbridge, Ms., Worcester co. This town was formerly called Tantuesque by the Indians, and New Medfield by the English. It is a pleasant town, and well watered by Quinebaug River. The surface is uneven and hilly, and the soil hard to subdue. There are some good fish ponds in the town, which serve to swell the Quinebaug. 18 miles S. W. from Worcester, and 60 W. S. W. from Boston.

Stuyvesant, N. Y., Columbia co. On the E. bank of the Hudson River. A hilly town with a productive soil. 12 miles N. from Hudson, and 18 S. from Albany.

Success, N. H., Coos co. There are several considerable mountains in this town, and 2 or 3 ponds. Narmarungawaek and Live Rivers rise here, and pass westerly into the Androscoggin. This town is exceedingly rough and hard to cultivate. First granted, in 1773, to Benjamin Mackay and others. 143 miles N. by E. from Concord, and about 30 E. from Lancaster.

Sudbury, Ms., Middlesex co. This ancient town is situated on the W. side of a river of the same name. It is watered by a branch of Sudbury River, and has some water power. The surface is pleasant, and rather romantic. Along the borders of the river are large tracts of meadow land, some of which is very valuable. Sudbury was first settled in 1638. 19 miles W. from Boston, and 6 S. S. W. from Concord.

Sudbury, Vt., Rutland co. Otter Creek touches upon the eastern border of this town. The other streams are small. Hubbardton Pond extends into the S. part, and there are in town several smaller ponds, of which Hinkum Pond is the most considerable. The surface is uneven, and a high ridge of land extends through the town. The soil is generally a rich loam; the timber principally pine, beech, and maple. There is a small village in the easterly part of the town. This town was chartered in 1761; the early settlers were generally from Connecticut. 43 miles S. W. from Montpelier, and 17 N. W. from Rutland.

Suffield, Ct., Hartford co. Suffield lies on the W. side of Connecticut River, and is bounded N. by Massachusetts, to which state it was attached until 1752. This territory was purchased about the year 1670, of two Indian chiefs, for \$100. The surface on the banks of the river is elevated, and although the town is without much alluvial meadow, the soil being of a strong, deep loam, is very fertile and productive. Suffield contains some of the best farms in the state. The principal village is pleasantly located on rising ground. It contains many handsome buildings; it is the site of the Connecticut Literary Institution, and commands delightful views of the river and circumjacent country. 16 miles N. from Hartford.

Suffolk County, Ms., c. h. at Boston. It includes the city of Boston and the towns of Chelsea, North Chelsea, and Winthrop.

Suffolk County, N. Y., c. h. at Riverhead. Incorporated in 1683. It is bounded N. by Long Island Sound, E. and S. by the Atlantic Ocean, and W. by Queens co. Surface somewhat broken and hilly on the N., but elsewhere level; soil easily tilled and productive. Watered by Peconic River and several small streams. There are several islands attached to this county, the principal of which are Gardiner's, Shelter, and Fisher's Islands.

Suffolk, N. Y., c. h. Suffolk co. 226 miles S. S. E. from Albany.

Suffolk, Va., c. h. Nansemond co. On the E. side of Nansemond River. 28 miles N. W. by W. from Norfolk, and 85 S. E. from Richmond.

Sullivan County, Ia., c. h. at Sullivan. Various creeks of the Wabash drain this county. It is bounded by Vigo N., Martin E., Davies and Knox S., and the Wabash River W.

Sullivan, Me., Hancock co. At the head of Frenchman's Bay. 93 miles E. from Augusta.

Sullivan County, Mo., N. part. Watered by tributaries of the Grand River, which run through it from N. to S.

Sullivan County, N. H., c. h. at Newport. This county is bounded N. by Grafton co., E. by Merrimac and a part of Hillsboro' counties, S. by Cheshire co., and W. by Connecticut River, or the state of Vermont. It was taken from Cheshire co. in 1827. The surface is elevated, but not mountainous. Croydon Mountain is the highest. Along the streams, particularly on Connecticut River, the soil is rich and exceedingly productive. The uplands produce good grain, and afford excellent pasturage. There is a great variety of delightful scenery in this county. Besides the Connecticut, which waters its whole western frontier, the Ashuelot, Cold, Sugar, Little Sugar Rivers, and other streams, furnish the county with an abundant water power, and Sunapee Lake and numerous ponds give beauty to its otherwise varied and picturesque scenery.

Sullivan County, N. Y., c. h. at Thompson. Formed from Ulster co. in 1809. It is bounded N. by Delaware and Ulster, E. by Ulster and Orange, S. and S. W. by Orange co. and the Delaware River, which separates it from Pennsylvania. Watered by several small lakes, and by Delaware, Neversink, and Mongou Rivers. Surface hilly and mountainous, the Shawangunk Mountain lying on the E. border; soil fertile in the valleys, and mostly good for grazing on the uplands. Lead ore is the principal mineral. The Delaware and Hudson Canal and the New York and Erie Railroad both cross this county.

Sullivan, N. Y., Madison co. Watered by Caneseraga and Chittenango Creeks, flowing into Oneida Lake, which bounds it on the N. Surface level and undulating; soil of excellent quality, consisting of rich alluvion on the N. 18 miles N. W. from Morrisville, and 129 from Albany.

Sullivan County, Pa., c. h. at La Port. N. central part. Hilly. Drained by northern tributaries of the W. branch of the Susquehanna.

Sullivan County, Te., c. h. at Blountville. Scott and Washington counties, Va., are on the N., Ashe co., N. C., E., Carter co., in Te., S. E., Washington S., and Hawkins W. Part of the surface is mountainous, the rest hilly. From E. to W., through the whole length of the county, flows Holston River, and in its course receives the Wantauga from the S. E.

Summer Hill, N. Y., Cayuga co. Watered by

the head branches of Fall Creek. A hilly town, with a pretty good soil. 24 miles S. E. from Auburn, and 147 W. from Albany.

Summit, N. Y., Schoharie co. Watered by branches of Schoharie Creek, and by Charlotte River. This is an elevated and hilly town, with a soil well suited to grass. 16 miles S. W. from Schoharie, and 52 S. of W. from Albany.

Summit County, O., c. h. at Akron. In the N. E. angle of the state. Drained by head streams of the Tuscarawas, and by the Cuyahoga and Little Cuyahoga, which afford much water power. Crossed from N. to S. by the Ohio Canal, with which the Ohio and Pennsylvania Canal unites in this county.

Sumner, Me., Oxford co. On a branch of the Androscoggin. 44 miles W. from Augusta.

Sumner County, Te., c. h. at Gallatin. This county is bounded by Kentucky N., Smith E., Cumberland River or Wilson S., Davison S. W., and Robertson N. W. Cumberland River washes it on the S., and it is drained by various creeks of that stream.

Sumpter County, Aa., c. h. at Livingston. W. part. Between the Tombigbee, by whose affluents it is watered, and the Mississippi line.

Sumpter County, Ga., c. h. at Americus. S. W. part. Drained by confluents of the Flint River, which washes it on the E. from the Mississippi to the Pearl.

Sumpter District, S. C., c. h. at Sumpterville. This district has Santee River or Charleston district on the S., Santee River or Orangeburg S. W., Waterce River or Richland W., Kershaw N. W., Lynch's Creek River or Darlington N. E., and Williamsburg N. The surface is level, and the soil generally sandy. A branch of Black River, called Great Pedee, drains the centre of this district. The canal connecting Santee River with Charleston Harbor leaves the Santee nearly opposite to the S. E. angle of Sumpter.

Sumpterville, S. C., c. h. Sumpter district. On the dividing ground between the two main branches of Black River, about 100 miles a little W. of N. from Charleston.

Sunbury, Ga., Liberty co. A town and port of entry on the S. side of Newport River. Catherine Island, which lies off the entrance of the harbor, forms and defends it from the weather. An academy was erected here in 1788. 45 miles S. by W. from Savannah.

Sunbury, Pa. Seat of justice of Northumberland co. 58 miles N. by E. from Harrisburg. It is beautifully situated on a broad plain on the E. side of the Susquehanna, just below the confluence of its N. and W. branches at Northumberland. The navigation of the Pennsylvania Canal is carried across the river by a basin in front of the town, nearly a mile in width, created by the Shamokin dam, 2783 feet long, a short distance below. A railroad is in operation for 19 miles, from Sunbury to the Shamokin coal mines, which was originally projected to extend to Pottsville. An enterprise is on foot for the development of a great water power, by the construction of a short canal from the Susquehanna basin, in the rear of the town, to empty into the Shamokin Creek, below the level of the great dam. With this improvement, and the abundant supplies of coal, iron, and limestone in the immediate vicinity, Sunbury must become an active manufacturing place. A bridge about a mile above the town, across the N. branch of the

Susquehanna, connects it with Northumberland.

Sunderland, Ms., Franklin co. This town lies on the E. side of Connecticut River. It was taken from Hadley in 1718. The central village of Sunderland is pleasantly situated on a fine interval of land, on the E. bank of Connecticut River. North village is 3 miles from the centre, and Plum Tree village 3 miles S. At the central village there is a bridge over the Connecticut. Mount Toby lies partly in Sunderland and partly in Leverett. See *Mountains and Caves*. 90 miles W. from Boston, and 9 S. by E. from Greenfield.

Sunderland, Vt., Bennington co. The Battenkill River passes through the town, and on it are some fine alluvial flats. Roaring Branch originates in several large ponds in the eastern part of the town, and running westerly, unites with the Battenkill in Arlington. The soil consists of alluvion, loam, and marl. Near the foot of the Green Mountains, the sulphuret of iron is found in considerable quantities. On the side of the mountain a vein of lead ore has been discovered in granular limestone. The settlement was commenced in 1766, by emigrants from Connecticut. 87 miles S. W. from Montpelier, and 15 N. by E. from Bennington.

Sunflower County, Mi., c. h. at McNutt. New.

Sunkhaze, Me., Penobscot co. Sunkhaze Stream meets the Penobscot, from the E., about 15 miles above Old Town village, in Orono. The plantation of Sunkhaze lies on this stream, 82 miles N. E. from Augusta.

Surry, N. H., Cheshire co., is watered by Ashuelot River, on which there is a tract of valuable meadow land, extending almost the whole length of the town. On the E. side of Ashuelot River is a steep and high mountain, on the summit of which is a pond of about 3 acres in extent, and about 25 feet depth of water. Surry was originally a part of Gilsun and Westmoreland, and derived its name from Surry in England. First settler, Peter Hayward, in 1764. 52 miles S. W. from Concord, and 6 N. W. from Keene.

Surry County, N. C., Rockford and Huntsville shire towns. Surry co. is bounded N. by Virginia, E. by Stokes co., N. C., S. by Rowan and Iredell, and W. by Wilkes and Ashe. The surface is hilly, and in part mountainous, and the county is drained by the extreme northern sources of the Yadkin.

Surry County, Va., c. h. at Surry. This county has James River on the N. and N. E., Isle of Wight S. E., Sussex S. W. and W., and Prince George N. W. In Surry rise the N. E. sources of Black River, a branch of Nottaway.

Susquehanna County, Pa., c. h. at Montrose. Broome co., N. Y., is on the N., Wayne co., Pa., Luzerne S., and Bradford W. The soil generally is of a middling quality, and the surface hilly. The local features of this county are very peculiar. The Susquehanna enters and again retires from its northern border, and thence, after an immense sweep through Broome and Tioga counties, N. Y., and Bradford co., Pa., it again reaches, in the N. W. angle of Luzerne, within less than 5 miles from the S. W. angle of Susquehanna. From this singular position, the creeks of the latter county flow from its centre like radii of a circle, and yet nearly all enter Susquehanna River.

Sussex County, De., Georgetown and Lewistown shire towns. Delaware Bay is on the

N. E., Atlantic Ocean E., Worcester co., Md., S., Somerset co., Md., S. W., Dorchester and Caroline counties, Md., and Kent co., De., N. Part of the surface is marshy, but it is generally level. The soil is mostly of a middling quality, though some parts are sandy. The waters flow from the centre of the county in opposite directions. Nanticoke drains its western side. Pocomoke has its source near its southern limits; Indian River, interlocking sources with both the preceding, flows into the Atlantic Ocean, and Cold Spring, Broadkill, Prunehook, Slaughter, Cedar, and Mispillan Creeks enter the Bay of Delaware.

Sussex County, N. J., is bounded N. E. by Orange co., N. Y., N. W. by Delaware River, opposite Pike co., Pa., S. E. by Passaic and Morris, N. J., and S. W. by Warren. Most of the land is hilly, and some mountainous, though in the N. E. section the flat and marshy bottoms of the Walkkill cover a considerable space. The climate of Sussex differs from that of the adjacent counties, on account of its superior elevation. The extreme western sources of the Passaic are in this county. From it also flow S. W., towards the Delaware, the Musconegung, Pequest, Flatkill, and Pauling's Creeks, and those of the Walkkill N. W. towards the Hudson. This county has a great variety of soil, from the most fertile alluvion to very barren mountain. The valleys of the creeks, particularly those flowing towards the Delaware, afford very fine meadow, orchard, and grain lands.

Sussex County, Va., c. h. at Hunting. This county has Surry on the N. E., Dinwiddie and Prince George N. W., Greenville S. W., and Southampton S. E. The Nottaway River and its confluent drain more than four fifths of the surface. The N. E. section is also watered by Black Water River.

Sussex, Va., c. h. Sussex co.

Sutter County, Ca. On the E. side of Sacramento, and on both sides of Feather River.

Sutton, Ms., Worcester co., was purchased of the Indians about the year 1704. This is a pleasant town, watered by the Blackstone River, and the Blackstone Canal passes on the northern border. The township is generally hilly, though of good soil. There are a number of neat and handsome villages in the town, that near the centre, Wilkinsonville, at the N. part of the town, and Manchaug, at the S., are the principal. There are a number of beautiful ponds in Sutton, and a great curiosity called "Purgatory Cavern." 8 miles S. by E. from Worcester by railroad, and 43 W. S. W. from Boston.

Sutton, N. H., Merrimac co. Three branches of Warner River, and a large branch of Black Water River, supply this town with water. On the margin of the last stream is some rich meadow and intervalle land. There are several ponds here: the most important are Long and Kesar's; the last is 190 rods square. Kearsarge Mountain extends more than half the length of Sutton, on the E. side. King's Hill is situated on the W. part of Sutton. On the most elevated part of this hill there is one of the most extensive landscape views in the country. Sutton was called Perry's-town from Obadiah Perry, one of its principal proprietors. On the W. bank of Kesar's Pond were found Indian hearths of stone laid with skill and ingenuity, also several Indian implements. This town has almost every variety

of soil, and although the surface is uneven, it produces all the grains and grasses common to the country. 23 miles W. N. W. from Concord.

Sutton, Vt., Caledonia co. Sutton is watered by two considerable branches, which unite near the S. line of Burke, and join the Passumpsic River in Lyndon. There are several ponds, of which Fish Pond is the largest. It covers about 200 acres. The surface of Sutton is generally even, and considerable tracts of it are so low and wet as to be incapable of cultivation. There are several bogs of marl in this town. The settlement of Sutton was commenced about the year 1791, by a Mr. Hackett, who was soon after joined by other families from Rhode Island and Connecticut. 21 miles N. from Danville, and 51 N. E. from Montpelier.

Suwanboro', Ga., c. h. Emanuel co. Near Canouchee River. 98 miles N. W. from Savannah, and 96 S. E. by E. from Milledgeville.

Swampscot, Ms., Essex co. A new town. A fishing village taken from the N. E. part of Lynn.

Swan Quarter, N. C., c. h. Hyde co. 203 miles E. by S. from Raleigh.

Swansea, Ms., Bristol co. The Indian name of this place was *Pockanocket*. Between Lee's and Cole's Rivers lies Mattapoiset Neck, at the head of which is Swansea village, a place of considerable trade and navigation. This town is favored with good navigable waters, and an hydraulic power. This town will be memorable on account of its being the place where the first English blood was shed in King Philip's war. 1 mile N. W. from Fall River, and 48 miles S. from Boston.

Swanton, Vt., Franklin co. This township is situated on the E. side of Lake Champlain. Missisquoi River passes through Swanton, and fertilizes a considerable portion of its territory. This river is navigable for lake vessels to Swanton Falls, 6 miles from its mouth. These falls descend 20 feet, and, with other smaller streams, give to Swanton a water power of great value. Bog iron ore, and an abundance of beautiful marble, are found in this town. The surface and soil are favorable to agricultural pursuits, with the exception of a part bordering the lake. The village of Swanton is pleasantly located, and may boast of the purity of its air and water. The first permanent settlers here were John Hiliker and family, about the year 1787. 50 miles N. W. from Montpelier, and 30 N. from Burlington by railroad.

Swanville, Me., Waldo co. This town lies 8 miles N. from Belfast, and 46 E. by N. from Augusta. It was incorporated in 1818. It is watered by Paasaggassawakeag Lake and River, and possesses a pleasant surface and fertile soil.

Swanzy, N. H., Cheshire co. The principal streams in this town are the Ashuelot and the South Branch Rivers. The surface is diversified with hills, valleys, and swells of upland. There is one pond in the S. W. part, the source of the South Branch. There is a mineral spring, the water of which is impregnated with sulphate of iron. 6 miles S. from Keene, and 60 S. W. from Concord.

Sweet Springs, Va., Monroe co. The medicinal virtues of these waters attract yearly a large company of valetudinarians. The village is 43 miles S. W. from Bath court house, and 93 in the same course from Staunton.

Sweden, Me., Oxford co. The waters from K ezer pond in Lovell, pass through this town, and

give it mill privileges. Sweden lies 9 miles N. E. from Fryeburg, 19 S. W. from Paris, and 62 W. S. W. from Augusta. Incorporated 1813.

Sweden, N. Y., Monroe co. Drained by Salmon Creek. Surface undulating; soil moist argillaceous loam, yielding large crops of grass, grain, and fruit. 15 miles W. from Rochester, and 241 N. of W. from Albany.

Switzerland County, Ia., c. h. at Vevay. This county has a productive soil and hilly surface. It is bounded by Dearborn N., Ripley N. W., Jefferson W., and by the Ohio River E., S. E., and S.

Sycamore, Is., c. h. De Kalb co.

Sylvania, Ga., c. h. Scriven co.

Syracuse, N. Y., shire town of Onondaga co., is situated on the Erie Canal, at the point of its connection with the Oswego Canal, about one mile and a half S. of Onondaga Lake. A railroad from Oswego also here connects with the great chain of railroads between Buffalo and the Hudson River, thus giving to Syracuse the twofold advantage of railroads and canals on these most important thoroughfares of intercourse and trade. This flourishing city is one of the sudden and magnificent creations in our country of those artificial channels and facilities of business which have been so greatly multiplied and extended within the last 30 years. It was incorporated as a village in 1830, when the population was 2566. In 1840 it had a population of 6500; and in 1850 of 22,271. It lies 147 miles W. from Albany by railroad, and 178 E. from Buffalo. It is 35 miles S. by E. from Oswego.

This place, as well as others in the township of Salina, in which it is included, is celebrated for the manufacture of salt, made from the salt springs which abound in the vicinity. The water is brought in pipes to Syracuse from Salina, a mile and a half distant. The fine salt is made by boiling, and other modes of applying artificial heat, and the coarse by solar evaporation. An experiment has recently been made, by order of the secretary of war, for the purpose of testing the relative merits of the Onondaga and the Turk's Island salt, in consequence of a prejudice heretofore existing against the salt of home manufacture, which had made it a requisite in all contracts of the government for the packing of pork and beef for public stores, expressly to stipulate that Turk's Island salt should be used. As the result of this experiment upon a lot of 800 barrels of pork, it is believed that the virtues of the domestic article are in all respects equal to those of the foreign, while in some points the advantage is clearly on the side of the former. The Onondaga salt, as it is called, is decidedly the best in appearance, being of much the lightest color, and is 4 pounds heavier in the bushel. There are annually manufactured at Syracuse about 800,000 bushels of this coarse solar salt, and the amount can be increased to any extent. "The springs at Salina, from which these works are supplied, are pierced through the alluvial, and terminate on gravel. A difference of opinion prevails as to the source of the brine. The general opinion is, that beds of rock salt exist here, as at other salt springs. Borings have been made at several points, and in one instance to the depth of 250 feet, without finding fossil salt. But the very important fact was elicited that the strength of the brine increased with the depth of the well." The wells, or springs, ordinarily used, are excavated only to the depth of 18 or 20 feet. Four-

teen pounds of salt are manufactured from a cubic foot of the water of the strongest spring. The whole amount of revenue to the state from the salt made at the four localities of Salina, Geddes, Liverpool, and Syracuse, in 1850, was \$44,364 03; which, at the impost of 6 cents per bushel, gives, for the quantity manufactured, 739,400 bushels.

To those who remember the appearance of this spot, and the country around it, no longer ago than 1820, in which year the middle, and first constructed, section of the Erie Canal was opened for navigation, having penetrated a wild and dark wilderness at Rome only to emerge from it at this place, and when Syracuse consisted of only a miserable tavern and a few scattered and indifferent wooden houses, the change which the brief period of 30 years has made must appear more like enchantment than reality. In every thing but the name Syracuse is now a city. Its extent, the magnitude and durability of its warehouses, its splendid hotels, its lofty spires glittering in the sun, its extended and well-built streets, thronged with people full of life and activity, and its canal basins crowded with boats, lading and unlading at the lofty stone warehouses upon the wharves, all conspire to give to this place the aspect of one of our most busy and flourishing marts of commerce.

Tacony. A landing place on the Delaware. 8 miles above Philadelphia. Passengers leave the cars at this place and take the steamboat.

Taghkanic, N. Y., Columbia co. Copake Creek waters this town. Surface hilly and mountainous; soil clay loam, very fertile in the valleys. 12 miles S. E. from Hudson, and 40 from Albany.

Talbot County, Ga., c. h. at Talbotton. Bounded N. W. by Merriwether co., N. E. and E. by Flint River, separating it from Upson and Crawford counties, S. by Macon, Marion, and Muscogee counties, and W. by Harris co. Drained by branches of Flint and Chattahoochee Rivers.

Talbot County, Md., c. h. at Easton. Choptank and St. Michael's Bays penetrate into this county, also Treadhaven River, to a distance of about 10 miles. The county occupies the peninsula between Tuckahoe River and Choptank, Chesapeake, and St. Michael's Bays. It is bounded N. by Queen Ann, E. by Tuckahoe River, or Caroline co., and S. E. by Choptank Bay, or Dorchester co.

Talbotton, Ga., c. h. Talbot co.

Talladega County, Ala., c. h. at Talladega. This county is bounded N. by Benton, E. by Randolph, S. by Tallapoosa and Coosa, and W. by Coosa River, separating it from Shelby and St. Clair. The land slopes westward towards the Coosa River.

Talladega, Ala., c. h. Talladega co.

Tallahassee, Fla. City, capital of the state, and seat of justice of Leon co. 292 miles W. N. W. from St. Augustine. The situation of this place is on elevated ground, having a fine mill stream on its eastern border, with a fall of 15 or 16 feet, after which it disappears in a cleft of the limestone strata. The adjacent country is rolling, but not hilly, and the soil good. The city is of recent origin, having been commenced in 1824, on this spot being selected as the capital of the state. The legislature held its first session there the following winter. It was incorporated as a city in 1825. It is regularly laid out, containing

a number of public squares, and has among its public buildings a state house, court house, jail, an academy, and churches of the Episcopal, Presbyterian, and Methodist denominations. It is connected by a railroad with Port Leon, 26 miles distant, on the Appalachee Bay, which may be regarded as the port of Tallahassee.

Tallahatchee County, Mi., c. h. at Charleston. Bounded N. by Ponola co., E. by Yalabusha, S. by Carroll and Sunflower, and W. by Sunflower and Coahoma counties. Drained by Tallahatchee River and tributaries.

Talapoosa County, Aa., c. h. at Dadeville. Bounded N. by Talladega and Randolph counties, E. by Chambers, S. by Macon and Montgomery, and W. by Coosa co. Drained by Talapoosa River and its tributaries.

Taliaferro County, Ga., c. h. at Crawfordsville. Lying in the N. E. part of the state, and having Oglethorpe co. on the N., Wilkes on the E. and N. E., Hancock on the S. and S. E., and Greene on the W. It has a length of 17 miles, and a mean width of 8 miles, with an area of 136 square miles. It has a general declivity towards the S. E., and is drained in that direction by the higher sources of the Ogeechee and Little Rivers. Its staple productions are cotton, corn, and wheat.

Tallulap, Mi., c. h. Issaquena co.

Tama County, Io. S. E. central part of the state. On the Iowa River.

Tamaqua, Pa., Schuylkill co. 79 miles N. E. from Harrisburg. On Tamaqua or Little Schuylkill River. Connected by railroad with Port Carbon. Abundance of anthracite coal is found in this vicinity, and the coal trade is the principal source of wealth.

Taney County, Mo., c. h. at Forsyth. Bounded N. by Green and Wright counties, E. by Ozark co., S. by Arkansas, and W. by Barry and Lawrence counties. Drained by White River and its branches.

Tappahannock, Va., c. h. Essex co. 50 miles N. E. by E. from Richmond. A port of entry on the Rappahannock.

Tarboro', N. C., c. h. Edgecombe co. On the W. bank of Tar River, at the head of steamboat navigation, and 76 miles E by N. from Raleigh.

Tariffville, Ct., in the town of Simsbury, Hartford co. On the W. side of Farmington River. 12 miles N. from Hartford. Here is a large manufactory of ingrain carpeting.

Tartton, O., Pickaway co. 46 miles S. from Columbus. On Salt Creek, a tributary of the Scioto.

Tatnall County, Ga., c. h. at Perry's Mills, is bounded N. E. by Canouchee River or Bullock co., S. E. by Liberty and Wayne, N. W. by Emanuel, W. by Telfair and Montgomery, and S. by Appling. On the western boundary of this county the Oconee and Ockmulgee Rivers unite, and form the Alatomaha. The Alatomaha winds S. E. along the county, and receives Great Ohoopce from the N.

Taunton, Ms., one of the shire towns of Bristol co. Situated on Taunton River, at its junction with Mill River. By the railroads, 35 miles S. from Boston, 20 N. by W. from New Bedford, and 31 E. by N. from Providence, R. I. Population in 1790, 3804; 1800, 3860; 1810, 3907; 1820, 4520; 1830, 6042; 1840, 7645; 1850, 10,431.

This town contains some excellent land, which

is under a high state of cultivation. But the attention of the people has long been turned chiefly to manufacturing pursuits. The Taunton River, so much celebrated for the multitude of alewives taken from its waters, is no less important for the great and widely-distributed water power it produces. It is also navigable for small vessels between this place and Fall River, about 17 miles S. W., where it empties into Mount Hope Bay. There is some navigation owned in Taunton, which is employed in the coastwise trade and domestic fishery.

The village contains a large number of handsome public and private buildings, located around and in the vicinity of a beautiful enclosure, called, from time immemorial, "Taunton Green." This public ground is handsomely ornamented with trees, which give a peculiar charm to the place. The court house, on one side of this green, is a tasteful edifice, with a portico of four Ionic columns. There are nine or ten churches in the place, several of which have beautiful houses of worship. Many of the private mansions are finely situated, and give evidence of the taste and affluence of their occupants.

The Mount Pleasant Cemetery, a short distance from the green, is laid out on the plan of Mount Auburn, near Boston, and is among the most pleasing of our rural cemeteries. The ladies of Taunton have erected here a chaste and beautiful monument to the memory of Miss Elizabeth Pool, the pious Puritan lady, of family and fortune, who conceived the bold design of planting a church among the Indians in this part of the wilderness, and for that purpose came, with others, from Taunton, in England, in 1639, and formed the settlement here. She died in 1654.

There are in Taunton a large number of cotton mills, print works, paper mills, nail factories, forges, furnaces, &c. Here are also manufactures of leather, boots, shoes, hats, chairs, straw bonnets, books, bricks, and other articles. Iron works were established here as early as 1652, and nails, to a large amount, continue to be among the products of the manufactures. Britannia ware is made here, which, in the quality of the metal, and in the beauty of its polish, is said to be equal to any which is imported.

Taunton is approached from all points, with great facility, by the different lines of railroad communication connected with the railroad from Boston to New Bedford, which passes through the town. This town has long attracted the attention of skilful mechanics and men of wealth as a place of business, and of persons of taste and elegant leisure as an agreeable and healthful place of residence. There are a number of beautiful ponds in the vicinity, and some high grounds from which delightful prospects are obtained, offering attractions, especially in the summer season, to persons wishing for temporary as well as permanent residence at a convenient remove from the heat and bustle of our crowded cities.

Taylor County, Io. On the southern border of the state.

Taylor County, Ky., c. h. at Campbellsville. Central part of the state. New. Taken from Green. Drained by affluents of Green River. Undulating and fertile.

Taylor County, Va., c. h. at Proutytown. N. W. part of the state. Watered by the W. fork of the Monongahela, which passes through it from S. E. to N. W. Hilly.

Taylorville, Te., c. h. Johnson co. N. from Roan's Creek, and 232 miles E. by N. from Nashville.

Taylorville, Is., c. h. Christian co. 26 miles S. E. from Springfield.

Taylorville, Ky., c. h. Spencer co. Near the centre of the county. 30 miles S. E. by E. from Louisville, and 30 S. W. by W. from Frankfort.

Tazewell, Ga., c. h. Marion co. On the E. side of South Whitewater Creek, a branch of Flint River, and 110 miles S. W. from Milledgeville.

Tazewell County, Is., c. h. at Tremont. Incorporated from Peoria co. in 1827, and is bounded N. and N. E. by Woodford co., E. by McLean, S. by Logan and Mason counties, and W. by the Illinois River, separating it from Peoria co. Drained by Mackinaw and branches of Sangamon River. Surface level, or slightly uneven, with some swamps; soil fertile in some portions.

Tazewell, Te., c. h. Claiborne co. Near the head of Russell's Creek, a branch of Powell's River, and 221 miles E. by N. from Nashville.

Tazewell County, Va., c. h. at Jeffersonville. Kentucky and Cabell co., Va., are on the N. W., Giles N. E., Washington S., Russel, S. W., and Wythe S. E. Part of the surface is mountainous, and the rest hilly. In this county are the sources of Chinchard and Great Sandy Rivers, and from its N. E. section flow several branches of Great Kanawha.

Tazewell, Va., c. h. Tazewell co. On the S. side of the N. fork of Clinch River. 284 miles W. by S. from Richmond.

Telfair County, Ga., c. h. at Jacksonville. This county is bounded by Appling S., Dooley S. W., Pulaski N. W., Little Ockmulgee River or Montgomery co. N. E., and Tatnall E. The Ockmulgee River enters the N. W. side of this county, and, after an immense curve to the S. E., E., and N. E., joins the Oconee at its N. E. angle.

Tecumseh, Mn., c. h. Lenawee co. 56 miles S. W. from Detroit.

Temple, Me., Franklin co. This was formerly a part of Kennebec co. It lies 40 miles N. N. W. from Augusta, and is bounded N. by Farmington. It was incorporated in 1803.

Temple, N. H., Hillsboro' co. The several streams which empty into Souhegan River, at Wilton, rise among the mountainous tracts on the W., and generally from sources within the limits of Temple. This town is of considerable elevation. From the highest point, in a clear atmosphere, about 20 meeting houses may be seen by the naked eye. The surface is uneven and pleasant; soil tolerably good. Temple is the easterly part of what was called Peterboro' Slip. 12 miles W. by S. from Amherst and 45 S. S. W. from Concord.

Templeton, Ms., Worcester co. This is a fine farming town, with a pleasant surface and fertile soil. Templeton is somewhat elevated, and sends branches both to Miller's River, on its N., and to the Chicopee on its S. These streams afford the town a constant and valuable water power. Along the streams are fine intervals, and the town is well supplied with all the varieties of woods for timber and fuel. There are a number of pleasant villages in the town; that in the centre is very handsome. Baldwinsville and Dedmunsville, two neat and flourishing manufacturing villages, are situated at the N. part of the town, on Otter River, a branch of the Miller's. 15 miles W. by S. from Fitchburg, from which to Boston is 50 miles.

The railroad from Boston to Vermont passes through the town.

Tensas Parish, La., c. h. at St. Joseph's. On the E. border, between the Mississippi and the Tensas.

Terre Bonne Parish, La., c. h. at Houma. Bounded N. and E. by Assumption and La Fourche Interior parishes, S. by the Gulf of Mexico, and W. by Atchafalaya Bay and Atchafalaya River, which separates it from St. Mary's parish. Drained by Terre Bonne, Petite, and Grand Bayou, Cailloux, and Bayou de Large Rivers. Surface level, and much of it too low for cultivation, but the soil on the borders of the streams is arable and productive.

Terre Haute, Ia., c. h. Vigo co. On high ground on the E. bank of Wabash River. 73 miles W. from Indianapolis. The national road here crosses the river, on a fine bridge. It is connected with Lake Erie by the Wabash and Erie Canal, and is to be connected by railroad with Columbus and St. Louis. This town, from its situation and the facilities of intercommunication with which it is about to be furnished, promises to become one of the principal towns of Indiana.

Tewksbury, Ms., Middlesex co., was formerly an Indian village, a part of Billerica, and called Wamesit. It has the Concord River on its western boundary. The surface is rather level, with a thin soil, better adapted to the growth of hops and rye than other crops. 5 miles S. E. from Lowell, and 20 N. N. W. from Boston.

Tewksbury, N. J., Hunterdon co. Watered by Lamington River and Rockaway Creek and branches. Surface hilly; soil fertile clay and loam. 14 miles N. E. from Flemington.

Texas County, Mo., c. h. at Houston. S. central. Watered by Big Piney Fork of Gasconade and the head streams of Currant River.

Theresa, N. Y., Jefferson co. Watered by Indian River. Surface uneven; soil rather sterile. Incorporated in 1841, from the town of Alexandria. 20 miles N. from Watertown, and 178 N. W. from Albany.

Thetford, Vt., Orange co. This town is pleasantly situated on the W. side of Connecticut River, opposite Lyme, New Hampshire. The Ompomponoosuc and its branches give the town an excellent water power. There are several ponds in Thetford, one of which covers about 9 acres, and is situated on an elevation, the base of which is only 4 rods from Connecticut River, and 100 feet in height. It is very deep; it has neither inlet nor outlet, and contains large quantities of perch and other fish. The surface of the town is generally rocky and uneven; it has but little interval, but the soil is strong and productive. There are 3 neat villages in the town, and a rich vein of galena. The settlement was commenced in 1764, by John Chamberlain, from Hebron, Ct., 34 miles S. E. from Montpelier, and 18 S. E. from Chelsea. On the Passumpsic Railroad, 14 miles N. from the White River Junction.

Thomas County, Ga., c. h. at Thomasville. Bounded N. and E. by Baker and Lowndes counties, S. by Florida, and W. by Decatur co. Drained by Ocklockany and Ocilla Rivers.

Thomaston, Ga., c. h. Upson co.

Thomaston, Me., Lincoln co., is situated at the head of the St. George's River. Here is the state prison, the buildings of which occupy a plot of 10 acres, including a marble quarry. The convicts are principally employed in working

granite into various forms for building, which, when prepared, is transported by water. The granite is of excellent quality, and is found in large quantities on the river. This is a fine town and the neighboring country is very pleasant and fertile, and well cultivated. 36 miles S. E. from Augusta, and 37 E. from Wiscasset.

Thompson, Ct., Windham co. This town was formerly a part of Killingly, and was first settled about the year 1715. The surface is hilly, but not mountainous; it presents a pleasing variety of elevations and valleys. The soil is a gravelly loam, strong, and productive of good crops of corn and hay, and affords excellent pasturage. French River meets the Quinebaug near the centre of the town, and Five Mile River, issuing from several ponds, waters the eastern part. These streams give to the town a valuable water power, and on their banks are the pleasant and thriving villages of Masonville, Fishersville, and New Boston. This town is large, and very pleasant; it contains a class of enterprising and intelligent agriculturists and mechanics. The Indian name of the place was *Quinnetsett*. 47 miles E. N. E. from Hartford, 27 W. N. W. from Providence, and 53 S. W. from Boston.

Thompson, N. Y., c. h. Sullivan co. It is watered by Mongoup and Neversink Rivers. Surface rather hilly; soil gravelly and sandy loam. 113 miles S. W. from Albany.

Thompsonville, Ct., in Enfield, Hartford co. At the junction of Freshwater with the Connecticut, and on the railroad from Springfield to Hartford. 20 miles N. from Hartford. There is here a large manufactory of carpets of the best quality. See *Enfield, Ct.*

Thornbury, Pa., Chester co. Drained by Brandywine River and Chester Creek. Surface level; soil sandy loam. 87 miles E. by S. from Harrisburg.

Thornbury, Pa., Delaware co. A township between Egmont and Birmingham. 18 miles W. S. W. from Philadelphia.

Thorndike, Me., Waldo co. An inland township. 59 miles N. E. from Augusta.

Thornton, N. H., Grafton co. This town is watered by Pemigewasset and Mad Rivers, and several small brooks. On Mill Brook there is a cascade, at which the water falls 7 feet in 2 rods, and then falls over a rock 42 feet perpendicularly. The intervals on the Pemigewasset are productive. There are many elevations, but none distinguished for a remarkable height. First settler, Benjamin Hoit, in 1770. 12 miles N. from Plymouth, and 55 N. by W. from Concord.

Three Rivers, Mn., St. Joseph co. 145 miles S. W. from Detroit. It lies on St. Joseph River, between the junction of Portage River and Stony Creek, and has great water privileges. Boats of 30 tons come up the river to this place.

Ticonderoga, N. Y., Essex co. Watered by the outlet of Lake George and by some small streams flowing into Lake Champlain, which bounds it on the E. Surface mostly level on the E., and hilly and mountainous on the W. In the S. E. part is the peninsula, on which are the ruins of old Fort Ticonderoga. 97 miles N. N. E. from Albany.

Tiffin, O., c. h. Seneca co. On Sandusky River. 85 miles N. from Columbus.

Tilden, Me. Hancock co. A new town taken from Mariaville in 1850.

Tincum, Pa., Bucks co. Bounded on the N. and E. by Delaware River, and drained by Tincum Creek. Tohickon Creek also runs on its S.

boundary. Surface level or undulating; soil sandy loam. 12 miles N. E. from Doylestown.

Tincum, Pa., Delaware co. This township consists mostly of grazing farms. It lies on the Delaware, below the mouth of Darby Creek, about 6 miles from Philadelphia.

Tinmouth, Vt., Rutland co. This town is separated from Wallingford by Otter Creek. Furnace Brook rises from a pond in the south part of the town. This stream has been noted for great quantities of fish of an extraordinary size. The surface of Tinmouth is hilly, in some parts mountainous. There is good land on the streams, and the high land is good for pasturage. There are several quarries of beautiful marble in this town, and iron ore in abundance. The settlement was commenced here about the year 1770. The town was organized March 11, 1777. From Rutland, 8 miles S.

Tioga County, N. Y., c. h. at Owego, was formed from Montgomery co. in 1794. It is bounded N. by Tompkins and Cortland, E. by Broome co., S. by the state of Pennsylvania, and W. by Chemung co., and is watered by the Susquehanna River and Owego Creek and tributaries. Surface hilly; soil well adapted to grazing, and in the valleys very fertile. This county has little mineral wealth. It is traversed by the New York and Erie Railroad, which follows the valley of the Susquehanna River.

Tioga, N. Y., Tioga co. Watered by the Susquehanna River and some of its branches. Surface hilly; soil gravelly loam, very fertile in the valleys. 5 miles W. from Owego, and 172 S. of W. from Albany.

Tioga County, Pa., c. h. at Wellsboro'. This county has Steuben co., N. Y., on the N., Bradford, Pa., E., Lycoming S. E. and E., and Potter W. The soil is of a middling quality, the surface broken. The main southern branch of Tioga River rises in the S. E. angle, and traverses this county, flowing N. into New York. The sources of Pine Creek drain its S. W. angle.

Tionesta, Pa., Venango co. Drained by some streams flowing into the Susquehanna River, which bounds it on the N. W. 206 miles W. N. W. from Harrisburg.

Tippah County, Mi., c. h. at Ripley. Bounded N. by Tennessee, E. by Tishamingo co., S. by Pontotoc and W. by Marshall co. Drained by Hatchie, Muddy, Wolf, and Tippah Creeks, and the head branches of Tallahatchee River.

Tippecanoe County, Ia., c. h. at Lafayette. Bounded N. and N. E. by White and Carroll counties, E. by Clinton, S. by Montgomery, and W. by Fountain and Warren counties. Drained by Wabash and Tippecanoe Rivers, Wild Cat Creek and its branches, which afford water power. Surface level or undulating, a large part being prairie. The Wabash and Erie Canal traverses this county.

Tipton, Io., c. h. Cedar co. On a high prairie, a little W. from Sugar Creek.

Tipton County, Ia., c. h. at Tipton. New. N. central part of the state.

Tipton County, Te., c. h. at Covington. The Mississippi River is on the W. of this county, Shelby co. S., Fayette S. E., Haywood E., and Lauderdale N. The general course of the Mississippi River in this county is S. W. It is very winding.

Tisbury, Ms., Dukes co., extends from Vineyard Sound on the N. to the sea on the S. The noted

harbor of Holmes's Hole, in this town, is on Vineyard Sound. This harbor is large and safe, and of sufficient depth of water for the largest merchantmen. The village at this harbor is pleasant, large, and quite a place of business. There are some high lands near the harbor, but the town is generally level. There is much good land in the town. Lagoon Pond communicates with Holmes's Hole by an opening which is only 4 rods wide and 7 feet deep at high water. The pond is 3 miles in length, and 1 in width, and in several places 40 feet in depth. Newtown Pond, in the S. part of Tisbury, is a mile and a half long, and has a natural communication with the sea, through which the tide rises and falls. The largest brooks in the island empty into the head of this pond, not more than 100 rods apart, one running from the W., and one from the N. W. On the easterly side of this pond are a number of deep coves, around which is much marshy land. The wells are on a level with the sea; the common depth of them is from 15 to 20 feet. The water is soft, and of good quality. Holmes's Hole village lies 8 miles N. W. from Edgartown, and 77 S. S. E. from Boston by railroad and steamboat, via New Bedford.

Tishamingo County, Mi., c. h. at Jacinto. Bounded N. by Tennessee, E. by Alabama, S. by Itawamba co., and W. by Tippah co. Watered by Tennessee River, which runs on its N. E. boundary, by Yellow and Tusculumbia Creeks, and by the head streams of the E. fork of Tombigbee River.

Titus County, Ts., c. h. at Mount Pleasant. In the N. E. angle. Watered by Sulphur Fork and Cyprus Bayou of Red River.

Tiverton, R. I., Newport co. This town is connected with Portsmouth, on the Island of Rhode Island, by a stone bridge at a place called Howland's Ferry. It adjoins Fall River.

The surface of the town is varied by hills and valleys. Its structure is granite, and the land, in some parts, is stony. The soil is principally a gravelly loam, and capable of producing good crops. There are valuable forests of timber in the town. 13 miles N. E. from Newport.

The navigable privileges of Tiverton are of a superior kind, and are improved, to some extent, in the fishery and foreign and domestic trade. There are large ponds in the town, well supplied with fish. These ponds produce a water power which is applied to the manufacture of cotton and other materials.

The captor of the British General Prescott was a native of Tiverton. His name was Tak, a slave, the property of Thomas Sisson, a wealthy farmer. "During the revolution, Tak was sent by his master into the army, to serve as a substitute for another man who was drafted. When Colonel Barton took General Prescott on Long Island, Tak was one of Colonel Barton's chosen men, and the one on whom he most depended. Having entered the house where General Prescott was quartered, Colonel Barton, followed by Tak and two or three others, proceeded silently to the door of the chamber where General Prescott was sleeping. The colonel, finding the door fastened, turned and whispered to Tak, 'I wish that door opened, General Prescott taken, and carried by the guard to the boat, without the least noise or disturbance.'

"Tak stepped back two or three paces, then plunging violently against the door, burst it open, and rushed into the middle of the room. At the same instant, General Prescott sprang from his

bed, and seized his gold watch, hanging upon the wall. Tak sprang upon him like a tiger, and clasping the general in his brawny arms, said in a low, stern voice, 'One word, and you are a dead man.' Then hastily snatching the general's cloak, and wrapping it round his body, and at the same time telling his companions to take the rest of his clothes, he took the general in his arms, as if a child, and ran with him by the guard towards the boat, followed by Colonel Barton and the rest of his little company."

Tak was more than 6 feet in height, well proportioned, and remarkable for his shrewdness, agility, and strength. He attained great age, and was never known to taste of any kind of meat.

Tivoli, N. Y., Dutchess co. On the E. bank of Hudson River, opposite Saugerties. 51 miles S. from Albany. There is a steam ferry here.

Toby, Pa., Clarion co. Bounded on the N. by Clarion River, and W. by the Alleghany, and drained by Licking, Catfish, Cherryrun, and Red Bank Creeks. Surface undulating or level; soil loam. Copperas and salt are found here. 190 miles N. E. from Harrisburg.

Todd County, Ky., c. h. at Elkton. Muhlenburg is on the N., Logan E., Christian W., and Robertson co., Te., S. Red River, a branch of Cumberland, and Muddy Fork, a branch of Green River, drain this county.

Toledo, O., Lucas co. City. Situated on the W. side of Maumee River, near its entrance into Maumee Bay, at the western extremity of Lake Erie, 134 miles N. N. W. of Columbus. Population in 1840, 1322; in 1850, 3819. It is 66 miles S. from Detroit, between which place and Toledo steamboats ply upon the lake daily. Steamboats run regularly between Buffalo and Toledo, 310 miles, touching at the intermediate ports of Cleveland and Sandusky. A railroad, 33 miles in length, connects Toledo with the Michigan Southern Railroad, at Adrian, and thence, with the southern extremity of Lake Michigan. The Miami and Erie Canal, 247 miles long, connects Toledo with Cincinnati; and the Wabash and Erie Canal, extending from this point through the circuit of the Wabash valley, will unite the waters of Lake Erie with those of the Ohio at Evansville, Ia., 324 miles below Cincinnati. The whole length of this canal will be 460 miles, opening to Toledo the valuable internal resources of Indiana and Eastern Illinois. By these canals, connecting the commerce of the lakes with that of the lower valleys of the Ohio and Mississippi, one of the most important channels of trade is opened between the eastern cities and the vast interior of the W. The productions of the S. and S. W., which, during the season of 1846, reached Toledo by these two canals, exceeded 3,000,000 of dollars in value. By its position, and the aid of these great internal improvements, Toledo is evidently destined to be one of the greatest gathering points of the agricultural products of the country.

Toledo is extended for more than a mile along the river bank; but the business chiefly concentrates at its upper and lower extremities or landings, which were originally two distinct settlements, called Port Lawrence and Vistula. At these points, especially at the upper landing, formerly Port Lawrence, the city is compactly built, with stores, warehouses, dwellings, and public houses, among which are many large and imposing edifices. Toledo was incorporated as a city in 1836, about 5 years after the settlement at Vis-

tula commenced. There are churches here of the Presbyterian, Episcopal, Methodist, Lutheran, and Roman Catholic denominations.

About the year 1833, there arose a serious boundary dispute between the state of Ohio and the territorial government of Michigan, the chief importance of which turned upon the value, to Ohio, in the opinion of her leading men, of this harbor at the mouth of the Maumee, to enable her to realize the benefit of her canals to the Ohio and the Wabash valleys. The difficulty, which had arisen from a discrepancy between one of the provisions of the ordinance of 1787 and the terms upon which Ohio had been admitted into the Union, was finally adjusted by Congress, by giving to Michigan, instead of this small strip of disputed territory, averaging about 8 miles in width, the whole of the extensive tract lying between Lakes Michigan and Superior, now so valuable for its rich deposits of copper and other minerals.

Tolland County, Ct., c. h. at Tolland. This county was taken from Hartford and Windham counties in 1786. It is bounded N. by Massachusetts, E. by Windham, S. by New London, and W. by Hartford counties.

The western part of the county lies within the great valley of the Connecticut; it is generally free from stone, undulating, fertile, and productive; the eastern section is within the granitic range which extends through the state: much of this portion of the country is covered with forests; that part which is cleared affords good grazing. The Scantic, Willimantic, Salmon, Hockanum, and Hop Rivers, with their tributaries, afford the county a good water power.

Tolland, Ct., c. h. Tolland co. Situated on the nearest mail route from Hartford to Boston. 18 miles E. N. E. from Hartford. Its products are English grain, grass, potatoes, &c. The land is rather sterile, mountainous, and uneven. The inhabitants are industrious and intelligent.

Tolland, Ms., Hampden co., was taken from Granville and Sandisfield in 1810. It was formerly called Southfield. This township is on elevated land adapted for grazing. It is watered by Farmington River, the western boundary of the town, which is here a beautiful and lively stream. Tolland has a neat village in the centre of the town, and another on the border of the river, called New Boston. 22 miles W. from Springfield, and 120 W. S. W. from Boston.

Tompkins County, N. Y., c. h. at Ithaca, was incorporated from Cayuga and Seneca counties in 1817. It is bounded N. by Seneca and Cayuga, E. by Cortland, S. by Tioga and Chemung, and W. by Chemung co. and Seneca Lake. Watered by Cayuga Lake and Inlet, and Six Mile and Fall Creeks. Surface hilly but arable; soil well adapted to grazing, and in the valleys to the growth of grass, grain, and fruit. This county has little mineral wealth. The Cayuga Lake and Inlet and the Cayuga and Seneca Canal open a water communication with the Erie Canal, and the Ithaca and Owego Railroad also crosses this county.

Tompkins, N. Y., Delaware co. The Mohawk, or W. branch of the Delaware, winds through this town, forming the W. boundary for some distance. Surface hilly and mountainous. 22 miles S. W. from Delhi, and 100 S. W. from Albany.

Tompkinsville, Ky., c. h. Monroe co. On a branch

of Big Barren River. 153 miles S. S. W. from Frankfort.

Tompkinsville, N. Y., Richmond co. Situated on Staten Island, 6 miles S. from New York, with which it is connected by steam ferry boats. It is pleasantly situated, overlooking the quarantine ground, and is the site of a marine hospital, or lazaretto, for the reception of sick seamen arriving from foreign ports. It is open only from the 1st of April to the 1st of November. This building is 177 feet long and 3 stories high. Here are also other hospitals for patients from the city with contagious diseases, which have spacious buildings and ample grounds, substantially enclosed.

Tonawanda, N. Y., Erie co. Watered by Tonawanda Creek, and comprises Grand Island, lying in Niagara River. Surface chiefly level, and soil fertile. 10 miles N. from Buffalo, and 288 W. from Albany.

Topsfield, Me., Washington co. This township was number eight in the second range N. of the Bingham Penobscot Purchase. It was incorporated in the year 1838. This town lies about 60 miles N. E. from Bangor.

Topsfield, Ms., Essex co. Before the incorporation of this town, in 1650, it was called by the Indians *Sheuceneneady*, and by the whites *New Meadows*. This is a pleasant town, watered by Ipswich River and its branches. The surface is diversified. There are some fine tracts of intervals in the town, and the uplands possess a strong soil. Topsfield was first settled about the year 1642. 21 miles N. by E. from Boston, and 9 N. by W. from Salem.

Topsham, Me., a shire town of Lincoln co. On the N. side of the Androscoggin, at the head of navigation, opposite to Brunswick, in common with which it enjoys from that river a great hydraulic power. A place of considerable trade, particularly in lumber.

Topsham, Vt., Orange co. Topsham is on elevated ground, with a rocky, strong soil, adapted to grazing. It contains much granite, and is watered by the upper branches of Wait's River, which propel a number of mills. The settlement was commenced about the year 1781. The first settlers were mostly from New Hampshire. 19 miles S. E. from Montpelier, and 15 N. E. from Chelsea.

Torrington, Ct., Litchfield co. This town was first settled in 1737. Its surface is diversified by hills and valleys, and the soil is better adapted to grazing than the culture of grain. Two branches of Naugatuck River meet at Wolcottville, a beautiful village in the S. part of the town. This village is situated in a valley, and near it a good bed of copper ore has recently been discovered; and Mr. Israel Coe, the proprietor, has commenced the manufacture of brass kettles the first establishment of the kind, it is believed, in the United States. 26 miles W. N. W. from Hartford.

Wolcottville owes its rise, principally, to Oliver Wolcott, secretary of the United States treasury during the administrations of Washington and John Adams, and governor of Connecticut 10 successive years. He was born at Litchfield, and died in New York, 1833, aged 74.

Toulon, Is., c. h. Stark co.

Towamensing, Pa., Montgomery co. Drained by Shippack and Towamensing Creeks. Surface level; soil red shale. 9 miles from Norristown.

Towanda, Pa., Bradford co. This village is the seat of justice, and is located on the right bank of the Susquehanna River. Excellent bituminous coal has been discovered in the mountain valleys S. W. from Towanda. 137 miles N. by E. from Harrisburg.

Townsend, Ms., Middlesex co. This town was formerly a part of "Turkey Hills," or Fitchburg, and was called North Town. The surface is generally level; there is a good deal of pine plain in the town. The Squanicook, a good mill stream, rises in this town, and joins the Nashua in Shirley. On this stream, at the eastern part of the town, is a pleasant, flourishing little village, called Townsend Harbor. About 4 miles W. from this is the west village. There is a female seminary in this place. At Centreville, a neat village, is an academy for youth of both sexes. Townsend west village lies 8 miles N. N. E. from Fitchburg, and 42 N. W. from Boston.

Townshend, Vt., Windham co. West River passes through this town with considerable rapidity. Along its banks are some tracts of good intervalve; but the surface of the town is generally hilly, and the soil more calculated for grazing than tillage. The first settlement was commenced here in 1761, by Joseph Tyler, who was soon joined by John Hazelton. 28 miles N. E. from Bennington, and 95 S. from Montpelier.

Travis County, Ts., c. h. at Austin. S. central. On both sides of the Colorado.

Tredypin, Pa., Chester co. Drained by Valley Creek. Surface gently sloping; soil calcareous loam.

Tremont, Me., Hancock co. New.

Trenton, Me., Hancock co. 7 miles S. by E. from Ellsworth, on navigable waters.

Trenton, N. J. City, capital of the state, and seat of justice of Mercer co. 29 miles N. E. from Philadelphia, and 57 miles S. W. from New York. Population in 1810, 3003; in 1820, 3942; 1830, 3925; 1840, 4035; 1850, 6766.

Trenton is situated at the head of sloop navigation, on the E. side of the Delaware River, opposite the lower falls. The Assunpink Creek here enters the Delaware. At the foot of the falls, or rapids, the Delaware is crossed by a fine bridge, 1100 feet in length, consisting of 5 arches, resting upon stone piers, which is considered a superior specimen of this species of architecture. It was built in 1806, at an expense of \$180,000. The Philadelphia and Trenton Railroad is carried over the river on this bridge. The ground on which the city is built, as well as the surface of the town generally, is considerably varied. The districts of Mill Hill, Bloomsburg, and Lambertson, included in the borough of South Trenton, and extending about a mile down the river, may in a general description be regarded as a part of the city.

Trenton is regularly laid out, and has many handsome stores, dwellings, and other edifices. The public buildings in the city proper are the state house, the governor's house, a public library, a lyceum, and 7 or 8 houses of public worship. The state house is beautifully situated near the Delaware, commanding a fine view of the river and the surrounding country. It is 100 feet long and 60 feet wide, built of stone, and stuccoed to resemble granite. Several of the public offices are fire-proof buildings. The governor's house is a plain but commodious edifice. The public buildings in South Trenton are the

court house, the state prison, and 4 or 5 churches. The court house is a handsome edifice of brick, stuccoed, in the Grecian style of architecture, with a portico of 6 Ionic columns on each end, and surmounted with a balcony. The state prison is well situated, near the Delaware and Raritan Canal, and the railroad from Philadelphia to New York. The walls, 20 feet high and 3 feet thick, enclose an area of 4 acres. The entrance is through the main building, in which reside the family of the warden and his assistants, to an observatory in the rear, from which diverge, at an angle of 45 degrees, on each side, the two corridors, in which are the cells for the prisoners. If the enlargement of this penitentiary is ever wanted, it is the design to add other radii, in conformity to the plan of these corridors.

The Delaware and Raritan Canal, which forms an inland navigation from Brunswick to this place, passes through the city. It is 42 miles long, 75 feet wide, and 7 feet deep, and is sufficient for the passage of small sloops. It crosses the Assunpink Creek, on a fine stone aqueduct. It was finished in 1834, at a cost of \$2,500,000.

The Delaware is navigable for large boats above the falls at Trenton, as far as Easton, Pa. The New Jersey Railroad, between New York and Philadelphia, via Newark, Elizabethtown, and Princeton, passes through this place.

Trenton was first settled in 1720; and received a city charter in 1792. It will ever be memorable as the place where the favor of Providence began decidedly to smile on the American arms in the war of the revolution; for here, on the night of December 25, 1776, at a gloomy period of the war, Washington crossed the Delaware, with 2400 of the continental troops, and suddenly attacked and captured 1000 Hessians of the British army, "which greatly revived the spirit of the nation, and had an important influence on the final result of the contest." The ground on which the Hessians laid down their arms is a little to the N. E. of the state house.

Trenton is an admirable site for manufacturing purposes, possessing, as it does, an extensive water power, created by artificial means, from the falls on the Delaware, and the waters of the Assunpink Creek.

Trenton, N. Y., Oneida co. Watered by Nine Mile and West Canada Creeks, on the latter of which are situated the celebrated Trenton Falls. Surface hilly; soil fertile clay loam. 12 miles N. from Utica, and 92 N. W. from Albany.

Trenton Falls, N. Y., Oneida co. On West Canada Creek. 93 miles N. W. by W. from Albany. See *Fashionable Resorts*.

Trenton, N. C., c. h. Jones co., is on Trent River. 20 miles a little S. of W. from Newbern, and by post road 139 S. E. from Raleigh.

Trescott, Me., Washington co. This is an Atlantic town, and bounded N. E. by Lubec. It comprises Moose Cove, Bailey's Mistake, and Haycock Harbors, and is flourishing in its trade and navigation. It was incorporated in 1827.

Triangle, N. Y., Broome co. The Tioughnioga and Ostelic Rivers form a junction in this town, the surface of which is hilly, and the soil well suited to grass. 16 miles N. from Binghamton, and 132 S. W. from Albany.

Trigg County, Ky., c. h. at Cadiz. Bounded N. W. by Livingston co., N. E. by Caldwell and Christian, S. E. by the state of Tennessee, and

S. W. by Tennessee River. Cumberland River winds obliquely through this county to the N. W. The surface is mostly low and flat.

Trimble County, Ky., c. h. at Bedford. Bounded W. and N. by the Ohio River, separating it from Indiana, E. by Carroll and Henry counties, and S. by Oldham co. Drained by the Little Kentucky and other branches of the Ohio River.

Trinity County, Ca. On the N. coast.

Troupsburg, N. Y., Steuben co. Watered by Cowanesque Creek. Surface undulating; soil clay and gravelly loam, well suited to grass. 25 miles S. W. from Bath, and 247 from Albany.

Troy, Aa., c. h. Pike co. 174 miles S. E. from Tuscaloosa.

Troy, Ia., c. h. Perry co. Above the mouth of Anderson's Creek on the Ohio River. 50 miles above the mouth of Green River and 168 S. S. W. from Indianapolis.

Troy, Me., Waldo co. Formerly called Joy. A fertile inland township. 39 miles N. E. from Augusta.

Troy, Mo., c. h. Lincoln co. On the S. W. side of Cuivre River. 129 miles E. N. E. from Jefferson City.

Troy, N. H., Cheshire co. The inhabitants are principally agriculturists. The soil and productions are similar to those of Fitzwilliam. It possesses but few water privileges. This town was taken from Marlboro' and Fitzwilliam. 54 miles S. W. from Concord, and 12 S. E. from Keene.

Troy, N. Y. City, port of entry, and seat of justice of Rensselaer co. Situated on the E. bank of Hudson River, 6 miles N. from Albany, and 150 N. from New York. Population in 1810, 3895; in 1820, 5264; in 1830, 11,405; in 1840, 19,334; in 1850, 28,785. The city is built on a somewhat elevated plain, extending from the river back to a range of hills terminating abruptly about 1 mile E., and furnishing from their brows, elevated from 300 to 400 feet, a commanding and beautiful view of the city and surrounding country. Mount Ida, directly in the rear of the broadest part of the city, and Mount Olympus, towards the northern part, are the eminences most distinguished for the fine prospects which they afford. Two streams, the Wynantskill and Poestenkill, affording an extensive water power, empty into the Hudson, within the limits of the city; the latter rolling down, through a narrow and picturesque ravine, S. of Mount Ida, with successive short rapids and beautiful cascades, and forming an object of interest well worthy of a visit from the curious traveller. The Wynantskill has a wider valley, through which a road passes, ascending to the upper level of the country.

The compact portion of the city is built N. of the Poestenkill, and extends along the Hudson for a distance of about 3 miles. The river, having a curve here, has given that form, for a considerable distance, to the great business street immediately on its bank. With this exception, the streets are laid out straight, intersecting each other, for the most part, at right angles. In consequence of this curve in River Street, several of the most important streets, which are parallel to the general course of the river, fall into it at their termination towards the central part of the city. This feature of the place, combining with its prevailing regularity, unites the greatest simplicity and beauty of arrangement with the most

entire facilities for business purposes. A railroad track is laid through the centre of River Street, upon which the cars from all the railroads coming into Troy are taken by horses through the city, passing in front of the principal hotels, and leaving their passengers where they may severally desire—a desideratum, in this mode of travelling, which obviates almost the only inconvenience to which it is ordinarily subject, that of taking carriages for conveyance to and from the stations.

There are numerous hotels in Troy, several of which are of the first class. Among these are the Mansion House and the Troy House, both equally well situated in respect to the convenience above mentioned. The great seat of business is River Street, which extends the whole length of the city, and is built up on both sides, with many splendid and spacious stores and warehouses. The streets running back from the river are handsomely built and quiet; and most of them are adorned with beautiful shade trees, giving an air of neatness, elegance, and comfort to the city, which make it one of the most attractive places to sojourn or reside in of any in the country. Many of the public squares and private gardens are ornamented with fountains, permanently supplied from the public reservoir on the neighboring hills, which also sends an abundance of excellent water in pipes to all the streets and dwellings. The elevation of this reservoir is 75 feet above the city, giving a sufficient head to carry the water into the uppermost stories of the buildings, and, in case of fire, to throw it upon and over them, from the numerous hydrants at the corners of the streets, with the force of the most powerful engines.

Of the public buildings in Troy, the court house is one of the most splendid. It is constructed of the Sing Sing marble, after a Grecian model. One of the Presbyterian churches, too, is a costly and beautiful edifice, in the same style of architecture. St. Paul's Episcopal Church is a noble specimen of the Gothic style, erected at an expense of about \$50,000. There are in Troy from 16 to 20 churches, of the various denominations. The Presbyterians have 4, the Episcopalians 3, and the Methodists and Baptists 2 or more each. Besides these there are churches of the Scotch Presbyterians, Friends, and Roman Catholics.

The Troy Female Seminary, established in this place through the exertions of Mrs. Emma Willard, holds a preëminent rank among institutions of this kind in our country. The school was commenced by Mrs. Willard in 1814, at Middlebury, Vt. In 1819, having received incorporation from the legislature of New York, it was removed to Waterford. In 1821 it was again removed to Troy, the corporation of this city having voted \$4000 towards the erection of suitable buildings for its accommodation. These buildings are beautifully situated in the central part of the city, with a finely-ornamented ground in front. This school has educated at least 5000 pupils. Since 1837 it has received from the state a share of the benefit of the literature fund, by which its library, apparatus, &c., are replenished from time to time, and made more and more complete.

The Rensselaer Institute, founded by the late Stephen Van Rensselaer, of Albany, for the thorough practical education of young men for

the profession of civil engineering, is also located at Troy.

While the natural facilities enjoyed by this city for commercial prosperity are good, they are such, at the same time, as must have required that spirit of enterprise and thrift for which its inhabitants have ever been distinguished, to render them fully available. In this they have been eminently successful. Being at the head of sloop and steamboat navigation on the noble Hudson, they have extensively availed themselves of this advantage, in connection with that of several artificial channels of communication to this point. The Champlain and Hudson Canal, which opens an extensive trade with the N., and the Erie Canal, which reaches the opposite side of the Hudson from the W., have each contributed essentially to the prosperity of Troy. Railroads also centre here which connect the city with Boston, via the great Western Railroad, on the E., with New York on the S., with the ports of Lake Erie, via Schenectady, Utica, Rochester, &c., on the W., and with Canada and Vermont, via Lake Champlain, on the N. The latter crosses the Hudson a little above the centre of the city, on a substantial bridge 1650 feet in length. Other very important projects of internal improvement are now in an encouraging course of consummation. One of these is the construction of a railroad from Troy to connect with the Boston and Fitchburg Railroad at Greenfield on Connecticut River, thus forming a new and most direct and eligible route to Boston. The chief obstacle to the complete success of this enterprise—the excavation of a tunnel through the Hoosic Mountain—seems likely now to yield to the energy and perseverance of the capitalists engaged in its accomplishment. However flourishing, therefore, this beautiful city has been in the past, its future prospects are still more flattering. It will be seen that Troy, although a little N. of Boston, is, with that city, almost in the direct line of intercommunication between Buffalo, Detroit, Chicago, and other principal depots of the produce of the west, and the greatest marts of our commerce in Europe. When the enterprising spirit of the citizens of Boston and Troy shall have succeeded in the great undertaking of tunnelling the Hoosic Mountain, thereby bringing the two cities within 170 miles of each other, and upon a grade which will defy competition, between the eastern terminus of the Erie Canal and the waters of Boston Harbor, no one can doubt that Troy must become one of the greatest inland cities of our country.

There are also immense facilities for manufacturing purposes, which have been or may yet be developed within and around this city. Considerable is already done with the power afforded by the Poestenkill and Wynantskill. The state dam, which has been thrown across the Hudson, just above the city, renders the waters of that river extensively available for manufacturing operations. Indeed, if we extend our view to the privileges upon the Mohawk, from the Cohoes Falls to its mouth, it may be said that the hydraulic power available for manufacturing purposes within a circuit of 5 miles around the city of Troy, is more than sufficient to turn every spindle now in operation in the United States.

In 1720 a grant of 490 acres extending along the Hudson between the Poestenkill and Meadow Creek, and including the ground on which Troy

was afterwards laid out, was made by the proprietor of Rensselaerwyck to Derick Van Derheyden, at the rent of 3 bushels and 3 pecks of wheat, and 4 fat fowls annually. Portions of this land were occupied by him and his descendants for a farm, and the village which sprang up here was afterwards known by the name of *Van Derheyden*. This village was incorporated by the name of Troy in 1796. But the principal settlers of Troy were emigrants from New England, who, seeing the advantages of its position, both in an agricultural and commercial point of view, induced the proprietors to lay it out into town lots, and turned their attention, with all their characteristic enterprise, to the means of its enlargement and prosperity. Under these good auspices Troy has grown to its present flourishing condition.

Troy, O., c. h. Miami co. On the W. bank of the Great Miami River. 68 miles W. by N. from Columbus, and 21 N. from Dayton. The Miami Canal passes through it.

Troy, Tc., c. h. Obion co. 147 miles N. W. by W. from Murfreesboro'.

Troy, Vt., Orleans co. This town is well watered by Missisco River and several of its tributaries. The falls on the Missisco, in the N. part, are a considerable curiosity. Here the river precipitates itself down a ledge of rocks about 70 feet. The soil is in general a strong loam, suitable for grass and most kinds of grain; the surface is generally level, and along the river are tracts of intervale. Iron ore of an excellent quality is found here, and also some minerals. The settlement was commenced about the year 1800, by emigrants from different towns on the Connecticut River. 10 miles N. from Irasburg, and 47 N. from Montpelier.

Trumbull, Ct., Fairfield co. This territory was formerly called North Stratford, and was taken from Stratford in 1798. It is watered by the Pequannock, which empties into Bridgeport Harbor. The surface is varied by hills and valleys; the soil is a gravelly loam, productive of good crops of grain and hay. Tamashua Hill, in the N. part of the town, is the first land seen in this direction from the ocean. 5 miles N. from Bridgeport.

Trumbull County, O., c. h. at Warren. Ashtabula co. is on the N., the state of Pennsylvania on the E., Columbiana on the S., and Portage and Geauga counties on the W. The land is valuable for farming, and is watered by the Mahoning River and Canal, and Musketoe Creek.

Truro, Ms., Barnstable co. Truro lies on both sides of Cape Cod, between Wellfleet and Provincetown. It was the *Pamet* of the Indians. Pamet River, which sets up from Cape Cod Bay, about the centre of the town, affords a good harbor for fishermen. There is in this town, near the lighthouse, a vast body of clay, called the "Clay Pounds." There are also in the town a number of beautiful ponds, and 200 acres of peat land. Pamet village, at the head of the river of that name, is very pleasant and flourishing, is a fine location, and easy of access for all those who wish to enjoy sea air, bathing, and marine scenery, in their greatest perfection, on *terra firma*. Another neat settlement, called Pond village, lies about 3 miles N. from Pamet. 37 miles below Barnstable, 102 from Boston by land, and about 60 by water.

Truxton, N. Y., Cortland co. The Tioughnio-

ga River waters this town. Surface undulating; soil argillaceous mould, and calcareous gravel. 12 miles N. E. from Cortland, and 131 W. from Albany.

Trydriffen, Pa., Chester co. This township adjoins Montgomery co. on the N. E., and lies between Charlestown and Radnor townships.

Tuftonboro', N. H., Carroll co. There are several ponds in this town, together with many small streams, running into Winnipiseogee Lake. The soil is various. There are several arms of the lake stretching far into the town, and presenting from the elevated parts a succession of beautiful views. First settlers, Benjamin Bean, Phineas Graves, and Joseph Peavey, about 1780. 50 miles E. by N. from Concord, and about 8 W. from Ossipee.

Tully, N. Y., Onondaga co. Watered by Onondaga Creek and some small lakes which are the sources of the Tioughnioga River. This is mostly a level town, with a soil well suited to grass. 16 miles S. from Syracuse, and 128 W. from Albany.

Tuckerton, N. J., Little Egg Harbor, Burlington co. This village and port of entry is situated on the Atlantic Ocean, at the head of Tuckerton Mill Creek, which empties into the Bay of Little Egg Harbor. It is handsomely laid out, the streets crossing at right angles, and shaded with poplar and willow trees. From Philadelphia it is 52 miles. 6 miles from Little Egg Harbor Bay, and 69 miles S. from Trenton. The manufacture of salt is carried on here, and wood and lumber are exported. The place is resorted to in the summer for sea bathing.

Tunica County, Mi., c. h. at Peyton. Bounded N. by De Soto co., E. by De Soto and Ponoia, S. by Tallahatchee co., and W. by Coahoma co. and the Mississippi River, dividing it from Arkansas. Drained by Cold Water River and some smaller branches of the Mississippi. There are several small lakes in this county.

Tunkhannock, Pa., c. h. Wyoming co. Bounded S. W. by the Susquehanna River, and drained by Tunkhannock and Meshoppen Creeks. Surface uneven; soil fertile on the margins of the streams. 154 miles N. N. E. from Harrisburg. 55 miles above Wilkesbarre.

Tuolumne County, Ca., c. h. at Sonora, stretches across the valley of the San Joaquin, into the mountain ranges on both sides.

Turin, N. Y., Lewis co. Watered by some small streams flowing into Black River, which bounds it on the E. Surface rolling; soil rich loam. 6 miles S. from Martinsburg, and 121 N. W. from Albany.

Turner, Me., Oxford co. A tributary of the Androscoggin meets that river in this town, and finely waters it. The soil of Turner is good, and its surface pleasant. There is a number of thriving villages in the town; there are considerable trade and some manufactures, but the business of the people is generally agricultural. It has Livermore on its N., Leeds and Greene on its E., Minot and Auburn on its S., and Buckfield and Hebron on its W. 38 miles W. S. W. from Augusta, and 14 E. from Paris.

Tuscarawas County, O., c. h. at New Philadelphia. Stark bounds it on the N., Harrison and Carroll on the E., Harrison and Guernsey on the S., and Coshocton and Holmes counties on the W. It is watered by Tuscarawas, Sandy, Conoton, Stillwater, and Sugar Creeks. Emigrants from

Pennsylvania and Virginia settled here about the year 1803 or 1804; they were mostly of German origin.

Tuscaloosa County, Aa., c. h. at Tuscaloosa. This county is bounded N. by Jefferson, E. by Shelby and Bibb, W. by Pickens, and S. by Perry and Greene.

Tuscaloosa, Aa. City and shire town of Tuscaloosa co. On the left bank of the Black Warrior River. 123 miles N. W. from Montgomery, and about 250 miles N. from Mobile. It is at the head of steamboat navigation from the Mobile Bay. This was the seat of government of the state until recently, when the capital was removed to Montgomery. The city is handsomely laid out, and contains, besides the county buildings, several churches, a masonic hall, an academy, a lyceum for boys, an Athenæum for young ladies, the Alabama Institute, and the halls of the University of Alabama, which is located here. The university buildings are situated about a mile E. of the centre of the city. They are 5 in number, besides professors' houses, and make an imposing appearance. See *Colleges*.

Tuscumbia, Mo., c. h. Miller co. On the N. W. side of Osage River. 35 miles S. W. from Jefferson City.

Tuskegee, Aa., c. h. Macon co. On a branch of Tallapoosa River. 152 miles E. S. E. from Tuscaloosa.

Twiggs County, Ga., c. h. at Marion. Wilkinson is on the N. E., Pulaski S. E., Jones N. W., and Ockmulgee River, or Monroe co., W.

Tyboine, Pa., Perry co. A township joining the S. E. side of the Tuscarora Mountain.

Tyler County, Ts., c. h. at Woodville. In the S. E. angle, on the W. side of the Neches.

Tyler County, Va., c. h. at Middlebourne, has a fertile soil, but broken surface. It is bounded N. W. by the Ohio River, N. by Ohio co., S. E. by Harrison, and S. W. by Wood.

Tyngsboro', Ms., Middlesex co., was formerly attached to Dunstable. It was incorporated as a district in 1789, to enable it to receive a donation from Mrs. Sarah Winslow, daughter of Ebenezer Tyng, for whom the town was named. This is a pleasant town, on both sides of Merrimack River. There is not much water power in the town, and the soil is light and sandy. The name of the first white inhabitant was Cranwell, originally from England, but last from Boston. Tyngsboro', by the railroads, lies 8 miles W. by N. from Lowell, and 34 N. W. from Boston.

Tyre, N. Y., Seneca co. Watered by Clyde, a branch of Seneca River, which bounds it on the E. Surface level; soil calcareous and sandy loam. 8 miles N. E. from Waterloo, and 171 N. of W. from Albany.

Tyringham, Ms., Berkshire co. This town was first settled in 1739. It is said to have received its name at the suggestion of Lord Viscount Howe, a few days before he fell in battle at Ticonderoga, July 6, 1758, who owned lands in Tyringham, in England. This town is twice crossed by two heavy ranges of hills. In the hollow between these ranges, the Hop Brook, rising in a small pond in Otis, flows westerly, and discharges itself into the Housatonic, in Lee. It derives its name from the wild hops which formerly grew upon its banks. In this town are a number of ponds and small rivers, whose waters fall into the Housatonic. Although the surface is rough and uneven, yet the soil is strong and productive.

There is a neat and pretty village near the centre of the town, which lies 20 miles S. by E. from Pittsfield, and 134 W. S. W. from Boston. From this village, about 3 miles N., are Hop Brook and Shaker villages.

Tyrone, Pa., Adams co. Bounded E. by Bermudian and W. by Conewago Creek. Surface level; soil gravel and red shale. 10 miles N. E. from Gettysburg.

Tyrone, Pa., Perry co. Drained by Sherman's Creek and branches. Surface mountainous; soil fertile calcareous loam in the valleys.

Tyrone, Pa., Huntingdon co. A township on Sinking Creek. 14 miles N. W. from Huntingdon.

Tyrone, Pa., Perry co. A township between Big Buffalo and Sherman's Creek, with Rye Tip in the E., and Tyboine in the W.

Tyrone, Pa., Fayette co. A township between Youghiogony River and Jacob's Creek.

Tyrone, N. Y., Steuben co. Watered by Mud Creek. A hilly town. Soil calcareous loam and clay, yielding large crops of grain. 16 miles N. E. from Bath, and 204 W. from Albany.

Tyrrel County, N. C., c. h. at Elizabeth. This county is divided into two nearly equal parts, by Alligator River or Bay, which puts up from Albemarle Sound. It has a poor, sandy soil, but level surface. It is bounded N. by Albemarle Sound, E. by Roanoke Sound, S. E. by Pamlico Sound, S. by Hyde co., and W. by Washington.

Ulster County, N. Y., c. h. at Kingston. Incorporated in 1683. It is bounded N. by Greene co., E. by the Hudson River, S. by Orange, and W. by Sullivan and Delaware counties. Watered by Rondout, Shawangunk, and Esopus Creeks, and the Walkkill. The Catskill Mountains cover the N. W., and the Shawangunk the S. portion of this county. The soil on the borders of the streams is very fertile, and on the uplands well suited to grazing. The water power is of great importance, and water limestone, marl, and lead ore are abundant. There are also several sulphur springs of some note. The Delaware and Hudson Canal follows the course of the Rondout to within 3 miles of the Hudson, for which distance the stream itself is navigable.

Ulster, Pa., Bradford co. On the W. bank of the Susquehanna River. 142 miles N. by E. from Harrisburg.

Ulster, Pa., Bradford co. A town on the right side of Susquehanna River, above Towanda.

Ulysses, N. Y., Tompkins co. Watered by some small streams flowing into Cayuga Lake, which bounds it on the E. Surface undulating, sloping towards the lake; soil good gravelly loam. 8 miles N. W. from Ithaca, and 175 W. from Albany.

Unadilla, N. Y., Otsego co. This town is watered by the Unadilla and Susquehanna Rivers, which form a junction in the S. W. part. Surface hilly and broken, with some fertile alluvion flats; the soil of the uplands is rich, and well suited to grass. 30 miles S. W. from Cooperstown, and 100 S. of W. from Albany.

Uncasville, Ct., in Montville, New London co. 45 miles S. E. from Hartford. An Indian village on the Mohegan reservation, between Norwich and New London. There are a chapel, a school house, and a house for a teacher, towards the erection of which the United States appropriated

\$500, with an annuity of \$400 for the teacher's support.

Underhill, Vt., Chittenden co. The head branches of Brown's River water this town. The surface is hilly and broken, and the soil hard. The settlement was commenced about the year 1786. 15 miles N. E. from Burlington, and 26 N. W. from Montpelier.

Union County, As., c. h. at Champagnole, is bounded N. by Washita co., E. by the Washita River, separating it from Bradley co., S. by Louisiana, and W. by Lafayette co. Drained by tributaries of the Washita River.

Union, Ct., Tolland co. The surface of Union is hilly, with a hard and unproductive soil. Mashapaug and Breakneck Ponds, lying in this town, are the principal sources of Quinebaug River. A branch of the Natchaug also rises here. 33 miles N. E. from Hartford.

Union County, Ga., c. h. at Blairsville. Bounded N. by North Carolina, E. by South Carolina and Habersham co., S. by Lumpkin, and W. by Gilmer co. Surface uneven, and watered by Hiawassee River and branches.

Union County, Is., Hamburg and Jonesburg shire towns. Jackson and Franklin counties are on the N., Johnson E., and Mississippi River on the W.

Union County, Ia., c. h. at Liberty. Bounded N. by Wayne co., E. by Ohio, S. by Franklin co., and W. by Fayette co. Drained by the E. fork of Whitewater River and its branches, which afford hydraulic power. Surface undulating; soil fertile.

Union County, Ky., c. h. at Morganfield. This county is situated opposite the mouth of Wabash River, and is bounded by Henderson co. N. E., Hopkins S. E., the Ohio River W. and N. W., and Tradewater River, or Livingston co., S. W.

Union Parish, La., c. h. at Farmersville, is bounded N. by Arkansas, E. by the Washita River, separating it from Morehouse parish, S. by Washita and Jackson parishes, and W. by Claiborne parish. Drained by De Arbone River and branches, and by other tributaries of the Washita.

Union, Me., Lincoln co. This pleasant and flourishing town is watered by Muscongus and St. George Rivers, and by several beautiful ponds. The soil is fertile, and the surface generally swelling. Union was incorporated in 1786. It is 28 miles S. E. from Augusta, and 7 N. by W. from Warren.

Union City, Mn., Branch co. At the head of navigation, on St. Joseph's River, at its junction with Coldwater River. 116 miles W. S. W. from Detroit. It possesses an extensive water power.

Union, N. Y., Broome co. Watered by Nanticoke Creek and other streams flowing into the Susquehanna River, which bounds it on the S. Surface undulating; soil rich gravelly loam. 6 miles W. from Binghamton, and 150 S. W. from Albany.

Union Vale, N. Y., Dutchess co. The Fishkill Creek waters this town, the surface of which is hilly and rolling, having the Matteawan Ridge on the E.; soil gravel, clay, and loam. 12 miles E. from Poughkeepsie, and 85 S. from Albany.

Union County, O., c. h. at Marysville. Bounded N. by Hardin and Marion, E. by Delaware, S. by Madison and Franklin, and W. by Champaign and Logan counties. Darby, Mill, Bokes, and Rush Creeks rise in this county, and furnish it

with a good supply of water. The land is level, fertile, and well adapted to grazing. The county was organized in 1820, and settled in 1799, by George Reed, Samuel Mitchell, and several others, all natives of Pennsylvania.

Union County, Pa., c. h. at New Berlin. This county is bounded by Lycoming co. N., Centre W., Mifflin S. and S. W., and Susquehanna River E. It is mountainous and much broken, but the river and creek lands are highly productive. Susquehanna River washes the greatest length of this county, and it is drained by White Deer, Buffalo, Penn's, and Mahoning Creeks.

Union, Pa., Berks co. Bounded N. by the Schuylkill River, and drained by Mill, French, and Sixpence Creeks. Surface very hilly; soil gravelly and sterile.

Union, Pa., Luzerne co. A township extending from the Susquehanna River to the E. limit of Lycoming co. 13 miles below Wilkesbarre.

Union, Pa., Union co. Watered by the Susquehanna River and its W. branch. Surface mountainous; soil calcareous loam.

Union, Pa., c. h. Fayette co. On both sides of Redstone Creek. About 4 miles from the western foot of Laurel Hill, 186 a little S. of W. from Harrisburg, and 276 W. from Philadelphia.

Union, Pa., Fayette co. A township around the borough of the same name. On both sides of Redstone Creek. 12 miles S. E. from Brownsville.

Union, Pa., Huntingdon co. A township in Trough Creek valley. 15 miles nearly S. from Huntingdon.

Union District, S. C., c. h. at Union. This district is bounded by Broad River, or York, Chester, and Fairfield districts E., Ennoree River, or Newberry, and Laurens districts S. W., and Spartanburg W. and N. W. Besides the two rivers, which form part of its boundary, it is drained by Pacolet and Tyger Rivers.

Union, Va., c. h. Monroe co. 229 miles W. from Richmond.

Unionville, S. C., c. h. Union District. On a small branch of Tyger River. 70 miles N. W. from Columbia.

Unity, N. H., Sullivan co. Little Sugar River has its source in Whortleberry Pond and Beaver Meadow, in the N. part of the town, passes through its centre, and empties into the Connecticut at Charlestown. Cold Pond is partly in this town. From Gilman's Pond, in the E. part, proceeds a branch of Sugar River, flowing through Newport. Perry's Mountain is in the S. W. part, and partly in Charlestown. Unity is an uneven township, but the soil is favorable for grazing. It is excellent for flax. This town was called Unity from the happy termination of a dispute which had long subsisted between certain of the inhabitants of Kingston and Hampstead, claiming the same tracts of land, under two different grants. First settlers, John Ladd and Moses Thurston, in 1769. 50 miles W. by N. from Concord, and 9 S. from Newport.

Upper Alloway's Creek, N. J., Salem co. Drained by Alloway's and Stow Creeks. The surface is undulating; the soil clay and loam in the N. E., and sandy, gravelly loam in the S. W. portions. 7 miles S. E. from Salem.

Upper Alton, Is., Madison co. Adjoining the town of Alton, on elevated ground, about 2½ miles back from the Mississippi.

Upper Bern, Pa., Berks co. Drained by a stream flowing into the Schuylkill River, which bounds it on the E. Blue Mountain lies on its N. border.

Upper, N. J., Cape May co. This town is bounded S. E. by the Atlantic Ocean, and drained by Tuckahoe and Cedar Swamp Creeks. Surface level; soil sand and clay. It lies 13 miles N. E. from Cape May Court House.

Upper Chichester, Pa., Delaware co. Drained by Hook and Naaman's Creeks. Surface level; soil loamy.

Upper Darby, Pa., Delaware co. Drained by Darby and Cobb's Creeks, which afford hydraulic power. Surface hilly; soil loamy.

Upper Freehold, N. J., Monmouth co. A township on the S. side of the River Shrewsbury. 12 miles S. from Amboy.

Upper Hanover, Pa., Montgomery co. Watered by Perkiomen Creek and branches. Surface hilly; soil red shale. 82 miles E. from Harrisburg.

Upper Mahantango, Pa., Schuylkill co. Drained by two branches of Mahantango Creek. Surface hilly; soil sterile, consisting of red shale and gravel.

Upper Makefield, Pa., Bucks co. Bounded N. by Pidcock's Creek. Surface undulating; soil clay and sandy loam.

Upper Marlboro', Md., Prince George's co. A little W. from Patuxent River, and 23 miles S. W. from Annapolis.

Upper Merion, Pa., Montgomery co. Drained by Valley and Gulf Creeks, which afford hydraulic power. Surface undulating; soil calcareous loam.

Upper Milford, Pa., Lehigh co. Drained by the N. branch of Perkiomen Creek and the head streams of Upper Saucon Creek. Surface mostly hilly; soil gravel and red shale of medium quality.

Upper Nazareth, Pa., Northampton co. Drained by two branches of Manoosky Creek. Surface undulating; soil productive gravel and slate.

Upper Paxton, Pa., Dauphin co. Bounded W. by the Susquehanna River, and drained by Mahantango, and Great and Little Wiconisco Creeks. Surface partly mountainous; soil red shale. 22 miles N. from Harrisburg.

Upper Penn's Neck, N. J., Salem co. Located on the E. bank of the Delaware River. Surface level; soil light sandy loam.

Upper Providence, Pa., Montgomery co. Bounded S. W. by the Schuylkill River, and drained by Perkiomen and Mingo Creeks. Surface hilly; soil gravelly loam and red shale.

Upper St. Clair, Pa., Alleghany co. Drained by Chartier's Creek. Surface hilly; soil loam.

Upper Salford, Pa., Montgomery co. Perkiomen and Rich Valley Creeks drain this town, the surface of which is level, and the soil red shale and loam. 10 miles N. N. W. from Norristown.

Upper Sandusky, O., c. h. Wyandot co. 64 miles N. from Columbus. It was laid out in 1843. The neighboring district was occupied till recently by the Wyandots.

Upper Saucon, Pa., Lehigh co. Drained by Saucon Creek. Surface diversified; soil calcareous loam in the valleys. South Mountain, in which iron ore is found, lies in the N. part of this town. 6 miles N. E. from Northampton.

Upper Swatara, Pa., Dauphin co. Drained by

Swatara Creek. Surface diversified; soil gravelly.

Upper Tulpehocken, Pa., Berks co. Watered by Tulpehocken Creek and its tributaries, Northkill and Little Northkill Creeks. Surface diversified; soil fertile calcareous loam and gravel. The Union Canal runs along the S. border of this town.

Upshur County, Ts., c. h. at Gilme. In the N. E. angle of the state, between the Upper Sabine and Cypress Bayou.

Upton County, Ga., c. h. at Thomaston. W. part. Drained by branches of the Flint, which washes it on the S. W.

Upton, Ms., Worcester co. Previous to its incorporation, in 1735, this town was attached to Mendon, Sutton, Uxbridge, and Hopkinton. The surface is partly plain land, and partly rough and hilly, with a strong soil. West River, a branch of the Blackstone, rises from a pond in Upton, and furnishes a power for a number of mills. Near Pratt's Pond and two other beautiful little lakes is a pleasant village, near the centre of the town, which lies 13 miles S. E. from Worcester, and about 7 S. from the Worcester Railroad at Westboro', from which it is 32 miles to Boston.

Urbana, N. Y., Steuben co. The S. part of Crooked Lake and its inlet water this town. Surface rather hilly; soil clay and loam. 6 miles N. E. from Bath, and 207 W. from Albany.

Urbana, O., c. h. Champlain co. 46 miles W. by N. from Columbus.

Urbana, Va., Middlesex co. A village and seaport on the S. E. side of Rappahannock River. 12 miles S. W. from Lancaster, and 60 N. by W. from Williamsburg.

Urbana, Is., c. h. Champaign co. On the S. side of the Salt Fork of Vermilion River. 92 miles E. N. E. from Springfield.

Utica, N. Y. City and seat of justice of Oneida co. Situated on the S. bank of the Mohawk River, on the site of old Fort Schuyler. 93 miles W. by N. from Albany, and 232 E. from Buffalo. Population in 1820, 2972; in 1830, 8323; in 1840, 12,782; in 1850, 17,642. Utica has a pleasant location, on ground gradually ascending from the river, and commanding a fine prospect from its more elevated parts. It is well built, having many fine stores and large and elegant dwellings. The streets are laid out with a good degree of regularity, generally, but not always crossing each other at right angles. They are neat and spacious, some of them 100 feet wide, and well paved. It contains a court house, offices for the clerks of the Supreme and United States' Courts, about 20 churches of the various denominations, an Exchange building, an academy, a museum, a Protestant and a Roman Catholic Orphan Asylum, and various other charitable institutions.

The New York State Lunatic Asylum, at Utica, is situated on somewhat elevated ground, about a mile W. of the city. It has fine buildings, with a farm of 160 acres attached. It contained about 500 patients in 1850.

The country around Utica is fertile, and the city is the centre of an active and extensive trade. Railroads, canals, and turnpikes radiate from it in all directions. The great Western Railroad, from Albany and Troy to Buffalo, and the great Erie Canal between the same points, pass through Utica. The Chenango Canal also comes in here from Binghamton, which is on the Erie Rail-

road, and on the Susquehanna River, 96 miles to the S. E.

The Erie Canal has been widened, where it passes through the city, to 70 feet, and made 7 feet deep, and presents a fine appearance from the substantial and beautiful bridges with which it is spanned. A culvert has been constructed in the city from the canal to the river, at an expense of about \$100,000. It is surrounded by one of the finest and richest agricultural districts in the union, and is a wealthy and flourishing place of business.

The first building erected within the limits of Utica was a mud fort, constructed during the old French war, and named Fort Schuyler. It occupied the portage, or carrying place between the Mohawk and Wood Creek, which discharge through Lake Oneida, into lake Ontario.

In 1798 Utica took its present name, being incorporated as a village. It was but an inconsiderable village until about the year 1800, when the location of the Seneca Turnpike, crossing the Mohawk at this point, operated to make it an important place of deposit and trade. In 1817 it was taken from Whitestown, and received a separate incorporation as a town. It was incorporated as a city in 1832. It is divided into 6 wards, and is governed by a mayor and 12 aldermen.

Uxbridge, Ms., Worcester co. This large, wealthy, and flourishing town was, until 1727, the W. part of ancient Mendon. Its Indian name was *Wacuntug*. The central part of the town has a fair soil; the surrounding hills are moist, and well adapted to grazing and orchards. There are in the town a quarry of stone and an iron mine. Uxbridge enjoys important advantages in being situated, for nearly its whole length, on the Blackstone River and Canal, as well as from the water power of West and Mumford Rivers, which here join the Blackstone. There are a number of flourishing manufacturing villages in Uxbridge, situated in valleys, and surrounded by picturesque scenery. The principal village is situated at the north part of the town. The railroad from Worcester to Providence passes through it. 16 miles S. E. from Worcester, and 40 S. W. from Boston.

Vallejo, Ca., Solano co. See *Appendix*, No 1.

Valley Forge, Pa., Schuylkill, Chester co. At the entrance of Valley Creek into Schuylkill River. 20 miles N. W. from Philadelphia, and 81 E. by S. from Harrisburg. The celebrated winter quarters of the American army in 1777.

Van Buren County, As., c. h. at Clinton. Bounded N. by Searcy, Izaard, and Independence counties, E. by Independence and White, S. by Conway, and W. by Pope co. Little Red River and branches, and some branches of the Arkansas, water this county.

Van Buren County, Io., c. h. at Keosauque. Bounded N. by Warelo and Jefferson counties, E. by Henry and Lee, S. by Missouri, and W. by Davis co. Drained by Des Moines River and branches. Iron, copper, tin ore, and marble are found in this county. The soil is fertile.

Van Buren, Me., Aroostook co. A new town.

Van Buren County, Mn., c. h. at Pawpaw Bounded N. by Allegan co., E. by Kalamazoo, S. by Cass, and W. by Berrien co. and Lake Michigan. Drained by Pawpaw River and its tributaries, the S. branch of Black River, Dowageake and Brush Creeks, all which afford good

water power. The surface is level, and the soil productive.

Van Buren, N. Y., Onondaga co. Watered by Camp Brook, a branch of Seneca River, which bounds it on the N. Surface rolling; soil sandy loam and clay 12 miles N. W. from Syracuse, and 145 N. W. from Albany.

Van Buren Harbor, N. Y., Chautauque co. On the S. shore of Lake Erie. Has a good steamboat landing. 5 miles S. E. from Dunkirk, and 334 W. by S. from Albany.

Vanceburg, Ky., Lewis co. This village is situated near the Ohio River. 35 miles N. E. by E. from Washington. Near this place are salt works.

Van Wert, O., c. h. Van Wert co. On a branch of the Little Auglaize. 136 miles N. W. by W. from Columbus.

Vandalia, Is., c. h. Fayette co. Situated on the Kaskaskia River. 73 miles S. E. from Springfield, and 82 N. E. from St. Louis. Until 1840 this was the capital of the state. The town is regularly laid out, with streets 80 feet wide, crossing each other at right angles, and a handsome public square in the centre. The public buildings are a court house, jail, a United States land office, and churches of different denominations. The national road extends to this place.

Vanderburg County, Ia., c. h. at Evansville. Bounded N. by Gibson, E. by Warrick co., S. by the Ohio River, separating it from Kentucky, and W. by Posey co. Drained by Big Pigeon, Blue, Grass, Locust, and Little Creeks. Surface mostly hilly; soil very fertile in the S. part.

Van Wert County, O., c. h. at Van Wert. Bounded on the N. by Paulding, E. by Putnam and Allen, S. by Mercer, and W. by the State of Indiana. This county was constituted in 1820. It was named in honor of Van Wert, one of the men who took up Major Andre, a British spy. The soil is various; the land level, and of a good quality. Some prairies are found here. The St. Mary's River is the principal stream. There are several others, and all furnish an excellent supply of water. The Miami Canal crosses the eastern part.

Van Zandt County, Ts., c. h. at Jordan's Sabine. In the N. E. angle of the state, on the head waters of the Sabine.

Varick, N. Y., Seneca co. Bounded E. by Cayuga, and W. by Seneca Lake. Surface elevated in the centre; soil fertile, yielding large crops of grain. 8 miles S. from Waterloo, and 180 W. from Albany.

Vassalboro', Me. This is a large and flourishing town, on the E. side of Kennebec River, opposite to Sidney. There are several large and beautiful ponds in the town, from which issue two excellent mill streams, one a branch of the Sebasticook, the other of the Kennebec. This is a place of considerable interior trade and business on the river. Vessels of considerable burden pass to the ocean from Vassalboro', by means of the Kennebec Dam. The valleys are very pleasant, and the surface and soil of the town varied and fertile. 12 miles N. by E. from Augusta.

Venango County, Pa., c. h. at Franklin. There is much good soil along the watercourses, but the surface generally is broken. Armstrong is on the S. E. of this county, Butler S. W., Mercer W., Crawford N. W., Warren N. E., and Jeffer-

son E. Through this county winds the Alleghany River, and in its course receives French Creek.

Venice, N. Y., Cayuga co. Watered by Salmon Creek. Surface undulating; soil clay and gravelly loam, based upon lime and gypsum. 15 miles S. from Auburn, and 162 W. from Albany.

Vergennes, Vt., Addison co. This city is beautifully located at the falls on Otter Creek, and is 7 miles from Lake Champlain. Otter Creek, at this place, is about 500 feet wide, and, at the falls, is separated by two islands, which form 3 distinct falls of 37 feet. These falls produce a great hydraulic power, rendered more valuable by being situated in the heart of a fertile country, and on the navigable waters of the lake. The railroad between Boston and Burlington passes through this city. Here are united, in great perfection, the two great powers,—water for mills, and steam for transportation,—which cannot fail to render any place that possesses them an important mart for trade and manufacture. The first settlement within the present limits of Vergennes was made in 1766, by Donald McIntosh, a native of Scotland, who was in the battle of Culloden. 12 miles N. W. from Middlebury, and 21 S. by E. from Burlington.

Vermilion County, Is., c. h. at Danville. Bounded N. by Iroquois co., E. by Indiana, and S. and W. by Champaign. Big and Little Vermilion Rivers drain this county the surface of which is undulating, and the soil fertile.

Vermilion County, Ia., c. h. at Newport. Bounded W. by Vermilion co. Is., and crossed by the river of the same name.

Vermilion Parish, La. On the southern border E. On the shore of the gulf, between Vermilion Bay and Mermentau Lake and River. Low and swampy.

Vermilion, O., Richland co. A township 86 miles N. E. from Columbus.

Vernon, Ct., Tolland co. Rock village and Tankerooson are pleasant and flourishing manufacturing villages. The Hockanum, and a branch of that river, the Tankerooson, are the principal streams.

Vernon was first settled in 1716. It was a part of East Windsor and Bolton until 1808. The surface of the town is varied by hills and valleys, the soil is a gravelly loam, and sandy, but good for grain and grass. 12 miles from Hartford.

Vernon, Ia., c. h. Jennings co.

Vernon, N. Y., Oneida co. Watered by Oneida and Shenandoah Creeks, has an undulating surface and fertile soil. 16 miles W. from Utica, and 113 N. W. from Albany.

Vernon, Te., c. h. Hickman co. On Pine Creek 62 miles S. W. from Nashville.

Vernon, Vt., Windham co. Vernon lies on the W. side of Connecticut River, opposite to Winchester, N. H. The surface is generally mountainous and rocky. There are in the town fine forests of oak and chestnut timber, and quarries of slate. This was one of the first settled towns in the state, but the precise time of its commencement is not known. The earliest inhabitants were emigrants from Northampton and Northfield, Ms. 18 miles S. E. from Newfane, and about 50 S. from Windsor. The Connecticut River Railroad passes through the town.

Verona, N. Y., Oneida co. Bounded on the N.

by Wood Creek, and W. by Oneida Lake, and watered by some small streams flowing into the former. The Erie and Oneida Lake Canals also form a junction in this town. Surface level and swampy; soil fertile. 120 miles W. from Utica.

Versailles, Mo., c. h. Morgan co.

Versailles, Pa., Alleghany co. Bounded S. by the Youghiogeny River, and W. by the Monongahela, and drained by Turtle Creek and Long Run. Surface hilly; soil loam. 12 miles S. E. from Pittsburg.

Versailles, Ky., c. h. Woodford co. 12 miles W. from Lexington, and 12 S. E. from Frankfort.

Versailles, Ia., c. h. Ripley co., is on Laughery Creek. 45 miles W. from Cincinnati, and, by post road, 69 miles S. E. from Indianapolis.

Vershire, Vt., Orange co. The surface is uneven and stony, but furnishes good pasturage. Branches of Ompononoosuc River rise here, but give the town no valuable water power. The settlement commenced here in 1780, and the town was organized in 1783. 25 miles S. E. from Montpelier, and 6 E. by S. from Chelsea.

Vestal, N. Y., Broome co. Watered by Chocunut Creek and some other tributaries of the Susquehanna River, which bounds it on the N. Surface rather ridgy and uneven; soil of good quality on the flats. 8 miles S. W. from Binghamton, and 154 from Albany.

Veteran, N. Y., Chemung co. A tributary of Seneca Lake, a fine mill stream, waters this town. The surface is hilly and soil productive. 11 miles N. from Elmira, and 190 W. from Albany.

Vevay, Ia., c. h. Switzerland co. On the N. E. bank of Ohio River. It was settled by Swiss emigrants, who cultivate the vine in this vicinity with good success. 94 miles S. E. from Indianapolis. 65 miles by water, and 45 by land, below Cincinnati.

Vicksburg, Mi., Warren co. Situated on the E. bank of the Mississippi. 50 miles N. N. E. from Natchez, and about 45 W. from Jackson, the capital of the state, with which it is connected by a railroad. The town is on a high bluff, about 200 feet above the river. The scenery is very fine from the bluffs in this neighborhood. The Walnut Hills, a little above Vicksburg, rise boldly, with alternate swells and gullies, to the height of nearly 500 feet, and form one of the most striking views met with by the traveller on the Lower Mississippi. This town has 4 or 5 churches, 2 of which, the Methodist and the Roman Catholic, are fine structures, several private schools, and 1 public school supported by special tax, containing about 500 scholars. An active business is done here in the preparation of lumber and building materials by saw mills, shingle factories, and brick yards. About 90,000 bales of cotton are annually shipped from this place to New Orleans.

Victor, N. Y., Ontario co. Watered by Mud Creek. A somewhat hilly town. Soil sandy and clay loam upon a layer of lime. 12 miles N. W. from Canandaigua, and 203 N. of W. from Albany.

Victoria County, Ts., c. h. at Victoria. Near the coast between the Guadalupe and La Bacca Bay.

Victory, Vt., Essex co. This unorganized town was granted November 6, 1780, and chartered September 6, 1781, to Ebenezer Fisk and others. It

is watered by Moose River. 20 miles W. from Guildhall, and 54 N. E. from Montpelier.

Victory, N. Y., Cayuga co. Sodus Creek waters this town, the surface of which is undulating, and the soil gravelly loam. 20 miles N. from Auburn, and 167 N. W. from Albany.

Vidalia, La. Parish of Concordia. Directly opposite Natchez, on the right bank of the Mississippi.

Vienna, Md., Dorchester co. A port of entry and village on the W. side of Nanticoke River. 13 miles N. W. from Salisbury, on the Wicomoca, and 33 from Snow Hill, in the same direction.

Vienna, N. Y., Oneida co. Watered by Fish Creek and other streams, flowing into Oneida Lake, which partly bounds it on the S. Surface undulating; soil mostly productive. 30 miles N. W. from Utica, and 125 W. from Albany.

Vienna, Is., c. h. Johnson co. On a small branch of Cash River. 40 miles N. E. from the mouth of Ohio, and 156 S. from Vandalia.

Vigo County, Ia., c. h. at Terre Haute. Wabash River crosses this county from N. to S. The state of Illinois is on the W., Parke N., Putnam E., and Sullivan S.

Villanova, N. Y., Chautauque co. Connewango Creek and some of its tributaries water this town, the surface of which is hilly and broken, and the soil well suited to grass. 22 miles N. E. from Maysville, and 318 W. by S. from Albany.

Vinal Haven, Me., Waldo co., includes the Fox Islands, at the mouth of Penobscot Bay. About 50 miles below Bangor.

Vincent, Pa., Chester co. French Creek runs nearly through the middle of this town. The village is situated between Pikeland and East Nantmill, on the S. W. side of Schuylkill River. 30 miles N. W. from Philadelphia.

Vincennes, Ia., c. h. Knox co. In the midst of a fine prairie, on the E. bank of Wabash River, 100 miles from its mouth. The oldest settlement in the state, having been established by the French as a trading post in 1730. It extends over half a mile along the river, which is navigable to this place. The streets are wide, and cross each other at right angles. There are excellent schools here, and a valuable library for popular use. The trade is considerable, and a handsome capital is employed in cotton and other manufactures. A railroad communication is in progress with Cincinnati and St. Louis. 118 miles from Indianapolis.

Vinton, Ia., c. h. Benton co.

Vinton, O., Gallia co. On the W. side of Big Raccoon Creek, 20 miles from its junction with Ohio River, and 92 S. by E. from Columbus. There is an abundance of mineral coal and iron in the vicinity.

Virgil, N. Y., Cortland co. Watered by East Oswego Creek and the Tioughnioga River. It is a somewhat hilly town, with a fertile soil. 9 miles S. from Cortland, and 148 S. of W. from Albany.

Volney, N. Y., Oswego co. Watered by Black Creek, a tributary of the Oswego River, which bounds it on the W. Surface undulating; soil sandy loam. 11 miles S. E. from Oswego, and 159 N. W. from Albany.

Voluntown, Ct., Windham co. This town was incorporated in 1719. It derived its name from the circumstance that most of its territory was

granted, in 1696, to volunteers in the Narraganset war. The surface is in some parts hilly; but the prevailing character of the surface and soil is a sandy and gravelly loam. The town is watered by Wood River, a branch of the Pawcatuck. 14 miles E. from Norwich.

Wabash County, Is., c. h. at Mount Carmel. In the S. E. part of the state, on the waters of Wabash River.

Wabash County, Ia., c. h. at Wabash. In the N. part of the state, on both sides of the Wabash River.

Waculla County, Fla. Central part of the state, on Apalachee Bay.

Wadesboro', N. C., c. h. Anson co. On a branch of the Great Pee Dee River, called Brown Creek. 70 miles W. from Fayetteville, and 143 S. E. from Raleigh.

Wadesboro', Ky., c. h. Callaway co. 255 miles S. W. from Frankfort.

Waitsfield, Vt., Washington co. The soil of this town is diversified, but generally a mellow loam, deep, and of excellent quality, producing grass and grain in the greatest abundance. Mad River passes through the town, and receives here Mill and Shepherd's Brook from the W., and Fay's and Pine Brook from the E., all of which are sufficient for mills. The intervals and high lands are of an excellent quality. A range of high lands runs through the eastern part of the town, the chief summit of which is called Bald Mountain. The first settlers were General Wait and family, who moved into this town in 1789. From Montpelier 20 miles S. W.

Wake County, N. C., c. h. at Raleigh. This county is bounded N. by Granville, N. E. by Franklin, S. E. by Johnson, W. by Chatham and Orange, and S. W. by Cumberland and Chatham. From N. to S. through the county winds Neuse River, and it is drained by the various branches of that stream.

Wakefield, N. H., Carroll co. Province Pond lies between Wakefield and Effingham, and is 480 rods long and 400 wide. Pine River Pond is the source of the river of that name, flowing N. W. into Ossipee Lake. The principal branch of the Piscataqua has its rise in Piscataqua Lake, formerly called East Pond, between Wakefield and Newfield, Me. Lovewell's Pond, in the S. part of this town, is about 700 rods long and 275 wide. It derived its name from Captain John Lovewell, of Dunstable, who, on the 20th of February, 1725, surprised and destroyed a party of Indians encamped on the side of the pond. Wakefield is a pleasant town; possesses an excellent water power; has a good soil and some excellent farms. 50 miles N. E. from Concord, and about 10 S. E. from Ossipee. A railroad from Great Falls to Conway is to pass through this town.

Wakesha County, Wn. In the S. E. angle of the state.

Walden, Vt., Caledonia co. This is an elevated town, between the head waters of Winooksi and Lamoille Rivers. Cole's Pond, lying in the town, produces a small stream called Joe's Brook. The surface is generally rough, but the soil in some parts of the town produces good crops. Nathaniel Perkins, Esq., moved his family into this township in January, 1789, and his was for three years the only family in Walden. 10 miles N. W. from Danville, and 25 N. E. from Montpelier.

Waldo County, Me., c. h. at Belfast. Southern

central. Bounded E. by Penobscot River and Bay. Undulating and fertile, with good facilities for both navigation and agriculture.

Waldo, Me., Waldo co. Its surface is pleasant, and its soil fertile: it abounds with mill sites. 44 miles E. N. E. from Augusta, and 7 W. N. W. from Belfast.

Waldoboro', Me., Lincoln co. A port of entry, on both sides of Muscongus River. The tonnage of the district, which includes several neighboring towns, exceeds 100,000 tons. The soil is good, and there is a large water power in the vicinity. 37 miles S. E. from Augusta.

Wales, Me., Lincoln co. There is a beautiful pond lying partly in Wales and partly in Lisbon; its outlet meets the Androscoggin a few miles above Topsham. Wales is an agricultural town of good soil and even surface. 20 miles S. W. from Augusta, and 26 N. W. from Wiscasset. Incorporated 1816.

Wales, Ms., Hampden co., was formerly a part of Brimfield, and called South Brimfield. This is a mountainous township, but there is much good land in the valleys, and most of the high lands afford excellent grazing. Near the village in the centre of the town is a beautiful pond, the outlet of which is the rise of the Wales Branch of Quinebaug River. This stream affords the town a good water power. From the top of Hitchcock's Hill, in the N. W. corner of the town, 1190 feet above the sea, is a splendid prospect. Wales was named for James Wales, Esq., one of the principal men in the town, at its incorporation, in 1828. 9 miles S. E. from the depot of the Western Railroad at Palmer, from which to Boston is 83 miles.

Wales, N. Y., Erie co. Watered by Seneca Creek. Has an undulating surface, and good soil. 18 miles S. E. from Buffalo, and 268 W. from Albany.

Walker County, Ga., c. h. at Jasper. Has Franklin, Lawrence, and Morgan on the N., Blount E., Jefferson and Tuscaloosa S., and Marion and Fayette W. The higher branches of Tuscaloosa River drain the county.

Walker County, Ga., c. h. at La Fayette. In the N. W. corner of the state. Includes the height of land between the waters of the Tennessee and those of the Coosa. Rough and hilly, with fertile valleys.

Walker, Pa., Huntingdon co. The Raystown branch of the Juniata River bounds this town on the E. and S. Its surface is hilly; soil good calcareous loam in the valleys.

Walker County, Ts., c. h. at Huntsville. Eastern central. On the W. side of Trinity.

Wallingford, Ct., New Haven co. Its length from E. to W. is nearly 7 miles, and its breadth about 6. The prevailing surface is pleasantly diversified with moderate hills and dales; the eastern extremity of the township is mountainous. The soil is generally excellent, excepting a tract called Wallingford Plain, consisting of coarse sand, situated on the eastern bank of the Quinnipiac. The town is watered by the Quinnipiac, a valuable mill stream, which passes through the extent of the town. Yaleville is a little manufacturing village in the northern section of the town. The principal village of Wallingford is beautifully situated on a fine elevation upwards of a mile E. of the river, on two parallel streets extending along the ridge of the hill. Wallingford originally belonged to New Ha-

ven, and was called New Haven village. 13 miles N. from New Haven.

Wallingford, Vt., Rutland co. This town is watered by Otter Creek, Mill River, and by 3 ponds, one of which, Hiram's Pond, covering an area of 350 acres, lies on very elevated ground, and is one of the principal sources of Otter Creek. These mountain ponds are very handsome, and contain fish. The soil is generally good; that on the banks of Otter Creek is very fertile and productive. A range of primitive limestone passes through the western part of the town, in which have been opened several quarries of excellent marble. Green Hill, situated near the centre, is composed almost entirely of quartz. A part of White Rocks, belonging to Green Mountain range, appears to be granite, the rest quartz. At the foot of White Rocks are large cavities, formed by the fallen rocks, called the icebeds, in which ice is found in abundance through the summer season. The village of Wallingford is pleasantly located on the banks of Otter Creek, near one of the ponds. The settlement was commenced in 1773, by Abraham Jackson and family. 10 miles S. by E. from Rutland, and 42 N. N. E. from Bennington. The railroad between Boston and Rutland passes through the town.

Walkkill, N. Y., Orange co. The Walkkill and Shawangunk Creek water this town. Surface undulating and hilly; soil well adapted to grazing. 22 miles W. from Newburg, and 105 S. S. W. from Albany.

Walpole, Ms., Norfolk co. Walpole was a part of Dedham until 1724. The surface presents a pleasing variety of hill and valley, and its soil generally is of a good quality. Three beautiful tributaries to the Neponset meet in this town. These streams afford the town a good water power. This is a flourishing town with a number of pleasant villages within its borders. The S. village lies 3 miles from the E. village. The E. village lies 9 miles S. by W. from Dedham, and 19 S. S. W. from Boston.

Walpole, N. H., Cheshire co. This town is beautifully diversified by hills and vales. The soil is similar to that of other towns on Connecticut River. The intervalles afford excellent tillage; the uplands are inferior to none in the state. Cold River passes through the N. part, and forms a junction with the Connecticut. There is a lofty hill, called Fall Mountain, a part of the range of Mount Toby, the highest parts of which are about 780 feet above the level of the river. The village of Walpole is situated at the foot of the hill, on a plain. Drewsville, in this town, is a pleasant village, romantically situated near the falls. Bellows Falls, on Connecticut River, separate this town from Rockingham, Vt. At the bridge, which crosses the river at this place, first built in 1785, and 365 feet in length, is a most interesting and sublime view. The river here is compressed into a narrow strait, between steep rocks, and, for nearly a quarter of a mile, is hurried on with great rapidity and loud roaring. In no place is the fall perpendicular, to any considerable extent; but in the distance of half a mile, the waters descend 42 feet. A canal, with 9 locks, passes round these falls, on the W. side. First settler, Colonel Benjamin Bellows, in 1749. From Concord 60 miles S. W. by W., and 22 N. W. from Keene by railroad from Boston.

Walterboro', S. C., Colleton district. On a branch

of Ashepoo River. This village is situated 46 miles a little N. of W. from Charleston, and by post road 178 miles S. S. E. from Columbia.

Waltham, Ms., Middlesex co., was the W. parish of Watertown, until its incorporation, in 1738. The surface is moderately level, with some elevations. Prospect Hill, 482 feet above the level of the sea, presents a delightful view of Boston, its harbor, and the adjacent country. A part of Fresh Pond lies within the limits of this town. The soil is generally not very fertile. Waltham Plain is a beautiful tract of land, under a high state of cultivation. On the road over this plain is a continuous village. Charles River passes through the town. Beaver and Mead's Ponds are handsome sheets of water, well stored with fish. The former produces a mill stream, which passes to Sudbury River. The Fitchburg Railroad passes through Waltham. 9 miles W. by N. from Boston, and 11 E. S. E. from Concord.

Waltham, Vt., Addison co. Buck Mountain lies near the centre of Waltham, and is the highest land in the county west of the Green Mountains. Waltham lies on the E. side of Otter Creek. At this place the creek is sluggish, and affords no mill privileges. The soil is generally good; that along the stream is excellent. The settlement of Waltham was commenced just before the revolutionary war, by a family of Griswolds and others, from Connecticut. 9 miles N. W. from Middlebury, and 40 S. W. from Montpelier.

Walton County, Fa., c. h. at Euchee Anna. Bounded N. by Alabama, E. by the Choctawhatchee River, separating it from Jackson and Washington counties, S. by Choctawhatchee Bay, and W. by Santa Rosa co. Drained by Yellow Water and Shoal Rivers and branches, and White and Alequa Creeks. Soil fertile in the N. portions.

Walton County, Ga., c. h. at Monroe. Gwinnett bounds this county on the W., Hall N. W., Newton S. W., Oconee River, or Jackson and Clark, N. E., and Morgan and Jasper S. E. It is drained by the sources of Oconee and Ockmulgee Rivers.

Walton, N. Y., Delaware co. The W. branch of the Delaware River and some of its tributaries flow through this town. Surface hilly and mountainous; soil well suited to grazing. 13 miles S. W. from Delhi, and 94 from Albany.

Walworth, N. Y., Wayne co. Watered by several small streams flowing N. into Lake Ontario. Surface rolling; soil fertile gravelly loam. 18 miles N. W. from Lyons, and 199 N. of W. from Albany.

Walworth County, Wn., c. h. at Elkhorn. Bounded N. by Jefferson and Waukesha counties, E. by Racine co., S. by Illinois, and W. by Rock co. Watered by Turtle River and its branches, by branches of Fox River, and by Geneva Lake, which lies in its S. part. The surface is level, and the soil very rich.

Wanahta County, Ma. On the uppermost waters of the Mississippi.

Wantage, N. J., Sussex co. Situated on the N. border of the state, and drained by Deep Clove River and Papakating Creek, head branches of the Walkill River. Surface undulating on the E., but hilly and mountainous on the W.

Wapankonetta, O., c. h. Anglaise co.

Wapello County, Io., c. h. at Ottumwa. S. E. part. The Des Moines passes through it from N. W. to S. E.

Wapello, Io., c. h. Louisa co., received its name from a chief of the Fox Indians, who resided here until 1836. It is regularly laid out with streets and squares, and is neatly built.

Wardsboro', Vt., Windham co. The surface is hilly, and in some parts rocky, and the soil is hard. Wardsboro' is watered by West River, and contains a number of minerals. There are some mills in the town, but the water power is not extensive. The settlement was commenced June, 1780, by people from Milford and Sturbridge, Ms. 15 miles N. W. from Brattleboro', and 20 N. E. from Bennington.

Ware County, Ga., c. h. at Waresboro'. Bounded N. by Telfair and Appling, and E. by Wayne and Camden counties, S. by Florida, and W. by Lowndes and Irwin counties. Drained by Santilla River and branches, and by the head branches of Suwannee and St. Mary's Rivers. This county contains the greater part of Okefinokee Swamp, a tract of land about 280 miles in circumference, which in wet seasons is entirely submerged, with the exception of a number of islands. The land in the remainder of the county is fertile, but, lying low, is liable to inundation.

Ware, Ms., Hampshire co. Ware was formerly connected with Brookfield and Palmer, and was called Ware River Parish. Ware possesses a most extensive and valuable water power, by Ware and Swift Rivers, and Beaver branch, all branches of the Chicopee. Ware contains a beautiful village, surrounded by high lands and picturesque scenery. 5 miles N. W. from the Warren depot on the Western Railroad, which is 73 miles W. by S. from Boston.

Wareham, Ms., Plymouth co. This town formerly comprised the E. end of Rochester, and a plantation belonging to Plymouth. The Indians called this place *Wanayantat*. The town was first settled about the year 1682. It lies at the head of Buzzard's Bay, and is watered by the Weweantic, Wankinco, and Agawam Rivers, which severally fall about 50 feet, thereby producing a great and valuable water power. Wareham presents a rare instance of the union of hydraulic and navigable privileges. This town is largely engaged in the iron manufacture, crossed by nine mill dams for the purpose of carrying several rolling and puddling mills, and extensive nail and hoop factories. There are also a number of furnaces for castings, manufactures of salt, and other establishments. The harbor of Wareham is good, and safe for vessels drawing 12 feet of water. The soil is generally light and sandy, but there is much good salt marsh. There is a good deal of oak and pitch pine timber in the town. There are a number of expensive bridges across the streams, and 6 villages, called the Narrows, Centre, Agawam, Tihonet, Washington, and Poles. The rivers and ponds of Wareham abound with a great variety of fish, the shores with oysters, lobsters, &c., while the deer and fox gambol in the forests. 52 miles S. S. E. from Boston, and 15 S. from Plymouth.

Waresboro', Ga., c. h. Ware co. A little S. from Santilla River. 75 miles N. W. from St. Mary's, and 212 miles S. S. E. from Milledgeville.

Warner, N. H., Merrimac co. This town is 15 miles from Concord. It is watered by Warner River, a handsome stream which rises in the Sunapee Mountain in Newbury. The lands, though broken, have in general a good soil. Miuk Hills

lie in the W. part, and furnish fine orchards and good pasturage. There are 4 ponds, viz., Tom, Bear, Bagley, and Pleasant Ponds. This town was granted in 1735, by the General Court of Massachusetts, to Deacon Thomas Stevens and others. It was incorporated in 1774.

Warren, As., c. h. Bradley co.

Warren, Ct., Litchfield co. Warren was taken from Kent in 1786. The town is watered by Shepaug River, a branch of the Housatonic, and by a large and handsome pond, called Raunang. Warren is hilly and rocky, and in some parts mountainous. 38 miles W. from Hartford.

Warren County, Ga., c. h. at Warrenton. Wilkes is on the N., Columbia N. E. and E., Jefferson S. E., and Great Ogeechee River, or Washington, and Hancock S. W.

Warren County, Is., c. h. at Monmouth. Formed in 1825, and incorporated in 1830. It is bounded N. by Mercer co., E. by Knox and Fulton, S. by McDonough, and W. by Henderson co. Drained by Henderson River and its branches, and by Ellison, Camp, and Honey Creeks. Surface level, and in the W. part liable to inundation; soil very fertile.

Warren County, Ia., c. h. at Williamsport. Incorporated in 1828. Bounded N. by Benton co., E. by Tippicanoe, S. E. by the Wabash River, separating it from Fountain co., S. by Vermilion co., and W. by Illinois.

Warren County, Io., c. h. at Indianola. S. central. Watered by South River and other southern tributaries of the Des Moines.

Warren County, Ky., c. h. at Bowling Green. This county is bounded N. by Grayson and Hart, E. by Barren or Green River, N. W. by Butler, S. W. by Logan, S. by Simpson, and S. E. by Allen. It is divided into two nearly equal sections, by Big Barren River.

Warren, Me. One of shire towns of Lincoln co. This town is situated on both sides of St. George River, at the head of the tide waters, and is bounded N. by Union, S. by Camden and Thomaston, E. by Cushing, and W. by Waldoboro'. 34 miles S. E. from Augusta.

The location of this town is very favorable for manufactures and navigation. The lumber business is not so large as formerly, yet considerable quantities are now sawed and shipped. Ship building is an important branch of business, and the manufacture of lime from a superior quality of limestone, with which this section of country abounds, is carried on extensively, and is annually increasing. The village is well located and pleasant.

Warren, Ms., Worcester co. Warren was formerly attached to Brookfield, Brimfield, and Palmer, until its incorporation by the name of Western, in 1742. In 1834, it took its present name, in honor of the memory of the patriot Warren, who fell at Bunker Hill. The land, though rather rough, is productive. The River Quaboag passes through the town. Coy's Hill, in the N. part, affords abundance of granite. At the foot of the hill iron ore has been found, and a mineral spring been discovered. Warren has a fine water power. The Western Railroad Seminary is in this town. The Western Railroad passes through Warren, and the depot is 73 miles W. by S. from Boston, and 25 E. N. E. from Springfield.

Warren County, Mi., c. h. at Vicksburg. Bounded N. E. by Yazoo co., E. and S. by the Big Black River, separating it from Hinds and Claiborne

counties, W. by the Mississippi River, separating it from Louisiana, and N. W. by Yazoo River, separating it from Issaquena co. Drained by branches of the Big Black River. Surface rough and hilly on the E., and liable to inundation in the W. portions; soil fertile. The Vicksburg and Brandon Railroad traverses this county.

Warren County, Mo., c. h. at Warrenton. E. part, on the N. bank of the Missouri.

Warren, N. H., Grafton co. This town is watered by the N. branch of Baker's River, which, near the S. line, furnishes valuable mill sites. The S. E. part presents a mountainous aspect, having a large portion of Carr's Mountain on its south-eastern border. Copper ore is found here. Warren was granted by charter, July 14, 1763. From Haverhill, 14 miles S. E., and 65 N. by W. from Concord.

Warren County, N. J., c. h. at Belvidere. Incorporated in 1824. Bounded N. by Sussex co., E. by Morris, S. E. and S. by Hunterdon co., and W. by the Delaware River, separating it from Pennsylvania. Drained by Pequest, Paulinskill, and Powhatcong Rivers. The surface is uneven, having Musconetcong or Schooley's Mountain on the S. E. border.

Warren County, N. Y., c. h. at Caldwell. Formed from Washington co. in 1813. It is bounded N. by Essex co., E. by Washington and Lake George, S. by Saratoga, and W. by Hamilton co. Watered by the Main and Schroon branches of the Hudson, which here unite, and by Lake George or Horicon, and several smaller lakes. Surface high, hilly, and broken, the Palmertown Mountains covering the E., the Kayaderosseras the central, and the Adirondack the W. portions. Great quantities of magnetic oxide, and hematite iron ores are found in this county, besides marl, graphite, and other minerals.

Warren, N. Y., Herkimer co. Watered by Nowadaga Creek, and some streams flowing into Canaseraga and Otsego Lakes. The surface is hilly, the uplands being well adapted to grazing, and the valleys to the growth of grain. 12 miles S. from Herkimer, and 68 N. of W. from Albany.

Warren County, N. C., c. h. at Warrenton. Mecklenburg and Brunswick counties, Va., are on the N., Northampton and Fairfax counties, N. C., E., Franklin S., and Granville W. Through the N. E. angle of the county crosses Roanoke River, and it is drained by several creeks, which flow into that stream, and by Fishing Creek, a branch of Tar River.

Warren County, O., c. h. at Lebanon. Green and Montgomery counties are on the N., Clinton on the E., Clermont and Hamilton on the S., and Butler on the W. This county was settled in the early part of the year 1796; the land is of a fine quality, and is well watered by the Great and Little Miami Rivers, and several smaller streams.

Warren, O., c. h. Trumbull co.

Warren, O., Belmont co. The heads of Capatina and Stillwater Creeks water this township. It is wealthy and agricultural, with rolling land, excellent for grain and tobacco. Within two or three miles of this place is a remarkable ancient fortification. It is a circular enclosure, of 4 or 5 acres, surrounded with a wall, from 3 to 6 feet high, and in some places 15 feet broad at the base. Trees of as large a growth as any in the neighboring forests grow on and within the walls.

Warren County, Pa., c. h. at Warren. Chautau-

que and Cattaraugus counties are on the N., McKean E., Jefferson and Venango S., and Crawford and Erie W. This county is well watered. The Alleghany River winds obliquely through it, and within it receives the discharge of Chautauque Lake, or Connewango Creek, Broken Straw Creek, and several other large creeks. The surface is hilly, much of the soil good, and some highly fertile.

Warren, Pa., c. h. Warren co., occupies an elevated position on the N. bank of Alleghany River, at the mouth of Connewango Creek.

Warren, Pa., Bradford co. Wepasening Creek and its branches water this town, the surface of which is hilly, and the soil gravelly loam. 17 miles N. E. from Towanda.

Warren, R. I., Bristol co. This small town, comprising an area of only about 2600 acres, is situated on the E. side of Narraganset Bay. It is 11 miles S. E. from Providence, and 19 N. by E. from Newport. Incorporated 1746. The surface of Warren is undulating, with a soil of rich mould, very fertile and productive. Warren has a safe and commodious harbor for vessels of 300 tons' burden. Ship building has been pursued here to a great extent. The village is delightfully situated on a rise of ground fronting the harbor.

Warren County, Te., c. h. at McMinville. Franklin bounds this county on the S., Rutherford W., Wilson and Smith N. W., Cane Fork River, or White, N. E., and Bledsoe S. E. It is drained mostly by the Creeks of Cane Fork River.

Warren, Vt., Washington co. Warren is watered by Mad River, and, although between the two Green Mountain ranges, the surface is not much broken. The settlement was commenced about the year 1797. 23 miles S. W. from Montpelier.

Warren County, Va., c. h. at Front Royal. Bounded N. by Frederick and Clarke counties, E. by Fauquier and Rappahannock, S. by Page, and W. by Shenandoah co. Drained by the Shenandoah River.

Warrenton, Aa., c. h. Marshall co. On the E. side of a branch of Tennessee River. 135 miles N. E. from Tuscaloosa.

Warrensburg, Mo., c. h. Johnson co. On Blackwater River, above Post Oak Fork, and 98 miles W. from Jefferson City.

Warrensburg, N. Y., Warren co. Bounded on the E. by the Schroon branch, and W. by the main stream of the Hudson, the two uniting on the S. boundary of the town. Surface hilly and mountainous; soil fertile in the valley of the Hudson. 6 miles N. W. from Caldwell, and 68 N. from Albany.

Warrenton, Ga., c. h. Warren co. 44 miles E. N. E. from Milledgeville.

Warrenton, N. C., c. h. Warren co. At the head of Fishing Creek. 62 miles N. N. E. from Raleigh.

Warrenton, Va., c. h. Fauquier co. 102 miles N. by W. from Richmond.

Warsaw, Is., Hancock co. On the E. side of Mississippi River, at the foot of Des Moines Rapids, and 114 miles W. N. W. from Springfield.

Warsaw, Ia., c. h. Kosciusco co. On the E. side of Tippecanoe River. 126 miles N. by E. from Indianapolis.

Warsaw, Ky., c. b. Gallatin co. In the north-

eastern part of the county. 45 miles from Frankfort.

Warsaw, Mo., c. h. Benton co. On the N. side of Osage River. 80 miles S. W. by W. from Jefferson City.

Warsaw, N. Y., c. h. Wyoming co. Watered by Allen's Creek, which flows through a broad and fertile valley. Surface hilly in some parts, and soil remarkably fertile, yielding large crops of grass and grain. 248 miles W. from Albany.

Warsaw, Pa., Jefferson co. Watered by a branch of Bank Creek, a tributary of the Alleghany. 168 miles N. W. from Harrisburg.

Warwick County, Ia., c. h. at Booneville. Big and Little Pigeon and some other creeks drain this county. It is bounded N. by Pike and Dubois, E. and S. E. by Spencer, W. by Vanderburg and Posey, and S. by the Ohio River.

Warwick, Ms., Franklin co. The territory of this town was granted, in 1736, to the descendants of 39 soldiers, who went from Roxbury and Brookline, in an expedition to Canada, in 1690; all of whom perished, save one by the name of Newell. The tract was called Roxbury Canada until its incorporation by its present name in 1763. It was first settled about 1744, and its Indian name was *Shawomet*. This town is elevated, and contains Mount Grace. The soil is strong, warm, and produces excellent pasturage. There are no considerable streams in the town. Morse Pond, a pleasant sheet of water, furnishes an abundance of fine trout, pickerel, and perch. There is a pleasant village in the centre of the town, which lies 16 miles N. E. from Greenfield, and 75 W. N. W. from Boston.

Warwick, N. Y., Orange co. Watered by the Walkkill and some branches of the Passaic River. Contains on the W. a portion of the "Drowned Lands." Surface uneven and mountainous; soil diversified, but mostly good. 24 miles S. W. from Newburg, and 116 S. S. W. from Albany.

Warwick, R. I., Kent co. This important town, the Indian *Shawomet*, is situated on the W. side of Narraganset Bay, 5 miles S. from Providence. The surface of the town, along the bay, is generally level, but the westerly part is hilly, so much so, that from some of the elevations a large part of the state may be seen in a clear day. The prevailing soil is a gravelly loam, strong, and productive of grain, grass, fruits, and vegetables. The town is well supplied with a great variety of fish, and forests of walnut, oak, and chestnut. Pawtuxet River washes the northern part of the town, and meets the waters of the Narraganset at this place, separating Warwick from Cranston. An arm of the bay extends westward, giving to Warwick and East Greenwich a number of excellent harbors. Vessels of 50 tons' burden pass to the flourishing village of Apponaug, between 4 and 5 miles from the bay. This village is pleasantly located, 10 miles S. from Providence, and is the site of considerable enterprise in ship building, the fishery, and the coasting trade.

Pawtuxet village is at the mouth of Pawtuxet River, a port of entry, and lies partly in Warwick and partly in Cranston. This beautiful village, 5 miles S. from Providence, is celebrated for its great hydraulic power on navigable waters. Warwick is eminently distinguished as a manufacturing town.

"Within a mile from the village of Apponaug may be seen a huge rock, so completely balanced upon another, and its equilibrium so exact, that a

boy 14 years of age may set it in such motion that the contact or collision caused thereby produces a sound somewhat like that of a drum, but more sonorous, which, in a still evening, may be heard a distance of 6 or 8 miles. Hence, from time immemorial, it has gone by the name of the Drum Rock. From the ponderous weight of that part which is thus nicely balanced, it is generally believed that no other than the hand of nature ever could have done it. Yet some are inclined to believe that it was thus placed by the herculean labor of some tribe of the natives. There remains no doubt but that this was a place of their resort or encampment, and that the Drum Rock served them either to give an alarm in case of danger, or to call the tribe together from their daily avocations. This rock is considered as a great curiosity, excites much attention, and consequently is at the present day a place of much resort, particularly in the pleasant season of the year."

Warwick County, Va., c. h. at Warwick. It is bounded N. W. by James co., N. E. by York, S. E. by Elizabeth co., and S. W. by James River.

Warwick, Va., c. h. Warwick co. 79 miles E. S. E. from Richmond.

Washington County, Aa., c. h. at Old Washington. Mississippi is on the W. of this county, Choctaw co. N., Tombigbee River E., and Mobile co., S. It has a moderately hilly surface, and soil, except in a few places near the streams, sterile, and covered generally with pine. Drained by branches of the Tombigbee River.

Washington, Aa., c. h. Autauga co. At the mouth of Autauga Creek, on the right bank of Alabama River. 23 miles above Cahaba.

Washington County, As., c. h. at Fayetteville. Bounded N. by Benton co., E. by Madison, S. by Franklin and Crawford counties, and W. by Indian territory. Drained by a head branch of White River. Surface hilly and broken.

Washington, Ct., Litchfield co. Judea, the first society in this town, was a part of Woodbury until 1741. It was first settled in 1734. It was incorporated as a town in 1779. 40 miles S. W. from Hartford, and 10 S. W. from Litchfield.

"A large part of this town is elevated and mountainous. Limestone abounds in many of the valleys. Several quarries of marble have been worked, from which considerable quantities have been raised. Iron ore has been found in various places. Ochre, fuller's earth, and white clay have also been found. The town is watered by the Shepaug River, a branch of the Housatonic, which passes through the whole length of the town, dividing it into two nearly equal parts. The town is divided into two societies, Judea and New Preston.

"There is in Judea, or Washington, as it is called, about 2 miles S. W. of the centre of the town, a place called Steep Rock. From the top of this eminence, which is easy of access, the beholder has one of the most interesting and beautiful prospects in the state."

Washington County, D. C., c. h. at Washington, is bounded S. E. by Potomac River, and W., N., and E. by Maryland. The soil is of middling quality, and the surface hilly. It includes the whole of the district.

Washington, D. C. The seat of government of the United States is situated on the N. bank of the Potomac, in the angle between that river and the eastern branch, near the head of navigation.

and distant from the Atlantic, via the river and the Chesapeake Bay, about 290 miles.

It was at the suggestion of General Washington that this particular site for the federal city was fixed upon. The ground on which it stands was ceded to the United States by the state of Maryland on the 23d December, 1788. The city is laid out on a magnificent plan, including 5000 acres, or over 8 square miles, sufficient to accommodate a million of inhabitants or more. The extent of this plan, which has caused Washington to be called a city of "magnificent distances," gave to the place for a long time a very scattered appearance; but the rapidity with which of late years the city has been built up seems to give hopes that the expectations of the original founders may be at least partially fulfilled.

The ground on which Washington stands has a general elevation of about 40 feet above the level of the river, with some points still higher. The streets run N. and S., E. and W., across which, in a diagonal direction, run a series of broad avenues, designed to facilitate communication from one part of the city to another, five of them radiating from the Capitol, and five others from the President's House. The avenues and principal streets are from 130 to 160 feet wide, and the points at which they meet are selected as sites for public buildings. The avenues are named from the different states; the streets, beginning at the Capitol, are designated, those N. and S. of it as A North and A South, B North and B South, &c., and those E. and W. of it as First East, First West, Second East, Second West, &c. Pennsylvania Avenue, extending about a mile from the Capitol to the President's House, is the most compactly built, and forms the principal thoroughfare.

The Capitol, standing on Capitol Hill, near the centre of the city plot, is the most striking building in the city, and the first object that fixes attention on approaching it. Elevated 72 feet above tide water, it commands an extensive view of the city and surrounding country.

The building, independently of the additions now in progress, is of freestone, and occupies an area of more than an acre and a half. It is 352 feet in length from N. to S., with a depth from E. to W. of 121 feet. On the E. front is a splendid projecting portico, 160 feet wide, of 22 lofty Corinthian columns, greatly admired for the grandeur of its design and the beauty of its execution. It is approached by a noble flight of steps, and is ornamented by two gigantic marble statues representing War and Peace. This eastern front faces a wide plain not yet much built upon. On the western front is a projection 83 feet in width, adorned by a recessed portico of 10 Corinthian columns. From this front there is a rapid descent of some 30 or 40 feet, to the level of Pennsylvania Avenue, and the building is approached on this side by winding walks and several flights of steps. In the middle of the building, between these two porticoes and the two wings on either side, is the Rotunda, a grand circular hall 95 feet in diameter, and the same in height. To the top of the dome over the Rotunda, and from which it is lighted, the height of the building is 120 feet. The walls of the Rotunda are adorned with magnificent paintings, with figures as large as life. Four of them, by Trumbull, representing the signing of the Declaration of Independence, the surrender of Burgoyne, the

surrender of Cornwallis, and Washington's resignation of his commission, are particularly valuable on account of the portraits which they contain. There are, besides, the Baptism of Pocahontas, by Chapman, the Embarkation of the Pilgrims, by Weir, and the Landing of Columbus, by Vanderlyn. One panel is yet unfilled. The room is also adorned with sculptures in *alto rilievo*, representing the rescue of Smith by the interposition of Pocahontas, the landing of the Pilgrims, Penn's Indian treaty, and Boone in murderous conflict with the Indians. The library room, on the W. of the rotunda, is 92 feet by 34, and 36 feet high. A large part of the library was recently destroyed by an accidental fire, but effectual steps have been taken to replace it. The wings, which are 121 feet in depth, contain, the northern one, the Senate Chamber, and that on the S., the Chamber of the House of Representatives. The Senate Chamber is 78 feet diameter and 45 high, and of a semicircular form. The vice president's chair has a canopy of rich crimson drapery, held by the talons of an eagle: above and behind the chair is a gallery for spectators, supported by Ionic columns of variegated marble, and another gallery extends round the semicircle. In the basement below is the room occupied by the Supreme Court. The Hall of the House of Representatives, in the S. wing, is semicircular like the Senate Chamber, but larger, being 96 feet diameter, and 60 feet high. The dome of this hall is supported by 24 Corinthian columns, of the beautiful variegated Potomac marble, highly polished. As in the Senate Chamber, the seats are so arranged as to face the speaker, whose chair, placed opposite the circular sweep, is considerably elevated, and is approached by avenues radiating from it as a centre. The gallery above the speaker's chair is reserved for ladies; another, for gentlemen, extends round the semicircle.

The Capitol, begun in 1793, planned by Charles Bulfinch of Boston, and continued under the superintendence of M. Latrobe, was many years in building, and has cost more than \$2,000,000 in the whole. It was first occupied in 1800, the northern wing only being then completed, at a cost of \$480,000. In 1814, after the completion of the southern wing, which cost \$308,000, but before the erection of the Rotunda and porticoes, during the British occupation of Washington, the building was set on fire, and the roofs and interior were burned. The wings were repaired and occupied in 1819. The centre building was completed in 1827, costing about a million. The sandstone of which the Capitol is built is very perishable, cracking off by the effect of the rain and frosts; and to save it from rapid disintegration it is necessary to keep it covered with a coat of paint. Loud complaints have always been made that the Representatives' Hall, in spite of its splendid appearance, is very badly adapted for either hearing or speaking, and at length measures have been taken for providing new chambers for the Senate and House by the erection of two additional wings, which are now in progress.

This extension of the Capitol consists of two wing buildings of marble placed at the N. and S. ends of the present structure, at the distance of 44 feet from it, with connecting corridors. Each building is 142 feet 8 inches front, from N. to S., by 238 feet 10 inches deep, from E. to W., ex-

clusive of the porticoes and steps; the corridors consist of passages leading from the centre building to the wings, of 21 feet 4 inches in width, with outside colonnades, which make the entire width of each corridor 56 feet 8 inches.

The wing buildings have porticoes on the E. front, extending the whole width, with a flight of steps to each, corresponding to the steps of the present Capitol. Each of these porticoes has a centre projection of 10 feet 4 inches by 78 feet in width; thus forming a double portico in the centre of the façade, similar in general design to that of the present eastern portico. There is also a portico on the W. front of each wing, 105 feet 8 inches in width, projecting 10 feet 6 inches; and on the N. and S. fronts, porticoes of the same projection, each of which is 121 feet 4 inches in width.

The whole extent of the buildings, from N. to S., when finished, will be 751 feet 4 inches, and the greatest width from E. to W., including porticoes and steps, 324 feet.

The ground actually covered by the buildings, including the porticoes and steps, and exclusive of the court yards, is 153,112 square feet, or 652 square feet more than three and a half acres; of which there is covered by the present building 61,201 square feet, and by the new wings and corridors 91,911.

The architecture of the exterior is designed to correspond in its principal features to that of the present building, and the disposition of the various parts is intended to present the appearance of one harmonious structure, and to impart dignity to the present building, rather than to interfere with its proportions, or detract from its grandeur and beauty.

The principal entrance to each wing is on the eastern front; the approach to it is by means of a flight of 39 steps, flanked by massy cheek blocks, similar to those of the present building, with a vaulted carriage way below to enter the basement. The front door opens into a vestibule of 27 feet in width, leading into a hall 55 feet square, lighted from the roof, and embellished by 20 marble columns, supporting an entablature and balustrade; this colonnade will support the galleries for approaching the offices in the second story. These halls will be enriched with marble antæ against the walls in both stories, and lighted by ornamental stained glass skylights, supported by iron rafters.

From each hall a vaulted passage, of 26 feet 10 inches in width, leads into a corridor of 23 feet 6 inches, running across each wing from N. to S., and uniting it with the centre building.

The Hall of Representatives occupies the western half of the S. wing, and is lighted on 3 sides by 50 windows. Its dimensions are 130 feet from N. to S., and 97 feet 10 inches from E. to W. The ceiling is 35 feet in height, deeply panelled and ornamented with brackets, pendants, and enriched mouldings; the panels will be filled in with ornamental glass, through which light will be transmitted from skylights in the roof.

The floor of the House is large enough to accommodate 400 members with separate desks, and allow ample space for lobbies and seats for distinguished visitors, while at the same time it may be conveniently adapted to the number of representatives which at present constitute this branch of the legislature.

The galleries for spectators extend around 3

sides of the hall, and are designed to accommodate 1200 persons; they are approached by 2 spacious flights of marble stairs.

The southern and western porticoes open into the hall, and will be appropriated exclusively to the use of the members, and such as have the privilege of the floor of the House.

The Senate Chamber is located on the western half of the N. wing, and is lighted on the N. and W. by 26 windows. Its dimensions are 70 feet 6 inches by 97 feet 10 inches; the ceiling is 35 feet in height, with sunken panels and ornaments, similar to those of the House of Representatives already described. There is ample room in this hall for separate seats for 100 senators, allowing at the same time all the space that will ever be required for lobbies and the accommodation of distinguished visitors.

The galleries, like those of the Hall of Representatives, occupy 3 sides of the chamber, and contain accommodations for 1200 persons; they are approached by 2 flights of marble stairs, like those of the S. wing. The galleries of each of the halls have five spacious doorways, which will afford ingress and egress without crowding, or causing inconvenience to the audience or disturbance of the members.

The Senate Chamber and the Hall of Representatives are both designed with reference to the principles of acoustics. The magnitude of these rooms, especially the latter, and the fact that they are to be constructed for speaking in from every point, render it necessary to avoid all forms that would produce echoes, and at the same time to present reflecting surfaces enough to give power to the voice without resolving the sound with greater intensity on one point than on another. To attain these objects, the rooms are made rectangular, and the ceilings comparatively low and flat.

The whole number of rooms in both wings, exclusive of the legislative halls, is 101; all of which are vaulted with bricks, and rendered completely fire-proof. 95 of these rooms are lighted directly from the outside, by one or more windows, and the remaining 6 depend on secondary light, and are designed for the storing of documents, stationery, &c.

The warming of the buildings will be effected by means of hot-water pipes enclosed in chambers erected in the cellars, and connected with boilers for heating the water; the external air will be admitted into these chambers, where it will be warmed and conducted by flues to all the halls and rooms in the buildings. An artificial draught will be created by means of fans placed at the bottom of the air shafts, and worked by a small steam engine erected in the cellar of the centre building, and kept continually at work during cold weather. By these means, a constant breeze of warm air will be thrown into every room, by which a corresponding volume of air previously in the room will be displaced; thus assisting the process of ventilation, and creating a circulation of the atmosphere which could not be attained by any other process.

The time required for the completion of the additions is five years, and the estimated expense, \$2,575,000. The architect is Thomas U. Walter, Esq.

The grounds about the Capitol, 22 acres in extent, have been enclosed, beautifully laid out, and ornamented with walks, fountains, trees

flowers, and shrubbery. In the enclosure opposite the eastern front has been placed Greenough's colossal statue of Washington, in a sitting posture, twice as large as life.

The President's House, one mile W. of the Capitol, is a very beautiful building, also of free stone, 170 feet long and 86 feet deep, ornamented on its N. front, facing Lafayette Square, with a portico of 4 Ionic columns. The garden front on the S. has a circular colonnade of 6 Ionic columns. Not far from the President's House are the offices of the executive departments. These are plain edifices of brick, 130 feet long by 60 wide, except the treasury building, which is of freestone, 336 feet long, with a wing in the rear 190 feet deep, and with a colonnade in front of 32 massive pillars. It contains 150 apartments. The General Land Office occupies the third story.

The General Post Office, on E. Street West, running from Seventh to Eighth Streets N., is an extensive marble building, with two wings, adorned in front and at the ends with fluted columns.

The Patent Office, between Seventh and Ninth Streets W., and F and G Streets N., built of freestone and marble, 270 feet long, and in the centre 170 feet deep, is the handsomest of all the public offices. The portico, copied from the Parthenon at Athens, consists of 16 columns, 50 feet high, in a double row. This edifice is partly occupied as a National Museum, and as a receptacle for models of new inventions. There are two wings of marble now in course of erection.

The Smithsonian Institute, on a 19 acre plot of ground, granted by the government, in the southern part of the city, between Seventh and Twelfth Streets, is built of reddish sandstone, in the ancient style of Norman architecture, and is 447 feet in length, with a width where broadest of 132 feet. It has 10 towers, one of which is 145 feet high, and the others 100 feet, and makes an imposing appearance.

The central portion of the building contains, on the first floor, a library, 134 feet by 50, divided into alcoves, and a hall for philosophical apparatus, 65 feet by 50. The second story contains the Museum, 200 feet by 50. This is divided into 3 aisles, the centre aisle being 40 feet in height.

The E. wing contains a lecture room, capable of accommodating 1000 persons. The eastern range contains laboratories, workshops, rooms for apparatus, offices, &c.

The western wing and range contains two large rooms, one of which will be used as a reading room. Beneath are rooms for unpacking books, and other purposes of the library.

The Smithsonian Institution derives its name and endowment from James Smithson, Esq., of England.

Mr. Smithson was a son of the first Duke of Northumberland. He was educated at Oxford, where he distinguished himself by his scientific attainments. He was an associate of most of the eminent men of science of the last generation in England. He had no fixed residence, and formed no family ties. He died at Genoa, June 27, 1829.

From the property which he received by his mother, and the ample annuity allowed him by his father, his frugality enabled him to accumulate

a fortune, which, at the time of his death, amounted to about £120,000 sterling.

By his will, he directed that the income of this property should be paid to a nephew during his life, and that the property itself should descend to his children, if he had any, absolutely and forever.

"In case of the death of my said nephew without leaving a child, or children, or of the death of the child or children he may have had under the age of 21 years, or intestate, I then bequeath the whole of my property to the *United States of America, to found at Washington, under the name of the Smithsonian Institution, an establishment for the increase and diffusion of knowledge among men.*"

Such are the words of the will, and the only words of Smithson which have come to us relating to this remarkable bequest.

Of the reasons which led him to make this disposal of his fortune, we know nothing except by inference. He was never in America, had no friends or acquaintances here, and is supposed to have had no particular fondness for republican institutions.

The event having occurred, in which the claim of the United States attached, the particulars of the bequest were communicated to our government, and both Houses of Congress passed a bill, which was approved the 1st of July, 1836, authorizing the president to appoint an agent to prosecute, in the Court of Chancery of England, the right of the United States to the bequest, and pledging the faith of the United States to the application of the fund to the purposes designated by the donor.

It was paid into the treasury of the United States, in sovereigns, during the month of September, 1838.

The amount of the fund at this time was \$515,169. It was not till 8 years after this period, 10th August, 1846, that the act establishing the Smithsonian Institution was finally passed.

This act creates an establishment, to be called the Smithsonian Institution, composed of the president and vice president of the United States, the secretaries of state, of the treasury, of war, and the navy, the postmaster general, attorney general, and mayor of Washington, with such others as they may elect honorary members. It devolves the immediate government of the Institution upon a board of regents, of 15 members; namely, the vice president of the United States, the chief justice of the Supreme Court, and the mayor of the city of Washington, *ex officio*, 3 members of the Senate, to be appointed by the president thereof, 3 members of the House, to be appointed by the speaker, and 6 persons to be chosen from the citizens at large, by joint resolution of the Senate and House, 2 of whom shall be members of the National Institute, and the other 4 inhabitants of states, and no two from the same state.

The act establishes a permanent loan of the original fund (\$515,169) to the United States, at 6 per cent. interest; appropriates the accumulated interest, then amounting to \$242,129, or so much as might be needed, together with so much of the accruing income as might be unexpended in any year, for the erection of a building; provides for the establishment of a library, museum, chemical laboratory, &c., and left most of the details of the organization to the board of regents.

The cost of the building is limited (with furni-

ture, grading the grounds, &c.) to \$250,000. This will be taken mostly from the income of the original and building funds, so as to save \$150,000 of the building fund, which will be added to the original fund, making a permanent fund of \$675,000, yielding nearly \$40,000 per annum.

This income, with all sums received from other sources, is to be permanently and equally divided between two great methods of increasing and diffusing knowledge—the first by publications, researches, and lectures—the second by collections of literature, science, and art.

The first two volumes of a series entitled "Smithsonian Contributions to Knowledge," in 4to., have been issued; also several works in a series of a more popular character, and in 8vo. form, entitled "Smithsonian Reports." It is proposed, also, to publish, for still wider circulation, a monthly "Bulletin." Researches in various departments of science have been instituted, or aided by the Institution, and several courses of free lectures have been delivered.

The library has been commenced. Measures have been taken, also, for supplying the cabinet of natural history and the gallery of art.

The Washington Monument, in the same part of the city, W. of Fifteenth Street, is in progress of erection, from private subscriptions collected throughout the Union. The following is the description of the design, as put forth by the Monument Association. The rotunda remains to be built, but the obelisk has already attained a height of 70 or 80 feet.

"The design embraces the idea of a grand circular colonnaded building, 250 feet in diameter and 100 feet high, from which springs an obelisk shaft, 70 feet at the base and 500 feet high, making a total elevation of 517 feet above the ground.

"This vast rotunda, forming the grand base of the monument, is to be surrounded by 30 columns of massive proportions, being 12 feet in diameter, and 45 feet high, elevated upon a lofty base or stylobate of 20 feet elevation and 300 feet square, surmounted by an entablature 20 feet high, and crowned by a massive balustrade 15 feet in height.

"The terrace outside of the colonnade is 25 feet wide, and the pronaos, or walk within the colonnade, including the column space, 25 feet. The walks enclosing the cella, or gallery within, are fretted with 30 massive antæ, (pilasters,) 10 feet wide, 45 feet high, and $7\frac{1}{2}$ feet projection, answering to the columns in front, surmounted by their appropriate architrave. The deep recesses formed by the projection of the antæ provide suitable niches for the reception of statues.

"This spacious gallery and rotunda, which properly may be denominated the "National Parthenon," is lighted in 4 grand divisions from above, and by its circular form, presents each subject decorating its walls in an interesting point of view, and with proper effect, as the curiosity is kept up every moment, from the whole room not being presented to the eye at one glance, as in the case of a straight gallery.

"Entering the centre pier through an arched way, you pass into a spacious circular area, and ascend with an easy grade, by a railway, to the grand terrace, 75 feet above the base of the monument. This terrace is 700 feet in circumference, 180 feet wide, enclosed by a colonnaded balustrade, 15 feet high with its base and capping.

"In the centre of the grand terrace rises the lofty obelisk shaft of the monument, 50 feet square at the base, and 400 feet high, diminishing as it rises to its apex, where it is 40 feet square. On each face of the shaft is sculptured the four leading events in General Washington's eventful career, in *basso rilievo*, and above this the shaft is perfectly plain to within 50 feet of its summit, where a simple star is placed, emblematic of the glory which the name of Washington has attained.

"To ascend to the summit of the column, the same facilities as below are provided within the shaft, by an easy, graded gallery, which may be traversed by a railway, terminating in a circular observatory 20 feet in diameter, around which, at the top, is a lookout gallery, which opens a prospect all around the horizon.

"In the centre of the monument is placed the tomb of Washington, to receive his remains should they be removed thither, the descent to which is by a broad flight of steps." Many states, cities and corporations have contributed blocks to this monument, highly ornamented, which form part of the inside wall, and the inscriptions on which can be read as one ascends.

The Navy Yard, on the E. branch of the Potomac, about a mile E. of the Capitol, has an area of 27 acres, enclosed by a substantial brick wall. Many extensive manufacturing operations for the supply of the navy are carried on here.

Half a mile beyond the Navy Yard, in the eastern section of the city, a mile and a half from the Capitol, is the Congressional Burying Ground, containing 10 acres, near the eastern branch, tastefully laid out and neatly kept.

The arsenal is about one mile S. of the Capitol, on Greenleaf Point, between the Potomac and the eastern branch.

Not the least important and interesting of the public establishments is the National Observatory, nearly a mile W. of the President's House, near Georgetown, between Twenty-Third and Twenty-Fifth Streets. The building is 50 feet square, and 3 stories high, ornamented with a movable dome, and provided with the best astronomical instruments.

The principal city and county buildings are an unfinished and shabby City Hall, in which the courts are held, the County Jail, a large, new building, 3 stories high, and the Penitentiary, a large building of freestone, on Greenleaf Point, facing the Potomac and adjoining the Arsenal grounds.

Columbian College is beautifully situated on elevated ground, commanding a broad view of the surrounding country. The college edifice is 5 stories high, 117 feet long and 47 wide.

Washington is separated from Georgetown by Rock Creek, over which are two bridges. A bridge a mile long, across the Potomac, leads to Alexandria, with which also there is steamboat communication. There are also bridges across the eastern branch, which, though deep enough to float a frigate opposite the navy yard, soon dwindles to a shallow stream. Vessels requiring 14 feet of water can come up to Potomac Bridge. The Chesapeake and Ohio Canal, which communicates with a local canal extending through the city S. of Pennsylvania Avenue, opens a communication with an extensive back country; but the trade of Washington is almost entirely limited to the articles required for the consumption of the city.

Population in 1800, 3210; in 1810, 8208; in 1820, 13,247; in 1830, 18,227; in 1840, 23,364; in 1850, 40,001, of whom about a quarter part are colored. Congress meets annually at Washington on the first Monday of December, and the Supreme Court of the United States annually on the first Monday of January.

Washington County, Fa., c. h. at Holmes Valley. Bounded N. and N. E. by Jackson co., E. by the Appalachian River, separating it from Gadsden co., S. by Calhoun co. and the Gulf of Mexico, and W. by the Choctawhatchee River, separating it from Walton co. Drained by Econfina River, and by branches of the Choctawhatchee River. In the S. part of this county is the fine Bay of St. Andrews. There is some good soil in the N. portions, but it is mostly sterile.

Washington County, Ga., c. h. at Sandersville. Oconee River, of Wilkinson co., is on the S. W., Hancock N. W., Ogeechee River, or Warren, N. E., Jefferson E., and Emanuel and Laurens S. E.

Washington, Ga., c. h. Wilkes co. On Kettle Creek, a branch of Little River. 50 miles W. N. W. from Augusta, and 78 N. E. from Milledgeville.

Washington County, Is., c. h. at Covington. Randolph is on the S. of this county, St. Clair W., Madison and Bond N., and Jefferson E. Kaskaskias River passes obliquely through it.

Washington County, Ia., c. h. at Salem. This co. is bounded by Floyd S. E., Harrison S., Orange and Lawrence W., White River, or Jackson, N., and Scott E. Big Blue River rises in this county, and flows S. into Ohio River.

Washington, Ia., c. h. Davis co. Between the two main branches of White River. 20 miles S. E. by E. from Vincennes, and 103 S. S. W. from Indianapolis.

Washington, Ia., c. h. Daviess co. 4 miles E. from the West Fork of White River, and 106 S. W. from Indianapolis.

Washington County, Io., c. h. at Washington. Bounded N. and N. E. by Iowa and Johnson counties, E. by Louisa, S. by Henry and Jefferson, and W. by Keokuk co. Drained by Iowa River, Long and Crooked Creeks, and by a branch of Skunk River. The soil is fertile.

Washington County, Ky., c. h. at Springfield. Green is on the S. of this county, Nelson W. and N. W., Salt River, or Franklin, N., Mercer E., and Casey S. E. The various sources of Salt River drain the county.

Washington, Ky., c. h. Mason co. 77 miles E. S. E. from Frankfort.

Washington Parish, La. This parish is bounded by Mississippi N., Pearl River E., parish of St. Tammany S., and Tangipao River, or St. Helena, W. It has a moderately hilly surface, and generally sterile soil, covered with pine timber. Bogue, Chitto, and Chifuncte Rivers are the principal streams.

Washington County, Me., c. h. at Machias. In the S. E. corner of the state, between the coast on the S. E., and Passamaquoddy Bay and St. Croix River on the N. E. Has a great extent of coast, and abounds in bays and harbors. The settlements are confined to tide waters. The soil is cold, and not favorable to cultivation. The interior is covered with dense forests.

Washington, Me., Lincoln co. Formerly called Putnam. 35 miles E. from Augusta.

Washington County, Md. Hagerstown, Hancock, and Williamsport, shire towns. Potomac

River, or Virginia, is on the S. of this county, Alleghany co., Md., W., Pennsylvania N., and Frederick co., Md., E. The county is well watered, and is traversed by Connolaways, Licking, Conococheague, Antietam, and other large creeks flowing from Pennsylvania into Potomac River. The surface is much broken by mountains and hills, though much of the river and creek alluvial soil is excellent.

Washington, Ms., Berkshire co., was first settled in 1760, and was called Greenwood, and for some time Hartwood. Its Indian name was *Tukonick*. This town is situated on the Green Mountain range, and its surface is greatly diversified by hills and valleys. It is, however, a fine township for grazing, and within its limits are many large and productive farms. No large river waters the town, but the crystal springs which gush from the mountains, and the sparkling ponds which decorate the valleys, give to the town an ample water power for domestic uses. The principal settlement is beautifully located in a mountain valley, through which the Western Railroad passes. 138 miles W. from Boston, and 13 S. E. from Pittsfield.

Washington, Mn., Macomb co. Stony Creek and the head branches of the Middle Fork of Clinton River water this town. The soil of which is fertile, yielding large crops of grain.

Washington County, Ma., c. h. at Stillwater. In the angle between the St. Croix and Mississippi.

Washington, Mi. Recently the seat of government of the state. 6 miles N. E. from Natchez, and 84 S. W. from Jackson, on the left bank of St. Catharine Creek, on a high, dry, and healthy site. In 1802 Jefferson College was incorporated, and located in this town.

Washington County, Mo., c. h. at Potosi. Situated S. from Franklin, and S. W. from Jefferson and St. Genevieve. This county lies on the heads of Big Black, Gasconade, Merrimac, and St. Francis Rivers. It has a hilly, mountainous, and broken surface, though much fertile soil is found in detached places, particularly along the banks of the Merrimac, Big River, and other streams. A great part of the lead mines of Missouri are included within the limits of this county.

Washington, N. H., Sullivan co. This town is hilly, but not mountainous. Lovewell's Mountain, so called, from Captain Lovewell's killing 7 Indians near it, is of a conical shape, about three fourths of a mile in diameter. Washington abounds with springs, rivulets, and natural ponds. Of the last there are 16, some of considerable magnitude. Island Pond, so called from its being full of islands, is 2 miles long and $1\frac{1}{2}$ wide. Ashuelot is $1\frac{1}{2}$ miles long and 1 wide; Half Moon is $1\frac{1}{2}$ miles in length; Brockway's, a beautiful sheet of water, lying on a white sand, is one mile long, and half a mile wide. Long Pond, lying in this town and Stoddard, is 5 miles in length. These ponds abound with a variety of fish. The borders present delightful scenery. The soil is deep and moist, better for grass than tillage. The first settlers had 180 acres of land each for settling. First settler, Reuben Kidder, Esq., in 1768. 35 miles W. from Concord, and about 16 S. E. from Newport.

Washington, N. J., Burlington co. A township adjoining Little Egg Harbor. The soil is sandy, and covered with pines. Bog ore abounds in

the low lands; that mixed with mountain ore is manufactured into all kinds of iron and castings.

Washington, N. J., Gloucester co. Watered by Pensuiken and Cooper's Creeks, and some branches of Atsion River. Its surface is level; its soil light sand and loam. Shell marl is found here.

Washington County, N. Y., Kingsbury and Salem shire towns. Formed from Albany co. in 1772. It is bounded N. by Warren and Essex counties and Vermont. E. by Lake Champlain and Vermont. S. by Rensselaer, and W. by Saratoga and Warren counties and Lake George. The Battenkill, Pawlet, Poultney, and Hoosic Rivers, and Wood Creek, are its principal streams. Surface hilly and unmountainous, being partly covered by the Palmertown range. Soil various, but warm and fertile in many parts. The different kinds of iron ore, marl, lime, marble, and water lime are the principal mineral productions. The Champlain Canal traverses this county.

Washington, N. Y., Dutchess co. Watered by tributaries of Wappinger's and Ten Mile Creeks. Surface hilly and uneven, being covered on the E. by the Matteawan Mountains. Soil fertile, yielding fine crops of grass and grain. 12 miles N. E. from Poughkeepsie village, and 88 S. from Albany.

Washington County, N. C., c. h. at Plymouth. The county is bounded N. by Roanoke River and Albemarle Sound, Tyrrell co. E., Martin W., and Hyde and Beaufort S. The soil generally is thin and sterile; the surface level and in part marshy.

Washington, N. C., c. h. Beaufort co. On the N. side of Tar River, at its junction with Pamlico River, and 127 miles E. by S. from Raleigh. A seaport largely engaged in the lumber trade.

Washington County, O., c. h. at Marietta. Lying on the Ohio River, at the mouth of the Muskingum, and having Morgan and Monroe counties on the N., the Ohio River separating it from Virginia on the S. E., and Athens and a part of Morgan co. on the W. This county, with boundaries originally embracing nearly one half the territory of the state, was constituted July 27, 1788, by proclamation of Governor St. Clair, being the first county established within the limits of Ohio. With the settlement of this county were laid the foundations of this great and flourishing state, under the auspices of the "New England Ohio Company," organized in New England in 1787. Forty-seven men, after making a toilsome journey across the Alleghenies, in the winter of that year, by the old Indian path, which has since been followed by the national road from Cumberland to Wheeling, planted themselves at the mouth of the Muskingum, on the spot where Marietta now stands, which had been previously selected for the commencement of their colony. General Rufus Putnam had the superintendence of the enterprise; and others of the company, as well as many of those who joined the colony afterwards, had served as officers or soldiers in the war of the revolution. They were a set of men of whose fitness for such a purpose Washington was able to say, "No colony in America was ever settled under such favorable auspices as that which was first commenced at the Muskingum. Information, property, and strength will be its characteristics. I know many of the settlers personally; and there never were men better

calculated to promote the welfare of such a community."

The present extent of Washington county is 45 miles in length from E. to W., and from 12 to 22 miles in breadth from N. to S., containing about 713 square miles. The Muskingum, by a circuitous but generally S. E. course, divides the county nearly in the middle. Other streams are the Little Muskingum, Little Hockhocking, Big Run, Bear Creek, Wolf Creek, Duck Creek, Cat's Creek, Rainbow Creek, and Pawpaw Creek. The Ohio River washes the whole south-eastern boundary of the county. The general surface, with the exception of the broad strips of alluvial lands upon the Ohio and the Muskingum Rivers, is hilly or broken. While there are extensive tracts of arable and fertile lands in the middle and western parts of the county, the uplands are better adapted, in general, to pasturage than to tillage. The staple productions are sheep, cattle, and horses, pork, wool, fruit, grains of various kinds, and the products of the dairy. Stone coal is abundant, especially on the Muskingum River. On the waters of the Pawpaw are found great quantities of iron pyrites, bedded in the clay at the bottom of the creek. Near these localities are the remains of numerous furnaces, built of stone, with hearths of clay, containing cinders and pieces of stone coal, partly consumed, which had been used in smelting these ores. These remains are very ancient, some of them having large forest trees growing upon their ruins. In the vicinity of Marietta there are also other ancient works, which appear to have been designed and used as fortifications, and which are a great curiosity to travellers.

Washington, O., c. h. Fayette co. 38 miles S. W. from Columbus, and 30 N. W. from Chillicothe.

Washington County, On. In the lower valley of the Willamette.

Washington County, Pa., c. h. at Washington. Bounded N. by Beaver co., N. E. by Allegheny, S. by Green, E. by Monongahela River, or Westmoreland and Fayette, and W. by Virginia. It has a productive soil and hilly surface. The height of land between Ohio and Monongahela Rivers is occupied by this county, and the creeks flow from its central parts like radii from a common centre.

Washington, Pa., c. h. Washington co. 209 miles W. from Harrisburg. Washington College is located here, (see *Colleges*;) likewise a female seminary. There are numerous stores in the village, and an active trade centres here. The college edifice stands to the E. of the town, is constructed of stone, three stories high, and sufficiently spacious to accommodate 150 students.

Washington, Pa., Lycoming co. A township situated opposite Williamsport, in the great bend of the W. branch of the Susquehanna.

Washington County, R. I., c. h. at South Kingston. S. W. part. Surface diversified and hilly. Fertile. An excellent grazing district. The coast has but two or three smaller harbors. The Pawcatuck, which flows S. through the W. part, is the principal river. The Stonington Railroad traverses this county from N. E. to S. W.

Washington County, Te., c. h. at Jonesboro'. This county has a hilly and broken surface. Nolachucky River drains its southern part, and Holston its northern. It is bounded N. by Sullivan, E. by Carter, W. by Greene co., Te., and S. by North Carolina.

Washington, Te., c. h. Rhea co. On the right bank of Tennessee River, about 100 miles below Knoxville, and 80 miles S. E. by E. from Murfreesboro'.

Washington County, Ts., c. h. at Washington. S. E. central. On the W. side of the Brazos.

Washington County, Vt., c. h. at Montpelier. This county is nearly in the centre of the state, and the principal part of it lies between the two ranges of the Green Mountains. It is bounded N. by Lamoille and part of Chittenden and Caledonia counties, E. by Caledonia co., S. by Orange and Addison counties, and W. by Addison and Chittenden counties. It was incorporated in 1810, by the name of Jefferson, and took its present name in 1814. This county is finely watered by the Winooski River and many of its important branches. The surface of the county is uneven, hilly, and in some parts mountainous, but there is much valuable land along the streams. There are large bodies of beautiful granite in the county, and slate of various kinds.

Washington, Vt., Orange co. Branches of Winooski, Wait's, and White Rivers rise in this town, but afford no considerable water power. There is some excellent land along the streams, and the uplands are generally arable, and afford good pasturage. There is a neat village in the town. The settlement was commenced in 1785, by Daniel Morse, who was soon joined by his brother, John Morse. 15 miles S. by E. from Montpelier.

Washington County, Va., c. h. at Abingdon. This county has Tennessee on the S., Scott co., Va., W., Russell N. W., Tazewell N., Wythe N. E., and Grayson S. E. It lies in the various valleys of the two great branches of Holston River, and is drained by those streams and their numerous confluent. The soil is fertile, though generally hilly.

Washington County, Wn., c. h. at Washington. Bounded N. by Fond du Lac and Sheboygan counties, E. by Lake Michigan, S. by Milwaukee and Waukesha counties, and W. by Dodge co. Drained by Milwaukee and Menemonee Rivers.

Washita (according to the French, *Ouachitta*) *Parish, La.*, c. h. at Monroe. Lying towards the N. E. part of the state, drained by the Washita River and its branches, and the sources of the Little River. Its length from E. to W. is 90 miles, and its mean width 60 miles. It is extensively covered with pine forest; and in some parts, on the rivers, the land is liable to be overflowed. Where the soil will admit of cultivation, cotton is the chief article of production.

Washnetaw County, Mn., c. h. at Ann Arbor. Incorporated in 1826. Bounded N. by Livingston and Oakland counties, E. by Wayne, S. by Monroe and Lenawee, and W. by Jackson co. Watered by Huron, Raisin, Macon, and Saline Rivers. Mullet's, Honey, Mill, and Paint Creeks, and several lakes. Surface slightly undulating; soil rich clay and loam. Most of its streams afford hydraulic power.

Waterbury, Ct., New Haven co. The Indian Mattatuck, a territory comprising this and some of the neighboring towns, being 18 miles in length, and 10 miles in width, was sold by the red men to the whites, in the year 1684, "for divers good causes and 39 pounds." This piece of ground was supposed, by the white men, to afford sufficient room and accommodations for *thirty families*.

There are some good lands on the borders of the streams, within the present limits of Waterbury; but the surface of the town is generally rough, and the soil difficult of cultivation.

The site upon which the borough of Waterbury stands is situated in a valley, which is washed by Mad River on the E., and the Naugatuck on the W. 32 miles from Bridgeport by the Naugatuck Railroad.

Waterboro', Me., York co. This town is watered by a large and pleasant pond, which empties into Little Ossipee River, a branch of the Saco, and by the head branches of the Mousum, a stream which meets the ocean at Kennebunk. This is a flourishing town, with a pleasant surface and good soil. It lies 24 miles W. from Portland, and is bounded S. by Alfred.

Waterbury, Vt., Washington co. The surface is generally level, with some pleasant swells. The soil is warm and fertile, and the lands on the rivers are not excelled in richness by any in the state. Waterbury is separated from Duxbury by Winooski River, which, with Waterbury River and other streams, affords the town a good water power. In the S. W. corner of the town, the passage of Winooski River through a considerable hill has worn a channel through the rocks. The chasm is at present about 100 feet wide, and nearly as deep.

This town was first settled by Mr. James Marsh, who moved here with his wife and 8 children, in June, 1784, and for nearly a year this family scarcely saw a human being but themselves. 12 miles N. W. from Montpelier, and 26 E. S. E. from Burlington. The railroad from Boston to Burlington passes through this town.

Waterford, Ct., New London co. This town was taken from New London in 1801. It is washed on the E. side by the River Thames, and on the S. by Long Island Sound, from which a bay or inlet extends, between Millstone and Black Points, quite into the centre of the town, affording a harbor for small vessels. This is a resort for fishermen on the Sound, and many species of the finny tribe are taken captive. There are a number of ponds in the town. On the New Haven and New London Railroad, 4 miles from New London.

Waterford, Me., Oxford co. It has a number of beautiful ponds. The surface is generally level, and the soil good. 57 miles W. by S. from Augusta.

Waterford, N. Y., Saratoga co. Situated at the junction of the Mohawk and Hudson Rivers. Surface undulating; soil alluvion and sand. 19 miles S. E. from Ballston Spa, and 10 N. from Albany. The village of Waterford is situated on the W. bank of the Hudson at the head of sloop navigation. The Champlain Canal passes through it, and enters the river here. The Troy and Saratoga Railroad passes through it. It has various manufactures, and considerable business. 5 miles from Troy.

Waterford, Vt., Caledonia co. The W. part of Waterford is watered by the Passumpsic, and the N. border by Moose River. A part of the town borders on Fifteen Mile Falls, in Connecticut River. The banks of that river are steep at this place, and form but little intervals. The uplands are rough and stony. The settlement of the town was commenced in 1787. 18 miles S. E. from Danville, and 48 N. E. from Montpelier. The Passumpsic Railroad passes through the town.

Waterloo, Mo., c. h. Clark co. A little W. from Mississippi River, W. from the entrance of Des Moines River, and 186 miles N. by E. from Jefferson City.

Waterloo, N. Y., c. h. Seneca co. Watered by Seneca River, parallel to which runs the Cayuga and Seneca Canal. Surface chiefly level; soil rich calcareous loam. 173 miles N. of W. from Albany.

Watertown, Ct., Litchfield co. Watertown was formerly a parish in Waterbury, by the name of Westbury. It was incorporated as a town in 1780. The township is generally uneven, or rather hilly; but some sections are level. The prevailing soil is a dry gravelly loam, and best adapted to grazing; but the different grains common to this part of the country are cultivated. Steel's Brook, a sprightly stream, passes through the central part of the town, and for a mile below and some distance above the centre of the town, a chain of rich meadows, though small in extent, border the sides of this stream. This is the birthplace of John Trumbull, the poet. 26 miles N. by W. from New Haven, and 10 S. E. from Litchfield.

Watertown, Ms., Middlesex co. The name of Watertown is said to have originated from the circumstance of its being a "well-watered place," or, perhaps, from its being situated on a considerable fresh-water river, and the communication with Boston being at first *by water*, in boats. The Indian name of the town was *Pogquesset*. Charles River gives this town a good water power; it passes along its whole southern border. This river is navigable to the centre of the town for vessels drawing 6 feet of water. The surface is diversified by hills and valleys. A part of Fresh Pond and a part of Mount Auburn Cemetery lie in this town. On the N. bank of the river, the United States Arsenal occupies a site of 40 acres of ground. Watertown village lies about 7 miles W. from Boston, and 12 S. E. from Concord. The Fitchburg Railroad passes on the N. side of the town, and the Worcester Railroad on the S.

Watertown, N. Y., c. h. Jefferson co. Watered by Stony and Sandy Creeks, and on the N. by Black River, which affords immense hydraulic power at this place. Surface rather uneven; soil fertile. 160 miles N. W. from Albany.

Waterville, Me., Kennebec co., is situated on the W. bank of the Kennebec River, opposite to Winslow, and bounded N. by Fairfield, and S. by Sidney. It contains 30 square miles, mostly of the best quality of farming land of the Kennebec region. Seven twelfths of the population is estimated to be agricultural. The principal village, of about 180 houses, is on the Kennebec, at Ticonic Falls. These falls are 18 feet in height, extending quite across the river. In the town there are many saw, 4 grist mills, carding machines, plaster mills, also extensive tanneries, and a machine shop, iron foundry, a branch of the celebrated Fairbanks establishment in Vermont, supplies a great portion of the interior of the state with ploughs. Waterville College is situated here. See *Colleges*.

The water power at Waterville and vicinity is very great. A circle described from the Ticonic Falls, before named, as a centre, with a radius of 5 miles, includes 2 falls across the whole Kennebec, at Kendall's Mills, 2 miles above Waterville; 2 falls, 5 miles distant, on the Sebasticook, a

large tributary stream; and an indefinite series of falls upon the Emerson Stream, from the cascade to its confluence, besides numerous rapids, which could easily be dammed, on all these streams. It is believed that no similar circle of 10 miles diameter in New England comprehends so large and convenient water power. But a very small part of this power is yet occupied. The river is navigable to this place from the dam at Augusta. Connected with Portland, 82 miles S. W. by Railroad.

Waterville, N. H., Grafton co. This town comprises the territory called Gillis and Foss Grant, until its incorporation in 1829. It was granted June 29, 1819, to Josiah Gillis, Moses Foss, Jr., and others. The latter commenced the settlement some years since. It is watered by Mad and Swift Rivers.

Waterville, Vt., Lamoille co. Waterville is environed by mountains, and is itself mountainous. It is watered by a branch of Lamoille River. There are many good mill privileges in this town, and some fine land on the borders of its streams. The settlement commenced here about the year 1789. 12 miles N. W. from Hydepark, and 39 N. W. from Montpelier.

Watervliet, N. Y., Albany co. This township lies on the W. side of Hudson River, opposite the city of Troy, and 6 miles N. from the city of Albany. The Mohawk River waters its northern part. The surface is level or undulating on the E., with some extensive flats on the Hudson, which are productive and well cultivated. The western part rises into hills. Several islands, lying at the confluence of the Mohawk with the Hudson, belong to this township. The Champlain Canal, crossing the mouths of the Mohawk in the northern part of this town, and bearing to the right, forms a junction with the Erie Canal, after which their united channel traverses its eastern border to Albany. At the Cohoes Falls, on the Mohawk, an immense water power has been developed, and considerably occupied. (See *Fashionable Resorts*.) At Port Schuyler a race-way is taken from the Erie Canal, supplying several hydraulic works. A small creek, at the S. E. course of the town, furnishes the power for a factory, and for mills. In this town there is a Shaker settlement, sometimes called *Niskayuna*, established in 1776, by Ann Lee, the first in the United States. They occupy about 2000 acres of land.

Watson, N. Y., Lewis co. Watered by Independence Creek and other streams flowing into Black River, which bounds it on the W. Surface hilly and mountainous; soil sandy loam. 10 miles N. E. from Martinsburg, and 135 N. W. from Albany.

Wauarsing, N. Y., Ulster co., is watered by Rondout Creek and its tributaries, affording fine hydraulic power at this place. Surface hilly and mountainous, the Shawangunk Mountain covering the E. part; soil gravelly loam and clay. Plumbago, lead, and iron ore are found in this vicinity. 22 miles S. W. from Kingston, and 81 from Albany.

Wayland, Ms., Middlesex co. The name of this town was East Sudbury from 1780 to 1835. It lies on the E. side of Sudbury River, and was once a part of Sudbury. The surface is pleasant, and the soil generally good. 16 miles W. from Boston, and 7 S. from Concord.

Wayne County, Ga., c. h. at Tuckerville. Wayne county has Glynn on the S. E., Camden

and Apppling S., Apppling and Tatnall W., and Alatomaha, or Elbert and McIntosh counties, N. E. Great and Little St. Illa Rivers traverse this county, and Turtle River rises in it.

Wayne County, Is., has Johnson and Union S., Jackson and Randolph W., Jefferson N., and White and Gallatin E. The W. branch of Little Wash drains the county.

Wayne County, Ia., c. h. at Centreville. Ohio is on the E., Union co., Ia., S., Fayette S. W., Henry W., and Randolph N. The sources of Whitewater River drain the county.

Wayne County, Io., c. h. at Corydon. On the southern border. Central. Watered by the S. fork of Chariton River.

Wayne County, Ky., c. h. at Monticello. This county is drained principally by Big Sinking Creek, a branch of the Cumberland. It is bounded N. by Cumberland River, or Adair and Pulaski counties, E. by Whitley, S. by Tennessee, and W. by Cumberland co., in Kentucky.

Wayne, Me., Kennebec co. Wayne lies N. of Leeds, and is situated a little below the centre of a chain of beautiful lakes or ponds, whose outlet, which passes through the town, falls into the Androscoggin. The centre of the town is about 4 miles E. of the Androscoggin, and 16 W. from Augusta. The surface of the town is undulating, and the soil fertile. It was incorporated in 1798.

Wayne County, Mn., c. h. at Detroit. Detroit River and St. Clair Lake are on the S. E., McComb co. N. E., Oakland N. W., and Monroe S. W. and S. It has generally a level surface, rising by a very gentle acclivity from Lake St. Clair and Detroit River, and gradually becoming flat, receding from these waters. This county has a very productive soil, and is drained by the Riviere Rouge.

Wayne County, Mi., c. h. at Winchester. This county is bounded by Alabama E., Greene co., in Michigan, S., Covington W., and the Choctaw country N. Chickasawhay and other branches of Pascagoula River drain it.

Wayne County, N. Y., c. h. at Lyons, was formed from Ontario co. in 1823. It is bounded N. by Lake Ontario, E. by Cayuga, S. by Seneca and Ontario, and W. by Monroe co. Watered by Clyde River and several small streams flowing into Lake Ontario. Surface undulating and somewhat ridgy; soil fertile, yielding abundant harvests of fruit and grain. Different kinds of iron ore, gypsum, marl, and water limestone are abundant; there are also numerous sulphur and a few salt springs. The Erie Canal follows the course of the Clyde River through this town.

Wayne, N. Y., Steuben co. Watered by Little and Mud Lakes on the E., and Crooked Lake on the W. Surface chiefly level; soil well adapted to grain. 14 miles N. E. from Bath, and 198 W. from Albany.

Wayne County, N. C., c. h. at Waynesboro'. Wayne co. is bounded N. by Nash and Edgecomb, E. by Greene and Lenoir, N. W. by Johnson, S. W. by Sampson, and S. by Duplin. Neuse River crosses the county.

Wayne County, O., c. h. at Wooster. Medina co. is on the N., Stark on the E., Coshocton on the S., and Richland on the W. It was laid out in 1808, by General Wayne, from whom it derived its name; but it was not organized until January, 1812. People from Pennsylvania settled here in 1805. The land is excellent, and is high and elevated, with extensive prairies seat-

tered here and there. The most important streams are Killbuck River, Chippewa, Sugar, and the Lake Fork of Mohican Creek.

Wayne County, Pa., c. h. at Bethany. New York is on the N. of this county, Delaware River, or Delaware co., N. Y., E., Pike co. S. E., and Luzerne and Susquehanna counties W. It is drained by the Lackawanna and other creeks of the Delaware. It has a hilly and broken surface, and generally thin and poor soil.

Wayne, Pa., Erie co. French Creek and a branch of Broken Straw Creek water this town, the surface of which is hilly, and the soil gravelly loam. 250 miles N. W. from Harrisburg.

Wayne, Pa., Greene co. Watered by Dunkark's Creek and branches. Surface hilly; soil loam. 15 miles S. W. from Waynesburg.

Wayne, Pa., Mifflin co. This town is bounded on the E. by the Blue Ridge, and drained by the Juniata River.

Wayne County, Te., c. h. at Waynesboro'. Lauderdale co., in Alabama, is on the S., Hardin co., Te., W., Perry N., and Lawrence E. The great bend of the Tennessee River encircles this county, where that stream turns N. on entering the state; and though in no place actually reaching Tennessee River, the creeks of this county are discharged from it like radii from a centre.

Wayne County, Va., c. h. at Trout's Hill. W. part. Separated from Kentucky by the Big Sandy, and from Ohio by the Ohio River. Hilly.

Wayne, Va., c. h. Wayne co.

Waynesboro', Ga., c. h. Burke co. On a branch of Brier Creek. 82 miles E. from Milledgeville.

Waynesboro', N. C., c. h. Wayne co. On the N. side of Neuse River, just below the entrance of Little River, and 51 miles S. E. from Raleigh.

Waynesburg, Pa., c. h. Greene co. On the N. side of Ten Mile Creek, 12 miles from its mouth, and 222 miles W. by S. from Harrisburg.

Waynesboro', Te., c. h. Wayne co. On the W. side of Green River. 99 miles S. W. from Nashville.

Waynesboro', Va., Augusta co. On South River, at the W. foot of Blue Ridge. 30 miles W. by N. from Charlottesville, and 105 miles W. N. W. from Richmond. Has a fine water power, and contains extensive manufacturing establishments.

Weare, N. H., Hillsboro' co. The only river in Weare is the N. W. branch of Piscataquog; it affords some good mill sites. Here are 3 ponds. Rattlesnake Hill, nearly in the centre of the N. line of the town, abounds with shelving rocks, abrupt precipices, forming dens and caves. During the summer season, the reptile from which it takes its name, is frequently found. The town, though rather broken, is not mountainous. It has small swamps and some good meadows. It received its name in honor of Meshech Weare, chief justice of the province of New Hampshire. First settlers, emigrants from Massachusetts, about the year 1749. From Concord 14 miles S. W., and 17 N. N. W. from Amherst.

Weathersfield, Vt., Windsor co. This town lies on the W. side of Connecticut River, at the "Bow," so called from a bend in the river. It contains large tracts of rich meadow land, and the uplands are of a good quality. This town is large, and contains a number of pleasant villages. It is watered by several ponds and by Black River. From Mt. Ascutney, at the N. part of the town, is a delightful prospect. Perkinsville, situ-

ated in the south-western part of the town, derives its name from a Mr. Perkins, a capitalist from Boston, who, in 1830, purchased a small woollen factory, which he greatly enlarged, thus giving an impulse to the business of the village, and attracting the attention of other capitalists to improve the favorable advantages afforded by the rapids in Black River to engage in the same enterprise. The early settlers emigrated principally from Connecticut. 70 miles S. by E. from Montpelier, and about 10 below Windsor. The Sullivan Railroad passes on the opposite side of the river.

Webb County, Ts., c. h. at Larido.

Webster, Ms., Worcester co. This town was incorporated in 1832, and named in compliment to Hon. Daniel Webster. It included a part of Dudley and Oxford, and a tract of land previously unincorporated. French River and a pond give this place a large and unfailing water power. The original name of this pond was *Chabana-kongkomom*, the same name by which Dudley was known. The fall at the outlet of this pond is 24 feet, which is increased, after it empties into French River, to about 90 feet, before it joins the Quinebang. The features of this town are rather rough. There are a number of pleasant and flourishing villages in Webster, but Merino village, partly in this town and partly in Dudley, is the largest. This village, through which the Worcester and Norwich Railroad passes, lies 16 miles S. from Worcester, and 60 S. W. from Boston.

Webster, N. Y., Monroe co. Watered by a few small streams flowing into Lake Ontario, which bounds it on the N. Surface level or slightly uneven; soil gravelly loam and sand. 10 miles N. W. from Rochester, and 216 N. of W. from Albany.

Wellborn, Aa., c. h. Coffee co.

Weldon, N. C., Halifax co. Situated at the Great Falls of Roanoke River, on the S. W. side, 12 miles above Halifax, and 95 N. E. from Raleigh. Connected by railroad with Raleigh and Wilmington on the S., and Petersburg and Portsmouth on the N.

Wellfleet, Ms., Barnstable co. Extends across Cape Cod. It was taken from Eastham in 1763. Its Indian name was *Punnonakanit*. The village is on the W. side of the cape; it is neatly built, and although its soil is light and sandy, it presents a handsome appearance. Wellfleet Bay sets into the town from the S., and is separated from Cape Cod Bay by several islands, which form a good harbor, at a place called "Deep Hole." The eastern section of the town is wooded to the edge of the ocean, which lashes a smooth, sandy beach. This is one of the most thriving towns in the state. 30 miles below Barnstable, and 95 E. S. E. from Boston by land, and 65 by water.

Wells County, Ia., c. h. at Bluffton. Incorporated in 1837. Bounded N. by Allen, E. by Adams, S. by Jay and Blackford, and W. by Grant and Huntington counties. Drained by Wabash River, which affords fine water power.

Wells, Me., York co. An ancient town, containing 35,000 acres, about one fifth of which is waste. There are extensive salt meadows, and a harbor for the small vessels. 30 miles S. W. by S. from Portland.

Wells, N. Y., Hamilton co. Sacondaga River waters this town. Surface diversified; soil chiefly

productive. 8 miles E. from Lake Pleasant, and 72 N. W. from Albany.

Wells, Pa., Bradford co. Watered by South Creek and branches, and by a branch of Seely Creek. Surface hilly; soil gravelly loam.

Wells, Vt., Rutland co. A part of this township is level, and a part mountainous. The soil is generally good, and productive of grain and pasturage. The principal stream issues from Wells Lake, a beautiful sheet of water, partly in Poultney, 5 miles in length, and covering 2000 acres. At the outlet of this pond is a snug village. The settlement was commenced by Ogden Mallary, about the year 1768. 65 miles S. S. W. from Montpelier, and 13 S. W. from Rutland.

Wellsburg, Va., c. h. Brooke co. On the E. side of Ohio River, at the mouth of Buffalo Creek. 16 miles N. by E. from Wheeling, and 344 N. W. from Richmond. It has mills and manufactories of various kinds, and is surrounded by inexhaustible beds of bituminous coal.

Wellsville, O., Columbiana co. On the N. bank of Ohio River, at the mouth of Little Yellow Creek. 51 miles E. N. E. from Columbus. This place has an extensive trade with the interior, and exports large quantities of flour.

Wendell, Ms., Franklin co., was formerly part of Shutesbury and Erving, and was incorporated in 1781, and named in honor of Oliver Wendell, Esq. This town is on elevated ground, and is the source of streams which flow to the Chicopee on the S., and Miller's River on the N. Its soil is strong and fertile, and well adapted for grain and grass. Miller's River affords a valuable water power, and on its banks are some fine intervals and delightful scenery. At the N. part of the town, Bear Mountain rears its head, 1281 feet in height. There is a handsome village in the town, about 4 miles S. of the river, and 80 W. by N. from Boston.

Wendell, N. H., Sullivan co. A considerable part of Lake Sunapee lies in this town. The surface of this lake is said to contain 4095 acres, of which 2720 acres are in Wendell. Here is the principal source of Sugar River, which flows from the lake near its centre from N. to S. There are 3 small ponds, containing an area of about 300 acres. The town received its name from John Wendell, one of the principal proprietors. First settlers: in 1772 emigrants from R. I. settled here. 40 miles N. W. from Concord, and 7 E. from Newport.

Wenham, Ms., Essex co. This town was formerly a part of Salem. It was first settled about 1638, and was called Enon. The surface is pleasant, and the soil generally of a good quality. Wenham or Enon Pond is a beautiful sheet of water, of irregular form, comprising an area of about a mile square, and affords an abundance of excellent fish. 6 miles N. from Salem, and 20 N. from Boston. The Eastern Railroad passes through the centre of the town, near the pond.

Wenlock, Vt., Essex co. This mountain town gives rise to a principal branch of Nulhegan River. The lands here are too elevated for cultivation. In 1791 the town was chartered. 30 miles N. W. from Guildhall, and 73 N. E. from Montpelier.

Wentworth, N. H., Grafton co. This town is watered by Baker's River, on which is a fall of 18 or 20 feet, affording a valuable hydraulic power. Here are but few ponds. Baker's, situated on Orford line, is the most considerable;

the outlet of which is called Pond Brook, and affords water sufficient for several valuable mill sites. In the E. part of the town lies part of Carr's Mountain. A part of the elevation called Mount Cuba lies in the W. part of Wentworth. This mountain contains inexhaustible quantities of the best limestone. Iron ore is found here. The soil is generally good. The town received its name from Governor Benning Wentworth. The first settlement commenced a few years before the revolutionary war. 15 miles N. W. from Plymouth, and about 50 N. N. W. from Concord.

Wentworth, N. C., c. h. Rockingham co. On a branch of Dan River. 116 miles N. W. from Raleigh.

West Almond, N. Y., Alleghany co. Watered by Angelica Creek. A hilly town, with a good soil. 6 miles E. from Angelica, and 248 W. from Albany.

West Bath, Me., Lincoln co. Adjoining the city of Bath.

West Bloomfield, N. Y., Ontario co. Watered by Honcoye Creek. Surface rather hilly; soil chiefly clay, based upon slate and lime. 14 miles W. from Canandaigua, and 208 N. of W. from Albany.

Westboro', Ms., Worcester co., was a part of Marlboro', and called Chauncy village until its incorporation in 1717. The waters of this town consist of some of the sources of Concord and Blackstone Rivers, which furnish a good water power. There are several handsome ponds in the town, well stocked with fish. This is a beautiful town: the surface is diversified, and the soil good. There are a number of neat and handsome villages in Westboro'. 12 miles E. from Worcester, and 32 W. from Boston.

West Boylston, Ms., Worcester co. This town once comprised a part of Boylston, Holden, and Sterling. It was first settled about the year 1720. The surface is very pleasant, the soil good and well cultivated. The Quinepexet and Stillwater Rivers meet the Nashua in this town, and afford a water power of much value. There are in the town a number of pleasant manufacturing villages. There is a romantic spot, called Pleasant Valley, in this town; it was once the bed of a small pond, and lies about a mile S. from the principal village. 8 miles N. from Worcester, and 42 W. from Boston.

West Bradford, Pa., Chester co. Bounded S. W. by Brandywine Creek, and drained by its branches, which afford good water power. Surface hilly; soil calcareous loam. 11 miles S. W. from Chester.

West Bridgewater, Ms., Plymouth co., was taken from Bridgewater in 1822. The surface is generally level, and its soil is capable of producing large crops. A large branch of Taunton River gives this town a good water power. Centre and Madagascar villages, about two miles apart, are neat, and busy in the labors of domestic industry. 21 miles S. from Boston by railroad, and 20 N. W. from Plymouth.

Westbrook, Me., Cumberland co. A trading and manufacturing town, adjoining Portland on the N. 52 miles S. S. E. from Augusta. The principal village is called Saccarappa.

West Cambridge, Ms., Middlesex co. This was the W. parish of Cambridge, called Menotomy, until its incorporation in 1807. A part of the lands is low and swampy, but the general features of the town are pleasant. Spy, Little, and

a part of Fresh Pond lie in this town; they abound with fish, and add much to the beauty of the place. These ponds cover an area of about 200 acres, and furnish large quantities of ice for transportation. In this town are some pleasant villages. Sucker Brook, though a small stream, furnishes a good water power. The descent of this stream is so great, that dams are erected in the town, for appropriating its waters 9 different times. From Boston by railroad, 6 miles.

West Carlisle, O., Pike township, Coshocton co. A village 60 miles from Columbus, and 22 N. E. from Newark.

West Charleston, O., Bethel township, Miami co. This town is located on an elevated, healthy spot. 12 miles N. from Dayton.

Westchester County, N. Y., Bedford and White Plains shire towns, was incorporated in 1683. It is bounded N. by Putnam co., E. by the state of Connecticut, S. by Long Island Sound and the Haerlem River, and W. by the Hudson. Surface hilly and uneven; soil fertile in many parts. Watered by Croton, Bronx, and Sawmill Rivers. It is rich in mineral productions, the principal of which are iron and lead ores and marble.

Westchester, N. Y., Westchester co. Watered by Bronx, Haerlem, and East Rivers. Surface hilly and rolling; soil clay loam, mostly fertile. Marble is quarried here in large quantities. 16 miles S. from White Plains, and 150 S. from Albany.

Westchester, Pa., c. h. Chester co., may vie with any other place in the U. S. of equal population, in neatness of its buildings, beauty of site, and healthful position. It has daily intercourse with Philadelphia by a railroad, and is 22 miles W. from it. 2 miles W. from Brandywine River, and 73 E. S. E. from Harrisburg.

Westerly, R. I., Washington co. In the S. W. angle of the state, between the Atlantic and the Pacantuck, at the mouth of which it has a harbor. The village is finely located at the head of navigation, 6 miles from the sea, on the Providence and Stonington Railroad, 40 miles S. S. W. from Providence.

At Westerly is presented the very singular feature of two Sabbaths every week. Almost one half of the inhabitants are Seventh Day Baptists, who keep Saturday with great sacredness, and on no account will do any work. The remainder observe Sunday as a holy day, and as studiously avoid all labor. The result is, that on Saturday, a portion may be seen going to church, a part of the stores are closed, and some of the factories are short-handed or closed entirely. On Sunday the same thing is to be observed. A part are engaged in worship and acts of devotion, while their neighbors are busily at work, and public worship is disturbed by the din of business and the noisy bustle of the crowd. Both parties appear strictly conscientious, and live peaceably together, although the partial observance of two days is very annoying and inconvenient.

West Farms, N. Y., Westchester co. On Bronx River. 11 miles N. E. from New York, and 146 S. from Albany. Connected with New York city by railroad.

Westfield, Ms., Hampden co. A beautiful place on Westfield River. The town is famous for its manufacture of whips. Several other manufactures are also carried on. It has an academy of good repute. 10 miles W. from Springfield, on the Western Railroad.

West Findlay, Pa., Washington co. Watered by branches of Wheeling Creek. Surface hilly; soil loam. 231 miles W. from Harrisburg.

Westford, Ms., Middlesex co. This is a good farming town, on elevated ground. The surface and soil are well adapted to the growth of grain, grass, and fruit. Quantities of fine granite, called "Chelmsford granite," are found here, quarried, and transported. Westford is watered by several beautiful ponds, and by Stony Brook, which rises in the town. The village in the centre of the town is handsomely situated on a swell of fine land. 28 miles N. W. from Boston, and 10 N. W. from Concord.

Westford, N. Y., Otsego co. Elk and Cherry Valley Creeks water this town. Surface hilly; soil productive sandy loam. 8 miles S. E. from Cooperstown, and 68 W. from Albany.

Westford, Vt., Chittenden co. Westford was settled soon after the revolutionary war, by Hezekiah Parmelee and others. The town is well watered by Brown's River, a branch of the Lamoille. The surface is rough, and the soil good for grazing. 13 miles N. E. from Burlington, and 35 N. W. from Montpelier.

West Goshen, Pa., Chester co. Drained by branches of Chester Creek, and of Brandywine River. Surface gently sloping; soil sandy loam.

Westhampton, Ms., Hampshire co., was first settled about the year 1767, and formed the W. parish of Northampton, until its incorporation in 1778. The features of the town are generally rough, but pleasing; the soil is good. A number of streams rise in the high lands, among which is the Manhan, affording a water power sufficient for domestic uses. There is a neat village near the centre of Westhampton, which lies 8 miles W. S. W. from Northampton, and 98 W. by S. from Boston.

West Haven, Vt., Rutland co. West Haven was set off from Fair Haven in 1792. It is well watered by Hubbardston and Poultney Rivers, and Cogman's Creek, on the former of which are handsome falls and mill sites. 19 miles W. from Rutland.

West Hempfield, Pa., Lancaster co. Bounded W. by the Susquehanna River, N. by Chiques Creek, and drained by Strickler's Creek. Surface hilly; soil calcareous loam. 8 miles W. from Lancaster.

West Liberty, Ky., c. h. Morgan co. On the N. E. side of Licking River. 107 miles E. by S. from Frankfort.

Westminster, Md., Frederick co. This village is situated on the road from Baltimore to Chambersburg. 30 miles N. W. from Baltimore, and a similar distance N. E. from Frederick.

Westminster, Ms., Worcester co. This town lies on the range of high lands which separate the waters of the Connecticut and Merrimac. Several streams, rising from large ponds in this town and its neighborhood, produce a considerable water power. The town was first settled in 1737. There is a handsome village in the centre. 50 miles W. N. W. from Boston, and 20 N. by W. from Worcester.

Westminster, Vt., Windham co. The surface and soil of Westminster are favorable for agriculture. The principal and oldest village is delightfully situated in the E. parish, on the bank of Connecticut River. It is enclosed by a semicircle of hills, which touch the river about 2 miles above and below the town. It is this barrier

which, while it contributes to the natural beauty of the place, has, by turning the watercourses in another direction, deprived it of all those facilities of access and of water power which have so much contributed to the rapid growth of some of the neighboring villages. The earliest permanent settlers came from Northfield, Ms., and from Ashford and Middleton, Ct., about 1741, and were soon followed by others from the same states. 82 miles S. from Montpelier, and 13 N. E. from Newfane. This town lies a little below Bellows Falls, and is in the vicinity of two railroads.

West Monroe, N. Y., Oswego co. Watered by Bay Creek, flowing into Oneida Lake, which bounds it on the S. Surface level; soil sandy loam. 25 miles S. E. from Oswego, and 147 N. W. from Albany.

Westmore, Vt., Orleans co. Westmore contains Willoughby's Lake, a handsome sheet of water, surrounded by Mounts Hor, Pico, and other elevations. Branches of Barton, Clyde, and Passumpsic Rivers rise in this and other ponds in the town. Westmore appears to be too high for the habitation of many people, or cattle. The settlement commenced here about the year 1800: it was abandoned during the war of 1812, but resumed on the return of peace. 12 miles E. from Irasburg, and 52 N. E. from Montpelier.

Westmoreland, N. H., Cheshire co. This town lies on the E. side of Connecticut River, and is watered by several small streams, which empty into it. The one issuing from Spafford's Lake, in Chesterfield, is the largest, and affords some of the best water privileges in the town. The surface is less varied than the neighboring towns. First settlers: four families settled in 1741. 65 miles S. W. from Concord, and about 10 W. from Keene. A railroad passes through the town.

Westmoreland, N. Y., Oneida co. Oriskany Creek and one of its branches water this town. Surface level; soil chiefly fertile loam. 12 miles W. from Utica, and 105 N. of W. from Albany.

Westmoreland County, Pa., c. h. at Greensburg. Somerset is on the S., Washington W., Alleghany N. W., Armstrong and Indiana N., and Bedford E. This county is well watered. The Monongahela forms its extreme western border, near which it is traversed by the Youghiogany. Its entire northern limit is formed by the Kiskiminitas, and its north-western by the Alleghany, whilst its surface is drained by the numerous confluent of these rivers. The country is hilly, and in part mountainous; soil productive in grain, pasturage, and fruit.

Westmoreland County, Va., c. h. at Leeds. Potomac River is on the N. E. of this county, King George co. N. W., Rappahannock River and Richmond S., and Northumberland S. E.

West Newbury, Ms., Essex co. This delightful agricultural town was taken from ancient Newbury in 1819. It occupies an elevated situation on the S. bank of the Merrimac. The soil is excellent. The town is connected with Rocks Village, Haverhill, by an excellent bridge over the Merrimac. West Newbury lies 4 miles W. from Newburyport, and, by the railroad from Newburyport, 38 N. from Boston.

Weston, Ct., Fairfield co. Weston was taken from Fairfield in 1787. It was settled in 1738. The town is watered by Saugatuck and Mill Rivers and a pleasant brook, which furnish a

good water power. There are some valuable mills for manufactures in the town, but the chief business of the inhabitants is agricultural. The soil is a gravelly loam, with an uneven surface. 60 miles S. W. from Hartford.

Weston, Me., Washington co. This town was incorporated in 1835. It is the half township granted to Hampden Academy. It lies a few miles W. from Grand Lake. It is watered by Baskahegan River, and is about 90 miles N. E. from Bangor.

Weston, Ms., Middlesex co. Previous to its incorporation, in 1713, the territory of this town was a part of Watertown. The town was settled about 1673. It is on high ground, and its surface is varied by hills and valleys. The soil is good and well improved. There are some small streams in the town. Stony Brook and others, and Charles River, wash its eastern border. The Worcester Railroad passes its south-eastern corner, and the Fitchburg Railroad goes through the N. part of the town. 14 miles W. by S. from Boston, and 9 S. S. E. from Concord.

Weston, Vt., Windsor co. West River passes through this town, and on its banks are some good lands and two pleasant villages. It was set off from Andover in 1790, and organized as a town in 1800. 66 miles S. by W. from Montpelier, and 22 from Windsor.

West Penn., Pa., Schuylkill co. Watered by Little Schuylkill River and Mahoning and Lizard Creeks. Surface hilly, abounding with anthracite coal; soil gravelly and unproductive. 79 miles N. E. from Harrisburg.

West Pennsboro', Pa., Cumberland co. Bounded N. by Conedogwinit Creek. Surface level; soil calcareous loam. 8 miles W. from Carlisle.

West Pikeland, Pa., Chester co. Watered by some branches of Schuylkill River, which afford hydraulic power. Surface gently sloping; soil sandy loam.

West Point, N. Y., Orange co., Cornwall township. Situated on the W. bank of the Hudson. 93 miles from Albany, and 52 N. from New York. This is the site of one of the most important fortresses during the revolutionary war, and is now the seat of the United States Military School, organized in 1802. During the war, this post was emphatically the key of the country, as it commanded the river, and prevented the British from holding communication with their provinces in Canada. At this point, the hill, composed of huge crags and blocks of stone, protrudes to the middle of the river, impelling the current towards the opposite bank, and reducing the channel to less than half a mile in breadth. This natural formation was eminently favorable to the object of the fortifications erected here. The cliff selected for the fortress rises from the river in 3 retreating terraces; upon the third of which, 188 feet above the water, and spreading out into a plain of more than a mile in circumference, old Fort Clinton was erected. Upon some of the eminences rising still higher in the rear, redoubts were erected covering this fort; one of which was Fort Putnam, at the height of 598 feet above the river, the ruins of which are still seen. On Constitution Island, which is a mass of rock, towards the opposite side of the river, works of strong defence were also constructed; and a heavy chain, supported by bnoys, was stretched across the angle made by the river, forming an effectual bar to the passage of the enemy's ships.

These works were constructed under the direction of the celebrated Kosciusko, as engineer; to whose memory a monument has been erected about 30 rods E. of the hotel in the vicinity of "Kosciusko's Garden," a spot to which the "Polish chieftain was accustomed to retire for study and reflection."

These fortifications were defended by 4000 men. They were built in a single year, almost without cost to the country. The French engineers, superintending the execution of their own plans to the minutest details, received no emolument, and the soldiers who labored at them had no pay. The British had a strong desire to possess themselves of this important post; and its surrender, as is well known, was to have been the first fruit of Arnold's treason, which was providentially prevented by the detection of Major Andre, and the discovery of the correspondence in his possession.

These grounds, now occupied by the national Military Academy, were ceded to the United States government, by the state of New York, in 1826. Here are erected, for the purposes of this institution, two stone barracks, one 3 and the other 4 stories high, with accommodations for 250 cadets, the number authorized to be received by law; also a large 3 story building, 275 feet long by 75 feet wide, for the recitation and drawing rooms, for military exercises in winter, and for a depository of apparatus, models, &c. Besides these, there is a beautiful stone building, 2 stories high, 150 feet in length by 60 in width, in the Gothic style of the period of Elizabeth, designed for the library and philosophical apparatus, with an astronomical observatory upon one of the 3 towers with which the N. front is ornamented; a chapel; a hospital; a mess hall; and 17 separate dwellings for the officers of the institution, with many other necessary buildings. There is a spacious hotel, finely situated at the brow of the hill, built of stone, surrounded with a beautiful piazza for promenade, and commanding in front a full view of the plain and buildings of the academy, and in the rear a most enchanting prospect of the river and Highlands. During the months of July and August, the cadets leave their barracks, and encamp upon the plain; and their time is devoted to a series of drills and evolutions upon parade, which are highly interesting to visitors.

West Point, Ky., Hardin co. On the S. side of the Ohio, just below the mouth of Salt River, and 75 miles W. by S. from Frankfort.

Westport, Ct., Fairfield co. This pleasant town was called Saugatuck, the name of a river that passes through it, until 1835. It was taken from the towns of Fairfield, Norwalk, and Weston.

Westport, Me., Lincoln co. This town is surrounded by the waters of Sheepscot River and Bay, and is bounded N. by Wiscasset, E. by Edgecomb and Boothbay, and S. and W. by Sheepscot's Bay and Georgetown. It is 29 miles S. by E. from Augusta. Incorporated in 1828.

Westport, Ky., c. h. Oldham co.

Westport, Ms., Bristol co., lies near the entrance into Buzzard's Bay, on the N. side. It has an excellent harbor near the sea, formed by Horse Neck Beach, extending in front of a large and handsome maritime village, called Westport Point, situated between the E. and W. branches of Acoakset River, which meet the tide waters here. This town was attached to Dartmouth

until its incorporation in 1787. Acoaset River, extending the whole length of the town, affords a good water power. There is another flourishing village in the town, called the Head of Westport, on the Acoaset. There is much good land here, but the surface is somewhat varied. The village at the harbor lies about 12 miles S. W. from New Bedford, and 67 S. from Boston.

Westport, N. Y., Essex co. Watered by Black Creek and several small streams flowing into Lake Champlain, which bounds it on the E. Surface level on the E. and hilly on the W.; soil clay and loam, chiefly fertile. 5 miles E. from Elizabeth, and 123 N. W. from Albany.

West Rockhill, Pa., Bucks co. Watered by Perkiomen Creek and a branch of Tolhickon Creek. Surface hilly; soil gravel. 92 miles E. N. E. from Harrisburg.

West Roxbury, Ms., Norfolk co. A new town, taken in 1852 from the city of Roxbury, including the parish of West Roxbury, and the village of Jamaica Plain.

West Springfield, Ms., Hampden co. This is a large, pleasant, and flourishing agricultural town, situated on the W. bank of Connecticut River, and watered by the beautiful Westfield River from W. to E. The surface of the town is delightfully varied by hills and valleys. Proven's Mountain is the principal elevation. The soil is greatly varied, but for the most part the lands are excellent. There are a number of pleasant and flourishing villages in this large town; those called West Springfield, Agawam, and Feeding Hills, are the principal. This town was formerly a part of Springfield, and called *Springfield Mountains*. It was first settled about 1654. The town is connected with Springfield by a bridge, four ferries, and by the Western Railroad, which crosses the river by a viaduct, and passes through the town. 100 miles W. S. W. from Boston, and 100 E. S. E. from Albany.

West Stockbridge, Ms., Berkshire co., was formerly a part of Stockbridge. It was purchased of the Stockbridge Indians, by the whites, and called Queensboro, until its incorporation in 1774. A collection of rugged hills occupy the centre of the town. Tom Ball Mountain is near the S. W. corner, and Stockbridge Mountain is on the eastern side. The S. and south-eastern parts consist of rough, broken land. Lime quarries abound, and much valuable marble is found here. West Stockbridge village, watered by Williams River, is a pleasant, busy place; it is the terminus of the Housatonic Railroad from Bridgeport, on Long Island Sound, and is united to the Western Railroad by a branch railroad to the state line, where a depot on the Western Railroad in this town is located. From this depot the distances by railroads are, to Boston 162 miles, to Albany 38 miles.

West Troy, N. Y., upon the W. side of the Hudson, opposite Troy, is properly a suburb of that city, and is connected with it by a bridge at the N. part, and by three ferries farther S., which ply continually between the two places. It lies within the limits of the township of Watervliet. It was incorporated as a village in 1836, comprising what was before called the village of Watervliet, with Gibbonsville and Port Schuyler. Outlet locks here connect the Erie and Champlain Canals with the Hudson River. It has a valuable water power, derived from the canal. There is a United States arsenal, established here in 1813, which has sev-

eral extensive buildings of stone and brick, with a large store of arms, arranged and kept in fine order. Attached to this establishment are about 100 acres of land, enclosed by an iron fence in front, and by a wall on the sides and rear, containing in all nearly 40 buildings. A fine Macadamized road connects West Troy with Albany, 6 miles distant. Enjoying similar advantages for trade and business with Troy herself, this flourishing suburb is destined, with the parent city, to a rapid growth.

West Turin, N. Y., Lewis co. Watered by Fish Creek and Salmon River, and partly bounded on the E. by Black River, in which are the High Falls. The Black River Canal also enters the river on the W. side, just below the falls. Surface mostly undulating; soil rich sandy loam and clay. 11 miles S. from Martinsburg, and 126 N. W. from Albany.

West Union, Io., c. h. Fayette co.

West Union, N. Y., Steuben co. Incorporated in 1843.

West Union, O., Tiffin township, c. h. Adams co. Lies 100 miles S. from Columbus, and 55 S. W. from Chillicothe.

West Union, O., c. h. Adams co., 106 miles S. from Columbus.

West Union, Va., c. h. Doddridge co.

Westville, Mi., c. h. Simpson co. A little S. from Strong, a branch of Pearl River, and 55 miles from Jackson.

Westville, N. Y., Franklin co. Watered by Salmon River. Is mostly a level town; soil sandy loam. 8 miles N. W. from Malone, and 220 N. from Albany.

West Windsor, Vt., Windsor co. The western part of the beautiful town of Windsor was set off in the year 1848, and called by the above name.

Wethersfield, Ct., Hartford co. A very fertile town on Connecticut River, adjoining Hartford, and famous for the cultivation of onions, which are raised in large quantities for exportation. The state prison is here. It is situated on a cove which sets back from the Connecticut at the N. end of the village. The apartments of the warden are at the E. end of the prison building. The hall, or central part, is 154 feet long, 43 feet wide, and 30 feet high, including 200 cells, in which the male prisoners are locked up at night. The W. end is used as the female department, containing cells, rooms for labor, kitchen and apartments for the matron. To the N. of the prison is a quadrangular yard, containing the workshops in which the convicts perform their daily labor.

Wethersfield, N. Y., Wyoming co. Watered by Tonawanda and Wiskoy Creeks. Surface rolling; soil well suited to grass. 10 miles S. W. from Warsaw, and 258 W. from Albany.

Wetumpka, Ga., Montgomery co. This town and village are situated on the Coosa River, a few miles above its junction with Tallapoosa, to form the Alabama, and by post road 110 miles E. by S. E. from Tuscaloosa. It is in a healthy and fertile section of country, at the head of steamboat navigation, and is a flourishing village.

Wetzel County, Va., c. h. at New Martinsville. N. W. part of the state. On the Ohio River. Watered by Fishing Creek. Hilly.

Weybridge, Vt., Addison co. Weybridge is watered by Otter Creek, which affords it good mill sites. Lemonfair River, a sluggish stream, also waters it. Some parts of the town are mountainous, but the soil is generally good; the

basis being limestone, it yields good crops. The settlement was commenced about the beginning of the revolutionary war, by Daniel Stow and John Sanford, but the settlers were soon after dispersed or made prisoners by the enemy. The settlement was recommenced on the return of peace. The first settlers were mostly from Massachusetts. 30 miles S. by E. from Burlington.

Weymouth, Ms., Norfolk co. This place was called *Wessagusset* by the Indians, and Weymouth by the English, after a town in England, from which emigrants came in 1624. This was the second settlement made by white men in New England. The surface is pleasantly diversified by hills and valleys; the soil is a strong, gravelly loam, with a granite superstructure. Weymouth is finely watered by large and beautiful ponds, and by two important arms of Boston Harbor, called Fore and Back Rivers. Between these rivers is a large tract of gently swelling land, of good soil, extending to Quincy, and is united to Quincy Point by a bridge across Fore River. There are several pleasant villages in Weymouth, but the principal place of business is at Weymouth Landing, so called, or Washington Square, at the head of Fore River, on the line of, and connected with, a large village in Braintree. The South Shore Railroad from Boston to Cohasset passes through this pleasant and flourishing village. The village at the S. part of the town is pleasantly situated on elevated ground, 3 miles S. from Washington Square. The Old Colony Railroad passes through this part of the town. 14 miles from Boston. From Weymouth Landing it is 11 miles S. by E. from Boston, and 24 N. W. from Plymouth. Among other manufactures, that of boots and shoes is extensively carried on.

Wharton, Pa., Potter co. Watered by a branch of Stony Creek. 179 miles W. S. W. from Harrisburg.

Wharton County, Ts., c. h. at Wharton. On both sides of the Colorado, towards its mouth.

Whartonville, Va., Fauquier co. A village about 40 miles from North Carolina.

Whately, Ms., Franklin co. Previous to its incorporation, in 1771, this town comprised the N. part of Hatfield. The Connecticut River bounds it on the E., and the town is well watered by Mill River and West Brook. In this town is a considerable quantity of intervalle land on Connecticut River, but it is not of the first quality. The principal street runs parallel with the river, about 2 miles westward. Between this street and the river is an extensive tract of swampy land, called Whately Swamp. Westward of the street the township is hilly, and the soil in many places rich and fertile. The village of West Whytel is pleasantly located amid the high grounds at the W. part of the town. About 2 miles northward from this village is Mount Esther. 11 miles S. from Greenfield, and 90 W. by N. from Boston. The railroad between Springfield and Greenfield passes through this town.

Wheatfield, N. Y., Niagara co. Bounded S. by Tonawanda Creek, and S. W. by the Niagara River. Surface undulating; soil chiefly fertile loam. 12 miles W. from Lockport, and 289 N. of W. from Albany.

Wheatland, N. Y., Monroe co. Watered by Allen's Creek, a tributary of the Genesee River, which bounds it on the E. Surface undulating;

soil productive calcareous loam. 17 miles S. W. from Rochester, and 232 W. from Albany.

Wheeler, N. Y., Steuben co. Watered by several streams flowing into Conhocton River, which partly bounds it on the S. W. Surface hilly; soil sandy loam and clay. 7 miles N. from Bath, and 210 W. from Albany.

Wheeling, Va. City, and seat of justice of Ohio co. Situated on the E. side of the Ohio River. About 35 miles N. W. from Richmond, 308 W. by N. from Baltimore, and 383 N. by W. from Cincinnati. The hills back of the city come so near the river as to leave rather a small area for building, so that the place is forced to extend along the high alluvial bank, principally on one street, for a distance of about 2 miles. It lies on both sides of the Wheeling Creek, which here empties into the Ohio. This was the site of old Fort Henry, and the seat of important operations in the early wars with the Indians. A fine stone bridge over the mouth of this creek connects the upper and lower portions of the city. It is the most important place in commerce and manufactures in Western Virginia. It contains several handsome churches, and other public and private buildings. It has cotton mills, rolling mills, glass works, a silk factory, a steam engine factory, &c. A large business is done in the building of steamboats. The Virginia Iron Works, located here, turn out from 1000 to 1200 kegs of very superior nails per week.

The national road, from Cumberland across the Alleghany Mountains to St. Louis, passes through Wheeling, and the Baltimore and Ohio Railroad terminates here, making this place a great thoroughfare of travel between the east and west. The Ohio River is here crossed by a magnificent wire suspension bridge, erected at a cost of over \$200,000. The span (said to be the longest in the world) is 1010 feet, from centre to centre of the stone supporting towers, and its height above low-water mark is 97 feet. The height of the towers on the Wheeling side is 153½ feet above low-water mark, and 60 feet above the abutment on which they stand. The entire bridge is supported by 12 wire cables, 1380 feet in length, and 4 inches in diameter, each composed of 550 strands. These cables are laid in pairs, 3 pairs on each side of the flooring. The bridge has a carriage way, 17 feet wide, and two foot-walks, 3½ feet wide. The wire for this stupendous and beautiful structure was manufactured by D. Richards & Co., an enterprising firm in Wheeling.

Wheelock, Vt., Caledonia co. There is some good land in this town, but a great part of it is mountainous or hilly, and fit only for pasturage. The streams flow N. W. into the Lamoille, and S. E. into the Passumpsic. This town was granted, in 1785, to Moore's (Indian) Charity School, at Dartmouth College, and named in honor of John Wheelock, who was at that time president of that institution. The first settlers were Joseph Page, Abraham Morrill, and Dudley Swasey, in 1790. 44 miles N. E. from Montpelier, and 10 N. from Danville.

Whitfield County, Ga. New. In the N. W. angle of the state.

White County, As., c. h. at Searcy. Bounded N. by Independence co., E. by White River, separating it from Jackson and St. Francis counties, S. by Pulaski co., and W. by Conway and Van

Buren counties. Drained by Little Red and other branches of White River.

White County, Is., c. h. at Carmi. Wabash River is on the E., Gallatin co. S., Franklin and Jefferson W., and Wayne and Edwards N. Little Wabash River drains most of the county.

White County, Ia., c. h. at Monticello. Bounded N. by Pulaski co., E. by Cass and Carroll, S. by Tippecanoe, and W. by Benton and Jasper counties. Drained by Tippecanoe River and branches. The surface is level, much of it being prairie, and the soil fertile.

White County, Te., c. h. at Sparta. White co. is bounded by Bledsoe S. E., Warren W., Caney Fork River S. W., Smith N. W., Jackson N., and Overton N. E. The eastern branches of Caney Fork River drain the county.

White Creek, N. Y., Washington co. Watered by Owl and Little White Creeks, flowing into the Hoosic River, which partly bounds it on the S. Surface hilly; soil rich sandy loam. 12 miles S. from Salem, and 42 N. E. from Albany.

Whitefield, Me., Lincoln co. Sheepscot River passes through this town, giving it fertility, beauty, and a good water power. It has Windsor on the N., Jefferson on the E., Alna on the S., and Pittston on the W. 16 miles S. E. from Augusta.

Whitefield, N. H., Coos co. The soil is generally thin and light, of easy cultivation, and tolerably good. In the N. part low spruce swamps abound. Here lie part of Blake's, Long, Round, and Little River Ponds, besides two other small ponds. The second of these is a beautiful sheet of water, of considerable size, abounding with fish. John's River passes through this town. First settlers, Major Burns and others, who settled soon after 1774. 120 miles N. from Concord, and about 12 S. E. from Lancaster.

Whitehall, N. Y., Washington co. At the S. end of Lake Champlain. 73 miles N. from Albany, and 82 miles S. from Burlington, Vt. This place derives its importance from its peculiarly favorable situation for business, at the junction of the Champlain Canal, from Albany and Troy, with the lake, and from its being a thoroughfare of travel on the great route between New York and Canada. The place is located in a romantic situation, at the mouth of a river called Wood Creek, which descends through a rocky ravine, and over a fall of about 20 feet, into the lake. The village is compactly built between the bold and lofty cliffs which overlook the town, and consists of about 150 houses; a number of mills, for which the river furnishes a fine water power; numerous warehouses for the forwarding and commission business; several churches, and other public buildings. This place was occupied by Burgoyne as his head-quarters, for a considerable time, and on the heights overlooking the harbor are the remains of a battery and blockhouse erected by him. Some of the finest steamboats on any of our waters ply between this place and St. John's, in Canada, 150 miles distant, whence there is steam communication direct to Montreal. There is also a continuous line of railroad communication N., via Rutland, Middlebury, and Burlington, to Montreal, E. to Boston, and S. to Saratoga Springs, Troy, Albany, and Schenectady, and the great routes of travel centering at these places.

Whitehead, Me., Lincoln county. An island off the town of St. George, with a light and

tower 30 feet in height. The light bears about S. W. by S. 9 miles from Owl's Head.

Whitely County, Ky., c. h. at Whitely. Tennessee is on the S. of this county, Wayne co., Ky., W., Rockcastle River, or Pulaski co. N. W., Knox N. E., and Harlan E. From S. E. to N. W. the county is crossed by the Cumberland River.

Whitemarsh, Pa., Montgomery co. Whitemarsh has long been noted for its elegant and variegated marble. The village lies 12 miles N. from Philadelphia.

White Plains, N. Y., c. h. Westchester co. It is watered by the Bronx River and Mamaroneck Creek. Surface somewhat hilly; soil chiefly loam, well suited to grass. 131 miles S. from Albany.

White Sulphur Springs, Va., Greenbrier co. See *Fashionable Resorts*.

Whitesides County, Is., c. h. at Lyndon. Formed from Jo Daviess county in 1836. It is bounded N. by Carroll co., E. by Ogle and Lee, S. by Bureau and Henry counties, and W. by Rock Island co. and the Mississippi River, separating it from Iowa. Drained by Rock River and its branches. Surface level, or slightly uneven; soil fertile.

Whitestown, N. Y., Oneida co. Half shire town with Rome. It is watered by Oriskany and Sadagada Creeks, flowing into the Mohawk River, which bounds it on the N. E. Surface undulating, with broad fertile valleys; soil rich calcareous loam. 97 miles N. W. from Albany.

Whiting, Me., Washington co. This town lies at the head of Machias Bay, and is watered by several ponds and a good mill stream. It lies 152 miles E. N. E. from Augusta, and 6 N. E. from Machias. Incorporated 1825.

Whiting, Vt., Addison co. Otter Creek waters the eastern border of the town, but affords no mill privileges. Along the eastern part of the town, near Otter Creek, is a swamp which covers 2000 or 3000 acres. It affords an abundance of excellent cedar, pine, ash, &c. The soil is generally of the marly kind, and produces good grass and grain. John Wilson erected the first house in Whiting in 1772, and in June, 1773, a family by the name of Bolster moved into it. During the revolution the settlement was abandoned, but was recommenced at the close of the war. 40 miles S. W. from Montpelier, and 10 S. from Middlebury.

Whitingham, Vt., Windham co. Deerfield River runs through the whole length of this town, along the western part. There are many other smaller streams in different parts. There are two natural ponds. Sawdawda Pond is so called from an Indian of that name, who formerly lived near it, and was afterwards supposed to have been drowned in going down Deerfield River. The surface of Whitingham is uneven, but the soil is generally good, and has a variety of timber. A mineral spring was discovered here in 1822. The western part of the town abounds with limestone. The settlement was commenced in 1770, by Mr. Bratlin and Silas Hamlington. 17 miles W. by S. from Brattleboro', and 18 E. S. E. from Bennington.

Whitley County, Ia., c. h. at Whitley. Bounded N. by Noble co., E. by Allen, S. by Huntington and Wabash, and W. by Kosciusco co. Eel River and its tributaries water this county, affording hydraulic power. The soil is fertile.

Whitley, Ia., c. h. Whitley co. On the N. W.

side of Eel River. 120 miles N. N. E. from Indianapolis.

Whitley County, Ky. Wayne co. bounds this county on the W., Pulaski and Laurel N., Knox E., and Claiborne and Campbell counties, of Tennessee, S.

Whitley, Ky., c. h. Whitley co. On the S. side of Cumberland River. 125 miles S. S. E. from Frankfort.

Whitpain, Pa., Montgomery co. On the W. side of Wissahicon Creek. This township is situated 15 miles N. N. W. from Philadelphia.

Whitesburg, Ky., c. h. Letcher co.

Whiteville, N. C., c. h. Columbus co. On the E. side of Beaver Dam Creek. 125 miles S. by W. from Raleigh.

Whitesville, N. C., Columbus co. This village is located on Beaver Dam, a branch of Waccamaw River. It is the seat of justice, and lies 118 miles S. from Raleigh.

Whitneyville, Me., Washington co.

Wickford, R. I., Washington co. Situated on a W. branch of Narraganset Bay, and has a good harbor. S. from Providence 22 miles. It has considerable shipping in the West India and coasting trade.

Wiconisco, Pa., Dauphin co. Watered by Wiconisco Creek, which enters the Susquehanna River at this place. Distant 53 miles N. from Harrisburg.

Wiggins Ferry, Is., St. Clair co. On the Mississippi, opposite St. Louis, Mo., and 95 miles S. by W. from Springfield. It has constant communication with St. Louis by steam ferry boats.

Wilbraham, Ms., Hampden co., was first settled in 1731. Before its incorporation, in 1763, it was the fourth parish of Springfield, and called Springfield Mountains. This town is watered by the Chicopee, and several of its small tributaries. The surface is diversified by hills and valleys, and the soil is well adapted to agricultural pursuits. The Wesleyan Academy, in Wilbraham, is an institution of great value, and in high reputation. It is situated at the N. part of the town, in a pleasant village, about 3 miles from the Western Railroad. From this village, by the railroad, it is 9 miles to Springfield, and 89 from Boston. South Wilbraham village lies 4 miles S. from the academy, and 2 N. from Rattlesnake Hill.

Wilcox County, Aa., c. h. at Canton. Butler is on the S. E. of this county, Monroe S., Clarke and Marengo W., Dallas N., and Montgomery N. E. Through the county, from N. to S. passes the Alabama River.

Wilkes County, Ga., c. h. at Washington. Columbia and Warren are on the S. E., Greene S. W., Oglethorpe N. W., and Broad River, or Jefferson co., and Lincoln E.

Wilkes County, N. C. This county is situated in a valley between mountains, and is drained by the sources of Yadkin River. A small village at the court house is the principal place.

Wilkesbarre, Pa. Shire town of Luzerne co. in the Wyoming valley. 114 miles N. E. of Harrisburg, and about 120 N. N. W. from Philadelphia. This town was laid out in 1773, by Colonel Durkee, who gave it the compound name it bears in honor of two eminent and zealous advocates of the American cause in the British Parliament—Wilkes and Barré. It is situated on a high bank of the Susquehanna River, which is here spanned by a fine bridge, and occupies one of the most

splendid sites in the state. The town is regularly laid out, but upon a plan, perhaps, entirely unique. There are four streets forming a parallelogram of equal sides, enclosed by which are four others running diagonally to these, and forming a diamond within the outer square, containing about 4 acres. This diagonal square is the public green, in which are the churches, the court house, and other buildings. At the angles it is cur by the sides of the parallelogram which surrounds it. The western angle is opposite the bridge, with the width of Main Street intervening. The bridge connects Wilkesbarre with the village of Kingston.

This is now a place of considerable business. There is here one of the most extensive rolling-mills in the country. The iron for these works is brought by canal from Danville. The Pennsylvania North Branch Canal passes E. of the town; and a railroad runs over the mountains 20 miles to the Lehigh at White Haven. The rich coal mine of the Baltimore Company is about 2 miles N. E. of the village.

The first settlers of this town, and of the beautiful valley in which it is situated, were principally from Connecticut. The inhabitants are still a highly-intelligent and moral people, retaining, in a good degree, the manners, habits, and enterprise of their New England fathers.

The valley of Wyoming, it is well known, is one of the most enchanting spots in its natural features, and one of the richest in historical associations, among the localities of our country. We cannot indulge in any extended description here, or enter into the minute incidents of its thrilling history. The site of Fort Wyoming was where the court house now stands. There was another fort a little below the bridge. Fort Durgee was half a mile below, and on the hill, N. of the village, the remains of the old redoubts are still visible.

"The severe and long-continued struggle for the possession of this country," says Professor Silliman, who visited this valley in 1829, "which was sustained by the original Connecticut settlers from 50 to 80 years since, and the repeated attempts which were made to disposes them by arms, sufficiently evince the high estimation in which it was held by all parties. . . No one who now surveys this charming valley can wonder that they would not quietly relinquish their claims. . . Few landscapes that I have seen," he adds, "can vie with the valley of Wyoming. The first glance of a stranger, entering at either end, or crossing the mountain ridges which divide it (like the Happy Valley of Abyssinia) from the rest of the world, fills him with the peculiar pleasure produced by a fine landscape, combining richness, beauty, variety, and grandeur."

The visitor to this beautiful valley will not fail to inquire for the battle ground, which was the scene of such a desperate conflict, and bloody massacre during the war of the revolution. The site of Forty Fort, the place where the little force of Wyoming was chiefly concentrated, to defend their settlement against an invading army of about three times their number, composed of British-American loyalists and Indians, is two or three miles N. of Wilkesbarre, on the Kingston side of the river, and about as much farther still to the N. is the plain, on and near which most of the men of Wyoming were slain, in and after the battle,—chiefly in their flight, and after sur-

rendering themselves prisoners of war. Only 60 of the men who went into this battle survived. The slain were buried about a month afterwards in one common grave. A beautiful monument has recently been erected on the spot where their ashes moulder, to commemorate their heroic martyrdom in defence of their homes, their liberties, and their country's cause.

Wilkesboro', N. C., c. h. Wilkes co. On the S. side of Yadkin River. 172 miles W. N. W. from Raleigh.

Wilkinson County, Ga., c. h. at Irwinton. This county is bounded N. E. by Oconee River, or Washington co., S. E. by Laurens, S. W. by Twiggs, and N. W. by Jones.

Wilkinson County, Mi., c. h. at Woodville. Mississippi River is on the W., New Feliciana, La., S., Homochitto River, or Adams co., Mi., N. W., Homochitto River, or Franklin co., N. E., and Amite E.

Will County, Is., c. h. at Juliet. Bounded N. by Du Page and Cook counties, E. by Indiana, S. by Iroquois and Vermilion, and W. by Grundy and Kendall counties. Watered by Desplains River and Kankakee River and their branches.

Williams County, O., c. h. at Defiance. This county has an excellent soil, very valuable for grain and grass. It is well supplied with water by many streams, the principal of which are the Mauwee, Anglaise, Little St. Joseph's, and Tiffin. On Maumee River are the Sulphur Springs; they are clear and cold, and have a strong odor, perceptible for a quarter of a mile. The Wabash and Erie Canal passes through the county, and will increase its business.

Williamsburg, Ms., Hampshire co. This township was granted, in 1736, to volunteers, for services against the Indians in 1704. It was attached to Hatfield, and called Hatfield Addition, until its incorporation in 1771. The surface is quite elevated, but pleasantly variegated by hills and valleys; the soil is warm and fertile. It is watered by Mill River, a fine stream, which passes through the centre of the town. Havdensville, a flourishing village, is located in Williamsburg, 8 miles N. W. from Northampton, and 95 W. from Boston.

Williamsburg, Mi., c. h. Covington co. Situated between the head branches of Leaf River. 82 miles S. E. from Jackson.

Williamsburg, N. Y., in the township of Bushwick, Kings co., on Long Island, about 3 miles N. E. of Brooklyn, and opposite to the N. part of the city of New York. It lies extended about a mile and a half on the bank of the East River, which has a bold elevation from the water at this place. Here are several large and substantial docks, with ample depth of water, for safe and convenient moorings for vessels of the largest class. It is but a few years since Williamsburg was but an inconsiderable village. An act of incorporation was obtained for it as a village in 1827, a steam ferry having previously been established to the foot of Grand Street, New York, by which an impulse was given to its prosperity. A steam ferry boat also now plies between this place and Peck Slip, at the lower part of New York, which accommodates a rapidly-increasing number of merchants and other men of business, who come here to find a pleasant residence out of the city. So great has been the progress of improvement, that the ancient village of Bush-

wick, which was formerly quite distinct from that of Williamsburg, can scarcely be identified.

Williamsburg has now about 30 streets graded and regulated, some of which are paved, and one Macadamized; and the number of streets permanently laid out amounts to over 70. It has several churches of different denominations, many large and handsome blocks of stores and warehouses, and numerous dwellings enjoying the best advantages of situation. The population in 1840 was 5094; in 1845, 11,338; and in 1850, 30,786.

Williamsburg District, S. C., Williamsburg and Kingstree shire towns. This district has Santee River on the S. W., Sumpter district N. W., Lynch's Creek, or Marion district, N. E., and Georgetown S. E. A branch of Great Pedee, called Black River, drains the district.

Williamsburg, Va., c. h. James City co. This village was formerly the metropolis of Virginia. It is situated on the E. side of a small creek that runs into James River, 32 miles E. by S. from Richmond, and 175 S. by E. from North Carolina. The streets are laid out with great regularity, and the public edifices exhibit the ruins of comparative grandeur, particularly the Capitol and college. The college, called the College of William and Mary, was endowed by the royal government with a clear and certain revenue of £3000 per annum. Though built to accommodate 100 pupils, it has seldom more than 40. Attempts have recently been made to revive the former prosperous state of this institution. See *Colleges*.

Williamson County, Is., c. h. at Bainbridge. Bounded N. by Franklin co., E. by Gallatin, S. by Johnson and Union, and W. by Jackson co. Drained by Muddy Creek, a branch of the Mississippi, and Saline, a branch of the Ohio River.

Williamson, N. Y., Wayne co. Watered by several small streams flowing into Lake Ontario, which bounds it on the N. 17 miles N. W. from Lyons, and 200 N. of W. from Albany.

Williamson County, Te., c. h. at Franklin. Bedford bounds it on the S. E., Duck River or Murray S., Dickson W., Davidson N., and Ruthersford N. E. Harpeth River, a branch of Cumberland, rises in this county, and drains its northern side. Duck River and its branches water the southern parts.

Williamson County, Ts., c. h. at Georgetown. E. of the Colorado.

Williamsport, Ia., c. h. Warren co. On the W. bank of Wabash River. 78 miles W. N. W. from Indianapolis.

Williamsport, Md., Washington co. On the E. side of Potomac River, at the entrance of Conecogue Creek, 107 miles N. W. from Annapolis. The Chesapeake and Ohio Canal passes through it.

Williamsport, Pa., Washington co. This place was formerly called Parkinson's Ferry. It is at the mouth of Pigeon Creek, on Monongahela River. 18 miles E. from Washington.

Williamsport, Pa., c. h. Lycoming co. On the N. bank of the W. fork of Susquehanna River. 93 miles N. from Harrisburg. The Pennsylvania Canal passes through it, and a railroad, 25 miles long, connects it with Ralston. 65 miles S. from Tioga, and 160 N. W. from Philadelphia.

Williamston, N. C., c. h. Martin co. On the S. side of Roanoke River. 25 miles W. from Plymouth, and 53 N. W. from Washington, on Pamlico River.

Williamstown, Ky., c. h. Grant county. On the E. side of Eagle Creek, a branch of Kentucky River, and 49 miles N. N. E. from Frankfort.

Williamstown, Ms., Berkshire co. This town is situated in a large and fertile valley, surrounded by romantic elevations, and watered by Hoosic and Green Rivers. It was first settled about the year 1751, and was called *Hoosic* by the Indians. The general character of the soil is clayey; but in few places is the clay so hard and stiff as to be injurious to its fertility. Loam predominates in some places, and a few spots of some extent may be called gravelly. Some of the best lands lie along the Hoosic and Green Rivers. But the hills, also, and generally the mountain sides, almost, and sometimes quite up to their tops, have a good, and, in many places, an excellent soil, suited both to grazing and tillage. The village in this town is delightfully situated on a gentle rise from the river. Williams College, in this town, is handsomely located. (See *Colleges*.) 125 miles W. N. W. from Boston, and 24 N. from Pittsfield. About 5 miles W. from North Adams, and thence by railroad to Boston, 171.

Williamstown, N. Y., Oswego co. Watered by a branch of Fish Creek, and by Salmon Creek. Surface level; soil moist sandy loam, well suited to grass. 28 miles E. from Oswego, and 137 N. W. from Albany.

Williamsville, N. Y., Erie co. On Ellicott's Creek. 278 miles W. from Albany. Large quantities of water lime, or cement, are produced from the vicinity.

Williamstown, Vt., Orange co. Williamstown lies on the height of land between Winooski and White Rivers, and contains no large streams. A brook, which here runs down a steep hill towards the W., divides naturally, and while one part runs to the N., forming Stevens's Branch of Winooski River, the other runs to the S., forming the second branch of White River. The turnpike from Royalton to Montpelier passes along these streams, and is known by the name of the Gulf Road, from the deep ravine through which it passes in this town, near the head of the second branch. In this ravine a medicinal spring has been discovered. Williamstown is timbered principally with hard wood, and the soil is well adapted to the production of grass. There is a small but pleasant village near the centre of the town. The settlement was commenced in June, 1784. From Montpelier 10 miles S. E., and about the same distance N. W. from Chelsea.

Willimantic, Ct., Windham co. A factory village, on the N. side of Willimantic River. 32 miles E. from Hartford, and 30 N. from New London by railroad.

Willinboro', N. J., Burlington co. Bounded N. W. by the Delaware River. Surface mostly level; soil good sandy loam. 7 miles N. W. from Mount Holly.

Williston, Vt., Chittenden co. This is an excellent farming town, of a rich soil, with an uneven surface, but not mountainous. Williston is watered by Winooski River and some smaller streams, but its water power is small. Thomas Chittenden was the father of this town. He came here in 1774. When the Vermont constitution was established, in 1778, Mr. Chittenden was selected as a candidate for governor, to which office he was annually elected, with the exception of one year, till his death, in 1797. 27 miles W. N. W. from Montpelier. This town adjoins Bur-

lington, and is easy of access to lake and railroad transportation.

Willoughby, O. A township in Lake co., lying on the shore of Lake Erie, and extending 8 miles from N. to S., and 5 from E. to W. The lands are productive and highly cultivated.

There is a flourishing village in this township, of the same name, situated on the Chagrin River, two miles and a half from its mouth, 11 miles S. W. from Parisville, the county seat, 19 miles E. from Cleveland, and 158 N. E. from Columbus. This village, and the township to which it belongs, were both formerly called Chagrin, from the name of the river. This name was changed for Willoughby in 1834. The first settlement was made here by the eccentric pioneer, David Abbot, and others with him, about the year 1799. The first organized town meeting was held in 1815.

This was the site, for some years, of a flourishing and well-conducted Medical Institution, which was founded in 1834, and provided with a spacious brick edifice, pleasantly located, and with an ample corps of instructors. This institution has since been removed to Columbus. The village contains a Presbyterian and a Methodist church. Tradition says that a bloody battle was fought here in early days between hostile Indian tribes; and some human bones, which were thrown up when preparing the foundations for the Medical College, have been supposed to be the bones of the slain.

Willow Grove, Pa., Montgomery co. In a beautiful vale, 13 miles N. from Philadelphia, and 111 E. from Harrisburg. The buildings are chiefly of stone. It is a place of summer residence for the citizens from Philadelphia.

Willsboro', N. Y., Essex co. Watered by Boquet River and some other tributaries of Lake Champlain, which bounds it on the E. Surface mostly level on the E., and hilly on the W.; soil rich clay loam. 15 miles N. E. from Elizabeth, and 137 N. N. E. from Albany.

Willshire, O., c. h. Van Wert co.

Wilmington, De., New Castle co. City, and port of entry. Situated between Brandywine and Christiana Creeks, 1 mile above their junction, 47 miles N. from Dover, and 28 miles S. W. from Philadelphia. Population in 1830, 6628; in 1840, 8367; in 1850, 13,931. Both the business and population of the place have rapidly increased within a few years past. It is situated in the midst of one of the finest agricultural districts in the Middle States. Its site, like that of Philadelphia, and of Baltimore, is on the outer edge of the primitive formation, and on the inner edge of the sea sand alluvion. The city is built on ground gradually rising to the height of 112 feet above the level of tide water. It is laid out with regularity; the streets, which are broad and airy, crossing each other at right angles. It is supplied with water from the Brandywine, by waterworks, like those of Philadelphia. The place is well built; the houses are generally of brick, and many of them are elegant. It has several churches of different denominations, and is distinguished for its excellent private schools. The principal public buildings are a city hall, a hospital and almshouse, two market houses, several banks, and an arsenal. The hospital is a large edifice, 126 feet long, and 3 stories high, located upon a fine, healthy eminence.

Wilmington is the largest place in Delaware, and, next to Philadelphia, the greatest mart of

trade in the basin of the Delaware River. The Christiana admits vessels drawing 14 feet of water to the city; and those drawing 8 feet can come up the Brandywine. Considerable shipping is owned here, and the whale fishery is carried on to some extent from this port.

But Wilmington is more distinguished for its various kinds of manufactures than for its maritime commerce. The falls of the Brandywine, in the immediate neighborhood, afford a valuable water power, which is rendered available to a great extent for the operations of machinery; applied to flouring mills, paper mills, saw mills, cotton, woollen, and various other manufactories. The flouring mills at Wilmington are among the largest in the United States. The making of gunpowder has been carried on here extensively for many years. Within 10 miles of this place, there is a large number of important manufactories, rendering it one of the largest manufacturing districts in the United States south of Philadelphia.

Wilmington, Ms., Middlesex co. At the time of its incorporation, in 1730, this town was a part of Woburn and Reading. The surface is generally level, with a light and sandy soil, well adapted for the growth of hops. The wood is chiefly pine, and much charcoal is made. The town is watered by a branch of Ipswich River, and the Middlesex Canal passes through it. The Boston and Lowell and Boston and Maine Railroads pass through this town. 15 miles N. W. from Boston, and 11 S. E. from Lowell.

Wilmington, N. Y., Essex co. Watered by the Saranae and the W. branch of the Au Sable River. Surface mountainous; soil fertile in some of the valleys. In this vicinity are immense beds of excellent iron ore. 28 miles N. W. from Elizabeth, and 148 N. from Albany.

Wilmington, N. C., port of entry and seat of justice of New Hanover co. 90 miles S. E. from Fayetteville, and 148 S. S. E. from Raleigh. It is on the E. side of Cape Fear River, about 35 miles from the sea. The harbor has a dangerous shoal at its entrance, but will admit vessels of 200 tons. There are two islands enclosed by different channels of the river, opposite the town, which afford some of the finest rice fields in the state. Wilmington is well situated for trade, though not accounted healthy in its location. It is at the terminus of the great series of southern railroads extending from New York, and branching in various directions from the main route.

Wilmington, Va., Fluvanna co. A village. 60 miles N. W. by W. from Richmond.

Wilmington, O., c. h. Clinton co. On Todd's Fork, a branch of Little Miami River. 72 miles S. W. from Columbus.

Wilmington, Vt., Windham co. The E. and W. branches of Deerfield River unite in this town, which, with the waters of Beaver and Cold Brooks, and of Ray's Pond, a large and beautiful sheet of water, a valuable mill power is produced. There are some fine tracts of land in the town, and a considerable portion that is rough and hard to till. The village is pleasant and thriving. Wilmington was settled before the revolutionary war, but increased but slowly until the peace. 17 miles E. from Bennington, and 14 S. W. from Newfane.

Wilmot, N. H., Merrimac co. The streams forming Blackwater River have their origin in the vicinity of Wilmot. They afford a good

number of mill sites. The town is composed of hills and valleys. There are no large collections of water, nor any mountains, excepting Kearsarge, whose summit forms the southern boundary. It received its name from De Wilmot, an Englishman. In 1775 this town was granted to Joseph Minot, Matthew Thornton, and others. 30 miles N. W. from Concord.

Wilmurt, N. Y., Herkimer co. This large town contains numerous lakes and ponds, sending forth streams in every direction. The land is mostly productive in summer crops, and well suited to grazing. 35 miles N. from Herkimer, and 100 N. W. from Albany.

Wilna, N. Y., Jefferson co. Watered by Indian and Black Rivers. Surface chiefly level; soil sandy and clay loam. 15 miles E. from Watertown, and 151 N. W. from Albany.

Wilson, Me. This town was incorporated in 1836, as "township number 9 in the 9th range, N. of the Waldo Patent in the county of Somerset."

Wilson, N. Y., Niagara co. Watered by Howell's and Tuscarora Creeks, flowing into Lake Ontario, which bounds it on the N. Surface chiefly level; soil gravelly and sandy loam and clay. 10 miles N. W. from Lockport, and 294 N. of W. from Albany.

Wilson County, Te., c. h. at Lebanon. Sumner co., or Cumberland River, bounds the N. W. part. Smith is on the E., Warren S. E., Rutherford S. W., and Davidson W.

Wilton, Ct., Fairfield co. Wilton was taken from the N. part of Norwalk, in 1802. The surface of the town is broken by two ridges of hills, but the soil is a gravelly loam, and productive of grain and a great variety of fruit. Agriculture is the principal business of the inhabitants. The town is watered by Norwalk River.

A classical school, of high reputation, was established here in 1818, by Hawley Olmstead, Esq. This school is worth a million of the silver mines that were discovered and worked in this town during the revolution.

Wilton, Me., Franklin co. This is one of the most flourishing agricultural townships in the state. It has a fertile soil, a beautiful surface, and two pleasant villages. It lies a little distance from Sandy River.

Wilton has an adequate water power for common purposes, produced by streams issuing from beautiful ponds in the town. The people are principally agriculturists. 38 miles W. N. W. from Augusta.

Wilton, N. H., Hillsboro' co. Souhegan is the principal river, which, with its branches, produces a valuable water power. This town has neither mountains, ponds, nor swamps. It is, in general, of strong and excellent soil. Good clay is found in plenty near the streams. There are several quarries of excellent stone for splitting and hewing. The town derived its name from Wilton, an ancient borough in Wiltshire, England. First settlers, three families from Danvers, Ms.; two by the name of Putnam, and one by the name of Dale. Settled in 1738. 9 miles W. by S. from Amherst, and 40 S. by W. from Concord. A railroad passes through here.

Wilton, N. Y., Saratoga co. Watered by a branch of the Hudson River. Surface slightly uneven on the E., and hilly on the W. 12 miles N. from Ballston Spa village, and 42 miles from Albany.

Winchendon, Ms., Worcester co. Before its incorporation, in 1764, this town was called "Ipswich Canada," it having been granted to the heirs of soldiers from Ipswich, who served in an expedition to Canada in 1690. It was first settled about the year 1752. The surface is somewhat uneven, but not mountainous; there are many rocks, but the soil is deep, strong, and fertile. This town is watered by several streams, which afford a good water power, but particularly by Miller's River, a noble mill stream, which takes its rise from Monomonack Pond, partly in this town and partly in Rindge. There are fine quarries of granite in the town, and a spring tinged with iron and sulphur. There are a number of neat and flourishing villages, called Robinsonville, Bullardville, Waterville, Spring, North, and New Boston; near the latter is a beautiful pond. The excellent water power in the town, and the Boston and Vermont Railroad passing through it, will place Winchendon high on the list of manufacturing towns. 38 miles N. N. W. from Worcester, and about 20 W. N. W. from Fitchburg, from which to Boston is 50 miles.

Winchester, Ct., Litchfield co. The geological character of the town is primitive; the rocks consisting of granite, mica, slate, &c. The soil is gravelly, hard, and coarse: it affords good grazing.

The borough of Clifton was incorporated in 1832. It is a flourishing village, principally built in a narrow valley, on the banks of a mill stream, called Mad River, which is a tributary of Farmington River. The valley at this place is but barely of sufficient width to admit of a street, with buildings on each side, the ground rising immediately in every direction. Westward of the main street in the village, a road passes up a steep hill for nearly a quarter of a mile, where, upon an elevated plain, is an interesting lake, or pond, which is one of the largest bodies of water in the state, being three and a half miles in length, and three fourths of a mile in breadth. The outlet of this lake presents a novel scene; it consists of a small stream, compressed within a narrow channel, and literally tossed from rock to rock till it unites with Mad River:

Winsted, or the East village, is very pleasant. Winchester lies within the "evergreen district," so named from the forests of hemlock and other evergreen trees, with which it abounds. These "Green Woods" present one of the most impressive scenes which can be found in an American forest. 26 miles N. W. from Hartford.

Winchester, Ia., c. h. Randolph co. 81 miles E. N. E. from Indianapolis.

Winchester, Ky., c. h. Clarke co. 44 miles E. S. E. from Frankfort.

Winchester, Ms., Middlesex co. Formed in 1852, from parts of Woburn, Medford, and West Cambridge.

Winchester, Mi., c. h. Wayne co.

Winchester, N. H., Cheshire co. The face of this town is diversified with hills and valleys. The soil is of an excellent quality. Ashuelot River passes through the centre of this town, affording a great hydraulic power. It is bordered on each bank by extensive intervals, of a fertility rarely excelled. There are other small streams running through the town. The centre village is on the S. E. bank of the Ashuelot; it is

very handsome: at the lower end of it, the street is adorned with a beautiful row of native evergreen trees, which extend nearly half a mile. Two miles W. is another manufacturing village, and in the S. E. part is another. First settlers, Josiah Wildard and others, settled about the year 1732. 13 miles S. W. from Keene, and 65 S. W. from Concord.

Winchester, Te., c. h. Franklin co.

Winchester, Va., c. h. Frederick co. This town is located on a branch of Opequan Creek, in a very productive part of Virginia, and possesses, for its relative population, much solid wealth. It lies 74 miles a little N. of W. from Washington city, and 146 a little W. of N. from Richmond.

Wind Gap, Pa., Northampton co. 110 miles N. from Harrisburg. Situated at the Wind Gap, so called, one of the celebrated gorges among the Alleghany Mountains, through which the road passes from Easton to Wilkesbarre. The scenery here is very romantic. It is 15 miles S. of the Water Gap, through which the Delaware finds its way through the mountains.

Windham County, Ct., c. h. at Brooklyn. This county is uniformly hilly, yet no part of it is mountainous or very elevated. The prevailing soil is a primitive gravelly loam. The greatest portion of the county is stony and considerably rough, and the lands generally best adapted for grazing, and many sections afford some of the richest dairy farms in the state. The Quinebaug and Shetucket, with their branches, intersect this county, and afford many valuable water privileges for mills and manufacturing purposes. The valley of the Quinebaug River comprises the best land in the county.

Windham county originally belonged to the counties of Hartford and New London. It was incorporated as a county in May, 1726.

This county is bounded N. by Massachusetts, E. by Rhode Island, S. by the county of New London, and W. by Tolland county.

Windham, Ct., Windham co. The territory of this town, Mansfield, and Canterbury was given by Joshua, a son of Uncas, the celebrated Mohegan sachem, to John Mason, James Fitch, and others, in the year 1675.

"Lieutenant John Cates, a pious Puritan, who served in the wars in England, holding his commission under Cromwell, when Charles II. came to the throne, fled to this country for safety. He landed first in Virginia, where he procured a negro servant to attend him. But when advertisements and pursuers were spread through this country, to apprehend the adherents of the protector, he left Virginia, came to New York, and from thence to Norwich. Still feeling that he should be securer in a more retired place, he came to this new plantation, dug the first cellar, and with his servant, raised in Windham the first English habitation, in the spring of 1689. The settlers, rapidly increasing, petitioned the General Court, and obtained a grant of town privileges in May, 1692.

It has an uneven surface, with a tolerable soil. It is pleasantly located, compactly and neatly built, and contains the charm of antiquity in as great perfection as can probably be found in New England.

The borough of Willimantic is 3 miles W. from Windham village. It is well situated on Willimantic River. It is built principally on one street, and contains some very handsome buildings.

Willimantic River rises in the county of Tolland, and, with the Natchaug, forms the Shetucket in Windham.

Windham, Me., Cumberland co. Windham lies on the N. E. side of Presumpscot River, which separates it from Gorham. It is 14 miles N. N. W. from Portland. This is a valuable farming town, and the inhabitants are principally employed in agriculture. Branches of the Presumpscot give the town good mill privileges. There are two pleasant villages in the town, and several beautiful fish ponds.

Windham, N. H., Rockingham co. Policy Pond lies in this town and in Salem. Cabot's Pond lies E. of the centre of the town. Golden Pond is in the S., and Mitchel's in the N. E. part. Beaver River forms the western boundary, upon which are some meadow lands. The town is well supplied with small streams, which afford fine fish. Windham was originally a part of Londonderry. 33 miles S. by E. from Concord, and 20 S. E. from Exeter.

Windham, N. Y., Greene co. The Bataviakill flows E. and W. through this town. Surface hilly and mountainous; soil good in some of the valleys, and well suited to grazing on the hills. 18 miles W. from Catskill, and 44 S. W. from Albany.

Windham, Pa., Luzerne co. Drained by Big and Little Mahoopeny Creeks. Surface mountainous; soil mostly fertile. 25 miles N. W. from Wilkesbarre.

Windham, Pa., Bradford co. Drained by Westpassing Creek, a branch of the Susquehanna River. Surface hilly; soil gravelly. 162 miles N. by E. from Harrisburg.

Windham County, Vt., c. h. at Fayetteville. This county is bounded N. by Windsor co., E. by Connecticut River, S. by the state of Massachusetts, and W. by the county of Bennington. The surface is much broken by hills and valleys; the western part is very elevated, and contains a part of the Green Mountain range. The geological character of the county is primitive. Immense quantities of granite are found in all parts of the county, most of which is of fine grain and very handsome. A variety of minerals are found here. The soil of the county is various, from the rich and alluvial meadows on the Connecticut, to the cold and rugged lands on the sides of the mountains. Windham county is finely watered by William's, Saxton's, and West Rivers, with their branches, and by numerous other streams. These waters give the county a great hydraulic power.

Windham, Vt., Windham co. Branches of West, William's, and Saxton's Rivers give this town a good water power. The surface is elevated; the soil, though strong, is better adapted for grazing than tillage. Windham was formerly a part of Londonderry. A variety of minerals are found here. There is in this town a beautiful pond. Edward Aiken, James McCormick, and John Woodburn were the first settlers. 30 miles N. E. from Bennington, and 25 S. W. from Windsor.

Windsor, Ct., Hartford co. This most ancient town is situated on the W. side of Connecticut River. The surface is generally level, having some extensive plains. The soil is various, and free from stone: some of it is light, but a large proportion of it is fertile, containing extensive tracts of rich meadow. Farmington River passes

through the town, and meeting the Connecticut, gives the town a good hydraulic power.

At a place called Pine Meadow, at the commencement of the locks on the Enfield Canal, a variety of ship and other timber is prepared for market. Pine Meadow is opposite to Warehouse Point, in East Windsor.

The centre village in Windsor is pleasantly extended on the banks of the Connecticut.

Poquonnock village is a few miles N. from the centre. It is a manufacturing village, delightfully situated at the head of navigation on Farmington River.

Windsor Locks. A manufacturing village in the N. part of Windsor, on the W. bank of Connecticut River, 12 miles above Hartford. At this place, the Connecticut River Company (whose office is at Hartford) have expended over \$300,000 in constructing a navigable canal over the lower rapids in the river, known as Enfield Falls. The canal and locks are navigable for freight boats of 85 tons' burden, and for all the steamboats going above Hartford; and furnish an immense water power for manufacturing purposes.

The fall is 32 feet. The present capacity of this canal is about 200,000 spindles' power, and may be increased considerably by enlarging the dam at the head. The water power is about one fourth occupied.

The best of mill sites may be selected on the land between the canal and the river, for 2 miles above the locks, on all of which is to be found a rock foundation of red sandstone, which, being excavated, furnishes a cheap and valuable material for buildings. The New Haven, Hartford, and Springfield Railroad runs for 2 miles on the margin of this extensive water power, having a station in the village, 12 miles below Springfield.

Windsor, Me., Kennebec co. 12 miles from Augusta, to which it lies adjacent on the W.

Windsor, Ms., Berkshire co. Noah Nash gave the province of Massachusetts 1430 pounds for this township, in 1762. It was first settled about the year 1766. Its Indian name was *Ouschan-kamung*. It was incorporated by the name of Gageboro', in 1771, but after the revolutionary war began, in 1777, the name was changed, because Gageboro' might seem to perpetuate the memory of the detested General Gage. This town has a lofty elevation, and surface somewhat uneven. It is watered by the Westfield and Housatonic Rivers, which receive several brooks in their passage through the town. On the Housatonic, near the line of Dalton, are falls, judged to be about 70 feet. The soil is warm, and finely adapted for grazing. There are some excellent farms in Windsor. The town is remarkable for the longevity of its inhabitants, which is doubtless owing to the purity of its air and water. 12 miles N. E. from Pittsfield, and 120 W. by N. from Boston, by the old road.

Windsor, N. H., Hillsboro' co. This town contains only 5335 acres. It is diversified with hills; its soil is strong, good for grazing and grain. Black Pond, near the centre, is said to be 160 rods long and 80 broad, and a pond near the S. E. corner is about 80 rods long and 40 wide. 30 miles S. W. from Concord, and about 27 N. W. from Amherst.

Windsor, N. Y., Broome co. Watered by the Susquehanna River and some of its branches. Surface hilly and mountainous; soil well adapted

to grazing. 12 miles S. E. from Binghampton, and 138 S. W. from Albany.

Windsor, N. C., c. h. Bertie co. On Cashie River, about 100 miles S. W. from Norfolk, in Virginia, and by post road 194 miles N. E. by E. from Raleigh.

Windsor, Pa., Berks co. Bounded E. by Maiden Creek, and W. by Schuylkill River and Canal. Surface hilly, Blue Mountain occupying the N. W. part; soil gravelly and sterile.

Windsor, Pa., York co. A town on the S. W. side of Susquehanna River. 10 miles E. from York.

Windsor County, Vt., c. h. at Woodstock. This county is bounded N. by the county of Orange, E. by Connecticut River, S. by Windham co., and W. by Rutland and a part of Addison counties. Windsor county is watered by White, Queechey, Black, West, and William's Rivers, and by other excellent mill streams. The surface is uneven, and in some parts mountainous, but generally not too elevated to admit of cultivation; the soil produces fine crops of grain, hay, vegetables, and fruits. The lands are peculiarly adapted for grazing. The beautiful Connecticut, which washes its whole eastern boundary, gives to this county large tracts of alluvial meadow land, and affords it a navigable channel to the seaboard. The hydraulic power of the county is very large, and its local position is such as to induce men of enterprise and capital to embark in manufacturing operations, which are annually increasing, with fair prospects of success.

Windsor, Vt., Windsor co. Situated on the W. side of Connecticut River. 55 miles S. by E. from Montpelier, and 139 N. W. from Boston by railroad. First settled in 1764. Its surface is uneven, but there are but few parts of it unfit for cultivation. It contains large tracts of alluvial meadow, and the uplands are generally fertile. Mill Brook waters the S. part of the town, and furnishes it with excellent mill sites. The manufactures of the town are numerous and valuable. The agricultural interests are also valuable: 10,000 sheep are annually sheared in the town, and many neat cattle, horses, and productions of the dairy are annually transported to its various markets.

The village of Windsor is on elevated ground, on the bank of the river; it is compactly and somewhat irregularly built, but very beautiful. There are but few villages in our country which make a more delightful appearance. It contains a great number of handsome dwelling houses and stores. Some of the private houses, churches, and other public buildings are in a style of superior elegance. This is the site of the Vermont State Prison. The streets are wide and beautifully shaded. The scenery around Windsor is highly picturesque. From the high lands across the river, in Cornish, which is united to Windsor by a bridge, or on the Ascutney, at the S. part of the town, some of the best landscapes in our country are presented to view.

This town has become the centre of an important commerce, both from the river and a fertile interior country. The favorable position of Windsor, as a place of trade, was early discovered, and it has been fortunate in possessing a succession of men, who, by their enterprise and wealth, have rendered it one of the most flourishing towns on Connecticut River.

A railroad through Windsor connects it with

the great routes running N. to Burlington and Montreal, E. to Concord and Boston, and S. to Springfield, Hartford, &c.

Winhall, Vt., Bennington co. This town was chartered in 1761, and its settlement commenced during the revolutionary war. The surface is rough, and the soil not very productive. Winhall River rises in this town, and affords it a good water power. 33 miles S. W. from Windsor, and 25 N. E. from Bennington.

Winnamac, Ia., c. h. Pulaski co. 100 miles N. by W. from Indianapolis.

Winnebago County, Is., c. h. at Rockford, Formed in 1836. Bounded N. by Wisconsin, E. by Boone co., S. by Ogle, and W. by Stephenson co. Drained by Rock, Kishwaukee, and Peckatonoke Rivers. Surface undulating; soil fertile.

Winnebago County, Wn., Oshkosh seat of justice. Bounded N. by Brown co., E. by Lake Winnebago, S. by Fond du Lac co., and W. by Marquette and Brown counties. Drained by Neenah, or Fox, and Pauwaygun Rivers and tributaries.

Winneshek County, Io., c. h. at Decorah. In the N. E. angle, bordering on Minnesota. Watered by the Upper Iowa and Turkey Rivers.

Winnboro', S. C., Fairfield district. Between Wateree and Little Rivers. 29 miles N. N. W. from Columbia. There is a Baptist Literary and Theological Seminary in the vicinity, with several fine brick edifices.

Winslow, Me., Kennebec co. A fine town on the Kennebec River, opposite Waterville, with a fertile soil and large water power. 18 miles N. by E. from Augusta.

Winston County, Mi., c. h. at Louisville. Bounded N. by Choctaw and Oktibbeha counties, E. by Noxubee, S. by Kemper and Neshoba, and W. by Atala co. Drained by tributaries of Pearl and Tombigbee Rivers.

Winton, N. C., c. h. Hertford co. This village is located on Chowan River, about two miles below the junction of Meherin and Nottaway Rivers. By post road 153 miles N. E. from Raleigh, and 60 N. W. from Norfolk, Va.

Winterset, Io., c. h. Madison co.

Winthrop, Me., Kennebec co. 10 miles W. from Augusta. It comprises 6 large ponds, the outlets to which afford a good water power. There are two villages, 4 miles apart, and manufacturing of leather, boots, and shoes.

Winthrop, Ms., Suffolk co. A new town, taken from Chelsea, including Point Shirley, which forms Boston Harbor on the N. E.

Wirt, N. Y., Alleghany co. Watered by Van Campen's and Little Genesee Creeks. Surface high and undulating; soil chiefly sandy loam. 15 miles S. W. from Angelica, and 270 from Albany.

Wirt County, Va. New. Taken from Logan. S. W. part. Watered by the Big Sandy, which separates it from Kentucky. Hilly.

Wirt, Va., c. h. Wirt co.

Wiscasset, Me., Lincoln co. Wiscasset is a shire town and a port of entry, situated on the W. side of Sheepscot River. 20 miles from the sea, 42 N. E. from Portland, and 10 N. E. from Bath.

Wiscasset contains a noble harbor for vessels of the largest class; it is easy of access, and seldom obstructed by ice. For many years previous to the commencement of the commercial

restrictions in 1807, Wiscasset was one of the most active and flourishing seaports in Maine. During the disastrous period which followed, Wiscasset suffered severely in common with all towns largely engaged in navigation.

Since the termination of the war, the town has been slowly but safely progressing in wealth and prosperity. In addition to its commerce in lumber and ship building, this place is largely and profitably engaged in the fishery, for which pursuit it is admirably located.

The village of Wiscasset is delightfully situated on rising ground, in view of the harbor. The court house, churches, stores, and dwelling houses are built with taste, and many of them with elegance. A more beautiful village is rarely seen.

Woburn, Ms., Middlesex co. This town was granted by the General Court to the town and church of Charlestown, in 1640; settled therefrom early in 1641, and called Charlestown village. In 1642 it was incorporated under its present name. The surface is uneven, and very much diversified by hills, dales, and woods. It contains several beautiful sheets of water, particularly Horn Pond. Middlesex Canal passes by the side of the pond, and makes a descent of 45 feet, by means of three double locks. The waters of this and several smaller ponds, after furnishing some valuable and well-improved water power, fall into Mystic River, through Mystic Pond, in Medford. The soil is various, but generally strong and rough; much of it is fertile, and the town contains some beautiful farms. Villages have sprung up in various parts. The Boston and Lowell Railroad passes from S. to N., through the easterly part of the town, from which is a branch railroad to Woburn Centre. Warren Academy, incorporated in 1828, is delightfully situated near the centre, on a beautiful eminence. 10 miles N. W. by N. from Boston, and 16 S. E. from Lowell.

Wolcott, Ct., New Haven co. This is a small town, watered by a branch of Naugatuck River. The town was incorporated in 1796. The territory was formerly a parish in the towns of Farmington and Waterbury, and from that circumstance was called "Farmingbury." The lands in Wolcott are elevated, rough, stony, and hard to cultivate. One of the highest hills in this part of the state lies in this town. It commands a very extended prospect of Long Island Sound and the adjacent country. 22 miles N. from New Haven.

Wolcott, Vt., Lamoille co. Wolcott is well watered by Lamoille River, and by Green and Wild Branch, its tributaries. Fish Pond, in Wolcott, is a pretty piece of water, and bears an appropriate name. There is some good grain land in the town, but most of the lands are fit only for pasturage. Wolcott was chartered to Joshua Stanton and others, in 1781. 10 miles S. E. from Hyde Park, and 37 N. from Montpelier.

Wolfboro', N. H., Carroll co. The soil is rocky, but productive, and the face of the country level. The wood is principally oak and other hard timber. The only river is Smith's; it issues from a large pond of the same name, in the S. E. part of the town. Near the bridge over Smith's River is a pleasant village. Winnipiseogee Lake lies on the S. W. of this town. A steamboat plies daily from Alton, 10 miles S., in connection with the Cocheo Railroad terminating there, to accom-

modate travellers to the White Mountains, for whose convenience a fine hotel has been erected at Wolfboro'. The charter of Wolfboro' was granted in 1770, to Governor John Wentworth, Mark H. Wentworth, and others. At the foot of a hill, near one of the ponds, is a mineral spring. The scenery in this town is splendid. First settlers, B. Blake, J. Lucas, James Lary, J. Fullerton, and others. 45 miles N. E. from Concord, and about 8 S. W. from Ossipee.

Wood County, O., c. h. at Perrysburg. Lucas co. is on the N., Sandusky and Seneca on the E., Hancock on the S., and Henry on the W. In February, 1820, the county was organized. This county is level, and has an excellent alluvial soil, based upon limestone. Black Swamp lies mostly in this county, and has been taken for farming purposes, as it has a rich, productive soil. It has a variety of timber, and iron ore is found in abundance.

Wood County, Va., c. h. at Belleville. Ohio River bounds it on the N. W., Tyler co., Va., N. E., Louis co. S. E., and Mason S. W. Little Kanawha River drains it mostly.

Woodbridge, Ct., New Haven co. The territory of this town belonged to the towns of New Haven and Milford, and was called the parish of "Amity" from 1739 until its incorporation in 1784. West River runs on the W. side of West Rock, a range of mountains on the eastern border of the town. The surface of the town is hilly, but the soil is excellent for grazing.

The regicides Goffe and Whalley had a number of places of concealment in the limits of Woodbridge, the most noted of which is Hatchet Harbor, or the Lodge, near a beautiful spring, in a valley, about 7 miles from New Haven.

Woodbury, Ct., Litchfield co. The settlement of this town commenced in the year 1672. It was incorporated in 1674. This is a good grazing township; the soil is generally warm and fertile. The village is situated in a pleasant valley, and watered by a number of small streams, which form the Pomperaug. It is surrounded by high hills on every side, forming a kind of amphitheatre, which renders it strikingly romantic. The village contains some handsome buildings.

Bethel Rock, near the village of Woodbury, is about 40 feet in height, and projects over 3 or 4 feet, forming a kind of shelter from the wind and rain. There is a fine grove near it. This spot is frequently visited; it excites solemn and pleasing impressions.

Woodbury, N. J., c. h. Gloucester co. At the head of navigation, on Woodbury Creek, a branch of Delaware River. S. S. W. from Trenton 37 miles.

Woodbury, Pa., Bedford co. Drained by Yellow Creek and branches, and by the Frankstown branch of Juniata River. Surface mountainous, containing iron ore; soil calcareous loam, gravel, and slate. 113 miles W. from Harrisburg.

Woodbury, Te., c. h. Cannon co.

Woodbury, Vt., Washington co. Woodbury was first settled in 1800. The town is watered by branches of Winooski and Lamoille Rivers, and probably contains a greater number of ponds than any other town in the state. The surface is rough, but the soil is good for grazing. 15 miles N. by E. from Montpelier.

Woodford County, Is., c. h. at Woodford. Bounded N. by Marshall co., E. by Livingston and McLean, S. by McLean and Tazewell counties, and

W. by the Illinois River, separating it from Peoria co. Drained by Mackinaw River.

Woodford County, Ky., c. h. at Versailles. Kentucky River is on the W., Franklin N. W., Scott N. E., Fayette E., and Jessamine S. E.

Woodford, Vt., Bennington co. Woodford contains several large ponds, from which issue branches of Walloomsack and Deerfield Rivers. The greater part of this town is too elevated and broken for cultivation. It is a good location for the sportsman. The town began to be settled immediately after the revolutionary war. 7 miles E. from Bennington, on the road to Brattleboro'.

Woodhull, N. Y., Steuben co. Watered by Tuscarora Creek. Has an uneven surface, and tolerably good soil. 20 miles S. from Bath, and 225 S. W. from Albany.

Woodsfield, O., c. h. Monroe co. On elevated ground, 18 miles from Ohio River, and 117 E. from Columbus.

Woods Hole, Ms., Barnstable co. In the town of Falmouth. See *Falmouth*.

Woodstock, Ct., Windham co. The surface of the town is characteristically hilly, but not mountainous or broken, and comprises very little waste land, most or all of the eminences being capable of cultivation. The prevailing soil is a deep gravelly loam, which is strong and fertile. It is best adapted to grazing. It may be considered one of the richest agricultural towns in this part of the state. The town is divided into 3 parts, viz., the old society of Woodstock, West Woodstock or New Roxbury, and Muddy Brook Society or North Woodstock.

The villages of Thompson, North Killingly, and Dudley, in Massachusetts, on corresponding elevations, are in fair view from the village in Old Woodstock. The village of Muddy Brook, or North Woodstock, is about 3 miles distant, situated in a beautiful valley, through which Muddy Brook, a fine mill stream, passes.

Woodstock, Me., Oxford co. In part mountainous, but with some fertile land. 42 miles W. from Augusta.

Woodstock, N. H., Grafton co. The Pemigewasset passes through the eastern section of this town. The three branches of this river unite in the N. part of Woodstock. There are several brooks and rivulets which supply this place with a number of mill privileges. The ponds are numerous. Cushman's Mountain in the S. W., Black in the N. W., and Blue in the W., are the highest elevations. Among these mountains, branches of the Wild Amonoosuck and Baker's Rivers, and Moosehillock Brook, have their sources. On the last stream is a beautiful cascade. There are here two springs, which have been termed medicinal. This town has some fine scenery. First settlers, John Riant and others, in 1773. 20 miles N. from Plymouth, and 62 N. from Concord.

Woodstock, N. Y., Ulster co. Watered by the Saghkill and other branches of Esopus Creek. The Catskill Mountains cover most of the surface; soil clay, gravel, and loam of indifferent quality. 12 miles N. W. from Kingston, and 57 S. W. from Albany.

Woodstock, Vt., c. h. Windsor co. Well watered by Quechee River and its branches. The soil is generally very fertile, with a pleasant surface of hills and vales. Woodstock Green, so called, is a beautiful village. The court house, planned and built under the supervision of Ammi B. Young,

Esq., the architect of the custom house in Boston, is one of the most chaste and classical structures in New England. The S. village is neat and pleasant; it is about 5 miles from the Green. The settlement of this town was commenced by Mr. James Sanderson, who moved his family here about the year 1768. 46 miles S. from Montpelier, and 11 N. W. from Windsor.

Woodstock, Va., c. h. Shenandoah co. About 1 mile from the W. bank of the N. fork of Shenandoah River, and 150 N. N. W. from Richmond.

Woodville, Aa., c. h. Jackson co. 163 miles N. E. from Tuscaloosa.

Woodville, Mi., c. h. Wilkinson co. 135 miles S. W. from Jackson. Connected with the Mississippi River by a railroad to St. Francisville, 29 miles.

Woodville, Ts., c. h. Tyler co.

Woolwich, Me., Lincoln co. Woolwich lies a little above Bath, on the E. side of Kennebec River. 32 miles S. from Augusta, and 7 W. from Wiscasset. It was incorporated in 1759. Woolwich has several ponds and small streams, and its navigable privileges are valuable.

Woolwich, N. J., Gloucester co. Bounded N. W. by the Delaware River, and drained by Peapaps, Little Timber, Raccoon, and Oldman's Creeks. Surface level; soil sandy. 11 miles S. W. from Woodbury.

Woonsocket Falls, R. I., Providence co. In the towns of Smithfield and Cumberland, at the falls of Blackstone River, which afford a great water power. 15 miles N. N. W. from Providence. See *Smithfield, R. I.*

Wooster, O., c. h. Wayne co. On the forks of Killbuck and Apple Creeks, and was named for General Wooster, who was killed at Danbury, Ct., in the year 1777, during the revolutionary war. 61 miles S. W. from Cleveland, and 89 N. E. from Columbus.

Worcester County, Md., c. h. at Snow Hill. Delaware co. is on the N., the Atlantic Ocean E., eastern shore of Virginia S., and Somerset co., Md., W. The Pocomoke River drains the greater part of this county.

Worcester County, Ms., c. h. at Worcester. This county crosses the state from New Hampshire on the N. to the states of Connecticut and Rhode Island on the S. It is bounded W. by the counties of Franklin, Hampshire, and Hampden, and E. by Norfolk and Middlesex counties. This is the largest county in the state. Its territory is larger than the state of Rhode Island, and its population greater than that of the state of Delaware. Its surface is rather undulating than hilly. Wachuset Mountain is its highest elevation. The soil is generally strong, and produces all kinds of grain, grasses, fruits, &c., common to its climate. Its water power is abundant in almost every town, and perhaps in no section of New England are the interests of agriculture, commerce, and manufactures more completely blended, nor can there be found better resources for their united support. Its principal rivers are the Blackstone, Quinebaug, Nashua, Ware, Miller's, and Mill. The Blackstone Canal passes from the centre of the county to the city of Providence, and several important railroads pierce the country in various directions, which with their various branches, afford a rapid communication to the capital of the state, and to distant towns and cities at the N., the W., and the S.

Worcester, Ms. City, and seat of justice of Worcester co. 44 miles by railroad W. from Boston, 54 E. from Springfield, 43 N. W. from Providence, R. I., and 59 N. W. from Norwich, Ct. Population in 1790, 2095; 1800, 2411; 1810, 2577; 1820, 2966; 1830, 4173; 1840, 7497; 1850, 17,059.

An attempt was made to settle this part of the country as early as 1675, but the hostility of the Indians was such as to prevent a permanent settlement until 1713. The Indians, who were very numerous, had towns on Tatnuck and Bog-gachoag Hills. They called the neighboring country *Quinsigamond*, the name of a lake, or Long Pond, which skirts the eastern border of the town.

It is stated that "in 1718 there were in the town 58 humble dwelling houses; some were furnished with windows of diamond glass," while others obtained the light "through the dim transparency of oiled paper."

The surface of the town is pleasantly varied by hills and valleys. The greatest elevation is that of Chandler's Hill, 748 feet above the sea, from which a fine view of the beautiful country surrounding it is presented. The soil is various, and suited to the cultivation of all the grains, grasses, vegetables, fruits, and flowers common to a New England climate, and the uncommon enterprise and skill displayed in the cultivation of the soil have covered the face of this section of the state with beauty and abundance.

Worcester was originally very large, including the territory of some of the surrounding towns. Its present boundaries are N. by Holden and West Boylston, E. by Shrewsbury, S. by Millbury and Auburn, and W. by Leicester and Paxton. A number of the streams which form the head waters of the Blackstone meet in this town, and furnish a considerable water power.

The central situation of Worcester, both in regard to the county and the state, the fertility of its soil, and that of the surrounding country, the salubrity of its climate, and the industry, intelligence, and wealth of its people, have long since entitled it to the honor of being called the chief town in the "heart of the commonwealth."

The city of Worcester is delightfully situated, in a valley, surrounded by hills of gentle acclivity. It has long been one of the most flourishing places in the interior of New England, and by the enterprise and wealth of its inhabitants, without the natural advantage of any navigable stream, it early became the mart of a large and prosperous business, giving it very much the appearance of a commercial town. It has taken an enlightened and timely interest in every form of internal improvement which has arisen, for the purpose of overcoming the natural disadvantage of its interior location, and facilitating its communication with the seaboard, and every part of the country. The greatest of these enterprises, before railroads were introduced, was that of the Blackstone Canal, opening the navigation for boats to the tide waters at Providence, R. I. But all other means of communication and business, even the great navigable rivers themselves, are now in a measure superseded by that which the railroad supplies. Of these Worcester has become a great central point. We have given above the direction and distance to the important seaports of Boston, Providence, and Norwich, with each of which Worcester is connected by railroads; and also to

Springfield, which is on the Western Railroad from Worcester to Albany, at the point of its intersection with the great chain of railroads running through the Connecticut valley from Canada to New York. On the N. from Worcester there are two railroads, one connecting at Fitchburg with the roads E., W., and N. from that place, and the other extending to meet the great Northern Railroad at Nashua, N. H., and connecting at an intermediate point with roads running through Lowell and Lawrence, and thence to Portland, Me. Worcester is thus made one of the greatest thoroughfares of travel in New England, and an eligible seat of manufacturing and other business operations.

There are many handsome streets in Worcester, but the most elegant, as well as the most important, is Main Street, which is about a mile and a half in length, straight, broad, and shaded with many beautiful trees. On this street are the principal retail stores, the banks, the largest hotels, the court house, the city hall, and three or four handsome houses of public worship. There are likewise, on both sides of this street, some of the most splendid private mansions in New England. The ground rises rapidly immediately W. of Main Street, and affords a beautifully-elevated site for all that portion of the city which extends in that direction. E. of Main Street the ground falls away more gradually to the small stream which winds its way through the bottom of the valley, and rises again on the opposite side, swelling in the northern part into the beautiful hill on which the State Lunatic Asylum is situated. Towards the S. part of the city there is a spacious green, opening E. from Main Street, on which stands the large and venerable meeting house of the first church, which is now known as the Old South in Worcester. Fronting upon the N. side of the green another handsome church edifice, and a third, beautifully situated, opposite the eastern end. Nearly all the leading denominations of Christians are provided with good houses of public worship.

The hall of the American Antiquarian Society is a handsome edifice, on Main Street, erected in 1820, at a cost of about \$10,000, to contain the unique and interesting library and antiquities of the society. It consists of a central edifice, 50 feet by 40, and two stories high, with wings each 20 by 28 feet, also two stories high. This important society, and its valuable library, owe their origin to the sagacious foresight, generosity, and public spirit of Isaiah Thomas, LL. D. Mr. Thomas was the father of New England printers. He published, in 1775, the first newspaper in Worcester, and, a few years later, the first English Bible in America. He was a gentleman of great patriotism and liberality. His donation to this library consisted of 3000 volumes, of his own careful selection. This institution is open freely to the public, and is visited by great numbers from every part of the country.

The State Lunatic Asylum has very extensive buildings, beautifully situated on an eminence eastward of the city, and surrounded by extensive and highly-ornamented grounds. The W. front consists of a spacious centre building, 4 stories high, with wings of 3 stories. The other sides of the square are completely enclosed by the buildings of the establishment. Those on the N. and S. sides correspond in size and structure with the wings in front, and are 134 feet in length. The plan and arrangements of this noble institution

are excellent throughout, rendering it a model for some of those which have been more recently built in other states. It is in place to remark here, that Worcester is extremely well suited to the sanitary purposes of such an institution, from the great salubrity of its climate. It is almost entirely exempt from those chilling easterly winds which so much prevail at certain seasons of the year on the Atlantic coast.

The Roman Catholic College of the Holy Cross has a fine location upon a rounded hill, about a mile and a half S. W. of the city. See *Colleges*.

Two other institutions or academies of the higher class, one for males, and the other for females, are situated, about the same distance, more directly W. of the city. The public and private schools, and other literary institutions in Worcester are of a high order. In no part of New England is education more honored and cherished than here.

There are several public houses in Worcester, which are among the best in the country, demanded and sustained by the vast amount of travel which comes to the city. An abundance of pure soft water is brought in by an aqueduct from the neighboring hills, for the supply of these establishments, and of the inhabitants generally.

The manufactures of Worcester are important, and of great variety, including cotton and woolen fabrics to a large amount, carpetings, both of wool and cotton, paper, wire, castings, machinery, carriages and railroad cars, brass and tin wares, musical instruments, hats, straw bonnets, shoes, harnesses, and numerous other articles. In these departments of industry a large amount of capital is employed, and great ingenuity and activity are displayed.

This place presents a striking example of what railroads have done, and will continue to do, in favor of the growth and prosperity of hundreds of other places in our country similarly situated. Before the railroad between Boston and Worcester went into operation, the freight on a ton of merchandise was \$10, and the time of transportation two days; now it is \$2, and the time three hours. It is obvious that by this means much of our trade and commerce will be transferred from the seaboard to such convenient points in the interior where real estate and the means of living generally can be obtained at a much lower cost. Our commercial cities on the coast, instead of continuing to be chiefly rivals to each other, have now much more to fear from the springing up of such places as these, in the tendency there is to make them merely deposits of merchandise for the country, rather than, as heretofore, its exclusive marts of trade.

Worcester, N. Y., Otsego co. Charlotte River and some of its branches water this town. Surface hilly; soil favorable to the growth of grass and grain. 14 miles S. E. from Cooperstown, and 56 S. of W. from Albany.

Worcester, Vt., Washington co. A branch of Winooski River gives this town a good water power, which is used for various purposes. Much of this township is mountainous; but there is some good land along the stream, and the high lands afford good pasturage for cattle. The settlement was commenced in 1797, by George Martin and John Ridlan, emigrants from Kennebec, Me. The town was organized March 3, 803. 8 miles N. from Montpelier.

Worthington, Ms., Hampshire co. This township occupies an elevated situation near the centre of the Green Mountain range, upon its eastern declivity. The waters are discharged into the Connecticut by the Westfield River, the principal branch of which washes the S. W. boundary of the town, and other branches pass through the middle and N. E. parts. It is one of the best townships of land in this vicinity; the surface is handsome and pleasant, and much of the soil rich and productive. 107 miles W. from Boston, and 18 E. from Pittsfield.

Worthington, O., in Sharon township, Franklin co. 9 miles N. from Columbus. This pleasant and thriving town stands on the left bank of the Whetstone River, which is the E. fork of the Scioto. The township to which it belongs was settled by the Scioto Company, formed in Granby, Ct., in 1801, and embracing 40 associates, to which number the company was limited by its articles. This number was filled up by persons from the counties of Hartford and Litchfield, Ct., and Hampshire and Berkshire, Ms. Their regulations, requiring the immediate establishment of public worship, and of a school for their children, were strictly adhered to. The first year of their enterprise saw 100 settlers in their new home. Their first 4th of July was celebrated in an original and novel manner. 17 gigantic trees, equal to the then existing number of the states in the Federal Union, having previously been cut so that a few blows of the axe would fell them to the ground, were made at sunrise, in lieu of ordnance, to thunder in successive peals through the resounding wilderness their national salute.

Worthington is handsomely laid out, with 10 streets extending N. and S., parallel to each other, and to the general course of the river, and 7 E. and W. It is neatly built, the greater part both of the private and public structures being of brick. There are churches here of several denominations; also a classical academy, of high repute, and a flourishing female seminary. Colonel James Kilbourne, who, as pioneer and agent of the Scioto Company, located their purchase, and afterwards laid out this town, it is said constructed the first map of the state of Ohio.

Wrentham, Ms., Norfolk co. This town was a part of Dedham until its incorporation, in 1673. It was first settled about the year 1667, and was named after a town in England. Its Indian name was *Wollonopange*. The surface is pleasantly diversified by hills and valleys. Joe's Rock Hill and Red Brush Hill are the most elevated grounds. The soil is generally of a good quality. From the high lands, and a large and beautiful pond, called by the Indian name of the town, branches of the Charles and Neponset rise. These streams, though not large, afford the town an excellent hydraulic power. There is a curious cavern in the town, called "Wampum's Rock." Eagle Factory village, Shepardsville, the village near the centre of the town, and the one in the N. part, are all pleasant villages. 27 miles S. S. W. from Boston, and 16 N. from Providence.

Wright County, Mo., c. h. at Hartville. Bounded N. by Camden and Pulaski counties, E. by Texas co., S. by Ozark and Taney, and W. by Green and Dallas counties. Drained by the head branches of Gasconade River.

Wrightsville, Pa., York co. On the W bank

of Susquehanna River. 31 miles from Harrisburg. A bridge 5690 feet in length connects this place with Columbia, on the opposite side of the river. It is connected by railroad with York, Gettysburg, Baltimore, and Philadelphia.

Wyalusing, Pa., Bradford co. This town lies adjacent to and includes the mouth of Wyalusing Creek. 50 miles N. W. from Wilkesbarre, and 30 S. W. by W. from Montrose.

Wyoming County, N. Y., c. h. at Warsaw. Formed from Genesee co. in 1841. It is bounded N. by Genesee, E. by Livingston, S. by Alleghany and Cattaraugus, and W. by Erie co. Its principal waters are Silver Lake, Allen's, Tonawanda, and Cattaraugus Creeks, and the Genesee River, which courses its S. E. corner. Surface undulating; soil well adapted to grass and grain, and in the valleys of the streams remarkably fertile.

Wyoming County, Pa., c. h. at Tunkhannock. Formed from Luzerne co. in 1841, and is bounded N. by Susquehanna co., E. and S. by Luzerne, and W. by Lycoming and Bradford counties. Drained by Susquehanna River and branches.

Wyoming, Pa. See *Wilkesbarre*.

Wythe County, Va. New. Taken from Logan. S. W. part. Includes the upper waters of the Gayandotte and Sandy Rivers. Mountainous.

Wythe County, Va., c. h. at Wytheville. This county occupies the country between the head waters of Tennessee and Great Kanawha. It is bounded by Grayson S. E. and S., Washington S. W., Tazewell N. W., and Giles and Montgomery N. E.

Wytheville, Va., c. h. Wythe co.

Xenia, O., Xenia township, c. h. Green co. A pleasant town, situated on Shawnee Creek. 3 miles from the Little Miami River. It is surrounded by a highly cultivated, fertile country.

Yalabusha County, Mi., c. h. at Coffeetown. Bounded N. by Ponola and Lafayette counties, E. by Chickasaw, S. by Choctaw and Carroll, and W. by Tallahatchee co. Drained by the Yalabusha River and branches.

Yam Hill County, On., c. h. at La Fayette. Between the Willamette and the coast.

Yancey County, N. C., c. h. at Burnsville. Bounded W. and N. by the Stone Mountains, which separate it from Tennessee, and by Ashe co., E. by Caldwell, Burke, and McDowell counties, and S. by Buncombe co. Drained by the Nolachucky River and its branches. This county contains the highest land in the United States E. of the Rocky Mountains, Black Mountain being elevated 6476 feet above the ocean. Copperas is found here.

Yanceyville, Va., Louisa co., lies 14 miles N. from Caroline Court House, and 60 N. W. from Richmond.

Yarmouth, Me., Cumberland co. A pleasant town on Casco Bay. 10 miles N. of Portland, with which it is connected by the Portland and Montreal Railroad, and 42 S. E. from Augusta. There is a fine stream of water, on which is a paper mill and other manufactories. It was formerly called North Yarmouth.

Yarmouth, Ms., Barnstable co., was first settled in the year 1637. It was called *Mattacheset*, or *Muttacheset*, by the Indians. It was incorporated as a town in 1639. The soil in many parts is quite productive. There are large tracts of salt

meadow in the town, which is very valuable. German's Hill, 136 feet above the sea, is the highest land in the town. Yarmouth extends across Cape Cod, and has good harbors on each side of it, of ample depth of water for fishing and coasting vessels. In this town are a number of large and beautiful ponds, of pure and soft fresh water. From one of these ponds issues Bass River, affording a small water power; at its mouth is a good harbor. The government of the United States have recently erected a breakwater for its protection. There are a number of pleasant villages in this town: those called Yarmouth, Yarmouth Port, South Yarmouth, and West Yarmouth are the most important. The second temperance society ever established was organized in Yarmouth, in 1817, a short time after the establishment of that in Boston, which was the first in the world. In and about the numerous ponds and large salt meadows, in this town and Barnstable, are found an abundance of fowl and fish in their season. Yarmouth Port lies 4 miles E. from Barnstable, and 69 S. E. from Boston.

Yates County, N. Y., c. h. at Milo. Formed from Ontario in 1823. It is bounded N. by Ontario co., E. by Seneca Lake, S. by Steuben, and W. by Steuben and Ontario counties. Surface pleasantly diversified; soil various, but mostly very fertile. This county contains an inflammable gas, a sulphur, and a salt spring. Seneca and Crooked Lakes lie partly within its limits, and are united by the outlet and Crooked Lake Canal. It is also watered on the N. W. by Candaigua Lake.

Yates, N. Y., Orleans co. Watered by Johnson's Creek and other small streams flowing into Lake Ontario, which bounds it on the N. Surface level; soil sandy and clay loam. 12 miles N. from Albion, and 267 N. of W. from Albion.

Yell County, As., c. h. at Danville. Bounded N. by Johnson and Pope counties, E. by Perry, S. by Montgomery, and W. by Scott co. Drained by the Petite Jean, La Feve, and other branches of the Arkansas River, which runs on its N. E. boundary.

Yonkers, N. Y., Westchester co. Watered on the E. by Bronx and Saw Mill Rivers, and bounded on the W. by the Hudson. Surface somewhat rough and uneven; soil clay and sandy loam. 10 miles S. W. from White Plains, and 130 S. from Albany.

York County, Me., c. h. at Alfred. In the S. W. corner of the state. Watered by the Salmon Falls on its W. border, and the Saco on the E. The soil is hard and rocky, yet with some good land; surface rough and uneven, with occasional mountains. The seacoast is without harbors, except two or three inferior ones. The railroad from Boston to Portland passes through it, parallel with the coast.

York, Me., c. h. York co. This is an ancient maritime town, on the coast between Kittery and Wells. It is bounded W. by South Berwick. This was for many years the shire town, and the place of holding the courts and keeping the records for the whole province, until the counties of Cumberland and Lincoln were set off in 1765.

York has a court house and jail, but all the county courts have been, within a few years past, removed to Alfred. The principal harbor is York River, about 6 miles from Portsmouth, N. H., with water sufficient for vessels from 200 to 300 tons' burden. The entrance, however, is dif-

fulc, being narrow and crooked. The other harbor is Cape Neddock, about 4 miles N. E. of the former, navigable about a mile from the sea at full tides only; it having a sand bar at its mouth sufficient to prevent vessels of any considerable burden passing at low water.

The settlement of this place began about the year 1630. It was then called Agamenticus, (see *Agamenticus*), from a mountain of that name in the N. part of the town. This town was nearly destroyed by the Indians and French in 1692, who, coming on snowshoes, surprised the unwary inhabitants at early morning. 45 miles S. W. from Portland, and 9 N. by E. from Portsmouth, N. H. York, Mn., Washtenaw co. 46 miles W. from Detroit.

York, N. Y., Livingston co. On the W. side of the Genesee River, and drained by two or three of its tributaries. Surface pretty level, sloping towards the river; soil very fertile, producing fine crops of grain. 7 miles N. W. from Genesee, and 237 N. of W. from Albany.

York County, Pa., c. h. at York. Maryland is on the S. of this county, Adams co., Pa., W., Cumberland co. N. W., and Susquehanna River N. E. It is principally drained by Conewago and Codorus Creeks. It has a varied soil and hilly surface.

York, Pa., c. h. York co. Situated on both sides of Codorus Creek. The village is laid out on a plain, with streets at right angles to each other, and contains the county buildings, jail, academy, and almshouse. 21 miles S. W. by W. from Lancaster, and 11 nearly W. from Columbia, on the Susquehanna. It is connected by railroad with Baltimore and Philadelphia.

York Haven, Pa., York co. Situated opposite Portsmouth, on the W. side of Susquehanna River, below Conewago Falls, and 14 miles S. from Harrisburg.

York Sulphur Springs, Pa., Adams co. S. from Carlisle 15, and from Harrisburg 21 miles. The springs at this place have valuable properties, and are provided with good accommodations for visitors.

York District, S. C., Yorkville chief town. This district is bounded by Lincoln and Rutherford counties, N. C., N., Catawba River, or Lancaster district, E., Chester S., and Broad River, or Union and Spartanburg districts, S. W.

York County, Va., c. h. at York. York River bounds this county on the N. and N. E., Elizabeth City and Warwick counties S., and James city co. S. W. and N. W.

Yorkshire, N. Y., Cattaraugus co. Watered by Cattaraugus Creek and some of its branches. This is mostly a level town, with a fertile soil. 15 miles N. E. from Ellicottville, and 274 W. from Albany.

Yorktown, N. Y., Westchester co. Watered by Croton River and several small ponds. Surface hilly and mountainous in the N. part; soil mostly of good quality. 16 miles N. from White Plains, and 117 S. from Albany.

Yorktown, Va., c. h. York co. Port of entry. 70 miles E. S. E. from Richmond. It is on the S. side of York River, opposite Gloucester. This place is memorable as the scene of the surrender of Lord Cornwallis, October 19, 1781. The place of surrender was on the S. side of the road to Hampton, about half a mile E. of the town. The Moore House, on Temple Farm, yet standing on the banks of the river, about a mile below

Yorktown, is memorable as the house in which Lord Cornwallis signed the articles of capitulation. Various other localities of special interest are pointed out as being connected with this important event, by which the war of the American revolution was brought to a successful close.

Yorktown was incorporated in 1705, and was once a flourishing village, with considerable commerce. The Swan Tavern here is said to be the oldest in Virginia. There are now not more than 40 or 50 dwellings, many of which are going rapidly to decay. On the banks of its beautiful river stands the ruins of an old church, built 150 years ago, and burned by the great fire in 1814. There are also, on what is called the Temple Farm, many old ruins indicating the site of an ancient settlement.

Yorkville, N. Y., New York co. On the Haerlem Railroad, 5 miles N. from the City Hall. See *New York City*.

Yorkville, S. C., c. h. York district. On a branch of Broad River. 79 miles N. by W. from Columbia.

York County, Ca., c. h. at Fremont. Between the W. bank of the Sacramento and the coast range of mountains.

Youngsville, Pa., Warren co. A village by post road 328 miles N. W. from Harrisburg.

Ypsilanti, Mn., Washtenaw co. On both sides of Huron River, and also drained by Stony Creek. 30 miles W. by S. from Detroit.

Yuba County, Ca., c. h. at Marysville. E. of Feather River, on the slope of the mountains.

Zanesfield, O., Logan co. The 11th of October, 1819, this town was laid out. It took its name from the original proprietor, Isaac Zane. It lies near the source of Mad River, 47 miles N. W. from Columbus, and 5 S. E. from Bellefontaine.

Zanesville, O. Shire town of Muskingum co. On the E. side of Muskingum River, opposite the entrance of the Licking River. 54 miles E. of Columbus, and about 80 miles from Marietta, by the course of the Muskingum, or 65 miles by land. It is on the national road, which here crosses the Muskingum. 74 miles W. from Wheeling.

At the point where Zanesville is located, the river sweeps round a kind of horseshoe curve, embosoming the town, and separating it from the villages of West Zanesville, which lies opposite, above the mouth of the Licking, South Zanesville, immediately below, and Putnam, still farther down. A fine bridge connects Zanesville with Putnam; and another, about half a mile above, is thrown over from Zanesville main street to a point in the river where the bridge forks; one of the branches connecting with South Zanesville, on the route of the national road, and the other connecting with West Zanesville. In its course round this curve, through a distance of about a mile and three quarters, the Muskingum falls 8 or 10 feet, which, by the aid of a dam, gives a fall of over 16 feet; thus furnishing a very extensive water power for hydraulic purposes. There is also a considerable water power on the Licking River. Besides these extensive facilities for business, there is an abundant supply of bituminous coal in the hills which surround Zanesville, rendering the employment of steam power cheaply and easily available.

The principal manufacturing establishments at Zanesville, including those located at South and

West Zanesville and Putnam, are iron founderies, flouring mills, glass works, woollen factories, oil mills, paper mills, saw mills, machine shops, &c.; besides which there are numerous other establishments of less magnitude.

There are several printing offices in Zanesville, from which are issued 4 or 5 weekly newspapers. This place has as many as 12 or 15 churches, of different denominations, some of which have large and beautiful houses of worship. Much attention is given to the subject of education. The founder of the settlement, John McIntire, left a large estate to found and sustain a school for the benefit of the poor. This school has a fine brick building. Besides this there are two large buildings for schools of the highest class, one for males and one for females, provided by the town. There is also an excellent female seminary in Putnam, the advantages of which are scarcely less available for the inhabitants of Zanesville than for the beautiful village where it is located. Indeed, these two places, being only separated by the river, are, in many respects, virtually one community; although the settlement on the Putnam side, having been chiefly commenced by New Englanders, has more the character and appearance of a New England village.

Zanesville is abundantly supplied with pure water, for use in the dwellings, and for extinguishing fires, by an aqueduct, constructed at a cost to the town of about \$42,000. The water is raised by a powerful forcing pump from the river into a reservoir on a hill 160 feet high, and is thence distributed by about 7 miles of iron pipe throughout the place. The reservoir has a capacity of

750,000 gallons, creating a head sufficient to throw the water, through hose applied to the hydrants, above the highest buildings.

For a place not yet enjoying the advantages of railroads, Zanesville is well situated in respect to communication with other parts of the country. The national road, a fine Macadamized turnpike built by the United States government, to connect the Atlantic States with the Mississippi valley, commences at Cumberland, at the eastern foot of the Alleghany Mountains, crosses over the mountains westward, to Wheeling, Va., and crossing the Ohio River by the celebrated wire suspension bridge, passes through Zanesville, and thence onward through the centre of the state. On this great road there is always an immense travel. The Muskingum, by dams, locks, and short canals, is rendered navigable for steamboats from its mouth to Dresden, 15 miles above Zanesville; where is a navigable side cut, of about 2½ miles, to the Ohio Canal; through which communication is had S. through the interior of the state, W. by a connecting canal to Pittsburg, and N. to Cleveland, on Lake Erie. One or more steamboats run regularly from Zanesville to Dresden, and others of larger size ply on the Muskingum and Ohio Rivers, between this place and Pittsburg, Cincinnati, and New Orleans.

Zebulon, As., c. h. Pike co.

Zebulon, Ga., c. h. Pike co.

Zoar, O., Tuscarawas co. A German settlement on the E. side of Tuscarawas River. 120 miles N. E. from Columbus. A peculiarly neat and pleasant village, and much visited by strangers for its fine garden of exotics

TABLE

Of the latitude and longitude of some of the most important places in the United States; also of the most considerable places in the British Provinces, Mexico, and the West India Islands, and of some of the principal marts for American commerce in Europe and South America. All the places are in N. latitude, except those marked S.; and all in W. longitude, except those marked E. The Observatory, in England, from which longitude is taken, is at Greenwich, 5 miles E. from London. For the latitude and longitude of the capitals of the states and territories, see p. 262.

DESCRIPTIONS

OF

MINERAL SPRINGS, WATERFALLS, CAVES, BEACHES, AND OTHER FASHIONABLE RESORTS.

* * * WE have thought proper to place in a separate chapter the most important places of public resort, curiosity, and entertainment, which persons travelling, and seeking health or pleasure, are desirous of bringing readily under their notice. This we have done for greater convenience of reference, as they must otherwise have been sought promiscuously throughout the entire work; and likewise for the purpose of giving more particular details of description, in many cases, than would be suitable to the general brevity with which the great majority of towns, villages, &c., must be noticed.

There are, of course, very many places of the same class with those included in this chapter, but of less consequence, which are briefly described in connection with the towns where they are situated. These, being known in their own immediate neighborhood, will naturally be referred to under the localities where they belong. Such is the progress of the country, however, that it will not be thought strange if some of these, and others yet unknown, should soon become as important as any which have been here described

ASCUTNEY MOUNTAIN, VT.

From the summit of this lofty mountain, on the right bank of the Connecticut, near the beautiful town of Windsor, is presented one of the richest and most variegated landscapes in New England. See *Mountains*, &c., p. 168.

AVON SPRINGS, N. Y.,

Are situated in the Genesee valley, about 20 miles S. from Rochester, and 25 from Canandaigua. The village is delightfully situated about half a mile E. of the Genesee River, on a terrace elevated about 100 feet above its banks, commanding an extensive prospect of its fertile valley and the adjacent country. This place is becoming more and more a place of resort for persons desiring the benefit of its medicinal waters, which are found peculiarly efficacious in disorders of the digestive organs, rheumatism, and gout, all sorts of cutaneous affections, and in every kind of obstruction of the alimentary system. The springs are on the S. W. of the village. The two most valuable are distinguished as the Upper and Lower Springs. Their properties are similar, differing only in the relative proportions of the

same mineral ingredients. There are several large and well-kept hotels, two of which are at the springs, and others are in the village. There are extensive accommodations for bathing conveniently arranged in connection with these houses, and likewise separate from them. The place is thus rendered delightfully attractive, in the summer season, for persons seeking recreation and pleasure, as well as for the invalid. The Genesee Valley Canal, between Rochester and Mount Morris, passes within about 2 miles of the springs, on which a line of boats runs up and down daily. There are also, during the season, lines of stages running every day between this place and Rochester.

BALLSTON SPA, N. Y.

Is situated in the town of Milton, Saratoga co., in a valley near the Kayaderoseras Creek, 32 miles N. of Albany, and 25 from Troy, with which it is connected by the Rensselaer and Saratoga Railroad. Its mineral waters were formerly much celebrated, but have since lost some of their properties, and are relatively of less value since the discovery of springs in such variety at Saratoga, 7

miles N. The oldest and most esteemed fountain is denominated the "Public Well," which is in the W. part of the village, and issues from a bed of blue clay and gravel. It is said to have been first discovered in 1769. There are other springs possessing the same medicinal properties, but of less note.

The *Sans Souci Hotel*, erected in 1803 for the accommodation of visitors, is a popular establishment, delightfully situated near the centre of the village. The main building is 160 feet long, with wings extending back 153 feet, and is surrounded by beautiful pleasure grounds. It can accommodate about 150 visitors, and is often thronged, during the summer months, with temporary residents from every part of the United States, and from other countries.

Long Lake, 5 miles S., is a favorite resort for those who are fond of fishing. The village was incorporated in 1807, and has about 2000 inhabitants. It contains a number of hotels besides the *Sans Souci*, and several private boarding-houses for visitors during the summer months. There are churches of the Presbyterian, Episcopal, Baptist, and Methodist denominations.

BELLOWS FALLS, VT.

See *Walpole*, N. H., or *Rockingham*, Vt.

BLACK MOUNTAIN, N. C.

This mountain, which is about 30 miles N. from Morgantown, rises to the height of 6476 feet, which is 250 feet higher than Mt. Washington, N. H., and is one of the highest elevations in the United States. In its near vicinity also are the summits called *Grandfather Mountain* and *Grandmother Mountain*; the former 5560 feet, and the latter 2500 feet in height.

BLANNERHASSET'S ISLAND,

In the Ohio River, about 14 miles below Marietta, is celebrated as having formerly been the residence of Mr. Blennerhasset, an Irish gentleman of distinction, who came to this country and built for himself a splendid seat upon this island. He expended here large sums of money in the decoration of his mansion, and in the elegant and tasteful arrangement of his gardens and pleasure grounds. His wife was a very accomplished lady, and his house became the resort of the most polished and literary society. Unfortunately, however, this gentleman became involved in the treasonable projects of Aaron Burr; having been induced by him to embark with all his wealth in his famous scheme for bringing about the dismemberment of the United States, and the establishment of a separate government in the south-west. The consequence was, that Blennerhasset was ruined in fortune and reputation; his splendid mansion was deserted and went to decay; and this once beautiful place now presents only a mass of ruins. For what it once was, and because of the melancholy historical interest which belongs to it, we have given the notice of this island a place in this section of our work.

BLUE HILLS, MS.

This range of hills lies about 10 miles S. from Boston, in the county of Norfolk, and from its proximity to several of the most populous cities and towns, the most cultivated and luxuriant landscapes, and the chief commercial marts and harbors of the commonwealth, its summits, though

not absolutely of great elevation, command some of the most interesting and lovely prospects to be found in this or in any country. The range has several summits in different parts, which, though varying in height, have each their respective features of interest to the spectator.

The most elevated height is at the western extremity, in the S. W. part of Milton, where the hill is 710 feet above the ocean. From this position a prospect of almost unexampled beauty and extent is spread out before the eye. The eight cities of Boston, Charlestown, Cambridge, Roxbury, Salem, Lynn, Lowell, and Lawrence; the beautiful suburbs of Boston, embracing the towns of Chelsea, Brookline, Brighton, Watertown, Newton, Dedham, Dorchester, Milton, Quincy, Braintree, Randolph, Weymouth, Hingham, and many others, with the broad expanse of Massachusetts Bay and Boston harbor, studded with islands and whitened with sails from every sea, seem all to be lying at the feet of the spectator. Of some of the objects of this gorgeous scene, President Hitchcock thus speaks, in his work on the "Scenographical Geology" of Massachusetts: "One circumstance of peculiar interest is the proximity of these hills to Boston, whose numerous edifices, masts, spires, and towers, and, nobly peering above the rest, the dome of the State House, present before the observer a most forcible example of human skill and industry, vying with and almost eclipsing nature. And the high state of cultivation exhibited in the vicinity of Boston, with the numerous elegant mansions of private gentlemen crowning almost every hill, and imparting an air of freshness and animation to the valley and the plain, testify how much taste and wealth can do in giving new charms to the face of nature. From these hills the observer has also a fine view of Boston harbor.

. . . To look out upon the ocean is always an imposing sight; but when that ocean is studded with islands most picturesque in shape and position, and the frequent sail is seen gliding among them, he must be insensible indeed whose soul does not kindle at the scene, and linger upon it with delight."

Besides the State House, and other imposing edifices in Boston, there are also the venerable college buildings at Cambridge, the Monument on Bunker Hill, the granite for which was quarried from a part of this range, the Asylums and Hospitals at South Boston, the Navy Yard at Charlestown, Dorchester Heights, and the massive fortifications upon some of the islands in the harbor, which will not fail to arrest the attention of the observer.

The prospect from these hills is remarkable for its extent as well as for its luxuriance and beauty. Although their elevation is not great, yet there is nothing to intercept the view on the N. between them and the Grand Monadnoc; the E. is open to Massachusetts Bay and the ocean; the S. to the counties of Plymouth and Bristol; and on the W. the horizon is only limited by the Wachusett Mountain, which lies in Princeton, about 60 miles distant. This height is plainly discernible, in a clear atmosphere, by the naked eye.

The Blue Hills constitute a convenient landmark for vessels bound into Massachusetts Bay, being the first land which is seen on their approach from the sea; and whenever seen, they have always a blue appearance, which circumstance has given them the name they bear. The

most elevated summit of this range lies about half a mile from the roads which pass at its base in various directions, and may be ascended by several paths from the different sides.

BLUE SULPHUR SPRING, VA.

This spring is situated in the region of the other Virginia springs, in a beautifully picturesque valley, on Muddy Creek, a small tributary of the Greenbrier River. It is about 20 miles W. of the celebrated *White Sulphur Springs*. The medicinal properties of the Blue Sulphur are considered as valuable, and draw a large number of visitors. Accommodations are afforded at the public houses for about 300 guests. This place is about 200 miles W. of Richmond, and is reached by the Richmond, Fredericksburg, and Louisa Railroads, as far as Gordonsville, thence by stage, via Staunton and the Natural Bridge, to the springs. For particulars of this and other routes, see *White Sulphur Springs*.

BOOTHBAY, ME.

This place, frequently known as *Townsend Harbor*, which is celebrated as one of the largest and most commodious harbors on the Atlantic coast, has become quite a fashionable resort for seekers of health and pleasure from the towns on the Kennebec River and other parts of Maine. Fishing and fowling here are exceeding good, and the convenient pleasure trips in boats among the islands in the bay afford no small enjoyment to the visitors.

Among the thousands of coasting vessels which swarm upon this coast, many hundreds are frequently seen within this harbor at the same time, enjoying a safe retreat from the raging storm without. Boothbay lies about 12 miles E. of the mouth of the Kennebec, and 24 miles from the city of Bath.

BRANDYWINE SPRINGS, DE.

These celebrated springs are situated near the Brandywine Creek, and are reached by carriages from Wilmington. They are much resorted to, both for health and pleasure, by the citizens of Wilmington, Philadelphia, Baltimore, and other places. Distant from Wilmington but a few miles.

BURNING SPRINGS, N. Y.

There is one of these curious springs, or rather eruptions of inflammable gas from the earth, situated in a ravine on the W. side of Bristol, 8 miles S. E. from Canandaigua. The gas rises through fissures of the slate rock, at the margin and in the bed of a brook. Where it issues from the rock it burns with a steady and beautiful flame. In winter, it forms openings in the superincumbent snow; and, being set on fire, it presents the curious spectacle of a flame rising out of the snow. In very cold weather, tubes of ice are formed around those currents to the height of two or three feet. When burning in a still evening, these natural lights may be seen presenting a novel and beautiful appearance.

There is another of these burning springs near the village of Barcelona, 51 miles W. of Buffalo, which has been applied to the useful purpose of maintaining a Light on the southern shore of Lake Erie. The gas escapes from the bed of a creek about 1 mile distant from the lake, and is carried in pipes to the light-house. There are other-similar springs in the U. S.

CAPE ANN, MS.

See towns of *Gloucester* and *Rockport*.

CAPE MAY, N. J.

This place, situated at the mouth of Delaware Bay, on the N. E. side, has, for a number of years past, become an attractive watering-place, much frequented by the citizens of Philadelphia and others. During the summer season, a steamboat runs from the city to the cape, and affords a pleasant trip. The beach is unsurpassed as a bathing-place, and the accommodations for the entertainment of visitors are of the first order. Distance from Philadelphia, 102 miles.

CARROLLTON GARDENS, LA.

This pleasant resort for the citizens of New Orleans is at Carrollton, a rapidly improving place, about 6 miles above the city, on the Mississippi. A railroad extends from the centre of New Orleans to this place, and it is occupied as a place of residence by many who do business in the city. Excellent cars run over the road every few minutes during the day and evening.

CATAWBA FALLS, N. C.

Situated on the left of the Swannanoa road, so called, leading from Morgantown to Nashville, through the Swannanoa Gap, and about 5 miles distant from the road. These falls are much visited by tourists, and are well worthy the attention and admiration they receive. The Catawba River is a branch of the Santee. See *Wateree River*, p. 256.

COHASSET ROCKS, MS.

These storm-beaten rocks, which have been the means of sending so many shipwrecked mariners to a watery grave, lie at the entrance of Cohasset harbor, a few miles S. E. of the light-house at the entrance of Boston harbor, extending about 3 miles from the town, and quite out into Massachusetts Bay. The outline of the shore at this point is such as necessarily to expose this place to the most powerful action of the sea, which has consequently here laid bare, to the skeleton, this brawny limb of "New England's rock-bound coast." The area covered with these ledges embraces many hundred square acres. It is a place of imminent hazard to vessels coming on the coast, and many have been the wrecks here experienced, with great destruction of life. The attempt was made, in 1849, to establish a light-house upon the outer extremity of these rocks, where, of course, the sea breaks over them with all its force. On the ledge known by mariners as Minot's Ledge, a structure was erected, consisting of iron piles, inserted from 5 to 6 feet in the rock, eight inches in diameter at the base, and four and a half inches at the top, nine in number, one being in the centre, and firmly braced by iron rods connecting them one with another. The breadth of this structure at the base was 25 feet, and its height 75 feet. It was first lighted January 1, 1850. In the great gale of April 16, 1851, this light-house was entirely beaten down, and now lies buried in the sea. Two persons, who had the care of the light, were lost in its destruction. A light-ship has since been placed at this station.

Cohasset is a pleasant place of summer resort for the citizens of Boston, from which it is distant, by railroad, 22 miles. Amid the rocks on the

opposite side of the harbor from the town, at a place called "The Glades," a very good house of entertainment has been established, affording fine advantages for enjoying sea air, sea bathing, and fishing. "The Glades" is also a favorite resort, in the proper season, for shooting the various kinds of sea fowl, which frequent this coast in countless numbers. This place may be approached either by crossing from the village in boats, or by a road about three miles round the harbor. Many of the rocks of this remarkable locality are of singular composition, and well worthy the attention of the geologist. See *Cohasset*.

COHOES FALLS, N. Y.

These falls are described in our account of the Mohawk River. See p. 220.

CONEY ISLAND, N. Y.

See p. 184.

CROWN POINT, N. Y.,

Is the name of an ancient fort, built by the French, in 1731, in the town of the same name, upon the N. E. extremity of a point of land jutting out into Lake Champlain. After the destruction of the old French fort, a new fortress was constructed here by Lord Amherst, which was built of wood and earth, enclosing an area of 1500 square yards, and surrounded by a deep and broad ditch, cut with immense labor in the solid granite. There was a gateway on the north, a drawbridge and a covered way to the lake. These works are said to have cost the British government 2,000,000 sterling. Near this point, on the 13th of October, 1776, the American fleet, under Arnold, was destroyed, and his expedition against Canada terminated. Crown point lies about 35 miles north from Whitehall.

DIGHTON ROCK, MS.

See town of *Dighton*.

DRENNON SPRINGS, KY.,

Situated in Henry county, about 20 miles from the mouth of the Kentucky River, and about a mile and a half back from the river. They are easily reached from Frankfort, 40 miles, Louisville, 78 miles, and Cincinnati, 95 miles, by steamboats, which run back and forth daily during the season of company at the springs. Every variety of sulphur and chalybeate waters are to be found among the fountains of this fashionable resort.

FLUSHING, N. Y.

This pleasant resort for the citizens of New York is in the town of the same name, on Long Island, to which the reader is referred.

FORT TICONDEROGA, N. Y.

This old fort, in the town of the same name, erected by the French in 1756, and by them called "Carrillon," is on the western shore of Lake Champlain, 24 miles from Whitehall, and 58 miles from Burlington. It is at this point that the delightful and much frequented route to Saratoga Springs, by the way of Lake George, diverges from the more direct route, by way of Whitehall. Passengers here leave the Champlain boats for stage coaches, by which they are conveyed over a hilly but romantic road about 3 miles, to the village of Ticonderoga, at the head of Lake George, and thence down the lake, 36

miles, by steamboat, to the Lake House, at its southern extremity. Ticonderoga was originally a place of much strength, having, from its situation with water on three sides, great natural advantages for a post of defence. It was taken from the English by the brave Colonel Ethan Allen, at the head of 83 Green Mountain Boys, at the commencement of the revolutionary war, in 1775. It was recaptured a however, by General Burgoyne, two years afterwards, and held by the British during the war. Burgoyne gained a position for a battery of artillery upon the summit of Mount Hope, about a mile north, from which he successfully stormed the fort. The ruins of this ancient fortress, which still remain, are sufficiently entire to give the visitor a pretty correct idea of the outline and interior of this celebrated stronghold. From Burlington to Ticonderoga, it is 58 miles, and thence to Saratoga Springs, by the route above described, 69 miles; from Boston to Saratoga Springs, by this route, 367 miles.

FRANCONIA NOTCH, N. H.

This pass through the western flank of the White Mountains, on the route from Littleton to the central part of New Hampshire, though less rugged and grand in its features, is by many thought to be not inferior in interest, on the whole, to the celebrated pass on the east of it, known, by way of eminence, as "*The Notch of the White Mountains*." The mountains between which the Franconia Notch passes are those which have received the names of *Mount Lafayette* and *Mount Jackson*. Persons who visit the White Mountains will not consider their excursion as complete until they have passed through the Franconia Notch. The grand and the beautiful are so blended in its wild scenery, that the observer scarcely knows with which of these great emotions he is most absorbed. There are also several particular objects of curious and impressive interest, on the way through this mountain pass, which travellers pause to notice. One of these, and one which has been declared to be the greatest natural curiosity of the state, is the "*Old Man of the Mountain*;" who, as he claims the title, without dispute, of "the oldest inhabitant," so he enjoys, without fear of rotation in office, the highest seat of promotion in New Hampshire. On a bold and nearly perpendicular front of the rock which terminates one of the jutting cliffs of Mount Jackson, at the height of 1000 feet, in full relief against the western sky, and looking in calm majesty towards the south, is seen this wonderful profile of the human face, delineated with striking exactness and in gigantic proportions, wearing from age to age the same undisturbed expression of sovereign dignity and hoary wisdom. No one who has stood and gazed, in a serene day, upon the face of the Old Man of the Mountain, can ever forget the visual image, or lose the moral impression he has there received. This profile is produced by a peculiar combination of the surfaces and angles of five massive granite blocks, which nature has piled upon this bald and storm-beaten height. A guide-board is placed upon the stage road, a short distance south of the Lafayette Hotel, which is kept here for the entertainment of visitors, to indicate the true position from which to view this curious freak of nature.

Another object of great interest to be visited, two or three miles south, is "*The Flume*." Of

this, Dr. C. T. Jackson, of Boston, in his work on the Geology of New Hampshire, thus speaks:

"The Flume is a deep chasm, having mural precipices of granite on each side, while a mountain torrent rushes through its midst, falling over precipitous crags and loose masses of rock. During the freshets of the spring season, and in early summer, it is not practicable to walk in the bed of the Flume. But in the driest season of the year, there is but little water in it, and the bottom of the ravine affords a good foot path.

"The direction of this rocky fissure is N. 80° E., and it appears to have resulted, not from the abrasion of the rocks by the action of running water, but to have been produced originally by a fracture of the uplifted rocks. The walls of the chasm on either hand exhibit proofs in favor of this opinion; for they are not water worn, but present surfaces of fracture, and the projecting ledges on each side are still comparatively sharp, and well defined in their outlines.

"One of the most remarkable objects in the Flume is an immense rounded block of granite, which hangs overhead, supported merely by small surfaces of contact against its sides. It appears to the traveller looking at it from below as if ready to fall upon him."

This Notch, in a remarkable manner, resembles the Great Notch, in its leading natural characteristics. Like that, it forms an extraordinary natural avenue for a road, which connects the region of the upper Connecticut River with the seaboard. In the same manner, also, it has its river, taking its rise from a pond, called Ferrin's Pond, near the head of the Notch, and rapidly increasing as it flows onward, receiving perennial supplies from the mountain sides, and often swollen to a maddening torrent, by the rains which fall upon their broad and steep declivities. This river is the most N. branch of the Pemigewasset; and uniting with two other branches, from the E. and W., in the N. part of the town of Woodstock, forms one of the principal sources of the Merrimack, which, after performing such wonders of productive industry at Manchester, Lowell, Andover, and Lawrence, falls into the ocean at Newburyport.

Travellers visiting the White Mountains by this route proceed by railroad from Boston to Concord, N. H., 76 miles; thence by railroad to Plymouth, 51 miles; thence up the valley of the Pemigewasset, by railroad and stage to the *Flume House*, 24 miles; thence through the Notch, by the Old Man of the Mountain, to the *Lafayette House*, 5 miles farther; in all, 153 miles from Boston. From this the distance to *Fabyan's White Mountain House*, via Bethlem, is 16 miles. From the *Lafayette House* N. to Littleton is 12 miles.

GINGERCAKE ROCKS, N. C.

This remarkable pile of rocks gives its name to the mountain summit, upon the top of which it is seen. They are situated in the mountainous part of Burke co., amidst wild and romantic scenery. The pile consists of two rocks, of different form and character, so poised as to stand firmly upon an exceedingly small base. The first or lower section, composed of a brittle slate stone, is in the form of the half of an inverted pyramid. Its truncated top, which, by its inverted position, becomes the base, upon which the whole is supported, is only 4 feet in diameter.

The centre of gravity to this part of the pile, would fall much without the base upon which it rests, were it not most accurately balanced in its position by the second or superincumbent rock, which is a table of mountain granite, 32 feet in length, 18 in breadth, and 2 feet thick, resting horizontally upon the other with a sufficient excess of its projection and weight, opposite to the preponderance of the inverted pyramid beneath, to produce a perfect counterpoise. The form and outline of this upper rock is as remarkable as that of the other, being as true in the proportions above given as if it had come from the hand of an artist. The lower section is about 29 feet high, which, being increased by the thickness of the upper section, makes the entire altitude 31 feet.

A visitor to this curious freak of nature remarks that "within the presence of this strange pile, the predominant feeling, after that of admiration, is fear. An attempt to reason one's self into a feeling of conscious security is utterly futile. The argument that it has stood there perhaps for thousands of years, amid the raging winds and rocking earth, is met and opposed by the ocular fact of its standing before you almost upon nothing; and, approach it at what point you will, it appears leaning towards you."

As these rocks stand upon the summit of the mountain, they can be seen, in a clear atmosphere, from a distance of many miles, looming up above the horizon, against the clear blue sky, in which they seem to float like a little fantastic cloud.

The prospect from this mountain summit towards other distant points is also sublimely grand. Looking north, the eye runs down a ravine between precipices from 800 to 1200 feet high, at the bottom of which the Linville River, one of the sources of the Catawba, dashes its pure waters along its rocky bed. From the top of one of the cliffs which overhangs this chasm is seen a shaft of rock shooting out over the gulf below, at the height of 1500 feet. This is known in the neighborhood by the name of the *Hawk's Bill*, from its resemblance to the beak of that bird.

On the left of this, from the point of observation, and about 5 miles distant, is the famous *Table Rock*, of Burke co., which rises, upon the verge of the Catawba valley, to the height of 2500 feet. It appears, as seen from this point, to have the shape of a perfect cone.

There are few mountain districts in which is presented such a various display of the strange, the wild, the beautiful, and the grand, as here.

GUILFORD POINT, CT.

Situated in the old town of Guilford, on the shore of Long Island Sound, 15 miles E. of New Haven. The point runs out a short distance into the water, about one mile from the centre of the town. This has long been a place of resort, in the summer season, for the citizens of New Haven, Hartford, and other places, in pursuit of health and recreation. Good accommodations are found at the Point itself, and also at the hotels and boarding-houses in the village.

HAMPTON BEACH, N. H.

This beach is on the Atlantic coast, in Rockingham co., about 12 miles S. of Portsmouth, and about 7 miles S. W. from Exeter. It is little inferior to the celebrated Nahant Beach, near Bos-

ton, and has long been the resort of invalids and parties of pleasure. There is a good hotel for the accommodation of visitors. There is, near this place, an abrupt and singularly-shaped promontory, extending into the sea, and dividing the beaches, which had otherwise been continuous, on either side, called Great Boar's Head. The fishing is very good here a little distance from the shore.

HARPER'S FERRY, VA.

This spot, so celebrated for its wild and majestic scenery, is in Jefferson co., at the confluence of Shenandoah and Potomac Rivers, where, after the union of their waters, they find a passage through the rocky barrier of the Blue Ridge, 1200 feet in height. Mr. Jefferson, in his "Notes on Virginia," has given a full and graphic account of the scene which is here presented, which he characterizes as "one of the most stupendous in nature." "Jefferson's Rock," the spot where it is said Mr. Jefferson wrote his description, is a pile of huge, detached rocks, leaning over the precipitous cliffs of the Shenandoah, and looking into the mountain gorge of the Potomac. Its top is 12 feet square, and almost level; whilst its base does not exceed 5 feet in width, resting upon a larger mass of rock, jutting out from the hill. Mr. Jefferson pronounces the scenery at this place as "worth a trip across the ocean to behold."

There is also a most enchanting prospect obtained from the summit of a mountain opposite, about a mile and a half farther up, on the Maryland side of the river. The eye here reaches a very wide extent of country, fields, woodlands, and plantations; while the Shenandoah, as it is traceable upon the magic picture, appears like a series of beautiful lakes.

A bridge, 750 feet long, crosses the Potomac at Harper's Ferry. The U. S. have located an armory and an arsenal at this place, which are well worthy the attention of the tourist. Nearly 9000 stand of arms are annually manufactured here, employing about 240 hands. The hotels at this place afford excellent accommodations for visitors.

The Baltimore and Ohio Railroad here finds a passage through the Blue Ridge, in its route between Baltimore and Cumberland. The distance from Baltimore is 82 miles, and from Cumberland 96 miles. The Winchester Railroad also connects this point with Winchester, Va., 32 miles distant.

HARRODSBURG SPRINGS, KY.

This celebrated watering-place is situated in a town of the same name, near the geographical centre of the state, a few miles S. W. of the Kentucky River. The springs are 6 or 8 in number, bursting out near the summit of the limestone ridge on which the village of Harrodsburg is built.

The *Epsom Spring* issues in the most copious stream, has a feeble sulphurous smell, and a lower temperature than the others, and therefore is the one chiefly used. This spring contains the following ingredients: Carbonate of magnesia, sulphate of soda, sulphate of lime, carbonate of lime, and sulphuretted hydrogen. Temperature 60 degrees. There is, as this analysis shows, a striking analogy between the constitution of the

Epsom Spring and that of the Seidlitz Spring of Bohemia; which was examined, and its powers warmly extolled by the celebrated Hoffman, in 1721, and has maintained its reputation unabated for more than a century.

The *Chalybeate Spring* is the same in constitution with the above, with the addition of iron, and a stronger impregnation of sulphuretted hydrogen. Temperature 65°.

From their composition, the sanative effects of these waters will be easily inferred. They are gently purgative, diaphoretic, and diuretic. They diminish arterial action, promote various secretions, and exert an alterative influence upon the system. Hence they are clearly beneficial in all diseases attended by inflammation; in obstructions of the viscera; dysentery; chronic rheumatism, and gout in its earlier stages; in cutaneous diseases; and in complaints of the chest following colds, measles, or scarlatina, or dependent upon inflammation of the bronchia.

For those from the S. and W. in search of health or recreation, this watering-place affords a delightful retreat in the summer months; and the number who resort to it is every year increasing. There have been some \$300,000 expended upon the premises; and there is, perhaps, no establishment of the kind in the United States, owned by an individual proprietor, which surpasses this in the means afforded for making a residence there desirable.

In the neighborhood of the springs are the *Gray Mural Cliffs* of the Kentucky River, which are visited as a great natural curiosity. Here the river flows, in a narrow and winding ravine, nearly 400 feet deep; and offers, in its high and precipitous banks, embellished with evergreens, much to interest those who have a taste for the sublime and beautiful in natural scenery.

The distance of these springs from Louisville, on the Ohio River, via Shelbyville, Frankfort, and Lawrenceburg, is about 120 miles.

HOBOKEN, N. J.

This delightful place of recreation for the citizens of New York lies on the opposite bank of the Hudson, immediately N. of Jersey City. During the warm summer months, the steam ferry boats running back and forth between Hoboken and New York are continually crowded with persons seeking refreshment in this charming retreat from the heated and thronged streets of the city.

HOPKINTON SPRINGS, MS.

These mineral springs have become somewhat celebrated. They contain carbonic acid, carbonate of lime, and iron. They are three in number, each differing in its properties from the others. They are situated near White Hall Pond, which abounds in fish of various kinds. At this place, a large and commodious hotel has been kept for many years, and has become a favorite resort for persons in pursuit of health or pleasure, where ample provision is made for all their wants. The Boston and Worcester Railroad passes within three and a half miles of the springs, at Westborough, 32 miles W. from Boston.

HOT SPRINGS, AS.

This place, situated a few miles N. of the Washita River, and about 50 miles from Little

Rock, the capital of the state, is becoming every season more and more popular. Its waters have been found efficacious in chronic diseases, such as scrofula, rheumatism, &c. Visitors to these springs find every accommodation suited to their wishes, at the fine hotel established for their reception.

HOT SPRINGS, VA.,

Situated in the western section of the state, in the vicinity of the other Virginia Springs, about 200 miles W. of Richmond. They are five miles distant from the Warm Springs. They are romantically situated in a valley surrounded by mountain peaks. There are 6 separate springs, which range in temperature from 98° to 106° of Fahrenheit. Each of the springs supplies a distinct bath; and the spout baths are natural spouts. The bathing establishment has recently undergone considerable improvement. The hotels, or buildings at the springs, are sufficient for the comfortable accommodation of 150 persons.

These waters, as critically analyzed by Professor William B. Rodgers, of the University of Virginia, contain the following saline ingredients in each 100 cubic inches, viz.: Carbonate of lime, 7.013; carbonate of magnesia, 1.324; sulphate of lime, 1.302; sulphate of magnesia, 1.530; sulphate of soda, 1.363; chloride of sodium and magnesium, with a trace of chloride of calcium, 0.105; proto-carbonate of iron, 0.096; silica, 0.045. The free gases consist of nitrogen, oxygen, and carbonic acid gas.

These waters, when taken internally, are anti-acid, mildly aperient, and freely diuretic and diaphoretic. When used as a general bath, their effects are great, frequently excelling all expectation. They relax contracted tendons, excite the action of the absorbent vessels, promote glandular secretions, exert a marked and salutary influence over the biliary and uterine systems, and often, in a short time, relieve excruciating pain, caused by long-standing disease in some vital organ.

For the routes to this place, see *White Sulphur Springs*.

HOUSE OF NATURE, IS.

This name is applied to a curious natural cavern in the rock, on the shore of the Ohio River, 24 miles below Shawneetown. Passengers on the boats will not fail to have it pointed out to them as they pass; and sometimes, at their request, the captains are so obliging as to stop their boats for a short time, to allow an opportunity of visiting the cave. The names of many visitors are graven on its front. The entrance is just above high water mark, and is about 20 feet high, leading into a spacious chamber with an arched roof 30 feet high, and extending back 125 feet. Families of emigrants, descending the river, have occasionally found a winter asylum in this cave. Mason, the noted pirate and outlaw, who, about the year 1800, subsisted with his banditti, for some time, by waylaying, robbing, and murdering the boatmen upon the river, made this cavern his rendezvous. He was finally shot by one of his own comrades, in order to obtain the reward of \$500, offered by the governor of Mississippi for his head.

INDIAN SPRINGS, GA.

This fashionable watering-place is situated in Butts co., 52 miles N. W. from Milledgeville. The springs are in the forks of two creeks which

empty into the Ockmulgee, and about 10 miles W. of that river. They contain sulphur and other ingredients, and are considered efficacious as a remedy for gravel, rheumatism, cutaneous and other diseases. Visitors here find good accommodations.

ISLES OF SHOALS, ME. AND N. H.,

Off Portsmouth, N. H. These shoals are 7 in number, lying about 9 miles out at sea. The largest of the islands, familiarly known as Hog Island, contains 350 acres, and has an elevation in its highest parts of 50 feet above the sea. Upon this island a hotel has recently been erected, affording pleasant accommodations for water parties from Portsmouth, from Hampton and Rye Beaches, and the neighboring towns, and also for persons wishing to remain a few days or weeks in summer, as it were, at sea, without any of the discomforts of a sea voyage. The place is much more frequented than formerly by parties of pleasure. See *Isles of Shoals*, p. 204.

LATONIAN SPRINGS, KY.

This is a pleasant and fashionable place of resort during the summer months, situated 4 miles back from Covington, on the opposite side of the Ohio River from Cincinnati. *Linden Grove Cemetery*, in the immediate vicinity of the springs, is an attractive place of the kind.

LONG BRANCH, N. J.

This popular place of resort for those fond of sea-shore recreations is on the E. coast of N. J., 32 miles from New York. The *Ocean House*, a short distance from Long Branch, is also a hotel of the first order. The constant sea breeze and the convenient sea bathing here to be enjoyed have a fine effect in restoring the exhausted energies of the human system. There is admirable sport for the angler in the vicinity. The Shrewsbury River on the one side, and the ocean on the other, swarm with many delicate varieties of the finny tribe.

In the neighborhood of Long Branch are also *Shrewsbury*, *Red Bank*, and *Tinton Falls*, which are all places of great resort. The above localities are reached by a steamboat, running at convenient periods from New York.

LOOKOUT MOUNTAIN, GA.

The range on which this lofty summit is situated commences in the N. W. part of the state, and rises to the height of 2000 feet. The view from Lookout Mountain is very grand, overlooking a vast extent of country, and comprising every variety of landscape. Encircling the brow of the mountain is a natural palisade of naked rocks, from 70 to 100 feet in height. The railroads from Savannah and Charleston approach near to this mountain.

MADISON'S CAVE, VA.

This cave is situated in the vicinity of Weir's Cave, and somewhat resembles that remarkable curiosity. It is, however, much less extensive, not exceeding 300 feet.

MADISON SPRINGS, GA.,

Are in Madison co., about 100 miles N. from Milledgeville, 23 miles N. E. from Athens, and 7 miles from Danielsville, the shire town of the county. The waters are impregnated with

iron, and are useful in cutaneous diseases. This is a place of fashionable resort, where visitors meet with every attention.

MAMMOTH CAVE, KY.

This stupendous wonder of nature is situated in Edmonson co., about 90 miles S. from Louisville, and about equally distant, in a N. E. direction, from Nashville, Te. A large and commodious hotel has been erected, two or three hundred paces from the mouth of the cave, for the accommodation of visitors. The tourist leaves the stage road about 6 miles from the entrance to the cave, and passes through some of the most romantic and beautiful scenery in reaching this public house, where he finds every thing provided to render his visit agreeable and instructive. It is only within a few years that this cave has been very extensively explored; and it is still supposed that but a small part of it, in comparison with the whole, has ever been trodden by the foot of man. It has been estimated that the length of all the different avenues and branches, when added together, would make more than 600 miles. As far as known, there are in the cave 246 avenues, 47 domes, 8 cataracts, and 23 pits. The darkness, deeper than that of the blackest midnight, which pervades these subterranean recesses, and which is little more than rendered visible by the torches which the visitors carry with them, renders it difficult for the spectator to form any thing like an adequate idea of its vast dimensions, its great heights and depths in the different apartments, and of the singularity and beauty of the natural decorations they contain. The recent attempt of an adventurous artist, however, to obtain drawings of a number of the different avenues, halls, and chambers, for the purpose of illustrating the hidden wonders of this natural phenomenon to the eye by the aid of the beautiful illusion of the moving panorama, has been, in a great degree, successful. The different parts of the cave selected for this purpose were illuminated by hundreds of lights, placed at different points, so as to give the most powerful and just effect to the ever-varying perspective within.

Immediately upon entering the mouth of the cave, the visitor perceives a sensible change in the temperature of the atmosphere, which is that of 59° Fahr., and remains so uniformly, winter and summer. No impure air exists in any part of it; decomposition and putrefaction are unknown; and combustion is perfect. Visitors going in and out are not liable to contract colds; but, on the contrary, colds are commonly relieved by a visit to the cave. No reptiles of any description are found here. It is a curious fact that fish without eyes have been caught in the rivers of this cave. They have been dissected by skillful anatomists, it is said, who declare that they are without the slightest indication of an organ similar to the eye, and also that they possess other anomalies in their organization interesting to the naturalist. These fishes are from 3 to 6 inches in length. Specimens of them are found in most of our collections of natural history.

The cave is also inhabited by two species of rats and a species of crickets, neither of which partake of the peculiarity of the fishes,—of the want of eyes,—for in both of these animals that organ is very largely developed. These rats are white and very large. Professor Agassiz has

some specimens of them in the collection at Cambridge. In the winter, millions of bats find here a resting-place well suited to their wants.

During the last war with England, a saltpetre manufactory was established in this cave; and, although it was discontinued in 1815, wheel tracks are still to be seen as clear and distinct as if made yesterday. The guides also point out corn cobs which were brought into the cave at that time, and which are perfectly fresh and sound.

The waters of the cave are of the purest kind; and, besides the springs and streams of fresh water, there are one or two sulphur springs. There are streams, lakes, and waterfalls of sufficient width and depth to compare well with those of the world above ground. Some of these rivers, as they are called, are navigated by boats of sufficient size to carry 12 persons; and one of them, called the Echo, is said to be broad and deep enough, at all times, to float the largest steamers. The rivers of the Mammoth Cave were never crossed till 1840. Some of them flow in deep channels, the sides of which rise high above their ordinary level. After heavy rains, they are sometimes swollen so as to rise more than 50 feet. At such times the streams, and especially the cataracts, of the cave, exhibit a most terrific appearance. Great exertions have been made to discover the sources of these streams, and where they find their outlets: yet they still remain, in this respect, as much a mystery as ever.

“Darkly thou glidest onward,
Thou deep and hidden wave!
The laughing sunshine hath not looked
Into thy hidden cave.”

The different apartments and passages of this wonderful subterranean labyrinth have many of them received names, from their resemblance, more or less real, to the most celebrated interiors and decorations of architectural design. A few only can be here described.

At the Cave House, erected near the entrance by Dr. Croghan, the late proprietor of this wonder of the world, those visiting the cave are supplied with lights, guides, and whatever else may be required for their expedition. The air of the cave, as you enter, gives a pleasant sensation of refreshing coolness. As you continue descending some irregular stone steps, the daylight fades and the gloom deepens. Nothing is heard save your own footsteps, and the sound of the waters leaping from a precipice over your head and falling on the rocks below. A beautiful stream of water falls over the mouth of the cave, as one writer has remarked, as if it were the remnant of a graceful curtain, which had formerly concealed this wonder from the gaze of man. Looking back towards the orifice, the light of the external day appears dim, as if it were the twilight of evening. Looking before you, if looking it may be called,—what a world of darkness! With all your torches how little can be seen! A strange sensation comes over you, as with hesitating step you proceed.

The first great expansion of the cavern which you enter is the Great Vestibule, an immense hall, covering an area of an acre and a half, with a dome, lost in the darkness, 100 feet high, unsupported by a single pillar. By kindling a fire at this spot, the vast dimensions of the chamber may be faintly discovered. “Far up above your head,” says one, “is seen the gray ceiling

rolling dimly away like a cloud, and many buttresses bending under their weight begin to project their enormous masses from their shadowy wall." Two avenues lead out of this hall, at opposite extremities, which are about 100 feet wide and 500 feet long, with roofs as flat and smooth almost as if finished by the mason's trowel. About half a mile farther on, you pass the Kentucky Cliffs, so called from their resemblance to the famous cliffs on the Kentucky River. About half a mile beyond these is the Church, which is 300 feet in circumference, and its ceiling 63 feet high. A huge protuberance of the rock on one side serves the fancy for a pulpit, and a recess in the wall, in a corresponding position, serves for a gallery. From this hint of nature, religious worship has more than once been celebrated here. Concerts of music have been held here, which have been said to produce singularly fine effects. After leaving the Church, a passage leads off at an acute angle from the main cave to the Gothic Avenue, which is nearly 50 feet wide, 15 feet high, and about 2 miles in length. The ceiling of this avenue is so smooth and white that it is difficult to believe that the trowel of the mason has not been used upon it. A good road extends through its entire length, and so pleasant is the temperature, purity, and salubrity of its atmosphere, that it has been selected as a most desirable promenade for invalids, who have sometimes resorted to this cave for their health. In one of the recesses of this avenue were to be seen, as late as 1813, two mummies in a good state of preservation, one of which was a female, in a sitting posture, with arms folded, and having before her various articles of her wardrobe. When, or by whom, these remains were placed in this dark and silent sepulchre, is of course unknown. A little farther on in this direction are the Registry Rooms, the ceiling of which, being perfectly white and smooth, serves as the register of the cave. Thousands of names have been traced upon it with the smoke of the torches. Next is the Gothic Chapel, a hall of almost overwhelming grandeur, elliptical in form, and 80 feet long by 50 in width. Immense stalagmites have been formed at each end, which almost close the entrance. There are also two rows of smaller pillars, extending from the ceiling on each side of the wall through its entire length. These impart to it, when strongly lighted up, the grand and solemn effect of a Gothic cathedral. Near this place is Brewer's Studio, a small room to which this name has recently been given by Mr. Brewer, author of the celebrated Panorama of the Mammoth Cave, from whose descriptions many of these notices have been compiled. He finished many of his sketches in this room. One or two other points of curious interest, such as the Devil's Arm-chair and the Lover's Leap, bring you to the termination of this Gothic Avenue.

Returning back to the main cave by another route, of more than a mile, through uninteresting scenery, and proceeding onward with this grand gallery, you soon reach the Star Chamber, one of the most brilliant apartments in the whole cave, and called by this name from the myriads of glittering points reflecting the light of the torches from the darkness overhead. The resemblance here to the splendid canopy of night is very perfect. Further on, the Chief City, or Temple, is formed by an immense dome, which

rises 120 feet high, and covers an area of 2 acres. It exceeds in size the Cave of Staffa, and rivals the celebrated vault in the Grotto of Antiparos. In passing through it from side to side, the dome appears to follow the spectator, like the sky in passing from place to place on the earth. In comparison with this dome of nature's rearing, the most celebrated of human structure sink into insignificance. There are, however, other domes in this wonderful cave, which, for height and extent, are even more extraordinary than this. Such is that, especially, which is called the Mammoth Dome. This dome of domes is nearly 400 feet above the floor of the room which it covers. Its elevation has been carefully determined by a competent civil engineer.

It would be impossible, within the limits of this article, to describe in detail the many objects of curiosity and scenes of grandeur which are to be found in the apparently interminable recesses of the Mammoth Cave. The names of the principal apartments, not already mentioned, will serve, by the aid of the foregoing descriptions, to suggest to the imagination of the reader some idea of their most impressive characteristics. Such are the Giant's Coffin, the Labyrinth, the Cascade, Gorin's Dome, the Bottomless Pit, the Winding Way, the Bandit's Hall, Great Relief Hall, River Hall and Dead Sea, Natural Bridge over the River Styx, (80 feet high,) Pass of El-Ghor, Crogan's Hall, City of the Tombs, Saint Cecilia's Grotto, Silliman's Avenue, Great Western Vestibule, Martha's Vineyard, Snowball Room, the Holy Sepulchre, Cleveland's Cabinet, Serena's Harbor, Fairy Grotto, Paradise, and others of a hardly less remarkable character.

To select one only from this list of wonders for the conclusion of our descriptions, we would offer the remarks of an intelligent clergyman, who lately paid a visit to the cave, upon that splendid hall known by the name of Cleveland's Cabinet. "The most imaginative poet," says this gentleman, "never conceived or painted a palace of such exquisite beauty and loveliness as Cleveland's Cabinet. Were the wealth of princes bestowed on the most skilful lapidaries, with a view of rivalling the splendors of this single chamber, the attempt would be vain. The Cabinet was discovered by Mr. Patten of Louisville and Mr. Craig of Philadelphia, accompanied by Stephen, the guide, and extends in nearly a direct line about $1\frac{1}{2}$ miles, (the guides say 2 miles.) It is a perfect arch, of 50 feet span, and of an average height of 10 feet in the centre—just high enough to be viewed with ease in all its parts. The base of the whole is carbonate (sulphate) of lime, in part of a dazzling whiteness and perfectly smooth, and in part crystallized, so as to glitter like diamonds in the light. Growing from this, in endlessly diversified forms, is a substance resembling selenite, translucent and imperfectly laminated. Some of the crystals bear a striking resemblance to branches of celery; others, a foot or more in length, have the color and appearance of vanilla cream candy; others are set in sulphate of lime in the form of a rose; and others roll out from the base in forms resembling the ornaments on the capital of a Corinthian column. Some of the incrustations are massive and splendid, others are as delicate as the lily, or as fancy work of shell or wax. Think of traversing an arched way like this for a mile and a half; and all the wonders

of the tales of youth—Arabian Nights, and all—seem tame, compared with the living, growing reality. Here and there, through the whole extent, you will find openings in the sides, into which you may thrust the person, and often stand erect, in little grottoes, perfectly incrustated with a delicate, white substance, reflecting the light from a thousand different points. All the way you might have heard us exclaiming, Wonderful! wonderful! O Lord, how manifold are thy works!"

The route by which this cave is commonly reached is by the daily line of U. S. mail stages from Louisville to Nashville, over a very good turnpike road. The stock has been subscribed for a railroad between these places, and in a few years the cave will be rendered much easier of access.

MITCHELL'S PEAK, N. C.

This lofty peak, which now enjoys the reputation of being the highest summit on the E. side of the Rocky Mountains, is seen on the road leading from Morgantown to Asheville, through the Swannanoa Gap, a few miles from where the Gap is entered. This name was given it in honor of Professor Mitchell, of Cincinnati, who has recently determined its altitude to be more than 250 feet higher than Mt. Washington in N. H., which had always before been supposed to be the highest land in the U. S., E. of the great chain of the Rocky Mts.

MONADNOCK MOUNTAIN, N. H.

This lofty mountain, whose summit is 3718 feet above the level of the sea, is situated in the towns of Jaffrey and Dublin, about 22 miles E. of Connecticut River, and 10 miles N. of the southern boundary of the state. It has long been visited as one of the most celebrated mountain heights in New England. The prospect from its top is most extensive and delightful. The ascent has been much improved within a few years past, and, for so great a height, is by no means difficult. Visitors have not unfrequently found a serene and beautiful atmosphere upon the summit of this mountain, while thunder, lightning, and tempest have been raging below. For a more minute description, see the towns above named.

MONTAUK POINT, N. Y.

See *Mountains*, &c., p. 221.

MONTMORENCI FALLS, CANADA.

This beautiful cataract is the greatest natural curiosity in the vicinity of Quebec. It is about 9 miles N. E. of the city, by the usual land route, on the river of the same name, which, coming from the N. W., in a stream about 60 yards wide, here falls directly into the St. Lawrence, over a perpendicular precipice 250 feet in height. Viewed from a distance, this magnificent waterfall appears like a motionless streak of snow upon the precipitous bank of the river. It is seen to great advantage from the St. Lawrence, immediately abreast of the cataract, where it appears a mighty torrent, projected with incredible velocity over the lofty cliff into the river, acquiring a fleecy whiteness as it falls; while the sun, in fine contrast with the snowy effulgence of the falling water, paints a deeply-tinted rainbow on the vapor at its base. The breadth of the fall is 100 feet, and its height, as will be perceived from a comparison, is about 100 feet greater than that of

Niagara Falls. The volume of water is so much less than that of Niagara, that the effect of the fall, in sublimity and grandeur of impression, bears no comparison, of course, to the effect of that stupendous cataract. Yet, from its great perpendicular descent, the ample woods with which it is fringed, and the broken rocks which surround and intersect its channel, sending it over the brink in foam resembling snow, sparkling in the light with its myriad crystal points, it has long been regarded as one of the most romantic and beautiful curiosities of the kind on the American continent. These falls may be seen in all their beauty and grandeur from the summit of the hill, near the shore of the St. Lawrence, and also on the S. side, from a position which may be gained with no great difficulty, part of the way down the bank.

On the hill near the falls is the house which was once the residence of the late Duke of Kent. It is now the residence of the proprietor of the extensive saw mills in the vicinity. These mills are carried by water taken out of the Montmorenci, about half a mile above the falls. They have upwards of a hundred saws in motion, and are said to be capable of turning out an entire cargo of planks in a day.

It was on the high grounds N. of these falls that General Wolfe first encountered the French, in 1759, and was repulsed, with the loss of 700 men—a disaster which he so fully retrieved for the British arms, though at the cost of his own life, a few days afterwards, upon the Plains of Abraham.

The ride from the city to the falls, on the S. side, is through the suburb of St. Roch, over the St. Charles River, near its mouth, and onward amidst beautiful farms and orchards to the pretty village of Beauport, which is well worth seeing, as furnishing a specimen of the better sort of Canadian country settlements. The view of Quebec, of Point Levi, of the St. Lawrence, and other interesting points, which is enjoyed in returning over this beautiful drive, is sufficiently splendid of itself to compensate all the trouble of obtaining it.

MONTREAL,

City, river port, seat of government, and chief mart of the commerce of Canada. The communication with this city from the U. S. has become so free and frequent, both for purposes of business and of pleasure, that we deem it desirable to give in this work a brief notice of the place. Its position at the head of ship navigation on the St. Lawrence, and near the confluence of that river with the Ottawa, in connection with its situation in relation to the U. S., renders it necessarily one of the most important commercial emporiums of America. It is the centre of the trade between Canada and the States, which is carried on by Lake Champlain and the Hudson to New York; with the west by the Lachine and Welland Canals and the lakes; and with New England by the railroads connecting with its ports. It is situated on the S. side of the large island from which it takes its name, and extends, with its suburbs, nearly two miles along the bank of the St. Lawrence, having, for some distance, nearly an equal breadth inland. It is divided into the Upper and the Lower towns, although the difference of elevation between the two parts is but slight. The Upper town, being the more modern, is the more handsomely built.

The situation and appearance of the city from

the water somewhat resembles that of Albany; increased, however, in picturesque beauty by the hill in the rear, originally called *Mount Royal*, which rises, about a mile from the city, to the height of 550 feet, forming a prominent object in the picture from every point of view. The battlemented wall, with which the old city was once surrounded, has fallen into decay; so that it is somewhat less like a European city in appearance than it formerly was, being now entirely open, and the wooded heights around covered with villas and pleasure grounds. The principal streets run parallel to the river, being crossed by others at right angles. Along the bank of the river, fronting upon the quays, is an extensive line of stone warehouses. Commissioners Street and Water Street are nearest to the river, and the next is St. Paul's Street, which is the great commercial thoroughfare, running the whole length of the city. Notre Dame Street, which is the Broadway of Montreal, extends in the same direction along the summit of the elevation of the Lower town, as it is seen from the river. In the Upper town and suburbs, which are mostly inhabited by the principal merchants, the houses are handsomely built in the modern style; but in the Lower town they are very generally of a gloomy-looking gray stone, with dark iron window shutters and tinned roofs, giving to the place rather an antiquated and heavy aspect. There is, however, a great appearance of strength and durability in these stone structures, which makes a favorable impression concerning the character and wealth of the place. To the tourist approaching Montreal upon the St. Lawrence, it presents the aspect of a "City of Granite." A massive stone quay extends along the whole river front, curving inward, and forming, with its wharves, a convenient harbor for the shipping. A broad space upon its brow, and in the rear, affords a delightful promenade in summer; and whenever any grand arrival or departure upon the river calls out the population of the city, this position, which offers unequalled advantages to the convenience of a multitude of spectators, presents an animated and imposing spectacle.

Immediately fronting the St. Lawrence is the Bonsecours Market, which, by its architectural embellishments, at once attracts the eye. But the most remarkable public edifice in Montreal, towering above every thing else, is the French Catholic Church of Notre Dame, commonly, but erroneously, called the French Cathedral. The Cathedral, or Bishop's Church, in Montreal, is in the W. part of the city. This Church of Notre Dame, situated on the street of the same name, and fronting on a public square, is the largest religious edifice in America. The length, from E. to W., is 225 feet, and the breadth 134 feet. There are towers at each of the corners, on its Gothic front, 220 feet in height; in one of which is hung the largest bell in the W. hemisphere. The interior contains 9 spacious aisles, with 1244 pews, and will accommodate 10,000 people. The service here is conducted in the French language. St. Patrick's is another large church, for the accommodation of the Irish Catholics, capable of containing about 7000 persons. There are other church edifices, of various denominations, and numerous public buildings, which are imposing in their architecture. Among these are the Government House; the Seminary of St. Sulpice; the Hotel Dieu, and the Sœurs

Noires, two large nunneries; the Court House and Prison; some fine banks; and an extensive range of barracks, for 2000 men. The hotels are numerous, some of them affording elegant accommodations for the travelling public. In one of the public squares is a colossal statue of Lord Nelson, placed upon a Doric column, the pedestal of which is covered with bass-reliefs representing his principal naval actions. "Montreal," says the British Whig, "is unquestionably the cleanest city in her majesty's dominions; although at one time it had the very contrary reputation." The labors of the corporation, in this respect, are worthy of all praise, not merely for the extreme cleanliness of the city, but for the good order and perfect quiet maintained both day and night. The cheapness of cab and caleche hire in Montreal is a fact which will not fail to interest the stranger visiting the place. For an English shilling you can traverse the entire length of the city and return again to your hotel.

In the year 1640, an association was formed in France, of persons actuated by religious zeal, for the purpose of colonizing the Island of Mount Royal. To this association the king ceded the whole island, which is about 70 miles in circumference. The spot selected for the city was consecrated by the superior of the Jesuits; the "Queen of Angels" was supplicated to take it under her protection, and it was called, at first, after her name, "La Ville Marie." In 1644 the whole of this beautiful domain, which, on account of its fertility, has been called the "Garden of Canada," became the property of the St. Sulpicians of Paris, and was by them afterwards conveyed to the seminary established by that order at Montreal. At the conquest of Canada by Great Britain, in 1760, the property and revenues of the seignories, and all estates belonging to existing religious institutions, were guaranteed to the possessors. Within the last half century many capitalists from England and Scotland have become residents of Montreal, and have infused a vigor and energy which are manifest in its greatly-extended commerce, and in the improvements which are continually taking place. At the same time it is true, that every thing about the city still speaks of its French origin; and so tenacious have been the French of their nationality, that a century of English rule has failed materially to alter their habits and manners.

The distance from Montreal to Boston is 339 miles, and to New York 406 miles.

MOUNT EVERETT, MS.

This is the most lofty of the summits of the Taconic range, situated in the E. part of the town of Mount Washington, which lies in the S. W. corner of the state. From the fact that, in connection with much of the surrounding elevated region of the Taconic Mountains, it constitutes the township of Mount Washington, the name of this mountain has often been confounded with that of the town. By the people of the vicinity it has sometimes been called *Bald Mountain*, and *Bald Peak*. We prefer, however, the name of MOUNT EVERETT, which President Hitchcock has given to it in his Geology of Massachusetts, in honor of Edward Everett, LL. D.

The height of this mountain is 2624 feet. The scenery in its immediate neighborhood is of the boldest and most romantic description. The whole township, as before intimated, consists of

one vast pile of mountains belonging to the Taconic range, which skirts Massachusetts on its western border. There are valleys here, but the valleys themselves are not less than from 1000 to 2000 feet above the Housatonic, which flows about 5 miles E. of the centre valley, or business part of the town. On the sides of this mountain valley are mountains rising, some 500 and some 1000 feet, from which descend some of the most beautiful cascades in nature. The mountain on the E., and nearest the Housatonic, is the mountain of which we are now speaking. We copy President Hitchcock's description of the view from this lofty summit.

"Its central part is a somewhat conical, almost naked eminence, except that numerous yellow pines, two or three feet high, and whortleberry bushes, have fixed themselves wherever the crevices of the rock afford sufficient soil. Thence the view from the summit is entirely unobstructed. And what a view!

'In depth, in height, in circuit, how serene
The spectacle, how pure! — Of nature's works
In earth and air,
A revelation infinite it seems.'

"You feel yourself to be standing above every thing around you, and possess the proud consciousness of literally looking down upon all terrestrial scenes. Before you, on the E., the valley through which the Housatonic meanders stretches far northward in Ms., and southward into Ct., sprinkled over with copse and glebe, with small sheets of water and beautiful villages. To the S. E., especially, a large sheet of water appears, I believe in Canaan, of surpassing beauty. In the S. W., the gigantic Alender, Riga, and other mountains, more remote, seem to bear the blue heavens on their heads, in calm majesty; while, stretching across the far distant west, the Catskills hang like the curtains of the sky. O, what a glorious display of mountains all around you! O, how does one, on such a spot, turn round and round, and drink in new glories, and feel his heart swelling more and more with emotions of sublimity, until the tired optic nerve shrinks from its office!

"This is certainly the grandest prospect in Massachusetts, though others are more beautiful. And the first hour that one spends in such a spot is among the richest treasures that memory lays up in her storehouse."

The best way of getting to Mount Everett, from any part of Ms., is through Egremont, which lies 25 miles S. by W. from Pittsfield. From Egremont, you pass along a vast uncultivated slope, to the height of nearly 2000 feet, until you reach the broad valley where the inhabitants reside. The distance from Boston is 183 miles W. From Hudson, N. Y., the distance E. is about 20 miles. You pass the beautiful lake in Copake, and up through the romantic gorge on the W. side of the mountain.

In the near neighborhood of Mount Everett, there is a waterfall upon the side of a deep gulf, which is well worth visiting, for the lovers of impressive scenery. It has received the name of Bashapish, or Bash-Pish Fall and Gorge. The stream descends rapidly towards the W., between perpendicular walls of rock, nearly 100 feet; striking then against a perpendicular mass of rock, it is made to turn, almost at right angles, to the left, and then to rush down a declivity, sloping at an angle of about 80°, in a trough

between the strata. This part of the fall cannot be less than 50 or 60 feet. And here the torrent, having for centuries been dashing against the edges of the strata, while at the same time its bed has been sinking, has worn out a dome-shaped cavity to the depth of 194 feet; that is, measuring from the top of the overhanging cliff to the foot of the fall.

By creeping along the S. side of the stream, where the wall is nearly perpendicular, one can descend quite to the foot of the fall, where he finds himself enclosed on the E., S., and W. by a vast wall of rock, which, as it rises, curves outward, so that, when he looks upward, he sees its surface, at the height of nearly 200 feet, projecting beyond the base as much as 25 feet. A man in such a spot cannot but feel his own impotence. There is a position upon the verge of this overhanging precipice from which a look down into this yawning chasm may be obtained. Those who visit these falls should not fail to ascend to this position, otherwise they will lose half the interest of the scene.

The day is not far distant when Mount Everett, and the scenery around it, will be visited by thousands, yearly, with an admiration equal to that excited by the most celebrated mountain heights in our country.

MOUNT HOLYOKE, MS.,

Situated in the S. part of the town of Hadley, on the E. side of Connecticut River, opposite to the Great Meadows of Northampton, and about 3 miles E. of the centre of that beautiful town. This mountain is 830 feet above the river, and presents from its summit one of the most charming prospects any where to be found in this country. The lovely valley of the Connecticut, with all its natural luxuriance, and all its adornments of cultivation and wealth, lies in view, more or less distinctly, according to the distance of its several parts, for an extent of 50 or 60 miles, from N. to S. The summits of the mountains in Meriden, Ct., about 15 miles from Long Island Sound, may be distinctly seen from the top of Mt. Holyoke. In a clear atmosphere, Hartford is visible about 45 miles to the S. The beautiful meadows of Northampton and Hadley, spreading directly under the eye of the spectator, with their vast and variegated carpet of ploughed field, grass and grain, through the midst of which, in a gracefully winding course, the silver stream of the Connecticut is threading its shining way, having the handsome towns of Northampton, Hadley, and Amherst set in different points, as gems upon the bosom of the landscape, constitute an entire vision of loveliness, such as almost makes the beholder feel that he has been transported into some Elysian land. The college buildings, in Amherst; the Mount Holyoke Female Seminary, in South Hadley; Hopkins Academy, in Old Hadley; the beautiful range of buildings upon Round Hill, Northampton, now occupied as a celebrated water cure establishment; the Williston Seminary, in East Hampton; a large number of church spires, and other public edifices; and last, though not least, the new city of Holyoke, growing up on the W. bank of the river at South Hadley Falls, are points of interest which arrest and fix the eye, as it wanders over this charming scene.

On the opposite side of the Connecticut, a little to the S. W., Mt. Tom, the hoary compeer of

Mt. Holyoke, lifts up its rugged form more than 1200 feet above the vale, and constitutes almost the only feature of native wildness which has defied the subduing touch of man. Even here, if the not improbable theory of some geologists be correct, the modifying hand of nature has accomplished one of its most remarkable achievements in the excavation of a rocky channel for the Connecticut, between these two mountain heights, which are supposed originally to have formed a connected chain, at a considerable elevation above their present bases. The appearance of the bold cliffs at the Rock Ferry crossing, as well as the form of the vast alluvial basin which would be embraced within the sweep of this mountain range, if only a connection here were formed, together with other geological characteristics, render this theory, extraordinary as it may seem, almost a matter of obvious demonstration.

A winding road has been constructed within a few years, by which carriages ascend about two thirds of the distance towards the summit of Mt. Holyoke; and the remainder of the ascent, though steep, is accomplished without difficulty. A building has been erected on the summit, where comfortable rest and refreshments may be enjoyed.

There are few, if any, mountain prospects in our country, which lie so near to a great thoroughfare of travel, and are so easily accessible, as this; few where so much delightful gratification can be obtained at so little expense of time and trouble. In short, there are few, if any, which, for extent and variety of interest adapted to give pleasure to a refined and cultivated taste, can be compared with advantage to this grand enchanting panorama, in which nature and art seem rivalling each other, for the meed of admiration.

MOUNT HOPE, R. I.

This interesting locality, once the seat of the celebrated King Philip, is situated in Bristol, the shire town of Bristol co., which is the *Pokanocket* of the Indians, lying between the Narraganset and Mount Hope Bays. The summit of the hill is about 2 miles N. E. of the court house, and though not elevated more than 300 feet above tide water, affords a most extensive and delightful prospect. Here is still shown, at a little distance from the apex of the mount, as it falls off towards Mount Hope Bay, a sheltered niche or alcove in the rock, where, as tradition says, King Philip had his royal seat, and where he presided in the council of warriors and sachems, who either acknowledged fealty to his realm, or yielded themselves to the lead of his superior prowess. By means of an extensive alliance of the Indian tribes, Philip finally made a desperate assault upon the English settlements in 1675, with the design of exterminating them from the American shores. The flame of war was lighted up in different parts of the country, and continued for more than a year to desolate New England. The first attack was made on Sunday, June 20, 1675. Philip was killed when attempting to escape from the pursuit of Captain Church, on Saturday, August 12, 1676.

MOUNT VERNON, VA.

This venerated spot, where once resided the father of his country, and where his ashes now repose, is universally regarded with a sacred interest. It is on the W. bank of the Potomac, 15 miles S. from the city of Washington, and 8

from Alexandria. General Washington's mansion is still in a good state of preservation. The new tomb into which his remains were removed in 1830, and subsequently placed in a marble sarcophagus, is in a retired situation a short distance from the house. It is a plain but substantial structure of brick, with an iron gate at the entrance, through the bars of which are seen two sarcophagi of white marble, in which slumber, side by side, the mortal remains of that great and good man and of his amiable consort.

The old tomb, in which the remains of Washington were first deposited, and which is now going to decay, is upon an elevation in full view from the river.

A glimpse of this interesting spot may be had from the Potomac steamer, on its way from Washington to the railroad terminus at Acquia Creek. But to visit the place, it is necessary to stop at Alexandria, and take a private conveyance to Mount Vernon.

NAHANT, MS.

This celebrated watering-place is a part of the beautiful town of Lynn. It is a peninsula, jutting out about 5 miles into Massachusetts Bay, and forms Lynn Bay on the S. From Boston to Nahant Hotel, on the E. point of the peninsula, by land, is 14 miles; from the centre of Lynn, 5; and from Salem, 9 miles. On the N. E. side of this peninsula is a beach of great length and smoothness. It is so hard that a horse's footsteps are scarcely visible; and, from half tide to low water, it affords a ride of superior excellence. Much may be said in praise of Nahant without exaggeration. Its formation, situation, and rugged shore excite the curiosity of all, and many thousands annually visit it for health or pleasure.

It is only 10 miles N. E. from Boston, by the steamboats continually plying in summer months. At this place are good fishing and fowling, and excellent accommodations; the ocean scenery is exceedingly beautiful in fair weather, and truly sublime in a storm.

This is one of the oldest and most celebrated watering-places in New England, and a place to which many of the wealthy citizens of Boston, having provided themselves with pleasant cottages, resort in the summer months with their families. The Nahant Hotel is a large and well-kept house near the termination of the peninsula.

NANTASKET BEACH, MS.

This delightful retreat in the summer months, for those who wish to enjoy the luxuries of sea air, bathing, fishing, fowling, &c., is approached by the South Shore Railroad, passing through the pleasant towns of Dorchester, Quincy, Braintree, Weymouth, and Hingham, to the Nantasket station, about 3 miles from the latter place, and 2 miles from Cohasset. The ride from the station to the head of the peninsula of Nantasket is about 2 miles, where are several large and well-kept houses of entertainment. Thence you proceed over a beautiful, level, and hard beach, about 4 miles in length. After passing the beach, you turn to the left nearly at a right angle, and cross a narrow neck of land, which brings you upon a fine highland, which constitutes the ancient town of Hull, the termination of which is Point Alderton, directly opposite the Boston light-house. On the N. and E. sides of this peninsula is Mas-

sachusetts Bay; on the S. and W. is included a large portion of Boston outward harbor, containing many beautiful islands, and the entrances to Hingham, Weymouth Fore and Back Rivers, and Quincy Bay. Among many islands here, of great beauty, is *George's Island*, on which is nearly completed one of the strongest forts on the American coast, for the protection of the city and port of Boston; also *Long Island*, which has recently become celebrated as a watering-place.

The peninsular promontory on which Hull is situated, from its position in the midst of the waters, and from the pleasant situations which have been erected here by our wealthy citizens for summer residence, has become to the people of Boston a second Nahant. The view of the harbor from this point, with its many lovely islands, the light-house opposite, and the animated spectacle of going and returning ships, steamers, and pleasure boats upon its waters, is beyond description beautiful. Here also, as well as at the beach, are good houses of entertainment.

This little town, in addition to these natural attractions, has an interesting and venerable antiquity. It was a mart of commerce, and the residence of eminent men, 6 years before Boston bore its present name, and 4 years before Salem became a town. The ease with which it was capable of being defended from the incursions of the Indians led to its early occupation as a place of residence. On the highest ground are the remains of an ancient fort, within which was a well, said to be 100 feet deep.

The first settlers of Dorchester received the hospitalities of the citizens of this place in June, 1660; and, in grateful remembrance, every succeeding generation pays frequent visits to this hallowed spot.

The distance from Boston to Hull, by land, is 22 miles; and by water 9 miles. A splendid steamboat, which plies between Boston and Hingham, passing near Forts Independence and Warren, Thompson's Island, on which is the Boston Farm School, Spectacle Island, Hospital Island, the islands above named, and several others, touches at this place, and affords one of the most delightful trips any where to be enjoyed.

NATURAL BRIDGE, VA.,

A stupendous natural arch of limestone rock, upon which a road passes over a small stream, called Cedar Creek, in the south part of Rock-bridge co., a short distance from its entrance into James River. It is on the ascent of a hill, which seems to have been cloven through its length by some great convulsion of nature. This is regarded by many as one of the greatest natural curiosities in the United States. The height of the bridge above the stream, to the top, is 215 feet; the chasm which it spans is 50 feet wide at the bottom, and 90 feet at the top; the average width of the arch is 80 feet, being narrowest in the middle; and its thickness, from the under to the upper surface, is 55 feet. The bridge is covered with a stratum of clayey earth, from 4 to 6 feet deep, having a natural parapet of rocks on either side, rendered firm by trees and shrubbery. The view from the top, for those who dare approach and look over the parapet into the abyss below, is awfully grand. From below it is equally sublime, and being divested of painful apprehensions, is more interesting. In looking up to this stupendous arch, at once so massive and so light,

and springing, as it were, up to heaven, the emotions of sublimity which are experienced are beyond the power of language to express. The names of many adventurous visitants are seen upon a portion of its walls, where they have been ambitious to excel those who have gone before them, in the height which they could ascend. The name of Washington still remains, where he climbed up, and engraved it in the rock with his own hands, 25 feet from the base. Through the chasm, which continues narrow, deep, and straight, for a considerable distance above and below the bridge, a limited but very pleasing view is obtained of North Mountain on the one side, and of the Blue Ridge on the other, each about 5 miles distant.

The Natural Bridge is made to answer a very useful purpose; as the turnpike road, which is carried over it, could not otherwise find a passage across this gulf for several miles. It lies 156 miles W. from Richmond.

NEW LEBANON SPRINGS, N. Y.

These celebrated warm springs are situated in the lovely valley of New Lebanon, a short distance W. of the Ms. line. The spot is surrounded by cultivated hills, which present a panorama of scenery greatly variegated and peculiarly pleasing to the eye. This place has long been known as a great resort for visitors from all directions, who come to enjoy the romantic scenery of the region and the beneficial influence of its tepid waters. The warm spring, which is on the side of a hill, is 10 feet in diameter, and 4 feet deep, and discharges water enough to supply a small mill power, to which the stream, at a little distance from the source, has been applied. The temperature of these waters is 72° Fahrenheit at all seasons of the year. They are clear as crystal, tasteless, inodorous, and soft, which renders them delightful for the warm bath, for which they are so much used; being found beneficial in cutaneous affections, rheumatism, internal obstructions, liver complaint, nervous debility, and other diseases.

Besides this abundant supply of warm water, there are numerous rills gushing out of the sides of the mountains here, which are almost as cold as ice. These, also, are peculiarly clear and pure.

This place has very judiciously been selected for the erection of an establishment for the water cure, which has of late years been introduced into our country from Germany.

A railroad will soon be completed, passing through this place, and connecting it with the Western Railroad, about 7 miles distant. From this point to Albany, about 33 miles; to Boston, about 167 miles; to New York, via Bridgeport and Long Island Sound, 160 miles.

NEWPORT, R. I.

This place, so "beautiful for situation," and so interesting for its antiquities, has become one of the most celebrated summer resorts in the United States. It is located on the S. W. side of the rich and fertile island of Rhode Island, lying within the mouth of Narraganset Bay, 5 miles from the ocean. Its harbor, one of the finest in the world, spreads W. before the town, which is built on a gentle declivity to the shore, and appears beautifully as it is approached upon the water. Its insular situation gives to Newport the advantage of a cool, refreshing sea

breeze from almost every point of the compass; so that in all the hot months it is one of the most comfortable places of residence any where to be found. On this account, it has long been a favorite place of fashionable resort, especially for visitors from the south. Within a few years past, a number of large and splendid hotels have been erected, affording the best accommodations that could be desired for all who come; so that, in this respect, Newport is now the rival of Saratoga itself.

The largest of these establishments are the *Ocean House*, situated at the S. end of Bellevue Street; the *Atlantic House*, at the head of Pelham Street; and the *Bellevue House*, having its most extensive front on Catharine Street. The *Ocean House* was first built in 1843, by a company, which has since been incorporated by the legislature of Rhode Island. In August, 1845, this edifice was entirely burnt to the ground; and in the following autumn and winter, it was rebuilt with great additions to its extent and splendor. These are the most extensive establishments, for the entertainment of company, in town; but there are a number of others, where boarders are handsomely accommodated, and for a few weeks in summer they are all generally filled.

Newport is rendered attractive not only by its cool and salubrious climate, but also by several objects of curious interest to the lovers of antiquarian research; its splendid beaches, adapted in the highest degree to the luxury of surf bathing; its abundant means of enjoyment for those who are fond of the pleasures of sailing or fishing in its secure and capacious bay and harbor; and the many beautiful rides over the area of the island in the rear of the town, upon roads of the finest description, and amidst the beautiful shrubbery and verdure, which its rich soil and moistened atmosphere sustain in fresh luxuriance.

Among the antiquities of Newport is what is commonly called the *Old Stone Mill*; which is one of the very few works of human structure in our country, the origin and design of which are involved in impenetrable mystery. That it may have been once fitted up and used for a mill, is perhaps probable, from the fact that it is mentioned in the will of Governor Benedict Arnold, who, in 1657, succeeded to Roger Williams in the government of Rhode Island, as "my old stone-built wind mill;" but that the structure was originally intended for such a purpose, is what few, considering its peculiar configuration and unknown antiquity, will be able to believe. There is no record, nor any traditionary legend, worthy of credit, to satisfy inquiry concerning the date, design, or artificers of this curious edifice. These points have occasioned much speculation; but all has been vain as to any satisfactory result.

This building, which, besides the above name, is frequently called the *Old Tower*, and the *Newport Ruin*, is a circular tower, 23½ feet in diameter, and 28½ feet high, composed of irregular, rough stones, said to bear no affinity to the rocks of the island. The body of this building is elevated upon 8 round pillars of the same material, arches being turned between the pillars. The height of these pillars is about 10 feet. The walls of the tower above are 18 inches thick, having one narrow loophole on the N., one on

the W., and one on the S. sides. On the E. side is a fireplace, with its flue in the wall. The roof and floors, if any it had, were of perishable materials, and are gone, leaving the interior open to the sky. It stands on a vacant lot upon the hill, a little E. of Spring Street, and between Pelham and Mill Streets. It has been supposed, by some, to have been built by the Northmen for a religious use; others have maintained that it was reared by the early inhabitants, as a place of refuge and defence against the Indians. The former of these hypotheses is of course conjectural, and the latter seems intrinsically improbable.

The company which annually visits Newport is of a peculiarly select and elevated character. The place differs in this respect from most of our fashionable resorts. It is not health or amusement which is here sought, so much as comfort, and fine society, and freedom from the cares of business and professional engagements. It is true many are here from the gay and pleasure-loving circles in the community; but the greater part of those who come are persons who aim to find in these elegant establishments, or in the beautiful cottages and summer houses which they have provided for themselves, a residence for the time being, partaking somewhat of the character of the homes of high life in the cities.

This beautiful island is approached by a daily line of steamboats from New York, from which it is distant 157 miles N. E.; and from Boston, also daily, by railroad and steamboat, about 70 miles.

NIAGARA FALLS.

These falls, in the Niagara River, which is the outlet of the great lakes of North America, containing one half of all the fresh water on the globe, are justly regarded as one of the most sublime and imposing spectacles in nature. The river, which flows from Lake Erie in a channel three fourths of a mile wide, and from 20 to 40 feet deep, and which is, at this place, about the same width, while pressing with great force down the declivity of the rapids for almost 3 miles above, is here precipitated over a perpendicular descent of 160 feet, with a tremendous roar, which is ordinarily heard from 15 to 30 miles, and has sometimes been heard at Toronto, a distance of 45 miles. It has been estimated that the volume of water carried over Niagara is not less than *six hundred and seventy thousand tons* in a minute. It is the vastness of elements like these, entering into the conception of this stupendous natural phenomenon, which carries the emotions of wonder and sublimity with which it strikes the outward senses to their highest bounds.

About three miles above the falls commence the rapids. These are caused by a descent in the bed of the river of about 52 to 57 feet, in the course of which are numerous ledges of rocks from 2 to 4 feet high, extending wholly across the channel, over which this mighty volume of waters, in a dashing and foaming torrent, is hurried on towards the tremendous cataract. The declivity of the river's bed is a little greater on the British than on the American side, as denoted by the numbers expressed above. This circumstance, together with a bend in the course of the stream, causes the principal weight of the water, computed to be about seven eighths of the whole, to be thrown towards the Canadian side of the

river, and consequently to be carried over the great Horseshoe Fall, which is that part of the cataract between Goat Island and the Canadian shore. The view of these rapids to be obtained from Goat Island, or from the opposite shore, were the wonder to end here, would be enough to reward the pains of the longest journey. Nearly in the middle, in respect to distance, the falls are separated by Goat Island, which has also received the name of Iris Island. This island, which contains about 75 acres, and is covered in part with a wild forest, extends to the brow and to the bottom of the precipice; and, from its own romantic situation, and the advantage it affords for viewing the surrounding panorama from many interesting points, which otherwise could never have been approached, constitutes one of the most pleasing features of the scene. A few rods from Goat Island, towards the American shore, the fall is again divided by the projecting of a small island, called Prospect or Luna Island. The section which is included between these islands is denominated the Central Fall, or the Cascade. The distance across the fall, from the American shore to Goat Island, is 65 rods; across the front of Goat Island, 78 rods; around the Horseshoe Fall, from Goat Island to the Canada shore, 144 rods; and directly across, from the island to Table Rock, 74 rods. The curve of this fall is somewhat less like that of a horseshoe than it formerly was, having approached a more angular form in the middle. The greatest height of the falls is near the shore on the American side, where the descent is 163 feet; near Goat Island, on the same side, it is 158 feet; near Goat Island, on the Canada side, it is 154 feet; and at its termination, near Table Rock, on the Canada shore, it is 150 feet. Visitors are often somewhat disappointed, at first, in their impressions of the height of the falls, which is owing to the unanticipated effect of their other immense proportions,—in length and in volume of water. When time and varying points of view have enabled the mind to stretch itself, in some measure, to take in these vast dimensions of the scene before it, then the awful grandeur of the height from which these mighty floods are descending, will not fail to be realized with almost overwhelming emotions. The different views which are to be obtained from below the falls are specially subservient to this effect.

The situation of a small island in the rapids above the American Fall, about midway between the shore and Goat Island, which is called Bath Island, encouraged the attempt to construct a bridge, over which the former might be safely reached. The work, though one of extreme difficulty and hazard, was successfully accomplished in 1818. This bridge, from the American shore to Bath Island, is 28 rods in length, and then 16 rods between Bath and Goat Islands. It crosses the rapids only 64 rods above the cataract. On Bath Island a toll-house is established, where a register of the names of visitors is kept, and the payment of a fee of 25 cents entitles each person to pass and re-pass as often as he may desire during the period of his stay. On this island an extensive paper mill has been established. The immense water power which might be obtained at these falls, for manufacturing purposes, is not improved to any great extent, on account of their exposed frontier situation in the event of war.

At the lowest extremity of Goat Island, towards the American side, a fine view is presented of the Central and the American Falls, of the river below, of the iron suspension bridge, spanning the gulf in the distance, at the height of 200 feet, and of the Whirlpool, caused by a violent angle in the rushing torrent two miles below, which is just distinguishable by the cloud of foam which it sends into the air. Those of firm nerves may here approach to the very verge of the precipice, and look directly down at the descent of the Cascade, or Central Fall, which rolls over the precipice at their feet, in a clear, unbroken column, 158 feet high. Beneath and behind this fall is the celebrated Cave of the Winds. From Luna Island, which is here connected with Goat Island by a foot bridge, a similar view of the American Fall is obtained, and the finest which is to be had from any position above the banks. The broad and massive stream pours over the brink 163 feet, into the depth below. At the opposite extremity of this great cataract, upon the American shore, is also a fine position, at Prospect Place, for a view of the entire falls, considered on the whole as the best panoramic view which is to be had from the American side. From the S. W. angle of Goat Island, towards the British side, a most grand view is presented of the Horseshoe Fall, the basin beneath, and the rapids above. A bridge, called the Terrapin Bridge, has been carried over the rapids at this point, about 250 feet, obliquely, towards the brink of the fall, to a position upon the rocks, where a stone tower has been erected, called Prospect Tower, which, from its open gallery at the top, 45 feet high, furnishes a magnificent view of the whole of this stupendous scene. For a view of the rapids, perhaps no other point of observation is equal to this. From this point the Horseshoe Fall is seen with the finest advantage, under the light of the morning sun, striking almost directly upon its front, and spanning the clouds of vapor with its brilliant bow. This also is the place to enjoy the scene by the evening moonlight. The bridge was formerly extended about 50 or 60 feet beyond the tower, so as to project a few feet over the edge of the precipice, enabling the spectator to look directly down 150 feet to the boiling basin into which the cataract of the Horseshoe Fall descends. This, however, has been considered as too daring an exposure of life to be prudently encountered, and therefore this extension of the Terrapin Bridge has been broken up.

There is a descent to the bottom of the falls from the front of Goat Island, which is accomplished by a covered winding staircase, erected in the year 1829 by the late Nicholas Biddle, Esq., of Philadelphia, and known as the Biddle Staircase. The descent from the island to the margin of the river here is 185 feet. From the foot of the stairs, to the left, a path leads to the Horseshoe Fall, by which, when the wind is favorable, a passage may be effected with safety for some way behind the sheet of falling water. To the right, from the staircase, a path leads to the celebrated Cave of the Winds, situated directly behind the Central Fall, towards the American side. This cave, formed by a recess in the wall of the precipice, is about 120 feet across, 50 feet in width, and 100 feet high. The sheet of water on the one side, and the projecting rock on the other, form an overhanging arch of awful grandeur; and from the back of the cave, the sight and

sound of the rushing waters, and of the reverberating winds pent up in their rocky confines, thrill the soul with emotions never to be forgotten.

The passage of the river from one side to the other is effected with ease and safety by a ferry, a few rods below the American Fall. This is maintained, during the season of the greatest concourse of visitors, by running a small steamboat across, and at other seasons by small boats with oars. The descent to the ferry on the American side is by a stairway, and also by a rail car, upon an inclined plane at an angle of 35° , and 325 feet in length, carried down and up by the action of a wheel turned by water. On the British side, a winding carriage road has been constructed. One of the best views of the falls, particularly of those on the American side, is that which is enjoyed from the boat while crossing this ferry. The depth of the water here is 250 feet.

A pleasing view of the falls is obtained from the wire suspension bridge, about 2 miles below, which is itself a wonder of art, now constituting an additional object of admiration for visitors at the falls. It spans the narrow gorge of the Niagara River by a reach, from pier to pier, of 800 feet in length, and 230 feet above the water. The width of the bridge is 40 feet. It is supported by 16 wire cables, 1100 feet long and upwards of 12 inches in circumference, having a strength equal to 6500 tons tension strain.

But the best single and comprehensive view of the falls is obtained from the banks on the Canadian shore, where a full view of the great Crescent or Horseshoe Fall is presented on the right, while those on the American side, though more distant, are seen in their whole breadth pouring down almost directly in front.

Table Rock, situated near the angle made by the shore on the Canada side with the precipice over which the Horseshoe Fall descends, is a broad projecting crag, 150 feet above the bed of the river, from which this fearful cataract, with the agitated waters both above and below, and the American Fall, in comparative distance, are seen with the finest advantage. Portions of this rock have fallen off, at different times within the memory of man, somewhat curtailing its original dimensions. This fact, together with the changes in the shape of the British Fall, from a comparatively gradual curve, according to authentic data, in 1678, to its present more angular outline, might seem to favor the belief of some geologists, that the falls have been, and are still, continually receding, and leaving behind them the high banks of a channel which they have been excavating perhaps ever since the creation. It is certain, however, that the lapse of 250 years has witnessed no perceptible alteration in the geographical position of this wonder of nature.

Near Table Rock there is another staircase by which visitors may descend to the foot of the Horseshoe Fall, and place themselves in a situation to feel the full impression of that tremendous power which is making the rocky foundations underneath to tremble. Here, too, those who are able to do it may pass, with a guide to direct them, a distance of 230 feet behind this great sheet of water, to a narrow ledge, upon which there is scarcely space to stand, called Termination Rock, and there gaze at the arch above, which appears threatening to fall and crush them, or look down into the abyss as far as the flashing waters and the rising mists will permit the eye

to penetrate. There are many features of sublimity and of beauty belonging to a full description of the Falls of Niagara, which must pass unnoticed here.

It is the opinion of those who have been long resident near the falls, that not even the different kinds of fish that chance to be carried down ever escape with life; wild fowl too, it is said, never escape destruction if once brought by any means near to the verge of the main cataract. Three large British vessels, stationed on Lake Erie during the war of 1812, were, at the close of the war, declared unfit for service, and condemned. Permission was obtained to send them over the falls. The first was torn to pieces by the rapids, and went over in fragments; the second foundered before she reached the falls; but the third, which was stronger, took the leap in gallant style, and retained her figure till she was hidden in the mist below. A reward of 10 dollars, which had been offered for the largest fragment of wood from either wreck, was finally paid for the only splinter which was found, which was not above a foot in length, ragged, and crushed as by a vice.

There are other falls in this country which have a greater perpendicular descent than those of Niagara; but there are none, either in this or any other part of the known world, where such a mass of water, with such tremendous power, is precipitated from so great a height. If any thing can add to the emotions of sublimity awakened by these amazing demonstrations of the Creator's might, it is the thought of their untiring endurance—of the centuries through which the "voice of God as the sound of many waters" here has thundered its eternal peal.

"These groaning rocks the Almighty's finger piled;
For ages here his painted bow has smiled,
Marking the changes and the chance of time—
Eternal—beautiful—serene—sublime!"

NICOJACK CAVE, GA.

This vast cave is situated in the N. W. extremity of the state, having its entrance about 20 miles S. W. of the Lookout Mountain, and half a mile from the S. bank of the Tennessee. The width of the entrance is 25 feet, and the roof varies from 5 to 60 feet in height. The *Students' Cave*, first explored by the students of Mercer University in 1848, which has its entrance about 4 miles distant, in Tennessee, is supposed to be connected with this.

The interior passages and apartments of these caves afford much both to astonish and delight the visitor. Spacious rooms and lofty domes, tall columns and glittering pendants from the ceilings, arches and resemblances to architectural façades, entablatures, and other decorations, constitute a succession of interesting objects, the extent of which is not definitely known. The railroads from Charleston and Savannah to the Tennessee River afford a ready communication with the region in which these caves are situated.

OLD MAN OF THE MOUNTAIN, N. H.

See *Franconia Notch*, p. 266.

OLD ORCHARD BEACH, ME.

This fine beach is in the town of Saco, which lies on the Eastern Railroad, about 15 miles S. W. of Portland. From the mouth of the Saco River, which here enters the ocean, the beach

stretches 5 miles and more to the N. E., and is uncommonly smooth and hard over its whole extent. The situation is retired and agreeable for visitors, being separated from the town by a narrow tract of pine wood, through which there are cool and pleasant rides. Accommodations are provided here for a considerable number of visitors.

ONONDAGA SALT SPRINGS, N. Y.,

Are upon the shores and in the neighborhood of the lake of this name, which lies wholly in Onondaga co. They are principally owned by the state, and bring to it a handsome revenue. They are the largest and best in the U. S. The making of salt, both by solar evaporation and by artificial heat, is carried on very extensively at Salina, Syracuse, Liverpool, and Geddes, places adjoining each other, which are all included within the limits of the Onondaga Salt Springs Reservation. The original Reservation, indeed, embraced a much larger extent; but the whole, not included within these several places, has been sold to private landholders.

Salt was first made on this tract at Salt Point, near the margin of the lake, and within the present limits of Salina. The earliest systematic arrangements for carrying on the business, as far as records show, date back as far as 1787. The principal spring is at Salina, which affords an inexhaustible supply of water, yielding, to every 40 gallons about one bushel of pure salt. The water is forced up by hydraulic engines into a large reservoir, from which it is conducted in pipes to the various works at Syracuse, and other places in the vicinity. The amount of the duty on salt, accruing to the state from these works, in 1850, was \$44,364.

PASSAIC FALLS, N. J.

These beautiful falls are on the Passaic River, at Paterson, 13 miles N. of Newark, and 17 miles from New York. They are easily reached by railroad from New York, and constitute one of the favorite resorts for citizens and strangers from the city. The river here, after pouring over a dam several feet high, erected immediately on the brow of the falls, and rushing thence down a steep declivity, on its natural rocky bed, some 20 or 30 feet, finally makes a plunge over a perpendicular precipice, about 60 feet high, into a chasm between two walls of the rock, from which the waters emerge through a fissure at right angles to the direction of the cataract. The rocks, being of a basaltic character, are of rectilinear form, and perpendicular in their position, which gives a remarkably bold and imposing aspect to the scenery. This also accounts for the comparatively smooth surfaces of this deep excavation. By the dam above the falls, a portion of the river is diverted for the purpose of obtaining the valuable water power by which the extensive factories at Paterson are carried on. This has much diminished the beauty of the falls, except at seasons of high water, when they appear in their original grandeur.

PHILLIPS'S POINT, MS.,

Juts out into Massachusetts Bay, about 3 miles N. of the centre of Lynn, on the N. side of the entrance to the peninsula on which Nahant is situated. Here is a beach of great beauty, of about half a mile in length. The access to this

delightful spot is so easy, and the natural charms of the place so great, that, with public accommodations which are all that guests can desire, it has become a favorite place of fashionable resort. The distance from Boston is 12 miles.

PICTURED ROCKS, LAKE SUPERIOR.

See p. 251.

PINE ORCHARD, N. Y.,

Is the name given to an elevated terrace of table land, or ledge, upon the Catskill Mountains, about 2300 feet above the level of the Hudson River. Formerly it was covered with a scattered growth of pines, which, in its wild state, give to it the name of Pine Orchard. Upon the E. verge of this table of rock, of about 6 acres in extent, stands the Catskill Mountain House, about 140 feet in length, and 4 stories high, which has been erected for the accommodation of visitors, who resort here in great numbers in the summer season, to enjoy the extensive prospect, the cool, exhilarating atmosphere, and the wild surrounding scenery. Few places of fashionable resort present stronger attractions than this. A line of stages runs between Catskill on the Hudson River and the Mountain House, a distance of 12 miles. The ride to the foot of the mountain is not specially interesting; but the ascent, by a very circuitous route, from every successive opening and turn of which some new and more extensive vista is presented to the eye continually, is in a high degree inspiring and delightful. And when at length the lofty eminence is reached, there opens, from the front of the noble edifice, a prospect of vast extent and beauty; embracing an apparently endless succession of woods and waters, farms and villages, towns and cities, spread out as in a boundless panorama, over which all inequalities of surface are overlooked. The beautiful Hudson appears narrowed in the distance, with numerous vessels scattered along its silvery line, discerned, as far as the eye can reach, by their canvas gleaming in the sun, and with the trailing cloud of some smoking steamboat almost constantly in sight.

The view embraces an area of about 70 miles N. and S. Far in the E. outline rise the Tughekanic mountains, and the highlands of Ct. and Ms. To the left are seen the Green Mountains of Vt., stretching away into the N. till their blue summits are blended with the sky. At other times all the prospect below is enveloped in a rolling sea of mist and cloud, surging with the wind, and presenting ever new and fanciful forms to the sight. Thunder storms are not unfrequently seen passing below the spectator, while the atmosphere is delightfully clear and cool around him. There are two small lakes a short distance behind the Mountain House, which, uniting their outlets in one stream, and pouring them over a precipice 175 feet at one leap, and 80 feet at another, into an immense ravine between two mountain ridges, present a waterfall which is one of the most wild and at the same time pleasing curiosities of nature. This is the source of the Kaaterskill River, which winds its way into the Hudson at Catskill village. A view of these falls is easily obtained by a walk or ride of a mile or two from Pine Orchard.

PLUM ISLAND, MS.

See *Newburyport*.

PLEASANT MOUNTAIN, ME.

This mountain, which is now much resorted to for its cool, invigorating air and lovely prospect, by the people of our eastern cities, is situated in the town of Bridgeton, by the travelled route about 50 miles W. from Portland. The excursion to the foot of the mountain is itself a delightful one, having the pleasant variety of a ride in the cars 10 miles out, to Gorham, and thence 8 miles by stage coach to the Sebago Lake, over which, and the other lakes connected with it by romantic streams, the trip to Bridgeton, 30 miles, in the little steamer which plies upon these waters, is quite enchanting. The mountain is more than 2000 feet above the level of the sea. The view from its summit is extensive, reaching to the ocean on one hand and the White Mountains on the other, and embracing 30 or 40 beautiful sheets of water, with the steamer, like a thing of life, winding her way among them; together with many neat and pretty villages, which dot the landscape in various directions. Sometimes the morning mists are seen lying along the valleys, giving the spectator to realize something like the privilege of a celestial elevation above the clouds.

The ascent is accomplished with perfect ease, by a good mountain path, for about one mile, on horseback or on foot, as may suit the visitor. An excellent house has been erected on the summit, where boarders can enjoy every comfort and luxury they may desire, from a well-spread table, neat and well-furnished apartments, piano-forte, and other accompaniments of our fashionable hotels. No elevation, perhaps, in New England, is so easily reached, where at once so fine a prospect may be enjoyed, and the accommodations of so comfortable a home obtained.

PLYMOUTH ROCK, MS.

This interesting locality takes the precedence, in some important respects, of all other places of public resort in our country. A natural and laudable desire to stand upon the spot where the forefathers of New England landed from the Mayflower, in 1620; to survey the natural features of the harbor, and the shore on which, in its wild and wintry desolation, their eyes first rested as their home in the new world; and to feel the inspiration of the scenes where our glorious institutions of civil and religious freedom were first conceived and nurtured; cannot fail to operate, with increasing numbers of our citizens, to induce them, at least once in their lives, to make a pilgrimage to the Rock of Plymouth.

"No New Englander," says Dr. Dwight, "who is willing to indulge his native feelings, can stand upon the rock where our ancestors set the first foot after their arrival on the American shore, without experiencing emotions very different from those which are excited by any common object of the same nature. No New Englander could be willing to have that rock buried and forgotten. Let him reason as much, as coldly, and as ingeniously as he pleases, he will still regard that spot with emotions wholly different from those which are excited by other places of equal or even superior importance. . . . Plymouth was the first town built in New England by civilized man; and those by whom it was built were inferior in worth to no body of men whose names are recorded in history during the last seventeen hundred years. A kind of venerableness arising from these facts attaches to this town, which may

be termed a prejudice. Still it has its foundation in the nature of man, and will never be eradicated, either by philosophy or ridicule. . . . When we call to mind the history of their sufferings on both sides of the Atlantic, when we remember their preëminent patience, their unspotted piety, their immovable fortitude, their undaunted resolution, their love to each other, their justice and humanity to the savages, and their freedom from all those stains which elsewhere spotted the character even of their companions in affliction, we cannot but view them as illustrious brothers, claiming the veneration and applause of all their posterity.

"The institutions, civil, literary, and religious, by which New England is distinguished on this side the Atlantic, began here. Here the manner of holding lands in free socage, now universal in this country, commenced. Here the right of suffrage was imparted to every citizen, to every inhabitant not disqualified by poverty or vice. Here was formed the first establishment of towns, of the local legislature which is called a town meeting, and of the peculiar town executive styled the selectmen. Here the first parochial school was set up, and the system originated for communicating to every child in the community the knowledge of reading, writing, and arithmetic. Here, also, the first building was erected for the worship of God, the first religious assembly gathered, and the first minister called and settled, by the voice of the church and congregation. On these simple foundations has since been erected a structure of good order, peace, liberty, knowledge, morals, and religion, with which nothing on this side the Atlantic can bear a remote comparison."

Since the opening of the Old Colony Railroad, in 1845, connecting Plymouth with Boston, from which it is distant 37½ miles S. E., the access to this interesting spot is rendered easy, and the number of visitors, especially in the summer season, has very much increased. The Samoset House, a spacious and well-kept hotel, in a delightful situation, looking out upon the harbor, offering the most tempting inducements to persons from the city to find a residence here during the heat of summer, and always filled with boarders during that season, furnishes another means of augmenting the number of strangers in Plymouth, who are interested to find out whatever is to be seen or known of the antiquities of the place.

The first object, of course, for which the visitor inquires, is, THE ROCK,—"FOREFATHERS' ROCK." This remains, except a portion of it which has been placed in front of Pilgrim Hall, in its original position, where the Pilgrims stepped upon it from their "shallop;" although the whole appearance of the spot has been changed by the erection of a wharf and warehouses over and around it. The rock lies buried to its surface in the earth at the head of "Hedge's Wharf," and between two stores which stand on either side of the passage to the wharf from Water Street, a few feet S. of North Street. The top of the rock is bare, and upon a level with the present surface of the ground. It is about 6½ feet broad in its horizontal diameter, and, since the removal of the portion which lies in front of Pilgrim Hall, about 4 feet in vertical thickness. In its geological character it is a *Boulder*, like the Pilgrims themselves, a stranger upon these

shores; and is described as "an extremely hard variety of scientific granite, of a dark gray color. The mica is in very small quantity, in fine black particles; and the rock, by its rounded edges, bears evidence of its solid character, as well as of the attempts to break specimens from it; which, fortunately, its extreme hardness renders seldom successful."

De Tocqueville, in his work on America, makes the following beautiful comment upon Plymouth Rock: "This rock," he says, "has become an object of veneration in the United States. I have seen bits of it carefully preserved in several towns of the Union. Does not this sufficiently show that all human power and greatness is in the soul of man? Here is a stone, which the feet of a few outcasts pressed for an instant; and the stone becomes famous; it is treasured by a great nation; its very dust is shared as a relic. And what has become of the gateways of a thousand palaces? Who cares for them?"

Should the stranger inquire how it is known with certainty that this is the very rock which first received the feet of the Pilgrims, it may be well to state, that, besides the general and undisputed tradition to that effect, among a people from the first intelligent and well informed, and in addition to the natural probability of the fact, from the size and situation of this solitary boulder lying at the water's edge, the following circumstances, in themselves full of interest, have placed this matter beyond a doubt. Elder Thomas Faunce, the last ruling elder in the first church of Plymouth, who was born at Plymouth in 1646, was of course well acquainted with a considerable number of those who arrived in the Mayflower, some of whom were still alive until he was of the age of 20 or 25 years. He lived to the year 1745, and died in his 99th year. In the year 1741, Elder Faunce, learning that preparations were making for the erection of a wharf near or over the rock, and feeling an anxiety in regard to its exposure, in the march of improvement, to be injured or displaced, though at the advanced age of 95 years, and in declining health, left his residence, about 3 miles distant, and, in the presence of many citizens, pointed out the rock as that on which the Pilgrims landed, and then himself took a final leave of this cherished memorial of the fathers. These circumstances have been related by several aged persons, who were present on the occasion, to those of the present generation; particularly by the late honorable Ephraim Spooner, deacon of the first church of Plymouth 41 years, and 52 years town clerk, who died in 1818, and who, as was happily said by President Holley, in his address at the commemoration of the landing in 1817, "knew and conversed with Elder Faunce, who personally knew the first settlers;—so Polycarp conversed with St. John, the beloved disciple of our Savior."

Allusion has been made to the fact that a portion of Forefathers' Rock has been removed and placed in front of Pilgrim Hall. This came about in the following manner: In the year 1774, when the spirit of national independence was coming to its crisis in the controversy with the parent country, some zealous whigs, seeking to avail themselves in this great cause of the patriotic associations connected with Plymouth Rock, undertook to procure its removal to the town square, where a liberty pole was to be

erected over it, and it was to be made the talisman of resistance to civil oppression. In the attempt to raise it from its bed, however, the rock was split asunder; which by some was interpreted as a favorable omen, indicating a final separation between the colonies and the mother country. After some hesitation, the conclusion was, to leave the lower part of the rock in its place, and to remove the other, which was accordingly carried to the town square, and honored as before mentioned. Here it remained until 1834; when, on the anniversary of American Independence, it was again removed to the area in front of Pilgrim Hall, and enclosed in an elliptical iron railing prepared for its reception; into the festoons of which are cast the 41 immortal names who subscribed the first civil compact, on board the Mayflower, November 11, 1620.

Pleasing and appropriate, however, as is this honored enshrinement of the fragment of the rock which has been removed, it is matter of much greater felicitation to the sons of the Pilgrims, that the great body of it remains, to mark the spot where they first descended upon the shores of the new world, and took possession of its wide domain, as an asylum for liberty and truth. To one standing upon this sacred spot, how full of force and beauty is the graphic language of Daniel Webster, in his centennial address of 1820!

"Beneath us is the rock on which New England received the feet of the Pilgrims. We seem even to behold them, as they struggle with the elements, and with toilsome efforts gain the shore. We listen to the chiefs in council; we see the unexampled exhibition of female fortitude and resignation; we hear the whisperings of youthful impatience; and we see, what a painter of our own has also represented by his pencil, chilled and shivering childhood, houseless but for a mother's arms, couchless but for a mother's breast, till our own blood almost freezes. The mild dignity of CARVER and of BRADFORD; the decisive and soldier-like air of STANDISH; the devout BREWSTER; the enterprising ALBERTON; the general firmness and thoughtfulness of the whole band; their conscious joy for dangers escaped; their deep solicitude about dangers to come; their trust in Heaven; their high religious faith, full of confidence and anticipation,—all these seem to belong to this place, and to be present upon this occasion, to fill us with reverence and admiration."

From the Rock the visitor will naturally turn to PILGRIM HALL. This handsome edifice, erected by the Pilgrim Society, which was formed in 1820, to commemorate the landing, and to honor the memory, of the Pilgrims, is situated on the E. side of Court Street, a short distance N. of Court Square. The corner stone of this monumental edifice was laid, with religious solemnities, September 1, 1824. It is constructed of granite, in a plain and substantial style of architecture, 70 feet in length by 40 feet in width, having a pediment in front, supported by six Doric columns. In the body of the building is a spacious hall, appropriated to the reception of interesting relics and memorials of the Pilgrims, and to the meetings of the Pilgrim Society. In the basement is a dining-room, intended for their accommodation whenever a great commemoration of the landing is held at Plymouth.

The objects of interest in Pilgrim Hall are too many to be here particularly described. The

fine historical painting, representing the landing of the Pilgrims, designed and executed by the late Henry Sargent, Esq., of Boston, and by him presented to the Pilgrim Society, occupies a conspicuous position on the east end of the room. It is on a canvas 13 feet by 16, and embraces, in its interesting group of figures, all the most important personages of that memorable day, together with SAMOSET, the Indian sagamore, who, by artistic license, is made to be an astonished, though not unfriendly observer of the scene. The room contains a portrait of the first Governor Winslow, and also of the second governor, his son, copied from the originals, painted in London. There are, besides these, many others of great value, but none of those who came in the Mayflower, except that of Winslow.

Among a great variety of antiquarian relics are, a chair of Governor Carver, the sword of Miles Standish, the original letter of King Philip to Governor Prince, and many utensils and articles of furniture brought over in the Mayflower. There is also here a library, composed of ancient and appropriate books, to which, as well as to the cabinet itself, additions are continually making. The early records of the colony, with the original signatures of the first men in authority, are kept in the office of the Register of Probate, at the court house, and are very politely exhibited by him to all who are interested to call and examine them.

BURYING HILL is the next interesting locality which will attract the steps of the stranger in Plymouth. This was originally called Fort Hill, because it was here that in 1622 the Pilgrims erected a building for defence against apprehended invasions from the Indians, upon which their solitary piece of ordnance was mounted. This building "served them also for a meeting-house, and was fitted accordingly for that use." A second and more substantial fort was erected here on the approach of Philip's war, in 1675. The site of this ancient fort is distinctly marked, on the S. E. part of the hill, overlooking the bay and the surrounding country in every direction.

Governor Carver, and those of the Pilgrims who died during the first year, were not buried in this ground, but upon Cole's Hill, a lower elevation, near the water's edge, just above where the high terrace wall from Water Street now is, which was in the close vicinity of the first enclosure made for their habitations. These early graves were carefully smoothed over, in order that the Indians might not perceive how greatly death had reduced their numerical strength.

Burying Hill, however, soon after 1622, began to be used as their place of sepulture; and here the generations of the dead in Plymouth have been gathered to their fathers for more than two centuries and a quarter. Guides have been placed along the paths, which have been tastefully laid out through the ground, to direct the notice of the visitor to some of the earliest and most hallowed graves. No dates, however, are legible upon these stones earlier than 1681. But a new white marble monument has been placed over the grave of Governor BRADFORD; who was chosen governor after the death of Carver, in 1621, and was elected to the same office every year until his death, in 1657, excepting for five years, when, as Winthrop says, he "by importunity got off."

A position on Burying Hill is the one of all

others to be chosen for the purpose of bringing under the eye at one view all the interesting localities of Plymouth. Imagining, therefore, that our readers stand with us

"On the hill of hallowed brow,
Where the Pilgrim sleepeth now,"

we shall, as rapidly as possible, complete our survey of whatever is most intimately associated here with the memory of the Pilgrim Fathers.

Lying before us on the E. are the harbor and the bay, above which our point of observation is elevated 165 feet. From this point the eye is enabled, in a clear atmosphere, sometimes to discern the white sand cliffs of Cape Cod, across the bay, at a distance of 25 miles; within which, on the 11th of November, 1620, the Mayflower, after a passage of 98 days, joyfully cast her anchor, and where she remained until the coast had been explored to find a place of settlement. There, on that day, before taking the first step in this urgent undertaking, the Pilgrims drew up and signed their ever-memorable compact for a free government; of which John Quincy Adams has said, "This is perhaps the only instance in human history of that positive original social compact which speculative philosophers have imagined as the only legitimate source of government. Here," he adds, "was a unanimous and personal assent, by all the individuals of the community, to the association by which they became a nation."

Contracting now the scope of vision to the entrance of the harbor, about 8 miles E. of the town, *Manomet Point* is seen on the right or S. side, which is the termination of Manomet Hill, about 400 feet high; and on the left or N. side, the *Gurnet*, a promontory connected with Marshfield by a low beach, and forming a fine situation for the beautiful double light which has been placed upon it.

A tongue of land springing from the shore on the S. side of the harbor, and extending N. 3 miles, directly in front of the town, from half a mile to a mile distant from it, divides this lesser bay into the outer and the inner harbors. On the outward side of this natural barrier there is the fine beach so well known as *Plymouth Beach*, which is commensurate with its whole extent.

From the Gurnet, along the N. side of the outer harbor, and round the point of the beach, lies the *Channel*, through which, after careful soundings had been made, the Mayflower, with her precious freight, was finally brought up as far as to an anchorage a little N. E. of the *Beach's Point*, where she lay from the 16th of December to the 5th of April following, a period of 110 days.

Nearly in the same range beyond, and apparently in conjunction with the Duxbury shore, on the N. side of the harbor, is seen *Clark's Island*, memorable as the spot where the first New England Sabbath was kept, by a portion of the Pilgrims, while the Mayflower was yet lying at Cape Cod. Being out in their shallop on an exploring tour, they were driven by a storm, on the night of December 8, to take shelter under the lee of this island, which is protected, in some measure, from the violence of the ocean by a projecting head land, a little to the S. E., called *Saquish*. This was their first introduction into Plymouth harbor, and is the true original of Mrs. Hemans's graphic picture:—

"The breaking waves dashed high
On a stern and rock-bound coast ;
And the woods against a stormy sky
Their giant branches tossed ;—

"And the heavy night hung dark
The hills and waters o'er,
When a band of exiles moored their bark
On wild New England's shore."

The 9th being extremely cold, they spent the day in drying their arms, repairing their shallop, and exploring the island. The next day being the Sabbath, "they rested according to the commandment ;" and here, their company being eighteen in number, they prayed and sang praises for the first time on those heathen shores to Him for whose pure faith and worship they had suffered and sacrificed so much in coming to this new world.

"Amidst the storm they sang ;—
And the stars heard, and the sea !
And the sounding aisles of the dim woods rang
To the anthem of the free !"

A short distance to the left of Clark's Island, on the Duxbury shore, there rises, directly from the water's edge, a low and regularly-formed hill, entirely under cultivation, which is known as *Captain's Hill* ; this being a portion of the land assigned at an early period to CAPTAIN STANDISH, the intrepid military leader of the Pilgrims. Upon this farm he settled, and built a house near where the little cluster of buildings now stands, at a little distance from the shore, on the S. W. side of the hill. Some ruins of this ancient house, which was finally consumed by fire, still remain to attract the curiosity of the antiquarian.

Contracting now our view within the precincts of the town itself, which lies spread out around us, it will be easy to trace the plan of the settlement, as it was first laid out and occupied by the Pilgrims. We look directly down before us through *Leyden Street*, running from the Town Square, in front of the Gothic meeting-house, to the water side ; lying as near as may be upon the steep margin of the stream which here flows into the harbor from the W. It was along this street, formerly called *First Street*, that on the afternoon of the 28th of December, they proceeded to measure out their grounds, intending to build a row of houses upon each side of the street, commencing from what is now Town Square. "And first," they say, "we took notice how many families there were ; willing all single men that had no wives to join with some family, as they thought fit, that so we might build fewer houses ; which was done, and we reduced them to nineteen families. To greater families we allotted larger plots ; to every person half a pole in breadth and three in length ; and so lots were cast where every man should lie ; which was done and staked out. We thought this proportion was large enough at the first, for houses and gardens, to empale them round ; considering the weakness of our people, many of them growing ill with colds," &c. . . . "We agreed that every man should build his own house ; thinking, by that course, men would make more haste than working in common."

They had previously completed one frame building, about 20 feet square, which was to serve them as a common shelter, until separate dwellings could be erected. This, which was the first building in the colony, was situated on the

S. side of the street, near the S. E. declivity of the hill towards the water side.

The first meeting-house stood in the Town Square, very nearly upon what is now the site of the meeting-house built in 1840, by the Trinitarian, or Third Church, which, in honor of the Pilgrims, has taken the name of the *Church of the Pilgrimage*.

The most elevated ground which is seen on the S. from Burying Hill, and immediately in the rear of that part of the town which lies on the opposite side of the stream, is known as WARSON'S HILL. By the Fathers it was called *Strawberry Hill*. It was on the summit of this hill that MASSASOIT appeared with his train of sixty men ; and from this place hostages were exchanged between him and the Pilgrims in the town, and negotiations carried on, in consequence of which the first treaty of peace and friendship was established with the Indians.

The general aspect of the landscape south of the town is quite unique, moulded by the drift formation, which overlies this section of the coast, and presenting a congeries of little rounded hillocks, which reminds one of the rolling sea itself. This singular contour of the surface accounts for a great number of beautiful ponds, said to be about 200, within the precincts of the town. But our limits, already much exceeded, forbid us to point out other interesting localities. The view presented from this eminence, embracing the harbor and the shores of the bay for miles around, especially when clothed with the associations of history peculiar to the spot, is not inferior in interest and beauty to any in the country.

Before we take leave of it, let us be reminded again that we stand among the graves of the Pilgrims, and of the venerated forefathers who early joined them in their sacred enterprise. We tread upon the ashes of those to whom we are indebted, under Providence, for all which we hold most valuable in our religious, civil, and social inheritance as a people. Verily they have received, in glorious measure, the recompense of the "blessed dead," who rest from their labors, and their works do follow them.

We cannot better conclude than with an extract from the beautiful hymn of Dr. Oliver Wendell Holmes, at the celebration of the Landing, in 1846 :—

"The weary Pilgrim slumbers,
His resting-place unknown,
His hands were crossed, his lids were closed,
The dust was o'er him thrown ;
The drifting soil, the mouldering leaf
Along the sod were blown ;
His mound has melted into earth ;
His memory lives alone.

"So let it live unfading,
The memory of the dead,
Long as the pale anemone
Springs where their tears were shed,
Or raining in the summer's wind,
In flakes of burning red,
The wild rose sprinkles with its leaves
The turf where once they bled !

"Yea, when the frowning bulwarks,
That guard this holy strand,
Have sunk beneath the trampling surge,
In beds of sparkling sand,
While in the waste of ocean,
One hoary rock shall stand,
Be this its latest legend—
HERE WAS THE PILGRIM'S LAND."

QUEBEC.

City and river port of Canada, on the W. bank of the St. Lawrence, about 340 miles from its mouth, and about 180 miles below Montreal. As many of our readers will be interested to know some of the more important particulars of a place so remarkable in its features, and so much frequented by persons from the United States on their excursions of pleasure in the summer months, we shall give a brief notice of it here.

Quebec is situated upon the extremity of an elevated ridge, or bluff, between the St. Lawrence and the St. Charles Rivers, at their point of junction. Its ground plan in this respect very nearly resembles that of the city of New York. The extreme angle of this promontory of rock, upon and around which the city is built, and which is called Cape Diamond, rises, on the side next to the St. Lawrence, almost perpendicularly to the height of about 340 feet, giving to the place, and especially to the citadel which crowns its summit, a most commanding appearance, from whatever direction it is first approached. On the 17th of May, 1841, a large portion, about 250 feet, of this cliff fell away, causing the ruin of several buildings and the death of about 30 persons.

Quebec is naturally divided into the Upper and the Lower town. The Lower town, which is the oldest, and lies wholly without the walls, partly at the foot of Cape Diamond and partly extending round to the St. Charles, has narrow and dirty streets, which are in some parts steep and winding, "the most crowded parts of the old town of Edinburgh not being more irregular or confined than the Lower town of Quebec." The streets in the Upper town, though rather narrow, are generally clean, and paved or macadamized. Both sections are almost wholly built of stone, and the public buildings and most of the houses in the Upper town are roofed with tin, the glitter of which in the sun has a very brilliant effect, though not altogether in keeping with the venerable aspect and associations of the place in other respects. The public buildings are substantial rather than elegant. The Roman Catholic Cathedral of Notre Dame; the Cathedral of the English Church; the old Episcopal palace, afterwards, for a time, the seat of the Canadian legislature; the quadrangular building, formerly the College of Jesuits, but now a barrack; with the Quebec Bank;—all these in the Upper town, and the government warehouses in the Lower town, constitute the principal public edifices. There are three nunneries in Quebec, one of which, the *Hotel Dieu*, answers a valuable purpose as a hospital. It was founded by the Duchess Aiguillon in 1637. Its chapel contains some fine paintings. The *Ursuline Nunnery*, near the centre of the Upper town, founded in 1639, is a neat building surrounded by a garden. The chapel is ornamented with appropriate decorations and with handsome paintings. The nuns of this institution are very rigid in their seclusion. Only persons of distinction are admitted within the walls, though admittance to the chapel can be more freely enjoyed upon application to the chaplain. The body of the French General Montcalm was deposited within this convent.

Near the cathedral is the *Place d'Armes*, or parade ground, where, on the E. of the Pentagon, once stood the Castle of St. Louis, the

foundation of which was laid by Champlain in 1624. The position is a most commanding one, upon the very brink of an almost perpendicular precipice of rock, 200 feet above the river, flowing almost at its base. This castle was the residence of the French and English governors, until it was destroyed by fire in 1834. Lord Durham, during his administration, had the site cleared and levelled, floored with wood, and converted into a spacious platform, with a railing carried quite over the edge of the precipice, making it one of the most beautiful promenades imaginable. From this platform, which is called *Lord Durham's Terrace*, is had an extensive view of the St. Lawrence, as far down as the Isle of Orleans; of the harbor filled with shipping, and the opposite bank of the river; with Point Levi; the village of D'Aubigny; and the road, leading up through one continuous line of cottages, to the Falls of the Chaudiere; with the mountains in the distance gradually fading from the view. From this point of observation, much of the Lower town and of the shipping at the wharves lies far below the eye, and almost directly under the feet of the spectator.

Crossing the *Place d'Armes* from the Terrace to Des Carriers Street, the visitor will see the beautiful monument, erected by Lord Dalhousie, "To the Immortal Memory of Wolfe and Montcalm." This monument, at the period of its erection, stood in the gardens of the chateau.

But to the American visitor, Quebec is most extraordinary for the closeness, perfection, and strength of its means of defence against an invading enemy. It is, in the first place, by its natural situation, a "munition of rocks"—the "Gibraltar of America." The whole Upper town is surrounded by a lofty wall, with fortifications, about 3 miles in extent. All communication from without is through massive gates, protected by heavy cannon, and attended by a military guard constantly on duty. The W. part of the city, being comparatively deficient in natural strength, has been covered by a combination of regular works, upon the most approved system, comprising ramparts, bastion, ditch, and glacis. In advance of these, also, to strengthen the defences of the city on the W., this being the only quarter from which an invader can approach by land, 4 martello towers have been erected on the Plains of Abraham. They extend from the St. Lawrence to the Coteau St. Genevieve, at the distance of 500 or 600 yards from each other. They are constructed with almost impregnable strength on their outer side, and the platform on the top is furnished with cannon of a heavy calibre; but on the side next to the city, they are so built as to be easily battered down by the guns from the walls or from the citadel, in the event of an enemy's gaining possession of them. The citadel itself occupies the highest point of Cape Diamond, from which it frowns with terror upon the foe in every direction in which access can be had to the city by water or by land. This fortress is constructed upon the most gigantic scale, and upon the most approved principles of the art. It includes an area of about 40 acres, accommodates the garrison, and contains a beautiful parade ground, with a prison, and with magazines and warlike implements, which are immense. The officers' barrack is a fine building, looking directly down upon the St. Lawrence. The soldiers' quarters are under the ramparts. If not

accompanied to the citadel by a citizen, the visitor must obtain a ticket of admission from the office of the adjutant general in the city, upon which he will be courteously received, and will have the honor of a guard to accompany him to all parts of the work which the regulations permit the stranger to inspect. It is approached by a zigzag pathway, with 32-pounders staring you in the face at every turn. When inside, it looks like a world in itself; though not that in which it might seem the lion would ever lie down with the lamb. The walk around the ramparts is the most delightful that can be imagined, commanding a prospect in every direction of 50 miles in extent, replete with all the elements which enter into the formation of a perfect landscape. The author of *Hochelaga* thus glowingly describes this panoramic view from the citadel: "Take mountain, and plain, sinuous river and broad tranquil water, stately ship and tiny boat, gentle hill and shady valley, bold headland and rich fruitful field, frowning battlement and cheerful villa, flowery garden and sombre forest;—group them all into the choicest picture of ideal beauty your fancy can create; arch it over with a cloudless sky; light it up with a radiant sun; and, lest the scene should be too dazzling, hang a veil of light haze over all, to soften the light and perfect the repose;—you will then have seen Quebec on this September morning."

Besides what has been above described, there is the extensive suburb of St. Roch, lying beyond the ramparts on the N. W., between the Upper town and the S. shore of the St. Charles River, which is the only portion of Quebec built on ground approaching to a smooth and level surface. Almost the whole of this section, comprising near a third part of the city, was desolated by fire, a number of years ago, and has been but very imperfectly rebuilt.

The *Plains of Abraham*, covered with pastures and cultivated fields, lie spread out on the W. of the city, so remarkable in history as the scene of the sanguinary conflict, as the result of which, in 1759, Quebec was taken from the French, by the British army under the command of the brave General Wolfe, who received here his mortal wound, and died upon the field, at the moment when victory declared in his favor. The spot is marked by a small stone monument, on which he breathed his last in the arms of his friends, exclaiming, as he heard the shouts, "They fly! they fly!" "Then I die happy." The French General Montcalm also was killed in the action.

The spot is also marked upon the bottom of the cliff, in the Lower town, near which General Montgomery, together with most of his personal staff, was killed during the American revolution, while making an attempt, in the night, to force an entrance into the city. The remains of the general were interred by a soldier, and were removed in 1818 to New York, where they now rest, in front of St. Paul's Church, on Broadway.

There are several places of resort, which are well worthy of a visit, in the vicinity of Quebec. The most celebrated are the Falls of Montmorenci, 9 miles N. E.; the Falls of the Chaudiere, 12 miles S. W.; Lake St. Charles, 16 miles N. W.; the Indian village of Lorette, 8 miles on the road to the lake; and the delightful excursion, along the bank of the St. Lawrence, about 8 miles out, to Cape Rouge, passing over the Plains of Abraham, and by Wolfe's Cove, where Wolfe

disembarked his army. The roads on all these routes are mostly good, and the obliging French drivers are not unreasonable in their charges.

Steamboats run constantly, during the travelling season, between Quebec and Montreal; and also from Quebec to the River Saguenay, 140 miles down the St. Lawrence, and then up the Saguenay from 50 to 90 miles, which has become a fashionable excursion.

The principal hotels in Quebec are the Albion, in Palace Street, and Payne's Hotel, in St. Ann Street, in the Upper town; and in the Lower town, the Ottawa House and the St. Lawrence Hotel.

RED SULPHUR SPRINGS, VA.

These springs are situated in the S. part of Monroe co., 42 miles from the White Sulphur, 17 miles from the Salt Sulphur, and 32 miles from the Sweet Springs. They are among the most celebrated of the Virginia springs for their medicinal effects, and are visited by a larger proportion of invalids, perhaps, than any other. Their decidedly beneficial influence upon *consumptive* patients, in the earlier stages of that disease, has given them an extensive reputation. Neuralgic cases, also, of the most obstinate character, have yielded to their influence. Scrofula, diseased liver, chronic diarrhoea, chronic rheumatism, gravel, dropsy, and diseases of the skin are among the disorders for which these waters have been found an efficacious remedy.

"The Red Sulphur water," says a physician who has given an account of them from personal observation, "is decidedly sedative in its effects. It subdues chronic inflammation, tranquilizes irritation, and reduces the frequency of the pulse in the most astonishing manner. It has been considered peculiarly adapted to the cure of pulmonary diseases; but its good effects equally extend to all cases of sub-acute inflammation, whether seated in the stomach, liver, spleen, intestines, kidneys, or bladder, and most particularly in the mucous membrane."

The following is the result of an analysis of these waters by Professor Rogers, the geologist of Virginia:—

To 1 gallon, sulphuretted hydrogen, cubic inches, 4.54; carbonic acid, 8.75; nitrogen, 4.25; making the gaseous contents 17.54.

Solid contents of 32 cubic inches of water, 1.25; consisting of sulphate of soda, lime, and magnesia, carbonate of lime, and muriate of soda.

Temperature, 54° Fahrenheit.

A visitor to the Red Sulphur Springs thus describes the natural situation and the accommodations of the place:—

"The approach to the village is beautifully romantic and picturesque. Wending his way around a high mountain, the weary traveller is for a moment charmed out of his fatigue by the sudden view of his resting-place, some hundreds of feet immediately beneath him. Continuing the circuitous descent, he at length reaches a ravine, which conducts him, after a few rugged steps, to the entrance of a verdant glen, surrounded on all sides by lofty mountains. The S. end of this enchanting vale, which is the widest portion of it, is about 200 feet in width. Its course is nearly N. for about 150 yards, when it begins gradually to contract, and change its direction to the N. W. and W., until it terminates in a narrow point. This beautifully secluded

Tempe is the chosen site of the village. The S. portion, just at the base of the E. and W. mountains, is that upon which stand the various edifices for the accommodation of visitors. These buildings are spacious and conveniently arranged; the servants are prompt and obedient; and the *table d'hôte* is abundantly supplied with every thing that can tempt the appetite. The promenades are beautifully embellished, and shaded from the midday sun by large sugar maples, the natives of the forest."

The springs are situated in the S. W. part of the valley, and the water is collected into two white marble fountains, over which is thrown a beautiful octagon-shaped pavilion.

Regular stages, or post coaches, arrive here daily, both from the N. and S. For further particulars of the general route, see *White Sulphur Springs*.

RICHFIELD SPRINGS, N. Y.,

Situated in Otsego co., on the N. side of Schuyler's Lake, about 1 mile from the lake shore. They are reached by the railroad, from the E. or W., to Herkimer, whence stage coaches and other conveyances convey passengers to the springs, 12 miles distant. The accommodations for visitors are very convenient and agreeable, having been greatly enlarged and improved within a recent period. The hotels are of the first class, supplying every luxury and comfort usually found at these resorts. At the lake, pleasure boats and fishing apparatus are kept in readiness for visitors. The ride to Otsego Lake is over a fine road, a distance of 6 miles.

The following is an analysis of the Sulphur Spring: Bicarbonate of soda, 20 grains; bicarbonate of lime, 10 grains; chloride of sodium and magnesia, 1.5; sulphate of magnesia, 90; hydro-sulphate of magnesia and lime, 2; sulphate of lime, 90; solid matter, 153.5; sulphuretted hydrogen gas, 20.8 inches per gallon.—These are sometimes known as *Canaderga Springs*.

ROAN MOUNTAIN, N. C.

The location of this mountain is 35 miles N. W. of Morgantown, and about 15 miles from Black Mountain, which we have mentioned in its place. The height of this mountain is 6038 feet. It is ascended with less difficulty than Black Mountain, and, though less elevated by more than 500 feet, is considered more beautiful as a height to be visited. Near its S. W. extremity there is a body of rocks resembling in appearance the ruins of an ancient castle.

ROCKAWAY BEACH, LONG ISLAND, N. Y.

This fashionable watering-place is on the Atlantic shore of Long Island, about 20 miles from New York. The principal hotel is the Marine Pavilion, which is a splendid establishment, erected in 1834, upon the beach, only a short distance from the ocean. There is also another hotel, which is well kept, and several boarding-houses, where the visitor or the invalid may enjoy the invigorating ocean breezes with less of cost and display than at the hotels. The most convenient route to Rockaway is by the Long Island Railroad to Jamaica, 12 miles from New York, and thence 8 miles by stage to the beach.

RYE BEACH, N. H.

The sea-coast in this town extends about 6 miles, making nearly one fifth of the whole sea-

board of N. H. There are within this distance two or three beautiful beaches, or rather portions of the beach, to which resort is had for sea bathing and summer recreations. At the principal place of resort, known as Rye Beach, there are pleasant accommodations provided for the entertainment of visitors. It lies E. of Portsmouth about 6 miles.

SACHEM'S HEAD, CT

This is an attractive watering-place on the Connecticut shore of Long Island Sound, 16 miles E. of New Haven, and 3 miles E. of Guilford Point. It has a spacious and elegant hotel, with ample accommodations for visitors. The place is wild and picturesque, and the sea breeze, bathing, rides, &c., are peculiarly grateful and refreshing during the sultry summer months.

SAGUENAY RIVER, CANADA.

Within a few years, the trip by steamboat from Quebec to this remarkable river, occupying from three to four days, has become a very fashionable excursion. We shall include in this article, therefore, some notices of the most interesting places which may deserve the attention of the tourist upon such a trip.

Starting from Quebec, and descending the St. Lawrence, the *Falls of Montmorenci* are seen to great advantage, about 7 miles below, precipitating their snow-white cataract over the lofty bank into the river. For a particular description of these falls, the reader is referred to the article upon that interesting natural curiosity, on page 272. The *Island of Orleans* is next passed, on the left; the principal ship channel of the river being that upon the N. W. side of the island. This is a fertile tract embraced within two encircling arms of the St. Lawrence, 21 miles long by 6 or 7 miles wide, and in part covered with forest. It rises from 50 to 100 feet above the water. *St. Patrick's Hole*, 11 miles below Quebec, on the Orleans shore, is a fine anchorage for vessels of the largest size. Here, about 25 years ago, an immense ship was built, of 3700 tons register, with a view of taking her to England, and saving the duty on the timber of which she was composed. She crossed the Atlantic; but as the object was defeated, she returned again to this country. In the attempt to make a second voyage, she was wrecked. Fourteen miles below Quebec, on the other side of this island, is the *Parish of St. Laurent*. The S. E. shore of the St. Lawrence, for many miles below Point Levi, presents a succession of villages and hamlets, consisting each of a cluster of houses after the French Canadian style, one story high, with both roof and sides painted white, and with a church standing in the midst. After passing *Madam Island*, 26 miles from Quebec, the river widens to 10 miles, and continues generally to increase in width to its mouth. *Cape Tourment*, 30 miles below Quebec, is a bold promontory rising to the height of 2000 feet, and seen at a great distance. *Grasse Island*, opposite this promontory, is the *Quarantine Station* for vessels inward bound, and has a hospital, a Roman Catholic chapel, and other buildings suited to the design of the establishment. *Goose Island*, 45 miles from Quebec, is owned by the nuns, and is cultivated as a farm by tenants. About 70 miles below Quebec is the *Isle aux Coudres*, (Isle of Filberts,) said to have been so named by Jacques Cartier, on his first voyage of

discovery up the St. Lawrence. On the S. E. shore of this island is *St. Anne*, where is a Catholic college, and a settlement of considerable size. *Kamowaska*, on the S. E. shore, about 90 miles below Quebec, containing about 1600 inhabitants, has become a favorite place of resort, during the summer months, for the inhabitants of Montreal and Quebec, for purposes of fishing and bathing, and is doubtless destined to become a fashionable watering-place, where, as the waters are perfectly salt, invalids and the seekers of pleasure may enjoy sea-bathing and other recreations. There is a settlement at the mouth of the *River Du Loup*, which comes into the St. Lawrence from the S. E. 120 miles below Quebec, containing some 1500 or 1800 inhabitants. Here commences the great road from the St. Lawrence River to the St. John's, by the way of the Madawaska River and settlement. As you come to the mouth of the Saguenay, which is 140 miles from Quebec, the waters of the St. Lawrence take a blackish appearance, which is perceivable for many miles below, extending far out into the river. This discoloration is occasioned by the entrance of the waters of this great tributary, which are of a very dark hue. Off the mouth of this river is *Red Island*, and nearly opposite is *Green Island*, which are among the first of the islands met with in ascending the St. Lawrence. The St. Lawrence River, below this point, assumes an imposing appearance; being clear of islands, and gradually widening until its breadth exceeds 100 miles.

We are now at the mouth of the SAGUENAY, to visit which is the principal object of the excursion. From the strange, wild, and romantic character of the scenery along its banks, as well as from the great depth and almost inky blackness of its waters, this may be considered as unquestionably the most remarkable river on the American continent. It is about a mile wide at its confluence with the St. Lawrence; and, in different parts of its course above, is often from 2 to 3 miles in width. It is one of the most important tributaries of this great river; its volume of water is indeed immense; and the depth and force of its current is so sensibly felt at its junction with the St. Lawrence, that vessels going up or down are obliged to yield to its influence for several miles. With the exception of the St. Lawrence itself, it is decidedly the largest river E. of the Appalachian chain of mountains. It is the only outlet of the beautiful *Lake of St. John*, which lies about 140 miles nearly W. from the River St. Lawrence, in an immense valley forming part of the territory belonging to the Hudson's Bay Company. This lake is nearly circular in its form, being between 30 and 40 miles in diameter; and it constitutes the great natural reservoir into which no less than twelve rivers, and many smaller streams, discharge their waters. The Saguenay is the channel by which this vast collection of water finds its way to the St. Lawrence, draining an area of country which is more extensive than all the rest of Lower Canada, although but little known, and till lately almost entirely uninhabited, except by one or two hundred Indian families.

The first half of the course of the river lies through a wilderness of hills, covered with an unbroken forest of pine, fir, and spruce; and numerous and formidable rapids in this part render the navigation difficult, and even hazardous, except to experienced canoe-men. Below

Chicoutimi, however, which is 68 miles from its mouth, it is navigable for the largest vessels. From the *Ha-Ha Bay*, which is 12 or 15 miles below Chicoutimi, the passage of the waters of the Saguenay, for the whole distance of 50 miles to the St. Lawrence, is one of the wonders of nature. They penetrate through solid mountains of scientific granite, which seem to have been split asunder by the upheavings of an earthquake, thus forming an immense canal, with banks of perpendicular rocks, towering up to 1500 or 2000 feet above the water, which is about 150 fathoms deep nearly the whole distance. In many places the largest vessel may run close to the perpendicular cliffs, with 100 fathoms water. Its depth, at several different points indeed, has never been ascertained. It has been plumbed, in some of these places, with a line of 330 fathoms, or 1980 feet, and that, too, immediately at the base of the cliff, and yet no bottom found.

Mr. Lanman, a talented artist and an accomplished writer, who recently made a tour through Lower Canada, thus speaks of the Saguenay: "Imagine, for a moment, an extensive country of rocky and thinly-clad mountains, suddenly separated by some convulsion of nature, so as to form an almost bottomless chasm, varying from 1 to 2 miles in width; and then imagine this chasm suddenly half filled with water, and that the moss of centuries has softened the rugged walls on either side, and you will have a pretty accurate idea of the Saguenay." "Generally speaking," he continues, "these towering bulwarks are not content to loom perpendicularly into the air, but they must needs bend over as if to look at their own savage features reflected in the deep. . . . Awful beyond expression is the sensation which one experiences in sailing along the Saguenay, raising his eye heavenward, to behold, hanging directly over his head, a mass of granite apparently ready to totter and fall, and weighing perhaps a million of tons. Terrible and sublime, beyond the imagery of the most daring poet, are these cliffs; which, while they proclaim the omnipotent power of God, at the same time whisper into the ear of man that he is but as the moth that flutters in the noontide air." Another writer has remarked that "the power and pride of man is as much humbled, in some parts of this tremendous chasm, as in the immediate presence of Niagara Falls."

Not the least remarkable feature of this river is the ridge of rocks lying across its mouth. This ridge is below the surface, and through it is a channel 120 feet deep, on the upper side of which the depth immediately increases to 840 feet; so that, even at its mouth, the bed of the Saguenay is absolutely 600 feet, or thereabout, below that of the St. Lawrence, into which it empties.

After entering the river, the hills soon rise abruptly from the water's edge, presenting an appearance, at first somewhat similar to the entrance into the Highlands, from the N., on the Hudson River. *Tadouac*, at the mouth of the Saguenay, on the St. Lawrence, is a small place, occupied as a trading post with the Indians, by the Hudson's Bay Company. *Tête du Boule* is a round mountain peak about a mile from Tadouac. The *Two Profiles*, a few miles farther up, elevated several hundred feet above the water, bear a striking resemblance to the outline of the human face. At *St. John's Bay*, 28 miles above

Tadousac, are extensive lumber establishments. *Eternity Point*, and *Trinity Point*, on the S. side of the river, 34 miles from the mouth, are two enormous masses of rock, rising abruptly from the water's edge to the height of 1500 feet. Fifty-seven miles from Tadousac opens the *Ha-Ha Bay*, or *Great Bay*, as it is sometimes called. At the head of this bay there is a large lumbering establishment, with several extensive saw-mills, which is said to give employment to 2000 persons living in the regions of the Saguenay and the St. Lawrence. At Chicoutimi, 68 miles from Tadousac, where our steamboat excursion must necessarily terminate, is another trading post of the Hudson's Bay Company. Two or three dwellings, and a small but venerable looking Roman Catholic chapel, constitute the settlement. It is one of those stations where, in former days, the Jesuit missionaries established a home for themselves. The church edifice, which yet remains to attest their religious zeal, is believed to be one of the first erected in Canada. Standing here, in so romantic and remote a spot, it is a peculiarly agreeable object. It is about 100 yards from the margin of the stream, in the centre of a plat of greensward, set out with shrubbery, with forest-trees crowning the rising ground in the rear. The old bell, still remaining in the tower, is covered with characters, or hieroglyphics, which the most learned visitors have not been able to interpret. Here assemble, in the months of June and July, every year, the children of the forest, some of them from the far north, to meet the Catholic priests, who visit the place at that season, to minister to the spiritual wants of such as still adhere to the religion which their fathers were taught in earlier ages, and reverence the spot hallowed by traditional associations. The Indians in the immediate neighborhood have, in a great measure, abandoned the use of strong drink, and have become orderly and decent in comparison with the other scattered remnants of their race.

Beyond this point all traces of civilization end. But the region of the Saguenay cannot long remain waste and unoccupied. It is doubtless destined to become the abode of an active and enterprising population. The aspect of the country around Chicoutimi is divested of the rugged character which distinguishes the banks of the Saguenay for the first 50 miles; and as the traveller penetrates into the interior, the appearance of the country indicates a superior soil. The climate, which, in the vicinity of Lake St. John, approaches very nearly to that of the district of Montreal, is well adapted to the purposes of agriculture; and the virgin soil cannot fail to repay the labor which shall be bestowed upon it.

ST. ANTHONY'S FALLS.

These falls are on the Upper Mississippi River, about 7 miles above Fort Snelling. They are a succession of boisterous rapids, with one cataract about midway, of 16 feet perpendicular descent. The Mississippi is here forced through a narrow, descending channel, which is blocked up with huge rocks piled one upon another, sometimes to an enormous height, and assuming many and singularly unnatural appearances. It is through and around these jagged rocks that the river urges its fretted course, foaming and tumbling with a deafening roar. The river seems to stop for a moment ere it encounters the fall; then, breaking

through every obstacle, it plunges on, its huge billows breaking on the rocks, and throwing a shower of spray over each little rocky island in the channel. There is great grandeur and beauty in the scenery at these falls. The whole descent of the river here is about 40 feet. Steamboats freighted with merchandise for the country above St. Anthony's Falls here find an important carrying-place, and it is remarkable that this is the only carrying-place in the whole length of this magnificent river. From these falls to St. Louis, 792 miles.

SALISBURY BEACH, MS.

This pleasant beach, from 4 to 5 miles distant from Newburyport, is celebrated for its beauty and salubrity, and is much frequented during the warm season.

SALT SULPHUR SPRINGS, VA.

This pleasant watering place is situated in Monroe co., 24 miles distant from the White Sulphur Springs. They are encircled by mountains on every side. They are much visited by invalids and others, and enjoy a high reputation for the virtues of their waters, as well as for the excellent accommodations with which they are furnished. The temperature of their waters varies from 49° to 56° Fahrenheit.

SARATOGA SPRINGS, N. Y.

This is the most celebrated watering-place in the U. S. There are here, within the distance of about half a mile, as many as 10 or 12 mineral springs, with properties considerably various, and all highly efficacious in their remedial use. This place has become the annual resort of thousands, especially during the months of July and August, who come in pursuit of health or pleasure, from every section of this country and of Europe. Large and splendid accommodations are provided in the various hotels and boarding-houses, which, in the season of company, are often thronged with visitors, presenting an animated scene of gayety, luxury, and display.

The village, which is in the N. part of the township of Saratoga, is pleasantly situated on a sandy plain, in part surrounded by a beautiful grove of pines, having its principal street upon the W. margin of a narrow vale in which the springs are found. On this broad street the largest hotels are situated, with several of the churches and other public edifices, which give to it an imposing appearance. The United States Hotel, which is perhaps the most extensive and magnificent of these establishments, is a large, four story brick edifice, furnishing accommodations for about 400 guests, located in a central position, and within a short distance of all the most important mineral springs. Congress Hall and Union Hall are both large and elegant establishments, situated also at the S. part of the village, near the Congress Spring. All these houses have beautiful grounds connected with them in the rear, with spacious piazzas and colonnades, and are fitted up with special reference to the demands of the more wealthy and pleasure-loving portion of the visitors at the springs. They are only kept open during the season of fashionable resort. The Pavilion Hotel, which was of this class, was destroyed by fire in 1843. Other houses, as the American Hotel, Columbian Hotel, Montgomery Hall, Adelphi Hotel, and Washington Hall

remain open during the whole year. Besides these, there are several respectable hotels of less note, affording good accommodations both summer and winter. Near the springs there are several public bathing-houses, where cold and warm water, and shower baths, can at all times be obtained.

The celebrated mineral waters, which are the great cause of attraction to this place, require a more particular notice. They issue from the limestone formation, which underlies the whole surface of sandy soil upon which the village is built; most of them coming out near the margin of a small stream which runs through the village, in the narrow valley on the E. of the principal street. It is not known at what precise period these springs were first discovered. It is said that the whites discovered them by remarking the track of the deer, who frequented them in such numbers as to wear a path to the spot. In 1773, a settlement was established here for the double purpose of trading with the Indians, and of accommodating invalids who might seek the benefit of two of these fountains of health, which were then all that were known. These were those since distinguished as the *Flat Rock* and the *High Rock* Springs, which had made themselves more obvious than the rest by a remarkable limestone deposit around their orifices.

There are now ten or twelve different springs coming to the surface, within the extent of about half a mile, in whose waters the mineral elements of soda, magnesia, lime, and iron, with others in less volume, are combined, in different proportions, with carbonic acid gas. Their prevailing character is that of *saline* and *chalybeate* waters. Congress Spring, Washington Spring, Putnam's Spring, Pavilion Spring, Iodine Spring, Hamilton Spring, Empire Spring, and the Flat Rock and High Rock Springs, may be mentioned as the most celebrated for their medicinal virtues. A cluster, known as the "Ten Springs," is situated about a mile E. of the village, the most valued of which is known as the Union Spring. The Mansion House, a well-kept summer establishment, is near to this locality.

The *Congress Spring* is the most copious, the most frequented, and the most salubrious of all the springs in Saratoga. It was discovered in 1792, by a member of Congress, named Gillman, issuing from an aperture in the side of a rock, which formed the margin of a little brook. After several years, the supply from this small orifice in the rock being wholly insufficient to meet the increasing demands of visitors, an attempt was made to remove the obstructions to its more abundant flow; in consequence of which the spring for a time disappeared, and was supposed to be forever lost. But at length signs of gas were observed rising through the water, from the bottom of the brook, which led to the ultimate recovery of this most invaluable fountain. By turning aside the stream, and digging about 8 feet through marl and gravel to the rock, its permanent source was found, and over it a tube 10 inches square was placed, through which an abundant supply of the finest mineral water continually rises to the surface. The *Pavilion Spring* also is brought from an orifice in the rock 40 feet under ground, and tubed up at great expense. This spring contains more of the carbonic acid gas than any other, and next to the Congress is most resorted to.

These waters are highly efficacious in many inveterate cases of disease. But even this is not their most important benefit. They have an almost magic effect upon the healthy system, to renovate and invigorate its energies, when relaxed from long confinement to business, or from sedentary habits, and to remove the latent causes of languor and disease. Their chief medicinal properties are of the cathartic and tonic kinds. Large quantities of these waters are bottled, transported, and sold in the various cities, which is one of the methods in which the springs, which are mostly the property of individuals, are made a source of profit to their several owners. For the use of the water at the springs no expense is incurred, except what is voluntarily given to those in waiting. It is a sufficient proof of the estimation in which they are held, to state that upwards of 35,000 persons generally visit Saratoga during the summer season, and that there are sometimes not less than 3000 visitors at the same time in the various hotels and boarding-houses.

We copy the following analysis of several of the above-named springs from the little work of Dr. R. L. Allen, a physician resident at Saratoga:—

Congress Spring. To one cubic gallon: chloride of sodium, grs. 390.246; hydriodate of soda, and bromide of potassium, 6,000; carbonate of soda, 9.213; carbonate of magnesia, 100.981; carbonate of lime, 103.416; carbonate of iron, 1,000; silex and alumina, 1,036. Solid contents, 611.892.

Carbonic acid gas, 386.188; atmospheric air, 3.261. Gaseous contents, 389.449.

High Rock Spring. To one gallon: chloride of sodium, grs. 190.233; carbonate of magnesia, 62.100; carbonate of lime, 71.533; carbonate of soda, 18.421; carbonate of iron, 4.233; hydriodate of soda, 2.177; silex and alumina, 2,500; hydriobromate of potash, a small quantity. Solid contents, 351.197.

Carbonic acid gas, 331.666; atmospheric air, 2,000. Gaseous contents, 333.666.

Hamilton Spring. To one gallon: chloride of sodium, grs. 290.500; carbonate of soda, 33.500; carbonate of lime, 95.321; carbonate of magnesia, 38.000; carbonate of iron, 4,500; hydriodate of soda, 3,500; bromide of potash, a trace; silex and alumina, 1,000. Solid contents, 466.321.

Carbonic acid gas, 340.777; atmospheric air, 2,461. Gaseous contents, 343.238. Temperature of the water, 48°.

Putnam's Spring. To one gallon: chloride of sodium, grs. 220.000; carbonate of soda, 15.321; carbonate of magnesia, 45.500; carbonate of lime, 70.433; carbonate of iron, 5,333; hydriodate of soda, 2,500; bromide of potash, a trace; silex and alumina, 1,500. Solid contents, 370.587.

Carbonic acid gas, 317.753; atmospheric air, 3,080. Gaseous contents, 320.833. Temperature, 48°.

Iodine Spring. To one gallon: chloride of sodium, grs. 147.665; carbonate of magnesia, 73.348; carbonate of lime, 28.955; carbonate of soda, 3,000; carbonate of iron, .900; hydriodate of soda, 3,566. Solid contents, 257.434.

Carbonic acid gas, 344.000; atmospheric air, 2,500. Gaseous contents, 346.5.

Pavilion Spring. To one gallon: chloride of sodium, grs. 183.814; carbonate of soda, 6,000; carbonate of lime, 59.593; carbonate of magnesia, 58.266; carbonate of iron, 4,133; iodide, sodium,

and bromide of potassa, 2,566; sulphate of soda, 1,000; alumina, a trace; silix, 1,000. Solid contents, 316.372.

Carbonic acid, 369.166; atmospheric air, 3,333. Gaseous contents, 372.499.

Empire Spring. To one gallon: chloride of sodium, grs. 215.756; bi-carbonate of lime, 24.678; bi-carbonate of magnesia, 113.459; bi-carbonate of soda, 33.584; hydriodate of potassa, 9,600; iron, 0,500; silix and alumina, 1,300. Solid contents, 399.877.

Carbonic acid gas, 260.132; atmospheric air, 3,314. Gaseous contents, 263.446.

These springs are situated 23 miles from Schenectady, and 37 from Albany. To New York, by Schenectady and Albany, 182 miles; to Utica by Schenectady, 95 miles; to Montreal, by Lakes George and Champlain, 226 miles; by Whitehall and Lake Champlain, 219 miles; to Boston, by way of Troy, 238 miles. A very pleasant way of getting to the springs from the northward and eastward is by the way of Lake Champlain and Lake George. See *Fort Ticonderoga*, p. 266.

SAYBROOK POINT, CT.

The situation of this ancient town on the W. shore and at the mouth of Connecticut River, having Long Island Sound on the S., gives it a fine exposure to the cool, invigorating breezes from the salt water; and offers at the same time peculiar facilities for pleasure excursions upon the river, which here spreads out into a broad and beautiful sheet of water. The Point is a peninsula about one mile in length, crescent-shaped in form, and connected with the main land by a narrow neck, over which the tide sometimes flows. The harbor, making up from the river, lies in the bosom of this peninsula, on the side opposite the sea. Towards its extremity the land is elevated, and spread out to about three quarters of a mile in breadth, affording space for a considerable settlement, which has existed here from the earliest colonial history of the country. Indeed, the venerable antiquities and important historical associations of this spot, constitute one of its peculiar attractions as a place of temporary resort. The monument of the Lady Fenwick is still extant, a handsome estate on the opposite side of the river being held, it is said, from an original grant, on the condition of keeping it in a good state of preservation. A square was laid out on this peninsula, on which it was intended to erect houses for Cromwell, Pym, Hasselrig, and Hampden, who, it is understood, had actually embarked in the Thames to occupy this ground. Here, too, are to be seen some relics of the ancient foundations of Yale College, which had its location on this point for 15 years. The old burial-ground, also, is a place of great interest to be visited.

Lyme, on the opposite bank of the river, is likewise a pleasant town, affording delightful accommodations to persons from the cities and the interior seeking the refreshment of a sojourn in the summer on the sea-coast. There are two hotels on Saybrook Point, which are delightfully situated and well kept; also many other places where board can be obtained. Steamboats run down the river to New York and to New London, Ct., stopping at Saybrook. It will soon be reached also by the New Haven and New London Railroad, which is in process of construction.

SCHOOLEY'S MOUNTAIN, N. J.

This is a place of much fashionable resort, during the summer months, for its pure air and romantic scenery. Belmont Hall, an excellent public house, is located on its top, at an elevation of 2000 feet, from which the prospect is almost unrivalled. There is also, near the summit, a mineral spring of considerable celebrity. It contains muriate of soda, muriate of lime, muriate of magnesia, sulphate of lime, carbonate of magnesia, silix, and carbonated oxide of iron. It has a temperature of 56° Fahrenheit, and discharges 30 gallons an hour.

Seven miles from the spring, on the mountain, is Budd's Pond, 2 miles long and 1 mile wide, of great depth, and clear as crystal, which abounds with fish, and is furnished with a pleasure boat for the use of fishing parties and parties of pleasure.

This place is approached from New York by railroad to Morristown, 32 miles, from which the mountain is about 20 miles. Philadelphia passengers leave the cars at New Brunswick, and take the stage via Somerville. It is 86 miles from Philadelphia, via Trenton.

SHARON SPRINGS, N. Y.

In the town of Sharon, in Schoharie co., about 45 miles W. of Albany by the Cherry Valley Turnpike. They are also reached by stages from Canajoharie, on the Utica and Schenectady Railroad, from which place they are distant about 12 miles, in a S.W. direction. There are two springs, called the Sulphur and the Magnesia Springs, situated at the foot of a hill, near the village, about half a mile N. of the turnpike road. These waters are highly impregnated with sulphur, strongly resembling the White Sulphur Springs of Virginia. They are pure and clear, and have been found to be highly efficacious in cutaneous, dyspeptic, and rheumatic complaints. They have an exhilarating effect upon the spirits, invigorating the system, and purifying the complexion, and in some respects possess medicinal and healing properties unsurpassed by any in the country.

The Pavilion House, at this place, is a large establishment, well constructed, and admirably arranged to accommodate a great number of visitors. It stands upon a commanding eminence, having a piazza with lofty columns in front, which give to it an elegant and inviting appearance. The prospect towards the N. is almost unlimited, and by many considered hardly inferior to that from the Catskill Mountain House. Its elevated situation, always securing a pure and bracing atmosphere, conspires with the use of the waters to render the residence of visitors here in hot weather delightfully salubrious and refreshing.

SIASCONSET, MS.

See *Nantucket*.

SQUANTUM, MS.

This is a small, rocky peninsula, jutting out between Dorchester and Quincy Bays, in Boston harbor, 5 miles S. of Boston, and near the mouth of Neponset River. It has ever been celebrated as a favorite resort, first by the red men, and afterwards by the whites, for fishing and fowling.

In 1621, when our Pilgrim Fathers, 10 in number, with Squantum, or Tisquantum, and two other Indians for their guides, made their first

excursion to Massachusetts Bay, as related by Winslow, they anchored at night under Nantasket Head, and then ran over to the Dorchester shore at this place, which they called *Squantum*, from the name of the friendly Indian who accompanied them.

This place is admirably adapted to the enjoyment of sea air and bathing, and to the procuring of shell and other fish. In the warm season of the year, it is frequently thronged by visitors from Boston and the neighboring towns, who obtain these luxuries in great abundance, and at a moderate expense. On the approach to Squantum by land, the ride is through some of the finest farms in the vicinity of Boston. Indeed the approach to this little peninsula, either by land or water, is delightful.

STAFFORD SPRINGS, CT.

These mineral waters have had a considerable notoriety ever since the settlement of that portion of Connecticut in which they are situated. The Indians first made the early inhabitants acquainted with their existence, it having been their practice, from time immemorial, to resort to them in the warm season, and to plant their wigwams around them. They recommended the water as an eye water; but gave, as their own particular reason for drinking it, that it "enlivened their spirits." It is said that, in 1766, Dr. Joseph Warren, afterwards General Warren, the patriot, who fell on Bunker Hill, made a careful examination of these waters, and had thoughts of purchasing the land on which they rise, with a view of establishing himself there.

There are two distinct springs, the medicinal properties of which are considerably diverse. One of them, and that which has been longest known, contains a solution of iron, sustained by carbonic acid gas; a portion of marine salt; some earthy substances, and an element called natron, or native alkali. This spring has been pronounced by chemists to be one of the most efficacious of the chalybeate springs in the United States.

The other spring, as analyzed by Professor Silliman in 1810, contains hydrogen gas and sulphur in large proportions, and a small proportion of iron.

In the year 1765, an effectual cure occurring of a most obstinate case of cutaneous disease, which had baffled all medical skill, very much raised the reputation of these springs; in consequence of which they immediately became a place of much resort for persons afflicted with various diseases. Within a few years past, it has been ascertained, as it is confidently believed, that the use of these waters operates as a thorough and effectual means of eradicating scrofula from the human system.

Dr. Willard subsequently carried into execution the plan of the lamented Dr. Warren, by building a large hotel for the reception of invalids and others. This establishment has been continued, with enlargements and improvements, to the present time. The situation is one which has many attractions for the lovers of bold and romantic scenery; and affords a most grateful retreat in summer from the heat, din, and dust of our large cities and crowded marts of business. The New London, Willimantic, and Palmer Railroad, connecting with the Western Railroad at the latter place, passes by Stafford Springs,

thus making the place easy of access from Boston, New York, and all other places on the principal routes through New England.

SWEET SPRINGS, VA.

These springs are situated in a wide and beautiful valley among the mountains in the E. extremity of Monroe co., the region of the mineral springs of Virginia. Their temperature is 73° Fahrenheit. They are celebrated for the tonic power of their waters, whether used externally or internally. They are only 17 miles distant E. from the celebrated White Sulphur Springs.

TINTON FALLS, N. J.

See *Long Branch*.

TRENTON FALLS, N. Y.,

Eighteen miles N. E. from Utica, are on the West Canada Creek, in the town of Trenton. These falls are among the most interesting of the natural curiosities of the U. S. The creek, or stream, here has its bed, for a distance of two or three miles, deep in the stratum of dark-colored limestone, which underlies the soil, and the whole is so densely embosomed in the primitive forest, that no token of the long and deep gorge through which the waters rush is visible till you are on the very brink. In one place, the banks of this gulf are about 140 feet in perpendicular height. The average breadth, between the banks, is about 200 feet. Within a distance of two miles, there are no less than six distinct cascades, interchanging with rapids as picturesque as the falls themselves. From the Upper Falls, where the water pitches over a descent of 20 feet, into a spacious basin, the river dashes along down its rocky bed for about a mile, to the second falls, called the Cascades, consisting of two pitches, with intervening rapids, having a fall of 18 feet. A little below is the third fall, called the Milldam, from the regularity and smoothness of the sheet of water, which here rolls over a precipice of 20 feet. About 40 rods below this are the High Falls. At this place, the most remarkable features of the spectacle are presented. The volume of the river is separated by rifts in the ledge into three distinct cataracts, which have a perpendicular fall of 109 feet, from the brink of the precipice to the bed of the stream below. Here, of course, the ravine has become very deep, and the lofty walls of bare and shelving rocks on each side, as seen from the bottom, surmounted and overhung by their wooded banks, combine with the triple cataract to present a scene of the wildest grandeur. About 70 rods farther down is the fifth, or Sherman's Falls, which have a descent of nearly 40 feet; and, after a current of less declivity than the rapids above, the stream reaches the last of this beautiful succession of cataracts, at Conrad's Falls, where the pitch is about 15 feet; making an aggregate of 312 feet descent in two miles, including the rapids. The Falls, at all times interesting, become intensely so in the season of the annual floods. The path which the observer must take, in order to obtain any adequate view of the scene, is found by descending a stairway at the lower end of the ravine, to the bottom, and pursuing his course along the strand, up the stream. This path a part of the way is easy, and part of the way it is more difficult, being for some distance along a narrow shelf of rocks, upon the immediate verge

of the rushing waters. This passage was formerly somewhat dangerous, being without the iron chain which now protects it, and has obtained a melancholy notoriety from the loss of two interesting young females, who fell, a few years ago, from the narrow ledge above the cascades into the boiling stream below, and were seen no more.

WACHUSET MOUNTAIN, MS.

This mountain is situated in the N. W. part of Princeton. It rears its conical head 2018 feet above Massachusetts Bay. The base is covered with a heavy growth of wood, which dwindles to mere shrubbery as you approach the summit, giving the mountain, when seen from a distance, an exceedingly beautiful appearance. The hand of art could hardly have shorn its sides to more exactness than nature has displayed in proportioning the growth of wood to the ascent. The prospect from this mountain, on a clear summer morning, is delightful in the extreme. To the observer from its top, the whole state lies spread out like a map. On the one hand is visible the harbor of Boston; on the other the Monadnock is seen rearing its bald and broken summit to the clouds; while the Hoosic and Green Mts. fade away in the distance, and mingle with the blue horizon. The numerous and beautiful villages, with their churches and spires, scattered thickly in all directions, give a charm to the scene. This is the most lofty summit in the state E. of Connecticut River.

This mountain was much resorted to by the native Indians, and tradition says, in many instances, for the purpose of discovering the location of the early settlers by means of the smoke of their fires. The roads to its base are so good, and its ascent not difficult, that it is now much visited during the summer months.

A very large and commodious hotel has recently been erected, which affords agreeable entertainment to its numerous visitors. The mountain is easily approached by railroads to within a few miles of its base. Distance from Boston, 52 miles W.

WARM SPRINGS, VA.

This is among the oldest of the watering-places in this part of the country. It is situated in Bath co., about 40 miles N. of the White Sulphur Springs. The water, which is very transparent, has a temperature of 98° Fahrenheit. The accommodations for entertainment and for bathing here are excellent.

WARM SPRINGS, N. C.

Situated in Buncombe co., on the E. bank of the French Broad River, about 37 miles N. W. from Asheville, and W. from Raleigh 294 miles. These springs have a most romantic locality, on the road leading through the Swannanoa Gap, in the mountains of the Blue Ridge. The above-named river finds here its course through this gap in the mountains, which is so narrow and so closely shut up on both sides, much of the way, as scarcely to afford space for a road to be constructed on the river's bank. Yet here has been built a fine macadamized road, following the course of the river, and having its foundations in many places supported by walls or piers resting on the river's bed. It is a work well worthy of the attention and admiration of the

traveller, as a fine monument of the triumph of human enterprise over the obstacles of nature. The scenery on this road is wild, rugged, and picturesque in a high degree.

In the course through this romantic pass occurs a beautiful plateau, upon the left or S. bank of the river, formed by a recess in the highlands, in the midst of which are these springs, which afford a very delightful watering-place, much resorted to by invalids and by the seekers of pleasure from this and the neighboring states. The main building erected for the accommodation of visitors is of brick, 280 feet in length, with a piazza on the entire front, supported by 13 large columns. The edifice is surrounded by charming pleasure grounds and gardens. The climate of this delightful spot is one of the most salubrious in the world, a visit to it, as has been said, "insuring health and vigor to the debilitated, its crystal waters, pure air, and exercise among the mountains dispelling all traces of dyspepsia and ennui."

Below the springs, by the course of the river, in the vicinity of the road, is the celebrated *Painted Rock*, which is a lofty wall from 200 to 300 feet high, stained of a yellow color, by the water oozing through its crevices from beds of clay, and bringing with it, perhaps, some ochre, or other mineral substance.

WEIR'S CAVE, VA.

This is considered as one of the most beautiful caverns in the world. It extends about 2500 feet in length, and is divided into a number of apartments, differing in size and in the beauty of their decorations. Some of the most extensive have received the names of "Washington Hall," "Congress Hall," "Solomon's Temple," "Organ Room," "Deacon's Room," &c. The walls consist of the most beautiful crystallized carbonate of lime, or calcareous spar. That which gives this cavern such a peculiar splendor is the great variety in form and color of the crystals with which its walls and ceilings are adorned, as they reflect the light of the torches with which these subterranean recesses are explored. Some of the apartments seem to be furnished, as it were, by the upholsterer, with hangings of rich and graceful drapery, formed by thin sheets of the same kind of incrustation; and from the lofty roof of one of the halls there is a sheet of this description which appears as if floating in the air, to which the appellation of "Elijah's Mantle" has been given.

The person who has the charge of this cave gives every requisite attention to the accommodation of visitors. It lies 17 miles N. E. from Staunton.

WELLS BEACH, ME.

A pleasant place of summer resort, in the town of Wells, 8 or 10 miles E. of the station for that place, on the Eastern Railroad. The facilities for sea bathing, sailing, fishing, and riding, upon the beach, are fine. The village is near the water, affording abundant accommodations to visitors, at reasonable rates for board.

WHITE MOUNTAINS, N. H.

These mountains are situated in the county of Coos, in the N. part of the state. They extend about 20 miles, from S. W. to N. E., and are the more elevated parts of a range extending many

miles in that direction. Their base is about 10 miles broad.

The Indian name of these mountains, according to Dr. Belknap, was *Agiocochook*. An ancient tradition prevailed among the savages, that a deluge once overspread the land, and destroyed every human being, except a single powwow and his wife, who sheltered themselves in these elevated regions, and thus preserved the race from extermination. The fancy of the natives peopled these mountains with beings of a superior rank, who were invisible to the human eye, but sometimes indicated their presence by tempests, which they were believed to control with absolute authority. The savages, therefore, never attempted to ascend the summit, deeming the attempt perilous, and success impossible. But they frequented the defiles and environs of the mountains, and of course propagated many extravagant descriptions of their appearance; declaring, among other things equally credible, that they had seen carbuncles at immense heights, which, in the darkness of night, shone with the most brilliant and dazzling splendor.

President Alden states, that the White Mountains were called, by one of the eastern tribes, *Waumbekketmethna*. *Waumbekket* signifies *white*, and *methna*, *mountains*.

These mountains are the highest in New England; and, if we except the Rocky Mountains, whose height has not been ascertained, and one or two peaks in North Carolina, they are the most lofty of any in the United States. Their great elevation has always rendered them exceedingly interesting, both to the aboriginal inhabitants and to our ancestors. They were visited by Neal, Jocelyn, and Field, as early as 1632, who gave romantic accounts of their adventures, and of the extent and sublimity of the mountains. They called them the *Crystal Hills*.

Since that time this mountainous region has been repeatedly explored by hunters and men of science.

Although these mountains are 65 miles distant from the ocean, their snow-white summits are distinctly visible, in good weather, more than 50 miles from shore. Their appearance, at that distance, is that of a silvery cloud skirting the horizon.

The names here given are those generally appropriated to the different summits: *Mount Washington* is known by its superior elevation, and by its being the southern of the three highest peaks. *Mount Adams* is known by its sharp, terminating peak, and being the second north of Washington. *Jefferson* is situated between these two. *Madison* is the eastern peak of the range. *Monroe* is the first to the south of Washington. *Franklin* is the second south, and is known by its level surface. *Lafayette* is known by its conical shape, and being the third south of Washington. The ascent to the summits of these mountains, though fatiguing, is not dangerous; and the visitant is richly rewarded for his labor and curiosity. In passing from the Notch to the highest summit, the traveller crosses the summits of Mounts Lafayette, Franklin, and Monroe. In accomplishing this, he must pass through a forest, and cross several ravines. These are neither wide nor deep, nor are they discovered at a great distance; for the trees fill them up exactly even with the mountain on each side, and their branches interlock with each other in such a manner that it is very diffi-

cult to pass through them, and they are so stiff and thick as almost to support a man's weight. Mount Lafayette is easily ascended. Its top, to the extent of five or six acres, is smooth, and gradually slopes away in every direction from its centre. It even has a verdant appearance, as it is every where covered with short grass, which grows in little tufts, to the height of four or five inches. Among these tufts, mountain flowers are thinly scattered, which add life and beauty to the scene. The prospect from this summit is beautiful. To the N., the eye is dazzled with the splendor of Mount Washington; N. W. are seen the settlements in Jefferson; W., the courses of the Amonoosuck, as though delineated on a map; S. W., the Mooshillock and Haystack are discovered; S., Chocorua Peak; S. E., the settlements and mountains in Bartlett; E., only dark mountains and forests. On descending this mountain, a small patch of water is found at its base, from which the ascent is gradual to the summit of Mount Franklin. After crossing this mountain, you pass over the east pinnacle of Mount Monroe, and soon find yourself on a plain of some extent, at the foot of Mount Washington. Here is a fine resting-place, on the margin of a beautiful sheet of water, of an oval form, covering about three fourths of an acre. The waters are pleasant to the taste, and deep. Not a living creature is to be seen in the waters at this height on the hills; nor do vegetables of any kind grow in or around them, to obscure the clear rocky or gravelly bottom on which they rest. A small spring discharges itself into this pond, at its south-east angle. Another pond, of about two thirds its size, lies north-west of this. Directly before you, the pinnacle of Mount Washington rises with majestic grandeur, like an immense pyramid, or some vast Kremlin, in this magnificent city of mountains. The pinnacle is elevated about 1500 feet above the plain, and is composed principally of huge rocks of granite and gneiss, piled together, presenting a variety of colors and forms.

In ascending, you must pass enormous masses of loose stone: but a ride of half an hour will generally carry you to the summit. The view from this point is wonderfully grand and picturesque. Innumerable mountains, lakes, ponds, rivers, towns, and villages meet the delighted eye, and the dim Atlantic stretches its waters along the eastern horizon. To the north is seen the lofty summits of Adams and Jefferson; and to the east, a little detached from the range, stands Mount Madison. Mount Washington is supported on the north by a high ridge, which extends to Mount Jefferson; on the north-east by a large grassy plain, terminating in a vast spur, extending far away in that direction; east, by a promontory, which breaks off abruptly at St. Anthony's Nose; south and south-east by a grassy plain, in summer, of more than 40 acres. At the south-eastern extremity of this plain a ridge commences, which slopes gracefully away towards the vale of the Saco, upon which, at short distances from each other, arise rocks, resembling, in some places, towers; in others, representing the various orders of architecture.

It would be vain in us to attempt a description of the varied wonders which here astonish and delight the beholder. To those who have visited these mountains, our description would be tame and uninteresting; and he who has never ascend-

ed their hoary summits cannot realize the extent and magnificence of the scene. These mountains are decidedly of primitive formation. Nothing of volcanic origin has ever yet been discovered, on the most diligent research. They have for ages, probably, exhibited the same unvarying aspect. No minerals are here found of much rarity or value. The rock which most abounds is schistus, intermixed with greenstone, mica, granite, and gneiss. The three highest peaks are composed entirely of fragments of rocks, heaped together in confusion, but pretty firmly fixed in their situations. These rocks are an intermediate substance between gneiss and micaceous schistus; they are excessively rough and coarse, and gray, almost black, with lichens. The mica in them is abundant, of different colors — red, black, and limpid; and, though sometimes several inches in diameter, yet most often irregularly stratified. The granite contains emerald, tourmaline, of which are found some beautiful specimens, and garnets, besides its proper constituents. Crystals of quartz, pyrites, actinote, jasper, porphyry, fluate of lime, and magnetic iron ore are sometimes obtained.

During nine or ten months of the year, the summits of the mountains are covered with snow and ice, giving them a bright and dazzling appearance. On every side are long and winding gullies, deepening in their descent to the plains below.

Here some of the finest rivers of New England originate. The Saco flows from the east side of the mountains; the branches of the Androscoggin from the north; the Amonoosuck, and other tributaries of the Connecticut, from the west; and the Pemigewasset from the south, its fountain being near that of the Saco. The sides of the hills are, in many parts, covered with soil; but this is very superficial in all cases, and every spot that can be reached by running water is left destitute of every thing but rocks and pebbles, of which, likewise, the river bottoms are exclusively composed. In these cold and elevated regions, the period for the growth of vegetables is extremely brief; the mountains must be forever sterile. Moss and lichens may be found near the summits, but of a meagre and scanty growth; looking as if they had wandered from their proper zone below, into those realms of barren desolation.

A visit of Mr. Vines to the White Mountains, described by Winthrop, is worthy of notice. It was performed in the month of August, 1642, by him, in company with Thomas Gorges, the deputy governor. Darby Field, who was living at Exeter, 1639, has the credit of being the first traveller to these mountains. His journey, also, is described by Winthrop, who says it was performed in the year 1632. He appears to have returned by the way of Saco. "The report he brought," says Winthrop, "of shining stones, &c., caused divers others to travel thither, but they found nothing worth their pains. Mr. Gorges and Mr. Vines, two of the magistrates of Sir F. Gorges' province, went thither about the end of this month," (August.) They set out, probably, a few days after the return of Field, dazzled by the visions of diamonds, and other precious minerals, with which the fancy of this man had garnished his story. "They went up Saco River in birch canoes; and that way they found it 90 miles to Pegwagget, an Indian town, but by land

it is but 60. Upon Saco River they found many thousand acres of rich meadow, but there are ten falls, which hinder boats, &c. From the Indian town they went up hill, (for the most part,) about 30 miles in woody lands; then they went about 7 or 8 miles upon shattered rocks, without tree or grass, very steep all the way. At the top is a plain, about 3 or 4 miles over, all shattered stones; and upon that is another rock, or spire, about a mile in height, and about an acre of ground at the top. At the top of the plain arise four great rivers, each of them so much water at the first issue as would drive a mill: Connecticut River from two heads, at the north-west and south-west, which join in one about 60 miles off; Saco River on the south-east; Amascoggin, which runs into Casco Bay at the north-east; and the Kennebec, at the north by east. The mountain runs east and west, 30 or 40 miles, but the peak is above all the rest. They went and returned in fifteen days." This description of the mountains was probably communicated by Mr. Vines to Governor Winthrop. It conveys a very accurate idea of them, as they now strike the traveller.

The *Notch of the White Mountains* is a phrase appropriated to a very narrow defile, extending two miles in length, between two huge cliffs, apparently rent asunder by some vast convulsion of nature, probably that of the deluge. The entrance of the chasm on the east side is formed by two rocks, standing perpendicular, at the distance of 22 feet from each other; one about 20 feet in height, the other about 12. The road from Lancaster to Portland passes through this notch, following the course of the head stream of the Saco.

The scenery at this place is exceedingly beautiful and grand. The mountain, otherwise a continued range, is here cloven quite down to its base, opening a passage for the waters of the Saco. The gap is so narrow, that space has with difficulty been found for the road. About half a mile from the entrance of the chasm is seen a most beautiful cascade, issuing from a mountain on the right, about 800 feet above the subjacent valley, and about two miles distant. The stream passes over a series of rocks, almost perpendicular, with a course so little broken as to preserve the appearance of a uniform current, and yet so far disturbed as to be perfectly white. This beautiful stream, which passes down a stupendous precipice, is called by Dwight the *Silver Cascade*. It is probably one of the most beautiful in the world.

At the distance of three fourths of a mile from the entrance of the chasm is a brook, called the *Flume*, which falls from a height of 240 or 250 feet, over three precipices; down the first two in a single current, and over the last in three, which unite again at the bottom, in a small basin, formed by the hand of nature in the rocks. The water is pure and transparent, and it would be impossible for a brook of its size to be modelled into more diversified or delightful forms.

It is by no means strange that the unlettered Indian fancied these regions to be the abodes of celestial beings; while the scholar, without a stretch of fancy, in calling to mind the mythology of Greece, might find here a fit place for the assemblies and sports of the Dryads, Naiads, and Oreads.

Avalanches, or slides, from the mountains. On the 28th of August, 1826, there occurred one o'

the most remarkable floods ever known in this mountainous region, and which was attended by the awful calamity of the destruction of a whole family, by an avalanche, or slide, from the mountains.

These avalanches, as they are termed in Switzerland, are produced by heavy rains; they commence, generally, near the highest limits of vegetation on the mountains, which, on some of them, is near their summits; the slides widening and deepening in their downward course, carrying along all the trees, shrubbery, loose rocks and earth, from their granite foundations. At this time there were probably thousands of acres reft from the sides of the mountain, and carried to the valley in the Notch below.

The house inhabited by Captain Samuel Willey and his family stood on the westerly side of the road, in the Notch, and a few rods distant from the high bluff, which rises with fearful rapidity to the height of 2000 feet. Adjoining was a barn and wood-house; in front was a beautiful little meadow, covered with crops; and the Saco passed along at the foot of the easterly precipice.

Nearly in range of the house, a slide from the extreme point of the westerly hill came down, in a deep and horrible mass, to within about five rods of the dwelling, where its course appears to have been checked by a large block of granite, which, falling on a flat surface, backed the rolling mass for a moment, until it separated into two streams, one of which rushed down by the north end of the house, crushing the barn, and spreading itself over the meadow; the other passing down on the south side, and swallowing up the unfortunate beings who probably attempted to fly to a shelter, which, it is said, had been erected a few rods distant. This shelter, whatever it might have been, was completely overwhelmed; rocks, weighing ten to fifty tons, being scattered about the place, and indeed in every direction, rendering escape utterly impossible. The house remained untouched, though large stones and trunks of trees made fearful approaches to its walls; and the moving mass, which separated behind the building, *again united in its front!* The house alone could have been their refuge from the horrible uproar around—the only spot untouched by the crumbling and consuming power of the storm.

The family consisted of nine persons: Captain Willey, his wife, five children, and two men, by the names of Nickerson and Allen.

Travellers visiting this section of country, in autumn, will be gratified with the rich and varied beauties of autumnal foliage common in this country, but more particularly so at the north, and which is thus described by Dr. Dwight:—

“The bosom of both ranges of mountains was overspread, in all the inferior regions, by a mixture of evergreens, with trees, whose leaves are deciduous. The annual foliage had been already changed by the frosts. Of the effects of this change it is, perhaps, impossible for an inhabitant of Great Britain, as I have been assured by several foreigners, to form an adequate conception, without visiting an American forest. When I was a youth, I remarked that Thomson had entirely omitted, in his Seasons, this fine part of autumnal imagery. Upon inquiring of an English gentleman the probable cause of the omission, he informed me that no such scenery existed in Great Britain. In this country it is often among

the most splendid beauties of nature. All the leaves of trees, which are not evergreens, are, by the first severe frost, changed from their verdure towards the perfection of that color, which they are capable of ultimately assuming, through yellow, orange, and red, to a pretty deep brown. As the frost affects different trees, and the different leaves of the same tree, in very different degrees, a vast multitude of tinctures are commonly found on those of a single tree, and always on those of a grove or forest. These colors, also, in all their varieties, are generally full; and, in many instances, are among the most exquisite which are to be found in the regions of nature. Different sorts of trees are susceptible of different degrees of this beauty. Among them the maple is preëminently distinguished, by the prodigious varieties, the finish, beauty, and the intense lustre of its hues, varying through all the dyes, between a rich green and the most perfect crimson, or, more definitely, the red of the prismatic image.”

Visits to these mountains are annually increasing. The roads and public houses on the various routes to them are excellent; and the scenery, in extent and variety, is of surpassing beauty and grandeur.

The following astrophe to Mount Washington was written by an American poet:—

*
“Thine is the summit where the clouds repose,
Or, eddying wildly, round thy cliffs are borne;
When Tempest mounts his rushing car, and throws
His billowy mist amid the thunder’s home!
Far down the deep ravines the whirlwinds come,
And bow the forests as they sweep along;
While, roaring deeply from their rocky womb,
The storm comes forth, and, hurrying darkly on,
Amid the echoing peaks the revelry prolong !”

* * * * *
“Mount of the clouds ! when winter round thee throws
The hoary mantle of the dying year,
Sublime, amid thy canopy of snows,
Thy towers in bright magnificence appear !
’Tis then we view thee with a chilling fear,
Till summer robes thee in her tints of blue;
When, lo ! in softened grandeur, far, yet clear,
Thy battlements stand clothed in heaven’s own hue,
To swell, as Freedom’s home, on man’s unbounded view !”

ROUTES TO THE WHITE MOUNTAINS.

1. *From Boston, via Portland, Me.*—From Boston by railroad to Portland, 105 miles, and thence by railroad to Gorham, N. H., 91 miles. Distance from Boston, 196 miles. At this place a hotel has been erected to accommodate visitors, 5 miles from the base of Mount Washington, and a road has been laid out to the summit on the north side of the mountain.

Another route from Portland is by railroad to Gorham, Me., 10 miles, and thence by stage 8 miles, to the steamboat running across the Sebago Lake and other small lakes and streams connected with it, to Bridgeton, a distance of 30 miles; thence by stage to Fabyan’s new house in Conway, 20 miles; thence to “Old Crawford’s,” south of the Notch, 24 miles; to the Willey House, within the Notch, 6 miles; and through it to “Tom Crawford’s,” 2 miles. From this place Mount Washington is ascended from the southwest, over the summits of Mounts Lafayette, Franklin, and Monroe, as described in the foregoing article. From Crawford’s to the White Mountain House, kept by Fabyan, the route continues by stage 4 miles, making the distance from Boston, this way, 189 miles. The ascent to the

summit of Mount Washington, from this place, is accomplished on horseback. The distance to the summit is 9 miles, about 5 of which are over a comparatively smooth and level road, to the base of the mountain.

These routes, particularly the latter, are very inviting. The journey from Boston to Portland may be made either by the Eastern Railroad, which passes along the coast, through the beautiful towns of Lynn, Salem, Newburyport, Portsmouth, and Saco; or by the Boston and Maine Railroad, which runs a great part of the distance upon a nearly parallel route, a few miles in the interior, passing by Andover, Lawrence, and Haverhill, in Ms., Exeter, Dover, and Salmon Falls, in N. H., and uniting with the eastern route at South Berwick, Me.

From Portland, the route to Gorham, N. H., north of Mount Washington, has the recommendation of being direct and expeditious, being all the way by the Atlantic and St. Lawrence Railroad; and when this road shall have been carried through, to connect with the railroad already opened upon the other end of the route, from where it strikes the Connecticut River to Montreal, this route will accommodate a great number of visitors, especially those who have not the time to spare for a visit to the Notch.

But the route from Portland by way of Sebago Lake will be preferred, of course, by those who wish to pass through the Notch, as well as to ascend the mountains. This is truly a delightful route, presenting every variety of scenery which these romantic regions afford. The passage of 30 miles through the lakes and the winding streams which connect them, in a pleasant day, is almost enchanting. At Bridgeton, too, the traveller is in the vicinity of *Pleasant Mountain*, described on p. 280, which, with its fine hotel, and prospect upon the summit, offers a delightful resting-place for any time which the tourist may have to spare. After passing through the Notch, this route continues to Littleton, on Connecticut River, which is only 18 miles beyond Fabyan's White Mountain House, and is the point to which travellers are brought upon two or three other favorite routes to this alpine region of the north. One of these is that from Boston through the Franconia Notch; and the distance from Littleton to the Lafayette House, near the *Old Man of the Mountain*, in the passage through this Notch, is only 12 miles. See p. 266.

2. *From Boston, via Dover, N. H., and Lake Winnipiseogee.*—From Boston, by the Boston and Maine Railroad, or upper route to Portland, as it is called, as far as Dover, N. H., 68 miles; thence by the Cochecho Railroad, through Rochester, to Alton Bay, at the south-east extremity of Lake Winnipiseogee, 28 miles, where passengers take the elegant little steamboat which runs upon the lake for Wolfboro', a distance of 10 miles; whence they pass by stage coaches to Conway, 32 miles; and thence onward to the White Mountains, by the remainder of the route, as described in No. 1.

This is the shortest route between Boston and the White Mountains, the whole distance to the White Mountain House being only 174 miles. It is likewise a very pleasant route, passing through the fine towns of Andover, Lawrence, Haverhill, Exeter, and Dover, on the upper route to Portland, and then, after leaving that route, furnishing the agreeable variety of a sail upon

the beautiful waters of the Winnipiseogee. At Wolfboro' a spacious hotel has lately been erected, for the accommodation of travellers upon this route.

3. *From Boston, via Concord, N. H., and Lake Winnipiseogee.*—By railroad to Concord, 76 miles; thence by railroad to Weir's Station, on the south-western shore of Lake Winnipiseogee, 33 miles from Concord; thence on the lake, 10 miles, to Centre Harbor; and thence by stage to Fabyan's New House at Conway, 30 miles. From Conway, by stage, the route is the same as described in No. 1. The distance from Boston to the White Mountain House, by this route, is 185 miles.

This route is one of great interest to the traveller in all its parts. The section between Boston and Concord passes through some of the finest cultivated portions of Ms. and N. H., lying chiefly along the valley of the Merrimack, on which are situated the great manufacturing towns of Lowell, Nashua, and Manchester. Concord, which is the capital of N. H., is one of the handsomest places in New England. From Concord, northward, through the Merrimack and the Pemigewasset valleys, the features of the route approach more to wildness, but are, at the same time, picturesque and lovely in a high degree.

The trip over the lake is also very agreeable in a different way, affording a most delightful excursion upon the clear waters and among the fairy islands of this miniature Archipelago, and bringing up at the pleasantly-situated and well-kept hotel of Mr. Coe, at Centre Harbor. Between this place and Conway, the route lies by Red Hill and Chocorua Mountain, the former of which is easily ascended from Centre Harbor, and affords a delightful view of the Winnipiseogee and the surrounding country. The travelling public are much indebted to the enterprise of Captain William Walker, formerly of Concord, who was the first to make the experiment of placing upon this lovely sheet of water a steamboat, fitted up and furnished in such a style as to be worthy of their patronage.

4. *From Boston, via Concord, N. H., and the Franconia Notch.*—To Concord by railroad, 76 miles; thence by railroad, on the same route as in No. 3, to Meredith Bridge, 27 miles from Concord; to Weir's Station, on Lake Winnipiseogee, 6 miles; to Plymouth, 18 miles. From Plymouth the route is north by stage up the Pemigewasset valley, to the Flume House, 24 miles; thence through the Franconia Notch, by the *Old Man of the Mountain*, to the Lafayette House, 5 miles. From this place, the stage route is to Littleton, 12 miles, and from Littleton to the White Mountain House, as described in other routes, 18 miles making the whole distance from Boston 186 miles.

Some time and travel may be saved, when at the Lafayette House, by taking a private conveyance direct to Bethlem and the White Mountain House, only 16 miles—reducing the distance from Boston to 172 miles.

This route, besides the part which is common to this and No. 3, is much admired on account of the ride which it affords through the Franconia Notch. This should certainly be enjoyed, either in going or returning, by all visitors to the White Mountains. The whole country has scarcely any excursion to offer more agreeably exciting than the trip from Plymouth to Littleton, through

this grand avenue among the highlands of the north. For a particular description of this North, see p. 266.

5. *From New York, via Connecticut River.*—From New York to Hartford, Ct., by railroad, via New Haven, the distance is 118 miles; thence to Springfield, 26 miles; to Northampton, 17 miles; to Greenfield, 19 miles; to Brattleboro, 25 miles; to Bellows Falls, 24 miles; to Windsor, 17 miles; to White River, 14 miles; to Hanover, Dartmouth College, and Norwich University, 6 miles; to Wells River, 34 miles—making an uninterrupted route by railroad, from New York to this place, of 300 miles. From Wells River to Littleton, the distance by stage is 12 miles. From Littleton, the route to the White Mountain House is as before described, and the distance 18 miles. Whole distance from New York, 330 miles.

This is one of the most pleasant routes of travel which can be chosen in any direction from New York. The lovely scenery and rich cultivation of the Connecticut valley, with the flourishing towns lying at brief intervals on both sides of the river, only a small part of which have been named above, present a landscape which for wealth, beauty, and extent, is not surpassed by any in the United States.

6. *From New York, via Hudson River, Saratoga, and Whitehall.*—Another route from New York to the White Mountains is up the North River, to Albany, 145 miles; thence by railroad to Schenectady, 16 miles; to Ballston Spa, 14 miles; to Saratoga Springs, 7 miles. Or from Albany, via Troy, to Saratoga, 37 miles. From Saratoga by railroad, to Whitehall, at the southern extremity of Lake Champlain, 40 miles; thence by railroad, via Castleton, to Rutland, 25 miles; thence to Bellows Falls, 55 miles, where the route connects with the Connecticut River route, described in No. 5. The whole distance from New York to the White Mountain House, by this route, is 403 miles.

Those who may prefer to do so can take the steamboats from Whitehall, on Lake Champlain, to Burlington, Vt., 78 miles; thence by railroad to Montpelier, the capital of Vermont, 40 miles; and thence to the junction with the Connecticut River route, at the mouth of White River, 52 miles below Littleton, N. H.

Another beautiful variation of this route from New York is that by the way of Lake George, which leaves the railroad at the *Moreau Station*, 16 miles north of Saratoga Springs, and thence by stage over a plank road to Caldwell, at the southern extremity of the lake, 14 miles. A steamboat daily plies on Lake George, to meet the boats on Lake Champlain, at Ticonderoga.

Nothing in the way of travelling excursions, for the distance over which you pass, combines a greater and more pleasing variety of gratifications, from scenery, society, and art, than this route from New York to the White Mountains, by whichever of the variations above mentioned it is pursued. Common to them all is the delightful trip up the North River, and the visit to the Springs, in respect to which the reader, if not already acquainted with these celebrated resorts, will find interesting particulars given under the descriptions of the same, on pp. 201 and 289. For a description of Lake George, see also p. 195.

The distance from New York to the White Mountains, via Boston, 216 miles, and thence by

the shortest route, via Dover and Winnepiseogee Lake, to the White Mountain House, 174 miles, is 390 miles.

WHITE SULPHUR SPRINGS, VA.

These are the most celebrated and the most generally visited of all the mineral springs of Virginia, and are to the south what Saratoga is to the north. They are situated on a branch of the Greenbrier River, in the county of the same name, on the western declivity of the Alleghany ridge, some 6 or 8 miles from the summit of the mountains. They are in an elevated and beautifully picturesque valley, hemmed in by mountains on every side. Thousands resort to them annually either to enjoy the benefit of the waters, or in pursuit of recreation and amusement.

According to an analysis of the waters by Professor Rodgers, the solid matter procured by evaporation from 100 cubic inches weighs 63.54 grains, composed of sulphate of lime, sulphate of magnesia, sulphate of soda, carbonate of lime, carbonate of magnesia, chloride of magnesium, chloride of sodium, chloride of calcium, peroxide of iron, phosphate of lime, sulphate and hydrate of sodium, organic matter, precipitated sulphur, iodine. The gaseous matter consists of sulphuretted hydrogen, carbonic acid, nitrogen, and oxygen. It is obvious, from this analysis, that the water must exert a very positive agency upon the system. Its remedial virtues extend chiefly to diseases of the liver, kidneys, alimentary canal, and to scrofula, rheumatism, and neuralgia.

This place was known to the aborigines as one of the most important licks of the deer and elk. The fame of an extraordinary cure, in 1772, experienced by a woman whose disease had baffled all medical skill, and who was brought here on a litter 40 miles, attracted many sick persons to the spring; and from that time it has been growing in favor with the public.

A visitor to the springs thus describes the place:—

“Nature has done every thing to make this an enchanting spot. The valley opens about half a mile in breadth, winding in length from east to west, with graceful undulations, beyond the eye’s reach. The fountain issues from the foot of a gentle slope, terminating in the low interval upon a small and beautiful river. The ground ascends from the spring eastward, rising to a considerable eminence on the left, and spreading east and south into a wide and beautiful lawn. The lawn and walks cover perhaps fifty acres. A few rods from the spring, at the right, are the hotel, the dining hall, the ball-room: all the rest of the ground is occupied mainly with cabins. These are rows of contiguous buildings, one story high, mostly of wood, some of brick, and a few of hewed logs whitewashed. The framed cabins are all painted white. Directly to the right of the spring, and very near it, is Spring Row; farther eastward, with a continuous piazza, shaded with vines, is Virginia Row; at right angles with this, crossing the lawn in the middle, is South Carolina Row; heading the eastern extremity of the lawn is Bachelor’s Row; on the north side of the lawn, beginning nearest the spring, are Alabama, Louisiana, Paradise, and Baltimore Rows—the last of which is the most elegant in the place. Without the enclosure, southward from the fountain, is Broadway; and a little west from this, on the Guyandot road, is Wolf Row. The

appearance of these cabins, or cottages, painted, decorated, looking forth from the green foliage, and tastefully arranged, is beautiful and imposing. The fountain is covered with a stately Doric dome, sustained by twelve large pillars, and surmounted with a colossal statue of Hygeia, looking towards the rising sun."

There are numerous routes to the Va. springs, all of which within a few years have been greatly improved. One of the pleasantest and most expeditious routes from Baltimore is by the railroad thence to Harper's Ferry; thence by railroad to Winchester; thence by stage to Staunton. From Staunton there are two routes, one directly across the mountains, to the warm and hot springs; the other, via Lexington, to the Natural Bridge, and thence to the White Sulphur Springs. These springs are 304 miles W. of Baltimore.

Another route from Baltimore is by Washington city, and thence by steamer to Acquia Creek, and over the Richmond, Fredericksburg, and Louisa Railroads, to Gordonsville. From this place the route is by stage, via Charlottesville, to Staunton, and thence to the springs by either of the two routes described above.

Travellers from the states S. of Va. take the railroad at Wilmington, N. C., for Richmond. They have thence a conveyance by the canal, 150 miles, to Lynchburg, and thence by stage, either over the road leading by the Natural Bridge, or by the way of Liberty, Fincastle, and the Sweet Springs, to the White Sulphur.

The usual route to the Va. springs, from the W. and S. W., is by leaving the steamboats on the Ohio River, at Guyandotte, and thence proceeding by stage to the springs. From Guyandotte to the White Sulphur Springs, the distance is about 160 miles.

WHEELING SUSPENSION BRIDGE, VA.

See *Wheeling*.

WINNIPISEOGEE LAKE, N. H.

This lake possesses singular charms. However romantic and beautiful Lake George, the charmer of all travellers, appears in its elevation, the purity of its waters, its depth, its rapid outlet, its 365 islands which bespangle its bosom, its mountain scenery, its fish, its mineralogy, still, in all but its historic fame, it has a rival at the east, in the Winnipiseogee of New Hampshire.

There are more than forty different ways of spelling the name of this lake, as might be shown by quoting the authorities. It was formerly written as though it had six syllables; but the pronunciation which has generally obtained with those best acquainted with the region of the lake, and the Indian pronunciation of the name, was *Win-ne-pe-sock-e*.

The lake is in the counties of Belknap and Carrol. Its form is very irregular. At the west end it is divided into three large bays; on the north is a fourth; and at the east end there are three others. Its general course is from north-

west to south-east; its length is about 25 miles, and it varies in width from one to ten miles. This lake is environed by the pleasant towns of Moultonboro', Tuftonboro', Wolfeboro', Centre Harbor, Meredith, Gilford, and Alton, and overlooked by other delightful towns.

The waters of the Winnipiseogee are remarkably pure, and its depth in some places is said to be unfathomable. Its sources are principally from springs within its bosom. Its outlet is the rapid river of its own name. Its height above the level of the sea is 472 feet. It is stored with a great variety of excellent fish; in the summer season, steamboats, sloops, and smaller vessels ply on its waters, and in the winter season it presents an icy expansion of great usefulness and beauty.

Like Casco Bay and Lake George, this lake is said to contain 365 islands. Without supposing the days of the year to have been consulted on the subject, the number is very great, several of which comprise farms of from 200 to 500 acres, the product of some of which, under good cultivation, has been, extraordinary as it may seem, as high as 113 bushels of corn to the acre.

The waters of this lake not only serve as a lovely ornament to the scenery of this region, and as a means of recreation and amusement to the multitude who pass and repass upon them, but answer an important purpose as a great reservoir of power for the extensive manufacturing establishments at Manchester, Lowell, and other places which are located on the Merrimac River, its outlet to the sea. The fall of this immense body of water, in its passage to the ocean, is so great that its power for manufacturing purposes can hardly be computed.

The route from Portland to this beautiful inland water is by railroad to Dover, N. H., 42 miles, and thence by railroad to Alton Bay, 28 miles; whole distance from Portland, 70 miles. From Alton Bay a fine steamer runs over the lake to Wolfboro', and to Centre Harbor, at different points on the opposite shore, and also to Weir's Station. at its south-western extremity, where the Boston, Concord and Montreal Railroad passes. At Wolfboro' and at Centre Harbor there are excellent hotels for the entertainment of travellers; and both of these places are points of departure from the lake, on different routes for the White Mountains. For routes from Boston and other places, converging to these points, the reader is referred to Routes to the White Mountains, p. 296.

The facility with which this charming lake is now reached, by the various routes from our large cities on the sea-coast, cannot fail to render the region of its fertile shores, at no distant day, an eligible locality for the country seats of persons of taste and wealth; where they may come and enjoy, if any where on earth, through the expression of natural scenery, that which it is said the Indians meant by the name WINNIPISEOGEE — *The smile of the Great Spirit*.

LIGHT-HOUSES

IN

THE UNITED STATES.

*** THE following table is taken from the list of light-houses, beacons, and floating lights, with the names of the states in which they are situated, their places of location, their latitude and longitude, and some remarks, as copied from a pamphlet containing an account of the light-houses in the United States, on July 1, 1851, and published by authority. Latitude all N.; longitude all W. from Greenwich, 5 miles E. from London. Within a few years, many of these light-houses have been rebuilt, or repaired, and furnished with plate glass. The light-houses on the American coast are considered by mariners in excellent condition at the present time.

MAINE.

Portland. Portland Head, off Portland harbor, S. side. Lat. $43^{\circ} 39'$. Lon. $70^{\circ} 17'$. Fixed. Height of lantern above the sea, 80 feet.

Seguin. On Island of Seguin, off mouth of Kennebec River. Lat. $43^{\circ} 41' 36''$. Lon. $69^{\circ} 44'$. Fixed. Height of lantern above the sea, 166 feet.

Whitehead. On Whitehead Island, S. W. of W. entrance to Penobscot Bay. Lat. $43^{\circ} 57'$. Lon. $69^{\circ} 4'$. Fixed. Height of lantern above the sea, 58 feet.

Franklin Island. On N. end of Franklin Island, W. of entrance to St. George's River. Lat. $43^{\circ} 52'$. Lon. $69^{\circ} 19'$. Fixed. Height of lantern above the sea, 50 feet.

Wood Island. On Wood Island, near entrance to Saco harbor. Lat. $43^{\circ} 27'$. Lon. $70^{\circ} 18' 30''$. Revolving. Height of lantern above the sea, 63 feet.

West Quoddy Head. On West Quoddy Head, near Eastport, S. side of entrance to West Quoddy Bay. Lat. $44^{\circ} 49' 18''$. Lon. $66^{\circ} 59'$. Fixed. Height of lantern above the sea, 90 feet.

Petit Manan. On S. end of Petit Manan Island. Lat. $44^{\circ} 22'$. Lon. $67^{\circ} 49'$. Fixed. Height of lantern above the sea, 53 feet.

Pond Island. W. side of entrance to Kennebec River. Lat. $43^{\circ} 45'$. Lon. $69^{\circ} 46'$. Fixed. Height of lantern above the sea, 52 feet.

Burnt Island. On Burnt Island, W. side of Townsend harbor, Lincoln co. . . . Fixed. Height of lantern above the sea, 55 feet 6 inches.

Libby Island. On Libby's Island, entrance of Machias Bay. Lat. $44^{\circ} 34'$. Lon. $67^{\circ} 22'$. Fixed. Height of lantern above the sea, 60 feet.

Monhegan Island. On Monhegan Island, Lincoln co. Lat. $43^{\circ} 44' 30''$. Lon. $69^{\circ} 18'$. Re-

volving. Height of lantern above the sea, 170 feet. Red and white light.

Owl's Head. W. side of W. entrance of Penobscot Bay, off Thomaston harbor. Lat. $44^{\circ} 3' 50''$. Lon. 69° . Fixed. Height of lantern above the sea, 117 feet.

Moose Peak. On Mistake Island, S. W. of W. entrance to the Bay of Fundy. Lat. $44^{\circ} 28'$. Lon. $67^{\circ} 31' 9''$. Revolving. Height of lantern above the sea, 53 feet 8 inches.

Matinicus Rock, (2 lights.) On Matinicus Rock a sea light off Penobscot Bay. Lat. $43^{\circ} 46' 24''$. Lon. $68^{\circ} 49'$. Fixed. Height of lantern above the sea, 82 feet 6 inches.

Pemaquid Point. On Pemaquid Point, S. W. of entrance to Bristol Bay, and E. side of entrance to John's Bay. Lat. $43^{\circ} 48'$. Lon. $69^{\circ} 29' 30''$. Fixed. Height of lantern above the sea, 64 feet.

Baker's Island. On Baker's Island, off Mount Desert, and S. of entrance to Frenchman's Bay. Lat. $44^{\circ} 13' 20''$. Lon. $68^{\circ} 8'$. Fixed. Height of lantern above the sea, 69 feet 8 inches.

Cape Elizabeth, (2 lights.) On Cape Elizabeth, S. S. E. of Portland. Lat. $43^{\circ} 33' 36''$. Lon. $70^{\circ} 11' 36''$. Fixed and revolving. 300 yards apart. Height of lantern above the sea, 140 feet.

Dice's Head. On Dice's Head, near Castine. Lat. $44^{\circ} 23' 12''$. Lon. $68^{\circ} 49' 30''$. Fixed. Height of lantern above the sea, 116 feet.

Hendrick's Head. On Hendrick's Head, mouth of Sheepscot River, E. side. Lat. $43^{\circ} 47' 30''$. Lon. $69^{\circ} 39'$. Fixed. Height of lantern above the sea, 39 feet.

Mount Desert Rock. Ocean light on Mount Desert Rock, about 20 miles S. S. E. of Mount Desert Island. Lat. $43^{\circ} 58'$. Lon. $68^{\circ} 00' 30''$. Fixed. Height of lantern above the sea, 56 feet 6 inches.

Brown's Head. On southern of the Fox Islands, E. side of W. entrance to Penobscot Bay. Lat. $44^{\circ} 5'$. Lon. $68^{\circ} 46'$. Fixed. Height of lantern above the sea, 80 feet.

Marshall's Point. On Marshall's Point, Lincoln co. Lat. $43^{\circ} 53' 20''$. Lon. $69^{\circ} 13'$. Fixed. Height of lantern above the sea, 30 feet.

Goat Island. Mouth Cape Porpoise harbor, N. side. Lat. $43^{\circ} 21'$. Lon. $70^{\circ} 25'$. Fixed. Height of lantern above the sea, 33 feet.

Negro Island. S. side of entrance to Camden harbor, Penobscot Bay. Lat. $44^{\circ} 11'$. Lon. $68^{\circ} 59'$. Fixed. Height of lantern above the sea, 50 feet.

Fort Point. On Old Fort Point, above Castine, to show the entrance to Prospect harbor. . . Fixed. Height of lantern above the sea, 90 feet.

Boon Island. On Boon Island, off York harbor. Lat. $43^{\circ} 8'$. Lon. $70^{\circ} 29'$. Fixed. Height of lantern above the sea, 70 feet.

Eagle Island Point. On Eagle Island, head of Isle au Haut Bay, to guide N. E. entrance to Penobscot Bay. Lat. $44^{\circ} 24'$. Lon. $68^{\circ} 46'$. Fixed. Height of lantern above the sea, 100 feet.

Nashe's Island. Off the mouth of Pleasant River, E. side. Lat. $44^{\circ} 27'$. Lon. $67^{\circ} 43'$. Fixed. Height of lantern above the sea, 47 feet. Red light.

Bear Island. On one of the Cranberry Islands, about 5 miles N. W. of Baker's Island light. Lat. $44^{\circ} 16'$. Lon. $68^{\circ} 12'$. Fixed. Height of lantern above the sea, 95 feet.

Saddleback Ledge. Near S. W. end of Isle au Haut, and E. side of entrance Isle au Haut Bay. Lat. $43^{\circ} 59'$. Lon. $68^{\circ} 36' 30''$. Fixed. Height of lantern above the sea, 62 feet.

Little River. In Cutler, on an island at the mouth of Little River harbor. . . Fixed.

Prospect Harbor. On Goat Island, in said harbor. . . Fixed.

Grindel's Point. At Gilkey's harbor, in Penobscot Bay. . . Fixed.

Beauchamp Point. On Indian Island, at mouth of Goose River, entrance to Camden harbor. . . Fixed.

NEW HAMPSHIRE.

Portsmouth, (or Newcastle.) S. W. side of inner entrance to Portsmouth harbor. Lat. $43^{\circ} 3' 30''$. Lon. $70^{\circ} 43'$. Fixed. Height of lantern above the sea, 90 feet.

White Island. The south-western island of the Isles of Shoals, ocean light. Lat. $42^{\circ} 58'$. Lon. $70^{\circ} 37' 30''$. Revolving. Height of lantern above the sea, 87 feet. Red and white light.

Whale's Back. N. and E. side of outer entrance to Portsmouth harbor. Lat. $43^{\circ} 3'$. Lon. $70^{\circ} 41'$. Fixed. Height of lantern above the sea, 58 feet. Two lights, one 10 feet above the other, but seen as one light at about 6 miles distant.

MASSACHUSETTS.

Boston. N. side of main outer entrance to Boston harbor. Lat. $42^{\circ} 19' 41''$. Lon. $70^{\circ} 53' 43''$. Revolving. Height of lantern above the sea, 90 feet.

Thatcher's Island, (2 lights.) On Thatcher's Island, about 2 miles off Cape Ann. Lat. $42^{\circ} 38' 21''$. Lon. $70^{\circ} 34' 48''$. Fixed. Height of lantern above the sea, 90 feet. Two light-houses, both fixed lights.

Baker's Island, (2 lights.) On Baker's Island, S. side of principal or N. E. entrance to Salem

harbor. Lat. $42^{\circ} 32' 12''$. Lon. $70^{\circ} 47' 28''$. Fixed. Height of lantern above the sea, 81 feet 6 inches. Two lights, one 70 and the other $8\frac{1}{2}$ feet above the level of the sea.

Plumb Island, (2 lights.) On Plumb Island, S. side of entrance to Newburyport. Lat. $42^{\circ} 48' 29''$. Lon. $70^{\circ} 49' 5''$. Fixed. Height of lantern above the sea, 54 feet.

Cape Cod, (Highlands.) Outside of Cape Cod, Truro. Lat. $42^{\circ} 2' 23''$. Lon. $70^{\circ} 3' 55''$. Fixed. Height of lantern above the sea, 180 feet.

Plymouth, (2 lights.) On Gurnet Point, N. side of entrance to Plymouth harbor. Lat. $42^{\circ} 00' 12''$. Lon. $70^{\circ} 36' 21''$. Fixed. Height of lantern above the sea, 90 feet.

Wigwam Point. On said point, E. side of entrance to Squam harbor, or bay. Lat. $42^{\circ} 39' 43''$. Lon. $70^{\circ} 41' 12''$. Fixed. Height of lantern above the sea, 50 feet.

Scituate, (2 lights.) On Cedar Point, N. side of entrance to Scituate harbor, and about 5 miles southward of Cohasset Rocks. Lat. $42^{\circ} 12' 17''$. Lon. $70^{\circ} 43' 15''$. Fixed. Height of lantern above the sea, 40 feet. Two lights; refitted in 1841, one red, and about 15 feet below the other, and consequently visible at much less distance; discontinued in 1849, on lighting Minot's Rock light, and revived and repaired in 1851.

Race Point. North-westerly point of Cape Cod. Lat. $42^{\circ} 3' 44''$. Lon. $70^{\circ} 14' 53''$. Revolving. Height of lantern above the sea, 32 feet.

Long Island Head. On N. end of Long Island, Boston Bay, and S. side of inner ship entrance. Lat. $42^{\circ} 19' 48''$. Lon. $70^{\circ} 57' 41''$. Fixed. Height of lantern above the sea, 80 feet.

Ten Pound Island. On Ten Pound Island, in Cape Ann, or Gloucester harbor. Lat. $42^{\circ} 35' 10''$. Lon. $70^{\circ} 40'$. Fixed. Height of lantern above the sea, 45 feet.

Billingsgate Island. On Billingsgate Island, W. side of entrance to Wellfleet. Lat. $41^{\circ} 51' 38''$. Lon. $70^{\circ} 4' 32''$. Fixed. Height of lantern above the sea, 40 feet.

Sandy Neck. W. side of entrance to Barnstable harbor, Cape Cod Bay. Lat. $41^{\circ} 43' 21''$. Lon. $70^{\circ} 17' 9''$. Fixed. Height of lantern above the sea, 40 feet.

Long Point. On Long Point Shoal, inside Cape Cod, and W. side of entrance to Provincetown harbor. Lat. $42^{\circ} 1' 50''$. Lon. $70^{\circ} 10' 50''$. Fixed. Height of lantern above the sea, 35 feet.

Gloucester Point. On Gloucester Point, E. side of entrance to Gloucester or Cape Ann harbor. Lat. $42^{\circ} 34' 49''$. Lon. $70^{\circ} 40' 10''$. Fixed. Height of lantern above the sea, 57 feet.

Straitsmouth Harbor. On Straitmouth Island, N. side of Cape Ann. Lat. $42^{\circ} 39' 41''$. Lon. $70^{\circ} 35' 36''$. Fixed. Height of lantern above the sea, 40 feet.

Marblehead. E. entrance to Marblehead harbor, S. E. side. Lat. $42^{\circ} 32' 3''$. Lon. $70^{\circ} 50' 5''$. Fixed. Height of lantern above the sea, 40 feet.

Ipswich, (2 lights.) On Patche's Beach, S. side of entrance to Ipswich harbor. Lat. $42^{\circ} 41' 8''$. Lon. $70^{\circ} 46' 17''$. Fixed and revolving. Height of lantern above the sea, 40 feet. Two towers and lights, each 30 feet high, 500 feet from each other.

Gayhead. On Gayhead, W. point Martha's Vineyard. Lat. $41^{\circ} 20' 54''$. Lon. $70^{\circ} 50' 26''$. Revolving. Height of lantern above the sea, 172 feet.

Clark's Point. On said point, W. side of entrance to New Bedford harbor. Lat. $41^{\circ} 35' 34''$, Lon. $70^{\circ} 54' 21''$. Fixed. Height of lantern above the sea, 52 feet.

Cutterhunk Island. On S. W. point of Cutterhunk Island, and S. of W. entrance to Buzzard's Bay. Lat. $41^{\circ} 24' 52''$. Lon. $70^{\circ} 57' 17''$. Fixed. Height of lantern above the sea, 48 feet 6 inches.

Nantucket Light. On Great or Sandy Point, the N. point of Nantucket Island. Lat. $41^{\circ} 23' 24''$. Lon. $70^{\circ} 3' 1''$. Fixed. Height of lantern above the sea, 70 feet.

Nantucket Beacon. Nantucket harbor, Brant Point. Lat. $41^{\circ} 17' 24''$, Lon. $70^{\circ} 5' 51''$. Fixed. Height of lantern above the sea, 40 feet.

Nantucket Harbor Light. Nantucket harbor, S. side. Lat. $41^{\circ} 16'$. Lon. $70^{\circ} 6'$. Fixed. Harbor light.

Cape Poge. N. E. point, Martha's Vineyard. Lat. $41^{\circ} 25' 18''$. Lon. $70^{\circ} 27' 19''$. Fixed. Height of lantern above the sea, 55 feet.

Chatham, (2 lights.) Chatham harbor, inside. Lat. $41^{\circ} 40' 16''$. Lon. $69^{\circ} 57' 12''$. Fixed. Height of lantern above the sea, 70 feet. Two lights, 70 feet apart.

Point Gammon. On said point, S. side of Cape Cod, inside of entrance to Hyannis harbor. Lat. $41^{\circ} 36' 35''$. Lon. $70^{\circ} 16' 16''$. Fixed. Height of lantern above the sea, 70 feet.

Holmes's Hole. On W. chop of Holmes's Hole harbor. Lat. $41^{\circ} 28' 57''$. Lon. $70^{\circ} 36' 27''$. Fixed. Height of lantern above the sea, 60 feet.

Tarpaulin Cove. W. side Tarpaulin Cove, Vineyard Sound. Lat. $41^{\circ} 28' 7''$. Lon. $70^{\circ} 45' 45''$. Fixed. Height of lantern above the sea, 80 feet.

Bird Island. On said island in Buzzard's Bay, E. side of entrance to Sippican harbor. Lat. $41^{\circ} 40' 9''$. Lon. $70^{\circ} 43' 21''$. Revolving. Height of lantern above the sea, 31 feet.

Monomoy Point. On Sandy Point, S. extremity Cape Cod. Lat. $41^{\circ} 33' 35''$. Lon. $69^{\circ} 59' 56''$. Fixed. Height of lantern above the sea, 33 feet.

Nobsque Point. On said point of Vineyard Sound, E. S. E. of entrance to Wood's Hole. Lat. $41^{\circ} 30' 57''$. Lon. $70^{\circ} 39' 37''$. Fixed. Height of lantern above the sea, 80 feet.

Dumpling Rock. Buzzard's Bay, S. S. W. of New Bedford, and of Clark's Point light. Lat. $41^{\circ} 32' 17''$. Lon. $70^{\circ} 55' 36''$. Fixed. Height of lantern above the sea, 43 feet.

Edgartown. At entrance to Edgartown harbor, Martha's Vineyard. Lat. $41^{\circ} 23' 27''$. Lon. $70^{\circ} 30' 29''$. Fixed. Height of lantern above the sea, 50 feet.

Ned's Point. Near Mattapoisett, E. New Bedford. Lat. $41^{\circ} 41' 1''$. Lon. $71^{\circ} 2'$. Fixed.

Nauset Beach, (3 beacon lights.) E. side Cape Cod. Lat. $41^{\circ} 51' 40''$. Lon. $69^{\circ} 57' 21''$. Fixed. Height of lantern above the sea, 90 feet. Three lights, 15 feet high, 50 yards apart.

Mayo's Beach, (Wellfleet.) Harbor light, inside Cape Cod, head of Wellfleet Bay. Lat. $42^{\circ} 55'$. Lon. $70^{\circ} 2'$. Fixed. Height of lantern above the sea, 30 feet.

Nantucket Cliff, (2 beacons.) In Nantucket harbor. . . Fixed. Height of lantern above the sea, 150 feet. Two harbor beacon lights.

Sankaty Head. On Sankaty Head, at the S. E. extremity of the Island of Nantucket, S. by W. 23 miles from Pollock's Rip light vessel, and S. by E. 9 miles from Nantucket Great Point light.

Lat. $41^{\circ} 16' 58''$. Lon. $69^{\circ} 58' 16''$. Flashes in $1\frac{1}{2}$ and 3 minutes. Lenticular light of 2d order.

Hyannis. At Hyannis, Barnstable co., at entrance to Hyannis harbor. Lat. $41^{\circ} 38'$. Lon. $70^{\circ} 18'$. Fixed.

Wing's Neck. On Wing's Neck, Sandwich, in Buzzard's Bay. . . Fixed.

Palmer's Island. On N. E. extremity of said island, in New Bedford harbor. . . Fixed. Height of lantern above the sea, 27 feet.

Minot's Rock, (destroyed.) On said rocks, the outermost of Cohasset Rocks, about 9 miles S. E. $\frac{1}{4}$ E. from Boston light-house. Lat. $42^{\circ} 16' 8''$. Lon. $70^{\circ} 45' 55''$. Revolving. Height of lantern above the sea, 66 feet. Blown down April 16, 1851.

Parret Harbor. On N. side of said harbor, southerly end of Salt Works Tower of Truro. . . Fixed. Red light.

FLOATING LIGHTS. *Brandywine Shoal.* Tonnage 129. Light boat sent to replace Minot's Rock light-house, destroyed. Two lamps, 12 cylindrical wicks each, one on the foremast, 42 feet, the other on the after mast, 45 feet elevation. Stationed here in 1851.

Tuckernuck Shoal. Tonnage 125. On Cross Rip, N. W. of Nantucket. One lamp with 8 cylindrical wicks, elevated about 38 feet above the sea.

Vineyard Sound. Tonnage 145. Near the rocks called "Sow and Pigs." Two lamps, 9 wicks each, elevated, one 40, the other 50 feet above the sea.

Pollock's Rip. Tonnage 145. Off Chatham, Ms. One lamp with 9 wicks, elevated about 40 feet.

RHODE ISLAND.

Newport. On S. point of Conanicut Island, called Beaver Tail. Lat. $41^{\circ} 26' 30''$. Lon. $71^{\circ} 24' 24''$. Fixed. Height of lantern above the sea, 98 feet.

Watch Hill. On Watch Point, S. E. of Stonington, about 2 miles. Lat. $41^{\circ} 18' 9''$. Lon. $71^{\circ} 52' 3''$. Revolving. Height of lantern above the sea, 73 feet.

Point Judith. On S. E. point of Narraganset Shore, between, and nearly in a range with, Beaver Tail and Block Island lights. Lat. $41^{\circ} 21' 35''$. Lon. $71^{\circ} 29' 25''$. Revolving. Height of lantern above the sea, 74 feet.

Goat Island. On N. end of Goat Island, Newport harbor. Lat. $41^{\circ} 30'$. Lon. $71^{\circ} 19' 50''$. Fixed. Height of lantern above the sea, 43 feet.

Dutch Island. On S. end of Dutch Island. Lat. $41^{\circ} 29' 30''$. Lon. $71^{\circ} 26'$. Fixed. Height of lantern above the sea, 56 feet.

Warwick Neck. On S. end of Warwick Neck. Lat. $41^{\circ} 34'$. Lon. $71^{\circ} 29'$. Fixed. Bay light.

Nayat Point. On Nayat Point, Providence River. Lat. $41^{\circ} 44'$. Lon. $71^{\circ} 22'$. Fixed. Height of lantern above the sea, 38 feet. Bay light.

Block Island, (2 lights.) On N. end of Block Island. Lat. $41^{\circ} 13' 24''$. Lon. $71^{\circ} 35' 4''$. Fixed. Height of lantern above the sea, 58 feet. Two lights placed one on each end of the keeper's house.

Poplar Point. Wickford, North Kingston. Lat. $41^{\circ} 35'$. Lon. $71^{\circ} 26' 40''$. Fixed. Bay light.

VERMONT.

Juniper Island. On Juniper Island, Lake Champlain, S. side of entrance to Burlington harbor. Lat. $44^{\circ} 27'$. Lon. $73^{\circ} 13'$. Fixed. Height of lantern above the sea, 95 feet.

CONNECTICUT.

New London. W. side of entrance to River Thames. Lat. $41^{\circ} 18' 55''$. Lon. $72^{\circ} 5' 56''$. Fixed. Height of lantern above the sea, 111 feet.

Faulkner's Island. On Faulkner's Island, off Guilford harbor. Lat. $41^{\circ} 12' 38''$. Lon. $72^{\circ} 39' 46''$. Fixed. Height of lantern above the sea, 93 feet.

Lynde Point. Mouth of the Connecticut River, W. side. Lat. $41^{\circ} 16' 13''$. Lon. $72^{\circ} 20' 59''$. Fixed. Height of lantern above the sea, 74 feet.

Stonington. On narrow point of land, E. side of entrance to Stonington harbor. Lat. $41^{\circ} 19' 34''$. Lon. $71^{\circ} 54' 52''$. Fixed. Height of lantern above the sea, 62 feet.

Morgan's Point. In Groton, N. side Fisher's Island Sound, near Mystic. Lat. $41^{\circ} 18' 54''$. Lon. $71^{\circ} 59' 54''$. Fixed.

Five Mile Point. Entrance of New Haven harbor, E. side. Lat. $41^{\circ} 14' 52''$. Lon. $72^{\circ} 54' 47''$. Fixed. Height of lantern above the sea, 85 feet.

Stratford Point. On said point, S. of Stratford, at entrance of harbor or river. Lat. $41^{\circ} 9' 2''$. Lon. $73^{\circ} 6' 46''$. Revolving. Height of lantern above the sea, 44 feet.

Fairweather Island. Entrance of Black Rock harbor, Fairfield. Lat. $41^{\circ} 8' 27''$. Lon. $73^{\circ} 13' 31''$. Fixed. Height of lantern above the sea, 71 feet.

Norwalk Island. Entrance of Norwalk River. Lat. $41^{\circ} 2' 50''$. Lon. $73^{\circ} 25' 43''$. Revolving. Height of lantern above the sea, 40 feet. Part red shades.

Great Captain's Island. On said island, near Greenwich Point, Fairfield co. Lat. $40^{\circ} 58' 52''$. Lon. $73^{\circ} 37' 59''$. Fixed. Height of lantern above the sea, 62 feet.

North Dumplin. On North Dumplin Island, in Fisher's Island Sound. . . Fixed. Red shades.

FLOATING LIGHTS. *Bartlett's Reef.* Tonnage 145. Off New London. One lamp with 9 wicks, 45 feet elevation.

Eel Grass Shoal. Tonnage 41. On said shoal. One lamp with 12 cylindrical wicks.

NEW YORK.

Eaton's Neck. E. side of entrance to Huntington Bay, Long Island. Lat. $40^{\circ} 57' 9''$. Lon. $73^{\circ} 24' 18''$. Fixed. Height of lantern above the sea, 134 feet.

Execution Rocks. Off Sand's Point, Long Island and Sound. . . Height of lantern above the sea, 54 feet. Red shades.

Sand's Point. On Sand's Point, Long Island Sound, E. of entrance to Cow Bay. Lat. $40^{\circ} 51' 52''$. Lon. $73^{\circ} 44' 21''$. Fixed.

Old Field Point. On Old Field Point, Long Island, N. side, opposite Stratford light. Lat. $40^{\circ} 58' 33''$. Lon. $73^{\circ} 7' 41''$. Fixed. Height of lantern above the sea, 67 feet 6 inches.

Fire Island Inlet. E. side Fire Island Inlet, Long Island, S. side. Lat. $40^{\circ} 37' 46''$. Lon. $73^{\circ} 13' 38''$. Revolving. Height of lantern above the sea, 89 feet 3 inches.

Throgg's Neck. On S. E. point of Throgg's Neck, Westchester, E. of Hell Gate. Lat. $40^{\circ} 48' 15''$. Lon. $73^{\circ} 48' 1''$. Fixed.

Stony Point. On the W. side of the Hudson, below West Point. . . Fixed.

Fort Tompkins. On Staten Island, W. side of

the Narrows. Lat. $40^{\circ} 35' 57''$. Lon. $74^{\circ} 3' 50''$. Fixed. Height of lantern above the sea, 89 feet.

Coxsackie. On the Hudson River, W. side, near Coxsackie. . . Fixed. River light.

Four Mile Point. At Four Mile Point, 4 miles from Hudson, on the Hudson River, W. side. . . Fixed. River light.

Saugerties. At the mouth of Saugerties Creek, on the Hudson, W. side. . . Fixed. River light.

Stuyvesant. Near Stuyvesant, on the Hudson River, E. side. . . Fixed. River light.

Rondout Creek. Opposite mouth of said creek, Ulster co., and entrance of Hudson and Delaware Canal. . . Fixed. River light.

Montauk. E. end of Long Island. Lat. $41^{\circ} 4' 10''$. Lon. $71^{\circ} 51' 58''$. Fixed. Height of lantern above the sea, 160 feet.

Little Gull Island. On said island, near N. E. end of Long Island Sound, S. side of main entrance. Lat. $41^{\circ} 12' 18''$. Lon. $72^{\circ} 6' 57''$. Fixed. Height of lantern above the sea, 50 feet.

Plumb Island. Near N. E. extremity of Long Island, and N. of Gardiner's Bay. Lat. $41^{\circ} 10' 21''$. Lon. $72^{\circ} 13' 14''$. Revolving. Height of lantern above the sea, 63 feet.

Buffalo, (on Pier.) At junction of Buffalo Creek and Lake Erie, on pier. Lat. $42^{\circ} 50'$. Lon. $78^{\circ} 59'$. Fixed. Height of lantern above the sea, 47 feet 6 inches.

Portland Harbor. At Portland, S. E. shore of Lake Erie. Lat. $42^{\circ} 32' 41''$. Fixed. Height of lantern above the sea, 80 feet. Lighted with natural gas.

Dunkirk Light. At Dunkirk, Lake Erie, S. E. shore. . . Fixed.

Galloo Island. On W. point Galloo Island, E. part of Lake Ontario. Lat. $43^{\circ} 51'$. Fixed. Height of lantern above the sea, 59 feet.

Oswego. At entrance of Oswego harbor, Lake Ontario, end of W. pier. Lat. $43^{\circ} 28'$. Fixed. Height of lantern above the sea, 82 feet. Beacon on a pier.

Cattaraugus Beacon. On pier, mouth of Cattaraugus Creek, Lake Erie. . . Fixed.

Dunkirk Beacon. Dunkirk harbor, Lake Erie. . . Fixed. Height of lantern above the sea, 25 feet.

Genesee, (and temporary beacon lamp.) W. side of entrance to port of Genesee, Lake Ontario, mouth of Genesee River. Lat. $43^{\circ} 12' 30''$. Fixed. Height of lantern above the sea, 83 feet.

Sodus Bay and Beacon. At entrance to Sodus harbor, Lake Ontario, W. side; beacon on W. pier. Lat. $43^{\circ} 19'$. Revolving. Height of lantern above the sea, 66 feet. Two lights, main light revolving.

Tibbets's Point. S. E. side of S. entrance to St. Lawrence River, Lake Ontario. Lat. $44^{\circ} 9'$. Fixed. Height of lantern above the sea, 52 feet.

Horse Island. On W. end of said island, and W. of Sackett's Harbor. . . Fixed.

Niagara Fort. At junction of Niagara River and Lake Ontario, E. side. Lat. $43^{\circ} 18' 20''$. Fixed. Height of lantern above the sea, 78 feet.

Stoney Point. On said point, E. end of Lake Ontario. . . Revolving.

Ogdensburg. On St. Lawrence River, mouth of Oswegatchie River. Lat. $44^{\circ} 45'$. Lon. $75^{\circ} 30'$. Fixed. River light.

Prince's Bay. On Staten Island, near S. E. end. Lat. $40^{\circ} 30' 22''$. Lon. $74^{\circ} 13' 24''$. Fixed. Height of lantern above the sea, 106 feet.

Esopus Meadows. Opposite Esopus, on Hudson River, W. side. . . Fixed.

Robbins's Reef. Off the upper end of Staten Island, S. W. part of New York Bay. Lat. $40^{\circ} 39' 21''$. Lon. $74^{\circ} 4' 30''$. Fixed. Height of lantern above the sea, 66 feet.

Cedar Island. Near E. end of Long Island, in Sag Harbor. Lat. $41^{\circ} 2' 18''$. Lon. $72^{\circ} 16' 6''$. Fixed. Height of lantern above the sea, 32 feet. Harbor light.

Silver Creek. On Lake Erie, S. E. side entrance to harbor. . . Fixed. Height of lantern above the sea, 27 feet.

Salmon River. On Lake Ontario, S. E. end, N. side of entrance to Port Ontario, Oswego co. . . Fixed. Height of lantern above the sea, 52 feet.

Rock Island Beacon, (Thousand Isles.) On said island, in St. Lawrence River. . . Fixed.

Sunken Rock Beacon, (Thousand Isles.) On said rock, or Bush Island, in St. Lawrence River. . . Fixed.

Crossover Island Beacon, (Thousand Isles.) On said island, in St. Lawrence River. . . Fixed.

Cumberland Head. On Lake Champlain, near Plattsburg. Lat. $44^{\circ} 42'$. Lon. $73^{\circ} 20'$. Fixed. Height of lantern above the sea, 45 feet. Inland light.

Split Rock. On Lake Champlain, near Essex. Lat. $44^{\circ} 12'$. Lon. $73^{\circ} 18'$. Fixed. Height of lantern above the sea, 110 feet. Inland light.

FLOATING LIGHTS. New York, (Dist.) *Stratford Point.* Tonnage 100. Off said point, on Middle Ground, Long Island Sound. Two lamps, 1 on fore and the other on mainmast, each lamp 9 cylindrical wicks.

Sandy Hook. Tonnage 230. Seven miles outside of Sandy Hook, in 15 fathoms water. Two lamps, 1 on foremast, 50 feet, the other on mainmast, 60 feet elevation, each lamp 9 cylindrical wicks.

NEW JERSEY.

Sandy Hook, (main light, and 2 beacons.) Sandy Hook, N. W. point of New Jersey, and S. of entrance to New York harbor. Lat. $40^{\circ} 27' 37''$. Lon. $74^{\circ} 00' 42''$. Fixed. Height of lantern above the sea, 90 feet.

Highlands of Neversink, (2 lights.) On Highlands of Neversink, S. of Sandy Hook lights. Lat. $40^{\circ} 23' 40''$. Lon. $73^{\circ} 59' 42''$. Two lights, 1 revolving. Height of lantern above the sea, 248 feet. Two lights, 100 yards apart; 1 fixed; S. light revolves; French lenticular apparatus, 1st and 2d orders.

Barnegat Shoals. S. side of Barnegat Inlet, and N. end of Long Beach. Lat. $39^{\circ} 45' 54''$. Lon. $74^{\circ} 6' 56''$. Fixed.

Cape May. On S. W. point of Cape May, N. of entrance to Delaware Bay. Lat. $38^{\circ} 55' 45''$. Lon. $74^{\circ} 58' 33''$. Revolving. Height of lantern above the sea, 88 feet.

Egg Island. Delaware Bay, N. side, nearly N. N. W. of Cape May. Lat. $39^{\circ} 10' 28''$. Lon. $75^{\circ} 8' 56''$. Fixed. Height of lantern above the sea, 42 feet. Lighted with gas in 1845.

Cohanzey Creek. Delaware Bay, N. side, and W. side of said creek. Lat. $39^{\circ} 20' 15''$. Lon. $75^{\circ} 22' 12''$. Fixed. Height of lantern above the sea, 42 feet. Lighted with gas in 1845.

Tucker's Beach. On said beach, near midway between Old Inlet and New Inlet. Lat. $39^{\circ} 30' 17''$. Lon. $74^{\circ} 17' 31''$. Fixed. Red shades.

Bergen Point. On a block at the extremity of a reef of rocks off Bergen Point, in the Kilns. . . Fixed.

Maurice River. On the bank of Maurice River Cove, E. point of said river, and S. W. side of Haystack Island, in Delaware Bay. . . Fixed.

Passaic River. At the mouth of said river, on a block in 4 feet of low water, near head of Newark Bay, about 5 miles above Bergen Point light, and to guide into Passaic and Hackensack Rivers. . . Fixed.

PENNSYLVANIA.

Presque Isle. At entrance of Presque Isle Bay, Lake Erie. Lat. $42^{\circ} 8' 14''$. Fixed. Height of lantern above the sea, 73 feet.

Presque Isle Beacon. Entrance of Presque Isle Bay, Lake Erie. . . Fixed. Height of lantern above the sea, 26 feet.

Fort Mifflin. On pier in Delaware River, opposite said fort. . . Fixed.

Brandywine Shoal. Brandywine Shoal, in Delaware Bay.

DELAWARE.

Cape Henlopen. On Cape Henlopen, S. side of entrance to Delaware Bay. Lat. $38^{\circ} 46' 35''$. Lon. $75^{\circ} 5' 37''$. Fixed. Height of lantern above the sea, 180 feet.

Cape Henlopen Beacon. Cape Henlopen, S. side of entrance to Delaware Bay, about $\frac{1}{4}$ of a mile from main light. Lat. $38^{\circ} 47' 21''$. Lon. $75^{\circ} 5' 44''$. Fixed.

Bombay Hook. N. W. end of B. Bay Hook Island, Delaware Bay. Lat. $39^{\circ} 21' 43''$. Lon. $75^{\circ} 31' 13''$. Fixed. Height of lantern above the sea, 46 feet.

Mahon's Ditch. At Mahon's Ditch, Delaware Bay, S. side. Lat. $39^{\circ} 10' 13''$. Lon. $75^{\circ} 24' 38''$. Fixed.

Misplillon Creek. At mouth of said creek, S. side, Delaware Bay. Lat. $38^{\circ} 56' 34''$. Lon. $75^{\circ} 19' 24''$. Fixed.

Christiana River. At mouth of said river or creek, N. side. Lat. $39^{\circ} 43' 12''$. Lon. $75^{\circ} 31' 50''$. Fixed. Lighted with gas.

Reedy Island. On said island, N. W. part of Delaware Bay, at entrance of Delaware River. Lat. $39^{\circ} 29' 57''$. Lon. $75^{\circ} 34' 44''$. Fixed. Lighted with gas.

Breakwater. On Delaware Breakwater. Lat. $38^{\circ} 47' 50''$. Lon. $75^{\circ} 7' 3''$. Fixed. Red light.

FLOATING LIGHTS. Delaware, (Dist.) *Five Fathom Bank.* Tonnage 195. On said bank, off Cape May. Two lamps, one on foremast, 40 feet, the other on mainmast, 45 feet elevation, 12 cylindrical wicks.

Upper Middle Shoal. (No. 2.) Tonnage 131. Near the middle of Delaware Bay, N. W. of Brandywine Shoals. One lamp, 12 cylindrical wicks, about 45 feet elevation.

MARYLAND.

Bodkin Island. On Bodkin Island, S. side of entrance to Patapsco River and port of Baltimore, Chesapeake Bay. Lat. $39^{\circ} 8'$. Lon. $76^{\circ} 25' 50''$. Fixed.

North Point, (2 lights.) On North Point, at N. side of entrance to Patapsco River, Chesapeake Bay. Upper light lat. $39^{\circ} 11' 45''$. Lon. $76^{\circ} 27' 17''$. Lower light lat. $39^{\circ} 11' 35''$. Lon. $76^{\circ} 26' 54''$. Fixed. Two lights to range with ship channel.

Thomas's Point. On Thomas's Point, S. of entrance to Annapolis, Chesapeake Bay. Lat. 38° 54' 25". Lon. 76° 27' 34". Fixed.

Pool's Island. On Pool's Island, in Chesapeake Bay, Harford co., N. E. of North Point lights. Lat. 39° 17' 22". Lon. 76° 16' 21". Fixed.

Smith's Island. On Smith's Island, in Chesapeake Bay, off Somerset co., and opposite entrance to the Potomac. Lat. 37° 53' 13". Lon. 76° 14' 39". Fixed.

Concord Point. (Havre de Grace.) On Point Concord, at entrance of Susquehanna River, Chesapeake Bay. Lat. 39° 32' 30". Lon. 76° 5' 42". Fixed.

Cove Point. On Cove Point, N. of entrance to Patuxent River, Chesapeake Bay. Lat. 38° 23' 6". Lon. 76° 23' 17". Fixed. Height of lantern above the sea, 50 feet.

Point Lookout. On Point Lookout, N. side of entrance to Potomac River, Chesapeake Bay. Lat. 38° 21' 14". Lon. 76° 19' 43". Fixed.

Lazaretto Point. Near Baltimore, on Patapsco River, N. side of entrance to Baltimore harbor. Lat. 39° 15' 39". Lon. 76° 34' 38". Fixed.

Clay Island. Mouth of Nanticoke River, N. extremity of Tangier Sound, Dorchester co., Chesapeake Bay. Lat. 38° 13' 52". Lon. 75° 58' 50". Fixed. Height of lantern above the sea, 36 feet.

Turkey Point. On said point, at the entrance of Elk River, W. side, N. part of Chesapeake Bay. Lat. 39° 26' 55". Lon. 76° 00' 54". Fixed.

Piney Point. On the Potomac River, E. side, about 14 miles N. W. from its mouth. . . . Fixed. River light.

Sharp's Island. On said island, Chesapeake Bay, off the entrance to Choptank River. Lat. 38° 37' 42". Lon. 76° 22' 36". Fixed.

Greenbury Point. On said point, N. side of entrance to Annapolis harbor. . . . Fixed. Height of lantern above the sea, 31 feet.

FLOATING LIGHT. *Hooper's Straits.* Tonnage 72½. In Chesapeake Bay, E. side, and S. of Hooper's Island. One lamp, 11 cylindrical wicks.

VIRGINIA.

Cape Henry. On said cape, S. side of entrance to Chesapeake Bay. Lat. 36° 56'. Lon. 76° 4'. Fixed. Height of lantern above the sea, 120 feet.

Old Point Comfort. On said point, mouth of James River, and N. side of entrance to Hampton Roads, Chesapeake Bay. Lat. 37°. Lon. 76° 22' 12". Fixed.

Smith's Point. On Smith's Point, near the mouth of the Potomac River, S. side. Lat. 37° 51'. Lon. 76° 22". Fixed. Height of lantern above the sea, 85 feet.

New Point Comfort. About 18 miles N. of Old Point Comfort, Chesapeake Bay, W. side. Lat. 37° 18'. Lon. 76° 21". Fixed.

Smith's Island. N. end of Smith's Island, N. E. of Cape Charles, and of N. entrance to the Chesapeake. Lat. 37° 13'. Lon. 75° 52'. Revolving.

Back River Point. About 5 miles N. E. of Old Point Comfort, and S. side of entrance to Back River. Lat. 37° 5'. Lon. 76° 21'. Revolving. Height of lantern above the sea, 40 feet.

Assateague Island. On said island, between Cape Henlopen and Cape Charles, on the ocean. Lat. 37° 54' 36". Lon. 75° 21' 45". Fixed.

Little Watt's Island. On said island, E. side

of Chesapeake Bay, Accomac co., and N. E. of southern entrance to Tangier Sound. Lat. 37° 45'. Lon. 76° 4'. Fixed.

FLOATING LIGHTS. Virginia, (Dist.) *Smith's Point.* Tonnage 120. S. E. of said point, in Chesapeake Bay, and S. E. of mouth of Potomac River. Two lamps, 11 cylindrical wicks each, 1 on foremast, 34½ feet, the other on mainmast, 39 feet elevation.

Craney Island. Tonnage 70. Near said island, W. side of entrance to Elizabeth River, and to Norfolk, &c. One lamp at mast head, 33 feet elevation.

Willoughby's Spit. Tonnage 400. S. side of entrance to Hampton Roads, S. part of Chesapeake Bay. Two lamps, 3 cylindrical wicks each, forward one 41 feet, after one 32 feet elevation.

Wolftrap Shoals. Tonnage 180. Between the mouths of York and Rappahannock Rivers. Two lamps, 12 cylindrical wicks each, forward one 30, after one 38 feet elevation.

Windmill Point. Tonnage 125. Off Windmill Point, N. side of entrance to the Rappahannock. One lamp with 5 cylindrical wicks in use, 40½ feet elevation.

Bowler's Rock. Tonnage 54. In the Rappahannock River, near said rock. One lamp.

Upper Cedar Point. Tonnage 72. Off said point, below the Narrows, and about 44 miles below Mount Vernon. One lamp with 6 cylindrical wicks, 34 feet elevation from deck.

Lower Cedar Point. Tonnage 72. In the Potomac River, between said point and Yates's Point, above Kettle Bottom. One lamp with 12 cylindrical wicks, 33 feet elevation from deck.

NORTH CAROLINA.

Bald Head. Near mouth of Cape Fear River E. side. Lat. 33° 51' 30". Lon. 77° 59' 30". Fixed. Height of lantern above the sea, 110 feet.

Federal Point. On Federal Point, N. side of inlet to Cape Fear River. Lat. 33° 56' 30". Lon. 77° 55". Fixed. Height of lantern above the sea 50 feet.

Cape Hatteras. On Cape Hatteras, about 1 mile N. of high water mark. Lat. 35° 15'. Lon. 75° 30'. Fixed. Height of lantern above the sea, 95 feet.

Pamptico Point. On said point, S. side of entrance to Pamptico River. . . . Fixed. Height of lantern above the sea, 30 feet.

Body's Island. On said island, 1½ miles S. of a new inlet made in 1847. Lat. 35° 47' 21". Lon. 75° 31' 39". Revolving. Height of lantern above the sea, 56 feet 6 inches.

Ocracoke. On W. end of Ocracoke Island, S. W. of Cape Hatteras, E. side of Ocracoke Inlet. Lat. 35° 6' 30". Lon. 75° 58'. Revolving. Height of lantern above the sea, 75 feet.

Cape Lookout. On Cape Lookout, near the end of the cape. Lat. 34° 37'. Lon. 76° 33'. Fixed. Height of lantern above the sea, 95 feet.

Oak Island. (2 beacon lights.) Two lights on said island to range with the channel on entering Cape Fear River. . . . Fixed.

Orton's Point. On W. bank of Cape Fear River, known as Orton's Point, Brunswick co. . . . Fixed.

Price's Creek. (2 beacons.) On W. bank of Cape Fear River, mouth of Price's Creek. . . . Fixed.

Campbell's Island. On Campbell's Island, in Cape Fear River, S. W. corner of lower end of

said island, generally known as "Big Island." . . . Fixed.

FLOATING LIGHTS. *Long Shoal.* Tonnage 145. In Pamlico Sound, northerly part, on E. point of said shoal. One lamp with 9 cylindrical wicks, at about 40 feet elevation.

South-west Point of Royal Shoal. Tonnage 140. On the point of said shoal, Pamlico Sound, W., 9 miles from Ocracoke light. One lamp with 11 cylindrical wicks, at about 40 feet elevation.

Nine Feet Shoal. Tonnage 70. About 4 miles N. by W. of Ocracoke light, and N. E. side of Royal Shoal. One lamp with 9 cylindrical wicks, at 40 feet elevation.

Mouth of Neuse River. Tonnage 125. Near entrance of said river into Pamlico Sound, off Marsh Point. One lamp with 9 cylindrical wicks, at 40 feet elevation.

Brant Island Shoal. Tonnage 125. On the point of said shoal, in S. part of Pamlico Sound. One lamp with 9 cylindrical wicks, at 40 feet elevation.

Harbor Island. Tonnage 72. On Harbor Island and Bar, between Pamlico and Core Sounds. One lamp with 9 cylindrical wicks, at 40 feet elevation.

Wade's Point Shoal. Tonnage 76. On said shoal, W. side of entrance of Pasquotank River into Albemarle Sound, and S. E. of Elizabeth City. One lamp with 9 cylindrical wicks, at 39 feet elevation.

Roanoke Island. Tonnage 72. Between Pamlico and Albemarle Sounds, near said island. One lamp with 12 cylindrical wicks, at 38 feet elevation.

Mouth of Roanoke River. Tonnage 130. Near its entrance into Albemarle Sound. One lamp with 9 cylindrical wicks, at about 42½ feet elevation.

Horseshoe. Tonnage 72. On said Shoal, between the New Inlet and Price's Creek, in Cape Fear River. One lamp with 12 cylindrical wicks.

SOUTH CAROLINA.

Charleston, and Beacon. On Light-house Island, and W. of ship channel to Charleston harbor. Lat. 32° 42'. Lon. 79° 54' 12". Revolving. Height of lantern above the sea, 125 feet 6 inches. Light and beacon.

Raccoon Key. On Cape Romain, about 10 miles S. W. of entrance to Santee River. Lat. 33° 1'. Lon. 79° 24'. Fixed. Height of lantern above the sea, 87 feet 6 inches.

North Island. On S. end of North Island, E. side of entrance to Pedee River, and to Georgetown. Lat. 33° 7' 30". Lon. 79° 1' 30". Fixed. Height of lantern above the sea, 89 feet.

Morris's Island, (2 beacon lights.) On said island, for the Overall Channel to Charleston harbor. . . . Fixed. Height of lantern above the sea, one 40 and the other 70 feet. Two beacons, 1 lamp each.

Sullivan's Island, (2 beacons; beacon back of Sullivan's Island, and beacon S. of Fort Moultrie.) Two beacons on said island to guide over Charleston Bar. One in lat. 32° 46' 51"; lon. 79° 53". The other in lat. 32° 45' 29"; lon. 79° 52' 55". Fixed.

FLOATING LIGHT. *St. Helena Bar.* Tonnage 72. On said bar, off the entrance to St. Helena Sound, and to Combahee and Morgan Rivers. One lamp with 12 cylindrical wicks.

GEORGIA.

Tybee. N. E. end of Tybee Island and S. side of entrance to Savannah River. Lat. 32°. Lon. 80° 52'. Fixed. Height of lantern above the sea, 100 feet.

Tybee Beacon. E. of light-house, about ¼ of a mile distant. . . . Fixed. Height of lantern above the sea, 56 feet.

Fig Island Beacon. On E. end of said island in Savannah River. . . . Fixed. Red shades.

St. Simon's Island. On S. end of St. Simon's Island, and N. side of entrance to the sound. Lat. 31° 8'. Lon. 81° 36'. Fixed. Height of lantern above the sea, 80 feet. A sound or inland light only.

Sapelo Island. On S. end of Sapelo Island, and N. side of entrance to Doboy Sound. Lat. 31° 21' 30". Lon. 81° 24'. Revolving. Height of lantern above the sea, 74 feet.

Wolf's Island, (2 beacons.) E. side, near N. end of Wolf's Island, and S. S. E. of Sapelo light. Lat. 31° 20'. Lon. 81° 24' 30". Fixed. Height of lantern above the sea, 25 feet. Two beacons, one of brick and the other of wood; the first 25, and the second 15 feet above the level of the sea.

Little Cumberland Island. S. side of entrance to St. Andrew's Sound and Santilla River. Lat. 30° 56'. Lon. 81° 34'. Revolving. Height of lantern above the sea, 80 feet.

Oyster Beds' Beacon. On Oyster Beds in Savannah River. . . . Fixed.

Cockspur Island Beacon. On a knoll connected with Cockspur Island, in Savannah River. . . . Fixed.

FLOATING LIGHTS. *Tybee Channel, or Martin's Industry.* Tonnage 125. At Martin's Industry, about 15 miles E. of Tybee light. One lamp with 4 cylindrical wicks, at about 40 feet elevation from deck.

Tybee Island Knoll. Tonnage 72. Off the knoll N. of Tybee Island, Savannah River. One lamp with 12 wicks.

FLORIDA.

St. Augustine. On N. end of Anastasia Island, and S. side of entrance to St. Augustine. Lat. 29° 52' 18". Lon. 81° 25'. Fixed. Height of lantern above the sea, 70 feet.

St. John's River. Near mouth of St. John's River, S. side of entrance. Lat. 30° 20' 30". Lon. 81° 33'. Fixed. Height of lantern above the sea, 65 feet.

Cape Carnaveral. On said cape, S. S. E. of St. Augustine. . . . Revolving.

Cape Florida. Off S. E. point of Florida, or on Key Biscayne. Lat. 25° 41'. Lon. 80° 5'. Height of lantern above the sea, 70 feet.

Dry Tortugas. On Bush Island, one of the westernmost of the Florida Reef. Lat. 24° 37' 20". Lon. 82° 52' 22". Fixed. Height of lantern above the sea, 70 feet.

Sand Key, (temporary light-boat.) About 8½ miles S. W. by S. of Key West. Lat. 24° 28' 30". Lon. 81° 49' 30". Revolving. Height of lantern above the sea, 70 feet. Refitted anew in 1843; destroyed by a tornado in 1846.

Key West. Key West Island, Florida Reef, S. W. of Cape Sable. Lat. 24° 32' 32". Lon. 81° 48' 30". Fixed. Height of lantern above the sea, 67 feet. Destroyed by a tornado in 1846, and rebuilt on new site in 1847.

Cape St. George. On said cape, and about 2½

miles E. of West Pass to St. George's Sound. . . Fixed. In place of one on St. George's Island.

St. Mark's. E. side of entrance to St. Mark's harbor. Lat. $30^{\circ} 4'$. Lon. $84^{\circ} 11'$. Fixed. Height of lantern above the sea, 73 feet.

Pensacola. S. side of entrance to Pensacola Bay, and N. W. of fort on St. Rosa Island. Lat. $30^{\circ} 20' 48''$. Lon. $87^{\circ} 17'$. Revolving. Height of lantern above the sea, 80 feet.

Amelia Island. S. side of entrance to St. Mary's River, and on N. end of said island. Lat. $30^{\circ} 42'$. Lon. $81^{\circ} 36' 30''$. Revolving.

Cape St. Blas. On Cape St. Blas, about 2 miles from its S. point. . . Revolving.

Dog Island. On said island, E. side of middle entrance to St. George's Sound. Lat. $29^{\circ} 46' 20''$. Lon. $84^{\circ} 38' 9''$. Revolving.

Egmont Key. On said key or island, entrance of Tampa Bay. . . Fixed.

FLOATING LIGHTS. *Carysfort Reef.* Tonnage 225. About 1° E. of Cape Sable, on said reef. Two lanterns and lamps, with 12 cylindrical wicks each, the forward lantern elevated 40 feet, and the after do. 30 feet; seen 12 miles.

Key West. Tonnage 145. At N. W. passage, near 12 miles from Key West. One light with 9 lamps and 24 wicks.

Sand Key, (temporary.) Tonnage 140. At Sand Key. One lamp with 12 wicks.

ALABAMA.

Mobile Point. On Mobile Point, E. side of entrance to Mobile Bay. Lat. $30^{\circ} 13' 42''$. Lon. $87^{\circ} 58'$. Revolving. Height of lantern above the sea, 55 feet.

Choctaw Point. On Choctaw Point, a little S. of Mobile. Lat. $30^{\circ} 44'$. Lon. $88^{\circ} 12'$. Fixed.

Sand Island. About 3 miles S. S. W. from Mobile Point. Lat. $30^{\circ} 13'$. Lon. $88^{\circ} 10' 58''$. Fixed.

MISSISSIPPI.

Cat Island. On W. point of said island, and E. of entrance to Lake Borgne. Lat. $30^{\circ} 13' 40''$. Lon. $89^{\circ} 5'$. Fixed.

Pass Christian. On the main land, about $6\frac{1}{2}$ miles N. W. of Cat Island light. Lat. $30^{\circ} 18' 55''$. Lon. $89^{\circ} 10' 26''$. Fixed.

Round Island. On said island, off Pascagoula Bay. Lat. $30^{\circ} 20'$. Lon. $88^{\circ} 40'$. Fixed. Height of lantern above the sea, 44 feet.

Biloxi. In Biloxi village, W. of W. entrance to Biloxi Bay. . . Fixed. Height of lantern above the sea, 53 feet.

LOUISIANA.

Bayou St. John. Mouth of Bayou St. John, on Lake Ponchartrain, 5 miles N. New Orleans. Lat. $30^{\circ} 3'$. Lon. 90° . Fixed. Height of lantern above the sea, 30 feet.

Frank's Island. On Frank's Island, at mouth of Mississippi, N. E. Pass, N. side. Lat. $29^{\circ} 8' 30''$. Lon. $89^{\circ} 1' 24''$. Fixed. Height of lantern above the sea, 78 feet.

South-west Pass of Mississippi. Entrance of Mississippi River, S. W. Pass, W. side. Lat. $28^{\circ} 58' 30''$. Lon. $89^{\circ} 20''$. Fixed. Showing two lights, one 25 feet above the other.

South Point, (Gordon's Island.) Entrance of Mississippi River, near S. Pass, S. W. side. Lat. $28^{\circ} 59' 42''$. Lon. $89^{\circ} 7' 24''$. Revolving.

Pleasanton's Island. E. Lake Ponchartrain,

near mouth Pearl River. . . Fixed. Formerly revolving.

Techefunctia River. Lake Ponchartrain, near Madisonville. . . Fixed.

Point de Fer. At the entrance of River Teche, or Atchafalaya Bay. Lat. $29^{\circ} 19' 30''$. Lon. $91^{\circ} 33'$. Fixed. Height of lantern above the sea, 70 feet.

Port Ponchartrain. Near E. end of railroad. . . Revolving. Height of lantern above the sea, 30 feet.

Pass Manchac. Mouth of Pass Manchac, between Lakes Maurepas and Ponchartrain. . . Fixed. Height of lantern above the sea, 34 feet. Red light, on S. side of the Pass.

New Canal. Lake Ponchartrain, entrance of said canal. . . Fixed. Height of lantern above the sea, 30 feet.

Vermilion Bay. Near S. W. entrance to said bay, on Marsh Island. . . Revolving.

Bon Fouca. Near mouth of Bayou Bon Fouca. . . Fixed.

Chandeleur Island. On N. end of said island. . . Fixed.

Proctorsville Beacon. On Lake Borgne. . . Fixed.

FLOATING LIGHTS. *Merrill's Shell Bank,* (iron boat.) Tonnage 400. At Merrill's Shell Bank. One lamp.

Ship Shoal Pleasanton. Tonnage 160. On the inside of the western end of Ship Island Shoal, in 5 fathoms of water, near Dernier (or Last Island.) Two lamps and lantern with 8 wicks, one elevated 45, the other 30 feet.

Atchafalaya Bay. Tonnage 72. In Atchafalaya Bay. One lamp with 12 wicks, 35 feet elevation.

OHIO.

Grand River. Mouth of Grand River, Fairport, Lake Erie. Lat. $41^{\circ} 53'$. Lon. $81^{\circ} 23'$. Fixed. Height of lantern above the sea, 91 feet. Light-house on the main land; a beacon on a pier.

Grand River Beacon. Mouth of Grand River. . . Fixed. Height of lantern above the sea, 24 feet.

Cleveland. Cleveland harbor, Lake Erie. Lat. $41^{\circ} 31'$. Lon. $81^{\circ} 51'$. Fixed. Height of lantern above the sea, 140 feet. Light-house on the main land; a beacon on a pier.

Cleveland Beacon. Cleveland harbor, Lake Erie. . . Fixed.

Vermilion River Beacon. On pier, Vermilion harbor, Lake Erie. . . Fixed.

Turtle Island. On said island, mouth of Maumee Bay, Michigan. . . Fixed. Height of lantern above the sea, 41 feet.

Sandusky. Near entrance Sandusky Bay. . . Fixed. Height of lantern above the sea, 60 feet.

Port Clinton. On Lake Erie, N. W. of Sandusky Bay. . . Fixed. Height of lantern above the sea, 45 feet.

Conneaut River Beacon. On Lake Erie, N. E. corner of Ohio. . . Fixed. Beacon on a pier.

Mouth Huron River Beacon. On Lake Erie, Huron co. . . Fixed. Height of lantern above the sea, 40 feet. Beacon on a pier.

Mouth Black River. On Lake Erie, Lorain co. . . Fixed. Height of lantern above the sea, 40 feet. Beacon on a pier.

Ashtabula Beacon. On Lake Erie, Ashtabula co. . . Fixed. Height of lantern above the sea, 40 feet. Beacon on a pier.

Cedar Point Beacon. Entrance of Sandusky Bay. . . Fixed. Height of lantern above the sea, 37 feet. Beacon light on keeper's dwelling.

Western Sister Island. On W. Sister Island, W. part of Lake Erie. . . Fixed.

MICHIGAN.

Fort Gratiot. Half a mile above outlet of Lake Huron. Lat. 42° 55'. Lon. 82° 22'. Fixed. Height of lantern above the sea, 74 feet.

Windmill Point. W. side of Detroit River, near its head. . . Fixed.

Monroe. W. end of Lake Erie. . . Fixed. Height of lantern above the sea, 46 feet.

Bois Blanc. N. side of Bois Blanc Island, near Mackinaw. . . Fixed. Height of lantern above the sea, 112 feet.

St. Joseph's River, (and 1 beacon lamp.) Mouth of St. Joseph's River, E. side Lake Michigan. . . Fixed. Height of lantern above the sea, 65 feet. And 1 beacon lamp on pier.

Thunder Bay Island. Lake Huron, N. E. of Saginaw Bay. . . Fixed. Height of lantern above the sea, 45 feet.

Gibraltar. Mouth of Detroit River. . . Fixed.

Grand River. Lake Michigan, E. side. . . Fixed. Height of lantern above the sea, 40 feet.

South Manitow Island. N. part Lake Michigan. . . Fixed.

New Buffalo, and Beacon. Near S. end, E. side Lake Michigan. . . Fixed.

Presque Isle. N. W. shore of Lake Huron. . . Revolving.

Kalamazoo River. S. E. shore of Lake Michigan. . . Fixed. Height of lantern above the sea, 42 feet.

Pottawattamie. Pottawattamie Island, entrance Green Bay. . . Fixed. Height of lantern above the sea, 120 feet.

Saginaw Bay. Mouth Saginaw River, in said Bay. . . Fixed.

Clinton River. Mouth of said river, Lake St. Clair. . . Fixed.

Point aux Barques. On said point, mouth of Saginaw Bay. . . Fixed.

Detour. At Detour, where River Sault Ste. Marie enters Lake Huron. . . Fixed.

White Fish Point. On said point, Lake Superior. . . Fixed.

Copper Harbor. At said harbor, Lake Superior. . . Fixed.

Eagle Harbor. In said harbor, Lake Superior. . . Fixed.

Manitou Island. On said island, Lake Superior. . . Fixed.

Grassy Island Beacon. On Grassy Island, in Detroit River. . . Fixed.

Mamajuda Beacon. On Mamajuda Shoals, in Detroit River. . . Fixed.

Skullagalee Rock. On Skullagalee Rock, Lake Michigan. . . Fixed.

FLOATING LIGHT. *Mackinaw Straits.* Tonnage 121. At the junction of Lakes Huron and Michigan, N. W. part of state of Michigan. One large lamp with 12 cylindrical wicks.

INDIANA.

Michigan City. S. end Lake Michigan. . . Fixed. Height of lantern above the sea, 60 feet.

ILLINOIS.

Chicago, and Beacon. S. bank Chicago River, Lake Michigan, and beacon on pier. . . Fixed.

Little Fort. In Little Fort Village, S. side of the river; S. W. shore of Lake Michigan. . . Fixed.

WISCONSIN.

Milwaukie, and Beacon. Mouth Milwaukee River, W. side Lake Michigan. . . Fixed.

Root River, (Racine.) Mouth Root River, W. side Lake Michigan. Lat. 42° 49' 33". Lon. 87° 40' 22". Revolving.

Sheboygan. Mouth of said river, W. side Lake Michigan. . . Fixed.

Manitowoc. Mouth of Manitowoc River, W. side of Lake Michigan. . . Fixed.

South Port. In South Port, on Warrington Island. . . Fixed.

Tail Point. On said point, near mouth of Fox River, Green Bay. . . Fixed.

Port Washington. At Port Washington, N. E. part. . . Fixed.

Port de Mort. On Plumb Island. . . Fixed.

TEXAS.

FLOATING LIGHT. *Galveston Bar.* Tonnage 145. On said bar, off Galveston. One lamp with 9 cylindrical wicks, 35 feet elevation.

COLLEGES IN THE UNITED STATES.

. It is now a little over two hundred years since the first college was founded in this country. At the end of the first century, the number had increased to only three — Harvard College in Massachusetts, the College of William and Mary in Virginia, and Yale College in Connecticut. The second century has witnessed an astonishing increase in the number of our colleges, as in the population, and in every other element of our national growth and prosperity. One college has been added, on an average, every year during the century, until the number in the United States, as contained in the following list, amounts to *one hundred and twenty*.

The number of students connected with the colleges in the United States as undergraduates, at the present time, is over *ten thousand*. If to these are added those connected with their preparatory and professional departments, the number rises to between twelve and fifteen thousand.

There are thirteen colleges in the New England States. Among these are some which may be denominated national institutions, deriving their students more or less from every state, and, sending out their influence to every part of the Union. They have sent out, from the first, about *twenty-one thousand* graduates, and are now graduating about *five hundred* students annually.

In the following notices of the colleges in the United States, we have set down such particulars as we are able to ascertain with sufficient certainty respecting each; although in respect to all of them, the account must necessarily be brief. Much the largest part of them have been founded, supported, and directed, by the clergy and other members of the Congregational and Presbyterian denominations. In regard to those which are under the direction of other denominations, the fact is always expressly mentioned. The number of colleges under the direction of the Baptists is 13; Methodists, 13; Episcopalians, 8; Roman Catholics, 11. Excepting in the case of the Roman Catholic colleges, and a few others at the south and west, the students enumerated, where only one number is given, are *undergraduates*, as distinguished from those in the preparatory or professional departments, and the instructors are those connected with the collegiate course. The number of volumes given as in the libraries generally includes the aggregate of all the books contained in the library of the college and in those established by societies among the students.

ALLEGHANY COLLEGE, PA.

Incorporated in 1817, and located at Meadville. It had 6 instructors, and 122 students in 1850. The library, of 8200 volumes, was mostly the donation of Rev. Dr. Bentley, of Salem, Ms. The college is under the direction of the Methodists. Commencement is on the first Wednesday in July. Rev. John Barker, D. D., is president.

AMHERST COLLEGE, MS.

This college is situated in Amherst, Hampshire co., about 8 miles east of Northampton. It was founded in 1821, and incorporated in 1825. It has three large brick buildings, four stories high, for students' rooms; and a fourth, comprising a spacious chapel, a library room, lecture and recitation rooms, &c. A beautiful building has recently been erected for the reception of the fine mineralogical and geological cabinets, collected by the labors and influence of Professor Hitchcock, now president of the college.

In mineralogy, nearly all the known species are represented by about 4600 specimens. In geology, there are 9300 specimens of American, and 4900 specimens of foreign rocks and fossils. In zoölogy, there are about 1800 specimens of 350 species of vertebrated animals, 5000 species of articulated animals; 200 species of radiated animals, and 6000 species of shells. The libraries contain about 16,000 volumes.

The philosophical apparatus was purchased chiefly in London, and is one of the most complete in the country. This college, besides its other endowments, enjoys the benefit of a fund of 50,000 dollars, five sixths of the income of which is appropriated to assist indigent students preparing for the ministry. The number of students of this class has, consequently, always been large. The faculty consists of the president, 7 professors, and 4 tutors. Alumni in 1850, 870. Commencement is on the second Thursday of August.

<i>Accessus.</i>	<i>Succession of Presidents.</i>	<i>Exitus.</i>
1821.	Rev. Zephaniah Swift Moore, D. D.	1823.
1823.	Rev. Heman Humphrey, D. D.	1845.
1845.	Rev. Edward Hitchcock, LL. D.	

AUGUSTA COLLEGE, KY.

Founded at Augusta, in 1825. It is under the direction of the Methodists. It had 4 instructors, and about 50 students in 1850. Volumes in the library, 2500. Commencement is on the Thursday after the first Wednesday in August. Rev. J. Tomlinson, D. D., is president.

AUSTIN COLLEGE, TS.

This college was incorporated in 1850. It is located at Huntville, and is in vigorous operation. An institution has been started, also, at Independence, in this new state, called *Baylor University*. Whether it has been incorporated or not we do not know. It has a small library of 300 volumes.

BACON COLLEGE, KY.

This college was founded in 1836, and located at Harrodsburg. It has 9 instructors, and a library of about 1800 volumes. The number of students in 1850 was 217, including those in the primary department. Commencement is in the first week in September. Samuel Hatch, A. M., is president.

BATON ROUGE COLLEGE, LA.

Founded at Baton Rouge, in 1838. Instructors, 4; students in 1850, 45; library, about 1000 volumes. Commencement in December. R. H. Ranney, president.

BELOIT COLLEGE, WN.

This is an infant institution, established three or four years since, at the flourishing town of Beloit, near the southern line of the state, on the route from Chicago to Galena. It has a charter from the legislature, conferring full university powers. One fine college edifice, on a beautiful situation, has been erected. The college has 3 instructors. No class has yet graduated. Library, 2000 volumes. Rev. Aaron L. Chapin is president.

BETHANY COLLEGE, VA.

This institution was founded in 1840, and is located in Bethany. It had 6 instructors, and 113 students, in 1850. Its commencement is in the first week in July. The president of the faculty is Alexander Campbell, A. M. The library contains about 3500 volumes.

BOWDOIN COLLEGE, ME.

This institution, first incorporated by the legislature of Massachusetts in 1794, is situated in Brunswick, Cumberland co., about 25 miles north of Portland, and about 35 miles south of Augusta. The name of Bowdoin was given to the college in honor of one of the earliest and most distinguished governors of Massachusetts; and the institution has since been indebted to members of the Bowdoin family for liberal benefactions; especially to the Hon. James Bowdoin, of Boston, who gave to it 6000 acres of land in the town of Lisbon, and from whose estates a large legacy has, within a few years, been secured to the college. On the separation of Maine from Massachusetts, the trustees surrendered its original charter, and received a new one from the State of Maine, with a liberal annuity in aid of its funds. The legislative government of the college is committed to a board of 13 trustees, and a board of overseers of 45 members, their vacancies being filled by the respective boards, with a negative on the part of the overseers on elections in the other board. The faculty consists of the president and 7 professors. The instruction is given chiefly by permanent officers. The college buildings are pleasantly situated upon a plain, with a grove of pines in the rear. Two are occupied as dormitories by the students; one, recently erected upon a beautiful model, for a chapel, library room, &c.; and others are occupied for lecture rooms, the Bowdoin gallery of paintings, and other purposes. The public libraries contain about 25,000 volumes. A flourishing medical school, with 6 professors and lecturers, is attached to the college. Number of alumni in 1850, 997. Commencement on the first Wednesday in September.

1839.	Rev. Leonard Woods, Jr., D. D.	

BROWN UNIVERSITY, R. I.

This institution (originally founded at Warren in 1764, and removed to Providence in 1770) takes its name from Nicholas Brown, its most munificent benefactor. It is under the direction of the Baptists. The buildings, furnishing elegant and ample accommodations, are situated upon the highest part of the city. The library, which is in Manning Hall, is arranged in a very perfect manner, and contains about 23,000 volumes. The libraries of two societies among the students contain 6000 or 7000 volumes more. Rhode Island Hall contains the cabinet, the chemical and philosophical apparatus, and spacious lecture rooms for the accommodation of the departments of mechanical and physical science. University Hall and Hope College are large edifices for the accommodation of students. There has been established in this university, in connection with the regular collegiate course, an English and scientific course, designed for the benefit of those who do not propose to enter either of the learned professions, but who desire to prepare themselves, by a thorough education, for some of the more active employments of life. The course embraces every department of English study pursued in the university, together with the several branches of mathematical and physical science, giving the student all the advantages of the library and cabinet, and of the courses of lectures on chemistry, natural philosophy, physics, intellectual philosophy, and the evidences of Christianity. This course is arranged for a residence of either one or two years. The faculty consists of the president and 6 professors. Number of students in 1850, 150; alumni, 1725. Commencement is on the first Wednesday in September.

<i>Accessus.</i>	<i>Succession of Presidents.</i>	<i>Exitus.</i>

BURLINGTON COLLEGE, N. J.

Located at Burlington, under the direction of the Protestant Episcopal Church. Founded in 1846. Students in 1850, 118. Library, 1200 volumes. Rt. Rev. George W. Doane, D. D., LL. D., president.

CENTRE COLLEGE, KY.

This institution is located at Danville. It was incorporated in 1818 or 1819. It is managed by a board of 11 trustees, appointed from time to time by the Presbyterian synod of Kentucky. The legislature gave up all control of its concerns, and surrendered it to the synod, in consideration of their engaging to endow the institution without legislative assistance. Connected with the college is a grammar school. There is also under the direction of the same board an institution for the deaf and dumb, which has been endowed by Congress. The college has five instructors. Students in 1850, 114; alumni, 307. Libraries, 5500 volumes. Commencement is on the last Thursday in June. Rev. John C. Young, D. D., is president.

CENTENARY COLLEGE, LA.

This institution was founded in 1841, and located at Jackson. It is under the direction of the Methodists. It has 5 instructors. The number of students in 1850 was 67. It has a library of about 3000 volumes. Commencement is on the last Wednesday in July. Rev. R. H. Rivers is president.

CHARLESTON COLLEGE, S. C.

Founded in 1785, and incorporated anew in 1791; located at Charleston. This college was again reorganized Dec. 20, 1837, by an act of the legislature, transferring all the college property to the city council of Charleston, and binding the city to maintain the college. In 1850 the college had 6 instructors, 70 students, and 124 alumni. The library contains about 2000 volumes. The commencement is on the Tuesday after the fourth Monday in March. William P. Finley, A. M., is president.

CINCINNATI COLLEGE, O.

This college was founded at Cincinnati in 1819. It had 84 students in 1850. Its commencement is on the last Monday in June.

COLLEGE OF NEW JERSEY, N. J.

This institution was founded in 1746, at Elizabethtown. From 1748 to 1757 it was at Newark. It was then removed to Princeton, as its permanent locality. In the old college edifice, which is of stone the British troops took refuge in 1777, and were dislodged therefrom by General Washington.

A great number of distinguished men have been educated at this college. It was established by the synod of New York, with a special view of raising up ministers of the gospel. It has over 3000 alumni, nearly 600 of whom have entered the ministry. Students in 1850, 243; instructors, 15; libraries, 16,000 volumes. Commencement is on the last Wednesday in June.

COLLEGE OF THE HOLY CROSS, MS.

This institution was founded in 1843, by the Roman Catholics. It has not obtained an act of incorporation. It is located in Worcester, on a beautifully elevated site, about two miles from the town. One large brick edifice has been erected for the accommodation of the students. All who are admitted are required to observe the rites of the Catholic church. A large part of the students are quite young. Rev. J. Early, an ecclesiastic of the order of Jesuits, is at the head of the institution. Fourteen teachers are employed, and the number of pupils is about 120. Volumes in the library, 4220. Commencement the last week in August.

COLUMBIA COLLEGE, N. Y.

This institution, in the city of New York, was founded by royal charter, in 1754, under the name of *King's College*, by which title it continued to be known until the revolution. During the period of the war, from 1776 to 1784, the business of instruction was necessarily suspended, and the college edifice was appropriated to the purposes of a military hospital. In 1784, an act was passed by the legislature of New York, confirming the original charter, and changing the name to *Columbia College*. The college is under the direction of the Episcopalians. It has 8 instructors, 17,000 volumes in the libraries, 130 students in 1850, and 1409 alumni.

COLUMBIAN COLLEGE, D. C.

This college is located in the city of Washington. It was incorporated by Congress in 1821, and is under the direction of the Baptists. The buildings are erected upon an elevated situation, north of the city, about one mile from the president's mansion, and two and a half from the Capitol. Congress has formerly given pecuniary grants to this college, amounting to \$25,000. A classical and preparatory school is connected with the college. The trustees are elected triennially. The college has 10 instructors, 55 students in 1850, and about 200 alumni. Libraries, 6200 volumes. On occasions of great interest, the students are permitted to hear the debates in Congress, and arguments before the Supreme Court.

Connected with Columbian College is a medical department, which was organized in 1825. It has 6 professors, and has graduated about 80 students. One student from each of the states and territories is admitted free of charge, excepting \$5 matriculation fee, and a graduating fee of \$20. The lectures commence on the first Monday of November. Joel S. Bacon, D. D., is president of the college.

CUMBERLAND UNIVERSITY, TE.

This institution was founded in 1844. It is located at Lebanon. It has 9 instructors. In 1850 it had about 50 students, and 5000 volumes in the libraries. Commencement is on the last Friday in July. T. C. Anderson, A. M., is president.

DARTMOUTH COLLEGE, N. H.

This college was chartered by royal grant in 1769. It is situated in the town of Hanover, about half a mile east of Connecticut River. The buildings are eight in number, all brick excepting two. The faculty consists of the president and 9 professors. There is likewise a medical department with 5 professors. The library contains about 22,500 volumes. The institution is one of the oldest and most flourishing in the United States. The number of its alumni in 1849 was 2558; undergraduates in 1850, 196; medical graduates, 775. Commencement is on the last Thursday in July.

DAVIDSON COLLEGE, N. C.

Founded in 1838, and located in Mecklenburg co. Three instructors in 1850, 44 students, and 3000 volumes in the library. Commencement is on the last Thursday in June. Rev. Samuel Williamson, D. D., is president.

DELAWARE COLLEGE, DE.

This college, which is the only one in the state, was incorporated in 1833. It is located at Newark. It has a library of 8700 volumes; instructors, 6; students in 1850, 45; alumni, 71. Commencement is on the third Wednesday in July. The president is Rev. W. S. F. Graham, A. M.

DICKENSON COLLEGE, PA.

This college, which is under the direction of the Methodists, was founded in 1783, and is located at Carlisle. In numerous instances it has received pecuniary assistance from the legislature, and once \$14,000 by a lottery. Its libraries contain about 14,500 volumes. It had, in 1850, 10 instructors, 142 students, 579 alumni. Commencement is on the second Thursday in July. President, Rev. Jesse T. Peck, D. D.

EMORY COLLEGE, GA.

Founded in 1837. Under the direction of the Methodists. Located at Oxford. Had 7 instructors and 145 students in 1850. Alumni, 112. Volumes in the library, 2700. Commencement on the Wednesday after the third Monday in July. President, Rev. George F. Pierce, D. D.

EMORY AND HENRY COLLEGE, VA.

This institution is located at Glade Spring, in Washington co. It was incorporated in 1839, and is under the direction of the Methodists. Instructors in 1850, 4; students, 55; libraries, about 8000 volumes. Commencement is on the last Wednesday of June. Charles Collins, A. M., president.

FRANKLIN COLLEGE, GA.

This institution was incorporated in 1788, as the *University of Georgia*. It was established at Athens in 1802. Its original endowment was 30,000 acres of land. It languished for want of funds until 1816, when the lands were sold, and the proceeds, amounting to \$100,000, were invested in productive stocks. One of the buildings was burnt in 1830. It was rebuilt by the state, which has also furnished means for procuring a valuable library. The college has two buildings for the accommodation of students, each 120 feet by 40, and three stories high; also a third building for public purposes. In 1850 it had 8 instructors, 125 students, and 593 alumni. The libraries contain 13,600 volumes. Commencement is on the first Wednesday in August. Rev. Alonzo Church, D. D., is the president.

FRANKLIN COLLEGE, LA.

Founded in 1839. Located at Opelousas. Has 4 instructors; 70 students in 1850. Commencement during the first week in November. Othon Boudet, president.

FRANKLIN COLLEGE, TE.

This college is situated in the vicinity of Nashville. It was established in 1845. It has 6 instructors, and in 1850 had 75 students; libraries, 3000 volumes. Commencement on the third Wednesday in October. Tolbert Fanning, A. M., president.

FRANKLIN COLLEGE, O.

Founded in 1825, and located at New Athens. Instructors, 4; students in 1850, 80; alumni, 90, libraries, 2200 volumes. Commencement is on the last Wednesday in September. William Burnett is president.

GENEVA COLLEGE, N. Y.

This college was founded in 1825, at Geneva, one of the pleasantest villages in the western part of New York. It is under the direction of the Episcopalians. Instructors, 5; students in 1850, 42; alumni, 131; libraries, 5400 volumes. Commencement, first Wednesday in August. The president is Rev. Benjamin Hale, D. D.

GEORGETOWN COLLEGE, D. C.

This is a Roman Catholic college, under the direction of the incorporated Catholic clergy of Maryland. It is the oldest Papal seminary in the United States. It was first incorporated in 1792, and authorized to confer degrees, by act of Congress, in 1815. Volumes in the libraries, 26,100. In 1850 it had 11 instructors, 180 students, and 100 alumni. Commencement is near the last of July. Rev. James Ryder, D. D., is president.

GEORGETOWN COLLEGE, KY.

Founded at Georgetown in 1840. This institution is under the direction of the Baptists. The number of students in 1850 was 77, with about the same number of alumni. The libraries have 7280 volumes. Commencement is on the last Thursday in June. Rev. J. L. Reynolds, D. D., is president.

GIRARD COLLEGE, PA.

See an account of this institution under *Philadelphia*.

GRANVILLE COLLEGE, O.

Founded at Granville in 1832. Under the direction of the Baptists. Had 5 instructors and 40 students in 1850; 3000 volumes in the libraries. Commencement is on the second Wednesday in July. Rev. Silas Bailey, D. D., is president.

HAMILTON COLLEGE, N. Y.

This institution is located at Clinton, Oneida co. It was established in 1812. The college buildings, three in number, stand in a line on the summit of a hill commanding an extensive prospect of rich and picturesque scenery. The number of instructors is 10; students in 1850, 149; alumni, 658; volumes in the libraries, 10,300. Commencement, fourth Wednesday of July.

<i>Accessus.</i>	<i>Succession of Presidents.</i>	<i>Exitus.</i>

1839.	Rev. Simeon North, LL. D.	

HAMPDEN-SIDNEY COLLEGE, VA.

This institution is in Prince Edward co., 80 miles south-west of Richmond. It was incorporated, with a very liberal charter, in 1783. It has 1500 alumni; 6 instructors and 25 students in 1850; libraries, 8000 volumes. A preparatory academy is annexed to the college. Commencement is on the Wednesday before the 4th of July. Rev. Lewis S. Green, D. D., is president.

HANOVER COLLEGE, IA.

This college was founded at South Hanover, in 1829. This place is in Jefferson co., six miles below Madison, on the Ohio River. There is a college edifice 100 feet by 40, and three stories high. There are also other small buildings erected for dormitories. The Indiana Theological Seminary is connected with this college. The college has six instructors. In 1850, it had 38 students. There were 16 in the theological department. The number of alumni is about 100. The libraries contain 4700 volumes. T. E. Thomas is president.

HARVARD UNIVERSITY, MS.

This university, situated at Cambridge, Ms., three miles out of Boston, is the oldest college in the United States. It was incorporated in 1638, and named *Harvard College*, from the Rev. John Harvard, its principal founder. Its endowments have been greatly increased by donations from the state, and by numerous acts of private bounty, so that with regard to funds, buildings, library, professorships, and literary advantages in general, it is the most amply furnished institution of the kind in America. Its alumni, in 1850, were 6272. It comprises a department for undergraduates, and one for students preparing for each of the learned professions, theology, law, and medicine. There is also connected with the university a scientific school, founded in 1848 by the Hon. Abbott Lawrence, with a fund of \$50,000, to which handsome additions have since been made, which affords instruction to young men preparing for various departments of business without a classical course. The principal college buildings are, University Hall, an elegant granite edifice, containing the chapel, lecture rooms, &c.; Gore Hall, a granite edifice, of great architectural beauty, containing the library of 84,200 volumes;

Harvard Hall, a brick edifice, containing the philosophical apparatus, mineralogical cabinet, &c.; four other brick edifices, called Massachusetts, Hollis, Stoughton, and Holworthy Halls, each four stories high, containing rooms for the undergraduates; Divinity Hall, a large brick edifice, for the accommodation of theological students; and Holden Chapel, containing the anatomical museum, chemical laboratory, and lecture rooms. There is also an astronomical observatory, finely suited to its purpose, in which is mounted one of the largest and most powerful telescopes in the world.

The legislative government is intrusted to a corporation, consisting of the president of the university and six fellows, and to a board of overseers, composed of the president, the governor and lieutenant governor of the state, the members of the executive council and of the senate, and the speaker of the House of Representatives, *ex officio*, together with 30 others, 15 clergymen and 15 laymen, elected for the purpose. The faculty of instruction, including those in the professional and scientific departments, consists of the president, 28 professors, 5 tutors, and several instructors; and to such of these as are connected with the classical department the immediate government of the college is intrusted.

The course of instruction for undergraduates, as in American colleges generally, occupies four years; and that of the theological school, three years; that of the law school, three years for such of the students as are graduates of some college, and five for such as are not. The students of the theological school are divided into three classes — senior, middle, and junior. Graduates of any college, of good moral character, may be admitted to share all the benefits of this department, to whom the tuition, as in the theological seminaries of the country generally, is afforded free of expense, and further assistance is given to such as are indigent. The law school was established in 1817. Candidates for admission must be graduates of some college, or qualified according to the rules of court to become students at law. The lectures for the medical students are delivered in Boston, at the Massachusetts Medical College, which is a spacious brick edifice, and contains a medical library of about 4000 volumes. They commence annually on the first Wednesday in November, and continue three months. In order to obtain a degree of M. D., the student is required to attend two courses of lectures, and to spend three years, including the time thus occupied, under the instruction of some regular practitioner.

In 1850, the whole number of alumni was 6,203. The number of undergraduates was 293; theological students, 23; law students, 102; medical students, 117; total, 535. The college commencement is on the third Wednesday in July.

HEIDELBURG COLLEGE, O.

This is a new institution, founded in 1850, by the German Reformed Synod of Ohio. It is located at a place called Tiffin City. The institution is to embrace a theological department. A plan has been adopted for a building four stories high, and 104 feet in length, to be erected at a cost not exceeding \$10,000.

HOWARD COLLEGE, AA.

This institution is at Marion. It was founded in 1841, and is under the direction of the Baptists. Instructors, 6; students in 1850, 40. It has a library of about 1500 volumes. Commencement is on the 4th Thursday in July. S. S. Sherman president.

ILLINOIS COLLEGE, IS.

This college was founded in 1829. It is located at Jacksonville, which is about 30 miles west of Springfield, the capital of the state. The college buildings have a beautifully-elevated situation, about a mile from the centre of the village, overlooking the surrounding flat country to a great extent. The number of instructors is 7; the number of students in 1850 was 34, and of the alumni, 93. It has in its libraries about 4000 volumes. Commencement is on the second Thursday in July. Rev. Julian M. Sturtevant, D. D., is the president.

INDIANA STATE UNIVERSITY, IA.

This institution is located at Bloomington. It was founded in 1816. It is under the direction of the Episcopalians. Valuable reservations of land were provided for the benefit of this college, which, when sold, it was supposed, would produce a fund of \$60,000 or more. Two college buildings have been erected, one 40 feet by 30, the other 75 by 55, and three stories high. The college has a pleasant situation. The number of instructors is 4. The number of students in 1850 was 97, and the whole number of alumni 108. The libraries contain 5000 volumes. Commencement is on the first Wednesday after the second Monday in August. The president is Rev. Andrew Wylie, D. D.

INDIANA ASBURY UNIVERSITY, IA.

This institution is under the direction of the Methodists. It was founded in 1839, and is located at Greencastle. It has 7 instructors. Students in 1850, 72; alumni, 64; libraries, 2700 volumes. Commencement is on the third Wednesday in July. Rev. L. W. Berry, D. D., is president.

IOWA COLLEGE, IO.

Located at Davenport, Iowa, on the Mississippi River, nearly opposite to the mouth of Rock River. The preparatory department was opened November, 1848, and the first college class, consisting of six young men, was formed in August, 1850. One edifice of brick, 35 feet by 50, with 18 feet walls, has been erected. This is designed ultimately for the college chapel. Professors, 2, besides the principal of the preparatory department.

JACKSON COLLEGE, TE.

Founded in 1833, and located at Columbia. Instructors, 5; students in 1850, 26; alumni, 46; volumes in the library, 2500. Commencement is on St. John's day, June 24. B. H. Ragsdale president.

JEFFERSON COLLEGE, PA.

This institution was incorporated in 1802. It is located at Canonsburg, Washington co., 18 miles south-west of Pittsburg. It has 8 instructors, 197 students, and about 1000 alumni. Libraries, 10,000 volumes. Agreeably to a special act of the legislature, provision is made for a thorough English and mercantile education, to qualify persons for teaching common schools, in which a preference is given, in respect to gratuitous instruction, to the sons of citizens of Pennsylvania. Commencement is on the second Wednesday in June. This college has a flourishing medical department established at Philadelphia, which has given diplomas to over 1800 graduates. It has seven professors. Students attending the lectures in 1850, 516. Lectures commence first Monday in November. Rev. A. B. Brown, D. D., is president of the college.

KENYON COLLEGE, O.

This college is located at Gambier, Knox co. It was founded in 1827, and is under the direction of the Episcopalians. A diocesan theological seminary is connected with it. About \$13,000 was collected in England for the support of this college. Its libraries contain about 7500 volumes. Instructors, 5; students in 1850, 50; alumni, 160. Commencement is on the first Wednesday in August. Rev. Sherlock A. Bronson, D. D., is president.

KNOX COLLEGE, IS.

This college is located at Galesburg, about 50 miles west of Peoria. The township was originally purchased with a view to the establishment and endowment of the college. The college was opened in 1837. In 1850 it had 5 instructors and 58 students. It has an academy, or preparatory department, with a considerable number of students. It has about 3000 volumes in its libraries. Commencement is on the fourth Wednesday in June. Rev. Jonathan Blanchard is president.

KNOXVILLE COLLEGE, TE.

This institution is at Knoxville, in East Tennessee. It was founded in 1792. It has 5 instructors. The number of students in 1850 was 57, and of alumni 122. The libraries contain 4500 volumes. Commencement is on the first Wednesday in August. Joseph Estabrook, A. M., is the president.

LAFAYETTE COLLEGE, PA.

Incorporated in 1826, at Easton, in Northampton co., on the Delaware River. It had, in 1850, 7 instructors and 82 students. Libraries, 5400 volumes. Commencement is on the third Wednesday in September. Rev. George Junkin, D. D., is president.

LA GRANGE COLLEGE, AA.

Founded at La Grange, in 1831. This college is under the direction of the Methodists. In 1850 it had 6 instructors, 76 students, and 130 alumni. Library, 3000 volumes. Its commencement is on the first Wednesday in June. Edward Wadsworth president.

MADISON UNIVERSITY, N. Y.

This institution is located at Hamilton, Madison co. It was incorporated in 1819, under the name of the Hamilton Literary and Theological Seminary. It is under the direction of the Baptists, and was originally designed as a school for the instruction of young men preparing for the ministry in that denomination, under the patronage of their Education Society. It has since been elevated into a college, having both a preparatory school and a theological department connected with it. It has 7 instructors in the collegiate, 3 in the theological, and 1 in the preparatory department. Students in 1850—collegiate 93, theological 22, preparatory 25; alumni, 200; libraries, 7000 volumes. Commencement third Wednesday in August.

MARIETTA COLLEGE, O.

This college was founded in 1833, at Marietta, on the Ohio River. Like the college on the Western Reserve, it was established mainly to meet the wants of the country for competent teachers and ministers of the gospel. Efforts have recently been made, with success, to increase the funds. The number of instructors is 6; number of students in 1850, 55; alumni, 113, 44 of whom have already entered the ministry. The libraries contain 6400 volumes. Commencement is on the last Wednesday in July. Rev. Henry Smith, D. D., is president.

McKENDREE COLLEGE, IS.

Founded at Lebanon, in 1835. Under the direction of the Methodists. It had 4 instructors and about 60 students in 1850. Libraries, 1800 volumes. Commencement is on the second Wednesday in July. The president is Rev. A. W. Cummings.

MARSHALL COLLEGE, PA.

Founded in 1836, and located at Mercersburg. It has 11 instructors. The number of students in 1850 was 81; alumni, 94; volumes in the libraries, about 7000. Commencement is on the last Wednesday in August. The president is Rev. John W. Nevin, D. D.

MASONIC COLLEGE, MO.

This college is located at Palmyra, in Marion co. It was established in 1831. It has 5 instructors and about 50 students. It has about 2500 volumes in its library. Commencement is on the last Thursday in September. J. Worthington Smith president.

MERCER UNIVERSITY, GA.

This institution is under the direction of the Baptists. It was founded in 1838, and located at Penfield. There are about 3000 volumes in its library. Instructors, 6; students in 1850, 61. Commencement on the last Wednesday in July. Rev. J. L. Dagg, D. D., is president.

MIAMI UNIVERSITY, O.

This institution is at Oxford, in Butler co., adjoining the state of Indiana. It was founded in 1809, and went into operation in 1824. The lands of the township of Oxford, a territory six miles square, and containing a population of several thousand inhabitants, were owned in fee simple by the university. The annual revenue of the institution is therefore large, and continually increasing. The location is represented as delightful. The number of instructors is 6; the number of students in 1850, 66; and of alumni, 343. There are about 7000 volumes in the libraries. Commencement is on the second Thursday in August. Rev. E. D. Macmaster, D. D., president.

MIDDLEBURY COLLEGE, VT.

This college was incorporated in 1800. It is pleasantly situated in Middlebury, 32 miles south of Burlington, in Addison co. The funds of the institution have been derived entirely from individual donations. The college buildings are two in number; one of wood, three stories high, containing the chapel, recitation rooms, and rooms for students; the other a spacious edifice of stone, 108 feet by 40, four stories high, containing 48 rooms for students. The libraries contain about 8500 volumes. The cabinet contains 2700 specimens in zoölogy, 400 in botany, 1500 in mineralogy, 1750 in geology. The faculty consists of the president, four professors, and one tutor. Alumni in 1850, 877. Commencement, third Wednesday in August.

<i>Accessus.</i>	<i>Succession of Presidents.</i>	<i>Exitus.</i>
1800.	Rev. Jeremiah Atwater, D. D.	1809.
1810.	Rev. Henry Davis, D. D.	1817.
1818.	Rev. Joshua Bates, D. D.	1840.
1841.	Rev. Benjamin Labaree, D. D.	

MISSOURI UNIVERSITY, MO.

This institution, founded in 1840, is located at Columbia. It numbers 12 instructors, and about 50 students; 26 had graduated in 1850. Library about 1200 volumes. Commencement is on the fourth Thursday in August. Its president is John H. Lathrop, A. M.

MISSISSIPPI COLLEGE, MI.

This college is located at Clinton. Our information respecting it is not full. Commencement is on the last Thursday in July. Rev. C. Parrish president.

MOUNT ST. MARY'S COLLEGE, MD.

This institution is under the direction of the Roman Catholics. It was established in 1809, by Dr. Dubois, afterwards Roman Catholic bishop of New York. In 1830 it was incorporated as a college. It is situated in a romantic spot at the foot of a branch of the Blue Ridge Mountains, two miles from the village of Emmetsburg, in Frederick co., 50 miles from Baltimore, and 60 from Washington. The number of instructors given as connected with the institution is 24, a small part of whom only are professors. In 1850 the number of students was 126; and of alumni, 137. The library contains 4000 volumes. Commencement is on the last Wednesday in June. John McCaffrey, A. M., is the president.

NORWICH UNIVERSITY, VT.

This institution, located in the town of Norwich, on Connecticut River, opposite to Dartmouth College, was first opened in 1820 as the "American Literary, Scientific, and Military Academy." Subsequently its character was changed to that of a college, under the patronage of the denomination of Universalists. The building is of brick, 100 feet by 40, four stories high, containing 3 lecture rooms, and 42 rooms for students. Volumes in the library, about 1400. Students in 1850, 59; alumni, 100. The president is Rev. Edward Bowers. Commencement, Thursday next after third Wednesday in August.

OAKLAND COLLEGE, MI.

Founded at Oakland, in 1830. Instructors, 6; students in 1850, 64; alumni, 83; 6000 volumes in the libraries. Commencement is on the first Thursday in April. Rev. Robert L. Stanton is president.

OBERLIN COLLEGE, O.

This institution was founded at Oberlin, in 1834. In 1850 it had 66 students. It has a female department, the pupils of which are not included in the above enumeration. They may, however, pursue the same course, and be admitted to the same college honors with the young men. The number of instructors employed is 12; the number of alumni, 199, of whom 130 are reported as having entered the ministry. The libraries contain 4200 volumes. Commencement is on the fourth Wednesday in August.

OGLETHORPE UNIVERSITY, GA.

This institution was incorporated in 1836. It is located at Milledgeville. It had 5 instructors in 1850, and 45 students. Its library has about 4500 volumes. Commencement is on the Wednesday succeeding the second Monday in November. Samuel K. Talmage is president.

OHIO UNIVERSITY, O.

This institution was founded in 1804. It is located at Athens, and is supported mainly by the income accruing from two townships of land, given by Congress for that purpose. It has 5 instructors and 145 alumni. In 1850 it had only 18 students. The libraries contain 5500 volumes. Commencement is on the first Wednesday in August. Rev. Alfred Ryors, D. D., is the president.

OHIO WESLEYAN UNIVERSITY, O.

This institution is located at Delaware. It was founded in 1842, and is under the direction of the Methodists. It has 6 instructors, and in 1850 had 38 students. Libraries, 2800 volumes. Commencement is on the last Wednesday in July. Rev. Edward Thompson, D. D., is president.

PENNSYLVANIA COLLEGE, PA.

This institution is located at Gettysburg, in Adams co. It is under the direction of the Evangelical Lutheran denomination, who have also a theological seminary at the same place. It was incorporated in 1832. In 1850 it had 6 instructors and 76 students. It had graduated 146. It has, likewise, a department for preparatory instruction, with quite a large number of pupils. Its libraries contain about 6000 volumes. A medical faculty connected with this college was established at Philadelphia in 1839. It is furnished with 7 professors, and has commodious buildings upon Filbert, above Eleventh Street. The medical lectures commence in the middle of October. The degree of M. D. is conferred by the medical faculty at Philadelphia, as authorized by a special act of the

legislature. The college commencement is on the third Thursday in September. Rev. H. L. Baugher, D. D., is president.

RANDOLPH MACON COLLEGE, VA.

This institution is located in Mecklenburg co., 88 miles south-west of Richmond. It was founded in 1832. It is under the direction of the Methodists. There is a preparatory school connected with it. It is reported as having 11 instructors in 1850, 145 students, and 124 alumni. Libraries, 6000 volumes. Commencement is on the second Wednesday of June. Rev. A. W. Smith is president.

RECTOR COLLEGE, VA.

Under the direction of the Baptists. Founded in 1839, and located in Taylor co. Instructors in 1850, 3; students, 50; library, 2500 volumes. Commencement, the last Wednesday in September. Charles Wheeler, A. M., president.

RICHMOND COLLEGE, VA.

This institution, located at Richmond, was founded in 1832. It is under the direction of the Baptists. In 1850, it had 6 instructors, and 72 students, with a library of 1200 volumes. Commencement is on the third Wednesday in December. Rev. Robert Ryland is president.

RUTGERS COLLEGE, N. J.

This institution is established at New Brunswick, 33 miles from New York and 56 from Philadelphia. It was founded in 1770, and named after a distinguished benefactor. It is under the direction of the Reformed Dutch Church. A theological seminary is connected with it, and likewise a flourishing grammar school. The principal college building is of stone, three stories in height, devoted to public purposes. The students generally lodge with the families of the village. There were 9 instructors, and 76 students, in 1850; alumni, 513; libraries, 1600 volumes. Commencement is on the fourth Wednesday in July. Theodore Frelinghuysen, LL. D., is the president.

ST. CHARLES'S COLLEGE, LA

This college is at Grand Coteau, and was established in 1838, by the Roman Catholics. Its instructors in all departments number 21, and the students in 1850, 103. It has about 4000 volumes in its libraries. Its commencement is about the middle of July. President, Thomas H. Soller, S. J.

ST. CHARLES'S COLLEGE, MO.

Established at St. Charles, in 1837. This college is under the direction of the Methodists. The number of students was 20 in 1850, and the number of instructors 3. Library, 900 volumes. The president is John W. Robinson.

ST. JAMES'S COLLEGE, MD.

Established in 1844, and located near Hagerstown. It is under the direction of the Episcopalians. It has 10 instructors; students in 1850, 32; libraries, 3500 volumes. Commencement on the last Thursday in July. Rev. John B. Kerfoot, D. D., is president.

ST. JOHN'S COLLEGE, MD.

This institution, located at Annapolis, was incorporated in 1784, and received from the state \$1750 per annum, on condition that the city should convey to the trustees 34 acres of land, the present site of the institution, which had been given to the corporation by Lord Baltimore. It was opened November 10, 1789, by Rev. William Smith, D. D., as president *pro tempore*. The first commencement was in 1793. In the high party excitements of 1805, the original grant, above referred to, was annulled. The state has since, however, made appropriations for its support. The buildings are on an elevated site, and command an extensive and delightful prospect. The college has 6 instructors; students in 1850, 30; volumes in the library, 3292. Among its alumni are many of the distinguished men of the state. The following is the list of presidents: Rev. John McDowell, LL. D., Rev. Henry L. Davis, D. D., Rev. William Rafferty, D. D., and Rev. Hector Humphreys, D. D., who is now in office.

ST. JOHN'S COLLEGE, N. Y.

Established at Fordham, by the Roman Catholics, in 1841. A. J. Thebaud, S. J., president. It has 16 teachers, and 110 students; libraries, 9500 volumes. Commencement, second or third week in July.

ST. JOSEPH'S COLLEGE, KY.

St. Joseph's is a Roman Catholic college, located at Bardstown. It was founded in 1819. It has 17 teachers, who, in 1850, had charge of 126 pupils in all the departments. The number of its

alumni is about 150. The library contains about 3000 volumes. Commencement is on the last Thursday in July. Rev. P. J. Verhaegen is at the head of the institution.

ST. MARY'S COLLEGE, MD.

This college was founded in 1799, and incorporated in 1804. It is located in Baltimore, and is a Roman Catholic institution. Library, 12,000 volumes; instructors, 20; students in 1850, 122; alumni, 187. Commencement is on the third Tuesday in July. Rev. O. L. Jenkins is the president.

ST. PAUL'S COLLEGE, N. Y.

Founded in 1837; located at Flushing; has 11 instructors, 29 students in 1850, and 380 alumni; libraries, about 3000 volumes. Commencement on the last Thursday in June. This college is under the direction of the Episcopalians.

ST. PHILIP'S COLLEGE, MN.

This is a Roman Catholic college, located in the vicinity of Detroit. It was founded in 1839. It has 4 instructors; in 1850 it had 30 students. Its library contains about 3000 volumes. Commencement is on the first Monday in October. President, ——— Bowers.

ST. VINCENT'S COLLEGE, MO.

Founded in 1843. Located at Cape Girardeau. Has 12 instructors, and had 90 students in 1850. Has a library of 5000 volumes. Its commencement is on the last Thursday in July. Rev. R. Hensley is president.

ST. XAVIER COLLEGE, O.

Founded by the Roman Catholics, at Cincinnati, in 1840. It has 18 instructors, 70 students, including all departments, and 220 alumni; library, 5600 volumes. Commencement is on the 15th of July. J. De Blicck president.

SHELBY COLLEGE, KY.

This college is at Shelbyville. It has 4 instructors; the number of students in 1850 was 93. It has a library of 4000 volumes. Rev. W. J. Waller, M. D., is president.

SHURTLEFF COLLEGE, IS.

Founded in 1835, at Upper Alton, under the direction of the Baptists. It has 6 instructors; the number of students is small; about 1600 volumes in the library. Commencement is on the fourth Thursday in July. Rev. N. N. Wood, D. D., is president.

SOUTH CAROLINA COLLEGE, S. C.

This institution was founded in 1804, at Columbia. It enjoys the patronage of the state. The buildings, library, and cabinets cost originally \$154,234. Between 1824 and 1834, the legislative appropriations amounted to \$120,000. The college has 8 instructors. The number of students in 1850 was 209. The libraries contain about 18,500 volumes. Commencement is on the first Monday in December. William C. Preston, LL. D., is president.

SPRING HILL COLLEGE, AA.

This institution, located at Spring Hill, is under the direction of the Roman Catholics. It was founded in 1830. It had 12 instructors and 70 students in 1850; about 4000 volumes in the library. Its commencement is in the first week in February. John Bazin president.

TRANSYLVANIA UNIVERSITY, KY.

This institution is located at Lexington, which is nearly in the centre of the valley of the Mississippi. It was founded in 1798. The buildings stand upon an eminence, a little distance from the city. The libraries contain about 14,000 volumes. The institution has 7 instructors. In 1850, the number of students was 50, and the number of alumni 610. The commencement is on the Wednesday before the third Friday in August. Rev. James B. Dodd is president.

TRINITY COLLEGE, CT.

This college is under the direction of the Protestant Episcopal Church. It was incorporated in 1823. It is pleasantly situated in the suburbs of the city of Hartford, about a mile from the State House, and has three handsome stone edifices, — in one of which is the chapel, — named Seabury Hall, Jarvis Hall and Brownell Hall. The college grounds include 14 acres. Libraries, 9000 vol-

umes. Students in 1850, 66; alumni, 257; faculty, the president and 6 professors. Commencement is on the first Thursday in August.

<i>Accessus.</i>	<i>Succession of Presidents.</i>	<i>Exitus.</i>
1824.	Rt. Rev. Thomas C. Brownell, D. D.	1831.
1831.	Rev. Nathaniel S. Wheaton, D. D.	1837.
1837.	Rev. Silas Totten, D. D.	
	Rev. John Williams, D. D.	

TUSCULUM COLLEGE, TE.

This college was founded in 1794, at Greenville. It has but 2 instructors at present. The number of its alumni in 1850 was 110, and of students 41; volumes in the library, 3000. Commencement is on the third Wednesday in September. James McLin president.

UNION COLLEGE, N. Y.

This college is situated at Schenectady, 15 miles from Albany. It was founded in 1795. The college buildings are each 200 feet long, four stories high, of brick, covered with a white stucco. The institution has a valuable library of 15,000 volumes, apparatus, and funds in profitable investment. It has 12 instructors, 230 students in 1850, and over 3000 alumni. Commencement on the fourth Wednesday in July.

<i>Accessus.</i>	<i>Succession of Presidents.</i>	<i>Exitus.</i>

UNION COLLEGE, TE.

This college, located at Murfreesboro', has recently gone into operation, having been founded in 1848. It is under the direction of the Baptists. It has 5 instructors; in 1850 it had 65 students. It has gathered about 800 volumes as the commencement of a library. Its commencement is fixed for the third Wednesday in July. J. H. Eaton president.

UNIVERSITY OF VERMONT, VT.

This institution was incorporated and established at Burlington, in 1791, but it did not go into operation till 1800. It is finely situated in the most elevated part of the town, about a mile east from the shore of Lake Champlain, 245 feet above the surface of the water, and commands an extensive and delightful prospect. A large college edifice of brick, completed in 1801, was consumed by fire in 1824, after which three brick edifices were erected, which have since been united in one, 250 feet in length by 40 in width. The faculty consists of the president, 5 professors, and 1 tutor. The college has well-selected libraries containing about 12,250 volumes. It has a valuable collection of specimens in different departments of natural history. There is a medical school connected with the college, in which instruction is given by 3 professors. Undergraduates in 1850, 95; whole number of alumni, 416. Commencement is on the first Wednesday of August.

<i>Accessus.</i>	<i>Succession of Presidents.</i>	<i>Exitus.</i>

1849.	Rev. Worthington Smith, D. D.	

UNIVERSITY OF NEW YORK, N. Y.

This university was chartered by the legislature in 1831. It is located in the city of New York, and is projected on the liberal scale of the universities of the continent of Europe. According to the plan of the institution, it embraces two general departments. The first comprises professorships and faculties for instruction in the higher branches of literature and science; the second embraces what is usually deemed a full course of classical, mathematical, and philosophical instruction, and also a complete course of English literature, mathematics, and the sciences, with their application to agriculture, to the arts, and generally to the ordinary purposes of life. The first chancellor of the university was Rev. James M. Mathews, D. D. To him succeeded Hon. Theodore Frelinghuysen, LL. D., who resigned in 1850. At present, the office of chancellor is not filled. Instructors, 11; students, in 1850, 151; alumni, 320; library, 4000 volumes. An elegant and costly stone edifice has been erected for the use of the university, which fronts towards the west upon Washington Square. Commencement is on the Wednesday preceding the 4th of July.

UNIVERSITY OF PENNSYLVANIA, PA.

This institution is located in Philadelphia. It was founded in 1755, and fully established in its present form in 1791. In the collegiate department it had, in 1850, 7 instructors and 88 students. The library now contains about 5000 volumes. The university embraces a faculty of arts, a faculty of medicine, and an academical department. The medical school is one of the most celebrated in the United States. It had 7 professors, and 438 students in attendance upon the lectures, in 1850. It has given medical degrees to 5130 graduates. The session for the medical lectures begins on the first Monday in November, and ends about the first of March. The commencement for conferring medical degrees is held, by special mandamus of the board of trustees, about the first of April, or as soon as convenient after the examinations of the candidates are over. The university commencement is on the 15th, 16th, or 17th of July. The president is Rev. John Ludlow, D. D.

UNIVERSITY OF VIRGINIA, VA.

This institution was founded in 1819, and went into operation in 1825. It is located about two miles from Charlottesville, in Albemarle co., near the centre of population in the state. It owes its origin and peculiar organization to Thomas Jefferson. It was erected by the state, at a cost of about \$400,000; and subsequently the state gave an annuity of \$15,000 for its support. The university is organized in a number of separate departments, or schools, in each of which degrees are conferred for thorough attainments in that department. Students who have received separate degrees in the schools of ancient languages, mathematics, natural philosophy, chemistry, and moral philosophy, are declared *graduates of the university*, with the title of "Master of Arts of the University of Virginia." Sometimes, when the number of diplomas granted by the separate schools is 50 or 60, there have not been more than one or two *graduates of the university*. The library has about 18,000 volumes; about half of which are very valuable, having been purchased in Europe, from a catalogue previously made out by Mr. Jefferson. There is a medical department, including the school of medicine proper, — physiology, pathology, &c., — the school of chemistry and *materia medica*, and the school of anatomy and surgery, in which the graduates receive the degree of M. D. The university has 10 instructors. In 1850, it had connected with its various schools 212 students. It has given diplomas to 1236. Commencement is near the end of June. Gesner Harrison is chairman of the faculty.

UNIVERSITY OF NORTH CAROLINA, N. C.

This institution was founded in 1789, and located at Chapel Hill. It had, in 1850, 6 instructors, 179 students, and over 900 alumni. Libraries, 12,350 volumes. Commencement is on the first Thursday in June. Hon. David L. Swain, LL. D., is the president.

UNIVERSITY OF ALABAMA, AA.

This institution is located at Tuscaloosa, the seat of government. It went into operation in 1831. The site of the college is on the Huntsville road, half a mile from the State House. There are three three-story buildings for students' dormitories, a building for a laboratory and recitation rooms, and several professors' houses. In the centre is a large circular building three stories high. On the first story is a large room for public occasions, with a circular gallery in the second for spectators. The third story is occupied for the library. The institution has 9 instructors. It had 92 students in 1850, and 181 alumni. Volumes in the library, 7123. Commencement on the Wednesday after the second Monday in July. Rev. Basil Manly, D. D., is president.

UNIVERSITY OF MISSISSIPPI, MI.

This institution was founded in 1844, and located at Oxford. It has 6 instructors; students in 1850, 64; alumni, 83. It has a library of about 2500 volumes. Commencement is on the first Thursday in April. Rev. A. B. Longstreet, LL. D., is the president.

UNIVERSITY OF NASHVILLE, TE.

This is one of the most important institutions in the Western States. It was founded in 1806, and is located at Nashville. It has a philosophical apparatus, purchased in London at a cost of \$6000. It has an extensive mineralogical cabinet. Theological students of all denominations are admitted at half price for tuition. The number of instructors is 7; the number of students in 1850 was 75; and of alumni, 398. The libraries contain nearly 10,000 volumes. Commencement is on the first Wednesday in October.

UNIVERSITY OF ST. LOUIS, MO.

This institution, which is under the direction of the Roman Catholics, was established in 1832. It is located at St. Louis. It has 17 instructors, 160 students, and 25 alumni. Volumes in the libraries, 13,500. Commencement is near the first of July. J. Van de Velde president.

UNIVERSITY OF MICHIGAN, MN.

The college which goes by this name is located at Ann Arbor. It is more correctly denominated "The College of Arts and Sciences in the University of Michigan," the university itself being an

institution of a more comprehensive character, embracing in theory the entire system of schools for the state. There are academies, or high schools, in different localities already in operation, which are branches of this state university. The college at Ann Arbor was opened in 1837. It has 7 instructors, who, according to the requisitions of the statute, are selected from different religious denominations, and preside in rotation, in the college faculty. The site of the college buildings is on an elevated plain, about three quarters of a mile from the centre of the town. Two fine buildings, of the largest class, and four stories high, have been erected for the use of the students. Between these it is intended to place a chapel, and then to extend the line in both directions, as the wants of the institution may require. This range of buildings is to occupy one of the sides of an extensive square area, on the two sides of which, at right angles with this, are to be houses for the professors, four of which have been erected. On the side opposite to the colleges, a fine building has just been completed for the use of the medical department in the university. The institution is fully provided for from the income of the public lands appropriated for this purpose. It has a library containing about 5000 volumes. The number of students in 1850 was 72. The commencement is on the third Wednesday in July. Rev. D. D. Whedon is president.

UNIVERSITY OF ROCHESTER, N. Y.

This new institution was founded November 4, 1850, by the New York Baptist Union for Ministerial Education, and its location established at Rochester. It has since received an act of incorporation from the New York legislature. It has connected with it a theological department, styled the Rochester Theological Seminary, which is open to students of all denominations. The plan of instruction in the university is peculiar, being so adjusted as to allow any who choose to omit the study of Latin and Greek, substituting modern languages in their stead, and a more extended mathematical and scientific course. Hence the students in each class are divided into two sections, the classical and the scientific sections. The regular course extends through four years, at the expiration of which those who have pursued the entire classical course are admitted to the degree of bachelor of arts, and those who have pursued the entire scientific course to that of bachelor of sciences. Young men, not otherwise connected with the university, are permitted, if they desire it, to attend the recitations of particular departments, provided they have the requisite preparation for the studies of those departments. This is denominated the partial course. The libraries of the University, and of the Theological Seminary, together amount to over 3000 volumes. A valuable cabinet of minerals has been secured. The number of students in the University, in 1851, was 109; and in the Theological department, 29. The commencement is on the second Wednesday of July. Hon. Ira Harris, LL. D., is the chancellor.

VIRGINIA MILITARY INSTITUTE, VA.

This institution, founded in 1839, is ranked with the colleges of the state. It is located at Lexington. In 1850 it had 6 instructors, 120 students, 107 graduates, and a library of 2500 volumes. Its commencement is on the 4th of July. Colonel F. H. Smith is the superintendent.

WABASH COLLEGE, IA.

This institution is located at Crawfordsville, in the valley of the Wabash, about 30 miles north-westerly from Indianapolis. It was founded in 1833. One large college edifice, four stories high, has been erected. Some 15 or 20 acres are enclosed for the college grounds, upon a part of which the original forest trees are standing. The college has 6 instructors; the number of students in 1850 was 38; the libraries contain 6000 volumes. Commencement is on the Thursday nearest to the 20th of July. Rev. Charles White, D. D., is president.

WAKE FOREST COLLEGE, N. C.

Established at Wake Forest, in 1838, under the direction of the Baptists. In 1850 it had 3 instructors, 24 students, and 4700 volumes in the library. Commencement is on the third Thursday in June. Rev. John B. White president.

WASHINGTON COLLEGE, PA.

This institution, incorporated in 1806, is located at Washington, in Washington co., 26 miles south-west from Pittsburg. It commenced operations under a new organization in 1830. The legislature made an annual appropriation of \$500, towards the support of a professorship of English literature, to prepare young men for teaching in common schools. By a standing rule, a certain number of poor and pious young men may be educated without charge for tuition. In 1850 the college had 8 instructors, 105 students, and 441 alumni; libraries, 3300 volumes. Commencement is on the last Wednesday in September. The president is Rev. James Clark, D. D.

WASHINGTON COLLEGE, MD.

Founded in 1783, at Chestertown. In 1827 the college was burnt down. A new building was erected, and the operations of the college revived in 1844. In 1850 it had 5 instructors and 70 stu

dents; library, 1200 volumes. Commencement about the 20th of August. E. F. Chambers president of the trustees.

WASHINGTON COLLEGE, VA.

This college is at Lexington, Rockbridge co., 129 miles north-west of Richmond. It was endow by General Washington, with 100 shares of the stock of the James River Company, which h sometimes produced an annual income of about \$2500. It was incorporated in 1812. Its funds ... large, and the course of instruction thorough. It has 6 instructors. In 1850 it had 81 students and about 600 alumni; volumes in the library, about 5000. Commencement is on the third Thursday in June. George Jankin is the president.

WASHINGTON COLLEGE, TE.

This college is in Washington co., founded in 1794. It has 2 instructors; students in 1850, 42 alumni, 110; library, 1000 volumes. The president is Rev. E. T. Bard, A. M.

WATERVILLE COLLEGE, ME.

This college is situated in Waterville, on the western bank of Kennebec River, 18 miles above Augusta. It was founded in 1820, and is under the direction of the Baptists. The instruction i given by the president and 5 professors. Number of students in 1850, 74; volumes in the library 8500. The college has two brick edifices for the accommodation of the students. Alumni in 1850, 267.

1839.	Rev. Stephen Olin, D. D.	1851.

WESTERN MILITARY INSTITUTE, KY.

This institution, having the rank of a college, was established in 1847, at a place called Blue Lick Springs. It has 9 instructors; the number of students in 1850 was 217. Colonel T. F. Johnson is at the head of the institution.

WESTERN RESERVE COLLEGE, O.

This institution, located at Hudson, in Portage co., was founded February 7, 1826. Its founders were mainly from New England, who were animated in their enterprise by a regard to the religious wants of the western country. The charter obtained from the state placed the institution wholly under the control of its founders, and has secured to it a complete exemption from the embarrassments so liable to grow out of mixed corporations. The college is now tolerably well endowed. Its funds have been wholly derived from private benefactions. In connection with the collegiate, there is a theological department in this institution. There is also a medical department, which is established at Cleveland. The number of instructors, exclusive of the medical professors, is 9; besides which there are also 3 teachers in the preparatory school. In 1850, the college had 54 students, and the theological department 19; alumni, 164. The libraries have about 8000 volumes. Commencement is on the second Thursday in June.

WEST TENNESSEE COLLEGE, TE.

This college was incorporated in 1843, and reorganized in 1849. It has 4 teachers, and about 100 students in the preparatory and other departments

WILLIAMS COLLEGE, MS.

This institution, situated at Williamstown, Berkshire co., was incorporated in 1793. It was founded by a bequest of Colonel Ephraim Williams, who commanded for some time two small forts on the banks of the Hoosac, in Adams and Williamstown, and who was killed in battle with the French and Indians, September 8, 1755. The buildings consist of four large brick edifices for the accommodation of students; a brick chapel 93 by 38 feet, containing also lecture rooms; a library building, and an astronomical observatory, the first erected in the United States. The college library, together with those of the societies among the students, numbers nearly 14,000 volumes. The faculty consists of the president, 6 professors, and 1 tutor. The college has about \$70,000 of productive funds. The philosophical and chemical apparatus has recently been enlarged by the alumni, at an expense of several thousand dollars. A new and commodious chemical laboratory and lecture room has just been completed, and likewise a magnetic observatory, for ascertaining and exhibiting the laws of terrestrial magnetism. Commencement is on the third Wednesday in August. Alumni in 1847, 1581.

WILLIAM AND MARY COLLEGE, VA.

This college, next to Harvard, the oldest in the country, was originally projected in 1688, the year in which William and Mary ascended the British throne. It was chartered by their majesties in 1691. It was established at Williamsburg, 60 miles south-east of Richmond. Rev. James Blair, D. D., was the first president. It is under the direction of the Episcopalians. The college has property amounting to \$150,000, and a library of 5000 volumes; instructors, 6. Rev. John Johns is the president.

WISCONSIN UNIVERSITY, WN.

This is a new institution, founded in 1849. Only the preparatory department has gone into operation. Rev. John H. Lathrop is the president.

WOODWARD COLLEGE, O.

Founded in 1831, and located at Cincinnati. It has 5 instructors, and a library begun of 14,000 volumes. The number of students hitherto has been small. Commencement is on the Friday before the 4th of July. Rev. Thomas J. Biggs, D. D., is the president.

YALE COLLEGE, CT.

Yale College was founded in 1700, and incorporated by the Colonial Assembly of Ct. in 1701. It was first located at Saybrook, but in 1716 was removed to New Haven. Its first commencement at New Haven was in 1717. About this time Mr. Elihu Yale, of London, gave a donation of books and money to the college; and in gratitude for his donations the institution was named Yale College. In 1733, Bishop Berkeley, of Ireland, gave a donation of 1000 volumes to the library, and two small foundations for premiums. Yale College has been for many years the most popular literary institution in America. Its number of undergraduates in 1850 was 386. The number of its alumni, (5932,) has nearly equalled that of Harvard, which is its elder by 65 years. Its buildings are beautifully situated on slightly elevated ground, opposite to the western side of the New Haven Green, or Park; their line in front stretching quite from the northern to the southern limit of this extensive quadrangle. In this range there are 5 large brick edifices, four stories high, occupied by the students; that on the north being occupied by the students of the theological department. In the intermediate spaces are three steepled buildings, one of which is the chapel, and the others are occupied with recitation and lecture rooms, and rooms for the professors. An elegant stone building has been erected within a few years for the reception of the college library, and the libraries of the societies among the students. The number of volumes in these libraries together is about 50,500. There are other buildings for the chemical laboratory; the mineralogical and geological cabinet, and the Trumbull gallery of paintings, &c. The cabinet of minerals is the most valuable in the United States, and inferior to only two or three in Europe. The college has a faculty of theology, of law, and of medicine connected with it. The medical college is furnished with a spacious and convenient stone edifice, containing one of the most valuable anatomical museums in the country. The theological department has 3 professors. The law school is under the direction of the Hon. Clark Bissell, late a judge of the Superior Court of Connecticut. The faculty, to whom are committed the government and instruction of the undergraduates, consists of the president and 10 professors, with 7 tutors. There has been organized also a department of philosophy and the arts, designed to furnish to resident graduates and others an opportunity of pursuing special branches of study, as far as they may desire. The president and all the academical professors aid in the instruction of this department. Commencement is on the third Thursday of August.

PROFESSIONAL SCHOOLS AND SEMINARIES

IN THE

UNITED STATES.

* ** The following tables are copied, with additions, from the American Almanac for 1851.

THEOLOGICAL SEMINARIES.

Name.	Place.	Denomination.	Commenced operation.	No of professors.	Students in or near 1850.	Number educated.	Volumes in library.
Bangor Theological Seminary.	Bangor, Me.	Congregational.	1816	37	37	202	7,000
Methodist General Biblical Institute.	Concord, N. H.	Methodist.	1847	40	40	69	2,000
Gilmanton Theological Seminary.*	Gilmanton, N. H.	Congregational.	1835	36	36	69	4,300
New Hampton Theological Seminary.	New Hampton, N. H.	Baptist.	1825	36	36	69	2,000
Andover Theological Seminary.	Andover, Ms.	Congregational.	1807	87	87	1,006	21,253
Divinity School, Harvard University.	Cambridge, Ms.	Cong. Unitarian.	1816	83	83	238	3,000
Theological Institution.	Newton, Ms.	Baptist.	1825	44	44	201	5,500
Theological Department Yale College.	New Haven, Ct.	Baptist.	1822	52	52	596	900
Theological Institute of Connecticut.	East Windsor, Ct.	Congregational.	1834	17	17	151	5,000
Union Theological Seminary.	New York, N. Y.	Prot. Episcopal.	1817	64	64	336	10,000
Auburn Theological Seminary.	New York, N. Y.	Presbyterian.	1836	106	106	211	18,000
Hamilton Literary and Theological Institute.	Auburn, N. Y.	Presbyterian.	1821	4	30	580	6,000
Rochester Theological Seminary.	Hamilton, N. Y.	Baptist.	1820	4	32	133	4,000
Hartwick Seminary.	Rochester, N. Y.	Baptist.	1850	2	20
Theological Seminary, Associate Ref. Church.	Hartwick, N. Y.	Lutheran.	1816	2	5	52	1,250
Theological Seminary, Dutch Ref. Church.	Newburg, N. Y.	Associate Ref. Ch.	1836	1	11	143	3,200
Theological Seminary, Presbyterian Church.	New Brunswick, N. J.	Dutch Reformed.	1784	3	36	179	..
Seminary of the Lutheran Church.	Princeton, N. J.	Presbyterian.	1812	5	153	1,626	11,000
German Reformed Theological Seminary.	Gettysburg, Pa.	Evan. Lutheran.	1826	2	26	200	9,000
Western Theological Seminary.	Mercersburg, Pa.	German Ref. Ch.	1825	2	18	121	6,000
Theological School.	Alleghany Town, Pa.	Presbyterian.	1828	2	48	252	6,000
Theological Seminary.	Canonsburg, Pa.	Associate Church.	1792	2	33	147	2,000
Western Theological School.	Pittsburg, Pa.	Associate Ref. Ch.	1828	3	35	85	1,500
Theological Seminary.	Meadville, Pa.	Cong. Unitarian.	1844	4	40	9	8,000
Episcopal Theological School of Virginia.	Philadelphia, Pa.	Reformed Presb.	..	3	13
Union Theological Seminary.	Fairfax co., Va.	Prot. Episcopal.	1822	4	38	229	5,000
Virginia Baptist Seminary.	Prince Edward co., Va.	Presbyterian.	1824	3	20	175	4,000
Southern Theological Seminary.	Richmond, Va.	Baptist.	1823	3	67	..	1,000
Theological Seminary.	Columbia, S. C.	Presbyterian.	1831	3	24	124	4,500
Furman Theological Seminary.	Lexington, S. C.	Lutheran.	1835	2	10	20	1,800
Mercer Theological Seminary.	Fairfield District, S. C.	Baptist.	1826	2	30	30	1,000
Howard Theological Institution.	Penfield, Ga.	Baptist.	1833	3	4	..	1,000
Western Baptist Theological Institute.	Marion, Aa.	Baptist.	1843	2	10	..	1,000
South-western Theological Seminary.	Covington, Ky.	Baptist.	1840	4	18	9	2,000
Lane Seminary.	Maryville, Te.	Presbyterian.	1821	2	24	90	6,000
Theological Department Kenyon College.	Cincinnati, O.	Presbyterian.	1829	3	36	257	10,500
Theological Dep't Western Reserve College.	Cincinnati, O.	Prot. Episcopal.	1828	4	4	30	4,500
Granville Theological Department.	Hudson, O.	Presbyterian.	1830	3	22	43	80
Oberlin Theological Department.	Granville, O.	Baptist.	1832	2	8	..	500
Theological Seminary, Associate Ref. Church.	Oberlin, O.	Congregational.	1834	3	20	124	250
Indiana Theological Seminary.	Oxford, O.	Associate Ref. Ch.	1839	1	12	31	1,500
Alton Theological Seminary.	South Hanover, Ia.	Presbyterian.	10
	Upper Alton, Is.	Baptist.	1835

BANKING INSTITUTIONS, COIN, AND CURRENCY

OF THE

UNITED STATES.

*** WE have received from a friend an elaborate and valuable paper, furnishing a succinct history of the currency of this country from its first settlement. The article is too long for insertion entire, in a work of this kind. We avail ourselves, however, of some of its most important statistical details, in presenting to our readers such a view of the banking institutions, coin, and currency of the country as may suffice to furnish complete and accurate data for economical and financial investigations.

UP to the year 1690, the currency of gold and silver was sufficient for the ordinary trade of the colonies. In consequence of the war against the French in Canada under Sir William Phipps, the want of money became oppressive, not only for the ordinary expenses of government, but for the pay of troops, and the incidental expenses to sustain an army. A proposition was brought before the colonial court to issue bills of public credit, as the only resort, to furnish means to carry on the war. After some effort, the court granted an issue of £7000 in bills of credit, printed on square slips of paper, varying in value from five shillings to five pounds.

The colonial court voted that the sum expressed in said bills should be equal in value with coin. The court provided no sinking fund for their redemption, only making them receivable for taxes or public dues, and promising, when demanded, to pay the full sum in money or public stock. The form of the first paper bill issued in America is as follows:—

“This Indented bill of Twenty Shillings, due from Massachusetts colony to the possessor, shall be in value, equal to money, and shall be accordingly accepted, by the Treasurer and receiver subordinate to him, in all public payments, and for any stock at any time in the Treasury.

“Boston in New England, December 6th, 1690.

“By order of the General Court.”

Thus Massachusetts established the first paper currency in America. The issue of a paper currency at once relieved the pressure for money, and raised the value of merchandise. The sudden rise in bread stuffs was a subject of alarm to a portion of the people, in consequence of which the General Court, at its next session, passed an act that the price of corn should be reduced.

The colonial court, for a period of fifty years, were continually legislating upon the currency, extending the issue of their bills of credit, and contriving all possible expedients to keep up the value, but without any beneficial result. The amount issued and in circulation in 1749, “the issue of fifty-nine years,” was £2,200,000, which had depreciated 89 per cent. from the specie value, being worth only 11 cents on the dollar.

Hutchinson, who then was speaker of the house, and one of the most influential men in the colony, and William Bollen, Esq., saw the necessity of at once abandoning the issue of bills, and redeeming the issue if possible. With the sanction of the colonial court, he was empowered to redeem the depreciated currency. £180,000 was obtained from the home government in specie, and the issues were redeemed at 11 cents on the dollar.

South Carolina issued bills of credit in 1702, and Pennsylvania in 1723; some other colonies at later periods issued bills of credit. The bills of these colonies shared the same fate as in Massachu-

sets, though the currency of Pennsylvania never depreciated so low in value as in other colonies. During the period from 1690 to 1760, no other efforts were made to improve the currency, if we except the paper scheme, called the Land Bank, in 1740.

Upon the redemption of a failed currency in New England in 1760, the colonial assembly established a silver currency at six shillings and eight pence per ounce. The apprehensions of a shock in trade, as consequent upon this, proved groundless; silver soon took the place of bills, every branch of business prospered, and was carried on with greater facilities than before.

The States of Rhode Island and Connecticut were invited by Massachusetts to conform their currency to a specie standard, but declined to comply with the request. The effect of adopting a specie standard of currency by a portion of New England, while the other colonies refused to conform their currency to a standard, caused so much suffering and inconvenience, that an act of Parliament was passed in 1763, to prevent paper bills of credit being issued in any of his majesty's colonies or plantations in America. This act caused paper bills of credit to be reduced to a very small amount; and from this time to the commencement of the war, the colonies were generally free from a depreciated paper currency.

From this brief account of the provincial paper money, the reader may estimate properly that provision of the constitution of the United States which forbids any state to emit bills of credit, or make any thing but gold or silver a legal tender for the payment of debts.

The next period of paper issues was brought on at the commencement of the war of the revolution. The colonies being without a sufficient currency to meet all their exigencies in raising armies and equipping fleets, the government was compelled to resort to the issue of bills of credit. This was called the Continental currency. The first emission was dated May 10, 1775, though no notes were issued till August following. The bills passed for nearly their declared value till the end of the year 1777, when the issue was about \$26,000,000. From that date to the year 1781, the value was constantly depreciating, until \$1000 of the continental paper money would not produce one dollar in coin. During a period of six years, the government issued \$357,476,541 of what was called the old emission, and \$2,070,485 of what was called the new emission. It is worthy of remark that the depreciation of the continental currency never retarded its circulation as long as it retained any value. The depreciation of the paper currency, during the period of its issue, caused successive acts of Congress for the purpose of sustaining its value, which in the end proved ineffectual.

The distress occasioned by the failure of the currency was universal for a time. It brought specie, however, directly into circulation, large amounts of which had been hoarded during the five years previous. The quantity was sufficient for all the ordinary purposes of trade. The country soon revived from the shock, but with a deep seated prejudice against a paper currency.

The country being now without any paper currency, or even a bank of deposit or discount, in any of the colonies, a new principle, based upon the true science of banking, was brought before the public by Robert Morris and others, who applied for a charter for a bank, to rest upon a *specie basis*, or that of the conversion of bills into coin at the will of the holder. This was the origin of the bank called the *Bank of North America*, which was established in Philadelphia in 1781, with a capital of \$2,000,000. The charter was obtained from Congress, and was advocated upon the ground that it would assist the country by loans, and otherwise render aid to the treasury of the United States. The bank was to have a portion of government deposits, and consequently the United States became a stockholder to the amount of \$254,000.

The bank commenced its business in January, 1782, under very flattering circumstances, being supported by some of the most distinguished men of the day; also having the sanction of Congress and the assistance of the United States to give it public credit. Notwithstanding the strong position of the bank, however, great difficulty was encountered in giving currency to its notes or bills. The experience of the evils suffered from the failure of the continental money was still fresh in the minds of the people. Having been so often disappointed in the colonial and continental currencies, they could not be made at once to feel the necessary confidence that the same results might not follow the new scheme. The public were slow to believe that the bank had coin in its vaults, or could redeem its bills on demand. Great efforts were made by the bank to remove these unfavorable impressions from the public mind, and to give the necessary credit and confidence to its circulation; and these efforts proved at length successful.

The second bank in America, established upon the principle of a specie basis, was the *Massachusetts Bank*, established in Boston in 1784, which institution has retained a good reputation down to the present time. The date of the institution of some of the earlier banks in the several states of

the Union is as follows: New York, 1784; Maryland, 1790; the first Bank of the United States, February 8, 1791; Rhode Island, 1791; South Carolina, 1792; Virginia and Connecticut, 1792; District of Columbia, 1793; Delaware, 1795; Maine, 1799; Kentucky, 1802; Ohio, 1803; North Carolina, 1804; Louisiana, 1811; and Georgia, 1812. Twenty-three institutions were established in the several states previous to the year 1800. Since the beginning of the present century, banks have increased in rapid succession. The country was eminently prosperous from 1794 to 1807, with a gradual increase of paper currency, and without any great reaction in trade till 1809; then a very general contraction of the currency took place, with a depressed state of trade, causing the failure of several banks, and a great depreciation in real estate and all other descriptions of property.

The whole number of Banks in the United States, in 1810, was 89, with an aggregate capital of \$52,601,601, and a circulation, at the close of the year, of \$30,000,000. The first Bank of the United States had been chartered, February 8, 1791, for a period of twenty years, with a capital of \$10,000,000. One fifth of this amount was subscribed by government, and the remainder by individuals. The charter being now about to expire, strenuous efforts were made for its renewal, but without success. In the House of Representatives, on the 24th of January, 1811, a bill for the renewal of its charter was indefinitely postponed by a vote of 65 to 64. Another bill was brought into the Senate the same session, on the 20th of February, which was rejected by the casting vote of the president of the Senate.

Congress then appointed trustees to wind up the concerns of the bank, who proceeded rapidly with their work, and by the 1st day of October, 1812, 88 per cent. of its capital was paid over to its stockholders; 7 per cent. more April 1, 1813, and several smaller dividends afterwards.

From 1811 to 1817, the country was without any national public banking institution.

After the close of the war, in 1815, the subject of a national bank was again revived, and on the 8th of January, 1816, a bill was reported in Congress, to establish a Bank of the United States. This bill finally passed the House of Representatives on the 14th of March, by a vote of 80 to 71, and the Senate on the 3d of April, by a vote of 22 to 12, and was approved by the president on the 10th of April, 1816.

The capital of this bank was fixed at \$35,000,000. It commenced operations on the 1st day of January, 1817, with \$14,000,000 of United States stock and \$1,400,000 of coin.

The circulation of bank notes, in 1815, was estimated at \$47,000,000; in 1816, at \$70,000,000; in 1818, at \$89,000,000. The contraction of the currency caused by the revulsion in 1819 was rapid, and so severe as to cause very general distress throughout the country. The whole circulation of the country, in 1820, was estimated at only \$45,000,000. The whole bank capital of the country, in 1830, was \$145,192,268, with a circulation of \$61,323,898. The whole number of banks which had failed or discontinued business, from 1811 to this date, was 193, possessing an aggregate capital of \$30,000,000.

The financial management of the United States Bank, during the first term of Jackson's administration, caused the president to recommend an inquiry into its condition. A bill was carried through both houses of Congress for the renewal of its charter, but it was vetoed by the president. The final result was, the refusal, on the part of Congress, to renew the charter.

A charter was obtained by Nicholas Biddle and others, from the State of Pennsylvania, under which the assets and liabilities of the Bank of the United States were transferred, by vote of its stockholders, to this new corporation. Government disposed of all its interest in the institution, having some time previously removed its deposits of coin, and the treasury department having dissolved all connection with the bank. The bank continued its existence till 1841, when the institution failed, the whole capital being a total loss.

In May, 1837, this bank, then called the United States Bank of Pennsylvania, suspended specie payments, with all other banks in the United States, with only one exception, which was that of the State Bank of Missouri. This was the first general suspension of specie payments by the banks of this country, a partial suspension having taken place during the war of 1812, when all the banks south and west of New England suspended specie payments, a large portion of which never resumed till after the revulsion in the years 1818 and 1819, and then by a failure of a considerable proportion of their number.

The banks of New England and New York resumed specie payments in May, 1838, after one year of suspension. The United States Bank of Pennsylvania, and others south, attempted a resumption at the same time, but suspended the second time in October, 1839. These banks resumed the third time in January, 1841, and again suspended in twenty days. After the failure of the United States

Bank of Pennsylvania, the Philadelphia banks resumed, for the fourth and last time, in March, 1842. The banks south gradually resumed, or otherwise went into liquidation; since which time the banks of the United States have maintained specie payments, and have been generally prosperous.

The period from 1830 to 1840 was marked by an extraordinary increase of banking capital, the largest during any period of our history. In 1830, there were 329 banks and branches in the United States, with a capital of \$143,301,898; in 1840, 901 banks and branches, with a capital of \$358,442,692, being an increase of \$215,140,794 in nine years.

The loans and discounts upon the capital were, in 1837, \$525,115,702; in 1840, \$462,896,523. The financial revulsion in 1837 and 1840 caused an extensive failure among the banks, with almost the entire loss of bank capital in Mississippi, Illinois, Alabama, and portions of other states. The loss of bank capital, during the transition from 1838 to 1846, by failure or otherwise, amounted to \$161,558,383, resulting in a contraction of the circulation of \$54,088,755, and a reduction in the number of banks, from failure alone, of 194.

The increase of banks and banking capital within the last ten years has been slower, but probably on a more sure and firm basis, than at any former period. The whole number of banks and branches in the United States, January 1, 1852, was 871, with a capital of \$227,469,074, being a less aggregate capital of \$130,973,618 than at the period of 1840. The reduction of banking capital was constantly going on from 1840 down to 1846, when the whole bank capital in the United States was \$196,894,309; since which period there has been a gradual increase in the aggregate. The increase in 1847 and 1848 was \$8,000,000; in 1849, \$12,000,000; in 1850, about \$10,000,000; the whole aggregate of increase since 1846 being \$30,574,765; the whole number of banks and branches being 871, only 30 less than at the great expansive period of 1840. The circulation at a period near January, 1852, was \$163,649,812; loans and discounts, \$412,607,553; and silver and gold in the vaults of the several banks to the amount of \$49,133,122; amount of bank capital, \$254,640,630.

It will be seen from this statement that the banks of the United States began to expand in 1831, and reached their maximum in 1837, then their lowest point of depression in 1843. Since that period, they have gone on again to extend their issues, but without any serious fluctuations.

BANKING INSTITUTIONS IN THE UNITED STATES IN 1852.

INCREASE OF BANKING CAPITAL TO POPULATION FOR TEN YEARS, SINCE 1840.

NEW ENGLAND STATES.

<i>States.</i>	<i>Population.</i>	<i>Ratio of Increase per ct.</i>
Maine,	583,188	16½
New Hampshire,	317,999	11½
Vermont,	314,120	7½
Massachusetts,	994,499	34¾
Rhode Island,	147,543	35½
Connecticut,	370,791	29½

Total, 2,728,140

Average increase of population, 22 per cent.
Bank capital, \$77,516,327, or \$28·60 per head.

MIDDLE STATES.

<i>States.</i>	<i>Population.</i>	<i>Ratio of Increase per ct.</i>
New York,	3,097,394	27½
New Jersey,	489,535	31
Pennsylvania,	2,311,786	34
Delaware,	91,535	18½
Maryland,	583,035	24

Total, 6,573,285

Average increase of population, 29 per cent.
Bank capital, \$92,714,931, or \$14·26 per head.

SOUTHERN STATES.

<i>States.</i>	<i>Population.</i>	<i>Ratio of Increase per ct.</i>
District of Columbia,	51,687	18½
Virginia,	1,421,661	14½
North Carolina,	868,903	15½
South Carolina,	668,507	12½
Georgia,	905,999	31
Florida,	87,401	60

Total, 4,004,158

Average increase of population, 19 per cent.
Bank capital, \$41,214,829, or \$10·30 per head.

SOUTH-WESTERN STATES.

<i>States.</i>	<i>Population.</i>	<i>Ratio of increase per ct.</i>
Kentucky,	982,405	26
Missouri,	682,043	77¾
Alabama,	771,671	30½
Louisiana,	511,974	45½
Tennessee,	1,002,625	21
Mississippi,	606,555	61½
Arkansas,	209,639	115
Texas,	212,592	
New Mexico,	61,505	

Total, 5,041,009

Average increase of population, 35 per cent.
Bank capital, \$32,498,596, or \$6·49 per head.

WESTERN STATES.

<i>States.</i>	<i>Population.</i>	<i>Ratio of Increase per ct.</i>
Ohio,	1,980,408	30½
Indiana,	988,416	44
Illinois,	851,470	78¾
Iowa,	192,214	345¾
Wisconsin,	305,191	890½
Michigan,	397,654	87½
Minnesota Territory,	6,077	

Total, 4,721,430

Average increase of population, 49 per cent.
Bank capital, \$10,695,969, or \$2·27 per head.

California,	165,000	
Oregon Territory,	13,293	
Utah Territory, estimated	15,000	

Total, 23,246,301

No bank capital.

PRECIOUS METALS IN THE UNITED STATES.

The total amount of gold and silver in the United States, in 1820, was estimated at \$40,000,000.	
Since that time, to June 30, 1851, the whole amount of importations of gold and silver from abroad has been	\$273,838,764
The exportations during the same period,	230,012,415
	<hr/>
Amount of silver and gold of domestic production, other than that received from California,	27,354,636
Amount of gold and silver received from California since 1848, to December 20, 1851,	92,106,123
	<hr/>
	163,287,108
From which is to be deducted for the amount exported from July 1 to December 20,	26,549,482
	<hr/>
	136,737,626
Add amount of silver and gold in the country, by estimate, in 1820,	40,000,000
	<hr/>
	176,737,626

From this sum is to be deducted the amount lost by abrasion, and used for manufacturing purposes, for 30 years, — excluding the amount received by immigrants, which may be estimated at \$1,500,000 annually, — which will amount, in the aggregate, to \$45,000,000; which sum, deducted from the above, will leave \$131,737,626 as the total amount of coin in the United States at the present time.

The amount of bullion deposited for coinage at the mint of the United States and its branches, in the year 1850, was —

In gold,	\$38,365,160
“ silver,	1,939,041

Total, 40,304,201

The coinage of the mints up to October 1, 1851, has been as follows:—

In gold,	\$156,721,849
“ silver,	77,677,885
“ copper,	1,381,643

Total, 235,781,377

Of this sum, \$95,847,862 is of domestic production, of which \$68,493,226 is of the production of California since 1848.

* From Rev. Louis Dwight's Annual Report of the Prison Discipline Society.

a Of the whole number received, 359 were males and 139 females; of these in Prison, October 31, 1850, 99 were males.
 b Discharged by court and magistrates, 19; discharged by payment of fines, 32; of those who died in Albany Penitentiary, 2; the whole number died of delirium tremens.
 c This amount is supposed to include salary of officers, fuel, and lights.
 d This balance in favor of the earnings above expenses does not include the salaries of the officers among the expenses, which amounted to \$7,388; showing a deficit of earnings, if the salaries of officers be included, of \$1,153, instead of a balance in favor of \$5,452.
 e This average is made on a bill of expenses not including the salary of officers.
 f Including furniture.
 g This amount is not included among the expenses of the institution in the Annual Report, but is paid from the state treasury.
 h The maladies of two others became unequivocally developed, who were thought, in the latter months of 1849, to exhibit symptoms of incipient insanity; but the physician says they owed their origin to the previous year, although their diseases were not sufficiently manifest to justify their return.
 i This balance of expense against the institution is over and above the salary of the officers.
 j It now here appears in the Annual Report of the institution what amount was paid for salary of officers, or for particular items of expense.
 k One by reversal of judgment.
 l This amount was drawn from the state treasury, and was in part expended for repairs and improvements.
 m This average expense of each prisoner is after deducting repairs and improvements.
 n Two were removed to Western House of Refuge, and three discharged by habeas corpus, and for new trial.
 o Three were returned as not insane; 12 remain in the Prison; but it is not stated when and where they became insane.
 p Two others were drowned, and one other was accidentally killed.
 q Seventeen were transferred to Auburn, and removed by habeas corpus.
 r This sum includes furniture as well as clothing.
 s \$8.42 more are charged as having been lost on broom making.

* "Apprentices" by the "Act to abolish Slavery," passed 18th April, 1846. † The returns from California are imperfect; the number is supposed to be much greater.

CENSUS

OF THE

UNITED STATES, 1850.

THE following census returns are not official ; no official publication of the population returns, except of the aggregates of the states, having yet been made. The following statements have been obtained from the returns of the marshals, deposited, under the act of Congress, in the state departments of the several states. In several cases, these returns have been abstracted and published by the authority of the state legislatures. Such has been the case in New York, New Jersey, Ohio, Michigan, Wisconsin, and other states. When such returns have been published, they have been followed here ; in other cases, the returns have been obtained by private enterprise and industry, and though they may probably vary a little from the official returns, when they are finally published, that variation cannot be material. In those cases where the census has been published by towns or townships, we have given the town or township returns ; but in all the Southern, and some of the Western States, the census has been returned only by counties.

POST OFFICES,

ARRANGED BY STATES AND COUNTIES.

*** The preceding chapter of counties, cities, towns, &c, was designed to include all places of importance enough to merit a particular notice, embracing all the court houses of the several counties. The following list contains the names of all places not already described, in which post offices existed on the 31st of May, 1851, according to the most recent statement published by the post-office department. They are, for the most part, places of small note, owing their importance chiefly to the fact of having a post office; though some places, particularly in the newly-settled states, have been included here and in the preceding tables of population, of which, had we possessed the necessary information, a more full account would have been given.

RATES OF POSTAGE.

Letter Postage.

For a single letter, sent not exceeding 3000 miles, if prepaid, 3 cts.; if not prepaid, 5 cts. Sent over 3000 miles, if prepaid, 6 cts.; if not prepaid, 12 cts.

For such a letter, conveyed wholly or in part by sea to or from a foreign country, (except all cases where different rates have been or shall be established by postal arrangements,) sent not exceeding 2500 miles, 10 cts.; over 2500 miles, 20 cts.

For a double letter there shall be charged double the above rates; for a treble letter treble the above rates, &c., &c. Every letter or parcel, not exceeding half an ounce (avoirdupois) in weight, is a single letter, and every additional weight of half an ounce, or of less than half an ounce, is charged with an additional single postage. When advertised, one cent additional is charged on each letter. For a letter delivered by a carrier, there is an additional charge of not exceeding one or two cents.

For drop letters, (not to be mailed,) each 1 cent.

For all letters or pkgs. (ship letters) conveyed by any vessels not employed in conveying the mail, 2 cts. To this charge of 2 cts. is added 4 cts. when the letters are not transmitted through the mail, but are delivered at the post office where deposited; and the ordinary rates of U. States postage are added when the letter is transmitted through the mails.

Newspaper, Pamphlet, and Book Postage.

1. Newspapers, periodicals, unsealed circles, and other printed matter, weighing not over three ounces, pay 1 cent each, to any part of the U. S., or half that rate, paid quarterly or yearly, in advance. The same kind of matter, weighing not over one and a half ounces, half the above rates.

2. Newspapers, &c., not weighing more than 1½ ounces, can be sent to any part of the state where published at half the above rates, i. e., for half a cent not prepaid, and a quarter of a cent if prepaid.

3. Small newspapers, periodicals, and printed sheets, in pkgs. of 8 ounces, at least, to one address, if prepaid, are to pay but half a cent per ounce.

4. Transient matter must be prepaid, or charged double postage, or 2 cents for every sheet.

5. Weekly newspapers free in co. of publication.

6. Bills for newspapers, and receipts for payments of moneys therefor, may be enclosed in subscribers' papers, but nothing else, and no writing or printing, inside or outside, except the address, under penalty of paying letter postage.

7. Exchanges between newspaper publishers free.

8. Books, bound or unbound, of not more than four pounds each, 1 cent per ounce, under 3000 miles, and 2 cents over that distance. Fifty per cent. to be added where not prepaid.

NEWSPAPERS IN THE UNITED STATES, 1850.

	No.	Circulation.	No. copies circulated per. an.
Dailies,	350	750,000	235,000,000
Tri-weeklies,	150	75,000	11,700,000
Simi-weeklies,	125	80,000	8,320,000
Weeklies,	2,000	2,875,000	149,500,000
Semi-monthlies,	50	300,000	7,200,000
Monthlies,	100	900,000	10,800,000
Quarterlies,	25	29,000	80,000
Total,	2,800	5,000,000	422,600,000

The foregoing table will show the number of daily, weekly, monthly, and other issues, with the aggregate circulation of each class.

Four hundred and twenty-four papers are issued in the New England States, eight hundred and seventy-six in the Middle States, seven hundred and sixteen in the Southern States, and seven hundred and eighty-four in the Western States.

The average circulation of papers in the United States is one thousand seven hundred and eighty-five. There is one publication for every seven thousand one hundred and sixty-one free inhabitants in the United States and Territories.

Number of Post Offices and length of Post Roads in the United States, the annual amount paid for Mail Transportation, and of Receipts and Expenditures of the Post Office Department, from 1790 to 1851, inclusive.

Years.	Number of Post Offices.	Length of Post Roads.	Paid for Transportation.	Receipts.	Expenditures.

ARMY AND NAVY

OF

THE UNITED STATES.

ARMY.

THE army of the United States, commanded by one major general and two brigadiers, consists of a corps of engineers, an ordnance department, two regiments of dragoons, one of mounted riflemen, four of artillery, and eight of infantry, — in the whole about 11,000 men, — and is stationed as follows :—

MILITARY GEOGRAPHICAL DIVISIONS.

The Eastern Division, composed of the 1st, 2d, 3d, and 4th Military Departments, comprises the following states : Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, North Carolina, South Carolina, and Georgia, and the portion of Florida and Wisconsin E. of a line drawn from Fond du Lac, Lake Superior, to Cape Sable, Florida.

The Western Division, composed of the 5th, 6th, 7th, 8th, and 9th Military Departments, is situated within the following limits : The country W. of the line from Fond du Lac to Cape Sable, (except Oregon and California,) embracing the part of Wisconsin W. of said line ; Minnesota ; the states of Iowa, Illinois, Missouri, Kentucky, Tennessee, Arkansas, Louisiana, Mississippi, Alabama, and Texas ; the part of Florida W. of said line ; the Indian country W. of the Mississippi River ; and the territory of New Mexico.

The Pacific Division, composed of the 10th and 11th Military Departments, comprises the territories of California and Oregon.

The head-quarters of the army are in Washington.

The head-quarters of the Eastern Division are at Troy, N. Y.

The head-quarters of the Western Division are at New Orleans, La.

The head-quarters of the Pacific Division are at Sonoma, Ca.

MILITARY GEOGRAPHICAL DEPARTMENTS.

No. 1. Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, and Connecticut.

No. 2. Michigan, Wisconsin, (E. of the line from Fond du Lac to Cape Sable,) Ohio, and Indiana. Head-quarters at Detroit.

No. 3. New York, New Jersey, Pennsylvania, Delaware, and Maryland.

The head-quarters of Departments No. 1 and 3 are at Troy, N. Y.

No. 4. Virginia, North Carolina, South Carolina, Georgia, and that part of Florida lying within the Eastern Division. Head-quarters at Fort Monroe, Va.

No. 5. The portion of Florida within the Western Division, the states of Alabama, Louisiana, Mississippi, Tennessee, and Kentucky. Head-quarters at New Orleans.

No. 6. Wisconsin, (W. of the line from Fond du Lac to Cape Sable,) Iowa, Illinois, and Missouri, above the 37th degree of N. latitude. Head-quarters at St. Louis.

No. 7. The country W. of the Mississippi, S. of the 37th degree of N. latitude, N. of Louisiana and Texas, and E. of Department No. 9. Head-quarters at _____.

No. 8. That part of Texas lying S. and E. of a line drawn from a point on the Rio Grande, opposite the southernmost limit of the island S. of El Paso, containing the towns of San Elizario, Socorro, and Isetta, to the junction of the *Ensenada Choctaw* (Choctaw Creek) with the Colorado or Red River, and down said river to Arkansas. Head-quarters at San Antonio.

No. 9. New Mexico and the territory N. and W. of the aforesaid line from the Rio Grande to and down the Colorado or Red River, formerly claimed as a part of New Mexico. Head-quarters at Santa Fé.

No. 10. The territory of California. Head-quarters at Monterey.

No. 11. The territory of Oregon.

PAY OF THE NAVY.

Captains, (68.) senior in service, \$4500; of squadrons, \$4000; others on duty, \$3500; on leave, \$2500. Commanders, (97.) in sea service, \$2500; on other duty, \$2100; on leave, \$1800. Lieutenants, (327.) commanding, \$1800; on

other duty, \$1500; waiting orders, \$1200. Surgeons, (69.) from \$1000 to \$2700, according to term and nature of service. Assistant surgeons, (43.) from \$650 to \$1200. Pursers, (64.) \$1500 to \$3500. Chaplains, (24.) at sea, \$1200; on leave, \$800. Professors of mathematics, (12.) \$1200. Passed midshipmen, (183.) on duty, \$750; on leave, \$600. Midshipmen, (183.) at sea, \$400; on other duty, \$350; on leave, \$300. Chief engineers, on duty, from \$1500 to \$2000; on leave, 1200 to \$1400. Assistant engineers, on duty, \$600 to \$1000; on leave, \$400 to \$850. Boatswains, gunners, carpenters, and sailmakers, on duty, \$700 to \$800; on leave, \$500 to \$600.

CANALS AND RAILROADS

IN THE

UNITED STATES.

CANALS.

NEW ENGLAND.

The only canal in New England, now employed for purposes of navigation, is the *Cumberland and Oxford*, 20½ miles, from Portland to Sebago Lake, to which the Tongo River improvement adds 30 miles of lake and river navigation. The *Middlesex Canal*, 27 miles, from Boston to Lowell, the *Blackstone Canal*, 45 miles, from Worcester to Providence, and the *Farmington Canal*, 78 miles, from New Haven to Northampton, have all been superseded by railroads. The same is the case with the short canals constructed for passing the various falls of the Connecticut and Merrimac, the navigation of these rivers having been mostly abandoned in favor of the railroads along their banks.

NEW YORK.

The *Champlain Canal* extends from the Hudson at Troy to Lake Champlain, at Whitehall, 64 miles. The *Erie Canal* extends from the Hudson, at Albany, to Lake Erie, at Buffalo, 364 miles. This latter canal sends off branches, as follows: *Black River*, from Rome to Carthage, 77½ miles, with a feeder from Brownville, 10 miles; *Chenango*, from Utica to Binghamton, 97 miles; *Oswego*, from Syracuse to Oswego, 38 miles; *Cayuga and Seneca*, from Montezuma to Geneva, 21 miles, tributary to which are the *Crooked Lake Canal*, 3 miles, from Dresden to Penn Yan, and the *Chenung*, 39 miles, from Jefferson, at the head of Seneca Lake to Elmira; finally, the *Genesee Valley Canal*, from Rochester to Olean, on the Alleghany, 108½ miles, with a branch from Mount Morris to Danville, 11 miles. Works are in progress to unite this New York system with the Pennsylvania and Susquehanna system, by canals extending from Binghamton and Elmira to the Pennsylvania line. All the above, except the junction canals last mentioned, are state works. The *Delaware and Hudson Canal* extends from the Hudson, at the mouth of the Esopus Creek, to the Delaware, at Port Jervis, and thence up that river to the mouth of the Lackawaxen, along which it is continued by the Lackawaxen Canal to Honesdale, in Pennsylvania, in the whole 110 miles. The whole length of canals in New York is near 1000 miles.

NEW JERSEY.

The *Delaware and Raritan Canal*, 42 miles, from Bordentown to New Brunswick, opens an internal sloop navigation from Philadelphia to New York. The *Morris Canal*, 102 miles, from Jersey City, opposite New York, to Easton, on the Delaware, communicates with the *Lehigh* navigation, and the Pennsylvania Delaware Canal.

PENNSYLVANIA.

Has a canal system still more extensive than that of New York. Commencing at the head of navigation in the Susquehanna at Havre de Grace in Maryland, the *Tidewater Canal* extends 45 miles, to Wrightsville, opposite the termination of the Columbia Railroad, from Philadelphia. Thence the navigation is continued by the *Eastern Division of the Pennsylvania Canal*, 44½ miles to the mouth of the Juniata, from which point the *Juniata Canal* extends W. 127½ miles to Hollidaysburg. The *Susquehanna Canal* continues N. from the mouth of the Juniata, 39 miles, to the junction of the N. and W. branches of the Susquehanna, whence the *West Branch Canal* proceeds to Lock Haven, 75 miles, whence the *Bald Eagle Canal* extends 22 miles, farther, to Bellefonte, at the foot of the main Alleghany ridge. The *North Branch Canal* extends from the junction of the two branches, 73 miles, to Wilkesbarre, and has been continued thence by a private company 90 miles, to the New York line; from which point two short canals, now in progress to Binghamton and Elmira, will connect this Susquehanna system with the New York canals. The other canals in the eastern part of Pennsylvania, besides the Lackawaxen, already mentioned, a continuation of the Delaware and Hudson, are the *Lehigh Navigation*, 46½ miles, to Mauch Chunk, and to the falls at Stoddardsville, 41½ miles farther; the Delaware division of the *Pennsylvania Canal*, from Bristol, at the head of sloop navigation on the Delaware, 60 miles, to Easton, where it communicates with the Lehigh navigation, and with the Morris Canal; the *Schuylkill Navigation*, from Philadelphia via Reading, to Port Carbon, 103 miles; and the *Union Canal*, from Reading westward to the Susquehanna, 82 miles. The Portage Railroad, 66 miles, over the mountains from Hollidays-

burg to Johnstown, unites the eastern division of the Pennsylvania Canal to the *Western Division*, which extends along the banks of the Kiskiminitas and the Alleghany, 104 miles, to Pittsburg. The *Beaver and Erie Canal* extends 136 miles, from the Ohio at Beaver, to Erie on Lake Erie, with two branches — the *French Creek Feeder*, 27 miles long, and the *Franklin Canal*, 22 miles long. The whole length of canals in Pennsylvania is 1280 miles, 848 of which are owned by the state, and 432 by companies.

OHIO.

The *Ohio Canal* extends 307 miles from the Ohio, at Portsmouth, to Lake Erie, at Cleveland, with branches to Columbus, 10 miles; to Lancaster, and thence down the valley of the Hocking to Athens, 65 miles; to Zanesville, 14 miles; and thence by the improved navigation of the Muskingum, to the Ohio River, 81 miles; up the Walhonding, 25 miles. It is also connected with the Ohio River by the *Sandy and Little Beaver Canal*, 76 miles, having a branch of 10 miles to Canton. It is connected with the canal system of Western Pennsylvania by the *Pennsylvania and Ohio*, or *Mahoning Canal*, 75 miles in length. The *Miami Canal*, and its extension in the western part of the state, is 181 miles in length from Cincinnati to Defiance on the Maumee, down which river the *Wabash and Erie Canal* extends 76 miles farther, to Lake Erie. The *Warren County Canal*, 19 miles long, the *Sidney Feeder*, 13 miles long, and the *St. Mary's Feeder*, 11 miles long, are branches of the Miami Canal. The Ohio canals are mostly state works.

INDIANA.

The *Wabash and Erie Canal*, 458 miles long, extends from Toledo, in Ohio, at the entrance of the Maumee into Lake Erie, to Evansville, on the Ohio, following the course of the Maumee as far as Terre Haute, and thence by the White River valley. The portion in Indiana is 376

miles long. The *White Water Canal* extends from Lawrenceburg, on the Ohio, a short distance below Cincinnati, up the White Water River, to Cambridge, 76 miles. These were originally state works, but have been transferred to private companies.

ILLINOIS.

The *Illinois and Michigan Canal* is 113 miles long, from Chicago to La Salle, at the head of steamboat navigation on the Illinois. Originally a state work, it is now in the hands of a company.

KENTUCKY.

The *Louisville and Portland Canal*, round the falls of the Ohio, is 2½ miles in length. The Licking, Kentucky, Green, and Barren Rivers have been improved by dams and locks, and made navigable for a total distance of 484 miles.

DELAWARE.

The *Chesapeake and Delaware Sloop Canal*, connecting Delaware and Chesapeake Bays, is 14 miles long.

MARYLAND.

The *Chesapeake and Ohio Canal* is 184 miles long, from Cumberland to Georgetown, with a branch of 7 miles to Alexandria.

VIRGINIA.

The *James River and Kenhawa Canal* extends up the James River from Richmond, 197 miles, to Buchanan. The *Dismal Swamp Canal* and branches, from Albemarle Sound to Norfolk, is 34 miles long.

SOUTHERN STATES.

There are a number of short canals in these states, but none of much importance.

RAILROADS.

Calais and Baring, 6 miles.
Franklin. Machiasport to Whitneyville, 9 miles.
Bangor and Piscataquis. Bangor to Oldtown, 12 miles.
Kennebec and Portland. Augusta to Portland, 60 miles.
Branch. Brunswick to Bath, 9 miles.
York and Cumberland. Gorham to Portland, 10 miles.
 **Atlantic and St. Lawrence*. Portland, via Danville and Mechanics Falls, to the Canada line, at Island Pond, 150 miles.
Androscoggin and Kennebec. Danville, via Leeds, to Waterville, 55 miles.
Androscoggin. Leeds to Livermore Falls, 20 miles.
Buckfield Branch. Mechanics Falls to Buckfield, 13 miles.
Eastern. Portland, via South Berwick, Dover, Newburyport, and Salem, to Boston, 105 miles.

Branches. Salisbury, 4 miles, Beverly to Gloucester, 14, Salem to Marblehead, 4.
Boston and Maine. South Berwick, via Bradford and Lawrence, to Boston, 74 miles.
Branch. Rollinsford to Great Falls, 3 miles.
 † *Great Falls and Conway*. Great Falls to Milton, 13 miles.
Cochecho. Dover to Alton Bay, 28 miles.
Newburyport. Newburyport to Bradford, 18 m.
South Reading Branch. South Reading to Salem, 9 miles.
Essex. Lawrence to Salem, 21 miles.
Manchester and Lawrence, 26 miles.
New Hampshire Central. Manchester to Henniker, 26 miles.
Boston and Lowell, 26 miles.
Lowell, Nashua, and Wilton, 30 miles.
Concord. Nashua, via Manchester, to Concord, 35 miles.
Portsmouth and Concord, 47 miles.
Concord and Claremont. Concord, via Contookville, to Bradford, 25 miles.

Contoocook Valley. Contoocookville, via Hen-
niker, to Hillsboro', 14 miles.

Northern New Hampshire. Concord to West
Lebanon, 69 miles.

Branch. Franklin to Bristol, 9 miles.

Boston, Concord, and Montreal. Concord to
Haverhill, 80 miles.

Fitchburg. Boston to Fitchburg, 50 miles.

Branches. Somerville to Cambridge, 3; West
Cambridge to Watertown, 8; West Cambridge to
Lexington, 11; South Acton to Lancaster and
Sterling, 9; Groton to Peterboro' and Shirley,
23; Groton to Lowell, (*Stony Brook Railroad*),
17 miles.

Vermont and Massachusetts. Fitchburg, via
South Vernon, to Brattleboro', 69 miles.

Branches. South Ashburnham to Bellows
Falls, (*Cheshire Railroad*), 54 miles; to Green-
field, 8.

Boston and Worcester. 44 miles.

Branches. To Brookline, 1; thence to Need-
ham, (*Charles River Railroad*), 8; Auburndale to
Newton Lower Falls, 1; Natick to Saxonville, 5;
Framingham to Milford, 13; Grafton to Mill-
bury, 4.

Fitchburg and Worcester. 26 miles.

Worcester and Nashua. 45 miles.

Providence and Worcester. 43 miles.

Norwich and Worcester. 66 miles.

Western. Worcester, via Springfield, West
Stockbridge, and Chatham, to Albany, 156 miles.

Branches. Palmer to Belchertown and Am-
herst, 10 miles; Pittsfield to North Adams, 20.

Old Colony. Boston to Plymouth, 37 miles.

Branches. Neponset to Milton, 3 miles; Brain-
tree to Cohasset, (*South Shore Railroad*), 12;
South Abington to Bridgewater, 7; South Brain-
tree to Fall River, (*Fall River Railroad*), 43;
Middleboro' to Sandwich, (*Cape Cod Branch*), 28.

Boston and Providence. 43 miles.

Branches. Jamaica Plains to Dedham, 6 miles;
thence to Blackstone, (*Norfolk County Rail-
road*), 26; Canton to Stoughton, 4; Mansfield to
New Bedford, (*Taunton Branch and Taunton and
New Bedford*), 31.

Stonington. Providence to Stonington, 50 miles.

† *Providence, Hartford, and Fishkill.* Bristol to
Willimantic, 50 miles.

New London, Willimantic, and Palmer. 66 miles.

New London and New Haven. 50 miles.

* *Canal Railroad.* New Haven and North-
ampton, 78 miles.

New Haven, Hartford, and Springfield. 62 miles.

Branch. Berlin to Middletown, 10 miles.

Connecticut River. Springfield to South Ver-
non, 50 miles.

Ashuelot. South Vernon to Keene, 23 miles.

Vermont Valley. Brattleboro' to Bellows Falls,
24 miles.

Sullivan. Bellows Falls to Windsor, 25 miles.

Rutland and Burlington. Bellows Falls to Bur-
lington, via Rutland, 120 miles.

Rutland and Washington. Rutland, via Cast-
leton, to Troy, 84 miles.

Western Vermont. Rutland to North Benning-
ton, 52 miles.

Troy and Boston. North Bennington to Troy,
32 miles.

Vermont Central. Windsor, via White River,
to Burlington, 117 miles.

Branch. Essex Junction to Rouse's Point, 52
miles.

Passumpsic. White River to St. Johnsbury, 61.

Champlain and St. Lawrence. Rouse's Point to
Ogdensburg, 118 miles.

† *Plattsburg and Montreal.* Plattsburg to Mooer's,
20 miles.

Naugatuck. Bridgeport to Winstead, 62 miles.

Housatonic. Bridgeport to West Stockbridge,
98 miles.

Danbury and Norwalk. 22 miles.

New York and New Haven. 76 miles.

Long Island. Brooklyn to Greenport, 75 miles.

Haarlem. New York to Chatham, 130 miles.

Hudson River. New York to Troy, 150 miles.

Hudson and Berkshire. Hudson to West Stock-
bridge, 34 miles.

Troy and Greenbush. 6 miles.

Troy, Whitehall, and Castleton. via Saratoga, 84
miles.

Schenectady and Troy. 20 miles.

Albany and Schenectady. 17 miles.

Saratoga and Schenectady. 22 miles.

Utica and Schenectady. 78 miles.

Utica and Syracuse. 53 miles.

Rochester and Syracuse. 104 miles.

Buffalo and Rochester. 76 miles.

Watertown and Rome. Rome to Cape Vincent,
97 miles.

Oswego and Syracuse. 35 miles.

Cayuga and Susquehanna. Cayuga to Oswego,
70 miles.

Canandaigua and Elmira. 67 miles.

Rochester, Lockport, and Niagara Falls. 76 miles.

Buffalo and Niagara Falls. 22 miles.

Buffalo and State Line. Buffalo to the west-
ern line of the state, 69 miles.

Erie and North East. Western line of New
York to Erie, Pa.

Buffalo and New York City. Attica to Hornells
ville, 60 miles.

Buffalo, Corning, and New York. Corning to
Wayland, 45 miles.

Corning and Blossburg. 40 miles.

Erie. Dunkirk, via Hornellsville, Elmira,
Corning, Owego, Great Bend, to Piermont, 444
miles.

Lackawana and Western. Great Bend to
Trenton, 50 miles.

Newburg Branch. Oxford to Newburg, 19.

Union. (late *Ramapo*.) Sufferns to Jersey City,
33 miles.

New Jersey. Jersey City, via Newark and
Elizabethtown, to Trenton, 57 miles.

Morris and Essex. Newark to Dover, 44
miles.

New Jersey Central. Elizabethtown to Easton,
87 miles.

Trenton and Philadelphia. 30 miles.

* *Belvidere.* Trenton to Belvidere, 63 miles.
Trenton Branch. Trenton to Bordentown, 6
miles.

Camden and Amboy. 65 miles.

Branch. To Mount Holly, 6 miles.

Philadelphia and Reading. Philadelphia, via
Reading, to Pottsville, 93 miles.

Mauch Chunk and Summit Hill. 9 miles.

Mine Hill. Schuylkill Haven to Fremont, 12
miles.

Little Schuylkill. Port Clinton to Tamaqua,
20 miles.

Philadelphia, Germantown, and Norristown. 17
miles.

Philadelphia and West Chester. 30 miles.

Columbia and Philadelphia. 82 miles.

Harrisburg and Lancaster. 36 miles.

Cumberland Valley. Harrisburg to Chambersburg, 56 miles.

Franklin. Chambersburg to Hagerstown, 22 miles.

York and Cumberland. Harrisburg to York, 25 miles.

Pennsylvania, Eastern Division. Harrisburg to Hollidaysburg, 135 miles.

Portage, 32 miles.

Pennsylvania, Western Division. Connemaugh to Pittsburg, 87 miles.

Philadelphia, Wilmington, and Baltimore, 98 miles.

Newcastle and Frenchtown, 16 miles.

Baltimore and Susquehanna. Baltimore, via Relay House, to York, 57 miles.

Westminster Branch, Relay House to Owen's Mills, 9 miles.

Baltimore and Ohio. Baltimore, via Monacasy, Harper's Ferry, and Cumberland, to Wheeling, 375 miles.

Branch. Monacasy to Frederick, 3 miles.

Winchester and Potomac. Harper's Ferry to Winchester, 32 miles.

Washington Branch. Baltimore, via Elk Ridge, to Washington, 40 miles.

Annapolis and Elk Ridge, 21 miles.

† *Orange and Alexandria.* Alexandria to Gainesboro', 45 miles.

Richmond, Frederick, and Potomac. Acqua Creek, via Chesterfield, to Richmond, 75 miles.

Branch, (Virginia Central.) Chesterfield to Charlottesville and Woodville, 77 miles.

† *Richmond and Danville.* Richmond to Meherin, 65 miles.

Richmond and Petersburg, 22 miles.

Appomattox. Petersburg to City Point, 10 miles.

Petersburg. Petersburg, via Hicksford, to Weldon, 64 miles.

Seaboard and Roanoke. Portsmouth to Weldon, 80 miles.

Granville and Roanoke. Hicksford to Gaston, 21 miles.

Gaston and Raleigh, 87 miles.

* *Wilmington and Weldon,* 162 miles.

Wilmington and Manchester, 162 miles.

South Carolina. Charleston, via Branchville, to Augusta, 137 miles.

Branches. Branchville to Columbia, 67 miles; to Camden, via Manchester, 37 miles.

† *Charlotte and South Carolina.* Columbia to Ebenezer, 78 miles.

King's Mountain. Chesterville to Yorkville, 32 miles.

* *Granville and Columbia,* with branches to Anderson and Abbeville, 164 miles.

Georgia Central. Savannah, via Gordon, to Macon, 191 miles.

Milledgeville and Gordon, 17 miles.

Macon and Western. Macon to Atlanta, 101 miles.

Augusta and Waynesboro', 21 miles.

Georgia. Augusta to Atlanta, 171 miles.

Branches. Camah to Warrenton, 4 miles; Union Point to Athens, 40 miles.

South-western. Macon, via Fort Valley, to Oglethorpe, 50 miles.

Muscogee. Fort Valley to Columbus, 70 miles.

Lagrange. Atlanta to West Point, 87 miles.

Western and Atlantic. Atlanta, via Kingston, to Chattanooga, 140 miles.

Rome. Kingston to Rome, 20 miles.

* *Nashville and Chattanooga,* 151 miles.

† *East Tennessee and Georgia.* Dalton to London, 82 miles.

West Point and Montgomery, 88 miles.

† *Mobile and Ohio.* Mobile to Citronelle, 33 miles.

Vicksburg, Jackson, and Brandon, 60 miles.

Clinton and Port Hudson, 24 miles.

West Feliciana. Woodville to Bayou Sara, 26 miles.

Mexican Gulf. New Orleans to Proctorsville, 27 miles.

New Orleans and Carrollton, 6 miles.

New Orleans, Milnesbury, and Lake Pontchartrain, 6 miles.

Alton and Sangamon. Alton to Springfield, 70 miles.

Sangamon and Morgan. Springfield to Naples, 54 miles.

† *Milwaukee and Mississippi.* Milwaukee to Palmyra, 43 miles.

Galena and Chicago. Chicago to Rockford, 92 miles.

Branches. To Aurora, 13 miles; to Fort St. Charles, 7 miles.

† *Chicago and Rock River.* Chicago to Ottawa, 84 miles.

Michigan Central. Chicago to Detroit, 278 miles.

Michigan Southern. Chicago, via Adrian, to Monroe, 247 miles.

Erie and Kalamazoo. Adrian to Toledo, 33 miles.

Detroit and Pontiac, 25 miles.

† *Evansville and Illinois.* Evansville to Princeton, 27 miles.

Louisville and Frankfort, 65 miles.

Frankfort and Lexington, 29 miles.

† *New Albany and Salem.* New Albany to Juliet, 65 miles.

† *Jeffersonville.* Jeffersonville to Rockford, 51 miles.

Madison and Indianapolis, via Edinburg, 36 miles.

Shelbyville Branch. Edinburg to Shelbyville, 16 miles.

Shelbyville and Knightstown, 27 miles.

Shelbyville and Rushville, 20 miles.

Lafayette and Indianapolis, 62 miles.

Peru and Indianapolis, 72 miles.

Terre Haute and Richmond. Indianapolis to Terre Haute, 73 miles.

Indianapolis and Bellefontaine. Indianapolis to east line of the state, at Union, 83 miles.

* *Indiana Central.* Indianapolis to east line of the state, near Richmond, 73 miles.

Dayton and Western. From the terminus of the preceding to Dayton, 36 miles.

Dayton and Greenville, 35 miles.

Cincinnati, Hamilton, and Dayton, 60 miles.

Mad River and Lake Erie. Dayton, via Springfield, to Sandusky, 150 miles.

Branch. Carey to Findlay, 16 miles.

Sandusky Mansfield and Newark, 117 miles.

* *Central Ohio.* Dayton to Wheeling, via Columbus, Newark, and Zanesville.

Little Miami. Cincinnati, via Lovelands, to Xenia, 65 miles.

Cincinnati and Hillsboro'. Lovelands to Hillsboro', 37 miles.

Columbus and Xenia, 55 miles.

Xenia and Springfield, 17 miles.

Cleveland, Columbus, and Cincinnati. Columbus to Cleveland, via Grafton, 135 miles.
 † *Iron.* Ironton to Jackson Furnace, 25 miles.
 † *Cleveland and Pittsburg.* Cleveland, via Alliance, to Wellsville, 100 miles.
Branch. Hudson to Akron, 8 miles.

† *Ohio and Pennsylvania.* Worster, via Alliance, to Pittsburg, 134 miles.
Cleveland, Painesville, and Ashtabula. Cleveland to Erie, 95 miles.
 * *Cleveland, Norwalk, and Toledo.* Grafton to Toledo.

NOTE. A few of the above roads, marked *, are not yet entirely finished for the distances stated. A large number of others, marked †, have extensive continuations in progress. Other very important roads are under way, including a line (large parts of which are already built) extending direct from Wheeling, via Columbus, Indianapolis, and Terre Haute, to St. Louis; another line, from Wheeling, via Marietta, to Cincinnati, and thence, via Vincennes, to St. Louis, communicating from Wheeling with Hempstead, on the Pittsburg and Philadelphia road, and by a branch from Parkersburg, near Marietta, with the Baltimore and Ohio Road. An important system of roads is also in progress in Illinois, extending from Cairo to Chicago and Galena.

COMPARATIVE SPEED ON THE PRINCIPAL RAILROADS OF THE U. STATES,
 (the speed being that of the swiftest trains.) From Fisher's "American Railway Guide."

NOTE.—In the compilation of the following Table, the TIME set down is that spent by trains moving along the whole length of the road, and includes all the stoppages on the routes.

ROUTES TO CALIFORNIA AND OREGON.

NICARAGUA ROUTE.

From New York to San Juan del Norte, at the mouth of the San Juan River, otherwise called Greytown, is 2000 miles. From New Orleans the distance is about 1400 miles. There is a good pier at Greytown, at which passengers can land without trouble, or they can pass directly into the river steamers, which ascend 52 miles to the Castillian Rapids. Here is a short portage of about 300 yards, the rapids not admitting the passage of steamers. Above the rapids to San Carlos, at the head of the river, is 27 miles. Thence across Lake Nicaragua to Virgin Bay is 42 miles. From Virgin Bay to San Juan del Sud, on the Pacific Ocean, is a land journey of 13 miles, to facilitate which a plank road has been constructed. The Transit Company have now on the river and lake seven small steamers, and others building, and the passage of the Isthmus, 135 miles in the whole, is accomplished in about 40 hours,—a time which will be considerably diminished when the new boats are ready. From San Juan del Sud to San Francisco is about 2800 miles, making the whole distance from New York about 5000 miles. This is accomplished in from 22 to 28 days, being the shortest and most expeditious route to California. Steamers by this route leave New York, New Orleans, and San Francisco once a fortnight, on the 1st and 15th of each month.

PANAMA ROUTE.

From New York to Aspinwall or Navy Bay, a few miles eastward of Chagres, via Kingston, Jamaica, (the mail route,) is about 2300 miles. Via Havana the distance is about 2400 miles. From New Orleans to Aspinwall is 1400 miles, or via Havana, 1650. A fine pier has been constructed at Aspinwall, to which the steamers come, the passengers and freight being placed directly in the cars of the railroad which is to extend to Panama, 49 miles. About 30 miles of the road are already finished, and the whole will be by the spring of 1853. From Panama, touching at Acapulco, San Diego, and Monterey, the distance is 3400 miles, making the entire route from New York to San Francisco, via Kingston, 5750 miles, or via Havana, 5850. First class steamers employed on this route leave New York, New Orleans, and San Francisco on the 5th and 20th of each month. Time, from 25 to 30 days. From San Francisco to Astoria, at the mouth of the Columbia River, (distance 700 miles,) there is a semi-monthly mail steamer.

CAPE HORN ROUTE.

From New York to California, via Cape Horn, is about 14,700 miles. This distance is made by clipper ships in from 100 to 130 days. Ordinary merchant ships are from one to two months longer.

The expense by all these routes for first class passengers is from \$250 to \$350 each; steerage passengers \$150 to \$200.

OVERLAND ROUTE.

There are two principal starting-places for this route, St. Joseph, Mo., a few miles above Fort Leavenworth, and Council Bluffs, a short distance N. of the entrance of the Platte into the Missouri. The road from Council Bluffs for 800 miles up the N. side of Platte River is the best natural one in the world. The elevation is less than 12 feet to the mile. The water coming from the high lands is fresh and cool. Grass is abundant, and on the river bottom two weeks earlier than on the route over the plains from St. Joseph, on the other side of the river. Timber, "buffalo chips," and mineral coal are found sufficient to supply travellers. The large amount of travel to California, Oregon, and Utah makes it a great national thoroughfare. Over 100,000 souls have already travelled this road since the discovery of gold in California. The passage from Council Bluffs can be safely made, with wagons drawn by mules or oxen, in from 60 to 90 days, at an expense of not over \$100 for each passenger. If emigrants conduct themselves properly, no danger need be feared from any Indian tribes through which the road passes. All necessary outfits and supplies can be had at Kanessville and Council Bluffs. An accurate General Directory has been published by J. H. Colton, 86 Cedar Street, New York, and a Mormon Guide, by Mr. Clayton, which will give the emigrant all necessary information. The forts of the American Fur Company and of the United States are usually prepared to render any aid needed by travellers. Aid has also been furnished at the California end of the route at the expense of the state of California.

N. B. The distances from St. Joseph are about 128 miles greater. The distance of Council Bluffs from New York, via Chicago, Dubuque, Galena, Cedar Rapids, and Fort Des Moines, is 1511 miles.

GRAND DISTANCE TABLE.

THIS Table comprises the distances to and from some of the most important points in the United States. It was prepared in October, 1851, by authority of the government, for the regulation of payments for travel to persons employed in the public service. It is, doubtless, of great accuracy, and will serve, in this work, instead of a repetition of the distances under the respective places mentioned, and be much more convenient for general reference.

LENGTH AND BREADTH OF THE UNITED STATES.

The extent of the Atlantic coast of the United States, in round numbers, and measuring from headland to headland, from Calais, at the head of Passamaquoddy Bay, to Key West, is 1690 miles. If the bay coasts and minor sinuosities were included, the distance would be twice as great. The coast of the Gulf of Mexico, measured in the same way, from Key West to the mouth of the Rio del Norte, is 1300 miles. The Pacific coast is 1200 miles, and the lake coast of the north 1200 miles; making, in the whole, 5300 miles of coast bounding on navigable waters. The land boundary between Mexico and the United States is upwards of 1300 miles in extent; that between the British possessions and the United States upwards of 1600 miles. Both these land frontiers, throughout almost their entire extent, are a complete wilderness. The greatest extent of the United States, from north to south, is from the forty-ninth degree of north latitude to the mouth of the Rio del Norte, 1600 miles in an air line. The breadth, from Passamaquoddy Bay to the mouth of the Columbia River, is 2000 miles, and from Charleston to San Diego, 1750. Area, as estimated by the superintendent of the census, 3,200,000 square miles.

PRINCIPAL ELEVATIONS. — Lake Superior, 641 feet above the level of the sea; Council Bluffs, 912; Sources of the Mississippi, 1400; Blue Ridge, 1500; Alleghany Mountains, (main ridge,) 2500; Green Mountain range, 3000; Catskill Mountains, 3800; Peaks of Otter, 4260; Ft. Laramie, 4079; Adirondack Mountains, 5000; Mt. Washington, (White Mountains,) 6234; Santa Fe, 6800; South Pass, 7085; Passes of the Sierra Nevada, 7200; highest peaks of the Rocky Mountains, 15,000.

APPENDIX.

No. 1.—VALLEJO, CA., SOLANO CO.

Capital of the state of California. In consideration that this should be made the capital of the state, General Vallejo and his associates agreed to convey to the state 156 acres of land, and to expend within two years \$370,000 in providing public buildings. This place is beautifully situated on the sides of lofty hills, which rise with a gradual undulation from the waters of the Straits of Napa, just at their entrance into San Pablo Bay, about 30 miles E. of N. from San Francisco, 8 N. of W. from Benicia, 100 S. W. from Sacramento, and about the same N. W. from Stockton. It can be approached by the largest sea vessels, and through the Sacramento and San Joaquin Rivers easily communicates with the whole mining district. In its neighborhood, on the Napa and Sonoma, is one of the best farming districts in the state. In addition to a commanding view of the beautiful valley of Napa, with its enclosure of sheltering hills, the perspective embraces the slopes of Benicia, the Straits of Carquinez, the verdant hills and valleys of Martinez, with Mare Island, the Bay of San Pablo, and in the far distance Telegraph Hill, dotted with white houses.

The Capitol stands on an eminence commanding a wide range of prospect. It is of plain and simple design, and will afford ample accommodations. The main entrance is by a bold flight of steps extending the full breadth of the building, and surmounted by a lofty portico. The lowest story or basement, which is of solid mason work, contains a hall intended for law courts, about 70 feet in length, 40 in breadth, and 12 in height, well lighted, with 10 massive pillars to sustain the upper halls. The first floor, to which the main entrance leads, by a spacious hall, is to be the session room of the House of Assembly. It has about the same proportions as the story below it, and a ceiling about 20 feet high. It is lighted by 14 large windows. From the entrance hall, at either side, a broad winding staircase leads to the senate room, which is of the same size as the assembly room, and equally well lighted. The house also contains, at either side of the entrance halls, committee rooms, the governor's room, and other state apartments. The apartments for the different state officers are separate from the main building. They are large and well furnished, with rather more space than would seem necessary for state purposes.

In the vicinity of the Capitol there are some 12 hotels of large size and ample accommodations.

No. 2.—SALT LAKE CITY, UH.

This city and settlement of the Mormons is situated at an elevation of more than 4000 feet on the River Jordan, a tributary of Great Salt Lake, at the foot of the western slope of the Wahsateh Mountains, an extensive chain of lofty hills, forming a portion of the E. boundary of what is known as the "Great Interior Basin," of North America. The Mormon communion was first organized in 1830, under the auspices of Joseph Smith, the prophet and founder, and after a temporary residence at Kirtland, O., was removed to Jackson co., Missouri, where by divine revelation, as Smith alleged, and the Mormons believed, the "Saints," as they called themselves, were directed to build a magnificent temple, according to a plan to be divinely communicated to Smith. The corner stone was laid, but a strong excitement was raised against them, and they were compelled to remove to Caldwell co., on the opposite bank of the Missouri, whence they were soon after obliged to fly to Illinois, where they founded the city of Nauvoo. Here they lived and flourished for several years, and completed the erection of a temple, but in 1844, a strong popular excitement was raised against them, they were attacked by an armed force, and their prophet and his brother Hiram, having submitted to be arrested, were barbarously murdered in the jail of Carthage. During the year 1845, these persecutions continued, and the Mormons, finding their condition no longer tolerable, resolved to abandon Nauvoo, and to seek an asylum elsewhere. For this purpose great sacrifices of property were made, and in February, 1846, a portion of them crossed the Mississippi, and formed a rendezvous near Montrose, in Iowa. Here they remained exposed to intense cold and deep snows till March, when, being joined by several hundred wagons and a large number of women and children, they organized under the leadership of Brigham Young, who was recognized as president of the church and the prophetic successor of Joseph Smith.

In their progress westward, being prohibited by cruel threats from passing through the settled districts of Northern Missouri, they suffered great hardships in traversing the then uninhabited wilderness of Northern Iowa; but in the course of the summer they reached the banks of the Missouri, where they enclosed land and planted crops, on the site of the present town of Kanessville, still occupied as a Mormon settlement and forwarding station for emigrants. As they were about to cross the river to pursue their journey, leaving a detachment to watch and gather the crop, they received a requisition from the government of the

United States for 500 men for the Mexican war, — a demand their compliance with which interrupted their progress for the season. Those who remained, being principally old men, women, and children, were compelled to pass the winter amid great sufferings and privations, in huts of logs, and caves dug in the river bank. In the spring of 1847, they again organized, and on the 8th of April, a pioneer company of 143 men, 72 wagons, 175 head of horses, mules, and oxen, and provisions for six months, started to seek a home beyond the Rocky Mountains. Crossing those mountains by the South Pass, about the end of July they reached the valley of the Great Salt Lake, where a piece of land was selected, consecrated by prayer, and planted with crops, and the nucleus was thus formed of the present territory of Utah. Soon after, the ground was surveyed and laid out into streets and squares for a large city, and for protection against the Indians, a fort or enclosure was erected by means of houses made of logs and sun-dried bricks, connected with each other, and opening into a large square. In October the colony was strengthened by the arrival of between 3000 and 4000 persons. Agricultural labor was resumed with spirit, ploughing and planting being continued throughout the whole winter, and till July following, by which time upwards of 6000 acres were enclosed and laid down in crops. While their crops were ripening, the colonists were reduced to great extremity for food. Game being scarce, they were obliged to subsist on wild roots and the hides of animals which they had used for roofing their cabins. But the crop proved abundant, and plenty has ever since reigned in the valley. In the autumn, another large immigration arrived under the president, Brigham Young. Building and agriculture were prosecuted with renewed vigor, and settlements continued to be made wherever water could be found for irrigation. Grist mills and saw mills were built; and in the spring a settlement was commenced on Weber River, a bold, clear stream which breaks through the Wasatch Mountain, 40 miles N. of the city, and discharges its waters into Salt Lake. Another settlement called Provaux City was commenced, near the mouth of the Timponogos, or Provaux, an affluent of Lake Utah, about 50 miles S. of the city. On the 10th of March, 1849, the emigrants assembled in convention, organized themselves as the state of Deseret, and the legislature, which met July 2d, forwarded a petition to Congress for admission into the Union. But, instead of granting this petition, Congress passed, September 9, 1850, an act erecting the territory of Utah, and Brigham Young having been appointed territorial governor, the Mormons have accepted the territorial organization. Their country is rapidly filling up with emigrants, collected by their missionaries from all parts of the world, but principally from the Welsh counties of England, where Mormonism has made a very deep impression.

Situated so far inland, and isolated by the very nature of the surrounding country, agriculture and the raising of stock must be the chief resources of this new colony. Owing to the almost total absence of rain from May to October, the dependence of the farmer must be entirely upon irrigation, for which the means are supplied by the reservoirs of snow accumulated in the gorges of the mountains, and furnishing never-failing

streams, sometimes of considerable magnitude. The soil, formed chiefly from the disintegration of the felspathic rock mixed with detritus of limestone, is of the most fertile character, and owing to its loose and porous texture it absorbs water in large quantities. The streams, which come rushing down the mountain sides, when they reach the plain below dwindle soon into insignificant rivulets, and are presently swallowed up and lost. Cultivation is therefore circumscribed within very narrow limits, being restricted generally to a strip of from one to two miles wide along the base of the mountain, beyond which the water does not reach. On the E. side of the Salt Lake valley, the land susceptible of irrigation stretches along the western base of the Wasatch Mountains, from about 80 miles N. of Salt Lake City to about 60 miles S. of it; the latter portion embracing, towards its terminus, the fertile valley of Lake Utah. This is a beautiful sheet of pure fresh water, 30 miles in length, and about 10 in breadth, abounding in fine fish, principally speckled trout of great size and good flavor, and surrounded by rugged mountains and lofty hills, with a broad green valley sloping to the water's edge. This valley opens to the northward, and through it flows the River Jordan, a copious and powerful stream, discharging into the Great Salt Lake. Soon after leaving the lake, the Jordan cuts through a cross range of mountains by which the valley is divided. The river descends about 200 feet in a distance of 2 miles. The E. side of the lower valley is watered by bold streams that traverse a strip of alluvion 20 miles long and 8 wide, and as an additional means of irrigation the waters of the Jordan might be taken out at the falls, so as to irrigate a surface of about 80 square miles.

Beyond the Jordan on the W., the dry and otherwise barren plains support a hardy grass, called bunch grass, which is peculiar to these regions, requiring but little moisture, very nutritious, and in sufficient quantities to afford excellent pasturage throughout the year to numerous herds of cattle. This same grass is afforded also by the hillsides, but only during the summer months. It seeds in summer, and is germinated by the autumnal rains, and grows under the snow. In the spring, as the snow line retires up the slope, the cattle and wild grazing animals follow it to the mountain peaks until midsummer, to be driven down again, as the accumulated snow, beginning on the summits, about the equinox, descends in a few weeks to the base. When it rains in the valleys, the snow falls in the mountains; and during winter, an immense quantity is drifted into the canyons, and passes to the depth sometimes of hundreds of feet, whence the mountain streams derive their supplies. To the northward in the low grounds bordering the River Jordan, hay in abundance can be procured, though rather coarse and of inferior quality.

Maize, or Indian corn, has not yet proved so successful, owing to the early frosts occasioned by the vicinity of the mountains; but the climate is particularly favorable to barley, oats, and wheat, — which produces from 40 to 60 bushels the acre, — to beets, turnips, melons, and especially potatoes, of which the quality is equal or superior to the best Nova Scotia varieties.

The land immediately around the Great Salt Lake is flat, and rises imperceptibly on the S. and W. for several miles; and where it is not broken

up by the abrupt hills, it is a soft and sandy loam, irreclaimable for agricultural purposes. The whole western shore of the lake is bounded by an immense level plain of soft mud, frequently traversed by small meandering rills of salt and sulphurous water, with occasional springs of fresh, all of which sink before reaching the lake. For a few months in midsummer, the sun has sufficient power to render some portions of the plain for a short time dry and hard, during which it is often covered for miles with a coat of salt half an inch thick or more; but one heavy shower is sufficient to convert the hardened clay into soft, tenacious mud, rendering the passage of teams over it toilsome and frequently quite hazardous. This extensive area, for a distance of 75 miles from the lake, is for the most part entirely bare of vegetation, except occasional patches of artemisia and greesewood, and destitute of water. The minute crystals of salt, which cover the surface of the moist, oozy mud, glisten brilliantly in the sun, and present the appearance of a sheet of water so perfectly that it is difficult at times for one to persuade himself that he is not standing on the shore of the lake. High rocky ridges protrude above the naked plain, and resemble great islands rising above the bosom of this desert sea. On the N. the tract of low ground is narrow, and the springs bursting out near the surface of the water, the grounds cannot be irrigated. But on the eastern side, including the valley of the Bear River, which comes in from the N., the land above the line of overflow, to which the lake rises with the spring freshets, is fertile and capable of cultivation between the mountain and the shore. The same is the case with the Ogden River, which breaks through the Wasatch Mountains on the W. To the N. extends the valley of the Jordan, and of the Utah Lake, already described, also that of the Tuilla, parallel to it on the W., watered by a small river of that name, and separated from it by the Oquirres Mountains. The Bear, Ogden, Jordan, and Tuilla are the only considerable tributaries of the Great Salt Lake. The valleys of these rivers afford rich and perennial pasturage, and are capable of cultivation wherever they can be irrigated.

The Great Salt Lake, 70 miles long and 30 broad, but very shallow, is perfectly saturated with salt, and its waters are so dense that persons float cork-like on its waves, or stand suspended with ease, with the shoulders exposed above the waters. Yet to swim is difficult, on account of the tendency of the lower extremities to rise, and the brine is so strong that the least particle in the eye causes intense pain, and if swallowed in any quantity, it brings on strangulation and vomiting. The salt makers affirm that they obtain two measures of salt for every three of the brine. This is an exaggeration; but the analysis of the water shows that it contains 20 per cent. of pure salt, and not more than 2 per cent. of other salts, forming one of the purest, and most concentrated brines in the world. It is a refreshing and delightful sport to bathe in the Salt Lake; but on emerging, the body is completely frosted over with salt; and a fresh spring, of which many break out on the very edge of the lake, is a necessary resort. The shores in summer are lined with the skeletons and larvæ of insects, and of the fish that venture too far from the mouth of the rivers; and these form banks that fester and ferment, emitting sulphurous gases offensive to the

smell, but not supposed to be deleterious to health. These, often dispersed by storms, are at last thrown far up on the beach to dry into hard cakes of various dimensions, on which horses can travel without breaking them through; but the under side being moist, the masses are slippery and insecure.

There are several beautiful islands contained in the lake, two of them of considerable magnitude, with a mountain ridge through the centre 2000 feet high, affording fresh springs of water and good pasturage. Around the contour of those islands, and along the adjacent mountains, on the whole circumference of the lake, the eye traces three principal terraces, each about 50 feet above the other. At the base of the hills around the lake issue numerous warm springs, that collect in pools, inviting aquatic fowl during winter by their agreeable temperature and the insect larvæ which they furnish. Along the brackish streams from the saline springs grows a thick, tangled grass, and the marshy flats are covered with fine reeds or dense fistulas. In early summer the shepherd boys fill their baskets with the eggs deposited in that cover by the goose, the duck, the curlew, and plover; or, taking a skiff, they can row to the Salt Lake Islands, and freight to the water's edge with those laid there for successive broods by the gull, the pelican, the blue heron, the crane, and the brandt.

From Provaux City, the settlement on the Tinpanogos, already mentioned, N. to Ogden City, on Ogden Creek, an affluent of the Weber, a distance of 90 miles, the base of the Wasatch range is already studded with flourishing farms wherever a little stream flows down the mountain side with water sufficient for irrigation, while in the gorges and canyons (the name given to the narrow passes of the mountains,) where alone any trees are to be found, are erected the saw and grist mills.

To the S. of Lake Utah, on one of its tributaries, another city has been founded, called Paysan, and 130 miles farther on the road to California, another, named Marti, in what is called San Pete valley, on a tributary of the Sevier, or Necolet River. Still farther S., near Little Salt Lake, 250 miles from the Great Salt Lake, a fourth settlement, called Cedar City, has been laid out, in a spot possessing the advantage of excellent soil and water, equal, it is said, to those of Great Salt City itself, and plenty of wood, iron ore, and alum, with some prospect of coal. It is the ultimate object of the Mormons, by means of stations, whenever the nature of the country will admit, to establish a line of communication with the Pacific, so as to afford a new route for their emigrants. With this view they have recently made a purchase, and established a colony at no great distance from San Diego, on the coast of California, which settlement they design to connect, by intermediate stations, with those on the Little and Great Salt Lakes.

Several other settlements have been established within the year past, including one in the Tuilla valley, and another on the line of communication with San Diego, which has been called Fillmore City, and made the seat of the territorial government. By an act of the last session of Congress, an United States mail route has been established on this line, from Great Salt Lake City, via American Fork, Provo City, Springfield, Payson's Summit Creek, Nephi City, Fillmore City, Red

Creek, Paravan, Johnson's Springs, and Cold Creek, to Santa Clara, near the southern border of Utah and thence, via San Bernardino, near which is the Mormon settlement, to San Diego, in California.

The City of the Great Salt Lake stands in the lower valley of the Jordan, at the western base of the Wasatch Mountains, in a curve, formed by the projection westward from the main range, of a lofty spur which cuts it off from the Great Salt Lake, which is distant about 20 miles. It is laid out upon a magnificent scale, being nearly 4 miles in length and 3 in breadth; the streets at right angles, 8 rods wide, with sidewalks of 20 feet; the blocks 40 rods square, divided into 8 lots, each containing 1 acre and a quarter. By an ordinance of the city, each house is to be placed 20 feet back from the front line of the lot, the intervening space being designed for shrubbery and trees. On the W. it is washed by the Jordan, while to the southward, for 20 miles, extends a broad level plain, watered by streams descending from the mountains, and all of which is capable of irrigation from the Jordan itself. The plain, on the W. side of the Jordan, extending north to the lake, is low and barren. Through the city flows an unfailling stream of pure, sweet water, which, by an ingenious mode of irrigation, is made to traverse each side of every street, whence it is led into every garden spot. On the E. and N. the mountain descends to the plain by steps, which form broad and elevated terraces, commanding an extended view of the whole valley of the Jordan, which is bounded on the W. by rugged mountains, stretching far to the southward, and enclosing the Lake of Utah. On the northern confines of the city, a warm spring arises from the base of the mountains, the water of which has been conducted by pipes into a commodious public bathing house. At the western point of the same spur, about 3 miles distant, another spring flows in a bold stream from beneath a perpendicular rock, with a temperature of 128° Fahrenheit, too high to admit the insertion of the hand.

The houses of the city are built principally of *adobe*, or sun-dried brick, which, when well covered with a tight projecting roof, makes a warm, comfortable building, presenting a very neat appearance. Buildings of a better description are being introduced, though slowly, owing to the difficulty of procuring the requisite lumber, which must always be scarce and dear in a country so destitute of timber.

Upon a square, appropriated to the public buildings, an immense shed has been erected on posts, capable of containing 3000 persons. It is called the Bowery, and is used as a temporary place of worship, until the construction of the great temple, which, in grandeur of design and gorgeousness of decoration, is—so the Mormons say—to surpass all the edifices which the world has ever seen.

Energetic measures are in progress for a woolen factory, the raw material being furnished from the sheep raised in the valley. A pottery is completed, cutlery establishments have been successfully commenced, and extensive arrangements are going on for the manufacture of sugar from the beet root, which succeeds to perfection in the valley. Among the English Mormons are many possessed of great manufacturing skill.

Several appropriations of land and money have been made for the establishment of a university,

the grounds of which are laid out and enclosed on one of the terraces of the mountain, overlooking the city. A normal school, for the education of teachers, is already in operation, and school houses have been built in most of the districts, both in the city and country.

Salt Lake City is a stopping-place for the California emigrants, a large part of whom pass through it. Distant from Council Bluffs, 171 miles; from San Francisco, 1114 miles; from New York, via Dubuque, 2372 miles.

No. 3. — ROCKTON, N. Y., HERKIMER CO.

Situated 74 miles W. from Albany, and 21 E. from Utica. Formerly called Little Falls. The Mohawk River descends here about 42 feet in the distance of three fourths of a mile, by two long rapids, separated by a stretch of deep water, affording hydraulic power to a vast extent, only a small part of which is yet employed for manufacturing purposes. The upper rapid is the most considerable. The name of Little Falls is by way of contrast with the Great Falls of Cohoes, near the mouth of the river. This vicinity is much resorted to in consequence of the wild and romantic scenery of the gap through which the river passes, crossing the southern extremity of the range of the Adirondack Mountains. The river bed is granitic gneiss, very hard, but easily quarried for building stones, and abounding with quartz crystals, which, under the name of "diamonds," are offered for sale to visitors by the children who collect them. The wooded hills rise steep on both sides from 350 to 400 feet, consisting of sandstone, above which are extensive beds of blue limestone, much used for building purposes. This defile is 2 miles long, with a medium breadth of 100 rods, and through it pass the Erie Canal on the S. side of the river, and the Utica and Schenectady Railroad and the Mohawk Turnpike on the N. The canal ascends, in the space of a mile, by 4 locks, a distance of 40 feet, and is supplied with water by a feeder carried across the river by a handsome aqueduct of 3 arches, one of 70, and two of 50 feet span. At one point the brow of the hill projects into the river, by which the canal is carried by expensive diggings and embankments, a part of the river bed being taken into the canal.

The village is principally on the N. side of the river, and though the space is apparently confined, there is still breadth sufficient for a large town. It contains upwards of 300 dwellings, and is supplied with water from a spring in the hills, 300 feet above the tops of the houses.

No. 4. — FALMOUTH, ME., CUMBERLAND CO.

A pleasant town at the head of Casco Bay, 6 miles N. of Portland, which formed a part of it until 1786. It is watered by the Presumpscot, and has a number of vessels employed in coasting and fishing. Some vessels are built here. Both the Atlantic and St. Lawrence and the Kennebec and Portland Railroads pass through it.

No. 5. — FREEPORT, ME., CUMBERLAND CO.

This town has a small harbor, and is situated at the head of Casco Bay, on the Ken-

nebec and Portland Railroad. 19 miles N. E. from Portland. It is mainly an agricultural township, but has some ship building and navigation.

No. 6. — FARMINGTON, ME., C. H. FRANKLIN CO.

Situated on Sandy River, a western branch of the Kennebec. At the junction of the Little Norridgewock is a handsome village, where the court house is. 29 miles N. W. from Augusta. Two miles up the Sandy is another beautiful village, the seat of a flourishing academy. The soil is of superior quality. There is considerable trade in lumber, and some manufactures.

No. 7 — GOLDSBORO', ME., HANCOCK CO.

This large township, which lies between Frenchman's Bay on the W. and the large and deep inlet of Goldsboro' Harbor on the E., is nearly surrounded by water, and has several good harbors. 99 miles E. from Augusta. It is engaged in navigation and the fisheries.

No. 8. — FARMINGTON, N. H., STRAFFORD CO.

Lies 36 miles E. N. E. from Concord, and 18 N. W. by N. from Dover, by the Cochecho Railroad. The Blue Hills, or Frost Mountains, extend nearly through the town, affording much fine scenery. The principal village is on the banks of the Cochecho. There is a famous rock, not far from the village, weighing many tons, and so exactly balanced on other rocks, that it can be made to vibrate several inches by the hand.

No. 9. — CIRCLEVILLE, O., C. H. PICKAWAY CO.

Township and town. The town, which lies on the E. bank of the Scioto, was laid out in 1810, on the site of some remarkable ancient circular mounds. 26 miles S. of Columbus, and 19 N. of Chillicothe. It is a thriving business place, surrounded by a beautiful level country. Opposite the town the bottom land on the Scioto is diked for several miles, to preserve it from overflow.
