

A

GAZETTEER

OF THE

UNITED STATES OF AMERICA;

COMPRISING

A CONCISE GENERAL VIEW OF THE UNITED STATES, AND PARTICULAR DESCRIPTIONS
OF THE SEVERAL STATES, TERRITORIES, COUNTIES, DISTRICTS, CITIES, TOWNS,
VILLAGES, THEIR MOUNTAINS, VALLEYS, ISLANDS, CAPES, BAYS,
HARBORS, LAKES, RIVERS, CANALS, RAILROADS, &c.; WITH
THE GOVERNMENTS AND LITERARY AND OTHER
PUBLIC INSTITUTIONS OF THE COUNTRY;

ALSO, ITS

MINERAL SPRINGS, WATERFALLS, CAVES, BEACHES,

AND OTHER FASHIONABLE RESORTS;

TO WHICH ARE ADDED

VALUABLE STATISTICAL TABLES, .

BY JOHN HAYWARD,

AUTHOR OF THE NEW ENGLAND GAZETTEER, AND SEVERAL OTHER GEOGRAPHICAL
AND STATISTICAL WORKS.

NEW YORK.

LEAVITT AND ALLEN.

1853.

Entered according to Act of Congress, in the year 1851, by

JOHN HAYWARD,

In the Clerk's Office of the District Court of the District of Massachusetts

STEREOTYPED AT THE
BOSTON STEREOTYPE FOUNDRY.

P R E F A C E .

THE labor of preparing and bringing out a new Gazetteer of the United States has become great and difficult. A considerable number of years have elapsed since any work of this kind has been given to the public as the fruit of original research. These have embraced a period of extraordinary progress and development in the whole economy of the country; during which our new settlements have been multiplied and extended with unexampled rapidity, and most of the districts, towns, and cities of an earlier date have made advances in population, wealth, and internal improvements, which have given to some of the older states a character and an aspect almost entirely new. Numerous flourishing places at the west, now the marts of an extensive trade, and seats of civil jurisdiction, have sprung up within that period; while great numbers of our maritime ports, and manufacturing towns and cities, in the Atlantic States, have seen their population, and every element of their prosperity, wonderfully augmented.

Hence the necessity of going over the whole ground, as far as possible, with new and careful investigation; questioning and doubting the old authorities at every step, and obtaining accurate information from the most recent and authentic sources. In the endeavor to accomplish this, the author has spared no labor nor expense which it was in his power to command. Having devoted himself almost exclusively to the pursuit of information in this department for many years, during which time his Gazetteers of New England, and of the states of Massachusetts, New Hampshire, and Vermont, have been given to the public, and having, for this purpose, travelled somewhat extensively, and made himself personally familiar with the physical and social characteristics of the country, he has endeavored to pass an intelligent judgment upon the genuineness and accuracy of all the materials incorporated in the work. Yet perfect accuracy, in a work of this extent, is unattainable by any human diligence; and the author claims, on this score,

nothing further than to have employed his best exertions, under some peculiar advantages, for the successful accomplishment of his object.

The most competent and able assistance has been freely employed, in the preparation and revision of the materials embodied in the work. Many of the papers on particular subjects, such as those on the higher educational institutions, the banks, the currency, the population, &c., have been prepared by gentlemen distinguished for their acquaintance with the several departments of learning to which they pertain; and a large number of the most elaborate articles in the descriptive portions of the work were written by persons familiar with the places and the scenes described. To these, and to other individuals, who have been steadily employed upon the undertaking, for a longer or shorter time, the author is happy to acknowledge himself indebted for a large amount of what is valuable in the subject matter, and much that is attractive in the literary execution of the work. He would specially acknowledge his obligations to the public officers of the several states and of the United States, to whom he has been indebted for many valuable documents; to the Rev. WILLIAM JENKS, D. D., for his articles on the New England States; to JESSE CHICKERING, M. D., for his assistance in the population tables; to CALEB STETSON, Esq., for his valuable article on banks; and especially to the Rev. SAMUEL H. RIDDEL, late secretary of the American Education Society, for his assistance in the preparation of the entire work.

The standard authorities which have been consulted are, the general and local gazetteers of former dates, numerous county and town histories, that valuable series of volumes known as Historical Collections of several of the states, the American Almanac, congressional and state documents, reports of corporations, topical and coast surveys, journals of the most intelligent tourists, guide books, maps, and other works, geographical, geological, and statistical, from which appropriate information could be derived. The substance of all which may be considered as of real value, in reference to the legitimate purpose of a gazetteer of the country, has been made to contribute to the completeness of the present work; to the exclusion, however, of a large class of unimportant details, with which the pages of works of this kind have frequently been encumbered. Statistics which are comparatively trifling and unessential in themselves, or such as must cease to be of any value after the changes of one or two years, have been usually omitted; and the space they would have occupied has been redeemed for matter of more general interest, and for such material facts as are wanted to satisfy the intelligent inquiries of persons interested in obtaining a knowledge of any portion of the country, for ends important to themselves.

The interest and convenience of the reader have also been consulted,

in regard to the facility of such casual references as a work of this kind is chiefly intended to supply, by breaking up the mass of its materials into several distinct sections, as indicated by a natural principle of distribution and arrangement. The general descriptions of the states and territories; the grand physical features of the country; the great body of its inhabited places, whether denominated cities, boroughs, towns, or villages; its chief localities of fashionable resort, and of curious interest to the traveller; the smaller post villages, which are only of consequence as such; the population, colleges, banks, and various statistical tables, are severally placed by themselves, under distinct and appropriate titles, instead of being all embodied, as has been more commonly the case, in one promiscuous and undistinguishable series. Thus the person consulting this Gazetteer will be saved much of the perplexity and hinderance of running his eye over pages of a long and crowded alphabet, to find the subject of his inquiry; while, at the same time, important portions of the work are thus presented, in a much more interesting and instructive form, to the general reader.

The failure of Congress, hitherto, to provide for the publication of the seventh national census, has necessarily occasioned a postponement in the issuing of this work, from the time contemplated in the original prospectus, and has required a laborious and expensive resort to other methods of obtaining the information which that public document was expected to supply. This delay, however, has been diligently improved in more carefully elaborating and perfecting important portions of the work, and in bringing the whole down to a much later date than was at first intended.

In all the toil of this arduous and protracted undertaking, the author has been much sustained and animated by the hope of offering an acceptable and useful service to his countrymen, and of contributing, in no small degree, to illustrate the prosperity and glory of a people, whose advancement, in all the elements of a free, Christian civilization, is becoming, more and more, the admiration of the world. In the confidence that neither of these good ends will be entirely lost, the labor of years is now submitted to a liberal and enlightened public, to meet with such approval only as its merits may deserve.

INTRODUCTION;

COMPRISING

A GENERAL VIEW OF THE UNITED STATES.

ON the subject of the UNITED STATES OF AMERICA it is not easy to write or to feel with calmness. Such and so great are the interests involved, that it requires no little control of the mind to maintain a freedom from enthusiasm in contemplating the rapid growth and development of these states, and the field of inquiry and effort which they display.

The following work professes to exhibit in detail the several parts, even to the most minute, of this now vast body, in a view at once geographical, civil or political, and moral or religious. It presents the natural features and the various peculiarities of the widely-extended domains, which, by the divine Providence, working its own wonders by various means, have been united into one nation, and placed under one form of government. This government is, indeed, of diversified application, in respect to its subjects or constituents, gathered from almost every people, and in the employment of its energies, as every government must be. Yet its principles and design are simple, and open to the inspection of all. The establishment of its principles has cost ages of human thought, labor, and suffering. Its design, both professedly and practically, is **THE PUBLIC GOOD**.

That such is the character of the government providentially established in these states is clear, from the fact that it has originated from the people, and is virtually managed by themselves. They have modified it as the circumstances attending its operation have appeared to them to require; and their own experience of its good or ill effects has decided both their judgment and actions concerning it. It admits not of the doctrine of "millions made for one," but cherishes the grand idea of reaching, with paternal and salutary attention, the masses of men and their wants. Hence it has opened, expressly, an asylum for all of the human race who are honorably seeking the enjoyment of that prosperity and influence with which God is ready to endow his moral, accountable creatures on earth, and are willing to bear the labor and sustain the responsibility that are necessary to secure them.

This very circumstance, combining with the condition in various respects of other countries has made the North American states a subject of curiosity abroad, and has attracted to them very many colonists from countries of an older civilization. And it deserves the attentive curiosity of those also who are in possession of its benefits, and who, as we trust, are becoming more sensible of their value; for it would argue great ingratitude, or inability to appreciate human privileges and blessings, should those which are the favored lot of the United States be overlooked or disregarded.

It will not, then, be amiss, in this place, to take a general and extended but rapid prospect of the country, in regard to its boundaries, divisions, and geography, including soil, climate, rivers, mountains, lakes; and to delineate, though briefly, the features of its history, progress, and present state, in an agricultural, commercial, civil, literary, and religious point of view.

At the period, therefore, when this volume issues, the United States of North America are thirty-one in number, enjoying each a separate local government, of its own choice and formation; and to these are added six *territories*, so denominated, whose government emanates from the supreme authority of the nation or republic, until they also shall have acquired a numerical population sufficient to establish a claim to become, by due form of law, sovereign states.

But before entering further on the exhibition of the political institutions of the country, it is proper to dwell on its natural features and boundaries.

The British possessions of New Britain, Upper and Lower Canada, with the province of New Brunswick, form the north and north-east boundary, partially modified, since the peace of 1783, by new treaties.* On the north-west, Russia has indeed a territory upon this continent; and Greenland, on the opposite side of it, but separated from it, belongs to Denmark; yet neither reaches the United States' boundary. British territory alone is conterminous with it, except in its direction through the lakes and a portion of the River St. Lawrence, of both which it keeps the centre.

On the east is the Atlantic Ocean, which, with the Gulf Stream at no great distance, washes the shore from the southern extremity of Florida to the extreme eastern coast of Maine. On the south is the Gulf of Mexico, as far as to the mouth of the Rio Bravo del Norte, which constitutes the limit between the republic of Mexico and the United States in that quarter, as far as to the 32d degree of north latitude, whence it takes a western course until it strikes a branch of the River Gila, which it follows to its entrance into the Rio Colorado, at the head of the Gulf of California. Thence it crosses over Southern California to the Pacific Ocean, at a point ten miles south of San Diego. This portion of boundary is under actual survey and definitive settlement, by commissioners chosen by each power mutually.

The western boundary is the vast Pacific Ocean, from latitude 32° 29' 30" to 49° north, and the Straits of Juan de Fuca; opening an almost illimitable career to navigation, enterprise, and skill in the prospective commerce of the country — a commerce that must, in not a long time, extend to all those Asiatic regions which from time immemorial have excited the cupid-ity of Europe.

The territory embraced within these limits embodies an area of perhaps 3,250,000 square miles. In this view, it ranks as the fifth of the great territorial powers of the earth; Russia being, since the disruption of the Spanish dependencies from the mother country, first in the list, Great Britain next, then China, and afterwards Brazil.†

Such an extent in latitude must stretch, of course, through very different climates; so that nearly every variety of temperature, and of animal, vegetable, and mineral productions, will be included. And these have actually been found, not, indeed, in all respects similar to those of Europe and Asia, but for by far the greater number.

* The last of which was negotiated by Hon. *Daniel Webster*, as secretary of state, and Lord *Ashburton*, as commissioner on the part of England, and ratified November 10, 1842.

† Spain once possessed territories containing, by estimation, 9,332,000 square miles. Russia has 7,555,000; England, 6,508,000; China, 5,200,000; and Brazil, 3,390,000.

The face of the country is also much diversified. Long ranges of mountains extend on each side of the great central basin or valley. That which marks the western part most prominently is a continuation of the Cordilleras of the Andes of South America, although receding rather more from the western coast. Their direction is northward, turning a little to the west, as the coast runs, and distant from it, in some parts, nearly 600 miles. On the eastern side, the several ranges, called in general Alleghany, and branching into the Green Mountains on the north-east, take the direction of the coast, from which they are generally distant about 250 miles. The space between these two vast ranges of mountains is watered by the majestic Mississippi, appropriately denominated, in a style peculiarly Oriental, the "Father of Waters," and its large tributaries—tributaries, the Missouri especially, equalling or surpassing in length of course and body of water most of the great rivers of the eastern continent.

With the British possessions in North America the United States share the magnificent provision which the God of nature has made of the vast reservoirs of fresh water in the chain of lakes that find their outlet at the Falls of Niagara and River of St. Lawrence. And it is a circumstance peculiarly worthy of notice, that, while the waters of Lake Superior are elevated 600 feet above the tide-waters of the Atlantic, so that a power of immense force is kept in reserve for all future uses, the depth is such, that, should the rocks at the great falls be worn entirely away, as they are known to have receded already several miles, neither that lake; nor Lakes Huron, Michigan, and Erie would be drained; and Ontario is the deepest of them all.

Considering the extent of country, its soil may be accounted generally fertile. An exception is found to this estimate in the territory which lies north of the new State of Texas, and west of Arkansas and part of Missouri. This has been emphatically denoted as the American Desert. On the eastern side of it are located the remnants of several tribes of the original inhabitants, who have left their ancestral abodes east of the Mississippi, and are congregated in a rather close proximity, requiring the keen oversight of the American government, as well as its paternal care and providence.

No reflecting person can examine the map of our territory without perceiving the unusual facilities of river communication enjoyed by all parts of it. This circumstance is wonderfully promotive of internal commerce, as well as of fertility in the products of the field and forest, the orchard and the garden. True it is that occasional droughts are felt, but the extent of such calamities has not been great, nor their continuance long; and often what is denied to one portion is bestowed on another, "that there may be equality," and, at the same time, the intercourse of friendly trade.

Sugar is produced in the lower parts of Louisiana, to a very considerable extent, from the cane plant, which might, doubtless, be cultivated more than it is in Florida, Alabama, and Mississippi, as well as in Texas. But the cotton fields have occupied the planter, and yielded generally a sure reward. Occasional frosts, however, are experienced all along the southern borders, rendering the cultivation of tropical productions too precarious for a dependence on them. This has been the case with the orange, fig, and lemon, while, of late, experiments have been made even farther north, on the introduction of the tea plant, with promising results. The Middle States appear to be the favorite region of the grape; and of this rich and wholesome fruit no small quantity of wine is already manufactured along the banks of the Ohio. The peach is cultivated extensively in New Jersey, especially, but flourishes, with the grape, in the neighboring states, and generally in that parallel of latitude. But we must refer to the Gazetteer itself, in the several articles, for the various particulars of this nature; remarking, only, that the maize, or Indian corn,—one of the indispensable articles of American food,—wheat,—a most important staple,—rye, barley, oats, rice, of its different varieties, the diet of so large a portion of mankind in Southern Asia, overspread the United States, in their respectively adapted parts, with ample provision for the population, even were it many times increased. And these necessary productions for the continuance of human life must long form the reliable articles of export and trade. Tobacco, too, and ardent spirits have been, and still are, notwithstanding all that has been said and written to dissuade men from the habitual use of them, a not inconsiderable item of commerce.

The American forests were the wonder of the early discoverers. Such a stately growth had been reached by the noble oaks, chestnuts, magnolias, cotton-trees, elms, maples, and, above all, the tall, straight pines, as rendered calculation almost wild in its anticipations of profit. What in the old countries had been the result of careful cultivation appeared here in all the unbounded luxuriance of nature, rendering the scenery picturesque often, and beautiful in the extreme, although more generally overburdened, tangled, and obstructed, and demanding the judicious hand of skill and taste. Much remains, in some parts of the country, in its original state still; although the rapid diminution effected by steaming excites not unfrequently an anxious fear, that our posterity may, if systematic attentions do not prevent, inherit a denuded patrimony, abandoned, like many portions of the "Old World," to sterility.

But here a provision meets us which seems to reassure our hope. The vast coal-beds which are wrought now to so great an extent and profit in Pennsylvania, and in several other states, "cropping out" along the navigable rivers of the west, will yield fuel, either in the bituminous form, or in the hard anthracite, which, it may be hoped, will prove a preservative of much forest scenery and highway shade. The substitution of coals for wood is rapidly advancing.

With respect to mineral wealth, it had been supposed until recently that little of the more precious metals would be found within the regions assigned to these states. But a sudden burst of what is almost universally regarded as good fortune surprises us in the acquisition of California. Its treasures of gold have surpassed all previous calculation, although not every hunter of it has been gratified with success. Millions have been gained, and will be brought into circulation, notwithstanding sickness, vice, and misery have often been coparceners in the enterprise. A new empire is founded, also, notwithstanding an almost incalculable expenditure of human life has been sustained to effect it. And we may hope, that, by the overruling hand which "educes good from partial evil," benefits to the human family will eventually be realized, though many individuals be sacrificed and lost.

Lead and copper had long been mined to much advantage before this unexpected discovery. And their abundance was a subject of gratulation, previous to the working of the copious supply of copper near Lake Superior, and of lead at Galena. Silver has been of rather rare occurrence, although gold has been obtained among the Alleghany ranges, and east of them; and the indefatigable exertions of Dr. C. T. JACKSON have even discovered tin. Iron, proverbially the most useful of all the metals, abounds almost every where.

While dwelling on these treasures of the earth, it should not be forgotten that great progress has been made in turning to profit many of the rocks which in some parts of the country are abundant, but of which other parts are destitute. Thus New Hampshire and Massachusetts send their granite to Georgia and Louisiana. The abundance of limestone in the north compensates the want elsewhere; and while in Florida, and Georgia, and Alabama, the live-oak has been felled, by dwellers of Maine, to furnish timber for their ship-yards, the mortar made of the lime from Thomaston has been cementing the buildings of the south—the abundance of one furnishing the other a needed supply, and that alternately and mutually.

Beautiful marbles also have been wrought in quarries of different kinds, from the famous verd antique to the rival of the Parian for whiteness and uniformity of texture, giving to statuaries and architects the materials from which the most splendid trophies of art may be elicited. To this may be added the red sandstone of Connecticut, the appearance of which, in various buildings, has been greeted with much favor. Before the introduction of the "Quincy granite," this material was the most commonly wrought stone of the market. Slate is also obtainable, and begins to be employed, and may soon equal the productions of ancient Wales, which, however, are still imported largely.

Of native animals but little is said at the present day, except in respect of the frontier settlements, and the employments of professed hunters who frequent the forests. Immense wealth has in time past been amassed from the furs, for which several species are sought and killed. Indians complain of the diminution of buffaloes, which heretofore had formed no small portion of their dependence; and it is unquestionable that the once abundant supply has been wasted in very many instances, in which their hides only have been the objects of

cupidity, their carcasses being left to birds of prey. The moose has almost disappeared, as also the wild deer, which once abounded. Bears are not common, yet the grisly bear, that dreaded monarch of the forest, is met in California still. The cougar, the catamount, members of the same family, wildcat, lynx, and wolf have in many parts been troublesome, but are now only occasionally caught, shot, or seen.

As we do not by any means profess to give a complete catalogue of quadrupeds, so neither can we of birds and fishes, which yet are abundant. The wild pigeons of the west are still celebrated for their multitudinous flocks, and the race of wild turkeys is not extinct. Birds of prey are not wanting, from the stately and powerful bald eagle to the various species of the hawk; and all the domestic fowls have accompanied the migrations of the European colonists, as well as all the domestic quadrupeds.

No small amount of provisions drawn from the pasture enters into commerce; and more especially of late years, and since the distressing famine in Ireland. Beef has long been furnished to the West Indies; and with it exported hams, lard, and cheese are admitted into the British islands. At the same time the rearing of sheep is regarded with greater favor, and that especially since the introduction of the Merino breed, and the consequent increase of woollen factories. Cattle, horses, asses, and mules are often shipped to the West India islands as live stock.

From the first knowledge of the Atlantic coast, the fisheries were accounted important. France and England at an early period were sensible of their value, and jealous in securing them. And even to this day, notwithstanding the former power has lost its hold on every portion of the northern continent, the two islands of St. Pierre and Miquelon are retained by treaty, in order to accommodate her fishermen, who spread on them their "flakes." With respect to the productiveness of this source of human support and governmental revenue, no part of the United States has experienced it more, and thriven more from it, than New England, through its hardy fishermen. From the earliest periods, their occupation has been one of the first necessity and greatest profit, if we take into view its various branches, and include in them the whale fishery. But in pursuit of that employment, not the Atlantic alone bounds their enterprising industry. The bold and hazardous occupation is followed in every ocean, sea, or strait where its subjects are to be met, and the whalers of America are among the most daring, courageous, and expert of men.

The land, the ocean, and the air combine, then, to furnish out a space in which to develop the genius, enterprise, and application of the rapidly increasing population of these states. For the exercise of every talent a field is not wanting; and the exertion of every faculty may be flattered with hope of success.

Having made these remarks, which, of course, must be superficial and brief, as we have no room for enlargement here, and must refer for special and particular information to the body of the work itself, in its several and distinct articles, we would, with equal brevity, dwell for a little time on some of the historical events which concern the settlement, growth, and prosperity of the states themselves.

Inquiries respecting the primeval inhabitants, important as they may be in the investigations we make for ascertaining the history of MAN, under all the varieties of existence in which he appears, can be indulged in but sparingly here. Still, since the present inhabitants have entered on the places of their predecessors, some interest must attach to the character and circumstances of those who have passed away; and it would seem illiberal and unkind to be wholly silent respecting them, and would argue an unbecoming disregard to the claims of common humanity. Hence the subject has occupied no small attention from all our historians.

But the little progress among them of what we term civilization, or rather, perhaps, their distance from the civilization which prevails with us, has rendered the cases so dissimilar, that it were almost invidious to overlook their estimate of character, and pride ourselves on our own. They had their own manners, and habits, and judgments; and although with a standard different from ours, it is evident they were not without some estimate of character. Talents they had, but without means of cultivation. A natural eloquence they could exercise, and

form sagacious counsels. But their want of a sure method of perpetuating their acquisitions, by a careful transmission of them, rendered them but transitory. Simple facts alone would be matters of remembrance, and even these would be recollected but imperfectly. Reasonings would be almost as evanescent as the times and occasions of them. The preservation of a continuity of thought, plan, and effort, so as to form national character, is the result of a literature that embodies the labors of the human mind.

It is not wonderful, then, that so little remains to enable us to ascertain the distinguishing traits of Indian character and life. Our histories fail to do justice to the subject, doubtless; for they were written by parties unfavorably prepossessed, and in but few instances by the cultivated talent of natives. Nevertheless, here and there, in the course of more than three centuries, an example is found.

The mounds and fortifications discovered at the west, and having some relation to monuments remaining in Mexico and Peru, indicate more of industry and talent than has at least been exercised by our Indians since Europeans landed on these shores. And perhaps their very presence hastened the deterioration, from a despair of resisting with success, or even maintaining their own position, much less of surpassing those who, in too many instances, became oppressors rather than aids, robbers more than friends.

These remarks, however, will, it is acknowledged, apply more to the southern than the northern part of the American continent — more to the Spaniards than the English. But even in regard to the English, although possessed of a purer faith, and prompted, in most cases, by higher motives, yet, with comparatively few though honorable exceptions, too little attention has been paid to their welfare, too little to their instruction and training for usefulness, and national establishment and prosperity. True, it was much to demand this of human nature, selfish as it is; and therefore the names of ELIOT, and MAYHEW, and GOOKIN, and PENN, and BRAINERD, and BENEZER, and of a catalogue of worthies, will be celebrated with high and growing regard. As no amalgamation of the races took place, the Indians have, for the greater part, declined. They are mostly removed from their ancient seats, and inhabit a frontier country, where they can enjoy, at least for a time, the privileges of the chase. Some, indeed, have abandoned the life of the hunter, and become agriculturists; and, in consequence of the persevering, self-denying labor of devoted missionaries, not a few have become, by the divine blessing, humble and devout Christians. The Cherokees, — who have now an alphabet of their own, — the Choctaws, Mohegans, — a mere remnant, however, — and a few Creeks, Mohawks, Oneidas, Ojibways, and Dakotas have thus been trained to a degree of Christian civilization; and the work is still advancing, but the discouragements are great. What is to be the issue time alone can develop.

As respects the European immigration, a new order of things dawned at its outset; and though the progress was slow at first, laborious, and often interrupted, yet it has advanced to a day of no little splendor. Let us trace the outlines.

Virginia may, in some respects, be permitted to take the lead; for, although both France and Spain had preceded England in efforts to colonize portions of North America, the colonies of each of them were beyond the boundaries which limited the thirteen states of the original Union; Canada retaining her connection with England, and Florida becoming a territory of the United States only in the year 1819, and a state in 1845. Virginia has, therefore, been called "the Old Dominion," dating her first effective European settlement from 1607. That very year, indeed, was marked by an attempt to settle an English colony at the mouth of the Kennebec, the intended province then bearing the name of Sagadahoc. But it was broken up the ensuing spring; and thirteen years passed away before the next settlement was made, in what had been called New England, as early as 1614.* This, happily, became permanent.

Still, the coast had been frequented for purposes of the fishery, and to effect also the expulsion of the French from Acadia, within the bounds of which debatable country they had formed several settlements, and recovered, and, to a later period, retained them, greatly to the

* See Life of Captain *John Smith*, the early hero of Virginia. *Belknap's Biog.* v. i. p. 306.

annoyance of the English settlers. But the colonization of Virginia, though attended with many discouragements and disappointments, on which our space permits us not to dwell, advanced, and became a safeguard to the next successful band of adventurers.

This band, to which we have before alluded, was the expatriated church of ROBINSON, who established themselves at Plymouth, and are familiarly and honorably known as "the Pilgrims of Leyden," or "the Pilgrim Fathers of New England." Their errand hither was mainly for religious peace and prosperity, and it was religiously conducted; nor is it too much to say, that, in the good providence of God, their efforts, character, and success have given a deeply-interesting tone to the history and features of their adopted country, and render their memory respected by every true philanthropist. But on their individual or special history we have no room here to dwell. Their immigration was in 1620.

A few years after, a settlement was commenced at Naumkeag, in the Bay of Massachusetts, and called Salem. Then followed an establishment on the north side of the river which enters the bottom of the bay, and, in compliment to the king of England then on the throne, took the name of Charlestown. The settlement of Boston succeeded, in 1630, under WINTHROP, JOHNSON, and their associates; and now the way was opened to thousands of their countrymen, and the principles agreed upon, on which the colony might live, thrive, and flourish.

Encouraged by such instances of success, there had been, in the mean while, several English adventurers who formed settlements for trading, fishing, and exploring the country, along the whole coast of New England; and the colonies of New Hampshire, of Connecticut, and New Haven, separate at first, but afterwards blended, Rhode Island and the Plantation of Providence, forming a retreat for persecuted religionists, Laconia, Gorgeana, and Sagadahoc, included afterwards in Maine, gradually burst into being. Before the middle of the seventeenth century they had become politically organized as distinct governments, and, in 1643, four of them formed a confederation, the type and emblem of a future important fact, which, in little more than a century later, created a new NATION.

The Dutch also, as a great naval power, and rival, in that respect, of England and France, had not been idle, but, as early as 1609, employed an Englishman, HENRY HUDSON, who discovered the noble river that bears his name, and penetrated it as far as where Albany now stands, preparing the way for the formation of the "Empire State" of New York. The early result was not, indeed, a promise of harmony in regard to the growth and happiness of the little colonies to the eastward of Manhattan or New Netherlands. Jealousies arose on both sides, and bickerings and difficulties with the natives, which were not fully quieted until English authority became paramount, and New York ceased to be controlled by any other European power.

The settlements of New Jersey and Maryland, of Delaware, and, at length, of Pennsylvania, extended the English influence along the coast between Virginia on the south, and New England to the north and east. For the settlement of Swedes, in the neighborhood of Cape Henlopen, yielded, in not a long time, to the prowess of the Dutch, and, with them, became at last subject to the British crown.

Nor did Virginia long remain the southern boundary of British dominion. North and South Carolina were settled in the reign of CHARLES II., and in 1732 the foundation was laid for the State of Georgia.*

These were the thirteen original states recognized at the period of the American revolution. But, considering how unanimous they became in that grand scene of the trial of principle, it is curious to notice how diversified were the characters of the first settlers of them, and on what principles they were severally chartered. JAMES I. of England, who gave the earliest of these charters, was bigoted, arbitrary, and jealous of his prerogative. Royal blood was, with him, of different composition from that which runs in the veins of ordinary mortals. And he was ready to visit with pains and penalties the presumption of ROLFE, one of his subjects, who had dared, without his leave, to ally himself with even an Indian princess, in the person

* See these several states, under their names, respectively, in the Gazetteer.

of **POCAHONTAS**, daughter of **POWHATAN**. Such, too, was the known character of his son and grandsons who succeeded him. And it was only under **CROMWELL**, and at the time of the revolution in England, that popular rights were regarded with any real sympathy. Hence, in part, at least, this observable diversity.

Some also of the charters, like those, for instance, of Pennsylvania and Maryland, were bestowed on court favorites, as gratuities for services rendered or anticipated. In others, as in those of the Carolinas, granted to noblemen principally, a provision was made in the constitution framed for them by the profound metaphysician **LOCKE**, for ranks of hereditary nobles — a provision which, though happily never carried into effect in any one province or colony, exhibits one of the embarrassments that, but for some overruling power, must have obstructed the course of the subsequent revolution, and establishment of a republican form of government.

But the tendency towards a prevalence of the principles of democracy or republicanism is, in one circumstance, more distinctly traceable than in any other. It is in the absence of the ultimately controlling power. This, from the very necessity of the case, threw the exercise of a certain degree of authority on the people themselves, either in their primary assemblies, where each one must feel his own consequence, or in those of their representatives, immediate or remote. Accustomed thus to a degree of self-government, and unawed by the splendor of the present majesty of power, unused therefore to the servility of courtiers, the colonists exercised a degree of sovereignty at an early period. This varied, indeed, as we have seen, in the different colonies; but, in process of time, a portion of liberty pervaded all. The removal to America of the charter of Massachusetts was no short step towards the exercise of the spirit of 1776. India is governed in London by the honorable company seated there, of whom the governor general is but the agent, and to whom he is accountable. But were the company seated in India, how long could loyalty to the crown of Great Britain be cherished?

It cannot, then, appear strange that a degree of jealousy should be felt in the mother country in relation to the exercise of power on the part of the colonies. It was this which led to the mission of **RANDOLPH** under **CHARLES II.**, and ripened the popular fury against **ANDROS** in the reign of his misguided brother. Nor this alone; for the exhibition of spirit and ability to conduct important warlike enterprises, which was made in 1745 in the successful attack on **Louisburg**, familiarly called the **Dunkirk** or **Gibraltar** of America, and deemed impregnable, aroused at court the anxious fear that greater efforts would soon become practicable, if the exercise of power were not speedily checked. To this idea we may trace the succession of measures which prepared the way for the American revolution.

It would be a pleasing task to dwell here on the endeared memory of many a colonial worthy, and to embalm the virtues of patriots not a few, though filling a humble sphere; but it is impracticable. Nor can we follow the traces of those stirring events which distinguished the vastly disproportionate struggle between the colonies and the powerful mother country, then at the height of her supremacy on the sea. Warriors were nurtured by the contests with the French of Canada. Minds were enlarged by the project of a confederacy to resist them made in 1754. In this it was intended so to unite the several colonies along the Atlantic border, that they might be able to defeat the sagacious policy of France in extending her posts from Canada to Louisiana, and securing the inland, central regions to herself, that she might fall on the maritime and subdue them at her convenience.

One of the most affecting though simple devices of the Puritans appears in the arms and motto adopted by the State of Connecticut. It exhibits the vine fastened and trained for bearing to its upright stake, and the assertion, "He who transplanted will sustain it."* This was the confidence of the pious founders of not a few colonies on this side the Atlantic. They trusted in God. And his providence can, without the aid of an unmanly superstition, be distinctly traced in the history of the United States. The spirit of his truth is marked, from generation to generation, on the minds, and consciences, and lives of men preparing for the

* "Qui transtulit sustinet."

exercise of freedom in its widest practicable extent and forms. If even HUME was compelled to give his meed of praise to the Puritans for the elements of true liberty ingrafted on the British stock by the struggles of the Commonwealth, Americans may well trace to the possession and free use of the Bible their more perfected political developments. Nay, it has been said, and that recently, with equal truth and eloquence, "Who shall write the history of modern civilization without tracking the course of the divine Word? To the homes of our fathers it brought the best lessons of experience and the sturdiest virtues of religion. We need not say much of the good seed of the Word that came with the people of the Mayflower and the Arbella, nor will our common sense or charity allow us to limit the blessing to any State in the Union. The Bible came with the Huguenots of Carolina, the Reformed Dutch of Manhattan, the Friends of Pennsylvania, the Churchmen of Virginia, the Methodists of Georgia, as well as the Puritans of Massachusetts. Who shall say what that book has done for the nation?"

Look, then, at the history of the United States. It deserves to be contemplated with serious attention as a development of the august providence of God, who uses the passions and pursuits of men for the accomplishment of his own wise and benevolent designs. The discovery of the new continent occurs at a period of the world when the human mind, in Europe at least, has been roused to uncommon activity, and has put forth its greatest vigor. The reformation resuscitates the power of the Bible, and persecution tests its worth. Spain conquers and possesses the southern part of the continent, seeking every where to assuage her insatiate craving for gold. She passes by the northern half, because it is not discovered there, and leaves to France and England a country she knows not how to value. France colonizes the least inviting part of this vast field, on which England begins to display a rival power. Commercial enterprise is roused, but commercial enterprise signally fails. Religious principle conducts a perilous effort, and success, after much hardship and suffering, crowns it. This encourages adventure, and, step by step, the work advances. Colonies, scattered along the Atlantic border, like those of ancient Greece on the shores of Asia,* multiply and prosper. But, unlike them, these colonies discover that their interests are similar, become united, and are led to form one government, which exhibits to the world a new nation.

Every step of this progress is interesting to the statesman, the philanthropist, and the Christian. The first will study it as developing the germ of human greatness; the next will contemplate it as opening an asylum for suffering humanity, a field for honest labor, with hopeful promise of reward; but the last will view it with grateful and adoring thoughts of the wonder-working power of God.

The close of the revolutionary struggle — during which had been exhibited many of the virtues that adorn and exalt human nature, although in multitudes of instances the contamination of the unfixed and loose opinions and manners that prevail in camps affected our countrymen, and made an awful inroad on the simplicity of colonial habits — brought with it a view and keen perception of difficulties and embarrassments which had hardly been anticipated. While the struggle itself endured, the event was doubtful, and hope and fear alternately prevailed. But when the pressure of events from abroad had diminished, and the feelings and views generated by the scenes of home gained sway, room was afforded for a new play of the passions, and perils of a new character arose. And hence it has been remarked by a statesman, whose talents and power of thought and language have been amply acknowledged in our own country and in Europe,† that no period of American history deserves the profound study of our young men more than that which intervened between the peace of 1783 and the establishment of the federal government in 1789.

The reason of this remark must appear on reflecting that, when the independence of the country had been achieved by labors, self-denial, and sacrifices of property, time, talents, and

* A comparison suggested by *Heeren*. Several of these colonies had, indeed, a confederation, — that of the Ionian cities, — but it neither continued long nor extended far.

† It seems hardly necessary here to name the Hon. *Daniel Webster*.

life, of which in this day we can form no adequate conception, there were required the virtues of self-command, candor, and devotion to the public welfare. Without these, it must be clear that freedom from one class of evils might have been effected only to incur new troubles and difficulties from another. The perils of anarchy and of civil war, and of the reckless personal ambition of daring chieftains, were all to be dreaded. With these perils the provinces of South America and Mexico were necessitated to contend when they burst away more recently from the dominion of Spain; nor have the contest and its perils ceased with them even yet.

But, most happily for us and the world, its Sovereign Ruler had provided for the emergency in raising up a distinguished individual, of whom, without unduly exalting man, we may admit, with truth, that he was "first in war, first in peace, and first in the hearts of his countrymen." WASHINGTON had been called to the command of her armies by his country in her day of danger. He had conducted the arduous struggle to its close, with a discretion, a moral as well as natural courage, and a dignity of character which left him without a rival. And perhaps in none of the favors of divine Providence bestowed on the country — and they have been numerous and great — can we find what should be regarded as more peculiarly deserving commemoration than this. It is admitted by all nations who become acquainted with the facts, as well as by our own. An English reviewer, while displaying a series of political schemes, remarked, that "however they might have appeared and been successful in other times, they could not bear the light of the age of WASHINGTON."*

His sterling worth, long tried and extensively approved, the disinterestedness of his behavior and moral integrity in all respects, rendered it safe, in the estimation of the people at large, to invest him with the supreme power of the republic. To this elevation no claim of royal descent was produced; although this might have been pleaded with equal truth as for General MONK, the rival, in one sense, and yet the restorer of CHARLES II. And it has been said that our minister in France received an offer from a Norman nobleman, who stated his family to be as ancient and respectable as that of WILLIAM the Conqueror. The offer was made on the supposition that of course the country would want, and must have a king, when it should become independent. GEORGE III. is stated to have remarked to our countryman WEST that he supposed the Americans would strive to make General WASHINGTON their king, instead of himself.

One of the most remarkable circumstances in reference to the American population, and the providence of GOD overruling and ordering affairs for a future benefit, is seen in this, that hereditary titles of nobility have been, from the first, unusual among us, to say the least. None, of course, could have originated here; and although noblemen dwelt with us as governors, occasional sojourners, and even with their own families about them, yet they were never American noblemen, entitled as such to a seat in the House of Lords.

It was bold language for the late M. SISMONDI to employ, when he said that revolutions for the advancement of liberty had not been rare, but that in France the principle on which they are sought, and which he supposed to be a melioration of the condition of the people, had been lost sight of, from the circumstance that they had ever placed some *prince* in power. This, of course, was written before the pretensions of LOUIS NAPOLEON BONAPARTE, almost invariably called a prince, were developed. If LAFAYETTE, in 1830, had been placed at the head of a republic, or, in 1848, some individual without a claim to royal descent or regal or imperial relationship, might not stability have been bestowed on those institutions which now seem only made to be overturned? And is it not strange, that, while in theory all titles are abolished, the French delight still in giving their rulers princely and noble titles? No, it may be said, it is not strange, for the French people are not prepared for republican government. It is questionable if they can be so before the present generation passes away.

Indeed, human nature must be greatly changed, if the hearts of men in America be not affected, as elsewhere, with the love of distinction. They are so affected; but the democratic tendency which has been stamped on our institutions is ever found a counteracting force.

* *Aikin's British Review*, about 1810.

Family cliques are cultivated, exclusiveness in the associations of intimacy is cherished, wealthy matches coveted and sought out, and effected even among very near relatives, to secure riches and influence; but still the general process is of a levelling character, after all. The equal division of estates in families, and the rapid growth of families themselves, assist it; and, in very many instances, the ambitious hope of rearing and establishing aristocratic distinctions is frustrated and destroyed.

At such a consummation we ought not, perhaps, so far as individual improvement is concerned, and the formation of a character of virtuous distinction and influence, to rejoice; nevertheless, the problem to be wrought out in America appears to be of wider concernment to the human race than the aggrandizement of family relationship. In the old republics of Venice, Switzerland, and Holland, things were vastly different. In them an aristocracy was avowed, established, and rendered paramount and flourishing. The American problem refers to the possibly Utopian idea of THE BROTHERHOOD OF MANKIND; and probably no nation was ever placed in circumstances calculated more happily to realize this object.

A new motive for the cultivation of the virtues which our fondest partiality ascribes to our best patriots, and most excellent citizens and countrymen, arises from the fact, that at the present eventful crisis of affairs in Europe, in which the experience and character of these states are studied, and our institutions alluded to, as an exemplification of the results of civic freedom, our example may be of the highest moral tendency. It may obtain an influence for the good of large and suffering portions of mankind, that shall be effective of "glory to God in the highest, and on earth peace, good will toward men."

With respect to the fears entertained from the overwhelming torrent of uneducated, and vicious, and pauper foreigners poured upon our shores, in a manner so unprecedented, we may feel less alarm if our citizens will but preserve, and, as circumstances require, augment the advantages of early education now enjoyed, and see that the young immigrants improve them.* This will lay the axe to the root of all growing corruption. Adults may prove incorrigible, and require the animadversion of wholesome law. Our prisons can now instruct and compel them to labor for the profit of the public; but THE EDUCATION OF THE YOUNG, conducted on principles of sound morals and sincere piety, will prove the sure foundation of usefulness, respectability, and prosperity. Such has it ever been found, and ever will be.

To return to our political state: a comparison of our highest executive officers with others of such grade abroad elicits hope. While, for instance, the present ruler of France is openly charged with a design of perpetuating his powers, and altering the very constitution of the country for that end, we have never had a *public* case, whatever may have transpired privately, in which a president of the United States was found ambitiously plotting for the perpetuation or continuance of his power. Those who have filled this station have returned successively to private life, or, as in two illustrious instances,† consented to serve the public in a lower but important position. Thanks are due to God for this apparent degree of civic purity of character. And we should rejoice in that state of public sentiment which would not only render the reverse of this odious to the country, but also effectually defeat the object aimed at.

The condition of the country at the close of the revolutionary war, and which had been but partially benefited by the subsequent confederation, assumed a new life under the government of the FATHER OF HIS COUNTRY. That government, after it had been exercised for the constitutional period, that is, for four years, from 1789 to 1793, was again offered by the public

* "Individuals, as such, have no more claim upon the public for their education than for their board and clothing." But "the first principles of popular government require that the means of education should as far as possible be equally within the reach of the whole population. This can be effected in no other way than by a system of education supported by the public. The same great motive of public policy requires that the schools should be of a very superior order, so that every child may receive not merely an education, but an excellent education." — GOV. EVERETT.

† Those of *Washington* and (more especially) *John Quincy Adams*.

voice to its distinguished head, and again accepted; but not for a third period, although by many greatly desired.

It had been only by the exercise of qualities precisely adapted to the emergencies which required them, that WASHINGTON had been so successful. His personal courage was unquestionable. His firmness and moderation were even constitutional, habitual, and uniform. He sincerely loved his country, and devoted himself to its interests in a manner perhaps unprecedented. The people at large appreciated his character, and had entire confidence in his integrity; and it was only prejudice or ignorance, or the reckless violence of party spirit, eagerly bent on its object, and unscrupulous as to the methods of attaining it, which opposed and thwarted his well-considered measures, gave trouble to his impartial government, and vilified his person.

In fact, in the great points of view under which we are to consider this so justly celebrated man, so remarkably prepared in the providence of God for the stations he was called successively to fill, it will be proper to notice, —

First, the contest for freedom, or the revolution. And in this we see a people widely scattered, comparatively poor, living under different laws, although dependent on the same crown, having rivalries, jealousies, antipathies of their own, and yet necessitated, from the very nature of the case, to act together. He was the instrument of thus connecting them, by the weight of his own character, and the wisdom and energy of his conduct, and the revolution was achieved.

Next came the substitution of a more effective central government for that of a Congress which had no power to enforce its decisions, and for a long period little ability to decide. And the convention of 1787, four years after the peace, was presided over by him. In that was formed the constitution, under which, with comparatively few amendments, the United States have existed in honor and prosperity for more than sixty years.

No one, probably, of its framers better knew than he the difficulties to be met, the powers necessary to be created and exercised, and the authority requisite to be given, in order to constitute an efficient yet paternal government; although this knowledge were in him more the result of experience, aided by sound, practical good sense, than of sedentary study and learned research. For these the corporal activity of his pursuits and labors had allowed him little leisure. But there were in association with him minds of high intelligence. Of this character were ADAMS, JEFFERSON, HAMILTON, MADISON, and JAY. To these, and such as they, were confided the great concerns of adjusting and balancing the respective departments, — legislative, judicial, and executive; — and of founding, at length, under his superintendence, an empire of laws based on the welfare of the whole community; laws under which any aggregate of population, if disposed to be orderly, industrious, and frugal, or any number of states, if loyally affiliated to the federal government, can enjoy as great prosperity as it falls to the lot of human institutions to secure.

The third view is that in which, after the perils, sufferings, sacrifices of the revolution, and the establishment of principles of government, partaking of the nature as well of concession, agreement, and compromise, in certain cases, as of conservative arrangements in others, we behold the successful warrior and upright legislator, first in the esteem, veneration, gratitude, and confidence of his countrymen, becoming their first president. At the head now of a new nation, his habits of intercourse must form precedents for his successors. The formalities of his administration will characterize future courses; and, happily, his inclination, judgment, and resolution established a "just medium" between too great stateliness, resembling the courts of foreign princes, and the too great familiarity which would bring government into contempt.

"If I were to exhibit the spirit of the constitution," observed recently the present able secretary of state, "in its living, speaking, animated form, I would refer always, always to the administration of the first president, GEORGE WASHINGTON. And if I were now to describe a patriot president, I would draw his masterstrokes and copy his design. I would present his picture before me as a constant study for life. I would present his policy, alike liberal, just, narrowed down to no sectional interests, bound to no personal objects, held to no locality, but

broad, and generous, and open, as expansive as the air. . . . I would draw a picture of his foreign policy, just, steady, stately, but withal . . . lofty and glorious. No man could say in his day that the broad escutcheon of the honor of the Union could receive injury or damage, or even contumely or disrespect, with impunity. His own character gave character to the foreign relations of the country. He upheld every interest of his country in even the proudest nations of Europe; and while resolutely just, he was resolutely determined that no plume in the honor of his country should ever be defaced or taken from its proper position by any power on earth. WASHINGTON was cautious and prudent; no self-seeker; giving information to Congress according to the constitution, on all questions, when necessary, with fairness and frankness, claiming nothing for himself, exercising his own rights, and preserving the dignity of his station, but taking especial care to execute the laws as a paramount duty, and in such manner as to give satisfaction to every body, and to be subservient to that end. And it was always remarked of his administration, that he filled the courts of justice with the most spotless integrity, the highest talent, and the purest virtue; and hence it became a common saying, running through all classes of society, that our great security is in the learning and integrity of the judicial tribunals. This high character they justly possessed, and continue to possess in an eminent degree, from the impress which WASHINGTON stamped on these tribunals at their first organization."*

We have dwelt thus long on this administration, as it exhibits the genius and spirit of the American government in its acknowledged model. Successive presidents — the thirteenth is now in the chair — have in general so regarded it, as well as the people at large; and all parties virtually conspire to render to it their praise. We have not room to follow out the history of each administration. The constitution itself it is proper for a short space to consider.

Its OBJECTS are, to form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defence, promote the general welfare, and secure the blessings of liberty; and it is ordained and established in the name of the people.

I. It vests all the LEGISLATIVE POWERS it grants in a Congress, consisting of two branches, a Senate and House of Representatives. The representatives are chosen once in two years, by all persons qualified in their several states to vote for members of the most numerous branch of the state legislature; and no one can be entitled to a seat in this house under twenty-five years of age. He must also have been a citizen of the United States for seven years, and an inhabitant of the state in which he is chosen.

The Senate consists of two senators from each state, chosen by its legislature, for six years. It is divided into three classes, one of which goes out of office every two years. A senator must have attained thirty years, been a citizen of the United States nine years, and be an inhabitant of the state that elects him.

When a vacancy occurs in the representation of a state, its executive is to issue writs for a new election by the people. If it happen in the Senate, the state legislature supplies it by a new election; and should it occur when such legislature is not in session, the state executive makes a temporary appointment until the legislature meets.

The representatives choose their own speaker, have the exclusive power to impeach public officers, and originate bills for raising a revenue. The Vice President of the United States presides over the Senate, which chooses its other officers, and a president *pro tempore*, in case of absence of its president, or in case he exercise the office of President of the United States.

Each house determines the validity of the elections and qualifications of its own members, forms its own rules, and keeps a journal of its proceedings. Their members are privileged from arrest, during the session, except for treason, felony, or breach of the peace.

The Congress has power to make and enforce all laws necessary for the general welfare; as, to lay taxes and collect them, imposts and excises also, to borrow money, regulate commerce,

* See Mr. Webster's Speeches at Buffalo, Syracuse, and Albany, in May, 1851, p. 55, ed. N. Y.

establish uniform rules of naturalization, coin money, establish post-roads and post-offices, promote the arts and sciences, institute tribunals inferior to the Supreme Court, define and punish piracy, declare war and make reprisals, raise and support armies, provide and maintain a navy, and regulate the militia, and to make all laws necessary to carry these powers into effect, exercising also jurisdiction over the District of Columbia.

II. No bill of attainder or retrospective (*ex post facto*) law shall be passed; the writ of *habeas corpus* cannot be suspended, except in cases of rebellion or invasion; no soldier, in time of peace, to be quartered in any house without the consent of the owner, nor in time of war but in a manner to be prescribed by law; no direct tax can be laid, except according to a census of the inhabitants; no duty can be laid on exports; no money to be drawn from the treasury, unless appropriated by law; no law to be made respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble, and to petition the government for a redress of grievances; no title of nobility can be granted, nor can any public officer, without the consent of Congress, accept of any present or title from any foreign prince or state. The states are restricted from emitting bills of credit, making any thing but gold or silver a tender for debts, and passing any law impairing private contracts. No member, also, of Congress, continuing such, is allowed to hold any office under the government of the United States; and no person holding any office under the United States can be a member of either house during his continuance in office.

III. The EXECUTIVE POWER is vested in a president, who holds his office for four years, and who must have been a citizen at the adoption of the constitution, or native of the United States, must have attained thirty-five years of age, and been fourteen years a resident within the Union. The president, and the vice president, of similar qualifications, are chosen by electors, designated as the legislature of each state shall direct. The number of electors in each state is to equal the whole number of its senators and representatives.

The president is commander-in-chief of the army and navy of the United States, and of the militia when called into actual service. He grants reprieves and pardons, except in cases of impeachment; nominates, and, with advice and consent of the Senate, appoints ambassadors, judges, and other officers of the United States, forms treaties, provided two thirds of the Senate agree, and fills vacancies in offices happening during the Senate's recess. He convenes the Congress on extraordinary occasions, receives foreign ministers, gives information to Congress of the state of public affairs, and, in general, takes care that the laws be faithfully executed — being himself under solemn oath or affirmation to that end, and liable to impeachment as any other public officer. In case of death, resignation, or removal of the president, the vice president succeeds to his office.

IV. The JUDICIARY of the United States consists of one Supreme Court, meeting annually at Washington, and such inferior courts as Congress ordains. The judges hold their offices during good behavior, and while holding them can sustain no diminution of salary. The power of these courts extends to all cases in law and equity, arising under the constitution or laws of the United States, and under treaties; to cases of public ministers and consuls; to all cases of admiralty and maritime jurisdiction; to controversies between the states, and where the United States are a party, but not in regard to suits originating with foreign states, or subjects of them; between citizens of different states; between a state and a citizen of another state, and between citizens of the same state, claiming under grants of different states; and to causes between one of the states, or an American citizen, and a foreign state or citizen.

V. As to general RIGHTS AND IMMUNITIES: In all criminal trials, except impeachment, the trial by jury is guaranteed to the accused. Treason is restricted to the simple act of levying war against the United States, and adhering to their enemies, giving them aid and comfort; and no one can be convicted but by two witnesses to the same act, or by confession in open court. Conviction of treason is not followed by corruption of blood, to disinherit the criminal's heirs, nor by forfeiture of estate, except during the life of the offender. The citizens of each state are entitled to all privileges and immunities of citizens in the several states; and the powers

not delegated to the United States by the constitution, nor prohibited by it to the states, are reserved to the states respectively, or to the people. Congress may admit new states into the Union; and the national compact guaranties to each state a republican form of government, together with protection from foreign invasion and domestic violence.*

Such, in substance, is the celebrated CHARTER, if it so may be called, of the rights, privileges, and duties of American citizens, whether in their private capacity, or raised for a time to offices of trust and power. Under it these states have grown to a maturity which ranks them, in their collective, concentrated existence, among the leading nations of the world. To the three millions of their population, when they felt it their duty to appeal to arms against the mother country, they have now added a score of millions, and more. They are in commerce second only to Great Britain, the first among the nations. Their navy is respectable, well built, and well furnished. Their internal commerce is immense. Its statistics appear in the following work. Their railroads are among the greatest triumphs of art over natural impediments of distance and unequal surfaces. Steam has astonishingly facilitated and abridged human toil; and the ease with which intelligence is, like lightning, sent from one extremity of the Union to the other, is among the wonders of the age.

We do not here appeal to statistics; these occupy another department, and will confirm the present statements amply. We commend to the reader a careful perusal of them, and will simply remark, in closing this rapid review, that it is not alone in the progress of population,† agriculture, commerce, and the arts, that we are to contemplate the elements of greatness bestowed on the United States. Other things demand a grateful notice.

Very early in the settlement of the country it was perceived that no temporal prosperity could be permanent without the institutions of learning and religion. Two classes of Englishmen came over: the one, at the south, maintained conformity to the church of England; the other, at the north, claimed and exercised a greater liberty — the liberty of dissent. These dispositions had each their peculiar effect. Compelled to rely on themselves, the northern dissenters founded their college, and endowed it as well as their poverty would allow; and for years it was the only seminary of such kind in the colonies. Sir WILLIAM BERKELEY,‡ like the late Emperor of Austria, wanted about him “not learned men, but obedient subjects.”

Wherever the influence of New England reaches in these states, the school, the college, and the Christian ministry are esteemed as necessities of life, and not easily dispensed with; and all the states, without exception, perhaps, have since the revolution partaken more or less in this feeling. The press groans with its periodical issues; and these are not all the production of contentious political partisans; but a large share is of a religious, scientific, literary character, bringing into discussion the great questions that agitate the intellectual world, and assuming a stand in the crowd of learned competitors.

Astronomy, chemistry, mineralogy, geology, and natural history are cultivated with growing ardor and success. They will be advanced by the facilities afforded through the unexpected liberality of an English stranger,§ whose benefaction has consecrated at the capital of the nation a reservoir of knowledge, diffusing its streams to the extremities of the land.

Our missionary enterprises, in the foreign field and at home, have been surprisingly prosperous. The state of Christian civilization bestowed on the Sandwich Islands is the proof of it as regards distant efforts; the increasing settlement of the institutions of religion in the

* See the constitution itself, and the abridgment of it in *Webster's* “Elements of Knowledge,” copied into that very useful and valuable compendium, *Goodrich's* “History of the United States,” compiled for youth; and of which many thousands are in their hands throughout the Union.

† For numbers only, China stands first, with her 300 or 400,000,000, as the case may be; then Britain, reckoning 150,000,000 subjects of her queen. Russia follows, with 60,000,000; France and Austria rank next. And whether the empire of Japan or the United States come next in order is not clear. Turkey is, probably, in advance of Prussia and Spain. No other power, perhaps, exceeds 10,000,000 of subjects.

‡ Governor of Virginia under the crown.

§ *James Smithson*, Esq.

west is a happy comment on the domestic effort; while the creation of a new republic on the shores of Africa is one of the most glorious of the triumphs of religion, humanity, and political wisdom.

Nothing will be wanting to the greatness and prosperity of our cherished republic, if, securing the blessing of God by obedience to his Word, under the directions of which no small portion of our ancestors lived and toiled, we hold on our way with fearless integrity, and a conscientious love of our country and our race.

DESCRIPTIONS

OF

STATES AND TERRITORIES.

The reader will please to observe that the statistical tables and other documents near the close of the volume will be found to contain much additional information in regard to the several and combined interests of the following confederated republics, denominated the United States of America.

These states and territories are alphabetically arranged.

ALABAMA ranks as the twenty-second state of the American Union. It was originally settled by French and Spanish immigrants. In conjunction with Mississippi, it was set off from Georgia, in 1800, as a separate territory; which again was divided in 1817, the western portion forming the State of Mississippi, and the eastern the Territory of Alabama — now the state of that name, having been so constituted by act of Congress in March, 1819.

Limits and Extent. — It is bounded by Tennessee on the north, Georgia on the east, Florida and the Gulf of Mexico on the south, and Mississippi on the west. It extends from $30^{\circ} 10'$ to 35° north latitude, and from 85° to $88^{\circ} 30'$ west longitude; comprising an area of nearly 51,000 square miles.

Surface and Soil. — The face of the country exhibits much variety. In the northern quarter, where the Alleghany Mountains terminate, it is elevated and somewhat broken, but gradually improves in appearance and fertility as it descends towards the opposite boundary, where it settles into wide-spreading prairies and gently-swelling plains, profusely covered with grass

and beautiful herbage. For all purposes of agriculture, the chief pursuit of the inhabitants, the soil is, in general, finely adapted. There are many large tracts, especially on the margins of rivers, which are remarkably productive. The most prominent among the "kindly fruits of the earth" are cotton, corn, wheat, and rice. Tobacco and sugar are also cultivated to some extent. The cotton crop, for several years past, is estimated to have been equal to a sixth part of the aggregate annual harvest of that commodity within the United States. Minerals, particularly iron and coal, are found in various parts of the state; the latter article exists in abundance on the borders of the Cahawba and Black Warrior Rivers.

Climate. — Alabama presents considerable diversity of climate, healthful or otherwise, according to locality. The hilly region, in the central and northern parts, affords a salubrious atmosphere, mildly tempered in winter, and gratefully pleasant in summer; but the low and marshy districts at the south, the bottom lands along the rivers, and the country lying in the neighborhood of the Muscle Shoals, are usually considered unhealthy.

Rivers. — Nearly every part of the state is amply watered by large streams admitting of extensive steamboat navigation. The most considerable and important of these rivers are the Tennessee, Chattahoochee, Alabama, and Tombigbee.

Civil Government. — The legislative power is vested in a Senate and House of Representatives; the former composed of thirty-three members, elected for four years, — one half retiring every two years, — and the latter consisting of one hundred members, elected biennially. The sessions of the legislature are held once in two years, at the present seat of government, the city of Montgomery. The people elect not only the executive and legislative authorities, but the judges of Circuit and Probate Courts. Judges of the Supreme Court and chancellors are chosen for terms of six years by the General Assembly, in joint ballot.

Judiciary. — The Supreme Court holds its sessions at the capital, semiannually, in June and January: it is composed of a chief and two associate justices. The Court of Chancery, comprising three chancellors, holds an annual session in each of the thirty-seven districts into which the state is subdivided. The Circuit Courts, of which there are nine judges, hold two sessions per annum, in each of the nine circuits.

Education. — See *Literary Institutions.*

Internal Improvements. — The state enjoys numerous facilities for intercommunication, and a due measure of public interest is directed to the development of these natural advantages. Many miles of railroads, and several important canals, have already been constructed, and others are also in contemplation.

Manufactures. — But little attention has been given to the business of converting the principal staple of the state into fabrics for exportation. Nearly all the cotton produced is sent as raw material to markets beyond the state, and but a small portion of the population is engaged in the manufacture of other articles of domestic growth.

Public Debt, &c. — For information relative to the debts, expenditures, financial resources, &c., of the state, see *Statistical Tables.*

Indians. — There are within the limits of Alabama several formidable tribes, or parts of tribes, some of whom, the Cherokees particularly, have attained a respectable state of civilization. These reside in the north-east corner of the state. The Choctaws and Chickasaws occupy portions of the western part, and the Creeks dwell on the eastern border. During the war of 1812, the white settlements were much annoyed by the Indians, who were finally subdued by General Jackson.

Population. — One of the chief impulses which led to the almost unexampled increase of population in Alabama, within the last forty years, was the annexation, in 1812, of a part of Florida. This measure gave access to an important coast frontier on the Gulf of Mexico, and induced an immediate flow of emigration in that direction.

ARKANSAS. This state was originally included within the limits of Louisiana; from which, in conjunction with Missouri, it was set off, becoming a part of the latter, under the name of Missouri Territory, soon after the purchase of the former by the United States. In 1819, Missouri was divided, and the southern portion became the Territory of Arkansas. It remained under a distinct territorial government until 1836, when it was elevated to the rank of an independent state, constituting the twenty-sixth member of the American Union. As early as 1685, settlements were formed in the country now embraced in this state by certain French adventurers, who formed alliances and intermarried with the then powerful tribe of Arkansas Indians, from whom the name of the state is derived.

Boundaries and Extent.—It is bounded north by the State of Missouri; east by the River Mississippi, separating it from the state of that name, and from Tennessee; south by Louisiana, and west by the Indian Territory. It lies between 33° and $36^{\circ} 30'$ north latitude, and reaches longitudinally from $89^{\circ} 30'$ to $94^{\circ} 30'$ west; being 245 miles in length, with a mean breadth of about 212 miles, comprehending an area of somewhat over 52,000 square miles.

Government.—The governor is elected, by a plurality of the popular vote, for a term of four years, but is ineligible for more than eight in any twelve years. There is no lieutenant governor, the executive duties devolving, in cases of official disability, first upon the president of the Senate, and next upon the speaker of the House of Representatives. The legislature consists of a Senate, in number not less than seventeen, nor more than thirty-four members, elected for four years; and of a House of Representatives, comprising from fifty-four to one hundred members, chosen biennially. The legislature convenes once in two years, at Little Rock, the capital. Laws against the introduction of slaves, either as criminals or as merchandise, may be passed by the General Assembly. Slaves are entitled by law to trial by jury; and, in capital cases, no difference on account of color is made in the imposition of penalties.

Judiciary.—The Supreme Court has three judges, who are chosen for terms of eight years by joint vote of the legislature. It has appellate jurisdiction only, except in cases provided for by the constitution. The Circuit Courts have six judges, elected by the people for four years. They have exclusive jurisdiction of all felonies, and of all civil cases not cognizable by justices of the peace, and hold in each circuit two terms annually.

Education.—Although large provision for the support of public education has been made,

the subject has hitherto occupied but a small share of the popular attention. There are, comparatively, but few common schools, and only some eight or ten academies, or high schools, in the state; yet, under an act of Congress, one thirty-sixth part of every township of land was appropriated for the maintenance of these institutions. The state treasury has also been liberally drawn upon for the same purpose. Nor are there any colleges, notwithstanding the munificent grant by Congress of seventy-two sections of land for the establishment of a classical seminary; the legislature having preferred to sell the land and divide the avails among the several counties.

Finances. — For particulars of receipts, expenditures, state debts, &c., see *Statistical Tables*.

Surface and Soil. — On the western border of the Mississippi, and extending some one hundred miles into the interior, the country is low, marshy, and subject to periodical inundations. It is densely wooded, with occasional open tracts of arable land. Towards the centre, it is generally hilly and rugged, though interspersed with extensive prairies. The western section is crossed by several mountainous ridges, the most elevated of which are the Black Mountains, and the Ozark (*alias* Arkansas) Mountains, the altitude of some of the peaks of which is estimated at 3000 feet above the level of the sea. As a whole, the state cannot be considered as a region of great fertility, some three fourths of its surface being unproductive, or unfit for tillage; although in certain localities, in the neighborhood of the inland streams, the soil is remarkably rich. The staple products of the earth are cotton and Indian corn; and considerable quantities of wheat, oats, sweet potatoes, and tobacco are also raised. Immense plains, covered exuberantly with verdure, afford peculiar facilities for the growth of cattle; and the forests and prairies abound with wild game, such as the buffalo, deer, elk, wild turkeys, geese, quails, &c. Indigenous fruits, such as grapes, plums, &c., are found in profusion. The peach is cultivated with great success, but the apple does not flourish.

Rivers. — There is scarcely a spot in the whole state that has not some navigable water-course within a distance of one hundred miles, so thoroughly is it penetrated by those natural channels of intercommunication. Among the principal rivers by which the state is watered, besides the Mississippi, are the St. Francis, the Arkansas, the Ouachitta, the White, Black, and Red Rivers.

Internal Improvements. — Little interest has been manifested in this subject. A grant by Congress of 500,000 acres of land, for the purpose of encouraging a system of internal improvements, was diverted from its legitimate object by an act of the legislature in 1849, authorizing the distribution of this fund among the forty counties into which the state was subdivided.

Minerals. — No extensive explorations of the mineral resources of Arkansas have yet been made; there are, however, undoubted indications of the existence of numerous beds of iron and lead ores, coal, and gypsum. Salt is also abundant, being found upon the surface of several large prairies, in some instances, it is said, to the depth of four to six inches. It is also contained in many remarkable springs, the waters of which are strongly impregnated with this material.

Manufactures. — Hitherto the manufacturing operations within this state have amounted to nothing of importance beyond the fabrication of articles for household use and home consumption.

Climate. — Upon the low river lands, the climate is decidedly unfavorable to human health, but in the elevated country, it is quite otherwise; although, in some quarters, the deleterious properties of the water render these localities unfit for the residence of a very numerous population. Connected with this topic may be mentioned the hot or warm springs, numbers of which are situated near the centre of the state. Their waters are known to be efficacious in the cure of chronic maladies, and are much resorted to by invalids, as well as by travellers drawn thither by curiosity.

Religion. — The predominating religious denominations are Methodists and Baptists. There are likewise considerable bodies of Episcopalians, Presbyterians, and Roman Catholics.

Indians.— Many tribes, or parts of tribes, of Indians have their abodes still within this state, the most populous of which are the Cherokees, Choctaws, Osages, Quapas, Camanches, &c.

Population.— Between 1810 and 1820, the population of Arkansas increased from 1000 to 15,000. In 1830 it had doubled this number, and in 1840 had risen to nearly 100,000, one fifth of whom were slaves. In 1850 it was 209,639.

CALIFORNIA has recently become one of the United States. A part of the country was discovered as early as 1542, by a Spaniard named Cabrillo; and its northern section was visited for the first time by foreigners in 1578, when Sir Francis Drake, then at the head of an expedition from England, gave to this region the name of New Albion. The Spaniards planted colonies upon its sea-coast in 1768, from which period, until 1836, the territory was a province of Mexico. In the latter year a revolution occurred. The people, after having frequently compelled the Mexican governors and other officials to abandon their posts, declared themselves independent, and undertook to organize new political institutions. Several weak and ineffectual attempts to regain absolute control were made from time to time by the Mexicans, until the year 1846. In July of that year, the port of Monterey, a central point on the Pacific coast of the state, was seized, in the name of the United States, by a naval force under Commodore Sloat, who at once unfurled the American flag, and established a provisional government. At that epoch, the administration of the affairs of the territory was in the hands of a civil governor and a military commandante, both natives of California, but holding commissions from the President of Mexico. In 1848, the discovery of a gold "placer" at Columa, (Sutter's Mills,) and the ascertained reality of its extraordinary richness, followed immediately by further and equally surprising developments, startled the whole civilized world; and a tide of emigration began to flow in from every quarter, with a rapidity and volume unparalleled in the history of nations. The population forthwith attained the required number for the formation of a distinct state. The inhabitants prepared and submitted to Congress the draught of a constitution; and in September, 1850, California was admitted into full membership as one of the United States.

Boundaries and Extent.— By the constitution, adopted by the people in November, 1849, and by the act of Congress consequent thereon, the limits of California are established as follows: commencing at latitude 42° north, and longitude 120° west; thence running south on said line of longitude until it intersects the 39th degree of north latitude; thence in a direct course south-easterly to the River Colorado; thence down the channel of said river to the boundary

between Mexico and the United States; thence along said boundary to the Pacific Ocean, and into the same three English miles; thence north-westerly, in the direction of the Pacific coast, to the original parallel of 42° ; and, finally, along this line to the point of beginning. It lies between 32° and 42° north latitude; and its extremes of longitude, owing to its angular position, embrace an extent of about 10° , — its eastern point being at $114^{\circ} 30'$, and the western at $124^{\circ} 30'$, — although the average distance of the eastern boundary from the sea-coast, and, consequently, the average breadth of the state, is but 212 miles. Its length from north to south is 764 miles; estimated area, 188,500 square miles. It is bounded north by the Territory of Oregon, east by that of Utah, south by Lower California, and west by the Pacific Ocean.

Government. — The chief magistrate is elected for two years; also the lieutenant governor, who is *ex officio* president of the Senate. The legislature is composed of two branches — the Senate, consisting of not less than one third, nor more than one half of the number contained in the other house, elected by districts biennially; and the Assembly, chosen annually, also by districts, to comprise not less than twenty-four nor more than thirty-six members, until the population shall amount to 100,000, when the minimum shall be thirty, and the maximum eighty. The legislature convenes annually in January. No lotteries can be granted, nor charters for banking purposes. The circulation of paper as money is prohibited. Corporations may be formed under general laws only. In legislative elections, the members vote *viva voce*. Loans of the state credit are interdicted; and state debts, exceeding a sum total of \$300,000, cannot be contracted except in certain specified contingencies. The property of married women acquired before or after marriage, and a portion of the homesteads, or other estates of heads of families, are protected by law. The elective franchise is held by all white males twenty-one years of age, who are citizens of the United States, or Mexicans choosing to become citizens, under the treaty of Queretaro, and have resided six months within the state. Indians and their descendants are allowed to vote in special cases.

Judiciary. — The Supreme Court consists of a chief justice and two associates, elected by the people for six years, and so classified that one shall retire every two years. District judges are chosen in like manner, for the same term of time; and county judges are elected for four years. The Supreme Court has appellate jurisdiction in cases involving a sum not less than two hundred dollars, in the settlement of certain legal questions, and in various criminal matters. The District Courts have power to try cases in law and equity, where the sum in dispute exceeds two hundred dollars. The county judges, assisted by two justices of the peace, hold Courts of Sessions in each county for criminal business. Clerks of courts, district attorneys, sheriffs, coroners, &c., are chosen by the people.

Finances. — The state debt in January, 1851, was \$500,000, — existing in the shape of bonds of \$500 and \$1000 each, — drawing interest at the rate of *three per cent.* a month. The means of meeting the public expenditure are derived chiefly from taxation. In 1850, the inhabitants of San Francisco and Sacramento were taxed at the rate of two to three per cent., principally, however, for municipal purposes. The state derives an income of \$1,525,000 from the following sources: 1. A state tax of one half per cent. on \$200,000,000, the estimated value of taxable property, amounting to \$1,000,000; 2. A poll tax of \$5 each on 50,000 inhabitants; and, 3. A miner's tax of \$20 per month on 25,000 foreign miners,* — the two latter items producing about half a million of dollars; — and, 4. Duties on sales at auction, estimated at \$25,000. The whole expense of the state government in 1850, including interest on the public debt, was \$700,000, deducting which from the computed receipts, a balance of \$825,000 remained in the treasury.

Education. — The constitution provides for the establishment and support of a system of free schools, in which instruction shall be given at least three months in each year. A fund is to be created from various sources, the interest of which is to be inviolably applied to the maintenance of these institutions. This fund must soon become one of great magnitude; for it is to consist of the proceeds of public lands ceded to the state for school purposes, and of

* This tax was repealed in the spring of 1851.

the 500,000 acres of land granted to each new state by the general government, together with such percentage on sales of lands within the state as shall be allowed by Congress, and the avails of all estates left by persons dying without heirs. Certain lands are also set apart, the income of which is to be appropriated to the maintenance of a university.

Surface, Soil, &c. — The face of the country presents, perhaps, a greater variety of topographical features than may be found in any one territory of like magnitude upon the whole earth. Several ranges of huge and lofty mountains — many of their peaks of volcanic origin, ascending into the region of perpetual snow — extend through the central parts, and parallel with the sea-coast of the state, from its northern nearly to its southern extremity. On the coast side of these ridges, as well as between them, the surface is greatly diversified, presenting many varieties of soil, thin and sandy in some localities, but in others abounding in the richest loam. Among the hilly regions, there are numerous valleys and plateaus, of different elevations, covered with a soil of good quality, which, wherever duly watered, is capable of being rendered highly productive. But these are frequently interspersed with large tracts of rough, broken, and apparently sterile territory, or intersected by deep and rocky ravines. Until within a very short period, the entire country, with the exception of a few widely separated spots, exhibited all the harsh and rugged characteristics of a yet unredeemed wilderness.

The elevated lands, at certain seasons, are usually either denuded of vegetation, or partially overspread with stunted trees and herbage. But in places that are sheltered, and having facilities for irrigation, fruits and garden vegetables grow luxuriantly. Though few agricultural experiments on a large scale have yet been made, enough has been ascertained to show that the resources of the state, in this respect, may be advantageously developed. Indeed, it is known that most of the cereal grains can be produced in quantities abundantly adequate to the wants of a numerous population. In most parts of the country, the vine, fig, olive, and other valuable plants, both of the temperate and torrid zones, may be cultivated with great success. Springs of water abound in many districts; while in others, the earth, for leagues together, exposes a naked and arid surface, which is only relieved by the periodical rains. Some few extensive forests, comprising, occasionally, trees of enormous magnitude, were met with by recent United States exploring parties; but large portions of the territory are very scantily wooded. This absence of trees, and the consequent want of moisture, and of shelter to the earth from the sun's heat, is doubtless a grand obstacle in the way of agricultural improvement; and years will probably elapse before any great measure of public attention will be directed to the subject. Among the forest-trees most common in California are the oak, ash, beech, birch, elm, plane, red cedar, and pine of almost every description. These abound more profusely near the Pacific shore, and in the vicinity of rivers communicating with that ocean, thus affording excellent opportunities for ship-building.*

Climate. — There is nearly, if not quite, as great a diversity of climate in California as of its geological features. The coast and its neighborhood are enveloped in cold mists, borne on the north-west winds, which prevail during most of the summer or dry season, with occasional intervals of more pleasant weather. At San Francisco, although the temperature frequently varies some 30° in a single day, it is said that the mean temperature, in both winter and summer, is nearly equal. Other positions on the coast are more or less affected by the chilly winds and fogs from the point above indicated, in proportion to their relative geographical situations, the line of coast at the southern part of the state being less directly influenced by those causes than that at the northern. In the winter, or rainy season, the prevailing winds are from the south-west, rendering the temperature much milder than in the same latitudes on the Atlantic side of the continent. Farther inland, beyond the first range of mountains, the

* Timber is scattered over several counties, and is quite abundant around Bodaga, San Rafael, Sonoma, Santa Cruz, and a few other localities. The red wood, or soft cedar, is most frequently met with in those quarters. It often grows to the circumference of forty feet, and to a height of three hundred. Near Santa Cruz, there is one measuring seventeen feet in diameter.

climate assumes a very different phase. The sea winds of the spring, summer, and early autumn, having deposited their freight of moisture upon the summits of the intercepting highlands, (the "Cordilleras of California,") pass gently into the great valley of the Sacramento, carrying a grateful softness, with scarcely a remaining vapor to obscure the brightness of the skies. Proceeding still onward in an easterly direction, these prevailing winds climb the flanks of the lofty Sierra Nevada, and, on reaching its elevated peaks, are deprived by condensation of all watery particles that may yet linger among them. Thence they pass down into the broad basin, spreading eastward to an immense extent, with occasional mountainous interruptions. Here another change of climate is perceptible; the air is exceedingly dry and hot throughout more than half the year, and the earth suffers accordingly. These variations occur sometimes within the distance of a few miles, corresponding generally with the abrupt changes observable upon the face of the country. A most delightful climate pervades the numerous valleys on the land side of the mountains, where they are protected from the rude ocean blasts. Near the western border of the Sacramento valley, the extremes of temperature, between winter and summer, are very great, comprehending some 80° Fahrenheit, viz., from 30° to 110°. A degree of heat almost as excessive as the last indicated is often felt in various parts of the mountain region; but this is here so peculiarly modified as to produce none of those injurious effects upon animal life which result from similar temperatures elsewhere. The rainy season, sometimes termed the winter, commences at the north in October or November, and progresses slowly to the south, reaching the centre of the state in December, and the southern boundary in January. The season has an average duration of about three months, but is longer and more pluvius at the north than at the south. The effect of all these atmospheric mutations upon human health must naturally be diverse, and not always congenial. The subject, however, has not yet been sufficiently investigated and analyzed to enable one to treat with accuracy upon the relations between those phenomena and the diseases incident to the localities where they respectively exist. That great scourge of modern times, the cholera, has visited some of the most populous settlements in the state; and other epidemics occur at different seasons, similar in character to those which visit other parts of the world exposed to like vicissitudes and agencies.

Rivers.—The waters of California partake of those varied peculiarities which mark its terrene surface and its atmospheric properties. The sea and its numerous contiguous bays and estuaries, the inland lakes, the rivers and their countless tributaries, are all subjects of speculative interest. They yield abundantly almost every description of fish found in like latitudes, besides many kinds which are either unknown or not common in other regions. Some of the rivers are navigable many miles from their mouths; others flow over precipices and ledges, constituting falls or rapids, which the industry of man may hereafter convert into valuable mill sites. The sea-shores are prolific in marine plants, which, at some future day, will doubtless be applied to useful purposes. Immense quantities of kelp are thrown up by the waves — an article that now forms the most available material for the manufacture of iodine, and is also excellent as a compost for arid soils, like those of this state. Lichens, in all their variety, spring profusely from the rocky strand along its entire extent, which, like the mosses of Iceland, and the carrageen of Ireland, will undoubtedly, in due time, be much prized for their nutritive and medical properties. The coasts and inland watercourses swarm with wild fowl, some of which resemble the aquatic birds found on the eastern shores of the continent, and others seem peculiar to the tracts which they inhabit. The principal rivers, communicating with the Pacific, are the Sacramento and San Joaquin. These flow through almost the whole length of the great valley between the Sierra Nevada and the coast range of mountains, the former taking its rise in the north, and the latter in the south, and both, uniting near the centre of the state, pass into the noble Bay of San Francisco, whence they reach the sea. They are fed in their course by great numbers of mountain streams from the western slopes of the Sierra Nevada. Other important rivers, though of less considerable extent, intersect the state in various directions.

Internal Improvements.— But little attention has hitherto been given to this subject, beyond

providing for the temporary accommodation of residents in the principal settlements. No railroads or canals of any importance have yet been constructed ; although projects have been suggested for several improvements of this description. It is not probable that many years will elapse before ample and convenient means of communication will be established between the seaports and the mining districts ; for the necessities of the people, and the nature of their pursuits, must soon demand far greater facilities of intercourse than any now existing.

Minerals.— Besides the incredible quantities of gold, for which California has become renowned above all other countries on the globe, sundry mineral products of much value are found in different parts of the state. Silver, mercury, and lead have been obtained ; and indications of copper, tin, iron, and other ores have appeared, as is reported, in several places.* No satisfactory signs, however, of any extensive coal fields have as yet been discovered, although reports of their existence have from time to time been made. Some few small veins of what was at first imagined to be pure coal have been met with ; but, on investigation, they have proved to be lignite, bitumen, or other material of tertiary formation. Researches for other minerals than gold have not yet been prosecuted to any great extent ; nor is it likely that, during the prevailing attraction towards the more precious metal, the coexistent mineral resources of the state will be fully developed, unless incidentally, and by degrees, or through systematic explorations under authority of the government.

The wealth of the "gold region" is almost, if not entirely, incalculable. This region comprehends the territory occupied by the Sierra Nevada and the contiguous country, including its rivers. Indeed, it is almost solely on account of its capacity to produce gold, that the attention of the world has been directed to this extraordinary country. The universally coveted metal is found in prodigious quantities along the western slopes of the great mountain range, and especially in and around the streams that descend thence into the large valley of California, at the bottom of which flow the Sacramento and San Joaquin Rivers. The gold is obtained in various forms, mostly in small, thin particles ; but not unfrequently in lumps, some of which have weighed several pounds. The slate rocks of the mountains enclose numerous veins of granite, in which gold is imbedded ; and it is from these sources, wrought upon as they have been by volcanic action, that the metal finds its way into the ravines and crevices upon the mountain sides, and into the streams below, carried thither by the constant operation of powerful atmospheric agencies. The value of the auriferous product of California can scarcely be computed. The yield of the mines for the year 1851, it is confidently stated, may be estimated at some seventy millions of dollars. This is based on official statements of the amounts procured, carried away by sea and land, stamped by various houses, or manufactured into jewelry, &c., during the first quarter of that year ; the aggregate of which, at the mint valuation, exceeded sixteen millions of dollars. New developments of rich deposits are constantly occurring ; and notwithstanding the vast additions to the population, which are made daily, the average gains of miners do not seem in any degree to diminish.

Manufactures.— The only manufacturing branches at present carried on in California are such as chiefly pertain to the casual wants of the people ; and these are confined to mechanical operations connected with the construction and repairing of houses, vessels, furniture, &c., the making up of clothing, and the fabrication of various articles needed by miners. Some considerable amount of gold is formed into jewelry, much of which is sent abroad ; but no other commodities, to any great extent, are manufactured for exportation.

Indians.— Few of the descendants of the aboriginal inhabitants remain within the present limits of the state. These few consist of small and scattered tribes, who neither own, nor pretend to claim, any portion of the soil beyond the boundaries of their small villages. To

* Cinnabar is found, in great quantities, within eight or ten miles of San José, the capital of the state. Sulphur is obtained in the vicinity of Sonoma. Salt ponds exist in different parts of the state, and limestone is not uncommon. In various spots, during the summer season, a peculiar sort of earth may be gathered from the sites of certain dried-up ponds, which possesses strong alkaline properties, and answers all the uses of ashes in the manufacture of soap.

the gold region, especially, they assert no title. They are, for the most part, a roaming, wretched race, divided into insignificant hordes, subsisting on wild fruits, berries, roots, &c., and too indolent to hunt for game in a legitimate way; but not too much so to pursue and steal the cattle and horses of the whites, which they use for food. There are, probably, no bodies of Indians in the United States who are more dishonest, perfidious, and cruel; nor any that are not superior in moral and intellectual character.

Population.—So rapidly has the population of California accumulated since the first discovery of a gold “placer,” in February, 1848, and so constantly does the stream of immigration flow on and expand, that the ratio of increase, at definite periods, cannot be ascertained with any great degree of accuracy. A comparison of the number of residents in certain localities, at the time of the occupation of Monterey by the United States forces, (July, 1846,) with the estimated number in January, 1851, — a space of four and a half years, — may give some idea of the force and velocity of that great “tide in the affairs of men,” which is setting towards this point from all quarters of the world. At the former date, there were but eight towns, or pueblos, within the present confines of the state, viz., San Diego, with 500 inhabitants; Pueblo de los Angeles, with 2500; Santa Barbara, 800; Monterey, 1200; Santa Cruz, 400; Pueblo de San José, 1000; Yerba Buena, (now San Francisco,) 400; Sonoma, 200; making a total of 7000. The rest of the territory contained some 7000 or 8000 besides. At the latter date, it was estimated that the residents in California, permanent and temporary, numbered not far from 200,000, one third of whom are engaged in mining.* There are towns, which, at the close of their first year’s existence, contained from 1200 to 1500 voters. In October, 1850, the monthly mail from the United States conveyed nearly 50,000 letters to California; and there were 22,000 advertised letters in the post-office of Sacramento city, then a place of less than three years’ growth.

There are some twenty post towns in the state. In January, 1851, thirteen newspapers (many of them daily) were published, as follows: 6 in San Francisco, 2 in Sacramento city, 2 at Stockton, and 1 each at Monterey, Sonoma, and Maryville.

Religion.—There are religious societies of almost every Christian denomination, and increasing attention is given to the support of public worship. No one sect appears to predominate, and the utmost toleration prevails. In the present fluctuating, unsettled, and bustling state of things, there must be, of course, many changes in the affairs, and in the relative numbers, of different communities and associations; so that an attempt to furnish correct statistical details in the premises must, at this time, be attended with much difficulty.

* The following estimate, made in April, 1851, is from a public journal printed at Sacramento: In the northern mines, or that scope of country lying north of San Francisco and Feather River, the population is computed at 20,000; the Yuba, 40,000; Bear River, 4000; the American Fork, 50,000; in the southern mines, or that portion lying south of the American River, 80,000; Sacramento and San Joaquin valleys and neighborhood, 65,000; the coast south of San Francisco, 20,000; — making an aggregate of 314,000. It is further estimated that the 100,000 miners have each labored 300 days during the preceding year, and have produced an average of 3½ dollars per diem; which gives a total of \$100,000,000.

CONNECTICUT is one of the original thirteen United States, and the most southern of that division of the country known as the New England States. The territory now constituting this state was granted to the Earl of Warwick, in 1630, by the Plymouth Company in England, and by him, in 1631, was assigned to a number of active Puritans, who were on the parliamentary side in the quarrel with Charles I. It was shortly afterwards settled, in part, by persons from various towns in Massachusetts. A few of the Dutch people of New York also established one or two small settlements, with the intention of appropriating the whole territory to themselves. This occasioned disputes, which continued until 1637, when the Pequot Indians made war upon all New England — an event that united the people for their common defence, and soon enabled them to overcome their savage assailants. Purchases of large tracts were made from time to time of the Indian occupants; and, in 1650, the Dutch abandoned their pretensions, except to the lands they had actually settled upon. In 1664, Connecticut was included in the charter from Charles II., granting the New Netherlands to the Duke of York; but the attempt to take possession under this authority was resisted by the local government of Connecticut, as were further encroachments under James II. and King William. The territory originally comprised two colonies, Connecticut and New Haven; the former settled by Massachusetts people in 1633, at Windsor, and, in 1635-6, at Hartford and Wethersfield; the latter by the English in 1638. These were combined into one colony by virtue of the charter from Charles II., in 1665; which charter formed the basis of the government until 1818, when the present constitution was established. The state took a very active and efficient part in the American revolution, furnishing nearly 40,000 soldiers out of a population of 230,000.

Boundaries and Extent.—This state is bounded north by Massachusetts, east by Rhode Island, south by Long Island Sound, and west by New York. Situated between $40^{\circ} 58'$ and $42^{\circ} 1'$ north latitude, and $71^{\circ} 43'$ and $72^{\circ} 37'$ west longitude. Area, 4674 square miles.

Government.—The executive power is vested in a governor and lieutenant governor, the latter being also president of the Senate. The legislature, called the General Assembly, consists of a Senate, of not less than eighteen nor more than twenty-four members, and a House of Representatives; most of the towns choosing two members each, and the residue but one. All state officers are elected annually by the people; and the General Assembly convenes once in each year, alternately at Hartford and New Haven. All white male citizens, twenty-one years of age, resident in the place where voting for six months next preceding, and having a freehold estate of the value of seven dollars; or having performed regular military

duty in such town for one year immediately previous to voting; or having paid a tax within said year, are entitled to the right of suffrage, on taking the oath prescribed by law.

Judiciary. — The judicial department embraces the Supreme Court of Errors, the Superior Court, a County Court in each county, a City Court in each city, a Court of Probate in each probate district, and, as in other states in New England, an indefinite number of justices of the peace in each county. The Court of Errors consists of five judges, appointed by the General Assembly, and holding their offices during their good behavior, but not beyond the age of seventy. It holds one term in each county annually, and has final jurisdiction of writs of error brought to revise judgments on decrees of the Superior Court. Two terms of the latter are held in each county annually, by some judge of the Supreme Court of Errors, designated for the purpose; and these tribunals have cognizance of civil suits brought by appeal from any lower court, or brought for relief in chancery, where the sum at issue exceeds \$335. They also have exclusive jurisdiction in capital cases of crime; and, concurrent with the inferior courts, of all other offences not within the control of justices of the peace. They have cognizance, likewise, of writs of error, brought to revise decisions of lower courts; of petitions for divorce, and for new trials relative to matters in or issuing from these courts, and of writs of *scire facias*, &c. In trials for capital offences, one or more of the other judges of the Supreme Court must be called to assist. The County Courts consist of one chief judge, and two associate judges, appointed annually by the legislature. They have original jurisdiction of all civil actions at law, wherein the demand exceeds \$35; and of all criminal cases, where the penalty does not exceed a fine of \$7, or an imprisonment of 30 days, or both. Actions involving smaller sums or penalties than the foregoing come within the special jurisdiction of justices of the peace. The City Courts, composed of the mayor and two senior aldermen, have cognizance of all civil actions not involving land titles.

Finances. — The expenditures of the state for the financial year ending 1850 were \$118,392-09, and the income \$122,346-73. The banking capital, April 1, 1850, amounted to about \$10,000,000.

Education. — In September, 1849, the date of the biennial exhibit, the school fund of the state amounted to \$2,076,602-75; and the dividends for 1850 gave \$1-50 for every enumerated child between four and sixteen years of age, of which the number is stated at about 92,000. The legislature, in 1849, appropriated \$10,000 for the establishment of a state normal school, for “teaching teachers how to teach,” to be placed under the control of one trustee from each of the eight counties. There are three colleges in the state, viz., Yale, founded in 1701, at Saybrook, and removed in 1717 to New Haven; Washington,* at Hartford, founded in 1824 — an Episcopalian institution; — and the Wesleyan University, founded, in 1831, at Middletown, by the Methodists. These are all in a highly flourishing condition. There is an extensive Asylum for deaf mutes at Hartford, which has deservedly attained great celebrity; also, in the same city, a Retreat for the Insane, which was opened in 1824, and is most happily managed. There are also several academies of a high order in various parts of the state. At the taking of the census in 1840, it was found that the number of persons within the state, above the age of twenty, who were unable to read or write, was only 526, — a much smaller proportion than in any other state, — and but very few of these were native citizens. The school fund of Connecticut is larger, compared with the population, than that of any other state of the Union, and the character of her school system is correspondingly excellent.

Surface, Soil, &c. — The state is divided into the following counties, viz.: Hartford, New Haven, New London, Fairfield, Windham, Middlesex, Litchfield, and Tolland. The face of the country is much diversified by hills and valleys, and is so exceedingly undulating as to present an ever-changing variety of objects. There are ranges of mountainous elevations, which take their rise in the north, and terminate near New Haven, but are not remarkable for their great height within this state. The soil varies from a gravelly loam, upon the hilly lands, to a rich and fertile alluvial in the valleys; the former well adapted to grazing, and the latter to tillage. In possession of an industrious class of freemen, the land yields, in great

* In 1845, the name was changed to Trinity College

abundance, all the varieties of products common to the climate. Nearly every description of grain, flax, hemp, hay, potatoes, and garden vegetables of all kinds, are among the most profuse of the agricultural products; orchards are also numerous, yielding apples, peaches, cherries, plums, and other fruits peculiar to this region.

Climate.—No portion of New England, contiguous to the sea-coast, possesses a more salubrious climate than Connecticut. The raw easterly blasts, which annoy all residents upon the shores of Maine and Massachusetts, become greatly softened before reaching the southerly border of this state. It is true that near the coast the weather is variable, and sudden changes of temperature occur, in accordance with the direction of the sea or land breezes; but, in the interior, these fluctuations are far less frequent, the temperature becomes steady, and the climate healthful in consequence.

Rivers.—Connecticut is finely watered by the noble river whence its name is derived, by the Thames, Housatonic, Naugatuck, and numerous smaller streams, affording extraordinary facilities for commercial and manufacturing operations. Numerous bays and creeks penetrate its shore, affording commodious harbors: that at New London, one of the best in the United States, has a depth of 30 feet of water. Brooks and springs, of the purest water, abound throughout the interior. Several mineral springs exist in the state, especially at Stafford and Suffield, which have acquired much celebrity.

Internal Improvements.—There are numerous railroads completed within the state, comprising an aggregate extent of somewhat over 500 miles; others extend in various directions, into or out of the state; and others still are in process of construction. Indeed, all requisite means for the extension of intercourse, and the promotion of internal and external commerce, are amply and generously provided, wherever and whenever the necessity becomes apparent; such is the vigilant spirit of enterprise and industry which is constantly stimulating this people to works of general improvement and utility.

Minerals.—Iron ore, of various qualities, is obtained in several parts of the state. The town of Salisbury, bordering on Massachusetts and New York, is celebrated for its valuable iron mines. The ore procured in this region possesses a peculiarly tenacious property, admirably adapted to the manufacture of wire, anchors, and other articles wherein firmness and flexibility, without brittleness, are desirable. It has been worked for upwards of one hundred years, and the supply still seems inexhaustible, many thousand tons being extracted annually. Stafford, near the southern line of Massachusetts, abounds in bog-iron ore, of excellent quality, suited to the manufacture of fine hollow-ware, and other castings. Marble of different kinds abounds in Milford, at the junction of the Housatonic with Long Island Sound. A quarry of serpentine, or "verde antique," of very beautiful texture, has been wrought for some time with much success. Vast quantities of reddish sandstone, much used in New York and other cities for building purposes, are quarried in Chatham, Portland, &c., on the Connecticut. Copper ore is found in Granby, in certain caverns about 50 feet in depth, called the Simsbury mines—once employed, for some forty years, as a prison, but now more liberally used for mining purposes. Another copper deposit has been discovered at Orange, near New Haven, where also a vein of silver was struck some years since, which, however, yielded too little to be deemed worth working. But few indications of coal are found in the state.

Manufactures.—The citizens of this state enjoy, in an eminent degree, the rare faculty of combining their great home interests—those of agriculture, commerce, and manufactures—in such manner as to make them happily support and advance each other. The products of their fields and forests, their orchards and dairies, their mines and quarries, are all subjects of domestic or foreign trade; or are made to contribute in some way, either as raw material, or as means of exchange, to the improvement and growth of their numerous branches of mechanical industry. Although the traffic of Connecticut, especially the coasting trade, is extensive, in comparison with that of other states of like magnitude, her manufactures are of still greater extent. Establishments for the conversion of her unwrought products, of all descriptions, into articles fit for practical use, abound, and are still multiplying, throughout the state, together with others, for operating in like manner upon the imported products of other states and

countries. These comprehend woollen, cotton, and silk factories; furnaces, forges, and rolling mills; paper mills; book-printing houses; hat, cap, and bonnet factories; tanneries, and other leather manufactories; glass-houses, potteries, brick and lime kilns, granite and marble yards; powder mills, chandleries, machine shops, furniture, carriage, and wagon manufactories; flour, grist, and saw mills; distilleries, manufactories of hardware, cutlery, tinware, clocks, &c.; ropewalks, ship yards, &c., the whole employing many thousands of operatives, and many millions of capital.

Indians. — The once powerful and savage lords of this fair territory were long since swept away; and if their descendants exist at all, it must be only among the dispersed and mixed vestiges of former tribes, of whose organization as nations or communities no traces now remain.

Religion. — The people of Connecticut, from the earliest settlement of its territory, have been distinguished for their religious character. In the primitive days of the colony, they were preëminently renowned for their strict adherence to, and enforcement of, the doctrine of church and state unity. Their statutes were based upon the Levitical code; but the character of that system, and of the sentiments, feelings, and practices of those who administered it, has become materially changed. The people of Connecticut still maintain a high position in the religious world. Religious denominations, of almost every variety, flourish in all quarters. Congregationalists, Baptists, Methodists, and Episcopalians, are the most numerous; Universalists, Romanists, and Unitarians follow in order; and there are a few Shakers.

Curiosities. — Connecticut abounds less in natural curiosities than in interesting antiquities. Old superstitions and traditions, romantic and supernatural events in the early colonial times, and reports of revolutionary marvels, are illustrated, in numerous localities, by alleged relics, and sometimes by actual documentary and topographical demonstrations. But these are matters belonging rather to speculation than to facts and realities.

DELAWARE. This small state was the first of the thirteen united American colonies to ratify and adopt the federal constitution, in 1789. It had been successively a Swedish settlement from 1627 to 1655, a province of the Dutch colony of New Amsterdam (or New York) for the next nine or ten years, then a dependency of New York, under the English, until 1682, and an adjunct of Pennsylvania for nearly a century thereafter, — during which period it was known as the “three lower counties of the Delaware.” In 1775, the nominal jurisdiction of the then proprietor of Pennsylvania was relinquished; and in the following year, the

people having framed and established a constitution, Delaware became a distinct independent state, taking for its name that of its bay and river, which had been derived at an early date from Lord De La War, one of the first settlers of Virginia.

Boundaries and Extent.—The state is bounded north by Pennsylvania; east by the Atlantic Ocean and by the waters of Delaware Bay, which separate it from New Jersey; and south and west by Maryland. It lies between 38° 27' and 39° 50' north latitude, and extends from 74° 50' to 75° 40' west longitude; being 92 miles in length by about 23 in width, and having an area of 2120 square miles.

Government.—The existing constitution underwent material alteration and revision in 1831. By its provisions the governor is elected quadrennially, and can serve but one term. The senate is composed of nine members, (three for each county,) chosen for four years; and the representatives, consisting of seven for each county, are elected every two years. The sessions of the legislature commence at Dover, the seat of government, on the first Tuesday of January in each alternate year. The executive and legislative elections are by popular vote; and the qualifications of voters are similar to those in the New England States.

Judiciary.—The judicial power is vested in four judges (one of whom is chief justice; the others associate law judges, residents of separate counties) and a chancellor, all appointed by the governor during good behavior. The chief justice and two associates constitute the Superior Court. No associate judge can sit within his own county. Inferior courts may be established by the legislature when requisite. The whole bench, including the chancellor, form a Court of Appeals; and the powers of a Court of Chancery are vested in the latter magistrate, together with the resident judge of the county.

Education.—The state has provided, from various sources, a school fund, which yields an annual income of \$20,000, applicable to the support of free schools; provision being made for the erection and maintenance of at least one of these seminaries within every three square miles. An equal or greater amount is furthermore raised for educational purposes, by taxes and contributions in the several districts. Delaware College, at Newark, founded in 1833, is the only institution of this grade in the state.

Finances.—Delaware owes nothing as a state, but possesses ample funds for all civil purposes, exclusive of those appropriated for schools.

Surface and Soil.—For the most part the face of the country is quite level. The only important elevations are certain ranges of table lands, in which the waters which flow from either side into the Chesapeake and Delaware, respectively, take their rise. These extend from the northern boundary, in a southern direction, gradually declining in height as they approach the central part of the state. In the southern and western quarters, as well as among the high lands above mentioned, there are extensive swamps. At the north, the soil consists of a strong clay, not very productive; in other parts, it is light and sandy; but there are large tracts of rich clayey loam, of great fertility. The agricultural products, besides excellent wheat and Indian corn, are rye and other grains, potatoes, and the usual abundance and variety of vegetable esculents peculiar to the Middle States. Fine grazing lands afford pasturage to multitudes of neat cattle, horses, and mules; and the swampy tracts yield large quantities of timber, much of which is exported.

Rivers.—The principal navigable stream is the Delaware River, flowing into the bay of that name. There are also several large creeks and mill streams, running east and west from the central table lands, and emptying into the Chesapeake and Delaware Bays.

Internal Improvements.—Among these are the Chesapeake and Delaware Canal, fourteen miles in length, connecting Elk River, by way of Back Creek, with the Delaware. This was finished in 1829, at a cost of \$2,750,000. Between Newcastle and Frenchtown, a railroad of sixteen miles forms the line of connection between the steamboat travel on the Chesapeake and Delaware Bays. It was completed in 1832, and cost \$400,000. The great breakwater, erected by the general government, within Cape Henlopen, should, perhaps, be here alluded to. This is a work of vast magnitude, the expense of its construction having fallen little short of two and a quarter millions of dollars.

Manufactures. — Wheat being the chief staple product, the most important of the home manufactures is naturally that of flour. A large amount of capital is also employed in cotton mills, and in the pursuit of divers other branches of domestic industry, such as the manufacturing of iron, of leather, gunpowder, machinery, &c.

Commerce. — Wilmington, by reason of its good and safe harbor, and having in its immediate vicinity large numbers of capacious flour mills, has long been known as the most important commercial place in the state. It carries on a very extensive trade, especially in the article of flour; and there are several ships belonging to this port which are actively engaged in the prosecution of the Pacific whale fishery.

Climate. — The geographical position of this state insures a medium temperature; but, as in most of the other Middle States, the climate, though generally mild, is subject to variations, induced by differences in locality. The elevated regions are undoubtedly far more favorable to health and longevity than the low, moist, and marshy tracts.

Religion. — Presbyterians and Methodists compose the most numerous of the religious denominations. Next in numbers are the Episcopalians and Baptists. There are also some Roman Catholics, and a few Friends or Quakers.

Population. — The progress of population in this state, for the last thirty years, has been exceedingly slow. From 72,674, in 1810, it had increased in 1850 to only 91,532. It is still the least populous state in the Union.

COLUMBIA, DISTRICT OF. This tract, originally ten miles square, was ceded to the United States in 1790, by the States of Maryland and Virginia, for the purpose of being occupied as the seat of the federal government. The location was selected by President Washington, in conformity with a provision of the United States constitution. It is placed under the immediate jurisdiction of Congress, and, at the date of the cession, comprised the city of Alexandria, in Virginia, the city of Georgetown, Maryland, and the site on which now stands the city of Washington. The latter was established as the permanent capital of the Union, in the year 1800, and is consequently the principal residence of the president, heads of departments, and other chief officers of the government, foreign ambassadors, &c. In 1846, the geographical dimensions of the District were reduced by an act of Congress, retreating the city and county of Alexandria to the State of Virginia.

Boundaries and Extent. — The District, as at present limited, containing less than two thirds of the original land surface, is bounded on the north-west, north-east, and south-east, by the

counties of Montgomery and Prince George's, in Maryland; on the south-west flows the Potomac, dividing it from Alexandria county, in Virginia—that portion of the District which reverted to the latter state by the act of 1846. The two cities, Washington and Georgetown, are situated respectively on the east and north-east banks of the river, and are connected by two short bridges crossing Rock Creek, a small branch of the Potomac. Washington lies in latitude $38^{\circ} 53' 23''$ north, and longitude $77^{\circ} 1' 24''$ west from Greenwich, and covers an area of somewhat over eight square miles. The area of the entire District is now estimated at sixty square miles.

Government.—By the withdrawal of the county of Alexandria, the District became confined to the northerly or Maryland side of the Potomac, where the laws of Maryland are in force, excepting when superseded by special acts of Congress; the power of legislating in the premises being vested in that body exclusively. The District has no local representative on the floor of the national legislature; but every member is deemed to be alike interested in its general affairs. The two cities have distinct civil organizations; they establish their own municipal laws, and regulate their own internal economy, in all matters not particularly provided for by Congress.

Judiciary.—The judicial tribunals consist of a Circuit Court of the District, with a chief judge and two associates; a Criminal Court for the District, with one judge; and an Orphans' Court, with a judge and register. The Criminal Court holds three terms a year, commencing respectively on the first Monday of March, the third Monday of June, and the first Monday of December.

Education.—Academies and grammar schools are tolerably well sustained, through private sources; but the number of common and primary schools, supported at the public cost, might, with advantage, be increased. There is a college at Georgetown, maintained by Roman Catholics; and another at Washington, called Columbian College, which is under the control of the Baptists.

Finances.—The public debt, at the close of the year 1840, amounted to one and a half million of dollars. The disbursements for public purposes, by the cities, often exceed the annual income, for various reasons; and, having few or no sources of revenue besides direct taxation, appropriations to meet deficiencies are not unfrequently made by Congress.

Surface, Soil, &c.—The land is generally hilly, but not mountainous. There are numerous alternating eminences and depressions, the former affording fine views, and the latter sometimes consisting of bogs and marshes. The soil is not naturally very fertile, being commonly sandy and clayey, but is doubtless capable of great improvement, with a due degree of attention to agricultural science by practical husbandmen. It produces much good timber, and most of the indigenous shrubbery and plants peculiar to the bordering states, many of which are very beautiful.

Rivers.—The beautiful Potomac laves the south-western margin of the District for some miles, and receives, at the south-eastern edge of the city of Washington, the waters of a considerable stream, called the Eastern Branch. These are the only rivers or streams of note which flow within or along the District. The Potomac affords navigation for vessels of a large class, from the Atlantic shore to the navy yard, Washington, at the confluence of that river and its branch, and for craft of smaller descriptions up to Georgetown.

Internal Improvements.—The Chesapeake and Ohio Canal, one of the most important works of this kind in the country, commences at Georgetown. It was commenced in 1828, and connects the waters of the two great rivers whose names it bears. The United States contributed one million of dollars, the city of Washington a like sum, and the city of Georgetown two hundred and fifty thousand dollars towards its construction. Railroads pass from the city of Washington, both north and south.

Manufactures.—Within the present limits of the District, there are no manufactures of articles exclusively or chiefly for export; most of the operations in this department of industry being confined to the fabrication of articles for family use and home consumption.

Population.—The number of inhabitants in the District varies at different seasons—

especially those in the city of Washington. During the sessions of Congress, the population of the capital is of course far more numerous than at other periods; that of Georgetown is comparatively much less fluctuating.

Climate. — Throughout most of the year, the climate is favorable to human health. The air is generally salubrious, and the water pure. In some locations, at the hottest seasons, diseases peculiar to the neighboring regions are apt to prevail; but extensively fatal epidemics are not common.

Religion. — The numerical proportions of the respective religious denominations stand, relatively, in the following order: 1. Presbyterians; 2. Episcopalians; 3. Methodists; 4. Baptists; 5. Roman Catholics; 6. Quakers; and, 7. Unitarians.

FLORIDA. The credit of having discovered this peninsula, now the southernmost of the United States, is usually awarded to Juan Ponce de Leon, from Hispaniola, who explored it, to some extent, in 1512 and 1516, and gave to it the name which it still bears. The coast, however, had been visited, in 1497, by Sebastian Cabot, from England; but its interior was not then examined. In 1539, an expedition from Cuba, commanded by Hernando de Soto, who had served with Pizarro, made a descent upon, and overran the country. In 1562, a body of French settlers, under Francis Ribault, endeavored to form a civilized colony; but they were shortly assailed by the Spaniards, and, after several conflicts, nearly exterminated. The conquerors were afterwards obliged to contend frequently with the English colonists of Georgia and South Carolina; but they maintained possession, though often attacked by both French and English forces, until 1763, the date of its cession to Great Britain. Liberal offers were immediately made to settlers from abroad; and in consequence, numerous reputable citizens from the British settlements, and even a body of some 1500 people from the shores of the Mediterranean, were induced to emigrate. A portion of the territory, known as West Florida, was conquered by the Spanish governor of Louisiana in 1781; and the whole was surrendered to Spain by the treaty of Paris, in 1783. In 1819, the latter power transferred the entire country, composing East and West Florida, to the United States, as remuneration for trespasses on American commerce. It was occupied by the authorities of the latter in 1820, and forthwith established as one of the territorial members of the American republic. It was erected into an independent state in 1845.

Boundaries and Extent. — Florida is bounded north by Georgia and Alabama, east by the Atlantic Ocean, south by the Gulf of Mexico, west by the same, and by a small portion of Alabama. It is situated between latitudes 25° and 31° north; and extends from 80° west

longitude to $87^{\circ} 35'$; being 385 miles in length, with a breadth varying from 50 to 250 miles, and containing 59,268 square miles.

Government.—The people of Florida formed a constitution in 1839, six years prior to the admission of the state into the Union. The governor is elected for four years; but is not eligible for two terms consecutively. The acting executive officer, in case of vacancy, is, first, the president of the Senate, and next, the speaker of the House of Representatives. Senators are elected for two years, and representatives for one year; the latter not to exceed sixty in number. Clergymen, bank officers, and duellists are excluded from participation in the civil government. The right of suffrage is enjoyed by all free white males, of lawful age, after two years' residence. Laws for the emancipation of slaves, or for the prevention of their introduction into the state, are prohibited. The sessions of the legislature are held biennially.

Judiciary.—The state is divided into four circuits, each having a judge and a solicitor. They are chosen by the legislature, and have original common law jurisdiction in all civil and criminal matters. The Supreme Court consists of the circuit judges, and has appellate jurisdiction only. The attorney general is elected by both houses of the legislature. The judges, in sessions of the Supreme Court, preside in their respective circuits.

Education.—No extensive system of common school education has yet been established. There are several academical institutions, and a number of grammar and primary schools, but no college in the state.

Finances.—The revenue of the state is about sufficient to meet its expenditures. For information concerning the public debt, &c., see *Statistical Tables*.

Surface and Soil.—Florida exhibits no very prominent elevations, the surface being generally level, and towards the south, especially, singularly broken into alternate tracts of meadow lands, forest-crowned knolls, and grassy lagoons. The celebrated "everglades" are situated in this quarter of the country, and extend northerly nearly 200 miles from the southern extremity. Much of the territory is covered with pine timber; although the live-oak, and other descriptions of hard wood, grow in abundance on the river banks. The quality of the soil is in many parts exceedingly rich. The "pine barrens," so called, are considered, however, as scarcely worth cultivating. The peculiarly open condition of the forests admits of the spontaneous and luxuriant growth of innumerable varieties of herbage and flowers, many of which are of the most beautiful description, and flourish in great profusion throughout all seasons of the year. The land, in nearly all parts of the state, is adapted to the culture of cotton, sugar, corn, rice, tobacco, and valuable fruits; and there is much grazing land even among the pine barrens, which are also finely irrigated by numerous streams of pure water.

Rivers.—On the eastern coast, the St. John's is the principal stream. It takes its rise at a distance of not more than 150 miles from the sea, in a straight line; though, from its meandering course, it probably flows more than twice that distance, varying in width from less than one to about five miles. The St. Mary's, which rises in Georgia, also empties into the Atlantic. The mouths of these rivers afford good harbors. On the western coast are numerous bays and inlets, furnishing safe shelter and anchorage for coasting craft. A large number of rivers enter the Gulf of Mexico from the western side of the peninsula, the chief of which is the Apalachicola.

Internal Improvements.—Several railroads have been constructed, and others are still contemplated. The most important already completed are, one between Tallahassee and St. Mark's, 22 miles; and another of 30 miles in length, extending from St. Joseph to Iola. A canal, entirely across the isthmus, has for many years been a subject of earnest consideration and active discussion. Such a work, it is universally conceded, would supply vast facilities to the commerce between Atlantic ports of the United States and the shores of the Gulf of Mexico, and be the means of avoiding immense losses, now annually incurred by vessels forced to encounter the hazardous navigation beyond the southern point of Florida.

Manufactures.—Beyond the fabrication of articles for domestic use, but little capital is employed in manufacturing operations. The exports from the state consist principally of raw materials.

Indians.—The territory, for some years subsequent to its cession to the United States, was much disturbed by contests with various Indian tribes. Among these, the Seminoles gave much trouble to the general government, and, on the question of their removal, with other natives, to the lands provided for them, were found to be most impracticable. They were, however, subdued, and a large portion of the tribe have retired to the far preferable country assigned them beyond the Mississippi.

Population.—There was an increase of population, during the ten years prior to the census of 1840, of nearly sixty per cent. Of the inhabitants at that date, nearly one half were slaves. The last census (1850) exhibits the same ratio of increase, but a somewhat smaller proportion of slaves.

Climate.—Except in the immediate vicinity of some of the large swamps, the interior of Florida, and the sea-coast generally, may be considered extremely favorable to health. Indeed, many parts of the state are much resorted to by invalids from northern localities, especially by persons subject to pulmonary affections, or laboring under certain chronic maladies. A mild and very uniform temperature prevails throughout the different seasons; the heat of summer rarely raising the mercury above 90°, or the cold of winter depressing it below freezing point. Epidemics, particularly the yellow fever, occasionally visit some of the low and marshy districts. The city of St. Augustine, occupying a remarkably fine geographical position, is widely celebrated for the salubrity of its atmosphere, the genial qualities and effects of which are not exceeded by those of any spot in Southern France or Italy.

Religion.—Episcopalians, Presbyterians, Methodists, and Roman Catholics constitute the principal religious denominations. Neither sect is very numerous.

Curiosities.—Among the natural objects of curiosity may be mentioned the existence and frequent formation of beautiful rivulets, the pellucid waters of which, after coursing through many devious curves for a long distance, suddenly disappear in some dark abyss, and all traces of their farther wanderings are lost to human eyes. On the other hand, vast volumes of water are often seen to emerge from the depths of the earth, at once forming navigable rivers, teeming with fish, turtles, alligators, &c. Both these phenomena are said to be common in some parts of the state, and in all probability are mutually connected by subterranean channels.

GEORGIA, the most recently settled of the thirteen original American colonies, which united in the great national act of independence, July 4, 1776. At that epoch, only about one third of a century had elapsed since the entire territory was the exclusive abode of the savage—the first English immigrants, under General Oglethorpe, having, in the year 1734,

commenced a settlement at the spot whereon the city of Savannah now stands. This company was composed chiefly of necessitous artisans and tradesmen, driven from Great Britain by want of employment to seek out new modes of living, and more permanent homes, in the western hemisphere. They had previously received from George II. a grant of the vast tract of country (called Georgia, after their royal patron) out of which the present States of Alabama and Mississippi, as well as Georgia, have since been formed. Although the original charter of Carolina included this whole territory, the Spanish occupants of Florida had laid claim to it, and, in 1742, undertook by force of arms to dispossess the English, but without success. In 1752, the company relinquished its charter to the crown, and thenceforth the province was placed upon an equal footing with the other colonies.

Boundaries and Extent.—Bounded north by parts of Tennessee and North Carolina, east by South Carolina and the Atlantic Ocean, south by Florida, and west by Alabama. It extends 300 miles from north to south, with an average breadth of 200 miles, and includes an area of 58,000 square miles. Latitude, 30° 22' to 35° north; longitude, 80° 50' to 85° 40' west.

Government.—In 1777 the people of Georgia established their first frame of state government. A second constitution was formed in 1785, and a third in 1798, which was revised in 1839, and still remains in force. The chief magistrate is elected biennially by the popular suffrages. In apportioning the representatives on the basis of population, three fifths of the blacks are reckoned in the estimate. There are 46 senatorial districts, each entitled to one member of the Senate; and the 93 counties into which the state is divided send each from one to three representatives to the legislature, which meets biennially at Milledgeville, the seat of government, where the governor and other executive officers are required to reside during their official terms. The right of suffrage is restricted to free white males, residents of the state for six months, and tax-payers one year prior to the election.

Education.—The subject of common education is but partially provided for, as may be inferred from the fact that in 1840 there were in the state upwards of 30,000 white persons above the age of 20 years who could neither read nor write. There is a literary institution at Athens, called the University of Georgia, which was founded in 1788, with the design of establishing branches in each county. The object, however, has been but imperfectly carried out.

Judiciary.—The Supreme Court consists of a chief justice and two judges, elected by the legislature for six years. There are eleven circuit judges, one for each of the circuits into which the state is divided. These courts have exclusive jurisdiction in criminal and land cases. Inferior courts, composed of five justices, are held in each county. These latter officers are elected by the people quadrennially, and act also as probate judges.

Finances.—The annual revenues of Georgia are amply sufficient to meet the current expenditures, including about \$110,000 interest on the state debt, and a reserve of \$70,000 towards a sinking fund for its ultimate extinction. The public debt in 1850 was stated at \$1,828,472, and was incurred for the construction of the Western and Atlantic Railway.

Surface, Soil, &c.—The face of the country, along the Atlantic coast, for some 30 to 40 miles in breadth, is generally level, with a rich soil, favorable to the cultivation of cotton and rice. The numerous islands on the eastern frontier are especially productive of that fine species of cotton known as *sea island*. Westward of the above tract, the land becomes more elevated, and the soil more sandy. Proceeding still farther into the interior, and beyond the mountainous region, a stronger and richer soil is found, which produces in abundance wheat, corn, and other grains; tobacco, cotton, and a great variety of fruits, as the orange, fig, pomegranate, lemon, citron, olive, melon, peach, pear, and grape. The latter fruit, of the finest flavor, grows spontaneously and luxuriantly among the pine barrens, in the vicinity of the sea-coast. Of the divers descriptions of fine timber composing the extensive forests of Georgia, the oak, hickory, cedar, and pine are the most common. The black walnut and mulberry are also abundant upon the high lands. The northern part of the state is traversed by a portion of the Appalachian chain of mountains.

Rivers.—Many of the rivers in Georgia are of great length; for instance, the Savannah,

which separates this state from South Carolina, is 500 miles long ; the Alatomaha, 400 miles to its sources ; Flint River, the Chattahoochee, and others. These are generally navigable for steamers and large boats through a considerable portion of their extent ; and some of them, especially those emptying into the Atlantic, admit the passage of large vessels for several miles above their mouths.

Internal Improvements. — These consist of several important canals and railroads, either completed or still in progress. Among them may be enumerated the Savannah and Ogeechee, and the Brunswick Canals, — the former 16, and the latter 12 miles long, — the Georgia Railroad, with its branches and projected continuations ; the Central Railroad, and the Munroe Railroad, — the whole forming a connected series, and embracing an aggregate extent of upwards of 500 miles.

Minerals. — On the borders of the Chattahoochee River, at the base of the Blue Ridge, considerable quantities of gold have been found ; and numerous smelting houses, employing some hundreds of persons, are established in the vicinity, although the business of mining has not been very regularly pursued. Copper and iron ores, the latter in great abundance, are also among the mineral productions of the state.

Manufactures. — A number of cotton mills, and some woollen factories, have been erected within a few years. Manufactures of cast iron and other hardware, machinery, leather, carriages, furniture, soap, candles, brick, lime, &c., are carried on to some extent, principally for home consumption. There are numerous flouring mills, distilleries, and breweries, portions of the products of which are exported.

Indians. — Some parts of the territory are still in the occupancy of the Creek Indians. The Cherokees also inhabit a large tract at the north-west boundary, their country extending also into Tennessee and Alabama.

Population. — About one third of the inhabitants of Georgia are of African descent.

Climate. — The interior and elevated parts of Georgia enjoy a delightful and salubrious climate, not excelled, perhaps, by that of any other region of like extent in North America. As in most of the southern states of the Union, there are extensive tracts of low and swampy grounds, which, at certain seasons, are subject to destructive epidemics, arising from noxious exhalations and impure water. The upper country, however, to which many of the inhabitants retreat during the unhealthy months, is remarkably exempt from these injurious influences. The winters, which are of but two or three months' duration, are generally so mild that vegetation is but little interrupted, and cattle roam at large upon the savannas and in the forests, where they find ample food. Snow and severe frosts are rare, although the thermometer occasionally indicates a temperature as low as 20° Fahrenheit.

Religion. — The religious denominations in Georgia are chiefly Baptists, Methodists, Episcopalians, and Presbyterians. There are also some congregations of Romanists, Lutherans, Friends, and Jews.

ILLINOIS. This comparatively young member of the American Union was, nevertheless, partially settled, by civilized adventurers, as early as the year 1673. A party of enterprising Frenchmen from Canada accompanied M. De la Salle in his second exploration of the country, in the above year, when in search of the River Mississippi, and founded the villages of Kaskaskias and Cahokia. These settlements continued to flourish for some years; but the people, by constant intercourse with the surrounding savages, gradually reduced themselves to a semi-barbarous condition, and for a long period their numbers were but little augmented by immigration. By the treaty of peace between the French and English, in 1763, the Illinois country, together with Canada, was ceded by the former to the latter, who took formal possession two years afterwards. It remained in their hands, under several successive military governors, until 1778; in which year a body of Virginia troops, commanded by General Clarke, penetrated the country, and subdued all the fortified places. In the same year, a county called *Illinois* was organized by the legislature, and placed under the care of a deputy governor. The country had been considered, hitherto, as a part of the territory included in the charter of Virginia; and the claim founded thereon was recognized by the treaty of 1783. Virginia, however, ceded it to the United States, four years afterwards, when it constituted a section of the "North-west Territory," so called. In 1800, it received a separate organization and a territorial government, in conjunction with, and under the name of, *Indiana*. Another division took place in 1809, when the distinct territories of Indiana and Illinois were formed; both of which were subsequently admitted into the Union, as independent states — the former in 1816, and the latter in 1818. The name of the state is derived from that of its great central river — an aboriginal appellation, signifying the *River of Men*.

Boundaries and Extent. — The state is bounded north by Wisconsin; east by the southern portion of Lake Michigan, by the State of Indiana, and by the Ohio River, dividing it from Kentucky also on the south; and west by the Mississippi, which separates it from the States of Missouri and Iowa. Its extreme length is some 380 miles, extending from 37° to 42½° north latitude. Its breadth varies from about 145 to 220 miles, being widest in the centre, and narrowest at the northern and southern points. Its utmost reach of longitude is 4 degrees, viz., from 87° to 91°, west from Greenwich. Its area is computed at 55,400 square miles, of which near 50,000 are believed to be well adapted to agricultural purposes.

Government. — The chief magistrate is chosen for four years, by the people, *viva voce*, and cannot serve two terms in succession. The lieutenant governor (who is, *ex officio*, president of the Senate) and the senators are also elected quadrennially. The members of the House of Representatives are elected for two years. The popular elections and the legislative

sessions are held biennially. The Senate cannot consist of less than one third, nor more than one half, the number composing the other branch. All white males above the age of 21 years, who have resided six months within the state, are qualified voters. Slavery is prohibited by the constitution — to amend which instrument a convention must be called. Elections are decided by a plurality of votes.

Judiciary.—The judicial power is vested in a Supreme Court, composed of three justices, and such other courts as the legislature may create. One session of the Supreme Court is held annually, in each of the three judicial divisions of the state. The state is also divided into nine circuits, each having a resident judge and a state's attorney. Five of these judges constitute a quorum. They are elected by the General Assembly, and hold office during good behavior. The state's attorneys are chosen for two years. Inferior courts are also held by probate judges and justices of the peace. The Supreme Court judges, together with the governor, compose a council of revision, with power to disapprove bills passed by the General Assembly, subject, however, to further legislative action, whereby a rejected bill may, nevertheless, become a law when reënacted by a majority of members elect in both branches.

Education.—The act of admission to the Union provides for a reservation of one thirty-sixth part of all the public lands, for school purposes; and section numbered 16 has been accordingly designated and set apart, in each township, for the benefit of its inhabitants. A common fund, for the promotion of education generally, was also established by the United States government, through the annual payment to the state of 3 per cent. of the net avails of the public lands within its limits. Of this fund, a sixth part is appropriated to the erection and support of a collegiate institution. Other funds, to a very generous extent, have likewise been provided; from all which sources a large annual income is derived. Yet the subject of common schools has not received that degree of regard and attention which its immeasurable importance demands; although there are, in many towns, primary schools of fair character, and occasionally a seminary of higher grade. Several colleges exist; but they are mostly exclusive or somewhat sectarian in their organization; each of the following denominations having a special institution, viz., Old School Presbyterians, New School Presbyterians, Baptists, and Methodists. One of these, at Alton, was liberally endowed by Dr. B. Shurtleff, of Boston, Massachusetts, and bears his name. There are a number of respectable academies and literary associations in various parts of the state; and it is to be hoped that measures will be taken to establish the school fund of the state on a basis corresponding to the liberality of Congress, and to the example set by Ohio and other neighboring states.

Finances.—The total amount of the public debt on the 1st of January, 1851, was \$16,627,507,91, nearly one half of which grew out of the construction of the Illinois and Michigan Canal. This latter item will be partially if not wholly liquidated by sales of canal lands, and by future receipts for tolls. The state is now able, from its revenues, for the first time in several years, to meet its current expenditures.

Surface, Soil, &c.—There are no lofty mountains in this state, although at its northern and southern extremes the land is considerably elevated, and occasionally broken. In general, the surface is level, or slightly undulating, about two thirds of the whole consisting of immense prairies, clothed luxuriantly with grass, herbage, delicious strawberries, and other wild berries, and resplendent with myriads of indigenous flowers, flourishing in all the beauty of "nature unadorned." No impenetrable forests encumber these vast tracts, although isolated patches of woodland, some of them covering many acres, are frequently found in their midst. In some quarters of the state, timber is sufficiently abundant; in others, there is a deficiency. The most common descriptions are the oak, hickory, maple, elm, ash, locust, beech, poplar, sycamore, and various other woods. The soil is almost invariably fertile, often of the finest and richest quality, to a great depth. The products of the earth are of corresponding value and amount. Every variety of grain, and of edible vegetables, together with hemp, flax, cotton, and tobacco, are cultivated with extraordinary success. All the fruits common to the temperate latitudes are produced in abundance:

grapes, especially, natives of the soil, are remarkably plentiful in most parts of the state, and of fine quality, capable of yielding excellent wines. The fecundity of the land, and the generous returns with which it rewards even the moderate labors of the husbandman, may be inferred from the fact that in almost all parts of the state an average crop, per acre, can be obtained, of fifty bushels of Indian corn — one of its important staples; and instances are frequent where the product reaches 75 to 100 bushels.

Rivers. — Illinois is provided most bountifully by nature with admirable facilities for communication by water, not only within, but far beyond, its own borders, by means of its numerous inland streams, tending in every direction towards, and connecting with, the great western rivers, and by its immediate contact, on the north-east, with Lake Michigan. The whole of its western boundary is washed by the mighty Mississippi, and the noble Ohio flows along a portion of its eastern frontier. The Illinois traverses a large part of the state from north-east to south-west, and its tributaries course through most of the central counties. Some of these branches are of great extent. Among the other important rivers are Rock, Kaskaskia, Wabash, &c.

Internal Improvements. — The canal for uniting the navigable waters of the Illinois with those of Lake Michigan, at Chicago, is one of the greatest enterprises of the kind in the Western States. Its computed extent is 106 miles, and its cost upwards of \$8,000,000. When fully completed, the waters of the Gulfs of St. Lawrence and of Mexico may be said to meet each other, through a long chain of inland channels. Under the system of internal improvement adopted by the state, in 1837, a number of extensive and important railroads were projected, the work on most of which has been commenced, and some few are in travelling order.

Minerals. — At the north-west angle of the state lie immense beds of lead ore, of which great quantities are annually smelted and sent to market. Copper and iron are also found in abundance in many parts of the state; and in the southern quarter, there are several sections of the public lands which are reported to be rich in silver ore, and in consequence are withheld from sale. Lime, salt, and coal are among the most plentiful of the mineral productions. Limestone ledges of great extent exist for many miles along the banks of the Mississippi, often rising abruptly and perpendicularly, in huge bluffs, to a height of 300 feet. In the south and east parts of the state, there are numerous saline springs, so strongly impregnated as to render profitable the manufacture of salt on an extensive scale in their vicinity. The elevated and broken regions towards the north, particularly in the neighborhood of Rock River, contain exhaustless veins of bituminous coal; and the bluffs and ravines on the river banks, in Madison and St. Clair counties, at the south-west quarter of the state, are pregnant with treasures of this valuable mineral.

Manufactures. — Hydraulic power to a considerable extent is attainable at various points of the state, some of which is already advantageously improved for manufacturing purposes. The contemplated improvements of the Wabash and other rivers — some of which are already in progress — will furnish additional water privileges of great value. Steam mills, for sawing lumber, manufacturing flour, &c., as well as mills wrought by animal and water power, are common throughout the state. There are also numerous smelting houses, iron furnaces, tanneries, potteries, distilleries, &c., together with a few cotton, woollen, and flax factories; and almost every article of domestic use is or may be fabricated within the state. Among the few commodities principally manufactured for export are whiskey and castor oil: some 40,000 to 50,000 gallons of the latter are annually expressed from the palma christi, or castor bean, at a single establishment in Edwardsville.

Indians. — Few or none of the descendants of the tribes formerly occupying this region now linger within or around it, their titles having been extinguished, from time to time, by various treaties with the United States government. The white inhabitants were somewhat annoyed by hostile Indians during the war of 1812; but after its close, the country was exempt from molestation until 1832, when a band of sanguinary savages, led on by the notorious chief Black Hawk, committed many bloody atrocities, and created much distress and

alarm, at the northern part of the state. They were at length entirely quelled, and finally removed to the country west of the Mississippi.

Population. — During the thirty years prior to 1840, the population of Illinois increased from 12,282 to 476,183, of whom 3600 were persons of color. In 1850, the population was 851,470, of whom 5366 were persons of color.

Climate. — In general, the climate of Illinois, in its influence upon health, does not differ materially from that of the other states, lying within the same parallels, east of the Alleghany ridge. It furthermore enjoys the advantage of exemption from annoying easterly winds, although the prairie breezes are often severely cold. The temperature, ordinarily, is much like that of Ohio and Michigan during the respective seasons. The length of the winter is usually somewhat less than three months. Snow seldom falls to a great depth, or continues upon the earth many days in succession; and the ground is commonly free from frost throughout half the winter. The early spring months are rainy and unpleasant; but they are soon succeeded by a milder season, a warm and cheering summer, with an invigorating atmosphere; and, finally, “the year is crowned” by a delightful autumn of some months’ duration, rarely disturbed by a cloudy day or a stormy hour.

Religion. — The most numerous sect are the Methodists, including their different varieties. Then follow the Baptists and Presbyterians, with their several ramifications. The Episcopalians, Lutherans, and Dunkards have each from eight to twelve congregations; and there are small societies of Roman Catholics, Quakers, and Mormons. The proportion of professors of religion has been estimated at about one tenth of the whole population.

INDIANA. The history of the settlement of Indiana is nearly identical with that of its twin sister, Illinois, and of much of the vast surrounding region formerly included in the so-called North-west Territory. The first permanent occupancy of the country was effected in 1702, at a fertile spot on the eastern bank of the Wabash, about 100 miles above its confluence with the Ohio. To this place, which became a fortified trading post, its inhabitants afterwards gave the name of *Vincennes*. The original settlers were French soldiers from Canada, belonging to the army of Louis XIV. Their descendants remained an almost isolated community, increasing very slowly in numbers, for nearly one hundred years, and, in the mean time, from habits of constant intercourse with their Indian neighbors exclusively, with whom they often

intermarried, had imbibed a taste for savage life, and had consequently retrogressed in the march of civilization. By the treaty of peace between France and England, in 1763, the territory became subject to the latter; from which power, however, it was wrested by the Americans during the revolutionary war. From the close of that struggle, in 1783, until General Wayne's treaty in 1795, and again just before the commencement of the second war with Great Britain, the people, generally residing in hamlets and villages remote from each other, were terribly harassed by the incursions of the Indians, who committed the most cruel atrocities. These merciless barbarians were at length effectually conquered and humbled by the United States military forces under General Harrison; a season of quietude and prosperity immediately ensued, and a vast tide of immigration has been flowing into the state since the peace of 1815. Indiana was originally embraced in the territory north-west of the Ohio, and so remained until the year 1800. It was then, including the present State of Illinois, newly organized under the name of *Indiana Territory*. In 1809, it was divided into two territories, Illinois having been set off, and became an independent state in 1816.

Boundaries and Extent.—The state is bounded north by Michigan and the southern portion of the lake of that name; east by the State of Ohio; south-east and south by Ohio River, which divides it from Kentucky; and west by Illinois, the Wabash River forming part of the boundary. It lies between $37^{\circ} 47'$ and $41^{\circ} 50'$ north latitude, and its mean length is estimated at 260 miles; its mean breadth is about 140 miles, extending from $84^{\circ} 45'$ to 88° west longitude. Its area comprehends nearly 34,000 square miles.

Government.—The executive power resides in a governor and lieutenant governor, the latter being president of the Senate, and acting as governor in cases of vacancy. The legislature consists of two branches, — Senate and House of Representatives, — apportioned to the counties, according to the number of qualified electors, in such ratio that the number of representatives shall not be less than 36 nor more than 100. The Senate is never to contain less than 12 nor more than 50 members. All the above are elected by the people triennially, except the representatives, who are chosen every year. The legislature convenes annually. The chief magistrate cannot hold office longer than six years in any term of nine years. The secretary of state, treasurer, and auditor are chosen by the General Assembly in joint ballot, the first for a term of four years, and the two latter for three years.

Judiciary.—The judicial power is vested in a Supreme Court, in Circuit Courts, Courts of Common Pleas, Probate Courts, and justices of the peace. The Supreme Court is composed of three judges, the senior in office being chief justice, and are appointed for seven years by the governor and Senate. The Circuit Courts are thirteen in number, and consist of a president judge for each judicial circuit, acting with two associate judges in each county: the president judges are elected for seven years by the legislature, and the associate judges for the same term by the people. Judges of probate, justices of the peace, sheriffs, and coroners are chosen by the people, for various terms.

Education.—The attention to this important interest has been considerably awakened within a few years. A common school fund, to be derived from various sources, was founded by a law of the state in 1849, at which time the several funds set apart for the purpose were valued at upwards of \$700,000. By the census of 1840, there were within the state over 38,000 white persons, above the age of 20 years, who could neither read nor write. Asylums for the blind, the deaf and dumb, and the insane, have been established. There are several colleges, and numerous academies, in various parts of the state.

Finances.—The annual revenue of Indiana is amply sufficient for the ordinary current expenditures. The amount of the public debt in July, 1849, was more than \$12,000,000, the liability for which is nearly equally divided between the state and the Wabash and Erie Canal Company.

Surface, Soil, &c.—The face of the country, though not mountainous, is in some quarters hilly and broken. The greater portion of the state, by far, consists of immense tracts of level lands, studded at intervals with picturesque clusters of trees. Many of the upland prairies are skirted for long distances with noble forests, while those bordering upon the rivers are

rarely productive of any description of timber. The whole earth is replete with vegetable wealth. Upon the prairies there is, at the proper seasons, intermingled with gay and odoriferous flowers, a thick covering of grass, growing to a height of seven or eight feet. The soil of the prairies, as well those which are elevated as those which lie along the rivers, is surpassingly rich, the loam commonly reaching to a depth of two to five feet. The trees of native growth comprise several varieties of oak, walnut, maple, elm, sycamore, beech, ash, linden, locust, sassafras, buckeye, cottonwood, cherry, and mulberry. The most important of the cultivated products are wheat, Indian corn, rye, and other grains, potatoes, and various other esculents. Grapes, and indeed fruits of all kinds peculiar to the climate, grow profusely. Among the many valuable staples of this state are large quantities of beef, pork, butter, cheese, sugar, wool, tobacco, and hemp.

Rivers.—The entire state is admirably watered by large and beautiful streams, many of them navigable for hundreds of miles. Among the most considerable rivers, besides the Ohio, are the Wabash, a tributary of the former; White River, a branch of the Wabash, with its two great forks; Whitewater, St. Joseph's, &c.

Internal Improvements.—The Wabash and Erie Canal, 187 miles in length, connecting the navigable waters of the River Wabash with those of Lake Erie, is the most important enterprise of the kind in which this state has been concerned. Nearly 100 miles of its extent are in Indiana, and the residue in Ohio. The whole was completed in 1843. The Whitewater Canal, a work of much less magnitude, is partially completed, and several additions are contemplated. A railroad, commencing at Indianapolis, connects the capital with three or four different points on the Ohio, a distance of about 100 miles. From the same point of beginning, another road, partly macadamized, extends northwardly to Michigan city. Other railroads have been projected, some of which are in course of construction.

Minerals.—The mineral resources of this state have been but partially explored or developed. Iron is known to exist in various quarters, and some copper has been found. Salt springs have been opened, at which salt in considerable quantities has been manufactured. Epsom salts, and saltpetre in a pure state, have been quite plentifully obtained from caves in Crawford and Harrison counties. Coal in abundance has been recently excavated from the bluffs near the Ohio, in Perry county. At a place called Cannelton, the deposits are extremely productive, yielding in profusion a very superior quality of bituminous coal, resembling, in all its characteristics, the celebrated English Cannel coal.

Manufactures.—The business of manufacturing has not been pursued largely, except for domestic uses. Cotton and woollen fabrics are extensively manufactured in families throughout the state; and there are also a number of fulling mills, woollen and cotton factories, iron furnaces, tanneries, potteries, breweries, flouing and saw mills, &c.

Indians.—The various tribes formerly inhabiting this region have yielded to the advances of their civilized successors, parted with their native right to the soil, and sought other homes farther west.

Population.—The population of Indiana, since the year 1825, has increased with unexampled rapidity. At that date, the number of inhabitants was estimated at 185,000. It is now, in (1850,) 988,416. Among the causes which have conduced to attract settlers thither, the extraordinary fertility of the soil, the low price of lands, the facilities for inland water communication, and the healthful climate, are doubtless among the most prominent.

Climate.—Residents of the country characterize the climate as generally mild and salubrious. In summer, the temperature is genial and uninterrupted by injurious changes. The winters are neither long nor severe, six weeks being considered as their average duration. Frosts, however, are common in spring and autumn. Fevers and agues prevail only in marshy places, and in the neighborhood of stagnant waters.

Religion.—In "modes of faith" there is much diversity. The most numerous classes of Christians are Methodists, Presbyterians, and Baptists; there are also considerable numbers of Lutherans, Episcopalians, Roman Catholics, and Friends.

Curiosities.—Among the most remarkable curiosities of the state are the mineral caves

already alluded to, and the multitudes of singular mounds scattered over the face not only of Indiana, but most of the Western States, supposed by many to have been ancient Indian fortifications, by others conjectured to be places of sepulture, and by some to be *tumuli* produced solely by natural causes.

INDIAN TERRITORY.

INDIAN TERRITORY (PROPER) is a large and fertile region, lying geographically in the centre of the North American republic, midway between the Atlantic and Pacific Oceans. It was allotted, and has been at different times enlarged, by the government of the United States, for the purpose of affording places of permanent residence for those Indian tribes who might emigrate from the states east of the Mississippi River. These emigrants are protected in the enjoyment of their own institutions, and many of the tribes have established forms of government independent of the United States laws, in all matters not connected with the preservation of peace between the tribes and upon the frontier. It extends from Platte River, in about 41° north latitude, to Red River, in 34°; is between 500 and 600 miles in length, and about 300 miles in breadth, and its area may be estimated at some 150,000 square miles. Its limits, however, are not exactly determined on the north or the west; it being generally understood that the *Indian Territory*, so called, comprehends that region which is permanently settled by Indian communities, as distinguished from the wide waste beyond its present northern and western borders, which is peopled by wandering bands of untutored natives. It is definitely bounded on the east by the States of Missouri and Arkansas, and on the south by the State of Texas, wherefrom it is separated by the Red River.

The soil throughout this territory is very generally productive. It is watered by numerous streams, few, if any of which, however, afford facilities for navigation. The principal rivers, besides those mentioned as forming the northern and southern boundaries, are the Kansas and Canadian, with their multitudes of forks or tributaries. Some of these take their rise in the Rocky Mountains, and all flow eastwardly, ultimately emptying either directly or by way of the Missouri into the great "Father of Rivers," the mighty Mississippi.

The face of the country presents but few mountainous prominences, although the land is generally high and swelling, especially in the south-eastern quarter, where are situated several ranges of large hills. Corn and other grains, vegetables, fruits, and all the agricultural products peculiar to the states lying eastward on the same parallel, may be cultivated with ample success. Timber is not abundant; but, with ordinary attention, such trees as are needed may be easily raised. The grassy prairies afford room for forests, and experiments already made demonstrate their adaptation to the rapid growth of wood. Lead and iron ores, coal, and saline springs are found in different parts of the territory. The country is admirably fitted for the raising of stock and domestic animals of all descriptions. The climate is represented as remarkably pleasant and salubrious, varying but little from that of the regions east of the Mississippi, whence the present inhabitants were removed.

The number of resident Indians may be reckoned at about 100,000, three fourths of whom are emigrants from beyond the eastern shore of the Mississippi. The population is constantly being augmented by additional removals of Indians from the east, under treaty stipulations with the United States. The most numerous, as well as the most advanced in civilization, of the tribes now settled in the territory, are the Cherokees, Choctaws, Creeks, Chickasaws, and Shawanees. These have established appropriate forms of government for themselves, some of them having written constitutions, and have made provision for the support of education, of public worship, of courts of justice, &c., similar to those of all well-organized communities.

Their dwellings are generally comfortable, their lands well tilled, and most of their natural facilities and advantages properly applied and improved. Large numbers of horses and cattle are owned among them; mercantile, mechanical, and manufacturing pursuits are carried on to considerable extent, especially by the Cherokee population; and one or more steamboats, the property of some of the latter, ply between their district and New Orleans.

The United States support several military posts within the territory, which are all kept garrisoned. Missionaries, from the various religious organizations in the states, have established stations at many points, who labor not only for the moral improvement, but for the literary and physical advancement, of the people. At the Shawanee station, under control of the Baptists, books in different Indian languages have been printed and issued; journals and other works have also been published in the Shawanee dialect. A very respectably conducted newspaper is supported by the Cherokees, the editor of which is an educated native.

In compensation for the lands which were vacated by the transfer of these tribes to their present locality, the United States paid, or stipulated to pay, between the years 1789 and 1839, in money or in lands exchanged or reserved, upwards of \$80,000,000. The number of acres of land thus acquired is about 420,000,000. The emigrants also receive considerable annuities, from which they derive a portion of their means of subsistence.

IOWA, recently a dependency of the United States, is now an admitted member of the Federal Union. Until 1832, the country was held in undisputed possession by its rude and roaming Indian inhabitants, of whom it was then purchased; and settlements were soon thereafter commenced by civilized emigrants. In 1838, having been set off from Wisconsin, it was organized under a distinct territorial government; and in 1846, the territory was duly elevated to the position of a free and independent American state.

Boundary and Extent.—Iowa is bounded north by the Territory of Minnesota; east by the Mississippi River, which separates it from the States of Wisconsin and Illinois; south by the State of Missouri; and west and north-west by portions of the Territories of Nebraska and Minnesota, from which it is separated by the Missouri and the Big Sioux Rivers. The country lies between $40^{\circ} 30'$ and $43^{\circ} 30'$ north latitude, and extends from $90^{\circ} 30'$ to $96^{\circ} 30'$ west longitude; reaching some 200 miles from north to south, with an average extent of over 220 miles from east to west, and comprehending about 51,000 square miles.

Government.—The executive power resides in a governor and lieutenant governor, chosen by popular vote for two years: the latter is president of the Senate. The legislature comprises a Senate and House of Representatives, the former chosen for four years, one half biennially, and in number not less than one third nor more than one half that of the other branch. The constitution provides that the House of Representatives shall not consist of less than 26 nor more than 39 members, until the white population shall amount to 125,000; when the *minimum* shall be 36, and the *maximum* 72. All free white male American citizens, after a residence of six months, are voters.

Judiciary.—The Supreme Court is composed of a chief justice and two associates, either two of whom form a quorum. They are elected by joint vote of the legislature for six years. District judges are elected for five years by the people, in the several districts. Probate judges, prosecuting attorneys, and clerks of courts are also elected in the same manner, every two years.

Education.—A superintendent of public instruction is chosen by the people for three years. A large school fund is secured by the appropriation of lands granted by Congress, escheated estates, and the percentage allowed by Congress on sales of public lands within the state. Common schools in all the school districts are also maintained, by law, from other sources of revenue. There is also a large fund assigned for the support of a university. The permanent school fund, at interest, in 1850, amounted to about \$279,000.

Finances.—The state holds productive property valued at upwards of \$11,000,000. Its debt, in 1849, was \$55,000, incurring an interest of \$5500. The legislature holding biennial sessions only, the annual public expenditure is only about \$19,000. The taxable property, in 1849, was valued at \$18,479,751, which pays to the state a tax of three tenths of one per cent.

Surface and Soil.—With the exception of some high hills in the northern part, the surface is nowhere mountainous, but consists of table lands, prairies, and gently swelling eminences covered with timber. Ranges of bluffs, from 30 to 120 feet in height, intersected with ravines, generally terminate the table lands upon the borders of rivers. The soil is almost universally good, reaching to a depth of 18 to 24 inches on the upland prairies, and from 24 to 48 inches on the bottom lands. Constant cultivation for a century would scarcely exhaust it. It produces every description of grain and vegetables suited to the climate, and is peculiarly favorable to the growth of fruit. Timber is not abundant, except in certain sections, comprising in all about one fourth part of the state. But the country is so well supplied with river navigation, that this deficiency in other quarters is not felt. Among the indigenous fruits are vast quantities of plums, grapes, strawberries, crab apples, &c. The crops of wheat ordinarily amount to 30 or 35 bushels per acre; and the yield of corn is from 50 to 75 bushels. Wells of excellent water are obtained at a depth of 25 to 30 feet.

Rivers.—Besides the noble rivers which skirt the state on the east and west, there are several streams of considerable magnitude, with numerous branches, pervading the entire territory. Many of them are extensively navigable, and afford fine water power; and all are immediately or remotely connected with the Mississippi or the Missouri.

Internal Improvements.—A project for constructing a railroad, commencing at Dubuque, on the Mississippi, and extending across the Rocky Mountains to the waters of Columbia River, was started in 1840. At the last session of the General Assembly, acts were passed granting the right of way to the Davenport, Camanche, and Lyons Railroad Companies, for railroads from the Mississippi to Council Bluffs on the Missouri. In these enterprises considerable northern and eastern capital will probably be employed.

Minerals.—But little comparative progress has been made in the exploration and development of the mineral treasures of Iowa; although it is well known, from even imperfect researches, that a very large portion of the country is extremely rich in various descriptions of metals. There are tracts, probably to the extent of hundreds of miles, that abound in lead ore; copper and iron are also abundant in various locations, as well as coal, limestone, &c.

In the vicinity of Dubuque, the largest town in the state, are some of the finest and most valuable lead mines in the United States.*

Manufactures.—Excepting the working of mineral ores into marketable shape, and the fabrication of articles for domestic use from the raw materials produced within the state, there are no extensive manufacturing operations. The whole amount of capital employed in 1840, in every description of manufactures, fell somewhat short of \$200,000.

Indians.—Recently large tracts were held by various tribes of Indians. The Iowas held portions of the south, the Pottawatamies of the west, and the Sacs and Foxes of the central parts of the state. But these tracts have been ceded to the United States.

Population.—Since the admission of Iowa into the Union, the state has been rapidly filling up with white settlers. In 1840, the population numbered 43,112, including that of the north section, now called the *Territory of Minnesota*. It has increased prodigiously within the past ten years, and at the last census amounted to 192,214.

Climate.—With the exception of some localities on the river sides, subject to occasional inundations, the climate of Iowa is more healthy in general than that of the neighboring Western States. This is accounted for by the fact, that the current of its streams is more rapid. The diseases prevalent in quarters considered unhealthy at times are fevers and agues, bilious disorders, &c. The commencement, duration, and termination of winter correspond with those of the same season in New England. But the temperature is less severe, being more like that of Pennsylvania. Snow, to a depth of more than seven or eight inches, is seldom seen. The summers are extremely pleasant, the heat rarely becoming oppressive, and the atmosphere being often refreshed by gentle showers.

Religion.—Methodists, Presbyterians, and Baptists are the most numerous of the religious denominations. The Episcopalians have several societies or parishes, and there are also Roman Catholics, Friends, &c.

Curiosities.—One of the most remarkable productions of nature, in this region, is a natural bridge, which crosses the River Maksqueta—a fine stream flowing into the Mississippi, near the centre of the eastern boundary of the state. This bridge has a span of 40 feet, and is composed of solid limestone.

KENTUCKY, formerly considered one of the "Western States" of the American Union, may now be ranked among those on the map at the right hand of the observer, since, by the

* Very recently, at Dubuque, a company of seven persons took from its native bed in one day a quantity of lead ore valued at upwards of \$1000.

immense extension of territory towards the setting sun, there is vastly more space between Kentucky and the Pacific Ocean than between that state and the Atlantic. It was originally included within the limits of Virginia, from which state it was separated in 1786, when it was organized under a territorial government, and so remained until its erection into a state in 1792. No extensive exploration of the country is known certainly to have taken place until about the year 1770, when the celebrated and eccentric adventurer Colonel Boone penetrated its then remote and inhospitable wilds. Four years afterwards, a permanent settlement was made at Harrodsburg; but the inhabitants of the territory, wherever located, were constantly harassed by the predatory incursions of various savage tribes, until the conclusion of the treaty with General Wayne in 1795.

Boundary and Extent.—The Ohio River constitutes the northern boundary of this state, separating it from the States of Ohio, Indiana, and Illinois. On the east lies Virginia, and on the south Tennessee. The Mississippi, on the west, separates Kentucky from the State of Missouri. It extends from north latitude 36° 30' to 39° 10', and lies between 82° and 89° 30' west longitude. Its length from east to west is about 400 miles, and its average breadth does not greatly exceed 100 miles. Its area, as officially reported, is 37,680 square miles.

Government.—The present constitution, adopted in 1850, provides for the quadrennial election of governor and lieutenant governor by a plurality of the popular suffrages; but the former magistrate cannot be reelected until after a lapse of four years. The lieutenant governor is, *ex officio*, the presiding officer of the Senate, and, in extraordinary cases, discharges the duties of the executive. The number of senators is limited to 38: one half of the number are elected every two years, in a manner that each member may serve four years. The representatives, 100 in number, apportioned to the several counties or districts every eighth year, are chosen biennially. The legislature holds biennial sessions at Frankfort, continuing only 60 days, unless by a two thirds concurrent vote. All white males, 21 years of age, after a residence in the state of two years, and in the district of one year, are qualified voters. The manner of voting at elections is by open vote, or *viva voce*.

Judiciary.—The courts consist of a Court of Appeals, having appellate jurisdiction only throughout the state, Circuit Courts in each county, and County Courts. The judges of the former, four in number, are elected by the people for eight years, and so classified that one shall retire every two years. Those of the Circuit Courts, 12 in number, are chosen for six years. Those of the County Courts, consisting of a presiding and two associate justices in each county, are chosen by the people for four years. Two justices of the peace are elected, in each county, for terms of four years. Sheriffs are chosen for two years, and cannot serve beyond a second term.

Education.—The state possesses a bountiful school fund, which, for the year 1849, yielded an income of about \$67,000, three fourths of which, however, are applied to the ordinary expenditures of the state. In the above year, there were 193,000 children between the ages of five and sixteen years, nearly one half of whom attended the district schools connected with the public system. Among these latter the sum of \$29,166 was distributed from the permanent school fund, and \$21,874 from the "two cent tax."

Finances.—In 1849, the whole amount of the funded debt was \$4,497,652.81, a part of which, viz., \$836,000, was due to the school fund. The income in the same year, from all sources, amounted to \$468,630.19, and the expenditures to \$447,620.64. To meet the interest of the public debt, the state owns bank stocks, turnpike and railroad stocks, and other property, from which an annual revenue of more than \$100,000 is derived. The residue of the interest is made up from the yearly tax, which is about 17 cents on each \$100 worth of property. The amount of taxable property in 1849 was upwards of \$285,000,000.

Surface, Soil, &c.—Kentucky presents a great diversity of surface. In the eastern quarter, where it is bordered by the Cumberland Mountains, there are numerous lofty elevations; and on the northern boundary, adjacent to the Ohio River, and running through the whole extent of the state, there is a strip of hilly but fertile land, from 5 to 20 miles in breadth. Along the immediate margin of the Ohio is a tract, one mile wide, of bottom lands, which are

periodically overflowed. The intermediate country, between the hilly regions on the north and on the south-east, is gently undulating; and here, within an area of 100 by 50 miles, the soil is of extraordinary richness. In the neighborhood of the Cumberland River, there is another tract of about 100 miles in extent, which, though denominated "barrens," has been within a few years transformed from an extended and unbroken prairie into forests of thrifty and valuable timber. The soil throughout the state is generally of excellent quality, producing hemp, tobacco, wheat, corn, and numerous other fruits of the earth in great abundance. Among the native trees, the most common are black walnut, black cherry, mulberry, locust, ash, elm, papaw, buckeye, whitethorn, cottonwood, and sugar maple. Grapes, of fine quality, also abound; and all the fruits adapted to the climate are successfully cultivated.

Rivers. — The largest rivers are the Cumberland and the Tennessee, both branches of the Ohio, which latter flows along the northern boundary for a distance of 637 miles. These branches are navigable to a very considerable extent. They enter the Ohio at points about 12 miles apart, and within 50 to 60 miles of the junction of the Ohio with the Mississippi. The other principal streams, besides those which bound the state, are the Kentucky, Licking, Salt, and Green Rivers, all of which are extensively navigable.

Internal Improvements. — The Louisville and Portland Canal, two and a half miles in length, is a work of extraordinary magnitude and importance. It was completed in 1831, at great cost, and after some years of labor; its bed having been excavated out of lime rock, a portion of it to the depth of 12 feet. By this work, a fall of 22 feet on the Ohio River at Louisville has been overcome, and vast numbers of steamboats and other craft are constantly passing through it. The Lexington and Ohio Railroad, extending from Lexington, *via* Frankfort, to Louisville, 95 miles in length, is nearly, if not quite, completed. Another, from the former city to Covington on the Ohio, opposite Cincinnati, is under contract; and some others are projected.

Minerals. — The most abundant of the mineral products of Kentucky are iron, coal, lime, and salt. Large quantities of the latter article are annually exported. Limestone, at various depths, underlays the soil of a large portion of the state.

Manufactures. — A large amount of capital is invested in the manufacture of hemp, cotton, wool, iron, tobacco, leather, and other staple commodities. The fabrication of almost every article of domestic use is also carried on throughout the state.

Indians. — Few or none of the descendants of the aboriginal possessors of the soil now remain within the limits of the state.

Population. — Sixty years since, the population of Kentucky numbered less than 75,000. By the last census, it has reached over 1,000,000, more than one fifth of which number are slaves.

Climate. — The winters in this state rarely continue longer than two or three months, and are generally mild, but humid. The other seasons are remarkably pleasant, and the temperature varies less between the extremes of heat and cold than in some of the neighboring states. The climate is consequently healthy.

Religion. — Of the various Christian denominations, the Baptists, perhaps, are the most numerous. The Methodists are next in numerical order. Presbyterians, Episcopalians, and Roman Catholics have each a large number of churches. There are also some societies of Shakers and Unitarians.

Curiosities. — Among the extraordinary objects of wonder found in this state is the celebrated "Mammoth Cave," which has not, probably, an equal in the known world. It is situated in the county of Edmonson, near the centre of the state, and its subterranean vaults have been explored to the extent of some eight to ten miles. Its earthy floor is impregnated so strongly with nitre, that considerable quantities of this article have been extracted therefrom. There are several other remarkable caverns in the state, principally in the south-west part, between Cumberland and Green Rivers. Many of the lofty, perpendicular precipices of solid limestone on the banks of Kentucky River, and the frequent chasms formed in the subjacent calcareous rocks by the rapid action of large streams, may likewise be enumerated among the natural curiosities of Kentucky.

LOUISIANA. This state became a territorial member of the Federal Union in the year 1803, under peculiar circumstances. It had been successively the property of certain French adventurers, of the crown of France, of the government of Spain, and again of the French, by whom it was sold to the United States for \$15,000,000. One of the conditions of the transfer required the United States to liquidate all claims of American citizens upon France, on account of commercial spoliation prior to the year 1800—an obligation which, after the lapse of nearly half a century, has not been fulfilled. Within 20 years after the discovery, in 1663, of the River Mississippi, the territory was explored by La Salle, who, in honor of Louis XIV., called it by the name it now bears. The first settlements were made at about the commencement of the 18th century; and in 1731, the proprietors relinquished their jurisdiction to the king, who ceded it to Spain, in 1762. It was reconveyed to France in 1800; and, at the period of its sale to the United States, three years thereafter, the province embraced all the country west of the Mississippi, reaching to the Texan boundaries. It was admitted as an independent state, and its limits specially defined, in 1812. The city of New Orleans, near the mouth of the Mississippi, is celebrated in history for its defence, under General Jackson, against an attack of the British sea and land forces, commanded by General Packenham, on the 8th of January, 1815, wherein the invaders were signally defeated.

Boundary and Extent.—It is bounded on the extreme north by Arkansas, and near its centre by a part of Mississippi; on the east by the Mississippi River, dividing it from the state of that name, and by Pearl River; on the south by the Gulf of Mexico; and on the west by Texas, from which it is partially divided by the River Sabine. It extends from 29° to 33° north latitude, and from 88° 40' to 94° 25' west longitude. Its length is 250 miles, and its breadth, at the southern extremity, 300. This width is maintained throughout about one half its length, when it becomes nearly 200 miles narrower, though gradually expanding towards the northern line, where it measures 180 miles in breadth. Its area is computed at 46,431 square miles.

Government.—By the constitution, established in 1845, the governor holds office for a term of four years, but cannot be elected for the next succeeding term. He is chosen by a plurality of the electors. The lieutenant governor, chosen in like manner, presides over the Senate. Senators, 32 in number, are chosen also for four years, at alternate biennial elections, so that one half retire every two years. Representatives, not less than 70 nor more than 100 in number, apportioned to the number of electors, as computed every 10 years, are chosen biennially. The legislature sits but once in two years, and their sessions cannot be of longer duration than 60 days. The qualifications of voters are similar to those of most

of the free states; the right of suffrage being confined to white American citizens, who have resided within the state two years, the last of which in the parish or county where they vote.

Judiciary.—The Supreme Court is composed of a chief and three associate justices. It has appellate jurisdiction only in certain prescribed cases. District Courts, with one judge to each, are established in the several judicial districts, the present number of which is 17: * these have jurisdiction in all criminal cases, and in civil suits involving a sum exceeding 50 dollars. All the judges are appointed by the executive; those of the Supreme Court for eight, and those of the inferior courts for six years.

Education.—The state appropriates annually, for purposes of education, \$250,000. It has also a permanent fund, derived from various sources, the interest of which is applied to the maintenance of free schools.

Finances.—It is provided by the constitution that the state debt shall never exceed \$100,000, except in case of war or other like emergency, or for some special public work or object authorized by law. Subscriptions by the state to the stock of any corporation are prohibited, as is also a loan of the state credit. Banking or discounting companies cannot be augmented in number, nor any further charters granted, except for political or municipal purposes, for more than 25 years.

Surface, Soil, &c.—Nearly the whole surface of the state consists of level prairies, many of them of immense extent. There are no elevations of consequence, excepting in one quarter, near the centre of the western boundary, where the land swells into protuberances, though of no very great height. There are occasional tracts exhibiting a hilly and rolling surface, having forests of pines, of singular appearance, upon the acclivities, and surmounted by broad expanses of table lands, the intervening valleys reaching to a depth of some 40 feet. Prairies, swamps, alluvial plains, pine, hickory, and oak lands, may be said to comprehend the chief varieties of the soil of Louisiana. The marshes, forming the basis of the alluvial soil, and which are annually overflowed, extend some 20 to 30 miles inland from the southern boundary, and in many places nearly the same distance on either side of the large streams. The alluvial grounds beyond, as they gradually accumulate, assume the character of prairies, and are remarkable for their extraordinary fertility. A part of the tract subject to inundation bears a heavy growth of timber. The soil of the pine uplands is somewhat sterile; and that of the elevated prairies is generally of ordinary quality, though well adapted for grazing; but that of the alluvial districts is exceedingly rich and productive. Sugar, cotton, and rice are the most important staples; and these are cultivated extensively and profitably. Among the other valuable products of the soil are corn and other grains, potatoes, tobacco, hay, &c. Large numbers of horses, cattle, sheep, and swine are raised in the central and northern parts of the state. The bottom lands bordering on Red River abound in various descriptions of timber, as locust, buckeye, papaw, willow, cottonwood, &c. On the fertile uplands are found the hickory, elm, ash, walnut, and mulberry; also grape-vines in great profusion. The white and yellow pine, and several kinds of oak, thrive in many other elevated parts of the state, otherwise deemed sterile.

Rivers.—The magnificent "Father of Waters," the Mississippi, discharges itself into the Gulf of Mexico, through various outlets at the southern and south-eastern extremities of the state. In its long journey from its northern sources, it of course traverses the entire length of the state, partially forming its eastern boundary, and then passing off in a south-easterly direction, nearly through the middle of the remaining portion of the territory. This vast stream receives in its course, and within the limits of the state, the liquid contributions of several important tributaries, which water the country in many directions. Among these are Red River and its branches, the Atchafalaya, &c.

Internal Improvements.—There are sundry railroads connecting the capital with different places in the vicinity, none of which, however, are of any great length. The railroad from St. Francisville, on the Mississippi, to Woodville, Mississippi, 20 miles, is the longest in the state.

* The district of New Orleans comprises 5 courts; so that the whole number of district judges is 22.

There are also several canals of considerable magnitude connected with the navigation of the Mississippi. Other public works of the kind, including both railroads and canals, are in contemplation, some of which are already in course of construction.

Minerals.— But little attention has been given to the mineral resources of Louisiana. Probably no extensive explorations have ever been undertaken. Few or no indications of coal, or other mineral deposits, have as yet made their appearance, and whatever treasures of this kind may exist beneath the surface still remain undeveloped.

Manufactures.— These include a few cotton factories, producing articles only for home consumption; several furnaces, forges, and tanneries; a number of sugar refineries, distilleries, and mills of various sorts.

Indians.— Of the numerous tribes which once peopled or roamed over this and the neighboring regions, scarcely a vestige remains. The race of red men has retired before the advancing footsteps of civilization, from this as from other quarters of the United States, where the settlements of the white man have encroached upon the hunting-grounds and the wild haunts and habits of the savage.

Population.— The people of Louisiana comprehend not only several varieties of the human species, but are composed both of native Americans and of the descendants of emigrants from many foreign nations. The inhabitants of the northern settlements were chiefly from Canada, those in the centre of the state are mostly of German extraction, and those at the south comprise large numbers of French and Spaniards, descended from the original settlers. The population, which in 1810 was 76,556, more than doubled itself within the following ten years, and in 1850 it had increased to 517,739. Nearly one half the population are slaves.

Climate.— There are large tracts in this state, which, at certain seasons, are decidedly unfavorable to human health. During the summer and autumn, the low and marshy localities are frequently visited by yellow fever, cholera, and other destructive maladies. Other parts of the state, however, enjoy a salubrious climate. The winters in general are said to be less mild than those on the Atlantic coast in the same parallel of latitude.

Religion.— The Roman Catholics have ever been the prevailing sect, the country having been originally settled by them, although other denominations are at present increasing. There are numerous bodies of Methodists, Baptists, Presbyterians, and Episcopalians, all of which are growing in numbers more rapidly than the Papists.

MAINE. History is, in more than one point of view, an instructor of mankind. It can be considered morally, as it teaches the connection of the virtues with domestic and national prosperity. By its statistics it enlightens the politician, animates the philanthropist, and

warns the tyrant. It directs the efforts of art, science, and benevolence; connects distant times and places with our own period and abode; makes us denizens almost of a world; and kindles a glowing interest in the affairs of our whole race.

The "enlightened European" might disdain to look for lessons of wisdom to the comparatively obscure settlers of American wildernesses; but it may be successfully maintained that even from them he could be taught. A population laborious and sober, frugal yet free, possessing and consulting the sacred records of divine revelation, and unobstructed in the reduction of their precepts into practical life, must afford a development to the human faculties rarely seen. The old world presents the many as made subservient to the few; the new world has afforded the prospect of the multitude engaged in promoting their own benefit, and framing their institutions in such manner as to secure it.

Let a thoughtful reader peruse the history of the republics of Italy, as written by their enlightened and faithful historian SISMONDI, and study the tablet it presents of lawless ambition, ruthless war, and keen suffering, of heartless oppression and wrong, and that for centuries; then let him turn over the records of our own American states, and institute a comparison. Will he not conclude that humanity has gained somewhat in the lapse of ages?

In MAINE, for instance, an example has been set for the instruction of the world, in the single circumstance of the creation of its territory into a sovereign state, without the shedding of a drop of human blood, or the existence of an angry debate. Peaceful and deliberate discussion, weighing critically the advantage or the injury, and honestly bringing each to the light for impartial examination, formed the prelude; and the consequent success of the measure has been between the sister states a subject of mutual congratulation, each of the parties having unquestionably gained.

It cannot be denied that in the circumstances of these two masses of population, amounting in the aggregate to 700,000 souls, the withdrawing of one third part might have furnished fuel for an extensive and ruinous conflagration. Causes of minor consequence often inflamed the ancient republics of Greece, and incited them to ruinous wars; and Italian history, before alluded to, is full of scenes of bloodshed where far less was at stake. But MASSACHUSETTS submitted to lose much of her weight and influence in the general union of the states, and MAINE was content with the division of the public property. Each State has since advanced in opulence, and in all that distinguishes American society, without the slightest relic of any ancient grudge, or the traces of political jealousy or envy.

No enlightened lover of mankind can contemplate such a picture, it would seem, without emotion. How many bloody revolutions would have been prevented, how many precious lives been saved, had such a course been uniformly held! The wars of Holland with Spain, in the sixteenth and seventeenth centuries, and that of Great Britain with the colonies in the eighteenth, would have had no place in history; and could the now remaining colonies pursue a similar course, it might be expected to issue in mutual benefit; as might, perhaps, the wasting desolations of Hungary and Italy, in our own day, have been prevented by it. Force and fraud have done for ambition the work of selfish aggrandizement too long already: we may hope that the time approaches when "the greatest good of the greatest number" is to be the acknowledged aim of the rulers of men.

Among the Eastern or New England States, extent of territory is the prominent distinction of MAINE. So great is this, comparatively, that it early gave occasion to a significant toast from a tourist* of South Carolina — "The District of Maine, the main district of Massachusetts!" But it rises to a higher consequence, for its area, which is now stated at 32,628 square miles, nearly equals the aggregate of all the other states comprised in the above-named division, and in population it stands among them the second only to Massachusetts.

Nor are these distinctions the sole recommendations of this state to our regard. Its lengthened sea-coast, indented with harbors almost innumerable, and extending more than 200 miles, point it out as offering advantages of navigation and commerce superior to any coast of equal extent possessed by any of the states of our broad confederacy — advantages which have been

* Major Pinckney, in 1809.

availed of by many of its adventurous and energetic citizens, who have for a long time frequented the West Indies, as well as our own ports, with lumber, cattle, and provisions of various kinds. This distinction occasioned a late President of the United States* to express the opinion, that in process of time the peculiar facilities of MAINE would inevitably raise her to a commercial prosperity greater than that of any state of the Union.

Her climate is, indeed, uninviting to the inhabitant of more southern regions. So great a portion of the year is occupied by the months which may be termed wintry, that a dread is felt of experiencing its rigor. But little reflection, however, is necessary to evince that such a climate is favorable to health, and promotive of vigorous action. An old inhabitant addressed a foreigner of distinction,† who had taken up his abode in it after the revolution, saying, "I wonder how you, who had a choice of all the country, should seat yourself here." "You have here," he replied, "the better end of the whole region, with a pure, gravelly soil and clear springs." The inhabitants of the rich, alluvial soil of the western country, enriched indeed by the vegetable spoils of centuries, yet hardly admitting the construction of durable roads, and affording in its waters but the elements of fever and ague, can appreciate the observation. MAINE is comparatively healthy. It has lost, however, a large number of its vigorous young men in the trade with the West Indies, as in fact has been the sad experience of most of the Northern States of our confederacy.

We may take a view of MAINE, —

I. In its condition previous to the formation within it of any settlement from Europe. It was then inhabited by a rather numerous and formidable body, or, to speak more accurately, by several bodies, of Indians, as they were subsequently termed. Of their character and manners, as they were totally destitute of letters, we can form but a very inadequate judgment, as our opinions must be grounded on knowledge obtained concerning them at a later period. Their country was mostly covered with wood; yet it abounded in animals used for the support of human life, and the natives were clad in their skins. Well-shaped, athletic, accustomed to traverse the rivers and to frequent the islands and sea-coast in their light canoes, they seem to have enjoyed much of all that can fall to the lot of savage life.

Of their languages we are able at present to give but a meagre account. Vocabularies have, indeed, been formed, and particularly one by RALLÉ,‡ a Jesuit priest, who was long with them, and lost his life in their defence; but it is believed no books were ever published in any of them, the celebrated Bible of their more western "apostle" ELIOT having appeared in the dialect of the tribes inhabiting Massachusetts.

The late lamented Dr. PICKERING, who had paid no little attention to the subject, has left, as the result of his labors, a lucid account appended to the translation of the "Conversations-Lexicon,"§ and an ample exhibition of the various opinions of different writers respecting the names and abodes of their several tribes appears in WILLIAMSON'S very elaborate History of Maine. But our limits will not permit us to pursue the subject far.

Not remotely from the mouth of the Penobscot, and up its waters, is placed by general consent the country called in the earliest English authorities NORUMBEGA. Here, or at Pemquid, it was supposed resided the most powerful chieftain of all the region now included in the boundaries of Maine. His title or name was Bashaba. His authority apparently reached westwardly as far as the Piscataqua; but when it originated is uncertain; it seems to have ended about 1617.

There remain at present but three tribes. These appear descended of the Etechemins, who had the Micmacs to the eastward of them, inhabiting what are now the British provinces of New Brunswick and Nova Scotia. Remnants of the latter are also left, but it is believed their language has never been reduced to writing, at least that no books have been printed in it.

* Mr. Van Buren.

† Count Polarecki, a noble of Poland.

‡ See Coll. Mass. Hist. Soc.

§ Encyclop. Amer., vol. vi., Appendix, in which (p. 585) he classes the native inhabitants east of the Hudson, except the Iroquois or Mohawks, as descended of the Lenápe, and says, "When the Europeans arrived here, these Indians were in possession of all the sea-coast from Nova Scotia to Virginia."

Two bodies of the Indians inhabiting Maine are the Passamaquoddy and Penobscot tribes; the latter reckoned as Tarratines, the former as Openangoes. By an experiment related by the Hon. Mr. WILLIAMSON, it appeared that "not a word of their language was found in the Bible translated by ELIOT."*

We cannot, perhaps, venture to assert that the coast had never been visited by Europeans before the voyage of CABOT, or those of the Spaniards, who, with the French, seem to have been upon it at an early date. But on a small island very near Monhegan was discovered, in 1808, an inscription of a rather curious kind, made on the side of a rock. It might possibly countenance the hypothesis, which has been of late entertained with so much approbation and interest by the Danish antiquaries, that America was visited by Scandinavians, or Icelanders, long before COLUMBUS. Yet the inscription seems too simple to be resolved into Runic characters. We give it thus:—

H X / N X M X A W I X X I A X K

On the top of the rock were found three holes, about one foot apart, rather deeply perforated, and calculated to accommodate a tripod. The island is called Manānas, or Menannah, and is described in WILLIAMSON;† although, so far as is known to the writer, the above inscription has never before met the public eye. It is the only one of which he has heard as existing in Maine; and whether it were the result of mere idleness, or made to score a reckoning, or has a meaning of a different kind, we will not undertake to determine. The holes are an inch deep or more, and near three inches in diameter. The strokes are cut to the depth of nearly half an inch, and are about six inches in length, as our informant ‡ stated. A spring is near, and the shore about thirty rods off. The ledge of rock is near the centre of the little island, and runs about north-north-east and south-south-west.

The natives became known to Europe by an act of what we might term cruel treachery in an English captain, WEYMOUTH. Yet it resulted in good. For an interest was excited on the sight of them, and new desires were aroused of colonizing their country. This was in 1605. Two or three years after, an actual attempt was made to settle at the mouth of the Sagadahoc or Kennebec River.

The Indians now remaining in the State of Maine are divided into three bodies. That division with which we are least acquainted is settled on the St. John's River, at two places, 63 and 163 miles respectively above Fredericton, in the Province of New Brunswick. SCHOOLCRAFT § gives their number at 300 souls, and calls them Souriquois. By WILLIAMSON they are termed Marechites, by MORSE Melecites. They were once numerous and powerful, but have greatly declined; and, like the other two divisions, are chiefly, as they ever have been from the earliest English settlement,|| under the influence of Romish priests; although attempts have been made, and sometimes with apparent success, to induce individuals to adopt a purer faith. In 1811, one branch of them was visited at Old Town, under the authority of the Massachusetts government, with a view to induce them to cultivate their lands, and learn to depend on the productions of their soil, and not merely on hunting, fowling, and fishing. But the effort was frustrated by the ensuing war of 1812–15, in which the tribe determined on a strict neutrality between the two belligerent nations.

At a subsequent period, as is stated by WILLIAMSON,¶ both these tribes had become

¶ Hist. of Maine, vol. ii. pp. 669, 670

“objects of public charity and protection,” and one which suffered peculiarly was aided by a grant of provisions. This, however, was but a temporary relief, and at length an arrangement was made, by which the lands belonging to the Penobscot tribe, and which originally extended far up the river, and six miles in width on each side of it, were still further relinquished or disposed of to the government by a treaty, with exception of four townships six miles square, and the islands in Penobscot River above Old Town.

In consequence of this arrangement, effected in 1817, and ratified February 20, 1819, the government stipulated to deliver to the tribe yearly, in October, as long as it might exist, “500 bushels of corn, 15 barrels of wheat flour, and 7 of clear pork; one hogshead of molasses, 50 Indian blankets, 100 pounds of gunpowder, 400 of shot, and 150 of tobacco; 100 yards of broadcloth, alternately red and blue; 6 boxes of chocolate, and \$50 in silver.” “Afterwards, \$350 were appropriated by the government, as an annual stipend to their religious teacher.”

Such is the issue of a lingering and almost listless existence, that has been protracted during successive and obstinate wars, in which the devotion of the Indians to their Romish guides filled them with prejudice and hatred against the Protestant settlers of Maine, and apparently has prevented, and still prevents, their rising, by industrious, economical habits, to the enjoyment of blessings which they see multiplied all around them. These but convince them of their own degradation, and display, in a marked contrast, the effects of their idleness and improvidence. There are now, according to the last account reported at Washington, 277 souls in the Penobscot, and 379 in the Passamaquoddy tribe; and much the greater portion of these are women and children. The Passamaquoddy tribe are at “Pleasant Point,” with a territory of 90 acres; the other at Old Town, on an island of the Penobscot River.

II. We may contemplate MAINE as claimed, and in part occupied, by French and English proprietors.

Compared with the other Eastern or New England States, it may be regarded as a peculiar feature of the history of MAINE, that her first settlements of Europeans were made on principles of feudalism. Hence, in fact, the disappointments that attended them. This observation was made, virtually, by the respected historian of New Hampshire, the accurate and sagacious BELKNAP. He could not but mark the difference resulting from the influence of orders transmitted from a distant country, compared with the impulses of personal interest and independent adventure. In almost every instance, the lordly proprietor, who managed his estate by agencies, was forced to succumb to the lavish or indiscreet expenditures of his “servants;” and they who became successful were the men who hazarded their all in person. This has been noticed in the remarks introducing our Gazetteer of New Hampshire.*

Sir FERDINANDO GORGES was the most conspicuous and laborious of these proprietors of the territory. The portion he claimed within the present limits of Maine reached along the shore from Piscataqua to Sagadahoc, estimated at 60 miles, and 120 miles into the interior, embodying about 6000 square miles. For this he obtained a patent from “the Council for the Affairs of New England,” which had been formed by King JAMES I., in 1606, into a company, divided into two parts, the one having South Virginia for its object, the other North Virginia. London and Plymouth gave name to these several divisions, which were united under one head, termed the “General Council of Virginia,” consisting of thirteen members appointed by the crown, and resident in England. In 1620, chiefly at the solicitation of GORGES, who was a leading member, the patent given originally to the Plymouth division was enlarged and renewed, and now embraced all NEW ENGLAND, taking the above title. This measure was deemed necessary, in order to give a “definite extent of territory, with necessary power and privileges,” and “an exclusive right to the soil, fishing, and trade within its limits.”

* See *Hayward's Gazetteer of New Hampshire*, p. 10, and repeated in this work. And see the very comprehensive summary of the history of these claims in an account of “the Plymouth Claim,” or “Kennebec Purchase,” by Hon. R. H. Gardiner, Pres. of Maine Hist. Soc., in vol. ii. of their Coll.

GORGES, whose attention had been early turned to America, as a field for colonization, and who had already made great efforts and expenditures, with but unsatisfactory results, being now strengthened by the zeal and intelligence of Captain JOHN MASON, whose patent adjoined his own at the westward, and extended from Piscataqua to Merrimac, entered on the work with new vigor, although advanced in years and a pecuniary sufferer. He had, in 1623, invested his son ROBERT with ample powers, and furnished him with stores to aid the settlers already upon his lands; and at length, in 1635, gave the form and consistency of a Province to them, of which he bore the title,* and to which he gave the name of MAINE.

It is peculiarly affecting to read the simple and "Brief Narration" which this ardent adventurer has transmitted to posterity, and see with what perseverance he cherished the hope, for near forty years, that, although for himself he were a loser, others would yet obtain great benefits. "I dealt not," says he, "as merchants are wont, seeking only to make my own profit, my ends being to make thorough the discovery of the country."—"I opened the way for others to make their gain."—"Thus much, I presume, will clear the objection made by my example, and give comfort and courage to the industrious to follow the precedents of those more able to act their own parts than I have been."—For he had said, "I found it no mean matter to procure any to go there, much less to reside there; and those I sent knew not how to subsist but on the provisions I furnished them withal." †

But our space will not permit us to dwell longer on this detail. It has already carried our narrative beyond the period of the earliest European settlements, and we must return.

The rivalry of the two most powerful princes on the continent of Europe, FRANCIS I. of France, and CHARLES of Spain, afterwards emperor, and 5th of that name, evinced itself in maritime affairs, as well as in efforts on land. One of the popes, himself a Spaniard, ‡ had "meted out" the heathen portion of mankind between the Portuguese and Spaniards, assigning to the latter, under the name of the West Indies, that "new world" of which COLUMBUS had been the discoverer, in 1492; to the former, with Africa, the East Indies.

FRANCIS, not brooking that his rival should be enriched with a possession so splendid, and roused by the efforts at discovery made by HENRY VII. of England, who had patronized the CABOTS, and claimed the northern part of the American continent, which they had seen in 1497, attempted to realize a share also. He therefore fitted out an expedition in 1523, under VERRAZZANO, who discovered Florida, and sailed along the coast from latitude 28° to 50°, denominating it New France. He, however, perished at sea, without effecting any colonization whatever. §

In fact, the wars of Europe conspired with other causes to prevent, for more than a century after its discovery, the colonization of any part of North America. Attempts were indeed made by Sir WALTER RALEIGH within the patent of South Virginia, and had been made previously in Florida, by Admiral COLIGNY, but were both ineffectual. And it may be asserted, that, notwithstanding repeated voyages to different parts of the coast by both French and English, and repeated exertions to colonize, frustrated by untoward circumstances, the sixteenth century had closed before any permanent establishments were made.

In 1602, the shores of Maine were at least approached by GOSNOLD, an English navigator, and the following year actually visited by MARTIN PRING, who fell in with the coast at the mouth of the Penobscot River. The claim of England to Canada and Nova Scotia had been valid until 1600, when the French were in possession of both; and the mutual contentions of the mother countries thenceforward affected the inhabitants down to the peace of 1763.

But it will be useful to glance at the intermediate period, by retaining a few dates as landmarks and assistants of the memory.

* Being called "Lord Proprietor of the Province of Maine;" the name of Maine being supposed to be taken from the province of that name in France—as a compliment to *Henrietta* of France, queen of *Charles I.*

† See his "Brief Narration," Coll. Hist. Soc. of Maine, vol. ii.

‡ *Alexander VI.* (Borgia.) See *Holmes's Annals*, vol. i. p. 7.

§ *Annals*, ut supra, p. 54.

1607. The colony of Sagadahoc was temporarily formed at the mouth of the River Kennebec. The time that had elapsed between GOSNOLD'S voyage and this period had been occupied by the visits of different navigators, who had greatly increased the interest felt in England with respect to America; and especially, as has been seen, in the bosom of Sir F. GORGES and his associates. And, as a result of the division of the royal patent, in 1606, already noticed, this attempt at Sagadahoc was made. But it was unhappily frustrated. The winter proved exceedingly cold, the colonists were poorly sheltered, and a part of their store was consumed by fire. Chief Justice POPHAM, a special patron of the enterprise, died; his brother also, GEORGE POPHAM, who was its president and leader, followed. Sir JOHN GILBERT, elder brother of RALEIGH GILBERT, admiral of the colony, had deceased, leaving this brother to be his heir. All these conspiring events urged the colonists to desist from their undertaking, and were effectual. The next year the survivors returned to England, "branding the country," remarks PRINCE, "as over cold, and not habitable by our English nation.*" This attempt embodied "a hundred emigrants, besides mariners."

1613. This year is memorable as bringing with it the first open rupture between the subjects of England and France residing on these shores. On the northern bank of the St. Lawrence the city of Quebec had been founded five years before, and the country to the west and south-west of it explored by the French. On the shores of Acadia also a settlement had been made at Port Royal, now Annapolis; and two Jesuits, disagreeing with those who formed this settlement, had seated themselves on the Island of Mount Desert, near the mouth of the Penobscot, and were engaged in labors to convert the natives to their system of religion. But the circumstances of the colonists in Virginia requiring aid, vessels had been despatched to the Bermuda Islands for provisions, and to the fisheries on the northern coast. The latter service was assigned to Sir SAMUEL ARGAL, who, on hearing the state of the French settlements, and conceiving that they had encroached on the English patents, attacked and destroyed them, in repeated expeditions, carrying away several of the inhabitants. Yet this act, although in time of peace, was not followed by war between the two nations.†

1615. Passing by the history of the previous voyages of SMITH, the hero of Virginia, who visited Monhegan, the preceding year, for purposes of trade, this year is observable, as exhibiting the first attempt, since the failure of 1607, to colonize under his command; but it was frustrated.‡

1620, November 3. Date of new charter to the Plymouth Company, under which MASON, GORGES, Sir W. ALEXANDER and others subsequently claimed lands, lying between 40° and 48° of north latitude.

1622, August 10. GORGES and MASON obtain a patent for the lands between the Rivers Merrimac and Sagadahoc, "extending from the Atlantic unto the Rivers Canada and Iroquois, and including the savage nations towards the great lakes." This was called "the Province of Laconia." To give effect to this was formed "the Company of Laconia," for fishing and the fur trade, discovery also and settlement. This year the Island of Monhegan is supposed to have received permanent inhabitants.

1623. A permanent settlement commenced at Saco. The coast had been previously reconnoitred by VINES and others, sent out by GORGES in 1609. But now, settlers having been procured for the locality south of the River Piscataqua, who founded the colony of New Hampshire, others established themselves along the shore eastward, at Arowsic Island, on the main land at Sagadahoc, at Sheepscot, Damariscotta, Pemaquid, and St. George's River.

An attempt was first made, this year, to establish a general governor over New England, in the person of ROBERT GORGES, son of Sir FERDINANDO, but the project happily failed. Nevertheless, it became a favorite measure with the government, and in subsequent periods occasioned no little alarm and trouble to the colonies. Agamenticus, or York, settled.

1627. A patent is granted to the New Plymouth colonists who had traded to Monhegan,

* See *Williamson*, vol. i. pp. 197-203, and *Prince's Annals*.

† *Holmes's Annals*, A. D. 1613. *Williamson's Hist. Maine*, vol. i.

‡ *Id. ib.* p. 214.

Damariscove, and the Penobscot previously, and now asked for the exclusive trade of the Kennebec; on whose bank they established, in the subsequent year, (during which the important patent of Massachusetts Bay was issued,) a trading-house.*

1629. THOMAS COMMOCK, or rather CAMOCK,† obtained a patent for land between the River Spurwink and Black Point, in Scarborough, on which he settled subsequently, and died in 1643.‡

In this year was also granted, with enlargements, the Kennebec or Plymouth patent, intended as an express favor to New Plymouth, for the encouragement of trade and the fishery, and for the propagation of religion. The area included in it is stated to have been 1,500,000 acres; but long disputes grew out of it, not settled before 1789.

1630. Grants were made by the Plymouth Council to settlers at Saco; and another, much more extensive, being 40 miles square, and called Lygonia, in which GORGES was greatly concerned, but still unsuccessful. It extended from Cape Porpoise to Cape Elizabeth.§

During this year was also granted the Muscongus patent, known at an after period as that of WALDO, which included a tract of about 30 miles square. It was not intended for a separate government, but only for purposes of trade with the natives.

1631. This year the Pemaquid patent was granted, and seems to have closed the series. Of all these it may be said, probably, as of many if not most of the early grants, their boundaries could not be well defined, and therefore disputes would in time naturally arise concerning them. Two territories soon came into notice — the Kennebec, or Maine, and the Sagadahoc, the eastern part of which was Acadian, and claimed by the French. The history of all these claims is given elaborately by WILLIAMSON, to whom our limits compel us to refer. They were not settled until the charter given by King WILLIAM and Queen MARY, in 1691, united them with Massachusetts under the same government.

That state had, however, in the year 1677, purchased the entire claim of the GORGES family to Maine, for £1250 sterling, and established a government over it. It had also assumed, in 1689, the government of Western Sagadahoc, and in 1690, Sir W. PHIPS subdued the remainder.

From this period the history of Maine is blended with that of Massachusetts; and although, as has been hinted, her sufferings from Canadian Indians had been peculiar, and so continued until the conquest of Canada by the British and provincial arms, and peace of 1763, yet the operation of the laws, customs, pursuits, and fortunes of Massachusetts was of the same character in “the district,” as in that state.

In 1820, after much previous discussion, of the most deliberate and prudent kind, however, a separation was effected by mutual arrangements, and a new state formed, taking the venerated name of MAINE. The Hon. WILLIAM KING, one of its most distinguished citizens, and who had greatly exerted himself to benefit the country, was, with great unanimity, elected their first governor. For the succeeding thirty years, the affairs of the state have been managed with the regularity, consideration, and fidelity which a well-informed community require of those whom their free suffrages raise to office. The cause of education has

* *Williamson's Hist. Maine*, pp. 233, 234.

† He was nephew of *Robert*, third Baron *Rich*, and first Earl of Warwick, whose son, of the same name, was president for a time of the Plymouth Company, and in 1644 admiral of England under the commonwealth. Camocks, the ancient residence of the family, was in Essex county, England. Captain *Thomas Camock*, a widower, father of the patentee, living in the family of the old Baron *Rich*, became attached to his daughter *Frances*, and, in consequence of the father's dislike of the match, carried her off on horseback. They were pursued, were compelled to swim a river with difficulty, reached Maldon, in Essex, and were there married — the old nobleman giving at length his blessing, seeing his daughter “had ventured her life” for her husband. But he was observed to take it to heart until his death, in 1581. Two sons and eleven daughters were the fruit of this marriage. *Moran's Hist. of Essex*, vol. i. pp. 323, 408.

‡ *Williamson*, *Hist. M.* vol. i. p. 236, who mistakes the relationship. See *Burke's Extinct Peerage of England*, and *Collins's Peerage*, ed. of 1756.

§ *Williamson*, ut supra, p. 238.

been cherished with a wise care; and that of religious instruction has encountered no impediment in an officious legislation, but has been left to its own native energy, and the operation of the general laws of the land. It has, therefore, by the blessing of God, been in a flourishing state, under the management of different denominations. Of these, Congregationalists, Baptists, and Methodists are the principal; and there are Episcopalians, and a few churches of Romanists. They enjoy equal liberty and equal protection.

Under a separate head in this work will be found an account of the colleges, theological seminaries, academies, and schools; as also the statistics of the agriculture, commerce, manufactures, roads, canals, rivers, bays, harbors, cities, towns, and settlements of the state, which has commenced, and is pursuing, under the divine blessing, its high career of well-earned prosperity.

ESTO PERPETUA!

MARYLAND is one of the thirteen American states, which, after the close of the revolutionary war, became parties to the compact whereby they were united into one great national family. It is usually designated as the southernmost of the Middle States, lying on the Atlantic coast; it extends from 38° to $39^{\circ} 44'$ north latitude, and between $75^{\circ} 10'$ and $79^{\circ} 20'$ west longitude; and its superficial area, of which about one fifth is water, is estimated as being 9,356 square miles. The present boundaries of the state are as follows: north by Pennsylvania, east by Delaware and the Atlantic Ocean, south and west by Virginia, from which it is divided by the River Potomac. Its form is extremely irregular. Chesapeake Bay, passing through the state from north to south, near its centre, separates it into two sections, which are known respectively as the Eastern Shore and the Western Shore.

It is generally understood that Maryland was comprised in the sweeping grant to the Virginia Company, prior to the year 1632; but in June of that year, the whole tract now constituting the state was conveyed by patent from Charles I. to George Calvert, Lord Baltimore; when, out of compliment to the then queen, Henrietta Maria, the colony was named *Maryland*. The earliest settlement was effected by some 200 Catholics of high respectability, under Leonard Calvert, son of the original grantee, at a spot occupied as an Indian village, on the north side of the Potomac. The generous offer, by the proprietor, of 50 acres of land in fee to every permanent settler, and the adoption of a form of government upon liberal and humane principles, similar to those contained in the wise model furnished by Roger Williams, and

afterwards enlarged upon by William Penn, soon attracted large numbers of valuable emigrants. Under this judicious policy, freely admitting associates from all countries, and assuring the enjoyment of equal privileges, including the utmost toleration of all Christian denominations, the colony rapidly increased in population, and continued to flourish, with some few interruptions, until the year 1652. Parliament then took forcible possession, and undertook to administer the affairs of the province through the agency of commissioners. But within ten years thereafter, the government reverted to the successors of Lord Baltimore. The first regularly arranged constitution was framed in 1650, two years prior to the act of Parliament above mentioned; its provisions contemplated a partition of the legislature, then composed of one body, into two branches, and a division of the territory into three distinct counties. At the outbreak, and during the continuance, of the war of the revolution, the men of Maryland were not behind their fellow-countrymen in patriotic efforts to secure the independence of the nation. In 1776, their first republican constitution was established, and the state formally joined the confederation in 1781. It adopted the constitution of the United States, at a convention held in April, 1788, by a vote of 63 to 12. A new state constitution was formed in 1851.

Government. — By the state constitution in force at the date of this article, the governor is elected triennially by a plurality of the popular vote, and is ineligible for the next succeeding term. He is selected in turn from each of the three gubernatorial districts into which the state is divided. The legislature consists of a Senate and House of Delegates; the former, 21 in number, chosen (one third every second year) by the counties and by the city of Baltimore, to serve six years. Members of the House of Delegates are elected for two years, from the counties, in proportion to population, the city of Baltimore being entitled to a number equal to that chosen by the largest county. This body may act as a grand jury. In case of vacancy in the office of governor, the executive functions are exercised, first, by the secretary of state; next, by the president of the Senate; and, lastly, by the speaker of the house; or, if in session, the General Assembly may forthwith fill the vacancy by joint ballot; and in like manner at the next session, should the vacancy occur during a recess. Any bill to abolish slavery must unanimously pass both houses, be published three months prior to the ensuing election of delegates, and, at the following session, again pass unanimously: it shall also provide for a full compensation of the slave owners. No gift or devise of property to clergymen is valid without consent of the legislature, excepting land for a church or cemetery, not to exceed two acres. All civil officers must declare their belief in the Christian religion. The right of suffrage is extended to all free white males, after twelve months' residence in the state, and six months in the county wherein they vote.

Judiciary. — There are six judicial districts in the state, composed respectively of two, three, or four counties. Each has a chief judge and two assistants. The city and county of Baltimore constitute one of these districts. The justices of each district preside over the several County Courts, which are the common courts of original jurisdiction in the state. There is a State Court of Appeals, including the chief judges of the six districts; and a Court of Chancery, comprising chancellor, register, and auditor.

Education. — The common school system, so deeply cherished in the Northern and Eastern States, has not yet attained a very great measure of public favor in Maryland. The schools, throughout the state, supported at public cost, do not, in the aggregate, contain so large a number of pupils as are contained in the common schools of the single city of Boston; and the whole state expenditure for educational purposes, including all that is applied for the support of colleges and academies, as well as for that of grammar and primary schools, does not exceed one half the amount expended by the same city upon the two latter grades of seminaries alone. Yet there are numerous private institutions of learning, some of great merit, and generally well sustained: among them are several Catholic colleges, and similar exclusive establishments. The number of white persons upwards of 20 years of age, in this state, at the census of 1850, who could neither read nor write, was upwards of ten thousand.

Finances. — The net amount of the public debt in December, 1849, was somewhat over

\$10,500,000, the interest on which is annually met by means of taxation. Provision has been made for the gradual reduction of this debt, through the operation of a sinking fund, and other resources. The nominal liabilities of the state, at the above date, reached nearly \$16,000,000; to meet which it had productive assets valued at about \$5,300,000, and unproductive property estimated at near \$15,500,000. The expenditures for the year ending December 1, 1849, were \$1,146,492.16; and the income, from all sources, including the direct tax, amounted to \$1,315,439.80.

Surface, Soil, &c. — The Eastern Shore of Maryland presents, in general, a low and flat surface, with frequent marshy tracts and stagnant ponds. The soil in this region, though not remarkably fertile, produces wheat of peculiar whiteness and excellence; also Indian corn, tobacco, sweet potatoes, and most of the ordinary descriptions of vegetables. The western section of the state is more elevated and protuberant, gradually rising towards the north-west, and becoming at that point quite mountainous, being crossed by a part of the Alleghany chain, reaching from Pennsylvania to Virginia. The land in the valleys between these eminences is of superior quality; and that of the entire section, indeed, is highly productive. The soil is composed mostly of a heavy red loam. The staple products are tobacco and wheat; but cotton, hemp, and flax are also raised in large quantities. Fruits of the finest kinds are abundant, particularly apples, pears, and the choicest varieties of stone fruit. The woodlands contain much valuable timber, and abound with nut-trees, the fruit of which affords subsistence to multitudes of swine. There are many tracts which furnish fine pasturage for cattle and sheep; and in addition to beef, mutton, wool, and the products of the dairy, vast quantities of poultry are raised in all parts of the state.

Rivers. — The Potomac, forming the boundary between this state and Virginia; the Susquehanna, flowing through Pennsylvania, and emptying into the northerly extremity of Chesapeake Bay; the Patapsco, and Patuxent, both navigable, and affording good water power, are among the principal streams immediately connected with the trade and commerce of Maryland. There are also several smaller rivers running into the eastern margin of Chesapeake Bay.

Internal Improvements. — Among the most important public works in the country are two which owe their origin to Maryland, viz., the Chesapeake and Ohio Canal, and the Baltimore and Ohio Railroad. They were both commenced in 1828; and by their aid the markets of the world may be readily supplied with the treasures of the immense coal regions in the west. A part of the chain of railroads, extending through most of the Atlantic states, crosses Maryland, taking Baltimore in its course. Other railroads, of considerable extent, diverge from Baltimore, Frenchtown, &c. A commodious canal, connecting the Chesapeake and Delaware Bays, 42 miles in length, was completed in 1829, at a cost of \$2,750,000.

Minerals. — Copperas and chrome ores, red and yellow ochres, sulphuret of copper, alum earth, and porcelain clay are found in considerable quantities, chiefly in the eastern and north-eastern parts of the state. Iron ore abounds in various localities; and the bog ore obtained in the southern quarter of the Eastern Shore is wrought to much advantage. But by far the most valuable mineral product of Maryland is the bituminous coal, of which there are exhaustless beds in the mountainous region near the western border of the state. One tract, in the vicinity of Cumberland, Alleghany county, is said to comprise an area of 400 square miles, the veins measuring from 5 to 15 feet in thickness; another, lying west of the Alleghany ridge, contains beds some 20 feet in depth.

Manufactures. — Wool, cotton, hemp, and iron are manufactured in many parts of the state. There are also numerous tanneries, chandleries, breweries, distilleries, potteries, paper mills, powder mills, &c.; and a very large amount of capital is invested in the business of manufacturing wheat flour.

Indians. — There are no organized tribes of the red races now extant in Maryland.

Population. — During the last sixty years, the average increase of population in this state does not seem to have exceeded *one per cent. per annum*. Nearly one fifth of the inhabitants are slaves.

Climate. — The elevated country of the Western Shore is blest with a delightful and

salubrious climate ; but in the low and moist lands of the opposite section, especially in summer and autumn, where the atmosphere is so often loaded with deleterious vapors exhaled from stagnant pools and unreclaimed marshes, the climate is decidedly unhealthy. This may be inferred even from the personal appearance of the people, who are subject, periodically, to severe agues, intermittent fevers, &c.

Religion. — The descendants of the original settlers, like their progenitors, are Roman Catholics, and probably constitute the most numerous of the several Christian denominations within the state. The next in numerical order are the Episcopalians ; then follow Methodists, Presbyterians, Baptists, German Reformers, and Lutherans ; also a small number of Quakers and Unitarians.

MASSACHUSETTS. The rank sustained among nations by the United States of America, as a consolidated, political body, is high. The second power in commerce on the earth, it compares well, at length, if not with the greatest, at least with the great, in population also. China, Great Britain, Russia, Austria, and France, with, probably, Japan, which still refrains from intercommunity with the rest of mankind, exceed it in numbers. Yet the general character of its inhabitants for intelligence, enterprise, and vigor excites inquiry. The rapid growth of the country increases curiosity, and prompts to further investigations. For it is found that, so far as we can be warranted by the extent of the period of proof, that growth is of a durable character.

Republican principles are not new to the world. The effort to maintain them has been made in various ages and countries, from the period of the free states of Greece, and the early years of republican Rome, to the centuries of Venetian, Swiss, and Dutch liberty.

But the constituent elements of their liberty seem to have been of a character different from that of the government of the United States. Hereditary aristocracies existed in most of them, as they do still in the only European republic that survives. In ours, this principle is unacknowledged ; and the people are, by constitution and actually, the originators of executive and legislative power. And the singular phenomenon is beheld, of a sovereign ruler, vested for a time with the exercise of supreme but constitutional power, and descending from that height to the level of private life — then called to and accepting grades of inferior influence, without the effort to seize, in any one instance, on a superior station. Such has been the uniform experience of more than half a century.

Here, then, a problem important to the welfare of the world is in process of solution : Can communities be trusted to govern themselves ? Thus far, the system adopted by the United

States succeeds admirably, even beyond the expectation of many wise and good men. And while the ever-varying phases of government, in those provinces of this western continent which shook off the yoke of Spain, exhibit an instability of condition* and character that still portends increase of evils, the march of our Union has been onward; and its citizens have exhibited the cheering spectacle of a nation enjoying the widest desirable range of human liberty regulated and rendered stable by law.

It is true, that, to a foreigner, it would appear impracticable to adjust the jarring interests of a multitude of sovereign states composing a federal whole. And great difficulty is, in fact, occasionally found. Yet it is not insuperable, nor of necessity fatal.

This truth results, in great measure, from the character, history and circumstances of the members which projected and which compose the Union itself. It becomes, therefore, a matter of curious research to investigate these, and it should be done with care. Especially is it of consequence to examine the condition, character and progress of those members of the great political community, which, in the providence of God, have exercised, in their respective individualities, any considerable or peculiar influence in forming the general character of the whole body.

And in this view MASSACHUSETTS shines. She was one of the earliest formed states. Her history, compared with that of almost any other political community, has features of distinct peculiarity, more especially in reference to the origin of her colonial existence. Nor has the influence she has since exerted, as regards the rest of the states, been inconsiderable. Far otherwise, indeed; and there is reason to believe, notwithstanding a variety of counteractions, that it increases. For she is vigorous and powerful — not, it is confessed, in extent of territory, or in the number of citizens subjected to her immediate control, and enjoying her maternal solicitude and care; but from the character of her cherished sons and daughters.

To understand as well as to substantiate this, it is necessary to contemplate the causes which, in the course of divine Providence, contributed to produce this character. And these causes are to be sought, not in the prompt resolution, or wise management, or prudent foresight merely, attendant on the conduct of the great enterprise itself; we must look beyond the period of the actual settlement of the country, courageous and well considered as the bold project itself was, to a source higher and more remote.

What, then, was it which formed the leading actors, such as they were, and nerved them with uncommon vigor to undertake, and prosecute, and, with the blessing of God, to accomplish, the establishment of an energetic civil community, three thousand miles from their native home, and on the shores of a savage, inhospitable country? It is fearlessly replied, RELIGION, the religion of the Bible. To this their ancestors had been introduced by the glorious reformation from Popery, under LUTHER, ZUINGLIUS, MELANCTHON, CALVIN, and their associates. And the sincerity of attachment to the truth of God, which they professed, had, in the case of many of them, been tested by much trial and suffering. This endeared to them that truth, and rendered it precious. They learnt to glory in the possession of the Scriptures, and were earnest in their efforts to carry out into life, and fully to enjoy, improve, and transmit their sacred injunctions and counsels.

Add to this the history of public policy in Great Britain for preceding ages; the contests of the nobles with the crown, producing at length the concession of the Magna Charta, A. D. 1215; the establishment of the popular branch of the English Parliament, commencing half a century after, in the ambitious shrewdness of SIMON DE MONFORT; the rise of new interests by the gradual progress of trade and manufacturing industry, and the consequent opening of new avenues to political power, and new channels of political influence, — all these eventuating in the examination of the first principles of government, and tending to establish the rights of subjects, and to limit the prerogative power of kings; — let these be considered, as developing popular influence, and tending to establish a reciprocity between ruler and subject, which had

* Reminding one of *Milton's* remark on the Saxon heptarchy, that "the flight of kites and crows might as well be traced as their history."

been indeed discernible at a very early period in the original Saxon character, and previously in the ancient British, and no one can be at a loss to determine, that such successive training, in combination with the deeper excitement of religious conviction and zeal, would produce in the seventeenth century men of moral hardihood, wary, bold, energetic, and effective.

Sprung from an ancestry thus disciplined, and possessing the advantages which accrued to England from the light of the reformation, the diffusion of books by printing, and the access enjoyed especially to the Sacred Scriptures, with the deepest reverence for them, the fathers of the colony of New Plymouth and that of Massachusetts Bay commenced their important work. It was of God, unquestionably. And His providential leading they were accustomed to observe and acknowledge in all their concerns. This was their habit and delight.

Equally attentive do they appear to the condition of their children after them. Hence, although, by fleeing to Holland, the persecuted Puritans* were allowed to enjoy freedom from the annoyance and pursuit of officers of the Star Chamber commission, such freedom for themselves lost no small part of its charm, when they found the morals of their offspring endangered, and the good habits inculcated on them liable to abandonment under the example and influence of the Dutch.† In 1617, therefore, their excellent pastor, the truly reverend JOHN ROBINSON, countenanced the project of removing to America.

That such a motive should be allowed so great influence on the judgment, feelings, and conduct of those much-enduring men, and that they followed its leading with so much conscientiousness, lays their posterity and countrymen under great obligations. We should be grateful to God, and to them. We should gird ourselves to the accomplishment of the object they had in view, and labor to fulfil what appears to be emphatically their "mission," and that indeed of our nation—to fix and stamp the worth of individual man, and develop his power of self-government, in establishing a system of liberty guarded by law.

Massachusetts may be viewed, —

I. In the establishment and form of its government. Both these seem to have been, very providentially, forced, as it were, upon the earliest undertakers. For, after the repeated disappointments they had suffered, in applications for aid and authority from the crown, during their stay in Holland, and after the resolution they had taken to remove to America, the Puritans of Leyden were left to unite, as a civil community, after their own choice. Had they landed, as they aimed to do, within the jurisdiction of the colony planted in Virginia, they must, of course, have submitted themselves to its government. But being driven back in their attempts to go south, after they had discovered land, they agreed, November 11, 1620, before leaving their ship, on a few simple but distinguishing articles,‡ and chose JOHN CARVER, one of their company, and a beloved and respected member of their church, to be their governor for the ensuing year.

The state of Governor BRADFORD's health rendered it expedient to give him an assistant, and a deputy governor was elected by the people; then a court of assistants was chosen, as

* *Neale*, Hist. Puritans.

† *Prince*, and the other historians.

‡ The agreement, on board the *Mayflower*, in Cape Cod Harbor: —

"In the name of God, Amen. We, whose names are here underwritten, the legal subjects of our dread sovereign lord, King JAMES, by the grace of God, of Great Britain, France, and Ireland, King, Defender of the Faith, having undertaken for the glory of God, and the advancement of the Christian faith, and to the honor of our king and country, a voyage to plant the first colony in the northern parts of Virginia, do by these presents solemnly and mutually, in the presence of God and one another, covenant and combine ourselves together in a civil body politic, for our own better ordering and preservation, and furtherance of the ends aforesaid, and by virtue hereof to enact, constitute, and frame such just and equal laws, ordinances, acts, constitutions, and offices, from time to time, as shall be thought most convenient for the general good of the colony, to which we promise all due submission and obedience. In witness whereof," &c.

Then follow the names of forty-one who thus covenanted, as may be seen in the edition of *Morton's Memorial*, published by Judge *Davis*; the whole number of souls being 101, including all members of the several families. See *Prince's Annals*, and *Young's Chronicles of the Pilgrims*. The names will be found at the end of this article.

the growing population increased the business of the government. But it was not until near twenty years after the first settlement that deputies were chosen by the towns, to form what is now termed a House of Representatives. No important alterations were made in this system of government, while the old colony of Plymouth retained its separate establishment; that is, until the union with the government of Massachusetts Bay, in 1692, except during the interruptions occasioned by the assumptions of ANDROS.

Governor WINTHROP,* on the other hand, had been appointed to the direction of the colony of the Bay, and which took more appropriately the name of Massachusetts, by the Plymouth Company in England, instead of Governor CRADOCK, who never came over. THOMAS DUDLEY was also appointed deputy governor. Yet, previously to their leaving England, the principal members of the company entered into a solemn agreement, providing that "the whole government, together with the patent [obtained about five months before] for the said plantation, be first by an order of court legally transferred and established to remain with us and others which shall inhabit upon the same plantation."† This company landed, with their charter or patent, at Salem,‡ (a settlement formed but a few years before, and then under the government of JOHN ENDICOTT,) July 12, 1630. From Salem they went first to Charlestown, and then settled at Boston, which became, from nearly that period, excepting only a few meetings at Newtown, or Cambridge, the seat of government down to the present day.

The instrument which vested the executive power in a governor, deputy governor, and eighteen assistants, constituted a General Court, consisting of these officers and the freemen of the colony. But alterations were soon made; for, in 1631, the General Court enacted that the governor, deputy governor, and assistants should be chosen by the freemen alone; and, in 1634, they erected a representative body, which, ten years after, when the court was divided into two houses, took the name of deputies, as the other house took that of magistrates. Trial by jury was early introduced; yet not until the Court of Assistants had often judged and punished in a summary way.

Thus it was, that, while a respectful acknowledgment of subjection to the mother country and dependence on her was frequently made, and the colonists boasted the name and privileges of Englishmen, they still retained the right of popular elections, and formed a government representative, yet dignified, and in all respects paternal.

II. In its literary institutions.

If in Holland the Puritans exhibited an anxious apprehension of injury to the youth from the irreligious influences surrounding them, the considerate, religious colonists of Massachusetts manifested, with much consistency, a wakeful care to instil instruction into their minds, when removed to the wildernesses of America. As early as 1636, the General Court appropriated £400 to the erection of a public school at Newtown, afterwards called Cambridge. "Scarcely," says the Rev. Dr. HOLMES,§ "had the venerable founders of New England felled the trees of the forest, when they began to provide means to insure the stability of their colony. Learning and religion they wisely judged to be the firmest pillars of the church and commonwealth." What the General Court had contemplated and partially provided for, the liberality of JOHN HARVARD, the worthy minister of Charlestown, who died in 1638, aided to accomplish. To the public school at Newtown he left by will £779 17s. 2d.; and by order of court, and in honor of its earliest benefactor, the school was named Harvard College, and the town called Cambridge, in memory of the place in England, at whose university several of the influential "planters" had received their own education.

The establishment of this college, consecrated "to CHRIST and the church," has been generally regarded as a striking proof of the far-seeing wisdom of the fathers of Massachusetts.

Incorrupta fides, nudaque veritas,
Quando ullum invenient parem?

† American Annals, vol. i. p. 247. Also President Quincy's elaborate History of Harvard College.

‡ Hutchinson, Coll. Papers, pp. 25, 26.

§ See Winthrop's History of New England, edited by Hon. J. Savage.

It shared the prayers and best wishes of ministers and churches, and proved a nursery of many "plants of renown," distinguished not in the walks of sacred labor alone, but in council, at the bar, upon the bench, and even in the field. For more than half a century it was the only college in North America, and is now the best endowed of all our literary institutions. Within the present bounds of the commonwealth, two other institutions, Williamstown and Amherst Colleges, have since been incorporated, and have enjoyed a very considerable share of legislative patronage, besides the results of private liberality. In addition to these is the important Theological Seminary at Andover, whose graduates are found, not officiating as pastors of our own churches only, but laboring in the missionary stations, from the Sandwich Islands, in the east, to the regions assigned our own Indians in the west; also a similar institution of the Baptist denomination at Newton, emulating its elder sister, and the "Wesleyan Academy" of the Methodists at Wilbraham.*

Equal attention was at an early period paid to the establishment of common schools in the several townships; and academies have been founded in not a few of the counties of the state, as at Andover in Essex county, Leicester in Worcester county, &c. Thus it has resulted that the inhabitants are found capable of reading, writing, and casting accounts, with very rare exceptions among male and female adults, to an extent as great, probably, as in any state of the Union, with the exception perhaps of Connecticut, and comparing with any the most favored population in the world. Indeed, the schools of Massachusetts have been and are the just cause of gratulation and pleasure with every intelligent friend to the permanent prosperity of its citizens.

III. In its churches.

These were esteemed by their founders the glory of the community. For the enjoyment and transmission of religious liberty, mainly, the country had been settled. As is specified in their patent, and as they profess in the articles of their association, it was to advance the kingdom of CHRIST by the conversion of the savages of America, as well as to escape the pains and penalties of unrighteous orders in council against liberty of conscience in religion, that they were willing to encounter the perils of the sea, or the equally threatening perils of the land. "O that I might have heard you had converted some, before you had killed any," exclaimed the pious ROBINSON in Holland, when, in 1623, he heard of the bold energy of the warrior STANDISH,† who had stifled a threatening insurrection of Indians against the feeble colony, by killing with his own hand its fomentor and leader. And this was the feeling which prompted the missionary labors of "the apostle" ELIOT, as that early, consistent, and attached friend of the Indians, and who translated the whole Bible into their language, has not unaptly been named. Nay, it was chiefly through the efforts of Governor WINSLOW, when visiting England on the affairs of the colony, that in 1649 was founded the Society for propagating the Gospel, having principally in view America as its field of labor. GOOKIN, the MAHEWS, and other worthies exerted themselves nobly in this cause; and several Indian churches were gathered, and sustained as long as subjects for such attention continued among us.

Harvard College was soon in a capacity to supply no small number of those worthy men, who formed an efficient ministry for the multiplied religious communities that grew up with the respective settlements or towns. These churches were gathered, served, and maintained, with direct reference to the authority of the Holy Scriptures. Their first supply came, of course, from abroad, for not a class received the honors of the college till more than twenty years after the settlement at Plymouth; and even afterwards, especially on the disgraceful persecutions that so soon followed the restoration of the monarchy in the person of CHARLES II., several excellent ministers accrued to our commonwealth, and shone as lights in the churches, aiding to maintain in them a primitive faith and a holy practice.

IV. In the industrial pursuits of its inhabitants.

The evidence of thrift, in an application to all those arts and employments by which human life is sustained, rendered comfortable, or adorned, is in few communities more rife, percep-

* See *State Institutions*.

† See *Allen's Biog. Dict.*, &c.

tible, and tangible, than in the industrious communities of the citizens of Massachusetts. For the special statistics which exhibit this evidence, reference is made in this work. But, although the present notices must be rapid and brief, it will be of benefit to classify a few of the particulars that deserve attention in the general estimate.

The soil of the state, when compared with portions of the Union, is not considered as the most inviting from its fertility, being hard and unyielding, generally, and often rocky. But the climate is wholesome, the air bracing; and patient, skilful cultivation brings its reward.

Yet at a very early period the whale, cod, and other fisheries attracted many. The coasts of New England had been visited successfully before any European settlements of a permanent nature were made. And, since that period, the fisheries have been pursued with highly important results—not merely as relates to the supply of food and increase of wealth, out the training also of a hardy, and skilful, and adventurous race of mariners. These pursue the whale in every ocean, and return richly laden with the spoil. That perilous employment has found no men more energetic and able than the whalemens of Massachusetts.

Manufactures of almost every kind have flourished, and still flourish, in this state. Those of cotton fabric are detailed in the account given of Lowell, Waltham, &c., exhibiting not merely a large and judicious investment of capital, and the application of ingenuity and skill to the several facilities for rendering the labor easy and profitable, but, more especially, delighting the philanthropist with the appearance of health, sound morals, and a cheerful devotion to labor, joined with self-cultivation, particularly in the female operatives, hardly, if at all, paralleled in any other portion of the civilized world.

In regard to commerce, it has often been said of New England, that “her canvas whitens every sea;” and Massachusetts is the most commercial of this family of states. Salem engaged among the first in the trade to the East Indies, and derived immense wealth from the skill, hardihood, and faithfulness of her intelligent seamen. But Boston has been a noted mart from its very settlement. Its commerce has literally extended to every sea, and the first American vessel that circumnavigated the globe sailed in 1787 from her port.

The manufacture of iron was commenced as early as 1643; but the minerals of the commonwealth are not abundant, and its furnaces and forges are supplied chiefly from other states. In carpentry of every kind much is annually effected, and furniture of all sorts is extensively exported to the West Indies, along with the produce of the dairy, the orchard, and the meadow.

Passing from this view of the commonwealth, its history demands attention, and may be considered advantageously in several periods.

1. From the settlement, respectively, of the Plymouth colony, in 1620, and that of the Bay in 1626, or '8, and 1630, to the union of both in one government, 1692.* These two colonies alone are mentioned, as space cannot here be afforded to a labored survey of the variations in the jurisdiction of the state at different times. Thus, at one period, Maine and Nova Scotia were attached to the Plymouth colony, and included in its government. At another, New Hampshire formed a part of Massachusetts, and shared the cares of its rulers. Maine, too, was an important portion of the state for many years, until it became itself a sovereignty in 1820.

The period above stated includes, then, the emigrations from England, which lasted without intermission to the times of the commonwealth under CROMWELL, when the friends of a republic could enjoy at home what had been sought before in America. It includes, likewise, the bloody struggles with hostile, marauding savages, stung by want, by envy and criminal neglect, as well as corrupted by the evil examples of worthless men, such as in every period since have abounded on Indian borders. And it embraces particularly that critical season in which, under the brave and cunning PHILIP, son of MASSASOIT, and sachem or king of the Wampanoags,

* *Plymouth colony* embraced the territory of the present counties of Plymouth, Bristol, Barnstable, Dukes, and Nantucket, with the exception of the town of *Hingham*, — and that of *Massachusetts Bay*, the residue of the state. See *Borden's Map of Massachusetts*

a most deadly warfare had well nigh depopulated several of their rising settlements, although it terminated fatally for the Indians.*

Yet this period, as we have seen, though it be one that includes such a calamitous contest with the natives of the country, extensively leagued together, and ably led on, was not barren of Christian effort to civilize and convert them. The history of these exertions is no small part of the true glory of the state.

This period, too, embraces the trials of leading men with the arbitrary councils and exactions of a corrupt and licentious court, under the brother STUARTS, CHARLES and JAMES, until, in the memorable case of ANDROS, the faithful representative of the latter king, a weak, yet tyrannical despot, the abuse of power met not only a firm resistance, but personal violence, in actual seizure and imprisonment.

The revolution of 1689 could in no part of the British dominions give greater joy than in Massachusetts. For it quelled the fear of a retribution for certain convenient assumptions of power, which might, for very many years, have well been anticipated. And it prepared the way for a government, which, although it abridged subsequently, and for a long period, the exercise of a popular voice in elections, commenced with a chief magistrate named by a clergyman of Massachusetts,† one of the agents of the colony.

2. The next period may extend to the taking of Louisburg from the French in 1745. It begins with the operation of the new charter, which was soon effected, and the government organized; and it develops a series of contentions between the provincial assembly, or magistrates and deputies, and the crown officers, beginning with the successor of Sir WILLIAM PHIPS, and lasting for near a quarter of a century. These disputes tended to discipline the minds of those who engaged in them, and to extend their views, rendering political subjects familiar; while, at the same time, the extent of territory subjected to the jurisdiction of the crown governors, embracing, not the colonies of Plymouth and the Bay alone, (as before observed,) but also Maine, Nova Scotia, the territory of New Brunswick, and the islands ‡ along the coast, and also New Hampshire occasionally, increased the connection by sea, at least, with a broad country, and familiarized the colonists to enlarged calculations and extended enterprise.

Much, however, of the distinctive features of the old and rigid Puritans had now been softened. Other views in theology were occasionally broached. The discipline of the churches began, with the increase of trade and commerce, to decline; and although, in the main, a spirit of religion continued to distinguish the community, when compared with other portions of the British dominions, it cannot be denied that "the gold had become dim, and the most fine gold changed."

Near the end of the period, nevertheless, a revival of religion was witnessed, of great power. It commenced at Northampton, under the searching ministry of the eminent JONATHAN EDWARDS,§ and extended widely; for in the midst of it WHITEFIELD visited America, and fanned, though he did not produce, the flame.

But the sagacity and energy of Governor SHIRLEY, in planning the expedition to Cape Breton, engrossed soon the cares and efforts of the colonists, and prepared the way for the succeeding period of their history, the opening and presentation of a drama in which the world is concerned. The complete success of the expedition drew the attention of the mother country towards its colonies, which it had previously underrated; the pay, in ready money, added greatly to the colonial aggrandizement, and encouraged an active industry, while it empowered the hitherto straitened inhabitants to avail themselves of the resources of their country, and, in various ways, aided the advance of the approaching revolution. Still they were among the most loyal subjects of the crown, and gloried, as yet, in the privileges as well as name of Englishmen.

3. From 1745 to the revolution, the history of Massachusetts is familiar to every politician of the day. In the war for subduing Canada provincialists took a deep interest, and were extensively and warmly engaged. And it proved a school for not a few of those whose courage was soon to be tested in the scenes of Lexington, Concord, Bunker Hill, and Boston. And as the difficulties with Great Britain originated in Massachusetts, her people were at no time backward to discharge their full share of duty, in council and in action, when the flames of war spread widely, and the whole series of English colonies along the coast were roused, as by the community of one spirit, to draw the sword in defence of their injured rights.

But the history of the American revolution, its causes, progress, accomplishment, and results, forms a theme too vast to be comprised in limits such as are assigned to this brief and rapid sketch. Men were in long preparation for the opening contest. The British ministry are encroaching and arbitrary. A decided stand is taken and maintained; and Massachusetts and her sister colonies become, at length, an independent nation.

4. The formation of a constitution for the state, which was effected in 1780, marks an important era in its history. A sublime spectacle indeed was presented, when the delegates were engaged in fixing the boundaries of civil rights and claims, and establishing the foundations of social order and prosperity. Yet not a less sublime spectacle appeared, when, in 1820, after a lapse of forty years, a revision of the same constitution was publicly effected, under the presiding auspices of that distinguished son of Massachusetts, who succeeded WASHINGTON as President of the United States, and had been a principal framer of the civil constitution of his own state.

That must be a people of peculiar character, among whom it is possible, without war, or contentious turbulence, or violence of any kind, or tendency to abandonment or licentiousness, to take apart the constituent portions of a civic system, and readjust them as quietly and orderly as if they formed but the mechanism of a watch. Yet several of our states have successfully followed the example. How nearly impracticable has it been in South America!

In 1786, the strength of attachment to "law and order" was tested by the rebellion. Yet this served, probably, to convince the majority, that, in order to maintain their freedom, that freedom must be guarded sedulously by wise provisions, to which *men must submit*. The quelling of that rebellion seems to have destroyed the very seeds of anarchy and confusion. Still, the sympathy excited by the French revolution threatened for a time no little disturbance of the political quiet, until the extravagances of the miserable leaders alienated from them all sober men.

5. The actual adoption of the federal constitution forms another era. The state had just experienced the necessity of resorting to arms to preserve its own domestic government. And it was but right to expect that its leading men should prove warm advocates for a system of rule that should fulfil the legitimate end of such an establishment, and be "a terror to the evil, and a praise and encouragement to them that do well."

Under the subsequent operation of this government, Massachusetts has partaken both of the weal and woe of the United States. She has furnished from the beginning her quota of able men in the councils of the nation, and twice has a citizen of her own been promoted to the presidential chair. Her orators and statesmen from AMES to WEBSTER have distinguished themselves, and honored and gratified their constituents, while they have contributed to advance the welfare and fame of their country.

In the mean while, that is, in 1820, Maine, ripe for self-government, was disconnected, and became a separate and independent state. The measure, it was apprehended, would greatly diminish the weight and influence of Massachusetts in the national councils, by the withdrawal of so large a constituency in respect to representation. Yet has the increase of population since been such, that at the present time it is nearly as great within the actual bounds of Massachusetts proper, as it was in both territories during the last year of the union of Maine with the state.

The deliberate adjustment of the various civil and political rights and privileges of a people, as asserted and maintained on this side the Atlantic, published in regular codes of law; the enrolment of citizens authorized to vote, whereby the violences attending some elections

elsewhere are avoided — violences, in the detail of which the enemies of republican institutions greatly delight and triumph; the deeply-engraven spirit of their forefathers, which can with difficulty be erased; the strong love of home and its enjoyments, ruling in the hearts of absentees,* and exerting an attractive influence in every climate; the general respect for religion and its ministers, which yet lingers in the population, and is sustained by the ordinary worth of those who bear the character of pastors and sacred guides; the introduction and general extension of instruction by schools on the Sabbath as well as the week days; the ample provision made for education, and the distinction and influence gained by real science and moral worth in heads of colleges and eminent professors; the improvements made in agriculture, rendering the farmer desirous and capable of raising much from a few acres, rather than superficially to run over a large extent but half cultivated; the improved character of seamen; the introduction of the temperance reform, and establishment of literary and benevolent associations, — all conspire to augur well for the future prosperity of the state.

In the catalogue of governors will be seen the names of several whom the people “delighted to honor,” and whose memory will be dear to the intelligent, sober, religious patriot. The names of CARVER, WINSLOW, BRADFORD, WINTHROP, HAYNES, among the early chief magistrates, and STRONG† among those of recent years, can hardly be named without emotion. The fame of POWNALL and HUTCHINSON, as faithful recorders, and of HANCOCK and ADAMS in the list of patriots, is spread as widely as the history of the state; and FRANKLIN, BOWDOIN, ADAMS, both the father and son, can never be forgotten. Among judges and counsellors, ministers of the gospel, authors and teachers, physicians, merchants, farmers, and mechanics, in short, in every department of life will be found those who have honored themselves by their talents, integrity, and usefulness, and proved worthy sons of a distinguished mother. All such will join in the devout aspiration with which the public document for her annual fasts and thanksgivings closes, —

“GOD SAVE THE COMMONWEALTH OF MASSACHUSETTS!”

* See *Pittsfield*.

† *Heu pietas, heu prisca fides!*

NOTE REFERRED TO ON PAGE 74.

1. Those with this mark (*) brought their wives with them; those with this (†), for the present, left them either in Holland or England.
2. Some left behind them part, and others all their children, who afterwards came over.
3. Those with this mark (§) deceased before the end of March.

So there were just 101 who sailed from Plymouth in England, and just as many arrived in Cape Cod harbor. And this is the solitary number who, for an undefiled conscience, and the love of pure Christianity, first left their native and pleasant land, and encountered all the toils and hazards of the tumultuous ocean, in search of some uncultivated region in North Virginia, where they might quietly enjoy their religious liberties, and transmit them to posterity, in hopes that none would follow to disturb or vex them. *Prince's Annals*.

a One of these was the servant who died before their arrival.
 b Besides the son born in Cape Cod harbor, named Peregrine.
 c He was of Governor Carver's family.
 d One of these was a son born at sea, and therefore named Oceanus.

 g Mr. Morton calls him Digery.
 h Mr. Morton calls him Bitteridge.
 i He was of Governor Winslow's family.
 j Mr. Morton seems to mistake in calling him Doten.
 k They were of Mr. Hopkins's family.

MICHIGAN. This is one of those members of the American Union which were formerly comprised in the "North-west Territory." In the year 1640, it was partially explored by a few French traders from Canada; and the first settlement was formed at Detroit, in 1670. By the peace between France and England, in 1763, the latter obtained possession of the territory, and, at the termination of the revolutionary war, ceded it to the United States—retaining control of Detroit, however, until 1796. It was organized as a territory of the United States in 1805; but, in the course of the war of 1812, again fell into the hands of the British, from whom it was recovered, in a short period, by the American forces under General Harrison. In 1836, it was admitted into the Union as an independent state.

Boundaries and Extent.—Bordered on the northern and eastern fronts by two of the great lakes, and parted near its centre by another, the land surface exhibits two distinct peninsulas—the base of one lying adjacent to Ohio and Indiana on the south, and that of the other commencing at the boundary of Wisconsin on the south-west. The main peninsula, known as Michigan proper, is bounded north by the waters of Lakes Huron and Michigan; east by Lakes Huron and St. Clair, and by a portion of Lake Erie, with the intermediate straits or rivers; south by the states of Ohio and Indiana; and west by Lake Michigan. The northern or upper peninsula is bounded north by Lake Superior; east and south-east by Lake Huron and the waters therewith connected; south by Lake Michigan; and south-west by the Menominee and Montreal Rivers, which separate it from Wisconsin. The southern peninsula is 282 miles long, with an average breadth of 140; the length of the northern is 324 miles, and its mean width 60. The whole area of the state, including some 36,300 square miles of water surface, comprises about 92,500 square miles. Its geographical position is between $41^{\circ} 30'$ and $47^{\circ} 20'$ north latitude, and extends from $82^{\circ} 25'$ to $90^{\circ} 30'$ west longitude.

Government.—The governor, lieutenant governor, and senators are elected biennially, and the representatives annually—the latter numbering 54, and the Senate consisting of 18. These elections are by the people, who, by a late amendment of the constitution, elect also the judges and cabinet officers. The sessions of the legislature commence annually on the first Monday of January; and the present seat of government is established at Lansing, Ingham county. A residence of only six months in the state, immediately preceding an election, confers the right of voting on all white males who have attained their majority.

Judiciary.—Until the recent modification of the constitution, the judges of the Supreme Court were appointed by the governor and Senate for seven years. The Supreme Court comprises a chief justice and four associate justices, one being assigned to each of the

five judicial circuits into which the state is divided. These courts hold one or two terms annually in each county; and there are also County Courts, having general common law jurisdiction, both civil and criminal. Persons charged with offences punishable by confinement in the State Prison may demand trial before the circuit judge, who in such case is to preside in the County Court. The county judges hold office four years. Probate Courts are held in each county, the judges of which, as well as those of the county courts, are elected by the people.

Education.—The subject of education has received a just share of public attention. The common school system is generously supported, and many literary institutions of a higher order have also been established and liberally endowed. At Ann Arbor is located Michigan University, which has academic branches in various other parts of the state. There are sundry colleges, maintained by different religious denominations, and generally in a flourishing condition. In 1849, the number of scholars in the state, which derived benefit from the public funds appropriated for purposes of education, was upwards of 125,000. There is a Board of Education, consisting of eight members, chosen by the legislature, which has charge of a well-endowed state Normal School, at Ypsilanti. Munificent appropriations have also been made for the erection and maintenance of asylums for the deaf, dumb, blind, and insane.

Finances.—At the opening of the year 1850, the state debt exceeded the immediate available means of payment by somewhat more than \$2,000,000. During the year ending November 30, 1850, the receipts into the treasury amounted to \$429,268, and the expenditures to \$449,355. The revenue is derived not only from direct state taxes, but from specific taxes, charges on sales of public lands, and other sources. It was estimated by the governor, in a late annual message, that the assessment of property for purposes of taxation, instead of being based, as heretofore, on a valuation of only about \$30,000,000, would be more equitably made if based upon a cash valuation; in which case the value of taxable property, it is supposed, must exceed \$100,000,000.

Surface, Soil, &c.—Michigan proper presents a diversity of surface. It is mostly either level or slightly swelling, but is occasionally rough and hilly; and towards the central points, between the eastern and western shores, is elevated to a height of some six to seven hundred feet, forming rugged and irregular ridges. On the western side of this range of eminences, the land slopes gently and smoothly towards the lake, but again rises on the coast into steep and broken sand banks and bluffs. The northern half of this peninsula is as yet but sparsely peopled; and its soil is regarded as inferior to that of the southern portion, although most of the lands in the interior are said to be, in general, well adapted to agricultural purposes. In the settled parts, the soil is quite productive; and flax, hemp, all the varieties of grains, garden vegetables, &c., are raised in abundance. The forests yield excellent timber, of almost every description known in this climate; as, the oak, walnut, hickory, elm, ash, maple, sycamore, whitewood, hackberry, cottonwood, poplar, butternut, cherry, &c. There are also large tracts of pine, spruce, and hemlock-trees in the northerly parts of the state. Of the upper or northern peninsula, no very great amount of knowledge has yet been obtained, beyond what is, in some degree, connected with the recent geological survey of this region. It is but thinly inhabited by permanent residents, its soil promising but poor remuneration to the cultivator. Mountains, valleys, hills, plains, forests, and rivers variegate the surface. The most lofty of the elevations ascend to a height of 2000 feet; some of the forests embrace millions of acres of pines and other evergreens; and a hundred rivers, large and small, affording valuable mill sites, flow from the uplands into the lakes, on either side of the Porcupine Mountains, the grand ridge which towers as a sort of dividing barrier between Lakes Superior and Michigan.

Rivers.—The high lands in the central parts of Michigan proper give rise to several large streams, which generally run into the lakes on either side. The principal of these are Raisin and Huron, flowing into Lake Erie; the Rouge, Clinton, Black, Saginaw, Thunder-Bay, and Chebogan, emptying into sundry straits and bays on the east; and the still larger rivers, St. Joseph, Kalamazoo, Monistic, Maskegon, and Grand, which connect with Lake Michigan on the west, and are partly navigable. Small lakes, yielding plenty of fine fish, abound in the

southern counties of this peninsula. Excepting the Montreal and Menominee, which form a part of the boundary, the rivers of the northern peninsula, though numerous, are comparatively inconsiderable, so far as they have yet been explored. The most important appears to be the Ontonagon River, which flows into Lake Superior.

Internal Improvements. — The Central Railroad, extending from Detroit to Lake Michigan, and the Southern Railroad, finished as far as Hillsdale, are the principal public works of this class within the state. They were both originally projected, and partially completed, under the authority of the state, whose property they were until 1846, when they were sold to certain incorporated companies. The Central was disposed of for \$2,000,000, and the Southern for \$500,000. Several branches extend in different directions from the above roads, embracing an aggregate length of some 70 miles. Other works have been projected, and will doubtless be prosecuted.

Minerals. — The northern peninsula of Michigan is known to be peculiarly rich in mineral treasures. In Ontonagon River, about the centre of the region, immense masses of native copper have been found; and there are doubtless vast beds of that and other minerals that yet remain to be developed. Iron and lead are known to exist in abundance.

Manufactures. — Several millions of capital are employed in various descriptions of manufactures; but the articles produced are such, in general, as are only required for domestic use, or home consumption. Wheat flour is, perhaps, the only manufactured commodity which is exported to any considerable amount from the state. In 1849, there were 228 flouring mills in the state, which manufactured 719,478 barrels of flour. There are some hundreds of saw mills scattered throughout the several counties, which prepare for market large quantities of lumber, and some portions of this product are also sent abroad.

Indians. — There are several tribes, or parts of tribes, of the red races, dispersed in different quarters of the state, the most numerous of which are the Chippewas, which compose upwards of one half of the Indian population, and reside mostly in the upper peninsula. The Ottawas are next in numerical order; then follow the Monomies and Pottawatamies, with a few Wyandots. These, altogether, number nearly 8000. They occupy various localities, dwelling for the most part on tracts specially reserved for their use.

Population. — Michigan, like the other North-western States, is peopled by the representatives of divers lands and races. The natives consist of the descendants of the aborigines, of the first French settlers, and mestizoes, or the offspring of white and Indian progenitors. Among the foreign population are immigrants from Great Britain, Germany, and other European countries; and there are multitudes of settlers from New England, New York, New Jersey, Pennsylvania, Virginia, and Canada. Very few of the African race are found in the state.

Climate. — There is a marked dissimilarity between the climates of the upper and lower peninsulas of Michigan, arising from their different geographical positions. The former is subject to great extremes of heat and cold, to sudden and severe changes, while the latter enjoys a comparatively mild and uniform temperature. Long and cold winters, followed by short and hot summers, are the principal seasons in the upper peninsula; for the transitions are so rapid as to afford but a brief interval of spring or autumn. The contrast between the two portions of the state, in this respect, is owing, doubtless, to the varied influences of the winds from the lakes. The general adaptation of the climate to human health may be said to equal that of the central portions of Indiana and Illinois. Among the diseases most common are fever and ague, and other maladies originating in *malaria*. In some seasons, affections of the lungs, of the bowels, the limbs, &c., prevail to greater or less extent, depending upon atmospheric agencies. The *goutre*, or swelled neck, is a disease peculiar to the inhabitants residing on the lake shores.

Religion. — Of the religious denominations the Methodists are the most numerous. Presbyterians, Baptists, Episcopalians, and Roman Catholics constitute the bulk of the remainder. There are, however, a few congregations of Lutherans, Dutch Reformed, Unitarians, Universalists, &c.

Curiosities. — Among these may be classed the ancient forts or mounds, the relics of former races, many of which are found in this and the neighboring states, varying in form and dimensions, and containing remains of human bodies, arrows, medals, ornaments, strangely-shaped vessels, &c., but as yet yielding no clew to the development of their mysterious origin. Certain “garden beds,” so called, are found in various parts of the state, evidently of very ancient Indian origin. In many instances they cover hundreds of acres, exhibiting traces of the most careful labor in the regularity of their outlines and compartments, and the fineness of their soil, as compared with the surrounding land.

MINNESOTA TERRITORY.

MINNESOTA (TERRITORY.) This was formerly a part of the vast country belonging to the United States which was acquired by the Louisiana purchase in 1803. It was then, with the surrounding regions, a rugged and unmeasured wilderness peopled only by savages, and had never been systematically explored by civilized man until about the period of its transfer. The tract now embraced within the limits of the territory was duly organized, and its boundaries defined, by an act of Congress, passed March 3, 1849, “to establish the territorial government of Minnesota.”

Boundaries and Extent. — Bounded on the north by the boundary line between the possessions of the United States and Great Britain; east and south of east by said boundary line to Lake Superior, and by a straight line thence to the northernmost point of Wisconsin in said lake; also along the western boundary of Wisconsin to the Mississippi River, and down the main channel of said river to the point where the line of $43\frac{1}{2}^{\circ}$ north latitude crosses the same; south on said line, being the northern boundary of Iowa, to the north-west corner of that state, whence the boundary proceeds southerly along the western limit of Iowa, until it strikes the Missouri River; and west by the main channel of said river, as far as the mouth of White-earth River, and by the main channel of the latter until it strikes the boundary of the British possessions. The territory, at its northern extremity, reaches from east to west between the 90th and 103d degrees of west longitude, and comprehends an area of 83,000 square miles.

Government. — The government is, of course, temporary, subject to such alterations, and to such further division of the territory, as may be determined by act of Congress. All free white inhabitants, 21 years of age, are voters, and were eligible for any territorial office at the first election. A Council and House of Representatives compose the legislative assembly; the former consisting of 9 members, chosen for two years, the latter comprising 18 members, elected annually. The legislature may increase the Council to 15 members, and the representatives to 39. The governor is appointed for four years, by the President and Senate of the United States. The secretary of state, in like manner appointed, is acting governor in the absence of the executive magistrate.

Judiciary. — The Supreme Court is composed of a chief justice and two associates, appointed for four years by the President of the United States. Two of these constitute a quorum. This tribunal holds an annual session at the seat of government. There are three judicial districts, in each of which one of the justices must reside, and hold a District Court, having the jurisdiction of the United States District and Circuit Courts. Both courts possess chancery powers. The laws of Wisconsin, until repealed or modified, are valid in this territory.

Education. — To this subject all due regard is given. Two sections in each township are set apart for the support of schools. In all the settled places, school-houses are among the first edifices erected. In some towns public libraries are established, and courses of instructive lectures maintained.

Finances. — By returns from five counties in the territory, made in January, 1851, it appears

that the assessed value of property in those counties amounts to somewhat over \$800,000; and measures are in progress for completing the valuation of the residue. The salaries of the territorial officers, as in other and like cases, are provided for by the general government. By the act of organization, \$20,000 were appropriated for the erection of public buildings at the capital, and \$5000 for the purchase of a territorial library.

Surface, Soil, &c. — The face of the country, in the central parts of the territory, is gently undulating in its general character, and exhibits about equal proportions of prairie and timber land, intersected in every direction by clear and beautiful streams, tributary to the Mississippi and Minnesota or St. Peter's Rivers, and navigable always in the spring for flat boats. This region also abounds in lakes of pure water; and its soil is represented as being unrivalled in fertility. With some modification, the same remarks may apply to the other sections of the territory. The valley of the Red River of the north, extending south some 300 miles, from the northern boundary of the territory into the centre, is about 150 miles wide, and perfectly level, with the exception of a few tracts of wet prairie, and is admirably adapted to the culture of wheat and other grains. The soil, for the most part, throughout the territory, consists of a mixture of sand and black loam, and, being loose and porous, is peculiarly favorable to the rapid growth of bulbous and other roots. Potatoes have been known to yield 450 bushels to the acre. Vegetable crops of all kinds, and in luxuriant profusion, are brought earlier to maturity than in many regions farther south. In the valley of Minnesota River, the strawberry vine commonly attains a height of twelve inches. A large part of the territory is overspread with vast forests of excellent pine and other trees of great value for building.

Rivers, &c. — Almost the entire eastern boundary, by the Mississippi and St. Croix Rivers, is navigable water: steamboats ply upon the former, within the territory, for upwards of 300 miles. At the north-east, the territory is bounded by that immense expanse of waters, Lake Superior. The Minnesota winds through a delightful valley, in a south and easterly direction, and has been ascended more than 200 miles. The Big Sioux, and other tributaries of the Missouri, flow southerly and westwardly. The Red River of the north, taking its rise near the centre of the territory, flows northerly, and is navigable for some 400 miles before passing into the British possessions. The Missouri, which constitutes a great portion of the western boundary, affords navigation during nearly its whole course along the territory. There are many other fine streams, and numerous large lakes, all presenting facilities for inland commerce, such as are possessed by no one state or other territory in the Union.

Internal Improvements. — A canal, to connect Lake Superior with Lake Huron, has been much talked of, and probably at no distant day will be constructed; as such a work will secure uninterrupted water communication down the great chain of lakes to the Atlantic coast. The removal of obstructions in the Mississippi and other rivers — surveys for which purpose have been authorized by Congress — will add many hundred miles to the already immense extent of navigable waters lying within and around this territory. The aid of railroads will of course soon be called in, to complete that system of internal improvements which Nature herself seems to have suggested.

Minerals. — In this newly-settled country no explorations on any considerable scale, for the purpose of developing its mineral resources, have as yet been undertaken. There can be no doubt that this territory possesses its full share of geological treasures, which in due time will excite the attention and repay the industry of its hardy and enterprising people.

Manufactures. — The only manufacturing branches now carried on to any great extent are those which are connected with the business of house-building, especially the manufacture of lumber. Of this article, although the work was begun so recently, a sufficiency is produced, not only to supply the home demand, but to furnish annually some 20,000,000 feet of boards, logs, &c., for exportation to the markets below, on the Mississippi. A number of steam and saw mills have already been erected; and so numerous are the mill sites, and so immense the water power within the territory, that this pursuit, together with others to which these advantages will apply, especially the manufacture of flour, must naturally add greatly to the public prosperity.

Indians.—There are several tribes, or parts of tribes, still inhabiting certain tracts at the northern and western parts of the territory. To some of these, the Chippewas and others, lands had formerly been ceded; but negotiations for the removal of the former have been entered into, and treaties for the extinction of the Indian title to other tracts have been provided for by Congress. Many of the most civilized are solicitous to become subjects of the laws of the territory, and to participate in its free institutions.

Climate.—Considering its high northern latitude, Minnesota enjoys a climate quite mild, in comparison with that of the more eastern states on the same parallel. The winters are less severe, except at some points in the neighborhood of the great lake; but the weather is uniform, regular, and subject to few or no sudden changes. The summers are temperate, and of sufficient length to bring forth and perfect the numerous agricultural products for which the soil is so well adapted. With abundance of pure water, and a salubrious atmosphere throughout the year, the people cannot but be favored with an uncommon measure of health.

Religion.—There are four beautiful church edifices in St. Paul, the capital, and several others in the towns of St. Anthony Falls and Stillwater. The several denominations of Christians consist of such as are usually found in the New England States.

Population.—The inhabitants of this territory, at the census of 1850, numbered but 6038, exclusive of Indians. But so desirable a country must soon attract towards it large reënforcements from the Northern and Eastern States. The tide of emigration, in fact, is already turned, and is moving with so strong an impulse in that direction, that long before the next decennial enumeration, Minnesota will no doubt have acquired the complement of inhabitants necessary to her admission as an independent state.

MISSISSIPPI, one of the most southern states of the American Union, was formerly included in the country claimed by France as a part of Louisiana. As early as 1716, a French colony settled on the spot now occupied by the city of Natchez, where they erected a fort; but in 1729, the inhabitants, together with those of two other settlements in the vicinity, were exterminated by the neighboring Indian tribes, only three or four persons, out of 700, escaping the general massacre. The territory, for many years thereafter, remained exclusively in possession of the savages. In 1763, France ceded the whole territory east of the Mississippi River to Great Britain, the subjects of which power soon afterwards occupied and strengthened the various posts, and began to settle around them. After several changes of proprietorship, and much negotiation, during some 15 years prior to 1798, between England, Spain,

and the United States, the country lying east of the Mississippi, and west of the boundary of Georgia, was, in 1800, erected into a distinct territorial government. It then comprehended both Alabama and Mississippi, under the name of the latter. In 1817, a separation took place, and Mississippi, having formed a constitution, was admitted into the Union as an independent state.

Boundaries and Extent. — This state is bounded north by Tennessee, east by Alabama, south by Louisiana and the Gulf of Mexico, and west by Mississippi and Pearl Rivers, dividing it from Arkansas and Louisiana. It extends from $30^{\circ} 10'$ to 35° north latitude, and from $88^{\circ} 10'$ to $91^{\circ} 35'$ west longitude, and contains 47,156 square miles, its extreme length being about 338 miles, and its breadth averaging 135.

Government. — The governor is chosen every two years by the people, and is eligible only for four in any period of six years. The Senate consists of 30 members, one half elected every two years; the term of service of each is four years. The representatives, 91 in number, are chosen biennially. The people also elect judges, state secretary and treasurer, chancellor, and sheriffs. White male residents in the state for one year, being 21 years of age, enjoy the right of suffrage. The legislature meets at Jackson, in the month of January, every other year.

Judiciary. — The state is divided into three judicial districts, in one of which, every two years, a judge of the High Court of Errors and Appeals is chosen for six years. Circuit Courts are held in seven different districts, by judges resident and chosen therein, and have original jurisdiction of all criminal cases, and in civil cases involving more than 50 dollars. The Court of Chancery has full equity powers.

Education. — There are several colleges in the state, which are generously endowed and in flourishing condition. Academies and other literary institutions are numerous and well sustained. Common schools are also established throughout the state. In 1840, there were 8360 white inhabitants above the age of 20 years who could neither read nor write.

Finances. — The receipts into the state treasury for the year ending 30th April, 1850, amounted to \$379,402.63, and the expenditures during the same period to \$284,999.58. The sources whence the revenue is derived are, a state tax, internal improvement, sinking and other funds. The chief items of expenditure are for judicial and legislative purposes. Among the enumerated items per last returns is one of 17 cents, as the contribution of the state for common schools — the support of these institutions being confided, under special laws, to the several counties. The state debt, incurred for banking purposes, amounted, in 1840, to \$7,000,000.

Surface, Soil, &c. — For about 100 miles inland, from the junction of the southern border of the state with the Gulf of Mexico, the surface is low and generally level, presenting a series of swamps and woodlands, overgrown with cypress and pines, with occasional open prairies, and flooded marshes. The land then becomes more elevated and uneven, and so continues to the northern extremity of the state, but nowhere rises to a height sufficiently lofty to deserve the name of a mountain. A vast tract of table land extends over much of the state, terminating in the low coasts of the Mississippi River. This produces, in its natural state, an immense growth of oak, maple, ash, and other timber, together with an undergrowth of grape-vines, spicewood, papaw, and other plants. The soil throughout is naturally very fertile, especially those alluvial lands on the river banks, which are not liable to inundation. The staple product of the state is cotton, which is raised in great abundance; and, by slight cultivation, the soil yields profusely Indian corn, rice, wheat, rye, and other grains, sweet potatoes, indigo, tobacco, melons, grapes, figs, apples, plums, peaches, lemons, oranges, &c.

Rivers. — Besides the Mississippi, which washes the western margin of the state by its windings through a space of 530 miles, the Yazoo is the most considerable stream which flows wholly within the state; this is 200 miles in length, passing through a healthy region, affording navigation for large boats some 50 miles, and emptying into the Mississippi near Vicksburg. Big Black River is of the same length, is alike navigable, and enters the Mississippi near Grand Gulf. Pearl River rises near the centre of the state, and in part divides it from

Louisiana. There are several other rivers of considerable magnitude; as, the Tombigbee, Homochitto, Pascagoula, &c. The state has a sea-coast of 70 miles, but no harbor sufficient for the admission of large vessels. Pascagoula Bay, 65 miles long by 7 wide, affords some inland navigation; but its entrances admit no craft drawing more than 8 feet of water.

Internal Improvements.—Several railroads have been completed, or partially finished, within the state, and others have been projected. The most extensive work of this kind commences at Vicksburg, and proceeds in an easterly direction, partly across the state. Another extends from Natchez, and either intersects or is intended to intersect the former. The state presents numerous opportunities for advantageous public improvements, which in due time will doubtless be prosecuted.

Minerals.—Mississippi is probably not rich in mineral products; at least no extensive investigations of her resources in this respect have yet been made. Clay, of good quality, suited to the manufacture of pottery and bricks, abounds in various localities; and sundry descriptions of pigments have also been found. It is not known whether any coal formations, or any indications of metallic deposits, have yet been discovered.

Manufactures.—There are in the state a number of cotton factories, on a small scale, several mills of considerable importance for the manufacture of flour, and numerous other establishments, producing most of the articles required for domestic consumption or family use. The amount of capital employed for manufacturing purposes, in 1840, was less than \$2,000,000.

Indians.—Large portions of the northern and eastern sections of the state are still held by the Choctaw and Chickasaw Indians. These tracts include some of the best lands in the state, abounding in broad and fertile prairies, which are well cultivated by their owners, who possess also large numbers of cattle, horses, swine, and sheep. These Indians are intelligent and industrious, many of them being good mechanics. The females, also, are expert at spinning and weaving.

Population.—Between the years 1820 and 1830, the population of Mississippi increased more than 80 per cent.; and between the latter year and 1840, the increase was more than 175 per cent. Of a population of 175,000, upwards of one half were slaves. The people are almost exclusively engaged in agricultural employments. Population in 1850, 606,555.

Climate.—For the most part the climate is decidedly healthy. The low country is of course subject to the ordinary diseases which prevail throughout all similar regions in the Southern States. But in the upper districts, the atmosphere is pure, and the climate, though variable, is temperate and salubrious.

Religion.—The most numerous of the religious denominations are the Methodists and Baptists—the former, compared with the latter, numbering as 3 to 1. The Presbyterians are next in numerical order; and the Episcopalians have several flourishing parishes.

MISSOURI is one of the Western — or, at present, more properly, one of the Central — states of the American Union. It formerly composed a part of the extensive tract, which, under the name of Louisiana, was purchased of France by the United States in the year 1803. In the following year, that portion of the country which now forms the State of Louisiana was set off from the residue, and denominated the Territory of Orleans; the remainder being styled the District of Louisiana, until 1812, when the name was changed to the Territory of Missouri. Another division took place about eight years afterwards, and in 1821 the state was formed out of a section of that territory, and duly admitted into the Union. Some of the places within the present limits of Missouri were settled as early as the year 1764, by hunters and traders generally from the north and east. In that year the city of St. Louis was founded, now the largest commercial place on the Mississippi, excepting New Orleans. St. Charles, on the Missouri, was established in 1780, and New Madrid on the Mississippi, in 1787.

Boundaries and Extent. — Missouri is bounded north by the State of Iowa; east by the Mississippi River, which separates it from the States of Illinois, Kentucky, and part of Tennessee; south by the State of Arkansas; and west by the Indian Territory, and by the River Missouri, dividing it from the Deserts of Nebraska. It extends from 36° to $40^{\circ}36'$ north latitude, and lies between 89° and $95^{\circ}45'$ west longitude. Its area is estimated at 67,380 square miles, being about 278 miles in length by 235 in breadth.

Government. — The governor and lieutenant governor are chosen, by a plurality of the popular votes, for four years, and are not eligible for two terms in succession. The lieutenant governor is *ex officio* president of the Senate. The legislature consists of a Senate, in number not less than 14 nor more than 33; and a House of Representatives, not to exceed 100 in number. The former are chosen for four years — one half every second year; and the latter every second year, in counties, to serve two years. The legislature meets biennially, on the last Monday in December, and the members receive three dollars *per diem* for sixty days of the session, after which their pay is reduced to one dollar — a feature that might be profitably adopted in other states.

Judiciary. — The Supreme Court, having appellate jurisdiction only, is composed of three judges, who hold office for twelve years. It holds two sessions annually. There are fourteen judicial circuits, with a like number of judges, who hold office for eight years. Circuit Courts are held twice a year in each county. These have exclusive jurisdiction in criminal matters, with power to correct the proceedings of County Courts and justices of the peace, subject to appeal to the Supreme Court. The supreme and circuit judges are appointed by the governor

and Senate. County Courts are established for each county, and are composed of three justices elected by the people for four years. Their jurisdiction is limited to matters of probate and to county affairs. There are, also, at St. Louis and some other cities, local tribunals, with the ordinary powers of Municipal or Police Courts.

Education. — Several colleges flourish in different quarters of the state, most of them under the special auspices of some religious denomination. A good number of academies and other literary institutions have also been established. The common and primary schools are tolerably numerous; but in 1850 there were over 20,000 white persons above the age of 20 years who could neither read nor write.

Finances. — The amount of the state debt is about \$685,000; the interest whereon is some \$73,000 annually. In 1843, the public debt was less than one half the above sum.

Surface, Soil, &c. — The surface and soil are much varied throughout the state. In some quarters, the lands are undulating and hilly, not rising, however, to a height that can be described as mountainous. Other portions are swampy, and subject to inundations, though heavily timbered, and having an alluvial soil of great fertility. The soil upon the uplands is in general very productive, consisting both of prairies and extensive tracts of woodland; but these are interspersed with rocky ridges and elevated barrens. The low lands, bordering on the rivers, are extremely rich. Indian corn and other grains, hemp, flax, tobacco, and sweet potatoes, are among the products of the field. Cotton is raised in the southern section of the state. Among the forest-trees are various species of oak, walnut, locust, ash, cedar, &c. Yellow and white pine abound in some localities. Grapes are found in profusion among the underwood of the forests; and most of the fruits common to the latitude of the state may be successfully cultivated.

Rivers. — This state is watered by numerous large streams, besides the great Rivers Mississippi and Missouri, the former of which flows along the eastern margin of the state, a distance, including indentations, of 550 miles; while the latter strikes its south-west angle, passes southward along its western boundary, and, crossing its centre, after having traversed the territory 384 miles, enters the Mississippi near St. Louis. The Osage, affording boat navigation for 660 miles, the Grand, Salt, Gasconade, Chariton, Maramec, and St. Francis, are rivers of considerable magnitude.

Internal Improvements. — The people of Missouri are favored with extraordinary facilities for internal intercourse, especially by water communication. These advantages are prosecuted to an incredible extent between St. Louis and all the great commercial marts of the south and west, and intermediate places, by means of steamboats and other craft, which navigate the principal rivers for hundreds and even thousands of miles. Such facilities naturally suggest numerous projects of improvement; and a system of railroads and canals, in all probability, will ere long be superadded. At the session of the legislature in 1851, bills were passed, appropriating \$2,000,000 for expediting the construction of the Pacific Railroad, and \$1,500,000 towards completing the Hannibal and St. Joseph Railroad. This measure caused an immediate flow of emigration into the counties contiguous to the proposed routes. The city of Hannibal, in particular, one of the *termini*, received greater additions to its population within the spring of 1851 than it had acquired during the whole of the three preceding years.

Minerals. — Missouri is remarkably rich in mineral treasures, especially in the value of its lead mines. These are known to occupy an area of over 3000 square miles. They are situated within an average distance of 70 miles from the city of St. Louis. The ore is of that description denominated "galena," and is found, not in veins, but in separate masses. It yields from 80 to 85 per cent. 5,000,000 or 6,000,000 pounds are produced annually. Iron ore, of excellent quality, also abounds. In Washington county, there is a hill some 400 feet in height, three miles in length, and one mile wide at its base, known as the "iron mountain," which appears to be entirely composed of iron ore, yielding some 80 per cent. of the pure metal. There is also another eminence, about 300 feet high, one and a half mile wide at the base, consisting wholly of the species of iron ore called "pilot knob," and which is equally valuable. Copper, zinc, calamine, antimony, cobalt, nitre, plumbago, salt, &c., are among the

mineral products of the same county and the contiguous region. Bituminous coal is abundant in various localities near the Mississippi.

Manufactures.—Iron, lead, and lumber are among the chief articles manufactured. There are also large numbers of grist mills, distilleries, potteries, brick, stone and marble yards, salt works, breweries, carriage and machine factories, and other establishments for the production of commodities requisite for home use, the whole employing a capital of several millions of dollars.

Indians.—There are no organized or distinct bands of Indians permanently settled within the state, most of the indigenous tribes having withdrawn to their allotted country beyond the western boundary of the state.

Population.—In 1810, the population was less than 20,000. During the following ten years, it had increased to upwards of 66,000. In 1830, it numbered 140,000; and in 1840, 383,000, including 58,000 slaves. Population in 1850, 684,132.

Climate.—The central and inland position of the state assures to its inhabitants extraordinary freedom from the sudden and trying changes which are felt by residents nearer the seacoast in the same latitudes. The difference of temperature between the cold of winter and the heat of summer is great—the extreme range of the thermometer being from 8° below zero to 100° above. But the seasons, in their progress, are gradual and uniform, subject to few or no abrupt and violent transitions. The air is pure and salubrious, and the climate may be classed among those most favorable to health.

Religion.—The Methodists are the most numerous of the various religious denominations within the state. Next in numbers are the Baptists; then the Presbyterians, Roman Catholics, and Episcopalians. There are, besides, several congregations of “Cumberland” and “Associate Reform” Presbyterians, and a few Unitarian societies.

NEBRASKA.

NEBRASKA is the name by which an immense wilderness, lying among the north-western possessions of the United States, is now designated. It is bounded on the north by the British possessions; on the east by Minnesota Territory and the State of Iowa; on the south by the Indian Territory, (proper,) the State of Texas, and the Territory of New Mexico; and on the west by the Territory of Utah and Oregon Territory. The Missouri flows along its entire eastern frontier, and the Platte and Arkansas Rivers water its southern borders, while its western limits are formed by the Rocky Mountains. With a vast sweep from the north-west towards the central part of the country, and thence curving to the north, a portion of this lofty chain encloses, as it were, in an amphitheatre nearly one half of the whole region. It reaches from the 38th to the 49th degree of north latitude; its extreme south-eastern point lies in 95°, and its extreme north-western in 114° west longitude. It is between 600 and 700 miles in length, and from 400 to 500 miles in breadth, and contains an area of some 300,000 square miles.

All this broad expanse is yet to be subdivided, and gradually furnished with distinct forms of civil government, or remain as the barren heritage of the untamed races for whose behoof it seems naturally designed. At present, it is almost exclusively the abode of savages and wild beasts, and is traversed by civilized man only through the like necessity which impels him to cross the pathless ocean on his way to countries beyond. Its natural resources have never yet been developed, and little more is known of its topography, its waters, forests, plants, minerals, &c., than what has been gathered by dint of a few partial explorations, or by travellers in their hurried journeys towards Oregon and California.

From its geographical position it must be inferred that its soil, climate, natural products, and capacities for improvement do not differ essentially from those of the states and territories by which it is encompassed. But there are no authentic data from which may be compiled any satisfactory amount of statistical information in the premises.

Maps, exhibiting the outlines of its principal features, have from time to time been constructed and published, wherefrom the names and localities of the most prominent and striking objects — such as mountains, rivers, and lakes — may in some partial degree be ascertained. Reliable and accurate surveys are yet to be undertaken and accomplished *by authority*; until when the inquirer who would obtain exact details must be content with the meagre accounts of casual tourists, or the unauthenticated reports of adventurous visitors from the neighboring regions.

The manifold nations or independent tribes of aboriginal inhabitants sustain different relations to the people of the United States. Some of them, with whom treaties have been made, or negotiations held, are professedly friendly; while others are treacherously hostile, and almost irreclaimable. They are frequently at war with each other, and in all the arts of civilization are generally behind the Indians who reside farther south. The number of Indians occupying the country between the Mississippi and the Rocky Mountains may be estimated at not far from 250,000, including those who have emigrated from the eastern side of the Mississippi, and settled in the Indian Territory proper.

A view of the map of the country presents some striking lineaments, especially in the north-western quarter. The great basin, circumscribed as with a massive wall by the bold curvature of the Rocky Mountains, sends forth countless streams of varied extent, forming the sources of the Missouri Rivér, and supplying the tract throughout with an abundance of watercourses, at remarkably regular distances. These streams are mostly dignified with names upon the maps; but whether their positions, dimensions, and tendencies are correctly delineated, is a question to be determined by future and more exact inspection. The southerly and easterly portions of the country are also amply furnished with those aquatic arteries and veins so necessary to the existence of a nation. The rivers already mentioned, as washing the eastern and southern boundaries, also receive innumerable branches; and there are some important streams which extend quite across from the very bases of the great mountain ridge on the west to the points of their junction with the Missouri, &c. Among the principal of these are the Platte, the Ni-obrarah, the Whiteearth, &c., with their numerous forks, all of which flow in an easterly direction.

NEW HAMPSHIRE. It is generally conceded that the inhabitants of the New England States, as a body, exhibit some peculiar characteristics, when compared with those who dwell in other sections of our widely-extended and diversified Union. And it is known that the varied face of the country, and hence the local facilities for different occupations, together

with the history of different settlements, have all tended to produce diversities of character, habits, and employments.

To these considerations must be added the different views and pursuits of the original settlers, the object of settlement being by no means the same in all the colonies.

Now, it is not pretended that the first Europeans who colonized within the bounds of New Hampshire were, like those at Plymouth, seeking an asylum from persecution for their religion. We know that expeditions for fishing along the coast, and the trade in furs, occupied the attention of the earliest visitors, and that a considerable time elapsed, after the discovery and partial colonizing of the shores, before a regular government could be formed; whereas, at the settlement of Plymouth, the principles on which the power of rule was to be based, and even those who were to exercise that power, were designated and resolved on before the landing of the company.

Very different was the condition of those who commenced the efforts which resulted in establishing the State of New Hampshire. Their arrangements, therefore, consisted more in the regulations of a mercantile company than in a civil legislation, with its provisions for insuring a permanent, dignified administration of well-adapted laws, the result of deliberate consideration. By the necessity of the case, however, this became their condition, in process of time.

No proof is found of actual settlement before 1623. The *precise date* of the settlement, it has been candidly acknowledged, "cannot probably be ascertained."* This acknowledgment, however, relates only to some overt act, connected with settling; since both the year and season of the year are ascertainable.

But the settlements were, for many years, greatly troubled by the conflicting claims of patentees. These claims were derived, originally, from the council of Plymouth, in the mother country. And of them it is remarked by Chalmers, that, "during the fifteen years of the existence of that company, it adopted the policy of conferring on various men several interfering parcels of New England; which has thrown the greatest obscurity over its earliest history; which long occasioned perplexing embarrassments to the different claimants, to the different colonies, and to England."† These transactions have, notwithstanding, been placed in as clear a light as the subject admits, by Dr. Belknap, the accomplished historian of New Hampshire, at a cost of much research. And we learn that Sir Ferdinando Gorges and Captain John Mason, as joint partners, obtaining a title to a territory they called Laconia, extending from Merrimac River to Sagadahock, (or the Kennebec,) and far inland, Mason having previously acquired the grant of another, reaching from the River Naumkeag to that of Piscataqua, and back to their sources, employed men to settle the country. Accordingly, successive establishments were made at Little Harbor and Dover, to which, from other causes, were added those of Exeter and Hampton, forming for themselves severally, in a few years, separate jurisdictions.

Without entering into an account of these various governments, which of themselves were only of short duration, it is sufficient for our purpose to state in this place, that, by the year 1642, they were all absorbed in the general government of Massachusetts. This absorption was not, however, an arbitrary or violent act on the part of that state. In each instance of its occurrence, it was, from the necessity of the case, solicited by the settlements. Their feeble condition, exposed as they were to the attacks of the savages of the wilderness, who, especially about the year 1637, appear to have plotted the destruction of all European settlers along the coast; the want of some superior authority, to act as an umpire in the disputes and difficulties which arose among themselves; and, added to this, a desire to hold their lands not as tenants, but in simple fee,—these were sufficient reasons for wishing to avail themselves of the matured authority, experience, and prosperity of Massachusetts.

The three governments, therefore, of Dover, Exeter, and Piscataqua, or Portsmouth, after struggling for years with difficulties of a civil and ecclesiastical nature, were united to the

* *Farmer and Moore's Coll.* vol. ii. p. 32.

† *Polit. Annals*, vol. i. ch. xvii. p. 472.

settlements in their vicinity to the south; Exeter being first joined, by the authority of the court, to Essex county; and afterwards, with the others, forming, for a time, the county of Norfolk;* their history being blended, for the next forty years, with that of their neighbors. Hampton had, in the mean time, been settled from Massachusetts, and was, therefore, accounted as naturally belonging to that government, although within the present bounds of New Hampshire.†

This latter name was assumed as early as 1629; when, after Gorges and Mason had been for several years united in the possession of a patent from the Plymouth council, embracing "all the lands between the Rivers Merrimac and Sagadahock," before cited, "and extending back to the great lakes and River of Canada,‡ and called *Laconia*," and under which patent their settlements had been made, as we have seen, Mason obtained for himself a new patent. The extent is thus described: "From the middle of Pascataqua River, and up the same to the furthest head thereof, and from thence north-westward, until sixty miles from the mouth of the harbor were finished; also, through Merrimac River, to the furthest head thereof, and so forward up into the land westward, until sixty miles were finished; and from thence to cross overland to the end of the sixty miles accounted from Pascataqua River; together with all islands within five miles of the coast." The territory included within these limits received the name which the state at present bears.

The same council which issued the patent above cited had given to Gorges, in 1621, "a grant of all the land from the River of Naumkeag, now Salem, round Cape Anne to the River Merrimac; and up each of those rivers to the furthest head thereof; then to cross over from the head of the one to the head of the other; with all the islands lying within three miles of the coast."§ It had also, after giving several other discordant grants, sold to a company of gentlemen, named by Hutchinson, || "all that part of New England three miles to the south of Charles River, and three miles to the north of Merrimac River, from the Atlantic to the South Sea." The date of the last patent was March 19, 1627.

It could hardly be expected that grantees of property so indefinite, or, if defined, so inconsistently done, should mutually agree. We are not, therefore, surprised to find that the people of Massachusetts regarded Gorges's and Mason's claims with jealousy, and considered them in a hostile light; nor that the death of Mason, who had been for some time using all his influence to procure a royal order for a general governor to be appointed for all New England, and thus to supersede those of Plymouth and Massachusetts, should be recorded by Governor Winthrop as a "mercy."¶ The conflicting claims we have alluded to must, almost necessarily, have originated hostile feelings, however we regret and disapprove them.

Gorges, in his History of New England, declares, "that he could hardly get any, for money, to reside" in the country he claimed; but the change of times and interests soon made it a place of refuge for persecuted religionists, and the settlements then advanced rapidly, until, attracting the attention of the royal government, "it was especially ordered, by the king's command, that none should be suffered to go without license." Yet, though destitute of royal patronage, the settlements nevertheless "grew," as Colonel Barre, in the period of the American revolution, declared of them before the British Parliament, "by the neglect of them," chargeable on their mother country — a neglect which rendered their own most strenuous exertions necessary, and finally successful.

* Including Salisbury, Haverhill, Hampton, Exeter, Portsmouth, and Dover.

† See *Belknap's History of New Hampshire*, chaps. i. ii. iii. iv.

‡ *Wood*, in 1634, says, "The place whereon the English have built their colonies is judged, by those who have the best skill in discovery, either to be an island, surrounded on the north side with the spacious River *Cannada*, and on the south with *Hudson's River*, or else a *Peninsula*, these two rivers overlapping one another, having their rise from the great lakes, which are not farre off one another, as the Indians doe certainly informe us." Such, at that time, was their geography of the country. *N. E. Prospect*, pp. 1, 2.

|| *History Massach.* vol. i. p. 16.

¶ *Winthrop's Journal*, vol. i. 187, and *Dr. Savage's* note there.

In fact, to this principle we must refer the difference between the success that attended on the settlers of the Bay State and that of the people employed by Gorges and Mason. This is sensibly and strikingly described by the judicious Belknap. "The difference between a man's doing business by himself, and by his substitutes," observes the doctor, "was never more finely exemplified than in the conduct of the Massachusetts planters, compared with that of Sir Ferdinando Gorges; what the one had been laboring for above twenty years, without any success, was realized by the others in two or three years; in five they were so far advanced as to be able to send out a colony from themselves, to begin another at Connecticut; and, in less than ten, they founded a university, which has ever since produced an uninterrupted succession of serviceable men in church and state."*

The history of New Hampshire may, with convenience, be divided into four distinct periods. The first will be the period we have just been reviewing—that from the earliest settlements by the English to the union with Massachusetts. The time of that union will form another, consisting of nearly 40 years. The third embraces the royal government of the province, and down to the American revolution, and the fourth what has transpired since.

I. Not much of interest, except that which is purely local, attaches to the history of the inconsiderable communities which were first formed. And yet it is no trifling subject for the contemplation of humanity. Courage and fortitude were needed, to face and endure the distresses of an American wilderness, 3000 miles from home. The names, therefore, of Hilton, Waldron, Williams, Neale, Wiggin, Chadbourne, and others, their associates, will be cherished not merely by their posterity, but by a grateful community of free, prosperous men, who inherit the result of their sacrifices and labors. Nor less in the church of Christ will the recollections of piety and faith dwell on the founders of the sacred institutions under the gospel, by which light was communicated to the ignorant, and consolation to the afflicted, and benefit to all. This will perpetuate the names of Dalton, Dudley, Leveridge, Gibson, Parker, and even Wheelwright, notwithstanding his occasional deviations and errors; nor, in the lustre of a succeeding period, will their "less light" be overlooked, or "shorn of its beams."

It must not also be forgotten, that the original proprietors, especially Gorges and Mason, to whom others, discouraged by the multiplied and long-enduring difficulties they met, sold their respective shares, were themselves great losers by the enterprise. Neither of them lived to see the success of his expenditures, large and liberal as they were, and reckoned at £20,000 sterling for each of them; but they transmitted to disappointed heirs a succession of lawsuits, crushed hopes, and mortifications. Yet they seem to have cherished to the last an approbation of their unrewarded efforts, and to have encouraged themselves in the hope that posterity would still reap important benefits from them. Let their names, then, be had in honor, and their example commend to their successors the exercise of that public spirit, which "seeketh not its own;" but, in the overruling providence of God, secures, though perhaps undesignedly, in many instances, the welfare of coming thousands.

II. A new scene opens in the next period. It presents, indeed, not a species of independent sovereignty, with which, apparently, some had flattered themselves, but—what is of higher moment in the scale of human enjoyment and progress—safety, encouragement, and aid. All that Massachusetts had realized she was ready to share; and perhaps there is hardly to be found in history an instance wherein political power was exercised in a more paternal manner; nor, a few instances only excepted, its exercise met with more of grateful recognition and willing subjection. Often did it occur, say the faithful recorders of the time, that, while the people had the acknowledged right to elect into office in their several towns such of their fellow-citizens, or, rather, fellow-subjects, as they might prefer, they yet requested the court to nominate and appoint them—a course of conduct which very few of the sturdy republicans of succeeding times would be disposed to adopt.

In proof of the exercise of the disposition now alluded to, and such a proof as is peculiarly

* Life of *Gorges*, in *Amer. Biogr.* vol. i. p. 331.

attractive, when the important and cherished seat of learning at Cambridge needed a substitute for its old and humble building of wood, contributions for reëdifying the structure with brick were liberally bestowed. "Portsmouth, which was now become the richest" of the New Hampshire towns, charged itself with "£60 per annum for seven years; Dover gave £32, and Exeter £10 for the same laudable purpose."* At a subsequent period, we shall find this example of a wise liberality to the cause of good learning followed by the government of the province in a highly valuable donation to the library of Harvard College, notwithstanding its location in a neighboring community.

These instances it is delightful to record; for they tended to prepare the way for that wider union of interests which was, in process of time, to be developed in all its vast and important bearings. Indeed, at the commencement of the period we are now reviewing, a measure fraught with consequences inappreciable, perhaps, by those who engaged in it, was adopted in the confederacy of colonies effected in 1643. New Hampshire shared in the benefits of this judicious and necessary arrangement, being included in Massachusetts. The other parties were Plymouth, Connecticut, and New Haven. And it cannot escape the notice of any who attentively observe "the leadings of divine Providence," that, in this manner, while the present perils of their great enterprise prompted these governments to counsels of fraternal union, they were preparing gradually the way for the final INDEPENDENCE OF THEIR COUNTRY.† Probably, without a similar course, they could hardly have sustained the horrors of the Indian war of 1675, and triumphed over Philip and his widely-extended confederates.

It deserves mention here, that, although the inhabitants of Massachusetts had formed for themselves what may be termed a "test act," and admitted none to "the freedom of their company," and thus to the bearing of office among them, but such as had been received into some one of the churches, — a regulation made, as Hutchinson informs us, by the freemen themselves, in 1631, and "continuing in force until the dissolution of the government;" that is, while they were under their original charter, — yet, on the admission of the New Hampshire towns, no such order was extended to them; and they elected their officers without the restriction. A similar course was held subsequently with regard to Maine. Thus the way was preparing for a wider toleration, the principles of which were in that age but little understood or felt.‡ It is not improbable, also, that the application of this measure to the New Hampshire towns was of influence in forming their temper to a remoteness from the strict Puritan features which characterized the Old Colony and the Bay State in their earliest times. And, indeed, it was not until 1671 that a Congregational church was gathered in Portsmouth, their capital; there having previously been only an Episcopal church in the town, which was formed in 1638.

III. The way had been gradually preparing for a change of government. The enemies of that system of rule which prevailed in Massachusetts had been, from the very first, busy in their complaints to the crown, and had been often on the point of succeeding, but were remarkably prevented. Thus, in 1635, an effort had been made to cause the surrender of their much-cherished charter. And at the restoration of the monarchy these were renewed, after a comparative quiet, on that subject at least, of near 20 years. But, in the course of a short period, complaints having been made by the heirs of Gorges and Mason, a commission was given by Charles II. to Colonel Nichols, Sir Robert Carr, and two others, to investigate the state of the colonies, particularly in regard to the grievance complained of, apply all proper remedies in their power, and make report. This report, although it failed of effecting all that was intended against the government of Massachusetts, prepared the way for the mission of

* *Belknap*, vol. i. p. 64, F. and M's ed.; also Hutchinson, &c.

† See this confederacy exhibited in an Address of the late Ex-President *J. Q. Adams*. *Mass. Hist. Coll.* III. vol. ix.

‡ In 1665, Dr. *J. Mather*, in a private letter, charges on the commissioners of the New England colonies the declaration, "that they would have liberty given to all sorts and sects of men." — See *Hutchinson*, vol. i. p. 208.

Randolph, which resulted in his advice to separate New Hampshire from that government, and to erect it into a province by itself.

This arrangement was at length effected; and in 1680, at the beginning of the year, John Cutt, Esq., an aged and worthy citizen of Portsmouth, was appointed, by royal authority, president. A council was assigned him, a portion of the members being specially named, with permission to fill up the prescribed number at their pleasure; to which was added a House of Representatives, to be chosen by the people—a form of government which, in itself considered, Belknap characterizes as being “of as simple a kind as the nature of a subordinate government and the liberty of the subject can admit.”* The new president died, however, before the expiration of his year of office, and was greatly lamented, as a gentleman of high moral worth and unblemished reputation. He was succeeded by his deputy, Major Waldron, who had long been distinguished by his public spirit and many services, and was therefore greatly esteemed.

The alteration of the form of government was not, however, allowed to pass off without another trait of genuine feeling, which does the parties great honor. With consent of his council and of the General Assembly, President Cutt communicated, as early as March 25, 1680, to the governor and council of Massachusetts, to be made known at their next session to the General Court of the province, a very grateful letter; “first to acknowledge,” says he, “your great care of us, and kindness towards us, while we dwelt under your shadow; owing ourselves deeply obliged, that you were pleased, upon our earnest request and supplication, to take us under your government, and ruled us well, while we so remained; so that we cannot give the least countenance to those reflections that have been cast upon you, as if you had dealt injuriously with us.” They then profess as follows: “no dissatisfaction with your government, but merely our submission to divine Providence, to his majesty’s commands, to whom we owe our allegiance, without any seeking of our own, or desires of change, was the only cause of our complying with that present separation from you that we are now under; but should have heartily rejoiced, if it had seemed good to the Lord and his majesty to have settled us in the same capacity as formerly.” They add, “We hold ourselves bound to signify, that it is our most unfeigned desire, that such a mutual correspondence betwixt us may be settled, as may tend to the glory of God, the honor of his majesty, whose subjects we all are, and the promoting of the common interest, and defence against the common enemy, that thereby our hands may be strengthened, being of ourselves weak, and few in number; and that, if there be opportunity to be any ways serviceable unto you, we may show how ready we are thankfully to embrace the same.” They close with saying, “We subscribe, wishing the presence of God to be with you, and craving the benefit of your prayers and endeavors for a blessing upon the heads and hearts of us who are separated from our brethren.” †

A document like this is well worthy of transmission to posterity. But, after the year’s service of Walter Barefoote, who was one of Randolph’s friends and abettors, the next administration, that of Cranfield, was unpleasant in the extreme. His self-seeking spirit, his contempt for the inhabitants, whom he found to be not more than four thousand in number, his tyrannical exactions, and his persecution and oppression of the respected minister of Portsmouth, the Rev. Joshua Moody, whose name will ever be held in affectionate respect, alienated from him the minds of the people, and caused them to rejoice when, chagrined and disappointed, he left them for Barbadoes.

We have not room, in this department of the present work, to enter into particulars of the history of so many changes as occurred in the administration of government, further than to say, that New Hampshire was again united with Massachusetts, under the presidency of Joseph Dudley, in 1686; also under that of Andros in 1687, and of Bradstreet in 1689. From 1692, however, the separate government obtained again, under Usher, Partridge, and Allen, for ten years; when Dudley was once more appointed governor, having Massachusetts also

* Hist. of N. H. p. 89, F. and M.’s edition.

† See the whole paper in *Hutchinson*, vol. i. 295, 296.

under his charge. The two governments were thus again united, and so continued from 1702 to 1741, sharing in each other's sympathies, and in weal or woe. In the last-named year, Benning Wentworth, a graduate of Harvard College, was appointed governor, and succeeded in that office by his nephew, John Wentworth, in 1767, whose term of service closed but with the revolution.

IV. The revolution produced, of course, its own heroes, as every period of such excitement must. But there had been a long training of them, unknowingly, as throughout our country. New Hampshire furnished her full quota of these, several of them reared in the hardships of Indian warfare, or in the laborious occupations of husbandry; and not a few were experienced in those scenes of conflict between Britain and France which ended in the reduction of Canada. A few years only after that event, the discussion of stirring questions between the colonies and the mother country called forth the best talents. The right of Parliament to tax, without the privilege of representation vested in the subject, and thence without his consent, was boldly denied. The stamp act excited alarm, and was resisted. Feudal institutions were reviewed, in an essay by the elder Adams, in 1765, and the canon law investigated; and, in short, the doctrines of civil freedom began to engage the public mind long before the actual INDEPENDENCE of the country was seriously contemplated.

The country, too, had gained strength and wealth. Of both these New Hampshire partook. Ship-building, from the facility of obtaining every kind of lumber, flourished on her scanty seaboard. Vessels of war had been for many years constructed within the waters of Piscataqua, which form almost her only harbors from the sea; and her merchants were known abroad, and their connections extensive and profitable at home.

Besides this, the increase of population in the country towns became observable. They had been gradually settling, after the disputes with the heirs of Mason were in good degree adjusted, and more especially after the purchase made of their claim by a company of New Hampshire gentlemen, in 1746, which had introduced an increase of agricultural products, by encouraging a more general acquisition of farms, the cultivation of which had been found the true source of wealth and general prosperity.

In addition, a new interest was given to the great subject of EDUCATION. We have before alluded to the regard shown to Harvard College. At the destruction by fire of its library, in 1764, under the government of Benning Wentworth, a generous donation was made, in order to replace it.* But, under the succeeding administration of his nephew, a magistrate distinguished for learning, good judgment, and public spirit, and therefore deservedly popular, the foundation was effected of a university within the state itself. The application for public aid by the Rev. Dr. Wheelock, and his offer of locating his institution where the greatest encouragement might be had, elicited such returns abroad, and especially such grants of land from the General Assembly, as fixed Dartmouth College at Hanover, in the county of Grafton, by royal charter, 13th December, 1769. The rank of this institution is high among the colleges of New England and the best literary establishments of the Union.

To recount the catalogue of worthies, whose names impart a lustre to their native state, and give the history of their lives, pleasing although it would be, cannot within the limits of this introductory sketch be admitted. The memories of Stark and Sullivan, and of Pepperell at an earlier period, who should be reckoned, probably, to New Hampshire, though locally of Maine, of Dearborn, and other military men, will not be suffered to perish. Those of Meshech Weare, the first president of the state, after the commencement of hostilities with Great Britain; and the governors, Langdon, Gilman, Smith, and Plumer, not to mention

* "The province of New Hampshire not having as yet any college of its own to divert its interest from Harvard College, hitherto the Alma Mater of her educated men as well as those of Massachusetts, the General Assembly of that province, by the recommendation of Governor Benning Wentworth, who had been applied to by the corporation on the subject, voted £390 sterling for the purpose of purchasing books for the library. A catalogue was sent to the Rev. Dr. East Aporp, then in England; and by his care books to the number of 743 volumes, enough to fill three quarters of an alcove, were purchased with that sum." — See *Peirce's Hist. of Harvard University*, edited by the late Hon. J. Pickering, Esq.

others of merit who have honorably filled the chair of state; of Mason, and of Webster, the former of whom has recently been lamented as one of the first, if not the first, of the lawyers of New England, and the latter happily living, as a glory of his birthplace, the able and successful expounder and defender of the constitution,— will pass down to posterity with still increasing esteem, and do honor to New Hampshire. They will excite the virtuous emulation of her aspiring youth, and tend to guide their steps to eminence.

Nor should the *religious interests* of the state be overlooked. These have been superintended by a ministry consisting of, apparently, as sound and faithful men as can be found laboring together in any state of our Union, among an equal population. A recent review of their history has been taken; and its well-informed author, addressing “the general association,” a body which dates its origin in 1747, declares, “Of 686, who from the first have filled the office of pastors in our churches, but about 150 now survive. All settled previous to 1780 are starred on the register of their names. Of those settled between 1780 and 1800, we can find but eight among the living, and not one of them in the active duties of the ministry. But though dead, they yet speak. Some of them experienced great trials and hardships for Christ’s sake, enduring perils in the wilderness and perils among savages. But they were strong in faith, constant in labors, enduring unto the end. Never, probably, has there existed,” he adds, “through a period of more than two centuries, a succession of one class of ministers more united in sentiment, more harmonious in practice, more consistent in example, more free from ambition and envy, and the strife of controversy, more self-denying, more useful as citizens, and more respected in their several fields of labor, than the Congregational and Presbyterian ministers of New Hampshire. A few, indeed, though very few, have proved themselves unworthy of their calling and office. Some have renounced their first faith, but the great body of them have stood firm amid changes, and were found faithful unto death.”*

The writer then notices the closing scenes of the lives of several of the pastors, as evidences of their sincerity and faithfulness; and especially commemorates Moody of Portsmouth, McGregor of Londonderry, Dr. McClintock of Greenland, Hidden of Tamworth, Dr. Harris of Dunbarton, and Dr. Church of Pelham, among those who have given their dying testimonies to “the truth as it is in Jesus.” Many other names are precious to the churches and to surviving friends; and that such a ministry, still more and more enriched with divine grace, may be perpetuated through the coming generations, every Christian patriot must desire; since it is only through the prevalence of the religion of the gospel that any community can truly prosper. For the Christian ministry is the institution of God for human welfare. And its usefulness is found not merely in reference to eternity, but the present life also. Says the commissioner of common schools, in his last Report to the legislature of New Hampshire, “The clergymen of the various towns that I have visited deserve especial notice for the lively interest they cherish in this movement, [to improve the schools,] for the valuable assistance they rendered me in my visits, and for the controlling influence which they exert on the minds of the people in favor of general intelligence and sound learning.”†

Although allusion has thus been made to the important subject of training the youth of the state, and to the promotion of “sound learning,” it yet seems proper to insert in this place a general view of it, with which the compiler of this work has been very obligingly favored by the late Rev. Dr. Cogswell, president of the Theological Seminary at Gilmanton. It is inserted entire, under the head of

“**EDUCATION IN NEW HAMPSHIRE.** The common school system of education,” observes the doctor, “so generally prevalent in New England, was very early adopted by the inhabitants of New Hampshire. In this respect, the state was probably as observant of duty as Massachusetts and Connecticut.

“The first law enacted for the establishment of what are termed ‘town schools,’ was passed in 1647, by the General Court of Massachusetts. The preamble and law are as follows: ‘It being one chief project of that old deluder, Sathan, to keep men from the knowledge of

* Rev. Mr. Bouton’s Hist. Discourse, Aug. 22, 1843, p. 24.

† See Report for 1843, p. 4.

Scriptures, as in former times, keeping them in an unknown tongue, so in these latter times, by persuading them from the use of tongues, so that, at least, the true sense and meaning of the original might be clouded with false glosses, of saint-seeming deceivers, and that learning may not be buried in the grave of our forefathers in church and commonwealth, the Lord assisting our endeavors:—

“*It is therefore ordered by this Courte and authority thereof,* That every townshipp within this jurisdiction, after that the Lord hath increased them to the number of fifty hows-holders, shall then forthwith appoint one within their towne, to teach all such children as shall resort to him, to write and read; whose wages shall be paid either by the parents or masters of such children, or by the inhabitants in general, by way of supplye, as the major parte of those who order the prudentials of the towne shall appointe; provided that those who send their children be not oppressed by paying much more than they can have them taught for in other townes.’

“This law extended to the inhabitants of New Hampshire, as the union between this state and Massachusetts took place in 1641. The ultimate object to be obtained by our Puritan ancestors in these schools was, that their children might be enabled to read and understand for themselves. They were zealous for the maintenance of the Protestant principle of private judgment in matters of religious faith and practice.

“The first law passed by New Hampshire, after it became a province, was enacted in 1693, amid the terrors and distresses of the sanguinary war with the Indians and the French, and shows how regardful of education the people at that time were. The law runs thus: it is ‘enacted and ordained, that for the building and repairing of meeting-houses, ministers’ houses, school-houses, and allowing a salary to a schoolmaster in each town within this province, the selectmen in the respective towns shall raise money by an equal rate and assessment upon the inhabitants; and every town within this province (Dover only excepted during the war) shall, from and after the publication hereof, provide a schoolmaster for the supply of the town, on penalty of ten pounds; and for neglect thereof, to be paid, one half to their majesties, and the other half to the poor of the town.’

“In 1719, a law was passed which ordained that every town having fifty householders, or upwards, shall be constantly provided with a schoolmaster to teach children and youth to read and write.

“In 1783, the voice of New Hampshire on the subject of education was expressed in language worthy of a free and sovereign state, and contained in the constitution of government then voluntarily adopted. It is as follows: ‘Knowledge and learning, generally diffused through a community, being essential to the preservation of a free government, and spreading the opportunities and advantages of education through the various parts of the country being highly conducive to promote this end, it shall be the duty of the legislators and magistrates, in all future periods of this government, to cherish the interests of literature and the sciences, and all seminaries and public schools, to encourage private and public institutions, rewards and immunities for the promotion of — sciences and natural history.’

“Since the adoption of the constitution, the acts of the government in favor of common schools have been liberal. They are now by law established throughout the state, and every child and youth may enjoy the benefits of education proffered by them. For their support, by a law of the state, about \$100,000 is annually raised by a tax upon the people.* The literary fund, amounting to \$64,000, formed by a tax of one half per cent. on the capital of the banks, has been distributed to the different towns. The proceeds of this fund, and also an annual income of about \$10,000, derived from a tax on banks, are appropriated to aid in support of schools, besides what is raised by the several districts themselves.

“There are, according to the last census of the United States, 2127 common schools, and 83,632 scholars attending them, being 1 in every $3\frac{4}{10}\%$ of the whole population of the state, and being a greater number, in proportion to the inhabitants, than is furnished from

* Whole amount raised in 1848, \$147,744.82. — See Report, cited above, p. 43

any other state in the Union, with but one exception. There are only 942 individuals in the state, over 20 years of age, who can neither read nor write, being only 1 to 307 of the population, and being a less number than in any other state, one only excepted.

"The number of academies and high schools in the state is about 70, being 1 to every 4000 inhabitants. The number of students attending them is 5799, being on an average more than 80 to an institution, and 1 to about every 50 of the inhabitants. This intermediate class of institutions between common schools and colleges is generally in a flourishing condition. Most of them are private corporations for public purposes, and need more funds for their support, that they may accomplish with greater energy the work devolving upon them.

"*Dartmouth College*, named after the Earl of Dartmouth, an early benefactor, is one of the most flourishing in the United States, and is situated in the south-west part of Hanover, about half a mile east of Connecticut River, on a beautiful and extensive plain, where there is a handsome village. It was founded by the Rev. Eleazar Wheelock, D. D., and chartered by royal grant in 1769. The funds, which are respectable, were obtained by donations from individuals, and by grants from the legislatures of New Hampshire and Vermont. The buildings are good, and six in number—all of them of brick except one, and most of them bearing names of benefactors."

Boundaries.—This state is bounded north by Eastern Canada, east by Maine, south-east by the Atlantic and the State of Massachusetts, south by Massachusetts, and west and north-west by Vermont. Situated between 42° 40' and 45° 16' north latitude, and 70° 35' and 72° 27' west longitude. Its length is 168, and its greatest breadth about 90 miles, and it comprises an area of about 7987 square miles.

First Settlers.—The first discovery of New Hampshire was in 1614, and the first settlements made by Europeans were at Dover and Portsmouth, in 1623; only three years after the landing of the Pilgrims at Plymouth.

Government.—The executive power is vested in a governor and five councillors, chosen annually by the people. The legislature consists of the Senate, comprising 12 members, chosen in 12 districts, and the House of Representatives, chosen annually in the month of March, every town having 150 ratable polls being entitled to send one, and an additional representative for every 300 additional polls. The legislature assembles annually at Concord, on the first Wednesday of June.

All male citizens, of 21 years and upwards, except paupers and persons excused from taxes, have a right to vote for state officers—a residence of at least three months within the town being required to entitle the person to vote.

Judiciary.—The Superior Court of Judicature consists of a chief justice and two associate justices, who hold one term annually in each of the ten counties of the state, for the hearing and determining of questions of law, and petitions for divorce. This court is also vested with chancery powers.

The judges of the Superior Court of Judicature are, *ex officio*, judges of the Court of Common Pleas. This court, before whom all actions for the recovery of debts and the enforcement of contracts, and all jury trials, are brought, consists of one of the justices of the Superior Court, or one of the justices of the Circuit Court of Common Pleas and of two county judges, who are generally appointed from among the yeomanry, whose principal duty it is to attend to the ordinary business of the county, its roads, expenses, &c. Terms are held semi-annually, in each of the counties.

Most of the *religious denominations*, which are found in the country at large, appear in New Hampshire, as might be anticipated from the freedom of religious inquiry and profession. In numbers, the *Baptist* denomination ranks next to the *Congregationalists* and *Presbyterians*. But the *Episcopal* branch of the church of Christ was early founded in the colony, and was greatly encouraged by several of the royal governors. The *Methodists* are numerous, and there are communities of *Friends*, or *Quakers*. But it is believed that the many important interests of society, in which good citizens may unite without infringing on a good conscience, are tending to soften the asperities of religious controversies, and to bring the community more

and more into a state of mutual forbearance, if not of mutual esteem. Thus Bible societies, and societies for the promotion of temperance, the associations which spring out of the great cause of education, and those which relate to agriculture, mechanic arts, general science, and mutual improvement in knowledge, especially by lectures and the founding and use of social libraries, all tend to occupy healthily the powers of the mind, and produce or promote that condition of civilization which becomes a free, vigorous, moral, and Christian state.

That such advances are really making is evident to the observer. They have, indeed, been gradual, but actual. The early colonists were often almost disheartened at the prospect before them, and complained of the difficulty of procuring a subsistence. It is well remarked by Dr. Belknap, that they too much neglected the cultivation of the soil, whose productiveness they had not properly tested, while their chief attention was given to the fishery, the lumber trade, and the procuring of furs. Many temptations, too, were thrown in their way, as occurred to other settlers in New England, by invitations to settle elsewhere. Lord Saye and Sele urged the colonists to people Barbadoes, where he possessed an interest. Cromwell, at a subsequent period, invited the tried and faithful Puritans to settle in Ireland, where the province of Ulster had long been devastated, and stood in need of inhabitants; or to enter on his new conquest of Jamaica, and become West India planters. Few, comparatively, however, were prevailed on to go; and those who staid became more and more accustomed to the country, and attached to it.

And now, what is the result? A healthy, active, intelligent, and industrious population is found, even among the mountain fastnesses of "the Granite State," not unaptly characterized as the Switzerland of America. They subdue the soil, and it yields its treasures; and if not in so great abundance of cereal grains, at least in valuable pasture—the grazing interest being very considerable throughout the state. Yet the improvements of modern agriculture are noticed and adopted. In islands of the beautiful Winnipiseogee—a favorable location, it must be confessed—136 bushels of Indian corn have been raised on the acre!* One would suppose that the fertility of the western prairie could offer little temptation to the farmer who might produce such a crop, and remain among his own paternal fields; especially when the contrast is made between the healthiness of a northern climate, in a high, hilly region, pure water flowing plentifully, all facilities for happily training a family; and a country where, indeed, labor is comparatively light, land cheap, and winters lose much of their rigor and length; but fever and ague sap the constitution, and send back the adventurer a lean, sallow invalid for life, or lay him prematurely in the grave.

Of recent years, the legislature has, in its wisdom, encouraged the investigation of the mineral treasures of New Hampshire. The employment of Dr. C. T. Jackson for this purpose has resulted in the discovery that this state is richer in this respect than any of its sisters. We do not say that it has the gold of California,—as, happily for its inhabitants, it has not,—nor that of North Carolina or Georgia; but the variety of its minerals is great, and the deposits of several of the most useful, if not most costly ores, are not infrequent. Grant that it abounds in granite and in ice. It has also a hardy and sagacious population, which can make that ice and granite articles of profitable commerce.

The increase of manufacturing establishments, in which scientific skill is tasked to mould the raw material into useful fabrics and forms, renders the possession of water power a great desideratum. In few spaces of equal extent, it is believed, does there exist a greater water power than in this state. And human ingenuity will not be backward in turning this encouraging circumstance to profit. Statistics of several establishments will be found in the following work, under the heads of their respective localities.

Of all the features of the state, the White Mountains must be regarded as not only the most prominent, but the most interesting. Forming the highest land in North America east of the Rocky Mountains and the Andes, they have become a favorite resort of the tourist, who is in search either of health or pleasure. Dr. Belknap supposed that the highest peak

* See Dr. Jackson's Agricultural Report.

would be found to be, when accurately measured, — which in his day it had not been, — over 10,000 feet high. But since that period it has been satisfactorily ascertained that it falls short of 7000. The ascent, perilous as it has been accounted, is often effected, and generally repays the task. But the remembrance of those dreadful avalanches, which, in one melancholy instance at least,* produced havoc, and ruin, and loss of life, will long impress the imagination seriously, and give solemnity to the wild solitudes of the mountains.

The engineer will think and calculate otherwise. And his is, in fact, the prevailing view now taken of heights of land and bodies of water. The latter, which abound in the region of the White Mountains, not only give animation to a landscape, and irrigate for the agriculturist or cattle-breeder the lands in their vicinage, but, directed by the hand of Science, and duly restrained and managed, facilitate human labor, and lay a foundation for national wealth. For if, as one of this profession † argued, “rivers were made to feed navigable canals,” the elevations where are found the sources of the Androscoggin, Saco, Merrimac, Connecticut, and many other streams, on whose banks and by whose waterfalls villages of manufacturers must rise, will not be contemplated by the practical improver without deep interest.

It is a great happiness, as well as honor, for the state, that its history has been so ably and respectably written, and at so early a period in the development of its resources. Dr. Belknap was eminently calculated to accomplish the work he undertook. It required research and patient labor; but he could labor and persevere, though under great embarrassment and difficulty, unknown, probably, by his successors in the ministry, but requiring in his day all fortitude and faith. His education had providentially fitted him for his task. Brought up under the eye of the New England historian, the Rev. Mr. Prince, whose spirit of accurate and industrious inquiry is celebrated, he had the advantage of consulting his collections, and imbibed a taste for the employment. Prince followed Mather, and Mather drew from Hubbard, and he from Winthrop and Winslow. Belknap completes the chain to our own times; and his history is quoted with that respect and confidence which honor his name, still further honored by the state in being attached to a lately constituted county.

Deficiencies in his work are, indeed, noticed, particularly in articles of natural history and natural philosophy. But, with the progress in science that has since been made, and the facilities for observation which have since been secured, the supply of these deficiencies will be easy. Nor can it be so difficult as it was originally to secure the evanescent tradition of events. The late and lamented John Farmer, Esq., and his living associate, ‡ as well as other members of the Historical Society, have done much to perpetuate New Hampshire history, whether of the state or of smaller communities, or of individual men.

The state is restricted on the sea-coast, and has but one avenue to the ocean. The Piscataqua presents for future improvement advantages that a perspicacious and thriving people will not be long in ascertaining and employing. The railroad from Portsmouth to Concord, opening an easy access to the great north and west, will give to the beautiful harbor of Portsmouth a foreign and domestic commerce hitherto unknown.

Though restricted on the sea-coast, and in this view not to be compared with her sister states of New England, the State of New Hampshire is yet second among them in extent of territory. That it may be filled with a prosperous, happy, exemplary population, who shall enjoy and improve the rich privileges of Christian freemen, which, in the good providence of God, now form their favored lot, and transmit them unimpaired to the latest posterity, is the writer's fervent wish and prayer.

* The destruction of Mr. *Willey's* abode and family.

† *Brimley*, the Duke of Bridgewater's surveyor.

‡ *J. B. Moore*, now librarian of the N. Y. Hist. Soc.

NEW JERSEY is one of the central states on the Atlantic coast of the country comprising the original thirteen United States. The earliest settlement was made in the county of Bergen, between the years 1620 and 1630, by some Dutch people from New York. They were joined by parties of Danes and Norwegians, who, in 1638, were followed by a body of Swædes and Fins, which formed a colony on the Delaware River, and purchased of the aborigines the lands on both sides of that stream, as far as the river was navigable. In 1664, the territory between the Connecticut and Delaware Rivers was granted to the Duke of York, brother to Charles II. The charter included New Jersey, of which the Dutch were forthwith dispossessed by the English; and it was then conveyed to Lord Berkeley and Sir George Carteret. These latter proprietors drew up a form of government, and sent over Philip Carteret as governor, who fixed upon Elizabethtown as his seat of government, in 1665. Sundry political changes ensued, and in 1676 the province was divided, the western part annexed to New York, and the eastern remaining as a separate colony, under the direct dominion of the crown. Six years afterwards, the latter section was assigned to William Penn and his associates. Twenty years subsequently, it was surrendered to Queen Anne, and incorporated with New York, under the government of which both provinces continued until 1788, when they were again placed under the immediate jurisdiction of the British sovereign, and so remained until the royal authority was abrogated by the revolution of 1776. The republican constitution of the state is dated July 2d of that year. During the war with Great Britain, New Jersey suffered more than her proportion of the hardships, and rendered her full measure of the services, incident to that eventful struggle.

Boundaries and Extent.—New Jersey is bounded north by New York State, east by the Atlantic Ocean, south by Delaware Bay, and west by the State of Pennsylvania. It lies between $38^{\circ} 58'$ and $41^{\circ} 21'$ north latitude, and extends from $73^{\circ} 58'$ to $75^{\circ} 29'$ west longitude. Its extreme length, from north to south, is about 160 miles, and its average breadth not far from 50 miles. Its area, by official report, is 8320 miles.

Government.—The government is vested in a governor, Council, and House of Assembly, all of whom are elected annually, the former by the legislative branches in joint ballot, the latter by the people. The Council consists of 18 members, the president of which is, *ex officio*, lieutenant governor, and the Assembly comprises 58 members. No persons are eligible for either of these offices without a previous residence of one year, and the possession of property valued at £1000 in the case of councillors, or at £500 in the case of assembly men. Voters must also have resided within the state one year, and possess property worth £50 “proclamation money.”

Judiciary.—The judicial tribunals consist of a Court of Errors and Appeals, a Court of Chancery, a Supreme Court, and Courts of Common Pleas. The Court of Errors comprises the chancellor, the justices of the Supreme Court, and six other judges appointed for six years by the executive, one of the latter vacating his seat in rotation each year. This court holds four stated terms every year. The chancellor and judges of the Supreme Court are appointed by the governor and council for seven years; the Court of Chancery holds four regular terms per annum, and the Supreme Court the same, the judges of which also hold Circuit Courts quarterly in each county. Judges of the Common Pleas Courts, five in each county, are chosen for five years by the legislature, and hold courts four times a year.

Education.—The state holds an available school fund amounting to \$377,413.01. There are some 1600 school districts in the state; but the system of free school education, judging from the latest returns, does not seem to have met with that favor from the legislature, or that solicitude on the part of the people, which its great importance demands; for it appears that, out of 119,000 children, between the ages of 5 and 16 years, only 70,000 receive instruction; that the average length of time within the year, for which schools are kept, is but nine months, and that the average cost of tuition is \$2.06 per quarter for each pupil. New Jersey, however, has long sustained a large number of literary institutions of a respectable order. At Princeton, there are the College of New Jersey, an ancient and distinguished establishment, and the Presbyterian Theological Seminary, of like eminence. At New Brunswick is Rutgers, formerly Queen's College, founded in 1770, with which also is connected the Theological Seminary of the Reformed Dutch church. There are likewise numerous academies, &c., in all parts of the state. The Friends have several respectable schools under their particular charge.

Finances.—The absolute debt of the state, on the 1st of January, 1850, was \$67,595.82, the annual interest upon which amounted to \$4075.84. The productive property of the state was valued at \$262,397.53, and the unproductive at \$764,670.60; the latter consisting of the "surplus fund" received from the United States, which has been loaned without interest to the respective counties. The revenues are derived mainly from transit duties on railroads and canals, dividends on stocks of ditto, taxes on railroad stock, interest on railroad bonds, special loans, &c. The aggregate receipts from these sources, for the year ending on the above-mentioned date, amounted to \$125,690.82, and the public expenditures for the same period were \$126,552.75. There are between 20 and 30 banks in the state, with an aggregate capital of from three to four millions of dollars.

Surface, Soil, &c.—The face of the country at the north is rather mountainous and broken, being crossed by portions of the Blue Ridge and other elevated ranges. From this point to the central part of the state the land is gradually depressed, and becomes undulating. At the south it is still lower and more level. The soil in the hilly region furnishes many excellent tracts for grazing; in the centre it is quite fertile; while towards the Atlantic coast it is sandy and naturally sterile. The latter district, however, by manual toil, has been made uncommonly productive, the proximity of two great markets having stimulated the industry and the agricultural skill of the inhabitants. Wheat and all the grains peculiar to the Middle States, potatoes, all descriptions of garden vegetables, and fruits of the finest sorts, as peaches, apples, pears, plums, cherries, strawberries, &c., are raised in great profusion, wherever due regard has been given to the improvement of the soil.

Rivers.—Several navigable streams intersect the state or flow along its borders, furnishing fine mill sites and abundance of water power for all needed manufacturing purposes. Besides the Hudson and the Delaware, which wash the eastern and western shores, the chief rivers are the Raritan, navigable for 15 miles, with important waterfalls beyond; the Hackensack, of about the same navigable extent, though supplying water power for about 20 miles farther; the Passaic, Salem, Cohanzey, and others, all more or less convertible to the purposes of commerce or manufactures.

Internal Improvements.—Among the most important works of internal improvement are the Morris Canal, the Delaware and Hudson Canal; the Camden and Amboy, the Paterson and

Hudson, the New Jersey, the New Brunswick and Trenton, the Morris and Essex, and other railroads, with divers branches. These pass through various quarters of the state in almost every direction, and afford great facilities for internal and external commerce. Most of the trade of the state is carried on or benefited by means of these valuable public works. They afford convenient egress to the vast quantities of agricultural produce, cattle, domestic animals, poultry, manufactured articles, &c., which are annually exported from the state.

Minerals. — Valuable iron, zinc, and copper ores are found in the state, and have been extensively worked, the smelting establishments and numerous furnaces being well supplied with fuel from the great sandy tracts which are covered with forests of pine timber.

Manufactures. — The manufacturing branches principally pursued in New Jersey are those of iron, glass, cotton, and woollen. There are also large numbers of paper mills, tanneries and other manufactories of leather, potteries, hat, cap, and bonnet factories, distilleries, machine shops, flouring mills, ropewalks, &c.; besides which, great quantities of home-made or family articles are annually produced.

Indians. — Few, if any, of the descendants of the aboriginal tribes are found within the limits of the state.

Population. — The character of the people has undoubtedly been essentially modified during the lapse of the several generations that have successively followed in the train of time, since the date of the earliest settlements. But few of the characteristics of the original emigrants from the north of Europe are now discoverable. Most of the inhabitants probably are of English extraction. The last census (1850) shows a population of near 500,000, including about 22,000 free colored persons.

Climate. — New Jersey enjoys a mild and healthful climate. Towards the sea-coast, the air is pure, and the temperature varies less between the seasons than in the high regions at the north, the thermometer seldom indicating a greater heat in summer than 87°, or less than 13° in winter. In the mountainous districts, the weather in winter is quite severe.

Religion. — The Presbyterians are the most numerous; the Methodists, Baptists, Dutch Reformed, Episcopalians, and Quakers nearly equally divide the remainder of the population. There are, however, some Roman Catholics, Congregationalists, Universalists, &c.

NEW MEXICO.

NEW MEXICO (TERRITORY.) The region now comprehended within the limits established by Congress as the United States Territory of New Mexico formerly constituted a portion or portions of a Mexican province. During the war between the United States and Mexico, (1846,) General Kearney took peaceable possession of Santa Fe, the capital of the province, and established a temporary government therein. In the early part of the following year, a revolt against the American authorities took place, and six of the civil officers, including the governor, were barbarously murdered. Several battles were subsequently fought in different parts of New Mexico, in all which the combined forces of the Mexicans and Indians were repulsed. By the treaty of peace in 1848, the Mexican title was cancelled, and the immense country, of which this territory forms a part, became an adjunct of the United States. By the act of Congress, passed September 9, 1850, for defining the northern and western boundaries of Texas, &c., a territorial government for New Mexico was also established.

Boundaries and Extent. — New Mexico is bounded north by the Territory of Utah, and by a part of the scarcely explored wilderness called Nebraska; east by the State of Texas; south by a portion of Texas, and principally by the boundary line between the United States and the Mexican possessions; and west by the State of California. Its eastern quarter extends from the 32d to the 38th degree of north latitude, and the residue of the territory from

the 33d to the 37th. It lies between 103° and 116° west longitude, reaching from east to west about 600 miles, is from 240 to 360 miles in width, and comprises an area of some 200,000 square miles.

Government.—By the act establishing the territory, the governor is appointed by the President of the United States for four years, who must reside in the territory, and is also superintendent of Indian affairs. A secretary of state is appointed in like manner for the same term, who is acting governor in the absence of that magistrate. The legislature is composed of a Council, to consist of 13 members, chosen for two years, and a House of Representatives, consisting of 26, who serve one year. The legislature is elected by a plurality of the popular votes. Its session cannot exceed 40 days. All laws must be submitted to Congress for approval. The right of suffrage is held by all free citizens of the United States, resident for a prescribed period within the territory. By the same act it was required that a census should be forthwith taken, in order to apportion the members of the legislature, according to the number of inhabitants. This was done in the spring of 1851, and the result showed a population of 56,984, exclusive of Indians. The ratio of representation has thereupon been fixed, for members of the Council at 4384, and for those of the House at half that number. The Legislative Assembly convened for the first time on the 2d day of June, 1851.

Education.—After the lands shall be surveyed under the direction of the general government, for the purpose of bringing them into market, two sections in each township are to be set off for the support of schools.

Judiciary.—The judicial power of the territory is vested in a Supreme Court, District Courts, Probate Courts, and justices of the peace. The former is composed of a chief justice and two associates, either two of whom form a quorum. An annual term of the court is held at the seat of government. The judges hold office four years. Three judicial districts are established, in each of which a District Court is held by the justices of the Supreme Court. The above tribunals possess chancery as well as common law jurisdiction. Appeals are allowed to the Supreme from the District Courts, but in such cases there is to be no trial by jury. Appeals are also allowed from the final decisions of the Supreme Court of the territory to that of the United States, in cases involving a sum in controversy of \$1000 and upwards, and also in cases affecting the title to slaves.

Finances.—The sources from which to meet the public expenditures, excepting those provided by Congress, will ordinarily consist of direct taxes, and the income arising from land sales, as is the case generally in all the new states and territories.

Surface, Soil, &c.—The face of the country presents much variety. Stupendous ranges of mountains—portions of the great vertebræ of the continent—traverse the eastern half of the territory from north to south, pierced occasionally by rugged and precipitous gaps, and sometimes by tracts of prairie, affording passage to travellers. This region includes the former provincial limits of New Mexico, and the oldest and most populous settlements. The country on the west of these elevations exhibits immense plains or plateaus, over which are scattered numerous isolated mountains and broken ridges of volcanic origin, the peaks of some of which rise to a great height. The valleys and slopes between the eminences in the eastern section consist generally of very productive land; and the river bottoms, especially near the southern boundary, comprise broad tracts of exceedingly rich soil, adapted to the culture of sugar, and of most of the products of that latitude. The portion of country lying on the Gila and Colorado Rivers, where these advantages are very apparent, will doubtless attract the early attention of settlers. The interior of the western half of the territory, so far as it has yet been topographically examined, is, for the most part, an arid and sterile desert, with the exception of some fertile spots and stunted forests along the margin of streams, or among the nooks of the high lands. The soil in this region seems to be either sandy or to consist of a light, porous clay, bearing a species of coarse grass, said to be good winter fodder for cattle. The country does not abound in timber, but in some locations is overgrown for miles with almost impenetrable thickets of *mezquite* and other thorny shrubbery. Corn, wheat, grapes, peaches, and other grains and fruits, are cultivated in a small way near the villages, and by some tribes of Indians in different parts of the territory; but it is only in the immediate

vicinity of streams that the land may be considered productive, or even inhabitable by civilized beings.

Rivers. — The Rio Grande takes its rise many miles above the northern boundary of New Mexico, flows entirely across the territory, and, after passing for several hundreds of miles between Texas and the Mexican states on the west, discharges itself into the Gulf of Mexico. It is navigable during a great part of its course. The Gila and Colorado are also among the principal streams; the latter a fine river, flowing from the north in a westerly direction, until it strikes the eastern boundary of California, from which point it proceeds southerly between that state and New Mexico, passes beyond their southern limits, and finally empties into the Gulf of California, affording steamboat navigation for 350 miles. There are numerous other streams, some of them very extensive, and most of them tributaries to the rivers already mentioned. The country, as a whole, is poorly watered, either for purposes of internal communication, for the propulsion of machinery, or for appeasing the thirst of men and animals.

Internal Improvements. — There are no public works of the character understood by this caption now existing in this territory, neither is it known that any are in contemplation, beyond that of constructing a road through it, from east to west, to facilitate the progress of emigrants into California. Surveys have been made with this view by military men under the authority of the United States, but the question of the construction of such a work remains undetermined; and it is further problematical whether, if a highway be decided on, it will ever assume the costly and important shape of a railroad. The enervating effect of the climate upon the inhabitants will probably tend to prevent for a long time any attempt at internal improvement by means of works of art.

Minerals. — Evidences of volcanic action abound upon the surface of all parts of the territory; and gold, silver, copper, and iron deposits exist in many places. Mines of the three former metals have been worked in past years to some extent, but discontinued within a short period. All the ordinary geological features peculiar to such a region are discoverable here. The character and composition, and the combinations of the masses which form the mountainous ridges, and other enormous protuberances scattered confusedly over the face of the country, refer to the fires below for the origin of their present appearance, at least, if not for the cause of the general barrenness of the earth around them.

Manufactures. — Nothing can yet be said of the manufacturing genius or industry of those who now constitute the people of New Mexico. Their ancestors, and those of the savages in the same region, were noted for little more in this line than the fabrication of a rude kind of pottery, and some few other sorts of household articles. The territory, or state, — as it may be hereafter, — will probably never become either a manufacturing or agricultural country for any important commercial purposes.

Indians. — The vast wilderness, of which the western half of the territory consists, is peopled by numerous tribes of Indians. Some of these are mild, peaceably disposed, honest, industrious, and hospitable, living in villages and permanent settlements, and obtaining their subsistence mainly by hunting, fishing, and tillage. Others wander about in hordes, living by plunder, and constantly engaged in thievish depredations and bloody warfare. With one of the most formidable tribes of the latter, the Apaches, Governor Calhoun, of this territory, has recently concluded a treaty, whereby they are restricted to such limits as may be prescribed by the United States government, and to form permanent settlements, the United States stipulating to furnish all necessary facilities for tilling the soil.

Population. — The census taken by the civil authorities of the territory showed a population of 56,984; but that of the United States, taken at nearly the same period, (1850-1,) gives a population of 61,547, exclusive of Indians, of whom, perhaps, it is impossible to obtain a correct enumeration.

Climate. — In those mountainous parts where water is easily accessible, the residents may be said to enjoy a good share of health throughout the year; but in other localities, at certain seasons, the heat is extremely oppressive, and the climate decidedly insalubrious. The winters are not uncomfortably cold for any great length of time; but, even at the extreme south snow is by no means uncommon, although the streams rarely freeze. During the march of

Lieutenant Colonel Cooke from Santa Fe to San Diego, in the latter part of October, 1846, snow fell, and his party suffered for about two weeks with cold, though then at the southerly border of the territory. In the vicinity of Santa Fe, about latitude 36° north, on the 31st of December, 1846, the snow was five inches deep.

Religion.—The Roman Catholic, having formerly been the established religion throughout all Mexico, still maintains its ascendancy in this territory. Other denominations, however, are now tolerated, under the laws of the United States.

Curiosities.—Among these, the most remarkable, perhaps, are the ruins of singularly constructed religious temples, and other large edifices, which are occasionally met with upon the sites of ancient Indian or Mexican villages, the inhabitants of which have long since passed beyond the reach of historical research, and left scarcely any traces even of legendary remembrance. The village of Pecos, not far from Santa Fe, furnishes one illustration among many of these extraordinary remains. In various quarters are found vestiges of mounds and other monuments, of strange forms and divers dimensions, the uses of which baffle inquiry or conjecture. Among the extraordinary natural phenomena may be enumerated the high volcanic peaks in the mountainous district near the centre of the territory, and the character of some of the sandstone rocks composing the walls of many chasms and bluffs in the same region. From one of these, which had broken so as to leave a perpendicular face 180 feet in height, Lieutenant Abert, in the course of his topographical exploration in 1846, gathered a number of shark's teeth, shells, and bones of fish. The ruins of the singular structures left by the Aztecs, an ancient race, of common origin with the New Mexicans, once inhabiting several large districts in this territory, are also among the striking curiosities of the country. In their wanderings from a point near the centre of the present northern boundary, they left at different spots many ponderous memorials of their laborious skill, in the shape of immense edifices, designed to serve, it is supposed, as fortified habitations. Near the River Gila, in November, 1846, Captain Johnson, U. S. A., visited one of these ruins, called the "Casa de Montezuma," presumed to be many centuries old, an account of which is given in his journal, communicated to the war department by General Kearney, in 1847.

NEW YORK is the northernmost of what were considered the Middle States at the establishment of the American republic. The first approach to a settlement within its present limits, by civilized Europeans, was made in 1610, by a party under the auspices of a company of Dutch merchants, who constructed a small fort on an island in the Hudson River, not far distant from the site now occupied by the city of Albany. Another fort was erected by the Dutch, in 1612, on York Island, the spot on which the city of New York is built. The whole

territory was then denominated New Amsterdam. In 1614, a body of English from Virginia took possession of it, which they soon after relinquished; and the Dutch continued to hold it thenceforward for about 50 years. During this period, their relations with the settlers in neighboring territories were not uniformly amicable, especially with those in New England. In 1629 it was erected into a regular colony, with a chief magistrate appointed by the Dutch government. He and his successors maintained jurisdiction until the year 1664, when the colony was captured by an English force, under authority of a royal patent, conveying it to the Duke of York, from whom its present name is derived. In 1673, the chief settlement was retaken by the Dutch, but restored in the course of the following year; from which time it remained a dependency of Great Britain for upwards of a century, until, through the results of the American revolution, it became an independent member of the federal Union. The first republican constitution was formed in 1777: this continued in force until 1822, when it was remodelled. In 1846 it was again revised; and, in the shape then given it, still remains the supreme law of the state.

Boundaries and Extent. — The state is bounded north by the British province of Canada; east by the States of Vermont, Massachusetts, and Connecticut; south-east by the Atlantic Ocean; south by the States of New Jersey and Pennsylvania; west and south-west by Lakes Erie and Ontario, and by the River St. Lawrence. It extends from 40° 30' north latitude to 45°, and lies between 71° 56' and 79° 56' west longitude. Its extreme length from east to west, measuring from the Atlantic shore of Long Island, is 408 miles; exclusive of that island, 340; and its breadth from north to south is 310 miles. Its area is estimated at 46,000 square miles.

Government. — By the constitution adopted as amended in October, 1846, a plurality of the popular vote elects the governor and lieutenant governor, who are chosen for two years. The people also choose in like manner, and for the same term of service, a secretary of state, treasurer, comptroller, attorney general, state engineer, and surveyor. Three canal commissioners and three inspectors of prisons are also elected by the people, to serve for three years each, one to retire every year, upon the principle of rotation. The legislature comprises a Senate and House of Assembly. There are 32 senatorial districts, each entitled to one senator, who serves two years. The House of Assembly consists of 128 members, apportioned among the several counties according to population, and elected annually. Every white male citizen, 21 years of age, a resident for one year next preceding an election, ten days a citizen of the state, four months a resident of the county, and thirty days of the district, is entitled to the right of suffrage, without other qualification. Colored persons, to be entitled to that right, must have resided three years within the state, and have owned and paid taxes on a freehold worth \$250 for one year next preceding an election.

Judiciary. — All judicial officers, except justices of the peace, are appointed by the executive, and hold office during good behavior, or until 60 years of age. The judicial power is vested, 1. In a Court for the Trial of Impeachments, which is composed of the members of the Senate, or a majority of them, with their president at the head of the court, — or, in his absence, the chief judge of the Court of Appeals, — together with a major part of the judges of the latter court. This tribunal is a court of record, and its officers and clerk are those of the Senate. A party impeached cannot be convicted without the concurrence of two thirds of the members present; nor punished by this court farther than by sentence of removal from or disqualification for office, though still liable to indictment. 2. The Court of Appeals, which consists of eight judges, four of whom are elected by the people, (one every second year,) and hold office eight years; and the other four are selected each year from those justices of the Supreme Court whose terms are soonest to expire. Six judges constitute a quorum; and the court holds four terms in each year. There must be one term in each judicial district every two years. 3. The Supreme and Circuit Courts, composed of justices elected by the people, — four in each of the eight judicial districts into which the state is divided, — one justice in each to retire from office every two years. One general term of the Supreme Court must be held annually in every county containing 40,000 inhabitants; and in other counties, one in two years. Two special terms each year are held in every county; also two Circuit

Courts: of the latter, the city and county of New York has four. The Supreme Court has general jurisdiction in law and equity, and power to review judgments of the County Courts. At the general and special terms are heard all equity cases; and the Circuit Courts are held exclusively for the trial of issues of fact. 4. County or Surrogates' Courts, with the ordinary jurisdiction of Probate Courts; and extending also to actions of debt, &c., involving not more than \$2000, to actions for damages not above \$500, for trespass or personal injury, and to replevin suits wherein not more than \$1000 are claimed. They have likewise equity jurisdiction for the foreclosure of mortgages; for the sale of the real estate of infants; for the partition of lands; for the admeasurement of dower; for the custody of lunatics and inebriates; and for the satisfaction of judgments where upwards of \$75 are due on an unsatisfied execution. 5. Criminal Courts; viz., Courts of Oyer and Terminer, and the Court of Sessions. The former, which are held in each county, except that of New York, at the same time and place at which the Circuit Courts are held, consist each of a justice of the Supreme Court, the county judge, and the two justices of the peace who are members of the Court of Sessions. In the city and county of New York these tribunals are composed of a justice of the Supreme Court and any two of the following magistrates: judges of the Court of Common Pleas for that county, mayor, recorder, and aldermen. Courts of Sessions are held by the county judge, and the two justices of the peace chosen as members of said courts.

Besides the foregoing, there are in the city and county of New York a Superior Court and a Court of Common Pleas, each having three judges.

Education.—This important subject commands a full share of public solicitude in this state. Colleges and other literary and scientific institutions, of a high order, are established and well sustained in various quarters. Some of these are supported in whole or in part by different religious associations. The oldest, — Columbia, formerly King's College, — founded nearly a century since, is chiefly under the direction of the Episcopalians, who also maintain another college, and an eminent theological institute. The Baptists, Presbyterians, Lutherans, and Associate Reformed church have also their respective theological seminaries. A very large number of academics and high schools, generally sustained by individual subscriptions, are to be found in every part of the state. The common school system is honorably cherished by the bounty of the legislature; and consequently the blessings of free instruction are diffused among children of all classes, through thousands of grammar and primary schools, under positive requisitions of law. For purposes of general education, the most liberal funds have been provided, amounting to \$1,900,000 annually, of which \$800,000 are raised by a state tax. The school fund produces \$300,000. The deaf and dumb, and the blind, likewise participate amply in these appropriations. There are in the state, probably, upwards of 50,000 persons, of adult age, who can neither read nor write; most of whom, without doubt, are of foreign extraction.

Finances.—The aggregate debt of the state, at the beginning of 1851, was \$23,463,838. About two thirds of this liability arises from the canal debt, and the residue from debts contracted on account of railroads, the general fund, &c. It is estimated that, by the operation of the canal and other sinking funds, the public debt can be liquidated in the course of some 18 years from the above date. The annual revenues are derived from state taxes, auction and salt duties, canal fund, &c., which, in general, largely exceed the amount of expenditures for the support of government and of state institutions, for interest on the state debt, &c.

Surface, Soil, &c.—The state exhibits much variety of surface. The eastern part is crossed by two chains of lofty hills, rising to an elevation of 1200 to 1700 feet. One of these ridges, entering from New Jersey on the south-west, strikes the Hudson River at West Point, is there divided by the stream, and resumes its prominence on the opposite shore, showing almost perpendicular walls on either side, as though cut in sunder by some sudden convulsion. These remarkable heights are known as the "Highlands." Their bases comprehend a breadth of some 15 to 20 miles. From the eastern margin of the river they take a northerly course, in detached masses, dividing the waters of the Hudson from those of the Connecticut, and

finally mingling with the mountain ridges which bend to the north-east and spread towards the coast of Labrador. A second range enters the state from the north-western side of New Jersey, and passes northward, forming the Shawangunk Mountains. A third, from the northerly part of Pennsylvania, proceeds in the same direction through a great portion of the state, with varied elevations, sometimes rising to a height of 3800 feet, and are known as the Catskill Mountains. The Adirondack Mountains, in the north-east part of the state, are still loftier, one of the peaks reaching to an altitude of 6460 feet. In the eastern quarter, as well as the southern, the surface is hilly, and occasionally much broken, though abounding in excellent grazing lands; but the western section is generally level, and the soil admirably adapted to the growth of grain. Indeed, the soil throughout is of good quality; and in some parts extremely rich and productive. Wheat, corn, rye, oats, buckwheat, barley, &c., together with potatoes, and every description of garden vegetables, are raised in profusion. Fruits of all kinds known to the climate, as apples, pears, peaches, plums, &c., are cultivated with great success. The forests yield excellent timber, in great variety and abundance.

Rivers, &c. — A number of noble streams pass through the state, or along its borders, in different directions; the chief of which are the Hudson, 324 miles in length, and navigable to Troy, 151 miles from its mouth; the Mohawk, which falls into the Hudson, near Troy, and is 135 miles long; the Genesee, which, after flowing 125 miles, occasionally over immense falls, affording prodigious water power, discharges itself into Lake Ontario, into which also flows Black River, a stream of 120 miles in length; the Saranac, falling into Lake Champlain, after a course of 65 miles; the Ausable, 75 miles in length, entering the same lake; the Oswegatchie, 100 miles long, emptying into the St. Lawrence; the Oswego, reaching between Oneida Lake and Lake Ontario, 40 miles; the St. Lawrence, forming a part of the north-western boundary; the Delaware, after a course of 50 to 60 miles, crossing the south-western border; the Susquehanna, flowing through a considerable portion of the southern margin; the Alleghany, coming from Pennsylvania, and returning thither, after a sweep of 45 miles in Cattaraugus county; and the Niagara, with its far-famed magnificent cataract. Numerous tributaries, of various extent, are connected with all these principal rivers. Portions of the great inland seas, Lakes Erie, Ontario, and Champlain, lie within the limits of the state. Numerous others are wholly imbosomed therein, most of which may be considered as arms of Lake Ontario. Several of these minor sheets of water are of considerable magnitude, and many of them are celebrated for their romantic beauty. The facilities for commercial and manufacturing purposes, which are supplied by these various bodies of water, are of incalculable value to the people of New York. They form one of the bases of that grand series of internal improvements, of which the enlightened patriots of that state, in years not long past, were the memorable pioneers.

Internal Improvements. — To New York belongs the honor of having given the earliest and strongest impulse, on the American continent, to a system of public works, on a great scale, designed for the promotion, unitedly, of the important interests of agriculture, commerce, and manufactures. The first of these noble enterprises was the Erie Canal, which, at its inception, was denounced, by a portion of the people, as an extravagantly bold and visionary undertaking. It was commenced in 1817, and finished in 1825, at a cost of upwards of \$7,000,000. It unites the waters of Lake Erie with those of the Hudson River, extending from Buffalo to Albany, a distance of 363 miles. Operations for enlarging it in breadth were not long since commenced, and, after having progressed considerably, were suspended, but will, in all probability, be shortly resumed. Some six or seven other important works of this kind are also completed; several more are in course of construction; and a further number have been projected. Those already finished are the Champlain Canal, connected with the Erie at Waterford, and proceeding 64 miles to Whitehall, on Lake Champlain; the Oswego Canal, also united with the Erie, and extending from Syracuse, 38 miles, to Oswego, on Lake Ontario; the Cayuga and Seneca, from Geneva to Montezuma, 21 miles; the Chemung, from the head of Seneca Lake to Elmira, 39 miles; Crooked Lake, between Penn Yan and Dresden, 8 miles; Chenango, another branch of the Erie, extending 97 miles from its junction at Utica, to Binghampton, on the Susquehanna. The aggregate cost of the six last-named canals is stated at nearly \$5,000,000.

Besides the foregoing, large portions of the following have been completed: the Genesee Valley Canal, to extend from Rochester, 108½ miles, to Olean, on the Alleghany; and the Black River, from the Erie at Rome, 35 miles, to the High Falls. The Delaware and Hudson Canal, from Rondout, Ulster county, 84 miles, to Delaware River, whence it extends 25 miles to Honesdale, Pa., where it connects with a railroad of 16½ miles to the coal mines at Carbondale, is the work of a private corporation, though assisted by a state loan, and partly lying in Pennsylvania. It was completed at a cost of \$1,875,000.

In addition to these artificial watercourses, New York has further provided for her own prosperity by the establishment of numerous extensive and costly railroads. A series of these commodious highways, with a large number of branches under divers names, and owned by various bodies of proprietors, extends from New York to Buffalo. A railroad from the latter place, *via* Niagara Falls, extends to Lewiston, and is there connected with a steamboat line to Oswego. A branch of this road runs to Lockport. There are also railroads between Schenectady, Ballston Spa, and Troy. A railroad of 50 miles (24 of which are in Pennsylvania) extends from Steuben county to the Blossburg coal mines, Pa. The Hudson and Erie Railroad, from Newburg and Piermont, on the Hudson, to Dunkirk, on Lake Erie, is between 400 and 500 miles in length, and has numerous extensive branches. There are many others, either partially completed or in contemplation; so that at some not very remote day the entire state will be intersected by these important public works.

Minerals. — The mountainous region at the north-east part of the state, south-west of Lake Champlain, is exceedingly rich in iron ore. This mineral is also abundant in several other localities, and is extensively wrought into pigs and various castings. In Clinton county, the ore is of extraordinarily fine quality, great quantities of which, in a manufactured state, are annually exported. Vast beds of lead ore are found in St. Lawrence county. At Ticonderoga, and at some other spots, abundance of excellent plumbago, or black lead, is found, and forms a valuable article of commerce. Indications of copper have been discovered in a few places. Salt and gypsum are obtained plentifully in several of the central counties eastward of Lake Ontario; and the former article is manufactured in such quantities as to supply a very extensive market; the latter is quarried largely, and sent by canals and railways to distant markets in all directions. Quarries of excellent marble are being worked in Westchester county and the region contiguous. Few indications of coal have yet been found. Limestone, sandstone, and granite are abundant in several parts of the state.

Manufactures. — New York is a large manufacturing as well as agricultural and commercial state. Countless establishments for the transformation of all her natural products into articles of trade are maintained every where. Millions of capital are invested in woollen and cotton factories; in the manufacture of salt, iron, and lead; in the fabrication of articles of leather, straw, glass, clay, marble, &c.; in distilleries, breweries, machine shops, flouring mills, and other mechanical agencies for the conversion of raw material into shapes fitted for the use and comfort of man.

Indians. — The numerous aboriginal tribes by which the entire state was formerly overrun have left comparatively but few living representatives within the state. The causes which have contributed to their annihilation, or dispersion, are those which have ordinarily produced the same results in all other parts of the United States. The hostile have been subdued by superior force; the friendly have been treated with liberality; and all who remained at the close of the American revolution have either been provided with, or allowed to possess themselves of, appropriate and comfortable homes elsewhere.

Population. — The population of New York, especially of the metropolis, and of the cities generally, exhibits more diversity of character, probably arising from their great variety of origin, than that of any other state of the Union, or, possibly, that of any other country on the earth. The ancient Dutch and English characteristics, so distinctly marked and preserved through many successive ages, are no longer discernible, except in sundry secluded localities, or within the circle of certain exclusive neighborhoods. The present generation is composed of new and multiform materials. People who can trace their ancestry to every nation,

and kindred, and tongue, on the face of the globe, are now among the moving masses of this most populous state in the western hemisphere. New York city, the commercial capital, in an especial manner exhibits an example of this aggregation of "all sorts and conditions of men." And the interior is also receiving daily its contributions of settlers or wanderers from every quarter of the old world. Among these, the most impoverished districts of Ireland present, perhaps, the largest number of representatives. Every other European country has furnished also a sufficient quota. Asia and Africa, even, are not without their delegates; nor are the two Indies, nor the foreign provinces both north and south of the boundaries of the republic. The ease with which emigrants may attain to all the privileges of citizenship, the facilities afforded for trade of every description, and the rewards procurable by the exercise of every species of active industry, are the chief causes and provocatives of this vast influx from abroad. Within the ten years ending with the census of 1850, the population of New York has increased from 2,428,921 to 3,097,394.

Climate. — There is, in this state, a considerable variety of climate. In the southern section, it is mild, but mutable, both in winter and summer. In the northern, the winters are more severe, but uniform, and the summers are pleasant. Westward of the mountainous ridges, the climate is more equable and salubrious than in like latitudes on the eastern side. At Albany, the temperature varies between the extremes of heat and cold generally more than 100°; that is, from 15° below zero to 90° above. At Canandaigua, there is nearly the same difference, the mercury sinking lower in winter, and rising to a less height in summer. On Long Island, near the Atlantic Ocean, the thermometer indicates a difference between the two extremes of about 90°; namely, from 4° below zero to 87° above. But, with the exception of occasional epidemics, not imputable, however, in general, to local causes, the climate of New York may be considered as one of the most healthy in the world.

Religion. — Every variety of religious doctrine prevalent in other parts of the United States has its disciples in this state. The different Christian denominations may be classed, according to numbers, as follows: Presbyterians, Baptists, Methodists, Dutch Reformed, Episcopalians, Associate Reformed, Roman Catholics, Lutherans, Universalists, and Unitarians. There are also sundry congregations of Jews, Quakers, Shakers, &c.

Curiosities. — Among several remarkable phenomena, in various departments of nature, existing within the State of New York, the cataract of Niagara stands most prominent. A detailed description of this world-renowned prodigy would require an amount of space inconsistent with the general object of the present work. But the subjoined extract from an account of the Falls of Niagara, written by Father Hennepin, who visited them in 1678, and published in London twenty years thereafter, presents a picture, the fidelity of which, notwithstanding its antiquity, will be recognized by all who have viewed the wonderful original in more modern times. The accuracy of the statistical facts therein presented is, of course, not assured; but the delineation is expressive of the impressions of almost every one who beholds this awfully grand object for the first time, and would undertake to describe it without actual admeasurement.

"Betwixt the Lakes Ontario and Erie," says Father H., "there is a vast and prodigious cadence of water, which falls down after a surprising and astonishing manner, insomuch that the universe does not afford its parallel. 'Tis true, Italy and Swedeland boast of some such things; but we may well say that they are but sorry patterns, when compared with this of which we speak. At the foot of this horrible precipice we meet with the River Niagara, which is not above a league broad, but is wonderfully deep in some places. It is so rapid above this descent, that it violently hurries down the wild beasts, while endeavoring to pass it to feed on the other side, they not being able to withstand the force of its current, which inevitably casts them headlong above 600 feet high.

"This wonderful downfall is composed of two great streams of water, and two falls, with an isle sloping along the middle of it. The waters which fall from this horrible precipice do foam and boil after the most hideous manner imaginable, making an outrageous noise, more terrible than that of thunder; for when the wind blows out of the south, their dismal roaring may be

heard more than 15 leagues off. The River Niagara, having thrown itself down this incredible precipice, continues its impetuous course, for two leagues together, to the great rock above mentioned, with an inexpressible rapidity; but, having passed that, its impetuosity relents, gliding along more gently, for other two leagues, till it arrives at the Lake Ontario. From the Great Fall unto this rock, which is to the west of the river, the two brinks of it are so prodigious high, that it would make one tremble to look steadily upon the water, rolling along with a rapidity not to be imagined. Were it not for this vast cataract, which interrupts navigation, they might sail with barks, or greater vessels, more than 450 leagues, crossing the Lake of Hurons, and reaching even to the farther end of Lake Illinois; which two lakes, we may easily say, are little seas of fresh water."

NORTH CAROLINA is one of the Southern States of the American republic, and one of the thirteen which originally adopted the federal constitution. It was included in the extensive region granted, in 1584, by Queen Elizabeth, to Sir Walter Raleigh, under the general name of *Virginia*. Its earliest permanent settlement was commenced about the year 1650, by a company of fugitives from religious persecution in the more northern part of Virginia, who established themselves at a spot near Albemarle Sound. In 1661, another body of English emigrants, from Massachusetts, settled on the shores of Cape Fear River. The colonists suffered many hardships and much trouble for want of a recognized independent representative at the court of the parent country. This they obtained in 1667; but, not far from this date, the province comprehending the country now forming both North and South Carolina had been granted to Lord Clarendon and others, who undertook to introduce a grotesque form of government, prepared for the grantees by the celebrated John Locke. Among the singular features embodied in this constitution were provisions for establishing an hereditary nobility, for vesting the legislative power in a "Parliament," and for the exercise of executive authority by a chief magistrate, to be styled the "Palatine." After trial of this system for a few years, its practical defects became palpable, and it was abandoned in 1693. The colony, however, made but slow progress, having to contend with numerous vexations, not the least of which was the sanguinary hostility of the neighboring savages, by whom, in 1712, a murderous and destructive war was carried on, rendered sadly memorable by the horrible atrocities with which it was attended. In 1729, both the Carolinas were ceded to the king for the sum of £17,500, and by him formed into two distinct colonies, which have ever since remained thus separated, and which now constitute the States of North and South Carolina.

The people of this state, in the early stages of the American revolution, were distinguished for their patriotic devotion to the cause of national independence. They opposed the encroachments of the crown, in 1769, with success, and were among the foremost of the colonists to declare themselves free from all foreign control. In May, 1775, a military convention was held in the county of Mecklenburg, which passed a series of resolutions, displaying the spirit, and even embodying some of the language, of the great Declaration of Independence issued to the world on the 4th of July of the next year. A state constitution was formed in 1776, which, with some amendments, still remains in force. Several severe battles were fought upon the soil of North Carolina in the course of the revolutionary war. The state adopted the federal constitution November 27, 1789, by a majority in convention of 118.

Boundaries and Extent. — North Carolina is bounded north by the State of Virginia, east and south-east by the Atlantic Ocean, south by South Carolina and Georgia, and west by the State of Tennessee. It extends from latitude $33^{\circ} 50'$ to $36^{\circ} 30'$ north, and lies between $75^{\circ} 45'$ and 84° west longitude; is 430 miles in length, and varies in breadth from 20 to 180 miles, and contains about 45,000 square miles.

Government. — The executive and legislative officers are elected by the people, once in two years. The governor cannot serve more than four out of six years. He is assisted by a council of seven members, appointed by the General Assembly. The Senate is limited to 50, and the House of Commons to 120 members. The required qualifications of voters for the latter, besides having arrived at the age of 21, are, a residence in the county one year prior to an election, and the payment of taxes: to be entitled to vote for senator, the possession of 50 acres of land is required in addition. The right of suffrage is denied to all persons of negro blood.

Judiciary. — The judges of the Supreme Courts of law and equity, judges of admiralty, and attorney general, are chosen by the General Assembly in joint ballot. The latter holds office four years, and the judges during good behavior. The Supreme Court holds three sessions per annum, two at Raleigh, and one at Morgantown, the latter for the western part of the state. The sessions continue until all the cases on the docket are either decided or deferred for good cause shown. It has jurisdiction in all cases of law and equity brought by appeal or by the parties. The superior courts of law, and the courts of equity, which have complete equity jurisdiction, hold one session semiannually in every county of the state. About ten counties compose a circuit, of which the state is divided into seven. These are visited alternately by the judges, so as not to preside in the same circuit twice in succession.

Education. — The free school system in North Carolina has not yet attained a very near approximation to that of the New England, Middle, and some of the Western States. In 1840, there were but 632 common schools in the state, and these contained less than 15,000 scholars, while there were more than 56,000 adult white persons unable either to read or write. The census of 1850 shows no better result. There are two colleges, and about 150 minor literary seminaries: the oldest of the former was founded in 1791. Provision for the establishment and maintenance of asylums for the insane, and for the deaf and dumb, has recently been made by the legislature.

Finances. — The net amount of the state debt, arising from the loan of its credit to certain railroad companies, is somewhat short of \$1,000,000. The receipts into the treasury, for some few years past, have very considerably exceeded the expenditures.

Surface, Soil, &c. — Along the Atlantic coast of the state, through a space of from 50 to 75 miles in breadth, the land is low, level, and swampy, intersected by many streams, which, from the nature of the surface, are neither rapid nor clear. Westwardly, beyond this tract, for a distance of some 40 miles, the land is more hilly and broken, and the soil sandy. Farther on, above the falls of the rivers, the country becomes elevated, and, in some places, mountainous. The highest mountain peak in the United States, east of the Rocky Mountains, is said to be Black Mountain, in Yancey county, which rises to a height of 6476 feet. There are other prominences, reaching to nearly as great an elevation. The soil in the district bordering on the sea-coast is generally poor, producing naturally no other timber than the pitch pine, from

which are procured large quantities of tar, pitch, and turpentine, constituting the chief articles of export from the state. The contiguous and more elevated region is somewhat more productive, though the soil is thin and sandy. The swampy spots are well adapted to the culture of rice. In the uplands, and beyond the mountain ranges, the land is exceedingly fertile. Indian corn grows well in all parts of the state, and cotton is successfully cultivated in many places. The low country, especially on the river borders, produces spontaneously plums, grapes, strawberries, and other fine fruits; it is also well adapted to the growth of rice, the sugar-cane, &c. The table lands at the west yield a fine natural growth of walnut, oak, lime, cherry, and other timber. The pitch pine, of which the low lands produce such large quantities, is generally of a prodigious size, far exceeding the dimensions of this description of timber found in the more northern states. The celebrated Dismal Swamp, 30 miles in length by 10 in width, lies in the northern part of this state, and reaches into Virginia. This tract is covered with a thick growth of pine, cypress, juniper, and oak-trees. There are within the state upwards of two million acres of swampy land, which may be reclaimed and made to produce abundant crops of rice, corn, cotton, and tobacco.

Rivers.—The Chowan and Roanoke, taking their rise in Virginia, flow through a portion of the state into Albemarle Sound. Cape Fear River is the longest which runs entirely within the state, being 280 miles in length, and is navigable, for vessels drawing 11 feet of water, to Wilmington, 40 miles from the sea. The Yadkin is also another considerable stream. They are all, however, subject to obstructions by sand bars at their mouths, owing to their sluggish course through a long distance of low and level country.

Internal Improvements.—There are several railroads and canals in this state, most of which are connected with those of Virginia. One of the railroads extends from Wilmington, 161 miles, to Weldon, on the River Roanoke; another reaches from Raleigh, 85 miles, to Gaston, on the same river. The Dismal Swamp Canal, which commences in Virginia, is extended into North Carolina. A canal of five miles passes round the falls of the Roanoke.

Minerals.—The state contains gold, iron, and other valuable minerals; but the public attention is chiefly directed to the former. The region which is most prolific in gold occupies both sides of the Blue Ridge, in the western part of the state. The mines have been extensively wrought; and, for some years, thousands of persons have been engaged, with varied success, in the business. The ore is found occasionally in veins, sometimes in small lumps, but more frequently in grains or dust. The amount annually obtained has been estimated at some \$5,000,000. Only a comparatively small part of this, however, finds its way to the United States mint, or is retained in this country, a considerable portion being transmitted to Europe.

Manufactures.—Coarse fabrics of cotton and of wool are manufactured to some extent, principally for home use. There are numerous furnaces, forges, and smelting houses, for the conversion of the native mineral ores, iron, lead, and gold, into marketable shape. The manufacture of flour is carried on somewhat largely; and among the remaining commodities manufactured in the state are hats and bonnets, hardware and cutlery, soap and candles, furniture and carriages, leather and saddlery, distilled and fermented liquors, &c.

Indians.—No distinct tribes, and but few scattered families, of the Indian race remain within the limits of North Carolina. As in most of the early settled states, the aboriginal proprietors of the soil have gradually given place to the advancing influences of civilization, and either become extinct, or sought out new hunting-grounds in remote and still unsubdued regions. At the last census, the inhabitants of Indian blood numbered only 710.

Population.—During the 40 years ending in 1830, the population of this state increased very steadily, though showing at each decennial census some differences in the ratio of augmentation. Between the above date and 1840, it remained comparatively stationary; but between the latter year and 1850, had increased from 753,419 to 868,903, about one third of whom are slaves.

Climate.—In some parts of the state, especially in the elevated country at the west, the climate is delightful, and quite healthy. In the low lands, towards the sea-coast, however, it is mostly otherwise, excepting in the winter season. The low and marshy surface engenders

unwholesome vapors in the summer and autumn, and, consequently, fevers, agues, and other diseases incident to such localities, frequently prevail.

Religion. — The most numerous religious denominations are the Methodists and Baptists. These generally reside in the low country. At the west, there are many Presbyterians. The Episcopalians and Lutherans have a number of congregations in various parts of the state; and there are also several bodies of Roman Catholics, Moravians, and Quakers.

OHIO. This state has heretofore been classed among the North-west States of the American Union; but the vast accumulation of territory lying still farther west and north has left Ohio more properly among the Middle States, on the Atlantic side of the continent: indeed, her relative position, considered in regard to the present north-western possessions of the United States, is actually that of one of the Eastern States of this republic. Marietta, the oldest town in the state, was settled, in 1788, by the "New England Ohio Company." The next permanent settlement was at Columbia, in the following year. In 1791, a company of French emigrants founded the town of Gallipolis. Large bodies of New England people, in 1796, settled several towns on Lake Erie. Before the above settlements were undertaken, several of the neighboring states, which, by charter or otherwise, were proprietors of various tracts of unappropriated western lands lying within this territory, had, from time to time, relinquished their claims; and numerous Indian titles were also extinguished by treaty. A territorial government was formed in 1799, in which year the legislature convened for the first time, at Cincinnati, and elected General William H. Harrison as delegate to Congress. A state constitution was formed in 1802, by virtue of which, and under authority of Congress, Ohio became an independent member of the federal Union.

Boundaries and Extent. — Bounded north by the State of Michigan and Lake Erie; east by the States of Pennsylvania and Virginia, being separated from the latter by the Ohio River; south by said river, which divides it from Kentucky; and west by the State of Indiana. The Ohio River washes the border of the state, through its numerous meanderings, for a distance of over 430 miles. The state contains 40,000 square miles, and measures 200 miles from north to south, by 220 miles from east to west. It lies between $38^{\circ} 30'$ and 42° north latitude, and between $80^{\circ} 35'$ and $84^{\circ} 42'$ west longitude.

Government. — The constitution provides for the election of a governor biennially; but he cannot be elected for more than three terms in succession. Members of the Senate, 36 in number, are elected for two years, one half chosen annually. The House of Representatives

is composed of 72 members, elected for one year. All these elections are by the people. The state secretary, treasurer, and auditor are chosen by the legislature, in joint ballot, for three years. The sessions of the General Assembly commence annually on the first Monday in December, at Columbus, the capital of the state. White males, 21 years of age, residents for one year in the state, and tax-payers, are entitled to the right of suffrage. The constitution has been recently revised and modified; but its new features do not seem to be essential improvements in principle upon its former provisions.*

Judiciary.—The judges of the Supreme Court, of the Common Pleas Courts, and of the city courts, are appointed, by concurrent vote of the two houses of the legislature, for seven years. The oldest Supreme Court judge in commission officiates as chief justice. There are four of these judges, two of whom hold a court in each county once a year. The Common Pleas Courts are held in some counties three times in each year, in others only twice, by a president judge and three associates. There are Superior Courts established in Cincinnati and in Cleveland; also a commercial court in the former city.

Education.—On the admission of this state into the Union, it was stipulated, for certain considerations, that one thirty-sixth part of all the territory should be set apart for the maintenance of common schools. This liberal reservation makes ample provision for securing to coming generations the advantages of early instruction; and, thus far, the compact, on the part of the state, has been faithfully carried out. Good schools are diffused all over the land; and all needful attention and aid are given by the people to their support and improvement. There are many thousands of public grammar and primary schools in the state, some hundreds of academies or similar seminaries, and about twenty universities, colleges, and other institutions of a high order. The amount of the school fund owned by the state is above \$1,700,000; and nearly \$300,000 is annually apportioned to the several counties for school purposes. The number of persons over 20 years of age, who can neither read nor write, is about 35,000.

Finances.—The state revenues are chiefly derived from taxes of various descriptions, viz., on real and personal property, professions, pedlers, foreign insurance agencies, auctioneers, brokers, banks, joint stock companies, &c, also from land sales, canal tolls, dividends on state property, interest on surplus revenue and other investments, &c. The expenditures include appropriations for state government purposes, interest on foreign debt, common schools, repairs on public works, &c. The total amount of the state debt, at the close of the fiscal year of 1849, including nearly \$17,000,000 foreign debt, was somewhat over \$19,000,000. The difference between the receipts and disbursements for the same year showed a balance in the treasury of \$554,000. Upwards of \$3,000,000 worth of stock in various public works is owned by the state, which yields liberal dividends. The gross income of these works, in 1849, was over \$740,000. The total value of taxable property was about \$430,000,000, and the revenue from taxes on real and personal estates amounted to \$1,260,000.

Surface, Soil, &c.—Near the borders of Lake Erie, and for some distance in the interior of the northern part of the state, the surface is generally level, and occasionally somewhat marshy. The section of country in the vicinity of the Ohio River, in the eastern and south-eastern quarters, is elevated and broken, although there are no lofty mountains in the state. But the entire region is a table land, reaching to a height of 600 to 1000 feet above the ocean level. The most level and fertile lands are situated in the interior, through which flows the River Scioto. Vast prairies lie near the head waters of that river, of the Muskingum, and

* Among the amendments introduced are the following: The House of Representatives to consist of 100 members—both branches to be chosen for two years; the legislature to hold its sessions once in two years; the lieutenant governor to be acting president of the Senate, with only a casting vote; on the passage of every bill, the yeas and nays to be required, and a majority of all the members elected, of each house, to be necessary to the passage of any law; all judicial officers to be elected by the people—the judges of the Supreme and Common Pleas Courts for five years; no state debts to be contracted to an amount of over \$750,000, except in certain emergencies, nor the state credit to be loaned, nor the state, nor any county, city, or town to hold stock in corporations.

the two Miami Rivers, upon which there is no growth of timber, but which yield abundance of coarse grass. The forests, in other parts, produce oaks, walnut, hickory, beech, birch, maple, poplar, sycamore, papaw, cherry, buckeye, and whitewood, in all their varieties. Pines are uncommon, and the whitewood is generally substituted. The staple agricultural product of the state is wheat, of which enormous quantities are annually exported. Rye, oats, buckwheat, Indian corn, and other grains, are raised in great profusion; and nearly every species of garden vegetable is cultivated successfully. It is estimated that nine tenths of the land is adapted to purposes of agriculture, and that three fourths of it is extraordinarily fertile. Fruits of all descriptions known in the same latitude grow luxuriantly in all parts of the state.

Rivers.—Besides the noble Ohio, which washes the south and south-east borders of the state, there are its numerous tributaries, some of which are streams of considerable magnitude, and extensively navigable. The Muskingum, which enters the Ohio at Marietta, affords navigation for boats through an extent of 100 miles. The Scioto, navigable for 130 miles, discharges itself into the Ohio at Portsmouth. The Great Miami, a rapid stream, after a course of 100 miles, joins the Ohio in the south-west corner of the state. The Little Miami, 70 miles in length, falls into the Ohio near Cincinnati. These rivers have many branches and forks, extending in various directions. A number of large streams flow northwardly into Lake Erie; as the Maumee, Huron, Sandusky, Cuyahoga, Vermilion, Ashtabula, Grand, and Black Rivers. These also have many branches.

Internal Improvements.—Many important public works have been undertaken and accomplished in this state. The Ohio Canal, 307 miles in length, extends from Cleveland, on the shore of Lake Erie, to Portsmouth, on the Ohio River; and there are connected with it sundry branches, one of which reaches 50 miles. This work, commenced in 1825 and completed in 1832, cost \$5,000,000. The Miami Canal, 178 miles long, extends from Cincinnati, and connects with the Wabash and Erie Canal at Defiance. This is also intersected by several branches. The Mahoning, a branch of the Ohio Canal, commences at Akron, and extends 88 miles, to Beaver River. Two continuous lines of railroad extend across the state, from north to south—one from Cincinnati to Sandusky, the other from Cincinnati to Cleveland, which is also connected by railroad with Pittsburg, Buffalo, Sandusky, and Toledo. There are numerous important lines in progress, extending east and west, and, indeed, in almost every direction.

Minerals.—Ohio does not present so great a variety of geological formations as are found in most other states. It is found that there are five distinct divisions of rocks, viz., blue limestone, the thickness of which is estimated at from 700 to 1000 feet; black shale, 250 feet; fine-grained sandstone, 350 feet; conglomerate, 200 feet; and coal series, 2000 feet. Indications of all these several formations are found in some counties; while in others those of only one or two of them are discoverable. The great coal region lies on the western bank of the River Ohio, and occupies not far from one fourth part of the whole state. The strata, as usual elsewhere, are interspersed with beds of iron ore; and immense quantities of both these materials are obtained from this quarter of the state. It is affirmed, in a Cleveland journal of March, 1851, that 1200 square miles in Ohio are underlaid with iron; and that a tract explored in 1838 was found adequate to furnish iron throughout an extent of 61 miles long by 60 wide, one square mile of which would yield 3,000,000 tons of pig iron—so that this district would contain 1,000,000,000 tons. If 400,000 tons were taken from it annually, it would require 2500 years to remove the whole.

Manufactures.—The manufactures of this state are confined principally to articles the raw materials of which are of home growth, as wool, iron, leather, tobacco, flour, sugar, wax, lard, silk, potash, &c. All the usual collateral branches are also carried on to any required extent. Though not strictly connected with this item, it may be proper here to remark that millions of horses, mules, neat cattle, sheep, and swine are raised within the state, and that great numbers of living animals, as well as vast quantities of packed beef and pork, are annually sent to eastern markets.

Population.— The people of Ohio are remarkable for industry, enterprise, and public spirit. They have “increased and multiplied,” through accessions from the older states, and from Europe, in an almost incredible ratio. The growth of the population has been without parallel, until, perhaps, the recent thronging towards the golden land in the farthest west. From the time when the first census was taken, a period of only 60 years, the number of inhabitants has been augmented from 3000 to nearly 2,000,000.

Climate.— In general, the climate throughout the state is highly favorable to human health. The summer season, though warm, is regular, with the occasional and somewhat rare exception of a whirlwind or hurricane. The winters are not severely cold, nor subject to violent storms; and the intermediate seasons are delightfully pleasant. It is true that in some of the marshy localities, giving rise to unwholesome vapors, the inhabitants are subject to those peculiar distempers always prevalent in such districts; but even there, the range of disorders scarcely extends beyond fevers and agues.

Curiosities.— The remains of ancient Indian villages, mounds, and fortifications, discoverable in many counties of the state, constitute the most remarkable subjects of curious interest. Particular descriptions of these vestiges may be found in Howe’s Historical Collections of Ohio, a work of 600 pages, octavo, full of minute detail, published at Cincinnati, in 1850. In the Scioto valley, within a compass of 12 to 15 miles around the city of Chillicothe, these extraordinary monuments are very numerous. A map, showing their respective positions, and an ample and very able account of a series of explorations made in that region, and elsewhere in the valley of the Mississippi, by Messrs. Squier and Davis of Ohio, between 1845 and 1847, may be found in the Transactions of the American Ethnological Society, vol. ii.

OREGON (TERRITORY.) One of the recently-organized territories of the United States, embracing a vast region, extending from the Rocky Mountains on the east to the Pacific Ocean on the west. The Columbia River, its principal stream, was discovered in 1792, and named by Captain Gray, of ship Columbia, of Boston. Having penetrated the river for some distance, and established the fact of its existence, the title by discovery belonged to the United States. Under the authority of this government, Captains Lewis and Clarke, in 1804 and 1805, explored the country from the mouth of the Missouri to the mouth of the Columbia, where they passed the following winter, thus strengthening the claim of the United States to

the territory; this exploration of the river being the first ever made by civilized adventurers. The first trading-house established in that region was erected on Lewis's River, a branch of the Columbia, in 1808, by the Missouri Fur Company; and in 1811, the town of Astoria was founded by the Pacific Fur Company, under John Jacob Astor, of New York. This post was subsequently transferred to the British "Hudson's Bay Company," in consequence of its exposed situation during the war of 1812; but was afterwards restored, according to a stipulation in the treaty of Ghent. The British government, however, claimed certain portions of the northern part of the country; and the question of boundary between the English and American possessions was for a long time a matter of controversy and negotiation. The subject was at length adjusted in 1847, and the 49th parallel of north latitude agreed upon as the line of demarcation. Congress, at about the same period, passed an act for the organization of a territorial government. The provisions of this act, so far as they relate to civil and judicial magistrates, to the Indians, the public lands, school reservations, &c., are similar to those established in the case of Minnesota Territory. (See *Minnesota*.) The act has since been amended in some particulars; but its general features are not essentially altered.

The Territory of Oregon is bounded north by the British possessions, from which it is divided at the parallel of 49° north latitude; east by the main range of the Rocky Mountains, separating it from the waste region of Nebraska; south by the Territory of Utah, and the State of California; and west by the Pacific Ocean. It extends from latitude 42° north to the above parallel; and, along its southern boundary, reaches from the 108th to the 124th degree of west longitude. Its area is estimated at upwards of 340,000 square miles.

The surface presents three distinct sections or tracts of country, formed by separate and nearly parallel mountain ranges, two of which extend through the territory from north to south. The Cascade Mountains form the eastern limit of the first section, its western boundary being the ocean; between these mountains and the next eastern range, called the Blue Mountains, lies the middle or second section; and the third section, still farther eastward, reaches to the Rocky Mountains.

These divisions differ considerably in most of their physical characteristics — in soil, climate, and natural products. The soil of the western or coast section, for the space of 100 to 150 miles east of the ocean, is not remarkably well adapted to the growth of grains, although many kinds of vegetable esculents may be successfully cultivated. The land is well timbered with firs, spruce, pine, oaks, ash, cedar, poplar, maple, willow, and other forest-trees. Fruit-trees of the more hardy kinds, shrubbery, vines, &c., are found to thrive in all unexposed places. Towards the coast, some of the forest-trees attain a prodigious size and height. Near Astoria, eight miles from the sea, there is, or recently was, a fir-tree 46 feet in girth, and 300 feet high; the trunk rising to a height of 153 feet before giving off a single branch. On the banks of the River Umpqua is a still more enormous specimen of the fir, being 57 feet in circumference, and 216 feet high below the branches. Pines reaching an altitude of 200 to 300 feet, and 20 to 40 feet round, are quite common. Good grazing tracts, and lands suited to the culture of many kinds of grain, and to the growth of pears, apples, and similar fruits, are found in the interior of this section, and at the base of the Cascade Mountains. The climate in this quarter is mild, though affected unfavorably at times by the raw sea fogs. It is not, however, unhealthy. The winters continue only from two to three months, commencing in December, though the rainy season lasts from November to March. Snow is not common, except upon the summits of the mountains. The middle section of the territory possesses a fair soil, consisting in part of a light, sandy loam, with many tracts of rich alluvion in the valleys. It is peculiarly suited to the production of wheat, and is fruitful in almost every description of vegetation. The climate here, especially towards the south, is uniformly pleasant and salubrious. The third division, lying between the Blue and Rocky Mountains, is extremely rough, and generally barren, with a correspondingly uncongenial climate. It is traversed by gigantic and lofty mountain ridges in various directions, and so broken into rocky masses as to present few level or productive spots. It is covered, in the elevated parts, with snow, to a greater or less depth, during almost the entire year. Rain

seldom falls, nor are there any dews. The temperature often varies 40° between sunrise and noon. Much less is known of the two last-mentioned sections of country than of that which lies on the shore of the Pacific, the chief seat, at present, of all the commercial or trading operations of the country.

A number of extensive and capacious rivers flow through the territory, generally taking their rise in the mountains, and their course towards the Pacific. The chief among these is the Columbia, (sometimes called the Oregon,) which originates in the Rocky Mountains, and, after a devious track of many hundred miles, enters the Pacific Ocean from the east, in latitude $46^{\circ} 19'$ north. It is navigable for vessels of 12 feet draught for 120 miles, and for boats some 40 miles beyond, to the falls of the Cascade Mountains. Some travellers describe it as excelling most of the celebrated rivers of North America in beauty and magnificence. At its mouth lies a large and commodious estuary, the entrance to which, from the ocean, is somewhat intricate, but which affords shelter and good anchorage to vessels of the largest tonnage. The Columbia, in its long and tortuous course, receives the waters of numerous tributaries, flowing from the north, the east, and the south. Some of these are of great volume and extent, and are also supplied by countless smaller branches and forks, stretching from every point, and presenting thousands of admirable mill sites. The other rivers which communicate directly with the Pacific are the Klamath and the Umpqua, both south of the Columbia, and extending inland only to the first or coast range of mountains. The principal rivers which empty into the Columbia, at various points, are the Canoe, Kootanie, Clark's, Spokane, Okanagan, Lewis, Kooskooske, Salmon, Umatilla, Quisnel's, John Day's, Chute, Cathlatae's, Cowelitz, and Willamette. The last named is a very important stream, flowing through a spacious and fertile valley, and uniting with the Columbia at a point not many miles from the ocean.

A number of settlements have been made upon the shores of the Columbia; and on the banks of the Willamette are situated some of the largest villages and towns in the territory. Among the former are Fort Vancouver, Astoria, St. Helen's, and Milton, the first two of which are places of considerable trade; and among the latter are Portland, already containing 15,000 inhabitants, several mills, churches, school-houses, &c., Milwaukie, Oregon city, Linn city, Champeog, Salem, and many others, all possessing ample water privileges, surrounded by a fine agricultural country, and inhabited by an industrious, intelligent, moral, and thriving people. Farther in the interior are Hillsborough and Lafayette, the latter having a population of 800. A railroad from Milton, on the Columbia, to Lafayette, and thence into the interior, is in contemplation, at an estimated cost of \$500,000.

The mountains of Oregon frequently shoot up into conical peaks of astonishing height, presenting objects of grand and awful sublimity. The summits of many of these towering eminences, in the coast range, reach an elevation of from 12,000 to 14,000 feet above the level of the sea, ascending to twice the altitude of the region of perpetual snow, and bidding defiance to the approach of human footsteps. The Rocky Mountains, that immense natural barrier on the east, rise in many places to a still greater elevation. They form a continuous chain, often ascending to a height of 16,000 feet, but occasionally offering to the hardy traveller some convenient depression or gap, whereby he may pass from side to side. In the northern part of this range are the sources of Frazer's River, which finds its outlet at the north-west corner of the territory, after a course of 350 miles through the British possessions. The northern branch of the Columbia rises in these mountains, in latitude 50° north, and, after having traversed this elevated region some 220 miles, and having fallen 550 feet, is still found, at Fort Colville, half way across the territory, to be over 2000 feet above the ocean level.

The lands around Puget's Sound, in the north-west part of Oregon, are among the most valuable in the territory for agricultural purposes, as well as for commercial pursuits. They consist of extensive prairies, which furnish food for great numbers of horses, cattle, swine, &c. Several flourishing settlements are established in this vicinity, and a large amount of trade is carried on. A considerable portion of the inhabitants are French and English emigrants from Canada. Much excellent timber is found in this region; and mills have been erected upon

the adjacent streams, where there are many valuable waterfalls. The waters of this sound abound in shell and other fish. The tide regularly flows and ebbs from fifteen to eighteen feet, and the navigation is unobstructed and safe.

Oregon is extremely rich in mineral resources, especially in the southern quarter, contiguous to the State of California. Large quantities of gold are dug in the fertile and pleasant valleys of the Klamath and the Umpqua. It is found even among the roots of the prairie grass. A lump valued at \$230 was recently taken from a sod; and those who are in search of the precious metal in this section — of whom there are thousands — seldom dig to a depth of more than three feet. Iron ore abounds on the Columbia; and among the other minerals already found in different parts of the territory are copper, lead, platina, plumbago, sulphur, salt, and coal. The latter is very abundant on the Cowelitz River, and at Puget's Sound.

There are many populous tribes of Indians within the territory, whose views and feelings are dissimilar in regard to the encroachments of the white man, and the advancement of civilization around them. The most powerful tribe are the Shoshonoes, or Snake Indians, who are said to number 15,000. The other principal tribes are the Flatheads, Flatbows, Pointed Hearts, and Pierced Noses. There are, besides, numerous smaller tribes. The governor of the territory, in his message to the legislature, in the spring of 1851, advocates the passage of a law by Congress for the protection of the Indian tribes.

The population of this territory has multiplied prodigiously within a very few years. In 1840, the number was estimated at only 700 or 800. At this time, exclusive of Indians, it is probably not less than 25,000. The new towns are generally peopled by emigrants from the old states, who appear to be sufficiently aware of the value of orderly and liberal institutions, and have made due provision for their establishment and maintenance. They acknowledge the necessity of the immediate construction of roads and other improvements, at the public expense; the establishment of a generous system of common education; and the enactment of laws founded on those principles of justice and benevolence which distinguish the general codes of the several members of the federal Union.

At a late session of the territorial legislature, the capital of the state was located at Salem, on the River Willamette. Acts also were passed for the establishment of a penitentiary at Portland, and a university at Marysville.

The time cannot be very remote, when Oregon will be united, by a direct chain of intercommunication, with all the states and territories lying between the Rocky Mountains and the equally rocky strand of the Atlantic Ocean. Already, in fact, the work may be said to have advanced half way towards completion. The *Great Northern Route*, so called, embraces a cordon of railroads, to extend from Boston and New York to Dubuque, in Iowa; a great portion of the line being finished and in travelling order, and the residue in a state of forwardness. This line runs *directly west* upon, or very near, the parallel of 42° north latitude, scarcely varying a whole degree in its entire course, thus far, of over 1100 miles. From Boston and New York to Buffalo and Niagara Falls, this route has long been in active operation. Some few curves between Syracuse and Buffalo are to be overcome by a rectilinear section, which will be continued beyond the Falls, through the southern portion of Canada West, to Detroit, in Michigan. From the latter point, the Michigan Central Railroad now extends across that state, and around the southern margin of Lake Michigan, to Chicago; thence the line is to proceed to Dubuque, traversing the northern boundary of Illinois, and crossing to the western shore of the Mississippi. Here, however, it cannot be stayed. The Iowa Central Railroad will take up the work, and carry it to the borders of Nebraska. At this last terminus, only, is any obstacle to be apprehended that cannot be quickly removed by the enterprise of the surrounding population. It becomes a national duty, then, to extend the work through that desolate wilderness, until it shall touch the southern boundary of Oregon, in the same latitude of 42°. California and Oregon will then consummate the enterprise; thus securing a direct and uninterrupted connection between the Atlantic and Pacific Oceans, across the body of the continent; and interjoining, by an imperishable belt of union, the inhabitants and the interests of the eastern and western extremes of this vast confederacy.

PENNSYLVANIA. This state is one of the most important members of the American Union. Its history is peculiar, and differs, in many respects, not only in regard to the original establishment of the colony, but in respect also to its early career, from that of almost every other state in the republic. The benevolent and tolerant character of its great founder impressed itself upon his associates and followers; and, as a consequence, the wisest and most liberal institutions that could be devised in an age when the true principles of human government were but obscurely understood, were fixed upon in the outset, were perseveringly adhered to, and have ever since been cherished, with the happiest results. William Penn and his 2000 comrades, mostly of the persecuted Quaker denomination, left England for this country in a spirit of peaceful philanthropy, and landed at Newcastle, on the Delaware, in 1682. He was fortunately received in a like amicable spirit by the natives, and forthwith proceeded without molestation in the execution of his preconceived plans. Passing up the river, he selected the spot upon which Philadelphia now stands, and there laid the foundation of that noble and unique city. Some forty years previous, a few settlements had been made, by a party of Swedes, along the western bank of the Delaware, within the present boundary of the state; but the honor of planting the commonwealth itself belongs exclusively to the high-minded and distinguished man whose name it perpetuates. The whole tract now comprehended within its limits was granted to him, in 1681, by King Charles II., in compensation for services rendered to the crown by the father of the grantee, Sir William Penn, who had been an admiral in the English navy. After a residence of about two years among the colonists, he repaired to England, in 1684, where he appointed a provisional government, consisting of a president and five commissioners, to whom was intrusted the administration of the affairs of the new settlement during his absence. Having obtained full confirmation of his proprietary rights, he revisited the colony in 1699, and subsequently again returned to his native country, where he died in 1718, at the age of 74, bequeathing his property as an inheritance to his children. His descendants continued in possession until the war of the revolution, when their interest was purchased by the commonwealth for the sum of \$580,000.

A state constitution was formed in 1776, which was superseded by another in 1790. This continued in force until 1838, when the existing constitution was established. The constitution of the United States was adopted in convention December 13, 1787. The city of Philadelphia, renowned as the spot whence issued the immortal Declaration of American Independence, was the seat of government of the United States, until it was transferred, in 1800, to the city of Washington. During the revolutionary war, Pennsylvania sustained heroically her part in that eventful drama. Several severe battles were fought upon her soil; and the efforts and

sacrifices of her sons in the cause of civil liberty were not outdone by any of her patriotic confederates.

Boundaries and Extent. — Bounded by the State of New York and Lake Erie on the north; by Delaware River, separating it from New Jersey, on the east; by the States of Delaware, Maryland, and Virginia on the south; and by the State of Ohio, with a part of Virginia, on the west. It lies between 39° 42' and 42° 15' north latitude, and reaches from 74° 44' to 80° 34' west longitude. Its dimensions are about 310 miles from east to west, by 160 miles in width, comprising an area of 46,000 square miles.

Government. — The present constitution provides for the election of governor triennially by the people; not to hold office longer than six years in nine: the Senate, consisting of 33 members, one third chosen each year, are elected for three years: the House of Representatives contains 100 members, chosen annually. The judicial officers are appointed by the executive, subject to the approval of the Senate. The secretary of state is exclusively an executive appointment; and the treasurer is chosen annually by the legislature in joint ballot. All white males 21 years of age, tax payers, residents for one year in the state, and for ten days in the district, are qualified voters.

Judiciary. — The judicial power is vested in a Supreme Court, four District Courts, and Courts of Common Pleas for 24 districts, into which the state is divided. The former is composed of a chief and four associate justices, who retain their offices for 15 years. They hold a court in bank once a year in four several districts. The District Courts are invested with the civil jurisdiction of the Common Pleas in their respective districts, in all cases exceeding a certain amount involved: the judges of these courts are appointed for 10 years. Judges of the Courts of Common Pleas hold office for 5 years; and any two of them may hold a Court of Quarter Sessions in any county. Sheriffs, coroners, clerks of courts, registers of wills, and recorders of deeds are elected by the people for 3 years, and justices of the peace for 5 years.

Education. — Pennsylvania has recently done much for the advancement of free education. There are in the state, independent of the city and county of Philadelphia, about 1500 school districts, and near 10,000 common schools, containing over 400,000 scholars. For the support of these institutions, some \$700,000 to \$800,000 are annually raised, partly by taxation in the several districts, and partly through state appropriations. There are also a large number of academies, and other literary or scientific institutions of a high grade, together with five or six theological seminaries maintained by various Christian denominations. The Girard College, near the city of Philadelphia, endowed by Stephen Girard with a fund of \$2,000,000, and devoted to the support of destitute orphans, is perhaps the greatest charity of the kind in the country. There are two flourishing universities, — the University of Pennsylvania, founded in 1755 at Philadelphia, and the Western University at Pittsburg, — together with the following colleges, founded between the years 1783 and 1836: Dickinson, Jefferson, Washington, Alleghany, Pennsylvania, Lafayette, and Marshall, besides sundry medical colleges.

Finances. — The public debt of the state is not far from \$40,000,000; and the value of its productive property is somewhat over \$32,000,000. The annual income of the state, from all sources, is about \$5,000,000, and the expenditures exceed \$4,000,000. The interest on the public debt amounts to over \$2,000,000 per annum.

Surface, Soil, &c. The state presents a great variety of surface. Much of it is undulating and hilly, and, in some localities, mountainous. There are also numerous level tracts, but few of which, however, are of any considerable extent. South Mountain reaches across one corner of the state, in a south-westerly course, from the River Delaware, through an uneven country, to near the centre of the northern line of Maryland. Blue Mountain, extending in the same direction, from the northern extremity of the Delaware, is a continuous elevation of 700 to 1200 feet above the base, and terminates in a lofty peak, called Pilot's Knob, near the southern boundary of the state. A broken and hilly region lies northward of this range, bordered by the Susquehanna and Lehigh Rivers, and celebrated for its vast deposits of anthracite coal. Several distinct mountains rise in this region, the summits of some of which consist of tracts

of unproductive table land. Other mountainous eminences lie around the valley of Wyoming, in the north-east part of the state; and there are several ridges eastward of the Susquehanna River, bearing various names. The lofty chain called the Great Alleghany, or Appalachian Mountains, traverses the state, almost uninterruptedly, from New York to Virginia. Westward of, and parallel with, the Alleghanies are Laurel and Chestnut Mountains, and other high ridges, in the direct vicinity of which the surface is rough and broken; but in the intermediate valleys, and farther towards the western part of the state, the soil is very rich and fertile. The land, indeed, throughout Pennsylvania, is generally of good quality. The grazing districts furnish large numbers of fine horses, neat cattle, and other domestic animals. Extensive tracts, lying along the margins of rivers, are peculiarly excellent, and under fine cultivation. Fruits of the best descriptions, and in great variety, are very abundant; vast quantities of wheat and other grains are raised in all quarters; and every species of vegetable product common to the Middle States is found in plenty and perfection within this flourishing agricultural commonwealth.

Rivers.—Among the principal streams are the Delaware, on the eastern border, which is navigable for ships of the line to Philadelphia, 6 miles above its junction with the Schuylkill, a distance of 120 miles from the ocean; the Schuylkill, about 130 miles in length, and the Lehigh, about 75 miles, are both tributaries of the Delaware, the union of the two latter being formed at Easton, some 60 miles north of Philadelphia. The Susquehanna passes through the state, from its sources in New York to its mouth in Chesapeake Bay. Boats and rafts may pass down this stream, but the upward navigation is impeded by numerous rapids. The Juniata enters the Susquehanna near Harrisburg, after flowing 180 miles from its rise in the Alleghany Mountains. The Alleghany and Monongahela Rivers, the former after a course of 400, and the latter of 300 miles, meet at Pittsburg, and, by their confluence, form the Ohio, which runs but a short distance within the state.

Internal Improvements.—The position, extent, and resources of Pennsylvania have naturally stimulated her people to the establishment of all needful facilities for the promotion of her great agricultural, manufacturing, and commercial interests. Accordingly her revenues and credit, and the means of her wealthiest citizens, have been liberally devoted to the construction of various descriptions of public works, some of which are on a scale of great magnitude. Railroads and canals intersect the country in all directions, connecting the tide waters on the eastern boundary with those of the Ohio, and between all the principal points of trade throughout the state. These great enterprises are so many in number, and so variously distributed, that, for a particular account of them, reference must be had to that portion of this work which treats of *Railroads and Canals*.

Minerals.—The grand mineral product of this state is anthracite coal, various qualities of which are mined in the different districts of the vast coal region, extending in length over 60 miles north-easterly from the north branch of the Susquehanna, with a breadth of 16 to 18 miles. This region is divided into three distinct coal fields, which again are subdivided each into several mining districts. These great deposits are estimated to occupy an area of nearly 1000 square miles, and in many spots to be from 50 to 60 feet in depth. As it is calculated that each cubic yard will yield a ton of coal, some conception may be formed of the immensity of the aggregate. In 1820, less than 400 tons of coal were sent to market from this region; but in 1842, the supply had increased to upwards of 1,112,000 tons, and the product has since been annually increasing. West of the Alleghanies lies a still more extensive tract, embracing an area of about 21,000 square miles, in which are embedded exhaustless quantities of bituminous coal. About 300,000 tons of this description of fuel are annually consumed in Pittsburg alone. The state also abounds in iron ore, salt, &c.

Manufactures.—The people of Pennsylvania are largely engaged in this department of home industry, the products of which are probably greater in quantity and value than those of any other state in the Union. The most important manufactures are cast and wrought iron in all varieties, cotton and woollen fabrics, paper, furniture, machinery, hats, articles of leather, porcelain, glass, pottery, marble, flour, chandlery, distilled and fermented liquors, &c.

Indians.—The aboriginal tribes which once peopled the territory now constituting the

State of Pennsylvania have all disappeared, so far as regards any distinct social organization. Their hunting-grounds were yielded to the first white settlers with much less repugnance than has been manifested in almost every other part of the continent; and their successors, by constantly pursuing towards the natives a humane and liberal policy, have enjoyed exemption from those depredations and wars which have so sorely afflicted most of the new settlements in this country.

Population. — From the date of the first enumeration of the inhabitants, 150 years ago, when the colony contained but 20,000 souls, the population of Pennsylvania has continued to “increase and multiply,” in steady and regular progression. At the present time its population numbers over 2,300,000. It is composed of the best possible materials for the formation and preservation of a free state. Industry, frugality, order, and patriotism are among the distinguishing traits of the people. Their enterprise and foresight have been remarkably exemplified in their magnificent system of public works, in their extensive agricultural and mechanical operations, and in their flourishing literary institutions. The establishment and support of all these important interests have been marked by unsurpassed earnestness and munificence.

Climate. — Although the climate of Pennsylvania is subject to much fluctuation at all seasons, and the extremes of temperature are some 120° asunder, ranging from 20° below zero, in winter, to 98° above, in summer, still there are few or no states in the Union which are blessed with a purer atmosphere or a more healthful climate. The spring and autumn, in all parts of the state, are delightfully pleasant; and notwithstanding the occasional violent changes, which, however, are not of long duration, the weather is for the most part equable and mild, according to the several seasons. The mean temperature, for the whole year, is between 44° and 52°. July is usually the hottest month, and January the coldest. In the southern quarters, winter commences late in December, and continues until March; but in the northern parts of the state, the cold season sets in a month earlier, and snow does not generally disappear until late in March. Frosts appear in some localities as early as September.

Religion. — The Friends or Quakers, successors of the first settlers, are probably more numerous in Pennsylvania than in any other state, having some 150 to 200 congregations. The Presbyterians, however, outnumber all the other denominations; then follow in order the Methodists, Baptists, German Reformed, and Episcopalians, all of whom are numerous. There is also the usual variety of minor sects.

RHODE ISLAND AND PROVIDENCE PLANTATIONS. This, in territorial extent, is the smallest state in the Union. It lies between 42° and 43° north latitude, and 71° and 72° west longitude from London, and comprises an area of about 1306 square miles. It is bounded north and east by Massachusetts, south by the Atlantic Ocean, and west by Connecticut. The

natural features of the state are somewhat peculiar. About one tenth part of it is water, and of the residue, a very considerable portion is made up of islands. The interior, with the exception of the intervals along the streams, is generally rough and hilly, better adapted to grazing than to the raising of grain. Most of the islands, together with that part adjoining salt water, are very fertile. The most considerable hills in the state are Mount Hope in Bristol, Pine in Exeter, Easchaheague and Hopkins in West Greenwich, Chopmist in Scituate, Neutaconkanet in Johnston, Woonsocket in Smithfield, and Diamond in Cumberland. The state abounds in streams of water, the banks of which are lined with manufacturing establishments of various kinds. Narragansett Bay extends from the sea, more than 30 miles into the state, affording commodious and safe harbors along its whole length. The harbor of Newport, at its mouth, is not excelled by any in the United States. The harbors of Bristol and Wickford are easy of access at all seasons for vessels of heavy burden. That of Providence has less water than either of these, nor can it be safely entered by any vessel of any considerable size without a pilot.

In 1839, Dr. Jackson, of Boston, under appointment of the legislature, made an agricultural and geological survey of the state. The mineral resources brought to light by this survey are not extensive or peculiarly valuable. Iron ore abounds in many localities. Anthracite coal is found in large quantities on the Island of Rhode Island, and also in Cumberland, and is fast coming into use. Limestone abounds in several towns, and is extensively and profitably wrought for use.

The state is divided into 5 counties, — Newport, Providence, Washington, Kent, and Bristol, — which are subdivided into 31 townships.

The settlement of the state by Europeans was commenced by Roger Williams and his associates at Providence, in the year 1636. The settlers came from Massachusetts, from which colony their leader had been banished for alleged political and religious heresies. In 1638, some of the religious followers of Mrs. Anne Hutchinson removed from Massachusetts to the Island of Rhode Island, in consequence of the proceedings had against them for their religious opinions. Samuel Gorton and his company commenced a third settlement at Warwick, in 1642. Neither of these companies had any charter from the English government. They were voluntary associations. Each company purchased its location of the Narragansett Indians inhabiting there. Neither of them had any patent from the English company, which claimed them by grant from the crown of England. They were separate, distinct colonies, independent of each other, and having no common bond of union, except what arose from their common origin, design, and dangers. In 1643, the Parliament of England granted a charter of civil government, under the name of "Providence Plantations, in New England, in America." This, with a slight interruption, constituted the fundamental law of the plantations until 1663, when Charles II., upon the petition of the inhabitants, granted them another charter, under the name of "the Governor and Company of the English Colony of Rhode Island and Providence Plantations, in New England, in America." This conferred on the colonists the right to elect all their officers, and to pass laws for their government, without the intervention, positive or negative, of either king or Parliament. It also guaranteed to them liberty of conscience, in the most unlimited meaning of the term. This charter continued in force, with the exception of the few years when Sir Edmund Andros was the general governor of New England, until the American revolution. The people of this colony entered that struggle with great zeal. In May, 1776, the colony repealed the law, before that time in force, securing to his majesty the allegiance of his subjects. They abolished the oath of allegiance to the king, struck his name from all legal process, and directed all proceedings to be in the name of the colony, thus anticipating the Congress of the United Colonies on the question of independence.

The colony united with her sister colonies in holding the old Continental Congress, and was among the first to direct her delegates to sign the Articles of Confederation. To those articles this state adhered with great pertinacity, until after all the others had deserted them, refusing to adopt the constitution of the United States until May 29, 1790. It has been said of Rhode Island with truth, that though "she was first at the fight, she was last to the feast."

As the charter of 1663 vested the right to elect all officers in the people of the colony, the Declaration of Independence required no change in the form of government. Elections were held after as well as before that event by force of laws passed pursuant to its provisions. It lost its binding force as an instrument emanating from the King of England, at the passage of the act of May, 1776, but it continued to be referred to as written evidence of the unwritten constitution of the state until very recently. With this explanation, it may be said, with truth, that this charter, with the usages which grew up under it, modified from time to time by the action of the legislature, continued to be the constitution of the state until the present written constitution went into operation, on the 2d day of May, 1843.

Under the charter, the right of suffrage was regulated by the General Assembly of the state, the charter being silent on the subject. In 1665, the General Assembly, in reply to a query on the subject proposed to them by the king's commissioners, declared, "that all men of competent estate, civil conversation, and obedient to the civil magistrate," were admitted freemen of the colony, on asking to be so admitted. There was no law declaring what should be considered as a "competent estate" until 1723, when the General Assembly by law enacted that no man should be admitted a freeman of any town, unless he owned lands in such town of the value of £100, or of the yearly value of 40 s., or were the eldest son of such a freeholder. In 1729, the freehold qualification was raised to £200, or £10 yearly value; and in 1746, to £400, or £20 yearly value. Subsequently it was reduced to £40, or 40 s. yearly value, and thus it stood in 1776. Some of these changes undoubtedly arose out of changes in the value of the pound. In 1798, the freehold qualification was fixed at \$134, or yearly value of \$7. Thus it continued until the constitution of 1843.

By that instrument, the right of suffrage is conferred on every male citizen of the United States of the age of 21 years, who has his home and residence in this state for one year, and in the town where he claims to vote six months preceding his claim; who owns a freehold estate in lands or real estate of the value of \$134 above all encumbrances, or which rents for \$7 per annum. Every native citizen of the United States, of the above age and residence, who is assessed and has paid a tax of \$1, or who has been enrolled and done military duty for one day at least, has the right to vote in the election of all civil officers, and on all questions, excepting only that unless he has been assessed and has paid a tax on property, valued at least at \$134, he is not allowed to vote for the election of city council of Providence, or on any proposition to impose a tax, or for the expenditure of money in any town.

The legislative power, under that constitution, is vested in the Senate and House of Representatives. The Senate consists of the lieutenant governor and one senator from each town. The governor presides over the deliberations of the Senate, and has the casting vote. The House of Representatives can never exceed 72 in number. Each town is entitled at least to one, and no town can have more than one sixth of the whole number. The ratio of representation, with these exceptions, is based on population. The present ratio is one representative for every 1875 inhabitants.

The Senate and House of Representatives are styled the General Assembly. They hold two stated sessions annually, one at Newport on the first Tuesday in May, and the other on the last Monday in October at South Kingston, once in two years, and in the intermediate years alternately at Bristol and East Greenwich. In addition to these, there are generally two adjourned sessions in each year, one of which is held in the summer at Newport, and the other at Providence in January.

The governor, lieutenant governor, senators, representatives, secretary of state, attorney general, and general treasurer are elected annually on the first Wednesday in April, their official term commencing on the first Tuesday in May. All the other state officers, except judges of the Supreme Court, are elected annually by the General Assembly in joint ballot of both houses, the governor presiding.

The judicial power in the state is vested in a Supreme Court, which holds two terms annually in each county, and in Courts of Common Pleas for each county, which also hold two terms in each year. The Supreme Court consists of one chief and three associate justices,

any two of whom make a quorum. Courts of Common Pleas are held by one of the associate justices of the Supreme Court. The judges of these courts are elected, like other state officers, by the General Assembly, but they hold their offices until they are declared vacant by a majority of all the members elected in each house at the May session.

In all the towns except Providence and Newport, the town courts are, *ex officio*, courts of probate, and the town clerks registrars of probate and of deeds. The Municipal Court of Providence exercises probate jurisdiction. The city clerk is register of deeds.

The industry and capital of the state were formerly devoted to agriculture and commerce. The latter was the favorite pursuit, as it led to greater wealth, and involved less personal labor. The peculiar situation of the state, and the commodiousness of its harbors, naturally turned the attention of its citizens to commercial pursuits. Rhode Island ships then visited all parts of the globe. They were the second, if not the first, to unfurl the stars and stripes in the Celestial Empire. For the last forty years, commerce has been gradually declining, until, at the present time, foreign trade is almost entirely confined to a few square-rigged vessels in the West India business. The number and tonnage of coasting vessels has increased during the same period. But capital and industry are pursuing new sources of wealth in manufactures and the mechanic arts. Calico printing was commenced here as early as 1794, on cotton cloth imported from the East Indies. Samuel Slater, the father of cotton manufactures in this country, set up his first cotton mill in the spring of 1796, in this state. Now, more persons are engaged in the various manufactures of cotton than in any other pursuit. The census of 1850 shows a great increase in the manufacturing interest, requiring vast expenditures.

Public provision was first made by law for the establishment of public schools in this state in the year 1800. It soon became very unpopular, and was repealed in 1803. In 1828, the General Assembly passed a new law on the subject, which, with various amendments, is still in force. At the passage of this act, the legislature made an appropriation of \$10,000 per year for the support of public schools, but for several years past the appropriation has been increased to \$35,000. The number of scholars registered in the state, during the last year, in the public schools, was 24,733; in the instruction of which 239 male and 270 female teachers were employed. The amount expended for instruction, repairs of school-houses, &c., during the same period, was about \$97,000.

Those who are ready to brand this state with infamy for neglecting the cause of public education would do well to recollect that Rhode Island never had any resources for such an object, or even for the support of its government, except by taxation on its citizens. The small tracts of land which belonged to the state were disposed of at almost nominal prices, because the title to and jurisdiction over them were claimed by the adjoining colonies and others. Beyond the present boundaries the state never owned any land.

There is but one university in the state. That is located at Providence. It was incorporated in 1764, under the name of Rhode Island College. The name was changed to Brown University in 1804, in honor of the late Hon. Nicholas Brown, who was its most munificent benefactor.

The Butler Hospital for the Insane was incorporated in January, 1844, under the name of the Rhode Island Hospital for the Insane. It received its present name from the late Cyrus Butler, Esq., the generous donor of \$40,000 to its funds in his lifetime. The institution is located at Providence, on the banks of the Seekonk River. On the 1st of January, 1851, there were 113 patients within its walls, — 50 males and 63 females.

Owing to the utmost liberty of conscience, which has ever prevailed in this state, there are congregations of almost every denomination of Christians within its limits. Roger Williams became a Baptist soon after the settlement of Providence, and founded a church of that denomination there. The church remained, though he left it in a few months, and became a *Secker*. The first church established on the Island of Rhode Island was also a Baptist one. The Friends soon established themselves there. The leader of the settlers at Warwick, Samuel Gorton, was the founder of the sect of Gortonists or Gortoneans, now extinct. In some parts of the state, Sabbatarian principles prevail to a great extent, the consequence of which

is a disregard of the Christian Sabbath. This circumstance has contributed to give the state that character for irreligion which some writers attribute to it. Notwithstanding this, and the jeers which have been indulged in by writers who should have known better, it is a fact, that there are as many religious societies, churches, and meeting-houses in this state, in proportion to its population, as in any other state in the Union.

The only railroads erected in whole or in part in this state are the Boston and Providence, leading from Providence to Boston; the New York, Providence, and Boston, leading from Providence to Stonington; the Providence and Worcester, leading from Providence to Worcester. Besides these, several others have been recently incorporated, and will probably soon be built. The Providence and Worcester Canal will long be remembered, having proved a complete failure.

The banking capital of the state has for many years been enormously disproportioned to the population. It exceeds \$12,000,000. Being, however, divided among nearly 70 banking institutions, it has generally been managed with safety to the public, and to the advantage of the stockholders.

In January, 1838, the legislature abrogated the use of capital punishment in all cases except for murder and arson. At the same time, they substituted imprisonment and fine for all kinds of corporal punishments before that time in use in the state. During that year, the state prison at Providence was completed. The buildings consist of a keeper's house, and a range of forty cells, two stories high, adapted to the Pennsylvania system of discipline—separate confinement at labor, with instruction. After a few years' experience, this system was abandoned, and the Auburn system substituted in its place. Since its establishment, 127 prisoners have been confined in it, of which number 37 remained its inmates in October, 1850.

SOUTH CAROLINA is one of the Southern States of the American republic. It was originally included in the grant by Charles II. to Lord Clarendon and others, in 1662, which embraced both the Carolinas. The coast, however, had been discovered nearly two centuries anterior to the first attempt at a settlement thereon. In 1670, a few English emigrants laid the foundation of a colony at Port Royal, under William Sayle, who acted as their governor. In the following year, the colonists took what they deemed a more favorable position, on the western bank of Ashley River. Hence they again removed, shortly afterwards, to the confluence of that and Cooper Rivers, the site of the present city of Charleston. But little

progress was made by the settlers in this region, until the Carolinas were divided, in 1720. From this period, notwithstanding frequent hostile incursions and sanguinary cruelties on the part of the neighboring Indians, the affairs of the province continued steadily to advance, until the revolutionary war. During that struggle, the state performed her full share of duty, and encountered many and great sacrifices, arising from her exposed position. A military force, for the defence of the colony against the British, was organized at a very early period of the contest; in 1776, an attack was made on Fort Moultrie, at the entrance of Charleston Harbor, in which the invaders were defeated; but in 1780, the city itself was captured by Sir Henry Clinton, after a siege of six weeks, who held possession until 1782. A number of battles were fought upon the soil of South Carolina in the course of the war, one of which, that of Eutaw Springs, in 1781, had the effect of closing the war in that state. The constitution of the United States was adopted by this state, in convention, in May, 1788, by a vote of 149 to 73. The first state constitution, being the earliest in the Union, was formed in 1775; the present one was adopted in 1790.

Boundaries and Extent.—Bounded on the north and north-east by the State of North Carolina, on the east and south-east by the Atlantic Ocean, and on the south-west by the State of Georgia, the Savannah River forming the line of division. The state contains about 25,000 square miles, being about 200 miles in length, with an average breadth of 160 miles. Latitude from 32° 2' to 35° 10' north; longitude from 78° 24' to 83½° west.

Government.—The governor, lieutenant governor, state secretary, treasurer, and surveyor general are elected by both branches of the legislature in joint ballot, each for the term of two years. The chief magistrate can only serve one term in any six years. The Senate is composed of 45 members, who are elected by the people for four years, one half the number being elected every two years. The House of Representatives contains 125 members, chosen by popular vote biennially. The right of suffrage is enjoyed by citizens who have resided in the county six months previous to the election, and paid taxes in the state for the year preceding.

Judiciary.—Judges and chancellors are chosen by the legislature, and hold office during good behavior. They may order special courts, and a chancellor may hear cases, by consent, at chambers. There are four chancellors in equity, and six judges of the General Sessions and Common Pleas; the latter courts have original jurisdiction in all civil cases where legal rights are involved, (excepting in small matters of contract,) and in all criminal cases affecting free white men, &c. There are also Courts of Equity, held annually in each district; Ordinary's Courts in each district, having probate powers; Magistrate's Courts, &c.

Education.—The free school system prevalent in most of the Northern and Western States is not yet fully incorporated with the institutions of South Carolina. Charity schools, however, for the elementary instruction of poor white children, are supported through both public and private means, in many parts of the state. And yet the state contains upwards of 20,000 free white adults who could neither read nor write. A number of respectable academies or high schools, and many primary schools, are well sustained by the wealthy classes. There are three colleges of some note, the most important of which is the College of South Carolina, founded in 1804 at Columbia, the state capital, and handsomely endowed by the state government. Connected with this is a Presbyterian theological seminary. Charleston College, founded in 1795, is an institution of less distinction, containing about 70 students. Another has been recently established in Abbeville district, called Erskine College, in which, at the commencement of the present year, were some 90 students. There is a state medical college, of high character, in the city of Charleston; a Baptist theological seminary at the High Hills, and another, supported by the Lutherans, at Lexington.

Finances.—The income of the state, from all sources, during the year ending September 30, 1849, amounted to some \$481,000, and the expenditures to \$418,000, leaving an excess of \$63,000. The state debt somewhat exceeds \$2,250,000, and the property of the state is estimated at \$5,000,000. The state taxes, in 1849, reached nearly \$300,000.

Surface, Soil, &c.—There is a broad belt of land, extending from 50 to 60 miles into the

interior, called the *low country*, which is flat, abounding in immense morasses and pine forests, and interspersed with fertile tracts, well adapted to the culture of rice, of which large quantities are here annually raised. Along the sea-coast there is a chain of valuable islands, the soil of which is admirably suited to the growth of the best descriptions of cotton. Near the centre of the state lies an arid and sterile region, presenting, for some 50 or 60 miles in width, and reaching nearly through the state, a succession of sand hills, in shape like motionless ocean waves, though containing, at intervals, spots of great fertility. Beyond this, by an abrupt acclivity, commences the upper country, which consists of an elevated table land, the soil being highly productive, and under excellent cultivation. Beyond this quarter, the surface becomes mountainous, occasionally exhibiting protuberances of considerable height. Table Mountain, the most lofty of these peaks, is about 4000 feet above the sea level. The peculiar staple product of the low country is rice, of which vast quantities are exported, amounting in value to some \$3,000,000 annually. Of the two sorts of cotton raised in the state, (the short and the long staple,) the aggregate annual crop is estimated at some 70,000,000 of pounds, nearly all of which is exported to the Northern States and to Europe. Among the other vegetable products are grains of nearly every variety; fruits of the best kinds, as figs, pomegranates, apricots, nectarines, cherries, pears, peaches, melons, &c. Oranges, grown in the open air, are less sweet than those raised farther south. The sweet potatoes of South Carolina are renowned for the fineness of their flavor. Tobacco and indigo are raised in large quantities. Tar, pitch, turpentine, and vegetable oils are among the important natural products of the state.

Rivers.—The state is well supplied with watercourses. Some of the streams are of great extent, and afford navigation for steamers and small craft for considerable distances. The Great Pedee, which is 450 miles in length, passes from North Carolina through the eastern part of the state. The Santee, from the same quarter, is navigable 200 miles for steamers. The Saluda, Edisto, Cooper, Ashley, and Combahee, &c., are more or less navigable for sloops and flatboats. The Savannah, flowing between Georgia and South Carolina, affords steamboat navigation for a distance of 250 miles, and for smaller boats to a further extent of 150 miles.

Internal Improvements.—There are three railroads in this state, embracing an aggregate length of over 400 miles, of which nearly 300 are in travelling condition. One line, of 135 miles, connects Charleston with Hamburg, opposite Augusta, Georgia, on the Savannah River. Another is in progress from Charleston to Cincinnati, Ohio, a distance of 600 miles. Several canals have been constructed, which, though of inconsiderable extent, are of great utility.

Minerals.—Gold is found in many parts of the state, but mining operations are carried on with less spirit than in North Carolina. Iron, lead, plumbago, and various ochres are obtained in considerable quantities; also marble, limestone, fine clay, fuller's earth, asbestos, soapstone, &c.

Manufactures.—South Carolina is not a large manufacturing state, although many articles for home use are fabricated in her workshops and upon her plantations. Some attempts to introduce the spinning and weaving of cotton have been made within a few years, but with indifferent success. Agriculture and commerce are the chief supports of the state. The abundance of her products from the former pursuit necessarily creates a large trade; and her exports of raw material, including cotton, rice, lumber, pitch, tar, &c., are annually of great magnitude.

Indians.—No organized tribes, or large bands of native Indians, are at present residing within the state.

Population.—For the last 50 years, the white population of the state has but slowly advanced in numbers, compared with the increase of the slave population. Of 668,507 inhabitants at the date of the last census, 384,948 were slaves. In the low country, the blacks outnumber the whites in the proportion of more than three to one; in the central parts of the state, the whites are rather the most numerous; and in the upper country, the numerical difference between the two races is nearly reversed from that which exists in the lowland districts.

Climate.—A very healthy climate characterizes the elevated portions of the state, which diminishes in salubrity as the surface descends towards the coast. The swampy rice fields, stagnant marshes, and sluggish atmosphere, generate fevers and all the pestilential maladies peculiar to low and moist locations, not watered by running streams, nor swept by pure breezes. The winters are short, mild, and rarely accompanied by snow or ice. Vegetation starts very early in spring. The heat of the long summers is intolerable to persons unacclimated; but the autumn is generally a very pleasant, though at its commencement an unhealthy season.

Religion.—Of the religious denominations, the most numerous are Methodists, Baptists, and Presbyterians. There are also large numbers of Episcopalians and Lutherans, besides many congregations of Roman Catholics and Jews, and several societies of Universalists, Unitarians, and Quakers.

TENNESSEE, formerly^d considered and denominated one of the "Western States," may now more properly be said to belong to the easterly geographical division of the American republic, since there is but one state lying between Tennessee and the Atlantic Ocean, while, on the other hand, there are five large states and territories between its westerly boundary and the shores of the Pacific. The original charter of North Carolina, granted in 1664 by King Charles II., embraced the area now included within the limits of this state. This region continued to be occupied by various large tribes of natives for more than a century after the above date, during the latter part of which period the early attempts of the whites to form settlements gave rise to frequent and sanguinary conflicts. In 1751, the Indians having offered donations of land as inducements for mechanics and farmers to establish their residences among them, a fort was erected and garrisoned near the centre of the tract held by the Cherokees. In the course of a few years, viz., in 1760, the latter commenced war upon the garrison, which they besieged and forced to capitulate. But the conquerors, in perfidious violation of their agreement, that the defeated party, some 300 in number, should be allowed to retire beyond the Blue Ridge, fell upon them when advanced about 20 miles on their way, and barbarously murdered every individual, excepting only 9 persons. In the following year, an expedition under Colonel Grant inflicted retributive chastisement upon the savages, and compelled them submissively to beg for peace. All the settlements hitherto made had been abandoned; but, after the cessation of hostilities, many persons from North Carolina and Virginia made renewed efforts to colonize this part of the country. In 1768-9, a body of

settlers planted themselves in the eastern quarter of Tennessee, and, their numbers continuing to increase, a large tract of land was purchased, though with much difficulty, in 1775. In the succeeding year, however, a warfare again occurred, which terminated in an arrangement with the two colonies above mentioned, whereby the boundaries of Tennessee were determined. The settlers continued to proceed westward, and, in 1779, having crossed the Cumberland Mountains, penetrated as far as the site on which Nashville now stands. The war of the revolution raged at this period throughout the land, and the inhabitants of Tennessee suffered greatly from the combined assaults of the British and Indians. In 1780, a memorable battle was fought at King's Mountain, in which the hardy backwoodsmen signally defeated the enemy; and in 1781, the Cherokee and Chickasaw tribes were glad to negotiate for peace. Up to the year 1790, North Carolina had exercised jurisdiction over this portion of the western territory; although, in the mean time, numerous controversies had taken place among the people, in regard to their political position, together with some contradictory legislation on the same subject. In that year, the territory was duly ceded to the United States by North Carolina, and Congress forthwith placed the "country south-west of the Ohio" under an appropriate form of government. The territory was repeatedly harassed by the Creeks and Cherokees, whose object was to prevent the further progress of the whites, until the year 1794, when a final and permanent treaty was concluded between those tribes and the United States. In 1795, the territory having acquired the requisite amount of population to become an independent state, a constitution was framed; and, in 1796, Tennessee was admitted as a member of the Union.

Boundaries and Extent. — This state is bounded on the north by the States of Kentucky and Virginia, on the east by North Carolina, on the south by Georgia, Alabama, and Mississippi, and on the west by the States of Arkansas and Missouri, from which it is separated by the River Mississippi. It lies between 35° and 36° 40' north latitude, and 81° 40' and 90° 15' west longitude; having an average length, from east to west, of some 430 miles, with a breadth of somewhat over 100 miles, and containing an area of 45,600 square miles.

Government. — By the constitution, as revised in 1835, the governor is elected every two years by a plurality vote of the people, and can serve only three terms in any four. The Senate is composed of 25 members, who are elected also biennially. The House of Representatives consists of 75 members, chosen in like manner for the same period; and the legislature convenes only once in two years. All free white citizens, resident in the county where voting for six months previous to an election, are qualified electors. The right of suffrage is not denied to colored persons, who are by law competent witnesses in courts of justice.

Judiciary. — Judges of the Supreme Court are elected, by joint vote of the legislature, for terms of twelve years, and judges of the inferior courts for eight years. There are three judges of the Supreme Court, (one for each of the judicial divisions of the state,) four chancellors, and fourteen judges of the Circuit Courts. There is also a Criminal Court for Davidson county, and a Common Law and Chancery Court for the city of Memphis. Justices of the peace are elected in districts for six years; sheriffs are chosen in counties for two years, and are ineligible for more than three terms in succession; registers hold office four years.

Education. — The school fund of Tennessee amounts to nearly \$1,500,000. The interest of this fund is annually apportioned to all the districts wherein a school-house has been provided; but the system of free education, which is the glory of many other members of the Union, seems not yet to be fully understood or appreciated by the people of this state. Still, the inhabitants support somewhat over 1000 common or primary schools, — perhaps a tithe of what are needed, — 200 or 300 academies, some of which are of respectable rank; and six or eight collegiate institutions, of varied character and standing. The two oldest of these latter are Greenville College, in East Tennessee, and Washington College, Washington county, both founded in 1794; but the most prominent is the University of Nashville, founded in 1806. And, after all, the number of white adults within the state who can neither read nor write may be estimated at about 60,000.

Finances. — The receipts and disbursements of the state, for a few years past, have nearly balanced each other. From the returns for the biennial term ending October, 1849, the expenditures had amounted to some \$800,000; to meet which the revenues had fallen short less than \$12,000. The state holds productive property valued at near \$5,000,000, and owes a debt of nearly \$3,500,000. Its ordinary annual expenditure, independently of the school appropriations and interest on the public debt, is somewhat less than \$300,000.

Surface, Soil, &c. — The state is usually considered as being divided into three nominal sections, severally known as West, Middle, and East Tennessee. The former, situated between the Mississippi and Tennessee Rivers, presents an undulating surface generally, though in some parts nearly level, with a light but productive soil, finely suited to the cultivation of cotton, the chief staple in this quarter. The middle section is more uneven and hilly, though not mountainous; and the lands are of somewhat better quality. East Tennessee, bordering on North Carolina, is an elevated region, containing numerous lofty and picturesque mountains, mostly covered to their summits with noble forests. Here are the Cumberland and Laurel Mountains, and other conspicuous branches of the Alleghany range. The soil throughout the state, with the occasional exception of rough and broken tracts among the high lands, is very fertile, yielding generous crops of agricultural products. Timber of every variety common to the adjacent states is found in great plenty. In addition to the trees ordinarily composing the western forests, there are upon the mountains vast groves of magnificent pines, furnishing material for the extensive manufacture of tar, rosin, spirits of turpentine, and lampblack; the juniper and red cedar also abound; and the mulberry is so plentiful and thrifty, that the silk culture might be pursued, with great profit, to an unlimited extent. Peach and other fruit-trees, the vine, &c., are cultivated with ample success; and, besides cotton, excellent wheat, Indian corn, tobacco, potatoes of every kind, and all the usual varieties of vegetables, are raised in large quantities. A considerable portion of the cotton raised in this state is sent into contiguous states in the interior, for home manufacturing.

Rivers. — Tennessee is watered in various directions by many important streams. The great Mississippi flows by, and constitutes its entire western boundary. The Tennessee River crosses the state between the divisions called Western and Middle Tennessee. The Cumberland, a tributary of the Ohio, though taking its rise in, and returning to, the State of Kentucky, has its course principally in Tennessee. There are many other large navigable streams; and East Tennessee, particularly, possesses a vast amount of water power, admirably fitting it for a manufacturing country.

Internal Improvements. — There are five railroads, including branches, now being constructed within the state, embracing an extent of 600 miles, of which only about 30 miles are yet in operation. The estimated cost of these works is \$600,000. The principal of these are projected continuations of various routes from Georgia, North Carolina, Louisiana, &c.

Minerals. — Gold, iron, coal, and salt are the most valuable among the divers mineral products of Tennessee. The former exists in the south-eastern quarter of the state, but to what extent is not wholly developed, no systematic explorations on a large scale having yet taken place. In the eastern and middle sections, iron ore is found in great quantities, and of superior quality. In the same quarters, also, there are immense beds of excellent coal. Salt springs are numerous, and there is an abundance of marble, gypsum, various pigments, nitrous earths, &c.

Manufactures. — These consist chiefly of goods for domestic consumption; although manufactured articles to some considerable amount are exported. There are cotton and woollen factories, iron works, machine shops, ropewalks, mechanics' establishments of all descriptions, potteries, distilleries, breweries, a great number of flour mills, grist mills, &c.; the whole employing a capital of some \$6,000,000.

Indians. — Most of the tribes which heretofore occupied the territory have passed across the great dividing stream, and taken up their residence upon lands in the Indian Territory, in accordance with treaty stipulations. No bands of native Indians exist, as such, within the limits of the state.

Population. — There were, in 1800, somewhat over 100,000 inhabitants in this state. Since

that period, the population has been found, at every decennial census, to have increased prodigiously. It has now reached an aggregate of 1,002,625 of which nearly a fourth part are slaves.

Climate. — Tennessee is favored with a very mild and generally salubrious climate. In the eastern part, it is particularly so; and is not surpassed, in all the desirable attributes of a genial temperature, by any other region of North America. It is, of course, varied, in some measure, throughout the state. But, from its geographical position, it may be pronounced healthy in every section, and almost entirely exempt from those destructive epidemics by which some of the neighboring states are frequently afflicted.

Religion. — Methodists and Baptists constitute the larger portion of the religious denominations within this state. There are likewise large bodies of Presbyterians and Episcopalians, together with several congregations of Lutherans, Romanists, Friends, &c.

TEXAS was formerly one of the Mexican possessions, though a distant province; being, as was generally admitted, one of the many conquests of Fernando Cortes, in the sixteenth century. At the period of its subjugation, it was inhabited by savages of the worst description. Prior to the year 1690, a French colony occupied a small district; but they were subsequently driven out by the Spaniards, under whose jurisdiction the country remained, with few or no intervals of agitation, sunk in the obscurity and lethargy of despotism, until the abdication of Charles VI. of Spain, in 1808. At this time, the people of Mexico began to assert their claim to the privilege of self-government; and in 1810, an open rebellion against the European authorities ensued. In 1813, a national Congress issued a declaration of independence; but a civil war raged for several years among various parties, upon the question as to what form of government should be established. At one time, the imperial party prevailed, and Mexico became an empire. This continued but for a brief period: a new system, organized like that of the United States, was adopted, and Mexico became a federal republic, Texas constituting an integral member. A series of revolutions succeeded, during which Texas separated itself from the confederation, achieved its independence by the battle of San Jacinto, in 1836, and erected itself into a distinct republic. A constitution was formed in the same year, and the first elections under the same were held forthwith. In 1845, after a prolonged controversy, Texas was annexed to the United States, and admitted into union therewith, by a joint resolution of both houses of Congress, ratified by the Texan people.

Boundaries and Extent.—This state is bounded on the north by portions of New Mexico, Nebraska, and the Indian Territory; on the east by the Indian Territory, and by the State of Louisiana, from the latter of which it is partially separated by the River Sabine; on the south-east and south by the Gulf of Mexico; on the south-west by the River Bravo del Norte, dividing it from the Mexican possessions; and on the west by the same, and by New Mexico. It lies between 26° and 36° 30' north latitude, and extends from 94° to 105° west longitude. It is of very irregular form, and is computed to contain about 237,320 square miles; a portion of the original area claimed by Texas, when a republic, having been set off by Congress, at the time of its admission as a state, in the formation of the Territory of New Mexico.

Government.—The existing constitution of the state guaranties the right of suffrage to every free white male, 21 years of age, after a residence of one year in the state, and six months in the district where voting. The executive officers, who can serve but four out of any six years, are elected for terms of two years by a plurality of the popular vote. The secretary of state, treasurer, and comptroller are chosen also for two years, by the legislature in joint ballot. Senators are chosen for four years, one half the number retiring from office every two years; the whole number not to be less than 19, nor more than 33. Representatives, not to exceed 90 nor fall short of 45 in number, are elected biennially; and the sessions of the legislature are held at like intervals. Persons concerned in duels are disqualified from holding office. Grants of money for internal improvements, &c., cannot be made without the sanction of two thirds of both houses. The laws are to be revised once in every ten years. Homesteads are exempted from forced sales for debt. The real and personal property of a wife is protected from seizure for the payment of the husband's debts. Corporations are not to be created with banking powers. The state cannot subscribe for stock in private corporations, nor borrow money, nor contract debts in time of peace to an amount exceeding \$100,000, unless by a two thirds vote of the legislature. No law for the emancipation of slaves can be passed, without consent of owners, and the payment of full compensation. The introduction of slaves as merchandise may be prohibited. Owners of slaves may be compelled by law to treat them with care and kindness; and in cases of refusal or neglect, the slaves may be taken and sold for account of the owners. Slaves may have a trial by jury when charged with crimes greater than petit larceny, and are protected against abuse or loss of life equally with the whites, excepting when engaged in a revolt.

Judiciary.—The Supreme Court comprises a chief justice and two associates, appointed for six years, who hold sessions annually, between June and October, in not more than three places within the state. It has appellate jurisdiction, but is under legislative control in criminal cases and appeals from interlocutory judgments. The District Courts are eleven in number, each having its local judge, appointed for six years, and holding sessions semiannually. They have original jurisdiction in criminal cases, and in suits involving \$100 and upwards. If punishments in cases of crime be not specifically defined by law, they are to be determined by the jury. In equity causes, each party has a right to demand a jury. Judges are nominated by the executive, and confirmed by a two thirds vote of the Senate.

Education.—The nucleus of a school fund has been formed, by a constitutional provision, requiring the reservation of ten per cent. of the annual state revenue derived from taxation, as a permanent fund for the maintenance of free public schools. Public lands granted for school purposes cannot be leased for longer terms than 20 years, nor alienated in fee. The important subject of education has, however, as yet, occupied no great share of the public mind. Some schools, of tolerable repute, are supported in the most populous settlements; and a late writer asserts that there are, also, some colleges in the state; but this report is scarcely sanctioned by any collateral authority. It is supposed, nevertheless, that the state contains fewer free persons over 20 years of age, who can neither read nor write, in proportion to the whole population, than any other of the Southern States of the Union.

Finances.—Texas is burdened with a heavy public debt, partly entailed upon the state by the late republic. The ostensible amount of its liabilities, in December, 1849, as reported by the auditor and comptroller, was upwards of \$11,000,000, the par value of which is rated at

about one half that sum. The revenues of the state were estimated at \$110,000, consisting of a tax of \$92,000 upon real and personal property, valued at \$46,000,000, and a poll tax amounting to \$18,000. The average annual expenditures of the state may be set down at \$100,000.

Surface, Soil, &c. — The appearance of the surface of the country is described as that of a vast inclined plane, gradually sloping from the mountain elevations in the west, towards the sea-coast on the south-east, and intersected by multitudes of streams, flowing in a south-easterly direction. It may be considered as comprehending three several divisions, each differing in some respects from the others. The first, commencing at the sea-coast, and extending inland from 50 to 100 miles, is a level and exceedingly fertile region, with a rich alluvial soil, exempt from those stagnant quagmires and lagoons which usually characterize the shores of the Southern States, beautifully wooded on the river borders, and abounding with extensive pasture lands, covered with an exuberant growth of native grasses and herbage. The next is a region of greater extent, presenting an undulating surface, composed chiefly of grassy prairies, interspersed with compactly timbered forests. The soil here rests upon a substratum of limestone and sandstone, and is of excellent quality. The third and loftiest region, situated among or near the great chain known as the Mexican Alps, consists partly of tracts of productive table land; but the mountain sides are also prolific in almost every variety of trees and shrubbery, while the intervening valleys, enclosing rich bottom lands, are extraordinarily fruitful, capable of repaying the toil of the husbandman a hundred fold. Indeed, the entire area of this immense state may be said to present, naturally, one of the most admirable countries on earth for agricultural purposes. The state is well wooded throughout. Among the trees most common are live oak of superior quality, other descriptions of oak, hickory, elm, walnut, sycamore, many varieties of acacia, cypress, caoutchouc, &c. The uplands also produce ample supplies of cedar, pine, and similar forest-trees. Fruits and garden vegetables, of every desirable sort, are cultivated with great ease and success. Peaches, melons, grapes, and other fruits known in temperate climates, are raised in profusion; and figs, oranges, lemons, dates, pineapples, olives, and other tropical fruits abound in the southern parts of the state. The products of the field consist of cotton, (the great staple,) maize, wheat, rye, barley, and other grains, the sugar-cane, potatoes of each kind, &c. Rice and tobacco are grown to some extent in different quarters; and among the indigenous plants are indigo, vanilla, sarsaparilla, and many medicinal shrubs. As a grazing country, Texas is exceeded by few or none of her sister states. Vast numbers of cattle, horses, mules, sheep, and swine are raised upon the prairie lands, receiving or requiring but little human care. Buffaloes and wild horses range the prairies in immense droves; and the deer, the bear, and other game, are every where abundant.

Rivers. — In addition to the rivers which form portions of the state boundary, the chief streams are the Neches, Trinity, Brazos, Colorado, San Antonio, Guadalupe, and Nueces, with their countless tributaries, all flowing towards, and ultimately emptying into, the Gulf of Mexico, after passing generally through the estuaries so numerous along that coast. These bays, being commonly obstructed by sand bars or narrow strips of land, do not afford convenient harbors, except for vessels of small draught. Steamboats drawing 12 feet of water can enter and ascend the Sabine; and the Rivers Neches, Trinidad, and Brazos are navigable, for similar craft, from 50 to 300 miles. The San Antonio and Nueces afford no navigation of importance; and the Colorado, though a fine stream, is obstructed near its mouth by a large raft, which in course of time will probably be removed, when vessels may pass up to Austin, the state capital, 220 miles from the gulf. The Rio Grande del Norte, on the south-western border, is a noble stream of some 1800 miles in length, and is already becoming a great commercial channel, though occasionally impeded by shoals and rapids.

Internal Improvements. — Although admitting of unbounded improvements in facilities for internal intercourse, Texas can as yet boast of very few such advantages in the shape of railroads or canals. A railway, to connect Galveston Bay with the River Brazos, through Houston and Harrisburg, is in progress, and the iron for 30 miles of the route is already provided.

Another is in contemplation, to extend from San Antonio to the Gulf of Mexico. A canal from Galveston Bay to Brazos is also in course of construction.

Minerals.—Silver mines formerly existed in the north-west part of the possessions of the late republic, but no deposits of that metal have been discovered within the limits of the present state. Excellent coal, and iron ore, abound in most of the inland districts. There are great quantities of nitre in the eastern quarter; there are multitudes of salt springs and lakes, from which large supplies of salt are procured; and bitumen is found in various localities. In all parts of the state except the low alluvial region, there is plenty of granite, limestone, gypsum, &c.

Manufactures.—Nothing of great public importance has yet been effected in this branch of industry. Thus far the labors of the inhabitants have been principally confined to pursuits connected with agriculture, and to the preparation of their products for market as raw material. Few or no articles for exportation have as yet been fabricated in the state.

Indians.—The territory and its neighborhood is still infested by hordes or remnants of tribes of savages, most of whom subsist by predatory incursions, often of the most destructive and sanguinary character. Efforts are in constant progress to reduce these marauders, by various methods, to a state of comparative peace and amity; but until the country shall have become more densely peopled, this desirable result will not probably be effected.

Population.—The civilized inhabitants of Texas comprise emigrants from all the other states of the Union, besides the descendants of the original Spanish settlers, and persons in whom Mexican and Indian blood is blended. The former class, in all probability, compose a majority of the present population, which, by the census of 1850, was as follows: Whites, 154,100; free colored, 331; slaves, 58,161;—total, 212,592.

Climate.—Texas is represented usually, by those who have travelled or resided in it, as possessing a delightful climate; and as being remarkably healthy in every part, with few exceptions at particular seasons. The wet and dry seasons, as in California, constitute the winter and summer. The former commences in December, and continues until March; the residue of the year, which is the dry season, comprehends spring, summer, and autumn. Severe cold weather never marks the winter season, and snow is very uncommon, except upon the mountain peaks. The heat of summer, although intense, is greatly modified by the regular and brisk breezes which prevail daily from sunrise until about 3 o'clock, P. M.; and throughout the year, the nights are said to be invariably cool. Between April and September, the temperature varies from 63° to 100° Fahrenheit, the average range at noon being about 83°. In summer, intermittent fevers are commonly prevalent in the low lands upon the Gulf coast, though rarely assuming an epidemic character.

Religion.—Among the descendants of the earliest settlers, the Roman Catholic is of course the prevailing religion, as in New Mexico. But since the revolution, which resulted in the severance of Texas from Mexican sway, other Christian denominations, of almost every class and name known in the older states of the Union, have multiplied and flourished; and the cathedrals erected by the devotees of the pope are now vastly outnumbered by the churches and other houses of worship occupied by Episcopalians, Presbyterians, Baptists, Methodists, &c.

UTAH TERRITORY.

UTAH is a newly-organized territory among the distant western possessions of the United States, deriving its name from that of the Pah-Utahs, a numerous tribe of native Indians, heretofore and still, with other tribes, occupying large portions of the country. It formerly composed a very considerable share of the wide-spread wilderness known as Upper or New California, and was consequently considered a Mexican dependency. Very few settlements have ever been made or attempted within the present limits of this region; in fact, it has scarcely been deemed habitable by civilized beings. The territory, together with that of New Mexico, and of the lately-formed State of California, fell to the United States by right of conquest, during the war with Mexico, and was duly transferred by the latter, under the treaty of 1848. For further information as to the general history of the country, see the articles *California* and *New Mexico*.

By the act of Congress passed September 9, 1850, establishing a territorial government for Utah, the limits of the territory are defined as follows: Bounded on the west by the State of California; on the north by the Territory of Oregon; on the east by the summit of the Rocky Mountains; and on the south by the parallel of 37° north latitude, which forms the dividing line between this territory and that of New Mexico. It extends from the 37th to the 42d degrees of north latitude, and lies between the 107th and 120th degrees of west longitude; having a breadth of 300, and an average length from east to west of some 600 miles, containing an area of about 180,000 square miles.

It is provided by the same act, that this territory, when admitted as a state into the Union, shall be received with or without the toleration of slavery, as may be prescribed by its own constitution. All free white males, residents in the territory at the date of said act, were empowered to vote at the first elections, and made eligible to any office in the territory; after which the legislative assembly shall fix the qualifications of electors. The governor holds office for four years, and receives his appointment from the executive of the United States. He must reside within the territory, act as superintendent of Indian affairs, and commission all territorial officers. He may pardon crimes against the laws of the territory, and relieve offenders against the United States laws, until the president's will be known. The President of the United States also appoints a territorial secretary for a like term, who administers the government in case of the governor's disability. A Council of 13 members, and House of Representatives, 26 in number, compose the legislative assembly. The former serve two years, the latter one year, and are elected by plurality of the popular votes. They are to be chosen in appropriate districts, and a due apportionment thereof is to be made by law. Legislative sessions are not to continue beyond 40 days. No laws interfering with the primary disposal of the soil, imposing taxes on United States property, or requiring extra taxes on property of non-residents, can be passed by the legislature. No law is valid until approved by Congress.

A Supreme Court, District and Probate Courts, and justices of the peace, constitute the judicial power of the territory. The former comprises a chief and two associate justices, to sit annually at the seat of government, and to hold office four years. A District Court is held by one of the supreme judges, at times provided by law, in each of the three judicial districts of the territory. Justices of peace cannot try cases involving land titles, or debts exceeding \$100. Both the Supreme and District Courts have chancery powers, and common law jurisdiction. Appeals from a District to the Supreme Court cannot have trials by jury. An attorney and marshal are appointed by the United States government for a term of four years.

After a survey of the lands under authority of the general government, two sections in each township, equivalent to one eighteenth part of the whole territory, are to be set apart for the support of public education. It is trusted that the sinister disposal, in some of the new states and territories, of similar liberal provisions for this object, will in due time be guarded against, in this territory, by the friends of common schools.

Regarding the finances of this newly-formed territory, there are as yet no authentic reports.

Those who have explored the northern part of the country, the number of whom is not great, describe it as mountainous, rugged, and generally barren, without forests, and destitute of valuable indigenous vegetation. Spots occasionally are presented which yield good grass for pasturage; and here and there may be found valleys of small extent, which are tolerably fertile. Towards the western boundary, near the bases of the Sierra Nevada, the soil is generally good. Numerous lakes, emitting streams of moderate size, lie along this region, affording convenient means for irrigation. But the central portion of the country, judging from the imperfect accounts which are at present accessible, is a wide sandy waste, producing, it is true, for a short season after the winter rains, a profusion of grasses and beautiful flowers, all which the succeeding summer heat reduces to an ashy desert. In other quarters, the country exhibits a rolling surface, with tracts of considerable fertility, often well wooded and watered, with frequent and extensive openings of prairie lands, and tracts of low grounds composed of a rich and loamy soil. Upon the whole, although a very large portion of the territory has never been subjected to cultivation, and still seems unfit for the permanent abode of civilized human beings, it is nevertheless susceptible of unlimited improvement; and the efforts of industry and science may yet convert it into "a land flowing with milk and honey."

The principal rivers within the territory, so far as they have yet been traced or partially examined, are named Rio de los Animas, Grand, White, Tampa, Vermilion, St. Mary's, Vintan, and Duchesne Rivers, most of which, with their smaller branches, flow from the north-east, and ultimately unite with the Great Colorado of the West. The latter appears to take its rise in the western slopes of the Rocky Mountains, near the north-east angle of the territory, and, taking a south-western direction, passes through New Mexico, forming part of the boundary between that territory and the State of California, and finally discharges itself into the Gulf of California. Great Salt Lake, a vast body of water lying near the centre of the northern boundary, is the source of numerous watercourses flowing north and east. Humboldt's River flows in a north-east direction, from a lake of that name near the mountains on the west. A river of some extent is connected with Nicollet's Lake, a large sheet, lying in the central part of the territory. A chain of lakes extends northerly from Humboldt's Lake, the principal of which are Carson's and Walker's Lakes. Pyramid Lake, which is of considerable magnitude, and several smaller collections of water, lie at the foot of the great mountain range which separates Utah from California. From each of these, several rivers stretch out in various directions, and are finally lost in the sands of the desert.

No regular mineralogical survey of this region has yet been undertaken, and its mineral resources, which are doubtless great, remain of course undeveloped. Coal, alum, and salt, are said to have been found in some localities. Excellent clay for the manufacture of pottery abounds in the central and northern parts; and satisfactory indications of iron ore have been discovered.

Besides the rude utensils and habiliments fabricated by the natives, there are no manufactured articles, of any note, produced within the territory; unless, indeed, the operations of the Mormons be considered an exception. This unique and erratic people, at their large settlement on Salt Lake, have erected various manufacturing establishments, including grain and lumber mills, woollen factories, potteries, &c. and are able to construct most of the farming or domestic implements, including fine cutlery, required for their own use. This settlement, prior to the organization of the territory, was called by the colonists "the State of Desert." The only railroad yet projected in that country is to be forthwith commenced here, to extend from Mormon city eastward, to the base of a mountain, where are extensive stone quarries. The chief purpose of the road is to convey stone and other materials into the city, for building.

But little is known of the present condition and numbers of the native tribes that are constantly roaming through this and the neighboring regions. The character of these wanderers, generally, is no better than that of the wildest Arabs or Hottentots. Attempts are in

progress to treat with some of the more approachable among them; and, where they can be reduced to a state less inconsistent with the true objects of human existence by no other means, large bounties in lands, or "tribute money," will doubtless be resorted to by the general government.

Excepting the colony composing the Mormon settlement, and the occupants of the few armed stations established by the United States, with perhaps an occasional *ranchero* occupied by Roman Catholic missionaries, there are no white or civilized inhabitants among the population of Utah. At all events, the enumeration is not yet completed; for Congress, by a supplement to the act for taking the seventh census, foreseeing the difficulty of completing the same within the State of California, and the Territories of Oregon, New Mexico, and Utah, by the originally specified time, has authorized an extension of the period, at the discretion of the secretary of the interior. Years may therefore elapse before the completion of this work.

The climate of Utah is in general more mild than that of the states on the east included within the same latitudes. Upon the sterile deserts in the central and southern parts, the summer heats are intense, and the climate sickly. Nearer the more fertile districts on the west, the temperature is equable, with less difference between the extremes of heat and cold than is usually the case on the Atlantic coast. The elevated lands, to a certain height, are considered very healthy; but travellers upon the mountain summits have frequently been attacked by fatal fevers and other alarming maladies. In the north, the winters are sufficiently moderate to admit of hydraulic operations throughout most of the season.

The only religious organization, if it can be so called, which is now maintained in the territory, is that of the Mormons, or "Latter Day Saints." Besides their establishment at Salt Lake, they have formed a colony in Iron county, about 250 miles south, among the high lands near the boundary of New Mexico; a position, around which the country is well wooded and watered, abounding in iron ore, and promising plenty of coal. See Salt Lake City, Appendix, No. 2.

VERMONT. The territory which is now included in the State of Vermont, and which lies between Lower Canada, New Hampshire, Massachusetts, and New York, was, for a long time after the surrounding settlements were made, in great measure unexplored by Europeans. In its vicinity, Canada was the first known and peopled by them, and a settlement was then made by the Dutch at Aurania, now Albany, and at the mouth of the Hudson. Then followed the settlements along the New England shores; but a considerable period elapsed before they

penetrated the interior, and, consequently, that interior was hardly marked but by marauding parties of Indians, and the footsteps of their unfortunate captives.

It is not found that any large body of the natives was cantoned within the present limits of the state. There was, indeed, a tribe bearing the name of Coossucks in the north-east part of it;* but these were inconsiderable in number, and hardly known in the records of warfare, being surrounded, although at no little distance, by larger tribes. These tribes consisted, in the first place, of the Five or Six Confederated Nations, at the head of whom figured the Mohawks. Among the French they bore the name of *Iroquois*, and had at an early period become their enemies, connecting themselves successively with the Dutch and English of New York, and adhering to their interests with great fidelity for more than a century and a half. The territory occupied by them, although denominated Canadian by Colden, in 1747, was included within the present boundaries of New York, being south of the St. Lawrence and the lakes, although their conquests extended far to the north and north-west. They were the terror of other tribes, yet seem never to have settled to the eastward of the Hudson, and the beautiful lake which was once denominated from them, but now has the name of *Champlain*.†

The Indians who were in alliance with the French of Canada were principally the Algonkins, otherwise called *Adirondacks*, a tribe between whom and the Iroquois there were frequent wars, the result of hostilities previous to the arrival of Europeans.‡ Whether or not the tribe denominated of St. Francis, as residing on the banks of that river, were of Algonkin or more eastern derivation, or whether connected with the Coossucks or not, is not clear. Charlevoix describes them as Abenakis, who had left their brethren of the east, and migrated to Canada for the benefit of an alliance with the French.

On the south-east and south, the Indians of the other New England States, New Hampshire, Massachusetts, Rhode Island, and Connecticut, inhabited mostly the sea-coast, and appear to have greatly dreaded the warlike character and prowess of the Mohawks. On the east were the Abenakis, Etechemins, and Micmacs, attracted also to the sea-shore, doubtless by the facility of procuring thence a portion of their provisions.

Thus it would seem that the interior country which now forms Vermont was, as it were, a thoroughfare between powerful contending Indian nations or tribes, without being conspicuous as the seat of any considerable body of natives. It was traversed, rather than settled by them; its water conveyances north and south admitting also an easy navigation by their canoes; and hence, in the remote periods of native history, has little that requires or can repay research. This is an observable peculiarity.

Another circumstance, which still more strikingly characterizes the country, is the history of the claims made on its territory by the states with which it is environed. To enter minutely into this history is no aim of the present work. But without adverting to it, our account would be exceedingly incomplete, as it tended not a little to mould the character of the inhabitants. For, in the process of settling the country, the lamentable conflicting of claims, as will be seen, imposed severe hardships on the enterprising men who ventured to leave the older settlements, and form in the wilderness homes for their growing families. Many a town contains in its rural burying-place the remains of

“Some village Hampden, who, with dauntless breast,
The little tyrant of his fields withstood;”

since, as successive claimants pressed their demands, the inhabitants were compelled to

* See a description of this tribe of Indians in Mr. *Thompson's* very valuable “History of Vermont, Natural, Civil, and Statistical.”

† *Holmes's Annals*, vol. i. p. 141. This name was given in 1611, three years after *Champlain* had founded Quebec. See also *Dunlap's Hist. of N. Y.* vol. i. p. 19.

‡ See *Colden, Hist. of the Five Nations, Part I.*, and the excellent “Synopsis of the Indian Tribes,” by the Hon. Mr. *Gallatin*, published in the *Coll. of the Amer. Antiq. Soc.* vol. ii., where the *Adirondacks* are characterized as of the “family” of Algonkin-Lenape.

repurchase their farms or leave them, suffering over again the grievances which disgraced the government of Andros, and ended in his seizure and confinement by the injured and enraged people.* His arbitrary cupidity, in which he but too faithfully imitated his worthless master, the bigoted and tyrannical James II., set an unhappy example, which yet was followed, and produced a hardihood of opposition that nerved the men of Vermont to daring actions.

When the country which forms the sea-coast of New England began to be settled from Europe, the claim of Massachusetts to territory was extended to "three miles north of the River Merrimac." Casting one's eye on the map, it is easy to perceive, that a line drawn due west from this northern boundary, as it is formed by the bend of the river towards the north, not far from its mouth, would cut off a considerable portion of the southern part of what now constitutes Vermont. The Massachusetts government, therefore, when it extended its cares to the security of the northern frontiers against the Indians of Canada, without any hesitation or doubt, as it seems, formed, in 1723, a lodgment in what is now Brattleborough, on the western bank of Connecticut River. There, during the distressing war with the natives, aided by the French, their instigators, which spread such terror and desolation along the borders of the settlements of Maine and New Hampshire, as well as Massachusetts, a fort was constructed by Lieutenant Governor Dummer, of the latter state, which received his name, and the next year a settlement followed. This was the first English settlement within the limits of Vermont.†

But although the frontier towards Canada was thus extended, and, under the shelter of a fort, the labors of clearing and cultivating the land appeared practicable, yet the country was by no means in a state of security. We must never forget that American colonists were from different nations. Spaniards, we know, peopled the southern part of the continent, or overran it with their merciless troops, at an early period after its discovery by Columbus. And, jealous as they ever were of any encroachment on their power, wealth, or influence, they would not have left "the bleak, inhospitable north" to France or England, each of which nations took a portion of it, had they discovered in it any *gold*, which, as the commodity most available for immediate use, and soonest adapted to the gratification of eager avarice, they chiefly sought. By Papal permission and decree, they claimed all America. But France resisted this claim, and labored to form there an empire of her own; and Charlevoix, the historian of it, boasts its extent as "greater than all Europe,"‡ although the proud Spaniard termed it "of nothing worth."§ This empire she exerted herself to establish and enlarge by all practicable means. Among these was the employment of a religious influence over the minds of the natives. Hence, in no inconsiderable degree, the efforts of her able, sagacious, indefatigable missionaries, most if not all of whom were Jesuits, bound to an implicit obedience to their head, eager to extend to heathen nations the papal sway, which had suffered so much from Luther and the reformation, and expecting to *merit* everlasting life by their exertions and sacrifices in spreading the triumphs of their faith; at the same time looking on the English as heretics, beyond the pale of *the church*, and so doomed to everlasting perdition. Religious bigotry, and hatred, and contempt were all combined, in their almost unmitigated hostility; the full spirit of which seemed imparted to their native converts, in addition to their own savage propensities and habits. Can we wonder, then, at the dread of Indian warfare that pervaded the frontier settlements of New England on the north?

It must, however, be observed, that if treachery and cunning marked the Indian, as sensible of his disadvantages in open warfare with his foes of European origin; and breach of promise, and cruelty, and revenge, too often distinguished the Romanist, and led him also to connive at and permit in his Indian subjects and allies atrocities at which Christian civilization shudders; there was yet no disposition in the Puritans of New England to view with favor the character or conduct of a Papist. The very name was odious.

Vermont, then, as a "thoroughfare" between nations of different origin, pursuits, and

§ The import of the name "Canada."

interests, attractive as it was from its fertility and adaptedness to the purposes of agriculture and grazing, could not be occupied by peaceful farmers while the surrounding populations were struggling for mastery. Nor did the impediments end even here.

The French, in 1731, erected a fort on the eastern side of Lake Champlain, towards its southern extremity; but they soon demolished it, and chose a position on the western side, where they built the celebrated fortress generally called Crown Point, although named by themselves Fort St. Frederic. Their object was, to facilitate their way to the Six Nations, whether for war or proselytism, and to their own possessions on the Mississippi beyond them, in order to environ ultimately the English colonists, and confine them to the Atlantic coast. The lake and its water communications were familiar to them, therefore, and highly valued. But on the land, it would seem, they had not leisure to make permanent settlements; nor, perhaps, any present inducement, at such distance from their capital, and under other circumstances of the case. Meanwhile, as the lands of Connecticut and Massachusetts became occupied by the posterity of the first settlers, new fields of labor were sought. Applications were therefore made to the government of the latter state, by several of its inhabitants, who associated for the purpose, and a grant was made them to the northward of Fort Dummer, and on the eastern side of Connecticut River. This was in 1735, and the settlement took the name of No. 4, afterwards called Charlestown. But not ten years elapsed before war was again rife between England and France; and in 1746 this settlement was attacked by Canadian Indians,* and, for the time, ruined. Nevertheless, the spirit of the early settlers was unbroken. They returned, built again, cultivated their lands afresh, although with their weapons beside them; were again and again attacked, waylaid, several of them made captives and sold in Canada; and thus persevered, with unabated zeal and bravery, through all their severe trials, until their efforts were, in the good providence of the God of their fathers, crowned with success.

It is almost impracticable, in these times of ease and security, to appreciate justly the hardships undergone by those who "made the wilderness to smile and blossom." Especially may this remark be made in reference to Vermont, although applicable far more extensively.

But, added to the hardships attending the subduing of the soil, and to "the sword of the wilderness," in the "peril" of which they often "gat their bread," the disputes concerning titles to the land itself, to which we have before alluded, occasioned peculiar trouble. The boundary line between Massachusetts and New Hampshire was not settled until March 5, 1740, when it was established by George II., to whom applications had been made for that purpose, in the manner in which it has since been preserved, and now exists.† On the establishment of this line, it appeared but reasonable to all parties that New Hampshire should extend on the west as Massachusetts extended in that quarter; and hence her claim to the lands west of the Connecticut, and north of the Massachusetts line. Grants were therefore made by the governor of New Hampshire without scruple, and as the courage or necessities of settlers might prompt their applications. In this manner the territory of Bennington was granted, in 1749, and other grants followed.

Again, however, war intervened; and, from 1754 until the final conquest of Canada by the British arms, in 1760, it raged with various success, but with great sacrifices and sufferings on the part of frontier settlers, exposed as they necessarily were, and furnishing no small number of the provincial troops.

The return of peace brought with its blessing still another trouble, in the claims that arose from a new quarter. The State of New York, settled, as we have seen, by the Dutch, a few years after ‡ the French had planted themselves in Canada, had indeed long since passed under the dominion of England, being finally subdued in 1664. But the Dutch had made a small

* See its interesting history in the Collections made by *Farmer and Moore, &c.*

‡ That is, in 1609, at the commencement of their twelve years' truce with Spain, which opened again the way to foreign enterprise. The year 1604 is fixed, by *Charlevoix* and others, as the time when the *Sieur de Monts* and *Samuel Champlain* completed the discovery of Canada, and took possession of the country for *Henry IV.* of France, almost a century after the first knowledge of it claimed by the French.

settlement for trading with the nations on the Connecticut, and, for a considerable period, stoutly disputed the possession with the settlers from the jurisdictions of both Plymouth and Massachusetts.* Indeed, they seem to have honestly purchased from the natives a right to the soil, with as much scrupulousness as the very Puritans at the east of them. Their claim, of a nature like that of the English, was made to extend, says Dunlap,† “from Cape Cod to Delaware Bay, on the Atlantic, including the islands of the sea-coast; the River St. Lawrence seems to have bounded it on the north; on the south, some undefined line beyond Delaware Bay; and west, it was boundless.” Afterwards, however, it was narrowed down to the territory west of the Fresh River, as they termed the Connecticut. Mention is made of their purchasing of the Indians the territory between this and the North River, and “twenty-one miles inland;” and De Laet, one of their early historians,‡ dwells on the pleasantness and fertility of the country, visited after Hudson, by Adrian Block, in 1614. Until recently, however, we have had little knowledge concerning the voyages of the Dutch navigators. Honor is at length given, and justice done them, in the Collections of the New York Historical Society.

Without entering too minutely into details, in this place, it may be sufficient to remark that, notwithstanding it has been asserted by some, that as early as 1623 the Dutch built a fortress at the present site of Hartford, yet Trumbull§ states it to have been as late as 1633, only three years before Governor Haynes and Mr. Hooker led their little colony thither. Disputes there were, sharp and long continued, with respect to boundaries. The English confided in their royal charter, and the ability of their king to sustain it; the Dutch in the liberty granted them by their high mightinesses the States General of Holland; and nothing but the superiority of British power, which effected the conquest of New York, and gave to the “colony of New Netherlands” a character, laws, alliances, and interests wholly English, prevented the establishment of a Dutch republic on these western shores. And it admits of question, whether true candor has, in this country, been shown to the claims of the noble-spirited people who authorized and forwarded the founding of New Amsterdam, “at a time,” said a worthy descendant from them, “when that nation [Holland] had just sprung into political existence, after a long, bloody, and most glorious struggle against civil and religious tyranny, during which all the energies of patriotism, courage, and talents had been suddenly and splendidly developed.”||

To be brief in this rapid review, a long period of silence on the subject of the Dutch claims, or the claims of New York, in reference to territory north of Massachusetts and west of Connecticut River, seems to have been maintained. This, perhaps, was owing to two considerations; the one, that already more land was claimed and possessed than the inhabitants could occupy and cultivate; and the other, that the northern frontier beyond Massachusetts, open as it was to the invasion of the French and their Indian allies or subjects, presented no attractions to settlers.

When, however, the establishment of peace removed the fears of savage outrage, and rendered the subduing of the wilderness no longer a perilous enterprise, “the unsettled lands of the country acquired a new value, and were every where explored and sought after by speculators and adventurers. None appeared more inviting than the tract between Lake Champlain and Connecticut River. The soil was rich and fertile, favorable in many places to the production of grain, and in all to grazing and the raising of cattle. It was plentifully watered by streams and rivers, and abounded with necessary and useful timber. In such a soil and situation, the labor and hardships of a few years could scarcely fail of producing rich and valuable farms, with all the ease and independence naturally annexed to industry in the rural economy of life.”¶

Application being made, as we have seen above, to the governor of New Hampshire, within

¶ *Dr. Williams*, from whose account much of what immediately follows is abridged.

whose territory this region was supposed to lie, he proceeded so far to issue grants, that in 1761 not less than sixty townships, of six miles square, were granted on the west of Connecticut River. In one or two years more, they amounted to one hundred and thirty-eight; keeping twenty miles east of the Hudson, so far as that extended northward, and then advancing to the eastern shore of Lake Champlain; thus enriching the governor, who, besides the fees and donations attending the business, reserved five hundred acres in each township for himself. This aroused New York. On the 23th of December, 1763, the lieutenant governor, Colden, issued a proclamation, in which he recited the grants made to the Duke of York by his brother, Charles II., asserted their validity, claimed the jurisdiction as far east as Connecticut River, and commanded the sheriff of Albany county to return the names of all persons who, under color of the New Hampshire grants, had taken possession of any lands west of the river.

This proclamation Governor Wentworth met by another, dated March 13, 1764, in which he declared the grant to the Duke of York to be obsolete, and asserted that New Hampshire extended as far west as did Massachusetts and Connecticut, and that the grants made by New Hampshire would be confirmed, even should the jurisdiction be altered. He exhorted the settlers not to be intimidated, but to cultivate their lands with diligence; and required the civil officers to exercise jurisdiction as far westward as grants had been made, and to punish all disturbers of the peace.

Two authorities were now up, and a contest between them might be anticipated. The assurances of the New Hampshire governor tended to quiet the minds of the settlers; but, on the part of New York, an express application was made to the crown. This stated — on what authority is, however, disputed — that the people were desirous to be included in that government, and that, as the course of business must ever lie towards New York, it would be for the convenience and advantage of the people, who, however, publicly disowned the application afterwards, to be united to that province. Nevertheless, it prevailed; and the king, on the 20th of July, 1764, ordered and declared “the western banks of the River Connecticut, from where it enters the province of the Massachusetts Bay, as far north as the forty-fifth degree of northern latitude, to be the boundary line between the said two provinces of New Hampshire and New York.”

Nothing appeared in this decision to alarm the people. Concluding that their title to the lands they had settled would be but confirmed by it, they had no idea of disputing the jurisdiction of New York, or opposing its government. They supposed the words “to be” were designed to express the future, and not to refer to the past. But not so did the New York government. “They construed it,” says the historian, “as a declaration not only of what was to be for the time to come, but of what was, and always *had been*, the eastern limit of New York; and, of consequence, that the grants which had been made by the governor of New Hampshire were grants of what had always belonged to New York, and were therefore illegal, and of no authority.” Letters had indeed passed between the governors of New Hampshire and New York, Wentworth and Clinton, concerning their respective boundaries, as early as 1750,* notwithstanding which the grants had still been issued; and it is surprising to see the confidence with which, on both sides, the claims were pressed. The late eminent Chancellor Kent,† writing of the dispute, as it was in 1777, says, “The inhabitants of the *north-east part of the state*, (now Vermont,) which had been represented in the convention under the names of the counties of Cumberland and Gloucester, renounced their allegiance, and set up for an independent state. On the 30th of June, in that year, they were knocking at the door of Congress for a recognition of their independence, and an admission into the Union.” On the other hand, Dr. Williams, speaking of the New York claim under the grant to King James, says, “There were no principles, which apply to human affairs, by which this grant would bear a strict examination.” He terms it “a blundering transaction,” and says that the geographical “bounds of it were contradictory, indefinite, and impossible.”

* *Belknap's Hist. New Hampshire*, p. 323, F. and M.'s ed.

† Address to the N. Y. Hist. Soc., 1828. See also *Dunlap, Hist. New York*.

The time, however, came for enforcing authority; and the government of New York required the settlers to surrender the charters they had received from New Hampshire, and take out new grants from New York, attended with great fees and expense. Some settlers complied, and bought their lands a second time; while others absolutely refused. Actions of ejectment followed, commenced in the courts of the new counties which had been formed, and these were decided there in favor of New York. Great profits accrued to its rulers from these measures, for the amount of them was far higher than the original cost of the titles from New Hampshire.

But opposition was made in cases where ejectment by official authority was attempted; and the settlers, "instead of being depressed into submission, seemed to derive new powers from oppression; and the people," says Dr. Williams, "soon began to associate, to defend one another in their opposition to the courts and officers of New York." Ten years of litigation and of occasional violence followed, of which it is remarked by Belknap, "that although [the dispute] was carried on with a degree of virulence unfriendly to the progress of civilization and humanity, within the disputed territory, yet it called into action a spirit of vigorous self-defence, and hardy enterprise, which prepared the nerves of that people for encountering the dangers of a revolution more extensive and beneficial."

Among the hardy, resolute, and brave men whom these difficulties were now nurturing, few became more distinguished than Seth Warner and Ethan Allen. Scenes of the revolutionary struggle were fast developing the character of our countrymen. One and another aggression of the British ministry; intent on carrying their favorite point, the civil subjection of the colonies, was provoking the opposition, not of the New England colonies alone, but others along the Atlantic border. The successful resistance to the stamp act of 1765, and which produced its welcome repeal, became an encouragement to the friends of liberty, who, in various ways, evinced their determination to make their value and consequence known and felt by the mother country. Of these a better appreciation was indeed made in that quarter than had heretofore been entertained. But still the progress of events conducted to an open rupture, on the special history of which it is not our object here to enlarge. Suffice it to say, that the territory now included in Vermont was very peculiarly exposed, and the situation of its inhabitants in many respects very singular.

It would, in fact, be difficult to produce a parallel to the anomalous state of these settlers. Their *improvements*, made on the lands they had purchased, were effected at imminent peril. Their titles to the lands themselves had been honestly acquired on their part, but were disputed by contending governments, which yet exercised over them no effectual authority,* and the total loss of them hazarded. To neither of these governments could they appeal without slighting the other; nor, consistently with their own interest, and duty to their families, submit to either. They felt, therefore, constrained to temporize; and while, with the rest of their brethren, they entered, as individually called by an imperious sense of duty, into the scenes of the revolution, they were nevertheless not unmindful of the peculiarities of their own case.

But it is not to be supposed, as it surely will not be by any true "Green Mountain Boy," or New Englander, that frontier settlers, coming out from such a state of society as had been constituted originally by the Pilgrim Fathers, and handed down from them, could consent to live without law, order, or those social institutions on which order and law depend. No! The towns, small and exposed as they might be, and struggling, as inevitably they must, with the hardships incident to settlements in the wilderness, cannot thrive without government; and they who are, at least for a season, beyond reach of the laws that govern the larger communities, from which they are providentially separated, become "a law unto themselves." They have their town meetings; they decide on the qualifications of voters in them; they choose their moderator, their town clerk, their selectmen, to manage the affairs of their little, but, to themselves and their families, all-important community. The school and the school committee,

* Although four counties had been nominally organized by New York, two on each side of the Green Mountains.

the church and its pastor, the constable and the justice of the peace, must all be included.* The citizen of New England, place him where you will, whether in the Old Colony or California, in Vermont or Iowa, cannot feel contented or happy until these are all provided for the civic association of which God, in his providence, has made him a member; and thanks be to God that a clear, sober view of the real wants and true interest of society forces this just appreciation on so many energetic minds!

Still there were many, doubtless, who entered the wilderness of Vermont, as they have other regions of frontier exposure and peril, without having previously imbibed a "love of things that are excellent"—men of rude passions, uneasy temperaments, reckless of rule or resolved to resist it, lawless, selfish, and overbearing. Such are found in all ages and countries. But the progress to social order either shakes them off, or humanizes them, or neutralizes, in time, their baleful influence.

The state of society and the emergency of their times have often in our country produced individuals of that class which we are early led to admire in the histories of ancient Greece and Rome—men who become eminent, not for the possession and cultivation of a single talent only, but for the development of the various powers bestowed on human nature, in their several fair proportions, as the necessities of their condition may demand. Such, in New Hampshire, was Meshech Weare; in Massachusetts, Elisha Williams, characterized so justly and beautifully by Doddridge; † Ashmun also, of whom one of the "favored of the Muses" ‡ writes that he was

"A leader when the blast of ruthless war swept by,
A teacher when the storm was past, and guide to worlds on high."

And the circumstances which called forth the vigor and courage of Warner and Allen, whose names only have been mentioned here, but on whose history we cannot dwell, brought into active and beneficial exercise the talents and virtues of Thomas Chittenden, who, though enjoying in early life but few advantages of education, shone, nevertheless, under the requirements of his trying times and high office, and has left a name which posterity cannot but honor, as his contemporaries revered and loved it.

The anomalous condition of the settlers, to which allusion has been made, requires a further description. They had represented their case to the throne as early as 1764; and, in 1767, an inhibition was issued to the governor of New York, who was required to desist from making any further grants until the royal will should be made known, "upon pain of his majesty's highest displeasure." This notwithstanding, grants were made, and resisted; and a series of altercations excited so greatly the animosity of the opposite parties, that a civil war must have been the issue, had not the events which occurred at Lexington and Concord, in 1775, arrested the attention of all, and fixed it on the interests of the whole country.

The seizure of Ticonderoga by Colonel Allen and his associates, of Crown Point by Colonel Warner, and of Fort St. John by Arnold, soon gave to the American forces the command of Lake Champlain in its whole extent; while the subsequent capture of Burgoyne, after the partial engagements of Hubbardton and Bennington, prevented any further fears, at least for a season, respecting the northern frontier.

In the mean time, great want was felt of some well-defined government over the population formed on the "Grants." A Congress had been constituted of delegates from the greater part of the colonies, and held its first session in 1774. At its second meeting, the next year, a committee was sent on to Philadelphia to consult with its members. On their return, this committee, by issuing circulars and reporting the result of their mission, prepared the way for a convention of delegates from the several towns, which had now become accustomed for some time to act together for mutual defence. This convention met on the 16th of January,

* These were, in fact, the principles on which the original grants from the New Hampshire government were constructed. See the copy of one in *Thompson's Hist. of Vermont*, 2d part, p. 224.

† Quoted by Dr. *Allen*, in his *Am. Biogr. and Hist. Dict.*

‡ Mrs. *Sigourney*, id.

1776, and presented its petition to Congress; but this was subsequently withdrawn, in consequence of a recommendation to submit for the present to New York; and finally, after other preparatory steps, the territory was declared, January 15, 1777, a free and independent state, assuming the picturesque name of *Vermont*.

This important measure was taken with great firmness, moderation, and unanimity. Yet it was followed, as under existing circumstances might have been anticipated, by opposition on the part of New York, petitioning the Congress not to acknowledge the act; and on the part of New Hampshire, claiming several of the towns which had embodied themselves in the new state. Nor was it until after a variety of changes, and much negotiation, of which the details might fill a volume,* that these external concerns were adjusted, and Vermont became an integral part of the new American Union. That happy event took place, after a satisfactory settlement of all disputes with the states both of New Hampshire and New York, March 4, 1791. The general history of the state since is blended with that of the nation.

Under all their difficulties and embarrassments, in the adjustment of land titles, the subduing of the wilderness, the arrangement of their political concerns, and the horrors of warfare, the inhabitants had not neglected the claims of religion and good learning. The settlement of the ministry in the small towns, as they were successively formed and grew able to sustain it, was followed up with a good degree of zeal and perseverance. The condition of society seemed to require, and effectually obtained, a free toleration of religious sentiments, with no distinction in the claims of sect or denomination. An entire sundering of bonds between the church and the state was accomplished, and the result has seemed to show that then the religion of the gospel flourished best, when left to its own heavenly resources, and the zealous love and efforts of its sincere friends; human laws being only then appealed to, when infractions of special civil compacts rendered such appeal needful. Hence absolute contracts for the support of the ministry can be exacted by law, but the law does not compel any to form such contracts.† Revivals of the power of religion have not been unusual. Nearly 20,000 communicants were found in June, 1848, connected with the 189 churches embodied in the "General Convention of Congregational Ministers and Churches," which then held its session at Brandon.‡ And the statistics of other denominations, which are found in this state, as in the rest of New England, bear comparison with this result.

For the cause of education Vermont has done nobly; and she deserves the high honor of being ranked among the few governments that have wisely discerned and followed out with energy the permanent welfare of those who sustain them. The school system of the other New England states has been introduced into Vermont, where upwards of 2400 district schools are maintained by a local tax levied by the inhabitants on themselves, and attended by upwards of 50,000 pupils — being a sixth part of the whole number of inhabitants; and besides these schools, the state has from time to time chartered a large number of academies; several of which, however, have since ceased to exist, while several among them are sustained by different religious denominations and private benefactions.

To crown this system, Vermont has a "State University" at Burlington, now in a flourishing condition, and a college at Middlebury, possessing at least equal advantages. Both are high in public favor; the latter being attended by about 100 pupils, the former by 70. There is also a medical college.

Medical societies, and societies for benevolent purposes, have been greatly multiplied in the state. Its agriculture, manufactures, and, by means of Lake Champlain, its navigation also, have been encouraged, developed, and become greatly successful. As yet, no state survey

* See, however, for the particulars, either Dr. *Williams's* History, or the clear though brief exhibition of all these transactions, consecutively, in *Thompson's* Vermont, Part II.

† See *Graham's* Sketches.

‡ See the Minutes of that Convention, printed at Windsor, where is established its Religious Journal. The first newspaper in the state was published in 1781.

of its geology has been completed; but the progress of its railroads, so vigorously prosecuted, and promising such advantages in bringing the riches of the west to the sea-coast, will doubtless make apparent also, at an early period, the worth of such a measure.

In 1842 began the celebration of Forefathers' Day;* and that whatever was commendable in their character and spirit may, under the blessing of their and our God, flourish in this now thriving state, is our hearty wish and prayer.

VIRGINIA is the northernmost, save one, of that division of the United States usually denominated the *Southern States*. It lies between lat. $36^{\circ} 33'$ and $40^{\circ} 43'$ north, and extends from $75^{\circ} 25'$ to $83^{\circ} 40'$ of west longitude. Its length, from east to west, is 370 miles; its greatest breadth 200; and its exact area is officially stated at 61,352 square miles.† It is bounded on the north by Pennsylvania; on the north-east by the River Potomac, which separates it from Maryland; on the east by the waters of Chesapeake Bay and the Atlantic Ocean; on the south by North Carolina and a part of Tennessee; on the west by Kentucky; and on the north-west by Ohio.

Having been the seat of the earliest English settlement permanently established in North America, Virginia ranks as the eldest, of the thirteen colonies originally compacted into the republic of the United States; and is therefore worthy of the frequently-bestowed appellation of "the Old Dominion." The present name of the state was conferred by Sir Walter Raleigh, in compliment to the maiden queen, by whom, in 1584, he had been empowered "to search for remote heathen lands, not inhabited by Christian people," and to have and hold, in fee simple, all the soil within 200 leagues of any places which should become, within six years, the fixed residences of his companions, the crown reserving to itself one fifth part of all the precious metals that might be obtained. Under this authority, between the years 1584 and 1588, Sir Walter fitted out several vessels, the first two of which touched at an island on the coast of what is now North Carolina; but of the number or fate of the adventurers there

* Boston Recorder of January 12, 1849.

† Some geographers give 220 miles as its extent from north to south, and estimate the area at 70,000 square miles. At the close of the American revolution, according to Mr. Jefferson, the boundaries of Virginia, commencing at the Atlantic Ocean, and reaching 768 miles to the River Mississippi, with an average breadth of about 223 miles, included an area of no less than 121,525 square miles, being "one third larger than the Islands of Great Britain and Ireland."

supposed to have been left, no satisfactory account has since appeared. The second fleet, consisting of seven "ships," landed 107 men upon the Island of Roanoke, in 1585.

In the two following years, further supplies, amounting, respectively, to 50 and 150 men, were sent by Raleigh, accompanied by a governor and 12 assistants, with a charter of incorporation. Though instructed to settle on Chesapeake Bay, they disembarked at a more southerly point; and their subsequent destiny, like that of their predecessors, is involved in mystery.

These attempts of Raleigh and his coadjutors to obtain a secure and solid foothold among the then hostile natives having successively failed, and the funds of the projector having suffered to the extent of £40,000 sterling, resort was had to the assistance of other capitalists. Accordingly, in 1589, Sir Walter transferred a portion of his interest in the grant from Queen Elizabeth to an association of merchants in London. A few additional adventurers were sent in the course of the two or three succeeding years. But in 1603, the attainder of Sir Walter Raleigh terminated his efforts and his anxieties in behalf of his favorite plan. In 1607, Sir Thomas Gates and others obtained a new grant from King James I. ;* which grant, in 1609, was superseded by letters patent of the same king, incorporating the Earl of Salisbury and his associates as "the Treasurer and Company of Adventurers and Planters of the City of London, for the first Colony of Virginia." The most ample powers in the premises were hereby conferred, and were even, three years afterwards, enlarged, by an additional grant of all the islands lying between the 30th and 41st degrees of north latitude, and within 300 leagues of the parts before granted.

The fact of the merging of all former grants in that to the Earl of Salisbury is derived from statements of Mr. Jefferson. Other authorities make mention of two chartered companies, to each of which was assigned an immense tract, called, respectively, South and North Virginia; the former reaching from latitude 34° to 38° north, including the present comparatively contracted area of the state; the latter† comprising the territory lying between the parallels of 41° and 45° north. Sir Francis Drake and Sir Richard Grenville appear to have been among those engaged in the unfortunate adventures under Raleigh's charter, prior to the commencement of the seventeenth century. The little band of 107 persons, who were ultimately successful in the attempt to colonize the new world, embarked from England in three small vessels, early in the year 1607. This expedition was commanded by Captain Christopher Newport, with whom were also associated the celebrated Captains John Smith and Bartholomew Gosnold. Their destination was the Island of Roanoke, previously visited by Raleigh's men, as above related; but adverse weather drove them into Chesapeake Bay, whence they ascended James River some 50 miles to an eligible spot, where they took up their abode, naming it Jamestown, in honor of their reigning sovereign. This place, therefore, though still of inconsiderable magnitude or importance, and greatly dilapidated, is entitled to the reputation of being the most ancient of the Anglo-American settlements; and may be regarded, in a great degree, as the germ of that vast empire, which, after a lapse of less than two and a half centuries, has spread itself over, and brought within the pale of civilization, nearly a tithe of the habitable globe.

It cannot be disguised that the first settlers of Virginia were actuated by motives of a nature somewhat more worldly than those which influenced their fellow-colonists of New England. The reported natural wonders of these new and strange regions, and the anticipated acquisition of immense treasures of gold and silver, were the predominant stimuli to their curiosity and their zeal. It seems not to have entered into their calculations, that they might be doomed to encounter innumerable trials, privations, and dangers; or that their sufferings in the midst of an unmeasured wilderness, surrounded and beset by pitiless barbarians, would constitute the miserable and almost sole fruits of their too sanguine hopes. The early history of Virginia is replete with affecting and interesting events, embracing many remarkable and romantic incidents. The frequent collisions of the emigrants with the treacherous and preda-

* It was under this grant that the first effectual settlement, at Jamestown, was made.

† Subsequently named New England, by Prince Charles, (afterwards Charles I.) 1614.

tory hordes around them, gave rise to numerous memorable deeds of heroism and magnanimity, as well as to no less a number of acts of cruel oppression and sanguinary atrocity. On the one hand, although pillage, assassination, and every species of outrage signalized the course of the lawless savage, the conduct of the civilized settlers themselves towards their untamed neighbors was not always the most just, humane, or politic. After a few years of perseverance and endurance, however, the latter succeeded in establishing themselves as a permanent community, through the aid of several fortunate circumstances which occurred in the lifetime of Powhatan, the celebrated and powerful Indian chief. To his singularly acquired friendship, the colony was at one time mainly indebted for its exemption from total extermination. His daughter, Pocahontas, after her generous rescue of Captain Smith from imminent death, married a Mr. Rolfe, a respectable planter, subsequently went to England with her husband, where she was honored with marks of the highest consideration; and thus a foundation was laid for the restoration of amity between the contending parties, which continued, with a few sad interruptions, for a long period.*

The curse of slavery, so lamentably entailed upon this otherwise favored region, and which, at the present remote date, is a source of bitter controversy, if not of incalculable danger to the whole American nation, originated with the landing of some twenty negroes from a Dutch vessel, and the selling of them into perpetual bondage, at about the time of the advent of the Plymouth "Pilgrims." This evil, which has since grown in magnitude and enormity to an extent scarcely reducible by human power, is a source of regret to the best portion of the people of Virginia, as well as one of angry remonstrance and censure on the part of many other members of the Union.†

The original limits of Virginia have, at various periods, and under divers circumstances, been materially circumscribed. In the early period of its colonial existence, its boundaries had never been accurately defined. It was an immense unexplored wilderness, to all appearance illimitable, especially on the north and west, and confined by no natural barrier then known to its new residents. As the population multiplied, and spread itself into the interior, and along the coast, to points remote from the seat of government, legislation upon local affairs became difficult, and the management of the general interests grew unwieldy. With this advance of civilization in every direction arose the necessity of forming new and distinct communities. Thus, from time to time, large portions of territory, with their inhabitants, were set off from the parent commonwealth, made independent of the latter, and endowed with the prerogative of establishing their own constitutions and laws. Most of the circumjacent regions, since erected into states, were meant, in all probability, to be included in the patents primarily granted to the London Companies by James I. His successors, however, at different periods, subdivided the country, and established distinct colonies within its supposed original borders.

The incipient principles of national freedom, the diffusion of which resulted in the American revolution, were as early recognized and inculcated in Virginia as in any of her sister colonies.

* The massacre, in 1622, of 347 colonists, — men, women, and children, — through a stratagem of the cruel successor of Powhatan, was one of the most severe afflictions ever experienced by the colony.

† Mr. Jefferson, in his "Notes on Virginia," (1781,) laments in strong terms the existence and increase of this "blot on our country," and ardently advocates a system of gradual emancipation. "During the regal government," he says, "we had at one time obtained a law which imposed such a duty on the importation of slaves as amounted nearly to a prohibition; when one inconsiderate Assembly, placed under a peculiarity of circumstances, repealed the law. This repeal met a joyful sanction from the then sovereign, and no device, no expedient, which could ever afterwards be attempted by subsequent Assemblies, — and they seldom met without attempting them, — could succeed in getting the royal sanction to a renewal of the duty. In the very first session held under the republican government, the Assembly passed a law for the perpetual prohibition of the importation of slaves. This," he continues, "will in some measure stop the increase of *this great political and moral evil*, while the minds of our citizens may be ripening for a complete émanicipation of human nature." — *Notes, Boston ed.*, 1832, p. 93.

When that momentous event took place, she furnished her full complement of patriots and warriors, participated largely in the toils, and conflicts, and sacrifices of "the time that tried men's souls," and in the consummation of the high purposes of that struggle, merited and received an ample share of its glorious fruits. Among the illustrious names that adorned her annals at this epoch, it may be sufficient to point to those of George Washington, Thomas Jefferson, Patrick Henry, James Madison, and John Marshall. The names of these distinguished men and their compatriots not only shine prominently upon the records of their renowned day and generation, but their effulgence will irradiate the nations of the earth, as a constellation of political light, commanding the homage of every friend of rational liberty in all coming time.

The first constitution of Virginia, in which her people took part, was formed in 1776. The previous dismemberments of the state, under various British monarchs, whereby Maryland, Pennsylvania, and the Carolinas had been gradually detached, were never formally confirmed by the people of Virginia until the adoption of this civil compact. Although those acts of the royal government had frequently been subjects of remonstrance, it was deemed advisable now to acknowledge them, that there should arise in future no cause of dissension among the members of the new confederacy. The constitution thus framed, in a season of critical emergency, without the advantages of leisure, deliberation, and of experience, (being the first in the whole United States,) was naturally imperfect. It was soon found to be unequal in its operations; and at the close of the war, much discussion arose upon divers projects for its improvement. It was not, however, essentially amended until 1830, when it underwent important modifications. Its principal features are as follow: the governor is elected by joint vote of the two branches of the General Assembly; his official term is three years, and he cannot be reelected for the next succeeding term; he is assisted in his executive duties by three counsellors of state, the senior of whom, in office, acts as lieutenant governor; the legislature comprises a Senate, consisting of 32 members, chosen for four years, (one fourth of whom are to retire each year,) and a House of Delegates, 134 in number, chosen annually by the people; clergymen are excluded from participation in the civil government; the judges are chosen by the legislature. The Assembly convenes at Richmond, the capital, annually, on the first Monday of December. Every white male, 21 years of age, and possessed of a freehold valued at \$25, or being a housekeeper, or head of a family, and having paid taxes, is qualified to vote for state or other officers; but subordinate officers, soldiers, marines, or seamen, in the national service, as well as paupers, and men convicted of infamous crimes, cannot exercise the right of suffrage. The manner of voting at all elections is the open or *viva voce* mode.

Virginia is now divided into 119 counties. Its seat of government is the city of Richmond, and its greatest commercial port is Norfolk. There are many other cities and populous towns in the state, more particular descriptions of which will be found in their proper order in this volume. Within even its present boundaries flow some of the finest rivers in America, the most important of which are the Potomac, Rappahannock, James, and Kanawha Rivers. It is also watered by the Ohio and its tributaries on the west. (See *Rivers*.) The surface of the state is greatly diversified; insomuch that those familiar with its topography have considered its soil and climate under several distinct zones or divisions. The eastern section is generally a low country, with a soil partly sandy and partly alluvial, abounding in swamps and unproductive tracts, and for the most part, especially towards the sea-coast and along the margins of rivers, noted for the prevalence of fatal epidemics during the season extending from August to October. From the head of the tide waters, the mountainous district commences. Here the soil becomes more fertile, and the climate more genial. Across this portion of the state stretch the widest bases of the stupendous Alleghanies — "the spine of the country." Between the numerous ridges, into which this vast chain is riven, there lie extensive and beautiful valleys, presenting a soil of the richest quality, a salubrious and delightful climate, and the most picturesque and magnificent natural scenery. Beyond these lofty eminences lies a third section, extending to the Ohio River in one direction, and to the

Cumberland Mountains in another, commonly distinguished as West Virginia. This, too, is an elevated and broken region, less productive in general than the middle section, and less populous, but enjoying an atmosphere quite as healthy, and waters equally pure.

The chief agricultural products of Virginia are wheat, Indian corn, and tobacco. Cotton is also cultivated considerably in the alluvial district contiguous to North Carolina; and in other quarters, hemp and wool are among the chief staples. All the varieties of grain, vegetables, and fruit, peculiar to the climate, are also raised; and these in great abundance where due attention is paid to their culture. In mineral wealth, Virginia is sufficiently rich to divert much capital from employment upon the surface to the development of actual or supposed treasures lying beneath. Iron, lead, copper, gypsum, salt, anthracite and bituminous coals are among the most plentiful and profitable of the rewards of these efforts and researches; although, in some localities, the more precious metals have become objects of inquiry; and numerous explorations, particularly in pursuit of gold, have been undertaken, (some of them quite recently,) with different degrees of success. The manufactures of the state are confined principally, with some exceptions, to the preparation of its staples for market, or for domestic consumption. The capital invested in all the branches of this department of home industry amounts to several millions. For all its purposes of trade, the commercial facilities of Virginia are ample. Its sea-coast and principal rivers afford many excellent harbors; and its means of intercommunication, both natural and artificial, extending through all parts of the state, are well adapted to the convenience and requirements of the people. Much attention has latterly been paid to the improvement of river navigation, the construction of canals, railroads, &c.

Among the remarkable natural phenomena existing in Virginia, besides its mountainous ridges, in some places singularly penetrated by noble rivers, are a number of mineral springs, cascades, caverns, and, above all, the celebrated structure in the county of Rockbridge, between the Blue Ridge and the North Mountain, called the *Natural Bridge*, and described by Mr. Jefferson, as "the most sublime of nature's works."* Many of the springs are so highly impregnated with salt, as to induce numbers of capitalists to enter into the manufacture of this article, and to erect salt works in various places; at one of which, near Charleston, on the Great Kanawha River, about 3,000,000 bushels of salt are made annually. The medicinal springs of Virginia, to the waters of which many virtues have been ascribed, are much frequented by invalids. The extraordinary cascade in the county of Augusta, called the *Falling Spring*, where the water descends perpendicularly, though in a comparatively small volume, from a height said to be 60 or 70 feet greater than that of the cataract of Niagara, is to the curious traveller an object of great interest and wonder. The sheet of water, only some 15 feet broad at the top, is divided in two or three places, at the commencement of the fall, by the rock over which it passes, but is nowhere else interrupted until it reaches the valley immediately below. So directly does the stream descend, that a person may pass dry-shod between the base of the rock and the bottom of the fall. Another extraordinary specimen of nature's

* "It is on the ascent of a hill," says the author of the Notes on Virginia, "which seems to have been cloven through its length by some great convulsion. The fissure, just at the bridge, is by some admeasurements 270 feet deep, by others only 205. It is about 45 feet wide at the bottom, and 90 feet at the top; this of course determines the length of the bridge, and its height from the water; its breadth in the middle is about 60 feet, but more at the ends; and the thickness of the mass, at the summit of the arch, about 40 feet. A part of this thickness is constituted by a coat of earth, which gives growth to many large trees. The residue, with the hill, on both sides, is one solid rock of limestone. The arch approaches the semi-elliptical form; but the larger axis of the ellipsis, which would be the chord of the arch, is many times longer than the transverse. Though the sides of this bridge are provided in some parts with a parapet of fixed rocks, yet few men have resolution to walk to them, and look over into the abyss. You involuntarily fall on your hands and feet, creep to them, and peep over. If the view from the top be painful and intolerable, that from below is delightful in an equal extreme. It is impossible for the emotions arising from the sublime to be felt beyond what they are here; so beautiful an arch, so elevated, so light, and springing, as it were, up to heaven! The rapture of the spectator is really indescribable!"—p. 21.

handiwork is the wild and magnificent torrent at Harper's Ferry, formed by the tumultuous rushing of the waters of the Potomac and Shenandoah through a gorge in the Blue Ridge, where they meet, and after momentarily beating with tremendous power against the rugged and rocky sides of the mountain, pass rapidly away together on their journey to the ocean. Several very curious caverns are found in the hilly regions, the most noted of which are Madison's Cave, on the north side of the Blue Ridge; another in Frederic county, near the North Mountain; and the "Blowing Cave" in one of the ridges of the Cumberland Mountains. The former of these has been a subject of much speculation with all philosophical visitors. A hill, 200 feet in height, rises perpendicularly from the margin of a branch of the Shenandoah River; one third of the way down from the summit, the cave opens, branches off in diverse directions, penetrates some 300 feet into the earth, and at two different points terminates in subterranean lakes of unmeasured dimensions. The roof is of solid limestone, 25 to 50 feet in height; and, being in a constant state of exudation, the ceaseless dropping of its calculeous tears forms, upon the floor and sides, a profusion of grotesque incrustations resembling pyramids and columns, gradually growing and changing in size and shape.

Not the least interesting spots in Virginia are Mount Vernon, on the Potomac, and Monticello, in Albemarle county; the former memorable as the long-loved home in life, and the chosen place of rest in death, of the illustrious Washington, and the latter as the splendid country seat of President Jefferson. No ostentatious memorials of those giant minds mark the abodes of their mortal remains. The tomb of the "father of his country" stands in a secluded cove at a short distance from the family mansion, in all the mournful and affecting dignity of unadorned simplicity. The spot of his nativity is designated in a like humble manner; it is in a retired part of the county of Westmoreland, on a plantation now in ruins, where may be seen, inscribed upon a modest stone, this brief memento: "*Here, on the 11th of February, 1732, George Washington was born.*" Over the grave of Jefferson stands a simple granite obelisk, bearing, by his own direction, this concise epitaph: "*Thomas Jefferson, author of the Declaration of Independence, and Founder of the University of Virginia.*"

The subject of internal improvements has occupied a large share of the public attention. The state has a fund of \$3,000,000, the income of which, exceeding \$280,000, is applied, under direction of a board of public works, to the advancement of useful projects for facilitating intercourse throughout the commonwealth. Among the most important of these undertakings is the construction of a series of canals and dams for the improvement and extension of the navigation of James, Kanawha, and New Rivers. Another great work is the Dismal Swamp Canal, 23 miles in length, whereby the waters of Chesapeake Bay are connected with those of Albemarle Sound. Sundry railroads, particularly in the eastern quarter of the state, have recently been opened, the whole comprehending an extent of over 300 miles; and others have been projected, or are already in course of construction. One line connects the Potomac with the Roanoke, passing through Petersburg, Richmond, and Fredericksburg; and another, commencing at Portsmouth, near Norfolk, secures an easy inland communication between the same rivers, at a lower point. There is also a railroad from Winchester to Harper's Ferry, where it meets the Baltimore and Ohio Railroad.

Considerations of state policy alone, perhaps, have prevented the organization of a system of universal education in Virginia. The subject, however, at the close of the revolution, engaged the earnest attention of some of the most sagacious minds. At that period, a revision of the civil code was in contemplation; and, among others, Mr. Jefferson projected and advocated a plan for the general diffusion of knowledge among all classes of people, not, of course, including slaves. The system proposed was progressive, embracing instruction of every grade, from the simplest elementary up to the highest stage of classical and scientific acquirement. The poor were to be supplied, at the public charge, with all the advantages of the grammar schools; and from these a certain number were to be annually selected, according to merit, for advancement to the collegiate institutions, supported also by the state. It would appear that this project, partial and limited though it was, as compared with the course pursued in New England, did not meet with the requisite amount of popular favor. Education had seldom.

if ever, been made a subject of legislation or discussion under the colonial government. The plan of establishing free schools, common to all, was therefore novel, and in some degree incomprehensible, as well as repugnant to the greater portion of men of wealth. As a whole, it was deemed too liberal and extensive. But, in 1796, that part of it which provided for elementary schools received the legislative sanction, although no measures were taken for carrying it into execution. In 1809, a fund "for the encouragement of learning" was established by law, to be derived from all fines, escheats, and forfeitures; and this fund was augmented, in 1816, by the addition of a very large share of the claim on the general government for military services during the then recent war. In 1818, the income of this fund amounted to upwards of \$50,000,* when the General Assembly set apart, as permanent annual appropriations, \$15,000 for the maintenance of a university, and \$45,000 for the education of the poor. Under this latter provision, the benefits of common schools were bestowed, with various degrees of success, upon large numbers of indigent children, who would otherwise, in all probability, have grown up in deplorable ignorance, vice, and misery.†

A further extension of the system of primary schools was authorized in 1820, at the discretion of the school commissioners, founded, however, on the coöperation of the inhabitants of the several school districts, who are required to defray some three fifths of the additional cost, on condition of receiving the residue from the state fund. There are numerous academies, or rather private schools, throughout the commonwealth; some of these are of a respectable rank, but they are designed chiefly for the children of those who can afford to dispense with the public bounty. Little or no attention was given to the education of females prior to the revolution; but there have been established since that event a large number of academies and high schools, devoted exclusively to the instruction of that sex. Of the still higher orders of educational seminaries, the most eminent are the University of Virginia, founded by Mr. Jefferson, near Charlottesville; the College of William and Mary, chartered by the English sovereigns of that name, in 1691, and erected by order of the Assembly at Williamsburg; Washington College, at Lexington, incorporated in 1782, and largely endowed by General Washington; and Hampden Sidney College, in Prince Edward county, founded in 1774. There are also several theological institutions, of comparatively recent date, under the patronage, severally, of Episcopalians, Methodists, Presbyterians, and Baptists.

The prevailing views upon the subject of religion are those held by almost every denomination of Christians in all other parts of the United States. In the early days of the colony, and during much of the subsequent time of its subjection to the sovereigns of Great Britain, the doctrines and discipline of the English church were those which generally predominated. But at the commencement of the American revolution, it was estimated that two thirds of the people had become dissenters; and the operation of the previously severe laws on the subject of religious faith and forms of worship was chiefly repealed or suspended by acts of the General Assembly, in 1776. The utmost toleration has since been recognized and affirmed by the legislative adoption of a bill drawn by Mr. Jefferson, in 1785, "for establishing religious freedom." At the present time, the most numerous sects are the Baptists and Methodists; next follow, in numerical order, the Presbyterians, Episcopalians, Lutherans, and Roman Catholics. There are also a few Unitarians, Friends, and Jews.

The actual outstanding public debt of Virginia, in February, 1850, was \$7,924,994.11, exceeding by \$545,539.11 the amount of *productive* property owned by the state; but the total value of funds of all descriptions, held by the state, is estimated at \$11,854,814. There were, in 1848, six banks, with twenty-one branches, employing a capital of \$10,283,633. Details of the value of exports and imports, with other statistics of the trade and commerce of the state, may be found in this work, under the appropriate heads.

* It now amounts to nearly \$90,000.

† An able writer in the "London Quarterly Journal of Education," speaking of the operation of this law, as ascertained up to the year 1834, remarks thus: "It has already imparted the knowledge of reading and writing, with all their moral tendencies, probably to 50,000 human beings; and, before many years, it will have conferred the same inestimable blessings on twice that number."

In conclusion, it may be remarked, that no state of the American Union enjoys a more liberal share of natural advantages than has fallen to the lot of this favored commonwealth. Her central position, productive soil, vast mineral treasures, forests of valuable timber, navigable rivers, secure harbors, commodious ports, and a climate averaging a medium temperature, are among those signal blessings of its inhabitants that demand a corresponding return of gratitude to the Supreme Giver, and the widest diffusion of his bounties among such of his rational creatures as are entitled to "life, liberty, and the pursuit of happiness."

WISCONSIN (or **OUISCONSIN**) was admitted by act of Congress, February 9, 1847, as an independent state of the American Union. Portions of its original territory were settled by the French as early as 1670. It passed from French to British jurisdiction in 1763, and so remained until 1794. After being connected with, and successively disconnected from, the respective States of Ohio, Indiana, Illinois, and Michigan, it was organized as a distinct territory of the United States in 1836. In 1838, it was further diminished in size by the separation from its present south-western border of what now forms the State of Iowa; and, in 1849, still further lessened, by setting off the remainder of the region lying west of the Mississippi, now known as Minnesota Territory.

Boundaries and Extent. — The state, as now established, extends from the Illinois line, in latitude $42^{\circ} 30'$ north, to latitude $45^{\circ} 20'$, and reaches from Lake Michigan on the east to the Mississippi River on the west. Its extreme length, measured angularly, from north-east to south-west, is about 380 miles; its breadth, from east to west, varies from 150 to 200 miles; and its estimated area, as officially returned, is 53,924 square miles.

Government. — Wisconsin is at present subdivided into 29 counties. The state government is vested in a governor, lieutenant governor, Senate, and House of Representatives, the latter to consist of not less than 60, nor more than 120 members; the number of senators not to exceed one third, nor be less than one fourth, of the number of representatives. The latter are elected by the people, annually; the senators and executive officers biennially. The annual sessions of the legislature commence on the second Thursday of January. All white male citizens, Indians recognized as citizens by any United States law, and civilized persons of Indian blood, not members of any tribe, are legal voters after a residence of one year within the state.

Judiciary. — The judiciary power is vested in a Supreme Court, Circuit Court, County Courts,

and justices of the peace. The Supreme Court is composed of at least four of the six judges of the Circuit Courts. Prior to the formation of the state government, the Supreme Court consisted of a chief justice and two associate justices. There are now five of the latter. During the continuance of the territorial organization, (some fourteen years,) Charles Dunn, of Elk Grove, held the office of chief justice: under the present state government, this office is held by Alexander H. Stow, of Taycheedah. The judges are elected by the people, each for the term of six years.

Education.— The subject of education has received, as might be expected from the character and origin of the settlers, a due measure of attention. Ample provision has been made by law for the establishment of a college; and corresponding means have been set aside in every township for the support of common schools, all by dint of bountiful grants of land. The value of the school fund thus created is estimated at \$2,780,912. Annual proceeds \$60,000.

Finances.— The state has as yet incurred no public debt.

Surface, Soil, &c.— In its external features, this state exhibits considerable variety. The northern part having never been fully explored, excepting by traders and trappers, is consequently but little known. It is, however, represented as a rugged and mountainous wilderness, though frequently presenting large tracts of extraordinary fertility, and watered by numerous broad and rapid streams. The surface, in the southern part, consists mostly of prairie land, well timbered along the river sides; in the central part of the state, the face of the country is more diversified. The rough and hilly tracts at the north produce the white pine in great abundance. The entire region is bountifully supplied with navigable streams, by which it is penetrated in all directions; and although on its eastern border it has a lake coast of some 200 miles, very few safe or commodious harbors exist in that quarter. The soil is generally of an excellent quality, and varies from one to ten feet in depth. It is especially productive on the margins of the Mississippi and Wisconsin Rivers, where also are found extensive forests of ponderous timber; and the land throughout the state, so far as it has been surveyed, proves to be admirably adapted to agricultural purposes, particularly to the growth of corn and wheat. Indeed, every species of vegetable suited to the climate can be cultivated with perfect success; and multitudes of cattle may find ample pasturage upon the rich and almost boundless prairies.

Rivers.— Its principal rivers, besides the great Mississippi, which flows along the western limits of the state, are the Wisconsin, a branch of the former, 500 miles in length; the Chippeway, a noble stream, emptying into the Mississippi north of the Wisconsin: Rock River, taking its rise within, and running partly through, the state; and Fox River, the proximity of which to the Wisconsin often causes an inundation of the intervening lands. There are likewise numerous lakes and ponds, some of great magnitude, in the northern section. Lake Winnebago, which connects with Green Bay, a branch of Lake Michigan, is 24 miles in length by 10 in width.

Internal Improvements.— Numerous internal improvements are in progress. The most important yet undertaken is that for improving the navigation of Wisconsin and Fox Rivers. This work is prosecuted by authority of Congress, half a million acres of the public lands having been appropriated for the purpose. Steamboat navigation between Lake Michigan, *via* Green Bay and the Mississippi, is secured by the improvement of Fox River, and the completion of a canal to Lake Winnebago. A railroad connects Milwaukee with the Mississippi; and convenient plank roads run into the interior from many places on the lake.

By reason of its contact with Lake Michigan and the waters thereto adjacent, together with its extensive means of inland navigation, Wisconsin enjoys great commercial facilities. On the margin of the above lake lies Milwaukee, the most thriving and populous town in the state, which has sprung into being and importance, almost magically, within a very few years, and has rapidly become the centre of a vast amount of trade. Possessing the best harbor between Green Bay and Chicago, it is the chosen resort of most of the steamers from Buffalo and other ports on Lake Erie, thus commanding a controlling interest in the entire business of the state. Madison, the capital, is situated on a beautiful elevation, midway between Lake Michigan and

the Mississippi, with both of which it has direct communication by means of a series of streams on either side.

Minerals. — In mineral resources Wisconsin is peculiarly opulent. The south-western portion abounds with lead and copper ores. The lead mines, in particular, are noted for being the most productive in the United States; and many millions of pounds of this metal are annually extracted, wrought into proper form, and exported. Vast quantities of copper, also, are being constantly exhumed and sent to market; and in iron ore the country is not less prolific. Much interest in the mineral products of this state has for some time been manifested, and is still actively exercised among enterprising capitalists in the neighboring states.

Manufactures. — Besides the smelting of ores, the business of manufacturing, in Wisconsin, is as yet inconsiderable; the greatest amount of capital invested in any one branch of public industry has been employed in the mining of lead, and preparing it for exportation.

Climate. — In the upper or northern part of the state, the winters are frequently severe, occasioned probably by the proximity of Lake Superior, which lies on the north and north-west. The summers, however, are temperate and pleasant. The winter is much more mild in the southern quarter, where the climate throughout the year is salubrious, and not unlike that of the northern portion of Missouri.

Indians. — A large portion of the northern section of the state is still peopled by various Indian tribes, several of which are in a state of semi-civilization. Some of the tribes, especially the Winnebagoes, have long refused to recognize the treaty ceding their lands to the United States, and continue to resist all attempts to remove them to their allotted country beyond the Mississippi.

Population. — The population of Wisconsin has multiplied prodigiously since the year 1830, when it numbered but about 4000. In 1847, it had reached over 200,000; and the census of 1850 states it at 305,191, including 626 free colored persons.

DESCRIPTIONS

OF

MOUNTAINS, VALLEYS, RIVERS, CREEKS, LAKES, CAPES, BAYS, HARBORS, ISLANDS, SOUNDS, &c.

ABBREVIATIONS.

As no uniform system of abbreviations for the names of the states and territories in the United States has hitherto been followed by any geographical writers, for the purpose of attaining greater ease and brevity of notation, we have in this work adopted the following, as best suited to this object; and would respectfully recommend them as intelligible and convenient for general use. We use, in all cases, the first and last letters of the name, excepting where two are alike in this respect, as in Indiana and Iowa, and in the compound names, as in New York, South Carolina, &c.

ALABAMA,	AA.	LOUISIANA,	LA.	NORTH CAROLINA,	N. C.
ARKANSAS,	AS.	MAINE,	ME.	OHIO,	O.

KENTUCKY,	KY.	NEW YORK,	N. Y.		

Abbaye, Point, Houghton co., Mn., extends into Lake Superior, between Huron and Keewaiwona Bays.

Abraham, Mount, Franklin co., Me., lies mostly in the town of Salem.

Adams, Cape, is on the Pacific, at the mouth of the Columbia River. A sand bar, 5 miles across, extends from it to within a mile of Cape Disappointment, which is 7 miles distant in a N. W. direction. When the wind blows from the W., this sand bar is covered with dangerous breakers. The cape is low, and thinly wooded. July 18, 1841, the U. S. sloop of war Peacock, belonging to the exploring expedition, was stranded and lost within Cape Disappointment.

Adams Creek, N. C., falls into Pamlico Sound, in lon. 76° 53' W., and lat. 34° 55' N.

Adams Point, Presque Isle co., Mn., projects into Lake Huron.

Adams Point, On. Situated at the mouth of Columbia River, opposite Cape Disappointment.

Adirondack Mountains, N. Y., lying S. W. of

Lake Champlain. Some of the peaks of this group are nearly as high as the White Mountains in New Hampshire. Mount Marcy, the highest summit, is 5464 feet above tide water in the Hudson. In these mountains this noble river takes its rise. There are five or six ranges of these mountains lying between Lake Champlain and Lake Ontario, and on the opposite side of Ontario, north of the Mohawk River. The chain which traverses Warren and Essex counties seems to be the most elevated. Some of the ridges of this group have received local names, as the Kayaderoseras, on the W. of Lake George; the Highlands of Black River; the Hassencleaver Mountains, of Oneida co.; and the central chain has been called Macomb's Mountains. From the early French inhabitants, they received the name of the *Peruvian Mountains*, in consequence of a belief then entertained that they possessed great mineral treasures. Little is known of the more northern portions of these mountains.

Adirondack River, N. Y., one of the head branches of the Hudson, rises in the Adirondack Mountains, in Essex co. It is about 20 miles in length, and passes through Lakes Henderson and Sanford, two small sheets of water surrounded by picturesque scenery, and immense beds of iron ore, and elevated 1900 feet above the Atlantic.

Admiralty Inlet, On. An irregular body of water, extending S. from the Straits of Juan de Fuca.

Agamenticus Mountain, Me., consists of three elevations, situated in the town of York, about 4 miles from the sea, and is a noted landmark for seamen. The highest summit is 673 feet above the ocean. It is said that St. Aspinquid died on this mountain in 1682, and that the Indians sacrificed 6711 wild animals at his funeral.

Agate Harbor, Houghton co., Mn. Situated on the N. coast of Keewaiwona Point, W. from Copper Harbor.

Agnew River, As., rises in the E. part of Pulas-ki co., and flowing S. E., enters White River in Arkansas co.

Aguila Creek, Ts., flows S., and empties into Brazos River, between Noland and Big Creeks.

Ahmie River, Dodge co., Wn. A head branch of the W. fork of Rock River.

Ahneepee River, Brown co., Wn. A small stream flowing S. E. into Lake Michigan.

Aitkin Lake, Ma. A small sheet of water lying N. from Sandy Lake, with which it is connected by an outlet.

Akkik or Kettle River, Ma. and Wn. It rises in the W. part of La Pointe co., Wn., flows S. S. W. into Ma., and empties into the St. Louis River.

Alabama River. This river is formed by the junction of the Coosa and the Tallapoosa, and flowing S. S. W., unites with the Tombigbee, 48 miles above Mobile Bay, and after the junction has the name of Mobile River. It is navigable at all seasons for vessels requiring 6 feet of water, from the junction, 60 miles, to Claiborne. From Claiborne, 150 miles, to the mouth of the Cahawba, the river has 4 or 5 feet of water. From the mouth of the Cahawba to the junction of the Coosa and Tallapoosa, its head branches, the river affords, in all places, 3 feet of water. The river is subject to great changes by rising and falling.

Alachua Savanna, Alachua co., Fla., is a marshy plain, which is supposed to discharge its waters by an underground passage into Lake Orange.

Alatamaha River and Sound, Ga. The river is formed by the union of the Ockmulgee and the Oconee. After the junction, the Alatamaha becomes a large river, flowing with a gentle current upwards of 100 miles, and enters by several outlets into Alatamaha Sound, 60 miles S. W. of Savannah, through which it passes into the Atlantic. This sound contains a number of beautiful islands. The Alatamaha is navigable on the Oconee branch, 300 miles from the ocean, for boats of 300 tons, and for steamboats to Milledgeville, and to an equal distance on the Ockmulgee branch. The bar at the mouth has 19 feet at low water. The whole length of the river to its source is about 500 miles.

Albemarle Sound, N. C., is a large inlet from the sea, in the N. E. part of the state. It extends 60 miles from E. to W., and is from 4 to 15 miles wide. It receives the Chowan, Roanoke, and several smaller rivers. It communicates with Pam-

lico Sound and the ocean by several narrow inlets, and with Chesapeake Bay by a canal through the Dismal Swamp.

Albert Lake, Ma. Situated near the Sioux River, and W. from Lake Pointset.

Albert Lake, On., lies S. E. from Summer Lake.

Albert Lea Lake, Iowa. This lake is situated on the N. border of the state, and is the source of Shell Rock Creek.

Allden's Hill, Ms. Situated in the town of Middleborough.

Alleghany or Appalachian Mountains reach from the Catskill Mountains, in the state of N. Y., their most elevated part, to Ga., forming a range of great length, and from 50 to 200 miles in breadth. The course of this great chain is nearly parallel with the Atlantic, and from 50 to 130 miles distant from it, and consists of a number of parallel ridges, denominated the Blue Ridge, North Mountain, Jackson's Mountain, Laurel Mountain, Cumberland Mountains, &c. These mountains, for the most part, are not over 2500 feet high, and they divide the waters which flow into the Atlantic on the E. from those which flow into the Mississippi and the lakes to the N. and W. These ridges are generally wooded to the top, and between the ridges are often valleys of fertile land, though the country among them is generally rocky and rough. They are composed of granite, gneiss, mica and clay slate, primitive limestone, &c.

Alleghany River. The head branches of this river water Potter co., Pa. It then enters N. Y. in the S. E. part of Cattaraugus co., through which it runs 45 miles in a circuitous course, after which it reenters Pa., and unites with the Monongahela to form the Ohio, at Pittsburg. The river is navigable, for boats of small draught of water, from the village of Olean, Cattaraugus co., to its entrance into the Ohio, a distance of 230 miles. Its entire length is 300 miles.

Allemande Lake, La., lies S. from the Mississippi River, and N. W. from Lake Washa, into which it discharges its waters.

Allen's Creek, an important mill stream, rises in Wyoming co., N. Y., flows through the E. part of Genesee into Monroe co., in the S. part of which it enters Genesee River.

Allen's Point, Vt., is the southern extremity of Grand Isle, in the township of South Hero, and takes its name from one of the early settlers.

Alligwash River, Piscataquis co., Me., is fed by a great number of small ponds, flows in a N. direction, and empties into the St. John's River.

Alligator River, N. C. This river rises in a lake of the same name, in Hyde, flows N. N. E., and empties into Albemarle Sound.

Alloway's Creek rises in Salem co., N. J., and falls into the Delaware River, 6 miles S. of Salem. It is 20 miles long, and navigable 12 miles for boats.

Alluvial Way, or Ridge Road, N. Y. This curious formation of nature extends from the Genesee River, near Rochester, to the Niagara River, near Lewiston, — a distance of about 80 miles, — is of considerable height, and about 8 rods in width. It is composed of sand and gravel stones, and is supposed by many to have once been the shores of Lake Ontario, from which it is now distant about 10 miles.

Amirante River, Fla., falls into Pensacola Bay.

Altovac Creek, Ts., flows in a southerly direction, and empties into Angelina River.

Alum Creek, O., is the W. branch of the Big

Walnut River, which it enters in the S. E. part of Franklin co., after a course of about 35 miles.

Alum Pond Hill, Ms. Situated in the town of Douglas. Height 778 feet.

Amelia Island, Nassau co., Fa., is situated in the N. E. part of the state. It is 15 miles long and 4 wide. Fernandina, a town at the N. W. end, was once the capital of the county, and a flourishing place. The land is fertile.

Anite River rises in Mi., and flowing S. into La., unites with the Iberville at Galveston, to which it is navigable, and after a course of 100 miles, falls into Lake Maurepas.

Amonoosuck Rivers, Upper and Lower, N. H. The upper river rises N. of the White Mountains, and passing N. E. into Dummer, approaches to within a few miles of the Androscoggin; thence it turns to the S. W., and empties into the Connecticut, at Northumberland, after a course of about 50 miles. Its valley, which is of great beauty, extends more than 20 miles in length, and 7 or 8 miles in breadth. The lower river rises on the W. side of the White Mountains, and falls into the Connecticut, just above Haverhill, after a course of 50 miles. Two miles from its mouth it receives the Wild Amonoosuck, a swift, rapid stream about 40 yards in width. The waters of the Amonoosuck are pure, and its current quick. The valley of the lower river is about half a mile in width, and was probably once the bed of a lake. About $6\frac{1}{2}$ miles from the Notch of the White Mountains, the river falls 50 feet over a mass of stratified granite.

Anastasia Island, Fa., is situated on the E. coast. It is 18 miles long and about $1\frac{1}{2}$ broad. A signal tower on its N. end is in $29^{\circ} 50'$ N. lat., $4^{\circ} 29'$ W. lon. from Washington.

Anclote Keys, Fa. These islands lie off the coast of Benton co., S. from Helley's Key.

Ancram, or Roeloff Jansen's Creek, N. Y. This small mill stream rises in Hillsdale, Columbia co., and after a circuitous course enters the Hudson 8 miles below the city of Hudson.

Anderson's River, Ky. It falls into the Ohio, 52 miles above Green River.

Anderson's Creek, Ia., rises in the W. part of Crawford co., flows S. S. W., separating Spencer and Perry counties, and falls into the Ohio River.

Androscoggin or Ameriscoggin River, Me. The Margallavay, its N. branch, receives Dead and Diamond Rivers, in N. H., and unites with the stream flowing from Umbagog Lake, about a mile from its outlet. The river then pursues a S. course until it approaches the White Mountains, and receiving several considerable tributaries, it passes into Me. N. of Mount Moriah. It then flows E. and S. E. through a fertile country, nearly to the sea-coast, and turning N., flows over the falls at Brunswick, near Bowdoin College, into Merrymeeting Bay, uniting with the Kennebec, 20 miles from the sea.

Angelica Creek, Alleghany co., N. Y., rises in the town of West Almond, flows W. through the town of Angelica, where it enters the Genesee.

Angelina River, Ts., flows in a S. S. E. direction, and empties into Neches River.

Ann, Cape, Ms. See Gloucester.

Annesmesic River, Somerset co., Md., rises in the E. part of the county, and flows a little S. of W. into Tangier Sound.

Anno Nuevo Point, Ca., extends into the Pacific at the town of Santa Cruz, and N. from Point Pinos.

Antelope Creek, Ca. A small E. branch of the Rio Sacramento.

Antelope Island, Uh. A large island lying in the S. part of the Great Salt Lake.

Anthony's Nose, or, as more commonly called, the Nose, is situated in the W. part of Montgomery co., N. Y., on the N. branch of Mohawk River, and is on the extremity of the hill or mountain called the "Klips." It slopes towards the river from an elevation of about 500 feet, bearing a great resemblance to a nose some 300 or 400 feet long.

Anthony's or St. Anthony's Nose, N. Y., projects from the S. side of Breakneck Hill, in the town of Phillipstown, on the E. bank of the Hudson. It derives its name from a resemblance to a huge human face, as seen from the river, at the N. entrance of the Highlands. There is another projection of the same name, but less remarkable, opposite the site of old Fort Montgomery, near the S. entrance of the Highlands, below West Point. *Antietam Creek* rises in Washington co., Md., and empties into the Potomac.

Antoine Creek, As., one of the head branches of the Little Missouri River, and the boundary line between Clark and Pike counties.

Apostles' Islands, La Pointe co., Wn. Situated in the W. part of Lake Superior, N. from Chego-wawegon Bay.

Appalachee Bay is a large bay on the coast of Fa., in the Gulf of Mexico. Through this bay is a passage 10 feet deep, which is gradually reduced to 8, by which St. Marks is reached. It furnishes the best anchorage ground along the coast for the distance of 230 miles.

Appalachian Mountains. See *Alleghany Mountains*.

Appalachicola River, Bay, and St. George's Sound. The river is formed by the union of Chattahoochee and Flint Rivers, which unite in the state of Ga. in lat. $30^{\circ} 42'$ N., from which it proceeds S. 70 miles, to St. George's Sound, and thence to the Gulf of Mexico. Near the mouth of the river it forms a broad estuary, denominated *Appalachicola Bay*, which connects with St. George's Sound. The latter is partly enclosed by three islands, and is 50 miles in length, and from 4 to 9 wide. Between the islands are three passages into the sound, which have a depth of about 15 feet of water at low tide. The river is navigable for small vessels to the junction of the Chattahoochee and Flint Rivers. The Chattahoochee, the largest branch, is navigable for boats nearly 400 miles from the Gulf of Mexico. The whole surface drained by the *Appalachicola* and its branches is estimated at a little less than 20,000 square miles.

Apple River, Is., crosses the N. W. part of the state, passes through Jo Daviess co., and after a course of 45 miles, falls into the Mississippi, 20 miles below Galena. It is 50 yards wide at its mouth. It is a rocky and rapid stream, furnishing many good mill seats.

Apple Creek, Mo., runs on the boundary between Perry and Cape Girardeau co., and falls into the Mississippi at Birmingham.

Apple River, St. Croix co., Wn. It flows S. W. into the St. Croix River.

Appletree River, S. C. A small branch of the Keowee.

Appomattox River, Va. It rises in Prince Edward co., and after flowing E. 120 miles, unites with James River at City Point. It is navigable

for vessels of 100 tons to the falls at Petersburg, the head of tide water. There is a canal around these falls, and the river is boatable 80 miles above.

Appoquinunk Creek, New Castle co., De., rises in the W. part of the county, and flows N. E. into Delaware Bay.

Aransas River, Ts., flows in a S. of E. course, and empties into Espiritu Santo Bay, a little below the town of Refugio.

Ararat Mountain, Pa., lies in Luzerne and Wayne counties. Length 15 miles.

Ararat, or *Pilot Mountain*, N. C., lies 9 miles N. W. from Bethania, between Yadkin River on the S. and Ararat River on the W. It is about 1 mile in height, of a pyramidal form, with an area of an acre at the top, which supports a rock 300 feet high.

Arguello Point, Ca. Situated N. W. from Point Conception.

Argyle Fort, Bryan co., Ga., situated on the W. bank of Ogechee River, 6 miles above Ogechee Bridge, was built in 1733, to protect the early settlers against the Spaniards. It is now in ruins.

Arkansas Pass, Ts. A passage between two islands leading into Espiritu Santo Bay.

Arkansas River, As. This river rises in the Rocky Mountains, about lat. 42° N., near the sources of the Del Norte, and near the boundary between Nebraska and New-Mexico, and for some distance forms a part of that boundary. It flows through the central part of Arkansas, and after a course of 2170 miles, enters the Mississippi in lat. 33° 40' N. Its general course is E. S. E. The navigation is not obstructed by rocks, shoals, or rapids, and it is navigable for boats at some seasons 1980 miles. The country watered by the Arkansas, in its upper parts, is sterile; but in the lower parts it is tolerably fertile, and on its alluvial borders it is rich. The whole surface watered by this river and its tributaries is estimated at 178,000 square miles.

Armstrong Fort. Situated on the S. extremity of Rock Island, Is.

Aroostook River, Me. This river rises in the interior of Piscataquis co., flows more than 100 miles in a circuitous course, receiving many important tributaries, and enters St. John's River in New Brunswick. The land on its borders is very fertile, and said to equal the celebrated Genesee land for the raising of wheat.

Ascutey Mountain, Windsor co., Vt. This mountain lies in the towns of Windsor and Weathersfield, and is a huge mass of granite, producing but little vegetation of any kind. Its name is undoubtedly of Indian origin, but writers are not agreed as to its signification. From the summit of this mountain the prospect is extensive and very beautiful. The Connecticut, which is easily seen winding its way through fertile and highly cultivated meadows, adds much to the charm of the scenery.

Ash Point, Chippewa co., Mn., extends into the Straits of St. Mary, opposite St. Joseph's Island.

Ashepoo River, Colleton district, S. C. This river rises in the W. interior of the district, flows S. S. E., and empties into St. Helena Sound.

Ashley Fork, Ca. A W. branch of Green River, which it enters below Brush Creek.

Ashley River, S. C. This river rises in the W. part of Charleston district, flows S. E., through Colleton district, and enters Charleston Harbor opposite the city of Charleston.

Ashley River, Fa., waters the W. part of the state, and falls into the Gulf of Mexico.

Ashabula River, Ashtabula co., O. It rises in the E. part of the county, flows about 30 miles in a N. W. direction, and empties into Lake Erie.

Ashuelot or *Ashwillit River*, Cheshire co., N. H. This stream rises in a pond in the town of Washington, flows in a southerly direction, through Marlow and Gilsom, to Keene, where it receives a considerable branch supplied from ponds in Stoddard. From Keene it proceeds to Swanzey, where it receives another branch, and thence pursues a southerly and westerly course, through Winchester into Hinsdale, where it empties into the Connecticut, about 3 miles from the S. boundary of the state.

Assabet River, Ms. It rises in the vicinity of Westborough, flows through Marlborough, Northborough, and Stow, and unites with Sudbury River at Concord.

Assemoqua River, Mn., rises in the S. W. corner of Clare co., flows E., and empties into the Tittabawasee on the S. border of Gladwin co.

Attanwa River, St. Croix co., Wn., flows S. W. into the St. Croix River.

Attonowining River, La Pointe co., Wn. A small stream flowing S. into the St. Croix River.

Attwater's Falls, in Norfolk village, St. Lawrence co., N. Y., are formed by the descent of Rackett River from a height of 50 feet.

Au Barque Point, Mn., extends into the N. W. part of Lake Huron, E. from the Big Bay de Noquet.

Au Barques Point, Huron co., Mn., situated at the mouth of Willow River.

Au Bay Point, Mn., situated between Big and Little de Noquet Bays.

Au Chapeau Point, Huron co., Mn., extends into Lake Huron, at the mouth of Pinebog River.

Au Cuirre River, Mo. This river is formed by three principal branches, called Indian Creek, Middle, and Eagle Forks. After the junction of these large streams, the river flows in an easterly direction, forming the boundary between St. Charles and Lincoln counties, and empties into the Mississippi.

Auglaize River, O., rises in Allen co., receives numerous branches, and forms a large branch of the Maumee River, entering it on the S. side, at Defiance. It is boatable, at high water, 50 or 60 m.

Au Haut Island, Me. This island lies off Hancock co., E. from the Vinalhaven Islands.

Au Pain de Sucre Point, Huron co., Mn. Situated E. from Point au Chapeau.

Au Sable Point, Schoolcraft co., Mn. Situated E. from the mouth of Hurricane River.

Au Sable Point, Brown co., Wn., extends into Green Bay, N. E. from the town of Green Bay, and opposite Grass Point.

Au Sable River, N. Y., sometimes called the Great Au Sable, rises in the Mohegan Mountains, Essex co., near the sources of Hudson River, flows N. E., and enters Lake Champlain in the S. part of Clinton co. Its two main branches unite at the village of Au Sable Forks; the river then passes through the manufacturing villages of Clintonville, Keesville, and Birmingham, affording extensive water power. There is a succession of falls, in all of about 150 feet descent, at Birmingham, 2 miles below Keesville. The river enters a deep ravine, of singular and romantic beauty, immediately below the falls. The rocks rise on either side of this chasm, which is formed by the wearing of the waters, or by some convul-

sion of nature, to an almost perpendicular height of from 75 to 150 feet, for a distance of about 2 miles, and an average width of about 50 feet, forming a great natural curiosity. There are other ravines of singular formation in this vicinity.

Au Sable River, Little, rises in Clinton co., N. Y., and enters Lake Champlain a few miles N. of the Great Au Sable.

Au Sable River, Is. A small branch of the Illinois River, which it enters from the N. in Gundy co.

Austin's Creek, Ga. It falls into Savannah River, about 12 miles N. W. from Savannah.

Aux Grais River, Mn., rises in the S. E. part of Ogemaw co., flows S. E. into Arenac co., where it falls into Rifle River.

Avalanche Lake, Newcomb, Essex co., N. Y. This small lake is situated between Mounts McIntyre and McMartin. It is much the highest body of water in the state, large enough to be called a lake; being elevated 2900 feet above the tide waters of the Hudson, of which it is a tributary. It derives its name from an avalanche that must have occurred on the W. side of Mount McMartin many years since.

Avon Springs. See *Mineral Springs, &c.*

Ayer's Hill, Haverhill, Ms. Height 339 feet.

Back Creek, Va., drains Frederick co., and flows N. E., through Berkley co., into the Potomac River.

Back River, N. H. The head stream of this River, called Bellamy Bank, is formed by two branches, which unite in Madbury. The stream then falls into the Piscataqua, on the W. side of Dover Neck, and is called Back River.

Back River, Va., forms the boundary between York and Elizabeth City counties, and empties into Chesapeake Bay.

Bad River, Mn., rises in Saginaw co., and empties into Saginaw River.

Bad River, La Pointe co., Wn. This stream has many large branches, which drain the E. part of the county. They unite to form the main stream near its entrance into Lake Superior.

Bagaduce Point, Me. A cape extending into Penobscot Bay.

Bahama Channel, or Gulf of Florida, the narrow sea between the coast of America and the Bahama Islands, is 135 miles long, and 46 wide. The currents here, formed by an inflection of the Gulf Stream, are very violent, passing at the rate of from 2 to 5 miles an hour among islands, and vessels are frequently wrecked in passing through this dangerous strait.

Baker's Island, Me., lies S. E. of Mount Desert Island, off Hancock co.

Baker Mount, On. This is an elevated peak of the Cascade Mts., situated on the N. border of the state.

Baker Pond, Me. Situated in the N. part of Somerset co. The S. branch of St. John's River passes through it.

Baker's River, Grafton co., N. H. This is a considerable stream, formed by two branches. The N. branch rises near Moosehillock Mountain in Benton, flows in a southerly direction through Warren into Wentworth, where it unites with the S. branch. The river then flows in a S. E. and S. course through Rumney and Plymouth, where it unites with the Pemigewasset, just above Plymouth Village. It was on this river, in the township of Rumney that

General Stark was captured by the Indians, on the 28th of April, 1752.

Bald Eagle Mountains and Valley, Pa., are situated N. E. of Juniata River, on the confines of Huntington and Centre counties. Bald Eagle Valley lies on the E. side, and is 5 miles wide, having beneath it a bed of limestone. It has also a place where caverns in the rocks absorb the principal streams of the valley, which run several miles under ground before they emerge.

Bald Eagle River, Pa., runs in a N. E. direction 44 miles, through Centre and Clinton counties, and falls into the W. branch of the Susquehanna, after a course of 50 miles.

Bald Face Mountain, Coos co., N. H., lies in the town of Bartlett, between Ellis River and the Rocky branch of the Saco.

Bald Hill, Douglas, Ms. Height 714 feet.

Bald Mount, Somerset co., Me., lies W. of Penobscot River.

Bald Mountain Hills, Rensselaer co., N. Y., is a high range extending from the town of Hoosick, through Petersburg into Berlin.

Bald Mountain Ridge, Me. Situated in the N. W. part of Somerset co., near the source of the W. branch of Penobscot River.—*Bald Mountain.* An isolated peak, situated in the same county, S. from the Ridge.

Bald Peak, Mt. Washington, Ms. Height 2624 ft.

Baldwin's Creek rises in Erin, Chemung co., N. Y., and flows S. into Chemung River.

Balize, La. This is the principal entrance into the mouth of the Mississippi, and is 100 miles below New Orleans. It is about 20 miles long, and has 16 feet of water on the bar.

Ballston Springs. See *Mineral Springs, &c.*

Baloxi, Bay of, Mi. This bay lies between Harrison co. on the N. and Ship Island Sound on the S.

Baloxi River, Harrison co., Mi., is a small stream emptying into Baloxi Bay.

Bamonegenook Lake, Me., lies in the N. part of Piscataquis co.

Bank Creek, Pa. The head branches of this stream rise in the W. part of Clearfield co. It flows in a S. W. direction, separating Clarion and Armstrong counties, and empties into the Alleghany River.

Bannister River, Va., runs through Pittsylvania and Halifax counties, and falls into Dan River, 10 miles above its junction with the Roanoke.

Baptism River, Ma. A small stream flowing S. E. into Lake Superior.

Baraboo River, Wn. It rises in the N. W. part of Sauk co., flows S. of E., and empties into Wisconsin River, in Columbia co., just above the town of De Korra.

Barataria Bay, La. This bay sets up from the Gulf of Mexico, and receives the waters of a chain of lakes lying between it and the Mississippi River.

Batataria Island, La. A strong military post on the N. side of the Gulf of Mexico, at the entrance of Barataria Bay, 55 miles N. W. from the Balize. It is a healthy island, and has a safe and commodious harbor.

Barataria River, La., runs S. into a bay of the same name.

Bare Mountain, Orange co., N. Y. This is one of the W. peaks of the Highlands, lying in the towns of Cornwall and Monroe.

Barnhart's Island, St. Lawrence co., N. Y., lies in St. Lawrence River, being the most N. island in this river belonging to the U. S.

Barn Island, Great, New York co., N. Y., lies in East River, on the N. side of Hell Gate, 7 miles from the City Hall. It is about 2 miles in circumference.

Barn Island, Little, N. Y., lies at the junction of Harlem and East Rivers, and N. E. of Great Barn Island, from which it is separated by a narrow channel called "Little Hell Gate."

Barnes Sound, Fla. A large expanse of water, situated between Dade co. on the N. and the Florida Keys on the S. and E.

Barnegat Bay, N. J. This bay is separated from the ocean by Island and Squam Beaches, extends from Barnegat Inlet, 20 miles, to Metcunk River, and is from 1 to 4 miles wide.

Barques River, Mo., enters the Missouri at lon. $93^{\circ} 14'$ W. and lat. $38^{\circ} 43'$ N.

Barren Island, King's co., N. Y., lies at the mouth of Jamaica Bay, between Plumb and Rockaway Inlets.

Barren Rivers, Ky., two small rivers, called the Big and Little Barren, are tributaries of Green River. The former falls into it in the N. W. corner of Warren co., the latter W. of Greensburg.

Barrell Creek, Iowa, flows S. W., and enters Missouri River in Mills co.

Barrier River, On., flows in an E. direction, and falls into Clark's fork of Columbia River, a little below Fort Okonagan.

Barrington Fort, Ga., 14 miles above Darien, on the E. bank of the Altamaha, was erected in 1720 by the Carolinians, to prevent the escape of the negroes to the Spaniards at St. Augustine.

Barron's Island, Grafton co., N. H. A small island in the Connecticut River, attached to the town of Piermont.

Bartlett's Island, La Pointe co., Wn. Situated in Lake Superior, N. E. from the Apostles' Islands.

Barton River, Vt., is formed in the township of Barton, by the junction of two head branches, one of which rises in Glover, and the other on the boundary between Sheffield and Sutton. The main stream flows N. and N. E., receiving Wiloughby's River near its head, and passing through parts of Irasburg and Orleans, empties into Memphremagog Lake. It waters about 160 square miles.

Basin Harbor, Addison co., Vt. See *Ferrisburg*. *Baskahegan River*, Me., rises in Baskahegan Lake, Washington co., near New Brunswick line; it then flows 15 or 20 miles in a W. direction, and empties into the Matawamkeag, a tributary of the Penobscot.

Bass Islands, O. Situated in Lake Erie, N. W. from Cunningham's Island and N. from the town of Port Clinton.

Bastien Bay, Plaquemine parish, La. A long, narrow body of water extending from the Mississippi River S. W. into Baratama Bay.

Basture Island. A small island lying in the Gulf of Mexico, near the coast of Mi.

Batache Bayou, La. A small branch of the Dorcheat Bayou.

Battahatchee River rises in Aa., and after a course of 70 miles in a S. W. direction, enters the Tombigbee, in Monroe co., Mi.

Batten Kill rises in Vt., flows W. through Washington co., N. Y., and enters the Hudson $1\frac{1}{2}$ miles below Fort Miller bridge. It is a good mill stream.

Battle Creek, Mn., is the largest branch of the Kalamazoo. It has a winding course of 40 miles, and furnishes good mill seats.

Battle River, Aroostook co., Me. A small stream flowing in a S. E. direction into the Matawamkeag River.

Bay Creek, Is., rises in the N. part of Pike co., flows W., and empties into the Mississippi in Calhoun co.

Bay River, Craven co., N. C., empties into Pamlico Sound, N. from Neuse River.

Bay Ronde, La. This small bay lies off Plaquemine parish, just above the Delta of the Mississippi.

Bayou des Arcs, As. This stream flows in a S. E. direction, forming the boundary line between White and Pulaski counties, and empties into White River.

Bayou Meter, As. This river rises in the N. W. part of Pulaski co., flows S. S. E., its tributaries draining a large extent of land, and falls into the Arkansas River, in Arkansas co.

Beach Island, Ms. This island lies off the town of Wellfleet, enclosing Wellfleet Bay.

Beacon Hill, or the *Old Beacon*, N. Y., one of the highest peaks of the Highlands of the Hudson, is situated in the S. part of the town of Fishkill, close on the borders of the Hudson, above which it is elevated 1471 feet.

Beacon, New, or *Grand Sachem*, N. Y., situated half a mile S. of the former, is the highest peak of the Highlands, or Matzeawan Mountains, being elevated 1685 feet above the tide waters of the Hudson. The view from the summit of this mountain is extremely beautiful. The river is visible from West Point to Tappan Bay on the S., and for an extent of 50 miles on the N. The surrounding rich and highly cultivated country, dotted with villages, and wanting in nothing that renders so extensive a landscape lovely, lies as a picture before the observer.

Bear Hill, Merrimac co., N. H. See *Northfield*.

Bear's Creek, Franklin co., Te. A small branch of Elk River.

Bearen Island, N. Y., lying in the Hudson, opposite the town of Coeymans, Albany co., was on the S. boundary of the old Rensselaerwyck colony, and was fortified and garrisoned by one of the early patroons, in 1644. All foreign traders were obliged to come here and learn the terms on which the port of the colony might be entered.

Bear Camp River, N. H. This river is formed in Ossipee, by the junction of its two principal branches, and empties into the W. side of Ossipee Lake.

Bear Creek, the outlet of Bear Lake, rises in Stockton, Chataque co., N. Y., and flowing S. enters Cassadaga Creek.

Bear's or Tiffin's Creek rises in Mn., and enters the Maumee $1\frac{1}{2}$ miles above the Anglaise. It is 54 miles long.

Bear Creek, Is., rises in the interior of Hancock co., flows S. S. E., and enters the Mississippi by two mouths in Adams co.

Bear Creek, Iowa. A S. branch of the Macquetais River, which it enters in Jackson co.

Bear Creek. A branch of Tennessee River, rises in Aa., and after a course of 70 miles enters the Tennessee, between the states of Aa. and Mi.

Bear Creek, Ts. A small W. branch of Trinity River.

Bear Grass River, Ky., falls into the Ohio, at Louisville.

Bear Lake, Chataque co., N. Y., is a small body of water lying partly in the town of Pomfret and partly in Stockton.

Bear Mountain, Wendall, Ms. Height 1281 ft.
Bear River, Me. This stream rises in the Highlands, near Umbagog Lake, and falls into the Androscoggin, opposite Bethel.

Beasley's Creek, Ky., falls into Ohio River, lon. 83° 55' W. and lat. 38° 35' N.

Beaver, *Big River*, Pa., is formed by the Mahoning and Shenango. It enters the Ohio River near the town of Beaver, Pa. The main river is about 20 miles long, and to its sources 80 miles. The Pennsylvania and Ohio Canal passes along the valley of this river.

Beaver Dam Creek, Beaufort district, S. C. A small branch of the Savannah River.

Beaver Dam Lake, Tunica co., Mi., lies a little E. from the Mississippi River, with which it is connected by an outlet.

Beaver Brook, Aroostook co., Me., is a tributary of Aroostook River, which it enters on the N. side.

Beaver Brooks, N. H. There are several streams of this name in the state. The largest rises in a small pond in Unity, and flowing W. empties into the Connecticut at Charlestown. Another rises in Mount Vernon, and empties into the Souhegan.

Beaver Creek, Crawford co., Wn. A tributary of Black River.

Beaver Islands, Lake Michigan. These islands are 5 or 6 in number. The largest, Big Beaver, contains 40 square miles.

Beaver Islands, *Great and Little*, Mn. They lie in the N. part of Lake Michigan, Great Beaver being S. and Little Beaver S. W. from Garden Island.

Beaverkill rises in Ulster co., N. Y., flows through Sullivan into Delaware co., and falls into the Papacton, a branch of the Delaware. It is a good mill stream.

Beaver Lake, Hamilton co., N. Y., is a small body of water emptying into Moose River.

Beaver River, N. H. and Ms., rises in Beaver Pond, in Londonderry, flows S. through Pelliam, and falls into the Merrimac, in Dracut, Ms., nearly opposite the mouth of Concord River.

Beaver River rises in Hamilton co., N. Y., and flowing W. empties into Black River, in Lewis co.

Becket Station Mountain, Becket, Ms. Height 2194 feet.

Bedlow's Island is situated in New York Bay, near Ellis's Island, and 2946 yards S. W. of the Battery. It belongs to the U. S. government, and on it is located Fort Wood, a strong fortification, which, with the works on Governor's Island, forms the inner defence of N. Y. harbor.

Beech River, Tc. This stream rises in the W. interior of Henderson co., flows E., receiving Piney, Cane, Mill, and other small creeks, and enters the Tennessee at Perryville.

Beerkill rises in Sullivan co., N. Y., flows E., and empties into Rondout Creek, in Ulster co.

Belamaquen Bay, Vt. A small bay jutting into the town of Ferrisburg, from Lake Champlain.

Belle River, Mn., passes through Lapeer and St. Clair counties, and after a course of 50 miles enters St. Clair River. It is navigable for bateaux a short distance from its mouth.

Belle Pond, or *Belle Water Pond*, Vt., lies in the S. E. part of Barton, and is 3 miles long and 1½ miles wide.

Bell Kedgwick River, Me. A branch of the Katwan Kedgwick, which it enters on the W. side.

Bellingham Bay, On. Situated in the N. W. part of the state, between the Gulf of Georgia and the Straits of Juan de Fuca.

Bellows Falls, Vt. See *Rockingham*.

Bennett's Creek rises in the S. part of Steuben co., N. Y., and flowing N. enters Canisteo River.

Benton Lakes, Ma. Situated at the head of Coteau Percee Creek, a tributary of Sioux River.

Bete Gris Bay, Houghton co., Mn. Situated on the N. E. part of Keewaiwona Bay.

Betsie River, Mn. This stream rises in a small lake in the S. W. part of Leelanau co., makes a curve into Manistee co., then flows through the S. W. part of Leelanau co. into Lake Michigan.

Big Bay de Noquet, Mn. This is a large bay extending into the N. part of the peninsula, N. E. from Green Bay. It receives the waters of several rivers, and communicates with Lake Michigan.

Big Bay Creek, Is. This stream flows S. E., draining Johnson and Pope counties, and empties into the Kentucky River.

Big Biueghy Creek, Choctaw co., Mi. One of the head branches of the Big Black River.

Big Black River, Mi., is 160 miles long, and empties into the Mississippi.

Big Blue River, Ia., falls into the Ohio, 2 miles W. from Leavenworth.

Big Blue River rises in the E. part of In. ter. and falls into the Missouri in Jackson co.

Big Bone Creek, Woodford co., Ky., flows W. into the Ohio River.

Big Branch Creek, Ripley co., Mo. A tributary of Current River, which it enters near the centre of the county.

Big Flat Creek, Bedford co., Te., enters Duck River from the S., opposite Shelbyville.

Big Hatchy River, Te., falls into the Mississippi in Tipton co., after a course of 100 miles.

Bighorn River. This river rises in the Rocky Mountains, and flowing in a N. E. direction, about 800 miles, joins the Yellowstone at Manuel's Fort. It waters a fine, fertile country, and is navigable for canoes to a great distance.

Big Horse Creek, Edgefield district, S. C. A small branch of the Savannah, which it enters a little below Hamburg.

Big Indian Creek, Ia., rises in the S. part of Johnson co., flows W., and empties into the W. fork of White River, in Morgan county.

Big Lake River, On. It rises in a lake on the N. border of On., flows S. W., and empties into Clark's Fork of Columbia River, a little W. from Pend Oreille's Lake.

Big Laurel River, N. C., rises among the Blue Ridge Mountains in Yancey co., and flows S. W. into the French Broad River.

Big and Little Sandy Forks, On. and Ca. These streams rise in the Wind River Mts., unite, and flowing S. W. into Ca., empty into Green River.

Big Loure River, Mo. This river waters the S. E. part of Adrain co., flows S. S. E., and enters the Missouri, opposite Loure Island.

Big Mill Creek, Jackson co., Va., flows in a N. W. direction, and empties into the Ohio River.

Big Muddy River, Is. This river rises in the N. part of Jefferson co., flows S. W., receiving numerous tributaries, and enters the Mississippi in the N. W. corner of Union co.

Big Pigeon Creek, Ia. It rises near the centre of Gibson co., flows in a winding southerly direction, and enters the Ohio River in Vanderburg co.

Big Pigeon River. This stream rises in the S. E. part of Haywood co., N. C., flows N. W. into Tc., and enters the French Broad River in the N. part of Cocke co.

Big Sandy River, rises in Va., and enters the

Ohio at Catlettsburg, Ky. It is formed by the junction of E. and W. forks, and its E. fork constitutes the boundary between Va. and Ky. for nearly 200 miles.

Big Stone Lake, Ma. This is a long, narrow sheet of water, lying S. E. from Lake Travers. The waters of Minnesota or St. Peter's River pass through it.

Big Swamp Creek, Lowndes co., Ala., flows N. W., and enters the Alabama River at Benton.

Big Thibeau River, Mo., rises in the N. E. part of Henry co., flows S. E., and enters the South Grand, near its junction with Osage River.

Big Whippoorwill Creek, Logan co., Ky., flows S. E., and empties into Red, a branch of Cumberland River.

Big Wills Creek, Ala. This stream has its source among the Alleghanies, flows mostly in a S. W. course, and falls into the Coosa River.

Big Wood River, On. It rises among the Salmon River Mountains, flows S. of W., and falls into Lewis's fork of Columbia River, just below Fort Poisé.

Big Creek, Posey co., Ia., flows S. W. into the Wabash River.

Big Creek, As. A small branch of White River.

Big Creek, Ts. An E. tributary of Brazos River.

Bigelow Mountains, Me., lie S. of Dead River, in Franklin and Somerset counties.

Billingsgate Island, Ms. This is the most southern of four islands enclosing Wellfleet Bay.

Birch Lake, Chippewa co., Wn. One of a chain of small lakes supplying the head waters of Red Cedar River.

Birch Stream, Penobscot co., Me., enters the Penobscot River just above Oldtown Island.

Bird Island, N. Y. Situated in the E. part of Lake Erie, opposite the city of Buffalo, is a small, rocky island. The great Black Rock Pier commences here, and extends to Squaw Island, opposite Black Rock, a distance of 2 miles, affording an immense hydraulic power, also an inexhaustible feeder for the Erie Canal.

Bird Song Creek, Benton co., Te. A small branch of the Tennessee River.

Bishop's Brook, N. H., waters Stewartstown, and empties into the Connecticut.

Bistineau Lake, Claiborne parish, La., receives Dacheet River, and connects with Red River, the waters of which it receives in the wet season, and discharges in the dry season. It is 35 miles long and 2 miles wide.

Biswell's Creek, Livingston co., Ky. A small branch of the Cumberland River.

Black Bay, Va. A small bay in the Chesapeake, at lon. 76° 21' W. and lat. 37° 9' N.

Black Bay. Situated in the N. part of Lake Superior, lon. 88° 10' W. and lat. 48° 36' N.

Black Bay, La., lies off St. Bernard and Plaquemine parishes, between Chandeleur Bay on the E., and the Bay de la Riviere au Chenes on the S.

Black Creek, Vt. See *Fairfield*.

Black Creek rises in New Hudson, Alleghany co., N. Y., and flows N. E. into Genesee River.

Black Creek, N. Y. This stream, which affords good water power, rises in Genesee co., and flows into Genesee River, in Monroe co.

Black Creek, Brown co., Wn. An E. branch of Wolf River.

Black Creek, Fa. A tributary of St. John's River, which it enters in Duval co.

Black Beard Island, Ga., belongs to the U. S. government, and contains 1600 acres.

Black Lake, St. Lawrence co., N. Y. This lake, which lies nearly parallel with St. Lawrence River, is about 20 miles long, and from 1 to 2½ miles in width, and seems a mere expansion of Black River, which enters it from the S. Its outlet, after flowing 2 or 3 miles, enters Oswegatchie River.

Black River, Me. This river rises in several ponds near the Canada line, and flows S. E. into St. John's River.

Black River, Little, Me., rises N. E. of the former, and flows S. E. into the St. John's.

Black River, Windsor co., Vt. It rises in Plymouth, flows through Ludlow, Cavendish, and Weathersfield, affording many mill sites, and falls into the Connecticut at Springfield. Its length is 35 miles.

Black River, Orleans co., Vt., rises in some ponds in Craftsbury, flows through Albany, Irasburg, and Coventry, and falls into Memphremagog Lake at Salem. Its length is about 30 miles.

Black River, the third river in size that has its course entirely in N. Y., derives its name from the color of its waters. It rises in Herkimer and Hamilton counties, flows N. W. about 120 miles, and empties into Black River Bay, in the E. part of Lake Ontario. It is navigable from the High Falls, in Leyden, where it has a descent of 63 feet, to the Long Falls at Carthage, a distance of 40 miles. The remainder of its course is circuitous, being a succession of rapids and falls. It is mostly a deep, sluggish stream, its falls, however, affording fine water power. Its lower part is bordered by a fertile and thickly settled country.

Black River Bay, N. Y., an expansion of Black River at its mouth, is situated E. of Lake Ontario, with which it communicates. It is 5 miles long, and 1 mile wide.

Black River, S. C. This river rises in the E. part of Kershaw district, flows S. E. across Sumpter and Williamsburg districts, and empties into Winyaw Bay at Georgetown.

Black River, Mn. This river is formed by 3 principal branches, which unite on the boundary between Allegan and Van Buren counties, and empties into Lake Michigan.

Black River, Mn., drains the W. part of the upper peninsula, flowing N. into Lake Superior.

Black River and Lake, Ottawa and Allegan counties, Mn. The river flows mostly in Ottawa co., and widens into a lake near its entrance into Lake Michigan.

Black River, Wn. It rises in the W. part of Portage co., and flows S. S. W. into the Mississippi River. This river has many tributaries, and drains a large extent of country.

Black Lake Creek, La., rises in Claiborne parish, flows S., receiving numerous tributaries, and uniting near its mouth with the Grand Bayou, enters Black Lake.

Black Fish River, Crittenden co., As. A small tributary of the St. Francis.

Black Oak Island, Sumpter district, S. C. Bounded E. and S. by the Santee River, and W. and N. by some of its branches.

Blackstone River, Ms. The most inland branch of this river rises between Paxton and Holden. It passes Worcester, receives the waters of the ponds in Shrewsbury, passes Auburn, Grafton, Millbury, Sutton, Northbridge, Uxbridge, and Mendon, and entering R. I. changes its name to

Pawtucket, and meets the tide waters in Providence River.

Blackwater River, N. H., derives its name from the color of its water. It is formed in the W. part of Andover, by the junction of two small streams, and flowing through Salisbury and Boscaawen, enters Contoocook River in Hopkinton.

Black Water River, Mo. This stream, with its tributaries, drains Johnson co., flows N. E., and enters La Mine River, in Saline co.

Blackwell's Island, N. Y., belonging to the city of New York, lies in East River, about 4 miles from the City Hall. It is $1\frac{1}{2}$ miles long, and quite narrow. On it are situated the City Penitentiary and the Lunatic Asylum, two massive stone buildings.

Blanco or Orford Cape, On. A point of land extending into the Pacific Ocean, N. from the mouth of Tlamath River.

Block Island, R. I. See *New Shoreham*.

Blood River, Te. and Ky., rises in Henry co., Te., flows N. E., and empties into the Tennessee River in Calloway co., Ky.

Blue Hill and Bay, Me. See *Towns*.

Blue Bayou, La. This stream is an outlet of the Bayou La Fourche, which it leaves at Thibodauxville. It then flows in a S. E. direction, separating La Fourche Interior and Terre Bonne parishes, and enters the E. part of Timbalier Bay.

Blue Buck Point, La. This is the S. W. extremity of Calcasieu parish, and extends into Sabine Lake.

Blue Hills, N. H. This is the name generally given to the range commencing in Nottingham, and extending through Strafford, Farmington, and Milton. Teneriffe, Saddleback, and Tuck-away are among its principal peaks.

Blue Hill, Milton, Ms. Height 635 feet.

Blue Mountains, On. A range extending through the interior of the territory, nearly parallel with the Cascade Mountains.

Blue Ridge, or *South Mountains*, branch off from the E. part of the Alleghany Mountains, in N. C., cross the state of Va., and extend to the "Highlands," N. Y. The highest summits, called "the Peaks of Otter," are in Bedford co., Va. The E. peak measures about 4000 feet in height.

Blue River, Grant co., Mn., drains the N. E. part of the county, and empties into Wisconsin River.

Blue Stone River, Va. It rises in the E. part of Tazewell co., among the Great Flat Top Mountains, flows N. E. through Mercer co., and falls into New River, near its junction with the Greenbrier.

Bluewater River, La., falls into the Missouri, 9 miles E. of the Kansas.

Bluff Island, in the St. Lawrence, is attached to the town of Hammond, St. Lawrence co., N. Y.

Bluff Point, N. Y. See *Crooked Lake*.

Bluff Point, Va. The S. extremity of Northumberland co., extending into Chesapeake Bay.

Bozakill rises in Schenectady co., N. Y., flows E., and enters Norman's Kill, in Albany co.

Bodeau Bayou rises in the S. W. part of As., flows S. into La., and enters Lake Bodeau.

Bodeau Lake, Bossier parish, La. This long and narrow sheet of water receives Bodeau Bayou on the N., and is connected by outlets on the S. with Red River and Lake Bistineau.

Bodkin's Point, Md., extends into Chesapeake Bay, lon. $76^{\circ} 35' W.$ and lat. $38^{\circ} 10' N.$

Boeuf Bayou, or *Creek*, La., rises in Rapide

parish, and flows through a fertile country, dividing into two channels, one of which connects with Red River, and the other with Crocodile River, to form the Courtableau.

Bog Stream, Piscataquis co., Me., rises near Moosehead Lake, flows S. S. E., and empties into Piscataquis River.

Boque Chito River, rises in Mi., flows 90 miles, mostly in La., and enters Pearl River from the W.

Boque Home Creek, Mi. This river rises in Jasper co., flows S., and enters Leaf River a little E. from Augusta.

Boque Inlet, N. C. Situated between Carteret and Onslow counties, and communicating with Goose Sound.

Bohe River, Md., falls into the Chesapeake at lon. $76^{\circ} 8' W.$ and lat. $39^{\circ} 30' N.$

Bohemia Creek, Md., enters Elk River 4 or 5 miles above its mouth.

Bois Blanc Island, Mn. Situated in Detroit River, near its entrance into Lake Erie.

Bois Blanc Island, Mn. A large island situated in Lake Huron, at the entrance of the Straits of Mackinaw.

Bolivar Point, Ts. A point of land enclosing Galveston Bay on the S. E.

Bombazine Lake, Vt. See *Castleton*.

Bone Hill River, Ma. It enters the Tehan Sanson, or River a Jaques from the N. W.

Bon Homme Island, Ma. Situated in the Missouri, a little E. from the mouth of Wanani River.

Bonpas Creek, Is. The head branches of this stream rise in Richland and Lawrence counties, and it flows S., forming the boundary between Edwards and Wabash counties, until its entrance into the Wabash.

Bon Secour Bay, Aa. Situated in the E. part of Mobile, and separated from the Gulf of Mexico on the S. by Mobile Point.

Boon Island, Me. This is a ledge of rocks on which is a light-house. It lies about 9 miles E. from Kittery.

Boone Lake, Iowa. A small sheet of water lying in the N. part of the state, being the source of Boone River.

Boone River, Iowa. This stream rises in Lake Boone, in the N. part of the state, flows S. S. W., and empties into the Des Moines, a little N. from Boone county.

Boquet River, N. Y. This fine mill stream rises in Keene, Essex co., and flows E. 45 miles into Lake Champlain.

Boreas River, N. Y. This river rises in Essex co., and flows S. into the Hudson, of which it is a head branch.

Boro Isle, Me., lies in Penobscot Bay. It is a long island, very narrow in the middle, but wider at each end.

Boston Harbor, Ms. This harbor extends across Light-house Channel and Broad Sound, from Point Alderton, on Nantasket, to Point Shirley, in Chelsea, a distance between the islands of about 4 miles. It is said to cover an area of 75 square miles, more than half of which is good anchorage ground for ships of the largest class. The whole British navy might moor in this harbor with ease, and ride in safety. This harbor is formed by the sea, and is entirely free from sand bars and running ice, which often obstruct the passage of vessels to harbors at the mouths of large rivers. The most important part of this harbor is entered by a narrow pass, between two and three miles below the city and navy yard,

and is well protected by two powerful forts — Independence and Warren. The outer harbor, below these forts, will shortly be protected by a very powerful fortress, now nearly completed, on George's Island, at a great expense, by the government of the United States. This harbor is easy of access, and never obstructed by ice, except that part of it near the city; nor is that part entirely frozen over oftener than twice or three times in the common age of man. Boston Harbor contains many islands of great beauty, and is the reservoir of the Mystic, Charles, Neponset, Manatiquot, and other small rivers. Its borders are environed by the towns of Hull, Hingham, Weymouth, Braintree, Quincy, Dorchester, Roxbury, Brookline, Cambridge, Charlestown, and Chelsea; and the numerous small bays, coves, and inlets indenting their shores, give great variety, and add much to the scenery of this delightful harbor.

Bottom Creek, Lapeer co., Mn. A head branch of the N. fork of Flint River.

Bourbease Creek, Mo. Its head branches drain the N. W. part of Crawford co. It then flows N. E., and enters the Maramec River in Franklin co.

Bowne's Hill, Sandwich, Ms. Height 297 feet.

Bowback Mountain, N. H. See *Stratford*.

Bowman's Creek, N. Y., rises in Schoharie co., and flowing N. enters the Mohawk near the village of Canajoharie.

Boyer's River, Iowa. It rises in a small lake, which is also the source of one of the head branches of Raccoon River, flows S. W. and falls into the Missouri.

Bracken Creek, Ky., falls into the Ohio, lon. 84° 8' W. and lat. 38° 36' N.

Braddock's Bay, Monroe co., N. Y., is a small body of water communicating with Lake Ontario.

Brady Fort, Sault St. Marie, Chippewa co., Mn.

Branch Brook rises in Smithtown, Suffolk co., N. Y., flows W. 4 or 5 miles, then turns to the N., and falls into the Nesapeake River, or Smithtown Harbor. The tide flows up the latter stream several miles.

Brandywine Creek, Pa. and De., rises in Pa., flows into De., and uniting with Christina Creek, enters the Delaware at Wilmington. It furnishes excellent water power, and is navigable to Brandywine village.

Brant Island, N. C. Situated in Pamlico Sound, between Nense and Pamlico Rivers.

Brant Lake, Horicon, Warren co., N. Y., is a small body of water emptying into the Schroon, a branch of the Hudson. The scenery on its shores is wild and romantic. It is surrounded by a heavy growth of pine, hemlock, and spruce, in which deer and other wild game are found. Its waters abound in fine trout.

Brassua Pond, Somerset co., Me., lies W. of Mooshead Lake, and receives several rivers.

Brazos River, Ts. It rises between Red and Colorado Rivers, flows S. E., and empties into the Gulf of Mexico.

Breach Inlet, Charleston district, S. C. The passage between Long and Sullivan's Island.

Breakfast Hill, N. H. See *Rye*.

Breakneck Hill, N. Y., is situated on the E. side of the Hudson, on its N. entrance into the Highlands. It is a precipitous eminence, 1187 feet high, and remarkable for containing the rock called the upper Anthony's Nose.

Brier Creek, Ga., a branch of the Savannah, is 100 miles long.

Broad Brook, Vt. This small mill stream rises in Barnard, crosses the S. E. corner of Royalton, and falls into White River in Sharon.

Broad Creek, Prince George's co., Md. A small stream emptying into the Potomac River, just above Piscataway Creek.

Broad River, S. C. This river rises in N. C., receives Pacolet and Tiger Rivers from the W., and uniting with the Salada above Columbus, forms the Congaree.

Broad River, S. C., is an arm of the sea between the main land and Port Royal Island.

Broad River, Ga., enters the Savannah, of which it is a W. branch, at Petersburg.

Bronx River rises in Westchester co., N. Y., flows 25 miles, and enters East River, opposite Flushing Bay.

Brother's Islands, North and South, attached to the town of Newtown, Queen's co., N. Y., are situated in East River, at the lower end of Long Island Sound.

Brown's Inlet, Onslow co., N. C. Situated N. E. from New River Inlet.

Brown Point, On., encloses Gray's Harbor on the N.

Brown's River, Vt., rises among the Mansfield Mountains, flows westerly through Underhill and Jericho into Essex, and thence northerly through Westford into Fairfax, where it enters the LaMoille. Length about 29 miles.

Brule Lake, Mn. A small sheet of water in the S. W. part of Marquette co., and at the head of Brulé River.

Brush Creek, S. C. A small branch of the Saluda River, which it enters in Anderson district.

Brush Creek, Ca. A small W. branch of Green River, which it enters below Yampah or Bear River.

Buck Creek, Harrison co., Ia. A small branch of the Ohio River.

Buffalo Creek is formed in Erie co., N. Y., by the junction of Cayuga and Seneca Creeks; it then flows in a N. W. direction, until it enters Lake Erie at Buffalo, receiving Cazenove Creek, 6 miles above. It is navigable for steamboats and the largest vessels for some distance, and forms the harbor of Buffalo, which is rendered secure by means of a pier and light-house, and is easily approached from the lake at all seasons, except in the winter, when closed by ice.

Buffalo Creek, Ga. A branch of the Oconee River, which it enters in Washington co.

Buffalo Fork, of the White River, As. This large stream rises in the W. part of Newton co., flows E., and enters White River in Yard co.

Buffalo Lake, Marquette co., Wn. This is an enlargement of one of the head branches of Neenah or Fox River. It lies W. from Puckaway Lake.

Buffalo River, Te. The head branches of this river rise in the N. part of Lawrence co. It flows W. through a part of Lewis and Wayne counties, then turns to the N., and unites with Dutch River in Humphreys co.

Buffalo River, Wn. It forms part of the boundary between Chippewa and Crawford counties, and falls into the Mississippi.

Buffalo River, Ma. It is supplied by numerous chains of lakes, and flows N. W. into North Red River.

Bull's Bay, Charleston district, S. C. This bay is enclosed by the Raccoon Keys on the N. E., and Bull's Island on the S. W.

Bull Hill, Phillipstown, Putnam co., N. Y., a high peak of the Highlands, is situated on the E. side of the Hudson.

Bull's Island, Charleston district, S. C. Situated S. W. from Bull's Bay.

Bullock's Creek, York district, S. C. A branch of the Broad River, which it enters at Pinckneyville.

Bulwagga Bay, Essex co., N. Y., lies on the W. side of Lake Champlain, between Cedar Point and Crown Point.

Bumsket Hill, Paxton, Ms. Height 1407 feet.

Bunkara River, Ca. One of the head branches of Grand River.

Buried Eagle Lake, Ma. Situated N. from Green Lake, and connected on the E. with St. Croix River.

Burlington Bay, Vt. A fine open bay, lying W. from Burlington village, between Appletree Point on the N. and Pottier's Point on the S.

Burnham's River, N. H. See *Lyman*.

Burnt River, On. It flows in a winding, easterly direction, and enters the Lewis Fork of Columbia River, above Malheur River.

Burnt Coat Island, Hancock co., Me. This large island, which is surrounded by other smaller ones, lies off Blue Hill Bay, about 13 miles E. by S. from Deer Island, and about 6 miles S. by W. from the town of Mount Desert. It has a light-house and good harbors.

Burnt Wood Islands, Mn. Situated at the mouth of Big Bay de Noquet.

Bush River, Newberry district, S. C. A branch of the Saluda.

Busseron Creek, Ia. This stream and its branches drain Sullivan co., and flowing S. W., enter the Wabash in Knox county.

Butle River, Ca. It rises among the Sierra Nevada, and flows S. W. into the Rio Sacramento.

Butter Hill, N. Y., a high, steep eminence, is situated on the W. side of the Hudson, opposite Breakneck Hill. These are the N. hills of this range on the river, and in ascending the Hudson the villages of Cornwall, New Windsor, Newburg, and Fishkill, together with the beautiful and highly improved farms in view, present a charming contrast to the rude and romantic mountain scenery just passed.

Buttermilk Channel, N. Y., is situated opposite the city of Brooklyn, between Governor's Island and Long Island.

Butternut Creek, N. Y. This is a good mill stream, rising in Burlington, Otsego co., and flowing into Unadilla River.

Buttermilk Falls, N. Y. A beautiful and romantic cascade, 2 miles below West Point, on the W. bank of the Hudson.

Butternut River, Aroostook co., Me., has its source in a small pond, and flows E. into St. John's River.

Buzzard's Bay, Ms. This bay is formed on its S. E. side by the Elizabeth Islands, and contains the important harbors of New Bedford, Fairhaven, Rochester, Wareham, &c. It juts up from the sea some 25 miles; its mean width is about 6 miles, and the width at its mouth about 7 miles.

Byram River rises in Westchester co., N. Y., flows S. 18 miles into Long Island Sound. It forms the boundary line between N. Y. and Ct. for a short distance.

Caballo Pass, Ts., is situated N. E. from Es-

piritu Santo Pass, at the mouth of San Antonia River.

Cabbage Island, Fa., lies off the coast of Hillsboro' co., a little above Tampa Bay.

Cacapon River, Great, Va. This river has its sources in the E. part of Hardy co., flows N. E., and enters the Potomac in Morgan co., W. from the Cacapon Mts.

Cacapon River, Little, Hampshire co., Va., flows N. E., parallel with the Great Cacapon, and empties into the Potomac.

Cache River, As. This is a large river, rising in the N. part of Greene co. It flows S. S. W., separating Greene and Poinsett from Randolph, Lawrence, and Jackson counties, crosses St. Francis and Monroe counties, and enters the White River at the town of Clarendon.

Cadose Creek rises in Tompkins, Delaware co., N. Y., and flows S. into the Papacton, a branch of the Delaware.

Cahaba River, Aa., rises in St. Clair co., and flows S. into the Alabama, 195 miles above its junction with the Tombigbee. It is 120 m. long.

Cahokia Creek, Is. This river rises in Macoupin, and falls into the Mississippi 2 miles below the ferry at St. Louis. Its course is sluggish near the mouth, and a mill dam backs the water for 15 miles. It formerly passed the village of Cahokia, but a mischievous Frenchman, owing to some pique, cut a channel which has since become its outlet from the creek to the Mississippi. Along its borders are 60 or 70 mounds.

Calaberas River, Ca., rises among the Sierra Nevada, and flows S. W. into the Rio San Joaquin.

Calcasieu River, La. This river rises S. W. of Red River, in the parish of Natchitoches; towards its mouth it expands into a lake 30 miles in length, and from 1 to 10 in width, but it contracts again to a river before it enters the Gulf of Mexico. The tide flows above the head of the lake, but both the river and lake are too shallow to be of much service for navigation.

Calebeebe Creek, Macon co., Aa. This stream flows N. W. into the Tallapoosa River.

Calif-Killer Creek, White co., Te., flows S. W. into the Caney Fork of Cumberland River.

Calibogoe Sound, S. C., is on the shore 7 miles N. E. of the mouth of Savannah River.

Callicoon Creek rises in Liberty, Sullivan co., N. Y., passes through Coshocton, and empties into the Delaware.

Calliou Lake, La., lies in the S. part of Terre Bonne parish.

Cambahoe River, S. C., is formed by two branches, called the N. and S. *Saltketcher*, and falls into St. Helena Sound.

Camel's Hump, Chittenden co., Vt. This mountain lies in the E. part of Huntington, and is the most elevated summit of the Green Mts., with the exception of the Chin. It is situated 17 miles W. from Montpelier, 25 N. E. from Middlebury, and 20 S. E. from Burlington. The summit is conspicuous from the whole valley of Lake Champlain, but is hardly accessible except from the N. When it is reached, however, the prospect which it commands is hardly surpassed in extent and beauty. It is usually ascended by way of Duxbury, where carriages can approach to within about three miles from the summit. The rocks which compose the mountain are wholly of mica slate, and the Hump is nearly destitute of soil or vegetation.

Campen's Creek rises in Wirt, Alleghany co., N. Y., and flows N. E. into Genesee River.

Campobello, an English island, off Passamaquoddy Bay, and near the town of Lubec, Me.

Canandaigua Lake, N. Y. This beautiful sheet of water lies in Ontario and Yates counties, mostly in the former. It is 14 miles long, and from 1 to $\frac{1}{2}$ wide. It is elevated 670 feet above the Atlantic, and is surrounded by fertile and highly cultivated lands, and the most beautiful scenery. Its waters are deep and clear, and abound with fish. Canandaigua Outlet flows N. E. into Flint Creek, and thence into Clyde and Seneca River. All these streams afford excellent water power.

Canadawa Creek, N. Y. This fine mill stream rises in Arkwright, Chataque co., and flows N. E. into Lake Erie. On its banks are located several thriving villages and manufacturing establishments.

Canadian River, As., flows N. E. into Arkansas River. It is navigable 100 miles.

Canadice Lake, Canadice, Otsego co., N. Y., is 3 miles long, and half a mile in width.

Canaderaga or *Schuyler's Lake*, N. Y., is situated in the N. part of Otsego co., and surrounded by hills. Its waters abound in all the fish common in this part of the state. The length of the lake is 5 miles, its average width $\frac{1}{2}$ miles.

Canaderaga Springs, Richfield, Otsego co., N. Y., are situated about 1 mile N. of Canaderaga Lake, on the Cherry Valley turnpike. They are impregnated with sulphur, and are much visited by invalids.

Canasewacta Creek, N. Y., a pretty good mill stream, rises in Otselic, Chenango co., and enters the Chenango River at the village of Norwich. This stream is noted for its fine trout, which are abundant.

Canaveral Cape, Orange co., Fla. This is a point of land on the S. E. part of the county, jutting into the Atlantic.

Cane Creek, N. C., rises in the Blue Ridge, flows S. W. by W., forming the boundary between Buncombe and Henderson counties, and empties into the French Broad River.

Cane Creek, Pickens district, S. C., unites with the Keowee to form Seneca River.

Canadea Creek rises in Chataque co., N. Y., flows E., receiving several tributaries, most of which afford good water power, and empties into Genesee River.

Caney Fork, Ca. A small W. tributary of Grand River.

Canisteo River rises in Alleghany co., N. Y., flows E., and enters Tioga River, 5 miles above the village of Painted Post, in Steuben co. It is a good mill stream, and is boatable about 40 miles. Its length is 50 miles.

Cannon River, Ma. The principal head branches of this river rise in Wita Sheda and Titanka Tiinnian Lakes. It flows N. E., and empties into the Mississippi, at the enlargement called Lake Pepin.

Cannouchee River, Ga. This is the W. and largest confluent of the Ogechee, being 140 miles long, and navigable 50 miles, to Cedar Creek.

Canoe Creek, Henderson co., Ky., flows N. W., and empties into the Ohio at the town of Henderson.

Canoe River, On. It rises in the N. part of Ont. Ter., flows S. W., and falls into Pend Oreilles, or Kulluspelm Lake.

Canseraga Creek rises in Alleghany co., N. Y., flows N., and enters the Genesee River in Living-

ston co. Several thriving villages and manufacturing establishments are situated on this stream.

Cany Creek, Johnson co., As. A small branch of the Arkansas River.

Cape Fear, N. C., is on the S. extremity of Smith's Island, near the mouth of Cape Fear River, in lat 38° 48' N. and lon. 78° 9' W.

Cape Fear River, N. C. Deep and Haw Rivers unite to form its N. W. branch; it then, after flowing 100 miles, receives the N. E. branch of Clarendon River, above Wilmington, and 34 miles below it enters the Atlantic by two channels, one on each side of Smith's Island. By means of embankments the channel has been deepened, and steamboats now proceed 90 miles, to Fayetteville, at the lowest water. It affords the best navigation of any river in the state.

Cape Horn Mountain, N. H. See *Northumberland*.

Cape May, N. J., is situated 18 miles N. of Cape Henlopen, on the N. side of Delaware Bay. On it is a light-house. It is 38° 57' N. lat., 74° 52' W. lon. See *Fashionable Resorts*.

Cape Vincent, N. Y., formerly called Gravelly Point, lies in the town of Lyme, Jefferson co., between St. Lawrence River and Chaumont Bay. It terminates in a broad, rounded point, on the E. side of Lake Ontario, opposite Fox and Grenadier Islands.

Capers Inlet, Charleston district, S. C. A narrow passage between Capers and some other small islands.

Captina Creek, O. and Va., falls into the Ohio River, 23 miles below Wheeling, Va.

Cardigan Mountain, N. H. See *Orange*.

Carleton Island, Jefferson co., N. Y., lying in the St. Lawrence River, is equidistant between Grand Island and the American shore, and is attached to the town of Lyme. It contains about 1200 acres of good land, and was the scene of some military preparations during the war of 1812.

Caribou Lake, Piscataquis co., Me., lies S. W. from Chesuncook Lake, with which it is connected by an outlet.

Carlos Bay, Fa. Situated in the Gulf of Mexico. Lon. 82° 20' W. and lat. 26° 40' N.

Carr River, Mn., rises in Chippewa and Michilimackinac counties, flows S. E., and empties into Lake Huron.

Carr River, Mn., waters the N. E. part of Schoolcraft co., and empties into Lake Superior.

Carr's Mountain, N. H. See *Ellsworth*.

Carson Lake, Uh., lies N. from Walker's Lake, and receives Carson River from the W.

Carson River, Ca. and Uh. It rises in the Sierra Nevada, Ca., and flowing N. E., empties into Carson Lake, Uh.

Carter's Mountain, Albemarle co., Va. It lies 2 miles S. from Charlottesville, and is elevated about 800 feet above the Rivanna.

Carter's Mountain, N. H., lies between the towns of Adams and Chatham.

Cascade Creek, Ma. A small stream emptying into the Mississippi at the Falls of St. Anthony.

Cascade Mountains, On. This range extends through the territory, nearly parallel with the Pacific coast. It contains many high peaks, and is crossed near the middle of its course by the Columbia River.

Cascadilla Creek rises in Dryden, Tompkins co., N. Y., flows W. through Ithaca, into the S. part of Cayuga Lake.

Cascasatica Creek, Ga., rises in the S. W. part

of Pulaski co., and flows S. E. into the Ocmulgee River.

Casco Bay, Me., situated between Capes Elizabeth and Small Point, is one of the finest bays on the American coast. It is 20 miles long, and extends inland about 15 miles. Within it are some of the best harbors in the world. It contains numerous islands, some of which are very large, fertile, and well cultivated. The view of the bay and its islands from the high grounds in the vicinity is one of great beauty.

Cash River, Is. This stream drains the W. part of Johnson co., flows S. W., separating Pulaski from Alexander co., and empties into the Kentucky River.

Cashuaque Creek rises in Alleghany co., N. Y., flows N., and enters Genesee River in Livingston co., near Mount Morris.

Cashong Creek rises in Benton, Yates co., N. Y., and flows E. into Lake Seneca.

Caspian Lake, Vt. See Greensborough.

Cass Bay, Mn. Situated between Grand Island and the main land of Schoolcraft co.

Cass Lake, Ma. A large, irregularly-shaped body of water, through which the head waters of the Mississippi River pass. It contains one or two large islands, and has Pike's and Allen's Bays on the S. and S. W.

Cass River, Mn., is a branch of the Saginaw, which it enters 20 miles from its mouth. It is an excellent mill stream, and in high water is boatable 15 or 20 miles from its mouth.

Cassadaga Creek, N. Y. This fine mill stream rises in Cassadaga Lake, Chatauque co., flows S., receiving several tributaries, most of which afford water power, and enters Conewango Creek.

Cassadaga Lake, N. Y., is a small sheet of water, lying in the towns of Pomfret and Stocton, Chatauque co.

Castete Creek, Franklin co., As. A branch of the Arkansas.

Castle Hill, Sangus, Ms. Height 288 feet.

Castleton River, Vt., rises in Pittsford, and flows S. and W. through Rutland, Ira, Castleton, and Fair Haven, into Poultney River. In Castleton, it receives the waters of Bombazine Lake, and a considerable mill stream from the N. Length about 20 miles.

Castor Creek, Mo. The head branches of this stream water the W. part of Madison co.; it then flows in a S. direction, and empties into the St. Francis.

Cat Island, St. Bernard parish, La., lies in Ship Island Sound, W. from Ship Island.

Cat Point, Franklin co., Va. A point of land extending into Appalachicola Bay.

Catahoola Lake, La., lies in Catahoola and Avoyelles parishes, receives several large streams, and flows into Red and Black Rivers.

Catahoola River, La., rises in Claiborne parish, enters a lake on the S. part of Catahoola parish, and after passing through it enters Wachita River. The lake, which is of considerable dimensions, is filled at high water, and nearly or quite dry when the river is low.

Catamount Mountains, N. H. See Pittsfield and Allenstown.

Catawba River. See Santee River.

Catherine's Creek rises in Chemung co., N. Y., flows N., and enters Seneca Lake, of which it is the inlet, at the village of Jefferson. This stream has a descent of 400 feet, in a distance of 15 miles, affording extensive water power.

Cathlatates River, On. It rises among the Cascade Mts., and flows S. into Columbia River.

Catistobole River, Va., drains the W. part of the state, and empties into the Gulf of Mexico.

Catskill Creek, N. Y., a good mill stream, rises in Schoharie co., flows through the S. W. corner of Albany co., and enters the Hudson in Greene co. at the village of Catskill. It has a descent of more than 1000 feet in 35 miles.

Catskill Mountains, N. Y. A spur from the Shawangunk ridge, which is a detached portion of the great Appalachian chain. They extend W. of the Hudson River, in the counties of Ulster, Greene, Albany, and Schoharie, and constitute the largest and most extensive range of mountains in the state. Their course is first northerly, near the Hudson, afterwards bending to the W. Their general elevation is about 3000 feet above tide water. Round Top and High Peak, two of the highest summits, as measured by the barometer, are, the former, 3804 feet, and the latter 3718 feet above the level of the sea. The Catskill Mountain House, upon a terrace of rock at the eastern extremity of the ridge, 2212 feet above the Hudson, and about 12 miles from the place of landing on the river, is a place of much resort in the summer season, for the clear and bracing atmosphere, and the extensive and beautiful prospects there to be enjoyed. See *Pine Orchard*.

Cattaraugus Creek rises in Cattaraugus and Genesee counties, N. Y., flows W., forming the boundary between Cattaraugus and Erie counties, and empties into Lake Erie. It is a fine large stream, and has a fall of 800 feet in about 50 miles, affording extensive water power.

Cattotong Creek rises in Tompkins co., N. Y., flows S., and enters the Owego, in Tioga co., a little above the entrance of the latter stream into the Susquehanna.

Caucomgong Lake, Me. Situated in the W. part of Piscataquis co., and connected by outlets with many small ponds.

Cayuga Creek, Erie co., N. Y., flows W. into Lake Erie, 15 miles S. of Buffalo.

Cawenisque River, Pa. A branch of the Tioga, which it enters on the borders of New York.

Cayudutta Creek rises in Fulton co., N. Y., flows S., and enters the Mohawk near the village of Fonda, Montgomery co.

Cayuga Creek, N. Y., rises in Genesee and Wyoming counties, flows in a W. direction, and unites with Seneca Creek to form Buffalo Creek, in Erie co.

Cayuga Island, N. Y., lies in Niagara River, opposite Grand Island. It is 1 mile long and a quarter of a mile wide.

Cayuga Lake, N. Y., lies between Cayuga and Seneca counties, and extends several miles S. into Tompkins co. It is a beautiful sheet of water, about 40 miles long from N. to S., and from 1 to 3½ miles in width. The outlet flows N. into Seneca River, and thence through the Oswego into Lake Ontario, about 35 miles distant. Its shores, in some places, are precipitous, but generally rise gradually from 100 to 150 feet, covered with highly-cultivated farms and thriving villages. The celebrated "Cayuga bridge," a mile and eight rods in length, crosses this lake at Cayuga village, near its northern extremity; likewise, the bridge of the Auburn and Rochester Railroad, which is a mile and a half in length. Steamboats run daily between this point and Ithaca, which is beautifully situated at the southern extremity of

the lake, touching at the several villages and landing-places on the eastern and western shores, forming a connection between important routes of travel, and affording one of the most agreeable pleasure excursions. The lake is very deep, in some places, it is said, exceeding 500 feet; its water is very transparent, and, owing to its depth, rarely closed by ice, even in the severest winters. It abounds with the choicest fish, such as the salmon trout, pickerel, perch, and pike.

Cayuta Creek, a rapid mill stream, rises in Cayuta Lake, Chemung co., flows in a S. direction, forming part of the boundary line between Chemung and Tioga counties, and falls into the Susquehanna a short distance below the state line.

Cayuta Lake, N. Y. This small body of water lies in the N. part of Chemung, on the confines of Tompkins co. Trout, and other fish of a fine flavor, are abundant in its waters.

Cazenove Creek, N. Y. A large, fine mill stream, rises in Erie co., and enters Buffalo Creek a few miles above its mouth.

Cazenovia Lake, Madison co., N. Y. This beautiful lake is situated in the town of the same name. It is 4 miles in length, 1 in width, and abounds with different kinds of fish.

Cedar Creek, Monmouth co., N. J. A small stream emptying into the Atlantic opposite Island Beach.

Cedar Creek, Ia., rises in the N. W. part of De Kalb co., flows in a southerly direction, and falls into St. Joseph's River of the Maumee.

Cedar Creek, Mo. This stream forms the boundary between Callaway and Boone counties, and empties into the Missouri, opposite Jefferson City.

Cedar Creek, Io. It rises in Monroe and Lucas counties, and flows N. E. into the Des Moines River.

Cedar Creek, Ts. The principal branch of Navisoto River.

Cedar Island, Accomac co., Va., lies off the Atlantic coast, opposite the town of Richmond.

Cedar Island, Carteret co., N. C. Situated in the S. part of Pamlico Sound, and washed on the N. W. by Long Bay.

Cedar Keys, Fla. A small group of islands lying off the mouth of Suwannee River.

Cedar Point, St. Mary's co., Md., extends into Chesapeake Bay, just below the mouth of Patuxent River.

Cedar River, Mn. It drains the W. part of Livingston co., flows N. of W., and empties into Grand River at the city of Lansing.

Cedar River, Mn., flows S. S. E., and empties into Green Bay.

Cedar River, Io. This river rises in the neutral ground, its head branches draining a large extent of country. It flows S. E. through Blackhawk, Benton, Linn, Johnson, and Cedar counties, into Muscatine co., where it turns to the S. W., and falls into Iowa River in Louisa co.

Center's River, Wn. It rises in the S. part of Brown co., and flows S. E. into Manitowoc co., where it empties into Manitowoc River.

Chagrine River, O. It rises in the S. W. part of Geauga co., flows in a northerly direction through Cuyahoga and Lake counties into Lake Erie.

Champlain, Lake, N. Y. and Vt. This delightful expanse of water is the boundary line between New York and Vermont. Vermont embraces about two thirds of its surface. New York is on

the W. side, and the counties of Franklin, Chittenden, Addison, and a part of Rutland, in the state of Vermont, lie on the E. At the N. it extends a few miles into Canada, and receives the waters of Pike River. It discharges into the St. Lawrence by the Richelieu, Sorel, or Chambly River. Among its tributaries from Vermont are the Missisquoi, Lamoille, Winooski, Otter, and Pawlet Rivers. From New York it receives the waters of the Chazy, Saranac, Sable, Boquet, and Wood Rivers, and of Lake George. Its length is about 130 miles: its breadth varies from 1 to 12 miles; average breadth about 3 miles. It abounds with salmon, trout, pickerel, and other fish. It is navigable for vessels of 90 tons' burden, and splendid steamboats are continually plying, in the season of navigation, from Whitehall, along its beautiful shores, to St. John's, in Canada. This lake contains about 60 islands, is remarkable for its splendid scenery, and renowned in ancient and modern stories for its scenes of warlike achievements. Lake Champlain is a great resort, both for business and pleasure. It is supposed that Lake Champlain once covered a much greater extent than at present, and that its waters were capable of being navigated by large vessels to the Atlantic Ocean, both by the Gulf of St. Lawrence and the Hudson River. See *Charlotte*, Vt.

Chandeleur Bay, La. This large bay lies S. from the Chandeleur Islands, E. from Black Bay, and N. from the mouth of the Mississippi River.

Chandler's Hill, Worcester, Ms. Height 778 ft.

Changa Creek, Pickens district, S. C. A branch of the Tugaloo.

Chanjushka River, Ma. A large W. tributary of the Mankato.

Chanpepan River, Ma., rises in a lake, flows S. W., and empties into the Missouri River, just above Prospect Island.

Chaplain's Fork, Ky., joins the Rolling Fork at lon. 86° 1' W. and lat. 37° 34' N.

Chariton River, Mo., rises in Iowa, and after a S. course of 130 miles, it empties into the Missouri at the S. extremity of Chariton co. It is boatable for 50 miles.

Charity Isles, Mn. Situated at the mouth of Saginaw Bay.

Charles River, Ms. The Indian name of this river is Quinobequin. It rises on the borders of Hopkinton and Milford, and flowing through Bellingham, Franklin, Medway, Medfield, Sherburne, Dover, Dedham, Needham, Natick, Newton, Waltham, and Watertown, it meets the tide waters, and forms a part of Boston harbor. It is navigable to Watertown, 7 miles W. from Boston.

Charles River, Washington co., R. I., rises in a pond, and flows in a westerly direction into Pawcatuck River.

Charlotte Harbor, Fla. See *Gasparilla Sound*.

Charlotte Lake, N. Y., is a small sheet of water lying in the town of Gallatin, Columbia co.

Charlotte River, N. Y., drains the W. part of Schoharie co., flows W. 30 miles through a part of Delaware into Otsego co., where it enters the Susquehanna.

Charlotte River, Fa., waters the E. part of the state, and falls into a bay of the same name.

Charlton River, Mo., falls into the Missouri, about 220 miles from the Mississippi.

Chartiers Creek, Pa., rises in Washington co., and, after a course of 30 miles, falls into the Ohio, 4 miles below Pittsburg. It flows through

a fertile country, abounding with bituminous coal.

Chatauque Creek, Chatauque co., N. Y., flows N. through a deep ravine into Lake Erie. It affords good water power, and a number of manufacturing establishments are located on its banks.

Chatauque Lake, Chatauque co., N. Y., is a beautiful sheet of water, 18 miles in length, and from 1 to 3 miles in width, except near the middle, where it contracts to a few rods. Steamboats ascend by its outlet from Conewango Creek, and thence to Mayville, on the W. extremity of the lake. It is the highest body of water in the U. S. on which a steamboat floats, being 726 feet above Lake Erie, and 1291 feet above the Atlantic.

Chateaugay Lake, N. Y., is situated in Beekmantown, Clinton co., on the borders of Franklin co. It is elevated 1400 feet above the Hudson, is 4 miles long and 2 miles wide. Its waters abound in fish.

Chateaugay Mountains, N. Y. This range commences in Canada, and extends S. through the N. W. part of Clinton into Franklin co. Some of the highest peaks are in the vicinity of Chateaugay Lake, Franklin co.

Chateaugay River, N. Y., rises in Clinton and Franklin counties, flows N., and enters the St. Lawrence in Canada.

Chattahoochee River rises in the Appalachian Mts., and forms, for a considerable distance, the boundary between Ga. and Aa., and is the largest branch of Appalachianicola River. It is navigable for steamboats to Columbus, Ga.

Chaumont Bay, N. Y., is situated in the town of Lyme, Jefferson co., E. of Lake Ontario; it is about 7 miles long, 2 miles wide, of an irregular shape, and abounding in fish. Chaumont River flows into it from the N.

Chaumont River, Jefferson co., N. Y., flows 15 miles in a S. direction, and enters Lake Ontario through Chaumont Bay.

Chazy Lake, Beekmantown, Clinton co., N. Y., is 4 miles long, and averages 1 mile in width.

Chazy River, N. Y., waters the W. part of Clinton co., and flows E., in a circuitous course of about 40 miles, into Lake Champlain, in the town of Champlain. It affords good water power.

Chazy River, Little, rises in Clinton co., N. Y., flows in an E. direction about 20 miles, through the town of Chazy, into Lake Champlain.

Cheat River, Va., an E. branch of the Monongahela, is navigable for boats, except in dry seasons.

Chedi Hanska Lake, Ma. Situated S. from Tewapa Tankyan Lake.

Chegowawegon Point, La Pointe co., Wn., encloses Chegowawegon Bay on the E.

Chemquassabamtook Stream, Piscataquis co., Me., is the outlet of a series of ponds, and empties into Alliguash River.

Chemung River, N. Y., the main feeder of Chemung Canal, is formed in Steuben co. by the junction of Conhocton and Tioga Rivers, and flows in a S. E. direction through the county of Chemung into Pa., where it enters the Susquehanna at the village of Athens. It is a good mill stream.

Chenango River, N. Y., rises in Madison and Oneida counties, flows through Chenango co., and enters the Susquehanna at the village of Binghamton, in Broome co. It runs 75 miles in a S. direction through Chenango valley, and on its banks are several pleasant and thriving villages.

It is used to a considerable extent to feed the Chenango Canal, and boats and rafts ascend it 50 miles from the mouth.

Cheputnetecook Lakes, Me. See *St. Croix River*.

Chera River, Cherokee co., N. C., enters the Tennessee on the N. W. border of the county.

Cheraw Hills, S. C., lie on the W. side of the Great Pedee, 10 miles N. W. from Greenville.

Cherry Creek, Samslac co., Mn. A small stream emptying into Lake Huron.

Cherry Valley Creek, N. Y., rises in the town of Cherry Valley, and enters the Susquehanna in Otsego co.

Chesapeake Bay, Md., the largest bay in the U. S., is about 200 miles long, from 7 to 20 broad, and generally 9 fathoms deep. Its entrance is in the state of Va., between Cape Charles on the N. and Cape Henry on the S. But the bay lies mostly in Md., dividing the state into two parts, called the eastern and western shores. This great bay furnishes many fine harbors, and a safe and convenient navigation. The principal rivers which flow into it are the Susquehanna on the N., the Potomac on the W., and the James on the W., near its mouth. Besides, there are the Rappahannock, the Patuxent, the Patapsco, Chester, Elk, Choptank, Nanticoke, and many others. The surface drained by the rivers which flow into the Chesapeake has been estimated at 70,000 square miles.

Chester River rises in Kent co., De., and flowing through Md., empties into a large estuary of Chesapeake Bay. It is navigable 30 miles to Chestertown.

Chestnut Ridge, Pa. A branch of the Alleghany Mountains, extending through Fayette and Westmoreland counties.

Chesuncook Lake, Piscataquis co., Me. This lake, through which Penobscot River passes, also receives Kakkognamook and Umbazookskus Rivers. It is about 25 miles long and 3 miles wide. The surrounding country is very fertile, and well adapted to the growing of wool and wheat. Its centre is about 130 miles W. N. W. from Augusta.

Chetimaches Lake, La., is situated between Atchafalaya and Teche Rivers. The former supplies its waters in time of high water, and receives them again at all seasons, 15 miles above its entrance into the sea. The lake is shallow, and surrounded by a low, marshy country, which it annually overflows. It is 40 miles long and from 1 to 6 broad.

Chew Island, Md. Situated in Eastern Bay, opposite the mouth of Wye River.

Chews River, Md. A small tributary of the Chesapeake.

Chicago River, Is., which forms the harbor of Chicago, on the S. W. border of Lake Michigan, is composed of two branches. The N., which is about 40 miles long, rises in the N. part of the state, and unites with the S. about three fourths of a mile from its entrance into the lake. The S. branch, which is about 6 miles long, is sufficiently deep to afford a secure harbor for any vessels which navigate the lake. The natural portage from Chicago River to the Des Plaines, a branch of the Illinois, is only 6 miles, and is so low that at high water it is often overflowed, so that boats can pass from one river to the other.

Chicagua, or *Skunk River*, Io. This large river rises mostly in Boone and Story counties, flows S. E., receiving numerous large tributaries

and falls into the Missouri on the boundary between Des Moines and Lee counties.

Chickahominy River, Va. This river rises about 25 miles N. W. of Richmond, and after a course of 60 miles, forming the boundary between several counties, falls into James River, 37 miles above Point Comfort.

Chickamanga River rises in the N. W. part of Ga., and enters the Tennessee, in the state of Te., a few miles above Lookout Mt.

Chickasawha River, Mi. See *Pascagoula*.

Chickeles Point, On., encloses Gray's Harbor on the S.

Chickeles River, On. It rises S. from Puget Sound, and flowing N. of W. empties into Gray's Harbor.

Chickopee River, Ms. This river has its sources in Spencer, Leicester, and Paxton, and receives the waters of Quaboag Pond, in Brookfield. It crosses Warren. At Palmer it receives Ware and Swift Rivers, and falls into the Connecticut in the N. part of Springfield.

Chico Creek, Ca., rises among the Sierra Nevada, and flows S. W. into the Sacramento River.

Chimney Point, Addison co., Vt., lies in the town of Addison, opposite Crown Point, and is the most western land in Vt. It was upon this point that the first settlement was made by the French in 1731, and here they erected a stone windmill, which was garrisoned during the colonial wars, and hence it has sometimes been called Windmill Point.

Chingoleagul Island, Va. A small island lying in the Atlantic, in lon. 75° 26' E. and lat. 37° 56' N.

Chingoteague Island, Va. A small island lying in the Atlantic.

Chipola River. This river rises in the S. E. part of Aa., takes a southerly course through Jackson and Calhoun counties, Fa., and empties into the Appalachian River.

Chipook Creek, Va. A tributary of James River.

Chippewa Bay, N. Y., in which are situated a portion of the "Thousand Islands," is on the E. side of St. Lawrence River, opposite the town of Hammond, St. Lawrence co.

Chippewa River, Wn., rises on the boundary line between Mn. and Wn., and pursuing a S. course receives several streams, outlets of lakes, and Red Cedar River, when, after a course of 150 miles, it falls into the Mississippi immediately below Lake Pepin.

Chippewayan Mountains, or *Rocky Mountains*. The great spine of North America, extending from the Isthmus of Darien to the Arctic Ocean. That portion which lies within the U. S. is generally called the Rocky Mountains. The great western tributaries of the Mississippi flow from these mountains.

Chittenango Creek, N. Y., has its source in the town of Nelson, Madison co., and flows N. into Oneida Lake.

Chockoloché Creek, Aa. A branch of the Coosa River, which it enters in Talladega co.

Chocolate Creek, Ts. A small stream emptying into the Gulf of Mexico opposite Galveston I.

Choctawatchee River rises in Aa., and falls into a bay of the same name in Fa., after a course of 130 miles.

Choptank River, Md., E. shore, empties into a large estuary in Chesapeake Bay. It is navigable for sloops 40 miles from its mouth.

Chowan River, N. C. This river is formed by

the Nottaway, Meherrin, and Blackwater Rivers, which rise in Va. It flows into Albemarle Sound, a little N. of the Roanoke. It is navigable, on the Meherrin Branch, for large vessels to Murfreesboro', near the line of Va.

Chrysophyle, or *Golden Gate*, Ca. A narrow strait connecting San Francisco Bay with the ocean.

Christiana River, or *Creek*, De., has its head branches in Pa. and Md., and flows into the Brandywine at Wilmington. It is navigable for vessels drawing 9 feet of water to Newport, and those requiring 6 to Christiana bridge, 9 miles above Wilmington.

Chrystler's Island, St. Lawrence co., N. Y., lies in the St. Lawrence River, and is attached to the town of Louisville.

Chunctamunda Creek rises in Fulton and Saratoga counties, N. Y., flows S., and enters Mohawk River at the village of Amsterdam, Montgomery co.

Church Island, N. C., lies in Currituck Sound.

City Island, N. Y., lies in East River, and is attached to the town of Pelham, Westchester co. It is 2 miles long, and 1 mile wide.

Clam River, Wn., drains the N. part of St. Croix co., flowing W. into St. Croix River.

Clarion River, or *Great Toby's Creek*, Pa., rises in McKean co., and after a S. W. course of 70 miles, falls into Alleghany River. It is navigable 55 miles for boats, and for canoes 10 miles farther. Vast quantities of lumber are sent down this river to Pittsburg, and towns on the Ohio.

Clark's River, Ky., rises on the N. border of Te., flows N. N. W., and empties into the Ohio at its junction with the Tennessee.

Clarke, or *Flathead River*, On. Ter., a tributary of the Columbia, rises in the Rocky Mountains.

Clarksburg Mountain, Clarksburg, Ms. Height 2272 feet.

Claverack Creek, Columbia co., N. Y., flows into Kinderhook Creek. Several factories and mills are located on this stream and its tributaries.

Clay Lick Creek, Crittenden co., Ky., a small branch of the Cumberland River.

Clear Creek rises in Chataugee co., N. Y., and flows into Conewango Creek, in Cattaraugus co.

Clear Lake, N. Y., is one of a small cluster, situated in the town of Alexandria, Jefferson co.

Clear Lake, Barry co., Mn. A small body of water lying in the S. interior of the county.

Clearfield Creek, Pa., a large branch of the W. fork of the Susquehanna, rises in Cambria co.

Clear Stream River, N. H., rises in the mountains in the town of Dixville, and passes through the centre of Erroll into the Androscoggin, about 3 miles W. from Umbagog Lake.

Cliffy River, Va., falls into Kanawha in lon. 81° 8' W. and lat. 37° 52' N.

Clifton Springs, Manchester, Ontario co., N. Y. These sulphur springs are situated on the line of the Auburn and Rochester Railroad, and are considerably resorted to for medicinal purposes.

Clifty Creek, White co., Te. A small tributary of the Caney Fork of Cumberland River.

Clinch River, Va. and Te., rises in Va., and, after a course of 200 miles, unites with Holston River at Kingston, and forms the Tennessee. It is boatable through most of its course.

Clinton, Fort, N. Y. See *Montgomery, Fort*.

Clinton Mountains, N. Y. The N. range of mountains in this state is sometimes so called See *Adirondack Mountains*.

Clinton River, Mn. This stream drains Oak

land and Macomb counties, and falls into Lake St. Clair.

Cloquet River, Ma. This river is supplied by a series of small lakes, and flows S. W. into St. Louis River.

Closter Mountains, or *Palisade Range*, commences in N. J., enters N. Y. in Rockland co., near the margin of the Hudson, and extends N. to Verdictje's Hook, in Clarkstown. The ridge known as Nyack Hills affords excellent red and brown sandstone, which is extensively quarried. The highest peak of this range rises about 1000 feet above the Hudson, and the Palisades are remarkable for their picturesque appearance, being in some places almost perpendicular.

Clove Kill rises in Union Vale, Dutchess co., N. Y., flows S. W., and enters the Fishkill, of which it is a head branch, at Beekman.

Clyde River, Vt., rises in Pitkin's and Knowlton's Ponds, in the town of Brighton, flows N. W. through Charleston, Salem, and Derby, and empties into Lake Memphremagog. This is a sluggish stream, with the exception of a few short rapids, until it comes within 3 miles of Lake Memphremagog. It runs through Round Pond, in Charleston, and through Salem Lake, a fine sheet of water nearly 2 miles in length and 1 mile in width, lying in the towns of Salem and Derby.

Clyde River, N. Y., is formed in Wayne co. by the junction of Flint and Mud Creeks, and enters Seneca River after an E. course of 20 miles.

Coal River, Va. A fine mill stream rising in the S. W. part of Fayette co., and flowing N. W., partly on the boundary between Kanawha and Boone counties, into the Great Kanawha River.

Coal Fire Creek, Pickens co., Aa. A small branch of the Tombigbee River.

Coan River, Northumberland co., Va. A small stream emptying into Chesapeake Bay.

Cobbesecontee Waters, Me. This pond is a fine sheet of water, lying W. of Hallowell, and connected with smaller ponds, situated in the towns of Monmouth, Winthrop, Readfield, and Mount Vernon. The outlet of the pond, a river of the same name, after passing through another beautiful pond, enters the Kennebec River at Gardiner. These waters afford charming scenery, great water power, and abundance of fish.

Cobscook Bay, Me. This large bay, situated W. of Passamaquoddy Bay, receives as its tributaries a number of large ponds. See *Eastport*.

Coheco River, N. H. See *Dover*.

Cod, Cape. See *Barnstable County*.

Codden's Hill, Marblehead, Ms.

Codorus Creek, Pa., after a course of 30 miles, falls into the Susquehanna, near New Holland village.

Coeymans Creek rises in New Scotland, Albany co., N. Y., and flows into the Hudson at the town of Coeymans.

Cohara Rivers, *Little* and *Great*, N. C. They drain the interior of Sampson co., unite in the S. part, and their waters, flowing S., fall into South River, in New Hanover co.

Cohoos Falls, N. Y., on the Mohawk River, near Cohoes village, is an object of great attraction for visitors from all parts of the Union, during the summer. Besides a rapid descent above and below, the river has a perpendicular fall of 70 feet at this place. Its banks present a grand and picturesque appearance, rising to the almost perpendicular height of from 50 to 120 feet for the distance of half a mile below the falls, where is

erected a substantial bridge across the stream, 800 ft. long, presenting a beautiful view of the cataract.

Cohuttah Spring, Murray co., Ga., one of the most valuable mineral springs in this part of the country, is situated at the base of Cohuttah Mountain, and on the S. side of a beautiful little stream which issues from the mountain and enters Connesauga Creek 6 miles below.

Cold Creek, N. Y., a good mill stream, rises in Centreville, Alleghany co., and flows E. into Genesee River.

Cold River, N. H. See *Acworth*.

Cold Camp Creek, Benton co., Mo. A branch of Osage River, which it enters from the N.

Cold Water River, Mi. This river rises in Marshall co., flows W. through De Soto co. into Tunica co., where it connects with the Mississippi by means of an outlet; it then pursues a winding southerly course until its entrance into the Tallahatchee.

Collberg Mountains, or *Hills*, N. Y., lie S. of the "Highlands," in the town of Cortland, Westchester co.

Collins River, Grundy co. Te. A head branch of the Caney Fork of Cumberland River.

Colonel's Mountain, Palmer, Ms. Ht. 1172 feet.

Colorado Hills, Ts. A range extending along the Colorado River, N. from the city of Austin.

Colorado River, Ts. The head branches of this large river rise in the mountains in the W. part of the state; it then flows S. E., draining a large extent of country, and empties into Matagorda Bay.

Columbia River, the great river of Oregon, the territory west of the Rocky Mts. Its sources are among the most elevated valleys in those mountain ranges, interlocking with those of the Missouri, the Rio Grande del Norte of the Gulf of Mexico, the Colorado of the Gulf of California, and the Buenaventura of the Pacific Ocean. It is composed of two great constituent branches, the Lewis River and the Clarke River, which take their names from their discoverers, Captains Lewis and Clarke, who, in 1804-5, under the direction of the United States government, explored the country from the mouth of the Missouri to the mouth of the Columbia. Clarke River, which is the great tributary of the Columbia from the north, is likewise constituted by two main branches. The northern branch takes its rise in about 50° N. lat. and 116° W. lon., and pursues a northern route at first, to near McGillivray's Pass in the Rocky Mountains, where it receives Canoe River, at an elevation of 3600 feet above the level of the sea. It then turns S., and receives many tributaries in its course, among which are the Cootanie, or Flat Bow, and the Flat Head, or Clarke River proper. It pursues this general course among high mountains, often expanding into lakes, until it reaches Fort Colville, a distance in this direction of 220 miles, where it is still at an elevation of 2049 feet above the level of the sea. Passing this point, it tends towards the W.; and after receiving Spokan River from the E., it pursues a still more westerly course for 60 miles; when, bending again to the S., it receives Okanagan River, which is the outlet of a line of lakes extensively navigable for canoes. Thence it passes on southward until it reaches Wallawalla, and here, in 45° N. lat., it forms a junction with Lewis River, the other great tributary, coming from the S. E. The entire valley of Clarke River embraces an area of 75,000 square miles; and the entire com-

parative course of the river to this point is about 800 miles. Lewis River takes its rise in the elevated regions of the Chippewayan system, about 10 degrees of latitude S. of the sources of Clarke River, and is, perhaps, of the two rivers, the main constituent of the Columbia. It pursues a northwesterly course, receiving large tributaries from both sides, particularly from the E., until, after a course of about 520 miles, it unites with Clarke River, the great northern tributary at Wallawalla. The valley of Lewis River exceeds an area of 100,000 square miles. Combining the two valleys of Lewis and Clarke Rivers, and measuring from the most northern source of the latter to the most southern source of the former, gives an entire breadth, for the sources of the Columbia, along the sides and summits of the Chippewayan range, of about 1000 miles from N. to S. After the confluence of these two large streams, the Columbia, which now carries a volume of water 3500 feet wide, and has yet to traverse a distance of about 300 miles, and make a descent of nearly 1300 feet, before reaching the Pacific, takes its final direction to the westward, pursuing a rapid course for 80 miles, to its passage through the range of *Cascade Mountains*, so called from the series of falls and rapids over which the waters of the river are carried, at this point, opposing an insurmountable obstruction to boat navigation. From Wallawalla to this pass, the Umatilla, Quisnel's, John Day's and Chute Rivers are received from the S., and Cathlatate's River from the N. From these falls there is still water navigation for 40 miles, when it is again interrupted by rapids. Thence to the ocean, a distance of 120 miles, the river is navigable, even at the lowest stages, for vessels requiring 12 feet of water, though obstructed more or less by many sand bars. In this part of its course, it receives the Willamette from the S., and the Cowelitz from the N. The width of the Columbia is greatly enlarged within the last 20 miles, and where it enters the ocean, between Point Adams and Cape Disappointment, it is about 7 miles across. There are flats and sand bars which extend nearly across the mouth between these points, and render the entrance of ships somewhat dangerous; though it would appear, from surveys and soundings, that there are about 20 feet of water over these flats at low tide; and that, in the channel, which lies near to Cape Disappointment, the depth of water is not less than 24 feet. The tide from the ocean flows back into the river nearly the whole distance to the grand rapids; and the reflux at Cape Disappointment, where the rise is about 9 feet, is generally, in the spring, 5 or 6 knots an hour. On the 7th of May, 1792, Captain Robert Gray, in the ship *Columbia*, of Boston, discovered and entered the mouth of this majestic stream, and, giving it the name of the vessel in which he sailed, called it the *Columbia River*. He was the first person who established the fact of its existence, and gave the title, from discovery, to the United States. In 1804-5, Lewis and Clarke made the first exploration of the river ever made by civilized men, and passed the winter of 1805-6 at its mouth. The Missouri Fur Company, in 1808, established a trading-house on Lewis River, the first ever formed on the waters of the Columbia; and, in 1811, Astoria was founded, at the mouth of the river, by the Pacific Fur Company, under John Jacob Astor, of New York.

Columbus, Fort, N. Y. See *Governor's Island*.
Comite River, Mi. and La., rises in Mi., and running into La., unites with the Amite 12 miles E. from Baton Rouge.

Compadre River, Ca. It rises in two widely-spread forks, which unite and flow N. W. into Eagle River.

Conception Point, or *Punta Conception*, Ca. Situated on the Pacific coast W. from the town of Santa Barbara.

Concord River, Ms., is formed at Concord by the junction of Assabet and Sudbury Rivers: after passing through the towns of Bedford, Billerica, and Chelmsford, it falls into the Merrimac, between Lowell and Tewksbury.

Concordia Lake, La., was evidently, in former times, the bed of the Mississippi, and in seasons of very high flood, the water from the Mississippi flows into it, through a small bayou, and passes into Bayou Tensas.

Concuh River rises in Pike co., Aa., and flows through Fa. into Pensacola Bay. Two miles below the Fa. line, it unites with the Escambia, a river of inferior size, the name of which, however, it afterwards assumes. It is navigable for more than 100 miles, but the country is sterile.

Conedogwinit Creek, Pa., runs E., and discharges its waters into the Susquehanna, a little above Harrisburg.

Conemaugh River, Pa. It rises in the Alleghany Mts., and flows W. N. W. into the Alleghany, 29 miles N. N. E. of Pittsburg. In the lower part of its course it takes the name of Kiskeminetas. Fifteen miles N. E. of Greensburg it has salt works on both its banks. Its length is about 150 miles.

Conqueuessing Creek, Pa., falls into the Mahoning, 12 miles from its mouth.

Conescheague Creek is formed by two branches, which rise in Pa., and unite 3 miles N. of Md. line; it then passes through Md., and empties into the Potomac, at Williamsport.

Conesue Lake, Livingston co., N. Y. This lake is 9 miles long, 1 mile wide, and is said to exceed 300 feet in depth. It is well stocked with fish, and its waters are pure and cold.

Conestoga River, Lancaster co., Pa., enters the Susquehanna 10 miles below Columbia.

Conewago Creek, or *River*, Pa., rises in Adams co., and after a course of 40 miles, falls into the Susquehanna, opposite Bainbridge.

Conewago Creek, Pa. This river enters the Susquehanna 5 miles below Middletown, after a W. S. W. course of 15 miles.

Coney Island, King's co., N. Y., forms a part of the town of Gravesend. It is much resorted to by visitors for sea air and bathing, as it directly faces the Atlantic, being divided from the main land by a narrow channel, over which is a toll bridge. There is no more convenient and desirable watering-place in the vicinity of New York than this island. It is $4\frac{1}{2}$ miles long, and averages half a mile in width.

Congaree Creek, Lexington district, S. C. A branch of the Congaree River, which it enters a little below Columbia.

Congaree River, S. C., which is formed by the union of the Broad and Saluda at Columbia after a course of 30 miles, unites with the Wateree to form Santee River.

Conhocton River rises in Steuben co., N. Y., and unites with the Tioga to form Chemung River, near the village of Painted Post. There are a

number of fine mill sites on this river and its tributaries, and it is navigable for arks and rafts to the village of Bath, during high water. Its length is 55 miles.

Connanic Island, Newport co., R. I. Situated in Narraganset Bay, S. S. W. from Prudence Island.

Conneaut Creek, O. and Pa., has its sources in Erie and Crawford counties, Pa., and Ashtabula co., O., and enters Lake Erie in the latter county.

Connecticut Creek, Long Island, N. Y., rises in Brookhaven, Suffolk co., and runs S., into Fireplace Bay.

Connecticut Lake, N. H. This lake, which is the source of one of the principal branches of the Connecticut, lies in lat. $45^{\circ} 2'$, and is $5\frac{1}{2}$ miles in length, and $2\frac{1}{2}$ in width. It is supplied by several small streams rising in the highlands N. from the lake. Its waters are remarkably clear, containing abundance of fish, and the scenery on its banks is very beautiful.

Connecticut River. This beautiful river, the *Quonectacut* of the Indians, and the pride of the Yankees, has its sources in N. H., and the mountainous tracts in Canada. Its name in the Indian language is said to signify *Long River*, or, as some render it, *River of Pines*. Its general course is N. and S. After forming the boundary line between N. H. and Vt., it crosses the western part of Ms., passes the state of Ct. nearly in its centre, and, after a fall of 1600 feet, from its head, N. of lat. 45° , it falls into Long Island Sound, in lat. $41^{\circ} 16'$. The breadth of this river, at its entrance into Vt., is about 150 feet, and in its course of 60 miles, it increases to about 390 feet. In Ms. and Ct., its breadth may be estimated from 450 to 1050 feet. It is navigable to Hartford, 45 miles, for vessels of considerable burden, and to Middletown, 30 miles from the sea, for vessels drawing 12 feet of water. By means of canals and other improvements, it has been made navigable for boats to Fifteen Mile Falls, nearly 250 miles above Hartford. The most considerable rapids in this river are Bellows Falls; the Falls of Queechy, just below the mouth of Waterqueechy River; the White River Falls, below Hanover; and the Fifteen Mile Falls, in N. H. and Vt.; the Falls at Montague and Holyoke, in Ms., and the Falls at Enfield, in Ct., where it meets the tide water. The perpendicular height of the falls, which have been overcome by dams and locks between Springfield, in Ms., and Hanover, in N. H., a distance of 130 miles, is 240 feet. Bars of sand and gravel extend across this river in various places, over which boats with difficulty pass in low water. The most important tributaries to the Connecticut, in N. H., are Upper and Lower Amonoosuck, Israel's, John's, Mascomy, Sugar, and Ashuelot Rivers; in Vt., Nulhegan, Passumpsic, Wells, Wait's, Ompomponoosuck, White, Waterqueechy, Black, Williams, Saxton's, and West Rivers; in Ms., Miller's, Deerfield, Agawam, Chickopee, and Westfield Rivers; and the Farmington, in Ct. The intervalles are generally spread upon one or both sides of the river, nearly on a level with its banks, and extending from half a mile to five miles in breadth; but its borders are in some places high, rocky, and precipitous. In the spring it overflows its banks, and, through its winding course of nearly 400 miles, forms and fertilizes a vast tract of rich meadow. In point of length, utility, and beauty, this river forms a distinguished feature of New

England. Large quantities of shad are taken in this river, but the salmon, which formerly were very plenty, have entirely disappeared. Connecticut River passes through a basin or valley of about 12,000 square miles; it is decorated on each side, with towns and villages of superior beauty, and presents to the eye a wonderful variety of enchanting scenery.

Connesauga River, Ga. This river has its source in Glimmer co., Ga., flows N. W., making a curve into Te., and then takes a winding southerly course, until its junction with the Coosawattee, to form the Oostenaula.

Connewango Creek rises in Chatauque and Cattaraugus counties, N. Y., and flows W. into the Alleghany. This stream is boatable during high water, and numerous rafts also descend it during certain seasons of the year. Chatauque Lake, and a number of other tributaries, flow into it.

Conoloway Creek, Pa., falls into the Potomac, near Hancock's Town, Md.

Constitution Island, N. Y., on which, during the revolution, some fortifications were erected, lies in the Hudson River, opposite West Point.

Contoocook River, N. H. This is a stream of considerable length and importance, originating in several ponds in Jaffrey and Rindge, and flowing N. it receives tributaries from Dublin, Peterborough, Sharon, Nelson, Stoddard, Washington, Antrim, Deering, and Hillsborough. In Hillsborough it takes a N. E. and E. direction, and proceeds through Henniker to Hopkinton, where it receives Warner and Blackwater Rivers. From Hopkinton it pursues a winding course through Concord, and falls into the Merrimack between Concord and Boscawen. Near the mouth of this river is *Duston's Island*, celebrated as the spot where Mrs. Duston destroyed several Indians, in 1698.

Conway Peak, or *Chocorua Mountain*, N. H. See *Albany*.

Cooper River, S. C., together with Ashley River, forms Charleston harbor, entering the Ashley on the E. side of the city. A canal 21 miles long unites this river with the Santee.

Coosa River, Aa., rises in the N. part of Ga., runs S. W. into Aa., and unites with the Tallapoosa to form Alabama River, 8 miles below Wetumpka. The Coosa is navigable for steamboats 8 miles above the junction. Its whole length is about 240 miles.

Coosaw River, Beaufort district, S. C. A kind of a strait connecting Broad River with St. Helena Sound.

Coosawhatchie River, S. C., runs S. S. E., and empties into Broad River. An eastern outlet, called Whale Branch, and also Coosaw River, forms the Island of Port Royal.

Coosawattee River, Ga. Ellijay and Carticary Creeks unite to form this river, which receives several large branches, the principal of which are Talkey, Rock, and Calico Creeks, and flows in a winding S. W. course until it unites with the Connesauga to form the Oostenaula.

Copake Creek, N. Y., a branch of Claverack stream, rises in Columbia co. Several factories and mills are located on this stream.

Copake Lake, Copake, Columbia co., N. Y., covers about 600 acres. Its shores are gently undulating and highly cultivated, and its waters pure and clear.

Copecut Mountain, Fall River, Ms. Height 355 feet.

Copper Creek, Va., rises in the S. part of Rus-

sell co., flows S. W., and falls into Clinch River, in Scott co.

Copper Harbor, Houghton co., Mn. Situated on the N. coast of Keewaiwona Point.

Corbeau Creek rises in Chazy, Clinton co., N. Y., flows N. E., and enters the Chazy River at the village of Corbeau, in the town of Champlain.

Core Sound, N. C., opens on the N. E. into Pamlico Sound. It is 40 miles long. The island which encloses it contains Cape Lookout on its S. extremity.

Corkin's Creek, Pa., falls into the Delaware River in lon. $75^{\circ} 10'$ W. and lat. $41^{\circ} 18'$ N.

Corpus Christi Pass, Ts. The passage between two islands which lie at the mouth of Nueces River, and opposite the town of Corpus Christi.

Cortableau River, La., flows into the Atchafalaya. It is 35 miles long.

Coteau Percee Creek, Ma. It rises in the Benton Lakes, flows S. W., and falls into the Sioux River.

Cote Blanche Bay, La. This bay sets up from the Gulf of Mexico, and connects on the N. W. with Vermilion Bay.

Cotentnea River, N. C. A branch of the Neuse River, which it enters on the boundary between Pitt and Lenoir counties.

Cottonwood Creek, Ca. It rises among the Coast Mts., flows E., and empties into the Rio Sacramento, of which it is a head branch.

Cottonwood Fork, Ca. A small W. branch of Grand River.

Coupe River, On. An E. branch of the Willamette River, which it enters below the Sandehan.

Cove Point, Calvert co., Md. A small point of land projecting into Chesapeake Bay.

Cow Bay, North Hempstead, Queen's co., N. Y., an arm of Long Island Sound, extends inland about 5 miles. It is navigable for steamboats, and is partly surrounded by highly cultivated farms and country seats.

Cow Neck, North Hempstead, Queen's co., N. Y., a point of land about 6 miles long and $2\frac{1}{2}$ miles wide, lies between Hempstead harbor on the E. and Cow Bay on the W. Sands' Point is on the N. part.

Cowikee Creek, Aa. This stream is formed by the junction of three principal forks, and enters the Chattahoochee in Barbour co.

Coxsackie Creek rises in Greene co., N. Y., flows N. E., and enters the Hudson in the town of New Baltimore.

Crab, or *Hospital Island*, N. Y., a part of the town of Plattsburg, Clinton co., lies in Lake Champlain, near Cumberland Head.

Crab-Tree Creek, Wake co., N. C., rises in the S. W. part of Wake co., takes a circuitous easterly course, and falls into the Neuse River.

Crabb River, Alleghany co., Md. A small tributary of the N. fork of the Potomac River.

Craig's Creek, Bottetourt co., Va., is formed in the S. W. part of the county by the junction of two branches, flows N. E., and empties into Cow Pasture River.

Cranberry Islands, Hancock co., Me. These islands lie a few miles E. by S. from Mount Desert, and embrace Great and Little Cranberry, Sutton's and Baker's Islands, and were attached to the town of Mount Desert until 1830, when they were incorporated. They afford good harbors, and are well located for the shore fishery.

Cranberry Lake, N. Y. This small sheet of water is situated in the S. part of Parishville, St. Lawrence co.

Crane Island, N. C., lies in Hunting Sound, and is about 6 miles in length.

Crane Island lies in the Potomac, 30 miles S. W. from Annapolis.

Crane Lake, Io. A small sheet of water situated near the head of Iowa River.

Crane Neck, in the town of Brookhaven, Suffolk co., N. Y., is a broad peninsula, extending into Long Island Sound.

Craney Island, Va., lies in Hampton Road, at the mouth of Elizabeth River, 5 miles S. W. from Fort George. A strong fort on this island defends the entrance of James and Elizabeth Rivers.

Crendrick Lake, N. C. Situated in lon. $76^{\circ} 55'$ W., lat. $35^{\circ} 46'$ N.

Cripple Creek, Va., rises in the E. part of Smyth co., flows N. of E., and empties into New River.

Croatian Sound, N. C. Situated between Roanoke Island and the main land of Tyrel co. It contains several small islands.

Crockerly Creek, Mn., rises in Kent and Neewaway counties, and flows S. W. across a part of Ottawa co. into Grand River.

Crooked Creek, Is. It rises in the N. W. part of McDonough co., flows S. E., and empties into the Illinois River, between Schuyler and Brown counties.

Crooked Creek, As. This stream rises in the S. part of Carroll co., pursues a very winding course, and falls into White River, having formed a part of the boundary between Marion and Searcy counties.

Crooked Lake, N. Y., lies chiefly in Steuben co., but extends N. into Yates co.; is 18 miles long, and $1\frac{1}{4}$ miles wide. Near the centre it separates into two forks, running northward, one 12 miles and the other 8, and receding from each other, until, at their extremities, they are 5 miles distant. At the point of their separation, a high promontory, called Bluff Point, rises from the water 800 feet. The outlet is at the north end of the eastern branch, running 7 miles E. by N., until it falls into Seneca Lake, at Dresden. This stream, in its course, has a fall of 269 feet, affording an excellent water power. Upon it, about one mile below the outlet of the lake, stands the village of Penn Yan. From this place to Seneca Lake, a canal, called "Crooked Lake Canal," has been constructed, with 27 locks, at a cost of \$137,000. Through Seneca Lake, this navigable communication is continued to the Erie Canal. In the opposite direction, a steamboat plies daily between Penn Yan and Hammond's Port, at the S. end of Crooked Lake.

Crooked Lake, Mn. Situated in the N. W. part of Wyandot co. It receives the waters of several streams, and connects by its outlet with Cheboygan River.

Crooked River, Oxford co., Me. This river joins the outlet of Long Pond, and falls into Sebago Lake.

Crooked River, Ky. A small branch of the E. fork of Salt River, forming the boundary between Anderson and Spencer counties.

Cross Island, Me. An island 3 miles long and 2 wide, lying off Machias Bay, and attached to the town of Cutler.

Cross Creek, or *River*, rises in Westchester co., N. Y., and flows E. into Croton River, in the town of Lewisborough.

Cross Lake, N. Y., through which flows Seneca River, lies between the counties of Cayuga and

Onondaga; it is 4 miles long and half a mile in width.

Crotched Lake, N. Y., lying between Racket and Long Lakes, in the N. part of Hamilton co., is an irregular body of water, as the name implies. Pahmechinbaguck — water right across us — is said to be the Indian name.

Croton River, N. Y., rises in several beautiful lakes in Dutchess and Putnam counties, flows in a S. W. direction, and enters the Hudson in Westchester co., about two miles above the village of Sing Sing. This river is the source of the Croton Aqueduct.

Crow Creek, Ia., rises in the W. part of Livingston co., and flows W. into the Illinois River.

Crow Islands, N. Y. This cluster of small islands is situated in Huntington Bay.

Crow's Nest, N. Y., a high peak of the "Highlands," is situated in the town of Cornwall, Orange co., on the W. side of the Hudson.

Crow River, Ma. This river rises in two large forks, flows in an easterly direction, and empties into the Mississippi N. W. from Rum River.

Crow Wing River, Ma. This river rises among the labyrinth of lakes in the N. part of the territory, flows S. E., and empties into the Mississippi just below Gayashk Lake.

Crum or Crom Elbow, N. Y., 4 miles above Poughkeepsie, is formed by a sudden turn of Hudson River.

Crum Elbow Creek, Dutchess co., N. Y., rises in the towns of Clinton and Rhinebeck, and flows S. W. through Hydepark into the Hudson. It is a pretty good mill stream.

Crunhorn Mountain, N. Y., situated in the town of Maryland, Otsego co., is a wild and barren eminence.

Cryder's Creek, N. Y., rises in the town of Independence, Alleghany co., and flowing S. W. enters Genesee River in the state of Pa.

Crystal Lake, N. Y., is one of a small cluster lying in the town of Alexandria, Jefferson co.

Cub Creek, Te., rises in the N. part of Henderson co., flows S. E., and falls into the Tennessee River.

Cubb Creek, Va., rises in the S. part of Appomattox co., and flows S. into the Roanoke River.

Cumberland Bay, N. Y., situated in Lake Champlain, opposite the village of Plattsburg, is enclosed by Cumberland Head, a point of land on the W. shore, stretching 4 miles into the lake. Macdonough gained his famous naval victory over the British, under Com. Downie, in this bay, on the 11th September, 1814.

Cumberland Head, N. Y., projects into Lake Champlain, N. from Plattsburg, and opposite South Hero.

Cumberland Island, Camden co., Ga. This is quite a large island, lying between St. Andrew's Sound on the N. and St. Mary's Sound on the S. The N. part is cut off by a small river, and called Little Cumberland Island. On the S. part is the Dungeness light-house.

Cumberland Mountains, Te. This range commences in the S. W. part of Pa., takes the name of Laurel Mts. in Va., passes through the S. E. part of Ky. and Te., and terminates in the N. part of Aa.

Cumberland River, a large river of Ky. and Te., rises in Ky., on the W. slope of the Cumberland Mts., near the boundary of Va., and pursues a very circuitous course to the Ohio, which it enters about 12 miles above the entrance of the Ten-

nessee. The elevation of its sources above its mouth is supposed to exceed 1000 feet. Its course is first W. and S. W. until it enters Te., and, bearing still S., passes round with an extensive sweep to Nashville. Its course is then north-westerly until it reënters Ky., and flows in this direction about 50 miles across the state to its junction with the Ohio. Its comparative length is about 450 miles; although from the great tortuosity of its channel, its entire length, following the course of the stream, cannot be less than 600 miles. Without reference to the inflections of the river itself, the valley which it drains is 350 miles long, with an average breadth of 50 miles, comprehending an area of 17,500 square miles, which, in superficies, is the third in rank of those of the tributaries of the Ohio. The greatest part of this valley lies between lat. 36° and 37°, and lon. 6° and 12° W. from Washington. In an ordinary stage of water, the river is navigable for vessels and large steamboats to Nashville, 200 miles, and for boats of 15 tons 300 miles farther. For half its length it is navigable for small craft at all seasons. The Cumberland is the second river in size that enters the Ohio, being inferior only to the Tennessee.

Cunningham's Island, O. Situated in Lake Erie, N. from the mouth of Sandusky Bay.

Current River, Mo. and As., rises in the Ozark Ridge, Mo., and, taking a course of about 150 miles, falls into Black River.

Currituck Island, Sound, and Inlet, Currituck co., N. C. The island which encloses the sound is 30 miles long and 2 broad. The sound is 50 miles long, from 1 to 10 broad, and rather shallow. The inlet is a narrow entrance into the sound between two islands.

Cutfoot Creek, N. C. A small branch of Neuse River.

Cuyahoga River, O. This river rises in Geauga co., runs southerly through Portage co., then proceeds in a N. N. W. direction through Summit and Cuyahoga counties to its entrance into Lake Erie, at Cleveland. It is one of the most important rivers in Northern O., its length being over 60 miles. Its falls, which are numerous, afford fine mill seats, and it is but little affected by drought.

Cypress Creek, As. It rises in the E. part of Van Buren co., flows S. W., and empties into the Arkansas at Cadron.

Cypress Creek, La. A head branch of the Middle Fork of Bayou d'Arbone.

Dacheet River, rises in As., and flowing S. into La., falls into Lake Bistineau.

Daddy's Creek, Te., rises in Bedsloe co., flows N. E., and unites with Obed's River near its entrance into Emery's River.

Damariscotta River, Lincoln co., Me. This broad arm of the sea has its source in several ponds in Jefferson and Nobleborough. It flows in a southerly direction, between Newcastle, Edgecomb, and Boothbay on the W., and Bristol on the E. It is navigable for vessels of any burden to the bridge, which crosses it between Newcastle and Nobleborough, a distance of 16 miles. Large quantities of lumber descend this stream, and many merchant ships are built on its borders.

Damiscove Island, Me., lies off the town of Boothbay, Lincoln co.

Dan River, N. C. and Va., unites with Stanton River in Va., and forms the Roanoke. It has falls of 23 feet at Danville, but by a canal con-

structed around them, is navigable 100 miles from its mouth.

D'Arbone Bayou, La. This stream rises in Claiborne parish, flows in a S. E. direction, and enters the Wachiita River in Wachita parish.

Darby Creek, O., rises in Union co., and after a S. E. course of 60 miles, enters the Sciota, nearly opposite Circleville.

Dartiga Lake, Nachitoches and Rapides parishes, La. This lake receives a river of the same name from the N. W., and connects on the S. with Red River.

Dauphin Islands, *Great* and *Little*, Aa., lie at the mouth of Mobile Bay, and are attached to Mobile co.

Dawfuskey Island, S. C., is 7 miles long, and 2½ miles broad, and lies 3 miles N. E. from the mouth of the Savannah.

Dead River, Me. This important tributary of the Kennebec rises on the border of Lower Canada, in Franklin co. It flows 40 or 50 miles in a S. E. direction, then N. about 10 miles; it then turns to the E., and flows about 15 miles to its entrance into the Kennebec, about 20 miles below Mooshead Lake. The land on its borders is fertile and heavily wooded.

Dead River, N. H., rises in the N. W. corner of the state, in Coos co., and after receiving several tributaries, empties into the Margalloway.

Dead Stream, Me., is a W. tributary of the Penobscot, which it enters at Orono, opposite Indian Village.

Dead Fish Lake, Ma. Situated N. W. from Seven Beaver Lake, and at the head of Second Embarras River.

Deadman's Bay, Fa. A curvature of the coast in Madison co.

De Chute River rises in the E. part of Aroostook co., Me., and flows E. into Canada, where it enters the St. John's River.

Decker's Creek, Is. A small branch of Bear Creek, which it enters in Hancock co.

Deep Creek, Io. A S. branch of the Macquetais River, which it enters in Jackson co.

Deep River, N. C., unites with the Haw to form the N. W. branch of Cape Fear River.

Deer Creek, N. Y., rises in Lewis co., and flows N. E. into Black River.

Deer River, N. Y., rises in Franklin co., flows N. W., and enters the St. Regis in St. Lawrence co.

Deer Creek, Hartford co., Md., empties into the Susquehanna.

Deer Creek, Perry co., Ia. A small branch of Ohio River.

Deer Creek, Ca., rises among the Sierra Nevada, and flows S. W. into the Rio Sacramento.

Deer Islands. A group of islands, five in number, lying in the Connecticut River, between the towns of Lyman and Barnet, Vt. The largest of these islands contains 38 acres of land.

Deer Island, Hancock co., Me., lies in Penobscot Bay, off the town of Sedgwick. See the town of *Deer Isle*.

Deerfield River, Vt. and Ms. This beautiful rapid stream rises in the high grounds of Windham co., near Stratton, Dover, and Somerset, Vt., and, proceeding in a S. E. course, it passes through Monroe, Florida, Rowe, Charlemont, Hawley, Buckland, Shelburne, and Conway, and falls into the Connecticut between Greenfield and Deerfield. The most important tributaries to this river are Cold River; a river from Heath and Coleraine;

one from Leyden, and one from Conway. It is very rapid in some places, and its passage through the mountains is very romantic. Length about 50 miles.

Delaware Bay, at the mouth of Delaware River, is an arm of the sea, stretching up in a N. W. direction, for a distance of 75 miles. The entrance to the bay is between Cape May on the N., and Cape Henlopen on the S., distant about 20 miles from each other. The width of the bay in the middle is 30 miles. There are many shoals, which render the navigation difficult and dangerous; and there is no good natural harbor within 70 miles of the ocean. The want of any secure anchorage on this coast, for several hundred miles from New York, has induced the government, at a heavy expense, to erect a breakwater, forming an artificial harbor, within Cape Henlopen. The anchorage ground thus provided is in a cove directly W. of the cape, having a depth of water of from 4 to 6 fathoms, and a superficial extent of over half a square mile. An internal communication has been formed between this bay and the Chesapeake by a canal 14 miles long, running between Delaware City, at a point 42 miles below Philadelphia, and Back Creek, which communicates through Elk Creek with the Chesapeake. This canal has a depth of 8 feet, a width of 60 feet at the surface, and 36 feet at the bottom, and admits of the passage of vessels of considerable size.

Delaware River rises among the western spurs of the Catskill Mts., in N. Y. The two streams which constitute its principal sources are the Mohawks and the Popacton. The first of these, which is the most remote, and the real source of the Delaware, rises from a small lake near the border of Schoharie co., N. Y., in 42° 45' N. lat., at an elevation of 1886 feet above tide water, and flows S. W. about 50 miles, to within 10 miles of the Susquehanna River, where, turning suddenly to the S. E., it flows about 12 miles to its junction with the Popacton. This branch rises in Delaware co., N. Y., and pursues a course nearly parallel to that of the main branch, for about 50 miles, to the point of meeting. After the junction of these two branches, the Delaware flows on in a S. E. course, forming the boundary between Pa. and N. Y., for about 60 miles, to the N. W. corner of N. J. It then bends to the S. W. 35 miles, along the base of the Kittaning chain of mountains, until it finds a pass through this mountain by the celebrated "Water Gap," which is considered a great natural curiosity. The view in passing through this chasm is highly picturesque and impressive. The distance is about two miles, between rugged and lofty walls, rising almost from the water's edge to the height of 1600 feet, and often overhanging with immense masses of the rock. Towards the N. W. the passage widens somewhat, and there are some beautiful islands in the river, which here has great depth. Continuing S. about 21 miles, it reaches Easton, Pa., where it receives an important tributary from the right in the Lehigh. About two miles below Easton, it pierces the Blue Ridge; and, five miles still lower, the South Mountain; having obliquely traversed, in its course thus far, a great part of the Appalachian system. From South Mountain its course is S. E., about 35 miles, to the falls at Trenton, at the foot of which it meets the tide water. The distance between Easton and Trenton is 60 miles, in which the

river passes over twenty-five rapids, with an aggregate fall of 165 feet. These rapids are navigable at high water. Below Trenton the Delaware turns to the S. W., and, passing Philadelphia, continues this course until near its entrance into the bay. A few miles below Philadelphia it receives the Schuylkill, which is one of its largest tributaries, from the N. W. The whole course of the river, from its remotest source to its entrance into the bay, is about 300 miles; and to its entrance into the Atlantic, 375 miles. There are five bridges crossing the Delaware, the lowest of which is at Trenton. "It is navigable for ships of the line to Philadelphia, 125 miles from the ocean by the course of the river and bay, and 45 miles from the head of the bay. For sloops it is navigable 35 miles farther, to Trenton. The Delaware is connected with the Hudson by two canals, the "Delaware and Hudson Canal," and the "Morris Canal." A vast amount of coal is transported on these canals; and, aside from this immense business, the Delaware is one of the principal channels of internal traffic in the Eastern States. The basin of the Delaware is about 250 miles in length, with a mean breadth of 45 miles; comprehending an area of 11,250 square miles. The surface is greatly diversified, with much difference of relative height.

De Loma Point, Ca. A point of land on which the town of San Diego is situated. It extends into the Pacific just above the boundary between Upper and Lower California.

Denny's River, Me. A small branch of the Schoodic.

Dernier Island, Terre Bonne parish, La. This is the largest of a chain of long, narrow islands.

Des Moines River, Io., rises in the Coteau des Prairies, and flowing in a S. E. direction, enters the Mississippi just below Des Moines Rapids, on the boundary between Io. and Mo. In high water it is navigable for steamboats 100 miles, and for keel boats at all seasons.

Des Plaines River rises in the S. E. part of Wisconsin, and after flowing through a fertile country, mostly over a bed of limestone rock, enters the Illinois River.

Destruction Island, On. Situated in the Pacific Ocean, N. W. from Greenville Point.

Detroit River is the river or strait through which the waters of the upper lakes, Superior, Huron, Michigan, and St. Clair, are discharged into Lake Erie. The length of the river, from Lake St. Clair to Lake Erie, is about 28 miles. At its outlet from Lake St. Clair, it is over a mile wide. Opposite to Detroit, about 8 miles below, it is three fourths of a mile wide. Its course to Detroit is a little S. of W.; but here it makes a curve, and pursues a more southerly direction. About 5 miles below Detroit, the river is divided into two channels, by Grand Turkey Island, and soon widens to 3 or 4 miles, and continues of this width for 16 or 17 miles, until it opens into the N. W. angle of Lake Erie. There are many islands in the river, rendering the navigation somewhat intricate; nevertheless, vessels of considerable burden can be carried through into Lake St. Clair. The principal channel is on the eastern side, between Boisblanc Island and the Canada shore. The banks of the river, in all its narrower parts especially, being settled and cultivated on both sides, present a beautiful view, in summer, to those who traverse its waters. The principal towns on its banks are Detroit and

Brownstown on the American shore, and on the Canada shore Sandwich and Amherstburg. It receives from Michigan the River Rouge, about a mile above Grand Turkey Island, and the Huron, at the point of connection with Lake Erie. From Canada, the only stream worthy of notice is the Canard, which enters the Detroit about $3\frac{1}{2}$ miles above Amherstburg.

Devil's Hole, N. Y., is a gulf in Niagara River, about $1\frac{1}{2}$ miles below the falls.

Dial Mountain, Nipple Top, or Noon Mark, N. Y., a peak of the Adirondack range, is situated in the town of Keene, Essex co. It is elevated 4900 feet above the Hudson.

Diamond Island, N. Y. See *Lake George.*

Diamond River, N. H., rises principally in Diamond Pond, in Stewartstown; thence it passes through Dixville, and after receiving several tributaries, falls into Dead River, near its junction with the Margalloway.

Dick's River, Ky. This stream waters the W. part of Rock Castle co., flows N. W. through Lincoln co., separates Garrard from Boyle and Mercer counties, and empties into the Kentucky River.

Dickson Creek, Ts. A small stream emptying into the S. W. part of Galveston Bay.

Dike Creek, N. Y., rises in Steuben co., flows W., and enters Genesee River in Alleghany co. The N. Y. and Erie Railroad extends through the valley of this stream for a considerable distance.

Disappointment, Cape, On. Situated at the mouth of Columbia River.

Dismal Swamp. An extensive tract of marshy, wooded land, lying partly in Virginia, and partly in North Carolina. It commences a little S. of Norfolk, Va., and extends S. 30 miles, with an average breadth of 10 miles, covering 150,000 acres. Some of the trees upon this tract grow to an enormous size, and the brushwood among them is so thick, as in some parts to be almost impenetrable. In the midst of this swamp is the lake, called Drummond Lake, 15 miles in circumference, which supplies the main trunk of the Dismal Swamp Canal, by a navigable feeder 5 miles in length. This canal is 23 miles long, uniting the waters of Chesapeake Bay with those of Pasquotank River, flowing into Albemarle Sound. In the Dismal Swamp the following rivers take their rise: the Nansemond and Elizabeth Rivers, flowing N. into the estuary of James River; Pasquotank and Perquiman's Rivers, flowing into Albemarle Sound; and some small creeks, running S. E. into Currituck Sound.

Dividing Creek, Va., separates Lancaster and Northumberland counties, and falls into the Chesapeake.

Doctor's Bay, Duval co., Fla. An enlargement of St. John's River just above Black Creek.

Dog River, Vt. It is formed in Northfield by the union of several streams, and taking a northerly course through Berlin, falls into Winoski River, nearly a mile below the village of Montpelier. Its length is about 16 miles, and it waters about 80 square miles.

Dorcheat Bayou. This stream rises in Hempstead co., As., and flows S. into La., where it enters Lake Bistineau.

Dolores River, Ca. A small stream flowing N. W. into the River St. Michael.

Drake's Creek. The head branches of this stream rise in Sumner co., Te. It flows in a

northerly direction, and empties into the Big Barren, in Warren co., Ky.

Drifting Island Lake, Ma. This lake is the source of one of the head branches of Watonwan River.

Drowned Lands, N. Y. A name given to a large marsh, through which the Wallkill flows. It is mostly situated in the town of Warwick, Orange co., and contains about 50,000 acres of land. The stream flows sluggishly through this swamp, which is used for the pasturage of cattle, on the subsiding of the spring freshets which submerge it, but is a desolate waste during the rest of the year. Although there are some fertile islands or elevated spots, all efforts to wholly drain it have been unsuccessful.

Du Chesne Fork, Ca. A head branch of Unita River.

Duck Creek, De. A small stream separating New Castle and Kent counties, and emptying into Delaware Bay.

Duck Creek, Scott co., Io., drains the S. part of the county, flowing W. into Mississippi River.

Duck Islands, Me., lie S. of Mount Desert Island.

Duck Lake, N. Y. This small sheet of water lies in the town of Conquest, Cayuga co.

Duck River, Brown co., Wn., rises in the S. part of the county, and flowing N. E., falls into Green Bay, N. W. from the mouth of Fox River.

Dudley Island, Me., lies in Passamaquoddy Bay, and belongs to Eastport.

Du Fil River, Mn., rises in the N. interior of Tuscola co., flows N., through Huron co., into Saginaw Bay.

Dug Hill, Blandford, Ms. Height 1622 feet.

Dugdemonia River, La. This large stream rises in Bienville and Jackson parishes, flows S. E., receiving numerous tributaries, and empties into Calatroula Lake.

Duncan's Creek, S. C., rises in the interior of Laurens district, flows E. by S., and empties into Ennoree River.

Duncan's Rocks, On. Situated at the mouth of the Straits of Juan de Fuca, off Cape Flattery.

Dunderberg Mountains, or *Hills*, Haverstraw, Rockland co., N. Y., constitute the S. part of the Highlands.

Dunmore Lake, Vt., sometimes called *Trout Pond*, is about 4 miles long, and three fourths of a mile wide. It lies in Leicester and Salisbury, and communicates through Leicester River with Otter Creek. Trout weighing 25 pounds have been taken out of this lake.

Dunn's Lake, St. John's co., Fa. A long, narrow sheet of water, N. E. from Lake George, and connected on the N. W. with St. John's River.

Duston's Island, N. H. This small island in the Merrimack, at the mouth of Contoocook River, between Concord and Boscawen, is celebrated for the heroic defence of a lady, whose name it bears, against a party of Indians, on the night of the 15th of March, 1698. See *Hayward's Gazetteer of New Hampshire*.

Dutcher's Creek, As. A small stream which enters Petit Jean Creek near Danville.

Dyer's Bay, Me. See *Steuben*.

Eagle Creek, Ky. This stream drains the N. interior of Scott co., flows N. N. W. to Gallatin co., where it turns to the S. W., separating Owen from Gallatin and Carroll counties, and empties into the Kentucky River.

Eagle Creek, Wn. A small branch of the

Mississippi, draining the N. W. part of Crawford co.

Eagle Harbor, Houghton co., Mn. Situated on the N. W. coast of Keewaiwona Point, W. from Great Marais Harbor.

Eagle Lakes, Aroostook co., Me., lie between the Aroostook and St. John's Rivers, and are connected with several smaller lakes. The general outlet is Chippiqueopshook River, which flows about 14 miles into St. John's River.

Eagle Lake, Kosciusco co., Ia. Situated S. E. from the town of Warsaw.

Eagle River, Houghton co., Mn., drains the N. W. part of Keewaiwona Point, and falls into Lake Superior.

Eagle River, Ca. It rises on the E. border of the state, flows W., and empties into Grand River.

East Bay, N. Y., is the E. part of the Great Bay, S. of Long Island.

East Bay, La. The body of water lying between the S. and S. W. passes of the Mississippi River.

East Canada Creek, N. Y., rises in Hamilton co., flows S., dividing Fulton and Montgomery counties on the E. from Herkimer co. on the W., and falls into the Mohawk. It is a rapid stream, affording good water power.

Eastern Bay, Md. An arm of Chesapeake Bay, extending between Queen Ann and Talbot counties.

East Koy Creek, N. Y., a fine mill stream, rises in Genesee co., flows S., and unites with the W. Koy in Allegheny co.; it then flows in an E. direction until its entrance into the Genesee.

East River, N. Y., is an arm of Long Island Sound, dividing Long Island on the E. from the Island of New York and a part of Westchester co. on the W. It communicates with the Atlantic Ocean through the "Narrows," with the harbor of N. Y., and with Hudson River. It is about 15 miles long, contains several important islands, and is navigable for large vessels. The celebrated pass called "Hell Gate" is opposite Great Barn Island, 7 miles N. E. of N. Y. city.

East Savannah River, Ma., flows N. E. into Embarras River.

East Swan River, Ma. It rises near Swan River, in a series of small lakes, flows S. S. E., and empties into St. Louis River.

Eaton's Neck, N. Y., a bold promontory, on which there is a light-house, lies in the town of Huntington, on the N. side of Long Island.

Ebeeme Mount, Piscataquis co., Me., lies S. E. of Mt. Baker.

Ebeeme River, Piscataquis co., Me., consists of two branches, which rise near Mount Ebeeme, and unite in Brownville to form Pleasant River.

Ebeneszer Creek, Ga., rises in the S. E. part of Scriven co., flows S. E., and falls into the Savannah River in Effingham co.

Echeconno River, Ga. This stream rises in the W. part of Pike co., flows S. E., separating Bibb from Crawford and Houston counties, and falls into the Ockmulgee River.

Eckford Chain of Lakes, N. Y., comprises three beautiful lakes, of which Eckford and Genet are the principal, lying E. of Racket Lake, Hamilton co.

Edisto River and Island, S. C. This river, the two main branches of which, called the North and South Edisto, rise in Edgefield co., pursues a S. E. course into Colleton co., where it turns to the S., and enters the Atlantic by two mouths,

which form Edisto Island. It is navigable 100 miles for large boats. The island is 12 miles long and from 1 to 5 broad.

Edward, Fort, Fort Edward village, Washington co., N. Y.

Edwards River, Is. This stream drains the S. interior of Henry co., flows a little S. of W. across Mercer co., and empties into the Mississippi.

Ed River, Ia., rises in Hendricks co., and, after a winding course, falls into the W. fork of White River, at Point Commerce, Greene co.

Egg Harbor, Great, River and Bay, N. J. The river rises in Gloucester co., and flows 45 miles into the bay. It is navigable for sloops over 25 miles above May's landing, below which it flows through a marsh. The harbor is 5 miles long, and from one half to 4 miles broad.

Egg Harbor, Little, River and Bay, N. J. This river rises in Burlington and Gloucester counties, and flows S. E. into the bay. It is navigable 25 miles, and is approached through New Inlet, which is from 15 to 18 feet deep.

Egmont Island, Hillsboro' co., Fa. Situated at the mouth of Tampico Bay, S. from Mullet Island.

Eighteen Mile Creek, N. Y., rises in Niagara co., and flows N. into Lake Ontario.

Eighteen Mile Creek, Putnam co., Va. An E. branch of the Great Kanawha.

Eighteen Mile Creek, S. C. A branch of Seneca River, which it enters in Anderson district.

Elbow Lake, Ma. This lake, which receives its name from its shape, is the principal source of the head branch of North Red River.

Eleven Mile Branch, Barnwell district, S. C. A small tributary of the Savannah River.

Eleven Point River, Mo. and As. This river has its source in Oregon co., Mo., flows S. E. into As., and, uniting with Spring River, empties into the Big Black.

Elizabeth Bay, Mn. A large curvature of Lake Michigan, extending into Michilimackinac co.

Elizabeth, Cape, Me., lies in the town of Cape Elizabeth, and forms the W. boundary of Casco Bay. Near the extremity of the cape is a lighthouse, 50 feet in height, in N. lat. $43^{\circ} 33'$, W. lon. $70^{\circ} 11'$.

Elizabeth Islands, Ms. See *Chilmark*.

Elizabeth River, Va. This river rises in Princess Ann and Norfolk counties, and, flowing N. W. 25 miles into a large estuary at the mouth of James River, forms the fine harbor of Norfolk. It forms, in conjunction with the Dismal Swamp Canal and Pasquatank River, a communication from Chesapeake Bay to Albemarle Sound.

Elk Creek, Sanilac co., Mn., flows into Lake Huron.

Elk River, Md., rises in Pa., and flows into a broad estuary on the N. part of Chesapeake Bay. It is navigable to Elkton, 15 miles.

Elk River, Aa., rises in Tc., and, flowing S. W. into Aa., enters the Tennessee a little above Muscle Shoals.

Elkhart River, Ia., rises in Noble and Lagrange counties, and flows N. W. into St. Joseph's River, in Elkhart co.

Elk Head River, Ca., rises in the Rocky Mts., and flows S. W. into Yampah, or Bear River.

Elkhorn River, Ky., enters the Kentucky on the E. side, in Franklin co., after a course of 30 miles.

Elkhorn River, Is., rises in Washington co., and flows N. W. into the Kaskaskia.

Ellejay River, Ga. A branch of the Coosa.

Ellicott's Creek, N. Y., rises in Genesee co., flows

W., and enters Niagara River near the mouth of Tonawanda Creek, in Erie co. This stream affords a number of good mill sites.

Ellico Pond, Orleans co., Vt. This pond lies in the towns of Greensborough and Craftsbury, and is sometimes called Ellico Scotland, a corruption of the Indian name of Ellico Scotlan. It is about 2 miles long and half a mile wide, and has two outlets, one to the N. and the other to the S. The N. outlet constitutes one of the head branches of Black River; the S., after passing through Little Ellico Pond, communicates with the River Lamoille in Hardwick. The scenery on the borders of this pond is very fine, and near its centre are two small islands. The waters abound with trout of excellent quality. This was formerly a favorite hunting-ground of the St. Francis Indians, to whom the N. part of the state once belonged.

Ellis Island, N. Y., sometimes called Gibbet Island, from the executions which take place here, lies at the mouth of Hudson River, opposite the city of New York. It belongs to the U. S. government, and Fort Gibson is situated on it.

Ellis River, Me., rises in the N. part of Oxford co., flows S. through the town of Rumford into the Androscoggin.

Ellis River, N. H., rises on the E. side of the White Mountains, near the sources of Peabody River. Its two main branches unite in the town of Jackson, and fall into the Saco River at Bartlett.

Elm Creek, Is. It rises in the S. part of Clay co., flows S. E., and empties into the Little Washash River.

Elm River, Houghton co., Mn. A small stream rising in Juliet Lake, and flowing N. W. into Lake Superior.

Elm River, Ma. A W. branch of North Red River.

Embarass River, Ma. A small stream flowing S. E. into St. Louis River.

Emenija River, Ma. This river flows S. W. into the Sioux, which it enters at the N. W. corner of Iowa.

Emery River, Te., is a branch of Clinch River.

English Lake, Stark co., Ia. A sheet of water lying near the centre of the county, and through which the Kankakee River flows.

English River, N. Y., rises in Clinton co., flows N. 30 miles, and enters Chateaugay River in Canada.

Englishman's Bay, Washington co., Me., is situated a few miles W. of Machias Bay. Chandler's River, a considerable stream, flows into it, and it contains many islands and fine harbors. Head Harbor Island is its W. boundary.

Eninandigo River, La Pointe co., Wn., rises in the N. W. part of the county, and flows S. into the St. Croix River.

Ennoree River, S. C. A branch of Broad River.

Eno River, Orange co., N. C. This stream rises in the interior of Orange co., flows E., and empties into the Neuse, of which it is a head branch.

Enty Catecom River, On. It flows S. E., and empties into Clark's Fork of Columbia River, a little below Barrier River.

Erie, Lake, one of the chain of great lakes lying between the United States and the British possessions in North America. Its waters wash the shores of four of the states, N. Y., Pa., O., and Mn., and of a large section of Canada. The greatest length of the lake, from the mouth

of the Maumee on the W. to the outlet of Niagara River on the E., is within a fraction of 270 miles. The width varies from 15 to 50 miles, the widest part being opposite to Ashtabula co., O. The depth is much less than that of either of the other great lakes, not exceeding 120 feet, or 20 fathoms, on an average, and becoming generally very shallow towards the shores. Its surface, as ascertained by the engineers of the Erie Canal, is 555 feet above the Hudson River at Albany, and 334 feet above Lake Ontario. It receives, at its extreme N. W. angle, through the Detroit River or Strait, the influx of the waters from the great upper lakes, and discharges them at the N. E. extremity, through the Niagara River, into Lake Ontario. This lake is the only one of the series in which a current is supposed to be perceptible. From the W., the rivers which come in are the Maumee, the Raisin and the Huron; from the N., the Ouse, or Grand River; and from the S., Portage, Sandusky, Huron, Cuyahoga, Grand Conneaut, Cattaraugus, and Buffalo. The waters of Lake Erie are united with the Hudson River by the Erie Canal, with the Ohio River by the Ohio Canal, and with the Wabash, at Terre Haute, Ia., by the Wabash and Erie Canal. The Welland Canal opens from Lake Erie a navigable channel into Lake Ontario and the St. Lawrence. Lines of railroad communication, also, connect it with Boston, with New York, with Cincinnati, and, by the way of Detroit, with a point on Lake Michigan, near to Chicago. This central position of Lake Erie gives it a greater importance, as a medium of transportation and travel, than can ever belong to either of the other great lakes, notwithstanding much greater impediments to its navigation, from the shallowness of its harbors, and the great number of rocks projecting from its northern shore. The navigation of the lake becomes dangerous as the stormy season approaches, and during a part of the winter is wholly prevented by ice. In the season of commerce upon its waters, between 300 and 400 vessels are employed, besides a great number of steamboats. The principal ports are those of Buffalo and Dunkirk, N. Y., Erie, Pa., Cleveland, Sandusky, and Toledo, O.

Error Mount, Me., is situated in the N. E. part of Somerset co.

Escambia River, Fla. and Ala., receives the Conecuh, a larger river than itself, and flows into Pensacola Bay.

Escatawpa Creek, Ala. and Mi. This stream rises in Washington co., Ala., flows in a S. S. W. direction, and enters the Pascagoula River near its mouth, in Jackson co., Mi.

Esconawba River, Mn. This large river drains the N. E. interior of Marquette co., flows S. E., and empties into the Little Bay de Noquet.

Esopus Creek, N. Y., a fine mill stream, rises in Ulster co., flows S. E. to the town of Marbletown, whence it flows N. E. until its entrance into the Hudson, at the village of Ulster.

Espiritu Santo Bay, Ts. This bay, which is enclosed by narrow islands, extends from Nueces River on the S. W. to Matagorda Bay on the N. E.

Espiritu Santo Pass, Ts. A narrow passage between two islands, and leading into Espiritu Santo Bay.

Establishment Creek, St. Genevieve co., Mo., flows N. E. into the Mississippi River.

Etowah River, Ga., one of the two branches which unite in Floyd co. to form the Coosa.

Eustis Lake, Marion co., Fla. A small body of water lying in the E. part of the county, S. from Lake Griffin.

Eutaw Springs, S. C., a small S. branch of Santee River, is famous for the battle fought on its borders, Sept. 8, 1781, between Greene, American general, with a loss of 555, and Stewart, British general, with a loss of 1000.

Fabius River, Mo., rises in Io. and Mo., and after a course of about 100 miles, enters the Mississippi in Marion co., Mo.

Fairlee Lake, Vt. See *Fairlee*.

Falcon Islands. Two or three small islands lying in Long Island Sound, off the coast of Ct.

Fall Creek, N. Y., rises in Cayuga co., and enters Cayuga Lake, near the village of Ithaca, in Tompkins co. This stream has several beautiful falls, which afford excellent water power. Those near Ithaca are particularly interesting. An artificial tunnel, through which there is a passage for visitors, has been constructed here, affording the most charming views imaginable.

Fall Creek, Ia., rises in the N. W. part of Henry co., flows S. W., and empties into the W. fork of White River at Indianapolis, Marion co.

Fall Creek, On., flows N. N. W. into Lewis Fork, of Columbia River.

Fall River, On. This river rises, by two widely-spread forks, in the Blue and Cascade Mts., flows in a northerly direction, and empties into Columbia River.

Fall River Hill, Fall River, Ms. Height 259 ft.

Falling Spring Rivulet, Va. This tributary of Jackson's River rises 20 miles S. W. from Warm Spring. It has a perpendicular fall of 200 feet, and a person may walk between the water and the rock without being wet.

Falls of Niagara. See *Fashionable Resorts*, &c.

Farm River, Ct. It rises in a pond on the border of Middlesex and New Haven counties, flows S. W., and empties into Long Island Sound.

Farmington River, Ms. and Ct. This river rises in Hampden and Berkshire counties, Ms., flows S. E. and N. E., across Litchfield and Hartford counties, Ct., and empties into the Connecticut River.

Fausse Riviere Lake, Mo., was the bed of the Mississippi until about 1714, when the river took a shorter course, and, filling up the old channel near its junction with the new, left the remainder a large lake. It is bordered with fine farms of a very fertile soil.

Fay's Mountain, Westborough, Ms. Height 707 feet.

Federal Point, N. C. The S. extremity of New Hanover co., jutting into Cape Fear River.

Fenahollowa River, Madison co., Fla. This is a small stream flowing in a south-westerly direction to the Gulf of Mexico.

Ferrand River, Vt. This river rises in Avery's and Warner's Gores, waters the towns of Morgan and Wenlock, and unites with Clyde River in Brighton.

Fifteen Mile Falls, Vt. See *Lunenburg*.

Finley's Lake, N. Y., lies in the town of Mina, Chataqua co.

Fire Islands, N. Y. These small islands lie opposite the town of Islip, in the Great S. Bay of Long Island.

Fireplace Bay, Brookhaven, Suffolk co., N. Y., is a curvature of the Great S. Bay of Long Island.

Fire Steel River, Mn., rises in the W. part of Houghton co., and flows N. W. into Lake Superior.

First Lake, Dane co., Wn. It lies S. E. from Second Lake, and supplies the head waters of the W. branch of Rock River.

Fish Creek, N. Y., an important mill stream, rises in Lewis co., and enters Wood Creek, in Oneida co. It is boatable a few miles above its mouth.

Fish Creek, Saratoga co., N. Y., the outlet of Saratoga Lake, enters the Hudson at the village of Schuylerville.

Fish Creek, Ma. This stream waters the S. W. part of the territory flowing S. into the Missouri River.

Fish Lake, Fulton co., N. Y. This lake, which is surrounded by high hills, is 2 miles long, and 1 mile wide. Its waters are clear and deep, abounding in salmon and brook trout of a superior quality.

Fish Lake, Oswego co., N. Y. This beautiful little sheet of water lies in the town of Granby, W. of Oswego River. It is 2 miles long, and 1 mile wide.

Fish River, Me., a tributary of the St. John's, flows in the N. part of Penobscot co.

Fish River, Baldwin co., Aa., pursues a S. course, and falls into Bon Secour Bay.

Fish River, Schoolcraft co., Mn. A small stream flowing into Lake Superior.

Fish River, La Pointe co., Wn., flows N. E. into the S. extremity of Chegowawagon Bay.

Fisher's Island, Ct. Situated in Long Island Sound, off the mouth of Mystic River. The beautiful steamer Atlantic, with many valuable lives, was lost at this island, in November, 1846.

Fisher's Island, Suffolk co., N. Y., lies near the E. end of Long Island Sound, off the Ct. shore. It is distant 14 miles from the nearest point of Long Island, and 137 miles from the city of N. Y. It is 8 miles long, 1 wide, owned by one proprietor, and sustains a very fine dairy.

Fisherman's Island, Me., lies off the town of Boothbay, Lincoln co.

Fisherman's Island, Northampton co., Va., lies off Cape Charles, at the mouth of Chesapeake Bay.

Fishing Creek, Va. It rises in the S. part of Wetzel co., flows N. W., and empties into the Ohio River at the town of New Martinsville.

Fishing Creek, S. C., rises in York district, flows S. E., and falls into the Wateree in Chester co.

Fishkill or *Matteawan Creek*, N. Y., an important mill stream, rises in Dutchess co., flows S. W., through the town of Fishkill, and enters the Hudson opposite the village of Newburg. The important manufacturing villages of Glenheim and Matteawan are located on this stream.

Fishkill or *Matteawan Mountains*, N. Y., in the S. part of Dutchess co., are a continuation of the Highlands, through which the Hudson River passes. They extend N., under different names, to the Green Mts. of Vt.

Five Mile Run Creek, Cattaraugus co., N. Y., rises in Hinsdale, and flows S. into the Alleghany River.

Flambeau Lake, Portage co., Wn. Situated in the N. part of the county, and connected by an outlet with one of the head branches of Chippewa River.

Flat Head Lake, On. A large body of water in the N. E. part of the territory, and supplying one of the head branches of Clark's Fork of Columbia River.

Flat River, N. C., rises in the W. part of Person

co., flows S. E., and enters Nense River just below the junction of the Eno and Little.

Flat Rock Creek, Ia. This stream waters the W. part of Henry co., flows S. W., and empties into the E. fork of White River, at the town of Columbus, in Bartholomew co.

Flat Shoal Creek, Ga., rises in Merriwether co., flows S. W., and falls into the Chattahoochee River.

Flattery, Cape, On. This cape is the N. W. extremity of the territory, being situated at the mouth of the Straits of Juan de Fuca.

Flattery Rocks, On. Situated in the Pacific, S. from Cape Flattery.

Flint Creek, N. Y., rises in Yates co., flows S., and enters Canandaigua Outlet in Ontario co.

Flint River, Ga. The two head branches rise in Campbell and De Kalb counties. Its length is 300 miles, its depth 6 feet, and its width, where it enters the Chattahoochee, 150 yards. It is navigable for steamboats to Bainbridge, 50 miles above its confluence.

Flint River, Mn., one of the largest branches of the Saginaw, rises in Lapeer and Sanilac counties, and enters the Saginaw 30 miles from its mouth, in Saginaw co. It is 100 miles in length, and, together with its branches, affords extensive water power. It is boatable 20 miles from its mouth.

Flint Steel River, Mn. A small stream emptying into Lake Superior, W. from Fire Steel River.

Flintstone Fork, Ca. One of the head branches of Eagle River.

Florida, Cape. A promontory situated on an island called Key Biscayne, off the S. E. coast of Fa. A light-house, which was burnt by the Seminoles, was erected here to mark the entrance of Hawk's Channel. It was situated in 28° 15' N. lat. and 3° 22' W. lon. from Washington.

Florida Keys, Fa. This is a long chain of islands extending in a south-westerly direction from Dade co. It embraces many groups, Key Largos being at the N. E. and the Tortugas at the S. W. extremity.

Floyd's River, Io., drains the N. W. part of the state, and falls into the Missouri River, near the entrance of the Sioux.

Flushing Bay, N. Y., lies S. of East River, with which it communicates. It is 3 miles long, 1 mile wide, and navigable for steamboats to the village of Flushing.

Folly Island, Colleton district, S. C. A long, narrow island, lying S. E. from James Island.

Fontaine Creek, Greenville co., Va. A W. branch of the Meherrin River.

Ford River, Mn. It rises in the S. interior of Marquette co., flows S. E., and empties into Green Bay, just at the mouth of Little Bay de Noquet.

Forest Creek, S. C. This is the E. fork of Tyger River, which it enters in Union district.

Forked Deer River, Te., rises in Carroll and Henderson counties, and, after a course of about 100 miles, enters the Mississippi in Tipton co.

Fort Point, Mn. The N. extremity of Sheboygan co., extending into the Straits of Mackinaw.

Foulweather Cape, On. Situated at the mouth of a small river, S. from Cape Lookout.

Fontain Creek, Monroe co., Is. A small stream flowing in a semicircular form, and emptying into the Mississippi River.

Fourche Caddo, As. A considerable stream of this name crosses Montgomery and Clark coun-

ties, and enters the Wachita a little above Archidelpia.

Fourche Dumas, Mo. and As. This stream rises in Ripley co., Mo., flows S., and enters the Big Black in Randolph co., Mi.

Fourth Lake, Dane co., Wn. Situated near the centre of the county, forming the N. boundary of the city of Madison.

Fox Creek, N. Y., rises in Albany co., flows W., and enters Schoharie Creek in Schoharie co.

Fox Creek, Smyth co., Va. A head branch of the S. fork of Holston River.

Fox Islands, Me. See *Vinalhaven*.

Fox Island, Jefferson co., N. Y., lies in the E. part of Lake Ontario, and is attached to the town of Lyme.

Fox Lake, Dodge co., Wn. Situated in the N. W. part of the county, at the head of Ahmie River.

Fox River, Is., rises in Wn., passes through a number of small lakes near the boundary of the state, and enters the Illinois, of which it is a principal branch, at Ottawa.

Fox River, Wn., is composed of two main streams coming from the S. and from the N., and forming a connection a few miles W. of Winnebago Lake. The southern stream of these two, known as Fox River proper, is composed of two branches, which take their rise in the level table land lying E. of the Wisconsin River, and unite at Fort Winnebago, leaving a portage of only about two miles from the navigable channel of the Wisconsin. The general course of the river from this point is N. E. It passes through, or rather itself dilates into, several small lakes in the upper part of its course, after which it more distinctly preserves its character as a river for about 60 miles, to its junction with its great northern confluent, as before mentioned. This confluent, formerly known as Wolf River, but now as Fox River, northern branch, has its sources a hundred miles or more to the N., among those of the rivers flowing into Lake Superior, and into the N. W. side of Green Bay. After the confluence of these two great branches, the Fox River takes a S. E. direction, and falls into the W. side of Lake Winnebago. It emerges again at the N. W. angle of this lake, and pursues a N. E. course for about 45 miles to the head of Green Bay. The Fox River is navigable, through Fox River proper, and the lakes into which it spreads itself out, for a distance of 200 miles, and forms, with Green Bay, or is destined to form, an important link of the navigable route from Lake Michigan to the Mississippi River, through the River Wisconsin.

Fox River, Io. and Mo. This stream rises in the E. part of Appanoose co., Io., flows S. E. into Mo., and empties into the Mississippi River a little below the Des Moines.

Fox Springs, Ky., which consist of white sulphur and chalybeate, are situated 10 miles E. from Flemingsburg, between two mountains. It is a pleasant resort, the surrounding country abounding in game.

French Creek, N. Y., rises in the town of Sherman, Chataque co., flows 100 miles in a S. direction, and enters the Alleghany River in the state of Pa. It is boatable more than 50 miles. It was on this creek that the French built one of their forts designed to keep up a communication between Lake Erie and the Ohio at Pittsburg, and thence its name.

French Broad River, a head branch of the Tennessee, rises on the N. side of Blue Ridge, Buncombe co., N. C., and entering Tennessee through a gap in the mountains, unites with Holston River, 5 miles above Knoxville. It is navigable to Dandridge for boats of 15 tons. The Nolachucky River on the N., and Great and Little Pigeon Rivers on the S., are its principal branches.

French's Hill, Peru, Ms. Height 2237 feet.

French River rises in Leicester, Ms., flows through Auburn, Oxford, and Dudley; it then enters Ct., and unites with the Quinebaug at Thompson. Some French Protestants settled on this river in 1685.

Frenchman's Bay, Hancock co., Me. This important bay extends from the Atlantic about 20 miles inland, and contains many fine harbors and beautiful islands. It is bounded W. by Baker's Island, one of the Cranberry group, and on the E. by a peninsula in the town of Goldsborough. The width of this bay, from Baker's Island to Goldsborough point, is 10 miles. It is surrounded by the towns of Eden, Trenton, Hancock, Franklin, Sullivan, and Goldsborough, and receives many valuable streams. It is one of the best retreats in a storm on the American coast, being easy of access, and never obstructed by ice.

Freshwater Island, S. C., lies in the Atlantic, in lon. $79^{\circ} 15' W.$, lat. $33^{\circ} 5' N.$

Friend's Lake lies in Chester, Warren co., N. Y.

Frog Bayou, As., falls into the Arkansas River in Crawford co.

Fulton Chain of Lakes, N. Y. This chain of eight small lakes lies in Herkimer and Hamilton counties; they are connected by navigable outlets, forming the head branches of Moose, a tributary of Black River.

Fundy, Bay of. This bay washes a part of the E. shore of Me., and is an important channel of commerce between the U. S. and the British provinces of New Brunswick and Nova Scotia. This large and important bay sets up N. E. round Cape Sable, the most southern point of Nova Scotia, in N. lat. $43^{\circ} 24'$, W. lon. $65^{\circ} 39'$, and crosses to the shore of Me. a little W. of Frenchman's Bay. From the mouth of Frenchman's Bay to Cape Sable is about 150 miles; from Eastport to St. John's, N. B., is 60 miles; from St. John's to Annapolis, in a bay of that name, on the Nova Scotia side, is 40 miles; from thence to Halifax, by land, is 80 miles. From Eastport direct to Annapolis, across the bay, is about 70 miles. The Bay of Fundy is divided near its head by Cape Chignecto. The N. W. part is called Chignecto Bay; the S. E. part the Basin of Mines. From Eastport to Cumberland, at the head of Chignecto Bay, is about 170 miles; to Windsor, at the head of the Basin of Mines, is about 150. From Windsor to Halifax is 45 miles. The commerce on this bay with our friends and neighbors, the English, is very considerable. While they receive bread stuffs and other productions of our soil, we are indebted to them for vast quantities of grindstones and gypsum. The gypsum is principally from the Basin of Mines: it lies embedded in elevated masses along the shores of the bay; it is easily quarried and taken on board of vessels by the sides of the cliffs. The grindstones from Cumberland, or Chignecto bay, are every where celebrated. The source is inexhaustible, and the manufacture immense. The tides in the Bay of Fundy are supposed to rise to a greater height than in any other part of the world.

Their elevation increases as you ascend the bay. At Eastport they rise 25 feet; at St. John's, 30; at Cape Split, 55; at Windsor, 60; and at Cumberland, at the head of Chignecto Bay, they rise to the enormous height of 71 feet. These tides announce themselves, some time before their approach, by a sound resembling that of a rushing wind in a forest; they dash against the shore with a reddish hue, the color of the clay bottom over which they pass, with frightful violence, at first to the height of from 8 to 10 feet, overwhelming all within their reach. There are but few islands within this bay. Grand Menan, and a cluster of small islands round it, off West Quoddy Head, and Campo Bello, near Eastport, are the principal. They belong to the British. The rapidity of the tides within this bay, the fogs which frequently prevail, and the absence of good harbors above St. John's, render the navigation difficult and often dangerous. The harbor of St. John's is easy of access, safe, and of sufficient expanse for a large fleet of any draught of water.

Gale's Creek, N. C., falls into the Atlantic in lon. $77^{\circ} 12'$ W. and lat. $34^{\circ} 44'$ N.

Galien River, Berrien co., Mn. A small stream watering the S. part of the county, and emptying into Lake Michigan.

Gallatin's River, Mo., is one of the S. W. sources of the Missouri River. Flowing N. it unites with Madison and Jefferson Rivers to form the Missouri.

Gallivan's Bay, Monroe co., Fa. The Gulf of Mexico stretches inland at this place, and receives the waters of Long Creek.

Gallo Island, Jefferson co., N. Y., lies in the E. part of Lake Ontario, and is attached to the town of Henderson.

Galveston Bar, Ts. The passage leading into Galveston Bay, between Galveston Island and Point Bolivar.

Galveston Island, Ts. Situated in the Gulf of Mexico, S. W. from Galveston Bay.

Garden Island, Mn., lies in the N. part of Lake Michigan, N. N. E. from Great Beaver Island.

Garden Island Bay lies E. from East Bay, between the S. E. and S. passes of the Mississippi.

Gardiner's Bay, N. Y., is a somewhat circular expanse of water, 8 miles in diameter, lying between Gardiner's Island and the E. extremity of Long Island.

Gardiner's Island, N. Y., is distant 3 or 4 miles from the E. end of Long Island. It is 4 miles long and 2 miles wide, forming the E. boundary of Gardiner's Bay. The island was settled in 1639 by Lyon Gardiner, a Scotchman, formerly a lieutenant in the British army. His descendants still occupy the island, which is under a high state of cultivation; it also sustains an extensive dairy and large flocks of fine sheep. Gardiner's Point is a long neck of land extending N.

Garoga Creek, N. Y., rises in Bleeker, Fulton co., flows S., and falls into Mohawk River at the village of Palatine, Montgomery co.

Garoga Lake, N. Y., lies in the town of Bleeker, Fulton co., and is surrounded by picturesque hills, thickly wooded with large forest-trees. It is 3 miles long and half a mile wide, abounding in salmon and brook trout.

Gasconade River, Mo., rises in Pulaski co., and after a course of 140 miles, enters the S. side of the Missouri, 100 miles from its mouth, in Gasconade co. It affords extensive water power.

Gasparilla Island, Hillsboro' co., Fa. This is a small island lying at the mouth of Charlotte Harbor.

Gasparilla Sound, Fa. It extends 6 miles on the W. coast of Fa., from Clini Inlet to Charlotte Bay, and is about 2 miles wide. Clini Inlet has 4 feet of water, and Gasparilla Inlet 6 feet on the bar.

Gauley River, Va., rises on the W. side of the Alleghany Mts., in Pocahontas co., and enters the Great Kanawha River on the N. side, just above the great falls.

Gauthier Creek, Chippewa co., Wn. A small branch of the Chippewa, which it enters near the mouth of Yellow River.

Gayard River, Clayton co., Mn., enters the Mississippi a little above the Wisconsin.

Gayashk Lake, Ma. A large sheet of water lying near the mouth of Crow Wing River, with which it is connected on the S. by an outlet.

Geducy's Channel. See *N. Y. Lower Bay*.

Geese Islands, N. H., lying in the Connecticut River, are five in number, and belong to the town of Haverhill. The largest contains about 49 acres, and the others contain, in all, about 15 acres.

Geganslette Creek, Chenango co., N. Y., rises in the town of Pharsalia, and enters Chenango River near the village of Greene. This stream affords many good mill sites, and abounds with fine trout.

Genesee Falls, N. Y. See *Genesee River*.

Genesee Port, N. Y. See *Charlotte*.

Genesee River, N. Y., takes its rise in the western part of the state of Pennsylvania, and running at first N. W., enters the state of New York near the S. E. corner of Alleghany co. After pursuing this course diagonally nearly across the county, it bends to the N. W., and continues in this direction, through Livingston and Monroe counties, to Lake Ontario. There are falls in this river, near its mouth, at Carthage, of 75 feet; at Rochester, 7 miles from its mouth, of 268 feet in all; and in the town of Nunda, at the northern border of Alleghany co., two falls of 60 and of 90 feet. By the falls and rapids at Rochester, a vast water power is created on which are many extensive flouring mills and other hydraulic works, not surpassed by any in the world. The river is navigable for vessels and steamboats from the lake to Carthage, about 2 miles N. of Rochester, to which point there is a railroad from the city. S. of Rochester, steamboats of light burden run to Avon, about 20 miles, and the river is navigable for boats to the head of the rapids, a distance of 53 miles. Some of the best land in all the state is found in the valley of this river, in an alluvial tract of about 40 miles in breadth.

Genet Lake, N. Y., one of the Eckford chain of lakes, lies W. of Mount Emmons, in Hamilton co., and is surrounded by wild and romantic scenery. It contains several beautiful little islands.

George, Fort, N. Y. See *Caldwell*.

George, Lake, or *Lake Horicon*, N. Y., a beautiful body of water, lying principally in Washington and Warren counties, about 36 miles long, from N. to S., and from 2 to 3 miles wide. It discharges its waters S., through an outlet about 3 miles long, into Lake Champlain. This outlet has a descent of about 160 feet. The lake is elevated 243 feet above tide water in the Hudson. It is surrounded by hills, rising sometimes to moun-

tains, and presenting a most picturesque variety of bold and beautiful forms, and dotted with islands of every shape and size, said to equal in number the days of the year. The water is of such extraordinary clearness and transparency that the bottom, of yellow sand, may be seen at depths of 30 and 40 feet. The reflected images from the shining bosom of the lake, of the surrounding hills and mountains, and of the hundreds of islands all bearing upon their margins, or their summits, clusters of graceful trees and shrubbery, added to other features of a bolder and more striking character, render this one of the most delightful resorts for those who have an eye for beautiful scenery.

The village of Caldwell is pleasantly situated at the S. W. end of the lake, and contains between 7 and 800 inhabitants. The Lake House, in this village, is a spacious and convenient hotel, situated within a few rods of the steamboat landing, and designed especially for the convenience of travellers and parties of pleasure, who find this a most grateful resort, at all times, during the summer season. From this point a steamboat runs daily, during the season of travelling, to the southern extremity of the lake, where the passengers find stages to convey them, about 4 miles, to Ticonderoga, on the western shore of Lake Champlain. There are several localities on the shores of this lake, which are interesting from their historical associations. The position of the lake, as forming a part of the most feasible route, in former times, between the navigable waters of the St. Lawrence and the North River, gave it much importance as a channel of communication to be commanded and defended by either power, which, in the changing fortunes of war, might come into possession of it. Fort William Henry, near the S. shore, the remains of which are still visible, was garrisoned by the English, in 1757, with a force of 3000 men. It was assaulted by the French army, of 10,000 men, under the Marquis de Montcalm, and compelled to capitulate. It was then razed to the ground by Montcalm, and never afterwards rebuilt. From this point General Abercrombie, with 15,000 men, embarked, in 1768, to attack Fort Ticonderoga. Sabbath-day Point is a projection from the western shore of the lake, about 24 miles from Caldwell, where a party of the English landed, during the French war, and were all killed by the Indians. Fort Ticonderoga, at the outlet of the lake, commanded the approach to it from the N., and was, for a long time, considered as almost impregnable, until it was taken from the French, by General Amherst, in 1759. It was again taken by surprise from the English, in 1775, by a small party of Americans from Vermont, commanded by Ethan Allen, but was retaken two years afterwards by General Burgoyne, who bore upon it with his cannon from the top of Mount Defiance, a position hitherto supposed to be inaccessible for any such effective battery. Since the close of the revolutionary war this fortress has been suffered to go to decay. Lake George abounds with the finest fish, such as the delicious salmon trout, weighing from 5 to 20 pounds, the silver trout, brook trout, pickerel, pike, and perch. In consequence of the extraordinary purity of the waters of this lake, the French formerly procured it for sacramental uses, on which account it was by them called Lac Sacrement.

Giant of the Valley, Essex co., N. Y., one of the high peaks of the Adirondack range.

Gibbet Island, N. Y. See *Ellis Island*.

Gibson, Fort, N. Y. See *Ellis Island*.

Gilbolo River, Ts. An E. branch of the San Antonio.

Goat or Iris Island, N. Y., lies in the Niagara River, at the Great Falls, dividing the waters into two unequal parts. See *Niagara Falls*.

Gogebic Lake, Mn. This sheet of water lies in the W. part of the upper peninsula, and is the source of the W. branch of Ontonagon River.

Goodwin Creek, S. C., a branch of the Great Pedee, which it enters about half a mile below Westfield Creek.

Goose Creek, Chataouque co., N. Y., rises in the town of Harmony, and flows N. E. into Chataouque Lake.

Goose Creek, Va., rises in the Blue Ridge, 5 miles S. W. of the Peaks of Otter, and after a course of 30 miles, enters Staunton River, in Campbell co.

Goose Creek, On., flows N. N. W., and empties into Lewis Fork, of Columbia River, a little above Malade River.

Gooseberry River, Ma. It flows S. E., and empties into Lake Superior.

Goose Neck Island, St. Lawrence co., N. Y., lies in St. Lawrence River, and is attached to the town of Louisville.

Goose River, Ma. A W. branch of North Red River.

Goose Sound, Carteret co., N. C. Situated between Old Topsail and Bogue Inlets, separating a long, narrow island from the main.

Gopher Creek, Io. A small stream entering the Missouri, just below the mouth of Boyers River.

Governor's Island lies in N. Y. harbor, at the junction of East and Hudson Rivers, and belongs to the U. S. government. It is finely situated for the defence of the city of N. Y., should an enemy pass the fortifications at the Narrows. On it are erected Fort Columbus, Castle Williams, and the South Battery, commanding altogether more than 200 pieces of armament. Fort Columbus, in the centre of the island, is the most important. These fortifications, when fully garrisoned, require 800 men.

Graham Lake, Ma. It lies N. W. from Okabina Lake, with which it is connected by an outlet.

Grand Bayou, La. This stream rises in Bienville parish, flows S. E., and uniting with Black Lake Creek, enters Black Lake.

Grand Calliou, Bayou, Terre Bonne parish, La., flows in a S. W. direction, and enters the Gulf of Mexico, S. from Lake Calliou.

Grand Island, Erie co., N. Y., lies in the Niagara River, and is comprised in the town of Tonawanda. It commences 6 miles below Buffalo, and extends to within 3 miles of the falls, being 9 miles in length, and in one place 6 miles in width. The soil is very fertile, and well wooded with white and black oak, beech, maple, ash, &c. The navigation along its shores is good, and the scenery exceedingly beautiful.

Grand Island, Schoolcraft co., Mn. A pretty large island, lying in Lake Superior.

Grand Island, La. A large island lying in the Gulf of Mexico, between Vermilion and Cote Blanche Bays.

Grand Lake. This large body of water lies partly in Washington co., Me., and partly in New Brunswick, and is 90 miles N. E. from Bangor.

It contains many islands, receives the waters of numerous small lakes and rivers, and is the principal source of the River St. Croix. There are several other lakes in this state of considerable magnitude and beauty bearing the same name.

Grand River, Me., rises in New Brunswick, and flows S. S. W. into St. John's River.

Grand River, O. It rises in Portage and Trumbull counties, flows N. through the W. part of Ashtabula co., then it turns to the W., and crossing Lake co., falls into Lake Erie.

Grand River, As., flows S. E. into the Arkansas. Navigable about 200 miles.

Grand River, Mo., rises in Iowa and, flowing S. E., enters the Missouri 240 miles from its mouth. It is boatable 100 miles.

Grand River, Mu., is the largest river running wholly in the state. Its two principal branches unite in Jackson co., and, pursuing a winding N. W. course, it enters Lake Michigan at Grand Haven, Ottawa co. It is 270 miles long, and about 60 rods wide at its mouth, admitting vessels drawing 12 feet of water. It is navigable for steamboats 40 miles, to the Grand Rapids, and 240 miles for bateaux.

Grand River, Ca. It rises in the W. part of Na., flows S. W. into Ca., and unites with Green River to form the Rio Colorado.

Grand Rond River, On. It rises among the Blue Mts., flows N. E. and empties into the Lewis Fork of Columbia River, just above Salmon River.

Grand Sachem of the Highlands, N. Y. See *Beacon, New*.

Grand Traverse Bay, Mn. This is a considerable inlet from Lake Michigan, towards the N. part of the state.

Grand Traverse River, Mn., drains Kaleasca and Omena counties, and empties into Grand Traverse Bay.

Grant's Island, N. H., lies in Connecticut River, opposite the town of Lyme, and contains 24 acres.

Grant River, Grant co., Wn. It flows in a general southerly direction, and empties into the Mississippi River.

Grass Lake lies in the town of Hammond, St. Lawrence co., N. Y.

Grass Point, Brown co., Wn., extends into the S. part of Green Bay, opposite Point au Sable.

Grass River, N. Y., rises at the S. E. part of St. Lawrence co., flows N., and enters St. Lawrence River at the N. boundary of the state, opposite Cornwall Island, Canada.

Grassy Brook, Vt. See *Brookline*.

Gratiot, Fort. St. Clair co., Mn., consists of a stockade, including a magazine, barracks, &c., for a garrison of one battalion, and was erected in 1814.

Grave Creek, Marshall co., Va., rises in the E. part of the county, flows N. W., and empties into the Ohio River at Elizabeth.

Gravelly Point, Arenac co., Mn., extends into Saginaw Bay, S. from Whitestone Point.

Gravesend Bay, N. Y., is formed by a curve on the W. end of Long Island, and enclosed by Coney Island. On this bay is situated the well-known Bath House, a favorite resort during the summer months.

Gray's Harbor, On. A small bay situated between Points Brown and Chicheeles, and receiving the waters of Chicheeles River.

Great Bay, Belknap co., N. H., lies between the towns of Sanborn and Meredith, and is connected with Winnipisioege Lake.

Great Barn Island, N. Y. See *Barn Island, Great*.

Great Egg Harbor, N. Y. See *Egg Harbor, Great*.

Great Hog Neck, N. Y. This peninsula lies in the town of Southampton, Suffolk co., between Gardiner's and Great Peconic Bays. It is connected to Long Island by a narrow isthmus.

Great Island, N. H. See *New Castle*.

Great Island, Ms., encloses Wellfleet Bay on the N. W.

Great Island, N. Y. See *Hempstead*.

Great Kills, N. Y., on the S. E. side of Staten Island, extend some distance inland, receiving several small streams.

Great Marais Harbor, Houghton co., Mn. Situated on the N. W. coast of Kewaiiwona Point.

Great Meadow Hill, Rehoboth, Ms. Height 266 feet.

Great Neck, North Hempstead, Queen's co., N. Y., lies between Cow and Little Neck Bays. It is about 4 miles long and 2 wide. Hewlett's Point is situated on the N. end.

Great Ohoopee River, Ga. This river rises in the S. E. part of Washington co., flows S., receiving many large branches, and empties into the Alatamaha in Tatnall co.

Great Peconic Bay, N. Y. See *Peconic Bay*.

Great Pine River, As., has its rise in the S. part of Newton co., and flows S. into the Arkansas.

Great Rock Hill, Rehoboth, Ms. Height 248 ft.

Great Salt Lake, Uh. This is the largest sheet of water in the state, lying in the N. E. part, W. from the Bear River Mts. It contains several islands, and its waters are saltier than those of the ocean. Bear River flows into it from the N. E., and Utah River, the outlet of Utah Lake, on the S. E.

Great South Bay, N. Y., commences at the New Inlet, 25 miles E. of the city of N. Y., and extends 50 miles along the S. coast of Long Island. It is from 1 to 5 miles wide, and affords good navigation. Its waters abound in fine shell and scale fish, and different kinds of wild water fowl are found here in great numbers, affording pleasant and profitable employment for the sportsmen, and an article of traffic for hundreds of people.

Great South Beach, N. Y., encloses Great S. Bay. It is 40 miles long and half a mile wide. On the W. end, near the Fire Islands, is a lighthouse called the Fire Island light.

Great Valley Creek, N. Y., a tributary of the Alleghany River, rises in Cattaraugus co.

Great Works Stream, Me., an important tributary of the Penobscot, which it enters on the E. side, opposite the Indian settlement at Oldtown.

Great Works Stream, York co., Me., rises in North Berwick, and enters Salmon Fall River at South Berwick.

Green Bay, Wn., runs parallel with the N. W. part of Lake Michigan, and is connected with it by a broad opening. It is 100 miles long, and from 15 to 30 broad. It receives Fox and Menomonee Rivers, and is navigable to its head for vessels of 200 tons. At its entrance is a succession of islands, extending 30 miles.

Green Brier River, Va., rises in the N. E. part of Pocahontas co., and flowing S. W. through Greenbrier and Monroe counties, enters the Kanawha at the passage through Laurel Ridge.

Green or Tibbett's Island, Albany co., N. Y., lies in the Hudson, opposite the city of Troy, to which it is connected by bridges, and is attached

to the town of Watervliet. It is about 2 miles long, half a mile wide, and is crossed by the Rensselaer and Saratoga Railroads.

Green Lake, N. Y., an extremely beautiful sheet of water, lies in the town of Manlius, Onondaga co., and within a few rods of the Erie Canal. It is about three fourths of a mile long, and quarter of a mile in width. It affords several kinds of excellent fish, and the water is so clear and transparent they can be plainly seen at the depth of 50 feet with the naked eye. Its depth is 176 feet, and in several places the water is 60 feet deep within five feet of the shore. A small circular lake, whose depth has never been ascertained, lies about 20 rods N. of this.

Green Lake, Marquette co., Wn. It lies in the E. part of the county, and communicates on the N. with Neenah or Fox River.

Green Lake, Ma. Situated near St. Croix River, S. from Buried Eagle Lake.

Green Mountains, Vt. This range of mountains rises in Lower Canada. They pass nearly through the centre of the state of Vt., from N. to S., and the westerly parts of the states of Ms. and Ct., and terminate near New Haven, on Long Island Sound. From their green appearance they give the name to Vt., and decrease in height as they approach the S. The north peak, in Mansfield, is the greatest elevation, being 4279 feet above the surface of Lake Champlain.

Green Mountains, Ts. A branch of the Rocky Mountain range, lying in the N. W. part of the state, between Arkansas River and Rio Grande.

Green or Quodotchoik River, Penobscot co., Me. is an important branch of the St. John's, which it enters about 24 miles W. from the New Brunswick boundary.

Green River, Vt., rises in the town of Eden, and falls into the Lamoille in Wolcott.

Green River, N. Y., rises in Austerlitz, Columbia co., flows S. E., and enters the Housatonic River in Ms.

Green River, Wayne co., Te. flows N. N. W. into Buffalo River.

Green River, Ky., rises in Lincoln co., and pursuing a W. N. W. course, enters the Ohio 200 miles below Louisville, and 50 above the mouth of Cumberland River. It is 200 yards wide at its mouth, and is navigable for boats nearly 200 m.

Green River, Is., rises in Winnebago Swamp, in the N. part of Bureau co., flows W. across Henry co., and empties into Rock River.

Green River, Ca. This large river rises among the Wind River Mts., flows in a winding S. course, and unites with Grand River to form the Rio Colorado.

Greenville Point, On. Situated N. N. W. from Gray's Harbor.

Greenwood Cemetery, N. Y. See Brooklyn.

Gregory Cape, On., extends into the Pacific just below the mouth of Umpqua River.

Grenadier Island, Jefferson co., N. Y., lies in the E. part of Lake Ontario, and is attached to the town of Lyme.

Grindstone Island, Jefferson co., N. Y., lies in the St. Lawrence River, and is attached to the town of Clayton; it is one of the largest of the "Thousand Islands," being 5 miles long and 2 miles wide.

Grive Cœur Lake, St. Louis co., Mo. A small sheet of water lying near the Missouri River.

Grosse Point, Cook co., Is., juts into Lake Michigan a little W. of N. from Chicago.

Grover's Island, on the coast of Ga., belongs to the U. S. government, and contains between 300 and 350 acres.

Guadalupe Mountains, Ts. A range running N. W. and S. E. between Colorado and Grand Rivers.

Guadalupe River, Ts. A large stream flowing S. E. into San Antonio River, which it enters near its mouth.

Guests River, Va., rises in the Cumberland Ridge, flows S. E., forming the boundary between Russell and Scott counties, and empties into Clinch River.

Gull Island, Great and Little, Suffolk co., N. Y., are attached to the town of Southold; they are situated in what is called the Race, from the swiftness of the current, and, had they not been composed of solid rock, must have long since disappeared.

Gull Islands, Mn. Situated in Lake Michigan, at the entrance of Green Bay.

Gull Island, Mn. A small island lying in the N. part of Lake Michigan, W. from the Beaver Islands.

Gun Lake, Mn. A small sheet of water lying in the W. part of Barry co.

Gunpowder Falls River, Baltimore co., Md., rises in the N. part of the county, flows S. E., and uniting with the Little Gunpowder Falls, empties into Chesapeake Bay.

Guyandot Big River, Va., flows N. W., entering the Ohio 327 miles below Pittsburg. It is navigable for canoes 60 miles.

Guyandot Little River, Va., falls into the Ohio in lon. 81° 12' W., and lat. 38° 14' N.

Gwinn's Island, Va. Situated in Chesapeake Bay, off the N. E. coast of Matthews co.

Gwinn's River, Baltimore co., Md. A small branch of the Patapsco River, which it enters at Baltimore.

Hackensack River, N. J., rises in Rockland Lake, Rockland co., N. Y., and after a S. course of about 40 miles, enters Newark Bay. The upper part of its course affords fine mill seats. The tide meets it at the town of Hackensack, after which its course to the bay is through a marsh.

Hadley's Falls, N. Y., are in the Hudson, just above the mouth of Sacandaga River, between the towns of Hadley and Luzerne.

Hainakraus Kill, N. Y., rises in Albany co., flows E., and enters the Hudson near the village of Coeymans.

Hakah, or Root River, Ma. It rises a little above the sources of the Upper Iowa River, flows in an E. direction, and empties into the Mississippi.

Halifax River, Orange co., Va. This river runs parallel with the Atlantic coast, receives several branches, the principal of which is Tomoco Creek, and enters the Atlantic at Musquito Bar.

Hallett's Cove, N. Y. See Astoria.

Hall's Stream forms the N. W. boundary between Canada and N. H., from its source to its junction with the Connecticut at Stewartstown, N. H.

Ham Fork, Ca. A small W. branch of Green River.

Hammonasset River, Ct. This stream flows S. E., forming part of the boundary between New Haven and Middlesex counties, and empties into Long Island Sound.

Hammond's Bay, Mn. A curvature of Lake Huron on the N. border of Presque Isle co.

Hampton Roads, Va. The local name given to a portion of the bay at the mouth of James River, opposite the entrance of Nansemond and Elizabeth Rivers. A line drawn across, from Old Point Comfort on the N. to Point Willoughby on the S., may define the limit between these Roads and Chesapeake Bay. Within the mouth of James River the limit is not so definite. The water is sufficiently deep for the largest ships of war, where, by the erection of adequate defences, which have been reported to be entirely feasible, they might ride in safety from the attack of an enemy's fleet.

Hannahatchee Creek, Stewart co., Ga., unites with Hicheto Creek at its entrance into the Chatahoochee.

Harbor Hill lies in the town of North Hempstead, Queen's co., N. Y. It is elevated 319 feet above the Atlantic, and is visible for 25 miles at sea, being the highest point of land on Long Island.

Harbor of New York. See *New York Bay*.

Hardin's Creek, Te., is formed in the W. part of Wayne co., by the junction of two forks, flows N. W., and falls into the Tennessee in Hardin co.

Harger's Creek, O. A small stream that falls into Sciota River at Circleville.

Harlem River, N. Y., a creek or strait, running from East River, as it is called, to North River, and forming the northern boundary of the Island of Manhattan, on which the city of New York is built. The island is connected with the main land by three bridges, Harlem bridge, Macomb's bridge, and King's bridge. There is also the massive and beautiful structure of stone masonry, upon which the Croton aqueduct is carried over the Harlem Valley and River, a little more than a quarter of a mile in length. The width of the river itself, at this place, is 620 feet. The western part of this river, from King's bridge to the Hudson, was named by the Dutch Spuyten Duyvel Creek. The whole length of Harlem River is 6 miles, and its width from one eighth to one fourth of a mile.

Harney Lake, Orange co., Fa., lies E. from Lake Jessup, with which it is connected by an outlet. On its S. W. border is Fort Lane.

Harpeth River, Te., rises in Williamson co., and pursues a N. W. course of 60 miles, to its entrance into Cumberland River, 19 miles N. W. of Nashville. It is boatable to Franklin.

Harrison's Island, Mn. Situated in the N. part of Lake St. Clair.

Hart's Island, N. H., lies in Connecticut River, in the town of Plainfield, and contains 19 acres.

Hart's Island, Westchester co., N. Y., lies in Long Island Sound, and is attached to the town of Pelham.

Hassencleaver Mountains, N. Y. This range of hills lies N. of the Mohawk Valley, extending through part of Herkimer and Oneida counties. They are from 1000 to 1200 feet in height.

Hatchee River, Te., rises in McNairy co., and pursuing a N. W., W., and S. W. direction for 100 miles, enters the Mississippi at Randolph.

Hatchet Creek, Aa. A branch of the Coosa River, which it enters in Coosa co.

Hatchet Hill, Southbridge, Ms. Height 1016 ft.

Hatteras Cape, N. C. A dangerous cape, in 35° 15' N. lat., and 75° 30' W. lon. It is on the S. W. end of a low, sandy, and rocky island, which encloses Pamlico Sound. The sea, in this place, is generally very rough, and this part of the

American coast is probably more dreaded by sailors than any other.

Haver's Island, Albany co., N. Y., lies at the mouth of the Mohawk River, and is attached to the town of Watervliet.

Haverstraw Bay, N. Y., lying opposite the town of Haverstraw, Rockland co., is formed by an expansion of Hudson River. It is 6 miles long, and from 2 to 3 miles wide, extending from Teller's to Verplank's Point.

Haw River, N. C., rises in Rockingham co., and flowing S. E., unites with Deep River, in Chatham co., to form the N. W. branch of Cape Fear River.

Hawpee Creek, Macon co., Aa. This stream flows in a general westerly direction, and falls into the Tallapoosa River.

Hawse's Hill, Barre, Ms. Height 1285 feet.

Hay River, Wn. This river drains the E. interior of St. Croix co., flows S. E., and enters Red Cedar River, in Chippewa co.

Hazen's Notch, Vt. A remarkable passage through the mountain, between the towns of Lowell and Montgometry.

Head Harbor Island, Me., lies off Jones Port, Washington co.

Helderberg Hills, or *Mountains*, N. Y., stretch through the W. part of Albany co., into Schoharie co., where they unite with the Catskill range. They consist of a series of limestones of varied mineralogical character, upon a foundation of graywacke, and abound in fossil remains, and extensive caverns ornamented with stalactites and stalagmites. These mountains are very precipitous, and are from 400 to 500 feet in height.

Hell Gate, or *Hurl Gate*, a strait in the East River, 8 miles from New York city, between the Islands of Manhattan and Parsell, on the N. W., and Long Island, on the S. E. It is said that the proper name of this strait is *Horll Gatt*, a Dutch term, signifying a whirlpool. Through this narrow pass the tides flow in and out, between the harbor of New York and Long Island Sound. At certain stages of the tide, the waters rush through here with a powerful current, and passing over sunken rocks, are made to whirl and roar with fearful violence. There is no great difficulty, however, in navigating the strait with safety, under the guidance of a skilful pilot.

Hell Gate, On. An E. branch of Bitter Root River, rising among the Rocky Mts.

Helley's Keys, Fa. These islands separate Tagabona Bay from the Gulf of Mexico.

Hemlock Island, St. Lawrence co., N. Y., lies in the St. Lawrence River, and is attached to the town of Clayton.

Hemlock Lake, N. Y., lies partly in Livingston, and partly in Ontario co. It is 6 miles long, and 1 mile wide, discharging its waters into the outlet of Honeoye Lake.

Hempstead Bay, N. Y., lies in the town of Hempstead, Queen's co., is 6 miles long, from 1 to 2 miles wide, and abounds with shell and scale fish, and wild water fowl. It is separated from the Atlantic by Long Beach.

Hempstead Plains, N. Y., an immense heath or barren, of more than 15,000 acres, is used merely as a common pasturage of the town of Hempstead, on which several thousands of cattle and sheep are annually fed, and is the site of the old Newmarket race course, where, in years past, immense sums of money have been lost and won.

The soil of these plains is good, and might be made fertile by cultivation.

Henderson Lake, N. Y., one of the head sources of the Hudson, lies in the town of Newcomb, Essex co., near the Adirondack Iron Works. It is elevated 1936 feet above the tide waters of the Hudson.

Henderson's River, Is. This river rises in the N. W. part of Knox co., flows S. W., and empties into the Mississippi in Henderson co.

Henlopen, Cape, De., is the S. W. extremity, at the entrance of Delaware Bay. It is 18 miles S. W. of Cape May, the opposite point in N. lat. $36^{\circ} 47'$, and W. lon. $75^{\circ} 6'$. There is a lighthouse on it.

Henry, Cape, Va., is on the S. side of the entrance into Chesapeake Bay, 12 miles S. Cape Charles, in $36^{\circ} 58'$ N. lat., and $76^{\circ} 21'$ W. lon.

Henry's Fork, On. It rises among the Rocky Mts., flows S. S. W., and empties into Lewis Fork of Columbia River.

Henry's River, N. C., rises in Burke co., flows E., and unites with Jacob's River to form the Little Catawba.

Herring Bay, Md., sets up from Chesapeake Bay, between Ann Arundel and Calvert counties.

Hickman Creek, Ky., rises in Fayette co., and flows S. W. through Jessamine co., into the Kentucky River.

Hickory Creek, Will co., Is., flows W., and empties into Des Plaines River a little below Juliet.

Hidden Wood River, Ma. An E. branch of the Inyan Reakah, or River of the Rock.

Higgins's Lake, Roscommon co., Mn., lies N. from Houghton's Lake, with which it is connected by an outlet.

High Falls, Lewis co., N. Y., occur in the Black River just before it is entered by Black River Canal. They are so called in distinction from Long Falls, which occur in the same river, 40 miles below, in Jefferson co. The river has a descent of 60 or 70 feet, and is well worthy a visit from the lovers of the picturesque.

Highlands, *Matteawan* or *Fishkill Mts.*, N. Y. These mountains lie in the counties of Rockland, Orange, Westchester, Putnam, and Dutchess, and are probably connected with the Alleghanies, as indicated by their geological formation. They are 16 or 18 miles in breadth, and extend in a N. E. and S. W. direction about 25 miles. They present some of the most romantic features of the scenery upon the North River, which is here contracted to a narrow space, by its passage through the mountain pass. Anthony's Nose, one of their lofty elevations on the eastern shore, is a pile of rock rising to the height of 1128 feet above the level of the river which washes its base. Two miles above is the Sugar Loaf Mountain, which rears its summit to the height of 860 feet. Crow's Nest and Butter Hill are on the W. side of the river. They rise abruptly from the water's edge, the latter 1520 feet, and the former nearly as high. Beacon Hill, on the E. side, sometimes called the "Grand Sachem," is the highest peak of the Highlands, being elevated 1685 feet above the Hudson. Several of the eminences in view from the river are celebrated in history for being the scenes of stirring events during the struggle for American independence. The sites of Forts Clinton and Montgomery are on the W. side of the river, from whence chevaux-de-frise, boom, and chains, were stretched across to the base of Anthony's Nose, in 1777. These forts, which

were garrisoned by six hundred men, were attacked Oct. 6, 1777, by a British force three thousand strong, under Sir Henry Clinton, and captured during the night. At the base of Sugar Loaf Mountain, on the E. side of the river, is seen the site of the house where the traitor Arnold lived. About a mile farther up, the garden and monument of Kosciusko are distinctly seen. The historical interest associated with West Point is familiar to every reader.

Highland Creek, Ky. This stream forms the boundary between Union and Henderson counties, and empties into the Ohio River.

High Ridge, Williamsburg, Ms. Height 1480 ft.

Hilliard's Knob, Rochester, Ms. Height 1120 ft.

Hillsboro' Inlet, Fa. A long, narrow inlet, extending from the mouth of Hillsboro' River some distance into St. Lucie co.

Hillsboro' River, Fa., rises in the E. part of Orange co., flows S. W., and enters Tampa Bay at the town of Tampa.

Hitchcock's Hill, Wales, Ms. Height 1190 feet.

Hockocking River, O., rises in Fairfield co., winds through a hilly country 80 miles, in a S. E. direction, and enters the Ohio at Troy, 25 miles below Marietta. It is boatable 70 miles, except the lower falls and some mill dams. It has a fall near its source of 40 feet.

Hog Island, N. Y., is situated in Hempstead Bay, Long Island.

Hog Island, or *Neck*, in Oyster Bay, Queen's co., N. Y., is connected to Long Island by Oak Neck.

Hog Island, Northampton co., Va., lies in the Atlantic, N. E. from Prout's Island.

Hog Island, Surry co., Va. A small island lying in James River.

Hog Island, Mn. Situated in the N. part of Lake Michigan, E. from Garden Island.

Hog Neck, N. Y. See *Great Hog Neck*.

Holeb Pond, Me., is a considerable body of water lying in Franklin and Somerset counties.

Hollow Creek, Barnwell district, S. C., enters the Savannah River at the S. E. corner of Edgefield district.

Holland Islands, Md., lie in Chesapeake Bay, N. from Smith Island and W. from Fishing Bay.

Hollinger's Creek, Baldwin co., Aa. A tributary of Perdido River.

Holston River, Te. This river unites with the Clinch, in Roane co., to form the Tennessee. With the exception of a fall of 7 feet, it is navigable 70 miles. There are valuable salt works near its source; also a fall of water of 40 feet.

Holt's Hill, Andover, Ms. Height 423 feet.

Homochitto River, Mi. It runs S. W., and falls into the Mississippi above Fort Adams, between Adams and Wilkinson counties.

Honeoye Creek, N. Y., an important mill stream, is formed by the outlets of Honeoye, Canadice, and Hemlock Lakes. It flows S. W., and enters Genesee River in Monroe co.

Honeoye Lake, N. Y. This beautiful sheet of water lies mostly in the town of Richmond, Ontario co. It is 5 miles long and 1 mile wide, and abounds in fine fish.

Honey Creek, Sauk co., Wn. A small tributary of Wisconsin River.

Honey Island, Holmes co., Mi. This is a large island formed by an outlet of the Yazoo River.

Hoosick River, N. Y., a large and important mill stream, rises in Ms. and Vt., flows E., and enters the Hudson in Rensselaer co.

Hood's Canal, On. A long, narrow channel extending S. W. from Admiralty Inlet.

Hood Mount, On. A high peak of the Cascade range, situated S. from Columbia River.

Hooper's Island, Md. Situated in Chesapeake Bay, off the S. W. coast of Dorchester co.

Horicon Lake, N. Y. See *George Lake*.

Horn Island, Mi., lies in Pascagoula Bay, off the coast of Jackson co.

Horn Lake Creek, De Soto co., Mi. A small stream which flows through a lake of the same name, and enters the Mississippi.

Horse Head Creek, Johnson co., As., flows S., and empties into the Arkansas River.

Horse Island, Barnstable co., Ms. This island is situated in Wellfleet Bay, at the mouth of Blackish Creek.

Horse Race, N. Y. A name given to the Hudson, just before it leaves the Highlands, at its lower entrance. The river here takes a sudden turn of a mile to the E., and resumes its S. course at Caldwell's Landing.

Hosmer's Ponds, Vt. See *Craftsbury*.

Hot Springs, Hot Spring co., As. There are about fifty of these springs, which break out from the W. side of a mountain, and flow into a small creek, which, taking a S. course of 6 miles, empties into the Wachita River. The temperature of the springs is from 110° to 150° Fahrenheit. The cold Chalybeate Springs, situated 3 miles N. E. of the Hot Springs, are much frequented by invalids. There are Sulphur Springs in the same county, 30 miles N. W. from the Hot Springs.

Houghton's Lake, Roscommon co., Mn., lies in the W. interior of the county, and is one of the head sources of Maskegon River.

Houghton Lake, Houghton co., Mn. Situated on Kewaiwona Point, N. E. from Portage Lake, with which it communicates.

Housatonic River, Ms. and Ct. The sources of this river are in the towns of Lanesboro' and Windsor, Ms. The main stream is formed at Pittsfield, and thence passes S. into Ct. After watering the county of Litchfield in that state, it separates the counties of New Haven and Fairfield, and meets the tide water at Derby, 14 miles above its entrance into Long Island Sound. The source of this stream is more than 1000 feet above the ocean, and in its course of nearly 150 miles, it affords numerous mill sites. The volume of water is not very large, except in seasons of freshet; but the scenery on the borders of the river is exceedingly beautiful; and the cataract at Canaan, Ct., where the water falls perpendicularly 60 feet, is well worthy the notice of travelers. The Indian name of this river signifies *over the mountains*.

Howland's or Superior Island, Cayuga co., N. Y., attached to the town of Conquest, is formed by the dividing branches of Seneca River.

Hubbardton River, Vt. This is a good mill stream, rising from several small ponds in Sudbury. It runs in a S. W. direction through Gregory's Pond, in Hubbardton, through Benson, and falls into East Bay in West Haven, after a course of about 20 miles.

Hudson River, N. Y., has its sources in numerous small streams which rise among the Adirondack Mountains, west of Lake Champlain. It pursues a straight course, almost directly south, for about 300 miles, until it enters the Atlantic through the harbor of New York. This river is one of the

best for navigation, in proportion to its length, of any in the United States. Notwithstanding it flows through a mountainous region, it is navigable for small sloops, and for steamboats of large size, to Troy, 166 miles from its mouth. The action of the tides at the mouth of the Hudson, coming in as they do from the ocean through the Narrows, and from the Sound through the East River, is such as to carry the swell of the river upwards, it is said, at the rate of 15 to 25 miles an hour; so that swift-sailing vessels, leaving New York at new tide, with all things favorable, sometimes run through to Albany with the same flood tide. The river has three large expansions, or bays, as they are called—Tappan Bay, Haverstraw Bay, and a third between Fishkill and New Windsor. Tappan Bay, or Tappan Sea, as it was formerly called, commences at Piermont, about 20 miles from New York, and extends northward to Teller's Point, a distance of 10 miles, with an average width of 3 miles. In some places the width is full 5 miles. Haverstraw Bay is also from 2 to 3 miles wide, and 6 miles long, terminating on the north at Verplank's and Stony Points. The passage of the Hudson through the Highlands is among the most romantic and sublime to be found any where upon our navigable rivers. The Mohawk River, which comes in from the west, at Waterford, about 10 miles north of Albany, is almost the only tributary of the Hudson of any importance. Through artificial channels, however, its navigable waters are connected with the great lakes at the west, and with the St. Lawrence at the north. The great Erie Canal unites the Hudson, at Albany, with Lake Erie, at Buffalo, 364 miles distant, by the route of the canal. The Champlain Canal unites the river at Albany with the southern extremity of Lake Champlain. The length of this canal is 72 miles. From Albany to West Troy, 8 miles, the Champlain and Erie Canals are in conjunction with each other. By the Delaware and Hudson Canal, the Hudson is also united, at a point about 90 miles from New York, with the Delaware, at the N. W. corner of New Jersey. Through this communication immense quantities of coal from the Lackawana district in Pennsylvania are transported to New York. During the season of navigation on the Hudson, numerous steamboats leave New York every morning and evening for the different places upon the shores of the river. From about the 20th of March to the 1st of December the bosom of this river presents the appearance of a great thoroughfare of travel. Steamboats of the largest class, nowhere excelled for comfort, elegance, and speed, run back and forth continually between New York and Albany or Troy; making the trip of 150 or 160 miles in from 10 to 12 hours running time, and touching at all the principal places on the route, to land and receive passengers. One of the most striking and peculiar features of the scenery on the Hudson is that of the Palisades, a designation given to a majestic range of columnar rock, varying in height from 50 feet to 300 and even 400 feet, and walling in the stream for about 20 miles from Weehawken to Piermont. For a great part of the distance, on the western shore, they rise almost perpendicularly from the water's edge. The shores of the Hudson between New York and Albany are studded with bustling towns, and beautiful villas, and country seats; which, mingling with the bold and picturesque features of the natural scenery, render the passage up and

down upon its waters one of the most inviting any where to be enjoyed.

Humboldt Lake, Uh., lies E. from Pyramid Lake, and receives the waters of Humboldt River.

Humboldt Lake, Ma. Situated E. from North Red River.

Humboldt River. It rises in two large forks among the Humboldt Mts, flows in a circuitous S. W. direction, and empties into Humboldt Lake.

Humboldt River Mountains, Uh., lie in the N. interior of the state, and run nearly N. and S.

Humphrey's Creek, Ballard co., Ky., flows N. W., and empties into the Ohio.

Humquolques River and Pond, Me., are situated in Aroostook and Penobscot counties. The river is a branch of Aroostook River.

Hunger's Creek, Northampton co., Va. A small inlet from Chesapeake Bay.

Hungry Bay, Jefferson co., N. Y., is a large expanse of water in the E. part of Lake Ontario. Black and Chaumont Rivers empty into it through bays of the same name.

Hunter's Island, Westchester co., N. Y., lies in Long Island Sound, and is attached to the town of Pelham.

Hunting Islands, Beaufort district, S. C. This group lies between St. Helena Sound and Broad River, and S. E. from St. Helena Island.

Huntington Bay is situated in the town of Huntington, Suffolk co., N. Y., on the N. side of Long Island, between Eaton's and Lloyd's Necks. It is a safe harbor, and abounds with shell and scale fish and wild fowl.

Huntington River, Vt., waters the towns of Lincoln, Starksborough, and Huntington, and joins Winooski River in Richmond. Its course is very rapid. Length about 20 miles.

Huron Bay, Houghton co., Mn., lies E. from Keewaiwona Bay, and communicates on the N. with Lake Superior.

Huron Islands, Mn. A small group lying in Lake Superior, at the mouth of Huron Bay.

Huron, Lake. One of the five great lakes of North America, and the third of the chain, proceeding W., lying between Canada West and the United States. This extensive sheet of water is nearly divided, by the peninsula of Canada West and by the chain of Manitou Islands in the N. part, forming, with this peninsula, almost a continuous land barrier, into three sections, the largest of which, lying S. of the islands, may be called Lake Huron Proper, while that directly N. of this range of islands has been denominated, by Tanner, Manitou Bay, and that which is nearly cut off by the peninsula and the N. projection of Great Manitou Island, lying to the N. E., has, by the same authority, been named Lake Iroquois, and, by others, the Georgian Bay. A considerable arm of the lake, also, on the S. W., stretching into the state of Michigan, has received the name of Saginaw Bay. Irrespective of these different sections, Huron Proper lies nearly in the form of a crescent, stretching from the Straits of Michilimackinac to the head of the River St. Clair, a distance, upon the middle curve, of 260 miles. The greatest breadth, independent of the bays, is about 70 miles, and the superficial extent about 20,000 square miles. The depth of this portion of the lake is very great, being at least 1000 feet deep towards the W. shore, which is its deepest part. Like all the other lakes, however, it is generally shallow near the shores, though it has several fine harbors.

It receives the waters of Lake Superior through St. Mary's Strait, and those of Lake Michigan through the Straits of Michilimackinac, and discharges its own waters, through the River St. Clair, into Lake Erie. The waters also of several small lakes are received from the N. W., the principal of which are Lake Nipissing and Lake Simcoe, which empty themselves, by rivers of a few miles' extent, into the Georgian Bay. This bay, or lake, as it might be separately regarded, lies nearly in the form of an ellipse, connected with the body of Lake Huron, and with Manitou Bay, at its N. W. extremity. It is 140 miles long by 70 miles wide, having an area of about 7000 square miles. Manitou Bay, which is that section of the lake lying directly N. of the great chain of islands, is in length, from E. to W., 80 miles, with an average breadth of 20 miles. Its area is about 1600 square miles. Taken in its whole extent, as including the sections here described, with the islands between them, Lake Huron covers an area of nearly 29,000 square miles. The number of islands in Lake Huron is very great. Among them, the chain which has been already mentioned, retaining their Indian name of Manitou (Great Spirit) Islands, includes all which are worthy of special notice. These are divided into the Great Manitou and Little Manitou Islands, besides which, at the W. extremity of the chain, is one which is called Drummond's Island. Great Manitou is much the largest of the series, being in length about 90 miles, E. and W., and in breadth, in the widest part, about 30 miles. The boundary between the United States and Canada passes along the middle of the River Huron Proper from the outlet of St. Clair River 225 miles, and thence, between Drummond and Little Manitou Islands, and over the W. end of Manitou Bay, to the influx of the N. branch of St. Mary's River. This lake holds a very important position as a commercial link in the chain of internal navigation. The main lake opens a spacious communication from Lake Erie, both into Lake Superior and Lake Michigan; and being connected with a series of smaller lakes and rivers, extending from the S. E. angle of the Georgian Bay almost to the N. W. angle of Lake Ontario, it affords great facilities for completing a separate and much shorter channel of transportation between the ports of Lake Ontario and those of Michigan and Superior. An expenditure, comparatively moderate in improvements of this kind, might reduce the distance full one half between the head of the River St. Lawrence and the head of Lake Huron. This is a matter which has long ago attracted attention, and which, in this age of commercial enterprise, may not improbably ere long be acted upon.

Huron River, O. This river rises in Richland co., flows through Huron and Erie counties, and falls into Lake Erie at Huron. It is navigable 6 or 7 miles.

Huron River, Mn., rises in Oakland and Livingston counties, and flows 90 miles, to its entrance into Lake Erie, below the mouth of Detroit River. This river and its branches afford extensive water privileges.

Huron River, Houghton co., Mn. This small stream flows N., and empties into Lake Superior E. from Huron Bay.

Hurricane Creek, Stewart co., Te., empties into the Tennessee River.

Hurricane River, Schoolcraft co., Mn. A small stream in the N. E. part of the county, and emptying into Lake Superior.

Hutchinson's Island, St. Lucie co., Fla. A large island lying between St. Lucra Sound and the Atlantic Ocean.

Ibberville River, La. This river leaves the Mississippi, of which it is an outlet, 14 miles below Baton Rouge, and flows 20 miles into Amite River. The Mississippi flows into it at high flood only.

Illinois Creek, As. This stream rises in Van Buren and Pope counties, flows S. S. W., and empties into the Arkansas.

Illinois River. The Illinois River has its entire course within the state to which its name has been given. Its upper tributaries take their rise in Indiana and Wisconsin. Those coming from Indiana are the Kankakee and the Iroquois; those from Wisconsin are the Des Plaines and the Fox Rivers. The two former unite, after flowing W. in a curve corresponding with the S. shore of Lake Michigan, in the N. part of Iroquois county, Illinois; and thence their waters flow still W. until they unite with those of the Des Plaines coming from the N. After the confluence of the Kankakee with the Des Plaines, the river takes the name of Illinois. From this point it flows nearly W. to Hennepin, in Putnam co., or almost to this place, receiving Fox River from the N., at Ottawa, and Vermilion River from the S. E., near the foot of the rapids. Its course then turns to the S. and S. W., in which direction mainly it flows as far as Naples, in Morgan co., receiving the Spoon River from the W., and the Sangamon from the E. From Naples it flows S. until it approaches within a few miles of the Mississippi, when it curves to the S. E., and afterwards to the E., and empties itself into the Mississippi, a few miles above the mouth of the Missouri. Its length, exclusive of its windings, is about 260 miles. It is navigable 210 miles, to the foot of the rapids, and, in high water, 9 miles farther, to Ottawa. Below the rapids the character of the river approaches to that of a tortuous canal, occasionally widening into swells which appear similar to lakes. Upon the W. shore of one of these beautiful expansions of the river the flourishing town of Peoria is situated. The navigable part of the river has a gentle current, unbroken by rapids, and peculiarly favorable to a safe and easy commerce by steamboats. From its relative position the Illinois is a river of great importance as a connecting link in the chain of internal navigable waters. The Illinois Canal, of 100 miles in length, connects its navigable waters with those of Lake Michigan at Chicago; thus opening a communication for commerce between the St. Lawrence and the Mississippi, and between the whole country bordering on the great lakes and the ports of New Orleans and the Atlantic. The valley of the Illinois in its widest part, from the sources of the Sangamon River on the E., to the sources of the Spoon River on the W., is 120 miles in breadth. In the N. part, however, branching into two long, narrow arms, the mean breadth does not exceed 60 miles. In this portion it encircles the S. part of Lake Michigan for a distance of about 200 miles. The area included in this basin is about 24,000 square miles.

Illinois River, In. Ter., rising in Benton and Washington counties, As., passes into the In.

Ter., and flows south into Arkansas River, 4 miles above the mouth of Canadian River. There are salt springs a few miles from its mouth.

Independence River, N. Y., rises in Hamilton co., flows W., and enters Black River in Lewis co.

Indian Creek, S. C. A branch of the Sunoree River, which it enters in Newberry district.

Indian Creek, Te., formed in Wayne co., by the junction of Indian River and Rutherford's Creek, flows N. W., and enters the Tennessee in Hardin co.

Indian Creek, Is. This stream rises in the S. W. part of Clark co., and flows S. W., across Floyd and Harrison counties, into the Ohio River.

Indian Fields, N. Y., are a part of the peninsula of Montauk, on the E. extremity of Long Island. The surface is very rough, yet the soil is generally good, affording fine pasturage. A remnant of the Montauk tribe of Indians still resides here.

Indian Hut Island, St. Lawrence co., N. Y., lies in the St. Lawrence River, near the Thousand Islands, and is attached to the town of Hammond.

Indian River, Me., is a small stream, watering the town of Addison, Washington co.

Indian River, N. Y. and Vt. This small stream rises in Rupert, Vt., waters the corner of Pawlet, and joins Pawlet River, in Granville, N. Y.—Another small stream of this name waters the towns of Essex and Colchester, Vt., and empties into Colchester Bay.

Indian Lake, Hamilton co., N. Y., is surrounded by a mountainous region of country, covered with deep forests of pine, spruce, birch, and poplar, which, contrasted with the smooth waters of the lake, present a scene of remarkable beauty. The mountain peaks attain an elevation of from 1500 to 2000 feet above the surrounding country. The lake is 4 miles long, 1 mile wide, and abounds in various kinds of fish.

Indian River, N. Y., the outlet of Indian Lake, flows N. E., and enters the Hudson, in Essex co.

Indian River, N. Y. This stream rises in Lewis co., flows N. W., through Jefferson, and enters Black Lake, in St. Lawrence co. The outlet of the lake flows into Oswegatchie River, which enters the St. Lawrence at Ogdensburg village.

Indian River, Sussex co., De., drains the E. part of the co., and empties into the Atlantic Ocean.

Indian River, Fa. The length of this river, from its head branches to Juniper Narrows, is about 100 miles. Its width and depth are extremely variable. In some places it is 4 miles wide; in others, not 50 yards. The depth of water is greatest when the S. inlets are closed. It runs nearly parallel with the E. coast of the state, its course being a little E. of S.

Indian Stream, Coos co., N. H., is the principal and most N. source of Connecticut River. It rises in the Highlands, near the N. border of the state, and pursuing a S. W. course, unites with the E. branch flowing from Connecticut Lake.

Inlet of Cayuga Lake, N. Y., has been rendered navigable for 1 mile S. of the lake, by the canal commissioners. There is now a toll taken for all boats passing and repassing to Ithaca village.

Inoque River, Ts. A head branch of Brazos River.

Inquest Creek, Io., rises in Appanoose and Monroe counties, flows E. across Davis and a corner of Van Buren co., and falls into the Des Moines River in Wapello co.

Intpah River, Ma. A W. branch of the Minesota, or St. Peter's River.

Inyan Reakah, or River of the Rock. It rises in Ma., flows S. W. across the N. W. angle of Iowa, and falls into the Tchankasdata, or Sioux River.

Inyan Yankey, or Little Sioux River, Io. This large river rises in a number of lakes, on the N. border of the state, flows in a S. direction, receiving numerous large tributaries, and empties into the Missouri.

Iowa River, Io., rises in the N. part of the state, and passes between 200 and 300 miles S. E. to the River Mississippi, in Louisa co. It is navigable from the Mississippi to Iowa City at all seasons. This is a beautiful stream, and its waters are exceedingly clear.

Ipswich River, Essex co., Ms. See *Ipswich*.

Iron River, Mn. A small stream draining the W. part of the upper peninsula, and falling into Lake Superior.

Irondequoit Bay, Monroe co., N. Y., is 6 miles long, 1 mile wide, and communicates on the N. with Lake Ontario. It abounds with the different kinds of fish peculiar to the lake.

Irondequoit Creek, N. Y., a good mill stream, rises in Ontario and Monroe counties, and flows N. into Irondequoit Bay.

Iroquois Point, Chippewa co., Mn., extends into the S. part of Tahquamenaw Bay.

Irving Lake, Ma. Situated N. E. from Cass Lake, and connected on the S. with the Mississippi River.

Isckua Creek, N. Y., rises in Cattaraugus co., flows S. into Oil Creek, which enters the Alleghany River at Olean village.

Isinglass River, N. H., rises in ponds in Barrington and Strafford, and joins the Cocheoc in Rochester.

Islands in Boston Harbor. See *Boston*.

Isle au Chats, N. Y., are two islands lying in the St. Lawrence, between which the boundary line dividing the U. S. from Canada passes. The E. one belongs to the town of Louisville, St. Lawrence co.

Isle au Gallop, St. Lawrence co., N. Y., lies in St. Lawrence River, and is attached to the town of Lisbon.

Isle au Rapid, St. Lawrence co., N. Y., lies in the St. Lawrence River, and is attached to the town of Madrid.

Isles of Shoals. These islands, 8 miles from the mouth of Portsmouth harbor, N. H., are seven in number, viz.: Hog, Smutty Nose, Star, Duck, White, Malaga, and Londoner Islands. Hog contains 350 acres of rock, and its greatest elevation is 57 feet above high water mark. Smutty Nose contains about 250 acres of rock and soil — greatest elevation 45 feet. Star Island contains about 180 acres of rock and soil, and its height is 55 feet. These islands, as a town, are called Gosport. Star and Smutty Nose are inhabited by fishermen, who carry on considerable business in their way, supplying Portsmouth and the neighboring towns with fresh fish, and sending large quantities of cured fish to Boston and other places. The celebrated dun fish are found here, which have heretofore been considered a distinct species of the cod. They differ, however, from the common cod only in the circumstance of their being caught and cured in winter. Star Island and Smutty Nose are connected by a sea wall, built at the expense of government, for the purpose of breaking a strong S. E. current pass-

ing between them, and forming a safe anchorage on the N. W. side of it. These objects have been attained, and the miniature fleet of the shoalers, riding at anchor in this artificial harbor, is no unpleasant sight. Smutty Nose and Malaga are connected by a sea wall, built at the expense of Mr. Haley, "the King of the Shoals." This wall, 14 rods in length, 13 feet in height, and from 20 to 30 feet in width, effectually secures Haley's Inlet and Wharf from the easterly storms, although the waves not unfrequently break over it in a severe storm. There are a few spots of dry soil upon them under cultivation. The Shoals are a pleasant resort for water parties, and their delightful, bracing air cannot be otherwise than advantageous to those who are in want of pure sea breezes. See Haywood's *New England Gazetteer*.

Isle Presque River, Me., has its source in a pond near the centre of Aroostook co., and flows in a N. direction into Aroostook River.

Israel's River, Coos co., N. H., is formed by cataracts which descend from the summits of Mounts Adams and Jefferson, and running N. W. it passes through Randolph and Jefferson, falling into the Connecticut in Lancaster. This beautiful stream received its name from Israel Glines, a hunter, who frequented these regions long before the settlement of the country.

Istogoga, Lake, St. Lucie co., Fla., lies N. W. from Lake Macaco, and connects by an outlet with Kissimee River.

Itasca Lake, Ma. This small lake is the principal source of the head branch of the Mississippi River. It connects with other smaller lakes, and contains Schoolcraft Island.

Iyanke Lake, Io. A small sheet of water situated near the N. border of the state.

Iyedan Lake, or Lac qui Parle, Ma. An enlargement of the Minesota or St. Peter's River, just above Intpah River.

Izuzah River, Ma. A W. tributary of Minesota or St. Peter's River, which it enters just below Big Stone Lake.

Jack's Fork, Mo. A tributary of Current River, which it enters from the W. near Chilton.

Jackson's Hill, Blandford, Ms. Height 1717 ft

Jackson's Lake, On. It lies S. E. from the Three Tetons, peaks of the Rocky Mts., and is the source of the Lewis Fork of Columbia River.

Jackson's River, Va. This river rises in Warm Spring Mts., and unites with Cowpasture River to form James River. Falling Springs, one of its head branches, has a perpendicular fall of 200 feet.

Jacob's River, N. C., rises in the S. part of Burke co., flows N. E., and unites with Henry's River to form the Little Catawba.

Jamaica Bay, N. Y., lies on the S. side of Long Island, and opens into the Atlantic by several inlets. It is navigable for vessels drawing but little water, and contains several low, marshy islands. Fish and wild fowl are abundant.

Jamany, Lake, Leon co., Fla., lies a little E. of N. from Tallahassee.

James Island, Colleton district, S. C. This island extends from Charleston harbor on the N. E. to Stone Inlet on the S. W.

James Island, Fa. This island lies between Ocklockony River on the N., the Gulf of Mexico on the E., St. George's Sound on the S., and Crooked River on the W.

James River, Va., is formed by the confluence of Jackson and Cowpasture Rivers, which rise in the Alleghany Mts., and run in S. W. courses, nearly parallel to each other, for about 50 miles, until they form a junction near the N. W. angle of Bottetourt co. The river here assumes a S. course for a few miles, and receives Craig's Creek from the S. It then takes a more easterly direction, bearing first S. E., then N. E., about 35 miles, to the W. base of the Blue Ridge, where it receives the North River from Augusta co. Here the river begins to break through the Blue Ridge, and, being now a fine navigable stream, it traverses a gap in this mountain range about 15 miles N. E. of the Peaks of Otter. Its general course through the mountains is S. E., in which course it continues for 30 miles farther, forming the dividing line between Amherst co. on the N. and Bedford and Campbell counties on the S. Here, traversing another lateral chain of mountains, the river is inflected to the N. E., and pursues this course 40 miles, between Amherst and Nelson counties on the N., and Appomattox and Buckingham on the S. It then assumes a course a little S. of E., which it pursues in general about 70 miles, to the head of tide water, separating Albemarle, Fluvanna, Goochland, and Henrico counties on the left, from Buckingham, Cumberland, Powhattan, and Chesterfield on the right. It receives the Appomattox River from the S. at City Point, 34 miles below Richmond. This is the largest tributary of James River, being about 150 miles long, and navigable for large merchant vessels 20 miles, to Petersburg, and for boats through nearly its whole course. After meeting the tide, James River increases considerably in width, and continues by comparative courses about 100 miles in a S. E. course, until it passes through Hampton Roads, and merges in Chesapeake Bay, between Old Point Comfort and Point Willoughby. The whole distance from the farthest source of James River in the Alleghany Mts., to its mouth, following all the windings of the stream, is about 500 miles. Its comparative length through the centre of its valley is about 370 miles. A line drawn in a S. S. W. direction from Old Point Comfort to the Alleghany Mts. 225 miles, will pass very nearly through the centre of that portion of the valley of James River which lies E. of the mountains. Its broadest part, including those of its confluent, is W. of the mountains, where it has a width of 90 miles; but the mean width of the entire valley is about 45 miles, and its area something over 10,100 square miles. Lynchburg on the S. side, and Richmond on the N., are the principal places on James River. The river is navigable for ships of large size as far as Jamestown. Vessels of 200 tons may go up to Warwick, and of 120 tons to Rockets, the port of Richmond. 110 miles from its mouth. Here are falls which entirely obstruct ship navigation. A canal, however, connects the tide waters below with the boatable waters above the falls, at Richmond, which are thence navigable for bateaux 220 miles. The first English settlement in the United States was made on this river in 1608. It was on a point of land projecting into the river from the north side, 32 miles from its mouth. A few ruins are all that now remain of this ancient and once important place.

James River, Mo., pursues a S. S. W. course

through Greene and Taney counties, and falls into White River.

Jefferson Mount, On. This is an elevated peak of the Cascade range, situated S. from Mount Hood.

Jeffrey's Creek, S. C., falls into the Great Pedee River in lon. $79^{\circ} 29'$ W. and lat. $34^{\circ} 8'$ N.

Jessup, Lake, Orange co., Fa., lies S. from Lake Monroe, with which it is connected by an outlet.

Jessup's or Indian River, N. Y., rises in Hamilton co., and flows N. E. into Indian Lake.

Jewell's Island, Me., lies in Casco Bay, off the town of Cumberland, Cumberland co., and about 10 miles E. of Portland.

Jilico Creek. A small stream rising in the N. part of Campbell co., Te., and flowing N. into the Cumberland River, which it enters in Whitley co., Ky.

Jocoe Fork, On., rises among the Rocky Mts., flows W., and empties into Clark's Fork of the Columbia River.

Joe's Pond, Vt. See Danville.

Joe's Rock Hill, Wrentham, Ms. Height 486 feet.

John's River, N. H., a branch of the Connecticut, has its principal source in Pondicherry Pond, in the town of Jefferson. Its other branches rise in Carroll, Whitefield, Dalton, and Lancaster.

John's River, N. C., rises in the Blue Ridge, Burke co., and empties into the Catawba.

John Day's River, On. A large stream rising among the Blue Mts., and flowing N. W. into Columbia River.

Johnson's Creek, N. Y., rises in Niagara co., flows N. E., and empties into Lake Ontario in Orleans co.

Jonathan's Creek, Ky. A small branch of the Tennessee River, which it enters in Marshall co. *Jones Creek, Kent co., De.* This stream rises in the N. W. part of the county, and flows S. E. into Delaware Bay.

Jones Creek, Ware co., Ga. This stream, which is one of the head branches of the Suwanee, flows through the W. part of Okefinokee Swamp, and unites with the Suwanuchee near Fort Gilmer.

Jones Creek, McIntosh co., Ga. A branch of the Alatomaha.

Jones Falls Creek, Baltimore co., Md. A small branch of the Patapsco River, which it enters at Baltimore.

Johnson's Creek, Ky. A branch of Licking River, which it enters from the E. in Nicholas co.

Judith, Point, R. I., is situated in the town of South Kingston, 11 miles S. S. W. from Newport, in N. lat. $41^{\circ} 24'$, W. lon. $71^{\circ} 35'$. A light-house, the tower of which is 35 feet high, was erected here in 1810. The Point is about midway between Vineyard and Long Island Sounds, Montauk, on Long Island, being about 30 miles S. W., and Gay Head, on Martha's Vineyard, E. by S. about 35 miles.

Juliet Lake, Houghton co., Mn. A small sheet of water lying in the N. W. part of the county.

Juniata River, Pa. This river is formed by the Raystown and Franktown branches, which rise at the foot of the Alleghany Mts. It unites with the Susquehanna 15 miles above Harrisburg. Its length is about 200 miles. The Pa. Canal runs parallel with the Juniata and Franktown Rivers to Hollidaysburg.

Jykill Island and Sound, Ga. They are situated at the mouth of Turtle and Scilla Rivers, on the S. E. shore of Glynn co.

Kaaterskill, N. Y. This river rises in Hunter, Greene co., among the Catskill Mts., flows N. W., and enters Catskill Creek in the town of Catskill. It is formed by the outlets of two little lakes about a mile and a half in circumference. At Pine Orchard, near the Mountain House, are a series of beautiful falls, which are much visited by travellers. The water falls perpendicularly 175 feet, and, after resting a moment on a ledge of rock, falls 85 feet more, making a total descent of 260 feet. It then rushes through a dark ravine into the valley of the Catskill.

Kaatsberg Mountains. See *Catskill Mountains*.

Kabildwi River, Ma. This river rises in two forks S. W. from the source of Rum River, flows S. W. for some distance, and then turning to the S. E., empties into the Mississippi.

Kadikomeq Lake, Ma. Situated N. E. from Gayashk Lake, and connected through Pine River with the Mississippi.

Kagino Lake, La Pointe co., Wn. Situated near the centre of the county, at the head of one of the main branches of Bad River.

Kalamazoo River, Mn. This river rises in Hillsdale co., and after a winding W. N. W. course of 200 miles, through Calhoun, Kalamazoo, and Allegan counties, enters Lake Michigan 41 miles N. of St. Joseph River, and 29 S. of Grand River. Its average depth for 8 miles from its mouth is 12 feet. At low water the bar at its mouth has but 6 or 7 feet. It is navigable 38 miles, to Allegan, for boats of 50 tons. The water power of the river and its branches is extensive.

Kandiotta Lake, Ma. One of the principal sources of the Psihu or Wild Rice River.

Kanhawa River, N. C. and Va. The Great Kanhawa River has its most remote sources in Ashe co., N. C., between the Blue Ridge and the main Appalachian chain, there denominated the Iron Mountain, though the river is not known as the Kanhawa until after it leaves this state and traverses several counties in Virginia, having in its course broken through the Iron Mountain, and also the Western chain of the Alleghanies, and received from the N. E. the two important tributaries, the Green Brier and Gauley Rivers. Above the Gauley, which enters in Nicholas co., the river is known as New River, and below as the Great Kanhawa. Its course in N. C., and, so long as it continues to traverse the region of the mountains, in Va., is, in the main, N. and N. E. In Montgomery co. it turns to the N. W., and, breaking through the western chain of the Alleghany Mts., continues this general course to its confluence with the Ohio. Besides the tributaries that have been mentioned above, it receives the Elk River from the N. and Coal River from the S., both entering it in Kanhawa co. It falls into the Ohio at Point Pleasant, in Mason co., lat. 38° 52' N. The entire length of the valley of the Great Kanhawa, from the point in the Alleghany Mts. where the river turns towards the Ohio, to its mouth, is about 200 miles. The greatest breadth from the sources of New River to those of Green Brier is about 180 miles, and the mean breadth about 60, giving an area drained by this river of about 10,800 square miles. The whole length of the river from its sources in Ashe co., N. C., by comparative courses, is about 300 miles, and its width, at its mouth, 500 yards. Following all the windings of the stream, its length, of course, is considerably greater than that here given. The comparative elevation of the valley of the Great

Kanhawa, as a physical section of the country, is its most remarkable feature, having an altitude, at the mouth of the river, of 525 feet above the tide waters of the Atlantic, at the foot of the mountains of 1585 feet, and at the sources of New River of about 2500 feet. The valley of the Great Kanhawa, proper, below the confluence of the Gauley, lies between that of the Little Kanhawa on the N. E. and that of Guyandot on the S. The most important enterprise of internal improvement in Va. is that undertaken by the James River Navigation Company, first chartered in 1784, on the line of the James and Kanhawa Rivers, and the intervening space, with a view to connect the commerce of the Ohio with the Atlantic. A portion of their outlay has been expended upon the Kanhawa, but the principal part upon the more eastern sections of the route, while much more remains to be done to complete all the improvements projected.

Kankakee River, Is. This stream rises in the N. part of Ia., and, entering Is. in Will co., it receives Iroquois Creek from the S., and unites with the Des Plaines to form Illinois River at Dresden.

Kanranzi River rises in Ma., flows S. of W., and empties into the Inyan Rekah, or River of the Rock.

Kansas River, In. Ter., has its source between the Platte and Arkansas Rivers, near the Rocky Mts., and, receiving several large branches on the N. side, it enters the Missouri at the W. boundary of the state of Mo. It is 340 yards wide at its mouth. Its whole length is about 1200 miles, and it is navigable 900.

Kaskaskia River, Is. This large branch rises in Champaign co., and enters the Mississippi 7 miles below Kaskaskia village, after a S. S. W. course of 300 miles. It is navigable to Vandalia, 150 miles from its mouth, at high water.

Katahdin Mountain, Me., is situated in the E. part of Piscataquis co.

Kauwemin River, Fond du Lac co., Wn. A head branch of Milwaukee co.

Kawakomik, or Clear Water River, Ma. A W. tributary of the Mississippi, which it enters above Crow River.

Kayaderosseras Creek, N. Y., an important mill stream, rises among the Kayaderosseras Mts., in Saratoga co., and flows S. E. into Saratoga Lake.

Kayaderosseras Mountains, N. Y., extend 60 miles in a S. W. direction, through Warren, Saratoga, and Fulton counties. The height of this range between the Schroon branch of the Hudson and Lake George is from 800 to 1200 feet, in Saratoga co. from 500 to 800 feet, and as it approaches the Mohawk, it gradually diminishes.

Kearsarge Mountain, Merrimack co., N. H., lies between the towns of Sutton and Salisbury, extending into both towns. It is elevated 2461 feet above the level of the sea, and is the highest mountain in the county. Its summits are a bare mass of granite, but the sides are thickly wooded. The prospect from this mountain is, in a clear sky, very extensive and beautiful.

Keewaiwona Bay, Mn. This is a long, pointed bay, extending nearly to the S. border of Houghton co., between Point Abbaye on the E. and Keewaiwona Point on the W.

Keewaiwona Point, Houghton co., Mn. A bold promontory extending into Lake Superior W. from Keewaiwona Bay. It is drained by many

small streams, and has numerous bays, harbors, and inlets on its coasts.

Kenduskeag Stream, Penobscot co., Me., rises in Dexter and Garland, winds in a S. E. direction through Corinth, Levant, and Dutton, and enters the Penobscot in the city of Bangor. It is a beautiful and valuable mill stream, and has many tributaries.

Kennebec River, Me. The first source of this important river is Moosehead Lake, of which it is the outlet. From thence it passes in a S. W. course nearly 20 miles, where it receives the waters of Dead River. It then proceeds S. to Starks, about 40 miles, where it receives the waters of the Sandy. Here it changes its course, E., about 12 miles, passing Norridgewock and Skowhegan. It then again changes its course to the S. till it receives the waters of the Sebastcook, about 15 miles. It continues to descend in nearly a S. course to Hallowell, about 20 miles. Here it inclines to the E. a few miles, and then, resuming a S. course, and passing through Merrymeeting Bay, where it receives the Androscoggin River, it passes Bath, and meets the ocean. The whole length of this river, from Moosehead Lake to the sea, is about 150 miles. The tributaries already named are the most considerable; but there are many others that would be considered important rivers in other sections of the country. The whole fall of this river is more than 1000 feet, and its hydraulic power, with that of its tributaries, is incalculable. We are enabled to state that the average or mean time of the closing of this river by ice at Hallowell, for forty-five successive years, was December 12, and of its opening, April 3. The most remarkable years were 1792, when the river closed November 4, and opened April 1 the following year, and 1831, when it closed January 10, and opened April 13. Since the year 1786, the Kennebec has not been obstructed by ice in any spring after the 20th of April.

Kent's Hill, Me., is situated in the W. part of Kennebec co.

Kent Island, Queen Anne co., Md., lies in Chesapeake Bay, opposite Annapolis. Length 12 miles.

Kentucky River, Ky., rises by three principal branches in the Cumberland Mts., denominated the North, Middle, and South Forks. These unite in Estill co., and the river thence pursues a circuitous course, but, in its lower part, generally N. N. W., until it falls into the Ohio at Carrollton, 534 miles below Pittsburg. The general course is very nearly S. E. to N. W. The length of the valley drained by this river is about 175 miles, with a mean width of about 40 miles, giving an area of 7000 square miles. This valley embraces part or the whole of nineteen counties, or a fraction over one sixth part of the whole state of Kentucky. The distance from the mouth of the river to its forks, by the course of the stream, is about 260 miles; in a direct line, about 112 miles. The channel of the river, in its natural state, is navigable, in high water, for steamboats of 300 tons, as far as Frankfort; and, in the same state of the water, steamboats might descend the river from 200 miles above. But the navigation has been improved by the construction of seventeen dams between the mouth of the river and the forks, with the corresponding number of locks, overcoming a difference of

elevation of 216 feet in the whole. These dams are from 350 to 500 feet long; and the locks are 178 feet in length by 38 feet in breadth. By means of the facilities thus furnished, boats not requiring more than 6 feet of water navigate the river at all seasons. The Kentucky River is without direct falls, though the natural current is rapid, and the bed rocky.

Keowee River. This stream rises in Macon co., N. C., flows S., and enters the Seneca River, of which it is the principal head branch, in Pickens district, S. C.

Kern Lake, Ca. A small sheet of water lying S. E. from Tulare Lake, with which it is connected by an outlet.

Kern River, Ca. This stream rises in the S. part of the Sierra Nevada range, and flows S. W. into Kern Lake.

Kettle Creek, Pa. It rises near the W. part of Tioga co., flows S. S. W., and empties into the Susquehanna in Clinton co.

Kewaunee River, Brown co., Wn. It rises near the S. part of Green Bay, and flows S. E. into Lake Michigan.

Key Biscayne Bay, Fla. Situated off Dade co., and N. E. from Barnes Sound. It contains numerous islands, of which Key Biscayne and Elliot's Key are the principal.

Key West, or *Thompson's Island*, Monroe co., Fla. This island is 4 miles long, and 1 mile wide. About a foot below the surface is a bed of limestone, which extends under the whole island. On the N. W. part is an excellent harbor.

Kiamishi River, In. Ter., rises in As., and falls into Red River 6 miles below Fort Towson.

Kickapoo Creek, Is. It rises in the interior of McLean co., flows S. W., and empties into Salt Creek in Logan co.

Kickapoo River, Wn. This river rises in Adams and Crawford counties, flows S. S. W., separating Crawford from Sauk co., and crossing the N. W. corner of Richland co., it reenters Crawford co., where it falls into the Wisconsin.

Killbuck River, O. A northern branch of the Muskingum.

Killington Peak, Vt., is a summit of the Green Mountains, in the S. part of Sherburne, and N. from Shrewsbury Peak.

Kill Van Kull, N. Y., a channel, lying between Staten Island and N. J. shore, is a continuation of Staten Island Sound. It extends from New York Bay to Newark Bay, a distance of 4 or 5 miles.

Kinderhook Creek, N. Y. This large and important mill stream rises in the E. part of Rensselaer co., flows S. W., and enters the Hudson, near the village of Columbiaville, Columbia co.

Kinebik, or *Snake River*, Ma. This stream rises in several lakes, flows S. E., and empties into the St. Croix River.

Kingdom Cone Creek, Letcher co., Ky. A small head branch of the N. fork of Kentucky River.

King's Creek. This small stream rises in the S. part of N. C., flows S. W., and enters Broad River in York district, S. C.

King's Mountain, N. C., situated in the W. part of the state, 25 miles W. from Charlottenburg.

King's River. This stream rises in the W. part of Newton co., As., flows N. N. W., and empties into White River in Barry co., Mo.

Kingston Landing, N. Y., formerly called Columbus Point, is situated in Kingston, Ulster co.,

on the W. side of Hudson River, 90 miles N. of the city of New York.

Kiniconink Creek, Lewis co., Ky. A branch of the Ohio River.

Kino Lake, Chippewa co., Wn. Situated in the N. W. part of the county, S. E. from Makwa Lake, with which it is connected by an outlet.

Kip's Bay, N. Y., lies in East River, on the E. side of the Island of N. Y., and opposite the mouth of Newtown Creek.

Kishkaupa River, Wn. This stream drains the S. W. part of Sheboygan co., and falls into Milwaukee River in Washington co.

Kissimee River, St. Lucie co., Fla., rises in a lake of the same name, flows in a S. S. E. direction, and falls into Lake Macaco.

Kittatinny Mountains, or *Blue Ridge*. These mountains extend through the N. part of N. J., cross the Delaware River at the Water Gap, pass through the S. E. part of Pa., and the W. part of Md., through Va., the Carolinas, into Ga.

Kittoctan Creek, Loudon co., Va., rises in the Blue Ridge of mountains, and flows N. E. into the Potomac River.

Klip's Hill, N. Y., is a branch of the Mayfield Mountains. It is sometimes called Anthony's Nose, in Montgomery co., where it crosses the Mohawk Valley. In it there is a remarkable cavern, called Mitchell's Cave, the walls of which are ornamented with incrustations and stalactites.

Knapp's Creek, Wn., drains the W. part of Richland co., and falls into Wisconsin River.

Knife River, Ma. It flows in a winding, S. direction, and empties into the W. part of Lake Superior.

Knox Creek, Tazewell co., Va. A small tributary of the Tug Fork of Sandy River.

Kooskoosky River, On. This large river rises among the mountains in the E. interior of the co., flows W., and empties into Lewis Fork of Columbia River.

Koweba Lake, Brown co., Wn. Situated in the N. E. part of the state, near the Menomonee River.

Kushkuning River, Wn. It rises in the N. E. interior of Dane co., flows S. S. E., and empties into Long Lake, in the S. W. corner of Jefferson co.

La Bacca Bay, Ts. Situated W. from Matagorda Bay, at the mouth of La Bacca River.

La Bacca River, Ts. A small river flowing S. E. into La Bacca Bay.

Lac Court Oreilles, Chippewa co., Wn. This lake is situated in the N. part of the county, and is the source of one of the head branches of Chippewa River.

Lac Vieux Desert. This lake lies partly in Mn., and partly in Brown and Portage counties, Wn., and is the head source of Wisconsin River.

Lackawanna River, Pa. This fine mill stream rises in Wayne and Susquehanna counties, and pursuing a S. and S. W. course 30 miles, enters the Susquehanna at Pittston.

Lackawannock Mountains, Luzerne and Wayne counties, Pa., extend between the sources of the Lackawaxen and Lackawannock Rivers. One of the N. peaks is called Moosuck Mountain.

Lackawaxen River, Pa. This river rises mostly in Wayne co., and flowing through a deep valley, enters the Delaware in Pike co. Its principal tributaries are the Dyberry, Middle, and Waulenpaupack Creeks. The Delaware and Hudson

Canals follow the Lackawaxen 25 miles to Dyberry Creek.

La Crosse River, Crawford co., Wn. It flows S. W., and empties into the Mississippi below Black River.

Ladies' Island, Beaufort district, S. C. This island lies between Coosaw River on the N., St. Helena and other islands on the E., and Port Royal Island on the W.

La Fave River, As. A large stream rising among the Washita Hills, Scott co., flowing E. through Yell and Perry counties, and emptying into the Arkansas River.

Lafayette, Fort, N. Y. See *Fort Hamilton*.

Lafourche River, La. This outlet of the Mississippi leaves the river on the S. side, above Donaldsville, and flows in a S. E. course into the Gulf of Mexico. Its length is 90 miles.

La Mine, River, Mo., has its source in Lafayette and Johnson counties, and flowing E. enters the Missouri in Cooper co., 5 or 6 miles above Booneville. It is navigable for a considerable distance for keel boats.

Lamoille River, Vt. This river is formed in Greensborough. Its general course is N. W. It passes through several towns, and falls into Lake Champlain at Milton, 12 miles N. from Burlington. This river has numerous tributaries: it has several falls, which produce a valuable water power. Its banks in many parts are very fertile. It was discovered by Champlain in 1609.

Lamprey River, N. H., rises in the town of Northwood, on the W. of Saddleback Mountain. It receives the waters of Jones's Pond, Pautuckaway, North, Little, and Piscascie Rivers, and meets the tide two miles above the Great Bay.

Laplot River, Vt. This stream rises in the S. E. part of Hinesburg, and running in a N. W. direction through a corner of Charlotte, and through Shelburne, falls into the head of Shelburne Bay. It is about 15 miles in length, and affords several mill sites.

Larguille River, As., has its source in the N. interior of Poinsett co., flows S. S. E., and enters the St. Francis on the boundary between St. Francis and Phillips counties.

Laughery's Creek, Ia. This stream rises in two forks in Franklin and Decatur counties, flows S. S. E. across Ripley into Dearborn co., where it turns to the N. E., and falls into the Ohio River.

Laurel Mountains. These mountains, which are a W. branch of the Alleghanies, extend through Pa. and Va. to Ky., and then, taking the name of Cumberland Mts., divide Va. and Ky., cross Te., and terminate in Aa.

Lawrence Hill, Pa. This mountain lies between the Alleghany and Chestnut ridges, and separates Somerset and Fayette counties.

L'Eau Claire River, Chippewa co., Wn. This river, with its numerous branches, drains the S. E. part of the county, and flows in a W. direction into the Chippewa River.

Leech Lake, Ma. This large, irregularly shaped body of water lies S. from Cass Lake, and is connected on the E. with the Mississippi River, by Leech Lake River. It receives the waters of small lakes and rivers on every side.

Leech's Stream, Vt., proceeds from a small pond in the N. part of Averill, and runs N. E. across the W. part of Canaan, and passes into Leech's Pond, which is about two miles wide and three long, and lies partly in Canada and partly in Vt. From this pond the stream runs nearly E. about

three miles, then S. E. into Connecticut River. Its mouth is nearly two rods wide.

Lee's Island, Fairfax co., Va., lies in the Potomac.

Lehigh River, Pa. This river rises in the E. part of Luzerne co., and, pursuing a winding course of 100 miles, empties into the Delaware at Easton. The upper part of the river is a rapid stream, with many falls. A navigation is opened by means of this river from Easton to Newhaven, a distance of 84½ miles, of which 30½ consist of pools, 39¼ of canals, 2½ of locks, and the remainder of sluices.

Lemonfair River, Vt., rises in Whiting and Orwell, runs through the E. part of Shoreham, across the S. E. corner of Bridport, and joins Otter Creek in Weybridge. There are some mill sites near its head, but it is, in general, a very sluggish, muddy stream.

Lemovier River, Wn. It rises in the N. W. part of Adams co., flows S. E., and falls into the Wisconsin on the N. border of Sauk co.

Lewis Creek, Vt., a valuable mill stream, rises near the N. line of Bristol, runs through the W. part of Starksboro' and E. part of Monkton, through Hinesburg, and the S. E. corner of Charlotte, and falls into Lake Champlain in Ferrisburg, a short distance N. from the mouth of Little Otter Creek.

Lewis Lake, N. Y. This small sheet of water lies in the town of Lake Pleasant, Hamilton co.

Licking River, Ky., rises in Floyd co., and falls into the Ohio at Newport, opposite Cincinnati. It is navigable 70 miles. Its whole length is 180.

Licking River, O., is formed by three principal branches, which water Licking co. It affords extensive water power, particularly by a dam at its entrance into the Muskingum.

Liepers Creek, Maury co., Te. A small branch of Duck River.

Lime Lake, N. Y., is a small lake situated in the town of Machias, Cattaraugus co.

Lime River, Brown co., Wn. The principal branch of Oconto River, which it enters from the N. W.

Limestone Creek, Orangeburg district, S. C. A small tributary of the North Edisto River.

Link Creek, Sangamon co., Is. A branch of Sugar Creek.

Little Harbor and *Piscataqua Harbor*, N. H. See *Portsmouth*.

Little River, N. C. It rises in the W. part of Franklin co., flows S. E., and enters the Neuse near Waynesboro', Wayne co.

Little River, S. C. This river forms part of the boundary between N. C. and S. C., and empties into the Pedee.

Little River, Ga., empties into the Savannah, 30 miles N. W. of Augusta.

Little River, Blount co., Te. This river rises among the mountains in the S. E. angle of the county, and flows N. W. into Tennessee River.

Little River, Ky., empties into Cumberland River, on the E. side.

Little River, Ia., a tributary of the Wabash, enters it above Vincennes.

Little River, Ts. A W. branch of the Brazos.

Little Androscoggin River, Me., has its sources in ponds in the towns of Woodstock, Greenwood, and Norway, Oxford co., flows in a S. E. direction across an angle of Cumberland co., and enters the Androscoggin opposite Lewiston.

Little Au Sable. See *Au Sable*.

Little Bay de Noquet, Mn. Situated N. from Green Bay and W. from Big Bay de Noquet. It receives the waters of Esconawba, Rapid, and several other rivers.

Little Beaver Creek, S. C., forms part of the boundary between Lexington and Orangeburg districts, and empties into the Congaree River.

Little Blue River, Mo., rises in the S. W. part of Jackson co., flows N. E., and enters the Missouri E. from the Big Blue.

Little Brazos River, Ts. It rises near the mouth of Big Creek, and flows S. E., nearly parallel with Brazos River, which it finally enters.

Little Calf Pasture Creek, Va., rises in the N. part of Augusta co., flows S. S. W., and empties into North River.

Little Calliou Bayou, Terre Bonne parish, La., rises near the source of the Grand Calliou, and flows S. into the Gulf of Mexico.

Little Catawba River, N. C. This river rises in Catawba and Burke counties, flows S. E., and unites with the Catawba at the S. E. angle of Lincoln co.

Little Chazy River. See *Chazy River*.

Little Cedar Creek, Mn. A branch of the Menomonee River.

Little Delaware River, N. Y., has its source in the town of Bovina, Delaware co., and flows W. into the W. branch of the Delaware.

Little Eninandigo River, La Porte co., Wn. A small stream flowing S. into the St. Croix River.

Little Falls, Herkimer co., N. Y. A rapid descent in the Mohawk River of about 42 feet in the course of a mile, so named in distinction from the larger falls, at Cohoes, in the same river, about 2 miles from its mouth. A continuation of the chain of the Catsberg Mt. crosses the Mohawk here, through a gap of which the river has apparently worn a passage, having now, on either side, a rocky wall of 500 feet in height. The bed of the river is composed of hard primitive granitic rock, above which are extensive strata of sandstone and blue limestone. The opposing cliffs here seem once to have been united, and to have constituted the barrier of a lake extending far to the west. The fall in the river consists of two long rapids, separated by an interval of deep water, occupying each about a fourth of a mile. The upper rapids are the largest. Above them a dam across the stream renders it placid, over which the waters, separated by a small island, fall in beautiful cascades into a deep pool beneath, whence the current rushes tumbling and foaming over ridges and masses of rock in its first descent, then flowing with comparative gentleness for a short distance until it is impelled with new impetuosity over the stony bed below. The Erie Canal descends through this pass on the S. side of the river, by five locks, in a deep cut through the solid rock, overcoming obstacles inferior to none excepting the deep excavation at Lockport. The village of Little Falls stands on the canal at this point, and enjoys advantages, from the extensive water power here created, for carrying on manufacturing operations to a very large extent. The Utica and Schenectady Railroad also passes through the chasm, on the N. side of the river. Boats were formerly transported round the falls by a canal on the N. side, which is now superseded by the Erie Canal, and is made to serve as a feeder to it by being brought across the entire valley in an aqueduct of massive stone masonry, supported upon three lofty arches, two of 50, and

one—the centre arch— of 70 feet span. Few spots can offer more to excite admiration, in romantic features and stupendous achievements, both of nature and of art. See *Iockton*.

Little Genesee Creek, N. Y., rises in Alleghany co., flows S. W., and enters Alleghany River in Cattaraugus co.

Little Hoosick Creek, N. Y., rises in Berlin, Rensselaer co., and flows N. into Hoosick River.

Little Kentucky River; Ky. It rises in the N. part of Shelly co., flows in a northerly direction, and empties into the Ohio near the mouth of the Kentucky River.

Little Machias and Little Rivers. See *Cutler*, Me.

Little Maquetats Creek, Dubuque co., Io.

Little Missouri River, As. A small stream flowing E. by S., and emptying into the Wachita River.

Little Neck lies in Huntington, Suffolk co., N. Y., between Great and Little Cow Harbors.

Little Neck Bay, N. Y., lies mostly in the town of Flushing, Queen's co., on the N. side of Long Island. It is 3 miles long, 1 mile wide, and partly surrounded by fine country residences and farms.

Little Ossipee River, Me., has its source in a pond in the W. part of Fork co., flows N. E., and enters the Saco in the town of Limington.

Little Otter Creek, Vt., rises in Monkton and New Haven, and falls into Lake Champlain in Ferrisburg, 3 miles N. from the mouth of Otter Creek. This stream, towards its mouth, is wide and sluggish, and runs through a tract of low, marshy ground.

Little Pigeon Creek, Ia., flows S. W., separating Spencer and Warwick counties, and falls into the Ohio.

Little Prairie River, Ma. It rises in a small lake, and flows in a W. direction into West Savannah River.

Little Rock River, Ma. A small stream falling into the Minnesota or St. Peter's River, near the outlet of Minnesota Lake.

Little Rock River, Ma. A small stream flowing S. E. into the St. Croix River.

Little Saline, Mo. A branch of the Missouri River, which it enters in the N. part of Moniteau co.

Little Saluda River, Edgefield district, S. C. This stream receives numerous branches, flows in an E. direction, and falls into the Saluda.

Little Snake Lake, On. A small sheet of water on the S. border of the territory, and connecting by an outlet with Bear River.

Little Sequatchy Creek, Marion co., Te. A branch of Sequatchy River, which it enters near Jasper.

Little Sodus Bay, N. Y., is a deep body of water lying in the town of Sterling, Cayuga co., and connected on the N. with Lake Ontario. Sodus Creek flows into it from the S. E. It is 2 miles long, 1 mile wide, and has a bar at the mouth.

Little Sugar Creek, Wn., rises in the S. W. part of Dade co., and flows S. E. across Green co., into Sugar Creek.

Little Thibeau River, Benton co., Mo. A tributary of Osage River, which it enters at Warsaw.

Little Tlamath Lake, On. Situated among the Cascade Mts., N. E. from Tlamath Lake.

Little Waraju River, Ma. It flows N. E., and empties into the Minnesota, or St. Francis River, a little below the Waraju.

Little Wachita River, Ts. A small W. tributary of Red River.

Little Wisconsin River, Portage co., Wn. This river has its sources in several chains of small lakes, flows S. S. E., and falls into the Wisconsin River.

Little Yadkin River. See *Yadkin River*.

Livingston Creek, Ky. A small stream, forming part of the boundary between Caldwell and Crittenden counties, and emptying into the Cumberland River.

Lizard River, Io. This river rises in the N. part of the state, flows S. E., and empties into the Des Moines, a little above Boone River.

Lloyd's Neck, N. Y., lies in the town of Oyster Bay, Queen's co., on the N. side of Long Island. It has Long Island Sound on the N., Huntington Bay on the E., Oyster Bay on the W., and a deep inlet, called Lloyd's Harbor, on the S.

Lochahatchee River, St. Lucie co., Fla. This small stream flows in an E. direction, and reaches the ocean through Juniper Inlet. At its mouth is Fort Juniper.

Lockwood's Folly, River, and Inlet, Brunswick co., N. C. This is a small stream rising near the centre of the county, and passing through the inlet into the ocean.

Locust Creek, Vt., rises in Barnard, and falls into White River, at Bethel. It is mostly a rapid little stream, and affords several good mill sites.

Locust Creek, Mo. A stream rising in the N. part of Putnam co., and flowing S. into Chariton co., where it enters Grand River.

Long Bay, N. H., at the head of Winnipisiogee River, lies between Guilford and Meredith. The waters of the Lake Winnipisiogee pass through this bay into the river of that name.

Long Creek, As., takes its rise in the N. part of Newton co., flows N. E., and enters White River on the S. border of Tancy co., Mo.

Long Cane Creek, Troup co., Ga., pursues a S. W. course, and falls into the Chattahoochee.

Long Falls, Black River, N. Y. The first fall is at the village of Carthage, Jefferson co., where there is a descent of 60 feet in half a mile, below which the river is navigable 4 miles; it then descends about 100 feet in 2 miles, thence is navigable to the Great Bend, between Champion and Le Ray, a distance of 4 miles; then flows in a succession of rapids to the villages of Watertown and Brownville, from whence the rapids are made navigable, by locks and dams, to Black River Bay, which connects with Lake Ontario. See *High Falls*.

Long Island, Me., lies in Blue Hill Bay, opposite Seaville.

Long Island, Va. A small island, lying at the mouth of York River.

Long Island, N. Y., is the largest of the islands on the coast of the Atlantic belonging to the U. S. From Fort Hamilton, at the W. end, to Montauk Point, at the E. extremity, the length is about 140 miles. The average width is only 10 miles; although the most important portion of the island lying W. of Peconic Bay is from 12 to 20 miles wide. It contains about 1500 square miles. It is separated from the continent, on the N., by Long Island Sound, lying between the island, through its whole length, and the coast of Connecticut, and varying from 2 to 20 miles in width. It is bounded on the E. and S. by the Atlantic, and on the W. by the Narrows and harbor of New York, and by the strait which connects the harbor with the Sound, called East River, from half a mile to 2 miles wide. The

island belongs to the state of New York. It is divided into three counties — King's co. in the W., which is the smallest in territory, but the largest in population; Queen's co. in the middle; and Suffolk co. in the E., which comprises two thirds of the territory of the island. A rocky ridge, or chain of hills, extends from the W. end to near Oyster Point, in the E. part, the highest elevation of which is in N. Hempstead, 319 feet above the level of the tide. On the N. side of this ridge, the land is rough and hilly; on the S. side, level and sandy. Much of the central portion of the island is covered with wood, consisting of an extensive pine forest, in which the deer still roams at large. The whole island is underlaid with granitic rock, which rises high in the ridge, or Spine, as it is denominated, and breaks out at Hurl Gate, and other places on the East River. The shores are much indented with bays and inlets. Towards the E. side, the island divides into two parts; the S. of which is a promontory, over 30 miles in length, and not generally more than a mile wide, terminating in Montauk Point. This constitutes the township of East Hampton. The N. part, which is much shorter, terminates at Oyster Point, and constitutes the township of Southold. The bay, extending up between these two portions of the main island, is the Great Peconic Bay. In its bosom are included several islands, the most considerable of which are Gardner's and Shelter Islands. 'On the S. side of Long Island is Great South Bay, which is itself another sound in miniature, extending from Hempstead Bay, E., 50 miles, with a width of from 1 to 5 miles, and separated from the ocean by a narrow island, or beach of stones and sand, with several inlets, in no part more than 3 miles broad. West of this, upon the S. W. shore of the island, is Rockaway Beach, which extends for about 22 miles, and is much resorted to by the citizens of New York and Brooklyn for sea bathing, and the sea breezes, so refreshing there in the hot season. From its vicinity to New York, there are many pleasant places of resort upon Long Island, which are much frequented, and many which are occupied for rural residence. Williamsburg and New Rochelle are pleasant places, where many citizens doing business in New York permanently reside. Flatbush, 5 miles from the city; Flushing, 9 miles; Jamaica, 12 miles; and Hempstead, 24 miles, are all delightfully situated. Fort Hamilton, at the Narrows, Gravesend Bay, and Coney Island are favorite bathing-places. Greenwood Cemetery is situated in the S. part of Brooklyn, about 3 miles from the Fulton Ferry, containing about 242 acres, with a great variety of surface, tastefully laid out, to attract the living to the resting-places of the dead. See *Brooklyn and Williamsburg*.

Long Island, Charleston district, S. C. This island is one of a small group, lying N. E. from Charleston harbor.

Long Island, Hillsboro' co., Va. Situated S. from the mouth of Tampa Bay.

Long Island Sound. This inland sea washes the whole S. boundary of Ct., and is formed by Long Island and the state of N. Y. It is navigable as far as Hurl Gate for vessels of any burden, and the passage to and from the sea around Montauk is remarkably easy at any time of tide, and in all weather. See *Judith, Point*. Some of the distances from Providence, and along the

northern coast of this sound, to the city of New York, are here given. From Providence to Newport, 30 miles; to Point Judith, 11 = 41; to the mouth of Stonington harbor, 27 = 68; to the mouth of New London harbor, 8 = 76; to the mouth of Connecticut River, 13 = 89; to the mouth of New Haven harbor, 27 = 116; to Stratford Point, 10 = 126; to the mouth of Fairfield harbor, 6 = 132; to Norwalk, 8 = 140; to Greenwich, or Sawpits, 15 = 155; to Throg's Point, 14 = 169; to Hurl Gate, 6 = 175; to New York, 8 miles; making the distance from Providence to New York, by water, 183 miles.

Long Lake, Me., lies in the N. part of Piscataquis co., 210 miles N. by E. from Augusta. It is about 15 miles long and 2 wide, and supplies Namjamskillecook River, which flows into Temiseonata Lake, the source of Madawaska River.

Long Lake, N. Y., called *Weechobadchonee-puss* (lake abounding in basswood) in the Indian tongue, lies in the N. part of Hamilton co. It is situated in a wild, uncultivated part of the state, and is 18 miles long and from 1 to 2 miles wide, being one of the largest of the cluster of lakes in this vicinity. It flows N., and empties into Racket River, although there is so little difference of level at its extremities that it might be made to flow S. into the Hudson.

Long Lake, Mn. Situated E. from Crooked Lake, mostly in Wyandot co. It receives the waters of the Sheboygan and several other rivers.

Long Lake, Wn. Situated mostly in the S. W. part of Jefferson co. It receives the waters of Rock River in the N. E., and discharges them at the S. W. extremity, on the N. border of Rock co.

Long Lake, Ma. A small sheet of water at the head of Chapah River.

Long Pond, Me. See *Bridgeton*.

Long or Runaway Pond, Vt. See *Glover*.

Long Pond, Litchfield co., Ct. Situated in the town of Winchester, and connected on the N. E. with Mad, a branch of Farmington River.

Long Prairie River, Ma. A large river supplied by a chain of lakes, and flowing N. E. into Crow Wing River.

Long Sault Island, Lower, St. Lawrence co., N. Y., lies in the St. Lawrence River, and is attached to the town of Massena. It is 5 miles long and 1 mile wide. Here are situated the Long Sault Rapids, 12 miles long, with a descent of 80 feet, around which is a canal on the Canada side of the river.

Long Sault Island, Upper, St. Lawrence co., N. Y., lies in the St. Lawrence River, and is attached to the town of Louisville. It is 3 miles in length and from 1 to 1½ miles in width.

Long Shoal River, N. C., flows through the E. part of Hyde co., and empties into Pamlico Sound.

Looking Glass River, Mn. This river drains the S. part of Shiawassee co., flows W. across Clinton into Ionia co., where it empties into Grand River.

Lookout, Cape, On., extends into the Pacific about midway between Capes Foulweather and Disappointment.

Loon Lake, N. Y. This small body of water lies in Chester, Warren co.

Loosahatchy River, Te., rises in the W. part of Hardeman co., flows in a W. direction, and, uniting with Wolf Creek, empties into the Mississippi a little above Memphis.

Loosaschoonah Creek, Mi., rises in Pontotoc co., flows S. W., and enters the Yallabusha.

Lost Lake, Antrim co., Mn. A long, narrow sheet of water lying W. from Great Traverse Bay.

Lourea Island, Montgomery and Warren counties, Mi. Situated in the Missouri, N. E. from the mouth of Gasconade River.

Lowell's Pond, N. H. See *Wakefield*.

Low Point Landing, N. Y. See *Carthage, Dutchess co.*

Lower Montreal River, Houghton co., Mn. A small stream draining the N. part of Keewaiwona Point, and falling into Bete Gris Bay.

Lower Saranac Lake. See *Saranac Lake*.

Lower Three Runs, Barnwell district, S. C., pursues a winding S. course, and falls into the Savannah.

Lumber River rises in N. C., and flows S. E. and S. S. W., forming the boundary between Marion and Harry counties, S. C., until its junction with the Little Pedee.

Lya Hende, or River of the Lakes. This chain of lakes commences in the N. part of Io., and, flowing in a N. direction into Ma., empties into Chanjushka River.

Lynhaven Bay or Harbor, Va., is situated in Chesapeake Bay between the mouth of James River and Cape Henry, and receives the waters of Lynhaven River.

Maccason Creek, Va., rises in the S. E. part of Russell co., and flows S. W. into Scott co., where it falls into the N. fork of Holston River.

McCrady River, On. and Uh., rises in a lake in the S. part of On., flows in a winding S. course, and empties into Rhett Lake in Uh.

McGee's Creek, Pike co., Mi. A small branch of the Bogue Chitto.

Machias River and Bay, Washington co., Me. The two head branches of the river are supplied by several ponds near the centre of the county, and unite at Machias Port, affording extensive water power in their course. The bay lies at the mouth of the river, between the towns of Cutler and Machias Port. It is 10 miles long, 4 or 5 wide at its mouth, and contains several coves, harbors, and islands.

Machias and Little Machias Rivers, Penobscot co., Me., are important tributaries to the Aroostook, which they enter near each other in Aroostook co., about 30 miles W. N. W. from Mars Hill.

McIndoes Falls, Vt., a considerable fall in Connecticut River, at the head of boat navigation, and opposite the S. E. corner of Barnet.

Mackinaw Island, Mn. Situated in the N. part of Lake Huron, a little above the Straits of Mackinaw.

Mackinaw River, Is., has its source in a prairie near the centre of McLean co., and passing through Tazewell co., falls into the Illinois 3 miles below Pekin. It affords water power, and its borders are mostly fertile.

McKee's Creek, Is., waters the E. part of Marquette co., and flows S. E. into the Illinois River.

McKenny's Creek, As. This stream joins Red River at the N. W. extremity of Fayette co., takes a semicircular bend, and unites with the Sulphur Fork of the same river.

Mackenzie's Fork, On. A head branch of the Willamette River.

Macon's Islands, La. A group of small islands lying in Chaudoleur Bay, off St. Bernard parish.

Macoquetais River, Io. It rises in the S. E. part of Fayette co., flows S. E., and empties into the Mississippi River in Jackson co.

Macoupin Creek, Is. This stream rises in the N. part of Macon co., and passing through a fertile country, enters the Illinois 26 miles above its junction with the Mississippi.

McQuam Bay, Vt. A large open bay in the W. part of Swanton.

McTiger Creek, Orangeburg district, S. C. A head branch of the South Edisto River.

Mad River, N. H., rises among the mountains in the N. E. part of Grafton co., and crossing the S. E. part of Thornton, falls into the Pemigewasset at Campton.

Mad River, Vt. A rapid stream, which rises in the highlands S. from Warren, and passing through Waitsfield, falls into Winooski River at Moretown.

Mad River, O., rises in Logan co., and, after a course of 50 miles, enters the Miami on the E. side, at Dayton. It affords extensive water power, its current being rapid and broken.

Madamscotis River, Me., has its source in a large pond, flows S. E., and enters the Penobscot about 45 miles above Bangor.

Madawaska River, Penobscot co., Me., is supplied by Temiscouata and other large lakes in the N. part of the state, flows more than 100 miles in a S. E. direction, and enters the St. John's River about 240 miles N. N. E. from Augusta. This river and these lakes water a country of great extent, and hardly surpassed in fertility by any land on the globe.

Madeline Island, La Pointe co., Wn. Situated in Lake Superior, at the mouth of Chegwagon Bay.

Madison Barracks. See *Sackett's Harbor*.

Madison Fort, situated in the town of the same name, Lee co., Io., was erected in 1808 as a defence against the Indians, who obliged the garrison to burn the fort in 1813. A few ruins are now to be seen.

Madunceunk River, Penobscot co., Me. This river enters the Penobscot on the W. side, about 6 miles above the Madamscotis.

Magothy River, Ann Arundel co., Md. This little stream flows S. E. into Chesapeake Bay.

Mahanoy River, Pa. This river rises in Schuylkill co., and flowing through Northumberland co., enters the Susquehanna 11 miles below Sunbury. Its length is 50 miles.

Mahantango River, Pa., is an E. branch of the Susquehanna, which it enters 18 miles below Sunbury, in Northampton co.

Mahoning River, Pa. and O. This river rises in Portage co., passes through Trumbull co., O., and enters Beaver River in Beaver co., Pa. The Pa. and O. Canal follows the lower part of this river.

Mahopack Lake, N. Y. This beautiful sheet of water lies in the town of Carmel, Putnam co. It is about one mile in diameter, contains two or three small islands, and is much resorted to for the fine fish with which it abounds.

Maiden Creek, Pa., flows S. W., and falls into the Schuylkill, 7 miles N. from Reading.

Makwa Lake, Chippewa co., Wn. One of a chain of lakes situated at the head of Red Cedar River.

Malade River, On. This river rises S. E. from the source of Big Wood River, flows S. S. W., and empties into Lewis Fork of Columbia River.

Malheureux Islands, St. Bernard parish, La. A small group lying at the mouth of Lake Borgne.

Malheur River, On. This river has its source

in a chain of lakes, flows N. E., and empties into Lewis Fork of Columbia River, nearly opposite Payette River.

Mamaroneck Creek, N. Y., rises in the town of White Plains, Westchester co., flows S., and enters Long Island Sound at Mamaroneck village.

Manataquot River, Ms., rises in Randolph, and after meandering through this town and receiving the waters of Great and Little Ponds, meets the tide waters of Boston harbor at Braintree Landing, on Weymouth Fore River, 10 miles from Boston.

Manitoulin Islands. A chain of islands lying in Lake Huron. They extend about 90 miles in length and 6 in breadth.

Mandowish Lakes, Portage co., Wn. A chain of small lakes situated in the N. part of the county, at the head of Chippewa River.

Manhattan Island. See *New York City*.

Manhegin Island, Me., lies off Muscongus Bay, Lincoln co., about 12 miles S. from the mouth of St. George's River. There is a light-house on the island, the tower of which is 30 feet high.

Manistee River, Mn. This is a large river, rising in Antim and Otsego counties. It flows S. through a part of Crawford, then S. W. through Kalamazoo, Wexford, and Manistee counties, into Lake Michigan.

Maniteau Creek, Mo. A small stream rising in the S. part of Cooper co., and flowing E. into the Missouri River.

Manitowatin Lake, La Pointe co., Wn. Situated at the head of one of the W. branches of Chippewa River.

Manitou Island, Houghton co., Mn. Situated in Lake Superior, off the extremity of Keewawona Point.

Manitowoc River, Wn. This river drains Calumet and Manitowoc counties, and empties into Lake Michigan at the town of Manitowoc.

Mankato River, Iowa and Ma. It rises in many branches in the N. part of Iowa, flows N., and falls into the Minesota or St. Francis River at the great bend opposite Marrah Tankak Lake.

Manomet Hill, Plymouth, Ms. Height 394 ft.

Manomin Lake, Ma., lies at the head of Manomin River.

Manomin River, Ma. It rises in Manomin Lake, flows W., and empties into the Mississippi a little above Muddy River.

Manomin or Wild Rice River, Ma. It rises in the N. part of the territory, flows in a westerly direction, and falls into North Red River.

Manominikan Lake, Chippewa co., Wn. A small sheet of water through which Red River passes.

Mansfield Mountains, Vt., extend through the town of Mansfield, from N. to S. They belong to the Green Mountain range, and the Nose and Chin, so called from their resemblance to the face of a man lying on his back, exhibit some of the loftiest summits in the state.

Manya Wakan River, Ma. It rises near the head of Long Prairie River, flows S., and empties into the Minesota or St. Peter's River a little below Iyedan or Qui Parle Lake.

Maple River, Mn. It rises in the interior of Shiawassee co., flows in a winding W. course, and empties into Grand River in Ionia co.

Maple River, Ma. It flows E., and empties into the Shuynn Oju River.

Maramec River, Mo., rises in Crawford and Washington counties, unites with the Bon Homme

in Franklin co., and enters the Mississippi 20 miles below St. Louis. Length 200 miles.

Margalloway River, Me. and N. H., has its source among the highlands which separate Me. from Canada, in the N. E. extremity of N. H., about 30 miles N. from Erroll. After a southerly course of nearly 20 miles on the W. border of Me., it enters N. H., where it forms a junction with the united streams of Dead and Diamond Rivers. Thence, after a S. course of about 6 miles to Erroll, it receives the waters of Umbagog Lake, and forms the Androscoggin River.

Maria Lake, N. Y. This small body of water lies in the town of Duaneburg, Schenectady co.

Marquette Bay, Mn. A curvature in Lake Michigan extending between Little and Great Au Sable Points.

Marrah Tankak Lake, Ma. A large sheet of water lying at the bend of the Minnesota or St. Peter's River, S. E. from Minnesota Lake.

Mars Hill, Aroostook co., Me., is situated about 1 mile W. of the Canada line, 200 miles N. N. E. from Augusta, and 80 miles N. W. from Frederickton, New Brunswick. The sides of this mountain are rugged, and the approach to it difficult. It has two spurs, one of which is elevated 1506 feet and the other 1363 feet above the waters of the Goose-quill River.

Marsh Creek. A small stream rising in the N. part of Campbell co., Te., and flowing N. through a part of Whitley co., Ky., into the Cumberland River.

Marsh Island, Terre Bonne parish, La., lies in the Gulf of Mexico, S. from Atchafalaya and Four League Bays. On its N. W. extremity is Point Au Fer.

Marsh River, Waldo co., Me., rises in the N. part of the county, flows E., and enters the Penobscot above Orphan Island.

Martha's Vineyard, Ms. See *Dukes Co.*

Martin's Creek, Harlan co., Ky. A small stream rising among the Cumberland Mfs., and emptying into Cumberland River at the town of Mount Pleasant.

Martin Creek, Brown co., Wn. A head branch of East Twin River.

Maryland Point, Md. A projection formed by a bend of the Potomac, 12 miles S. W. from Port Tobacco.

Mary's Lake, N. Y., is a small body of water situated in the town of Parish, Oswego co.

Mary River, Ca. It flows S. W., and empties into Green River above Vermilion Creek.

Marwobone Creek, Henry co., Va. A small W. branch of Smith's River.

Mascomy Pond, N. H. A brief description of this lovely sheet of water is given under *Enfield*.

Mascomy River, N. H., has its source S. of Smart's Mt., which lies in the towns of Lyme and Dorchester, and, running through Canaan, falls into Mascomy Pond, in the town of Enfield. See *Enfield*.

Maskegon River, Mn. This river has its source in several small lakes in Mikenauk co., and enters Lake Michigan 14 miles N. of Grand River. Length 175 miles.

Masonboro' Inlet, N. C. A passage among the islands on the S. E. coast of New Hanover co.

Mason's Islands, Ct. A group of small islands lying at the mouth of Mystic River.

Massabesick Pond, N. H. See *Chester*.

Massachusetts Bay, Ms. The whole of this bay

is within the limits of Massachusetts. The exterior bounds of this celebrated bay are Capes Cod and Ann. The former is in N. lat. $42^{\circ} 6'$, and W. lon. $70^{\circ} 7'$; the latter in N. lat. $42^{\circ} 45'$, and W. lon. $70^{\circ} 17'$. Cape Ann bears from Cape Cod N. N. W. about 40 miles. The length of this bay is about 60 miles, from N. W. to S. E.; its breadth is about 25 miles. Numerous bays and rivers of various sizes set in from this bay, and its whole coast is lined with commodious harbors and pleasant commercial towns. This bay is noted for its delightful scenery, and as containing the first settlements of the Pilgrim Fathers of New England.

Massena Springs, N. Y., are situated about 1 mile S. of Massena village, on Rackett River. They are a good deal resorted to for the cure of cutaneous disorders.

Masserne or *Ozark Mountains*. This range commences in Mo., near the junction of Missouri and Mississippi Rivers, and runs in a S. W. direction, through Mo., As., and In. Ter., into Texas. It is crossed by Arkansas and Red Rivers. Mount Cerne, the highest peak, gives name to the range.

Massie's Creek, O. This fine mill stream rises in Madison co., and, after a highly picturesque course through a chasm 20 or 30 feet wide, and 60 deep, falls into Little Miami River 4 miles above Xenia.

Matagorda Bay, Ts. Situated at the mouth of the Colorado River, and N. E. from Espiritu Santo Bay.

Matakeunk River, Penobscot co., Me., has its source in small ponds, and flows in a N. direction into the Matakamkeag, near its junction with the Penobscot.

Matawamkeag River, Me., is one of the most important tributaries of the Penobscot. It rises in Aroostook co., flows through Matawamkeag Lake, and enters the Penobscot about 60 miles N. by E. from Bangor.

Matchapungo Inlet, Northampton co., Va., empties into Broad Water Gulf, between Prout's and Hog Islands.

Mate Creek, Logan co., Va. A small branch of the Tug Fork of Big Sandy River.

Matinac Island, Me., lies off St. George, Lincoln co.

Matinicus Islands, Me. This group of islands lies at the entrance of Penobscot Bay. Marshall's Island, the largest of the cluster, is a plantation attached to Hancock co. The light on Matinicus is about 15 miles S. by E. from Thomaston.

Matomkin Island, Accomac co., Va. It lies off the Atlantic coast, between Wallops Island on the N. and Cedar Island on the S.

Mattapony River, Va. This river rises in Spottsylvania co., and is formed by the union of Mat, Ta, Po, and Ny Rivers. It unites with the Pamunky to form York River, at the S. E. extremity of King William co.

Mattawomon Run, Md., rises on the boundary between Prince George's and Charles counties, and flows S. of W. into the Potomac River.

Matteawan or *Fishkill Mountains*, N. Y. See *Highlands*.

Matthias Point, King George co., Va. This is the N. E. extremity of the county, extending into the Potomac River.

Mattimuskeet Lake, Hyde co., N. C. A large sheet of water lying in the S. interior of the co.

Maumee Bay, O. and Mn. This bay, which

lies at the S. W. extremity of Lake Erie, is about 5 miles long and 2 wide. It receives the waters of Maumee and several smaller rivers.

Maumee River, O., is formed by the junction of Little St. Joseph's, St. Mary's, and Great and Little Anghaize Rivers. It rises in the N. E. part of Ia., and, pursuing a N. E. course of about 100 miles through fertile borders, enters Lake Erie through Maumee Bay. For 50 miles from its mouth it is 70 rods wide, and is navigable for steamboats and schooners 18 miles to Perrysburg. In the spring and fall it is boatable 18 miles farther, to Fort Wayne. The Wabash and Erie Canal follows its banks.

Maurice River, Gloucester co., N. J. This river rises in Deptford and Franklin towns, and in its upper part affords water power. It is navigable 20 miles for vessels of 80 or 100 tons. Excellent oysters are taken at its entrance into Delaware Bay.

May, Cape, N. J., received its name from Cornelius May, a Dutch navigator, who visited the bay in 1623. It is situated on the N. E. side of Delaware Bay, in lat. $38^{\circ} 56' N.$, and lon. $74^{\circ} 56' W.$ There is a light-house on the S. extremity.

May River, S. C., falls into the Atlantic in lon. $80^{\circ} 55' W.$, lat. $32^{\circ} 15' N.$

Mayfield Mountains, N. Y., the S. termination of the Clinton or Adirondack range, lie in Fulton and Montgomery counties. Klip's Hill, or, as sometimes called, Anthony's Nose, is the S. peak.

Mayfields River, Ky. This river rises in the S. W. part of Graves co., flows in a N. direction to McCracken co., where it takes a turn to the W., crosses Ballard co., and empties into the Mississippi.

Mayo Rivers, North and South, Va. and N. C. These streams rise in the N. part of Patrick co., flow S. E., uniting in the S. W. angle of Henry co., and empty into Dan River, in Rockingham co., N. C.

Meadow River, Me. A small stream flowing into Casco Bay.

Meacock Bay, Suffolk co., N. Y., lies on the S. side of Long Island. It is 4 miles long, and from 1 to 2 miles wide.

Medicine Creek, Mo. Its head branches rise in Sullivan and Mercer counties, and flowing S., it enters Grand River in Livingston co.

Medina River, Ts. The head stream of the River San Antonio.

Megunticook River and Pond, Waldo co., Me. The river rises in the pond of the same name, and enters the Penobscot at Camden, affording excellent water power. The pond lies in the town of Lincolnville, is about 9 miles long, of an irregular shape, and a very beautiful sheet of water.

Meherin River, Va., rises in Charlotte co., and flowing S. of E., unites with the Nottaway, to form Chowan River, in N. C.

Meigs Creek, O., falls into the Muskingum, 20 miles above Marietta.

Memmis Lake, La Pointe co., Wn. This lake supplies one of the head branches of Namekagon River.

Memokage River, Ma., flows S. E. into the St. Croix River.

Memosic River, Mn., rises in the E. part of Lake co., flows N. W., and empties into Manistee River, near its mouth.

Memphrenagog Lake, Vt. and Canada, is 30 miles

in length, and 2 or 3 miles wide. It lies mostly in Canada, only 7 or 8 miles of the S. end extending into Vt. It is situated about half way between Connecticut River and Lake Champlain, and the part within Vt. lies between the towns of Derby and Newport. A bay extends S. into Orleans. These waters cover about 15 square miles in Vt., and receive from this state Clyde, Barton, and Black Rivers. The waters of the lake are discharged to the N. by Magog Outlet into the River St. Francis, and through that into St. Peter's Lake, about 15 miles below the mouth of the River Richelieu.

Menan Islands. Grand Menan, belonging to the British, lies off the mouth of the St. Croix River, and Passamaquoddy Bay. On its S. side are a number of small islands and harbors. The inhabitants are principally fishermen. Little or Petit Menan, Washington co., Me., lies about 3 miles S. S. E. from Goldsboro' harbor. On it is a light-house, with a tower 25 feet in height.

Menee Creek, Wn., rises in the S. part of Manitowoc co., flows S. E. into Sheboygan co., and empties into Lake Michigan, a little above Sheboygan River.

Menomonee River, Mn., has its source in a small lake, and running E. by S. about 100 miles, enters Green Bay. It forms part of the boundary between Mn. and Wn. Ter.

Mequacumecum River, Mn., drains the W. interior of Marquette co., flowing S. into the Wescota, or Brulé River.

Mequon River, Washington co., Wn. A small stream rising in Musqueoc Lake, and flowing S. E. into Milwaukee River.

Mermentau River, La. This river drains the extensive prairies of the S. W. part of the state for a distance of 200 miles. After passing through a lake of the same name, it falls into the Gulf of Mexico, 200 miles W. of Mississippi River. It has but 3 feet of water on the bar at its mouth. The country through which it flows is covered with grass, with the exception of a narrow strip of woodland, partly live oak, which skirts its borders.

Merritt's Island, Orange co., Fa. This island lies in Indian River, and occupies nearly the entire length of it.

Merrimac River. See *Franklin, N. H.*

Merrymeeting Bay, Me., is about 5 miles above Bath, at the junction of the Androscoggin and Kennebec Rivers. It is 10 or 12 miles in length, and contains Swan and other islands.

Merrymeeting Bay, N. H. See *Alton.*

Merrymeeting Pond, N. H. See *New Durham.*

Meshoppen Creek, Pa., flows S. W., and enters the Susquehanna, about 17 miles above Tunkhannock Creek.

Metagamook Lake, Me., lies in the W. part of Penobscot co. The E. branch of Penobscot River passes through it.

Mexico Bay, Oswego co., N. Y., lies in the E. part of Lake Ontario, opposite the mouth of Salmon River.

Mexico, Gulf of. This great gulf, situated S. of the U. S., is 1000 miles long and 600 broad, containing 660,000 square miles. It washes the W. coast of Fa. and the S. coast of Aa., Mi., La., and Ts.

Miami River, O., rises in Hardin co., and, after a S. W. course of 100 miles, affording extensive water power, falls into the Ohio in the S. W. corner of the state. It receives many large branches, and is 200 yards wide at the mouth.

It is connected with the Anglaize, a S. branch of the Maumee, by a portage of 5 miles, and, although its course is rapid, it is navigable to a limited extent for 75 miles.

Michell's Cave, N. Y. See *Klip's Hill.*

Michemanetue Lake, Lenawee co., Mn. A small sheet of water supplying the head branch of Tiffins River.

Michiconi Lake, Portage co., Wn. Situated S. E. from Flambean Lake, with which its outlet connects.

Michigamme Lake, Mn., lies in the N. interior of Marquette co., and is the source of Peshakeme River.

Michigan, Lake. One of the five great lakes, lying wholly in the United States, and the largest body of water within its boundaries. It lies chiefly between the states of Mn. proper and Wn., touching also Ia. and Is. in its S. part. Its length is great in proportion to its breadth, being 330 miles long, and, on an average, 60 miles broad. It covers an area of 16,981 square miles, or 10,868,000 acres, being inferior in size only to Lake Superior and Lake Huron. It is between 41° 38' 58" and 46° N. lat., and between 84° 40' and 87° 8' W. lon. Its surface is elevated about 600 feet above tide water; but its bottom is estimated to be, on an average, 900 feet deep, so that, if there were a free channel sufficient to drain this lake into the ocean, there would still remain a sea, in this position, nearly as large as the lake now is. Its waters are discharged N. into Lake Huron through the Straits of Michilimackinac, or Mackinac, from 4 to 3 miles wide, and 40 miles long. It has Green Bay on the N. W., which by itself is a large sheet of water, 120 miles in length by 25 in width, connected with the lake by a strait at its N. part. Into this bay are received also, through Fox River, the waters of the small Lake Winnebago. The principal rivers which flow into Lake Michigan, beginning at the S. or upper end, are the two Calamicks and Riviere du Chemin, from Ia., and, from the peninsula of Mn. proper, the St. Joseph, Kalamazoo, Grand River, Maskegon, White River, Pent Water, Pere Marquette, Sandy, Monistic, Platt, Carp, Grand Traverse or Ottawa, and some others of less note. Grand Traverse is the name applied to that part of the Ottawa River which widens to a bay for a distance of 30 miles before it enters the lake. On the W. shore the confluents of Lake Michigan are mere creeks, among which Manawakee, about 70 miles long, is the most important. Several rivers of considerable importance, however, come in from the W. through Green Bay, among which are Fox River and the Menomonee. The waters of Lake Michigan are pure and clear, and abound in excellent fish. There are many good harbors upon its shores, upon which commercial towns are rapidly growing up. On the W. are Chicago, Kenosha, Racine, Milwaukee, Washington, Sheboygan, and Manitowoc, and Grand Haven, Richmond, St. Joseph, and Michigan city on the E. The relative position of this lake is most advantageous for becoming the medium of an extensive commerce. Its longest diameter lies in the direct line of communication between the valley of the Mississippi and that of the other great lakes and of the St. Lawrence. It is navigable for the largest vessels and steamboats, which ply between Buffalo and Chicago, touching at the several ports on the way. A grand

canal, constructed through part of its extent for a ship canal, and capable of being completed on that scale, connects the waters of Lake-Michigan at Chicago with those of the River Illinois, the Mississippi, and the Gulf of Mexico.

Michilimackinac Strait. See *Mackinaw*.

Middlebury River, Vt., rises in Hancock, passes through Ripton, and, flowing W., falls into Otter Creek in the S. part of Middlebury. The length of this stream is about 14 miles, and it affords several mill sites.

Middle Island Creek, Va. This stream rises in the E. part of Doddridge, flows N. W. and W., and empties into the Ohio River opposite Middle Island.

Middle Three River, Io., rises in two forks in Madison co., flows N. E. across Warren co. into the Des Moines River.

Miles's River, Vt., rises in Lunenburg, and, pursuing a S. course into Concord, where it receives the outlet of Miles's Pond, bends its course E., and falls into Connecticut River by a mouth 7 or 8 yards wide.

Mill Brook, Vt. See *Windsor*.

Mill Creek, Ia., has its source in the S. W. part of Hendricks co., flows in a winding S. W. direction, and empties into White River.

Mill Creek, Mn. It rises in the E. part of Lapeer co., flows S. of E., and empties into Black River in St. Clair co.

Mill Creek, Ca., rises among the Sierra Nevada, and flows S. W., into the Rio Sacramento.

Mills River, Is., rises in the N. part of Jackson co., takes a semicircular bend, and empties into the Mississippi in Randolph co.

Mille Lacs, Chippewa co., Wn. This lake is the source of an E. branch of Red Cedar River.

Miller's River, Vt., rises in Sheffield, waters a part of Wheelock, and falls into the Passumpsic, in Lyndon. It is generally a rapid stream, and affords some good mill privileges, particularly in Wheelock, where there is a considerable fall.

Miller's River, Ms. This is a fine mill stream, rising in ponds in Ashburnham and Winchendon; it has many tributaries, and passes through Athol, Orange, and Wendell, and falls into the Connecticut at Irving.

Millinocket Lake, Penobscot co., Me. This large sheet of water receives many rivers, and is an important source of the W. branch of the Penobscot. Its outlet, a river of the same name, connects it with Pemadumcook Lake near the great falls at Pemadumcook Outlet.

Millstone Creek, N. J. This rapid stream rises in Monmouth co., and flowing N. N. E., enters the Raritan in Somerset co. The Delaware and Raritan Canal follows this stream a considerable distance.

Mill Tail Creek, Tyrrell co., N. C., flows N. W. into Alligator River.

Milwaukee Bay, Wn. A curvature of Lake Michigan in the E. part of Milwaukee co.

Milwaukee River, Wn. This large stream rises in Sheboygan and Fond du Lac counties, flows S. S. E. through Washington into Milwaukee co., where it empties into Milwaukee Bay, at the town of Milwaukee.

Mini Skuyuh or *Salt Lake*, Ma. A long, narrow sheet of water, connecting by an outlet on the S. with Tchan Sanson or River à Jaques.

Minnesota Lake, Ma. A small sheet of water, the outlet of which communicates with Minnesota or St. Peter's River.

Minsi Sagaigoning or *Mille Lacs*, Ma. This is a large, circular sheet of water, lying between Mississippi and St. Croix Rivers, and connecting on the S. with Rum River.

Misery River, Houghton co., Mn. A small stream in the N. W. part of the county, flowing into Lake Superior.

Missillon Creek, Md. A small stream separating Kent and Sussex counties, and emptying into Delaware Bay.

Missisco Bay, Vt. and Canada, is a large arm of Lake Champlain, which extends into Canada between Swanton and Highgate on the E. and Alburg on the W. Its width from E. to W., on Canada line, is about 5 miles, and it extends 4 or 5 miles into Canada. This bay covers an area of about 35 square miles.

Missisco River, Vt., rises in Lowell, and, flowing N. E. through a part of Westfield and Troy, crosses the N. line of the state into Potton, in Canada, where it receives a large stream from the N. E. After running several miles, it returns into Vt. about 1 mile W. from the N. E. corner of Richford. Thence it runs S. W. through the corner of Berkshire, where it receives Trout River, into Enosburg. It then passes through Sheldon and Highgate into Swanton, and, after performing a circuit of several miles in that town, returns into Highgate, and, running N. W., falls into Missisco Bay, near Canada line. This stream affords a considerable number of valuable mill sites, and besides its tributaries above mentioned, Black Creek and Taylor's Branch are the most important. The length of this river, including its windings, is about 75 miles, and it is navigable for vessels of 50 tons' burden 6 miles to Swanton Falls, where is hydraulic power of great value.

Mississippi River. The largest and most important river of the United States, or of North America. The import, in the Algonquin language, of the name *Missi Sepe*, is Great River. Whether we consider its great length, its mighty and numerous tributaries, the extent of country which it drains, or the distance to which it is navigable, it well deserves the title which the Indians have given to it, "The Father of Waters." If estimated by the criterion which is now considered as determining the comparative importance of the great rivers, — the extent of the area drained by its waters, — it is the fifth, or perhaps the fourth, in rank among the rivers of the earth, and the third among the rivers of the American continent. The basin, or valley, of the Mississippi extends from the Appalachian chain of mountains on the E. to the Rocky Mts. on the W., and from the Gulf of Mexico on the S. to the great lakes and the boundary between the United States and the British possessions on the N. and N. W. This great basin is composed of two very unequal slopes, or inclined planes. One, the W., and most extensive, falling E. from the Rocky Mts., has a mean width of about 800 miles; the other, which declines from the Appalachian Mts. W., has a mean width of about 400 miles. The base line, or line of common depression, follows the valley of the Illinois, and of the Mississippi below the point where the former unites with the latter. A line drawn from the Appalachian chain, at the source of the Tennessee, to the source of the most N. W. tributary of the Mississippi, measures a distance of about 2000 miles; and a line drawn nearly at right angles

to this, from the sources of the Red River, to those of the Wisconsin, measures about 1100 miles. The average width of the Mississippi basin is about 550 miles. The extent of surface included in this vast area is about 1,100,000 square miles. This exceeds the aggregate of all the valleys drained by the rivers of the Atlantic slope, including that of the River St. Lawrence. The principal tributaries of the Mississippi are the Red River, the Arkansas, the White, the Missouri, and the Yellowstone, from the W., and the Ohio and Illinois from the E. These great rivers, with many others of inferior magnitude, draining the different parts of the great basin from which they come, unite with the Mississippi proper, and pour their waters through its channel into the Gulf of Mexico. Above the confluence of the Missouri with the Mississippi, the former, although denoted as a secondary to the latter, is much the larger of the two. But the Mississippi, having been first explored, retains, through its course, the name which it then received. Above the entrance of the Missouri, it is known in common parlance as the Upper Mississippi. The river is called the Mississippi proper, in distinction from this great tributary, so much its superior; inasmuch as, from the natural features of the entire basin denominated the valley of the Mississippi, it would seem that the Missouri should bear the same name, or that it is better entitled to be considered as the true Mississippi. The extreme source of the Mississippi was discovered by Schoolcraft, July 13, 1832, to be the Itasca Lake, in $47^{\circ} 10' N.$ lat., and $94^{\circ} 54' W.$ lon., at an elevation of 1500 feet above the ocean, and 3160 miles from its entrance into the Gulf of Mexico. This is a beautiful sheet of water, of irregular shape, about 8 miles long, situated among hills covered with pine forests, and fed by springs. It has its outlet to the N., which is about 10 or 12 feet wide, and from 12 to 18 inches deep, which, flowing N., passes through Lakes Irving and Traverse. It then turns E., and passes through several small lakes to Lake Cass, which is about 16 miles long, and contains several islands. Thence it flows E. to Lake Winnipeg, and S. E. to Little Lake Winnipeg, below which it receives Leech Lake through an outlet, which was formerly supposed to be the source of the Mississippi. From this point the river expands to a hundred feet in width, and flows through a low prairie country till it reaches the Falls of Peckagama, where it descends about 20 feet over a rapid of 300 yards. These falls are about 685 miles above the Falls of St. Anthony. All the sources of the Mississippi take their rise in lat. 42° to $48^{\circ} N.$, and the general course of the river is S., bearing E. in the upper part through about 20 degrees of lat., to its entrance into the Gulf of Mexico. By this rule of computation, the length of the valley of the Mississippi proper is about 400 miles; but the extent of travel by the course of the river is probably twice this number of miles. It has indeed been estimated higher than this; but the length of rivers extending far into these remote and sparsely-settled regions of the country has been generally overrated. The gradual declivity of the Mississippi valley, however, is so very slight, giving a fall to the waters of not more than five or six inches to the mile upon an average, and the soil through which its channel is made is so tender and easily worn away, that the smallest obstacles in the stream,

or the most inconsiderable variations in the surface of the country, have been sufficient to divert the current from an onward direction, and to give it oftentimes a very serpentine and circuitous course. The Mississippi meets with very few falls or rapids in its course. The Falls of St. Anthony, about 2000 miles from its source, terminate the route of steamboat navigation. Down these falls, the river, which is here about half a mile wide, precipitates its waters in a perpendicular descent of about 16 or 17 feet, making, with the descent of the rapids above and below, a fall of about 40 feet. For a long distance below it is a clear, placid, and beautiful stream, skirted with wide and fertile bottoms, or alluvial margins, which are under water at the season of floods. A few miles below the mouth of the River Des Moines, and about 100 miles above the entrance of the Missouri, there are rapids of about 10 miles in extent, which at low water in the summer occasion considerable impediment to the navigation. Where the Missouri enters, the river has a width of a mile and a half; but below this, to the mouth of the Ohio, although the volume of its waters is greatly increased by those of this mighty tributary, the width of the stream is considerably less. Its channel, however, has greater depth, and its current a more accelerated and turbulent movement. At the lowest stages, 4 feet of water may be found from the rapids of Des Moines to the mouth of the Missouri. Below that point, to the mouth of the Ohio, there are 6 feet in the channel of the lowest places, at low water. Between the mouth of the Ohio and the St. Francis there are various shoals, where pilots are often perplexed to find a sufficient depth for their boats during low water. Below that point there is no difficulty at any season, except in finding the right channel. The river washes the entire western border of the state of Mississippi, which it separates from Arkansas and Louisiana, for a distance, by the windings of the stream, of 530 miles. A large portion of its banks, in this section of its course, consists of inundated swamp covered with cypress, excepting occasional elevated bluffs, which rise immediately upon the borders of the river. Natchez, the largest and most commercial place in this state, is situated on one of these bluffs, elevated 250 feet above the surface of the river. About 500 miles from its mouth, the Red River enters the Mississippi from the W. This is the last of the tributaries of any consequence which it receives. Next to the Missouri and the Arkansas, it is the largest which comes in from the W., and discharges about as much water as the latter. Here the Mississippi carries its greatest volume of water, as immediately below this it sends off, at intervals, several large outlets, which make their way in separate channels to the ocean. Three miles below the mouth of Red River, the Atchafalaya, or Chiaffalio Bayou, as it is called, passes off on the W. side, which is supposed to carry off as much water as the Red River brings in. The Atchafalaya has been supposed to be the ancient bed of the Red River itself, by which it continued its course to the ocean without forming a connection, as now, with the Mississippi. The latter has here effected a change in its course by cutting through the isthmus of a large bend, in consequence of which its main channel does not now pass by the mouth of the Red River. By these changes, it is probable there has been some

disturbance of the natural course of that river. The Atchafalaya, inclining to the E. of S., enters the bay of the same name in the Gulf of Mexico. The outlet Plaquemine leaves the Mississippi 128 miles below the outlet Atchafalaya. Thirty-one miles below the Plaquemine, and 81 above New Orleans, is the outlet of La Fourche, which also communicates with the ocean. Below this there are numerous small streams leaving the Mississippi at different points. On the E. side the principal outlet is the Iberville, which passes off a little below Baton Rouge, going through Lakes Maurepas, Ponchartrain, and Borgne, into the Gulf of Mexico. In times of flood this outlet carries off considerable water. Between this outlet on the E. and Atchafalaya on the W. is included what is called the Delta of the Mississippi. At the distance of 105 miles below New Orleans, by the course of the river, and of 90 miles in a direct line, this majestic river enters the Gulf of Mexico by its several mouths, the principal of which is the N. E. pass, called the Balize, $29^{\circ} 7' 25''$ N. lat., and $89^{\circ} 10'$ W. lon., and the S. W. pass, $29^{\circ} 8'$ N. lat., and $89^{\circ} 25'$ W. lon. Most of the vessels enter and leave the river by the Balize. The depth of water on the bar, at each of these passes, is from 12 to 17 feet, but much greater immediately within and without. The river is navigable for vessels of any size, which are now for the most part taken up to New Orleans by steam tow-boats, as the most expeditious and economical method of reaching the city. Sailing vessels seldom go farther up than Natchez, 322 miles above New Orleans, as the navigation of the river by steamboats is much more convenient. The Delta of the Mississippi, if we regard the efflux of the Atchafalaya as its apex, and the Gulf of Mexico as its base, stretches over two degrees of latitude and three degrees of longitude. The distance from the outlet of Atchafalaya to the mouths of the Mississippi is 220 miles. Its breadth varies from 10 miles to 100, and its area amounts to at least 12,000 square miles, or one fourth part of the state of Louisiana. The very trifling elevation of the Delta, by its acclivity from the ocean, is demonstrated by the fact, that in autumn, when the rivers are reduced to their lowest mark, the tides of the gulf, of only about 2 feet mean elevation, are sensibly felt in the Atchafalaya and Iberville, at their efflux from the Mississippi, sometimes even causing the current to flow back from the former into the latter. From the physical characteristics of the Delta, it has been supposed by some geographers that the main channel of the Mississippi is changeable. But this must be a mistaken opinion. When the annual inundations occur, the surface of the river is indeed above that of the surrounding country; and the effect of the action of its powerful current in leaving a greater deposit of alluvion upon its immediate banks than farther back, has been to give them a permanent elevation above the general surface. Nevertheless these superficial banks, which of course are liable to accretion or abrasion in the lapse of time, are as nothing to the deep bed of the stream, which, as in the case of all other rivers, is the deepest valley of the region through which it flows. That this is the character of the main channel of the Mississippi is apparent from the soundings which have been made, showing a depth at the head of the Delta, at the lowest water, of 75 to 80 feet; of 130 feet near the out-

let of La Fourche, at Donaldsonville; of 100 feet and upwards opposite New Orleans; and of 75 to 80 feet 3 miles above the main bars, at its mouth. Comparing these elements with those of the deepest lake of La., Lake Ponchartrain, the bottom of which is not more than 18 to 25 feet below the general level of the Delta, the bed of the river is seen to be from 75 to 80 feet below the bottom of the lowest adjacent depression. With the exception of some changes which have been effected, both in and above the Delta, by the cutting off of the necks of isthmuses, formed originally by almost circular bendings in the river, the current of the Mississippi is as effectually and permanently confined to its channel as that of any other river. In this phenomenon, such lakes as that of Fausse Riviere, (False River,) of which there are some six or seven, either formed or forming, have had their origin. This fine lake, in the parish of Point Coupee, 172 miles above New Orleans, was once a bend of the Mississippi. In or about the year 1714, the change above described was effected, from which both the names Fausse Riviere and Point Coupee (Point Cut Off) are derived. By cutting through this narrow neck of land, the Mississippi shortened its course upwards of 30 miles. Near the new channel the old bed was rapidly filled with alluvion, but in all other parts it retained its original form, and is now a lake, with a margin possessing the usual fertility of the river banks, and occupied with farms and farm-houses. From the extent of country drained by the Mississippi, it necessarily follows that its spring floods are very great, and of very long continuance. In a mean of ten years, it appears that the swell commences on the Delta about the end of February, and continues rising to the middle of June, when the waters begin to abate. This long and gradual discharge is occasioned by three causes, depending on the vast extent of the region from which the floods descend: first, varieties of temperature from a difference of latitude and an increase of elevation; second, contrariety of direction in some of the streams which constitute the sources of the river; third, the time required for the waters of the Upper Mississippi, of the Missouri, and of other distant regions, to traverse the long distance from the sources to the mouths of this mighty river. The difference of latitude from the mouths to the remotest sources of the Mississippi is about 20 degrees, and the relative elevation not less than 5000 feet. These elements combined would give a winter climate to the sources of the Missouri or Mississippi, equal to that of Labrador, in lat. 61° , on the Atlantic coast. Permanent snows cover the earth in winter, over the Atlantic slope and Mississippi basin, as low as lat. 31° , the waters from which, it is obvious, cannot be simultaneously discharged. The general course of the flood being S., the spring advances in a reverse direction, and releases in succession the waters of the lower valley, then those of the Ohio, and last those of the Mississippi proper and the Missouri. Rising in lat. 42° to 50° N., and at an elevation of from 1200 to 5000 feet, the higher sources of the Mississippi are locked in ice and snow long after summer reigns on the Delta. Then the course of the Missouri and Yellowstone Rivers is to the N. E. at first, for 500 or 600 miles, from which circumstances, together with the slow movement of the waters, it results that the waters of the upper

sources of the Mississippi do not reach the Delta before the beginning of August, about 100 days after the breaking up of winter, and more than a month after the inundation has been abating. The average height of the floods, below the mouth of the Missouri, is 15 feet. From the Missouri to the Ohio it rises 25 feet, and for a great distance below the mouth of the Ohio it rises 50 feet. Before reaching Natchez, the height of the floods begins to decline. At Baton Rouge it seldom exceeds 30 feet, and at New Orleans 12. This gradual diminution in the flood, in the lower part, has been supposed by some to result from the draining through the numerous effluxes of the river, conveying away such considerable portions of its waters by separate channels to the sea. So greatly does the quantity of snow and rain differ in different years, that it is quite impossible, even for those who have had the longest experience, to anticipate, with an approach to certainty, the elevation which the flood will attain in any given year. Some years the waters do not rise above their channels, and no inundation takes place. As the banks of the river in the Delta, from the cause above noticed, are higher than the general level of the country, constituting an alluvial margin of from half a mile to a mile and a half wide, it becomes important to protect some of the more valuable tracts in the rear from the annual overflow of the river, from which they could not easily be drained. For this purpose an artificial embankment has been raised at great expense upon the margin of the river, called the Levee. On the E. side this embankment commences 60 miles above New Orleans, and extends down the river more than 130 miles. On the W. side it commences 172 miles above New Orleans. The vast trade of the valley of the Mississippi centres at New Orleans. Vessels are often from 5 to 30 days ascending the river to this port, unless they employ the steam tow-boats, though they will often descend with a favorable wind in 12 hours. Before the introduction of steam-boats it required 8 or 10 weeks to go to the mouth of the Illinois. The use of steamboats has nearly superseded all other vessels for ascending the river. Boats of 40 tons ascend more than 2000 miles, to the Falls of St. Anthony. The passage from Cincinnati to New Orleans and back has been made in 19 days. The first steamboat on the western waters was built at Pittsburg in 1811, and there are now over 300 on the Mississippi and its tributaries, many of them of great burden. By the opening of the Illinois Canal from Chicago to the head of navigation in the Illinois River, a connection has been formed between the waters of the River St. Lawrence and the Mississippi, of sufficient draught to admit the passage of small vessels, laden with their cargoes of merchandise. Some time in the autumn of 1849, the first vessel was reported at New Orleans as having arrived from the St. Lawrence, via the Welland Canal, the great lakes, the Illinois Canal and River, and the Mississippi. Returning by the Atlantic coast, she might then have circumnavigated the United States.

Mississineua River, Ia. and O. This river rises in the N. W. part of Dark co., O., flows N. W. into Ia., and empties into the Wabash River in Miami co.

Missouri River. The sources of this great river take their rise in the Rocky Mts., and some of their springs are within a mile of other springs

which discharge themselves W., through the Columbia River, into the Pacific Ocean. The three principal streams which constitute the head waters of the Missouri are the Jefferson, the Madison, and the Gallatin, which unite at the same point in lat. $45^{\circ} 10' N.$, and lon. $110^{\circ} W.$ From their confluence at this point, the river takes the name Missouri, and flows onward, receiving numerous tributaries in its course, through a distance of more than 3000 miles, to its junction with the Mississippi in lat. $38^{\circ} 51' N.$, and lon. $90^{\circ} W.$ Its course is at first N. and N. E., to the mouth of White Earth River, lat. $47^{\circ} 25'$; thence S. E., about 220 miles, to the Mandan villages, or Indian settlements. From this point, the river takes a S. course, through a distance of several hundred miles; and then, being inflected more to the E., it pursues this general direction to the Mississippi. Although it loses its name at its confluence with the Mississippi, it is, before it reaches this point, much the longest and largest river of the two, and, physically considered, is entitled to be denominated the principal, rather than the secondary. The Missouri is already a very large river, when it approaches and passes the sources of its very inferior rival. If it be ranked according to physical preëminence, as including the Mississippi from its confluence with that river to its mouth, it has an entire length of about 4350 miles, and is probably the longest river of the earth. Ranking it as a secondary to the Mississippi, and having reference to the area drained by its channel, it is the largest river of that class in the world. A direct line drawn along its valley, from its junction with the Mississippi River to the head of Maria's River, one of its most N. W. sources, is nearly 1400 miles in extent, and the width of the upper valley of the Missouri, as that part is called which is above the confluence of the Yellowstone, is not less than 600 miles across the sources, and has a mean of 300 miles in the general direction of the streams. The entire valley, drained by the Missouri proper, includes an area of 523,000 square miles, or a surface more than double that of the whole Atlantic slope of the United States. The upper valley of the Missouri presents a surface, on the W. side, broken by mountains, and gradually spreading into plains, as the rivers descend in their courses. The whole face of the country, with partial exceptions along the rivers, is open prairie, exhibiting a strong resemblance to the steppes of Asia, in nearly the same latitude. The surface of the lower valley is also extensively occupied with prairie, the alluvial and fertile soil on the rivers not having a very great breadth. The first large tributary of the Missouri is the Yellowstone. This river, 800 yards wide at its mouth, and probably the largest tributary of the Missouri, enters it on the S. W. side, about 1800 miles from its junction with the Mississippi. The Yellowstone, at its junction, is as large as the Missouri. Steamboats ascend to this point, and can ascend farther by either branch. After their junction, the united waters of the Yellowstone and Missouri form a river as large in volume, and as wide and deep, probably, as at its entrance into the Mississippi. Chienne River, 400 yards wide at its mouth, enters the Missouri on the S. W. side, 1310 miles from its mouth; White River, 300 yards wide, enters it on the S. W. side, 1130 miles from its mouth; Big

Sioux River, 110 yards wide, enters it 853 miles from its mouth, on the N. E. side; Platt River, 600 yards wide, enters it on the S. W. side, 600 miles from its mouth; Kansas River, 233 yards wide, enters it on the S. W. side, 340 miles from its mouth; Grand River, 190 yards wide, enters it on the N. E. side, 240 miles from its mouth; La Mine River, 70 yards wide, enters it 200 miles from its mouth; Osage River, 397 yards wide, enters it on the S. W. side, 133 miles from its mouth; and Gasconade River enters it on the S. W. side, 100 miles from its mouth. The largest of these tributaries are navigable from 100 to 800 miles. Through the whole course of the Missouri there is no serious obstruction to the navigation, except, perhaps, from the shallowness of the water, during the season of the greatest drought, before arriving at Great Falls, about 260 miles from the Mississippi. The Missouri is over half a mile wide at its mouth, and through the greater part of its course it is wider than this. It is a rapid and turbid stream, and generally carries along a powerful volume of water; but owing to its passing through a dry and open country, and being subject to extensive evaporation, it becomes low at certain seasons, hardly affording sufficient water for steamboat navigation. From much greater relative elevation, from higher latitudes, and from the peculiar courses of some of its tributaries, the flood in the Missouri is the latest in order, and does not reach the Mississippi proper until after the flood in that river, the Ohio, Arkansas, and Red Rivers have in great part subsided. At the Great Falls, distant about 2600 miles from the Mississippi, the river descends, by a succession of rapids and falls, 375 feet, in about $16\frac{1}{2}$ miles. The lower and greatest of these falls has a perpendicular pitch of 87 feet, the second of 19 feet, the third of 47 feet, and the fourth of 26 feet. These falls, next to those of Niagara, are the grandest on the continent. At the distance of 110 miles above these falls is a remarkable passage of the river through the mountains, denominated the Gates of the Rocky Mts. The scenery at this place is exceedingly grand. For a distance of about 6 miles, the rocks rise perpendicularly from the margin of the river to an elevation of 1200 feet. The river is compressed to the width of 150 yards, and for the first 3 miles, there is only one spot, and that only of a few yards, on which a man could stand between the water and these perpendicular walls of the mountain. Nothing can be imagined more gloomy and impressive than the passage through this deep chasm.

Mobile Bay, Aa. This bay is connected with the Gulf of Mexico by two straits, one on each side of Dauphin Island. The strait on the W. side will not admit vessels drawing more than 5 feet of water: that on the E. side, between the island and Mobile Point, has 18 feet of water, and the channel passes within a few yards of the point. There is a bar across the upper end of the bay, which has only 11 feet of water. The length of the bay is 30 miles, its average width 12 miles.

Mobile River, Aa. The Alabama and Tombigbee unite, 40 miles above Mobile, to form this river. A few miles below the junction it divides into several channels. The main W. channel is called the Mobile; the main E., which is widest and deepest, the Tensaw. It is navigable to St.

Stephen's for vessels drawing 5 or 6 feet of water, by the Tombigbee branch, and to Claiborne by the Alabama branch. The two branches unite in $31^{\circ} 6' N.$ lat., and $11^{\circ} 5' W.$ lon. from Washington. The river sometimes rises 50 or 60 feet in time of flood.

Mob Jack Bay, Va. An arm of Chesapeake Bay, lying between Matthews and Gloucester counties.

Moffet's River, Augusta co., Va. A small stream flowing into Middle River, a branch of the Shenandoah.

Mohawk River, N. H., rises among the mountains of Dixville, and in its course through Colebrook, receives some considerable branches from Stewartstown, and falls into the Connecticut.

Mohawk River, N. Y., the principal branch of the Hudson River, rises in Oneida co., near the source of Black River, and runs S. about 20 miles, to Rome, and thence nearly E. to the Hudson River, which it enters at Waterford, between Albany and Saratoga. Its whole length is about 135 miles. The river has many rapids, and two large falls in its course. At Little Falls, it descends over a stony bed, and through a remarkable gorge in the mountain, 42 feet in the course of a mile. At Cohoes Falls, about 2 miles from its mouth, it pours its waters down a perpendicular descent of about 70 feet. Three fourths of a mile below this point is a bridge over the river, from which a fine view of the cataract is obtained. The Erie Canal now passes along, chiefly on the S. bank of the Mohawk, nearly through its whole course; consequently the channel of the river is but little used for navigation. The banks of the river are very level, and in some parts very fertile, particularly in Herkimer co., though in other parts they are poor and rocky.

Molechumkamunk Lake, Me., lies about 80 miles N. by W. from Portland, and is one of the chain of large lakes extending N. W. from Umbagog Lake, through Oxford and a part of Franklin co., and emptying into the Androscoggin River. The borders of these lakes are thinly settled, but the soil is extremely fertile, and the scenery equal in beauty to that of the celebrated Winnipisogee.

Molly's Pond, Vt. See *Cabot*.

Molunkus River, Me. This large stream rises mostly in Aroostook co., flows in a S. direction, and falls into the Matawamkeag about 8 miles from its mouth.

Momsco Bay, Chippewa co., Mn. A branch of the Straits of St. Mary, opposite St. Joseph Island.

Momsco River, Michilimackinac and Chippewa counties, Mn., flows N. E., and empties into Momsco Bay.

Mongaup Creek, or River, N. Y., rises in the N. part of Sullivan co., and flows S. into Delaware River.

Monistique Lake, Mn. Situated on the S. border of Schoolcraft co.

Monistique River, Mn. This river and its numerous branches drain the E. part of Schoolcraft co., and empty their waters into Lake Michigan.

Monk's Hill, Kingston, Ms. Height 313 feet.

Monocecy River, Pa. and Md. This river rises in Adams co., Pa., flows S. S. W., and empties into the Potomac at the S. angle of Frederick co., Md.

Monody Creek, Pa., falls into the Swatara 12 miles W. from Lebanon.

Monomoy Island, Barnstable co., Ms. A long, narrow island, lying off the town of Chatham.

Monongahela River, Pa. This river has its source in Randolph co., Va., at the foot of the Laurel Mts., and after flowing 300 miles in a N. direction, unites with Alleghany River at Pittsburgh, to form the Ohio. It is crossed by a bridge at its mouth, where it is nearly 400 yards wide. It is navigable for large boats 60 miles to Brownsville, and for small boats 200 miles from its mouth. It is entered on its E. side by Cheat and Youghiogeny Rivers, its principal tributaries.

Monroe, Lake, Orange co., Fa. A small lake which is supplied by the waters of St. John's River. On its S. border is Fort Mellon.

Montauk Point, N. Y., lies 140 miles E. from the city of New York, and about 60 miles W. S. W. from Gay Head light-house on Martha's Vineyard, Ms. Near this place are high and rugged cliffs, against whose base the waves of the Atlantic dash with almost continued violence, any thing like a perfect calm being of rare occurrence. There is a sublimity and wildness, as well as solitariness, here, which leave a powerful impression on the heart. In a storm, the scene which the ocean presents is awfully grand and terrific. At this place are fine sea air and bathing, and many resort here, during the summer months, for health and pleasure. At the extremity of this point is a light-house, one of the most important beacons to mariners on the American coast. We copy the following beautiful lines, descriptive of the place, written by Mrs. Sigourney, the celebrated American poetess:—

“Ultima Thule! of this ancient isle,
Against whose breast the everlasting surge,
Long travelling on, and ominous of wrath,
Forever beats. Thou lift'st an eye of light
Unto the vexed and storm-tossed mariner,
Guiding him safely to his home again.
So teach us, 'mid our own sore ills, to wear
The crown of mercy, and, with changeless
Eye, look up to Heaven.”

Montezuma or Cayuga Marshes, N. Y., extend 14 miles along the outlet of Cayuga Lake and Seneca River. They are from 2 to 3 miles wide, and in summer are covered with rank grass from 3 to 4 feet high.

Montgomery, Fort, N. Y. This old fortress, and that of Fort Clinton, both on the W. side of the Hudson River, 6 miles below West Point, were memorable spots during the revolutionary war.

Montreal River. This small river rises in small lakes in La Pointe and Portage counties, flows N. W. on the boundary between Wn. and Mn., and falls into Lake Superior.

Moore's Creek, N. J., falls into the Delaware about 6 miles above Philadelphia.

Moose Mountain, N. H., is the name of a peak situated between Middleton and Brookfield, and also of a mountain in Hanover. See *Brookfield* and *Hanover*.

Moose Lake lies in the town of Wilmurt, Herkimer co., N. Y., in an uncultivated and almost uninhabited region of the state.

Moose River, Me. This large tributary to Moosehead Lake rises in the W. part of Somerset co., and in its course flows through Atich, Woods, Brassua, and several other ponds.

Moose River, N. H. This stream rises on the N. side of the White Mts., near the town of Randolph, through which it passes, and unites with the Androscoggin in Shelburne.

Moose River, Vt., is an E. branch of the Passumpsic, and rises in Granby and East Haven. Taking a S. W. course through Victory, Bradleyville, and a part of St. Johnsbury, it falls into the Passumpsic, opposite St. Johnsbury Plain. Length 24 miles.

Moose River, N. Y., rises in Hamilton co., flows W., and enters Black River, a short distance above High Falls, in Lewis co.

Moose Head Lake, Me. This lake, the outlet of which is the source of Kennebec River, lies in the county of Piscataquis. Its form is very irregular. Its length is between 40 and 50 miles, and its breadth, in the widest part, about 12 miles. The tributaries are numerous, and flow from almost every direction. It contains a number of islands, the largest of which is Sugar Island, containing 5440 acres, and Deer Island, containing 2000 acres. These islands are fertile, as is the whole country surrounding the lake, except in some places where the banks are high and precipitous. The waters are deep, and abound in trout of an extraordinary size. It is remarkable that the territory surrounding this inland sea, possessing in rich abundance all the necessary requirements for the uses and comforts of man, and within three hundred miles of the capital of New England, should be left a wilderness garden, uninhabited and almost unexplored, while thousands of New England men are pressing to distant regions, less healthful, and *less productive*, when markets for surplus produce are considered. A steamboat plies up and down the lake, for the purpose of transporting passengers, more particularly those who are engaged in felling timber, and for the purpose of towing the timber down to the Kennebec outlet. The lumber business on this lake is very extensive, and doubtless lucrative; but the time is not very distant when this and other sections of Maine will be as much valued for the fruits of the soil, and under the wise system of geological exploration, adopted by the legislature, for the quarries of slate, lime, granite, marble, and even coal, as they are now for their forests of timber. This lake may be divided into two bays. A little above the centre of it is a narrow pass, of rather less than a mile across. At this place, on the western side, is Mount Keneo, an elevation of 500 or 600 feet, projecting over the water. From this height a picturesque view of the lake, its islands, and a boundless wilderness, is presented.

Moosehillcock Mountain, N. H., is a noble eminence, in the S. E. part of Benton, and ranks among the highest mountains in New England. Baker's River rises on its E. side.

Mooselucknaguntic Lake, Me., lies about 2 miles S. of Molechunkamunk Lake, into which it empties.

Moreau Creek, Mo., is formed in Cole co., by the junction of its two forks, flows E., and enters the Missouri River, a little above the Osage.

Morehouse Lake, N. Y., the head source of East Canada Creek, lies in the town of Morehouse, Hamilton co.

More's Hill, Goshen, Ms. Height 1713 feet.

Moriah, Mount, N. H., an elevated peak of the White Mountains, situated in the S. part of Shelburne.

Mormon Creek, Crawford co., Wn. A small branch of the Mississippi.

Morrison's Island, Colleton district, S. C., lies

at the mouth of Charleston harbor, N. E. from James Island.

Mother Kill, Kent co., De. A small stream emptying into Delaware Bay, just below Jones Creek.

Mountain Ridge, N. Y., lies S. of Lake Ontario, and once, without doubt, formed its S. shore, of which the Ridge Road, or Alluvial Way, running parallel with the S. border of the lake, and from 6 to 8 miles from it, is an important proof. Niagara River flows through the ridge.

Mount Daniel, Webster, Ms. Height 785 feet.

Mount Defiance, N. Y., a high eminence, is situated in the S. part of the town of Ticonderoga, Essex co., on the W. side of Lake Champlain, and overlooks the site of old Fort Ticonderoga. General Burgoyne ascended this mountain with some pieces of artillery in 1777, and obliged the Americans to evacuate Fort Ticonderoga, which had been considered almost impregnable. Since then it has been thought useless as a military station, and suffered to go to decay. On the summit of this mountain are still to be seen the remains of Burgoyne's Block House, which commands a beautiful and extensive view of Lake Champlain and the surrounding country.

Mount Desert Sound, Me., lies S. of the Island of Mt. Desert, from which Mt. Desert Rock lies about 20 miles S.

Mount Emmons, N. Y. This isolated peak lies mostly in the town of Gilman, Hamilton co., and is elevated about 4500 feet above the tide waters of the Hudson.

Mount Esther, Whately, Ms. Height 995 feet.

Mount Grace, Warwick, Ms. Height 1628 feet.

Mount Hope and *Mount Hope Bay*. See *Bristol*, R. I.

Mount Ida, N. Y. This fine eminence lies about half a mile E. of Hudson River, within the city of Troy.

Mount Independence, Vt., lies in the N. W. corner of the township of Orwell, and about 2 miles S. E. from Ticonderoga Fort. It is interesting on account of its connection with the early history of our country.

Mount Lincoln, Pelham, Ms. Height 1248 feet.

Mount McIntyre, N. Y., a peak of the Adirondack range, lies in Essex co.; and is elevated 5183 feet above the tide waters of the Hudson.

Mount Marcy, N. Y., the highest eminence of the Adirondack range, lies in the town of Keene, Essex co. It is elevated 5467 feet, or upwards of a mile, above the tide waters of the Hudson, and overlooks several other peaks of nearly the same height. The view of these mountains, covered with a dense, luxuriant forest, as seen from Lake Colden, is grand and picturesque in the extreme.

Mount Misery, N. Y., lies in the town of Brookhaven, Suffolk co., on the N. side of Long Island, and commands a view of Long Island Sound and the surrounding country.

Mount Nebo, situated in the town of Middlebury, Vt., is sometimes called Chipman's Hill. It rests on a base of about 2 miles by 1, and rises gradually 439 feet above the level of Otter Creek. A part of the village rests upon its S. declivity, and it affords some of the best arable land in the township. The scenery from its summit is also very fine, commanding an extensive view of Lake Champlain and the surrounding country.

Mount Seward, N. Y. A lofty group of the Adirondack range bears this name. It lies in the

S. E. part of Franklin co., and is elevated 4800 feet above the Atlantic.

Mount Tom, Woodstock, Vt., is an eminence of some height.

Mount Tom, Northampton, Ms. Height 1214 ft.

Mount Vernon, Fairfax co., Va. This town, which contains the mansion and tomb of General Washington, is situated on the W. side of the Potomac, 6 miles below Alexandria. Many a pilgrimage has been made to the spot hallowed by the memory of the father of his country.

Mud Creek, N. Y., rises W. of Canandaigua Lake, in Ontario co., flows N. E., and unites with the Canandaigua outlet in Wayne co. The united streams then take the name of Clyde River, which flows 20 miles in an E. direction, and empties into Seneca River.

Mud Creek, N. Y., rises in Yates co., flows S., and enters Conhocton River in Steuben co.

Mud Lake, N. Y. This small body of water lies mostly in the town of Tyrone, Steuben co.

Mud Lakes, Uh. A chain of lakes lying N. from Pyramid Lake, with which they are connected by outlets.

Muddy Brook, Vt. This stream divides Williston from Burlington, and falls into Winooski River.

Muddy Creek, York co., Pa. This stream drains the S. E. part of the county, and empties into the Susquehanna River.

Muddy Creek, Is. A branch of the Little Wash River, which it enters in Clay co.

Muddy River, Ky., a S. tributary of Green River, rises in Todd and Logan counties, and, flowing north, forms the boundary between Butler and Muhlenburg counties.

Muddy Lake and River, Ma. The lake lies N. W. from the Minsi Sagagoining or Mille Laes, and the river connects it with the Mississippi.

Mugget Hill, Charlton, Ms. Height 1012 feet.

Mulberry Creek, Ga. A tributary of the Chattahoochee, which it enters in Harris co.

Mulberry Creek, Aa. This is a branch of the Alabama River, which it enters on the N. side, after forming the boundary between Autauga and Dallas counties.

Mulberry Creek, As. A pretty large stream, which rises in the S. part of Newton co., and flows S. W. into the Arkansas.

Mullet Island, Hillsboro' co., Fa. Situated at the mouth of Tampa Bay.

Mullet River, Wn., rises in a small lake in the E. part of Fond du Lac co., and flows W. across Sheboygan co. into Sheboygan River.

Mullican River, N. J., forms the boundary between Burlington and Atlantic counties, and enters the Atlantic 9 miles E. of Leeds, through New Inlet. It is navigable 20 miles for vessels of 60 tons.

Murderer's Creek, Orange co., N. Y., flows E., and enters the Hudson at the town of New Windsor.

Murphy Islands, Charleston district, S. C., lie S. from the mouth of the Santee River.

Muscatauck River, Ia. The head branches of this river rise principally in Decatur and Ripley counties. Its two largest, called Vernon and Graham's Fork, unite on the W. border of Scott co. It then flows W., separating Jackson and Washington counties, and empties into the E. fork of White River.

Muscle Fork, Mo. A branch of the Chariton River, which it enters just below Keytesville.

Muscot Creek, N. Y., rises in Putnam co., flows S., and enters Croton River, in Westchester co.

Muskeg River, La Pointe co., Wn. The most W. branch of Bad River.

Muskeget Island, Nantucket co., Ms. Situated off the N. W. extremity of Smith's Point.

Muskingum River, O. This large river is formed by two main branches, Tuscarawas and White Woman's Rivers, which unite at Coshocton. The Tuscarawas rises in Medina co., and a portage between them gave name to Portage town and county. The Muskingum is navigable for large bateaux to Coshocton, 100 miles. A canal, with a dam and locks, affording great water power, is constructed around the falls at Zanesville. There is a slack water navigation from Zanesville to Dresden, where a channel, 2½ miles long, connects Muskingum River with the Ohio Canal. The river is 225 yards wide at its entrance into the Ohio, at Marietta.

Musquewooc Lake, Washington co., Wn., lies in the N. W. interior of the county, at the head of Mequon River.

Musquito Creek, Io. A small branch of the Missouri, which it enters below Boyer's River.

Musquito Harbor, Me., lies in the S. part of Gouldsboro', Hancock co.

Musquito South Lagoon, Fa. Situated in the E. part of Orange co., between Indian River and the Atlantic.

Mystic River, Ms. The head of this river is at the beautiful town of Medford, 5 miles N. from Boston. At the junction of this river with the Charles, near the city of Charlestown, the British ships of war lay at the battle of Bunker Hill.

Nahant, Ms. See *Fashionable Resorts*.

Nahmyoo Bay, Brown co., Wn. Situated on the E. part of Green, W. from Sturgeon Bay.

Namebin Lake, La Pointe co., Wn., is the source of one of the main branches of Bad River.

Namejoy Bay, Charles co., Md. This is a small opening above Port Tobacco, on the E. side of the Potomac.

Namekegon River, Wn. This river drains the S. part of La Pointe, and, crossing the N. E. angle of St. Croix co., falls into the St. Croix River, of which it is a head branch.

Nansemond River, Va., has its source in Dismal Swamp, and enters Hampton Roads by a broad estuary. It is navigable for vessels of 100 tons to Suffolk, more than 20 miles.

Nantick River, New London co., Ct., flows in a S. direction, and empties into Long Island Sound.

Nauticoke Falls, Pa., are occasioned by the Susquehanna River's piercing a mountain in the N. part of Newport, 8 miles below Wilkesbarre. A dam is erected here for feeding the North Branch Canal, which affords great water power, and supplies a great quantity of surplus water.

Nauticoke River, Dc. and Md. This river rises in Suffolk co., Dc., flows S. W., and after entering Md., receives Marshy Hope River, which rises in Kent co., Md. The stream then enters, by a broad estuary, Fishing Bay, a branch of Chesapeake Bay.

Nantucket Island, Ms. See *Nantucket*, county and town.

Narmarungawack River, N. H., rises in the town of Success, and unites with the Androscoggin in Milan.

Narraganset Bay, R. I. This delightful bay is 28 miles in length, and from 3 to 12 in breadth,

lying wholly within the state of R. I. It extends from Point Judith on the W. to Seaconnet Rocks on the E., and terminates about 6 miles below Providence, at Bullock's Point. Taunton, Providence, Pawtuxet, and other rivers flow into it, and on its borders are Newport, Bristol, Warren, and other flourishing towns. It contains many beautiful islands, the principal of which are Conanicut, Prudence, Patience, Block, and Hope. This bay is accessible at all seasons, is well protected by forts, and affords some of the best harbors in the world.

Narraguagus River and Bay, Washington co., Me. The river has its source in several ponds in Beddington, and flowing in a S. S. E. direction, enters Narraguagus Bay between Harrington and Steuben. The bay contains a number of islands, and communicates on the E. with Pleasant Bay.

Narrows, N. Y. This great channel, through which most of the vessels going or returning from distant voyages enter the harbor of New York, lies between Long Island on the E. and Staten Island on the W. It is 8 miles S. of the city of N. Y., and communicates with the Lower Bay, which here contracts to one mile in width. Its shores are bold and commanding, and on them are situated the principal forts and batteries for the defence of the harbor and city.

Narrows, or Chimney Narrows, N. Y., situated on the Chemung River, near the village of Corning, Steuben co., are formed by rocky cliffs on the N. side of the river. They derive their name from the rocks which, left bare by the action of the water, resemble rude chimneys. A road, which is not without danger to the traveller, has been constructed along the narrow pass.

Nashua River, N. H. and Ms. This beautiful stream rises in Worcester co., Ms., and is formed of two branches, called the N. and S. branches. The N. branch is formed of two streams, one from Ashburnham, the other from Wachuset Ponds. The S. branch is composed of Still River, issuing from the E. side of Wachuset Mountain, and a stream from Quinepoxet Pond, in Holden. These branches unite in Lancaster, whence the main river proceeds in a N. E. course to Harvard, Shirley, Groton, and Pepperell, in Ms., and from thence into N. H., through Hollis, and nearly through the centre of Nashua, and falls into the Merrimack on the border of Nashvile.

Nash's Stream, N. H., originates in the vicinity of Stratford, and falls into the Upper Amonosuck, in the N. W. part of the town of Stark.

Nassau River, Fa., after an E. course on the S. border of Nassau co., enters the Atlantic by Nassau Inlet.

Natchaug River, Ct., is the largest branch of the Shetucket. It rises in Union and Woodstock, and enters the Shetucket near the boundary of Chaplin and Mansfield.

Natural Bridge, Va. See *Fashionable Resorts*.

Natural Canal, in the town of Canton, St. Lawrence co., N. Y., connects the waters of Oswegatchie and Grass Rivers. It is very straight, is 6 miles long, from 10 to 20 rods wide, and navigable at high water for boats of 10 tons.

Naugatuck River, Ct. This important mill stream is about 50 miles in length. It rises in the N. part of Litchfield co., and after traversing a S. course nearly the whole length of that county, it crosses the W. part of New Haven co., and falls into the beautiful Housatonic, at Derby.

Naunessa River, Wn. This stream flows S. E.

across the N. E. corner of Dane co., then turns to the N. E., crossing the N. W. corner of Jefferson co., and empties into the W. branch of Rock River, in Dodge co.

Navidad River, Ts. The E. fork of La Bacca River, which it enters at the town of Texana.

Navisoto River, Ts. A small stream flowing S. into Brazos River.

Nawizi River, Ma. This river runs W. of the Wanani, and nearly parallel to it, and empties into the Missouri.

Neal's Brook, Vt. It rises in several branches in Lunenburg, and, flowing S., falls into a pond of the same name, which lies near the centre of Lunenburg, and is about one mile long and half a mile wide. The stream then continues its course S., meets a W. branch, and after running about half a mile farther, falls into Connecticut River by a mouth nearly two rods wide.

Nebish Island, Mn. Situated in St. Mary's Straits, S. from Sugar Island.

Neches River, Ts. This river flows in a S. S. E. direction, and empties into Sabine Lake near the mouth of Sabine River.

Neddock, Cape, Me., is a rocky bluff, situated about 3 miles N. of York harbor, and inhabited by a few fishermen.

Neepeskunk Lake, Wn., lies in Winnebago and Fond du Lac counties, and communicates on the N. with Neenah or Fox River.

Neil's Creek, Steuben co., N. Y., flows E. into Conchocton River.

Nekomenon River, Marquette co., Mn., flows E. into Lake Superior.

Nemasket River, Ms. A fine mill stream. See *Middleboro'*.

Nenelau River, Mn. It rises in Oscoda and Alcona counties, flows N. E. across Alpena co., in Thunder Bay River.

Neosho River, In. Ter. This river rises in the dividing ridge between Arkansas and Kansas Rivers, runs S. E. and E. through the Osage and Cherokee lands, and enters the Arkansas 3 or 4 miles S. of Fort Gibson. Its length is 240 miles.

Neponset River, Ms. This is a noble mill stream, rising in Canton, Stoughton, and Sharon. It receives Mother Brook, a tributary of Charles River, and meets the tide water at Milton Mills; and after meandering 4 or 5 miles through beautiful meadow land, it meets Dorchester Bay at the delightful villages of Neponset and Commercial Point, about 5 miles S. from Boston. This river is navigable for large vessels to the Lower Falls in Dorchester and Milton.

Nescopeck Creek, Luzerne co., Pa., rises in the town of Hanover, and empties into the Susquehanna at Nescopeck Village, after a W. and N. W. course of 30 miles.

Nescopeck Mountain, Luzerne co., Pa. This mountain is about 850 feet in height and 20 miles in length, running parallel to Wyoming Mt., on the N. side of Nescopeck Creek.

Neshaming River, Pa., has its source in Hilltown, Bucks co., and after a winding course of 35 miles, crossed by several fine bridges, enters the Delaware 3 miles below Bristol.

Nesapeake River, N. Y., rises in Smithtown, Suffolk co., and runs N. into Long Island Sound. The tide ascends it 5 miles, and it is navigable that distance.

Neuse River, N. C. This river rises in Person and Orange counties, and after a course of about 300 miles, falls into a large estuary, connected

with Pamlico Sound. It is boatable 200 miles, and navigable for vessels 12 miles above Newbern.

Neversink Highlands, Monmouth co., N. J. These highlands lie near the ocean, and are about 300 or 400 feet high. They are mostly covered with wood, and, lying in a low country, although their height is not great, they have become a noted landmark for sailors.

Neversink River, N. Y. This fine mill stream rises in Ulster co., flows through Sullivan co., and empties into the Delaware at the village of Port Jervis, Orange co.

New Inlet, N. C. The passage between Federal Point and Smith's Island.

New River, Va., rises in the N. part of N. C., and flowing into Va., is called the Great Kanawha, after passing through Peter's Mountain.

New River, N. C., falls into New River Inlet, on the coast of the Atlantic, 45 miles W. S. W. of Cape Lookout.

New River, Beaufort district, S. C. This river runs nearly parallel with the Savannah, and enters Tybee Sound by several mouths.

New River, Ga. A small branch of the Chattahoochee, which it enters in Heard co.

New River, La., rises in Ascension co., between Mississippi and Amite counties, and empties into Lake Maurepas.

Newagen, Cape, Me. This cape extends from the town of Boothbay about 5 miles into the sea, and forms the E. boundary of Sheepscot Bay.

Newfound Pond, N. H. See *Bristol*.

Newfound River, N. H. See *Bristol*.

Newichawannock River, N. H. See *Piscataqua*.

New Point Comfort, Va. The S. E. extremity of Matthews co., between Chesapeake and Mob Jack Bays.

Newport Rivers, Ga. The N. River is navigable to Riceboro', 20 miles. Its length is 25 miles. The S. River, a smaller stream, empties into St. Catharine's Sound.

Newtown Creek, N. Y. rises in Newtown, Queen's co., flows W., and enters East River, opposite the city of N. Y.

Newtown Creek, N. Y., a fine, rapid mill stream, rises in Erin, Chenango co., and enters Chemung River, at the village of Elmira.

New Topsail Inlet, New Hanover co., N. C. Situated N. E. from Sandy Inlet.

Nickojack Creek, Ga., issues from a remarkable cave, situated in the N. W. extremity of the state. The cave is in Lookout Mt., is about 80 feet wide, 50 feet high, and 1½ miles in length. The creek is a powerful stream, being 60 feet wide at the mouth of the cave.

Niagara River discharges the waters of the great upper lakes, Superior, Michigan, Huron, and Erie, into Lake Ontario. It forms part of the boundary of the United States and of the state of New York, and is about 35 miles in length. It partakes more of the character of a strait, perhaps, than of a river. As it flows from Lake Erie, it is about three fourths of a mile wide, and from 20 to 40 feet deep. Its current for 3 miles is rapid, after which it becomes smooth and placid, resembling a prolongation of the lake, interspersed with low, wooded islands until it reaches the rapids, about 20 miles below Lake Erie, and three fourths of a mile above the falls. Five miles below Lake Erie, the river begins to expand, or, perhaps, more properly, to divide, flowing, in about equal volume, upon each side of Grand Island, which

is 9 miles long, and nearly the same in width in its widest part. At the foot of Grand Island is Navy Island, containing about 300 acres, which belongs to Canada, and was occupied by the Patriots, so called, in 1837-8. There are many other small islands in this section of the river, among which are Bird Island, between Buffalo and Fort Erie; Squaw Island, opposite to Black Rock, containing 131 acres; Strawberry Island, 100 acres; Beaver Island, 30 acres; Rattlesnake Island, 48 acres; Tonawanta Island, 69 acres; Cayuga Island, 100 acres, about 4 miles above the falls; Buckhorn Island, 146 acres; and Goat or Iris Island, upon the very brink of the cataract, containing 75 acres. The shores of the river are low, and nearly level, from Lake Erie to the falls, and are but little inhabited. Black Creek and Chippewa Creek empty into it from the Canada side, and Shojokey, Tonawanta, Cayuga, and Gill Creeks from the American side. All these are above the falls. Below the termination of Grand and Navy Islands, the two channels are again united, and the river, being compressed to a width of about two miles and a half, begins to flow on with an accelerated motion, in a gradually contracting channel, until it reaches the rapids, over which it is hurried, foaming and roaring, with irresistible velocity, for about three fourths of a mile farther, to the great Cataract of Niagara. Here its whole volume is precipitated over a perpendicular wall of rock, into a chasm from 150 to 160 feet in depth, to the surface of the stream below. Immediately under the cataract the depth to which the channel has been excavated cannot, of course, be fathomed; but a short distance below, where the river is compressed to less than one fourth of a mile in width, the current has been ascertained by soundings to be about 250 feet deep. For a more particular description of this great natural phenomenon, the reader is referred to a separate article, embracing many details which do not so properly belong to an account of the river. The general course of the river from Lake Erie to the falls is about N. W. by N. Below this point its general direction to Lake Ontario, 14 miles, is about due N. For about half this distance, to Lewiston, the river flows with concentrated volume, and with great velocity, in a descent of 104 feet, between banks gradually increasing in height from 150 to nearly 400 feet. These high banks terminate abruptly just above Lewiston; and the river thence flows on over an extensive plain, with scarcely more than two feet declivity, through the whole remaining distance of seven miles, to Lake Ontario. The river here becomes wider, and of course more tranquil, and its clear waters, flowing between even and regular banks, assume an appearance as lovely as it was before majestic. Nearly opposite Lewiston is Queens-town, on the Canada side. To these places the river is navigable for steamboats, and vessels coming into it from Lake Ontario. The whole descent of the river, from Lake Erie to Lake Ontario, is 334 feet. See *Fashionable Resorts*.

Nicollet Lake, Ca. Uh. A large sheet of water lying S. S. W. from the Great Salt Lake. Its principal outlet is Nicollet River.

Nidjikee Lake, La Pointe co., Wn. Situated E. from Meminis Lake, at the head of Namekegon River.

Nine Mile Creek, Onondaga co., N. Y., flows N. into Onondaga Lake.

Nipple Top. See *Dial Mountain*.

Nishnabatoria River, Io. and Mo. It rises in the S. W. interior of Io., flows S. W., crossing Mills co., Io., and Atchison co., Mo., and empties into the Missouri in Holt co.

Noddaway River, Mo., rises in the S. W. part of In. Ter., and enters the Missouri in the N. W. part of the state, after a course of 200 miles.

Nodding's Point, Camden co., Ga., juts into Jykil Sound just above Dover Island.

Nokay River, Ma. It rises in a chain of lakes, flows S. W., and empties into the Mississippi, a little below Crow Wing River.

Nolachucky River, N. C. and Te., has its source in Buncombe co., on the W. side of the Blue Ridge, and enters the French Broad River in Te.

Noland's Creek, Ts. It rises in the Cross Timbers, and flows S. into Brazos River.

Nolin Creek, Ky., rises in Hardin and Laure counties, flows S. W., forming the boundary between Grayson and Hart counties, and falls into Green River, opposite Brownsville, Edmonson co.

Noman's Land Island, Dukes co., Ms. Situated off the town of Chilmark, and directly S. from Gay Head.

Nonesuch River, Me. A small stream which waters Scarborough, and falls into the sea.

Norley River, one of the head branches of the Hiawassee, rises in Ga., flows N. N. W., and enters the Hiawassee in Cherokee co., N. C.

Normanskill, N. Y., rises in Schenectady co., flows S. E., and falls into Hudson River in the town of Bethlehem, Albany co.

North Fork, White River, drains Ozark co., Mo., flows S. into As., and enters White River in the N. W. part of Izard co.

North Island, Georgetown district, S. C. Situated at the entrance of Winyaw Bay.

North River, Ms. The head of this river is at Pembroke; it is very deep and narrow, and so exceedingly crooked that it meanders 18 miles in its course from Pembroke to Situate harbor, when the distance by land is less than 6 miles.

North River, N. Y. See *Hudson River*.

North River, N. C., forms the boundary between Currituck and Camden counties, and empties into Albemarle Sound.

North River, St. John's co., Fa. A small stream running parallel with the sea-coast, and falling into St. Augustine harbor.

Northern Fork, or Fall River, Io. It rises in the N. W. part of Dubuque co., flows S. E., and empties into Maccoquetais River in Jackson co.

North Neuport River, Ga. This stream rises in some small lakes in the centre of the county, flows S. E., and falls into St. Catherine's Sound.

North West Bay lies in the town of Westport, Essex co., N. Y., on the W. side of Lake Champlain.

Norwalk River, Fairfield co., Ct., flows in a S. direction into Long Island Sound.

Notipecago River, Mn. This is quite a large stream, having its sources in Oceana, Neewayga, and Lake counties, and flowing W. across Mason co. into Marquette Bay.

Nottoway River, Va. and N. C., rises in Prince Edward co., Va., and after a course of 110 miles, joins the Meherun in Gates co., N. C., to form Chowan River.

Nowadaga Creek, Herkimer co., N. Y., rises in the town of Warren, flows N. across Danube, where it enters the Mohawk.

Nowaynin Bay, Brown co., Wn. An inlet from

Lake Michigan, situated in the N. E. part of the county.

Nueces River, Ts. This large river rises in a lake, flows S. E., and empties into the Gulf of Mexico through Corpus Christi Pass.

Nulhegan River, Vt., rises in the towns of Averill and Wenlock. The N. branch takes a S. course through Averill, Lewis, and a part of Bloomfield, and the W. branch flows in an E. direction through Wenlock and a part of Brunswick. They unite in Bloomfield, and flowing S. E., fall into the Connecticut just above the N. E. corner of Brunswick. The course of this stream is generally rapid, except that part which runs through Wenlock and Brunswick. Through this and Clyde River the Indians formerly had their navigation from Lake Memphremagog to Connecticut River. They had a carrying-place of about 2 miles from the head of one river to that of the other. The Nulhegan waters about 120 square miles, and is about 3 rods wide at the mouth.

Oak Creek, Otsego co., N. Y., the outlet of Canadega or Schuyler's Lake, flows S. through the town of Otsego, and falls into the Susquehanna River.

Oak Creek, Milwaukee co., Wn., drains the S. part of the county, and empties into Lake Michigan.

Oak Island, N. Y., lies S. of Long Island, in the Great South Bay.

Oak Neck, N. Y., is situated in the town of Oyster Bay, Queen's co., on the N. side of Long Island.

Oakhill Landing, Livingston, Columbia co., N. Y., is situated 5 miles S. of the city of Hudson, on the E. side of Hudson River.

Oak Orchard Creek, N. Y., rises in Genesee co., flows N., and enters Lake Ontario in Orleans co.

Obed's River, Morgan co., Te. A W. branch of Emery's River.

Obed's River, Te., rises in two principal forks, which unite in Overton co. It then flows in a N. W. direction, and enters Cumberland River at Celina.

Obion River, Te. A large extent of country is drained by this river and its tributaries. The principal head branches rise in Henry and Carroll counties, and the river pursues a S. W. course until its entrance into the Mississippi.

Oblong Creek, N. Y., rises in Dutchess co., and falls into Ten Mile River, which enters the Housatonic in the state of Connecticut.

Ocohanock Creek, Va., forms part of the boundary between Northampton and Accomac counties, and falls into Chesapeake Bay.

Occoquan River, Va. This stream rises in Fauquier and Prince William counties, flows S. E., separating Fairfax and Prince William counties, and empties into the Potomac.

Ochee River, Wn. It rises in the S. E. part of Columbia co., flows S. S. E., and empties into Nauneecha River in Dodge co.

Ocheyedan Lake, Io. Situated near the N. border of the state, at the head of Ocheyedan River.

Ocheyedan River, Io. It rises in Ocheyedan and another small lake, flows S. E., and falls into the Inyan Tankey or Little Sioux River.

Ochapah Lake, Ma. Situated E. from Marxah Tankah Lake, and connected with the Minnesota or St. Peter's River by Tehankaska River.

Ocilla River. This river rises in the S. part of Georgia, flows in a S. S. W. direction through

Florida, separating Madison and Jefferson counties, and empties into Appalachee Bay.

Ocklawaha River, Fla. This river has its source in Lake Griffin, flows N. and E., and enters St. John's River just above Lake George.

Ockmulgee River, Ga. This river, the main branch of the Alatomaha, rises in Gwinnett and De Kalb counties, and flowing 200 miles in a S. S. E. direction, is joined by the Oconee on the S. border of Montgomery co., where they form the Alatomaha. It is navigable to Macon for steamboats.

Oconee River, Ga. The head branches of this river water Jackson co., and flowing in a S. S. E. direction, it unites with the Ockmulgee 280 miles below Milledgeville, to which place it is navigable for steamboats.

Oconto River, Brown co., Wn. It rises near the centre of the county, flows S. and E. into Green Bay.

Ocracoke Inlet, N. C. This is a narrow pass from the Atlantic Ocean to Pamlico Sound. There are 14 feet of water on the bar at low tide, and at the side of the passage are dangerous shoals.

Octaro Creek, Pa. and Md., separates Lancaster and Chester counties, Pa., and falls into the Susquehanna in Md., about 5 miles below the state line.

Ogeechee River, Ga., rises in Green co., 7 miles N. W. of Greensboro', and flows into Ossabaw Sound, 17 miles S. of Savannah, after a course of more than 200 miles. It is navigable for sloops 30 or 40 miles from its mouth, and for boats of 30 tons to Louisville, Jefferson co.

Ogunquit River, York co., Me., rises in two branches, and enters the Atlantic just above Cape Neddock.

Ohio River. The Ohio River, from the extent of the area drained by its waters, the large facilities which it affords to internal commerce, and its relative position in the heart of the country, connecting the largest maritime states with the west, is second in importance only to the Mississippi. It is the great N. E. tributary of the "Father of Waters." Its general course is from the N. E. to the S. W., making about 10° of lon. and $3\frac{1}{2}^{\circ}$ of lat.; and, flowing from the border of N. Y. through Western Pa., it separates the states of Va. and Ky., on the S., from O., Ia., and Is. on the N. Physically considered, the River Alleghany, which rises in Potter co., Pa., on the W. slope of the Alleghany Mts., and which is navigable for boats of 100 tons for 270 miles above Pittsburg, is one river with the Ohio, although it does not receive this name until it forms a junction with the Monongahela, another large tributary of the Ohio, coming down from the Alleghanies in the opposite direction. This river, though a less important stream than the Alleghany, is about equal to it in width at their confluence, and is navigable, at a good stage of water, for boats of a large size for about 100 miles from its mouth. The Ohio proper is formed by the confluence of these two rivers at Pittsburg, where the elevation is 680 feet above tide water, and 380 feet above the point of junction with the Mississippi. Its average descent is not quite five inches to the mile. Immediately below the junction the Ohio is 600 yards wide, and is a placid and beautiful stream. The French called it *La Belle Riviere*, the beautiful river. Its name, however, according to Heekewelder, is an abbreviation of the Indian word *Ohiopeckanne*, meaning a

very white stream, and alluding probably to the white caps with which its gentle surface is covered in a high wind. The physical section of the great Mississippi valley which is drained by the Ohio River, lies between lat. $34^{\circ} 12'$ and $42^{\circ} 27'$, and lon. $78^{\circ} 2'$ and $89^{\circ} 2'$ W. from the meridian of Greenwich. According to Darby and Dwight, who have minutely recorded the elements of these calculations, the distance in a direct line from the sources of the Alleghany to the mouth of the Ohio is 680 statute miles. Yet this is not the longest, nor, in regard to the proportions of the area included, the most central line which can be drawn through the valley of the Ohio. Such a line, extended from the sources of Cataraugus Creek in N. Y. to those of Bear Creek in Aa, the extreme distances reached by the N. E. and the S. W. tributaries of the Ohio, gives a length of 750 statute miles. If this be considered as the transverse diameter, and another line extending from the Blue Ridge, where the sources of the Great Kenhawa and those of the Wetauga branch of the River Tennessee arise, to the N. W. sources of the Wabash, a distance of 450 statute miles, be taken as the conjugate diameter of an ellipse, to the regular form of which the Ohio valley so nearly approaches, the whole area amounts by calculation to over 200,000 square miles. The two opposing inclined planes of this valley are of unequal extent, about in the ratio of 2 to 3, the larger being that which falls to the S. W. from the Appalachian Mts., containing an area of 120,000 square miles. This also, declining from a mountainous outline, has a much more rapid declivity than its opposite. The most elevated table lands from which the E. tributaries of the Ohio flow have an altitude of 2200 feet above the bed of the river; and there is no part, from the sources of the Alleghany to those of the Tennessee, which has a less elevation than 700 or 800 feet. Of course the declivity in this great inclined plane is much the most rapid as it approaches its apex upon its mountainous border. In this respect the opposite plain, or that on the N. W. side of the river, is directly the reverse. The more remote parts of this more gentle declivity, lying near the borders of Lake Erie and of Lake Michigan, are, to a great extent, level and marshy, and it is not until the waters running towards the Ohio have travelled far on their courses, that they gradually begin to descend more rapidly towards their recipient, as the face of the country changes slowly from a level into hill and dale. The principal tributaries of the Ohio on the E. side are the Monongahela, the Great Kenhawa, the Big Sandy, the Kentucky, the Cumberland, and the Tennessee. Those on the W. side are the Muskingum, the Scioto, the Miami, and the Wabash. From the difference of feature above mentioned, in the two opposite inclined planes, down which these tributaries descend from the E. and from the W., it results that the scenery upon those on the E. side, as they are ascended towards their sources in the Appalachian chain, becomes more and more bold and picturesque, while that upon the W. tributaries, as you ascend their streams, becomes more and more tame and monotonous. The scenery upon the Ohio itself partakes of the peculiarity in this respect which belongs to its E. tributaries. Descending the river from Pittsburg, the scenery along its banks and hills is highly picturesque and varied; but these fine features gradually

disappear, and are entirely lost long before reaching the mouth of the river. Many villages and farm-houses are passed through the whole course of the river; but as the bottom lands on its immediate margin are liable to be overflowed, the inhabitants usually settle a little back, so that the buildings in view give no adequate impression of the population or improvements of the country. The ordinary current in the Ohio is very gentle, not exceeding, at the medium height of water, 2 or 3 miles an hour. In the lowest stages of the water, a floating substance would probably not advance a mile an hour. Like all the western rivers, the Ohio is subject to great elevations and depressions. The average range between high and low water is 50 feet. Its highest stage is in March, and its lowest in September. It is liable, however, to great and sudden elevations at other times through the year. It has been known to rise 12 feet in a single night. In 1832 an extraordinary flood was experienced, and on the 18th of February the waters flowed at 63 feet above low water mark at Cincinnati. This of course inundated the lower parts of the city. From Pittsburg to the mouth of the Ohio there are as many as 100 considerable islands, besides numerous sand-bars and tow-heads, as those low sandy islands are called which are covered with willows, and are incapable of cultivation. Some of the islands are very beautiful, and seem inviting as places of residence. Heavy forests cover a great portion of the banks, and limit the prospect from the river; but they exhibit a beautiful verdure, which is often exuberant with blossoms. As a channel for navigation, few, if any, of the rivers of the globe equal the Ohio. The only direct cataract in the river is that at Louisville, which is now, for all the purposes of navigation, obviated by a canal, which admits of the passage of the largest steamboats. The river descends here, in its natural bed, $22\frac{1}{2}$ feet in the course of 2 miles. Even over this the boats are able to pass in high water. The average time of the suspension of navigation on the Ohio by the ice, in winter, is five weeks. One half of the rest of the year, on an average, it is navigable by large steamboats in its whole course. The other half it can be navigated easily only by boats of a smaller draught. Flat and keel boats descend the river at all seasons, but are liable in periods of low water to frequent groundings upon the sand-bars, and the necessity sometimes of lightening to get off the boat. Steamboats are sometimes grounded on the bars, where they are compelled to wait in peril for the periodical rise of the river. It is reckoned that the Ohio and its tributaries have not less than 5000 miles of navigable waters. The length of the principal river from Pittsburg to its mouth, according to the Western Pilot, is 959 miles, although the distance in a direct course is only about 614 miles. The following distances upon the river are derived from the same authority: from Pittsburg to Steubenville, O., 70 miles; to Wheeling, Va., 92; to Marietta, O., 174; to Gallipolis, O., 264 $\frac{1}{2}$; to Portsmouth, O., 349; to Maysville, Ky., 397; to Cincinnati, O., 455 $\frac{1}{2}$; to Lawrenceburg, Ia., 479 $\frac{1}{2}$; to Louisville, Ky., 587; to New Albany, Ia., 591; to the mouth of the Cumberland River, Ky., 900; mouth of Tennessee, Ky., 911 $\frac{1}{2}$; and to the confluence of the Ohio with the Mississippi, 959 miles. The commerce of the Ohio is connected with the Atlantic by a canal

and railroad, uniting Pittsburg and Philadelphia. A railroad is also in operation from Baltimore as far as Cumberland, which is to cross the Alleghanies to Wheeling.

Ohioyle Falls, Pa. This cataract is at the head of boat navigation in Yonghiogeny River, where it passes Laurel Hill, 60 miles above its junction with the Monongahela. The river falls perpendicularly about 20 feet, and there is a total descent of 60 feet in the space of a mile.

Oil Creek, Pa., derives its name from a spring on its bank, near the boundary between Venango and Crawford counties, on the surface of which floats an oil valuable for medicinal purposes. The creek enters Alleghany River 8 miles E. of Franklin.

Oil Creek, Perry co., Ia. A small stream flowing into Ohio River.

Oil Spring Creek, N. Y., rises in Alleghany and Cattaraugus counties, and flows S. W. into the Alleghany River.

Oil Spring Reservation, N. Y. This is an Indian reservation of about 1 mile square, containing a pool of water, the surface of which is covered with an oily substance much used for the cure of sores and chronic diseases in man and beast. It lies in the towns of Cuba and Hinsdale. See *Oil Creek*, Pa.

Okabena Lake, Ma. Situated in the S. part of the territory W. from the Moingonan River.

Okaman Lake, Ma. It lies at the head of Leseur River, and S. E. from Ochopah Lake.

Okamenpiden Lake. Situated on the boundary of Io. and Ma.

Okanozabee River, Mi. and Aa. This river is formed in Mi. by the junction of the Noxubee River, Dancing Rabbit, Horse Hunter, and other creeks. It flows S. E. into Aa., and enters the Tombigbee at Gainesville.

Okeechobee or *Macaco Lake*, Fa. This large lake lies mostly in St. Lucie co., to the N. of the Everglades. It receives the waters of Kissimee River on the N., and Fish Eating Creek on the W., and contains several islands.

Okonagan River. This river rises principally in the British possessions, flows in a S. direction, and empties into Clark's Fork of Columbia River, in On.

Old Caney Creek, Ts., empties into the Gulf of Mexico a little E. from Mattagorda Bay.

Old Field Point, N. Y., is situated in the town of Brookhaven, Suffolk co., on the N. side of Long Island. On it is located a light-house.

Old Man's Kill, N. Y., rises in Plattekill, Ulster co., flows E. through Marlboro' into the Hudson.

Old Plantation Creek, Northampton co., Va. A small inlet communicating with Chesapeake Bay.

Old Point Comfort, Elizabeth City co., Va. Situated between Chesapeake Bay on the E. and Hampton Roads on the W.

Old Topsail Inlet, Carteret co., N. C. A passage between the islands in the N. E. part of Onslow Bay.

Olivetian River, N. H., is formed of two branches, both having their sources in the town of Benton: the E. branch from the W. side of Moose-hillock Mountain, and the N. branch from Owl's Head Mountain. These branches unite near the E. line of the town of Haverhill, and the main stream passes through the S. part of the town, and falls into the Connecticut.

Olympus, Mount, On. Situated in the N. W. part of the state, S. from the Straits of Juan de Fuca.

Ompompanoosuck River, Vt., rises in the N. W. part of Vershire, and runs E. into West Fairlee. It then takes a S. E. course into Thetford, where it receives a stream from Fairlee Lake, which is a large body of water lying partly in Fairlee and partly in Thetford. In the S. part of Thetford it receives a considerable stream from the W., which originates in Tunbridge and Strafford, and it finally mingles with the Connecticut in the N. E. part of Norwich. The whole length of the Ompompanoosuck is about 20 miles, and it affords a number of valuable mill sites. The name, which is Indian, is said to signify a stream where many onions are found.

One Hundred and Two River, Mo. This stream waters the S. interior of Nodowry co., flows S., and empties in the Little Platte River in Buchanan co.

Oneida Creek, N. Y., rises in Madison co., flows N. W., dividing Madison and Oneida counties, and empties into Oneida Lake. This river and its tributaries afford a number of good mill sites. It is also a feeder to the Erie Canal. Vessels ascend it to the village of Oneida Castle, a distance of 3 miles.

Oneida Lake, N. Y., is bounded by Oneida, Madison, Onondaga, and Oswego counties. It is 22 miles long, and from 4 to 6 wide. Wood, Oneida, and Chittenango Creeks, besides several smaller streams, flow into it. There is a fine shelving beach on the E. end, which is much resorted to for fishing with seines. White fish, pickerel, pike, perch, and catfish are taken in great quantities.

Oneida River, N. Y., formed by the outlet of Oneida Lake, flows 20 miles in a circuitous W. direction, and unites with the Seneca River. The united streams then take the name of Oswego River, which flows N. into Lake Ontario.

Onion River, Vt. See *Winooski River*.

Onion River, Sheboygan co., Wn. It rises in the W. interior of the county, flows S. E. nearly to its S. border, and then flows N. N. E. until its entrance into Sheboygan River.

Onondaga Creek, Onondaga co., N. Y., flows N. into the lake of the same name.

Onondaga Lake lies in the N. part of Onondaga co., N. Y. It is 8 miles long, and from 2 to 4 miles wide, and abounds in pickerel, pike, bass, and catfish. The number of salt springs on its borders have led to the supposition that the water at the bottom of this lake was salt, but experiments to the contrary have since been made.

Onslow Bay, N. C., is a portion of the Atlantic contained within the curve between Cape Fear and Cape Lookout. A chain of long, narrow islands, with inlets between them, stretches along the shore, at a distance of 1 or 2 miles from it.

Ontario, Lake. One of the chain of the great American lakes, lying between the state of New York and Canada. This is the easternmost and smallest in extent of the series. It is 190 miles long, with an average width of 40 miles. Its greatest width is 55 miles. Its circumference is 480 miles. It is very deep in every part, varying from 500 to 600 feet, so that its bottom is considerably below the surface of the Atlantic. Its surface is 334 feet below that of Lake Erie, from which, through the Niagara River, or Strait, it receives the waters of all the great upper lakes, at its western

end. Its outlet, at its N. E. extremity, is the River St. Lawrence. A large number of creeks and rivers enter the lake on the S. side, the principal of which are the Genesee, Oswego, and Black Rivers. The principal bays are those of Quinte and Burlington, in Canada; and Chaumont, Gerondiquot, and Braddock's, on the American shore. The Bay of Quinte is a considerable body of water, into which a river descends, forming the outlet of several small lakes. The shores of this lake are generally rather low, and in some places marshy; in other parts, however, they are elevated, and the land is generally good. The "alluvial way," so called, is a remarkable ridge of land from 7 to 10 miles distant from the S. shore of the lake, and extending in a course nearly parallel to it for a long distance, having the appearance of being in some way formed by the action of the lake, at a period when it may have been higher and spread over more surface than at present. There is an excellent road upon the summit of this ridge. There are a number of good harbors, and several places of increasing commerce and business, upon the shores of Lake Ontario, the most important of which, on the Canada shore, are Toronto, Kingston, and Coburg; and on the New York shore, Oswego, Sackett's Harbor, and Port Genesee. This lake is subject to violent storms and heavy swells; but it is safely navigated by steamboats, which are large and stanchly built, and by other vessels. By the Welland Canal, which connects this lake with Lake Erie on the W., vessels are carried around the Falls of Niagara, and also around the rapids in the upper part of the St. Lawrence. It is connected with the Erie Canal and the Hudson River by a canal from Oswego; and much valuable trade to and from New York passes by this channel through the lake. Ontario has such a depth of water that even its harbors are seldom closed or much obstructed by ice. Daily lines of steamboats run through the lake from Ogdensburg, on the River St. Lawrence, to Lewiston, touching at all the intermediate ports. Sackett's Harbor, at the mouth of Black River Bay, about 150 miles N. from Oswego, is one of the best and most secure harbors on Lake Ontario. It was an important naval and military station during the last war with Great Britain.

Ontonagon River, Mn. This large river drains the W. part of the upper peninsula. Its E. branch rises in Marquette co., its middle and S. in small lakes near the border of Wn., and its W. in Gogebic Lake. The main stream flows in a N. N. W. direction, and empties into Lake Superior.

Oostenaula River, Te. and Ga., rises in Te., and unites with the Etowah in Floyd co., to form Coosa River.

Opequan River, Va. This river rises in the S. E. part of Frederick co., flows N. E., separating Clark and a part of Jefferson from Frederick and Berkeley counties, and empties into the Potomac River.

Oquossak Lake, Oxford co., Me. This large sheet of water lies a few miles N. E. of the Moose-luckmaguntic. It is irregular in its form, and contains many islands.

Orange Lake, Fa. This is an irregular sheet of water lying in Alahua and Marion counties. Its outlet connects with the Ocklawaha, a branch of St. John's River.

Oriskany Creek, N. Y., a very important mill stream, on which are situated extensive cotton and

woollen factories, rises in Madison co., and falls into the Mohawk at the village of Oriskany, Oneida co.

Orphan's Island, Penobscot co., Me. This beautiful island, containing about 5000 acres of land, lies at the mouth of Penobscot River, and is 4 miles in length. Its N. part lies opposite the town of Bucksport, to which it is attached. It divides the Penobscot into two branches, the W or main branch of which is called the "Narrows," on which side is a fort constructed by the U. S. government. The other branch is called E. River. The island derived its name from having been the property of an orphan who inherited it as her part of the Waldo estate.

Osage River, Mo., has its source in In. Ter., flows into Mo., and after a winding course through fertile borders, falls into the Missouri 133 miles above the Mississippi. It is 397 yards wide at its mouth, and navigable for steamboats 200 miles.

Osakis River, Ma., is supplied by numerous lakes, and flows W. into the Mississippi.

Ossabaw Island and Sound, Bryan co., Ga., are situated at the mouth of Ogeechee River. The island is flat and sandy, and 10 miles long; and the sound is an inlet between this island and Warren Island.

Ossipee Lake, N. H. See *Ossipee*.

Ossipee Mountain, N. H. See *Ossipee*.

Oswegatchie River, N. Y., rises in Herkimer co., and pursues a winding N. W. course until it enters the St. Lawrence at the village of Ogdensburg, St. Lawrence co.

Oswego River, N. Y., furnishes the final outlet of the small lakes in the interior of the state of N. Y. into Lake Ontario, into which it flows at the town of Oswego, on the S. shore. The Oswego River flows directly from the outlet of the Oneida Lake, and receives the waters of the other small lakes by the Seneca River, into which their several outlets are discharged, and which unites with it about 24 miles from its mouth. Its course is about N. W. The lakes with which it is connected are, besides the Oneida, Fish, Cross, Otsego, Onondaga, Owasco, Skeneteles, Canandaigua, Crooked, Cayuga, and Seneca Lakes. This river, for the greater part of its course, serves the purpose of the Oswego Canal, connecting the Erie Canal at Syracuse with Lake Ontario, the falls of about 100 feet, 12 miles from its mouth, being overcome by lockage. From the foot of these falls the canal is carried along upon the E. bank of the river to its mouth, where it descends by locks to the level of the lake. An immense water power is furnished by this canal for mills and manufacturing purposes at Oswego. This river served in early times as the great channel of intercourse between the French, and subsequently the English, in Canada, and the Six Nations of Indians in Western N. Y. It was not, however, navigable from the lake, on account of the falls at its mouth.

Otego Creek, N. Y., rises in Burlington, Otsego co., and flows into the E. branch of the Susquehanna. It affords good water power.

Otisco Lake, N. Y. This beautiful sheet of water lies in the W. part of Onondaga co., surrounded by romantic scenery, and is 5 miles long and 2 miles wide.

Otsdawa Creek, N. Y., rises in Laurens, Otsego co., and flows S. into the Susquehanna River.

Otsego Lake, N. Y. This beautiful body of water lies in the N. part of Otsego co. It is 9

miles long, from 1 to 2 miles wide, and abounds with a variety of fish of fine flavor. At its outlet, which is the source of Susquehanna River, lies the flourishing village of Cooperstown. This lake and vicinity is a favorite resort of the sportsman and angler, and noted for pleasant scenery.

Otselic River, N. Y., rises in Madison co., flows through Chenango and Cortland counties, and enters Toughnioga River in Broome co. This stream affords good water power, and abounds in fine trout.

Otsuaga Creek, N. Y., rises in Herkimer co., flows N. E., and enters the Mohawk in Montgomery co.

Otta Quechee River, Vt., (called also *Water Quechee* and *Quechee River*.) rises in Sherburne, runs E. through the S. part of Bridgewater, thence E. N. E. through Woodstock, into the S. part of Hartford, and thence S. E. through the N. E. corner of Hartland, into Connecticut River, about 2 miles above Quechee Falls. In Bridgewater it receives two considerable mill streams, namely, North Branch, which rises in the N. part of this township, and South Branch, which rises in Plymouth. In Woodstock it receives two other fine mill streams: one, rising in the N. E. corner of Bridgewater and S. E. corner of Barnard, falls into Quechee River just below the N. village in Woodstock. Quechee River, in its course, receives numerous other tributaries. It is about 35 miles in length, and waters about 212 square miles. The name is of Indian origin, and is said to signify quick whirling motion, probably given on account of appearances at the falls.

Otter Creek, Vt., is the longest stream in the state. It rises in Mount Tabor, Peru, and Dorset, within a few rods of the head of the Battenkill. In Dorset it turns suddenly towards the N., and returns into Mount Tabor, running through the W. part of this township and Wallingford, and through the central part of Clarendon into Rutland; it then takes a N. W. course through Pittsford and Brandon, between Leicester and Salisbury on the E., and Whiting and Cornwall on the W., through Middlebury, between New Haven and Weymouth, through the N. E. corner of Addison, between Waltham and Pantton, and through Vergennes and Ferrisburg, into Lake Champlain. From the S. W. it receives in Ferrisburg a large creek, which rises in Bridport; in Weybridge, Lemonfair River; in Rutland, Little West River, or Furnace Brook; and in Mount Tabor, Mill River. From the E. it receives New Haven, Middlebury, Leicester, and Furnace Rivers, East Creek, Cold and Mill Rivers, all of which are considerable mill streams. Otter Creek affords many excellent mill sites, and is navigable 8 miles for the largest vessels on the lake. Its whole length is about 90 miles, and it waters about 900 square miles. The alluvial flats along this stream are very extensive and fertile. It was named by the French *Riviere aux Loutres*, the River of Otters, long before any settlements were made by the English in this state.

Otter Creek, N. Y., rises in Herkimer co., flows W., and falls into Black River in Lewis co.

Otter Creek, Ia. A small branch of the Wash River, which it enters in the N. part of Vigo co.

Otter Creek, Is., flows S. W. through Macoupin co., and empties into Macoupin River.

Otter, Peaks of, Va., are situated between Bedford and Bottetourt counties, 30 miles W. by N. of Lynchburg. They are a part of the Blue Ridge, and the highest land in the state. The E. peak is 3104, or, according to some statements, 4260 feet high, and the W. 2946 feet.

Otter Tail Lake, Ma. The largest and most N. of the chain of lakes supplying the head waters of North Red River.

Ottoway River, Ma. It rises in several small lakes, flows S. S. W., and empties into the Mississippi a little below Peterah River.

Ottowas Bay, Mn. A part of Saginaw Bay, bordering on Iosco and Arenac counties.

Overslaugh, N. Y., is situated in the Hudson River, 3 miles below the city of Albany, and formerly consisted of a succession of bars or flats, through which there were narrow channels, affording but a small depth of water at low tide. This obstruction, however, has been mostly removed by the U. S. government, and the increased depth of water has much improved navigation.

Owasco Lake, Cayuga co., N. Y., is 12 miles long and about 1 mile wide. Its waters are very transparent, abounding with trout and other fish. The banks are rugged and picturesque.

Owasco Outlet, N. Y., commences in the town of Auburn, 2 miles S. of the village, and falls into Seneca River in the town of Metz. This stream affords extensive water power, and many of the fine mill sites are already occupied.

Owawichah River, Ma. It flows S. W., and empties into the Missouri a little above Third Cedar Island.

Owego Creek, N. Y., rises in Cortland and Tompkins counties, and empties into the Susquehanna at the village of Owego, Tioga co. This creek passes several pleasant villages, and, together with its tributaries, affords extensive water privileges.

Owen's Lake and River, Ca. The lake is a small sheet of water situated at the S. part of the Sierra Nevada, and the river a stream emptying into it from the N.

Owl's Head, Me. See *East Thomaston*.

Owyhee River, On. This river rises in the S. part of the territory, takes a semicircular course, bending into Ca. for a short distance, and finally enters the Lewis Fork of Columbia River a little below Big Wood River.

Oxbow Lake, N. Y., is a beautiful little sheet of water lying in the town of Lake Pleasant, Hamilton co. Its waters abound with trout of a fine flavor. The outlet of this lake is a valuable mill stream, emptying into Piseco Lake.

Oyster Bay, N. Y., a large and important body of water, lies in the town of Oyster Bay, on the N. side of Long Island, and is connected with Oyster Bay and Cold Spring harbors, all of which abound with shell and scale fish, and wild fowl.

Oyster Creek, Ts., falls into the Gulf of Mexico N. E. from the mouth of Brazos River.

Oyster River, N. H. See *Durham*.

Packard's Mountain, New Salem, Ms. Height 1278 feet.

Pacolet River, N. and S. C., has its source in the Blue Ridge, N. C., and falls into Broad River at Pinckneyville, Union co., S. C.

Paint Creek, O., rises in Madison co., and after a course of 60 miles enters the W. side of the Sciota, 5 miles below Chillicothe.

Palala Creek, Ga., rises near the centre of

Stewart co., flows S. W., and falls into the Chat-tahoochee.

Palisades, N. Y. This range of precipitous rocks extends about 20 miles along the W. bank of the Hudson. They first approach the immediate borders of the river at Fort Lee, in N. J., where they are from 300 to 500 feet in almost perpendicular height, and extend N. to Piermont at the commencement of Tappan Bay. They are appropriately named Palisades, meaning "palings set out for an enclosure," as they will probably restrain the waters of this noble river so long as the earth keeps its foundation.

Palm Island, Hillsboro' co., Va. Situated between Long Island on the N. W. and Clam Island on the S. W.

Palmertown Mountains, N. Y. This range, which runs parallel with the Kayaderosseras Mts., commences in the N. W. part of Washington co., extends in a S. direction between Lakes George and Champlain, through a part of Warren, into Saratoga co. They rise to a height of from 1000 to 1200 feet in Washington and Warren counties.

Palmetto Creek, Laurens co., Ga., flows S. E. into the Oconee River.

Pamlico River, N. C., is a broad estuary leading from Tar River into Pamlico Sound. It is from 1 to 8 miles broad, deep enough to admit any vessels which navigate the sound, and 40 miles long.

Pamlico Sound, N. C. This shallow body of water is 80 miles long, and from 8 to 30 miles wide. The principal entrance to it is Ocracoke Inlet. The N. part is connected with Albemarle Sound. It is separated from the Atlantic by long, sandy islands, hardly a mile wide, covered with bushes, the outer point of one of which is Cape Hatteras. Tar and Neuse Rivers flow into the sound. The land around it is low, and in some places marshy.

Pamunky River, Va. This river is formed by the junction of N. and S. Anna Rivers, between Hanover and Caroline counties, and unites with the Mattaponi to form York River, between New Kent and King William counties.

Panther Gap Creek, Bath co., Va. A small stream, flowing in a S. W. direction into Cow Pasture River.

Panther River, Mo. A stream rising in the S. part of Jackson co., and flowing S. E. into the South Grand, a branch of Osage River.

Papacton River, N. Y., the E. branch of the Delaware, rises in the N. part of Delaware co., flows S. W. into the town of Hancock, where it unites with the Mohawk, or W. branch.

Paradox Lake, lying in the town of Schroon, Essex co., N. Y., is 4 miles long, and from half a mile to a mile wide. There are many small lakes in the vicinity, which abound with trout and other fish.

Paris Island, Beaufort district, S. C., lies in Broad River, between Port Royal and St. Helena Islands.

Parker's Islands, N. H. See *Hanover*.

Parker's Island, Md., lies in the Chesapeake, about 15 miles S. from Annapolis.

Parrott's Creek, Jackson co., Va. A small tributary of the Choctawhatchie River.

Partridge Lake, Brown co., Wn. Situated on the S. border of the county, and connected on the E. with Wolf River.

Pascagoula River, Mi. Chickasawhay and Leaf Rivers unite to form this river, which falls into Pascagoula Sound, in the Gulf of Mexico, after

a course of 200 miles. It is boatable 150 miles, and navigable for vessels drawing 6 feet of water 60 miles.

Pascagoula Sound, Mi. and Aa., into which Pascagoula River empties, is separated from the Gulf of Mexico by several low, narrow islands. Its average breadth is 8 miles, and its length about 55 miles.

Pasquotank River, N. C., rises in Lake Drummond, in Dismal Swamp, and runs S. E. into Albemarle Sound. It is connected with Elizabeth River by a canal, which forms a communication between Albemarle Sound and Hampton Roads.

Passadumkeag River, Me. This fine mill stream rises in the N. E. part of Penobscot co., flows through the N. part of Hancock co., then reënters Penobscot co., and receives Cold Stream 2 miles above its junction with the Penobscot.

Passage Island, Hillsboro' co., Va., lies at the mouth of Tampa Bay, S. E. from Egmont Island.

Passaic River, N. J. This stream rises in Mendham, Morris co., and though flowing through a mountainous country, pursues a winding and somewhat sluggish course of about 70 miles to its entrance into Newark Bay. It has some falls which afford good water power, particularly the great falls at Paterson, where there is a perpendicular fall of 50 feet, and a total descent of 70 feet, with a width of about 60, affording immense water power. It is navigable for sloops to Acquahunonck, 12 miles, and is bordered by marshes near its mouth.

Passumpsic River, Vt., rises in a pond on the E. border of Westmore, and, running S. through Newark, passes into the W. corner of East Haven; thence it pursues nearly a S. course through Burke, Lyndon, St. Johnsbury, Waterford, and Barnet, and falls into the Connecticut 1 mile below the foot of Fifteen Mile Falls. This river flows through much rich interval, is generally deep, and measures from 4 to 6 rods in width below St. Johnsbury Plain. It receives several large branches in Lyndon, two in St. Johnsbury, and one in Barnet. The name of this stream is said to be derived from the Indian phrase, *Bas-soom-suc*, signifying a stream where there is much medicine. Length about 34 miles.

Patanguomis River, Me., in the N. part of Piscataquis co., is an enlargement of the Alliguash River.

Patapsco River, Md. This fine mill stream rises in Baltimore co., and enters Chesapeake Bay, by a broad estuary between North and Bodkin's Points. It is navigable for vessels drawing 18 feet of water 14 miles, to Fell's Point.

Patkasha River, Ma., flows E., and enters the Tehan Sanson or River à Jaques, a little below Wamuduska River.

Patoka River, Ia., rises in Orange co., and pursues a W. course until it enters the Wabash, opposite Mount Carmel, Is., and 1 or 2 miles below the mouth of White River.

Patsaliga River, Aa. This is one of the principal branches of the Conecuh River, which it enters from the N. W. in Covington co.

Patten's Creek, Ky., enters the Ohio in lon. 85° 50' W. and lat. 38° 22' N.

Patterson's Creek, Va. It rises in the N. part of Hardy co., among the Alleghanies, flows N. E. across Hampshire co., and enters the N. branch of the Potomac.

Patterson Point, Michillimackinac co., Mn., encloses Elizabeth Bay on the W.

Patuxent River, Md., forms the boundary between Montgomery and Anne Arundel counties, and flowing S. E. 40 miles, it turns to the S., and flows 50 miles, nearly parallel with Chesapeake Bay, which it enters on the W. side by a large estuary. It is navigable 50 miles, to Nottingham, for vessels of 250 tons.

Pawwaicun Lake, Winnebago co., Wn. A large sheet of water, which receives the waters of Wolf River in the N., and communicates with Neenah or Fox River on the S. E.

Pawcatuck River. This river rises in the W. part of R. I., where it receives Wood and Charles Rivers, two good mill streams, and empties into Long Island Sound, between the towns of Westerly, R. I., and Stonington, Ct. It is navigable 6 miles.

Pawlet River rises in Vt., flows W. and N. W. through Washington co., N. Y., and falls into Wood Creek just before its entrance into Lake Champlain. This stream affords good water power, and on its banks are situated several pleasant villages.

Pawnis Deserted River, Ma. A small stream flowing S. W. into the Missouri River.

Pautuxet River, R. I., rises in the W. part of Providence co., and, with its branches, waters a large part of the state. It enters Narraganset Bay 5 miles below Providence, and is celebrated for its fine mill sites.

Payette River, On. It rises among the Salmon River Mts., flows S. of W., and empties into Lewis Fork of Columbia River.

Pea River, Aa., is the largest branch of Choctawhatchee River, which it enters near the S. border of the state, in Dale co.

Pea Patch Island. Situated in Delaware River, and contains the ruins of Fort Delaware, which was erected during the American war.

Peabody River, N. H., rises in the E. pass of the White Mts., near the head of Ellis's River, a branch of the Saco, and passes N. into the Androscoggin.

Peaked Mountain, Monson, Ms. Height 1239 ft. *Peak Island*. A small island lying in the Gulf of Mexico, at the mouth of the Mississippi.

Pearl Lake, Avoyelles parish, La., discharges its waters through the Bayou de Glaze into the Atchafalaya River.

Pearl River, Mi. and La. Its head branches rise near the centre of Mississippi, and running S. it joins by several mouths the Rigolets, which forms a communication between Lakes Pontchartrain and Borgne. It forms the boundary line between Mi. and La. from lat. 31° N. It is navigable for small craft to Jackson, the capital of Mi. Some efforts have been made to improve the navigation, which is obstructed by sand bars, shallows, and rafts of timber.

Pecan Creek, Ts. An E. branch of Colorado River, which it enters just above the San Saba.

Peck's Beach, Cape May co., N. J. A long, narrow island, lying S. from Great Egg Harbor.

Peconic Bay, Great, lies on the E. end of Long Island, opposite Shelter Island, by which it is separated from Gardiner's Bay. It is 14 miles long, from 4 to 5 miles wide, and is separated from Southold Harbor by Great Hog Neck. Its borders are somewhat irregular, and Robbins's Island is situated near its centre. Little Peconic Bay extends inland 4 or 5 miles. Sloops navigate it to the village of Riverhead, which is the shire town of Suffolk co.

Peconic River, N. Y., rises in the town of Brookhaven, Suffolk co., flows E. through Little Peconic into Great Peconic Bay.

Pedee, Great, River, N. and S. C., rises at the foot of the Blue Ridge, Wilkes co., N. C., and bears the name of Yaddin River until it enters S. C. It then flows in a S. direction until it unites with the Wacamaw, a little below Georgetown, and forms Winyaw Bay, which enters the Atlantic 12 miles below Georgetown. It is navigable 200 miles for boats of 60 or 70 tons.

Pedee, Little, River, rises in N. C., and, flowing S. S. W., enters the Great Pedee, 32 miles above its mouth.

Pekatonica River, Wn. and Is., rises in Iowa co., Wn., and, flowing S. and E., receives Sugar Creek from the N., and falls into Rock River, Is., 6 miles below the N. boundary of the state. It is navigable to Mineral Point, Wn., for flat boats.

Pekende River, Ma., rises in a small lake, and, flowing W., empties into the Missouri River opposite Prospect Island.

Pekushino River, Ma. It rises in a small lake near the source of Rum River, flows S. W., and empties into the Mississippi nearly opposite Sagatagon or Spunk River.

Peloose or Flag River, On. A N. branch of Lewis Fork of Columbia River.

Pemadumcook Lake, or the *Bamedumpkok*, Piscataquis co., Me. This lake lies a few miles N. of Baker's Mt., is of an irregular shape, and contains many islands. The soil on the borders of the Pemadumcook and the numerous lakes connected with it is remarkably good. The Jo-Mary Lakes, lying near, are beautiful sheets of water, and are surrounded by some of the best timber land in the state. The facilities for rafting timber down the Penobscot through these lakes render this part of the state very valuable.

Pemigewasset River, N. H. This stream and the Winnipiseogee constitute the Merrimack. The Pemigewasset is formed of three principal branches, having their sources in Woodstock, Franconia, and the Ungranted Lands S. W. from the White Mts. These branches unite in Woodstock, from whence the main stream passes in a S. direction, through Thornton, Campton, between Plymouth and Holderness; Bridgewater, Bristol, and New Hampton; Hill and Franklin; at which latter town it unites with the Winnipiseogee.

Pemmaquid Point, Lincoln co., Me. This important point of land is situated between Muscongus Bay on the E. and Pemmaquid River on the W. It contains a light-house, which bears about 9 miles N. E. from Bantam Ledge, and 10 W. from St. George's Island.

Pendleton River, Ga., rises in Laurens co., Ga., flows S. W., separating Emanuel and Montgomery counties, and receiving Alligator, Tiger, Swift, and Wolf Creeks, and empties into the Great Ohoopee in Tatnall co.

Pend Oreilles or Kulluspelm Lake, On. A large sheet of water through which flows the Clarke Fork of Columbia River.

Penn's Creek, Pa. This stream rises in the N. part of Huntingdon co., flows N. E. and E., and empties into the Susquehanna River in Union co.

Penobscot Bay, Me. This bay extends from Owl's Head on the W. to Burnt Coat Island on the E., a distance of 30 miles. At its mouth are Fox Islands, Deer Isle, Isle of Haut, and several smaller ones. It extends inland to Belfast Bay

at the mouth of Penobscot River, a distance of 20 miles N. from Owl's Head. This bay affords many varieties of fish, contains many good harbors, and on its borders are many large and flourishing towns.

Penobscot River, Me. This large and important river, with its numerous and extensive branches, waters a great portion of the state. It pierces the county which bears its name, and receives tributaries from Washington, Hancock, Waldo, Piscataquis, and Somerset counties. Below the union of the E. and W. branches, the Piscataquis and Matawamkeag are its largest tributaries. From the junction of the two branches, or "the Forks," to tide water at Bangor, is about 76 miles. The E. branch rises at the N. in the Sebouis Lakes, near Aroostook River, and on its passage to the junction, a distance of about 50 miles, it is properly called Sebouis River. The W. branch of the Penobscot rises in the high lands on the border of Lower Canada and the W. frontier of Me. It passes through the counties of Somerset and Piscataquis in an E. direction, to its junction with the E. branch, receiving in its course the waters of Lakes Chesuncook, Pemadumcook, Millinocket, and other large collections of water. This branch passes within 3 miles of the N. border of Moose Head Lake, the source of Kennebec River. The length of this branch of the Penobscot, from its source to its union with the E. branch or Sebouis River, may be stated at about 140 miles, and the greatest length of the river to Bangor, 215, and to the ocean, 275 miles. Some of the most important tributaries of this majestic river are noted under their distinctive names. A description of them all, with their hydraulic powers and boatable capabilities, their rapid courses and beautiful cataracts, their fertilizing qualities, and other peculiarities, would fill a volume. Indeed, these streams, and the immense basin which they drain, are so little known, that some years must elapse before any thing like a fair delineation of the value and beauty of this interesting section of New England can be given.

Pensaukie River, Brown co., Wn. A small stream flowing in a N. of E. direction into Green Bay, which it enters S. from Oconto River.

Pensacola Bay, Fla., sets up from the Gulf of Mexico, between Barancas Point and the W. end of St. Rosa Island. The entrance to the bay, between these points, is only about three fourths of a mile wide, and is well defended by a fort on Point Barancas. The bar has 22 feet of water at low tide. Extending in a N. E. direction, the bay has a length in some parts of 28 miles, and an average width of about 3 miles. About 11 miles from its mouth, it divides into three parts, called Escambia Bay, Yellow Water Bay, and East Bay. Escambia Bay is on the W., and is so called from the name of the river, which it receives from Florida. Yellow Water Bay also receives the river of that name. East Bay, which is 7 miles long, admits frigates of the largest class to ride at anchor, and is entirely protected from all winds. The city of Pensacola is situated on the W. shore of the principal bay, about 10 miles from the entrance from the gulf. The harbor of Pensacola is good, being the deepest haven on the N. coast of the Gulf of Mexico. The country around this bay is generally low and barren.

Peoria, Lake, Is. This lake, which is an ex-

pansion of Illinois River, extends 20 miles in a S. W. direction to Peoria village. It is much wider than the river, has a gravelly bottom, and very little current. It is divided by the Narrows into two parts, and abounds with various kinds of fish.

Pepacton River. See *Delaware River*.

Pepin Lake. An expansion of the Mississippi River, 1 mile below the junction of the St. Croix, and 100 miles below St. Anthony's Falls. It is 24 miles long, and from 2 to 4 miles wide.

Peguanoock Creek, N. J., rises in the Walkill and Wawayanda Mts., Sussex co., and flowing S. E. and S. 27 miles, its rapid current affording good water power, falls into the Passaic. It is called Pompton River below Pompton village.

Pequawkett River, N. H. This stream bears an Indian name formerly applied to a tract of country now including Conway, N. H., Fryeburg, Me., and some of the adjacent towns. The river rises in two ponds in Eaton, and falls into the Saco.

Pequest Creek, N. J., is a large and rapid stream. Its two head branches unite in Independence, Warren co., and after a course of 30 miles it enters the Delaware at Belvidere village.

Peguonoc Creek, New London co., Ct. A small stream emptying into Long Island Sound, between Mystic and Thames Rivers.

Perch Lake, N. Y., rises in Orleans, Jefferson co., flows S. W. into the village of Dexter, where it enters Black River.

Perdido River, Ala. and Fla., rises in Baldwin co., Ala., and flowing S. 40 miles, enters the Gulf of Mexico through a narrow and shallow bay.

Perkiomen River, Pa., rises in Upper Milford, at the foot of South Mt., flows S. about 30 miles, receiving a number of tributaries, which with the main river afford good water power, and enters the Schuylkill 6 miles above Norristown.

Perpetua, Cape, On. A small point of land situated on the Pacific coast, N. N. E. from Cape Gregory.

Perry's Peak, Richmond, Ms. Height 2039 ft.

Peshigo River, Brown co., Wn. This large river rises in the N. W. interior of the county, flows S. E., receiving numerous branches, and falls into Green Bay a little below the mouth of Menomonee River.

Peshakeme River, Mn. It rises in Michigamme Lake, in the N. part of Marquette co., and flows S. into the Wesacota or Brulé River.

Petrah River, Ma. A small stream emptying into the Mississippi E. from Rum River.

Petersburg Mountains, N. Y., are a range of not very high hills extending S. from Washington, through Rensselaer and a part of Columbia co.

Petite Jean Creek, As. A large stream rising in the W. part of Scott co., and flowing a little N. of E. into the Arkansas River, which it enters on the boundary between Perry and Yell counties.

Pey or Elm River, Ma. A large stream flowing S. E., and emptying into the Tchan Sansan, or River à Jaques, just below Tchanchicanah Lake.

Pharaoh Lake lies in the town of Schroon, Essex co., N. Y.

Phelps Lake, N. C. A sheet of water lying in the S. E. part of Washington co., and connected by a creek with Albemarle Sound.

Philadelphia River, Vt. A small stream originating in the S. part of Goshen, and running S. W. through Chittenden into Pittsford, where it unites with East Creek.

Phillips River, N. H., a branch of the Upper Amonoosuck, rises in the towns of Dixville and Columbia, and, after passing through Millsfield and Dummer, unites with the main stream in the town of Stark.

Pickercel Bay, Ma. Situated in the N. E. part of Leech Lake, N. W. from Leech Lake River.

Pierce Hole River, On. A head branch of Bitter Root River.

Pig River, Va., rises in the Blue Ridge, and after a course of 35 miles, falls into Roanoke River.

Pigeon River, Te., falls into the French Broad, in lon. 82° 56' W., and lat. 35° 46' N.

Pike River, Vt. See *Berkshire*.

Pilot Mountain, N. H. See *Kilkenny*.

Pilot Peak, Uh. A high mountain situated between the Great Salt Lake on the E. and Humboldt River Mts. on the W.

Pine Creek, Pa., rises in Potter co., and flows in a S. direction into the W. branch of Susquehanna River. It is navigable 60 miles to the line of Potter co.

Pine Creek, Marshall co., Ia., flows N. W. across an angle of St. Joseph's co. into the Kankakee River.

Pine Creek, As., rises in Fulton co., flows S. W., and enters White River at the town of Athens, Izard co.

Pine Barren Creek, Aa., flows mostly in Wilcox co., and falls into the Alabama River.

Pinebog River, Huron co., Mn., flows N. into Lake Huron.

Pine Log Creek, Washington co., Fa. A small stream emptying into Choctawhatchee Bay.

Pine Mountain Creek, Harris co., Ga. A small stream rising in the Pine Mts., and emptying into the Chattahoochee River.

Pine Island, Hillsboro' co., Fa. A long, narrow island, lying in Charlotte harbor.

Pine Lake, Barry co., Mn. Situated S. from Gun Lake.

Pine Lake, Chippewa co., Wn., lies between Birch and Red Cedar Lakes.

Pine River, N. H. A small stream issuing from a pond in the town of Wakefield, and passing N. W. into Ossipee Lake.

Pine River, Mn., rises by numerous head branches in the S. part of Chippewa co., flows S., and empties into Lake Huron E. from the mouth of Carp River.

Pine River, Mn. It rises in the E. part of Mecosta co., flows S. E. across an angle of Montcalm into Gratiot co., then N. E. into Midland co., where it enters Chippewa River.

Pine River, Arenac co., Mn., flows S. E. into Saginaw Bay.

Pine River, Wn. It rises in the N. W. part of Sauk co., and flows S. into the Wisconsin River.

Piney Creek, Ca. A small head branch of Grand River.

Pinnacle Creek, Logan co., Va. A head branch of Guyandotte River.

Pinos Point, Ca., extends into the Pacific at the city of Monterey.

Pinllala River, Aa., waters the E. part of Montgomery co., and enters the S. side of Alabama River.

Pipe Creek, Iowa co., Wn., flows in a N. direction into Wisconsin River.

Piscassick River, N. H., rises in the N. E. part of Brentford, and passing through New Market, falls into Lamprey River at Durham.

Piscataqua River, N. H., the only large river whose course is entirely in this state, is formed by the junction of several small streams in a wide and deep channel, hollowed out partly by them, and partly by the tide. The names of these streams, beginning at the N. E., are Salmon Falls, Cochecho, Bellamy Bank, Oyster, Lamprey, Squamscot, and Winnicut Rivers. The last five unite their waters in a large and irregular bay, between Durham and Greenland. The waters of this bay meet those of Salmon Falls and Cochecho Rivers, at Hilton's Point, a few miles below Dover. After this junction, they proceed in a direct line to the S. E., and join the ocean 2 or 3 miles below Portsmouth, embosoming several islands, and forming one of the best harbors on the continent. Few rivers make a more magnificent appearance than this; yet the streams by which it is supplied are small. Salmon Falls furnishes more than all the rest. This stream is called Newichawannock, from the falls in Berwick till it receives the waters of the Cochecho, but the name of Piscataqua ought to be applied to the whole of Salmon Falls River.

Piscataquis River, Me. This river rises in the S. W. part of Piscataquis co., flows 65 miles in an E. direction, and falls into the Penobscot in Penobscot co. It receives many tributaries, of which Sebec and Pleasant Rivers, and Sebosis stream, are the principal. This river affords good water power, and together with its branches waters large tracts of country.

Piscataquog River, N. H., is formed from two principal branches, one from Francestown, the other from Henniker and Deering, which unite near the W. line of Goffstown. The main stream pursues a southerly course through Goffstown and the N. E. corner of Bedford, where it falls into the Merrimack.

Piscataway Creek, Prince George co., Md., rises near the centre of the county, and flows S. W. into the Potomac River.

Pischous River, On. A W. branch of Clarke Fork of Columbia River.

Piscose Lake, lying in Arietta, Hamilton co., N. Y., is 6 miles long, about 2 miles wide, and abounds with salmon and brook trout of a superior size and quality. The surrounding country also affords great quantities of wild game, making the region a favorite resort of the angler and sportsman. The outlet of the lake constitutes the W. branch of the Sacondaga, a tributary of the Hudson River.

Piskasau River, Boone co., Is. This stream is a head branch of Rock River.

Pistakee Lake, Is., lies in the N. W. part of Lake co. Fox River passes through it.

Pitt Mount, On. A high peak of the Cascade range, situated W. from Flamath Lake.

Placid Lake, N. Y., lying mostly in the town of Keene, in the N. part of Essex co., and surrounded by a wild and picturesque region of country, is 4 miles long, and from 1 to 1½ miles wide.

Plaisance Bay, Mn. Situated in the W. part of Lake Erie, opposite the town of Monroe, Monroe co.

Platt or Plott River, Vt. See *Laplot*.

Platte River, In. Ter., rises by two branches in the Rocky Mts., which unite in the N. part of the territory, 400 miles from their source, and joins the Missouri 700 miles from the Mississippi, after an E. course of about 1600 miles. Its principal

branches are the Elkhorn, entering it near its mouth, and the Loupfork, 90 miles above. It is from 1 to 3 miles broad, and so shallow that, excepting in floods, it is fordable in almost any place. The number of islands, the shifting sands in its bed, and the rapidity of the current, are effectual barriers to all navigation.

Platte River, Little, a N. branch of the Missouri, which it enters 349 m. from the Mississippi.

Pleasant Lake, N. Y., is a beautiful sheet of water, lying mostly in the town of Lake Pleasant, Hamilton co. It is 3 miles long, from 1 to 1½ miles wide, and abounds in fine fish of different kinds. The surrounding country is a favorite resort of wild game, and is interspersed with small lakes, the waters of which are well stocked with fish.

Pleasant River, Washington co., Me. This river has its source in a pond in Beddington, and flows in a N. E. direction into Pleasant River Bay, which lies on the E. side of Naraguagus Bay.

Pleasant River, Piscataquis co., Me. This important mill stream is a tributary of the Piscataquis. It receives the two Ebeeme branches in the town of Milo, about 15 miles from its mouth.

Plum Creek, Is. A small branch of the Mississippi River, which it enters in Carroll co.

Plum Creek, Delaware co., Io. A small branch of the Macoquetais River.

Plum Island, Essex co., Ms. See *Newburyport*.
Plum River, Ma. An E. tributary of North Red River.

Plumbgut, N. Y., is the channel between Plumb Island and Oyster Pond Point on the E. end of Long Island.

Plaquemine Bayou, La., an outlet of the Mississippi, is 117 miles above New Orleans, 8 miles below the mouth of the Iberville, and 96 below the efflux of Atchafalaya outlet, which it finally enters. The waters of the Mississippi only flow into it when that river is nearly at its greatest height. It is navigable at such times for vessels and steamboats.

Pocomoke River and Bay. The river has its source in Dismal Swamp, on the boundary between De. and Md., and proceeds about 70 miles in a S. W. direction to Pocomoke Bay, a branch of Chesapeake Bay. The river is navigable to Snowhill for vessels.

Pocotalico River, Kanawha co., Va., flows into the Great Kanawha about 40 miles from its mouth, after a S. W. course of about 60 miles. Bituminous coal and iron ore are found on its borders. It is boatable 20 or 30 miles in high water.

Pocotaligo River, Sumpter district, S. C., rises in the W. part of the district, and flows S. E. into Black River.

Poestenkill, N. Y. This valuable mill stream rises in the towns of Grafton and Sand Lake, Rensselaer co., flows W. into the city of Troy, where it enters the Hudson.

Poinsett Lake, Ma. Situated W. from the Sioux River, with which it is connected by an outlet.

Poinsett Lake, Orange co., Fa. A small lake, through which flow the waters of St. John's River.

Poinsett River, Ca. A small head branch of the Rio Sacramento.

Pointe Seul Choix, Mn., extends into Lake Michigan, opposite the S. W. corner of Schoolcraft co

Point au Betsie, Mn. The W. extremity of Leelanau co., projecting into Lake Michigan.

Point aux Grais, Arenac co., Mn. Situated near the mouth of Rife River, and extending into Saginaw Bay.

Point Barro de Arena, Ca. Situated N. W. from Point de los Reyes.

Point de los Reyes, Ca. Situated on the Pacific coast, N. W. from San Francisco Bay.

Point de Tour, Mn. Situated at the E. entrance of Big Bay de Noquet.

Point de Tour, Mn. The S. E. extremity of Chippewa co., extending into Lake Huron.

Point no Point, Matthews co., Va., extends into Chesapeake Bay.

Point St. Ignace, Michilimackinac co., Mn. This is the S. extremity of the county, extending into the Straits of Mackinaw opposite Fort Point.

Point St. Vital, Chippewa co., Mn., extends into Lake Huron W. from Point de Tour.

Pollopel's Island, N. Y. This mass of rock lies in the Hudson River, near its E. shore, 6 miles above West Point, and opposite Breakneck Hill.

Pomme de Terre River, Mo., rises in Greene co., and flows N. into Osage River.

Pompton River, N. J., which is formed by the junction of Pequannock, Ringwood, and Ramapo Rivers, divides Passaic from Morris co., and falls into the Passaic. Its length is 8 miles. The Morris Canal crosses it in a wooden aqueduct 286 feet long, 2 miles above its mouth.

Ponchartrain Lake, La., communicates with Lake Maurepas on the W., with Lake Borgne through the Rigolets on the E., and with New Orleans through St. John's Bayou and a canal on the S. The largest of its tributaries are Tangipaha and Tchefuncte Rivers, which enter it on the N. side. It is 40 miles long, 25 miles broad, and 16 or 18 feet in the deepest parts, but not more than 9 feet near the shore.

Pond River, Ky. A tributary of Green River, separating Muhlenburg and Hopkins counties.

Pondicherry Mountain, N. H. See *Jefferson*.

Ponguamgumook Lake, Piscataquis co., Me., lies S. of Barnonengumook Lake.

Poplar Island lies in Chesapeake Bay, in lon. 76° 28' W., and lat. 38° 45' N. It is about 10 miles in circumference.

Porcupine's Islands, Hancock co., Me., lie in Frenchman's Bay, off the town of Gouldsboro'.

Porpoise, Cape, York co., Me., is situated in N. lat. 43° 22', W. lon. 70° 23', and forms the N. E. boundary of Kennebunk harbor.

Portage Lake, Houghton co., Mn. This lake is very irregular in its shape, having several arms, one of which communicates with Keewaiwona Bay, one with Houghton's Lake, and one extends N. W. almost to the opposite side of Keewaiwona Point, on the head of which the lake is situated.

Portage Lake, Livingston and Washtenaw counties, Mn. One of a number of small lakes supplying the head waters of Huron River.

Portage River, O., drains Hancock co., and flowing N. E., enters Lake Erie at Port Clinton. It affords good water power, and flows through Black Swamp, an unhealthy region, but which would make a very fertile country if suitably drained.

Portage River, Mn. One of the head branches of Grand River, draining the N. E. part of Jackson co.

Port Douglass, N. Y., is a convenient landing in

Chesterfield, Essex co., on the W. side of Lake Champlain, and 8 miles E. of Keesville village.

Port Genesee, N. Y. See *Charlotte*.

Port Neuf River, On. A small stream flowing W. and emptying into the Lewis Fork of Columbia River, a little below Fort Hall.

Potato River, Midland co., Mn. A small stream flowing E. into Saginaw Bay.

Poteau River, As., rises in Scott co., flows W. and then N., mostly in the In. Ter., and falls into the Arkansas at Fort Smith.

Potomac River forms the S. boundary of Maryland through its whole course, dividing it from Virginia. It rises by two main branches in the Alleghany Mts., called the N. branch and the S. branch; and also receives numerous other streams from the same elevated regions, which are among its more distant sources. The course of the two main branches is N. E. at first, until the N. branch passes Cumberland, where it is inflected to the S. E., and breaks through several ridges of elevated lands into the valley of the S. branch, and forms a junction with it. The latter, if estimated by its length, and the extent of the area drained into its channel, must be regarded as the main branch, although it is to the N. branch that the name of the Potomac has been distinctively applied. The river now pursues a N. E. course, breaking through another mountain chain, until it reaches its most N. latitude at Hancock's Town, where it is again inflected to the S. E., which direction it generally pursues to its entrance into Chesapeake Bay. About 40 miles below Hancock's Town, the Potomac, after receiving the Shenandoah from the S., which brings in a volume of water nearly equal to that of the principal river, breaks through the Blue Ridge at Harper's Ferry. The Shenandoah is the longest branch of the Potomac. Its remotest sources are in Augusta co., Va., and its general course is N., and nearly parallel to the W. base of the Blue Ridge, for a distance of about 130 miles, till it unites with the Potomac, having found this remarkable passage through the mountains. The bold scenery at this pass has been justly admired as among the finest natural curiosities of the country. The level, at low water, at the junction of the two rivers, is 288 feet above tide water. The upper valley of the Potomac, between the Blue Ridge and the Alleghany Mts., including that of the Shenandoah, is in length about 160 miles, with a mean breadth of 50 miles, embracing an area of 8000 square miles. Having passed the Blue Ridge, the Potomac continues S. E. about 50 miles to the lower falls, and the head of tide water, at Georgetown. It soon attains the dimensions of a large navigable river. It is a mile and a quarter wide, and 18 feet deep at Alexandria, which is nearly 300 miles from the ocean, and is navigable for ships of the line to the navy yard at Washington. The circuitous course of its tide water channel renders the navigation of the Potomac Bay somewhat tedious, though it is in all parts easy and safe. Its general course, for many miles, is nearly the same with that of the Chesapeake Bay, with which it finally unites, by a mouth 10 miles wide and 42 feet deep. Combining the two sections of the Potomac valley, above and below the Blue Ridge, the whole basin embraces an area of about 13,000 square miles, which is a region of great interest, both in physical and political geography. Its entire length is about 600 miles. Above tide water there are three points where are considerable

falls. The principal towns and cities on this river are Port Tobacco, Alexandria, Washington, Georgetown, Harper's Ferry, and Cumberland.

Pottier's Point, Vt. This point is situated on the W. side of Shelburne, 2 miles 182 rods from the S. wharf in Burlington. It took its name from John Pottier, the first settler upon it, but is often called Shelburne Point.

Poultney River rises in Vt., flows in a W. direction, forming the boundary between New York and Vermont for some distance, and falls into the head of Lake Champlain.

Powder River, On., rises among the Blue Mts., and flows N. E. into the Lewis Fork of Columbia River.

Powell's Point, Currituck co., N. C. A point of land projecting into Albemarle Sound, between Currituck Sound on the E. and North River on the W.

Powel's River, Va., has its source in Powel's Mt., and, passing into Te., unites with Clinch River, 38 miles N. E. of Knoxville. It is boatable nearly 100 miles.

Powow Hill, Salisbury, Ms. Height 328 feet.

Powow River, N. H. and Ms., has its principal source in Great and Country Ponds, in Kingston, N. H., and passes over the S. W. part of E. Kingston into South Hampton; thence into Amesbury, Ms., where it turns E. into South Hampton again, and returns into Amesbury, falling into the Merrimack between Salisbury and Amesbury. There are several falls in this river, those in Amesbury being the most remarkable, the water falling 100 feet in the distance of 50 rods.

Prairie Creek, Io. A small head stream of the Macoquetais River, which it enters in Delaware co.

Prairie Creek, Io. A S. branch of the Macoquetais River, which it enters in Jackson co.

Prairie River, Mn. This stream rises in a small lake in the N. E. part of Ia., flows N. W. across Branch and St. Joseph's counties, Mn., and empties into St. Joseph River.

Presque Isle River, Mn. This river rises in many small lakes on the boundary between Mn. and Wn., flows N. N. W., and empties into Lake Superior.

Preston Lake, Ma. Situated near the Sioux River, and S. W. from Lake Poinsett.

Presumpscut River, Cumberland co., Me., the outlet of Sebago Lake, falls into Casco Bay at Falmouth, 6 miles N. of Portland.

Prince's Bay, N. Y., lying on the S. E. side of Staten Island, is famous for its oysters, which are very abundant and of a fine quality.

Profile Mountain, N. H. Dr. Jackson, in his celebrated work on the Geology of New Hampshire, thus describes this curious specimen of the works of nature: "The profile is produced by the irregular jutting out of five blocks of granite, giving the effect of the stern visage of an old man looking over the deep valley below, and having so strong a likeness to a human face as to be regarded as an object of wonder and admiration, worthy of a visit from travellers. It has been declared to be one of the greatest natural curiosities of the state. It is said that the view of the profile is lost when the mountain is approached, as it is also by a considerable change in the point of view on the road, the best spot to see it to advantage being where the guide-board directs the traveller's attention to it."

Prospect Hill, Waltham, Ms. Height 482 feet.

Prospect Hill, Hingham, Ms. Height 243 feet.

Prospect Hill, Rowley, Ms. Height 264 feet.
Provt's Island, Northampton co., Va. A pretty large island lying off the Atlantic coast.
Proven's Mountain, West Springfield, Ms. Height 665 feet.

Providence Lake, Carroll parish, La. A small sheet of water connecting by outlets with the Mississippi River and Swan Lake.

Providence River, R. I. This river, or the head waters of Narraganset, extends below the city of Providence to Field's Point, about 3 miles, or to Bullock's Point, 5 miles. On the N., just below Providence, it receives the Seekonk or Pawtucket, and another stream or expanse of water, into which the two small rivers, the Wansquatucket and Moshasick, flow, just above the town.

Provost Creek, N. Y. This stream rises in Albany co., flows S., and enters Catskill Creek in Greene co.

Prudence Island, R. I., is situated in Narraganset Bay, and belongs to Newport co.

Psihu or *Wild Rice River*, Ma. This large river rises in several lakes, and flows N. E. into the North Red River.

Ptan Ska Lake, Io. A small body of water lying W. from Spirit Lake.

Puckaway Lake, Marquette co., Wn. Situated in the S. part of the county, at the head of Neenah or Fox River.

Puerco River, New Mexico. This river rises among the mountains in the N. W. part of the state, flows S. S. E. nearly parallel with the Rio Grande, which it enters at a great bend which occurs above the Presidio de Rio Grande.

Puget Sound, On., is situated at the S. part of Admiralty Inlet, receives the waters of several rivers, and contains many islands.

Pumgockamock Lake, Piscataquis co., Me., lies S. E. of Bamonenungemook Lake, with which it is connected by an outlet.

Pumpkin Vine Creek, Ga. A tributary of the Etowah, which it enters in Cass co.

Punepun Lake, Mn. Situated in the S. part of Charlevoix co.

Pungo River, N. C., separates Hyde and Beaufort counties, and empties into Pamlico Sound.

Pushaw Lake, Penobscot co., Me., lies W. of Oldtown Island, and is connected on the N. with Dead Stream. It is about 8 miles long and 1 wide.

Putnam Fort, N. Y. See *West Point*.

Pyramid Lake, Ca., Uh. A large body of water lying E. from the Sierra Nevada Mts. It receives the waters of the Mud Lakes on the N., and of Salmon Trout River on the S. E.

Pyramid Point, Mn. The N. W. extremity of Leelanau co. projecting into Lake Michigan.

Quantuck Bay lies in the town of Southampton, Suffolk co., N. Y., at the E. extremity of the Great South Bay. Quogue Neck separates it on the E. from Shinnecock Bay.

Quechee River, Vt. See *Otta Quechee*.

Quinebaug River, Ct. and Ms. This beautiful mill stream rises in Mashapaug Pond, Union, Ct., flows N. to Brimfield, Ms., then S. E. to Thompson, Ct., where it receives French River; thence it flows about 30 miles in a S. direction through a very fertile country, joins the Shetucket near the city of Norwich, and takes the name of that river to the Yantic. These three streams unite to form the Thames.

Quinepaick River, Ct. This stream rises in Bristol and Farmington, flows 30 miles in a S. direction, and enters Long Island Sound at New Haven.

Quissibis River, Me., rises in the N. E. part of the state, flows S., and enters the St. John's River E. of Green River.

Quoddy Head, or *West Quoddy Head*, Me., is the W. entrance into Passamaquoddy Bay. It is in N. lat. 44° 55', W. lon. 66° 49', and has a light-house 45 feet high. See *Lubec* and *Eastport*.

Rabbit Creek, Ma., empties into the Mississippi between Nokay and Muddy Rivers.

Rabbit River, Allegan co., Mn., flows in a W. direction, and falls into the Kalamazoo.

Raccoon Creek, Crawford co., Wn., falls into the Mississippi a little above Bad Axe River.

Raccoon River, Io. This long river rises in the N. W. interior of the state, one of its head branches communicating through a lake with Boyer's River, a branch of the Missouri. It flows in a S. E. direction, crossing Dallas co., and falling into the Des Moines in Polk co.

Racket Lake is situated on the table land of Northern N. Y., in Hamilton co., and is elevated 1731 feet above the level of the ocean. It is 14 miles long, from 2 to 5 wide, of an irregular shape, and abounding with fish of uncommon size. It is surrounded by an uncultivated but interesting region, interspersed with numerous small lakes, the sources of rivers which flow in every direction.

Racket River, N. Y., rises in a number of lakes in Hamilton co., flows in a N. direction through St. Lawrence co., and enters the St. Lawrence River opposite the Island of Cornwall, in Canada. Two other important rivers enter the St. Lawrence, one on each side of this stream, within the distance of 6 miles. The length of the Racket is 145 miles.

Raft River, On., flows N. and empties into Lewis Fork of Columbia River, between Fall and Swamp Creeks.

Ragged Mountains, N. H., so called from their rough appearance, lie between Andover and Hill, extending in a chain about 10 miles from the Pemigewasset to the vicinity of Kearsarge. It is a bleak and precipitous range, and is nearly 2000 feet high in its N. points.

Railcut Hill, Gloucester, Ms. Height 205 feet.

Rainy River, Is., rises near the W. border of Ia., flows W. N. W., and joins the Illinois River in lon. 88° 5' W., and lat. 41° 20' N.

Raisin River, Mn., derives its name from the numerous grape vines which formerly covered its banks. It rises in the town of Wheatland, Hillsdale co., and after a circuitous course of 130 miles, it enters Lake Erie, 2½ miles below Monroe. Its entire length in a direct line is about 60 miles. Its current is rapid, and it is enclosed by high and beautiful banks.

Ramapo River, N. Y. The head branches of this stream rise in Orange co.; thence it flows in a S. direction through a part of Rockland co., and falls into the Passaic River, in N. J. It abounds in fish, and affords many excellent mill sites.

Rancocus Creek, N. J., rises in Monmouth co., and flows N. W. into the Delaware River.

Rainer Mount, On. A high peak of the Cascade Mountains, situated N. E. from Mount St Helen's.

Rapid Ann River, Va., rises in Madison co., in the Blue Ridge, and falls into the Rappahannock, 10 miles above Fredericksburg.

Rapid River, Mn., drains the S. W. part of Schoolcraft co., and falls into the Little Bay de Noquet.

Rapids, or *Wigobimis River*, St. Croix co., Wn. It rises in a pretty large lake, and flows W. into the St. Croix River.

Rappahannock River, Va. This river rises in the Blue Ridge, and flowing S. E. 130 miles, enters a large estuary from Chesapeake Bay, 25 miles S. of the mouth of the Potomac. It has 4 fathoms of water to Hobbs's Hole, and is navigable to Fredericksburg, 110 miles, for vessels requiring 10 feet of water.

Raritan River, N. J., is formed by two principal branches which unite in Somerset co., and empties into Raritan Bay at Amboy. Sloops of 80 tons ascend the river to Brunswick, 17 miles, with 8 feet of water.

Raspberry River, La Pointe co., Wn. A small stream flowing N. E. into Chegowawagon Bay.

Rattlesnake Island, N. Y. This island, consisting of 50 acres of grass land, lies in the Niagara River, 4 miles below Black Rock.

Raw Creek, Fa. A small stream connecting Dunn's Lake with the ocean, and forming a part of the boundary between St. John's and Orange counties.

Rauley's Springs, Rockingham co., Va. This watering-place is situated on Dry River, 12 miles N. W. of Harrisonburg.

Reaburn River, S. C., rises in the S. E. part of Greenville district, flows S., and, uniting with Reedy River, enters the Saluda.

Red Creek, Mi. This stream rises in Marion co., flows S. W., and empties into the Pascagoula River.

Red Cedar Creek, Ma., flows S. E., and empties into the St. Croix River between Memokage River and Reed Creek.

Reddy's River, Wilkes co., N. C., is a branch of the Yadkin.

Red Cedar Lake, Chippewa co., Wn. This is the most S. of a chain of lakes supplying the head waters of Red Cedar River.

Red Cedar Lake, Ma. Situated S. E. from Muddy Lake, and connected by an outlet with the Mississippi River.

Red Cedar River, Chippewa co., Wn. This river rises in a series of small lakes in the N. W. part of the county, flows S. S. W., and empties into Chippewa River.

Red Eye River, Ma. It rises in a lake, and flowing S. E. empties into Crow Wing, a little above Long Prairie River.

Red Hill, N. H. See *Moultonboro'* and *Centre Harbor*.

Red Brush Hill, Wrentham, Ms. Height 456 ft.

Red River, La. and As. The first large river which enters the Mississippi above its mouth, coming down from the far S. W. It rises near the base of the Rocky Mts., in lat. 35° to 40° N., and lon. 25° to 32° W. from Washington. Its sources are between those of the N. fork of the Arkansas River and those of the Rio Brazos of the Gulf of Mexico. Its course is very nearly E. for more than half of its entire length, until it enters the S. W. corner of Arkansas, when it is inflected to the S.; and after flowing in this direction about 100 miles, and crossing into Louisiana, it bends to the S. E., and continues in this

general course until it falls into the Mississippi in lat. 31° 1' N., and in lon. 91° 42' W. from Greenwich. Its entire length is more than 1000 miles. From 100° 2' of lon. W. from Greenwich, to about lon. 94° 32', it forms the N. boundary of Texas; it then traverses a small angle of Arkansas, and enters Louisiana, and traverses the whole N. half of the state diagonally to its junction with the Mississippi, through a comparative course within that state of 300 miles. The greater part of its channel is through fertile prairies of a reddish soil, which imparts its color to the waters of the river. These prairies, especially in the remoter regions, are the favorite range of the buffalo, and other wild animals of that country. The shores of the river abound with grape vines, which produce an abundance of delicious fruit. Some distance below, where the river bends to the S. E., having entered Louisiana, it divides into numerous channels, almost losing its character as a river, and spreading a maze of interlocking watercourses, without any direct continuous channel, over an elliptical region of low lands between the receding hills, varying in width from 8 to 10 miles, and about 70 miles in length. This is what is called the "Raft," from its supposed correspondence with an obstruction in the Atchafalaya, occasioned by an accumulation of timber becoming stationary in its channel. But it is affirmed by the best authorities, upon personal observation, that there is nothing in common between the two rivers, as it respects this peculiarity, except the obstruction to the continuity of their streams. That of Red River is not a "raft" in the literal sense, composed of timber, as in the case of the Atchafalaya, but is rather supposed to be the remains of a lake which formerly occupied this low ground, and has been gradually filling up with the *débris* from the river's banks, until it is now a mere thicket of islands, through which the waters, coming down from above, slowly make their way to the former outlet of the lake. At Grand Ecor, 4 miles above Natchitoches, the whole volume of the river is united; but it is soon again divided into several channels, which afterwards unite in one, 30 or 40 miles farther down, again to separate at the outlet of the Bayou Rapide. The lower section of the main channel is narrower than above the "Raft," as it is called, but it is increased in depth. After passing Alexandria, there are other outlets, which convey away their waters into the Atchafalaya, thus diminishing somewhat the volume of the river. This river, but for the obstructions above described, would be a fine navigable water for 400 miles from its mouth. Could this impediment be overcome, much greater facilities would be offered for the settlement and profitable improvement of the extensive and fertile regions upon its banks.

Red River, Ca., rises among the Sierra Madre, and flows N. W. into the Rio Colorado.

Red Hill River, N. H., has its source in the town of Sandwich, and falls into the Winnipisogee in Marlboro'.

Redfoot River, Te., rises in the N. E. part of Obion co., flows S. W., and empties into Obion River near its junction with the Mississippi.

Red Pipestone Creek, Ma. An E. branch of the Sioux River, which it enters just below Coteau Percee Creek.

Red Creek, Ma. It flows S. E. into the St. Croix River.

Reedy Creek, Va., rises in the E. part of Jackson co., flows N., and empties into the Little Kanawha in Wirt co.

Reedy Island lies in the Delaware River, 50 miles below Philadelphia, and 20 miles from Bombay Hook. Length 3 miles, width one fourth of a mile.

Reedy River, S. C. This stream rises in Greenville district, flows S. S. E., and uniting with the Reaburn, empties into the Saluda River.

Refugio River, Ts. A small stream entering Espiritu Santo Bay, just above the town of Refugio.

Rehoboth Bay, Sussex co., De. Situated at the mouth of Indian River, through which it communicates with the Atlantic.

Revel's Island, Va. A small island near the coast, in lon. 75° 43' E., and lat. 37° 35' N.

Rhett Lake, Ca. Situated on the N. border of the territory at the head of Tlamath River.

Riawaw River and Island, Colleton district, S. C. This little river is properly an inlet, reaching from Stono Inlet to the mouth of the North Edisto River. The island lies directly S. from the river.

Richland Creek, Te., rises in the W. part of Dickson co., and flows W. into Tennessee River.

Richland Creek, Knox co., Ky. A small stream emptying into the Cumberland River at Barbourville.

Richland Creek, As., rises in the interior of Madison co., flows W., and enters White River in Washington co.

Richmond Fort, N. Y. See *Staten Island*.

Richmond's Island, Cumberland co., Me., is a part of the town of Cape Elizabeth.

Rifle River, Mn. It rises in the S. part of Oscoda co., flows S. S. E. through Ogemaw and Arenac counties, and falls into Saginaw Bay.

Rigolets River or Channel, La., connects Lakes Ponchartrain and Borgne, and is 8 or 10 miles in length.

Rio Bosque, Ts. A W. tributary of Brazos River.

Rio Colorado. This large river rises principally in On. and Na., flows S. W. across the entire length of Upper Ca., and empties into the N. part of the Gulf of California.

Rio de Chama, New Mex., flows S. W. into the Rio Grande.

Rio de Jemez, New Mex. It rises in the W. part of the state, and flows S. W. into the Rio Grande.

Rio de la Cosumnes, Ca., rises among the Sierra Nevada, and flows S. W. into the Rio San Joaquin.

Rio de la Plumas, Ca. This large river rises in the N. part of the Sierra Nevada, flows S. W., and empties into the Rio Sacramento.

Ridge Road, N. Y. See *Alluvial Way*.

Rio Frio, Ts. It flows S. E. into the San Miguel, a tributary of Nueces River.

Rio Gila. This large river runs on the S. border of Ca., separating it from Mex., and empties into the Gulf of California at the mouth of Rio Colorado.

Rio Grande. This river, which is also called the Rio del Norte, and Rio Bravo, rises in the Green Mts. and the Sierra de Anahuac, flows S. E., separating Ts. from New Mex. and Mexico, and empties into the Gulf of Mexico.

Rio San Buenaventura, Ca. It rises among the Coast Mts., flows N. W., and empties into the Pacific just above Monterey

Rivanna River, Va., flows S. E., and unites with James River at Columbia. It is boatable more than 20 miles.

Roanoke River, Va. and N. C. Staunton and Dan Rivers, two large tributaries, unite near the S. border of Va. to form this river, which flows into the W. extremity of Albemarle Sound. It is navigable for vessels of 45 tons, 75 miles, to the Great Falls at Halifax. A canal around the falls opens a boat navigation to the junction of Staunton and Dan Rivers, which are both navigable some distance for boats.

Robbins's Island, N. Y., belonging to the town of Southold, Suffolk co., lies in Great Peconic Bay.

Roche Port River, Mo., rises in the S. E. part of Randolph co., and flows S. into the Missouri.

Rock City, situated in the town of Great Valley, Cattaraugus co., N. Y., about 7 miles S. of Ellicottville, is a great natural curiosity. It is approached by a ridge of gradual ascent, extending from the base to the summit of the hill, and terminating at an elevation of 600 feet. More than 100 acres are covered with vast fragments of rock at this single spot, the imposing grandeur of which declares them not unaptly named. The masses of rock, although detached from each other, approach nearer and nearer towards the centre, and vary from 15 to 35 feet in height. Most of them are rectangular; some of them are separated but a few inches, while others have an interval of several yards between them. The removal of large masses from the midst of some groups has left spaces resembling fine courtyards.

Rockaway Beach, N. Y. See *Fashionable Resorts*.

Rock Creek, D. C., flows between Georgetown and Washington city, and falls into the Potomac.

Rock Creek, On. A small S. tributary of Lewis Fork of Columbia River.

Rock Island. Situated in the Mississippi, near Rock River Rapids. It is 3½ miles long, and three fourths of a mile wide. The sides are of perpendicular rock, 20 feet above the greatest height of water. Fort Armstrong is situated on the S. border of the island.

Rock Island Rapids commence at Rock Island, just above the mouth of Rock River, and extend 15 miles up the Mississippi, with a descent of 21 feet 10 inches. Ledges of rock extend across the river in various places, greatly obstructing navigation at low water. The U. S. government has done something for the improvement of these rapids.

Rockland Lake lies in Clarkstown, Rockland co., N. Y. It is 5 miles in circumference, is elevated nearly 200 feet above the level of the Hudson, and surrounded by high hills. Its waters, which are very pure, abound in fish of various kinds, and great quantities of ice, procured here during the winter season, are annually taken to the New York market.

Rock Mountain, De Kalb co., Ga. This isolated peak rises 2226 feet above the stream at its base. It is about 7 miles in circumference.

Rock River, Vt. This river rises in Franklin, and runs through Highgate into Missisco Bay.

Rock River, Ca. A small W. branch of Green River.

Rock River, Wn. and Is. This river has its source in a region of lakes and swamps. One of its principal heads, the Catfish, rises in a swamp a few miles S. of Fort Winnebago, and connects the "Four Lakes." Rock River receives several

tributaries after it enters Is., and falls into the Mississippi 3 miles below Rock Island. Much of the country through which it passes in Is. consists of fertile prairie, with some timber land. Its channel is mostly lime and sandstone rock, and it has several rapids, which obstruct navigation at low water.

Rocky Creek, Ca. An E. branch of Grand River.

Rocky Comfort Creek, Ga., rises in Warren co., flows S. E., and enters the Ogechee in Jefferson co.

Rocky River, N. C., has numerous head branches, which drain the whole of Cabarras co. The main stream flows S. and then W., separating Stanley from Union and Anson counties, and empties into the Yadkin River.

Rocky River, S. C., rises in the N. part of Anderson co., flows S., and enters the Savannah in Abbeville district.

Rodman River, Fond du Lac co., Wn. A head branch of Milwaukee River.

Rondout Creek, or River, N. Y., rises in Sullivan, flows W. through Ulster co., and enters the Hudson near Rondout village. The Wallkill and several smaller streams, all affording considerable water power, are its tributaries.

Roukonkoma Lake, or Great Pond, N. Y., lies in the towns of Brookhaven, Smithtown, and Islip, Suffolk co., and near the centre of Long Island. It is about a mile in diameter, of great depth, and its transparent waters are filled with perch and other small fish. Its situation, surrounded as it is by immense forests of pine and other trees, is beautiful in the extreme. It is within a mile or two of the Long Island Railroad, and distant about 50 miles from N. Y. city.

Roupe River, Mn. It rises principally in some small lakes in the S. part of Oakland co., flows S. E. across Wayne co., and falls into Detroit River.

Rough Creek, Ky. This stream waters the W. part of Hardin co., flows S. W., and forming part of the boundary between Daviess and Ohio counties, empties into Green River.

Round Island, Mn. Situated in the N. part of Lake Huron, between Bois Blanc Island on the S. E., and Mackinaw Island on the N. W.

Round Lake, N. Y., is a small body of water, situated in the town of Malta, Saratoga co., and abounding in perch, pickerel, and other kinds of fish.

Round Lake, N. Y., is a handsome sheet of water, lying in the town of Lake Pleasant, Hamilton co., and connected, by an outlet of half a mile in length, to Lake Pleasant. It is situated in a pleasant country, and its waters abound with fish.

Rouse's Point, N. Y., on the N. side of Sorel River, which runs into Lake Champlain, a little above lat. 45° N. Until the late treaty with Great Britain this point belonged to Canada. At this place the railroad between Boston and Ogdensburg crosses Lake Champlain.

Royse Mountain, N. H., lies N. from Chatham.

Rubicon Creek, Wn. It rises in the W. part of Washington co., and flows W. into Dodge co., where it empties into the E. branch of Rock River.

Rum River, Ma. This river is supplied by Minsi Sagaigoning or Mille Lacs and several smaller lakes, and flows in a southerly direction into the Mississippi.

Rush Creek, O., enters the Hockhocking about 7 miles below Lancaster.

Russell's Creek, Ky. Formed in Adair co. by the junction of Sulphur and Reynolds Creeks,

flows N. W., and empties into Green River in Greene co.

Russell Mountain, Me. There are two peaks of this name in Piscataquis co., one N. and the other S. of Moose Head Lake.

Russell's River, Mn. A small stream draining the S. E. part of Keewaiwona Point, and falling into Lake Superior.

Sabbath Day Point, Warren co., N. Y., lies in the town of Hague, on the W. side of Lake George, 24 miles N. of Caldwell village. It derives its name from the circumstance of some English troops landing here on the Sabbath, during the old French war, and falling in a conflict with a party of Indians.

Sabine River, La. and Texas. This river rises in Texas, in lat. 32° 30' N., flows S. E. and S., and enters La. in Caddo parish, thence forming the boundary between La. and Texas. It is 300 miles long, watering the most hilly parts of La. in the upper part of its course, and in its lower part a broad and sterile prairie. In low water it has but 4 feet on the bar at its mouth. It passes through Sabine Lake, which is 30 miles long and from 1 to 7 or 8 miles wide, before entering the Gulf of Mexico, but is little broader after leaving the lake than when it entered it.

Sable, Cape, Monroe co., Fa. This is the S. W. extremity of the peninsula. On it is situated Fort Pointsett.

Sable River, Mason co., Mn., empties into Marquette Bay.

Sac River, Mo. This river rises in Lawrence and Green counties, flows N., and enters Osage River in St. Clair co.

Sac River, Wn. A small stream draining the N. E. part of Washington co., and emptying into Lake Michigan at the town of Ozaukee.

Sacandagaw River, N. Y., rises in several small lakes in Hamilton co., of which the largest are Piseco, Round, and Pleasant Lakes. The river then flows in a winding E. direction through the N. E. corner of Fulton co., and enters the Hudson in the town of Hadley, opposite the village of Luzerne, Saratoga co.

Saco River, N. H. and Me., is one of the largest in New England, yet, being much broken in its course by falls, is not navigable to any considerable extent. It springs from three sources in the White Mts.; the branch issuing from the S. W. side of the mountains, near the Notch, is considered the main stream; next to this is the middle branch, which is the smallest; and beyond is the branch called Ellis's River, which rises on the N. E. side of the mountains, and after a course of about 18 miles, unites with the main branch in the town of Bartlett. Cutler's and New Rivers are mountain torrents that discharge into the Ellis. The Ammonoosuck, a branch of the Connecticut, rises within about 2 rods of the Saco, flowing in an opposite direction. The whole length of Saco River is estimated to be 160 miles; running in its general course S. S. E., and discharging into the sea at Saco. The principal falls are, the Great Falls, at Hiram, where the water descends 72 feet; Steep Falls, at Limington, 20 feet; Salmon Falls, at Hollis and Buxton, 30 feet; and Saco Falls 42 feet. The latter are about 4 miles from the mouth of the river. The ordinary rise of the water, in the spring, is from 10 to 15 feet, but in great freshets it has been known greatly to exceed that number. A long storm which occurred in

October, 1785, raised the river to an immense height, sweeping away mills and bridges, and inundating houses that stood in its vicinity. In 1814, there was the greatest freshet known since that of 1785. At such seasons the appearance of Saco Falls is truly sublime.

Sacramento River, Ca. This river rises among the Sierra Nevada, flows in a S. direction, and empties into San Francisco Bay at the mouth of the Rio San Joaquin, or San Joaquin River.

Sadaquada, or *Sagouit Creek*, Oneida co., N. Y. This river rises in the town of Paris, and flows into the Mohawk about 1 mile below Whitesboro' village. It is one of the most important mill streams of its size in the state. On its banks are located several large villages and manufacturing establishments.

Saddle Mountain, Adams, Ms. Height 3505 ft.

Saddle River, N. J., rises in the S. part of N. Y., and enters the Passaic about 1 mile above Acquackanock. It is a rapid stream, affording extensive water power. Its length is 18 miles.

Saddleback Mountain, Franklin co., Me. This mountain is a few miles S. of Mount Abraham, and is elevated about 4000 feet above the level of the sea.

Saddleback Mountain, N. H. This a peak of the Blue Hill range.

Saginaw Bay, Mn., on the W. side of Lake Huron, is 60 miles long and 30 wide, containing a number of islands, the largest of which is Showangunk Island. It is navigable for vessels of any burden, its numerous coves, protected by islands, affording some of the best harbors on the lake.

Saginaw River, Mn., one of the largest rivers in the state, is formed by the junction of Cass River from the E., Flint and Shiawassee from the S., and Tittabawassee from the N. W. Its length from the mouth of Flint River, in a direct line, is 25 miles, but some of its branches are 4 times that length. Its course is N. N. E. to its entrance into Saginaw Bay. It is from 25 to 30 feet deep, but the bar at its mouth has not generally more than 5 or 6 feet of water upon it, although an E. wind often raises it 3 feet higher.

St. Andrew's Bay and Sound are situated on the S. coast of Fa. The main part of the bay extends N. 12 miles, but some of its branches extend 30 miles. Its average width is from 2 to 5 miles. It is easy of access, has 18 feet of water on the bar, and good anchorage within, sheltered from the winds. An arm extends 20 miles parallel with the coast and a mile from it. 10 miles from the sea, another branch, from 1 to 10 miles wide, extends E. 30 miles.

St. Andrew's Sound, Ga. This sound receives the waters of Santilla River and some small streams. It also contains Dover and other islands.

St. Bernard River, Ts., flows S. E., and empties into the Gulf of Mexico just below the mouth of Brazos River.

St. Blas, Cape, Fa. This is a narrow point of land S. from St. Joseph's Bay.

St. Catharine's Island, Liberty co., Ga., lies off the mouth of Newport River, between St. Catharine's on the N., and Sapel's Sound on the S., and is 10 miles long and 5 broad.

St. Clair Lake, Mn., is connected to Lake Huron by St. Clair River, and to Lake Erie by Detroit River. It is 24 miles long, 30 wide, 90 in circumference, and 20 feet deep. Its banks are alluvial, have a slightly uneven surface, and are elevated 20 feet above the water. Clinton River,

from Mn., and the Thames and others, from Canada, flow into it.

St. Clair River or Strait, Mn., discharges the waters of Lakes Superior, Michigan, and Huron, and connects the latter with Lake St. Clair. It flows S., and enters the N. E. part of Lake St. Clair by six channels, the N. one of which, on the Mn. side, is the one navigated in ascending and descending the river. It has few islands excepting those formed by its outlets. Its waters are clear and transparent, the navigation easy, and the scenery varied and beautiful. No rivers flow into it on the E. side. Its principal tributaries from Mn. are Black, Pine, and Belle Rivers. It is 40 miles long, half a mile wide, and on an average 50 feet deep, with a current of 3 miles an hour, and a descent of about 13 feet.

St. Croix River. This river, which is also sometimes called by the names of Passamaquoddy, Schoodie, and Cheputnetecook, forms the boundary line between the U. S. and New Brunswick, from the ocean to Grand Lake. The length of the river from Eastport to Grand Lake is 82 miles, and it is navigable 28. There are many elevations in this river, and consequently many falls and rapids, affording great water power. The mouth of the Schoodie, its W. branch, is 166 feet above tide water at Calais, and the whole fall of the St. Croix is 444 feet to sea level.

St. Croix Lake and River, Wn. The river rises in two principal branches, in the dividing ridge between Lake Superior and Mississippi River, and, flowing S., receives many tributaries, and passing through St. Croix Lake, a long, narrow body of water, it becomes contracted again to the size of a river, just before its entrance into the Mississippi, some distance below the Falls of St. Anthony.

St. Francis River, Mo. and As. This river rises in St. Francis co., Mo., and, flowing S., enters As., where it receives White Water River, a long branch which rises in Mo., and enters the Mississippi in Phillips co. It passes through many lakes and swamps, yet its waters are remarkably clear, abounding in fine fish. It is navigable nearly 200 miles at high water.

St. François River, or the *Pecheenegamook*, rises in Piscataquis co., on the border of Canada, flows about 50 miles in a S. S. E. direction, receiving several branches and the waters of a number of lakes, and enters the St. John's near the line of Penobscot co.

St. George River, Lincoln co., Me. This river rises in ponds in the towns of Montville, Searsmont, and Belmont, Waldo co., and flows 40 miles in a S. direction into Muscongus Bay. It meets the tide at Warren, 15 miles from the sea, to which place it is navigable.

St. Helena Island, Beaufort district, S. C., lies between St. Helena Sound on the N. E. and Broad River on the S. W.

St. Helena Isle, Michilimackinac co., Mn. Situated at the W. entrance of the Straits of Mackinaw.

St. Helena Sound, S. C. This sound lies between Colleton and Beaufort districts, receives Coosaw, Combahee, Ashepoo, and other rivers, and contains several islands.

St. Helen's Mount, On. An elevated peak of the Cascade Mts., situated N. from Fort Vancouver.

St. John's River rises in Canada and the N. part of Me. It receives the Madawaska, St.

Francis, Aroostook, and many other important tributaries, from Me. It waters a large portion of its N. territory, and bears many valuable productions of that state to its mouth. "This river is 350 miles long. The tide flows up about 80 miles. It is navigable for boats 200 miles, and for sloops of 50 tons 80 miles. This river and its branches water a large tract of excellent country. About 30 miles from its mouth commences a fine level country of rich meadow lands, well clothed with timber. The river furnishes a great quantity of salmon, bass, and sturgeon. About a mile above the city of St. John's is the only entrance into this river. It is about 80 or 100 yards wide, 400 yards long, called the falls of the river. It being narrow, and a ridge of rocks running across the bottom of the channel, on which there are not above 17 feet of water, it is not sufficiently spacious to discharge the fresh waters of the river above. The common tides here rising above 20 feet, the waters of the river at low water are about 20 feet higher than the waters of the sea; at high water the waters of the sea are about 5 feet higher than those of the river; so that at every tide there are two falls, one outwards and one inwards. The only time of passing with safety is when the waters of the river and of the sea are level, which is twice in a tide, and continues only about 20 minutes each time." By the late treaty between the U. S. and Great Britain, the navigation of this river is free to both nations.

St. John's River, Fa. This river rises in an immense marsh, slightly elevated above the level of the ocean, and flows N., nearly parallel with the coast, until it turns to the E., and flows into the Atlantic. It passes through Lake George in the upper part of its course, and afterwards receives the Ocklawaha, a large tributary. Its entire length is about 250 miles. It often spreads from 3 to 5 miles in width, though in other places it is not more than a quarter of a mile wide. Vessels drawing 8 feet of water enter Lake George and Dunn's Lake, 150 miles from its mouth. It is only 1 mile wide at its entrance, and it has 12 feet of water on the bar. There is a light-house on the S. side of the river at its mouth.

St. John's River, Ca. It rises on the E. border of the state, and flows W. into the Rio Colorado.

St. Joseph's Bay, Fa., is enclosed by Cape St. Blas, a long, crooked peninsula. The bay is 20 miles long, and from 7 to 8 wide, with a broad entrance on the N. W., near Cape False, affording 17 feet of water on the bar. There is a channel close to the peninsula, on the S. E. side of the entrance, nearly as deep as the N. W. passage. The N. E. shore of the bay is intersected by ponds and lagoons. There is a beautiful island, 2 miles from the S. E. coast, covered with live oak, cedar, and palm-trees.

St. Joseph's Island, Mn. Situated N. of Lake Huron, in the Straits of St. Mary, between George's Island on the N. W. and Drummond's Island on the S. E. The S. W. passage, through which the U. S. boundary passes, is called Muddy Lake. The length of the island is 20 miles, and its greatest breadth 8 miles. On its S. extremity are the remains of an old British fort.

St. Joseph, Lake, Tensas parish, La. A narrow, semicircular sheet of water, emptying into the Mississippi.

St. Joseph's River, Mn., waters the central part

of Hillsdale co., flows S. W. across a corner of O. into Ia., where it joins the St. Mary's at Fort Wayne, forming Maumee River. It affords extensive water power.

St. Joseph's River, Mn. This river rises in the N. E. part of Hillsdale co., flows E., and, after a S. curve into Ia., proceeds N. W. to its entrance into Lake Michigan. It is 250 miles long, following its course, but not more than 150 in a direct line, being the second river in size in the state. Its tributaries are numerous, and its water power extensive. It is navigable for keel boats to Lockport, 130 miles. At its mouth is a good harbor, and, by a pier, is sufficient for any number of vessels required by the lake navigation. The bar at its mouth has 6 feet of water. There is a good deal of wood land on its borders, and the soil is generally fertile.

St. Lawrence River. This great river forms the outlet of the chain of lakes, or inland seas, lying between the United States and Canada. It may be considered as descending from Lake Superior, and passing through Lakes Huron, Erie, and Ontario, to the Gulf of St. Lawrence, a distance of 2000 miles; draining an area of over 500,000 square miles in extent. Its course through the centre of these lakes and below, until it crosses 45° N. lat., forms the boundary between the United States and Canada. After crossing 45° lat., the course of this majestic river is wholly within the territory of Canada. In the upper part of its course it loses its character as a river, when passing through the lakes; and even when it passes from lake to lake, connecting and bearing along their waters, it is known by different names in different sections; as the St. Mary between Superior and Huron; the St. Clair and the Detroit between Huron and Erie, having the small lake St. Clair in the intermediate course; and the Niagara between Erie and Ontario. From Lake Ontario to Montreal it is sometimes called the Iroquois, though it is more commonly known as the St. Lawrence proper, from the outlet of Lake Ontario to its mouth. Below Montreal the river varies in breadth from half a mile to three miles, and it passes through the Lake St. Peter, 50 miles below Montreal, which is from 12 to 15 miles wide. Below Quebec the river increases rapidly in width, until it enters the gulf by a mouth nearly 100 miles across. Its average fall is about six inches to the mile, although this is very unequally distributed, on account of the numerous rapids, and one stupendous cataract in its course. It receives many tributaries, the most important of which, on the south side, is the Richelieu, which is the outlet of Lake Champlain, entering at the head of Lake St. Peter; and, on the north, the Saguenay, 140 miles below Quebec; and the Ottawa, or Grand River, which enters it a little above Montreal. The St. Lawrence, with the chain of lakes which empty their waters through its channel into the N. Atlantic, constitutes one of the great commercial thoroughfares of the North American continent. It is navigable for ships of the line 400 miles, to Quebec, and for ships of 600 tons to Montreal, and onward through a series of ship canals for passing the falls and rapids into the lakes. In addition to the more customary forms of steam-boats, of ships, and other sea-going vessels, and of the craft usually employed in the navigation of large rivers, the waters of the St. Lawrence, more than any other river, even of this forest

covered continent, are frequented by enormous timber rafts, commonly borne along by the force of the current alone, though sometimes accelerated by spreading a sail, or by huge oars called sweeps. These floating islands of timber, with huts here and there rising upon their low surface for the accommodation of the raftmen, and also another sort of craft with long, low hulls, nowhere else known, and designed for the transportation of timber of great length, contribute the more remarkable and picturesque features to the animating spectacle presented by the navigation upon this noble river. The navigation is, of course, obstructed by the ice in winter, which in this high latitude continues, either bound or floating, for several months. From Montreal to Lake Ontario the navigation of the river is frequently interrupted by falls and rapids, which has occasioned the construction, at a heavy expense, of a series of canals, with locks of sufficient dimensions to admit the passage of the largest steamboats, and of the vessels navigating the St. Lawrence from Quebec to Montreal. The line commences with the Lachine Canal, extending from Montreal to the village of Lachine, round the rapids of the same name, a distance of 8 miles. From Lachine, the river, or a broad expansion of it, called Lake St. Louis, is navigable to the cascades, at the mouth of the Ottawa River. Here commences the Beauharnois Canal, which extends 16 miles, to a point opposite to Coteau du Lac, surmounting the obstacles caused by the several rapids known as the Cascades, the Cedars, and the Coteau du Lac, which make, in all, a difference of elevation of about 60 feet. At this point another expansion of the river is entered, called Lake St. François, which reaches to Cornwall, a distance of 40 miles, in 45° lat. The St. Lawrence Canal commences at this point, and extends to Dickinson's Landing, 12 miles, passing the Long Sault Rapids, which have a total descent of about 50 feet. This canal, which is a fair sample of all the other works, has 6 locks, of solid masonry, constructed in the most durable manner, each 200 feet long in the chamber, by 50 feet wide, with a depth of 10 feet. From Dickinson's Landing to Lake Ontario, steamers of a large class navigate the river, though there are two or three rapids below Ogdensburg. The Welland Canal, which unites the waters of Lake Ontario and Lake Erie, by affording a navigable channel round the Falls of Niagara, is a work of great magnitude. It is 42 miles long, 56 feet wide, and 16 feet deep; and the whole ascent from one lake to the other is 334 feet. To accomplish this ascent there are 22 locks, constructed of granite, with a lift of from 12½ to 14 feet. Those at each entrance from the lakes are 185 feet long and 45 feet wide. The others are 150 feet long and 46½ feet wide. This canal has one deep cut through a mountain ridge, 45 feet deep, where an immense quantity of earth and rocks was removed. This work was first completed in 1829, at a cost of \$1,000,000; but in 1845 and 1846, it was enlarged and improved at a great additional expense. All the above-mentioned canals are on the Canadian side of the river, and are the product of British capital and enterprise, designed to furnish a continuous ship navigation throughout the whole extent of the valley of the St. Lawrence, and the basin of the great lakes, to the Falls of St. Mary, and to give to the Canadas

a direct and independent communication between the vast and far north-west and the Atlantic Ocean.

St. Louis River, Ma. The head branches of this river rise in Dead Fish and Seven Beaver Lakes; it then flows S. W. for some distance, and finally flows S. E., forming the boundary between Wn. and Ma. until its entrance into Lake Superior.

St. Lucia Sound, St. Lucie co., Fla., extends from Gilbert's Bar, parallel with the coast, to Indian River.

St. Mark's River, Fla., rises in a small pond, and after a S. W. course of 19 miles, unites with Wakully River at St. Mark's, to form the Apalachee. Boats requiring 4 feet of water ascend its whole length.

St. Martin's River, Md., waters the N. E. part of Worcester co., and enters the Atlantic through Sinepuxent Bay, opposite Fenwick's Island.

St. Mary's River, St. Mary's co., Md. It rises near the mouth of the Patuxent River, and flows S. into the Potomac.

St. Mary's River, Ga. and Fa. This river, which was formerly the boundary of the United States, rises in Okefinokee Swamp, in the S. part of Ware co., Ga., and flowing S. for some distance, it suddenly turns N., and finally takes an E. course until its entrance into the Atlantic. It is 105 miles long, at low tide has 13½ feet of water on the bar, and at common high tide 19½ feet. It forms the only good harbor of the E. coast of Fa.

St. Mary's River, O. and Ia., rises in the S. part of Mercer co., O., flows N. W., and unites with St. Joseph's River to form the Maumee at Fort Wayne.

St. Mary's Strait forms the outlet of Lake Superior, and its connection with Lake Huron. It is about 70 miles long from Maple Isles, in Lake Superior, to the passage between Drummond's and St. Joseph's Islands, into Lake Huron proper. The strait is naturally divided into two sections by the Falls of St. Mary, about 30 miles below Lake Superior. The upper section is chiefly free from islands, and gradually contracts in width to about half a mile at the point where it rushes down the falls. This part of the strait is navigable for vessels drawing 6 feet of water. The Falls of St. Mary consist of a rapid descent over ledges of rocks, without any perpendicular fall, for about three fourths of a mile. It is ascertained that the rocky barriers of this narrowest part of the strait are gradually yielding to the abrasion of the waters and the ice, and that the surface of Lake Superior is lowering. Below the Falls the channel of the strait or river becomes wider, and is soon divided into two by George's Island, which division is continued by St. Joseph's Islands below quite to the entrance into Lake Huron. On the American side, the channel, which is again subdivided by Sugar Island, 20 miles long, and others of smaller size, forms the more direct entrance into Lake Huron, by a passage between the westernmost of the Manitou Islands and the promontory of the True Detour, from the Michigan shore. The other channel, on the Canada side, terminates in the Manitou Bay of Lake Huron, upon the N. side of the Manitou Islands. The entire fall from the level of Lake Superior is 23 feet. Vessels with a draught of 6 feet may go up from Lake Huron to Sault de St. Mary at the foot of the Falls.

St. Michael's River, Talbot co., Md., flows S. 10 miles towards Tread Haven Bay, then turns N. W., and flows 6 miles to Chesapeake Bay, which it enters opposite the S. part of Kent Island, by a broad estuary.

St. Michael River, Ca., flows N. W., and empties into Grand River.

St. Raphael River, Ca. flows S. W., and empties into Green River.

St. Regis River, N. Y., rises in Franklin co., flows N. W., through a part of St. Lawrence co., into Canada, where it enters the St. Lawrence River a few miles above the line.

St. Simon's Islands and Sound, Ga. This sound lies off Glynn co., between Alatomaha Sound on the N., and Jykill Sound on the S. It contains St. Simon's, Little St. Simon's, Long, and some other islands.

Sakpan River, On. A small stream flowing W. into Admiralty Inlet.

Sal, Point, Ca. Situated on the Pacific coast, N. from Arguello Point.

Salamanic River, Ia. This stream is formed by the junction of two branches near the centre of Jay co., flows N. W., and empties into the Washbas River in Wabash co.

Saline Bayou, Sevier co., As. A tributary of Little Rock River.

Saline Creek, Mo. This small stream falls into the Mississippi in the S. E. part of St. Genevieve co. Salt has been manufactured here from the salt springs, which are numerous on its banks.

Saline River, Is. This river is formed near Equality, Gallatin co., by the union of N., S., and Middle Forks, and falls into the Ohio 12 miles below Shawneetown. There are several extensive salt works on its borders.

Saline River, As., rises in the Masserne mountains, 20 miles S. W. of Little Rock, and falls into the Wachita, after a southerly course of 50 miles.

Saline River, La., rises in Claiborne parish, and flows S. W. into Black Lake, 8 miles N. E. of Natchitoches. Its length is 50 miles.

Salkehatchie River, S. C. This stream rises in the interior of Barnwell district, flows S. E., and unites with the Jackson branch to form the Combahee River.

Salmon Brook, Aroostook co., Me., rises in two large forks, and flows S. into Aroostook River.

Salmon Creek, N. Y. There are several streams of this name in the state, the most important of which rise in Oswego, Wayne, and Monroe counties, and empty into Lake Ontario.

Salmon Falls River, Me. and N. H. See *Piscataqua*. There is a remarkable fall in this river, between the towns of Rochester and Lebanon, Me. The river is confined between two rocks, about 25 feet high, the breadth at the top of the bank not exceeding 3 rods. It is called the Flume, is about 4 rods in length, and varies from less than a foot to 2½ feet in breadth; but the water has a subterranean passage. In the rocks are many cavities, mostly cylindrical, from 1 to 7 feet in diameter, and from 1 to 4 in depth.

Salmon Falls River, N. H. See *Piscataqua*.

Salmon River, Penobscot co., Me., flows S. about 30 miles, and enters the Penobscot about 4 miles below the junction of the E. and W. branches of that river.

Salmon River, Ct. This fine mill stream rises in the high lands in Tolland co., flows S., receiving many valuable tributaries, and enters the

Connecticut at East Haddam, where it produces a beautiful cataract.

Salmon River, N. Y., rises in Lewis co., flows W. through Oswego co., and enters Lake Ontario, through Mexico Bay, at Port Ontario village. It has a tolerably good harbor at its mouth, and is boatable, at high water, 14 miles, to the falls at Orwell. These falls may be classed among the greatest natural curiosities of the country. The current of the river is gentle for 6 miles or more above, then follow 2 miles of rapids, and then it falls almost perpendicularly 107 feet. At high water the sheet is 250 feet wide, but at low water it contracts to half that width. The banks are rocky precipices of from 70 to 90 feet in height above the falls, and about 200 feet below them. The river below the falls abounds in salmon, trout, and other fine fish.

Salmon River, N. Y. This stream rises in the E. part of Franklin co., flows N. W. into Canada, where it enters the St. Lawrence River.

Salmon River, On. It rises among the Salmon Mts., in the E. part of the territory, flows N. of W., and empties into Lewis Fork of Columbia River.

Salmon River Mountains, On. A range extending through the E. interior of the territory nearly parallel with Salmon River.

Salmon Trout River, Houghton co., Mn. A small stream W. from Portage Lake, and flowing N. into Lake Superior.

Salt Creek, Porter co., Ia. A small branch of the Calumic River.

Salt Lakes, Ts. Two small lakes lying N. W. from the battle-ground of Palo Alto.

Salt Lake, Ts. A small sheet of water supplying one of the head branches of Brazos River.

Salt River, Ky. Its head waters drain Mercer co., and flowing N. into Anderson co. it turns W., and enters the Ohio at West Point, 20 miles below Louisville, between Jefferson and Meade counties. It is 200 yards wide at its mouth, and boatable 150 miles. On the S. side, 15 miles from its mouth, it receives a branch nearly as large as itself, called the Rolling Fork, which also receives a large branch in Nelson co., called Beechy Fork. Some of the most fertile parts of the state are watered by this river and its branches.

Salt River, Mo., rises in Io., and flows S. S. E. to Ralls co., where it pursues a very winding N. E. and S. W. course, until it enters the Mississippi 85 miles above Missouri River. It is navigable to a limited extent.

Salt River, Mn., waters the N. E. part of Isabella co., flows E., and empties into Tititawasee River in Midland co.

Salt River, Ca. This is a large river flowing S. W. into the Rio Gila.

Saltpetre Creek, Md., falls into Gunpowder River 12 miles E. N. E. from Baltimore.

Saluda River, S. C. This large stream rises in the N. W. part of the state, flows S. E., separating Greenville, Laurens, and Newberry from Pickens, Anderson, Abbeville, and Edgefield districts, crosses Lexington district, and unites with Broad River at Columbia to form the Congaree.

Samphire Islands, St. Bernard parish, La. A group of small islands lying N. from the Macons.

Sampit Creek, Georgetown district, S. C. A small stream which enters Winyaw Bay at Georgetown.

San Antonio River, Ts. It rises near the sources

of San Miguel River, flows S. E., and empties into Espiritu Santo Bay.

Sand Bay, Houghton co., Mn. Situated on the N. W. coast of Keewaiwona Point, E. from the mouth of Eagle River.

Sand Creek, Marshall co., Is., enters the Illinois River a little above Macon.

Sandeham River, On. An E. tributary of the Willamette.

Sand Hill River, Ma., flows W., and empties into North Red, a little above Goose River.

Sand Key, Fa. A long, narrow island, lying off the coast of Hillsboro' co.

Sand Point River, Ma., flows N. of E., and empties into Lake Pepin.

Sandusky Bay, O., lies in Ottawa, Sandusky, and Erie counties. It is 23 miles in length, with an average width of about 3 miles. Sandusky River flows into it on the W., and on the E. it communicates with Lake Erie through a narrow strait.

Sandusky River, O., rises in Richland and Crawford counties, flows N., 90 miles, through a fertile country, and empties into Sandusky Bay. A portage of 4 miles connects it with Sciota River, and though a rapid stream, it affords good navigation at high water.

Sandy Creek rises in Orleans co., N. Y., flows N. W., and enters Lake Ontario in the town of Clarkson, Monroe co.

Sandy Creek, N. Y., rises in Lewis co., flows W., and enters Lake Ontario in the town of Ellipsis, in Jefferson co.

Sandy Creek, Little, N. Y., rises in Jefferson co., flows S. W. into Oswego co., where it enters Lake Ontario, through Sandy Creek Bay, at the town of the same name.

Sandy Hook, Middletown, Monmouth co., N. J. This is a sandy beach from half a mile to a mile wide, extending N. from Old Shrewsbury Inlet, and the S. extremity of the highlands of Never-sink, for a distance of 6 miles. It encloses Sandy Hook Bay, which is 7 miles long and 6 wide. As the sand accumulates and extends the point N., a new light house has been erected on Flynn's Knoll, half a mile N. of a former one.

Sandy Inlet, N. C. A passage among the islands on the S. E. coast of New Hanover co.

Sandy Lake, Ma. This is an irregular sheet of water, situated N. from Minsi Sagagoning or Mille Lacs, and connected by an outlet on the N. W. with Mississippi River.

Sandy River, Me., rises near Saddleback Mountain, in Franklin co., flows in a winding S. E. direction into Somerset co., where it enters the Kennebec at Starks, 37 miles above Augusta. It has a number of branches, is about 45 miles in length, and affords excellent water power.

San Francisco Bay, Ca. This large bay receives the waters of Sacramento, San Joaquin, and other rivers, and is connected with the ocean by a narrow strait.

San Francisco River, Ca. A large stream flowing S. into Salt River.

Sanganon River, Is., rises in Vermilion co., in a small lake, flows S. W., then N. W., and finally W., until its junction with Illinois River, between Cass and Mason counties. This river and its numerous tributaries water the most fertile and pleasant parts of the state. It is navigable to the junction of the N. and S. forks for small steamboats.

San Jacinto River, Ts. This small river flows S. E. into Galveston Bay.

San Joaquin River, Ca. It has its source in Tulare Lake, and the Sierra Nevada, flows in a N. W. direction through a fine valley, and empties into San Francisco Bay.

San Lewis Bar, or *West Pass*, Ts. The passage between Galveston Island and the main land.

San Marcos River, Ts. The head stream of Guadalupe River.

San Miguel River, Ts. A large E. branch of Nueces River.

Sanpoila River, On. A small stream flowing S. into Clarke Fork of Columbia River.

San Saba River, Ts. A W. branch of Colorado River, which it enters just below Pecan Creek.

Santa Clara River, Ca. A small stream rising among the Wahshatch Mts, and flowing S. into Virgin River.

Santa Fe River, Fa. This river is formed by the junction of New and Sampson Rivers, flows in a winding W. direction, and, uniting with the Enchtuckne, enters the Suwannee.

Santa Rosa Island, Santa Rosa co., Fa. This long, narrow island extends from Choctawhatchee Bay on the E. to Pensacola Bay on the W.

Santee River, S. C. This large river is formed by the junction of the Congaree and Wateree, and, flowing S. E., enters the sea by two mouths, about 20 miles below Georgetown. Navigable at some seasons nearly 300 miles.

Sanybel Island, Hillsboro' co., Fa. Situated S. from Pine Island, at the mouth of Carlosahatchee River.

Sapelo Island, McIntosh co., Ga. Situated in Sapelo Sound, which also contains Black Bear and some other islands.

Saranac Lake, Lower, N. Y., lying in the S. part of Franklin co., is 7 miles long, 2 or 3 wide, and is connected on the W. with Round Lake and several other lakes and ponds. Its waters abound with fine fish.

Saranac Lake, Upper, Hamilton co., N. Y. This lake, which lies 3 or 4 miles W. of Lower Saranac Lake, is 10 miles long, from 2 to 3 wide, and is surrounded by numerous other lakes and ponds, which are the head sources of Saranac and Rapid Rivers. The lakes and outlets are boatable to a considerable extent, and are well stocked with the fish peculiar to this part of the country.

Saranac River, N. Y., rises in the Saranac Lakes, in the S. part of Franklin co., flows N. E. across the corner of Essex co., and enters Lake Champlain at Plattsburg, in Clinton co. This river rises within a mile of Rackett River, and might be rendered boatable a considerable portion of its length. It has been computed that by excavations and locks a continuous line of navigation, 210 miles in length, might be formed through these two rivers.

Saratoga Lake, Saratoga co., N. Y. This beautiful sheet of water is situated 4 miles S. E. of Saratoga Springs village, and 5 miles E. of Ballston Spa. It is 9 miles long, and about 2 wide. It is much resorted to by pleasure parties, during the summer months, as the lake is abundantly stocked with fish of various kinds, and its shores abound with wild game.

Saratoga Springs, N. Y. See *Fashionable Resorts*.
Sassafras River, Md., forms the boundary between Cecil and Kent counties, and empties into Chesapeake Bay.

Saugatuck River, Ct. See *Westport*.

Savage Creek, Ky., runs on the boundary between Greenup and Carter counties, and empties into the Big Sandy River.

Savannah River, Ga., is formed by the junction of Tugaloo and Kiowee Rivers, in the S. E. part of Franklin co., 100 miles above Augusta, and flows S. E., forming the boundary between Ga. and S. C., until its entrance into the Atlantic, through Tybee Sound, in 32° N. lat. The largest vessels ascend to Five Fathom Hole, 13 miles from the ocean, and 3 miles below Savannah. Large brigs come to the wharves in Savannah. Steamboats ascend to Augusta, 340 miles from its mouth, and pole boats go 150 miles farther. The tide flows 25 miles up the river.

Sawkill Creek, Dutchess co., N. Y., rises in the town of Milan, flows W., and enters Hudson River at the town of Redhook.

Saw Mill River, Westchester co., N. Y. This stream, on which are situated several factories and mills, flows in a S. W. direction, and enters the Hudson at the village of Yonkers.

Saxton's River, Vt., is formed in Grafton by the union of several streams from Windham, and running in an E. direction about 10 miles, through the S. part of Rockingham, falls into Connecticut River in the N. E. corner of Westminster, about 1 mile below Bellows Falls.

Scantic River, Ct. See *East Windsor*.

Scapan Pond, Aroostook co., Me. This is a pretty large sheet of water, the outlet of which flows into Aroostook River.

Scarboro' Creek, Brown co., Wn. A branch of Kewanee River, which it enters from the S. W.

Schlosser Landing, Niagara co., N. Y., is situated on the E. side of Niagara River, in the town of Niagara, about a mile and a half above the Falls, and opposite Chippewa village, Canada. It has become famous as being the place where the steamboat *Caroline* was destroyed by the British, December 29, 1837. It was suffered to be precipitated over the Falls, having been previously set on fire.

Schoharie Creek, N. Y., rises among the Catskill Mts., in Greene co., flows N. through Schoharie co., and enters the Mohawk in Montgomery co. This large stream and its tributaries afford extensive water power.

Schoodic Lakes, Me. These lakes are about twelve in number, lying in the N. part of Washington co., and from them issue the Schoodic, or W. branch of the St. Croix River. The most E. of these lakes is called the Big Lake. The true Indian name is *Gena-sau-ca-naw-gum*. It is of a very irregular form, and about 9 miles in length. It is connected by a very rapid stream, 3 miles long, with Grand Lake, whose Indian name is *Wid-i-wau-cau-gum*. This is a splendid sheet of water, 15 miles in length, is very deep, and the water remarkably clear. It is well stocked with fish. Beyond this, on the S. W., is Pocumcus Lake, 4 miles long, and the Waboosis, 3 miles long. In a W. direction lies the Sic-la-dob-sis, 10 miles in extent. Farther N. is the Horse-shoe Lake, so called from its form; also the Junior Lake, 6 miles long. Still farther on is the Scragged Lake, of an irregular shape; also the Pleasant Lake, 5 miles long, with some others of less size. These are all connected by considerable-sized streams, and, except between the Big and Grand Lakes, there is a continuous boat navigation of nearly 100 miles in extent. The charac-

ter of these waters, which are very extensive, and of the surrounding country, which is very fertile and well wooded, may be expressed in nearly the same words as those applied to *Moose Head Lake*.

Schooley's Mountain, N. J., is a peak of the chain which extends across the N. W. part of the state. It crosses the N. W. part of Morris co., has a height of 600 feet above its base, and about 1100 feet above the level of the ocean. A mineral spring near its top has rendered it quite celebrated, and a turnpike road leading from New York to Easton crosses it.

Schroon Lake, N. Y., lies in Essex and Warren counties. It is 10 miles long, from 1 to 2 wide, and abounds with fish. Deer and other wild game are found in the forests on its borders.

Schroon River, N. Y. This stream rises in Essex co., flows S., and unites with the main branch of the Hudson in Warren co.

Schuyler, Fort, N. Y. See *Throg's Point* and *Ulica*.

Schuyler's Lake, N. Y. See *Canaderaga*.

Schuylkill River, Pa. The three principal branches of this river rise in Schuylkill co., and flowing S. E., it enters the Delaware 7 miles below Philadelphia. It is about 140 miles long. The most important of its tributaries are Tulpehocken Creek, from the W., and Perkiomen Creek, from the E. Vessels of from 300 to 400 tons ascend to the W. wharves of Philadelphia, where its average depth at common tides is from 13 to 14 feet. By means of canals and pools, it is navigable 108 miles, from Fairmount Dam, above Philadelphia, to Port Carbon, in Schuylkill co. An immense quantity of coal is transported on it.

Sciota River, O., rises in Hardin co., and, flowing through Marion and Delaware into Franklin co., receives Whetstone or Olentangy River, just above Columbus, whence it flows nearly S. to its junction with the Ohio, at Portsmouth, where it is 150 yards wide. It flows about 160 miles through a very fertile country, and is navigable 130, to the mouth of Little Sciota River.

Scraggy Neck Island, Barnstable co., Ms. Situated between Cataumt and Red Brook Harbors.

Scull Creek, Colleton district, S. C. The E. and largest branch of Ashepoo River.

Scull's Creek, Emanuel co., Ga. A small tributary of the Ogeechee River.

Scuppernon Creek, Wn. It rises in the S. W. part of Waukesha co., and flows W. into Jefferson co., where it enters Rock River.

Scutlock Point, Me. A small cape situated in lon. 67° 58' W., and lat. 44° 18' N.

Seaconnet Rocks, or Point, R. I. See *Little Compton*.

Sebago Lake, Cumberland co., Me. This beautiful lake receives the waters of Long and several other ponds, and of Crooked River. It is 12 miles in length, and its greatest width is from Baldwin to Raymond, a distance of about 7 miles. Its outlet is Presumpscot River, which empties into Casco Bay. The Cumberland and Oxford Canal passes from this lake to Portland.

Sebasticook River, Me., rises on the borders of Penobscot and Piscataquis counties, flows S. W. and S. through a part of Somerset co., which it divides, for a short distance, from Waldo co.; thence it flows S. W. through a part of Kennebec co., and enters Kennebec River, opposite Waterville. This stream flows 50 miles through a beau-

tiful country, receives several tributaries, and affords excellent water power.

Sebec Pond, Piscataquis co., Me., lies in the towns of Sebec, Foxcroft, and Bowerbank; it is surrounded by a beautiful and heavily timbered country, is about 10 miles long, and averages about a mile in width. Its outlet is a mill stream about 10 miles in length.

Sebawa Creek, Eaton and Ionia counties, Mn., flows N. into Grand River.

Sebois Lakes and River, Penobscot co., Me. The lakes are of an irregular form, about 15 miles in length, and varying from half a mile to a mile and a half in width. They lie near the Aroostook and Sebois River. Their outlet flows S. 50 miles into the E. branch of the Penobscot.

Second Lake, Dane co., Wn. Situated between Third Lake on the N. W., and First Lake on the S. E., with both of which it is connected by outlets.

Second Embarras River, Ma. It rises in Dead Fish Lake, flows S. W., and empties into St. Louis River.

Seneca Fort, Seneca co., O., situated on the W. side of Sandusky River, in the town of the same name.

Seneca Lake, N. Y., is the largest of that series of beautiful lakes lying in the interior of Western New York. It is 40 miles long, and varies in width from 2 to 4 miles. Its elongated diameter is nearly from N. to S. The elevation of its surface is 431 feet above tide water. About midway, upon the W. shore, it receives the outlet of Crooked Lake, which lies about 6 miles to the S. W., elevated 265 feet above. Its own outlet is at its N. E. angle, and flows E. about 12 miles to Cayuga Lake, affording a fine water power at Waterloo, and also at Seneca Falls. The whole descent, in 12 miles, is about 80 feet. At the falls the water descends 47 feet over 4 dams. Seneca Lake is very deep, and consequently is never entirely frozen over: 12 miles from its outlet, it has been ascertained to be 560 feet deep. The lands upon the shores of this lake are very picturesque and beautiful, being highest and boldest about the S. end, and towards the N. less elevated, but undulating, and bountifully adorned with the fruits of cultivation, with here and there a remaining tract of the primitive forest. The landscape gradually rises, for several miles from the shores, by broad natural terraces, or successive ridges, running parallel with the lake, over a considerable extent of country. This lake is connected by a canal with Crooked Lake. Its outlet is also made navigable by locks at Waterloo, connecting its commerce with that of the Erie Canal. It is connected also by railroad conveyance S. with the Susquehanna River, at Owego, and with the Delaware River and the Erie Railroad at Binghamton. Upon the lake itself steamboats run regularly through from Geneva, rear its foot, to Jefferson, at its head. It is known that the water of this lake has a gradual rise and fall, through periods of several years; but the cause of this has never been ascertained.

Seneca River, N. Y., is the outlet of Seneca Lake, from the N. end of which it flows E. about 12 miles, to the N. end of Cayuga Lake. Receiving the waters from this lake, it turns N. until it meets with a stream formed by the outlet of Canandaigua Lake, and other small tributaries coming from the W.; after which it flows E. again, receiving other tributaries successively from the outlets of Owasco, Skaneateles, and Onondaga

Lakes, until it meets that of the Oneida Lake; where, turning to the N. W., it becomes the Oswego River, and flows into Lake Ontario, at Oswego. Its course is about 60 miles from Seneca Lake, across Seneca, Cayuga, and Onondaga counties, to its confluence with the Oswego. It is rendered navigable by a canal and locks to the great Erie Canal at Waterloo. There are falls in this river at the village of Seneca Falls, 10 miles from the lake, and also at Waterloo, 4 miles higher up, upon which, especially the former, a great water power is obtained.

Seneca River, S. C., rises in the Blue Ridge, N. C., flows S. through Pickens and Anderson districts, S. C., and enters the Tugaloo. It is about 50 miles long, and has numerous branches.

Sequatchy River, Tc. This river rises in the N. interior of Bledsoe co., flows in a pretty direct S. W. course, and empties into the Tennessee River in the S. part of Marion co.

Seven Beaver Lake, Ma. This sheet of water contains one or two islands, and is the source of the head branch of St. Louis River.

Seven Mile Brook, Me., rises in Franklin and Somerset counties, flows about 35 miles in a S. E. direction, affording fine mill privileges to the towns of Kingfield and New Portland, and enters the Kennebec at Anson, 40 miles N. E. from Augusta.

Severn River, Anne Arundel co., Md., rises near the centre of the county, flows S. E., and empties into Chesapeake Bay just below Annapolis city.

Seymore's Hill, Sandisfield, Ms. Height 1698 feet.

Seymour Lake, Vt. See *Morgan*.

Shade Creek, Pa., rises in Somerset co., in the Alleghany Mts., and falls into Conemaugh River at Johnstown.

Shade Mountains, Pa. This ridge of the Alleghany chain extends from Bedford co. through Huntington into Mifflin co., a distance of 40 miles.

Shahwater Cape, On. Situated on the W. coast S. from Gray's Harbor.

Shallot River and Inlet, Brunswick co., N. C. The river receives several small tributaries, and passes through the inlet into the sea.

Shallow Lake, Me. This is one of a chain of lakes lying in the W. part of Piscataquis co.

Shamokin Creek, Pa., after a course of 30 miles enters the E. side of the Susquehanna, 2 miles below Sunbury.

Shanwapaquan River, On. A head branch of the Yakima River.

Shark River, Monmouth co., N. J. A small stream emptying into the Atlantic through Shark Inlet.

Sharon Springs. See *Mineral Springs*.

Sharp's Island, Md. Situated in Chesapeake Bay, at the mouth of Choptank River.

Sharpshin Point, Vt. A high, rocky point, situated on the N. side of Burlington Bay, 1 mile and 217 rods from the S. wharf in Burlington.

Shaw's Creek, S. C. A branch of the South Edisto River, with which it unites in Barnwell district.

Shawangunk Creek, or River, N. Y. This stream rises in Orange co., flows N. E., and enters the Wallkill in Ulster co.

Shawangunk Mountains, N. Y. This range, which is a continuation of the Alleghany chain, extends in a N. E. direction through Orange and Sullivan counties, and terminates at the town of New Paltz, in Ulster co. The E. declivity is par-

tially cultivated, but the W. is rocky and precipitous. They contain a fine lead mine.

Sheboygan River, Wn., rises near Lake Winnebago, in Fond du Lac co., and passing through a small lake in the N. W. part of Sheboygan co., it proceeds by a winding E. course to Lake Michigan.

Sheepscoot River, Me., rises in the town of Palermo, Waldo co., flows about 35 miles in a S. direction, and falls into Sheepscoot Bay. This river is navigable, and affords valuable mill privileges. The tide meets it between Wiscasset and Newcastle.

Sheepscoot Bay, Me., extends inland about 10 miles between the towns of Boothbay and Georgetown. Its mouth is 3 miles wide, and bears N. E. 6 miles from Seguin light, at the mouth of the Kennebec.

Shegg's Creek, Ky. A small stream flowing through Barren co. into the Big Barren River.

Shelburne Bay, Vt. See *Shelburne*.

Shell Lake, St. Croix co., Wn. Situated in the N. E. part of the county, at the head of Clam River.

Shenandoah River, Va. This river is formed in Warren co. by the junction of two branches. The N. branch rises in Rockingham co., and the S. branch in Augusta co. The latter flows along the W. side of Blue Ridge, and nearly parallel with it, until its union with the N. branch, whence the main stream flows N. E. to its entrance into the Potomac at Harper's Ferry, just before its passage through the Blue Ridge.

Shepaug River, Ct. This stream rises in Goshen, Litchfield co., flows S. through the towns of Washington and Roxbury, and enters the Housatonic at Southbury. It receives several branches, and affords good water power.

Shetek Lake, Chippewa co., Wn. This is the most N. of a chain of lakes supplying the head waters of Red Cedar River.

Shetek Lake, Ma. This is one of a cluster of lakes supplying the head waters of Moingonan River.

Shetucket River, Ct., rises by several branches in Tolland and Windham counties. It passes between the towns of Lisbon and Franklin, and joining the Quinnebaug at Norwich, flows into the Thames. It receives several branches, the principal of which are the Natchang and Willimantic, and affords fine mill privileges.

Shickskinny Mountain, Pa., extends along the W. side of Susquehanna River, which it crosses in Luzerne co.

Shinnecock Bay, Suffolk co., N. Y., is a beautiful body of water, lying in the town of Southampton. It is 10 miles long, and from 3 to 4 wide. A narrow sand beach, evidently formed by the waves, separates it from the ocean. This bay has long been celebrated for its shell fish. Clams of a superior quality are found here in great abundance, affording employment to a great many persons.

Shishib Lake, La Pointe co., Wn. Situated in the S. E. part of the county, between Weyekwa and Manitowish Lakes.

Shitticook River, Aroostook co., Me., is the largest N. E. branch of the Matawankeag.

Shoal Creek, Is., a tributary of Kaskaskia River, rises in Montgomery co.

Shoal River, Fa. One of the principal branches of the Yellow Water River, with which it joins in Santa Rosa co.

Sholey's Fork, Ca. It flows S. into the Rio Gila.

Shooting Creek, Cherokee co., N. C., flows W. into the Hiwassee River.

Shrewsbury River, Shrewsbury town, Monmouth co., N. J., a continuation of Sandy Hook Bay, flows about 5 miles, partly through a salt marsh, and averages about a mile and a half in width. It receives Shrewsbury River proper, a stream 6 or 7 miles long.

Sibley Lake, Ma., lies N. from Gayashk Lake, with which it is connected.

Sideling Creek, Md. A small branch of the Potomac, running on the E. side of Sideling Mt.

Sideling Mountains. This range traverses Huntington and Bedford counties, Pa., and Alleghany co., Md.

Siegas River, Me., flows S., and enters the St. John's W. of Grand River.

Sierra Nevada, Ca. This large chain of mountains extends through the W. part of Ca., and contains some of the highest land in the Union. It is the source of many large rivers, the principal of which are the Rio Sacramento and Rio San Joaquin.

Silliman Lake, Ma. The most S. of a chain of lakes, connecting by an outlet with North Red River.

Silver Bluff, S. C. This eminence extends about 2 miles along the Savannah, is about 1 mile wide, and is elevated nearly 30 feet above the opposite shore.

Silver Creek, Chataque co., N. Y., rises in the town of Hanover, and flows N. W. into Lake Erie.

Silver Creek, Burke co., N. C., flows N. N. E., and empties into the Catawba near Morgan.

Silver Creek, Clarke co., Ia. It flows in a S. direction, forming part of the boundary between Clarke and Floyd counties, and empties into the Ohio River.

Silver Lake, Wyoming co., N. Y., is 3 miles long and three fourths of a mile wide. It is a charming sheet of water, and is stocked with bass, pickerel, muscalonge, and other fish peculiar to Lake Erie, from whence they were brought.

Silver River, Ca. A small stream flowing S. W. into St. John's River.

Sims's Stream, N. H., rises from several ponds and springs among the mountains in the town of Columbia, and falls into the Connecticut River near the N. W. extremity of the town.

Sinepuzent Inlet, Worcester co., Md., situated in lat. 38° 10' 30" N., is the entrance into Sinepuzent Bay from the ocean. The bay is long and narrow, and Asaticque Island separates it from the Atlantic.

Sinnemahoning River, Pa., enters the W. branch of the Susquehanna in the S. W. part of Lycoming co.

Sinoogawnock River, N. H. See *Israel's River*.

Sioux River, Ma. This large river rises near the sources of the Minesota or St. Peter's River, flows S. S. E., forming the boundary between Io. and Ma., and empties into the Missouri.

Sipsy River, Aa. This river rises in the W. part of Walker co., and flows S. S. W. into the Tombigbee.

Siselin Lake, Otsego co., Mn. The waters of this lake connect by an outlet with a branch of the Au Sable River.

Six Mile Creek, Tompkins co., N. Y., flows N. W. to the village of Ithaca, where it enters Cayuga Lake.

Skaneateles Lake, N. Y. This beautiful and romantic sheet of water lies partly between Ca-

yuga and Onondaga counties. It is 15 miles long, and from half a mile to a mile wide. Its N. shores are bordered by highly cultivated farms and country seats, while the S. banks are more rugged and picturesque. It is famous for its fine trout, which are taken in great numbers, weighing from 5 to 10 pounds each.

Skoovargurmish River, Mn., waters the W. part of Montmorenci co., and flows N. into Lake Huron.

Skootum Lake, Piscataquis co., Me. This is a pretty large sheet of water, the outlet of which enters Piscataquis River.

Skunk River, Io. Otherwise called *Chicaqua*. Rises near the centre of the state; runs into the Mississippi parallel with the Des Moines, and distant 20 to 30 miles from it N.

Sleeping River, Mn. A small stream emptying into Lake Superior.

Sleepy Creek, Va., rises in the N. part of Frederick co., and runs N. E. into the Potomac.

Slippery Rock Creek, Pa., rises in Mercer and Butler counties, and falls into Conquenessing Creek a little above its entrance into Big Beaver River. Length 35 miles.

Small Cape, Me., situated in the S. part of Phippsburg, is the E. boundary of Casco Bay.

Smith Fork, Ca. One of the head branches of Eagle River.

Smith's Island, Northampton co., Va., lies in the Atlantic, N. E. from Cape Charles.

Smith's Island, New Hanover co., N. C., is situated at the mouth of Cape Fear River. Cape Fear is the S. extremity of the island. A light-house stands on the W. side, overlooking the main channel.

Smith's Point, Va. The E. extremity of Northumberland co., extending into Chesapeake Bay.

Smith's River, Grafton co., N. H. This river rises from several ponds in Grafton and Orange, and after pursuing a winding E. course of from 12 to 18 miles, through Danbury and Alexandria, falls into the Pemigewasset between Bristol and Hill.

Smithtown Bay, N. Y., lies in the town of Smithtown, on the N. side of Long Island, and is a good harbor during easterly storms. It is a great resort of wild water fowl, and is stocked with various kinds of fish.

Snake Island, N. Y. See *Rattlesnake Island*.

Soda Lake, Caddo parish, La., lies S. from Caddo Lake, with which it is connected.

Sodus Bay, or *Great Sodus Bay*, Wayne co., N. Y., is an irregular body of water, lying in the towns of Sodus and Huron, and opening into Lake Ontario on the N. It is navigable, and at its mouth have been constructed extensive piers and light-houses. It is 5 miles long, and from 1 to 3 wide.

Soldier River, Io. This stream rises in the N. W. interior of the state, near the source of Raccoon River, flows S. W., and empties into the Missouri.

Soucook River, N. H., has its source in 3 ponds in the S. part of Gilmanton, called Loon, Rocky, and Shellcamp Ponds. The river passes through Loudon, receiving several branches, and forms the boundary between Concord and Pembroke, falling into the Merrimack below Garvin's Falls.

Soudneuk Stream, Piscataquis co., Me., rises in a small lake, and flows S. into the W. branch of the Penobscot.

Souhegan River, N. H., originally *Souhegenack*. The name of a river in Hillsboro' co., and the former name of Amherst and Merrimack. The principal branch of this river originates from a pond in Ashburnham, Ms. It passes N. through Ashby into New Ipswich, and through Mason, Milford, Amherst, into the town of Merrimack, where it unites with Merrimack River. In its course it receives several streams from Temple, Lyndeboro', and Mount Vernon, and just before it falls into the Merrimack receives Babboosuck Brook, a stream issuing from Babboosuck Pond. See *Amherst*.

South Bays, Vt. There are two bays of this name, one at the S. end of Lake Champlain, near Whitehall, and the other at the S. end of Lake Memphremagog, between Salem and Newport.

South Bay, Washington co., N. Y. This bay lies between the towns of Dresden and Whitehall, and opens into Lake Champlain. It is 4 miles long, and half a mile wide.

South Bay, N. Y. See *Great South Bay*.

South River, N. C. A large tributary of the Cape Fear River. It rises in the N. E. part of Cumberland co., flows S. S. E., separating Sampson and New Hanover from Cumberland, Bladen, and Brunswick counties.

South Newport River, Ga. This river flows in an easterly direction, forming the boundary line between Liberty and McIntosh counties, and falls into Sapelo Sound.

South Three River, Io., rises in the N. part of Clarke co., flows N. E. across Warren co., and empties into the Desmoines.

Sowadabscook River, Penobscot co., Me. This stream falls into the Penobscot at Hampden, 5 miles below Bangor. Within 3 miles of its mouth it falls 120 feet, furnishing many valuable mill privileges. The main branch, which rises in Stetson, unites with the Harvey Stream from Levant, and the Kinsley Stream from Etna, both affording excellent mill sites, near the village in Carmel. Below these the Sowadabscook is deep and sluggish, from 15 to 25 yards in width, flowing through extensive meadows, and the Great and Little Ponds in Hermon, with very little descent, to the head of the falls in Hampden. Near the E. line of Carmel, this stream comes within about 20 rods of the Little Kenduskeag, a stream which flows through the N. E. part of Carmel, from Levant to Bangor; and the two streams are united by a branch from 20 to 30 feet wide, and 3 feet deep, called the "Cross." The Kenduskeag is so rapid that it rises and falls much quicker than the Sowadabscook. When the streams are rising, the current in the Cross sets towards the Sowadabscook, and when falling towards the Kenduskeag. The country watered by the Sowadabscook is generally rather level and free from hills, though there are many swells of very fine farming land.

Spafford's Lake, N. H. See *Chesterfield*.

Spanish Creek, Camden co., Ga. A small tributary of St. Mary's River.

Spanish Lake, Natchitoches parish, La., lies S. from Red River, into which it discharges its waters. It receives several small streams, the principal of which is Bayou Terre Blanche.

Speckled Mountain, Oxford co., Me., lies on the N. H. line, partly in the town of Riley. Elevation about 4000 feet.

Spencer Mountain, Piscataquis co., Me., lies E. of Moose Head Lake.

Spesulia Island, Harford co., Md., lies in Chesapeake Bay, just below Turkey Point.

Spigot River, N. H. and Ms., rises in Hempstead, and passes through Salem, and into the Merrimack, between Methuen and Dracut, Ms., nearly opposite Shawheen River, which comes from the S. through Andover.

Split River, On. A head branch of Yakima River.

Spirit Lake, Io. Situated in the west of the state at the head of Inyan Yankey or Little Sioux River.

Split Cape, Me. See *Addison*.

Spoon River, Is., is formed in Coffee co., by the union of several forks, and pursues a S. course until it enters the W. side of the Illinois. It affords good water power.

Sprague's Hill, Bridgewater, Ms.

Spring Creek, Ga., rises in the N. part of Early co., flows S., and falls into Flint River near its junction with the Chattahoochee.

Spring River, Mo. and Wes. Ter. The head branches of this stream drain Lawrence co.; it then flows in a circuitous S. W. course into the Western Territory, where it enters Neosho River.

Spring Garden Lake, Orange co., Fa., lies S. E. from Lake George, and empties into St. John's River.

Spruce Hill, Bridgewater, Ms. Height 2588 feet.

Spyuten Duyvel Creek, N. Y. See *Harlem River*.

Squalluck River, Me., rises in the N. part of the state, near the Canada line, and flows W. into the Toladi.

Squam Lake, N. H. This beautiful sheet of water lies on the borders of Holderness, Sandwich, Moultonboro', and Centre Harbor. It is about 6 miles long, and in its widest part 3 miles in width. It covers a surface of between 6000 and 7000 acres, contains numerous islands, and is well stored with fish. This fine lake is but a short distance from the celebrated "Senter House," at Centre Harbor.

Squam River, N. H. See *Holderness*.

Squamscot or Swamscot River, N. H., called also *Great or Exeter River*. See *Exeter*.

Squaw Island, Erie co., N. Y., lies in the Niagara River, and is attached to the town of Black Rock. It contains about 130 acres of land.

Squirrel River, Portage co., Wn. A small W. branch of the Little Wisconsin River.

Stanislaus River, Ca. It rises among the Sierra Nevada, and flows S. W. into the Rio San Joaquin.

Stanwix, Fort, N. Y. See *Rome*.

Staten Island, N. Y., lies in the Bay of New York, about six miles S. of the city, and constitutes the county of Richmond, with four towns. It has Newark Bay, and the channel called the "Kills," on the N.; New York harbor and the Narrows, between the outer and inner bays of New York, on the E.; Raritan Bay S.; and Staten Island Sound W. The centre of the island is about 11 miles S. W. from the city. It is 14 miles in length N. E. and S. W. and 8 miles wide in its broadest part. Its surface is agreeably diversified, with some good soil for cultivation, and the advantage of nearness to the market for the disposal of every kind of product. The highest elevation is that of Richmond Hill, from the summit of which, 307 feet above the level of the ocean, the prospect, which may be enjoyed with little effort to obtain it, embrac-

ing the city and the harbor of New York, with its shipping, its fortifications, and its islands, Brooklyn, and the surrounding country on Long Island, Hoboken, and the adjacent portions of New Jersey, is extremely rich and beautiful. On a hill near the Narrows a telegraphic signal is erected, communicating with the Marine Telegraph on the Merchants' Exchange in Wall Street. The New York quarantine ground is on the N. shore of this island, opposite to the villages of Tompkinsville and Stapleton, to both of which places steamboats run several times a day, from the foot of Whitehall Street. New Brighton is a pleasant village on the margin of the island, a little further W., where are many elegant residences, occupied by families from the city. The Sailor's Snug Harbor, a large and imposing edifice, is an asylum for superannuated seamen, situated a short distance from New Brighton. The seat of justice for the county, embracing Staten Island, is at Richmond.

Steer Creek, Gilmer co., Va. A S. branch of the Little Kanawha River.

Sterling Peak, Vt. See *Sterling*.

Stevens's Branch, Vt. See *Barre*.

Stevens Creek, S. C. This stream rises in Abbeville and Edgefield districts, receives many large branches, and empties into the Savannah in Edgefield district.

Stevens's River, Vt. This fine mill stream rises in Peacham and Ryegate. It received its name in compliment to Captain Phineas Stevens, the brave defender of Charlestown, N. H. The waters of this river are remarkably clear, and its banks luxuriant and romantic. It meanders about 15 miles, and in its course through Barnet receives Harvey's Lake, a pellucid sheet of water, covering an area of 300 acres. This beautiful river mingles with the Connecticut at Barnet, where it makes a descent of 100 feet in the distance of 10 rods.

Sting Bay Point, Va. The S. E. extremity of Middlesex co., at the mouth of the Rappahannock River.

Stocton's Island, La Pointe co., Wn. Situated in the W. part of Lake Superior, S. from Bartlett's Island.

Stone Coal Creek, Lewis co., Va., flows N. W., and enters the W. fork of the Monongahela at Weston.

Stone's River, Te. An important stream rising in the E. part of Cannon co., and flowing N. W. into the Cumberland River, which it enters N. E. from Nashville.

Stone Inlet, Colleton district, S. C. The passage between Riawaw and Folly Islands.

Stony Island, Jefferson co., N. Y. This island lies in the E. part of Lake Ontario, and belongs to the town of Henderson. It is about 3 miles long and 1 wide.

Stony Point, Monroe co., Mn., extends into Lake Erie, E. from Plaisance Bay.

Strawberry Island, N. Y., lies in Niagara River, about 1 mile below Black Rock, and is a great resort of sportsmen, as it abounds in wild ducks, and affords fine fishing grounds. It contains 100 acres of low ground, mostly covered with coarse grass.

Strawberry River, As. This river rises in the interior of Fulton co., flows S. E. through Lawrence co., and falls into Big Black River in the N. E. corner of Independence co.

Strong River, Mi., rises in Scott co., flows S. W., and empties into Pearl River.

Stump Inlet, N. C. A passage among the islands off the S. E. coast of New Hanover co.

Sturgeon Bay, Brown co., Wn. A long, narrow bay, communicating on the N. W. with Green Bay, and extending S. E. nearly to Lake Michigan.

Sturgeon River, Mn. It rises in a number of small lakes in the N. part of Marquette co., flows W., and then N., into Houghton co., where it empties into Portage Lake.

Success Pond, N. Y. See *Lakeville*.

Suck Creek, Te., enters Tennessee River at the Whirl.

Sucker's Fork, Scott co., Ia. A small branch of Graham's Fork of the Muscatauck River.

Sucker River, Mn., rises in a small lake in the N. E. part of Schoolcraft co., flows across a corner of Chippewa co., and empties into Lake Superior.

Sudbury River, Ms. This river rises in Hopkinton and vicinity, and after passing Framingham, Natick, Sudbury, Wayland, and Lincoln, joins the Assabet at Concord.

Sugar Creek, Hickman co., Te., enters Dutch River from the N. E.

Sugar Creek, Ia., rises in the S. part of Clinton co., flows S. W. across Montgomery and Parke counties, and empties into the Wabash.

Sugar Creek, Sangamon co., Is. A branch of the Sangamon River, which it enters E. from Springfield.

Sugar Creek, Is. This stream rises in McDonough co., and enters the Illinois in Schuyler co.

Sugar Island, Mn. A large island situated in the Straits of St. Mary, between the Montreal Channel and Tahquamenaw Bay.

Sugar River, N. H. This river rises from Sunapee Lake, passes through part of Wendell, the whole of Newport, and nearly through the centre of Claremont, where it meets the Connecticut. Red Water Brook, in Claremont, is a branch of Sugar River.

Sullivan's Island, Charleston district, S. C. A small island lying at the mouth of Charleston harbor.

Summer Island, Mn., lies in Lake Michigan, S. from Point de Tour.

Sunener Lake, On. A small body of water lying N. E. from Tlathath Lake.

Sunapee Lake, N. H., lies in the N. W. part of Hillsboro' co. and the N. E. part of Cheshire, in the towns of Wendell, New London, and Newbury. It is 12 miles long and about $1\frac{1}{2}$ miles in width. Its outlet is on the W. side, through Sugar River. Dr. Jackson, in his geological report, says that this lake is so near the summit level, that a slight excavation would turn its waters either into the Connecticut or the Merrimack. It is elevated about 1080 feet above the sea level, and the descent of its outlet, Sugar River, to the Connecticut, is very rapid.

Suncook River, N. H. This river rises in a pond between Gilmanton and Gilford, near the summit of one of the Suncook Mts., elevated 900 feet above its base. This stream passes through two other ponds at the foot of the mountains, and thence through the S. E. part of Gilmanton, into Barustead, where it receives several tributaries; thence through Pittsfield and Epsom, and between Allenstown and Pembroke, into the Merrimack.

Sun Flower River, Mi. This river is supplied by two head branches, which are outlets of the

Mississippi. It flows S., connecting with numerous small streams, and finally enters the Yazoo.

Sunkhaze Stream, Me., flows N. of W., and falls into the Penobscot about 5 miles above Oldtown village.

Superior, Lake, the largest of the great lakes of North America, and supposed to be the largest body of fresh water on the surface of the globe. Its length is about 380 miles, its breadth 130 miles, and its circumference between 1400 and 1500 miles. It is surrounded mostly by a rocky, uneven, and sterile coast. It contains many considerable islands, the largest of which, in the N. W. part, is Isle Royal, about 100 miles long and 40 broad. Its waters abound with fish, particularly trout, sturgeon, and white fish, which are caught at all seasons. The trout taken in this lake generally weigh about 12 pounds, but many are larger than this, even up to 50 pounds. The elevation of the lake's surface above the ocean is 641 feet, and the mean depth of its bottom 900 feet. This lake is subject to as violent agitation from storms as the broad Atlantic, and its navigation is quite as dangerous. The vessels which navigate Lake Superior are confined within its own waters, as the Falls of St. Mary present a complete obstruction to communication by water with the lakes below. This obstruction will doubtless be ultimately overcome, as it is possible that this should be done by a ship canal, at a comparatively moderate expense. More than 30 rivers empty their waters into Lake Superior, which are all discharged by the outlet of St. Mary's Strait, or River, into Lake Huron, towards the E. The boundary line between the U. S. and the British possessions passes from its outlet through the middle of the E. section of this lake; but towards the W. it is carried clear round to the N. of Isle Royal, giving that island and the whole body of the lake below it to the U. S.; then, passing round the W. extremity of the island, it inclines S. to the entrance of Pigeon River, leaving the largest part of this section of the lake on the British side. The Pictured Rocks, so called, towards the E. end of Lake Superior, are a great natural curiosity. They form a perpendicular wall 300 feet high, extending about 12 miles along the shore of the lake. Upon the face of this wall are numerous indentations and projections, from which they have received their name, and at the base are many deep reeding caverns, into which the waves, especially when lashed by storms, roll and reverberate with a tremendous roar. At one place, at the height of 70 feet, a considerable stream leaps out, at a single burst from this lofty palisade of rocks, into the lake, leaving a clear space for boats to pass behind its descending column. At another place four huge piers of the rock bear up a vast stratum or entablature of the same, with earth resting upon it, upon which are growing trees of spruce and pine, some of which stand 50 or 60 feet high. This is appropriately called the Doric Rock, from its remarkable resemblance to a work of art. In the region about the shores of Lake Superior, many valuable mines of copper and other ores have been discovered within a few years past, for the working of which companies have been formed among capitalists of our eastern cities, who, notwithstanding the remoteness of the locality, and the want of many facilities of transportation which may hereafter be provided, are, with profit to themselves, bringing no small supply of this

valuable mineral wealth into the commerce of the country.

Suquinochee River, Sumpter co., Aa. This river has several large branches, and flows S. E. into the Tombigbee.

Suwannee River, Fa., rises in Okefinokee Swamp, Ga. The Allapahaw flows into it from the N., and the Withlacoochee from the N. W. The banks in some places are 100 feet high, perpendicular, and of beautiful granite. Its bed is rocky, and it enters into the Gulf of Mexico through numerous shallow channels. The bar at its mouth has not more than 5 feet of water, but above that it has 15 feet for 55 miles.

Suwannee River, Ware co., Ga. One of the head branches of the Suwannee River, which it enters near Fort Gilmer.

Swamp Creek, On., flows N. W., and enters Lewis Fork of Bear River a little above Malade River.

Swan Creek, Te., enters Duck River from the S. in Hickman co.

Swan Creek, Mo., rises in the S. W. part of Wright co., flows S. W., and enters White River at Forsyth, in Taney co.

Swan Lake, Ma. The largest of a chain of lakes at the head of Swan River.

Swan Point, Md. The S. W. extremity of Kent co., extending into Chesapeake Bay.

Swan River, Ma. It rises in Swan Lake, flows S. S. W., and empties into the Mississippi River.

Swatara River, Pa., flows S. W., and enters the Susquehanna at Middleton.

Sweet Springs, Monroe co., Va. This is one of the oldest watering-places in the state. There are extensive accommodations, and the waters are efficacious in many complaints, resembling the Bristol Hot Wells, England. The spring is so copious as to turn a mill 200 yards from its source.

Swift River, Me., flows S., and falls into the Androscoggin at Mexico.

Swift River, N. H., rises in the mountains N. W. of Albany, passes through that town with great rapidity, and falls into the Saco in Conway. Its whole course is rapid, and in one place it falls 30 feet in the distance of 6 rods through a channel in the solid rock of about 12 feet wide, the sides being from 10 to 30 feet perpendicular height. At the upper part of these falls are several holes, worn perpendicularly into the rock, several feet in depth, and from 6 inches to 2 feet in diameter. There is another small stream of the same name in the town of Tamworth.

Table Mountain, Pendleton district, S. C. This remarkable mountain is elevated 3168 feet above the surrounding country, and about 4000 ft. above sea level. One side of the eminence presents an immense rocky precipice, at the bottom of which is a dismal valley or gulf, of great depth, and whitened by the bones of various animals.

Tayabona Bay, Fa., lies off the coast of Benton co., and receives several rivers, the principal of which are the Weekiwachee, the Pithlochastotoc, and the Anelote.

Taghkonic Mountains, N. Y. This range, which is a branch of the Green Mountains, commences in the E. part of Rensselaer co., extends S. parallel to the state line, sometimes entering Ms., through Columbia, into Dutchess co., a distance of 50 miles, where it divides into two ridges, one of which extends through Putnam into West-

chester co., dividing the waters that flow E. into Long Island Sound from those that flow W. into Hudson River.

Tahnechah River, Iowa co., Wn., flows N. into Wisconsin River.

Tahquamenaw Bay, Mn. This large bay is situated between the Straits of St. Mary on the S. E., and Lake Superior on the N. W., and separates Canada from Michigan.

Tahquamenaw River, Mn. The numerous head branches of this river rise in Michilimackinac and Chippewa counties; the main stream then flows in a N. E. direction, and falls into Tahquamenaw Bay.

Talcott Lake, Ma. The Moingonan River passes through this lake, which lies S. from Lake Shetek.

Tallahala Creek, Mi., has its source in Jackson co., flows S., receiving several large branches, and empties into Leaf River.

Tallahatchie River, Mi. This is an important stream, which, with its branches, drains the principal part of the county whose name it bears.

Tallapoosa River, Ga. and Aa., rises in Carroll and Paulding counties, Ga., flows S. W. into Aa., where it receives numerous small tributaries, and joining with the Coosa between Montgomery and Autauga counties, forms the Alabama.

Tallah or Terrora River, Ga. It rises in Rabun co., flows S. E., separating Rabun and Habersham counties, and unites with the Chatuga to form the Tugaloo.

Tamarac Creek, Crawford co., Wn. A small tributary of Trempaleau River, which it enters near its mouth.

Tampa Bay, Fa., called *Espiritu Santo* by the Spaniards, is the largest bay in the Gulf of Mexico, being 40 miles long, and in one place 35 miles in width, and having from 15 to 20 feet of water on the bar. It receives numerous tributaries, of which Hillsboro', Manate, Oyster, Indian, and Alafia Rivers are the principal. The bay is easy of access, and affords fine anchorage. At its mouth are numerous islands. Little Tampa Bay, lying in its N. W. part, is about 10 miles in diameter, but very shallow.

Tampa Creek, Ma. A W. tributary of Shayenn Oju River.

Tangier Sound, Md. Situated in Chesapeake Bay, off the coast of Somerset co., and N. W. from Pocomoke Bay. It contains a number of islands, and receives the waters of Nanticoke, Wicomico, Manokin, and some other rivers.

Tangipahao River, Mi. and La., rises in Pike and Amite counties, Mi., flows S. into La., then S. by E. to its entrance into Lake Ponchartrain, its whole length being about 80 miles.

Tankio River, *Little and Great*. These streams rise in the S. part of Page co., Io., flow S. into Mo., and enter the Missouri River in Holt co., soon after their junction.

Tanner's Creek, Ia., falls into the Ohio River 2 miles below Lawrenceburg.

Tappan Bay, N. Y., an expansion of Hudson River, commences 22 miles N. of the city of New York, and extends to Teller's Point, a distance of 10 or 12 miles. It is from 2 to 3 miles wide, and is surrounded by a beautiful and highly-cultivated country.

Tar River, N. C., rises in Person co., flows in a winding S. E. direction, receives Fishing Creek, a large branch from the N. in Edgecomb co., and below Washington expands into a broad estuary, which is called Pamlico River, and flows into

Pamlico Sound. Vessels drawing 9 feet of water navigate it to Washington, and small steamboats to Tarboro'. Its length is about 180 miles.

Tarquovac Mountain, Me., lies on the border of Piscataquis and Somerset counties.

Taunton River, Ms. This river rises in Plymouth co., and falls into Mount Hope Bay. The Taunton and its branches water the towns of Abington, Hanson, Halifax, and Plympton, all the Bridgewater, Raynham, Taunton, Berkley, Dighton, Freetown, Fall River, Somerset, and Swanscy. It is celebrated for the great hydraulic power it affords, and for the number of alcwivs within its waters.

Tarpan River, On. It rises among the Cascade Mts., and flows S. W. into Admiralty Inlet.

Tehanchicanah Lake, Ma. An enlargement of the Tchan Sanson or River à Jaques.

Tehiyaza Lakes, Io. A chain of small lakes, lying on the N. border of the state, and supplying the head branches of Lime Creek.

Techocunna River, Ga., rises in Monroe co., flows in a S. E. direction 40 miles, and enters the Ockmulge between Houston and Bibb counties.

Teche River, La., rises near Red River, in Rapides parish, and pursuing a winding S. S. E. course, it enters the outlet of Chetimaches Lake, in St. Mary's parish. It is about 180 miles long, and 200 yards wide at the mouth. Its channel is deep, and the tide ascends more than 100 miles. This river, like the Mississippi, is higher than the adjoining country, excepting its immediate banks. It is 20 feet deep, has 8 feet of water on the bar, and is navigable to New Iberia, 100 miles.

Telegraph Hill, Marshfield, Ms. Height 205 ft.

Telessas Lake, Piscataquis co., Me., lies S. E. of Bamonenungemook Lake, with which it is connected.

Teller's Point, Westchester co., N. Y. This peninsula lies on the E. side of Hudson River, in the town of Cortland, just above the mouth of Croton River. It is about 2 miles long, and separates Haverstraw and Tappan Bays.

Tellico River rises in the N. part of Cherokee co., N. C., flows N. W. into Te., and empties into Tennessee River in Monroe co.

Temisconata Lake, Me. See *Madawaska River*.

Teniffie Mountain, N. H. See *Milton*.

Ten Mile Creek, or River, N. Y. and Ct. This stream rises in the N. E. part of Dutchess co., flows S. and E. into Ct., where it falls into the Housatonic River.

Tennessee River has its sources in the Alleghany Mts., in Tazewell and Wise counties, Virginia. Its principal head tributaries are the Holston and the Clinch Rivers, the former of which receives the French Broad River, and the latter Powell's River. The Holston and Clinch unite at Kingston, in Roan co., Tennessee, and thence the course of the main stream is about S. W., until it crosses the boundary of Alabama, near the N. E. corner of the state, and continuing 50 or 60 miles in this direction, bends towards the N. W., breaking through the Cumberland Mts., and traversing the entire N. end of Alabama, until, cutting off a small corner of Mississippi, it emerges again into Tennessee, where it immediately takes a course due N., crossing the state, and entering Kentucky, across the western point of which, bearing a little farther to the W., it flows on to its confluence with the Ohio, which is only about 12 miles below the mouth of the

Cumberland River. The valley of the Tennessee divides itself into two great sections, the upper and the lower. The upper valley is that which is above the passage of the river through the Cumberland Mts., and is included between the two parallel chains of the Appalachian system, which form a connection just below this pass.

This upper section is mountainous and much elevated, embracing an area of about 24,000 square miles. The lower valley of the Tennessee is composed of several physical sections, in N. Alabama, W. Tennessee, and Kentucky, comprising in all an area of 17,600 square miles.

Thus the whole valley of this large river embraces a superficial extent of 41,600 square miles. It is, therefore, by this standard of estimation, as well as from its comparative length, which is near 1200 miles, and from the large volume of water which it carries, entitled to the first rank among the tributaries of the Ohio. The difference in the relative height between the highest and the lowest extremes of the upper and lower valleys of the Tennessee is not less than 1700 feet. The current of every branch of the river is very rapid, though there are few, if any, direct falls in them, and they generally admit of boat navigation nearly to their sources. The whole river has a mean fall of 2 feet to the mile. It is navigable, excepting at low water, for steamboats, from its mouth to Florence, in Alabama, a distance of 259 miles. Here are the Muscle Shoals, where the river expands to a width of several miles, and is very shallow. A canal has been made around these shoals 36 miles long, to admit the passage of steamboats, and the navigation of the river above is unobstructed for 250 miles, to the pass of the Cumberland Mts. The river is here compressed to a width of 70 feet, besides being whirled around a projecting cliff, occasioning a very difficult current for boats, whether ascending or descending. The river above this point is only favorable to navigation with the stream.

Tensas River, La., rises in Chicot co., As., flows nearly parallel with the Mississippi, through Carroll and Madison counties, forms the boundary between Concordia and Cattahoola counties, and falls into Wachita River.

Tensaw River, Aa., the eastern outlet of Mobile River, leaves it 8 miles below the junction of Tombigbee and Alabama Rivers. It flows S. past Blakely, and enters Mobile Bay by several mouths. It contains a considerable island a little below where it leaves Mobile River.

Tetedes Mort, Jackson co., Iowa. A small branch of the Mississippi.

Tetos Pond, Me., is connected on the N. by an outlet with Telessas Lake.

Tewapa Tankyan Lake, Ma. Situated between the forks of a river of the same name.

Tewapa Tankyan River, Ma. It rises in Warah and Wamdushkati lakes, flows N. E., and empties into Mankato River.

Thames River, Ct. The Quinebaug, Shetucket, and Yantic Rivers unite near Norwich to form this stream, which is navigable from that place to New London, a distance of 14 miles. The banks of this river are very picturesque and beautiful.

Thimble Islands, New Haven co., Ct. A group of small islands lying off the town of Branford.

Third Lake, Dane co., Wn. Situated on the E. border of the city of Madison, S. E. from Fourth Lake.

Thirteen Mile Creek, Mason co., Va. An E. branch of the Great Kanawha.

Thomas Fork, On. A small stream flowing S. W. into Bear River.

Thompson's Creek, S. C., flows S. E., and enters the Great Pedee below Chatham.

Thousand Islands. This cluster of islands, belonging partly to the Americans and partly to the British, lies in the St. Lawrence River, a little below Lake Ontario. Some of these islands are fertile and possess good timber, but generally they are small and rocky. The river where they are located is from 2 to 10 miles in width. In the distance of between 20 and 30 miles, the number of these islands is said to exceed 1500, and passages amid them, up and down this magnificent outlet of the great lakes, present to the traveller scenes of great sublimity and beauty.

Three Buttes, On. These are isolated peaks situated between Lewis Fork and Malade River, and N. W. from Fort Hall.

Three Tetons, On. These peaks are a branch of the Rocky Mts., and are situated at the head of the Lewis Fork of Columbia River.

Throg's Point, Westchester co., N. Y., is situated in the S. E. part of the town of Westchester, 16 miles N. E. of New York city. It projects a mile or two into East River, and is an important military position, on which has been erected by the United States government a strong fortification, called Fort Schuyler, which, together with the fortification at the Narrows, is intended to defend the city of New York from foreign invasion.

Thunder Bay, Mn. This large bay extends from Lake Huron into Alpena co., contains a number of islands, and receives the waters of several rivers.

Thunder Bay River, Mn. This river rises in the N. part of Oscoda co., takes a winding N. E. course through Montmorenci and Alpena counties, and falls into Thunder Bay.

Tibbet's Island, N. Y. See *Green Island*.

Ticonderoga Fort, Essex co., N. Y. This renowned fortification lies on the W. side of Lake Champlain. See *Fashionable Resorts*.

Tie Tie Creek, Ware co., Ga. A small stream flowing through the W. part of Okfeinokee Swamp, and emptying into Jones Creek.

Tiffins River, O., rises in a lake in Mu., enters O. in Williams co., and flows in a S. direction to Maumee River, which it enters one mile W. of Defiance. It is navigable for small craft 50 miles, and affords good water power.

Timbalier Bay, La. This is a rather shallow bay, from 3 to 6 miles wide, extending N. W. from the mouth of Bayou La Fourche 30 miles, and is bounded on the S. W. side by a long, low peninsula.

Timpanozu River, Ca., Uh. A small stream rising in the Timpanozu Mts., and flowing S. W. into Utah Lake.

Tinker's Creek, O. A tributary of the Cuyahoga, which it enters 12 miles above Cleveland.

Thoughtoga River, N. Y. This fine mill stream rises in Onondaga co., flows S. through Cortland co., and enters Chenango River at Chenango Forks village, in Broome co.

Tippecanoe River, Ia. Its head branches water Noble and Kosciusko counties, and, after a winding course through Fulton, Pulaski, and White counties, it enters the Wabash in the N. part of Tippecanoe co.

Tipsinah River, Ma. A N. E. tributary of the Minnesota or Qui Parle River.

Ti Tanka-He Lake, Ma. An irregularly-shaped sheet of water, lying near St. Croix River, and S. from Lake Pointsett.

Titicus Creek, or River, rises in Ct., flows W. into N. Y., and enters Croton River at the town of West Salem, Westchester co.

Tlamath Lake, On. A large sheet of water situated in the S. part of the state, among the Cascade Mts.

Tlamath River, On. and Ca. This river rises in Tlamath Lake, in On., and Rhett Lake, on the N. border of Uh., flows W. for some distance across Uh., then, turning to the N. W., crosses a corner of On., and discharges its waters into the Pacific.

Tobacco River, Mn. A small stream draining the E. part of Keewaiwona Point, and falling into Lake Superior.

Tobepokaliga Lake, Orange co., Fa. Situated N. from Lake Kissimee, with which it is connected by an outlet.

Toby's Creek, Pa., falls into the Alleghany River about 20 miles below Franklin. It is about 55 miles long, and is boatable for a large part of its course.

Tombigbee River, Mi. and Aa., rises in Tishamingo co., Mi., flows a little E. of S., receiving several branches, and passes into Aa. Sixty miles below it receives from the E. the Black Warrior, a river nearly as large as itself, at Buffport, and, proceeding 100 miles in a winding S. direction, it unites with the Alabama to form Mobile River. 45 miles above the Mobile Bay, and about 70 miles from the Gulf of Mexico. It is navigable 9 months in the year to St. Stephen's for large vessels, and to Columbus, Mi., for steamboats. Its entire length is nearly 500 miles.

Tomer Stream, Me., rises in the N. part of Washington co., and flows S. into the outlet of Schoodie Lakes.

Tomhannock Creek, Rensselaer co., N. Y., rises in the towns of Grafton and Pittstown, flows N. W., and enters the Hoosick at Schaghticoke.

Tompkins River, N. Y. See *Staten Island*.

Tom's River, N. J., rises in Monmouth co., and empties into Barnegat Bay.

Tonawanda Creek, N. Y., has its source in the S. part of Wyoming co., flows N. through a part of Genesee, thence it turns W., forming the boundary between Erie and Niagara counties, and empties into Niagara River at Tonawanda village. It constitutes a part of Erie Canal for a distance of 12 miles.

Tonawanda Island, Niagara co., N. Y. This island lies in the Niagara River, opposite Tonawanda village, and belongs to the town of Wheatfield. It contains about 70 acres of highly-cultivated land.

Tournois Creek, Clark co., As. This creek flows S. E., and empties into the Little Missouri near its junction with the Wachita.

Turtle River, On. A small N. tributary of Columbia River.

Town Creek, Brunswick co., N. C., flows S. E. into the Cape Fear River.

Train Bay, Mn., washes the coast of Schoolcraft co., W. from Grand Island.

Transparent Lake lies in Hamilton and Herkimer counties, N. Y. It is surrounded by wild and picturesque scenery, and its waters, which, as the name indicates are remarkably clear, abound in

salmon and brook trout of a superior size and quality. The lake is 5 miles long and 2 wide.

Traverse Island, Mn. Situated in Lake Superior, at the mouth of Keewaiwona Bay.

Traverse Lake, Ma. This is a long, narrow body of water, containing several islands, and supplying the waters of Stouxx Wood, a head branch of North Red River.

Trembleau Point, Essex co., N. Y. lies on the W. side of Lake Champlain, in the town of Chesterfield. This is the N. termination of the Clinton Mts., which extend from the Mohawk River to this place.

Trepaleau River, Crawford co., Wn. It drains the N. W. part of the county, and falls into the Mississippi River.

Trench's Island, S. C. A large island lying S. from Broad River, and belonging to Beaufort district.

Trenton Falls, N. Y. See *Fashionable Resorts.*

Trinity River, Ts. This large river rises principally in the forest called the Cross Timbers, flows S. E., and empties into Galveston Bay.

Trough Creek, Pa. is formed in the town of Trough Creek by the union of N. and S. branches, and forcing a passage through Terrace Mt., it enters the Raystown, a branch of Juniata River.

Trout Island, Mn., lies in the N. part of Lake Michigan, N. from Little Beaver Island.

Trout Lake, Portage co., Wn. Situated in the N. part of the county, E. from the Mandowish Lakes, with which it is connected by an outlet.

Trout River, Me., is a W. branch of the Madawaska.

Trout River, Vt. This is a good mill stream, formed in Montgomery by the junction of several branches. It runs in a N. W. direction, and falls into the Missisco, on the border of Enosburg and Berkshire.

Trout River rises in Franklin co., N. Y., flows N., and enters the Chateaugay River in Canada.

Tshatl Mount, Ca. This peak of the Cascade range of mountains is situated near the head of the Rio Sacramento.

Tshatl River, On. A large stream rising among the Cascade Mts., and flowing W. into Tlamath River.

Tunkhannock River, Pa., rises at the foot of Ararat Mt., in the town of Jackson, Susquehanna co., flows S. W. through Wyoming co., and enters the Susquehanna on the N. side of Tunkhannock Mt., after a course of about 30 miles.

Tuckasee River, N. C. The head branches rise in Haywood and Macon counties; the river then runs N. W., dividing these two counties, crosses the N. part of Macon co., and empties into the Tennessee River.

Tufis's Hill, New Braintree, Ms. Height 1179 feet.

Tugaloo River, Ga., one of the head branches of the Savannah, unites with the Keowee 48 miles N. W. from Petersburg.

Tularas Lake, Ca. This large sheet of water, which lies between the Sierra Nevada and Coast Mts., is the principal source of the Rio San Joaquin.

Tulip Bayou, As. A small stream forming the boundary between Hempstead and Wachita counties, and emptying into the Little Missouri.

Tullick Fork, On. A small stream flowing S. W. into Bear River.

Tumbletee Fork, Ca. A small W. branch of Grand River.

Tupper's Lake, Franklin co., N. Y., lies in the S. W. part of the county, is 6 miles long and 2 wide, and abounds with trout and other fish.

Turkey Creek, Hardin co., Te., unites with Swift Creek, and falls into the Tennessee above Savannah.

Turkey Creek, Humphreys co., Te. A small branch of the Tennessee River, which it enters between White Oak and Richland Creeks.

Turkey Point, Harford co., Md. It projects into Chesapeake Bay.

Turkey River, Io. This stream rises in the N. E. part of the Neutral Ground, flows S. E. across Winneshiek, Fayette, and Clayton counties, and falls into Mississippi River.

Turtle Creek, Shelby co., O. A small E. branch of the Miami River.

Turtle Creek, Wn. It rises in the N. W. part of Walworth co., flows S. W., and enters Rock River on the S. border of Rock co.

Turtle or Merimpticook River, Me., rises in a large pond, and flows into the St. John, about 7 miles S. W. of the Madawaska.

Tuscaloosa River, Aa., generally called the Black Warrior, which is the English of Tuscaloosa, a name given it by the Choctaw Indians, is formed by the junction of Locust Fork from the E., and Mulberry River from the W. The former rises in Blount co., 20 miles S. of Tennessee River, and the latter in Lawrence and Walker counties. They unite on the boundary between Jefferson and Tuscaloosa counties, and become the Black Warrior, which unites with the Tombigbee in the S. part of Greene co. Steamboats ascend it to Tuscaloosa, 400 miles, by the course of the river, above Mobile.

Tuscarora Creek, Niagara co., N. Y., rises in the Tuscarora reservation, and flows N. E. into Lake Ontario.

Tuscarora Creek, Pa., rises in Tell, Huntingdon co., and enters the Juniata after a N. E. course of about 35 miles.

Tuscarora Mountains, Schuylkill co., Pa., a W. continuation of Mauch Chunk Mt., lie on the line between Rush and West Penn townships. They abound in veins of anthracite coal.

Twaalfskill, N. Y. See *Wilbur.*

Twelve Mile Creek, N. Y. rises in the S. part of Yates co., and enters Conhocton River in Steuben county.

Twelve Mile Creek, Pickens district, S. C. An eastern branch of Seneca River.

Twelve Pole Creek, Va. This stream is formed in Wayne co., by the junction of the Caney and Laurel Forks, and flows N. N. W. into the Ohio River.

Twenty Mile Creek rises in Chatanque co., N. Y., flows S. W. into Pa., where it falls into Lake Erie.

Twenty-eight Mile Creek, S. C., empties into Seneca River in Anderson district.

Twenty-six Mile Creek, Anderson district, S. C. A branch of Seneca River.

Twin Rivers, Wn. These rivers rise in the S. E. part of Brown co., flow S. E. into Manitowoc co., where they unite, and empty into Lake Michigan. Before their junction they are called East and West Twin Rivers.

Two-hearted River, Chippewa co., Mn. A small stream emptying into Lake Superior.

Two Islands River, Ma. A small stream flowing S. S. E., and emptying into Lake Superior.

Two Sisters' Creek, Erie co., N. Y., flows W. into Lake Erie.

Tybee Islands and Sound, Ga. Situated at the mouth of the Savannah River. On the N. E. extremity of Great Tybee Island is a light-house.

Tyger River, S. C. A branch of Broad River, which it enters on the boundary between Union and Newberry districts.

Tygart's Creek, Ky. This stream drains the W. part of Carter co., flows N. E., and empties into the Ohio in Greenup co.

Tygart's Valley River, Va. A branch of the E. fork of the Monongahela River. It flows through Randolph and a part of Barbour co.

Tymochtee Creek, O., enters the Sandusky from the W., 8 miles below Upper Sandusky.

Uinta River, Ca. A W. branch of Green River, which it enters nearly opposite White River.

Ulofanhatochee River, Ga. This river rises in Gwinnett co., and flows S. into the Oconee, of which it is a head branch.

Umahilah River, On. It rises among the Blue Mts., and flows N. of W. into Columbia River.

Umbagog Lake. This large sheet of water lies mostly in Oxford co., Me. It extends about 300 rods in width into the towns of Erroll and Cambridge, N. H. It is about 18 miles long, and in some places 10 in width, nearly equalling Lake Winnepiseogee in size and beauty. Its waters flow into the Androscoggin River by an outlet on the W. side.

Umpqua River, On. It rises among the Cascade Mts., flows W., and empties into the Pacific.

Unadilla River, N. Y., rises in Oneida co., flows S. S. W., forming the dividing line between Madison, Otsego, and Chenango counties, and falls into the Susquehanna River. This stream is 50 miles in length, and affords extensive water power.

Uniku Mountains. That portion of the Alleghany range which lies S. E. of Tennessee River, and which separates Te. from N. C.

Union River, Hancock co., Me. This river rises a few miles S. of the Passadumkeag. It meets the tide at Ellsworth, and flows S. into Blue Hill Bay. It is a beautiful stream, receiving many tributaries, which water a great part of the county. The river is upwards of 40 miles in length above Ellsworth, and affords much valuable water power.

Upatoi Creek, Ga. This small creek rises in Marion co., flows S. W., and enters the Chattahoochee in Muscogee co.

Upper Iowa River. It rises in the S. part of Minnesota Territory, flows S. of W., across Winnebick and Allamakee counties, Io., and empties into Mississippi River.

Upper St. Croix Lake, La Pointe co., Wn. It is situated near the head of Burnt Wood River, and is one of the head sources of the St. Croix.

Upper Three River, Io. It rises in the W. interior of the state, flows in a S. E. direction, crossing Madison and Warren counties, and empties into the Desmoines River on the S. border of Polk co.

Upper Three Runs, Barnwell district, S. C. This stream has several branches, the principal of which are Cedar and Tinker's Creeks. It flows S. W., and falls into the Savannah River.

Utah Lake, Ca., Uh. Situated S. E. from the Great Salt Lake, with which it is connected by Utah River. Timpanoossee, Utah, and many other rivers, flow into it from the E.

Utsayantha Lake, or *Pond*, Schoharie co., N. Y.

This small lake, which is the head source of Delaware River, lies in the town of Jefferson.

Valcour Island, N. Y., lies in Lake Champlain, a few miles S. of Plattsburg village. It is 2½ miles long, and half a mile wide.

Valley Creek, Pa. A mill stream which unites with the Schuylkill, about 20 miles N. N. W. from Philadelphia.

Vancouver Fort, On. Situated on the Columbia River, nearly opposite the mouth of Willamette River.

Van Schaick's Island, Albany co., N. Y., lies at the mouth of the Mohawk River, and is attached to the town of Watervliet. It is about a mile and a half long, and quarter of a mile wide. The Rensselaer and Saratoga Railroad crosses it.

Verdreitje Hook, N. Y. This promontory projects into the Hudson River from the W. side, opposite Teller's Point, and separates Tappan and Haverstraw Bays. It is elevated 668 feet above the river.

Vermilion Bay, La., is situated S. of Lafayette co., at the mouth of Vermilion River, and connected with the Gulf of Mexico by a strait called Grand Pass. It is connected with Cote Blanche Bay on the E. It has only 5 feet of water on the bar at its entrance, but has 10 or 12 within the bar.

Vermilion Creek, Ca. An E. branch of Green River, which it enters above Yampah or Bear River.

Vermilion River, Is., rises in Livingston co., and falls into the Illinois in La Salle co. Bituminous coal, lime, and freestone are found on its banks. The rapids and falls in the lower part of its course afford good water power.

Vermilion River, O., rises in the N. part of Richland co., and, flowing N., enters Lake Erie 9 miles E. of Huron River. The harbor at its mouth has been improved by the U. S. government.

Vermilion River, La., rises in the N. E. part of Lafayette parish, and flows S. to its entrance into Vermilion Bay.

Vermilion River, Ma. It rises in Herkalah Lake, flows N. E., and empties into the Mississippi opposite the St. Croix River.

Virgen River, Uh. This river rises in the Wahsatch Mts., and flows in a S. direction into the Rio Colorado.

Vlaie, or *Fly*, Fulton co., N. Y. This extensive marsh lies in the E. part of the county, and is annually submerged by the surplus waters of the Sacandaga and other rivers, forming a sheet of water extending several miles each way, and sometimes covering 20,000 acres of land. It is much resorted to by anglers and sportsmen.

Vlaie, or the *Vly*, Schoharie co., N. Y. This large swamp, or pond, lies in the town of Middleburg. A tributary of Schoharie Creek flows from it on the N., while Catskill Creek flows from it on the S.

Vlaman's Kill, N. Y., rises in Albany co., flows S. E., and enters the Hudson at the town of Bethlehem.

Volga River, Io., rises in the interior of Fayette co., flows S. of E., and enters Turkey River in Clayton co.

Wabash River, Ia., rises in Darke co., O., flows N. W. into Huntington co., Ia., where it receives Little River, which rises near the junction of the head branches of Maumee River. It then

crosses the state in a S. W. direction, receiving Eel and Tippecanoe Rivers on the N., and Salamanie and Missisniewa Rivers on the S. side, and a little below Terre Haute it takes a more S. direction, forming the boundary between Ia. and Is., until its entrance into the Ohio, 68 miles above the mouth of Cumberland River, and 127 miles above the Mississippi. It is the largest N. tributary of the Ohio, and the second in size in its whole course. It connects Lake Erie with the Ohio River by means of the Wabash and Erie Canal. Steamboats ascend it to Lafayette.

Wabesipinicon River, Io. This large river rises in the E. part of the neutral ground, flows S. E. across Buchanan, Linn, Jones, a corner of Cedar, into Clinton co., and then flows E., separating Clinton and Scott counties, until its entrance into the Mississippi.

Waccamaw Lake, N. C. A small sheet of water lying in Brunswick and Columbus counties, and emptying by an outlet into Waccamaw River.

Waccamaw River, N. and S. C. This river rises in the E. part of N. C., flows S. W., and enters Winyaw Bay in Georgetown district, S. C.

Wachita River, As. and La., rises in Hot Spring co., receives Little Missouri River on the S. border of Clarke co., and Saline River on the S. extremity of Bradley co. It then enters La., and, receiving numerous large branches, flows S. by E., until its junction with Black, a tributary of Red River.

Wachusset Mountain, Princeton, Ms. Height 2018 feet.

Wading River, Burlington co., N. J. This stream, with its branches, drains the S. part of the county, and falls into Little Egg Harbor River.

Wahlah-Wahlah River, On. It rises mostly among the Blue Mts., flows N. W., and empties into Columbia River.

Wahsatch Mountains, Uh. A range extending from Utah River S. S. W. to the head branches of Virgen River.

Wait's River, Vt. The main branch of this river rises in Harris's Gore, and runs S. E. along the W. line of Topsham. Another branch, called Jail Branch, rises in Washington, and, running N. E., joins the main branch in the S. W. part of Topsham. Another stream rises in the N. part of Topsham, and, running S., unites with the main stream near the N. E. corner of Corinth. Another stream, called the South Branch, rises near the middle of Washington, and, pursuing a S. E. course, joins the river at Bradford. Wait's River and its branches are lively streams, and afford a number of very good mill privileges.

Wakasasse Bay, Fa. This curvature extends nearly the entire length of Levy co., and receives the waters of several rivers.

Wakasasse River, Fa. A small stream flowing into the bay of the same name.

Wakatonica River, O., flows S. E. into the Muskingum, 13 miles above Zanesville.

Walhonding River, O., formerly called White Woman River, one of the main branches of the Muskingum, is formed by the junction of Mobiccan and Vernon Rivers. It receives Kilbuck Creek from the N., and unites with the Tuscarawas opposite Coshocton.

Walker's Lake, Uh., lies S. E. from Pyramid Lake, and receives the waters of Walker's River from the N.

Walker's River, Uh. This stream rises among

the Sierra Nevada, takes a semicircular course, and empties into the N. part of Walker's Lake.

Walnut Creek, O., waters Fairfield co., and flowing S. W. 30 miles, enters the Sciota 6 miles above Circleville.

Walnut Hill, Charlemont, Ms. Height 1888 ft.

Wallabout Bay, N. Y., lies in the N. E. part of the city of Brooklyn. The U. S. navy yard is situated here. Here were the British prison ships moored, during the revolutionary war, on board of which it is said 11,500 American prisoners perished, and were buried on the beach near by.

Wallag-as-quegamook Lake, Piscataquis co., Me., is one of the numerous lakes through which Alligash River passes.

Wallkill River, N. Y. This large and important mill stream rises in N. J., flows in a N. direction into N. Y., crosses Orange and Ulster counties, and empties into the Rondout, a tributary of the Hudson.

Walloonsack River, Vt. and N. Y., is a small stream formed in Bennington, Vt., by the union of several branches which rise in Glastenbury, Woodford, and Pownal. It takes a N. W. direction, leaves the state near the N. W. corner of Bennington, and unites with the Hoosick nearly on the line between Washington and Rensselaer counties, N. Y. Between this stream and the Hoosick was fought the Bennington battle.

Walloostook River, Me., is the W. or main branch of the St. John's. It rises in the N. part of Somerset co., flows N. E., receiving the waters of many rivers, lakes, and ponds, and after traversing a large extent of fertile and heavily-timbered country, unites with the St. François. See *St. John's River*, under *Fundy Bay*.

Wallops Island, Accomac co., Va., lies at the S. entrance of Sinepuxent Bay.

Wandushka River, Ma. A large W. tributary of the Tchan Sansan, or River à Jaques.

Wanari River, Ma. This large stream flows S. E., and empties into the Missouri a little W. from Bon Homme Island.

Wando River, Charleston district, S. C. This river receives several small branches, and empties into Charleston harbor.

Wangombaug Pond, Tolland co., Ct. Situated in the town of Coventry, and connected by an outlet on the S. E. with the Willamantic River.

Wapacan Creek, Is., unites with Mason Creek in Grundy co., and flows N. into the Illinois.

Wappinger's Creek, Dutchess co., N. Y., enters the Hudson below New Hamburg. It is a large and important mill stream.

Waraju River, Ma. It rises near the source of the Moingonan, and flows in an E. direction until its entrance into the Minnesota or St. Francis River.

Ware River, Ms. Branches of this powerful mill stream rise in Hubbardston, Barre, and Oakham. It passes through Hardwick, New Braintree, and Ware, and joins the Chicopee at Palmer.

War Eagle Creek, As., rises in the S. part of Madison co., flows N. W., and enters White River in Benton co.

Warner River, N. H. See *Warner*.

Warsaw Islands and Sound, Ga., lie off Chatham co., between Tybee and Ossabaw Sounds.

Washa, Lake, La. This sheet of water lies S. from the Mississippi River and from Lake Ponchartrain. It receives the waters of several other

lakes, which it discharges through two large outlets into Barataria Bay.

Washington, Fort, N. Y. The site of this old fortification lies on New York or Manhattan Island, 10 miles N. from the City Hall.

Waske River and Bay, Chippewa co., Mn. The river flows in a N. E. direction, and empties into the bay, which communicates on the N. with Tahquamenaw Bay.

Wassataquoik River, Me. This stream rises in Piscataquis co., between Mts. Washington and Katahdin, and flows S. E. into the E. branch of the Penobscot.

Wassawa or Yellow Lake, St. Croix co., Wn. Situated in the N. part of the county, and connected on the N. W. with St. Croix River.

Wassessa or Vermilion River, Ma. This large river runs between the Sioux and Tchan Sansan or River à Jaques, and empties into the Missouri.

Wataree River, N. C. and S. C., waters Burke co., N. C., but is called the Catawba until it enters S. C., where it is called the Wataree, until its junction with the Congaree, near the middle of the state.

Watatick Hill, Ashburnham, Ms. Height 1847 feet.

Watatuga River, N. C. and Te., has its source in Ashe co., N. C., flows N. W. into Te., and enters the S. fork of Holston River in Sullivan co.

Watchog Pond, R. I. Situated in the S. part of Washington co.

Waterbury River, Vt., rises in Morristown, and runs S. through the W. part of Stowe and Waterbury, into Winooski River. In Stowe it receives one considerable branch from the E., which rises in Worcester, and two from the W., which rise in Mansfield. It also receives several branches from the W. in Waterbury, which originate in Bolton. The whole length of the stream is about 10 miles, and it affords a number of good mill sites.

Water Quechee River, Vt. See *Otta Quechee.*

Watkins Point, Md. The S. W. extremity of Somerset co., extending into Tangier Sound.

Watowean River, Ma. A large W. branch of the Mankato, which it enters above Tewapa Tankyan River.

Wazi Oju River, Ma. A large stream draining the S. E. part of the territory, and emptying into the Mississippi.

Wells's Island, Jefferson co., N. Y., is one of the largest of the "Thousand Islands" lying in the St. Lawrence River, and is attached to the town of Clayton. It was here that the British steamer Sir Robert Peel was burnt during the Canada revolution.

Wells River, Vt., has its source in Kettle Pond, which lies in Groton and Marshfield. It runs nearly S. E. about 2 miles, and falls into Long Pond in Groton, which is about 2 miles long and 100 rods wide. From this pond it continues its S. E. course half a mile, and falls into another pond, which is about half a mile long and a quarter of a mile wide. It then runs a mile and a half, and meets the South Branch, which rises near the S. W. corner of the town, and runs nearly E. to its junction with the main stream; it then runs E. S. E. about 1 mile, and receives the North Branch, which rises near the N. E. corner of the town. Continuing the same course, it passes through the N. W. part of Ryegate into Newbury, and running near the line between Newbury and Ryegate about 4 miles, falls into the Connecticut

in the N. E. part of Newbury. This is generally a rapid stream, furnishing many excellent mill privileges.

Wesacota or Brulé River, Wn. This river rises in a small lake in the N. part of the state, and its waters form the boundary between Wn. and Mn., and, taking the name of Menomonee in the lower part of its course, flows into Green Bay.

West Bay, La. A large bay lying off Plaquemine parish, opposite Bay Ronde.

West Canada Creek, N. Y. This fine rapid mill stream rises in Hamilton co., and enters the Mohawk River about a mile below Herkimer village. The celebrated Trenton Falls, where there is a descent of more than 300 feet in 4 miles, are situated on this stream, about 20 miles above its mouth.

West Creek, or River, N. Y., rises in Ontario co., flows S. W., and enters Canandaigua Lake in Yates co.

West Island, Bristol co., Ms. Situated off the town of Fairhaven, E. from Sciticut Neck.

West or Wantasticook River, Vt. This river rises in Weston, runs S. into Londonderry, and near the S. line of this township receives Winhall River. It then takes a S. E. course through Jamaica, Townshend, Newfane, and Dummerston, and unites with the Connecticut in the N. E. part of Brattleboro'. In Jamaica it receives Bald Mountain branch, which rises in Stratton, another large branch from Wardsboro', and Meadow branch, which rises in Windham. In Newfane it receives South and Smith's branches. This river and its branches drain about 440 square miles. The main stream affords but few mill sites, but there are a great number on its tributaries.

Westerloo Island, N. Y., lies in the Hudson River, just below the city of Albany, and is attached to the town of Bethlehem. It is 2 miles long and one quarter of a mile wide. The land is very fertile, being composed of rich alluvial deposits. Opposite the lower end of the island is the bar or shoal called Overslaugh, which forms the principal obstruction to the navigation of the Hudson.

West Feather River, Arenac co., Mn. A small stream flowing into Saginaw Bay.

Westfield or Agawam River, Ms. This romantic stream rises in the N. part of Berkshire co., traverses the towns of Plainfield, Cummington, Goshen, Worthington, Chesterfield, Norwich, Montgomery, Russell, and Westfield, and meets the Connecticut at West Springfield.

West Coyce Creek, Alleghany co., N. Y. This stream rises in the N. W. part of the county, and flows S. E. into Genesee River. It affords good water power.

West River Mountain, N. H. See *Chesterfield* and *Hinsdale.*

West Quoddy Head, Me. See *Quoddy Head.*

West Savannah River, Ma. It rises near the source of the E. Savannah, flows S. W., and empties into Sandy Lake.

Weyekwa Lake, La Pointe co., Wn. Situated between Namebin and Shishib Lakes, and connected to the latter by an outlet.

Wheeling Creek, Va. and Pa., waters Washington and Greene counties, Pa., and enters the Ohio in Ohio co., Va., just below Wheeling.

Wheelwright's Pond, N. H. See *Lee.*

Whetstone Brook, Vt., is a small mill stream, which rises in Marlboro', and runs nearly E. through Brattleboro' into Connecticut River

Whetstone or Olentangy River, O., rises in Richland co., and empties into the Sciota, just above Columbus.

Whiskey Island, Mn., lies in the N. part of Lake Michigan, N. W. from Great Beaver Island.

White Cap Mountain, Me. See *Andover*.

White Creek, Vt. and N. Y., originates in Rupert, Vt., and taking a S. W. course, unites with the Battenkill, in Washington co., N. Y.

Whiteface Mountain lies in the N. W. part of Essex co., N. Y. It is surrounded by picturesque scenery, Placid Lake and several other small sheets of water lying at its base on the W. It is elevated 4855 feet above the Atlantic.

William Henry, Fort. See *Caldwell*.

White Fish Point, Chippewa co., Mn., separates Tahquamenaw Bay from Lake Superior, and receives the waters of several rivers.

Whitehead, Lincoln co., Me. A small island, off the town of St. George, containing a light and tower 30 feet high. The light bears 9 miles S. W. from Owl's Head.

White Mountains, N. H. See *Fashionable Resorts*, &c.

White River, Vt. This river rises in Granville, and taking a S. E. course through corners of Hancock, Rochester, and Pittsfield, enters Stockbridge. It then turns to the N. E., and, after running through the S. E. corner of Bethel, into Royalton, bears to the S. E., through Sharon and Hartford, and falls into the Connecticut about 5 miles above the mouth of Otta Quechee River. On account of its proximity to the Otta Quechee, White River receives no large tributaries from the S. Broad Brook and Locust Creek are the most important. From the N. it receives three large branches, called the First, the Second, and the Third Branch. The *First Branch* rises in Washington, and running through Chelsea and Tunbridge, unites with White River in the E. part of Royalton. The *Second Branch* rises in Williamstown, and running southerly through Brookfield and Randolph, enters White River, a little W. of the centre of Royalton. The *Third Branch* originates in Roxbury, runs through the corner of Granville, through Braintree and the corner of Randolph, and joins White River at Bethel village. Each of these streams is about 20 miles in length, and on each are several good mill sites, particularly on the last-mentioned one, at Bethel village. White River is the largest stream in Vt. on the E. side of the mountains. Its length is about 55 miles, and it waters about 680 square miles.

White River, Ia., is formed between Daviess and Knox counties by the junction of the E. and W. forks. The E. rises in Johnson co., receives many branches, and is navigable 150 miles. The W. fork rises in Randolph co., is increased by many tributaries, and is navigable in high water to Indianapolis for steamboats, and for flat boats much further. The lower part of the river is 200 yards wide, and its length to its entrance into the Wabash is 30 miles.

White River. A large stream of Arkansas and Missouri, which rises in the N. E. section of the former state, in the ridge called the Black Mountains, which divides its sources from those of the Arkansas. Its course is N. E. at first, about 60 miles, crossing into the S. E. corner of Missouri, after which it bends to the S. E., and descends again into Arkansas, pursuing this general direction through a comparative distance of 120

miles, to its junction with the Big Black River in Independence co. Below this point its general course is nearly S., being a very little E., to its junction with the Mississippi. Big Black River, which is the principal tributary of the White River, rises in Reynolds co., in the S. E. part of Missouri, and flows nearly S., through Wayne co., to the boundary of Arkansas, after crossing which it bends towards the S. W. to the point of its confluence with White River. After Big Black River, two or three lesser tributaries enter the White River in Arkansas. Near its mouth the river divides into two parts, the smaller of which diverges, and forms a connection with the Arkansas, while the other pursues a course to the Mississippi. The entire comparative course of White River is about 350 miles, measured through the centre of the valley which it drains. The form of this fine valley is triangular, having an area of about 30,000 square miles; and the river is navigable by both its great branches far above their junction.

White River, Mn., rises in the E. part of Neewaygo co., flows S. W. across Oceana co., and empties into Lake Michigan.

White River, Ca. It rises in the Wahsatch Mts., and flows S. W. into Green River.

White Oak Creek, Te. A small stream which enters the Tennessee River on the S. border of Stewart co.

White Oak Creek, Mi. and Te. A small branch of the Tennessee River.

White Oak River, Te. A small tributary of the Tennessee River. Its principal branches are Hurricane and Mud Creeks.

Whitestone Point, Mn. Situated in the N. E. part of Arenac co., extending into Saginaw Bay.

White Water River, Mo. and As. The head branches of this large stream drain Cape Girardeau co.; it then flows S. S. W., and enters the St. Francis River in Mississippi co., As.

Wichaniwa or St. Francis River, Ma. A large stream flowing S. W. into the Kabitawi River.

Wild Branch, Vt. This stream rises in Eden, runs through the western part of Craftsbury, and unites with the River Lamolle in Wolcott.

Wild Cat Creek, Ia. A branch of the Wabash River, which it enters at the town of Lafayette in Tippecanoe co.

Willamette River, On. This river rises among the Cascade Mts., flows in a winding N. direction through a fertile valley, and empties into the Columbia River nearly opposite Fort Vancouver. It affords good water power.

Williams Fork, Ca. A N. branch of the Rio Gila.

Williams River, Vt., is formed in Chester by the union of three branches, which originate in the towns of Ludlow, Andover, Windham, and Grafton. These branches unite about a mile and a half below the two villages in Chester, and their united waters, after running 15 miles in a S. E. direction, fall into Connecticut River in Rockingham, 3 miles above Bellows Falls. Along this river is some fine interval, and it affords several good mill privileges.

Willimantic River, Ct. See *Windham*.

Willoughby Lake, Vt. See *Westmore*.

Willoughby River, Vt., issues from Willoughby Lake, in Westmore, runs through the S. part of Brownington, and unites with Barton River in the N. part of Barton.

Willow River, Huron co., Mn. A small stream flowing N. into Lake Huron.

Willow River, St. Croix co., Wn. A small stream flowing into St. Croix River, just above Lower St. Croix Lake.

Wilson's Creek, S. C., empties into the Saluda River in Edgefield district.

Wilson's Creek, Ky. This small stream flows S. W., forming the boundary between Bullitt and Nelson counties, and empties into the Rolling Fork of Salt River.

Winchels Mountain, Granville, Ms. Height 1362 feet.

Winhall River, Vt., is a small mill stream which originates in Winhall, and after running easterly through the corner of Jamaica, unites with West River in the S. part of Londonderry.

Wind Lake, Wn. A small sheet of water on the N. border of Racine co.

Windmill Point, Vt. See *Alburg*.

Windmill Point, Va. The S. E. extremity of Lancaster co., extending into Chesapeake Bay, just above the mouth of the Rappahannock River.

Winnebago Lake lies in the E. part of Wisconsin, about 30 miles W. of Lake Michigan, having its S. half in Fond du Lac co., and the N. between Calumet and Winnebago counties. It is about 30 miles in length from N. to S., and from 2 to 10 miles in breadth. It discharges its waters N., through Fox River, into Green Bay.

Winitigoshish Lake, Ma. A large sheet of water lying N. E. from Cass Lake, with which it is connected by the Mississippi River.

Winnicut, or *Winniconett River*, N. H., a branch of the Piscataqua, rises in a swamp between Hampton and New Hampton, and passes N. into the Great Bay, at Greenland.

Winnipiseogee Lake, N. H. See *Fashionable Resorts*, &c.

Winnipiseogee Islands. See *Lake Winnipiseogee*.

Winnipiseogee River, N. H., issues from the S. W. arm of the lake that name, to which it is the principal outlet. It thence passes through two bays, between Meredith and Gilmanton, entering the Great Bay in the N. E. part of Sanbornton. From thence it passes through two other bays, forming the boundary between Sanbornton on the N. W., and Gilmanton and Northfield on the S. E., and unites with the Pemigewasset in Franklin. The stream is rapid in its course, affording much good mill power. It has a fall of 232 feet from the lake to its junction with the other branch of the Merrimack, this name being given to the confluent stream.

Winooski Falls, Vt. See *Winooski River*.

Winooski River, Vt. This is one of the largest and most valuable rivers in the state. It is about 70 miles in length, and in its course fertilizes large tracts of land, and produces a great hydraulic power. This stream rises in Caledonia co.; it passes nearly through the centre of the counties of Washington and Chittenden, and after passing "Winooski City," it falls into Champlain Lake five miles N. from Burlington village. Winooski River has numerous tributaries, and is one of the most romantic streams in the country. The channels which have been worn in the rocks by its ceaseless current are objects of great admiration. In its passage through the mountains are found fissures through solid rocks from 30 to 100 feet in depth, with smooth, perpendicular sides, 60 or 70 feet in width. In many places on this stream are natural bridges, curious caverns, and delightful waterfalls. The road near the banks of this stream, from Connecticut River

to Burlington, is said to be the best passage across the mountains in that direction: it is highly picturesque and delightful. The Indians in former times, on their trading excursions between Canada and the Connecticut River, passed up and down this stream in their bark canoes; and as wild onions were found on its banks, they called it *Winooski*, which, in their beautiful and expressive language, signifies *onion*.

Winyaw Bay, S. C., extends into Georgetown district, 14 miles from the Atlantic, and is 2 miles wide. Large vessels ascend to Georgetown, and Great Pedee, Black, and Wacamaw Rivers flow into it.

Winyaw Point, Georgetown district, S. C. The S. extremity of North Island.

Wissakude or *Burnt Wood River*, La Pointe co., Wn. It rises in a lake near the centre of the co., flows N. N. W., and empties into Lake Superior.

Wisconsin River, Wn., has its sources in several small lakes near the N. boundary of Wisconsin, between those of the Montreal and Menomonee Rivers. It is one of the most important tributaries of the Upper Mississippi. From its rise it flows S., about 200 miles, through the centre of Wisconsin, till it reaches the borders of the settled portion of the state near Fort Winnebago, where it bends to the S. W., and continues in that general course about 100 miles to the Mississippi, into which it empties at Prairie du Chien. Its navigation is much obstructed by shoals and bars, except at high stages of the water. As the state becomes settled, and its rich resources of wealth are more fully developed, this river will doubtless be improved as an important channel of internal commerce.

Witakantu River, Ma. It rises in Washtey Lake, flows S. E., and empties into Minesota or St. Peter's River.

Wiyo Pahah Wakan, or *East Medicine Knoll River*, Ma. This is a pretty large stream, flowing S. E., and emptying into the Missouri a little above Owawickah River.

Wolf Creek, Mi. and Te., rises in the N. part of Tippah co., Mi., flows N. W. into Te., and uniting with the Loosahatchy River, enters the Mississippi just above Memphis.

Wolf River, Mi., rises in Marion co., and flows in a S. direction into the Bay of St. Louis.

Wonasquatucket River, Providence co., R. I. This stream rises in Smithfield, runs between N. Providence and Johnston, and forms the head of Providence River. It affords great water power, and numerous manufacturing establishments are located on its banks.

Wood Creek, Oneida co., N. Y. This is a deep and sluggish stream, rising in the town of Rome, and emptying into the E. end of Oneida Lake. Before the completion of the Erie Canal there was a short portage at Rome village, between this river and the Mohawk, over which much merchandise was transported. It now constitutes a part of the Oneida Lake Canal, which, in connection with the lake and Oneida River, forms a complete water navigation from the Erie to the Oswego Canal.

Wood Creek rises in Washington co., N. Y., flows N., and enters Lake Champlain at Whitehall village. This stream affords some good mill sites, and constitutes a part of the Champlain Canal for a considerable portion of its length.

Wood River, R. I. See *Hopkinton*.

Woonsocket Falls, R. I. See *Smithfield*.

Worton Point, Kent co., Md., projects into Chesapeake Bay.

Wyakoming River and Lake, La Pointe co., Wn. The river has its source in the lake, and flows W. into St. Croix River, of which it is a head branch.

Wynant's Kill, Rensselaer co., N. Y. This stream, on which are situated many extensive manufacturing establishments, rises in the town of Sand Lake, and is the outlet to a number of small lakes.

Wye River, Md., forms the boundary between Talbot and Queen Anne counties, and falls into the E. side of Chesapeake Bay.

Yadkin River, N. C., rises in the E. side of the Blue Ridge, flows E. and S. E. into Montgomery co., where it passes through the Narrows, being contracted by mountains on each side, from 200 yards' width to about 30. It then flows into S. C., and in its lower part takes the name of Great Pedee, until it enters Winyaw Bay.

Yakima River, On. It rises among the Cascade Mts., flows S. E., and empties into Clarke Fork near its junction with Lewis Fork of the Columbia River.

Yampah or Bear River, Ca. It rises on the border of Na., flows W., and empties into Green River.

Yant River, New London co., Ct. This river rises in the N. W. part of the county, and, flowing S. E., meets Quinebang and Shetucket Rivers at Norwich, where the three rivers fall with great rapidity into the Thames, producing valuable water power. See *Norwich*.

Yazoo River, Mi., is formed in Carroll co., by the junction of the Tallahatchee and Yalabusha Rivers, and, flowing S. S. W., enters the Mississippi 12 miles above the Walnut Hills. Sun Flower River, a considerable branch, flows into it from the N. It is 200 yards wide at the mouth, and large boats ascend 50 miles at high water.

Yellow Lake, St. Lawrence co., N. Y., lies mostly in the town of Rossie, is 4 miles long, and half a mile wide.

Yellow River, Ia. It rises in the N. W. part of Kosciusko co., and flows S. W. into English Lake.

Yellow River, Io., drains Winneshiek and Allamakee counties, and falls into the Mississippi River.

Yellow River, Wn. This large river rises in a lake in the N. interior of Portage co., flows S. W., and falls into the Chippewa just above Chippewa Falls.

Yellow Dog River, Houghton co., Mn., flows N. E. into Lake Superior.

Yellow Water River, Aa. and Fa., rises in Cov-

ington co., Aa., flows S. W. through the W. part of Fa., and enters a branch of Pensacola Bay.

Yocomico River, Va. A branch of the Potomac, separating Northumberland and Westmoreland counties.

Yocum Creek, Harlan co., Ky. This stream rises among the Cumberland Mts., and flows N. W. into the Clover Fork of Cumberland River.

Yocanoocany Creek, Mi. This stream rises in Choctaw co., flows S. W., and enters Pearl River in Lake co.

York River, Va., is formed at the S. E. extremity of King William co., by the junction of Pamunkey and Mattaponi Rivers. Its lower part forms a bay, generally 2 or 3 miles wide, through which it enters Chesapeake Bay between York and Gloucester counties. It forms the best harbor in Va., at Yorktown, where it is contracted to a mile in width, and large vessels ascend 20 miles above. Its entire length is about 120 miles.

Youghiogony River, Va., Md., and Pa., rises in Alleghany co., Md., enters Pa., and proceeding in a N. N. W. direction, crosses the Laurel Hills and Chestnut Ridge, and falls into the Monongahela, 18 miles S. E. of Pittsburg. At the Ohiopyle Falls, 30 miles from its mouth, it has a perpendicular descent of 20 feet, presenting a beautiful and grand appearance. It is navigable to the falls.

Yslas de Santa Barbara. Two small islands, situated in the Pacific Ocean, W. from the Ysla de Santa Catalina.

Ysla de Santa Catalina. Situated in the Pacific Ocean, N. from the Ysla de San Clemente.

Ysla de Santa Rosa. Situated in the Pacific, off the coast of California, and S. W. from the Ysla de Santa Cruz.

Ysla de Santa Cruz. Situated in the Pacific Ocean, off the S. W. coast of California, and S. from the town of Santa Barbara.

Ysla de San Clemente. This island is situated in the Pacific Ocean, off the S. W. coast of Upper California.

Ysla de San Miguel. A small island lying in the Pacific, W. from Ysla de Santa Rosa.

Ysla de San Nicolas. Situated in the Pacific Ocean, off the S. W. coast of California, and S. from the Ysla de Santa Cruz.

Ysla del Padre, Ts. This is a long, narrow island, lying in the Gulf of Mexico, and separated from the main land by the Laguna de Santander.

Zappapoiic River, Huron co., Mn., flows in a circuitous, E. course, into Lake Huron.

Zimmerman's Creek, N. Y., rises in the town of Stratford, Fulton co., flows S., and enters Mohawk River in Montgomery co.

A STATISTICAL TABLE,

Presenting a concise view of the location, extent, &c., of each state and territory in the United States, with the capital of each; and a variety of other statistical facts.

No. { States and Territories.	Date of first settlement.	Became a state or territory.	Latitude and longitudinal limits.		Area in square miles.	Pop. to sq. mile.	State debts, 1860	Militia in 1850.	Capitals of states and territories.	Lat. and lon. of capitals.		No.

DESCRIPTIONS

OF

COUNTIES, CITIES, TOWNS, VILLAGES, &c.

THIS chapter is intended to include all the *places*, whether actually incorporated or not as cities, towns, or villages, which, from the number of their inhabitants, and their natural or artificial resources, might seem worthy of notice. Such, however, is the rapid growth of many parts of our country, that no doubt there are numerous places, recently sprung up, quite as well worthy of mention as many of those contained in this chapter, but of which no particular information has reached us, and which must therefore be looked for in the list of Post Offices. Townships not contained in this chapter may be found in the census tables.

As the full returns of the census of 1850 have not yet been printed, and probably never will be, and as they have been already discovered, like those of the census of 1840, to be full of errors, we have not attempted to state the number of factories, sawmills, gristmills, stores, schools, or churches in each place, or the amount of capital employed in trade or manufactures, or the amount of production, minute details as to which it is impossible to obtain correct information, and so liable to change, that the correct returns of to-day may be absolutely false to-morrow. It has been thought best to devote the space at our command to things more permanent in their nature, and of more general concern, without going into details of little or no interest to strangers, and with which the inhabitants of each place are already better acquainted than we can pretend to be: yet the importance of water power to the development of our resources is so great, that, when aware of its existence, we have taken care to mention it, and such application of it to use as we know to be made. The general results by states of the statistical returns of the late census will be found brought together in our statistical tables, which general results, as the errors in particular places may serve in part to counterbalance each other, may, perhaps, be more reliable than the particular statements from which they are compiled. The tables in relation to commerce and navigation are more trustworthy, having been compiled from the annual reports of the treasury department. Special details as to population, banks, colleges, and places of fashionable resort will be found in separate chapters, as well as a general description of the states individually, and of the mountains, rivers, lakes, and other geographical objects.

The letters *c. h.* are used to denote the shire town of a county. What in the other states are called *counties*, are known in South Carolina as *districts*, and in Louisiana as *parishes*. For the list of abbreviations of states, see pages 4 and 167.

Aaronsburg, Pa., Centre co. A considerable village near Penn's Creek, at the E. extremity of Penn's Valley, 32 miles from Bellefonte and 89 N. W. from Harrisburg.

Abbeville, Aa., c. h., Henry co. On Yattayabba Creek, 211 miles S. E. from Tuscaloosa.

Abbeville District, S. C., W. part. Surface agreeably diversified, well watered, and fertile; lies between the Savannah and Saluda; drained principally by branches of the Savannah.

Abbeville, S. C., c. h., Abbeville district. Situated on a branch of Little River. Besides the county building, this place has an arsenal and magazine. 97 miles W. from Columbia.

Abbott, Me., Piscataquis co. On Piscataquis River, 76 miles N. by E. from Augusta

Abbyville, O., York township, Medina co. On Rocky River, 118 miles from Columbus, and 25 from Cleveland.

Aberdeen, O., Brown co. On the Ohio River, opposite Maysville, 122 miles S. W. from Columbus.

Abingdon, Va., c. h., Washington co. Between the two forks of Holston River, about 7 miles distant from each, and 304 S. W. from Richmond.

Abington, Ia., Wayne co. On the W. side of the E. fork of White River, 72 miles E. from Indianapolis.

Abington, Ms., Plymouth co. Pleasantly situated on the highest lands between Narraganset Bay and Boston Harbor. There are two large intervals of about 500 acres each, surrounded by

high lands, mostly covered with water in the winter, and beautifully green in the summer. At the E. part is a beautiful range of elevated land, comprising over 2000 acres, called Beech Hill. No large rivers water the town, though Beaver Creek, Streame's and Hersey's River, and French's Stream afford some good mill privileges. A part of Accord Pond is in this town. The soil is strong and good, though rocky; it is better for grazing than tillage. The surface is rough and broken. The meadow land abounds in peat, and some parts of the upland in blue slate. Some bog iron ore is found. The territory of this town is large, and it contains several handsome and growing villages. The original population, strictly of the Pilgrim family, is rapidly increasing, many residents in the town doing business in Boston. The Old Colony Railroad passes through the whole length of the town. Distances, about 18 miles from Boston and Plymouth. Manufactures, boots and shoes very extensively, and of iron, particularly of nails, tacks, and brads, made by machinery. The casting of bells was introduced here before the revolution, and early in the revolutionary war the casting of shot and cannon.

Abington, Pa., Montgomery co. There is a water power here which operates one or more mills. 100 miles E. from Harrisburg.

Abington, Pa., Wyoming co. On the S. branch of Tunkhannock Creek, 151 miles N. E. from Harrisburg.

Aboite, Ia., Allen co. 120 miles N. N. E. from Indianapolis.

Accomac County, Va., c. h. at Accomac. On the E. shore of Chesapeake Bay. Bounded N. by Md., S. by Northampton co. It is divided into Accomac and St. George's parishes. It also comprises several islands lying in Chesapeake Bay. Soil sandy.

Accomac, Va., c. h., Accomac co. 193 miles E. by N. from Richmond.

Acquackanonck, N. J., Passaic co. On the Passaic River, at the head of sloop navigation. Surface rolling on the E., and hilly and mountainous on the W.; soil mostly fertile. 13 miles N. W. from New York, and 79 N. E. from Trenton. Manufactures, cotton, leather, and malt liquor.

Acton, Me., York co. An interior town, near the head waters of Salmon River, by which it is divided on the W. from N. H. 15 miles W. from Alfred, 107 S. W. from Augusta.

Acton, Ms., Middlesex co. Watered by a branch of Assabet River, and contains several ponds; the largest of which is Nagog Pond, covering 600 acres, and 47 feet in depth; 21 miles N. W. from Boston. The railroad from Boston to Fitchburg passes through the west village. The centre is pleasant, having a large common, well shaded with trees, and surrounded by neat buildings, and good mowing and tillage land. A monument has lately been erected here, (partly at the expense of the state,) in honor of Isaac Davis, a citizen of the town, the first person killed in the skirmish with the British at Concord Bridge, the commencement of the battle of Lexington. Manufactures, boots, shoes, blinds, and sashes.

Acworth, N. H., Sullivan co. On Cold River and Cold Pond. Soil good. Beryls of large size are found here. 13 miles S. from Newport, and 44 W. from Concord.

Ada, Mn., Kent co. At the junction of Grand

and Thorn Apple Rivers. 158 miles N. W. from Detroit.

Adair County, Ky., c. h. at Columbia, South central. Watered by Greene River and its branches. Soil fertile.

Adair County, Mo., c. h. at Hopkinsville, N. E. part. Watered by Chariton River, which flows S. through it.

Adams, Ms., Berkshire co. A flourishing agricultural township, comprising the two villages of North and South Adams. The Hoosack River passes through it, and affords a great water power. There is a valuable quarry of marble. Traces of old Fort Massachusetts are still found. Saddle Mountain, the summit of which is called Gray Lock, the highest of Massachusetts mountains, lies chiefly in this town. The natural bridge on Hudson's Brook is a curiosity. The waters have worn a passage from 30 to 60 feet deep, and 30 rods in length, through a body of white marble, or limestone, and formed a bridge of that material, 50 feet above the surface of the water. There are two limestone caves, one of which contains several apartments which have been explored. Manufactures, cottons, woollens, leather, iron, hardware, cabinet wares, marble, &c. A railroad from Pittsfield to this place connects with the Western Railroad. 120 m. W. N. W. from Boston, and 40 E. from Troy, N. Y.

Adams, Mn. A township of Hillsdale co. 93 miles S. W. from Detroit.

Adams, township, Jefferson co., N. Y. Watered by Sandy and Stony Creeks. The surface is slightly uneven, the soil a rich, sandy loam. There is water power on Sandy Creek. The village is 12 miles S. from Watertown, and 162 N. W. from Albany.

Adams's Basin, N. Y., Monroe co. On the Erie Canal, 230 miles W. from Albany.

Adams County, Ia., c. h. at Decatur. On the E. border, on both sides of the St. Mary's, which passes through its N. E. corner.

Adams County, Is., c. h. at Quincy. On the Mississippi River, which separates it from Mo. Watered by affluents of the Mississippi and Illinois Rivers.

Adams County, Mi., c. h. at Natchez. In the S. W. angle, on the Mississippi. Surface somewhat hilly, except on the borders of the rivers; soil mostly fertile.

Adams County, O., c. h. at West Union. The Ohio River divides it from Kentucky. The soil is various, and the land uneven and hilly. Iron ore is found in some of the hills along Brush Creek.

Adams County, Pa., S. part, c. h. at Gettysburg. Uneven, but fertile. Watered by tributaries of the Potomac and Susquehanna.

Adams County, Wn. New, central part. The Wisconsin passes through it from N. to S.

Adams's Mills, O., Muskingum co. On the Ohio Canal, 6 miles N. E. from Dresden and 61 E. from Columbus.

Adamsville, O., Muskingum co., is a small town 12 miles E. from Zanesville and 20 W. from Cambridge.

Addison, Me., Washington co. 135 miles E. by N. from Augusta. Addison Point or Cape Split, off which are several islands, is the principal harbor and place of trade.

Addison, Pa., Somerset co. On the Yioughiogheny River, 153 miles S. W. from Harrisburg.

Addison County, Vt., c. h. at Middlebury. W

part; on Lake Champlain. Large quantities of white and beautifully variegated marble are found in this county. It is well watered by Otter Creek, Mad and White Rivers; and by Lake Champlain, which affords many navigable privileges. The soil is good, particularly in those towns below the mountains, and bordering the lake and rivers.

Addison, Vt., Addison co. On the E. side of Lake Champlain, and nearly opposite to Crown Point, N. Y. The French commenced a settlement here in 1731. The English came here about 1770. 40 miles W. S. W. from Montpelier, and 12 W. N. W. from Middlebury.

Addison, Steuben co., N. Y. Watered by Camistee River and Tuscarora Creek. The surface is uneven and the soil not remarkably fertile. Grindstones are made from the sandstone furnished in this town. 18 miles S. from the village of Bath, and 225 W. by S. from Albany, N. Y.

Adell, Io., c. h. Dallas co. 80 miles W. of Iowa city, on Raccoon River, a tributary of the Des Moines.

Adelphia, O., Colerain township, Ross co. On the north fork of Salt Creek; 40 miles S. E. from Columbus and 16 N. E. from Chillicothe.

Adrian, Mn., c. h. Lenawee co. Opposite the junction of Beaver Creek with Raisin River; S. W. from Detroit, 67 miles. One of the most flourishing towns in the state. The Michigan Southern Railroad, between Monroe on Lake Erie and Chicago, Is., passes through it, and another railroad comes in here from Toledo, on the Maumee. 67 miles S. W. from Detroit, and 38 miles W. from Monroe.

Aid, O., Lawrence co. A township on the waters of Symmes Creek, 15 miles from Burlington.

Air, Pa. A township of Bedford co., drained by Big Cove, a tributary of the Potomac. Mountainous, with fertile valleys.

Akron, O., Summit co. On the Portage summit of the Ohio Canal, in a beautiful and fertile country. It possesses a great hydraulic power, and is a place of much trade and manufacture. Here the Pennsylvania and Ohio Canal intersects the Ohio Canal. Near this place is an abundance of bituminous coal. It is 16 miles S. W. from Ravenna, and 110 E. from Columbus.

Alabama, N. Y., Genesee co. On the Tonawanda Creek, which sends a feeder across the N. W. part of the town into the Erie Canal. On this creek, near the feeder, are falls of about 30 feet. The soil is clay and gravelly loam, producing fine wheat. 12 miles N. W. from Batavia village, and 257 W. from Albany.

Alachua County, Fla., c. h. at Newmansville. In the N. central part of the peninsula, between the Suwanee and the St. Johns. It contains several ponds and prairies, and affords excellent pasturage. Surface rolling.

Alamance County, N. C. N. central. New; taken from the N. W. part of Orange. Watered by the Haw, which passes through it from N. W. to S. E.

Albany, Ky., c. h. Clinton co. On Spring Creek, a branch of Cumberland River, 126 miles from Frankfort.

Albany, Me., Oxford co. At the source of Crooked River, which empties into Sebago Lake. 17 miles W. by N. from Paris, and 58 W. from Augusta.

Albany, N. H., Carroll co. Swift River and

several small streams pass through this place. There are a number of hills and mountains; the highest, Chocorua, is visible from a great extent of country. The soil is fertile. 64 miles N. by E. from Concord, and 67 N. by N. W. from Dover.

Albany County, N. Y., c. h. at Albany. On the W. branch of the Hudson at the head of navigation. Uneven, and in the S. W. part hilly and mountainous. On the river the soil is good, but in the interior sandy and unproductive. Its N. E. corner is traversed by the Erie and Champlain canals and by the Albany and Schenectady, and Troy and Schenectady Railroads.

Albany, N. Y. City, capital of the state, and the seat of justice of the county of the same name. Situated on the W. bank of the Hudson River. 145 miles N. from New York. It is connected with New York, Boston, and Buffalo, by continuous lines of railroad, and by railroad and steam navigation with Montreal. The population in 1830 was 24,238; 1840, 33,721; 1850, 50,763. Albany was settled by the Dutch in 1623, who built a fort there, and called the place Fort Orange. This settlement was afterwards called Beaver Wyck, and then Williamstadt. On the capture of New York by the English in 1664, Albany received its present name, in honor of James, Duke of York and Albany, afterwards James II., in whose reign the original city charter was granted by Governor Dougan, July 22, 1686. The charter has been materially altered by recent acts of the legislature. The city is divided into ten wards; it has a commanding situation, and when viewed from the water appears to great advantage. On the margin of the river is a flat, alluvial tract, extending from 15 to 100 yards back, from which the ground rises abruptly, and in the course of a mile attains an elevation of 220 feet, beyond which it is level. The view from the highest parts of the city is extensive and picturesque. To the N. are seen the city of Troy and the adjacent villages, and in the distance the hills of Vermont; to the E. the beautiful country lying on the opposite side of the Hudson; and to the S. the Helderbergs and Catskill Mountains. Originally the city was not laid out with much regularity, and some of the streets are narrow; but those in the newer and more elevated parts of the city are wide and regular. State Street, the principal street in the early times, as from its relative situation it still must be, running W. from the river, and intersecting many of the streets, is from 150 to 170 feet wide. It has a steep ascent, at the head of which is the Capitol, on the opposite side of the public square. This square is formed by the Capitol and Academy Parks, which are enclosed by substantial iron fences, with a street running between them, and laid out with walks and ornamental trees. Fronting upon this square is the Capitol, occupied by the legislature, the state courts, and an extensive and valuable library, which is a fine edifice 115 feet long by 96 broad, of two stories, upon a basement of 10 feet elevation, having a portico of the Ionic order, with columns 3 feet 8 inches in diameter, and 33 feet high. It is built of the Nyack freestone, and cost about \$125,000. The Albany Academy is built of the same material, and fronts on the square north of the State House; cost, \$100,000. It is furnished with able instructors, and has about 300 pupils. On the opposite side of the square, fronting W.

upon the Academy Park, are the State Hall, built for the accommodation of the public offices, and the City Hall, a splendid edifice with a gilded dome. Both of these buildings are of marble. The other public buildings are a Medical College, on Eagle Street, a few rods S. of the square; a Female Academy on North Pearl Street, having annually from 300 to 350 pupils; the Exchange, a large granite building at the foot of State Street, occupied for stores, offices of professional men, and the Post Office; and between thirty and forty churches of the various denominations. Among the finest of the church edifices is the Baptist Church, on North Pearl Street. The old State Hall, on the S. side of State Street, formerly occupied for the state offices, has been fitted up for the reception of the Geological Cabinet, formed under the direction of the state geological surveys, and for the accommodation of the meetings of the State Agricultural Society. The Poorhouse, in the S. W. part of the city, has commodious buildings, and 150 acres of land cultivated by the inmates. The Albany Orphan Asylum supports from 80 to 100 female children. The St. Joseph's Roman Catholic Asylum supports 40 females. There are in the city over 100 streets and alleys; 11 public squares; 3 markets; 15 or 20 principal hotels; 10 public school buildings, with houses for the teachers; and a state arsenal. The branches of manufacture are numerous, employing a capital of nearly \$2,000,000. This city is indebted for much of its present prosperity to the advantages for trade which it derives from the Erie and Champlain Canals, which terminate here, connecting with Lake Erie and Lake Champlain, and bringing the immense produce of the W. and N. to the navigable waters of the Hudson at this point. A capacious basin, a mile and a quarter in length, is formed by enclosing a portion of the river directly in front of the city, with a pier, upon which extensive warehouses are erected, designed for the reception of boats from these canals, and their accommodation in lading and unlading. The shipping on the river also finds a safe harbor here. A great number of steamboats for carrying passengers and merchandise, and towboats for expediting the trips of sailing vessels, ply between Albany and New York. A sand bar about 3 miles below the city frequently impedes the passage of large vessels in dry seasons. A ferry here connects the two termini of the railroads from the E. and the W. There is likewise another ferry for the ordinary travel; so that the scene presented at this point, when the river and canals are open for navigation, is one of great activity. A company has been chartered by the legislature for the purpose of constructing a tunnel under the Hudson River, connecting the railroads on each side, to be completed within five years from 1852, the date of the act. The communication with New York, when the river is closed, has been maintained extensively by the railroads through Connecticut. A road is completed now, however, along the E. bank of the Hudson itself, which establishes a most direct and rapid communication with New York at all seasons of the year. In the year 1850, there arrived at the Hudson River, by the Erie Canal, 1,554,675 tons of merchandise, which exceeds the amount for 1840 by 1,087,360 tons, thus showing not only the greatness of the present commerce by this canal, but the rapid ratio of its increase. At the

ports of Albany and West Troy, the receipts of the four articles of flour, wheat, corn, and wool, in 1850, were as follows, viz.: Flour, 3,256,077 barrels; wheat, 3,670,754 bushels; corn, 3,228,056 bushels; wool, 11,986,000 pounds. The same year there were shipped for the west, 390,864 tons of merchandise, amounting in value to \$83,968,350; of which value \$26,884,964 was from New York; \$22,896,178 from Albany; and \$34,187,208 from West Troy. By the report of the auditor of the canal department for 1850, it appears that the increase in the amount of merchandise transported up and down on the Erie Canal during that year, as compared with 1840, was, in value, \$69,350,183. From facts like these, showing the vast amount, and the rapidly increasing development of the resources of our western country, viewed in connection with the fact that its settlement and cultivation are only yet in their commencement, it may be seen how little occasion there is for any of our Atlantic cities to fear the consequences of a rivalry among themselves as to their facilities for obtaining the western trade. This trade is destined to such advances in the future as will abundantly employ the means which every mart upon our seaboard may provide for its accommodation. Connected with Albany are many interesting recollections of our national history. Here was held the first General Congress, to make arrangements for the national defence; and here, upon the 4th of July, 1754, Franklin and other patriots "signed the first plan of *American Union*, and proclaimed to the colonies that they were one people, fit to govern, and able to protect themselves."

Albany, Pa. A southern township of Bradford co., watered by Tonawanda and the branches of Mahoopeny Creek. Surface hilly, soil gravelly loam.

Albany, Pa. A northern township of Berks co. Surface hilly, soil sterile.

Albany, Vt., Orleans co. Surface uneven; watered by Black River and several of its branches. There are likewise several considerable ponds, the most important of which, Great Hosmer's Pond, is partly in Craftsbury. The soil is generally sandy, or gravelly, with some good intervals land. 37 miles N. by E. from Montpelier.

Albemarle, N. C., c. h. Stanley co. 146 miles from Raleigh.

Albemarle County, Va., c. h. Charlottesville. Eastern central, bounded W. by the Blue Ridge. It is chiefly watered by the head branches of the Rivanna River. Surface and soil much diversified.

Albia, Ia., c. h. Noble co.

Albion, Io., c. h. Monroe co. 80 miles S. W. from Iowa city.

Albion, Is., c. h. Edwards co. The situation is high and healthy. 160 miles from Springfield, and 40 S. W. from Vincennes.

Albion, Me., Kennebec co. This fine farming town lies on the stage road from Augusta to Bangor. 24 miles N. E. from Augusta, and 44 S. W. from Bangor.

Albion, N. Y., c. h. Orleans co. In the town of Barre, on the Erie Canal. 250 miles W. by N. from Albany.

Albion, N. Y. A township of Oswego co. Watered by Salmon River and Creek. Surface undulating, soil good; producing white pine, hemlock, maple, and beech timber. 25 miles E. from

Oswego village, and 147 miles N. W. from Albany.

Alburg, Vt., Grand Isle co. It is bounded by the waters of Lake Champlain, except on the north. The soil is good and finely timbered. It has a mineral spring, of some repute for the cure of scrofulous diseases. 10 miles N. from North Hero, and 79 N. W. from Montpelier.

Alden, N. Y., a township of Erie co. Watered by Cayuga and Ellicott's Creeks. The surface is undulating, and the soil adapted to grass and grains. 18 miles E. from Buffalo, and 272 S. by W. from Albany.

Alexander, Me., Washington co. In this town are some ponds, which, with the large pond in Baring and Alexander, produce a large stream which empties into Cobscook Bay. 25 miles N. by W. from Machias.

Alexander County, N. C. New, taken from Iredell. W. central part.

Alexandersville, O., Miami township, Montgomery co. Located on the Miami Canal. The remains of ancient fortifications are found here. Distant 18 miles W. from Xenia, and 73 from Columbus.

Alexander County, Is., c. h. at Unity. In the S. angle of the state, between the Mississippi and Ohio. Drained by Sexton's, Cash, and Clear Creeks. Soil fertile, about one third consisting of alluvion. The S. part is liable to inundation.

Alexander, N. Y., Genesee co. On both sides of Tonawanda Creek, which flows nearly N. through it. The surface is slightly uneven, and the soil clay loam, well adapted to the growth of grain and grass. 8 miles S. of Batavia village, and 247 miles N. of W. from Albany, on the railroad from Albany to Buffalo.

Alexandria, Ky., c. h. Campbell co. 85 miles from Frankfort.

Alexandria, La., c. h. Rapides parish. On Red River, just below the rapids, 291 miles N. W. from New Orleans.

Alexandria, N. H., Grafton co. A small part of Newfound Lake lies in this town. On Fowler's and Smith's Rivers, and other small streams, are fine intervale lands. Settled, Dec. 1769, by Jonathan, John M., and William Corliss. 34 miles N. W. from Concord, and 40 S. E. from Haverhill.

Alexandria, N. Y., Jefferson co. This town, situated on the St. Lawrence River, comprises several of the "Thousand Islands," and contains Clear, Crystal, and Butterfield Lakes. The surface is gently undulating, and the soil clay and marly loam. 20 miles N. from Watertown and 190 N. W. from Albany.

Alexandria County, Va., c. h. at Alexandria. On the S. side of the Potomac, opposite the District of Columbia. It is connected by a bridge of more than a mile in length, with Washington City. Surface uneven, soil light.

Alexandria, Va. City and shire town of Alexandria co., situated on the W. side of the River Potomac, 7 miles S. from Washington city. This city was included in that part of the District of Columbia ceded to the United States by Virginia, as a location for the seat of government. But recently it has been ceded back again, with all that portion of the territory lying on the west side of the Potomac, and now belongs, as at first, to the jurisdiction of Virginia. The river, opposite the city, has a sufficient depth to admit vessels of the largest class to come to its wharves. The place is pleasantly situated on ground grad-

ually rising from the river, and is laid out with much regularity, the streets crossing each other at right angles. It has a number of churches, among which are two Presbyterian, two Episcopal, two Methodist, one Baptist, and one Roman Catholic. There are two banks, with a capital of \$1,000,000. The termination of the Chesapeake and Ohio Canal is at this place. The principal trade of Alexandria is in flour, wheat, Indian corn, and tobacco. Population in 1850, 8,795.

Alford, Ms., Berkshire co. A mountainous township, on the line of the state of N. Y. The valleys produce some grain; considerable portions of the rough parts of the town are good pasture land. 190 miles W. from Boston, and 19 S. by W. from Pittsfield.

Alfred, Me., c. h. York co. A good farming town, well furnished with water power by Monsum River. 35 miles S. from Portland, and 86 S. W. from Augusta.

Alfred, N. Y., Allegheny co. Hilly, and the soil adapted for grazing. The New York and Erie Railroad passes through this town. 12 miles S. E. from Angelica, and 244 miles S. of W. from Albany.

Algiers, La., Orleans parish. On the right bank of the Mississippi River, opposite New Orleans. The river here is rather less than half a mile wide, and curves in such a manner that much the greatest force and rapidity of the current is thrown upon the New Orleans side. From this circumstance, as well as from the greater elevation of the ground on which Algiers is built, rendering it secure from the overflow of this river, even at the highest stages of the water, it has some natural advantages over New Orleans for commercial purposes. In 1844, Thayer and Company commenced the erection of warehouses of the first class at this place, for the reception and transmission of merchandise, which now extend about 2000 feet on the river, and are doing a heavy amount of business. Commodious wharves have been built, and floating docks for repairing vessels, and this port is now connected with the port of New Orleans as a port of entry and delivery. This place is rapidly building up, and is destined to become an important mart of commerce. Among other establishments for manufacturing purposes is an extensive iron foundry, covering more than 300 square feet of ground. It is in contemplation by the government to establish a navy yard and a naval depot at Algiers. This is the southern terminus of the Opelousas Railroad, which extends through Attakappas to Opelousas. The favorable position of Algiers, in reference to this great line of internal communication, in connection with its fine facilities for navigation and commerce, on the Mississippi River, cannot fail of making it, at no distant day, one of the most prosperous and important places on the banks of the "Father of Waters."

Allamakee County, Io. In the N. E. corner.

Alleghany County, Md., c. h. at Cumberland. W. extremity of the state. Watered by the Potomac and Youghiogeny Rivers. Surface rough and mountainous, being crossed by the main chain of the Alleghany Mountains; much of the soil, however, is fertile. The great national road, built by the government, commences at Cumberland and crosses the mountain west. The Chesapeake and Ohio Canal extends to Cumberland, and the Baltimore and Ohio Railroad trav-

erces the country east and west. This county contains the famous Frostburg coal field.

Alleghan County, Mn., c. h. at Alleghan. S. W. part of the state, on Lake Michigan. Watered by Kalamazoo, Black, and Rabbit Rivers. Surface undulating, soil sandy on the borders of the lake, rich alluvion on the rivers, and elsewhere a mixture of sand and clay.

Alleghan, Mn., c. h. Alleghan co. On both sides of the Kalamazoo River. It has an elevated surface, a dry, sandy soil, and good water power. 161 miles W. by N. from Detroit.

Alleghany County, N. Y., c. h. at Angelica. On the S. W. border of the state. Watered by Black, Dike, Caneadea, Cold, and Campen's Creeks, beside other smaller tributaries of the Genesee which flows nearly through the centre of the county. The surface on the E. and W. consists of ranges of table land, elevated from 1500 to 2500 feet above the tide waters of the Hudson. The soil in the Genesee valley is very fertile, and the uplands are well adapted to grazing. This county contains several beds of bog iron ore. In the W. part is an oil spring which yields large quantities of Seneca oil. It is crossed by the Genesee Valley Canal and the New York and Erie Railroad.

Alleghany County, Pa., c. h. at Pittsburg. The Alleghany and Monongahela Rivers unite near the centre of this county, to form the Ohio. Surface hilly, soil fertile. Abounds in coal.

Alleghany, Pa. A southern township of Armstrong co.; in the angle between the Alleghany and the Kiskiminitas. Surface hilly, soil rather unproductive.

Alleghany, Pa. A northern township of Westmoreland, in the southern angle between the Alleghany and the Kiskiminitas. The water power is considerable, and is improved for operating several flouring mills, saw mills, &c.

Alleghany, Pa., Blair co. Watered by the Beaverdam, a branch of the Susquehanna River. Surface mountainous; soil in the valleys rich.

Alleghany, Pa. An eastern township of Somerset co., on the dividing ridge between the waters of the Susquehanna and Youghiogeny. Surface very hilly; soil, gravel.

Alleghany, Pa., a northern township of Venango co., on the N. bank of the Alleghany. Surface hilly; soil gravelly.

Alleghany City, Pa. A suburb of Pittsburg; see Pittsburg.

Alleghany, Pa., a central township of Cambria co., on the height of land between the head waters of the W. branch of the Susquehanna and the Kiskiminitas.

Alleghany County, Va., c. h. at Covington. Central, in the valley district, bounded W. by the Alleghany Mountains, which separate it from Greenbrier co. Watered by Cow Pasture and Jackson's Rivers, head branches of the James. The passage of Jackson's River through Waite's Mountain is a great curiosity. One of its tributaries, also, has a fall of 180 feet in a short distance. The soil is fertile on the streams, and on Rich Patch Mountain; elsewhere the land is sterile. Surface elevated and mountainous.

Allen County, Ia., c. h. at Fort Wayne. Watered by St. Joseph's and St. Mary's Rivers, which unite at Fort Wayne to form the Maumee. Surface level, consisting partly of wet prairies; soil fertile. The Wabash and Erie Canal passes through this county.

Allen County, Ky., c. h. at Scottsville. On the S. border of the state. Watered by the sources of Big Barren River, a branch of Green River. Surface level; soil of a tolerably good quality.

Allen, N. Y., Alleghany co. Several small affluents of the Genesee flow through this town, the surface of which is undulating, and the soil clay and sandy loam. 7 miles N. from Angelica, and 261 S. of W. from Albany.

Allen County, O., c. h. at Lima. On the summit between the lake and the Ohio River. Very fertile. The Miami Canal passes through it.

Allen, Pa. A south-east township of Cumberland co. 18 miles W. S. W. from Harrisburg.

Allen, Pa. A west township of Northampton co. The Lehigh River and Canal bound it on the W.

Allenstown, N. H., Merrimac co. Watered by Suncook River. The land is mostly ordinary, though there are some fine farms, also a large growth of oak and pine timber. 11 miles S. E. from Concord, 38 W. from Portsmouth.

Allentown, Pa., (also called Northampton,) c. h. Lehigh co. 87 miles E. N. E. from Harrisburg.

Alligator, Fa., c. h. Columbia co. 110 miles S. E. by E. from Tallahassee.

Almond, N. Y. A western township of Alleghany co., on the head branches of Canisteo River, a tributary of the Susquehanna. The surface is rather hilly; the soil mostly clay loam, and good. 14 miles E. from Angelica, and 240 S. of W. from Albany.

Alna, Me., Lincoln co. On Sheepscot River. 10 miles from Wiscasset, 54 N. E. from Portland, and 20 S. S. E. from Augusta.

Alsace, Pa., Berks co. On the E. side of Schuyl kill River; watered also by Roush's Creek. The surface is mountainous, but the soil, under good cultivation, is productive.

Alstead, N. H., Cheshire co. Watered by Cold River, and branches of the Ashuelot. It contains Warren's and other ponds. 12 miles S. E. from Charlestown, 56 W. by S. from Concord.

Altamont, Te., c. h. Grundy co.

Alton, Ill., city, Madison co. Situated on the east bank of the Mississippi, 82 miles W. by S. from Springfield, the capital of the state. This place has an excellent steamboat landing, and is advantageously situated for trade. It extends along the river about 2 miles; and back, from half a mile to a mile. The streets, which are laid out with regularity, are from 60 to 180 feet wide. The place has had a rapid growth. There are churches here of the Presbyterian, Baptist, Methodist, Episcopal, Evangelical, Lutheran, and Unitarian denominations. Two or three weekly newspapers are published here. There are several large commission houses, a great number of stores, a flouring mill, a brewery, saw mills, &c. Quite a number of steamboats doing business on the Mississippi, Missouri, and Illinois Rivers, are owned here. The surrounding country is rich in fine timber, limestone, and bituminous coal.

Alton, N. H., Belknap co. On Merrymeeting Bay of Winnipiseogee Lake. Soil hard and rocky, but productive if well cultivated. Its timber, oak, beech, maple, and pine. Principal elevations, Mount Major and Prospect Hill. Half Moon Pond, between Alton and Barnstead, is 300 rods long, 150 wide.

Amoskeag, N. H., Hillsboro' co. A village in Goffstown, on the Merrimac River, which here

falls 54 feet in a mile and a half, furnishing a great water power. There are some manufactories at Amoskeag, but the greatest part of the water is carried in canals to Manchester, a little distance below. 17 miles S. by E. from Concord.

Amboy, N. Y. An E. township of Oswego co., drained by Salmon and Scriba Creeks, and contains several small lakes. Surface level; soil a rich loam, producing abundant crops of grass and grain. 30 miles E. from Oswego village, and 137 N. W. from Albany.

Amelia County, Va., c. h. at Amelia. E. central. The Appomattox River runs along the N. and N. E. boundary, and its branches drain this county. Surface pleasantly diversified; soil rather unproductive. The principal agricultural productions are wheat, corn, cotton, and tobacco.

Amenia, N. Y. An eastern township of Dutchess co., on the Ms. border, watered by Wassaie and Ten Mile Creeks, branches of the Housatonic River. It contains two considerable ponds, and some mineral springs, and affords magnetic iron ore and marble of good quality. The surface is much diversified; the Taghkanic and Fishkill Mountains crossing parts of the town. 20 miles N. E. from Poughkeepsie, and 70 S. S. W. from Albany.

Americus, Ga., c. h. Sumpter co. 104 miles S. S. W. from Milledgeville.

Ames, O. A township of Athens co., on Federal Creek, a few miles N. E. from Athens, c. h.

Amesbury, Ms., Essex co. On the N. side of Merrimac River, separated from Salisbury by Powow River, a stream navigable for some distance for vessels of 300 tons. A pond, covering about 1000 acres, back of the town, 90 feet above the sea, serves as a reservoir for a constant and extensive water power. That part of the town called "The Mills" is at the lower falls of the Powow. The river here is about 2 rods in width, and is crossed by several bridges. The views from Whittier, Bear, and Pond Hills are delightful. At the W. end of the town are two flourishing villages, with a small stream, noted for salmon. 40 miles N. E. from Boston, and 6 miles N. W. from Newburyport, with which it communicates by the Salisbury Branch Railroad. Celebrated for its flannels, and other woollen goods.

Amherst, Me., Hancock co. On the head waters of Union River. 25 miles E. from Bangor.

Amherst, Ms., Hampshire co. Comprises 4 handsome villages—the centre village, where the college is located, and the N., the E., and S. villages. The town is watered by 2 good mill streams, which form Mill River. The college is situated on elevated ground, in the centre village, surrounded by a fertile country, and commanding a prospect of one of the most picturesque sections of the state. 82 miles W. from Boston, and 7 E. by N. from Northampton. See *Colleges*.

Amherst, N. H., c. h. Hillsboro' co. On Souhegan River, a tributary of the Merrimac. The soil is excellent. There is a celebrated mineral spring here. 29 miles S. from Concord, and 40 E. from Keene.

Amherst, N. Y., Erie co. Tonawanda Creek bounds this township on the N. and Ellicott's Creek flows through it. The surface is uneven, and the soil of an indifferent quality. 10 miles N. E. from the city of Buffalo, and 283 N. of W. from Albany.

Amherst County, Va., c. h. at Amherst. S. central, in the N. angle between the Blue Ridge and James River. Surface elevated, and agreeably diversified; soil tolerably good. Wheat and tobacco are the principal products.

Amherst, Va., c. h. Amherst co. 15 miles N. N. E. from Lynchburg, and 115 W. from Richmond.

Amite County, Mi., c. h. at Liberty. In the S. W. angle of the state, bordering on Louisiana. Watered by Amite River and its branches. Surface uneven; soil of good quality, especially on the borders of the streams. Chief products, cotton and corn.

Amity, Me., Aroostook co. Township No. 10, first range of townships from the E. line of the state. About 100 miles N. E. from Bangor.

Amity, N. Y., Alleghany co. On the Genesee River, which flows in a N. direction, nearly through the centre of the township. Surface high and rolling on the outskirts; soil various; the uplands being adapted to grazing, and the borders of the rivers to the growth of grass and grain. 6 miles S. of Angelica, and 255 S. of W. from Albany.

Amity, O., Pike township, Knox co. Fertile and healthy. 8 miles N. E. of Mt. Vernon, 53 from Columbus, and 85 from Cleveland.

Amity, Pa., Erie co. A hilly township, with a soil of gravelly loam.

Amity, Pa., Berks co. On the Schuylkill. The Reading Railroad passes through it.

Amsterdam, N. Y., Montgomery co. Township and village on the Mohawk River, Erie Canal, and Schenectady and Utica Railroad. Watered by several small streams, the principal of which is the Chuctanunda Creek. A fine quality of building stone is quarried here. The surface is uneven, but the soil is fertile and easily tilled, consisting of clay loam and rich mould. The village contains manufactures of carpets, scythes, &c. 31 miles W. from Albany.

Amwell, N. J., Hunterdon co. Watered by the south branch of the Raritan River and its tributaries. Surface uneven; soil fertile in some parts.

Amwell, Pa., Washington co. Surface hilly, abounding with coal, and watered by the branches of Ten Mile Creek. Soil loam.

Anamosa, Io., c. h. Jones co.

Ancram, N. Y. A S. E. township of Columbia co., drained by Ancram and Punch Creeks. Surface hilly, soil gravelly loam and clay, upon a foundation of slate and limestone. 21 miles S. E. from the city of Hudson.

Andalusia, Aa., c. h. Covington co.

Anderson, Ia., c. h. Howard co.

Anderson County, Ky., c. h. at Lawrenceburg. Watered by Salt River and its head branches, and on the E. by the Kentucky. Surface rough.

Anderson, O. An E. township of Hamilton co., between the Ohio River and the Little Miami.

Anderson District, S. C., c. h. at Anderson. In the N. W. part of the state. Watered by head branches of the Savannah and Saluda Rivers.

Anderson, S. C., c. h. Anderson district. 127 miles N. W. from Columbia.

Anderson County, Te., c. h. at Clinton. N. E. central. Watered by Clinch River. Rough, but fertile.

Anderson County, Ts., c. h. at Plenitude. E. part. On the upper branch of the Trinity.

Andes, N. Y., township, Delaware co. Watered

by Temper's Kill and the Papacton branch of the Delaware River. Surface hilly; soil adapted to grazing. 87 miles S. W. from Albany.

Andover, Me., Oxford co. Watered by Ellis's River. About 30 miles N. W. from Paris, and 61 W. N. W. from Augusta.

Andover, Ms., Essex co. A large town of ten miles square, bounded N. by the Merrimac, and watered by the Shawheen, which affords many water privileges. There are large villages in the N. and S. parts of the town, some 3 miles distant from each other, and several smaller villages. Most of the soil is arable, and much of it highly cultivated. Among the manufactures are flannels, linen, yarn, and shoe thread. The various literary institutions are its principal attraction. Phillips Academy has now been in existence nearly 70 years. It has ample endowments, convenient buildings, a chemical and philosophical apparatus, which cost over \$2000, a valuable library of 700 volumes. From the commencement of its operations to 1845, 4437 individuals have enjoyed its advantages. This institution was incorporated several years before any other academy in New England, and is still deservedly conspicuous among them all. Its funds enable the trustees to secure the permanent services of distinguished teachers, without making any but the most moderate charges for tuition, while large numbers receive their entire tuition free. The Theological Seminary. See *Theological Institutes*. The Abbot Female Academy. This academy is beautifully located, in the same village with the other literary institutions; it presents the additional attractions of a valuable philosophical apparatus, and cabinet of minerals, and a select library of modern works, together with a beautiful building, and grounds tastefully arranged and adorned. Many of the most valuable publications of the day are issued from the Andover press. Its learned Quarterly, the *Bibliotheca Sacra*, has a large circulation across the Atlantic.

Andover, N. H., Merrimac co. The Black Water is the principal stream. There are six ponds. The Ragged Mountains are on the N., the Kearsage on the W. Soil of good quality. 21 miles N. W. from Concord. The Northern Railroad passes through the centre.

Andover, N. Y., a township of Alleghany co. Dyke Creek, a tributary of the Genesee River, flows through this town. Its surface is uneven; soil, clay loam. 15 miles S. E. from Angelica, and 266 S. of W. from Albany.

Andover, Vt., Windsor co. Markham and Terrible Mountains lie in the western part. The land is uneven, and the soil hard. 20 miles S. W. from Windsor, and 68 S. from Montpelier.

Andrew County, Mo., c. h. at Savannah. Principal streams, Platte and Nodaway Rivers. The Missouri also touches the S. W. corner.

Angelica, N. Y., c. h. Alleghany co. Township and village on Angelica Creek. The surface is rolling; the soil mostly fertile, consisting of clay loam and sandy alluvion. 262 miles W. from Albany.

Angelina County, Ts., c. h. at Marion. In the E. part of the state. Drained by the Angelina, the E. fork of the Neches.

Angola, Ia., c. h. Steuben co. 174 miles N. N. E. from Indianapolis.

Annapolis, Md., city, port of entry, capital of the state, and seat of justice of Ann Arundel co.,

stands on the W. side of the Severn, 2 miles from its entrance into Chesapeake Bay, 28 miles S. S. E. from Baltimore, and 40 miles E. N. E. from the city of Washington. Annapolis was established as the seat of government in 1699. The state house is a venerable building, in which the American Congress held some of its sessions during the revolutionary war; and in the senate chamber of which, Washington, at the close of the war, resigned his commission. It is a spacious and elegant building for the period of its erection. The state library, in one of its apartments, contains 15,000 volumes. The city is regularly laid out, with streets diverging from the state house, and also from another point, at which is located the Episcopal Church, as from two centres. The city is pleasant and healthy as a place of residence, but as a place of business it has fallen behind in consequence of the flourishing state of Baltimore. Annapolis is the seat of St. John's College, a branch of the University of Maryland. See *Colleges*.

Annisquam, Ms., Essex co. 34 miles from Boston; the north village of the town of Gloucester, having a separate harbor of its own, formed by Annisquam River, and opening into Ipswich Bay.

Ann Arbor, Mn., Washtenaw co. This flourishing place, on both sides of the Huron River, is regularly laid out, partly on the river and partly on elevated ground a short distance S. of it. It is handsomely built, and is the seat of the Michigan University. See *Colleges*. It is on the Michigan Central Railroad, 42 miles W. from Detroit.

Ann Arundel County, Md., c. h. at Annapolis. Central, on the W. shore of Chesapeake Bay. Surface rolling; soil tolerably fertile. It is watered on its N. border by the Patapsco, and on its S. W. border by the Patuxent River.

Annsville, N. Y., Oneida co. Fish Creek and its tributaries water this township, the surface of which is undulating, and the soil mostly gravelly loam. 25 miles N. W. from the city of Utica, and 118 miles from Albany.

Annville, Pa., Lebanon co. Swatara Creek, and tributaries of it, flow through this township, affording good water power. Surface level; soil gravel and calcareous loam. The Union Canal passes through it.

Anson, Me., Somerset co. At the junction of Seven Mile Brook with the Kennebec, on the western side of that river. Here are fine farms and good husbandry. 112 miles N. from Portland, 40 N. W. from Augusta.

Anson County, N. C., c. h. at Wadesboro'. On the S. border and S. bank of the Yadkin, by which and its tributaries it is watered.

Antes, Pa. A northern township of Blair co., on the height of land between the Juniata and the W. branch of the Susquehanna. 116 miles W. from Harrisburg.

Antrim, N. H., Hillsboro' co. On Contoocook River. Hilly, but productive. 30 miles S. W. from Concord.

Antrim, Pa., Franklin co. Conecheague Creek and its branches water this township, the surface of which is level, and the soil calcareous loam.

Antwerp, N. Y., Jefferson co. Oswegatchie River waters this township on the N. and Indian River on the S. The former here makes a bend called the "Oxbow." The surface is hilly; the soil good, clay loam, well adapted to the growth

of grass. 20 miles N. E. from the village of Watertown, and 164 N. W. from Albany.

Appalachicola, Fla., c. h. and port of entry, Franklin co. 135 miles S. W. from Tallahassee, situated on a bluff at the mouth of the river of the same name. It is regularly laid out, and occupies an area of one square mile. On Front Street there are a number of blocks of large brick stores, with granite fronts. The remaining portion of the town is built mostly of wood. *Appalachicola* is a considerable mart for cotton. The river is navigated by steamboats and other boats, and the harbor generally contains a number of large vessels, lading and unlading at the wharves.

Appleton, Me., Waldo co., 35 miles E. by S. from Augusta, between the head waters of the Muskingum and St. George's.

Appanose co., Io., c. h. at Antreville. On the S. border of the state.

Appling County, Ga., c. h. at Holmesville. S. E. central. Watered by the head branches of Satilla River. Surface level. Soil light and sandy.

Applingville, Ga., c. h. Columbia co. On Great Kiokee Creek, 111 miles S. S. E. from Milledgeville.

Appomattox County, Va., c. h. at Clover Hill. In the S. central part of the state, with the James River on its N. W. border.

Aquia, Va., Stafford co. On Aquia Creek. The railroad to Fredericksburg and Richmond commences here, and connects with Washington by steamboat.

Arcadia, N. Y., Wayne co. Watered by Mud Creek, and contains large quarries of gypsum. The surface is hilly; the soil sandy and calcareous loam. 5 miles W. from Lyons village, and 190 N. W. from Albany.

Archer, O., Harrison co. A township watered by Stillwater River and its branches. Distant from Cadiz a few miles N.

Argyle, Me., Penobscot co. is a new town, but fertile and flourishing. It produces the best of wheat. 89 miles N. E. from Augusta.

Argyle, N. Y. Washington co. Surface uneven; soil gravelly loam, and sandy. It is equidistant from Salem and Sandy Hill, and 46 miles N. E. from Albany.

Arietta, N. Y., Hamilton co. This township is large, and contains several lakes and numerous small streams. The southern part only is partially settled. 72 miles N. W. from Albany, and 8 miles W. from the village of Lake Pleasant.

Arkadelphia, As., c. h. Clark co. On the Wachitta, 100 miles S. W. of Little Rock.

Arkansas County, As., c. h. at Arkansas Post. S. E. part, in the angle between the White and Arkansas Rivers. Surface mostly level, comprising the S. part of Grand Prairie, the soil of which is very fertile.

Arkansas Post, As., c. h. Arkansas co. On the N. bank of Arkansas River, on a high bluff, 50 miles from the Mississippi. It was founded by the French in 1685. 117 miles S. E. from Little Rock.

Arkwright, N. Y., Chautauque co. A high and hilly township, with a soil adapted to the growth of grass or grain. 346 miles W. from Albany.

Arlington, Vt., Bennington co. Watered by Green River, Mill, and Warm Brooks, and Roaring Branch, which form excellent mill sites, and fall into the Batten Kill in the N. part of the town. On the streams are large bodies of rich

intervals. West and Red Mountains extend through the W. part. There are marble quarries here, and a curious cavern. 15 miles N. from Bennington, and 106 S. W. from Montpelier.

Armagh, Pa., Mifflin co. A northern township.

Armstrong County, Pa., c. h. at Kittanning. W. central. The Alleghany passes through it from N. to S., and the Kiskiminitas washes its S. W. border. Surface pleasantly diversified.

Armstrong, Pa. A western township of Indiana co. Watered by Crooked Creek. Surface level; soil, clay and gravel.

Aroostook County, Me., c. h. at Houlton, is in the N. E. and N. part of the state. Watered by the Upper St. John's and its southern tributaries. Mostly unsettled. Soil, a limestone formation, favorable to wheat.

Arrow Rock, Mo., Saline co. Situated on a high bluff on the S. side of the Missouri River. It has a good landing, and is surrounded by a fertile country. 72 miles N. W. from Jefferson city.

Ascension Parish, La., c. h. at Donaldsonville. Southern part, on both sides of the Mississippi. It has on the N. the Amite, with which the Manshac pass from the Mississippi communicates. The La Fourche, another outlet of the Mississippi, leaves that river at Donaldsonville, in this parish. Level, and, except the lands on the immediate banks of the rivers, annually inundated.

Ashe County, N. C., c. h. at Jeffersonton. In the N. W. corner. Watered by the head branches of the Holston and Great Kanawha Rivers. Surface elevated and rough, being a table land between Bald Mt. and the Blue Ridge; soil tolerably good.

Ashboro', N. C., c. h. Randolph co. 72 miles W. from Raleigh.

Ashburnham, Ms., Worcester co. On the height of land between the Connecticut and Merrimac Rivers. It is watered by large ponds, which furnish good mill seats. There is much good land both for grass and grain. 54 miles N. W. from Boston, and 4 N. W. from Fitchburg.

Ashford, Ct., Windham co. Watered by several small tributaries of the Yantic. The surface is rough and stony, but excellent for grazing. 31 miles E. from Hartford, 14 N. W. from Brooklyn.

Ashford, N. Y., Cattaraugus co. Drained by Cattaraugus Creek and its tributaries. Surface slightly uneven; soil, clay loam. 300 miles W. from Albany.

Ashland, Ms., Middlesex co. On head streams of Concord River which afford water power. The Worcester Railroad passes through the centre of the town. 25 miles W. S. W. from Boston.

Ashland County, O., c. h. at Ashland. N. part. Drained by branches of the Mohican Creek, a tributary of the Muskingum.

Ashland O., c. h. Ashland co. 30 miles N. E. from Columbus.

Ashley County, As., c. h. at Hamburg. (New.) *Ashby*, Ms., Middlesex co., is on elevated land, bordering on Rindge, N. H. Branches of the Squamcook rise here, and pass to the Nashua. It is varicd with hills and vales, and is rich in agricultural products and fine scenery. 42 miles W. N. W. from Boston, and 25 N. W. from Concord, N. H.

Ashtabula County, O., c. h. at Jefferson. In the

N. E. corner of the state, on the southern shore of Lake Erie. The soil is various, but generally good. Grand River, Ashtabula, and Conneaut Creeks are the most important streams; these afford a valuable water power. They flow north-westwardly into Lake Erie; the land, which is mostly level, descends in that direction. The first settlers of this county emigrated from New England, and they and their descendants are remarkable for thrift and intelligence.

Ashtabula, O. Township and borough, Ashtabula co., on Ashtabula River, near its mouth, and 191 miles N. E. from Columbus.

Ashville, Aa., c. h. St. Clair-co. On the S. E. side of Canoe Creek, 90 miles N. E. from Tuscaloosa.

Ashville, N. C., c. h. Buncombe co. On French Broad River, 256 miles W. from Raleigh.

Assumption Parish, La., c. h. at Assumption. S. central, on the S. side of the Mississippi. The Bayou La Fourche runs S. through it.

Assumption, La., c. h. Assumption Parish. On Bayou La Fourche, 89 miles W. from New Orleans.

Astoria, N. Y., Queen's co., lies at Hallett's Cove, just below Hurl Gate. It contains a female seminary, and manufactories of carpets, turpentine, and other articles. It is connected with New York by a ferry. It is distant 6 miles N. E.

Asylum, Pa., Bradford co. Watered by the Susquehanna River, on which are the Wyalusing Falls, and by Duval's, Sugar, and Tonawanda Creeks. 145 miles N. from Harrisburg.

Atchison County, Mo., c. h. at Linden. In the N. W. corner of the state. Watered by several confluent rivers of the Missouri, which flow S. through it.

Athens, Aa., c. h. Limestone co. About 1 mile W. from Swan Creek, and 154 miles N. by E. from Tuscaloosa.

Athens, Ga., c. h. Clarke co. Situated on the W. bank of the Oconee River, the seat of the Georgia University. (See *Colleges*.) 75 miles N. by W. from Milledgeville; connected with Augusta by railroad.

Athens, Ky., Fayette co. On a small branch of Kentucky River, 34 miles S. E. from Frankfort.

Athens, Me., Somerset co. Watered by a branch of Kennebec River. 18 miles N. N. E. from Norridgewock, 45 miles N. from Augusta.

Athens, N. Y., Greene co. On the Hudson River, opposite the city of Hudson. The surface in the W. part is hilly, but it becomes more level near the Hudson. Soil generally fertile, being a mixture of clay, sand, and loam. There is in this town a quarry of graywacke slate, from which large quantities of flagging stone are sent to market. It is 29 miles S. from Albany, and 5 N. from Catskill village.

Athens County, O., c. h. at Athens. On the S. E. it touches the Ohio River, and the Hocking flows through it from N. W. to S. E. This county is very irregular in its form. Its mean breadth from N. E. to S. W. is about 20 miles, and its length, upon the longest line that can be drawn over it, is 40 miles. It contains an area of 740 square miles. The surface is broken and hilly, but the soil is good. Lime, freestone, and clay for brick, furnish abundant materials for building. The county contains bituminous coal in abundance, and in several localities iron ore is found. Salt of an excellent quality has been

manufactured from the water of wells sunk deep into the earth for that purpose. The Hocking River enters the county at its extreme north-western angle, and flows S. E. diagonally over the whole territory, falling into the Ohio River at its extreme south-western angle. The southern border declines to the southward, and is watered by several creeks which run into the Ohio. There are many good mill sites on the Hocking River and its branches. Two townships in this county, containing 46,080 acres, were granted by the United States Congress for the endowment of a state university, which has since been established at Athens, the chief town of the county.

Athens, O., c. h. Athens co. 72 miles S. E. from Columbus. Situated on a peninsula formed by a curve in the Hocking River. It is well built, generally of brick, and presents a neat and picturesque appearance. The Ohio University is located here, the buildings of which are on a slight eminence in the south part of the village. (See *Colleges*.) There is likewise an academy in the place. The township to which it belongs is the northernmost of the two granted by Congress for the support of the university. There are in the place a number of stores and mechanical establishments, and an active business is done.

Athens, Pa., Bradford co. Beautifully situated at the junction of the Chemung and Susquehanna Rivers. Surface a gently-undulating plain, envired by mountains.

Athens, Pa. An eastern township of Crawford co.

Athens, Tc., c. h. McMinn co. On Eastanalla Creek, 15 miles from its entrance into the Tennessee, and 154 S. E. from Nashville.

Athens, Vt., Windham co. A good township of land, particularly for grazing. 10 miles from Bellows Falls, and 98 S. from Montpelier.

Athol, Ms., Worcester co. On Miller's River, a fine stream which affords great water power. The surface is uneven; soil strong and productive. There are a number of handsome villages in the town, and many large farms. 70 miles W. N. W. from Boston, and 28 N. W. from Worcester. The Vermont and Massachusetts Railroad passes through the principal village.

Athol, N. Y., Warren co. A large township on the head waters of the Hudson River, watered by several of its tributaries. The W. part is sterile, and chiefly valuable for its timber. 71 miles N. from Albany.

Atkinson, Me., Piscataquis co. On Piscataquis River. 132 miles N. E. from Portland.

Atkinson, N. H., Rockingham co. It has an uneven surface, but superior soil. The apple has been much cultivated, and the finest fruit is produced. One of the oldest academies in the state is here. 30 miles S. W. from Portsmouth, and 36 S. E. from Concord.

Atlantic County, N. J., c. h. at May's Landing, S. E. part. It embraces numerous islands, and its sea-shore is indented by many bays. Soil chiefly light and sandy.

Attala County, Mi., c. h. at Kosciusko. Central. Watered by the Big Black, which separates it from Holmes co., and by head branches of Pearl River. Surface level; soil tolerably good.

Atica, N. Y., Wyoming co. Watered by Tonawanda Creek and its tributaries. Surface undulating; soil well adapted to the growth of grass and grain. 250 miles W. from Albany.

Attleboro', Ms., Bristol co. In the N. W. corner of the county. It possesses a fine water power. Ten Mile River runs the whole length of the town, and puts in operation several cotton mills, and a calico printing establishment. There are a large number of smaller manufactures, such as boots and shoes, combs, carpenter's tools, clocks, straw bonnets, and jewelry. The Boston and Providence Railroad passes through it. 30 miles S. S. W. from Boston, and 12 N. from Providence, R. I.

Auburn, Ia., c. h. De Kalb co. 153 miles N. N. E. from Indianapolis.

Auburn, Me., Cumberland co. Taken from Minot, in 1842. 30 miles N. from Portland. On the Androscoggin. A flourishing town.

Auburn, Ms., Worcester co. There are a number of flourishing villages here; the principal are Stoneville and Drury Mills, large manufacturing places. French River passes through it; also the Norwich and Worcester Railroad. 45 miles W. S. W. from Boston, and 5 S. by W. from Worcester.

Auburn, N. H., Rockingham co., contains some fine swells of land. 5 miles E. from Manchester. Taken from Chester in 1845.

Auburn, N. Y., c. h. Cayuga co. 173 miles W. from Albany, and 152 miles E. from Buffalo. This is one of the most beautiful and thriving inland towns in the state. It is situated on both sides of the stream which forms the outlet of the Owasco Lake, about a mile and a half S. of the body of the lake. There is a fine hydraulic power upon the stream where it passes through the town, which is largely improved for mills and manufacturing purposes. The entire fall is about 100 feet, and the amount of water discharged from the lake is large and little affected by the variations of flood or drought. A large cotton factory, several flouring mills, saw mills, sash and blind factories, planing mills, iron founderies, and other works are carried by this water power. Auburn is pleasantly laid out, though with less regularity than is commonly aimed at in modern towns. The streets are generally straight, but seldom parallel, and consequently intersecting each other, for the most part at every variety of acute and obtuse angles. The principal streets are wide, well paved, or macadamized, and built up in some sections with handsome ranges of stores, dwellings, and public houses, of brick or dressed limestone, some of them four stories high, which would not discredit the streets of our largest commercial cities. The state prison located at Auburn has been regarded, in its system of discipline, as a model for such institutions. It is located in the N. W. part of the village, enclosing a square of 500 feet on a side, by a stone wall from 16 to 40 feet high. The buildings form three sides of a square. 276 feet in front, the wings running back 242 feet, with a width of 45 feet. In the area formed by the main prison buildings is a grass plot, laid out with gravel walks. In the rear of this is the interior enclosure, occupied by the workshops of the prisoners, built against the outer wall of the prison yard. The outlet of the Owasco passes by the S. side of this enclosure, and is made to turn a wheel without the wall, the shaft of which, passing through, gives motion to the machinery within. The prisoners labor in the shops by day under the direction of the overseers, in the presence of each other, but without any communication, and

at night they go to occupy each his solitary cell. This system, as distinguished from the old method of placing several prisoners in the same apartments for lodging, with opportunity of unrestrained intercourse on the one hand, and from that of solitary confinement in their separate cells, by day as well as by night, on the other, is what has obtained the name of the "Auburn system of prison discipline," in consequence of its having been first set in operation here, and the prison being constructed with special reference to its application. The chief peculiarity of structure is in the arrangement of the cells. The cells are in a body, or block, extending through the centre of each wing of the prison buildings, ranged in tiers of four stories high, with galleries or stagings passing by the doors. The space between this block of cells and the walls of the prison is 10 feet wide from top to bottom, thus forming, as it were, a prison within a prison. The cells are 7 feet long, 7 feet high, and 3½ feet wide, sufficiently lighted while daylight continues, and well warmed and ventilated from the intermediate area. The earnings of the Auburn prison for the year 1850, were \$68,737.31; the expenditures, \$71,166.07. There is usually a balance in favor of the establishment. The surplus in 1849 was \$10,837.80. This prison was commenced in 1816. There is at Auburn a Theological Seminary, of the Presbyterian Church, connected with the New School General Assembly. The buildings are pleasantly situated in the N. part of the village. The principal edifice is of stone, composed of a centre building and two wings, four stories high, connected by intermediate sections of three stories above the basements, the whole presenting a front of 200 feet. (See *Theological Seminaries*.) The other public buildings in Auburn are the court house and jail, the Auburn Academy, the Auburn Female Seminary, and churches of the Presbyterian, Episcopal, Methodist, Baptist, Universalist, and Roman Catholic denominations. Auburn was settled in 1793. Incorporated as a village in 1815, and as a town in 1823. Population in 1850, 9548.

Audrain County, Mo., c. h. at Mexico. N. E. central, in the N. angle between the Mississippi and Missouri. Watered by the S. fork of Salt River. Surface level; soil fertile.

Auglaize County, O., c. h. at Wappaukonetta. In the N. W. part of the state, on the head waters of the Auglaize River.

Augusta, Io., Des Moines co. A neat and flourishing village, on the N. side of Skunk River. A large flouring mill is in operation here.

Augusta, Ga. City, and seat of justice of Richmond co., on the S. W. side of the Savannah River, 96 miles N. E. from Milledgeville, and 120 miles N. W. from Savannah, with which it connects by steamboat navigation. This city is regularly laid out and well built. The streets are wide, and intersect each other at right angles. Many of them are beautifully shaded with trees. The city is built chiefly of brick, and many of the houses are spacious and elegant. The principal public buildings are the city hall, market house, court house, a jail, a theatre, a hospital, a female asylum, an arsenal, and several handsome churches. Some of the public buildings are costly and elegant. Many of the blocks of stores are large and substantial, and the whole place has much of the aspect of a large commercial mart. It has long been a very flourishing place

of business, and has perhaps as much trade as any other place of its population in the country. The country back of Augusta is very rich, and a great amount of cotton, tobacco, and other produce is brought here and sent down the river. There are 10 or 12 large commission houses engaged in foreign trade, with a capital of about \$250,000. Augusta enjoys excellent facilities for commercial intercourse with the interior by the several railroads which centre here, and others connected with them. Charleston and Savannah, Milledgeville and Macon, Fort Gaines on the Chattahoochee, Athens in Te., Montgomery, the capital of Alabama, and other important places are connected by railroad with Augusta.

Augusta, Ky., c. h. Bracken co. 73 miles N. E. from Frankfort.

Augusta, Me., c. h. Kennebec co. City, and capital of the state. Situated at the head of sloop navigation on the Kennebec River, 43 miles from the sea. It was first settled in 1771, and incorporated as a town in 1797. Population in 1820 2475; 1830, 3980; 1840, 5314; 1850, 8231. Augusta lies on both sides of the Kennebec, rising each way by an easy ascent from the river. The bridge, uniting the E. and W. parts of the town, is a fine structure, 520 feet in length, built in 1799, at a cost of \$28,000. The town is well laid out, neatly built, and contains many handsome structures.

There are nine or ten churches of the various denominations. The state house in Augusta is a spacious and elegant structure, located upon a beautiful eminence about half a mile from the village, on the road towards Hallowell, and commands an extensive and very delightful prospect. It is built of hammered granite, or rather gneiss, of a white color, and very much resembles marble at a distance. The material of which it was built was quarried near the spot on which it stands. In front is an extensive common, adorned with trees tastefully arranged, which, when grown into shades, will afford a delightful promenade.—The United States arsenal buildings are situated upon the E. bank of the river, in view of the village, and are chiefly constructed of stone, and present a very fine appearance. The grounds are extensive, beautifully arranged, and surrounded by a costly iron fence. There are at present about 2000 stand of arms deposited here, besides cannon and other munitions of war.—The state insane hospital, a splendid granite edifice, an honor to the state and to humanity, occupies a plat of elevated ground of seventy acres, on the east side of the river. Its situation is unrivalled for the beauty of its scenery. It is much admired for its external architecture and internal arrangement. The centre building and wings are 262 feet long; the centre building being 82 feet in length, 46 feet wide, 4 stories high, besides the basement and attic, having a chapel in the attic 80 by 40. The wings are 90 feet long in front, and 100 in the rear, 38 feet wide, and 3 stories high, divided into 126 rooms, 120 of which are designed for patients, with halls between the rooms 12 feet wide running the entire length of each wing, and communicating with the dining rooms in the centre building.—The Cony Female Academy was incorporated in 1818, owing its origin to the liberality of Hon. Daniel Cony. The building is a commodious and handsome edifice upon the east side of the river. At a

short distance is a large boarding house connected with the institution. It has a fund of about \$10,000, and a well-furnished laboratory and library.—There are excellent public houses in Augusta, the chief of which are the Augusta House, near the state house, and the Mansion House.—About half a mile above the village, a massive dam has been erected across the Kennebec, with locks, for the purpose of improving the navigation of the river above, and of creating a water power of great capacity. The length of this dam, exclusive of the stone abutments and lock, is 584 feet, and the height 15 feet above ordinary high water mark, forming a pond of the average depth of 16 feet, and 16½ miles in extent. The immense body of water, and the great and unailing supply thus brought into application for manufacturing purposes, are almost unsurpassed. The first cost of this great work was about \$300,000. This water power is already used to a very considerable extent in propelling various kinds of machinery. Several saw mills, a large flouring establishment, sash, door, and blind manufactories, machine shops, and a cotton factory, with 10,000 spindles, are in successful operation.—Augusta presents advantages for manufacturing establishments equal, if not superior, to any in New England. It is located in the heart of a large and powerful state, rapidly increasing in population and wealth, surrounded by a fertile country, rich in every necessary agricultural product, and stored with granite, clay, lumber, lime, iron ore, and every building material. The facilities afforded here for transportation are of inestimable value to a large manufacturing town. Cotton and other raw materials, and manufactured goods, may be transported by water to and from the very doors of the mills. The great Eastern Railroad from Boston and Portland passes through this town, in its course to Bangor. Steamboats pass from Augusta to Boston in eleven hours. A steamboat plies daily on the river above the dam to Waterville. This place cannot fail of becoming, at no distant day, the site of very extensive and profitable manufacturing operations.

Augusta, Mi., c. h. Pery co. On Leaf River, 173 miles S. E. from Jackson.

Augusta, N. Y., Oneida co. The W. part of this township is watered by Oneida Creek and its tributaries, and the S. E. part by Oriskany Creek, which has a fall of 30 feet, affording a fine hydraulic power. The Chenango Canal also passes through the town. Surface rolling; soil tolerably good. 110 miles N. of W. from Albany, and 18 S. W. from the city of Utica.

Augusta, Pa., Northumberland co. Watered by Great and Little Shamokin Creeks. Surface diversified; soil, gravel, red shale, and alluvion. 65 miles N. from Harrisburg.

Augusta County, Va., c. h. at Staunton. Between the Blue Ridge and the central ridge of the Alleghanies. Watered by branches of James and Shenandoah Rivers. Surface uneven and mountainous; soil fertile, yielding large crops of wheat.

Auraria, Ga., Lumpkin co. On the ridge between Chestatee and Etowah Rivers, in the best part of the gold district, 135 miles N. N. W. from Milledgeville.

Aurelius, N. Y., Cayuga co. Watered by Owasco outlet, and several streams flowing into Cayuga Lake, which bounds it on the W. **Sur-**

face undulating; soil good. 5 miles W. from the village of Auburn, and 178 from Albany.

Aurelius, O. A township of Washington co. The surface is hilly, but has a rich soil, covered with timber. 20 miles N. from Marietta.

Aurora, Me., Hancock co. 106 miles E. from Augusta.

Aurora, N. Y., Erie co. Drained by Seneca and Cazenovia Creeks. Its surface is undulating; soil clay and gravelly loam. 276 miles W. from Albany, and 15 S. E. from the city of Buffalo.

Aurora, N. Y., Ledyard, Cayuga co. Pleasantly situated on the E. bank of Cayuga Lake. It has a flourishing academy, and three or four churches. Steamboats stop here daily, which connect with railroads at each end of the lake. 170 miles W. from Albany.

Aurora, O., Portage co., is a township situated on the road from Warren, Trumbull co., to Cleveland, Cuyahoga co., 28 miles from the former, and 25 from the latter place, and 131 N. E. from Columbus. The railroad from Cleveland to the Ohio River passes through it.

Au Sable, N. Y., Clinton co. On the N. side of the Great Au Sable River: the Little Au Sable passes through it. Surface undulating, and on the W. hilly. 15 miles S. from the village of Plattsburg, and 140 N. of Albany.

Au Sable Forks, N. Y., Essex co. At the junction, on the E. and W. forks of Au Sable River. Here is a forge, rolling mill, and nail factory. 154 miles from Albany.

Austerlitz, N. Y., Columbia co. On the Ms. border. Hilly and mountainous. Watered by several small tributaries of the Housatonic. The soil is a gravel and clay loam. 30 miles S. S. E. from Albany, and 14 N. E. from Hudson.

Austin County, Ts., c. h. at Belleville. S. central, on the Brazos.

Austin, Ts. Capital of the state. Situated on the E. bank of the River Colorado, about 200 m. from Matagorda Bay, through which the river empties into the Gulf of Mexico. The town is pleasantly located, on ground elevated about 40 feet above the river. It derives importance from having become the seat of government of this new state, which, in connection with its natural advantages for trade and commerce, will give an impulse to its prosperity for years to come.

Austintown, O. A township of Mahoning co., 160 miles N. E. from Columbus.

Autauga County, Aa., c. h. at Kingston. Central. Bounded on the S. and E. by the Coosa, and watered by many small tributaries of that river. Surface broken; soil good, and on the borders of the rivers very fertile.

Averill, Vt., Essex co. On the Canada line. It has several large ponds, and is watered by a branch of Nulhegan River. The soil is cold and broken. 30 miles N. from Guildhall, and 60 N. E. from Montpelier.

Aron, Ct., Hartford co., lies between two mountainous ridges, and has considerable rich level land on the borders of Farmington River. The view from Monte Video, on Talcott Mountain, nearly 1000 feet above the waters of the Connecticut, is quite enchanting. 9 miles W. N. W. from Hartford.

Aron, Me., Franklin co. Watered by some of the head branches of Sandy River. 35 miles W. by N. from Norridgewock, and 50 N. N. W. from Augusta.

Aron, N. Y., Livingston co. On Genesee

River, and also watered by the outlet of Conesus Lake and some other small streams. The surface of the W. part is hilly, but on the E. it is more level. Soil fertile, especially on the borders of the streams, producing grass and grain in great abundance. There are several celebrated mineral springs in this town. (See *Watering Places*, p. 263.) 8 miles N. from the village of Genesee, and 220 W. from Albany.

Avon, O., Loraine co., borders on Lake Erie, and is watered by French Creek, which passes through the centre of the township. 17 miles W. from Cleveland.

Avozelles Parish, La., c. h. at Marksville. Central. On both sides of Red River, touching the Mississippi on the S. E. corner. The parts bordering on the rivers are so low as to be liable to inundation, but the W. part, being more elevated, is fit for cultivation, and tolerably fertile. Cotton is the principal product.

Babylon, N. Y., Suffolk co. A pleasant summer retreat near South Bay. 185 miles S. E. from Albany.

Bachelor, Me., Oxford co. Between two mountains on the line of New Hampshire, 60 miles W. from Augusta.

Bad Axe County, Wn. On the Mississippi. Drained by Bad Axe River. Taken from Crawford in 1851.

Baileysville, Me., Washington co. On the line of N. Brunswick, 80 miles E. N. E. from Bangor.

Bainbridge, Ga., c. h. Decatur co. On the E. side of Flint River, 188 miles S. S. W. from Milledgeville.

Bainbridge, Ia., Putnam co. Near the Walnut fork of Eel River, and 38 miles W. from Indianapolis.

Bainbridge, N. Y., Chenango co. Watered by the Susquehanna River and its tributaries. The surface is hilly, the soil of good quality. 110 miles W. by S. from Albany.

Baker County, Ga., c. h. at Newton. In the S. W. corner of the state. Watered by Flint River, which flows southerly through it, and its W. tributary, the Itchawaynoelchaway. Soil sandy, but well adapted to cotton.

Bakersfield, Vt., Franklin co. Somewhat broken, but not mountainous. Timbered principally with hard wood. The soil is in general warm and productive. Watered by Black Creek, and several other small branches of the Missisquoi River. 30 miles N. E. from Burlington, and 38 N. N. W. from Montpelier.

Balcony Falls, Va., Rockbridge co. On the James River, at the passage of the Blue Ridge. This is the W. terminus of the James River Canal. A dam is thrown across the river for the purpose of feeding the canal. The scenery here is bold and picturesque. 197 miles W. from Richmond.

Baldwin County, Aa., c. h. at Blakely. Between the Perdido on the E., which separates it from Florida, the Gulf of Mexico on the S., and Mobile Bay on the W. Level near the Gulf of Mexico, but more uneven in the interior. Soil tolerably good on the margins of the streams.

Baldwin County, Ga., c. h. at Milledgeville. Surface uneven. Drained by the Oconee River, which flows S. E. through the middle of it. Soil generally good, and on the borders of the streams fertile.

Baldwin, Me., Cumberland co. Between Sebago Pond and Saco River.

Baldwinsville, Ms., a village of Templeton, Worcester co. On the Vt. and Mass. Railroad. 64 miles W. by N. from Boston.

Baldwinsville, N. Y., Onondaga co. On the N. side of Seneca River, and possessing a good water power, which is improved for iron works, machine shops, flouring mills, the manufacture of woollens, &c. There is here a flourishing academy. Boats from the Oswego Canal are brought through the Seneca River to this village. 145 miles W. by N. from Albany.

Ballard County, Ky., c. h. at Columbus. In the N. W. corner, in the angle at the junction of the Ohio and Mississippi. Drained by Mayfield's Creek and its branches.

Ballston Spa, N. Y., c. h. Saratoga co. See *Fashionable Resorts*.

Ballston, N. Y., Saratoga co. Surface slightly uneven; soil mostly gravelly loam. 4 miles S. of Ballston Spa, and 26 N. from Albany.

Baltimore County, Md., c. h. at Baltimore city. N. part, stretching from Chesapeake Bay to the Pennsylvania line. Watered by Gunpowder and Patapsco Rivers. Surface hilly.

Baltimore, Md. City, port of entry, and seat of justice of Baltimore co. Situated on the Patapsco River, about 14 miles from its entrance into Chesapeake Bay, and about 200 miles from the ocean by ship channel. It lies 40 miles N. E. from Washington, and 97 S. W. from Philadelphia. The population in 1790 was 13,503; in 1800, 26,514; in 1810, 35,583; in 1820, 62,738; in 1830, 80,625; in 1840, 102,313; in 1850, 169,012. The city is favorably located on the N. side of a bay which is formed by the Patapsco River; having an area, over which it is compactly built, of about two miles on the bay, E. and W., and a mile and a half N. and S. As laid out, it includes a plot of 4 miles square. The ground is slightly uneven, having many gentle elevations; which give the city a fine drainage, and affords many commanding sites for public edifices and private dwellings, especially towards the N. and E. The highest of these elevations, is that on which the Washington Monument is erected, the base of which is 150 feet above the harbor. The streets are laid out with much regularity, generally straight, and crossing each other at right angles, having a width of from 50 to 100 feet. The principal promenade is Baltimore Street, 86 feet wide and 2 miles long, running E. and W. through the centre of the city. A small river, called Jones's Falls, empties into the harbor, passing through the city, and dividing it into two nearly equal parts on the E. and W. Over this stream are three elegant and substantial stone bridges, and four of wood, by which the different parts of the city are conveniently united. The houses are generally built of brick, with a basement of granite or marble, the materials for which are obtained from the vicinity; and they evince a state of general prosperity and substantial wealth, without ostentation or display. Among the public buildings, the city hall, on Holliday Street, is a plain edifice, three stories high, with a portico supported by four massive columns; a substantial and convenient structure, without much pretension to architectural beauty, occupied by the city council and several public offices. The court house, on the corner of Washington and

Monument Streets, is a handsome building, constructed of brick and marble, 145 feet long, 65 wide, and 2 stories high. The building is elevated 10 or 12 feet above the level of the adjacent streets, and is approached by steps in the front and rear. Above the steps is a colonnade, with Tuscan pillars supporting a plain entablature above. The building is crowned with a cupola of imposing appearance. Its interior arrangements are such as to render it one of the finest court houses in the country. The state penitentiary, on the corner of Forrest and Madison Streets, consists of a centre building, and two wings, a little separated from it, on the E. and W.; of which the first is occupied by the keeper's family, officers, and guards; the E. wing, having 320 dormitories, by the male prisoners; and the W. wing by the females. Besides these buildings, there are ranges of workshops extending 250 feet in length and 25 in breadth, in which the prisoners work by day. By night they are confined in their separate cells. Near to the state penitentiary is the county prison, two stories high, with a basement and an attic, surmounted by a neat cupola, and adorned by towers at both the ends. Among the church edifices, the two most distinguished for architectural elegance are the Roman Catholic Cathedral, corner of Cathedral and Mulberry Streets, and the Unitarian Church, corner of Charles and Franklin Streets. The cathedral is a cruciform building, 190 feet in length, and at the transept 177 feet in breadth. Its height, from the foundation to the top of the cross upon the dome, is 127 feet. The building is lighted from the dome by windows not visible below. At the W. end of the building two tall towers arise, which are crowned with Saracenic cupolas, resembling the minarets of a Mahometan mosque. It was originally designed to place an elegant Ionic portico between these towers; but this part of the design remains unexecuted by reason of the great expense of the edifice. This church has one of the largest organs in the United States, having 6000 pipes and 36 stops. It contains two splendid paintings, the one, the descent from the cross, presented by Louis XVI., and the other, St. Louis burying his officers and soldiers slain before Tunis, presented by Charles X. of France. The Unitarian Church, which is also much admired for the beauty of its architecture, is 108 feet in length and 78 feet in width. It has a colonnade in front consisting of four Tuscan columns and two pilasters. From this portico the building is entered through five bronze doors, in imitation of those of the Vatican at Rome, three leading into the body of the house and two into the galleries. The interior is square, supporting a dome 55 feet in diameter. The summit of the cupola is 80 feet high. The organ in this church contains 1400 pipes and 22 stops. St. Paul's Church, Episcopal, with its lofty tower and steeple, the First Presbyterian Church, with two towers, and the First Baptist Church, with its Ionic portico and dome, are prominent buildings of the city. Among the commercial institutions, the Exchange, between Water and Gay Streets, is a splendid building, 225 feet long, and 141 feet deep, and three stories high above the basement. On the E. and W. fronts, the building is adorned with colonnades of six Ionic columns each, the shafts of which are single blocks of Italian marble finely wrought.

The edifice is surmounted with a dome 115 feet above the street. The Merchants' Room, in the Exchange, is 53 feet square. The Custom House is entered from Water Street. It has an extensive saloon divided by colonnades into three apartments. The desks of the officers are ranged between the columns, and the central area is occupied by persons doing business with the department. The Collector's Room is at the upper end of the hall. The buildings of the Maryland University are situated in Lombard Street, and those of St. Mary's College upon the corner of Franklin and Green streets. A number of the public schools have handsome and convenient edifices. A fine building of Gothic architecture has been erected for the accommodation of the institution known as McKim's Free School. Among the benevolent institutions, the Hospital is provided with a spacious and commodious building in the N. W. suburbs of the city, which was erected at a cost of \$150,000. It commands a fine view of the city and surrounding country. On account of the number of monuments which it contains, Baltimore has obtained the name of the "Monumental City." The Washington Monument, at the intersection of Charles and Monument Streets, is a most imposing structure. This is a column of the Doric order, 20 feet in diameter at the base and 14 at the top, rising 180 feet from a base 20 feet high, and bearing a statue of Washington which is 13 feet in height. The whole is constructed of white marble. There is an ascent to the top of the column by a winding staircase within the shaft, where a most commanding view of the city and its environs is obtained. The Battle Monument, at the corner of Calvert and Fayette Streets, is a handsome structure of fine white marble, erected to commemorate the bravery of those who fell in defending the city from the attack of the British on the 12th of September, 1814. The base is Egyptian, in the form of a truncated pyramid, rising about 20 feet from the ground, having on each front an Egyptian doorway, with the winged globe and other Egyptian symbols, under the shadow of a deep overhanging cornice. Above this base rises the column, in the form of a Roman *fascies*, on the bands of which are inscribed, in letters of gold, the names of those who fell in the battle. The column is surmounted by a female figure, emblematical of the city of Baltimore, saved by the event of this engagement. The British force which invaded the city in this attack consisted of about 12,000 troops, and a squadron of 40 or 50 vessels. Fort McHenry at the entrance of the harbor from Patapsco Bay, was bombarded by sixteen ships from the squadron for twenty-four hours. These, being repulsed, drew off. The troops, to the number of 9000 men, landed at North Point, and proceeded to within six miles of the city, where they were met, on the 12th of September, by the Baltimore brigade, under General Stryker, consisting of 3,200 men. In the severe battle which ensued the British commander, General Ross, was killed. The Americans retreated towards the city, and were slowly followed on the next day by the enemy; but fearing lest their own retreat should be cut off, which was contemplated, they hastily returned on board their fleet, and left the Chesapeake. — Baltimore is well supplied with pure and wholesome water. In different parts of the city

are public fountains, supplied by springs, enclosed by circular iron railings, and covered by small open temples, consisting of columns supporting a dome, which answer both a useful and an ornamental purpose. But the chief supply is by means of an aqueduct, in which water is brought from Jones's Falls, a distance of about half a mile, into a reservoir in Calvert Street, and thence distributed to every part of the city. Baltimore enjoys great facilities both for foreign and domestic trade. The harbor is very fine, consisting of three parts. The entrance to the outer harbor, between Fort McHenry and the Lazaretto, is no more than about 600 yards in width, with 22 feet of water. This width gradually increases, with the same depth of water, for a mile and a quarter, where it is again contracted to one fourth of a mile, and forms the entrance to the second or middle harbor, over a channel of about 12 feet of water. Above this, which is called Fell's Point, the harbor again expands into an ellipse, half a mile in width and a mile long, having a depth of 15 feet. The third or inner harbor, called the Basin, has a depth of 10 feet, and extends nearly into the middle of the city. Vessels of 500 or 600 tons can lie at the wharves near Fell's Point, and those of 200 tons or more can come into the city through the inner harbor. A marine telegraph is located on Federal Hill, which communicates with a signal on the Chesapeake Bay, to give notice of the approach of vessels through the bay. In respect to domestic commerce, this city possesses distinguished advantages. By its natural position it must necessarily draw to itself most of the trade of Maryland, one half of that of the great state of Pennsylvania, and no inconsiderable portion of that of the Western States. And then, by the means which its own enterprise has provided, these natural advantages are greatly increased. It has lines of steam packets running to Philadelphia and Norfolk, and of sailing packets to New York, and to other large ports on the Atlantic coast. The communication of Baltimore with the surrounding country is now greatly facilitated and extended by railroads. One chain connects the city with Philadelphia and New York. The Baltimore and Susquehanna Railroad extends to York, in Pennsylvania, and thence by another route connects the city with Philadelphia. The Baltimore and Ohio Railroad, which is designed to connect the city with Wheeling, on the Ohio River, is in operation as far as Cumberland, near the foot of the Alleghany Mountains, and when carried through to Wheeling, will open the most direct and speedy communication between the valley of the Mississippi and the Atlantic coast. A branch from this road connects the city with Washington, a distance of about 40 miles, and thence extends by an almost continuous route to New Orleans. As a market for tobacco, Baltimore is second to no other, and has been reckoned the greatest flour market in the world. The manufactures of this city are not less important to its prosperity than its commerce. A great amount of water power exists in the vicinity, which has been made extensively available for manufacturing purposes. Upon Jones's Falls, the small stream which passes through the city, there is a succession of mill sites, which are improved for manufacturing purposes. The Patapsco River, though not large, has a fall of about 800 feet, through a distance

of 30 miles out of Baltimore, affording numerous and valuable situations for mills and factories. There are, within 20 miles of the city, 60 or more flouring mills; also numerous manufactories of cotton and woollen fabrics, of powder, paper, iron, copper, glass, steam engines and other machinery, chemicals, tobacco, &c. The literary and scientific institutions of Baltimore are various and respectable. The Maryland Institute, established for the promotion of the mechanic arts, has a fine chemical laboratory, and philosophical apparatus. The Maryland Academy of Sciences and Literature has its library and collections in the Atheneum buildings. There is also the City Library, the Apprentices' Library, and the Exchange Reading Rooms. The Maryland University, and St. Mary's College, which latter institution is under the direction of the Roman Catholics, are located in this city. For the particulars of these institutions, the reader is referred to the article on Colleges in this work. The charitable and benevolent institutions of the city are also numerous, among which, besides the Hospital, already noticed, there are the Almshouse, several orphan asylums, a City Dispensary, and various other associations for the relief of poverty and distress. There are in the city something over 40 churches of different denominations. The Roman Catholics, by whom Baltimore was originally settled, are the most numerous. They have six church edifices, including their great cathedral. The Methodists have 9; the Episcopalians 5; the Presbyterians 5; the Baptists 4; the Unitarians 1; besides those of the Lutherans, German Reformed, and Friends.

Baltimore was first laid out as a town in 1729. It contained only 50 houses in 1765. In 1797 it was chartered as a city. Owing to its eminent natural advantages, it has had a rapid growth in population and in wealth. The municipal government is vested in a mayor and city council. The mayor is elected for two years, by twelve electors, one from each ward, chosen by the people.

Baltimore, O., Fairfield co. On the Ohio Canal, which intersects the village. There is a considerable water power here applied to the flouring business, the manufacture of woollen cloths, &c. 32 miles S. W. from Columbus.

Bangor, Me., city and seat of justice of Penobscot co., is at the head of navigation on the W. side of Penobscot River, where it is entered by the Kenduskeag, 30 miles N. by E. from Belfast Bay, and about 60 miles from the open sea. It is 66 miles E. N. E. from Augusta. — The first settlement in this place, by the whites, was made in the winter of 1769–70. In 1772, the plantation, *Kenduskeag*, as it was then called, consisted of twelve families. In 1790, the population of Bangor was 169; in 1800, 277; in 1810, 850; in 1820, 1221; in 1830, 2868; in 1840, 8627; and in 1850, 14,432. — The compact part of the population is on both sides of Kenduskeag stream, which is about 190 yds. in width at its mouth, over which are three bridges, and on which, at the foot of the falls, about a mile from the city, are numerous mills. The bridge across the Penobscot, 100 rods above the mouth of the Kenduskeag, to the pleasant town of Brewer, is about 440 yards in length. It cost \$50,000. The basin at and below the mouth of the Kenduskeag, where the vessels lie to receive their cargoes, is 90 rods in

width, and affords good anchorage. The tide here generally rises about 17 feet. Ship building is extensively pursued at this place; but commerce in lumber, of all the various kinds in use, is the principal occupation of the inhabitants. An immense amount of that article is annually rafted down the rivers, and transported to almost all parts of the world. Bangor is the greatest depot for lumber on the continent of America. — On the Penobscot River, and its tributary streams, above Bangor, are between 300 and 400 saw mills, capable of cutting an immense amount of lumber annually; all of which, except what is used in building, must be shipped at the harbor of Bangor. The value of the boards, timber, clapboards, shingles, oars, scantling, wood, &c., shipped at this port, varies from one to two millions of dollars annually. A large number of vessels are annually employed, during the season of navigation, in freighting lumber, timber, &c., to various places, besides others engaged in foreign commerce and in the fisheries. — Bangor was incorporated as a town in 1791, and in 1834 it became a city. — The site of this city is pleasant, commanding fine views of the rivers and the adjoining country. The buildings, both public and private, are constructed with neatness and taste, and some in a style of superior elegance. There are several handsome church edifices and other public buildings. The public houses are excellent, among which is the Bangor House. The Custom House is a new and beautiful building of granite. The buildings of the Theological Seminary are beautifully situated in the most elevated part of the city. Conveyances for travellers from the city are frequent and comfortable both by land and water. A railroad is in operation to Oldtown, 12 miles, and steamboats ply to and from Portland and Boston during the season of navigation, which generally continues eight or nine months in the year. The great Eastern Railroad from Boston has reached Waterville, and will soon be extended to Bangor; and at no very distant period, doubtless, to the British province of New Brunswick. Excursions to this queen city of the east are becoming quite fashionable in the summer months. — Bangor is on one of the noblest rivers in the Northern States — the product of an almost countless number of tributary streams. Bangor is seated at the natural outlet of these mighty waters, as the mart of one of the most extensive and one of the richest alluvial basins east of the Ohio valley. It is true that this section of country is in a high degree of latitude, and that the icy chains of winter are felt with greater force and for a longer period than in more southern climes. But this seeming disadvantage is more than compensated by the unrivalled purity of the air and water — two of the indispensable requisites of health and longevity. There is probably no portion of country in the world where the great staples of wheat, beef, and wool can be produced with greater facility, where surplus produce can find a market at less expense, or where the industrious agriculturist can reap a more sure reward. On a comparison of the present population of this immense territory, extending from tide water to Madawaska, with that of older settlements of a less fertile soil, of less navigable facilities, and in nearly as high a degree of latitude, the mind is favorably impressed with the flattering prospects of the valley of the Penobscot, and of Ban-

gor, which must ever possess superior advantages as a mart of trade.

Bangor, N. Y., Franklin co. Drained by Little Salmon River, and some branches of the Salmon. The surface is level; the soil good. 220 miles N. N. W. from Albany.

Barbour County, Ga., c. h. at Clayton. In the S. E. angle separated by the Chattahoochee from Georgia. Surface rolling; soil fertile on the margins of the streams.

Barbour County, Va., c. h. at Philippa. In the N. W. part. Uneven and rough. Watered by the E. fork of Monongahela, which flows through it from S. to N.

Barboursville, Ky., c. h. Knox co. 130 miles S. E. from Frankfort.

Barcelona, N. Y., Westfield, Chautauque co. Port of entry, and a place of considerable trade. Situated on Lake Erie, 51 miles S. W. from Buffalo, and 343 W. from Albany.

Bardston, Ky., c. h. Nelson co. On the E. side of Beech Fork, a branch of Salt River. Cotton and woollen cloths are manufactured here to some extent, steam power being employed. St. Joseph's College (Roman Catholic) is located here, which has one handsome four-story building. (See *Colleges*.) This is one of the handsomest towns of the west, and contains an enterprising, intelligent, and remarkably moral population. 40 miles S. E. from Louisville, and 50 S. W. from Frankfort.

Baring, Me., Washington co. Bounded N. by the St. Croix River, E. by Calais, and W. by a large and beautiful pond which empties into the St. Croix. 209 miles N. E. by E. from Augusta.

Barker, N. Y., Broome co. Tioughnioga River and some of its tributaries water this town. Its surface is uneven; its soil well adapted to grazing. 12 miles S. from Binghampton, and 135 S. W. from Albany.

Barkhamstead, Ct., Litchfield co. Watered by branches of Farmington River. The soil is more particularly adapted to grazing. First settled 1746. Incorporated 1779. Granite, iron ore, and limestone are found here. The hilly part of the town presents some fine scenery. *Hitchcockville*, N. of the centre of the town, is a flourishing manufacturing village, with great water privileges.

Barnard, Vt., Windsor co. It is watered by Broad Brook and Locust Creek. In the centre is the village, and a beautiful pond. The surface is hilly, and the soil well adapted to grazing. 21 miles N. W. from Windsor, and 37 S. from Montpelier.

Barnesville, O., Warren township, Belmont co. 55 miles N. from Marietta, and 100 E. from Columbus.

Barnesville, O., Belmont co. A place of active business, where steam is applied for manufacturing purposes. 30 miles S. W. by W. from Wheeling, and 101 miles E. from Columbus.

Barnet, Vt., Caledonia co. On Connecticut River, at the Fifteen Mile Falls, and opposite Lyman, N. H. It has a good soil, and is an excellent farming town, with slate and iron ore. It has a great water power on Passumpsic and Stevens Rivers. On the latter are falls of 100 feet in the distance of ten rods. There are a number of pleasant and fertile islands in the river, between this place and Lyman. The head of boat navigation on Connecticut River is at the lower village in this town, viz., McIndoes's Falls. The principal places of business are at this vil-

lage, at the village at Stevens's mills, and at Passumpsic village. 11 miles S. from Danville, and 36 E. from Montpelier. The Passumpsic Railroad passes through this town, affording railroad connection with New York, Boston, &c.

Barnstable County, Ms., c. h. at Barnstable. This county includes the whole of Cape Cod. The whole length of the cape is 65 miles, and the average breadth about 5 miles. Below the town of Barnstable the county is quite sandy, so much so that the people are generally dependent on Boston and other towns for a large proportion of their meats and breadstuffs. This deficit is amply compensated by the unrivalled privileges enjoyed, and well improved by them, in the cod, mackerel, and other fisheries. This county has but little wood, but it is well stored with peat, and an abundance of pure, soft water.

Barnstable, Ms., c. h. Barnstable co. Pleasantly located at the head of Cape Cod. Its harbor is formed by Sandy Neck, and is good for vessels of 8 feet draught of water. From this place packets constantly ply to Boston, and, in the summer months, steamboats run between this place, Plymouth, and Boston. There are a number of pleasant villages in the town. West Barnstable village is 4 m. from the court house. Hyannis is 6 S from it, and has become, by an expensive breakwater, a most important harbor, perfectly safe from all winds. Oysterville, Centreville, and Cotuit, are on the south side of the cape, and have good harbors for small vessels. This town has numerous ponds, a valuable cranberry meadow, some fine upland, and extensive salt marshes. 65 miles S. E. from Boston.

Barnstead, N. H., Belknap co. Not mountains, but has large swells of land, good for grazing. Soil easy of cultivation and productive. 20 miles N. E. from Concord.

Barnsville, Ga., Pike co. On the Western Railroad. 40 miles from Macon, and 65 W. from Milledgeville.

Barnwell District, S. C., c. h. at Barnwell. S. part, between the South Edisto and Savannah Rivers. It is drained by the Combahee and Salkahatchie Rivers, and contains several sulphur springs. The Hamburg and Charleston Railroad crosses the N. part.

Barnwell, S. C., c. h. Barnwell district. On Turkey Creek, near the great Salkahatchie River. 100 miles S. by W. from Columbia.

Barre, Ms., Worcester co. Surface elevated. Soil good. Drained by several head branches of the Ware River. A busy town, with a variety of miscellaneous manufactures. 60 miles W. by S. from Boston.

Barre, N. Y., c. h. Orleans co. On the Erie Canal. Drained by several small streams. Surface undulating; soil suitable for the growth of grass and grain. 257 miles N. of W. from Albany.

Barre, Vt., Washington co. One of the best farming towns in the state. It is well watered by Stevens and Jail branches of Winoski River. Inexhaustible quantities of excellent granite are found here. 6 miles S. E. from Montpelier. The Vermont Central Railroad passes through the town.

Barren County, Ky., c. h. at Glasgow. S. central. Watered by Little Barren and the Beaver branch of Big Barren River, a tributary of Green. Surface slightly uneven; soil of medium quality.

Barrington, N. H., Strafford co. The surface broken and rocky; the soil chiefly a gravelly loam. There are no less than 13 ponds of considerable magnitude in this place, from whence issue streams. On Isinglass River is a fall of 30 feet. Two miles from the centre of the town is a remarkable cavern, called the *Devil's Den*. Granite and iron ore are plenty. 20 miles N. W. from Portsmouth, and 30 E. from Concord.

Barrington, N. Y., Yates co. This town lies E. of Crooked Lake, and is drained by a number of small streams. The surface is undulating, and the soil good. 193 miles W. from Albany.

Barrington, R. I., Bristol co. This small town is well watered by Palmer's River, and by an inlet of Warren River, over which is a bridge. The soil of the town is of a fertile sandy loam, and quite productive. Large quantities of seaweed are collected on its shores. A large tract in Barrington, called the "Cove," now covered with water to a considerable depth, is supposed to have once been a forest, as timber and fuel are obtained from its bottom. Some salt is made in this town, and shell and other fish are abundant. 8 miles E. N. E. from Providence.

Barry County, Mn., c. h. at Hastings. S. W. central. Watered chiefly by Thorn Apple River. Surface undulating and broken; soil fertile.

Barry County, Mo., c. h. at McDonald. In the S. W. corner, bordering on Arkansas. Surface hilly; soil mostly good.

Barry, Pa. A N. W. township of Schuylkill co. Watered by Deep Creek, a branch of the Susquehanna River. Surface mountainous, with fertile valleys. 76 miles N. W. from Harrisburg.

Bart, Pa. A S. E. township of Lancaster co. Watered by a head branch of Octarara Creek. 55 miles E. from Harrisburg.

Bartholomew County, Ia. c. h. at Columbus. S. E. central. Soil very fertile. The E. branch of White River flows S. through the middle of it. It is also traversed by the Madison and Indianapolis Railroad.

Bartlett, N. H., Coos co., lies at the foot of the White Mountains, on the E. side. The Saco River meanders through it.

Bartlett, Pa. A township of Jefferson co., on both sides of Union River.

Barton, N. Y., Tioga co. Situated partly between the Susquehanna and Chemung Rivers, and watered by Cayuta Creek. Surface hilly; soil rather sterile, except the valleys, which are very fertile. 15 miles W. from Oswego, and 181 miles S. W. from Albany.

Barton, Vt., Orleans co. Watered by Barton River. A thriving town, with a good hydraulic power. 42 miles N. E. from Montpelier.

Baskingridge, N. J., Somerset co. A beautiful and healthy place, lying on high ground. 46 miles N. by E. from Trenton.

Bastrop County, Ts., c. h. at Bastrop. Situated on both sides of the Colorado.

Bastrop, Ts., c. h. Bastrop co. On E. bank of the Colorado, 40 miles S. E. from Austin.

Batavia, N. Y., Genesee co. Watered by Tonawanda Creek, which winds through the town. The surface is level; the soil fertile. The railroad from Albany to Buffalo passes through it. 285 miles W. from Albany.

Batavia, O., c. h. Clermont co. On the N. bank of the E. fork of Little Miami River, 96 miles S. W. from Columbus.

Bates County, Mo., c. h. at Batesville. On both sides of Osage River. Mostly prairie.

Batesville, As., c. h. Independence co. 140 miles S. W. from Little Rock.

Bath, Is., c. h. Mason co.

Bath County, Ky., c. h. at Owingsville. Licking River washes its north-eastern border.

Bath, Me., city, Lincoln co., lies on the W. bank of the Kennebec River, 12 miles from the sea, 31 miles S. from Augusta, and 32 N. E. from Portland. The population in 1830, was 3773; in 1840, 5141; in 1850, 3020.—An attempt was made by a missionary to settle this place, and preach to the fishermen as early as 1670. But the Indians would not permit it. The first permanent settlement was made in 1756. The town is built on a gentle declivity, and extends from a mile and a half to two miles along the river, and nearly a mile back. It is handsomely laid out, and contains several elegant church edifices, and other buildings, public and private, which are an ornament to the place.—The principal business of Bath is commerce, trade, and ship building, particularly the latter, for which it is admirably well located. This place ranks as the third in the United States in respect to this important interest. The tonnage of the district of Bath including the waters of the Kennebec River, in 1850 was 103,795. This place is noted for its accomplished shipmasters and fine sailors.—The harbor of Bath is seldom obstructed by ice. Regular lines of steamboats ply between this place and Portland and Boston, about three fourths of the year. A branch railroad connects it with the Portland and Augusta Railroad at Brunswick, about 8 miles distant.

Bath, N. C., Beaufort co. 143 miles E. by S. from Raleigh, on the Pamlico River.

Bath, N. H., Grafton co. On the Connecticut. The Green Mountains on the W. and the White Mountains on the E. effectually shield it from high winds and long storms. The Ammonoosuc River waters the S. E. part, furnishing fine water privileges; it has a convenient fall at the lower village. The soil on the hills is a reddish loam; in the valleys it is alluvial. 80 miles N. W. from Concord.

Bath, N. Y., c. h. Steuben co. Watered by Conhocton River and some of its branches. The surface is hilly, but embraces much good tillable land. 216 miles W. by S. from Albany.

Bath County, Va., c. h. at Bath. Central. Watered by Cowpasture, Jackson, and the head branches of James Rivers. Surface rough and elevated; soil tolerably fertile.

Bath, Va., c. h. Bath co. 164 miles W. N. W. from Richmond. Here are two springs, useful in rheumatic and other complaints; one the Warm, the other the Hot Spring.

Baton Rouge, La. Capital of the state, and seat of justice of East Baton Rouge Parish. Situated on the E. bank of the Mississippi, 117 miles above New Orleans. It consists chiefly of one street, which is built on a gentle swell of land, 40 or 50 feet above high-water mark. The seat of government has lately been established at this place. It contains four or five churches of different denominations, a court house, jail, penitentiary, and U. S. barracks, which are fine buildings, standing on elevated ground, a short distance E. of the town. This is the seat of Baton Rouge College. (See *Colleges*.) As it is only since December, 1849, that Baton Rouge

became the capital of the state, no account of the public buildings can be given at present.

Baton Rouge, East, Parish, La., c. h. at Baton Rouge. On the E. bank of the Mississippi, between that river and the Amite. It contains the first land in ascending the Mississippi which is elevated above inundation.

Baton Rouge, West, Parish, La., c. h. at West Baton Rouge. On the W. bank of the Mississippi, between that river and the Atchafalaya Bayou. Surface level; soil very fertile on the borders of the streams; the remainder is liable to inundation.

Battle Creek, Mn., Calhoun co. Situated at the mouth of Battle Creek, which possesses a great water power. 12 miles W. from Marshall. The Northern Michigan Railroad passes through it.

Bayou Chicot, La., c. h. St. Landry. 250 miles W. N. W. from New Orleans.

Beardstown, Is., Cass co. On the E. side of Illinois River. 48 m. W. by N. from Springfield.

Beattystown, N. J., Mansfield, Warren co. On Musconetcong Creek, at the western base of Schooley's Mountain. 58 miles N. from Trenton.

Beaufort County, N. C., c. h. at Washington. A central county, on both sides of Pamlico River and Sound. Surface low, and at times inundated. Cotton and rice are the principal productions.

Beaufort, N. C., c. h. at Carteret co. Port of entry, on the Atlantic, 11 miles N. W. from Cape Lookout. It has an excellent harbor, admitting vessels requiring 14 feet of water. It is protected by Fort Macon, on Bogue Point, at the mouth of the harbor. 168 miles S. E. from Raleigh.

Beaufort District, S. C., c. h. at Coosawatchie. In the S. angle of the state. Watered in the interior by the Coosawatchie and some other rivers. It embraces Hilton Head, St. Helena, Port Royal, and several other islands.

Beaufort, S. C., Beaufort co. A port of entry on Port Royal Island, on the W. bank of Port Royal River. A bar prevents the entrance of vessels drawing more than 11 feet. 75 miles S. W. from Charleston. 146 S. from Columbia.

Beaver County, Pa., c. h. at Beaver. On the W. border, on both sides of the Ohio and Beaver Rivers. It has an uneven surface, but a fertile soil.

Beaver, Pa., c. h. Beaver co. On the Ohio River, at the mouth of Big Beaver River. It stands on an extensive plain, and is handsomely built.

Beaver, Pa. A N. W. township of Crawford co.

Beaver, Pa. A S. W. township of Union co.

Beaver Islands, Mn., Michilimackinac co. A Mormon settlement on the islands of the same name, in the N. part of Lake Michigan.

Beccaria, Pa. A S. township of Clearfield co.

Becket, Ms., Berkshire co. It is mountainous, broken, and rocky, but well wooded. The soil is hard and cold. 15 miles E. S. E. from Lenox, and 65 E. from Albany.

Bedford, Ia., c. h. Lawrence co. About 3 miles N. from the E. fork of White River, and 71 miles S. W. from Indianapolis.

Bedford, Ky., c. h. Trimble co. 1 mile from this village is a mineral spring impregnated with salts and sulphur, which attracts numerous visitors. 41 miles S. W. by W. from Frankfort.

Bedford, Ms., Middlesex co. The Shawshcen River rises in this town, and the Concord passes

its W. border. 15 miles N. W. from Boston, and 5 N. E. from Concord.

Bedford, N. H., Hillsboro' co. On the Merrimac. It has considerable intervale land. A remarkable gulf and precipice are within its limits. A brook passes over the precipice, and falls about 200 ft. within the distance of 100 yds. Here are found several excavations in solid stone, large enough to contain many persons. 8 miles N. E. from Amherst, 21 S. from Concord. The Nashua and Concord Railroad passes on the opposite side of the Merrimac.

Bedford, N. Y., c. h. Westchester co. Half shire town with White Plains, which lies 15 miles S. Watered by Croton River, and several other streams. The surface is hilly and broken, and the soil light and stony. 109 miles S. from Albany.

Bedford County, Pa., c. h. at Bedford. On the S. border. Watered by tributaries of the Juniata and Potomac Rivers. Surface mountainous, with fertile valleys. Iron ore and bituminous coal are found here.

Bedford, Pa., Bedford co. On the Roystown branch of the Juniata River, and is celebrated for its mineral springs.

Bedford County, Te., c. h. at Shelbyville. S. central. On the head waters of Duck River. Surface undulating; soil fertile.

Bedford County, Va., c. h. at Liberty. S. central. Between the James River and the Roanoke. Bounded W. by the Peaks of Otter, in the Blue Ridge, separating it from Botetourt co. The interior is drained by Goose and Otter Creeks. Surface elevated; soil fertile, yielding fine crops of tobacco, Indian corn, and oats.

Bedminster, N. J., Somerset co. A hilly town, with a fertile soil, composed of lime, clay, and red shale. 8 miles N. W. from Somerville.

Bedminster, Pa. A central township of Bucks co.

Beekman, N. Y., Dutchess co. Drained by the Fishkill and several other streams. The surface is hilly, and the soil rich, gravelly loam. 14 miles S. E. from Poughkeepsie, and 87 miles from Albany.

Beekmantown, N. Y., Clinton co. Watered by several small tributaries of Lake Champlain, and containing Chazy and Chateaugay Lakes. It extends across the county a distance of 37 miles. On the E. it is level or slightly uneven; on the W. hilly and mountainous. 8 miles N. from Plattsburg, and 70 N. from Albany.

Belair, Md., c. h. Harford co. 53 miles N. by E. from Annapolis.

Belchertown, Ms., Hampshire co. Soil excellent, and well improved. Separated from Ware by Swift River on the N. 75 miles W. from Boston, and 17 N. E. from Springfield.

Belfast, Me., port of entry and shire town of Waldo co., is beautifully situated on Belfast Bay, on the W. side of Penobscot River. It lies 40 miles E. from Augusta, 30 S. from Bangor, 30 N. from Thomaston, and across Belfast Bay, 12 W. from Castine. The town was incorporated in 1773, but not permanently settled until about the year 1785. There is considerable good land in Belfast. In 1837, it produced 3492 bushels of excellent wheat. The Paasaggassawakeag River winds along near the centre of the town, and adds much to the appearance of the place. The harbor is very good, being guarded by Long and Sears's Islands, and has anchorage for a great number of vessels of the largest class.

—The proximity of Belfast to the sea, its site in relation to Penobscot River, and its excellent harbor, which was never known to have been obstructed by ice but twice, (1780, 1815,) give it peculiar advantages for foreign commerce, the coasting trade, and the fisheries. Considerable ship building is carried on at this place. The tonnage of the district of Belfast in 1850 was 44,335 tons. The principal exports are lumber and fish. Population, 1810, 1259; 1820, 2026; 1830, 3077; 1840, 4186; 1850, 5052. Belfast, although irregularly built, is a pleasant town, and on account of its fine open harbor is an important winter mart of the trade of Penobscot River.

Belfast, N. Y., Alleghany co. Watered by the Genesee River, and some of its tributaries. The Genesee Valley Canal leaves the river at this place. Surface uneven; soil, sandy loam. 262 miles W. from Albany.

Belfast, Pa. An eastern township of Bedford county.

Bellknop County, N. H., c. h. at Gilford. Central. On the south side of Lake Winnepesaukee. It has many other beautiful lakes and ponds within its limits. Some of the lands are high, and present a great variety of picturesque scenery. Though rough and uneven, and in some parts rocky, the soil is generally productive. The streams are numerous, rapid, and durable, and have a great hydraulic power.

Bell County, Ts., c. h. at Bellton.

Bellefontaine, O., c. h. Logan co. On the railroad from Cincinnati to Sandusky city, and 69 miles N. W. from Columbus.

Bellefonte, Pa., c. h. Jackson co. On Paint Rock River, about 2 miles W. from Tennessee River, and 166 miles N. E. from Tuscaloosa.

Bellefonte, Pa., c. h. Centre co. On Spring Creek, a branch of Bald Eagle River. 85 miles W. from Harrisburg. A place of extensive trade in the iron business. Connected with West Branch Canal by Bald Eagle and Spring Creek Canal.

Belleville, Is., c. h. St. Clair co. 13 miles E. S. E. from St. Louis, and 100 S. by W. from Springfield. Steam power is employed in some large flouring mills, and there are various other manufactures.

Belleville, N. J., Essex co. On the W. side of Passaic River. It has fine water power, and cotton and woollen, paper, dyeing and printing, and flouring mills.

Bellenille, Ts., c. h. Austin co.

Bellingham, Ms., Norfolk co. Soil light and sandy. It is watered by Charles River, and has a good hydraulic power. The factory villages lie at the N. part of the town, 4 miles from the centre village. 28 miles S. W. from Boston, and 18 S. W. from Dedham, with which it is connected by the Norfolk County Railroad.

Belmont, Me., Waldo co. Watered by the Passagassawakeag, which rises in a pond of that name, and empties at Belfast, about 6 miles N. It is 34 miles E. from Augusta.

Belmont, N. Y., Franklin co. Chateaugay and Trout Rivers flow through this town, and it contains several small lakes. The surface is hilly, and in some parts mountainous. 10 miles S. E. from Malone, and 202 from Albany.

Belmont County, O., in the eastern part of the state, having the Ohio River on its eastern boundary, separating it from Ohio co. in Virginia. On the W. on the N. W., and on the N. E., it is bounded by the counties of Guernsey, Harrison,

and Jefferson, and by Munroe on the S. Its greatest length, on the northern line, is 30 miles, and its breadth 20, having an area of 520 square miles. The high table land between the valleys of the Ohio and the Muskingum Rivers divides this county into two nearly equal sections. Small creeks flow eastward into the Ohio, and westward the Will's and Stillwater branches of the Muskingum flow into that river. The whole surface of this county is uneven, consisting of a series of hills, with deep, narrow intervening valleys. Yet the soil is almost uniformly productive; suitable for grazing and for the culture of wheat and corn. St. Clairville is the chief town.

Bellvue, Is., c. h. Jackson co.

Belvidere, Is., c. h. Boone co. On the E. head waters of Rock River.

Belvidere, N. J., c. h. Warren co. At the junction of Pequest River with the Delaware. 57 m. N. N. W. from Trenton. The Pequest has a fall here of about 50 ft. within a mile from its mouth, affording a heavy water power. There is also a fall of about 22 feet in the Delaware, and these two privileges together are greater than any others in the state. A fine bridge here crosses the Delaware.

Belvidere, Vt., Lamoille co. A considerable part is mountainous, and unfit for cultivation. Watered by two branches of the River Lamoille. 18 miles N. W. from Hyde Park, and 45 N. W. from Montpelier.

Bellows' Falls, Vt., Windham co., lies 93 miles S. by E. from Montpelier. See *Rockingham, Vt.*

Benicia, Ca., Solano co. On the strait between San Pablo and Suisun Bays, about 40 m. N. E. from San Francisco. Ships of the largest size can lie here close to the town, which is laid out on a handsome slope towards the hills. It is a port of entry, with an arsenal, navy station, and docks of the Pacific Steam Packet Co. for refitting their steamers.

Bennington, N. H., Hillsboro' co. Taken from Greenfield, Francetown, Deering, and Hancock, in 1842.

Bennington, N. Y., Wyoming co. Drained by the Cayuga and Tonawanda Creeks. The surface is rolling, the soil fertile, consisting of a moist clay. 256 miles W. from Albany.

Bennington County, Vt. Bennington and Manchester, shire towns. In the S. W. the low lands are excellent, but the largest portion of the county is mountainous, and fit only for grazing. Many streams rise in the mountains, and descend to the ocean, some by the Hudson and some by the Connecticut, affording a great hydraulic power. Iron ores of good quality are found in this county, and large quantities of beautiful white marble.

Bennington, Vt. Half shire town of Bennington co. The other is Manchester, 25 m. distant. Of good alluvial soil, delightfully enriched by evergreen mountains. It abounds in iron ore, manganese, ochre, and marble. The streams are numerous, and afford excellent mill sites. 120 miles S. W. by S. from Montpelier. The manufacture of a new species of earthen ware, or rather stone ware, of a fine quality, has recently been commenced here. It is from a mixture of flint, quartz, and feldspar, which unites, with much lightness and beauty, the advantages of great general strength, and especially the ability to stand fire, which is an important recommendation. The patent of the manufacturers is for the

enamel, or the burning in of the colors, which produces a brilliant, glossy surface, impervious to the action of all acids, and to all outside appliances.

Bensalem, Pa. A S. township of Bucks co.

Benson, Vt. Rutland co. On Lake Champlain. The waters are generally brackish and unpleasant. 75 miles S. W. from Montpelier.

Benton County, Aa., c. h. at Jacksonville. N. E. part, between the Coosa and the state of Georgia. Drained by the Tallapoosa and branches of the Coosa Rivers. Surface mostly level, soil fertile.

Benton County, As., c. h. at Bentonville. In the N. W. corner, on the height of land between waters of the White River and those of the Neosho.

Benton, As., c. h. Sabine co. On the Sabine Fork of the Wachita. 24 miles S. W. from Little Rock.

Benton, Is., c. h. Franklin co. 151 miles S. S. E. from Springfield.

Benton County, Fa. On the Gulf coast of the peninsula, S. of the Withlacochee River.

Benton County, Ga., c. h. at Oxford. On the W. border N. of the Wabash.

Benton County, Io., c. h. at Vinton. E. central.

Benton, Ky., c. h. Marshall co.

Benton County, Mi. On the E. side of the Mississippi. In the N. part of the state.

Benton, Me., Kennebec co. 25 miles W. from Augusta.

Benton, Mi., c. h. Yazoo co. Nearly equidistant between Big Black and Yazoo Rivers. 50 miles N. W. from Jackson.

Benton, Mo., c. h. Scott co. 222 miles S. E. from Jefferson City.

Benton County, Mo., c. h. at Warsaw. S. W. central. On both banks of the Osage River, which flows through it from W. to E. Surface uneven; soil very fertile.

Benton, N. H., Grafton co. It is watered by branches of Oliverian Brook and Wild Amonoosuck Rivers. Moosehillcock and Owl-head Mountains lie within its limits. It presents a rough and mountainous aspect, and the soil in some parts is not capable of cultivation. It was formerly called Coventry. 70 m. W. N. W. from Concord, and 12 E. S. E. from Haverhill.

Benton, N. Y., Yates co. The surface of this town consists of broad plains and gentle swells. The soil is mostly clay, and sandy and gravelly loam. 207 miles W. from Albany.

Benton County, O., c. h. at Marysville. In the valley of the Willamette.

Benton County, Te., c. h. at Camden. W. part. Watered by the Tennessee River, which runs along its E. boundary, and by some of its branches. Surface level; soil fertile.

Bentonville, Te., c. h. Polk co. On Four-mile Branch, 174 miles S. E. from Nashville.

Bergen County, N. J., c. h. at Hackensack. In the N. E. corner, between the Hudson on the E. and the N. Y. boundary on the W. Watered by the Hackensack and Saddle Rivers. The surface in the central part is generally level, or undulating; the W. is mountainous, and on the E. is the lofty trap ridge, known as the *Palisades*, extending its whole width on the Hudson. The soil in the valleys especially, is productive.

Bergen, N. J., c. h. Hudson co. The surface is partly hilly, and the soil, in other parts, somewhat marshy, but fertile. 56 miles N. E. from Trenton.

Bergen, N. Y., Genesee co. Black Creek waters this town, the surface of which is level, and the soil clay, in some parts, and in others calca-

reous loam. 14 miles N. W. from Batavia, and 299, by railroad, N. of W. from Albany. The Rochester and Buffalo Railroad passes through it.

Berkley, Ms., Bristol co. was formerly a part of Dighton, from which it is separated by Taunton River. The noted "Dighton Rock" is in the limits of the town of Berkley. A part of Assenbet Bay is also within the town. 37 miles S. from Boston, and 18 E. from Providence.

Berkley County, Va., c. h. at Martinsburg. On the N. border, in the valley. Drained by affluents of the Potomac, which washes its N. border. Surface rough and broken.

Berkeley Springs, Va., Morgan co. 180 miles N. N. W. from Richmond, in the village of Bath.

Berks County, Pa., c. h. at Reading. In the S. E. part. Watered by the Schuylkill River, which flows through it. Surface mostly mountainous; soil productive. It is crossed by the Schuylkill and Union Canals, and the Reading Railroad.

Berkshire County, Ms., c. h. at Lenox. On the W. border. It is rough and hilly in many parts, but affords considerable fine land. Berkshire is the most elevated county in the state. On the E. side lie the Green Mountains, which shut it away from the rest of Massachusetts, and on the W. are the Taghkanic Mountains, which separate it from the state of New York. The Housatonic and Hoosic are its chief rivers. This county possesses, in rich and inexhaustible abundance, iron, marble, and lime. It is well wooded, and has much water power.

Berkshire Valley, N. J., Jefferson. Morris co. Watered by a branch of Rockaway River, which affords a water power, on which are several forges. 12 miles N. W. from Morristown, and 17 N. from Trenton.

Berkshire, N. Y., Tioga co. Drained by E. and W. Owege Creeks. The surface is hilly, but the soil mostly very productive. 13 miles N. from Owege village, and 168 W. by S. from Albany.

Berkshire, O., 23 miles N. by E. from Columbus.

Berkshire, Vt. Franklin co. Missisco River runs through the S. E. corner, on which is some fine intervalle. Pike River passes through the town, affording some of the finest mill sites in the country. The soil is various, but generally good; surface is diver-sified with gentle swells and vales. 50 miles N. W. from Montpelier, and 22 N. E. by E. from St. Albans.

Berlin, Ct., Hartford co. The villages of Worthington and New Britain are very pleasant. The first manufacture of tin ware in this country was commenced at this place, about the year 1770, by Edward Patterson, a native of Ireland.

Berlin, Me., Oxford co. 100 miles N. from Portland.

Berlin, Ms., Worcester co. Watered by North Creek, a branch of the Assabet. 31 miles W. by N. from Boston.

Berlin, N. H., Coos co. The Androscoggin and Amonoosuck Rivers pass through it; also the railroad from Portland to Montreal. The Androscoggin in this town descends more than 200 feet in a mile or two, and the principal fall, worn through the solid rock, is a great curiosity. 140 miles N. from Concord, and 98 from Portland by the railroad.

Berlin, N. Y., Rensselaer co. Little Hoosic and Kinderhook Creeks, and the Poestenkill, flow through this town. The surface is moun-

tainous; Taghkanic Mountain extending into the E. and Peterboro' into the W. part, the soil in the valley between being quite fertile. 18 miles E. from Troy, and 24 E. by N. from Albany.

Berlin, O. A post town, 89 miles from Columbus.

Berlin, Pa. An E. township of Wayne co., on the Delaware.

Berlin, Vt., Washington co. Watered by Winooski and Dog Rivers, and Stevens's Branch, furnishing good mill sites. The land is somewhat broken, but of strong soil, and good for tillage. 4 miles S. from Montpelier.

Bernalillo County, N. M., c. h. at Albuquerque. On the Rio del Norte, S. of Santa Fe.

Bernard, N. J. A N. town of Somerset co. Hilly and mountainous, with a fertile soil. It contains the village of Brackinridge.

Bernardston, Ms., Franklin co. A township of superior land, considerably elevated, between Fall and Connecticut Rivers. Bald and West Mountains afford delightful scenery; the former is 630 feet above the waters of the Connecticut, 96 miles W. by N. from Boston, and 7 miles N. from Greenfield, on the railroad from Greenfield to Brattleboro'.

Berne, N. Y., Albany co. Watered by Foxes Creek on the W., and two large ponds on the E. It is crossed by the Helderberg Hills, which contain several curious caverns. The soil in the valleys is very fertile, consisting of calcareous loam. 16 miles W. from Albany.

Berne, Pa. In the centre of Berks co., on the W. bank of the Schuylkill, and divided into Upper and Lower townships.

Berrien County, Mn., c. h. at St. Joseph. In the S. W. border, on both sides of the St. Joseph's, at its entrance into Lake Michigan. St. Joseph's, Pawpaw, and Salien Rivers afford fine hydraulic power. Surface rolling; soil various, but mostly productive. Crossed by the Michigan Central Railroad.

Berrien Spring, Mn., c. h. Berrien co. On the W. bank of the St. Joseph River, 15 miles from its mouth, and 192 miles S. W. from Detroit.

Bertie County, N. C., c. h. at Windsor. N. E. part, between the Roanoke, on the S., and Albemarle Sound, where it receives the Chowan on the E. Level, and somewhat marshy.

Berwick, Me., York co. 93 miles S. W. from Augusta, on Salmon River, E. side. On the railroad from Boston to Portland.

Berwick, Pa. An eastern township of Adams co. Watered by Conewago and Beaver Creeks, tributaries of the Susquehanna. Surface level; soil red shale. 41 miles S. W. from Harrisburg.

Berwick, Pa., Columbia co. At Nescopeck Falls, on the N. side of the Susquehanna River. 28 miles S. W. from Wilkesbarre, and 97 N. by E. from Harrisburg.

Bethany, Ct., New Haven co. Some portions are good land and well cultivated, but a large part is mountainous, and fit only for the growth of wood. Beacon Mountain, between Bethany and Nangatuck River, presents some wild and picturesque features.

Bethany, Mo., c. h. Harrison co. 200 miles N. W. from Jefferson City.

Bethany, N. Y., Genesee co. Drained by Tonawanda and Black Creeks. Surface somewhat uneven; soil sandy loam and clay. 291 miles W. from Albany.

Bethany, Pa., c. h. Wayne co. 1 mile W.

from Dyberry Creek, and 165 miles N. E. from Harrisburg. There are glass works here, and other manufactures.

Bethel, Ct., Fairfield co. A pleasant and flourishing village, in the town of Danbury, and about 3 miles N. W. from the centre of that town.

Bethel, Me., Oxford co. 61 miles N. W. from Portland. A fine farming town.

Bethel, N. Y., Sullivan co. The Mongoup and several other small tributaries of the Delaware flow through this town, which also contains several small lakes. The surface is hilly; the soil gravelly loam. 121 miles S. S. W. from Albany.

Bethel, Pa. A southern township of Bedford co. Watered by Great Conoloway Creek and its branches, tributaries of the Potomac. Surface mountainous; soil calcareous loam.

Bethel, Pa. The westernmost township of Berks co. Drained by a head branch of the Swatara. The Blue Ridge bounds it on the N. 52 miles E. from Harrisburg.

Bethel, Pa. A southern township of Delaware co. Watered by Naaman's, a branch of Chester Creek. Surface level; soil clay.

Bethel, Pa. A N. E. township of Lebanon co. Between two head branches of Swatara Creek. Mountainous in the N., and level in the S. Soil mostly gravel.

Bethel, Vt., Windsor co. Watered by branches of White River, and possesses good mill sites. Excellent soapstone is found here in great quantities. The surface is broken and mountainous, but the soil is warm, and good for grazing. Considerable business is done at both villages, E. and W.; the latter is the largest. 31 miles S. by W. from Montpelier, and 30 N. W. from Windsor. The Vermont Central Railroad passes through this town.

Bethlem, Ct., Litchfield co. Hilly, with a gravelly loam, and fit for grazing and the growth of rye. Watered by Pomperaug River, a branch of the Housatonic. 33 miles W. S. W. from Hartford.

Bethlehem, N. H., Grafton co. Drained by Great Ammonoosuck River and one of its branches. Round and Peaked Mountains are in this town. The soil produces good crops of grass and grain. There is plenty of pine timber and sugar maple. Iron ore is found. 100 miles N. W. from Concord.

Bethlehem, N. J., Hunterdon co. Hilly and mountainous on the N. Soil red clay, slate, and loam. 40 miles N. by W. from Trenton.

Bethlehem, N. Y., Albany co. On the Hudson River, and watered by Normanskill, Vlamanskill, and Coeymans Creek. 5 miles S. from Albany.

Bethlehem, O. Post town on the Ohio Canal.

Bethlehem, Pa., Northampton co. 48 miles W. by N. from Philadelphia, and 93 E. from Harrisburg. Situated on the N. bank of the Lehigh River, at the mouth of Manokiey Creek. The ground, rising gradually both from the river and the creek, affords a commanding and beautiful site for the village. The place was settled by the Moravians, under Count Zinzendorf, and has long been celebrated for its excellent female school, conducted by persons of that sect, to which many ladies from the Middle States have resorted for education. It contains a large stone church, in the Gothic style of architecture, with a tower rising from the centre surmounted by a dome. It is 142 feet long and 68 feet wide. In the burying ground, which is laid out with much neatness and

taste, the heads of all the graves lie towards the north. There is a good water power, improved for carrying flouring mills, grist mills, saw mills, &c. A bridge 400 feet in length crosses the Lehigh.

Beverly Farms, Ms. A village in the E. part of the town of Beverly, Essex co.

Beverly, Ms., Essex co. United to Salem by a bridge across the North River, 1500 feet in length. It has a pleasant village at the N. part of the town. The business is much associated with that of Salem. The people are noted for their enterprise in commerce and the fisheries. From the elevated grounds in this town much delightful scenery is presented. A part of the beautiful Wenham Pond lies within its limits. 16 miles N. from Boston, by the railroad.

Beverly, Va., c. h. Randolph co. On the E. fork of the Monongahela River, 205 miles N. W. from Richmond. Built on three parallel streets, in the midst of a well-cultivated and thickly-settled district.

Bexar County, Ts., c. h. at San Antonio. Bexar includes all the western part of the state, most of which is unsettled, and much of it incapable of settlement.

Bibb County, Aa., c. h. at Centreville. Central. On both sides of the Cahawba.

Bibb County, Ga., c. h. at Macon. Central. On both sides of the Ocmulgee. Soil red loam and sand.

Biddeford, Me., York co. On the S. side of the Saco, at its mouth, and connected with the town of Saco by a bridge. 15 miles S. W. from Portland. The falls of the Saco River at this place create an immense water power, upon which large factories have been recently erected; and it has become, along with Saco, the seat of extensive manufactures.

Bienville Parish, La. N. W. central. Drained by tributaries of the Red River, which run S. through it.

Big Beaver, Pa. A northern township of Beaver co., on the W. side of the Beaver River.

Big Flats, N. Y., Chemung co. Chemung River gives name to this town, through which it passes, as do some of its tributaries. The navigable feeder of the Chemung Canal and the New York and Erie Railroad also pass through it. Surface hilly, except on the borders of Chemung River; soil fertile, especially in the valleys. 203 miles S. W. from Albany.

Billerica, Ms., Middlesex co. Watered by the Concord and Shawshen Rivers, and has a pleasant village, on high ground, near the centre. Soil good, and well improved. Billerica Mills village is near the Lowell Railroad, 22 miles from Boston.

Biloxi, Mi., Harrison co. Situated on Biloxi Bay, 227 miles S. E. from Jackson. Site of an early French settlement.

Bingham, Me., Somerset co. On the E. bank of Kennebec River. 118 miles N. N. E. from Portland.

Bingham, Pa. A N. E. township of Potter co., on the New York line.

Binghamton, N. Y., c. h. Broome co. At the junction of the Chenango River with the Susquehanna. 145 miles S. W. from Albany, and 225 miles by the Erie Railroad, N. W. from New York. It belongs to the township of Chenango, and was incorporated as a village in 1813. The Chenango Canal runs northerly from this

place, and unites with the Erie Canal at Utica. The great Erie Railroad passes through it, and extends to Dunkirk, on Lake Erie, 244 miles W. It is also at the head of boat navigation on the Susquehanna River. These various facilities afford to this flourishing place peculiar advantages for business. No place in the state, perhaps, at present, exceeds this in rapid and permanent growth; and it must become an important inland town. Binghamton is surrounded by a rich agricultural and grazing country, which here finds a ready market for its abundant products. There is likewise an extensive water power on the Chenango, which is employed for manufacturing and mechanical purposes. Steam, also, is extensively used. There are large flouring mills, saw mills, plaster mills, tanneries, clothing establishments, and a variety of other manufacturing operations. The Erie Railroad Company have established here a large machine shop and car factory. A bridge here crosses the Susquehanna, and another the Chenango. The place, which was formerly called *Chenango Point*, received its present name in honor of William Bingham, Esq., of Philadelphia, a respected benefactor of the village in its infant state.

Birdsall, N. Y., Alleghany co. Watered by Black Creek and some other streams. Surface slightly uneven; soil clay loam. 260 miles W. by S. from Albany.

Birmingham, Pa. A western township of Delaware co.

Black Brook, N. Y., Clinton co. contains several small lakes, and is drained by Saranac, Au Sable and Little Au Sable Rivers, and Black Brook. The surface is hilly and mountainous, abounding with iron ore. 20 miles S. from Plattsburg, and 154 N. from Albany.

Blackford County, Ia., c. h. at Blackford. N. E. central. Watered by Salamanic River, a tributary of the Wabash, and several small creeks. Soil mostly fertile.

Black Hawk County, Io., c. h. at Astor Falls. E. central. On both sides of the Cedar Fork of the Iowa.

Black Lick, Pa. A southern township of Indiana county, on the Kiskiminitas and Pennsylvania Canal.

Black Rock, N. Y. A town of Erie co. Drained by Buffalo Creek and other small streams flowing into the Niagara River. It embraces Squaw and Strawberry Islands, each containing about 100 acres of land. The line between the U. S. and Canada bounds this town on the W. Surface mostly undulating; soil alluvial. It environs the city of Buffalo on three sides, from the centre of which it is distant about 3 miles, and from Albany W. 325 miles.

Black Rock, N. Y., Erie co. This village, in the town of Black Rock, situated at the foot of Lake Erie, may be considered as a suburb of the city of Buffalo, from which it is not more than two and a half miles distant, and with which it is connected by a railroad. At this point the Erie Canal enters Lake Erie. An immense mole or pier projects into Niagara River, at once forming a harbor for the port and turning water from the river into the canal. The canal is supplied by this means with water for nearly half its entire distance; and by means of the same mole a large water power is obtained at Black Rock, which is used for flouring mills and other purposes.

Blackstone, Ms., Worcester co. Blackstone

River runs through it on the S., and Mill River on the E. There are four villages. The township is broken and uneven, with rather a thin soil. The Providence and Worcester Railroad passes through the south-western part of the town.— 39 miles S. W. from Boston, and 18 N. W. from Providence, R. I.

Bladen County, N. C., c. h. at Elizabeth. In the S. angle, on both sides of Cape Fear River.

Bladensburg, Md., Prince George co. 34 miles W. from Annapolis, and 6 N. E. from Washington. It is a little S. of the railroad from Washington to Baltimore. Celebrated for the battle in 1814, which preceded the capture of Washington.

Blair County, Pa., c. h. at Hollidaysburg. A little S. of the centre of the state, on the eastern slope of the main chain of the Alleghenies, the crest of which forms its western boundary. Watered by the Upper Juniata and its heads.

Blairsville, Ga., c. h. Marion co. 118 miles N. N. W. of Milledgeville.

Blairsville, Pa., Indiana co., is at the junction of Black Lick Creek with Kiskiminitas River, 171 miles W. by N. from Harrisburg, on the Pennsylvania and Ohio Canal.

Blakeley, Ala., c. h. Baldwin co. Opposite to Mobile. It has a good harbor, and the situation is healthy and pleasant, but the attempt to make it rival Mobile has not succeeded.

Blakeley, Ga., c. h. Early co. 203 miles S. W. from Milledgeville.

Blakely, Pa. A N. E. township of Luzerne co., on both sides of the Lackawannock River.

Blanchard, Me., Piscataquis co. 116 miles from Augusta.

Blanford, Ms., Hampden co. A mountainous township, of good grazing land. Branches of Westfield River rise here, and give it a good water power. The Western Railroad passes through Chester village, at the north part. From Boston 119 miles, and from Springfield 21 miles.

Blaudiville, Ky., c. h. Ballard co. 350 miles W. of S. from Lexington.

Bleecker, N. Y., Fulton co., contains Fish and Caroga Lakes, and is drained by Caroga Creek and some small branches of Sacondaga River. Hilly and mountainous, mostly covered with forests. 55 miles N. W. from Albany.

Blenheim, N. Y., Schoharie co. Drained by Schoharie Creek, and some of its tributaries. Hilly and mountainous, and abounds in geological curiosities, the most important of which are the "Bear's Ladder," composed of globular masses of graywacke, and Mineral Hill, a large mass of red sandstone. There is also here an extensive slate quarry, 53 m. S. W. from Albany.

Bledsoe County, Te. S. E. central. On the height of land between the waters of the Cumberland and Tennessee. Watered by Sequatchie River, and has a somewhat mountainous surface.

Blissfield, Mn., Lenawee co. On the N. bank of Raisin River. 71 miles S. W. from Detroit. The Erie and Kalamazoo Railroad passes through it.

Blockley, Pa. A suburb of Philadelphia.

Bloom, Pa. A central township of Columbia co., at the junction of the Susquehanna River and Fishing Creek. Surface level; soil sandy and calcareous loam. 80 miles N. by E. from Harrisburg. It contains the village of Bloomsbury.

Bloomfield, Ct., Hartford co. It was incorporated into a town in 1825. Has a fine soil, cultivated with great industry, producing large crops of grass and grain, with an abundance of choice fruit. 6 miles N. by W. from Hartford.

Bloomfield, Me., Somerset co. On Kennebec River, 33 miles N. from Augusta. A fine township of land.

Bloomfield, Ia., c. h. Greene co. On the E. side of the W. branch of White River, 74 miles S. W. from Indianapolis.

Bloomfield, Io., c. h. Davis co. 30 miles S. W. from Iowa city.

Bloomfield, N. J., Essex co. 54 miles N. E. from Trenton, and 4 N. from Newark.

Bloomfield, Vt., Essex co. The W. and S. parts are watered by Bulhegan River. 86 miles N. E. from Montpelier.

Blooming Grove, N. Y., Orange co. Murderer's Creek and its branches water this town. The surface is hilly, Seunemunk Mountain, a peak of the Highlands, covering the S. E. part. The soil is very fertile. 12 miles S. from Newburg, and about 100 S. from Albany.

Bloomington, Is., c. h. McLean co. 73 miles N. N. E. from Springfield. Beautifully situated on the margin of the prairie, with a delightful country around it.

Bloomington, Ia., c. h. Monroe co. 49 miles S. W. from Indianapolis. The seat of the Indiana University. See *Colleges*.

Bloomington, Mo., c. h. Macon co. 90 miles W. of N. from Jefferson City.

Bloomsburg, N. J., Warren and Huntingdon counties. On both sides of Musconetcong Creek, and 43 miles N. N. W. from Trenton.

Bloomsburg, Pa., Columbia co. On the W. side of the E. branch of the Susquehanna River, at the junction of Fishing Creek. 87 miles N. by E. from Harrisburg.

Blossburg, Pa., Tioga co. Situated near the celebrated Blossburg coal mine, 133 miles N. N. W. from Harrisburg. Connected by railroad with Corning, N. Y., from which there is lake and canal navigation to Albany.

Blount County, Ala., c. h. at Blountsville. N. central. Surface uneven, watered by the head branches of the Black Warrior River; soil rather sterile.

Blount County, Te., c. h. at Marysville, shire town. On the E. border, between the Tennessee River and the N. C. line. Surface uneven and mountainous; soil fertile.

Blountsville, Ala., c. h. Blount co. On the W. side of the Locust Fork of Black River. 104 miles N. E. from Tuscaloosa.

Blountsville, Te., c. h. Sullivan co. 288 miles E. by N. from Nashville.

Blue Hill, Me., Hancock co. At the head of a bay of the same name. 12 miles E. from Castine, and 78 from Augusta.

Blue Sulphur Springs, Va., Greenbrier co. 227 miles N. by W. from Richmond. See *Fashionable Resorts*, p.

Bluffton, Ia., c. h. Wells co. 90 miles N. E. from Indianapolis.

Bœuff Prairie, La., c. h. Franklin. 200 miles W. by N. from Baton Rouge.

Boags, Pa. A central township of Centre co. On the main ridge of the Alleghenies. Soil, slate and gravelly limestone.

Bolivar, As., c. h. Poinsett co. 14 miles N. E. from Little Rock.

Bolivar County, Mi., c. h. at Bolivar. On the Mississippi, opposite the mouth of the Arkansas. Watered by Sunflower River.

Bolivar, N. Y., Alleghany co. On the Pennsylvania border. High and uneven. 275 miles from Albany.

Bolivar, O., Tuscarawas co. On the W. side of the Tuscarawas River, and on the Ohio Canal. 118 miles N. E. from Columbus.

Bolivar, Te., c. h. Hardeman co. Near the Big Hatchee River, on the S. side. 162 miles S. W. from Nashville.

Bolton, Ct., Tolland co. The soil is a coarse, hard, gravelly loam, fit only for grazing. The Bolton stone quarry is quite noted. "The stone is a species of slate, of a brilliant light gray color, composed of mica and quartz, and is excellent for flagging and other purposes. It is extensively used in the principal cities of the United States. For strength it exceeds any other known in this country, and the demand for it is rapidly increasing." 16 miles E. from Hartford. The Providence, Hartford, and Fishkill Railroad passes through this place.

Bolton, Ms. On the height of land between Concord and Nashua Rivers. A good farming town. The hills contain limestone, and lime is made here. 31 miles W. by N. from Boston.

Bolton, N. Y., Warren co. Bounded on the E. by Lake George, and contains several small lakes. The Schoon branch of the Hudson River waters the W. part. The surface is hilly, and in some parts mountainous, and the soil not remarkably good. 72 miles N. from Albany.

Bolton, Vt., Chittenden co. On the western range of the Green Mountains. Mountainous and broken, and but a small part of it capable of being settled. Winoo-ski River runs through it, from E. to W.; also the Vermont Central Railroad. 19 miles S. E. from Burlington, and 19 N. W. from Montpelier.

Bombay, N. Y., Franklin co. Little Salmon and St. Regis Rivers water this town, the surface of which is mostly level. 15 miles N. E. from Malone, and 226 N. from Albany.

Bond County, Is., c. h. at Greenville. S. W. central. Watered by Shoal Creek, a branch of the Kaskaskia River.

Bonnet Carre, La., c. h. St. John Baptist parish. In a bend of the Mississippi River, called Bonnet Carre, (square bonnet.) 38 miles W. from New Orleans.

Boone County, Is., c. h. at Belvidere. On the northern border. Watered by the Kankekee and its tributaries, the E. head waters of Rock River. Surface undulating; soil very fertile.

Boone County, Ia., c. h. at Lebanon. Central. Watered by Sugar and Racoon Creeks. Surface mostly level, consisting partly of prairie; soil very fertile.

Boone County, Io., c. h. at Boonboro'. Central. The Des Moines passes through it from N. to S.

Boone County, Ky., c. h. at Burlington. The northernmost county in the state, in a bend of the Ohio, opposite the mouth of the Great Miami. The Ohio River bounds this county on the N. Surface uneven; soil fertile.

Boone County, Mo., c. h. at Columbia. Central. On the N. bank of the Missouri. Rock and Cedar Creeks drain this county.

Boone County, Va. West part. Rough and un-

even. The Coal River, a southern tributary of the Kenhawa, runs on its eastern border, and the Little Coal N. through it.

Booneville, N. Y., Oneida co. Drained by Black River and the head waters of the Mohawk. 28 miles N. from Utica, and 123 W. from Albany.

Boonville, As., c. h. Scott co. 120 miles W. by N. from Little Rock.

Boonville, Ia., c. h. Warwick co., lies between Pigeon and Cypress Creeks. 173 miles S. S. W. from Indianapolis.

Boonville, Ky., c. h. Owsley co.

Boonville, Mo., c. h. Cooper co. On the S. bank of Missouri River. 50 miles N. W. from Jefferson City.

Bordentown, N. J., Chesterfield, Burlington co. On the E. bank of the Delaware. 27 miles N. from Philadelphia, and 7 miles S. E. from Trenton. Built on an elevated plain 65 feet above the river, upon which it has a commanding and beautiful situation. The Camden and Amboy Railroad passes, by a viaduct, under some of its principal streets. The Delaware and Raritan Canal here connects with the Delaware at the head of steamboat navigation. Bordentown is a favorite resort, in the summer season, for people from Philadelphia. The village is very neat, and enjoys a salubrious climate. The extensive grounds and mansion formerly occupied by Joseph Bonaparte, ex-king of Spain, are among the most conspicuous and attractive objects of the place. One of the most magnificent river views any where to be enjoyed in the country is afforded here. The Delaware, as seen from the brow of the hill on which the town is situated, winds its way through a level country, spread out for many miles under the eye of the spectator, until it disappears behind projecting headlands.

Boothbay, Me., Lincoln co. On the coast between Sheepscoot and Damariscotta Rivers, almost surrounded by water. 34 miles S. S. E. from Augusta, and 60 E. N. E. from Portland.

Boscawen, N. H., Merrimac co. On the W. side of Merrimac River. The town is watered by the Blackwater, an important stream. Of a deep, productive soil, affording many excellent farms. The surface very level. The principal village on the E. section of the town is a street nearly two miles in length, very straight and level. There is another village on a pleasant eminence near the west meeting house. 8 miles N. W. from Concord, with which it communicates by two railroads.

Boston, Ms. Seaport and capital of the state. Situated at the W. extremity of Massachusetts Bay, into which empty Charles and Mystic Rivers. By age and commercial importance, Boston is the metropolis of New England.—The population of Boston, in 1700, was 7000; in 1722, 10,567; in 1765, 15,520; in 1790, 18,038; in 1800, 24,937; in 1810, 33,250; in 1820, 43,298; in 1830, 61,391; in 1840, 93,470; and in 1850, 136,884. Owing to the almost insular situation of Boston, and its limited extent, its population, as compared with that of other large cities of the Union, does not fairly represent its relative importance. While the population of East Boston, on an island adjacent in the harbor, and of South Boston, on a contiguous point of the main land of Dorchester, is included in that of the city proper, because these new suburbs are embraced

within its chartered limits, yet all its ancient environs upon the main land, embracing Charlestown, Chelsea, Roxbury, Dorchester, Brookline, and Cambridge, with a large margin still more remote, to which the railroads, like arteries from a great heart, carry a daily and hourly circulation of life—all the towns and villages of this broad area, occupied to a great extent by a population whose business and means of wealth are within the city, and who really constitute a component part of its people, being associated with it in all its commercial, manufacturing, literary, and social relations, as much as the inhabitants of Greenwich, Manhattanville, and Haerlem with New York, or those of the districts contiguous to Philadelphia with that city, have hitherto remained distinct towns; three of them, indeed, being now flourishing cities; and this large overflow of population is consequently never represented in any statement of the population of Boston. The peninsula on which Boston proper is built is connected with the main land of Roxbury on the S., from which it extends in a direction a little E. of N., about 3 miles, having an average breadth of about a mile. The isthmus, or Neck, as it is commonly called, is something over a mile in length, and is nearly all included within the limits of Boston. It was originally quite narrow, and so low that parts of it were frequently overflowed by the highest courses of the tides. The waters of the harbor, flowing up into the bay of Roxbury, on the E. side of the Neck, and those of the Charles River, spreading out over the flats upon the W., formed a broad but shallow cove upon that side, between the isthmus and the main land of Brookline. Until 1786, 156 years after the settlement of Boston, the only passage into the town was over the Neck. It has been much elevated in being improved and built upon, and additions to its width are continually made by filling up the flats, especially upon the W. side. There are now four broad avenues passing over the Neck from Roxbury to the city: Harrison Avenue, Washington Street, Suffolk Street, and the Tremont Road. — The main body of the peninsula, which was thus nearly surrounded by the waters of the harbor and of Charles River, comprised within its natural limits about 700 acres of land. In three points it swelled into hills of considerable elevation; one being on its S. E. angle, and presenting a bold barrier to the waters of the ship channel; another being at its N. extremity, looking off towards Chelsea and Charlestown; and the third, which was more central, with a very much broader base, extending its N. and W. slopes nearly to the banks of Charles River. This was the most elevated of the hills, being 138½ feet above the level of the sea; and its summit was cleft into three conical peaks, which, being near the original centre of the town, led at first to the adoption of the name of Tremont, or Trimountain, for the town itself. This name, however, was soon dismissed for its present name, which it received on the 7th of September, 1630, in honor of the Rev. John Cotton, the second minister of the first church, who came from Boston, in England. The Indian name of the peninsula was *Shawmut*. — There is extant a very accurate description of Boston in 1633, by William Wood, the author of New England Prospect, which Snow, a writer of high authority on this subject, remarks, "could hardly be

amended." — "Boston," says Wood, "is two miles N. E. of Roxbury. Its situation is very pleasant, being a peninsula hemmed in on the S. side by the bay of Roxbury, and on the N. side with Charles River, the marshes on the back side being not half of a quarter of a mile over; so that a little fencing will secure their cattle from the wolves. . . . It being a neck, and bare of wood, they are not troubled with these great annoyances, wolves, rattlesnakes, and mosquitoes. Those that live here upon their cattle must be constrained to take farms in the country, or else they cannot subsist, the place being too small to contain many, and fittest for such as can trade into England for such commodities as the country wants, being the chief place for shipping and merchandise. This neck of land is not above four miles in compass, in form almost square, having on the S. side, at one corner, a great broad hill, whereon is planted a fort, which can command any ship as she sails into the harbor within the still bay. On the N. side is another hill, equal in bigness, whereon stands a windmill. To the N. W. is a high mountain, with three little rising hills on the top of it, wherefore it is called the *Tramount*. From the top of this mountain a man may overlook all the islands which lie within the bay, and desery such ships as are on the sea-coast. This town, though it be neither the greatest nor the richest, yet is the most noted and frequented, being the centre of the plantations, where the monthly courts are kept. Here likewise dwells the governor. This place hath very good land, affording rich cornfields and fruitful gardens, having likewise sweet and pleasant springs. The inhabitants of this place, for their enlargement, have taken to themselves farm houses in a place called Muddy River, [Brookline,] two miles from the town, where there is good ground, large timber, and store of marsh land and meadow. In this place they keep their swine and other cattle in the summer, whilst the corn is in the ground at Boston, and bring them to town in the winter."

The original conformation of the ground was such that the N. part of the peninsula was almost severed from the other by the coves or indentations of the shore which ran in around the base of Copp's Hill on the S., both from the harbor on the E., and from Charles River on the opposite side, so as nearly to meet at their extreme points. When the tides were highest, this part of Boston, and the central part, which would also be nearly or quite cut off from the continent by the flowing of the waters across the Neck, presented the appearance of two islands, rather than that of a peninsula. The tide ran up on the E. to where Dock Square now is, and in a northerly direction almost to Hanover Street at a point a little E. of Union Street. From Charles River, on the opposite side, a broad cove came up to a point only a few rods N. W. of Hanover Street, leaving but a narrow neck of land for the connection between the centre and the north end of the town. By the crection of a causeway where Causeway Street now is, this cove was subsequently converted into a capacious mill pond, and by means of a short canal cut through the neck by which its waters were separated from the harbor, they were made available for a tide mill at this place. This was long known as Mill Creek, and constituted the dividing line between the centre and the north end.

That part of the map of Boston which exhibits an equilateral triangle, as included between Charlestown, Merrimac, and Causeway Streets, having its apex in Haymarket Square, covers the principal part of the area which was occupied by this mill pond; having been converted into solid land with the materials obtained by the levelling of Beacon Hill and the eminences W. of it, excepting the creek, which was kept open to connect the river with the harbor as long as the navigation upon the Middlesex Canal was a matter of consideration. This improvement was commenced about 1804, and when completed, it had added to the area of the city about 43 acres. And here it may be remarked that the area of the peninsula, which in its natural condition comprised, as above stated, only about 700 acres, has been enlarged by continued encroachments upon the sea, until it contains fully double this number of acres at the present time. The city is now extending its limits in this manner more rapidly than at any former period. The quantity of land made, and in the process of being made, by improvements recently undertaken by the city at the south end, is estimated at over 2,000,000 square feet. By the railroads in this direction entire hills of gravel are being removed from their bases in the vicinity of Boston, to form the foundations of a new and beautiful extension of this flourishing city. It is not improbable that the whole of the bays on each side of the Neck may, at some period not far distant, disappear before the march of human enterprise, and that the city may be otherwise extended much into the area of Roxbury and Dorchester. — Some knowledge of the natural structure of the ground on which Boston is built is necessary to explain the great irregularity of the plan upon which its streets and thoroughfares have grown up. The high hills in different quarters of the town, with the coves, and creeks, and marshes, thrusting themselves up between them on all sides, would necessarily control the choice of sites for building, and the location and courses of the principal streets, in a place thus springing up in the poverty and infancy of the country. There is a similar irregularity in the lower part of the city of New York. Even in Philadelphia, the situation of which upon a gently-swelling plain admitted of the most uniform arrangement of the streets which could possibly be desired, the operation of this principle is illustrated, in the case of Dock Street, in the oldest part of the city, which follows the winding course of an ancient creek running into the Delaware. This seems the more remarkable there from being almost a solitary exception to the general plan. But in Boston it would have been perhaps impossible for the founders of the city, even if they could have anticipated its future growth and greatness, with the means they had at command, to have caused it to be built up on any outline materially different from that which it received. As an example, an order dated March 30, 1640, provides for a road between certain points, "two rods in breadth, *as directly as the land will bear.*"

The first settlement of the town in 1630, and its most populous part as late as 1650, was on Washington Street, between State and Eliot Streets, including the cross streets on either side, which had all begun to be occupied; and Elm Street, the upper part of Hanover Street, and Sudbury Street, on the N. side. Here, in what

is now the centre of the city, the business of the town commenced, and the most influential characters dwelt. The first house of worship stood near the corner of State and Devonshire Streets; the first store was on the N. corner of State and Washington Streets; the first market place was where the Old State House now stands. The residence of Governor Winthrop was on the E. side of Washington Street, a little N. of the Old South meeting house. Subsequently the growth of trade and commerce occasioned a larger proportionate increase of population at the north end, which became "for many years the most populous and elegant portion of the town."

The principal thoroughfares through Boston, from the centre outwards, connecting with the different avenues to the city, are as follows: To Roxbury, over the Neck, either by Washington Street or Tremont Street; to the Western Railroad, by Washington, Summer, and Kingston Streets; to the Old Colony Railroad, by Washington, Summer, and South Streets; to South Boston, over the new bridge, by Washington, Summer, and Sea Streets; to the Eastern Railroad, and the Ferry to East Boston, by North Market and Commercial Streets; to the north end, and the Ferry to Chelsea, by Hanover Street; to the Charles River Bridge leading to Charlestown, by Union and Charlestown Streets; to the Boston and Maine Railroad, the Fitchburg Railroad, and the Warren Bridge, leading also to Charlestown, by Union and Haverhill Streets; to the Lowell Railroad, by Court, Green, Leverett, and Lowell Streets; to Canal Bridge, frequently called Craigie's Bridge, leading to East Cambridge, by Court, Green, and Leverett Streets; to the West Boston Bridge, leading to Old Cambridge, by Court and Cambridge Streets; to the Western Avenue, or Mill Dam, leading to Brookline and Brighton, by Beacon Street; to the Providence Railroad, by Tremont and Boylston Streets, or for pedestrians, over the Common.

The numerous avenues to Boston mentioned in the foregoing paragraph constitute an interesting and characteristic feature of the city. They have been constructed at different periods, as the business of the city, and its more convenient connection with the surrounding country, required, and at an almost incalculable outlay of expense. The first of the bridges was the Charles River Bridge, leading to Charlestown, which was open for travel on the anniversary of the battle of Bunker Hill, June 17, 1786. It is 1503 feet in length, and cost \$50,000. The next was the bridge to Old Cambridge, opened Nov. 23, 1793. Its length is 2758 feet, with an abutment and causeway 3432 feet long, making a total length of 6190 feet. Cost, \$76,667. The old bridge to South Boston from the Neck, at Dover Street, opened in 1805, is 1550 feet long, and cost about \$50,000. Craigie's Bridge, opened in 1809, is 2796 feet in length. A lateral bridge extends from this to Prison Point, Charlestown, 1820 feet in length. The new bridge to South Boston, 500 feet long, and the Warren Bridge, to Charlestown, 1390 feet long, were both completed in 1828. The only other avenue to Boston, for ordinary travel, is the Western Avenue, or Mill Dam, leading from the foot of Beacon Street to Sewall's Point, in Brookline. This avenue is upon a substantial dam, extended across the western bay, about a mile and a half in length, and from 60 to 100

feet in width. This dam encloses about 600 acres of flats, over which the tide formerly flowed from seven to ten feet deep. A partition dam divides this enclosure, and forms, by the aid of flood and ebb gates, a full and a receiving basin; thereby creating at all times a vast hydraulic power for the propulsion of machinery. The partition dam also forms a fine avenue from the main dam to Roxbury. This great undertaking was commenced in 1818, and opened for travel July 2, 1821. It cost about \$700,000. The proprietors of the Western Avenue claim a perpetual franchise; but all the other avenues have either become already, or will, at a given date, hereafter become, the property of the state, and free for the use of the public. The various railroads are carried over into the city upon bridges built expressly for their accommodation. There are besides steam ferry boats which ply continually between Boston and East Boston, and between Boston and Chelsea.

There are two rapidly-increasing sections of the city, which have sprung up upon points of land separated from the peninsula by portions of the harbor. One of these is *South Boston*, which was set off from Dorchester, by legislative enactment, March 6, 1804. The territory is bounded South by Dorchester Bay, and spreads out about two miles on the south of Boston harbor, above the forts. It contains about 600 acres, and is laid out into regular streets and squares. In about the centre of this tract, and about two miles from the City Hall, are the memorable "Dorchester Heights," famous in revolutionary history, which rear their heads one hundred and thirty feet above the sea, furnishing from their summits a magnificent view of Boston, its harbor, and the surrounding country. One of these heights is now occupied by a capacious reservoir of the Boston Water Works. The natural situation and surface of this part of Boston are highly picturesque and beautiful.

East Boston is on the margin of one of the larger islands in the harbor, formerly known as *Noddle's Island*. The original proprietor of this island, in 1630, was Samuel Maverick, who lived upon it as his homestead; at the same time that John Blackstone owned and occupied the peninsula of Boston. The island contains about 660 acres of arable land, and a large body of flats. It was purchased by an incorporated company in 1832, for the purpose of laying out a section of the city there. It lies about 660 yards north-east from Old Boston, and about the same distance from Charlestown. Portions of its surface are beautifully elevated, and are crowned with buildings enjoying a fine prospect of the city and shipping opposite. The Cunard line of steam ships from Liverpool have their wharf here; and here the extensive wharves and warehouses of the Grand Junction Railroad have been established. East Boston is becoming a place of extensive business, especially in the various branches of manufacture and ship-building.

Among the principal establishments at East Boston is a very extensive steam flouring mill, in which from 350,000 to 400,000 bushels of wheat are annually converted into the finest flour. There is likewise at East Boston an immense sugar refinery, the buildings of which make an imposing appearance.

For a particular account of Boston Harbor, the reader is referred to the description of *Mountains,*

Rivers, Harbors, &c., p. 173. In confirmation of what is there stated in regard to its freedom from obstruction by ice, it may here be added, that during the uncommonly severe winter of 1851-2, when New York and other southern harbors were completely ice-bound, Boston Harbor, by the aid of a little steamer, was kept free for the passage of ships, and the ferry boats running across to Chelsea and East Boston were not impeded a single day.

While the first inhabitants of Boston depended chiefly upon the productions of their farms and gardens for subsistence, they were obliged by their narrow premises to seek for privileges in the adjacent territory, for wood, pasturage, and tillage. In this way it came about that the principal islands in the harbor were annexed to Boston rather than to other adjoining towns. Conant's Island, since called Governor's Island, was granted to Governor Winthrop, for a nominal rent, in 1632, and thus became a possession of Boston. Before the end of 1636, Noddle's Island, Deer Island, Long Island, Spectacle Island, and Hog Island are recorded in the colony records as having been granted to sundry inhabitants of Boston. It is probable that the others which now belong to the city, making the number twenty or more in all, were, in a similar manner, occasionally granted afterwards; as upon these islands, together with the shores of Chelsea, Brookline, and other places, portions of land were allotted to every family in Boston, according to its numbers and its wants.

The want of ample room upon the peninsula for the growth of the city, especially before the relief afforded by the railroads, led to such a crowded occupancy of the limited area, that the streets are in many parts narrower than would have been preferred, and, with one noble exception,—that of the Common,—very little space has been afforded in the older sections of the city for public squares and pleasure grounds. In the newer portions, which are building up on the Neck, some spacious squares have been reserved for public grounds, which are handsomely enclosed with iron fences, ornamented with trees, and with beautiful fountains in the centre. Two of these are Blackstone Square and Franklin Square, lying on opposite sides of Washington Street. Louisburg Square, in the western part of the city, extending from Mount Vernon Street to Pinckney Street, and Pemberton Square, near the centre, opening into Tremont Street opposite the union of Court Street with Cornhill, are small but beautiful grounds, surrounded by some of the most stately private residences in the city. The summit of Fort Hill, anciently occupied by a fortification, has also been kept open for a public ground, and affords a delightful promenade, with a lovely view of the harbor.

"Prior to 1640," says Snow in his *History of Boston*, "mention is frequently made of *Tower Fields*, in the Boston records; and they seem to have been enclosed by a general fence." The following vote was passed on the 30th of March, 1640: "Henceforth, there shall be no land granted either for house-plot or garden, out of the open lot or common field which is left between the Sentry Hill and Mr. Colburn's end, except three or four lots to make up the street," &c. This was the origin of the *Boston Common*; which, scanty as their precincts were, the fathers of the city, with a wise and disinterested care for the public welfare, secured to the enjoyment

of all future generations of its inhabitants. This Common, extending over about forty-eight acres of ground, with its splendid malls surrounding the whole border, shaded with majestic elms, some of which are over a hundred years old, and its numerous cross paths beautifully graded, bevelled, and adorned with variegated trees, is considered as one of the most delightful promenades in the world. One of its greatest charms is in the diversified natural surface which it presents; and one of the most gratifying proofs of the good taste of the Bostonians is seen in the care which has been taken to obliterate as little as possible, by any artificial embellishments, those lineaments of nature which are universally pleasing. This beautiful ground is enclosed by a costly iron fence one mile and two hundred and seventeen yards in length, with elegant granite gateways at two of the opposite angles. Near the centre is a beautiful little pond, out of the midst of which a fountain, supplied from the Boston Water Works, sends up its massive and graceful *jet d'eau* from 80 to 90 feet into the air. The fountain also displays, at will, many other pleasing forms, having an affluent supply of water, and a head which presses upon it like one of nature's illimitable forces. This extensive and beautiful public ground is an inestimable boon to the citizens of Boston. Its position, partly on the north-western declivity of Beacon Hill, with a public garden of about 25 acres lying still beyond it, keeping its whole western margin open to Charles River and to the distant landscape as far as the eye can reach, secures the free ingress of the most exhilarating and healthful influences of the climate to the very centre of the city. As a field for military parades, civic processions, and grand commemorative banquets, the Common has been honorably distinguished. On the annual gala day of the republic, it presents, in pleasant weather, a most joyous and sublime spectacle. The people of the city, and of the country for many miles around, the native born and the adopted citizen, young men and maidens, old men and children, here meet as in a grand levee, under the mutual restraints of self-respect, courtesy, and decorum, and in the conscious enjoyment of a dignity and happiness which fall to the lot of the populace of no other country on the globe. It is seldom that any unseemly rudeness or vulgarity offends the eye or ear on these public occasions; especially since intoxicating liquors have been excluded from the refreshment stands upon the streets. It is estimated that not less than 100,000 persons have been present at the usual display of fireworks in the evening; and yet, within a half hour after the entertainment is over, this vast multitude will have retired, without disorder, leaving the Common and its vicinity to its accustomed silence and repose.

Some of the most elegant streets in Boston are those which front upon the Common; viz., Beacon, Park, Tremont, and Boylston Streets. Beacon Street, especially, for grandeur of elevation, extent and beauty of prospect, and the splendor of its long line of palace residences, culminating with the State House on the summit of the hill, will compare to advantage with the most celebrated streets and terraces in the European cities.

Other parts of the city, also, are built with great elegance, though almost invariably with-

out fanciful decorations or other ostentatious display. The material mostly used for private residences is brick, with the Quincy granite for the basement stories and foundations. A style of building with circular or swelled fronts prevails in Boston, among houses of the first class, which imparts an air of graceful elegance to the external structure, and admits of a beautiful finishing within. The Boston houses are distinguished for the variety and perfection of their interior accommodations and means of comfort, in which respect many dwellings of the most wealthy surpass those of all other cities in the country. A very massive, and at the same time beautiful, style of building is adopted for the largest class of stores, warehouses, and blocks upon the wharves, for which the Quincy granite is made use of, either finely hammered or merely split and jointed, according to the design of the structure or the degree of architectural symmetry intended.

Among the public buildings most worthy of notice, the State House may first be mentioned, as occupying the most elevated and commanding situation, and giving character to the distant view of Boston, from whatever direction it is approached. This fine building stands on Beacon Hill, fronting the malls and Common, at an elevation of 110 feet above the sea. The site was purchased from the estate of JOHN HANCOCK, the patriot, and is termed, in the deed, "Governor Hancock's pasture." The venerable mansion of Governor Hancock is hard by, and is the only relic of the olden time which maintains its ground on Beacon Street against the march of modern improvements. The corner stone of the State House was laid on the 4th of July, 1795, by the venerable SAMUEL ADAMS, who succeeded Hancock as governor of the commonwealth. The edifice is 73 feet in front and 61 feet deep. The height to the lantern upon the top of the dome is 110 feet. The dome itself is 50 feet in diameter and 30 feet in height. It consists externally of a basement story and of a principal story 30 feet high. The centre between the wings is 94 feet in length, the front of which, on the basement, is formed of arches advanced 14 feet from the walls, and supporting a colonnade of Corinthian columns above, of the same extent. The Hall of the Representatives is in the centre of the principal story, the Senate Chamber occupies the east wing, and the Chamber of the Governor and Council the west wing. Upon the first floor are the offices of the secretary, treasurer, and board of education, the state library, &c. In a recess built for the purpose, in the rear of the lower hall of entrance, stands the beautiful statue of Washington by Chantrey, presented to the state in 1827, by the Washington Monument Association.

The view from the top of the State House is very extensive, and probably combines a greater variety of interesting features than any other view in the United States. The whole city lies as on a map immediately under the observer's eye. On the N. and W. the county of Middlesex, with its cities, towns, and villas, the venerable halls of Harvard, the sacred field and towering monument of Bunker Hill; on the S. the county of Norfolk, with its granite hills and luxuriant vales, studded with towns, and spires, and farm houses; and on the E. the harbor and the ocean, with a hundred islands, traversed by the ships of every clime. all

conspire to render this the most enchanting scene this side of the Bay of Naples.

The Old State House still stands in State Street, at its upper end, and seen from below presents a fine specimen of the architecture of a former age. On this spot was the seat of government in Massachusetts for 140 years: two buildings having been destroyed by fire before the present venerable edifice was erected. The first was built in 1659, the second in 1714, and the present in 1748. Since the removal of the Capitol to Beacon Hill, in 1798, the old State House has been used some time for a City Hall and Post Office, and more recently for stores and offices for men of business.

One of the first objects of interest for which the stranger inquires in Boston is Faneuil Hall, — the "Cradle of Liberty" — celebrated in American history as the forum of that patriotic eloquence which made a monarch tremble on his throne, inspired an unprepared and unassisted people to achieve their independence, and sounded out those maxims of political truth and wisdom which have extended their influence over the habitable globe. This noble edifice, the gift of Peter Faneuil, Esq., to the town in 1742, is situated in Dock Square, is 100 feet long by 80 feet wide, and three stories high. The great hall is 76 feet square, and 28 feet high, with deep galleries on 3 sides, and capable of containing about 5500 persons standing. It is appropriately decorated with the busts and portraits of the fathers of American liberty who once thundered within its walls, — HANCOCK, SAMUEL and JOHN ADAMS, — and of others, as of WASHINGTON and KNOX, who thundered upon the field of battle. The portrait of Washington is the original full length picture by Stuart. To these are added a beautiful picture, in full size, by Sargent, of Faneuil, the munificent donor. The building was materially enlarged, by additions to its width and height, in 1805. It is interesting to notice the unfading power of the patriotic associations of this memorable hall upon the minds of the Boston populace. It is enough for the purposes of the popular orator, on any topic connected with social or civil right, if his auditors breathe within its sacred walls.

Faneuil Hall Market, situated immediately E. of Faneuil Hall, is one of the most costly and superb of the public buildings. It extends on Dock Square 535 $\frac{1}{2}$ feet, and is 50 feet in width. The centre part of the building, 74 by 55 feet on the ground, rises to the height of 77 feet, and is surmounted by a beautiful dome. The wings in their entire extent are 30 feet high, with two stories above the basement. Upon each end is a portico, with four columns, of the Grecian Doric order, 3 $\frac{1}{2}$ feet in diameter at the base, and 20 feet 9 inches high, to the capital; each column being one solid shaft of Quincy granite, of which material, finely hammered, the whole building is constructed. The first story is occupied for the market, having its stalls on each side of a grand corridor, through the whole length of the building. The upper story is one vast hall, so constructed as to be divided into several compartments for warehouses, or all thrown into one, for large sales, fairs, or exhibitions of mechanical or agricultural products. This upper hall is called Quincy Hall, in honor of Hon. Josiah Quincy the elder, under whose mayoralty it was built. The edifice, exclusive of the land, cost \$150,000. Faneuil Hall Market is one of the most extensive and richly-

furnished markets in the country. Besides the retail, a large wholesale business is here carried on, not only for the city, but for a wide circle of towns in its vicinity, which by the numerous railroads are brought within a few hours of Boston. On each side of this beautiful building are two broad streets, one 65 and the other 102 feet in width, having each a range of spacious warehouses with granite fronts, facing the market. There are several other markets in the city. Besides those in East Boston and South Boston, there are Boylston Market, Beach Street Market, and Williams Market, in Dover Street; also Blackstone Market, in the street of the same name. The two last named were opened in 1852. Over Boylston Market is a public hall, 100 feet in length by 48 in width. This building is at the corner of Washington and Boylston Streets, nearly opposite the site of the old Liberty Tree, of revolutionary renown.

The City Hall is centrally located, on an open plot of ground between Court Square and School Street, having the Stone Chapel Cemetery on the west, extending to Tremont Street. The edifice is of granite, and consists of an octagon centre, with wings on the E. and W. sides. The entire length of the building is 140 feet.

The Court House, in Court Square, between the City Hall and Court Street, for the accommodation of all the courts of law for the city, county, state, and the United States, is a stately edifice, of hewn granite, in length 175 feet 10 inches, in width 53 feet 10 inches, and in height 57 feet 3 inches. A Doric portico adorns each of its N. and S. fronts, having four fluted granite columns, 4 feet 5 inches in diameter, and 25 feet 4 inches high, of a single piece, weighing 25 tons each. Excepting these two fine porticoes, this building is plain in the exterior.

The Merchants' Exchange, on the south side of State Street, is a magnificent structure, completed in 1842. Its front, on State Street, is 76 feet; its height, 70 feet; and its depth, to Lindall Street, 250 feet, covering 13,000 feet of land. Its front is entirely of Quincy granite, with four pilasters and two antae, each of a single stone 45 feet in height, and weighing, on an average, 55 tons. The great central hall, for the Merchants' Exchange and newspaper reading room, is truly a splendid room. Its dimensions are 80 by 58 feet, having 18 beautiful columns supporting the dome, 20 feet in height, in fine imitation of Sienna marble, with Corinthian capitals. The front is occupied by banks, insurance offices, &c., and the basement for the Post Office. There is also a hotel in the building. The cost of the structure, exclusive of the site, was \$175,000.

The Custom House, in Boston, is one of the most magnificent and elaborately finished buildings in the United States. It was commenced in 1837, and not entirely completed until 1849. The whole cost, including the site, was about \$1,076,000. It is situated between Long Wharf and Central Wharf, fronting west upon Commercial Street, and east upon the harbor. It is in the form of a Greek cross, surmounted, over the transept, by a dome, which, like the whole roof of the building, is entirely of granite tile, to the skylight. Its foundations rest on 3000 piles, driven in the most effective manner. The length is 140 feet, and its width 75 feet. Its width at the centre, including the projections of the cross, is 95 feet; the porticoes upon these projections

being 10 feet in front, on each side, with a breadth of 67 feet. The exterior of the building is purely Grecian Doric, not an exact copy from any ancient model, but an adaptation to suit the purposes of the structure, which is characteristically Grecian in all its parts. It consists of a portico on each side, of six fluted columns, and an order of slightly engaged columns round the entire walls, 20 in number, resting on a high stylobite or basement. The columns are 5 feet 4 inches in diameter, and 32 feet high; the shaft being in one piece, and each weighing about 42 tons. Upon these rest a full entablature, and pediments above the porticoes. The top of the dome is 95 feet from the ground. The interior arrangement is adapted with great perfection to the purposes of the building. The grand cross-shaped rotunda, in the centre, for the transaction of the general business of the collector's department, is a splendid room, 63 feet in its greatest length, 59 feet wide, and 62 feet high to the skylight. The ceiling of the dome is supported by 12 marble columns, 3 feet in diameter, and 29 feet high, ornamented with highly-wrought Corinthian capitals. The numerous other compartments, from the cellar to the attic story, are constructed and arranged with such convenience for the facilities of business as can hardly be surpassed. The building was designed by A. B. Young, A. M., architect, of Boston, and erected under his supervision throughout.

The new City Prison, near the foot of Cambridge Street presents an imposing appearance on approaching the city over Cambridge Bridge. It consists of a centre octagonal building, with four wings radiating from the centre. Three of these wings enclose the cells of the prison, which is constructed upon the Auburn plan. The west wing is appropriated to the jailer's family, his office, and those of the other officers, the hospital and chapel; and the centre to the great kitchen, scullery, laundry, ward room, and other general purposes of the establishment. The exterior is entirely of Quincy granite, formed with split ashlar, in courses, having the cornices and other projecting portions hammered or dressed; the whole design, in a successful manner, combining symmetry with strength.

The Masonic Temple, on Tremont Street, fronting the Common, is also a beautiful building, completed in 1832. It is 80½ feet in length, 60 feet in width, and 52 feet in height. The towers upon the two front corners rise 90 feet from the ground.

The Boston Museum, on Tremont, near Court Street, and the Howard Athenæum, on Howard Street, are also beautiful specimens of architectural taste. These are both occupied, in part, for dramatic performances.

The Massachusetts Horticultural Society have a beautiful hall in School Street, opposite the City Hall, in which weekly exhibitions of fruits and flowers, of great luxuriance, are held, during the appropriate season.

The Tremont Temple, opposite the Tremont House, burnt down in 1852, but since rebuilt, has four stores in front, and in the rear two rooms, each 16 by 32 feet, and a vestry 32 by 73 feet, 13 feet high, well lighted and ventilated.

Still farther in the rear is a hall or chapel, 53 by 73 feet, and 25 feet high, capable of seating from 800 to 900 persons, the entrance to which

is an easy descending grade, of only three quarters of an inch to a foot, by a seven feet passage on the northerly side of the building.

There is another passage, of about the same width, on the southerly side, from, and on a level with, Tremont Street; also a centre passage, twelve and a half feet wide, designed as the principal entrance, but all to be thrown open, when required, for outlets to the main hall, which is in the upper story, and is about 73 by 130 feet, and 45 feet high, with galleries on three sides, with eight distinct flights of stairs, (four on each side,) at different points, together with independent flights of stairs from the anterooms to the lower floor, making in all over 50 feet in width of stairway downward from the floor of the hall.

In a recess at the end of the hall, concealed by a wire gauze screen, painted in imitation of panel work, stands the largest organ in America, built by E. & G. G. Hook, of Boston. It has four sets of keys, and two octaves and two notes of pedals. The swell organ extends through the entire compass from C C up to A, 58 notes. It is enclosed in a double box, 11 feet high, 9 feet deep, and 12 feet wide, and contains 15 stops and 834 pipes. The great organ contains 15 stops, including a metal double open diapason to 16 feet C, five unison stops, two principals, 13 ranks of chorus, and two reeds, making 1334 pipes. The choir organ contains 10 stops and 568 pipes. The solo, or fourth manual, contains six stops and 276 pipes. There are eight pedal stops, among them a 32 feet tone, and a 16 feet reed, making 216 pipes. There are also nine coupling stops, and four composition pedals. Extreme height of the organ, 45 feet; width, 36 feet. Total number of pipes, 3010; stops, 70, two only of which are divided.

Between the main hall and the lower floor in the second story, there are thirteen rooms, averaging about 16 feet in width, and from 32 to 38 feet in length. The walls throughout, from openings under the basement floor to the attic, are vaulted for purposes of ventilation, and plastered directly upon the brick, thus preventing the dampness usual in solid brick walls, and the usual danger of fire spreading from one apartment to another, behind the furring, at the same time improving the halls for sound.

The Boston Music Hall, completed in 1852, has one front entrance on Winter Street, and another in Bumstead Place. The interior of the hall is 130 feet long, 80 feet wide, and 65 feet high. It has a gallery at one end, and two rows of balconies on either side. A series of Corinthian pilasters, rising from above the upper balcony, support a groined cove, in which are the semi-circular windows which light the hall. The ceiling within the coving is divided into diamond-shaped panels. The front of the galleries is of light cast-iron work. The gas lights are arranged along the top of the main cornice, with supplementary gas lights on the front of the galleries. The hall will contain 3000 persons, and has corridors on either side, with 42 doors communicating with the hall. The architect was Mr. George Snell, of Boston.

The literary, charitable, and humane institutions of Boston are numerous and well endowed; and the buildings with which many of them are furnished, are among the handsomest ornaments of the city. The Boston Athenæum, incorporated in 1807, has a library of about 50,000 vol-

umes, which, in value as well as in size, is hardly surpassed by any other in the country. Its regulations are framed with the design that it shall answer the highest purposes of a public library. Besides the bound volumes above enumerated, it possesses 20,000, or more, unbound pamphlets, between 400 and 500 volumes of engravings, and the most valuable collection of coins in this part of the country. It has lately received an important accession to its treasures in the purchase of about 450 volumes, and from 800 to 1000 pamphlets, which once formed a part of the library of Washington. This important acquisition was secured to the Athenæum through the liberality of about 100 gentlemen of Boston, Salem, and Cambridge. There are also connected with the Athenæum a fine sculpture gallery and a gallery of paintings. In the latter is to be seen Belshazzar's Feast, the great historical picture of Washington Allston, which, although many years under his hand, was never entirely finished; also, a valuable series of sketches by this great artist.

Hon. James Perkins gave for the use of the Athenæum, in 1821, his own costly mansion in Pearl Street, which was occupied until it became necessary, in 1849, to change the location. The beautiful building which it now occupies is on Beacon Street, a short distance east of the State House, a situation most highly eligible for such an institution. The edifice is elegant, spacious, and convenient. The front is in the later Italian style of architecture, resembling some of the works of Palladio in its general arrangement; constructed of the Patterson freestone, of a light gray color. The length is 100 feet, and the height 60. The main entrance opens into a pillared and panelled rotunda, from which the staircases conduct above. The sculpture gallery, 80 feet by 40, is on the first floor. The library occupies the second story, which is divided into three rooms, two in front and one large hall in the rear, 109 feet by 40. This hall is beautifully finished in the Italian style, and admirably fitted for the purposes of its design. The picture gallery is in the upper story, divided into six apartments, each lighted by a skylight. An annual exhibition of paintings is open here, during the winter and spring.

The Massachusetts Historical Society, founded in 1790, occupies a suit of rooms in the granite building, on Tremont Street, between the Stone Chapel Cemetery and the Boston Museum. It has a valuable library of 7000 bound volumes, besides 450 volumes of manuscripts, and a large collection of pamphlets, maps, charts, coins, and other interesting relics of antiquity. The manuscripts of the historian Hubbard; of the first Gov. Winthrop, 11 vols.; of Gov. Hutchinson; of the first Gov. Trumbull, of Connecticut, 23 vols.; and the manuscript of Washington's Farewell Address to the Officers of the American Army, are in possession of this society. One of its rooms is adorned with the portraits of about 70 distinguished personages, mostly the worthies of New England. This society has issued a series of Historical Collections, in all amounting to 30 volumes.

The library of the Boston Library Society, founded in 1792, occupies a hall over the centre of the Tontine Buildings, as formerly denominated, in Franklin Place. This hall was a donation to the society by Bulfinch, (the architect of the Capitol at Washington,) Vaughan, and

Scollay, the three proprietors of the Tontine. This library has over 12,000 volumes.

The American Academy of Arts and Sciences, founded in 1780, is next in age to the American Philosophical Society at Philadelphia, which is the oldest of the scientific associations of the country. Its library, of 8000 volumes, contains a valuable collection of the memoirs and transactions of learned societies, and other scientific publications. It is kept in the N. wing of the Athenæum, on the lower floor.

The Mechanics' Apprentices Library Association, in Boston, claims the distinction of being the first of its kind established in the world. It is due to the wise suggestion and philanthropic energy of Mr. William Wood, now residing in Canandaigua, N. Y.; whose exertions have been extended, with the like success, to most of our large cities, and even to the cities of the old world. Lord Brougham remarks, that, "Although the remote origin of these institutions may be traced to Dr. Franklin, Mr. Wood has the merit of establishing them on their present plan, and adapting them peculiarly to the instruction of mechanics and apprentices. He founded the first in Boston, in 1820." The library contains about 4000 volumes, and was the gift of the Boston public to the apprentices of the city. It was originally intrusted to the care of the Massachusetts Charitable Mechanics Association, a society of established reputation, founded in 1795. This society, which is still prosperous, has handsome funds, which have been recently invested in the Revere Hotel. Its income is employed for relieving the distresses of unfortunate members and their families, and to stimulate, by premiums, inventions, and improvements in the mechanic arts. For this purpose it provides for those frequent and extensive exhibitions of the products of manufacturing skill and industry which have been so highly successful in Boston. In 1828, the Apprentices' Association was organized as distinct from that of the Mechanics, and the library committed to their entire control.

The Mercantile Library Association, of Boston, instituted in 1820, is a large and useful society, composed of merchants' clerks and others, which has a library of over 7000 volumes, and maintains an able and popular course of lectures. Their hall is on the corner of Bromfield and Province Streets.

Efforts are now making to establish a free City Library, and several handsome donations have been already made for that purpose.

But the most munificent foundation of this character, in Boston, is that of the Lowell Institute, established by the princely liberality of JOHN LOWELL, Jr., Esq. By a legacy amounting to about \$250,000, this gentleman has provided for the maintenance of public lectures, of the highest order, which are to be free to all the citizens, on the great subjects of natural and revealed religion; on the literature and eloquence of the English and other languages; on the various sciences in their application to the arts, and other relations of utility to man; and on such other subjects as the wants and taste of the age may demand. The Lowell Institute, by its ample income, is able to command the services of men of the highest talent in the country, and to furnish them with the fullest means for illustrating the subjects of their various discourses. The lectures are given on Tuesday and Friday

evenings, in a spacious audience room, fitted up for the purpose, and leased by the Institute, in the rear of the Marlboro' Hotel. None of its income can be expended in the erection of buildings.

There are other literary societies in Boston which we cannot speak of in detail. Such are the Boston Society of Natural History; the American Statistical Association; the New England Historical and Genealogical Society; the American Oriental Society; and the Boston Lyceum. All these have valuable libraries, cabinets, and collections. The Handel and Haydn Society, the Boston Academy of Music, and the Musical Education Society, are well-conducted and efficient associations for the cultivation of musical science and Christian psalmody.

Among the numerous charitable and humane institutions of the city are the Boston Lunatic Hospital, and the Houses of Industry and Reformation, each of which has a commodious and handsome edifice, located at South Boston; the Quarantine Hospital, delightfully situated on Rainsford's Island; the New Almshouse, on Deer Island, for which a most splendid, capacious, and well-constructed building has been erected, which is in the form of a Latin cross, having its four wings, three stories high above the basement, radiating from a central building four stories high; the Boston Eye and Ear Infirmary, with a beautiful structure lately erected in the W. part of the city; the Boston Female Asylum, founded in 1800, for assisting, instructing, and employing female orphan children, for which a new and substantial brick building, with ample grounds and some peculiar arrangements for warming and ventilating, has been provided at the south end; also the New England Female Medical College, established by the exertions of Samuel Gregory, for the qualification of females to nurse and attend upon the sick of their own sex. Besides these there are several societies for the benefit of seamen; among which are the Boston Port Society, and the Boston Seaman's Friend Society, which has provided an excellent Home for Sailors.

The Massachusetts General Hospital, situated on an open plot of ground of four acres, on the banks of Charles River, at the W. part of the city, is one of the noblest, best endowed, and best furnished institutions of the kind in the country. This beautiful edifice is of Chelmsford granite, 274 feet in length by 54 in breadth, with a portico in front of eight Ionic columns. Connected with the building in the rear is a kitchen and laundry of the most approved construction. The whole interior arrangement is according to the most perfect system. The premises are decorated with ornamental trees and shrubs, and laid out in gravel walks for those patients who are able to enjoy exercise in the open air. This institution has found many munificent patrons in Massachusetts. Its capital, now yielding income, exclusive of the large amount invested in the buildings, grounds, &c., is \$171,119. It has several other sources of income, making its whole receipts, in 1850, \$38,517. The number of patients received the same year was 746.

The McLean Asylum for the Insane, so called from JOHN McLEAN, Esq., an eminent merchant of Boston, and a liberal benefactor of the General Hospital, is a branch of that institution, having a separate location on a delightful eminence in Somerville, about 1 mile N. W. of the city.

The establishment, consisting externally of a group of five elegant buildings, makes a fine appearance from whatever direction it is viewed. As an example of the noble manner in which such institutions are sustained by the Boston merchants, it may be stated that, in 1843, Hon. William Appleton gave \$10,000 "for the purpose of affording aid to such patients in the McLean Asylum as, from straitened means, might be compelled to leave the institution without a perfect cure;" and, in 1850, the same gentleman contributed the further sum of \$20,000 "for the purpose of erecting two additional edifices, sufficiently large to accommodate eight males and eight females, with such conveniences and facilities as shall enable each to have not only the care, attention, and comforts, but the luxuries and retirement which they have been accustomed to enjoy at home."

The Perkins Institution and Massachusetts Asylum for the Blind is another of the great eleemosynary institutions originated by Boston liberality. It was first opened as an experiment, in 1832, under the superintendence of Dr. Samuel G. Howe. In 1833, Col. Thomas H. Perkins made a donation of his valuable mansion house in Pearl Street, other gentlemen in Boston \$50,000, the ladies \$14,000, and the legislature \$6,000 annually, for its permanent establishment. It now receives from the state \$9000 annually. Its average number of pupils is about 100, who are from many different states of the Union. The rapid growth of the institution having rendered its removal necessary, the estate in Pearl Street was exchanged for the present large and beautiful edifice at South Boston, formerly known as the Mount Washington House. To this splendid building, five stories high, and from its lovely eminence overlooking the city, harbor, and surrounding region, many conveniences have since been added, making the establishment, in respect to its accommodations, all that can be desired. It is open to the public on the afternoon of the first Saturday in each month.

Several of our national societies for religious and benevolent purposes have their seat of operations in the metropolis of New England. Among these are the American Board of Commissioners for Foreign Missions, the American Baptist Missionary Union, the American Education Society, the American Peace Society, the American Unitarian Association, the Prison Discipline Society, and the old Society for Propagating the Gospel among the Indians and others in North America. Several others, though not national in their organization, are truly such in the extent of their operations; such as the Massachusetts Home Missionary Society, the American Tract Society of Boston, and the Massachusetts Sabbath School Society.

There are upwards of one hundred churches in Boston, of the different denominations; 98 of which have their regular places of worship. Of these, the Unitarian Congregationalists have 22; Orthodox Congregationalists, 14; Baptists, 13; Methodists, 12; Episcopalians, 11; Roman Catholics, 11; Universalists, 6; Presbyterians, Swedenborgians, and several other denominations, one each. Most of the church edifices are venerable and costly structures, which contribute in no small degree to beautify the city. Several have lofty spires, which have a fine appearance on an approach to the city by land or water.

That of the Park Street Meeting House, north of the Common, rises to the height of 218 feet above the pavement, and is one of the most beautiful examples of this description of architecture in the country. The Gothic style, in dark colored sandstone, has been adopted, with fine effect, in the erection of several of the more recent structures.

The oldest church edifice in Boston, still standing, is that of Christ Church, (Episcopal) at the north end, built in 1723. In the steeple of this church is a peal of eight bells, on each of which is an inscription. Two of these are as follows: "We are the first ring of bells cast for the British Empire in North America. A. R., 1744." "God preserve the Church of England. 1744." The initials A. R. are those of the founder.

The Old South Meeting House, on Washington Street, is the next building in age, having succeeded to two others of wood on the same spot. It was opened for worship April 26, 1730. There is great historical interest connected with this sacred edifice. "Here was delivered, in defiance of the threats of authority, and in presence of marshalled soldiery, Warren's fearless oration, on the anniversary of the massacre of the 5th of March, 1770. Here were repeatedly held the meetings of oppressed freemen, which called forth those pearls of patriotic eloquence which moved the whole country, and shook the British throne." When the British troops occupied Boston, the whole interior of the Old South, except the sounding board and the east gallery, was dismantled by them, and converted into a circus for their dragoons. About two feet of earth was spread upon the floor for their horses to exercise upon. Large portions of the invaluable historical library, collected by its former pastor, Rev. Thomas Prince, they used for kindling their fires. This desecration of the Old South excited universal indignation. Happily, the interior was afterwards fully restored in its former style, with its two tiers of galleries, &c., and has been carefully preserved to this day, at once a venerated specimen of the elegance of ancient times, and a sacred shrine of patriotic and religious memories. In keeping with these associations, the Old South has long been the place where the annual election sermon is delivered before the governor and General Court.

The public schools of Boston, next to her religious institutions, and in harmony with them, have, from the first, been her most cherished care. The records of the town afford evidence, as early as 1635, of the establishment of a "Free School." From that hour to the present, Boston, in this respect, has held an honorable preëminence. The system of the public schools has here been brought to a high degree of completeness and perfection. It comprises schools of four different grades, viz.: 1. The Primary Schools, each taught by one female teacher, for children between 4 and 8 years of age. 2. The English Grammar and Writing Schools, into which all the children pass from the primary schools. 3. The English High School. 4. The Latin Grammar School. The two last are exclusively for boys. A public high school for girls is, perhaps, a desideratum; though the deficiency is supplied, to a great extent, by excellent private schools in the city. The number of primary schools, in 1851, was 188; and of the English

grammar schools, 22; with a corps of 370 teachers, whose salaries amount to \$183,898. The buildings for the use of the high and grammar schools are the most perfect in their kind, and in their style of architecture at once neat and ornamental. Their cost, with that of the primary school houses, including the ground, up to May 1, 1851, is estimated at \$1,210,110. About one quarter part of the population of Boston is kept at school throughout the year, at an annual expense to the city of about \$250,000; which, including the heavy investments for buildings, apparatus, &c., involves an outlay for this important public interest without a parallel in the world's history. It is, however, a part of the encomium due to the merit of the public schools of Boston, that many of her sister cities are now emulating her wisdom and liberality in this particular.

As a branch of the same enlightened philanthropy, the Boston Farm School for Indigent Boys, on Thompson's Island, should be mentioned; the object of which is "the education and reformation of boys who, from loss of parents or other causes, are exposed to extraordinary temptations, and in danger of becoming vicious and dangerous, or useless members of society." This institution, with 140 acres of land and suitable buildings, can accommodate 300 boys, who are to be trained with a view to promote at once their physical, mental, and moral welfare. This is virtually the Boston "College for Orphans." It has been in operation since 1835. There are likewise the House of Correction, and the House of Industry and Reformation, at South Boston, the latter designed for juvenile delinquents, and having a branch at the hospital on Deer Island, in which excellent schools are maintained. The State Reform School, at Westboro', also receives a large number of this class of children from the city.

The institution of the Franklin medals, awarded annually in the Boston schools, was founded by Dr. Franklin. The following is from the clause in his will, in which he makes the bequest, and defines its object:—

"I was born in Boston, New England, and owe my first instructions in literature to the free grammar schools established there. I therefore give one hundred pounds sterling to my executors, to be by them, the survivors or survivor of them, paid over to the managers or directors of the free schools in my native town of Boston to be by them put out to interest, and so continued at interest forever, which interest annually shall be laid out in silver medals, and given as honorary rewards annually by the directors of the said free schools, for the encouragement of scholarship in the said schools," &c. To the proceeds of this benefaction the city adds an annual sum sufficient to procure six silver medals, which are inscribed "The Gift of Franklin." The first pupil of the Boston schools, who received the Franklin medal, was Dr. John C. Warren, in 1792.

Since Boston, by its railroads, has become a great centre of business and travel for a large portion of the country, its hotels and houses of public entertainment have become an important feature of the city. Among the most celebrated are the Tremont House, on the corner of Tremont and Beacon Streets; the United States Hotel, opposite the Western Railroad

Station; the American House, on Hanover Street, the Revere House, on Bowdoin Square; the Quincy House, on Brattle Square; the Winthrop House, on Tremont Street, opposite the south end of the Common; and the Adams House, on Washington Street. These are all large and splendid establishments, conducted upon a most perfect system; and some of them have obtained a high celebrity in foreign lands. There are numerous hotels besides of great excellence, though less extensive than the above.

The total value of real and personal estate assessed for taxation in Boston, in 1851, was \$187,947,000. There were in 1852, twelve individual citizens estimated to be worth a million or more, and twenty more estimated to be worth half a million and upwards.

Boston was originally selected as a place of residence for its abundance of pure water; and it is supposed that, on this account, the name *Shawmut*, signifying *Living Fountains*, had been given to the peninsula by the Indians. For many years, however, previous to the construction of the great aqueduct by which it is now so richly supplied, the wants of the city, in this important particular, had increased beyond its internal resources. A company was incorporated, as early as 1795, for the purpose of introducing into the city the water of Jamaica Pond, in Roxbury. In 1845, this company had laid about 15 miles of pipe, conveying the water to nearly 3000 of the 10,370 houses which the city then contained. The elevation of this pond, however, was too low to bring the water into the higher portions of the city; and its capacity was quite insufficient for the supply of the portions reached. For 20 years previous to 1845, various commissions had been constituted, at different times, to examine the waters in the neighborhood, for the purpose of selecting one to be introduced into the city. At length, in 1845, Long Pond, or LAKE COCHITUATE, as it has since been named, was selected for this purpose, which lies in the towns of Framingham, Natick, and Wayland, about 20 miles west of Boston. This beautiful body of water covers an area of 659 acres, and is in some places 70 feet deep. It drains an area of 11,400 acres, and will supply, according to the lowest estimate, 10,000,000 gallons of water daily. Its elevation above the level of spring tide at Boston is 124½ feet. It is divided into two sections by a dam. The northerly section, from which the aqueduct is taken, contains about 200 acres; and the other, which is held in reserve, to be drawn upon as wanted, contains about 459 acres. The gate house is in Wayland, near the Natick line. The water is conveyed, through a conduit of brick masonry, from this point 14½ miles to the reservoir in Brookline, which is 4½ miles distant from the centre of the city. This conduit is, in section, an egg-shaped oval, the largest end down, 6 feet 4 inches in height, and 5 feet in width, in its interior dimensions, and of two bricks in thickness, laid in hydraulic cement. It has a descent of 2½ inches to the mile. The conduit is interrupted at the crossing of Charles River, over which the water is carried in two 30 inch iron pipes, on a bridge of granite masonry, constructed in a handsome style of architecture, with three arches of 30 feet span. Some of the excavations for the conduit were over 50 feet in depth; and it is carried through two tunnels in ledges of the hardest rock, one 1140, and the other 2410 feet in length. The

reservoir in Brookline is a beautiful structure, of irregular, elliptical shape, including, with the embankment and the necessary margin, 38 acres. The surface of the water covers about 22½ acres. It is capable of containing about 100,000,000 gallons of water—a quantity sufficient for the city for two weeks, at 7,000,000 gallons a day. The gate house is a handsome structure of granite masonry, with a roof of iron.

* From the Brookline reservoir the water is brought into the city, over the Neck, in two iron pipes, one 30 and the other 36 inches in diameter. The first discharges into a central reservoir on Beacon Hill, a short distance in the rear of the State House. From the other, branches are conducted directly to most parts of the city.

The Beacon Hill reservoir is a massive structure of granite stone masonry, nearly 200 feet square, occupying the entire area, east and west, between Temple and Hancock Streets, and extending from Derne Street on the north to the rear of Mount Vernon Street on the south. Its height to the top of the coping, on Derne Street, is 58 feet 9 inches; this, by the declivity of the ground, being its loftiest wall. The whole substructure supporting the basin, or reservoir, rests on arches of immense strength, 14½ feet span. The depth of the basin is 15 feet and 8 inches, and its capacity 2,678,961 wine gallons. This reservoir is intended to supply the city, for a short time, in any possible contingency of the connection with the Brookline reservoir being interrupted.

There are also distributing reservoirs at South Boston and at East Boston. The reservoir at South Boston is on Telegraph Hill, one of the old "Dorchester Heights." It is supplied by a 20 inch pipe, from the main in Tremont Street, through Dover Street, and over the south bridge. Its capacity is 7,508,246 gallons. The water is carried to East Boston by a 20 inch pipe, commencing at Haymarket Square, and crossing Charles River on the lower side of Warren Bridge, thence over Mystic River by Chelsea Bridge, and thence across Chelsea Creek by a flexible pipe to the reservoir on Eagle Hill. This reservoir is 30 feet deep, and contains 5,591,816 wine gallons. The cost of introducing the water into East Boston was \$306,980. The entire length of pipe laid from the commencement of the Boston Water Works, in all parts of the city, in Brookline, Roxbury, South Boston, Charlestown, Chelsea, and East Boston, up to January 1, 1852, was a fraction over 100 miles. The entire cost of the aqueduct, up to January 1, 1852, was \$5,185,711.

An analysis of the water of Lake Cochituate, by Professor Benjamin Silliman, Jr., gave the following results:—

Chloride of sodium,0323
Chloride of potassium,0380
Chloride of calcium,0308
Chloride of magnesium,0764
Sulphate of magnesia,1020
Alumina,0800
Carbonate of lime,2380
Carbonate of magnesia,0630
Silica,0300
Carbonate of soda, equivalent to crenate and nitrate of do., and loss,5295
	<hr/>
	1.2200
Carbonic acid in one gall. in cubic inches,	10.719

This water is remarkable for the very small quantity of solid matter which it contains, and its great freedom from foreign substances. Indeed, Professor Silliman remarks, it is "almost good enough for any chemical purpose whatever." "A water," he adds, "which will dissolve nitrate of silver without cloudiness, and will produce no precipitate with a salt of baryta, must be allowed, on all hands, to be *very pure*, although not absolutely so."

As a commercial port, and also as a place of internal trade, especially since the completion of her great lines of railroad communication, Boston possesses preëminent advantages. Previous to the revolution, and for a long time afterwards, this was the most extensive mart of foreign commerce in the country; and, even to this day, Boston has more than one half of the East India trade carried on from the United States, and of the Russia trade three quarters. She has also an extensive trade with the Mediterranean the West Indies, South America, and every part of the commercial world. In 1851, the arrivals from foreign ports were 2877, of which 75 were from the Cape of Good Hope and beyond. Besides these, a large number of the foreign vessels, belonging to Boston, arrive and discharge their merchandise at New York, for the advantages of a more central and extensive market.

The foreign commerce of this country may be said to be controlled by the cities of Boston and New York. The aggregate value of their imports amounts to about \$185,000,000, of which about \$35,000,000 comes direct to Boston. The immense wealth of these two cities, amounting in the aggregate to \$500,000,000, enables them almost entirely to command those great branches of commerce which require a heavy capital for their operations. The East India and Pacific trade, without including the vessels bound to California, employs, at the present time, 338 ships and barks, which, with the exception of a few vessels owned in Salem, is controlled entirely by Boston and New York; New York having a majority of the China trade, and Boston controlling nearly all the trade with Calcutta, Manilla, Batavia, Sumatra, the Cape of Good Hope, Chili, and Peru.

"Those," says an early historian of Boston, "who were formerly forced to fetch most of the bread they ate, and beer they drank, a thousand leagues by sea, are, through the blessing of the Lord, so increased, that they have not only fed their elder sisters, Virginia, Barbadoes, and many of the Summer Islands, that were preferred before them for fruitfulness, but also the grand mother of us all, even the fertile isle of Great Britain. Beside, Portugal hath had many a mouthful of bread and fish from us in exchange for their Madeira liquor, and also Spain; nor could it be imagined that this wilderness should turn a mart for merchants in so short a space. Many a fair ship had her framing and finishing here, besides lesser vessels, barks, and ketches. Many a master, besides common seamen, had their first learning in this colony. Boston, Charlestown, Salem, and Ipswich, our maritime towns, begin to increase roundly, especially Boston, the which, of a poor country village, in twice seven years, is become like unto a small city, and is in election to become a mayor town suddenly, chiefly increased by trade by sea." This quaint and lively sketch of the infant com-

merce of Boston, so interesting on other accounts, reveals the early development of many of those great sources of wealth which have made it one of the richest cities of this country. It has been the mother of the maritime interest in America, has continued the training of "many a master, besides common seamen," not only for her own, but for the other great ports of the country, and is now a chief mart for the exportation of "bread and fish," in exchange for the commodities of Europe.

But as other considerations besides the facilities of trade had an influence, and even a controlling influence, in the original settlement of Boston, its situation was not selected upon the principle which has generally governed the location of our large cities, viz., the confluence of some large navigable river with the sea, thus uniting the greatest natural advantages for foreign and internal traffic. Consequently, for a time after the vast resources of the country west of the Alleghany Mountains began to be largely developed, and to seek a channel to the foreign market, the trade of Boston suffered, relatively, from the want of better communication with the more remote interior, and her ships had to seek freight in the southern ports. But, happily, in her large accumulations of capital, and in the indomitable enterprise of her citizens, she found the means of completely obviating this natural disadvantage, through the construction of the several great lines of railroad by which she has become connected with the most distant sections of the country lying east, west, north, and south. This great achievement of science, industry, and art has effected a most surprising advancement in the commercial prosperity and prospects of Boston. Her internal trade, which was formerly limited to the coast, and to the space circumscribed by the nearest ranges of elevated mountains, is now opened to the farthest boundaries of the valleys of the Mississippi and the St. Lawrence; and her merchants now think as lightly of extending their traffic beyond the Rocky Mountains to Oregon and California, as they once did of reaching the opposite slopes of the Green Mountain and Alleghany ranges.

There are now seven great lines of railroad diverging in different directions from Boston, most of which are annually increasing in extent. It will give some idea of the magnitude to which this interest has grown, when it is stated that the aggregate distance travelled to and from Boston daily, upon the railroads now in operation, disregarding many of the shorter trips of the numerous accommodation trains around the city, is over 12,000 miles, and that the number of persons arriving and departing daily is upwards of 10,000. Another route is now nearly completed, to meet the great Erie Railroad, by the way of Hartford, Ct., and Fishkill on the Hudson River. But the greatest further improvement now in progress is the extension of the Fitchburg Railroad beyond its present terminus at Greenfield, by tunnelling the Hoosic Mountain, and passing to the city of Troy on the Hudson River opposite the Erie Canal. As the highest grade on this road between the Connecticut and Hudson Rivers is only 31 feet to the mile, and the distance between the two cities only about 175 miles, this improvement, when completed, cannot fail to give to Boston a large increase of the almost boundless commerce of the west.

By our tables of latitude and longitude, it will be seen that Albany, Buffalo, Detroit, and Chicago lie within a fraction of the same degree of latitude with Boston; and as these four places are the chief depositories of the immense produce of the west, and as the great marts for this produce in Europe — Liverpool, Havre, St. Petersburg, and other ports — lie some degrees N. of Boston, it must be evident that every variation to the S. of this line of communication will by so much increase the distance on this great channel of commercial intercourse. And the capitalists of Boston, aware of this fact, are expending large sums of money in the extension of these improvements. To say nothing of several enterprises more remote, or in their more incipient stages, we learn from authentic sources, that probably one third of the entire line from Albany to Buffalo; one half of the Vermont Central, the Rutland, and the Canada roads; two-thirds of the Ogdensburg, connecting the Vermont Central with Lake Ontario; and two thirds of the Michigan Central, extending from Detroit to Chicago, are owned in Boston.

As a mart for our domestic manufactures, Boston, from these various facilities, possesses great advantages; and especially as the metropolis of New England, which is already, and seems destined to be more and more, the great manufacturing district for the country.

There is probably no place in the world better provided than Boston with the necessary accommodations for her extensive commerce. The whole margin of the city on the E. and N. is lined with about 200 docks and wharves, affording altogether an extent of wharfage of over 5 miles. Some of these wharves are among the most stupendous structures of this description in the country. Long Wharf, at the foot of State Street, extends into the harbor 1800 feet, having upon it a line of 76 spacious warehouses. Central Wharf, S. of this, is 1379 feet long, with a uniform range of warehouses running the whole length, 50 feet wide and four stories high. Between these two wharves, on Commercial Street, stands the Custom House. South of Central Wharf is India Wharf, 930 feet long, with a range of 39 warehouses in the centre. Among the most extensive wharves towards the northern part of the city are Granite or Commercial Wharf, Lewis's Wharf, and the Eastern Railroad Wharf. On each of these is a range of massive granite warehouses, unequalled by any thing of the kind in the United States. On the Eastern Railroad Wharf there are two such ranges, and the avenue to the railroad station passes between them. That on the south side is occupied by an extensive flouring mill, in which 2500 bushels of wheat daily are manufactured into the finest flour. South of these are other important wharves; among these is Russia Wharf, formerly Griffin's Wharf, where that memorable demonstration of the spirit of resistance to British oppression was given, in the presence of several of her ships of war lying before the city — the emptying of about 340 chests and half chests of tea into the ocean. One of the greatest accommodations recently provided is that at the termination of the Grand Junction Railroad at East Boston, by which all the railroads coming to the city are immediately connected with a system of warehouses and wharves, where vessels are laden and unladen. This important improvement was opened on the 17th of Sep-

tember, 1851, the day of the grand festival held by the city for celebrating the completion of the last of the great lines of railroad centring here, by which the River St. Lawrence, at its two most important points, the port of Ogdensburg and the city of Montreal, one the outlet of the commerce of the great lakes, and the other the head of ship navigation entering the British provinces by that mighty river, became connected with the port of Boston. This was a proud day for the New England metropolis, which, after years of incredible enterprise and expenditure, saw the completion of that magnificent scheme of internal communication by which the most distant sections of our country, and the neighboring provinces of Great Britain, became commercially annexed to her domain. As was natural, the highest public functionaries, and many of the wealthy merchants and others from Canada, were present, by invitation, to unite in the festivities of the occasion.

No maritime port in this country enjoys finer advantages than Boston in respect to the capaciousness and security of its harbor, and the unobstructed ingress and egress of shipping to its wharves at all seasons of the year. Of Boston harbor we have given a particular description on page 173, to which the reader is referred. For statistics of the commerce, banks, &c., see Statistical tables.

The first settlement of Boston was in 1630, when John Winthrop, the first governor of Massachusetts, and the company of immigrants with him, having arrived and tarried for a short time at Charlestown, removed their location to the peninsula. There was one solitary inhabitant there at an earlier date, the Rev. William Blackstone, of whom Mather speaks as "a godly Episcopalian," who in 1626 had built a cottage near what is now called Spring Street, in the western part of the city. In 1634, fifty acres of land were set off to Mr. Blackstone, which was about one twelfth part of the peninsula, he being "the first European inhabitant." Not long afterwards, when he wished to remove, the town purchased all his "right and title to the peninsula of Shawmut" for £30, each freeholder paying six shillings, and some of them more. Mr. Blackstone afterwards settled in Rhode Island. In 1673, the first wharf was built. In 1677, the court appointed John Hayward postmaster, "to take in and convey letters according to direction," which was the first commencement of the post office system in America. In 1690, the first paper money was issued. In 1701, the representatives of Boston were instructed by the town to use their influence to obtain the abolition of slavery — one of the earliest movements in the world on this subject. April 17, 1704, the first number of the *Boston News Letter*, the earliest newspaper in America, was published by John Campbell. The year 1706 is rendered memorable in the annals of Boston by the birth of Benjamin Franklin. October 1, 1768, after the disaffection of the colonists with the British government had become serious, two regiments of British troops were landed at Boston, who took up their quarters in the old State House. March 5, 1770, the Boston massacre occurred, by the firing of the troops upon the citizens, and killing three persons and mortally wounding three others. March 31, 1774, the Boston port bill was passed in the British Parliament, shutting the port of Boston and producing great distress among the citizens.

May 14, the town voted to discontinue all commerce with Great Britain. On the 17th of June, 1775, the memorable battle of Bunker Hill was fought. March 17, 1776, the British were compelled to evacuate Boston, and the American troops, under General Washington, entered it in triumph. Independence having been established, and peace declared in 1783, Boston, with other cities of the Union, entered upon a rapid career of commercial enterprise and prosperity.

Boston continued a town, and its affairs were administered by selectmen, like other towns in Massachusetts, until February 23, 1822. At this time the population was about 45,000. The intention to make Boston a city had occasionally been entertained since 1651; but the people had not hitherto felt the necessity of a more efficient municipality than that of the town. They had continued in a remarkable degree, notwithstanding the admixture of foreign elements, to justify the early encomium of Winthrop: "They were generally of that understanding and moderation, as that they would be easily guided in their way by any rule from Scripture or sound reason."

The city is divided into 12 wards, and is governed by a mayor, 8 aldermen, and 48 common councilmen, 4 from each ward. The mayor and aldermen constitute one board, and the common councilmen another, who hold their sessions separately, excepting when they meet in joint ballot. Two persons besides from each ward are chosen to act with the mayor and president of the common council, as a school committee; and one from each ward to constitute a board of overseers of the poor. The term of all these offices is one year.

In bringing this article to a conclusion we may adopt the words of Hon. JOSIAH QUINCY, late president of Harvard University, in his address delivered at the close of the second century from the settlement of the city:—

"As our thoughts course along the events of past times, from the first settlement of Boston, they trace the strong features of its character indelibly impressed upon its acts and in its history—clear conceptions of duty; bold vindications of right; readiness to incur dangers and meet sacrifices in the maintenance of liberty, civil and religious. Early selected as the place of chief settlement of New England, it has through every subsequent period, maintained its relative ascendancy. In the arts of peace and in the energies of war, in the virtues of prosperity and adversity, in wisdom to plan and vigor to execute, in extensiveness of enterprise, success in accumulating wealth and liberality in its distribution, its inhabitants, if not unrivalled, have not been surpassed by any similar society of men. Through good report and evil report, its influence has at all times been so distinctly seen and acknowledged in events, and been so decisive on the destinies of the region of which it was the head, that the inhabitants of the adjoining colonies of a foreign nation early gave the name of this place to the whole country; and at this day among their descendants the people of the whole United States are distinguished by the name of "Bostonians." Amidst perils and obstructions, on the bleak side of the mountain on which it was first cast, the seedling oak, self-rooted, shot upward with a determined vigor. Now slighted and

now assailed; amidst alternating sunshine and storm; with the axe of a native foe at its root, and the lightning of a foreign power at times scathing its top, or withering its branches; it grew, it flourished, it stands—may it ever stand—the honor of the field."

Sicut patribus sic Deus nobis.

AS GOD WAS WITH OUR FATHERS, SO MAY HE BE WITH US.

Boston Corner, Ms. This tract, in the S. W. corner of the state, though politically attached to the township of Mount Washington, is cut off from it by a mountain 2000 feet in height.

Boston, N. Y., Erie co. Watered by Cauquaga Creek and other small streams. The surface is undulating; the soil good. 18 miles S. E. from Buffalo, and 289 W. from Albany.

Bastrop County, Ts., c. h. at Bastrop. South central. On the Colorado.

Botetourt County, Va., c. h. at Fincastle. South central. Between the Blue Ridge on the E. and the main branch of the Alleghanies on the W. The Upper James River flows through it. Surface elevated and mountainous.

Bound Brook, N. J., Somerset co. 33 miles N. E. from Trenton. On the Delaware and Raritan Canal.

Bourbon County, Ky., c. h. at Paris. N. E. central. The S. branch of Licking River waters this county. Soil very productive.

Bovina, N. Y., Delaware co. The surface is hilly, and is watered by Little Delaware River. Soil adapted for grazing. 69 miles S. W. from Albany.

Bow, N. H., Merrimac co. Soil uneven and hard, but productive. Turkey River empties into the Merrimac at Turkey Falls. About a mile below are Garvin's Falls. Bow Canal is situated on the Merrimac, 3 miles below Concord; the fall it overcomes is 25 feet; length a quarter of a mile. 7 miles S. E. from Concord. On the Concord and Nashua Railroad.

Bowdoin, Me., Lincoln co. An interior town. 37 miles N. N. E. from Portland.

Bowdoinham, Me., Lincoln co. On the west side of Kennebec River. Here is considerable business in the lumber trade and ship building. 12 miles N. from Bath.

Bowie County, Ts., c. h. at De Kalb. In the N. E. corner between Red River and Caddo Lake.

Bowling Green, Ia., c. h. Clay co. On Eel, a branch of White River. 60 miles S. by W. from Indianapolis.

Bowling Green, Ky., Warren co. On Big Barren, a branch of Green River, and accessible by steamboats of 200 tons at all seasons. 144 miles S. W. from Frankfort. The principal export is tobacco.

Boydton, Va., Mecklenburg co. 109 miles S. S. W. from Richmond. Seat of Randolph Macon College, the buildings of which are about 1 mile W. of the village. See *Colleges*.

Boyle County, Ky., c. h. at Danville. Central. Watered by branches of Salt and Dick's Rivers. Soil very productive.

Boylston, Ms., Worcester co. Hilly and broken, but the soil is strong and productive. It is watered by the S. branch of Nashua River. 40 miles W. from Boston, and 7 N. from Worcester.

Boylston, N. Y., Oswego co. Little Sandy and Trout Creeks water this town, which has a some-

what rough surface, but a productive soil. 140 miles N. W. from Albany.

Boxboro', Ms., Middlesex co. Soil mostly light, and the surface broken and hilly. Good limestone is found here. There is a pleasant village in *Boxboro'*, through which the Boston and Fitchburg Railroad passes. 27 miles N. W. from Boston, and 7 N. W. from Concord.

Boxford, Ms., Essex co. 25 miles N. from Boston, and 12 S. W. from Newburyport.

Bozrah, Ct., New London co. The soil is a gravelly loam, rich and fertile. It is watered by Yantic River, on which are two pleasant and flourishing villages, *Bozrahville* and *Fitchville*.

Bracken County, Ky., c. h. at Augusta. N. E. part of the state, on the Ohio River. Surface broken; soil fertile.

Bradbury County, As., c. h. at Warren. In the S. E. corner, bordering on Louisiana. Saline Fork of the Wachita runs S. through it.

Bradford, Me., Penobscot co. 87 miles N. E. from Augusta.

Bradford, Ms., Essex co. On the S. side of Merrimac River. United to Haverhill by a bridge 680 feet in length, and a railroad viaduct. The surface of the town is pleasantly diversified, and the soil various. Much of the land is of a superior quality. The Bradford Academy is on an elevated spot, about 100 rods from Haverhill, and commands a beautiful view. 16 miles N. E. from Lowell, and 31 N. from Boston by the Boston and Maine Railroad.

Bradford, N. H., Merrimac co. Many parts of the town are hilly, although most of it lies in a valley. Near the Sunapee Mountain is an extensive plain, more than a mile long and half a mile wide. 28 miles W. from Concord.

Bradford, N. Y., Steuben co. Drained by Mud Creek and its tributaries. The surface is uneven; soil of good quality. 12 miles E. from Bath, and 204 S. of W. from Albany.

Bradford County, Pa., c. h. at Tonawanda. In the N. E. angle bordering on N. Y. Watered by the Chemung and the N. branch of the Susquehanna Rivers, and by Tonawanda and Sugar Creeks. Surface partly mountainous. In the S. part is much good land.

Bradford, Pa. A northern township of McKean co., on the New York frontier.

Bradford, Vt., Orange co. The surface is somewhat broken. A strip of intervalle skirts Connecticut River, which bounds the town on the E., and there is much good land in other parts. 30 miles S. S. E. from Montpelier, and 11 S. S. E. from Chelsea.

Bradley, Me., Penobscot co. 12 miles E. N. E. from Bangor.

Bradley County, Te., c. h. at Cleveland. In the S. E. corner, bordering on Georgia. Surface mountainous; soil, fertile on the borders of the streams.

Bradleyvale, Vt., Caledonia co. Watered by Moose River. Has a fine water power and much good land. 12 miles easterly from St. Johnsbury.

Brady, Mn. Watered by Portage River. 146 miles W. from Detroit.

Braintree, Ms., Norfolk co. The surface is variegated by hill and dale, presenting many delightful views of Boston, its harbor, and the adjacent country. The soil is a strong, gravelly loam, and very productive. Excellent granite abounds here. The first ever used in this country, for the purpose of building houses, was fur-

nished by John Hayward, Esq., of this town, in 1752, for the erection of King's Chapel, in Boston. There are several villages in the town. The Old Colony Railroad passes through the centre. 10 miles S. by E. from Boston, and 12 E. by S. from Dedham.

The town is well watered by Monatiquot River, on which are several manufacturing establishments.

The farm of Hon. Benjamin V. French, a native of this town, and a retired merchant, at Mount Monatiquot, deserves to be noted as a remarkable instance of the agricultural and horticultural improvements effected of late years in the vicinity of Boston. Commencing in 1818 with a worn-out piece of land, Mr. French now has on his place over 400 varieties of the apple, as many of the pear, and about 100 each of plums and cherries, besides every variety of other fruit which can be cultivated in this climate, whether for the field or garden. It is his object to try all kinds, with the view of selecting the best, which he thinks will soon be reduced to about 30 varieties of the apple, 20 of the pear, and about the same number of plums and cherries, by which the worthless kinds so generally now growing will be superseded. This selection will include quite a number of native American varieties, new specimens of which are constantly brought forward by the zeal of our intelligent horticulturists, who well deserve to be ranked among public benefactors. In 1851, Mr. French exhibited, at the Horticultural Rooms in Boston, 230 choice specimens of as many different varieties of the apple and pear, for which he received a splendid piece of plate.

Braintree, Vt., Orange co. Watered by the third branch of White River, and Ayers's and Mill Brooks, its tributaries. Between Ayers's Brook and the third branch is a large swell of land called "Quaker Hill." Between the third branch and the head of White River is a considerable mountain, which renders that part incapable of settlement. 21 miles S. from Montpelier, and 14 W. by S. from Chelsea. The Vermont Central Railroad passes through this town.

Branch County, Mn., c. h. at Branch. On the southern border of the state. Undulating, and watered by branches of the St. Joseph's River. Soil fertile sandy loam.

Branch, Mn., c. h. Branch co. On the W. branch of Coldwater River. 113 miles W. S. W. from Detroit.

Branciforte County, Ca., c. h. at Santa Cruz, on the N. coast of Monterey Bay.

Brandenburg, Ky., c. h. Mead co. On the Ohio River. 94 miles W. by S. from Frankfort.

Brandon, Mi., c. h. Rankin co.

Brandon, N. Y., Franklin co. A large and mostly uncultivated town, covered with dense forests, and interspersed on the S. part with numerous lakes. It is drained by Saranac, St. Regis, and Racket Rivers. 10 miles S. W. from Malone, and 215 N. N. W. from Albany.

Brandon, Vt., Rutland co. Watered by Otter Creek, Mill River, and Spring Pond, on which streams are good mill sites. Some of the land is level, with rather a light soil, but that on Otter Creek is excellent. Bog iron ore is found here; also, abundance of marble. There are two curious limestone caverns in this town. 60 miles N. W. from Windsor, and 40 S. W. from Montpelier. The Rutland Railroad passes through it.

Brandt, N. Y., Erie co. On the borders of Lake Erie; bounded partly on the S. by Cattaraugus Creek. Hilly. 20 miles S. from Buffalo, and 348 W. from Albany.

Brandywine, Pa., Chester co. Brandywine and Beaver Creeks water this town.

Branford, Ct., New Haven co. An uneven township, of strong soil, on Long Island Sound. Thimble Islands and Indian Islands lie within the limits of the town.

Brasher, N. Y., St. Lawrence co. St. Regis and Deer Rivers water this town, the surface of which is rolling, and a large part of the soil swampy, abounding with bog iron ore. 30 miles N. E. from Canton, and 250 N. N. W. from Albany.

Brasher Falls, N. Y., St. Lawrence co. The falls of Deer River, at this place, afford extensive water power.

Brattleboro', Vt., Windham co., lies in the S. E. section of the state, having Connecticut River for its E. boundary. It is 96 miles S. from Montpelier, and 90 miles W. from Boston. The surface of the town is diversified by hills, valleys, and plains. It has a good soil, which is generally well improved. The town and vicinity are noted for their salubrious air, pure water, and fine mountain scenery. It is intersected by West River, Whetstone Brook, and numerous smaller streams. There are many sites for water power on the larger streams unoccupied, and inviting to enterprise.

At the S. E. section of the town is the site of the once famous military post Fort Dummer, nothing of which is now retained but the name, Dummer Meadows. Here, in 1742, the first English settlement in Vermont was effected.

There are in Brattleboro' two villages, the E. and the W. The W. village is near the geographical centre of the town. Here is a flourishing academy, and one or two meeting houses. The E. village, which is the part of the town commonly known as Brattleboro', is on Connecticut River, at the mouth of Whetstone Brook, which affords a convenient landing-place for river craft. Brattleboro' is here connected with Hinsdale, on the New Hampshire side, by a handsome covered bridge spanning the Connecticut River. This village is the general business mart for the surrounding towns. It is a place of much enterprise and prosperity, and combines, in a remarkable degree, the characteristics of taste and elegant culture with those of natural wildness and rural beauty.

In this village is located one of the most extensive water-cure establishments in the country, under the care of Dr. Wesselhoeft. The abundance, purity, and even temperature of the waters issuing here from natural springs in the hillsides, the invigorating air and romantic scenery, render this place peculiarly well adapted to the purposes of such an institution.

The railroad connection is now complete from Brattleboro' with all the southern, eastern, and northern railroads.

Braxton County, Va., c. h. at Braxton. N. W. central, on both sides of Elk River, a N. tributary of the Kenhawa.

Braxton, Va., c. h. Braxton co. On the N. side of Elk River. 321 miles W. N. W. from Richmond.

Brazoria, Ts., c. h. Brazoria co.

Brazoria County, Ts., c. h. at Brazoria. On the Gulf coast, on both sides of the mouth of the Brazos.

Brazos Santiago, Ts., Cameron co. A port a little N. of the mouth of the Rio Grande.

Brazos County, Ts., c. h. at Boonville. E. central, in the angle between the Brazos and Navasota.

Breaknock, Pa. A N. E. township of Lancaster co. Watered by Big and Little Muddy Rivers. Has a hilly surface and gravelly soil.

Breathitt County, Ky., c. h. at Breathitt. Surface hilly and mountainous, and watered by the N. and Middle Forks of the Kentucky River. Soil good on the borders of the streams.

Breckenridge County, Ky., c. h. at Hardensburg. On the Ohio, about the middle of its course along the state.

Bremen, Me., Lincoln co. On Muscongus Bay, about 40 miles S. E. from Augusta, and 15 E. S. E. from Wiscasset.

Brentwood, N. H., Rockingham co. The soil is better for grass than grain. Exeter River, and other smaller streams, water this town. Pick-pocket Falls, on Exeter River, afford an excellent water power. Vitriol, combined with sulphur, is found here. 32 miles S. E. from Concord, and 4 E. from Exeter.

Brewer, Me., Penobscot co. On Penobscot River, opposite Bangor.

Brewster, Ms., Barnstable co. Barnstable Bay is on the N. of this town. From three ponds in the town, covering about 1000 acres, a never-failing stream issues. Peat of good quality abounds here. Some parts of the soil are light and sandy, others clay and loam. There is a convenient breakwater for the accommodation of packets and other small vessels, where they lie in safety at any season of the year. 78 miles S. E. from Boston, and 13 E. from Barnstable.

Bridgeton, Me., Cumberland co. On the border of Long Pond, near the head of navigation.

Bridgeton, N. J., c. h. Cumberland co. It is situated on the Cohansic Creek, 40 miles S. S. E. of Philadelphia. The creek is navigable to the town for vessels of 101 tons, and it is consequently a port of entry for the district of W. Jersey. There are several manufacturing establishments which, with the shipping, give activity to the business of the place.

Bridgewater, Ms., Plymouth co., contains some of the best lands in Plymouth co. Taunton River washes the southern border of the town. The chief village is very pleasant, and is the seat of considerable business. It lies 27 miles S. by E. from Boston, and 20 W. by N. from Plymouth. One of the State Normal Schools for teachers is here.

Bridgewater, N. H., Grafton co. 30 miles N. W. from Concord.

Bridgewater, N. J., Somerset co. Surface level or undulating, except on the N. E., where it is mountainous.

Bridgewater, N. Y., Oneida co. Unadilla River has its source in this town. The surface is hilly and broken, yet well adapted to grazing, and in some parts to the growth of grain. 15 miles S. from Utica, and 110 W. from Albany.

Bridgewater, Vt., Windsor co. Surface uneven, and in some parts rough and stony. Along the Quechee River are tracts of valuable intervals, and there are many good farms in other parts. The summits of the hills are, in general, covered with spruce and hemlock; the timber, on other parts, is mostly maple, beech, and birch. There is an inexhaustible quarry of soapstone situated

nearly in the centre of the town. There is a small village on the river, near the S. E. corner of the town. This town is watered by Otta Queechee River, and by several considerable branches. These streams afford numerous mill privileges. 45 miles S. from Montpelier, and 17 N. W. from Windsor.

Bridgeport, Ct. City and town, Fairfield co. 75 miles S. S. W. from Hartford; 17 miles S. W. from New Haven, and 62 miles N. E. from the city of New York. It is on the W. side of an arm of Long Island Sound, into which the Pequannock River enters. The township contains about 10 square miles of excellent land, and was separated from Stratford in 1821. The city has had a rapid and prosperous growth. It was incorporated as a city in 1836. It is chiefly built on a plain, elevated a few feet above high-water mark, and is handsomely laid out and neatly built. There is a terrace of about 50 feet ascent at the N. side of the city, above which there is a surface of about half a mile square, on which are a number of beautiful private mansions, delightfully situated for the prospect of the city and of the Sound, which lie spread out before them. There are five or six handsome church edifices, belonging to different denominations. Some of the hotels are spacious and elegant buildings.

A large business is done at Bridgeport in the coasting trade, and something in foreign commerce. Some vessels are employed in whaling and other fisheries. The harbor is safe; but the entrance of large vessels drawing more than 13 feet of water is impeded by the bar at its mouth. A steamboat plies daily between Bridgeport and New York. This is the S. terminus of the Housatonic Railroad, which connects at West Stockbridge, Mass., with the Western Railroad from Boston to Albany, and with another to Hudson, N. Y. The New York and New Haven Railroad, which is part of a continuous route to Boston, passes through this place. The Naugatuck Railroad also comes in here.

Bridport, Vt., Addison co. Level, and the soil generally is a brittle marl, or clay. The hills are a loam and red slaty sandstone. A range of shelly blue slate extends through the town, lying generally a little below the surface. This town is poorly watered, there being no durable mill streams, and the springs and ground generally being impregnated with Epsom salts. For family use rain water is generally employed. There are several landing-places for goods on the lake shore. Lake Champlain forms the western boundary of this town; across this lake to Crown Point is 2 miles. 12 miles W. by S. from Middlebury, and 45 S. W. from Montpelier.

Brier Creek, Pa. An easterly township of Columbia co. 94 miles N. from Harrisburg.

Brighton, Me., Somerset co. 50 miles N. from Augusta.

Brighton, Ms., Middlesex co. 5 miles S. W. by W. from Boston. Washed by Charles River on the W. and N. The soil is excellent, and highly cultivated. Winship's gardens are noted throughout the country for their nurseries of fruit-trees and shrubbery, and for their grand display of plants and flowers of every variety. J. Breck & Co.'s garden, and horticultural and seed establishment, and Warren's gardens, attract much attention. Brighton is the largest cattle market in New England. The Boston and Worcester Railroad passes through it.

Brighton, N. Y., Monroe co. Watered by Genesee River. The surface is slightly uneven, the soil sandy or clay loam. 3 miles E. from Rochester, and 255 miles N. W. from Albany.

Brighton, Pa., Beaver co. On the W. side of the Big Beaver, about 4 miles from the Ohio River, and 231 miles W. by N. from Harrisburg. It is connected with New Brighton on the opposite side of the Big Beaver by a bridge. The water power at this place is extensive, and is improved for flouring mills, the manufacture of cottons, &c.

Brighton, Vt., Essex co. Watered chiefly by Ferren's River, and other head branches of Clyde River. Some of the head branches of the Passumpsic and Nulhegan Rivers originate here. A very good township of land, and contains much excellent white pine timber, with several fine mill sites. 70 miles N. E. from Montpelier.

Brimfield, Ms., Hampden co. A fine farming town, with a good soil, and is well watered by Quinnebaug River. 19 miles E. by N. from Springfield, and 70 W. by S. from Boston.

Bristol, Ct., Hartford co. 20 miles W. by S. from Hartford, and 28 miles N. from New Haven. It is watered by streams which flow into the Farmington River. The surface of the town is uneven and hilly. The soil, which is a gravelly loam, is considerably fertile, producing all kinds of grain, grass, and fruit common to this climate. But the great business of Bristol, for which it has become celebrated far and near, is the manufacture of clocks, which are made in every variety of form and kind, whether of wood or brass, and are sent into all parts of this country, and even to other countries. The number of clocks produced in a single year has sometimes amounted to 100,000; as many as 16 or 18 manufactories being engaged in this business. A good deal is also done in the manufacture of buttons, and a variety of other articles.

There are churches here of the Congregational, Baptist, Methodist, and Episcopal denominations. The Congregational house of worship is situated on the summit of a circular hill, around the base of which the principal part of the village is built along the stream which furnishes the power for the manufactories.

Bristol is on the route of the railroad now in process of construction from Hartford to Fishkill, N. Y., which is already in operation as far as to this place. This railroad intersects the Canal Railroad at Plainville, and, as it proceeds westward, will successively connect with the Naugatuck, the Housatonic, the Haerlem, and the Hudson River Railroads, and terminate opposite Newburg, from which a branch is opened to the great Erie Railroad.

Bristol County, Ms., Taunton and New Bedford, shire towns. In the S. part, bordering on R. I. Taunton and Pawtucket are its chief rivers. The surface is somewhat broken, but generally level; soil mostly inferior quality. It has a maritime coast of considerable extent, indented with numerous headlands, small bays, and harbors. This county gives rise to many streams that fall into Massachusetts and Narragansett Bays, and its water power is abundant in almost every town. It abounds in excellent iron ore.

Bristol, Me., Lincoln co. On the Damariscotta and Pemaquid Rivers. 60 miles N. E. from Portland, and 32 S. E. from Augusta.

Bristol, N. H., Grafton co. A hilly township, but has a good soil. Newfound Pond, 6 miles in length, and from 2 to 3 miles in width, lies in this town and Hebron. 30 miles N. W. from Concord.

Bristol, N. Y., Ontario co. Watered by Mud Creek. The surface is somewhat uneven, the soil various, some parts being very fertile. It is about 9 miles S. W. from Canandaigua, and 232 W. from Albany.

Bristol, Pa. A township of Philadelphia co. Watered by Tacony Creek.

Bristol, Pa., Bucks co. Township and village on the W. bank of the Delaware River. 20 miles N. from Philadelphia, and 115 E. by S. from Harrisburg. The Pennsylvania Canal communicates with the Delaware River by a branch to this place, which is a great channel for the transportation of coal, and various kinds of merchandise.

Bristol, R. I. Port of entry and shire town of Bristol co.; the *Pocanoket* of the Indians. It is equidistant from Providence and Newport, being 15 miles from each. This town is beautifully situated on a kind of peninsula or tongue of land extending S. from Warren into Narraganset Bay. The arm of the bay on the E. side, running up towards Fall River, is called Mount Hope Bay. It is 6 miles long, but averages less than a mile and a half in width. On the height of land between these two bays, is Mount Hope, once the residence of the celebrated King Philip. The soil of this town is a deep, gravelly loam, very fertile and productive. Great quantities of onions, carrots, beets, and potatoes are raised here for exportation. Most of the gardens are made to yield two crops of different vegetables annually. It is supposed that as many as one third of the population are employed in horticulture.

Bristol was settled in 1680. About three fourths of the inhabitants live in a compact and beautiful village, which is delightfully situated at the western border of the township, on the navigable waters of the Narraganset. The site is well elevated above the shore, and, ascending gradually as it recedes, affords to the inhabitants a fine view of the lovely bosom of the bay, and in return presents the town to those passing by it on the water, as an object of picturesque and quiet beauty. The main street, which extends the whole length of the village, contains the handsomest buildings, and is ornamented with beautiful shade trees. On this street are the Congregational and Episcopal houses of worship. The other meeting houses and public buildings are likewise pleasantly situated.

The harbor of Bristol is easy of access, safe, and deep enough for vessels of almost any size. The commerce of the place is much less than it was 30 years ago, but is now on the increase. Some large freighting ships are owned here, a considerable number of coasting vessels are employed, and the West India trade is beginning to be carried on quite extensively. The port of Bristol collects as much revenue as any port in the state, and has 13,000 tons of shipping registered or enrolled. A steamboat which plies daily between Providence and Fall River stops at this place. To Fall River the distance is 8 miles.

Of late years, the capitalists of Bristol have introduced manufacturing enterprise to considerable extent. There are two large cotton mills, two planing mills, besides saw mills and grain mills, an iron foundry, &c., all driven by steam.

Considerable capital also is employed in ship building.

No place in the country, perhaps, with the exception of Newport, suffered more in the war of the revolution than Bristol. During the three years that Rhode Island was in possession of the British, the town was exposed to the constant incursions of the enemy. It was bombarded by a British squadron in 1775. In May, 1778, the meeting house and all the most valuable dwellings were burnt.

Few places can appear more eligible than Bristol and its environs to the inhabitants of our crowded cities, as a retreat, in the summer months, from the excitements, din, and heat, which, without such annual respite, become to them so irksome and exhausting.

Bristol County, R. I., c. h. at Bristol. E. part. That portion of the state between the two main branches of Narraganset Bay.

Bristol, Vt., Addison co. About one third of this town lies entirely W. of the Green Mountains, and is very level, rich, and productive. The remainder is broken, and a considerable part incapable of cultivation. The village is near the centre of the town, upon New Haven River, immediately after it passes the notch in the mountain. 25 miles S. W. from Montpelier, and 11 N. from Middlebury.

Broadalbin, N. Y., Fulton co. A good grazing township. 42 miles N. W. from Albany.

Broadtop, Pa. A northern township of Bedford co.

Broken Straw, Pa. A central township of Warren co.

Brooke County, Va., c. h. at Wellsburg. In the N. W. corner, between the state of Ohio and the Ohio River. Surface uneven, and watered by several small creeks flowing into the Ohio River; soil fertile. Iron ore and bituminous coal are found in this county.

Brookfield, Ct., Fairfield co. The surface is somewhat broken, but the soil is strong, and well adapted to the culture of grain. The rocks in many parts of the town are limestone, and afford marble. The N. E. boundary is washed by the Housatonic River, and Still River passes nearly through its centre.

Brookfield, Ms., Worcester co., is divided into three parishes — North, South, and West Brookfield. The Western Railroad passes through the entire width of the town. East Brookfield lies, by the railroad, 64 miles W. from Boston. South and West Brookfield lie 5 miles farther W.

Brookfield, N. H., Carroll co. Soil good. Cook's Pond is the source of the west branch of Salmon Falls River. 50 miles N. E. from Concord.

Brookfield, N. Y., Madison co. Unadilla River, and some of its branches, water this town, the surface of which is hilly. 83 miles W. from Albany.

Brookfield, Pa. A N. W. township of Tioga co. 174 miles N. by W. from Harrisburg.

Brookfield, Orange co., Vt. Nearly on the height of land between White and Winooski Rivers. Parts of it are broken; but it is mostly fit for cultivation, and is very productive, particularly in grass. It is well watered with springs and brooks, but has no very good mill privileges. The principal stream is the second branch of White River. Around the bottom of a small pond, in the W. part of the town, is an inexhaustible quantity of marl, from which good

lime is manufactured. 40 miles N. by W. from Windsor, and 16 S. from Montpelier.

Brookhaven, N. Y., Suffolk co. As to territory, one of the largest towns in the state, extending across Long Island, and embracing the islands opposite, in South Bay. Its N. and S. shores are indented by numerous bays and inlets abounding with a great variety of fish and fowl. Surface mostly level; soil consists of black mould, and in some parts of pure sand. 70 miles E. from New York.

Brookline, Ms., Norfolk co. This delightful town is connected with Boston by the Mill Dam across Charles River Bay, and by a branch of the Worcester Railroad. It is remarkable for its varied surface, high state of cultivation, elegant country seats and gardens, excellent roads, and for its rich and picturesque scenery. 4 miles S. W. from Boston, and 5 N. E. from Dedham.

Brookline, N. H., Hillsboro' co. 7 miles S. W. from Amherst, and 40 S. W. from Concord.

Brookline, Vt., Windham co. A deep valley runs the whole length of the township, and along the whole of the E. line of the town is a considerable elevation. During a violent freshet, a bed of porcelain clay was laid open. The soil is better adapted to the production of grass than grain. 35 miles S. from Windsor, and 18 N. from Brattleboro'.

Brooklyn, Ct., c. h. Windham co. Finely watered by Quinnebaug River and Blackwell's Stream. The land is uneven, and somewhat stony, but the soil is strong. 30 miles E from Hartford, 44 W. from Providence.

Brooklyn, Me., Hancock co. New. Taken from Sedgewick in 1849.

Brooklyn, N. Y. City and seat of justice of Kings co., on the W. end of Long Island, separated by the East River from the S. part of the city of New York. Population in 1810, 4402; in 1820, 7175; in 1830, 15,396; in 1840, 36,233; in 1850, 96,838. During the last twenty years, since the habitable part of New York has been extending, and becoming more and more remote from the seat of business, the population of Brooklyn has increased with unexampled rapidity. It is connected with New York, in the very district where the heaviest commerce lies, by a number of steam ferries, which are from 700 to 750 yards wide, and are crossed in four or five minutes by boats which ply continually between the two cities. Except on rare occasions, in the winter, when the ice opposes an obstruction to the free passage of the boats, these ferries bring the cities virtually nearer to each other than would be done by bridges, or even by a continuous connection on terra firma. The greatest thoroughfare among these is the Fulton Ferry, from Fulton Street in New York to Fulton Street in Brooklyn.

The ground on which Brooklyn is built is considerably more elevated than that of New York, especially towards its southern extremity. "Brooklyn Heights," so called, memorable in revolutionary history, presents a bold front to the sea, rising abruptly to an elevation of 70 feet above tide water, affording a view of the city and harbor of New York, the islands in the bay, and particularly Governor's Island, with its noble fortifications, Staten Island, and the New Jersey shore, all combining to furnish a prospect which is scarcely surpassed by any in this country.

The greatest length of Brooklyn, within its in-

corporated limits, is 6 miles, N. E. and S. W., and its greatest breadth 4 miles. The whole of this extensive area has been laid out into streets, though many of them have not yet been opened and regulated. The city, generally, is laid out with order and symmetry of plan; and the streets, excepting Fulton Street, the oldest in the city, are straight, and, almost without any other exception, they cross each other at right angles. They are generally from 50 to 60 feet wide, and several of them have a still greater width. Many of the streets are shaded with beautiful trees, which impart to portions of the city, in the summer season, a peculiar air of pleasantness and comfort. No city in the country, perhaps, is better built than Brooklyn. The houses are very generally marked by chasteness and elegance of design, and many of them are splendid specimens of architectural beauty.

Of the public buildings the most prominent is the new City Hall, situated on a triangular piece of ground between Fulton, Court, and Joraleman Streets. This noble building is constructed of Westchester marble, 162 feet long by 102 feet wide, and 75 feet in height to the top of the cornice. The crown of the cupola, with which it is surmounted, is 153 feet from the pavement. In the eastern part of the city, near Fort Green, is the Jail, which is a substantial building erected in 1837. The Lyceum, at the corner of Washington and Concord Streets, a fine granite edifice; the Savings Bank, an elegant structure at the corner of Fulton and Concord Streets; the Brooklyn Female Academy, a spacious building on Joraleman Street; the City Library, containing a large collection of valuable literary and scientific works; a new and elegant Athenæum, and the Brooklyn Orphan Asylum, are each of them buildings which are ornamental to the city.

The more thickly-settled parts of Brooklyn have no public squares or open grounds. Such, however, is the commanding width of many of its avenues, the high and airy location of its site in general, and its almost rural aspect, in many parts, from the abundance of the trees with which the streets are bordered, that the absence of such open pleasure grounds is less to be regretted than it otherwise must have been. Provision has been made, however, in the newer parts of the city, for some public squares.

Brooklyn contains about 50 churches, several of which are splendid edifices recently constructed. Among these is the Episcopal "Church of the Holy Trinity," on Clinton Street, a fine specimen of the Gothic architecture, erected by the munificence of an individual citizen of Brooklyn, at a cost of about \$150,000. The Congregational "Church of the Pilgrims," not far from the same locality, is a fine edifice, of dark gray granite, in the characteristic English style of the period of Cromwell. In the base of the principal tower of this church, about 8 feet from the ground, is placed an angular fragment, of considerable size, from the rock on which the Pilgrim Fathers landed at Plymouth.

The United States Navy Yard, at Brooklyn, is situated on the S. side of Wallabout Bay, which makes up with a broad curve from the East River, at the N. E. part of the city. From this point a ferry runs directly across to the foot of Walnut Street, New York. About 40 acres of ground are included in these premises. There

are two large ship houses for the protection of naval vessels of the largest class when building, together with extensive workshops, and every requisite for a great naval depot. There is connected with this establishment an important literary institution, called the United States Naval Lyceum, formed in 1833 by officers of the service connected with the port. It contains a mineralogical and geological cabinet, and a fine collection of curiosities of a miscellaneous character. The government has constructed a dry dock here similar to that in the United States Navy Yard at Charlestown, Ms. On the opposite side of the Wallabout, about half a mile E. of the Navy Yard, is the Marine Hospital, situated upon a commanding elevation, and surrounded by about 30 acres of land under high cultivation. In this bay are always one or more large naval vessels lying in ordinary. These mark the spot where lay the Jersey and other British ships, during the revolutionary war, made use of as prison ships, for the confinement of those American soldiers whom they had taken prisoners in battle, in which it is said that as many as 11,500 prisoners perished in the course of the war, from bad air, close confinement, and ill treatment. These unhappy men were buried upon the shore, with little care but to put their bodies out of sight. In 1803, the bones of these sufferers were collected, as far as could then be done, and placed in 13 coffins, corresponding with the old 13 states, and honorably interred in a commemorative tomb erected for the purpose, not far from the Navy Yard.

The harbor of Brooklyn is extensive, and is capable of being very largely improved by adding to the number of its docks and slips. Vessels of the largest class can come up to its piers, to discharge or receive their cargoes. The Atlantic Dock is a very extensive basin for the reception of shipping, about a mile below the South Ferry, constructed by a company incorporated in 1840, at a cost of about \$1,000,000. The basin within the piers covers 42½ acres, with sufficient depth of water for the largest ships. The outside pier extends 3000 feet on Buttermilk Channel. The piers are furnished with spacious stone warehouses. The terminus of the Long Island Railroad is located near the landing from the South Ferry, which connects with New York at the S. E. corner of the Battery. From the station, the road is carried, by a long tunnel, under a number of the most important of the streets of Brooklyn, which it has to cross in its route.

Greenwood Cemetery, in the S. part of Brooklyn, about three miles from Fulton Ferry, is an extensive and beautiful ground provided by the cities of New York and Brooklyn for the burial of their dead. It may be approached either by this ferry, from which hourly carriages run to the entrance for a trifling charge, or by another at the Battery, which passes round and lands its passengers on the S. side, in the near vicinity. Greenwood contains 250 acres of ground, one half or more of which is covered with wood of the natural forest. The grounds have a varied surface of hill, and valley, and plain. From some of the open elevations extensive views are obtained of the ocean, and of the cities of Brooklyn and New York. The whole cemetery is traversed by about 15 miles of winding avenues and paths, leading through each shaded recess, and to every spot at once hallowed and adorned by the memorials of the dead. Great improvements

are continually going on, and every year adds new beauty to this interesting place.

The first settlement of Brooklyn was made at the Wallabout Bay, by George Jansen Rapelje, in 1625. The earliest deed for lands on record is to Thomas Besker, in 1639. October 18, 1667, Governor Nicholls granted a patent "to certain inhabitants of the town *Breukelen*, for and in behalf of themselves and their associates, the freeholders and inhabitants, for all the lands in the town not taken up in severalty." This patent was confirmed by Governor Dongan in 1686. In 1670, license was given by Governor Lovelace to the inhabitants to purchase the Indian title.

With Brooklyn and its immediate neighborhood is connected the memory of the bloody battle of August 27, 1776, in which the Americans were defeated, occasioning the withdrawal of the army from Long Island into New York.

Brooklyn was incorporated as a village in 1816. In April, 1834, the whole territory of the town was incorporated under the name of the "City of Brooklyn." It is divided into nine wards; and the powers of the corporation are vested in a mayor and a board of aldermen, composed of two from each ward, all elected by the people.

Brooklyn, Pa. A southern township of Susquehanna co. 171 miles N. N. E. from Harrisburg.

Brooks, Me. Waldo co., 11 miles N. N. W. from Belfast, and 45 N. E. from Augusta.

Brooksville, Me. Hancock co. On the E. side of Penobscot Bay, opposite to Islesboro' and Castine.

Brookville, Ia., c. h. Franklin co. 75 miles S. E. from Indianapolis.

Brookville, Ky., c. h. Bracken co.

Broome County, N. Y., c. h. at Chenango. On the S. border. The surface is hilly, the valleys bordering the streams large and fertile, but the soil for the most part better adapted to grazing than the raising of grain. It is watered by the Susquehanna, Chenango, and Tioughnioga Rivers, and by Nanticoke Creek. It contains several sulphur and salt springs. The Chenango Canal and New York and Erie Railroad pass through this county.

Broome, N. Y., Schoharie co. Watered by Schoharie and Catskill Creeks. The surface is hilly and mountainous; soil indifferent, except in the valleys, where it is fertile. 38 miles S. W. from Albany.

Brown County, Is., c. h. at Mount Sterling. On the W. bank of the Illinois River. Drained by McKee's and Crooked Creeks. Surface slightly uneven; soil productive.

Brown County, Ia., c. h. at Nashville. S. central part of the state. Watered by Salt Creek and its branches. Surface undulating and hilly; soil fertile.

Brown County, O. In the S. W. angle, bordering on the Ohio River. On the N. it is watered by Eagle, Red Oak, Straight, and White Oak Creeks, besides the Ohio River and the E. fork of Little Miami. The soil is fertile and good.

Brown, Pa., Lycoming co. Pine Creek and its branches water this town. Surface mountainous; soil varied.

Brown County, Wn., c. h. Depere. In the E. part of the state, including Green Bay. Surface diversified; soil of good quality.

Brownfield, Me., Oxford co. 81 miles S. E. from Augusta.

Brownstown, Ia., c. h. Jackson co. On the E.

fork of White River. 71 miles S. from Indianapolis.

Brownstown, Mn., Wayne co. At the entrance of Huron River into Lake Erie.

Brownsville, Ky., c. h. Edmonson co. 130 miles S. W. from Lexington.

Brownville, Me., Piscataquis co. 20 miles N. from Dover. A good township of land.

Brownsville, O., Licking co. On the national road, 40 miles E. from Columbus.

Brownsville, Pa., Fayette co. On the E. bank of the Monongahela River, at the mouth of Redstone Creek. 191 miles E. by S. from Harrisburg. The national road passes through it, constitutes its principal street, and is carried over the Monongahela by a fine bridge.

Brownsville, N. Y., Jefferson co. On the borders of Lake Ontario. Was settled in 1799 by Major General Jacob Brown. Surface level; soil highly fertile. 164 miles N. W. from Albany.

Brownsville, Te., c. h. Cameron co.

Brunswick, Ga., c. h. Glynn co. On Turtle Creek, about 14 miles above the bar, and 8 miles above the light-house on St. Simon's Island. It has a fine, spacious harbor, with 13 feet of water on the bar at lowest tides. 233 miles S. E. from Milledgeville. A canal is in progress to connect it with the Alatamaha River.

Brunswick, Me., Cumberland co. 33 miles S. from Augusta, and 27 miles N. by E. from Portland. Brunswick is on the S. side of the Androscoggin River, with Topsham directly opposite, with which it is connected by a substantial bridge. It lies at the head of tide water, the Androscoggin being navigable to the foot of the falls at this place. Brunswick is handsomely laid out and well built, principally on two wide streets running parallel to each other, and united by cross streets at right angles. The buildings of Bowdoin College are situated on an elevated plain at one extremity of the village, having in the rear a handsome grove of evergreens. The college buildings and the professors' houses are arranged in good taste, and make a pleasing appearance. See *Colleges*.

By the falls on the Androscoggin at this place, Brunswick possesses a great water power. Vast quantities of timber and logs are floated down the river, to be sawn into boards at the numerous mills which are in operation here. Cottons and woollens are manufactured to some extent. Much more of this extensive privilege remains to be improved. Possessing such an exhaustless water power, and being at the same time situated on navigable waters, with its river coming down about 140 miles, through the heart of a fertile and healthy country, Brunswick has peculiar advantages for becoming a large manufacturing town. This place is now connected, by railroad, with Augusta, Portland, and Bath.

Brunswick County, N. C., c. h. at Smithville. In the southernmost corner, between the Cape Fear River, Atlantic Ocean, and the S. C. boundary. Surface low and marshy; soil sterile.

Brunswick, N. Y., Rensselaer co. The Poes-tenkill and its tributaries water this town. The surface is hilly, and there is a great variety of soil. 4 miles E. from Troy.

Brunswick County, Va., c. h. at Lawrenceville. On the S. E. border. The Meherrin River flows nearly through the centre of this county, and the Roanoke touches the S. W. corner.

Brunswick, Vt., Essex co. On the W. side of

Connecticut River, and has some excellent mill sites, on the waters of Nullegan River and Wheeler and Paul's Streams. 83 miles N. E. from Montpelier.

Brutus, N. Y., Cayuga co. Watered by Branch and Cold Spring Creeks, tributaries of Seneca River. The Erie Canal passes through it. The land is hilly; the soil consists of clay and sandy loam. 7 miles N. from Auburn, and 181, by railroad, W. by N. from Albany.

Bryan County, Ga., c. h. at Bryan. In the eastern angle, bordering on the Atlantic, and bounded N. by the Ogechee.

Bryan, O., c. h. Williams co. 150 miles N. W. from Columbus.

Buchanan County, Io., c. h. at Independence. In the eastern part of the state. The Wapisa-pincon flows through it from N. W. to S. E.

Buchanan County, Mo., c. h. at Sparta. In the N. W. angle of the state, bordering on the Mis-souri River. Drained by the Little Platte River.

Bucks County, Pa., c. h. at Doylestown. Bound-ed N. E. and E. by the Delaware River, separat-ing it from New Jersey, S. by the Delaware River and Philadelphia co., W. by Montgomery co., and N. W. by Lehigh co. Watered by Nesh-aming and Tolinton Creeks, and the head branches of Perkiomen Creek. Surface diversified; soil of different qualities. There is one locality of plumbago in this county.

Buckfield, Me., Oxford co. This town is finely watered by a branch of Androscoggin River. It is bounded on the W. by Paris, and is 34 miles W. by S. from Augusta, and 50 N. by W. from Portland. The soil of this town is very good.

Buckingham, Pa., Wayne co. Situated on the W. bank of the Delaware River.

Buckingham, Pa., Bucks co. Soil a mixture of clay, loam, and gravel. 104 miles E. by N. from Harrisburg.

Buckingham County, Va., c. h. at Maysville. Central. The James River runs on its N. and W., and the Appomattox on its S. border.

Buckingham, Va., c. h. Buckingham co. 79 miles W. from Richmond.

Buckland, Ms., Franklin co. This town is separated from Charlemont, of which it formerly was a part, by Deerfield River. It has a good mill stream, Clesson's River, which passes through the town. The surface is uneven, but the soil strong, and well adapted for grazing. 100 miles W. by N. from Boston, and 10 W. from Green-field.

Buckland, Va., Prince William co. On Broad Run, 111 miles N. from Richmond. Situation elevated and romantic. Two or three flouring mills are in operation here.

Bucksport, Me., Hancock co. On the E. side of Penobscot River. 15 miles below Bangor, and 61 N. E. from Augusta. It has a fine harbor for vessels of the largest class.

Bucksville, Ky., c. h. Cumberland co.

Bucksville, Horry district, S. C., takes its name from its founder, Henry Buck; is situated on the W. side of the Wacamaw River, about 5 miles above its junction with the Peedee, and about 30 miles from Georgetown; has good navigable water, for vessels of 200 or 300 tons, and a large business in lumber and naval stores.

Bucyrus, O., c. h. Crawford co. On the left bank of Sandusky River. 46 miles from San-dusky City, and 60 from Columbus.

Buffalo, N. Y., city, port of entry, and capital of Erie co., stands at the eastern extremity of Lake Erie, near its outlet through the Niagara River, and at the mouth of a creek, called Buffalo Creek, which empties into the lake at this point. It is 327 miles W. from Albany, by railroad, and 363. miles by the Erie Canal. It is distant W. from Rochester 73 miles; S. S. E. Niagara Falls, 22 miles; and S. W. from Montreal, 427 miles. Population, in 1810, 1508; 1820, 2095; 1830, 8653; 1840, 18,213; 1850, 42,261. Since the completion of the Erie Canal, and the chain of railroads connecting Buffalo with Albany, New York, and Boston, its position, at the eastern termination of the commerce through the great lakes, Erie, Huron, and Michigan, gives it a most commanding advantage for business. It is the gateway between the east and the west; and, although other channels for this commerce will be opened, yet, as the vast resources of the west have scarcely begun to be developed, the traffic which is destined to pour through this communication must be immensely increased beyond what it has ever yet been. The ground on which the city is built rises gradually from the creek, which passes through its southern district, and becomes, at the distance of 2 miles, an extended and elevated plain, 50 feet or more above the lake; furnishing a most commanding view of the bosom of the lake and harbor, of the Erie Canal, of Niagara River, and the Canada shore. From the same feature of its situation, the place itself presents a most beautiful appearance, as it is approached upon the lake. The city is laid out, with much regularity, into streets which are broad and straight, and usually intersecting each other at right angles. Main Street, which is more than 2 miles in length and 120 feet broad, is built on both sides, through a good part of its extent, with fine and lofty blocks of stores, dwellings, and hotels, which present an imposing appearance. Many of the streets are paved and lighted. There are 3 public squares, Washington, Franklin, and Niagara, which are planted with trees, adding much to the beauty and health of the city. The houses are generally built with neatness and good taste. The public buildings are a court house, jail, county clerk's office, and 2 market houses, in the upper story of one of which are the chamber of the common council and the city offices. There are about 20 churches in the city, of which 3 are Presbyterian, 2 Episcopal, 1 Baptist, 1 Methodist, 3 German Protestant, 1 Unitarian, 2 Roman Catholic, 1 Universalist, 1 Bethel, and 2 African. Some of the church edifices are handsome specimens of architecture. There are an orphan asylum, a theatre, and a number of spacious and elegant hotels. The Young Men's Literary Association has a well-selected library of 3500 volumes, and sustains an able course of lectures in the winter. There is 1 academy, which furnishes instruction to from 60 to 100 students. The common schools of Buffalo are under the management of the city council, and are made free to the children of every class of the citizens, without charge for tuition.

Buffalo is well supplied with water from the Niagara River, by an aqueduct which has lately been completed. The water is taken from the river, at Black Rock, by a tunnel 300 feet long, and 6 feet square, under the canal, and excavated

through solid rock, and entering the river through the pier, 12 feet below the surface; and through this, water is conveyed to a well under the bank, from which it is elevated by forcing pumps into the reservoir on Prospect Hill, about a mile from the centre of the town. From thence it is conveyed in pipes to its place of destination. The water is as pure as the best well water.

Buffalo has a most ample and secure harbor for the boats and shipping which navigate the lakes. It is a kind of natural dock, formed by the mouth of the creek, which here enters the lake, and which has, for the distance of a mile from its entrance, 12 or 14 feet of water. A bar at its mouth, which originally obstructed the passage of vessels from the lake, has been in a great measure removed, and prevented from further accumulation by the erection of a mole and pier, which serves to direct and strengthen the action of the current in such a manner as to effect this object. This work was built by the joint contributions of the U. S. government and the citizens of Buffalo. At the extremity of the pier is a light-house, constructed of dressed limestone, 20 feet in diameter and 46 feet high. The harbor is protected from all winds, and is so spacious that it might well accommodate several hundred steamboats and lake vessels. Several other important improvements have been made, or are now in a course of construction, by which the facilities afforded by this port and harbor for the transshipment of merchandise between the lake and the canal are rendered in the highest degree eligible and convenient. It is proposed also, in order to render the harbor more easily accessible from the lake, especially in severe winds and storms, to construct a ship canal across the isthmus to the creek, at a point near the upper end of the harbor. This port is not generally open for navigation till about the middle of May. By means of the strong westerly winds which prevail upon the lake at the breaking up of the ice in the spring, the floating ice is liable to be accumulated at Buffalo, so as to obstruct the access to the harbor sometimes for several weeks after the broad lake is navigable. The commerce of the lakes to this port employs from 50 to 60 steamboats, many of which are spacious and elegant, and about 300 schooners and other vessels. The largest vessels are generally schooners, because they are more easily managed on the lakes than square-rigged vessels. The value of property sent E. from Buffalo by the Erie Canal in 1850 was \$20,991,462, being an increase from 1840 of \$14,790,633. The tolls on the Erie Canal received at Buffalo in 1850 amounted to \$703,498. Buffalo is connected, by canals and railroads, and the lakes, with all the great commercial places in the country. Among the articles imported into Buffalo during the year ending December 31, 1851, were 1,323,784 barrels of flour; 4,212,979 bushels of wheat; 6,146,519 bushels of corn; and 12,507,421 pounds of wool. The estimated value of property received at this port from the W. in 1850 was \$35,000,000.

Buffalo was originally laid out by the Holland Land Company in 1801; but its progress was slow until after it was fixed upon as a military post in 1812. The very next year, the place was almost totally destroyed by a conflagration, which consumed every building excepting two. This mischief was done, it being in the time of the war with Great Britain, by a party of the

British soldiers and the Indians. After the war was ended, Congress made an appropriation of \$80,000 towards remunerating the citizen^s of Buffalo for their losses by this disaster. In 1817 the place had grown again to contain more than 100 houses, many of which were of brick, and some large and elegant. The largest number had been erected the previous year. It was incorporated as a village in 1822. But the commencement of the rapid growth and prosperity of Buffalo dates from the time when the Erie Canal was completed, in 1825. Four years from this time it contained 400 dwellings, and more than 2000 inhabitants. It was incorporated as a city April 20, 1832. The city is divided into 5 wards, and is governed by a mayor and common council, elected annually by the people. In April, 1833, a company was incorporated for the erection of a marine hospital. In May, 1834, an incorporation was established for the construction of a marine railway, with dry or wet docks, for repairing vessels. In April, 1835, the Sailor's and Boatman's Friend Society was incorporated, for the purpose of promoting the moral and religious welfare of that numerous class of persons engaged in navigating these inland waters. The importance of such a form of philanthropic effort, in the port of Buffalo, may be inferred from the fact, that it has, besides the operations on the Erie Canal, an uninterrupted extent of lake navigation of 1500 miles, with a coast of 3000 miles. The first vessel bearing the American flag upon Lake Erie was the sloop Detroit, of 70 tons, built in 1796. The first steamboat, "Walk-in-the-Water," of 342 tons, low pressure engine, was built at Black Rock, near Buffalo, in 1818. In 1843, the Buffalo Commercial Advertiser collected and published as complete a list as could be obtained of all the steamers which had been built for the lake navigation up to that date; it being a quarter of a century from the time when the first steamer was launched upon Lake Erie. The whole number given in the list is 105; making an aggregate of 27,000 tons' burden, at a total cost of \$3,510,000.

Buffalo, Pa. A township of Armstrong co.

Buffalo, Pa. A township of Butler co. Great and Little Buffalo and Thorn Creeks water this town.

Buffalo, Pa. A township of Perry co., on the W. bank of the Susquehanna River, above the entrance of the Juniata. Surface hilly; soil slate.

Buffalo, Pa. A township of Union co.

Buffalo, Pa. A township of Washington co. 217 miles W. from Harrisburg.

Bullitt County, Ky. c. h. at Shepherdsville. Towards the N. border of the state. Surface uneven on the N. E.; soil fertile.

Bullock County, Ga., c. h. at Statesboro'. In the S. E. angle. Bounded N. by Burke and Scriven counties, E. by Effingham co., S. by Bryan and Tatnall, and W. by Tatnall and Emanuel counties. It has the Ogeechee River on its E., and the Cannouchee on its W. boundary.

Bull Skin, Pa. A northern township of Fayette co.

Buncombe County, N. C., c. h. at Ashville. On the W. border. The Nolachucky and French Broad River and tributaries water this county. Surface rough and elevated, being situated between two ridges of the Alleghany Mountains; soil well adapted to grazing.

Bureau County, Is., c. h. at Princeton. North central. On the W. bank of the Illinois. Surface mostly level, and in parts marshy.

Burke County, Ga., c. h. at Waynesboro'. On the E. border, separated by the Savannah River from S. C. Drained by Brier Creek and other branches of the Savannah River.

Burke County, N. C., c. h. at Morgantown. West part, at the E. foot of the Blue Ridge. Drained by Catawba River and tributaries. Surface rather elevated; soil mostly fertile.

Burke, Vt., Caledonia co. A mountain, 3500 feet in height, divides this town from Victory, on the E. Branches of Passumpsic River pass through it, and afford a good water power. Oilstone (novaculite) is found in an island in Memphremagog Lake. The soil of the town is good, and abounds with hard wood and evergreens. The settlement was commenced, about the year 1790, by Lemuel and Ira Walter, Seth Spencer, and others, from Connecticut, and the S. part of this state. The town was organized December 5, 1796. 20 miles N. E. from Danville, and 50 N. E. from Montpelier.

Burksville, Ky., c. h. Cumberland co. On the W. bank of Cumberland River. 124 miles W. by S. from Frankfort.

Burleston County, Ts. East central. In the angle between the Brazos and the Yagua.

Burlington, Ct., Hartford co. An agricultural township, with a light soil, gravelly loam, pleasantly diversified by hills and vales. It is watered by Farmington River, and was taken from Bristol in 1806. This town has been noted for the equality of its inhabitants in regard to property.

Burlington, Io. Shire town of Des Moines co. On the W. bank of the Mississippi, 88 miles S. by E. from Iowa City, and 259 N. by W. from St. Louis. This place was the first capital of the state. It is finely located on the river, and surrounded by hills of gradual acclivity, affording many commanding sites for buildings. The town is regularly laid out, and neatly built, having several commodious brick churches, and many handsome private residences. It is advantageously situated for becoming a commercial emporium for a large and important section of country. Its trade is already extensive, and it has numerous mechanical and manufacturing establishments. There are two or three printing offices here, which issue weekly newspapers. The town was laid out in 1834. The seat of government was removed to Iowa City in 1839. This was once the residence of the celebrated Indian chief Black Hawk, and here his bones repose.

Burlington, Ky. c. h. Boone co. 82 miles N. by E. from Frankfort.

Burlington, Me., Penobscot co. 37 miles N. E. from Bangor. It is watered by a branch of the Passadumkeag, and parts of several large ponds.

Burlington, Ms., Middlesex co. The surface is uneven; soil light and sandy. It is good land for hops and rye. A branch of the Shawshen and Vine Brook water the town. Burlington was formerly a part of Woburn. 3 miles N. W. from the Woburn depot on the Lowell Railroad 10 miles from Boston.

Burlington County, N. J., c. h. at Mount Holly South central. Extending from the Delawars to the Atlantic. Drained by Crosswick's, Assun-

pink, Black's, Craft's, Assisunk, Rancocus, and Pensauken Creeks, branches of the Delaware River. Soil principally alluvial.

Burlington City, N. J., Burlington co. A port of entry on the E. bank of the Delaware, encircled by a small stream so as to form an island. It is regularly laid out with streets intersecting each other at right angles. The bank of the river is a beautiful grassy plain, bordered by elegant dwellings. The Camden and Amboy Railroad passes through it.

Burlington, N. Y., Otsego co. This town is watered by Butternut and Wharton Creeks. Its surface is rolling, and soil good. 12 miles W. from Cooperstown, and 72 from Albany.

Burlington, O., c. h. Lawrence co. On the N. bank of the Ohio River, at the southern extremity of the state. Sawing and various manufactures are carried on by steam power.

Burlington, Pa., Bradford co. Sugar Creek and its branches water this town. Surface hilly; soil gravelly loam. 144 miles N. from Harrisburg.

Burlington, Vt. Port of entry on Lake Champlain, and shire town of Chittenden co. 38 miles W. N. W. from Montpelier. Population in 1830, 3525; 1840, 4271; 1850, 7505. This beautiful town is the largest in the state, and one of the most delightful for situation in the United States. It is built on the E. shore of the lake, about opposite its widest part, where it makes up between two points in a kind of bay with a regularly-curving shore. The site of the town rises gradually as it recedes from the water for a distance of a mile or more, until it attains an elevation of 281 feet from the surface of the lake. Over the whole extent of this fair declivity the town is spread, presenting a fine appearance as it is approached or passed upon water. The view of the lake, and of the near and distant scenery, which is had from the more elevated parts of the place, from the windows and roofs of the dwellings, and especially from the dome of the university, which stands on the height of land, presents features of natural loveliness and grandeur not surpassed by those of any other situation occupied by a populous town in the United States. The lake is here about 10 miles wide, and lies in view, to the N. and S., almost as far as the eye can reach. Beyond its western shore rise the Adirondack Mountains of New York, to the height, in some parts of their majestic outline, of 5000 and 6000 feet. The eastern horizon, likewise, is bounded by the Green Mountain range, with its two most elevated summits, 4000 feet high.

The streets are regularly laid out, running from the lake shore E., with others running N. and S., intersecting them at right angles, and dividing the whole surface into regular squares. There is a public square near the centre, on which is situated the Court House, and around it some of the principal hotels, stores, banks, offices, &c. The town is handsomely built throughout, and there are a number of elegant private mansions with beautiful grounds and gardens. Several of the church edifices are fine specimens of architectural taste. The finest are the Calvinistic Congregational Church, after a pure Grecian model; the Unitarian Congregational Church, of brick, with a lofty spire; and the Episcopal Church, which is of stone, in the Gothic style. For a notice of the University of Vermont, which is located here, see *Colleges*.

As connected with Burlington may be mentioned the village of Winooski Falls, which is situated on both sides of the Winooski River, about 2 miles N. E. of the town. The portion of the village which is on the N. side of the river is in Colchester. A substantial covered bridge connects the two sides of the river. The water power at these falls is sufficient for propelling almost any amount of machinery. Several large manufacturing establishments have been erected here, consisting of cotton and woollen mills, a foundery and machine shop, an extensive flour mill, saw mills, &c. Some of these manufactories were consumed by fire in the winter of 1851-2.

The harbor of Burlington is the best on Lake Champlain, and a larger number of the vessels employed in the lake navigation are owned here than in any other place. The government has erected a substantial breakwater here for the protection of the harbor from the west winds.

On Juniper Island, 4 miles from the harbor, a light-house is erected. A great amount of goods are landed at the wharves in Burlington, and the mercantile traffic of the place is large, and must continue to increase. Steamboats stop here on their daily trips from Whitehall, N. Y., to St. John's in Canada, whence there is daily steam communication to Montreal. Railroads extend from Burlington E. to Boston, 248 miles; W. to Ogdensburg, 163 miles; S. to Whitehall, 91 miles; and N. to Montreal, 91 miles, with the exception of 9 miles by steamboat from La Prairie.

Burnham, Me., Waldo co. 37 miles N. E. from Augusta, and about 30 N. W. from Belfast. It is bounded S. W. by Sebasticook River, and E. by Troy. Incorporated 1824.

Burns, N. Y., Alleghany co. Drained by Causseraga Creek. Surface uneven; soil of good quality. 237 miles W. from Albany.

Burnside, Pa. A township of Clearfield co. 156 miles N. W. from Harrisburg.

Burnsville, N. C., c. h. Yancey co. 200 miles W. from Raleigh.

Burrillville, Providence co. This town was taken from Gloucester in 1806. It is finely watered by Branch River, with many branches; one branch of which rises in Alum Pond, partly in this town and partly in Douglas, Mass. This river is an important tributary to the Blackstone. Manufacturing villages are scattered over this large town in almost every direction. The face of the town is rough, but the soil is adapted to grazing, and produces large quantities of beef, pork, butter, cheese, &c. Herring and Eddy's Ponds are pleasant sheets of water.

Burton, N. Y., Cattaraugus co. The Alleghany River and some of its tributaries water this town. The surface is uneven, and there is quite a variety of soil. The New York and Erie Railroad passes through it. 15 miles S. E. from Ellicottville, and 300 S. of W. from Albany.

Bushkill, Pa., Northampton co. Bushkill Creek waters this town. The surface is hilly, and the soil tolerably fertile.

Bushnell's Basin, N. Y., Monroe co. On the Erie Canal. 217 miles W. by N. from Albany.

Bushwick, N. Y., King's co. Watered by Newtown Creek. Surface hilly; soil, with good cultivation, productive. 3 miles E. from the city of Brooklyn, and 148 S. from Albany.

Bushkirk's Bridge, N. Y., Cambridge, Wash-

ington co. On Hoosic River. 29 miles N. by E. from Albany.

Busti, N. Y., Chautauque co. Chautauque Lake and its outlet bounds this town on the N., which is watered by several small streams flowing into the lake. Surface hilly, and soil good. 324 miles S. of W. from Albany.

Butler County, Aa., c. h. at Greenville. Bounded N. by Lowndes, E. by Pike and Coffee, S. by Covington and Conecuh, and W. by Conecuh, Monroe, and Wilcox counties. Watered by branches of Conecuh River. Surface undulating; soil of pretty good quality.

Butler, Aa., c. h. Choctaw co. 80 miles S. of W. from Columbia.

Butler County, Ky., c. h. Morgantown. Bounded N. by Ohio and Grayson counties, E. by Edmonson, S. by Warren and Logan, and W. by Muhlenburg county. Green River waters this county.

Butler County, Mo. On the S. E. border. The Big Black River runs through it, and the St. Francis along its eastern border. A large part of it is subject to annual inundation.

Butler, N. Y., Wayne co. Watered by some small streams flowing into Lake Ontario. The surface is rolling, the soil gravelly loam. 13 miles N. E. from Lyons, and 170 N. of W. from Albany.

Butler County, O., c. h. at Hamilton. In the S. W. corner. It is a very valuable farming county, and is abundantly supplied with water by the Great Miami River and several creeks. The Miami Canal and the Miami and White-water cross it; also two railroads running N. from Cincinnati.

Butler County, Pa., c. h. at Butler. Western part. Watered by Slippery Rock and Connequeness Creeks, branches of Beaver River. The Alleghany River touches the N. E. and S. E. corners. Surface uneven; soil well suited to grain and grazing.

Butler, Pa. A township of Butler co.

Butler, Pa., c. h. Butler co. On Connequeness Creek. 203 miles N. N. W. from Harrisburg. The place contains an academy, well endowed.

Butler, Pa. A township of Luzerne co.

Butts County, Ga., c. h. at Butts City. Between the Sacramento and Feather Rivers.

Butternuts, N. Y., Otsego co. Butternut Creek and Unadilla River drain this town. The surface is for the most part hilly. 25 miles S. W. from Cooperstown, and about 90 W. from Albany.

Butts County, Ga., c. h. at Jackson. Central.

Buxton, Me., York co. This town is bounded on the S. W. by Saco River, and N. by Gorham. At this place the Saco falls about 80 feet, and produces a great hydraulic power, which is partly improved for manufacturing establishments. It lies 8 miles N. W. from Saco, and 18 W. from Portland.

Cyberry, Pa., Philadelphia co. Poguessing Creek waters this town. Soil sandy loam. 113 miles E. by S. from Harrisburg.

Byfield, Ms., Essex co. A parish in the towns of Newbury and Rowley, watered by Parker River, which affords good hydraulic power. 35 miles N. by E. from Boston. There is an ancient academy here.

Byram, N. J., Sussex co. The Musconetcong River bounds this town on the S. The surface is broken by South Mountain.

Byron, Me., Oxford co. New; taken from Barnard.

Byron, N. Y., Genesee co. Watered by Black Creek. This town contains several sulphur springs. Surface level; soil generally productive. 10 miles N. E. from Batavia, and 277 N. of W. from Albany.

Cabarrus County, N. C., c. h. at Concord. S. central. Watered by Rocky, a branch of the Yadkin River. Surface mountainous and broken; soil fertile.

Cabell County, Va., c. h. at Barboursville. W. part, on the Ohio River. Drained by Guyandott and Big Sandy Rivers. Surface mountainous and broken; soil mostly of an indifferent quality.

Cabot, Vt., Caledonia co. This town lies on the height of land between Winooski and Connecticut Rivers. "The Plain" is delightfully situated, having the Green and White Mountains in prospect. Several branches of the Winooski water this town, and afford it some water power. Here is Jo and Molly's Pond, and a sulphur spring. The surface is broken and hard, but good for sheep. This is the birthplace of the late Zerah Colburn, the celebrated mathematician. The settlement of this town was commenced on what is called *Cabot Plain*, in April, 1785, by James Bruce, Edmund Chapman, Jonathan Heath, and Benjamin Webster, with their families. 10 miles S. W. from Danville, and 20 N. E. from Montpelier.

Caddo Parish, La., c. h. at Shreveport. In the N. W. corner. Red River runs along its E. border, and Caddo Lake lies in the N. part. Surface mostly level; soil of medium quality.

Cadiz, Ky., c. h. Trigg co. On a beautiful eminence on the bank of Little River. 9 miles from Cumberland River.

Cadiz, O., c. h. Harrison co. Situated 114 miles E. N. E. from Columbus, and about 25 miles westerly either from Wheeling or Steubenville, on the Ohio River. It is a flourishing inland town, with a handsome village, remarkably well built and city like in its appearance. Besides the county buildings, which are of brick, it contains several handsome churches, of which the principal are the Presbyterian, the Methodist, and the Associate Reformed. This town was laid out in 1803, when its site, like most of the surrounding country, was a forest; and its location was determined by the connection here of two public roads, from different sections of Pennsylvania and Virginia, toward Central Ohio, which, before the construction of the national road, afforded the chief thoroughfares of western stage travel in this direction.

Cahaba, Aa., c. h. Dallas co. On the right bank of the Alabama River, immediately below the mouth of the Cahaba, about 50 miles W. from Montgomery, and 140 N. by E. from Mobile. It has communication with these places by steamboats plying constantly on the river.

Cairo, Is., Alexander co. Situated at the junction of the Mississippi and Ohio Rivers, 266 miles S. from Springfield, 522 S. E. from Cincinnati, and about 1000, by the course of the river, N. from New Orleans. From a survey of the great physical features of the western country, in connection with a prospective estimate of the immense resources of wealth which are to be rapidly developed there, the locality of this place ap-

pears to possess the most remarkable advantages for becoming, at some future period, the seat of one of the largest and most important cities in North America. Being near the geographical centre of the great Mississippi basin, and at a point which the Creator, by the convergency of its great navigable channels, seems to have pointed out for its social and commercial centre, it cannot fail, unless from local difficulties it should prove impracticable to found a city here, of being at length the commercial emporium of the west. Its only disadvantage is in the too slight elevation of the delta on which the place is built, above the rivers, by the junction of which it is formed, which exposes it in its natural state to be overflowed by their waters at the period of their highest floods. This has hitherto prevented Cairo from realizing in any considerable degree the magnificent results which its projectors have anticipated. But it is intended ultimately to obviate this disadvantage entirely by raising a levee, or artificial embankment, similar to that before the city of New Orleans, by which the inundation of the delta shall be prevented. Considerable progress has been made by the "Cairo City Company" towards the accomplishment of this necessary improvement; and their operations, which were for a time suspended for the want of pecuniary encouragement, are again resumed, and will doubtless be prosecuted to completion, under the impulse likely to be given to their enterprise by the success of other schemes of internal improvement.

The "Cairo City Property" embraces in all about 9500 acres on this delta between the Mississippi and Ohio Rivers, with the levees, workshops, founderies, saw mills, dwellings, hotel, and other buildings on the premises. 1200 acres embraced within the proposed corporate limits of Cairo, are wholly enclosed by levees, raised above the highest known floods; and the enclosure for nearly 4000 acres, including the above, is partly completed.

One of the correlative enterprises of internal improvement, upon which those interested in the prosperity of Cairo depend for encouragement, is the incorporation of a company by the state of Illinois for building a railroad from Cairo, through the centre of the state, to Peru, at the southern terminus of the Illinois and Michigan Canal; and thence, by branches diverging N. E. and N. W., to Chicago, on Lake Michigan, and to Galena and Dubuque, on the Upper Mississippi. A long portion of this road is now in process of construction. For the furtherance of this important enterprise Congress, by an act passed in 1850, has granted to the state of Illinois the right of way for the construction of this road through all the public lands where it may pass; and also "every alternate section of land designated by even numbers, for six sections in width on each side of said road and branches," to be sold for the purpose of its construction. The grants are made on the conditions that the work shall be begun and carried on simultaneously from both ends of the route, and that the whole shall be completed within 10 years from the date of their enactment. Similar grants are made, by the same act, to the states of Mississippi and Alabama, for the construction of a railroad south, from Cairo to Mobile, on the Gulf of Mexico. The construction of the Illinois Central Railroad has been undertaken with spirit by the state, and

will doubtless be completed within the time fixed by Congress.

Thus it will be seen that much, very much, is to be anticipated for the future growth of Cairo. Having, as computed, "upwards of 20,000 miles of river navigation" on the Mississippi, Ohio, and Missouri, and their tributaries, all centring here, with a navigable channel open to New Orleans at all seasons, and being "at the terminus of the great Central Railroad of Illinois, which is to form the most direct and rapid route of communication between the South-Western and Northern States," and about midway between the great lakes and the Gulf of Mexico, between which an entire communication by railroad, through this place, will ultimately be completed, it is evident that the local disadvantages above referred to cannot long oppose an insuperable obstacle to the causes so powerfully conspiring to render Cairo a great centre of intercourse, traffic, and exchange for one of the most extensive and productive regions of the world.

Calais, Me., Washington co. This great mart of lumber, and of the commerce of a large section of country, lies at the head of navigation on the Schoodic, or St. Croix River, nearly opposite St. Stephens; N. B. A bridge across the river connects the British with the American sides. At Milltown, about 2 miles above the bridge, 40 or 50 saw mills are in constant operation. A railroad passes from Calais, through Milltown, to Baring. Calais was incorporated as a city in 1850, and has become one of the most flourishing places of business in the state. 204 miles from Augusta, and 28 above Eastport.

Calais, Vt., Washington co. This township is watered by two branches of the Winooski River. They unite near the S. line of the town, affording in their course a great number of valuable privileges. It is also well watered with springs and brooks. The soil is a warm loam, easily cultivated, and well adapted to all kinds of grain. The surface is somewhat uneven. The timber on the streams is mostly hemlock, spruce, and pine; on the higher lands, maple, beech, &c. The N. line of the township intersects two considerable ponds. There are several other small but beautiful ponds lying within the township, abounding in fish. Long Pond lies in the N. W. part of the town. In one autumn, 2000 pounds of trout were taken from this pond. There are several springs in the town whose waters are quite brackish. The settlement was commenced in the spring of 1787, by Francis West, from Plymouth co., Ms. The first permanent settlers, however, were Abijah, Asa, and P. Wheelock. 8 miles N. from Montpelier.

Calaveras County, Ca., c. h. at Double Springs, otherwise called Pleasant Valley. In the mountains E. of the San Joaquin, between Dry Creek of the Moquelumne and the Stanislaus River.

Calcasieu Parish, La., c. h. at Lisbon. In the S. W. corner, between the Gulf of Mexico and the Sabine River and Lake, which separate it from Texas. Watered by the Mermenton, Calcasieu, and Sabine Rivers and Lakes.

Caldwell County, Ky., c. h. at Princeton. W. part. Watered by the Tenesa and Cumberland Rivers. It has a generally level surface, and fertile soil.

Caldwell Parish, La., c. h. at Columbia. N. E. central. Drained by the Washita River. Sur-

face flat and alluvial on the E., and hilly on the W.

Caldwell County, Mo., c. h. at Far West. N. W. part. Drained by Shoal Creek, which affords good water power. Surface mostly level; soil fertile.

Caldwell County, N. C., c. h. at Lenoir. W. part of the state. At the E. foot of the Blue Ridge. Watered by Yadkin River. Surface broken; the Blue Ridge lying on its N. border. On the borders of the river, however, are broad and fertile flats.

Caldwell, N. Y., c. h. Warren co. Watered by several small streams flowing into Lake George, which bounds it on the E. The surface is hilly and mountainous, the Palmertown ridge crossing the S. E. part. Many interesting events, both of the old French war and of the revolution, are associated with some of the localities in this town. (See *Lake George*, p. 195.) 62 miles N. from Albany.

Caldwell, N. J., Essex co. Watered by Deep and Green Brooks, branches of the Passaic, and good mill streams. Surface, except on the margins of the streams, rolling and mountainous.

Caldwell County, Ts., c. h. at Lockhart. Central part of the state. On the upper waters of the Guadalupe River.

Caledonia, N. Y., Livingston co. Watered by Genesee River and an excellent mill stream, rising from a spring in this town. Surface somewhat uneven; soil calcareous loam. 10 miles N. from Genesee, and 228 N. of W. from Albany.

Caledonia County, Vt., c. h. at Danville. N. E. part. The eastern range of the Green Mountains extends through the western part of the county. It is watered by many fine streams, but the Connecticut, on its S. E. border, and the Passumpsic, are its chief rivers. A large part of the county is high and good land; that along the rivers is excellent. There are some sulphur springs in this county; limestone and granite are abundant. The Passumpsic Railroad connects it with Boston and New York.

Calhoun County, Fa., c. h. at St. Joseph. W. part. At the mouth of the Appalachian River. Surface mostly level; soil sandy.

Calhoun County, Is., c. h. at Gilead. In the angle formed by the junction of the Illinois and Mississippi. The surface consists of table land, with strips of alluvion.

Calhoun County, Mn., c. h. at Marshall. This county was incorporated in 1833, and is bounded N. by Barry and Eaton, E. by Jackson, S. by Hillsdale county and Branch, and W. by Kalamazoo county. Watered by St. Joseph's and Kalamazoo Rivers, which afford extensive water power. Surface undulating, containing large quarries of sandstone; soil fertile, sandy loam.

Calhoun County, Ts. On the coast between La Vacca Bay and the River Guadalupe.

Calaway County, Mo., c. h. at Fulton. East central. On the N. bank of the Missouri River. Drained by Big and Little Au Vase Creeks. Surface undulating; soil fertile.

Callaway County, Ky., c. h. at Wadesboro'. W. part. In the W. angle between the state of Tennessee and the Tennessee River. It is crossed through the middle by Clark's River.

Calumet County, Wn., c. h. at Calumet. E. part. On the N. E. shore of Lake Winnebago. Drained by the head branches of the Manitowago River.

Calvert County, Md., c. h. at Prince Frederic.

S. E. part. Between Patuxent River and Chesapeake Bay. Surface undulating.

Cambria County, Pa., c. h. at Ebensburg. S. W. central. Between the Laurel Ridge and the Alleghanies. Watered by the W. branch of the Susquehanna and the head branches of Kiskiminitas or Conemaugh River. Surface rough and mountainous; soil tolerably good.

Cambria, N. Y., Niagara co. Mostly level. Watered by several small streams. 7 miles W. from Lockport, and 283 N. of W. from Albany.

Cambria, Pa., Cambria co. Watered by Black Lick Creek and the N. branch of Little Conemaugh River. Surface hilly; soil sand and clay.

Cambridge, Me., Somerset co.

Cambridge, Md., c. h. Dorchester co. On the S. side of Choptank River, 12 miles from its entrance into Chesapeake Bay. 61 miles S. E. from Annapolis.

Cambridge, Ms. City and one of the seats of justice of Middlesex co. This is the seat of Cambridge University, the oldest and best endowed of the colleges in the United States. It may be divided into three parts—Old Cambridge, where the college is situated, about 3 miles W. from Boston; Cambridgeport, a flourishing village, about midway between Boston and Old Cambridge; and East Cambridge, where the county buildings are located, immediately connected with Boston by Cragie's Bridge over Charles River; also with the city of Charlestown by a bridge. Population in 1790, 2115; 1800, 2453; 1810, 2323; 1820, 3295; 1830, 6072; 1840, 8409; 1850, 15,215.

Cambridge is one of the oldest towns in New England. It was incorporated in 1630, by the name of Newtown. It took the name of Cambridge in 1638. It has ever been closely connected with Boston in all its literary, intellectual, and political relations; and, were it not for municipal distinctions, might be considered as virtually an integral part of the metropolis. Old Cambridge especially constitutes one of the very beautiful suburbs of Boston. (For a notice of the university, the reader is referred to *Colleges*.) The university buildings are pleasantly, though somewhat irregularly, situated. Some have quite a venerable appearance; and others, which are newer, particularly the library building, are among the finest specimens of architecture in the country. A large proportion of the houses in Old Cambridge are of the most elegant description, being built and located, even when they are not very costly, with a just regard to the principles of taste. They are often embowered in the most beautiful trees and shrubbery. There are several handsome houses of public worship in the vicinity of the College Green.

Cambridgeport, as its name implies, is a more crowded and bustling mart of business. There are, however, many very pretty streets here, and many elegant and costly houses. There are several handsome meeting houses, the town-house, and other public buildings.

East Cambridge, formerly known as Lechmere's Point, opposite the N. W. part of Boston, is also a business part of the city, and has risen into consequence within a few years. It contains six or eight places of worship, the court house, jail, and house of correction. Here are the extensive glass works of the New England Glass Company; also soap, candle, and brush factories, and a great variety of other manufac-

turing and mechanical operations. Charles River winds its course along the S. border of Cambridge, affording convenient facilities for navigation to each section of the town.

The Mount Auburn Cemetery lies about a mile W. of the university, in the towns of Watertown and Cambridge. This beautiful rural cemetery, the first of the kind in the country, was dedicated September 24, 1831. It contains about 100 acres of land, covered with a natural growth of trees, the highest part of which is 125 feet above the river, laid out with winding gravelled walks, and embellished with every variety of shrub and flower. Numerous monuments, of costly material and exquisite workmanship, are already erected, constituting this a magnificent resting-place of the dead. It is surrounded by an iron fence, with an imposing granite gateway, in the Egyptian style; and not far from the entrance is a chapel, of granite, for the celebration of burial services. Our readers will be pleased to see the following short extract from the address of the late JUDGE STORY at the setting apart of this hallowed spot to the purpose for which it is now used:—

"Nature," he says, "seems to point it out with significant energy, as the favorite retirement for the dead. There are around us all the varied features of her beauty and grandeur—the forest-crowned height, the abrupt acclivity, the sheltered valley, the deep glen, the grassy glade, and the silent grove. Here are the lofty oak, the beech, that 'wreathes its old, fantastic roots so high,' the rustling pine, and the drooping willow,—the tree that sheds its pale leaves with every autumn, a fit emblem of our own transitory bloom; and the evergreen, with its perennial shoots, instructing us that 'the wintry blast of death kills not the buds of virtue.' Here is the thick shrubbery, to protect and conceal the new-made grave; and there is the wild flower creeping along the narrow path, and planting its seeds in the upturned earth. All around us there breathes a solemn calm, as if we were in the bosom of a wilderness, broken only by the breeze as it murmurs through the tops of the forest, or by the notes of the warbler, pouring forth his matin or his evening song.

"Ascend but a few steps, and what a change of scenery to surprise and delight us! We seem, as it were, in an instant, to pass from the confines of death to the bright and balmy regions of life. Below us flows the winding Charles, with its rippling current, like the stream of time hastening to the ocean of eternity. In the distance, the city—at once the object of our admiration and our love—rears its proud eminences, its glittering spires, its lofty towers, its graceful mansions, its curling smoke, its crowded haunts of business and pleasure, which speak to the eye, and yet leave a noiseless loneliness on the ear. Again we turn, and the walls of our venerable university rise before us, with many a recollection of happy days passed there, in the interchange of study and friendship, and many a grateful thought of the affluence of its learning, which has adorned and nourished the literature of our country. Again we turn, and the cultivated farm, the neat cottage, the village church, the sparkling lake, the rich valley, and the distant hills, are before us through opening vistas; and we breathe amidst the fresh and varied labors of man."

From the first settlement of the country, Cambridge has been a place of great importance. At the commencement of the revolution, and during the year 1775, the head-quarters of the American army were in this town, and here Washington entered upon his duties as commander-in-chief. His quarters were at the Cragie House, situated on the street between the college and Mount Auburn. Our admired poet, Longfellow, the present proprietor, displays good taste by preserving as nearly as possible the original external appearance of the house. The Washington Elm, on the westerly side of Cambridge Common, is also an object of interest, as under its branches Washington was stationed while his commission was proclaimed to the army of twenty thousand men drawn up on the Common; and here he drew that sword which, turning every way, like the sword of the angel, became salvation to his country, and terror and confusion to her adversaries.

Cambridge, N. H., Coos co. This town has an uneven surface, and is watered by several streams which rise here and fall into the Androscoggin. 143 miles N. E. from Concord, and 35 N. E. from Lancaster.

Cambridge, N. Y., Washington co. Watered by Hoosic River and its tributaries. Surface generally level, soil mostly gravelly, and sandy loam. 12 miles S. from Salem, and 34 N. E. from Albany.

Cambridge, O., c. h. Guernsey co. On the national road, on Wills Creek. 48 miles W. from Wheeling, and 78 E. from Columbus.

Cambridge, Vt., Lamoille co. Lamoille River passes through the town, and receives, in its course, North Branch, Brewster's River, and Seymour's Brook. These streams afford numerous mill privileges. The surface is uneven, and in some places rough. The land is, however, generally good, and on the river are about 6000 acres of valuable intervals. A branch of Dead Creek rises in this town, and another branch of said creek runs across the N. W. corner of the town. The town is well watered, and produces timber of various kinds. There are three small villages. The first settler was John Spofford; he came into the town in 1783, from Piermont, N. H. 18 miles W. from Hydepark, and 40 N. W. from Montpelier.

Cambridgeport, Ms., Middlesex co. See *Cambridge, Ms.*

Camden, As., c. h. Washington co. 90 miles W. of S. from Little Rock.

Camden County, Ga., c. h. at Jeffersonton. In the S. E. corner. Santilla River flows through the interior, and St. Mary's River along the S. border of this county, which embraces Cumberland Island, lying in the Atlantic.

Camden, Me., Waldo co. On the W. side of Penobscot Bay. 10 miles N. from Thomaston, and 40 E. S. E. from Augusta. It has two fine harbors, but its chief business is the manufacture of lime, of which about 200,000 casks are annually shipped to all ports of the United States. The lime is used for making cement of a superior quality. The Megunticook River affords an extensive water power.

Camden County, N. C., c. h. at Jonesburg. In the N. E. corner, on Albemarle Sound, between Pasquotank and North Rivers. Surface low and marshy.

Camden, N. C., c. h. Camden co. On the **B.**

side of Pasquotank River. 219 miles E. N. E. from Raleigh, otherwise called Jonesburg.

Camden County, N. J., c. h. at Camden. S. W. part. Washed by the Delaware on the W. Level, and soil light.

Camden, N. J. City and port of entry, Gloucester co. Situated on the E. side of the Delaware River, opposite Philadelphia. The city was incorporated in 1828, extending about 2 miles on the river, and about a mile and a half back. It consists of three distinct villages, each connected with Philadelphia by a ferry. The upper of these is known as Cooper's Point, and the lower as Kaighn's Point, or South Camden. Camden proper is that part of the city included in the central village, which is the largest of the three. Cooper's Point, however, was first settled, and the ferry from Philadelphia to this point was established as early as 1695. Much of the territory included within the chartered limits of Camden is yet occupied with gardens and fruit orchards, for the supply of the Philadelphia market. There are several public gardens, which are places of resort for the citizens of Philadelphia, in the summer, for recreation.

Windmill, or Clark's Island, lies in the river between Philadelphia and Camden proper, having the deepest channel on the Philadelphia side. Vessels of the largest class can come up only to Kaighn's Point, and those of 150 tons only to Camden proper. Clark's Island and the bar running from it interposed, in its natural condition, an obstacle to the direct passage of the ferry boats to Camden. This proved so serious an inconvenience that, in 1837, a channel was cut through it at a cost of about \$40,000. The terminus of the Camden and Anbooy Railroad, making a part of one of the routes from Philadelphia to New York, is at Camden; and also that of another railroad, running a few miles south, to Woodbury, the shire town of the county.

The growth of Camden, as a place of business, has been considerable for a few years past. There are now 18 or 20 respectable mercantile houses, several lumber yards, and numerous mechanical and manufacturing establishments. There are churches in the city of the Episcopal, Baptist, and Methodist denominations, and of the Friends. The remains of barracks built here by the British, during their occupancy of Philadelphia, in the war of the revolution, are still visible near the upper ferry.

Camden, N. Y., Onondaga co. Watered by Fish Creek and its branches. The surface is generally hilly; the soil easily cultivated, and very fertile in some parts. 35 miles N. W. from Utica, and 127 W. by N. from Albany.

Camden, S. C., seat of justice of Kershaw district. On the E. bank of Wateree River. 33 miles N. E. from Columbia. The river is navigable to this place for flat boats of 60 or 70 tons. The soil of the surrounding country is fertile, but liable to be overflowed. Cotton and corn are abundantly produced. The place is well built; some of the church edifices, of which there are four or five, are elegant. Its trade is considerable. The De Kalb mills, and a cotton factory, are in the suburbs of the village.

This place is celebrated, in revolutionary history, as the scene of two important battles: that of August 16, 1780, between General Gates and Lord Cornwallis; and that of April 23, 1781, between General Greene and Lord Rawdon. In

1825, Lafayette laid the corner stone of a monument here to the memory of Baron de Kalb, of revolutionary celebrity, which stands at the foot of De Kalb Street, and is of fine white marble.

In the near vicinity of this town is a large mound, supposed to indicate the site of one of the ancient towns of the Catawba Indians.

Camden County, Mo. Southern central. Watered by the Osage and several large tributaries.

Cameron, N. Y., Steuben co. Watered by Canisteo River, and several small streams. The surface is hilly, the soil generally good. 7 miles S. from Bath, and 221 S. of W. from Albany.

Cameron County, Ts., c. h. at Brownsville. In the S. E. angle, between the Lower Del Norte and the Gulf coast.

Camillus, N. Y., Onondaga co. The surface is rolling, and is watered by Nine Mile Creek. It lies 7 miles W. from Syracuse, and 141 N. W. from Albany.

Campbell County, Ga., c. h. at Campbellton. N. W. part on both sides the Chattahoochee. Surface undulating; soil productive.

Campbell County, Ky., c. h. at Newport. Northernmost part, in the angle between the Licking and Ohio. Surface uneven; soil productive.

Campbell, N. Y., Steuben co. Conhocton River, Mead's Creek, and several small streams water this town. Surface hilly, soil clay and marly loam. 10 miles S. E. from Bath, and 209 W. by S. from Albany.

Campbell County, Te., c. h. at Jacksboro'. East part on the N. border. Watered by the Tennessee and several branches of the Cumberland River. Surface broken by the Cumberland Mountains.

Campbell County, Va., c. h. at Campbell co. South central. Between the James River and the Roanoke. It has a rough surface, but fertile soil.

Campbell, Va., c. h. Campbell co. 125 miles W. S. W. from Richmond.

Campbellton, Ga., c. h. Campbell co. On both sides of the Chattahoochee River. 102 miles N. W. from Milledgeville.

Campton, N. H., Grafton co. The surface is broken and uneven. Besides Penigewasset River, this town is watered by Mad, Beebe, West Branch, and Bog Brook Rivers. The land in the valleys is good, and there is some intervale. The high land is good for grazing. The forest trees are mostly deciduous. Iron ore is found in some parts. From the circumstance of the first proprietors' building a camp, when they went to survey Campton and Rumney, this town derives its name. First settlers, two families named Fox and Taylor, in 1765.

Canaan, Ct., Litchfield co. First settled in 1738. Incorporated, 1739. The town lies on the E. side of Housatonic River, opposite Salisbury. A ledge of limestone rocks crosses the river at this place, about 30 rods in length, causing a perpendicular fall of 60 feet. The river is rapid, both above and below this beautiful cataract. The whole descent of the river, in Canaan, is about 130 feet, "nobly arranged and distributed, and comprehending a remarkable variety of beauty and grandeur." The township is mountainous, with some arable land along the streams. Limestone and iron ore are abundant.

Canaan, Me., Somerset co. A good farming town on the E. side of Kennebec River. 34 miles N. from Augusta.

Canaan, N. H., Grafton co. Heart Pond, so called from its figure, is situated in the centre

of the town, upon a swell of land so elevated, that at a distance it presents the appearance of a sheet of water on a hill. It is 400 rods in length, and 200 in width, and is surrounded by a ridge or mound. It is from 4 to 5 feet high, and is found to have been produced by the drifting of the ice, when breaking up in the spring. Besides this, there are Goose, Clarks', Mud, and Bear Ponds. The soil is fertile, and the land capable of cultivation. It derives its name from Canaan in Connecticut. First settlers, 1776, George Harris, Thomas Miner, Joshua Harris, Samuel Jones, and Samuel Meacham. 16 miles E. from Dartmouth College, and 52 N. W. from Concord by railroad.

Canaan, N. Y., Columbia co. Some of the branches of Kinderhook Creek water this town. Surface hilly and mountainous. 20 miles N. E. from Hudson, and 24 S. E. from Albany.

Canaan, Pa., Wayne co. Some branches of the Lackawaxen water this town, and the Carbondale and Honesdale Railroad traverses it. Surface somewhat mountainous; soil loam and gravel. N. E. from Harrisburg 159 miles.

Canaan, Vt., Essex co. Canaan lies opposite Stewartstown, N. H. The north-east corner of the town is the most easterly land in Vermont. February 26, 1782, it received a new charter, and October 23, 1801, the town of Norfolk was annexed to it. The Connecticut River bounds it on the E. Willard's Brook, &c., afford good mill privileges. There is some fine intervals on the Connecticut, and much good land in other parts. 35 miles N. from Guildhall, and 103 N. E. from Montpelier.

Canadice, N. Y., Ontario co. Watered by Honeoye, Canadice, and Hemlock Lakes. The surface is quite hilly; the soil fertile in some portions. 18 miles S. W. from Canandaigua, and 216 W. from Albany.

Canajoharie, N. Y., Montgomery co. On the S. side of the Mohawk River, and watered by Bowman's and Otsquake Creeks. Surface hilly; soil strong sandy loam. 10 miles W. from Fonda, and 55 N. of W. from Albany.

Canandaigua, N. Y. Shire town of Ontario co. This township contains a considerable portion of Canandaigua Lake. Its surface is diversified with hills and plains; the soil is fertile, and generally under high cultivation.

The village of Canandaigua, incorporated in 1815, is pleasantly situated at the outlet of the lake, 224 miles by railroad W. from Albany, and 104 E. from Buffalo. The ground on which it is built descends gently towards the lake, presenting a fine view of the water from the village. Two parallel streets, which run N. and S., and are crossed at right angles by several others, constitute the principal streets; having a fine public square at the centre, on which are located the court house and other public buildings.

There is a classical academy at Canandaigua, in which a very thorough course of studies is pursued; also the Ontario Female Seminary, founded in 1825, which enjoys a high reputation. There are churches of the Presbyterian, Episcopal, Methodist, and Baptist denominations. A state arsenal is located here. Many of the mansions of the citizens are large and elegant, and are surrounded by beautiful trees and gardens, giving an air of superior wealth and refinement to the place.

The first land office in Western New York for the sale of lands to settlers was opened at Canandaigua, in 1789, by Oliver Phelps, who, with Nathaniel Gorham, was a leading pioneer in the pur-

chase, survey, and settlement of this part of Western New York. The system which he conceived, of surveying lands by townships, and numbering them in ranges, from a given line, became the model for surveying all the public lands of the United States. Canandaigua, for example, was township number ten in the third range. Canandaigua village also was laid out by Messrs. Phelps and Gorham, who lived and died here, and by their liberal benefactions in founding the classical academy above mentioned, have left behind them an honorable memorial to all succeeding generations.

Candia, N. H., Rockingham co. 15 miles from Concord, on the height of land between the Merrimac and the ocean. Site elevated; soil hard.

Candor, N. Y., Tioga co. Watered by Cattoctong and West Owego Creeks. Hilly; soil mostly rich loam. 8 miles N. from Owego, and 177 S. W. from Albany.

Caneadea, N. Y., Allegheny co. On each side of Genesee River, and watered by several of its small tributaries. The E. and W. parts of the town are hilly, becoming more level on the borders of the river. Soil clay and sandy loam. 267 miles W. from Albany.

Canisteo, N. Y., Steuben co. Watered by Canisteo River and some of its tributaries. The surface is very uneven; soil good, the valley of the Canisteo consisting of rich alluvial flats. 241 miles S. W. from Albany.

Cannon County, Tc., c. h. at Woodbury. Central. Surface hilly, and watered by some tributaries of Cumberland River; soil fertile.

Canterbury, Ct., Windham co. The first settlers of this town were principally from Dorchester, Ms., and its neighborhood. They came here about the year 1690. The soil of the town is a gravelly loam, generally fertile and productive. The Quinnebaug is here a large and beautiful stream. It annually overflows its banks, and fertilizes a large tract upon its borders. There is fine fishing in Bates's Pond.

Canterbury, N. H., Merrimac co. On Merrimac River. Uneven. Soil generally good. In the S. E. part is a village of Shakers.

Canton, Ct., Hartford co. First settled 1740; incorporated 1806; taken from Simsbury. Collinsville is the principal village in the town. This village presents a beautiful appearance, and is a noble specimen of individual enterprise. The soil of Canton is coarse and stony, and the surface hilly. Farmington River passes through its S. W. corner. In Collinsville is an extensive axe manufactory, with machinery of unsurpassed excellence.

Canton, Me., Oxford co. Incorporated 1821. It lies on both sides of the Androscoggin River, 32 miles W. N. W. from Augusta, and 24 N. E. from Paris.

Canton, Ms., Norfolk co. This town was formerly the first parish in the old town of Stoughton. The Indian name was Punkapog. The natural scenery of this town is beautifully diversified and picturesque. Punkapog Pond is a beautiful little lake, and affords fine fishing. Blue Hill, 630 feet above the level of the sea, and the highest land near the sea-coast of Ms. is partly in this town and partly in Milton. From its summit there is a magnificent view of the metropolis and its harbor, of the ocean and the surrounding country. The E. branch of Neponset River, and several large ponds and reservoirs,

give this town an extensive water power. The railroad bridge over one of the ponds and river at this place is conceded to be the most elegant and massive structure of masonry in the United States. It cost the company \$93,000. It is 615 feet in length, connected at intervals by buttresses 5½ feet thick, extending transversely across the walls, and projecting 4 feet beyond their faces. Their elevation is crowned by segment arches that support the coping, surmounted by a parapet wall 3 feet 8 inches high. Near the bottom are 6 large arches, for the passage of water, and in another place is an arch still larger, through which passes a town road. From the top of the viaduct to the bottom of the pond, the distance is about 70 feet. A branch railroad to Stoughton, 4 miles distant, enters the Boston and Providence Railroad near the viaduct. The Fowl Meadows, a large portion of which are in Canton, extend 7 miles in length, with varying breadth; they contain excellent peat. 14 miles S. by W. from Boston, and 6 S. E. from Dedham.

Canton, Mi., c. h. Madison co. 23 miles N. by E. from Jackson.

Canton, N. Y., St. Lawrence co. Watered by Grass and Oswegatchie Rivers, which are connected at this place by a natural canal 5 miles in length. The surface is mostly level; soil strong clay loam. Lead ore, and a fine white marble, are found here. 206 miles N. W. from Albany.

Canton, O., c. h. Stark co. In a fertile tract of land, on the forks of Nimishillen Creek. 120 miles N. E. from Columbus, on the Ohio and Pennsylvania Railroad, and having railroad communication with Cleveland, Pittsburg, and Columbus.

Canton, Pa., Bradford co. The Tonawanda Creek and its branches water this township, the surface of which is hilly, and the soil gravelly loam. 136 miles N. from Harrisburg.

Canton, Pa., Washington co. Watered by Chartier's Creek and its branches. Surface somewhat undulating; soil loam. Coal abounds.

Cape Elizabeth, Me., Cumberland co. On the S. E. shore of Casco Bay, adjoining Portland. One of the oldest towns in the state. It contains a pond, which, upon being drained, disclosed a bed of peat, from which is made, by carbonization, the celebrated deodorizing powder. The inhabitants are generally farmers.

Cape Girardeau, Mo., Cape Girardeau co. On the W. bank of the Mississippi River, 10 miles from Jackson, and 207 S. E. from Jefferson City. A place of considerable trade.

Cape Girardeau County, Mo., c. h. at Jackson. S. E. part, on the Mississippi. The head branches of White River water this county, and iron and other minerals are found here.

Cape Island, N. J., Cape May co. This favorite watering-place is on the sea-shore, at the S. extremity of the state, 108 miles S. from Trenton. It has several large hotels and boarding houses, and is much frequented in the summer season. See *Fashionable Resorts*.

Cape May County, N. J., c. h. at Cape May. At the S. E. extremity. Watered on the N. by Tuckahoe River, and contains several salt lakes, formed by inlets from the sea. Surface level; soil alluvial.

Cape May, N. J., c. h. Cape May co. 93 miles S. from Trenton.

Cape Vincent, N. Y., Jefferson co. On the S. side of St. Lawrence River. 190 miles N. W. from

Albany. Steam power is made use of for several manufactures.

Carbon County, Pa., c. h. at Mauch Chunk. E. part. Uneven and mountainous. Embraces the valley of the Lehigh, in the middle part of its course, which river passes through it from N. to S. The Lehigh coal comes from this county, which includes the N. E. portion of the southern anthracite coal field.

Carbondale, Pa., Luzerne co. On Lackawana Creek. 35 miles N. E. from Wilkesbarre, and 160 N. N. E. from Harrisburg. This flourishing place has sprung into existence within a few years, in consequence of its location in the great anthracite coal region. The Lackawana coal mine is situated in the acclivity of a hill, and presents a front of pure coal 20 feet thick. The coal, when quarried, is carried up several inclined planes, by stationary steam engines, to an elevation 850 feet above the mine, whence it descends again by a railway, 16 miles in length, to the canal at Honesdale. Thence it goes to New York and Philadelphia. Hundreds of thousands of tons of coal are mined here, and sent to market, annually. The place has five or six churches, and quite a number of stores. About a mile from the village, on Fall Brook, is a beautiful cascade of about 80 feet descent.

Cardington, O., Marion co. About 18 miles S. E. from the seat of justice.

Carlinsville, Is., c. h. Macoupin co. On the N. side of Lake Fork of Macoupin River. 39 miles S. S. W. from Springfield.

Carlisle, Is., c. h. Clinton co.

Carlisle, Ky., c. h. Nicholas co. On a small branch of Licking River. E. N. E. from Frankfort 53 miles.

Carlisle, Ms., Middlesex co., was formerly a district of Concord. It is watered, on its E. boundary, by Concord River. The soil is not very productive, and its surface is rough and rocky. 5 miles N. from Concord, and 21 N. W. from Boston.

Carlisle, N. Y., Schoharie co. The surface of this town is hilly, abounding in caverns containing large quantities of aragonite, and sulphate of barytes. 8 miles N. W. from Schoharie, and 36 W. from Albany.

Carlisle, Pa., c. h. Cumberland co. 15 miles W. by S. from Harrisburg, on the Cumberland Valley Railroad, which extends from Harrisburg through this place to Chambersburg. It is regularly laid out, with a spacious public square in the centre, and wide streets crossing each other at right angles. It is well built, mostly with brick and stone. It has 9 or 10 churches. Dickinson College is located here, and its buildings occupy a commanding situation in the W. part of the village. (See *Colleges*.) About half a mile from the village are the United States barracks, built in 1777, chiefly by the Hessians captured at Trenton. The government have established a cavalry school here. About 4 miles N. are the Carlisle Springs, at which there are good accommodations for visitors. The locality is retired, and surrounded with the beautiful scenery of the Blue Mountain.

Carlisle Springs, Pa., Cumberland co. So called from the sulphur springs existing here. 19 miles W. by S. from Harrisburg.

Carmel, Me., Penobscot co. 71 miles from Augusta. See *Sowadabscook Stream*.

Carmel, N. Y., c. h. Putnam co. It contains

several small lakes, from which flow the head waters of Croton River. Surface hilly; soil very fertile. 106 miles S. from Albany.

Carmi, Ia., c. h. White co. On the W. bank of Little Wabash River. 181 miles S. E. from Springfield.

Carnesville, Ga., c. h. Franklin co. On Stephen's Creek. 111 miles N. from Milledgeville.

Caroline County, Md., c. h. at Denton. On the E. shore, bordering on Delaware. The Chop-tank River waters this county, the W. branch forming its W. boundary.

Caroline, N. Y., Tompkins co. West Owego and Six Mile Creeks water this town, the surface of which is hilly, and the soil gravelly and calcareous loam. 12 miles S. E. from Ithaca, and 156 S. W. from Albany.

Caroline County, Va., c. h. at Bowling Green. E. part between the Rappahannock and the North River. Watered by the Mattapony and its branches. Surface hilly and broken; soil diversified.

Carroll County, As., c. h. at Carrollton, shire town. In the N. W. corner bordering on Missouri. Watered by branches of the White and Little Red Rivers.

Carroll County, Ga., c. h. at Carrollton. On the W. border, extending from the Alabama line to the Chattahoochee. Watered by the head branches of the Tallapoosa River. Surface high and broken.

Carroll County, Is., c. h. at Savanna. In the N. W. angle on the Mississippi. Surface undulating, and drained by Plum and Rush Creeks; soil productive.

Carroll County, Ia., c. h. at Delphi. N. W. central. It is traversed by the Wabash River and Rock, Deer, and Wildcat Creek, and also by the Wabash and Erie Canal. Surface mostly level.

Carroll County, Ky., c. h. at Carrollton, shire town. N. part on the Mississippi, at the mouth of Carroll River. The surface is level, and the soil very rich.

Carroll Parish, La., c. h. at Providence. In the N. E. corner. Traversed by Bayou Bœuff, Bayou Macon, and the Tensas River.

Carroll, Me., Penobscot co.

Carroll County, Md., c. h. at Westminster. Bounded N. by Pa., E. by Baltimore co., S. by Ann, and W. by Frederick co. It has a fertile soil. Watered by Patapsco and Monococy Rivers.

Carroll County, Mi., c. h. at Carrollton. N. W. central. Between the upper waters of the Big Black and the Yallahusha Fork of the Yazoo.

Carroll County, Mo., c. h. at Carrollton. N. W. central. In the W. angle between the Grand River and the Missouri.

Carroll County, N. H., c. h. at Ossipee. E. central. On the N. side of Winnipiseogee Lake, and presents very beautiful scenery. The surface and soil, and its hydraulic power, are much the same as those of Belknap co.

Carroll, N. H. A township in Coos co., lying at the base of the White Mountains. Its surface is uneven, and its appearance dreary. This township was granted in 1772 to Sir Thomas Wentworth, Rev. Samuel Langdon, and 81 others. 120 miles N. from Concord, and 18 S. E. from Lancaster.

Carroll, N. Y., Chautauque co. Watered by

Connewango and Stillwater Creeks. Surface hilly; soil sandy. 336 miles W. by S. from Albany.

Carroll County, O., c. h. at Carrollton. E. part. On the height of land between the Muskingum and Ohio. The canal, from Bolivar to the Ohio River, passes through its N. W. corner.

Carroll, Pa. A township of Cambria co.

Carroll, Pa. A township of Perry co.

Carroll, Pa. A township of Washington co.

Carroll, Pa. A township of York co.

Carroll County, Te., c. h. at Huntington. W. part. on the height of land between the Tennessee and Mississippi.

Carroll County, Va. New; taken from Grayson. On the S. W. border, in the valley between the Blue Ridge and the Iron Mountain.

Carrollton, Aa., c. h. Pickets co. On the W. bank of Lubbub Creek. 42 miles W. from Tuscaloosa.

Carrollton, Ga., c. h. Carroll co. On the S. fork of Tallapoosa River. 131 miles W. N. W. from Milledgeville.

Carrollton, Is., c. h. Greene co. On the borders of Spring Prairie. 69 miles S. W. from Springfield. Steam power is applied to operate flouring mills and saw mills. The surrounding country is beautiful.

Carrollton, Ky., c. h. Carroll co. On the S. bank of the Ohio, at the mouth of Kentucky River. 46 miles N. N. W. from Frankfort.

Carrollton, Mo., c. h. Carroll co. On Waconda Creek. 6 miles N. of Missouri River, and 124 N. W. from Jefferson City.

Carrollton, Mi., c. h. Carroll co. On the S. side of Big Sandy Creek. 92 miles N. by E. from Jackson.

Carrollton, N. Y., Cattaraugus co. On the Pennsylvania border.

Carrollton, O., c. h. Carroll co. 125 miles N. E. from Columbus.

Carter County, Ky., c. h. at Grayson. N. E. part. Drained by the Little Sandy and Tygart's Creek. Hilly.

Carter County, Te., c. h. at Elizabethtown. In the N. E. corner. Mountainous. Drained by the Watoga and the S. fork of Hoalston.

Carteret County, N. C., c. h. at Beaufort. On the coast, S. of Pamlico Sound. It comprises several islands, on one of which is Cape Lookout. Soil sandy and marshy.

Carthage, Is., c. h. Hancock co. Situated between Bear and Long Creeks. 9 miles from the Mississippi River, and 106 W. N. W. from Springfield. There is coal in abundance in the vicinity.

Carthage, Mi., c. h. Leake co. 60 miles N. E. from Jackson.

Carthage, Mo., c. h. Jasper co. 160 miles S. W. from Jefferson City.

Carthage, Me., Franklin co. Incorporated 1826. 46 miles from Augusta, and 73 from Portland. See *Barnard*, Me.

Carthage, N. C., c. h. Moore co. 70 miles S. W. from Raleigh.

Carthage, N. Y., Jefferson co. On the Black River. 152 miles N. W. from Albany. There is extensive water power on the Long Falls, commencing at this place, below which the river is not navigable. Above, boats run up 40 miles, to High Falls, where the Black River Canal begins. There are large iron works at this place.

Carthage, O., Hamilton co. 8 miles N. from Cincinnati, and 116 S. W. from Columbus.

Large public meetings, agricultural fairs, &c., are frequently held here, on account of the central position of the place in the county.

Carthage, Tc., c. h. Smith co. 52 miles E. from Nashville.

Carthage, Ts., c. h. Panola co.

Carver, Ms., Plymouth co. 8 miles S. W. from Plymouth, and 38 S. E. from Boston. Soil sandy and poor. Noted for its iron castings. This town has a number of beautiful ponds, and is resorted to by sportsmen for fishing and fowling.

Casco, Me., Cumberland co. An interior township, taken from Raymond.

Casey County, Ky., c. h. Liberty. S. central. Watered by the head branches of Green, and the Rolling Fork of Salt River.

Cass County, Ga., c. h. at Cassville. N. E. part. Watered by Etowah River and Sulacoe Creek. Hilly and mountainous; soil very rich on the borders of the streams.

Cass County, Ia., c. h. at Virginia. W. central. In the S. angle between the Illinois and Sangamon. Drained by several creeks flowing into the Illinois. The surface is slightly uneven; the soil very productive.

Cass County, Ia., c. h. at Logansport. N. central. Watered by the Wabash and Eel Rivers, which afford fine mill privileges. Surface mostly level. The Wabash and Erie Canal traverses this county.

Cass County, Mn., c. h. at Cassopolis. In the S. W. corner, bordering on Indiana. Undulating; soil very fertile.

Cass County, Mo., formerly called Van Buren, c. h. at Harrisonville. On the W. border. Drained by the Osage, which passes through it from W. to E.

Cass County, Ts., c. h. at Lindin.

Cassopolis, Mn., c. h. Cass co.

Cassville, Ga., c. h. Cass co. 144 miles N. W. from Milledgeville.

Castine, Me., Hancock co., occupies a peninsula, with a good harbor, on the E. shore of Penobscot Bay.

Castleton, N. Y., Rensselaer co. On the E. bank of Hudson River. 8 miles S. by E. from Albany.

Castleton, Vt., Rutland co. This is a flourishing town, watered by a river of the same name. The surface is rough and hilly, but there is some rich land. Mill streams abound in Castleton. Lake Bombazine, seven miles in length and two in breadth, is chiefly in this town. It is stored with fish, and has an island near its centre of exquisite beauty. The village of Castleton is elevated and neatly built. It was incorporated in 1847. There is considerable variety in the soil and surface. The rocks are chiefly argillaceous. The soil of the plains is sandy and light; on the hills it is slaty, gravel, loam, and vegetable mould. Castleton River, and its tributary brooks, furnish considerable water power. Being increased by many abundant springs along its bed, its waters are very pure and cool in summer, and seldom frozen in winter. The first dwelling house was erected in August, 1769, of which Colonel Lee and his servant were the sole inhabitants the following winter. In 1770, Ephraim Buel, Eleazer Bartholomew, and Zadock Remington, with their families, settled in this town, and were soon followed by Colonels Bird and Lee. 11 miles W. from Rutland, and 72 S. W. from Montpelier.

Castor, Mo., Madison co.

Caswell County, N. C., c. h. at Yanceyville. On the N. border. Dan River winds along its N. boundary. Soil fertile.

Catahoola, Parish, c. h. at Harrisonburg. E. central. On both sides of the Washita.

Catawissa, Pa., Columbia co. At the junction of the Susquehanna River and Catawissa Creek. 81 miles N. N. E. from Harrisburg.

Catskill, N. Y., c. h. Greene co. On the Hudson River. It is watered by the Catskill and some of its branches. The surface is hilly in the W. part. The soil consists of clay, sand, and loam. 34 miles S. from Albany.

Cattaraugus County, N. Y., c. h. at Ellicottville. Bordering on Pennsylvania. It is watered by Great Valley, Oil, and Cattaraugus Creeks, and the Alleghany River. Surface elevated; soil good, and well adapted to grazing. This county contains bog iron ore, some salt and sulphur springs, and one oil spring. The Genesee Valley Canal crosses its S. E. angle, terminating at Olean, on the Alleghany River. Its southern part is traversed by the Erie Railroad.

Catawba County, N. C., c. h. at Newton. New; taken from Lewiston. On the southern border.

Cavendish, Vt., Windsor co. The soil is good, and easy to cultivate. Black River and Twenty Mile Stream are the principal waters. Along these streams are some small tracts of fine interval. The greatest curiosity in the town, and perhaps the greatest of the kind in the state, is at the falls on Black River, which are situated between Dutton's Village and White's Mills. Here the channel of the river has been worn down 100 feet, and rocks of very large size have been undermined and thrown down, one upon another. Holes are worn into the rocks, of various dimensions and forms. Hanks's Mountain, which separates Baltimore from this town, derives its name from Colonel Hanks, who, during the French and Indian wars, encamped thereon for the night, with a small regular force. There are two villages, viz., Duttonsville and Proctorsville. Near the latter village are large quarries of soapstone and serpentine. The settlement of this place was commenced in 1769, by Captain John Coffin. 10 miles S. W. from Windsor, and 60 S. from Montpelier. The Rutland and Burlington Railroad passes through the town.

Cayuga County, N. Y., c. h. at Auburn. W. central part. Extends from Lake Erie S. along the E. shore of Seneca Lake. It contains Owasco Lake, and includes the upper W. shore of Skeneateles Lake. It is crossed by the Erie Canal and by the Rochester and Syracuse Railroad. The soil is very fertile, yielding large crops of grain of different kinds. There are several important sulphur and saline springs, and also a chalybeate spring in the county.

Cayuga, N. Y., Cayuga co. On the N. E. shore of Cayuga Lake. 162 miles W. by N. from Albany. A bridge for travel here crosses the lake, over a mile in length, and another for the Rochester and Syracuse Railroad, still longer. A steamboat plies between Cayuga and Ithaca, at the head of the lake, 40 miles distant.

Cayuta, N. Y., Chemung co. Watered by Cayuta Creek and some of its branches. Surface hilly and broken. 188 miles S. W. from Albany.

Cazenovia, N. Y., Madison co., is watered by Chittenango Creek and Cazenovia Lake. The

surface is elevated and uneven; soil fertile, and adapted to the growth of grass and grain. 118 miles N. of W. from Albany.

Cecil County, Md., c. h. at Elkton. On the eastern shore, at the extreme N. The interior is watered by Elk River. Surface undulating; soil tolerably fertile. Crossed by the Chesapeake and Delaware Canal, and by the Newcaste and Frenchtown and Philadelphia and Baltimore Railroads.

Cecil, Pa., Washington co. Miller's branch of Chartier's Creek waters this town, which has a diversified surface and loamy soil. Coal is found here in large quantities.

Cedar Bluff, Aa., c. h. Cherokee co.

Cedar County, Io., c. h. at Tipton.

Cedar County, Mo. S. W. part. The Sac, a tributary of the Osage River, flows N. through it. *Cedar Rapids, Io.*, Linn co. On Cedar River, the northern fork of the Iowa.

Celina, O., c. h. Mercer co.

Centre, Pa., a township of Butler co. On the height of land between the Alleghany and Beaver.

Centre, Pa., Perry co. 36 miles N. W. from Harrisburg.

Centre, Pa., Greene co. Ten Mile Creek and its branches water this town, which has a hilly surface and loamy soil.

Centre, Pa., Indiana co. Watered by Yellow and Twolick Creeks, branches of Black River. Surface hilly; soil clay and loam.

Centre, Pa., Union co. Watered by Penn's and Little Mahonialy, or Middle Creeks. Surface various.

Centre County, Pa., c. h. at Bellefonte. Central. Watered by the W. branch of the Susquehanna River, and by Bald Eagle and Penn's Creeks. The surface is rough and mountainous, and iron ore is found here; soil productive on the margins of the streams.

Centre Harbor, N. H., Belknap co. Between Winnipiseogee and Squam Lakes. Soil mostly a rich loam. 37 miles from Concord, with which it is connected by railroad.

Centerville, Aa., c. h. Bibb co. On the E. side of Catawba River, at the lower falls. 38 miles S. E. from Tuscaloosa.

Centerville, Ia., c. h. Wayne co. On the E. side of Whitewater River, 62 miles E. from Indianapolis.

Centerville, Md., c. h. Queen Ann co. 39 miles E. by N. from Annapolis.

Centerville, Mn., c. h. St. Joseph co. On Prairie River, 139 miles W. S. W. from Detroit. One of the branches of the University of Michigan is established here.

Ceres, Pa., McKean co. Tunangwant, Sugar, Willow, and Kenjua Creeks water this town, the surface of which is rolling, and the soil loam and gravel.

Chambers County, Aa., c. h. at Chambers. On the E. border. The Chattahoochee River forms part of its E. boundary. Surface undulating; soil productive.

Chambersburg, Pa., c. h. Franklin co. Watered by Conococheague and Falling Spring Creeks, tributaries of the Potomac River. S. W. from Harrisburg 45 miles. A large and prosperous place, having a good water power improved for propelling cotton and woollen factories, flouring mills, paper mills, &c.

Champaign County, Is., c. h. at Urbana. E. central. Watered by Embarras, Kaskaskia, Illi-

nois, Sangamon, and Vermilion Rivers. Surface undulating; soil of good quality.

Champaign County, O., c. h. at Urbana. W. central. It takes its name from the level face of the country; is wealthy and fertile. Mad River, Duck, Nettle, Chapman's, King's, and Stony Creeks, are the most important streams. The Cincinnati and Sandusky Railroad passes through it.

Champion, N. Y., Jefferson co. Black River and some of its tributaries water this town. Surface hilly; soil very fertile. 148 miles N. W. from Albany.

Champlain, N. Y., Clinton co. On the shore of Lake Champlain, on each side of Chazy River, and bounded on the N. by Canada. The surface on the E. is level, on the W. hilly. Soil generally fertile. The Ogdensburg Railroad passes through the centre of this town, which lies 4 miles W. of Rouse's Point, on Lake Champlain. 15 miles N. from Plattsburg, and 188 N. from Albany.

Chanceford, Pa., York co. 47 miles S. S. E. from Harrisburg.

Chapel Hill, N. C., Orange co. On New Hope, a branch of Cape Fear River. Seat of the University of North Carolina. (See *Colleges*.) The locality is elevated and healthy, the soil fertile, and the water good. 28 miles N. W. from Raleigh.

Chaplin, Ct., Windham co. Taken from Mansfield, Hampton, and Windham, in 1832. It is watered by Nechaug River, which passes nearly through its centre. The town is small, but the soil is good, and populated by industrious farmers, who, by their practice of keeping a large number of sheep, seem to be convinced of the fact that wool is one of the most important staples of New England.

Chapman, Pa., Union co. The Mahantango Creek waters this town, affording good mill privileges. Surface hilly; soil alluvial and gravelly. 42 miles N. by W. from Harrisburg.

Chapman, Pa. A township of Clinton co.

Chardon, O., c. h. Geauga co. Situated about 600 feet above Lake Erie, on the elevated land between the head waters of Grand, Cuyahoga, and Chagrin Rivers. 168 miles N. E. from Columbus, and 28 E. by N. from Cleveland.

Chariton, Io., c. h. Lucas co. 100 miles S. W. from Iowa City.

Chariton County, Mo., c. h. at Keytesville. N. central. The Missouri River runs along its S., and Grand River along its W. boundary, while Chariton River flows through the interior.

Charlemont, Ms., Franklin co. This was formerly a frontier town, in which many Indian aggressions were committed. The traces of Hanks's, Taylor's, and Rice's garrisons are still to be seen. Mount Peak, and other lofty elevations, with the Deerfield meandering through the town, give to Charlemont much delightful scenery. Although the general features of the town are rough and craggy, it contains large tracts of valuable land. It has a great water power. 15 miles W. from Greenfield, and 105 W. N. W. from Boston.

Charles County, Md., c. h. at Port Tobacco. On the western shore, near the southern extremity, between the Potomac and Patuxent Rivers. Surface broken; soil tolerably fertile.

Charles City County, Va., c. h. at Charles City. E. part. In the western angle between the Chickahominy and James Rivers. Surface undulating.

Charles City, Va., c. h. Charles City co. Situated N. of James River. 45 miles S. E. by E. from Richmond.

Charleston, Me., Penobscot co. At the source of Pushaw Lake. 73 miles N. W. from Augusta.

Charleston, N. Y., Montgomery co. Watered by several small branches of the Mohawk River. The surface is hilly; the soil mostly sandy loam. 43 miles N. W. from Albany.

Charleston, Pa. A township of Tioga co. 146 miles N. from Harrisburg.

Charleston District, S. C., c. h. at Charleston. On the Atlantic. Drained by Cooper and Ashley Rivers. Surface low, and liable to inundation. The South Carolina Railroad passes through it, and a canal unites the Cooper and Santee Rivers.

Charleston, S. C. City and port of entry. Situated on a point of land between the Ashley and Cooper Rivers, at their junction, 6 miles inland from the Atlantic coast. Population in 1790, 16,359; 1800, 18,712; 1810, 24,711; 1820, 24,780; 1830, 30,289; 1840, 29,261; 1850, 43,000, including in this number the population of St. Philip's Parish, which is a continuation of the city north, but, till within a few years past, not included in its chartered limits. Charleston is the largest city on the Atlantic coast south of Baltimore. The harbor, which is formed by the confluence of Ashley and Cooper Rivers, is about 2 miles wide, and extends between 6 and 7 miles, a little S. of E., to the ocean. Ashley River, opposite the city, is 2100 yards wide, and Cooper River 1400 yards wide, and both are from 30 to 42 feet deep. The ground on which the city is built is elevated 8 or 9 feet above high-water mark, at ordinary flood tides. A violent easterly wind, however, concurring with a high course of tides, has sometimes caused parts of the city to be inundated, which was the case in 1728, 1752, and 1797. The tide rises here about 6½ feet, and flows in and out with a strong current, which is supposed to contribute to the salubrity of the city. The place is considered as more healthy than any other part of the low country in the Southern States, and is much resorted to by the planters during the sickly months. The city is about 2 miles in length, and over a mile in breadth, and is laid out with considerable regularity. The streets, for the most part, run parallel to each other, from E. to W., extending from river to river, and are crossed by others at right angles. Many of them are paved. The houses are, many of them, of brick, and an ordinance of the city now requires that all within its corporate limits, to be hereafter constructed, be of this material. Many are of wood, neatly painted white, and having piazzas beautifully ornamented with vines. Those in the outer extremities have beautiful yards and gardens connected with them. Every spot in the vicinity, capable of improvement, is occupied with plantations in a high state of cultivation. The growth of Charleston has been less rapid than that of most cities of the United States. It has frequently suffered by disastrous fires. In 1796, one third of this city was destroyed, at a loss estimated at \$2,500,000. In 1837, 1200 houses were burned, being one fifth part of the city, covering 145 acres of ground, at a loss estimated at \$5,000,000. Nevertheless, the city has advanced in prosperity, and contains all those institutions which mark a thriving and wealthy commercial city. The principal public

buildings are the City Hall, Exchange, custom house, court house, jail, state citadel, and two arsenals, a college, a medical college, an almshouse, an orphan asylum, a theatre, seven or eight banks, and about 25 churches. Some of the churches are elegant buildings. The City Hotel, among the public houses, is a splendid establishment, erected at a cost of \$150,000. The city has a fine library, comprising nearly 20,000 volumes. There is also a library with 10,000 volumes, belonging to the Apprentices' Association, which sustains an annual course of scientific lectures. The means of education provided by the city are good. There is one high school, and five public free schools; the whole under the direction of a board of commissioners. The Literary and Philosophical Society is a highly respectable institution, having a fine collection of objects in natural history.

The trade of Charleston is extensive. The harbor is spacious and convenient, though somewhat obstructed by the bar at its mouth. Over this bar there are four principal channels, having a depth of water, at high tide, varying, in the different channels, from 17 feet to 10 feet; and at low tide, from 10 to 6 feet. After entering the harbor, the channel, which is deep, passes very near the S. end of Sullivan's Island, upon which Fort Moultrie is situated. Opposite to this point, upon a sand bar, is another fort, called Fort Sumpter, which stands close upon the channel. The position of these fortifications is very effective for the defence of the city. Charleston possesses great facilities for trade with the interior. It is connected by a canal with the Santee River, which is thence navigable to Columbia, and by a railroad with the Savannah River at Augusta. The length of this road is 136 miles. A branch extends from Branchville, 62 miles, to Columbia. Thus Charleston commands the internal trade not only of most of its own state, but likewise much of that of North Carolina and Georgia. There are several lines of packets connecting Charleston with the city of New York; and numerous steamboats running to Savannah, Beaufort, Georgetown, Columbia, St. Augustine, and other places.

The exports of Charleston are of great importance, consisting of rice and tobacco in considerable amount, but particularly of upland and sea-island cotton. The upland cotton in this region of country is of the finest quality. The sea-island cotton is grown on the islands in this neighborhood, and is remarkable for its fineness, and for its staple, or length of fibre.

This city was first settled in 1680. About 10 years later a colony of French refugees, exiled from their native land in consequence of the revocation of the edict of Nantz, settled in Carolina, and some of them in Charleston. These were the Huguenots, or French Protestants, who fled from religious persecution similar to that which brought the Puritans to New England. From this noble stock have descended many of the families of Charleston. Its inhabitants have always been celebrated for their intelligence, their polished manners, and unaffected hospitality. During the revolutionary war, the defences of this city, on Sullivan's Island, sustained a violent assault from a British squadron, consisting of 9 ships of war, carrying 250 guns, and triumphantly repulsed them, by the bravery of a garrison of 400 men, under the command of

Colonel Moultrie. The garrison lost only 10 men in the conflict, and had but 22 wounded; while the British suffered a loss of nearly 200 in killed and wounded. This was on the 28th of June, 1776. On the 17th of May, 1780, the British having again attacked the city by sea and land, it was surrendered into their hands, but was evacuated by them in 1782.

Charleston, Va., c. h. Jefferson co. 168 miles N. from Richmond.

Charleston, Vt., Orleans co. The principal stream in this town is Clyde River. There are some falls of consequence on this stream, particularly the Great Falls, where the descent is more than 100 feet in 40 rods, but its current is generally slow. The alluvial flats along this stream are extensive, but generally too low and wet for cultivation. In the S. E. part of the township are 1000 acres of bog meadow, in a body, upon this river. There are several considerable ponds. Echo Pond, the most important, is in the northern part, and was named by General J. Whitlaw, on account of the succession of echoes which are usually heard when any sound is produced in its vicinity. It is a mile and a half long, and half a mile wide. The other pond of most consequence is called Pension Pond. These ponds abound in fish. There are 2 small villages situated upon Clyde River, about 6 miles apart, designated as East Charleston and West Charleston. The soil is a rich loam, and produces good crops. 54 miles N. E. from Montpelier.

Charleston, Ia., c. h. Clarke co. 100 miles S. S. E. from Indianapolis.

Charlestown. City and seaport of Massachusetts; situated on the N. side of Charles River, at its mouth, opposite Boston. It is built on a peninsula, extending about one mile in a southeasterly direction, between the estuary formed by the mouth of the Mystic River on the N. E., and Charles River and the harbor of Boston on the S. and S. E. It is connected with Somerville by a narrow neck of land, and with Boston, Chelsea, and Malden by bridges. The settlement of Charlestown was earlier by two years than that of Boston. In the year 1628, as the early history informs us, "Six or seven persons, with the consent of Governor Endicott, travelled from Naumkeag (Salem) through the woods westward, and came to a neck of land between Mystic and Charles Rivers, called Mishawum. It was full of Indians; and with the unconstrained consent of their chief, they settled there." The way for such a favorable reception had been prepared before them by the usefulness to the Indians of one white person, Thomas Walford, a blacksmith, who had built a cottage on the peninsula. Governor Winthrop, and the company who came into the colony with him, in 1630, first settled at Charlestown, but soon after removed over the river to the peninsula of Boston. The place was named in honor of Charles I., the reigning sovereign of England at that time. The natural surface of the peninsula of Charlestown is uneven, rising on the E. into the two hills called Bunker Hill and Breed's Hill; and the summits and slopes of these elevations have afforded beautiful sites for the laying out of portions of the city. There is one great thoroughfare running from Market Square, near the point where the bridges come over from Boston, over the whole length of the peninsula to the neck; and from this on either side streets are laid out at various angles leading

through different sections of the city. Streets also diverge from Market Square on either side of the main street. The streets are generally wide and airy, and many of them are pleasantly shaded with trees of a recent growth. It is neatly built, and contains many elegant public and private edifices. Many of the merchants and other business men of Boston reside here. The population in 1850, was 17,216.

Charlestown is memorable for its sacrifices in the cause of American independence. Bunker Hill is celebrated as the spot where the first regular battle was fought, on the 17th of June, 1775, between the provincial and the British troops, in the war of the revolution. In this battle, the British had 1054 men slain, among whom was a large number of commissioned officers. The Americans, whose whole force did not exceed 1500 men, had 145 killed and 304 wounded. Among the former was MAJOR GENERAL WARREN, at that time president of the Colonial Congress; who, in the true spirit of heroic patriotism which had long animated his course, bravely volunteered to serve his country in this eminent post of danger. Early in the action, Charlestown was set on fire by the enemy, and a general conflagration ensued. On the site of the battle, and near the spot where Warren fell, a grand commemorative monument has been erected; which is an obelisk of hewn granite, 30 feet square at the base, 15 feet square at the top, and 221 feet in height. Its foundations, which are 62 feet above the level of the sea, are laid 12 feet under ground, and 50 feet square. The corner stone was laid by the venerable Marquis de Lafayette, on the 17th of June, 1825, when an address was delivered by Hon. Daniel Webster. The work was completed July 23, 1842, and on the 17th of June, 1843, its completion and the anniversary of the battle was commemorated in a splendid manner. An address was delivered, on the ground, as before, by Hon. Daniel Webster, in presence of the President of the United States, several of the heads of department, and an immense concourse of citizens. The monument is ascended within by a circular flight of 294 steps, to the chamber immediately beneath the apex, from the windows of which a view is had almost equal to that from the State House in Boston. In this chamber are seen two brass cannon, named *Hancock* and *Adams*, which were used in the battle; on each of which is the following inscription:—

"SACRED TO LIBERTY.

"This is one of the four cannons, which constituted the whole train of field artillery possessed by the British colonies of North America, at the commencement of the war, on the 19th of April, 1775. This cannon and its fellow, belonging to a number of citizens of Boston, were used in many engagements during the war. The other two, the property of the government of Massachusetts, were taken by the enemy.—By order of the United States, in Congress assembled, May 19, 1788."

The monument stands in the centre of a square on Bunker Hill, containing nearly six acres, and enclosed by a massive iron fence. The natural surface of the ground is in part preserved, upon which some lineaments of the old breastwork are still discernible—a soil which will be ever dear to the bosom of the patriot, and to the friends of liberty throughout the world.

The following touching and truly eloquent apostrophe to the monument is from the opening of the address of LOUIS KOSSUTH, on the occasion of the reception given to him in Monument Square, by the authorities of Charlestown:—

“My voice shrinks from the task to mingle with the awful pathos of that majestic orator! Silent like the grave, and yet melodious like the song of immortality upon the lips of cherubin;—a senseless, cold granite, and yet warm with inspiration like a patriot’s heart;—immovable like the past, and yet stirring like the future which never stops;—it looks like a prophet and speaks like an oracle. And thus it speaks:—

“The day I commemorate is the rod with which the hand of the Lord has opened the well of liberty. Its waters will flow. Every new drop of martyr blood will increase the tide. Despots may dam its flood, but never stop it. The higher its dam, the higher the tide. It will overflow or break through. Bow, and adore, and hope!”

“Such are the words that come to my ears; and I bow,—I adore,—I hope. In bowing, my eyes meet the soil of Bunker Hill—that awful opening scene of the eventful drama, to which Lexington and Concord had been the preface. The spirits of the past rise before my eyes. . . . All the spirits of that most eventful victory, under the name of defeat—I see them all. The eyes of my soul are familiar with the spirits of the martyrs of liberty. But those I see around me have no sad, ghastly look; they bear no gushing wounds crying for revenge to the Almighty God; the smile of eternal bliss is playing around their lips, and though dwellers of heaven, they like to visit the place where their blood was spilt. It was not spilt in vain. Their fatherland is free; and there is a joy in that thought adding ever a new charm even to the happiness of blessed souls. As the fabulous divinities of ancient Greece like to rest from the charms of heaven on Mount Olympus, so must the spirit of Warren like to rest on the top of this monument here.

“Martyrs of my country! how long will it yet be till a like joy will thrill through your departed souls? When will the smile of that joy play around your lips? How long will yet the gush of your wounds cry for revenge—your fatherland still bleeding, down-trodden, oppressed? Almighty Father of mankind, let the day of thy mercy be not too far!”

The United States Navy Yard is the next object of interest to the visitor in Charlestown. This is situated at the foot of Bunker Hill, on a point of land E. of the centre of the town, extending along the harbor, from the mouth of Charles River to the mouth of Mystic River. The site, including about 100 acres of ground, was purchased by the government in 1800, at the cost of about \$40,000. On the side next the town, the yard is protected by a wall of stone masonry, 16 feet high. On the harbor, several wharves, and a dry dock, have been constructed, with a strong sea wall throughout the remainder of the line. The dry dock is itself a stupendous work, which cost the government about \$675,000. It is built of beautifully hammered granite, in the most workmanlike and substantial manner; is 341 feet long, 80 feet wide, and 30 feet deep. It was completed in 1833, and the first vessel which was received into it was the frigate Constitution.

There are in this yard four large shiphouses,

a ropewalk of granite 1300 feet long, various mechanic shops, storehouses, dwelling houses for the officers, marine barracks, and naval stores to the value of \$2,000,000. More or less ships of war are at all times lying here in ordinary, and two line of battle ships, the Vermont and the Virginia, have been on the stocks in the shiphouses for many years, ready to be got to sea at any time in a few months, when required. Connected with the navy yard, and under the general direction of the commandant, are a naval magazine, and the finely-situated naval hospital, at Chelsea.

Charlestown contains also the state prison, founded in 1800, which is situated at Prison Point, near Charles River, in the W. part of the city. This penitentiary, having been essentially improved and extended in 1826, and again in 1850, is one of the best-arranged and most successfully-administered institutions of the kind in the country. The buildings are in the form of a cross, having four wings, united to a central octagonal building, three of which, for the convicts, are capable of any required extension, without disturbing the central arrangements, or the unity of architectural design. The interior arrangement and discipline of this prison are upon what is known as the “Auburn plan.”

The McLean Asylum was formerly in Charlestown; but by a division of the town, to constitute the new town of Somerville, the site of that institution falls within the latter place. For a notice of this excellent asylum, the reader is referred to our account of the Massachusetts State Hospital, under Boston.

The merchandise depot of the Fitchburg Railroad is located in Charlestown, near the Warren Bridge. This is a large establishment, and destined to be yet much more extended.

Charlestown is the proper seat of the ice trade, which has now become a staple of New England. The Charlestown Branch Railroad, running to Fresh Pond, in Cambridge and Wattertown, a distance of about 3 miles, was first constructed for conveying the “ice crop” from this pond to the wharves in Charlestown, whence it is exported in quantities, averaging 50,000 tons a year, to the southern ports of the United States, the West Indies, South America, England, and the East Indies.

Charlestown was established as a city in 1847. It has rapidly advanced in business and population within a few years past. It is intimately united with Boston by its situation, and consequently, in its various commercial and manufacturing interests and pursuits.

Charlestown, N. H., Sullivan co. The only rivers are the Connecticut and Little Sugar Rivers. In the former, there are 3 islands, the largest, Sartwell’s Island, is 10 acres, and is well cultivated. The others are 6 acres each, and have a rich, loamy soil. The soil is extremely various. Cheshire Bridge connects this town with Springfield, Vt. Captain Phineas Stevens was among the first settlers. In 1747, he defended the fort so gallantly from the French and Indians, that S^r Charles Knowles presented him with an elegant sword, and from this circumstance the township, when it was incorporated, in 1753, took the name of Charlestown. Bog iron ore and other minerals are found here. First settlers, several families by the names of Parker, Farnsworth, and Sartwell, from Groton, Ms. 51 miles W. from

Concord, and 20 S. E. from Windsor, Vt. A railroad from Boston to Burlington, Vt., now passes through this delightful town.

Charlestown, Pa., Chester co. A township on the Susquehanna River. 82 miles E. from Har-
risburg.

Charlestown, R. I., Washington co., lies on the sea, opposite to Block Island. It has five large ponds, which cover an area of seven square miles. Charlestown and Conaquetogue Ponds are salt water, and Fosquissett, Watchaug, and Cochumpang are fresh water. These waters afford a great variety of fish. Near the sea, the land is arable, but the interior of the town is more fit for the growth of wood. This town contains the graves of the remnant of the tribe of the once powerful and dreaded Narraganset Indians. They possessed a considerable tract of land in this town, but owing to a dislike to agricultural pursuits, and by intermarriages with the whites and negroes, their race as a distinct people has long since become extinct. Charles River passes through the town, and gives it mill privileges. Charlestown lies about 8 miles W. S. W. from South Kingston, and 40 S. W. from Providence.

Charloe, O., c. h. Paulding co. 137 miles N. W. from Columbus.

Charlotte, Me., Washington co. Incorporated 1825. About 25 miles N. W. from Machias, and 184 E. by N. from Augusta.

Charlotte, N. C., c. h. Mecklenburg co. On the E. side of Sugar Creek, a branch of Catawba River, and 158 miles S. W. from Raleigh. Near this place are rich gold mines, and a branch mint is established here.

Charlotte, N. Y., Chautauque co. Drained by Cassadaga Creek and its tributaries. Surface undulating; soil adapted to the growth of grass and grain. 13 miles E. from Mayville, and 320 S. of W. from Albany.

Charlotte, N. Y., Monroe co. At the mouth of Genesee River, 7 miles below Rochester, sometimes called Port Genesee. W. N. W. from Albany 224 miles. The steamboats between Lewiston and Oswego stop here.

Charlotte, Te., c. h. Dickson co. 35 miles W. from Nashville.

Charlotte, Vt., Chittenden co. This township is pleasantly situated on the lake shore, and is watered by the River Laplott and Lewis Creek. In the western part of the town the soil is excellent. There are no elevations which deserve the name of mountain, but a range of considerable hills runs through the centre of the town. 49 miles W. from Montpelier, and 11 S. from Burlington. The Burlington and Rutland Railroad passes through it. In August, 1849, nearly the entire skeleton of a whale was found in this town, embedded in blue clay, 8 feet below the surface. The locality is 60 feet above Lake Champlain, 150 feet above the sea, and more than 150 miles from the nearest part of the present ocean. The animal was 13 feet long, and was ascertained to belong to the living genus *beluga*.

Charlotte County, Va., c. h. at Charlotte. S. E. central. Watered by Little Roanoke River. Soil rich, yielding large quantities of grain, tobacco, and fruit.

Charlotte, Va., c. h. Charlotte co., (formerly called Marysville,) lies 3 miles from Little Roanoke River, and one and a half miles from Ward's Fork. W. S. W. from Richmond 98 miles.

Charlottesville, Va., c. h. Albemarle co. On

Moore's Creek, 2 miles from its junction with Rivanna River, and 85 N. W. from Richmond. This is the seat of the University of Virginia. (See *Colleges*.) The place has a considerable water power, on which there are flour and other mills. Connected with Richmond by the Central Railroad.

Charlton, Ms., Worcester co. The lands in this town are elevated and rough, but the soil is strong and rich, and well adapted for agricultural purposes. Many small streams rise in the highlands, and form the head branches of the Quinebaug, by which the south-western part of the town is watered. The water power is good. Charlton was taken from Oxford in 1754. 13 miles S. W. from Worcester, and 57 W. S. W. from Boston, by the Western Railroad.

Charlton, N. Y., Saratoga co. Watered by Aelplass Creek, a tributary of the Mohawk River. Surface undulating; soil mostly productive. 8 miles W. from Ballston Spa, and 24 miles N. W. from Albany.

Chartiers, Pa., Washington co., situated on the N. side of Chartier's Creek, is a hilly town, with a loamy soil. Coal is found here in large quantities.

Chateaugay, N. Y., Franklin co. Chateaugay River and its tributaries water this town, which is bounded on the N. by Canada. The surface is hilly; soil clay and sandy loam. 200 miles N. from Albany.

Chatham, Ct., Middlesex co. The township of Chatham embraces the greater part of Middle Haddam parish, the parish of East Hampton, and a part of the parish of West Chester. It lies opposite to Middletown, from which it was taken in 1767. Chatham is watered by Salmon and Pine Brooks, and several ponds.

Chatham County, Ga., c. h. at Savannah. In the southern angle, between the Savannah River and the Atlantic. Surface low and level. Rice, sugar, and cotton are the chief productions.

Chatham, Ms., Barnstable co. The soil is rather better than is generally found on this part of Cape Cod. Its surface consists of sand hills, with narrow valleys between them, ponds, and swamps. The harbor of Chatham, after being closed by a beach 25 feet high, covered with beach grass, and a mile in length, has lately been opened again, in consequence of a violent storm. 30 handsome ponds supply this town with soft and pure water. The village is elevated and pleasant. In a fair day, Nantucket can be seen without a glass, 20 miles. Its Indian name was Manamoyit. It was first settled about 1665. Chatham lies on the S. side of the cape, 20 miles E. from Barnstable.

Chatham County, N. C., c. h. at Pittsboro'. Central. Watered by the Cape Fear River, and by the Haw and Deep, its head branches. Surface undulating; soil fertile, yielding good crops of wheat, cotton, and tobacco.

Chatham, N. H., Carroll co. On the E. side of the White Mountains, and adjoining the line which divides this state from Maine. There are several ponds here, and some considerable streams. The surface is mountainous and rocky. Between Chatham and Jackson, Carter's Mountain rises so high as to prevent the opening of a road; so that to have intercourse with the rest of the county, the inhabitants are obliged to pass through part of the state of Maine. Chatham was granted to Peter Livius and others, February

7, 1767. 92 miles N. E. from Concord, and 40 N. from Ossipee.

Chatham, N. J., Morris co. The Passaic River waters this town. Surface uneven, Long Hill lying in the S. part. 56 miles N. N. E. from Trenton.

Chatham, N. Y., Columbia co. Watered by Kinderhook Creek. The surface is hilly, and there is a great variety of soils. 22 miles S. E. from Albany, and 16 N. E. from Hudson.

Chatham, Pa., Tioga co. Surface undulating; soil well adapted to grazing.

Chattahoochee, Fla., Gadsden co. On the E. side of the Appalachian River. 45 miles W. from Tallahassee. There is here a United States arsenal.

Chattanooga, Te., Hamilton co. 141 miles S. E. from Nashville. The railroad from the northern boundary of Georgia to Nashville (connecting with Decatur, Augusta, Macon, and Savannah) crosses the Tennessee at this point.

Chattooga County, Ga., c. h. at Summerville, In the N. W. corner of the state, bordering on Alabama. Surface mountainous; soil rich on the borders of the streams.

Chaumont, N. Y., Jefferson co. At the head of Chaumont Bay, on the E. end of Lake Ontario. Has a fine harbor, and derives good water power from Chaumont River. Blue limestone, for building, is found here. 178 miles N. W. from Albany.

Chautauque County, N. Y., c. h. at Chautauque. The most W. county in the state. Bounded N. by Lake Erie, and S. and W. by Pennsylvania. Watered by Chautauque, Cassadaga, and Bear Lakes, and by Chautauque, Canadawa, French, Silver, Cassadaga, and Connewango Creeks, and the outlet to Chautauque Lake. The surface is hilly, a ridge extending parallel to the lake, and at a distance of from five to eight miles from it, which is elevated in some places to the height of 1400 feet. The soil is fertile, especially along the borders of the lake and principal streams. There are several gas springs in this county, some giving forth carburetted and others sulphuretted hydrogen gas. The most remarkable localities of the former are at Fredonia, Westfield, and Van Buren Harbor. Bog iron ore, alum, copperas, and shell marl are also found in considerable quantities.

Chautauque, N. Y., c. h. Chautauque co. It is watered by Chautauque Lake on the E., and by Chautauque Creek and its branches on the W. The surface is high and uneven; the soil fertile, producing large crops of grass and grain. 336 miles W. from Albany.

Chazy, N. Y., Clinton co. On the W. shore of Lake Champlain. Watered by Chazy and Little Chazy Rivers. The surface is hilly on the W., but grows level as it approaches the lake. The soil is mostly good, and in some parts very fertile. 10 miles N. from Plattsburg, and 176 N. from Albany. On the Plattsburg and Montreal Railroad.

Chelmsford, Ms., Middlesex co. Chelmsford was granted, in 1663, to some persons in Woburn and Concord, and comprised the territory of Westford and Lowell. Its Indian name was Pawtucket. There is a great variety of soil in the town; some of it is good and productive, but a large part is broken, sandy, and swampy. This place is noted for its beautiful granite and limestone. Middlesex village, at the head of Middlesex Canal, is a pleasant place. The village of North Chelmsford lies on the banks

of the Merrimac, and is very pleasant; it contains a depot on the Nashua Railroad, 4 miles W. from Lowell, and 30 N. W. from Boston.

Chelsea, Ms., Suffolk co. This town was formerly Chelsea, Me., Kennebec co. A new town, formed in 1850 from a part of Hallowell.

Chelsea, Ms., Suffolk co. This town was formerly a part of Boston, and now forms a part of the county of Suffolk. For nearly a century of the difficulties attending getting to and from Boston. At the time of its incorporation, it required, with a team, a journey of more than 20 miles, although the distance across the water was less than one and a half miles. Since the steam ferry and other avenues have been opened, the town has grown rapidly. It contained, in 1852, about 7500 inhabitants. A new and delightful village has sprung up in the vicinity of the ferry, since 1830, containing over 1200 buildings, erected on spacious streets, with sidewalks, lamps, &c., giving the place the appearance of a city, with the pleasant, shaded walks of a suburban park.

The surface of the town is broken into several beautiful eminences, affording delightful views of Boston, Charlestown, Bunker Hill, Medford, Lynn, Nahant, and Boston Harbor. Powder Horn Hill, about 2 miles from the ferry, is 220 feet in height.

The principal manufactures of Chelsea are of leather, steam engines, steam boilers, salamander safes, iron castings, boots and shoes, bricks, and other articles. There are ship yards and boat builders' shops.

The United States Marine Hospital and the Naval Hospital, in this town, are on large plots of ground, in delightful and airy situations, and afford comfortable retreats for sick and disabled seamen of the navy and merchant service.

Winnesmet Ferry, leading from the foot of Hanover Street, in Boston, to this town, is probably the oldest establishment of the kind in America. The first grant was given to Thomas Williams, in 1631. The distance across Charles River is about a mile and a third. The average number of passengers daily crossing the ferry is over 3000.

Chelsea, Vt., Orange co. This is the shire town, and is a township of good land, with a pleasant village in the centre. It is watered by the head branches of White River, and has a good hydraulic power. This town was formerly called Turnersburg. Improvements were commenced here in the spring of 1784, by Thomas and Samuel Morse, and Asa Bond, who, the next spring, brought in their families from Winchester, N. H. 20 miles S. by E. from Montpelier.

Chemung County, N. Y., c. h. at Elmira. Bounded N. by Tompkins, and E. by Tioga co., S. by the state of Pa., and W. by Steuben co. Watered by Chemung River, Cayuta and Newtown Creeks, and the inlet of Seneca Lake. Surface hilly and broken; soil fertile along the borders of the streams, and of good quality on the uplands. The Chemung Canal runs through this county connecting Seneca Lake with the Chemung River and there is a navigable feeder extending into Steuben co. It is also crossed by the New York and Erie Railroad.

Chemung, N. Y., Chemung co. On the Chemung River, along the valley of which are fine alluvial flats. The rest of the surface is hilly and broken. In the S. E. part, near the bank of the river, is a remarkable elevation called "Spanish

Hill," which rises 110 feet above the plain; upon the summit of which are vestiges of fortifications, which perfectly command the bend of the river, and display much skill in their construction. 198 miles S. W. from Albany.

Chenango County, N. Y., c. h. at Norwich. S. central. Watered by the Chenango, Unadilla, and Susquehanna Rivers, and Canasawacta and Geneganslette Creeks. Broken and hilly, but the valleys are extensive and fertile, yielding large crops of grain. The uplands are well suited to grazing. There are two or three sulphur springs in this county, considered very efficacious in cutaneous disorders. The Chenango Canal runs through the valley of the Chenango River, and nearly through the centre of the county.

Chenango, N. Y., c. h. Broome co. At the junction of Chenango and Susquehanna Rivers. Part of the surface is hilly. The valleys, which are from one to two miles wide, consist of rich alluvion, which yields large crops of grass and grain. 145 miles W. by S. from Albany.

Chenango, Pa., Beaver co. 238 miles W. by N. from Harrisburg.

Chenango Forks, N. Y., Broome co. On the Chenango Canal, at the junction of Tioughnioga and Chenango Rivers. 127 miles W. S. W. from Albany.

Chepachet, R. I., Providence co. On Chepachet River, 16 miles W. by N. from Providence, in the town of Gloucester.

Cheraw, S. C., Chesterfield district. On the W. bank of Great Peedee River. 110 miles above Georgetown, and 93 miles N. E. from Columbia. The river is navigable for steamboats to this place. The cotton and other trade here is of considerable importance.

Cherokee County, Aa., c. h. at Jefferson. On the E. border north. Uneven and hilly; fertile on the margins of the streams.

Cherokee County, Ga., c. h. at Canton. In the N. W. angle. Watered by the Etowah River and tributaries. Surface rough and hilly; soil rich on the borders of the streams.

Cherry Creek, N. Y., Chautauque co. Watered by Conewango Creek and some of its branches. The surface is somewhat uneven; the soil clay and sandy loam. 320 miles W. by S. from Albany.

Cherokee County, N. C., c. h. at Murphy. In the westernmost extremity of the state. Hilly and mountainous, but fertile on the borders of the streams.

Cherokee County, Ts., c. h. at Rusk.

Cherryfield, Me., Washington co. At the head of tide waters on both sides of the Narraguagus.

Cherry, Pa. A township of Butler co.

Cherry, Pa. A township of Lycoming co. 130 miles N. from Harrisburg.

Cherry Tree, Pa., Venango co. 230 miles N. W. by W. from Harrisburg.

Cherry Valley, N. Y., Otsego co. Cherry Valley Creek and some other small streams water this town, the surface of which is hilly, and the soil good. 52 miles N. of W. from Albany.

Cheshire, Ct., New Haven co. Taken from Wallingford in 1780. The Quinnipiac River and Canal Railroad pass through the town. Cheshire has an uneven, but good soil, with a very pleasant village, and an Episcopal academy. Agriculture is the chief occupation of the inhabitants.

Cheshire, Ms., Berkshire co. This town was first settled in 1767. The centre of it, through which the S. branch of the Hoosic runs, is a rich and fertile valley. To the E. and W. of this,

the ground gradually rises into hills and mountains. The township is excellent for grazing. Extensive and valuable dairies are kept, and the Cheshire cheese has acquired a wide and merited celebrity. The famous mammoth cheese, presented to President Jefferson, January 1, 1802, contributed much to bring this town into notice. On a given day, the dairy women sent their curds to one place. The quantity was too great to be pressed, even in a cider mill; so that, in addition to the intended present, three additional cheeses were made, weighing 70 pounds each. The mammoth cheese weighed about 1450 pounds. Mr. Jefferson sent back a piece of this to the inhabitants to satisfy them of its excellence; he also sent pieces of it, it is said, to the governors of the several states. From the W. village, or "Four Corners," to South Adams is about 4 miles.

Cheshire County, N. H., c. h. at Keene. In the S. W. corner. The length of this county is 31 miles, its greatest breadth 26 miles, and its least 15. It is bounded N. by the county of Sullivan, E. by Hillsboro' co., S. by the state of Ms., and W. by Vt., from which it is separated by the Connecticut River. Ashuelot River waters this county. Spofford's Lake, a beautiful collection of water, 8 miles in circumference, is situated in Chesterfield. There is an island of about 8 acres in the lake. The Grand Monadnock is the highest mountain. Bellows' Falls, on Connecticut River, at Walpole, is regarded as a great natural curiosity.

Chest, Pa., Clearfield co. The W. branch of the Susquehanna River waters this town, which has a hilly and rough surface, and loamy soil. 150 miles N. W. from Harrisburg.

Chester, Ct., Middlesex co. On the W. side of Connecticut River. 31 miles S. by E. from Hartford. It has great water power, and some manufacturing.

Chester, Is., Randolph co. On the E. bank of the Mississippi River, 2 miles below the mouth of the Kaskaskia, and 149 miles S. E. from Springfield.

Chester, Me., Penobscot co. Incorporated in 1834.

Chester, Ms., Hampden co. This town contains two flourishing villages, both of which are on the Western Railroad. Chester village, on the N. branch of Westfield River, is 119 miles W. from Boston, by the railroad. Factory village lies 7 miles W. from Chester, and is watered by the western branch of the Westfield River. It has good mill privileges. Chester is a mountainous township, but has good land for grazing.

Chester, N. H., Rockingham co. A branch of Exeter River, called "The Branch," is the principal stream. Massabesick Pond, containing 1500 acres, is the largest body of fresh water in the county. The remains of an Indian settlement, on an island in this pond, may still be seen. The soil is fertile. In this town are two caves: one is situated in Mine Hill; the entrance is 5 feet high, and 2½ wide; the other is in the westerly side of Rattlesnake Hill, in a ledge of coarse granite, nearly 40 feet high; one entrance to which is 11 feet high and 4 broad. Native sulphur is found. Granite and gneiss are the prevailing rocks. This is a pleasant town, and is the principal place of business in the county. It commands an extensive prospect, embracing a view of the ocean 20 miles distant. First settlers, Samuel Ingalls, Jonathan Goodhue, and many others. 17 miles W. S. W. from Exeter, and 23 S. E. from Concord.

Chester, N. J., Burlington co. Rancocas, Pennsylvania, and Pompton Creeks, and the Swedes branch of the Delaware River, water this town. Surface level; soil sandy, but productive. 9 miles S. W. from Mount Holly.

Chester, N. J., Morris co. Black River, and some streams flowing into the W. branch of the Raritan, water this town. Surface undulating, with the exception of one isolated mountain; soil loamy. 50 miles N. by E. from Trenton.

Chester, N. Y., Warren co. Watered by the Hudson River and some of its branches, by Schroon Lake, which lies on its N. E. boundary, and by two small lakes contained within its limits. The surface is hilly and mountainous; the soil is productive in the valleys. 18 miles N. W. from Caldwell, and 180 miles N. from Albany.

Chester, N. Y., Orange co. 102 miles S. by W. from Albany. Situated on the Erie Railroad. An extensive cattle market.

Chester County, Pa., c. h. at Westchester. In the S. E. corner of the state. Watered by Brandywine and French Creeks and the head branches of Elk River. Surface hilly and mountainous in the W. portion; soil diversified, but mostly productive. The Columbia and Philadelphia Railroad traverses this county.

Chester, Pa., c. h. Delaware co. This place, called Upland until 1701, is, perhaps, the oldest settlement in the state, having been founded long before the grant of William Penn. It lies on the W. bank of the Delaware River, 94 miles E. S. E. from Harrisburg, and 14 S. W. from Philadelphia.

Chester, Pa., Wayne co. A township on the W. bank of the Delaware River.

Chester District, S. C., c. h. at Chesterville, shire town. N. W. part. Surface pleasantly varied.

Chester, S. C., c. h. Chester district. On the dividing ridge between the waters of Broad and Wateree Rivers. 57 miles N. by W. from Columbia.

Chester, Vt., Windsor co. Williams River is formed in this township, by the union of three considerable branches. The surface is considerably diversified with hills and valleys, but the soil is generally good. The timber is mostly hard wood, with some hemlock, spruce, and pine. There are a variety of minerals found here. There are two villages, called the North and South village. The settlement was commenced in 1764, by people from Woodstock, Ct., and Worcester and Malden, Ms. 16 miles S. W. from Windsor, and 79 S. from Montpelier. The Rutland Railroad between Boston and Burlington passes through this handsome town.

Chesterfield, Ms., Hampshire co. This is a mountainous township, having the N. branch of the Westfield River passing through its whole extent. The soil is rough, but excellent for grazing. Beryl and emeralds are found here. The Westfield River, at this place, has worn into the solid rock, in places, nearly 30 feet in depth, and may be traced from the bridge nearly 60 rods, appearing as if cut out by human hands. 11 miles W. N. W. from Northampton, and 101 W. N. W. from Boston.

Chesterfield, N. H., Cheshire co. The land is mostly upland, well adapted for grazing and Indian corn. Cat's Bane Brook is a stream of great importance. Spofford's Lake is a beautiful collection of water; it contain 526 acres, and is fed by springs in its bosom. Its waters are clear and pure, its bed being a white sand. There is an island in this lake, of 6 acres. From the E. side

of the town issues a stream, called Partridge's Brook. West River Mountain lies in this town and Hinsdale. Chesterfield has three villages: the principal is situated near the centre of the town, 3 miles E. from Connecticut River. 11 miles S. W. from Keene, by which it is connected by railroad, and 62 S. W. from Concord.

Chesterfield, N. Y., Essex co. On the shore of Lake Champlain, and watered by the Au Sable River and several small lakes, the principal of which are Auger and Butternut. The surface is hilly and mountainous; soil, mostly sandy loam.

Chesterfield, N. J., Burlington co. Situated on the E. side of the Delaware River, and drained by Crosswick's and Black Creeks. Surface level; soil a mixture of sand, clay, and loam.

Chesterfield District, S. C., c. h. at Chesterfield. On the northern border, between Lynch's Creek and the Great Pedee. Drained through the centre by Black Creek. Sterile, except on the margins of the streams.

Chesterfield, S. C., c. h. Chesterfield district. On Thompson's Creek, a branch of Great Pedee River. 105 miles N. N. E. from Columbia.

Chesterfield County, Va., c. h. Chesterfield. E. central. In the W. angle, between the Appomattox and James Rivers. Surface uneven. The Richmond and Petersburg and the Richmond and Danville Railroads pass through it.

Chesterfield, Va., c. h. Chesterfield co. On the N. branch of Swift Creek, a tributary of the Appomattox. 10 miles S. by W. from Richmond.

Chestertown, Md., Kent co. On the W. side of Chester River, 30 miles above its mouth. 54 miles N. E. from Annapolis. A branch of the Maryland University is located here, called Washington College. See *Colleges*.

Chesterville, Me., Franklin co. An excellent township, on Wilson's Stream. 24 miles N. E. from Augusta.

Chestnut Hill, Pa., Monroe co. Head's Creek waters this town. Surface hilly in some parts.

Chestnut Hill, Pa., Philadelphia co. 9 miles W. from Philadelphia, in Germantown. A pleasant place of summer resort for the citizens of Philadelphia.

Chicago. City, lake port, and shire town of Cook co., Is. Population in 1850, 30,000. This place is situated on the W. shore, and towards the S. end of Lake Michigan, at the point where the river of the same name enters the lake. The northern and southern branches of this river unite about three quarters of a mile back from the lake, forming a harbor from 50 to 75 yards wide, and from 15 to 25 feet deep. At its mouth it spreads out into a bay, with about 9 feet depth of water. The city is built on both sides of this bay and harbor, on a site which is almost as level as a floor, but sufficiently elevated to be secure from the highest floods. Piers have been constructed, extending into the lake from both sides of the mouth of the river, to prevent the formation of a bar from the accumulation of sand. These works were built by the United States, and also the light-house, and the fortification, named Fort Dearborn, which are upon a strip of land between the city and the lake shore, belonging to the government.

This place has had a rapid growth, and from its position in the great line of communication between the E. and W., is destined to become a large city. In 1832 it contained only 5 small stores, and 250 inhabitants. Only 4 vessels had

arrived during the year before. In 1836, 4 years later, the arrivals of brigs, ships, and schooners amounted to 407, besides 49 steamboats.

The Illinois and Michigan Canal unites the head of navigable waters in the Illinois River with Lake Michigan at Chicago. This great internal improvement was projected, and in part constructed, to be a ship canal for the largest class of vessels which navigate the lakes. For a distance of 30 miles from a point in the Chicago River, $5\frac{1}{2}$ miles W. of the city, it was excavated, through indurated clay and compact limestone, to the depth of from 18 to 20 feet. Beyond this the canal is only 6 feet deep. Its width at the top is 60 feet, and its entire length $96\frac{1}{2}$ miles, besides a navigable feeder of about 4 miles, from Fox River. This is one of the best constructed works of the kind in the country, opening an extensive channel of trade to the W., and establishing an uninterrupted water communication between the St. Lawrence and the Mississippi.

Another improvement, still more important in its results to the prosperity of Chicago, is that of the great Illinois Central Railroad, which is now in process of construction between this place and Cairo, at the junction of the Mississippi and Ohio Rivers. This railroad will constitute the most direct and expeditious channel of communication between the North-Western and the Southern States, and between the commerce of the great lakes and the Gulf of Mexico. Especially will this be the case when its route shall be extended, as now contemplated, through Mississippi and Alabama to the city of Mobile; for which extension, as well as for the road through Illinois, Congress has voted a munificent appropriation from the public lands. Such an important line of communication, whether by this extension to Mobile, or by the river, as at present, to New Orleans, open throughout at all seasons of the year, must bring an incalculable amount of business into Chicago, while it opens to the Atlantic cities of the N. a new available access to the vast resources of the western trade.

The streets of Chicago are laid out in straight lines, intersecting each other at right angles. They are of good width, and some of them are planked; stone pavements not being used to any great extent. The largest buildings are of brick. The place is well supplied, from the region about Green Bay, with pine timber, another important material for building; and the transportation of this valuable description of lumber through the canal into the northern parts of Illinois and other sections of the west, where it is a desideratum, makes a profitable part of the business of Chicago. The city is supplied with water by an aqueduct from the lake. It has six or seven churches, some of which are fine edifices, situated on a public square. Some of the public houses are extensive establishments, affording accommodations equal to the best hotels in our eastern cities.

Chichester, N. H., Merrimac co. The soil is good, and there is little waste land. The E. part of the town is watered by Suncook River. In various parts traces of Indian settlements are to be seen. Pinkfield Pond is in Chichester, from which flows a stream S. W. into the Suncook. First settler, Paul Merrill, in 1753. 8 miles E. from Concord.

Chickasaw County, Mi., c. h. at Houston. N. E. part. On the height of land between the waters of the Yazoo and those of the Tombigbee. The

head waters of the Yalabusha River and Oktibeha Creek water this country.

Chickopee, Ms., Hampden co. A large manufacturing village, on the Chickopee River, lately a part of Springfield. There are extensive cotton factories here, also manufactories of paper, iron castings, arms, machinery, &c.

Chicot County, As., c. h. Columbia. In the S. E. corner, on the Mississippi. Bartholomew and Bœuf Bayous and Macon River traverse this county. Surface low and level; soil greatly diversified.

Chictawaga, N. Y., Erie co. Watered by Cayuga and Cazenove Creeks. Surface undulating; soil fertile. 6 miles E. from Buffalo, and 273 W. from Albany.

Chili, N. Y., Monroe co. On the W. side of Genesee River, and drained by Black Creek. Surface undulating; soil very productive. 10 miles S. W. from Rochester, and 230 W. by N. from Albany.

Chillicothe, Mo., c. h. Livingston co. On a prairie, about $3\frac{1}{2}$ miles from the junction of the E. and W. forks of Grand River.

Chillicothe City, O., c. h. Ross co. A handsome and flourishing place on the W. bank of the Scioto and on the Ohio Canal.

Chillisquaque, Pa., Northumberland co. 65 miles N. from Harrisburg.

Chillitecaux, Mo., c. h. Dunklin co.

Chilmark, Ms., Dukes co. This township comprises the westerly part of the island of Martha's Vineyard; also a range of smaller islands, called the Elizabeth Islands, and the island of No Man's Land.

Chilo, O., Franklin township, Clermont co., was formerly called Mechanicsburg. It is on the N. bank of the Ohio River. 113 miles S. W. from Columbus.

China, Me., Kennebec co. 20 miles N. E. from Augusta. A fine agricultural township on Twelve Mile Pond, the outlet of which into the Kennebec affords excellent mill privileges.

China, Mn., St. Clair co. 51 miles N. N. E. from Detroit.

China, N. Y., Wyoming co. Watered by Clear Creek, one of the head branches of Cattaraugus Creek. The surface is gently undulating on the S., and still more uneven on the N. The soil is suitable for the growth of grass. 20 miles S. W. from Wyoming, and 271 W. from Albany.

Chippewa County, Mn., c. h. at Sault de St. Marie. Bounded N. by Lake Superior and St. Mary's Straits, E. by the North Channel and Lake Huron, S. by Michilimackinac county, and W. by Schoolcraft county.

Chippewa County, Wn. N. W. part of the state. Drained by the Chippewa and its branches.

Chippewa, Pa., Beaver co. 7 miles N. W. from Beaver.

Chittenango, N. Y., Madison co. 1 mile S. from the Erie Canal, and near the railroad. 120 miles W. N. W. from Albany. There is a sulphur spring one mile S. of the village.

Chittenden County, Vt., c. h. at Burlington. Bordering on Lake Champlain. Its soil varies from rich alluvial meadows to light and sandy plains. The beautiful Champlain, washing its western boundary, gives it great facilities for trade. Lamoille River passes through its N. W. corner, and Winooski River pierces its centre. These streams, with several others of smaller size, afford the county a good water power. The

railroads which intersect this county in various directions, its fine mill privileges, and good soil, render this a highly interesting section of the state.

Chittenden, Vt., Rutland co. The N. W. part of this town is watered by Philadelphia River, the eastern part by Tweed River, and the southwestern part by East Creek. Near Philadelphia River is a mineral spring, and among the mountains are some caverns. Iron ore of good quality is found here in abundance, and also manganese. The settlement was commenced about the close of the revolutionary war, but much of it, being mountainous, remains unsettled. 12 miles N. by E. from Rutland, and 40 S. W. from Montpelier.

Chocanut, Pa., Susquehanna co. 189 miles N. N. E. from Harrisburg.

Choctaw County, Ga., c. h. at Butler. S. W. part, between the Tombigbee and the Mississippi line.

Choctaw County, Mi., c. h. at Greensboro'. N. central. Watered by the head branches of Black River.

Chowan County, N. C., c. h. at Edenton. In the N. E. corner of the state, bounded S. and W. by Albemarle Sound. Surface level; soil fertile.

Christian County, Is., c. h. at Edinburg. S. central. Watered by the S. branch of the Sangamon River. Surface level; soil fertile.

Christian County, Ky., c. h. at Hopkinsville. S. W. part. On the height of land between the Green and Tennessee Rivers. Watered by Trade-water, Pond, and Little Rivers. Soil mostly fertile.

Christiana, De. A township of Newcastle co. The village called Christiana Bridge is on Christiana Creek. 9 miles S. W. from Wilmington.

Christiana, O., Madison township, Butler co. A village 14 miles N. E. from Hamilton.

Cicero, N. Y., Onondaga co. Watered on the N. E. by Oneida Lake, and on the E. by Chittenango Creek. Surface generally level; soil of a medium quality. 10 miles N. E. from Syracuse, and 143 N. W. from Albany.

Cincinnati, O. City, port of entry, and seat of justice of Hamilton co. Situated in the southwestern part of the state, on the N. side of the Ohio River, opposite to the mouth of Licking River, which comes in here from Kentucky. It is 116 miles S. W. from Columbus, the capital of the state, and 494 above the mouth of the Ohio. The rapid growth of Cincinnati has been remarkable. The population in 1800 was 750; in 1810, 2540; in 1820, 9642; in 1830, 24,831; in 1840, 46,338; in 1850, 115,338.

The city lies in a valley, about 12 miles in circumference, bounded by hills gently rising to the height of 300 feet, and affording from their summits and declivities beautiful views of the river, and of the city upon its banks, with the flourishing towns of Newport and Covington upon the opposite side. The city itself is built on what was originally two successive table lands, or "bottoms" of the river, at different elevations; the one being from 40 to 60 feet above the other; which, in grading, have been reduced more nearly to a gradual ascent of from 5 to 10 degrees from the river. The plan of the city was originally laid out with great regularity, and has been in a good degree preserved. An open area upon the bank of the river, with about 1000 feet front, and embracing 10 acres, is reserved for the "Landing;" which is of great importance to the business of the city, and usually presents a scene of great activity. The seven principal streets run

north from the river, 66 feet in width, and at intervals of 396 feet, and are crossed at right angles by seven others, the same distance apart; excepting Water and Front Streets, which are somewhat nearer, and Second and Third Streets, which, on account of the original shape of the ground, were located farther apart. To this original plan other streets have been added, particularly on the N. and W. The corporate limits of the city include about four square miles. The central part is compactly and finely built, with spacious warehouses, large stores, and handsome dwellings. One of the squares was originally reserved for the public buildings, and several of the first edifices designed for public uses were erected upon it. Among the public buildings of Cincinnati are the court house on Main Street, a spacious building 56 by 60 feet, and 120 feet high to the top of the dome; the edifice for the Franklin and Lafayette Banks, on Third Street, which has a splendid Doric portico of a beautiful gray freestone; the First Presbyterian Church, on Main Street, 68 feet front by 85 feet deep, cornered with turrets, and crowned with a cupola; the Second Presbyterian Church, of agreeable architecture without, and beautiful within; and many other church edifices which are ornamental to the city. There are likewise the Cincinnati College, the Medical College, Mechanics' Institute, Catholic Athenæum, 4 market houses,—one of which is 500 feet long,—two museums, a theatre, a hospital, a lunatic asylum, &c. There are many extensive and fine blocks of stores, especially on Front and Main Streets. The open area at the Landing is substantially paved to low-water mark, and is supplied with floating wharves, adapted to the great rise and fall of the river, which has a mean annual range of about 50 feet, with about 10 feet more in extraordinary floods. Many of the streets are well paved, and several of them are handsomely shaded with trees. A large proportion of the houses is of stone or brick, from two to four stories high. Though the climate of Cincinnati is more variable than that on the Atlantic coast in the same latitude, yet few places in the country are more healthy than this city. The inhabitants are from nearly every state in the Union, and from many European nations. The Germans make nearly one third of the population.

This city is hardly excelled by any other in the Union in respect to the literary advantages it affords. The common free schools are of a high order, embracing ten school districts, with fine brick edifices three stories high, and furnished with various apparatus. Besides these, there are numerous private schools. There are also public high schools, male and female, in which instruction is given to a great number of pupils. There is a college, with which is connected the celebrated Astronomical Observatory established through the exertions of Professor Mitchell, and by the enlightened liberality of the citizens. The Roman Catholics have a college here, called St. Xavier College. The Medical College of Ohio, chartered in 1825, is located here. Lane Theological Seminary, an institution belonging to the New School Presbyterians, is located at Walnut Hills, two miles from the centre of the city. The Old School Presbyterians have also an institution here, more recently established, for the instruction of theological students. The Mechanics' Institute was chartered in 1828, for the improvement of mechanics in scientific knowledge by means

of popular lectures, a library, reading room, &c. It has fine buildings, and apparatus which has cost about \$10,000. The Young Men's Mercantile Library Association has a valuable library and reading rooms in the Cincinnati College edifice, on Walnut Street. Although intended for the particular benefit of young men, its advantages are open to every respectable citizen. Besides this, there is an Apprentices' Library Association, which has a handsome collection of books, in every department of literature and science, appropriate to the objects of such an institution. All minors brought up to laborious employments have, under certain regulations, free access to this library, from which about 500 volumes are drawn out weekly. In 1831, a College of Teachers was established, having for its object the elevation of the qualifications of teachers, and the advancement of the interests of schools at the west, which holds an annual meeting at Cincinnati in October. The charitable institutions required by the wants of a large city have been liberally furnished in Cincinnati. Among these are the Orphan Asylum, in Elm Street, a fine four story building, with ample grounds; two Orphan Asylums of the Roman Catholics, for the different sexes; and the State Commercial Hospital and Lunatic Asylum, incorporated in 1821, with accommodations for 250 patients. Among the most extensive establishments of the city for business are the pork houses, which are located on the Miami Canal. Cincinnati is the greatest market in the Union for this important article of supplies. The number of hogs slaughtered here, during the season of packing, in the fall and winter of 1851-2, was 352,000.

Cincinnati, for a city of such recent origin, possesses great facilities for communication with the surrounding country, by canals, McAdams roads, and railroads. The Miami Canal connects the city with the Wabash and Erie Canal, at Defiance. The Whitewater Canal extends into Indiana, and commands much of the trade of its eastern section. The improvements upon the Licking River, by dams and locks, have rendered that stream navigable for steamboats of 150 tons, for a distance of more than 200 miles into Kentucky. Two railroads are now in operation, which connect the city with Sandusky and with Cleveland, on Lake Erie. The interior and capital of Indiana is connected with the Ohio River by a railroad at Madison, about 80 miles below Cincinnati. These are great and useful works, upon the structure of which many millions of dollars have been expended. The trade of the country from the Ohio River to the Lakes, north and south, and from the Scioto to the Wabash Rivers, east and west, comes chiefly to Cincinnati. The same is true of the trade of Kentucky for a great distance each way upon the Ohio. The manufactures of Cincinnati are also extensive. The surplus water from the canals furnishes no inconsiderable power, which has been thoroughly applied to use; and much is added by the steam engine, which is available here at a reasonable expense. A steam engine supplies a large part of the city with water, for drinking and culinary uses. It is forced up from the Ohio River, into reservoirs upon a hill 700 feet high; and thence it is carried by iron pipes under the bed of Deer Creek, to the intersection of Broadway and Third Street, where its distribution through the city commences. These

works were projected and carried on by individual enterprise until 1839, when they were purchased by the city.

On the 28th of December, 1788, but a little more than sixty years ago, the first company of civilized men landed on the north bank of the Ohio, opposite the mouth of Licking River, to commence the settlement of a town. Their first log cabin was built on a spot which is now on Front Street, a little east of Main Street. In January, 1789, they proceeded to lay off their town, which was then covered with a dense forest; the lower bottom bearing huge sycamore and sugar maple trees, and the upper, beech and oak. The streets were run, and the corners marked upon the trees. To their projected city they gave the name of Losantiville, which was afterwards changed to Cincinnati. In 1802, it was incorporated as a town, with a population of less than 1000 inhabitants. Thus recent is the origin, and thus rapid has been the growth, of this beautiful city, which long since obtained the name of "the Queen City of the West."

Cincinnati, N. Y., Cortland co. Surface hilly; soil fertile. 15 miles S. E. from Cortland, and 131 S. W. from Albany.

Circleville, O. See *Appendix*, No. 8.

Circleville, Va., c. h. London co.

City Point, Va., Prince George co. A port of entry on a point formed by the junction of James and Appomattox Rivers. 33 miles S. E. from Richmond. Large ships come up to this place, and it is connected with Petersburg by railroad.

Clackamas County, On., c. h. at Oregon city. In the lower valley of the Willamette.

Claiborne, Ala., c. h. Monroe co. On the E. side of Alabama River, at the head of schooner navigation. 138 miles S. from Tuscaloosa.

Claiborne Parish, La., c. h. at Overton, shire town. In the N. W. angle, bordering on Arkansas. Watered by Red River and branches of the Wachita, and by Bistiepan and Bodeau Lakes. The soil on the borders of the streams is of good quality.

Claiborne County, Mi., c. h. at Port Gibson. In the S. E. angle, bordering on the Mississippi. Bayou Pierre waters this county. Surface somewhat uneven; soil, except on the margins of some of the streams, of an indifferent quality.

Claiborne County, Te., c. h. Tazewell, shire town. On the northern border. Bounded N. by Ky. and Va., E. by Hawkins co., S. by Granger, and W. by Campbell co. Watered by Powell's and Clinch Rivers, head branches of the Tennessee. Surface mountainous.

Clappville, Ms., Worcester co. A manufacturing village at the head of Quinnebaug River. 50 miles W. by S. from Boston, in the town of Leicester.

Claremont, N. H., Sullivan co. This beautiful town is watered by Connecticut and Sugar Rivers, besides numerous brooks and rivulets. It is a fine undulating tract of territory, covered with a rich gravelly loam. The hills are sloping acclivities, crowned with elegant summits. The intervalles on the rivers are rich and luxuriant. In this town are fine beds of iron ore and limestone. It received its name from the country seat of Lord Clive, an English general. The beautiful location of Claremont, its immense water power, and its facilities of transportation by steam, render it a desirable location for manufacturing. Some valuable minerals are found

here. 12 miles N. from Charlestown, and 47 N. N. W. from Concord. A railroad from Boston to Burlington, Vt., passes through this town.

Clarence, N. Y., Erie co. Watered by Ransom's and Tonawanda Creeks. Surface undulating; soil adapted to the growth of grain. 16 miles N. E. from Buffalo, and 265 N. W. from Albany.

Clarendon, N. Y., Orleans co. The surface of this town is high and broken. The soil consists of calcareous loam. 10 miles S. E. from Albion, and 248 N. W. from Albany.

Clarendon, Vt., Rutland co. Otter Creek passes through the town; this, with its branches, Mill and Cold Rivers, and Furnace Brook, supply the town with water. The E. part of the town borders on the Green Mountains, but the principal elevations are the range of hills between Otter Creek and Furnace Brook, and between the latter and Ira Brook, on the west line of the town. The alluvial flats on Otter Creek are very productive. The uplands are a gravelly loam. Marble is found here. There are two small villages, one in the eastern and the other in the western part. Clarendon Springs, celebrated in cutaneous and scrofulous diseases, are situated near Furnace Brook and Clarendon Cave, on the south-easterly side of a mountain, in the westerly part of the town. The healing ingredient in the springs is nitrogen in chemical combination. The water is cold, transparent, and free from any mineral taste; the supply from the spring is abundant. It has become a fashionable resort. The settlement was commenced in 1768, by Elkanah Cook. The first settlers were mostly from Rhode Island. 85 miles S. W. from Montpelier, and 7 S. from Rutland. The great southern railroad passes through this town.

Clarendon Springs, Vt., Clarendon, Rutland co. 70 miles S. S. W. from Montpelier. See *Clarendon*, Vt.

Clarion County, Pa., c. h. at Clarion. N. central. Watered by the Alleghany and Clarion or Toby's Rivers and Red Bank Creek. Surface rough, and abounding with iron on the N., but more level and fertile on the S.

Clarion, Pa., c. h. Clarion co. Watered by Piney, Licking, and Mill Creeks, and Laurel Run, branches of the Clarion River. Surface somewhat hilly; soil loamy. 184 miles W. N. W. from Harrisburg.

Clark County, O., c. h. at Springfield. S. W. central. It was organized in 1818, and has a very fertile, well-cultivated soil, abundantly supplied with water by Mad River, Buck and Beaver Creeks, and several springs. This county is in a very flourishing condition, and has the national road crossing it from E. to W. The Cincinnati and Sandusky Railroad passes through it.

Clarksburg, Ky., c. h. Lewis co. On Salt Lick Creek. 4 miles S. from the Ohio River, and 107 E. N. E. from Frankfort.

Clarksburg, Ms., Berkshire co. The soil is hard and stony. About two thirds of it lies on the Hoosic and Bald Mountains, which is cold and rocky, but covered with valuable timber. Between the mountains the soil is good for grazing. The town is well watered by Hoosic River and Hudson's Brook. It was first settled by persons of the names of Ketchum, from Long Island, and Clark, from R. I., in 1769. 25 miles N. from Pittsfield, and 120 W. N. W. from Boston.

Clarksburg, Va., c. h. Harrison co. On Mo-

nongahela River. 253 miles N. W. from Richmond.

Clarkson, N. Y., Monroe co. On the shore of Lake Ontario. Watered by Sandy and Little Salmon Creeks. The surface is generally level; the soil sandy and gravelly loam. 16 miles N. W. from Rochester, and 233 N. W. from Albany.

Clarkstown, N. Y., c. h. Rockland co. On the W. bank of the Hudson River, and contains a small lake, the waters of which flow into the Hackensack River. Surface mostly hilly; soil fertile in the valleys. 248 miles S. from Albany.

Clarksville, Aa., c. h. Clarke co. 134 miles S. from Tuscaloosa.

Clarksville, Ga., c. h. Habersham co. 138 miles N. from Milledgeville.

Clarksville, N. H. Coos co. On the E. bank of Connecticut River. The soil is hard. 156 miles N. from Concord.

Clarksville, Ts., c. h. Red River co.

Clarksville, Te., c. h. Montgomery co. At the junction of Red and Cumberland Rivers. 45 miles N. W. from Nashville.

Clarke County, Aa., c. h. at Clarksville. S. W. part of the state. In the angle formed by the junction of the Alabama and Tombigbee Rivers. Surface uneven; soil generally rather sterile.

Clarke County, As., c. h. at Greenville. S. W. central. In the W. angle, at the junction of the Washita and Little Missouri Rivers. Surface hilly and mountainous; soil sterile, except on the borders of the streams.

Clarke County, Ga., c. h. at Watkinsonville. N. E. central. On the upper waters of the Oconee River. The Athens Branch Railroad connects the N. part with Augusta.

Clarke County, Is., c. h. at Marshall. On the E. frontier, on the Wabash. Fox and Crane Creeks, and the N. branch of Embarrass River, water this county.

Clarke County, Ia., c. h. at Charleston. On the S. E. border. On the Ohio River. Surface undulating, and watered by some small branches of the Ohio.

Clarke County, Io., c. h. at Oecola. Southern part. *Clarke County*, Ky., c. h. at Winchester. N. E. central. The Kentucky River runs along its S. border.

Clarke County, Mi., c. h. at Quitman. On the S. E. border. Surface mostly level, and drained by the Chickasaw River and branches.

Clarke County, Mo., c. h. at Waterloo. In the N. E. corner between the Mississippi and Des Moines. Fox and Wyaconda Rivers traverse this county.

Clarke County, On., c. h. at Columbia city.

Clarke County, Va., c. h. at Berryville, in the N. of the valley. The Shenandoah River waters this county. Surface varied, having the Blue Ridge on the E.; soil very fertile.

Clarkesville, N. Y., Alleghany co. Drained by Dodge's Creek and some other small streams. The surface is high and undulating, being mostly covered with a dense pine forest. 278 miles S. W. from Albany, and 15 from Angelica.

Clatsop County, On. At the mouth of the Oregon.

Claverack, N. Y., Columbia co. Claverack Creek waters this town. The surface is hilly in parts, and the soil generally productive. 4 miles E. from Hudson, and 34 S. from Albany.

Clay County, Is., c. h. at Maysville. S. E. cen-

tral. Watered by the Little Wabash River. Surface level; soil productive.

Clay County, Ia., c. h. at Bowling Green. S. W. central. Watered by the Eel River and its tributaries. Land mostly productive.

Clay County, Ky., c. h. at Manchester. S. E. part. Watered by the S. fork of Kentucky River. Soil mostly of an indifferent quality.

Clay County, Mo., c. h. at Liberty. W. part, on the N. bank of the Missouri. Fishing River and a branch of the Little Platte cross this county. Surface undulating; soil very fertile.

Clay, N. Y., Onondaga co. At the junction of Oneida and Seneca Rivers. Surface undulating; soil mostly fertile. 151 miles from Albany, and 10 N. from Syracuse.

Clay, O., Knox co., is a flourishing agricultural township.

Clayton, Aa., c. h. Barbour co. 179 miles S. E. from Tuscaloosa.

Clayton, Ga., c. h. Rabun co. At the southern base of the Blue Ridge. 181 miles N. from Milledgeville.

Clayton County, Iowa, c. h. at Prairie La Porte. In the N. E. corner, on the Mississippi. Drained by Turkey River. The soil on Turkey River is very fertile, and there are many good mill sites. Lead ore is found in this county.

Clayton, N. Y., Jefferson co. Bounded on the N. W. by the St. Lawrence River, and watered by Chaumont River and French Creek. The surface is undulating, and the soil productive. 172 miles N. W. from Albany, and 12 miles N. from Watertown.

Clearfield County, Pa., c. h. at Clearfield. W. central. Head branches of the W. fork of the Susquehanna River water this county. Surface rough and mountainous, being situated between the Main and Laurel ridge of the Alleghanies. Soil mostly sterile.

Clearfield, Pa. A township of Cambria co. Surface undulating; soil gravel and clay.

Clearfield, Pa., c. h. Clearfield co. On the S. bank of the W. fork of Susquehanna River, near the mouth of Clearfield Creek, and 126 miles N. W. from Harrisburg.

Cleveland County, N. C., c. h. at Shelby. On the southern border. West middle. Broad River waters this county.

Cleveland, Te., c. h. Bradley co. 156 miles S. E. by E. from Nashville.

Clermont, N. Y., Columbia co. Watered by Ancram or Roeliff Jansen's Creek. The surface undulating; soil clay and gravelly loam of good quality. 43 miles S. from Albany.

Clermont County, O., c. h. at Batavia. In the south-western corner, on the Ohio. In some parts the land is wet, and not good for cultivation; but it is generally fertile, and is watered by the East Fork River.

Cleveland, O. City and port of entry and c. h. Cuyahoga co. On Lake Erie, at the mouth of Cuyahoga River. It derives its name from General Moses Cleveland, an agent of the Connecticut land company, who accompanied the first surveying party to the Connecticut Reserve, and under whose direction the town was first surveyed in 1796. The Indian title to the land it occupies had been extinguished two years before; but on the opposite side of the Cuyahoga River the Indians retained their title till 1805. Cleveland was incorporated as a village in 1814, and as a city in 1836. Population in 1799, one family; in

1825, about 500; in 1830, 1000; in 1840, 6071; in 1850, 17,054. It is 130 miles N. W. from Pittsburg, 146 N. E. from Columbus, 200 S. W. from Buffalo, 130 E. from Detroit.

It is situated on a gravelly plain, elevated about 80 feet above the lake, of which it has a commanding prospect. The streets, which cross each other at right angles, are 80 feet wide, and Main Street 120. The location is dry and healthy, and there are many fine buildings. Near the centre is a public square of 10 acres, neatly enclosed and shaded with trees.

The harbor at the mouth of the Cuyahoga, since its improvement, by piers on each side extending into the water, is one of the best on Lake Erie, and its position at the northern terminus of the Ohio Canal, and the fertile country and enterprising population by which it is surrounded, have given it a very rapid growth, which as yet is but just commencing.

It is already the second commercial town in Ohio, and bids fair even to rival Cincinnati. Besides its intercourse with the interior of the state by the Ohio Canal, and its extensive lake commerce, it communicates by the Ohio and Pennsylvania Canal with Pittsburg, and by the New York and Welland Canals with the Atlantic coast. To these facilities for transportation have lately been added a system of railroads, affording communication with Cincinnati, Detroit, Pittsburg, and Buffalo, and through these two latter places with Philadelphia, New York, and Boston. Ohio City, on the opposite side of the Cuyahoga, is a growing suburb. See *Ohio City*.

Clifton Park, N. Y., Saratoga co. On the Mohawk River. Surface undulating; soil a sandy loam, of tolerably good quality. 22 miles N. from Albany.

Clinch County, Ga. South part, taken from Ware. Only 673 inhabitants in 1850, and no post office.

Clinton, Ct., Middlesex co. 51 miles S. by E. from Hartford.

Clinton, Ga., c. h. Jones co. 26 miles W. from Milledgeville.

Clinton County, Is., c. h. at Carlyle. South central. Surface undulating, and watered by Kaskaskia River; soil productive.

Clinton County, Ia., c. h. at Frankfort. N. W. central. Watered by tributaries of Wildcat and Sugar Creeks. Soil productive, with the exception of "Twelve Mile Prairie."

Clinton, Ia., Vermilion co. On the Wabash River. 82 miles W. from Indianapolis.

Clinton County, Io., c. h. at De Witt. The easternmost county in the state. In the N. angle, between the Wabispinicon River and the Mississippi.

Clinton County, Ky., c. h. at Albany. On the southern border E. Surface diversified, and watered by several small tributaries of the Cumberland River; soil fertile.

Clinton, Me., Kennebec co. A fine township on the ~~W~~ bank of the Kennebec. The Sebasticook also passes through it, and at the falls affords fine water power. 24 miles N. by E. from Augusta.

Clinton, Ms., Worcester co. A new manufacturing town on the Nashua, set off mostly from Lancaster.

Clinton County, Mn., c. h. at De Witt. Central. Watered by Maple and Lookingglass Rivers and branches. Surface level; soil fertile

Clinton, Mi., Hinds co. 10 miles W. by N. from Jackson. The seat of Mississippi College. (See *Colleges*.) It has likewise a female seminary.

Clinton County, Mo., c. h. at Plattsburg. N. W. part. Watered by tributaries of Little Platte River. Surface level; soil very productive.

Clinton, N. C., c. h. Sampson co. On a branch of Black River. 94 miles S. S. E. from Raleigh.

Clinton County, N. J. In Lebanon, Bethlehem, and Kingwood townships, on the S. branch of Raritan River. 37 miles N. by W. from Trenton. The surrounding country is fertile, and there is a good water power.

Clinton County, N. Y., c. h. at Plattsburg. Bounded N. by Canada, E. by Lake Champlain. Its principal rivers are the Saranac, Chazy, and Great and Little Au Sable, all excellent mill streams. The surface is elevated and hilly on the S., but more level on the N. and E. parts. Soil greatly diversified. Bog and magnetic iron ores of excellent quality, and peat, are found here in great abundance. There is also in this county one sulphur and one carbonated spring. Traversed by the Ogdensburg, and by the Plattsburg and Montreal Railroad.

Clinton, N. Y., Oneida co. Seat of Hamilton College. On both sides of Oriskany Creek. 9 miles S. W. from Utica, and 99 miles W. N. W. from Albany. See *Colleges*.

Clinton, N. Y., Dutchess co. Surface hilly, and watered only by some small streams. The soil is gravelly loam. 10 miles N. from Poughkeepsie, and 75 S. from Albany.

Clinton County, O., c. h. at Wilmington. S. W. part. On the height of land between the Scioto and Little Miami.

Clinton County, Pa., c. h. at Lock Haven. North central. Watered by the W. branch of the Susquehanna River. Surface mountainous; soil very fertile on the streams.

Clinton, Pa., Lycoming co. Bounded on the N. E. and S. E. by the Susquehanna River. 6 miles S. E. from Williamsport.

Clinton, Pa. A township of Wayne co.

Clinton, Te., c. h. Anderson co. 175 miles E. from Nashville.

Clintonville, N. Y., Clinton co. On the N. side of Au Sable River. 10 miles W. from Port Kent, on Lake Champlain, and 153 miles N. from Albany. The best iron ore is obtained in this vicinity in great abundance, and there are extensive iron works here, with a large capital invested in the business.

Clover Hill, Va., c. h. Appomattox co.

Clyde Mills, Mn., St. Clair co. Situated at the head of steamboat navigation on Black River, 12 miles from its mouth, and 67 N. E. from Detroit.

Clyde, N. Y., Wayne co. On Clyde River and the Erie Canal. 174 miles W. by N. from Albany. Here is a large hydraulic power, and extensive operations are carried on in the flouring business, in the manufacture of glass, leather, &c.

Clymer, N. Y., Chautauque co. Broken Straw Creek and its branches water the S. part of this town. Surface rolling; soil suitable for grass. 353 miles W. by S. from Albany.

Coahoma County, Mi., c. h. at Delta. On the W. border N. On the Mississippi. Sunflower River waters this county. Surface level, and at certain seasons inundated.

Coal, Pa. A township of Northumberland co.

Coalsmouth, Va., Kanawha co. On the S. side

of Kanawha River, at the mouth of Coal River, which affords hydraulic power. 325 miles N. W. from Richmond.

Coatesville, Pa., Chester co. On the W. branch of Brandywine Creek. 62 miles E. S. E. from Harrisburg. There is a mineral spring here of some celebrity.

Cobb County, Ga., c. h. at Marietta. N. W. part on the N. bank of the Chattahoochee. Watered by the Chattahoochee River and its branches and some tributaries of the Coosa.

Cobleskill, N. Y., Schoharie co. Watered by the Cobleskill. This town contains a mill stream which issues from a natural well of unknown depth, then disappears and pursues a subterranean passage for 7 miles. The surface of the town is rather hilly, and the soil in the valleys fertile. 45 miles W. from Albany.

Cochecton, N. Y., Sullivan co. Bounded on the W. by Delaware River, and is also watered by Collicoon and Ten Mile Creeks. The surface is hilly; soil principally gravelly loam. 134 miles S. W. from Albany.

Cocke County, Te., c. h. at Newport. E. part separated from Haywood county, N. C., by the Smoky Mountains. It is watered by the French Broad and its tributary the Big Pigeon, both S. W. tributaries of the Tennessee. Elevated, broken, and uneven.

Coeymans, N. Y., Albany co. On the W. side of the Hudson River, and drained by Coeymans Creek and some other streams. The surface is uneven, and there is a variety of soil. 12 miles S. from Albany.

Coffee County, Aa., c. h. at Wellborn. On the southern border. Watered by Pea River, a branch of the Choctawhatchie, which passes through it from N. to S.

Coffee County, Te., c. h. at Manchester. S. central. Surface undulating, and watered by the head branches of Duck River; soil productive.

Coffeewell, Mi., c. h. Yalobusha co.

Cohasset, Ms., Norfolk co. This town was, till 1770, a precinct of Hingham, and was called Conohasset, an Indian name, signifying a fishing promontory. It contains some excellent soil, though it is, for the most part, rocky and difficult of cultivation. The Cohasset River flows through a part of the town into the harbor. In the south-westerly part of the town, there is a fresh pond, of 90 acres, abounding with pike, and other fish common to fresh water. The Indian Pot, so called, is considered quite a curiosity. It is situated near the base of a large mass of solid rock, near what was once the sea-shore. Its cavity is as round, smooth, and regular as a well-formed seething pot, and will hold about 12 pailfuls. On the same mass of rock is another excavation, called the Indian Well. This is about 10 feet deep, half of it circular and half semicircular. The Cohasset Rocks, so disastrous to mariners, lie off this town. The situation of this town is delightful and romantic, and being easy of access by the South Shore Railroad, it attracts many visitors in the summer season. 21 miles from Boston.

Cohoes, N. Y., Albany co. On the S. W. side of the Mohawk River, a short distance below the falls of the same name, and near the junction of the Erie and Champlain Canals. The Erie Canal passes through the village. It is a manufacturing place, and as such possesses remarkable advantages, not only from the immense extent of the hydraulic power created by

these falls in the Mohawk, but also from its relative position in the vicinity of such cities as Albany and Troy, and its extensive facilities of communication, by the canals, the Hudson River, and the railroads, with all parts of the country north, south, east, and west.

The falls are in full view from the village, and are seen with special advantage from a bridge, 800 feet long, just below, pouring down from a height of 70 feet or more, between rocky walls of corresponding elevation, and on one of the sides rising above the cataract 100 feet still higher. On the water power here developed, there are already erected several large manufacturing establishments, among which are cotton mills, flouring mills, iron works, brass foundries, &c.; and an almost incalculable capacity of further application exists. The village contains 6 or 7 churches, some 20 stores, and a numerous population. It is often visited to obtain a view of the falls and of the romantic scenery connected with them. It lies 8 miles N. from Albany, and about the same distance W. by N. from Troy.

Cohulath Springs, Ga., Murray co. At the base of Cohulath Mountain, and derives its name from the valuable mineral springs within its limits. 12 miles N. from Spring Place.

Colchester, Ct., New London co. This is a pleasant town; the site of Bacon Academy. The surface of the town is uneven, with a strong gravelly soil. Excellent iron ore is found here. 23 miles S. E. from Hartford.

Colchester, N. Y., Delaware co. Watered by the Papacton branch of the Delaware. Surface hilly and mountainous; soil favorable to the growth of grass. 101 miles S. W. from Albany.

Colchester, Vt., Chittenden co. There are two small ponds in this town; the largest contains about 60 acres. The principal streams are the River Lamoille, Mallet's Creek, Indian Creek, and Winooski River. The soil in the N. and N. W. parts is a variety of gravel and loam. In the middle part of the town is a large tract of pine plain, mostly covered with pitch pine and small oaks. On the bank of the Winooski River are large tracts of intervals. The rocks in the N. and E. parts are mostly composed of lime and slate; red sandstone is found in abundance near Mallet's Bay. Iron ore is found here. The settlement was commenced in 1774, at the Lower Falls, on Winooski River, by Ira Allen and Remember Baker. 36 miles N. W. from Montpelier, and 6 N. from Burlington. Winooski village lies in Burlington and Colchester.

Colden, N. Y., Erie co. Watered by Cazenove Creek and some other small streams. The surface is hilly, and the soil, although rather moist and cold, is suitable for grass. 20 miles S. E. from Buffalo, and 287 from Albany.

Cold Spring, N. Y., Putnam co. Picturesquely situated among the Highlands, on the E. side of Hudson River, 1 mile above West Point, and 100 S. from Albany. Various and extensive operations in manufactures are carried on here; the principal of which are in iron and brass, steam boilers, and locomotive engines.

Cold Spring, N. Y., Cattaraugus co. On both sides of the Alleghany River, into which Cold Spring Creek flows. The valleys are extensive, and the rest of the surface hilly. 308 miles S. of W. from Albany.

Cold Spring Harbor, N. Y., Queen's and Suffolk counties, in the towns of Oyster Bay and Hunt-

ington, at the head of Cold Spring Harbor. 186 miles S. by E. from Albany. This place has considerable shipping, and also manufactories of woollens and other goods.

Cold Water, Mn., c. h. Branch co. Watered by Cold Water River and its branches. 110 miles W. S. W. from Detroit. On the Southern Michigan Railroad.

Colebrook, Ct., Litchfield co. An elevated township, of a hard, gravelly soil, and uneven surface, on the line of Massachusetts. The E. part of the town is watered by Farmington River. The village is very pleasant, having Mount Pisgah in the rear.

Colebrook, N. H., Coos co., is watered by the Mohawk River and Beaver Brook. The soil is rich; intervals of good quality stretch along the Connecticut. First settlers, Sir George Colebrook and others. 35 miles N. from Lancaster, and 140 N. from Concord.

Colebrookdale, Pa., Berks co. 73 miles E. from Harrisburg.

Cole County, Mo., c. h. at Jefferson City. Central. In the W. angle, at the junction of the Osage with the Missourri River.

Colerain, Pa. A township of Bedford co.

Colerain, Pa., Lancaster co. 69 miles S. E. from Harrisburg.

Coleraine, Ms., Franklin co., was first settled about the year 1746. Part of the settlers were Irish Presbyterians. This town was named in honor of Lord Coleraine, of Ireland. It is finely watered by two branches of North River, a tributary stream of Deerfield River. The surface of this town is somewhat rough and uneven, yet it contains much fine land. 9 miles N. W. from Greenfield, and 99 W. N. W. from Boston.

Coles County, Is., c. h. at Charleston. E. part, S. Watered by the Kaskaskia, Embarrass, and the head branches of the Little Wabash River. Surface slightly uneven; soil of good quality. This county contains many fine mill sites.

Colesville, N. Y., Broome co. On both sides of the Susquehanna River. The surface is mostly hilly, and the soil of the valleys consists of rich alluvion. 127 miles S. W. from Albany.

Colliton District, S. C., c. h. at Waterboro'. In the S. angle on the Atlantic Ocean. Watered by the Edisto and Combahee Rivers. Surface level; soil fertile.

Collikoon, N. Y., Sullivan co. Watered by Collikoon Creek and branches.

Collins County, Ts., c. h. at McKinney. N. E. part, on the head waters of Trinity.

Collins, N. Y., Erie co. Situated on the N. side of Cattaraugus Creek, and watered by a number of small streams. The surface is uneven, and the soil various. 24 miles S. from Buffalo, and 295 W. from Albany.

Collinsville, Ct., Hartford co. On both sides of Farmington River. 15 miles W. by N. from Hartford, in the town of Canton.

Colorado County, Ts., c. h. at Columbus. S. central. On both sides of the Colorado.

Columbia, Ct., Tolland co. Taken from Lebanon in 1800. Watered by a branch of the Willimantic. The surface is uneven; the soil hard and gravelly, but excellent for grazing.

Columbia County, Va., c. h. at Lancaster. N. E. part. Watered by the Suwanne River, which bounds it on the W., by St. Mary's River, and by Randolph Lake, a sheet of water 7 miles long and 5 wide. Gadsden's Spring, celebrated for

its medicinal properties, is situated on the bank of Little Suwanee River. It is 60 feet across, and 85 or 40 deep. The soil is mostly poor.

Columbia County, Ga., c. h. at Applington. E. central. Bordering on the Savannah. It has an undulating surface and rich soil.

Columbia, Ky., c. h. Adair co.

Columbia, La., c. h. Caldwell co. 273 miles N. W. from New Orleans.

Columbia, Me., Washington co. At the head of tide water on the W. side of Pleasant River. 120 miles E. by N. from Augusta.

Columbia, Mi., c. h. Marion co. On the E. bank of Pearl River. 113 miles S. S. E. from Jackson.

Columbia, Mo., c. h. Boone co.

Columbia, N. C., c. h. Tyrrell co. On the E. side of Scoupermony Creek, a little E. of its entrance into Albemarle Sound, and 200 miles E. from Raleigh.

Columbia, N. C., c. h. Tyrrell co. 200 miles E. from Raleigh.

Columbia, N. H., Coos co. This town lies on the E. bank of Connecticut River. The surface is uneven, the mountains of Stratford lying along the S. From these a number of streams descend into the Connecticut. There are also several small ponds here; on the borders of one, called Lime, vast quantities of shells are found, from which a species of lime is made. Lime Pond is 100 rods long, 80 wide, and of an irregular elliptical shape. Its bottom is covered, to the depth of 6 feet, with white calcareous marl. It was first granted in 1770. 30 miles N. from Lancaster, and 143 N. from Concord.

Columbia County, N. Y., c. h. at Hudson. On the E. border S., between the Hudson and the Massachusetts line. Kinderhook, Claverack, Copake, and Ancram or Roeliff Jansen's Creeks water this county. Surface hilly on the E.; soil greatly diversified. The Hudson and Berkshire and the Hudson River Railroads cross this county.

Columbia, N. Y., Herkimer co. Some of the head branches of the Susquehanna and Unadilla Rivers, and a few small tributaries of the Mohawk, water this town. The surface is hilly; the soil sandy and calcareous loam. 75 miles N. W. from Albany.

Columbia City, On., c. h. Clark co.

Columbia County, Pa., c. h. at Danville. N. E. central. The E. branch of the Susquehanna River and Big Roaring, Fishing, and Catawissa Creeks water this county. Surface rough and uneven; soil productive.

Columbia, Pa. A township of Bradford co.

Columbia, Pa., Lancaster co. On the E. bank of the Susquehanna River. 30 miles S. E. from Harrisburg. It is connected with Havre de Grace, at the mouth of the Susquehanna, by a canal, and with Philadelphia by railroad. A bridge here crosses the Susquehanna, a mile and 390 feet in length, resting on stone piers. An aqueduct supplies the place with water for domestic and other purposes. The trade with Philadelphia and Baltimore is large in lumber, coal, iron, &c.

Columbia, S. C. City, capital of the state, and seat of justice of Richland co. 73 miles N. E. from Augusta, and 120 miles N. N. W. from Charleston. Situated on the E. side of the Congaree River, immediately below the confluence of the Broad and Saluda Rivers, which unite to form the Congaree. The city stands upon an

elevated plain, about a mile back from the river, from which there is a handsome and extensive prospect in all directions. It is laid out with regularity, the streets crossing each other at right angles, 100 or 150 feet in width, and many of them ornamented with trees.

The state house, near the centre of the city, is a plain edifice of wood, 170 feet long, 60 feet wide, and two stories high. The other public buildings are a court house and jail, a town hall, a market house, an academy, and a female seminary, a large lunatic hospital, and churches of the Presbyterian, Episcopal, Methodist, Baptist, and Roman Catholic denominations. The edifice of the Presbyterian Church is an elegant building, with two lofty spires. The buildings of the South Carolina College, which is situated here, are handsomely located upon a lot of 25 acres, enclosed by a wall of brick. The buildings, which are of brick, consist of two for students, 200 feet long, 25 feet wide, and three stories high, a building for the library and other rooms for the use of the college, upon the top of which is an astronomical observatory. The president's house is situated at the head of the opening between the two college buildings, which are placed opposite to each other. There is also a theological seminary at Columbia, founded in 1831.

Columbia is a place of considerable business. A railroad extends to Branchville, 60 miles, where it connects with the Charleston and Augusta Railroad. A steamboat also plies between Columbia and Charleston. The Saluda Canal, about six miles long, built for the purpose of avoiding the falls in the Congaree, passes through the city, and boats of large draught ascend to this place.

Columbia, Te., c. h. Maury co. On the S. bank of Duck River. Jackson College is located here. (See Colleges.) 42 miles S. S. W. from Nashville.

Columbia, Va., c. h. Fluvanna co. On the N. bank of James River, at the mouth of the Rivanna, and 50 miles W. N. W. from Richmond.

Columbia County, Wn., c. h. at Decorra. S. central part. Includes the carrying place from the water of Fox to the Wisconsin.

Columbiana, Aa., c. h. Shelby co.

Columbiana County, O., New Lisbon, shire town. Situated in the N. E. section of the state, on the Pennsylvania state line, having Mahoning co. on the N., Jefferson co. on the S., Stark and Carroll counties on the W. and S. W. It is 30 miles in length from E. to W., and 25 miles in average breadth from N. to S. A portion of its S. E. boundary is on the Ohio River, about 40 miles below Pittsburg. The Sandy and Beaver Canal, connecting the Ohio Canal with the Ohio River, in the direction of Pittsburg, traverses the centre of this county. The railroad between Cleveland and Pittsburg, Pa., also passes near to the whole extent of its northern boundary. Most of the S. part of the county is broken and hilly, and has a light, but productive soil. The central and northern parts are more level, and have a soil which, under good cultivation, yields the most abundant returns for the labor bestowed. Extensive quarries of lime and sandstone are found in almost every part of the county, and the hills and valleys contain inexhaustible beds of clay and deposits of bituminous coal. The principal streams are the Little Beaver and its branches. Owing to its

elevation, the fall on these streams, in their descent towards the Ohio, is great; furnishing an amount of water power, available for mills and manufacturing purposes, which is equalled by that of few other parts of the western country. The staple commodities are wheat, horses, and sheep. Population in 1850, about 6000.

Columbus, Ga. City, and seat of justice of Muscogee co. Situated on the eastern bank of the Chattahoochee River, at the head of steamboat navigation, 375 miles above Appalachicola, at the mouth of the bay, and 124 miles W. S. W. from Milledgeville, the capital of the state. There is a succession of falls, or rapids, in the river immediately above Columbus, over which it descends about 110 feet in the distance of 4 miles. The city stands on a fine elevation above the level of the river, and covers about 1200 acres of ground. It was laid out in 1828, and has had a rapid growth. The two principal streets, running N. and S, are 165 feet wide. Six others, parallel to these, are 132 feet wide. These are intersected at right angles by 12 others, 99 feet in width. Many of the buildings of the city, both public and private, are large and elegant. The court house is one of the finest in the state. It is of brick, 60 by 90 feet on the ground, and two stories high, having a fine Grecian Doric portico on each front. Some of the church edifices are handsome buildings. The Planters and Mechanics Bank is a beautiful building, modelled after the Temple of the Winds, at Athens, having an elegant portico of six fluted columns. The Oglethorpe House, a fine hotel, is the largest building in the city, excepting the cotton warehouse. This warehouse is one of the most capacious, substantial, and convenient in the state. It stands on the bank of the river, is built of brick, fire proof, 133 feet long, and 148 feet wide, covering an acre and three quarters of ground. The exportation of cotton from Columbus is a large business. Steamboats ply between this place and New Orleans, and the number running to different points upon the river is fifteen or twenty. Boats drawing five feet of water can come up to the city at all seasons. A fine bridge here crosses the Chattahoochee, which cost \$30,000. Population in 1840, 3114; in 1850, 6000.

Columbus, Ia., c. h. Bartholomew co. On the E. side of the E. fork of White River, 41 miles S S. E. from Indianapolis.

Columbus, Ky., c. h. Hickman co.

Columbus, Mi., c. h. Lowndes co. On the E. bank of the Tombigbee, at the head of steamboat navigation, and is elevated 120 feet above the river. A United States land office is here. 141 miles N. E. from Jackson.

Columbus County, N. C., c. h. at Whitesville. In the southern angle, bordering on South Carolina. Watered by the Little Pedee and Waccamaw Rivers. Surface level, and partly marshy.

Columbus, N. Y., Chenango co. Watered by the Unadilla River and some of its branches. The surface is hilly; soil clay and sandy loam. 14 miles N. E. from Norwich, and 83 W. from Albany.

Columbus, O. City, capital of the state, and seat of justice of Franklin co. 140 miles S. W. from Cleveland, and 125 N. E. from Cincinnati. It is on the same parallel of latitude with Philadelphia, 450 miles W., and on the same meridian with Detroit, 175 miles S. Population in 1840,

6048; in 1850, 16,634. It is situated on the E. bank of the Scioto, upon ground rising gradually from the river, and affording an eligible site for a large city. This spot was selected by the legislature as the seat of government in 1812, while it was yet a wilderness, and is designated in the act as "the high bank of Scioto River, opposite Franklinton." It is laid out, as all towns established in such a manner are usually laid out, with the most entire regularity; the streets crossing each other at right angles, and forming spacious squares, which are often divided into lesser squares by alleys, or narrower streets, intersecting each other in the middle. Broad Street, which extends from the bridge, over which the national road passes the Scioto, to the eastern limits of the city, is 120 feet wide, and High Street, at right angles with this, which is the principal seat of business, is 100 feet wide. The other streets are 88 feet in width. A substantial quay has been constructed along the margin of the river, 1300 feet long, which affords every facility for loading and unloading goods, produce, and other articles transported upon the river; or through the Ohio Canal, which passes 11 miles S. of this point, and is connected with the Scioto at Columbus by a canal, or feeder, of that length.

In the centre of the town is a public square of 10 acres, handsomely enclosed, designed originally for the public buildings. It has Broad Street on the N. side, and High Street on the W. Upon the S. W. corner of this square, fronting towards the W., stands the State House, which is a brick edifice, 75 feet long by 50 feet wide, two stories high, and surmounted with a handsome cupola, from the balcony of which a beautiful view of the city and the surrounding country is obtained. The winding course of the river, the pleasant town of Franklinton, on its opposite bank, and many features of the more distant prospect, give a varied and pleasing interest to this view. The representatives' hall is on the lower floor of the state house, and the senate chamber is immediately above. The public offices are in a separate building, 100 feet long by 25 feet wide, standing directly N. of the State House. In the same line, a little farther N., is the Court House, for the United States District Court. There are many elegant private dwellings in Columbus; but the general style of building is characterized rather by neatness than display. The churches of the different denominations are numerous, and many of them well sustained. The First Presbyterian Church in Columbus was organized in 1818, and their neat brick edifice stands near the S. E. corner of the public square. The Baptist Church is a large and handsome building at the corner of Third and Rich Streets, and the Episcopal Church is a stone edifice on Broad Street, opposite the public square.

The several state institutions, located at Columbus, do honor to the state, while they greatly adorn the city. The Ohio Lunatic Asylum occupies an open area, about 1 mile E. of the State House, and is a truly noble structure. The buildings present a front of 376 feet, with wings on the right and left projecting 11 feet forward, and running back 218 feet, thus forming a spacious court in the rear. They cover an acre of ground, and contain 440 rooms. About 30 acres of land are attached to the establishment, forming a quiet and ample retreat for such patients as are able to enjoy it. The cost of erecting

the buildings of the Lunatic Asylum was over \$150,000.

The Ohio Deaf and Dumb Asylum is located about one third of a mile E. of the State House, on grounds which are handsomely laid out, and adorned with shrubbery. Its site was selected in 1829, and it went into operation as soon as the necessary arrangements could be made. The buildings are of brick, and cost, with the grounds, about \$25,000.

The Ohio Institution for the Education of the Blind is another of these noble institutions, located at Columbus. It is situated on the national road, about three quarters of a mile easterly from the State House. The edifice is a large and handsome structure, of brick, with a beautiful lawn in front. The institution was established in 1837, and is in a flourishing condition.

The state penitentiary, which is situated on the eastern bank of the Scioto, about half a mile N. from the State House, is the largest and most imposing of the public edifices at Columbus. The main building is constructed of hewn limestone, and consists of a centre building, 56 feet front, and four stories high, with two wings each, 200 feet long, and three stories high; presenting an entire front of 456 feet in extent. With the prison yard in the rear, upon the three sides of which are the long ranges of workshops for the prisoners, the buildings of the penitentiary enclose a hollow square of 6 acres. The centre building of the main edifice, as seen in front, contains the house of the warden, the office, and the guard rooms; and each of the wings contains 350 cells for prisoners, arranged in 5 tiers, and exposed through the whole line to the observation of the officers from the guard rooms. A railroad, about two miles long, has been laid down from the prison to a stone quarry, where a portion of the convicts are employed in getting out stone. The discipline of this prison is excellent. The prisoners attend divine service on the Sabbath, and enjoy the privileges of a Sabbath school, and the use of an excellent library, comprising several hundred volumes. They have Bibles in their cells, unite in exercises of sacred music, and are permitted, occasionally, to hear temperance addresses, &c., in the chapel. Their labor yields to the state, after defraying the expenses of the prison, a surplus of \$16,000 or \$18,000 annually.

On the 10th of February, 1816, Columbus was incorporated as a borough. Its present city charter was granted March 3, 1834. The mayor is elected for two years. The city is divided into five wards, each of which elects four members of the city council, who hold their offices for four years, one in each ward being elected annually. All other officers are elected annually.

Columbus, Pa. A township of Warren co.

Comal County, Ts., c. h. at New Braumfels. S. central. On the head waters of the Guadalupe.

Concord, Me., Somerset co.

Concord, Ms., Middlesex co. This is one of the shire towns, and is situated on a river of the same name. This was the first inland settlement in the colony of Massachusetts Bay, and derives its name from the harmony in which it was purchased of the natives. Its Indian title was Musketaquid. The surface is quite level; the soil, in some parts, is sandy, but generally it is moist and fertile. The Concord and Assabet Rivers

water the town, and the Fitchburg Railroad passes through it. It was here that the first British life was taken in the war of the revolution. 20 miles W. N. W. from Boston, and 30 N. E. from Worcester.

Concord, N. C., c. h. Cabarras co. On the E. side of Big Coldwater Creek, a branch of Rocky River. 139 miles W. S. W. from Raleigh.

Concord, N. H., c. h. Merrimac co. The capital of the state. Population in 1840, 4897; in 1850, 8584. It lies on both sides of the Merrimac River, and contains an area of about 41,000 acres. There are five ponds in Concord, the largest of which are Turkey Pond, in the S. W., and Long Pond, in the N. W. parts of the town, on the streams passing from which are some valuable mills and privileges. The Contoocook River enters the W. corner of the town, and uniting with the Merrimac on the N. W. line, forms, at its junction, the island celebrated in history, where Mrs. Dustin made a desperate escape from a party of Indians, who were carrying her into captivity, in 1698. On the borders of the Merrimac, which is the principal river of this region, are rich, well-cultivated intervalle lands. The business between Boston and Concord was formerly conducted by means of the Middlesex canal and locks, on the Merrimac River; but since the construction of the railroads, the canal has been abandoned. The great increase notwithstanding, both of travel and trade, between these two places, is one of the best proofs of the superiority of railroad transportation. Concord is rapidly increasing in business, wealth, and population, by the extension of numerous railroads to various points. The Concord Railroad has a splendid depot, from which start the trains running N., S., E., and W.; they also have an extensive freight depot 300 feet in length. In connection with these buildings, they have a large engine house, machine shop, repair shop, paint shop, and car house, with extensive wood sheds. In the centre of the building is a large and commodious hall, accommodating from 1500 to 2000 people. The buildings belonging to the Northern Railroad are not so extensive as those of the Concord; they have a large machine shop, a repair shop, and one of the best engine houses in New England. The Boston, Concord, and Montreal, the Concord and Claremont, and Portsmouth and Concord Railroads are more or less dependent upon the two former roads for various accommodations.

The main village is situated on the westerly side of the Merrimac River, and extends over a surface of about two miles in length, and from a half to three fourths in width. Many of the streets are handsomely laid out, and are beautifully adorned by shrubbery of various kinds. On Main Street, six rods in width, is situated the State House, in the centre of a beautiful common, with a thrifty growth of maple and elm trees.

Much of the mercantile business of the place is done on Main Street, which runs N. and S. from the State House, nearly a mile each way. All of the public houses, and a large proportion of the manufactories and shops, may here be found. Near the northern extremity of State Street, two miles in length, also a very handsome street, is situated the Methodist Biblical Institute, a theological school, commenced in 1847, and now in successful operation. The state prison is located on this street. On the westerly side of the Concord and Claremont Railroad is a very extensive

iron foundry, with several mills and shops, with various kinds of machinery, propelled by steam power. There are also several establishments for the manufacture of coaches and other vehicles. Some are very distinguished for their superior skill and workmanship, and employ a large amount of labor and capital. In the Concord portion of Fishersville, near the junction of the Contoocook River with the Merrimac, six miles N. of the main village, about half of which is in Concord and the other half in Boscawen, there are a large cotton factory, various other manufacturing establishments, and sites for two other factories equal to the one already completed. This village, on both sides the Contoocook, has grown up rapidly, and is still increasing. It is traversed by the Northern and Claremont Railroads, which afford great facilities for transportation.

The W. village, better known as the West Parish, is situated about half way between Fishersville and the main village. Here are manufactured some of the finest flannels and blankets in the country. The Concord and Claremont Railroad passes through this place.

The E. village, situated on the easterly side of the Merrimac River, distant about 2 miles from the State House, is a very thrifty and growing place, connected with the main village by Federal Bridge; also by the Boston, Concord, and Montreal Railroad.

Concord, N. Y., Erie co. Situated on the N. side of Cattaraugus Creek, and watered by several small streams. The surface is quite hilly, the soil favorable to the growth of grass. 282 miles W. from Albany, and 25 S. from Buffalo.

Concord, Pa., Delaware co. Watered by Painter's Creek, which affords good hydraulic power. 20 miles W. from Philadelphia.

Concord, Pa., Franklin co. At the head of Tascorora Creek. 12 miles W. from Harrisburg.

Concord, Pa., Erie co. Watered by branches of French and Broken Straw Creeks. Surface hilly, and well suited to grazing.

Concord, Vt., Essex co. Hall's Pond, lying near the centre of the town, is about a mile long, and about 100 rods wide. Miles's Pond is about the same size, and lies near the N. E. corner of the town. This town is watered by Moose and Connecticut Rivers, also by several small streams. The surface is uneven, and in the N. E. parts very stony. It is an excellent grazing township, and has some good tillage land. The first settlement was commenced in 1788, by Joseph Ball. 24 miles S. W. from Guildhall, and 44 N. E. by E. from Montpelier.

Concordia Parish, La., c. h. at Vidalia, E. part, between the Washita and the Mississippi. Surface flat, and mostly liable to inundation; soil extremely fertile, producing large crops of cotton.

Conceh County, Aa., c. h. at Sparta. On the S. border. Watered by Conceh River and its tributaries.

Conemaugh, Pa., Cambria co. Situated at the junction of Conemaugh River and Stone Creek. Hilly; soil of clay and calcareous loam.

Conemaugh, Pa., Indiana co. Watered by Blackleg's Creek and Conemaugh River. Surface hilly; soil a rich loam. Salt is found here on the banks of the Conemaugh.

Conesesus, N. Y., Livingston co. Between Conesesus and Hemlock Lakes. Hilly; the soil hardly of the medium quality. 221 miles W. from Albany.

Conesville, N. Y., Schoharie co. Drained by the Manor Kill, a branch of Schoharie Creek. Hilly; the soil sandy loam. 42 miles S. W. from Albany.

Conewago, Pa. A township of Adams co.

Conewago, Pa. A township of York co.

Conequessing, Pa., Butler co. Conequessing, Breackneck and Yellow Creeks water this town. Surface undulating; soil clay, gravel, and loam.

Conestoga, Pa., Lancaster co. 5 miles S. from Lancaster.

Conhocton, N. Y., Steuben co. Conhocton River and some of its branches water this town, the surface of which is hilly, and the soil moist clay loam, favorable to the growth of grass. 225 miles W. from Albany.

Conklin, N. Y., Broome co. The Susquehanna River flows through this town. The surface is rather hilly, with the exception of a deep valley on the banks of the river. 5 miles S. E. from Binghamton, and 152 S. W. from Albany.

Conneaut, Pa., Erie co. Surface hilly; watered by Conneaut Lake and Creek; soil loam and gravel.

Conneaut, Pa., Crawford co. This town has an undulating surface and gravelly soil.

Conneaut, O., Ashtabula co. Township and town, formerly called Salem. On the shore of Lake Erie, at the mouth of Conneaut Creek.

Connellsville, Pa., Fayette co. 180 miles W. by S. from Harrisburg.

Connenauagh, Pa. A township of Somerset co.

Connersville, Ia., c. h. Fayette co. On the W. side of Whitewater River. 60 miles E. S. E. from Indianapolis.

Connewango, N. Y., Cattaraugus co. Watered by Connewango and Little Connewango Creeks. The surface is high and broken; the soil fertile. 302 miles W. by S. from Albany.

Connewango, Pa., Warren co. Bounded on the S. by the Alleghany River, and drained by Conewango Creek. Surface uneven; soil fertile, especially in the S. part.

Conquest, N. Y., Cayuga co. On the N. side of Seneca River, in which is Howland's Island, belonging to this town. It also contains Duck Lake. The surface is rolling; the soil sandy and clay loam. 162 miles N. W. from Albany, and 15 N. from Auburn.

Constable, N. Y., Franklin co. Trout River waters this town, which is bounded by Canada on the N. The surface is level; soil sandy loam. 218 miles N. N. W. from Albany, and 6 N. from Malone.

Constantia, N. Y., Oswego co. Watered by Scriba's Creek and other small streams flowing into Oneida Lake, which bounds it on the S. The surface is level; soil sandy. 30 miles S. E. from Oswego, and 140 N. of W. from Albany.

Constantine, Mn., St. Joseph co. On St. Joseph River, at the mouth of Fall River, 149 miles W. S. W. from Detroit. A place of extensive business, having excellent water power. Steamboats pass the mouth of the St. Joseph.

Contoocook Village, N. H. In the town of Hopkinton, Merrimac co. On Contoocook River, which affords extensive hydraulic power. W. from Concord 10 miles.

Contra Costa County, Ca., c. h. at Martinez. In the south angle, between San Francisco Bay and the outlet of the Sacramento.

Conway County, As., c. h. at Lewisburg, Central. On the N. bank of the Arkansas.

Surface uneven, and drained by Cadron and Point Remove Creeks.

Conway, Ms., Franklin co. South and Bear Rivers, tributaries of Deerfield River, give to Conway an excellent water power. The surface is uneven, and in some parts quite elevated; the soil is strong. The village, in the centre of the town, is located in a small valley, between Beal's and Billing's Hills; it is very neat and picturesque. 8 miles S. W. from Greenfield, and 98 W. N. W. from Boston.

Conway, N. H., Carroll co. Swift, Pequawkett Rivers, and another stream, discharge themselves into Saco River, in this town. Saco River here is from 10 to 12 rods wide, and about 2 feet deep; its current rapid, and broken by falls. Walker's, and Little Pequawkett Ponds are in this town. There is a detached block of granite on the southern side of Pine Hill, the largest perhaps in the state. There is a sulphur spring on the bank of Cold Brook. The land, when well cultivated, produces large crops of corn and rye. Daniel Foster, in 1765, obtained a grant of this township, on condition that each grantee should pay a rent of one ear of Indian corn annually, for the space of ten years, if demanded. Conway is a great resort for travellers from the S. E. to the White Mountains, for whom there are good accommodations. See *Fashionable Resorts*. Settled in 1764, '8 and '9. 76 miles N. N. E. from Concord.

Conwayboro', S. C., c. h. Horry district. On the W. bank of Waccamaw River, at the head of steamboat navigation, and 196 miles E. by S. from Columbia.

Cook County, Is., c. h. Chicago. In the N. E. corner of the state, on Lake Michigan. Calumet, Chicago, and Des Plaines Rivers water this county. Surface undulating, and in parts marshy.

Cook County, Ts. New.

Coolbaugh's, Pa., Monroe co. 138 miles N. E. from Harrisburg.

Cool Spring, Pa., Mercer co. Watered by Cool Spring and Otter Creeks, branches of Neshanock River. W. N. W. from Harrisburg 175 miles.

Cooper County, Mo., c. h. at Booneville. Central. On the S. bank of the Missouri. Watered by La Mine and Little Saline Rivers and Manitou Creek. Surface undulating; soil of excellent quality.

Cooper, Me., Washington co. Denny's River, emptying into Meddybemps Lake, and both discharging into the River St. Croix at Baring, water the N. part of this town. It lies 164 miles E. N. E. from Augusta, and about 36 miles N. from Machias.

Cooperstown, N. Y., c. h. Otsego co. Beautifully located on a plain at the outlet of Otsego Lake. 69 miles W. from Albany. There is here a very fine water power.

Cos County, N. H., c. h. at Lancaster. N. part of the state. Coos is the largest county in N. H., and within its limits are situated most of the ungranted lands. Large portions are mountainous and cannot be cultivated. It is 76 miles in length, and about 20 in width. Besides the stupendous pile of the White Mountains, in this county, there are several other mountains of no inconsiderable height. Three of the principal rivers in New England, the Connecticut, Androscoggin, and Saco, take their rise in this county. Umbagog Lake, the source of the Androscoggin, lies partly in this county, though most of it is in Maine. Lake Connecticut is situated N. of lat. 45°, and is one of the sources of Connecticut River.

Coosa County, Ga., c. h. at Rockford. E. central, between the Tallapoosa and Coosa. Drained by Hatchet, Paint, and Wawakee Creeks, branches of the Coosa. Surface varied; soil productive.

Copake, N. Y., Columbia co. Drained by Ancram Creek, which flows through several small lakes. The E. part of the town is hilly, and on the W. is a broad valley, the soil of which is very fertile. 17 miles S. E. from Hudson, and 47 S. S. E. from Albany.

Copenhagen, N. Y., Lewis co. On Deer River, which, half a mile below this place, has a nearly perpendicular descent of 175 feet. 149 miles N. W. from Albany.

Copiah County, Mi., c. h. at Gallatin. In the S. W. part of the state, on the W. side of Pearl River. Bayou Pierre and the head branches of Homochito River traverse this county.

Copper Harbor, Mn., Houghton co. In lat. 47° 28' and lon. 88° 45', near the extremity of Keewaiwona Point, which projects nearly into the middle of Lake Superior from its southern shore. It is a tolerably safe retreat for small vessels and steamboats, and is of importance on that account, but it is not sufficiently near to the working mines to be supported by any business population. A post office, and a tavern, with a few humble dwellings, is all that this place can boast of. This harbor was well known to the French missionaries 230 years ago, and the green silicate of copper or chrysocola, which formed the outcrop of the black oxide of copper vein, was described by those missionaries in a work published in Paris, in 1626. In 1843, this mine was opened by the Boston and Pittsburg Mining Company, but it was soon exhausted of its ore, the lode having been cut off by a bed of fine-grained red sandstone, as had been predicted it would be by the geologist who first surveyed the mining regions of Keewaiwona Point. The mine was therefore soon after abandoned, and no more black oxide of copper has been found there.

The rocks at Copper Harbor are a coarse conglomerate, a pudding stone, fine red sandstone and trap rocks, mostly of an amygdaloidal structure, the latter skirting the coast, and forming the capes and headlands. Copper Harbor is now distinguished from other places on Keewaiwona Point for the absence of copper, which is so abundant at Eagle River, and Eagle Harbor, 18 or 20 miles to the westward of it.

Corinna, Me., Somerset co. Situated 53 miles W. N. W. from Augusta, and about 35 N. W. from Norridgewock. Incorporated 1816.

Corinth, Me., Penobscot co. 81 miles N. by W. from Augusta. Watered by the Kenduskeag. A fine township.

Corinth, N. Y., Saratoga co. Situated on the W. side of the Hudson River. The surface is rolling; soil sandy. 16 miles N. from Ballston Spa, and 49 N. from Albany.

Corinth, Vt., Orange co. The surface is generally very uneven and broken, and the elevations abrupt; yet the land is, in almost every part, susceptible of cultivation. The soil consists of a dark loam, mixed with some sand. Some minerals are found here. This township is well watered by Wait's River and several of its branches. On North Branch, in the N. E. corner of the town, is East Village, first settled in 1777, by Ezekiel Colby and family. 20 miles S. E. from Montpelier, and 10 N. E. from Chelsea. The Central and Passumpsic Railroads pass near.

Corning, N. Y., Steuben co. An important place on the S. side of Chemung River, 213 miles W. S. W. from Albany. The Erie Railroad passes through this place. A canal connects it with Seneca Lake, and a railroad with Blossburg, in Pa.

Cornish, Me., York co. Bounded N. by the Saco and Great Ossipee Rivers. 83 miles S. W. from Augusta, 32 W. by N. from Portland, and 25 N. from Alfred. Incorporated 1794. Cornish produces good crops of wheat and some wool.

Cornish, N. H., Sullivan co. Connecticut River waters the W. part of this town, and a bridge connects Cornish with Windsor, Vt. The soil is fertile. The town is hilly, except that part which lies on the river. Blow-me-down and Bryant's Brooks are the only streams of any magnitude. First settlers, emigrants from Massachusetts, in 1765. 17 miles N. from Charlestown, and 60 N. W. by W. from Concord. The Sullivan Railroad here connects with a road to Burlington by crossing a bridge to Windsor.

Corn Planter, Pa., Venango co. 217 miles W. N. W. from Harrisburg.

Cornville, Me., Somerset co. This town is well watered by the Wessarauset River, a branch of the Kennebec. There is much choice land in Cornville.

Cornwall, Ct., Litchfield co. This mountainous township lies on the E. side of Housatonic River. The scenery about the south village is very beautiful. The mountains and lofty hills which rise immediately on almost every side, shutting out, in a sense, the most of the world from this apparently retired spot, present a bold and most striking feature in the landscape. This village is the place where a Foreign Mission School for educating youth was established in 1818. 38 miles W. from Hartford.

Cornwall, Vt., Addison co. This is a handsome township of land, and the surface is generally level. Lemonfair River crosses the N. W. corner, and Otter Creek washes a part of the eastern boundary. In the S. part of the town is a quarry of excellent dark blue limestone, and near the centre of the town is a bed of hydraulic cement, or native lime. Beautiful calcareous spar is found in the western part. Along Otter Creek is a large swamp, covering several thousand acres. The settlement was commenced in 1774. Distances, 50 miles S. W. from Montpelier, and 36 S. from Burlington.

Cornwall, N. Y., Orange co. Situated on the W. bank of the Hudson River, 100 miles S. from Albany. The surface of this town, being chiefly within the Highlands, is hilly, and in a great part mountainous, including in its area those well-known summits Bare Mountain, Crow's Nest, and Butter Hill. The physical features of this whole region are highly interesting and romantic. There are several localities in this town of interest in our revolutionary history; such are West Point, and the sites of the old forts Putnam, Clinton, and Montgomery. The two former are situated at West Point, and the latter on an eminence in the S. part of the town, near the Hudson. The landing for Cornwall is at the village bearing the same name, 4 miles S. of Newburg, at the northern termination of the Highlands. See *West Point*.

Corpus Christi, Ts., c. h. Nueces co.

Cortland, N. Y., Westchester co. On the E. side of the Hudson. Watered by Croton River

and several small streams. This town was the theatre of many exciting scenes during the revolutionary war. The surface is hilly, and in parts mountainous; a peak of the Highlands, called the lower "Anthony's Nose," being situated in the N. W. part. 110 miles S. from Albany, and 16 N. W. from White Plains.

Cortland County, N. Y., c. h. at Cortlandville. Central. It was formed from Onondago co. in 1808. Watered by Tioughnioga and Ostelic Rivers, which, with their branches, afford much valuable water power. Surface elevated and hilly, with broad fertile valleys; soil mostly of excellent quality. Iron ore and marl are found in small quantities, and there are two or three sulphur and brine springs.

Cortlandville, N. Y., c. h. Cortland co. Watered by Tioughnioga River, and some of its branches. The surface is undulating; the soil very fertile. 140 miles W. from Albany.

Corunna, Mn., c. h. Shiawassee co. On Shiawassee River, which affords good hydraulic power. N. W. from Detroit 79 miles. Coal, sandstone, and lime are found near this place.

Corydon, Ia., c. h. Harrison co. On the E. bank of Indian Creek, a branch of the Ohio River. 126 miles S. from Indianapolis.

Coshocton County, O., c. h. at Coshocton. E. central. Many mounds and burial-places are found here. The land is uneven, but rich and fertile, and is well watered by Walhonding and Killbuck Rivers, and several creeks. The Ohio Canal crosses the county. Three salt wells are found here, and iron and lead ore, and stone coal.

Coshocton, O., seat of justice of Coshocton co. 30 miles N. from Zanesville, and 83 E. N. E. from Columbus. It is at the junction of the Tuscarawas and Walhonding Rivers, which here unite and form the Muskingum. Steamboats come up here occasionally in high water. The ground on which the town is built rises beautifully from the river, by four natural terraces, each about 9 feet above the other; the first three of which are about 400 feet in width, and the last about 1000. The public square, on which the county buildings are located, is about 60 rods back from the Muskingum, and contains 4 acres, neatly enclosed, and planted with trees. The streets are laid out at right angles with each other, dividing the town plot into 36 blocks, which are more or less built upon. There are four or five churches in the place, one or two printing offices, and several manufacturing establishments. A bridge across the Muskingum connects this place with Roscoe, on the Ohio and Erie Canal, at the point where the Walhonding Canal unites with it.

Cossawago, Pa. A township of Crawford co.

Cotton Gin Port, Mi., Monroe co. On the E. side of the Tombigbee River, just below the junction of the E. and W. branches. 180 miles N. E. from Jackson.

Council Bluffs, Io., on the Missouri River, where the Pottawatomie agency was, is the great crossing-place on the Missouri for emigrants by the northern route for Utah, Oregon, and California. Council Bluffs Indian sub-agency is on the opposite side of the river. Fort Calhoun, often designated on maps as Council Bluffs, was situated 28 miles above, on the Nebraska side. The route by Council Bluffs is destined by nature for the great thoroughfare to the Pacific. This

was the road selected by "nature's civil engineers," the buffalo and the elk, for their western travel. The Indians followed them in the same trail; then the traders; next the settlers came. The estimation in which this route is held may well be judged by any one who will take the trouble to look over the volume of recommendations from emigrants, traders, and Indian agents.

Coventry, Ct., Tolland co. The Wangombog, a beautiful pond, and the Skungamug, Hop, and Willimantic Rivers, give Coventry a good water power. This town was first settled in 1700. The surface is uneven, and the soil a gravelly loam. 18 miles E. from Hartford.

Coventry, N. Y., Chenango co. Drained by Harper's and Kelsey's Creeks, branches of the Susquehanna River. The surface is hilly; soil sandy loam, suitable for the growth of grass. 16 miles S. from Norwich, and 117 S. W. from Albany.

Coventry, Pa., Chester co. On the Tioga River. Surface hilly, abounding with coal and iron; soil clay and gravelly loam.

Coventry, R. I., Kent co. This is a very large township, extending to the N. line of Connecticut, and admirably watered by numerous ponds, and by Flat River, an important branch of the Pawtucket. Coventry has long been noted for the number and variety of its manufactures, particularly of cotton and wool. The soil of the town is well adapted to agricultural pursuits. There are a number of pleasant villages in Coventry, all of which are flourishing, both in manufacturing and trade. 10 miles S. W. from Providence.

Coventry, Vt., Orleans co. Barton and Black Rivers run northerly through this town into Memphremagog Lake. There are good mill privileges in this town on Black River, and likewise on some of the smaller streams. The other waters are the S. bay of Lake Memphremagog, and two small ponds. The soil is generally good. Its timber is mostly maple and beech. The western part of the town is somewhat broken, but not mountainous. The village is situated at the falls in Black River, in the S. W. part of the town, and is in a flourishing state. The first settlement commenced about the year 1800. 4 miles N. from Irasburg, and 46 N. E. from Montpelier.

Covert, N. Y., Seneca co. On the W. side of Seneca Lake, and watered by several small streams flowing into the lake. The surface is high and level; the soil fertile. 177 miles W. from Albany.

Covington County, Ala., c. h. at Montezuma. On the S. border. Watered by Conecuh, Yellow Water, and Pea Rivers. Soil rather sterile.

Covington, Ga., c. h. Newton co. About 3 miles E. from Yellow River, a branch of Ockmulgee River, and 61 miles N. W. from Milledgeville. The site of Emory College. See *Colleges*.

Covington, Ia., c. h. Fountain co. On the E. bank of the Wabash. 74 miles W. N. W. from Indianapolis.

Covington, Ky., City, Kenton co. Situated on the S. bank of the Ohio, at the mouth of Licking River, directly opposite Cincinnati. 85 miles S. E. from Frankfort. It is built upon a beautiful plain, several miles in extent, and the streets are so laid out as to correspond with those of Cincinnati, and appear a continuation of them, with only the river interposed. Many persons doing business in Cincinnati are induced, by the facil-

ties of crossing the river by steam ferry boats, which is here about 600 yards wide, to make their residence in Covington; and this tendency will doubtless much increase hereafter with the growth of Cincinnati, and the greater difficulty and expense of obtaining residences near the centre of business. It has, moreover, a large business of its own, consisting of various manufacturing establishments, and large operations in pork.

The principal public buildings of Covington are a spacious City Hall, two female academies, the Western Baptist Theological Seminary, and several handsome church edifices. The Methodists and Roman Catholics have each two churches here; and the Presbyterians, Baptists, Episcopalians, and the Reformed, or Christian Baptists, one each. The Theological Seminary is a well-endowed institution, and is now in a flourishing condition. It is under the patronage of the Western Baptist Education Society. The buildings are pleasantly located in the centre of a square containing 10 acres, upon elevated ground, overlooking Cincinnati and the surrounding villages. When the plan of construction is fully carried out, there will be two theological buildings, like the one which is now erected, 120 feet long by 46 feet deep, four stories high, with a large and elegant chapel between them. Covington is rapidly increasing, and is destined, probably, to be the largest city in Kentucky. Population in 1840, 2026; in 1850, about 10,000. Newport, with 7000 inhabitants, adjoins it on the opposite side of the Licking, making in fact one town.

Covington, La., c. h. St. Tammany parish. On a small river which flows into Lake Pontchartrain. 45 miles N. from New Orleans.

Covington County, Mi., c. h. at Williamsburg. S. central. Watered by branches of Leaf, a tributary of the Pascagoula River. Soil mostly of indifferent quality.

Covington, N. Y., Wyoming co. Watered by Allen's Creek. The surface is rolling, the soil fertile. 241 miles W. from Albany.

Covington, Pa., Luzerne co. The Lehigh River forms the S. E. and S. boundary of this town.

Covington, Va., c. h. Alleghany co. Among the mountains, on Jackson's River, near the junction of Pott's Creek. 196 miles W. from Richmond.

Cowdensport, Pa., c. h. Potter co.

Coveta County, Ga., c. h. at Newman. W. central. Between the head waters of Flint River and the Chattahoochee.

Cowpens, S. C., Spartanburg district. This place, which lies between Pacolet and Broad Rivers, is famous for the battle of Cowpens, which was fought in its vicinity, January 11, 1781. 117 miles N. W. from Columbia.

Cosackie, N. Y., Greene co. On the W. bank of the Hudson River, and watered by several small streams. The surface of the E. part is level, and the W. hilly. 22 miles S. from Albany.

Craftsbury, Vt., Orleans co. This township is well watered by Black River, which is formed here, and by its several branches, which afford numerous mill privileges. The Indian name of this river was Elligogigo. Wild Branch passes through the W. part of this township. There are five natural ponds, viz., Elligo, Great Hosmer, Little Hosmer, and two smaller ponds. The geology of this town is in many respects interesting, and, in some, peculiar. Few areas of the same space, in a region of primary rocks, furnish

so many varieties *in situ*. Near the centre of the township, on an elevated plain, is situated the centre village. Craftsbury Academy is located here. The first settlement was commenced in the summer of 1788, by Colonel Ebenezer Crafts. 12 miles S. from Irasburg, and 31 N. E. from Montpelier.

Cranberry, Pa., Butler co. Glade Run, and Breakneck, and Brush Creeks water this town. Surface undulating; soil clay and loam.

Cranberry, Pa., Venango co. Bounded on the N. and W. by the Alleghany River. 207 miles W. N. W. from Harrisburg.

Cranston, R. I., Providence co. The soil of this town is more favorable for the production of fruits and vegetables than for grain. Some parts of the town are very fertile, but considerable of the land is rough and uneven. Providence market is supplied with a considerable amount of the products of the town. The water power of the Pawtuxet and Powchasset is constant and abundant. Cranston is a very pleasant town, and its proximity to Providence (only 5 miles S. W.) gives it peculiar privileges.

Craven County, N. C., c. h. at New Berne. E. middle. On Pamlico Sound. Neuse River traverses this county, the surface of which is level and in parts marshy, and the soil mostly fertile.

Crawford, Aa., c. h. Russell co.

Crawford County, As., c. h. at Van Buren. On the W. border. On both sides of the Arkansas. Surface diversified.

Crawford County, Ga., c. h. at Knoxville. W. central. Flint River and a branch of the Ockmulgee water this county. Soil sandy and rather sterile.

Crawford County, Is., c. h. at Palestine. On the E. border, on the Wabash River. Watered by the Wabash and Embarrass Rivers and their branches. The surface consists partly of rich prairies.

Crawford County, Ia., c. h. at Fredonia. S. part. Touches the Ohio River. Watered on the S. E. by Blue River. Surface rough and hilly.

Crawford, Me., Washington co. Incorporated 1828. This is a good township of land, and was formerly called Adams. A large pond in Crawford and a part of another are the sources of a branch of East Machias River. 30 miles N. from Machias, and 140 E. N. E. from Augusta.

Crawford County, Mo., c. h. at Steelville. S. E. central. The head branches of Maramec River water this county. Surface diversified and abounding with iron ore; soil various. A spring, discharging 30,000 cubic feet of water per minute, propels the Maramec iron works.

Crawford, N. Y., Orange co. Watered by Shawangunk River. The surface is hilly; soil clay and sandy loam. 18 miles W. from Newburg, and 94 S. S. W. from Albany.

Crawford County, O., c. h. at Bucyrus. N. central. Watered by Sandusky River, Broken Sword and Tymochtee Creeks.

Crawford County, Pa., c. h. at Meadville. In the N. W. corner, bordering on Ohio. Watered by Shenango and French Creeks and their branches. Iron ore is found in this county, and a creek affording bituminous oil.

Crawford County, Wn., c. h. at Prairie du Chien. In the N. angle between the Wisconsin and the Mississippi. The rivers afford excellent water power. Surface hilly; soil fertile along the borders of the streams.

Crawfordsville, Ga., c. h. Talliaferro co., lies between Ogeechee and Little Rivers. 62 miles N. by E. from Milledgeville.

Crawfordville, Ia., c. h. Montgomery co. On the S. side of Sugar Creek, and is the seat of Wabash College. (See *Colleges*.) 45 miles N. W. by W. from Indianapolis.

Creek, Pa. A township of Washington co. *Crittenden County, As.*, c. h. at Marion. On the E. border, between the Mississippi and the St. Francis. Surface level, and in parts liable to inundation. Soil very fertile in the more elevated portions.

Crittenden County, Ky., c. h. at Salem. W. part. On the Ohio River. The Cumberland River forms its S. W. boundary. Surface level; soil productive.

Croghan, N. Y., Lewis co. Surface hilly and mountainous; soil fertile in the valleys. 141 miles N. W. from Albany.

Cromwell, Pa. A township of Huntington co.

Cromwell, Ct., Middlesex co. On the W. side of Connecticut River, 13 miles S. from Hartford. A new town, which embraces that part of Middletown formerly known as Upper Middletown. It contains a handsome village, lying on an elevated site from which there is a lovely view of the river and the surrounding fertile country.

Crown Point, Ia., c. h. Lake co. On Robinson's Prairie, 15 miles S. from Lake Michigan, and 158 miles N. N. W. from Indianapolis.

Crown Point, N. Y., Essex co. On the W. border of Lake Champlain. Watered by Putnam's Creek, and some other small streams. The surface is level on the E., and mountainous on the W. This town was the scene of important events during the French and revolutionary wars. On a neck of land, in the N. E. part of the town, are situated the ruins of the fort of Crown Point. 105 miles N. N. E. from Albany.

Croydon, N. H., Sullivan co. The N. branch of Sugar River waters this town. The soil is moist and rocky, and produces valuable crops. Croydon Mountain is of considerable elevation, on which are two small ponds. First settlers, Samuel Chase and others, in 1763. 44 miles N. N. W. from Concord, and 8 N. from Newport.

Cuba, N. Y., Alleghany co. Watered by Oil Creek, and contains a small lake. Near the W. boundary is located the Oil Spring Reservation. Surface high and undulating on the E.; soil mostly productive. The Genesee Valley Canal and New York and Erie Railroad cross this town. 12 miles S. W. from Angelica, and 274 from Albany.

Culloma, Ca., c. h. El Dorado co. On the S. fork of the American River, 45 miles from Sacramento city, in the immediate vicinity of the spot where gold was first discovered.

Culpepper County, Va., c. h. at Fairfax. N. part. On the upper waters of the Rappahannock. Surface agreeably diversified, and soil rich.

Culpepper, Va., c. h. Culpepper co. 98 miles N. N. W. from Richmond.

Cumberland County, Is., c. h. at Greenup. Eastern part. Watered by the branches of the Embarrass, a tributary of the Wabash.

Cumberland Co., Ky., c. h. at Burkesville. On the southern border. On both sides of Cumberland River. Surface uneven; soil fertile.

Cumberland County, Me., c. h. at Portland. In the S. W. part of the state, between Casco Bay on the S. E. and the River Kennebec on the N. E. Fertile, and under good cultivation. Several railroads pass through it.

Cumberland, Me., Cumberland co. Set off from the westerly part of Yarmouth in 1821. 54 miles S. W. from Augusta, and 10 N. from Portland. Cumberland is pleasantly situated on Casco Bay, and enjoys many navigable facilities.

Cumberland, Md., c. h. Alleghany co. On the N. bank of the Potomac River, at the junction of Wills Creek, and 166 miles W. N. W. from Annapolis. The Cumberland or national road, and the Baltimore and Ohio Railroad pass through it, and the Chesapeake and Ohio Canal terminates here. Coal abounds in the neighborhood, and is largely exported down the Potomac.

Cumberland County, N. C., c. h. at Fayetteville. S. E. central. On both sides of Cape Fear River. Surface undulating, and watered by the Cape Fear River and branches; soil light and thin.

Cumberland County, N. J., c. h. at Bridgetown. S. part. On Delaware Bay. Drained by Maurice and Tuckahoe Rivers, and Stow and Cohansey Creeks. A salt marsh of from half a mile to a mile in width borders on Delaware Bay. Soil rather light, but fertile in parts. Iron ore and marl are found in this county.

Cumberland County, Pa., c. h. at Carlisle. S. E. central. Watered by Conedogwinet and Yellow Breeches Creeks, branches of the Susquehanna River. Surface somewhat hilly; soil very rich. Iron ore is found here.

Cumberland, Pa., Adams co. Between Marsh and Rock Creeks, and drained by Bear and Willoughby Runs.

Cumberland, Pa., Green co. Watered by Muddy Creek, a branch of the Monongahela River. Surface level; soil loamy. 11 miles E. from Waynesburg.

Cumberland Valley, Pa., Bedford co. Between Evits and Will's Mountains, and watered by Evits Creek.

Cumberland, R. I., Providence co. Pawtucket, Mill, and Peter's Rivers, and Abbot's Run, afford the town a good hydraulic power. 8 miles from Providence.

Cumberland County, Va., c. h. at Cumberland. E. central. Between the Appomattox and James Rivers. Surface somewhat hilly, and drained by Willis River; soil fertile.

Cumberland, Va., c. h. Cumberland co. On an elevated position between Appomattox and Willis Rivers. 52 miles W. by S. from Richmond.

Cunning, Ga., c. h. Forsyth co. 9 miles W. from Chattahoochee River, and 109 N. W. from Milledgeville.

Cummings, Pa. Township, Lycoming co. 111 miles N. from Harrisburg.

Cumington, Ms., Hampshire co. On the range of the Green Mountains, but with a strong and productive soil. Westfield River passes through it, receiving many tributaries, which, with the main river, afford much water power. 110 miles W. from Boston.

Currituck County, N. C., c. h. at Currituck. On the N. E. shore. This county comprises Roanoke Island, and is divided into two parts by Currituck Sound. Surface level, and in parts marshy.

Currituck, N. C., c. h. Currituck co. On the W. side of Currituck Sound. 242 miles E. N. E. from Raleigh.

Cushing, Me., Lincoln co. Situated on St. George's River, opposite to the town of St. George. 45 miles N. E. from Augusta, and about 12 miles S. from Warren. This place was settled by emigrants from Ireland, as early as 1733.

Cussawago, Pa., Crawford co. 246 miles N. W. by W. from Harrisburg.

Cuthbert, Ga., c. h. Randolph co. 159 miles S. W. from Milledgeville.

Cutler, Me., Washington co. Bounded S. by the Atlantic Ocean, and about 20 miles S. W. from West Quoddy Head. It contains Little Machias Bay and Little River, and is bounded W. by Machias Bay. Cutler has a good harbor. 164 miles E. by N. from Augusta.

Cuyahoga Falls, O., Summit co. So named from the falls in the Cuyahoga River, on which the place is situated, being about 40 miles S. of Cleveland, and 128 N. E. from Columbus. This place was laid out in 1837, and had so rapid a growth that in 1840 it was the rival of Akron for the county seat, from which it is 4 miles distant. The Pennsylvania and Ohio Canal passes through this place, and enters the Ohio Canal at Akron. The falls afford an excellent water power, which is already employed to operate several large paper mills, flour mills, and other manufactories; and is available for further application to a large extent.

The falls themselves present many wild and romantic features for the admiration of the lovers of nature. The Cuyahoga has a descent here, in the course of a little more than 2 miles, of about 200 feet, over stratified rocks, which, for a portion of the distance, are worn away, or were originally separated by some convulsion of nature, into a chasm of nearly that depth. The ravine thus formed, with the rapids and cascades of the river passing through it, exhibits many points of bold and picturesque scenery. The Indian name for these falls was *Coppacaw*, which signifies, it is said, *shedding tears*.

Cuyahoga County, O., c. h. Cleveland. N. E. part on the shore of Lake Erie. The Cuyahoga, Rocky, and Chagrin Rivers are the principal ones, and they all run northwardly into Lake Erie. The county takes its name from the principal river.

Cynthiana, Ky., c. h. Harrison co. On the E. side of the S. fork of Licking River. 37 miles N. E. from Frankfort.

Dade County, Fla., c. h. at Key Biscayne. Bounded N. by Lake Okeechobee, E. by St. Lucie county, S. E. and S. by the Atlantic Ocean, and W. by Monroe county. This county comprises several keys, or islands, lying off its coast; and in the N. part is a tract of land called the Everglades, covered with water from one to six feet deep, and dotted with fertile islands and cypress swamps. The Everglades were a celebrated retreat of the Seminole Indians during the Florida war. Soil fertile in parts, and especially along the sea-coast.

Dade County, Ga., c. h. at Trenton. Bounded N. by Tennessee, E. and S. by Walker co., and W. by Alabama. Lookout Creek, a branch of the Tennessee River, waters it. Surface mountainous; soil fertile in the valleys.

Dade County, Mo., c. h. at Greenfield. Bounded N. by Cedar co., E. by Polk and Green counties, S. by Lawrence, and W. by Jasper

co. Watered by Pomme de Terre River and its tributaries. Surface slightly uneven; soil fertile.

Dadeville, Aa., c. h. Tallapoosa co. 6 miles E. from Tallapoosa River, 37 miles N. E. from Wetumpka, and 140 E. S. E. from Tuscaloosa.

Dahkotah County, Ma., c. h. at Fort Snelling. In the angle between the Minnesota and Mississippi.

Dahlonega, Ga., c. h. Lumpkin co. Between Chestatee and Etowah Rivers. 140 miles N. N. W. from Milledgeville. The site of a branch mint.

Dale County, Aa., c. h. at Daleville. Bounded N. by Pike, E. by Henry co., S. by Florida, and W. by Coffee co. Watered by tributaries of the Choctawhatchee River. Surface mostly level; and soil sterile, with the exception of some fertile swamps bordering the river.

Dallas County, Aa., c. h. at Cahaba. Bounded N. by Perry co., E. by Autauga and Lowndes counties, S. by Wilcox, and W. by Marengo co. Watered by the Alabama and Cahaba Rivers, which form a junction in this county. Surface slightly uneven; soil rich on the borders of the streams.

Dallas County, As., c. h. at Princeton. S. central. Between the Wachita and its Sabine Fork.

Dallas County, Io., c. h. at Adell. S. central part.

Dallas County, Mo., c. h. at Buffalo. S. W. central. Watered by the Mianqua, (a tributary of the Osage,) which flows N. through it.

Dallas, Pa., Luzerne co. Watered by Harvey's Lake, lying in this town, and by its outlet, and some other streams, affording hydraulic power. Surface broken and mountainous; soil slate, gravel, and loam. 133 miles N. E. from Harrisburg.

Dallas County, Ts., c. h. at Dallas. In the N. E. angle, on the upper waters of the Sabine.

Dallas, Me., Franklin co. New.

Dalton, Ms., Berkshire co. Dalton began to be settled about the year 1755. It is a good grazing, mountain town, finely watered by the Housatonic River. The village in the centre of the town is curiously and very pleasantly situated. It is in the valley of the Housatonic, and encircled on three sides by that beautiful stream. The Western Railroad passes through it. 5 miles E. from Pittsfield, and 146 W. from Boston.

Dalton, N. H., Coos co. On Connecticut River. The Great or Fifteen Mile Falls commence in Dalton, and rush tumultuously along its N. W. boundary. The town is also watered by John's River and several large brooks. The western and southern parts are hilly. On the borders of John's River the white pine abounds. The soil on the highlands is good, and well adapted to grazing. Blake's Pond lies at the S. E. corner; it was named for a famous hunter. Near Slate Hill is a mineral spring; it deposits a thin crust of iron ore. This town was named from Hon. Tristram Dalton, a grantee. First settlers, Moses Blake and Walter Blass. 125 miles N. by W. from Concord, and 8 S. by W. from Lancaster.

Damariscotta, Me., Lincoln co. On the outlet of Damariscotta Pond, formed in 1847 from parts of Bristol and Nobleboro'. 30 miles S. E. from Augusta.

Damascus, Pa., Wayne co. On the W. bank of the Delaware River. 190 miles N. N. E. from Harrisburg.

Dana, Ms., Worcester co. This is a small town, taken from Greenwich, Hardwick, and Petersham, in 1801. There is some good land in the town, but much of it is fit only for pasturage. Swift River and one of its tributaries, Fever Branch, pass through its northern and western section. 30 miles N. W. from Worcester, and 70 W. by N. from Boston.

Danbury, Ct., Fairfield co. Danbury, the *Pahquoque* of the Indians, is one of the shire towns, and was first settled in 1684. The soil of the town is good, and agreeably diversified by hills and valleys. The borough, or village, is very pleasantly situated in a valley, and is memorable for its sacrifices in the revolutionary war. It was nearly destroyed by the British, with a large amount of continental stores, April, 1777.

Danbury, N. H., Grafton co. Danbury lies in the form of a diamond; it is hilly, although there are some intervals. In the N. E. part there is a large hill. The eastern section is watered by Smith's River. The first settlement was made in 1771. 16 miles S. by W. from Plymouth, and 29 N. from Concord, by railroad. The Northern Railroad passes through the town.

Danby, N. Y., Tompkins co. Watered by Cattotog Creek and its branches. The surface is hilly; soil gravelly loam. 8 miles S. from Ithaca, and 172 S. of W. from Albany.

Danby, Vt., Rutland co. Otter Creek runs nearly on the line between this township and Mount Tabor, but there are no streams of much consequence within the township. The most considerable are Mill River and Flower Branch. These and a branch of Otter Creek, in the north-eastern part, are all sufficient for mills. The surface is uneven, and some parts mountainous. South and Spruce Mountains are the principal elevations. The soil is well adapted to the production of grass. There are several caverns in this township; also several marble quarries in the S. E. part, and specimens of galena have been found. In the western part of the township is a spring, nearly sufficient to carry a mill where it issues from the foot of the mountain. The settlement was commenced in 1765. Distances, 17 miles S. from Rutland, and 68 S. S. W. from Montpelier.

Dandridge, Te., c. h. Jefferson co. On the N. bank of French Broad River. 229 miles E. from Nashville.

Dane County, Wn., c. h. at Madison. Bounded N. by Sauk and Portage counties, E. by Dodge and Jefferson, S. by Rock and Green, and W. by Iowa co. Watered by the Four Lakes, fine sheets of water, and by their outlets. Surface level; soil very productive.

Danielsville, Ga., c. h. Madison co. 91 miles N. from Milledgeville.

Dansville, N. Y., Livingston co. On Canaseraga Creek. 238 miles W. from Albany. There is a fall here of 60 feet in a mile and a half. Connected with the Genesee Valley Canal by a branch which has its terminus here.

Dansville, N. Y., Steuben co. Watered by Canaseraga Creek, and some tributaries of Canisteo River. The surface is somewhat uneven; the soil clay and gravelly loam. 20 miles N. W. from Bath, and 234 W. from Albany.

Danube, N. Y., Herkimer co. Watered by No-wadaga Creek, a branch of the Mohawk River, which bounds it on the N. The surface is undulating, and the soil very fertile in the valley of

the Mohawk. 12 miles E. from Herkimer, and 70 N. W. from Albany.

Danvers, Ms., Essex co. This ancient town adjoins Salem on the N. W., and was formerly a part of it. It was incorporated in 1756. There are 3 villages here — South Danvers, one at the New Mills, and another at the Plains. This town is well watered by Ipswich River and the sea, and possesses a good water power, both salt and fresh. The town presents a varied surface, and from the high grounds are obtained some of the most picturesque views of sea and shore to be found in Massachusetts Bay. Danvers is abundantly supplied with fine sienite, clay, and never-failing springs of soft and pure water. It was in the family of Mr. Parris, of this place, that witchcraft first made its appearance in this country, in 1692. South Danvers is 2 miles from Salem, and 14 N. E. from Boston. Danvers is very largely concerned in the production of leather, boots, and shoes, the annual product exceeding two millions of dollars. There are also manufactures of iron, wool, &c.

Danville, As., c. h. Yell co.

Danville, Is., c. h. Vermilion co., occupies an elevated position on the N. side of Vermilion River, near the junction of the N. fork. 130 miles E. by N. from Springfield.

Danville, Ia., c. h. Hendricks co. On the W. side of White Lick Creek. 20 miles W. from Indianapolis.

Danville, Ky., Boyle co. The seat of Centre College and of the Kentucky Asylum for the Deaf and Dumb. On a small branch of Dick's River. 41 miles S. by W. from Frankfort. See *Colleges*.

Danville, Me., Cumberland co. This town, formerly called *Pejepasco*, was set off from the W. part of Yarmouth in 1802. It lies 32 miles S. W. from Augusta, and 29 N. from Portland. Farming is the principal business.

Danville, Mo., c. h. Montgomery co. 47 miles N. E. from Jefferson City.

Danville, N. H., Rockingham co. This town was formerly a part of Kingston, and known by the name of Hawke. The soil is uneven, but good. Achnusnut River passes over the N. W. corner. Long Pond lies in the E. part, and Cub Pond on the W. side. 33 miles S. E. from Concord, and 10 S. W. from Exeter.

Danville, O., Knox co. 65 miles N. E. from Columbus. In the midst of a fine agricultural country.

Danville, Pa., c. h. Montour co.

Danville, Vt., c. h. Caledonia co. The eastern part of this township is elevated about 200, and the western about 800 feet above Connecticut River. The soil is free from stone, easily cultivated, and is perhaps equal, in richness and adaptation to agriculture, to any in the state. It is watered by numerous streams of pure water, which rise in the higher lands of Wheelock, Walden, and Cabot. Joe's Pond lies mostly in the western part of the township, and covers about 1000 acres. It discharges its waters into the Passumpsic by Merrill's River. At its outlet, a large, never-failing sheet of water falls over a limestone ledge, 75 feet in 12 rods. In the N. part of the town are Sleeper's River and the Branch. Danville village is pleasantly situated, nearly in the centre of the township, on elevated land, in the midst of a beautiful farming country. Phillips Academy was incorporated in 1840, and named

in honor of Paul D. Philips, who endowed it with \$4000. In 1785, or '6, the settlement was commenced by about 50 emigrants from N. H. and Ms., who entered on the land as "squatters." 30 miles N. E. from Montpelier.

Danville, Va., Pittsylvania co. On Dan River, which affords good water power. S. W. by W. from Richmond, 164 miles. The river is navigable, for boats, to the falls of the Roanoke. Danville is the centre of a lucrative trade.

Darby, Pa., Delaware co. On Darby Creek, and is divided into two parts, the Upper and Lower. 95 miles E. S. E. from Harrisburg.

Darien, Ct., Fairfield co. A township of good soil. 42 miles S. W. from New Haven.

Darien, Ga., c. h. McIntosh co. Situated on the northern and principal channel of the Altamaha River, 12 miles above the bar, at its entrance into Altamaha Sound, on the Atlantic coast. The bar has 14 feet of water at low tide. The place is situated on a high, sandy bluff, on the N. side of the channel. Upon the Oconee branch of the river there is steamboat navigation 185 miles, to Milledgeville, the capital of the state; and upon the Ockmulgee branch to Macon; thus bringing a considerable trade from the central portions of the state to the port of Darien. The population and business of the place have much increased since 1810, when there were only about 200 inhabitants. It has a custom house, a bank, an academy, besides the county buildings, churches, and many handsome private residences.

Darien, N. Y., Genesee co. Hilly. Drained by Ellicott's Creek. The soil consists of clay and calcareous loam. 256 miles W. from Albany.

Darke County, O., c. h. Greenville. Situated in the western part of the state, having Mercer co. on the N., Shelby and Miami on the E., Preble on the S., and the boundary between Ohio and Indiana on the W. It is 34 by 21 miles in extent. There is in this county a considerable proportion of prairie land. The principal streams which drain it are Stillwater and Greenville Creeks.

Near the N. E. corner of this county is the battle ground where the army under St. Clair, in 1791, suffered a disastrous defeat in an engagement with the Indians. The object of the campaign was the establishment of a line of military posts through that country, for the purpose of keeping the Indians in check, and preventing future hostilities. Fort Recovery was erected by General Wayne, in 1793, upon the site of this battle, and this fort, the next year, sustained a desperate attack from the Indians, in which they were repulsed with severe loss.

Greenville, the present county seat, is also a place of much note in the history of the negotiations with the Indians which followed these events. Here, on the 3d of August, 1795, General Wayne concluded a treaty of peace with the chiefs and representatives of 12 of their most powerful tribes, who had become determined, notwithstanding the untoward influence of the British agents, to make a permanent peace with the "Thirteen Fires," as they called the thirteen federal states. This was also the theatre of another treaty with the Indians in 1814, which was negotiated on the same spot of ground, with the Wyandots, Delawares, Shawnees, Senecas, and Miamies, by General William Henry Harrison and Governor Lewis Cass, commissioners of the United States.

Darlington District, S. C., c. h. at Darlington. Bounded N. E. by the Great Pedee River, separating it from Marlboro' co., S. E. by Marion co., S. W. by Lynches Creek, separating it from Sumpter co., and N. W. by Chesterfield co. Surface slightly uneven; soil rather poor, except on the borders of the streams, where it is very productive.

Darlington, S. C., c. h. Darlington district. Situated a little W. of Black Creek, a branch of Great Pedee River, and 129 miles E. S. E. from Columbia.

Darttown, O., Butler co. 109 miles S. W. by W. from Columbia. In the neighborhood of this place is a mineral spring of some note.

Dartmouth, Ms., Bristol co. Dartmouth lies on Buzzard's Bay, near its mouth, and has a number of small inlets from the bay and some good harbors. It has some small streams, the principal of which is the Pamansat. Its Indian name was Apeniganset. The surface is uneven, but the soil is good for agricultural purposes. There are three villages in the town — Smith's Mills, North Dartmouth, and South Dartmouth; the latter is called Padan Aram, and is situated at the head of Apeniganset Bay. Vast quantities of fish, principally menhaden, are taken in Buzzard's Bay, and brought to this town, for the purpose of manuring the land. 5 miles S. W. from New Bedford, and 60 from Boston.

Dauphin County, Pa., c. h. at Harrisburg. Bounded N. by Northumberland and Schuylker counties, E. by Lebanon, S. by York, and W. by the Susquehanna River, separating it from Perry co. Drained by Mahantango, Powell's, and Swatara Creeks. Surface hilly and mountainous; soil fertile. The Pennsylvania Canal and the Union Canal traverse this county.

Davenport, Io., c. h. Scott co. On the W. side of the Mississippi River, at the foot of the Lower Rapids, opposite the flourishing village of Rock Island, in Ia. Important as the only feasible point to bridge the Mississippi. It is the seat of Iowa College.

Davenport, N. Y., Delaware co. Charlotte River, and some of its tributaries, water this town. The surface is hilly; soil argillaceous loam. 14 miles N. from Delhi, and 63 W. from Albany.

Davidson County, N. C., c. h. at Lexington. Bounded N. by Stokes county, E. by Guilford and Randolph, S. by Montgomery and Rowan, and W. by Rowan and Davie counties. Drained by several small streams flowing into the Yadkin River, which traverses the W. part of this county. Surface undulating; soil productive.

Davidson College, N. C., Mecklenburg co. The seat of Davidson College. 150 miles W. by S. from Raleigh. See *Colleges*.

Davidson County, Te., c. h. at Nashville. Bounded N. by Robertson co., E. by Sumner and Wilson, S. by Rutherford and Williamson, and W. by Dickson co. Watered by Cumberland River, which passes through the county from E. to W., and by Harpeth, White's, Stone's, and Poplar Creeks. Surface slightly uneven; soil of good quality.

Davie County, N. C., c. h. at Mocksville. Bounded N. by Surry co., E. by the Yadkin River, separating it from Davidson co., S. by Rowan co., and W. by Iredell co. Surface undulating, and drained by the branches of the Yadkin River; soil extremely fertile.

Davies County, Ia., c. h. at Washington. Incorporated in 1816. Bounded N. by Green co.,

E. by Martin, and S. and W. by the two forks of White River, separating it from Dubois, Pike, and Knox counties. Drained by the tributaries of White River. Surface level or undulating, consisting partly of prairies; soil mostly fertile.

Daviess County, Ky., c. h. at Owenboro'. Bounded N. by the Ohio River, separating it from Ia., E. by Hancock and Ohio counties, and S. and W. by Green River, separating it from Muhlenburg, Madison, and Henderson counties. Drained by small branches of Ohio and Greene Rivers.

Daviess County, Mo., c. h. at Gallatin. Bounded N. by Harrison co., E. by Grundy and Livingston, S. by Caldwell, and W. by De Kalb and Gentry counties. Surface undulating, and watered by the W. fork of Grand River; soil fertile.

Davis County, Io., c. h. at Bloomfield. On the southern border, E.

Day, N. Y., Saratoga co. Sacandaga River passes through this town. The surface is mountainous, the Kayaderasseras range extending across it. The valley of the Sacandaga contains the most fertile soil. 55 miles N. from Albany, and 25 N. W. from Ballston Spa.

Dayton, N. Y., Cattaraugus co. Watered by Connewango Creek and some of its tributaries. The surface is undulating; the soil favorable to the growth of grass and grain. 302 miles W. from Albany, and 20 N. W. from Ellicottville.

Dayton, O. City and seat of justice of Montgomery co. On the Great Miami River, at the mouth of Mad River, 50 miles N. from Cincinnati, and 68 W. by S. from Columbus. The Miami Canal from Cincinnati to Lake Erie passes through this place. Population in 1810, 383; 1820, 1139; 1830, 2954; 1840, 6067; 1850, 10,996. Dayton is one of the largest places in the interior of the state. There is a large water power within its corporate limits, and a still greater within the immediate vicinity. The principal manufactures in operation here are cotton and woollen factories, flouring mills, saw mills, oil mills, paper mills, iron founderies, and machine shops, and shops for the manufacture of clocks, scythes, gun barrels, flooring machines, &c. The amount of capital invested in these various operations is large. By the assessment of 1846, Dayton was the second city in the state in the amount of taxable property. Its progress was very gradual from its settlement in 1796 to 1812, when the war with Great Britain, making it a thoroughfare for troops and military stores on their way to the frontier, gave a great impulse to its prosperity. The construction of the Miami Canal has secured to it, of late years, a rapid and healthful increase.

The court house in Dayton is the most costly and elegant in Ohio, being constructed of cut stone, upon a beautiful Grecian model, surmounted by a handsome cupola. It cost between \$60,000 and \$70,000. The other public buildings are a jail, of stone, a city hall, two academies, several banks, and a number of church edifices, which are elegant specimens of architecture. Many of the private residences are tasteful, and beautifully situated. The Cooper Female Academy has a spacious edifice, three stories high, for its accommodation. There are nine turnpike roads centering at Dayton, and connecting it with different parts of the country.

Deanfield, Me., Hancock co. Between Passadumkeag River and Olammon Stream.

Dearborn County, Ia., c. h. at Lawrenceville.

Incorporated in 1802. Bounded N. by Franklin co., E. by Ohio., S. by Ohio co., and W. by Ripley county. It is watered by Great Miami and Whitewater Rivers, and several small creeks. Surface rough and hilly, with fertile bottom lands on the borders of the streams.

Dearbornville, Mn., Dearborn, Wayne co. On the S. branch of Rouge River. 10 miles W. from Detroit. A United States arsenal is located here.

Delbois, Me., Washington co. On the upper waters of the Narraguagus. 50 miles S. E. from Bangor.

Decatur County, Ga., c. h. at Bainbridge. Watered by the Chattahoochee River, separating it from Fa. and Aa., on the W. Surface somewhat uneven; soil rather barren.

Decatur, Ga., c. h. De Kalb co. 90 miles N. W. from Milledgeville. Situation elevated and healthy. It is the point of junction of the lines of railroad from Augusta, and from Savannah, via Macon, and the united line which runs across the northern boundary of the state by Chattanooga to Nashville, in Te.

Decatur County, Ia., c. h. at Greensburg. Incorporated 1821. Bounded N. by Rush co., E. by Franklin, S. by Ripley and Jennings, and W. by Bartholomew and Shelby counties. It is watered by Flat Rock, Clifty, and Sand Creeks, all mill streams. Surface slightly undulating; soil productive.

Decatur, Ia., c. h. Adams co. On the S. W. side of Wabash River. 132 miles N. E. from Indianapolis.

Decatur County, Io., c. h. at Decatur. On the southern border, middle.

Decatur, Mi., c. h. Newton co. At the head of Chickasawha River. 76 miles from Jackson.

Decatur, N. Y., Otsego co. Elk Creek and some other small streams water this town. The surface is elevated and hilly; soil sandy loam. 64 miles W. from Albany, and 12 S. E. from Cooperstown.

Decatur, Pa., Mifflin co. Watered by Jack's Creek, a tributary of the Juniata River. Surface mountainous; soil gravel and slate. 14 miles N. E. from Lewistown.

Decatur County, Te. New. Western part of the state.

Dedham, Me., Hancock co., adjoins Ellsworth. Union River passes through its N. W. corner.

Dedham, Ms., Norfolk co. This is the shire town of the county, and has a varied surface and good soil. The court house in this town is a beautiful building. It has a Doric portico, with four granite columns on each front. This town is finely watered by Charles River, on its western border, by Neponset River on the E., and by Mother Brook, so called — a canal or raceway for a mill of about 3 miles in length, passing from the Charles to the Neponset. This was the first canal made in the United States. It was commenced and accomplished within ten years after the first settlement of Boston. Dedham is noted for its good hydraulic power. Dedham village is very pleasant. A branch railroad from the village meets the Boston and Providence Railroad. 10 miles S. W. from Boston, and 35 N. W. from Plymouth.

Deep River, Ct., Middlesex co. A village of Saybrook, on Connecticut River, at the mouth of Deep River. 33 miles S. by E. from Hartford.

Deerfield, Ms., Franklin co., lies on the W. bank of Connecticut River. Deerfield River meets

the Connecticut at this place, and spreads out a large body of fine alluvial land, in the centre of the town, encircling a village of great beauty. This is said to be the oldest town in the county, and was called by the Indians Pocumtuck. It was granted by the General Court to a company at Dedham, in 1669; and a settlement was commenced in 1670. From the mountains in this vicinity delightful views are obtained. Deerfield Mountain, which separates the Connecticut River from the Deerfield Meadows, is 700 feet above the plain. Sugar Loaf Mountain, which forms the southern termination of the Deerfield Mountain, rears its conical peak of red sandstone 500 feet above the river. Just at the foot of the Sugar Loaf, at Bloody Brook, a company of young men, from the county of Essex, were slain by an ambush of Indians, during Philip's war, in 1675. A monument has been erected to their memory. Deerfield extends for several miles along the banks of the Connecticut, and is traversed through its entire length by the Connecticut River Railroad, which crosses the Deerfield River by a remarkable viaduct. South Deerfield, or Bloody Brook, is a thriving village, in which are a variety of miscellaneous manufactures. In the village of Cheapside, north of Deerfield River and adjoining Greenfield, is a manufactory of cutlery. The railroad from Greenfield to Boston passes through this village. 90 miles W. by N. from Boston, and 4 S. from Greenfield.

Deerfield, N. H., Rockingham co. This town has a number of ponds which afford fish. Moulton's is noted for having no visible inlet; also on account of having been sounded without discovering any bottom. A branch of Lamprey River passes through Deerfield. The surface is uneven; soil durable and fertile, though hard to cultivate. The Luckaway, Saddleback, and Fort Mountains, are the principal elevations. In the W. part of the town is a natural formation in a ridge of rocks, designated "Indian Camp." On the E. side of this camp is a natural flight of steps. Deerfield was once a place of resort for deer. While the petition for the town was pending, a Mr. Batchelder killed a deer, and, presenting it to Governor Wentworth, obtained the act under the name of Deer-field. First settlers, John Robertson, Jacob Smith, Isaac Shephard, Benjamin Batchelder, and others, in 1756. Distances, 18 miles E. S. E. from Concord, and 30 W. by N. from Portsmouth.

Deerfield, N. J., Cumberland co. Cohansey Creek, and Muddy Run, a branch of Maurice River, water this town. Surface level; soil chiefly clay and gravel.

Deerfield, N. Y., Oneida co. Watered by the Mohawk, and a few small streams. The surface is rather hilly; the soil very productive in the valley of the Mohawk. 4 miles N. from Utica, and 94 N. W. from Albany.

Deerfield, Pa., Tioga co. Watered by Cowanesque Creek and Marsh, a branch of Crooked Creek. Surface hilly; soil gravelly loam.

Deer Isle, Me., Hancock co., comprises three principal islands, Deer, Little Deer, and Isle of Haut, containing 17,000 acres. They have good harbors, and are well located for the shore fishing. 75 miles E. by S. from Augusta.

Deering, N. H., Hillsboro' co. This town is diversified, well watered, and its soil is favorable for agriculture. There are three ponds, Dud-

ley's, Pecker's, and Fulton's. The name was given it by Governor John Wentworth, in honor of his wife, whose maiden name was Deering. First settlers, Alexander Robinson and William McKean, in 1765. 25 miles S. W. from Concord, and 22 N. W. from Amherst.

Decarpark, N. Y., Orange co. Watered by Delaware, Neversink, and Bashkill Rivers. The surface is mountainous on the E., and level on the W., towards the Delaware. The soil is very fertile. 38 miles W. from Newburg, and 108 S. W. from Albany.

Defiance County, O., c. h. at Defiance. In the N. W. angle of the state, including the junction of the Maumee and the Auglaize. Traversed by the Wabash and Miami Canals. Level and fertile.

Defiance, O., c. h. Defiance co. Very prettily located at the junction of the Auglaize with the Maumee Rivers, on the Wabash and Erie Canal. It has great local advantages, having the benefit of the navigation of the Maumee, Auglaize, and Tiffin Rivers. It is also a central point to several state roads. 50 miles W. from Perrysburg, and 80 E. from Fort Wayne.

De Kalb County, Ga., c. h. at Lebanon. Bounded N. E. by Georgia, E. by Cherokee co., S. W. by St. Clair and Blount counties, W. by Marshall, and N. W. by Jackson co. Surface mostly uneven, and drained by Will's Creek, a branch of the Coosa River.

De Kalb County, Ga., c. h. at Decatur. Bounded N. by Forsyth co., E. by Gwinnett and Newton, S. by Henry and Fayette, and W. by Campbell and Cobb counties. Drained by branches of the Chattahoochee and Ockmulgee Rivers. The Chattahoochee flows along its N. W. boundary. Surface elevated table land. The Georgia Railroad passes through this county.

De Kalb County, Is., c. h. at Sycamore. In the northern part of the state. Watered by Kishwaukee Creek and a small river.

De Kalb County, Ia., c. h. at Auburn. Incorporated in 1835. Bounded N. by Steuben co., E. by Ohio, S. by Allen, and W. by Noble co. It is watered by St. Joseph's, a branch of Maumee River, and by several creeks.

De Kalb, Mi., c. h. Kemper co. 2 miles S. from Saranochee Creek, and 106 E. N. E. from Jackson.

De Kalb County, Mo., c. h. at Marysville. In the N. W. angle, on the height of land between the Platte and Grand Rivers.

De Kalb, N. Y., St. Lawrence co. Osgewatchie River and some of its tributaries water this town. The surface is hilly, and marble and iron ore are found here. The soil is of rather an indifferent quality. 10 miles S. W. from Canton, and 193 N. W. from Albany.

De Kalb County, Te., c. h. at Smithville. In the central part of the state. Hilly and broken.

Delaware City, De., Newcastle co. On the W. bank of the Delaware River, at the mouth of the Chesapeake and Delaware Canal. 35 miles N. from Dover.

Delaware County, Ia., c. h. at Muncietown. Bounded N. by Grant and Blackford counties, E. by Jay and Randolph, S. by Henry, and W. by Madison co. Surface mostly level, and watered by the Mississinewa and the W. fork of White River, and by Bell and Buck Creeks. Soil productive.

Delaware County, Io., c. h. at Delhi. Bounded N. by Clayton co., E. by Dubuque, S. by Jones

and Linn, and W. by Buchanan co. Watered by Macoquetais River and its branches. Surface undulating; soil fertile.

Delaware, N. J., Hunterdon co. On the E. side of the Delaware River, and drained by Wickhechoke Creek.

Delaware County, N. Y., c. h. at Delhi. Bounded on the N. by Otsego and Schoharie, E. by Schoharie and Greene, S. by Ulster and Sullivan, and W. by Chenango and Broome counties, and the state of Pennsylvania. It was incorporated from Ulster and Otsego counties in 1797. Watered by the Delaware, Susquehanna, and Charlotte Rivers, and the Beaverkill. Surface rough and hilly, soil fertile, especially in the valleys. Bog iron and copper ores are found in small quantities, in several places, and there are a number of mineral springs in this county.

Delaware County, O., c. h. at Delaware. Bounded N. by Marion, E. by Knox and Licking counties, S. by Franklin, and W. by Union co. The land is valuable for farming and grazing, and is well watered by the Scioto and Olentangy Rivers, and Alun and Walnut Creeks.

Delaware, O., c. h. Delaware co. It was laid out by Moses Byxbe, Esq., in 1808. On the western bank of Olentangy River, on rolling land. A handsome bridge crosses this river, leading from one of the principal streets. A very valuable white sulphur spring is found here, the waters of which are remarkable for their clearness and abundance. Several chalybeate springs are also found. The medicinal virtues of these springs cause the town to be much visited by travellers. It lies 70 miles N. from Chillicothe, and 24 N. from Columbus.

Delaware County, Pa., c. h. at Chester. Bounded N. by Chester co., E. by Philadelphia co. and the Delaware River, separating it from New Jersey, S. by Delaware, and W. by Chester co. Watered by Darby, Ridley, and Chester Creeks, all fine mill streams. Surface undulating; soil fertile.

Delaware, Pa., Mercer co. The Chenango and Lackawannock Creeks water this town. Surface uneven; soil clay and loam. 7 miles N. W. from Mercer.

Delaware, Pa., Pike co. Watered by Dingman's and Bushkill Creeks. Surface rough and broken; soil gravelly loam. 148 miles N. E. from Harrisburg.

Delhi, Ia., c. h. Delaware co.

Delhi, N. Y., c. h. Delaware co. Watered by several branches of the Mohawks, or W. branch of the Delaware. The soil is productive in the valleys. 77 miles S. W. from Albany.

Delphi, Ia., c. h. Carroll co. On the E. side of Wabash River, at the mouth of Deer Creek. 66 miles N. N. W. from Indianapolis. There is a curious spring near this place, the water of which is of a reddish color.

Demopolis, Ala., Marengo co. On the E. bank of Tombigbee River, a little below the mouth of the Black Warrior River. 64 miles S. S. W. from Tuscaloosa. Site of a land office.

Denmark, Me., Oxford co. Incorporated in 1807. It lies 85 miles S. W. by W. from Augusta, about 28 S. W. from Paris, and 47 N. W. from Portland. Denmark is finely watered by Saco River and several beautiful ponds. The principal business of the inhabitants is agricultural, for which they have a fertile soil.

Denmark, N. Y., Lewis co. Deer Creek and

Black River water this town. The surface is somewhat hilly; the soil very productive. 15 miles N. from Martinsburg, and 141 N. W. from Albany.

Dennis, Ms., Barnstable co. Dennis extends across Cape Cod, and is bounded on the E. by Brewster and Harwich. Its southern boundary is Yarmouth, nearly six miles of which is Bass River, one of the most important streams on the cape. The Indian name of Dennis was Nobs-cusset. The first salt produced by solar evaporation, in this country, was made in this town, by John Sears and others, in 1776. There are pleasant villages in the town, on both sides of the cape, and near them several fine fresh water ponds. From Scargo Hill, the highest land in the town or county, and a noted landmark for sailors, a magnificent ocean scene is presented. Dennis suffered severely in the awful gale of October, 1841: 26 of its finest young men were buried in the ocean in a day; 18 of whom, all school-fellows, left their nearest kindred within a quarter of a mile of each other! The town was named in honor of its first minister, the Rev. Josiah Dennis, who was settled in 1627.

Dennis, N. J., Cape May co. Dennis Creek, which flows into Delaware Bay, bounds this town on the S. W. The N. portion consists of sandy plains. 85 miles S. from Trenton.

Denton, Md., c. h. Caroline co. On the E. bank of Choptank River. 65 miles E. from Annapolis.

Denton County, Ts., c. h. at Alton. On the northern border. Between the head waters of the Sabine and the Red River.

De Pere, Wn., c. h. Brown co. 153 miles N. E. from Madison.

De Peyster, N. Y., St. Lawrence co. On the E. side of Black Lake, and watered by the Oswegatchie and some of its branches. The surface is somewhat uneven; the soil arable and productive. 12 miles W. from Canton, and 180 N. W. from Albany.

Deposit, N. Y., Tompkins, Delaware co. On the N. bank of Delaware River, 118 miles W. S. W. from Albany. This is a great depot for lumber, which is taken down the Delaware to various markets.

Deptford, N. J., Gloucester co. Big Timber Creek and some branches of Egg Harbor River water this town, which has a level, sandy surface.

Derby, Ct., New Haven co. The Indian name of this town was *Paugasset*. It was purchased of the Indians and incorporated in 1675. The surface of the town is uneven, with some fertile meadow on the banks of the rivers. Derby is watered by the Housatonic and Naugatuck Rivers.

The *Landing* is on the east side of the Housatonic, just below the junction of that river with the Naugatuck. Vessels of 10 feet draught of water can pass to the Landing.

Derby was the birth place of the Hon. David Humphreys, a poet, an aid to Washington, and a minister to Spain, distinguished for his efforts for the introduction of Merino sheep and the manufacture of broadcloths. He died at New Haven, February 21, 1818, aged 66.

Derby, Vt., Orleans co. The surface is very level. There are some plains of several hundred acres' extent; and where the land rises, the elevations are gradual and moderate, and hardly deserve the name of hills. The land is well tim-

bered, principally with rock maple and other hard wood. Cedar swamps of from one to ten acres are found in various parts. The soil is fertile and abundantly productive. The River Clyde passes through the S. part of the township, affording numerous mill sites. Salem Pond, through which Clyde River passes, lies partly in this town, and is 4 miles long and 3 broad. Hinman's Pond, near the centre of the town, is one mile and a half long, and three quarters of a mile broad, and empties into Salem Pond. The first settlement was made in 1795, by Alexander Morgan, Henry Burrell, and the Hon. Timothy Hinman. 12 miles N. E. from Irasburg, and 52 N. E. from Montpelier.

Derry, N. H., Rockingham co. A fine grazing township with a handsome village, taken from Londonderry in 1828. The soil is productive; the inhabitants remarkable for their industry, general wealth, and longevity. 18 miles W. S. W. from Exeter, and 25 S. E. from Concord.

Derry, Pa., Columbia co. The surface of this town is level; soil calcareous loam and clay.

Derry, Pa., Dauphin co. Surface varied; soil slate and calcareous loam. 12 miles S. E. from Harrisburg.

Derry, Pa., Mifflin co. Kishcoquilla Creek waters this town.

De Ruyter, N. Y., Madison co. Watered by the E. branch of the Tioughnioga River. The surface is elevated and hilly; the soil sandy loam and clay. 14 miles S. W. from Morrisville, and 122 W. from Albany.

Desha County, As., c. h. at Belleville. Bounded N. by Jefferson, Arkansas, and Phillips counties, E. by the Mississippi River, S. by Chicot and Bradley counties, and W. by Dallas co. The Arkansas and White Rivers drain this county. Surface level, and in parts liable to inundation; soil fertile.

Des Moines County, Iowa, c. h. at Burlington. Bounded N. by Louisa co., E. by the Mississippi River, separating it from Illinois, S. by Skunk River, separating it from Lee co., and W. by Henry co. Drained by Flint River and its branches. Soil fertile.

De Soto Parish, La., c. h. at Mansfield. On the western border, between Red River and the Sabine.

De Soto County, Mi., c. h. at Hernando. Bounded N. by Tennessee, E. by Marshall co., S. by Ponnola, and W. by Tunic co., and the Mississippi River. Drained by Cold Water River and its tributaries.

Detroit, Mn., c. h. Wayne co. City and port of entry. On the W. side of Detroit River or Strait, 7 miles below the outlet of Lake St. Clair, and 18 miles above Lake Erie. It is 132 miles E. from Lansing, the capital of the state. Population in 1810, 770; in 1820, 1442; in 1830, 2222; in 1840, 9102; in 1850, 21,028.

The ground on which Detroit is built has a gentle ascent from the river as far back as to the main street, and thence, westward, it is level. The plan of the city is rectangular, extending along the river more than a mile, and nearly a mile back. The principal street running through the most dense portion of it, parallel with the course of the river, is Jefferson Avenue. Leading from the river, at right angles with this, is Woodward Avenue. These streets are 200 feet wide. There are several streets or avenues, which are 120 feet in width, and the other streets

are 60 feet wide, generally crossing each other at right angles. There are several public squares, the principal of which are the Campus Martius, in the central part of the city; and the Grand Circus, in which five of the great avenues meet. The wholesale stores, and the warehouses for heavy goods, are mostly located on Atwater Street on the river, and on Woodbridge Street, between this and Jefferson Avenue. On Jefferson Avenue are located the principal dry goods and fancy stores, with the public and private offices. This is truly an elegant street, compactly built, and imposing in its appearance.

Among the public buildings deserving of particular notice, is the building lately occupied as the state house, built of brick, having a handsome Ionic portico, and a dome 140 feet high. The view from the top of this building is at once extensive and beautiful; embracing, with the entire city, the strait above and below, enlivened with shipping and steamboats, Lake St. Clair, and a wide extent of cultivated country around the city and on the Canada shore. The City Hall is a neat brick edifice, 100 feet by 50, which cost \$20,000. The lower story is occupied as a market, and the upper for the city courts. The Michigan Bank has a costly and beautiful edifice of polished stone, in the Grecian style, two stories high above the basement. Several of the churches have beautiful buildings, among which is St. Paul's, Episcopal, in the Gothic style; the First Presbyterian Church, with a Grecian portico of six Doric columns; a Baptist Church of the Grecian Ionic order; and St. Ann's Cathedral, of hewn granite, 116 by 60 feet, with two towers in front, and surmounted by an octagonal dome 30 feet in diameter and 30 feet high.

Among the higher literary institutions of the city are the Historical Society, founded in 1829; the State Literary Institute, founded in 1838; the State Medical Society; the Young Men's Society for Moral and Intellectual Improvement, founded in 1832; a Young Ladies' Seminary; a Young Ladies' Institute; the St. Clair Seminary for Young Ladies, (Roman Catholic); and several high schools for boys.

Detroit is advantageously located for trade, and is fast becoming a great commercial emporium. The navigation of the river and lake is open about eight months in the year. The Michigan Central Railroad now opens a direct and speedy communication through the most populous portion of the state to the opposite side of the peninsula; and thence, by a few hours' water passage, to Chicago, Milwaukee, and the far west. Other routes of railroad communication are in the process of construction.

Though the history of Detroit, as a place of any considerable population and trade, is recent, corresponding to that of the whole western country, yet as a place of military importance it has had an early antiquity among the towns now belonging to the United States. It was founded by the French in 1683. In 1760 it fell into the hands of the British. In 1784 it became by treaty a possession of the United States, which maintained a garrison there from 1796 until within a few years past. It was first incorporated as a city in 1802. In the war of 1812, Detroit was captured by the British, and recaptured by the Americans the next year. In 1815 it received a

new charter of incorporation. The city has twice been extensively devastated by fire; first in 1805, when it was nearly destroyed; and afterwards in 1837, when there was also a great destruction of property.

De Witt, Io., c. h. Clinton co.

De Witt County, Is., c. h. at Clinton. Central part.

De Witt, N. Y., Onondaga co. The surface of this town is rather uneven, and there is a cavern within its limits which has been explored for the distance of 100 rods. In this vicinity also are immense quarries of water lime, which is exported in large quantities. 5 miles E. from Syracuse, and 142 N. of W. from Albany.

De Witt County, Ts. S. central. On both sides of the Guadalupe.

Dexter, Me., Penobscot co. This town was first settled in 1801. Incorporated 1815. It lies 67 miles N. E. from Augusta, and 35 N. W. from Bangor. Dexter is a valuable township of land. The farmers reap a rich reward for their labors. In this town is a pond covering 500 acres, at the outlet of which are mills and a beautiful village.

Dexter, Mn., Washenaw co. At the mouth of Mill Creek, which affords extensive water power. The railroad between Detroit and Chicago passes through it.

Dexter, N. Y., Brownville, Jefferson co. On the N. side of Black River, at its mouth. It has extensive hydraulic privileges. The navigation of Lake Ontario comes up to the place.

Diana, N. Y., Lewis co. The S. part of this town was set off in 1841 to form a part of the town of Croghan. It is watered by the Oswegatchie and Indian Rivers. The surface is hilly; the soil suitable for grass. 154 miles N. W. from Albany, and 25 N. from Martinsburg.

Dickinson, N. Y., Franklin co. This large town, 40 miles in length, is watered by the head branches of Racket and St. Regis Rivers, and by numerous lakes. The soil is various, and the S. part of the town mostly a wilderness. 15 miles S. W. from Malone, and 154 N. N. W. from Albany.

Dickinson, Pa., Cumberland co. Yellow Breeches Creek waters this town. Surface hilly, affording iron ore; soil calcareous loam.

Dickson County, Te., c. h. at Charlotte. Bounded N. by Steward and Montgomery counties, E. by Davidson and Williamson, S. by Hickman, and W. by Humphreys counties. Its surface is elevated table land, sending its streams E. into the Cumberland, and W. into the Tennessee River. The soil is of tolerably good quality.

Dighton, Ms., Bristol co. Was formerly a part of Taunton, and lies on the W. side of Taunton River. Sureganset River affords it a good water power. The noted "Dighton Rock," on which are curious inscriptions, lies in the limits of the town of Berkley, formerly a part of Dighton.

Dinwiddie County, Va. S. E. part. Watered by the Nottaway and tributaries, and on the N. by the Appomattox. Surface gently rolling.

Dinwiddie, Va., c. h. Dinwiddie co. On Stony Creek. 37 miles S. by W. from Richmond.

Dix, N. Y., Chemung co. Catharine's Creek waters the E. part of this town. The surface is hilly; soil gravelly loam. 16 miles N. from Elmira, and 185 S. of W. from Albany.

Dixfield, Me., Oxford co. This is a good farming town on the N. bank of the Androscoggin

River. 42 miles N. W. by W. from Augusta, and 25 N. by E. from Paris. Incorporated 1803.

Dixmont, Me., Penobscot co. On the height of land between the Kennebec and Penobscot. 44 miles N. E. from Augusta.

Dixville, N. H., Coos co., comprises 31,023 acres of uneven land. Numerous streams meander through it. In this town is the celebrated Dixville Notch, which may be regarded as one of the most remarkable exhibitions of natural scenery in the state. Near this Notch is a curious ravine, called the Flume. First settler, Colonel Timothy Dix, Jr. 40 miles N. N. E. from Lancaster, and 146 N. N. E. from Concord.

Dodge County, Mi. On the N. border, middle. On head waters of Chariton River and Loent and Maritime Creeks.

Dodge County, Wn., c. h. at Hustis. Bounded N. by Marquette and Fond Du Lac counties, E. by Fond Du Lac and Washington, S. by Waukesha and Jefferson, and W. by Dane and Portage counties. Watered by Rock and Beaverdam Rivers, and Rubicon Creek. Surface level, and in parts swampy.

Doddridge County, Va., c. h. at West Union. N. W. part. On the height of land between the Monongahela and Ohio. Watered by tributaries of the latter. Hilly and rough.

Donaldsonville, La., Ascension parish. On the S. side of the Mississippi River, just below La Fourche Outlet, and 73 miles W. by N. from New Orleans. Formerly the state capital.

Donegal, Pa., Butler co. Bear Creek and some branches of Conoquenessing Creek water this town. Surface hilly and uneven, containing iron ore and anthracite coal; soil sand, gravel, and clay.

Donegal, Pa., Washington co. Bush and Castleman's Runs and the Dutch Fork of Buffalo Creek water this town. Surface hilly; soil loam. Coal abounds here.

Donegal, Pa., Westmoreland co. 160 miles W. from Harrisburg.

Donephan, Mo., c. h. Ripley co.

Dooley County, Ga., c. h. at Vienna. Bounded N. by Macon and Houston counties, E. by Pulaski and Irwin, S. by Irwin and Lee counties, and W. by Flint River, separating it from Sumpter co. Surface elevated, and drained by branches of Ockmulgee and Flint Rivers.

Dorchester County, Md., c. h. at Cambridge. Bounded N. by Talbot and Caroline counties, E. by De., S. E. and S. by Nanticoke River and Chesapeake Bay, and W. by Chesapeake Bay. Choptank River waters it on the N. and N. W. Surface level; soil productive.

Dorchester, Ms., Norfolk co. This ancient and respectable town lies on Dorchester Bay, in Boston Harbor, 5 miles S. from Boston. It was first settled by a company of Puritans from England. These Pilgrims landed from the ship Mary and John, at Nantasket, on the 11th June, 1630; and on the 17th day of that month they located themselves at the Indian Mattapan, and called it Dorchester, in honor of their pious and learned friend, the Rev. John White, of Dorchester, in England.

The town included most of the territory of the towns of Milton, Canton, Stoughton, Sharon, and that part of Boston on which stand the celebrated Dorchester Heights.

Dorchester has furnished pioneers for the settlement of several important places, in different

parts of the United States. A party from this town, in 1635, crossed the trackless wilderness by a journey of fourteen days, and settled Hartford, on Connecticut River. In 1695, another party emigrated from this place, and settled Dorchester, in South Carolina, and afterwards Midway, in Georgia.

The soil of Dorchester is encumbered with rocks, but is very fertile, and under a high state of cultivation. It is exceedingly productive, particularly of vegetables, fruits, and flowers. Its surface is greatly variegated, presenting a continual succession of picturesque and delightful views of the country, city, and sea. Its hill tops and valleys are decked with farm houses and tasteful villas, and nowhere can be found the union of town and country enjoyments more complete.

Dorchester is literally a town of villages. Travel its fine roads which way you will, villages, villas, and country seats, ever changing, ever beautiful, are presented to view. A part of the town has already been annexed to Boston, and should fire and water continue to make steam, old Shawmut, now crowded almost to suffocation, will, ere the lapse of many years, sue for another bit of Mattapan.

The beautiful Neponset washes the whole of the southern border of the town, and besides its navigable privileges, affords a large and valuable water power. The first water mill in America was erected in this town, in 1633; and here, about the same time, the cod fishery, the boast of New England, was first commenced. The manufactures of Dorchester consist of cotton goods, boots, shoes, hats, paper, cabinet, block tin, and tin wares, leather, wearing apparel, soap, candles, chocolate, and playing cards, the aggregate amount of which, in one year, was about half a million of dollars.

The most important villages for trade in Dorchester are those connected with the tide water. Milton Mills, a handsome village, partly in Dorchester and partly in Milton, 6 miles S. by W. from Boston, at the head of navigation on the Neponset, and at the lower falls of that river, contains many manufacturing establishments, and commodious wharves for lumber, coal, &c.

Neponset village is very pleasantly situated on the margin of Dorchester Bay, and near the mouth of Neponset River, on the great road leading to Quincy and Plymouth. It is a place of considerable trade, and some navigation. It has steadily increased in business, population, and wealth; and being located on good navigable waters, within 5 miles of the city, it must soon become an important outport of the crowded metropolis. This village includes a beautiful peninsula, or neck of land, called Pine Neck. In consequence of the Old Colony Railroad passing over it, a flourishing settlement has commenced on this neck of land, which, by the enterprise of its occupants, promises to become an important place of business. Already a number of wharves and storehouses have been erected here; also a meeting house, a public hall, and several large establishments for mechanical operations. Neponset, as well as Commercial Point, and other harbors in Norfolk co., has become a port of delivery, dependent upon the principal harbor of Boston. By extending the Dorchester and Milton Railroad a mile and a half to the Providence Railroad, Neponset soon will become a large de-

pository of all kinds of building materials, fuel, and of the raw materials for manufacturing purposes, for a wide extent of country. The Old Colony Railroad passes by this and the villages of Commercial Point and Harrison Square, two places exceedingly pleasant both for business and residence.

The first settlers of Dorchester came a regularly organized church, with its pastor and officers. They soon erected a house of public worship; but it is a singular fact that "none can tell the precise spot where the first meeting house was located, nor does a single stone remain to designate the site of the original burying-ground." The earliest date in the present ancient cemetery that can be distinctly traced is 1644.

On the 24th of June, 1852, a new rural cemetery, lying partly in Dorchester and partly in West Roxbury, was consecrated by religious services. It is named Mount Hope Cemetery, and is upon the same plan as the cemetery at Mount Auburn. The grounds include an area of 85 acres, embracing every variety of hill and dale, forest, glade, &c., now sought for in places of this description. It is already laid out extensively with avenues and paths, beautifully fitting it for its purpose. It is about 5 miles distant from Boston, and is approachable by many excellent roads from the city, on which omnibuses are running, and also very conveniently by the Providence Railroad.

Among the first settlers of Dorchester was George Minot, a ruling elder of the church for thirty years. He erected a dwelling house in that part of Dorchester where the pleasant village of Neponset now stands. That house is now standing, and is doubtless one of the oldest houses in the country. It is in good repair, and has ever remained in possession of Mr. Minot's lineal descendants. Mr. Minot died December 24, 1671, aged 78. This house is even more celebrated for the female heroism displayed within its walls, than for its antiquity. A party of Narraganset Indians, hunting on the borders of Neponset River, stopped at Elder Minot's house, and demanded food and drink. On being refused, they threatened vengeance, and the sachem, or chief of the party, left an Indian in ambush to watch an opportunity to effect it. Soon after, in the absence of all the family, except a young woman and two small children, the Indian attacked the house, and fired at the young woman, but missed his mark. The girl placed the children under two brass kettles, and bade them be silent. She then loaded Mr. Minot's gun, and shot the Indian in the shoulder. He again attacked the house, and in attempting to enter the window, the girl threw a shovelful of live coals into his face, and lodged them in his blanket. On this the Indian fled. The next day he was found dead in the woods. The Indian's name was Chickataubut, but not the Narraganset sachem of that name. The government of Massachusetts Bay presented this brave young woman with a silver wristband, on which her name was engraved, with this motto — "She slew the Narraganset hunter."

Dorchester, N. H., Grafton co. Dorchester is situated on the highlands between Connecticut and Merrimac Rivers. The principal streams are the S branch of Baker's River, a branch of Mascomy and Rocky Branch. There are two ponds, both in the W. part of the town. The soil in some parts is very fertile. The highlands are uneven and rocky. First settlers, Benjamin Rice

and Stephen Murch. 23 miles S. by E. from Haverhill, and 40 N. W. from Concord.

Dorr, Is., c. h. McHenry co.

Dorr County, Wn. New. Taken from Brown in 1851.

Dorset, Vt., Bennington co. There are no considerable streams in this township. Otter Creek, Battenkill and one of its branches, and Pawlet River, afford some mill privileges. This township is considerably mountainous. Equinox Mountain lies partly in the S. W. corner. In this township are several remarkable caverns. The first settlement was made in 1768. 26 miles N. from Bennington, and 91 S. S. W. from Montpelier.

Double Springs, otherwise called Pleasant Valley, Ca., c. h. Mariposa co.

Douglas, Ms., Worcester co., was named in honor of Dr. William Douglas, of Boston, a Scotch gentleman of some eminence, a benefactor to the town, and the author of a history of New England. Douglas was first settled about the year 1722, and at first was called Sherburne, from which place the first settlers came. The town is diversified by hills and valleys, the former affording much wood, and the latter a fine soil for cultivation. Mumford River passes through the E. village, on which are fine tracts of interval, and good mill seats. The town abounds with springs and small streams. The centre village lies 16 miles S. from Worcester. The E. village is 2 miles N. E. from the centre, and 42 S. W. by W. from Boston.

Douglass, Pa., Berks co. Watered by Manatawny Creek, which affords mill privileges. Surface undulating; soil of pretty good quality.

Douglass, Pa., Montgomery co. Perkiomen and Swamp Creeks, good mill streams, water this town. Surface hilly; soil red shale.

Dover, De. Capital of the state, and seat of justice of Kent co. Pleasantly situated on elevated ground between two principal branches of Jones's Creek, 10 miles above its entrance into the W. side Delaware Bay. The town is laid out with much regularity, having a large public square in the centre, and wide streets intersecting each other at right angles. The state house stands on the E. side of the square, and other public buildings are around it. There is at Dover a beautiful monument in honor of Colonel John Haslett, who fell in the battle of Princeton. Dover lies 50 miles S. from Wilmington, and 120 from Washington.

Dover, Me., c. h. Piscataquis. On Piscataquis River. 77 miles N. by E. from Augusta.

Dover, Ms., Norfolk co., was taken from Dedham in 1784. This town is bounded N. by Charles River. The surface is uneven, and a large part covered with wood. Pine Hill, in Dover and Medfield, 400 feet above Charles River, affords an extensive prospect. 5 miles W. from Dedham, and 14 S. S. W. from Boston.

Dover, N. H., shire town of Strafford co. 40 miles E. from Concord, 66 N. from Boston, and 44 S. from Portland, Me. Population in 1820, 2871; in 1830, 5449; 1840, 6458; 1850, 8186.

This is one of the most interesting and important towns in New Hampshire. It is situated at the head of navigation on the Cochecho River, about 12 miles from the ocean, in the midst of a peculiarly rich and fertile country, on the N. W. and S. There are falls in the river at this place of about 32 feet descent, which con-

stitute one of the most valuable water privileges in New England. Passing over this town in any direction the traveller finds no rugged mountains nor extensive barren plains, but ascending occasionally some gentle elevation, his eye meets some new and pleasing feature of the landscape — a winding stream, a well-cultivated farm, or a distant village. In the S. part of the town there is a neck of land about 2 miles long, and half a mile in breadth, lying between the Piscataqua River on the one side, and the Bellamy River, commonly called by the inhabitants *Back River*, on the other. The travelled road, from which the land gradually descends on either hand to the rivers, commands a very extensive, variegated, and delightful prospect of bays and their adjacent shores, of streams, fields, and distant mountains. On this neck of land the first settlement of the town was commenced in 1623, by a company in England, whose design was to plant a colony and establish fisheries along the Piscataqua River. For several years this spot embraced the principal part of the population of the town. Here the first meeting house in Dover was erected, and afterwards surrounded with an intrenchment and flankarts, the remains of which are still visible. In process of time the business and population began to centre around the falls, 4 miles N. of the neck, where the beautiful village of Dover now is. Subsequently, when this fine water power began to be improved for manufacturing purposes, a vigorous impulse was given to the prosperity of the place.

The Coheco Manufacturing Company have now in operation here 4 large cotton mills, which manufacture about 7,000,000 yards of print cloths per annum; also, 1 large printery, capable of turning out 7000 pieces of prints per week. They have also an extensive machine shop. This company employs about 1500 persons, 1000 of whom are females. The Bellamy mills, on Bellamy River, about a mile and a half from the village, consist of saw mills, and mills for the manufacture of machinery, railroad cars, carriages, and axles; and near them are two or three flannel manufactories. On this river, also, is a paper manufactory. A company at Dover have in successful operation machinery for the knitting of drawers and shirts. Besides the above, a variety of smaller articles of manufacture are produced.

These two rivers, the Coheco or Quoheco, and the Bellamy or Black River, are the principal streams in Dover. They take a S. E. course through the town, and unite with other streams to form the Piscataqua, which separates Dover on the E. from Elliot, Me.

Dover is well built, the houses being generally neat, and some of them elegant. The houses of worship, the court house, and other public buildings are handsome, and the factories massive and imposing in their structure.

A Congregational church was organized here in 1638; and their minister, a Mr. Leverich, was probably the first ordained pastor who preached the gospel in New Hampshire. Rev. Dr. Belknap, the historian of New Hampshire, was ordained as pastor of this church in 1767.

A society of Friends was established here at an early period, and at one time comprised about one third of the population.

This town, at its first settlement, was greatly exposed to invasions from the Indians, between

whom and the inhabitants some unfortunate jealousies and suspicions were excited. The people experienced many sufferings from their repeated attacks.

Dover is easily approached by the Boston and Maine Railroad, which is the upper or inland route between Boston and Portland, Me. It is also connected by the Coheco Railroad with Alton Bay on Lake Winnipiseogee, which opens a direct, expeditious, and delightful route from Boston to the White Mountains. Another railroad extends N. from Dover, passing by Great Falls, and reaching to Milton, 15 miles, intended to furnish a still more direct route to the mountains.

Dover, N. J., Monmouth co. Watered by Tom's and Forked Rivers and branches of Cedar and Rancoos Creeks, affording water power. Surface mostly level, and soil sandy. 24 miles S. from Freehold.

Dover, N. J., Randolph, Morris co. On both sides of Rockaway River. 63 miles N. from Trenton. It is on the line of the Morris Canal.

Dover, N. Y., Dutchess co. On both sides of Ten Mile Creek. The surface is somewhat mountainous; the soil gravelly loam of good quality. Iron ore is found in this town, and there are extensive quarries of white and colored marble. 93 miles S. S. W. from Albany, and 20 E. from Poughkeepsie.

Dover, O., Dover township, Tuscarawas co. This is a flourishing town, and is situated on a level plain 35 feet above the water on the Ohio Canal, on which it lies. The streets cross each other at right angles. A covered bridge, 346 feet long, and built in 1833, crosses the canal and river. It is 110 miles N. E. from Columbus, and 93 S. from Cleveland by the canal.

Dover, Pa., York co. The surface of this town is hilly; soil red shale.

Dover, Te., c. h. Stewart co. On the S. side of the Cumberland River. 75 miles W. N. W. from Nashville.

Dover, Vt., Windham co. This town was a part of Wardsboro' until 1810. The land is high and uneven, more fit for pasturage than tillage. It is the source of several branches of West and a branch of Deerfield River. Serpentine and chlorite slate are found here. Although this township is quite mountainous, yet the soil is warm, sweet, and productive. 12 miles N. W. from Brattleboro', and 120 S. by W. from Montpelier.

Doune, N. J., Cumberland co. Bounded E. by Maurice River, and S. by Delaware Bay. It is also watered by Dividing and other small creeks. The land bordering on the bay and Maurice River is flat and marshy. 14 miles S. E. from Bridgeton.

Downingtown, Pa., Chester co. On the W. bank of the E. fork of Brandywine Creek. 67 miles E. S. E. from Harrisburg. The battle of Brandywine was fought 12 miles below this place, September 11, 1777.

Doylestown, O., Wayne co., is situated on the road leading from Wooster to Akron, 16 miles from the former, and 13 from the latter place, and 36 miles S. from Cleveland.

Doylestown, Pa., c. h. Bucks co. 100 miles E. from Harrisburg. The situation is elevated and commanding.

Dracut, Mass., Middlesex co. Dracut is united to Lowell by two handsome bridges over Merri-

mac River. The town is pleasantly situated on the N. side, on the line of New Hampshire, with a tolerable soil, and some water power by Beaver River. The proximity of this town to Lowell gives it a favorable market for the fruits and vegetables which it plentifully yields. There is some fine scenery in the town, particularly around Pawtucket Falls, when the river is high. 27 miles N. from Boston, and 16 N. by E. from Concord.

Drayton, Ga., c. h. Dooly co. On Pennehatchee Creek, about 1 mile from its entrance into Flint River, and 98 miles S. S. W. from Milledgeville.

Dresden, Is., Grundy co. At the junction of Kankakee and Des Plaines Rivers, 153 miles N. N. E. from Springfield. The Illinois Canal passes through it.

Dresden, Me., Lincoln co. On the E. bank of Kennebec River, 14 miles S. from Augusta.

Dresden, N. Y., Washington co. Situated between Lakes George and Champlain. The surface is hilly and mountainous, Palmertown Mountain extending through the town, rising, in some places, to the height of 1200 feet above the level of Lake Champlain. The land is unfit for cultivation, and mostly covered with forests. 28 miles from Sandy Hill, and 78 N. N. E. from Albany.

Dresden, O., Jefferson township, Muskingum co. A thriving town on Wakatom-aka Creek, on a side cut of the Ohio and Erie Canal, near their union with the Muskingum River.

Dresden, Te., c. h. Weakley co. On one of the head branches of Obion River. W. by N. from Nashville 122 miles.

Drew County, As., c. h. at Monticello.

Dromore, Pa., Lancaster co. Bounded S. W. by the Susquehanna River, and drained by Conewago Creek, which affords hydraulic power. Surface undulating; soil clay. S. E. from Lancaster 15 miles.

Dryden, N. Y., Tompkins co. Fall Creek and some other small streams water this town. The surface is uneven; the soil productive, consisting of gravelly loam. 10 miles E. from Ithaca, and 160 W. from Albany.

Duane, N. Y., Franklin co. Situated in the northern part of the state, about 200 miles from Albany. A considerable part of this town is yet covered with the native forest. The surface is uneven and hilly, with several small lakes. The principal settlement is in the northern part. The town has become celebrated for its superior iron ore, or "native steel ore," as it has been called, which is capable of being cast from the ore into the finest edged tools. At Duane there are a blasting furnace and a scythe manufactory.

Duanesburg, N. Y., Schenectady co. Watered by Schoharie Creek and some other small streams. The surface is elevated and hilly; the soil clay loam. 12 miles S. W. from Schenectady, and 21 N. W. from Albany.

Dublin, Ga., c. h. Laurens co. On the W. side of the Oconee River. 79 miles S. S. E. from Milledgeville.

Dublin, N. H., Cheshire co. On the height of land between Connecticut and Merrimac Rivers. Its streams are small. Centre Pond is in the middle of the town; it is one mile in length, and about the same in breadth. A large portion of the Grand Monadnock lies in the N. W. part of

Dublin, and near the centre of the town is Breed's Mountain. The land is better for grazing than tillage. First settlers, 1762, John Alexander, Henry Strongman, and William Strong. 10 miles E. by S. from Keene, and 50 S. W. from Concord.

Dublin, O., Washington, Franklin co. On elevated ground, on the W. bank of Scioto River, on which there is water power. 12 miles N. N. W. from Columbus.

Dublin, Pa., Bedford co. Watered by Wooden Bridge and Little Augwick Creeks and the head branches of Licking Creek. Surface level; soil calcareous loam. 25 miles E. from Bedford.

Dublin, Pa., Huntingdon co. Shade and Little Augwick Creeks drain this town. Surface mountainous; soil clay. 21 miles S. E. from Huntingdon.

Dubois County, Ia., c. h. at Jasper. Incorporated in 1817. Bounded N. by Davies and Martin counties, E. by Orange and Crawford, S. by Perry and Spencer, and W. by Pike counties. Watered by Strait River, by the E. fork of White River, and by Patoka and Huntley's Creeks. Surface hilly and undulating; soil fertile.

Dubuque County, Io., c. h. at Dubuque. Bounded N. by Clayton co., N. E. by the Mississippi River, separating it from Wisconsin, and on the E. from Illinois, S. by Jackson and Jones counties, and W. by Delaware co. Drained by Turkey and Little Macoquetais Rivers and branches, and by some small creeks flowing into the Mississippi.

Dubuque, Io., shire town of Dubuque co. Situated on the W. bank of the Mississippi River, about 80 miles N. E. from Iowa City, 454 miles above St. Louis, and 338 below the Falls of St. Anthony. It is 24 miles, by the Mississippi and Fevre Rivers, from Galena. Dubuque, like Galena, is celebrated for its lead mines, the ore being found in abundance within its corporate limits, and for many miles around. This is, indeed, the commercial centre of the lead region.

Dubuque was originally settled by a French half-breed of that name, who purchased his title from the Indians. The town is built on a fine table prairie, with picturesque bluffs in the rear, some of which are adorned with princely mansions. The place is laid out with regularity, and handsomely built. Among the churches, of which there are several of the various denominations, there is a large stone Roman Catholic cathedral. Its spacious brick warehouses, its many stores and mechanic shops, its numerous steamboats lading and unloading at the quays, and the bustling activity of business in its streets, sufficiently indicate that this place is now the great commercial emporium of the country of the Upper Mississippi. The Illinois Central Railroad from Cairo, at the mouth of the Ohio, will have its northern terminus on the opposite side of the river, which will open a communication, at all seasons of the year, to the Gulf of Mexico. There will soon be a continuous railroad route from this place to Chicago, and thence to New York and Boston.

Dudley, Ms., Worcester co. This town was granted by the legislature in 1660. The grantees bought it of the Pegan tribe of Indians. Quinnabaug River on the W. and French on the E. give to Dudley an excellent water power. The town was named in honor of Paul and William Dud-

ley, of Roxbury, who were among the first proprietors. It is a pleasant town, with a good soil, and a surface variegated by hills and vales, smiling ponds, and constant streams. There are 3 villages here, Dudley Hill, Tufts, and Merino. The Indian name of a large pond in the town is Chabanakongkomam. 55 miles S. W. from Boston.

Dukes County, Ms., c. h. at Edgartown. This county is formed of the islands of Martha's Vineyard, Chappaquiddick, Elizabeth Islands, and No-Man's Land. The latter of which is the S. extremity of Massachusetts. These islands were discovered by Bartholomew Gosnold, in 1602. He landed at No-Man's Land, which he called Martha's Vineyard, passed round Gay Head, anchored in the Vineyard Sound, and landed on Cuttuhunk, which he called Elizabeth Island, a name since extended to the whole group to which it belongs. A small rocky islet in the midst of a pond of fresh water on this island, was selected as the site of a settlement, and a stockhouse was erected on it—the first house built by the English on the shores of New England. Gosnold could not induce any of his men to remain, yet the commencement of efforts for colonizing New England dates from his voyage.

Dumfries, Va., Prince William co. On the N. side of Quantico Creek, a tributary of Potomac River, and 86 miles N. by E. from Richmond. The best winter harbor on the Potomac is about 2½ miles below this place.

Dummer, N. H., Coos co., comprises 23,040 acres. It is watered by the Amonosuck and Androscoggin. This town is rough in its surface, and cold in its soil. First settlers, Mark H. Wentworth, Nathaniel Haven, and others, in 1773. Distances 140 miles N. by E. from Concord, and 30 N. by E. from Lancaster.

Dummerston, Vt., Windham co. This township is watered by West River and several small streams, affording a considerable number of good sites for mills. The surface is broken. The rocks which constitute Black Mountain, near the centre of the town, are an immense body of granite. A range of argillaceous slate passes through it. Primitive limestone occurs in beds. This is one of the oldest towns in the state. 90 miles S. from Montpelier, and 8 S. E. from Newfane. The Connecticut River Railroad passes through this town.

Dunbar, Pa., Fayette co. This town is bounded on the E. by the Youghiogeny River, and drained by Dunbar Run, a mill stream. Surface undulating; soil calcareous loam. 8 miles N. E. from Union.

Dunbarton, N. H., Merrimac co. The situation of this town is elevated, though there are but few hills. The air is clear, the water good, and the town very healthy. The soil is good, and well suited for corn, wheat, and orcharding. Arsenic is found here. The inhabitants are mostly descendants of Scotch-Irish, so called, from the north of Ireland. It was first called Starkstown, in honor of the principal proprietor. Its present name is derived from Dunbarton, in Scotland, from whence Stark emigrated. First settlers, 1749, Joseph Putney, James Rogers, William Putney, and Obadiah Foster. 10 miles S. W. from Concord, and 20 N. from Amherst.

Dunkirk, N. Y., Chautauque co. An incorporated village in Pomfret, situated on Lake Erie, 44 miles S. W. from Buffalo. This is the western

terminus of the Erie Railroad, extending from Piermont, on the Hudson River, 24 miles from New York, to this place, a distance of 445 miles, or 469 from New York. There is also a continuous railroad route to Jersey City, opposite New York, leaving the Erie Railroad 18 miles W. of Piermont, and passing through Patterson, N. J.; on which the distance between Dunkirk and New York is only 460 miles.

From its position in reference to this great channel of communication, Dunkirk is destined to take a rank among the most important places on Lake Erie. It has one of the best harbors on the lake, for the improvement of which the United States government has expended large sums of money. It is extremely valuable as an anchorage and port of refuge, and is often resorted to for that purpose. It is frequently open several days, and even weeks, earlier in the spring than the harbor of Buffalo. A railroad along the lake shore, in continuation of the great western route, from Boston, via Troy, Albany, and Buffalo, will make Dunkirk a new thoroughfare between the North-Western States and the two most important ports on the Atlantic. Distance from Dunkirk to Boston, by the railroads now in operation, 572 miles; and by the contemplated route via Troy and the tunnel through the Hoosic Mountain, 545 miles.

Duklin County, Mo., c. h. at Chillitecunx. In the extreme S. E. Between St. Francis and White Water Rivers, and largely subject to overflow.

Dunstable, Ms., Middlesex co. This town was taken from Dunstable, now Nashua, N. H., in 1741. The Nashua River passes the W. border of the town, but gives it no important water power. The soil is sandy. 12 miles W. N. W. from Lowell, and 33 N. W. from Boston.

Dunstable, Pa., Clinton co. The W. branch of the Susquehanna River bounds this town on the S. E. and S. The surface is mountainous, containing coal; soil sterile.

Du Page County, Is., c. h. at Napierville. Bounded N. and E. by Cook co., S. by Will, and W. by Kendall and Kane counties. Des Planes River and Du Page Creek water this county.

Duplin County, N. C., c. h. at Keenansville. Bounded N. by Wayne county, E. by Lenoir, Jones, and Onslow, S. by New Hanover, and W. by Sampson co. Surface level, and drained by Cape Fear River and branches; soil productive.

Durham, Ct., Middlesex co. This town was first settled in 1698. Its Indian name was Coginchang. Agriculture is the principal employment of the people of Durham, for which they have rather an uneven but fertile soil. "This town has been distinguished many years for a very fine breed of cattle. Two oxen, presented by some of the inhabitants to General Washington, furnished a dinner for all the officers of the American army at Valley Forge, and all their servants."

Durham, Me., Cumberland co. A good township of land on the S. side of Androscoggin River. 25 miles N. from Portland, and 31 S. W. from Augusta.

Durham, N. H., Strafford co. The situation of this town upon the Piscataqua and its branches is very favorable, both as to water power and transportation. Oyster and Lamprey are the two branches; the latter flows over several falls. Upon both sides of Oyster River a deep argilla-

aceous loam prevails, which is favorable to the production of grasses. Extensive ledges of granite are found here. A large block of it, weighing 60 or 70 tons, was formerly poised so exactly between two stones, as to be visibly moved by the wind. It was dislodged from this position by the curiosity of some visitors. Durham was originally a part of Dover. Oyster River was so called from the abundance of oysters found in it. 32 miles E. by S. from Concord, and 11 W. N. W. from Portsmouth.

Durham, N. Y., Greene co. Drained by the Catskill and some of its tributaries. The surface is hilly and uneven; soil clay and gravelly loam. 20 miles N. W. from Catskill, and 34 S. W. from Albany.

Durham, Pa., Bucks co. Bounded E. by the Delaware River, and drained by Cook's or Dunham Creek, a mill stream. In this town is the Devil's Hole, a large cave, at the bottom of which is a basin of pure water, 20 feet wide, and having a subterranean outlet. 20 miles N. E. from Doylestown.

Durhamville, N. Y., Oneida co. On both sides of Oneida Creek. 125 miles W. N. W. from Albany.

Dutchess County, N. Y., c. h. at Poughkeepsie. Bounded by Columbia co. on the N., by the state of Connecticut on the E., by Putnam co. on the S., and by the Hudson River on the W. It was incorporated in 1683. Wappinger's, Fishkill, and Ten Mile Creeks drain the surface, which is somewhat hilly and uneven. Soil chiefly fertile. It is rich in mineral productions, the principal of which are iron, marble, and lead. Peat and marl are also abundant, and there are one or two remarkable gas springs.

Duval County, Fla., c. h. at Jacksonville. Bounded N. by Georgia, E. by the Atlantic Ocean, S. by St. John's and Alachua counties, and W. by Alachua and Columbia counties. Watered by the Nassau, St. John's, and Black Rivers.

Duxbury, Ms., Plymouth co. This is an important maritime town. The harbor is formed by a peninsula called the Gurnet, jutting out in a S. E. direction from Marshfield on the N., of about 6 miles in length. The soil of Duxbury is generally unproductive; yet there are some fertile spots. Its Indian name was Mattakeset. There is an apple-tree here noted for its age, size, and fruitfulness. It is upwards of 100 years old. It is 40 feet in height, and its circumference, 8 inches from the ground, is 16 feet. Its fruit, in 1 year, has made 10 barrels of cider, besides 30 bushels for the cellar. The village in Duxbury is pleasantly located on elevated ground, in full view of the sea. Beyond it, about 2 miles distant, is "Standish Hill," part of the farm of the renowned Captain Miles Standish, the military hero of New England. 6 miles N. from Plymouth, and 30 S. E. from Boston.

Duxbury, Vt., Washington co. The south and western parts of this township are mountainous, and incapable of settlement. Nearly all the inhabitants are confined to the margin of Winooski River, and the north-eastern parts of the township. This township is watered by Winooski River, which forms the northern boundary, by Duxbury branch, on which is a considerable settlement, and several small branches of Mad River. The natural bridge over Winooski River is between this town and Waterbury, and near it are some curious caverns. The settlement was

commenced about the year 1786. 11 miles W. from Montpelier.

Dyer County, Te., c. h. at Dyersburg. Bounded N. by Obion co., E. by Gibson, S. by Lauderdale, and W. by the Mississippi River. Drained by Obion and Forked Deer Rivers. Surface uneven, with the exception of the flats on the border of the Mississippi.

Eagle, N. Y., Alleghany co. Canadea and Wiskay Creeks water this town. The surface is undulating; the soil favorable to the growth of grass and grain. 264 miles W. by S. from Albany.

Eagle Harbor, Mn., Houghton co. This village, on Keewaiwona Point, has sprung up in the immediate neighborhood of several important mines of copper and silver. The village takes its name from that of the little harbor in the bosom of which it is seated. The first house erected at this place was put up by Colonel Charles Gratiot, for the accommodation of the pioneer miners employed by the Lake Superior Copper Company in 1844; and it was at this place that the first search for native copper commenced. That year some of the veins yielded a promising return of copper; but the ground was not found to be so favorable for mining purposes as that of Eagle River, a few miles farther to the westward. There are now wrought, near Eagle Harbor, several very valuable mines; among them, the North-West, Copper Falls, and North-Western mines are most conspicuous. This harbor is the nearest safe shelter for small vessels that the miners can avail themselves of, and hence its importance. Good hotels and comfortable accommodations now invite the traveller to this spot, which seven or eight years ago was an unbroken wilderness.

By means of gib nets an abundance of large lake trout and of white fish is caught off this harbor. Trout may also be taken by trolling with a long line from a sail boat. Siskowit, a fat species of salmon, are also occasionally caught at this place, but they are not abundant, their range being limited to the coast of Isle Royale, 40 miles N. of Keewaiwona Point, a few rarely straying across this part of the lake.

The climate of Eagle Harbor is like that of Keewaiwona Point, generally much milder than that of the Sault St. Marie, on account of its being nearly surrounded by the deep waters of Lake Superior, which preserve an invariable temperature of about 39½ degrees Fahrenheit, and thus moderate the heat of the air in both summer and winter. Potatoes and some early garden plants thrive on Keewaiwona Point, but Indian corn rarely ripens there. Oats, barley, and summer wheat do very well.

Eagle River Settlement, Mn., Houghton co. Eagle River is 8 miles W. of Eagle Harbor, in lat. 47° 23' 28" N. The stream enters the lake over a sandy bar, and the bay offers no shelter for vessels, so that it is only practicable to take on board the steamers' cargoes of copper during good weather. In case of storms, the vessels run to Eagle Harbor for shelter.

Owing to the discovery of the most valuable mines of copper and silver near this river, a considerable village has sprung up at its mouth, and a numerous population of miners and miners connected with the mines reside at the mining stations up the river, at the Phoenix Cliff and

North American mines, which are from one to four miles from the mouth of the stream, and upon its borders.

The Phoenix, formerly called the Lake Superior mine, was the first mine wrought for native copper and silver on Lake Superior. It was not wrought properly at first, owing to want of experience in this new kind of mining, but has since been carried on with the most promising success. The Cliff mine, 3 miles from the Phoenix, was the first mine that was opened in a truly scientific manner, and has proved the model mine of the country, and has given most profitable returns to the stockholders. About 150 men are employed at this mine in extracting metallic copper and silver from the rocks. This mine is one of the wonders of the world, and is unparalleled in its produce; masses of solid native copper, of from 10 to 100 tons, being extracted by mining operations from regular veins of the metal. The copper is mixed with variable proportions of silver, which is always found free from any alloy, and often occurs embedded in the solid copper, as if welded to it only at the points of contact. This mine produces, on an average, 900 tons of fine copper, and about \$5000 worth of pure silver per annum. The stock is owned mostly in Boston and Pittsburg, and is held at a good rate, but little of it being offered at the brokers' board.

The North American Company have a mine nearly as valuable as the Cliff, within a half mile of that celebrated mine, and the works are admirably constructed, and mining is carried on with success, both copper and silver being found there native.

Copper Falls mine, which is 4 miles to the E. of Eagle River, is situated on a small stream called Copper Brook, and has been wrought with promising success, but not to the extent of those already mentioned. A considerable corps of miners are there employed in searching for copper, and a regular mine has been constructed, and native copper and silver have been raised and sent to market.

All the mines we have named were discovered in 1844 and 1845, and are situated in amygdaloidal trap rocks, near their junction with sandstone rocks. The veins cross the "country," or traverse the line of direction of the trappean masses and stratified rocks. Hence they are called true veins. Stone hammers used by the aboriginal inhabitants, in old pits, have disclosed the interesting fact that these lodes of native copper were known probably for thousands of years before the white men set foot upon this continent. All the tools indicate that the mines were wrought by savages, who employed fire to cause the rock to crumble away from the copper, and then broke off masses of the metal. Few of these excavations are deeper than 6 or 8 feet, but they are of considerable extent. Aged trees growing upon the surface soil of these pits prove that the mining operations were carried on many centuries ago.

The soil on Eagle River is good, and produces oats and potatoes in abundance, and some fine esculents and garden vegetables; but the season is short, and tender crops often are overtaken by frost.

There are a good tavern, and store, and post office at the mouth of Eagle River. Some fish are taken, but the place is not regarded as good fishing ground.

Earl, Pa., Berks co. Manatawny Creek waters this town, the surface of which is broken by South Mountain.

Earl, Pa., Lancaster co. Watered by Conestago and Muddy Creeks. Surface undulating; soil gravel and red shale. 13 miles N. W. from Lancaster.

Early County, Ga., c. h. at Blakely. Bounded N. by Randolph co., E. by Baker, S. by DeCATUR co., and W. by the Chattahoochee River, separating it from Ga. Surface level, and drained by Spring, a branch of Flint, River; soil fertile.

East Avon, N. Y., Livingston co. 2 miles E. from Avon Springs, and 218 W. from Albany. The surrounding country is highly cultivated, and the situation of the place is commanding.

East Bethlehem, Pa., Washington co. The Monongahela River bounds this town on the E., and Ten Mile Creek on the S. Surface hilly, and abounding with coal mines; soil loamy. 197 miles W. from Harrisburg.

East Bloomfield, N. Y., Ontario co. Drained by Mud Creek and some other small streams. The surface is undulating; the soil fertile. 8 miles W. from Canandaigua, and 203 W. by N. from Albany.

East Bradford, Pa., Chester co. Valley Creek and its branches water this town, affording hydraulic power, and Brandywine River forms its S. W. boundary. Surface hilly; soil calcareous loam.

East Bridgewater, Ms., Plymouth co. Beaver and Satucket, branches of Taunton River, afford this town a good water power. The settlement of this part of Old Bridgewater was not commenced much before 1685. There are two pleasant villages in the town, at which considerable business is transacted. A branch of the Old Colony Railroad, from South Abington to Bridgewater, passes near the village of Joppa, 6 miles from the former, 2 from the latter, and 26 from Boston.

East Cambridge, Ms., Middlesex co. See Cambridge, Ms.

Eastchester, N. Y., Westchester co. Watered by Bronx River and Hutchinson's Creek. The surface is hilly and somewhat rocky; but the soil is for the most part very productive. 10 miles S. from White Plains, and 140 S. from Albany.

East Cocalico, Pa., Lancaster co. Watered by Cocalico Creek.

East Deer, Pa., Alleghany co. Located on the W. side of the Alleghany River.

East Donegal, Pa., Lancaster co. Watered by Little Chicques Creek and its branches.

East Fallowfield, Pa., Chester co. Watered by the W. branch of Brandywine Creek.

East Feliciana Parish, La., c. h. at Clinton. The state of Mi. bounds this parish on the N. Watered by Amite River, and Comite and Thompson's Creeks. Soil fertile on the streams.

Eastford, Ct., Windham co. Taken from Ashford. On a head stream of the Yantic. 14 m. N. W. from Brooklyn, and 31 E. from Hartford.

East Goshen, Pa., Chester co. Watered by Chester and Ridley Creeks. Surface mostly level; soil rich sandy loam. 18 miles W. from Philadelphia.

East Greenwich, R. I., Kent co. This is the shire town, and is pleasantly located on Narraganset Bay. It was incorporated in 1667, and comprises an excellent harbor for ships of 500

towns' burden. A number of vessels are owned here, and the coasting trade and fisheries give employment to many of the inhabitants. The town is watered by Maskachug and Hunt's Rivers, on which are cotton mills and other manufactories. The soil of the town is rather rough and stony, but it yields good crops of corn, barley, and potatoes. East Greenwich is noted for excellent fruit and cider.

The Kentish Guards was established here in 1774, and proved a nursery of distinguished officers, of which the celebrated General Nathaniel Greene was one. Across the bay, to Bristol, is about 8 miles. 14 miles S. from Providence.

East Haddam, Ct., Middlesex co. A town of considerable trade and manufacturing enterprise, on the E. side of the Connecticut, and at the outlet of Salmon River. The soil is hilly and rocky, and more fit for grazing than tillage. Considerable business is done here in the shad fishery. It is supposed that more leather is made in this than in any other town in the state. This place has fine water privileges, both for navigation and manufactures. A short distance from the centre of the town is a pond covering 1000 acres. On the river formed by the outlet of this pond, the water is precipitated over rocks nearly 70 feet perpendicular. The scenery around these falls is beautiful, and worthy of particular notice.

Leesville, on Salmon River, and Mechanicsville, on Moodus River, a branch of Salmon River, are very flourishing settlements.

This place, the Indian Mackimoodus, is remarkable for frequent slight shocks of earthquakes, producing singular noises, which the Indians attributed to the anger of their gods towards the white men. It is said that some valuable geological discoveries have recently been made in this quarter. The town was first settled in 1685, but not incorporated until 1724.

Eastham, Ms., Barnstable co., lies on both sides of Cape Cod, which, at this place, is about 3 miles across. It is the ancient Nausat of the Indians, and was purchased of the natives by the people at Plymouth, prior to its grant by the court, in 1644. A settlement commenced the year the grant was made. The soil of this town was formerly considered as unproductive as any on the cape; but by good management it has been made to furnish a supply of breadstuffs for its own inhabitants, and some for exportation. There is a pear tree in this town celebrated for its longevity. It was brought from England by Thomas Prince, who was elected governor of the colony in 1634. Its fruit is said to be fair and good, and yields about 15 bushels annually. 22 miles E. N. E. from Barnstable, and 66 S. E. by E. from Boston, by water.

Easthampton, Ms., Hampshire co. This is a pleasant town, on the W. side of Connecticut River, 5 miles S. from Northampton, of which it was formerly a part. The Hampshire and Hampden Canal passes through this town, but has been abandoned, and a railroad substituted for it. The Mount Tom range of mountains commences here, and extends into the state of Connecticut. The highest part of the range is in this town, and is 1214 feet above the river. A large part of the lands in Easthampton are fertile and productive. There is here a flourishing and richly-endowed English and classical seminary, founded and endowed at an expense of \$50,000, the munificence of the Hon. Samuel

Williston, under the name of the Williston Seminary.

East Hampton, N. Y., Suffolk co. Situated on the E. extremity of Long Island. 114 miles E. from New York city, and 267 E. S. E. from Albany. This town, including land and water, embraces a large area, being about 23 miles in length, over the narrow strip running up from Montauk Point to its western boundary, and about 12 miles in breadth, on a line from the northern extremity of Gardiner's Island, which is connected with it, directly across the town to the ocean. The village is built principally on a single street, a mile and a half long, and about three fourths of a mile from the southern shore. The town was settled in 1649, by 30 families from Lynn, and the neighboring towns, in Massachusetts. There is a small remnant of the Montauk Indians still remaining, upon a reservation of 1000 acres, held by them under the conditions of their sale of the Montauk tract to the whites, about 180 years ago. See *Montauk Point*, p. 221.

East Hanover, Pa., Lebanon co. 21 miles E. from Harrisburg.

East Hartford, Ct., Hartford co. This town is situated opposite to Hartford, and connected with it by a bridge across Connecticut River. The soil of the town is generally fertile, but the alluvial meadows on the border of the river, of which there is a large tract, is of a superior quality. The agricultural products of this town are very considerable. Hackanum River furnishes the town with a good water power, on which are valuable manufacturing establishments, particularly of paper. East Hartford is noted for its manufactures in former years. The first powder mill in this country, it is said, was erected here, in 1775. This is a very pleasant town. The main street, which is very long and wide, is delightfully shaded by stately elms. East Hartford was taken from Hartford in 1784.

East Haven, Ct., New Haven co. This town was taken from New Haven in 1785, and is connected with New Haven by a bridge. It has good navigable privileges, and is watered by Quinnipiac River. This was a great resort for the Indians in former years. On Grave Hill were an Indian fort and cemetery. Bones of Indians of a large size, and domestic and warlike implements for savage use, have been found here. The Indian Well, in a granite rock, on an island in Stony River, is a curiosity. East Haven is pleasantly located, and commands a fine prospect of Long Island Sound.

East Haven, Vt., Essex co. The land in this township is high, but much of it is very suitable for grazing. Passumpsic River crosses the W. corner, and the head of Moose River waters the eastern part, each being about two rods wide, and affording good mill sites. There were five or six families in this town as early as 1814. 24 miles N. W. from Guildhall, and 69 N. E. from Montpelier.

East Hempfield, Pa., Lancaster co. Watered on the E. by Little Conestoga Creek. Surface principally level. 38 miles E. S. E. from Harrisburg.

East Huntingdon, Pa., Westmoreland co. Watered by branches of Jacob's Creek.

East Kingston, N. H., Rockingham co. The soil is of an excellent quality, and well adapted to grain and grass. Powow River crosses the S. W. part of this town. First settlers, William

and Abraham Smith. 42 miles S. E. by E. from Concord, and 20 S. S. W. from Portsmouth, and by railroad 5 miles S. from Exeter.

East Lebanon, O., Wayne co. This village is 90 miles N. E. from Columbus, and 5 from Greenville.

East Lyme, Ct., New London co. On the coast, between the Rivers Thames and Connecticut. The New Haven and New London Railroad passes through it. Surface diversified; soil generally good.

East Livermore, Me., Kennebec co. On the E. bank of the Androscoggin. 23 miles W. from Augusta.

East Machias, Me., Washington co. On both sides of East Machias River 149 miles E. by N. from Augusta. It has a great water power, and is largely engaged in the lumber trade.

East Marlboro', Pa., Chester co. Watered by Redelay Creek and Pocoppen, a branch of Brandywine Creek. Surface gently sloping; soil sandy loam. 28 miles S. W. from Philadelphia.

East Montpelier, Vt., Washington co. This town was incorporated November 9, 1848, and comprises the northern and eastern part of the fertile and peasant town of Montpelier.

East Nantmeal, Pa., Chester co. The N. and S. forks of French Creek water this town, the surface of which is hilly, and the soil gravelly. 65 miles E. S. E. from Harrisburg.

East Nottingham, Pa., Chester co. Watered by Elk and Little Elk Creeks. Surface slightly uneven; soil sandy loam.

Easton, Md., Talbot co. On Tread Haven Creek. 13 miles from Chesapeake Bay, and near the head of a large estuary. S. E. from Annapolis 45 miles.

Easton, Ct., Fairfield co. Taken from the E. part of Weston. 10 m. N. W. from Bridgeport.

Easton, Ms., Bristol co. There are two pleasant villages here, both well watered by branches of Taunton River. From the W. village it is about 10 miles to Taunton, and 24 to Boston.

Easton, N. Y., Washington co. On the E. border of the Hudson River, and watered by the Battenkill, one of its tributaries. The surface is slightly uneven; the soil generally clay and sandy loam. Limestone and water lime of superior quality are found here. 26 m. N. N. W. from Albany.

Easton, Pa., seat of justice of Northampton co. On the W. side of Delaware River, at the junction of the Lehigh, 58 miles N. from Philadelphia, and 106 E. N. E. from Harrisburg. Population in 1820, 2370; 1830, 3529; 1840, 4865; 1850, 9000. The town is built on a point of land bounded and shaped by the Delaware and Lehigh Rivers, and by Bushkill Creek. It is regularly laid out, with streets crossing each other at right angles, and a public square in the centre. The court house, standing upon this square, was built in 1758. The part of the town lying near the Delaware, though well elevated above the river, is level; but the ground rises gradually as it recedes to the W., forming a fine acclivity for that part of the town which is the most handsomely built, and in which are the principal churches and other public buildings. Still more elevated, in the rear of the town, are the buildings of Lafayette College, which are handsomely located, and command a beautiful prospect of the surrounding country. (See *Colleges*.) The fine bridge at this point, over the Delaware, 500 feet long, was built at an expense of \$80,000. The Dela-

ware, the Morris, and the Lehigh Canals form a junction at Easton; and railroads meet here from Philadelphia, via Trenton, from Jersey City, opposite New York, and from Belvidere, an important town a few miles to the N. The manufactures of this place are of considerable importance. About a mile above Easton, on the right bank of the Lehigh, a manufacturing village has sprung up, called South Easton, which contains large mills for the manufacture of cotton goods, nails, rifles, steel, and various other articles.

Eastoun, Pa., Chester co. Surface slightly uneven, and drained by Darby Creek; soil sandy loam.

East Penn, Pa., Northampton co. Watered by Mahoning and Lizard Creeks, branches of the Lehigh River. Surface mountainous, the Lehigh Water Gap, through Blue Mountain, being in the S. part. Soil red shale and gravel. The streams afford water power. 91 miles N. E. from Harrisburg.

East Pennsboro', Pa., Cumberland co. Drained by Conedogwint Creek, a mill stream flowing into the Susquehanna River, which bounds the town on the E. 10 miles N. E. from Carlisle, and about the same distance N. W. from Harrisburg.

East Pikeland, Pa., Chester co. Watered by Stony, French, and Pickering Creeks, all mill streams flowing into the Schuylkill River.

Eastport, Me., Washington co., includes four islands, on the chief of which, called Moose Island, the town is built. It has a fine harbor, and has been noted for smuggling adventures, being situated on the W. shore of Passamaquoddy Bay. The tide is very rapid, and rises 25 feet. Two long bridges connect Moose Island with the main land. It has still considerable trade in lumber.

East Rockhill, Pa., Bucks co. Surface hilly; soil gravel.

East Union, O., Wayne co., is a flourishing township, a few miles E. from Wooster.

Eastville, Va., c. h. Northampton co. On the S. side of King's Creek, a small stream which empties into Chesapeake Bay, through a considerable estuary. E. from Richmond 151 miles.

East Whiteland, Pa., Chester co. Surface level; soil rich calcareous loam.

East Windsor, Ct., Hartford co. First settled 1680. Taken from Windsor, 1768. This is an excellent township of land. Its extensive meadows on the E. side of Connecticut River are of uncommon fertility and beauty. Scantic River, a considerable mill stream, passes through the N. part of the town, and gives it the name of Scantic. The village of Wapping is in the S. E. section of the town. The principal street, about a mile back of the river, is the village, running the whole length of the town, wide, neatly built, and beautifully shaded.

East Windsor Hill, Ct., in South Windsor, Hartford co. 11 miles N. E. from Hartford. The Theological Institute of Connecticut is located here. There is a rich and delightful prospect from the buildings, which are seen at a distance in different directions.

East Windsor, N. J., Mercer co. Watered by Millstone River, and Assunpink and Miry Runs. Surface level; soil sandy and rather sterile. 20 miles S. W. from New Brunswick.

Eaton County, Mn., c. h. at Charlotte. Incorporated in 1837. Bounded N. by Ionia and Clinton counties, E. by Ingham, S. by Jackson and Calhoun, and W. by Barry co. Watered by Grand and Thornapple Rivers and Battle Creek. Sur-

face undulating, containing quarries of sandstone and limestone; soil very rich.

Eaton, N. H., Carroll co. The soil is moderately good, and the plains furnish excellent pine timber. There are several ponds in this town. Six Mile Pond is one; it is 4 miles long, and from half a mile to a mile in width. Good iron ore is found here, and near Snell's Pond a vein of zinc and lead ores. 64 miles N. E. from Concord, and 55 N. N. E. from Dover.

Eaton, N. Y., c. h. Madison co. It is watered by the head branch of Chenango River. The surface is rolling; soil fertile loam, particularly favorable to the growth of grass. 100 miles W. from Albany.

Eaton, O., c. h. Preble co., and is located on the E. bank of St. Clair's Creek. At this place the creek has a fall of about 20 feet in 80 rods, which adds to the importance of the town. It was laid out in 1806, and is 80 miles N. from Cincinnati, and 95 W. from Columbus.

Eaton, Pa., Wyoming co. Bounded on the N. E. and E. by the Susquehanna River, and drained by Bowman's Creek, one of its tributaries. Surface broken by the Alleghany Mountains. One peak, called the Knob, rises 1150 feet above the Susquehanna River. 143 miles N. E. by N. from Harrisburg.

Eatonton, Ga., c. h. Putnam co.

Ebensburg, Pa., c. h. Cambria co., occupies an elevated position on the Alleghany ridge. 139 miles W. by N. from Harrisburg.

Eckford, Mn., Calhoun co. Soil fertile, and well suited to grain. 101 miles W. from Detroit.

Economy, Pa., Beaver co. On the E. side of the Ohio River. This town is settled by a community of Swabians, and was founded by Mr. George Rapp, who acted as their temporal and spiritual leader. 217 miles W. by N. from Harrisburg.

Eddington, Me., Penobscot co. This town lies on the E. side of Penobscot River, 6 miles above, and N. N. E. from Bangor, and 70 N. E. by E. from Augusta. The village is pleasantly situated at the "Bend" of the river. The soil of the town is good, and well wooded.

Eddyville, Ky., c. h. Caldwell co. On the E. side of Cumberland River. 237 miles W. S. W. from Frankfort.

Eden, Me., Hancock co. On the N. part of the Island of Mount Desert. 92 miles E. from Augusta. It has a good soil, good harbors, and great conveniences for the shore fishery.

Eden, N. Y., Erie co. Cauquaga and Big Two Sisters Creeks flow through this town into Lake Erie. The surface is undulating, the soil remarkably fertile. 14 miles S. from Buffalo, and 287 W. from Albany.

Eden, Vt., Lamoille co. The streams in this township are numerous. Wild Branch and Green River rise in the eastern part. They are both considerable mill streams. The Branch, which is the outlet of North Pond, runs across the N. W. corner of Hyde Park, and falls into the Lamoille, at Johnson. North Pond is 2 miles long, and of very unequal width. The township is considerably mountainous. Mount Norris and Hadley Mountain lie on the N. line of the township, and partly in Lowell. Belvidere Mountain lies partly in the N. W. corner. In the western part of Eden is some good tillage land. The eastern part, being the dividing ridge between the waters of Lakes Champlain and Memphremagog, is moist and cold, but good for grazing. Rocks,

principally mica and chlorite slate. The settlement was commenced in 1800, by Thomas H. Parker, Isaac Brown, and Moses Wentworth. 10 miles N. E. from Hydepark, and 30 N. from Montpelier.

Edenton, N. C., c. h. Chowan co. At the head of Edenton Bay, near the mouth of Chowan River. 66 miles S. from Norfolk, and 182 E. by N. from Raleigh.

Edgar County, Is., c. h. at Paris. Bounded N. by Milton county, E. by Indiana, S. by Clark, and W. by Coles county. Watered by Little Embarrass River, and Big, Brulette's, and Clear Creeks. Soil mostly fertile.

Edgartown, Ms., Dukes co. This is the shire town, and a port of entry, comprising the eastern part of the island of Martha's Vineyard and Chapequiddick. The harbor is safe, easy of access, and is considered one of the best on the American coast. The surface of the town is generally plain, with a few elevated spots, rising from 60 to 120 feet above the sea. Near the middle of the island is a pond of fresh water, in size of about 20 by 10 rods, and from 5 to 6 feet in depth. This pond has never been known to be dry. As the island contains few streams for a water power, windmills supply their place for all domestic purposes. A great variety of fish are taken, both from the sea and fresh water ponds. Chapequiddick Island lies on the E. side of the town, and forms Edgartown Harbor. The surface of the island is varied by some moderate elevations; its soil is light, but generally productive. 25 miles W. S. W. from Nantucket, and 30 S. E. by E. from New Bedford.

Edgecomb, Me., Lincoln co. Between the Damariscotta and Sheepscot Rivers, opposite Wiscasset, 26 miles S. S. E. from Augusta. Advantageously situated for navigation and the fisheries.

Edgecombe County, N. C., c. h. at Tarboro'. Bounded N. by Halifax co., E. by Martin and Pitt, S. by Wayne, and W. by Nash co. Watered by Neuse River, and by Tar River and its branches. Surface level; soil of tolerably good quality.

Edgefield District, S. C., c. h. at Edgefield. Bounded N. E. by the Saluda River, separating it from Newberry district, E. and S. E. by Lexington, Orange, and Barnwell districts, S. W. by the Savannah River, separating it from Georgia, and N. W. by Abbeville district. Drained by Little Saluda River and Stephens' Creek. Surface slightly uneven; soil well suited to the growth of cotton.

Edgemont, Pa., Delaware co. Surface hilly, and watered by Ridley Creek; soil loam. 87 miles E. S. E. from Harrisburg.

Edinburgh, Me., Penobscot co. Incorporated 1835.

Edinburgh, N. Y., Saratoga co. Sacondaga River, and some of its tributaries, flow through this town. The surface is slightly uneven on the W., and hilly and mountainous on the E., the Kayaderoseras or Greenfield Mountain stretching across it. The soil of the W. part is fertile, particularly in the valley of the Sacondaga. 20 miles N. W. from Ballston Spa, and 50 N. from Albany.

Edmeston, N. Y., Otsego co. Watered by Wharton's Creek and the Unadilla River. The surface is hilly; the soil sandy loam. 15 miles W. from Cooperstown, and 77 from Albany.

Edmonds, Me., Washington co. Situated between Cobscook Bay and E. Machias.

Edmonson County, Ky., c. h. at Brownsville.

Bounded N. by Grayson co., E. by Hart, S. by Warren, and W. by Butler. Watered by Green River and its tributaries, and Nolin and Bear Creeks. Soil productive.

Edwards County, Is., c. h. at Albion. Bounded N. by Richland co., E. by Bon Pas Creek, separating it from Wabash co., S. by White, and W. by Wayne co. Watered on the W. by the Little Wabash River. Surface undulating; soil productive.

Edwards, N. Y., St. Lawrence co. Situated at the junction of the E. and W. branches of the Oswegatchie River. The surface is uneven; the soil favorable to the growth of grass. 24 miles S. from Canton village, and 194 N. W. from Albany.

Edwardsville, Is., c. h. Addison co.

Effingham County, Ga., c. h. at Springfield. Bounded N. by Scriven co., E. by the Savannah River, separating it from South Carolina, S. by Chatham co., and W. by the Ogeechee River, separating it from Bryan and Bullock counties.

Effingham County, Is., c. h. at Ewington. Bounded N. by Shelby co., E. by Jasper, S. by Clay, and W. by Fayette co. Drained by the Little Wabash River and its branches. Surface slightly uneven; soil fertile on the margins of the streams, but at very high flood liable to inundation.

Effingham, N. H., Carroll co. There are several mountains, of considerable elevation, in this town. Ossipee River passes through it, over which is a toll bridge. Its former name was Leavitt Town. There is a large pond near the Ossipee River, and Province Pond lies between Effingham and Wakefield. 60 miles N. E. from Concord, and 5 N. from Ossipee.

Egg Harbor, Great, N. J., Atlantic co. The surface of this town is level, and for several miles from the shore marshy; the remainder is dry and sandy.

Egg Harbor, Little, Burlington co., N. J. Bass River, and other streams flowing into Little Egg Harbor, drain this town. Surface level and sandy. 35 miles S. E. from Mount Holly.

Egremont, Ms., Berkshire co. Part of this township is mountainous, rough, and craggy; some parts are undulating, some level, and most of the land is fit for the plough or grazing. Green River passes through the N. E. corner of the town, and with several brooks and ponds, affords it a water power sufficient for domestic uses. This town was first settled by the Dutch, and afterwards by the English, about the year 1730. 140 miles W. by S. from Boston, and 25 S. by W. from Pittsfield.

Elba, N. Y., Genesee co. Oak Orchard Creek waters this town, the surface of which is undulating, and the soil somewhat sandy. 7 miles N. from Batavia, and 250 W. by N. from Albany.

Elbert County, Ga., c. h. at Elberton. Bounded N. by Franklin co., E. by the Savannah River, separating it from South Carolina, and S. and W. by Broad River, separating it from Lincoln, Wilkes, Oglethorpe, and Madison counties. Surface hilly; soil mostly productive.

Elberton, Ga., c. h. Elbert co. 111 miles N. N. E. from Milledgeville.

Elbridge, N. Y., Onondaga co. Watered by the outlet of Skaneateles Lake. The surface is slightly uneven, and the soil fertile. Indian antiquities of considerable interest are found in this

vicinity. 13 miles W. from Syracuse, and 149 W. by N. from Albany.

El Dorado County, Ca., c. h. at Antonia. In the mountains E. of the Sacramento, between Dry Creek of the Moquelumne and Middle Fork of American River.

Elizabeth, As., c. h. Jackson co. On the E. side of White River, at the head of steamboat navigation, and a little below the mouth of Big Black River. 118 miles N. E. from Little Rock.

Elizabeth City, N. C., c. h. Pasquotank co. On Pasquotank River, 20 miles from its mouth, and has a water communication with Norfolk, Va., by means of the Pasquotank River, Dismal Swamp Canal, and Elizabeth River. 215 miles E. by N. from Raleigh. It trades with the West Indies in pine lumber.

Elizabeth, N. J., Essex co. Bounded on the E. by Newark Bay and Staten Island Sound, and is drained by Bound and Morss Brooks. Soil rich, and partly marshy.

Elizabeth, Pa., Alleghany co. On the E. side of the Monongahela River, 14 miles S. from Pittsburg, and 192 W. from Harrisburg. Many steamboats are built here, and by a slack water navigation boats of a large class come up to this place. There are manufactures of glass ware, woollen goods, flour, &c.

Elizabeth, Pa., Lancaster co. Between Trout Creek on the E., and Hammer Creek on the W., and is drained by Middle and Seglock Creeks. Surface hilly; soil gravel and red shale.

Elizabeth City County, Va., c. h. at Hampton. This is one of the eight shires into which Virginia was divided in 1634. It is bounded N. by York co., E. by Chesapeake Bay, S. by Hampton Roads, and W. by Isle of Wight co. It has a level surface, and good soil.

Elizabethport, N. J., Essex co. On Staten Island Sound, near the junction of Newark Bay, and 47 miles N. E. from Trenton. A railroad from this place connects with Easton, Pa., on the Delaware River. There is daily communication, by steamboats, with New York city.

Elizabethtown, Is., c. h. Hardin co. 219 miles S. S. E. from Springfield.

Elizabethtown, N. C., c. h. Bladen co. On the W. side of Cape Fear River. 40 miles above Wilmington, and 99 S. from Raleigh.

Elizabethtown, N. J., seat of justice of Essex co. On Elizabethtown Creek, 2½ miles from its entrance into Staten Island Sound. This beautiful place is regularly laid out, with broad streets, and has many fine buildings, among which are the Court House, the First and Second Presbyterian, and the Episcopal Churches. This was the third settlement made in New Jersey, and for many years was the largest and most flourishing place in the province. The first public buildings of the jurisdiction of East Jersey, were here, and the first General Assembly met here from 1668 to 1682. The First Presbyterian Church is the oldest congregation in the state organized for worship in the English language. During the revolution this town was greatly harassed, and its church edifice, standing where the noble building of the First Presbyterian Church now stands, was fired by the torch of a refugee, and burned to the ground. The College of New Jersey, afterwards located at Princeton, commenced its existence here. The building in which its first exercises were held was also burned down during the war.

Vessels of 30 tons come up to Elizabethtown, and vessels of 300 tons to Elizabethport, at the mouth of the creek. From this port a railroad, passing through Elizabethtown, extends 26 miles, to Somerville. Elizabethtown is on the New Jersey Railroad, between New York and Philadelphia, 15 miles from the former, 72 from the latter, and 42 N. E. from Trenton.

Elizabethtown, N. Y., c. h. Essex co. Watered by Boquet River and some of its branches. The surface is broken by the Clinton range of mountains, which passes through it from N. to S., some of the peaks being elevated about 1500 feet above the surrounding plains. Excellent iron ore is found here in large quantities. 126 miles N. from Albany.

Elizabethtown, Te., c. h. Carter co. On Wautauga, a branch of Holston River. 301 miles E. from Nashville. In the vicinity are large iron works.

Elk, Pa., Warren co. Located between the Allegheny River on the E. and S., and Conecango Creek on the W. The soil on the streams is very fertile.

Elk County, Pa., c. h. at Ridgeway. On the height of land between the eastern and western waters. N. central part. Watered on the E. by Susquehanna Creek and its tributaries, flowing into the W. branch of the Susquehanna, and on the W. by the sources of Clarion River, a tributary of the Allegheny. Hilly, but fertile in the valleys. Thinly peopled.

Elk Creek, Pa., Venango co. The Six Mile Run, and Canoe, Beaver, and Dyer Paint Creeks, water this town. Surface level; soil loam. 122 miles W. N. W. from Harrisburg.

Elk Creek, Pa., Erie co. Drained by Cussawago and Conneant Creeks. On the margin of the latter salt springs are found. Surface hilly; soil gravelly loam. 256 miles S. W. from Erie, and 16 N. W. from Harrisburg.

Elkhart County, Ia., c. h. at Goshen. Bounded N. by Michigan, E. by La Grange and Noble counties, S. by Kosciusko, and W. by St. Joseph co. St. Joseph and Elkhart Rivers and their branches water this county, the surface of which is a mixture of woodland and prairie.

Elkhorn, Wn., c. h. Walworth co. 68 miles S. E. from Madison.

Elkland, Pa., Tioga co. Watered by Cowanesque and Crooked Creeks, branches of Tioga River. Surface hilly; soil gravel, clay, and loam. 170 miles N. from Harrisburg.

Elk Ridge Landing, Md., Anne Arundel co. On the S. side of Patapsco River, at the head of tide water. 7 miles W. S. W. from Baltimore, and 30 N. N. W. from Annapolis. Connected by railroads with Baltimore and Washington; also with Cumberland, on the route to Ohio. The Patapsco is crossed at this place by a splendid viaduct of granite, 700 feet long, with 8 arches. There are here extensive iron works.

Elkton, Ky., c. h. Todd co. On the E. side of Elk Creek, a branch of Red River. 187 miles S. W. from Frankfort.

Elkton, Md., c. h. Cecil co. Situated at the junction of the two main branches of Elk River, at the head of tide water. On the railroad, 44 miles from Philadelphia.

Ellejay, Ga., c. h. Gilmer co. 170 miles N. W. from Milledgeville.

Ellenburg, N. Y., Clinton co. English River and some other streams water this town. 25

miles N. from Plattsburg, and 188 N. N. E. from Albany.

Eltery, N. Y., Chautauque co. On the N. side of Chautauque Lake. Drained by several small creeks. The surface is undulating; the soil good. 342 miles S. by W. from Albany.

Ellicott, N. Y., Chautauque co. On the N. side of Chautauque Lake. Watered by Cassadaga Creek and the outlet of the lake. The surface is undulating, the soil sandy loam. 330 miles W. by S. from Albany, and 18 S. E. from Maysville.

Ellicott's Mills, Md., Anne Arundel co. On Patapsco River. 40 miles N. W. from Annapolis. There are numerous mills and manufactories here, amidst much romantic scenery.

Ellicottville, N. Y., Cattaraugus co. Watered by Great Valley Creek and some of its branches. The surface is mostly undulating, the soil well adapted to the growth of grass and grain. 292 miles W. by S. from Albany.

Ellington, Ct., Tolland co. Ellington was taken from East Windsor in 1786, and was that part of East Windsor called the Great Marsh. The soil is light and dry, but considerably fertile. It is generally level, but the eastern part is hilly and mountainous. The scenery in this town embraces considerable variety, and is uncommonly interesting and beautiful. The Ellington School, for boys, situated in a very neat village, is in high repute. 12 miles N. E. from Hartford.

Ellington, N. Y., Chautauque co. Clear Creek flows nearly through the centre of this town. The surface is undulating; the soil sandy loam. 20 miles E. from Maysville, and 320 S. of W. from Albany.

Elliot, Me., York co. On Salmon Falls River. A good farming town. 108 miles S. W. from Augusta.

Elliotsville, Me., Somerset co. This place is 81 miles from Augusta.

Ellisburg, N. Y., Jefferson co. The N. and S. branches of Sandy Creek flow through this town, affording excellent hydraulic power. The surface is level; the soil fertile loam. 20 miles S. W. from Watertown, and 166 N. W. from Albany.

Ellsworth, Me., c. h. Hancock co. On both sides of Union River, at the head of navigation. The soil is good, and the situation convenient for ship building, which is largely carried on here, many ships employed in the freighting business being owned by the inhabitants. There are some manufactures, and a good deal of trade. 81 miles E. by N. from Augusta.

Ellsworth, N. H., Grafton co. This town is mountainous. The principal elevation is Carr's Mountain. A small stream issues from West Branch Pond, and runs into the Pemigewasset, at Campton. The soil, though in some parts sterile, produces grain. Maple sugar is made here. 59 miles N. N. W. from Concord, and about 12 N. from Plymouth.

Ellsworth, O., Trumbull co. This township is bounded by Jackson on the N., Canfield E., Salem S., and Berlin W. It is the first in the 4th range of townships in the Connecticut Western Reservation. It is 181 miles N. E. from Columbus, and 15 S. from Warren.

Elmira, N. Y., c. h. Chemung co. On the N. side of Chemung River, and drained by Newton's Creek, one of its tributaries. The surface is

rather hilly, and the soil extremely fertile in the valleys. 198 miles W. by S. from Albany.

Elmore, Vt., Lamoille co. Fordway or Elmore Mountain lies in the N. W. part of the township, and is a considerable elevation. The remaining part of the surface is accessible, and not very uneven. It is mostly timbered with hard wood, and the soil is of a middling quality. A part of the waters of this township pass off into the River Lamoille, and a part into Winooski River. Mead's Pond lies in the north-western part, and covers about 300 acres. There are three other small ponds within the township. Iron ore is found in abundance. The settlement was commenced in July, 1790. 8 miles S. from Hydepark, and 37 N. from Montpelier.

El Passo County, Ts. Western part.

Elsinboro', N. J., Salem co. Alloway's and Salem Creeks water this town, the surface of which is level and marshy, and the soil rich loam. 3 miles N. E. from Salem.

Elyria, O., e. h. Lorain co., was named from the Hon. Heman Ely, who laid it out. It is a well-built place, situated between the branches of Black River, distant from Columbus 130 miles N. E.

Elyton, Aa., e. h. Jefferson co. At the head of Catoochee or Valley Creek. 54 miles N. E. from Tuscaloosa.

Emmanuel County, Ga., e. h. at Swainsboro', Bounded N. by Washington, Jefferson, and Burke counties, E. by Bullock co., S. by Tatnall and Montgomery, and W. by Laurens co. Surface level, and watered by Ogeechee, Cannonchee, and Ohoopce Rivers and their branches. Soil sandy and barren.

Emden, Me., Somerset co. A fine township, with two villages on the W. side of Kennebec River. 46 miles N. N. W. from Augusta.

Eminence, Mo., c. h. Shannon co.

Emmaus, Pa., Lehigh co. A Moravian village, at the foot of South Mountain. 87 miles E. by N. from Harrisburg.

Emmettsburg, Md., Frederick co. 80 miles N. W. from Annapolis. The site of Mount St. Mary's College, and St. Joseph's Female Institute. (See *Colleges*.)

Enfield, Ct., Hartford co. This town was first settled, 1681, by emigrants from Salem, Ms. It formerly belonged to Massachusetts, and was a part of Springfield. The first bridge across Connecticut River was built in 1808, connecting Enfield with Suffield. The surface is generally level, and the soil moist and fertile. The street where most of the inhabitants reside is very pleasant, wide, and well shaded. The village near the river was commenced about 1831. It is watered by Scantic River. 18 miles N. from Hartford.

Enfield, Me., Penobscot co. Incorporated 1835.

Enfield, Ms., Hampshire co. This town was formerly part of Belchertown and Greenwich, and lies between them. Two branches of Swift River meet in this town, and give it a water power, which adds much to its beauty and wealth. There are two pleasant villages here, and several eminences from which fine views may be had of this section of country. 15 miles E. from Northampton, and 71 W. from Boston.

Enfield, N. H., Grafton co. The surface of this town is diversified, and watered by ponds and streams, stored with fish. Mascomy Pond is a beautiful collection of water, four miles in length, and of various breadth, interspersed with islands, and checkered with inlets. Its eastern banks are

covered with trees. Along the western bank, between the pond and Montcalm, extends the turnpike road, the whole distance through a beautiful village, shaded to the north, on either side, by a growth of trees. Mascomy River empties into this pond. On the W. bank is a Shakers' settlement. Copper and other valuable minerals are found here. Mountain Pond, on the summit of Montcalm, is 200 rods long, and 100 wide. First settlers, Nathaniel Bicknell, Jonathan Paddleford, and Elisha Bingham. 10 miles S. E. from Dartmouth College, and 42 N. W. from Concord.

Enfield, N. Y., Tompkins co. The surface of this town is undulating, and watered by a few small streams. The soil is a productive loam. 5 miles W. from Ithaca, and 175 W. from Albany.

Enosburg, Vt., Franklin co. The surface is pleasantly diversified with hills and valleys; but the soil is better adapted to grass than grain. It is well watered by Missisco and Trout Rivers, and two other considerable streams. These streams afford numerous and excellent mill privileges. The settlement was commenced in the spring of 1797, by emigrants mostly from other townships in the state. 85 miles N. by W. from Montpelier, and 37 N. E. from Burlington.

Ephratah, N. Y., Fulton co. Zimmerman's and Garoga Creeks water this town, the surface of which is uneven, and the soil sandy loam. It is located 6 miles W. from Johnstown village, and 51 N. W. from Albany.

Ephratah, Pa., Lancaster co. This town was settled by a religious sect called Tunkers, or Dunkers. (See *Hayward's Book of Religions*.)

Epping, N. H., Rockingham co. This town was formerly a part of Exeter. The soil in general is very good. Lamprey River, at the W., receives the Patuckaway, and runs through the whole length of the town. Another river runs through the N. part, and from that circumstance is called North River. 29 miles S. E. from Concord, and 20 W. from Portsmouth.

Epsom, N. H., Merrimac co. The surface of the town is generally uneven. The principal eminences are called McCoy's Fort, Nat's and Nottingham Mountains. The soil is in general good. Great and Little Suncook are the only streams deserving the name of rivers. Here are 3 ponds, Chestnut, Round, and Odiome's. Brown oxides, sulphuret of iron, varieties of quartz, feldspar, and schorl are found here. Terra de senna is found here; it constitutes a very handsome and durable paint for cabinet work. First settlers, Theodore Atkinson and others. 12 miles E. from Concord.

Equality, Is., c. h. Gallatin co. On the N. side of Saline Creek. 187 miles S. S. E. from Springfield. Salt is made here.

Eric County, N. Y., c. h. at Buffalo. Bounded on the N. by Niagara, E. by Genesee and Wyoming, S. by Cattaraugus co., and W. by Lake Erie. It is watered by the Niagara River and Buffalo, Cayuga, Cattaraugus, Cazenove, Seneca, Ellicott's, Cauquaga, and Tonawanda Creeks. The surface is somewhat hilly in the S., but is mostly level or gently undulating. The soil is generally fertile, yielding large crops of grass and grain, and abundance of fruit. There are no minerals of great value in this county. It contains several Indian reservations, which are mostly inhabited by the Seneca tribe. The Erie Canal here communicates with the lake,

and a branch extends into the city of Buffalo. The Buffalo and Niagara Falls Railroad is partly, and the Buffalo and Black Rock Railroad wholly, within this county.

Erie County, O., c. h. at Sandusky city. N. part on Sandusky Bay and Lake Erie. Drained by Huron and Vermilion Rivers. Level and fertile. The W. part crossed by three railroads running from Sandusky city S. S. W. and W.

Erie, O., Sandusky co. Located on the N. side of Portage River, near Lake Erie. It was organized in 1833, and settled by the Canadian French. 16 miles N. E. from Lower Sandusky.

Erie County, Pa., c. h. at Erie. Bounded N. by Lake Erie and New York, E. by Warren co., S. by Crawford co., and W. by Ohio. Surface undulating, and watered by Conneaut, Elk, Walnut, and other creeks flowing into Lake Erie, and French Creek, flowing into the Alleghany River. Soil mostly sand and clay, well suited to the growth of grass.

Erie, Pa., shire town of Erie co. On the shore of Lake Erie, 272 miles N. W. from Harrisburg, 90 miles, on the lake, S. W. from Buffalo, N. Y., and 94 N. E. from Cleveland, O. Erie is built upon a bluff pleasantly overlooking Presque Isle Bay, the peninsula of which forms it, and the broad expanse of the lake beyond. The site is level, and the town is regularly laid out with broad and handsome streets. The public buildings are generally fine specimens of architecture, and many of the private residences are elegant, making this one of the pleasantest places in Pennsylvania. The Reed Hotel, after the plan of the Astor House, in New York, is a splendid establishment. The town contains the usual county buildings; a splendid Doric temple, of marble, formerly used by a branch of the U. S. Bank of Pa., now by the Erie Bank; an academy; and several churches of different denominations.

This place has good commercial advantages, being on one of the best harbors of Lake Erie, which is generally free from ice a month earlier than that of Buffalo; and being connected, by a canal, with the Ohio River, at the mouth of the Beaver, and thence by the river with Pittsburg, and, by the Pennsylvania Canal, with Philadelphia. The canal basin, connected with the harbor at Erie, is 2000 feet long by 1000 feet wide. It is connected by railroad with Buffalo on the E., and with Cleveland on the W.

During the war of 1812, Erie was an important military and naval station. Here, with most incredible despatch, was built the fleet with which Commodore Perry gained his victory on Lake Erie, on the 10th of September, 1813. Scarcely 70 days from the time the timber was standing in the forest, the whole squadron, consisting of 3 brigs, 5 schooners, and 1 sloop, was ready for action.

Erie, N. Y., Chemung co. Watered by Cayuta Creek and some other small streams. The surface is hilly; the soil hardly of medium quality. 8 miles E. from Elmira, and 190 W. by S. from Albany.

Errol, N. H., Coos co. This town is situated on the W. of Umbagog Lake. Several streams unite here with the Androscoggin. The surface is rough; the soil cold and hard to till. First settlers, Timothy Ruggles and others, February 28, 1774. Distances, 30 miles N. N. E. from Lancaster, and 108 from Concord.

Erving, Ms., Franklin co. Until 1838, the ter-

ritory of this town was called "Erving's Grant." It is watered on its S. side by Miller's River, a beautiful mill stream, and Connecticut River washes its N. W. corner. There is much elevated land in the town, affording excellent pasturage. 10 miles E. by N. from Greenfield, and 80 W. N. W. from Boston, with which it is connected by railroad.

Erwin, N. Y., Steuben co. Situated at the junction of Conhocton and Tioga Rivers. The surface is hilly. 20 miles S. E. from Bath, and 210 W. by S. from Albany.

Escambia County, Fla., c. h. at Pensacola. It is bounded N. by Alabama, E. by Escambia River, separating it from Santa Rosa co., S. by the Gulf of Mexico, and W. by Perdido River, separating it from Alabama. The surface, near the coast, is level, but in the interior more elevated. The soil is mostly sterile.

Esopus, N. Y., Ulster co. On the W. bank of the Hudson. Watered by Walkkill and Rondout Rivers. The surface is rather hilly; the soil mostly sandy clay and loam. 7 miles S. from Kingston, and 68 S. from Albany.

Essex, Ct., Middlesex co. On Connecticut River, 7 miles from its mouth, in the town of Saybrook. 37 miles S. by E. from Hartford. It has considerable shipping and trade, and something is done at ship building.

Essex County, Ms., Salem, Ipswich, and Newburyport, shire towns. This county is bounded N. W. by Rockingham co., N. H., S. W. by Middlesex co.; S. by Suffolk co., E. and N. E. by the Atlantic Ocean, and S. E. by Massachusetts Bay. There is much good land in this county, but its surface is rocky and uneven. It has an extensive sea-coast, indented with numerous bays, inlets, and capacious harbors. It is more densely populated than any county of its size in the U. S. It has great wealth, and its commerce and fisheries are unrivalled by any section of country, of its extent, on the globe. It has many beautiful ponds, and commanding elevations, and its seaboard is the delight of every beholder. The principal rivers are the Merrimac, Ipswich, and the Shawsheen.

Essex, Ms., Essex co. This was formerly a part of Ipswich, and is watered by a little river called Chebacco, which empties into Squam Bay, and gives it some mill privileges, and navigable accommodations. Essex is a pleasant, flourishing town, and contains many fine farms. It is a great place for building small vessels employed in the fisheries.

Essex County, N. J., c. h. at Newark. Bounded N. by Passaic and Bergen counties, E. by Bergen and Richmond, S. by Middlesex, and W. by Somerset and Morris counties. Watered by the Passaic, Rahway, and some other rivers, which afford fine water power. Surface mountainous; soil mostly red shale.

Essex County, N. Y., c. h. at Elizabethtown. Bounded on the N. by Clinton co., E. by Lake Champlain, S. by Warren, and W. by Franklin and Hamilton counties. It contains several small lakes, and is watered by Au Sable, Boquet, Saranac, and several smaller rivers, and the head waters of the Hudson. The surface is hilly and mountainous, much the highest peaks in the state occurring in this county. Mount Marcy, in the town of Keene, is elevated 5467 feet above the level of the ocean. The soil is fertile on the borders of the lake, but sterile in

the interior. Its principal riches are its mineral productions, in which it surpasses any county in the state. Iron ore of different kinds, graphite, and marble are among the most important deposits.

Essex, N. Y., Essex co. On the W. border of Lake Champlain. Watered by Boquet River. The surface is hilly; soil good on the E. part. 10 miles N. E. from Elizabethtown, and 135 N. N. E. from Albany.

Essex County, Vt., c. h. at Guildhall. This county is bounded N. by Canada, E. and S. by Connecticut River, which separates it from Coos co., N. H., S. W. by Caledonia co., and W. by Orleans co. This county is the least populous in the state, with the exception of Grand Isle co. The settlements are mostly confined to the towns lying along Connecticut River. The county is in general very uneven, and the soil rocky and unproductive. It comprehends that part of the country called Upper Coos, which lies on the west side of Connecticut River. Nulhegan River is the principal stream, which is wholly within the county. This and several smaller tributaries of the Connecticut water the eastern parts. Passumpsic, Moose, and Clyde Rivers, and several streams, water the other parts. Essex co. presents a great variety of magnificent scenery.

Essex, Vt., Chittenden co. There are no mountains, and but few hills in this township. The S. and W. parts are timbered principally with pine. The soil is dry and sandy, but produces good rye and corn. The remaining part of the township is timbered with hard wood, and is more natural to grass. Winooski River washes the S. boundary. In this river are two falls. The lower, called Hubbell's Falls, afford several valuable mill privileges. Brown's River, Steven's, Alder, and Crooked Brooks are considerable streams. On Winooski River are beautiful tracts of intervals. The first permanent settlement was made in 1783, by Messrs. Smiths, Winchels, and Willard. The settlers were principally from Salisbury, Ct. 7 miles N. E. from Burlington. The Vermont Central Railroad passes through the town.

Essex County, Va., c. h. at Tappahannock. Bounded N. and E. by the Rappahannock River, separating it from King George, Westmoreland, and Richmond counties, S. by Middlesex co., and W. by King and Queen, and Caroline counties. Surface rather uneven; soil fertile on the streams, but elsewhere sandy and sterile.

Estill County, Ky., c. h. at Irvine. Bounded N. by a branch of the Kentucky River, separating it from Clark co., E. by Montgomery and Owsley counties, and S. and W. by Madison co. Drained by the Kentucky River and its tributaries.

Estilville, Va., c. h. Scott co. On Moccasin Creek, a branch of Clinch River. W. by S. from Richmond 344 miles.

Etna, Me., Penobscot co. A farming town. 63 miles N. E. from Augusta.

Eugene, Ia., Vermilion co. On the S. side of Big Vermilion River, 1½ miles from the Wabash River, and 85 miles W. from Indianapolis. The river is navigable for steamboats to this place.

Eutaw, Ala., c. h. Greene co.

Eulalia, Pa., Potter co. The E. branch of Sinnemahoning River and its tributaries water this town. Surface hilly; soil vegetable mould and loam. 187 miles N. N. W. from Harrisburg.

Evans, N. Y., Erie co. On the border of Lake

Erie. Watered by Big and Little Sister Creeks and some other small streams. The surface is hilly; the soil very productive. 16 miles S. from Buffalo, and 293 W. from Albany.

Evansville, Ia., c. h. Vanderburg co. On the N. bank of the Ohio River, at the great North Bend, below the mouth of Green River, and 172 miles S. W. by W. from Indianapolis.

Evesham, N. J., Burlington co. Watered by Rancocas and Haines's Creeks and the head branches of Little Egg Harbor. Surface level; soil chiefly good sandy loam. 34 miles S. from Trenton.

Exeter, Me., Penobscot co. A good farming town. 65 miles N. N. E. from Augusta.

Exeter, N. H., Rockingham co. The compact part of the town lies about the falls, which separate the fresh from the tide water of a branch of the Piscataqua, known by the name of Exeter River. Above the falls, this stream assumes the name of Great River. At the falls are several large manufacturing establishments, and mechanical operations are largely carried on in the town. The soil is good, though various. Phillips Academy, in Exeter, was founded by the liberal donations of John Phillips, L. L. D., in 1781. Exeter has at all periods of its history possessed eminent and useful men. Some of the first lawyers and jurists, antiquarians and scholars, have received their early education at its literary institution. The village is handsome, and affords a pleasant place of residence. The Maine Railroad passes through it. First settlers, John Wheelwright and others, in 1638. 40 miles S. E. by E. from Concord, and 14 S. W. from Portsmouth.

Exeter, N. Y., Otsego co. Watered by Canaderaga Lake, Butternut and Wharton's Creeks, and several other small streams. The surface is elevated and hilly; soil well adapted to grazing. 10 miles N. W. from Cooperstown, and 78 W. from Albany.

Exeter, Pa., Berks co. Drained by Manokesvill and Roush Creeks, tributaries of the Schuylkill River. Surface hilly or undulating; soil tolerably fertile.

Exeter, Pa., Luzerne co. Drained by Gardner's Creek and Cascade Run, tributaries of the Susquehanna River, which bounds it on the N. E., and is traversed by the Shawney Mountains, on the E. side of which are found beds of anthracite coal. The soil is very fertile. The S. part of this town was the scene of the celebrated battle of Wyoming, fought in 1778. 129 miles N. N. E. from Harrisburg.

Exeter, R. I., Washington co. This is an agricultural and manufacturing town. The town is very large, being 12 by 5 miles. The surface is much diversified by hills and valleys; the soil is a gravelly loam, and very productive of all the varieties common to the climate. The products of the dairy are considerable. Branches of Wood River give this town a good water power. 24 miles S. W. from Providence.

Fabius, Mo., Marion co.

Fabius, N. Y., Onondaga co. This town is drained by the head branches of Tioughnioga River. The surface is hilly; the soil favorable to the growth of grass. Remains of ancient fortifications are found here. 20 miles S. E. from Syracuse, and 121 W. from Albany.

Fairfax, Vt., Franklin co. The surface is

somewhat uneven, and the soil light and easily cultivated, producing good corn and rye. Its principal streams are the River Lamoille, Brown's River, Parmelee's and Stone's Brooks, all of which afford good mill privileges. The great falls, in the Lamoille, 88 feet in 30 rods, are situated in the S. E. part of the town. In this town are 2 pleasant villages. Broadstreet Spafford and his two sons, Nathan and Asa, came into this township from Piermont, N. H., in 1783. They soon after removed their families here. 37 miles N. W. from Montpelier, and 12 S. E. from St. Albans.

Fairfax County, Va., c. h. at Fairfax. Bounded N. E. and S. E. by the Potomac River, separating it from Maryland, E. by the District of Columbia, S. W. by Ocoquan River, separating it from Prince William co., and N. W. by Loudon co. The interior is watered by Difficult Creek, a branch of the Potomac. Surface rough and hilly; soil mostly of poor quality.

Fairfax, Va., c. h. Fairfax co. 121 miles N. from Richmond.

Fairfield County, Ct. Fairfield and Danbury are the shire towns. This county is bounded N. by Litchfield co., N. E. and E. by Housatonic River, S. E. and S. by Long Island Sound, and W. by the state of New York. This is a fine farming section of country, agreeably diversified in regard to surface, with a strong fertile soil, and possesses great natural agricultural resources. Fairfield co. extends nearly 40 miles on Long Island Sound, and enjoys great facilities for navigation and the fisheries. The beautiful Housatonic washes its N. E. boundary, and the Saugatuck, Norwalk, Mill, Pequonoc, and other rivers afford it an ample water power. It contains many villages of superior beauty, and abounds in scenery of an interesting character. First settled 1639.

Fairfield, Ct., Fairfield co. This is the shire town, and comprises three parishes, Fairfield, the seat of justice, Green's Farms, and Greenfield. Its Indian name was Unquowa. The surface of the town is undulating and very pleasant. The soil is fertile, well cultivated, and productive of wheat and rye, and a great variety of fruits and vegetables for New York market. Black Rock Harbor is safe and easy of entrance for vessels drawing 19 feet of water at common tides. There is but little water power in Fairfield, except that produced by the tide.

In the year 1637, the tract of country which now forms the town of Fairfield was discovered by Captain Mason and the troops of Massachusetts and Connecticut under his command, when they pursued the Pequots to the swamp in this town bearing the name of "Pequot Swamp." This is the spot made memorable by the great fight that took place there between those troops and the Pequots, terminating in the almost entire destruction of that once powerful and warlike nation of savages. There are no Indian marks left by which this swamp can be traced as the place of their extermination, except a mound of earth in the centre of it, considered as a place of safety, evidently the effect of art, with a raised footpath leading from it to the surrounding high grounds. 21 miles S. W. from New Haven, on the New Haven and New York Railroad.

Fairfield, N. J., Cumberland co. Watered by Cohansay, Nantuxet, and Cedar Creeks. Surface level and sandy, with a marshy strip border-

ing on Delaware Bay. 12 miles S. by W. from Trenton.

Fairfield, N. Y., Herkimer co. Drained by West Canada Creek. The surface is hilly, and somewhat rocky; the soil fertile, and well adapted to grass. 10 miles N. from Herkimer, and 81 N. W. from Albany.

Fairfield, Me., Somerset co. On the W. side of Kennebec River, watered by a small stream running into the Kennebec, and by a branch of Waterville River. This is a fertile township of land, with a pleasant village. 26 miles N. from Augusta, to which the Kennebec is navigable.

Fairfield, O., Greene co. On a spacious plain surrounded by hills on the S. E. side of Mad River. 57 miles W. by S. from Columbus.

Fairfield, Pa., Westmoreland co. Drained by streams flowing into Conemaugh River, which bounds it on the N. E. Surface mostly level; soil calcareous loam.

Fairfield District, S. C., c. h. at Winnsboro'. Bounded N. by Chester district, E. by Lancaster and Kershaw districts, S. by Richland district, and W. by Broad River, separating it from Lexington, Newberry, and Union counties. Watered by Wateree, Little, and Broad Rivers. Soil very productive.

Fairfield, Vt., Franklin co. Black Creek and Fairfield River cross this township, and afford good mill privileges. Smithfield Pond, in the westerly part of the town, is about 3 miles long and $1\frac{1}{2}$ broad. The township was originally covered with hard wood. The surface is uneven, but very little of it is so broken as to be unfit for cultivation. The soil is generally good. The first settler of this town was Mr. Joseph Wheeler. He moved into it with his family in March, 1788. 45 miles N. W. from Montpelier, and 27 N. N. E. from Burlington.

Fairfield County, O., c. h. at Lancaster, situated a little S. E. of the centre of the state, on the height of land between the Muskingum and Scioto Rivers, having Licking co. on the N., Perry on the E., Hocking on the S. E. and S., and Pickaway and Franklin on the W. The principal streams are the head waters of the Hocking River, which runs S. E. into the Ohio. The western and northern parts are mostly level, and the soil highly fertile. The middle and eastern portions are more undulating, but still with a good soil; while the southern becomes hilly and broken, with a thin soil, composed, in many places, of sand and gravel. The staple productions of the county are wheat and the various grains, potatoes, and tobacco.

Among the physical features of this county is one which is worthy of notice, consisting of abrupt, precipitous, and conical ledges of rock, covered with little or no vegetation, interspersed in a promiscuous manner in every direction. One of these, about a mile N. E. from Lancaster, is very remarkable, rising to the height of about 200 feet. A writer on the geology of the state says, "What is properly called the sandstone formation terminates, near Lancaster, in immense detached mural precipices, like the remains of ancient islands. One of these, called Mount Pleasant, seated on the border of a large plain, affords, from its top, a fine view of the adjacent country. The base is a mile and a half in circumference, while the apex is only about 30 by 100 yards, resembling, at a distance, a huge pyramid. These lofty towers of sandstone are like

so many monuments to point out the boundaries of that ancient Western Mediterranean which once covered the present rich prairies of Ohio." Mount Pleasant is tolerably easy of ascent from the N. E., and is much resorted to by tourists and parties of pleasure for the extensive prospect of the surrounding country which it commands. Lancaster is supplied from this mountain with abundance of building stone and sand.

The main trunk of the Ohio Canal traverses the N. W. section of this county, and the Hockhocking Canal, which is a branch from the same, passing S. E. through Lancaster to Logan, on the Hockhocking River, opens a channel of transportation directly through the centre of the county.

Fairfield co. was constituted, by proclamation of Governor St. Clair, December 9, 1800. Lancaster, which had been laid out, in the fall of the same year, by Ebenezer Zane, was designated as the county seat; and, as the tide of emigration was at this time setting in with great force, the town experienced a rapid growth. It is related of the early inhabitants, that, in the absence of temperance statutes, they met and enacted the following: "That any person of the town found intoxicated should, for every such offence, dig a stump out of the streets, or else suffer personal chastisement"—a law which either in the keeping or breaking must happily have enured to the benefit of the town.

Fairhaven, Ms., Bristol co. Previous to 1812, this town was a part of New Bedford. The villages of Fairhaven and Bedford, at the head of Buzzard's Bay, were laid out about the year 1764, on opposite sides of the Acushnet River, which expands between the two villages, and forms a safe and commodious harbor of nearly a mile in breadth. At Acushnet village, in this town, is a good water power. Fairhaven is connected with New Bedford by a bridge across the Acushnet; also by a steam ferry. This is, indeed, a fair haven; from the circumstance of its beauty it was thus justly named.

Fair Haven, Vt., Rutland co. The surface of the township consists of swells and vales. The soil is various, consisting of gravel, sand, and marl. Along the rivers the soil is alluvial, and very productive. There is a variety of timber. The principal streams are Poultney and Castleton Rivers. About one mile above Fair Haven village, Castleton River receives the waters of Lake Bombazine, and one mile W. of the village, it joins Poultney River, and, after running 3 miles farther, falls into the lake. Between the junction of these streams and the lake are two considerable falls. The settlement commenced in 1779, by people from Connecticut and Massachusetts. 16 miles W. from Rutland.

Fairmount, Va., c. h. Marion co. On the Monongahela and the Baltimore and Ohio Railroad.

Fairport, O., Painesville township, Lake co., was called Grandon for a short time after it was laid out. The town is situated on the southern shore of Lake Erie, also on the E. bank of Grand River, at its mouth. Considerable business is carried on here. There is an excellent harbor, and it is a regular place of landing and embarkation for passengers between the western country and the state of New York. Distances 170 miles N. E. from Columbus, and 32 N. E. from Cleveland. This is the port of Painesville, and connected with it by a railroad 3 miles long.

Fairlee, Vt., Orange co. This is a rough and mountainous township, with very little productive land, on the W. side of Connecticut River, and connected with Orford, N. H., by a bridge across that river. Fairlee Pond is 2 miles in length, and about three fourths of a mile wide. The settlement was commenced in 1766, by Mr. Baldwin. Distances 17 miles E. S. E. from Chelsea, and 31 S. E. from Montpelier.

Fairview, Pa., Erie co. On Lake Erie, and drained by Walnut and Elk Creeks. Surface hilly; soil gravelly loam. 267 miles N. W. from Harrisburg.

Fairview, Pa., York co. Surface somewhat hilly, and watered by Yellow Breeches, Fishing, and Newberry Creeks; soil gravel and calcareous loam. 17 miles N. W. from York.

Fairport, O., Guernsey co. 105 miles E. from Columbus.

Fall River, Ms., Bristol co. Port of entry. 54 miles, by railroad, S. from Boston, 18 S. E. from Providence, R. I., and 18 N. N. E. from Newport. Population in 1810, 1296; 1820, 1594; 1830, 4158; 1840, 6738; 1850, 11,522.

This flourishing town lies at the head of the eastern arm of the Narraganset Bay, called Mount Hope Bay, where it receives the Taunton River. It has taken its name from another river which here falls into the bay from the E., by a descent over its rocky bed, in less than half a mile, of over 130 feet. This river forms the outlet of Watuppa Ponds, which lie about 2 miles E. of the village. The area of these ponds is about 5000 acres; and their principal supply for the fine water power which they create is from perpetual internal springs. The town of Fall River is almost without a parallel in respect to the union of an extensive hydraulic power, with a position immediately upon navigable waters. The river, for almost its entire length, flows from the ponds upon a granite bed, and for much of the distance it is confined between high granite banks. This water power, therefore, has all, or nearly all, to be occupied between these banks; and the wheels, upon which it is brought to act, are placed directly in the bed of the river. The whole of this fall is now occupied by large manufacturing establishments, generally occupying each a separate dam, and some of them extending entirely across the river, from bank to bank; and so rapidly do they succeed each other, that there is scarcely left between the buildings sufficient room for light and air.

It is a characteristic of this river, that while it affords an almost uniform and constant supply of water, it is never subject to excess; and therefore no injury or inconvenience has ever been experienced from so peculiar a location of the mills. The great business of Fall River, and that mainly which has given to it its present importance, is manufacturing. The hydraulic power of the river, although comparatively the volume of water is not large, is, nevertheless, owing to the steadiness of the supply and the certainty with which it can be controlled, available to a much greater extent than usual. Steam power has also been introduced and applied to the carrying on of some large operations.

The principal manufactures are of cotton, wool, and iron, with the printing of calico and the making of machinery. From 50,000 to 75,000 spindles are employed in the cotton manufacture. The calico printing works turn out

about 300,000 yards a week. At the woollen factory, satinet and cassimeres are made in large quantity. The machine shop employs over 100 hands, and turns out machinery of the best quality, and of every description, but principally for the cotton manufactories. But the largest establishment, and that which excites the most curiosity here, is one for the manufacture of iron. These works are operated wholly by steam, and employ between 400 and 500 hands, working up into nails, hoops, rods, castings, &c., from 10,000 to 12,000 tons of iron annually. Fall River has also its full share of shop manufactures. There is likewise a manufactory of sperm oil and candles.

The interests of navigation at this place are also considerable. The harbor has a sufficient depth of water for ships of the largest class, and is capacious enough almost to accommodate the ships of the whole world. It is one of the places which was formerly examined, and received favorable consideration, by the government, as an eligible site for a naval depot, especially with a view of constructing a dry dock under the old system. A number of vessels from this port are engaged in the whale fishery. Those owned here, and engaged in the coasting trade, are numerous; besides a large number, some of them of a large class, which are employed to bring lumber, coal, iron, and other articles consumed by the manufacturers and others in the place.

Fall River is well built. The surface being elevated and uneven, affords fine situations for dwellings; and, for a manufacturing town, the location is pleasant and healthy. The churches, 10 or 12 in number, are all of them neat, well situated, and commodious. Several of them are large and elegant.

This place has within its immediate vicinity an abundance of fine granite, equal in quality to any in the country. This granite is extensively wrought, giving employment to numerous persons. The immense fortifications at Newport have been mainly constructed with granite obtained at this place. It is also extensively used for building purposes in the village. Some very extensive granite buildings, particularly one for a market and town hall, have been erected of this material, which would suffer but little in comparison with buildings for like purposes in the city of Boston.

Fall River was formerly a part of Freetown, and was incorporated by its present name about the year 1802. Soon after, the name was changed to Troy, and by this name the place was designated for about 30 years. But the village, which continues to be called Fall River, becoming at length the point of chief importance, this name was again given to the town, by act of the legislature.

On Sunday, July 2, 1843, this place was visited by one of the most destructive fires, in proportion to its size, which has ever occurred in this country. About 200 buildings, including 1 factory, 1 large hotel, and 3 churches, were consumed. The energy and resources of the citizens have been evinced by the rapidity with which the place rose from its ashes, and attained an increase even upon its former extent.

Fall River is on one of the great daily routes, by railroad and steamboat, between Boston and New York, and is variously connected with that beautiful network of railroads by which all the

most important points in New England are brought into easy communication with each other.

Falls, Pa., Bucks co. On the Delaware River, opposite Trenton, and drained by Scott's and Penn's Creeks. Surface undulating; soil loam and sand.

Falls, Pa., Wyoming co. Bounded W. by the Susquehanna River, and drained by Buttermilk Falls Creek, which has a perpendicular descent of 30 feet. Surface uneven or mountainous; soil well adapted to grass and grain. 153 miles S. E. from Harrisburg.

Falls County, Ts. New.

Fallsburg, N. Y., Sullivan co. Neversink River and some of the head branches of Rondout Creek water this town. The surface is hilly; soil mostly gravelly loam. 8 miles N. from Monticello, and 108 S. W. from Albany.

Fallston, Pa., Beaver co. Situated on the W. bank of Beaver River, and has good mill privileges. 229 miles W. by N. from Harrisburg.

Falmouth, Ky., c. h. Pendleton co. At the junction of the main branch of Licking River with its S. W. fork. 60 miles N. E. from Frankfort.

Falmouth, Me. See Appendix, No. 4.

Falmouth, Ms., Barnstable co. It is a pleasant town on Vineyard Sound. Two streams afford the town water power; also 40 ponds, some of fresh and some of salt water, which are well stocked with fish. The scenery around some of these ponds is delightful; one of them is of sufficient depth of water for ships of any class. The Indian name of this place was Saccanesset. Wood's Hole, in this town, lies about 4 miles S. W. from Falmouth village. It is a good harbor, and is much frequented by vessels, and by invalids in search of sea air and bathing. 22 miles S. W. from Barnstable, and 70 S. E. from Boston.

Falmouth, Va., Stafford co. On the N. side of the Rappahannock River, just below the falls, and 64 miles N. from Richmond. There are large flouring establishments here.

Fannet, Pa., Franklin co. Tuscarora Creek waters this town. Surface mountainous, having Tuscarora Mountain on its W. border; soil calcareous loam and slate. 16 miles N. from Chambersburg.

Fannin County, Ts., c. h. at Bonham. On the north-eastern border of the state.

Farmersville, La., c. h. Union parish. On the N. side of Bayou d'Arbonne. 333 miles N. W. from New Orleans.

Farmersville, N. Y., Cartaraugus co. Drained by the head waters of Genesee River. Elevated and hilly. 274 miles W. from Albany.

Farmville, Va., Prince Edward co. On the S. side of Appomattox River. 70 miles W. S. W. from Richmond. A large capital and many hands are employed in the manufacture of tobacco. The river is navigable for steamboats to Petersburg.

Farmingdale, Me., Kennebec co. Formed in 1852, from parts of Gardiner, West Gardiner, and Hallowell.

Farmington, Ct., Hartford co. The first settlers of this town were from Hartford, being emigrants from the neighborhood of Boston, Ms. They located themselves, in 1640, on the luxuriant meadows of the Tunxis, or Farmington River, 10 miles W. from Hartford. The township was purchased of the Tunxis Indians, a numerous and warlike tribe. At its incorpo-

ration, in 1645, the township comprised 15 miles square; since which the pleasant towns of Southington, Berlin, Bristol, Burlington, and Avon have been taken from the original territory of Farmington.

Farmington River rises in the highlands in the N. part of Berkshire co., Ms., and after meandering delightfully through the towns of New Hartford and Burlington, in a S. E. direction, it changes its course at Farmington to the N., and passing Avon and Simsbury to the border of Granby, it again turns abruptly to the E., and meets the Connecticut at Windsor. This is a beautiful and fertilizing stream, and gives to the towns through which it passes, but particularly to Farmington, large tracts of rich alluvial meadows.

Farmington village is a delightful place, on an elevated plain, surrounded by high hills. It is connected with New Haven by railroad.

Round Hill, in the meadows, near the village, is a natural curiosity. It rises abruptly to the height of 60 feet, is nearly circular in its form, and covers 12 acres.

Farmington, Io., Van Buren co. On the Des Moines River. Iron ore, coal, and building stone abound in this vicinity.

Farmington, Me., See *Appendix*, No. 6.

Farmington, Mo., c. h. St. Francis co. S. E. from Jefferson City 139 miles.

Farmington, N. H., See *Appendix*, No. 8.

Farmington, N. Y., Ontario co. Mud Creek and a small branch of Canandaigua outlet water this town. The surface is level, and the soil fertile, but difficult to till. The Auburn and Rochester Railroad crosses the S. W. angle. 7 miles N. from Canandaigua.

Fauquier County, Va., c. h. at Warrenton. Bounded N. by Warren, Clarke, and Loudon counties, E. by Prince William, S. by Stafford and Culpepper, and W. by Rappahannock co. Watered by the Ocoquan and the head branches of the Rappahannock River. Surface agreeably diversified; soil tolerably fertile.

Fayette County, Aa., c. h. at Fayette Court House. Bounded N. by Marion and Walker counties, E. by Walker, S. by Tuscaloosa and Pickens counties, and W. by Mississippi. Sipsey and Battahatchy Rivers and Luxapatilla Creek water this county. Surface slightly uneven; soil fertile.

Fayette Court House, Aa., c. h. Fayette co. 2 miles W. from Sipsey River, and 40 N. W. from Tuscaloosa.

Fayette County, Ga., c. h. at Fayetteville. Bounded N. by De Kalb co., E. by Henry, S. by Pike, and W. by Flint River, separating it from Coweta, and partly from Campbell co. The surface is level, and soil fertile.

Fayette County, Is., c. h. at Vandalia. Bounded N. by Montgomery and Shelby counties, E. by Effingham and Clay, S. by Marion and Clinton counties, and W. by Bond and Montgomery counties. Watered by Kaskaskia River and its tributaries. Surface level, consisting partly of prairies, and on the borders of the Kaskaskia, liable to inundation.

Fayette County, Ia., c. h. at Connersville. Bounded N. by Henry and Wayne counties, E. by Union, S. by Franklin, and W. by Rush co. Watered by White River and its head branches, which afford extensive hydraulic power.

Fayette County, Io., c. h. at West Union. In

the N. E. angle. Watered by Turkey River and its branches.

Fayette County, Ky., c. h. at Lexington. Bounded N. by Scott and Harrison counties, E. by Bourbon and Clark, S. by the Kentucky River, separating it from Madison co., and W. by Jessamine co. Surface an elevated table land, watered by the head branches of Elkhorn River and other streams flowing into the Kentucky. Soil of excellent quality.

Fayette, Me., Kennebec co. A good township of land. 17 miles W. N. W. from Augusta.

Fayette, Mi., c. h. Jefferson co. 80 miles S. W. from Jackson, and 25 N. E. from Natchez.

Fayette, Mo., c. h. Howard co. On the E. side of Bonne Femme Creek. 61 miles N. W. from Jefferson City. Fayette College is located here. See *Colleges*.

Fayette, N. Y., Seneca co. Bounded on the E. by Cayuga, and W. by Seneca Lake. Seneca River and some of its branches water the town on the N. The surface is level; soil fertile. 178 miles W. from Albany.

Fayette County, O., c. h. at Washington. Clinton and Green counties bound it on the W., Pickaway and Ross on the E., Highland on the S., and Madison co. on the N. The land is level, and of a good quality, and is watered by Deer and Paint Creeks. Emigrants from Virginia and Kentucky settled here about the year 1805.

Fayette County, Pa., c. h. at Union. Bounded N. by Westmoreland co., E. by Somerset co., S. by Virginia, and W. by the Monongahela River, separating it from Greene and Washington counties. Drained by the Youghiogony River, and Dunlap, Brown's, Redstone, and Cook's Creeks. At the Ohiopile Falls the Youghiogony River descends 60 feet within the space of a mile. The surface of this county is partly mountainous, Laurel Hill and the Chestnut Ridge lying in the E. part. The soil is fertile.

Fayette, Pa., Alleghany co. Watered by branches of Chartier's Creek. Surface hilly, abounding with coal; soil loam. 214 miles W. from Harrisburg.

Fayette County, Te., c. h. at Somerville. Bounded N. by Tipton and Haywood counties, E. by Hardeman co., S. by Mississippi, and W. by Shelby co. Watered by Loosahatchy and Wolf Rivers. Soil fertile. A railroad extends from La Grange, in this county, to Memphis, on the Mississippi River, and a side branch extends to Somerville.

Fayette County, Ts., c. h. at La Grange. S. central. On both banks of the Colorado.

Fayette County, Va., c. h. at Fayetteville. Bounded N. by Nicholas co., E. by Greenbrier, S. by Mercer and Logan, and W. by Logan and Kanawha counties. Watered by New and Gauley, head branches of the Great Kanawha River, and by Clear and March, branches of Coal River. The surface is mountainous, and on New River, 2 miles from Fayetteville, is a projection called Long Point, the top of which, consisting of a flat rock covering 2 acres, is elevated 1500 feet above the water of the river. At another place, a perpendicular rock, called Hawk's Nest, or Marshall's Pillar, rises 1100 feet above the surface of the same river. Some interesting remains of ancient fortifications are also found in this county.

Fayetteville, As., c. h. Washington co. Situated on the N. W. side of White River. 196 miles N. W. from Little Rock.

Fayetteville, Ga., c. h. Fayette co. On a branch of Flint River. 85 miles W. N. W. from Milledgeville.

Fayetteville, N. C., seat of justice of Cumberland co. On the W. side of Cape Fear River, at the head of uninterrupted boat navigation, 60 miles S. from Raleigh. The town is pleasantly situated about a mile from the river, and is regularly laid out, with streets 100 feet in width. An arsenal of construction has been established here by the government. There is a good water power, on which, besides the shops of the arsenal, there are a number of cotton factories, flouring mills, grist mills, and saw mills. It has an active trade in grain, flour, naval stores, and tobacco.

A considerable portion of this place was destroyed by fire in 1831. An appeal was made, with much success, to the sympathies of the people throughout the United States, and about \$90,000 were contributed for the relief of the sufferers.

Fayetteville, O., Perry township, Brown co. 25 miles N. from Georgetown.

Fayetteville, Te., c. h. Lincoln co. On the N. side of Elk River. 86 miles S. from Nashville.

Fayetteville, Vt., c. h. Windham co. In the town of Newfane. 115 miles S. from Montpelier.

Fayetteville, Va., c. h. Fayette co. 2 miles W. from New River, a little above its junction with Gauley River, and 289 miles W. from Richmond.

Fayston, Vt., Washington co. Fayston is generally too mountainous to be much cultivated. Along the borders of some of the branches of Mad River, which rises here, is some arable land. The town was settled in 1798, by Lynde Wait, Esq. 16 miles W. S. W. from Montpelier, and 25 S. E. from Burlington.

Fenner, N. Y., Madison co. Watered by Chittenango and Canaseraga Creeks. The surface is undulating; soil of good quality. 8 miles N. W. from Morrisville, and 115 W. by N. from Albany.

Fentress County, Te., c. h. Jamestown. Bounded N. by Kentucky, E. by Campbell co., S. by Morgan and Putnam, and W. by Overton co. Watered by Obey's River and White Oak Creek, branches of Cumberland River.

Ferdinand, Vt., Essex co. This town was chartered in 1761. Paul's Stream affords it a good water power, but the land is so mountainous, rocky, cold, and swampy, that people do not choose to cultivate it.

Ferguson, Pa., Centre co. Spring Creek and its branches water this town. Surface mountainous, and abounding with iron ore; soil calcareous loam in the valleys. 11 miles S. from Bellefonte.

Ferrisburgh, Vt., Addison co. This township is watered principally by Otter, Little Otter, and Lewis Creeks. In Little Otter Creek are 4, and in Lewis Creek 3 commodious falls, on which mills and other machinery are erected. Lake Champlain is on the western boundary. In this township is one of the best harbors on the lake, called Basin Harbor. The surface of the north eastern part is somewhat hilly. The remaining parts, especially the western, are remarkably level. No township in the state has afforded more or better timber for market than this. The soil is various. It is a good grazing township. A part of this town was annexed to Pantton in 1847. The first permanent settlement was made in 1784 and 1785, by emigrants from Bennington, in this state, and from Connecticut. 16 miles N. W. from Middlebury, and 34 W. from Montpelier.

Fincastle, Va., c. h. Botetourt co. On the S. E. slope of Catawba valley, 175 miles W. from Richmond.

Findlay, Pa., Alleghany co. Watered by Monture's Run, and branches of Raccoon Creek. Surface hilly; soil loam. 15 m. N. W. from Pittsburg.

Finley, O., c. h. Hancock co.

Fishing Creek, Pa., Columbia co. Drained by Fishing Creek. Surface mountainous; soil gravel and clay. 101 miles N. by E. from Harrisburg.

Fishkill, N. Y., Dutchess co. This is one of the largest and wealthiest inland towns in the state. It is situated on the E. bank of the Hudson River, and drained by the Fishkill and Wappinger's Creek. The surface is undulating on the N., and on the S. hilly and mountainous. There are several quarries of iron ore, marble, and black lead. The soil is uncommonly fertile. 10 miles S. from Poughkeepsie, and 88 S. from Albany.

Fishkill Landing, N. Y., in Fishkill, Dutchess co. On the Hudson River, at the mouth of Fishkill Creek, 90 miles S. from Albany. A steam ferry connects this place with Newburg, on the opposite side of the Hudson.

Fishkill, N. Y., King's co. The surface of this town is mostly level; the soil productive when properly tilled. 4 miles S. E. from Brooklyn, and 149 S. from Albany.

Fitchburg, Ms., Worcester co., was formerly a part of Lunenburg. A large branch of the Nashua, and two smaller streams, pass through the town, and afford it an extensive and constant water power. Over the Nashua are a large number of dams, and the river in the course of two miles puts in motion a number of cotton and other factories. This is a very flourishing and growing town, having received a great impulse since the completion of the railroads by which it is connected with Boston, Worcester, Lowell, and the valley of the Connecticut. Near the principal village is an immense quarry of excellent granite. The surface is uneven; the soil strong and fertile. In some parts the hills are large, high, and steep. Rollstone and Pearl Hills are the principal ones. 49 miles W. N. W. from Boston, and 24 N. from Worcester.

Fitzwilliam, N. H., Cheshire co. Camp and Priest Brooks are the principal streams. South Pond, 230 rods long, and of various width; Slip's Pond, 200 rods long and 100 wide; Rockwood's Pond, and Collin's Pond, are the only natural collections of waters. The surface is hilly; soil rocky, and suitable for grazing and tillage. There is very valuable meadow land found here. Near the centre of the town is a large hill, noted for its romantic prospect. Gap Mountain, on which are found various stones suitable for whetstones, lies partly in this town. First settlers, James Reed, John Fassett, Benjamin Bigelow, and others, in 1760. 13 miles S. E. from Keene, and 60 S. W. from Concord. The Cheshire Railroad passes through it.

Flabush, N. Y., King's co., L. I. 8 miles S. E. from New York city. The seat of justice for King's co. was here until 1832, when it was removed to the city of Brooklyn. It is a small but pleasant town, containing two churches, and an academy of long-established reputation. The Dutch Reformed Church is of gray stone, with tower, bell, and spire. From its vicinity to New York, this is a pleasant place of resort in the warm season. Prospect Hill, half a mile N. W.

of the village, about 200 feet in height, overlooks four of the adjacent towns, and affords an extensive prospect out to sea.

Near the N. W. boundary is the battle ground where the battle of Long Island was fought in 1776, under the immediate command of Generals Putnam and Sullivan; which, issuing unfavorably for the Americans, led to the masterly retreat of the troops, under Washington, from Long Island.

Flatlands, N. Y., King's co., embraces Barren and some other small, marshy islands. The surface is level; soil productive, when properly cultivated. 8 miles S. E. from Brooklyn, and 153 S. from Albany.

Fleming County, Ky., c. h. at Flemingsburg. Bounded N. by Mason and Lewis counties, E. by Carter, S. by Morgan and Licking River, separating it from Bath co., and W. by Nicholas co. Surface mountainous in the E. and S. portions; soil fertile, being based upon limestone.

Fleming, N. Y., Cayuga co. On the W. border of Owasco Lake. Drained by Crane Brook and some other small streams. The surface is undulating; soil clay loam of good quality. 4 miles S. from Auburn, and 160 W. from Albany.

Flemingsburg, Ky., c. h. Fleming co. On Stockton Run, 1 mile from its junction with Fleming Creek, and 95 miles E. by N. from Frankfort.

Flemington, N. J., c. h. of Hunterdon co. This town, 25 miles N. by W. from Trenton, is very pleasantly situated on an undulating plain, one mile N. of which is a high eminence which overlooks the village and surrounding country, and affords a delightful view of it. The village is mostly built on one street, which has many handsome dwellings, and is marked by a general appearance of neatness and thrift. The court house is a spacious stone building, with a Doric portico, in the basement of which is the county prison. There are two copper mines near this place. The soil of the surrounding country is red shale, and tolerably productive.

Fletcher, Vt., Franklin co. The River La-moille just touches upon the southern extremity of this township. Metcalf Pond is about one mile long from N. to S., and one third of a mile wide from E. to W. It discharges its waters at the S. end, forming one of the head branches of Black Creek. This stream, Fairfield River, and Stone's Brook are the principal waters. The surface of this township is considerably broken. The town was chartered to Moses Rolinson, John Fay, and others, in 1781. The settlement was commenced in 1784. 22 miles N. N. W. from Montpelier, and about 18 S. E. from St. Albans.

Florence, Aa. Shire town of Lauderdale co. On the N. side of the River Tennessee, immediately below the Muscle Shoals. It is situated on an elevated plain, 100 feet above the river. The streets are 100 feet wide, and cross each other at right angles. Except when the water is low, steamboats ascend from the Ohio to this place; so that it carries on some trade with New Orleans. Above Florence, there is a railroad from Tusculumbia, nearly opposite, on the river, to Decatur, a distance of 46 miles, to avoid the shoals; above which the river is again navigable as far as Knoxville, Te. At Chattanooga, near the S. border of Tennessee, the boats connect with an extensive railroad route through the N. part of Georgia to Augusta, and thence to Charleston, S. C., a distance, in the whole, of about 440 miles. For an in-

terior location, Florence is well situated for business.

Florence, N. Y., Oneida co. Watered by tributaries of Fish Creek. The surface is slightly uneven. 33 miles N. W. from Utica, and 127 from Albany.

Florence, Ms., Berkshire co., comprises a part of Zoar, an unincorporated district. This township is situated on the height of the Green Mountain range; its surface is broken, and its climate severe. Hoosic Mountain, 1448 feet above Deerfield River, which washes its eastern boundary, and other mountains in the town, offer to the beholder some of the finest Alpine scenery in the state. 125 miles W. by N. from Boston, and 22 N. N. E. from Pittsfield.

Florida, N. Y., Montgomery co. The Mohawk River and Schoharie Creek water this town. Surface undulating; soil favorable to the growth of wheat. 8 miles S. E. from Fonda, and 34 N. W. from Albany.

Floyd County, Ga., c. h. at Rome. Bounded N. by Chatoga and Walker counties, E. by Murray and Cass, S. by Paulding co., and W. by Aa. The Oostanaula and Etowah unite to form the Coosa, in this county, which is also watered by Cedar and Chatoga Creeks. Surface uneven; soil rich on the borders of the streams.

Floyd County, Ia., c. h. at New Albany. Incorporated in 1819, and bounded N. by Washington and Scott counties, E. by Clark co., S. E. by the Ohio River, separating it from Ky., and S. and W. by Harrison co. Watered by Silver, and the head branches of Indian Creek. Surface hilly; soil rich.

Floyd County, Ky., c. h. at Prestonburg. Bounded N. by Morgan and Johnson counties, E. by Pike, S. by Letcher, and W. by Perry and Breathitt. Watered by the head branches of Kentucky and Licking, and the W. fork of Big Sandy River. Surface high and hilly.

Floyd, N. Y., Oneida co. On the N. side of the Mohawk. Watered on the E. by Nine Mile Creek. The surface is rolling; the soil fertile, and particularly suitable for grass. 8 miles N. from Utica, and 100 N. W. from Albany.

Floyd County, Va., c. h. at Jacksonville. Bounded N. by Montgomery, E. by Franklin, S. by Patrick and Carroll, and W. by Pulaski co. Surface mountainous, and watered by Little River and its tributaries; soil suitable for grazing.

Floyd, Va., c. h. Floyd co. 215 miles W. S. W. from Richmond.

Flushing, N. Y., Queen's co. Bounded on the N. by Long Island Sound. Flushing and Little Neck Bays, with the streams flowing into them, also water this town. The surface is mostly level; soil well tilled and productive. 6 miles W. from North Hempstead, and 156 S. from Albany.

Fluvanna County, Va., c. h. at Palmyra. Incorporated in 1777, and bounded N. by Albemarle and Louisa counties, E. by Goochland co., S. by James River, separating it from Cumberland and Buckingham counties, and W. by Albemarle co. It is traversed by the Ravenna River. Surface mostly rough; soil good on the rivers. Gold is found in this region.

Fonda, N. Y., c. h. Montgomery co. On the N. side of Mohawk River, and on the railroad from Albany to Buffalo, 42 miles W. from Albany. This is a prosperous manufacturing place.

Fond du Lac County, Wn., c. h. at Fond du Lac. Bounded N. by Winnebago and Cal-

umet counties. E. by Sheboygan, S. by Washington and Dodge, and W. by Marquette co. Watered on the N. E. by Lake Winnebago, and drained by Rock and Milwaukee Rivers, and Crocodile and Martin's Creeks. Surface mostly level, and in parts swampy.

Fond du Lac, Wn., Fond du Lac co. At the head of Winnebago Lake. 98 miles N. E. from Madison.

Fordham, N. Y., Westchester co. On the line of the Haerlem Railroad, 12½ miles from New York City Hall. The site of St. John's College. See *Colleges*.

Forest County, Pa. New. Had but 561 inhabitants by the census of 1850.

Forestburg, N. Y., Sullivan co. Drained by Neversink River and some other streams. The surface is hilly; soil sandy loam. 8 miles S. from Monticello, and 127 S. S. W. from Albany.

Forks, Pa., Northampton co. Located near the junction of the Delaware and Lehigh Rivers, and drained by Bushkill Creek and its branches. Surface level; soil loam.

Forsyth, Ga., c. h. Monroe co. A little S. from the Towelagge, a branch of Ockmulgee River, and 55 miles W. from Milledgeville. Connected with Macon by railroad, 45 miles distant.

Forsyth County, Ga., c. h. at Cumming. Bounded N. by Lumpkin co., E. and S. by the Chatahoochee River, separating it from Hall and Gwinnett counties, and W. by Cherokee co. Drained by Chatahoochee and Etowah Rivers and branches.

Forsyth, Mo., c. h. Taney co. On the E. side of White River, at the mouth of Swan Creek, and 201 miles S. from Jefferson City.

Forsyth County, N. C. New.

Fort Ann, N. Y., Washington co. Bounded by Lake George on the N. W., and is watered by Wood Creek; the Champlain Canal also passes through this town. Surface diversified with hills, mountains, valleys, and plains; soil varied as the surface. 12 miles N. from Sandy Hill, and 60 N. N. E. from Albany.

Fort Bend County, Ts., c. h. at Richmond. In the S. middle part of the state, on both banks of the Brazos.

Fort Covington, N. Y., Franklin co. Salmon and Little Salmon Rivers water this town, the surface of which is level, and the soil of good quality. The Canada line bounds it on the N. 14 miles N. W. from Malone, and 223 N. N. W. from Albany.

Fort Des Moines, Io., c. h. Polk co. At the junction of Racoon and Des Moines. It is a beautiful place, at the head of navigation of the Des Moines River, within 30 miles of the geographical centre of the state, of which it will probably be the capital at no distant day. The valley of the Des Moines is unsurpassed in fertility, and Fort Des Moines is already the seat of a large inland trade. 120 miles W. from Iowa City.

Fort Edward, N. Y., Washington co. On the E. bank of the Hudson. Drained by the Moosekill and some other small streams. The surface is somewhat undulating; soil of good quality. 4 miles S. from Sandy Hill, and 47 N. N. E. from Albany.

Fort Hamilton, N. Y., King's co. Situated at the western extremity of Long Island, on the E. side of the Narrows, through which is the main entrance into New York Harbor. There is

a small village here connected with the Fort, which enjoys a fine view of the lower bay and of the ocean, and is one of the many places of resort for the people of New York in the summer season. See *New York*.

Fort Madison, Io., Lee co., on the W. bank of the Mississippi River, contains the ruins of a fortification, now hardly visible, erected in 1808, as a defence against the Indians, who compelled the garrison to burn the fort in 1813.

Fort Miller, N. Y., Washington co. On the E. side of the Hudson River, where is a descent of about 20 feet, also a dam for feeding the Champlain Canal.

Fort Plain, N. Y., Montgomery co. On the S. bank of the Mohawk River, on the Erie Canal.

Fort Smith, As., Crawford co. 165 miles W. N. W. from Little Rock, and 66 miles S. E. from Fort Gibson. This place is situated on the S. side of the Arkansas River, at the entrance of the Poiteau, a small river from the S., on the extreme W. border of the state. It is the site of an extensive fortification, erected by the government for the protection of their western frontier settlements.

Fort Wayne, Ia., c. h. Allen co. In a fertile region, on the S. side of Maumee River, and on the Wabash and Erie Canal. 131 miles N. N. E. from Indianapolis.

Foster, R. I., Providence co. This is a large agricultural and manufacturing town, finely watered by Hemlock Brook, Ponongansett and Moosup Rivers. The surface of the town, in many parts, is rough and uneven, but the soil is well calculated for the productions of the dairy. In the western part are extensive forests of valuable timber. There are a number of pleasant villages on the borders of the numerous streams. First settled in 1717; incorporated in 1781. Foster was named in compliment to the Hon. Theodore Foster, formerly a senator of the United States. 15 miles S. W. from Providence.

Fountain County, Ia., c. h. at Covington. Incorporated in 1825. Bounded E. by Tippecanoe and Montgomery counties, S. by Park co., and W. and N. by the Wabash River, separating it from Vermilion and Warren counties. Drained by Coal and Shawnee Creeks, branches of the Wabash River, and good mill streams. Surface slightly uneven; soil of excellent quality. The Wabash and Erie Canal traverses this county.

Fowler, N. Y., St. Lawrence co. Drained by the Oswegatchie River and some of its tributaries. The surface is slightly uneven; soil mostly good. 22 miles S. from Canton, and 186 N. W. from Albany.

Foxboro', Ms., Norfolk co. In this town are a number of pleasant ponds, and several small streams which empty into Taunton River. These all produce considerable water power. The Boston and Providence Railroad passes through the town. The depot is 21½ miles S. S. W. from Boston, and 19½ N. by E. from Providence.

Foxcroft, Me., Piscataquis co. On the N. side of Piscataquis River, opposite Dover. 77 miles N. N. E. from Augusta.

Foxville, Va., Fauquier co. On the Rappahannock River. 30 miles above Fredericksburg, and 116 miles N. by W. from Richmond. Here is a white sulphur spring, and a quarry of slate. The manufactures are considerable.

Framingham, Ms., Middlesex co. This beautiful town is distinguished for its agricultural,

manufacturing, and mechanical progress. The soil is various, but generally strong and fertile. The surface is not very uneven, though there are several elevated and pleasant hills. Nobscot and Bare Hills command extensive and rich views. In the S. and S. E. parts are several pleasant ponds. The principal stream is Sudbury River. Saxonville, in this town, is one of the most beautiful and flourishing villages in New England. Long Pond, which supplies Boston with water, lies partly in this town. The Framingham Academy, in the centre village, is a useful and popular seminary. 21 miles W. from Boston, and 23 E. from Worcester.

Francesstown, N. H., Hillsboro' co. The two S. branches of the Piscataquog rise in this town. Pleasant and Haunted Ponds are considerable collections of water. The land is uneven, and in many parts stony, but the soil is warm and moist. The highest land is Crotched Mountain, the summits of which are more than 600 feet above the level of the Common, in the centre of the town. One of the summits is covered with wood; the other is almost a solid ledge of rocks. There is in the easterly part of this town a very extensive and valuable quarry of soapstone, resembling, when polished, verd antique marble. In the N. part good black lead, and in the S. rock crystal have been found. Garret and soapstone are also found here. The local situation of this town is very eligible for business. It derived its name from Frances, the wife of the last Governor Wentworth. 12 miles N. W. from Amherst, and 28 S. W. from Concord.

Franconia, N. H., Grafton co. This town is mountainous. Its streams are branches of the Lower Amonoosuck River. Here are several ponds; one of which, called Ferrin's, is the source of the middle branch of Pemigewasset River. The mountains adjoining the Notch are called Mounts Lafayette and Jackson. On the latter is the celebrated "Profile," or "Old Man of the Mountain." It is situated on a peak of solid rock, 1000 feet high, and almost perpendicular. On this peak, Nature, in her wildest mood, exhibits the profile of the human face. See *Fashionable Resorts*. The village in this place, lying in a hollow, is remarkable for its cold weather. It owes its rise and prosperity to the discovery and working of a rich vein of granular magnetic iron ore. First settlers, Captain Artemas Knight, Lemuel Barnett, Zebedee Applebee, and others, in 1774. 28 miles N. E. from Haverhill, and 95 N. from Concord.

Franconia, Pa., Montgomery co. This town is watered by Indian, Pike, and Shippack Creeks, and the N. E. branch of the Perkiomen Creek. Surface level; soil red shale. 88 miles E. from Harrisburg.

Frankford, N. Y., Sussex co. Papakating Creek, a branch of the Wallkill River, waters this town. Surface hilly on the W., but elsewhere level; soil very productive, being based upon lime and slate.

Frankford, Pa., Cumberland co. Watered by Conedogwinit Creek and its branches. Blue Mountain lies partly in the N. part of this town, and McClure's Gap on the E. boundary; it has also a sulphur spring near the centre.

Frankford, Pa., Oxford, Philadelphia co. On Tacony Creek, which affords water power. 5 miles N. E. from Philadelphia, and 104 E. by S. from Harrisburg.

Frankfort, Ia., c. h. Clinton co. On the S. fork of Wildcat Creek, N. N. W. from Indianapolis, 42 miles.

Frankfort, Ky., c. h. at Franklin co. Capital of the state.

Frankfort, Me., Waldo co. An excellent township with two villages on the W. side of Penobscot River. It is the highest point to which vessels can ascend during the icy season of the year. 12 miles below Bangor.

Frankfort, N. Y., Herkimer co. Situated 7 miles W. from Herkimer, and 87 W. N. W. from Albany. The surface on the S. is broken and hilly, but upon the N., in the valley of the Mohawk, are fertile meadows. The principal village is situated on the S. side of this river, on the line of the Erie Canal. There are manufactories here for making cotton and woollen goods, and machinery, under a company incorporated in 1834, with a capital of \$200,000.

Frankfort, O., Wells township, Guernsey, lies on the old road leading from Zanesville to Wheeling, in Virginia, about 15 miles E. from Cambridge.

Frankfort, O., Concord township, Ross co. This town is pleasantly located on the N. fork of Paint Creek, on elevated land, and occupies the same spot of the old Indian town of Chillicothe. Near here are several large mounds.

Franklin County, Aa., Russellville, shire town. Bounded N. by the Tennessee River, separating it from Lauderdale co., E. by Lawrence co., S. by Marion co., and W. by Mississippi. Surface hilly, and drained by Cedar, Bear, Little Bear, and Spring Creeks; soil fertile.

Franklin County, As., c. h. at Ozark. Bounded N. by Washington and Madison counties, E. by Johnson, S. by Scott, and W. by Crawford co. The Arkansas River traverses the middle of this county, from E. to W. Surface rough and hilly; soil fertile on the borders of the streams.

Franklin, Ct., New London co. Shetucket River separates this town from Lisbon. The surface of Franklin is uneven; the soil a gravelly loam, more fit for grazing than tillage. There is a woollen factory on Beaver Brook, a branch of the Shetucket; but the chief business of the people is rearing sheep, and other agricultural pursuits. 34 miles E. S. E. from Hartford.

Franklin County, Fa., c. h. at Appalaehicola. Incorporated in 1832. Bounded N. and E. by Gadsden co., S. by the Gulf of Mexico, and W. by Calhoun co. The Appalaehicola River forms part of its W. boundary. The land is low and swampy, interspersed with numerous ponds. Soil very fertile on the margins of the rivers. This county embraces the islands of St. George and St. Vincent.

Franklin County, Ga., c. h. at Carnesville. This county was incorporated in 1788, and is bounded N. E. by the Tugaloo, a head branch of the Savannah River, separating it from S. C., S. E. and S. by Elbert and Madison counties, and W. by Hall and Habersham counties. Drained by the N. fork of Broad River. Surface hilly; soil productive.

Franklin County, Is., c. h. at Frankfort. This county was incorporated in 1818, and is bounded N. by Jefferson co., E. by Hamilton and Gallatin, S. by Williamson, and W. by Jackson and Perry counties. Watered by Big Muddy River and its tributaries, and the S. fork of Saline Creek. Soil of good quality.

Franklin County, Ia., c. h. at Brookville. Bounded N. by Fayette and Union counties, E. by Ohio, S. by Dearborn and Ripley counties, and W. by Decatur co. Drained by branches of the White Water River, which afford fine mill privileges. Surface level or undulating; soil fertile. The White Water Canal crosses this county.

Franklin, Ia., c. h. Johnson co., occupies a high bluff, on the E. side of Young's Creek, 20 miles S. from Indianapolis.

Franklin County, Ky., c. h. at Frankfort. Bounded N. by Henry and Owen counties, E. by Scott, S. by Woodford and Anderson, and W. by Shelby co. Surface hilly, and watered by Kentucky and Elkhorn Rivers; soil fertile.

Franklin, Ky., c. h. Simpson co. On the W. side of Drake's Creek, a branch of Barren River. 164 miles S. W. from Frankfort.

Franklin Parish, La., c. h. at Winnsboro'. N. E. central. Between Bayou Boeuf of Red River, and Bayou Macon, the W. branch of the Tensas.

Franklin, La., c. h. St. Mary's parish. Located on the W. side of the Bayou Teche. 144 miles W. by S. from New Orleans.

Franklin County, Me., c. h. at Farmington. In the W. part of the state, including the height of land between the Androscoggin and Kennebec. Undulating, with mountainous tracts, with numerous ponds and mill streams. Soil generally good. The northern part bordering on Canada is still unsettled.

Franklin, Me., Hancock co. At the head of Taunton Bay, the most northerly part of Frenchman's Bay. 15 miles E. from Ellsworth.

Franklin County, Ms., c. h. at Greenfield. This was a part of Hampshire co. until 1811. The surface is elevated; the Green Mountain range intersects it from N. to S., presenting some of the wildest and most picturesque scenery in the state. The soil is exceedingly fertile; its rich alluvial valleys produce the finest crops of grain and grass, while its mountain sides afford rich pasturage. Few sections of our country equal the county of Franklin in the extent and value of its hydraulic power. The noble Connecticut pierces its centre from N. to S., the romantic and powerful Deerfield pours its volume of water from the W., while Miller's River comes in from the E., with its rapid current, joins the two former near the heart of the county, and passes to the ocean. These rivers, combined with their numerous tributaries, watering every section of the county, produce a water power of great extent and usefulness.

Franklin, Ms., Norfolk co. Charles River and several of its branches meander through this town, and give to it fine mill seats and a constant flow of water. This town was a part of Wrentham until 1778. There are in the town some very pleasant villages, and some eminences from which are fine views of the surrounding country. This town was named in honor of the celebrated Dr. Franklin. Soon after its incorporation, a hint was given to the doctor, then in France, that a present of a bell would be acceptable to the town for the honor conferred. The doctor sent the town some valuable books, and observed that he presumed the people of Franklin were more fond of sense than sound. 27 miles S. W. from Boston, and 17 S. W. from Dedham.

Franklin County, Mi., c. h. at Meadville. Bounded N. by Jefferson and Coshic counties,

E. by Lawrence and Pike, S. by Amite and Wilkinson, and W. by Adams co. Watered by tributaries of the Homochitto and the head branches of Amite River. Surface undulating; soil sterile, except on the margins of the rivers.

Franklin County, Mo., c. h. at Union. The Missouri River bounds this county on the N., separating it from Warren and St. Charles counties. St. Louis and Jefferson counties bound it on the E., Washington and Crawford on the S., and Gasconade on the W. Drained by the Maramec and Bourbeuse Rivers, the latter being a good mill stream, and by some smaller tributaries of the Missouri. Surface undulating; soil mostly fertile.

Franklin County, N. C., c. h. at Louisburg. Bounded N. by Warren co., E. and S. E. by Nash, S. W. by Wake, and W. by Granville co. Tar river traverses the middle of this county, and Fishing Creek forms part of its N. boundary. Surface level; soil productive.

Franklin, N. H., Merrimac co., is a place of considerable and increasing business. The junction of the Winnipiseogee and Pemigewasset Rivers, in this town, form the Merrimac, creating on both streams an extensive and valuable water power.

A famous peat bog is in this town. Plumbago, &c., has been found here. The Northern Railroad passes through the centre. This town was taken from the towns of Salisbury, Andover, Sanbornton, and Northfield. 19 miles N. by N. W. from Concord by the Northern Railroad.

The descent of the Winnipiseogee branch, from the lake to its junction with the Pemigewasset, is 232 feet. The confluent stream bears the name of Merrimac, and pursues a S. course, 78 miles, to Chelmsford, Ms.; then an E. course, 35 miles, to the sea at Newburyport. On the N. line of Concord, the Contoocook discharges its waters into the Merrimac. The Soucook becomes a tributary in Pembroke, and the Suncook between Pembroke and Allenstown. The Piscataquog unites in Bedford; the Souhegan in Merrimac; and a beautiful river, called Nashua, in Nashua. The tributaries which enter in Massachusetts are the Concord at Lowell, the Spiggot at Methuen, the Shawsheen at Andover, and the Powow, between Amesbury and Salisbury. The principal tributaries are on the W. side of the river, all, except the Concord, rising in the highlands between the Connecticut and Merrimac. There are numerous falls in this river, the most noted of which are Garven's in Concord, Bow Falls in Hooksett, Amoskeag Falls in Goffstown and Manchester, Pawtucket Falls at Lowell, and the falls at Lawrence. The river was formerly much used for boat navigation, in conjunction with the Middlesex Canal, aided by canals round the principal falls; but since the introduction of railroads, this method of transportation has been abandoned, and the water is now employed solely for propelling machinery. Already upon the banks of this river have risen the flourishing and fast-growing cities of Manchester, Lowell, and Lawrence, and there is still a large amount of water power unemployed. The Lake Winnipiseogee, the outlet from which is under the control of the water power companies, furnishes an inexhaustible reservoir for keeping up the supply of water in the driest seasons. See *Pemigewasset River*.

The Merrimac, whose fountains are nearly on

a level with the Connecticut, being much shorter in its course, has a far more rapid descent to the sea than the latter river. Hence the intervals on its borders are less extensive, and the scenery less beautiful, than on the Connecticut. It is, however, a majestic river. Its width varies from 50 to 120 rods. The tide flows up to Haverhill, a distance of 16 miles from the sea, and the mouth of the river forms the harbor of Newburyport, the bar of which prevents the entrance of vessels drawing more than 15 or 16 feet of water. The name *Merrimac* signifies, in the Indian language, a sturgeon, a species of fish which abounds in the tide water.

Franklin, N. J., Gloucester co. Drained by branches of Maurice and Great Egg Harbor Rivers, and by Raccoon Creek. Surface level; soil mostly sandy and poor. 15 miles S. E. from Woodbury.

Franklin, N. J., Bergen co. The surface of this town is undulating; the soil mostly fertile, being composed of gravel, sand, and loam, based upon sandstone. 13 miles N. W. from Hackensack.

Franklin, N. J., Somerset co. Millstone and Raritan Rivers, and Six Mile Run water this town. Surface somewhat uneven, and on the S. W. hilly. 7 miles S. E. from Somerville.

Franklin, N. J., Warren co. Watered by Potatcong and Musconetcong Creeks.

Franklin County, N. Y., c. h. at Malone. Formed from Clinton co. in 1808. Bounded N. by Lower Canada, E. by Clinton and Essex, S. by Essex and Hamilton, and W. by St. Lawrence co. Watered by numerous lakes and ponds, the principal of which are the Upper and Lower Saranac Lakes, and by Chateaugay, Salmon, Trout, Deer, St. Regis, and Racket Rivers, flowing into the St. Lawrence, which washes its N. W. corner, and also by the Saranac, flowing into Lake Champlain. Surface chiefly level on the N., but hilly and mountainous in the middle and S. The soil is diversified, but much of it very fertile. The mountains abound in the best of iron ore, and the surface is heavily timbered in some parts.

Franklin, N. Y., Delaware co. Oleont Creek and its branches water this town. The soil is fertile loam. 12 miles W. from Delhi, and 93 S. W. from Albany.

Franklin, N. Y., Franklin co. Drained by Salmon and Saranac Rivers and some of their tributaries. It also contains several small lakes. The surface is hilly and mountainous; soil various. 25 miles S. E. from Malone, 187 N. from Albany.

Franklin County, O., c. h. Columbus. Situated nearly in the centre of the state, having Delaware co. on the N., portions of Licking and Fairfield on the E., Pickaway on the S., and Madison on the W. It is 23 miles square. The surface is generally level, and in many parts low and wet, better adapted to grazing than to raising grain. The county is drained, however, by several streams, upon the banks of which is much arable land and many finely-cultivated farms. The Scioto River passes through the centre of the county, from N. to S. The Whetstone River, and other small streams and creeks, running nearly in the same direction, drain other portions of the county.

This county was first settled in 1797. It was constituted a county, being taken from the then existing county of Ross, March 30, 1803. Some-

thing has since been taken from its area, in constituting the surrounding counties, reducing it to its present limits. The Ohio Canal passes across the S. E. corner of the county, and a branch from it is brought to the centre at Columbus. The national road passes through it from E. to W. This tract was once the residence of the Wyandot Indians, who had a large town on the site of the city of Columbus, and cultivated extensive fields of corn on the river bottoms on the opposite side of the Scioto.

Franklin, O., a township of Portage co., in the N. part of the state. The Cuyahoga River passes diagonally through it, affording much valuable water power, which is improved for manufacturing purposes at the two villages of Franklin Mills and Carthage. The Mahoning Canal passes through the township, falling into the Cuyahoga for a part of the distance. Brady's Pond, so called, is a small but beautiful sheet of water, about $2\frac{1}{2}$ miles from Franklin Mills, from the fine white sand on the shores of which glass is manufactured. About 30 miles S. E. from Cleveland.

Franklin Mills, O., Portage co. At the falls of Cuyahoga River, and on the Pennsylvania and Ohio Canal. At these falls there is a great water power. Much business is done here. 134 miles N. E. from Columbus.

Franklin County, Pa., c. h. at Chambersburg. Incorporated in 1784. Bounded N. by Perry and Cumberland counties, E. by Adams co., S. by Maryland, and W. by Bedford co. It is drained by Conococheague and Conedogwinit Creeks and their branches, affording great hydraulic power. South and Tuscarora or Cove Mountains are the only considerable elevations. Soil very fertile, being based upon limestone. White marble is found here, and iron ore is abundant.

Franklin, Pa., c. h. Venango co. On the S. side of French Creek, at its junction with Alleghany River. Steamboats come up to this place from the Ohio. There is a communication by river and canal to Lake Erie. 210 miles W. N. W. from Harrisburg.

Franklin, Pa., York co. Drained by a branch of Bermudian Creek. 4 miles S. from Harrisburg.

Franklin, Pa., Adams co. Conewago and Conococheague Creeks, and some branches of Marsh Creek, water this town. Surface level; soil red shale.

Franklin, Pa., Fayette co. Watered by the Youghiogeny River and Redstone Creek. It has a hilly surface and loamy soil. 9 miles N. from Union.

Franklin, Pa., Greene co. Ten Mile Creek and its branches water this town. Surface undulating; soil loam.

Franklin, Pa., Huntingdon co. Watered on the S. boundary by the W. branch of the Little Juniata River, and drained by Warrior's Run and Spruce Creek. Surface mountainous; soil calcareous loam.

Franklin County, Te., c. h. at Winchester. Bounded N. by Bedford and Coffee counties, E. by Marion co., S. by Alabama, and W. by Lincoln co. Watered by Duck River, and Rock, Elk, and Paint Creeks. Surface rough and uneven, having Cumberland Mountain on its S. E. border; soil fertile.

Franklin, Te., c. h. Williamson co. On the S. side of Harpeth River. 18 miles S. from Nashville.

Franklin County, Vt., c. h. at St. Albans. This county is bounded N. by Lower Canada, E. by Orleans co., S. E. and S. by Lamoille co., S. by Chittenden co., and W. by Lake Champlain. The Missisco River passes through the northern part of the county, and the Lamoille its most southern section. Although the surface is somewhat broken, and in some parts mountainous, yet the soil is productive of wheat and grass. In this county marble and iron ore, of excellent qualities, are found.

Franklin, Vt., Franklin co. The River Rocher, or Rock River, rises in this township, and falls into Missisco Bay in Highgate. It is also watered by several small branches of Missisco and Pike Rivers. A large pond lies near the centre, 3 miles long and about 1 wide. The settlement was commenced in 1789, by emigrants mostly from Massachusetts. 60 miles N. W. from Montpelier, and 17 N. N. E. from St. Albans.

Franklin County, Va., c. h. Rocky Mount. Bounded N. by Roanoke and Bedford counties, E. by Pittsylvania, S. by Henry and Patrick, and W. by Floyd and Montgomery counties. Watered by streams flowing into Staunton River, which forms its N. E. boundary.

Franklinville, N. Y., Cattaraugus co. Drained by Ishua and Great Valley Creeks. The surface is undulating; soil very fertile loam. 8 miles E. from Ellicottville, and 279 W. by S. from Albany.

Frankstown, Pa., Huntingdon co. This town is watered by the Frankstown branch of the Juniata River, which passes through the Frankstown Gap of Dunning's Mountain, and by Beaver Dam Creek. 116 miles W. from Harrisburg.

Frederica, Ga., Glynn co. On the W. side of St. Simon's Island, and contains the ruins of a fort built by General Oglethorpe in 1736. S. E. from Milledgeville 229 miles.

Frederick County, Md., c. h. at Frederick. Bounded N. by Pennsylvania, E. by Carroll co., S. by Montgomery co. and the Potomac River, separating it from Virginia, and W. by Washington co. Surface mostly level, and drained by Monococy River and Cotocoin Creek and their branches. Soil chiefly fertile, being well adapted to grazing and the growth of grain.

Frederick, Md. City, and seat of justice of Frederick co. Situated on Carroll Creek, 3 miles above its entrance into Monococy Creek, 43 miles W. from Annapolis, and 61 W. by N. from Baltimore. It lies on the old travelled road between Baltimore and Wheeling, and a short distance N. of the Baltimore and Ohio Railroad, with which it is connected by a branch 3 miles long at a point near the Monococy Viaduct. Frederick is laid out with regularity, in broad streets crossing each other at right angles, and contains a number of elegant public and private buildings, among which are the edifices of 12 or 14 churches of different denominations. The buildings are mostly of stone or brick. Many of the streets are paved. The trade of this place is quite extensive, rendering it one of the most important towns in the state.

Frederick, Pa., Montgomery co. 77 miles E. from Harrisburg.

Frederick County, Va., c. h. at Winchester. Bounded N. by Hampshire, Morgan, and Berkeley counties, E. by Clarke, S. by Warren and Shenandoah, and W. by Hardy and Hampshire counties. The Shenandoah River bounds this county on the S. and S. E., and Opequan, Sleepy,

and Back Creeks, branches of the Potomac, rise here. The surface is much diversified, being mountainous on the W.; the soil is mostly very fertile.

Fredericksburg, Va. City, and seat of justice of Spotsylvania co. Situated in a pleasant valley on the S. W. side of Rappahannock River, 62 miles E. by N. from Richmond, and 56 S. S. W. from the city of Washington. It is at the head of tide water on the river, about 150 miles from its mouth, and just below the falls, from which it derives a good water power. The Rappahannock is navigable for vessels of 140 tons to the foot of these falls, and vessels come up and lie at the wharves, within a few yards of the public warehouses. A canal is partly completed to extend from this point to Fox's Mills on the river, 35 miles above.

Fredericksburg is regularly laid out, and compactly built. The principal public buildings are a court house, a market house, an orphan asylum, and churches of the Episcopal, Presbyterian, Methodist, and Baptist denominations. Many of the buildings are of brick; others are of stone, from the extensive quarries in the vicinity. This city possesses a prosperous trade, which is chiefly in the various kinds of grain, flour, and tobacco. Gold is among the valuable exports of this port, considerable quantities of which are mined in this region of country. Fredericksburg was founded in 1727, and named in honor of Prince Frederick, the father of George III.

Fredericktown, O., Knox co. A thriving village on the W. bank of Vernon River, and surrounded by fertile and beautiful land.

Fredonia, Ia., c. h. Crawford co., occupies a high bluff on the N. side of the Ohio River, at the Great Horseshoe Bend, and 122 miles S. from Indianapolis.

Fredonia, N. Y., Chautauque co. 2 miles E. from Lake Erie, and 323 W. by S. from Albany. An inflammable spring at this place furnishes gas for lighting the streets and dwellings.

Freedom, N. H., Carroll co. Freedom is an uneven township, but has some good farms. It is bounded in part by the Ossipee Lake and River. This town was formerly called North Effingham. 60 miles N. N. E. from Concord.

Freedom, Me., Waldo co. A good township of land. 25 miles N. E. from Augusta.

Freedom, N. Y., Cattaraugus co., contains several small lakes, and is drained by Clear Creek and some other small streams. The surface is chiefly level; soil fertile, and well adapted to grass. 269 miles W. from Albany.

Freedom, Pa., Beaver co. On the E. bank of the Ohio. 2 miles from the mouth of Beaver River, and 224 W. by N. from Harrisburg. Here are large manufactories of steam engines and boilers, and steamboats of the largest size are built.

Freehold, N. J., c. h. Monmouth co. Soil good sandy loam. The battle of Monmouth was fought in this town, June 28, 1778. 35 miles S. E. from Trenton.

Freehold, Upper, N. J., Monmouth co. Fertile in the W., sandy and sterile in the S. E.

Freeman, Me., Franklin co. 62 miles N. W. from Augusta.

Freeport, Me. See *Appendix*, No. 5.

Freeport, Is., c. h. Stephenson co. On Peekatonic River. 200 miles N. from Springfield.

Freeport, O., Harrison co., lies on Big Stillwater Creek, 100 miles from Columbus. There

is a railroad from this place to Bridgeport, on the Ohio River.

Freeport, Pa., Armstrong co. At the junction of Buffalo Creek with Alleghany River. 196 miles W. N. W. from Harrisburg. The Pennsylvania Canal here crosses the creek by an aqueduct.

Frestone County, Ts. New.

Freetown, Ms., Bristol co. Its Indian name was Assonet, and it was first settled in 1659. This town lies on the E. side of Taunton River. The New Bedford and Taunton Railroad passes about 3 miles N. E. from Assonet village, at the head of a small bay of that name, and the principal place of business in the town. Assonet River falls into the bay at the village, which, with the bay and Taunton River, affords the village good mill seats and navigable facilities. The soil is light. It is the seat of various manufactures in iron, leather, and cabinet furniture. 12 miles N. N. W. from New Bedford, and 43 S. from Boston.

Fremont, Ca., c. h. Yolo co. On the W. bank of the Sacramento, opposite the mouth of Feather River.

Fremont, Io., c. h. Benton co.

Fremont County, Io., c. h. at Sidney. In the S. W. corner of the state.

Fremont, O., c. h. Sandusky co. Connected by railroad with Sandusky City.

French Creek, N. Y., Chautauque co. Watered by a creek of the same name. The surface is hilly; soil favorable to the growth of grass. 18 miles S. W. from Mayville, and 355 W. by S. from Albany.

French Creek, Pa., Mercer co. French and Sandy Creeks drain this town, the surface of which is level, and the soil clay and loam of indifferant quality. 223 miles W. N. W. from Harrisburg.

Friendship, Me., Lincoln co. On the coast, at the head of Muscongus Bay. 48 miles S. E. from Augusta.

Friendship, N. Y., Alleghany co. Drained by Campan's Creek, a branch of the Genesee River. Surface undulating; soil argillaceous mould, yielding large crops of grass. 10 miles S. W. from Angelica, and 266 W. from Albany.

Frostburg, Md., Alleghany co. 176 miles N. W. from Annapolis. Hereabouts are extensive beds of semi-bituminous coal, largely wrought, and connected by railroad with the Chesapeake and Ohio Canal, and Baltimore and Ohio Railroad at Cumberland.

Fryeburg, Me., Oxford co. On both sides of the Saco, which, from its very winding course, runs between 30 and 40 miles in its limits. The principal village is in a plain, surrounded by lofty hills. Lovewell's Pond, famous in the history of the Indian wars, lies a short distance from the village. 75 miles W. N. W. from Augusta.

Fulton County, As., c. h. at Pilot Hill.

Fulton County, Is., c. h. at Lewiston. Bounded N. by Knox co., E. by Peoria co., S. E. and S. by the Illinois River, separating it from Mason co., and W. by Schuyler, McDonough, and Warren counties. Drained by Spoon River and Copperas Creek. Surface undulating, consisting partly of prairies; soil very fertile.

Fulton County, Ia., c. h. at Rochester, shire town. Bounded N. by Marshal co., E. by Kosciusko and Miami, S. by Cass, and W. by Pulas-

ki co. Surface level, and watered by the Tippecanoe River.

Fulton County, Ky., c. h. at Hickman. In the S. W. corner of the state. Level.

Fulton, Mi., c. h. Itawamba co. On the E. fork of Tombigbee River. 210 miles N. E. from Jackson.

Fulton County, N. Y., c. h. at Johnstown. This county is bounded on the N. by Hamilton co., E. by Saratoga, S. by Montgomery, and W. by Herkimer co. It was incorporated from Montgomery co. in 1838. The surface is hilly and mountainous, being crossed by the "Klips," or Mayfield Mountains, a branch of the Clinton or Adirondack range. It is drained by the Sacandaga River, and numerous tributaries of the Mohawk and West Canada Creek. The soil is generally strong and productive.

Fulton, N. Y., Oswego co. On the E. side of Oswego River. 190 miles W. N. W. from Albany. The river here has a fall of about 20 feet, producing a good water power.

Fulton, N. Y., Schoharie co. Watered by Schoharie Creek and some of its branches, on one of which there is a fall of 100 feet. The surface is rather hilly; the soil fertile in the valleys. 9 miles S. W. from Schoharie, and 42 W. from Albany.

Fulton, O., Hamilton co. Situated on the Ohio River, above and adjoining Cincinnati. The township lies in the form of a crescent, following the bend of the river about two miles and a half, and extending inland only about half a mile to the top of the river hill. The town is built principally on one street, being separated only by an interval of about a mile between its western limits and the suburbs of Cincinnati. There are extensive lumber yards in Fulton, and several steam saw mills, by which a profitable business is done. But the greatest business of the place is that of steamboat building. A large proportion of the Cincinnati built boats are the product of the yards in this industrious village. The turnpike through this town is a great thoroughfare of travel, and of transportation by wagons, to and from the city. The Little Miami Railroad, and the Cincinnati, Columbus, and Sandusky Railroad, both enter Cincinnati through this town. Population in 1840, 1506; in 1850, 3223.

Fulton County, O. New. Taken from the W. part of Lucas. On the N. W. border of the state

Noble County, O. New.

Fulton County, Pa. New. Taken from Bedford, E. part. On the S. line of the state, in a valley between two ranges of the Alleghanies. Watered by tributaries of the Potomac.

Fultonville, N. Y., Montgomery co. On the S. side of the Mohawk River, on the Erie Canal. 43 miles W. N. W. from Albany.

Gadsden County, Fa., c. h. Quincy. Georgia bounds this county on the N., the Ocklockony River separating it from Leon and Wakulla counties on the E., the Gulf of Mexico and Franklin co. on the S., and the Appalachian River, separating it from Washington and Jackson counties, on the W. Surface mostly low, and in parts marshy; the soil bordering on some of the streams is of good quality. Dog Island, lying off the coast, belongs to this county.

Gaines, N. Y., Orleans co. Drained by some small tributaries of Oak Orchard Creek. The surface is chiefly level; the soil of good quality

3 miles N. from Albion, and 254 W. by N. from Albany.

Gainesboro', Te., c. h. Jackson co. On the S. side of Cumberland River. 73 miles E. N. E. from Nashville.

Gainesville, Ga., c. h. Hall co. 3 miles E. from the Chattahoochee River, and 118 N. N. W. from Milledgeville.

Gainesville, N. Y., Wyoming co. Allen's Creek and a branch of the Genesee River water this town. The surface is somewhat hilly and uneven; soil very favorable to the growth of grass. 7 miles S. from Warsaw, and 248 W. from Albany.

Galen, N. Y., Wayne co. Clyde River and the Erie Canal pass through this town. The surface is hilly; soil sandy loam. 5 miles E. from Lyons, and 172 W. by N. from Albany.

Galena, Is. City, and seat of justice of Jo. Daviess co. 180 miles W. from Chicago, and 230 N. W. from Springfield. Pleasantly situated on Fever River, about 5 miles, by the course of the river, above its confluence with the Mississippi; though not more than 2½ miles from the Mississippi in a direct line. The Fever River, which has the resemblance of a canal, 100 feet wide, is navigable to Galena for large steamboats at all stages of the water. This is the commercial emporium of the great lead region lying in Northern Illinois and Wisconsin. The city was laid out in 1826. It has a court house, jail, an academy, and churches of the Presbyterian, Methodist, Baptist, Episcopal, and Roman Catholic denominations. The Galena and Chicago Union Railroad, under contract to be finished in 1852, will terminate at Galena. This will bring Galena within 72 hours of Boston and New York. The Illinois Central Railroad, when built, will connect with the Chicago and Galena road; thus opening a railroad communication S. to the Ohio River, at the mouth of the Illinois. Population in 1840, 1500; in 1850, 6000.

Gallatin County, Is., c. h. at Equality. Incorporated in 1812, and bounded N. by Hamilton and White counties, E. by the Wabash and Ohio Rivers, separating it from Kentucky, S. by Hardin and Pope, and W. by William and Franklin counties. Soil chiefly sandy, and underlaid with slate. Salt springs are found here.

Gallatin County, Ky., c. h. at Warsaw. Bounded N. by the Ohio River, separating it from Indiana, and by Boone co., E. by Grant co., S. by Owen, and W. by Carroll co. It has an undulating surface and fertile soil.

Gallatin, Mo., c. h. Daviess co. On the W. fork of Grand River. 189 miles N. W. from Jefferson City.

Gallatin, N. Y., Columbia co. Watered by Charlotte Lake and Roeliff Jansen's and Dove Creeks. The surface is rather hilly; soil various. 15 miles S. E. from Hudson, and 44 S. from Albany.

Gallatin, Te., c. h. Sumner co. 3 miles N. from the Cumberland River, and 26 N. E. from Nashville.

Gallia County, O., c. h. at Gallopolis. Athens and Meigs counties bound it on the N., the Ohio River on the E., and Lawrence and Jackson counties on the S. and W. It was settled in 1790, by people from France, from which circumstance it derives its name, France anciently being called Gaul. The Ohio River, Racoon Creek, and several smaller streams supply this county with

water. In the northern part the land is good, but elsewhere it is hilly, and has a poor soil.

Gallopolis, O., c. h. Gallopolis co., meaning *French city*, because settled by French, is situated pleasantly on a western eminence of the Ohio River. It is remarkable for containing within its bounds a large semi-globular mound, 18 or 20 rods in circumference at its base. From Columbus it is distant 102 miles S. E.

Galloway, N. J., Atlantic co. Nacote Creek drains this town. Surface level, the S. part consisting of a sandy salt marsh.

Galveston, Ts. City. 200 miles S. E. from Austin, the capital of the state. Situated on the eastern extremity of an island upon the S. side of Galveston Bay, near the entrance to the bay from the Gulf of Mexico. This flourishing city, the commercial metropolis of the state to which it belongs, is now beginning to take rank among the places of first importance in this respect upon the southern coast of the United States. The harbor is one of the best on the Gulf coast, having about 14 feet of water on the bar at low tide. It enjoys the best facilities for communication with the interior, and with all the principal places on the coast. There are regular lines of steamboats plying between Galveston and New Orleans, also to other ports along the coast, and up the bay and river to Houston, from which it is distant about 80 miles. This city, settled no longer ago than 1837, has rapidly increased in trade and population; and, from the superiority of its harbor, and the enterprising spirit of its capitalists and merchants, is destined to attain an early pre-eminence in wealth and influence.

Galveston County, Ts., c. h. at Galveston. In S. E. angle, on the coast.

Galway, N. Y., Saratoga co. Chuctenunda and a branch of Kayaderoseras Creek water this town. Surface hilly; soil clay loam. 12 miles W. from Ballston Spa, and 36 N. W. from Albany.

Gambier, O., Knox co. Pleasant. 56 miles N. E. from Columbus. Kenyon College is situated here. See *Colleges*.

Gardiner, Me., Kennebec co. On the W. side of the Kennebec River, at the head of ship navigation. 4 miles below Hallowell, and 6 below Augusta. It was incorporated in 1802, and named after Dr. S. Gardiner, one of the proprietors of the old Plymouth patent. The Cobbescontee, which enters the Kennebec at this place, furnishes an extensive water power, which is largely employed in sawing timber, and for some other purposes. The business part of the city is full of activity and enterprise. The buildings, some of them very handsome, on a gentle rise from the river, are beautifully located, and command a fine prospect. Gardiner is one of the largest and most thrifty places in the state. It is connected by railroad with Augusta, Bath, and Portland. Population in 1850, 8231.

Gardner, Ms., Worcester co., took its name in memory of Colonel Thomas Gardner, of Cambridge, who fell in the battle of Bunker Hill. It was formerly parts of Westminster, Ashburnham, Winchendon, and Templeton. The face of the town is uneven; but though rocky, the soil is strong and fertile, producing in abundance all the grasses and grains common to the climate. Bakersville and Gardnerville are pleasant villages. The former lies near a delightful pond. Otter River, a branch of Miller's River, several

smaller streams, and some springs, give the town good mill privileges, and produce much good meadow. 10 miles W. from Fitchburg, and 60 W. by N. from Boston, by the Fitchburg Railroad.

Garland, Me., Penobscot co. On the head waters of the Kenduskeag. 74 miles N. E. by N. from Augusta, and 27 N. W. from Bangor.

Garrard County, Ky., c. h. at Lancaster. Bounded N. by the Kentucky River, separating it from Jessamine co., E. by Paint Lick Creek, separating it from Madison co., S. by Laurel and Rock counties, and W. by Dicks River, separating it from Lincoln and Doyle counties. The soil is very fertile.

Gasconade County, Mo., c. h. at Hermon. Bounded N. by Grand River, separating it from Montgomery co., E. by Franklin and Crawford counties, S. by Crawford, and W. by Osage co. Drained by Gasconade and Bourbeuse Rivers, and their branches. Surface mostly rough and uneven; soil very fertile on the streams. Iron ore, sulphur, saltpetre, limestone, and other minerals are found here.

Gaston County, N. C. New. Taken from Lincoln. On the southern border of the state. Includes the height of land between the Yadkin and Catawba.

Gaston, N. C., Northampton co. On the N. side of the Roanoke River, 87 miles N. E. from Raleigh. The railroad from Petersburg to Raleigh crosses the Roanoke here.

Gates County, N. C., c. h. at Gatesville. Bounded N. by Virginia, E. by Camden and Pasquotank counties, S. by Perquimans and Chowan, and W. by Showan and Blackwater Rivers, separating it from Hertford co.

Gates, N. Y., Monroe co. Surface undulating; soil chiefly sandy. 3 miles W. from Rochester, and 220 W. by N. from Albany.

Gauley Bridge, Va., Nicholas co. At the falls of the Great Kanawha River, and junction of the Gauley, 277 miles W. from Richmond. The Kanawha is navigable to this place, where it has a fall of 22 feet perpendicular, giving a great water power.

Geauga County, O., c. h. at Chardon. Bounded N. by Lake Erie, E. by Ashtabula and Trumbull counties, S. by Portage, and W. by Cuyahoga co. The name of this county signifies *Grand*, in the Indian language, and that is the name of the principal river; there are several smaller ones besides. The soil is good, well watered, and covered with timber. Iron is found in great abundance.

Geddes, N. Y., Onondaga co. On the Erie Canal, 2 miles W. of Syracuse, in the township of Salina, incorporated as a village in 1832. It is pleasantly situated at the head of Onondaga Lake. The village has grown up rapidly, in consequence of the discovery at this place of saline springs, from which large quantities of salt are made by solar evaporation. See *Salina*.

Genesee County, Mn., c. h. at Flint. Bounded N. by Saginaw and Tuscola counties, E. by Lapeer, S. by Oakland and Livingston, and W. by Shiawassee co. Watered by Flint and Shiawassee Rivers, the former affording good hydraulic power. Surface undulating; soil rich sandy loam.

Genesee County, N. Y., c. h. at Batavia. Taken from Ontario county in 1802, and itself divided in 1841, the S. part forming Wyoming co. Bounded on the N. by Orleans, E. by Monroe
