of instruction is carried out similar to what is given to the students attending the training colleges, and on the eleventh day each student has to teach the said first lesson, which takes up about ten minutes, and marks for practical efficiency in drill are awarded according to his or her proficiency. During the session (both at the colleges and in the special classes) two lectures—one on the physiology of bodily exercise and the other on the practical work of a teacher of physical training—are delivered, and, at the end of the session or—in the case of the special teachers' classes—on the last day of the course a written examination on these lectures is held, and the marks earned in the practical examination, added to the marks made in the written examination, determine the grade of the certificate to be granted. In the teachers' classes the numbers have varied from twenty up to forty, and, when the class exceeds thirty, additional teachers are employed to assist the teacher who is specially in charge of the class. In those of the Board Schools of Aberdeen where the services of the staff of the Aberdeen Physical Training College are employed, over 7000 children annually receive instruction in physical training, and in the schools where the staff of the college are employed, and also where they are not employed, each child receives at least one half hour's instruction in physical training weekly during the year.

10,494. How do you carry out the instruction and inspection of teachers? At what various centres do you hold classes for the instruction of teachers? Give the numbers attending these various classes, length of course necessary to obtain certificate?—At the various training colleges, and in connection with the special classes for teachers, the instruction is given by certain members of our staff who have been specially trained for that purpose, and at the close of the session, or at the close of the special class, an examination in the practical work is carried out by myself, and the written papers are set and examined by me. The classes in connection with the Aberdeen Physical Training College for the instruction of teachers have been held at the centres mentioned (Q. 10,492), and the numbers attending these classes varied from twenty to eighty. The course of instruction in the special holiday classes for teachers extend, as stated above, over twelve working days of at least four hours per day, forty-eight hours of instruction in all, but, in addition, especially during the second week of the course, the teachers generally spent four to six additional hours for special practice.

10,495. By whom are these certificates granted? How are these classes taught, and by whom? Give number of attendances necessary for gaining a certificate?—Certificates of different degrees of efficiency are granted to the teachers by the Council of the College, on the report of the examiner, and for further answer to this question, reference is made to my foregoing answer.

10,496. Are men and women taught separately or together?—At the training colleges the men and women are taught separately, but at the special teachers' classes they are taught together, and this system has been found to be of great advantage.

10,497. Give approximately the fees charged these teachers for courses of instruction?—At the training colleges a general fee of £50 or thereby for a course of instruction has hitherto been charged, and if the instruction requires the services of two teachers, a fee of from £50 to £60 has been charged, while, in addition, a fee of 10s. 6d. per student to cover examination and the issue of certificates has been charged. For the special classes for teachers a fee of £1, 1s. for the course of instruction, and a further fee for examination for the college certificates, varying according to the size of the class from 10s. 6d. to £1, 1s., has been charged.

10,498. How and by whom is the inspection of these classes conducted?—See my previous answers.

10,499. Do you recommend teachers who have been granted your certificates to teach your system

of physical training in their schools?—Teachers who have been granted the certificates of this College have never been recommended to teach our system in their schools, but I have every reason to believe that they have done so.

10,500. Can you state as a fact that this is rigidly and extensively carried out?—While I cannot state as a fact that our system of physical training has been rigidly and extensively carried out, I have again and again been told by teachers who have gone through our system of instruction that they have found our system not only producing satisfactory results in their pupils, but also that the pupils themselves were anxious for the drill hour, and that one of the most effective punishments they could inflict on the pupils was to debar them from their drill lesson.

10,501. Can you state approximately the number of schools in Scotland in which your system is taught?—In Aberdeen, Aberdeenshire, Banffshire and Kincardineshire, and in most of the schools in Scotland north of these counties, I have reason to believe that our system is taught; while in Fifeshire, Argyllshire, Ayrshire, the Lothians, and in many other counties throughout Scotland our system will be found in many schools.

10,502. How often is your system changed and remodelled?—Special instructions are given by our Council to the members of our staff to report any improvements in our system which may come under their notice while engaged in teaching. These are all noted, and every four years or thereby we alter and re-model our syllabus in order to keep it abreast of the times.

In addition, my bookseller has a standing order to furnish me with a copy of every book bearing on physical drill that is published, and these are handed to our staff to peruse and to pick out any new exercises they may find. These are tested, and if found to be useful are added to our repertoire.

10,503. Do you consider a medical examination of teachers in view of their physical training necessary or desirable?—I consider a medical examination of the students attending our training colleges would be a step in the right direction, but if a medical examination were made of these students in their earlier years, such an examination might be dispensed with in the Colleges.

10,504. Do you recommend special clothing for boys and girls undergoing physical training?—Special clothing for boys and girls undergoing physical training would undoubtedly be of great advantage, but from a practical point of view, and considering the number of subjects that have to be taught under the Code, and the limited time available for physical training, it would be almost impossible to be carried out in our large public schools.

10,505. Is there, at your Physical Training College, a register kept, shewing the height, weight, chest girth, spirometry, and biceps girth of those attending the classes?—A register shewing the height, weight, chest girth, and biceps girth of the members of the Aberdeen Gymnastic Club has been in existence for many years, but it has not been carefully attended to. That such a register should be kept by teachers in public schools would undoubtedly be valuable for obtaining reliable statistics as to the value of physical training, but here again the want of time renders such a proceeding difficult.

10,506. Distinguish the following forms of physical training, viz.—ordinary exercise, ordinary work, walking and running games, e.g., football, cricket, etc., free gymnastics, musical drill, applied gymnastics, military drill, voice training, rifle-shooting, boxing, swimming? What, in your opinion, are their respective merits?—(1) Ordinary exercise such as walking tends to improve the health, but if left to the child itself it will probably be carried out at irregular intervals, and as it more directly exercises only the lower limbs, it will have little effect in developing, say, the chest, which contains the principal vital organs.

(2) Ordinary work, such as a blacksmith's, is unsuitable for development, as it will develop only one part of the body, say the right arm, leaving probably the left arm and left side of the body, which may be the parts specially requiring development, undeveloped.

(3) Walking and running.—Both necessary in any course, although exercising only certain parts.

(4) Games.—All games exercise principally the lower extremities, and, as the object a child has in view is not its own development, but to win the game in which it is engaged, it (the child) will probably confine itself to those games in which it has to use the part of its body which is already in a fair state of development, leaving the other parts of the body, which may be undeveloped, untouched.

(5) Free gymnastics or Swedish drill.—These exercises, being founded on physiological principles, are of great advantage in the development of the body and in increasing the health of the child, but, owing to the want of a musical accompaniment, fail to secure and retain the attention of the pupil.

(6) Musical drill.—This form of exercise, provided the apparatus, such as dumb-bells, Indian clubs, etc., used is not too heavy for the weakest pupil in the class, is eminently suitable for the development of children of all ages in our elementary as well as in our secondary schools.

(7) Applied gymnastics.—If 'applied gymnastics' means the use of fixed apparatus, such as the horizontal bar, parallel bars, and such like, I consider that unless the pupils are trained under the personal supervision of a skilled instructor, the result would be more likely to cause injury to a growing child than to benefit it. Up to fourteen years of age such exercises are, in my opinion, unnecessary, but from fourteen to eighteen years of age boys might, with advantage, be formed into cadet corps, provided these corps are attached to some volunteer corps, and provided they are trained by the instructors of that corps, and, in addition to military training, receive a modified course of 'applied gymnastics.'

(8) Voice training.—This exercise is most valuable for children provided they are taught by specialists, for, in addition to the training of the voice, the exercise has a most direct and beneficial effect upon the lungs.

(9) Rifle shooting.—The ordinary boy under fourteen years of age is physically incapable of acquiring any practical knowledge of rifle shooting, but between fourteen and seventeen the average boy is capable of acquiring a certain proficiency in the use of the present service rifle.

(10) Boxing.—In Scotland boxing is scarcely to be found, and from a physiological point of view the advantages to be derived from it are small, owing to the position which a boxer has to assume while engaged in such exercise.

(11) Swimming.—If this accomplishment has to be taught to children, it should be done only in a proper swimming bath, where the temperature of the water is fairly constant, and where continuous careful supervision can be given.

10,507. What, in your opinion, is their absolute and relative value to children aged from six to twelve, twelve to fourteen, and fourteen to eighteen years? Are these or any of them required by and advantageous to the present race of children?—(1) Children from six to twelve years of age will benefit most by engaging in walking and running, free gymnastics, musical drill and voice training, provided they are taught by skilled teachers.

(2) Boys and girls between twelve and fourteen years of age would develop sufficiently by the above-mentioned exercises, and swimming might with advantage be added.

(3) If the children in our public schools receive regular and scientific instruction under skilled teachers in walking, running, free gymnastics, musical drill, voice training, and swimming, the results, from a national point of view, would be eminently satisfactory.

10,508. What, in your opinion, are the effects of such

physical training—moral, physical, and intellectual? —As the result of the training in the subject mentioned in Q. 10,507 (3), the physical and intellectual advantages to the nation would be immense, and in the case of boys from fourteen to eighteen years, the addition of rifle shooting would undoubtedly add to the safety of the empire. My experience is that boys and girls, who are engaged in exercises such as are above mentioned, are more likely to maintain a higher standard of life than the boy or girl who spends his or her spare time loafing in the streets and smoking cigarettes, or in a dancing hall.

10,509. Is a uniform system in schools desirable or necessary?—A uniform system of physical training in Scotland is neither desirable nor necessary. A certain standard, accompanied by a syllabus of instruction up to which the teacher must aim at bringing his class, is an undoubted advantage ; but the teacher, while maintaining the general standard laid down in such a syllabus, should be allowed considerable freedom so as to meet the special circumstances and the normal rate of progress of his pupils.

10,510. What system, in your opinion, do you consider the best?—I do not profess to be able to state what system of physical education is the best, but, as the result of an experience of over thirty years, the system most likely to succeed is one in which a musical accompaniment forms a leading feature of the exercises. These exercises must be sufficiently numerous to supply a certain amount of variety to the pupil during a school life of at least five years.

10,511. What is the relation between mental study and physical training? What is the just proportion of time to be devoted to physical training in relation to study?—Muscles are said to be the organs of movement, but of themselves they cannot initiate a movement. They require a stimulus, and that stimulus originates in the will or brain, and is communicated by means of the spinal cord and the nerves to the particular muscle exercised, and therefore it is impossible to perform the simplest muscular movement without a mental exercise of more or less importance. In the ordinary school week I consider that each child should have at least two half hours per week devoted to its physical training. If that were done regularly, and under skilled and competent teachers, the time devoted to physical training would be more than counterbalanced by the increased interest shown by the child in ordinary school work.

10,512. Is physical training most advantageous if carried out daily in connection with school work?—A daily lesson in physical training of half an hour would not, in my opinion, interfere with school work ; but looking to the length of the school day and to the number of other subjects taught, it is said to be impracticable under present conditions, and if to be expected, will require to be specially stipulated for.

10,513. What are the respective merits of outdoor and indoor training?—In a climate such as we have in Scotland, a regular system of outdoor training is impossible, and, therefore, to ensure regularity, we must fall back on indoor training, which necessitates the provision, in connection with all our public schools, of a large, well-ventilated, and (in winter) equably heated hall or room for that purpose. Though the cost is considerable, this hall would, in addition to its use for physical training, prove a very valuable adjunct for other school work.

10,514. What are the results of your experience regarding physical training in all forms?—The result of my experience regarding the question of physical training in this country, which, in addition to time spent in actual instruction, I have studied from a physiological point of view for many years, has led me to come to the following conclusions, viz. :—

(1) That during the past forty or fifty years the conditions of life have changed considerably in our country. Instead of the people being fairly and evenly distributed with plenty of fresh-air and open-air occupations, they are now yearly leaving the country districts and rushing in ever-increasing numbers into

towns, where greater facilities for procuring work can be obtained, and better and more regular pay received, and from which, by means of railways and steamers, the products of their labour can be more easily and cheaply distributed.

(2) That this aggregation of people in towns deprives to an injurious extent the population of fresh-air and open-air occupations enjoyed by their parents and grandparents, and further, in consequence of the daily increasing competition for existence, there is an ever-increasing wear and tear of the nervous and muscular systems of the people.

(3) That to counteract all these non-health-giving conditions there is an imperative call not only for improved sanitation, careful supervision of food, and such modern health-preserving measures, but also, on the part of the State, for the provision of an intelligent and rational system of physical training for the development and building up the bodies of our citizens.

(4) That such a system of physical training would undoubtedly prove a national benefit, and that, therefore, in my opinion, it lies with the Government to supply the machinery for such training, to find the needed grants, and to see to its being carried out.

(5) That this system of physical training should, in my opinion, be of the nature suggested in previous answers.

10,515. What remedies or suggestions have you to propose regarding the last part of the terms of reference, viz.—How the existing opportunities for physical training may be increased by continuation classes and otherwise, so as to develop, in their practical application to the requirements of life, the faculties of those who have left the day schools, and thus contribute towards the sources of national strength?—As to the remedies or suggestions regarding the last part of the terms of reference, I presume the Commission will consult both experts from the army and from the Education Department, and also ascertain the views of those who have devoted themselves specially to the subject of the physical training of children, and whose labours have already met with more or less satisfactory recognition. With the opinion of such men before them, the Commission should formulate the general lines on which the national system of physical training should be carried out. Having agreed upon these general lines, the establishment of National Training Colleges throughout Scotland is to be recommended, with men at the head of these Colleges with high educational qualifications, in addition to their training as specialists in this subject. In these Colleges special classes for training teachers should be formed, a course to extend over a period of at least two years. Before entering these Colleges the candidate should be required to pass an entrance examination in general knowledge similar probably to the present examination for King's students entering the Normal Training Colleges or by production of a Leaving Certificate. During the time the students are in these Training Colleges they should be subjected to periodical examinations to ascertain their progress, and at the close of their course each candidate should receive a certificate of competency graded according to the appearances they make before the examiners. On leaving their College these students should be required to serve a further probation as instructors for two years, either in the Colleges in which they have been trained or in certain groups of schools. At the end of this period of probation, if favourably reported on by special inspectors, these students should obtain their Government Certificate or 'Parchment,' which would entitle them to have their names entered at the Government headquarters as duly qualified. For each teacher thus qualified a grant from the public funds should be given to the College where he or she was trained, to meet the cost of training. In addition to the training of the teachers, which would only occupy a part of the time of the instructors in these Colleges, it would be the further duty of these Colleges to undertake, if desired, the official supervision of the training of the children in the elementary and secondary schools of their respective districts, and for this

work, after inspection by Government officials, a small annual grant proportionate to the efficiency of the work done should be given to said Colleges. While the staff are engaged in this work of supervision in the schools, the students in training at these Colleges should have frequent opportunities offered them of practising their profession in the different schools, so that they might acquire practical experience in the handling of children. It is to the want of this practical experience in the handling of children that physical training has, in so many instances, proved a failure in schools. While these duties would take up a considerable portion of the work and time of the staff in these Colleges, their principal duty, in towns at least, would be to organise and carry on evening classes in physical training in connection with the evening or continuation schools for the benefit of the young men and women of the working classes between the ages of fourteen to eighteen. The fee to be paid by these young people should be a nominal one. A special grant should be given for these classes, equal to what might be gained in any of the other evening school subjects. The compulsory attendance of boys and girls from fourteen to eighteen at these evening classes is to be desired, but before compulsion is resorted to other methods might first be tried. One method has often struck me as being likely to produce the desired result, namely, the issuing of certificates of physical fitness to the young people attending these classes, which would no doubt shortly come to be recognised by the employers of labour as of equal importance to their employes as the present Leaving Certificates are in University and other professional circles, and, lastly, the staff of these proposed Colleges, and every certificated teacher, should be recognised as Government servants, and be entitled to pensions in the same manner as other teachers in State-aided schools.

10,516. Does your experience enable you to compare the physique of town and country children? What defects have you noticed, and in what proportion can they be ascribed to insufficient feeding, bad constitution, bad housing, defective training, disregard or ignorance of the ordinary rules of health?—So far as my experience goes, there is little difference in this part of the country between the physique of town and country children. There is no doubt a considerable number of children who show by their flabby condition that they are fed more on tea and such-like slops than on porridge and milk, which at one time was the staple food of the children in this part of the country. Curvature of the spine is very often met with in the schools of Aberdeen and Aberdeenshire, but the introduction of an intelligent system of physical training would undoubtedly tend to reduce, or at least to modify, this defect.

10,517. Generally state your ideas and opinions on any additional matter within the scope of the reference, and furnish such further information in your power?—On the general question of a national system of physical education, I hold very advanced views. 'Civium viris civitalis vis,' 'The strength of the citizen is the strength of the State,' and therefore I look forward to seeing every physical training school or college presided over by a medical man, who, in addition to his training as such, shall himself have passed through a practical course of training, embracing all the recognised movements for developing the bodies of our children, and, in addition, shall have had sufficient opportunities of actually drilling and training the children. These special teachers or instructors, under a medical superintendent trained on the lines above mentioned, should be men and women of a liberal education in addition to their special training. They ought at least to have reached the same educational platform as school teachers in other subjects. With such an executive staff the national system of physical training would undoubtedly be one not only of an intelligent and carefully-graduated style, but it would also be imparted to the children by specialists specially trained to deal with children, and possessing in addition the powers of attracting young men and women to

their classes and of retaining their interest in the subject. Besides, the inducement to young men and women to obtain certificates of physical fitness would draw them to these classes when they found that possessed of these certificates their chances of securing good situations would be almost invariably secured. Further, from a moral point of view, the training thus suggested for young men and women between fourteen and eighteen years of age would be given during the most impressionable and dangerous years of life, and would do much to improve and elevate the moral life of the nation by substituting during these years, for the attractions of the public house and dancing saloon, means of recreation, productive not only of much good to the moral, but also to the physical welfare of the young people. Of late years the question of military drill for boys has bulked largely in the utterances of our legislators. It seems to me that, important as this question is from a military point of view, people overlook the fact that the number of young men required for our army, even in the crisis of a war with a European power, forms a small proportion of the young men and women of the country. However, in the national system of training sketched out by me, all the young men of the country would receive in early life such a thorough physical training as would fit them for taking up arms on behalf of their country in a much shorter time and in a much more efficient manner than they at present can. Again, if the Government saw its way, as no doubt it would, to include the years spent by certificated teachers of physical training in the army as counting towards a pension, we would have many of them applying for commissions in the army or serving as non-commissioned officers or in the ranks, feeling assured that when they left the colours they would *ceteris paribus* be preferred as teachers in those Government institutions. The following is my experience of the various forms of exercises in which I have been interested:—

1. *Volunteer experience.*—Joined the 1st V.B. Gordon Highlanders as a private thirty-five years ago. Have been a corporal, sergeant, colour-sergeant, ensign, lieutenant, captain, major, and at present I am lieutenant-colonel and honorary colonel commanding the battalion. Personal experience in (1) Volunteers;

Was the first sergeant in the battalion to pass the sergeants' proficiency examination. As an officer I have passed through the Hythe School of Musketry, and held the appointment of musketry instructor to my battalion for three years. Passed for my captain and field officer's certificate at the Aldershot School of Instruction in 1885. Have been a marksman for the last thirty-three years. Hold a Government certificate from the gymnasium in Aldershot. Have passed in tactics, organisation and equipment, military topography, and in military law.

2. *Experience in gymnastics.*—A member of the Aberdeen Gymnastic Club since 1867, and first prize-ties; man for many years. Have taught voluntary classes in gymnastics since 1885, and trained numerous classes of students and teachers.

3. *Rowing experience.*—Have rowed as a member, first, of the Aberdeen Rowing Club; second, as a member of the Edinburgh University Boat Club, and latterly of the Aberdeen Gymnastic and Rowing Club. Have coached numerous crews in both the Aberdeen Rowing Club and the Aberdeen Gymnastic and Rowing Club. Rowed stroke in the first university race between Edinburgh and Aberdeen, and rowed in several races between Aberdeen and the St Andrew Boat Club, Edinburgh. Have also rowed for many years in the Aberdeen regatta.

4. *Football experience.*—Was a member of the Aberdeen University first fifteen from 1869 to 1874. Was captain of the Aberdeenshire F.C. from 1875 to 1887. Played in the Edinburgh Wanderers and Royal High School F.P. Football Clubs in 1874-5, and captained the North v. South team in 1881.

5. *Rifle shooting experience.*—Was a member of my rifle company shooting team for many years, and have won prizes at all the Scottish rifle meetings. Have been on

Mr G. Cruden, the range officers' staff at Bisley for the past ten years, and am at present secretary of the Aberdeenshire Volunteer Rifle Association.

M.A.
16 Sept. '02. 10,518. *By Mr McCrae.*—Do you think that it would be looked upon as a possible thing to make these exercises compulsory in the University?—It might be done with the support of the authorities.

University :
compulsion
possible.

10,519. You don't think that the students themselves would object?—I don't think they would object to a certain modified amount.

10,520. Have you given attention to the kind of physical training given in elementary schools, continuation schools, and training colleges?—Yes, I have given attention to that for many years.

10,521. You have, of course, a definite system yourself?—I have a system in use in Aberdeen.

10,522. Is that based really on what is called the Aldershot system?—It is the result of long practical experience, and almost all the exercises of the Aldershot system are included in it, with the addition of musical accompaniments.

10,523. Wherein does it differ from the Sandow system?—I have not had an opportunity of studying his system.

10,524. Are you familiar with the evening continuation classes in Aberdeen?—I have a fair acquaintance with them in connection with physical training, but, I may add that physical training was generally given on a different night from the ordinary night of the evening school.

10,525. Was it a really systematic course?—Yes! but it was given on an extra night, generally on Fridays. In Aberdeen the Friday evening is a sort of off-night with the pupils.

10,526. *By Professor Ogston.*—I suppose that in saying that you represent the University of Aberdeen you mean that you know it so well that you can speak with authority in regard to these matters that your evidence relates to?—Yes. For many years I was actively connected with the various games there, and since then I have seen and am acquainted with a good deal of what is still going on.

10,527. Although you are absolutely familiar, you don't bring with you a mandate from the University to appear in their name?—No.

10,528. You are a teacher and lecturer on physical training there?—Yes.

10,529. Have they ever recognised your lectureship on physical training as part of the faculty?—Yes, it was under their auspices that I was first appointed.

10,530. You think that such a lectureship should have full recognition and full weight?—Yes, and especially so in regard to what is called the King's students, who are to devote themselves to teaching.

10,531. At present you teach those who are to become schoolmasters and mistresses?—Yes.

10,532. You provide them with a certificate that they have satisfied you, and that certificate bears the imprint of the University?—Yes.

10,533. That is the only training they get in physical training?—Yes, in connection with the University.

10,534. Is it recognised by the Board of Education?—I understand that there is a diploma in connection with the University of Aberdeen granted by the Committee, and those who pass through a regular course of physical training have a special addition made to that certificate.

10,535. You think that in the future preparation of our teachers for their vocation they ought to be provided with a thorough education in physical training themselves to enable them to impart it properly to others?—That is my view.

10,536. Do you think that a compulsory institution of physical training in the University would interfere with the work of our most zealous students?—I think it would be very difficult at first to get them to realise the value of it, but I think it would ultimately be successful.

10,537. *By Sir Henry Craik.*—You have been acquainted with the University for about thirty-eight years?—Yes, since 1864.

10,538. Looking back on your experience, do you think that there has been an improvement in the physique of the students, or the reverse?—Opportunities for exercise have very much increased in my day, and a certain number of the students take regular advantage of them.

10,539. In former days that was much less the case?—Yes, football was the only game that was recognised; we played on Saturday afternoons, and, if possible, we endeavoured to prevent our professors from finding out that we did so.

10,540. It was absolutely discouraged then?—That was the belief among the undergraduates.

10,541. At present out of over 800 matriculated students there are only some 200 that take part?—Yes, these statistics were supplied to me by the secretary of the field committee.

10,542. Although a great improvement has been made, there is a great deal of leeway to make up?—Undoubtedly.

10,543. *By Mr Shaw Stewart.*—Supposing physical education were made compulsory in the University, there would be a regular course, I suppose, with certificates granted at the end of a certain amount of proficiency?—That would depend upon the form that the system took.

10,544. Would you just give us your own idea as to what line that should take?—To begin with, I think you have got the elements of it in the arrangements for the King's students which now represent a considerable proportion of the students attending the University. I think that if the training were further developed we would probably have by-and-bye a good many of the medical students taking special interest in this work with the view of their being qualified as doctors of public health.

10,545. Would you advocate a minimum amount of proficiency that must be attained by all students?—I would suggest a certain minimum course and get them all to conform to that.

10,546. You think that that would be fairly easy to bring about?—I think so, with the co-operation of the University authorities.

10,547. And the students would fall in with the idea?—Yes, in my opinion they would.

10,548. *By the Hon. Thomas Cochrane.*—You were at the Aberdeen University yourself?—Yes.

10,549. You derived great benefit from the physical training that you started yourself?—Yes.

10,550. You state so in your evidence, and you would anticipate the same advantage to other students as you yourself have derived from physical training?—Yes, I undoubtedly think so.

10,551. You have by your system come to be an athlete yourself?—I was in search of health and gained a certain amount of strength. That is why I think that any course of physical training in a University should be under proper supervision so as to produce health and not athleticism.

10,552. You look more at general health than athleticism?—Most certainly.

10,553. Any compulsion you suggest would be in the direction of promoting physical health and not of turning every student into an athlete?—That is so.

10,554. *By Sir Thomas Glen Coats.*—Are there any poor students who must necessarily live in a very frugal manner in the University. We have heard of that all over Scotland. The reason I put that question to you is, I should like to know if compulsory training would benefit those poor students?—You mean that owing to their impecunious circumstances they could not afford sufficient food?

10,555. Yes?—I think that every student in the University of Aberdeen gets a fair amount of plain nourishing food.

10,556. *By the Chairman.*—I am rather ignorant as to the Universities in Scotland. Can you tell me what are the ages of the students at Aberdeen?—I should say from about seventeen to twenty-one.

10,557. Not older?—Not as a rule.

10,558. Have you knowledge of other universities

in Scotland besides Aberdeen?—No. I attended Edinburgh University, but only for one session.

10,559. You have nothing to do with any other university in the way of physical training?—No.

10,560. Have you had pupils to train who had been in other universities?—I have seen students in Aberdeen University who had been in colleges in London—medical students.

10,561. From hearsay, do you know whether there is more physical training at Aberdeen University than at other universities?—There are more games played in the other universities in Scotland than there are in Aberdeen. Football, for instance, is much more played in Edinburgh and Glasgow than it is in Aberdeen.

10,562. But actual physical training is not more encouraged in the other universities than it is in Aberdeen?—I don't think so, so far as I am aware.

10,563. You do not put Aberdeen University forward as pre-eminent in physical training of students, or do you do so?—I think, so far as the training of the King's students is concerned, it has certainly taken the lead.

10,564. How many King's students are there?—From thirty the first year up to seventy.

10,565. *By Sir Henry Craik.*—You speak of the importance of this athletic training of students who are preparing to be teachers. Are there many students in the University of Aberdeen who are preparing for commissions in the army?—Hitherto there have been very few.

10,566. But you think that the university, with such opportunities as are now available, might do a good deal in the way of training for commissions in the army?—Yes, I think so.

10,567. It would give a good class of well-educated men?—Yes, there is no doubt about that.

10,568. By means of the volunteer corps, they would have special opportunities for being trained in the elements of military discipline?—Yes.

10,569. *By the Chairman.*—We shall now examine you on the general evidence that you have given?—Very well, sir.

10,570. *By the Hon. Thomas Cochrane.*—I think you passed first through a special course of military instruction at Aldershot?—Yes.

10,571. You were led to develop that afterwards? You were not satisfied with the course that you went through at Aldershot?—I was very much satisfied with what I got there, and I endeavoured to introduce it in Aberdeen, and I did so to a certain extent.

10,572. Did you find that the military system failed to retain the attention of the children?—My experience led me to believe that the want of the musical accompaniment was the reason of its failure.

10,573. You prefer musical accompaniment to all physical exercises where children are concerned?—Yes.

10,574. Do you find that the various movements are as accurately gone through with musical accompaniment as they are by word of command?—They are carried out by the children with much greater pleasure, and I believe that much better results are obtained by that means.

10,575. It gives them an added interest?—Yes.

10,576. And relieves the mind of any strain?—Yes, it is an antidote to the other work that they are doing in the school.

10,577. You find that under your modified system the children and young men at the gymnasium keep up their interest?—In our gymnasium we found that after adopting the lines that we now follow, the average life of the young men was greatly added to.

10,578. You don't mean their actual life but the number of years they attend?—That is so. A young man used to attend for three years, whereas now he very often attends for double that time.

10,579. That is because he finds greater interest in the work?—Yes, his interest is increased and retained.

10,580. What additions to the military drill have you introduced?—In addition to almost every one of the exercises in the Aldershot system, we have in our

text-book, not only a musical accompaniment to them all, but also a large number of other exercises.

10,581. You have dumb-bells and hoop drill, bar-bells and Indian clubs?—Yes.

10,582. Are you particular as to the weight of the bar-bells, Indian clubs and dumb-bells?—Yes, in every case we make it a point to see that the weight is not more than the weakest child in the class can use with safety.

10,583. Do you find that they are suitable for girls as well as boys?—Yes.

10,584. Your system, which has been so successful, has been adopted in other parts of Scotland?—I believe so, and teachers who have practised it seem to find that their pupils like the system.

10,585. Can you give us any places where your system is adopted?—The exercises we recommend are certainly practised in all the schools in Aberdeen and in many of the schools throughout the north of Scotland, and in other parts as well.

10,586. I think you train the teachers?—Yes.

10,587. Is that the way in which your system becomes disseminated through the schools?—Principally, and through the students who attend the Aberdeen, Glasgow, and several of the Edinburgh Training Colleges.

10,588. How long does it take to train a teacher who is otherwise ignorant of physical training?—To train a specialist would, in my opinion, require at least two years, but with the few facilities given for physical training in schools, it is very difficult to get teachers to devote anything like that time to qualify.

10,589. How long would an ordinary teacher of a Board School require in order to become sufficiently proficient to be able to instruct a class?—That would depend a great deal on the interest taken by the teacher in the subject. If he is interested in the subject I would say from twenty to thirty attendances for practice, and, in addition to that, ten or twelve lessons in the practice of teaching. That would enable them to start a class in any school. After that their proficiency would depend on how they applied themselves by further study to the subject.

10,590. You think that about twenty lessons would be sufficient for him to attend?—Yes, to learn the different movements, but in addition to that there is the question of learning how to impart these movements to the pupil, which requires considerable practice.

10,591. Do you practise them in instructing one another?—Only in what I might call the first lesson. That is all that can be done owing to the short time available for training.

10,592. When you have taught them they obtain certificates of efficiency?—Yes.

10,593. Who gives them that?—The Council of our Training College.

10,594. At Aberdeen?—Yes.

10,595. Who gives them the certificate in the classes in other parts of the country?—If the classes are taught by the staff of our Institution, then it would be done by the Council.

10,596. Do you give them all a personal examination?—Yes, and report to the Council the result of the examination. Each candidate is specially examined.

10,597. You teach the men and women separately at the Training College?—Yes, owing to the large numbers attending the classes.

10,598. Do you think that boys and girls ought to be taught separately, or could they work together?—I think of the two ways the results are probably better when they work together.

10,599. There is no emulation between the boys and the girls which would lead to any injury to the girls?—I do not think so. The girls generally are quicker.

10,600. The system that you advocate is not so severe that girls could not take part in it?—No.

10,601. Does it require any special clothing?—It would be better if the children had special clothing, but in the short time available for drill it is practically impossible for them to change.

Mr G. Cruden
M.A.
16 Sept. '02.

Teachers: training: length of necessary course for proficiency.

Certificates of efficiency: individual examination.

Boys and girls: good results from working together.

indoor
training.

Games.

Continuation
classes :
practical
inducements
rather than
compulsion :
leaving
certificate of
fitness.

10,602. You prefer free gymnastics to applied gymnastics for young children?—Yes.

10,603. Applied gymnastics require to be carried out under qualified instructors?—Yes, if the results are to be satisfactory.

10,604. With free gymnastics you don't require a fully-qualified instructor in order to get beneficial results?—You require a certain amount of skill in training the children so as to see that their positions are correct and that the movements are correctly carried out.

10,605. You might get injury through applied gymnastics if carried out under the supervision of a non-qualified instructor, but in free gymnastics you are not so likely to do the child any injury?—That is so; the risk is very slight in free gymnastics.

10,606. Do you believe that a uniform system of physical training for Scotland might be instituted?—No, I think the tendency nowadays is to bring out the individuality of every teacher. While there should be a certain standard of efficiency, I think that considerable latitude should be allowed to each teacher to act according to the efficiency of the pupils and to the facilities given for the class or classes being taught.

10,607. Do you think there should be a general code sufficiently wide to enable each instructor to take certain portions of it to suit himself?—Yes, that is my view.

10,608. There should be a code sufficiently wide and embracing a sufficient number of movements to enable an instructor to select from it?—Yes.

10,609. For inspection it would be better to have a certain code?—A certain minimum standard.

10,610. And a certain number of exercises?—Yes.

10,611. So that an inspector going about might see that the physical training was properly carried out?—Yes.

10,612. You consider that in Scotland outdoor training is not always possible?—That is so.

10,613. You prefer outdoor training where it can be carried on?—Yes, but it is impossible in Scotland with our changeable climate.

10,614. It is impossible every day, but there are a great many days in the year when it is quite possible?—Then it becomes very irregular; if it is wet it has to be postponed; if it is very warm it has to be postponed; and in many cases the playgrounds are very dusty. All these conditions would interrupt the training.

10,615. Further on in your evidence you speak of the aggregation of people in towns depriving the population of fresh air to an injurious extent. You place great reliance on fresh air?—Yes.

10,616. You like your physical exercises to be carried on as far as possible in the fresh air?—Yes.

10,617. That is if the playgrounds are suitable?—Yes.

10,618. Do you believe in playing games as being good for children in addition to set physical exercises?—Yes, I think they are the natural outcome of the child's superfluous energy.

10,619. You place games high in the order of physical exercises?—Provided a child is physically trained first, it may engage in games not only with less risk of danger but with greater pleasure to itself.

10,620. You suggest the compulsory attendance of boys and girls from fourteen to eighteen at evening classes as a thing to be desired, but you think that before compulsion is resorted to other methods should be tried. What methods do you suggest?—I suggest the issuing of a Leaving Certificate for physical fitness, that being an inducement which might, without compulsion, attract a very large number of boys and girls to evening classes.

10,621. Would that, in your opinion, attract boys between fourteen and eighteen who have no great desire for physical training?—If the employers of labour would ask for the production of such a certificate, I venture to think that a very large number both of boys and girls of that class would then attend these continuation classes.

10,622. It would not meet the class who are not

likely to obtain very permanent employment and to whom physical training might be an advantage?—It would be worth while trying some system such as I have suggested so as to see what the effect would be.

10,623. You would try to make your voluntary system as attractive as possible?—Yes, and at the same time let the inducement be of some practical value to the child.

10,624. And you suggest as one means that they should obtain a certificate?—Yes.

10,625. Is there any other means that occurs to you?—I cannot say that there is.

10,626. In your experience do you find a good many physical defects among the children?—Not in Aberdeen.

10,627. You talk of curvature of the spine as being met with in the schools of Aberdeen and Aberdeenshire?—That is so.

10,628. You are strongly in favour of physical training for young men and women between fourteen and eighteen years of age. You consider that to be the most impressionable age?—Yes.

10,629. It is the most important time in the child's life to form good impressions and good physical habits?—I have no doubt about that.

10,630. You go on to say that you consider that it would do much to improve and elevate the moral life of the nation by substituting against the attraction of the public-house and dancing saloon means of recreation, moral and physical?—Yes.

10,631. By Mr Alston.—I think in one part of your evidence you say that you have passed through no fewer than 3000 teachers?—Yes, over that number.

10,632. About what ages were these?—From eighteen upwards.

10,633. Did they all get certificates of competency?—Most of them.

10,634. After what length of training?—So far as the students attending the colleges are concerned, two years of about one hour a week for about forty-two weeks in the year, making eighty-four hours in all.

10,635. Then they not only learned perfectly what they were taught in your college, but were supposed to be competent to impart that instruction in physical training in the schools?—Well, the rudiments. We teach them one lesson and the rest require to be learned by further practice.

10,636. But in getting a certificate are they supposed to teach the complete course?—Yes, with further practice or by a little more study as they go on.

10,637. Is that certificate accepted by the School Boards?—It has been.

10,638. It is not liable to be called in question by any other authority?—It is quite possible that it might be.

10,639. Suppose there were one or more large centres established in Scotland by the Government through the Education Department, they would become the ruling power. Would they accept the certificate given by such a training college as your own?—Our training college exists in the absence of any such authority. We would be very pleased indeed to hand it over to the Education Department.

10,640. In connection with the musical accompaniment to drill which you introduced because it added variety and interest to the course, you used the expression that there was consequently less mental concentration on the part of the child upon the exercise that was being gone through. Is it an advantage that there should be less concentration?—From my point of view I think it is. The more automatic the exercises, the greater will be the relief to the child's mental faculties.

10,641. I think we have had evidence to the very opposite effect?—Well, doctors differ.

10,642. Has your experience been that the child benefits by the mere automatic going through of the movements without a mental strain?—There is no doubt about it in my experience.

10,643. By Mr McCrae.—Could you give us your views as to the benefit of physical training in continuation schools as compared with drill?—Military drill?

Continuation classes : military plus free applied.

Mr G. Cruden,
M.A.
16 Sept.

10,644. Yes?—I think that the best system of all would be to include military drill along with physical training, free and applied.

10,645. You say that you would not propose to make that compulsory meantime in the continuation schools?—I think that children at that age (fourteen to eighteen) have been so accustomed to compulsory school life that we would probably succeed better by endeavouring to adopt some voluntary plan in the first place such as I have sketched out.

10,646. You really think that the better way to get physical training of a proper kind in the continuation schools is by having it voluntary and attractive?—Yes, with some practical award to be gained for efficiency.

10,647. Can you give us any information as to the physical training imparted to the girls at those continuation schools in Aberdeen?—They are taught more or less in the same way as other boys.

10,648. But in separate classes?—Yes.

10,649. *By Professor Ogston.*—Your teaching boys and girls in the same class involves, I suppose, the fact that there is no necessity for separate sexes of teachers; girls don't require to be taught by women?—Both boys and girls may be equally well taught at school age by either men or women.

10,650. So in a poor school, where there is only a male teacher, physical training is still perfectly practicable for both sexes?—Yes.

10,651. In your long experience of physical training you must have found that many methods of physical training were cropping up and being recommended?—Yes.

10,652. I suppose we may assume that you are more or less familiar with the principles of those different methods?—I have studied the different systems to a certain extent.

10,653. Do you think that it is likely that any very valuable new system will be introduced in the future?—I don't think that that is likely. Already there are so many different movements given, and different ideas promulgated, that it seems to me you could now evolve a very valuable course.

10,654. So the time is now ripe for formulating a code which will embrace the best of everything?—Yes, but that code would require to be subject to alteration or modification from time to time as anything further might emerge.

10,655. Have you ever in your large experience observed any harm to the pupils who were being trained physically?—In several cases I have noticed applied gymnastics result in serious injury to boys and girls, but in my long experience of physical training under competent teachers I could not point to any actual bad results from free exercises.

10,656. You mean that gymnastics practised unscientifically may do injury, but if practised properly, gymnastics and physical training may be carried out without risk of serious personal injury?—That is so.

10,657. Is there a large proportion of bad physique that has come under your observation, such as curved spines, bowed legs, flat feet, knock-knees, and so on?—The only one I have given special attention to is curvature of the spine, and that is very often very evident among children of all classes.

10,658. Can you give us any idea of the proportion? Would it be one or ten per cent.?—I could not give any definite proportion.

10,659. Do you think that the proportion of such physical deformities in the children that have come under your observation is so great as to require special methods in connection with the introduction of a national system?—So far as Aberdeen is concerned, I do not think so.

10,660. And the same as regards illness as distinguished from bad physique?—You mean what?

10,661. Consumption and such like?—I have not noticed that.

10,662. Although you very highly approve of music, you are aware that there are places where it is not practicable to use it?—I don't think there is any place

in Aberdeenshire where facilities for a musical accompaniment are not to be had.

10,663. Suppose we found in some very remote part of Scotland it was quite impracticable, you don't think that that should be a bar to the introduction of a beneficial course of physical training?—No, but it would be more difficult to retain the attention of the pupils.

10,664. But it would not be prohibitory?—No.

10,665. *By Mr Fergusson.*—You have said that you would not approve of any hard and fast system. I suppose you have a system of your own in a book with everything laid down in it?—We have a book in which are included exercises of various kinds.

10,666. That is, so far as your knowledge goes, the best that there is?—I am not in a position to say that. All I can say is that it has proved satisfactory so far as our experience goes.

10,667. Wherein, in a general way, does it differ from the Aldershot system? Do I understand you to say that it is principally in the variety of the exercises and in the music?—Yes, these are the two special points.

10,668. Do you know Chesterton's system?—Yes.

10,669. Wherein does it differ from yours?—Almost all his exercises are to be found in our text-book, and many other exercises.

10,670. They are very much on the same lines?—Yes, so far as his text-book goes.

10,671. As to the teaching in schools of children up to the age of fourteen, you think that the ordinary school teacher, if properly qualified, is the best person to teach the children?—It would depend upon so many outside circumstances. First of all, it would depend on the interest shown in physical training by the headmaster or masters of the school; and secondly, on whether or not that teacher has a special liking for the subject or not.

10,672. At any rate you would like to have some expert now and then looking at the work that was being done, and see if things were working right?—Yes, I believe that would be absolutely necessary to work up to a standard.

10,673. What about the inspection of the work: how would that be done?—It would depend on what standard was to be laid down. If it was to be laid down by the Education Department, they would have to find their own inspectors.

10,674. Do you think that anyone who is not an expert in these matters is qualified to inspect?—So far as my experience goes, the inspectors of the Education Department seem to have a very fair knowledge of the work.

10,675. And do you think that if they were specially charged with that duty, the whole of the inspection might be done without experts?—They have so many other duties to perform that probably they might not be able to undertake this additional work with the requisite amount of attention.

10,676. Do I understand you to say that you are in favour of medical inspection?—I think it would be very valuable in the elementary schools.

10,677. As to the time that you think should be given to physical training of all sorts, including drill and all kinds of physical exercises, in the ordinary elementary schools, I think you speak of two half-hours. Do you think that that is sufficient, or do you put it at that because you don't think that it would be possible to get more?—I don't think you would get more.

10,678. If you had to lay down the time, what would you like?—I think that the result of two half hours a week would be very valuable indeed, but further time, if it could be had consistent with the attention required for other subjects, would be better.

10,679. Would half an hour a day be too much?—I think so. I should say that two hours a week would be ample for children in elementary schools.

10,680. As to classes for teachers: your college instructors teach the teachers?—Yes.

10,681. Who examines them?—I do.

Mr G. Cruden
M.A.

16 Sept. '02.

Exercises: voluntary and attractive, with practical award for efficiency.

System: text-book.

Differences from Aldershot system: variety and music.

Teachers plus expert inspector.

Inspection.

Medical inspection desirable.

Time: two hours for each week in elementary schools ample.

Teachers' classes.

Mr G. Cruden,
M.A.
16 Sept. '02.

10,682. Personally?—Yes.

10,683. And you grant the certificates?—I recommend them to the Council.

10,684. Are any special instructions given as to dealing with girls who, as we know, at special times require special care?—Yes.

10,685. The teachers are always specially instructed to be careful on that point?—Yes.

Time.

10,686. *By Mr Shaw Stewart.*—You said that half an hour a day might be too much for children in elementary schools. Would it be too much if it were broken up into short spaces of time?—When I stated half an hour a day as being too much, I meant that it was an undue proportion of the school day.

10,687. We have had a good deal of evidence before us to the effect that an increased amount of physical training every day would give relief to the children, especially if it were broken up into two or more intervals. You don't quite agree with that?—No, I don't think that the result would be in proportion to the disorganisation and disturbance of the ordinary school work.

Music.

10,688. With regard to the music accompanying the physical exercises, we have had some evidence that the music rather prevents the teacher from correcting mistakes. While music is being played, it is said, the teacher cannot make his voice heard, and so correct at the moment any mistakes that he sees. In teaching the first elements of physical exercise, you would do that without music?—You mean the position and first movements?

10,689. Yes. That would be done without music?—Yes.

10,690. The music would only come in when it is more or less perfect?—Yes.

Boxing.

10,691. You don't appear to value boxing very much. We have had some evidence to the effect that it was very valuable from a moral point of view; that if a boy was taught how to strike a fair blow he would be very unwilling in after life to strike an unfair blow?—I have not looked at it from that point of view. I have only looked at the position that the boxer assumes before he commences. I don't think that it is good for a young lad, as it has a tendency to contract the chest.

Covered playgrounds.

10,692. With regard to the training of children in or out of school, I suppose covered playgrounds would obviate the difficulty of regular training out of doors?—Yes.

10,693. It would be a good thing if all schools were provided with covered playgrounds?—Yes, if no large and airy halls were available.

Volunteers: physical drill.

10,694. *By Sir Thomas Glen Coats.*—Do you find time for the physical training of either recruits or volunteers in the time at your disposal during the year?—While going through the recruit drills, they get the usual exercises laid down in the drill book, but in the latest issue of the drill book they have done away with what was a very popular part, viz., physical drill with arms.

10,695. Do you think that the physical training of a Volunteer amounts to anything? Does it do him much good from a physical point of view; does it develop him?—There is no doubt that it helps to set him up.

10,696. To a certain extent?—Yes.

10,697. With regard to getting men for the active service companies, do you find that within the age limit you would have drawn indefinitely on your men, but there were a number of men who were physically unfit?—I think the age limit was unnecessary, so long as they passed the doctor.

National system of training: expect great improvement in physique of whole young population

10,698. The question leading out of that is this,—if those volunteers had had a proper system of physical training in the schools and afterwards, they would probably have been very much more fitted to comply with the requirements?—I believe that if we had a regulated system of physical training in our public schools, the standard of the young men of the country would very shortly show a great improvement.

10,699. *By the Chairman.*—Are you interested in the object of the reference to this Commission?—With reference to continuation classes?

10,700. The reference generally to this Commission?—I have been very much interested in this subject for a number of years.

10,701. Do you believe that any recommendation we may make will do any good?—It is hardly for me to say.

10,702. I just want to know what you think?—I can only speak from my own experience. I am satisfied that some sort of regulated system of physical training for the young people, boys and girls, in our elementary schools, backed up by the educational authorities, would certainly result in a very valuable improvement in the physique of the whole of the people.

10,703. Your reason for that somewhat hopeful belief is that you think that public opinion is veering round a good deal more to the value of physical training than it was?—No doubt people are taking a much greater interest in the subject, but it is necessary that those who are responsible for the training and education of the young should put something before them.

10,704. You quite understand that unless what is recommended is practicable there is not much use making any recommendation. You agree with that?—Yes.

10,705. You don't yourself see that practicability is out of the question; you think that it is possible?—I believe that it is possible.

10,706. You were asked about your own system, but you did not seem inclined to push it very much. Have you supreme belief in your system as against other systems? I ask that because the authors of other systems have pushed their own systems very strongly?—We have left it to those who have come under the system to give their opinion.

Witness' system: tested and approved

10,707. But you do earnestly and seriously think that your own system is the best?—Yes. It is the outcome of long experience, and we have found that it has been appreciated by a very large number of teachers, and they have again and again expressed themselves as quite satisfied with it so far as their pupils were concerned.

10,708. *By Mr Shaw Stewart.*—Do you regard as one of the objects of physical training, other than military, the making children more adept in manual dexterity, and so being more fit for industrial careers?—That is certainly one of the many advantages to be derived from it.

10,709. *By Mr Fergusson.*—I understood the objectors to musical accompaniment to go this length that a teacher said, 'I cannot teach a class of thirty children and play the piano at the same time,' and also that in teaching the exercise the children do not attain the same smartness. When the exercise is learnt I think they are all agreed that there should be music. It is during the learning of the exercise that they object to the music. Do you agree with that?—You would first have to show them the different motions or the different parts of the movement you wish them to do, but after that is done you can find a pianist in every school, and can devote your own attention to the teaching.

Music: precautions.

10,710. That is so if there is one person to play and another to teach; but there are many places where the same person has to play and teach. You don't object to that idea, teaching the class their exercise first and then, when they know it, have it with music?—You have to do that, so as to show them the exercise.

10,711. *By Mr McCrae.*—Have you considered the advisability of having public gymnasia established by the municipality of Aberdeen to encourage physical training?—I cannot say that I have, but I question very much whether that would really lead to such practical results as would justify the expenditure.

Public gymnasia: not practically valuable

10,712. Would it not be a help to the continuation classes if there was some central institution where all could go?—Our experience of public gymnasia has not led us to come to the conclusion that such institutions would be of great practical value.

10,713. *By Mr Fergusson.*—Can you carry on physical training without making it popular—gymnastics are very popular, and for gymnastics you must have

gymnastics are very popular, and for gymnastics you must have

gymnasia?—True, but I understood Mr McCrae to refer to the establishment of municipal gymnasia.

10,714. Without any reference to the continuation classes?—Yes.

10,715. It would be an absolute necessity to have gymnasia in order to make training for boys over fourteen popular?—Yes, or a room adapted for that training.

Mr G. Cruden,
M.A.
16 Sept. '02.
Gymnasia.

The witness withdrew.

Mr REGINALD CARTER, M.A., examined.

Mr R. Carter,
M.A.

10,716. By the Chairman.—You have prepared a statement which you have put before this Commission?—Yes.

State your School and University training, former experience, and time in present position.—Clifton College, 1881–1886, football cap; Balliol College, 1886–1890, viii. XV.; Lincoln College, 1891–1901, treasurer of athletic clubs for seven years up to 1901; Principal of the Oxford University Day Training College for four years up to 1901; member of the Oxford University Volunteer Corps for two years up to 1901; now Rector of Edinburgh Academy.

What is the class of school and scholars; give numbers and ages of pupils.—‘Secondary School.’ Upper school, 300 (roughly); preparatory school, 100 (roughly). Of the total number of 400 about 60 are boarders. The ages range from six to eighteen or nineteen (preparatory, six to ten; upper school, ten to eighteen or nineteen). Parents of good standing; most of them live in Edinburgh or neighbourhood.

The regular outdoor games are:—*Football* (first two terms of session) and *cricket* (third term). Attendance at games or drill is compulsory, except for boys exempted on medical grounds, and boys living at a distance from Edinburgh. By far the greater number of the boys play football and cricket, very few take drill as an equivalent for outdoor games. This drill takes place in the gymnasium after school hours (from 3 to 4 p.m.). It is designed as exercise for the few boys who do not play outdoor games. It is entirely independent of the gymnastic lessons included in the regular school curriculum of every boy.

Hockey is occasionally played in the park when the grounds are not fit for football, or the boys are sent for a *short run* (about 3 miles). Practice for the *games* (athletic sports) takes place regularly during the last three weeks of the second term, when football is over. Boys take turns at running, jumping, hurdle races, and so on.

Two masters have regular charge of these outdoor games: one organises the games of the senior division of the upper school, the other those of the junior division. They are helped by several masters, who take regular turns at practice games every week. The school captains also take a share, and have a certain amount of responsibility; and the bigger boys often bear a hand in coaching the smaller ones.

Sides in practice games are arranged for football according to size and skill; for cricket according to classes, roughly.

There are two fields, each of 9 acres; one at Raeburn Place, seven minutes’ walk from the Academy, and one north of Inverleith Park, in front of the two boarding houses, ten minutes’ walk from the Academy. Each field has a pavilion. Boys change for games either in these pavilions or at home, according to their distance from the fields.

There are two fives courts at the back of the Edinburgh Academy under supervision of a master.

Over and above the regular outdoor games, every boy, unless specially exempted, goes through a course of physical exercise in the gymnasium. These gymnastic lessons form part of the regular curriculum of every boy between nine and three o’clock.

A well-equipped gymnasium is attached to the school. The junior division of the upper school devotes one-third of the time to free, and two-thirds to applied gymnastics. The senior division devotes practically the whole of the time to applied gymnastics, with occasional free exercises.

All gymnastic instruction is in the hands of Sergeant

Sheen, late instructor to the 2nd Border Regiment, assisted by Sergeant Brown and Sergeant Bowie. The classes are so arranged that each instructor has from ten to fourteen boys. A regular school register is kept by Sergeant Sheen, and made up at the beginning and end of each term.

Outdoor games are not compulsory for boys in the preparatory school, but a good many of them take part in football, cricket, and athletic practice, and, generally speaking, they are keen on outdoor games. These games are under supervision.

All preparatory boys take regular gymnastic exercise. This consists entirely of free gymnastics—marching, Swedish drill, and dumb-bell exercises.

Time allotted to outdoor games.—For boys who play football in school matches on Saturdays, three hours’ practice, one hour match a week.

For boys who do not play in matches, three hours’ practice a week.

For boys who play cricket in school matches on Saturdays, four hours’ practice, and roughly about two hours’ match a week. (The 1st, 2nd, and 3rd XI. matches take longer than this.)

For boys who do not play in school matches, four hours’ practice a week.

Athletic practice, three hours a week. (Drill for boys who do not play outdoor games, three hours a week.)

Gymnastics.—Two lessons of about forty-five minutes each a week.

The outdoor games take place between 3.30 and 4.30 or 5 in the afternoons after school hours.

The gymnastic lessons take place during school hours between nine and three.

There is a Carpentry Class in the workshop every day between three and four o’clock. Boys may attend two days in the week.

A drawing and painting class meets four times a week, from three to four o’clock. Boys may attend two days in the week.

There is a School Choir which meets every Friday from 5.15 to 6.30. Two lessons a week in singing are given to boys in the Junior Division who sing.

These lessons form part of the regular curriculum between nine and three o’clock.

There is no cadet corps and no rifle shooting. There is no swimming bath attached to the school, no fire brigade, no ambulance.

Other points of interest may be mentioned. Between every lesson there is an interval of five minutes. Boys are encouraged to get out into the yards for fresh air. In the preparatory school there is an interval of half an hour every morning.

Dinner is served in hall from 12.45 to 1.15. Most of the boys attend. After dinner there is an interval of fifteen minutes. School starts at 9 and finishes at 3. Saturday is a whole holiday.

Boys who live in Edinburgh do roughly about half an hour’s walking to and from school every day.

All boys unless specially exempted take part in games and gymnastics.

The games are well organised. The masters are duly qualified, being university men of distinction in athletics. The gymnastic instructors are fully qualified. The janitor, who is of great help in many ways, especially with small boys, is an old navy man.

There is no regular *school* medical examination. Each boarding house has its medical man, and parents, of course, have their medical men.

One of the masters has made a point of examining

register.

Time allotted.

Handicrafts.

Voice training.

Intervals between lessons.

Medical examination.

Mr R. Carter, the eyesight of new boys, and we shall probably take steps to make a regular examination of the whole school as regards hearing and eyesight.

M.A.
16 Sept. '02.

Outdoor games.

Outdoor games are best. Boys get fresh air for their lungs and free movement for their limbs. They take naturally to football, cricket, golf, jumping, running, bicycling, and so on. In football and cricket they are encouraged to use their heads, to keep their tempers, and to play for their side. The bigger boys, and in particular the school captains, have definite responsibilities. Generally speaking, games, when properly supervised, are a distinct help to the life of a school. Public spirit is fostered, and the health of boys is improved.

As with work, so with games, care must be taken that boys are not over-strained and over-excited. Too much football, too much cricket, too many school matches, tend to make boys regard games as a serious occupation rather than as a recreation. Their bodily strength may be overtaxed and their intellectual growth hindered.

Games and gymnastics.

School life, I think, should be so arranged that games are given their proper place and their proper importance. Above all, boys should have a reasonable amount of time in the week left over for their own use. As for indoor gymnastics, they are good and useful in that they help to develop a boy's frame, teach him to hold himself well, and give timely relaxation from study.

Proportion of time.

As regards proportion of time.—Probably about four or five hours a week indoor and outdoor exercise properly distributed will do very well.

At the Academy the school curriculum consists of thirty periods in the school week of five days (a period = from 45 min. to 55 min. according to the time of day). Of these thirty periods, two are devoted to gymnastics. Out of school hours, from three to five hours a week are devoted to games. This arrangement has been found satisfactory.

Every school, I think, should have some form of physical training carried out in connection with school work. Each pupil should have a reasonable amount of exercise in the week.

It would be a good thing if as many masters and mistresses as possible, both in elementary and in secondary schools, were encouraged to take an interest in physical training, and to acquire experience in this side of school life. Whether it is reasonable or not to expect masters in Scottish elementary schools to manage the whole of the physical training in their schools I am not in a position to say.

I am not clear as to the precise meaning of the words 'military drill and training.'

10,717. By Sir Henry Craik.—You are Rector of the Edinburgh Academy?—Yes.

Experience.

10,718. Your experience has been of a varied kind?—Yes.

10,719. You have been chiefly connected hitherto with teaching in England?—Yes, at the university.

10,720. For four years you were head of the Teachers' Training College at Oxford?—Yes.

10,721. That brought you in contact with the education in the State-aided schools?—Yes.

10,722. Then you also taught in English public schools?—No, I never taught in one.

10,723. But you are well acquainted with them?—Yes, I know a fair amount about them. I was educated in one, and I have often been in them examining them. I know a good many men in them.

10,724. Your experience is of these public schools or boarding schools?—To a certain extent it is.

10,725. In the Edinburgh Academy you have to deal with day boys?—Yes, the greater number are day boys, but there are about sixty boarders.

10,726. The boarders don't board in the school: they board with the masters in various parts of Edinburgh?—Yes, there are two large houses in which they board.

10,727. The fact of their boarding with masters gives them no sort of corporate life such as there is in England?—No, they are not quite like the houses in the big schools in England.

10,728. It is practically a day school?—Yes.

10,729. Comparing that with a boarding school, which of the two systems is best qualified to develop the physical training of the pupils?—It depends on the class of boy with whom you have to deal. In the Academy our boys are practically of the same class as the boys who attend the big public schools in England, and the system is practically the same. We have a compulsory system of games, and I see very little difference in that matter.

10,730. What I wish you to give us information on is this: do you see anything in our Scotch system of day schools to prevent that class of secondary pupils completely overtaking satisfactory physical training?—I don't see anything, but my experience is not at all large. I have only a general notion of the secondary schools in Scotland.

10,731. Comparing the pupils of your present school with those in public schools that you are acquainted with in England, how do they compare with one another?—I should say that they compare very favourably with English boys. I have been struck with the Scotch boys since I came north. I have known a number of Scotch boys in the south, of course, but I have been much struck here with the school fifteens and the boys generally. They look robust and well set up and healthy, and, I think, compare very favourably indeed.

Scotch English compare

10,732. You mainly depend for your physical training on games?—Yes, outdoor games.

10,733. The drill is a sort of *pis aller*?—Yes, drill Drill so-called. It is merely an equivalent for boys who for some reason or other do not take outdoor games. It is hardly worth taking into account, because by far the greater number take part in the outdoor games.

10,734. Are those who take the drill rather the more weakly boys?—I don't know that I am very well acquainted with the boys that take the drill, and I cannot speak with any certainty on the matter. They are boys in whose case, for some reason or other, there is some objection to their taking part in outdoor games.

10,735. Physical objection?—Yes, very likely.

10,736. Do you think that drill has a good effect in the way of discipline, character, and moral effects?—I would very much rather have outdoor games than drill. If it were a matter of choice in a school of 300 boys between outdoor games and drill, I would have no hesitation at all in choosing outdoor games.

10,737. Is there any chance of this, that in games those who are not very strong may be shoved aside and rather put in the background?—You mean put into a wrong set?

10,738. Rather discouraged from taking a very active interest in the games at all?—Yes, there is a certain amount of danger. I have known cases of boys in some schools who have never taken part in games at all.

10,739. Was that because they were not very dexterous?—It was because they did not care for them.

10,740. For those boys military drill would have been very important?—They would not like drill any more than the games. I know boys who would object to any compulsory training.

10,741. But those are the boys who ought to have it?—Yes, and I should prefer that they should go out of doors rather than do drill indoors.

10,742. In the case of your own school, most of the boys have had experience of games by the time they come under your charge?—To a certain extent. They naturally are the kind of boys who take an interest in games. It has not always been compulsory in the Academy: it is only within the last nine or ten years that the compulsory system has come in, but of course there it is, and boys accept it as it stands. They are encouraged to play outdoors in the preparatory division, but it is not compulsory, and when they come to the upper school they fall in with the existing state of things. I think it suits them better to go out of doors and play games.

10,743. In the matter of discipline and generally,

how would your boys compare with the boys of an English school?—Excellent. I think the system has worked very well indeed.

10,744. For your class of boys you don't feel that the disciplinary effect of the drill is very necessary: they have acquired otherwise the qualities that it would give?—I don't quite know what you mean by discipline in respect of drill as compared with games.

10,745. Will they all obey the word of command and stand precisely where they are told?—We have that as well in our school: we have a mixture of both. All the boys do exercises in the gymnasium at word of command.

10,746. You don't rely altogether on outside games even in your school?—No.

10,747. Turning back to your experience in the training of teachers for State-aided schools, do you think that drill is more necessary in the State-aided schools for the larger number of children than it is in a school like your own?—It is a question as to whether you should have drill or outdoor games.

10,748. Yes?—I would rather have outdoor games if I could get them.

10,749. But in the large State-aided schools, do you not think that probably games will be less possible than in a school like yours?—Yes, but I would rather have drill if nothing else is to be had. I think that there should be a certain amount of drill in every school.

10,750. In the Training College in Oxford, were the teachers instructed in the particulars of drill?—No, but they probably will be. A new arrangement is coming in—in fact, I was engaged in arranging that with the Board of Education as well as I could when I left. The University Day Training Colleges are struggling societies, but I am very glad that these day training colleges have started, because it will encourage teachers to look into these matters. I always tried to encourage our men to take an interest in the matter of games, to join the volunteers if they could do nothing else.

The witness withdrew.

Mr JOHN MACPHERSON, examined.

10,760. *By the Chairman.*—You are Chief Constable of Perthshire?—Yes.

I have served in the Perthshire police for over forty years—sixteen years as chief constable.

The population of the county (excluding the city of Perth) is 90,383, and of that number about 3500 are young lads ranging from fourteen to eighteen years of age. Of these, 1900 are employed as farm-servants and labourers, 1000 as tradesmen, and 600 as clerks, shopkeepers, etc.

Speaking generally, the youths of Perthshire are well behaved and comparatively free from serious criminal offences, and only a very few are idle, worthless characters.

It is the case, however, that young farm-servants and labourers congregate on the Saturday nights in the neighbouring villages, and often indulge in more drink than is good for them, and this leads to high words, swearing, etc., with the result, when in this state, they create disturbance, and sometimes throw down walls, etc., out of pure, wanton mischief.

This class of youths (farm-servants and labourers), being generally tired at night, do not take much advantage of continuation classes.

With very few exceptions, the farm-servant is not taken up with educating himself, and for physical exercise considers he has sufficient muscular development in the course of his day's work.

Then youths employed as clerks, tradesmen, and shopkeepers, and residing generally in the towns and villages, are practically a different class. They are also free from criminal offences of a serious nature, but some of them are given to petty fruit and turnip stealing, etc.

They are taken up with cricket and football in the summer evenings, and in winter, where reading rooms

10,751. You are speaking of teachers for State-aided schools?—Yes, teachers for elementary schools.

10,752. Summing up, you think that the day school is certainly qualified to give as good a physical training as the boarding school is?—Yes, that is, if you have boys going on to seventeen or eighteen years of age.

10,753. You find that although you depend generally in your own school upon games, yet you supplement that to some extent in the case of all your pupils, and to a larger extent in the case of a few of your pupils, by physical exercise and drill?—Yes, it is all part of the regular curriculum of the school.

10,754. Your experience as a trainer of teachers for elementary schools leads you to think that in elementary schools drill is even more essential and should bulk more largely than in your school?—That is so.

10,755. I mean to say that in the State-aided schools the drill would be a more important part than in your school?—Yes.

10,756. We have heard a good deal in regard to other schools about the importance of having a medical inspection. Do you have any such inspection in the Edinburgh Academy?—No, we have no medical man attached to the school.

10,757. Don't you think that it is an important thing in connection with physical training that there should be some medical inspection?—Yes. I have known instances of boys overstraining themselves, but not in the Academy. I think it would be a very good thing to have some medical inspection.

10,758. You think that there would be no objection to that being done in a day school?—No. Of course at the Academy it is not absolutely necessary to have a medical officer attached to the school, as we can rely on parents taking proper care of their children, but in most schools it would be a good thing.

10,759. Certainly in schools where pupils came from homes where there was less attention?—Yes.

and continuation classes are available, these are fairly well attended.

The language and general manners of this class are decidedly above that of the agricultural class, but, on the other hand, they indulge in smoking cheap cigarettes and reading trashy literature, which must have a pernicious effect on their moral as well as physical condition.

A great temptation to the youth of our villages is ice-cream shops, where cheap cigars can be had, and billiards, bagatelle, and other games indulged in up till midnight.

The damage done to the youths by contact in these dens is fraught with fears for their conduct in later years.

Legislation for the better supervision of these shops is urgently required—particularly as to the sale of cigars—and all such places should be closed same hour as public houses, and wholly closed on Sundays.

The smoking of cheap cigarettes and cigars, and the very prevalent and growing custom of making a diet of tea, bread and butter, instead of porridge and milk, must have a deteriorating effect on the health of young people, and I think an effort should be made to open their eyes to the pernicious effects of such practices.

Then something could be done in the way of promoting healthy outdoor exercise and recreation for young people.

Personally I am strongly in favour of every youth in the land being versed in military drill.

It would be beneficial, bodily and mentally, and help to make our youths more fit for their future career in life.

It would improve the health, promote steadiness, obedience, and smartness, and would, further, be a pleasant and interesting recreation.

Mr R. Carter
M.A.

Continuation
classes: atten-
dance at to
eighteen
desirable:
well attended
except by
farm servants.

I think drill should be a part of a boy's education, that he should attend continuation classes after he leaves school, up to the age of seventeen or eighteen, and then become a volunteer. Unfortunately, many people think that military drill savours of conscription and militarism, and I fear the making of it compulsory would be loudly resented.

As a general rule continuation classes are well attended by the youth of towns and villages, but not by farm-servants.

Recognising, therefore, that the farm-servant won't attend school, something could be done in the way of making the school come to him, and with a theme to interest him.

I would suggest that the important subjects of agriculture and forestry be placed in front of him by competent teachers, and, to stimulate the interest, hold out prizes of pecuniary value to be competed for at the end of each session. Further, certificates and diplomas could be issued, and thus enable him to reap the benefit of his attendance at these classes by enhanced pay, consequent on his holding such certificate or diploma.

This system could be made to apply to all trades, and young men would then strive to secure the certificate or diploma applicable to their trade or business, and thus ensure for themselves advanced positions in their particular employment.

A gymnasium for ploughmen would be of no value—their employment gives them ample muscular exercise.

On the other hand, for clerks, shopkeepers, etc., some form of muscular drill is absolutely necessary, and this again would require to be popularised by competitions and rewards, otherwise attendance could not be secured, nor a high standard of muscular development attained.

In my humble opinion any scheme that may be devised, if success is to be assured, can only be a voluntary one, combined with substantial gain to the parties aimed at.

You seem rather against the idea of compulsion in any way?—That is so.

Is that from what you think yourself or from what you think would be thought by the parents?—From what would be thought by the parents.

You have no experience in the county of Perth of what are called the hooligan class?—No.

Nor even the loafer?—No, he is unknown with us.

There are none of that class in the county or in any of the small towns over which you have control?—Very few.

Most of the crimes in your county are due to drink?—Yes.

As a general rule, there are more young people who are occupied than not?—Yes.

Consequently you don't see any special use for giving physical employment to those between the ages of fourteen and eighteen?—So far as the farming class is concerned, I think they get plenty of exercise, but I think that the other class, such as tradesmen, shopkeepers, and so on, should get more. I think it is important that something should be done for them.

You also think that the continuation system itself is not sufficiently interesting to attract young people unless there are prizes, or something else, to be derived from it?—That is so.

You have been so long in the county of Perth that you have not had much practical experience of other places?—That is so.

You are not opposed to giving a certain amount of physical education to every child?—I would certainly do that.

You would give it to every young person up to eighteen years of age?—Clearly.

Have you any advice to give as to how cigarette smoking and things of that kind might be put down?—There would require to be legislation. I do not think it could be managed otherwise.

You think that it is very much against the health of the average child?—Yes. It must be very

bad for a young man to stay in one of those ice-cream shops till all hours of the night.

By the Hon. Thomas Cochrane.—Are these ice-cream shops allowed to sell tobacco?—They sell cigarettes.

They get a licence?—Yes.

And they are allowed to keep open till a late hour?—Till midnight.

Is there any drinking in them?—There is no strong drink, they have lemonade and such drinks.

Have you seen the report by Colonel McHardie, the Chairman of the Prison Commissioners?—I have not read it yet.

He gives some interesting information about crime, and his opinion is that the right time to prevent crime is when the children are young, that they should be taken then and trained?—Clearly.

If a man is an adult criminal there is not much hope of reformation?—There is very little hope.

He says that they should not only be protected but should be properly educated, and that in a generation or two an improvement would be effected. Do you agree with that?—Yes.

The moral and physical training would be of benefit to the children?—Yes.

You would endeavour to get that by means of persuasion?—Yes. That is the difficulty.

You think there would be resentment if these young lads were compelled to go to the continuation classes?—Yes.

Who would resent it?—Themselves.

Would their parents resent it?—I think that if the parents fully understood the advantages that would arise, they would not resent it.

If they knew that it was for their children's good, they would not resent it?—That is so.

It would be a means of keeping them from getting into evil habits?—Yes.

You have had a good deal of experience with farm servants in Perth?—Yes.

They are not very bad as on the whole?—No.

They have their faults like every class?—Yes.

Their fault principally is that they don't always profitably spend the whole of their time?—That is so.

It might be difficult after their labour is over to get them to attend continuation classes at a distance from their homes, but you said that something might be done by making the instruction go to them?—Yes.

You might have some travelling instructor to go round the different villages?—Yes.

What should he teach them so as to interest them?—In the first place, agriculture.

That has been tried by some county councils?—Yes. It has been tried in Perthshire, but only in about ten places.

Did it meet with any measure of success?—Fair.

How many attended?—164.

What class did they belong to?—I should say that they were all farm servants.

There was no compulsion in that?—No.

They attended from a desire to improve themselves in their profession?—Yes.

Did any of them become farmers afterwards?—I do not think there is quite sufficient time for that yet.

Have you any information as to their subsequent conduct? Are they better workmen, or have they come under you?—I could not say anything about them.

The fact that they did not come under your notice you take as being favourable?—I should say so.

If they did come under your notice, then it would generally be for some fault?—Yes.

In your opinion any scheme, if success is to be gained, must be a voluntary one?—Yes.

You don't place any confidence in com

elling these young fellows to attend?—I am strongly in favour of something being done, but I think that a fair trial should be given to the voluntary system, and if it was seen that it did not work in the course of two or three years, then strong measures should be taken.

10,809. You would first rather persuade them to attend by making the continuation classes attractive, and then if that did not succeed you think that the time would have come when they should be compelled to attend?—Yes.

10,810. *By Sir Henry Craik.*—Do your police have anything to do with the city of Perth as well as the county?—No.

10,811. You have nothing to do with the railway station at Perth?—No.

10,812. From what class do you draw your constables?—Generally from the farm-servant class.

10,813. Are they amenable to discipline, and do they turn out efficient members of the force?—Very good indeed.

10,814. The authority and discipline improve them very markedly?—Yes.

10,815. You speak in your evidence of meetings on Saturday nights when there is more drink than is good for those who take part in them, that there are high words resulting in disturbance and damage to property. I presume that that brings a large number of the youth of Perthshire under the notice of the police?—Yes.

10,816. And perhaps they have to suffer for it?—They do.

10,817. Do you think that compulsion being adopted at fourteen years of age, which would give them some sense of discipline, of their responsibility, of the necessity of respecting others and respecting property, would not be a very much less evil than the opposite result, which is to bring them under the penalties of the law?—I am of strong opinion that it would be better in the first place to try the voluntary system.

10,818. But we have tried it very largely. There have been agencies all through the county of Perth, and it has just resulted in producing the circumstances you describe, and then you have to deal with them in a way which marks them very disagreeably for the rest of their life?—Yes.

10,819. Do you think that if those responsible for those youths understood properly the alternative, they would not be willing to have a certain compulsion which would prevent those errors rather than penalise them?—I am of strong opinion that the people of our country would resent compulsion.

10,820. Is it not the case that in older days a certain duty was recognised on the part of every inhabitant of

the country of going through a certain amount of physical exercise, and fitting himself as a citizen?—Yes, and I am strongly in favour of every young man being thoroughly drilled.

10,821. If you could get over this prejudice, you have no feeling that the compulsion would do any wrong to anyone to whom it was applied?—I think it would do a world of good.

10,822. All you fear is public prejudice against it?—Yes.

10,823. *By Mr McCrae.*—You say that as a rule the continuation classes are well attended by the lads of towns and villages. Are those evening classes very general throughout the county of Perth?—Yes, we have classes held in sixty-four parishes.

10,824. Is physical training part of the education that is given?—No.

10,825. It is all mental?—So far as I am aware, it is.

10,826. *By Mr Shaw Stewart.*—I would like to ask you about legislation for preventing smoking of cheap cigarettes. What would be the most practical way of dealing with that?—Have them licensed the same as public houses.

10,827. And not allow children under fourteen to buy cigarettes?—Certainly.

10,828. Do you think that if cigarettes were only sold in packets of twelve as the lowest amount, that would have any effect?—It might.

10,829. *By Sir Thomas Glen Coats.*—You have not said anything about children of school age. Have you much experience of the children of school age?—I am glad to say that we have not much trouble with children under fourteen.

10,830. I don't mean experience as regards the law, but your own experience. When children leave school about thirteen or fourteen, do they at once find occupation?—The farming class just get work at the farms.

10,831. Just when they leave school?—Yes, and other young children join trades, and so on.

10,832. Do you think that physical training during school age would induce them to carry that on voluntarily afterwards?—Yes.

10,833. If they got the taste for it?—That is so. I think that if the advantages of physical training were brought under the notice of parents, employers, clergymen, and teachers, it would do a world of good.

10,834. You do not think that the physical exercise that they get in walking to and from the school is sufficient. You think it would be better if they got a regular training in drill?—Certainly.

The witness withdrew.

Mr ALEXANDER PORTER, examined.

10,835. *By the Hon. Thomas Cochrane.*—You are Chief Constable of the counties of Roxburgh and Berwick?—Yes.

10,836. You have handed in a statement of your evidence, which you will please read?—

With reference to this subject, my attention has, from time to time, been directed more to the effect which athletic and military training has on the manners and conduct of youths than to the effect of such training on physical development, and I am convinced that if carried out under conditions suitable to the age and physical capacity of the pupil, such training is highly beneficial in every respect, and that we cannot have too much of it. There is, however, to my mind, a still more important element in the education of youth than athletic or military training, and which should, I think, have precedence in every school, namely, the inculcation of good manners and encouragement of good conduct both inside and outside of the school. This duty is unfortunately in too many cases entirely neglected by parents, who, in sending their children to school under the pressure of the School Board officer, seem to consider themselves relieved of all responsibility for the training of their

children either in morals or manners, but teachers in public schools are too fully occupied in complying with the requirements of the Education Code, in squaring the standard of education with the age of the pupil, to give the necessary time and attention to the discharge of this important duty. The result is that a large proportion of children are turned loose without any clear perception of right and wrong, and depend on such influences as may accidentally affect their future course of conduct. This is, in my opinion, the outcome of the present system, which permits of children of tender years being sent to a Board School, in many cases to get them out of the way at home while the mother is employed at household work or in trying to add by her labours to the family income. There should be an age limit under which children should not be subjected to the process of cramming prevalent in infant departments of Board Schools, and there should also be a limit to the hours of attendance. From ten to three or four o'clock is much too long for a child of say ten years of age to be subjected to the strain of mental training, even when relieved by intervals of outdoor recreation. The effect of this continuous mental strain is shown by the

Mr J. Macpherson.
16 Sept. '02.

Continuation classes :
no physical instruction given.

Cigarette smoking.

Physical drill desired for school children.

Mr A. Porter.

Infants' hours of attendance should be limited.

Mr A. Porter. washed-out appearance of children by the time the annual holidays come round. The hours of teaching should be varied by intervals devoted to athletic exercises under the personal direction of qualified teachers, in order to initiate in the children habits of civility, courtesy and discipline.

Military training after twelve. Under twelve training by ordinary school staff.

Military training and exercises are excellent things, and might be applied with great advantage to pupils of twelve years of age and over, but for children under that age every branch of training should be conducted by the staff of the school, every member of which should be qualified by training to impart instruction in elementary physical drill. Military drill instructors are not, in my opinion, so well adapted to impart instruction to juniors as they may be to more advanced pupils. The purely military system is too mechanical, and tends rather to cramp than to develop individual intelligence.

My interest in the subject, however, comes in at a later stage, when the good or evil effect of moral training comes into play through the independent action of the child, and it is at this stage that the effect of parental and school training can be distinguished. As there is a clearly-defined distinction in the home training, so there is an equally marked distinction in the pupils of different schools, not always to be attributed to the class of children, but more especially to the system of training carried out in the school. There is a marked difference in the habits of boys in burghal and in country schools. The first thing the former does is to learn to smoke cigarettes, a vicious habit which ought to be repressed by every possible means. The country boy, on the other hand, takes to bird-nesting and rearing of birds, beasts, etc., a most laudable and instructive diversion which ought to be encouraged—the protection of wild birds notwithstanding. I have never known a boy go astray who groped his way through natural history. The town-bred boy, however, has not this outlet for his natural instincts, and perforce is confined to his cigarettes, football, and occasional cricket, and is unfortunately always under the influence of a few evil-disposed and vicious companions. Football and cricket are excellent amusements, and are most useful as a means of physical training, if conducted under proper control, otherwise they generally lead to outbreaks of passion and foul language, which are not always confined to the field of action, but become habits not easily eradicated.

Town and country boys: differences.

Boys' Brigades are, I think, a most successful organisation for the training of youths, mentally and physically, and when properly conducted include every kind of sport and amusement—football, cricket, and excursions—which a boy requires until he begins the serious business of earning a living, and even after that period—until he joins a Volunteer corps. The most successful Boys' Brigades I have known were officered by civilians who had been trained in the Volunteers. The effect of the training on the boys is surprising—smart and intelligent in action, their manners and conduct improve rapidly, and a Brigade boy can always be picked out anywhere and in any company by his manly and respectful bearing. Unfortunately such brigades require money to maintain them, and although everybody admires and approves of them, yet somehow voluntary subscriptions dwindle down and they have to be given up. This result is most unfortunate, as these brigades pick up boys at a critical age and do an incalculable amount of good.

Boy's Brigade commended.

Juvenile delinquency insignificant.

Juvenile delinquency does not bulk largely in my counties, and while a number of youths are annually dealt with in the criminal courts for trivial offences, such as pilfering gardens or damaging property, the outcome of thoughtlessness or exuberant spirits, the number so dealt with is insignificant. Where children do go wrong, their wrong-doing can be traced in most cases to neglect of home training through the ignorance or vicious habits of the parents. We have few, if any, of the class of either parents or children from which spring the habitual criminal, and all that is required is that at home and at school the children should be so

controlled and directed as to prevent them drifting into vicious habits.

The number of convictions recorded against juveniles between the ages of fourteen and eighteen years during the five years ending 1896 was—in Roxburghshire, 127 males, 12 females, total 139; and for the five years ending 1901, 188 males, 7 females, total 195.

In Berwickshire for the same periods the number of convictions recorded for the first five years was 88 males, 7 females, total 95; and for the next five years 89 males, 5 females, total 94.

The greatest contributing factor to juvenile delinquency is in one word 'drink.' Youthful delinquents are either the offspring of drunken parents whose home influences have been bad and home comforts none or the result of foolish indulgence in intoxicating liquors by ignorant youths, unaware of the danger of such indulgences. Against this record of delinquency should be set the very large number of cases in which even children of tender years hand over to the police valuable property found by them, and which is afterwards restored to the losers, much of which, such as money and jewellery, might have easily been concealed and appropriated without detection.

In the constabulary service the most difficult and delicate part of the training of recruits is teaching them civility and manners. Recruiting is in Scotland limited to the age of from twenty-one to twenty-five years, and the young recruit carries with him into the service the accent and mode of speech peculiar to the district to which he belongs, and to which he clings as if it formed his sole claim to independence, and his affirmative 'Aye' and negative 'No,' or its northern equivalent 'Na,' is as difficult to eradicate as is his uncouth manner and bearing. There are, however, fortunately notable exceptions to this class—men who have served in the Volunteers or who have been fortunate enough to have been in a Boys' Brigade. The military service is more fortunate in obtaining the raw material at a more pliable age, and association in the barrack yard helps to establish the more euphonious 'Yes, sir' and 'No, sir.' In rural districts the police recruit has not the advantage of association to help him, and his training depends on the vigilance of his superiors.

In 1867, when Her late Majesty the Queen visited the border district, in controlling and regulating the large crowds assembled to greet her at the various towns she visited, I observed that any order given by me was obeyed promptly and with becoming grace and alacrity by men who had been in the army or who had served in the volunteers, while many of those who had not the advantage of such training had to be restrained under strong persuasion and pressure. Subsequent observation and experience of large crowds have confirmed the impression then formed, that military training and discipline could be depended on in the maintenance of order on public occasions. In 1891 I had some conversation on this subject with the Earl of Minto, who was then brigadier of the southern counties, and in consequence submitted the following memorandum to his lordship, and which has since been perused and favourably considered by several military officers of distinction and experience; but nothing has been done to give effect to my suggestion, which, however, I still consider to be both practicable and desirable as affording means of valuable instruction to a class of young men who have difficulty in filling up spare time, and which is generally spent in gossiping, loafing, and a little rowdiness, with a pretty free use of coarse language.

Notes on the Volunteer System.—(1) The Volunteer movement in Scotland has greatly improved the moral and social condition of the people. The improvement is most marked in cities and towns, where the influence of the movement in promoting order and submission to constituted authority has been recognised by all concerned in the control of crowds of people on public occasions. This influence of discipline, though limited by the paucity of the

Mr A.

16 Sep

Const
traini
recrui

Mili
train
valu

Vol
syst

men who have undergone military training, has been distinctly observed even in country crowds.

(2) In the earlier years of the movement almost every village and hamlet contributed its quota to the district regiment or battalion, but that state of matters does not now generally prevail.

(3) Considering the beneficial effects which discipline and military training have had on young men in towns, it would be of great advantage to have them extended to country districts. There are large numbers of young men employed as mechanics in country villages, and a larger number employed as labourers on farms, who have a good deal of spare time in the evenings which they have no means of profitably employing, and to whom a weekly or bi-weekly parade for drill and instruction in military duties would be a positive gain, and these parades would be largely taken advantage of as an agreeable means of filling up spare time.

(4) Seeing that young men in villages and at farm places have not sufficient time, however much inclined thereto, to attend at stations where there are Volunteer drill instructors, it is suggested that such instructors might attend at villages or central points in country districts at such times in the evening as would be most convenient for mechanics and farm-servants to attend for drill. This might be done without increasing the number of such instructors or the general expenses to any appreciable extent.

Besides increasing the strength of the Volunteer battalion, it is believed that such an arrangement would tend to popularise service in the regular army.

10,837. How long have you been Chief Constable of Roxburgh and Berwick?—I have been Chief Constable of Roxburghshire since 1884, and of Berwick since 1894. I was formerly Depute Chief Constable of Roxburghshire. I have served in Roxburghshire for forty years.

10,838. You have had a good deal of experience in those counties?—Yes.

10,839. You have taken an interest in the physical training of the children?—Yes.

10,840. You have found that the advantages of physical training were very apparent in improved manners and morals?—Yes, morals especially.

10,841. These improved morals are a valuable asset to the children in after life?—Yes, not only to themselves, but also to men like myself who have to preserve public order, because I find that when they are thoroughly disciplined they will readily do what they are asked to do.

10,842. They are better men in every way?—Yes.

10,843. Does the same thing apply to the girls?—Yes.

10,844. You have made some strictures on the Board Schools. You consider that some of the hours of teaching should be devoted to physical work?—I think there is too much given to mental work and too little relaxation. A child goes to school about 9.30 in the morning and has no relaxation till between three and four o'clock, except an hour for meals, during which the children run home and swallow their food too hastily. I don't see any benefit that can arise from cramming at such an early stage.

10,845. In regard to training, you rather object to military drill instructors?—I prefer a civilian, for this reason, that I think the civilian has more sympathy with the children than your strictly trained military drill instructor, who is, after all, very much just what the army has made him—a machine.

10,846. Of course the whole system of military drill has very much changed of late years. There is much less of that purely mechanical drill than there used to be?—The little I have seen of it seems to be changed in the wrong direction.

10,847. You then find fault with boys who smoke cigarettes. Can you suggest any means for doing away with that?—Nothing except parental control, and I also think that the school teachers should put their foot down on it.

10,848. Have you any ice-cream shops under your jurisdiction?—Yes.

10,849. Are they centres of cigarette smoking?—*Mr A. Porter.* They are centres of everything that is evil.

10,850. You speak of football as being a good form of physical exercise, but you rather object to the foul language that is used?—I think that football is an excellent thing both for children and adults, but for children especially it should be carried out under proper control.

10,851. It is more the language of the spectators that you object to?—Yes, but the children are apt to do just as their elders do.

10,852. You speak very favourably about the Boys' Brigade?—Yes, I do.

10,853. You find in your own service that the manners of your recruits are sometimes capable of improvement, and that after being under your charge there is a considerable improvement?—Yes.

10,854. You wind up with some general suggestions for the Commission. You think that the farm labourers have a good deal of leisure time in the evenings?—Yes.

10,855. While not prepared to go to continuation classes, if some means of instruction were brought to their door they would be ready to avail themselves of it?—Yes, I am sure they would. It would give them something to do.

10,856. The continuation classes might include instruction in agriculture and physical training and other subjects likely to interest the farm labourers?—Yes.

10,857. If that was brought to their doors you think that the farm labourers would avail themselves of it?—Yes, because they have a good deal of spare time in the evenings.

10,858. *By Sir Henry Craik.*—There are some points I should like to ask you about. You think that compulsory school education has diminished the strength of parental responsibility?—I am clearly of that opinion.

10,859. Would your belief in that lead you to oppose compulsory education in schools?—Do you mean physical?

10,860. No. Would your conviction of the evil that it has done in lowering parental responsibility lead you to be inclined to abolish compulsory education?—I would not go that length, but I think that the school teacher should go a long way in filling up the gap.

10,861. We will come to that presently. How would you bring the responsibility of the parent home to him if you think he is rather losing it?—He is losing it in this way, that education costs him nothing, and he does not value it so much as he used to do in the days when my mother had to pay school fees for me.

10,862. You don't suggest that those country people with whom you deal would be able to look after their children all day. The help the school gives them must be considerable in that way?—Yes, but I think they throw the responsibility on the school at too early an age of the pupil. It is rather painful to see a little toddling thing being forced screaming to school in the morning.

10,863. Do you really find that?—Yes.

10,864. Is that really your experience, that the smaller children in country districts have to be forced?—I am speaking more now of the burghal than the country schools. I do not think they go to the country schools at such an early age.

10,865. At what age do they go?—Three years of age is very common.

10,866. If they go at three years of age, that is voluntary?—That is so.

10,867. That means that the parent thinks that the child would be better looked after at school than he would be at home?—That is what I complain of.

10,868. Do you think that it is better that if the parent is occupied all day the child should go into a nice airy room where there is an infant department and where it can be looked after by a teacher?—I don't think that it is good for the child.

10,869. You think it would be better to have the child rolling about at the door-step?—Why should it be rolling about the door-step?

Mr A. Porter.

16 Sept. '02.

10,870. Who is to attend to it?—The mother.

10,871. But the mother is busy?—Not necessarily. Of course, there are exceptions, which I grant, but I am taking the general rule, and I think this relief is too much taken advantage of by the mothers, and they send their children to school to get them out of the way. I do not think that that should be encouraged.

10,872. Don't you think that sending them to a good well-lighted and well-warmed room under the charge of a teacher who is devoted to those young children is any more harmful than to roll about the feet of the mother, who is probably very busy with her work?—I have yet to discover where these well-aired, well-ventilated schools are to be found in country districts. I think you are rather dwelling upon the palatial buildings that you have in Edinburgh.

10,873. I visited and opened a school in Berwickshire which seemed to me to be just as good a school as we could find in Edinburgh?—I grant that there are good schools, and all the schools that are being put up now are first-class.

10,874. But you think that the ordinary school under the School Boards in Roxburghshire is not, in point of heating and ventilation, superior to the mass of the houses?—What I contend is that the young child would be better toddling about at home, getting fresh air and some of the kitchen smoke, which won't do it any harm.

10,875. Would you like the School Boards to close their doors to children under five years of age, and say, 'We won't admit you'? Is not that the logical conclusion of your argument?—Yes, and this being a body engaged in endeavouring to find a way of improving the physical and mental development of children, I do not think that my suggestion is wrong.

10,876. You agree to follow that logical conclusion?—Yes.

10,877. You say that teachers in public schools are too fully occupied in complying with the requirements of the education Code to give the necessary time and attention to the discharge of this important duty of training the children in morals and manners. Is it not part of the code that the children shall be so trained?—Yes, but I go further than what I have said in my evidence, and I say this, that the teachers you are bringing forward as elementary teachers in public schools have not got the training themselves. They are not trained physically.

10,878. That is to say that the Code is not being carried out?—What I want to say is that I do not think that those pupil teachers and assistant teachers should be appointed until they are so qualified.

10,879. You do not think that they are properly carrying out the requirements of the Code?—I don't know. I am not there to judge.

10,880. But you don't think they are carrying out the attention to the training of the children in manners and morals which the Code requires?—I don't think so.

10,881. Have you, as Chief Constable, any reports as to the schools from which juvenile delinquents come?—I have not.

10,882. You are aware that under a recent Act you can obtain these statistics?—I am aware that under the Youthful Offenders Act I am obliged to keep a record.

10,883. But under an Act of quite a recent Session returns of that sort are made, and the police authorities may furnish these to the school authorities. Have you ever attempted in dealing with these youthful delinquents to trace them to their schools and co-operate with the teachers?—I am bound to do that under the Youthful Offenders Act, but before that I had no instructions on the subject.

10,884. You think, however, that that is a useful provision?—I am satisfied that one Chief Constable at any rate has paid a great deal of attention to it.

10,885. It was his suggestion that this was put into the Act?—I am familiar with what Captain M'Hardy of Ayrshire has done with youthful offenders, but we do not have the same class of youthful offenders.

10,886. Don't you think that a means of bringing home this duty to teachers is now in the hands of the police authorities, who can trace back these offenders to their school and communicate with the school authorities. They can find out what the schools are which are chiefly responsible for these youthful offenders, and bring home the responsibility to them in that way?—I am aware that I must do that now, but hitherto I had no instructions on the subject, and we had such a small percentage of juvenile offenders that there was no record of that sort kept.

10,887. Do you think that as a means of helping the carrying out of work of this sort, a certain amount of physical training would be very important?—Clearly. I still maintain that the teacher ought to be qualified to impart that instruction. Of course, I am aware that in many schools a military drill instructor is brought in, but I think that that is the duty of the teacher.

10,888. By Mr Alston.—You referred to the Boys' Brigade, and, as Chief Constable of two very important counties in Scotland, it is very gratifying to know that you have formed such a high opinion of their work in the country. Have you had much close observation of these Boys' Brigade companies?—Yes. I have tried to associate myself with these companies, to give every encouragement I could, seeing the beneficial results that followed.

10,889. To what do you attribute these beneficial results in companies of the Boys' Brigade?—First of all, to the athletic exercise and training, the habits of discipline, and the inculcation of good manners. These are the principal points. In Jedburgh we had a most successful Boys' Brigade. I live there, and I have associated myself with that Brigade. The boys were mixed; they were not all of one class, and I think that that helped the less fortunate boys in imbibing the instruction. There was no encouragement held out to these boys beyond the discipline and the drill, and a good deal of human sympathy.

10,890. Of course, you are aware that this is a religious movement to begin with?—This was conducted on non-religious principles.

10,891. Then it could not be a company of the Boys' Brigade?—The churches were associated with it. What I mean is that the clergymen of the town took no part in it except lending their sympathy and support.

10,892. It must have been attached to some body. Was it a Jedburgh company?—Yes.

10,893. It must have been attached to one church or several churches?—It was attached to all the churches.

10,894. It was a union company?—Yes.

10,895. It does not exist now?—It exists in name, but not otherwise.

10,896. Why?—For want of funds.

10,897. What funds were required to carry on that company?—I think it took £25 a year to carry it out.

10,898. Do you remember how that money was spent?—They spent about £25 in getting up a band.

10,899. That may account for the company going to pieces?—Perhaps it does, but the community are all the better for the band, because we have the residue. I think that the boys also have greatly benefited; many boys trained in that band have gone to other towns and found good situations as musicians.

10,900. Still it was unwise to risk the company on account of the band?—Perhaps it was, but you cannot bring experience to bear on what was only an experiment.

10,901. Is that what you mean when you say, 'Unfortunately such brigades require money to maintain them, and although everybody admires and approves of them, yet somehow voluntary subscriptions dwindle down and they have to be given up'?—Yes.

10,902. That occurs in very few cases?—Unfortunately it occurred in this case.

10,903. This is an instance of a good company which ceased to exist?—Yes.

Children under five should not be admitted into the schools.

Teachers: assistant and pupil teachers not properly qualified.

Juvenile delinquents: recent Act.

Physio given as ferab school teach

Boys Brig

Bene result

Mr

16 S

Porter. 10,904. You say, 'The most successful Boys' Brigades I have known were officered by civilians who had been trained in the volunteers.' Do you understand that, generally speaking, the officers of the Boys' Brigade are not civilians?—In some instances Boys' Brigades are drilled by military instructors.

10,905. That is quite the exception?—But it is done.

10,906. As a rule the officers are civilians. In Scotland a number of the officers have been in the volunteers, and the employment of army soldiers outside the company is avoided as much as possible. It is only when they cannot do without military instruction that they call in their help?—I think the Boys' Brigade are all the better of a little military instruction. Of course, I am not familiar with the rules.

10,907. When all is said and done, you thoroughly approve of this movement?—Yes.

10,908. Your experience is that it has done an immense deal of good?—Yes, immense.

10,909. *By Mr Shaw Stewart.*—Do you think that any legislation in regard to cigarette smoking would do any good?—I don't think so. I think it must be left to moral suasion.

10,910. You think that physical training, if properly carried out, would help to stop foolish indulgence in intoxicating liquors by youths, that exercising their bodies in physical exercise would have a distinct

effect in after life in the direction of temperance?—*Mr A. Porter.*

Yes. 10,911. Do you think that physical exercise in schools should be accompanied by occasional lessons on the benefits of physical training?—Yes.

10,912. *By Mr McCrae.*—You have very decided opinions as to the amount of drill given in our Board Schools, and you feel that they should have more time devoted to physical exercise. Have you turned your attention at all to the question of evening continuation classes?—No, except thus far, that they are not taken advantage of to the extent that they might and should be.

10,913. Is that general over the two counties under your supervision?—Yes.

10,914. What do the boys do after they leave school at fourteen years of age; do they find employment at once?—Generally. They are at first put out as message boys or to do something else.

10,915. There is not much opportunity for their loafing about after they have left school?—No.

10,916. What do the girls do after they leave school?—Some of them become shop assistants and so on. In Roxburgh-hire we have a considerable amount of textile manufactories, and the mills take up a lot of the girls.

10,917. Is there any physical training in those evening schools that you speak of?—There is none.

The witness withdrew.

Mr H. RIPPON SEYMOUR, examined.

Mr H. Rippon Seymour.

10,918. *By Mr McCrae.*—You are Gymnastic Instructor at George Watson's College, Edinburgh?—Yes.

10,919. State your school and university training, your former experience, and the time in your present position?—I was educated at the City of London School and Haysman's Anglo-French College, and have attended classes in anatomy and physiology for two years whilst in Edinburgh.

I have served ten years in the army, five of which were as a gymnastic instructor, leaving with the rank of sergeant.

I have extra first-class certificates from Aldershot in gymnastics and fencing, and a first-class army certificate in education.

Since leaving the service, I was for a time employed as director of the Dundee Physical Training College, and for nearly eight years have been in my present position at George Watson's College.

I have at different periods been instructor to the Edinburgh Harriers Gymnastic Club, the Queen's Edinburgh Volunteers, the Warrender Private Baths Classes, the Alloa Bath Classes, etc., etc., all of which I resigned to manage my present academy of fencing and physical training.

I have therefore nearly eighteen years' experience of drill and general physical training.

I am an official judge to the Scottish Amateur Gymnastic Association, and have officiated as judge at gymnastic contests in England, Scotland, and Ireland.

I am the author of a well-known work on physical training, which is largely used by army instructors, and at the gymnasia at Aldershot, Sandhurst, and the Curragh Camp.

10,920. (a) What is the class of your school and scholars? (b) Give the numbers and ages of the pupils?—(a) George Watson's Boys College is, I believe, the largest day secondary school in the United Kingdom, with an average attendance of nearly 1700 boys, who belong mainly to the middle and upper-middle classes. (b) The ages of the pupils range from four to nineteen.

10,921. Give in detail all the existing opportunities of physical training under the following branches:—

(a) Regular games, e.g., football, cricket, hockey, etc. (1) Are they organised and supervised by masters? (2) What is the size of the playing field and its distance from the school?

(b) Drill: how taught, and by whom? Gymnastics, free or applied? Is there a gymnasium attached to the school?

(c) Athletics, e.g., jumping, running, etc.

(d) School runs, paper chases, etc

(e) Handicrafts.

(f) Voice training.

(g) Cadet corps, rifle shooting.

(h) Swimming. (1) Is there a swimming bath attached to the school?

(i) Fire Brigade Corps.

(j) First aid and ambulance?—(a) In connection Games: with the school there are clubs for practically every athletic club, game or sport, e.g., football, cricket, golf, cycling, swimming, etc., all of which are under a ruling body known as the Watson's College Athletic Club. This club is probably one of the strongest athletic bodies in Scotland, and practically every boy at school belongs either to one or other branch of it. (1) One of the Organisation masters acts as secretary to the club, and takes charge of football or cricket teams when playing from home. The club is in the hands of a committee of former and senior pupils, and the headmaster has, of course, a voice in the direction of affairs in the capacity of president. (2) The playing field is a large one, of Playing field. some acres in extent, provided with a handsome pavilion, containing lavatories, dressing-rooms, etc., and is situated in one of the healthiest parts of the city, within a mile of the school. The school itself is situated on 'The Meadows,' in which the boys play during recreation and lunch hours.

(b) Drill and gymnastics—both free and applied—Drill and are taught by me, with my assistant, in an excellently gymnastics. equipped gymnasium, which is attached to the school.

(c) Athletics, as distinct from physical training Athletics. proper, are catered for by the school athletic club, though jumping is taught in the gymnasium. Prizes are awarded annually for jumping to seniors and juniors, and I might here mention that for two years past a 'Watson's boy has won the junior championship for high jumping, open to all Scottish schools.

(d) There is not a weekly 'school run' or paper chase, Runs. but the Watsonian cross-country club is open to present as well as former pupils.

(e) Handicrafts, 'slojd,' etc., are not taught.

(f) All boys in the elementary and junior sections Voice train- of the school are taught singing by two visiting masters. ing.

(g) There is not at present a cadet corps or rifle

Mr H. Rippon club, but a movement in this direction is probable in the near future.

16 Sept. '02. (h) There is a swimming club in connection with the school, which has the use of the Warrender Baths every afternoon and evening. (1) There is no swimming bath at the school.

(i) and (j) No fire-brigade or first-aid classes. 10,924. State specifically the time allotted to these or any of them *per diem* and per week. Are any of these taken in ordinary school hours?—Half an hour, twice weekly, is allowed for physical training during school hours, and practice at the various games, according to season, is to be had every afternoon and evening after school.

10,925. What, in your opinion, are the respective merits and relative values of the various forms of physical training?—For school use a system of physical training should be divided into four main branches, viz. :—

(1) Military drill; (2) Free gymnastics; (3) Dumb-bell exercises; (4) Applied gymnastics.

These four branches contain all that is absolutely necessary for the healthy and uniform development of the young.

Each branch has its special advantages and uses, e.g. :—

(1) *Military Drill* has principally for its objects the teaching of obedience and smartness, and marching tends to improve the pupil's gait and carriage.

(2) *Free Gymnastics* renders the body supple, yet strong, and assists in giving graceful movement of the limbs.

(3) *Dumb-bell Exercises* strengthen and develop the muscles, but do not of themselves give dexterity of movement.

(4) *Applied Gymnastics* should only be taught to pupils who have had a thorough course of training in the other three forms of exercise.

They induce greater precision in the movements of the body, and a ready obedience on the part of the muscular system to the will.

Each branch of physical training has therefore its special uses, and no so-called system is complete without the four branches, taught progressively, and in the order named. Free gymnastics can, however, be taught directly the pupils are able to form into lines and march into their places, after which the tuition of Nos. 1 and 2 can be combined in one lesson.

There is no one game perfect from a developmental point of view, every game requiring more or less a special set of muscles, which consequently are liable to receive more exercise than other sets. Swimming, however, most nearly approaches the perfect exercise.

10,926. How far are these opportunities taken advantage of?—With regard to the pupils of George Watson's College, all the classes—with the exception of the two elementary and three senior—attend the gymnasium twice weekly for gymnastics and drill. Fully 90 per cent. of the boys are regular attendants, the remaining 10 per cent. being either medically excused, or take up other work at the request of their parents.

As far as possible, I insist that every pupil shall at least take drill—which includes free gymnastics and dumb-bells—unless he has a written excuse, but I am pleased to find that there are but few attempts to shirk the work; in fact, as a general rule, the boys are glad of the change of occupation afforded by physical training.

An extra class, held every day, after school hours, for half-an-hour, is very well attended, especially during the winter months, as during the summer outdoor games have actually a greater claim on the boys' own time.

Physical training is much appreciated by boys, especially when exercises of emulation are included in the curriculum.

The elder boys are perhaps more partial to the arduous exercises of applied gymnastics than to drill, which is possibly only natural.

10,927. What, in your opinion, are the results of

such physical training? What are the effects, moral, physical, and intellectual?—The principal beneficial results of systematic physical training are dual—

1. To the pupil. 2. To the teacher.

1. To the pupil.

(a) There is soon a marked improvement in physique.

(b) During exercise the mind receives rest, consequent on the complete change of occupation.

(c) An improvement in manners, greater pride in personal appearance, and more self-control.

(d) A gradual eradication of nervousness and nervous ailments.

(e) The performance of drill to music trains the ear to a recognition of time and tune.

2. To the teacher.

(a) The strict discipline enforced at military drill renders control of a class much easier.

(b) The necessity for corporal punishment is less.

(c) The time taken from lessons is frequently more than regained by the greater aptitude with which the pupils do their work after such exercises.

For a fuller account of the beneficial effects of physical training, see attached 'Proposed Scheme.'

10,928. Is a uniform system of physical training in schools desirable or necessary?—In authorising the introduction of systematic physical training into schools, it would not be necessary for the Education Department to enter in minute details as to the exact movements to be performed by any class or child. It would, however, be well to stipulate that any system adopted must provide for tuition in at least *three* of the four principal branches of physical training, as noted in answer to a previous answer.

10,929. You have had considerable experience of Board Schools?—Yes.

10,930. Do you think that a uniform system should be enforced all over?—Not with regard to the actual movements that are performed without any apparatus, I think the actual exercises should be left to each Board.

10,931. Would you approve of a scheme being formulated under medical advice with perhaps power to advise the different schools?—Yes. There must be some system to see that the work is done properly.

10,932. You would have a uniform system with variations?—Yes.

10,933.—You would like a certain amount of deviation from the system?—Yes.

The insertion of such an article into the 'Code' would certainly simplify matters, and leave no doubt in the minds of school managers and headmasters as to what was required of them, and would, in my opinion, eventually produce a desirable uniformity.

10,934. How, in your opinion, can the present system be improved and developed?—This is a problem to which I have given serious consideration for a number of years, and I am convinced that the solution is as follows :—

In order that the very best and most far-reaching results may accrue both to the State and to the individual, the physical training of the people must be controlled by the State, through the medium of a central body such as the Education Department.

The principal difficulty in solving this problem seems to lie in the 'degree of control' to be exercised by the State.

There are many reasons why a State control is necessary, a few of which may be noted :—

(a) As all other branches of education, mental, manual, and to some extent moral, are supervised and directed by the State, there can be no reason why physical training should not likewise be controlled and supervised.

(b) At present no recognised system of physical training is in use in our Scottish schools.

This want of system of organisation makes it quite impossible to accurately compare the results of work done in different districts, or to obtain reliable statistics of the physical improvement in children receiving instruction, e.g., increase in size, additional weight, or greater immunity from those ailments and diseases which are invited, so to speak, by the flat chests, un-

Mr H. R. Seymour.

16 Sept.

(1) to pupil

(2) to teacher

System: should include three of the four main branches.

Uniform system w. latitude.

Suggestio sketch of scheme: control by State thro Departme advantage

Systematic training: benefits.

Rippon developed lungs, and weak systems of so many children in large cities, where, as a rule, overcrowding is common and playing-fields are scarce.

(c) Owing to the want of expert supervision and instruction, it is in many cases extremely doubtful whether the pupils benefit by the training they now receive.

It is indeed admitted by some headmasters that the children are not in all cases taught by qualified instructors, and that they do not receive nearly enough of the training, such as it is.

The remedy is apparent. The Department might insist that any money grant for physical training would be paid only to those schools who provided a thorough course of instruction in at least three of the four main branches of physical training already indicated.

With regard to the grant now paid for adequate physical exercise (Art. 19, A 4, Scotch Code), which includes the teaching of drill—or some other form of physical exercise—I would suggest that a new grant be allowed for physical training, in a form to be approved by the Department.

This grant might be awarded in three degrees, e.g., 1s. if the inspector reports that the teaching and results are fair; 1s. 6d. if he reports that it is good; 2s. if he reports that it is excellent.

The present grant of 1s. for organisation and discipline, only in so far as it relates to general school conduct and organisation—but not to drill or physical training—might be allowed as heretofore.

If for no other reason, the desire to earn this grant would of itself cause School Boards to adopt a more thorough and systematic physical training into their school curriculum.

Any scheme or system of physical training in schools must be sufficiently rigid to admit of the just comparison of one school with another, yet sufficiently elastic to provide a thorough training for pupils of all ages, of both sexes, and for weak as well as strong.

Such a system should ensure that whilst the infants and weakly children were not exercised beyond their capacity, the older and stronger children received sufficiently vigorous exercise to produce general development.

Finally, in order that absolute justice may be done to each school and each board, the inspector must be an expert. As there are Government inspectors of music, drawing, and other special subjects requiring expert knowledge, it is also necessary that physical training be inspected in like manner.

The time must come when physical training shall take its place with mental training, when the one shall help the other, to the betterment of the individual, and accordingly to the benefit of the nation.

10,935. What is the relation between mental study and physical training?—Mental study has primarily for its objects the cultivation of the mind for the purpose of enabling one to perform the duties of life.

This being so, it is necessary to teach the child those subjects which shall best fit him for employment on leaving school, and experience has taught those charged with the duties and responsibilities of education which subjects are likely to prove most useful.

Yet, though a certain amount of mental study is necessary (and now compulsory), if one is to succeed in life, it should be remembered that an unvarying action on any of our senses has, when too long continued, the same effect as no action at all.

It is therefore necessary, for the benefit of the pupil, to alternate the periods of mental study with periods of physical training, thus creating 'change'—the key-note of life.

In sickness or in ill-health, the brain-power is usually at its lowest; therefore, in order that the mind should be more easily receive impressions, it is necessary to have a healthy body. A recognition of this fact is of great importance, for often the mind of a weakly pupil is but educated at the expense of his body. It is well known that exercise is one of the most important factors in the building up of a healthy body, for 'the structures and functions of the body increase with use, and decrease with disuse and idleness.'

As, therefore, it is obviously against the laws of nature to cultivate one part of the body at the expense of another, the education of mind and the training of the body should be synchronous.

Mr H. Rippon
Seymour.
16 Sept. 0'2.

It must be admitted that the training of the mind undoubtedly requires more time specially devoted to it than the training of the body, because—with few exceptions—with children, mental study is more or less undesired and unwelcome, whereas the desire for movement is ever present, and the growth of a healthy child takes place spontaneously with every movement from the day of its birth.

Unfortunately, however, the children of the poorer classes do not long have the opportunities for even this spontaneous physical training. I have known children of poor parents, whose life consists of one round of unvaried toil, they act as message boys (or girls) before breakfast, during the school dinner-hour, and after school, the intermediate hours being occupied either with school or home-lessons.

Training
essential for
poorer class
children.

It is therefore for these children that systematic daily physical exercise is so necessary; for their bodies are much neglected, and reflexly their minds are stunted and warped. They have frequently no recreation of a proper kind, except what can be found in close and narrow streets, where, I fear, they gain little else than vicious habits.

10,936. What is a just proportion of time to be devoted to physical training in relation to study?—The school day being, usually, six hours, I certainly think a half-hour daily for physical training is only a reasonable proportion for lower-class schools, at all events; with regard to higher-class schools, three lessons weekly, each of half an hour, would perhaps be sufficient.

Time: half-
hour daily.

10,937. You think that half an hour is not too much?—It might be limited to twenty minutes.

10,938. I mean not in relation to the mental exercise, but to its effect on the body?—I do not think that it is too much.

10,939. Is physical training most advantageous if carried out daily in connection with school work?—To be of practical value, physical training must be carried out daily, during school hours, and more or less compulsorily, especially at Board Schools.

Daily exercise.

10,940. What are the respective merits of outdoor and indoor training?—Physical training in the open air has an advantage over indoor training, solely owing to the fresh air and sunshine obtainable during the lesson. This only refers, however, to the spring and summer seasons, for in winter these advantages are not so apparent. In fact, if the gymnasium or room used for exercises be well ventilated, and aired between each class, the hygienic difference between indoor and outdoor exercises is very slight. There is, however, always the disadvantage of dust rising—from wooden floors especially—during marching exercises, and frequent washing is consequently necessary.

Outdoor and
indoor
training

I am certainly in favour of outdoor exercise whenever practicable, more especially for drill and free gymnastic exercises.

10,941. Should some form of military drill or training form part of the ordinary curriculum of every school?—Military drill (marching, turning, forming fours, and other elementary movements) must always form the basis of any practical system of physical training, either for children or adults, and the disciplinary effects of military drill are so well known that few schools are not taught it nowadays.

Military
drill:
essential.

I am firmly of opinion that until pupils have thoroughly mastered the rudiments of military drill, they should not be allowed to learn the more specialised movements of dumb-bells, Indian clubs, or applied gymnastics.

10,942. What system of physical training is, in your opinion, the best?—There is, in my opinion, no so-called 'system' which can claim perfection, or to be 'the best.'

System: must
be com-
prehensive.

As already stated, no system can be at all complete or perfect which does not embrace the four

Mr H. Rippon
Seymour.
16 Sept. '02.

principal branches of physical training. Any much-advertised system of dumb-bell exercises or Swedish drill is but a part of the complete training necessary, and would soon prove intensely monotonous, especially to children, if it were the sole form of exercise given.

As each branch of physical training has its special uses, a combination of them all must be used to make a 'system' complete.

Such a combination, gradual and progressive, is given at George Watson's College, and I am sure that any pupil who has attended the gymnasium there for 3 or 4 years will have a good knowledge of each branch of training, and will, other things being equal, present a sound and uniform development.

As regards the details of movements with dumb-bells, for example, I use my own exercises, which, from experience and a study of anatomy, I find will produce the required development.

10,943. As distinct from physical training, what physical education is given in your school?—Physical education—as distinct from physical training, such as lectures in anatomy, physiology, etc.—is not given at George Watson's College; but during the very hot weather I occasionally vary the work by a simple lesson on the muscular system, or the physiological effects of exercise, with special reference to an exercise then under observation.

I am greatly in favour of regular lessons in elementary physiology and anatomy being given during school hours, especially to the older pupils, in order to create an interest in their own health and development.

10,944. What are the results of your experience regarding physical training, games, etc.?—The general results of my experience are that, almost without exception, those who take a sufficiency of healthy exercise are undoubtedly stronger, healthier, and fitter in every respect for the battle of life, not merely physically but mentally, than those who do not.

A partial proof of this statement is seen in the average height standard of the upper classes, which is nearly 4 inches more than that of the lower classes.

It was at one time supposed that if a man was a good athlete, he must necessarily be a 'numbskull,' but this is not or need not be the case. I have had many boys through my hands who have taken high places in both branches of education—mental and physical.

It is not, however, the object of physical training in schools to produce a single specimen of perfect development, but rather to develop and improve the physique of the whole, without either impairing the mental faculties or taking up overmuch of the time necessary for mental culture.

I am convinced that up to the present sufficient attention has not been paid to the physical training of our children, simply because its importance has not been generally or fully recognised, either by the parents or by the local authorities responsible for education.

10,945. Are they at present sufficiently organised and supervised? Are the teachers themselves duly qualified and instructed?—During the past eight years I have made extensive inquiries into the physical training in Scottish schools, and I am forced to the opinion that there is but little system in the existing methods.

There is practically no organisation and no expert supervision.

A large number of children attending school receive no physical training. Each instructor or class-teacher, as the case may be, gives tuition in any kind of drill he pleases, and unless the teacher is fully qualified the result to the children is anything but satisfactory.

Many headmasters complain bitterly of the need for more and systematic training, and also regarding the insufficient room for exercise.

One headmaster puts the matter very plainly when he says: ' . . . Though our children are evidently 'improving in their manners and general intelligence, 'they appear less fit and robust in physical aspect, and 'consequently less qualified for attaining success in

'life . . . As the years go on the number of delicate children has a tendency to increase, and it is therefore not without need that more attention is now being demanded for their physical training . . . It is sometimes painful to think that we are actually stimulating their minds at the expense of their 'bodies' (Stockbridge).

In other cases the children have to drill, *in all weathers*, in the playground, which may be all very well during the summer, but, as a headmaster says, 'it goes without saying that the discomfort arising from 'being exposed to all kinds of weather does not conduce to the satisfactory carrying on of the work' (West Fountainbridge).

As an example of the insufficiency of the training existent in the majority of Edinburgh schools, I may mention that only five instructors are at present employed to teach nearly 30,000 children, and consequently nearly one-half receive no instruction. Many of the teachers are said to be qualified to teach drill, etc., to their classes, but I am of opinion that their own training is not yet sufficiently thorough to enable them to do the children justice, as their knowledge of the subject rarely extends beyond a very rudimentary knowledge of military drill. There are, of course, a few exceptions.

Unfortunately, this want of system and organisation is most apparent in the places where physical training of a thorough kind is most necessary, viz., the elementary schools.

I have every reason to believe that in the majority of secondary and higher-class schools there is no need for any alteration in their present methods of physical training, for it is, as a rule, conducted on fairly sound lines.

The majority of these schools employ from one to three instructors, so that every boy receives a fair share of individual attention. The boys and girls attending these schools are, on account of their social position and environment, able to indulge in games and sports to a much greater extent than the lower classes, and are therefore not in need of so much physical training at school.

With the majority of School Board children all is different. Belonging as they do to the lower and even lowest classes, they have practically none of the advantages of the middle and upper classes. They usually leave school early in life, and immediately go to work, perhaps in a factory, almost certainly under more or less unhealthy conditions. Their generally ill-developed bodies are predisposed to disease, and under such conditions it is inevitable that the lower classes should deteriorate.

It must be admitted that the unwise and often insufficient food is an additional cause of the degeneration of the lower classes,—to whom, I fear, this is not solely confined. At the same time, I am sure that (with a preliminary medical examination) a rational system of physical training, rationally administered, will do much to improve their physique.

10,946. Are the pupils examined by a medical man? What kind of medical examination is made, and how often? Is a school register kept, showing the height, weight, chest girth, spirometry, biceps girth, and general physical development of the pupils? If so, how often are these measurements taken, and by whom?—There is no systematic medical examination at George Watson's College, though some boys are excused gymnastics on the advice of their family doctor, and I occasionally recommend boys, for various reasons, to see a medical man before engaging in arduous exercises.

Owing to the extremely large number of pupils attending this school, I have not, so far, been able to undertake their measurement.

I, however, make a rule of measuring all my own pupils,* whether requested to do so or not, for two reasons:—

1st. Because should any part of the body be underdeveloped, measurement immediately discloses the fact, and attention can thus be directed to this part.

Mr H. Rippon
Seymour
16 Sept. '02.

Board Schools :
want of system, etc

Secondary schools :
sufficient training.

Food.

Medical examination none.

Measurement made of witness' pupils : advantages.

Physical education : lectures on physiology desirable.

Experience : physical training essential for true development of national physique.

Object of training.

Organisation : none at present.

Lack of facilities.

* See Vol. I. Appendix VI.

2nd. Because, as a rule, measurement gives a pupil more interest in the work of development, which by a physiological law proceeds far more rapidly when the work is considered a pleasure and not merely a task.

The knowledge that one is making progress in development greatly sustains the interest, especially in those exercises which otherwise would soon become monotonous.

I am in favour of a system of annual measurements, which should include the height and weight as well as bodily measurement.

Such a system would in time provide statistical proof of the value of physical training, which (apart from army measurements) is at present very limited.

The necessity for a better system of physical training in schools has occupied my attention since 1895, since which time I have more than once suggested to various School Boards means by which the present instruction might be improved and augmented.

I was met on every hand with the argument that, as the majority of schools were already in receipt of the higher grant for physical training, there could be no need for any alteration.

The question of actual benefit to the children, *who were earning this grant*, was made of quite secondary importance.

This, then, I found the stumbling-block to further progress, and reluctantly came to the conclusion that unless the Government or the Education Department moved in the matter, no improvement was probable.

It is worthy of note also that whereas the higher grant for physical training (under the head of organisation and discipline) is paid, generally speaking, for about 85 per cent. of the children, or even more, nearly one-third, and in some cases one-half, of the children receive no physical training at all.

The attached scheme is the result of my earnest consideration of the subject for many years, and I believe that it is only by the adoption of some such system into schools that the adequate physical training of our children will become possible.

Proposed Scheme for the introduction of Systematic Physical Training into Board and Secondary Schools.—For the proper and adequate physical training of the children attending Board or Elementary Schools at a minimum of expense, the following method will, I believe, be found the most practical and efficient.

Briefly, the instruction of the children should be given by the class teachers, who are first taught, and afterwards assisted and guided by a superintendent; and the work is inspected at intervals by expert inspectors appointed by the Education Department.

To make the proposed system clear, it may be divided into three heads, viz. :—

- A. The training and duties of the teachers.
- B. The duties of the Superintendent.
- C. The duties of the Inspector.

A. The training and duties of the teachers.

1. The whole of the teachers (except those teaching special subjects, like art, French, music) should attend a Training Centre twice a week, probably between 6 and 7 p.m., to receive practical and theoretical instruction.

2. An examination held (say quarterly) by the Board, assisted by an expert, should be passed by the teachers in order to qualify for certificates of proficiency in drill.

3. On receiving certificates they would be considered qualified teachers in drill, and having been taught the same system, they should be able to teach the same drill to any class in any school.

4. They would be held responsible that the system adopted was adhered to in its fundamental principles, so that there would be no real difference between the work of one school and another.

5. The male and female teachers would receive instruction separately.

B. The duties of the Superintendent.

1. The whole of the personal training of the teachers would be under the direction of one Superintendent, according to the system sanctioned by the Education Department.

2. The Superintendent would be immediately under the orders of a Committee appointed to manage this section of education, from whom he would receive his orders, and to whom he would be personally responsible.

3. During the day the Superintendent would visit as many schools as practicable, and assist in the work, helping and advising the teachers, or checking any irregularities in system of drill.

4. The Superintendent might also award marks to each class and school visited, in a book kept for that purpose for his own reference, and also for the guidance of the Inspector at his visits. He would be required to visit the schools periodically to see that—

- (a) The teachers allowed no irregularities to creep in.
- (b) Every teacher was efficient.

(c) Those teachers whose method of instruction was not right were helped, and received further instruction. He would require to see that the infants and weakly children were not exercised beyond their capacity—a branch of the science of physical culture which only an expert perfectly understands—and he would also give assistance when and where necessary.

C. The duties of the Inspectors.

The Inspector should report (say) quarterly on each school visited, regarding—

- (1) The number of certificated and uncertificated teachers in each school.
- (2) The progress made since last visit.
- (3) Number of hours daily allotted to physical training.
- (4) Time allowed for playground recreation.
- (5) Reasons why some teachers do not possess certificates.
- (6) Suggestions as to alterations in system or time allowed for drill.
- (7) The number of children (a) under instruction, (b) not under instruction, and why.
- (8) Whether the training of the children was 'fair,' 'good,' or 'excellent.'

With regard to the actual system to be used, the Department might well authorise a broad plan of work to which School Board authorities would be required to adhere more or less closely. For instance, a thorough course of physical training should consist of—1, Military drill; 2, free gymnastics; 3, dumb-bell exercises; 4, applied gymnastics. The Department might reasonably insist, therefore, that the highest grant would not be paid, unless instruction were given in at least two (or three) of the branches of physical training.

It is further suggested that the grant for physical training be paid as follows:—1s. if the Inspector reports that the work is 'fair,' 1s. 6d. if he reports 'good,' and 2s. if he reports that it is 'excellent.'

10,947. What remedies or suggestions have you to propose regarding the last part of the terms of reference, viz., how the existing opportunities for physical training may be increased by continuation classes and otherwise, so as to develop, in their practical application to the requirements of life, the faculties of those who have left the day schools, and thus to contribute towards the sources of national strength?—That there exists a real necessity for providing the growing youth of this country with wholesome, healthy, and cheap recreation for the evenings will readily be admitted.

The public-house, the music-hall, billiard room, and the street appear to be the chief resorts of thousands of young men, who would be far better employed cultivating either mind or body. The physical training of those who are no longer at school is conspicuous by its absence, owing no doubt to the want of facilities for obtaining such tuition cheaply.

The problem of providing evening instruction in gymnastics, and other forms of physical training, suitable, as regards expense, for the working classes, and at the same time of real value from the point of view of physical development, is a difficult one.

I believe, however, that the following suggestions may assist to some slight extent in solving this problem; and though I am aware that evening classes of this

Mr H. Rippon

Inspectors.

System:
general
principles.

Special grant.

Mr H. Rippon
Seymour.

16 Sept. '02.

kind were tried in London without great success, I think, with care and attention to certain details, such classes could be made most popular.

The London classes failed principally owing to the want of proper gymnastic apparatus and instructors. In providing for evening classes, therefore, these shortcomings must not be overlooked, especially in the initial stages, if success is to be assured.

Continuation
classes: to be
held in
gymnasia
attached to
schools.

There are three principal questions to be considered, viz.—

1. Where can these classes be held?
2. How can they be made popular?
3. The question of fees, etc.

1. Where can these classes be held?—There being so few public gymnasia, the only possible place where evening classes could be held at present is in the public school gymnasium; and I may here say that the following suggestions are based upon the assumption that School Board authorities will permit the use of their gymnasia during the evenings.

There are (or are shortly to be) thirteen gymnasia attached to the public schools in Edinburgh, which should be sufficient—at all events at first—to undertake the work.

If the classes proved popular, the whole of the gymnastic instructors employed by the Board would probably be required every evening for two or three hours; and it is absolutely necessary to have this instruction, if good results are desired. Each gymnasium should be fitted with all necessary apparatus.

Classes:
suggestions
for making
them popular.

2. How can the classes be made popular?—The fact that such classes were to be held should be made widely known, and possibly the simplest means of advertising would be by asking the present pupils to mention the matter to their brothers or other relatives who had left school.

Another simple method of obtaining 'recruits' would be to ask those boys or girls about to leave school to join the classes, and thus a 'school club' might be formed.

For the classes to be popular they must be cheap, and although it might be necessary to charge a small fee, an arrangement could be made whereby a portion of the fee would be returned if a good percentage of attendances were made, as is now the custom with the present evening continuation classes.

It would also be necessary to offer prizes for individual and inter-school competition, for I am convinced, by my experience with evening classes and clubs, that competition is absolutely necessary to sustain interest in any form of athletics.

Moreover, inter-school or inter-city competitions have undoubtedly the effect of creating a most desirable *esprit-de-corps*.

Classes should be for young women as well as for men, but distinct. They might be held every evening, the most suitable hours being between 7 and 10 p.m., and pupils should be desired to attend at least twice weekly.

Measurements of the men should be taken, as I find this helps to give a greater personal interest in the work, besides being of use from a statistical point of view.

Lectures in the Physiology of Exercise might form a part of the season's work, and would, I believe, tend to popularise the subject.

Continuation
classes: fees.

3. The question of fees, etc.?—I think it would be better, from every point of view, for the pupils to pay a small fee (returnable as mentioned), because there is always the inducement of obtaining a return of some portion or the whole of the fee, and this should help to ensure the regular attendance of a pupil for a session.

Such a system of payment would certainly be popular, but in the event of every pupil making the necessary attendances and having his fee returned, by whom should the cost of instruction, etc. be borne?

This is a matter for a Government grant, and would certainly be worth an experiment. If a good and regular attendance, and fair all-round development (as shown by measurements at the end of a session), were

secured, the experiment would be successful and worthy of repetition.

Mr H. R.
Seymour

16 Sept.

If the public could only be brought to see the enormous benefits—not merely physical, but *moral*—of such a training to their children, and through them to the nation, I believe that, with the exception of the very poor, they would not grudge the small fee asked, and that such a voluntary system of continuation classes would in time become popular and universal.

10,948. What is your opinion of the Swedish system of drill?—The movements of what was at one time called Swedish drill are used in free gymnastics and dumb-bell exercise. Free gymnastics are really Swedish drill.

10,949. *By Mr Fergusson.*—On the question of system, I suppose that while you do not advocate any hard and fast system, still you agree that some general principles must be laid down for teachers to work on in the elementary schools, so as to have some general uniformity?—Yes. In the Edinburgh schools the teachers might be taught one system of dumb-bells, for instance.

System:
must be
general
principles
laid down
in official
text-book

10,950. But there must be some book which would contain the groundwork of the instruction?—I think the Education Department should draw up a pamphlet somewhat after the lines of the model system.

10,951. Allowing the teachers to introduce exercises on the lines to suit their own schools?—Yes.

Cruden's
Chesterton
books.

10,952. Do you know Cruden's book?—Yes.

10,953. Does that book contain most of what you think is desirable?—I think so. It contains the same exercises as are used in the service.

10,954. Do you know Chesterton's book?—I should say that it was the best.

10,955. One of the strong points in Cruden's system is music. What is your view?—I think that it has advantages for the younger children, but not after you get to children of the age of twelve or thirteen. For little boys and girls of eight to ten it makes drill more interesting.

Music:
advantage
up to twelve

10,956. But even when they are older does it not relieve the monotony a little?—I don't think it is so beneficial; I don't think there is the same development as there is without it. The exercise is rather sacrificed to the mere keeping of time. They cannot put their mind into it so well. For young children it gives an idea of time and tune, and that makes it more interesting, but the older ones will do the exercise without the music.

10,957. Of course the exercise must be learned thoroughly before the music is used?—Yes.

10,958. Do you think that in the elementary schools this work should be left in the hands of the ordinary teacher, supposing that teacher to be qualified, or should it be in the hands of experts?—I think that the teaching of the classes should be left in the hands of the teachers, who should have a thorough training first.

Teachers
properly
trained at
supervisor

10,959. Would you have any supervision by specialists?—I think that that is necessary, but if there is no such supervision, then the teachers might become slack.

10,960. How would you do it? Would you have an expert visiting schools now and again and seeing if they were going on all right?—Yes. I think that each Board should be responsible for their own schools, and should have an expert or two.

Expert
inspector

10,961. There should be an expert, however it was arranged?—Yes.

10,962. You have already expressed yourself as being in favour of medical inspection. You say that the physical training should occupy half-an-hour?—Yes.

Training
daily for
half-an-h

10,963. You lay stress on it being done every day?—Yes, it is necessary to have it daily.

10,964. You know that there are practical difficulties which come in in large schools where there are great numbers of classes, and where you cannot find time in the day to give each class its half hour?—I believe that even less than half-an-hour would do, but I think that half-an-hour would be of great use. I know that

a lot of work can be done in ten minutes, and if they got a full ten minutes every day it would be of the greatest use.

10,965. Would you sooner have half-an-hour every day than every other day?—Yes, I think it is the continuance of exercise that is good.

10,966. You spoke of the trouble in finding covered places for the work. You favour covered playgrounds?—Yes, so that the work can be done in any weather, and then you have fresh air.

10,967. The school teachers would require to have a very thorough training?—Yes.

10,968. How long do you think it takes to train a teacher?—Well, educated people could learn in a quarter, taking lessons twice a week, making fifty-two lessons, both of theory and of practice.

10,969. You think that the ordinary teacher might, with that number of lessons, be qualified to teach his class?—Yes. In time it would be much easier if such a system as I have advocated were adopted, because the pupil teachers would learn it, and when they came to the special class they would know this work.

10,970. *By Mr Shaw Stewart.*—With regard to the problem of providing evening instruction in gymnastics, have you considered the point as to how that could be made popular?—Yes.

10,971. You don't say anything on the point of making it compulsory?—I was afraid to mention it. I am in favour of it, but I did not mention it as I did not think that it would be considered.

10,972. We have to consider all kinds of boys, whether they are inclined to physical exercise or disinclined, and perhaps it is more important that those who are disinclined should take part in physical exercise. There are only two ways, either by attracting or compelling them?—That is so. I am afraid there is a class that would never be induced to join. I don't think the lower class or the criminal class would attend.

10,973. You think it must be made compulsory?—Yes.

10,974. Do you think that compulsory attendance upon three nights a week could be made practicable?—It could be done. You could get people to teach them in Edinburgh, where there are thirteen gymnasia. It is only a question of expense and the ability to enforce attendance.

10,975. What do you think about it?—I believe in it strongly.

10,976. And do you think that attendance could be enforced?—I don't think that it could be enforced without an Act of Parliament.

10,977. You have not specially considered that point as to how it could be done?—No. I did not think when reading the question of saying that it should be compulsory, but I am in favour of it being compulsory.

10,978. That is the only way in which you think you could get large numbers of those who are disinclined to come in?—Yes.

10,979. *By Sir Thomas Glen Coats.*—A great many boys after leaving school go at once to find some employment, and a great number of them are beyond parental control, so that if you did enforce compulsory attendance, you would require to proceed against the young people themselves in the event of their not turning up?—Yes.

10,980. Would that be practicable?—I don't think so, unless it was made the law. Of course, you might act in the same way as you do with children who have to attend school.

10,981. That would be by extending the age?—Yes, extending the age for training to eighteen.

10,982. But they might be employed in an office?—Yes, but they don't work at night. They would be far better employed at something like that if you could only get them. There is nothing to keep them away, except in the case of those on night duty, and there are very few of those.

10,983. Have you formed any idea as to whether the people would stand that?—I am afraid they would not in Scotland, especially if the military part of this

business was put too far in front. There is a feeling against militarising too much. I have spoken to a number of parents about that. They all like the idea of their children getting military drill, but when there was the idea that we should have a class after hours where the boys should wear a uniform, some of the parents came and said that they did not like soldiering, that they were afraid that their boys would run away and enlist.

10,984. *By Sir Henry Craik.*—You, having considerable experience of Board Schools, have come to the conclusion that the physical training given therein is defective?—Yes, I think it is very defective in most instances.

10,985. You are aware, because you have mentioned it just now, that there are no less than twelve or thirteen gymnasia in connection with the Edinburgh schools?—That is so.

10,986. They have attempted to appoint instructors and have made efforts in that way, but still you think that generally all over Scotland it is very much under what ought to be given?—Yes, because I do not think they get long enough at it, and a large amount of the instruction that they do get is not what it should be.

10,987. These are two separate things. Of course it is not whether it is twenty minutes or half an hour or three-quarters of an hour. Do you wish it to be longer than any of these times?—No, I think the time they get is enough, but in some schools they get practically none. Course suggested.

10,988. Then you think we ought to say that physical instruction must not only be part of instruction in every school, but it must be taken up by every pupil in the school, unless there is a medical certificate to the effect that the pupil is not fit to do so?—Yes.

10,989. You think that the Department would be justified in going that length?—Yes.

10,990. You think that the Department should not give the highest grant unless that is done?—That is so. I say that the grant is paid at the present time for a large number of children who don't get any physical training.

10,991. There is no grant paid, because there is no special grant for training, but the condition is considered to be fulfilled even when a number of the children in the school are not getting instruction?—That is so.

10,992. That is so far as regards the number of people getting the instruction, and the time devoted to it. Broadly speaking, what is the defect in the instruction that is given?—That is a point upon which I, as a professional instructor, have never cared to speak, because it looks like finding fault with my colleagues. Instructors: differences between army drill and gymnastic instructors.

I have seen from the reports of the evidence that have appeared in the *Scotsman*, that one or two of the witnesses state that they are rather against army drill instructors. I think I ought to make it clear that there is a great difference between the army drill instructor and the gymnastic instructor. The drill instructor may be any man who has left the army, and who has merely a knowledge of drill. He takes a situation as a drill instructor and janitor, but he does not know anything about gymnastics. On the other hand, the gymnastic instructor is a man who has had instruction and practice in gymnastics. He is a drill instructor, and also a gymnastic instructor. In Edinburgh there are three or four who are merely drill instructors and nothing else. Their knowledge is gained from some book, probably the Army Drill Book, and unless a man has a very fair knowledge of the work he is doing, and the effect he is producing, or wishes to produce, I say that he is not a qualified instructor. That is the fault of the present system in Edinburgh.

10,993. Then the inference from that is that you either require a specially-trained instructor to give this instruction in every school, or that the teacher should have gone through the course himself?—I prefer the latter, which I think is the better course. The teachers themselves have told me that a teacher of a class, Teachers should be trained.

knowing each boy by name, can get more out of his class in twenty or ten minutes than a visiting master can get in half an hour.

10,994. But in the larger schools you would have a special instructor?—In fee-paying schools it is a different matter. In our own school we have two instructors, and in the Academy they have three. That gives every boy a fair share of attention.

10,995. You think that the highest grant should not be considered to be earned unless the instruction is provided, unless every pupil who does not show a medical certificate takes part in it, and unless it is given by some one who has given adequate proof of training in that special subject?—Yes.

10,996. You think, further, that it ought to be inspected not only by the ordinary inspectors, but that they should have the assistance of an expert examiner?—Yes, I think so, because there are so many little differences in movements that a man, unless he has been thoroughly trained to do drill movements himself, would not know any difference. I have seen drill done which was of very little use, but which looked all right, as it was done to time and had a nice appearance, but, as to developmental effect, it would have very little.

10,997. In regard to the military drill, whatever prejudice there might be against it, you think that the rudiments of military drill must precede every form of physical exercise?—Yes, for the sake of order and discipline. It must be done first.

10,998. It must be the basis?—Yes, it is very simple, but it must be done first.

10,999. *By Mr Alston.*—You begin with elementary drill. Would you go on with the older boys to more complete drill?—Yes, a little more, but not very advanced movements.

11,000. Do you draw a distinction between the drill instructor and the gymnastic instructor? Are they two different men?—Yes, very different men. Once a man gets a certificate in the army for gymnastic instruction he would not call himself a drill instructor. A gymnastic instructor includes drill. Every man leaving the army must have a good knowledge of drill, and he may go and make himself an instructor, but he knows nothing beyond what he gets in the drill book.

11,001. A gymnastic instructor knows the physiology of it?—Yes, he has been taught that.

11,002. He is also a competent drill instructor?—Yes, he must be that.

11,003. Your old soldier or janitor is not the man you want?—No.

11,004. Is a gymnastic instructor, who is also a competent drill instructor, kept thoroughly posted up in the newest drill? It has been said that he requires to go back to Aldershot to refresh himself?—That is not the case. Of course it depends on what sort of man he is. As a rule, a man has a great deal to learn after leaving the army. He may think that he knows all about gymnastics, but I am afraid he does not. Personally, I have not gone back to Aldershot to learn, and I don't think there is any necessity for it. I keep quite up to date without that.

11,005. It would be the duty of the School Boards, when they engaged a drill instructor, to engage a man who was competent in gymnastics as well as drilling?—Yes.

11,006. That is not found in a man who can only teach company drill?—No.

11,007. At George Watson's College you have no fewer than 1700 boys. In how many squads do you put these through the physical training?—We get them in classes of about 40 boys each.

11,008. What space do you require to drill 40 boys?—We have a large gymnasium, about 70 feet by 40.

11,009. An ordinary school does not have those facilities?—No.

11,010. You say that musical accompaniment is very desirable for the younger pupils, but that the training should be thoroughly instilled before you use the musical accompaniment?—Yes.

11,011. Would you use the musical accompaniment afterwards?—Yes.

11,012. What do you say to the opinion expressed by an expert, that musical training is advantageous because it involves less mental concentration?—That is so, but other people say that unless you have concentration you don't develop so quickly. I believe you must have a certain amount of concentration on what you are doing at the time. Otherwise the development does not take place so rapidly.

11,013. *By the Hon. Thomas Cochrane.*—You suggest that the pupil should pay a small fee, to be returned afterwards. I don't quite understand that point. Do you think that that would be an attraction?—It would, if the pupils thought that they would get the fees back again. There must be some expense, and I think it could be managed in the same way as the present continuation classes are managed. They pay a fee, and it is returned to them if they put in a sufficient number of attendances.

The witness withdrew.

Adjourned.

TWENTY-THIRD DAY.

Thursday, 18th September 1902.

At the Museum of Science and Art, Edinburgh.

PRESENT :

THE RIGHT HON. THE EARL OF MANSFIELD, *Chairman.*

The Hon. THOMAS COCHRANE, M.P.

Sir THOMAS GLEN COATS, Bart.

Sir HENRY CRAIK, K.C.B.

Mr M. H. SHAW STEWART, M.P.

Mr J. C. ALSTON.

Mr J. B. FERGUSSON.

Mr GEORGE M^CCRAB, M.P.

Mr R. B. PEARSON, *Secretary.*

Mr R. ROBERTSON, examined.

ing at Moray House, 1868-69, two years. Student in Arts, Edinburgh University, 1870-74, five sessions.

Former Experience.—Teacher in Practising Department of Moray House Training College from January 1870 till July 1874, four-and-a-half years. Headmaster of Kirkliston Public School for two years, 1874-76. Head Mathematical Master in Edinburgh Ladies' College for fifteen years, 1876-91. Headmaster of Edinburgh Ladies' College for eleven years since October 1891.

11,017. (a) What is the class of your school and scholars? (b) Give the numbers and ages of the pupils?—(a) Secondary School for Girls. Majority of pupils belong to upper middle class, daughters of professional men and business men. About fifty Burgh Committee Bursars, and, on an average, about twenty Heriot Bursars are on the Roll. (b) About 1100 pupils, whose ages range from five to nineteen years.

11,018. Perhaps you would explain a little more fully what these bursars are?—Ten or twelve of them are admitted every year after an examination conducted by the Edinburgh Burgh Committee.

11,019. What age will they be?—They are under twelve.

11,020. You say also that there are about 1100 pupils whose ages range from five to nineteen years. Have you many children as young as five?—Yes, we have from 40 to 50; the largest number of girls are those of thirteen, fourteen and fifteen years.

11,021. I think you have been headmaster in your school for nearly eleven years?—Yes.

11,022. Give in detail all the existing opportunities of physical training under the following branches:—

(a) Regular games, e.g., football, cricket, hockey, etc. (1) Are they organised and supervised by masters? (2) What is the size of the playing field, and its distance from the school?

(b) Drill: how taught, and by whom? Gymnastics, free or applied? Is there a gymnasium attached to the school?

(c) Athletics, e.g., jumping, running, etc.

(d) School runs, paper-chases, etc.

(e) Handicrafts.

(f) Voice training.

(g) Cadet corps, rifle shooting.

(h) Swimming. (1) Is there a swimming bath attached to the school?

(i) Fire brigade corps.

(j) First aid and ambulance.

(a) There is a tennis club connected with the College, the membership of which has averaged over 100 during the past ten years. Sometimes the membership is as high as 140. During the last few years there has been a tendency for the membership to decrease, and that decrease we attribute to cycling becoming so popular among the girls. Instead of going to the tennis club they go out for a cycle run. The average is slightly over 100. Of course the members of the club are limited to our senior department, girls from twelve years upwards. Members have the option of playing at the Falconhall Courts, two miles distant from school, or on the lawns of Daniel Stewart's College, distant about one mile. The Falconhall Courts, which are four in number, were laid out by the Governors in 1893, in the middle of a field measuring $1\frac{1}{2}$ acres in extent. Round the courts a short-hole golf course has also been laid out. This golf course was laid out so that if too many girls turned up to play tennis, those who could not get on to the courts were enabled to fill up their time satisfactorily. Two courts are used by pupils of the Edinburgh Ladies' College, and two by pupils of George Watson's Ladies' College. The pupils of each College has a separate pavilion. At Daniel Stewart's College there are four courts, and the grounds measure $1\frac{1}{2}$ acres. The pupils of the Edinburgh Ladies' College have the use of the four courts on the evenings of Mondays, Wednesdays, and Fridays, and of two courts on Saturday forenoons. Each section of the Club is managed by a committee of senior pupils, with the assistance and advice of a

class governess. They practically manage the matter themselves, but call in the governess when they wanted advice in any way.

(b) Drill is taught to junior and senior pupils in accordance with Ling's Swedish system, by two lady teachers, who have had a two years' course of training under Madame Bergmann Österberg, at the Physical Training College, Dartford Heath, Kent. Pupils receive lessons in gymnastics, both free and applied. There are a gymnasium and a drill hall (used also for dancing) attached to the College. Until 1893 the teaching of drill and gymnastics was in the hands of masters. From 1893 till 1899 dancing was taught two hours weekly during the first and second quarters, and drill and gymnastics for one hour a week during the third and fourth quarters, the latter subjects being under the care of a succession of lady teachers, natives of Sweden or Norway, and trained at the Royal Central Institute, Stockholm. These ladies did excellent work, but as they were employed by us only during the half year, when they got a situation at home, where their services were required all the year round, they seldom came back to us, and we therefore never had them for more than one or two years. At that time the supply of qualified lady drill instructors was very small, but since the institution of Madame Österberg's training college at Dartford Heath, the supply is more ample, and we can get home-trained teachers. Since October 1899 more complete arrangements have been in force at the two Merchant Company's Ladies' Colleges, where two ladies now devote their whole time to the teaching of dancing, and two to drill and gymnastics. In the forenoons throughout the whole session dancing is taught at the Edinburgh Ladies' College and gymnastics at George Watson's Ladies' College, while in the afternoons the pupils of George Watson's Ladies' College receive their lessons in dancing and those of the Edinburgh Ladies' College in gymnastics. The teachers in the middle of the day go from one school to the other. The dancing teachers go over to George Watson's and the drill teachers come over to the Edinburgh Ladies' College for the afternoon. At the Edinburgh Ladies' College each class receives weekly an hour's lesson in dancing, and the same in drill and gymnastics. Much benefit has resulted from these changes. Not only has the time devoted to drill and gymnastics been doubled, in so far as they have now a weekly lesson of an hour all the session through instead of during the last two quarters as formerly, but there is now throughout the year a continuity in the lessons which conduces to steady interest in the work and more satisfactory progress. The fact that there are two teachers is an advantage in many ways, but chiefly in rendering possible more thorough classification. The time-table is so arranged that two English classes are taught gymnastics together. These are all English classes, with pupils as nearly as possible of the same age and having the same attainments in English. They are reclassified for gymnastics, as those who have previous training in gymnastics and are expert are put into the higher class for gymnastics, and thus beginners (chiefly pupils admitted from other schools) are never placed in the same division with scholars of several years' training. The lessons are thereby rendered more pleasant and interesting to all, and good pupils are advanced more rapidly to more difficult exercises.

(c) Exercises in jumping and vaulting form a regular part of the gymnastic lessons.

(f) Voice training is given in connection with the lessons in singing, to which two hours are devoted weekly.

(h) A swimming club was formed in connection with the college in February last, arrangements having been made with the directors of the Warrender Baths, by which pupils have the use of the baths on reduced terms of subscription. The membership of the club numbers thirty-four.

11,023. State specifically the time allotted to those or any of them *per diem* and *per week*?—See my previous answer.

Training in
school hours.

11,024. Are any of these taken in ordinary school hours?—Drill and gymnastics are taken in school hours; swimming is not, as it is generally taken in the afternoon or Saturday forenoon.

11,025. What, in your opinion, are the respective merits and relative values of the various forms of physical training?—My opinion may be gathered from subsequent answers.

Opportunities
taken
advantage of.

11,026. How far are these opportunities taken advantage of?—While drill and gymnastics are not compulsory, the lessons are taken advantage of, except in the highest class, by 90 per cent. of the pupils. There are still parents who object to gymnastics on grounds of propriety, and several pupils are exempted on the score of health. At the beginning of the session the pupils are told that they are all expected to take lessons in gymnastics, and those who wish to be exempted have to bring written notes signed by their parents. We find that several of them don't care about taking the whole of the work, but are willing to take lessons in drill and physical exercise if they are exempted from gymnastics. We meet the wishes of the parents as far as we can. There are also cases of pupils who have extra lessons at the request of the parents. If a teacher finds a pupil suffering from slight curvature of the spine or stooping shoulders, and if extra exercise would help, then arrangements are made, and in many cases great benefit has resulted.

Training:
effects;
moral,
physical and
mental.

11,027. What, in your opinion, are the results of such physical training?—What are the effects, moral, physical, and intellectual?—*Moral effects.*—Increase of physical fitness promotes cheerful disposition, healthy exhilaration of spirits, and general feeling of happiness. Gymnastic exercises develop courage, presence of mind, and self-control. Games foster a spirit of ready and hearty co-operation, loyalty, unselfishness, magnanimity, self-reliance, and power of endurance. The games I refer to are indoor games. The lesson in gymnastics is frequently relieved by the children being asked to take part in a game that is arranged and supervised by the drill instructor.

11,028. What sort of games?—Parlour games. In that way they are often initiated into games that they might not otherwise hear about. The teachers of drill learn a great deal about such games in the training college.

11,029. Such games as general post, hunt the slipper, blowing a feather, and so on?—Yes, games that are easily adaptable to the drill hall. The children take great interest in them and return to their work with great pleasure after a break of that kind.

Physical effects.—Muscles are developed, joints are suppled, the chest is broadened, the spine is straightened, shoulder-blades are flattened, the blood is purified and invigorated, functional activities are promoted, and digestion is improved. It is an excellent thing about the training or system that all the parts of the body are developed harmoniously. Exercise gives pleasure, and bodily movements become free, easy, and graceful. It is quite evident that within the last few years the carriage and bearing of the girls have decidedly improved through the exercise they have had.

Mental effects.—The brain as part of the body shares in the general physical development, becomes more alert and responsive, acts more freely, with more pleasure and with more effect. A feeling of repose and a consciousness of power are engendered, greater power of concentration and attention is secured, and class discipline is thereby rendered easier.

Uniform
system
undesirable:
must be
great freedom.

11,030. Is a uniform system of physical training in schools desirable or necessary?—A uniform system of physical training in schools is neither necessary nor desirable. Systems of physical training should be modified to suit the class of schools, primary or secondary, the sex of the pupils, and even to some extent the locality, whether town or country. What is suitable for boys may not be suitable for girls. In other branches of school work the Education Department has of recent years acted more and more on the sound principle of leaving much to local and personal initiative. Physical training might wisely be dealt with on the same

principle. While school authorities might be asked to submit schemes for the approval of the Department, a large measure of freedom should be allowed.

11,031. How, in your opinion, can the present system be improved and developed?—The system at present in use is so rational in its underlying principles, and its details have been so thoroughly thought out, that improvement seems possible only in its further practical development. With a view to this, more time is required. It is, however, exceedingly difficult to find additional time, especially in the senior department, owing to the increasing number of subjects included in the curriculum. It would also be a decided advantage if, in addition to the weekly lesson given by the special teachers, a brief period of say ten or fifteen minutes, two or three times a week, could be devoted to physical exercises, under the direction of a teacher or governess. This would imply further training, however, on the part of the general teaching staff to secure effective work. Better results could be obtained with the present time-table arrangements if all pupils were properly clothed in prescribed gymnastic costume. Though the use of such a costume is not made compulsory, every means is used to encourage its introduction, and it is now becoming much more general. But there are still parents who have a prejudice against it. Its general use would add to the comfort of the pupils, would enable the teachers to introduce a greater variety of exercises to render the lessons more interesting, and, in consequence, to secure more satisfactory progress. There are many exercises which they cannot perform with comfort and safety without a special gymnastic costume. If a special gymnastic costume is introduced, there is greater variety and more interest and progress in the work. Last session we made it a condition practically on all pupils being admitted to the higher divisions that they should provide themselves with the special costume. That has had a very satisfactory result in the way that a very much larger proportion of our pupils now provide themselves with this special costume.

11,032. At what cost would that be?—It would not be serious. It would consist of a serge blouse and knickers, which most of the pupils have in any case. A matter of 10s. or 12s. would cover the cost.

11,033. It would not be prohibitive?—No, not in many cases. I have had only one case where it seemed prohibitive, and that was the case of a Heriot bursar, but that is the only case where the question of cost has been raised at all.

11,034. What is the relation between mental study and physical training?—Physical training taken in its widest sense is a powerful factor in keeping the body healthy and well. Hence it helps the brain to keep strong, and able to do the mental work required of it. Through increase of lung capacity a larger supply of oxygen is taken into the blood, which, purified and invigorated, flows to the brain cells and renders them better able to perform their functions. Again, by changing from intellectual to physical work, the blood is drawn from the intellectual centres to the motor centres, and gradually the intellectual centres become quiet, until they reach an almost passive state. Hence from physical exercise we actually obtain rest. Physical training also develops certain qualities, such as alertness, quickness of observation and self-control, which are of the utmost value in mental study.

11,035. What is a just proportion of time to be devoted to physical training in relation to study?—No definite answer can be given to this question, as the proportion of time should vary according to infinitely varying circumstances.

11,036. Supposing the circumstances were more equal, we rather want to know what could be instead of what is?—Under present school conditions?

11,037. Yes?—We give practically an hour of gymnastics, an hour of dancing, and two hours of singing.

11,038. That is four hours?—Yes, and then our pupils have intervals of seven minutes at the end of every hour, in which there is a change from one room to another, giving them a change of position and making them walk up and down stairs. They get twenty-five

week

minutes for luncheon and play. Their lunch does not occupy them more than ten minutes, and they devote the rest of their intervals to dancing, skipping, tigg, running about and shouting to their hearts' content. The recreation room is quite away from the classrooms, and we leave them very much to themselves. They have practically five hours a week independent of mental work such as the ordinary lessons, and I don't see that under present conditions we can give them any more.

11,039. You think that probably that is sufficient time, or would you like to give them any more?—If it could be arranged, I don't think it would do them any harm to give them more.

11,040. Is physical training most advantageous if carried out daily in connection with school work?—The best results would be obtained if physical exercises could be given for a short time daily by the ordinary teachers as part of the regular routine, in addition to a weekly lesson from an expert. Of course I pointed out before that the difficulty in carrying that out is the fact that all the teachers are not specially qualified to give instruction in training. I remember as a pupil in a country village school our old teacher used to make the work more pleasant to the pupils by making us for about five minutes stand at word of command, turn right and left, and other very simple exercises, when we were somewhat tired at our tasks. After the exercises we sat down again quite refreshed. If something of the kind were introduced, perhaps more systematically, it would be helpful.

11,041. What are the respective merits of outdoor and indoor training?—For all practical purposes, especially as regards girls' schools, a good well-ventilated gymnasium is of greater value than an outdoor playground for physical training, and for the following reasons:—

(1) Our climate is such that the proportion of days when an outdoor gymnasium would be totally unfit for use is very great. There are many days when we could not turn the girls out on to the playground to put them through the exercise they have to undergo.

(2) A scientific course of training necessitates a certain amount of rest between the various items of the lesson, and is quite different from the quick continual motion which must be kept up by a class exercising out of doors. Thus the chance of pupils taking cold in such a course would be much greater if the lessons were given in the open air.

(3) A minor reason is that it is more difficult for children when out of doors to fix their attention on the matter in hand. The very fact of being in the fresh air induces in them a feeling of unrest and impatience at restraint, which makes it more difficult to secure satisfactory results in the limited time usually allowed for the gymnastic lesson.

11,042. Should some form of military drill or training form part of the ordinary curriculum of every school?—Not of secondary schools for girls.

11,043. What system of physical training is, in your opinion, the best?—Ling's Swedish system seems to me the best for girls' schools. It is the most scientific, its principles being based upon a sound knowledge of mechanics, anatomy, physiology, and psychology. Its details have been most thoroughly and systematically worked out. Its exercises are very numerous, carefully chosen for their physiological effects, thoroughly graduated, so that within each lesson one movement prepares the way for the next, capable of endless variation to suit special circumstances, and providing facilities for regular and steady progression from simple and gentle exercises to those more difficult and more complicated. None of the exercises are too violent or too fatiguing.

It differs from other systems in being largely independent of the use of apparatus, is therefore less expensive, and admits of free exercises elsewhere than in the gymnasium.

From the very large number of movements, every part of the body is exercised, and care is taken to secure harmonious development. Its fundamental

principle is 'the oneness of the human organism, the 'harmony between mind and body.'

11,044. As distinct from physical training, what physical education is given in your school?—Besides lessons in gymnastics, the pupils receive a weekly lesson in dancing, in connection with which physical exercises with expanders are given. The pupils have generally ten or twelve minutes devoted to exercise with expanders, which develop the chest and lead to graceful movement and attitude. They have also an hour weekly devoted to pianoforte music. The pupils in the elementary department (from five to eight years of age) receive lessons in musical drill, marching, etc., besides action songs and regular dancing lessons. Musical drill is conducted by the mistresses of the elementary department. They have lessons in dancing more frequently than the others.

11,045. What are the results of your experience regarding physical training, games, etc.?—Experience proves that the brightest and ablest pupils are those who can take a good position in class and at the same time take their full share in games with the best of their companions. The classes which are brightest intellectually are also the keenest at their drill and at their games. Among the elder girls we find a few who are awkward and dull at games, and to whom the mere thought of gymnastics is repulsive, but this is generally because need for study in preparation for examinations has become more pressing year by year, until through neglect of games and exercise of all kinds, they have become largely unable to enjoy them. The number of such pupils, however, becomes fewer year by year, who will become fewer because the pupils are now getting physical training from their earliest years practically, and they enjoy it and wish to have it continued.

11,046. Are they at present sufficiently organised and supervised?—Yes, I think they are. Every class spends from fifteen to twenty-five minutes daily in the recreation hall, a room measuring ninety-one feet by twenty-four feet, where various games, such as skipping, etc., are engaged in. The hall is well lighted and well ventilated, and is quite isolated from the classrooms, so that any unavoidable noise in no way interferes with the work of the school. While in the hall the largest possible freedom is allowed to the pupils. Class governesses are present, but are not expected to supervise the games, or to take any active interference in them. Pupils enjoy their games more thoroughly, and derive more benefit from them, when they are left to themselves. Too much system and regulation is undesirable.

11,047. Are the teachers themselves duly qualified and instructed?—As before stated, the teachers of drill are specially qualified.

11,048. Are the pupils examined by medical men?—The pupils are not examined by medical men, so far as the school authorities are concerned. Of course if parents wish to know whether it would be unsafe for their daughters to take physical training and gymnastics, they may get them examined and send me a note to such effect.

11,049. Have you often got such notes?—Not often.

11,050. You assume that every girl that comes is in a fit state for the exercise she has to do?—Unless we have intimation to the contrary. If a drill teacher sees that a girl is unduly fatigued, then she takes notice of that and allows a longer rest.

11,051. When did you last have a teacher noticing that?—We have it occasionally throughout the session. They are exceedingly watchful in that way.

11,052. Are you informed?—Yes, but not in all cases. They may take the matter into their own hands and dispose of it, as they are quite reliable and trustworthy in that respect.

11,053. Is it a frequent occurrence?—It is very rare.

11,054. Is a school register kept, showing the height, weight, chest girth, spirometry, biceps girth, and general physical development of the pupils?—No school register showing heights, etc., is kept.

18 Sept. '02.
Continuation classes : public gymnasia.

11,055. What remedies or suggestions have you to propose regarding the last part of the terms of Reference, viz., how the existing opportunities for physical training may be increased by continuation classes and otherwise, so as to develop, in their practical application to the requirements of life, the faculties of those who have left the day schools, and thus to contribute towards the sources of national strength?—In order to counteract the tendency to aimless loafing and lounging, indulged in by young lads, both in towns and in rural districts, every means should be used to render gymnastics a popular subject in continuation classes. I have experience both of country districts and towns, as I spent the first eighteen years of my life in a country village, and I know how aimlessly many of the young fellows spend their evenings and spare hours. I think it would be a very beneficial thing in every way if they could be interested in this. Young lads from fourteen to eighteen or nineteen could not spend their spare time more profitably. Public gymnasia should be provided by local authorities, and, where possible, volunteer drill halls should be rendered available when not otherwise required.

11,056. *By Sir Thomas Glen Coats.*—Is yours a day school?—Yes.

11,057. How many hours a week do your pupils attend work?—The elementary pupils attend four and a half hours a day, some of the juniors attend five hours, and all the seniors and the majority of the juniors attend six hours.

11,058. What are their hours?—From nine to three.

Training : bad effects not observed.

11,059. Can all the older girls take this physical training continuously without injury to their health, and do all the girls take this physical training daily?—They only have it once a week.

11,060. Certain girls, of course, would require to be excused?—Very few.

11,061. You have never seen any bad effects?—No, the very opposite.

Lectures on physiology, etc.

11,062. *By Mr Shaw Stewart.*—Do you give short lectures and explanations on physical training?—The teachers of gymnastics are continually giving hints and explanations as they arise in the course of their lessons. I have over and over again been present when they have been engaged in doing so, and I have heard them give the girls hints of the utmost value as to the preservation of health, not only during school but after school.

11,063. And also information as to the intention of the different physical exercises?—Yes, they do the work most intelligently. It is not at all mechanical.

Graduation of classes.

11,064. *By Mr Fergusson.*—You spoke about re-classifying your classes for physical exercise. Do you think that that is practicable in ordinary schools? Would it not cause great disorganisation of school work, for instance, in an ordinary elementary Board School?—I would not like to speak authoritatively on the matter, but we certainly have an advantage and privilege over the smaller schools in that way, in that with our large numbers we are able to re-classify.

11,065. You think that it is desirable if it can be done, but there are difficulties?—If it can be done it is exceedingly necessary. We did not do it until two years ago, and the effect has been very apparent since. Good pupils get ahead and feel that they are making progress, whereas formerly they were kept back by the slower pupils being associated with them in the class.

Training beneficial in curing defects.

11,066. You speak about special cases, such as curvature of the spine, having special attention paid them. Is it your view that physical training is very beneficial in curing these cases?—Yes, we have found that over and over again.

11,067. You look upon that as a very important point in physical training, that it may at an early age, if taken in time, cure these defects, which, if not attended to, would be very serious in after life?—Yes, it is exceedingly valuable.

Compulsion : attraction preferable.

11,068. You speak with great experience, having seen the evil of lads loafing about and doing nothing, and you think that physical training and gymnastics from fourteen to eighteen would be very beneficial.

Do you think that that could be made compulsory after school age?—Personally I am afraid that the element of compulsion would be objected to by the country lads and the country people to begin with.

11,069. How would you propose to attain what you consider to be a most desirable object?—If local people of influence, employers of labour, farmers, and manufacturers could be heartily interested in the work, and would use their influence in inducing the young lads to attend these classes, I think it would be more beneficial than trying to compel them to attend.

11,070. You would like to see them made as attractive and popular as possible, and would thus hope to induce the lads to attend?—I think the ultimate result would be more satisfactory if the element of compulsion were kept in the background, and if they were induced in every possible way.

11,071. You made the interesting remark in speaking of your experience in school that your schoolmaster used to give you simple exercises for a few minutes in the middle of your lessons. Looking back to that, do you feel that these few minutes were of great benefit?—Yes, most certainly.

11,072. Such a thing is very simply carried out?—Yes, and I have carried it out. I was for nearly five years one of the teachers in Moray House, with large classes ranging from 100 to 140, and when I had a long lesson in hand, and when the pupils began to get fagged and to lack interest in their work, I have seen two minutes spent in that way put them all right again.

11,073. That is a strong argument in having physical training every day in short doses instead of once a week?—It is certainly ideal wherever it is practicable.

11,074. There seems nothing very difficult in what you suggest, or even in going a little further. A minute or two can always be found?—It is practised by the teachers in many cases.

11,075. Do you think in the class of schools, of which yours is one, there is more physical training than in the other schools throughout the country which you have knowledge of, and which deal with the same class of pupils?—I am afraid I am not in a position to speak authoritatively on the matter. I cannot say what the average length of time devoted to drill now is in Board Schools.

11,076. I am talking of schools such as yours?—I know that St George's practising school in Melville Street devotes quite as long a time.

11,077. Do you know any school dealing with children such as yours where you would say that physical training is much neglected?—I would not like to name any.

11,078. I don't want you to specify any, but do you know if there are any such schools?—I don't know.

11,079. I wanted to know whether you thought that there was any need to deal specially with schools of your class, or whether the general trend of public opinion was in favour of more physical training in secondary schools, and they were sufficiently meeting the demand?—I think that public opinion is being very rapidly developed favourably towards the whole movement, and on that ground alone I think the managers of such schools will feel it to be to their interest as well as their duty to provide physical training.

11,080. So far as you know, they are meeting that demand and progressing in that direction?—Yes.

11,081. *By Mr McCrae.*—I think you said that the elementary classes got musical drill instead of the Swedish system?—Yes.

11,082. To what age would that apply?—From five to eight.

11,083. Up to eight years it is all done to music?—Yes, practically.

11,084. Have you any particular system of drill?—It is just the ordinary musical drill that is given in all infant departments of schools.

11,085. You think that they could not take up the Swedish form of drill before that age?—They did get lessons in Swedish drill for several years while the drill was given by the teachers from Sweden; but the last

teacher we had recommended me very strongly to discontinue Swedish drill with the elementary pupils, and to let them have musical drill alone, as she thought that they were not quite old enough to benefit from the simplest exercise that they got.

11,086. They recommended that until a child was eight years of age it should not be practised in Swedish drill?—Yes; and that was an opinion gained from experience.

11,087. You say that a uniform system of physical training is neither desirable nor necessary. Eliminate for a moment the secondary schools: can you give us any opinion with regard to a uniform system throughout the Board Schools?—One can easily suggest various arguments in favour of a uniform system, such as that pupils move so frequently from one Board School to another; and certainly, if there was a system, perhaps not absolutely uniform, but founded on similar principles and following certain lines, all over the country, there would be less dislocation when pupils were removed from one school to another.

11,088. That would be an advantage?—Yes, a decided advantage.

11,089. What do you mean by saying that the locality should determine whether there should be uniformity or not?—What is suitable for a country boy may not be exactly what a town boy would benefit from. Country pupils are slower in their movements altogether, and they have often physical exercise of another kind which the town pupils do not have.

11,090. The local distinction would only be between town and country?—Practically.

11,091. You say that the more pressing demands by curriculum subjects are rather against getting more physical training. Do you think that it would be advisable to somewhat reduce those demands so as to give an opportunity for more physical training?—Personally, both as a teacher and as a father, I should prefer that the demands made upon growing boys and girls were lessened in the way of school subjects, and that longer time should be devoted to physical training; but our best pupils work with the university as their goal, and in order to get into the university and to qualify themselves for graduation, they must pass a preliminary examination in five subjects. We find that it is all we can do to get them prepared for that, so that they may go direct from the school to the university. In the higher schools we find it exceedingly difficult to spare the time for physical training.

11,092. *By Sir Henry Craik.*—You have no suggestion to make as to any alteration in the rules of the Department in regard to the curriculum? In fact, we impose no rules on you?—No rules are imposed, but the necessities of the entrance examination of the university practically impose rules.

11,093. Don't you qualify your pupils chiefly by leaving certificates?—Yes.

11,094. These five subjects may be taken in more than one year?—Yes, they are taken in more than one year.

11,095. Still you think that they impose too great pressure?—It is often forgotten that girls have demands on their time which boys do not have. For example, until within the last year or two of school attendance there are two or three hours a week devoted to sewing, and one hour a week devoted to pianoforte.

11,096. Is it necessary for girls of that age who are entering the university to have so much time devoted to sewing?—They discontinue sewing two or three years before they leave school in the case of those who look forward to a university course, but very often the girl or her parents have not absolutely made up their minds as to whether she will go to the university until within a year or two from the time she leaves school, and in that case the school authorities hesitate about asking her to discontinue her sewing unless a request is made by the parents.

11,097. You are aware that the Department has rather indicated that such subjects might be dropped in the later years?—That is quite true, but if we were to make arrangements for entirely discontinuing such

subjects as needlework, there would be an outcry against it, and our education would be pointed to as being very one-sided. In fact it is already said that our education is to too great an extent a literary education, and too little practical in its character.

11,098. The alteration in that you leave more time for physical training and reduce the other work is a change in public opinion or is an action on the part of the school authorities. There is no general regulation to prevent it?—No, but we cannot go too far ahead of public opinion.

11,099. Your fear is of public opinion and not of any hard and fast rule laid down by the Department?—The interests of our best pupils are also at stake.

11,100. What I want you to answer is this: it is not any rule in the code of the Department which you are obeying, but what you believe to be in the interests of the pupils or in accordance with public opinion?—They have laid no rules down, but they have instituted a series of examinations which demand a high standard of attainment.

11,101. But the Department does not require the five subjects to be taken?—No, but our best pupils through the Department examinations qualify for the university preliminary, and the university authorities require them.

11,102. We will go to another subject now. Your Playground. school has very little playground accommodation?—We have none.

11,103. You supply the place of games very largely by this systematic physical exercise?—Yes.

11,104. Would you prefer to have a larger playground and to dispense to some extent with this physical exercise, or do you think that physical exercises have an advantage which even the games do not have?—I think, as far as our girls are concerned, with the physical exercises they have, and the large recreation room that is at their service, on many days of the year they are better off than if we had a playground.

11,105. About a year or two ago I had the advantage of seeing the exercises conducted by your ladies. All your ladies have gone through a very elaborate course of physical training?—Yes, a two years' course.

11,106. Are you aware of any other schools which employ a teacher with the same amount of training?—St George's School in Melville Street. Expert teacher.

11,107. They use the same ladies?—Yes, and also the Ministers' Daughters' College.

11,108. It would be hardly possible to have them in an ordinary elementary school?—I don't see why it should not be. The salaries are not prohibitive.

11,109. Do you charge a special fee for it?—We have no special fee.

11,110. *By Mr Fergusson.*—Perhaps you might run through the evidence given by Dr Milne Murray. (Question 10,208.) Do you find any difficulties arising from that, and how do you deal with them?—We have no difficulties, because our teachers are thoroughly well up in physiology, which forms part of their training at Dartford Heath College. A very important part of their training is a knowledge of anatomy and physiology. Training of girls: dangers; lady teachers well qualified.

11,111. *By the Chairman.*—The sex of the teachers being what?—They are all lady teachers. Of course these young ladies know perfectly well what the results would be.

11,112. *By Mr Fergusson.*—Dr Milne Murray rather suggested to us that the girls were very reticent about saying anything, and the teacher had no knowledge?—That is quite true. I can understand that they are very reticent about it, but I am quite satisfied of this, that the teachers will notice it from certain appearances, and from the fact that the girls may be more listless and may not put the same spirit into their work, and without saying a word about it they will make the necessary arrangements. My experience of these teachers is that we have no more sympathetic or intelligent members on our staff than the ladies who are teaching physical training.

11,113. Then you don't think that any other arrangements should be made than calling the attention of the

Mr R. Robertson.
18 Sept. '02.
opinion, not of Department.

Mr R. Robertson.
18 Sept. '02.

teachers to the fact that very special care is required?—I know that that point is very fully, carefully, and systematically impressed on them by Madame Österberg and other members of her staff.

11,114. Is there anything in your course of physical exercise that might be bad for girls under these conditions?—That is one of the strong and good features of the Ling system, that none of the exercises are violent. None of them involves any strain unless they are continued too long. Whenever there is the slightest appearance of overstrain they stop.

11,115. Would the danger arise when you were conducting gymnastics with apparatus?—That is never severe, nor is it continued long at a time. Their lesson is generally divided into three parts—drill, exercises, and gymnastics.

Teachers and parents: frank co-operation.

11,116. In practice you have no difficulty in dealing with what Dr Milne Murray refers to?—No. With regard to what he says about co-operation between parents and teachers, we have no difficulty, because the parents take us most frankly into their confidence when the health of the pupil is concerned. They know perfectly well that if they call upon the lady superintendent or myself, or the teachers of drill, and make any representation of that kind, the matter will be carefully noted and attended to.

The witness withdrew.

Mr ANDREW GILLANDERS, examined.

Mr A. Gillanders.

11,123. *By the Chairman.*—You are headmaster of the Public School at Portree?—Yes.

11,124. Would you kindly read over your statement of evidence?—I am headmaster of the Portree Public School in Skye, and have held that position since January 1882.

The school is a mixed one, with a roll, at the close of last session, of 120 boys and 127 girls. The average attendance is 205.

In addition to the elementary department there is an advanced department, with an average attendance of twenty-five, in which instruction is given in the usual branches of English, mathematics, ancient and modern languages, the curriculum being arranged to meet the requirements for the Leaving Certificate examinations of the Scotch Education Department.

Centre school.

The school is recognised as a 'centre' school under the scheme of the Inverness-shire County Committee on Secondary Education and under the scheme of the Trust for Education in the Highlands and Islands of Scotland, from both of which bodies subsidies are received towards the promoting of secondary education in the district.

Ages.

The ages of the pupils range from five to eighteen years.

The parents of the pupils are, on the whole, in comfortable circumstances, and are by vocation mainly tradespeople, labourers, fishermen, and crofters; but a number have difficulty in finding steady employment.

Feeding.

The majority of the children are well-fed, but one cannot fail to notice from the pinched faces of a number of them that considerable poverty prevails. Tea, with a piece of dry bread, is too often made to pass for a meal, and many children do not get, as often as they should, the porridge and broth that promote health and build up the constitution. It is a remarkable fact, however, that many of the children who look ill-fed and bloodless grow up to be strong, healthy men and women.

Remarkable development.

The school serves for the children of Portree and the crofting districts about the town. A number of country pupils holding bursaries lodge in the town, and about twelve children walk a distance of three miles daily to school.

No meals are supplied by the school authorities, but the parents of children coming from a distance make provision among friends in the town for having a warm meal supplied to their children at the interval for dinner.

11,117. And they do that?—Yes, regularly throughout the session.

11,118. *By the Hon. Thomas Cochrane.*—In the case of a Board School, where there is not the same opportunity of supervision as there is in your school, would any difficulty arise?—I could quite understand that in the case of an unintelligent teacher, who did his or her work mechanically—I can understand it in the case of a male teacher putting a mixed class of boys and girls through the physical exercise, where a girl might be subjected to exercises which were not suitable for her condition at the time. In our case we have not the slightest fear of that, because the ladies are so kindly and sympathetic and know the human system so well.

11,119. It is a point that ought to be considered?—Certainly with mixed classes, and where the whole staff of the school take part in the physical training it is very important.

11,120. *By Sir Henry Craik.*—What are the salaries that you pay to these ladies?—They accept nothing less than £100. Madame Österberg makes that a condition.

11,121. They are paid by other schools as well?—All her students get £100 to begin with. We have one just now beginning at £100 and another at £110.

11,122. Madame Österberg herself gets very much more than that?—Yes, the school is her own

Clothing great improv

Time-table

Physical exercises music

Cruden system Militaire

My experience as a Volunteer for nine years in the Seaforth Highlanders has been of great value to me in teaching this class.

Military drill takes the form of turnings, forming fours, marching, with easy formations while on the march. It is performed in the school playground. We have a little park adjoining the school, which will be useful by-and-bye if we get it levelled, but want of money prevents that in the meantime. We use it for marching just now.

This part of school work proves very attractive to boys, and comes as a welcome relaxation after the strain of mental work. It is of great value in the securing and maintaining of good order and discipline, while it improves the children's health and physique.

As showing how much the pupils get interested in this form of drill, I may state that three years ago the boys of the senior division, on their own initiative, formed a kind of cadet corps. By means of contributions received from friends in the town, they supplied themselves with cheap helmets, belts, wooden guns and bayonets. They had a regular staff of officers and non-commissioned officers, and continued their drill under the supervision of a non-commissioned officer of the local Volunteer company. The movement was not continued the following year owing to the absence of an enthusiastic leader, but many of these boys are now efficient members of the Volunteer company. The boys have an opportunity of seeing the local Volunteers drill three times a week for two months of the year, and they are greatly interested in the different movements. Nearly every young lad in Portree becomes a Volunteer on reaching the age of seventeen years. For the last few years three or four of my senior pupils have been enrolled as Volunteers in the local company. These are exempted from drill at school, but they prefer to fall in with the other pupils at school drill.

The only games that are organised are those of shinty and football. In the winter months the well-known Highland game of shinty is chiefly played. It is the most popular of all our games, and all the boys take part in it in the school playground. On Saturdays competitions are usually held among the scholars, and occasionally with the scholars of a neighbouring school. We have no danger with big and little boys at shinty, as we have two clubs.

The pupils have the use of a public recreation ground which has been rented by the Parish Council of Portree, and they engage in the games of shinty, football, and (a few) cricket in the evenings and on Saturdays. The recreation ground is situated at some little distance from the school premises, and it was found not to be convenient for games during school intervals, as the boys, carried away by the excitement of the game, did not always appear punctually at the hour of assembling of the classes. There is an organised athletic club.

Only recently the School Board of Portree acquired the use of a small field adjoining the school playground to encourage the development of games and physical training, but as it is very uneven and the Board does not see its way to spend the ratepayers' money to any great extent in an already heavily-burdened parish in levelling the ground and in putting a boundary wall around it, it is hardly suitable for the proper carrying on of any game. Still it is an improvement, and some movements in advanced physical drill may be carried out there.

Unfortunately there is no covered-in gymnasium connected with the school, which is absolutely necessary if physical drill is to be carried on successfully all the year round. The weather as a rule is so wet and stormy in winter that drill is confined for the most part in that season to free-arm and dumb-bell exercises in the school class-rooms. In the summer months military drill is given outside when weather permits.

As showing that the School Board are fully alive to the importance of physical training and to the benefits to be derived from it in the case of all pupils, I might here mention that three years ago the Board received a circular from the officer commanding the 72nd and

79th Regimental District at Inverness with reference to proposals to establish a uniform system of physical training in all Scotch schools. The proposition was that the Board agree (1) to accept physical training as a part of the curriculum in Scotch schools, (2) to determine with the advice of their medical authorities what measure of physical training may be adopted daily, (3) to determine the source from which instructors should be drawn. At the same time assistance was offered by lending trained men who might instruct the scholars in those physical exercises which had been successfully adopted in the army, or by affording those engaged in teaching drill in schools an opportunity of learning at the military station of the district what had been recently taught in military gymnasia.

The School Board replied that they highly approved of the proposal contained in the circular, and expressed their readiness to accept the assistance tendered.

But there arose the difficulty of carrying out the proposal from the fact that there was no gymnasium, and the School Board communicated with the Congested Districts Board to ascertain whether a grant of money could be made to the School Board for the purpose of the equipment of their school at Portree, which was the central school for the district, with a gymnasium, with a view to the physical training of their pupils on the lines recommended by the General Commanding the Forces in Scotland.

The Congested Districts Board replied that as the Amending Bill, which was then before Parliament, had been prevented from passing, they had no power to do what was suggested by the Portree School Board. The idea of the Bill was to give some money for technical education, to provide kitchens, laundries, and so on. It would have been a great advantage if it had been passed into law.

The matter went no further at the time, and we went simply on the old lines of giving 'adequate' physical drill.

Continuation classes have not been carried on for several years, owing, partly, to outside attractions. Volunteer recruit drills operated to some extent against their success, as lads of the required age were drawn to drill rather than to the continuation class. I believe an attempt will shortly be made to resume these classes.

The careers followed by pupils after leaving school are numerous. A small percentage enters the professions, but the majority enter employments that are more immediately remunerative. Some go into the law and bank offices in Portree; others find employment in the post-office and steamboat offices and steamers; a few go to sea, and a very few join the army. The school was represented in South Africa recently by seventeen former pupils—three in the Volunteer Service Company Cameron Highlanders, two in Lovat's Scouts (one of whom was killed), three in the Cameron Highlanders (of whom one was colour-sergeant of the regiment, and received the distinguished service medal, having been mentioned in the despatches), and nine in other regiments.

Several boys enter shops, and after serving an apprenticeship, go south—usually to Glasgow—where they find employment, as do also many other boys when they learn a trade, or are strong enough to labour.

A few girls become teachers; vacancies in the post-office are much run after; a few learn dress-making; others become shop-assistants, and many enter domestic service.

There is no systematic medical examination of scholars. On thinking over the matter, I have come to the conclusion that in the interests of weaker children medical examination would be advisable, especially in the matter of eyesight. A number of my own pupils who became pupil teachers have complained of headaches, and a great many of these have likely been due to defective eyesight. In any case it might be sufficient in this direction if a pupil who claimed exemption from physical training got a medical certificate, in the same way as a pupil who claims exemption from attendance at school on

eighteen.

the ground of ill-health has to produce a certificate from a medical practitioner that he is not in a fit state of health to attend.

Physical training should, in my opinion, be compulsory in all schools, and it ought to be compulsory for those between the ages of fourteen and eighteen years, whether in continuation schools or otherwise. Every young man ought to be taught to feel that there is an obligation resting upon him to contribute to the 'sources of national strength,' so that in an emergency he may not be unable to bear arms and use them if required on behalf of his home and country.

There would be no difficulty with lads attending school, for if it were once imposed as a necessary part of the curriculum of a school, the parents and pupils would readily acquiesce. The difficulty would be with boys who as soon as they reach the age of fourteen leave school for good. These are the lads who need drill most, and whom it ought to be in the power of the School Board or other authority to supervise until they reach the age of eighteen. I am not prepared to suggest how physical training is to be made compulsory in the case of boys who have left school, but I do not think it should pass the wit of man to devise a scheme that would work satisfactorily. I think it ought to be left to the School Board, or some other authority, and I would go so far as to say that that authority should keep them in tow until they are eighteen years of age.

All boys ought to be made to receive a certain number of hours of physical and military drill each session until they reach the age of seventeen or eighteen, when they would most probably enrol themselves as Volunteers or join one of the other Imperial forces.

Drill:
certificates of
proficiency:
count towards
volunteer
drill.

If a scheme of physical drill were formulated for a school and approved of by the Education Department, a scholar who attended a three years' course should receive a certificate of proficiency which would exempt him if he became a Volunteer from a considerable part of the drill now given to recruits.

Physical training would not impose any unfair burden on young lads. Judging from what I have observed of the interest taken in it by our own pupils, who follow with intelligence the movements of the Volunteers at their usual drills, I think it would be extremely popular. The lads are keen to become Volunteers, and the local company has no difficulty in getting recruits, for the lads join as soon as they reach the prescribed age.

Training:
good results.

Further, when they are well trained in physical exercises it has the effect of systematising their play at their games. We have had evidence of that in the case of the shinty club at Portree. They always played well in the ordinary way; but their play lacked method, and they almost invariably broke down; they did not keep up their form throughout the game. But one season they went into physical training with the instructor of the Volunteer Company, and the result was most noticeable. The training had altered matters; they could stand fatigue as they could not do before; they played a combined game, and they were able to take a leading position among the clubs of the Camanachd Association of Scotland.

Teachers:
training:
ordinary
school staff.

Of the teachers who give instruction in physical drill, two assistants and I myself have attended classes at the training colleges, and I myself hold a certificate of proficiency as a Volunteer.

All teachers under forty years, who are not otherwise qualified, should be required to take a course of instruction in military and physical drill at centres (Art. 91), under army instructors specially qualified.

The school drill should be in the hands of the school staff.

More attention should be given to the training of young teachers at the Normal Schools in physical drill, that they may come out fully qualified to teach the subject.

Military drill.

I do not anticipate any great difficulty in the teaching of military drill if it should be introduced into schools generally. Teachers who are at all interested in this part of school work will readily

acquire a knowledge of the subject and teach it successfully. The fact that they have to teach it will serve to keep the teachers up to date. As the result of our experience in the recent war, there have been many changes in Volunteer drill, and the instructors had to learn the new form of drill by themselves, without going anywhere for special instruction, and school teachers would soon master the difficulties connected with the introduction of new forms of physical drill. Still it would be a great advantage if teachers had opportunities for attending special classes for instruction.

It would also be of immense advantage to teachers if a graduated scheme of instruction in physical training, drawn up by experts, was formulated for the whole school. The circumstances of localities vary, and so should the character of the physical training, but in all essential parts there should be uniformity. Local Boards should, while keeping to the essentials, be allowed to introduce into their scheme any forms that would help to develop the games that are popular in the district, because it is admitted that there is much physical education in the systematic playing of games.

A suitable scheme of physical training would, I believe, be highly popular as part of the curriculum of continuation classes, judging, as I have stated, from the interest evinced by the boys in the Volunteers when the latter are being drilled. Volunteering is popular with the parents, and they take an interest in the physical training given to their children at the day school.

I have never heard of a parent objecting to his son joining the Volunteers. There might be such an objection if the father thought his boy was neglecting his school education, but, as a matter of fact, the volunteer drill rarely interferes with school work, as over 90 per cent. of those becoming Volunteers have left school for good.

As the result of my experience, physical training has the effect of creating a spirit of comradeship among the scholars, of confidence in each other, and tends to the elimination of selfishness. It helps to do away with the slovenly gait and carriage so common among country children, corrects round shoulders and stooping, and conduces to mental as well as bodily alertness. It gives a power of application to work that would otherwise be lacking, and the tone and discipline of the school are greatly affected by it. In fact, physical training leads to improvement all round, and most people are now coming to recognise that an education which does little or nothing to promote the development of the bodily powers is incomplete and ineffective.

The physical education, therefore, of our boys, as an essential branch of their equipment for life, should be encouraged in every way by the educational authorities of this country, the task being, as a writer put it the other day, 'the production of a martial and physically well developed, not of a military population.'

If I may be allowed to say so, I think that the inquiry into the practicability of introducing shooting into a course of physical training a wise one.

In my opinion it would be an advantage if provision were made for the training of all boys in the use of the rifle. It would lead to the development of good marksmanship, with the result that we would be adding greatly to our national defence.

Short ranges would have to be erected: Morris tube and other rifles with ammunition would have to be provided for the use of boys over fourteen years. This would entail an expenditure which could be met only by an adequate Government grant.

11,125. You advocate a general system more or less for all schools?—Yes.

11,126. So that if a teacher were transferred from one school to another he would be still teaching the same system?—Yes.

11,127. Whatever the system were, Cruden's system or some other system, that would be the principal reason for having one system?—Yes.

Uniform
general
system.

11,128. May I ask your opinion as to whether the military system would not be preferable owing to your getting so much assistance from volunteers; I mean the existing military system of the day, whatever it may be?—Yes. The preliminary parts of it, such as are suitable for boys, with a little tactics. There would be no harm in having a little tactics.

11,129. Otherwise you are quite satisfied with Cruden's system?—Yes.

11,130. I see you are fully impressed with the advantages of physical training, and you would like to see it extended to boys of between fourteen and eighteen?—Yes.

11,131. You have had a good many years' experience of physical training?—Yes, I have been teaching Cruden's system systematically for about twelve years, with a little military drill thrown in.

11,132. In those twelve years have you seen an improvement in the lads you have been teaching as a result of physical training?—Yes. The sergeant instructor of the volunteer company told me the other day that the boys he gets now from the school as volunteers are much more easily taught, and he attributes that to the training they get in school. He says that about half the number of regulation drills would be sufficient now for recruits.

11,133. That would be rather a means of encouraging physical training with boys who join the volunteers or militia, that they have exemption from some of the rather irksome preliminary drills?—Yes.

11,134. I think the phrase you use is that it should not pass the wit of man to devise a scheme. Have you any particular suggestions to assist us to devise a scheme by which boys between fourteen and eighteen should be attracted to join continuation classes where physical drill was given?—No, unless you made them compulsory.

11,135. How would you enforce the attendance?—I could not say, unless you give the Board power as you do for the day school.

11,136. You mean the same power as they have in the case of day schools?—Yes.

11,137. That power consists in summoning the parents and fining them?—Yes.

11,138. How could that be done in the case of a young lad of seventeen who was in employment away from his home? You would have to proceed against him as an individual?—I do not know.

11,139. These are all difficulties that the wit of man may find?—Yes, I know.

11,140. You think that so far as the schools are concerned, all school drill should be in the hands of the school staff?—Yes.

11,141. They know the pupils and understand them better?—Yes.

11,142. Would it be well that that should be supervised by an expert from time to time?—I think so, but I would not like to have a martinet coming in; I would prefer an inspector who was in sympathy with the children, a teacher who had specialised in the work.

11,143. One who would have sympathy with the teachers and the children?—Yes.

11,144. You think his higher standard would rather sharpen the training as given by the teacher?—Yes.

11,145. You do not think there is any difficulty in the ordinary school teacher learning sufficient physical drill to impart it to the pupils?—No.

11,146. You are fortified by the fact that a good many of the volunteers have picked up the new drill very easily?—Yes.

11,147. It has been very much simplified?—Yes.

11,148. The parents in your district take a great interest in volunteering?—Yes.

11,149. They also take an interest in physical training?—Yes.

11,150. You would have no difficulty, so far as they are concerned, if you showed them the advantages?—I would have no opposition.

11,151. It is an improvement in every way, and it helps to do away with slovenly gait and carriage?—Yes.

11,152. You think that the blot on the present educational system is that, while it educates the mind it has not done enough for the body?—That is so.

11,153. You advocate short ranges with the Morris tube?—Yes.

11,154. Do boys like that?—Yes, they have opportunities of practising with the volunteer instructor, and it is very popular.

11,155. Have you ever shot with a Morris tube yourself?—Yes.

11,156. Did it improve your work at the long range?—It improved the sight. When I learned shooting the Morris tube was not in vogue.

11,157. But you have worked with it, and you have found that it made you more acquainted with the use of the rifle?—Yes.

11,158. It is a fine training for the eye?—Yes.

11,159. Even for a boy who did not want to adopt any military form of profession, you think it would be of assistance to him in other occupations in which accuracy of eye would be required?—Yes.

11,160. *By Sir Henry Craik.*—You think that, as a means of developing games, this physical instruction is necessary?—Yes. Physical instruction helps games.

11,161. You find that it greatly helps the games?—Yes.

11,162. It would not do to trust entirely to the games without such physical instruction?—No, the games would get somewhat wild.

11,163. You speak of shinty as being a common game?—Yes. Games.

11,164. There is a game that one of the teachers spoke of as the war game. Do you know it?—It is not very common in Skye.

11,165. It is a good game for giving notions of distance and so on?—Yes.

11,166. It is not practised with you?—No. Rounders is one of our games.

11,167. You say that the boys are greatly interested in the volunteering movement, and that they join when they get to the proper age?—That is so.

11,168. Have you ever attempted to form a cadet corps?—No. Cadet corps.

11,169. What are the objections to a cadet corps?—There are no objections. The boys took it up one year on their own initiative and it was very successful, but it fell through owing to the want of an enthusiastic leader to keep it going.

11,170. You have nothing to bring before our notice which raises a difficulty?—No, there is no difficulty if it is taken up properly.

11,171. You are aware that three-fourths of the expense is borne by the Government?—Yes.

11,172. You think that inspection of this physical training would be best carried out, not by a specialist, but by someone acquainted with the general work of the school who had gone through a careful preliminary training?—Yes.

11,173. You think that that would be better than a specialist?—Yes.

11,174. I would like to ask you one question on a subject which has not been touched in your evidence. Do you think it would be possible to bring down children occasionally during their holidays to such a place as Portree and to quarter them in the school?—I think so. Town children: suggested holiday courses.

11,175. Have you ever had any such plan put before you?—No.

11,176. Are you aware that it has been occasionally carried out in England?—I was not aware.

11,177. How would it be received in Portree?—I think it would be received with interest.

11,178. There are about six weeks when you do not use the school at all?—That is so. I think the people would be rather attracted by it. Is it with an idea of developing drill?

11,179. It is just to give them open air and health conditions and such training as they might have if they are removed from their surroundings in towns. It has been tried with great success among the London boys.

- Mr A. Gillanders.* 18 Sept. '02. You think that such a thing would be welcomed in a place like Portree?—I think it would.
- 11,180. And would such assistance as lay within your power be given?—Yes, I am sure our Board would do everything in their power.
- 11,181. You say that you do keep a few boys up to eighteen in your school?—Yes.
- 11,182. That is exceptional?—Yes, they are preparing for some examination, for the law and the university.
- 11,183. I notice you state the employments of those who leave school earlier. All the employments you mention seem to imply that they leave the place?—No, I mean that they go to offices in the town of Portree.
- Girls.* 11,184. *By Sir Thomas Glen Coats.*—You have told us a good deal about the physical exercises and drill given to the boys, but you have not said very much about the girls. Do they get the same kind of physical exercise as the boys?—Yes.
- 11,185. Do they like it?—Yes.
- 11,186. Have you found it to be of very considerable advantage to them?—Yes.
- Army: enlistment decreasing.* 11,187. Do many of your boys go into the army?—Not many. Skye boys are off regarding the army.
- 11,188. There used to be a great many who went into the army?—Yes.
- 11,189. How do you account for that decrease?—I cannot account for it, and I have been making inquiries all round. Perhaps the remuneration is not so tempting. When the Lovat Scouts were raised the enhanced pay induced a great many to volunteer. I think that more volunteered from Skye than were taken. A good many of our more enterprising young men leave early for Glasgow, where they get remunerative employment.
- Children: rapid development.* 11,190. The evidence you have given with regard to delicate children turning out strong men and women is the same as we have had from several witnesses from the Highlands. How do you account for these delicate children becoming strong men and women?—I think it is due to their being so much in the open air afterwards.
- 11,191. Are they better fed afterwards?—Yes, I think so, when they begin to earn a little.
- 11,192. Do you think that that is the reason of it?—I don't know.
- 11,193. You do not trace it to the amount of physical exercise that you give in the schools?—Not to any great extent, but I think it has an effect in improving their appearance.
- Training: advantages.* 11,194. *By Mr Shaw Stewart.*—Your experience leads you to believe in physical training as being an advantage for volunteering?—Yes.
- 11,195. Have you also seen its advantages in industrial life afterwards apart from volunteering?—Yes, they are more steady at their employment.
- 11,196. Might it not lead to greater skill in handicrafts?—It should, but of course we have no industries in Portree in which we can see such effects.
- 11,197. But what would you say from your observation generally in travelling, and going about?—I should say that it would have a good effect.
- Teachers: good training.* 11,198. It would lead to good citizenship?—It should.
- 11,199. And so more attention should be given to the training of young teachers so that they may be fully qualified to teach the subject. If a system were provided whereby young teachers might be systematically trained and got certificates, would you anticipate a very great improvement in physical training in all schools?—Yes.
- 11,200. *By Mr Alston.*—What is the length of your school week?—In the advanced department it is about 30 hours and in the elementary it is about 26 hours.
- Time allotted.* 11,201. You have given some details as to the amount of time devoted to the various subjects. How much is devoted to physical training as apart from drill?—In the elementary department about two half hours a week, and in the advanced department about three-quarters of an hour, but I occasionally give them five minutes.
- 11,202. You give three-quarters of an hour in addition to drill?—That is what I mean. These in the senior department get three-quarters of an hour military drill along with the advanced department.
- 11,203. The system that you have been using is Cruden's?—Yes.
- 11,204. Have you found that to be a very complete system?—Yes.
- 11,205. You have not tried the Swedish system?—No.
- 11,206. Would you approve of a uniform system being adopted in all schools?—Yes.
- 11,207. You would not find that a disadvantage?—No, I think that the boys in the country would be capable of learning all that town boys would learn.
- 11,208. Does Cruden's system supply all the requirements for a course of physical training?—I think so, but I have no experience of gymnasium work.
- 11,209. I am speaking just of physical exercises. A good many systems have been introduced, and there is a great variety of opinion as to which is the most complete?—I have no experience of any except Cruden's.
- 11,210. We have a generally-expressed opinion that the teachers would not like to be tied down to one uniform system?—There should be some latitude to introduce some forms of developing such games as are most suitable for the children and for which they care.
- 11,211. Evidently the boys in Portree, if not in Skye, are exceedingly keen on volunteering?—That is so.
- 11,212. Is that confined to your district?—I don't think so. Wherever there is a good volunteer company with popular officers they soon get up an *esprit de corps*.
- 11,213. You say that they are keen on joining at the earliest possible moment?—Yes.
- 11,214. And yet very few join the army?—That is so.
- Army: ment.* 11,215. Was this attempt on the part of the officer at Inverness on a line with the War Office's desire to get recruits from Skye?—I could not say.
- 11,216. They failed to get recruits in Skye?—That is so.
- 11,217. You have no reason to give for that?—No.
- 11,218. Is it general throughout the Highlands that the men don't enter the army freely now?—In some parts they get a large number of recruits, such as in Lewis and in Dingwall, where they get great numbers.
- 11,219. You say that you would propose to make continuation classes compulsory, but you don't see how that can be done?—No, but it is the only way to overtake the physical training of those boys.
- Continu classes: pulsion.* 11,220. Could you not make use of the interest that these boys take in volunteering?—We would have no difficulty at all in Portree.
- 11,221. That is to say, they would take physical training and drill as part of the continuation work, and no compulsion would be necessary in Portree. But you think there would be some difficulty in other parts of the country?—Yes.
- 11,222. *By Mr McCrae.*—I think you said that in your view drill had advantages over mere physical training?—Yes.
- 11,223. It engenders habits of discipline?—Yes.
- 11,224. Although that training has made the lads very keen to join the Volunteers, still very few have joined the army?—That is so.
- 11,225. But so far as Skye is concerned, that training in the schools has not engendered that military spirit which some parents are afraid might be encouraged in the schools throughout the country?—That is so.
- 11,226. *By Mr Fergusson.*—You like Cruden's book, but you complain of a want of variety in exercises. Are the exercises in Cruden's book not sufficient in variety? The complaint we have is that the Aldershot system has not sufficient variety, and we are told that there is more variety in Cruden's system. What is the want of variety that you complain of?—There is a good deal of sameness in the exercises. There should be some exercises for the lower limbs.
- Cruden's book: m be great variety.* 11,227. You think that Cruden's system might be supplemented?—Yes.

11,228. I do not quite understand what you meant in answer to Sir Henry Craik in regard to the inspecting of physical work. I understand that you want the teachers to take physical training in schools, and you would favour a skilled person having a large district and going round now and again to see how things were getting on?—Yes, a man who had sympathy with children and who knew about the difficulties in training children. I do not think that an army instructor would do.

11,229. Are you talking of a drill sergeant or gymnastic instructor?—An officer who had specialised in drill.

11,230. Everybody has not the knowledge and advantages that you have, being a volunteer and well up in physical training. If there was not some supervision, then slovenly habits might creep in?—That is so.

11,231. Do you think that the time you devote to physical work, two half hours a week, is sufficient?—No, I do not think it is enough, but the Code is so burdened with subjects that there is a difficulty in getting the time in.

11,232. If physical training is so good, do you think that if you took another hour off some other subjects it might do good in the long run?—I think it would.

11,233. You favour daily work rather than longer intervals?—Yes.

11,234. You favour compulsory training if the wit of this Commission can devise a means, but whether it is compulsory or not, you say that gymnasia are essential for any kind of education training for lads?—Yes, the schools are not adapted for it.

11,235. It is an absolute necessity to have a gymnasium whether the training is compulsory or voluntary?—Yes.

Mr A.
Gillanders.
18 Sept. '02.
Time : daily ;
gymnasia
necessary.

The witness withdraw.

Sergeant-Major F. W. CRAIG, examined.

Sergh.-Major
F. W. Craig.

11,236. *By the Hon. Thomas Cochrane.*—What is your regiment?—Royal Garrison Artillery.

11,237. You have prepared a *précis*, which the Commission have before them?—Yes.

Qualifications, etc.—Service in regular army, twenty-four years, still serving; volunteer drill instructor for last nine years; music master and physical and military drill instructor to the Nicolson Institute, Sandwick and Laxdale Public Schools under Stornoway School Board for eight years. Number of scholars about 950 between the three schools.

Ages of pupils.—From five to eighteen years.

Parents' position and vocations.—Varied; professions—tradesmen, fishermen, crofters, etc.

Cannot say if well fed, but the appearance of some of the children seems the reverse.

No meals are supplied by the school or other authorities.

Clothing fair; country and some of the town children generally barefooted.

Sandwick and Laxdale scholars live from one to two miles from school.

System of training.—Nicolson Institute: Swedish physical drill, with and without arms, and military drill. Sandwick and Laxdale: physical and military drill. In existence for eight years.

Swedish drill taught by class teachers. Physical and military drill in Institute by class teachers under my supervision; at Sandwick and Laxdale by myself, with slight assistance from teachers.

Time.—Institute, under ten years of age, 15 minutes daily; over ten years of age, 10 minutes daily.

Physical and military drill, all boys over ten years of age, 45 minutes once a week.

Sandwick and Laxdale: physical and military drill, 30 minutes, twice a week.

Military drill.—Squad drill, with intervals, single and double ranks and formations. Gymnastics: none. No apparatus. Swedish drill: 1st, 2nd and 3rd lessons. Games.—Football, cricket, rounders, handball. A reasonable amount of success.

The children, boys particularly, are greatly interested in their drill.

No accommodation inside the schools, but the Institute and Sandwick have large level playgrounds; Laxdale uneven and on a slope.

No games are organised.

There have been successful continuation classes, but no physical training attempted.

A few pupils follow the professions, others the army, navy, merchants, clerks, joiners, masons, blacksmiths, coopers, ship carpenters, marine engineers; others become quay porters, carters, with a sprinkling of loafers.

On rare occasions epidemics, such as measles, scarlet fever, and whooping cough, have forced the closing of the schools.

No medical examination of pupils.

I consider that medical examination is desirable at certain periods, should physical training become compulsory.

Certainly physical training should be compulsory in all schools, and also for those from fourteen to eighteen years. This is practically carried out now in the Secondary Department of the Nicolson Institute.

Teachers could learn physical training, as is now being done at Stornoway, viz., by attending a class for teachers under the County Committee, or by the male teachers joining a Volunteer corps where available.

The vacation class could be taught by a retired non-commissioned officer, or, as in my own case, by a Volunteer instructor. Time: one hour *per diem* if other work has to be carried on; if not, two hours.

In the country districts there is a large amount of loafing in those between fourteen and eighteen.

I think that physical training would be popular as part of the curriculum of continuation classes.

There is no rifle club here, but it would be a great attraction to the boys between fourteen and eighteen.

Games are not popular in the outlying districts, partly through no knowledge of them; but in Stornoway and villages near hand, football and cricket seem to attract a number of lads.

If drill is taught, I should recommend the physical and military drill as laid down in Infantry Training, with apparatus for the advanced classes.

So far as I know, no objections have been expressed by parents.

The effects of physical and military training have had a marked effect on the general appearance of the children; they are better set up and their discipline is excellent.

I believe the ordinary rules of health are taught by the teachers.

In the outlying districts of the North of Scotland and Islands, if the playgrounds of the different schools had some sort of open-air apparatus, such as parallel bars, horizontal bar, and so on, to be open to the lads between fourteen and eighteen every evening after day-school hours, and that rifle clubs be instituted in each school for practice with Morris tube, I believe a great number of the lads who loaf about would be attracted to the continuation classes.

As a further incentive, certificates could be granted to those lads who have made such progress in military drill and shooting as may be determined.

11,238. *By Sir Henry Craik.*—I observe that the time taken for physical instruction rather lessens as the children advance in the school?—Yes.

11,239. Is that your own opinion, or is it due to the exigencies of the school work?—Yes.

11,240. You would rather give more time to physical instruction?—Yes.

11,241. You have no games organised in those schools?—No.

11,242. Do you think that if games were organised

it would lessen the necessity for physical training?—I think it is better to leave the children to carry on their own games.

11,243. But the games might take the place of the physical training?—No.

11,244. You think that physical training should be compulsory for those between fourteen and eighteen. To what extent is it now carried out in Stornoway?—In the Nicolson Institute all those lads have taken bursaries who have had physical training.

11,245. These are picked boys?—Yes.

11,246.—But the rank and file who have not taken bursaries do not get a chance of this?—There are a lot of boys who continue going to school although they have not got bursaries.

11,247. Those will be the better class?—No, their parents are sometimes not very well off.

11,248. And they get physical training up to the time they leave?—Yes.

11,249. In a large proportion of schools boys between fourteen and eighteen get none?—They generally leave.

11,250. There are no continuation classes in which they can get physical training?—No.

11,251. You say that in some cases you get slight assistance from the teachers?—That is so.

11,252. Is that because they are not keen about it, or because they do not have sufficient training?—They have not got sufficient training. I get those teachers to come up while I am drilling the children, and I turn to the teachers and say: 'There is a chance for you, you can go through the exercise I have just done.'

11,253. You have never had entrusted to you any classes for teachers?—I have one now.

11,254. Under whose auspices is that class carried on?—Under the auspices of the County Committee.

11,255. You find no objection on the part of parents to the military drill?—No; rather the opposite.

11,256. Have you ever attempted to start a cadet corps in Stornoway?—When I was a pupil teacher in the Nicolson Institute there was a cadet corps raised by Mrs Percival, Lady Matheson's mother. After my father's death, I was put in charge of these boys as their instructor. That was the only cadet corps which was in existence there. It was not recognised by the Government.

11,257. What prevented its being recognised?—I could not say.

11,258. There has been no proposal to establish one?—No.

11,259. Would it be a good thing if it could be done?—Yes.

Compulsion.

Teachers

Military
drill: no
objections.

Cadet corps.

11,260. *By the Hon. Thomas Cochrane.*—Had they a uniform?—Yes, that was all provided by Mrs Percival.

11,261. *By Sir Henry Craik.*—You think that rifle clubs with Morris tubes would be very useful?—The children about here are military mad.

11,262. And yet they have no opportunities?—No. If you saw those lads on parade you would agree that the way in which they do the manœuvres would be a credit to a crack corps.

11,263. And yet there is no organisation like a cadet corps?—No.

11,264. Do the boys always join the volunteers?—Yes.

11,265. They would be keen to join much earlier?—Yes, they would. That is why I think there should be a rifle club in connection with the school.

11,266. You think that such practice as that would be very good for them, not only as increasing the vital strength of the nation, but also for their own education, training their eye and steadiness of hand and their practical adaptability?—Yes.

11,267. You would do it not so much by compulsion, although you think it ought to be applicable to all, but you would hold out the benefit of a certificate?—Yes.

11,268. What purpose would that certificate serve?—When the lad joins the volunteers as a recruit he has to do a certain number of drills. Now if he had one of these certificates I do not see why some of his drills should not be cut off.

11,269. You would have the same if they joined the army?—Yes. At present they have to go a certain number of months before they get to the higher rate of pay.

11,270. By allowing this certificate to count for that, you would be offering an inducement to the boys to go through this training, and you would also increase your recruiting resources?—That is so.

11,271. *By Mr Fergusson.*—You say that there is no medical examination of pupils. If physical training is to be much developed in schools, is there not a necessity for medical inspection?—Yes.

11,272. You are in favour of exercise being done to music?—I am against that in one sense, but I think for public purposes it pleases the parents.

11,273. For training you prefer not to have music?—Certainly.

11,274. If the boys are so 'military mad,' how is it that so few join the army?—They do join the army.

11,275. *By Sir Henry Craik.*—There is a wide difference between Skye and Stornoway?—Yes.

11,276. There is very little contact between them?—Very little indeed.

Mr C. M. ALEXANDER, examined.

11,277. *By the Hon. Thomas Cochrane.*—You are headmaster of Burnmouth Public School?—Yes.

11,278. Have you taken an interest in physical training in your school?—Yes, my school is situated in the east of Berwickshire, on the coast. There is an average attendance of about 90 children, belonging mostly to the fishing community.

Drill is taken twice a week, 30 minutes being allowed for each lesson.

The system of physical training here is designed to exercise the muscles of the body generally, but care is taken particularly to secure an erect, active carriage, and a general smartness of movement, and so counteract the tendency to a heavy slouching gait peculiar to their elders.

Stage I.—Pupils from five to eight years have simple free-arm exercises and extension motions, together with marching.

Stage II.—From eight to ten years the marching exercises assume easy military movements, together with free-arm exercises further developed, and twelve exercises with light dumb-bells.

Stage III.—(a) From ten to fourteen years the ordinary infantry squad drill is gone through.

(b) Dumb-bells.—A series of nine exercises combined; judging the time, Naval system. A series of thirteen exercises based on the Swedish system.

(c) Wands.—A set of four exercises from the Navy and Army 'Rifle Exercises with Arms.'

(d) A set of gymnastic exercises with movements for the arms, legs, body and lungs.

All the foregoing are taken both by girls and boys.

(e) In addition the boys from ten to fourteen practise the bayonet drill.

(f) Review exercise, with wooden guns, and the Royal Naval cutlass exercises, with single-sticks.

'The extent to which use is made of the existing 'opportunities' is shown by the marked improvement in the attendance of the pupils since the introduction of drill. The yearly average attendance has steadily risen, till last year it rose to 92 per cent.

There has been a most decided improvement in the general appearance and deportment of the children,

Drill: time.

Course of
instruction.

Improvement
noticed.

and an alacrity of movement, all of which can only be traced to the influence of the physical exercises.

No opportunity exists here for the carrying on of the training after the children leave school.

11,279. You find that physical training has a tendency to improve the general appearance of your pupils?—Yes.

11,280. And it improves them mentally and physically?—Yes, it brightens them up most astonishingly.

11,281. There is with you no opportunity for the carrying on of the training after the children have left school?—No; that is due to the fishing industry, the young men requiring to go out according to the tides, especially at crab fishing.

11,282. You would like to see something of that sort?—I tried it myself, but owing to the fact that they are irregular in going out to the fishing, I could not get a regular attendance.

11,283. Is there any other point you would like to elaborate in the statement which you have made?—No, except the question of compulsion.

11,284. What are your views on that?—I should be strongly in favour of compulsion. I show the style of drill that we go through. (*Hands in book.*)

11,285. That is the same as the naval drill?—Yes. I think that all teachers should be specially trained and certificated for this subject, both male and female, and you might appoint experts to supervise and make

suggestions. There should be drill taught in every school. In seaport towns they might also be drilled in the management of boats according to the modes of the navy.

11,286. You would set up masts and yards?—Yes, or we could take the pupils down to the harbours. All children from ten to fourteen should be formed into school brigades, and from fourteen to eighteen into Boys' Brigades. That should be compulsory, and they should be associated with the volunteers. Drill should be made compulsory for the grant being earned in evening Continuation Schools.

11,287. How would you enforce the compulsion?—Somewhat similar to the way in which we enforce the education in the Board Schools.

11,288. *By Mr Shaw Stewart.*—How would you enforce the compulsion in the case of lads having to go to the fishing?—They might get a certificate signed by a local volunteer officer or a Justice of the Peace, and if they do not have that, then treat with them in the ordinary way by punishment.

11,289. You think that it would be possible for them to attend the fishing and yet put in sufficient numbers of attendance?—Yes, if you took it for granted that their attendances would be irregular, but still they would have their spell of drill all the same.

11,290. *By the Hon. Thomas Cochrane.*—There would be some system of exemptions?—Yes, naturally.

Mr C. M. Alexander.

exemptions.

The witness withdrew.

Mr R. W. CARSON, examined.

Mr R. W. Carson.

11,291. *By the Hon. Thomas Cochrane.*—You are headmaster of the Sanquhar Public School?—Yes.

11,292. You have put in a statement?—Yes.

During the last session we have been very much hampered both as regards drill and our other work, for since last July the Sanquhar Public School has been undergoing extensive alterations, at an estimated cost of £3500. These alterations are expected to be completed within the next four weeks, so that by the beginning of next session everything will be in good working order. There is now a good central hall, forty-two feet by twenty-two feet, which will be used as a drill hall when required. The playgrounds are of considerable extent. As soon as the alterations are complete, I expect to get some gymnastic apparatus.

On this point I am strongly of opinion that when proposed alterations in schools of a fair size are submitted for the approval of the Education Department, a small gymnasium should be insisted upon in every case as a *sine quâ non*. Schools of small size should at least be supplied with parallel bars on the playgrounds, and ladders inside the shelter sheds. My experience is that School Boards as a rule will do with alacrity what is required of them by Government, whereas if the recommendation comes from the headmaster it naturally does not carry so much weight.

The following is our syllabus of drill for next session :—

(1) Advanced Department M.C. Class and Standard V.

The Board of Education's Model Course of Physical Training.

Headmaster.—Normal School diploma for drill; sergeant in Volunteers for sixteen years; two years' drill at Dumfries Academy (Saturdays).

James Cuthbertson.—Certificate Aberdeen Physical Training College; one year's drill at Dumfries.

(2) Standards IV. and III.—Formation of squad, attention, standing at ease, dressing with intervals, turnings, formations of fours, leg exercises, marching in file, free gymnastics, extension motions, bar-bells, dumb-bells.

Thomas Salmon.—Two years' drill at Dumfries.

Jessie Dalziel.—One year's drill at Dumfries.

(3) Standard II.—Formation of squad, attention,

standing at ease, dressing with intervals, marching in file, free gymnastics, extension motions.

Catherine Young.—Four years' drill as pupil-teacher.

(4) Infants and Standard I.

Elsie Cameron.—Normal School diploma for drill; certificate, Aberdeen Physical Training College; certificate, Mrs Hughes' Kindergarten College, London.

Helen Chalmers.—Four years' drill as pupil-teacher.

Miss Cameron has favoured me with the following notes :—

'In the infant department physical exercises are most beneficial to young children as a relaxation from brain work and as a means of brightening them up and securing good discipline.

'I base my drill upon Aberdeen Physical Training College methods, combined with the grace and easy motion of the Swedish system.

'Varied marching and easy motions with musical accompaniment in free gymnastics, Kindergarten games, and occupations form the infant work.

'Bar-bells, dumb-bells, Mrs Hughes' garland drill, hoops, exercises in free gymnastics form the work of Standard I.

'Physical training is sadly hampered in many schools by—

(1) Desk accommodation absorbing five-sixths of floor space.

(2) By the individual taste of the teacher.

(3) By lack of apparatus.

'A grant might be given, and then every playground would be well equipped with swings, parallel bars, etc.'

Owing to the alterations already referred to, we had no continuation classes last year.

I am a little doubtful of the popularity of physical exercises as part of the curriculum of a continuation school unless some special inducement, such as the formation of a shooting club in connection with the class, be held out to pupils. This club, which could practise with air-guns in the classroom, just as recruits at present do in the barrack-rooms, would, I am convinced, encourage many to join the class, and, what is of more importance, continue membership during the prescribed number of weeks, provided there were regular competitions. It might also prove a good feeder for the Volunteer corps.

Continuation
classes :
special
inducement.

Mr R. W.
Carson.
18 Sept. '02.

When I was a Volunteer I used to take a great interest in the men's shooting. I always remember the remark one of our crack shots—a coal-miner—made to me when talking about target practice. 'Oh,' said he, 'it's ocht that's in't,' meaning thereby that if it were not for the shooting he and many others would not be Volunteers.

Teachers :
Saturday
classes :
difficulties.

In connection with the Saturday classes for teachers, I would like to make a suggestion.

Some teachers, well up in years, have, since last October up to the 24th May, regularly attended a class for drill every Saturday at Dumfries Academy. One teacher, aged sixty-two years, had to leave home at 7.30 a.m. and drive about five miles in a public conveyance to catch his train, arriving in Dumfries some time before the class assembled, but that was the only way he could get a suitable railway connection. Being a member of the class, I had often a talk with him and several others, who had also long distances to come, on this subject, and the conclusion we arrived at was, that for teachers distant from any centre it would be far better for Government to make arrangements whereby they could, wherever practicable, be attached to the nearest Volunteer company and get practice in drill along with the recruits.

School
exhibitions.

I find that periodical school exhibitions are of great use, not only in stimulating pupils to do their best, but also in getting their parents to take an interest in this side of the school work.

When we began these exhibitions they were pooh-pooed by many, but all that is changed now, and at every exhibition we can count upon a crowded house. Indirectly we teachers derive a considerable benefit from these exhibitions, as we are able to net a good sum of money, which we are allowed by the Board to devote to some school purpose.

By the last exhibition we drew £20, which enabled us to establish a school library. Our next exhibition, which we expect to take place about Christmas, will, I hope, give us funds to buy a good piano for our central hall.

Physical
exercises :
beneficial.

11,293. You find that in all classes in your school physical exercises are very beneficial?—Yes.

11,294. Your lady teacher reports very favourably upon them as regards the infants?—Yes.

11,295. It brightens them up and secures good discipline?—Yes.

11,296. In fact it is better for little children sometimes than too much mental work?—Yes.

11,297. You find that physical training is hampered in many schools by the desk accommodation?—Yes.

Pla. ground.

11,298. You would advocate some system whereby the desks should be movable?—Yes, or there should be some outside place for exercise. We have a playground extending to about two acres in which we can drill our children, and we find that to be much better.

11,299. It is far better?—Yes, both for the children and for us.

11,300. You have no difficulty in retaining their attention outside?—No.

11,301. You say in your statement that physical training is sometimes hampered by the individual taste of the teachers?—That is Miss Cameron's statement: she said that some teachers had little bits of fads. An inspector of schools was talking over the matter with me, and he spoke about the physical training in one school where the teacher just taught his scholars to salute, and he asked where the physical training came in.

System :
should be
formulated.

11,302. You are in favour of some system being laid down by the Education Department?—Yes. The model scheme is a capital one.

11,303. It should be adhered to as far as possible?—That is what I do. I don't know anything better.

11,304. You are rather doubtful about physical

exercises in the continuation school?—Yes, the lads have been working all day, and unless you give them some inducement they won't come. We have had experience of air-gun competitions in bazaars, and we have had no difficulty in raising £20 a week, charging sixpence for five shots.

11,305. You have raised £20 through the shooting alone?—Yes, we have done it several times. One man will give a prize of perhaps the value of 10s., another 5s., and another 2s. 6d., and then we have a competition with the air-gun at a range of about thirty feet, charging sixpence for five shots. We have secured over £20 on three or four occasions.

11,306. In addition to that you give exhibitions of physical training?—Yes.

11,307. Those exhibitions are very popular with the parents?—Yes, I have never heard of any objection to them.

11,308. You also drew £20 by one of those exhibitions?—Yes, we have done it twice.

11,309. You seem to be in a thriving condition?—Yes.

11,310. The parents take an interest in the physical training of their children?—Yes.

11,311. There is a suggestion made by Miss Cameron that some arrangement should be made for the travelling expenses of teachers being on a more liberal scale?—That is my statement.

Teachers
training

11,312. You would like some system by which the teacher should be trained in physical training by the nearest volunteer company?—Yes.

11,313. You think that that would be an inexpensive system?—Yes, and it would be more effective and better for many who are up a bit.

11,314. By Mr Fergusson.—What sort of inspection, if any, would you like of your physical work. You say that teachers should teach the children. Would you not like a trained expert to come round now and again and see how you are getting on?—Yes, I meant to suggest that. If you got a man to go round a certain district I would prefer him to be a teacher himself, so that he might get on with the other teachers and see how they are doing, and give hints. That, I think, would be of great service.

Expert
inspector

11,315. Have you ever found any need of medical inspection? Would you like that there should be any form of medical inspection if physical training is to be more developed?—Ninety per cent. or more of the children are thoroughly healthy.

Medical
examinat

11,316. But might there not be defects that you cannot see, something wrong with the heart or something of that sort which might be put right, and which, if not attended to, might injure the child very much?—Yes. Of course I would like them to be examined, so that I might be prevented from hurting them through any physical drill.

11,317. How much time would you like to give to physical training?—I think fifteen minutes in the forenoon and fifteen minutes in the afternoon—half an hour per day split up into two periods.

Time: hal
hour per
diem.

11,318. By Sir Henry Craik.—You speak of the class that was held for teachers at Dumfries Academy. On the whole, was that successful?—Yes.

Teachers'
class.

11,319. You think, however, that it would be more convenient if the instruction could be obtained at the nearest volunteer company?—Yes.

11,320. Has any proposal of that sort been formulated?—No. We have only had a talk about it.

11,321. If any scheme could be put before us which could be brought within the words of the Article, then the Department would readily consider it?—It would be for the County Council to do so.

11,322. Yes, and if the Article were made to cover the instruction at a volunteer centre, I don't see anything that would prevent it?—I think it would be very good for lots of men.

The witness withdrew

Mr D. F. LOWE, M.A., LL.D., examined.

Mr D. F. Lowe, LL.D.
18 Sept. '02.

11,323. *By the Hon. Thomas Cochrane.*—You are headmaster of George Heriot's School, Edinburgh?—Yes.

11,324. Perhaps you will kindly read your statement?

I am a Master of Arts, as well as an honorary Doctor of Laws of Edinburgh University. I held assistant masterships in various schools, and in 1873 became Rector of Bathgate Academy, where I remained for seven years. In 1880 I was appointed House Governor and Headmaster of Heriot's Hospital, Edinburgh, and again in 1886, under the amended scheme for the administration of Heriot's Trust, when the institution was opened as a day school for fee-paying pupils, I received the appointment of Headmaster of the school.

George Heriot's School is a secondary school, essentially modern in its organisation, with fully-equipped science and technical sides.

The scholars are drawn chiefly from families of the lower middle and skilled artisan classes, and while a large majority are Edinburgh children, there are also a considerable number of pupils who come daily from towns and villages in the neighbourhood of the city.

The number on the roll averages about 950, and the ages of the boys range from about nine to seventeen.

The school stands in an open space of eight and three-quarter acres, and about one-third of this is used as playground, the remainder being laid out as lawn and shrubberies.

A new recreation field of over ten acres, and situated at Goldenacre, about a mile and a half from the school, has been set apart by the Governors of Heriot's Trust for the use of present and former pupils, for cricket, football, and school games. It occupies part of the grounds of the Trust, and has taken the place of a smaller and less convenient field. The Governors have also erected at the field a handsome pavilion for the use of the players, costing over £2000.

A well-equipped gymnasium and an excellent swimming-bath form part of the school buildings.

Full provision has, therefore, been made for the games and physical training of the boys, and they have every inducement to take advantage of the facilities offered them.

The games are organised and supervised by members of the junior staff of the school, under the direction of the headmaster. They take that supervision in turns.

Drill and gymnastics are taught to all the pupils, except those who are excused on the score of health, etc., and the instructor in these subjects devotes his whole time to the work of the school. That is to say, the instructor is a member of the regular school staff. He attends all day, and gives the whole of the day to the school work. The present teacher is Sergeant-Instructor Dalby (of the Army Gymnastic Staff, Aldershot), and his course of instruction includes—free gymnastics, dumb-bell and bar-bell exercises, marching, and squad drill. Applied gymnastics are also taught to the older boys.

Jumping, running, etc., in the playground are freely indulged in by the boys at all school intervals.

There are no school runs or paper-chases.

Manual training or handicraft forms part of the regular work of the school in its middle and upper divisions. We have both wood and iron workshops. Under a scheme the Trust obtained in 1885 we had provision for these.

Voice training receives due attention from the music-master.

We have no cadet corps, and it is difficult to see, in face of the work already occupying the school day, how time could be found for training. Where boys are resident it is quite a different matter. That difficulty as to time is the one serious difficulty all through one's endeavours to do the best one can for this subject. In the old days of Heriot's Hospital, before it became

an open school, and when the boys were all in residence, they received military drill, and a number of the older boys were trained to use the carbine. The instructor was an old military man, and the training was entirely on military lines. That was done to find occupation for those boys who were in the building all day long.

Some years ago, when an inter-scholastic event had a place in the programme of the Edinburgh Volunteer shooting competitions, a team of boys used to be sent from the school, but great difficulty was experienced here, and, I believe, in other day schools also, in finding time for practice. We had Morris tube practice. We got a small target fixed up at the end of one of our play-sheds, but it was a matter for the boys to carry out in their own time—after the work of the school was over.

There is no Fire Brigade corps in the school, nor is anything done in connection with First Aid or Ambulance work.

Physical training and swimming have one hour each per week given to them in all the classes, except those of the upper division of the school. Time for training, etc.

The lower and middle division boys are all taken in ordinary school hours, but those of the upper division take their gymnastics before the commencement of the ordinary school day, and their swimming on Saturday forenoons.

With reference to the relative values of free and applied gymnastics, I believe that the former is better suited for young boys, and that the latter should not be introduced as part of the training till a boy has reached fourteen or thereby. Up to fourteen, free gymnastics: after fourteen, applied gymnastics.

Swimming is found to be an excellent training at all ages. We have very few requests to be excused from taking swimming. Sometimes if a boy has a tendency to taking colds, or there is some other health reason, he is excused, but as a rule practically all the boys take swimming. Swimming.

Comparatively few seek to be excused either from gymnastics or swimming.

I consider that the results of physical training cannot be otherwise than beneficial, if the course of work in these subjects is carefully arranged and conducted. Training in discipline cannot but be of the very greatest value to the boys. It may be taken that discipline is a question of morals, and anything that contributes to the cultivation of obedience to authority must make for the strengthening of the moral side of a pupil's nature, just as also it cannot but aid in training and developing his intellectual powers. Benefits.

It is desirable that to a certain extent there should be uniformity of system, especially in the earlier stages, but in more advanced work a teacher may very well be left to develop his course according to his own preferences. I don't think it is possible to have complete uniformity of system. A great deal must be left to the working of any system by the instructor himself. To some small extent you can have certain uniform exercises, and I think that would be desirable, but you must give a free hand to the instructor. System: must be considerable latitude.

In circumstances where it is possible, I believe that a short daily exercise would prove of most advantage. In view, however, of general time-table requirements, this is an almost impossible arrangement. One could do it possibly in the youngest class of all. In practice it is difficult to find more than two hours weekly for this branch of work, even in the lower classes of a secondary day school. Daily when possible.

My preference is for outdoor rather than indoor training. I believe that as much as possible should be done in the playground. Our playground is quite satisfactory and sufficient for that purpose. Outdoor and indoor trainings.

In my opinion the school period of a boy's life is too early for the introduction of military drill as taught to recruits in the army. Of course, boys at school may very well be taught squad drill and the simpler parts of military drill, but as boys used to be taught in Military drill.

Mr D. F. Lorne, LL.D. schools, military drill formed much too large a part of their work.

18 Sept. '02. Every incentive should be given to lads when they have left school to become Volunteers. I was a Volunteer myself, and I should like to see volunteering receive the assistance that it deserves. I think boys should be encouraged in every way to join, but I doubt whether a precocious military training in school is the best way to induce them to enter the ranks of volunteer corps. Any drill should be of a kind to vary and supplement games and physical training—not to supersede these.

I know the change that has taken place in military drill, making it more attractive. I think that scouting would be very attractive to boys, and I would modify my opinion to a certain extent in that direction. What I object to is the very rigid form of squad drill and mechanical exercise.

So far as my knowledge and experience go, I believe free gymnastics to be the best kind of physical training for school purposes.

Manual training is given in the school workshops, where from two to four hours a week are devoted to this subject, according to the ages and advancement of the pupils.

In my opinion physical training, games, etc., play a very important part in school life, and, when not overdone (as the tendency rather is, I think, in these days) they cannot fail to be of the greatest value in securing for those engaging in them sound health both of body and mind. I think that is the aim we ought to have in view in dealing with this whole matter.

The organisation and supervision of the games, etc., are carefully considered and conducted. The teachers are not all equally interested in games, but a number of them are good cricketers and football players, and take an active interest in the work of the play-fields. I should say, in connection with the boys' cricket and football, that we have clubs of former pupils, both cricket and football, and we have also a club connected with the school F.P. golfers. I merely mention the last to show that an interest is taken in all outdoor games as far as possible.

I should add that the resident groundsman at the Recreation Field, who formerly played in English County cricket, instructs the boys.

None of the pupils, with the exception of the Foundationers, are examined officially by a medical man, and no register is kept showing the height, weight, chest-girth, spirometry, biceps-girth, and general physical development of the pupils. I think there has been a good deal said about the effect of physical training, while the facts upon which the statements are based have not been sufficiently ascertained. We want to know more definitely what really are the effects, and I should say that I think there ought to be a medical examination of pupils from time to time, either quarterly or at the beginning and end of the session. A register might also be kept showing the effects of physical training in this way by taking the measurements referred to.

I have no opinion to offer regarding the value of continuation classes, but it seems to me that if the work of these is to consist of applied gymnastics, only small numbers could avail themselves of even extended opportunities. If military drill be the kind of training intended to be carried on, I have already stated my preference for postponing this till it can be given as part of the work of a volunteer corps.

11,325. Referring to what you said about keeping a register showing the effects of physical training by taking certain measurements, would you take them from every school, or would you select schools in different parts of the country as typical?—I know that it would be a matter of very considerable difficulty to take every school. In our school we have a medical officer who is responsible for looking after the health of the foundationers. The candidates are examined when they come up, and again before they enter the school and they may be seen by the medical officer from time to time during the period they remain in school. I am sure we could arrange for some kind of examina-

tions by the medical man. The measurement might be done by the instructor, and he could quite well keep the register. Only a little additional work would be necessary to meet the difficulty.

11,326. It would be still more important from a statistical point of view if this were carried out by someone really qualified to take the measurements?—Yes.

11,327. I have had experience of recruits' measurements being taken, and I know that they are very apt to vary unless taken by a skilled man. I suppose you agree with me?—Yes.

11,328. It is difficult to take measurements that you can rely on for statistics?—Yes.

Then with regard to continuation classes, I think that they would probably be likely to be more successful if teachers would take an active interest in the matter, and urge their pupils, before the time for leaving school, to continue after they have left to take advantage of all opportunities for further physical training. There is no doubt a difficulty in regard to time. Many boys after leaving school attend evening classes—say in the Heriot-Watt College and elsewhere—and they have little leisure for physical training after their day's work is done.

11,329. You think, on the whole, judging from your experience, that many of the boys would like physical training?—Yes, I think we could do more if the proper spirit were fostered among the boys, and by the teachers suggesting the desirability of carrying on that kind of work.

11,330. *By Sir Henry Craik.*—You find certain difficulties in carrying on this physical work even in a school like your own?—What kind of difficulties do you refer to?

11,331. There is the difficulty of time?—Certainly, the difficulty of time is a very great one.

11,332. Of course your pupils are those who have the privilege of attending a well-endowed school with every advantage?—That is so.

11,333. You have a recreation field of ten acres, an attendant in charge of it, and a handsome pavilion?—Yes, these have been provided from the funds of the Trust.

11,334. Such an expense could hardly be faced in a State-aided school; the difficulties would be greater?—Yes.

11,335. You spoke of the difficulty in regard to time. You have had a large experience, extending over a number of years, in Scottish education: do you think that the mental pressure in the schools has increased?—I do think that we have more demands made on us now in the upper divisions of the schools than we used to have. The work is heavier, and every half-hour is very precious.

11,336. That is because the public demands are larger?—That may be.

11,337. Do you think that increased pressure has led to any depreciation in the physical training? One or two things that you said rather indicated that as being the experience in Heriot School. You had a cadet corps?—It was not a cadet corps, but the boys did have military training, and a number of the older boys were taught the ordinary carbine drill, but that was at the time when the boys lived in the Hospital. We had no Leaving Certificates in those days, nor inspections such as we have now, and the pressure was a very different kind of pressure. A good deal of that kind of thing was done in order to give variety to the boys' life. The boys' school day lasted from nine to four o'clock, and then they lived in the Hospital. They had spare time in the early evening, before preparation of lessons and so on.

11,338. You have had experience of both a residential school and a day school?—Yes.

11,339. Do you think that the one is better than the other in view of physical training?—I think that in the one case your opportunities are much greater. If your boys are resident you can take any spare time they may have, and use it for those purposes of which we are speaking.

Mr D. F. Lorne, LL.D.
18 Sept. '02.

Continuation classes.

Time.

Mental pressure: more demands.

Opportunities in schools.

Drill supplementary to games and other training.

Manual training.

Training: if all round, beneficial.

Games.

Medical inspection necessary.

Register should be kept.

Measurements.

Medical examination.

11,340. They had not so many opportunities in the older days as they have now?—We had no swimming bath.

11,340A. And you had no recreation field of ten acres?—No, but we had the ground all round the Hospital as playground, on which the boys carried on their cricket and football. There were only 180 boys, so that they had plenty of room.

11,341. There was none of the lawn and shrubberies?—The lawn was used by the boys for play purposes.

11,342. *By the Hon. Thomas Cochrane.*—What system of physical training does your instructor carry out; does he adopt any special system?—No. We know about Cruden's system, Chesterton's system, and the Aldershot system. Our present instructor was at Aldershot, and is fully qualified. He is developing things on his own line, and in an exceedingly reasonable and sensible sort of way.

11,343. It will likely be based on the Aldershot system?—No; while he sees many excellences there, he does not think it the best system for boys.

11,344. Have you considered the advantage of drill in enforcing habits of discipline even in boys of school age?—I think the tendency will be to improve the discipline, but I don't know that there is any great necessity. Speaking for myself, we don't find it to be a necessity, but I have no doubt that the result will be as you say.

11,345. If it were possible to re-arrange your timetable, so as to give a little time to drill, it would be very advantageous to the pupils?—They all get drill of one kind or another. The senior boys come to the gymnasium before the ordinary school begins, and on Saturdays they go to the swimming bath. They go quite willingly on the Saturday forenoon from nine till eleven or twelve. Some of the boys who don't take swimming go to the cricket field.

11,346. You have a certain amount of drill?—Yes.

11,347. Do you think that it would be to the advantage of the pupils if the curriculum were curtailed so as to give more time for physical training?—We must consider what the Scotch Education Department has to say in regard to that. We have so many demands on us that I feel it would be almost impossible to give more time.

11,348. *By Sir Henry Craik.*—But what do we ask? I think the pressure we bring on the schools is rather against your presenting candidates for leaving certificates. We have put a restriction on the number of subjects to be taken up?—The Department is the *fons et origo*. We naturally take as many subjects as we may.

11,349. Is it not the case that we have had to decline candidates for more than a certain amount of subjects?—Yes, but I know that it takes us all our time to prepare for the subjects in which we are permitted to present pupils.

11,350. *By Mr Fergusson.*—We have been told by some people that they find that by increasing the time devoted to physical training they no doubt diminish the time devoted to book learning, but the children are so much improved that they gain even in the less time that they have for book learning. Do you believe

that?—I believe that it would be a good thing if we could distribute the time over every day of the week. As it is, in the lower division of the school we give two hours, an hour to swimming and an hour to physical training.

11,351. If that theory be correct, then you need not be so pressed. Some people say that if you give more physical training, the children in five hours will learn the same amount as they used to learn in six hours?—It is not a question of arithmetic; you cannot work it in that way. I think that, with the two hours, we are giving a fair amount of time.

11,352. In schools such as yours you are devoting sufficient attention to the subjects?—Yes, I think that nothing can be laid to our door in the way of neglecting these subjects, for which we have done a very great deal. Our governors have been so impressed by their value that we now possess that excellent playground which I have mentioned. One would expect that where a body of managers could make a good deal of money by the feuing of such a piece of ground they would have a difficulty about giving us so much, but, as a matter of fact, they have given it, and they gave it readily.

11,353. That only refers to schools such as yours: it does not touch the Board Schools?—That is so.

11,354. *By Mr Shaw Stewart.*—Several able witnesses have told us that physical training is quite as important as mental training. Do you think that two hours a week physical exercise is sufficient time for a lad to make the best of himself in body and mind, putting aside the exigencies of the time-table?—I don't think the physical training is entirely confined to the two hours that we give; a boy has training of a kind in all the intervals between the classes, and then when he leaves school he goes to the cricket field, as many of them do.

11,355. But not all the boys?—No, you never find all the boys taking up cricket and football.

11,356. Is it not those boys that require more regulated physical training?—That is a question that I can hardly answer. It may or may not be so. Naturally a boy of high spirits, who is strong and healthy, would at once go to the cricket field, whereas a boy in a somewhat delicate state of health would avoid such a thing. The difficulty is to know what to do with such a boy. Of course the day school has a limited period for the day's work, from nine to three or four as the case may be.

11,357. You object to a uniform system. You were not considering Board Schools then?—I am speaking entirely from the point of view of my own school. I cannot speak as to the others at all.

11,358. *By Sir Henry Craik.*—You don't have any compulsory playing of games?—No. Games not compulsory.

11,359. You are aware that the compulsory playing of games obtains in many public schools?—Probably in schools where the boys are resident.

11,360. It is done in Edinburgh?—I know one school in Edinburgh where it is done, but I believe that the feeling of parents is opposed to that in a number of cases.

The witness withdrew.

Mr WILLIAM BEATTIE, examined.

11,361. *By the Hon. Thomas Cochrane.*—You are headmaster of Balquhiddy Public School?—Yes.

11,362. You have handed in a statement of your intended evidence?—Yes.

I am a trained, certificated master (York, 1883-4), and have been for two years in my present position. Prior to my appointment here I was for ten years first assistant master in Jedburgh Grammar School. I may also state that I have been a successful teacher of music and organist.

Since boyhood I have taken a great part in athletic sports, and have been captain of golf, cricket, cycling, and football clubs. Since my coming here a successful

effort has been made to keep children at school two years beyond the Merit Certificate stage. Recently H.M. Inspector offered to approve of this school having an advanced department with higher grants under Art. 21, but the School Board cannot at present see their way to equip the school for higher education. This school has 50 pupils on roll, with an average attendance of 45.

The youngest is five and the oldest sixteen years of age.

The parents are stock farmers, crofters of a good Parents class, and estate servants, e.g., gamekeepers, gardeners, foresters, carters, joiners, and blacksmith. Families Food.

Mr D. F. Lowe, LL.D.
18 Sept. '02.

Mr W. Beattie.

Mr W. Beattie. 18 Sept. '02.	are, as a rule, large, and the children are well and substantially fed. They get porridge and milk twice daily. I have not a single ill-fed child in school.	and many afterwards go to domestic service or become dressmakers.	Mr W. Beattie. 18 Sept. '02.
	No meals are provided by the School Board or other authority. Fully three-fourths of the children bring their midday lunch to school. Every one has milk (heated at the school fire in winter), which, along with bread and cheese or a sandwich, forms this meal. Stronger and healthier-looking children it would be difficult to find. Only one child in school could be considered of delicate constitution.	There is little illness—mostly colds—at school. As registrar of births, etc., for the parish, I may mention that in this district people generally live to a good old age. The climate is healthy, despite the heavy rainfall of 75·5 inches per annum.	
Clothing.	The clothing is quite satisfactory, and neatly repaired when necessary. In summer most of the children go barefooted. The parents say this saves the boots for winter.	No regular medical examination of the scholars takes place, and in this district is unnecessary.	Medical examination unnecessary day school
	Most of the children reside, on an average, about 1 $\frac{3}{4}$ miles from school. A few are distant 3 and 4, whilst two live 4 $\frac{1}{2}$ miles away.	I certainly do think that physical training should be made compulsory in all day schools. Great care, however, should be taken with delicate children; for physical exercises, whilst they improve the physique and are highly beneficial to almost all, are found to be very fatiguing to a few. The teacher will require to be observant of the constitutions and state of health of his scholars.	
	Five ride bicycles daily to school, and I am encouraging this means of locomotion.	Though regular physical training would undoubtedly be beneficial for youths from fourteen to eighteen years of age, I do not think the country is yet in favour of its being made compulsory. It ought not to be forgotten that the love of sport, inherited from the Normans, is as strong, if not stronger, than ever. Though in the city there is a certain rowdy element connected with football and racing, yet in the smaller towns and throughout the country generally a strong, manly spirit prevails in all branches of sport. In my opinion there never were finer athletes than now amongst lads from fourteen to eighteen years of age. The lads to be benefited most of all by compulsory physical training are those who loaf about street corners and usually drift into public-houses at seventeen or eighteen.	Compulsio for those fourteen to eighteen undesirable as yet.
	Whilst walking a good distance to and from school materially benefits the health of the scholars, it does nothing, as far as I can see, to improve awkward and clumsy gait, which is too often the result of long fatiguing walks.	There is doubt, too, as to whether it would be possible to bring often together for training youths from outlying districts.	
Training : advantages.	Here physical training comes in, and is a valuable corrective. Soon beneficial results begin to show themselves in improved carriage and greater activity of body and mind. To my mind physical exercises with a sprightly and tasteful musical accompaniment form a most delightful interlude in a hard day's work.	Male teachers can receive military and physical training by joining the local Volunteer corps. Both sexes, if living remote from the town or not, may obtain adequate instruction in physical exercises by attending classes such as those conducted by Colonel Cruden, Aberdeen. Surely, too, competent drill instructors could be found in the provinces willing to carry on physical training classes for teachers.	Teachers' training.
	The system of physical training in use in this school is based upon that of Colonel Cruden, Aberdeen. As an ex-Volunteer I am able to give in addition a good deal of company drill of an easy nature, e.g., company formations, turnings, and marching. During stormy weather musical drill is given inside, but the floor space is limited for this delightful exercise. Hoops, bar-bells, and dumb-bells are in use. This system was begun after my arrival. The boys have drill for three-quarters and the girls for half an hour per week. Hitherto I have only been able to give this amount of drill, but hope ere long to have three half-hour lessons per week for both boys and girls. However, I try to make up for this deficiency by looking well after the games of the children. Football, cricket, etc., are regularly played in season, and a good football is always kept in school. The girls play at various games, and in their case also balls and ropes are kept for use. My own love for games and sports was largely acquired at St John's Schools, Jedburgh, where I was a scholar and pupil teacher. There our teacher took a great interest in the various sports, and matches were regularly played against other schools and clubs.	In one landward Board I know of, a peripatetic drill instructor (ex-army man) goes round the various schools in turn. He is compulsory officer as well. Could he not instruct the teachers if necessary?	
Music.		The time of tuition per day or week would largely depend upon the aptitude of the teacher. Again, some splendid text-books (e.g., Cruden's, Oxley's) may be studied, and twenty minutes' interested and vigorous exercise in the morning should make a smart teacher proficient in drill in a comparatively short time.	
Cruden's system.		There is no loafing whatever in our district. A competent instructor of continuation classes would, I have no doubt, make physical training popular.	
Musical drill.		There can be no doubt that a well-equipped gymnasium and competent instructor would attract boys from fourteen to eighteen years of age. In the second place, technical classes suitable to the industries of the locality ought to, and generally do, draw well. In rural districts, where agricultural pursuits are engaged in, it is not always the case that the teaching of the science of agriculture attracts the youths. A general but attractive scheme of work and personally popular teacher succeed often best of all.	Gymnasium for those fourteen to eighteen.
Time.		Music and dancing are attractive subjects. (Here delightful dancing is to be seen.) The former is, like physical exercises and military drill, only paid for at the lowest rate of 2s. 6d. per pupil per hour per week.	
Games.		The latter subject is not recognised at all under the Code.	
Manners.	Though the games here are not organised, yet the boys choose a football and cricket captain. I am particularly delighted with the total absence of swearing or vulgarity amongst the children. They play with a brightness and zest truly gratifying.	11,363. Is there anything you would like to add to the statement that you have just made?—I have noted one or two things that I thought of later on in regard to the medical examination of scholars. I have stated that no regular examination takes place. I may say, on second thoughts, that it might be better to have them examined. Although I am personally known to all the parents, who are not slow to tell me of any	Medical examination desirable.
Accommodation (inside) inadequate.	I regret that our inside accommodation for physical training is inadequate. The space outside is fairly good, but we could do with more room for cricket and football.		
	The men and youth of this district are very capable shots. I have seen some of my scholars competing in glass-ball competitions with surprising success. There is a glass-ball shooting club here, which holds two meetings annually. The lads have a good many opportunities for shooting.		
Drill.	H.M. Inspector of Schools has commented very favourably on our drill. The parents are quite pleased, they tell me, with 'the drill'; the physical exercises done during the day are often repeated in the kitchen at night.		
Continuation classes : no physical work.	Continuation classes were last held here three years ago, but no physical training was given. On leaving the day school most of the lads assist their parents on the farms. A few find employment in banks and law offices, whilst others become estate servants. The girls assist at home, as a rule, for a time,		

defects of hearing or sight, at the same time the doctor may be able better to find out those defects by a regular examination.

11,364. Especially in eyesight?—Yes, and perhaps with regard to nervous diseases such as St Vitus' Dance, which is a form of disease that we sometimes meet.

11,365. Teeth are very much neglected?—Yes; I have a case of a boy who has suffered the whole of this week from toothache. I encourage the care of the teeth by example and precept. I never have toothache myself.

11,366. You think that all the lads in your district take a great interest in sports after leaving school?—Yes.

11,367. They would hardly require any compulsion to attend classes if they were made interesting?—In our district the great majority of the pupils would have a good long distance to go, and, being on the hills all day, they would perhaps find it too fatiguing to come down to the school at night; they could hardly be expected to come. They have an intense fondness for shooting. I have already mentioned the surprising success of school boys who remain with me till sixteen, and who shoot very often at glass balls.

11,368. Do they shoot at a rifle range also?—No, we have no range. They shoot rabbits and other game, and they have lots of opportunities for handling the rifle. Their sight also is wonderfully good. I often go out with them with gamekeepers and young farmers, and they detect objects on the hills long before I can detect them.

11,369. They have good training in eyesight?—Yes.

11,370. *By Sir Henry Craik.*—You have known other parts of the country?—Yes.

11,371. You have told us that you do not have a single ill-fed child, that only one child could be considered delicate, that clothing is satisfactory, that there is little illness, and that otherwise the school is in a very excellent condition. Is that typical of the country schools in Scotland?—I think myself that my school is rather better in the way of health than a great many ordinary schools that I have seen in the South of Scotland.

11,372. There is no loafing whatever in your district?—No.

11,373. Your attention was attracted to this subject of physical instruction because you were under a teacher who was specially interested in the subject?—Yes.

11,374. You have yourself repeated this in your own school, and you think with good results?—Yes.

11,375. You have been in England also?—Yes. I was trained in York.

11,376. How does the physical condition of the boys you have to deal with in Scotland compare with

the condition of the boys in England?—I think the boys in Scotland are, on the whole, more heavily built than in England. I don't say that the English boys are not so smart physically, but the Scotch boy is bigger and burlier.

11,377. Do you think that in England they receive as much physical training as they receive at Balquhider?—I could not speak with authority on that point, because I did not remain in England after leaving College. I can speak about the physical training that the students receive in the College at York.

11,378. Was that thorough?—It was very thorough in the way of sport.

12,379. But in drill?—We were all compelled to be Volunteers, and not only that, but we were compelled to take, if possible, certificates of proficiency in the teaching of military drill.

11,380. Do you know the training colleges in Scotland?—Yes.

21,381. Are they as good as the English ones?—No; in England we all lived together.

11,382. The teachers turned out by the York College had more opportunities for physical training than those in the colleges in Scotland?—Yes, we had a rowing club, fives club, football and cricket clubs, and our sports were carried on under the most advantageous conditions.

11,383. *By Sir Thomas Glen Coats.*—You spoke about the boys shooting glass balls. What is your opinion about training the hand and eye as regards shooting with a shot gun or shooting at a range?—I have had experience of both, and I must say that it is easier to shoot at the range than it is to shoot with the sporting rifle; that is to say, at living objects.

11,384. Which would you prefer for training the hand and eye?—Certainly shooting with the rifle.

11,385. At a range?—No.

11,386. Shooting at moving objects?—Yes, with a sporting gun.

11,387. When you speak of shooting at glass balls, what do you mean they are shooting with?—A sporting gun with small shot.

11,388. *By Mr Fergusson.*—You do not consider walking as being a sufficient substitute for physical exercises?—No.

11,389. Do you teach dancing?—No.

11,390. You refer to dancing as being an attractive subject?—The people of Balquhider are naturally dancers. I may say that before I went to Balquhider I heard of teachers going round the district and holding very large classes there. The people all danced beautifully.

11,391. There would be no objection on the part of parents to teaching dancing?—No.

11,392. It is very good exercise?—It is the very best. The dancing is surprisingly fine in Balquhider.

The witness withdrew.

Mr M. PATERSON, B.A., LL.D., examined.

11,393. *By the Chairman.*—You are Rector of the United Free Church Training College, Edinburgh?—Yes.

11,394. You have prepared a statement which we shall be glad to hear you read.

1. (a) *School and University training, (b) former experience, and (c) time in present position.*

(a) Educated in the Royal High School of Edinburgh—period of attendance six years; and in the University of Edinburgh—period of attendance four years.

(b) Was for seven years in Blair Lodge School, Polmont, first as classical master, later, colleague in the principalship.

(c) In my present position since the beginning of 1864.

2. *Average number of Students.*

The college is sanctioned for 220 students, and that number is in attendance. Of these, about 90 are men, 130 are women. The proportion varies.

3. (a) *The ages of students, (b) parentage, (c) future careers:*—

(a) No student is admissible who is under eighteen years of age. The women are usually older than the men. Their average age is twenty years.

(b) The women are of a social grade slightly higher than the men. A good many of the latter are sons of working men and small shopkeepers. Some belong to the lower middle class. A considerable number are sons or daughters of ministers, teachers and others of similar social standing.

(c) All undertake to teach in schools under Government inspection. Some rise to important positions in schools like the Edinburgh High School, the Edinburgh Academy and the Merchant Schools.

4. *Opportunities of physical training:*—

(a) *Regular games.*—The college has clubs for Games, football and cricket respectively.

(1) The clubs and their operations are under the cognisance of the rector, and to a small extent are

Mr W. Beattie.

Games.

Mr M.
Paterson,
B.A., LL.D.
18 Sept. '02.

peculiarly aided from the college funds. The clubs are managed by committees and office-bearers chosen by the students. There is no further supervision.

(2) In the college grounds there is a 'drill square' or playground laid with fine ashes, in which, at the 'ten minutes' hourly intervals, and at other opportunities, a considerable amount of restricted practice of both games is possible.

Matches are played on Saturdays throughout the session.

The managing committee of the college, in answer to a petition from the students, recently authorised the rector to make enquiry for the use of a field in the neighbourhood of the college. He has now been successful. The West Meadows are available for cricket.

The women of the boarding house attached to the college play tennis in the large court in the centre of the college buildings.

Drill.

(b) *Drill*.—Drill is taught to all the students, except those of the third year, by two drill sergeants of high standing, during the whole session in a large court, open on one side. They are taught in four sections, first year men and first year women, second-year men and second-year women. Each section is subdivided and drilled by a separate instructor. Toward the end of the course the divisions are joined and drilled under one instructor, the other instructor, however, being present.

Second-year students drill one another, and this last session, they also drilled small classes of boys and girls under the supervision of the instructor.

The drill sergeants hold the position of sergeant-major of the Queen's Rifle Volunteers and are in touch with the regular forces.

Athletics.

(c) *Athletics*.—Running drill is practised in the ground attached to the college.

Handicrafts.

(d) *Handicrafts*.—Cardboard modelling taught to the men and similar work taught to the women as extension of kindergarten is all that is done.

Voice training.

(e) *Voice training*.—This is prescribed and given in connection both with music and phonetics. At drill the voice is exercised in singing, during certain 'practices.' Breathing exercises are also practised.

Volunteering

(f) *Cadet Corps, Rifle Shooting*.—On this subject I beg to submit a report that has been drawn up by one of our students at my request. 'The Volunteer Movement in Moray House began in June 1900. The students are attached to No. 11 Company of the Queen's Edinburgh, and although there are a number of professional companies, such as University, S.S.C., Bankers, etc., in the Brigade, the Moray House men are already taking their own place. All the recruit drills are put in at the College, where there are excellent facilities for all weathers, in the students' own time, after College hours, under the Sergeant-Major of the Queen's. Over 40 students have become efficient volunteers, and, while a few have resigned on leaving the district, this year's camp at Barry in the 32nd Brigade Field Army was attended by 32 men. Of these, 30 formed the advance party of the Queen's Edinburgh, and were considered a most energetic and capable party for work demanding some intelligence, while their Guard which was mounted for the arrival of the Battalion was complimented by General Sir Archibald Hunter, commanding the Scottish District, as the best guard in the district. While some resign on leaving the district, others leaving this year have signified their intention of attaching themselves for drill to the local corps of the district to which they may be appointed, but retaining their membership of the College corps that they may annually reunite at camp. Indeed a prominent feature of the movement has been the enthusiasm with which camp has been attended for the maximum time. . . . Several intend taking out their commission as soon as their position warrants their doing so.' Replying to the question why more of the students are not joining the volunteers, and what are the drawbacks to the formation of a separate company in Moray

Difficulties.

House, the report says: '1st, the transition stage through which the College, as an educational institution is passing, has rendered many of the students chary of giving up their own time. Until a proportion of the time, at least, can be recognised by the Education Department as forming part of the work of the Training College, and thus let it be seen that something will be done for those who care to sacrifice the remainder of the requisite time . . . there seems no prospect of the movement being set up on the basis suggested, a position it should undoubtedly and would almost certainly occupy. 2nd, The want is felt of an officer specially charged with the Moray House men to work up recruiting. No member of the staff of the College or of the Normal (Practising) School has been found willing to undertake this position, but it is expected that some one of the students themselves will soon be in a situation to warrant his doing so.' In answer to the question what kind of volunteers Moray House students make, it is said, Sir Archibald Hunter considers the three requisites of the good soldier to be (1) ability to march long distances; (2) ability in making and intelligence in taking cover; (3) good shooting. From the athletic disposition of the most of our men and the standard of intelligence which one expects to find in teachers in training, it will be seen that they may be regarded as likely to be well fitted for requisites (1) and (2). With regard to marksmanship, nearly all are good shots, and it may be mentioned that at the annual prize competition of the Queen's Brigade in D Class, open to men of not more than two years' membership, the first place was taken by a Moray House man, and other three prizes, out of a total of twelve.

(g) *Swimming*.—The public baths are at no great distance from the college.

(h) *Gymnastics*.—Free gymnastics as applied to the Gymna army are carried out by the students.

There is no gymnasium attached to the college. The covered room, open on one side, already referred to, serves, to a certain extent, the purposes of a gymnasium.

5. All students have ten minutes of interval at the beginning of each hour, and there is a vacant half hour for the men, who dine in college. These times are diligently used for the games already mentioned. Occasional spare hours also are available for the University men.

Drill is given twice each week, in both the summer and winter session, for half-an-hour at a time. The lessons are all given in ordinary college time.

6. *Advantage taken*.—Practically all the men become members of the College Football Club and engage in play. The membership of the cricket club is not so large, but the game is extremely popular with those who engage in it.

As to drill, all students are drilled, unless exempted by reason of medical certificate. Naturally, perhaps, the exercises are more heartily entered into by the men.

7. *Results and Effects of Physical Training. Physical Results*.—The aim of physical education may be said to be complete development of the body (as the aim of education generally is complete human development), its several parts being brought to their proper size, perfect conformation and highest capacity. Systematic physical exercise, given with sufficient regularity and frequency, during the period of the body's growth, that is in youth, undoubtedly, as MacLaren of Oxford shows, increases the size and power of the involuntary muscles employed, increases the functional capacity of the involuntary muscles, and thereby promotes the health and strength of the whole body by increasing respiration and quickening circulation. Tables like those of MacLaren showing 'the influence of systematised exercise on boys of different conditions of growth and development extending over periods of several years' sufficiently prove this, the measurements having reference to weight, chest, forearm and upper arm, though the demand on the boy's time is no more than one hour per week.

Mr M.
Paterson,
B.A., LL.D.

tage of

Traini
physic
results

As regards training college students the most obvious result is that the carriage is improved, slouching habits are corrected, erectness of bearing is promoted, and a general alertness is produced, all of which count for much in the qualifications of a teacher.

Intellectual.—Physical fitness for exacting intellectual work is maintained in our men partly by the meal supplied daily in the college at a moderate cost, partly by their games, and by the drill exercises they receive.

The interconnection of mind and body is now known to be so close that whatever contributes to increased health and vigour of body reacts powerfully in securing intellectual health and vigour. The mind, it has been said, is at the mercy of the body. The organ through which the mind works and on which it is entirely dependent is subject to the same laws as other bodily organs, so that the wear of brain entailed by mental work must be made good day by day, while at the same time, in the case of the young, provision must be made for additional growth of brain, as of the body as a whole. In order to this, children's games and physical training are important factors.

Moral Results.—In the Paris International Congress on Physical Education, several deputies, admirers of the Ancient Greek gymnastic, attributed to physical education a sovereign, or even an exclusive efficacy, in beautifying and moralising the soul. 'Physical beauty,' it was said, 'is mother of moral beauty.' Mme. Kauffmann, after an exhibition given by Mme. Bergman Österberg's pupils of Swedish gymnastics, thanked the latter for thus forming perfect women, morally as well as physically. In America, too, more than with us, the gait and bearing and habit of body generally of a pupil have come to be regarded as a not unreliable index of moral character. It is an old and interesting idea that a beautiful body and a beautiful soul are usually associated, but as M. Chabot, who reported on the Congress to the French Government, remarks, the merit that belongs to the young ladies trained by Mme. Bergman Österberg cannot all be reasonably attributed to Swedish gymnastics and physical education. Something must be claimed for hereditary qualities, for the moral influences of their homes, and for Mme. Österberg herself. Moral education is a thing of the intelligence and the will.

Now, for the training of the will, it is certain that physical exercises in the case of the young prove quite invaluable. In these exercises submission is demanded to authority, to command, in what is easy and pleasing, and in circumstances where there is no temptation to resist. Such submission continued throughout a school career can scarcely fail to leave as its result a habit of subordination to law and order, and it may be hoped that along with other influences, submission to the highest demands that can be made of a human being may also be rendered. Self-respect and self-reliance too are almost necessarily fostered by physical training. The young man becomes conscious, not only of increase of muscle in arms and limbs, of expansion of chest and all that follows from chest expansion, but also of a dexterity, a serviceableness, a power of endurance which he did not formerly possess. He feels himself to be more of a man than he was, so that like one trained by MacLaren, when asked whether he felt stronger for his practice, he may reply, 'I feel twice the man I did, sir'; and when further asked what he meant by that, said, 'I feel twice the man I did for anything a man can be set to do.'

I agree with Mr Bott of Birmingham that such moral effects as the following may be looked for from physical training, viz.:—That children are taught from their earliest years that there is a right way and a wrong way of doing even the simplest things, e.g. walking, marching, and the like. They learn to know the value of form and style. Habit is formed in easy things of doing what they are told and doing it promptly. Also that each child in a squad being on an equal footing with all the others, learns that no one can gain distinction at the expense of his neighbours, that one child can spoil the efforts of the other

children, that success depends on the complete subordination of every child to the instruction and commands of the instructor.

I might also refer to the development of habits of comradeship, sense of duty, feeling of responsibility and of individual resource, as suggested in Lord Balfour's Circular, dated 3rd February 1900.

8. *A Uniform System.*—In the Paris Congress, already referred to, a resolution was unanimously agreed to that 'the principles of physical education ought to have a universal character, and ought to conform to the laws of physiology, mechanics (animal?) and psychology.' All the teachers of gymnastics present, representing almost every country in Europe, as well as America and Japan, seem to have expressed themselves as prepared to accept the teachings of physiology, anatomy and biological mechanics. If the principles suggested by these sciences were given effect to in a system of physical training, very considerable diversity in the mode of teaching might be recognised, and would not be objectionable.

9. *Amendment and Development.*—What seems most to be required is a clear understanding on the part of school managers and teachers of what is aimed at in physical training, and of its importance, of the means by which the ends it aims at may best be reached, and increased time for accomplishing what is in view.

10. *Just Proportion of Time.*—MacLaren, as the result of long and varied experience, thought that one hour per week was sufficient for the complete system of bodily culture which he recommends. The college drill sergeant, who also drills our practising school children, suggests that two or three half-hours per week are sufficient. Were this time given by competent teachers, during the whole of a child's career at school, probably most of the ends in view would be attained.

11. *Other Physical Education given in the College.*—The drill sergeants explain, with some fulness, the exact bearing of each part of the drill that is given to the students.

The students also have the subject discussed at some length in their class-rooms. Thus, a tolerably full account of the Paris Congress has been given, dealing as it did with the *Philosophy* of the subject, the *Biology*, the *Technique*, the *Pedagogy* and the *Propaganda*. The *rationale* of physical exercise and training is taken up, with a brief account of Ling's system, and the plans adopted by the great School Boards of London, Birmingham, etc., as described in the *Additional Reports of the Education Department*. The diagrams illustrative of these systems are preserved in a scrap book and shown.

12. *Keeping up to Date.*—Some do, chiefly in connection with the Volunteers, but of the majority I am not able to speak.

13. *Medical Examination.*—Besides producing a medical certificate from the family physician, the students until recently were examined by the medical officer of the college at the beginning and end of their course. Since the passing of the Superannuation Act, much more stringent and searching examinations are held at the instance of the Education Department.

14. The value of a register as to height, weight, etc., as used in other countries, has been explained to the students, but no register has yet been instituted.

15. I venture to submit to the Commissioners a short statement sent to me by our drill sergeant, a man of much intelligence and of great experience:—'During the number of years I have been drilling schools, I find that there are no objections on the part of the parents to physical training, but there are many cases in which parents object to the introduction of military drill along with physical training. For my part, I do not think that squad drill is required. The Blue Book on Physical Training, issued by the Education Department for 1900, gives it rather too much of a military tone. The only drill required is that which is sufficient to bring the children into their positions for the various exercises.'

Mr M.
Paterson,
B.A., LL.D.
18 Sept. '02.

Uniform system: general principles, but freedom.

Improvements suggested.

Time: proportion.

Physical education.

Medical examination

Training and military drill; objections to latter.

Mr. M. Paterson, B.A., LL.D.
18 Sept. '02.

System of training: probable effects.

'In fact, I would suggest that the word *drill* be deleted and the word *exercise* be substituted. Then I feel sure the parents would have no objection.' . . . Under the head *Method of Training*, the sergeant says: 'This is what I would call the most serious side of the question of physical training, for if the greatest care is not used, then the after effects may do serious injury to the pupil. The system as carried out in the service now is what I would call a forced training, and is done to convert or develop a growing lad of seventeen years into a young man of twenty-one, and there is not the slightest doubt that it does so after a few months' training. But what effect will this have on the man in after years? To further illustrate this, I may mention that during the late war, I saw about 650 men parade in Edinburgh. They were reservists. Their ages would average from twenty-five to thirty-five. They were a square-shouldered set of men, scarcely a round-shouldered man was to be seen among them. All these men had received physical training in the army. In general appearance they looked youthful enough, but their stature (*sic*) appeared to the eye as though they were men of about forty-five or fifty. From this, one comes to the conclusion that all who receive physical training will become square-shouldered men, also that they will be set men before their time. Whether this is an advantage to the men remains for the medical authorities to decide. . . . Another point I would state is that all gymnastic instructors, as a rule, do not live to a good old age. They generally break down in the prime of life, and I attribute this to the overtaxing of the muscles and tissues of the body in their earlier days, say from their twentieth to thirtieth year. In physical training it is not the intention to make a boy or girl a gymnast, but simply to exercise those parts of the body which would remain dormant by certain occupations and callings.' The sergeant then urges that the morning is the best time for physical exercise.

Uniform system: Paris Congress.

11,395. Perhaps you might elaborate a little more your statement as to a uniform system. Has anything happened since the resolution passed at the Paris Congress?—As a result of that conference there was a complaint that there was not so much agreement as would have been desired among the specialists who should have guided those who were to determine what system of gymnastics was best. It seems as if that ought to be ascertained—what anatomy, physiology, and perhaps psychology teach us is best in order to have the ends of physical training accomplished. We should look to science to teach us that, and then there would be an opportunity of considering how the means available in schools could be applied for that end.

11,396. They contented themselves with a few words and did nothing further?—They had a good deal of discussion on the subject.

11,397. Are you interested yourself in physical training, or do you look at it from an exalted point of view?—It is rather from my position that I take an interest in it.

11,398. But you have considered it?—Yes, always in its bearing on what I have to do with the students.

11,399. Recently have you considered the general question, have you been interested in it?—Yes, I have read and thought a good deal about it.

Training: valuable after school age.

11,400. Have you come to any conclusion as to the benefits it would have on the population at and after school age?—Yes, I quite agree that it would be very valuable indeed after school age if it could be continued. I have a little doubt as to whether at first it could be made compulsory. Perhaps like many other things it might first be voluntary and gradually encouraged, so that all might share in it.

11,401. You recognise that the part of society requiring it more than any other is the one most difficult to get at?—Yes.

Students, female: drill.

11,402. By Mr McCrae.—I think you say that the women are drilled along with the men?—No, they are drilled separately.

11,403. Do they get squad drill?—They don't get

all that the men get. They all take squad drill, physical exercises, free gymnastics, dumb-bell and Indian clubs, but the women don't take the parallel bars.

11,404. The women are drilled by the drill instructor, the same as the men?—Yes.

11,405. You think that your way would be very much clearer if the Education Department recognised physical training as part of your work?—The physical training is recognised as part of our work—in fact, we require to give it.

11,406. You say that the Education Department should recognise the cadet corps?—The idea, I suppose, would be that if men took drill as volunteers they might be exempted so far from the ordinary drill at the Training College.

11,407. By Sir Henry Craik.—There is no cadet corps, of course?—No.

11,408. By Mr McCrae.—Will those women who are trained by your drill instructor train the children in the various schools to which they are afterwards appointed?—Yes.

More systematic training

11,409. You therefore think that a more systematic course of training might be of advantage?—Yes, or perhaps a little more time is all that is required.

11,410. You give one hour a week divided into two?—Yes, in both summer and winter now. Our drill sergeant subjects them all to examination in drill, and the result that he got in July last was, that out of thirty-eight men, fifteen got eighty per cent. for word of command, method of drill and knowledge of drill, ten got seventy per cent., five got from sixty to seventy per cent., and there were eight below sixty per cent. I do not suppose that these eight would be of very much use in teaching drill. Out of the women thirty got eighty per cent. and upwards, seventeen got between seventy and eighty per cent., six got between sixty and seventy per cent., and there were thirteen who got below sixty per cent.

Examined—result

11,411. Do you know what he means when he says that he does not think that squad drill is required?—I cannot say that I do. I got this statement sent to me when I was in the country.

11,412. By Mr Alston.—These pupils of yours get this physical training for their own benefit?—Yes, and also to enable them to give instruction in schools.

11,413. Do you think that the training they get in your establishment is sufficient to make them competent teachers in the schools to which they afterwards go?—I am afraid that I could scarcely say that they would meet the demands that seem to be made now. They meet the demand of the Code as it stands, which says 'Adequate physical training.'

Training insufficient

11,414. Is it not the case that a very large number of these men and women go to such a training college as there is at Aberdeen, for instance Cruden's, which has passed through some three thousand in recent years, and gives certificates when they are proved to be competent to instruct a class. Do you think that your pupils would be competent to take up the same position as those who have gone to a physical training college?—I suspect we don't give enough time, but we have the very best instruction. General Chapman said recently that the instructors we had were the very best that could be got. I do not think that twenty drills a year [since doubled] would be quite sufficient.

11,415. It is not so much the time as the quality of instruction that they get which enables them to teach when going to schools. Do you think that your students after the training they get at your establishment would still require to go to a training college to gain proficiency?—I think *we* are the college for them, and if we had a little more time they would be quite expert.

11,416. Supposing an expert inspected a class which was being instructed by these students sent out by you, would he be sufficiently satisfied with what he saw?—Some of them would do better than others, but I am scarcely able to say anything more about them.

Inspected

11,417.—I am looking to a time that might come when a Government expert might be appointed to

Mr. Paterson, B.A., LL.D.

18 Sept.

examine with great care the work of the male and female teachers in schools?—I understand. Our practising school has always been favourably reported on. In that school there are between eight and nine hundred children, and they require physical drill to satisfy the Code. In 1900 the report stated that the military drill taught by the instructors was of conspicuous excellence and would do credit to a crack corps. I should hope that those students who take an interest in the work might satisfy any inspector.

11,418. We have had evidence that an expert, when he came to examine teachers at their work, even when turned out by a physical training college, found that they were not up to the mark. In speaking of the uniformity of the teaching, you say that it would be desirable to have a complete manual embodying all that was thought necessary and desirable, conforming to the laws of physiology, etc., such a full manual to be used by all schools, and the teachers to be allowed to use portions of it. You think that that would be desirable?—Yes.

11,419. Have you met with many methods of physical training?—I am best acquainted with MacLaren's.

11,420. You are aware that there are several systems published?—Yes.

11,421. Is there a desire that there should be a free hand in connection with these manuals, that the teachers should be able to extract from them the parts that they think applicable to their class?—Yes.

11,422. Your drill sergeant makes statements that seem to come awkwardly from a drill instructor. The attitude he takes in reference to military drill is rather striking. The statement with regard to overtaxing the muscles and tissues does not apply to your school?—No.

11,423. He lays some stress on the omission of the word 'military.' That is a sop thrown for the public who don't approve of military drill?—Yes, I suppose so.

11,424. He would like to have the drill, but he does not want to have the phrase?—I suppose that is so.

11,425. *By Sir Henry Craik.*—I would like to ask you about one subject not touched in your evidence. You have been for thirty-six years in your present position?—Yes, rather more.

11,426. Your experience is almost unequalled in the class of persons who are preparing to be elementary school teachers?—Yes.

11,427. You began before the passing of the Education Act?—Yes.

11,428. Could you tell us what were the numbers in your training college in 1864 and what they are now?—The number was slightly lower in those days. It was just after the introduction of the Revised Code, and while 200 had been the number for several years before, it was reduced to about 160, and it sank even below that.

11,429. What have you now?—We have sanction for 220. I suppose they would have sanctioned more if we could have accommodated them.

11,430. Was the competition for entering the training college in 1864 less or more than it is now?—We find on this side of the country very considerable difficulty in getting men at all.

11,431. Then you think there is more difficulty now in securing suitable teachers than there was in 1864?—It was in 1864 when things were at their worst. Things were looking very black for education at that time, and the number fell very rapidly, but it improved afterwards. I am afraid that the number of men looking forward to the teaching profession is no greater than it was at that time.

11,432. You always draw a much better class of women than of men?—Yes.

11,433. That is the experience of all the training colleges?—Yes.

11,434. Comparing the class and calibre of the men under training thirty or forty years ago with them now, what observations would you make?—Since university privileges have been put within the reach of students,

I think there has been an improvement in the attainments of the men. I am not quite sure whether they come from the same grade of society as they used to come from; I don't think it is quite so high.

11,435. Your experience there agrees with that of most of the other training colleges?—I think so.

11,436. Accompanied by that probable falling off in the social status of the teachers there has been some falling off in their physique?—Perhaps a very little.

11,437. The old parochial teacher was physically a better man than the average school teacher of the present day?—I am afraid that that is quite true. I am sorry sometimes to look over our men, as their appearance is, in some cases, rather disappointing.

11,438. You referred to the Superannuation Act and the more careful examination of candidates which we have been obliged to institute under that Act, and you said that the more careful examination has led to a good many rejections?—It has led to several in our case.

11,439. And a good many besides?—Yes.

11,440. You think, on the whole, that so far as teachers who have charge of the children of Scotland are concerned there is a depreciation from the physical point of view?—Yes, if there is any change it is rather in that direction, but I would not like to put it very strongly.

11,441. That does not refer so much to the women, because, as you said, you always draw a better class of women than of men?—That is so.

11,442. Turning to the elementary schools between 1864 and 1902, we have to deal with a very much larger class of children who are at the lowest end of the social scale than we had in 1864?—Yes.

11,443. There is, therefore, greater need of attention to physical training for those children than there was in 1864?—Yes. Systematic training: more necessity now than in 1864.

11,444. There is more need that it be not left entirely to the children themselves to join in games, but that there should be systematic physical training?—Yes.

11,445. Your experience agrees with my own, that on the one hand the children are more in need of it than they were in 1864, and on the other hand the teachers to give it to them are perhaps on the whole less fitted to give it than they were in 1864?—I would not put it that way in regard to the teachers.

11,446. They are not quite so good physically?—Perhaps not quite.

11,447. They have made it up by being better instructed in a physical system?—Yes. For a number of years there was no physical training given to our students at all.

11,448. But from the point of view both of the children and of the teachers, comparing these two dates, there is an increased necessity for systematic physical training?—Yes.

11,449. *By the Hon. Thomas Cochrane.*—Do you find that physical training, in addition to its moral and physical effect, must also have an influence on manners?—Undoubtedly. I think I have mentioned in regard to our own students, that their slouching habits are corrected and so on. The effect is mentioned in Lord Balfour's circular. Training: good effects.

11,450. It leads them to have a respect for themselves?—Yes.

11,451. It modifies any false ideas of independence in which a rough manner is supposed to be a sign of independence?—Yes.

11,452. I don't want to cavil with any point, but I think your drill sergeant draws certain comparisons in his statement that to my mind are not quite borne out. He tells us that he inspected some 650 men on parade who were reservists and that they looked useful enough, but their stature appeared to the eye as though they were men of forty or fifty?—I think the word 'stature' is misplaced; I don't know exactly what he means. Perhaps he means that they were twenty-five to thirty-five years old but looked older. Training in army: effects.

11,453. He comes to the conclusion that physical training, as received in the army, will make them

Mr M. Paterson, B.A., LL.D.

18 Sept. '02.

Mr M.
Paterson,
B.A., LL.D.
18 Sept. '02.

square-shouldered men before their time, but he is inclined to think that it ages them?—Yes.

11,454. Anyone considering that, should take into consideration the life of the soldier as well?—Yes.

11,455. The kind of life that they lead, the guard mounting and things of that kind, and a good many nights in which they do not get their rest, such things all help to age the men?—They must do so.

11,456. No doubt your drill instructor would tell you that in his experience of seeing recruits trained there was an immense amount of improvement?—Yes.

11,457. You don't think that there is any harm in physical training?—No. Our pupil teachers who have gone through the Training College, and who began as pupils and got the drill year after year, stand highest in physical training at the end of the period, showing that if a system which has been well arranged has been pursued from the beginning of the school career to the end, there is no overstraining, and good results are attained.

11,458. General and gradual training is in every way beneficial?—Yes.

11,459. In addition to that improved physique, do you find that they are as successful in these schools?—Yes. I was rather struck this morning to find that the woman who was by far best intellectually in our Training College stands first in physical drill, and a considerable number are in similar positions.

11,460. That is not an isolated case?—No.

11,461. You find that those who are good in physical training are also good in other subjects?—In most cases.

11,462. You have come to that general conclusion?—Yes.

11,463. You at any rate have no fear that physical training would produce too much of a military spirit?—I think not.

11,464. You are not alarmed in that way?—No.

11,465. *By Sir Thomas Glen Coats.*—I have often heard it stated that it has been a great disappointment that the manners of school children have not improved so much as might have been expected from the education they were receiving. Do you agree with that?—I am very sorry to have to say that I do agree.

11,466. Is that owing to the home training, or rather to the want of training in the schools on the part of the teachers?—Perhaps the teachers have not been sufficiently alive to what they could do in the way of improving manners. They have not laid sufficient stress, perhaps, on improving the manners of the children; it has not been sufficiently before them as an end well worth striving after.

11,467. If physical training were more attended to in the training colleges, do you think that that would improve teachers in that respect, and that that improvement would descend to the children in the schools?—I think it would contribute to it. I am afraid there would require to be more moral lessons than are given at present, good manners being made the subject of actual teaching, children being taught to understand the value of good manners. I think that that would go a great way. I am afraid that physical training in itself would not accomplish it.

11,468. It has been proposed that lectures on physiology should be given at the same time as physical training. I suppose you think that lessons in good manners might be added?—Yes.

11,469. *By Mr Fergusson.*—Do you impress that on your students who are going out as teachers, that they ought to pay particular attention to that point?—Yes.

11,470. Is there any particular examination in physical exercises and drill that your students go through before they finish their course?—We don't get any examiner from outside. The drill sergeants themselves submit them to an examination.

11,471. Do they get any certificates?—Yes, there is a certificate given in the following form,—‘Mr . . .

‘having received at this Training College, in successive years, two courses of instruction in Free Gymnastics, Physical Training and Military Drill, which have been attended with . . . regularity, is, after Examination, found to be a . . . instructor in the above exercises. He has also a general knowledge of Indian Clubs, and is able to teach the various Dumb-bell Exercises.’ That certificate is signed by the drill instructors and by me.

11,472. I suppose the amount of the training which you give and the examination which you exact really depend on the requirements of the Education Department. If they want a higher standard, then you give them more training?—Yes, and if Sir Henry Craik says that we have to give more time, then we will try and find it, but it is pretty difficult.

11,473. It is said that ‘until a proportion of the time, at least, can be recognised by the Education Department as forming part of the work of the Training College, and thus let it be seen that something will be done for those who care to sacrifice the remainder of the requisite time, there seems no prospect of the movement being set up on the basis suggested.’ You agree with that?—Yes, that, of course, refers to volunteering.

11,474. But there is something there that you think the Department might help you in?—Yes. What you have been quoting from is a letter written by a student who has finished his course, and it works out in this way, that the men go to the volunteering after a long day's work, beginning at nine o'clock and ending about four, and then they have drill and go out to the shooting in the evening. The feeling is that they cannot be expected to do quite as much work as men who don't do that.

11,475. You spoke of the good effects the daily meal supplied to the students has had?—Yes, Dr Kerr, who was recently chief inspector, took a great interest in this question and raised a fund to supplement what the students were able to pay for their dinner, so that any student can now have a very good dinner for sixpence, the actual cost being eightpence, and the balance is made up from that fund.

11,476. You think that that has had very good results?—Yes, exceedingly good.

11,477. If that is so with your students, you think it might be taken to be the same with children in elementary schools?—Yes.

11,478. You think that the School Boards should look carefully into the question of underfed children?—Yes.

11,479. *By the Chairman.*—Should School Boards do that?—It should be looked after.

11,480. But you said School Boards. Did you mean that?—I am not sure. Some of our students have sent me an account of what is done with underfed children, in London for example, but I am not quite sure whether the School Boards did much or anything.

11,481. *By Mr Fergusson.*—I did not ask you if School Boards should feed the children, but whether they should not see to it and take some interest in the question of underfed children, and see what could be done to remedy it?—Yes, I feel that children are not fit for mental work if they are underfed, and I think that whatever requirement comes from the Department or under an Act of Parliament, that children should be intellectually instructed, should carry with it the necessity of making provision for those for whom no other provision is made.

11,482. *By Mr Alston.*—I notice that the certificate you have shown us is signed by the two drill instructors and yourself. I suppose this is granted on the opinion of the drill instructors?—Yes.

11,483. It follows that they must be efficient instructors themselves?—Yes.

The witness withdrew.

Mr JOHN TAYLOR, M.A., examined.

Mr J. Taylor,
M. A.
18 Sept. '02.

11,484. *By Sir Thomas Glen Coats.*—Just give us some information as to the position you at present hold?—At present I am headmaster of the Camphill Public School, Paisley, and I have been so for fourteen years.

11,486. You have prepared a series of answers to certain questions which have been put. Will you go over these?—Yes.

11,487. State your experience, qualifications, number of years in present position?—Headmaster of Central, West, Ferguslie and Camphill Schools, Paisley, embracing a period of service of thirty-one years. Headmaster of Camphill School since its opening in 1888—now fourteen years.

11,488. What is the class of your school, number of scholars, average attendance, and ages of pupils?—Camphill is a Public Elementary School. There are six departments for elementary work, and an advanced department of pupils who have obtained the 'Merit' Certificate, numbering 80 boys and 60 girls. Each department has a responsible head, all subject to the headmaster. Enrolled this week (re-opening on 1st September) 1840 pupils; expect the numbers to rise to 2000 by the end of September. The highest number present was 2171 on an inspection day—April 1893. Since then several new schools have been opened. Accommodation for an average of about 1900. The ages of pupils range from 4½ to 15 years.

11,489. What are the position and vocations of the parents generally?—The parents are shopkeepers, clerks, artisans, labourers, etc. It is a typical Board School. I should say that about 150 out of 2000 will include all who might be classed as somewhat poorer than the average.

11,490. Are the children, on the whole, well fed or the reverse?—The great majority of the children appear to be well fed and cared for.

11,491. Are any meals supplied by school or other authorities?—No meals have at any time been supplied by the school authorities.

11,492. How are the children clothed?—The children are well clothed; in winter I have remarked it specially, most of the girls have warm jackets or ulsters, and the boys have overcoats. I would remark that during the fourteen years during which this school has been open there is a marked improvement in the cleanliness, clothing, and feeding of the children, and I might say the same of the other schools here. Generally the pupils are well shod. A Ladies' Guild makes provision in clothing, boots and stockings for the very poor; from 70 to 90 pupils have been attended to for several years about Christmas time. The parents are asked to contribute 1s. for a pair of boots (to girls), or clogs (for boys), and 6d. for a pair of stockings. For articles of clothing nothing is paid. This Guild has done excellent work; there is judicious selection and kindly dealing. The Captain of Police and the Superintendent of the Society for Improving the Poor give valuable help.

11,493. What are the greatest distances children have to come to school?—The school is not quite central; 1¼ miles will cover the greatest distance; from the Cross (the centre) a radius of one mile will enclose the boundary. A few come by train a greater distance.

11,494. State the existing opportunities of physical training, e.g., drill, gymnastics (free or applied), games, etc.?—The teachers, male and female, alone teach drill—physical drill—bar-bells, dumb-bells, Indian clubs, etc.; musical accompaniment. There is no gymnasium; there ought to be, where so many of the bigger boys and girls are collected. At present the boys in and above the fourth standard number about 450, and the girls 300—in all, 750. I suggested to the School Board the desirability of erecting a gymnasium two years ago, when a new workshop (forty benches) was erected. The Board, having a

heavy expenditure in building schools, could not see its way to do so then. Two of the Board Schools with much smaller attendance have this valuable adjunct. It looks a little anomalous that one of the largest schools in Scotland, and the largest in Paisley, with (say) 1100 boys and 900 girls, should be unprovided. Further, into this school are collected all those from the Board Schools in town who are beyond the 'Merit' Certificate classes. Hence the necessity is greater for building a gymnasium.

11,495. How long in existence? How taught, and by whom?—This school has two male janitors, but neither is qualified by certificate nor experience to teach drill. I may say that one of our janitors was called to the front, and was absent for two years. During that time we had a temporary janitor, and when our old janitor returned he was appointed as janitor to a new school, the 'Abercorn,' so that we are still without an instructor of physical training or military drill. Nearly all the other schools in the town have janitors who can teach drill. I have long advocated the necessity of a specially qualified instructor, either janitor or visiting master, but to this time I have not had my request granted. Nearly all the other schools in town have a janitor who teaches drill. The drill has been taught by the teachers, but I cannot say that I am satisfied. To do it properly and systematically, it requires higher qualifications and greater experience than they possess. Nor is it sufficient, in the case where the janitor is employed, to say that, being an army man, he has had drill. He ought to be able to teach it, and command authority in the doing of it. You would require to preserve discipline at the same time. I may add that where it is possible you should have a janitor who is also a drill instructor. That is better than having an outside man, as you can work your time-table more conveniently. With an outside man, you have to suit your time-table to him.

11,496. How long *per diem* or *per week*?—One hour per week at the most. Time allotted.

11,497. How much attempted? Reasons of success or failure?—Not much has been attempted. Want of proper accommodation for teaching it and the need of a properly qualified instructor, for the older pupils especially. The classrooms are unsuitable; there is only a limited space of free floor in front of the desks—width, about three yards. Drill cannot well be performed at the desks, as there is no freedom to move. It is dangerous to do so standing on the seats. There are large covered playsheds for boys and girls. As these are the means of entrance and exit, they are inconvenient. The worst objection is that they are too cold in winter; many a day the drill had to be omitted for this reason. I am not averse to drill in the playground, but the weather conditions and our situation often prevent our drilling in the playground.

11,498.—Are pupils interested and keen?—The pupils are interested and keen on drill. Boys like good stiff drill; they don't relish drill which is only a kind of play. When boys are disciplined strictly and kindly they yield to it with great pleasure, but it must be strict. appreciated if strict.

11,499. What accommodation for physical training inside and out?—Answered in answer to the question before last.

11,500. Are any games played? When? Is there a park or field easily accessible? Are they organised?—There is a very large field between our school and the railway, but it does not belong to the school. It is on a slope. Last summer (1901) the pupils, boys and girls, in lieu of drill attended the Corporation Baths—the School Board paying for them. The visits to the baths of the pupils with their teachers were made between May 1st and October 30th. Those who attended belonged to Standards V., VI., and Advanced. The attendance was optional. The School Board

exacted from each parent a note that they wanted their child to get swimming. That was done so as to free the school authorities from responsibility if any accident might happen. This summer (1902) there were no swimming classes, the Board not coming to terms with the Corporation. There is no swimming bath attached to any Board School in Paisley. The common games are football, cricket, tops, skipping-ropes, marbles, leap-frog, etc. A large field of several acres is contiguous to the school, but has no connection with the school. There is no organisation about the games, nor can there possibly be where so many are in one playground (one for boys and one for girls). Available for games—boys' playground, 3661 square yards; girls' playground, 4237 square yards. We have very large playgrounds, but when you have 1100 boys and 900 girls, it is scarcely possible to organise games in that limited space. The games are usually played at the interval, but a very large proportion go then for dinner. The School Board have opened some of the school playgrounds in the evenings during the summer months, the Town Council paying for men in attendance.

11,501. Are there continuation classes? Are they successful? Is some physical training given?—There are continuation classes, four schools take up the more elementary work. One school has advanced work—English, commercial languages, dressmaking, cookery, shoithand, etc., and we have science and art classes. No physical instruction is given in these classes.

11,502. Generally what careers do pupils follow after school?—The boys on leaving school become message-boys, office-boys, etc., until they are older and stronger to become apprentices. The girls go to the mills, shops, warehouses, and some help at home. There is abundance of employment in Paisley for young people.

11,503. Is there any medical inspection or examination of the scholars and school?—There is no medical inspection or examination of scholars or school.

11,504.—Is such desirable, in your opinion, at certain periods?—I think it very desirable at periods. I have often thought that the visit of an oculist to examine the eyes of pupils would be of advantage. We sometimes make discoveries of defects that parents have been ignorant of—oblique vision, weak vision, scales on the eyes, short sight, etc.

At the request of Mr Boyd, H.M. Inspector, some years ago, I examined about 800 pupils for colour blindness, and, as far as I could judge, about 3 per cent. were colour blind. We have cards with the various tints and colours, and little balls of wool of various colours. They were passed quickly before the children, who were asked to say what the colours were. Mr Boyd had met one of the examiners of the Board of Trade, who told him of candidates being rejected for colour blindness. The test was to find out whether the defect was natural or induced.

An oculist would be of advantage in this case. A difficulty arose in that some of the very poor could not pay for glasses which might be prescribed. A medical man could detect St Vitus' Dance, etc., and would be able to see that children were not neglected by parents in the matter of food or cleanliness, etc. There are some troubles that affect the children. Nowadays school life is pretty hard. A child leaves home at 8.30 and gets home at 4.30, and has home lessons. The working man grumbles about an eight hours' day, but his child is harder wrought. I think we ought to have visits from doctors to find out any weakness in the children that may not have been detected by their parents.

11,505. Should physical training be compulsory in all schools and also for those between fourteen and eighteen?—I think that properly organised physical training should be made compulsory in all schools, and that proper accommodation and up-to-date instruction be provided.

It cannot well be made compulsory for those between fourteen and eighteen. I feel assured that where it is provided, it would be appreciated, and much benefit would follow by directing aright the overflow of energy

and animal spirits to strengthen body and mind. Mr J. Taylor
M.A.
18 Sept. '02
Cadet corps
advocated.

A cadet corps would be an excellent institution in a large school. There is nothing better for growing boys at school than rigid military drill, not to imbue them with the military spirit, but to train them to habits of prompt obedience and smartness of bearing. I may say that in Paisley I have never heard any fear expressed as to the children having military spirit imparted by having drill carried on in schools.

11,506. Would it impose an unfair burden on young lads, e.g., apprentices? How could that be avoided? —If voluntary, I do not think it would be a burden; it would become an attraction. Such pupils cannot brook to be coerced. Voluntary
and attrac-
tive.

11,507. How are the teachers themselves instructed? —The varied and unequal qualifications of those called upon to teach this branch to me constitutes the main difficulty. Some are qualified, others can never qualify from causes physical and otherwise. The great majority of the teachers are ladies, and cannot control large classes of big boys and girls. We have a staff of forty teachers, of whom only thirteen are males. In large schools many changes in the staff occur—new ones come in with varied experience. Some can do a little, some more, others nothing. Teachers who have been in service for many years had no opportunity of instruction in this branch at the Normal School. Those more recently appointed are more up-to-date. As a consequence there is a want of uniformity in the excellence or efficiency of the teaching. When teachers get older they cannot have the same agility for gymnastics, dumb-bells, Indian clubs, etc., hence the necessity of employing an athletic qualified specialist to organise, direct and instruct. Teachers:
properly
qualified:
necessary to
have exper-
instructors

11,508. Is there any method you can suggest by which the teachers could be kept up-to-date?—I think that a class for teachers should be provided by the Board or Education Department, where every year during the winter months, under a really capable teacher, those who had become rusty might be brought up-to-date, and all new additions to the staff might be instructed for the sake of uniformity. A class of this kind was instituted about eight years ago, but I would suggest that it be a standing institution. In my own school 110 teachers have passed through my log-book since 1888, and it stands to reason that there must have been great differences in the capabilities of those teachers. Teachers'
classes.

11,509. Should there be an uniform system for all schools?—I advocate uniformity—the constituency of our Board Schools is much the same. I think there should be a regular code for the Infant school, the Junior, the Senior, and the Advanced Departments. One of the instructors in Paisley pointed that out; he said that sometimes scholars came from other schools, and there was the greatest difficulty in teaching them, on account of the variety of methods, whereas if there was a regular code, children could easily be brought to fall in. This code could be revised from time to time. Healthy competitions could be held to test individual and class excellence. In Greenock, I understand, such competitions are held to test the efficiency in drill of the various schools, and with marked success. Uniform
system
advocated

11,510. Would physical training, as a part of the regular curriculum of continuation classes, be popular? —I think that physical training as a part of the curriculum of continuation classes would be most popular. In 1888, when this school was opened, such instruction was given, and the class was much appreciated. That is a good time ago. Indian club and dumb-bell exercises were then practised; and there was a demonstration about that time which was greatly appreciated. Continua-
classes:
physical
would be
popular.

11,511. If drill is taught, on what system is it based?—The drill taught in this school is physical drill to musical accompaniment. In this school the pupils have excellent practice in marching to and from their classrooms. The school is of three storeys, with attics; the classes assemble in the covered playsheds, each with its teacher at the head. To the stirring Physical
with mu-
advantag-
drill in c
of alarm
fire, etc.

J. Taylor, U.A.
Sept. '02.
tunes of the piano they march upstairs and downstairs three times per day. This provides an excellent means of discipline. The advantage of this was very marked on the occasion of fire breaking out in the attics. About 2000 pupils were marched out in six or seven minutes without panic. They had acquired the orderly habit of marching up and down.

11,512. Do you know of any objections being raised by parents?—No complaints against drill from parents. Deformed or delicate children are exempted.

11,513. As the result of your experience, what effects has physical training, moral, physical, and intellectual?—I hold a strong opinion of the benefits to be derived from systematic instruction in drill exercises. The habits of prompt obedience and orderly behaviour are insensibly acquired. I am strongly in favour of the formation of school clubs for football, cricket, etc. A great deal more could be done in properly organised games in a field, and under the teacher's eye and guidance. It is not so much in the class drill within school that the great moral effect is to be found. In the games in field or school playground, control of temper, nobility, generosity, and magnanimity find scope; endurance and determination to excel are there exhibited. Drill in the class-room secures orderly habits and prompt obedience, but in the games are brought out the manly and moral qualities.

11,514. As distinct from the training, what physical education is given?—I may say that after all that I have stated I confess that we are far behind in our arrangements and efficiency in this most important branch of education. I am speaking for my own school in particular.

11,515. Please furnish all additional information in your power having a bearing on the terms of reference?—I think that I have exhausted all that I can say on the matter.

11,516. There are just one or two points I should like to put to you. You are quite satisfied that all the children at your school are well fed and get sufficient nourishment both for their ordinary lessons and doing their physical training?—Yes, there are 150 out of the 2000 that you might look upon as poor little things, but the rest could quite well go through physical drill and would be the better of it.

11,517. You complain of the want of trained janitors for giving physical drill. Have your teachers gone through a training college?—One-third of them have not. I don't think that the training college would give sufficient instruction for that. I value it no doubt, but in a class where I have so many big boys that I would require a thoroughly up-to-date drill inspector who would take those big boys himself.

11,518. Your classes are mixed classes?—Yes.

11,519. Your difficulty is that the lady teachers would not have sufficient power over these boys?—Quite so.

11,520. They could manage the girls if they had them alone?—Yes.

11,521. Have they a proper amount of training?—No. I think that all under the old third standard could be taught by female teachers, but beyond that we ought to have stern discipline by a male teacher, because the boys do take advantage of the lady teachers when in large classes.

11,522. Would it be possible to break up the classes for drill purposes so that the male teachers could take the boys and the ladies could take the girls?—When the girls come to the fifth and sixth standards and beyond that I think they ought to have more than lady teachers to give them drill.

11,523. We have seen in London most excellent drill given by ladies alone in a ladies' school, and I think it was the opinion of the members of this Commission that the work done by those ladies was quite as good as anything that could be done by men?—It depends on how these ladies were trained.

11,524. You think that the teachers who come to you do not have sufficient training?—Yes. Ours is such a large school and we have such a variety of teachers; except they are kept up-to-date find a difficulty.

11,525. Are there many teachers who don't go through the training colleges?—A great many in Paisley have been 'acting teachers,' and these have not been in the training colleges. *Mr J. Taylor, U.A.*
18 Sept. '02.

11,526. Does your Board encourage or discourage teachers of that kind who have not been through a training college?—At times they can get no others.

11,527. Then there is a difficulty in getting the number of teachers required?—Yes, there is a difficulty in getting them.

11,528. You complain of having no gymnasium. If you had a sufficient shelter for drilling children in winter as well as in summer, don't you think that a great deal could be done without having apparatus for gymnastics?—What we want is not so much apparatus as a covered place or a shed. A gentleman in Paisley offered £100 to furnish a gymnasium if the School Board would build it, but they were spending too much money on new property at that time, and that £100 was therefore lost. I think that out of 450 boys above the fourth standard we would be able to get a sufficient number of lads who would profit by the exercises.

11,529. Are the fields used by the children?—No, they are railway property.

11,530. Are they shut up?—Yes.

11,531. Would it be desirable to get these fields?—That is a difficult point. If we had them, it would be pretty difficult to keep discipline. We can enforce discipline much better when the children are under our eyes than when they are stretched over two or three acres of ground.

11,532. But I meant this, would it be desirable to have the fields for drill purposes?—The fields are not suitable because they are on a stiff slope; any ground that would be suitable for drilling the boys is near the railway and about 300 yards away from the school. Our own playgrounds are very good for drilling the children in good weather.

11,533. Do many of the boys belong to football or cricket clubs?—They are not old enough. They play in the playground, and then they play very often in the streets.

11,534. There are a good many small clubs in Paisley?—Yes, but they are not organised.

11,535. You say that for one year the children went to the town's baths for swimming?—Yes, for one or two years.

11,536. Would you approve of that being continued?—Yes, because the best swimmers are made in the baths in towns. Many boys and girls learned to swim during these months. I think it is a capital exercise and a very good substitute for physical exercise in the summer months.

11,537. I think you say that physical exercise and drill are of great help in maintaining discipline in the school?—Yes.

11,538. Do you think that it improves the manners of the children?—I think so—in school, at any rate.

11,539. Have you any complaint to make as to the manners of the children?—Not in school.

11,540. But out of school?—Yes, I have frequent complaints. I think that what has been taught and insisted on in the school is neutralised outside.

11,541. Have you any suggestions to make with regard to the improvement of the manners of the children?—The only way is for the teacher to keep pegging away to secure good behaviour, but beyond that we have not very much control.

11,542. Do all your teachers insist on good manners from the children?—Yes, I have never had any difficulty in school about behaviour.

11,543. How much time could be devoted to physical training without interfering with the class work?—The most we could devote would be one hour per week for each boy and girl. So many things are now crowded into the Code that we have to leave reading, writing and arithmetic to the very end.

11,544. We have evidence that where more time was given to physical training, it benefited the other work, that the children were smarter and brighter and

Mr J. Taylor, U.A.
18 Sept. '02.

Covered playgrounds required.

Playing field.

Physical drill: good disciplinary effect: might improve manners.

Time: one hour per week.

Curriculum: difficult to find time

Mr J. Taylor, M.A. came back to their ordinary lessons more able to take part in them?—Yes, but something else must be left out.

11,545. No, nothing else went?—It depends on how many subjects were taught. If you have a great many subjects it is impossible to get them all crushed in.

11,546. But if the children come to these subjects brighter and with more go, surely they can learn them in a shorter time?—So many subjects must be pressed into the school hours. Some subject must suffer, and I say that some subject should suffer, in order to increase the drill. I should wish to have physical instruction as one of the compulsory subjects of school life.

11,547. You know something about the half-time school?—Yes.

11,548. These children do very well in half the time?—Yes, but they are the pick of our children.

11,549. Do you think so?—Yes, I think they are.

11,550. Of course they are kept at school regularly during the time they are there?—There is this very important fact that the children know that their work is noticed and that they are examined every month from head-quarters; that makes them far more diligent than either their father or mother can make them. They know that if they stand well in their examinations they will stand well with the factory authorities.

11,551. That shows that some more time could be devoted to physical training?—In the half-time school there are a great many things not taught which we have to teach.

11,552. Why have you to teach them?—Because the Board exacts them from us.

11,553. *By Sir Henry Craik.*—Do you mean the School Board?—School Boards generally demand that from us. They say: 'This school can do this and that, why can you not do it?' We are urged on by this competition as to who can do the most.

11,554. *By Sir Thomas Glen Coats.*—You think you are rather treated as a step-child in regard to physical training?—I am in correspondence with my Board as to this, and I allowed one or two of them to see my answers. Seven or eight of the Board Schools are well supplied and have trained drill instructors, but in my instance my janitor, being away for two years and then being sent to another school, has left me in the unfortunate position of not having a janitor to give proper instruction.

11,555. Are your Board in sympathy with physical training?—I think so. My school is in a temporary position just now in respect to a physical instructor.

11,556. *By Sir Henry Craik.*—You say that there are no complaints from parents as to drill?—No, there are none.

11,557. You have never heard a disagreeable or cantankerous parent say that he would not allow his child to take part in the drill?—No, unless there was some defect in the child.

11,558. Suppose that had occurred and that some children had been exempted from the training you have described, the marching upstairs and downstairs three times a day?—No one objects to the marching.

11,559. But suppose some one objected and said that they wanted their boy or girl to sit still? If that had been the case and you permitted it, then it might have led to a great disaster on the occasion of the fire about which you told us?—Yes. After all these children had left the building I sent through each room to see that there was no child left in school. I considered that this physical training was a splendid thing, and my sending them out was my duty whether a parent objected to it or not.

11,560. But permission of any option in such a case might have led to a tremendous catastrophe in such a contingency?—Yes.

11,561. If a parent refused that permission, your only alternative would be to close the door of your school to him and to say: 'You cannot send your child here?'—Yes.

11,562. The Department has held that you can do that?—Yes.

11,563. What is there in the Code that requires you

to add more subjects than you wish?—I am afraid it is not the Code at all; it is the system.

11,564. *By Mr Shaw Stewart.*—You say that you could not get more training than an hour a week without dropping something out of the time-table?—That is so.

11,565. That is owing to the demands of the School Board?—Yes.

11,566. Do you think that if a strong recommendation were made by this Commission, emphasising the importance of physical training, that would tend to lessen the competition among School Boards you spoke of just now?—I would make it compulsory all round. It would certainly have the effect you mention, but it would require to come with authority from the Commission.

11,567. At present it is the insistence of the School Boards on so many subjects that is an obstacle to providing adequate physical training?—Yes, the want of time.

11,568. It has been suggested to us that in towns schools might group together and acquire the use of public parks for football, etc., on different days of the week. Is there any public park or field that can be acquired in that way by the Paisley School Board?—Our Town Council have the charge of the parks, and they are not very anxious to throw them open to football or other clubs of that kind. These parks are frequented by older people, and they could not very well be made available for football and other games.

11,569. Would it be possible to secure a field?—Yes, because Paisley is not a very closely built place. Less than a mile would take you into the country. I think it would be a splendid thing to have a field for a group of schools. In the Glasgow Academy, the school stops on Wednesdays at 2.30, and they have a field further out in the country where the boys are free to organise games after that time.

11,570. Perhaps if some recommendation were made by this Commission in that direction, it might draw the attention of the School Boards to that matter?—Yes. I hail with delight the revival of cricket in Scotland.

11,571. You say, on the question of compulsory physical training of boys between fourteen and eighteen, that it cannot be well made compulsory. Why do you say that?—The Scottish boy does not like to be coerced; he must be drawn.

11,572. He is compelled to go to school?—But not after fourteen.

11,573. If it was made part of the school curriculum that they should attend continuation classes for mental and physical training up to eighteen, do you think that that would be quite impracticable in Scotland?—I might quote what the convener of the evening classes in Paisley told me. He thought it would be a good thing to have these classes three times a week, two nights being given to ordinary instruction and one night to physical drill for all boys between fourteen and eighteen.

11,574. With reasonable exemptions could they not be made compulsory?—I am afraid not; but they might be made very attractive.

11,575. *By Mr Fergusson.*—I should like to get at the bottom of this question of overloading the curriculum. You say it is not the Code, and I know that. What is it?—One school does it, and another school does it, and we have all to try to keep as much to the front as we can. There is manual instruction, hand and eye training, cookery, and so on.

11,576. And there is also physical training. If you like to put it into your time-table no one will object?—We would require to cut something off.

11,577. But don't you think that it is of sufficient importance to do that?—Yes, I do.

11,578. Will anyone hinder you if you choose to do it?—I suppose not.

11,579. You say you can do it, and still you don't do it?—It is just this, that we have to divide our subjects as well as we can to find a place for all.

11,580. If the Education Department were to demand

Mr J. Taylor, M.A.

Time : demands of School Boards.

Playing field centre for group of schools.

After fourteen not compulsory but attraction advocated.

Curriculum : lack of time owing to competition with other schools.

Mr J. Taylor, M.A.

18 Sept. '02.

Half-time scholars.

Exactions by School Board.

Drill.

more time, you would do it, and you would not be sorry to do it?—No, I would be very glad to do it.

11,581. One difficulty you say you have in regard to the ordinary school teacher taking the drill classes is that you have so many lady teachers, and the boys take advantage of them. Does that not apply to all sorts of lessons?—Not to the same extent. Drill is an exacting subject.

11,582. You said that when you had swimming, all the parents were required to sign their consent. Did any of them object?—Yes.

11,583. Did many object?—Not very many.

11,584. Why did they object?—They were afraid of their children getting drowned or meeting with some accident.

11,585. You said that you thought that children were too hard wrought?—I think they are.

11,586. How would you remedy that?—I cannot say very well. We have tried to reduce the home lessons.

11,587. Can you not do that?—We do it. But apart altogether from that work, there is the length of time that they are in school.

11,588. Is there any need for home lessons?—There might be for some pupils, and there are many parents who expect them, because that is the only means they have of seeing how their children are getting on.

11,589. *By Mr McCrae.*—What system of physical training do you adopt in your school? Do your instructors have any special system?—Some of the teachers use Cruden's book, and others just follow their own taste.

11,590. The teachers themselves are at liberty to choose the system?—Yes.

11,591. You don't have a uniform system throughout the school?—No.

11,592. Are the exercises all done to musical accompaniment?—Nearly all.

11,593. You say that you have no physical instruction at all in the continuation classes?—That is so.

11,594. You had physical instruction at the beginning?—Some evening classes, but not continuation classes, were held in the Camphill School. We had a splendid class for Indian clubs and dumb-bells.

11,595. Why was it discontinued?—It was not taken up by any person paid by the Board. It was taught by one of our own teachers.

11,596. There has been no effort made to establish physical instruction in the continuation classes?—No.

11,597. *By Mr Alston.*—You say in your evidence, in answer to the question as to how the children are clothed, 'I would remark that during the fourteen years during which this school has been open, there has been marked improvement in the cleanliness, clothing, and feeding of the children.' That is not *apropos* of anything you do in school?—Yes, it is. I think the teachers have a good deal to do with that, and it is to their credit; in the matter of cleanliness, by insisting upon it. In fact, I have been before the Sheriff once or twice in connection with defaulting children, and the parents would say, 'So and so sent my child home,' and the Sheriff would ask if I had done so, and I would say that I did, and I would give my reason, that the child was not clean, and the Sheriff would say, 'If you had done otherwise I would have censured you.'

11,598. That does not apply to the clothing?—I think they are very well clad, with the exception of the few I have referred to. There is abundance of work in Paisley.

The witness withdrew.

Mr H. E. PEACOCK, examined.

11,620. *By the Chairman.*—You are headmaster of St. Mary's Episcopal School, Kirriemuir?—Yes.

11,621. Are all the children in your school Episcopalian?—No, the majority of the children are Presbyterian. I should say that perhaps 20 per cent. may be Episcopalian.

11,599. With regard to your difficulty about your drill instructor and janitor?—That is temporary.

11,600. If you got the right man back, then you want him to be both janitor and instructor?—Yes, I could arrange my time-table more easily.

11,601. Would the better system not be that you should have a uniform system of instruction in physical training?—Yes.

11,602. There should not be various instructors in that sense. Suppose all your teachers were sent to a physical training college, and on getting certificates, came back to you thoroughly competent to teach all your children, and using one system, would that not be better than a janitor or two janitors?—Yes, but I was referring to making the instruction uniform over all the schools of the country.

11,603. It seems absurd that in your school there should be some teachers teaching Cruden's system and some other teachers using a different system?—Yes.

11,604. Is there any danger of an old soldier being not up to date?—Yes.

11,605. So, on the whole, the whole system would be better if you could get it worked out?—Yes, if I had the teaching staff uniformly trained.

11,606. You spoke about the boys' keenness for drill?—Yes, I find that when they are drilled thoroughly and well, they enjoy their drill lessons.

11,607. You mean, when they get thorough drill?—Yes.

11,608. With discipline?—Yes, and sharp commands to be obeyed at once.

11,609. Could that not be taken advantage of in continuation classes somewhat in the way you have indicated, counting on the keenness of the boys after school age?—Yes.

11,610. You think that what you mentioned—two nights of ordinary instruction and one night of physical drill—would be of great advantage?—Yes.

11,611. Would that be sufficient inducement for these boys to come without any compulsion?—It would draw more to our evening classes.

11,612. *By the Hon. Thomas Cochran.*—Did the girls attend the swimming baths as well as the boys?—Yes, and they were capital swimmers. There was a female instructor for the girls. I would not send the children to the baths unless they had an instructor. If they did learn to swim without an instructor, it would be with difficulty, and they would use wrong strokes.

11,613. A great many children have learned to swim at Paisley?—Yes.

11,614. Had you any trouble with the girls; were they prevented from swimming at any times?—Sometimes their parents would say that they did not want them to go.

11,615. You yielded to the parents?—Yes.

11,616. There was no danger of any of these girls being injured by swimming at any improper times?—No.

11,617. When speaking of medical examination, you said that you thought that defective eyesight would be discovered if there was medical examination and would be cured if taken in time?—Yes.

11,618. You are afraid that there might be a difficulty in supplying the children with glasses?—Yes, that has been put before me by parents who said that they could not afford to buy glasses.

11,619. Some of the schools have school funds, which they raise by giving exhibitions in physical training. Such a fund might be used for providing glasses?—Yes, that would be a very reasonable way.

11,622. You have prepared a statement which you might kindly read?—Yes.

I am a trained certificated teacher of the first class. During my two years' residence at Chester Training College I was a Volunteer in the College Battery of the Cheshire and Camarvon Artillery, and I hold their certificate of efficiency

Mr J. Taylor,

boys.

Medical
examination.

Mr H. E.
Peacock.

- Mr H. E. Peacock.*
18 Sept. '02.
- I have been a teacher for twenty-three years. My present appointment I have held for seventeen years.
- The school buildings are healthily situated, standing within a fair-sized playground of 78 feet by 64 feet, and having a grass park as its western boundary.
- There are 170 names on the roll, with an average attendance of 145. The youngest children are four years of age, and the oldest fourteen years.
- The parents are farm hands, factory workers, tradesmen and shopkeepers.
- Most of the children are healthy-looking and well fed, though a few look as if a more plentiful supply of porridge would benefit them. On the whole, I should say they are well fed.
- There is an improvement in the housing, though some of the older buildings do not receive the amount of sunshine that is necessary to make dwellings thoroughly healthy.
- As a general rule, I should say that the pupils are warmly clad, thick woollen underclothing being worn by nearly all during the greater part of the year.
- The school managers do not supply any meals.
- Some of the children live as much as two miles from the school, but the majority live within a radius of half-a-mile.
- The boys receive the ordinary military drill from the sergeant, consisting of squad and marching drill, extension motions and free gymnastics. This takes place every Tuesday from 12.10 to 1 o'clock.
- The drill given inside the schoolrooms consists of free gymnastic exercises with and without musical accompaniment. The Infants' Divisions have a short time daily for this, about seventy minutes a week; the other divisions forty minutes a week. The drill sergeant has attended for seven or eight years to instruct the boys.
- The drill and exercises are popular with most children, and certainly they enjoy the movements more when accompanied by music.
- The playground is large enough for purposes of military drill, but the accommodation inside the school can only be obtained by moving the desks.
- There are no games organised. The children seem to play certain games at certain seasons of the year, e.g., in the early spring, all the boys play at the bools (marbles). A good many girls engage in this game too, but the handball is in greater favour with them. There is not room enough in the playground to permit football when all the children are in it, but occasionally a class of boys is given ten minutes to have what they regard as 'a right game' by themselves.
- There are no continuation classes in connection with St Mary's School, but the School Board for Kirriemuir organise such during the winter months.
- The Chairman of the Board, Lieut.-Colonel Davidson, commanding the Black Watch Volunteer Battalion, informs me that the Board had had a class for physical training that was fairly attended.
- On leaving school the pupils enter the factories (jute and boot), engage themselves to farmers, learn a trade, or enter a shop or an office. Many of the girls become domestic servants.
- Later, some of the boys join the army, and occasionally the navy. Probably one per year would represent those becoming soldiers, whilst one in three years would account for those joining the navy. I do not hear of any becoming fishermen.
- We have epidemics of measles, whooping-cough and influenza which seriously affect the school, otherwise there is not much sickness. On an average, I suppose one death per year would account for the mortality. Occasionally a medical man has visited the school at the instance of the local authorities, but there is no periodic examination of the pupils.
- I think it would be a good thing if a medical man visited the school at the commencement of every session to report upon the pupils in regard to their eyesight, teeth, hearing, etc.
- Sometimes children are suffering from disease and yet have a healthy appearance. A teacher will only discover these facts by accident. It is very desirable
- that a teacher should be acquainted with the condition of the constitutional health of the pupils. I think physical training should be compulsory for all children, except such as are certified by a doctor to be unfit for it. From fourteen to eighteen they require control and direction more than ever they did, for they begin during that period to kick at authority, and it is a period when the frame is capable of being braced and set up.
- Most teachers have had some training, military (Volunteer) or other. As the community at large will eventually be benefited, I think the cost of (say) a fortnight's course of (say) the training organised by Colonel Cruden might be provided for the teachers who are willing to undergo it. I should say that it should be compulsory in all the training colleges and for all pupil teachers.
- I do not think there is much loafing during the day-time, for, as a rule, boys are eager to go to work. At night they might perhaps be more usefully employed. For example, when the Volunteers parade there are a good many youths of (say) sixteen to nineteen that follow and look on, when they would be better in the ranks. There are plenty of facilities here for football, cricket, golf, quoits, fishing, etc., and to a considerable extent these opportunities of healthy recreation are embraced.
- With regard to physical training forming a part of the curriculum of continuation classes, I think it should prove popular if the training could be given in a properly-equipped gymnasium.
- When physical training was tried here it was found difficult to secure the Public Hall with anything like regularity; and then it was felt that a skilled and practised teacher was needed to direct and control the pupils. Without proper guidance they attempt amiss, or too much or too little.
- Rifle clubs would be desirable and popular if they gave sufficiently frequent practice to enable the members to become good shots. I remember that as a Volunteer I got plenty of everything except actual target practice. It was a general complaint that we might drill in all sorts of weather, and suffer sunstroke and chilled hands and feet. We carried a carbine and clicked the trigger often enough, but we had little chance of discovering whether we could shoot straight.
- I am of opinion that all drill should be after the pattern practised in the army. The army should set the standard; then, on joining either the regular or volunteer forces, there would be nothing to unlearn and time would be saved.
- I certainly think plenty of apparatus should be available. A well-equipped gymnasium should be established in every town, and every encouragement given to the youth of both sexes to develop themselves physically. Cycling, golfing, and especially walking develop the body in the fresh air and in pleasant surroundings.
- It would be a great thing if everybody while young could learn to swim thoroughly well. Any physical acquirement has the effect of heightening the pleasure and value of existence. Under particular and unexpected circumstances it supplies the individual with the nerve and presence of mind indispensable to the rendering of valuable service.
- I never heard parents object to drill of any kind unless on the ground of physical unfitness. Certainly any training smartens and sets up the general bearing of a boy or man.
- The ordinary rules of health receive attention. The principles of ventilation, the value of sunshine, food, and clothing, the way to eat, what not to eat and drink, the injurious effects of the use of tobacco to the growing youth, the necessity of courtesy and generally good manners come under the general knowledge subjects in object and nature knowledge lessons, and with the elder pupils form the subject-matter supplied to them for their writing exercises.
- There is in this town a Boys' Brigade. This organisation has doubtless done much good, but a class of boys most needing the discipline there supplied abstains from joining it. Perhaps a cadet corps affiliated with the Volunteer corps might prove attractive to boys. There

is no doubt that a smart uniform, considerate treatment, and the use, under skilful direction and strict control, of a *real* rifle would draw many. By the time they were eighteen they would be fit and eager to become regular Volunteers. The commanding officer of the Volunteers here would be able to give valuable aid in the promotion of such a body. He has for years taken a keen and active interest in any scheme that had for its object the physical and moral welfare of the youth of Kirriemuir. He had a great deal to do with the promotion of the Boys' Brigade, and as member (now chairman) of the School Board is in close touch with the younger community of the town.

11,623. You say that you don't supply any meals to the children. Do the managers take any means of seeing that the proper meals are given?—I do that on my own account. I endeavour to find out whether the children who come from a distance are likely to get a comfortable meal at one o'clock. I think that they are all fairly well provided. Children who come from a distance have often friends in the town to whom they go for dinner, and sometimes they appear to be better off than a very few who live in the town. There are places near the schools where soup is supplied at small cost, and many of the children take advantage of that.

11,624. What do you mean by 'extension motions'? Do you mean physical exercises?—Yes. Cruden's book begins with what are called extension motions. Our sergeant calls them extension motions to differentiate between them and more advanced drill.

11,625. Your physical exercises are only given once a week?—Yes, by the drill sergeant, and only in good weather, because we have no provision for giving them under cover in bad weather.

11,626. Have you got fixed desks in your school-room?—No, they are not fixed.

11,627. Could you move them so as to leave room for the drill?—That is done in the drill that I give myself. The drill sergeant does nothing inside.

11,628. You say that in the case of children suffering from disease, and yet having a healthy appearance, a teacher may only discover the fact by accident. Do you ever discover anything wrong yourself, by accident?—Yes, I remember an instance two years ago, when a parent came and asked me to warn the teacher to be very gentle with her son. I asked her why she made that request, because the child looked a very healthy boy, and I had had no complaint from the teacher about him, and then she opened his waistcoat and shirt and showed me his chest. There were two or three large holes, which, I suppose, would be due to scrofula or something of that kind. I should never have discovered it if she had not given me the information that way. There was nothing wrong with the boy in appearance or in conduct, except that he sometimes felt a little fatigued, and any pressure in the way of lessons was an objection.

11,629. I suppose you are acquainted with the various children of both classes in Kirriemuir between fourteen and eighteen?—Yes.

11,630. You think that a little more physical exercise would do them no harm?—It would do them a great deal of good. It is the control over the children of that age that I had in my mind when giving my evidence. When they leave school at fourteen they think they are getting free from authority and that they have gained their liberty. I think that sometimes—indeed, very often—the control or guidance of their guardians is not wise, it is often indifferent; they don't take the trouble to see that the children are properly occupied and employed during their leisure hours in the evening. They have a good deal of leisure even after they go to work, and that time might be very usefully employed in continuation classes; and I think that physical training would form a very interesting and valuable part of such classes.

11,631. I see that you say that it would be a great thing if everybody when young could learn to swim well?—Yes. I think that swimming, apart from its being a pleasant recreation, does a very great deal towards giving a boy or girl a feeling of independence.

In deep water there must be either a feeling of danger or a feeling of perfect safety, and what applies in the water I think applies equally on land. I don't think that any good that may be done by physical training remains at one point; I think it influences the individual to a very great extent in many directions in after life.

11,632. Do you think there would be any value in the medical superintendence of school buildings, looking to the ventilation and so forth?—I think it would be a very good thing if some recognised authority were to come at certain times and to lay down emphatically whether or not the state of affairs was satisfactory and to say what improvement was desirable.

11,633. In your case your managers meet at certain intervals?—Yes.

11,634. They meet practically the same as a School Board would do?—Yes.

11,635. Any matter that you have to lay before them you bring up at those meetings?—Yes.

11,636. Do they visit the school between the meetings?—Yes, without any warning.

11,637. You speak about the Boys' Brigade at Kirriemuir, and you say that the discipline keeps them from joining it. Why is that?—It repels them.

11,638. You say that there is no doubt that drill with the rifle would draw a number?—Yes, one of the chief objects of a volunteer is to learn to shoot. I think in the past the volunteer had the idea that his chief purpose was to go through certain movements of what I might term a spectacular nature. I know that in my case I made very little actual use of the rifle, and, of course, that would apply to a very great many others.

11,639. You were a gunner?—Yes, I was in the artillery.

11,640. You think that if the commanding officer of the volunteers interested himself in the promotion of a cadet corps, it would be very useful?—I think so. In fact, that officer said he would be glad to do so, and he knew many of the officers were equally willing.

11,641. The commanding officer of the volunteers, I see, is also chairman of the School Board?—Yes.

11,642. *By Sir Henry Craik.*—I observe you say that your boys play certain games at certain seasons of the year, but the only one you mention is marbles?—I thought I might be trivial if I entered into the details of their games.

11,643. But a specimen game would not be marbles?—I suppose they play the usual games.

11,644. You specially say that the girls play handball and the boys play marbles?—If the boys could play football they would play it in preference, but the playground is not big enough.

11,645. The grass park that you mention is not available?—No.

11,646. Why not?—It is rented by a butcher in the town.

11,647. You mentioned it as if it was connected with the school?—I mentioned it in order to show that the building was healthily situated, that it was not closed in by a number of buildings.

11,648. *By the Hon. Thomas Cochran.*—Would there be much difficulty in getting the whole or any part of that park for a playground?—A part of it might be obtained.

11,649. Would it be very expensive to obtain, say, an acre?—I don't suppose there is more than 2 acres altogether.

11,650. What is it worth?—About £3 an acre.

11,651. For £3 a year you could get a good playground?—Possibly.

11,652. Your school is a voluntary school?—Yes.

11,653. You have no rates to fall back upon?—No.

11,654. Could anything be done by voluntary effort?—It might. But Kirriemuir is particularly fortunate in possessing what I might term recreation grounds for children. There is a public park, and beyond that there is a large space termed the 'Hill,' which is open to the

public for all sorts of games. I suppose there will be 50 acres there.

11,655. You are therefore very well situated in

'Thrums'?—Exceedingly. In summer time there are hundreds up there taking part in cricket and such-like games. It is the healthiest spot in the neighbourhood.

The witness withdrew.

Mr G. F.
Macnee.

Mr G. FRASER MACNEE, examined.

11,656. *By the Chairman.*—You are Clerk to the Church of Scotland Education Committee, who have training colleges in Edinburgh, Glasgow, and Aberdeen, each college having a large practising school attached to it?—Yes.

11,657. You are also Lecturer on Physical Training in the Edinburgh Training College, and Captain of the College Company, 4th Volunteer Battalion The Royal Scots?—Yes.

11,658. Will you state where you were educated?—I was educated in the Buccleuch Public School, and served in that school as a pupil teacher for the full period of five years. I attended the arts and some of the science and medical classes at Edinburgh University.

Personal
experience
and training.

11,659. State your former experience, and the time in your present position?—I was appointed to my present position in September 1887. In 1896 I attended a course of instruction in the Aberdeen Physical Training College, and obtained the certificate of the college. I began to give instruction in physical training to the male students in the Edinburgh Training College in October following, when such training was first introduced in that College. In the summer of 1899 I attended a course of instruction in the Military Gymnasium at Aldershot, and received a certificate there. I also hold a riding certificate (1901) from the Riding School of the Royal Engineers, Aldershot, and the ordinary Army certificate as captain in the Volunteers. I was two years a member of the Edinburgh University Company of the Medical Staff Corps (which company is confined to medical students), and I have held a commission in the 4th Volunteer Battalion The Royal Scots since 1895, previous to which I had been for a short time private and sergeant in the same battalion. From my boyhood I have taken a great interest in all athletic matters—have played football, cricket, golf, jumping, running, and have cycled, ridden and boated, but, in the main, my special hobby has been walking, and I have frequently walked over fifty miles and sometimes over sixty miles in a day.

Number of
students.

11,660. What is the average number of students, male and female?—The following is the average number of students at the different training colleges of the Church of Scotland, viz. :—

	Male.	Female
Edinburgh,	91	128
Glasgow,	78	172
Aberdeen,	25	104
Total,	194	404

Age, etc.

11,661. What are the ages of the students, and generally their parentage and future careers?—The ages range from eighteen years to twenty years. The males are generally the sons of well-to-do working men, shopkeepers, farmers, etc. The females are from the same classes, but a number of them are from families in exceptionally good circumstances. The majority of the males and a number of the females become university graduates, and all intend to become teachers in elementary or secondary schools.

11,662. Give in detail all the existing opportunities of physical training under the following branches :—

(a) Regular games, e.g., football, cricket, etc. (1) Are they organised and supervised? (2) Is there a playing field?

(b) Drill: how taught, and by whom?

(c) Athletics, e.g., jumping and running.

(d) Handicrafts.

(e) Voice training.

(f) Cadet corps, rifle-shooting.

(g) Swimming. Is there a swimming-bath easily accessible?

(h) Gymnastics, free or applied.

Is a gymnasium attached to the College?—The following remarks apply chiefly to the Edinburgh Training College, although the work done at Glasgow and Aberdeen is carried out on similar lines :—

(a) The male students have a football club, a cricket club, and a golf club. These are all duly organised, and a general interest is taken in them by myself and other teachers, but no regular supervision takes place. The college has no field of its own, but advantage is taken of the public parks. The members can generally secure good positions in these parks, as they can exercise at hours which are not suitable for the ordinary park players.

(b) The females are taught physical drill on the Swedish system by Mr J. C. McGavin.

The males receive instruction from myself in physical drill according to a programme of my own, after the style of the Aberdeen Physical Training College course, which includes a large number of the Aldershot gymnasium exercises.

(c) Jumping and running are taught as part of the physical drill course.

(d) In Aberdeen College classes in woodwork are conducted.

(e) All the students are carefully practised in giving the words of command in the physical training course. Singing and phonetics are taught separately at the college.

(f) The students are all encouraged, but not compelled, to become members of the College Company of the 4th Volunteer Battalion The Royal Scots, which was formed in connection with the College in 1899, and of which I am captain. Nearly the whole of the students enrol as members and become efficient Volunteers. Last year the company had 109 efficient members.

They undergo the annual recruit drill, company and battalion training, and take part in the annual camps. They also perform the requisite rifle shooting laid down by the Government regulations, and have prize competitions and shooting matches like other Volunteer companies. The company attended, with the battalion, the following camps :—In 1900 at Lochcote, one month; in 1901, at Aldershot one week; and in 1902 at Tyn-drum, one week. In May last I took 80 members of the company a most successful march for five days through the counties of Roxburgh and Northumberland—the longest distance travelled in one day being twenty-six miles. Opportunities are given at camp for athletic sport of all kinds, and these are keenly taken advantage of by the students. During the week at Aldershot I asked and got permission from Colonel Fox to take my company through the military gymnasium there. Not only did we see the building, apparatus, and squads at work, but at the request of Colonel Fox the staff also gave a demonstration of the main features of the course.

(g) There is a public swimming bath within a short distance of the College, and one or two lessons in swimming are given during the session.

(h) There is no gymnasium attached to the College. In the College hall free gymnastics are taught, and also dumb-bell, Indian club, bar-bell, rifle and bayonet exercises, etc., and often to a musical accompaniment.

11,663. What time is allotted to these, or any of them, *per diem* or per week?—Are any of these taken in ordinary College time?—The training College time-table allows one hour per week during the session for physical training. The rifle shooting, a number of the volunteer drills and the games are done outside the College time-table hours.

Mr G. F. Macnee. 18 Sept. '02. Special costume desirable.

11,664 How far are the existing opportunities for physical training taken advantage of?—In physical training the existing opportunities are very largely taken advantage of, and are greatly enjoyed. It is to be regretted that the games are taken advantage of by a much smaller number of students.

11,665. What, in your opinion, are the results and effects of physical training—moral, physical, and intellectual?—The results from a systematic physical training would be exceedingly great—beneficial not only to the individual but also to the State. I have it on the authority of several of my colleagues on the training college staff that the intellectual work of the students is being influenced for good by the physical and military side of their training.

11,666. Is a uniform system of physical training desirable?—I do not think it necessary to have a uniform system of physical training. It might be an advantage to have for guidance a comprehensive general programme laid down (as is done with regard to other subjects in the more recent Codes of the Education Department), but leaving to individual teachers the carrying out of exercises suitable to the requirements of the district or institution.

11,667. How can the present system be amended and developed?—I think more time should be given to the subject during the training college course. Another hour added to the present one hour per week would even make a great difference. This, of course, is much in the hands of the Education Department, which during the past year has given a great impetus to physical education in training colleges by their issue of circular 329.

11,668. What is a just proportion of time to be devoted to physical training in relation to study?—A daily lesson of half-an-hour should, I think, be given. This would be a benefit to study.

11,669. What physical education, as distinct from training, is given at the college?—During the practical course, hints are constantly given bearing on the physiology of the body, and the muscles and organs brought into action by the various exercises. Some lectures are also given on hygiene and the laws of health.

11,670. Do those leaving the training college keep themselves up-to-date in physical training?—All who have to teach physical training in schools must, to some extent, keep themselves up-to-date in the subject. In general, such teaching is given without gymnastic costume and under conditions which are not conducive to proper effect. Much depends on the headmaster taking an active interest in the subject. The fact that so many headmasters all over the country are, of their own free will, attending Saturday or vacation courses in physical training is having an excellent effect.

11,671. Are the students medically examined whilst at college, if so, how often?—The students are medically examined on entering and leaving the college, and also on being enrolled as Volunteers.

11,672. Is any college register kept, showing the height, weight, chest girth, spirometry, biceps girth, etc.? If so, how often are these measurements taken, and by whom?—No register is kept other than the Volunteer register, which gives the height, weight, and chest measurements of the student when enrolled. I have often thought that such a register would be most useful, but under present conditions as to time it is impossible.

11,673. State all other information and your views derived from your experience, particularly with regard to the last part of the Terms of Reference?—My experience as to physical training having been largely connected with young men going out to all parts of the country as teachers, I have ever been alive to the responsibility and have constantly kept before them the benefits that would follow to their pupils and themselves by their attending, on every possible opportunity, in school and out of it, to physical training.

The time allotted to this subject on the college timetable—one hour per week—is small, but we always tried to make the most of it. Practically, all went

into the work heartily, every student being attired in proper gymnastic uniform. With regard to costume in schools I think every class-room should have its stock of gymnastic shoes for all the boys and girls in the class, as well as belts for the boys. Without this rig-out much of the physical drill lesson is a waste of time. The initial expense might be great, but it would be well worth the money. Braces on boys and tight-fitting dresses on girls are the great drawback to physical development and exercise. A teacher in gymnastic costume would feel the benefit of the lesson as well as the pupil.

The time allowed in the ordinary day school for physical training must be increased. At present it is small, and it will remain so until the Education Department recognise the importance of the subject by offering a special and substantial grant for its excellence. I think, too, that a great improvement would be brought about by friendly visits of specially qualified inspectors instead of the examination of this subject being left to occupy, say, five minutes of the time of the annual visit of the present ordinary school inspector.

The teacher should be allowed great freedom as to outside drill. Undoubtedly the aphorism for athletes is walk, walk, walk. Physical training on every possible occasion should be done in the open. There should be at least one systematic walk a week into the country in school hours for each class. A smart walk, sometimes at ease, and sometimes at attention, with an occasional halt to explain some flower, tree, rock, or other natural object, or even to say a word on the lie of the land as regards military topography. Some years ago, as a pupil teacher in Hawick, with the consent of a sensible headmaster, in school hours often did I

'In martial order,
Up by Teviot's flowery border,'

march my class—and a big one too—reconnoitring that most historic and ballad district, including the hills of Etrick—the home of that gallant colonel whose evidence before the Commission must come first—the Honourable John Scott Napier, at present commanding Aldershot Gymnasium, though generally—like true sons of heroes slain at Flodden—we had our eye on the other side of the Border—broad Northumberland. Never in school life did I experience anything to interest children so much as such a march. The word 'military' need frighten no parent. At this stage of a child's life I would train neither for the military martinet nor for the commercial magnate. The first and simplest movement in physical drill is, in a sense, purely military drill.

On their walks, going and coming, I would march to a tune, local and patriotic, when such a song exists; and surely poor must be the district that cannot claim some snitable air. Open-air work is a further test of discipline which, to my mind, should be firm but genial, with an occasional joke for the bairns. It is no discipline at all that can't stand a joke now and again. The Nature Knowledge walks of the Code, at present optional, should be made compulsory; and in what way could the objects of these walks be vitiated by the march being accomplished on sound physical lines?

The Aldershot system of physical training is a magnificent one, and lucky is the man who has been accepted and passed through it. The greater part of it, however, is not suitable for the ordinary school. In the gymnasium at Aldershot you have the picked men, physically, of the British army. They are chosen, as I understand, from the various regiments as likely to excel in gymnastic work before enrolling in the school at Aldershot; and yet even from among these some are sent back as unfit to reach the high standard of efficiency required. The course is largely a gymnastic one, and gymnastics, I do not think, should be given before a child is fourteen years of age. In the training college the exercises given in physical training include nearly all the Aldershot gymnastic exercises.

The formation of a volunteer company from the Volunteering-students in training has, I think, added a new and important factor to training college life, though this factor.

Time for training in day schools must be increased.

Expert inspectors.

Drill and exercise out-doors.

Code: nature knowledge walks should be compulsory.

Aldershot system.

Mr G. F.
Macnee.

18 Sept. '02

part of the training is not officially recognised as yet. Much labour has been given and many difficulties have been overcome, but by encouragement and support from the committee, Professor Laurie, the rector, and lecturers, and from Colonel Douglas Elliot, the company in Edinburgh Church of Scotland Training College is now quite established. Colonel Elliot says of the company: 'I was very pleased, indeed, through the exertions of Captain Macnee, to secure a company of excellent recruits. Physically, they are above the average, and of course are able from their training to take a much more intelligent grasp of the principles of drill and discipline. We have now had experience of the company for three Volunteer years. They attended all camps, and were enthusiastic workers. I consider it of the very greatest importance to these students to have the benefit of military drill and discipline at this stage of their career, not to speak of the physical benefits which they derive from the exercise.'

'I think it is quite practicable for every training college in the kingdom to arrange for a similar volunteer company, or section of a company, and were it made compulsory by Government, I consider that not only would the teachers themselves benefit, but their training would have an immense effect for good on the training and discipline of children throughout the whole country.'

Such a company, I fear, will always be somewhat difficult to work, unless captained by an officer belonging to the institution, who can at any time and at the shortest notice, when he sees an advantageous change in the ordinary day's time-table, fix up a drill or a shoot. Evening drills are, for study's sake, reduced to a minimum.

The battalion to which a college company is attached ought to receive an increased grant for such. An ordinary company must pay better, since training college students can rarely remain longer than three years with the company or the battalion. Nor do I think they should be encouraged to remain longer, but should be expected to join the corps of the district to which they have gone, and also to take a commission. No man should be more fitted to take command than the schoolmaster. Who can have the same influence with the lads who have left his school?

It would also tend to improve the social position of the teacher by his taking a prominent part in one of the recognised institutions of the country.

Every boy over fourteen should belong to a cadet corps. The Boys' Brigade is a most excellent organisation, and has done infinite good; but I think it would be greatly strengthened if they were attached to the local volunteer organisations.

Shooting should be taught with the carbine or ordinary rifle. Every child after leaving school should be on a register for so many years. As long as the youth can show that he is attending evening classes, he should be exempt, if he wishes, from ordinary physical drill classes; but, if not, he should be bound to attend self-improvement classes, in the shape of physical and military drill. This would go far to solve the problem of the physical training of those who do all their athletics by proxy at the Saturday afternoon football match. On occasional visits to the football field I have often looked around on the mass of spectators and wondered if nothing interesting could be devised by which the whole crowd might get something beneficial in the way of physical training instead of leaving the exercise to be performed entirely by twenty-two or thirty specialists.

The trained specialists can be justified. They show that they have pluck and athletic training, and that they have been taught to obey, without demur, the judgment of the Referee—qualities which are bound to reflect for good on the spectators.

I think the sitting of this Commission is most timely and necessary.

By helping in the physical development of the individual the country's strength is thereby increased. The task is a great and important one. If the physical

training of the young above fourteen as well as the child at school is to be taken in hand, as it must, I think a new school of teachers for this subject is necessary—a class approaching, if possible, in ordinary education to the day school teacher. He could take in hand entirely the continuation school work and be used for supervision in the day school. The ordinary assistant in school, who has done his or her full day's work, should have a minimum of evening work.

11,674. *By Sir Henry Craik.*—Have you any experience as to how the work you describe as having done as a pupil teacher in taking children out walks was an advantage?—I found them of intense interest to the children. I had never heard of such a thing being done before.

11,675. Did the headmaster approve of it?—Yes.

11,676. Do you know if it has been carried on since?—I do not know.

11,677. What would you say of the advance or depreciation of the physique of those people who have come up to be trained for teachers during the fifteen or sixteen years you have been in your present position?—I do not think their physique has gone very much down, but I think that formerly the men seem to have been bigger.

11,678. Of course the difficulty in carrying on your instruction is principally the insufficient playground and insufficient gymnasium accommodation?—Yes, we go into the King's Park for drill.

11,679. That is only possible in good weather?—Yes.

11,680. For any improvement in the training of the teachers in this way we have to look to private subscriptions to meet any expense that may be incurred?—Yes.

11,681. That would have to be done by some public authority?—Yes, where they might get the use of a gymnasium.

11,682. *By Mr Shaw Stewart.*—You say that you think that every classroom should have its stock of gymnastic shoes for all the boys and girls in the class, as well as belts for the boys. Do you lay considerable importance on that?—Yes.

11,683. It is important as curing flat feet and other ailments of children?—Yes, and it enables them to enjoy their exercises properly. The braces of the boys and the tight-fitting dresses of the girls are great drawbacks.

11,684. *By Mr Fergusson.*—Are your students examined in physical training before they leave you?—Yes.

11,685. Who examines them?—Formerly the examination was conducted by the Aberdeen Physical Training College. The Education Department now sends a representative: Captain Armytage was down in July.

11,686. He gave certificates?—We have not got them.

11,687. Did they all qualify?—We have not got our report yet.

11,688. I notice that you say that you get plenty of accommodation in the parks. We have been told that the School Board children cannot get accommodation in the parks. How do you manage it?—We have odd times now and again at which we can manage to go to the park.

11,689. But I understand that the children don't get in?—They get into the parks.

11,690. Not for playing games?—They do.

11,691. *By Mr McCrae.*—You say that you don't consider that a uniform system of physical training is necessary. Do you mean that also with reference to the elementary schools?—Yes.

11,692. Don't you think it would be a good thing to have a uniform system applicable to the whole of the country, with perhaps liberty to make some variations?—That is what I mean by a comprehensive general programme, just as in other things, such as drawing and nature knowledge.

11,693. What system do you adopt; is it based on the Aldershot system or Cruden's?—It is a mixture of

the whole of them. I took from the Aldershot system what I thought was most useful. It seems to me that Cruden had the Aldershot book before him, and that Chesterton had Cruden's book before him.

11,694. You have really prepared a system of your own?—I cannot say that; I have just taken what is most suitable.

11,695. You adopt a different system for the females?—I have nothing to do with them.

11,696. Do you know whether female teachers get any drill? We heard of another training college where the female teachers got squad drill?—They get drill. I had the female students of the Episcopal College for some time and enjoyed the training very much, but I had not time to continue it.

11,697. You find the volunteer company to be a great success in your College?—Yes.

11,698. You speak about continuation classes, and you say that every child after leaving school should be on the register for so many years, and that so long as the youth can show that he is attending evening classes he should be exempt if he wishes from ordinary physical drill classes, but if not, he should be bound to attend classes for physical and military drill. How would you compel him to do so?—Have your compulsory officers as you have for children up to fourteen years of age.

11,699. You would have that applicable to youths up to seventeen or eighteen years of age?—It would be worth trying.

11,700. What if they were leaving the town?—Then send word to the next town.

11,701. Would they be punished?—I have not thought out the punishment yet.

11,702. Who would be punished, the parent or the delinquent?—The delinquent, I think.

11,703. How would you punish him?—I have not thought that out, but I am strong on having a register, and to keep hold of those boys until they are eighteen.

11,704. You were at Aldershot yourself?—Yes.

11,705. Do you think it necessary that the instructor should go to Aldershot occasionally to get his information brought up to date as regards drill?—I don't think that is necessary if you keep in touch with all that is going on.

11,706. *By the Chairman.*—You are very keen on this subject, but of course there are a number of teachers throughout the country who are not keen. Suppose you have a teacher who is distinctly bored with physical training, would it not be of great assistance to him to have some book to fall back on?—Yes, it would be of immense assistance. I think something should be sent out by the Department like what they have in drawing, a skeleton.

11,707. Another thing is that if a teacher is transferred from one school to another, and they have the same system in both, then he will be able to go ahead at once?—Yes, but if there was a change, they might enjoy the exercises of the previous school. Any system you have must have the same earlier exercises.

TWENTY-FOURTH DAY.

Friday, 19th September 1902.

At the Museum of Science and Art, Edinburgh.

PRESENT:

THE RIGHT HON. THE EARL OF MANSFIELD, *Chairman.*

The Hon. THOMAS COCHRANE, M.P.

Sir THOMAS GLEN COATS, Bart.

Sir HENRY CRAIK, K.C.B.

Mr M. H. SHAW STEWART, M.P.

Mr J. C. ALSTON.

Mr J. B. FERGUSSON.

Mr GEORGE McCRAE, M.P.

Mr R. B. PEARSON, *Secretary.*

Major-General Sir IAN S. M. HAMILTON, K.C.B., D.S.O., examined.

11,708. *By the Chairman.*—You have been kind enough to send a *précis* of some evidence that you wish to give, but I may say that if there is anything that you wish to add to this, or if you wish to supplement it in any way, the Commission will be very glad to hear you. Will you kindly read your statement?—I have some experience of the effects of a special sort of physical training upon a certain section of our population, namely, the effects of drill and military physical exercises, with and without arms, upon the weedy and undeveloped youth of our great cities.

When I was commandant at Hythe, it was my duty to inspect every regiment of cavalry and every battalion of infantry serving in the United Kingdom. On such occasions I always made a point of seeing the recruits. A certain proportion of these recruits are drawn from the *residuum* of our town populations. When they enlist they are often miserable looking youths. Their limbs and fingers are poor and thin; their features haggard and pinched. Once in the army they are forced to lead a regular life, and to drill and to per-

form physical exercises. Within four or five months a marvellous transformation takes place, whereby they develop into stout, bright-looking, rosy-cheeked young men.

This satisfactory result may be, in some measure, due to the regular hours and wholesome food, for, undoubtedly, the wholesome food is essential. Physical training is invaluable, but it depends for its full effect upon a full stomach. We recognise this in the army, where a cup of cocoa and a biscuit are insisted on as a preliminary to the soldiers' early morning drill. I have, however, asked many officers and N.C.O.'s to what they attribute the improvement in their recruits. The answer invariably is that the drill and exercises, with and without arms, are largely responsible for this physical regeneration, which affects so many thousands of the under-sized, dispirited, undeveloped hobbledehoyes from cities, whom we have from time to time been forced to accept for the army.

I fear I cannot go so far as to say that the mischief caused by neglect of physical training in boyhood may

Maj.-Gen. Sir Ian Hamilton,

be completely remedied by drill, etc., in adolescence. Although the army may intervene in time to transform a certain proportion of potential workhouse inmates into useful citizens, their constitutions have probably suffered irretrievable damage between the period of their leaving school and the period of their enlistment.

Soldiers : prematurely aged : due to lack of training, etc., in early life.

I can show the reasons for this conclusion by means of an example. You have a soldier servant ; a re-engaged man about thirty years of age and looking rather older. You go away for a year or two, and on your return you find him a respectable person with grey hair. He has become what is called an old soldier, and his age is about thirty-three. He has prematurely aged. Many of those who are resuscitated by the means I have described seem to pay the penalty for earlier neglect by losing the best part of that flat table land of vigorous middle life which may last, under happier conditions, for twenty or even twenty-five years.

11,709. You put that down to the evil effect of their early training, and not to their over-exerting themselves by training in the army?—I have seen the greatest ingenuity in attempting to account for this phenomenon, and I have heard it particularly said that it was the night duties.

11,710. That would not affect a soldier servant?—No, not at all, of course, and I myself attribute it simply to the fact that they were half starved at one time in their lives and that they never recovered—I mean half starved not only as regards food, but as regards all development of the body.

I would enthusiastically welcome and approve of a system by which the physical aptitudes of our Scotch youth would receive careful attention, not only in the State-aided schools, but also for some considerable period after leaving school. I speak as a soldier as well as a Scotchman, and particularly from the point of view of national defence and the military tactics and requirements of the future. I hold that in future wars every private soldier may expect to have occasion to depend much more than formerly upon himself alone. He should therefore possess sufficient initiative and knowledge to enable him in the attack to advance against an invisible enemy without orders, and often without the example of an officer to encourage him. There will be no drums beating the charge, no waving colours or cheering swarm of comrades. Alone, as an individual, he will have to make his way step by step, foot by foot, using every possible means to conceal himself, until he reaches a point 80 or 100 yards from the enemy's line, which he will then apply himself to break with his bullets sent at the heads or loop-holes he can now at last distinguish. Hundreds, perhaps thousands, of his companions will be doing the same thing, but within a distance of 800 yards from the enemy they will all be working as individuals. If the private soldier does not wish to go on at the imminent risk of his life, there is no power on earth that can now compel him to do so in a day attack conducted over open country. I mean to say that physique will help him under such trying circumstances. The resolution and self-sacrifice which steel a man's soul to face death is as much a matter of physical as moral training.

I place them upon the same footing. I have seen moral energy unable to find expression owing to an impotent physique. I have seen a fine physique deserted by its moral energy in the hour of trial. If I may say so, it seems to me that the moral education of our young Scotchmen belongs to the mothers, the ministers, and to the existing type of schools. The physical side has hitherto not been sufficiently insisted upon, and that is why I so ardently wish to see physical training made compulsory, not only in the curriculum of the schools, but also as a continuation training for the further development of physical aptitudes. I very earnestly hope that such continuation training may be given with arms and under the direction of a qualified military instructor. The physical training in the schools might well consist, as at present, of ordinary physical exercises, but I trust

the continuation training may be given a distinct military bias.

My reasons are : If our boys are taught to handle arms, use the bayonet, march, skirmish, shoot, etc., they will be a great addition to our military strength. Young Boers, between the ages of twelve and fifteen, were most dangerous, and have sent many a good man to his long account. In their native land, or mounted on ponies in any healthy country, boys of fifteen will make most excellent soldiers. They attach less value to their lives than older men, and are wonderfully enthusiastic as well as dashing, supple, and quick. I would feel very confident of obtaining creditable results if I were placed in command of a mounted infantry brigade composed of boys who had previously been well grounded in handling arms, in skirmishing and the attack, and whose bodies and limbs had been rendered robust by careful training. I am a Scotchman and a Presbyterian. I would not anticipate any opposition, from the religious point of view, to a military bias being given to the education of the young. On the contrary, I would expect much kind assistance.

Presbyterians are at least as anxious for the maintenance of our Empire as other denominations. It would only be necessary to convince our ministers that the adoption of a system of semi-military training for our boys and youth would tend to relegate all questions of conscription and barrack life further to the background than they are at present. The Church of Scotland will, if I mistake not, be quick to perceive that a physical continuation training with a military bias would afford many of the advantages and absolutely none of the disadvantages of conscription. There are no people who realise more clearly than the ministers of the Scotch church that our army is the one great popular organisation besides their own which continues to give a silent denial to the assumption that wealth is the supreme object of existence. They understand that, whatever the practice of individuals may be, the ideals of the army tend towards self-sacrifice and hardship, and thus form a counterpoise to those of the age which make so strongly for self-love and luxury. They are, in fact, thoroughly patriotic, and will prefer to recognise a moral obligation to train their people for the defence of the Empire rather than sit with folded hands awaiting that conscription which is the probable alternative.

I would not anticipate any objection from the young Scotch people. The games and physical exercises of their schools would have given them a turn for such things. In the military continuation drills and exercises there would be a serious purpose underlying their work, which must appeal very strongly to any Scotch boys. The parents might be doubtful at first, but they would almost immediately realise in the improved manners and bearing of their sons what are the advantages of a taste of military discipline. Meanwhile, the introduction of such a system would complete what the war in South Africa has begun, by removing the prejudice against a military career which still exists in the homes of so many of our Scotch people. By bringing the civil population into closer touch with the army, incalculable good would be done to the troops, and some good, I venture to think, to the country. At present our soldiers, and we, the officers, suffer, each in our own class, from being unduly exalted at one time and undeservedly neglected at another. Both attitudes are exaggerated, and more knowledge and real sympathy might effect some enduring and sensible compromise in this respect in the minds of the public. Until lately there was, it must be acknowledged, some ground for Scotch prejudice against the army, whether manifested by the sober merchant of Glasgow or Dundee or by the labourers and miners he employed. It was the aim of the army to turn its men into machines, and such men were men spoilt for most branches of civil life. In future, it will, I hope, be the object of the army to develop initiative and individuality of thought and action amongst its men, qualities which should tell just

Training : great need : soldiers in future must depend on themselves individually.

Physical and moral training.

Compulsion desired in schools and continuation classes : physical exercises in former : semi-military

training in latter.

Reasons.

System proposed : advantages preferable alternative conscription.

Military training : system would remove popular prejudices against the army.

Sir as much in subsequent private life as they did in the ranks.

I think the length of time to be devoted to continuation exercises should be half an hour at a time, but three-quarters of an hour would be better. I foresee no real difficulty in introducing such a system. The press and the ministers will, we must hope, persuade the people to give the system a fair trial. The best line to take is that we Scotch mean to retain our advantage over the English in all educational matters. Instructors might be available from the volunteer permanent staff, or else be found in the persons of retired drill corporals or sergeants who live in the neighbourhood. Better still, the teachers might be sent to Aldershot and Hythe for a short time to qualify as instructors in drill and shooting. Fortunately, it will be most easy to arrange such matters in big cities where the need is most urgent for military exercises, and where there is, on the other hand, no space available for games. Officers commanding districts would take an interest in the movement, and might do much by inspections, etc., to encourage the boys and their instructors. I am sure, however, the Commission will find others better qualified than I am to advise upon any such points of detail.

I think the continuation classes should be compulsory. If not compulsory, it seems to me you will most certainly fail to secure the attendance of just that unruly and dissipated element which will of all others most benefit from discipline and drill. It would, indeed, be a cruel kindness to such boys and to their parents and their country to give them any option in the matter.

11,711. Then is there anything in Germany that you have seen that you wish to put before us? Having been there recently it would be very interesting?—Within a week or two of my seeing Sandhurst I saw the great cadet school at Potsdam.

11,712. Did you inspect the cadets at Sandhurst?—Yes, I first inspected them with Lord Roberts, and within three weeks I inspected the whole of the German cadets near Potsdam, and as regards the attention paid to their physical development, when I saw the Sandhurst cadets go through their gymnastic exercises, marching, etc., I thought they were rather good, but when I saw the young Germans, I saw that it was quite a different thing—that they were not in the same street and very much better. Whether it was the marching past, or the horizontal bars, or the parallel bars, or fighting with bayonet, it struck me that a great deal more attention had been bestowed upon the systematic development of their bodies. They were younger than ours; I should say they averaged about eighteen months to two years younger than ours. There were two or three officers with me who were connoisseurs in that sort of thing more or less, and they agreed that these boys were quite splendid, and not only did they do these physical exercises, but there were some exercises specially calculated to test their nerve. They went up on a platform, about fifteen or eighteen feet high, and on the edge of it they stood on their heads and then flung themselves backwards on to some soft earth underneath. It required considerable nerve to do that, and a German officer told me that this was carefully done for the purpose of training their nerves. They were led up to it from low heights, and then brought up to that height. It struck me altogether that in Germany an immense deal is done everywhere by the Kaiser and the Government to foster the national sentiment and to improve the national physique.

11,713. I presume it struck you in like manner that not enough attention is paid to physical training in this country?—Yes, exactly.

11,714. And probably, if the same care was bestowed, our boys would be as well as the Germans?—A great deal better. I am perhaps prejudiced, but our native qualities seem to me better. Perhaps comparisons are odious, but I think our men, as far as native aptitude goes, are the better men.

11,715. Then generally do you lay great stress on

each man acting for himself in the future, and may I take it that you are highly in favour of individuality?—I am highly in favour of individuality.

11,716. Do you consider it necessary that it should be fostered?—I consider it quite necessary in the fighting of the future.

11,717. And yet at the same time, when everyone is taught on the same lines and on a similar system, do you not think that individuality will be destroyed?—It will be an extremely difficult thing, of course, because you must have discipline for many reasons—absolute discipline and obedience—and yet you must have individuality. To quote the Germans again, I think they try very hard to reconcile the two qualities, although their men have not the native individuality that our people have. For instance, in rifle shooting one of their exercises is this: they send two private soldiers to skirmish up towards a target, concealing themselves as best they can, and firing alternately about every fifty or sixty yards in broken ground. One man watches the other, and makes an exact note of what he has done and how he has done it. He is left entirely to himself, and then when the exercises are over they appear before the captain, and one of them will say to him, 'So and so committed such and such a fault; he ought not to have exposed himself so much, and if he had gone ten yards further he would have had a better shot.' And similarly the other one reports against his comrade, and they have to exercise their minds as if they were almost officers for the moment. Even very young officers are carefully trained in many ways in Germany to teach them how to exercise individual resource. For instance, a captain goes with some twenty men with blank ammunition, takes up a position and conceals himself on the top of a hill, and the subaltern takes half a dozen men and begins to stalk him. The ground is such as to enable him to get within 100 yards without being seen. If he shows himself, the captain and his men fire with blank ammunition, and then afterwards he is told, 'You have committed a great fault; you have not been clever; you have shown yourself when you ought to have been able to get 300 yards further without doing so.' I quote that as an example. Although they are tremendous people for discipline, they try to make everyone think.

11,718. Is it your opinion that if drill is practised either by those at school or those who have left school, it is very important that in addition to the actual ground for pure drill they should have some open space to work in?—Yes.

11,719. It is a very difficult thing to obtain at present in many places in Scotland, but you would emphasise that as a great desideratum?—Yes, I would indeed. You must have some open spaces. I take it that one advantage of this drill is that you don't need such large spaces as you need for dozens of games, such as cricket or football. If you had 100 boys, and were going to develop their physique, you could work with less space if you were drilling them and teaching them to march than you could if you were going to have nine games of cricket going on at the same time.

11,720. But you need more when you get to skirmish or individual drill?—In a big town that is a very great difficulty. I am very strongly in favour of open spaces being provided for that reason.

11,721. *By Sir Henry Craik.*—With regard to physical training, you have seen the training that goes on at the Duke of York School?—Yes, I have.

11,722. How would that compare with the training that you saw at Potsdam?—I should not think that they gave nearly the same amount of time to it that these cadets did.

11,723. It is very well done there?—It is excellently done.

11,724. They begin at an earlier age?—Yes.

11,725. You place more reliance on the training in school by drill and discipline than upon the effect of games: former games?—I do, for several reasons. How can you examine what progress is being made if you give your physical development by means of games? I mean to

Maj.-Gen. Sir Ian Hamilton, K.C.B., D.S.O.

19 Sept. '02.

German training: individuality and corporate discipline combined.

Open spaces should be provided.

Drill and school by drill and discipline than upon the effect of games: former preferred.

Maj. Gen. Sir Ian Hamilton, K.C.B., D.S.O. say, that in every game of football and cricket you have skitters and shirkers who hang about and pretend that they have been playing, and they don't play at all, whereas if you have them in a row they have to do the exercises.

19 Sept. '02.
Training as part of education: must be systematic and regular.

11,726. Besides that, you think that to have full effect this physical training must be considered as a part of education, and be under the charge of those who are responsible for it?—I strongly think so.

11,727. That it should be connected closely with intellectual training?—I think that it acts and reacts on the teacher and pupil. I think that the teacher will gain greater power over his pupil in lessons by having exercised his power in making him go 'about 'turn' and 'shoulder arms.'

11,728. And, therefore, however good games may be, especially for schools of the higher class, before we can have the full effect of the physical training, it must be done under strict regulation and guidance, and as a part of a regular system?—That is entirely my view.

11,729. Then for those exercises that you have described, you would require more than any playground and really open spaces?—No, I don't think so. I think, for instance, that with regard to training for shooting, our great difficulty is the extraordinary clumsiness of the recruit, and the time he takes to get the proper positions. All such preliminary training can, however, be done on quite a small playground or yard, or even in a room.

Town children and country schools: vacation courses.

11,730. Do you not think that it would be a very good thing if we could carry out more generally the plan in England of taking the town children to the country for a vacation?—Yes.

11,731. Have you seen any of these camp schools?—No, but I have read of them.

11,732. But you think that it would be better to give the town boys a few weeks, camping them in the country schools?—That could be made a sort of reward for proficiency in learning their ordinary drill and exercises—that they would go out for a fortnight skirmishing, and so on, in the country. That would be splendid.

11,733. That would be considered a part of the regular school work, and instead of the schools being left useless for two months, they could be used?—That would be splendid.

Compulsion after fourteen strongly desired.

11,734. *By Sir Thomas Glen Coats.*—Do you advocate very strongly the compulsory training of young people after the ordinary school age of fourteen?—Yes.

11,735. Can you give any information as to any means of carrying out this compulsory attendance, seeing that many of the children would be beyond parental control, and apprentices, and lodging away from home?—I think I am hardly capable of guiding the Commission on that point. I think that I expressed the strong view that it would be most desirable to have it compulsory, but I know that this view comes into conflict with certain theories of political economy. These boys are earning something, and I should like simply to say that it would be desirable to have it compulsory.

11,736. The reason I ask is that I don't think there is any witness who has had any plan to suggest for compelling those boys to attend; if they don't come in, then naturally you would fine them or give them imprisonment or some method of doing it?—There is some penalty for non-attendance at school.

11,737. But this is beyond school, and beyond the control of the compulsory officer?—In our status of life boys are not beyond control until they are seventeen, at any rate.

Military training for boys up to eighteen: must be progressive course.

11,738. There is one other question; if those boys from fourteen to eighteen get military drill with arms, do you think there would not be some chance of their getting tired before they were old enough to join a volunteer corps or going into the army?—No, I don't think so. I presume that from fourteen to sixteen they would have a small rook rifle, a thing that they turn out for seven francs at Liège, and after that they would presumably get a carbine or cadet rifle, and there would be progress through the business that would keep up their interest in it.

11,739. You would give them training in shooting as well as drilling?—We have just now evolved a system of miniature ranges where you could teach a man to be a good shot practically without going to the rifle range. Formerly with the Snider and Martini-Heury, the kick and shock and smoke were so great, and the trajectory so high, that the only practice you could have was in the sun and air and wind and at long distances. Now our present rifle has no kick and no smoke, and it is simply a question of firing at 20 or 25 or 30 yards, at a proportionately reduced target, and with the one exception of the wind, you are learning really just as much as if you were firing at 1000 yards.

11,740. *By Mr Shaw Stewart.*—At what age do you think a lad is fit to drill with and use a full-sized rifle?—Certainly not till after sixteen, I should say.

11,741. In your evidence you say, 'I think the length of time to be devoted to continuation exercises should be half an hour a day, but three-quarters of an hour would be better'; that is after they have left school?—I was imagining that in the evening after they left school they would have half an hour or three-quarters for drill.

Contin classes necess

11,742. But you would not mean that for every day in the week; it would not be easy to get lads to attend continuation classes every day in the week?—I was thinking, then, perhaps purely as a soldier of what one would like, and not what was possible. I was thinking of two half hours' musketry training per week and one half hour of shooting, and the rest for drill.

11,743. Perhaps for the ordinary lad you would like to alter that to half an hour 'at a time.' There is this difficulty in a continuation class for all sorts of lads, supposing it was possible to bring them together: I don't suppose they would be got together for more than three times a week, and possibly only twice a week?—Well, I don't want to put in anything that is not possible, because that would weaken the whole thing. Then I shall insert the words 'At a time.'

11,744. Then there are two questions with regard to your general evidence. You don't desire to see all boys become soldiers—that is out of the question?—I think that would be a most regrettable thing.

11,745. The trend of your evidence is rather towards the military side?—Yes.

Train necess all.

11,746. You rather wish them to be able to bear arms, if necessity arose?—Yes.

11,747. And you think physical training is as necessary for those who enter industrial life as for a soldier's life?—I should say that the battle of industrial life is as severe as any battle with arms.

11,748. And the preparation for that life is as important as that for the life of a soldier?—Absolutely.

11,749. *By Mr Alston.*—You spoke of the prejudice on the part of the public against the army; can you account for that prejudice in Scotland?—I endeavour to account for it in my evidence to some extent. It dates from very old days, when the prisons used to be emptied into the army. It is, as I say here, the fact that the training in the army, although good for a certain limited number of things, has not hitherto been such as to better qualify a man for civil life afterwards. I think that is the reason. I think instinctively they felt that when a man came back he was not very successful in getting employment, and so on.

Arm popul Judh

11,750. Was it not very largely due to the quality of the army?—That is what I say—in the olden days when the jails were emptied into the army.

11,751. But that, of course, has not applied for many years, and yet the prejudice still exists?—It has existed in Scotland from the days of Culloden.

11,752. You remark upon the good that would be done by bringing the public more into contact with the army?—I think so.

11,753. You would require a soldier to be a very much better class of man than we have had?—I would try and make him so. But it is the soldier's own class; his father and mother and brother that look down upon him now. In the Highlands when he goes to be a soldier they are sorry, and they strike

him off to a certain extent. There is that feeling, I am afraid, or there has been till very lately.

11,754. You know that there is considerable difficulty in introducing military training in the schools and in continuation classes, on account of the prejudice of the parents against a military training?—Certainly.

11,755. There is still a strong antipathy to it?—Yes, but I think that will decrease.

11,756. As against these proposals?—Yes, I think that it will decrease.

11,757. Then you think that there will be sufficient attraction?—Of course genuine, conscientious objection might have to be respected. I don't think you would make a Quaker fire off a gun, but you might train him with the white flag, or something of that sort. I would not let him off doing his drill.

11,758. Do you think that there would be sufficient attraction to a boy of fourteen, or seventeen, or eighteen, without compulsion to attend a continuation class and take physical training and military drill?—I think with the best boys there would be, but I think with the very boys you want to get at there would not be. I would add that I think that probably more of these young rascals would come voluntarily than you think now, especially if you give them some little badge and so on. I do think that, but I would rather see compulsion.

11,759. You would rather see compulsion?—I would rather see compulsion.

11,760. Do you think the public would be prepared to stand compulsion?—It depends a good deal on the report of this Commission, perhaps. One will see how the public takes it, I suppose, by degrees from the Press.

11,761. *By Mr Fergusson.*—If you had a free hand, would you introduce conscription into this country in the fullest sense of the word?—No.

11,762. But you feel that something should be done, as the present state of matters is not satisfactory?—Yes.

11,763. And therefore you advocate this system which you have sketched out as something which will not be any great burden on anybody or be very irksome, and put conscription in its fullest sense in the background for ever?—That is so.

11,764. *By Mr McCrae.*—I suppose, in your desire for physical training, you would have the twofold object—you would like to improve the physical development of the race apart from purposes of national defence?—Yes. I am trying to regard this question quite as much from the point of view of a citizen as of a soldier.

11,765. And also for national defence?—Yes.

11,766. Have you considered any alternative to compulsory training which might be an improvement on our present state of matters?—I suppose it is a very vexed question, but if you could not have compulsion, and if the boys would not come willingly, they might be remunerated.

11,767. I notice that you rather suggest that up to fourteen, or as long as the boys are attending the day schools, they should not have military drill?—This new model course of training adopted in England is, of course, military to a certain extent already; I mean to say that there is no need for any great change in the present system as long as the boys are attending the day schools.

11,768. You say that the physical training might still consist, as at present, of ordinary physical exercises; would you add drill to that?—I personally prefer a touch of drill all round, but I don't want to attach so much importance to that as to have a distinct military training.

11,769. But you think that it would be an advantage before fourteen that they should be taught squad drill in the schools?—Yes, I do.

11,770. As far as compulsion there is concerned, there is not the same difficulty, because there is compulsory attendance for mental subjects, and physical training might be added?—Yes.

11,771. The great difficulty is when we come to the

point after they leave school, between fourteen and seventeen years of age?—Yes.

11,772. Would you approve of a cadet corps being attached to every day school?—I would.

11,773. Then you think that it would be a good thing if a cadet corps was attached to every day school, and perhaps attendance might be continued at the continuation and evening classes?—Yes, the boys at the school would be too small to belong to a cadet company.

11,774. There is the Boys' Brigade, starting at about twelve years?—Yes.

11,775. To what age in these continuation classes do you think they should get organised physical training?—I have said here, in this paper, seventeen to eighteen, certainly.

11,776. Then to go a step further, supposing it were necessary in the future to avoid conscription that every young man capable of bearing arms should put in a course of training such as our volunteers undergo just now, would it be feasible that a boy who had attended the continuation evening classes, and had a certificate that he had undergone physical training, might be exempted from undergoing a training similar to what is undergone by the volunteers. My point is, that up to seventeen, if he had a sufficient physical training, combined with drill, and in the event that I have forecast, everyone should have compulsorily to put in a certain number of drills for the purpose of national defence, the boys holding such certificates might be exempted?—I think so. That would come itself. They would come before an instructor, who would find that they knew their work.

11,777. And it would be an advantage from that standpoint?—I think that might be a very reasonable proposal to make.

11,778. Then we had the other day a witness who, while telling us that in certain parts of the Highlands they were very keen on volunteering, they had no desire to enter the army; do you think that such a course of training, while it might make them more anxious to join the volunteers, might give them a taste for the army?—Of course the Highlands are strong against the army at present in most parts of it, and I don't think anything can make them worse in that respect, and I think it might make them a great deal better.

11,779. But you think that by giving such a training they might be content with the soldiering that they get in the continuation classes and the volunteers, and that there would be no fear that that training might induce everybody to enlist?—Certainly not. I have no fear of that at all.

11,780. With regard to the young Germans at the cadet school, what age would they be?—They are considerably younger than our boys. Ours are about nineteen and a half; that is the latest they can go, and they are from eighteen to twenty, but these boys at Potsdam ranged from about fourteen to about eighteen or nineteen.

11,781. So that they start much earlier than in this country?—Yes, certainly.

11,782. *By the Hon. Thomas Cochran.*—You spoke of the advantage of physical training to the recruit; is there a distinct and marked advantage?—I have not the statistics, with me, but it is only a few weeks ago that an officer commanding one of our depôts sent me the statistics, and it would be very easy to get them and send them to the Commission; it is quite extraordinary.

11,783. You spoke about the premature ageing of old soldiers; do you trace that to the amount of physical training that he has had as a young soldier?—No.

11,784. We had a witness here yesterday who rather brought that forward?—After all, a recruit only gets two hours a day for the first fortnight of what you might call physical drill, and the rest of the two or three hours is not of an exhausting nature at all.

11,785. You put in premature decay probably as due to the fact that he has been insufficiently nourished?—Yes, and the body not physically trained.

Maj.-Gen. Sir Ian Hamilton,
K.C.B.,
D.S.O.

19 Sept. '02.
Cadet corps approved.

National defence: compulsion: continuation classes: certificates of proficiency.

German cadets 14-18: Sandhurst cadets 19½.

Recruits' training.

Soldiers: premature ageing.

Maj.-Gen. Sir Ian Hamilton, K.C.B., D.S.O. 11,786. And not due to physical training?—No, certainly not.

11,787. I don't want to go over the prejudice about the army, but do you think it can be traced to other causes than the fact that you have alluded to as to the inferior quality of material? Is there anything in the present treatment of the soldier that leads to the prejudice?—I don't think there is anything in the present treatment of the soldier that would lead to any prejudice, but I do think that there is a great deal of room still for improving and modernising barrack life, and I think that in the next year or two a great deal will be done in every way to bring things up to date.

11,788. That is the very point I had in my mind; there is a prejudice to the barrack life among the better soldiers, is there not?—Yes, I think a great deal will be done, but as regards opinions, there are a hundred reasons why they should not be passionately fond of the army. They don't make much money, for one thing, and there are many reasons.

11,789. Do you think it would be possible to do with less barrack life in the army?—All roll-calls are being done away with except one, and I think you will find that the men will be less tied to their barracks, but I think they must live in barracks.

11,790. It has been rather a fad of my own to give the men of good conduct in the army, who pass in all their drills, long periods to live in plain clothes and to enable them to go out into civil life for six months or so, and come back again to barracks at any time they are required without interfering with discipline, at the option of the commanding officer?—I think that is rather a large question to answer offhand, but you would never know where you were as regards your establishment if you gave a large number of men leave for long periods. As regards the permission to wear plain clothes on furlough, that has been done.

11,791. The other, I thought, might be in the discretion of commanding officers very largely to allow men to go back who could keep in touch with civilian life, and enable them to go out and pick up their old work again. Now a great number of men go to the barracks who are really useless. However, I don't want to pursue that. Then there is a good deal of this dislike in the army to the excessive number of fatigues?—We have also permission in the army to limit the

number. It has been admitted that reserve men and old soldiers may be made use of to lessen those fatigues.

11,792. And that ought to tend to popularise the Army?—I think a great deal will be done.

11,793. There is also the number of guards?—Lord Roberts is very keen on that subject, and has already done much to reduce sentries.

11,794. And all those subjects rather lead the soldier to think that when he is in barracks he is treated like a child?—Yes.

11,795. There is also going to bed at a certain hour, and there is no individuality or initiative?—No, we want to improve matters. I can confidently assure the Commission that the present Commander-in-Chief is bent upon introducing reforms in this respect.

11,796. Do you think that for purposes of discipline better-educated men are restrained from going into the army?—Certainly not.

11,797. Do you think that these reforms would tend to improve the soldier morally and in every way?—Yes, but we must move slowly.

11,798. About the cadet corps, which has been brought before us by some of the witnesses, there is a difficulty in organising cadet corps that they have not been recognised by the War Office where there is no uniform provided?—Well, I have only been back at the War Office for a week or two since the South African War, and I am not aware what has been happening there, and I must be careful not to clash with any remarks of my superiors, but I think that a cap and a belt would please the boys and might be accepted as uniform.

11,799. We had several cases brought under our notice of masters and others being anxious to have a cadet corps to be attached to a school, and they felt that the parents would not go to the expense of uniform, and that they thought it was not necessary, and that the boys could do it with some simple uniform; they want something such as a cap and a belt?—Yes.

11,800. Something to identify them?—Yes.

11,801. There has been an idea given expression to, that in the army men are rather tending to machines?—Yes, formerly, and perhaps to some extent still, but I hope this tendency will not long prevail.

The witness withdrew.

Mr ARTHUR S. REID, M.A. (Cantab.), F.G.S., examined.

Mr A. S. Reid, M.A., (Cantab.), F.G.S.

11,802. *By the Chairman.*—You have your notes before you?—Yes.

11,803. State your school and university training, your former experience, and the time in your present position?—Educated at Sutton Valence School and St John's College, Cambridge. First Class in Natural Sciences' Tripos, 1879.

Two years at York, 2 years at Sutton Valence, 18 years at Glenalmond.

11,804. (a) What is the class of your school and scholars? (b) Give the numbers and ages of the pupils?—A Secondary School on the English Public School system. Sons of gentlemen.

140 boys, ages varying from 9 (in Junior School) to 19.

11,805. Give in detail all the existing opportunities of physical training under the following branches:—

(a) Regular games, e.g., football, cricket, hockey, etc.: (1) Are they organised and supervised by masters? (2) What is the size of the playing-field, and its distance from the school?

(b) Drill: how taught and by whom? Gymnastics: free or applied? Is there a gymnasium attached to the school?

(c) Athletics, e.g., jumping, running, etc.

(d) School-runs, paper-chases, etc.

(e) Handicrafts.

(f) Voice training.

(g) Cadet corps, rifle-shooting.

(h) Swimming: (1) Is there a swimming-bath attached to the school?

(i) Fire brigade corps.

(j) First aid and ambulance.

(a) Regular games are Rugby football and cricket; Games. golf and fives are organised, but not compulsory. Hockey is played when football is impossible from the state of the ground.

(1) All games are organised as part of the school training, and are controlled by committees of masters and elder boys, who are responsible to the Warden of Glenalmond for the carrying out of the system. Masters take part in all games. A committee consists usually of one master and several boys: some committees are of boys only.

(2) Five cricket grounds and four football grounds are used, all within the school grounds, and easily accessible in a few minutes. The area of these fields, taken together, is estimated as from 22 to 24 acres.

(b) Drill is taught as part of the volunteer corps training by a resident sergeant instructor (late Black Watch) and the officers of the corps.

There is a large gymnasium in the school fitted with the usual appliances (bars, ropes, ladders, rings, dumb-bells, etc.).

Gymnastics and physical drill are taught by a resident sergeant instructor (first-class Aldershot certificate for gymnastics and fencing) and competent masters.

allotted.

(c) 'Athletic sports' (running, jumping, hurdle-racing, putting weight, throwing hammer and cricket ball, steeple-chases across country, etc.) are held each year at the end of March, and are trained for specially during that month.

(d) In the winter terms there are compulsory short school runs on three days per week; in bad weather, when football is impossible, longer runs, hockey and paper-chases are substituted for that game.

(e) Carpentry is taught by the resident carpenter, and mechanical engineering by the resident mechanical and electrical engineer: the former to the modern side and middle school as part of their training, the latter to those boys whose parents desire it as a preparation for their sons' future career.

(f) There is a school choir instructed and trained by a resident choir and music master.

(g) The cadet corps (4th V.B.R.H.) was started in 1876. The numbers at present are 101, so that, with a few exceptions, all boys who are old enough and big enough are members of the corps. The captain and lieutenant are masters, the 2nd lieutenant and N.C.O.'s are elder boys and some masters; there are also masters in the ranks. There is a resident sergeant instructor (late Black Watch). Members of the corps who are old enough are enrolled. The corps is regularly inspected and reported upon by the adjutant, and joins, when possible, in battalion drill and field days.

All members of the corps who are competent to handle the rifle can get instruction and practice in Morris-tube shooting during the winter terms. In March and the summer term (May to July inclusive) the best shots are trained on the range at 200 and 500 yards, and of these the best eight are sent to compete at Bisley for the Ashburton Shield and Spencer Cup (which Glenalmond has won thrice) against other public schools. Glenalmond has been represented at Wimbledon and Bisley since 1877. Matches are shot during summer term against about twenty other schools and some regular and volunteer teams.

(h) There is no swimming-bath attached to the school, but three separate portions of the river, of graduated depths, are used for bathing in summer; the necessary stages and diving-boards are fitted up, and boys are 'passed' from one bathing place to another according to their ascertained proficiency in swimming, diving, and floating, beginning with water within the depth of the smallest boy.

(i) and (j) Both fire-brigade drill and ambulance work (with lectures from the medical officer) were at one time part of the school training; lately they have been in abeyance, but I have the Warden's authority to state that both will shortly be again included in the curriculum.

(k) Boxing and fencing should be added to the above list as among the organised forms of physical education at Glenalmond.

11,806. State specifically the time allotted to these or any of them *per diem* and per week?—*Cricket*.—On three days per week 2½ hours, on two days per week about 3¼ hours. On Saturdays matches for first and second XI's, and occasional matches on other days. Every boy gets one day per week (exclusive of Saturday) 'off' from cricket.

Football.—Three separate hours' practice or matches per week, as well as shorter practices in such special matters as 'passing,' 'kicking,' 'scrum-work,' etc. Boys who are physically unfit for football or cricket go organised runs or walks.

Gymnastics.—Each boy gets about 1¼ hours per week, and there are also 'voluntary' classes for those who wish for more. The best gymnasts form an VIII., and the best pair of these compete from time to time with the other schools at Aldershot. There are special classes for weakly boys.

Athletic Sports.—The training for these takes the place of football in March, and is organised and supervised by a committee of boys and masters.

Runs.—In winter terms a short run of 2 to 3 miles

on three days per week (non-football days). Longer runs and paper-chases *vice* football, when the weather will not allow of that game being played.

Boxing and fencing.—Each two hours per week in winter terms for those who join the classes.

Drill.—One full dress parade of one hour per week; recruit drills three half-hours per week.

Shooting.—Winter terms: Morris-tube, three periods of ¾ hour per week. Summer-term: four periods of 2 hours per week (including matches), and occasional longer periods when matches are shot at Barry, Crieff, Montrose, or other distant ranges.

Golf.—Any boy who has passed the test for the links may play golf when not required for the compulsory games or runs.

Fives.—There are three fives-courts under control of the keeper of fives (a senior boy). The use of them is obtained by putting down names in the morning.

All games are, as explained above, controlled by committees who make rules and regulations. These committees are controlled by a central 'Games Committee,' which is finally responsible to the Warden. Cricket, range-shooting, and corps-drill belong to summer term. Football, gymnastics, athletic sports, runs, boxing, fencing, golf, Morris-tube shooting, and corps-drill belong to the winter terms.

11,807. Are any of these taken in ordinary school hours?—With the exception of section (e), all these are taken 'out of school.'

11,808. What, in your opinion, are the respective merits and relative values of the various forms of physical training?—This question opens out a large field, but briefly it may be said that whereas gymnastics and physical drill make chiefly for muscular and bodily development, the great value of organised games is, in addition to bodily development, the unconscious training in habits of unselfishness, self-reliance, unquestioning obedience to captains or umpires, self-control, generous appreciation of others, consideration for others' feelings—in fact, many of the qualities that go to the making of the 'gentleman.'

11,809. How far are these opportunities taken advantage of?—With us there does not arise the question of 'taking advantage of opportunities.' The games are part of the school system and life; masters take part in them, not as invigilators or supervisors, but, like the boys themselves, in friendly rivalry, their greater experience or ability sometimes aiding the boy by advice, sometimes by example, while, at the same time, they obey their boy-captain just as they have done all their life at school and university. These relations react on the mental side of the school training, since qualities that are hidden in the classroom come out on the playing-fields or range, and man and boy acquire mutual respect for one another.

11,810. What, in your opinion, are the results of such physical training?—The results are invaluable, in that physical development keeps pace with mental development, which is necessary for the properly 'educated' man. Qualities and habits which cannot be brought out or inculcated in the class-room—which cannot be taught—are, almost unconsciously, acquired and developed, while the master ceases to be only (from the boy's point of view) a teaching-machine or task-master, and, therefore, finds his usefulness as a teacher enhanced.

11,811. What are the effects, moral, physical, and intellectual?—This is again a wide question, but, to take a single example under each heading, one may say (1) Games and physical exercise are the natural prophylactic against the moral evil that may get hold of, and ruin bodily and mentally, the growing boy whose sex-sense is asserting itself. The healthy, clean-blooded, vigorous boy, keen to excel in his games, is mostly clean-minded and clean-souled, and I have known the evil in question combated by an appeal to the need of efficiency in games, when other appeals have failed.

(2) A comparison between a young man who has been educated at a school where games are an integral part of the school training, followed by an English university where games, though not compulsory, are

almost equally a part of the training, and a young man who has not had these opportunities, will, I think, answer this question.

(3) Every schoolmaster finds, I think, that for his own and his pupils' intellects to be at their brightest and in their most receptive condition, a due proportion of physical exercise and games is both desirable and necessary.

11,812. Is a uniform system of physical training in schools desirable or necessary?—Provided the uniform system does not destroy individuality, it may be desirable though not necessary. A system that might be desirable for a school in a town would not necessarily be desirable for a school, like Glenalmond, among the hills, the moors, and the burns. The main outline might be uniform; the details should be left to the circumstance of situation. Uniformity of physical training is probably more necessary in the state-aided schools, especially at first, when a system has to be created.

11,813. How, in your opinion, can the present system be improved and developed?—If 'the present system' means that adopted by Glenalmond and the English public schools, though, no doubt, it cannot be called perfect, I doubt if much improvement is needed unless it be in details. The main principle of making physical education part of the school training, and having organised games a part of the school system, seems to me absolutely sound, and Continental nations appear to be awakening to the fact.

11,814. What is the relation between mental study and physical training?—The two should go hand in hand; the one fulfils the other. '*Mens sana in corpore sano*' is a trite, but none the less true, motto for guidance. If the balance between the two is not justly held, we have the Scylla of the 'brainless athlete' on the one side and the Charybdis of the 'attenuated book-worm' on the other to avoid, or, if we allow games and physical exercises to get the upper hand, we may lay ourselves open to be reproached as producing only 'flannelled fools and muddled oafs.'

11,815. What is a just proportion of time to be devoted to physical training in relation to study?—If 'physical training' includes all games and outdoor exercise, whether organised or not, I should say about one to two.

11,816. Is physical training most advantageous if carried out daily in connection with school work?—Certainly; the brain gymnastic and the bodily gymnastic should alternate daily, and be made an integral part of the school life. So we get the 'public school spirit' which has turned out the type of ruling Briton who makes his way all over the world.

11,817. What are the respective merits of outdoor and indoor training?—Valuable training in co-ordination of hand and eye, and in development of powers of observation, can be obtained indoors as well as the muscular development from gymnastic work, but outdoor games and exercise are immeasurably superior in bringing about true and full development. Moreover, there is the education of the æsthetic sense to be thought of, wherein the hill, the moor and the burn, the bird, the beast and the flower, especially in a school situated as Glenalmond is, must needs play their part.

11,818. Should some form of military drill or training form part of the ordinary curriculum of every school?—Yes, certainly; if not compulsory the opportunity should be there; military drill and drill with D.P. carbines when the service rifle is not obtainable and range-shooting is impossible; especially so in the 'State-aided' schools, which would thus become, more than before, feeders for volunteer corps and the regulars, apart from the excellent disciplinary effects of such training.

11,819. What system of physical training is, in your opinion, the best?—I have not sufficient practical knowledge of systems of physical training to answer this question, but I believe that what is generally known as the 'English Public School' system, followed by the

training of the English (resident) university, produces the best average man at present.

11,820. As distinct from physical training, what physical education is given in your school?—The Modern side and Middle school are taught science (physics, chemistry, geology, etc., etc.): the development of powers of observation and the co-ordination of hand and eye, orderliness of method and nicety of manipulation being specially looked after in practical chemistry, field geology, and practical surveying.

11,821. What are the results of your experience regarding physical training, games, etc.?—This seems to be covered by answers already given.

11,822. Are they at present sufficiently organised and supervised?—At Glenalmond the organisation is, as far as I can judge, sufficient. Supervision, if it exists at all, is done by the boys themselves—captains of games, etc. But when the *esprit de corps* demands that each boy shall 'play up and play the game' for the honour of his school, little supervision is necessary.

11,823. Are the teachers themselves duly qualified and instructed?—Yes, certainly.

11,824. Are the pupils examined by a medical man?—Each boy brings to school with him a medical report showing what illnesses he has had, what bodily imperfections, if any, he possesses, and what weaknesses he is specially liable to (*e.g.* asthma, glandular swellings, etc., etc). On reaching school he is thoroughly examined by the resident medical officer, and his limitations made note of: then a programme is made for him as to what forms of physical exercise and what games he may engage in, whether he may take cold shower baths, etc., etc. This is communicated to the tutor specially responsible for interesting himself in the boy's life at school (each boy has such a tutor) and the 'Games' Authorities arrange his physical exercise programme in accordance with the medical report and suggestions.

11,825. What kind of medical examination is made, and how often?—The examination is complete and thorough at the boy's entry; it is repeated as often as the medical officer considers it necessary.

11,826. Is a school register kept, showing the height, weight, chest girth, spirometry, biceps girth and general physical development of the pupils?—Height and weight have been registered for several years, but no register has been kept of the other items mentioned. I have, however, the Warden's authority for stating that, in future, a register of the kind intimated will be kept at Glenalmond.

11,827. If so, how often are these measurements taken, and by whom?—Hitherto, at beginning and end of term, by the Sergeant Instructor.

11,828. What remedies or suggestions have you to propose regarding the last part of the terms of reference, viz., How the existing opportunities for physical training may be increased by continuation classes and otherwise, so as to develop in their practical application to the requirements of life, the faculties of those who have left the day schools, and thus to contribute towards the sources of national strength?—To this question, from my inexperience, I had no answer, but I have referred it to my headmaster, who has given me the following among other means:—'By continued military drill of an extended nature so as to co-ordinate with the elementary drill which should be given in national schools by gymnasia, etc. At present, voluntary Boys' Brigades and cadet corps, started and maintained by private benevolence, are the only agencies to cope with this problem. If it is to be met properly, so that the national life is not imperilled by a generation of weaklings, the State must step in and organise.'

11,829. By Sir Henry Craik.—You have been at Glenalmond for eighteen years?—Yes.

11,830. At that school you have drill as well as games?—Yes, cadet corps drills.

11,831. Your cadet corps is thoroughly organised and in connection with the 4th Battalion of the Royal Highlanders?—Yes.

11,832. Will you tell us whether you find the

19 Sept. '02.

A. S. physical training a great supplement to the games; you don't think that the school would do with games alone?—No, I think not. I think there should be gymnasium work as well.

11,833. Whether do most of your boys take part in the games or in the drill?—All boys that are physically competent have to take part in the games. They are part of the school system.

11,834. Without medical reasons they must take part in them?—Yes, provided that the doctor passes them, they must play in all games that they can play.

11,835. And the cadet corps is only voluntary?—Yes, but every boy is advised to join it for his own good, and, as a matter of fact, nearly all those who are tall enough and up to the standard do join it.

11,836. You have about 100 out of a total attendance of 140?—Yes, and that allows for the small boys in the Junior school, who are not big enough.

11,837. You have specially given attention to shooting?—Yes.

11,838. Do you find the Morris-tube satisfactory?—Personally I don't think it does much more than teach position drill really, because of the difference of the recoil, the difference in the weight of the rifle, and the absence of practice in judging light and windage. We find that boys who are good at Morris-tube are not better at the range; just the same as a game shot is not necessarily good at the range.

11,839. But in many town schools better than nothing?—Yes.

11,840. You have dropped the fire brigade and ambulance?—Yes, but that is to come on again.

11,841. Did you find them useful?—Yes, decidedly.

11,842. How much time is given to the drill?—There is a full-dress parade once a week, and recruit drills three half hours during the week; that is the amount of the cadet drill. Last term we had to learn the new drill, and a great deal more time was given to it.

11,843. On the whole, how much is it every week?—One hour for certain boys and three half hours for the beginners and recruits.

11,844. About one hour and a half over all?—One hour for all.

11,845. How much time is compulsorily given to all games?—Cricket, three days a week two hours and a half, and two days a week three and a quarter. Then, of course, on Saturday there are usually matches. For football there are three separate hours' practice per week, and there are half-hour practices in such special matters as drop-kicking, passing, scrums, and so on. There are also the compulsory runs.

11,846. Altogether with games, shooting, and drill, you assign about twenty hours a week?—It would be different in different terms.

11,847. But something on an average of about twenty hours?—I have not added it up.

11,848. You don't think that is too much?—I don't think so, considering that they are organised games and part of the school training. I think it would be too much if they were games made by boys on their own account.

11,849. But in a school where you draw from the best social class, and where you look carefully to the all-round training of your boys, you divide the physical and mental training into something like equal proportions?—I think it comes to very nearly that sometimes, though one or two is the more general proportion.

11,850. And you think that is the right proportion?—I think so.

11,851. Do you think the proportion that is given in the great mass of State-aided schools is miserably small?—Yes, but I would not advise that for all schools.

11,852. Why not?—I don't think they could afford the time.

11,853. Why can they not just as well as your boys?—There are a great many of our boys who have not to struggle for their livings. Their careers are provided for them before they come to school.

11,854. But still the great bulk of the boys who go to public schools have to earn their living?—Yes,

more or less, but many are more or less certain of a competency.

11,855. You are not educating them to be idle?—No, certainly not.

11,856. In order to prepare them for an industrious life, you give them that physical training?—Yes.

11,857. And you think that that is about the proportion that prevails throughout the higher-class public schools in England and Scotland?—Yes, I think it is about one to two, counting all opportunities for games.

11,858. You have described the results of physical training, and you also speak of the question of the uniform system of physical training. You think that a certain amount of uniformity is necessary?—I don't think it is quite necessary; I think it is rather desirable than necessary.

11,859. And will be all the more necessary in State-aided schools?—Yes, I think so.

11,860. You are asked, 'In your opinion can the present system be improved and developed,' and you say in answer, 'If "the present system" means that adopted by Glenalmond and the English public schools, though, no doubt, it cannot be called perfect, I doubt if much improvement is needed unless it be in details. The main principle of making physical education part of the school training, and having organised games as part of the school system, seems to me absolutely sound, and continental nations appear to be awakening to the fact.' You don't think that, so far as you know, it has sufficiently prevailed in our ordinary State-aided schools?—No, I don't think so.

11,861. The largest proportion of time to be devoted to physical training is about one to two hours, but it is in most public schools calculated at much more than that?—Yes.

11,862. Perhaps about one-third?—I have not actually made the calculation really, and I could not answer offhand.

11,863. You think it is almost a necessary part of satisfactory physical training that the poorer class in towns should see something of the country?—Yes, and should be taught in their schools to refrain from wantonly hurting animals and flowers alike. My point is that a plant is a useful living being, and that they ought to respect it and stop the tearing up of flowers and ferns. The first idea of the town people seems to be to pull up flowers and break branches off trees, and they would not do that if they were properly taught to refrain from injuring these creatures, and to respect their value and use as antidotes to the animals' effect on the air, irrespective of their beauty.

11,864. How are your teachers qualified?—Well, the instructor of gymnastics and drill and so on has the qualifications of being an army man, and holding certificates for gymnastics and fencing and shooting and so on from the army.

11,865. And he takes the physical training?—Yes.

11,866. But then the officers of your volunteer corps are masters?—Yes. The officer commanding goes to the School of Instruction, Victoria Barracks, to be trained and obtain his captain's certificate.

11,867. It is the duty of the ordinary staff of the school to take part in the games?—It is part of the system that they should be with the boys in their games and play with them, vying with them, and I don't see why State-aided schools should not do the same thing.

11,868. In your school you have a very strict system of medical inspection and examination?—Yes. No boy may engage in any game or even take a cold bath till the medical officer at the school has examined him and passed him on to his Tutor or special master, who is responsible for his life at school. Each of us has a certain number of boys, and we are responsible for them, and we are in correspondence with their parents, and we deal entirely with that boy. If he is punished at all he is punished by his Tutor or the headmaster; there is no indiscriminate punishment.

11,869. Does the medical officer see the physical training himself?—Yes, and he plays in the games and so on.

Uniform system desirable.

11,870. Then as to your suggestions you say, 'By continued military drill of an extended nature, so as to co-ordinate with the elementary drill, which should be given in national schools by gymnasia, etc. At present, voluntary Boys' Brigades and cadet corps, started and maintained by private benevolence, are the only agencies to cope with this problem. If it is to be met properly, so that the national life is not imperilled by a generation of weaklings, the State must step in and organise.' Will you explain a little more what you mean by that?—That, as you see, is not my own answer, because I did not consider my knowledge of State-aided schools was sufficient.

11,871. You speak for your headmaster?—It was Mr Hyslop (our new headmaster) who gave me that part in inverted commas.

11,872. It is intended that there should be some sort of extended drill over a large space?—If possible, I think. There was another method of physical training that we used at Glenalmond at one time which I think might be adopted in State-aided schools. We called it by the word 'Levy,' but it really consisted of road-making and putting up fences, and putting dams across a river or repairing a bridge—any kind of outdoor work. I have heard a great many boys, especially those who have gone to the Colonies, say that they were very thankful for that elementary training.

11,873. But you dropped it?—Yes, it dropped by force of circumstances, but I believe it will be reinstated.

11,874. What was the technical word?—It was our word 'Levy.' It was road-making, or any sort of work of that kind.

11,875. There are some schools in England which carry that on?—Yes. It does not cost much—a certain number of barrows, spades, pickaxes, etc.

11,876. *By Sir Thomas Glen Coats.*—Is most of the time not taken up by the regular work of the school devoted to physical training or organised games—is there much time for the boys being left entirely to themselves?—Yes.

11,877. Private reading or natural science?—All the lists I have given you only apply to sections at a time. When one set of boys are playing these games there is another set who are off, and they have time to go and fish, photograph, roam on the moors, etc.

11,878. They have a time for themselves quite free from the supervision of the masters?—Yes, every day. In winter evenings, too, there is a 'recreation' hour after 'preparation,' in which boys read, write, play indoor games, hold committee and club meetings, etc. The summer Saturday, too, gives eight or nine hours at a stretch for country walks, cycling, etc., and every day there are free times for everyone, free from school work or compulsory games.

11,879. In our ordinary Board Schools they could not give anything like that time to physical training and drill?—No, I don't think so, but I think they might give more than they do. I speak with very little knowledge of these schools, but from what I have seen, I think they might give more.

11,880. Do you think that in the regular school hours more time might be given over to it?—Yes, I think you will get rid of a good deal of hooliganism if you will teach boxing and fencing, for it seems that they must fight. The more you come down the scale the more they appear to want to fight, and if you taught them to fight properly, I don't think they would fight wrongly as they do at present.

11,881. *By the Hon. Thomas Cochrane.*—You have a very wide curriculum of physical training to cover

almost every subject?—Yes, we take all that we can. A good many of these things are voluntary.

11,882. Some are compulsory?—Yes, cricket, football, gymnastics, and running are compulsory.

11,883. Do you find that it is at all too much for any of your boys?—The moment it is, it is stopped with him. A boy would complain to his Tutor or the doctor if overtaxed, and have things altered for him.

11,884. You have a very careful medical inspection?—Yes. Having a resident doctor for 140 boys, he can look after them well.

11,885. Then there is the system of Tutors; in your Glenalmond School he appears to be more than an ordinary tutor?—Yes.

11,886. A guide, philosopher, and friend?—Yes, that is exactly what the Tutor aims to be. He tries to interest himself in the boy's life, inclinations, difficulties, and troubles, and help him by advice and otherwise.

11,887. How many are given to each?—The greatest number is twenty-five, the least about twelve, and it is the Tutor's business to specially look after these boys and take any complaint from other masters. There is no such thing as a boy being punished, in hot blood, by another master; the Tutor is left to deal with the boy, after proper investigation, or report to the headmaster.

11,888. And he would be able to judge whether the boy is able to do the physical training?—Yes, he generally passes him on to the doctor.

11,889. Do the parents object to the physical training?—I have never known a case. They may say that their boy is not strong enough to play cricket or football, and that he might get hurt, but, as a rule, the boy, unless physically unfit, bears down the parent after a time when he sees what other boys are doing in games.

11,890. He brings his influence to bear at home?—Yes.

11,891. In future you are going to have a register kept of the physical development of the boys?—Yes, an anthropometric register, I believe, School register; important

11,892. That will be of great utility and interest?—Yes.

11,893. I presume it will be carried out by some skilled person?—I suppose it will. I know nothing about details. I presume that the doctor will keep the register and make the measurements, assisted by the Sergeant Instructor.

11,894. You will consider the matter of having it carried out by some properly-qualified person?—Yes. I will put it before my headmaster.

11,895. It is so easy to be a little deceived taking these measurements?—Yes.

11,896. I think the Commission rather place importance on this statistical information in future?—Yes.

11,897. I feel myself that it is of very great importance?—Yes.

11,898. *By the Chairman.*—I don't want to question you, but you put it on record that these remarks and your evidence generally which you have given us have been given with the full concurrence of your new headmaster?—Yes.

11,899. And although you are in a transition state between one master and another, this has been revised by the present and new master?—Yes, so far as my written evidence goes; he asked me to write exactly in my own words what I thought, and then asked me to put it before him, and before it was sent he made a few additions and wrote that answer (11,828) at the end. Everything written has passed before his eyes, and has received his sanction as to matters of fact, but matters of opinion are, of course, not binding on him.

The witness withdrew.

Mr ANDREW STRACHAN, examined.

11,900. *By the Chairman.*—I shall trouble you to read your notes.—

I am headmaster of Dens Works School, Dundee, and have occupied that position for twenty-eight years.

The school is the 'Half-Time' school in connection with Dens Works, belonging to Messrs Baxter Brothers and Co. (Limited), and is situated in Crescent Street, in close proximity to the works.

The number of pupils on the roll at the end of the

Mr A.
Strachan
Half-time

school year (September 30, 1901) was 386, and the average attendance for the year was 187·9—that is, the average number present each day was 375·8.

The pupils *now* are from twelve to fourteen years of age.

A few 'All-day' pupils are under twelve.

The pupils are children of working-class parents, the fathers being skilled tradesmen, or labourers, seamen, etc. A few are fatherless.

They appear to be very well fed, and their clothing at school and work is, as a rule, neat, clean, and comfortable, suitable to their circumstances. The wages they themselves earn materially contribute to these results.

Most of them reside in the neighbourhood of the works and school.

Military drill and physical exercises have been given to the boys of this school since 1880. The late Mr Peter Carmichael (of the firm of Baxter Brothers and Co.), who took very great interest in the children, and frequently visited the school, was the first to suggest that these exercises should form part of the school work. He believed that as a result of these exercises the boys would show a decided improvement in their appearance, and greater smartness; and I think his expectation has been realised.

Sergeant-Major Tait, drill instructor to the First Forfarshire Rifle Volunteers, was engaged, and he has since continued on the school staff as our drill instructor, and we have found him in every way competent. He attends every Friday (weather permitting) from 10 to 11.30 for the forenoon school, and from 12.30 to 2 for the afternoon school. The boys of each division are drilled in two sections—an advanced and an elementary—each section receiving forty-five minutes. The drill includes all the turnings, marching and formations; the physical exercises are the usual 'extension motions' and exercises for 'bending and stretching the body,' given without apparatus.

The boys take great pleasure in their drill and exercises, and, as a rule, strive to excel in them. The smartest boys are made guides and markers.

The playground has a southern exposure, is well sheltered by the school and surrounding buildings, and shaded with trees. In 1883 it was greatly improved, and rendered more suitable for drill, by being made more level, and paved partly with flagstones and partly with masons' chips.

There are no continuation classes in connection with this school.

The boys from Dens Works School have the same careers open to them as boys from the Board Schools. The fact that they have been 'half-timers' does not in any way affect their prospects. They are as readily taken as apprentices as other boys. The way to respectability and usefulness is not in any degree barred to anyone because he has been a half-timer.

Former pupils from this school are to be found in all trades; many occupy very good positions, and some have businesses of their own and are employers of labour.

Many have become mechanics, joiners, plumbers, railway servants, shopkeepers, and as engineers in steamships they are to be found in all parts of the world.

Some are clerks, some mill-overseers, foremen in various trades, commercial travellers, ship captains and mates.

One is a certificated sanitary officer. One, now dead, was Chief Sanitary Officer in Durban, one is manager of a large wholesale business in the city; one is manager to a spinning company; one is manager of a foundry; one is sub-editor of a popular newspaper; and one is a certificated schoolmaster.

Many have entered the army and navy. Some of these are able seamen; one is an artificer in the navy; one a petty officer in a first-class battleship. I know of several who have joined the Black Watch; one who is in the Scots Greys; and one rose to be sergeant-major in a crack cavalry regiment.

I am sure that if former pupils had known that I was to be questioned regarding their present positions, I would have received shoals of letters to confirm my statement that the period they spent in our half-time school has not told against their success in life, but, in many cases, has been a furtherance to it.

I am often told by former pupils that they do not regret the time they spent as half-timers.

A great many children, however, pass through half-time schools for whose education the half-time system cannot be held responsible. I refer to those children who at the age of twelve or thirteen have just managed to pass the 'third standard' in the board schools, and many of whom are very deficient even in the work of that standard.

The health of the half-timers is exceedingly good. Health. Cases of absence on account of illness are rare. In the higher classes especially, the pupils (who, as a rule, have been longest at the school) have every appearance of good health, and are on the whole well developed children, comparing not unfavourably with children in ordinary day schools.

The school hours are not too long to weary the pupils; the work in which they are engaged is not so hard as to fatigue them, and the evenings are entirely at their disposal, for no home lessons are given.

The late Dr J. W. Miller, who was one of the certifying surgeons for Dundee, in a letter to Sir John Leng, defending the half-time system, written on 30th March 1895, makes the following statements:—'As to the physical health of half-timers there is no evidence whatever that it is injured by their work. The evidence is all the other way.'

'Does the agitation against the half-time system not arise in great part from a mistaken impression, a false picture formed in the mind as to what these young workers are like? This is natural enough on the part of those who have not practical acquaintance with the matter. They are apt to take up the idea that these children are sweated for the benefit of employers, oppressed, over-driven, spiritless, and sickly. It is not so. I have frequent occasion to be in the flats, and have taken notice of the half-timers at their work, and have been struck with the appearance they presented of happy activity, and of having pleasure in their employment. Indeed, these children exhibit just the same amount of vivacity and sportiveness as other children. Symptoms of dulness or depression are conspicuously absent.'

The children when they are first employed are examined and passed by the certifying surgeon, but they are not examined periodically. Medical examination.

Physical exercises ought to form part of the ordinary work of every school, and the boys of the senior division ought, besides, to get military drill, and this section of the school, I think, should receive this instruction from a man who has had military training. There is no doubt that lads would be greatly benefited if that training were continued for some years after they had left school. Physical exercises and military drill advocated in all schools.

But, judging from the very partial success of the Compulsory Clause of the Education Act—as shown by the large number of truants—I do not think that the authorities should make physical training and drill compulsory after school age was passed. Not compulsory after fourteen.

The gymnasia might be made so attractive that the majority of the lads would be glad to attend; but there are in every community some ill-conditioned lads whose chief pleasure is to resist authority, and be as troublesome as possible; and that class—if the attractiveness of the gymnasia did not secure their attendance—would at least be denied the satisfaction of having successfully defied the authorities.

11,901. You have handed round some photographs?—Yes; these may serve to show the Commission the kind of children who are employed as half-timers.

11,902. What time of day do you have your half-timers?—From 9 till 11.30 and from 12.30 to 3, and on three days we extend it to half-past three for the drawing.

11,903. What time do you do your physical train-

Mr A. Strachan.
19 Sept. '02.

ing?—On Fridays from 10 to 11.30 and from 12.30 to 2—the quietest time we can get in the playground.

11,904. You think that if attendance was made compulsory after fourteen years of age it would be even worse in the result than the present compulsion to attend elementary schools?—I think they have not succeeded in getting them to attend up to fourteen years of age, and above that there will be more difficulty.

No truants :
penalties.

11,905. Have you any truants?—No truants.
11,906. They are not allowed?—No, we report every week in the factory certificate book those who are absent, and if they are absent they are sent up next week to make up the time, and they will be a whole day at school, and that is so much off their wage. It is a very rare thing for them to be absent.

11,907. *By Mr McCrae.*—How many schools have you in Dundee on half-time?—There used to be a great number, but there are only three now belonging to separate firms, Baxter Brothers, Wardmills School, and Seafield, and the School Board have St Andrews exclusively for half-timers, and classes for them in Brown Street School and South Road School.

11,908. Can you tell me whether physical training is given at all these schools?—I could not tell, but I think it is.

11,909. Have military drill and physical exercises been given in your school since 1880?—Yes.

Continuation
classes.

11,910. You have no continuation classes?—Not now. We had them when I was appointed teacher there; we had evening school for four or five years, but the School Board set up schools and we stopped.

11,911. The reason that you have no continuation classes is that they would come into competition with the classes of the School Board?—Yes.

11,912. At what age do your pupils leave you?—Now it is fourteen. Last year they could leave at thirteen if they had passed the fifth standard.

11,913. Do you find that after fourteen they lapse into bad habits, or do they go directly into other work?—They may continue at the work for some time, or they go to some trade, but they don't lapse into bad habits—not in any numbers.

11,914. Do you think that there is really no considerable number that fall into bad habits?—No, not at our school.

Half-timers :
work and
education.

11,915. Do you find that with half-timers work at the factory is rather a relaxation than otherwise?—Yes, I think it fits them better to take education, and it is better than having a whole day.

11,916. What about the moral atmosphere of the factory?—I believe in Baxter Brothers there is nothing to complain of.

11,917. But generally?—I cannot speak about any others.

11,918. Is there separation of the sexes there?—Occasionally there may be males and females working in the same department, but I know that the employers are very careful in appointing men of good character to be foremen, and I never heard of anything wrong.

11,919. But from your knowledge—you have been twenty-eight years in this school—you would not say that there is any cause to be seriously alarmed about the moral condition of either the boys or girls?—Not at all—not in that work.

'Half-timer'
defined.

11,920. *By Mr Fergusson.*—Would you kindly define exactly what a half-timer is? What age do they come and what standard do they have to pass?—The law has been changed this year. Since January the age has been raised to twelve, but before that it was eleven. They had to show a certificate that they had passed the third standard. Now there is no standard, but they must get an exemption from the School Board. They fill up a form, and the School Board may grant or refuse. There is no education test at all now.

11,921. When they come to you are they with you in the morning in one week and in the afternoon the next?—They are in the morning with me all week, and then next week they are with me in the afternoon—week about.

11,922. And you have no home lessons?—None whatever.

11,923. Do you find any serious inconvenience in having no home lessons?—No. At one examination I asked the inspector if he made any allowance to half-timers, because we had no home lessons, and he said: 'No, that is in your favour.' He did not believe in home lessons himself.

11,924. Is that your experience as a teacher?—Yes, I think the whole of the standard work can be done in school hours better than by giving home lessons.

11,925. How do these half-time children compare in their knowledge of book learning with children who are at it the whole time?—We have the same examination to pass at the end of the year, and the inspectors' reports bear out that we are really pretty good invariably.

11,926. Of course the inspector remembers that you are half-timers, but can you give me any comparison between the standard of knowledge of your children and the whole-time children?—Here is an extract from the inspector's report, 'The general results of examination compare very favourably with those in the best 'full time schools.' That is some years ago. Here is another, 'A decidedly good appearance is made by the 'sixth standard pupils in all their work.'

11,927. Even with your half-timers you find an opportunity of devoting some time to physical training of all sorts?—Each section receives three-quarters of an hour. The instructor attends for an hour and a half in the forenoon and an hour and a half in the afternoon every Friday.

11,928. You manage to do three-quarters of an hour of physical training in the week?—Yes.

11,929. Of course your boys are doing work, and that is physical training also?—Yes.

11,930. *By Mr Alston.*—You quite recognise the desirability of these children having physical training and military drill after school age?—Yes, I think it is a good thing to continue with.

11,931. Your idea is that they might be attracted by gymnasia?—They would require some place for drill, and if gymnasia were made attractive, I think the boys would be glad to go there.

11,932. Is that your experience of the Dundee boys?—They go to parks outside and play football at any spare moment.

11,933. That is a game of their own free will, but in continuation classes, where they are asked to come back for instruction in physical training and military drill, would they do so voluntarily?—They seem to enjoy their exercises at school.

11,934. And they would be equally keen after the control of school had been lost?—I think so. I don't see why they should not.

11,935. You refer to a possible class of rebels?—Yes, the compulsory officers would have some difficulty.

11,936. There would be no compulsory officer after school age?—Then how could you make it compulsory?

11,937. Would you advocate it to be compulsory?—If it was compulsory they would need some form of compulsion.

11,938. And the attraction of the gymnasium would not be sufficient?—For some.

11,939. How could that be attained—compulsion for some and not for others?—That is the difficulty.

11,940. What is your opinion of the boys of Dundee generally; are they rougher than in other towns?—I have not experience of other towns. I am a Dundee man myself, but I should say they are not noted for very good manners in the streets.

11,941. Is there anything in the early period at which they go to work that makes them rougher?—I don't think that. When I meet any half-timer I am always recognised in a respectful way, and they have as much manners as the boys in the Board Schools.

11,942. Not more?—Perhaps more. They are always very respectful.

11,943. That arises from your own training?—I suppose so.

11,944. *By Sir Henry Craik.*—You show in the

photograph some girls; have you girls in the school?—Yes, more girls than boys.

11,945. But you don't mention the girls once in your evidence; you say that there is physical drill and military exercises for the boys. Is there none for the girls?—No.

11,946. No physical training for the girls?—No.

11,947. Have you found it unsuitable?—Our time is short, and they have sewing to do, and that takes up their time when the boys are at the drill.

11,948. But do you give the girls no opportunities for physical training at all?—I believe that the work they have is very good physical training for them.

11,949. You don't mention about the future prospects of the girls?—They are serving an apprenticeship. They become spinners and weavers, and make good wages.

11,950. And are they taught in the same classes with the boys?—If a class is not very large we have boys and girls sitting side by side, but not mixed.

11,951. Is there a separate playground?—No, it is one.

11,952. You have big boys and girls all above the age of twelve; do you think that is a good arrangement—that these girls should only have the use of the playground to share with the boys?—There is never any trouble with them. I am usually on the playground during the interval, and the girls have their amusement and the boys have their games, and there is never anything wrong.

11,953. Have you traced any of the girls in the future?—They go to be weavers and spinners. Some may leave to be shopkeepers, but the weaving and spinning is mostly what they do.

11,954. They have very little opportunity of changing their lot afterwards?—No.

11,955. The half-time school, in fact, educates them to be weavers for the mill, and rather turns them specially in that direction?—Yes, more than for shop girls.

11,956. Do any of them go into domestic service?—Occasionally. I have heard of it.

11,957. But rarely?—I have not set myself to trace them, but I know that they do go to domestic service, and after a time they get married. They are respectable girls, and spinning and weaving is a respectable occupation.

11,958. *By Sir Thomas Glen Coats.*—You say that the proportion is larger with the girls than with the boys; how much larger?—For year ending September 30, 1901, the average attendance of boys was 80·3, and of girls 107·6.

11,959. I understood you to say that during the time the girls were in school they would have no less education than the full-time scholars?—Yes, we bring them on one standard a year.

11,960. And by the time they leave they are as well educated as those who attend the full time?—I think so.

11,961. Don't you consider that rather a strange state of matters: in that case you would say that half the time they devoted to teaching the scholars in the other schools is thrown away?—I have this authority (the inspectors' reports), and I remember Mr Peter Carmichael sent me the transactions of the Royal Society, and there was an article in them by Dr Richardson, and he maintained that 2½ or 3 hours was all the brain work that a child could profitably be given per day, and if that is the case I think that the half-time school gives the time required. It does not fatigue the brain, and if they are average children they can go on a standard without any home lessons at all.

11,962. The system in your school is that children attend the school half the day and work the other half?—Yes.

11,963. Do you think that better than the alternative system?—Yes, a little every day is better than a big dose every second day.

11,964. Then you say that in an ordinary Board School that a great deal more time could be devoted to

physical training without at all interfering with the lessons?—Yes, I believe that.

11,965. You have arrived at that decision after the long experience you have had of half-time schools?—Yes, I tried home lessons for a short time, but I found that they were far better without them, and we got better results without them.

11,966. Do the boys have the same occupations as the girls in the mills?—Not altogether. There is what they call the hackling department, where they have to screw and unscrew the grippers, and the girls are mostly at the spinning and taking off the full bobbins and putting on the empty ones. They have a long time to wait, and take a rest, while the work is not exhausting.

11,967. But later on the girls go on to weaving?—Yes.

11,968. And do the boys go on to weaving?—No.

11,969. Does their work in the factory practically stop after a certain age, say seventeen or eighteen?—I understand that they keep on a certain number. They never put away boys.

11,970. But they don't pay them anything like the wages that they could make if they were weavers?—A half-timer's pay is from 3s. 6d. to 4s. 3d.

11,971. But beyond that, when they have reached the age of seventeen or eighteen, we have had evidence that the older boys don't get the same employment in the mills that the girls do, and consequently, unless they find other occupations, they are apt to loaf about and get into bad habits?—I have information that thirteen to fourteen per cent. of the half-time boys remain at the work from sixteen and seventeen, and some are then employed as apprentice mechanics, clerks, assistant overseers, and loom tenters, but the majority of the half-timers leave the work and go to other trades.

11,972. As to the young people in the flax and jute mills, do the younger men get sufficient work when they reach the age of seventeen and eighteen. There is not the same scope for them in the factory as there is for the girls?—No, there are few required. It is light work, and it is the lighter ones that remain—the undersized boys that remain at the mill, and the bigger boys go to other work that is more suitable for them.

11,973. *By the Hon. Thomas Cochrane.*—You have an ex-sergeant-major as a drill sergeant?—Yes, all these years.

11,974. Does he do his work well?—Very well indeed. He is a trustworthy man.

11,975. Is he up to date?—He has changed always when the Regulations changed.

11,976. Is there any objection taken in Dundee to military drill and instructors?—I never heard any objection to it.

11,977. One witness who was before us from Dundee expressed a dislike to anything like military drill?—Well, the boys are not asked whether they will take it, and the parents are not asked if they will allow them, but the boys get military drill, and there has never been any objection.

11,978. If there was any objection, it would be an objection amongst a very limited class?—Yes.

11,979. You don't give physical exercise to the girls?—No; we try it occasionally. If our lesson happens to be on muscles or anything of that sort connected with nature knowledge, I may give them a little exercise to show how muscles are developed.

11,980. Don't you think that it would be desirable for girls?—Yes; and if we had time we might give it to them the same as these boys, but being a half-time school, and having a certain amount of knowledge to impart, our time is limited, and I think we are doing very well. We began it long before the School Board.

11,981. Do your girls turn out well?—Yes, they are a good class of girls, and well developed.

11,982. And they make respectable wives and mothers?—Yes, I know some of them.

11,983. Dundee has rather a bad reputation morally?—I don't know that it is any worse than Edinburgh or Glasgow, but it might be better.

11,984. I am quoting from the evidence of previous

Mr A. Strachan.

Employment at seventeen or eighteen.

Military drill: no objection.

Girls: morally and physically.

Mr A.
Strachan.
19 Sept. '02.

witnesses from Dundee, who have given it a bad name to the Commission?—These girls (in the photographs) are as respectable girls as you will get in any Board School.

11,985. You think the girls are as good as in any other part of the kingdom?—There may be a lower class in Dundee, as in all other towns, but we do not get very many of them in a half-time school.

11,986. Do you think there is room for improvement in Dundee?—Certainly.

11,987. Do you think that the system of education in Dundee is apt to form the character of these girls and give them moral strength to resist temptation?—I suppose that is part of their education.

11,988. Has it had that effect?—I never saw anything wrong with the behaviour of the girls in my school.

11,989. But generally do many escape?—There are a great many children who escape education; I don't know how. They are truants and only partially educated. We have them coming to us when they are thirteen or upwards, just newly passed the third standard, and since January we get those who are in the second standard.

Truants.

11,990. Do you think that there is a large number of children in Dundee who escape education altogether?—I have been told that. I have it in print that there were about 2000 truants in Dundee; but, according to the School Board officer's report, there are 363 on his list just now with more or less unsatisfactory attendance.

The witness withdrew.

Mr A.
Sturrock.

Mr ALEXANDER STURROCK, examined.

12,001. *By the Chairman.*—You are a teacher of gymnastics in the University of St Andrews, and also in Dundee High School?—Yes.

12,002. You divide your evidence into two—one referring to St Andrews University and the other to Dundee High School?—Yes.

St Andrews
University.

12,003. We will first take your evidence as to St Andrews University.

Give in detail all the existing opportunities of physical training under the following branches:—

(a) Regular games, *e.g.*, football, cricket, hockey, etc. (1) Are they organised and supervised by masters? (2) What is the size of the playing field and its distance from the university?

(b) Drill: how taught, and by whom? Gymnastics, free or applied? Is there a gymnasium attached to the university?

(c) Athletics, *e.g.*, jumping, running, etc.

(d) Handicrafts.

(e) Voice-training.

(f) Cadet corps, rifle shooting.

(g) Swimming. Is there a swimming bath attached to the school?

(h) Fire brigade corps.

(i) First-aid and ambulance.

Games.

(a) There are two football clubs (Rugby and Association) with senior and junior teams in each. Practice is frequently engaged in, and matches are played almost every week during the winter session.

There is no cricket played in the university.

A hockey club was formed some years ago and play (confined to women students) is frequently engaged in.

There are two golf clubs (gentlemen's and ladies'), and a mixed club for the practice of lawn tennis. The work of the latter club is chiefly confined to the summer session. The university provides good facilities for the practice of the game, and they are largely taken advantage of.

(1) The foregoing clubs are not subject to any direct supervision, but several of the professors are annually elected presidents and vice-presidents, and most or all of them contribute to the various funds, and otherwise interest themselves in the work.

Playing field.

(2) The university is not in possession of a playing field of its own, but joins with the managers of Madras College in renting one containing about twelve acres, distant about half a mile from the university.

11,991. In what school?—The whole of the schools.

11,992. Embracing how many children?—He has on his default list 1147 over the whole town attending school irregularly this year. Of those some were attending school more or less irregularly, and 363 unsatisfactorily—the truant class.

11,993. 363 habitual truants?—Yes.

11,994. How many children are there in the Board Schools in Dundee?—I could not say; but this is the officer's report for the month of April, where he said that he has 1147 on the default list, so many excused for illness, and 363 unsatisfactory.

11,995. Does he say what percentage that is of the whole?—He does not say. I just copied it down.

11,996. This amount of absenteeism is to be deplored?—Yes.

11,997. And do you think that the education in Dundee has borne good fruit?—Yes, I think so.

11,998. Are they better or more moral than they used to be as the result of education?—I think so, as the result of education. I think those girls who have passed the fifth or sixth standard have something better to occupy their attention than mere loafing on the streets.

11,999. You mean to say that girls that are better educated are better able to look after themselves?—Yes.

12,000. And place a greater value on their lives?—Yes.

(b) There is a company of volunteers, R.A., in connection with the university, the members of which receive the usual instruction in drill from a resident drill instructor having the rank of sergeant-major. Gymnastics (free and applied) have been taught in the university by myself to the members of the gymnastic club for the last twenty-one years. This club, like all the others in the university, is formed annually at the commencement of the session, each member being required to pay an annual subscription of 2s. 6d. The University Court contributes a sum of £15 annually towards its maintenance, while Professor M'Intosh, who has been president of the club for a number of years, has on several occasions provided medals and other prizes to the successful competitors in the 'Display' sometimes held towards the end of the session.

(c) Jumping and running are both frequently engaged in in connection with the work of the gymnasium.

(d) There are no handicrafts taught in the university. Handicrafts none.

(e) Voice training is taught the members of the musical society by their conductor. This society meets once a week. Voice training

(f) Rifle shooting is engaged in by the members of the volunteer company, practice being encouraged by the presentation of a number of prizes to the successful competitors. Rifle shooting

(g) There is no swimming or other bath attached to the university. Swimming

(h) There is no fire brigade corps.

(i) Formerly there was an ambulance class taught in connection with the volunteer company, but it has been in abeyance for some years.

12,004. What time is allotted to these or any of them *per diem* and *per week*? Are any of these taken in ordinary university time?—The gymnasium is open every afternoon on week days for individual practice, and on Saturday instruction is given by the instructor and assistants from 11 a.m. to 1 p.m. Instruction is also frequently given on the afternoon of Saturday and at other times when occasion offers. Drill is taught every week-day except Saturday, in the gun-room, at all hours, company drills being held twice a week during the last half of the session.

12,005. How far are the existing opportunities taken advantage of? Give numbers approximately under the various heads?—Owing to the large number of societies taken advantage of. Give numbers approximately under the various heads?—Owing to the large number of societies

connected with the university the existing opportunities are not taken advantage of as they might be. The number of members in each society or club approximately will be:—volunteers, 92; football (rugby), 40; (association), 35; gymnastic, 36; hockey, 18; lawn tennis, 45; golf (gentlemen's), 54; (ladies'), 20.

12,006. What organisation exists for the promotion of physical training in any form in the university?—Last session an athletic union was formed for the purpose of controlling the work of the clubs within it, but it is yet too early to speak of its influence.

12,007. What, in your opinion, are the defects of the system?—I find that towards the end of the university session so much work has to be accomplished by the students in connection with their class and degree examination that it is impossible to get them to take that interest in physical training which I think absolutely necessary. Owing to the pressure of work it is all but impossible to get the members of the class to attend. I have already stated that the prizes provided for the successful competitors in the competition forms a great inducement to the members to practice; and I have always endeavoured, in fixing the date of the display, to place it as near the end of the session as possible. The chief defect of the present system is the want of facilities. I may here state that although the members of the University Court are anxious to render every assistance possible, the state of the funds will not admit of any great liberality.

12,008. What remedies or suggestions have you to propose? Should there be any form of compulsion?—I would suggest that a good gymnasium, thoroughly equipped, be provided, and that a sufficient sum be annually set aside for its maintenance and for the payment of the instructor. Were such a gymnasium provided, I am confident that a greater number of students would be induced to take advantage of it, and it would give an opportunity of forming classes for the practice of elementary and advanced work for both men and women, and also for carrying out examinations which cannot be done at present except under very disadvantageous conditions.

12,009. Do you think a medical examination of students from time to time necessary, with a view of development of physical training?—Although I do not profess to be able to answer the questions regarding compulsory attendance or medical examination authoritatively, I venture to state, from my experience as a teacher of physical drill, that both would be of considerable advantage.

12,010. Generally, what suggestions or proposals have you to make regarding physical training in the Scotch universities?—Regarding physical training in the Scotch universities, the question is of too general a character for me to deal with except in a general way; but if I may venture to express my opinion, I would say that something like a three years' course, suited to the requirements of the students, might be established thus:—

The first year—Physical drill and light gymnastic exercises.

Second year—Dumb-bells, bar-bells, and applied gymnastics.

Third year—A revision of the first and second years' exercises, with boxing, fencing, etc., in addition.

12,011. We now come to your general evidence. State your school and university training, your former experience, and your present position?—I have had neither university nor school training, but my experience in the field of physical training has extended over a period of thirty years. I am at present engaged as superintendent of the Dundee Public Gymnasium, and physical director at the University, St Andrews, the High School of Dundee, and also in most of the private schools and colleges in and around Dundee and St Andrews.

12,012. Give details of your system of physical training, on what based, and how carried out, etc.?—During that time I have constructed a system of physical training out of the experience thus gained, the full details of which are contained in a book, *The*

Elements of Physical Education, published and printed by Messrs Blackwood & Sons, Edinburgh, on my behalf, four years ago; but the fundamental principles of that system may be stated shortly as based upon what is known as 'Free Exercises,' all of which aim at the gradual development and cultivation of the various muscles, and are arranged on a graduated scale so as to meet fully the requirements of various of the sexes.

12,013. Describe your physical training college, how and when founded?—The Dundee Physical Training College is an offshoot from the class conducted by me for a long period of years in connection with the Young Men's Christian Association. It was built by public subscription about 11 years ago, and is a suitable building, and fully-equipped for all grades of physical culture. It contains a large hall, airy, lighted from the roof, which is supported by steel girders. The floor space is such that a class of from 100 to 150 can be easily handled. There are retiring rooms for males and females, which are fitted up with spray baths and all lavatory accommodation. There is a large gallery on the north side used for antagonistic exercises, extending into two smaller wing galleries for the public convenience.

12,014. Describe the syllabus, length of courses of instruction, number of pupils in particular classes, number of pupils attending per annum, etc.?—The syllabus contains an arrangement of classes consisting of policemen, volunteers, telegraph boys, and also for those engaged on night duties, such as printers, compositors, etc. There are also classes made up of those engaged in the various professions and trades, and so arranged as to meet the convenience of all. Ladies' classes are conducted during the day, and a special class is arranged for ladies, the majority of whom are either female clerks or shop attendants. School children and youths have also special meetings. The rudimentary lessons are confined to easy exercises.

The following order is the usual routine:—

- 1) Drill,—military, Swedish, Swiss, etc.
- (2) Physical Exercises,—marching, running, maze, free exercises.
- (3) Dumb-bells or bar-bells.
- (4) Gymnastics free. } 5
- (5) Gymnastics applied. } 4
- (6)

The length of each course extends over a period of ten weeks or three months, and the number of pupils in each class range from ten to forty. Altogether during the year there is an attendance of from four hundred to about six hundred pupils.

12,015. How do you carry out the instruction and inspection of teachers? At what various centres do you hold classes for the instruction of teachers? Give the numbers attending these various classes and the length of course necessary to obtain certificate?—The instruction of teachers is carried out on the lines of imparting a full knowledge to meet the requirements laid down by the Scotch Education Act, and the inspection is made by an independent examiner, and consists of oral and written questions. Classes have been conducted by me at such centres as Dundee, Montrose, Leven, and Cupar (Fifeshire). The attendance ranged from twenty to fifty students. The course consisted of fifty lessons, of one hour each.

12,016. By whom are these certificates granted? How are these classes taught, and by whom? Give number of attendances necessary for gaining a certificate?—The certificates are granted by the directors of the Dundee Gymnasium and also by the Fife County Council. These classes have all been conducted under my special supervision. The number of attendances necessary to obtain a certificate is forty-eight.

12,017. Are men and women taught separately or together?—Men and women have separate classes.

12,018. Give approximately the fees charged these teachers for courses of instruction?—The fees range from 5s. 6d. to £1, 1s.

12,019. How and by whom is the inspection of these classes conducted?—The inspection is conducted by

Mr A. Sturrock.

Males and females separate. Fees.

Inspection.

- Mr A. Sturrock.
19 Sept. '02.
- Captain Armytage, Inspector of Gymnasia in Scotland, in connection with those classes under the auspices of the Fifa County Council. The Dundee classes are inspected by myself. Each student is taken and individually examined.
- 12,020. Do you recommend teachers who have been granted your certificates to teach your system of physical training in their school?—Yes, certainly. Teachers are strongly recommended to teach the system they themselves have been taught.
- 12,021. Can you state as a fact that this is rigidly and extensively carried out?—I believe this is done generally, but there are no data existing to prove that it is done correctly, owing to the want of an officially-appointed inspector.
- 12,022. Can you state approximately the number of schools in Scotland in which your system is taught?—I cannot state even approximately the number of schools in Scotland in which my system is taught, but, judging from the large sale of my book on the subject, and the number of teachers who have passed through my hands during an experience of twenty years, the number must of necessity be very large.
- 12,023. How often is your system changed and remodelled?—The fundamental principles of my system have never been changed, but I am at all times ready to make such alterations which I may deem necessary improvements. These ideas I have learned from observations during frequent journeys I have made to Continental Gymnastic Tournaments and meetings to which I have been invited.
- 12,024. Do you consider a medical examination of teachers in view of their physical training necessary or desirable?—Yes, highly necessary and desirable.
- 12,025. Do you recommend special clothing for boys and girls undergoing physical training?—Yes. A uniform of a distinctly woollen nature should be worn, together with light shoes or boots to support the foot.
- 12,026. Is there, at your Physical Training College, a register kept, showing the height, weight, chest-girth, spirometry, and biceps-girth of those attending the classes?—Only in cases medically recommended, and when pupils so desire.
- 12,027. Distinguish the following forms of physical training, viz.:—Ordinary exercise, ordinary work, walking and running, games—*e.g.*, football, cricket, etc.—free gymnastics, musical drill, applied gymnastics, military drill, voice training, rifle-shooting, boxing, swimming?—To distinguish the forms of physical training enumerated involves a considerable amount of detail. Each one has a distinctive feature, but not one of them by itself covers the whole field of training necessary to full physical development. This much may, however, be said in connection with each point, that it is absolutely necessary to get the pupil to bring his or her mind to be thoroughly interested in the developing of those muscles and organs which the exercises apply to.
- 12,028. What, in your opinion, are their respective merits?—If properly and systematically carried through under the direction of a *qualified* instructor, the exercises embodied in free gymnastics, musical drill, and applied gymnastics are all that is, in my opinion, necessary for a thorough physical training.
- 12,029. What, in your opinion, is their absolute and relative value to children aged from 6 to 12, 12 to 14, and 14 to 18 years? Are these or any of them required by, and advantageous to, the present race of children?—I certainly think every one of them is of advantage to the present race of children, and the exercises may be so graduated that the weakest, by careful treatment, may be physically improved and strengthened. Unless more attention is to be given in this direction in the future, I am of opinion the race will most assuredly deteriorate.
- 12,030. What, in your opinion, are the effects of such physical training—moral, physical, and intellectual?—Where you have physical instruction imparted I have observed that the moral tone is of a higher order, the intellect is brighter and sharper and the physical figure more natural and healthy; this is only what might be expected, because the whole system is now in its natural condition.
- 12,031. Is a uniform system in schools desirable or necessary?—Yes, I would say so; a uniform system is necessary in schools.
- 12,032. What system, in your opinion, do you consider the best?—All existing systems have good points, but to arrive at one definite system a representative board of experts would require to be formed for the purpose of framing a uniform system.
- 12,033. What is the relation between mental study and physical training? What is the just proportion of time to be devoted to physical training in relation to study?—The relation between mental study and physical training is this, as the mind is required to be fixed on attaining a certain or particular point of knowledge, so it has also to be concentrated on the development of any particular organ or muscle.
- 12,034. Is physical training most advantageous if carried out daily in connection with school work?—Yes, that is so, if physical training is carried out daily.
- 12,035. What are the respective merits of outdoor and indoor training?—Outdoor training is at all times preferable to that of indoor, provided the conditions are suitable.
- 12,036. What are the results of your experience regarding physical training in all forms?—The results of my experience stated shortly are that wherever the art of physical culture is given even the slightest attention there you will find a superior class of individuals.
- 12,037. What remedies or suggestions have you to propose regarding the last part of the terms of reference, viz., how the existing opportunities for physical training may be increased by continuation classes and otherwise, so as to develop, in their practical application to the requirements of life, the faculties of those who have left the day schools, and thus contribute towards the sources of national strength?—I am distinctly of opinion that a course of physical instruction ought to be embodied in connection with the various school classes or standards, and this can only be done by the Government giving a grant in aid to provide qualified instructors and equipment that every facility and encouragement ought to be given for the same being fully carried out in connection with continuation schools. Further, I would suggest that the school playgrounds ought, during summer months, to be kept open for the use of those who have left school, and classes formed on a popular basis for giving an all round course of physical training and popular games.
- 12,038. Does your experience enable you to compare the physique of town and country children? What defects have you noticed, and in what proportion can they be ascribed to insufficient feeding, bad constitution, bad housing, defective training, disregard or ignorance of the ordinary rules of health?—From my experience I could not compare the physique of the town and country children, because the most of my work has been connected with the better class of schools among the pupils of which 'insufficient feeding, uarsing, etc.' do not exist. However, I have had cases which have been medically recommended to take physical exercises, and when the pupils have been benefited; but in cases of round shoulders, hip deformities, I find that physical training imparted by me benefits not only those children but improves their manners as well. Gymnastic exercises are apt to be carried to an extreme if proper care is not taken.
- 12,039. Generally, state your ideas and opinions on any additional matter within the scope of the reference, and furnish such further information in your power?—In my opinion, schools ought to have a systematic course of training, beginning the young children with calisthenic movements and introducing physical exercises of a more developing nature suited to the age and physique of the pupils. Our educational system in Britain is of a high order, why not introduce a physical system on the same lines, and

appoint centres where large gymnastic meetings could be held the same as on the Continent? Too much time is wasted in the evenings among our young people, and if an arrangement was made where classes in physical training could be organised and supported like our continuation classes throughout Scotland, it would have a tendency to encourage the people to take advantage of them and thus help to build up our nation.

12,040. In speaking of St Andrews University, you say, 'I may here state that although the members of the University Court are anxious to render every assistance possible, the state of the funds will not admit of any great liberality.' I suppose not much could be done if they have no money?—I do not know what they are going to do. We are getting on pretty well with the University, and if all goes well we will no doubt succeed. There are some nice gentlemen coming in about the University, and if we had another Andrew Carnegie or two we might soon get the gymnasium. I have plans drawn and ground looked out for the approval of any one like Dr Carnegie coming about, and if he wants to give a donation, there it is.

12,041. You are ready for him?—Yes. I have had the half of a church at St Andrews for a gymnasium for the last twenty years. When I came first there was scarcely any provision for gymnastics, but I put in the gymnasium. I am not saying that in a bouncing way, but I did it, and through going to the University I got engaged with one or two schools, such as St Leonard's; and the University were to give me £15, but I did not get it. I only got £10, so that the University, as far as gymnastics are concerned, is not a financial success to me, but I have a connection in St Andrews, or otherwise it would not pay me. I would not think of going to the University alone. I have Clifton Bank. I don't go to the Ladies' School now.

12,042. Passing to your Dundee work, you say that you have had experience in the field of physical training for a period of thirty years. Is all that you have said under that out of your own head?—Yes, I make my assistant do the military part and I do the physical training, and I get Colonel Cruden or some one round about to examine the pupils.

12,043. Are the certificates granted on your recommendation?—Yes, I know who should get them and who should not. Suppose they make a bungle of an examination, it is not to be held that they are the worse students. I let them have another trial, and I say that this girl or gentleman may be a little nervous.

12,044. I suppose a good many teachers are your pupils?—The most of the Fife teachers do my system—the whole of Fife almost and a good number in Forfarshire.

12,045. Do you make the teachers drill one another?—Yes, and I get Dr Lennox to come and examine them.

12,046. You have some ideas about special clothing?—Yes, more especially the slippers.

12,047. But you have not a register of your present College?—No, but I always know them. I have a register in a way, and they are not long in coming back to us, and they like to get something more.

12,048. By a uniform system, do you mean to say that you would like a uniform system all over Scotland?—No, not necessarily, but I would like to see all children getting some physical drill,—it does not matter to me what the physical training is. Supposing a Fife teacher is going down to Aberdeenshire, he has my system, and if another goes to London and takes up another system, don't let these men clash together; don't let us come bash up against one another—it is still physical training.

12,049. Do you think that physical training is most desirable?—I would like it every day, if possible, a little, more especially to the children. There must be games among the little children—some recreation and more recreation than sitting in a hot room in a country school.

12,050. You think that a little of it at a time is better than a good deal at a time?—Yes, about half an hour.

12,051. Do you not think that it would be too much?—A quarter of an hour or a half an hour. I have seen me going into a school and saying 'Let me have a turn with these children,' and I would get them all standing up and go through a movement, and the children were brighter after they sat down again.

12,052. You were asked about remedies. I suppose your work has been connected with the better class of schools?—Of course, I don't like to mention about that, but I go and teach poor children, such as the blind children, and I have my daughter, who goes to the Orphan Institute, but, of course, these are not what you call the lower slum children. These are children who have come from the slums. I was the first to introduce gymnastic classes into Church Societies and Mission Halls in Scotland. I saw on the Continent how they did these things, and I got the first gymnastic team to go through the Church and do that sort of work, and then the physical training teacher took up the work.

12,053. What is your opinion about compelling those under fourteen years of age to do physical training?—Lord Balfour, in the 1890 Code, gave a grant for education along with physical training, but why not open the door wider and let the children come for the one subject. Let us have one subject and give a grant for physical training alone. I have a gymnasium in Dundee, and I got one put up for a lady, Miss Wilson of Bantaskine. That lady has got the gymnasium put up, but she cannot get the people to go in. I have been the means of organising a lot of these throughout Scotland. Miss Wilson opened the door, and she complained of the older ones taking the younger ones away to the public-house, and if she had a grant from the Government or some other source to get those boys to come in and do gymnastics, they would come, but the moment they have to go to a continuation school they don't go.

12,054. *By Mr Shaw Stewart.*—That is at Camelon?—Yes, and the same is done at Leith.

12,055. *By the Hon. Thomas Cochrane.*—About those classes that you hold for teachers, you hold them in various parts of the country?—Yes. Teachers' classes.

12,056. And in Fife they are inspected by Captain Armytage?—Yes.

12,057. He is an expert?—Yes, as good as any that I have had.

12,058. He inspected your class at Cupar?—Yes, Inspection. and at Leven, and did it very satisfactorily.

12,059. Apparently he did not think so much of your work at Cupar?—I don't know that he said that.

12,060. He was before us as a witness, and he said, 'Looking at it from a gymnastic point of view, and rather putting it on general terms, it was certainly not up to the quality of the work done at Aldershot'?—That was possibly in the military system. You have a military man, but not a military training man. Captain Armytage was a military man.

12,061. He was Inspector of Gymnasia for Scotland?—Yes. My work was not of a military nature beyond physical training.

12,062. What he said was, 'I asked Mr Sturrock to put the Board School teachers in Fife and district through as a class, and he put them through under an instructor, who, I believe, was a corporal of the Volunteers. I saw him put them through about three movements. I called out Mr Sturrock at once. I said, "Do you realise that the instructor has already made several mistakes, and has not checked the teachers in the least? You must understand that this class has been a class for teachers, and these teachers have got to instruct children afterwards. If they are not instructed properly themselves, they cannot be expected to know how to instruct." That was the main point of the thing. Then I also discovered that they had only been taught a very limited amount of the course—in fact, I believe Mr Sturrock was under the impression that he was going to examine the class until I appeared,

Mr A. Sturrock.

19 Sept. '02.

Time: half an hour daily.

Mr A.
Sturrock.

19 Sept. '02.

'and I found that the work had not been thoroughly 'done'?—That was the military part of the work, I suppose.

12,063. He found that you did not carry out the work as he would have liked to carry it out?—He did not give me anything to carry out. I had to do that on my own responsibility.

12,064. He came to the inspection and he did not seem to be satisfied?—The man that I got was a Volunteer corporal simply, because I was refused one out of the Perth barracks. My military instructor was called up at the time to active service.

12,065. Where did you get your own training?—It was done by Mr Herbert, who came from London to the Dundee Volunteers, and he trained me. I was also under Captain Roland some years ago.

12,066. Who was he?—He went round Edinburgh and taught fencing twenty or thirty years ago.

12,067. *By Mr Shaw Stewart.*—With regard to the physical training at the University of St Andrews, you think that any physical training at the University must be quite imperfect without a gymnasium or a swimming bath?—I think that every university in Scotland ought to have them both.

12,068. And if they don't have them, the young men attending the universities cannot be said to be properly trained?—No, they are not physically trained, and they are not of great use to the world in many respects after they go away, because the mind is the master and the body is the slave to these gentlemen after they go away from the universities.

12,069. *By Sir Henry Craik.*—Those classes for teachers that you speak of are conducted under the management of the County Council of Fife?—Yes.

12,070. What is the financial arrangement—do the County Council pay you a certain sum?—They give me £10.

12,071. And do the teachers pay you a fee besides?—No.

12,072. Do you say that these range from 5s. 6d. to a guinea?—That is in the Dundee Public Gymnasium.

12,073. Why do not the teachers go to the gymnasium when they have the opportunity open to them?—I don't know, but they don't do it.

12,074. Are you aware that the Code permits any authority to establish classes for which the Department gives a high grant; why do they spend their money doing what they can get done from the public funds?—I don't know why they do it, but they come and pay me a fee, and I have two or three already booked for next session.

12,075. But besides that, you carry on other classes for the County Council, which these teachers get free?—I only teach the physical training.

12,076. You grant certificates; what is the value of them?—It is physical training and military drill.

12,077. But what rights do they carry to the holder?—They can go and teach the children the system that I have taught them.

12,078. But anybody can do that?—Yes, but it is under the Education Department that I am, and I grant the certificate.

12,079. You are taking it on Captain Armytage's report; your certificate does not give any right in respect to the Department. When Captain Armytage came down to your class and inspected it, he made the report on the individual scholar, but he did so not as your agent, but as an officer of the Department?—Yes.

12,080. And the Department granted the certificate?—Yes.

12,081. What fee do you charge for your certificate?—2s. 6d. as a rule.

12,082. Was any fee charged for that certificate issued by Captain Armytage?—Not that I am aware of.

12,083. Why do the teachers prefer to pay 2s. 6d. for one that was not official rather than get one officially for nothing?—They wished to have a certificate from the Dundee Public Gymnasium under my instructions.

12,084. *By Mr Fergusson.*—About these systems you

spoke of as clashing, I suppose there is not much difference between Chesterton's and Colonel Cruden's?—The one is done to music and the other is not.

12,085. Otherwise the general principles on which they are founded are the same?—Yes, they are pretty nearly the same.

12,086. May we say the same about your system?—Yes, they are much about the same.

12,087. You would not advocate such a hard and fast system being laid down as to be exactly the same everywhere?—You might modify it a little.

12,088. If general principles are laid down, isn't that sufficient?—Yes; I do not quite get at your meaning.

12,089. You said that the difficulty was that these systems clashed, but they are on general principles the same?—Yes. It is when they go into another school.

12,090. But the general principles are the same?—Yes, all the same.

12,091. Do you know anything about the American system—one called Stone's School of Physical Culture?—No. I have the book, but I don't know anything about it.

12,092. They profess to do all that is required in from five minutes to a quarter of an hour's exercise every day; do you think that is sufficient time for physical exercise?—I would like that to be done, but I don't know how he does his exercise.

12,093. Do you think that is sufficient?—Yes, I think so.

12,094. Not in large doses?—No.

12,095. The Chairman asked you about suggestions and you spoke about slippers; do you mean that in physical training?—No, it is in the gymnasium. The boots are too heavy. At one of the industrial schools I pointed out to the examiners that the boots were far too heavy. There are many bones in the foot, and if one was knocked out, a person might be crippled for life.

12,096. How can you remedy that?—By giving the children lighter-soled boots.

12,097. Can you do that with a Board School?—If you cannot, then do away with the instep movement.

12,098. You would rather do that?—I did that at the Orphanage, and the inspector has ordered other boots.

12,099. Do you say that you would rather leave the exercise out than do it with those heavy boots?—Yes.

12,100. *By Mr McCrae.*—A part of your system comprises military drill?—Yes.

12,101. Do you teach that yourself?—Forming fours and opening out I do, but beyond that I do not do it.

12,102. What training had you with regard to the military part of it?—I went to Cupar, and I have a good friend in Sir John Gilmour. I assisted him in the riding school, and I got his own instructor for the Fife Light Horse, and that is the way I got my training. I have also been in Portsmouth twice, but I have never gone to Aldershot. I have had the honour to be invited to the Continent to these huge displays, and I saw the system in the military way. I came away and compared it with our military way, and I told General Chapman that the turnings of our military steps were different from those in Italy. I said, 'You draw back your right foot till the toe touches the heel of the left (one) and (two) you turn round, and (three) you bring up the foot, but the Italians turn on the heel of the right and bring up the left foot smartly to that of the right.' He said, 'It would never do on a hill; you would tumble,' and I said that it was at Lugano, on a hill, where I saw it.

12,103. Is military drill done at Dundee in the evening classes?—No, it is not. There was one question that Sir Henry Craik put to me, that the certificate of the gymnasium was granted by the Education Department, but the certificate of the Dundee Public Gymnasium was recognised by the Education Department. I would like to point out that the certificate that they pay a fee to me for is recognised by the Scotch Education Department.

Universities
should have

Mr A.
Sturrock
9 Sept.

Mr H. F. HUNTER, examined.

Mr H. F. Hunter.

19 Sept. '02.

12,105. *By the Chairman.*—You have a *précis* of your evidence?—Yes.

I am a Government certificated teacher of the first class, a matriculated student of the Royal University, Ireland, and a teacher of almost sixteen years' standing.

In my present position as master of the senior department of All Saints' Episcopal School, Edinburgh, I have been almost twelve years.

This school is situated in a confined street, within the populous neighbourhood of Tolleross, Edinburgh, and is capable of accommodating over 300 scholars—infants and juveniles—with an average of about 260.

The ages of the pupils vary from five to fourteen years, the usual period of school age for elementary schools.

The parents belong to the working class, following the usual occupations, *e.g.*, millworkers, joiners, shoemakers, tailors, printers, etc.

All are fairly well off, and keep their children clean, tidy, and apparently well fed. There are a few exceptions, but these are the children of hard-working mothers (widows).

Meals and clothing are provided to a few of the poorest during the winter months by the Association for the Improvement of the Condition of the Poor.

These helps have been the means of producing regularity among this poorer class during a period of the year when most indoor drill is done, and I have concluded from their brighter appearance that they have benefited both in body and mind.

Very few of the scholars have long distances to come, as the school is supplied from the neighbourhood. There are several who have a quick twenty minutes' walk.

No definite system of physical training has been adopted; but in marching, changing of classes, and while sitting in class, the posture of the body is attended to.

In the physical exercises taught to the pupils, the musical drill exercises in Gill's book are followed for the two junior classes, and also a small part of the physical exercises as arranged by T. Chesterton, Teacher of Physical Education to the London School Board. The former have been used for several years, and the latter during the last two years, both being taught by junior teachers under my supervision. In the senior classes, hoop drill as given in Cruden's drill-book, and physical exercises as arranged in the Medburn Musical Drill, are given to the girls. Preliminary physical drill without arms was also given three years ago. The hoop drill has been used for the same time as Gill's Exercises, while the Medburn drill has been in vogue for the last two years. Chesterton's Physical Exercises have been begun this year.

The boys receive military drill as far as can be done without arms as well as the physical training. This year, however, I have been able to have the use of rifles, and began to drill with them before the summer vacations.

Each class receives thirty minutes per week. At first the boys received their military drill from a teacher who was a sergeant in one of the city Volunteer corps. When he left the work was carried on for a time by the janitor, formerly a sergeant-major in the H.L.I. The work is now undertaken by myself, who am an ex-member of the Border Rifle Volunteers, and at present an officer of the Church Lads' Brigade organisation. All the work here has been well reported on by H.M. Inspectors.

As to the pupils' interest, I have not the least hesitation in asserting that they seem to look forward to it, as the attendance is usually good on those days. Unfortunately our accommodation is very limited, both indoors and in the playground. The nature of the building prevents any improvement, while there is no room for the extension of the playgrounds. Games could not be organised in these, and the children, chiefly the older ones, play in the front street.

For better teaching and greater enjoyment of the exercises, I think every school ought to have a special room, well lighted and ventilated, provided with the necessary apparatus, and capable of holding a class. Here every class could receive regular systematic lessons, say twice or thrice a week, of twenty to thirty minutes' duration. In this way the benefits of the training would soon be apparent.

There are no continuation classes in connection with this school.

Some of the boys and girls from this school find employment in the mills, but the majority follow trades.

No great outbreaks of disease have occurred beyond the usual children's troubles—measles, fever, whooping-cough, etc. We have no medical examination, but such, I think, would be desirable, particularly with regard to the pupils' eyesight and hearing.

I am in favour of physical training in all schools and for every child, if physically fit, as a means of inducing a healthy body and mind, capable of receiving instruction with alertness, brightness and intelligence. In many cases this training would, to a small extent, help to counteract the influence of the confined homes, and, in the case of boys, might induce them to ask and look for more of it when they have left school.

Physical training for those between fourteen and eighteen years of age would certainly be good, but it is one of the difficulties to persuade them of its benefits. Compulsory training for these ages would be a difficult matter, as boys cannot be so easily reached after leaving school. Here the Boys' Brigade and the Church Lads' Brigade are doing good work. In the former, however, the age of admission is too young, taking schoolboys into its ranks who are already receiving some physical training. If these younger ones were out, this might be an inducement for older lads to join who might otherwise join, but do not care to mingle with school-boys.

Special classes for older teachers would assist them. They, in turn, could undertake the training of the pupil teachers along with their classes, if physical training were made one of the compulsory subjects in their (pupil teachers') curriculum. Two or three lessons weekly would suffice. They (pupil teachers) should also be required to instruct a class to H.M. Inspector's satisfaction. Certificates of ability to instruct pupil teachers as well as pupils should be granted only after the training college period, or from a special school for physical training.

The best instructors in this work are military men who have had experience of it. I think one-and-a-half hours per week in three half-hour lessons would be sufficient.

There is little loafing in this quarter, as far as I have noticed.

I have had no experience of continuation classes, but I would think that, if under physical training gymnastics were included, there would be no doubt of its popularity.

I have never considered the question of rifle clubs. No objections have ever been made by parents.

All the exercises and drill used here have tended to smarter movements and readier obedience in the performance of their work.

No systematic series of lessons upon rules of health is given, but, in our scheme of nature knowledge, lessons on the structure of the body are given.

Reading rooms, with simple games of dominoes, draughts and chess, are often employed, but, if there were gymnasia attached, for which a nominal charge was made, a good many of these growing lads might be induced to use them, and so be drawn from parading the streets. This was my experience as a lad.

12,106. What did you say about the age of admission into the Boys' Brigade being too young? I suppose it was not too young formerly, but it is only since then that the age has been increased?—I have considered all along that they were a trifle on the young side.

Special room.

Continuation classes: none.

Medical examination.

Training desirable for all.

Fourteen to eighteen: compulsory inadvisable.

Boys' Brigade.

Teachers: qualifications.

Instructors.

Physical education.

Gymnasium.

- Mr H. F. Hunter.*
19 Sept. '02.
Church Lads' Brigade.
- 12,107. They were not receiving physical education before as they are now?—Recently it has been more developed, but I consider that the age is on the young side because of that.
- 12,108. Have you a company of your own?—No; I have a company of the Church Lads' Brigade, which is an Episcopal Church organisation.
- 12,109. I suppose your school is managed like most schools of the same kind by a committee of managers?—Yes, the Vestry of All Saints' Church.
- 12,110. How long has it been established?—I was a pupil teacher there, and I began my apprenticeship in the year 1880. It was in existence for about three years before that. It was a school before it went down to All Saints' in Glen Street.
- 12,111. You have an average of about 260?—Yes, infants as well as juveniles. Last year the juvenile average was 157.
- 12,112. Do they have physical training for the infant division?—I have no control of them. They are of various ages. Last year I got a class up, and the average was between eight and nine. There were a good many over ten and nearer eleven.
- 12,113. When they came to you from the infant school?—Yes; but these had been late in admission to the infant school. Being old, they were put into what is known as Standard I.
- Inspection.*
12,114. Who inspects your scholars in physical drill?—His Majesty's Inspector, Dr Thomson, or his assistant.
- 12,115. Whenever he happens to come?—Yes.
- 12,116. Do you know whether he was satisfied?—I had one of the assistants, Mr Andrew, who took the boys into the playground for drill, and he mentioned to me that they had performed their work very well. The girls upstairs were being exercised in the hoop drill in the presence of Dr Thomson, and he expressed himself to the same effect.
- Girls and boys.*
12,117. Have you girls as well as boys?—Yes.
- 12,118. Do the girls do physical drill?—A little, according to Chesterton's book now.
- 12,119. Who examines them?—The same inspector.
- 12,120. Are there any other sub-examinations, or only the one annually?—Just the one annual examination, except the Scripture examination, but that is not recognised by Government.
- 12,121. But in physical drill?—No, just the one.
- 12,122. Do the managers take much interest in the physical part of the education?—I cannot say that they do. They don't visit us very often.
- 12,123. Who suggested Chesterton's name to you?—I happened to be wanting something better than Cruden's hoop drill, and I had a look at Chesterton's book, which I thought was the very thing.
- Training: more should be given.*
12,124. Now what is your opinion as to the sufficiency of physical training that is given to your children. Do you think it is enough?—No, it might be more, and I should like to have more.
- 12,125. What hinders you from having more?—In the first place I have not sufficient room, and in the second place the staff is not big enough to allow the class to be broken up. I have two classes to supervise myself.
- 12,126. Are they under pupil teachers?—No, ex-pupil teachers.
- 12,127. And do they know anything about drill?—One takes a class while the other takes another lesson, and my double class is being taught by another.
- Music.*
12,128. Is any of your drill done to music?—Yes.
- 12,129. Who plays?—One of the teachers.
- 12,130. You never make the pupils play?—There are none of them that length.
- 12,131. Do you teach music in that school?—We teach singing.
- Drill in playground.*
12,132. Do you do physical drill without music?—I have asked the boys to whistle in the playground, but not the girls upstairs.
- 12,133. Do you drill the boys in the playground?—Yes.
- 12,134. Have you no other place to go to except the playground?—No.
- 12,135. And never any possibility of taking them out?—No.
- 12,136. Or even taking a walk up to Arthur's Seat?—I have never got permission from the managers to do that.
- 12,137. Have you asked it?—No.
- 12,138. Do you not think something of that sort would be very useful, to take the whole school out, or has it never struck you?—It never struck me to take the whole school out.
- 12,139. Or even in batches?—Then I would leave no responsible certificated teacher.
- 12,140. You would rather take them out all at once or not at all?—Yes.
- 12,141. *By the Hon. Thomas Cochrane.*—You say Outdoor that the building of your school prevents any improve-ment?—Yes.
- 12,142. Why is that?—It lies immediately behind All Saints' Church, adjoining All Saints' Mission Home, and the playground is between the Home and the school. The place is not a school at all; it is known as Lauriston Hall, and on one side houses continue up the street. Behind there is Brougham Street, and in front is a Roman Catholic school. There is no room.
- 12,143. Not even on the roof?—No, it is a high building.
- 12,144. Is there any park where the children can play?—The nearest is the Meadows, about five or seven minutes' walking distance.
- 12,145. Are there any games there?—Running about games, but no apparatus.
- 12,146. Not a corner reserved for the children?—There is one away at the far end of the Meadows, about half an hour's walk.
- 12,147. And if there was one at the near end, would that interfere with the public?—I don't think so, if it were placed in the corner where there is a large amount of shrubbery.
- 12,148. Do you think it would be taken advantage of by your children?—Yes, and by the scholars of the Roman Catholic School opposite mine.
- 12,149. It would keep them out of mischief?—There is a possibility.
- 12,150. Is there any opportunity of playing football there?—No, we are not allowed.
- 12,151. Is there any reason why?—It would damage the ground, that is already used for cricket.
- 12,152. Is there any other ground?—I have a football team, and we go to a park, but it is being cut up by the Corporation, and soon we will not have any use of it.
- 12,153. But you would be glad if some means could be found whereby your children could play football at certain hours?—Yes, because the boys are keen about it. I have gone with my boys to every match except one. I made a point of going, even although it was a sacrifice to myself, and I found that it had a beneficial effect.
- 12,154. Do you think that if it were brought to the notice of the authorities they might do something?—They might, but it has been a long cry for a playing field for the schools.
- 12,155. A long-felt want?—Yes.
- 12,156. Last year we had a little privilege granted to us in being allowed to play in the East Meadows during the forenoons, and that was the first that has been granted for many a long day.
- 12,157. Supposing such a privilege was granted, how would you provide them with footballs and other apparatus for playing?—The footballs that I have got just now were obtained by voluntary effort from old scholars.
- 12,158. Do you think that could be further extended?—Yes, because the older boys had a football club of their own and they allowed us the use of their apparatus. Being a church school, I am in greater touch with the old scholars than the majority of School Board teachers.
- 12,159. How are certificates of ability granted just now?—The only one that I know of is from Cruden's school in Aberdeen.
- Mr H. Hunter.*
19 Sept.

12,161. Do you think that a great deal of uniformity would result if they were granted from some special school for physical training, or do you think that would require more regulation?—Yes.

12,162. Are they inspected by the Education Department?—No.

12,163. Did you get a certificate?—No, there was nothing of that kind when I was at Training College.

12,164. Did any one of your pupils get a certificate?—Yes, one of them; she was a lady, and got a certificate from Cruden's.

12,165. Do you think that if not properly supervised they might be improperly earned; that is to say, that a person might get a certificate which was not warranted?—That might possibly be the case, but that was not the idea that was in my mind. The idea that I had was that there might be a uniformity of work.

12,166. You speak of your experience as a lad parading the streets; did you ever parade the streets?—No, I did not care for that. I was a cathedral chorister in St Mary's, and we had a little gymnastics granted to us there, but two or three of us found that it was not sufficient, and we regularly tramped to the Chain Pier at Trinity and took advantage of the small gymnasium at the end of the Chain Pier. I found each time that I visited it there was a goodly number of young fellows there. We paid 1d. to get on. There was swimming at the end of the pier, but we went for the gymnastics.

12,167. Did you find the advantage of the gymnastics?—I found that it helped me in my work. I was rather a book-worm, and I only wished that I had had the same physical training in the Training College.

12,168. Other lads, you think, would be benefited by it if it were made easy for them?—Yes.

12,169. *By Mr Shaw Stewart.*—You use Gill's book?—Yes.

12,170. This is the first time we have heard of it; is it similar to Cruden's?—Much the same. It has the drill on the one side and music on the other. That is why I took it first of all.

12,171. Is it used in other schools?—I could not say so.

12,172. In your time-table you do not say the length of time occupied in physical training?—I say that our classes receive thirty minutes.

12,173. Is that all the time that each class gets?—Yes.

12,174. No short intervals?—Except in the playground, where we assemble for only a few minutes.

12,175. Would it not be an advantage to have a little time each day?—Yes.

12,176. Do you think it could be done without interfering with some of the other work?—Some of the other work would have to go.

12,177. *By Sir Henry Craik.*—The fact is that there is no opportunity for games in your playground?—None. The only game is running about.

12,178. Is there only one playground?—One for the boys and one for the girls. They are very small.

12,179. Do the girls play at all?—Skipping-ropes.

12,180. What is the amount of drill given to the girls?—Exactly the same as the boys, thirty minutes.

12,181. But they don't take part in the same exercises?—No; they have Medburn's and Cruden's, and we have begun Chesterton's.

12,182. Do you find that the same exercises suit for boys and girls?—This year we are giving Chesterton's for boys and girls separately. We do the boys' work while the girls have needlework.

12,183. Have you any objection from parents?—No, but I have had a line to be excused for the day.

12,184. You don't consider that thirty minutes a week without much opportunity for games is anything like an adequate time?—No; I should like to see it twice or three times a week.

12,185. But every day there ought to be some games?—They are running about.

12,186. But that has to be done on the street?—Yes, because we have not sufficient room in the playground.

12,187. *By Mr Fergusson.*—Are there many badly-fed children in your school?—No, last year I had six.

12,188. Are these all that meals are got for?—Yes, they get meals by making special application.

12,189. Do you see much benefit both to body and mind?—Yes.

12,190. You have had experience of Medburn's and Gill's and Chesterton's; what is the advantage of Chesterton's?—I find that Chesterton's exercises every part of the body in turn.

12,191. Isn't that the same with Cruden's?—I have only used the hoop drill with Cruden's.

12,192. You have not studied his book?—No.

12,193. But you think that there is a lot of variety in Chesterton's?—Yes.

12,194. There is no music in Chesterton's?—There are two pages of music, but these pages are an indication of what music you might choose to apply to drill.

12,195. You spoke of having two classes to teach; do you consider that for ordinary work you are under-staffed?—Just now the school is under-staffed. We are at the minimum when I am out.

12,196. Can you look after two classes?—I try to do justice with two, but I unite several lessons.

12,197. Can you not unite two classes for physical drill?—They are united.

12,198. But still both in staff and buildings you are not very advantageously situated?—Very far from it.

12,199. *By Mr Alston.*—You say that no definite system has been adopted; you use no fewer than four different systems; is that from your own choice or from the difficulty of adopting one?—When I wrote down 'no definite system,' I understood that the system meant was to be a Government system, and I was left to my own free will. I found that Gill's was good for the younger ones to begin with, and I continued it.

12,200. Do you not find that it has been introducing a difficulty not to adopt one book alone, without saying whose, the one that you thought to be best?—In using Gill's I use it more as a musical drill, and I am using Chesterton's book for physical drill, one to train the ear to time and the other to advance the physical nature of the body.

12,201. Supposing you had a lady pupil or a gentleman from one of these training colleges, with a certificate of efficiency, it would be only one system?—Yes.

12,202. Would it not be an advantage to have a uniform system of physical training?—Yes, if it were begun in the infant room and carried out; but I have no control in the infant room, and I cannot begin there.

12,203. You say at the end, like many other witnesses, that you think a gymnasium attached to a continuation class would be sure to attract the boys?—Yes, ^{great} attraction.

12,204. Is that your experience?—To give you a reason, I happened to be passing the Western Branch of the Library, and I saw the caretaker removing numerous lads from the doorway, and I found a great number of the lads playing dominoes, and I asked why they could not all have a chance. I suggested that they might be doing something else, and hence my idea of the gymnasium. Then, when I went first from Edinburgh, I was secretary and treasurer of the Young Men's Friendly Society in Ayr, and we met three times a week for games. One of the attractions was two or three pairs of boxing gloves.

12,205. You think that a gymnasium would be a great attraction?—Yes.

12,206. You would not leave the gymnasium free to boys without supervision?—No.

12,207. You would have a skilled teacher?—Yes, certainly.

12,208. *By Mr McCrae.*—I think you say that at first the military part of your physical training was given by a sergeant of one of the City Volunteer Corps, and it is now given by yourself, you being a member of the Border Rifle Volunteers; what rank did you hold?—I was just a private.

12,209. Did you go in for an examination for proficiency?—I was not long enough in the volunteers to do it. The sergeant who was my instructor was in your own regiment.

12,210. Why did you discontinue the sergeant instructor?—He left.

Mr H. F. Hunter.
19 Sept. '02.

Systems.

Gymnasium:
great attraction.

Military training.

Mr H. F. Hunter. 12,211. It was not a question of expense for the school?—It was Sergeant M'Kiinnon, of your own corps. He was a teacher at that time.

19 Sept. '02.

12,212. Have you seen the new drill book?—I am using it with the boys just now. I was at it this morning.

Mr H. Hunter. 19 Sept.

The witness withdrew.

Mr R. G. Gordon.

Mr R. G. GORDON, examined.

Mr R. Gord.

12,213. *By the Chairman.*—Are you at the Edinburgh University just now?—Yes.

12,214. I am very glad to have the opportunity of seeing one actually in training at the present time; how long have you been there?—Five years.

12,215. How long do you contemplate being there?—Another year.

12,216. I suppose you have been asked various questions, have you not?—Yes, I have had questions put to me to answer.

Existing Opportunities for Physical Training at Edinburgh University.

Edinburgh University: existing opportunities.

1. Edinburgh University Athletic Club.

Sections (a) Rugby football.	(f) Boating
(b) Association.	(g) Hare and hounds.
(c) Cricket.	(h) Boxing.
(d) Tennis.	(i) Fencing.
(e) Hockey.	(j) Golf.
2. University Volunteer Corps.
 - i. No. 2 (University) Battery 1st E.C.R.G.A.V.
 - ii. No. 4 Company Q.R.V.B.R.S.
 - iii. Royal Army Medical Corps (Volunteers).
3. Voice training.
4. Beagling.

Volunteering.

Voice training. Beagling. Organisation.

Membership of the Athletic Club is open to past and present members of the University and Royal College of Surgeons. The general finances and affairs of the club are managed by the Senior Field Committee, which is composed mainly of professors and lecturers, some of whom are elected by the Senatus and University Court. In addition to this committee, there is the Athletic Club Committee, composed of a treasurer elected by the Field Committee, a secretary, and about six members elected by the Athletic Club, and a representative from each section. This committee meets once a week.

Each section of the Athletic Club has its own committee and office-bearers. The general expenses of each section are paid by the Athletic Club, and each member of a section has to pay a sectional subscription to the Athletic Club.

The Athletic Club has a membership of about 350; the most popular section is the Rugby Football section, which last season had a membership of seventy-three. The other sections have the following memberships:—

Tennis	50
Hockey	48
Association football	32
Boxing	30
Hare and hounds	29
Boating	27
Cricket	26
Golf	7

Volunteer corps.

The Volunteer Corps are organised and supervised by the commanding officers of the brigade to which they belong, not by the University. No. 4 Company has a membership of about 170, the R.A.M.C. has about 100, and the Battery about 75.

Defect: University field too far distant.

A great drawback to the obtaining of exercise and physical training is the want of any place near the University where men could go to get some exercise when they only have one hour to spare. The University field is fully two miles away, and it takes up a whole afternoon for a man to go out there and get some exercise.

No gymnasium or swimming bath.

There are no baths or a gymnasium in connection with the University. The two private baths in Edinburgh have a fair proportion of student members, but both are about a mile away from the University.

Fives courts.

Fives courts, if situated beside the University, would be very useful, and supply a want to those men who have an hour to spare and wish to get some exercise.

Another great drawback is the number of classes which are held in the afternoon; in winter especially a man has often to choose between missing a class or getting no exercise.

A uniform system of physical training throughout the universities would seem to be undesirable in view of the principle on which Scotch universities are conducted, *i.e.*, that the doing or not doing of certain things in most cases is left entirely to the will of each student.

12,217. Then as to voice training?—I should not have put that in. There is music, but it is all theoretical. This should have been omitted. No. 4, I put in in answer to the question whether I had anything else to add. I put in beagling, as there is a beagling club. I might add that the golf club has also outside members, so that the seven do not represent the whole membership, but they represent the University members.

12,218. Do they represent the whole of the University membership?—Yes, but of course a lot of other fellows play golf who are not members of the golf club. They do not play in connection with the golf club.

12,219. With regard to your statement, 'That the 'doing or not doing of certain things in most cases is 'left entirely to the will of each student,' that is an unwritten law?—Yes. I mean by that that at Oxford and Cambridge fellows seem to have to go to chapel in the morning and to be in at night at a certain time, and here, when fellows live in lodgings, they do as they like.

12,220. Is there any means, in your opinion, by which you could obtain some exercises and physical training in the University?—We have not a gymnasium at all, and to a certain extent that is a great drawback.

12,221. Do you know whether the question has been urged on the authorities?—We used to have a gymnasium down at the old buildings. Our University is in two parts, the old buildings and the new buildings. We used to have a room in the old buildings which was used as a gymnasium, but that was given up some years ago, and I don't think the matter has been brought up.

12,222. Is there any place for single-stick or anything of that kind?—I should say that when the Union was started there was a room in the basement which was specially built as a gymnasium. The Students' Union is a sort of club, and when it was started there was a room for a gymnasium, but it was given up. I don't think the place paid, and they turned it into a billiard room. There was no gymnasium, but in the hall of the Union there is boxing and fencing.

12,223. Of course if there were baths it would be a capital thing?—Yes, I think they would be well patronised.

12,224. But no representation on the subject was made?—No, so far as I know it was never asked for.

12,225. As to actual physical exercise, have they gone to drill?—In the volunteer corps I expect they get it. I know that in the battery we get some occasionally at camp, but apart from that we do not have any. We have marching drill occasionally.

12,226. But are there many who don't go in for many of these things?—Yes, the great bulk.

12,227. A large proportion who have actually no physical training at all?—Yes, it is really a matter of time more than anything else.

12,228. But that is the case?—Yes. The athletic club has a membership of 350, and the volunteer corps have about 352; that is 702, and of course the one includes many members of the other. There are between

Time of classes in winter difficult. Uniform system of university undesirable.

Student Union.

Baths.

Drill.

Large portion no training want.

Mr R. G. Gordon. 2000 and 3000 matriculated students. That includes a lot of law students who come up for one class, but there are about 2000 students.

Sept. '02. 12,229. But if there were more opportunities close at hand, more people would claim the advantage?—Yes.

12,230. *By Mr Fergusson.*—Do you think that if any system of physical training was made compulsory at the University it would be very unpopular; would it be possible at all to find time?—I think it would be a very difficult matter in this way, that universities differ from schools in that you have not a time-table which the fellows in one year all follow, because one man will go to one class, an extra-mural class, and this lecturer has his tutorials at one hour, whereas another lecturer will have his tutorials at a different hour or on a different day of the week. The fellows in my year have not all the same programme, and not all the same spare time. I hope I have made it clear.

12,231. It would be like another subject that you were taking up, and you could fit it in just when you could; they would not all do it together. Would there be any difficulty about it, or would it be very unpopular?—I expect that to the great majority it would be unpopular.

12,232. Do you think it would be no use?—I think it would.

12,233. *By Mr Shaw Stewart.*—As regards boxing and fencing, is there a qualified instructor?—Yes.

12,234. May we take it that you speak on behalf of a large number of students in giving your evidence. Have you been selected as a typical student of your year?—I don't know, I am sure.

12,235. At any rate your views are probably shared by a large number of your fellow students?—A certain number. I have not discussed this question.

12,236. But I was going to ask you whether you don't think that a University career is not incomplete without gymnastic opportunities?—I certainly think it is incomplete without a proper opportunity for physical training, whether it is gymnastics or more outdoor exercise. It is incomplete, because there are any number of fellows who break down during their course.

12,237. And a great many students would agree with you in that?—Yes, certainly.

12,238. There would be no objection to a uniform system, and equal facilities in all universities?—No, I don't think so; I think there ought to be some facilities.

12,239. To make physical as well as mental training in Scotch universities possible, there ought to be well-equipped gymnasia and a swimming bath at each?—I think it would be a great thing.

12,240. To make it complete?—Yes.

12,241. *By Sir Henry Craik.*—You say that about 400 or 450 out of the 2000 cover the whole number of students who take an interest in athletic exercises or volunteering?—Well, I should have qualified that, because up here we have other clubs, like old former pupil clubs belonging to the Academy and High School and Watson's, and a lot of students who, instead of playing for the University, play for these clubs.

12,242. And do they not belong to the athletic club?—No, they have no connection with the club at all.

12,243. That is a great pity, is it not, for the *esprit de corps* of the University?—Yes, certainly.

12,244. Is the subscription to this athletic club heavy?—No, it is 5s. to the club itself, and each section has its own subscription. The Rugby football is 7s. 6d., and so is the Association; the cricket is a guinea; tennis is a guinea, I think; hockey, 7s. 6d.; the boating, a guinea; hare and hounds, 2s. 6d.; boxing and fencing, 5s.; and golf, 2s. 6d.

12,245. They are very small?—Yes.

12,246. Do you think that, taking the large number who don't take any interest in these games, many are deterred by those subscriptions?—No, I think there are very few.

12,247. Do you think that those who don't take part in these games are the poorer class of students?—No, I don't think so.

12,248. You say that you find many who, for want of such opportunities or otherwise, break down in the course of their career?—Yes, several. I don't know the proportion, but I know that several friends of my own of late have been very ill—with consumption, and things like that.

12,249. I am asking whether your experience is the same as my own many years ago, that it is very often the case that many of these are ignorant of the way of taking care of themselves and quite ignorant of health rules?—Several may be, but in the case of a great majority it is a question of time, because they have such a lot to get in in their session that they have no time for exercise.

12,250. And perhaps some live in not very airy lodgings; but, on the whole, do you think they have plenty of food?—Yes.

12,251. Even the poorest of them?—Yes, but, of course, I don't know about that. There is one thing, that fellows are rushed so much going to classes that they have to bolt their meals. In the middle of the day one gets out of the Infirmary at half-past one and has to be at a lecture at two o'clock, and when one has to go across to the Union and wash and have lunch, there is not much time left.

12,252. You don't think, on the whole, that there is much injury done by undergraduates getting into bad ways; do you think billiards is the best occupation for them?—It depends upon how much one plays.

12,253. It is better that he should play in the Union than go to a public-house?—Yes.

12,254. Then the beagling is separate?—Yes.

12,255. It is more select?—Yes, it is more select. They have to keep up a pack of beagles.

12,256. Do they get permission in the neighbourhood to hunt?—I think they do, as a rule.

12,257. But that touches a very small number?—Yes.

12,258. Amongst your contemporaries, are there many students who are thinking of taking commissions as officers in the army as their future career?—I am a medical, and know very few of the others, so that I cannot speak to that.

12,259. Are there many preparing for the Army Medical Corps?—Yes, a fair number.

12,260. And do they get any special training that would suit them for that?—No.

12,261. Do you think it would be useful to those preparing for the Army Medical Corps that the University could help them in the way of exercise in their future career?—I am afraid I don't know enough about the Army Medical Corps to be able to answer that.

12,262. *By the Hon. Thomas Cochrane.*—I would like to know a little more about the students who break down; do many break down?—Looking back among the fellows that I have known, I cannot think of more than seven or eight out of 200 or 300.

12,263. They have broken down in health?—Yes.

12,264. Were they unable to keep up the strain of the hard work?—Yes.

12,265. Do you think physical exercise would help them to bear the strain?—Yes, I think so, undoubtedly.

12,266. Do you think that they were the ones who took an interest in athletics, or entirely book-worms?—The ones that I knew were mostly fellows who did not take much interest in exercise. I know of one who said that he took no exercise at all, that most of his time was spent at the University, and walking to it and walking home.

12,267. He gave himself up to his work altogether?—Yes.

12,268. Do you think that is typical of a good many young fellows?—Yes, there is a fair proportion who don't take exercise.

12,269. Is that partly due to the want of facilities?—Yes, and time; time is the great thing.

12,270. And over-pressure?—Yes.

12,271. Do you think that if facilities were given to the University, the students would be able to avail themselves of them?—Yes.

Mr R. G. Gordon. 19 Sept. '02. Students: ill health: want of time for exercise.

Food: students and their meals: want of time.

Beagling.

Health: breakdown of students: physical exercise necessary.

Want of time and facilities.

Mr R. G.
Gordon.

12,272. Do they play fives?—Up here a great many don't play fives, but they would learn.

12,273. It is very much the same all over the world—that people would take advantage of athletics if they got the chance?—Yes. A fellow has not time to keep himself in good training. They may not object to have exercise on a Saturday afternoon, but they have no time during the week to keep in good condition.

12,274. It rather points to the fact that if the University authorities were to bring some pressure to bear to make all take a short amount of physical exercise every day, it would be an advantage?—Yes. I don't know if it would be advisable to make it compulsory.

12,275. It would be rather to give facilities?—Yes.

12,276. But only some would not exercise themselves at all?—Yes, even if they had facilities.

12,277. *By the Chairman.*—Is there anything else that you think of to put before us?—No.

12,278. Do you know anything about country life yourself?—Yes, I have been camping out in the north.

12,279. Where do you live in the country, as a rule?—I live in Edinburgh itself.

12,280. *By Mr Fergusson.*—As to this want of time that you put as the root of most of your trouble, could not something be done if the University authorities made

arrangements and organised the work a little more— couldn't you then get time for a little exercise and time to have your food properly, if these lectures were arranged on some sort of system?—There was a Commission about two years ago, composed of lecturers and students, and they thrashed the matter out, and made several suggestions to the Senatus, or whoever has to do with the order of the classes, but I don't think many of them were adopted. The classes have to be got in somehow. There is a number of classes that we must take, and they have to be got in, and it is a question of time, and not so much of what might be called bad management, in not putting them in properly. It is really a question of time.

12,281. You mean that you are occupied the whole day?—Say the whole forenoon from nine to half-past one, and perhaps on some days from two till five, and then the infirmary in the evening again, and you have to get in some reading after that.

12,282. Did this Commission result in anything satisfactory?—They made several suggestions as to the order of classes.

12,283. They thought that something might be done?—Yes.

12,284. But did they not do anything?—No, the Senatus did not think that the suggestions were any good.

The witness withdrew.

Adjourned.

TWENTY-FIFTH DAY.

Tuesday, 30th September 1902.

At the City Chambers, Glasgow.

PRESENT:

THE RIGHT HON. THE EARL OF MANSFIELD, *Chairman.*

Sir THOMAS GLEN COATS, Bart.

Sir HENRY CRAIK, K.C.B.

Mr M. H. SHAW STEWART, M.P.

Mr J. C. ALSTON.

Mr J. B. FERGUSSON.

Mr GEORGE M'CRAE, M.P.

Mr R. B. PEARSON, *Secretary.*

Professor F. O. BOWER, F.R.S., examined.

12,285. *By the Chairman.*—Will you kindly describe your position, so that we may get it recorded in the evidence?—I am Regius Professor of Botany in the University of Glasgow. I was for a number of years honorary president of the athletic club in the University of Glasgow.

12,286. How long have you been Professor at Glasgow University?—Nearly eighteen years.

12,287. Do you still act as president of the athletic society?—No; I went off in rotation some years ago.

12,288. You still take an interest in it?—Yes.

12,289. Give in detail all the existing opportunities of physical training under the following branches:—

(a) Regular games, e.g., football, cricket, hockey, etc. (1) Are they organised and supervised by masters? (2) What is the size of the playing field, and its distance from the University?

(b) Drill: how taught, and by whom? Gymnastics, free or applied? Is there a gymnasium attached to the University?

(c) Athletics, e.g., jumping, running, etc.

(d) Handicrafts.

(e) Voice training.

(f) Cadet corps, rifle shooting.

(g) Swimming. Is there a swimming bath attached to the school?

(h) Fire brigade corps.

(i) First aid and ambulance.

(a) There is one ground for Rugby football or cricket, one ground (rented) for association football; none for hockey or other games. A running and cycling track is laid down round the Rugby ground; two fives courts exist.

(1) The games are not organised or supervised by the University authorities, beyond the fact that the ground is held by the University Athletic Club from the University Court, and ultimately subject to its control, and the honorary president of the club is always a professor.

(2) The playing field is just large enough for a Rugby pitch, with tracks round it, and is contiguous to the University buildings. But as part of it is shortly to be used as a building site, it will not be available long for athletic purposes. The association ground is

University authorities should institute course of exercise and grant facilities.

Want of time: over-pressure

Mr R. G. Gordon.
19 Sept. '02.

Prof. F. O. Bower, F.R.S.
30 Sept. '02.

Glasgow University.

Prof. F. O. Bower, F.R.S.
30 Sept. '02.

Games: organisation.
Playing field

rented on a short term, and as the finances of the association club have not been flourishing, it is not certain that the tenure can be extended. The University Athletic Club has been in existence for over twenty years. It holds the ground rent free from the University, under an agreement originally with the Senate, now with the University Court. The club has spent considerable sums on levelling and draining, etc. It may be expected that when the University Court finds it necessary to resume occupancy, it will offer compensation proportional to the sums spent. During the time I was president, considerable sums of money came into our hands, and were spent on the University ground and on building a pavilion. The total sum came to about £2000. As far as I remember, about £1250 came from the Students' Union Bazaar, and £300 came from the first Glasgow Exhibition for the use of our ground. The money was spent chiefly on levelling, which was extremely expensive, as being heavy boulder clay, on building a pavilion which has since been removed, and on laying down tennis courts, and so forth.

(b) There is no drill of any sort connected with the University, excepting that of the University Company of the Royal Army Medical Corps.

Gymnastics are taught in the gymnasium by an instructor appointed by the Gymnasium Committee, which always includes some of the professors. Students pay moderate fees for the courses of instruction. The gymnasium was built by subscription on University ground close to the College; it is managed by a committee composed of students, with two or three professors.

(c) Athletics are practised intermittently, but only by very few students, mostly just before the annual athletic meeting. But for the competitions, only very few students enter.

(d) None.

(e) Musical societies have existed, but none is in active life.

(f) None.

Rifle Volunteer Corps.—None.

One company of Royal Army Medical Corps is recruited mostly or entirely from University students.

(g) Swimming is not practised about the University; there is no swimming bath.

(h) None.

(i) None, I believe.

12,290. What time is allotted to these or any of them *per diem* and per week? Are any of these taken in ordinary University time?—No time *per diem* is set apart for any athletic or other exercises.

12,291. How far are the existing opportunities taken advantage of? Give numbers approximately under the various heads?—It is difficult to answer the question as to numbers with any degree of precision. The number could readily be obtained from the secretaries of the Gymnasium Athletic Club, or officers of the Royal Army Medical Corps, etc. But I am sure I am correct in saying that of our total number of students (1500 to 2000), barely 10 per cent. take part in any athletic exercises organised in connection with the University. Many, doubtless, belong to Volunteer corps or athletic clubs elsewhere. But the clubs, etc., about the University are in frequent financial difficulties, and secure the adherence of only a very small number. They are, however, open to all.

I have had information from the athletic club and the gymnasium. The numbers are only stated approximately for the athletic club. In 1900-1 the number approximately was 200; in 1901-2 it was 150. That is out of a total of 2000 students. There seems to have been a falling-off this last year. The students on the roll in the gymnasium number from 30 to 40, and non-students about 12. I think that number must be understated. The boxing class numbers about 12, and there is a class of about 9 Queen Margaret ladies, making about 70 in all. These numbers do not exactly tally with the financial statement which I received this morning. The students' fees are £1 per session, the non-students' fees are £1, 10s., and on that basis the receipts for the last ten years have averaged in

students' fees about £46, non-students' fees about £40, and other items, including interest on investments, bring up the income to about £140 per annum. So it is seen that the 10 per cent. I have stated is about right; it is rather above the actual fact.

12,292. What organisation exists for the promotion of physical training in any form in the University?—There is no organisation for the promotion of physical training in any form in the University beyond those mentioned.

12,293. What, in your opinion, are the defects of the system?—The defect of the system is its entire absence.

12,293A. What remedies or suggestions have you to propose? Should there be any form of compulsion?—In making suggestions, it will be necessary first to distinguish between exercises which are purely of the nature of sport and those which are not. A student should not in my opinion have his amusements supplied gratis, and accordingly I should not advocate any State aid for University games or athletics. I see no way of increasing the attention which the Glasgow student gives to games, except by increasing his love of them, and his willingness to pay for them, and give time to the pursuit of them. I see no ready way of influencing the tastes of students in this direction. His abstention is largely due to the cost of the games, and to the mistaken idea, so often entertained, that time devoted to outdoor exercise is time wasted, or diverted from more important matters. I do not think that Government intervention can be properly asked as regards games, unless it be in the provision of suitable ground. In Glasgow the question of an athletic ground for the University will soon become an acute one, and I hope that the Commission will give their careful attention. Part of the ground at the University is just about to be used as a building site, which will make the remaining ground insufficient for football purposes. The existence of the athletic club in close proximity to the University is therefore threatened. As the Rugby football has been the most successful section, they will have to seek ground elsewhere. I hope that when the ground is occupied, the University authorities may see their way to repay something equivalent to the sums spent on the ground by the club.

But in gymnastics and physical drill I think matters are different, these not being of the nature of mere amusements; to secure that these shall be adequately taught in schools they should be taught to the masters. A considerable number of our students pass, by examinations which are under Government control, into the ranks of schoolmasters. It would be possible, without making it compulsory, to offer *inducements* to them to qualify in the teaching and practice of physical drill and gymnastics. By treating these as optional subjects, for the qualifying examination, and assigning to them a sufficient proportion of marks, a large attendance at classes might be secured. The courses by which such marks are to be earned would have to be under proper instruction and control, and the marks be assigned partly for regular attendance at a full course of physical drill (or gymnastics or both), partly for proficiency shown at its close, partly for proficiency in teaching the exercises to others.

These qualifying classes should be open to all students, who might be trained together with those who are preparing for the scholastic profession.

To carry this into effect, the University gymnasium would have to be under Government control, directly or indirectly, with a duly qualified instructor, and supported financially. I do not anticipate that serious obstacles would be found to this proposal on the side of the University.

I certainly think that an obligatory period of drill in the open air for all students daily would be desirable, and a great benefit to them physically, but I doubt whether it would be wise to impose it at present.

12,294. Do you think a medical examination of students from time to time necessary, with a view of development of physical training?—I think a medical

Gymnastics and drill: inducements should be offered: qualifying classes.

Compulsion undesirable.

Medical examination advocated.

Prof. F. O.
Bower, F.R.S.
30 Sept. '02.

examination of students, from time to time, would be a most useful thing, not only for information of the authorities as to their condition, but for the instruction of the students themselves. Many young men grow up without any idea of their own weak points, or how their health might be strengthened and improved by measures which a medical inspector would easily suggest. Within the last few days an example has come before me of an undergraduate (not of this University) who thought that he was suffering from his liver, and took active exercise to correct it, while all the time he was actually suffering from his heart, and, of course, active exercise was the worst thing possible for that.

12,295. Generally, what suggestions or proposals have you to make regarding physical training in the Scotch Universities?—My chief suggestion, which I have already stated, is to take over the gymnasium as a school for gymnastics and physical drill. As far as I can form an opinion, the University authorities would, I believe, welcome any attempt to better the physical condition of the students. At present especially they would, I believe, do so in Glasgow, as it will be necessary shortly to restrict the athletic ground, if not even withdraw it from the use of the athletic club. Individually, many of the professors have felt that too little is done for the physical improvement of the student. I have myself noted the prevalent poor physique, want of colour, and other evidences of lack of physical exercise. More than anything else I am impressed with their *bad teeth*; the proportion of first year's students (mostly sixteen to twenty years) with good front teeth is very small. Of that proportion I find that the Colonial students are generally the best. The significance of this in general health is too obvious to need insistence. I doubt whether anything short of compulsion will make certain of the Scotch students take time from their work for physical culture, and compulsion would make it so distasteful to others as to rob it of much of its benefit.

12,296. *By Sir Henry Craik.*—I think you have had experience elsewhere than in Glasgow?—Yes, I was in my football team in school.

12,297. Which school?—Repton.

12,298. Were you in an English university?—Yes, Cambridge.

12,299. How does the physical condition of the Scottish students compare with that of the students you saw in England?—I should say that the frame of the average Scottish student is a good one, but not properly developed.

12,300. From what class of students do the 10 per cent. that you refer to as taking part in athletic exercises come?—I could not specify that. I think, as a rule, they will be the better-to-do students.

12,301. Students who have had opportunities before of physical exercise?—Yes; students from the public schools.

12,302. Those who most need it and have not had any opportunities before are precisely those who neglect physical exercise when they come to the university?—Yes.

12,303. In the case of the poorer students from the country, the expense is a deterrent?—Yes. The subscription in the gymnasium is £1 for the session, and that is a considerable deterrent. The subscription for the athletic club and for Rugby football comes to 10s.

12,304. Small as the sum is, you think that it is a deterrent?—Yes.

12,305. Then there is the pressure of time?—I think that that is the chief deterrent. The student has so serious a view of making the best of his time at the university that he will give too many hours a day for the cultivation of his mind at the expense of his body.

12,306. Have you seen many cases of a breakdown in health?—I have seen cases, but I could not say that it was a very large proportion. I was very much impressed when I first came with the condition of the students, which seemed to be worse at the end of the session than at the beginning. I remember that

impressing itself on me very clearly when I first came.

12,307. Do the students who are preparing to be teachers represent a good class of students in point of physical development?—I am frequently not aware which are the teacher students and which are not, so that I should find it difficult to answer your question. I should say that from the few isolated cases I know the teachers are quite a fair average.

12,308. They don't give very much attention to physical exercise during the university course?—No.

12,309. Are you aware whether there are many in Glasgow University who are preparing to be officers in the army?—I should say that only a small proportion of our students are studying with a view to the army.

12,310. You are aware that the recent Commission on Military Education took up the question of the university training of officers?—Yes.

12,311. Was that considered by the University of Glasgow?—I don't think that it was considered with relation to any athletic exercises. I am not aware of the matter having been brought up.

12,312. Do you think that the university might with advantage train officers for the army if they had opportunities for physical exercise and physical training?—Yes.

12,313. These men would be a very valuable adjunct?—Yes.

12,314. You are aware that there are commissions in the army open to students?—Yes.

12,315. A very small number, however, come from Glasgow?—That is so.

12,316. *By Mr Alston.*—It is not apathy towards physical training that troubles the students, but the feeling that they have no time?—That is so. They take their duties so seriously that they are slow to sacrifice any time to physical culture.

12,317. No arrangement of the professors' classes could obviate that difficulty?—Our classes are dovetailed in to such an extent that it would dislocate a very large and complex machine. Arrangements would have to be made so as to take the students when they could come.

12,318. We had similar evidence in Edinburgh. You make the remark that to secure the full advantages you would have physical drill and gymnastics taught in the schools by the masters. Of course you are aware that in many cases they are taught by ex-army sergeants or other experts. Would you advocate teaching by the masters in the Board Schools?—What I would advocate would be having one of those Government instructors in the university so as to teach the masters before they left the university.

12,319. When would they get time for this class?—The great overcrowding of classes is rather on the medical and scientific sides than on the arts side. The arts students would find time much more easily than the other students, and the great proportion of those studying for the teaching profession are on the arts side.

12,320. You think that future masters might be instructed in physical training?—Yes, I think that might be done.

12,321. They might be taught by an expert appointed by the Government or some other authority?—Yes, and under some Government control.

12,322. *By Mr McCrae.*—You say that you have no volunteer corps in connection with the University apart from the corps of the Royal Army Medical Corps. Does that mean that you have not even a volunteer company attached to a Glasgow corps the same as they have in Edinburgh?—There is one company of the 1st Lanark which is called the University Corps, but I doubt whether it is kept exclusively for University students.

12,323. But it is recognised as the University Company?—Yes.

12,324. You could not give us any idea as to how many of the students are volunteers?—No.

12,325. Of course that is an important form of physical training which the students would receive?—Yes. In this connection I might add that there is a

F. O. R. S. rifle club for the cultivation of match shooting, but the numbers are exceedingly small. I believe that it is a successful and meritorious body so far as it goes, but it only affects a small number of the students.

12,326. So far as you know, that University Company is not confined exclusively to university students?—I am not sure on that point.

12,327. It is rather an important point if they have a company entirely confined to the students?—I believe it is not confined to the students. It is more a nominal connection than a close connection.

12,328. They are very keen on volunteering in the West. I am surprised that the University has not developed that side of training?—I think that the keenness of volunteering in the West has brought about such convenient opportunities for the students that they don't require to start a corps of their own.

12,329. Of course there is a difference between a corps and a company?—Yes.

12,330. *By Sir Thomas Glen Coats.*—I suppose quite a number of the students have had a certain amount of physical training in school before they go to the University?—Yes, chiefly those coming from well-established public schools, as they would be called in England.

12,331. And they will have had a little of it even in the Board Schools?—Yes, but I should think they would have less opportunities than in the public schools.

12,332. That being the case, do you think that if opportunity was given for physical training and for gymnastic training a great many more would take advantage of it than do at present? I think you say that barely 10 per cent. take part in athletic exercises?—I think that if the way was smoothed for them, and especially if such inducements as I have mentioned were offered for those entering the scholastic profession, there would be a very considerable increase in the number taking part in the gymnasium exercises. I don't know about the games.

12,333. You don't think it would be practicable to make physical training part of the university course?—I should be glad to see it myself, but I think the feeling would be one of distaste if it was made compulsory.

12,334. Are there not a great number of students who would benefit most by athletic exercises who would not take such exercises unless they were compelled to do so?—I think a very large proportion would not take them unless they were compelled to do so.

12,335. So you could not benefit them unless you made the exercises compulsory?—There would be a difficulty without compulsion.

12,336. *By Mr Shaw Stewart.*—Do you think that if there was a swimming bath the students might be induced to take advantage of it?—I think it would be taken very largely advantage of. There was a swimming section of the athletic club which had arrangements with one of the public baths for swimming and doing a certain amount of gymnastics. I think that such a thing would be very largely taken advantage of.

12,337. If there were facilities for fencing, would they be taken advantage of?—That is an exercise which I enjoy and admire myself, but I don't think that it would gain a very great hold on the students. I think that boxing would probably take a good deal more hold.

12,338. In either of those they get a great deal of exercise in a short time?—Yes.

12,339. Do you think that if there was a recommendation from this Commission advocating increased physical training, that would lead to more attention being paid to physical training in the university?—Yes, I think so.

12,340. *By Mr Ferguson.*—Is the gymnasium in the Glasgow University a good one?—It is a very well-arranged gymnasium indeed.

12,341. It is well equipped?—Yes, and well kept up.

12,342. Is that all done at the expense of the

University?—No. The gymnasium was built by subscription.

12,343. And were the furnishings and appliances supplied by subscription?—Yes.

12,344. Do the University do anything to furnish means for giving physical exercise of any kind to the students?—I think not.

12,345. They have not supplied a swimming bath or a gymnasium or anything?—I think not, beyond having allowed the gymnasium to be built on University ground, and giving the athletic ground rent free.

12,346. The University, far from encouraging physical exercise of any kind, are doing their best to discourage that, because they are building over the only ground that you have for practising athletics on?—I would hardly put it that way. Owing to the stress of circumstances we have had to find a site for additional buildings, and that site, unfortunately, is on the University ground.

12,347. You were at Cambridge and so was I. You cannot conceive of the authorities building over the cricket or football grounds there?—No, but Cambridge is Cambridge and Glasgow is Glasgow.

12,348. You say that students think that time spent on physical training is time wasted. Do you think that it is time wasted?—No.

12,349. The University authorities apparently think that it is?—No.

12,350. Why don't they do something to foster physical exercise?—There are reasons for that, and the first reason is that we would find a difficulty in financing the matter. The University of Glasgow is living closely up to its income in doing its duty, which is the duty of providing education. Another reason is the difficulty as to time; we have the classes so spliced in that the arrangement of definite hours would be a matter of extreme difficulty.

12,351. You don't favour physical exercise so far as to say that it is a necessity?—Personally I do.

12,352. So your University is neglecting what you consider to be one of the necessities of education. We have been told that the great difficulty is time. It was put to us that, far from having any extra time for physical exercises, there was not even time for the students to take their meals, as they had to run from one lecture to another. Surely there must be something wrong in a system such as that for young lads, where arrangements cannot be made even to let them have their food properly. Can you imagine anything worse?—No. I have seen cases where the students have not been able to get their meals at proper hours, and I deplore that such a thing should be. One reason that has led to that is, I think, the necessity for economy; in order to get the university course in within the minimum of time, their classes are taken very closely together.

12,353. That is what I am coming to. Is not one of the great faults the short length of the session? If you had a longer session you could reduce the pressure. What is the length of your session?—I think there is a mistaken idea involved here, not distinguishing between the arts session and the university sessions. The arts classes usually meet during the winter session, extending to twenty weeks, and the classes in the summer session are largely optional, but in the faculties of science and medicine they have a winter session of twenty weeks, and a summer session of ten weeks. If you total up all the actual days of teaching done by a Scotch professor on the medical or science side, and compare the number with those in Oxford or Cambridge, I think you will find that the number of days on which he teaches is larger than in Cambridge or Oxford.

12,354. But the number of days that the student is at the college is not so large?—I think you will find that the actual university terms work out less in Oxford and Cambridge than in Glasgow.

12,355. Is that really so?—I think so. If you look into the matter, I am sure that you will find that that is so.

12,356. At any rate, we have got it that you have

Prof. F. O. Bower, F.R.S.

30 Sept. '02.

No facilities furnished by University.

No encouragement by University authorities owing to want of money and time.

Length of session: Arts classes meet during winter for 20 weeks; classes in summer optional. Science and medicine classes meet during winter for 20 weeks; 10 weeks in summer.

Prof. F. O. Bower, F.R.S. — That is so, for the students in medicine and science.

30 Sept. '02.

12,357. The students have to attend thirty weeks in order to qualify?—Yes.

12,358. That is the minimum for keeping their terms, or whatever the equivalent is, in Scotland?—Yes.

Games and physical exercises : financial assistance.

12,359. *By the Chairman.*—When you say that in Glasgow the question of an athletic ground will soon become an acute one, and that you hope this Commission will give the matter their careful attention, do you mean that you are pleading *in forma pauperis*, and you hope for a grant?—Yes, any way in which Government assistance could enable us to have a satisfactory ground with permanent tenure for athletic purposes, not necessarily contiguous to the University, but perhaps away out at Anniesland—any such assistance

would be most important; it would be perhaps the most important way in which physical exercise could be encouraged.

Prof. I. Bower, F.R.S.

30 Sept.

12,360. From what I understood you to say just now, you rather suggest that the University itself would be unable to do it?—I think the University Court ought at all events to pay such sums as would be approximately equivalent to what the athletic club has spent on this ground, so that the club would have a certain sum to start with, but that sum would be insufficient for securing ground where land is so expensive.

12,361. That rather contradicts your statement, when you say that the student should not have his amusement gratis?—He will have to run his games himself, but there will be this assistance.

12,362. Physical exercise, of course, is not amusement, but is instruction?—That is so.

The witness withdrew.

Mr H. J. Spenser, LL.D.

Mr H. J. SPENSER, LL.D., examined.

12,363. *By the Chairman.*—You are Rector of the High School of Glasgow?—Yes, I have been so since 1901.

12,364. You have prepared a statement of evidence, which we have gone over very carefully?—Yes.

I. School and University Training.—School—

The High School, Nottingham (Senior Prefect and Games' Secretary, 1882-1884).

College—

St John's College (1884-1889).

University—

Cambridge (1884-1889).

Experience. — 1889-1894. — Senior Classical Assistant and Resident House-Master at Woodbridge Grammar School, and at the College, Inverness.

1895.—Headmaster's Assistant to Dr Gow (now Headmaster of Westminster School), at the High School, Nottingham.

1896-1900.—Classical Master at the Edinburgh Academy.

January 1901—present time.—Rector of the High School of Glasgow.

II. Status of the High School of Glasgow.—(a) In 1872, by the Education (Scotland) Act, the school was constituted one of the eleven Higher Class Public Schools in Scotland, and transferred from the management of the Town Council to that of the School Board.

The fees vary from £6, 15s. per annum in Form I. to £8, 5s. per annum in Form VI. in the senior school. Fees in the junior school amount to £5, 5s. per annum.

In accordance with the scheme of the Burgh Committee on Secondary Education there are sixty scholarships. These are of the same amount as the school fees, and are tenable for three years. This session there are forty-five bursars holding bursaries under various trusts and societies. The pupils are drawn from all classes of society.

(b) The total number of pupils on the rolls this session was 928 on the 10th September. The ages of pupils vary from six to nineteen years.

(Note.—The school period varies from forty to fifty minutes.)

III. Existing opportunities of Physical Training.—

(a) The regular games are Rugby football and cricket. These are now recognised by the Board as forming part of the regular school curriculum. The games take place during the last period on Wednesday afternoons (for seniors), and during the last period on Thursday (for juniors and 'Geits'). The games are not compulsory, but parents are strongly recommended to allow their boys to join the clubs. The subscriptions are 5s. for members of the first and second fifteens, and 3s. 6d. for ordinary members. The subscription to the cricket club is 2s. 6d. For those who do not take part in the games, alternatives, in some cases at a moderate fee, are provided in the shape of—

(1) Extra lessons in the subjects noted in the reports as weak (or in shorthand): or

- (2) Ambulance and 'first-aid' lectures or
- (3) Drill: or
- (4) Music: or
- (5) Swimming.

Matches, or practice games, in football and cricket (according to the season) are arranged for all members of the clubs on Saturdays. Occasional cricket matches are played through the week after school hours.

(1) The games are organised and supervised by the rector and the committee of the former pupils.

Football Club.—Several of the masters take an interest in the games and act in official capacities. The games are conducted and controlled by a committee of the boys themselves acting under a constitution contained in the 'Customs.' From time to time this committee submits to the rector such rules as are found necessary. Subject to his approval these rules are issued in printed form.

(2) The school has no playing field. For football last season three full pitches (of 110 yards × 75 yards each) were rented from the Glasgow Agricultural Society in the show ground at Whiteinch. The ground is distant fully three miles from the school. Boys go down by train from Charing Cross Station (single fare 2d.) or by tram (fare 1½d.).

For cricket last season practice ground and pitches were rented from the West of Scotland Cricket Club at Hamilton Crescent, which is distant about two miles from the school.

The rent of football and cricket grounds amounted to £60, toward which the School Board granted £30.

(b) Drill—including gymnastics, free and applied—Drill is taught to every form in the school for two periods per week. This includes the preparatory and the junior and senior schools. There is a fully-equipped gymnasium, with a drill hall of the same size directly beneath it. There are two fully-qualified instructors who have served in the army.

(c) Athletics (running, jumping, etc.), are practised after school hours from March till May, when the school sports take place. The 'coaching' is done by masters and former pupils.

(d) School runs in carefully regulated 'packs,' corresponding to the practices, are arranged for during the football season, whenever the state of the ground renders football impossible.

(e) Handicrafts.—Manual instruction in woodwork forms part of the regular curriculum of the fourth form on the 'scientific' side.

(f) Voice training.—Singing for one period per week is part of the regular curricula of the preparatory classes, of the junior school, and of the first forms (Latin and 'non-Latin' sides) of the senior school.

The school choir (voluntary: subscription, 2s. 6d.) meets on Tuesdays from 3.35 to 4.35 p.m., and on Fridays from 3.35 to 4.35 p.m.; on the same day for combined practice with the former pupils from 5.30 to 6.30 p.m. There is an annual concert in April.

(g) The cadet corps (supported by voluntary

Mr H. J. Spenser, LL.D.

No school playing field

Gymnasium

Athletics.

School runs

Handicrafts

Voice training.

Cadet corps.

Games: part of curriculum.

Alternatives.

subscriptions and small fixed subscriptions from the members) meets for drill on Mondays and Thursdays from 3.45 to 4.45 p.m., with extra drills and parades as ordered. The captain and officers are masters of the school.

Morris-tube practice is taken in the First Lanark Rifle Volunteers' Drill Hall, and rifle shooting at the Daruley range, which is about six miles distant from the school.

(h) Swimming is recognised by the Board as an alternative part of the regular school curriculum for all forms during the last period on Wednesday afternoons in the summer term. A small fee is paid. Beyond this there is a swimming club, organised and conducted by masters of the school and a committee of the boys. There is no swimming bath attached to the school. An arrangement is made with the manager of the Western Baths, Hillhead, distant about 1½ miles from the school, by which the use of the bath is obtained at much reduced fees. There is an annual swimming gala in June.

(i) There is no fire brigade corps.

(j) 'First aid and ambulance' lectures are recognised by the Board as an alternative part of the regular curriculum of the senior school during the last period on Wednesday afternoons. A moderate fee is paid.

In addition to the above agencies there are—

(k) A cycling club.

(l) A photographic society.

(m) A golf club.

(n) A boxing club.

(o) An orchestral society.

(These are voluntary, and out of school hours. There are small subscriptions.)

(p) Botanical excursions.—These form part of the regular science curriculum and take place in school hours.

IV. Wherever the above agencies form part of the regular school curriculum, the fact and the time devoted have been noted.

The 'extra school' means of recreation are set forth in the afternoon and Saturday programme (according to the season).

Monday, 3.45 to 4.45 p.m.—

(i) Cadet Corps' Drill.

(ii) Boxing Club (juniors).

Tuesday, 3.35 to 4.35 p.m.—

(i) Choir Practice for Trebles and Altos.

(ii) Orchestral Society's Practice.

(iii) Bass Practice.

(iv) Swimming Club.

Wednesday, 2.40 to 4 p.m.—

(i) Football: First, Second, and Third Practices at Whiteinch.

(ii) Cricket at Hamilton Crescent.

Thursday, 2.20 to 4 p.m.—

(i) Football: 'Geits' Practice at Whiteinch.

Thursday, 3.45 to 4.45 p.m.—

(ii) Cadet Corps' Drill.

Friday, 3.45 to 4.45 p.m.—

(i) Literary and Debating Society.

(ii) Choir Practice for Trebles and Altos.

(iii) Bass Practice.

(iv) Swimming Club.

(v) Boxing Club (seniors).

Friday, 5 p.m.—

Tea for Choir.

Friday, 5.30 to 6.30 p.m.—

Combined Practice of Present and Former Pupils Musical Society.

Saturday—

Football or Cricket: Matches or Practice Games as arranged. Golf, as arranged by the Club. Cycling Club Run.

V. The respective merits and relative values of the various forms of Physical Training.—Physical training in schools should be directed to secure the health, vigour, and all-round development of the pupils. The limitations of such training are well defined by Mr C. B. Fry in a recently-published manual on *Diet and Exercise for Training*, pp. 7 and

8: 'The truth is, there are two sorts of training; the 'one general, having for its object merely general "good "condition," a sound muscular system, a sound strong heart, and a "good wind"; the other special, having for its object the attainment of the maximum of proficiency in the special line chosen—rowing, running, boxing, or whatever it may be.'

The new system of military training, which includes free gymnastics and the new drill, appears to me exceedingly well calculated to achieve the objects enumerated above.

Games—football, cricket, etc., and athletics—properly organised and conducted (and on both these qualifications great stress must be laid), constitute most valuable adjuncts to the physical training given in school. Moreover, they have a definite social and moral effect on the school. They can be made to afford valuable lessons in organisation; they are played in the open air in proper costume; they give rise to an infinite variety of movements which follow each other in the most rapid succession, and they develop alertness, rapidity of decision, and executive power.

VI. How far are these opportunities taken advantage of?—As regards the High School of Glasgow, it must be remembered that, with the exception of the literary society and an informal football club numbering some thirty players, the clubs and societies detailed in the Saturday and afternoon programme have only been in operation during the past session.

Football club. Numbers (session 1901-2)—boys 161; former pupils, 75. Cricket club, 50. Swimming club, 140. Musical society, boys, 76; former pupils, 34. Orchestral society, 11. Cadet corps (two companies), 200.

The difficulties of extending the membership are chiefly those entailed by—

(i) The wide extent of the area from which the pupils are drawn.

(ii) The expense involved alike for the club and the individual.

(iii) The absence of tradition which would warrant educational agencies, the value of which is not yet generally recognised.

VII. The results of Physical Training.—The results in general being those defined in No. V., the particulars may be enumerated as—

(1) Increased lung capacity.

(2) Stimulation of the circulation.

(3) Healthy action of the digestive and excretory organs.

(4) Power of concentrating muscular effort.

VIII. The effects, moral, physical, and intellectual. General observations.—The effects are best seen in the products of schools where games and physical training have formed part of the regular curriculum for years past. So far as physique solely is concerned, the effects are unmistakable, and not to be attributed to differences of home influences, diet, or parentage. A notable instance in Scotland is afforded by the Edinburgh Academicals—the old boys of Edinburgh Academy. In this day-school of some 400 boys, games, as well as gymnastics, have been made compulsory during the last twelve years: the physique and vigour of the Academicals are remarkable. But, on the social and moral sides, the difference between the products of the school which teaches and the school which educates is more marked still. On the walls of Dulwich College is an eighteenth century portrait, bearing the legend, 'Athletic and Humane.' Taken seriously, as they were intended, these words would serve to describe a large and very valuable class of men in public life in Great Britain. These men have not forgotten the lessons of their youth, the unselfishness of combined endeavour, the chivalrous feeling that scorns to take an unfair advantage of an opponent, and the pluck that never knows defeat. The whole case for games has been admirably put by Miss Penelope Lawrence, Roddean School, Brighton: 'The national out-of-door games . . . combine with the primary training in obedience common to all games, the finest opportunity for healthy pleasurable exercise, for training in physical skill,

Mr H. J. Spenser, LL.D.

Games :
advantage
detailed.

'courage, and endurance. In those games which involve 'large numbers, the constant necessity for the subordination of self to the good of the side, for perfect fair 'dealing with other players, for patience and cheerfulness under reverse, for resource in emergency, there is 'the finest field for the exercise of all the civic virtues.'

Details of effects.—(i) Games supply exactly what is wanted at the particular stage of development; each individual exhibits in his growth and development the successive stages through which the race has passed in its evolution; the age of puberty corresponds to the age of chivalry. The interest which boys take in games, and the extent to which games bulk in their conversation, should not be deprecated on the ground of excess; this is simply a phase, and the topic of conversation is healthy because impersonal.

Lombroso writes that the intense admiration bestowed on proofs of physical force belongs to an early stage of civilisation, the 'chivalry' stage, in fact, of what Pestalozzi calls 'der Prozessgang der Natur in der 'Entwicklung des Menschenschlechts.'

(ii) The health-giving movements occur spontaneously, and are not executed at the word of command. Games make less demand on the nervous system than drill; the tense, motionless state in which the word of command is awaited in drill is apt to be fatiguing.

(iii) All healthy growing boys are restless, and need a proper outlet for their energy. There is an intimate connection between physical good condition and good behaviour, moral and social. The connection was well expressed by the late Ernest Balfour (Edinburgh Academical), 'Keep good and fit—fit because good, 'and good because fit,' and by Sir Archibald Hunter in his address to the High School boys on January 23rd, 1902, 'Be keen and keep clean' ('clean', morally and physically).

Every schoolmaster knows that between the ages of fourteen and eighteen a boy is either athletic and spruce, or non-athletic and unkempt, or, worse still, morbid, introspective, and precocious. ('Stalky & Co.' may be cited as examples of the piggish and grubby, and Canon Farrar's school boys of the morbid.) The tendency to disorderly conduct in the streets is reduced to a minimum in the case of boys who play games; no boy who wishes to keep his place in any XV. or XI. will smoke.

(iv) The organisation of the games can be made a most valuable educational instrument. The 'School 'Council,' or 'Prefects,' the 'Caps' Committee, and the captains of practices exert a great influence over the school: to the boys they are masters, to the masters boys. Their example relieves good behaviour from the imputation of priggishness; they are consciously the guardians of the school's honour. But they cannot be left to themselves; they must be told definitely what is expected of them.

In this connection I cannot do better than quote Mr Lewis Paton, the headmaster of University College School, London, in the *Educational Times*, May 1st, 1902. ('The Feelings as a Factor in School Training'):—

'The school games, and all the organising work that 'they involve, serve also as a field for another instinctive 'feeling which is found, at any rate, in all vigorous 'specimens of boyhood. They want to manage things 'for themselves. With quite young children how frequent it is to hear them say: "Now let me do it." "Let "me try it by myself!" It is so all the way up, and 'school games, a cadet corps, athletic sports, and all 'the other branches of school activity, a debating 'society, a musical society, a chess club, a camera club, 'a scientific society, a school magazine, all afford 'splendid scope for this instinctive desire to manage. In 'fact, it is here that you find that training in citizen- 'ship and affairs which you do find in English schools, 'and will scarcely find in others. Let it have scope; 'there may be hitches; there may be mismanagement, 'but in this, as in everything else, boys learn by 'making mistakes. As Mr Chesterton says, "What "is worth doing at all is worth doing badly." The

Organisation
educationally
valuable.

'feeling for leadership is the counterpart of the feeling 'for comradeship. The one implies the other, and it is 'the boast of our English schools that in their sports 'and in their system of perfect government they have 'recognised both these natural instincts and utilised 'them for the purposes of the corporate life.'

The Clubs and Societies.—'In connection with 'the School there are a number of clubs and societies, 'the primary object of which is to provide for the 'physical and mental recreation of present and 'former pupils. Their general value to the School 'can hardly be over-estimated; they furnish 'opportunities for masters, boys, and former pupils to 'meet within and without the School in friendly inter- 'course on a common footing; they do much to estab- 'lish the continuity of the School, and conserve its 'best traditions. The cadet corps and the football 'and cricket clubs, in particular, instil the notion of 'obligation into boys' minds at the most impressionable 'age.

'School societies, well organised and conducted, 'militate powerfully against carelessness and selfishness, 'and, more than any other factor, engender and develop 'esprit de corps.

'Parents are urged to allow their boys to join some 'of the societies and clubs whose programmes are 'appended. In view of life, it is most desirable that 'a boy should acquire intellectual and artistic interest 'beyond those aroused by the subjects of the curriculum. 'A school training should not merely prepare a boy for 'his work in life; it should teach him the right use 'of leisure.

'The tastes which are engendered by membership of 'these clubs and societies are not natural; they are 'acquired, and acquired best and most easily when the 'boy is young.'—*Ibid.*

The Cadet Corps.—On national, as well as on moral, Cadet cor
grounds I would strongly advocate the formation of advantage
cadet corps, or similar military organisations, wherever possible. The cadet corps possesses over mere gymnastics three advantages which it shares with the games—

- (i) The movements are executed in the open air.
- (ii) They are shared in by many boys simultaneously.
- (iii) The excellence of the individual is regarded not in itself, but as conducing to the excellence of the corps.

The relations between the masters, who are officers, and boys, who are privates or non-commissioned officers, are very valuable in school life. The moral effect on the boys who are non-commissioned officers is admirable. The shooting practices, the scouting, the out-marches, and the 'roughing it' of camp life develop steadiness, self-reliance, and endurance. The distinctive uniform is a great point, particularly in a day school, where it is most desirable to multiply the points of association: the uniform gives the cadet a pride in the corps, and so in the school.

The new regulations for cadet corps—by which the amount of shooting practice is largely increased—are welcomed by all who sympathise with the movement.

(Note.—The officers of the cadet corps are placed at a disadvantage as compared with the officers of the Volunteer regiments, in that they get no 'outfit 'allowance.'

Equality of treatment in this case and a Government grant to the corps, dependent on efficiency and numbers, would do much to encourage the extension of the movement.)

Militarism and the Military Spirit.—It is, perhaps, Cadet cor
worth while to examine the objection which is some- and
times raised against the institution of cadet corps as 'militari
at present existing—viz., that cadet corps and kindred associations tend to foster 'militarism' or the 'military 'spirit.'

There are, I submit, two well-defined senses in which these terms can be used—

(i) To denote the glorification of the Army as it obtains abroad, in France in particular, as evidenced by the Dreyfus case, and similar cases where officers are

Mr H.
Spens
LL.D.

30 Sept

concerned. This state of mind is, apparently, due to constant nervous apprehension of invasion: it results in exaggerated importance attached, and respect paid, to military men: this universal obsequiousness exerts the worst possible influence on officers and men: it tends to produce acute military megalomania: when the army is believed to be strong, the nation is cock-a-hoop, and ready to pick quarrels. This temperament is peculiarly Celtic. I quote from Mommsen's *History of Rome*, vol. iv., pp. 285-7: 'The Celts boldly challenge danger 'while future, but lose their courage before its presence' (p. 286); and they exhibit 'utter incapacity to preserve 'a self-reliant courage, equally remote from presumption 'and from pusillanimity' (p. 287). In this sense 'militarism' invests the whole nation collectively with the character of the bully and the swashbuckler.

(ii) To denote the spirit of discipline, of implicit unwavering obedience, the instinct of comradeship and 'solidarity.' The ready submission of men and boys in masses to self-imposed discipline shows how necessary it is to utilise this instinct for good ends.

The hooligan is simply obeying this instinct when he consorts with other hooligans in a 'gang' under a 'captain.'

Up to the furthest point the discipline of every good school, where the boys know and trust their masters, is exactly the discipline of a regiment where the men know and trust their officers.

The objectors to cadet corps obviously use the terms 'militarism' and 'military spirit' in the first signification.

Is there any proof that volunteering and the cadet corps movement tend to foster this spirit? I can find none.

Up till the late war, the Volunteers were little esteemed; even now they have only justified their existence. (See *Punch*, passim, for jokes on Volunteers, only paralleled by those on curates: note the university term 'bug-shooters,' etc.)

(The wild language and cheers of the populace over the departure of troops and victories cannot be taken to indicate any deep-rooted growth of the war-spirit in the nation; these are the very people who do not and will not go into the army—the loose-lipped and thirsty-throated.)

Intellectual Effects.—Beyond the improvement in general health, and, consequently, in the state of all the organs of the body, which results from physical training, I do not attribute any intellectual value to games.

The 'league' and cricket professionals may be excellent men, but I do not think it will be seriously contended that they make intellectual advance by the practice of their arts. Lombroso ascribes the quickness and agility of criminals to a kind of simian nature, a great development of the motor at the expense of the cerebral centres. In many schools I think that games take up time and thought unduly to the serious detriment of work, and to the development of what I will call 'beefy-mindedness.' The recent war has made painfully apparent the faults of our public school education, the deficient mental development, and the 'plentiful lack' of imagination. Modern warfare and strategy demand something beyond the physical characteristics of the Apache in our officers. A well-known army coach has remarked that the Duke of Wellington may or may not have uttered the famous saying attributed to him, 'that the battle of Waterloo was won in the 'playing fields of Eton,' but that he considered it beyond doubt that Magerfontein and other unsuccessful battles were lost there!

This preponderance of athletic to the exclusion of intellectual interests appears to be more common in boarding than in the day-schools, for two reasons—

(i) In the case of the day-school the boy goes home at night and finds topics for discussion beyond school life; he finds more to talk about, and receives less encouragement to be 'lop-sided.'

(ii) The 'athletic master' is less common on the staff of day-schools; even when present he gets less opportunity to accentuate the games' craze.

My own views regarding the 'athletic master' are expressed in the *Contemporary Review* for July 1900. Since writing that article I have read with great interest an article by the Rev. Lionel Ford, then a master at Eton. The passage is worthy of attention in view of the connection between the 'athletic master' and the games' craze, and a further connection, recently suggested, between membership of a first XV, and the army. Writes Mr Ford of the athletic boy: 'Our 'young hero feels pretty certain that his athletic 'prominence of to-day will stand him in good stead in 'life.' 'I shall try to get into the army,' says he to himself, 'probably through the militia. If I fail I 'shall look out for a mastership somewhere. You can 'get lots of holidays, lots of cricket and football then.'

IX. There is, I conceive, exactly the same necessity for a uniform system of physical—as of mental—training in all classes of schools. Uniform system necessary to secure efficiency.

This uniformity need not be absolute, the aim being simply to secure efficiency in all schools. The uniformity (or co-ordination) should extend to the subjects of primary education—the old 'standards I. to 'VI,'—and to a scheme of physical training extending over a corresponding number of years. The same latitude might be allowed as in the choice of curricula for primary schools.

The measures I would suggest as necessary to ensure the essentials of a good education—physical and mental—in schools other than primary and higher grade, are—(i) time-tables and curricula should be submitted to the Board of Education for approval; (ii) the teaching should be subject to inspection; (iii) the buildings should be examined and approved by the Board of Education's inspector. Suggestion.

No school that is properly conducted should shrink from submitting curriculum and time-tables, or object to inspection. But headmasters, who apply question-begging epithets to any scheme that does not acquiesce in their absolute supremacy, and, for a variety of reasons, protest against State control in any form, find strong support in the folly of parents who prefer to exercise their indefeasible right to have their children badly educated.

X. Physical training, *in all classes of schools*, might be greatly improved by insistence on a theoretical and practical knowledge of physical training—including capacity to teach—as an indispensable qualification for all teachers, certificated or registered. All teachers should hold certificates of proficiency in physical training.

Generally speaking, in the higher class public schools, and in the primary schools of Scotland, the value of games is not sufficiently recognised by School Boards, schoolmasters, or parents. The ideas of football, for instance, are too often gathered from the conduct of the 'supporters' of the local professional team on Saturday afternoons. Even where a more enlightened opinion prevails, the task of organising and conducting games is becoming increasingly difficult for the following reasons:— Games: their value not sufficiently recognised.

(i) A good ground of sufficient size is difficult to find; when found, the rent is prohibitive, save where the pupils can pay subscriptions. It is almost impossible to get a lease of a playing field for a term of years, such a lease, that is, as would warrant the erection of the necessary accommodation.

(ii) The cost of the plant and care of the field.

(iii) In the case of large cities and towns, where the field is some distance from the school, time and money are taken up in the transit.

(iv) The very restricted use which can be made of the field where the numbers are large.

(Note.—The estimated cost under heads (i) and (ii) in the case of the 230 players of the Glasgow High School amounts to £165 for the ensuing session.)

In the case of primary and higher grade schools in England, the public parks are largely utilised for games, the teachers undertaking the organisation and supervision. The large clubs—professional and amateur—lend material assistance. A detailed account of such work in twenty great centres is given in article 7, vol. ii., of *Special Reports on Educational Subjects*:— 'The organisation of games out of school for the

Mr H. J. Spencer, LL.D.

30 Sept. '02.

Mr H. J.
Spenser,
LL.D.

30 Sept. '02.

'children attending public elementary schools in the 'large industrial centres, as voluntarily undertaken by 'the teachers,' by Mr George Sharples, headmaster, Waterloo Road Higher Grade Board School, Manchester.

It appears to me that something of the same kind might be done in Scotland to develop and extend games in the primary schools.

In Edinburgh there is an Inspectors' Cup for competition between the schools, but I do not know to what extent the games are organised.

XI. The Relation between Mental Study and Physical Training.—When once the period of maturity is reached, the necessity for physical training and exercise is less cogent. But during adolescence very few boys or young men can produce their best work, unless they get a due proportion of exercise. The development of brain and body should proceed *pari passu*.

Mental and bodily exertion draw on the same fund of nervous energy, and, if one draws to excess, the other must suffer. The physical training must be proportioned to the mental expenditure. Too often the mental expenditure is limited by the physical training and exercise. The proportion varies, but I should say that—

XII. *In a Day School*, with the ordinary hours and the Saturday whole holiday—the total number of periods being thirty-five per week—two periods per week gymnastics and two hours' games should keep a boy in good condition.

XIII. As to the comparative merits of fifteen or twenty minutes' gymnastics or drill daily—or a definite number of periods (per week two)—I can offer no opinion as regards primary schools. In the case of the High School of Glasgow, and similar schools, I am strongly of opinion that the definite periods constitute the better system.

XIV. The advantages of outdoor training are obvious: the necessity for a proportion, at any rate, of the physical training taking place in the open air is cogent in all large centres.

XV. Some form of military drill or training should, in my opinion, form part of the ordinary curriculum of every school. The new system of physical training for the Army has discarded nearly all the objectionable features of the old drill book.

XVI. The system of physical training outlined in the accompanying scheme is, I think, thoroughly satisfactory. Wherever possible, games should be included in the compulsory scheme.

XVII. At present there is no course of physical education (beyond ambulance and first-aid lectures) in the High School curricula.

Next session, as an alternative to these lectures, I propose to have a course in hygiene, including—

- (i) Respiration and Ventilation.
- (ii) The Skin—Cleanliness.
- (iii) Digestion—Food.
- (iv) Exercise.
- (v) Clothing, in Relation to Health.

XVIII. There is no examination by a medical man. A medical examination is held twice yearly: the cards I have brought show the nature of such examination.

The examination is made, and the measurements taken, by Messrs R. A. Nicolson, M.A., B.Sc., and Frank L. Grant, M.A., and Messrs Garrow and Core, gymnastic instructors, all members of the school staff.

XIX. Gymnastics and physical training classes might be recognised as full grant-earning, and they might be made free. Compulsion, in the present state of public opinion, is, I think, impossible. The whole question of compulsory military drill in all classes of schools—primary, higher grade, technical, secondary, and continuation classes—should, I think, be determined by considerations of national rather than of educational policy.

12,365. *By Sir Henry Craik*.—The second section of your evidence points to the fact that the boys attending your school are of rather the upper middle

class, except those who come in by bursaries?—I should think that that is so.

12,366. There are one or two points that have struck me as slightly inconsistent. You say that beyond improvement in general health, which results from physical training, you do not attribute any intellectual value to games. Again, you say in paragraph XI. that during adolescence very few boys or young men can produce their best work unless they get a due proportion of exercise. Is there not a little inconsistency between these two statements? The one seems to say that it has no effect on the mental development, and the other that mental development is impossible without it?—I think that an improved physical condition is produced in which better mental work is done. I think that the two statements are quite consistent.

12,367. I just want to prevent any inference that might be made, that you thought that physical training was not necessary for the full intellectual development. It is, in fact, a necessity?—Yes.

12,368. Now, comparing the systematic physical training or drill with games, I should like to know which you place highest?—As an ideal system of physical training, I believe in a combination of games and drill; it should be military drill, supplemented by games.

12,369. You say there are considerable advantages, but also dangers, in games, when speaking of the intellectual effects?—Yes, they may be overdone, as I think they are in the majority of the great schools.

12,370. You say in another part of your statement that that is not a danger at all to be feared in any day-school?—I think that that is so.

12,371. Of course these day schools are the great majority in Scotland?—Yes.

12,372. What do you think is the special advantage of physical training?—It is the only possible staple of training in schools. It is, for instance, impossible to take 928 boys a long distance out to play games.

12,373. You speak of certain dangers and drawbacks in regard to the systematic drill?—There is the possibility of fatigue, as I think it makes more demands. I think that games make less demand on the nervous system than drill. The old system of drill, what I would call the barracks' square parade-drill, which kept boys waiting a long time while some small action was being done, was very unsatisfactory. In some schools the old drill was given as a punishment, which showed that it was felt to be fatiguing.

12,374. You think that the disciplinary effect of systematic drill is good?—I think it will be with the new drill.

12,375. But any drill which involves obedience to orders and words of command has a good disciplinary effect?—Yes, the best.

12,376. You attach importance even to the wearing of uniform, to association in a certain organisation like a cadet corps?—Yes.

12,377. That, of course, would not be given by games?—I think games do give it, but I think the chief value of games is their social value and the power of individual self-control.

12,378. Games would hardly have the same disciplinary effect?—That is so, but they have the same effect to this extent, that in games you learn to realise that you are a part of your school, and you also realise that in the cadet corps.

12,379. You discussed objections that might theoretically be raised against drill. Have you found these objections to exist among the parents of your own boys?—I have had them stated in two or three cases.

12,380. Have they asked that the boys should be withdrawn?—No, but they have not allowed their boys to join the cadet corps. I have had objections from parents that such organisations tend to foster the military spirit.

12,381. There is a certain amount of systematic drill even for those who don't join the cadet corps?—Yes.

12,382. They have never objected to that?—No.

Mr H. J. Spenser, LL.D.
30 Sept. '02.

12,383. They object to it when it is under the name of a cadet corps?—Yes.

12,384. Have you many boys who are training for the army?—I don't know that I have any. I have no army class.

12,385. Do you know any schools in Scotland where there is an army side?—There is one in the Edinburgh Academy, and one at Glenalmond.

12,386. Why is there no demand in Glasgow for that?—I cannot say, except that the class of parents who intend their boys for the army send them to other schools.

12,387. It is not through unwillingness on the part of the authorities?—No. The reorganised curriculum of the High School would give the training in the necessary subjects.

12,388. For that purpose the cadet corps would be of great value?—I don't think that the cadet corps' training would be of any advantage as regards passing the Sandhurst entrance examinations.

12,389. But it would give them a certain professional knowledge if the instruction was carried on thoroughly?—Yes.

12,390. Have any difficulties occurred in the organisation of that cadet corps: do you find any of the rules difficult to comply with?—No; the only difficulty is the one of expense.

12,391. Summing up, you think that in a school like your own, for a well-to-do class of children, with a large revenue, in addition to games some systematic physical training is necessary?—Yes.

12,392. The inference will be that where games cannot be so well developed, as is the case in the State-aided schools, the physical training there would be even more necessary?—Yes.

12,393. I observe that your grounds are a long way from the school?—Yes.

12,394. There is no possibility of getting grounds any nearer?—No.

12,395. *By Mr Fergusson.*—We have had evidence as to the facilities for physical exercises and games in the universities of Scotland. Have you any experience of Scottish universities?—I know the Edinburgh and Glasgow universities well.

12,396. There is no very great interest taken in athletics or physical exercises in the Scottish universities?—No.

12,397. We have been told that one reason for that is that there are very few facilities, and there is no time. Have you any observations to offer on physical training in the Scottish universities?—I think the secondary schools of Scotland have restricted education to what was done in the classrooms and within class-hours; that is to say, a boy has gone to school and his intellect only has been developed, nothing being done for his social life; when he goes to the university he is more or less a selfish unit. He has never been taught to regard games as necessary or desirable, and he sticks too exclusively to work.

12,398. You think that the teaching that is now being given in these schools such as yours will increase the desire on the part of lads when they go to the university to continue some physical training and physical exercises?—I hope so.

12,399. Have you any ideas as to how the opportunities at universities could be increased: there is the difficulty of time?—I take it that there are just the same opportunities at a Scottish university as there are at an English university.

12,400. It is a matter of arrangement?—Yes, it is a matter of arrangement of classes. They should not be held in the afternoon.

12,401. *By Mr Shaw Stewart.*—With regard to the objections to the military spirit, is it your opinion that the elements of military training must be taught to boys in order to get them to move in bodies?—Yes.

12,402. Therefore the objection to the elements of military training, quite apart from the view of encouraging a boy to be a soldier, is quite unreasonable?—I think so. We don't move our boys from one classroom to another in military formation.

12,403. But if there was a fire in a school you would have to move them quickly in masses, and then the elements of military drill would be necessary for that?—I don't think that that necessity is very cogent. In the case you speak of, I cannot imagine anyone issuing military orders for boys, say, to form fours.

12,404. But the elements of military training will be necessary for the ordinary training of boys. What are your reasons for exercising the elements of military drill over boys?—I think I have already given these in detail.

12,405. My object is to accentuate the difference between encouraging a boy to be a soldier and using the elements of military drill for the purpose of teaching boys how to move together in a large number?—I would make use of the elements of military drill in the gymnasium, but in a school like the High School I don't think rigidity of movement necessary in the ordinary evolutions of life. For instance, we never move our boys downstairs in a military formation. We never make them march.

12,406. You said you believed in military training supplemented by games. In military training do you include physical exercises?—Yes; but I should minimise any merely mechanical evolutions.

12,407. In short, you believe in military training because it comprises the best kind of physical exercise for developing the body?—Yes.

12,408. That you consider to be essential to the health of a boy?—Yes.

12,409. *By Sir Thomas Glen Coats.*—You are strongly in favour of physical drill and games in Scotland?—Yes, very strongly in favour of that.

12,410. You devote a very much greater time to these exercises than has been given in former years?—Yes, and they have been regularised by the School Board. There are two school periods for gymnastics in the time-table, and two hours for games.

12,411. These are entirely voluntary on the Saturdays?—Yes.

Games: voluntary.

12,412. Are many of the pupils engaged in these games on the Saturdays?—I think we have played ten fifteens on a Saturday, which represents 150 boys.

12,413. Do you have boys and girls in your school?—No, we have only boys. The great difficulty in our case is that over 500 of the pupils come from a distance. That is a difficulty as regards the Saturdays.

12,414. How old are the boys when they leave your school?—I should say that the average life is from three and a half to four years. The average age of our boys when they leave will be between fifteen and sixteen. We have boys at school as old as nineteen, but these are exceptions.

Ages of boys on leaving.

12,415. Do you think any steps should be taken to continue the physical training of these boys after they have left the High School?—I think it is most desirable that steps should be taken to achieve that. There is a difficulty in this, that in Glasgow there are eight School Boards, of which six are actually effective—that is to say, eight School Board areas, six of which have actual schools. Unless you institute an entirely different system of registration, similar to the systems that prevail on the Continent, the youth that you wanted to get at, who was living in lodgings, would simply avoid you by changing his lodgings.

Continuation of training desirable but difficult: should be made attractive.

12,416. You could not make the parents responsible for these youths?—They usually live in lodgings.

12,417. You cannot think of any scheme for making it compulsory?—I think it is desirable to have a scheme such as we had in the time of the Tudors, when by statute the use of the long bow and the practice of arms were demanded. I would make it a matter of national, and not of educational, policy.

12,418. Do you think it would be practicable to give boys and girls after they leave school physical training along with other lessons, say three times a week?—Yes.

12,419. If it was not made compulsory, do you think such inducements might be offered to the young people as would bring them out?—Yes, I think

Mr H. J.
Spenser,
LL.D.

30 Sept. '02.

so. The subject of gymnastics should be put on the same footing as the other subjects, and should be paid the full grant. The gymnastic classes should be free.

12,420. Do you think that that would induce them?—I think so. Of course, it depends on the trade that they are employed at during the day. I think that the clerk certainly might attend.

12,421. *By the Chairman.*—You have quoted from ancient history about what had to be done in England long ago. It was different in Scotland?—Yes.

12,422. Is there much difference between English and Scotch boys now?—I think the difference depends on the homes and on the parents. In England, athletics have become traditional, and the parents never think twice about the boys playing games. In Scotland there is considerable opposition on the part of the parents; they don't think it is necessary. I should say that Scotch boys, particularly Glasgow boys, are keener all round when they do take a thing up than they are in England. I may say that they are keener in Glasgow than they are in Edinburgh. Here, again, the keenness, directed hitherto to work, is apt to defeat itself.

12,423. You think with a little encouragement there is almost no limit to their physical abilities?—I think so.

12,424. I would ask you to read section 10 of your evidence?—There is, I conceive, exactly the same necessity for a uniform system of physical—as of mental—training in all classes of schools. This uniformity need not be absolute, the aim being simply to secure efficiency in all schools. The uniformity (or co-ordination) should extend to the subjects of primary education—the old “standards I. to VI.”—and to a scheme of physical training extending over a corresponding number of years. The same latitude might be allowed as in the choice of curricula for primary schools. The measures I would suggest as necessary to ensure the essentials of a good education—physical and mental—in schools other than primary and higher grade, are (i) time-tables and curricula should be submitted to the Board of Education for approval; (ii) the teaching should be subject to inspection; (iii) the buildings should be examined and approved by the Board of Education inspector. No school that is properly conducted should shrink from submitting curriculum and time-tables, or object to inspection. But headmasters, who apply question-begging epithets to any scheme that does not acquiesce in their absolute supremacy, and, for a variety of reasons, protest against State control in any form, find strong support in the folly of parents who prefer to exercise their indefeasible right to have their children badly educated.

Playground.

12,425. *By Sir Henry Craik.*—You say that you have no ground at the High School itself for games?—Practically none. The juniors play little games in the afternoon.

12,426. What is the size of the whole ground that you occupy?—I could not say.

12,427. Suppose there were no buildings on it except the original school, would there be room for games?—No.

12,428. I was at the High School myself, and we certainly did play football in the playground then?—They play it now, what I call the little game, but the playing-ground is not seventy yards long.

12,429. There have been a good many buildings upon it since my time?—Yes.

12,430. Even if these buildings were not there, would the playground not be big enough for football?—Even if the two side wings were not there it would not be big enough.

12,431. But without the new buildings there would be a considerable playground?—No, it would not fulfil the minimum conditions laid down for Association or Rugby. Besides, you could not have turf there with the boys walking along; the turf would be walked off in three days.

12,432. The site, perhaps, has been rather over-

crowded?—No; there is enough space for boys to go out and get fresh air between the classes.

12,433. But not so much as there used to be?—No.

12,434. *By Mr Alston.*—You have 200 boys in your cadet corps out of a total of 928 boys?—Yes.

12,435. Is there any limit put to the size of the corps?—No, we might apply for more companies if the boys came in. The only difficulty seems to be the getting of officers.

12,436. In the Kelvinside Academy a larger proportion of the boys seems to belong to the cadet corps?—Yes. In Kelvinside Academy they have only one company. In the High School we have a second company, which means six officers in all.

12,437. There is no necessary limit?—No, I don't think the War Office puts one.

12,438. In a school like yours, there can be no objection on the part of parents on the score of expense?—I think all the boys who could join do join. The question of individual expense has come in very seldom.

12,439. There has been objection on the part of parents on account of the military spirit?—Yes, I have had three or four cases of people who came up to the school and protested, saying that they thought this movement was wrong.

12,440. What was their exact attitude? On what did they base their feeling?—What, I think, they wanted was universal peace, disarmament of all military forces, volunteers and regulars alike.

12,441. Did you ascertain whether they belonged to the Peace Society?—No, I did not.

12,442. These were exceptional cases?—Yes.

12,443. You find that boys and parents are quite pleased on the whole with the military instruction?—Yes. Glasgow generally is very good at volunteering. I think there is a greater proportion of regiments in and around Glasgow than in any other place in Great Britain.

12,444. That is a fact, and not only is there so large a percentage of volunteers, but the percentage of proficiency is, or rather used to be, greater than in any other part of Great Britain. You have given the advantages of games, but you have thrown out one or two warning notes?—Yes.

12,445. In one paragraph you quote them as being very detrimental, if carried to excess?—That is so.

12,446. You don't approve of the influence of the professional element?—I am strongly against the spectacular element.

12,447. In speaking of the effect of games, you quote a statement that, although the Battle of Waterloo was won in the playing fields of Eton, still Magersfontein and other unsuccessful battles were lost there?—Yes, I think there would be a consensus of opinion that some of the defeats in South Africa might have been saved.

12,448. What is the exact bearing of that remark?—I think I have gone into it fully in my evidence. The Rev. Lionel Ford of Eton says that a boy who at school went in for nothing else but games, goes up to a university and gets admitted because he is an athlete, and then, by-and-bye, he gets into the army by a sort of back door. I think it is incontestable that this is one of the ways in which the commissioned ranks of the army are recruited.

12,449. Is it that particular defect that leads so many officers in the army to neglect their professional duties?—I don't think officers pay the same attention to their professional duties as do other professional men. Their duties do not bulk so large in their lives.

12,450. What is the relation between that state of things that we have heard so much about and the excess of games in the schools?—I think the games are overdone. To quote Lombroso, I think the motor centres are developed at the expense of the cerebral centres. Mr Ford includes a certain type of schoolmaster in the same category.

12,451. *By Mr M'Cræe.*—You have no medical examination of your boys?—No.

12,452. Don't you think that that would be an advantage?—Only for one thing—the heart. No boy

should be allowed to play games who suffers from any heart weakness.

12,453. You don't think it would be an advantage to have each pupil medically examined?—Not beyond that. I think that such an examination as we have is quite sufficient.

12,454. Are all your pupils examined by your staff and gymnastic instructors?—Yes.

12,455. You have produced some tables as to measurements?—Yes. (*Witness handed in tables.*)

12,456. You have a statement as to physical measurement?—Yes, that is a summary of results obtained from examination of one of the forms.

12,457. I notice that you have 55.6 per cent. as defective in eyesight. This represents the defects on all counts?—Yes.

12,458. Do you find that that obtains generally in the other forms as well?—I don't think the results are out yet for the other forms.

12,459. Has that impressed itself on you as being a serious matter?—Yes; and we are testing the hearing in the same way.

12,460. What do you think is the cause of defective sight?—I think the conditions of modern life have a good deal to do with it. Boys never learn to look at a thing.

12,461. 49 per cent. of defective eyesight is quite normal?—Yes, I think so, if all defects are included.

12,462. I notice from the photograph of your cadet corps that it is really attached to the 1st Lanark Rifle Volunteers?—Yes.

12,463. That, I suppose, is the reason why you get the advantage of their Morris-tube and their ranges?—Yes, and the drill hall.

12,464. Are there any boys over seventeen in the cadet corps?—I think there are some.

12,465. Are they not ordinary members of the volunteer corps?—No, we don't swear them in.

12,466. I think that is done in some other schools?

—Yes, it is done at Merchiston, and I don't see any objection to it. The only reason is that there are not enough to make it worth while to do so.

12,467. You say that your officers don't get the outfit allowance?—Yes, that is so.

12,468. Suppose you swore in those boys who were over seventeen years of age, and got your officers sworn in as officers of the 1st Lanark Rifle Volunteers, they would then be entitled to the outfit allowance?—No, that does not follow. There must be vacancies in the regiment to allow of this. The cadet corps officers have all the same tests and have to undergo the same training, and it seems hard that the outfit allowance should be withheld.

12,469. *By Mr Fergusson.*—In section IX., which you read, you suggest some supervision as being necessary to ensure the essentials of a good education. Do you say that your experience is that that ought to be done, or do you say, as has been suggested by some other witnesses, that physical training and the opportunities for exercise have of late very much increased in your class of school, and the authorities are fully alive to the necessities, and that sufficient advance is being made without the necessity of any State interference?—I should say that that is not the case in Scotland. I do not think that the opportunities for physical training are adequate. I don't think that the games are organised, nor is the position they occupy in the school curriculum sufficiently considered. In fact, the rector of a northern academy told me that a local magnate and member of Parliament made a speech, and said that he was Anglicising this school, because he had introduced games and instituted a cadet corps.

12,470. Has there not been a considerable advance in public opinion in Scotland as to the necessity for physical exercise?—It is not so neglected as it was. It is moving.

12,471. But you think there ought to be some official control?—Yes.

Mr H. J. Spenser, LL.D.
30 Sept. '02.

Opportunities for training inadequate: some official supervision necessary.

Mr W. Cecil Laming, M.A.

The witness withdrew.

Mr. W. CECIL LAMING, M.A., examined.

12,472. *By the Chairman.*—You are rector of the Kelvinside Academy, Glasgow?—Yes.

12,473. You have prepared a statement of evidence, which you will please read?—

I was educated at Christ's Hospital and St John's College, Cambridge. For the past two years I have been Rector of Kelvinside Academy, Glasgow, and for the previous ten years I was an assistant master at Edinburgh Academy. My evidence is based mainly on my experience of the nature and the results of the physical training given in these two Scotch day-schools.

Kelvinside Academy ranks as a secondary school, and educates upwards of 200 boys from six to eighteen years of age, mostly the sons of well-to-do parents residing in the neighbourhood. The physical training of our boys is regarded as of great importance with us, and special stress is laid upon this essential part of their education. Our outdoor games, which are not compulsory, consist of football in the winter months and cricket in the summer. Boys are encouraged to organise and regulate their own games, but we have several masters on the staff who take a keen interest in the outdoor life of the school, and one or more of them are generally on the field while the games are in progress, either personally taking part or exercising general supervision. I consider it as most desirable that masters should be able and willing to show an active interest in the athletic side of school life, as the cordial relations thus established between them and the boys contribute materially to the effective discipline of the school. Two periods a week, from 12 to 1, are devoted to practice games, and matches are played on Saturdays. Our school field is 6½ acres in extent, and situated about seven minutes' walk from the school. We have further about 2 acres of playground surrounding the school buildings, in which the boys play during the regular school intervals.

Athletic sports are held annually in the school field, and include the usual events—running, jumping, hurdle-racing, place-kicking, etc. Boys are encouraged to train for these sports systematically.

Gymnastics form a regular part of the school curriculum and are compulsory on all boys, unless physically unfit. Every class in the school has during the week two periods of about forty minutes each allotted to the gymnasium, except the two highest classes, which have only one period. In the case of the very youngest boys, of six or seven years of age, the gymnasium is optional. There is a well-equipped gymnasium attached to the school, under the supervision of a competent instructor, who was lately chief gymnastic instructor at Maryhill Barracks and is now a regular member of the staff, permanently employed. The system is carefully graduated according to the boys' physical capacities. For the greater part of the school the exercises consist of free gymnastics, including dumb-bell exercises. This is subsequently combined with a moderate use of the usual apparatus as a boy advances up the school, until in the highest classes a more extended use of the apparatus is allowed and boys are instructed in the elements of boxing and single-stick.

A gymnastic display is given annually by the school, and competitions are held for places in the gymnastic 'eight,' in much the same way as for the football fifteen and cricket eleven. Proficiency in gymnastics is encouraged by the award of medals and prizes.

Voice training forms part of the curriculum of the lower half of the school for all boys who show the least aptitude for it. The time allotted is one hour per week.

Drill.—There is a cadet corps belonging to the school, attached to the 4th V.B.S.R. (Cameronians). The corps is very popular with parents and boys, and at the end of last session numbered upwards of 80 out

Athletics.

Gymnastics: compulsory graduated system: instructor. Gymnasium attached to school.

Voice training.

Drill: cadet corps very popular.

Mr W. Cecil Laming, M.A.
30 Sept. '02.

of a little more than 100 available. Membership is almost exclusively confined to boys of the upper school.

The corps was started some ten years ago by a master then on the staff, who held a captain's commission in the 4th V.B.S.R. He has lately been succeeded by another volunteer officer, a captain in the South Staffordshires, whose commission will be transferred.

Drill is taken two days a week for about an hour, between 12 and 1.

Recruits are drilled by a drill-instructor provided by the battalion to which we are attached. The older cadets are divided into four sections, each under a section-commander—one of the boys—who is responsible for their drill and general efficiency, while the commanding officer takes general supervision of the whole corps. For practice in shooting a Morris-tube range is fitted in the gymnasium. Every cadet has to fire a certain number of rounds during the session, prizes being given for excellence in marksmanship. During the summer months, the older boys go occasionally for rifle practice to the battalion's range when they can get the use of it, and last session an eight was sent to Darnley to compete for the schools championship.

Rifleshooting.

Cadet corps in schools : encouragement and organisation of rifle shooting advocated : general efficiency enhanced by special school camps.

With regard to cadet corps in schools, I would suggest to the Commission that a good deal more might be done by the Government to encourage and improve the rifle shooting. In Glasgow and district alone, several new corps have recently been raised, but the opportunities for efficient practice are extremely limited. Morris-tube practice is serviceable enough as a makeshift, but real efficiency can only be attained by practice at the butts, and more especially by competition among the various corps. If miniature ranges, say up to 200 yards, could be provided in central districts for the use of cadets, with serviceable carbines and competent instructors and markers, there would be a rapid and material improvement in the shooting, the importance of which is, I take it, one of the most obvious and valuable lessons of the recent war. I think, too, that well-qualified drill-instructors might reasonably be supplied by the Government, or as an alternative that a capitation grant be made to all cadet corps, free from the present unsuitable restrictions, to cover the necessary expenses of the corps, which are at present defrayed by private subscription. Further, the general efficiency of school cadet corps, would be much enhanced if opportunities were given them of spending a week under canvas in camps of their own, without being obliged to join the ordinary military camps. Such a scheme would create healthy rivalry between the various corps, and do away with the difficulty many parents now feel in sending their boys to camp ; while the week's training, besides lending interest to the work and providing some object to look forward to, would be of inestimable value in giving additional point and reality to what has been learned in the previous year.

System of training : combination of games, gymnastics, and military drill.

With regard to the respective merits and relative values of the various forms of physical exercise, I am of opinion that each has distinctive merits of its own, and that the best results would be given by a combination of outdoor games (football especially in this climate), gymnastics and military drill. In cases where it is impossible, from want of accommodation or other considerations, to organise football, gymnastics and drill, with practice in shooting for the older boys, would give excellent results. The advantage of football over the other two, apart from the healthy exercise in the open air, lies in the fact that success depends as much on the independent action of the individual as on the combined efforts of the whole team. Thus a boy's individuality is brought out, he learns to act for himself on the spur of the moment, while at the same time he realises that on his own individual and unaided action may depend the success or failure of the combination of which he is a unit. The football field will further foster in a boy the qualities of pluck and perseverance, self-reliance and self-control. For these reasons, therefore, I am of opinion that from a moral point of view, football is of greater importance than

Advantages of football.

either gymnastics or military drill, as it tends more to bring out individuality of action and character. The weak point of military drill, as far as its moral effects are concerned, is that at present it is too rigid and uniform, and that, except in the case of officers, it leaves little or nothing to individuality. I understand, however, that the new drill-book gives greater prominence to this desirable feature. Notwithstanding this weakness, I hold that the establishment of cadet corps in schools on a military basis will be productive of much good from a physical and disciplinary point of view. It trains boys to habits of smartness and precision, of orderliness and cheerful submission to discipline, that cannot fail to react beneficially on the general tone of the school.

Gymnastic training is almost entirely physical in its results, though even here the moral effect of the discipline is clearly discernible. A carefully graduated course of gymnastics, under competent instructors, tends to the improvement of physique, and this in turns acts upon the mind. An inert and stagnant brain is seldom found in a boy of healthy and active frame ; and, speaking generally, I think that boys who show the keenest interest in physical pursuits will prove to be the most cheerful and interesting pupils. I do not mean that physical superiority argues intellectual superiority, but that in general boys, whose physical training has provided them with a fund of vigorous health on which to draw, will evince a bright and cheery disposition in tackling their work, that will, as far as their mental attainments go, culminate in success. It would seem to bear out this theory, that our medals and prizes for class-work are repeatedly carried off by boys who have won distinction in one or other of the various spheres of physical activity.

I am of opinion that a uniform system of physical training in schools is neither desirable nor necessary. The system that suits one school may not be found suitable to another. At any rate I think that uniformity is not of much importance. What is, however, important, is that the physical training given should be in the hands of men thoroughly competent, both in theory and practice. It is as easy as it is fatal to good results to overstrain young boys, and the utmost care must be exercised in developing their physique by gradual processes.

With regard to the time that should be devoted to physical training in schools, I think that where no opportunity exists for outdoor games, *i.e.*, where physical training, if given at all, forms part of the school curriculum, half an hour a day should be allotted to every class in the gymnasium, but if this can be supplemented by military drill or outdoor games, or both, as in my opinion it should be, then it becomes less necessary to devote so much time to the gymnasium. Apart from this I think it is of the greatest importance that a short interval should be given after each period's work in school, during which the boys are made to go out into the open air. Outdoor training is preferable to indoor, but where circumstances only admit of the latter, care should be taken to keep the room in which it is given clean and well-ventilated and as free from dust as possible. As a guide for the gymnastic instructor, and also to provide a ready and practical proof of the physical improvement brought about by gymnastic training, I think it is desirable that a register should be kept by all schools, in which the physical development of each boy should be noted from year to year. Such a register has been recently started at Kelvinside Academy.

With regard to the question of continuation classes, I think there can be no reasonable doubt as to the desirability of some system by which the physical training started at school could be continued after boys have left. Whether it is practicable to make such a system compulsory or not, I have no means of judging. I suspect, however, that unless a certain amount of compulsion were brought to bear, the system would fail to reach the special class who would perhaps derive the most benefit from it, or who at any rate need it most. If it is to be made compulsory, it must be made

Uniform system undesirable but training must be careful supervision

Time to be allotted.

School register of physical development desirable.

Continuation classes : compulsion probably necessary : compulsory course suggested.

popular and attractive. In all probability the line of least resistance would be in the direction of rifle-clubs rather than in that of rigid military training, savouring of conscription. If in conjunction with practice in rifle-shooting every boy underwent a course of gymnastic training, and were exercised in the more interesting forms of military movements, with exemption on attaining a certain degree of proficiency, the national physique would be maintained at a high level, and the system would be as popular as any compulsory system could be.

12,474. You attach great importance in Kelvinside Academy to physical training?—Yes.

12,475. More so since you have been rector than before?—I really cannot say. I only know about it from my own experience, and I attach considerable importance to it. We also attached considerable importance to it in Edinburgh.

12,476. You say that sports are held annually in the school field. Is that a large field?—Yes, it extends to 6½ acres.

12,477. How do the boys play in that field?—You can get two games, which means sixty boys. We have about one hundred boys who are available for football, but of course they don't all play on one stated day.

12,478. In addition to that field, you have two acres of playground round the school buildings?—Yes.

12,479. Do you have any physical drill of a simple form?—Yes.

12,480. Where is that done?—In the gymnasium.

12,481. Is it never done in the open air?—Yes, if the weather is at all favourable.

12,482. But the weather is very often favourable even in Glasgow?—I would not say very often.

12,483. It is not always wet?—No, but it is very often too cold, and we are not sheltered. I much prefer the physical exercises to be taken out of doors when possible. The gymnasium is airy, and we keep it exceedingly clean and fresh.

12,484. What sort of uniform do the boys in your cadet corps wear?—They wear a Cameronian kilt and a red tunic.

12,485. The recruits are drilled by a drill instructor provided by the battalion. Does he drill anyone else but boys for the cadet corps?—Not with us. The cadet corps practically takes in all the available boys.

12,486. Is it obligatory?—No.

12,487. But it is so popular that there is no difficulty in getting the boys to join?—That is so. Last year over eighty per cent. of the available boys joined it voluntarily. It is exceedingly popular with the boys and their parents.

12,488. If a boy wishes to do nothing in physical exercise, is that allowed?—He has to take his gymnastics, but he is not compelled to take football or any outdoor games.

12,489. Have you any medical examination of boys?—No.

12,490. What is your opinion as to that? Do you think it would be of any use in finding out any weakness in the boys?—I think it would be very useful, but it would be very difficult for a day school to manage it.

12,491. You hardly think that it is necessary?—I don't think it is necessary, but I think it is advisable. Of course, in my opinion, that is more the parents' duty.

12,492. Of what class are your boys?—They are sons of well-to-do parents.

12,493. They are all well fed?—Yes.

12,494. You speak about drill instructors being supplied by the Government or a capitation grant being made to all cadet corps to cover the necessary expenses of the corps. You could hardly expect the Government to do that except through their military advisers?—Possibly.

12,495. Would you not apprehend that some objection might be taken to that by parents in the way of it being too military?—I have not come across that objection myself in regard to the cadet corps.

12,496. Have you had any military experience yourself?—No.

12,497. What makes you say that individuality among private soldiers is such a good thing?—I think that the ordinary soldier of the present day is too much of a machine. If all his officers get killed, what happens? He does not know how to act, and unless he has some responsible private in his company who will take the lead, he is quite at sea. That, of course, is a civilian's opinion; it is not a military opinion in any way. I think the general civilian opinion is that there is nobody to beat the British soldier if he is well led, but if his leaders happen to be killed, he cannot act for himself, and then there is a panic. If he could be taught individuality, and how to act for himself on the spur of the moment, then he might fill the place of a fallen officer—at any rate he would not feel so stranded.

12,498. You prefer that he should act as they do in a rink in curling, where everyone takes the skip in turn?—Yes. Of course it is difficult to know how to teach them individuality.

12,499. You say that you do not think that uniformity of a system of physical training is of much importance. Of course you must remember that teachers are often transferred from one school to another, and there would be a difficulty unless there was a uniform system?—I say that it is neither desirable nor necessary. Perhaps I should have said 'not necessary.' I would rather have a uniform system than none at all, but I do not think that it is necessary. If you make it absolutely necessary, the man has no free hand to deal with each class of boy as he thinks fit. One system may not suit every school. Of course it never occurred to me that a teacher might be transferred from one school to another. If you are to do that, then of course you cannot help having a uniform system.

12,500. Children are also transferred from one school to another?—I don't see how you can help having a uniform system. It would certainly be much better than no system at all.

12,501. You have recently started a register of physical development in your school?—Yes.

12,502. Have you brought it with you?—No.

12,503. Is that a sort of physical history of the boy so long as he is at school?—Yes. We take his chest measurement and height, and in the upper classes we take his biceps.

12,504. Those measurements will remain in the school books for ever?—Yes, they form a permanent record of his physical training, just as we have a record of his intellectual training.

12,505. You are in favour of physical training in the continuation classes?—Yes, if it can be managed.

12,506. You rather doubt how it is to be brought about, and you think that if it is to be made compulsory it must be made popular and attractive?—Yes, I don't see how you are to reach the class you want unless it is made popular. There was the same difficulty when compulsory education was brought in. People thought that it could not be made compulsory, but the difficulty was overcome.

12,507. You are in favour of it, and you think that everyone who went through it would be improved?—I certainly think so.

12,508. *By Mr Shaw Stewart.*—You would not apply this sentence of yours with regard to uniformity to Board Schools?—No.

12,509. You prefer that particular schools should have their particular system?—That the man should have a free hand to adopt your system if he likes.

12,510. With regard to ranges and cadet corps,—supposing miniature ranges were provided, how would that work in with the school time?—I personally would not mind giving up time to it, because I think it is so important. At present our Morris-tube practice takes place in the afternoons, and it does not interfere with the school at all. That is all very well for sighting and so on, but when a boy goes out to the range he shoots with the carbine and gets a kick on the shoulder and does not know what he is doing. He

*Mr W.
Cecil Laming,
M.A.

Uniform system probably necessary.

School register.

Continuation classes: training must be made compulsory and attractive.

Rifle shooting: no difficulty in finding time.

Mr W. Cecil Lamington, M.A. may be excellent at the Morris-tube and yet be quite a failure at the range.

30 Sept. '02. 12,511. You don't see that there would be any difficulty in providing time out of school hours for such practice?—No. We provide time for the Morris-tube, and they have to fire a certain number of rounds during the session.

12,512. In your school every boy must have gymnastics?—Yes.

12,513. Is that a popular class?—It is one of the most popular.

Morris-tube worked in gymnasium.

12,514. *By Mr Fergusson.*—Do you work the Morris-tube in your gymnasium?—Yes.

12,515. Do you find it satisfactory?—So far as it goes.

12,516. You have no difficulty with it?—No.

12,517. What sort of carbines are these that you use? They are not the service rifle?—No.

12,518. That is exactly where your trouble is. If you try the service rifle you will find that there is no such thing as a kick about it?—Service rifles should be provided, but we have not got them.

12,519. You find the Morris-tube to be excellent as training for the service rifle?—Yes, but of course there is also the wind and the different surroundings at the range.

Training now sufficient in higher class schools.

12,520. Do you think that in schools such as yours sufficient attention is now being given to physical training of all sorts, that opinions have changed lately, and more attention is being paid to these things, or do you think it is necessary that there should be some State interference or supervision to see that these matters are properly attended to?—I can only speak for Edinburgh and Kelvinside. In Edinburgh, when the new rector came, ten years ago, he introduced an enlarged system of physical training: in fact the gymnasium was built in his time. At Kelvinside there is sufficient attention being given to the matter.

12,521. Do you know any schools where sufficient attention is not given?—No.

12,522. A previous witness told us that it was essential that there should be State interference or supervision to see that a proper system was being worked in the secondary schools. I rather gathered from witnesses before that that they thought sufficient attention was now given to these matters, and it might be allowed to work its own way?—I don't think there would be any harm in having Government supervision in this matter as in other matters.

12,523. You favour the rifle club in preference to the more strictly military cadet corps?—Yes, as being more popular.

12,524. You find the Morris-tube to be very popular with your boys?—Yes, boys like shooting at anything.

Medical inspection: desirable in Board Schools.

12,525. You said that medical inspection was desirable, but not necessary, and there were difficulties in a day-school. What are these difficulties?—There would be a difficulty in having a medical inspector.

12,526. I don't quite see that. Supposing you have one appointed for your school, then he might inspect every boy at the beginning of the term. It would only take a boy about five minutes, and that would not be serious?—No, but who is to provide the medical inspector?

12,527. Your difficulty is the paying?—Yes.

12,528. I thought your difficulty was in having the boys inspected?—No, there is no difficulty at all in that.

12,529. It would have to be one of the school expenses?—But there are so many things now that have to be paid for by the school.

12,530. You don't think it is sufficiently necessary to entitle you to incur the expense?—No.

12,531. Of course you are speaking for your own class of boys. There is a difference between them and the boys whose parents don't look after them?—Yes. I think it would be extremely desirable in a Board School, because the parents there have not the same means of calling in doctors as we have.

Cadet corps: school camps.

12,532. *By Sir Thomas Glen Coats.*—You say that

you would like to take the cadet corps to a separate camp?—Yes.

12,533. Would you be able to get the cadet corps of the different schools into camp at the same time?—Yes, I think so. There is a difficulty, however; we break up in the end of June, while other schools break up in the end of July. August, however, is a month that would suit everybody, and I think that if the cadet corps were allowed to have a camp of their own in the first week of August, it would be so popular that boys even away on holiday would come back for it. In fact, some of our boys were willing last year to come up from the coast and spend some time in camp.

12,534. It would be quite possible to have standing camps, where the boys from Edinburgh could come at one time and the boys from Glasgow at another?—Yes, but I think it would be better if they all had their camp at the same time.

12,535. Do many of your boys go into the army?—A good many go into the volunteers and some of them go into the army. Since I have been at the Kelvinside Academy two or three old boys have passed into the army. Our corps provides nearly all the officers in the 4th V.B.S.R.

12,536. Can you give any suggestion as to whether boys of a different class, those attending the Board Schools, should go into the camp in the same way? In the higher-class schools the number of boys going to camp would be comparatively small?—Yes. I don't see why the other boys should not be sent to camp as well. It would be excellent training for them all.

12,537. The regulation as to cadet corps would require to be altered a little. If arrangements could be made you would advocate that boys who wished should go into camp?—Yes, I think it would be a very good thing for all classes of boys.

12,538. *By Sir Henry Craik.*—In your evidence you spoke about restrictions. What are the restrictions you had in your mind?—I believe that in order to earn a grant a cadet corps must swear in a certain number of volunteers when they leave school, otherwise they have no grant. We have never had a grant, and I believe that Merchiston has never had a grant. We have never applied for it, just because we have not a sufficient number of boys who become volunteers afterwards.

12,539. That is the only restriction you refer to?—That is the only one that concerns us, and it is the only one I know of.

12,540. Your school is inspected annually by the Education Department?—Yes.

12,541. Do you find that the examination stimulates the work at all?—It is rather difficult to say. Do you mean among the boys?

12,542. I mean this, do you find it helpful?—Yes, I think it is fairly so, but to tell the honest truth, the form of examination by the Education Department is not one that I should choose. We know nothing as to the results. It is not at all helpful to the masters.

12,543. You get their report?—Yes; it is based on a pretty hurried visit.

12,544. The results are from the evidence that is gathered at that visit?—Yes, it may be correct or not. So far as the examination itself goes, there is very little use in it to a school.

12,545. That is your experience?—Yes.

12,546. Has the examination covered the physical instruction?—No. I have always asked the inspectors to see the gymnasium and the cadet corps. We have generally turned out the corps for them.

12,547. At which of the inspections?—Any one that I can fit the time-table to.

12,548. Do they pay attention to it?—Yes.

12,549. As much as you think necessary?—Yes.

12,550. The inspection is carried out by several gentlemen, each of whom is specially qualified in certain subjects?—Yes.

12,551. No one is specially qualified in physical

Mr Cecil Lamington, M.A.

30 Sept. '02.

Cadet inabilities earn a

School specification Department not ho

Qualification inspectors training detail port

training?—No, except Mr Scougal, who happens to be qualified to give an opinion on the cadet corps, although not a military opinion.

12,552. You think it would be better to have an

inspection of the physical training and a report?—Yes, if it is included in the inspection we should have a qualified inspector.

12,553. And a detailed report?—Yes.

Mr. W.
Oecil Laming,
M.A.

30 Sept. '02.

The witness withdrew.

Commander GEORGE S. DEVERELL, R.N. (retired), examined.

Com. G. S.
Deverell,
R.N.

12,554. *By the Chairman.*—You are superintendent of the Clyde Training Ship *Empress* at Row?—Yes.

12,555. How long have you been there?—For fifteen years.

12,556. You have 400 boys between eleven and sixteen years of age?—Yes.

12,557. What opportunities have you for physical drill, etc.?—We have a large gymnasium fitted with vaulting horse, parallel bars, swings, ladder, etc., and we have also horizontal bars on the main deck. We have physical drill with and without rifles. Every boy in the ship is taught, and it is eventually done as a battalion. Free gymnastics are used and done every day in the week except Saturdays and Sundays, under a qualified instructor. Every muscle is strengthened.

12,558. Has that had a good effect in your experience?—The greatest proof of the good it does is in the look and improvement of the lads, very much increased weight, height and chest measurements, and I also believe that since so much advantage has been taken of, and attention paid to, the various physical drills and exercises, football, rowing, etc., offences have much decreased. In addition to the ordinary gymnastic exercises, there is the necessary activity which has to be used in going aloft, which I am of opinion brings every muscle into use; also rowing, which is always a special feature in this ship, and causes keen competition amongst my lads.

12,559. You take the height and chest measurements periodically?—Yes, we measure them at entry and every six months after.

12,560. You think that offences are very much decreased in consequence of the attention paid to the various physical exercises and games?—Yes.

12,561. Special attention is paid to swimming with you?—Yes, at the present moment 255 boys out of 380 can swim fairly well. No boy is sent to sea who cannot swim.

12,562. You think that every boy and girl should pass a certain standard of gymnastics before they are allowed to leave school?—Yes. I would strongly urge, not only for the benefit of the young people themselves, but also for our common country, that every boy, aye, and girl too, should be compelled to learn and pass a certain standard of gymnastics before they are allowed to leave school, and every opportunity should be given by having a public gymnasium in every locality, with qualified instructors, as it is undoubtedly the fact that many of those whose 'talents' lay in their muscular development, would thus get the attention the clever lads and lasses now get, which would at any rate give them good health and constitutions.

12,563. Would you prefer that children should have their own teachers to instruct them?—Yes, if they are competent.

12,564. And failing that, a qualified instructor?—Yes.

12,565. Would you prefer to have the examination of these exercises done by an ordinary examiner or by an expert?—An expert.

12,566. You see the difference?—Yes.

12,567. You talk about the ordinary teachers, but you would prefer to have them examined by an expert?—Yes.

12,568. Do you believe that ordinary teachers are capable of teaching physical exercises?—I am peculiarly placed as to that. My gymnastic teacher happens to have been a schoolmaster, but, as a rule, I have had an old soldier or an old man-of-warman.

12,569. Who examines the boys in those exercises?—Besides myself there is the Government Inspector of Industrial and Reformatory Schools.

12,570. Does he give full attention?—Yes.

12,571. Does he understand it thoroughly?—Yes, he goes heart and soul into all the games.

12,572. You have no acquaintance with the girls?—No.

12,573. What you have said with regard to them is only your own pious opinion?—Yes.

12,574. Have you any acquaintance with school life in Scotland?—Not outside my own school. Of course, I have seen most of the industrial schools, but I have not really seen their work.

12,575. You have prepared a statement of the exercises done by your boys?—Yes.

Physical Drill, with Arms (Rifles).—First practice, second practice, third practice, fourth practice, fifth practice. Physical exercises taught on the *Empress*.

Free Gymnastics.—Arms bending and stretching; pounding exercise; the lunge, right and left leg; general practice (five motions); touching the toes; arms circling; mowing exercise; on the toes (double kneebend); quick, mark time; on the hands (standing on the hands).

Leg Exercises.—Marching on the toes; hopping; hopping on the left and right foot alternately; rapid marching; gymnastic march; break into double line, knee up.

Parallel Bars.—Clear the right bar to the front; clear the left bar to the front; clear the right bar to the rear; clear the left bar to the rear; pressing between the bars; figure.

Horizontal Bar.—Pulling to the bar; pulling to the bar, seizing the right wrist; pulling to the bar, seizing the left wrist; over the bar, swinging round backwards; over the bar, swinging round frontwards; over the bar, swinging round backwards; right leg over; left leg over; arms over the bar, swinging round backwards; hanging on by the legs and swinging on to the feet.

Jumping.—No. 1, first file, first two files.

Vaulting Horse.—Clear the horse (right then left); clear the horse, right hand; clear the horse, left hand; frog leap; jumping through the hands; somersault; pyramid; skipping.

12,576. *By Sir Henry Craik.*—From what class do you draw your pupils?—They are all boys of the lower class of society, or they ought to be. They are all industrial school boys sent to us by the magistrates.

12,577. They are not good specimens morally, whatever they may be physically?—No. Of course, some of the boys are sent simply as orphans.

12,578. In the ameliorating of their condition, you attach as much importance to the physical training as to the mental training?—Yes, quite as much importance, if not more. Importance of physical training.

12,579. The children when they come to you have been underfed?—Yes, and in many cases they have been entirely neglected.

12,580. What do you do in regard to their mental training?—I have a navigation class of forty boys.

12,581. But you begin them with elementary work?—Yes. When they come first they are examined by our schoolmaster, and he places them into the standard they are qualified for. They go up to Standard VI.

12,582. They go rapidly through the standards, because they are regular attenders?—Yes, but they are half-time, because they are doing work also.

12,583. Do you find that the physical training interferes with their intellectual work?—Not much. They are very slow, but pretty sure in the end.

12,584. They advance in body at the same rate?—Yes. If they did not get the physical drill the school would not advance so fast as it does.

12,585. Your experience is that having to deal with

- Com. G. S. Devereil, R. N.
30 Sept. '02.
- the set of children who are sent to you, and with whom you must deal and cannot send away, it would be impossible to train them properly without physical training?—Quite impossible.
- 12,586. Attempting to deal with great masses of children in State-aided schools without systematic physical training would be a hopeless task?—Yes.
- 12,587. In the case of your own boys, you would feel it to be perfectly hopeless?—Yes.
- 12,588. What do your boys go out as at the end of the school age?—The majority of them go as sailors.
- 12,589. Do they do you credit?—Yes, about 90 per cent. of them do.
- 12,590. Coming from the worst beginnings, the system that you follow of a combined mental and physical training trains them so well that you say that 90 per cent. of them turn out a credit to you?—Yes. I should like to add that when the boys are confined to the ship, for instance by the weather, the offences increase tremendously, simply because they have not got an outlet for their games. There are times, of course, when we cannot land them.
- 12,591. Have you great difficulty in regard to moral offences?—No, we take extra precautions. I may say that before I went into the industrial school work, I had three years' experience in the largest training ship in the navy as second in command, and that experience has always followed me right through. Of course in that case they were older boys, but I have always had the idea in my mind, and we have taken elaborate care. When a boy goes to bed he does not get in between sheets, but gets into a blanket and rolls himself round and round, and that, I think, to a large extent stops any immorality. Of course the watchman can at once tell if there is anything going wrong. I honestly believe that on board the *Empress* we have very very little of it.
- 12,592. Even with such unpromising material?—Yes.
- 12,593. Have you to take extra precautions when the physical exercise is stopped?—We always have the physical drill. When we cannot land the boys for football, then the offences increase, but I don't mean immoral offences.
- 12,594. *By Mr Alston.*—What means do you take to raise your boys morally; have you religious or moral teaching?—I am the parson, and there are a number of people who come and give lectures on temperance. Whenever any offence takes place, I always speak to them about that offence, and if it is a serious offence, I make a point of speaking to them on the Sunday.
- 12,595. The teaching is intended to be in the direction of raising these boys morally?—Yes.
- 12,596. The boys are not all of the lowest type; many of them are smart enough, but they have got beyond the control of their parents. They may be very good boys for all that?—Yes. The most insubordinate and tiresome boy that I had in my ship was a son of a well-to-do lady in the Argyll Arcade.
- 12,597. We must not class them as being of the very worst type?—No, but the majority of their parents are of a very low type.
- 12,598. That is to say, they are neglectful of their children?—Yes, entirely.
- 12,599. And the boys are sent to you when the day industrial school is ineffective?—Yes. I don't have many day industrial school boys with me.
- 12,600. When you speak of a decrease of crime, you are referring to crime on board your ship?—Yes.
- 12,601. Besides your ordinary physical drill, you have naval drill?—Yes, we have our tender.
- 12,602. What advantage do your boys derive when serving on board the tender?—One of the greatest things they gain is their sea legs.
- 12,603. But I mean in the matter of training. Do the officers get a better grip over the boys? On account of the handling of the craft, do they feel that they are a united party?—Yes. There are fifty boys on board and seven men, the officer, master, and the crew, and they have a better chance of getting at them.
- 12,604. Of course in these days the handling of sailing ships has almost become extinct?—Yes.
- 12,605. You say that the boys there are better under control, work more harmoniously together, and are under better discipline than perhaps they are with the ordinary physical exercise on board the *Empress*?—Yes.
- 12,606. You say that most of your boys go into the mercantile marine?—Yes.
- 12,607. Do they take those boys willingly?—Yes; most of my committee are shipowners.
- 12,608. Is there any objection to sending boys to a training ship?—I don't think so.
- 12,609. Would you advocate them being sent to the *Empress* rather than to Mossbank, the boy being the same in both cases?—If the boy had any idea of going to sea I would send him to the *Empress*.
- 12,610. Is there a large proportion of boys who take naturally to the sea?—Yes. I think I have sent quite 85 per cent. of our boys to sea.
- 12,611. And 90 per cent. have given satisfaction?—Yes.
- 12,612. *By Mr McCrae.*—You say that you give them physical training every day?—Yes.
- 12,613. How long does that occupy them per day?—They commence at eight o'clock in the morning and go on till a quarter to nine. In the winter time we have the Friday afternoons.
- 12,614. Do they get squad drill?—Yes, firing exercise and marching past with the band. They have two bands.
- 12,615. *By Mr Fergusson.*—Who is head over the *Empress*?—The Home Office.
- 12,616. You have a pamphlet with you which contains statistics?—Yes, our annual report. I have also a list of the weights and measurements when the boys entered and when discharged.
- 12,617. *By Mr Shaw Stewart.*—I should like to understand how boys are sent to the *Empress* training ship. Is it exactly on the same conditions as they are sent to the industrial schools?—It is an industrial school.
- 12,618. Who decides whether the boy is to go to Mossbank or to the *Empress* training ship?—I am afraid I don't know. So far as I know it is done entirely in the Court.
- 12,619. *By Sir Thomas Glen Coats.*—The age of the boys is from eleven to sixteen years. Have they got any education before they come?—Some of them have and some have not. In the last three years I have had three boys who did not even know their alphabet.
- 12,620. Would the average boy be equal to the III. Standard?—Yes, about that.
- 12,621. Does the education you give them correspond with what is given in the Board Schools?—I should think so; but of course the majority of these boys are sent for not attending the Board Schools.
- 12,622. After they come, they are working half-time?—Yes.
- 12,623. Have you any idea whether they make the same progress in your school as children in Board Schools would do?—I think so. We have a large science class which is entirely voluntary.
- 12,624. Do you think that children attending a school every alternate day or half-time make as much progress as children attending a Board School every day?—I think that they make nearly as much progress.
- 12,625. *By the Chairman.*—You have handed in some statistics as to the height, chest, and weight measurements. You say that during the last year of a boy's stay in the *Empress* the height generally increases 2 inches, the weight 16 lbs., and the chest girth 3½ inches?—Yes.
- 12,626. *By Mr Fergusson.*—The boys that are sent to you are all under fourteen years of age?—Yes.
- 12,627. It has been suggested recently in a magazine article that one way to deal with the street loafer and hooligan who is to be found about the streets, with no visible means of subsistence, is to send him to something in the way of an advanced training ship. That, of course, is dealing with boys of fifteen years upwards.

Good effect of training seen in high percentage of successful boys.

Hooligans loafers: practicab. scheme.

Do you think that any scheme like that would be practicable?—Yes.

12,628. Could you make something useful of him?—

Yes, but they would require to be by themselves. It would not do to have them with the younger boys.

12,629. Do you think that that is a reasonable suggestion for dealing with the class of boy who otherwise drift into the hooligan or criminal?—Yes. It would be a splendid idea, because we want sailors, and if we got those, even although they were hooligans, I think that a lot of good might be brought out of them and might be made use of.

12,630. *By Mr Alston.*—Most of the evidence as to drill that has been led before this Commission has been with regard to military drill. As a naval man, would you say that there is anything in naval drill superior to the military drill?—For bringing out actual muscle

there is nothing like boat pulling. In that exercise you use all your muscles and your eyes as well.

12,631. Is there nothing in the particular nature of naval drill which brings the individuality of the boy more to the front?—Naval drill is the same as military drill. Of course, there is gun drill, but you have that in the artillery.

12,632. It has been objected that military drill is far too formal?—What a sailor looks on as naval drill is entirely the sail drill.

12,633. Is there anything in naval drill that gives rise to the expression of 'the handy man'?—No, except that a naval man can do anything; he can cook, he can make and mend his clothes, he can cut hair, he can do anything.

12,634. The individual qualities are brought out in each man?—Yes.

The witness withdrew.

Mr W. L. CARRIE, M.A., examined.

12,635. *By the Chairman.*—You are headmaster of George Watson's College, Edinburgh?—Yes.

12,636. You have prepared a statement of evidence to be submitted to this Commission?—Yes.

I am a Master of Arts of Edinburgh University. After the usual course of training I was appointed in 1882 head English master on the Classical side of George Watson's College, and held this post till 1898, when I was promoted to the headmastership of the school. I may also state that for three successive years, by the election of former pupils of the school, I was made president of Watson's College Athletic Club.

George Watson's College is a higher class school, with elementary, junior, and senior departments. The last-named includes a classical and a commercial side. The pupils come from all parts of the British Isles, from the colonies, and from foreign countries. They are drawn chiefly from the professional and business classes. The average enrolment is about 1650, and the average attendance over 1500. The ages of the boys range from five to eighteen years. The school buildings are situated in an open space of about three acres, while the Meadows and the Links, which are adjacent, afford abundance of additional playground. The playing field is at Myreside, about a mile and a half from the school. It extends to over thirteen acres, and is provided with a commodious pavilion. The school thus possesses exceptional advantages in the way of facilities for outdoor sports and recreation.

There is a large and well-equipped gymnasium attached to the school, and two qualified instructors devote their whole time to the training of the boys in physical exercises. We have not, at present, a swimming bath, but special arrangements have been made whereby our boys have the privilege of using the Warrender Private Baths in the immediate neighbourhood of the school. This privilege is largely taken advantage of, and the swimming club is one of the most flourishing of the school associations.

The sports clubs of the school are those of football, cricket, golf, swimming, and cycling. General athletics, such as running, leaping, etc., are encouraged by the holding of school games annually, which are very popular, and are usually attended by about 6000 people. Each of the clubs is specially supervised by masters, who take an interest in the respective sports, and all their proceedings are within my own cognizance. As far as possible, however, the actual working of the various clubs is left in the hands of the boys themselves. The experience so gained is a useful training, and I am glad to say that the *esprit* which prevails makes the management simple and successful. Several of the clubs have former pupil sections, and we are greatly indebted to old boys for interest taken in the sports of their successors, both by way of management and also in that of encouragement by the presentation of valuable prizes for competition. The Watsonian Club, for example, gives annually two medals for boys who

best combine scholarship and athletics: associations of old boys in London, in India, in South Africa, in North America, and in South America also contribute valuable prizes every year for the benefit of the school athletics; and I must not omit to mention that in all matters connected with the school games and physical education we have the hearty and generous support of the governors of the college.

While the sports of the school clubs are voluntary, and, to a certain extent, restricted to the members of the various clubs, all pupils, except such as may be debarred by physical weakness, have continuous opportunities throughout the school course of being exercised in drill and gymnastics.

We have no school runs or paper chases. There is a cross-country harriers' club of former pupils, in whose doings our boys sometimes take part.

We do not make provision for training in handicraft beyond the classes in Practical Science and Drawing.

The pupils of the elementary and junior departments have regular practice in singing twice a week.

A good many years ago there was a cadet corps in connection with the school, but it was given up through lack of interest. A rifle team used to take part in the matches for the school cup, which was shot for at the Edinburgh Meeting for a number of years. Personally I am in favour of the institution of a cadet corps, and am not without hopes that we may be able to resuscitate it in the near future.

We have no fire brigade corps, and no instruction is given in ambulance work.

There is no opportunity given during school hours for the practice of athletic sports beyond the spontaneous games of the boys at the intervals; but the gymnastics and drill of all but the highest classes form part of the regular curriculum, and are taught during the school day. Senior boys have the privilege of attending the gymnasium after school hours, when they receive special instruction.

We do not find any large number of boys whose parents desire them to be exempted from physical training. A few boys, on account of physical defects or by medical advice, are not allowed to take part in the severer forms of exercise; but, speaking generally, the opportunities afforded for physical training are fully taken advantage of and thoroughly appreciated.

Evidences of the effects of such training are specially marked in the case of boys about the middle of the school—say from twelve to fifteen years of age—where much of the training is by classes to the word of command. A class is enlivened by its spell of bright and active movement breaking in upon the sober routine of brainwork. One notices, too, a general alertness, a smartness of carriage, and a prompt obedience, which, added to the general development of the body resulting from a wisely regulated course of training, make the teaching of gymnastics a useful and even necessary adjunct to mental work. The reaction of body on mind is everywhere apparent, and it is not at all unusual

Com. G. S.
Deverell,
R.N.

and drill in
regular
curriculum.

Effects of
training:
mind and
body.

Mr W. L. Carrie, M.A.

30 Sept. '02.

Uniform system: desirable if coupled with latitude.

Instructors: better class desired.

Regular inspection.

True aim of education: all-round development.

Time allotted.

Training should be in connection with school work.

Outdoor training.

Military drill commended.

Free gymnastics for boys up to fourteen.

Organisation of games satisfactory.

No medical examination.

Continuation of training: old boys' clubs might form basis.

to find boys who are in the first rank in school sports taking also a foremost place in studies.

A certain amount of uniformity in physical training is unavoidable and even desirable; but the instructor who knows his work need not be and ought not to be tied down to a specified course. He will be guided by the special needs of his pupils.

A better class of instructors is wanted; men who know the science of gymnastics as well as the art, who have some notion of the anatomy of the human body, and who can apply that knowledge in their work. Their teaching would then be more intelligent and better directed to the end in view. Possibly, also, it would be advantageous were the teaching of physical exercises to be subject to regular inspection like other branches of school activity.

While it is true that physical training is bound to conduce to health, and health of body is essential to sound brain work, still, in my opinion, it is possible to over-estimate the value of physical training in its bearing on mental study; and perhaps there is a tendency towards exaggeration of its importance at the present time—I mean its value as conducive to power of mind. Nevertheless, the aim of education ought to be the production, not of the mere bookworm any more than the mere athlete, but of the man who has all parts of his nature developed in their true and properly-balanced proportions.

In this connection, the question as to the relative amount of time to be given to physical training on the one hand, and to mental work on the other, seems to be a problem rather for the medical or psychological expert. We endeavour to give the majority of our boys at least two half hours a week of physical training, leaving out of account the time devoted to their games and pastimes.

It is certainly preferable to have physical training carried on in connection with the school work, as thereby its recreative effect is obtained as a benefit to the ordinary work of the school; and to a large extent such is the case with us at present; but the exigencies of time-tables and obligatory subjects of study preclude the possibility of fully carrying out the principle in practice.

I am inclined to believe in the benefits of exercise in the open air as the best of all means for ensuring physical development.

I am of opinion that some form of military drill ought to form part of the curriculum of every school, for I believe it to be productive in large measure of those habits of manly bearing and prompt obedience to which I have referred.

I am strongly of opinion that for boys up to the age of thirteen or fourteen free gymnastics is the best form of physical training. Applied gymnastics should be reserved for senior boys on account of the severer muscular strain put upon the pupils and the greater appeal to individual nerve and pluck.

The supervision and organisation of our school games is eminently satisfactory. The boys are instructed in cricket by a professional cricketer and several assistants.

We have no general medical examination, and no statistics of physical development can be given.

With regard to increased facilities in the way of carrying on physical exercises after school life is past, much must be left to the individual. But I may be allowed to point out that most secondary schools have in connection with them a former pupils' club, and these associations might be made the basis of an organisation whose object would be the affording of opportunities for physical development on various lines. To such an organisation the school gymnasia might be made available—as the school fields are at present—at convenient times and under proper supervision. It is a question for others to consider whether and how such gymnastic and calisthenic classes should be encouraged by the municipal authorities or by Government.

12,637. Are physical exercises, such as free gymnastics, given in the gymnasium?—Yes.

12,638. Does the physical training include actual applied gymnastics?—Yes.

12,639. You only give two half hours a week?—Yes.

12,640. Do you give no more just because you have no time?—That is so, but great encouragement is given through my governors and the Watsonians. We have various clubs, one of the most flourishing of which is the swimming club. Then we have a very flourishing golf club, and football and cricket clubs. In these ways the physical training of the boys is well attended to, in addition to the more formal training in the gymnasium.

12,641. You say that a good many years ago there was a cadet corps, but it was given up through lack of interest. Has there been any intention to revive that cadet corps?—I am not without hopes that we may resuscitate it in the near future.

12,642. You don't find a large number of boys whose parents wish them to be exempted, but you do find a few?—Yes, a few by medical advice are not allowed to take part in the physical exercises.

12,643. You find that great advantages are apparent in smartness, alertness, and so forth, especially between the ages of twelve and fifteen. That is owing to a certain amount of systematised physical training?—Yes.

12,644. You think that a certain amount of uniformity is unavoidable, but the instructor ought not to be tied down to a special course; he should be guided by the needs of his pupils?—Yes.

12,645. Who are your instructors at present?—Sergeant Seymour, and Mr Anderson, who was trained in the Leith Gymnasium.

12,646. They are both specialists?—Yes.

12,647. You have no ordinary teachers who go in for it in any way?—No, except the teacher of the lowest class, who gives musical drill to the little boys.

12,648. You don't doubt that she is qualified and that a similar person could be equally well qualified?—That is so.

12,649. You say that it is not at all unusual to find boys in the first rank of school sports and also in the foremost place in their studies?—Yes. This year the dux and second dux are two of the finest boy golfers in Edinburgh.

12,650. You say, however, that they may overdo this?—What I mean is that one is apt to over-estimate its value.

12,651. There are a great many clever boys and men who take no physical exercise whatever?—That is so. I say in my evidence that the aim of education ought to be the production of a man who has all parts of his nature developed in their true and properly-balanced proportions.

12,652. You would want all men to be as like each other as possible?—I should like them all to be healthy by exercise of body, and mentally alert through exercise of brain.

12,653. You believe in the benefits of exercise in the open air as the best of all means of ensuring physical development?—Yes.

12,654. You have school games in all cases under supervision?—Yes.

12,655. That is tuition as well as supervision; they are being taught the games?—Yes.

12,656. Do you believe in having statistics of physical development?—Yes, I think they would be valuable.

12,657. Would it be much trouble to keep them?—It has not been done in George Watson's, principally on account of the size of the school, but I think that some such measurements would be valuable.

12,658. You don't think there would be any objection to it on the part of the parents?—No, I think there would not be, more especially if it led to their finding out if there was anything wrong with their children.

12,659. You say that most secondary schools have former pupils' clubs in connection with them. That is a useful thing?—Yes, very useful indeed. The Watsonian Club has given a great impetus to athletics

Mr W. Carrie

in the school by making the scholarly boys compete for very valuable prizes. The North American Club sent two beautiful gold watches this summer.

12,660. You don't get similar prizes for mental work?—Yes, we do.

12,661. So it makes one branch advance with the other?—It gives dignity to athletics in the eyes of the boys. It induces the scholarly boy to take part in the games, and a boy who is good at the games to attend to his lessons.

12,662. *By Sir Thomas Glen Coats.*—You say that two half-hours are given for physical training during the week apart from the games. Are these two half-hours part of the school time?—Yes.

12,663. Do you consider that the two half-hours are sufficient, or would you prefer to give more?—I think I would prefer to give a little more.

12,664. You think that that might be done without interfering with the other work of the school?—I think so; in all but the highest classes preparing for the Leaving Certificate Examinations.

12,665. Are the boys obliged to take part in the games?—They are not obliged, but they are advised to take part as far as possible.

12,666. Are there many who don't go in for them?—No, I think that a very large proportion of the school take part in the games.

12,667. Physical training is obligatory?—If the parents object we don't give it.

12,668. Have you any objections?—We have a few.

12,669. Is that on the score of health?—Yes.

12,670. You have no objection to military training on the ground that it fosters a spirit of militarism?—I have never heard that.

12,671. *By Mr McCrae.*—I notice that you have pupils from all parts of the world, from the Colonies and foreign countries, as well as our own boys. Have you noticed any particular difference in the physique of the different classes?—I cannot say that I have.

12,672. The Scotch boy is equal to the Colonial?—I think he is.

12,673. Do you pay any attention to their teeth?—Yes.

12,674. We had evidence to-day as regards the Colonials. Would you say that their teeth is better than the teeth of the Scotch boys?—I have not noticed that.

12,675. You say that a better class of instructors is really wanted. Of course, you indicate men specially qualified to teach gymnastics?—Yes, and more than that, I think they should be educated men, men whom the boys would look up to as they look up to University men.

12,676. Have you ever considered whether it would be a good thing for the teacher also to have a certain knowledge of physical training, so that he might give some exercises in the schoolroom instead of going to the gymnasium?—I quite approve of that.

12,677. Would it be possible in a school like yours?—It might be.

12,678. I suppose that the objection to giving more time for physical training is the time-table?—Yes.

12,679. If more time were given to physical training, might the boys not be brighter and able to go through more work in a shorter space of time than is required just now, or is there any way you could cut down the curriculum to make room for physical training?—I don't see my way at present to do that.

12,680. Why?—On account of the claims that are made by the Scotch Education Department.

12,681. *By Sir Henry Craik.*—What does the Department demand?—You know how severe the test is.

12,682. What test?—The Leaving Certificate and the Intermediate Certificate.

12,683. What are the demands of the Department?—The Leaving Certificate.

12,684. Yes?—Four higher grades.

12,685. They don't require them to be taken together?—I know that.

12,686. Have we not had to remonstrate with the fact that pupils have taken too many together?—No.

12,687. Have we not had to remonstrate that you have presented pupils in too many subjects?—I am not aware that you have remonstrated with my governors.

12,688. We have had to place a restriction?—I know that you have done so.

12,689. Do you wish that the Leaving Certificate, as denoting the end of the school career, should be reduced, and that less should be wanted for a certificate in a particular subject?—All I know is that the test is very severe.

12,690. Do you want us to grant the certificate for less knowledge in a particular subject?—I should be inclined to do so.

12,691. To lower the aims of the Scottish schools altogether?—Not to lower the aims, but, while keeping up the aims, to make it possible for a larger number of boys to take the certificates.

12,692. That is lowering the aims. If we are to pass the boys more easily than we do, it must only be by lowering what we demand in a particular subject. On the other hand, so far as the Department is concerned, we have done all we can, and we have had to impose severe restriction on the number of subjects that were taken. Now, do you want us to allow a larger number of subjects, but to allow smaller attainments in each subject?—Of course I am not arguing the point with you as to increasing the number of subjects or lowering the aims; I am explaining why it is that we cannot find more time for physical training.

12,693. It is because you wish to get a larger number of certificates than you think is consistent with the all-round training of your boys?—I am not aware of that.

12,694. The Department does not ask you to put your boys in for all those subjects?—They set up a very high standard.

12,695. And they limit the number of subjects?—Yes, and our boys aim at these, and we find that if we are to gain these Leaving Certificates, we cannot give them more time to physical training than we do at present.

12,696. Because you present them in too many subjects?—No, we present them in the subjects necessary for the Leaving Certificate.

12,697. You draw from a well-to-do class on the whole?—Yes.

12,698. Your class, I suppose, more than any in the population of this country, is determined to make its way in the world, to gain its livelihood, and is ambitious to do so in the best way possible?—Yes.

12,699. The amount of competition and keenness among your pupils in George Watson's College is perhaps greater than in any other institution in the country?—I know that there is a keen spirit of rivalry, and we have many clever boys.

12,700. You are largest in numbers?—Yes.

12,701. Looking to the position your pupils gain all over Scotland, England, and the Colonies, perhaps there are as many of them as there are from any other institution in the country?—Yes.

12,702. Have you examined whether the boys who have come to the top and have distinguished themselves, as so many boys from George Watson's College have done, have been boys who took a lead in athletic exercises?—Yes, I have noticed that.

12,703. What is the result of your observation?—I have found that those lads found time, not only after school hours, but on the Saturdays, to go to golf, football, or cricket, and they also found time to master their studies, but they were able boys.

12,704. They have taken the highest places in the competitions in Oxford, Cambridge, and the Civil Service?—Yes.

12,705. Were these boys who had attended to their physical training?—Yes, they were strong boys who had attended to their physical training.

12,706. They had not found it incompatible with the carrying on of a high mental strain in their school life?—That is so.

Ambitious aims of pupils: highest places in open competitions gained by clever boys who attended to physical training.

Mr W. L.
Carrie, M.A.
30 Sept. '02.

12,707. You rather think that it promoted their mental activity?—Yes.

12,708. As we have been told that in dealing with the poorest class of boys in the training ship it would be practically impossible to carry on their work without physical exercise, so you, speaking at the other end of the scale, speaking for those who are among the most ambitious and most energetic of the youth in Scotland, say that it has not interfered with, but has promoted, intellectual activity?—Yes.

Cadet corps.

12,709. *By Mr Alston.*—You say you have not got a cadet corps. Is there any reason for that?—There was one some years ago, but it was dropped from lack of interest. I may say that my attention has been given to it recently, and I have been talking about it to my governors. They favoured the idea, and I think we shall have a cadet corps before very long, associated with the volunteer battalions.

12,710. Where came in the lack of interest?—I was English master then, and was not so conversant with school affairs as I am now.

12,711. The rifle team has been given up?—Yes.

12,712. It is quite possible that a very important cadet corps might be attached to George Watson's College?—Yes.

12,713. You might have a cadet corps of 300 or 400?—Yes.

12,714. Would there be any difficulty as regards expense?—There might be. That is also under my notice, but I think it could be got over.

12,715. Would you have any difficulty in the matter of officers?—I am not sure as to that. I think several of the masters would be very willing to help.

12,716. They would also require to be competent in drill?—Yes.

12,717. The more companies you had, the more officers you would require?—Yes.

12,718. You would get the non-commissioned officers from the boys?—Yes.

12,719. Then speaking of physical instruction, you say that a better class of instructors is wanted. Are you speaking of the class of men that you have had hitherto?—I am speaking of the class of men who are usually employed as instructors.

12,720. In such a school as yours?—In all secondary schools.

Teachers:
ordinary staff
preferred if
properly
qualified.

12,721. You mean ex-army men?—I think that better-educated men should be employed, men whose education would of its kind compare with the education of University men.

12,722. Then your own teachers would probably be the best instructors in physical drill?—If they had the necessary knowledge.

12,723. Would you favour your teachers being sent to a central school of instruction and coming back with certificates of qualification?—Yes.

12,724. *By Mr Fergusson.*—You yourself are very much in favour of physical training and exercise for boys?—Yes.

12,725. Is it your opinion that in secondary schools, such as your school, sufficient attention is paid to physical exercise and games, or do you think that some official supervision is required to see that they are kept

up to a proper standard?—I think in a school like George Watson's, with its numerous athletic organisations and the instructors we have, and the encouragement that we have from the Watsonian clubs, a great deal of interest is excited and a great deal of work is done.

12,726. Do you know of any secondary schools where, in your opinion, sufficient attention is not paid to these matters?—No.

12,727. Do you think there ought to be some official supervision of these matters in secondary schools, or do you think they are doing well enough as they are?—Speaking for my own school, one of our masters is appointed secretary, and is in constant touch with the boys.

12,728. That is your own school. I want rather to get at the general run of the secondary schools of Scotland?—What we find good would be good in other schools.

12,729. But is it done?—I am not aware.

12,730. You provide a day meal for your boys?—Yes.

Food: m
provided,
paid for b
boys.

12,731. They have to pay for it?—Yes.

12,732. Why do you provide it: is it for the good of the children?—Yes.

12,733. And for their convenience?—Yes.

12,734. If you gave them nothing, they would have to go elsewhere?—Yes.

12,735. If that is good for children in a school such as yours, why should it not be equally good for the children at every Board School in the country? You don't give the meals free, and I am not suggesting that any meal should be given free. I merely ask why, if it is done in the upper-class schools, it should not be done in the lower-class schools?—I should think that it would be on the score of expense. The parents might not be able to pay for it.

12,736. But can you suggest any reason why arrangements should not be made that they should get it if they wanted it?—No. Of course in some schools in the country they go home to their midday meal where the distance is short.

12,737. You were asked about the requirements of the Education Department. Do your boys have much home work?—I should say that the boys in the highest classes have a good deal of home lessons.

Home less
unavoidab

12,738. Do you approve of that?—I think it is unavoidable.

12,739. Is it the case that in Germany home lessons are not allowed?—I don't know. In the middle school, and the junior department of the senior school, and in the elementary school, the home lessons are reduced to a minimum, and the boys have plenty of time in the evening after giving an hour and a half to their home lessons.

12,740. You have no medical examination in your school?—No.

Medical
examination

12,741. Do you think it would be desirable to institute something of the sort?—I think so. The size of our school has prevented this being attended to. I don't say that it should not be done when new boys enter the school.

12,742. It would be still more desirable for boys who are not so well looked after at home?—Certainly.

The witness withdrew.

Mr J.
M'Farlane.

Mr JAMES M'FARLANE, J.P., examined.

Mr J.
M'Farlane

12,743. *By the Chairman.*—You are Vice-Chairman of the Juvenile Delinquency Board, Convener of the Mossbank Industrial School, Governor and late Chairman of Hutcheson's Endowed School, Glasgow?—Yes.

Mossbank
Industrial
School: ages,
education,
and class of,
boys.

12,744. In regard to the Mossbank Industrial School for Boys, how many inmates have you?—There are 375 boys, the house being full.

12,745. What is the average age on admission?—The average is from nine to eleven. The physique on admission is much under the average.

12,746. What about their education?—It is usually about three years behind proper standard. In some

cases we have boys coming in twelve years of age who are absolutely illiterate.

12,747. To what class do these boys belong?—All sorts; but they have been very much neglected at home, and have been without proper training.

12,748. Are they all delinquents?—No, the most of them are rather waifs and strays. In fact, generally speaking, the boys we have been getting for some years past have been more sinned against than sinning.

12,749. You say that the average age on leaving Mossbank School is from fifteen to fifteen and a half years?—Yes, that is so. All the boys are kept at school all

day till they pass the third standard. Thereafter, till leaving the institution, they are half at school and half at industrial training.

12,750. You say in regard to physical training that the boys are kept thoroughly clean by frequent baths in the house?—Yes. There is an excellent swimming pond, where all are taught swimming. The boys get military drill under an ex-army sergeant.

12,751. How often do they get that drill?—Daily.

12,752. For how long?—About half an hour a day. They turn out twice with the band.

12,753. There are no officers, but the senior lads act as non-commissioned officers?—That is so. All the boys get efficient gymnastic training once a week. This includes bars, horse, rings, climbing rope, etc. All the boys get free gymnastics five times a week, one hour each lesson.

12,754. Your boys seem to get a good deal of physical exercise?—Yes.

12,755. In addition, there are organised football and cricket teams?—Yes.

12,756. You speak about the brass and pipe bands?—Yes. The brass band numbers about forty, and is kept at a high stage of efficiency. The pipe band consists of eighteen performers.

12,757. You say that the pipe band has proved of great value in strengthening and expanding the chests of the boys?—Yes, we are rather surprised at the development there. We started this pipe band about two years ago, and we found that the lung power was so indifferent that they could not play. In a short time they got into the way of playing, and they developed their chests to the extent of a couple of inches in a short time. We are impressed with the difference on these pipe boys.

12,758. You don't find that it makes them thirsty?—They are all teetotallers.

12,759. In regard to industries, you say that you have a farm extending to fifty acres, and a garden of nearly four acres, employing twelve boys. You have fourteen boys at your bakery, and you say that the development of baker lads is most marked?—Yes, they are kept working on their feet, and they have to use their arms to a considerable extent in making the bread, and that sets them up.

12,760. You say that shoemaking does not improve the boys physically?—No, as they are stooping most of the time.

12,761. And they are in a close atmosphere?—The atmosphere is fairly good.

12,762. There is always a smell of leather?—Yes.

12,763. Is tailoring encouraged?—No. We just have the tailoring required for repairs and making clothes. This department is not encouraged, as the posture at work is detrimental, the work is irksome, and few lads follow it out.

12,764. Firewood cutting is not carried on with you?—That is so. It is carried on in other schools in order to make a profit, but we would not have it on any terms.

12,765. You don't wish to make a profit?—No, but we endeavour to make the cost as small as possible.

12,766. There is a boys' home in connection with Mossbank?—Yes. It is an adjunct of Mossbank, for lads (working) who have passed out. The lads, numbering fifteen to twenty, are encouraged to continue swimming and gymnastics, and they get one evening per week of free gymnastics. The superintendent is fully qualified to give this.

12,767. What about your industrial school for girls at Maryhill? Does it come under your Board?—Yes, but it is under another committee.

12,768. Have you much to do with it?—No. There are 200 girls in it, and the house is generally full. For some years past drill has been taught by a sergeant, a very competent instructor.

12,769. Can you tell what kind of drill it is?—No.

12,770. It has resulted in excellent health in the school?—Yes. Two lessons per week are given, and, as

I have said, the result has been excellent health in the school. Besides that, the girls are taller and stronger than formerly. It is proposed to make this part of the training more prominent, and a drill hall is in course of erection with that view.

12,771. Do the girls ever give any displays?—They have small displays in the house, but the facilities there are not quite sufficient. When this new drill hall is up, we expect to be able to do a good deal more in that direction.

12,772. You say that you have three day industrial schools with a roll of nearly 600?—Yes. A fourth day industrial school was opened just about a fortnight ago. Up till now the drill has been trifling, but the superintendent of the boys' home will devote about five hours weekly to each school, giving military drill and free gymnastics. One drawback is the amount of time taken up with manual instruction and drawing, etc., and in the case of girls in cooking and laundry work.

12,773. Does that apply to all institutions?—It applies to those four day industrial schools. The children there are all bad truants, and all the time we can devote to their education is really required.

12,774. They pass out of the day industrial schools when fourteen years of age?—Yes.

12,775. What happens then?—They seek employment.

12,776. Do they get it?—Quite easily.

12,777. *By Mr Fergusson.*—With your brass and pipe bands you will get a good many musicians?—Yes.

12,778. Do they learn music easily?—Yes, very easily.

12,779. What you have told us about the pipes is very interesting. Do they pick them up easily?—Yes.

12,780. You have a special teacher?—Yes, and he also acts as gardener.

12,781. Is every boy allowed to go into the band?—They are selected by the governor. No one gets into the band unless his record for behaviour is thoroughly good.

12,782. It is always easy to keep the band up?—Yes.

12,783. You say that since physical training in the girls' school came more into vogue, the girls have become taller and stronger. Is that from any statistics that you have, or is it just your general observation?—It is just from general observation. They look particularly well.

12,784. And you attribute that result to the physical training?—Yes.

12,785. Is that why you are now introducing it into the industrial schools? What made you come to the conclusion to devote more time?—We were appointing a new superintendent for the boys' home, and in dealing with that we thought that if we got a man thoroughly capable of teaching free gymnastics, we would be able to get a better man, and that his time could be devoted to these industrial schools over and above the janitors who drill the children.

12,786. Have you any experience of any other institutions except those you have alluded to? Can you tell us anything about other industrial schools?—No, except from a cursory visit.

12,787. You cannot give any idea whether the standard of physical training is generally being increased?—No, we have not compared it.

12,788. These boys when they leave you at fourteen get employment. Do they generally turn out well?—As far as the lads from Mossbank are concerned, we find on an average that 90 to 95 per cent. turn out well. Quite a large number go into engineering and moulding. A proportion go into farming, and a considerable number go into shoemaking. At least 90 per cent. turn out satisfactory to us.

12,789. *By Mr Alston.*—Does the whole school turn out to drill?—Yes.

12,790. It is practically a battalion?—Yes.

12,791. You drill it in companies, but the teachers

Mr J. M'Farlane.

Day industrial schools.

Bands.

Training for girls: good results.

Mossbank: at least 90 per cent. turn out satisfactorily.

Drill.

Mr J.
M'Farlane.
30 Sept. '02.

don't act as officers. Did they ever do so?—They used to.

12,792. None of these teachers would be competent to drill?—No.

12,793. Your sergeant is an old army man?—Yes.

12,794. What are his qualifications?—I am not sure. He came from Galashiels, where he was very highly spoken of, and where he had charge of the military drill. He excels as a gymnast in the gymnasium. We think that the teaching should cease in the classrooms.

12,795. Suppose there were any change made as to increasing the amount of physical training and drill in the schools, and that the authorities insisted upon teachers qualifying themselves, would our schools have any difficulty in getting into line with that new condition of things?—Yes.

12,796. What would you recommend? Suppose a new state of things were instituted, in which we were all called upon to have more stringency in drill and more military drill?—We would put additional work on the inspector, whose time is not all taken up with the instruction of the boys. He acts as store-keeper.

12,797. You say we would have a difficulty. Suppose they insisted upon there being complete instruction, and an expert examiner sent at stated intervals to see how it was getting on, could we face up to that?—I think we could.

12,798. You say that the drill instructor is also teacher of gymnastics. Is he competent?—Yes.

12,799. What results do you get from physical drill? How does it affect the physique and the conduct of the boy?—The physique is increased in a most satisfactory manner. We have altered the diet somewhat, but I am satisfied that the extra swimming and drill that the children are having are making a considerable improvement on their general appearance.

12,800. Apart from the discipline of Mossbank, is there added stringency in the discipline applied to the boys while taking gymnastics? Does the drill instructor get more disciplinary results in physical training and drill than is got from the boys disciplined generally in the school?—I would not say so. The discipline of the school is very good; the lads behave particularly well.

12,801. Is there anything in the discipline of regulated instruction in physical training and drill which is above and beyond the ordinary discipline of the institution?—Yes. It is bound to affect the general discipline of the school.

12,802. Is such a discipline duly enforced by this instructor?—Yes.

12,803. The results are beneficial?—Yes.

12,804. We had the question of the *Empress* before us. Can you tell us how the boys are sent to the *Empress*?—They are sent from the Justices of Peace Court. As a rule, when the boys are brought there, there is an officer of the ship present, and if the lad is a likely boy, then he says, 'He will make a good sailor,' and he is sent to the *Empress*.

12,805. He is not sent as a punishment, but as an encouragement?—As an encouragement.

12,806. How do they happen to send them to Mossbank instead of the *Empress*?—The application is made by the officer, who takes into consideration the surroundings of the child, the physique, and so on, and the result is that we get the inferior lads.

12,807. He selects those who would be better served by the *Empress*, and sends you the ones who would be better under discipline at Mossbank?—Yes.

12,808. The moral condition of the boys is much the same in both cases?—Yes.

12,809. Shoemaking and tailoring are requisite for repairs in the school, but it is not an advantageous kind of work for giving to the boys?—That is so.

12,810. You say that the excellent health of the school arises from its physical training. Are there not other good conditions?—Yes. The diet is very good.

12,811. And there is abundance of good milk?—Yes.

12,812. You speak about one of the drawbacks being the time taken up in some schools by girls cooking and doing laundry work?—What I refer to is the excessive amount of that. We have had a suggestion from the inspectors lately that these girls should be taught to do up cuffs and collars, but the thing is absurd. The education of these girls is so far behind, and as they never wait beyond fourteen years of age, there is absolutely no time for these superior branches.

12,813. While you would not object to the cooking and laundry work, you think the excess of it would interfere with their education?—Yes, and the physical drill of the children.

12,814. *By Sir Henry Craik*.—You use the phrase that the children come from all classes. I presume you mean that they originally belonged to all classes. What are the varieties of classes that they do come from?—I would say that they are the children of labourers and the children of widows, who have got beyond control. In almost every case there is absence of home control.

12,815. How do the class of children you get into the day industrial schools on account of truancy compare with the children you get at Mossbank?—To a certain extent they are much the same, but we have a few of a superior class, perhaps the children of a decent man who cannot attend to them during the day, or perhaps children of a widow who has to go out to her work, and in such a case it is half an industrial school and half a children's *crèche*, as I might say.

12,816. On the whole, these day industrial schools are rather better than Mossbank?—Not on the whole. I would say that two thirds are of the same class as we have at Mossbank, and the other third might, perhaps, be a little higher up in the social scale.

12,817. Are you most pleased with the results in Mossbank or in the day industrial schools?—From an educational point of view, and from the point of view of attendance, we are thoroughly satisfied with the results in the day industrial schools.

12,818. Are you as well satisfied as you are at Mossbank?—I was speaking of their education, the work they were doing in the school. Their truant habits seem to depart from them, because we have an attendance of about 90 per cent.

12,819. I am speaking in rather a wider sense as to the results and the development of the children in every direction. Whether are you most pleased with the results you get at the day industrial schools or the results you get at Mossbank?—They can scarcely be put on the same platform, because many of these day industrial children are only with us for a short time, and our efforts are to improve their education and their physical development to a certain extent. In the case of Mossbank, we have them till they are fifteen or fifteen and a half years of age, and we are *in loco parentis*, as it were.

12,820. You have a greater hold over them?—Yes, much greater.

12,821. Confining yourself to the physical side of their education, how do the two compare?—Maryhill and Mossbank are a long way ahead of the others.

12,822. The fact that you have a less hold of the children at the day industrial schools in respect of their physical training hinders your good results?—Yes, we have a shorter time to work on both during the day and during the time of commitment. We have an hour and a half more at Mossbank than we have in the day industrial schools, and that hour and a half makes all the difference.

12,823. The result of that is, that the children committed merely for truancy are really not in as good a position either for their physique or mental training as children who have been neglected and are put entirely under your charge?—That is so.

12,824. *By Mr Shaw Stewart*.—Nearly all your boys go into civil life?—The great proportion of them do. A few go into the army.

12,825. You find that the physical training you are able to give them stands them in very good stead when they go into trade and industrial work?—Yes.

Mr J.
M'Farlane.

Training as
important
civil life as
for army or
navy.

12,826. So that physical training is really quite as important for civil life as it is for boys who are intended for the army or navy?—We are agreed on that point.

12,827. You are in a good position to be able to give evidence on that point?—We are.

12,828. *By Mr McCrae.*—To what age do you keep the boys in your boys' home after they leave the institution?—They stay there for eighteen months or two years, but very few of them go into the boys' home at all. We pass out of the institution on an average 100 boys every year. Many of them by that time have either fairly good homes or they go to relatives.

12,829. Do you make a charge, or do you house them free?—No. We reckon that it costs about six shillings a week to keep them. If their wages don't amount to that, then they hand over their wages, keeping a shilling or so to themselves. Everything above 6s. is paid to them in pocket money or put into a savings bank, which they draw from when they leave.

12,830. Have you evening classes for them?—No.

12,831. You say that they get one evening per week of free gymnastics?—Yes.

12,832. Is that compulsory?—No, but the lads take it.

12,833. *By the Chairman.*—Have you had any boys with you who were cripples?—We have had a few, but they are not being admitted now. When I first went to Mossbank, as a member of committee, we had some boys who had lost a leg, but the instructions really given from the Home Office and the spirit of the rules were that we were to take no one who was not likely to be ever able to turn out to fight the battle of life.

12,834. *By Mr Alston.*—Is it not the case that in all the schools under the Juvenile Delinquency Board inculcation of good manners is a very special feature?—Yes.

12,835. All these children are respectful?—Yes.

12,836. Would you compare them advantageously with School Board children generally?—I would be sorry to put them alongside the School Boards so far as manners are concerned. When our boys are in chapel there is absolute silence.

The witness withdrew.

Mr EDWIN TEMPLE, B.A. (Cantab.), examined

12,837. *By the Chairman.*—You are rector of Glasgow Academy?—Yes.

12,838. State your school and university training, your former experience, and the time in your present position.—Educated at Fettes College, Edinburgh, and at Pembroke College, Cambridge. I have had nine years' experience as an assistant-master at Trinity College, Glenalmond, and three years as rector of Glasgow Academy.

12,839. (a) What is the class of your school and scholars? (b) Give the numbers and ages of the pupils?—(a) Glasgow Academy is a large day school, which gives education to the boys of the best class. (b) The pupils number about 600 boys from the age of six to seventeen.

12,840. Give in detail all the existing opportunities of physical training under the following branches:—

(a) Regular games, e.g. football, cricket, hockey, etc.

(1) Are they organised and supervised by masters?

(2) What is the size of the playing field, and its distance from the school?

(b) Drill: how taught and by whom.

(c) Gymnastics, free or applied. Is there a gymnasium attached to the school?

(d) Athletics, e.g., jumping, running, etc.

(e) School runs, paper chases, etc.

(f) Handicrafts.

(g) Voice training.

(h) Cadet corps, rifle shooting.

(i) Swimming. Is there a swimming bath attached to the school?

(j) Fire brigade corps.

(k) First aid and ambulance.

(a) Football, cricket, lawn tennis are the games played. (1) They are organised by masters and boys, and are supervised. (2) Round the school itself is a large yard of 3½ acres, and there is a cricket and football field of 12 acres about one and a half miles away.

(b) Drill is taught to most of the classes by our gymnastic instructor.

(c) Gymnastics, free and applied, are taught to most of the classes. There is a large gymnasium. There are no exercises done in the open air. The drill of the cadet corps is done inside the gymnasium.

(d) We hold athletic sports in the spring, and a large number of boys compete in the various events, and practise them for some weeks before.

(e) Those who play football keep in training by runs.

(f) None.

(g) The lower classes are taught singing, and there is a pipe band in connection with the cadet corps.

(h) A corps has been introduced this year; it numbers about 110 boys. We have just fitted up a Morris-tube range in the gymnasium, and as many boys as possible will be trained to shoot.

(i) No swimming bath belonging to the school; but numbers of the boys who dwell in the vicinity belong to private baths, and a swimming competition is held once in the year.

(j) No fire brigade.

(k) No first aid and ambulance.

The games I have mentioned are not compulsory, but the boys are advised as strongly as possible to go in for them. I should like to have them compulsory if possible, but I don't see my way to have it.

12,841. State specifically the time allotted to these or any of them *per diem* and per week.—Football and outdoor games are played on Saturdays, and once besides in the week time is made for such games. The games are played under supervision. We practically give physical instruction on the Saturdays, but that is not obligatory in any way. About one-third of the boys will go on the Saturdays, and more will go on the other days. Gymnastics: two periods a week (of about forty-five minutes each) are devoted to gymnastics in all classes except the three highest. Drill: the cadet corps is drilled twice a week. Our school hours are from 9.20 in the morning till 3.50 in the afternoon, with an interval of an hour in the middle of the day. There are seven periods in the school day.

12,842. Are any of those taken in ordinary school hours?—Gymnastics (and physical drill) are taken in the school hours.

12,843. What, in your opinion, are the respective merits and relative values of the various forms of physical training?—It seems to me that gymnastics and drill are excellent for the training of the body—the legs, arms, chest, and muscles. That outdoor games give this bodily training, and have the additional advantage of being played in the fresh air, and also give a moral training as well. I give my opinion of the results just from my own experience; I see generally that the results are excellent.

12,844. How far are those opportunities taken advantage of?—I should think about 70 per cent. of the boys take advantage of the opportunities for games and of joining the cadet corps.

12,845. What, in your opinion, are the results of such physical training?—In my opinion the results of physical training are excellent. The body requires to be developed as well as the mind.

Mr J. M. Farlane.

30 Sept. '02.

Cripples not admitted.

Boys respectful and well-mannered.

Mr E. Temple, B.A. (Cantab.).

Voice training. Cadet corps.

Swimming.

Games not compulsory.

Time allotted.

Gymnastics and drill in school hours.

Outdoor games preferred.

Opportunities taken advantage of.

Good results of training.

- Mr. E. Temple, B.A. (Cantab.)
30 Sept. '02.
Moral, physical, and intellectual effects.
- 12,846. What are the effects—moral, physical, and intellectual?—I should say that the moral effects of a cadet corps are that discipline is taught by it; of outdoor games, such as cricket and football, that boys learn pluck and endurance, and discipline too. Of course the boys must be well taught in order to gain all the advantages. The physical effects are good. If the body is made healthy by them, I consider that the intellectual effects will be good. I have known many cases where physical efficiency has been accompanied by mental efficiency. I have just seen to-day a boy who has passed for the Indian Civil Service, and he is one of the best football players in Glasgow. He had to give it up last year when he went to Wren's in London, but he is an extremely good athlete.
- One system should be laid down.
- 12,847. Is a uniform system of physical training in schools desirable or necessary?—I do not see how it is to be introduced, unless cadet corps in schools be made compulsory. There would be no reason, of course, why the Board Schools that do give physical training should not all give it on similar lines. I am aware that there are various systems, and I don't see why there should not be one laid down as a system to be followed.
- Compulsory service: cadet corps.
- 12,848. How, in your opinion, can the present system be improved and developed?—I believe it would be a good thing if the Education Department took up the question of compulsory service. I have had great difficulty in starting a cadet corps, because of the slowness that the War Office works with. It has taken us six months to get leave. It seems to me that the question of universal service will have to be faced soon, and I believe that this result would best be attained if boys between the ages of twelve and eighteen were all taught drill and how to handle a rifle. At present the starting of a cadet corps is a cumbersome and costly process, and it ought to be simplified. It would be good for the country generally if compulsory education were to be extended to drill and shooting.
- Mind and body.
- 12,849. What is the relation between mental study and physical training?—I presume it is the case that the mind can better work in a healthy body, and that physical training tends to make the body healthy.
- Proportion of time.
- 12,850. What is a just proportion of time to be devoted to physical training in relation to study?—I should be glad to see boys in the open air for two hours daily, but I leave the answering of this question to more capable hands.
- Outdoor games preferred.
- 12,851. Is physical training most advantageous if carried out daily in connection with school work?—I believe more in outdoor games; but some physical training, such as physical drill and gymnastics, can well be carried out in connection with school work.
- Outdoor and indoor training.
- 12,852. What are the respective merits of outdoor and indoor training?—The great advantage of outdoor training is that the fresh air is enjoyed—in a large town a very important point; and my opinion is that outdoor training is superior to indoor training, but in the case of a day school, the latter is more easily secured in connection with the school work.
- Military training should be part of curriculum of all schools.
- 12,853. Should some form of military drill or training form part of the ordinary curriculum of every school?—I consider that military drill and training should form part of the curriculum of every school, as it is my opinion that every healthy male inhabitant of these islands should be able to defend his country in an emergency. I do not think that conscription, as they have it in France and Germany, can be introduced, but if it can be managed that all boys be trained, enough will be done.
- System.
- 12,854. What system of physical training is, in your opinion, the best?—Gymnastics and physical drill train and exercise and develop the body; outdoor games do the same, and secure fresh air.
- No physical education given.
- 12,855. As distinct from physical training, what physical education is given in your school?—None.
- 12,856. What are the results of your experience regarding physical training, games, etc.?—My experience is that the results are good.
- 12,857. Are they at present sufficiently organised and supervised?—Yes, at this school.
- No inspection
- 12,858. Are the teachers themselves duly qualified and instructed?—Yes. Our teacher is an ex-army man—he was a gymnastic instructor in the army. There is no inspection of his work, but we hope, all the same, that he is doing it right.
- Mr. E. Temple, B. (Cantab.)
30 Sept. '02.
No medical examination
Register of measurements kept of certain classes.
- 12,859. Are the pupils examined by a medical man?—No.
- 12,860. Is a school register kept, showing the height, weight, chest girth, spirometry, biceps girth, and general physical development of the pupils?—A register is kept of certain classes showing the height, weight, chest girth, biceps girth. The measurements are taken by the instructor, and he hands them in to me.
- 12,861. If so, how often are these measurements taken, and by whom?—At the beginning and end of the session, by the instructor.
- 12,862. What remedies or suggestions have you to propose regarding the last part of the terms of reference, viz., how the existing opportunities for physical training may be increased by continuation classes and otherwise, so as to develop in their practical application to the requirements of life the faculties of those who have left the day schools, and thus to contribute towards the sources of national strength?—As I have stated elsewhere, I think it would be a good thing if boys were compelled to have drill and shooting. A cadet corps should be formed in every school, at which attendance should be compulsory; and in elementary schools boys would have to remain members of their corps till the age of eighteen. The same remark would apply to a less extent to boys at secondary schools, inasmuch as they leave school at a later age than those in elementary schools. It would be possible to have a certain standard which must be reached in drill and marksmanship, and then they would not have to remain all the time till eighteen in the corps, and this would get rid of some difficulties which would attach to boys living at a distance from their schools, to whom compulsory attendance at drill after leaving school might be a real hardship. I believe that so long as expense is not incurred by individuals, this compulsion would not be taken amiss. The effects would be good for the bodies and minds of the individuals; and I should think that the evil of hooliganism would not be attacked in this way.
- Suggestion: cadet corps for every school, with compulsory attendance.
- 12,863. Has this physical training at your school increased since you have been there?—No, I cannot say that it has.
- 12,864. When you went to that school, was it just the same as it is now?—Yes; we cannot make it compulsory for various reasons.
- 12,865. We have had evidence from Glenalmond, and therefore I am not wrong in asking you this—Do you think it would be better if there was as much physical exercise in the Glasgow Academy as you had at Glenalmond? Do you think that you have as much?—We don't have as much.
- 12,866. Do you think it would be better if you had, or do you think that the position of the two schools is so different?—The position is so different that we cannot compare them, but still I should like to see more than we actually do have. It is a very difficult thing to have in a big town.
- 12,867. By Sir Henry Craik.—As you have had experience both in Glenalmond and the Glasgow Academy, I would ask you—Do you think that the day-school system in Scotland is in any way opposed to the full development of physical training?—The chief difficulty in the way of full development of physical training is the time.
- 12,868. You have not the same command over the leisure hours of the boys as you have in a boarding school?—That is so. In six weeks' time from now, when the boys get out of school it will be dark.
- 12,869. How would you arrange that in a boarding school?—They would have their interval in the middle of the day and would work in the evening.
- 12,870. The result of that is that in the day-school system, whatever its advantages in other respects, you require to guard carefully against any neglect in physical training?—Yes.
- 12,871. More carefully than in the case of England,

where the boarding-school system is so widely spread?

—Yes.

12,874. *By Mr McCrae.*—You say that you give forty-five minutes in two periods per week to gymnastics. Does that include the physical drill?—Yes.

12,875. Is it forty-five minutes at a stretch, or do you break it up?—It is forty-five minutes at a stretch. They start off with Indian clubs, and then dumb-bells, and gymnastic exercise, parallel bars, and the horse.

12,876. Have you any particular system of physical training apart from the applied gymnastics which you teach?—No.

12,877. *By Mr Fergusson.*—I don't understand what your difficulty is in making your physical training compulsory in your school?—The ground is a mile and a half away from the school.

12,878. That refers to the games?—Yes.

12,879. But what about the physical exercises in the gymnasium?—They are compulsory.

12,880. I notice you say that drill is taught in most of the classes by your gymnastic instructor, and then you say afterwards that two periods a week are devoted to gymnastics in all classes except the three highest. Do these higher classes not get so much training in physical exercises?—Not in the gymnasium.

12,881. Why?—We have not got the time.

12,882. What time?—Time left over after other work.

12,883. Do you think that your boys in the higher classes are over-worked?—No.

12,884. Is the standard of the certificates very high, and have you a difficulty in working the boys up?—We have to work them.

12,885. Are they worked too much?—I don't think so. Another thing to be remembered is, that the bigger boys may be members of the cadet corps, which is drilled twice a week out of the school, and join in outdoor games.

12,886. You spoke about the difficulties of starting a cadet corps. You mean difficulties put in your way by the War Office, who are troublesome to deal with, and who have all sorts of red-tape regulations?—Yes, that is what I mean. It took us six months to get their permission.

12,887. There are many things they insist on that you think might be dispensed with?—Yes.

12,888. Do you think it would be a good thing to have an inspector going round and examining your physical work?—I should be quite pleased.

12,889. Don't you think it would be an advantage?—To see that it was being thoroughly done?

12,890. Yes.—I daresay it would.

12,891. Do you think that in schools such as yours sufficient attention is given to physical training, or do you think it would be desirable that there should be some official supervision in all secondary schools to make sure that sufficient physical training was being given? Do you know any that are not paying enough attention?—No. I am satisfied that we are doing all that we can do.

12,892. Have you much acquaintance with other schools?—No.

12,893. *By Mr Shaw Stewart.*—Take a number of schools such as yours, and suppose there were a particular system of physical training selected and recommended, and suppose that all these schools adopted that course, would it not be more satisfactory to the headmasters of those schools that an inspector should go round periodically and examine the physical training work that was being done, so that each master would know exactly how his boys stood as regards physical training?—Yes. I think it would be more satisfactory, because he would have expert advice to rely on.

12,894. Would that not keep your instructors up to the mark, and at the same time show each school how they stood as regards other schools?—Yes.

The witness withdrew.

Adjourned.

TWENTY-SIXTH DAY.

Wednesday, 1st October 1902.

At the City Chambers, Glasgow.

PRESENT:

THE RIGHT HON. THE EARL OF MANSFIELD, *Chairman.*

Sir THOMAS GLEN COATS, Bart.

Sir HENRY CRAIK, K.C.B.

Mr M. H. SHAW STEWART, M.P.

Mr J. C. ALSTON

Mr J. B. FERGUSSON.

Mr GEORGE McCRAE, M.P.

Mr R. B. PEARSON, *Secretary.*

Mr SAMUEL CHISHOLM, LL.D., examined.

12,895. *By the Chairman.*—You are Lord Provost of Glasgow, and also Lord-Lieutenant of the County of the City of Glasgow?—Yes. I became a member of the Corporation in 1888, and was a Magistrate of the city for five years.

I am not unacquainted with the needs of the citizens in their various relationships, and have interested myself in their social, physical, and religious improvement.

Prior to my election to the civic chair I had been identified with various religious and philanthropic organisations in the city, and since I became Lord

Provost I have been brought into close personal touch with almost all the voluntary and statutory associations which exist for the promotion of the wellbeing of the community.

I do not think our city is worse than others.

Yet the habits and morals of our young people is a very serious problem.

I have ascertained the number of males between the ages of twelve and twenty-one years who have been convicted of crimes and offences at our Police Courts during the last three years, and I am sorry to say that these are on the increase.

Mr E. Temple, B.A. (Contab.).

30 Sept. '02.

Special
temptations.

Loafing:
causes.

Facilities
provided by
the Corpora-
tion: public
parks,
gymnasia, etc.

During the year 1899 there were 3523 young men between the ages of twelve and sixteen years, and 7184 between the ages of sixteen and twenty-one years, or a total of 10,707, convicted. In 1900 these numbers were respectively 3692 between the ages of twelve and sixteen years, 7965 between the ages of sixteen and twenty-one years, or a total of 11,657. In 1901 the numbers were still higher—viz., 4523 between the ages of twelve and sixteen years, 7929 between the ages of sixteen and twenty-one years, or a total of 12,452.

I have also ascertained the number of males committed to reformatories and industrial schools during the same period. In 1899 there were 53, in 1900 there were 93, and in 1901 there were 104.

The majority of youths between the ages of twelve and eighteen years of age who are brought before the Police Courts show a poor physical development. Their moral condition is low.

The crimes for which such youths are brought up are malicious mischief, obscene language, petty thefts, and occasionally housebreaking.

Their manners are rude, and wanting in respect to their seniors. They resent correction.

The special temptations to those youths are early familiarity with betting and drunkenness, association with the vile and vicious, the reading of trashy literature, which magnifies criminals into heroes, ice-cream shops, which are kept open until late hours and on Sundays, are loosely managed, and afford unprofitable places of association. I have no doubt that cigarette smoking to a certain extent comes under the same category, but I don't put it on the same platform as those other temptations I have referred to.

Among the causes which contribute to loafing at street corners are: indolence, desire for companionship, poor accommodation and unpleasant surroundings in homes and lodging-houses, lack of interest in healthy amusements and pursuits, carelessness of parents, who allow children from an early age to remain on the streets until late hours.

With regard to the agencies fitted to counteract the evil influences and temptations above-mentioned, I do not refer to religious and educational, because I believe they are beyond the scope of the reference to the Commission. But I know that in addition to the scholastic side of education, the School Board have drill and athletic classes specially designed for the physical development of the scholars.

The Corporation in various directions have endeavoured to fulfil their part in contributing to the physical culture of the citizens. They have provided in various parts of the city no fewer than nineteen open spaces and children's playgrounds. The largest and most important of these is the Phoenix Recreation Ground in the Cowcaddens district, containing 11,802 square yards. It is situated in the midst of a dense working-class population. It was acquired in 1893 at a cost of £20,205, and has been equipped with gymnasia and other apparatus at a cost of £5219. In addition to these specially constructed playgrounds, portions of the various parks (of which there are fifteen) have been set aside for children playing. By arrangement with the School Board also the playgrounds at a number of the schools have been placed at the disposal of the Corporation for the erection of gymnastic apparatus. The facilities thus afforded are largely taken advantage of, and it cannot be doubted they have a most important effect in contributing to the health and longevity of the children. A public gymnasium for adults is also provided in Glasgow Green, and is taken advantage of to a considerable extent. The gymnasium there is quite open to anyone who is passing, and is constantly being taken advantage of. We cannot tell how many people make use of it.

The Cathkin Braes Park, belonging to the Corporation, which extends to 49 acres, situated in the uplands of Renfrewshire, and a farm at Milngavie to the west of the city, are available for children's

excursions and games to encourage them to go out of town for their enjoyment. That, of course, is mainly in the summer-time, and on the Saturday afternoons especially.

The Corporation have erected eight public baths in the various districts of the city, and while swimming is the only athletic exercise for which provision is made, each of the swimming ponds are provided with 'travelling rings,' suspended above the water for the use of swimmers only. It should be mentioned, however, that many of the private bathing establishments have also small gymnasia attached to them.

The extent to which the swimming facilities are taken advantage of will be understood when I say that during the swimming season and at certain hours when the working classes are free to attend at the baths the ponds become overcrowded with bathers.

That there is a natural desire on the part of the people to engage in this exercise is shown by the fact that wherever and whenever a swimming bath is erected it is at once taken advantage of.

During the last financial year the total attendances at all the Corporation Baths were: male swimmers, 368,554; female swimmers, 16,241.

Attached to the baths are over forty swimming clubs, composed of young men desirous of developing this feature of physical exercise. The members of these clubs meet once a week between the hours of 9 and 10 p.m. There are also seven women's clubs. Last year the men's clubs had 971 meetings in the ponds, and the women's clubs 149 meetings. The total attendance of members of clubs last year was: males, 39,550; females, 3075. This is an interesting feature of the baths, which the Corporation encourage in every possible way. It should be mentioned also that the Corporation place the baths at the disposal of the School Board free of charge at certain hours in the day. The facilities thus provided are taken advantage of by forty-two of the schools. The number of school children attending the baths last year was 26,240 boys and 4646 girls. I should like to make a remark in regard to the rowing on the river. There used to be a large number of rowing clubs who practised on the river, but the removal of the weir a number of years ago prevented that. The Corporation have re-erected the weir, and the rowing club which has survived is very grateful for this action on the part of the Corporation. We look forward to further development of that, not only most delightful, but most improving exercise on the upper reaches of the river.

I understand the Commissioners will welcome any information as to the steps which are taken to counteract the temptations and dangers which beset the path of young men in a large city like Glasgow. They also desire to know how far the continuation classes, evening schools, and the various voluntary and philanthropic societies and associations meet the evil.

I am happy to know that in Glasgow we have many useful agencies doing excellent work in the direction referred to.

I am in a position to speak of the efforts made by the Glasgow United Young Men's Christian Association, of which I am honorary president and a director, and which has a membership of over 7000.

The educational classes carried on in the evening in their central institute and in their four sections are taken advantage of by older students than those attending the evening classes of the School Board.

The ages vary from fifteen to thirty, the majority being from sixteen or seventeen to twenty-three years of age. A large proportion of these come to situations in the city from all parts of Scotland, and through their connection with the association as members are brought into touch with educational classes. The enrolments number about 3000 per annum.

Classes for physical instruction are conducted in the Central and Southern Institutes with considerable success. The gymnasiums are fully equipped, and the students year after year in the West of Scotland con-

Physical
instructi-
on classes:
gymnasium

petitious obtain marked successes. For the past session three gymnasium students—one lady and two gentlemen—have carried off championships. These were the club championship of the West of Scotland Junior Gymnastic Association, the all-round championship, and the Indian club championship, the latter by the lady.

The numbers attending the gymnasium classes have been diminishing, and it has been found increasingly difficult to carry them on without serious financial loss. This difficulty has been increased by the alterations introduced into the Code last year, whereby, under Division 4, the Government grants formerly made for these classes have been withdrawn, except in cases of pupils who are also taking instruction in commercial or technical subjects. Almost all the students who go in for physical instruction are not in attendance at other classes, and the discontinuance of the grant under Article 10 (a) of previous codes has seriously jeopardised the carrying on of the gymnasium classes.

It may be of value to have copy of the last report received from H.M. Inspector, viz.:—

‘The work of this large institution continues to expand, and the curriculum provides for almost every taste and almost every need. In modern languages and commercial subjects particularly, the courses of instruction cover the whole ground and afford an admirable training. It is of interest to note that many of the students have gained high positions in public examinations during the past session. The excellent course in gymnastics for ladies has not yet secured in the fullest degree the attention which it merits.’

As a Governor of the Glasgow Athenæum, I am in a position to know that that institution, which conducts educational classes on an extensive and successful scale, had the same experience as the Y.M.C.A. with regard to their gymnasia. When the present handsome building was erected, about ten years ago, a very fine gymnasium was fitted up at considerable cost. At first the gymnasium was confined to members of the institution, who paid a subscription of 12s. 6d. per annum for its use, including instruction. It was found, however, that the number of members availing themselves of this privilege was so small that the governors were obliged to throw it open to the public, charging non-members 21s. per annum, and continuing the subscription for members at the moderate figure of 12s. 6d. The fees received did practically no more than pay the instructor's salary, leaving nothing for the other expenses, such as rent, rates, lighting, cleaning, etc., and resulted in a loss of about £200 per annum. When this had gone on for about eight or nine years it was proposed to the members that if they would agree to a slight increase in the rate of subscription, with the view of bringing the department nearer to a paying point, the governors would give it a further trial, but when a vote was taken it was found that a large majority were not disposed to accept this proposal, and hence the gymnasium was closed. It was hoped that a grant would be received from the Scotch Education Department for instruction in physical exercise, but under the new code, as already explained, this grant is only paid in the case of those who are studying some other subject in the institution, and very few enrolments took place under these conditions.

The value of gymnastic classes is undoubted, not only from a physical point of view, but also from a moral one, as being an excellent counter attraction to the temptations of a city, and it might be worth the Commissioners' consideration to recommend the Education Department to give a grant to educational institutions for the teaching of gymnastics without the present restriction. But regarding this I have no strong opinion.

Although not connected with the Volunteer movement in Glasgow, I am aware of the excellent training in drill and other physical exercises which the various regiments impart. In the headquarters of these regiments, handsomely-equipped gymnasia are taken advantage of by the members of the corps. The Boys'

Brigade likewise confer incalculable benefit upon their members, and I cannot speak too highly of the good that they are doing. No doubt, however, evidence of a direct character will be offered to the Commissioners by others better qualified to speak on these matters than I am.

I should not forget to mention the work being carried on by the Glasgow Foundry Boys' Religious Society, of which I am president and a director, and with the work of which I have been actively and personally identified for the last twenty years.

Last year nine branches of the Society had athletic clubs in operation, with an average attendance at each club of eighteen lads per night. Three of these branches had clubs for girls, at which the average attendance per night was about fifteen.

As a result of a circular sent out recently to branches not presently carrying on athletic clubs, the committee learned that several branches were in favour of doing so, but could not as there was no available accommodation. The social reform department of the society offers every encouragement to branches taking up athletic work by assisting clubs to obtain the necessary apparatus on easy terms. The society work lies among the poorer classes of the city, and the consequence is that the lads and girls who come to the athletic clubs are not able to do much for the support of the clubs, the usual small subscription of 1s. per session being barely sufficient to pay the gas bill. It has been found in some of the clubs that the lads who attend for a winter or two are very much improved physically, while the drill develops a smartness which is lacking in those who have not attended the clubs.

Evidence has, I understand, been presented on behalf of the Juvenile Delinquency Board, and I need not refer to the provision made by them in their industrial schools further than to say that the results of the instruction given in free gymnastic exercises have been quite remarkable, whether regarded physically, morally, or intellectually. An improvement also in the deportment of the children has resulted since this training has been developed. The drill and physical training in the industrial schools is conducted on the most thorough and complete description, and includes free gymnastic exercises, swimming, etc. The boys are also encouraged in all manly sports, such as football, cricket, running, etc. It is interesting also to know that the benefits derived from drill and other exercises by the girls in the Girls' Industrial School are very marked. They come from the slums in a poor emaciated condition, many of them where the rudiments of proper training are unknown, but they are not long in the institution before a marked improvement is evident. The girls enjoy the physical lessons they receive, and exhibit through them an alertness and quickness where slothfulness used to be the habit.

In conclusion I might venture to offer the following suggestions as to how the evil influence by which our youths are beset might be further counteracted, viz.: (1) more attention should be paid to the training in good habits and good manners both at home and at school; (2) a taste for good literature should be cultivated; (3) the extension of corps such as Boys' Brigades to all schools, such corps tending to improve boys in physique, manners and morals; (4) provision of better housing accommodation with decent surroundings; (5) punishment of parents who by their neglect allow their children to drift into crime; (6) schools might be kept open at night and provided with reading-room and gymnasia under proper supervision, provide training in handicraft, music, and other matters that could be followed with interest.

12,895A. Have you any further suggestions to make to this Commission as regards the terms of their reference?—Nothing further occurs to me.

12,895B. When you say that crime is increasing, do you think that it is crime that is increasing or that it is the police who are more active, and there is more detection of crime?—I am afraid that both things are at work. I don't say that the crime is increasing, but the number of those who are convicted is increasing. I am afraid

Suggestions.

Number of convictions increasing: growth of unruliness among the young.

Mr Samuel
Chisholm,
LL.D.
1 Oct. '02.

there is a growth in the disorderliness and unruliness of our young people.

12,896. You rather attribute that to their surroundings?—Yes, these have a very great deal to do with it, as has also the lack of proper training, supervision, and control.

12,897. Especially control on the part of their parents?—Yes.

12,898. *By Sir Thomas Glen Coats.*—You mention a great many schemes in Glasgow for the education of children, both physical and otherwise. Are the schemes, as they exist, adequate for all those who would willingly take advantage of them, or who at present are inclined to take advantage of them?—I am not quite sure as to what you mean. For example, I think a great many young people would take advantage of opportunities in the evening or on Saturday afternoons of recreation and exercise if opportunities were provided for them then, if the playgrounds of the schools were thrown open, or something of that kind. I think that a great number who at present just loaf about the streets would be very glad to take advantage of such opportunities.

12,899. My reason for asking is more to find out whether you thought you would require to give greater inducements to get the young people to go into these places?—Something might be done that way. I am not suggesting that that should be done, but until larger provision is made for their voluntarily taking advantage of drill or exercise, I don't think I am in a position to say that special inducements or compulsion are necessary.

12,900. In speaking about the physical training in evening classes, you referred to changes in the Code, obliging the students to take other classes besides physical training. You did not lay a great deal of stress on that yourself?—What I meant to say was that I quite appreciate the force of the arguments on the other side, but I have not come to any conviction on the subject so strong as to warrant me pressing a view.

12,901. I think the majority of the witnesses before us have advocated physical training being carried on as part of these evening classes, and they thought that there would be no difficulty in getting the students to take the other instruction as well, giving one evening to physical training, and other two evenings to that other instruction, or giving a part of both on each night. You advocate that more attention should be paid to the training of good habits and good manners both at home and at school. What would you suggest that could be done at school to attain this object?—Direct instruction.

12,902. Where are our schools wanting in that respect in the meantime?—Going along the street you see hundreds of boys, jostling, rude, and unmannerly to each other, not to speak of girls and their seniors, and one cannot but think that if these children were properly instructed in what is seemly, it would not prevail to the extent that it does.

12,903. Is it due to the fault of the teachers, or where do you place the fault?—I don't know that you can allocate the fault on any one spot and say that it is there, that if you remove it, it will be all right. I have not sufficient acquaintance with the conduct of day schools to warrant me even in saying that the children don't get sufficient instruction at school, but I am afraid they don't get sufficient direct instruction as to their proper conduct in their intercourse with each other and their seniors.

12,904. I don't think you say anything about the compulsory education of children after the age of fourteen in continuation classes. Do you think that that compulsion would be possible?—I am afraid not.

12,905. You think that if extra inducements were given in the way of physical training and gymnastics, and making the instruction as pleasant as possible, you could increase these evening classes to a large extent?—Yes, a great deal could be done.

12,906. But still there would be a large number that would not be brought in?—There is no doubt about that.

12,907. *By Mr Shaw Stewart.*—You speak of the facilities offered by the Corporation through the erection of gymnastic apparatus on playgrounds. Would you advocate gymnastic apparatus in playgrounds without instruction as taking the place of instructed drill?—No.

12,908. The erection of these gymnasia in playgrounds is merely to fill up gaps in the time of the boys on the street?—Yes, to afford them opportunities of enjoyment and exercise which may be comfortably and safely taken advantage of.

12,909. You would by no means seek thereby to lessen the amount of instructed physical training in schools and continuation classes?—No.

12,910. At the latter end of your evidence there is one recommendation that you make,—'the punishment of parents who by their neglect allow their children to drift into crime.' Have you any particular scheme by which you could do that? Has any plan occurred to you?—No, I leave that to Parliament.

12,911. *By Mr Fergusson.*—In the first part of your evidence you referred to the ice-cream shops. I think I am right in saying that there is at present a Bill in process of being introduced by Mr Orr-Ewing dealing with that matter?—That is so.

12,912. We need not therefore go into that question now. As to these gymnasia that Mr Shaw Stewart was asking about, are they on the same sort of principle as Lord Meath's? Do you know his Children's Open-Air Playground Association?—No. There is a caretaker appointed to each playground.

12,913. You don't find any accidents?—I dare not say that there are none, but there are very few.

12,914. You speak about the advantages of swimming and the eagerness of people to use the swimming baths if they get the opportunities. You attribute the decrease in the attendance at gymnastic classes to changes in the Code, which I have no doubt Sir Henry Craik will deal with. As to the Glasgow Athenæum gymnasium having to be closed, don't you think that the trouble there may have been caused by the high fee charged, 21s., and by the fact that when that was found not to pay it was proposed to raise it? Don't you think that the better plan would have been to reduce it? 21s. is a large sum for the class of lads we are dealing with?—Yes, but the Athenæum deals with a class rather above those.

12,915. You can hardly put that forward as showing that boys don't want to take advantage of a gymnasium? You cannot expect them to pay 21s.?—There are really no boys who are members of the Athenæum.

12,916. The class that go to the Athenæum are rather above what we have in our mind?—Yes.

12,917. As one who is convinced of the value of the halfpenny fares in tramways, do you not think that the gymnasium might have been made cheaper than that?—That may be so.

12,918. Speaking as to what could be done at school, you have the general impression from what you see on the street that there must be some weak spot in the training of children in manners when they are at school, although you are not prepared to put your finger on any particular spot. Is there not a marked difference in the manners of children from different schools? Have you ever noticed that?—Yes, I have noticed that, but I think it is rather due to the fact that the different schools indicate children coming from a different locality.

12,919. You have never investigated further to see whether it was that the teachers took more trouble in the teaching of manners?—No.

12,920. How are you to get parents to look better after the manners of their children at home? Can you offer any practical suggestion as to how you are to induce parents to do that?—That is a very large question, and I am afraid I dare scarcely begin to enlarge on it.

12,921. Can you make any suggestion about it?—At this moment there is a scheme on foot which does not aim directly at that point, but which includes it. The scheme I refer to is one for the visitation of the

Anderson
scheme
im-
table.

12,925. Has your attention been called to any scheme for dealing with the large class of loafers who drift into bad ways and become hooligans and criminals? If you have no compulsion, you will not be likely to attract such lads?—No. I have not heard of any direct scheme for grappling with that class apart from philanthropic efforts.

12,926. Have you seen a recent article by Sir Robert Anderson in one of the magazines in which he advocated what I might call an extension of the reformatory system, that these lads found wandering about the streets without any home or employment should be sent to a training ship?—Yes.

12,927. What was your opinion of the suggestion?—I thought it was extremely difficult, so difficult as to be almost impracticable.

le
: s
ed.

12,928. *By Mr McCrae.*—The statistics you have given us with regard to the increase of juvenile offences show an increase in two years of 1645. Are you quite sure that that is a real increase, that it is not due to a more rigorous supervision on the part of the police?—I cannot say to what it is due.

12,929. I notice that you divide them into two classes—first, those from twenty-one to sixteen years of age, and those from sixteen to twelve years of age. The increase is much larger among the younger boys than among the older ones?—Yes.

12,930. That seems to show that the rising generation is not quite so well-behaved as those who have gone before?—It would look like that, but the offences for which the younger persons are brought up are of a more trivial kind. A great number of them are brought up for such offences as playing football on the streets, which is a police offence.

12,931. That is just the point I want to be at. Were these offences really taken notice of in the same way some years ago?—Prior to 1899 they were.

12,932. To the same extent?—I don't think there has been any material difference in the class of offence that has been dealt with.

12,933. I notice that within this last year in the comparison between 1900 and 1901 there has been an actual decrease in the number of those ageing from sixteen to twenty-one, while there has been a very large increase in those from twelve to sixteen?—Yes. The older ones are practically stationary, being about 7900.

12,934. Do you think that these offences are really increasing among the younger people to the extent of about 30 per cent. in one year?—There is this perhaps to be said, but I don't know how far it might affect it: in 1901 we had the Exhibition. There was a general excitation in the public mind during the whole year, and a playground consisting of some six acres in which the young people used to play was occupied by the Exhibition. That possibly might account for a number that would be thrown on the streets.

12,935. Are these years the calendar year or the police year?—The police year is the calendar year for offences.

12,936. Are these gymnasia in the Phoenix recreation ground entirely outside?—Yes, they are in the open air.

pul
rec
ana
m.

12,937. You have nothing in the shape of a public gymnasium under cover?—No, not connected with the Corporation.

12,938. We all know that the Corporation of Glasgow takes very large views of its responsibilities. I would like to ask what is your view as to the Corporation providing gymnasia under cover for the use of the younger people in the different towns?—Do you mean for school children or for what we call halfpennies?

Mr Samuel
Chisholm,
L.L.D.
1 Oct. '02.

Youths from fourteen to eighteen: in inadvisable to provide free gymnasia: if erected, should be under Educational authorities.

12,939. Say from fourteen to eighteen?—I am not prepared to advocate the Corporation providing gymnasia under cover for lads and young men without payment. I don't see why lads of that age who can spend their money on cigarettes and ice-cream should have this enjoyment provided for them by the Corporation without payment.

12,940. If it were thought advisable that some form of physical education was absolutely necessary for boys and girls between the ages of fourteen and eighteen, and it was thought advisable to erect such gymnasia, would you say that they ought to be under the control of the Corporation or the educational authorities?—I think they should be under the educational authorities.

12,941. They should really be a step from the day school?—Yes.

12,942. Of course, physical training is really compulsory just now in the day schools up to fourteen years of age?—Yes.

12,943. Do you think there is a sufficient amount of physical training given in the day schools now?—I don't think I have data upon which to form an opinion. You see I never was on the School Board, and I would not like to dogmatise on that point.

12,944. What is your view as to a cadet corps being established in connection with all the schools?—I took part in the formation of the High School cadet corps, and, from all I know of its working and its objects, I quite agree with it.

Cadet corps approved.

12,945. So far as continuation classes are concerned, you really think that the voluntary system has not had a chance?—I don't think it has.

Continuation classes: inducements preferable to compulsion.

12,946. You think before there is any suggestion of compulsion we should give a fair trial to physical training in the continuation schools, offering some inducement for the pupils to take advantage of that?—Yes.

12,947. You have not a decided opinion as to whether these classes should be taken in conjunction with mental subjects or not?—That is so; I have not sufficient knowledge of the whole case to warrant my giving any opinion.

12,948. You have had a large experience of public matters. Don't you think that physical training is of so much importance that a grant might be made by the education authorities for examination in physical training in the evening continuation schools?—I can quite well appreciate the argument on the other side. While physical training is undoubtedly most desirable, I am not sure that the encouragement to young fellows to spend their time in nothing but physical training without any connection with mental and intellectual acquirements is of any advantage. I sympathise to a certain extent with that view of it.

12,949. *By Mr Alston.*—I suppose the two classes of delinquents are boys and young men?—Yes.

12,950. We notice that while convictions against boys have increased by 831 in 1901 as against 1900, there is a decrease among the young men of 36. Is there any inference to be gathered from that fact?—In regard to the older ones, the numbers are so near to one another that I do not think there is anything in that trifling decrease. In regard to the larger increase among the younger ones, I have hazarded the only suggestion that occurs to me in regard to its explanation, but it is perfectly possible that a growing severity on the part of the police may account for a very considerable number. There is a considerable increase among the younger ones between 1900 and 1901. So far as playing at football in the street is concerned, a bright dry season would account for a very large number as compared with a rainy season. 1901 was a particularly sunny season.

Convictions: numbers: increase: methods of counting offences.

Mr Samuel
Chisholm,
LL.D.

1 Oct. '02.

12,951. And then you were taking open spaces from them for your Exhibition?—We took one large space.

12,952. How are the police convictions counted against an individual? Is John Smith counted one, and if he comes back twenty times is he twenty John Smiths?—Yes.

12,953. That is a very important point. If you say that the increase in crime in Glasgow is deplorable, it may be a repetition of these petty offences by the one boy?—Yes.

12,954. Is the same method followed in the English cities?—I think it is. There is never a case of previous conviction brought up against those boys, so that the magistrate cannot tell whether this is their first or tenth time. The police constable may be able to say that he has never seen a certain boy before, but there is no record kept.

12,955. In comparing the juvenile crime of Glasgow with the juvenile crime of Liverpool, the data are the same?—Yes.

12,956. In nineteen places in the city you have got open spaces for children's playgrounds. I presume they have swings and other fixed implements for gymnastics?—Yes, a regular equipment.

12,957. Is there any supervision of the children there?—There is a caretaker.

12,958. Have you been troubled with many accidents?—Very few.

12,959. Is there any temptation in these open places to make the children play truant from school? Have you found that?—No, but we have not troubled ourselves with that. We think that the School Board officer can find the children in a playground much more

easily than anywhere else, as the children are playing openly there.

12,960. Has the School Board officer been known to make raids on your playgrounds?—I have not found that.

12,961. You are perhaps doing the child an injury at one end while doing him good at the other end?—I have not found that.

12,962. You say you have opened gymnasia in certain directions in conjunction with the School Board. How does the Corporation come to take part in that work in connection with the School Board?—We had a conference with the School Board in order to get them to do it.

12,963. One would say that it was the business of the School Board to erect these gymnasia in the various schools and not the business of the Corporation?—I think the School Board do not recognise that it is within their function to spend money in that direction.

12,964. Many witnesses before us have given very strong evidence as to the question of the erection of gymnasia both in connection with schools and the city. Is it to the advantage of the children that such gymnasia have been erected by the Corporation?—Yes.

12,965. *By Sir Henry Craik.*—I understand that you feel that you have not experience enough to discuss evening schools in detail?—That is so.

12,966. I see that a subsequent witness raises the same point, so that perhaps I need not trouble you with it. You understand that certain considerations have been before the Education Department?—Yes, I quite understand.

The witness withdrew.

Mr T. W.
Cuthbertson.

12,967. *By the Chairman.*—You are the Treasurer of the Boys' Brigade?—Yes.

12,967A. Will you kindly read your *précis* of evidence?—

As you are inquiring into the opportunities for physical training now available in Scotland, I desire to bring to your notice the work of the Boys' Brigade.

The Boys' Brigade was instituted in Glasgow in 1883 by Mr W. A. Smith, a volunteer officer and a Sunday school secretary, who foresaw the value of drill and discipline as an educative force, and linked them to the highest form of education—religious teaching.

From a strength of 1 company, 3 officers, and 30 boys in 1883, the Brigade has now grown to 1100 companies, 4000 officers, and 50,000 boys in the United Kingdom; while in the United States, Canada, the West Indies, South Africa, Australia, New Zealand, India, and Ceylon, there are to be found further 35,000 members of the Brigade. And if we are fully to measure the direct outcome of Mr Smith's original company, we must include the kindred organisations which have since been formed on the same lines—the Church Lads' Brigade, the Roman Catholic Boys' Brigade, and the Jewish Lads' Brigade—making the total number of boys who are thus at present brought under religious influence and healthy physical training not less than 130,000.

In Scotland the parent organisation stands practically alone, and there the strength of the Boys' Brigade is 400 companies, 1600 officers, and 20,000 boys.

The object of the Boys' Brigade, as laid down in the Constitution, is 'the advancement of Christ's Kingdom among boys, and the promotion of habits of obedience, reverence, discipline, self-respect, and all that tends towards a true Christian manliness.'

Every company must be connected with a church or other Christian organisation. But the distinctive feature of the work is to be found in para. 3 of the Constitution, which states that '*military organisation and drill shall be used as a means of securing the interest of the boys, banding them together in the work of the Brigade, and promoting among them such habits as the Brigade is designed to form.*'

Mr THOMAS W. CUTHBERTSON, examined.

Every boy in the Brigade, therefore, is receiving a training in obedience, reverence, discipline, and self-respect, inculcated through the medium of military drill; and the standard of drill taught in the Brigade is by no means a low one. It follows, of course, that in an organisation of voluntary workers the standard varies considerably in different companies; yet on the other hand, the fact that the boys also attend voluntarily makes it necessary that the standard should be a high one, otherwise the drill would cease to have attraction for the boys. As a matter of fact, the standard is considerably higher than I have seen in any of our public schools in Glasgow; and further, the nature of the organisation promotes that *esprit-de-corps* which is of such great educative value, and which does so much to promote efficiency. Our *Drill Book* is adapted from the latest Army book, '*Infantry Training, 1902.*'

Each company meets for drill at least once a week during a session of eight or nine months, and the membership of the Brigade is confined to boys between the ages of twelve and seventeen years. By taking them so young as twelve, we get hold of them before they have quite reached the stage of thinking they should be independent of control; and having thus got hold of them, we are able to keep them (if their hours of work permit) to an age at which they are fitted to pass into other organisations suited for young men. Over 8000 new boys joined the Brigade in Scotland as recruits last session; and as our members are increasing yearly, it may be reckoned that 9000 fresh boys per annum are coming under the influence and training of the Boys' Brigade in Scotland. While recognising that military drill is really a form of *physical* (as well as moral) *training*, the Brigade does not stop there; but, wherever possible, companies go in for physical exercises as well, and our *Drill Book* contains a variety of these. On this subject we have not been in the habit of asking for detailed statistics from our companies, but I have endeavoured to obtain some figures to lay before the Commission. In answer to an inquiry sent out the other day to the Scotch companies, we have replies from 227 companies, which show the

Military drill and physical exercises were put upon a par with other educational subjects. Accordingly a few companies in Scotland arranged to work under the Code for a year as an experiment.

Mr T. W. Cuthbertson.
1 Oct. '02.

The experiment was such a complete success in most cases that doubtless the practice would have become general, but next year the Code was again altered in such a way that it became almost impossible for our companies to work under it, and I do not know that any companies tried to do so last year. Military drill and physical exercises were again relegated to a subsidiary position, and could only earn grants in the case of pupils attending at least one other class. Further, the clause which restricts the payment of grants to pupils who are free from the obligation to attend school (the limit of age being now fourteen) struck off a considerable proportion of the strength of our companies from the possibility of grant-earning under the continuation classes code.

1901 Code: impracticable for companies to work under it: reasons.

In only thirty-one cases do the returns show that outside assistance has to be called in to give this instruction; in all the other cases it is given by the officers of the companies; and the average time devoted to this branch of the work is rather over two hours per week. To these figures will fall to be added a considerable number of companies where some physical training is mingled with the ordinary drill instruction at the regular weekly parade.

Another branch of work that receives considerable attention in the Boys' Brigade is *athletics*. Very many of our companies have a football club, cricket club, or swimming club, and some have all three. Swimming is, of course, restricted by the opportunities which the locality provides; cricket is a game that requires to be carefully fostered in Scotland; but football is the favourite recreation of all our boys. While we believe football in itself to be a good thing, and to have in it possibilities of the very best moral as well as physical training, yet its tendency in our cities, if left to itself, is often bad. Our aim, therefore, in this branch of work is to control and elevate the sports which our boys go in for, and to bring the best possible out of them. With this in view we form those clubs, referee the games and matches, teach the boy to play fair, to subordinate himself to the good of his team, to keep his temper, to accept the referee's decision, to be able to take defeat.

But while we in no way despise the value of such games, we do not place them on a par with drill and physical exercises as a moral and physical training. In a large city the space required, and the distance to be travelled to get to it, at once place games in a secondary position. The ground required for twenty-two boys to play football would suffice for the training of several hundreds in physical exercises. And it is probably only on a Saturday afternoon, and that in good weather, that the game can be played; whereas physical instruction can be given indoors and near the boys' homes on any evening of the week.

To get the full benefit of such games as football and cricket, time, money, and space are required to an extent that is quite beyond the reach of the majority of boys of the working-class. Drill and physical exercises, however, can easily, and comparatively inexpensively, be brought to their very doors.

Then there are our *summer camps*, held usually for a week, at coast or country, during the holiday season. More than a fifth of our whole strength took part in these last year. And, though they are not arranged primarily with a view to instruction, yet they are under military discipline, and drill is in most cases carried out each day. The early rising, the turn of duty, the tidiness and prompt obedience required, the morning drill or practice of physical exercises, the route marches, the organised games are of as much value, physically and morally, as many evenings of work during the winter. A well-directed holiday in the fresh air is of incalculable benefit to the class of boy who would otherwise spend the time in the close streets of a city, or among the questionable attractions of a popular watering place.

With regard to the clause in the terms of reference of the Royal Commission which deals with 'how such opportunities may be increased by continuation classes,' etc. it may interest the Commission to know that two years ago we made an experiment of working under the *Continuation Class Code*, and that with considerable success. The Code of 1900 contained a change which made this for the first time possible.

While it is not probable that every Boys' Brigade Company would bring its work under the Continuation Class Code, even if that were made possible, yet I think a large number of companies would avail themselves of the opportunity; and I am sure from personal experience that it would greatly add to the efficiency of those companies. For my own part, during the session in which my company worked under the Code, we found that the possibility of a visit from H.M. Inspector any night was the greatest incentive to good work and the surest preventive of any slackness. Besides, the grants thus earned would result in a great increase in the number of physical training classes within the companies by enabling them to obtain better accommodation, suitable appliances, etc.

What would be required, however, would be practically the conditions of the Code of 1900, viz.:—

Continuation classes: suggested conditions.

(1) That military drill and physical exercises should be recognised by themselves as subjects for which grants can be paid.

(2) That all boys of twelve years and over be eligible to earn these grants.

Of course it would be quite possible for a Boys' Brigade Company to take up some other subject with a view to making drill and physical work count along with it for a grant; but in a place like Glasgow, at all events, where the other subjects are better taught under the School Board, I consider that this would be very inadvisable.

Drill, however, is taught in most of our companies to a much higher standard than prevails in the schools, and the standard of our physical work is also high; so if these were recognised by themselves, it would be no case of our straining the letter of the Code to obtain a grant, but simply a recognition by the Code of our regular work.

Ambulance, doubtless, is one of our subjects, and is presently included in Division II. of the Code, but it is not a subject that we deem it wise to teach to any but our older boys, so it does not meet the case.

In a class like drill, where necessarily all our boys are instructed together, it would be necessary to include all boys of twelve years and over. And if it is desired to get boys to continue their attendance at drill and physical instruction after they are beyond school age, the surest way is to have them already in an organisation which will carry them on without any break in the continuity.

There are many other branches of Boys' Brigade work, such as the company bible-class, reading and recreation rooms, ambulance classes, and instrumental bands, but these, I presume, do not come within the scope of your present inquiry, so I need not enter into details of them.

In every branch of the work, the Boys' Brigade ideal is not to depend upon the drill sergeant or other outside assistance, but to have the work done by our own officers, without remuneration of any kind, and purely from love of the boys. So through it all we have the *binding influence* of the *Brigade* and the *personal influence* of the *Officers* which hold the boys together at an age when they would otherwise be impatient of

Instruction: personal influence of officers.

Mr T. W.
Cuthbertson.

1 Oct. '2.

control, and make them willing to place themselves under systematic instruction of various kinds, which they would not accept apart from the controlling influence.

12,968. Your *précis* of evidence is very interesting, and I will ask Mr Alston to put some questions to you on it.

12,969. *By Mr Alston.*—For the information of the Commission, I will ask you your qualifications. You are a Captain in the 4th V.B.S.R., Hon. Treasurer of the Boys' Brigade at the Headquarters, member of the Glasgow Battalion Council, Editor of the *Boys' Brigade Gazette*, which is the official organ, captain of the 115th Glasgow Company, and associated with the 58th Glasgow Company, both of these being in connection with St George's Parish Church?—Yes.

12,970. You have had a large experience in the working of the Boys' Brigade, and have considerable knowledge of the boy himself and his environments, both at play and at home?—Yes.

12,971. The Boys' Brigade of which you have given particulars is a national movement?—Yes.

12,972. It has companies throughout the United Kingdom, with its headquarters in Glasgow?—Yes.

12,973. The companies in the United States and our Dependencies abroad are affiliated to the home Brigade, but they are not managed by the home Brigade?—That is so.

12,974. They are modelled upon it, and they more or less accept the principles and methods of the Boys' Brigade?—Yes.

12,975. You say there are 1100 companies, 4000 officers, and 50,000 boys in the Boys' Brigade in the United Kingdom. Those figures are taken from schedules returned by companies?—Yes. These are round numbers based on the actual figures, which are 1100 companies, 4160 officers, and 49,165 boys, no company being included that has failed to make a report, even although it be known to be in existence.

12,976. You bring out the total strength in Scotland as 400 companies, 1600 officers and 20,000 boys?—Yes.

12,977. That is an increase of 35 companies on last year?—Yes.

12,978. Of the 20,000 boys in Scotland, how many are in the Glasgow battalion alone?—6000.

12,979. Glasgow, therefore, is a very representative field of the working of the Boys' Brigade, not only in Scotland, but in the United Kingdom?—Yes.

12,980. From what class are these boys drawn?—I should say that they were sons of the small shop-keeper, the artisan, and the unskilled labourer.

12,981. You can give an example of very low class boys?—Yes, my own boys in the Broomielaw are sons of quay labourers, who are men of very irregular occupation and very irregular habits.

12,982. What do you make of that class of boy?—I have found that the Brigade was even more successful with them than with the higher-class boys.

12,983. Is the supposition thrown out by one witness that the Boys' Brigade does not touch the lowest stratum of boy life, but includes only good boys, borne out by facts?—No. Of course to a certain extent you can see that with the Boys' Brigade, being an organisation that requires a certain amount of obedience and order from these boys, there will always be a substratum who will not always readily submit themselves to that, so that there are a few lower down that we may not get, but we go right down to the boys of the unskilled labourer, the ordinary 18s. a week labourer, and I think that we have boys of that class in very considerable numbers.

12,984. There is every desire on the part of the Brigade to get hold of such boys?—Yes.

12,985. Then the Boys' Brigade is interdenominational, not sectarian; most sections of the Christian Church have companies in connection with it, and it has been found to be a strong bond of union between workers of various churches?—Yes.

12,986. You refer to the distinctive feature of the work, the military organisation and drill and so on.

Has this special feature of military organisation and drill had the effect that was expected?—Yes, very markedly so.

12,987. On the whole, what would you say were the results from the military organisation as applied in the Boys' Brigade?—On the individual boy?

12,988. Yes?—It smartens him up, it gives him physical improvement; and also by its discipline and obedience it gives him moral improvement. By its religious connection it works a religious improvement, and owing to the unit of the company with its officers and non-commissioned officers and the boys, it inculcates an *esprit de corps* parallel to the sort of school feeling that you have in an English public school. It is the only thing that seems to bring into the life of that class of boy the same sort of *esprit de corps* as is got in the best class boy in great English public schools.

12,989. Do you know any schools, or any method of dealing with boys, producing the same results as you get in the Boys' Brigade?—No.

12,990. Would you differentiate between the Boys' Brigade and a drill class or a cadet corps at school?—Yes, very distinctly.

12,991. Will you give us some particulars?—A drill class at school seems to me to simply teach the actual points of drill or physical exercise which are in the curriculum, whereas the Boys' Brigade company introduces this feeling of *esprit de corps* and makes the boy a member of a unit, a unit in which he finds interest, not only for the hour of drill, but for many another hour of his life, as I have brought out in my evidence. That is the difference between it and the school class. I have some knowledge of the cadet corps, as there is one in connection with the regiment to which I belong. It, of course, gives the military instruction much better than the ordinary school drill gives, because it has the different ranks of officer, non-commissioned officer and boy, but, so far as I know, it does not enter into the boy's life further than the military side of it.

12,992. While a Boys' Brigade company is a military unit, it does not ape the army in any way?—No.

12,993. It does not have a uniform?—No, except a cap, belt and haversack.

12,994. At what expense to the boy?—That varies. In a poor district, such as my own, we ask the boy to pay 6d. per annum for his membership to the company, and everything is provided. In a better-class company, where the boys are better off, a subscription of, perhaps, 1s. per annum is required. The boy in that case probably provides his own accoutrements of cap, belt and haversack at a cost of something like 1s. 8d., and he may probably pay a small subscription for the extra things such as the gymnastic class, perhaps 1d. a week, on the principle that they are able to pay for it; and the interest of a boy who is able to pay for it is generally greater if he does pay something for it. It is always a small sum.

12,995. You say he pays for his belt; is that correct?—In some cases, but more usually he does not. He usually only has to pay for his cap and haversack.

12,996. There is nothing in the way of cost to prevent a boy joining?—No.

12,997. Practically the cost to the boy is the cost to the parent?—Yes.

12,998. There is no objection from that side in the matter of cost?—No.

12,999. Is it the case that boys who have been in the Boys' Brigade in many instances have been found conspicuous for their smartness in the eyes of the general public?—Yes, we have been told that in many a case.

13,000. You don't claim that the Boys' Brigade has done everything for the good of the boy, but, to a very large extent, you have attained these objects that you aim at through the work of the Boys' Brigade companies?—Yes.

13,001. In your evidence, you have referred to the ages of twelve to seventeen; you don't enrol any boy before twelve, and every boy must leave at seventeen.

Personal position and experience.

National movement: numbers.

Glasgow battalion: classes of boys.

Lowest class touched.

Boys' Brigade: interdenominational, not sectarian.

Military drill: beneficial effects.

Mr T. W.
Cuthbertson.

1 Oct. '2.

Boys' Brigade and drill class, cadet corps, etc., differential former introduces *esprit de corps*.

Uniform: small expense; no objections from parents.

Boys conspicuously smart.

Age limits, twelve to seventeen: reasons.

Mr. T. W. Cuthbertson.

1 Oct. '02.

These ages practically cover a boy's life at a most critical period. Before that he is a child, and after that he is a young man?—Yes.

13,002. There is no reason for having boys younger than the one age and older than the other?—If younger boys were taken in it would militate against its success; you would cease to hold boys of fifteen and sixteen if you brought in boys so small as to be called 'kids.'

13,003. Some witnesses have objected that the Boys' Brigade does not take them in at an older age than seventeen?—Our view is that they are then ready for other organisations, either on the Church side or on the military side, if such is desired. That is to say, we stop at the age when they are quite eligible to go into the volunteers, although we in no way work the one into the other, we have no connection with the volunteers, but still the volunteers are open to them. We feel that a boy would not stay if he was able to go into the volunteers, whether he went in or not. He would no longer don boy's uniform when he might don man's uniform.

13,004. How would that affect the Boys' Brigade as against the cadet corps?—The cadet corps wear a full uniform.

13,005. Is that not a temptation to a Boys' Brigade boy as against his plain little outfit?—In the meantime there have been no cadet corps in Glasgow, or, as far as I have heard, in Scotland, which have really catered for the same class of boy. They have all been for rather a better class of boy. We have had no experience of the effect of the one as against the other.

13,006. Suppose, as a result of this Commission, a very large increase of cadet corps was encouraged throughout the Board Schools, would that affect the Boys' Brigade?—It would have some effect, but we have work to do still that would not be interfered with.

13,007. You have means of coming into touch with the boys that a cadet corps would not have?—Yes. An officer who came home lately from Australia said that there the cadet corps were very universal, but he said that where the Boys' Brigade was well managed—where it was not too much a repetition of what a boy got in a cadet corps, many boys belonged to both.

13,008. With so much emphasis laid on this distinct feature of military drill and organisation, a great deal of misapprehension has been felt on the part of the public as regards the meaning of the Boys' Brigade?—Yes, but as the Brigade becomes known that feeling diminishes to very small proportions; where the Brigade is not fully known it always exists.

13,009. Of course the Boys' Brigade has nothing at all to do with militarism or inculcation of the military spirit in its worst sense?—No, we don't find a larger proportion of our boys go into the army than of boys who have not been trained.

13,010. Would more Boys' Brigade boys go to the volunteers if there was more freedom as to the recruit drills required?—Yes.

13,011. That is to say, a well-drilled boy going into the volunteers would find it a great hardship to go through the same recruit drills as have to be gone through by boys who knew nothing?—That is so.

13,012. You have referred to the training you secure in the Boys' Brigade apart from the military training, and you have given a list of the boys who have received training in some seven or eight different branches of physical training in 227 companies?—Since that statement was handed in I have got it up to 240 companies, and can give any details that may be wanted.

13,013. That is about 60 per cent. of the whole strength, and would mean somewhere about 10,000 boys under physical training as well as military training?—Yes.

13,014. Is this capable of considerable extension?—Yes.

13,015. Can you conceive that every company of the Boys' Brigade might have ample and complete physical training in addition to its military training?—Not ample and complete owing to their not all being

able to afford the necessary accommodation and apparatus, but to a considerable extent it might be done.

13,016. If that were possible, the field is there, at any rate?—Yes. I feel sure that if that difficulty were met, every company would do physical work as well as ordinary military drill.

13,017. You say that only in 39 cases has outside assistance been called in?—That is so.

13,018. Are the officers capable of giving instruction?—I think that the very great majority are thoroughly competent.

13,019. They have studied under experts?—Frequently. In Glasgow the officers who train the boys in physical work have in almost every case been trained in the volunteer gymnasias, where an Aldershot instructor is very often to be found giving instruction.

13,020. You would have no fear of a Government Inspector coming round to examine your boys?—No, but you will always find a few weak companies anywhere.

13,021. You then refer to athletics to show how athletics receive very great attention in the companies of the Boys' Brigade, and how the officers especially take charge of athletics and sports and produce a high-toned influence on the boys when engaged in these sports. Can you point to any good results on this side of Boys' Brigade work?—I think that the best result we have found from athletics is the improved moral tone. That is the most marked result from training ordinary boys of the class that we deal with who don't in the first instance play games in what we call a sportsmanlike manner. We find that our games, which are always more or less supervised, result in a very great improvement in that direction, which I would say is an important moral factor in the boys' life.

13,022. In playing matches, you have had occasion to observe the conduct of a Boys' Brigade company as against that of boys who don't belong to the Boys' Brigade. There is a distinct improvement in the methods of the Boys' Brigade boys?—Yes, the absence of bad language is most obvious.

13,023. And temper?—Yes, it is greatly kept down. 13,024. Great stress has been laid on the advantages of football. That is largely played by the boys?—That is entirely in the case of what I would call the better class boy. To get full advantage of such athletics there must be something of a gentlemanly feeling in the boy to begin with, or it must be taught to him, and that, of course, you will find in the boy at the good class boarding school or day school, but it is not to any great extent in our boys to begin with. We believe that the ordinary methods of physical training have a much better and more far-reaching effect upon the boy than the games can possibly have.

13,025. But the training results come out in the playing of the games?—Yes.

13,026. In the next part of your evidence you refer to the summer camps. How many boys altogether would be in the camps last summer?—I think there would be about 10,000.

13,027. And a due proportion of that number in Scotland?—Yes.

13,028. We were talking about the peculiar attitude of the Boys' Brigade officer towards the boy in his company. It is quite different from the attitude of an ex-army sergeant drilling in school?—Yes.

13,029. It is different from the attitude of the officers in the cadet corps?—Yes.

13,030. The Boys' Brigade officers have a stronger hold on the boy?—Yes.

13,031. They have more knowledge of his character and his home surroundings?—Yes.

13,032. Among the other questions that must have arisen in all companies, has that particular hold of the officer over his boy had any influence in the matter of smoking?—Yes, to a considerable extent, but not absolute. There is this about it in the first place, that no boy is allowed to smoke in uniform wherever we can see him. That of itself is a distinct time when

Officers competent to instruct.

Games effect great moral improvement in the boys.

Effects of training more far-reaching than those of games.

Summer camps: 10,000 boys out in 1901.

Officers have strong hold over boys.

Smoking.

Mr T. W.
Cuthbertson.

1 Oct. '02.

he may not smoke, and then we recommend strongly that that abstention should be carried out while the boy is in the Brigade.

13,033. Has there been any response to that?—Yes, to a considerable extent.

13,034. There is something done on a large scale in Perth?—Yes, but I believe much more in the influence of the individual officer in his own company.

13,035. It is admitted generally that cigarette smoking is a great evil?—Yes.

13,036. The Boys' Brigade has a very firm hold on the whole country?—Yes.

13,037. It is becoming more and more recognised by those who have to deal with boys, that the methods of the Boys' Brigade can hardly be dispensed with?—That is so.

13,038. Is the Boys' Brigade in a position to take a very important part in any scheme for providing increased facilities for physical training?—Yes.

13,039. You really have a hold over a very large number of boys not only in the companies at present, but having passed boys through at the rate of eight or nine thousand in a year, a very large number of boys in Scotland have been through the Boys' Brigade?—Yes. That is the rate we are passing them through at now.

13,040. You perhaps have had an average of 2000 a year for fifteen years, and thus a great many boys now men with families have passed through the Boys' Brigade and been influenced by it.—Yes.

13,041. You think that it is an organisation that can take an important part in any scheme for the advancement of physical training among the boys?—Yes.

13,042. It will become an important factor in adding to the material strength of this country?—Yes.

13,043. *By Sir Henry Craik.*—With regard to this question as to the evening schools, I would like to ask you first with regard to the methods of your own organisation. The essential point of it is that to a certain amount of drill and physical training you add something else?—Yes.

13,044. You don't attend solely to the physical training, but you give them something for mental and moral cultivation?—Yes.

13,045. You think that the combination has an important educational effect?—Yes, we believe in that very strongly.

13,046. Is not that a considerable argument, if a change in the Code be made, that a certain amount of mental training be urged, not as an absolute necessity, but as a general rule under continuation classes?—The point I refer to here is not that we would ask the Code to do anything, but that the Boys' Brigade is doing a certain work on certain lines, and if it should seem advisable for the authorities to wish to encourage that work, then the lines of the 1900 Code are those on which it could be done.

13,047. You are aware that the 1900 Code was not nearly so advantageous to the continuation classes as the present Code generally?—I believe so.

13,048. At the same time that this slight restriction from which exemptions can be made was introduced, the grants under the Code were very largely increased?—Yes.

13,049. I only want to point out that in introducing restriction the Code followed very much the same principle that you in your organisation have adopted, that is of combining the different sorts of instruction?—I understand.

13,050. Have you attempted, what you are aware we have urged, that where there is an organisation for physical drill only it might form a partnership with another continuation class under different management, and we would consider that to be satisfactory under the Code?—We have not tried it here, the position being that we would not have a majority of our boys so qualified to count, and it really would not tempt a man to work that way only for a minority of his boys.

13,051. Do you think the School Board would not be prepared to form a partnership with you in regard

to this?—I have nothing to say on that side. I have no reason to indicate that they would be otherwise than friendly, but it would not work in with our arrangement. What I want to be clear is that the Boys' Brigade work is going on and existing. The arrangement in that particular year seemed to me to give a possibility of greatly widening the work, but the Boys' Brigade goes on all the same without the assistance.

13,052. That arrangement which you made use of in 1900 only allowed you a very small grant?—From our point of view the grant was perfectly good. I would not urge for anything more, as it was quite satisfactory.

13,053. It came to 2s. 6d. a head?—Yes. I had a company of about 70 boys, and of these 70 about 50 took physical exercise, and 20 ambulance work, and the grant for the session's work amounted to nearly £30. My company was not the largest company, but it was one of the larger ones, and I can give details of the others.

13,054. Now, although you find that the Code restricts you in that way, if you saw your way to join in other subjects you would get a bigger grant?—Yes.

13,055. You recognise the objections that there are to applying a grant that is made by Parliament for education to what is solely physical training?—I recognise that there was that objection, but I take it that the attitude nowadays is to recognise physical culture as a much more important part of education than it was formerly thought to be.

13,056. Have you made any representations to the Department?—No.

13,057. You are aware that the Department is quite ready to consider any representations?—Yes.

13,058. There is one other point with regard to those continuation classes. Would you advocate a rule under the Code by which physical training should be made an essential part of those continuation classes?—I don't think that that would do for evening work. In the first place, many of the fellows attending the literary classes have been doing hard physical work all day, and physical training at night would not be acceptable to them at all.

13,059. You don't think that a universal rule of that sort would do?—No.

13,060. *By Mr McCrae.* Do you find that your boys on joining the Brigade have benefited by the training they have got in the Board Schools?—Do you mean as regards military drill work?

13,061. Yes?—No, we don't trace much effect of their previous school instruction in military drill,—at least, we have not done so as yet.

13,062. The conclusion you would draw from that is that there is not a sufficient amount of physical training given in our Board Schools at the present time?—Yes.

13,063. The Boys' Brigade only give training to a small proportion of the youth of the country. While we all recognise the great advantage of the moral training you give them, can you suggest anything whereby we might reach the other class that don't come under your sphere of influence?—I think that anything in the way of support to an institution of the nature of the Boys' Brigade would immediately result in larger numbers being able to be taken on.

13,064. You said that the grant your company got under the Code of 1900 was £30. Can you give the Commission an idea of the total amount earned by the different companies in Scotland?—The whole thing was an experiment, and only a few companies were advised to take it up, as we did not know how it would work. Sir Henry Craik will be able to give the full figures, but I think that twenty companies took it up over the country, and their grant varied considerably according to the amount of work done. The highest I know of was £35, and I should say that the average was something like £15.

13,065. You say that the change in the Code made it almost impossible for the companies to work under it?—Yes.

13,066. That was because mental subjects were joined with the physical work?—And also that no boy

Mr T. W.
Cuthbertson.

1 Oct. '02.

Increase of training: Boys' Brigade in a position to give material assistance to any scheme for providing further facilities.

Continuation classes: combination of different sorts of instruction: 1901 Code: application of grant.

Continuation classes: inadvisable to make physical work an essential part.

Board Schools: insufficient amount of training given.

Boys' Brigade if supported, might reach those not under its influence.

Mr T. W. Cuthbertson,
1 Oct. '02.

under fourteen years of age could any longer be recognised for grant-earning in an evening school.

13,067. Then what is to be done with those that you don't get a hold of? Suppose a cadet corps were established in connection with our Board Schools, and that there should be continuation evening classes at each of our Board Schools for boys over fourteen, and that some system of cadet corps should be continued, would that interfere with the working of the Boys' Brigade, would it be inclined to supersede it?—To a certain extent it would interfere with it, but if part of the work that the Boys' Brigade is doing were done by the State, then the Boys' Brigade would develop its other branches and work for the good of the boys, as I don't anticipate that the whole of the work that the Boys' Brigade does could ever be taken over by the State.

13,068. Your objection would be that they could not have the same moral influence over the boys that your teachers have?—There would be that difference. I don't call it an objection.

13,069. Is your system of physical training compiled from the Aldershot system?—Yes, entirely.

13,070. That is the infantry drill of 1902?—Yes, that has just been introduced this year. These returns of physical training that I have given have not been carried on from our book. As the result of the increased attention that has been given to these things now, we have incorporated them in our book. In fact, the rifle exercise book which is before you is only out this morning. Consequently I should say there will be a great increase in physical training now that we have put it in our own books.

13,071. Prior to the issuing of this book, had you a uniform system over Scotland, or did each teacher adopt his own system?—Everything we have is only recommended, but when it is given in the book it will become almost universal.

13,072. You give rifle exercises?—Yes.

13,073. Do you teach the boys shooting?—No, it is all dummy rifle work.

13,074. You don't think it would be a good thing if some of the older boys were trained to shoot?—We don't think that that belongs to our work.

13,075. Would it not be an attraction if the older boys could have practice at the Morris-tube?—We don't consider that we are entitled to take up that side of work. We use the military training entirely from its moral point of view.

13,076. It would be going rather much to the military side?—It would be rather beyond our duty.

13,077. By Mr Fergusson.—I rather gather that you have no suggestion to offer as to how the worst class of boys whom you don't get a hold of are to be got a hold of?—I don't for a moment mean that my answer to Mr Alston indicated that I considered that there was a large number of the worst class of boys outside of us. We get boys from all classes, and I don't think there is a large number left out. I merely wanted to be absolutely fair, and I said that there were some, but I don't think there is any larger proportion of them than of any other class.

13,078. Are you speaking for the whole of the Boys' Brigade, or only for the particular section you are in?—When I go into the smaller details, my experience is based on Glasgow.

13,079. From what one generally hears, the Boys' Brigade is supposed to get only the better boys?—That is not correct.

13,080. You made a suggestion that the Boys' Brigade might be taken over by the State?—I referred to the possibility of part of the work of it being done by the State.

13,081. Would not one of the results be that it would stop your flow of voluntary officers and so on. When people are taken over by the State they all want to be paid?—I don't mean the Boys' Brigade to be taken over. What I said was that if part of the work we at present do, the drilling, were by means of such an arrangement as has been suggested by some people done outside of us, then we would not need to lay so

much stress on that branch of our work, and we would develop on other lines.

13,082. Is there anything else you would like to say in reference to that question about the difficulties in connection with the Code?—I don't think so. My attitude here is that you are enquiring into what is being done and what may be done, and I come more to let you know officially what is being done by the Boys' Brigade. In this point I take up a matter which the Code of 1900 practically offered to do for us and which was withdrawn. I thought I should draw your attention to it.

13,083. By Mr Shaw Stewart.—I should like to understand clearly your views about physical training in continuation schools. In answer to Sir Henry Craik, you said that you did not look with favour on the idea that every boy should engage in physical training at a continuation school?—I said that I did not think it would be looked upon with favour.

13,084. Because a good many of them are engaged in physical labour during the day?—Yes, very many.

13,085. Would you advocate making physical training in continuation schools optional?—Yes. I look upon continuation schools as entirely optional, and they should be so.

13,086. We have had a great deal of evidence now in the direction of making them compulsory?—That is rather apart from my position here, but I don't take that view of it.

13,087. If the physical training in continuation schools is optional, would it not be possible that a good many youths, more particularly those for whom physical training would be advisable, would through laziness, perhaps, or otherwise, escape this physical training in continuation schools?—To the same extent as they at present do, because by no means do a majority attend continuation schools at all.

13,088. We rather hope by some recommendation that we might improve things?—I am assuming that continuation schools as such are optional. They are not within the compulsory system of Scottish education. I think that whereas there would be some of the students who would take the literary classes without taking the physical classes, still I am satisfied that if the physical classes were put on an open basis similar to the others, perhaps a larger number would come in and take the physical classes.

13,089. That is to say, with the inducements that might be offered?—Yes.

13,090. By Sir Thomas Glen Coats.—Did I understand you to say that you considered that the Boys' Brigade, the Church Lads' Brigade, the Roman Catholic Brigade, and the Jews Boys' Brigade virtually cover the ground, as regards children, of the ages taken into these companies?—No.

13,091. Do they largely cover the ground, or do you think that they might be made to virtually take in all the lads of these ages?—Nothing apparently will ever take in everybody. I think that monetary support is necessary to extend these organisations, and if that were forthcoming then the number of boys would increase proportionately. We have never in the bigger places come to a point where we considered that by any means we had got all those who would be willing to come in if we could give them companies. I know at this moment one district in Glasgow which happens to be well populated, but rather sparsely supplied with Boys' Brigade companies, and one company there has had to refuse a large number of boys this year.

13,092. How does that arise?—That one company cannot become any bigger relative to the size of the hall accommodation and so on, and there is no neighbouring company for these boys to go to. Of course, we are trying to induce some of the bodies about to take the matter up. There are plenty of boys.

13,093. All these boys are connected with some church or some religious body?—No, but as soon as they join the company they have a church connection. There is no previous church connection in the majority of the companies. A few who are very well supplied may only take boys belonging to their own congregation,

Continuation schools : training must be voluntary.

Financial aid necessary to extend existing organisations.

Boys' Brigade brings boys under influence of religious teaching.

Mr T. W. Cuthbertson. 1 Oct. '02.

but in a company like my own, we simply draw the boys off the streets.

13,094. Do you consider that a large number of the boys are brought under the influence of religious teaching from the inducements offered by the Boys' Brigade?—Yes, we believe that strongly.

13,095. Do you touch the girls at all?—No.

13,096. Have you any idea of taking up the girls?—No, we have our hands full with the boys. You may not be aware that there is a small organisation for girls called the Girls' Guildry, started in Glasgow, the originator being Dr. W. F. Somerville.

13,097. Would you consider it almost a necessity to have some such organisation for the girls?—I have not given that any consideration.

13,098. So far as their physical training is concerned?—I would rather leave that to others to judge.

Churchgoers: attraction of Brigade.

13,099. *By the Chairman.*—From what you have said, I infer that there are a great many schoolboys in Glasgow who are not churchgoers?—That is so.

13,100. And yet a great many of these are attracted to the Boys' Brigade, and then they are put into some church company?—Yes, being attracted to the Boys' Brigade brings them under the direct influence of the officers of that company, and the company is connected with a church.

13,101. Previous to that, these same boys have had nothing to do with any church?—That is very often the case.

13,102. How do they come? How are they attracted?—They are attracted by what they see. They will see the company marching out in their district some day, and that awakens their interest.

13,103. You have a good many boys between twelve and fourteen who are in the Boys' Brigade and who are still school children?—Yes.

13,104. They are able to make proselytes, as it were, in the school among their own fellow school children?—I think a boy has quite as wide a circle outside his school as inside. He has his own circle of friends, quite as large a circle as he has in school.

Continuation classes: boys attending day schools: exemptions: two grants.

13,105. *By Sir Henry Craik.*—With regard to attendance of pupils at continuation classes who are not free from the obligation of attending the day school, don't you see objections to the recognition of such pupils in continuation classes?—In the educational one I do, but not in the other, because the other gets at present such a very limited portion of attention within the day schools as far as I see.

13,106. If the boys are attending a day school, the proper way to provide for their adequate physical training is to provide it in the day school and not ask them to come back to a continuation class?—There is

this about it, that we do get them. Suppose we had to wait till the age of fourteen before we got the boys, the question would be whether we would get any at all. We have got him at twelve or thirteen when he is still in the day school, when he is still under direct control, and we have formed a link with him and have a hold on him afterwards.

13,107. You think it would be better in the case of some boys that at the age of twelve they should, even at the expense of the day school training, get more of the sort of thing that your organisation brings to them?—Yes.

13,108. You are aware that a School Board can grant exemption at twelve under special circumstances?—Very special circumstances, I believe.

13,109. Where it is proved to the satisfaction of the Board that it would be more for the benefit of the boy to go to work during the day and attend continuation classes in the evening, they are quite entitled to grant exemptions?—Yes, but what I rather refer to is the case of the boy still at the day school for his ordinary educational classes. There is nothing that entitles them to give any exemption from his inability to earn a grant in physical work in the evening school.

13,110. But he could earn the grant in the evening continuation school. They can do that under the Act of Parliament. If they think after consideration of the circumstances that that exemption ought not to be granted, but that the boy ought to go on attending the school in compliance with the Act of 1901 till he is fourteen, surely the best place for his physical instruction is at the school he is bound to attend. Do you think that the State ought to make two grants for the same boy, one in the day school and another in the continuation school?—Yes, I think so, with the present amount of physical instruction in the day schools.

13,111. *By Mr McCrae.*—Is it the case that attendance at Bible class or Sunday School class is compulsory on all members of the Boys' Brigade?—To a large extent that is so.

Boys' Brigade: attendance Bible Class Sunday School compulsory

13,112. Is there any exception?—There are exceptions.

13,113. Do you refer to companies or individuals?—In my own company, for example, I require that attendance on all who are Protestants, but not on those who are Roman Catholics. As a rule it is required.

13,114. Each company is connected with some congregation, and in connection with that there is either a Bible Class or a Sunday School?—Yes, but, of course, the company may be connected with any kind of congregation, and it is therefore quite universal.

13,115. That is part of the moral influence you bring to bear on them?—Yes.

The witness withdrew.

The Very Rev. D. A. Canon MACKINTOSH, examined.

Canon Mackintosh.

13,116. *By the Chairman.*—You are Chairman of the Committee of Management of the Roman Catholic Training College, Downhill?—Yes. The College, which is a residential one, is attended by female students only, of whom there are one hundred in residence, ranging in age from eighteen to twenty-three years. The students are the daughters of tradesmen, farmers, clerks, etc., and are preparing for the profession of teaching. The existing opportunities for physical training may be summed up as follows:—Drill is taught by qualified teachers of the College. The exercises are performed to a musical accompaniment, and the apparatus used consists of Indian clubs, poles, dumb-bells, etc. In these exercises every part of the body is brought into play, e.g., toe, ankle, knee, wrist, elbow, head, eyes, etc. There are few games indulged in, and these are not organised or supervised. There is no playing field, but there is a good playground. Walks are taken daily, and at times longer excursions into the country. The students go through a regular course of voice training, according to approved methods. There is no gymnasium and no swimming bath. In the summer session three hours a week are devoted to drill. The results of the physical

Downhill Training College: residential, for female students; eighteen to twenty-three. Existing opportunities: drill with music.

Playground. Walks. Voice training.

Results of training.

training are decidedly good, physically, morally, and intellectually. The development of the body is aided, and the physical powers are braced up, while habits of promptness, obedience, and attention are cultivated. Care must always be taken, of course, especially in the case of young women, that the training is not overdone. While it may be regarded as an important relaxation in the ordinary work of the students, still the danger of unduly exhausting the energy must be guarded against, and it would seem that a period of not more than twenty minutes in duration is quite enough to be devoted to it at a stretch. That amount of time per day might perhaps be regarded as a sufficient allowance. There would be no objection to some approximation to a uniform system of training, provided reasonable latitude were always allowed for the varying requirements of sex, age, health, locality, etc. In the College the laws of health are clearly taught, in relation to personal health, ventilation, and cleanliness of schools and classrooms, healthy management of children in schools, and I may add that the students are taught and encouraged to keep their lecture-rooms clean and tidy by daily sweeping, dusting, polishing the floors, etc., all of which

Canon Mackintosh.

Uniform system: no objections if sufficient latitude allowed. Physical education.

Canon
MacIntosh.
1 Oct. '02.

may be regarded as physical exercise of a by no means unimportant character. Further, they make their own beds, take it in turns to serve at table, etc., and on Saturdays they do a fair amount of laundry work in the way of folding clothes, sorting, and carrying to various destinations. The students are medically examined once a year, and the results reported to the Education Department.

There is no register of measurements kept. It is impossible to say to what extent the physical training received in College is continued and developed in after life, but as the students all go into the teaching profession, where they have to take charge of the physical exercises given to the children in their classes, it is but reasonable to suppose that their knowledge of and facility in physical exercises are at any rate maintained, and probably extended.

Speaking for the Roman Catholic Elementary Schools in this district, which rely for their supply of teachers principally on this College, I may say that physical exercises and military drill receive considerable attention in them. There are no regularly employed drill instructors as a rule; the instruction is given by the teachers—in the larger schools principally by masters who have undergone at the Training College at Hammersmith, from which our male trained teachers are drawn, a very thorough course of training in military drill.

If the Commissioners would care to hear my personal views in regard to the object of their inquiry, I should be glad to submit them. I am in hearty sympathy with the desire to promote in every legitimate way the physical training of the young, but there are some important preliminary problems that have a vital bearing upon the subject which demand earnest consideration before any comprehensive or effectual solution of the question of physical training can be arrived at. The regulation of the drink traffic and the better housing of the poor have a direct and most important relation to the physical well-being of the young. While the drinking habits that at present prevail among the people continue unchecked, and while so large a percentage of the population of our towns and cities dwell in slums, physical deterioration is bound to proceed, and it seems to me that a radical reform in these two directions ought to enter into the consideration of the means by which the physical culture of the young is to be best promoted. Further, speaking as a school manager and School Board member of many years' experience, I am convinced that enlarged powers should be granted to School Boards to compel regular attendance at school, especially as regards that large class of children belonging to careless and improvident parents, who are under no wholesome home restraint, who are only occasionally seen at school, and who consequently lose not only the physical training and military drill received by their fellows, but also miss the ordinary discipline and education of the school. These grow up stunted in body and undeveloped in mind, to be a weakness and a menace to the community. Educational authorities should have power to deal more summarily than at present with the parents of such children, and some scheme of mutual co-operation between School Board officer and police constable should be devised to compel the attendance at school of the irregular and the truant. The existing procedure in dealing with defaulting parents is cumbersome and slow, while its results are disappointing in the extreme. At present a large proportion of the children who most require the salutary influence of physical exercises and military drill are to a great extent deprived of it by their intermittent attendance. Personally I am in sympathy with the desire to have such exercises forming a prominent and essential part of the school work. I would have them given in a graduated system, beginning with the youngest classes and carried throughout the school, with military drill introduced at as early a stage as might be thought desirable. Where playground accommodation is insufficient or unsuitable, halls might be erected or rented, at the expense of the Government or municipal authorities rather than at that of school managers, in

which the schools of a district might be drilled in relays of classes. If possible I should have the same training continued in the continuation schools as an integral part of their curriculum, and I do not think that such a demand would be resented if it were made clear that some such general plan of physical and military training was probably the only alternative to some system of conscription. This could all be done, I think, without resulting in any undue fostering or glorification of the military spirit, a result which I would certainly deplore.

13,117. Have you any medical inspection of the young women at the College?—Yes.

Medical examination.

13,118. Is it periodical or only occasional?—They are always examined medically on admission, and the result of that inspection is sent to the Education Department, and then they are examined periodically by the doctor.

13,119. Have you anything to show that at any time they are training they have been doing too much, or anything that would be injurious to them?—No.

13,120. Do you ever find out anything by this inspection?—Yes.

13,121. You think that it is of value?—Yes.

13,122. You could hardly get on without it?—We could get on without it so far. There has been hardly a case where it was necessary to discharge a student on account of ill-health.

13,123. Do you have male and female teachers at your College?—We have female teachers, and sometimes male teachers are called in for special lectures.

13,124. *By Sir Henry Craik.*—You have a good many small Roman Catholic schools under the charge of female teachers alone?—Yes.

13,125. Both boys and girls attend these schools?—Yes.

Female teachers for boys and girls.

13,126. Do you find that these lady teachers can carry on the physical instruction of both sexes quite well?—Yes. In some cases where the boys predominate, a drill instructor is employed to give military drill.

13,127. But if the lady teacher is sufficiently trained she can do so?—Yes.

13,128. And she finds her discipline helped by that?—Yes.

13,129. Have you any medical inspection throughout your elementary schools?—I don't think that an organised system of medical inspection of the schools is in existence with us.

No medical inspection throughout R.C. elementary schools; but desirable.

13,130. Would you think it desirable to have such an inspection?—I should certainly think that it would be a good thing, because nowadays so many children suffer from their eyes.

13,131. And teeth?—Yes, and in various other ways, so that I think it would be a very good thing to have.

13,132. But as voluntary managers you don't feel that you could go to the expense of providing medical inspection?—No.

13,133. Would you object to it being carried out through the sanitary authorities?—We don't mind who carries it out, provided that we don't have to pay for it.

13,134. Would the parents object to it?—No, I think they would be glad of the opportunity of having their child examined.

13,135. You say that you are convinced that enlarged powers should be granted to the School Board for regular attendance at school. You rather refer to the means of dealing with parents who neglect their children?—Yes.

School Board's powers of compelling attendance.

13,136. The powers of compelling regular attendance under the Act of Parliament are as great as they could be made?—What I really mean is this, that in the case of certain classes of the lower orders the powers are ineffective.

13,137. Is that from an unwillingness on the part of the School Board to put their powers into force?—No, but they are so slow and cumbersome, that it is a long time before these people are reached, and when they are reached and brought before the Sheriff, in a

Canon
Mackintosh.
1 Oct. '02.

large number of cases the treatment is so ridiculously lenient that the whole thing is turned into a farce, if I may use the expression.

13,138. The Roman Catholic clergy support the more stringent enforcement of the compulsory powers?—Yes.

13,139. You say that you would have the same training continued in the continuation schools as an integral part of their curriculum. In the continuation classes you think we might require physical training to be a constant adjunct as in the day schools?—Yes, I think it should be a Code subject both in the continuation classes and in the day schools.

13,140. They may earn grants for it in the continuation classes, but it is not necessary?—It should be made compulsory.

13,141. You don't see your way to make attendance at these classes compulsory?—I don't see my way to compel these lads to attend.

13,142. Of course you would induce them?—Yes, but that is a great difficulty. It would be a very great advantage to them if they would attend.

13,143. *By Mr Fergusson.*—I think you said in answer to Sir Henry Craik that you were in favour of medical inspection so long as you did not have to pay for it. Who should pay for it if it be not the School Board?—I don't represent the School Board.

13,144. I thought you were talking then with reference to School Boards?—No.

13,145. With reference to the difficulty of dealing with those children who don't attend school, your experience is that some time has to elapse before you can pull up the parents, there are all sorts of formalities to be gone through, and then they are brought before the Sheriff, and he reprimands them, and the parents move to another place, and the whole thing goes on again?—Yes. I would venture to say that there is far too much regard given to the 'liberty of the British subject' bogey. I think that the police officers both in town and country should be furnished with a list of all the children of school age in their districts; the School Board officer could visit the school and report the worst cases to the police officer on his beat, and then it should be dealt with as a crime against the ordinary criminal law of the country, because it is really neglecting a most important and vital duty. These people should not be trifled with. At present they feel they are being trifled with, and it makes no impression on them. As Mr Fergusson has remarked, a negligent parent in a certain locality goes through the process, and then as soon as that is finished he moves to another district, and the process begins again.

13,146. Do you think it would be desirable that when a new family comes to a new district the School Board should make some inquiries as to where that family came from and how they stood in the school district? If you got from the former district a report that they have been evading education, then you should deal with them in a summary way?—I think that that is done by the School Board officers, but that does not help matters, because you have no summary mode of dealing with them.

13,147. I think you rather suggested that physical training should be made a compulsory part of continuation classes?—I don't see any other way of having it secured.

13,148. What do you say to what some other witnesses put before us, that if a lad has had a hard day's work it is rather severe on him to say, 'You must take a course of gymnastics,' when what he really wants to do is a little mathematics or something that is good for

his trade; would you still insist on his going to the physical exercises in the evening?—Circumstances alter cases. It is not gymnastics I should suggest for the continuation classes, as these would be perhaps too violent; it is rather ordinary drill, which would, I think, entail no exhaustion.

13,149. It would be subject to exceptions, of course?—Yes, it would have to be arranged.

13,150. *By Sir Thomas Glen Coats.*—Have you a Roman Catholic Church Boys' Brigade in Glasgow?—No, it has been tried, but somehow or other it has been found not to succeed. It has not been taken up generally.

13,151. *By Mr McCrae.*—You say that in your training college drill is taught by qualified teachers. Is there any particular system that you adopt, or any manual that you follow?—We have no manual for ourselves, and I am not in a position to name the system that is followed, but I know that the exercises are taught on some approved system.

13,152. It would really be the system taught at Hammersmith?—Not necessarily, because there is no connection between the two.

13,153. But you say that the masters have undergone training there?—Yes, I think they would have what is called the 'model course.'

13,154. Under the Education Department?—Yes, of England.

13,155. You think that is what is adopted?—Yes.

13,156. You say that physical exercise and military drill receive considerable attention in your elementary schools. Can you give any details as to the number of hours in the week that are devoted to physical training?—I am not exactly able to say, but I should think that twenty minutes or so are devoted every day to some class—that is to say, a class to-day and another class to-morrow.

13,157. One class would not get more than two days a week?—Possibly.

13,158. You have been a School Board manager. What is your opinion as to the sufficiency of the physical drill given in the Board Schools at the present time?—I am a member of the Govan Parish School Board, and I think that, as conducted under that Board, it is both efficient, and I might say sufficient. There are drill instructors attached to each of the schools, and the Govan Board make a speciality of it. They occasionally give exhibitions which I think are highly approved of, and praised even by military gentlemen who have been invited to witness them.

13,159. Would you say that in your opinion a sufficient amount of time is given to physical training under the Govan School Board?—I am not exactly prepared to make a definite statement, because I don't carry the time-table in my mind.

13,160. *By Mr Alston.*—With reference to this point about larger powers to School Boards to compel attendance, you deal with parents who may be careless or improvident, but they may also be unable, as in the case of a widow, to attend to their children. You say that they are let off with just a reprimand?—As a rule that is the case.

13,161. Do the Day Industrial Schools not help you with your children?—So far as Catholics are concerned we have no Day Industrial School. The Day Industrial School conducted under the Boards would not meet with our approval. Our children could not go to the Day Industrial Schools unless they were under our own supervision. As a matter of fact, none of our children go to the Day Industrial Schools of the Glasgow Board.

The witness withdrew.

Mr CHARLES J. CUNNINGHAM, examined.

Mr C. J.
Cunningham.

13,162. *By the Chairman.*—You are headmaster of St Mary's Roman Catholic School, Duntocher?—Yes. I am a Trained Certificated Teacher of the Second Class, and was trained in Hammersmith Training College for two years, 1883–84.

Since the month of January 1885 I have been engaged in teaching in Roman Catholic Elementary Schools in Scotland—in Edinburgh, Glasgow and Duntocher. After acting as assistant in Edinburgh and Glasgow for nearly twelve years, I took up my present

Mr C. J. Cunningham

1 Oct. '02.

position of headmaster in St Mary's R.C. School, Duntocher, in April 1896, over six years ago.

The school is situated in the county of Dumbarton, about nine miles from the city of Glasgow, and about six miles from the town of Dumbarton. Duntocher has no direct railway communication with either of these places, the nearest railway station, Dalmuir, being about two miles away. The only large centre of population in the near neighbourhood is Clydebank, which is two miles away. The school is a mixed one, consisting of boys and girls whose ages range from four to fourteen. The average number of scholars on the roll last year was 357.6, while the attendance was 293.8, as shown in Form IX.

The parents of the children are mostly factory workers engaged in Singer's Sewing Machine Works at Kilbowie, two miles from the school, while a few of the men are engaged in the shipbuilding yard at Clydebank. There are also a few labourers.

The children are usually well fed, as work is plentiful in the neighbourhood, and the wages fairly good, but in necessitous cases both food and clothing are supplied by the managers. The clothing of the children is on the whole good, but in a few cases admits of improvement.

Most of the children reside in the village, within a few yards of the school, with the exception of about twenty or thirty who come from Old Kilpatrick, a distance of two miles, and perhaps a dozen who come from Hardgate, a distance of one mile.

The system of training in the school is that taught by Thomas Chesterton (with and without dumb-bells), late chief instructor at the Aldershot Gymnasium, and is practically the same as that taught in the British Army. The physical exercises begin in the infant department, where they are done to music without dumb-bells, and are continued right through the school, the dumb-bells being used only in the upper classes—Standards IV., V., and VI. I introduced this system over six years ago, when I took charge of the school, and it has been practised by one or other of the classes daily ever since. The training is done by myself and assistants, one of whom was trained in Hammersmith Training College by Mr Chesterton, who is instructor there.

About 2½ hours are spent every week in physical drill by the various classes in the school.

There is no military drill attempted in the school.

The pupils are very fond of the physical exercises, especially those who are allowed to use the dumb-bells, and they have had a good effect on the discipline and tone of the school. The inspector's report a year or two after I introduced these physical exercises contained these words: 'The order and discipline was perfect in all the classes.' On another occasion the report said: 'Drill forms a commendable feature,' and nearly every year some mention of the physical drill is made in the Inspector's report.

13,163. Has he spent much time in the inspection of physical drill?—Just going through the top classes.

13,164. He has not inspected every class?—No.

Some of the classrooms have spaces in front of the desks, and there is a small playground with a covered shed outside, where physical drill can be done by one class at a time.

13,165. I suppose you often play in the shed?—Yes. We have very good air round about us, so that we do not require to go round to the playground, and time is thus saved.

Football is played by all the boys, and there are at least two or three football clubs in every rural school. These are not organised by the teachers, but they usually subscribe to the funds, while the managers in our schools often present the boys with balls, etc.

Evening continuation classes were held in 1896, 1898, and 1899, and the Inspector's report said in 1898:

'In the matter both of attendance and of thoroughness of instruction, this evening school is one of the most successful in the district. The higher grant is heartily recommended.' It was not so successful in 1899, as many of the men had to work overtime at

night, and so were unable to attend. Last year there were no evening continuation classes for the same reason.

13,166. Are they likely to recommence?—If the men were not working overtime, they would come and bring the lads with them. When they don't come, then the lads don't come either.

There was no physical training in these classes, but if a hall properly fitted up were attached to the school, and a qualified person appointed to take charge of the physical training say one night per week, I have no doubt it would make the evening classes more popular, provided the Government bore the expense, but if the voluntary schools were called upon to pay for the physical training of these young men, it would simply put an end to the classes altogether.

The majority of the pupils after leaving school are employed in Singer's Sewing Machine Works, some of the girls find employment in the mill, or work in the fields, and a few of the boys, after working in the machine works for a few years, join the army or go to the shipyards.

The children at school are very healthy as a rule, and except an epidemic of measles now and again, there is hardly any sickness among them. Children healthy

There is no regular medical examination of the pupils, but if a child appears to be suffering from sickness, the mother is sent for and advised to take it to the doctor. Sometimes children are sent home if they have sore eyes or any open sore which renders their presence in school undesirable. I don't think any regular medical examination necessary unless the children appear to be suffering from disease of some kind. Medical examination unnecessary.

13,167. Not even for physical exercises?—No, I don't think they hurt any at all.

I think some kind of physical training should be compulsory in all schools, and also for those between fourteen and eighteen years, and I think that is the opinion of most of the teachers in the voluntary schools in this district. Training should be compulsory in all schools, and for those between fourteen and eighteen. Training colleges: all teachers learn physical drill.

The teachers in our schools learn it in the training colleges. Physical drill forms a very important part of the curriculum in Hammersmith Training College, where all our masters are trained, and also in Downhill Training College, where most of our female teachers are trained. Drill of some kind has been taught in Hammersmith for years, and has always been thoroughly enjoyed by the students in training. I was taught military drill there eighteen years ago by a thoroughly-qualified instructor who had been a sergeant in the army. Teachers could easily learn physical drill at special classes for teachers only, to be held on Saturdays for an hour, care being taken that these classes were taught by thoroughly competent persons properly qualified to teach the subject properly.

13,168. Do you know whether the teachers have to pass an examination; do they get a certificate showing that they are qualified?—Yes. Teachers: certificates granted, but not necessary

13,169. You get your teacher with the certificate?—Yes, but the one I have just now has not got one.

13,170. You don't require it?—No.

13,171. Don't you think you ought to require it?—It would be as well, I think, to have one, but they may be able to teach just as well without one.

13,172. Before engaging a teacher, would it be your habit to see the teacher go through teaching exercises?—I don't think so.

13,173. You don't think it is important enough?—I think it is quite important enough.

13,174. You don't think so or else you would say so?—I think it is, but they have been trained in Hammersmith for two years.

13,175. But they come without a certificate?—Sometimes. Sometimes they don't care to go in for it.

13,176. If they come to you and have some knowledge whether they can teach or not?—I see them doing the exercises.

There is really no loafing properly speaking in those between fourteen and eighteen years in the village, as boys and girls are sent to work as soon as they are

No loafing in those between fourteen and eighteen: all anxious for employment.

Mr C. J. Cunningham.
1 Oct. '02.

fourteen years of age. The children as a rule are eager to get to work, and the parents only too willing to send them, as they often need the money they are able to earn very badly. Of course in the evening, after work is over, the class referred to walk and stand about the streets a good deal, but this seems to be their way of getting fresh air and gentle exercise.

In every parish there is a League of the Cross hall in connection with the church, where the young men play billiards and other games. These halls are also supplied with good literature in the shape of papers and books, and the halls are always well filled, especially in the winter season. The young men who attend these halls are all total abstainers, and the halls have done a good deal towards keeping them from the public house and the street corner.

I think physical training would make continuation classes popular, provided a properly-equipped hall were fitted up and placed in charge of a competent instructor, where pupils could be drilled say one night in the week; but the money must come from the Government or Local Authority, as the managers of voluntary schools would find it impossible to maintain such a hall by voluntary contributions.

There is no rifle club in the village in connection with the Catholic body, but there are at least two football clubs whose members mostly belong to that body. Physical drill is the only form of drill taught in our schools. Dumb-bells are used in the upper classes, and the parents highly approve of the physical exercises done by their children.

The physical training has the effect of making the children orderly and promptly obedient. It is sometimes used to rouse them up when they are inclined to be lazy or disorderly, and always with good effect, while the benefit it has had upon their general health is simply incalculable.

The scheme of nature knowledge lessons takes in all about the laws of health, clothing, food, ventilation, etc., and is taught throughout the school.

To attract lads between fourteen and eighteen years of age I would suggest a properly-equipped hall or gymnasium under the charge of a competent instructor, if possible, in connection with an evening school. The Catholic parents are very careful about the morals of their children, and would not allow them to attend such a hall unless it was placed under the management of a committee appointed from their own body. If those conditions were carried out, I have no doubt that such a hall would be welcomed by our people in every village, and would attract a great many of the lads between fourteen and eighteen years of age.

Then in the fine weather properly-organised walks, under the charge of the instructor or other competent person or persons, would teach the lads to hold themselves properly when walking—a thing very few of them do at present—foster a love for long walks in the country, and do away with the lounging about the streets which is so prevalent at the present time.

13,177. Can you further suggest how you would provide that these should be paid for?—That is just the question.

13,178. What is your suggestion?—Of course the Roman Catholics as a body have to pay a very heavy school rate; we don't get one penny towards our schools, so that we have to keep our own schools to a certain extent from our own pockets. I don't think that they would give us the hall, but if you would give us the hall from the local rates, then I think that they would become popular. From fourteen to eighteen years of age is a dangerous period of life, and then these lads might be tempted into gambling in a placelike that. We want to have a control over these lads.

13,179. Are you speaking for yourself?—That is the opinion of the Catholics.

13,180. Your connection with the lads as their master ceases when they reach the age of fourteen?—Yes.

13,181. And it is somebody else then who comes in as their authority?—Yes. It might be myself if it was an evening school.

13,182. By Mr Fergusson.—You say that you use Chesterton's system. Have you experience of any other system?—No.

13,183. You say there is no military drill attempted in the school?—That is so.

13,184. How does the inspector come to report that drill forms a notable feature?—He means physical drill. I don't mean marching and the like of that; I simply mean exercise with dumb-bells.

13,185. You don't do any marching or forming fours?—No.

13,186. You don't think that any medical examination is required?—No.

13,187. Do you find that there is a good deal of trouble with children's eyes and teeth?—Not so much with us. We are more apt to find skin disease, and when we do find that we send the child home.

13,188. There is nothing of that sort that a doctor might call attention to and which you might not notice?—No, the children with us are very healthy.

13,189. But still medical inspection would do no harm?—No; but what time would we have for it?

13,190. Suppose three minutes to each child, once every sixth months?—If that could be done it would be all right.

13,191. By Mr M'Cræ.—You think that physical training should be compulsory in all schools, and compulsory also for children between fourteen and eighteen?—Yes.

13,192. How would you make that effective as regards those between fourteen and eighteen?—We would want legislation.

13,193. Supposing you got legislation?—My suggestion is that if we had a properly-equipped hall in connection with our body, managed in the same way as our schools are managed by the body of Catholic managers, we could make them attend if we liked.

13,194. You are speaking just for your own body?—Yes.

13,195. You have not considered the question whether it could be made compulsory over the whole country?—No.

13,196. There was one remark you made with regard to the continuation schools; you said that when the men were working overtime the young lads did not come?—Yes. Duntocher is a small place, and there were only about forty lads left, so that it was not worth while carrying it on.

13,197. Supposing a public gymnasium was established, do you think that the Catholic parents would object to their children attending if it was under proper control?—I do not think they would, provided the Catholic body had a chance of seeing that the gymnasium was properly conducted.

13,198. You don't mean to say that it would be a *sine qua non* that there should be a Committee of your own body to manage it? If it was under the local authority, you would be quite willing that the children should go?—Yes, if we had a chance of going in and seeing that the place was properly conducted.

13,199. So you would alter your statement in this way, 'I would not like them to attend such a hall unless it was placed under the management of a Committee with sufficient representation from our body'?—Yes.

13,200. As it is, you limit it to a Roman Catholic gymnasium?—It would be more popular if they had one for themselves.

13,201. But if it was possible to work one for the whole community, you would be quite satisfied if there was a sufficient representation on the Committee of management from your body?—Yes, and if you would give us one night in the week to ourselves for our own young men.

13,202. You would not approve of your young men going in on ordinary nights even although your body were represented on the Committee?—No, I think they should be kept separate. We want some control over our lads at that age.

13,203. You would wish to have one night in the week under your own control?—Yes.

Mr C. J. Cunningham.
1 Oct. '02.

Chesterton's system : physical drill.

Medical examination

Training : compulsion practicable with Catholics

Public gymnasium suggestion special facilities for Catholics.

Church halls in every parish.

Continuation classes would become popular if physical instruction given.

No rifle club.

Physical education.

Attraction for lads fourteen to eighteen : gymnasium with competent instructor : organised walks in country.

Suggested erection of halls.

Miss MARY ANDERSON, examined.

Miss Mary
Anderson.
1 Oct. '02.

13,204. *By Sir Thomas Glen Coats.*—You are head mistress of the Ferguslie Half-Time School, Paisley?—Yes.

13,205. How long have you occupied that position?—Since the opening of the school in 1887.

13,206. And previous to that?—I was for about a year in the Maxwelltown Half-Time School, and previous to that in the Stow School and the Free Normal College.

13,207. You give certain reasons why children attending school every alternate day are as far up as the children in the Board Schools?—Yes.

I bring forward the following reasons as to why the scholars in above school are able to obtain as good results at their annual inspection as those in the Board Schools, where the attendance is double:—

(1) The school has always been exceedingly well staffed, no pupil teachers nor ex-pupil teachers, but certificated Normal-trained teachers having been employed.

(2) The classes are smaller than in the Board Schools, and thus the teachers get at the scholars individually, and gain a more personal influence over them than when grouped in larger classes.

(3) Being in close alliance with the mill, it has always been an easy matter to gain excellent discipline, which is a great aid in securing excellence in all school work.

(4) The school itself and its environments are so particularly bright and beautiful that their effect cannot but be good. The mind as well as the body is bound to be healthier, with fresh air, good light, and bright surroundings.

Then, again, as to the effect on the health of the girls while working half-time and afterwards, I must say, as far as my experience goes (and I have been in the school since its opening in 1887, and have enrolled 3335 scholars), that the girls here are as healthy and attend as regularly as those in any school in town, while they develop into quite as strong women as do those who begin work at fourteen years of age or over it.

I have had many talks with my old pupils, who never seem to regret the years spent in half-time, but rather look back with pleasure to that period of their lives when they worked in the mill and attended school each alternate day.

Individual examination ceased in the year 1890 for all except Standard V., and in 1897 for Standard V.

The following matter furnishes the Inspectors' Report on the school from 1891 to the present date:—

5th December 1891.—The appearance made in the examination gives evidence of continued zeal and ability on the part of the teachers. With very little hesitation the mark of excellent is given for the standard work. The style of reading and the neatness of writing and figning are specially commendable.

The class subjects of English, geography, and needlework are distinctly good. Order and discipline are excellent, the demeanour of the girls being altogether very pleasing.

15th November 1892.—The school continues to be conducted with most gratifying success. The teachers are skilful and earnest, and they receive in their work the thoughtful and liberal support of the managers. Reading is particularly good in respect of both clearness and expression. The written exercises are very well set down, though in one of the divisions of the Fifth Standard there is a tendency to rather small a hand, and the general proficiency in arithmetic is fully above the average. The answering in the class subjects of English and geography is quite good, and needlework is taught with much care and very good success. Excellent discipline is maintained, the behaviour of the girls during both days of the examination being unexceptionable.

1st December 1893.—The school continues to be conducted with vigour and intelligence, and the results

of the examination are in every way creditable to Miss Anderson and her assistants.

A large number of the girls have been very well instructed in practical cookery, the arrangements for which are of a very complete and satisfactory character.

21st November 1894.—The school retains in all respects its very satisfactory character.

6th December 1895.—There is no falling off in the high standard of efficiency hitherto attained in this school, and the results are all the more creditable under the circumstances of the past year.

11th December 1896.—The marked efficiency of the school continues to reflect great credit on both teachers and the managers.

23rd November 1897.—The school continues to be conducted with much ability, and the appearance made at the examination is in all respects most creditable.

30th November 1898.—This admirably-equipped school maintains its high standard of efficiency.

29th December 1899.—The organisation, discipline, and instruction of this school continues to be highly satisfactory in all respects. Many of the written exercises of the pupils are models of neatness and accuracy, and the oral part of the examination, including reading and recitation, give evidence of careful and intelligent training. The needlework requirements are very amply fulfilled. Singing, drill, and practical cookery receive due attention.

7th January 1901.—The high standard of efficiency which has characterised this school continues to be very well maintained.

I am directed to enquire whether the names of the following scholars, who appear to have illegally withdrawn from work, were brought under the notice of the School Board:—Numbers 3073, 2997, 3129, 3137, on the admission register.

I am also to request that you will be good enough to state the date and place at which the scholar No. 3080 was examined for the labour certificate.

10th December 1901.—This school continues to enjoy all the conditions of success: excellent accommodation, an ample and efficient staff, and the helpful supervision of the managers, and the result, as usual, is of a highly creditable character.

13,208. It has been said by a previous witness that the children who are most diligent in this half-time school are rewarded by better employment in the mills?—I consider the statement made by Mr Taylor to be erroneous. The promotion is carried on by the length of service, provided the girls are fit for the work that is given them. I always knew that, but, since reading Mr Taylor's evidence, I have inquired into the matter. The school is quite apart from the mill in regard to promotion. Of course, the clever girls at school are bound to be clever in the mill also, and industrious girls at school will also be industrious in the mill.

13,209. State your qualifications, degrees, experience, number of years in present position, position of school, number of scholars, average attendance?—Normal-trained certificated teacher, assistant under the Paisley School Board from Christmas 1880 to Christmas 1885. At that time appointed mistress of the Maxwelltown Half-Time School, and transferred in 1887 to my present situation. Number on roll at midsummer, 135; average, 61.4 per day.

13,210. What are the ages of your pupils, youngest and oldest?—Youngest pupil eleven years of age; oldest does not exceed fourteenth birthday. The age for being admitted half-time is twelve now. Some got in at eleven. No girl remains in our school after her fourteenth birthday, so that the ages range between twelve and fourteen.

13,211. What are the position and vocations of the parents?—Parents of the working class, employed in children engineering yards and manufactories in town. Some are merely labourers.

13,212. Are these children of the same class as the average children in the Board Schools?—Yes.

Miss Mary Anderson.

1 Oct. '02.

Food and clothing: none supplied.

Exemptions.

Time table.

Comparison with Board School education.

Time for physical drill.

System: musical drill in central hall: beneficial effect.

13,213. There is no difference?—I see no difference.

13,214. Are the children well fed or the reverse at home?—On the whole, children are well fed.

13,215. Are any meals supplied by school or other authorities?—No meals at school.

13,216. Any clothing of children supplied?—No.

13,217. Name the distances most of the children have to come to school?—Most of the scholars live a few minutes' walk from school. Some come from Inkerman and Elderslie, half an hour's distance.

13,218. Give in detail time-table of school?—There are now only four classes each day, corresponding to (1) Standard VI., (2) Standard V., (3) Standard IV., Upper Division, and (4) Standard IV., Lower Division.

13,219. Are most of the children encouraged to remain till after they have passed the sixth standard, or its equivalent?—We have a few, but not a great many, who remain till they have passed standard six. Many would like to leave at thirteen, who have not got through the sixth standard.

13,220. By whose permission are they allowed to leave?—They get a paper of exemption from the School Board, and this is filled up by the parents, giving their name, address, wages and number of family, and the wages of the family. The total is taken, and if they consider that the family is too poor, then the child is allowed to go on half-time, but if not, they are refused and no exemption is given.

13,221. Are there many exemptions?—No, there are very few considering the number of applications.

The school opens at nine o'clock a.m. and closes at four o'clock p.m., with an interval of one hour between twelve and one o'clock.

The subjects taught and the time allotted to each per week are—

Religious Instruction	2	hours
Reading and Intelligence	5	"
Arithmetic	5½	"
Sewing, Knitting, Darning, and Patching	4	"
Geography	2	"
History	2	"
English	2½	"
Composition or Dictation	2½	"
Drawing	2	"
Singing	1	"
Drill	½	"

Being a half-time school, it must be borne in mind that only a half of this time goes to each division.

13,222. Your time-table seems to be very much the same as that of the Board Schools?—Yes. We have not taken what is called hand and eye training, and we don't put cooking into the curriculum. We did have it, but we taught it after school hours. Then they have what is called nature knowledge as a subject in the Board Schools. We don't take that as a subject, but we bring it in in our reading elsewhere wherever possible. In fact, we give more time to reading and intelligence in proportion to our time than to any other subject. We are not so overcrowded with subjects as the Board Schools are, and if I had the opportunity I would never put in so many subjects as they put in. I think that reading and intelligence are suffering in schools because of the want of time spent on them.

13,223. Do you consider that the children in your school have obtained as good an education as those children who are attending every day?—The Inspectors seem to think so.

13,224. Do you find time for physical training?—The time I give is too small compared with what I would like to give, and now that the subject has been brought up, I mean to give a little more. I give half an hour a week, and I would rather give one hour.

13,225. What system of physical training is now in vogue?—Properly speaking there is no regular system. All we attempt is musical drill with dumb- and barbells.

13,226 How long has it been in existence? How

taught, and by whom?—Six years. Taught in the central hall of the school by the various teachers.

13,227. Have you found the children benefitting under it?—Yes, they like it very much and have benefited very much. It improves the discipline, and it also makes the girls walk with a better carriage and develops their muscles. Altogether it makes them smarter.

13,228. Besides this half hour a week, are the girls marched into their classrooms?—Yes, from the playground into the hall and then into the classrooms. I have made them march to music ever since the school opened.

13,229. You find that the central hall is good for physical training?—Yes, it is as good as we could have.

13,230. How many hours per week or *per diem*?—One half-hour per week.

13,231. Military drill, gymnastics, Swedish drill, games, etc. How much attempted? Success or failure?—Success in what attempted.

13,232. Are pupils interested?—Yes.

13,233. What accommodation for some kind of physical training, inside and out?—Large central hall of school and shed in playground.

13,234. Are any games played; are they organised?—Games are played, but these are not organised.

13,235. Are there continuation classes?—No continuation classes.

13,236. Generally what careers do pupils follow after school? *e.g.*, army, navy, merchants, farmers, fishermen, mill-hands, etc.?—They nearly all become mill-hands.

13,237. Is there much illness at school?—No.

13,238. Is there any medical examination of pupils?—Yes.

13,239. Is such desirable at certain periods?—Yes, that is my opinion.

13,240. Should physical training be compulsory in all schools?—Yes.

13,241. And also for those fourteen to eighteen?—It would be advisable.

13,242. How could teachers learn it?—Teachers should not be asked to learn it. Properly trained instructors could be obtained.

13,243. Is there much loafing in those between fourteen and eighteen?—In all large towns there is a good deal of loafing among boys and girls of that age.

13,244. Would physical training as part of curriculum of continuation class be popular?—I think so.

13,245. Rifle clubs: games?—Rifle clubs would be suitable for boys.

13,246. Any objections expressed by parents?—No.

13,247. What effects has the physical training?—Improves the carriage, exercises the various muscles, and helps discipline.

13,248. As well as physical training, are the ordinary rules of health taught, *e.g.*, about ventilation, air, sunshine, clothing, food, way to eat, etc.?—Yes, but not as fixed subjects, only as opportunities occur to speak of these things.

13,249. Suggest plan for attracting boys fourteen to eighteen?—I would suggest a public gymnasium conducted somewhat on the lines of an advanced Boys' Brigade.

13,250. Looking to the progress made by the children in your school attending half-time, do you think that would be a good argument for devoting more time in Board Schools to physical training? Do you think they would have the time to spare?—That would be a matter for each head teacher to think over. I would not like to give my opinion against his, but I think that he would require to take some time from something else.

13,251. You have to give the teaching to your children in half the time that they have in the other schools. Do you not think that they should be able to give more time to physical training?—Any teacher that I have spoken to says that his time-table is so overcrowded; it seems that the School Board overcrowd the time-table because for one thing they give

Miss Mary Anderson.

1 Oct. '02.

Central hall in school, a shed in playground

Medical examination

Training should be compulsory all schools, and for the fourteen to eighteen. Teachers: trained instructors preferred. Loafing. Continuation classes.

Rifle clubs.

Physical education.

Public gymnasium suggested.

Increase training: time-table: difficulties and causes.

3d. a head for each extra subject, and once begun it has to be kept up. They have to compete with other schools. We are isolated and don't have to compete. I think they could give more time to drill if they were really very anxious to do it. I think that if all the teachers in the land would impress the children with the fact that it is in their own hands to make their bodies strong and make themselves strong men and women, they are intelligent enough to understand that; and then they like the drill.

13,252. Do you approve of the alternate day system as compared with the half-day system?—I have had no experience of any except the whole-day system, but I think it works better than the half-day system. I would not like to offer an opinion against those who have tried the half-day system, however. The girls attending the whole-day system are quite free from the mill one day, thus resting their bodies, and from school the next, thus causing less of a strain on their minds.

13,253. *By Sir Henry Craik.*—You say you don't take up nature knowledge as a subject?—That is so.

13,254. You try to work it in with the other lessons?—Yes, the intelligence lesson.

13,255. Is not that what the Code asks?—Yes, but I thought they expected it to be taken as a separate subject.

13,256. By no means. What we try to urge in the Code is that it should be worked in with the other subjects. We don't want a long list of special subjects to be taken up in detailed course. We want nature knowledge to be precisely that which may be worked in with the other lessons to stimulate the intelligence. Did I understand you to say that the School Board pay their teachers 3d. for each subject?—Not the teachers; that is the grant to the school.

13,257. Under what clause of the Code is that? You know that the grant is now paid as a slump sum and not by subjects at all. When you gave your evidence I thought you meant that there was an arrangement between the teachers and the School Board?—Why should the teachers speak about the 3d.?

13,258. This is what I want to know?—It seems only lately that I have heard it talked about.

13,259. *By Mr McCrae.*—In speaking of the time allotted to each subject per week, you qualify your time-table by saying that being a half-time school it must be borne in mind that only half of the time goes to each division?—Yes.

13,260. That means that they only get half of the number of hours that you have given?—Yes.

13,261. That is not the case with regard to drill, is it?—It would be the same as the rest, and it is too small.

13,262. It means that they only get a quarter of an hour?—We have managed to make it a little more, but the time-table only shows a quarter of an hour.

13,263. So far as the individual pupil is concerned, your time-table should be reduced by one-half?—Yes.

The witness withdrew.

Mr WILLIAM HENDERSON, examined.

13,278. *By the Chairman.*—Will you describe yourself, please, so that we may get it on the notes?—I am a jute spinner and manufacturer in Dundee, and I have taken a good deal of interest in connection with the continuation classes, particularly those conducted in connection with the Young Men's Christian Association in the city. I happen to be president of that association, and I am also chairman of the Technical Institute Committee in Dundee.

13,279. You have been kind enough to make a *précis* of your evidence, and you might read it.—

Physical training of boys and girls up to fourteen years.—I have no special knowledge of this as practised in schools, but observation during twenty years as an employer of labour in the jute manufacturing trade has impressed me of the need of a system of physical

13,264. You have no continuation classes?—No.

13,265. Do you approve of these?—Yes, but I would not approve of them in our school, as there are plenty under the School Board.

13,266. You think that physical training should be made compulsory in all schools and also for children between fourteen and eighteen years of age?—I could not say that it should be compulsory for those between fourteen and eighteen years of age; I don't think we could make it compulsory. You would require to bring in moral suasion.

13,267. How would you exercise that moral suasion?—I think if it was made attractive to them, and they liked it in the day school, then in the course of a few years we would have them educated up to that, and they would see the good and beauty of it.

13,268. *By Mr Fergusson.*—You say you are so much impressed with the good results of your physical training that you propose to increase the time?—Yes.

13,269. What subjects are you going to reduce?—I may take half an hour off the arithmetic.

13,270. *By Sir Thomas Glen Coats.*—Are your pupils strong and healthy?—The attendance is really better with us than in the other schools, so that I would imagine that their health should be quite as good, if not better. Some of the girls develop greatly, but whether it is due to better food, and the classrooms being so particularly healthy and not overcrowded, I don't know.

13,271. Is there any medical inspection?—No, except when they are admitted into the mill and passed by the doctors in the mill. I think, however, there should be medical inspection in all schools for defective eyesight, hearing, and skin troubles, which sometimes occur, and which are infectious. The doctor would notice what might escape attention otherwise.

13,272. *By the Chairman.*—You get your children from some other schools?—They come from all the other schools.

13,273. If physical drill is increased, and there is a common system laid down for it in every school, it would be necessary for you to fit yourselves to it?—Yes, I would be quite willing to do so.

13,274. Your good class of teachers being superior to pupil teachers, would be all the more ready to follow it up and able to do so?—Yes, but if drill is to be a universal thing, there should be trained instructors for it.

13,275. You find no difficulty in giving your exercises to children coming from other schools who have been trained to a certain extent?—No.

13,276. Do they ever make any remark about having done that before?—Some girls who come from country schools, where drill has not been introduced, are a little stiff, but, as a rule, they all like it. No parents have ever asked me not to give their children drill. The children look forward to it.

13,277. Do you play the music yourself?—One teaches the exercises and another plays the accompaniment.

training for such young people, especially during their school hours. The relaxation of mental strain, combined with moderate systematised exercise, is, in my opinion, of great value. Gymnastic exercises, in the usual acceptance of the phrase, are not so valuable as extension exercises, and these latter suit both sexes.

From fourteen to eighteen years of age.—Where children remain at school, the supervision of such drill is easy and ought to be continued; but where the child goes to work, it is not so easy to continue the training. Public gymnasia, in most large towns, offer facilities for those who wish to avail themselves of them, but the number who take advantage of these facilities is small. Besides, the fatigue of the day's work indisposes many to further exercise.

Miss Mary Anderson.

1 Oct. '02.

Compulsion in day schools: attraction for those fourteen to eighteen.

Good health of pupils.

Medical inspection advisable.

If drill increased, trained instructors should teach it.

Mr W. Henderson.

Fourteen to eighteen: gymnasia in connection with continuation classes.

Mr W.
Henderson.

1 Oct. '02.

The association of gymnasia with evening continuation classes would be of use in encouraging the continuance of physical exercise. In the Young Men's Christian Association rooms here, where continuation classes were conducted, a gymnasium was provided and was largely taken advantage of, till the erection of a public gymnasium in the vicinity proved a greater attraction.

With regard to many lads who are serving apprenticeship to trades, I am of opinion that continuation classes are more useful than physical drill, as they generally have plenty of exercise at their work, and given good classrooms and teachers in sympathy with the boys, there is little difficulty in getting the classrooms filled. The increasing numbers who come forward to continuation and technical classes proves that the value of them is more appreciated now than formerly. In 1886-87 the students attending classes at the Y.M.C.A. here numbered about 400; in 1900-01 they had increased to 590; and at the Technical Institute, which was opened in 1887, the number in 1900-01 was 693. Greater interest might be shown by employers of labour and managers of works in urging their apprentices to join evening classes.

For young boys who needed some inducement to attend evening classes, manual instruction classes were formed some years ago in carpentry and clay modelling, and the desire to join these led many who would not otherwise have done so to attend the educational classes, permission to attend the manual classes being conditional upon attendance at the other.

For older lads, say from eighteen years of age, I am in favour of military drill, and while not approving of conscription, would make service for a time in a Volunteer corps compulsory.

'Loafers.'—I cannot think of any shape in which work can be made to appear attractive to this class. Effort in any form is repulsive to them, and as they constitute a standing menace to the welfare of society, I am inclined to treat them as criminals, and enforce a form of 'statute-labour' for their benefit.

13,280. You say that you have no special knowledge of physical training for boys and girls up to fourteen years of age?—Yes.

13,281. But you are quite agreed that it is very important that they should have a full course of physical training, then?—Certainly.

12,282. Because you can catch everybody then, and you cannot catch them afterwards?—That is so.

13,283. You are thoroughly in accordance with that view?—Yes, quite. I have tried to express that here, and the need for it particularly during school hours.

13,284. You say that greater interest might be shown by employers of labour and managers of works in urging their apprentices to join evening classes; what do you exactly mean by that?—We have offered to pay the fees of our apprentices who will attend these classes. We try to urge them to attend with the view of improving their position, particularly as mechanics, with whom we have most to do. We have no apprentices in the mills other than mechanics and those who are coming forward to mechanical work, and that is the particular inducement that we hold out.

13,285. What has been the result of that improvement, may I ask?—Very few of them have taken advantage of it. I believe that a number of them have attended the classes, because they have been urged to, but they have not taken advantage of the fees. They seem to think that that is an inducement which is not necessary, and they have taken advantage of the classes apart altogether from that. I mention the figures there of those who were attending the classes of the Y.M.C.A. and the Technical Institute, in order to show that these classes are very much more largely taken advantage of than formerly. In the first year, 1886-87, the classes at the Y.M.C.A. were practically the only classes of that kind in Dundee. Then in 1887 the Technical Institute was begun; that was a new building altogether, and many who were interested in the matter expressed a fear that there was no room in the city for two institutions conducting classes of

that kind, but the experience of this year has proved that not only is the Technical Institute required, but the classes at the Y.M.C.A. have been crowded out, so that the members going there represent a very large increase indeed in the number of those who are taking advantage of the classes.

13,286. Then you say that while you do not approve of conscription, you would make service for a time in a volunteer corps compulsory; is not that rather a contradiction?—Yes, it is, but it is an idea that I have had for quite a time. I was a volunteer myself for eleven years, and I think that the advantage of the drill and discipline is so great that every young fellow ought to be made to undergo it.

13,287. Do you think that the colonel of a volunteer regiment would like everybody to come in from the streets?—No, there are a good many who are not suited for it physically, but I think that they might be graded in some fashion. Some colonels might object to it.

13,288. You must be very careful what you say about that, as it is not quite practicable. Will you reconsider what you have said? You say that you would make service in a volunteer corps compulsory for a time for all lads, including loafers and everybody else?—Yes, unless the loafers could be dealt with in some other fashion.

13,289. But you cannot force a colonel of a volunteer regiment to take anybody he does not want to?—No, certainly not, but I think that the service in a volunteer regiment is so beneficial that that difficulty would have to be ignored, if it could not be overcome with regard to the feelings of the others in the corps.

13,290. Supposing you had some form of compulsion for those loafers you speak about, what advice can you give the Commission as to how that could be brought about. Would you put the loafers under the School Board, or would you put them under any other authority or under the police, or what would you do?—I think that probably the police would be the body best able to cope with them. The habitual loafers are generally well known to the police, and if some form of employment could be provided by the State to which these men would be obliged to attend, I think it would be a good thing.

13,291. In that case do you go so far that you would take them up as having no particular means of livelihood, or something of that kind?—Yes.

13,292. Treat them like vagrants?—Yes.

13,293. Have you had a large knowledge of seeing loafers?—Yes.

13,294. Are there a great many in Dundee?—A good many.

13,295. More than there ought to be?—Yes. I think that is borne out by this fact, that Dundee is a very excellent recruiting ground for the army.

13,296. *By Mr McCrae.*—You have taken a great interest in these continuation classes in connection with the Y.M.C.A.; how does the School Board deal with the question of continuation classes in Dundee?—During the last two years they have developed these very much. I may say that last session they improved the classes which they offered to young people and increased their number, opening additional classes, and that has acted adversely to the classes at the Y.M.C.A. It reduced our numbers from about 590 to considerably under 400—about 330, I think, because the School Board were able to provide these classes more cheaply than we were. We have to make ends meet, as we have no rates to fall back upon, and we could not give the classes as cheaply as the School Board was able to do, and they have taken away almost entirely those attending our commercial classes—English and geography, and these classes.

13,297. How do the fees of the Y.M.C.A. continuation classes compare with those exacted by the School Board?—I am not exactly sure what the fees are just now in the School Board, but our fees are 5s. for one class and 10s. for a course.

13,298. And the School Board did it much more cheaply?—Yes.

Mr W.
Henderson.

1 Oct. '02.

Volunteer training compulsory for all lads.

Loafers: compulsory employment

Continuation classes: increase of numbers in attendance: educational subjects more necessary than physical drill.

Loafers: 'statute-labour.'

Physical exercises necessary for school children.

Continuation classes: interest of employees: increased attendances.

Continuation classes lately developed by Dundee School Board influence of less fees.

13,299. So that if the School Board was taking a very active interest in it there might be a little overlapping, or would you still have your work, supposing they were doing their utmost to make them popular?—We have given more attention to classes suitable for apprentices, such as machine drawing and construction, and engineering drawing and practical geometry, and these classes.

13,300. You say that public gymnasia in most large towns offer opportunities for those who wish to avail themselves of them, but the number who take advantage of these facilities is small. Is that not too much of a generalisation. Are there public gymnasia in all large towns?—I have not a very wide experience of them, but I know that the introduction of one in Dundee has given great facilities to our young fellows.

13,301. I think Dundee is rather in advance of other towns in that respect?—Well, in some respects I think we are exceedingly well off in educational establishments.

13,302. Have you considered the question of physical training apart from gymnastics in connection with your continuation classes?—Yes, I think that physical training is more useful than gymnastics. As I say here, 'gymnastic exercises in the usual acceptance of the phrase are not so valuable as extension exercises, and these latter suit both sexes.' In the first place, the physical training is suitable, I think, as far as I know, to both boys and girls, and it can be carried on with the minimum appliances. Then it can be given without great expense in the way of providing accommodation as well as appliances, and I think that, generally speaking, it is more healthful than some violent gymnastic exercises.

13,303. Then with regard to this paragraph about making service with a volunteer corps compulsory for all lads over eighteen, I suppose your point is that to avoid conscription you would have each lad capable of bearing arms undergo a certain amount of military training, but so as not to interfere with his daily avocation?—Yes.

13,304. Have you thought how it would work out?—Would you require a system of registration?—Yes.

13,305. Have you given any attention to the details of how it would work out?—No, I cannot say that I have, but I have thought of it principally in connection with the fact that you have mentioned that it does not interfere with a lad's daily employment. He can spend perhaps one evening a week quite easily in connection with his volunteer services, and that keeps him in touch with the corps, and to a very large extent make him efficient in the elementary branches of the work, but I think that the drill and discipline are of the greatest value to young fellows from eighteen to twenty-five.

13,306. You have taken a great interest in philanthropic work; what is your opinion of the moral tone of the youth of Dundee?—There is a low section in Dundee, the moral tone of which is very low indeed, I think, but speaking of the working classes generally, I think it is very good.

13,307. Is that your experience and opinion?—Yes.

13,308. *By Sir Henry Craik.*—Would you be in favour of making physical training a necessary part of all continuation classes?—I am not sure about making it compulsory. It might deal hardly on some bodies who had not the same facilities that the School Board have, and it seems to me that, judging from what is being done in Dundee by the School Board, the continuation classes will be wrought in the near future almost entirely by the School Board, if they continue to develop as they are doing just now. It seems to me that there will be no room for other bodies, particularly on account of the cheapness with which the School Board can do it.

13,309. Do the School Board at the present spend much money from the rates upon these continuation classes?—I have not seen their accounts presented in such a form as to show what is spent upon the continuation classes.

13,310. I don't think you will find it very large; you get three-fourths of the expenses of these continuation classes from the Department?—Yes.

13,311. And do your fees not make up the other quarter?—Yes, I think they do.

13,312. Where do you find the difficulty of carrying them on?—Very largely in accommodation, the School Board having the schools at their disposal.

13,313. You are associated with the Technical Institute?—Yes, I am the chairman of the Institute Committee.

13,314. Is it the case that the Technical Institute and the Y.M.C.A. are joining together?—They have done so now. This is the first session, beginning in September—last month.

13,315. And they made an application to the Department to be recognised as a special institution under Article 87 of the continuation classes?—The Department intimated to us that they were in future to recognise it. We did not apply for the recognition, but they said that it was their intention to recognise it.

13,316. If you would organise yourselves in such a form?—It was simply an intimation as far as I recollect that the classes were to be recognised under paragraph 87 of the continuation schools.

13,317. And the competition would not arise, because you understand that we take power to refuse recognition of any competing classes?—Yes, there is no competition now between the Technical Institute and the directors of the Y.M.C.A., because in the spring of this year an understanding was arrived at whereby the classes in the Y.M.C.A. room have been surrendered to the Committee of the Technical Institute, and these classes are all being wrought now by the one authority—the Committee of the Technical Institute.

13,318. And that authority would be recognised even were the School Board to compete?—I am glad to hear that.

13,319. But you think that your premises were not sufficient?—They were found to be insufficient, and we had to turn away students. Three years ago we had to dismiss about seventy students from the classrooms of the Y.M.C.A. after they had paid their fees. Accommodation was found for about twenty of these in the classroom of the Technical Institute, but about fifty had to be turned out on the streets.

13,320. And you have not provision for the physical training?—No, we have no provision for physical training.

13,321. *By Sir Thomas Glen Coats.*—Do you find a difficulty in getting employment for lads over seventeen or eighteen?—In the industry in which I am engaged it is difficult. We in the textile business employ a large number of girls and women, and we employ a large number of boys, but when they get to the age of seventeen or eighteen, the wages are not sufficient to induce them to remain. We have very little employment for young men.

13,322. And are these the lads who become loafers on the street?—Yes.

13,323. And you have difficulty in dealing with them?—Yes.

13,324. *By Mr Ferguson.*—I gather that your view is that for lads after the age of fourteen or apprentices, physical training and other instructions should go together, but that the one should not be insisted on to the exclusion of the other?—At that age I think not.

13,325. As to that last paragraph about loafers, I want to ask you this. It has been suggested that in dealing with loafers, any able-bodied youths found without any visible means of subsistence, and making the streets their home, should be sent, not to prison, but to a training ship or other institution, or in other ways made into useful citizens?—Yes, that satisfies me.

13,326. That meets with your approval?—Yes.

13,327. With reference to Dundee, have you read the evidence that has been given before this Commission?—Most of it. I don't think I have read every word.

13,328. Have you read the evidence given by the Rev. Mr Williamson?—Only part of it.

13,329. There was one matter he spoke of, and I

*Mr W.
Henderson.*

1 Oct. '02.

Continuation classes under Technical Institute and Y.M.C.A.

Little employment for young men: loafers.

After fourteen, combination of physical and mental instruction.

Loafers: approval of Sir Robert Anderson's scheme.

Supervision of young factory girls.

Mr W.
Henderson.
1 Oct. '02.

shall read you his evidence. 'Q.—Is there anything you would suggest dealing with the very special young population of Dundee, that the Commission could recommend? A.—Yes, I have long thought that the manufacturers are responsible. I hold the manufacturers have no right to take possession of these young people and place them in conditions of employment where their morality is injured. Q.—In fact they place obstacles in the way of the School Board carrying out all that it might carry out in reference to these young people? A.—I think so; it is hardly fair to say that they place the obstacle, but they know, or they ought to know, that they treat these young people as if they were machines, without moral responsibility. Q.—You would like some method by which that could be put a stop to, then? A.—Well, I think that if a properly qualified matron were appointed to each mill, she would see that there was nothing done that would in any way injure the proper conduct of young girls especially. The girls suffer more than the boys, I think.' Was your attention directed to that?—Yes.

13,330. I should like to ask you, as a manufacturer,

what is your view on that subject. Is there any weakness there?—I am afraid that the suggestion which struck me most there was the proposed appointment of a matron. I am afraid that is impracticable. Our control of the workers is, of course, only during working hours. Generally they are pretty busy during those hours, and they are all supervised. With regard to the youngest girls whom we employ, and who are known as shifters in connection with spinning frames—that is, replacing the full bobbins with empty ones—these squads of shifters are all overlooked by an older woman, who is called the shifting mistress, and I think that most employers and managers and foremen are careful to see that these women are women of respectable character. I quite understand that where women in that position were disreputable, they might exert a very bad influence over these young girls, but I think, from my knowledge of the manufacturers in Dundee, they do exercise a considerable amount of care in these directions.

13,331. You don't think that there is any practical suggestion on these lines?—No, I don't think there is any practical solution of that.

The witness withdrew.

Mr J. Lyons.

MR JOHN LYONS, examined.

Mr J. Lyons.

13,332. *By Mr Fergusson.*—You are the headmaster of St Margaret's Roman Catholic School, Glasgow?—Yes. Trained Certificated Teacher of the First Class. First Class (Advanced) Certificates for Physiology, Magnetism and Electricity, Acoustics, Light and Heat, and Mathematics from Science Department, S. Kensington; Full Drawing Certificate (D), and Intermediate Certificate in Music (Old Notation and Tonic Sol-fa, Vocal and Instrumental), Pupil Teacher in London for five years '67-'71. Trained in Hammer-smith Training College two years, '72-'73. Headmaster for twenty-nine years; opened and organised two new schools. Twenty-seven years Headmaster in present school, which has 1200 scholars on the rolls, with an average attendance of 960. The school is divided into three departments—boys, girls and infants.

The ages of the children range from three to fourteen years. The parents are mostly of the labouring class, with a fair sprinkling of the better class of artisans. The children are, on the whole, fairly well fed and decently clad.

A sewing guild composed of voluntary lady workers supplies necessitous cases with boots and clothing in winter, while a branch of St Vincent de Paul Society furnishes meals to the poor children during spells of dull trade or inclement weather. An area of half a mile radius would include the whole of the district from which our children are drawn.

A carefully-selected course of physical exercises, compiled and arranged from the best authorities by Thomas Chesterton, Instructor of Physical Education to the London School Board, and late chief Instructor at the Aldershot Gymnasium, is in vogue.

This course has the sanction and approval of H.R.H. the Duke of Cambridge, and is carefully graded to suit the capacity of each class of children from the lowest to the highest. This scheme is carried out in the school by two trained certificated teachers on the staff, who hold certificates of proficiency in drill from Colonel Onslow.

In the senior division, dumb-bells and clubs were used, but to save time these are now discarded, as they are not essential to the efficacy of the drill. The exercises are invariably given in the open air, because, if performed in school, where the air is more or less vitiated, they cannot possibly be so beneficial to the scholars.

The children themselves are much interested in the drill, and only those physically unfit are exempt from taking part in it. The parents also show by their attendance at school displays, where musical drill is a chief feature, that they appreciate the system, and

often, at considerable sacrifice to themselves, provide their children with suitable costumes and apparatus.

For drill purposes the school is divided into five sections, and each section exercises for half an hour, the highest on Monday, and descending to the lowest on Friday.

The requirements of the Code at present do not, I consider, admit of more time being devoted to this subject. If, however, less time were required to be given to, say drawing, another half hour could with advantage be given to drill; and I would prefer to give two separate half hours rather than one hour at a stretch.

The ten minutes' intervals allowed forenoon and afternoon for recreation are taken full advantage of by the children, and all kinds of games are indulged in; but games such as cricket, football, etc., cannot be systematically played on account of the limited playgrounds and the necessity there is of asphaltting these—a fall on a concrete floor being dangerous to life and limb.

There is comparatively little illness among our children, excepting an occasional outbreak of measles or scarlet fever, which, however, very seldom assume alarming proportions. We have no medical examination of the scholars in the school, but each teacher reports suspected cases of sickness to the headmaster, who sends for the parents and advises medical examination when necessary. In infectious cases, of course, all children coming from the infected premises are refused admittance to school until notice of the removal of infection has been received from the sanitary inspector. An ambulance class has recently been formed for Catholic teachers, and all are encouraged to attend. I think there could be no objection to a medical examination periodically, particularly in the case of the eyes, as myopia seems to be on the increase, and bad reading and writing are frequently attributable to this cause without the teacher suspecting it. As attendance at school is compulsory, School Boards should be empowered to grant spectacles to poor children whose eyesight is defective. I would also suggest that the efforts of the teachers to put down the growing evil of smoking among children should be supported by the local authorities, or even by legislation. There is no doubt that smoking is injurious to school children, both physically and morally, and strenuous efforts should be made to suppress it.

I hold that physical training in one form or another should be compulsory in day schools. I think, however, the system should be an elastic one, and allowances should be made for environment, pre-

Smoking.

Compulsory training in day school.

Lyons. dilections of the teachers, prejudices of the parents, or any special circumstances connected with the school. Moreover, I maintain that baths should be attached to, or be within a convenient distance of, every school, and that attendance at the baths be recognised in lieu of physical drill. Swimming and bathing I consider to be the best of all physical exercises, and being conducive to cleanliness, health-giving in the extreme.

Related to this also is the kindred subject of the housing accommodation of the working classes, for a child reared in an insanitary dwelling or district cannot be expected to be a sound physical subject. In the meantime, and until the housing problem is nearer solution, I think it would be advisable to adopt means to secure the attendance of poor children at school at as early an age as possible. The purer atmosphere of the school and its superior surroundings, not to mention the training received there, are calculated to have not only a refining and elevating influence, but to produce beneficial physical effects not to be expected in many homes. Where the children have good homes I think they should not be compelled to attend school before at least six years of age, more particularly as the age limit for leaving school has been raised to fourteen years.

Poor parents should be encouraged to send their children even as early as three years, and a room in every school should be fitted up with a miniature gymnasium, consisting of rocking horses, swings, may-poles, etc., where the little ones could get physical exercises, health and enjoyment not to be got elsewhere. This idea is already being carried out in some schools with much success, but more could be done in this direction by grants of apparatus from Government or from local authorities.

I must say that the raising of the school age limit to fourteen years bears rather heavily on many poor parents, and reacts injuriously on the children themselves. In order to get some financial assistance from their children, parents now send them out as early as 6 o'clock a.m. to go with milk carts, papers, etc., and they are again engaged at various jobs after school hours, as grocers, butchers, etc., cannot now get boys as readily as formerly. The physical exercise is often overdone in these cases, and the physique of the children suffers in consequence. School Boards could, I think, with advantage, exercise greater leniency in exempting the children of poor and deserving parents at a less age than fourteen, on condition, of course, that they attend the evening classes.

With regard to the teaching of physical culture in our schools, I have to state that all our trained teachers, during their two years' residence in the Training College, undergo a thorough course of training in physical exercises and military drill under a regular Army Drill Instructor. On the completion of their course, they are examined by a military officer of rank, who grants certificates of efficiency. This examination is both practical and theoretical. The practical consists in the one student putting the remainder through their exercises to the satisfaction of the examiner. The theoretical examination consists in answering physiological questions on the anatomy of the human frame, and on the different muscles brought into play by the various exercises performed. Our trained teachers may, therefore, on leaving the Training College, be considered as fully equipped for the teaching of drill.

The advantages of physical training in the hands of a good teacher, who has regard for age, capacity, and general health of the pupils, are undoubted. It teaches order, discipline, and obedience; relieves mental strain, promotes bodily development, and affects beneficially even the deportment of the children.

When our children leave school, they betake themselves to one or other of the many occupations common to the neighbourhood. They enter the factory, the foundry, the engineering shop, the ship-yard, etc. Many boys, however, at the age of fourteen years go as message boys till they reach sixteen years, when they

are apprenticed to trades. Some later on find their way into the Army, and a few into the Navy. The want of Catholic chaplains on board our men-of-war vessels, I consider, has some influence in deterring our young men from joining the navy.

Continuation classes are held during the winter months on Monday, Tuesday, and Wednesday evenings, from 7.30 to 9.30. They are not taken advantage of to the extent we could wish, but in many cases there are good reasons for this, such as late employment.

Nevertheless, it must be admitted, that many who could do not take advantage of these classes, notwithstanding that they are free to all, no fees being required.

No physical exercises or drill of any kind are taught in connection with these classes. The majority of the boys get plenty of physical exercise at their work during the day, and it would require to be a very attractive scheme indeed that would be popular among them in the evening. For the same reason there is comparatively little loafing, as boys find no difficulty in getting employment.

Related to continuation classes, somewhat, we have a guild for boys between fourteen and sixteen, and a branch of the Young Men's Society for youths over that age.

Boys' Guild.—We consider the time when boys at fourteen years are free from the restraints of school life and begin to mix among men in public works to be the most dangerous period of life morally. And I maintain that morality and physique are closely allied, the latter depending greatly on the former. The Boys' Guild is, therefore, more in the nature of a religious society. However, the guild generally possesses a football, wickets, etc., which are used in the public parks and vacant spaces, and cricket and football bulk largely in the amusements on excursion days to the country or seaside.

Young Men's Society.—This society possesses a suite of rooms for their own use, consisting of billiard room, library, and hall for lectures, concerts, etc. And here, I think, there exists the nucleus of any popular scheme that may be devised for the physical training of our youths of fourteen to eighteen.

To be popular, however, with our people, three important points should be observed, viz.:—

(a) The scheme should not insist on military drill, as the parents are opposed to anything which savours strongly of militarism. They want to keep their sons at home.

(b) Any system that does not recognise the religious convictions of the parents would not secure their hearty support. They like, and insist as far as possible on it, to see their sons take their recreation as well as their education among their co-religionists, and under supervision of which they approve. Hence our denominational schools, halls, etc.

(c) No scheme would be popular which would in any way increase the financial burden which they already have to bear in connection with their schools.

I fully believe that any system devised to improve the physical development and well-being of the people, and recognising the principles I have laid down, would receive hearty co-operation from our people.

For instance, in connection with these halls which already exist, gymnasia could be established under a proper drill instructor; and attendance at a gymnasium could be reckoned as an attendance at a continuation class. Or a certain number of hours' attendance at a gymnasium could be considered as qualifying for a certificate of efficiency, and a grant allowed for each efficient. Rifle clubs in connection with the Young Men's Society might become popular.

In conclusion, I would suggest that the present regulation existing in some public parks, prohibiting boys over fourteen from using the gymnasia, should be abolished, or, alternatively, that separate gymnasia, be erected for their special benefit.

13,333. Do you take any steps to deal with those who don't seem to be properly fed?—Yes.

13,334. What do you do?—The teachers generally make inquiries when times are bad.

Mr J. Lyons.
1 Oct. '02.

Continuation classes: no physical exercises given.

Boys' Guild.

Young Men's Society.

Training of those fourteen to eighteen: suggestions.

Mr J. Lyons.

1 Oct. '02.

Chesterton's system.

Outdoor exercises intermittent: covered playground.

Medical inspection desirable.

Ages of children attending school.

Continuation classes: compulsion undesirable.

13,335. If there is a child who is not well fed, you find out why not?—Yes, and we encourage the children to tell us.

13,336. You consider that part of your duty?—Yes.

13,337. Is Chesterton's system the only system you are acquainted with?—No, I had a course of military drill myself in the Training College in 1872 and 1873.

13,338. But things have changed a bit since then?—Yes.

13,339. Do you know Cruden's?—No. I think Chesterton's is a very good system, and it answers the purpose very well.

13,340. Who is Colonel Onslow?—He is a military officer in London, and he goes round to inspect the training colleges, and grants certificates.

13,341. With regard to the exercises in the open air, what do you do on a wet day?—They are generally postponed.

13,342. Then you have them at very irregular intervals and miss a day?—Yes, and take two classes out at once on the favourable days.

13,343. Does not Chesterton have daily exercises?—Yes, he has exercises in the classroom.

13,344. If you had accommodation, would you like to give daily instruction instead of intermittently?—Yes. Our playground is covered, and even on a wet day it does not interfere much with us.

13,345. At the beginning of every term, or every six months, would you say that the children should be all inspected by an appointed medical officer attached to the school?—Well, I believe it would be a very good thing.

13,346. At any rate you see no harm?—No, on the contrary.

13,347. Are you troubled with cases of defective eyesight?—Yes, we have a few cases.

13,348. And that is rather a special thing that a doctor might be able to deal with if you did not notice it yourself?—Yes, I think a doctor might do us a great amount of good by coming periodically.

13,349. You afterwards say that there is no objection to physical training, but that means to say that you would not have a hard and fast rigid system, and that so long as the teaching conforms to general principles you would give the teachers a free hand?—Yes.

13,350. Have you any baths?—The baths are very convenient to us, and a few of them attend in the evening, but there are new baths opening beside us. I find that they are very popular, and I think they are very good indeed.

13,351. Do the children attend at the age of three now?—A few do.

13,352. They cannot attend much earlier than that?—No, but the tendency is not to send them so young now.

13,353. Do you think the children under six cannot be made useful?—I am speaking of good homes, and the fact of the children playing about the streets tends to give them plenty of physical exercise.

13,354. Do you call playing about the street physical exercise?—Yes, I think all the time the child is gaining strength for future mental effort.

13,355. Don't you think you could deal with a child a little better in organising him at school and starting him off at games?—I believe in going to the school very young.

13,356. You don't have any outside experts?—No.

13,357. Do you think that is the best way?—If the teachers are properly trained.

13,358. What keeps the children back from attending the continuation classes?—Are the classes not sufficiently attractive, or what is the matter?—I say that many of them are working late and they don't get home till six or seven o'clock.

13,359. But apart from that, it must be admitted that many who could do not take advantage of them?—I suppose it is the want of parental control and not looking after the children.

13,360. Do you think that there is anything to make

them more attractive—if you had a gymnasium and physical training might the continuation classes be made more useful?—I believe they would so long as attendance was not made compulsory.

13,361. You would not like to see physical training after school age made compulsory?—No, I would not.

13,362. But something might be done?—Many of our lads are working hard all day, and if anything were made compulsory, they would not take to it at all.

13,363. Would you have a compulsory system with exemptions for those who are working hard all day?—Most of ours work hard all day. They are mostly working lads.

13,364. With regard to the Boys' Brigade, is there anything else that you would suggest that would be useful on the same lines as the Boys' Brigade, something to keep the boys together after school age, and help them to spend their time better and teach them useful things—for instance, a cadet corps attached to the school; have you any ideas on that subject?—I don't know that it would be popular with our class of boys, but if something were done to attract them, it might.

13,365. You find this useful—something to keep them together after school age?—Yes, that is necessary, and would be doing a great amount of good. Of course something might be done.

13,366. With regard to your statement that the parents want to keep their sons at home, is that a strong feeling in your district?—Yes, I think it expresses the feelings of the parents. Military training.

13,367. Do they not like volunteering or soldiering in any form?—I don't think they object so much to volunteering as to soldiering.

13,368. When you speak about military drill, you don't mean the elements of drill?—No.

13,369. But something that would make soldiers of them—is that what is in your mind?—Yes.

13,370. Then you say that no scheme would be popular which would in any way increase the financial burden which they already have to bear in connection with their schools. It has been explained to us that you have heavy burdens and have to pay school rates, and still support your own schools?—Yes.

13,371. Do you think any increase on that would militate against any system?—Yes.

13,372. Have you any experience of rifle clubs, or have you tried them?—No.

13,373. Then in conclusion you suggest that the present regulation existing in some public parks prohibiting boys over fourteen from using the gymnasia should be abolished. What is that rule?—That no one over fourteen is allowed to use them in the park beside us. Public parks: gymnasia should be to boys over fourteen.

13,374. Which park is that?—Plantation Park.

13,375. Then children under fourteen are allowed to use the gymnasium?—Yes, but not over that. It is meant for school children.

13,376. And you think that it would be taken advantage of?—Yes, I believe it would, because many boys do go there and they have to be driven away.

13,377. By Mr Alston.—Where is this school of yours situated in Glasgow?—In Kinning Park.

13,378. Is the population principally Irish there?—No, they are in the minority.

13,379. I mean imported Irishmen or Roman Catholic Irishmen?—They are mostly Irish.

13,380. You have 1200 scholars, with an average attendance of 960; is that rather under the School Board average?—A little under some of them and a little over others.

13,381. Is there any particular reason for that?—There may be a little laxity on the part of the School Board officers. We are on the boundary of two School Board areas; part is under the Govan Board and the other part is under the Glasgow Board.

13,382. Any laxity on the part of the parents?—There may be that also: you will get that everywhere.

13,383. A few paragraphs further down you say, 'The parents also show by their attendance at school displays, where musical drill is a chief feature, that they appreciate the system, and often at considerable

Mr J. L.

1 Oct.

Lyons. 'sacrifice to themselves provide their children with 'suitable costumes and apparatus'; do you find the parents of that particular class always able to pay out money for things of that kind and not for others?—I don't know that they are able to do it, but they find the means to do it.

13,384. And are the children dressed up for these occasions?—Yes.

13,385. Do you find musical drill attractive?—Yes, very attractive.

13,386. Have you considered the question of it being a hindrance to perfection of instruction in physical training, because many witnesses have pointed out that unless the physical instruction is perfectly given, the carrying out of musical drill without care in the grounding work tends to formality in the drill and detriment to the children?—I think that depends more on the drill instructor and his method of carrying it out.

13,387. That is the meaning of the evidence that physical instruction with musical accompaniment tended to inefficient training, but you say that there is always a very gratifying display?—Yes. Sometimes we have a class that is taught physical training by a lady teacher, and the same exertion is not put into it as if it were given by a male drill instructor; but if given with music it is good for the children in other ways, and if proper attention is given to the details by a good instructor, then it is useful as physical training.

13,388. Further down you say, 'I think either the 'system should be an elastic one, and allowances should 'be made for environments, predilections of the teachers, 'prejudices of the parents, or any special circumstances 'connected with the school.' Do you think it is a wise thing to give way on these points?—I have never experienced that myself, but I have heard of cases where parents have objected to their children getting military drill.

13,389. But this is physical training?—Well, drill is a kind of physical training.

13,390. But it is not military drill?—I think the objection is chiefly to military drill.

13,391. In adopting a system of physical training, it would not be wise to give way to the predilections of the teachers and the prejudices of the parents?—I mean as far as teachers are concerned, they may have a preference for one system over another.

13,392. Would you allow several systems?—No, but I mean other systems in other schools.

13,393. Then in the case of a pupil going to another school, a different system would be used in the school that he has left from the system in the school to which he goes?—I don't see any strong objection to that so long as it is physical training.

13,394. Under the heading of 'Young Men's 'Society,' we have evidence from a witness, a co-religionist of your own, as to it being desired in the Roman Catholic body that the hall used for physical exercises, or amusements, should be under the control of your own Church people; do you find that that is a necessity?—I don't know that there is any special arrangement or agreement come to. I consulted no one in writing this, and I am simply expressing my own convictions.

13,395. I want to know whether it is a well-grounded opinion among all Roman Catholics that a hall used for such recreation should be under the control of your own body, either partially or wholly?—Yes, I think it should be wholly under our own control. If a popular scheme were devised, then there could be a regular examination by the proper authorities and an instructor appointed to go in and examine everything.

13,396. The point is that we were struck by the fact that the position taken up by the Roman Catholic population in the district in reference to such a hall for public recreation in which their young men might take part, is that they should have control of the hall or be well represented on the body of management?—In point of fact it is their own hall.

13,397. Not if it was a public hall?—Then we could not expect to have the entire control of it.

13,398. Not the entire control, but say a whole night a week; do you say that you would desire that?—I think we should have it whenever we wished. We want a hall of our own. We have that in every mission already.

13,399. You don't want to be mixed up with the others in education or amusement?—As far as possible, no.

13,400. Then you say, 'The scheme should not in- Militarism. 'sist on military drill, as the parents are opposed to any- 'thing which savours strongly of militarism,' but militarism is not involved in military drill?—If you gave it to the oldest boys the parents might look upon it in that light, but children would not take that out of it.

13,401. And if there was a cadet corps, some parents would object on that ground?—Possibly.

13,402. *By Mr M'Cræ.*—You say that the raising School age limit: should be more exemptions: occupations. of the school age limit to fourteen years bears rather heavily on poor parents?—Yes, I have found that.

13,403. Is that particularly a working-class district?—Yes, a great many are of the working class.

13,404. Do you think that the sending out of children at six o'clock in the morning to go with milk carts and papers is very general in your district?—I would not say that it is very general, but there is a good proportion of the children in the upper classes of the school who are engaged in work.

13,405. Then it appertains to a fairly large class?—Yes.

13,406. But can the children of poor parents not get exemption after attaining the age of twelve years?—Yes, but the School Boards might be more lenient.

13,407. You think that there should be a more generous interpretation of that permissive class?—Yes, in some cases.

13,408. You say that when they leave school they go to many occupations; is there any interval between leaving school and obtaining work during which the children run about wild?—Not now, not since the age has been raised to fourteen.

13,409. You say further on that the boys have no difficulty in getting employment?—Not the least.

13,410. We had evidence from one witness, who said that a good many boys after leaving school roved about and did not follow any occupation, but you have not found it so?—Not since they were compelled to attend school till fourteen.

13,411. Did they obtain exemption between twelve and fourteen?—Yes, in former times they did.

13,412. You say that no physical exercises are given in the continuation classes?—None.

13,413. But have you ever tried to establish such?—No.

13,414. Don't you think that it would be rather a good thing?—Many of our boys, in fact the whole of them, are working hard the whole day, and I don't think it would be a popular move to have physical training after working hours, but something might be suggested to make it attractive.

13,415. You know the difference between gymnastic and physical exercises apart from gymnasia?—Yes.

13,416. Extension motions and that sort of thing?—Yes.

13,417. They might get physical training although not of a very violent nature?—I have not given consideration to that in the evening classes.

13,418. You make a complaint about cigarette smok- Ciga: tte smol: ing among children, and you think that this should be put a stop to by legislation?—I do.

13,419. What lines would you suggest on which legislation should proceed?—I can scarcely suggest that, but I see the evil, and it seems to be growing.

13,420. Do you mean that a boy should be liable to be arrested if found smoking cigarettes under a certain age?—I would not go so far as that.

13,421. Is it very prevalent?—Yes, very, and no doubt it is injurious to the children themselves, and if some way could be thought of, it might be checked, but I have not formulated any scheme by which it may be checked. The teachers do all they possibly can to put it down, but it is not effective.

Mr J. Lyons.

Continuation classes.

Ciga: tte smol: ing

- Mr J. Lyons.* 13,422. *By Mr Shaw Stewart.*—On the same point, do you think that if cigarettes were not allowed to be sold in packets beyond a certain minimum—say a dozen cigarettes—that would have some effect on children buying them?—Possibly it would, or if the sale of cigarettes were forbidden to all children below fourteen.
- 13,423. And no child allowed to enter a tobacconist's shop?—That might have some effect, but I don't think it would kill the evil, because they get them from older boys.
- 13,424. You have not thought of any legislative scheme?—No.
- Public parks.* 13,425. You say that the Boys' Guild generally possesses wickets which are used in the public parks; I am afraid there are not many open spaces about Kinning Park?—There are not so many as there used to be.
- 13,426. And there is not a public park within a mile?—Yes, there is Plantation Park, at the end of Scotland Street, and they can play there. Then there is a large vacant space not far down the Govan Road in the Plantation district where they can play.
- Public gymnasium: some supervision or control by Roman Catholics.* 13,427. With regard to that point of a public gymnasium, supposing there was a public gymnasium erected, I want to know from you how Roman Catholic youths could make use of it, because I think you would be against their going in with other boys on any night, even as part of the continuation school; you would like to have the sole control of the boys during the time that they were exercising in the gymnasium?—We should like some sort of supervision that we could approve of.
- 13,428. It has been suggested that if there was a public gymnasium in a district, the Roman Catholic youths might make use of it during one night in the week under Roman Catholic supervision; that would meet your approval?—I think so.
- 13,429. But you would not like them otherwise to take part?—If there was a public gymnasium such as you speak of under the management of people that we had confidence in, I don't think that would be any bar to our children going there.
- 13,430. Or if Roman Catholics were represented on the board of management?—Yes.
- R. C. Boys' Brigade: objection to military training.* 13,431. *By Sir Thomas Glen Coats.*—We have had some evidence that the Roman Catholic Boys' Brigade has not been very successful; how do you account for that? We are told that other Boys' Brigades have been more successful in taking the boys off the street and bringing them under control and doing them good generally. Wouldn't that also apply to your Boys' Brigade?—I don't know that we have ever attempted very much in that direction.
- 13,432. Would you approve of that?—It would depend upon what lines it was run upon.
- 13,433. *By Mr Alston.*—It is in England and Ireland where your Church has taken part in that movement and not in Scotland; is not that so?—It is not tried much about here.
- 13,434. *By Sir Thomas Glen Coats.*—Would you consider that military training would make it unpopular?—I think that would be a great objection to it if the people thought that it was only a stepping-stone to the army.
- 13,435. But it does not seem to have that objection in England and Ireland?—It may not have that effect at all, but if people think it has, I think it would militate against the success of it.
- 13,436. You think that the feeling would prevail more in Glasgow?—I cannot speak about the feeling in other places, but I think that is the feeling about here.
- 13,437. Some people think that it would smarten them up and give them an inducement to join the brigade?—Yes.
- 13,438. *By the Chairman.*—Do you share in this dislike of the army that you say is so permanent about you?—I don't dislike the army. You mistake me if you think I said that I disliked the army.
- 13,439. But you said that a great many people did not like it?—I don't think they would like their sons to join the army.
- 13,440. Why not?—They require them at home; they would rather keep them at home. They don't like the idea of them going away.
- 13,441. They would sooner have conscription, would they?—No, I don't believe they would like that.
- 13,442. You have had a large experience of twenty-seven years in your present position; what do you think about the effect that physical drill has had just now? Do you see any difference since it has been brought forward, or do you think that this is rather a useless inquiry?—No, I don't think it is a useless inquiry at all. I think it is a very useful inquiry.
- 13,443. You are not satisfied that there has been sufficient of it up to the present time?—I think more of it could be given with advantage to the children.
- 13,444. And with no detriment to their mental acquirements?—No, it would rather help them, so long as the time-table of the school would give them the time, but we have so many things to do, we cannot devote as much time as we would like.
- 13,445. But you don't advise or recommend in any way tampering with the Saturdays, do you?—For the children or the teachers?
- 13,446. For the children?—Many of them are employed on Saturdays. You refer to those up to fourteen.
- 13,447. Those who are up to fourteen?—Many of them are engaged on Saturdays working. In shops nowadays they cannot get boys on account of the raising of the age to fourteen. They are working all day on Saturday. Saturday being a very busy day, butchers and grocers cannot get a sufficient number of boys.
- 13,448. And they find the Saturday holiday a very useful day to get hold of the children?—Yes.
- 13,449. And teachers naturally would hardly do anything on the Saturday; it is a great boon to them to have Saturday free?—Yes.
- 13,450. But at the same time it has been mooted, and I thought it right to ask you whether physical training of some kind or other could not be done on Saturday; it might take the form of digging in a garden?—It would be a good thing for the children, I believe.
- 13,451. Some people think it is a pity that when they are employed for five days in the week they should go and sit in the gutter and make mud pies and do no good for themselves or anybody else, whereas by helping their parents in the shops it is a good thing?—I think a great deal could be done on the Saturdays with those not usefully employed, but I think anything compulsory would not act.
- 13,452. *By Sir Henry Craik.*—You say that the requirements of the Code at present do not admit of more time being devoted to the subject, and you suggest that room should be made for it by dropping the subject of drawing?—Not by dropping it.
- 13,453. You say that less time would require to be given to it?—Yes, less time could be devoted to it.
- 13,454. But the only time is as much as to make it efficient?—Is it not compulsory to give one and a half hours to it?
- 13,455. No. Would you sacrifice the drawing, which is itself more or less a training of the bodily as well as the mental capacities to this?—I would not sacrifice it, but I think they are expecting too much from the elementary children.
- 13,456. We have been told that very often, but the part that you want sacrificed is part of that instruction which comes closest to the physical training?—I don't see that.
- 13,457. Surely drawing is part of the education which comes very closely to the training of the body as distinguished from the mental?—I don't think there is much physical training in that; there is more training of the hand and eye.
- 13,458. Is the object of the training not to give a certain physical training as distinguished from mere brain work?—I cannot see it in that light.
- 13,459. Would you entirely prevent the employ-

Mr J. Lyons

1 Oct. '02.

Physical drill:

increase advantageous

Saturdays: physical exercises for school children might be tried: compulsory inadvisable.

Time: drawing.

Mr J. Lyons. ment of school children out of school hours?—No, I would not. I think it is absolutely necessary and useful. The parents require the children.

13,460. How do you define physical exercise as a part of education? Do you mean that it brings bodily fatigue, or do you intend by it what properly and healthfully trains the muscles and the bodily faculties?—The one which trains the bodily faculties.

13,461. But you don't use it quite in that sense. You say that the physical training is overdone; that is mere fatigue—the fact that they undergo fatigue without supervision and without any relation to their strength and health—that is surely not physical exercise?—When physical exercise is overdone it leads to fatigue.

13,462. But going messages and being employed at early hours means fatigue, and, in fact, it is the want of system and of supervision in the training of their bodies that is the error, and instead of being overdone it is not sufficient?—I would say that it is physical exercise, but not systematised.

13,463. Surely in the case of those boys who are over-fatigued by cruel and disproportionate labour, physical exercise in the sense of supervised exercise is more required than any other; it cannot be overdone?—Do you mean that after boys are running

messages you should start and give them systematised training? *Mr J. Lyons.*

13,464. You mean bodily exercise?—I would not agree to that. *1 Oct. '02.*

13,465. You say that the School Boards should exercise greater leniency in exempting the children of poor and deserving parents; have you had a long experience of the leniency that they have shown?—Yes. Exemptions: School Boards should be more lenient in cases of poor parents, etc.

13,466. And do you think that they have been over severe?—Yes, I think they might exempt more than they do for poor parents, such as widows, and in cases where the father is incapacitated through illness, etc.

13,467. And instead of thinking with some of the witnesses that they have been rather lax, you think that they have been too stringent?—No, not in all cases. I say that they could exercise greater leniency with poor and deserving parents. Perhaps the parents themselves do not take the full advantage of this that they might do.

13,468. But if parents do not take the advantage of having them exempted, still you think that, even if the parents wished them not to be exempted, they should be exempted?—They may not know how to go properly about it. It is not that they do not wish them to be exempted.

The witness withdrew.

Mr H. Muir.

Mr HUGH MUIR, examined.

Mr H. Muir

13,469. *By the Chairman.*—You are headmaster of Dobbie's Loan School, Glasgow?—I am.

13,470. State qualifications, degrees, experience, number of years in present position, position of school, number of scholars, average attendance.—I have first-class certificate from Education Department. I took the following classes in the University of Glasgow, viz.:—Geology, astronomy, humanity, and moral philosophy. I have advanced certificates from the Science and Art Department for geology, physiology, agriculture, magnetism, and electricity. I have also a full 'D' art certificate. I have been about twenty-five years in schools of this class under the Glasgow School Board, viz.:—Bishop Street, Campbellfield Half-time, Dovehill, Rosemount, and Dobbie's Loan. I also taught for several years at the central classes for pupil teachers. I have been six years in present position. One of the lowest grade, 1100 scholars on roll, and 900 in average attendance.

13,471. Ages of pupils, youngest and oldest?—The ages range from three and a half to fourteen years.

13,472. Position and vocations of parents?—Most of the parents are very poor and belong principally to the labouring classes, e.g., iron foundry, chemical work, and dock labourers, etc., whilst there are also a few tradesmen amongst them, such as joiners, engineers, ironmoulders, etc.

13,473. Children well-fed or the reverse at home?—Most of them get plenty food of a kind, but not such as will maintain the body in a proper, healthy and vigorous condition.

13,474. Any meals supplied by school or other authorities?—No meals supplied by school. A very liberal supply given by the Charity Organisation Society and church missions.

13,475. Clothing of children.—Most of them are fairly well-clad, and the others, with but few exceptions, are generally supplied by the Charity Organisation Society.

13,476. Distances most of children have to come to school.—The children all live within a radius of half a mile from the school.

13,477. What system of physical training now in vogue?—Army system—('Model course of drill for 'elementary schools,' since June 1902).

13,478. How long in existence? How taught and by whom?—Army system—('Chesterton,' from 1895 to June 1902). It is taught with musical accompaniments by the instructor in the drill hall. Thomas William Christie (army certificate) is the instructor.

13,479. How many hours per week or *per diem*?—About thirty minutes' physical training and twenty minutes' military drill per week. Time allotted.

13,480. Military drill, gymnastics, Swedish drill, games, etc. How much attempted? Success or failure?—No gymnastics or games. The drill is certainly a success.

13,481. Are pupils interested?—As a rule, very much.

13,482. What accommodation for some kind of physical training, inside and out?—There is a drill hall, with a piano on a raised platform, and also a covered-in and an open playground. Free exercises can also be taken in all the classrooms. Drill hall: playground with covered-in shed.

13,483. Are any games played: organised?—There are no games.

13,484. Are there continuation classes: successful?—No continuation classes. No continuation classes.

13,485. Generally what careers do pupils follow after school? e.g., army, navy, merchants, farmers, fishermen, mill-hands, etc.?—The most of them become labourers, a few become mechanics, and some enter the army or navy.

13,486. Much illness at school?—No, there are very few cases.

13,487. Any medical examination of pupils?—No, unless in special cases. Medical examination.

13,488. Is such desirable at certain periods?—I do not think so, as children requiring medical examination are already specially dealt with.

13,489. Should physical training be compulsory in all schools?—Yes. Compulsory training.

13,490. And also for those fourteen to eighteen?—Yes, to a certain extent.

13,491. How could teachers learn it?—Centres could be formed in rural and outlying districts. In cities and large towns there are plenty opportunities for learning it. Teachers could learn it theoretically from books, but not so thoroughly as if taught practically. Teachers.

13,492. By whom taught and for how long *per diem* or per week?—Could be taught by volunteers, army non-commissioned officers, etc. About an hour per week.

13,493. Is there much loafing in those between fourteen to eighteen?—Yes, a great deal in this locality, but it is now gradually decreasing. Loafing.

13,494. Would physical training as part of curriculum of continuation class be popular?—I think it would.

13,495. Rifle clubs; games?—Rifle clubs would be

- Mr H. Muir. popular. As for games, it would depend on the kind of game.
- 1 Oct. '02. 13,497. If drill is taught, on what system based?—On the army system.
- 13,498. With apparatus or without?—With both.
- 13,499. Any objections expressed by parents?—No objections.
- Effects of training. 13,500. What effects has the physical training?—It smartens up the children wonderfully, improves their bearing and discipline generally, and enables them to throw off the slovenly habits so often acquired in such localities. It is partly a recreation, and the children are benefited both in health and general physique.
- Physical education. 13,501. As well as physical training, are the ordinary rules of health taught, *e.g.*, about ventilation, air, sunshine, clothing, food, way to eat, etc.?—Yes, the ordinary rules of health are taught.
- 13,502. Suggest plan for attracting boys fourteen to eighteen.—Have attractions, such as competitions in shooting, swimming, boxing, etc.
- 13,503. You say that you have a full 'D' art certificate; what does 'D' stand for?—It stands for drawing. It stands for a complete drawing certificate.
- 13,504. Is your drill always with music?—Not always.
- Medical examination: doctor appointed by School Board. 13,505. You say that children requiring medical examination are already specially dealt with; how are they dealt with?—By a doctor appointed by the School Board for the purpose.
- 13,506. But you say that there is no medical examination of pupils unless in special cases?—I mean there is no general examination of pupils in the school as a whole.
- 13,507. But there is a doctor appointed?—For all the schools in the Glasgow School Board.
- 13,508. How often does he come to you?—He has to be asked by the School Board to come and visit the children at their homes. He does not come unless in special cases.
- 13,509. Does the School Board pay the doctor for attendance at the school?—Yes.
- 13,510. But he does not make a regular systematic examination?—In the case of a parent pleading that a child is unwell, the doctor has to go and report upon him.
- Loafing decreasing. 13,511. You say that there is a great deal of loafing between fourteen and eighteen, but that it is decreasing?—Yes.
- 13,512. What is the cause of that?—I think the fact of the 'Immoral Traffic Act' coming into force has decreased it materially—even in my own experience in looking at it.
- 13,513. Then you say that the parents have no objections to drill; have you asked the parents if they had any objections?—No.
- 13,514. Have you no suggestion as to how the money is to be got—is it by the School Board off the rates, or how would you do it, because such extra moneys cannot be got from the Department?—Can it not be got from the Department?
- 13,515. A certain amount, but not enough for prizes; have you considered who would supply these?—No.
- 13,516. But we have to think about that?—That is true.
- Time. 13,517. *By Sir Henry Craik.*—You can only give twenty minutes of drill in the week?—That is the utmost limit at present by the time allowed for an instructor by the School Board to give to the school.
- 13,518. It is not that there is not the time, but you have not the service of an instructor long enough for the purpose?—Yes, still the time is limited.
- 13,519. They find no difficulty in giving 2½ hours a week in some other schools; could you do as much as that?—I am afraid not.
- Games: lack of accommodation. 13,520. You have no games?—No organised games whatever. The playgrounds are all asphalt or concrete, and quite unsuitable for games. The only game that the boys think of is football, and cricket was probably never heard of in that locality.
- 13,521. Do you think that games have a salutary effect?—I don't think so in Glasgow.
- 13,522. Why not?—They are so hampered for room.
- 13,523. But would they not have a good effect?—Yes, if all the pupils could be engaged in a game.
- 13,524. But do you not think it is a very great deprivation for children of that class, upon whose future the welfare of the country depends, that they should be deprived of as good training as the better class of children?—If it could be done, it would be better for the children.
- 13,525. Could they not have a central playground which they could share for two or three days in the week?—I don't think so.
- 13,526. You see no possibility of securing what you nevertheless admit to be a matter of vital importance?—No.
- 13,527. *By Mr Alston.*—I think yours is one of probably three schools in Glasgow that represent the very lowest class of people, and Dobbie's Loan for choice?—It will be one in about six which are much about the same.
- 13,528. But you are a very representative Board School in a low part of Glasgow?—Yes, one of the worst.
- 13,529. And one where all the difficulties that surround School Board tuition are at work?—Yes.
- 13,530. In view of this inquiry into the present conditions of physical training, and the possibilities of largely increasing it, can you help the Commission in any way?—In order to give the time to devote to it, I think that probably the time should vary according to the ages of the pupils, and I say for infants probably ten or fifteen minutes three times a week; junior department, I, II., and III., say twenty minutes three or four times a week, and for the senior division from twenty-five to thirty minutes four times a week.
- 13,531. Do you think that that would be a very desirable amount?—Yes.
- 13,532. It is so much more than some schoolmasters have considered advisable?—In schools with advanced subjects they could have more.
- 13,533. Would you sacrifice much to get that very desirable amount of physical training?—No, I don't think so.
- 13,534. You would not need to give up much?—No, it would not be a great sacrifice.
- 13,535. And you would be thoroughly in favour of that?—Yes.
- 13,536. Do you anticipate any difficulty on the part of the pupils?—No.
- 13,537. And when you come to military training, you anticipate no objection on the part of the parents?—None whatever.
- 13,538. You use Chesterton's system?—Yes.
- 13,539. Would you approve of a uniform system?—Yes, in principle.
- 13,540. Supposing you consider the whole field of the Glasgow School Board, would you like to see it uniform?—Yes, in all the elementary schools.
- 13,541. Sufficiently wide and sufficiently inclusive to let you use any part of it?—Yes.
- 13,542. Then the interchange of pupils and teachers would not matter in that case?—No.
- 13,543. Would you prefer that your teachers should be the instructors?—Mainly, but to be supervised by a proper visiting instructor.
- 13,544. Would you not prefer all your teachers to go to a school of training and come back with a certificate of efficiency?—Yes, certainly that would do.
- 13,545. It would be an advantage to have the supervision of an instructor?—Yes.
- 13,546. And not an ex-army soldier?—No, if the teacher was properly qualified.
- 13,547. You say that your children have plenty of food?—Very unsuitable food is generally given. In their own homes they have tea and bread to all the meals, and no properly cooked meals.
- 13,548. You spoke of no meals being supplied by the school, but a liberal supply was given by the

Mr H. Muir.

1 Oct. '02

Very low class of children.

Time to be allotted.

Uniform system in elementary schools desirable.

Teachers supervised by expert.

Food and clothing: outside agencies.

H. Muir. Charity Organisation Society and Church Missions, and again, you say that the Charity Organisation Society provides the supply of clothing?—Yes.

13,549. What do they do for food?—It is in connection with a sort of tent.

13,550. Not the Charity Organisation Society?—No; the food is supplied by the Glasgow United Evangelistic Association and not by the Charity Organisation Society.

13,551. It cannot be, I think?—They supply the food.

13,552. From whom, do you know?—I think Mr MacKeith, who is one of the Honorary Treasurers of the Glasgow United Evangelistic Association.

13,553. That is not the same Society; but with reference to the clothing, is that the same?—No, that is the Charity Organisation Society. The cases are reported to the Charity Organisation Society's Poor Children's Clothing Scheme.

13,554. A case reported to them indicates a very poor class of child and parent?—Yes, and the poorest children are very often refused, because after the Charity Organisation officers make enquiries and report that the children are neglected, and that their parents are dissolute, they refuse aid, and the case is reported generally by the compulsory officer of the district to the School Board offices, and the form is served out warning them about what will take place if they don't attend to the children's welfare.

13,555. Have you heard of cases being handed over to the Society for the Prevention of Cruelty to Children?—Yes.

13,556. That shows the class of children with whom you have to deal?—Yes.

13,557. Who is the medical officer?—Dr Wilson Bruce.

13,558. He will have a very complete knowledge of all these children?—Yes, he knows them well.

13,559. Is there much loafing in boys between fourteen and eighteen?—Yes, but it is decreasing.

13,560. Why do you say that?—I think since the Immoral Traffic Act came into force they don't expose themselves to the public sight as they did, and they are keeping out of sight.

13,561. Who are these loafers that you refer to?—I don't know what they do.

13,562. Are they boys or girls?—Girls predominate.

13,563. Can you follow out the course of your own children?—In my experience I have seen the very worst children to deal with exempted by the Board, and that class was recruited to a great extent by those children who were exempted from attendance at school.

13,564. Exempted by whom?—By the Board.

13,565. On what ground?—On the ground of the poverty of their parents, or that they wanted them to earn some money, and they went to the streets, but that has been lessened of late.

13,566. You had not the same difficulty with boys?—Not so much as the girls.

13,567. Is the type of loafer exemplified by these loafers around the Caledonian Central Station?—You have not the most degraded loafer there. He would not dare go there.

13,568. When you say that the parents express no objection, does that refer to purely military drill?—They have no objection whatever.

13,569. To its most advanced form?—None.

13,570. Suppose it were possible to attach a cadet corps to a school such as yours, would there be any objection on the part of parents?—I don't think so.

13,571. Are there districts in Glasgow where there would be objections?—Yes.

13,572. Is that principally amongst the Irish?—Yes, but that is only from hearsay.

13,573. Is that from the ignorance of the parents?—From prejudice against military service and ignorance combined.

13,574. Your plan is attraction and not compulsion?—When I made the suggestion, I thought that it was outside of compulsion.

13,575. Have you any opinion as to whether there should be compulsion at the age of fourteen to eighteen?—Yes, certainly, I think there should be compulsion.

13,576. How would you attain it—whom would you compel, and how would you get them?—That is the difficulty.

13,577. You have no solution?—No.

13,578. *By Mr Fergusson.*—As to the question of these neglected children, you say that they are reported to the Charity Organisation Society, and they reject them because the parents are dissolute?—Yes.

13,579. And then they are dealt with by the School Board officer, and after that fails, they are handed over to the Society for the Prevention of Cruelty to Children?—Yes.

13,580. After all, can you bring the parents to book?—They generally give in to the School Board circular.

13,581. You deal effectually with these children?—Yes, mostly.

13,582. It is disappointing to hear from you, who have had to do with one of these very poor schools, that you cannot suggest any means by which these poor children can be given any opportunity of playing games or having any amusement; I rather gather that from your answer?—If there was a place where games could be taught, and I say there are no games that they take an interest in except football or pitch and toss.

13,583. Is there any park near you?—There is a park within 300 yards of the school, but they dare not play games there. It is gymnastics and swings that are there.

13,584. If that restriction was removed, would they play if they were allowed?—Well, it is laid off more for gymnastics. It is only a space—not a park.

13,585. There is no place where games could be played?—No.

13,586. Your experience is that these exemptions given to children as a rule make for evil?—Yes, in the majority of cases.

13,587. It is a bad thing?—Yes, it is a bad thing altogether.

13,588. And are the School Boards recognising that it is doing harm?—Yes, they do fully now.

13,589. *By Mr McCrae.*—Do many of your children get casual employment before they go to school in the morning and after school hours?—I think a good many go with milk and papers.

13,590. Do you think that is a great disadvantage to children?—Yes, the children are worn out with their labours in the early morning, and it is quite a common occurrence to find children sleeping in their seats.

13,591. Is it the poverty of the parent that compels them to resort to that?—I don't think so. There are so many agencies in the district that the more they get from one the more they want from another. I mean that the Charity Organisations overlap, and if they get help from one they go to another. These organisations are meant for the best, but really they do harm in a great many cases. The people have lost their spirit of independence altogether.

13,592. Do you know many cases where increasing the school age to fourteen has been a hardship to the industrious poor?—With a very few it is a hardship.

13,593. You have no continuation classes?—These classes are held within centres, and there is a centre within 100 yards of where I am, and it is a small number that take advantage of them.

13,594. Do you not think it would be an advantage to try and keep hold of the children after leaving school, if they were given the advantage of physical training on alternate nights; would that be an inducement?—I think it would.

13,595. Do you think you would get hold of them in that way?—To a certain extent, I think you would.

13,596. *By the Chairman.*—On the question of food, I suppose they are principally given tea?—Dry bread and tea mostly, no oatmeal or vegetables or soups of any description. The majority of them would not

be troubled cooking dinner, and many of them have not the utensils to cook dinners. That is a large proportion. 13,597. But the old custom of a little oatmeal in a basin and a little hot water poured over it has gone out?—Yes, they would not be troubled with it.

The witness withdrew.

Miss KATE HUNTER, examined.

Miss Kate Hunter.
Girls' reformatory.

13,599. *By the Chairman.*—You are Superintendent in Chapelton Reformatory for Girls, Bearsden?—Yes. This reformatory is beautifully situated in the country, five miles north of Glasgow, and thither female delinquents are sent from the courts on a variety of charges—theft, burglary, falsehood, fraud, and wilful imposition, or general pilfering.

Education.

English, writing, arithmetic, and domestic science in all its branches are taught to the inmates without exception, about 94 per cent. of them ultimately taking situations as domestic servants.

Conditions.

Girls on admission must be certified Protestant and healthy, and none may be detained after she has reached her nineteenth birthday, but any well-behaved girl may be licensed out to respectable employment at any time after her first eighteen months in the institution.

Parents.

As a general rule the girls come of very poor parentage, 62 per cent. from homes rendered miserable by the drunken habits of the parents; 36 per cent. have only one parent; 4 per cent. are orphans, while many have stepmothers.

The childhood of these girls has been passed, for the most part, on the streets; a few have never been to school, and the very large majority are only fit, on admission, for Standard II. Seen their miserable family circumstances, their life out of doors has not been without its advantages for their physical development, for they have thereby obtained plenty of open-air exercise, and the sometimes all too scanty home diet has frequently been supplemented by food or its equivalent, earned by doing odd jobs or running messages.

Agas.

The average age of those at present under detention in the institution was, on admission, thirteen years, and their height 4 ft. 6 $\frac{3}{4}$ ins. Their present averages, after a period of two years and two-twelfths of detention, are: Age, fifteen years and ten months; height, 4 ft. 10 in.

When the girls come to us they are slovenly in gait and habits, have an aversion to lacing their boots (which they prefer to wear in pantoufle style), are frequently round-shouldered, with receding chest, and are, in many cases, unable to assimilate the nourishment provided in a wholesome and regular diet. The natural result of this latter condition is, of course, anæmia, many cases of which have had to be treated here. For some years we confined our efforts in the matter of development by drill to the ordinary so-called 'Musical Drill,' comprising free, dumb-bell, bar and club exercises, but while these undoubtedly helped to improve the gait, and interested and amused them, the improvement in the general health of the girls was scarcely observable. I should not like it to be understood that, after, say, one year's detention in this reformatory, girls were weakly or delicate, for, thanks to long country walks, plentiful and good diet, etc., their health has always been above the average. Cleanliness of person has always been attended to here, but it was not until we began to give the girls half an hour of physical culture five days a week, followed by a tepid bath in winter and a cold one in summer, and, during the warm weather, an hour per week of swimming in the public baths under qualified teachers, that anæmia might be said to have disappeared from among them. On Saturday each girl gets a hot lather from head to foot, followed by a cold douche. In following out this treatment systematically we have been guided (and our teacher has been trained) by Mr Cowan St Clair, of the Physical Culture College, Glasgow, in whose opinion the baths are a most important accompaniment of the exercises. In fact, the result of my two years' experience of this system has been, that anæmia, faulty

Musical drill tried: now complete systematic course of physical training with baths: effects.

13,598. That was very easily done, and very wholesome?—Yes, but the easier way is to go to a shop and get a loaf and tea. That is about the outside of what they do. There is a number of them who get properly cooked meals; that is, the best of them.

Mr H. Muir.
1 Oct. '02.

Miss Kate Hunter.

development, and eczema, have not only been greatly modified, but that they have practically 'ceased from 'troubling' the inmates of this reformatory. That the moral effects of this training have proved as satisfactory as the physical, I need hardly state, for this result is only to be expected.

On the system itself I need not enlarge here. In closing, I would beg to suggest that classes for physical culture should be given daily in every school in the country (accompanied by drills and baths), as I feel convinced that the result thereof would be not only a people of finely-developed physique, but of healthy and vigorous intellect, and of strong but refined moral influence.

13,600. Do the young girls that you speak of all come from Glasgow?—Yes, the very large majority come from Glasgow.

13,601. Do you give these girls actual physical drill?—Yes.

Physical drill given daily for half an hour.

13,602. How much a week?—Every day half an hour.

13,603. And do they like it?—Very much.

13,604. Is it always with music, or is it sometimes without?—The physical culture is much more serious than the drill. We don't give music at all with physical culture. We make the girls inhale and exhale regularly while exercising.

13,605. The other is more to amuse them?—Yes.

13,606. What assistance have you there?—I have five young women, three of whom are in training to become superintendents of reformatories themselves, and, as such, they pass through a training for the drill. One learns physical culture thoroughly, and the other goes in for drill. The physical culture is taught at the Training College at Charing Cross, and the drill master teaches the other one privately.

Teachers' training.

13,607. Under what department is this reformatory; who keeps it up?—The Home Office and the City is assessed for the school also. It is under the Juvenile Delinquency Board.

13,608. *By Mr Fergusson.*—You have really very unpromising material to deal with?—Yes.

13,609. And yet your experience is that particularly by attention to physical training and all sorts of baths you can turn out a very good finished article?—Yes. Anæmia has practically disappeared. We have not had any case in the house for two years practically.

Result of systematic training on unpromising material: 80 per cent. turn out well.

13,610. You say that your system, if followed in every school, would be very good. I daresay we might do drills, but the baths would be very difficult?—Yes, but in the day industrial schools in Glasgow they have large baths for say sixteen, and the children come in the morning.

13,611. What becomes of these girls after they leave you?—They all go to domestic service.

13,612. And do they as a rule do well?—The statistics are sometimes misleading, but I made a calculation myself on a five years report, and I found that 80 per cent. were doing well, were keeping out of police offices or prisons and doing well, some of them extremely well, and others not so brilliant, but still keeping out of trouble. Eleven per cent. had really gone to the wall, and the rest were unsatisfactory.

13,613. But still, if you had not had them it would have been the other way about; the 80 per cent. would have gone to the wall?—Yes, but one does not know.

13,614. *By Mr McCrae.*—Is there any particular system of physical drill which you adopt in your reformatory?—We have the dumb-bells, but we don't do nearly so much good to the girls with that drill as

Physical culture and physical drill: former preferred.

with the physical culture. The bar bells and free exercises are what they call 'physical drill,' which smartens them up and teaches them obedience and discipline, but the physical culture has prepared them, as it were, for the other and made them very much stronger.

13,615. But there are at least three systems—Cruden's, Chesterton's, and the Army system; and do you give them physical drill on any particular system?—I think it is the army system, because it was a retired army man who introduced it. He is coming just now every Saturday to give the girls one hour's training.

13,616. Do you know what qualifications he has?—I think he is a retired sergeant. He teaches in Partick Academy, and many other places in Glasgow.

13,617. Do you know what certificates he has?—No.

13,618. But you are rather inclined to the physical culture?—Yes. I think it is more useful. It is useful, and the other is ornamental.

13,619. But is the other ornamental if it is properly done?—No. I would put it away altogether if I thought it was entirely ornamental, but, during the two years, the physical culture has been very much more satisfactory than the physical drill was alone before, and the girls have been well bathed and kept clean. It is only within the last two years that they have been bathed every day.

13,620. The improvement may be traced to that?—Yes, we give them the drill and the physical culture at a time when they are not hungry and not digesting, very much between meals.

13,621. *By Mr Alston.*—You are drawing a distinction between physical drill and culture; do you use the word culture as applying to Mr Cowan St Clair's teaching?—Yes, the development of the chest and the muscles, and the children understand it as such. When the teacher says, 'We will take the exercise on the deltoids,' the girls are ready at once, and they know where their deltoids are.

13,622. You have taught them anatomy?—They learn physiology for the ambulance certificate.

13,623. You tried the extension motions and dumb-bells before?—Yes.

13,624. How long did you carry on these?—For seven years. I have been nine years at Chapelton.

13,625. And had you experience of handling these girls before you had physical training at all?—Yes. We could not get them to play or to move smartly. They had a very bad gait and were very bad walkers.

13,626. And you had no means of bringing about a change of style and bearing?—No.

13,627. But you introduced discipline with your physical training?—Yes, before that.

13,628. But you got it in the exercises and words of command?—Yes.

13,629. How did you hear of physical culture?—I read about it in some magazine, and I thought that it was what I was looking for. I went and put myself under the training of Mr Cowan St Clair, and I saw it was something good from my own experience, and I sent a Miss Blackwood, who is now my assistant, to get training there.

13,630. And you are satisfied with the results?—Yes.

13,631. It has given you a new lease of that school?—Yes.

13,632. You could not have accomplished before what you are accomplishing now?—No, and it gives the girls a sort of *esprit de corps*.

13,633. They see that they are attaining more?—Yes, they feel smarter all round, and they have more self-respect.

13,634. As to the class of girls, and as to their criminal propensities, you have feeble-minded girls among them?—Yes.

13,635. Is the percentage large?—No, I would not say so.

13,636. Do you expect to find as many in the Girls' School, Maryhill?—I think more.

13,637. How would you account for that?—Ours

are weeded. They are certified healthy and sound-minded when they leave the court.

13,638. But the Maryhill girls are caught before that?—Yes, and some are sent back to their parents.

13,639. Have you been able to improve the condition of the feeble-minded girls?—Yes, in some cases, but not in other cases. The last one who was sent to the lunatic asylum went quite wrong in the mind. She had incipient insanity before she came to us; she improved morally and physically, but these attacks of insanity came on not in consequence of weakness of physical health, but perhaps in consequence of a superabundance of strength. She was a tremendously strong girl.

13,640. Your methods could not help failing there?—No.

13,641. But you have improved the condition of the feeble-minded?—Yes.

13,642. Do you attribute that to the physical training or to the general discipline of the school?—The general discipline, I should say.

13,643. Your own handling of these girls perhaps more than physical training?—Yes, but with insanity we have failed, and made no difference in cases of insanity.

13,644. *By Sir Henry Craik.*—I was going to ask you about one paragraph. You say, 'Seen their miserable ^{Girls' conditions of} family circumstances, their life out of doors has not ^{life.} been without its advantages for their development.' That is the old life previously?—Yes.

13,645. That is when they were hanging about the streets?—Yes.

13,646. And it did strengthen them to a certain extent?—As they became older and coming about fifteen they would sit a great deal by the fire at home and drink a great deal of tea, and they consequently lost a great deal of physical force, but if we get them younger and straight off the streets, the gamin and the arab are stronger, as a general rule.

13,647. You mean that the girl who is restricted in running about the streets will really be in a worse state of health than the street arab?—Probably.

13,648. And in her case the need of this physical training which has succeeded with you would be even greater?—Well, physically it might, but morally not.

13,649. They would not want it so much morally?—No, if the children had been under control at home; but one must start with the understanding, of course, that not one of my girls has ever been controlled by her parents. They don't know what control is. ^{Parents' control.}

13,650. Moral control is not wanted in the case of these respectable children?—In all cases it is wanted, in the case of respectable parents also.

13,651. But as a mere physical result even more is required by the children who attend the ordinary State-aided schools?—Yes, because they have not been running about so much out of doors.

13,652. What is the number in your school?—Fifty-two at present.

13,653. Have you had experience of other schools?—Yes, young ladies' schools.

13,654. But in any State-aided schools?—I have not taught in them.

13,655. Do you find any difficulty in discipline, or are they obstreperous?—They are never obstreperous in a body, but individually they are occasionally.

13,656. The result of your experience is that without this physical training it would be perfectly hopeless to do any good with these children?—No, much good had been done before I went to Chapelton.

13,657. But you had difficulty in maintaining them under control?—There were not so many girls at that time. One direct effect I trace to this physical training is the increased smartness of the girls in moving about and in learning to do things, and consequently when they go out they take superior positions—I mean, what are superior positions to them. They become laundresses and housemaids, whereas before they became general servants at 6s. a month to begin with when they went out, and got rarely more than 10s. a month. ^{Physical exercises: beneficial result.}

Miss Kate Hunter.

1 Oct. '02.

Miss Kate
Hunter.

1 Oct. '02.

Manners
improved.

Influence of
parents and
old associates.

13,658. And you attribute a great deal to this development by physical exercises?—Yes, a very great deal.

13,659. *By Sir Thomas Glen Coats.*—Is there an improvement on their accent and the manners of the girls?—Their manner is certainly improved, but the Gallowgate accent seems so deeply embedded in them that it is a decided part of their whole being. In the playground they forget everything but the Gallowgate accent.

13,660. Do many of these girls fall under the influence of their parents or companions after they leave you?—Some do. Nearly all the ill-doing ones are under the influence of their parents.

13,661. But many of them are so strengthened morally that they escape that?—If we place them far away from their parents. We try to keep them a distance from their parents. We are keeping one girl, who was practically kidnapped by her parents for the sake of her box and outfit. She came from England on a holiday, and we had to go for her with a policeman and a detective and deliver her from her own parents.

13,662. Do you find any danger from the old associates?—Yes, if the discharged girls are placed

where there are old associates, but I place one in Saltcoats, and one in Edinburgh, and one in London. They think they are getting together again when they are sent to London, not knowing that it is a Sabbath day's journey from Surrey to Hertfordshire.

13,663. *By the Chairman.*—Have you difficulty in getting people to take them?—No, we have far too many situations for them.

13,664. No difficulty whatever?—None whatever. When they make their own characters after they have been in the situation that I put them into, and if their mistress does not increase their wages and does not wish a trained girl, I tell them to look out for a situation for themselves, and they get offers of situations in good families. That is owing to the character they have earned since they have left us, and I don't appear as referee in that case. They go as independent girls, and I don't even write to them on paper headed 'Reformatory School' in case they should get into trouble that way.

13,665. *By Mr Alston.*—Is it drink that is at the bottom of all this?—64 per cent. have drunken parents, either one or the other, and sometimes both. In the case of the girl that I mentioned, it was drink that was the cause with both parents.

The witness withdrew.

Adjourned.

TWENTY-SEVENTH DAY.

Thursday, 2nd October 1902.

At the City Chambers, Glasgow.

PRESENT:

THE RIGHT HON. THE EARL OF MANSFIELD, *Chairman.*

Sir THOMAS GLEN COATS, Bart.

Mr J. C. ALSTON.

Mr GEORGE M'CRAE, M.P.

Professor OGSTON.

Mr R. B. PEARSON, *Secretary.*

Mr R. E. THOMAS, examined.

Mr. R. E.
Thomas.

2 Oct. '02.

13,666. *By the Chairman.* You are chief instructor of physical exercises with the Leeds School Board?—Yes.

13,667. Will you kindly read your *précis* of evidence?—

Physical Training under the Leeds School Board.—No effort has been spared by the Leeds School Board to make the physical training as thorough and complete as possible. Over 50,000 scholars receive instruction in physical drill, and scholars of the upper standards (IV. to VII.) are also taught to swim. The physical drill is divided into two main sections—elementary military drill and physical exercises with dumb-bells, wands and Indian clubs.

The military drill secures smartness and precision in class movements, while the physical exercises strengthen the muscles and develop the physique of the children.

The work may be most conveniently reported upon under the following heads:—

(a) Evening Classes for Teachers.—To thoroughly ground the teaching staff in the various movements, and thus enable them to efficiently train their own scholars.

(b) Training of children in elementary Board Schools.—By teachers who have received certificates of proficiency under head (a).

(c) Training of children in higher grade Board Schools, with use of gymnasium, by special instructors.

(d) Training of children in Board Industrial Schools.

(e) Training of children in swimming.

(f) Continuation classes.

(g) Inspection.

(a) Evening classes for teachers.—In 1883 the Board established classes in Swedish drill under the supervision of a trained teacher, and this system was continued until 1890, when teachers' classes in musical drill were established at the gymnasium of the Central Higher Grade School. With certain modifications these classes have been continued with conspicuous success to the present time.

Each session extends over twenty weeks, with two lessons of one hour per week. Separate classes are held for head and assistant mistresses and head and assistant masters. Teachers from voluntary schools are admitted on payment of a small fee.

Thorough instruction is given in elementary military

Teachers:
evening
classes.

Course of
instructio

drill, the various turns, forming company, forming fours, etc., and also in physical exercises with dumb-bells, etc. These exercises have been very carefully arranged from simple movements to more advanced, to bring into vigorous action the principal muscles, special attention being given to those of the trunk. The instructor explains the effect of each exercise on the particular group of muscles used in performing the movement.

At the end of the session the teachers are examined, and, if competent, are granted a certificate of proficiency by the Board.

The examination is very searching, candidates having to perform the exercises taken during the course, and to thoroughly satisfy the examiner of their ability to handle a class. 1780 teachers' certificates have been granted during the past eleven years.

The effect of the regular and systematic exercise on the teachers is most beneficial, especially amongst the mistresses. When the session begins the teachers all over show a stooping and inert figure, while towards the end of the course a decided improvement in their carriage and bearing is noticeable. Enquiry amongst the teachers shows that attendance at these classes improves their general health.

In continuation of the evening training classes, Saturday morning has been set apart for recreative classes for those teachers who desire to take a course of gymnastic training. These classes have been well attended by the mistresses, to the manifest improvement of their health and physique.

The exercises are carefully selected, and each student is under the immediate supervision of the instructor.

(b) Training of children in Elementary Board Schools.—Prior to 1895 boys and girls were trained under different systems; the boys were instructed in military drill, with a few extension movements, under the supervision of a drill sergeant, and some of the girls were taught musical drill with dumb-bells and wands.

In 1895 the present system of combined military drill and physical exercises was introduced, subject to certain modifications for girls.

The work is now taken by the teachers, who are responsible for their own classes.

This arrangement works well, as both teacher and children feel the exercise a pleasant change from ordinary school studies, and enter with interest into the various movements. One great advantage is that the teacher knows fairly well the capacity of each child, and can thus relieve the weakly ones from undue strain.

Children unfit for drill are excused.

The exercises are carefully graded, those for the lower standards being simple, and gradually leading up to those for the upper standards.

The exercises are taken in the open air when possible; if the weather be inclement the work is done in the school, and the doors and windows thrown wide open to ensure ventilation. Standing on forms or desks is prohibited.

Special attention is given to marching, so that the children may move in an easy, graceful way. The changing of classes in school is always done to music, and in some of the larger schools it is an interesting sight to observe the smart, graceful way in which the necessary changes are made.

One hour per week is allotted in the school timetable to drill and physical exercises, in two lessons of half an hour. If, however, the attention of the class is flagging at any time during an ordinary school lesson, the children are instructed to stand up in their class places, and a few vigorous movements are taken for two or three minutes: this short exercise brightens the class, and the lesson is resumed with fresh spirit.

Experience proves that a systematic course of physical training has a decidedly beneficial effect on children of a timid and retiring nature, who are stimulated by having to join in and keep up with the others.

It may be pointed out that beyond the physical and mental benefit to be derived from the work, the lessons

of prompt obedience to word of command and of fixed attention to the movement in progress are invaluable to the scholar, and cannot fail have to a salutary effect.

Recognising the value of music as an aid to physical exercise, the Board has provided pianos in most of the schools, and these have been found to add materially to the brightness, precision and finish of the movements.

In the infants' schools various simple drills are taken with musical bells, wands, hoops, etc.; the exercises are made as pleasing as possible, and as each of these departments possesses a piano, the work is made very bright and attractive.

(c) Training of children in higher grade schools.—The Central and Cockburn Higher Grade Schools are each provided with a fully-equipped gymnasium, containing all necessary appliances for thoroughly developing the physique.

The children at these schools are taught (by special instructors) various drills with dumb-bells, wands, and Indian clubs, etc., and also receive careful instruction on the varied apparatus.

In selecting the exercises, an eclectic method has been pursued; no particular system has been strictly adopted, but the most suitable exercises have been selected from each. The movements are graded to suit the capacity of the various classes. No hazardous movements are allowed.

Girls who take gymnastics are required to wear a special costume appropriate to the work.

The effect of regular systematic gymnastic exercise for girls from twelve to sixteen years of age has been found most beneficial. In addition to the two Higher Grade Schools, the Board has provided a fully-equipped gymnasium at Cross Stamford Street School, which is situated in a very poor part of the city. This has proved a centre of excellent work in the district.

(d) Industrial Schools.—The children attending the Board's Day Industrial Schools receive instruction in military drill and physical exercises. At one of these (Edgar Street) a gymnasium has been provided, and the lads are taught elementary work on the apparatus.

The Board has two residential Industrial Schools—one at Shadwell for boys, the other at Thorp Arch, about fifteen miles from Leeds, for girls. Each of these schools has an excellent gymnasium, of which the fullest use is made.

The children take great interest in the gymnastic work, and their physique has greatly improved.

(e) Training of children in swimming.—Recognising the great importance of this branch of physical training, the Board have erected baths at five schools, and as there are five Corporation baths available in various quarters of the city, swimming has been made one of the ordinary subjects of instruction.

The school time-tables have been arranged so that boys and girls in Standard IV. and upwards may visit the baths once a fortnight during the summer season accompanied by one of the teachers.

The squad is restricted to twenty-four children, and the lesson, under a qualified instructor, lasts for forty-five minutes (fifteen minutes for land drill, fifteen in the water, and fifteen for dressing and undressing).

The children are taught the correct ways to approach a drowning person and how to rescue them, and also how to restore respiration.

Very weakly children and any who may have a tendency to fits are carefully excluded from swimming.

The following statistics of attendance and results will give an idea of the work accomplished in 1901:—

Visits paid.	Number under instruction.	Certificates issued.
127,05	9200	1203

In addition to the swimming instruction during school hours, arrangements have been made for the children to visit the baths after school hours—on Saturdays on payment of a halfpenny, and during holiday times on payment of a penny. £170 was taken last year in this way.

(f) Continuation Classes.—In addition to the

Gymnastic
classes for
young men
and women.

evening classes for teachers, the Board has established night classes for young men and women in business. These classes are held at the gymnasia in the Cockburn Higher Grade School at the south end of the city and Cross Stamford Street School in the north district. These classes have been attended with great success. A small fee is charged, which is reduced when the student is attending another of the evening classes.

Instruction is given in the various musical drills, and in elementary and (with men) advanced gymnastics.

A number of young men who have regularly attended these classes have made excellent use of the skill thus acquired by forming and instructing classes in connection with places of worship in the city and district.

Inspection.

(g) Inspection.—Each school is visited three times a year by the chief instructor, to see that the work taught at the teachers' classes is thoroughly carried out. A general report on the school and individual reports on the staff are furnished each year.

In cases where the drills are inclined to be done in weak style, the instructor gives a specimen lesson with one of the classes in presence of the whole of the staff. Weak spots are indicated, and the teachers are shown how to strengthen them.

Cost.—The cost of the Board's system of physical training amounts to £380 per annum.

It is pleasing to note the great interest taken by the teachers in the games of the children. In the playgrounds the staff may be seen vigorously taking part in seasonable games with the scholars, with good results to all concerned.

Athletic sports are organised annually for the children, and prizes are given to the successful competitors in the various standards.

A school football league has existed in Leeds for several years, which has done much to promote a spirit of manliness and fairplay amongst the lads.

It should be borne in mind, however, that as a rule chosen teams of lads from each school take part in football contests, whereas one great advantage of a complete system of physical training is that strong and weak—girls and boys—can participate and derive very great benefit therefrom.

I have given a brief account of our physical training under the Leeds School Board, and shall now proceed to mention one or two matters which may be of interest to the Commission.

I find as a general rule that many schools suffer through not having a suitable place in which physical exercises may be carried on during inclement weather.

When the weather is favourable the work should undoubtedly be done in the open air, but during the winter the drills have often perforce to be taken in the schoolrooms.

We in Leeds are very well off, as many of our schools have large central halls, which are admirably adapted for drilling.

In many schools throughout the country considerable ill-health ensues through the children (the girls particularly) receiving chills while out for drill.

I would strongly recommend that each school should have a special room in which each class might carry on their physical exercises.

It would need no elaborate furniture, simply the bare walls and the necessary racks for the dumb-bells, etc., but it would be a great boon to both teachers and scholars.

I have already referred to the continuation classes we have in Leeds, and I would like to draw special attention to the value of these classes as a means of improving the national physique.

There certainly should exist some machinery for securing the attendance at physical training classes of lads from fourteen to eighteen.

During these years the lads could be harmoniously developed, and at the age of eighteen would be found to be thoroughly well set up and in the best of condition.

I can confidently say from my experience in Leeds, that if work on these lines could be carried out

throughout the land, the national physique would benefit to an enormous extent. We have the raw material, but, unfortunately, for want of proper training it is going to waste.

Young men, after having passed through such a course as I have indicated, would be well prepared and ready for the volunteer or regular service.

Cricket, football and similar games, while admirable in themselves, are not sufficient to develop the frame thoroughly. It is also important to notice that amongst the poorer classes the facilities for indulging in these games are really very limited, and as these classes form a very large proportion of the population, their requirements must not be overlooked.

I certainly think these games should be encouraged as an aid to physical training, and it would be an excellent thing if County and Borough Councils were to provide the necessary grounds for these recreations.

Another point I would like to mention, viz., the tendency in the present day to exalt the 'strong man.' Our object should be not to turn out occasional giants of strength, but to ensure that the bulk of our young people should receive careful physical instruction, in order that the national physique should be of a high average.

There must be some who are naturally gifted beyond others, and who must rise to the top in feats of skill and strength, but I maintain that special attention should be given to the weakly ones, to build up their strength and thus ensure the strength of the nation.

13,668. We are all very much obliged to you for your very interesting evidence, and for your having come to us from such a long way off. I want to know if you can tell the Commission who conducts the examination which you mention as being very searching?—I conduct the examination.

13,669. As well as the occasional inspection?—Yes, by special wish of the School Board. When I went first I did not like the idea, but the Board wished me to do it.

13,670. You are chief inspector and chief examiner also?—Yes, I did not like it myself. I thought that an outsider should come in to examine, but perhaps I am really stiffer than an outsider would be, as I know all their weak points.

13,671. You say that children unfit for drill are excused. Who excuses them?—The teachers. Suppose a child has a badly twisted leg, then he would be excused.

13,672. If a child does not feel inclined, it can apply to be excused?—Yes. We leave it in the discretion of the teacher.

13,673. Are the industrial schools penal schools in any way?—No, the children there are children whose parents won't send them to school, or are children who won't go. If the parents will not send them, then the Board steps in and says, 'You must send them,' and it provides these schools for that class of children.

13,674. What is your procedure?—They summons the parent, and the magistrate gives an order that the child has to go to school.

13,675. Who do they summons the parent before?—The local magistrates.

13,676. Does that often happen in Leeds?—The boy's residential industrial school is for 180, and it is full, and the girls' residential industrial school, which is for 100, is also full. The day industrial schools are for about 120 each.

13,677. They board at the residential schools?—Yes.

13,678. They are taken away from their parents altogether?—Yes.

13,679. And they are thus forced to go to school?—Yes. In the day industrial schools they go for breakfast in the morning and stop for dinner and tea, and then they go home at night.

13,680. How are the continuation classes for young men and women made known?—The Board advertise them, in the syllabus that they issue at the beginning of the winter session, and special bills are also sent round.

Mr. R. E.
Thomas.

2 Oct. '02.

Games should be encouraged.

True object to improve national physique.

Residential and Day Industrial Schools.

Continuation classes.

Cost of system.
Games : interest of teachers.

Athletic sports.

Football League.

Systematic training : advantage over games.

Special hall recommended.

The value of continuation classes.

13,681. Do young men and women attend them who don't go to other classes?—They are not compelled to attend another class, but as a rule they do so. They will join, for example, a class in mechanics and attend the physical class as well.

13,682. But they are not obliged to do that?—No.

13,683. Towards the end of your remarks you rather deprecate the strong man. I suppose that is Sandow's system you refer to?—Yes.

13,684. What system have you got?—I like dumb-bell work and all work with light apparatus, *i.e.*, clubs, wands, etc.

13,685. Is it the Swedish system for boys and girls, or is it the military system for boys and Swedish system for girls that you use?—I don't care for either of them. The Swedish system is too severe and uninteresting, and the military drill is also rather severe.

13,686. That is on children, but not on those over fourteen?—I think it is. We take the best out of the Swedish and the best out of the military drill.

13,687. You have got no named system that you could recommend?—No.

13,688. What you use is a modification of the military drill?—Yes, that is as regards the 'Formation' work. Some of our exercises, such as Indian clubs, are not taken in the Army Scheme.

13,689. *By Sir Henry Craik.*—Do you find any difficulty as to the feeding or health of the children?—Only at certain times, as, for instance, when there are big strikes on, or anything like that, and the parents earn very little. The children are rather under condition then.

13,690. At ordinary times you think the feeding and clothing are satisfactory on the whole?—Yes, decidedly.

13,691. Have you seen any deterioration in physique in the course of your experience?—In certain schools in the lower districts of the town the physique is not up to the physique of the children in the schools in the better quarters. I have been in Leeds for twelve years now, and I think that the physique of the children has distinctly improved.

13,692. You don't think there is any necessity for providing food as a means of developing physique?—No, not in ordinary times, but in times of stress the Board do that.

13,693. Have you ever made inquiry as to the food that they do get among poor children?—Yes, as far as I can from the teachers who visit among the children.

13,694. You have had no crying cases of bad feeding or insufficient nourishment?—No, except at these special times, and they are exceptional, the times when the parents are not earning money, and as they have no reserve they have to live from hand to mouth. If it was not for the teachers, the children would come off very badly.

13,695. At these times do you lessen the physical exercises?—Yes.

13,696. You find that it is not possible to do the exercises when the feeding is less?—They are very much weaker, and not able to take physical exercise. Even then some of the children are so proud that they prefer almost to starve than to accept food at the hands of the teachers. The staff go down about 7.30 or 8 o'clock in the morning and prepare soup and get everything ready, and the children have simply to come and take it, but, as I say, some of the children don't seem to care to come. In all cases like that the teachers use their discretion, and if they see that the children are insufficiently nourished, they only let them take a little physical exercise.

13,697. In these continuation classes you come into close contact with the older boys of fourteen to eighteen?—Yes.

13,698. Do you think that physical exercise is very important for them?—Yes.

13,699. Would you be prepared to advocate a compulsory system?—Not at first. I should advocate for three years a system of classes like we have in Leeds, attracting them so far as you can, and if they

don't come then there would be nothing else but to make it compulsory. I think I should give them a chance first by offering prizes and so on.

13,700. Do you think it would be a good thing in the Code to make physical exercise a necessary part of these continuation classes?—Yes.

13,701. You don't think that any pupils would object to that?—I don't think so.

13,702. You say that your system of physical training costs the Board only £380 a year?—That is the cost of the special instruction. Of course the teachers take their own classes and are responsible for them, and practically the only extra expense is the expense of the instructor and assistants to teach the teachers. That is what I mean by that £380. Of course you cannot very well divide the teachers' time and say that so much must be given to teaching physical exercise.

13,703. There may be further expense due to a slightly increased staff?—I don't think so.

13,704. The teachers don't complain that it is imposing an undue burden on them?—At first they did, but they don't complain now.

13,705. A little management got over that?—Yes, a little tact. We compel the teachers to attend the night training classes unless they can produce a doctor's certificate stating that they ought to be exempted. If we get a teacher fresh out of College, we give him some twelve months to turn round, but after that every teacher, male and female, has to attend these classes. They disliked it at first, but they have fallen in with it, and find that it really does them good. When they come in at first I notice that they are stooping and quite limp, and all that, but they are very well set up by the end of the term.

13,706. What you do might be extended to all teachers under School Boards generally?—Yes.

13,707. What proportion of the children in Leeds go to the School Board schools.—There are about 80,000 children in Leeds, and of these about 50,000 go to the Board schools, and 30,000 to the Church schools.

13,708. Is there any system of physical instruction given in the Church schools?—There is no organised system like what there is under the School Board, but many of the Church School teachers have attended these classes and teach their children.

13,709. You don't inspect these schools?—No, I have nothing to do with them.

13,710. *By Sir Thomas Glen Coats.*—You give one hour per week to the children?—Yes.

13,711. Do you consider that that is quite sufficient?—No.

13,712. You would rather give more?—Yes; I would recommend half an hour a day. I put that point very strongly before the Board, but they shake their heads and say that physical exercise is not the only thing in the course. What I have got is all that I can get.

13,713. Are there any military or ex-military instructors employed?—There is just one sergeant-major who comes for one hour a week to the central higher grade school. He really came before I was there, and they kept him on. He just comes for an hour on Friday afternoon and puts the pupils through a few turns and extension movements, and that sort of thing.

13,714. In the Board Schools your teachers, both men and women, are of different ages?—Yes, we have them from twenty years to sixty years of age.

13,715. Do you find all the teachers capable of receiving instruction and imparting it?—Yes, except the cases I have mentioned where they have a doctor's certificate. They may not all be able to receive the instruction perfectly, but still they can teach it.

13,716. Are your schools mixed schools?—I have all kinds of schools—some mixed, some boys', and some girls'.

13,717. Would you have the boys and girls taught in the same classroom?—Yes, that is done in the ordinary work.

13,718. But would you have the physical drill done

Mr. R. E. Thomas.

2 Oct. '02.

Teachers compelled to attend evening classes, unless medically exempted.

Teachers.

Boys and girls.

Mr R. E.
Thomas.

2 Oct. '02.

that way?—As a rule we arrange it this way; there are two classes, and one teacher will take the boys from each class, and another teacher will take the girls, so that the boys drill by themselves and the girls by themselves. They are also taught together.

13,719. Do you find that the female teachers can instruct the boys, or do they instruct the boys at all?—Yes, the junior boys.

13,720. The quite small boys?—Yes, up to about nine or ten. In fact, I find some of the lady teachers quite as smart as the men, and quite as capable of giving instruction. They are very clever.

13,721. You have splendid facilities for teaching swimming in Leeds?—Yes.

13,722. In your £380 you have not included the swimming?—No.

13,723. That is rather an expensive item?—Yes.

13,724. From what you say, I take it that the young people who attend the evening continuation classes are rather a superior class—they are not those that we might perhaps most wish to get into classes of that kind?—They are mostly young mechanics and girls in shops.

13,725. Who are willing to pay something?—Yes.

13,726. You induce them to take the other classes by reducing the fee for the gymnasium?—Yes, with a fee of 3s. 6d., 2s. 6d. would be for one class and 1s. for the gymnasium, and that will last for the whole of the winter course.

13,727. You don't get the loafer class?—No, those are all young men and women who want to advance themselves and to get on.

13,728. Have you any suggestion to make regarding the teaching of that loafer class?—I think the only way is to try persuasion as it were for a term of years, and then if you find that it does not do, you can make it compulsory that they must attend these classes. Many of those who attend continuation classes start classes of their own and get hold of a lower substratum, as it were, than we perhaps get into the gymnasium.

13,729. *By Mr Alston.*—In answer to the Chairman, you mentioned that it was you, I think, who grant the certificate?—The School Board gives the certificate.

13,730. Upon whose dictum?—Upon my dictum.

13,731. How many special instructors are employed in the gymnasium?—There are three—myself and two assistants.

13,732. Who conducts the evening classes?—I do most of the teaching in the evening classes.

13,733. You use a modified system of the Swedish and military drill. Have you published any book on it?—No, we have just a pamphlet for our own use.

13,734. You find both of these systems to be a little trying for the pupils?—Yes. The Swedish system is overladen with words of command, and the exercises are too severe for the children, so that we have practically dropped it. We use just enough of the military drill to get the children to fall into their places smartly in order to do the physical exercises.

13,735. That brings us to the question which has been constantly before the Commission, whether one uniform system which was wide enough would not be an advantage so that the teachers might extract from it what they found to be most suitable. Would you advocate that?—I am rather opposed to any fixed system, as it gets a little bit hard at times.

13,736. But if it were wide?—It would all depend on the width.

13,737. It might be wide enough for all the schools in the country?—Yes.

13,738. That would have an advantage in many ways?—Yes, a teacher who was going from one school to another would always know the work.

13,739. You speak of the use of pianos in schools. Have you found musical drill to be a great advantage?—Yes.

13,740. The teachers give the children a thorough grounding before the musical accompaniment is given to the drill?—Yes

13,741. Do you find any objection to the use of music?—They are not allowed to take the drill with music until they can do the exercises perfectly without it. The music is a great improvement; it makes the children work brighter and more smartly.

13,742. But you do take careful note that they are doing the exercises properly even when the music is being played?—Yes.

13,743. You make a considerable demand upon the School Boards and the community for space and expenditure for the provision of physical training?—Yes.

13,744. Would it be possible to provide special rooms for physical training when you consider that the expenditure of School Boards upon special rooms for teaching is already very large?—I think it would be possible in this way: in Leeds we have a number of central halls which are very advantageous, and then we have a number of covered sheds in the playgrounds where the children go in wet weather. Now, my idea would be to utilise these sheds by putting a wooden floor on them which would not cost a great deal.

13,745. Would you not prefer a shed with a roof, but open at the sides?—No, it is too draughty, and is particularly risky for the girls. In November, I have found the children shivering away, and then, of course, I have ordered them in.

13,746. You would not have compulsion till the very last moment?—That is so.

13,747. And then it would be for boys over fourteen?—Yes.

13,748. *By Mr Shaw Stewart.*—In reply to Sir Thomas Glen Coats, you made a very interesting statement, that in connection with the continuation classes the boys themselves started classes of their own and reached those that did not come to your classes. Is that done on any large scale?—Yes, in one of my classes at Cross Stamford Street I had about twenty, and nearly every one of these began teaching classes of their own in the slums of Leeds.

13,749. In what rooms did they teach their classes?—Church rooms, Sunday Schools, and that sort of thing—mostly Chapel Sunday Schools.

13,750. So the ordinary work of continuation schools acts in two ways?—Yes, it has done that with us. Of course, there is a society, the National Physical Recreation Society, which exists to form classes like that. That society provides teachers for these slum classes, as it were.

13,751. But I understood from you that this was done in Leeds on the initiative of the youths themselves?—Quite so. Some of them may be eighteen or nineteen when they come to us, and they stay on till they are perhaps twenty or twenty-two.

13,752. We had some evidence with regard to the teaching of swimming from Mr Alexander, the well-known expert in physical training, and he drew our attention to the way in which you taught swimming at Leeds. He said that the teacher 'teaches the boys and girls the swimming drill on land, so that when they go into the water to swim, they won't receive the instructions of their teacher while they are half choked with water; they know what they have to do when they do get into the water, and go straight at it instead of shivering and waiting for instructions.' Do you find that system to be very valuable in saving time in imparting instruction?—Yes, especially in the life-saving. It is just simple movements to show them how to move their arms and limbs. If you give them that instruction while they are in water, then they shiver away, so we therefore give it on land.

13,753. *By Mr McCrae.*—You are fully impressed with the advantage to the pupils of continuation classes. How long have those classes been carried on in Leeds?—About eleven years.

13,754. Is that since the classes were started for mental work?—Yes.

13,755. Did these classes follow the classes for mental work?—Yes, the evening classes were started two or three years before that. When I came to Leeds I introduced these physical classes.

Mr R. E.
Thomas.

13,756. Will there be continuation classes for every Board School in Leeds?—No, they are grouped.

13,757. In certain centres?—Yes.

13,758. You say that you have one in Cross Stamford Street in a very poor part of the City. You charge a small fee for that also?—Yes, about 1s.

13,759. That is for the whole session?—Yes.

13,760. Do you remit that if they take other classes?—No, that is the reduced fee.

13,761. What if they don't take other classes?—As a matter of fact, they do.

13,762. There are very few who go in for physical instruction alone?—Very few.

13,763. You say you are against compulsory physical training for lads between fourteen and eighteen, and you advocate the trial of a voluntary system for three years?—Yes.

13,764. Your classes have been going on for a much larger number of years than that. What difference would you suggest in your method?—We attract rather a different class of people than you want to touch. Those we have are young fellows in constant work, and I take it that the ones you want to get hold of are those who are not in constant work, particularly the loafing kind.

13,765. How would you get hold of them by voluntary effort?—By advertising it widely and offering rewards for regular attendance. I think that if it was started it would spread.

13,766. Would you go the length of saying that to make it attractive it should be altogether free?—Yes, I think so.

13,767. There should be no charge at all?—No.

13,768. How long have you been chief instructor?—Twelve years.

13,769. How long have you been examiner?—Twelve years.

13,770. Were you trained in any particular system of physical gymnastics before that?—I was trained at the Liverpool Gymnasium, but we had no set system; we took the best out of each.

13,771. Have you ever considered the possibility of the Corporations of the large towns providing gymnasia for the use of the lads of the city?—Yes, I have approached the Leeds Corporation indirectly about that, but the extent they have gone to is to provide a few open-air gymnasia without instructors. These are worse than useless, as the floor is simply hard concrete or ashes, and children are apt to come down when swinging and break their limbs. They would be better without those. Proper supervision must be given if these gymnasia are to be of any good. The Corporation have altered one small swimming-bath into a gymnasium.

13,772. Supposing such gymnasia were established, would you suggest that they should be under the control of the municipality or the control of the education authorities?—I am afraid it would have to be the municipality. The education authorities would have no *locus standi*, as they would not be schools in any way.

13,773. If it were a good thing that the education authorities should have control, of course it would follow that they would establish the gymnasia?—Would they establish them as a sort of continuation class?

13,774. I was putting to you which body you thought would have the best control over the boys. That might be an element in deciding who were to provide the gymnasia?—I think the local authority would be the best.

13,775. Better than the educational authority?—Yes, they are more on the spot.

The witness withdrew.

Mr ROBERT WILSON BRUCE, L.F.P.S.G., examined.

13,776. *By Professor Ogston.*—Will you kindly state your qualifications?—I am a Licentiate of the Faculty of Physicians and Surgeons in Glasgow, and Medical Officer to the Glasgow School Board and Eastpark Home for Infirm Children, Glasgow.

13,777. We shall be obliged by your reading over your statement of evidence?—

The tenements in the district to which my statement specially refers, and in which the greater number of the children attending Dobbie's Loan School reside, were all erected previous to the formation of a sanitary authority. They were not originally provided with sanitary conveniences, but, in accordance with the requirements of the Health Department, water-closets have been provided for the tenants on each floor, and there is a water supply in most kitchens. There is little back-court accommodation, and many of the stairs are dark and ill-ventilated. The houses are chiefly those of one and two apartments, the larger houses having been subdivided. The occupants of these tenements are generally unfamiliar with the rudimentary laws of health, or they do not act in accordance with their knowledge. An open window, in the full sense of that phrase, is a luxury they seldom experience, their ill-ventilated rooms get close and offensive, and the children reared under these conditions must necessarily suffer in health and be unfit for severe physical exertion or endurance.

I do not mean that there are no healthy houses in the district, or that the bulk of the children suffer from impure air. My visits are mostly made to the homes of School Board defaulters, and to those who have sick and infirm children of school age. What I see convinces me that unthrift is very general, that dirty, disorderly, and ill-ventilated rooms are common, and that though the children get enough to eat it is not of the proper quality, and does not yield sufficient nutriment for healthy growth.

As illustrative cases, I submit some visited recently in the ordinary course of my work—

(a) Maitland Lane, two apartments in close. Kitchen, two beds, fairly clean. Room said to be damp, contains frame of an old bedstead and some other articles of broken furniture. The floor is littered with small coal. Household consists of husband, who won't work; wife (with a black eye) nursing a baby; girl, fourteen years, who cleans stairs; boy, eleven years (school defaulter), sells newspapers; two younger children, at present in hospital with scarlet fever; and a sickly baby in cradle at bedside—seven inmates in all. The wage-earners are the boy and girl. Food—breakfast: tea, bread, and jelly; dinner: 'any scraps girl picks up after telling her story' or gets from people whose stairs she cleans; supper (if any): tea, bread and jelly.

(b) Milton Street, two apartments. Kitchen looks to back court, room looks to lane, both dark. Household consists of husband, wages 35s. per week; wife, domestic; boy, seventeen years, 6s. per week; girl, fifteen years, 2s. per week; and four younger children. Food—breakfast: porridge and milk; dinner: bread and milk; supper: broth, beef, and potatoes. (Intemperance.)

(c) Soho Street, East End, two apartments, rent 11s. per month; furniture, two small tables and stool, mattress in kitchen with bedcover, mattress in corner of room. This is all the furniture. Household—husband and wife and five children. Eldest boy, twelve years, at school; another boy, ten years, in bed, dirty and naked, with counterpane for only covering, said to take fits. Food—breakfast: porridge and milk; dinner: tea and bread; supper: potatoes, and sometimes with meat. Earnings, 23s. weekly.

(d) Marshall Street, city. 'Farmed-out house, one room in close, looks into court, very dark, rent 5s. per week. Furniture provided, which consists of table, with school form, an ordinary kitchen table, two chairs, two plates, two jelly mugs, two bowls, two tin dish covers, and some broken hyacinth bottles, two pots and one frying-pan, wool mattress, one sheet, two pillows,

one thin bedcover (no blankets). Household—Husband and wife, two children; boy, ten, at school; boy, seven, deformed (rickets); wages, 28s. per week. (Intemperance. Food—(breakfast: porridge and milk; dinner: potatoes and stew; supper: tea, bread and cheese.

These cases are cited to show the squalour and discomfort of the homes, the intemperance and improvidence of the parents, and the consequent hardship experienced by the children. In houses of a different type, which are clean and tidy, and show no signs of straitened circumstances, the air space is often unduly encroached upon by needless furniture. The concealed parlour bed is used as the family wardrobe, and the kitchen shelves are crowded with crockery ware for mere show. Windows are closed to keep out the dust and the blinds drawn to save the carpet from the sun. Recently, in a house showing signs of poverty, I was surprised by the well-stocked dish shelves, but the surprise took another form when I learned that the dishes were all broken, and only kept to give the house a 'bein' look.'

Food.

Food.—The dietary in three of the stated cases is very satisfactory, but I am all but certain that tea was more frequently used than my informants cared to admit. A meal which is easily cooked, though it is of low food value, is preferred to one of richer nourishment, which takes time to prepare or trouble to cook. It is largely from that cause that porridge, broth, and potatoes have disappeared from the meals of the poor. Bread, cheese, ham, jelly, and butter, with tea, are the articles out of which most meals are now formed. My experience amongst industrial school children confirms me in this opinion, and the shopkeepers in the neighbourhood of Dobbie's Loan School, whom I consulted, had the same conviction. I tried to find the dietary of the girls and boys in the senior class of Dobbie's Loan School—there were over thirty in each class. Of the girls, fourteen had tea and bread for breakfast, the others in the class got porridge. For dinner, nine had tea and bread, the others had soup and potatoes, etc. For supper, all had tea. The boys, for breakfast five had tea and bread, the others had porridge. For dinner, four had tea and bread, the others had soup and potatoes. For supper, four had porridge, the others had tea and bread.

Clothing.

Clothing.—There can be no doubt that in cold weather the clothing of many boys is far from satisfactory. It is difficult to state precisely what should be worn in order to preserve health. The housing and also the feeding of the boy needs to be considered. A well-fed boy, who sleeps in a healthy atmosphere, can endure cold better than one who is badly housed and improperly nourished. It is generally held that woollen underclothing is a necessity of our climate, yet a large proportion of boys never wear flannel underclothing of any sort. They are clothed in accordance with the resources of the parents, there is no uniformity of material, style or colour. Were mothers able to patch, darn, and sew on buttons, and did so, much of the boys' hardship would be removed, and the indescribable and shivery garments so mysteriously but literally held together by 'buttons, thrums, and skewers' would become (if less picturesque) more comfortable and decent. Many boys attend school during the winter months with bare feet.

Health.

Health.—I was impressed while watching the younger children mustered in one of the school playgrounds by the number of pale-faced boys who were small in stature and had deformed limbs. Immediately afterwards, I was taken to one of the senior classes and asked the boys to stand up, but found very few who were undersized or unhealthy in appearance. A teacher said his boys would compare favourably with any of those in more salutary districts. I am not able to explain this disparity, and am wondering if it is only an illustration of the law of the 'survival of the fittest.'

During the first six months of this year over 350 visits were made by me to children of school age, who

were asserted to be ill and unattended. Their ailments I tabulate:—

General (simple and not easily classed)	92
Rickets	42
Eye Disease	33
Skin Disease	30
Imbecile and Defective	28
Struma	26
Lung Disease	23
Spine Disease	21
Paralysis	16
Heart Disease	10
Mumps	7
Hip-joint Disease	6
Deaf and Dumb	6
Rheumatism	5
Fits	4
Ear Disease	3
Congenital Deformities	2

Mr. R. W. Bruce,
L.F.P.S.G.
2 Oct. '02.

Ailments of school children.

From this list it may be inferred that many of the ailments of the young are due to bad hygienic conditions, and that with better homes, good food, warm clothing, and proper exercise, much suffering would be prevented. The sickly and deformed would all but disappear, and a new race of healthy, romping, joyous children would take their place. A marked improvement has taken place in the health of the poorer children of Glasgow during the last twenty-five years. This is due greatly to the working of the City Improvement Act, which secured the removal of insanitary property and let sunshine and air into others, to the better constructed schoolrooms, where so much of the children's time is spent, and to philanthropic and other agencies, such as—East Park Home for Infirm Children, Poor Children's Dinner Table, Fresh-Air Fortnight, Charity Organisation Society, and Parochial Boarding-out, specially devoted to their benefit. The improvement has been marked by the decrease in rickets. Though this disease is still prevalent, the cases are not so numerous, nor is the type so severe as formerly. I am of opinion that country children are physically superior to urban children, but they are not mentally superior. I have visited schools all over the country, where our boarded-out children are placed, and the statement of the teachers generally was in favour of the city children.

Health of poorer children improved during last twenty-five years.

Country and urban children.

Mr James R. Motion, inspector of Glasgow Parish, states that the children boarded out have added considerably to the smartness of the country children, and have contributed greatly to the increase of the Education grants.

Drill.—I am strongly in favour of physical drill at school. It is one of the influences at work to raise the standard of the citizen. I have, during the history of the Glasgow Board, only met with one case of illness, said to be due, but falsely, to the school physical exercises. At Mossbank Industrial School, where there are about 400 boys having physical drill for one hour daily, I have never heard of illness as a result. The whole drill is not given at one time, but is distributed throughout the day. All the boys are well fed, well housed, and warmly clothed.

Physical drill beneficial.

I am in opinion that ordinary school boys in districts like those under consideration should not have much drill at a time. I would prefer that they receive a little, and often. Prolonged drill would tire and unfit them for the other work of the school.

13,778. In all those drawbacks to health which you have mentioned, and which, I suppose, we might call the accessories of civilisation, you place bad ventilation and bad feeding in the fore-front as producing defective health and defective development?—That is my experience.

13,779. I suppose the cure for that is to be looked for in better information among the working classes regarding those subjects rather than in the introduction of any physical training?—I believe so.

Physical education plus physical training.

13,780. But you think that physical training would assist in diminishing those evils?—Yes, the children being, of course, taught the reason of the physical training.

R. W. 13,781. And they in their turn becoming parents
and wiser?—Yes.

uce, F.S.G. 13,782. Out of 350 ailments, you have 42 rickets,
21 spine disease, 16 paralysis, 6 hip joint, and 2
congenital deformities. Those are all bad cases that
would be very striking in the children drawn up in a
row?—Yes.

13,783. You have very famous surgeons in Glasgow,
and a number of these cases would be treated in
hospital and the deformities rectified?—Most of the
children that are here don't go to the hospital.

13,784. So that would not explain the improvement
in the senior class?—I don't think so.

13,785. As you say, the only reason for that im-
provement may be the law of the survival of the
fittest?—Yes. I think the mortality among children
in this particular district is pretty high.

ry and 13,786. You consider that country children are
physically superior to urban children. You have had
opportunities satisfactory to yourself for coming to
that conclusion?—Yes. In connection with the Parish
Council of Glasgow, of which I am a member, children
are boarded out all over the country. I have visited
those children, and it is quite apparent that they are
smaller than the country children, but then they are
brighter, more alert, and do their lessons better.

13,787. You don't think that physical perfection
and mental acumen naturally go together or are
inseparable?—I don't think they are inseparable.

13,788. Do you think that if the physique were
improved you would have an improvement in the
mind?—Yes, I think so.

13,789. *By Mr Shaw Stewart.*—I would like to ask
you about the diet. Of course you would rather see
more milk in the diet?—Yes, and more oatmeal.

13,790. Is the disuse of milk due partly to the
easier way in which a meal is got from tea, or is it also
due to the greater expense of milk?—It is due very
often simply to carelessness on the part of the people,
and to the fact that they prefer tea. Very young
children are brought up on tea.

13,791. But do they prefer tea because it is more
easily made and handier to get at, or do they use tea
on account of the expense and difficulty in getting
milk?—I could not quite say.

13,792. I suppose milk is sold in the district you
refer to?—Yes, it can be quite easily got, but an
infusion of tea goes a very much longer way; I have
no doubt that the expense has something to do with
it in many cases.

13,793. You said that in one house showing signs
of poverty you were surprised by the well-stocked dish
shelves that were kept for show. I suppose there is
some value in that show of well-kept dishes. Does it
not show that there is some little self-respect and a
wish to keep the place tidy?—Yes. The house I was
visiting was a clean house.

13,794. *By Sir Henry Craik.*—Your visits are mostly
made to the homes of School Board defaulters?—Yes.

13,795. You don't pay any general visits to the
schools under the Board?—Not unless I am sent for.

13,796. If you were to do that, then additional
medical officers would be required?—Yes.

13,797. Do you think that such visitation would be
useful and important?—I don't think so. They are well
supervised by an inspector in connection with the Board.

13,798. Is that sanitary inspector sufficient without
any medical inspection of the children?—Yes. The
teacher when he notices anything sends for the medical
officer.

13,799. That must be rare in ordinary schools?—
Yes, it is rare.

13,800. There might be cases of defective eyesight,
or other things of that sort which the teacher might
overlook?—That is so.

13,801. You don't think that is sufficient to induce
you to have a general medical inspection of the schools?
—No.

13,802. *By Mr Alston.*—You said in one part of
your evidence with regard to the diet that the children
got enough to eat, but what they did get to eat was
not of the proper quality. Is that the case with the
children in such a district as Dobbie's Loan?—It very
largely prevails.

13,803. They do get enough to eat?—They get
what satisfies them—they get bread, jelly and tea.

13,804. What they get to eat is not proper for
growing children?—That is so.

13,805. You took a census of thirty boys and thirty
girls and put down the number who take tea and bread
and the number who take proper food. It appears, if
you add these up, that there is a very considerable pro-
portion of good diet in both classes, but especially
among the boys?—That is so.

13,806. Adding up the figures for the 30 boys, I find
that at 55 meals they got good food and at 35 meals
they got tea and bread; whereas with the girls, at 53
meals they got indifferent food as against 37 meals of
good food. Is it the case that the girls take tea and
bread and the boys crave for something better and get
it?—That is often the case.

13,807. From your visits to the industrial schools,
you know the condition of the children before they
are sent there and the condition in which they
appear when they have been there for some months.
Do you attribute the chubby faces and appearance
of health to the good and regular food that they get in
these schools?—Yes, and the good clothing.

13,808. It comes to this, that if in all the Board
Schools where the poorer classes of children attend, you
had good food and suitable clothing, then you would
make a new race of them?—Yes.

13,809. *By Mr McCrae.*—You say there has been a
marked improvement in the health of the poor children
during the last twenty-five years, and you attribute that
to the improvement schemes of the Corporation. Do
you find that those people generally appreciate the better
homes that are now provided for them?—I am sorry
to say that I do not.

13,810. In the matter of cleanliness, you think that
there is still great room for improvement?—Yes.

13,811. Is there anything that you yourself, with
your large experience among these poor people, could
suggest to bring about a better state of matters?—You
can only do it by teaching the children.

13,812. You mean starting with them and instilling
into their minds the necessity for better health condi-
tions?—Yes, I think it is impossible to deal with the
adults.

13,813. You say that it is generally held that
woollen underclothing is a necessity in our climate.
Is that your own opinion?—Yes.

13,814. I don't want to draw you into the contro-
versy as to whether woollen or linen clothing is the
better, but you think that woollen underclothing is a
necessity for this climate?—Yes.

13,815. *By Professor Ogston.*—Has every School
Board in Scotland got a medical officer?—I don't
think so.

13,816. Would you approve of every School Board
having its medical officer?—Yes.

13,817. He could maintain a supervision over the
health of the children, which would not necessarily
imply an extremely elaborate examination, and that
would be beneficial?—That is so.

13,818. When you said that medical inspection was
not desirable, you referred more to the registration of
every little ailment?—Yes, I thought the gentleman
who was asking me the question referred to the
individual schools.

13,819. You would approve of general medical
inspection?—Yes.

13,820. If physical training were made compulsory
in the Board Schools, you would think that such a
general medical inspection would be more desirable?—
Yes.

Professor Sir WILLIAM TURNER, K.C.B., M.B., LL.D., examined.

Prof. Sir
Wm. Turner,
K.C.B., M.B.,
LL.D.

2 Oct. '02.

13,821. *By Professor Ogston.*—You are Professor of Anatomy in the University of Edinburgh and President of the General Medical Council of the United Kingdom?—Yes.

13,822. We have had in the course of the evidence submitted to this Commission, a great number of statements made by those who are by no means skilled in scientific matters, and it is therefore very desirable that we should have the pronouncement of an authority on a number of those. I would therefore put a few general questions to you which your high position would enable you to answer. Does your science enable you to tell the Commission whether physique and intellect go together?—That is rather a wide question to put to me, but I have no hesitation in saying that physical exercise is of the highest importance in connection with the development of the body generally. The brain, for example, is something more than a centre of intelligence. It is the great centre of movement of the body, and regulates these movements; it is also the great centre of sensation, and the fact that it is a centre of movement and a centre of sensation will show that there must therefore be an intimate relation between the motor and sensory systems of the body and the brain. We cannot look upon the brain solely as a centre of intelligence.

Importance
of physical
exercise.

Intellect and
body: tallest
races not the
highest
intellectually.

13,823. Are you able to tell us whether the biggest races are intellectually the highest?—What exactly do you mean? Do you mean the tallest races?

13,824. Yes. In the history of the world have they been intellectually the highest?—I am not prepared to say that. The race that is by repute the tallest race as regards the average height of its men, namely, the Patagonians in South America, have no reputation for special intelligence, and I am not prepared to say that even among Europeans the tallest races of men are more intelligent than the shorter races. Take, for example, those parts of Great Britain where you get the tallest men, namely the Border counties and the eastern part of Yorkshire,—I am not prepared to say that they are superior in intelligence to men in other parts of the country where the average stature is not so great.

13,825. I suppose it would also follow that it is by no means true that the biggest individual is the most intellectual?—Certainly not.

13,826. Could you tell us whether the races that have had the best physique, apart from height, have been the highest in the scale of civilisation in the world?—We have a very remarkable example of the co-relationship between physical development and the very highest mental development among the ancient Greeks. That, I suppose, would be generally acknowledged. But I am not prepared to state that in all races of men these two characteristics are so precisely correlated as existed among the ancient Greeks.

Physique
and mental
development.

Physical
excellence
and mental
capacity.

13,827. Therefore, in considering the possibilities of our own race, and its prevailing in the struggle for existence, it by no means follow that physical excellence is to be placed extremely high?—Well, physical excellence in the struggle for existence must be associated with mental capacity. You must have the two associated together in order to obtain the highest place.

Effect of
civilisation.

13,828. Many of our witnesses have told us that the general effect of civilisation has been to impair physical development?—I am not prepared to take up that position.

13,829. Would you say that if it were true that it was inherent to civilisation, it was due to its accessories, such as crowding, bad ventilation, feeding, and so on?—In all these matters we must take into consideration the conditions of life of the individual and of the people. We must take into consideration whether the people can breathe a pure atmosphere, whether they have proper food, whether they have opportunities of undertaking that amount of physical exercise which is necessary for the proper development of the body, and for keeping the body in a proper state of health. I consider that all these are essential

if you wish to get the *mens sana* and *corpus sanum* properly conjoined with each other.

13,830. Would it be possible for you to say that you are satisfied that the conditions of life in cities have been proved to deteriorate the race?—I think there can be no question that when the conditions of life are unsatisfactory the race must deteriorate.

13,831. Do you regard this deterioration as temporary or permanent?—That is difficult to answer. If these conditions of life tended to the propagation of tuberculous affections and of such affections as deteriorate the proper performance by the body of its functions, then there must be an effect which is not limited to one generation, but which would affect subsequent generations.

13,832. In considering the question of education, and especially the two forms of it—mental training and physical training—do you consider that this Commission would be justified in giving physical training a subordinate place to mental training, because physical training aims at maintaining and perfecting bodily qualities that already exist in considerable perfection, while mental training aims at conveying what does not exist or which is merely rudimentary?—I should hold physical training to be an essential part of education, but at the same time it must not take so large a place in any system of education as to dominate the mental training. I think that for the proper preservation of the body in a state of health, so that the best use may be made of the mind and for the training of the mind, there should be a certain part of time set aside for physical training. I would not venture to give a definite opinion as to what amount of time should be set apart, because that is rather a matter for those who are engaged in school education to express an opinion on, but, at the same time, I should hold that a part of each day should be set aside for body training in addition to what is occupied with the mental training.

13,833. I suppose if we had to deal with children living in a state of nature, such as Arabs, Basutos, etc., physical training would be quite superfluous?—In connection with that matter, I don't see how this Commission can leave out of consideration the conditions of life under which our children are living. It must be obvious that a child living in the country is very differently situated from a child living in the town, and even children living in town are differently situated. Take boys educated at the Edinburgh Academy, where there are abundant means of recreation in their play-fields, and boys educated in a Board School in the Cowgate, where the provision for exercise is limited to a mere yard round the school, my feeling is that in any resolution which this Commission may come to in connection with this matter, they cannot lay down a hard and fast rule; the rules must have a certain elasticity, so that they may be adapted to the various conditions of life of school children, not merely as regards their residence in town or country, but adapted to the varying circumstances of parents, to parents who are comfortable in their circumstances and who can provide their children with proper food, and to those, on the other hand, who are poor and who cannot provide their children with the due amount of proper food. I feel that all these things would require to be taken into consideration in the formulation of any administrative system, and therefore you cannot lay down a hard and fast rule which is to regulate everybody's children. I think that that meets your point, sir.

13,834. Yes, entirely. Do you think we would be right in considering as the chief aim of a physical training that it should correct the defects entailed by civilisation?—If the so-called civilisation signifies living in insanitary houses, inability to receive or obtain exercise under healthy conditions, I think it would be a very wise piece of statesmanship if something could be done to remedy such conditions and to give the children a purer and happier life.

True aim
of physical
training.

13,835. Do you consider that if physical training were pushed to such an extent as to produce athletes and acrobats it would be conducive to the health of the community?—No. It is not our business to produce athletes and acrobats. That is a personal matter; it is not a State question.

13,836. One of the aims of physical training should be to produce certain limited results in the way of evolving healthy individuals, doing away with the evils that are entailed by their environment?—Yes, I should hold that.

13,837. Regarding physical training as a matter with which science may deal, does it increase the muscular development?—I have no doubt it does.

13,838. Does it strengthen other parts besides the muscles; does it strengthen the ligaments and harden the bones?—The muscles act on the bones in such a way that undoubtedly they strengthen the bones. If you compare the skeleton of a highly-muscular individual with the skeleton of a person who has not got a corresponding muscular development, the bones at once show which is the skeleton that has belonged to the muscular person and which is the skeleton of the feebly-muscular person. For example, we can at once distinguish the skeleton of a man from the skeleton of a woman, because a man, as a rule, exercises his muscles much more than the woman does, and we can tell which are the man's bones by their character.

13,839. Do you consider that it has a similar beneficial effect on digestion, respiration, and circulation?—Yes, certainly.

13,840. Those improvements would be of slow course?—I don't know. I must ask what you mean by slow. How long a period of time do you mean?

13,841. Requiring months and years to produce, not days or weeks?—It would require some months.

13,842. Would the improvement be permanent?—I am not prepared to say how far it would be permanent.

13,843. A statement was made to us that physical training would prevent left-handedness. Do you think that is possible?—I should not be prepared to accede to that proposition.

13,844. Or left-eyedness?—No.

13,845. A sudden alteration of shape, length, and bulk is not to be expected from physical training?—That would depend very much upon the particular form of physical training. That expression, 'physical training,' covers a great deal, and it covers variations in the methods. For example, I would take physical training to cover such things as the ordinary games of the schoolboy (I need not particularise them), gymnastic exercises carried on with a proper teacher in a systematic way, drill of various kinds, and then there is that very special form of physical training which Mr Sandow has introduced and made so much of. That system of his seems to me to be one that has for its special object the development of the muscles, and by this muscular development the enabling of a person so trained to exercise very remarkable feats of strength. In fact, I think he calls it 'strength culture,' as far as I remember. There can be no question at all from what I have seen myself that by his method you do get most remarkable muscular development. He has it in himself and in his pupils. I have had some of his pupils attending my class in Edinburgh, and I have examined them and heard what they have to say as to the methods of training they have gone through. There can be no question in my mind that Sandow's system does exercise a very remarkable influence on muscular development. How long that would last, unless the method of training is kept up, I don't know. I don't think that we have yet had sufficient experience to say definitely how long it might last.

13,846. Many of the enthusiasts in physical training who have appeared before us have detailed changes produced by it which seem almost miraculous, whereas to me as a member of this Commission it seems that possibly the improvement there might be explained by the mere improved carriage the of individual, that instead of the slouching figure and contracted chest, the improvement

in height, in chest girth, and so forth that have been recorded might be due to the improved carriage. Could you help us in regard to that?—I can only speak from personal acquaintance with what I have seen regarding Sandow's system. There can be no question at all that there is, by the use of that system, an extraordinary muscular development.

13,847. So you think that his claim that in thirteen lessons children of ten years old increase three inches in chest girth is a possibility?—Yes, I think it is. Of course I have no experience, and I merely give you a general impression.

13,848. It would not be produced by the more upright attitude of the spine and the further projection of the ribs caused by the improved carriage?—I am not prepared to say but that may be a factor, but I cannot but think that it is to a large extent due to the actual growth of the muscles.

13,849. And consequent alterations in the bones?—Yes.

13,850. Do you think that the actual structure of the lungs could be enlarged by physical training?—We know this, that the lungs fill the chest, and if the chest walls expand, the lungs would expand also. I should be quite prepared to think that if you get a chest expansion you will get an equivalent in lung expansion, because the lungs rise and fall with the rise and fall of the walls of the chest during the breathing process; the one must follow the other.

13,851. This would be due to no more than the development of the latent elasticity of the lungs?—I think it would be only that.

13,852. I should like now to put a few general questions. I suppose that the conclusions that have been forced upon us by many, that physical training will improve discipline and personal appearance, are reasonable?—Yes.

13,853. If the Commission see its way to adopt a system of physical training, would it be right that they should keep in view that it should be limited to favouring development within normal limits?—Yes.

13,854. And it should be suited to age and sex?—Yes.

13,855. But that training in the technical sense of the word, such as is employed for boat races, would not be a part of it?—No, that is quite special. If a person is going in for excellence in special athletic pursuits, he must be specially trained. I should not hold that it is any part at all of an ordinary school system to have special training for athletic pursuits. I would venture to say that what the school has to do is to see that the body is a vigorous body, and that through the vigour of the body the mind may also have its vigour improved, but I should not be disposed to go beyond that in the way of advocating any special athletic training in a general school system.

13,856. I may seem to be asking you a number of elementary questions, but I wish to have your opinion upon them on record. Do you think that physical training is likely to injure individuals?—Not if it is judiciously practised.

13,857. Are there any special precautions required in the case of girls at adolescence?—You mean at the time of puberty?

13,858. Yes?—Both girls and boys at the time of puberty would have to be trained by persons who had some knowledge of what the changes are that take place in the body at that time. They would require to have some general physiological knowledge, so that they might appreciate the special conditions incident to that period of life.

13,859. Special precautions in regard to underfed children ought to be a part of it?—Certainly.

13,860. Judging from the experience of your university students, do you think that physical training would be beneficial to the highest intellects amongst them?—Perhaps you will allow me to indicate what facilities are afforded in the University of Edinburgh in connection with physical training and exercise. To begin with, we have had in the university since 1859 a most efficient volunteer company, No. 4 Company, and we are very proud of it. That year, 1859, was the

starting-point of the volunteer system. I have a certain personal interest in it, because I was an officer in it for thirty years. It is one of the most vigorous and prosperous companies in the Queen's Edinburgh Rifle Brigade. The average number of students, who are drawn from all the faculties, is from 150 to 170. Then we have also a battery of volunteers belonging to the City Artillery, composed also of students drawn from all the faculties. Besides that, we have a special medical company belonging to the Royal Army Medical Corps, which always musters 100 men, and, in fact, we could take more if a larger number were allowed by the regulations. Those are methods of systematic training applicable to a very important purpose, namely, the cultivation of our youth in habits of drill and discipline. But then, in addition, we have a very thriving athletic club, which has a large field, the purchase price of which was obtained partly by public subscription and partly by a large subscription from the University funds. All forms of athletics are practised by the members of that club. It has been pointed out to me that in Edinburgh you cannot judge of the number of students who take an active part in athletic sports solely by the numbers belonging to one or other of these different organisations which I have named, because there are so many students who have been educated in the Edinburgh public schools who retain their connection with their school clubs and don't necessarily join the athletic club of the University. Those, therefore, would have to be added in order to reach the total number of our students taking an active part in the athletic exercises. Well, now, as regards the relation which these athletic exercises may have to intellectual pursuits—you have men some of whom illustrate the association of great intellectual vigour with physical vigour, and, on the other hand, you have examples of men who give too much time to their physical exercises and don't give sufficient time or thought to mental work, so that you at once see that it is difficult to lay down any general proposition.

13,861. You would not go so far as to say that in the case of a university student of the highest mental ability, physical education was a necessity?—No, I would not go so far as to say that, but I think it would be better for him if he did take a moderate amount of physical exercise. I think that thereby his mental powers would be more likely to endure longer.

13,862. In any compulsory system of physical training, would it suffice that such things as drill, gymnastics, games, running, and perhaps swimming, and the education of the special senses were included without the inclusion of such of the less practicable things as boxing, fencing, boating, riding, and rowing?—If you are to lay down general rules, of course, these rules would have to be applicable to such exercises as can generally be obtained, such exercises as the country generally could give opportunities for. Swimming, for example, is an art for which you don't find the means all over the country. The same with boating; riding to some extent is a question of purse and the means of the parent. Those that you have mentioned in the first instance I should say ought to be generally cultivated.

13,863. Is military drill in any way disadvantageous to growing lads?—I don't think that I could say that it was disadvantageous if it is not pressed too far. We must bear this in mind that the legal period of coming of age is not the physiological period of coming of age. A youth becomes of age legally when he is twenty-one, but he does not attain his full physical maturity at twenty-one. The skeleton is not complete in its ossification until the age of twenty-four or twenty-five. Therefore, in any proper system of drill for military purposes, it is clear that youths who have not yet attained their full physical development must not be too hardly pressed. The instructor should bear in mind that he is dealing with an organisation which is not complete.

13,864. The last question I have to put to you is regarding the girls. What is your opinion with regard to gymnastics for girls?—I have no experience in the matter, and I would rather not give an opinion.

13,865. Have you any advice to give us as regards games like football and cricket for girls?—No, I have no experience.

13,866. *By the Chairman.*—Can you tell us, roughly speaking, whether men or women live longer?—That is rather a matter for the Registrar-General; it is not a matter that I have considered.

13,867. You would not like to say?—No.

13,868. The reason I ask that question is that you have told us that a man was much more muscular than a woman. Is there any reason to believe that muscle prevails to the end, or does it waste?—I don't think the question of relative muscularity has very much bearing upon the question of the relative duration of the life of the two sexes.

13,869. If we try to make anyone muscular, we don't try, thereby, to prolong his or her life?—Not into advanced age.

13,870. Only during the best years of their life?—Yes, in what we may call the active period of life.

13,871. We had the advantage of noticing the boys in Sandow's class at the London Orphan Asylum. I don't think that Professor Ogston was there. We were very much struck by the abnormal development that had taken place in a comparatively short time among these boys. They were exceedingly fit and well in every way, but some of us thought that they were rather proud of their muscular development. Do you consider such pride to be a healthy or an unhealthy element in a boy of ten, twelve, thirteen, or fourteen?—I don't think it will do him any harm.

13,872. It is only to be expected in a place like that, where so much attention is given?—Yes.

13,873. It was rather a self-admiration society than a mutual admiration society, and it rather struck us?—I don't think it will do any harm.

13,874. If that is the sequence of Sandow's system, and if that system is to be more largely used, then it is to be expected that such a sequence will follow?—I think that young people are all apt to be conceited of their accomplishments, but they generally grow out of that.

13,875. Conceit of themselves is not a bad thing?—No.

13,876. *By Sir Thomas Glen Coats.*—Would you consider it an advantage to children that we should try and develop the muscles to a large extent, or would it be better to give them such exercises as would give them freedom of movement and teach them to hold themselves erect?—My own feeling would be that games, where they are possible, should be encouraged because of that very freedom of movement to which you have just referred, but a system like Sandow's seems to me to be one which is capable of application in localities where you cannot get large play-fields, and where children are unable to indulge in those movements which games ensure. It seems to me to be a system that is more applicable to a town life than a country life.

13,877. One of our medical witnesses advocated the carrying on of the exercises until there was a certain amount of tiredness in the pupil. He said you should not carry on the exercise in such a way that the pupil would not be any more tired after it was finished than he was when he began, and therefore he did not think very much of walking as an exercise, as you could walk a long distance and yet not call on any reserve force in the system. His idea was that you must call on this reserve force periodically in order to get the benefit of the training. What would you say with regard to that?—I don't think I have quite clearly grasped the point.

13,878. The point is this, that the duration of the physical exercise or the amount of exertion required should be carried to such an extent that the reserve force of the body should be called out. Would you go the length of tiring the pupils?—The sense of fatigue, if not too strong, is, I think, rather a pleasant sense up to a certain point, but then when people attempt more than their strength admits of, and get over-tired, I should not consider that to be a method of physical exercise which was a wise one.

Prof. Sir
Wm. Turner,
K.C.B., M.B.,
LL.D.
2 Oct. '02.

Muscular
development

Games and
systematic
training.

Prof. Sir Wm. Turner, K.C.B., M.B., LL.D. 13,879. *By Professor Ogston.*—Perhaps I might put it this way; the witness that has been referred to advises that exercises to be beneficial should occasionally be violent?—I could not agree with that.

2 Oct. '02. 13,880. *By Mr McCrae.*—Eliminate for the moment the secondary schools—do you think it would be possible to have a uniform system of physical training applicable to all the Board Schools in towns?—Yes, in towns.

13,881. And perhaps another system to suit the exigencies of the country?—Yes.

13,882. Can you give the Commission any guidance as to what should happen after the children leave school? Of course, they are at school till they are fourteen years old, and they will get physical training, we will suppose, with any system that might be suggested up to fourteen years of age. Can you give any guidance as to what ought to be done between the ages of fourteen and eighteen?—I think there is a great administrative difficulty in that, for this reason, that so long as you have a boy at school you have him under control, and when he leaves school and goes into some occupation in life he ceases to be under your control. I don't see, as I am at present informed, how you could retain a hold on them and continue any system of physical exercise.

13,883. Do you think that a system similar to Sandow's should be combined in our public schools with a certain amount of military drill?—I understand that this question of military drill is one on which there is some feeling.

13,884. I was asking principally from the medical point of view, and not with any ulterior military object?—Well, the elements of military drill should be learned, I think, by everyone; but when I say that, I don't refer, of course, to the evolutions of battalions or of brigades. The elements on which all drill is based seem to me

be of the highest value in a course of training, teaching children, for instance, how to march, how to carry their body erect, how to keep time, how to come to attention. I think all these things ought to be matters of general training, but I am not prepared, so far as school training of children goes, to go further than that.

13,885. You would not go so far as to say that it would be a good thing merely from the point of view of physical development that there should be a cadet corps connected with all our Board Schools?—I must ask a little further explanation. What would you propose the cadet corp should do?

13,886. Just go through the elements of military drill?—Such as I have referred to?

13,887. Yes?—Certainly, I see no reason why that should not be carried out.

13,888. Might it be an advantage in this way, that the boys might be retained in those corps even after they had left school?—Yes, subject to their own consent.

13,889. If there were continuation classes, and they attended these classes, they would have that association with the cadet corps even after they had left the day school?—Yes, if they wished it.

13,890. Would that be a good thing?—Yes, if they wished it.

13,891. It should be voluntary, however?—Yes.

13,892. *By Professor Ogston.*—Are you willing to give an opinion as to whether, in the event of a larger system of compulsory physical exercise being introduced, there ought to be a certain reasonable amount of medical inspection connected with it?—I think that it would be found that cases would undoubtedly arise where it would be advisable to have a medical opinion on individuals.

Prof. Sir Wm. Turner, K.C.B., M.B., LL.D. 2 Oct. '02.

Cadet corps: must be voluntary.

Medical inspection advisable.

The witness withdrew.

Adjourned.

TWENTY-EIGHTH DAY.

Friday, 3rd October 1902.

At the City Chambers, Glasgow.

PRESENT :

THE RIGHT HON. THE EARL OF MANSFIELD, *Chairman.*

Sir HENRY CRAIK, K.C.B.

Mr J. B. FERGUSON.

Mr M. H. SHAW STEWART, M.P.

Mr GEORGE McCRAE, M.P.

Mr J. C. ALSTON.

Mr R. B. PEARSON, *Secretary.*

Miss LILY MONTEAGLE, examined.

Miss Lily Monteagle.

3 Oct. '02.

13,893. *By the Chairman.*—You are at present engaged in teaching a class of feeble-minded children in Glasgow, and have prepared some evidence on that matter?—Yes.

I have been for the past ten years a teacher under the School Board of Glasgow. I am at present teaching a class of feeble-minded children in Oatlands Public School.

Nineteen months ago I was asked by the Board to take up the work of teaching these children, and on my agreeing to do so I was sent, along with another Glasgow teacher (Mrs Menzies), to London to become acquainted with the system of teaching the feeble-minded in the London Board Schools.

We remained in London for three months, under the

direction of Mrs Burgwin, the Superintendent of Special Schools, and visited most of the centres where feeble-minded children are taught. We were present at a large number of the medical examinations which children have to undergo before being admitted to the Special Schools (as these centres are called in London). In this way we gained much experience as to the kinds of cases and varieties of types admitted to the Special Schools. We also attended some of the larger centres for several weeks at a time, in order to gain experience in the teaching of these special classes. On our return from London in April 1901, the Board appointed me to take charge of a new centre for feeble-minded children in Camlachie Public School, and at the same time Mrs Menzies was appointed to open a new centre

intellectual
progress.

at Finnieston Public School. I remained in Camlachie till August 1901. While teaching there I was assisted by Miss Renwick, and on my leaving Camlachie, to begin teaching in Oatlands Public School, where a class had been in operation for three years, Miss Renwick was appointed to take my place.

There are now four schools in Glasgow where feeble-minded children are taught. These are situated in some of the most densely-populated and poorest districts of the city—two in the east, one in the north, and one in the north-west. In each school there is at present only one class for the children, and one teacher for each class. The number on roll, including the four centres, is 92. Of these 59 are boys and 33 girls. I noticed that in the London Special Classes, as well as those here, about two-thirds of the total number were boys. All the children in these classes have been examined by Dr Carswell, of Glasgow, and certified by him 'mentally defective.' He has also classified them thus:—Class I. (hopeful), Class II. (less hopeful), Class III. (not hopeful). Some of the children are defective in speech; some are epileptics; some belong to the type known as Mongol (from its resemblance to the Mongolian race); some are Cretins (Cretinism being a state of defective mental development, associated with arrested growth); some are too weak physically to attend an ordinary class, and might be suffering from paralysis, heart disease, St Vitus dance, hysteria, etc.

In Oatlands—and I think this applies to the other Centres also—the children in Class I. have made marked progress during the last year. Those who could not read are learning to do so. They have also made good progress in arithmetic, writing, and manual occupations. I have hopes that a number of these will be able in another year to join one of the ordinary standards. These children, I may add, would have made little, if any, progress in an ordinary class. They would have fallen behind the other children, and after a time have lost heart. In all probability they would have remained in the same class for two or three years, and at the end of that time have been passed on to the next teacher as hopeless. As an example, I may mention one little boy who was sent to me from an infant department. He had been for over a year there, and did not then even know the letters. His teacher told me that he fell asleep every afternoon in school. He has been with me nearly a year now, and has learned in that time to read little words, add small numbers, and write fairly well. He has never fallen asleep in the school since he came to the class, and never seems to wish to do so. I hope to be able to send him to Standard II. in another year.

Those in Class II. will not likely ever be able to join an ordinary class, but they make progress, some in one branch and some in another. One child may learn to read well, another to write well, while another may excel in sewing, or some other manual occupation. To this class most of the Mongol type belong. They are often very bright, and learn quickly up to a certain stage, but they do not seem to be able to go further. Many of the children in Class II. might be able, with careful training, to earn their own living after leaving school—the boys as farm labourers, the girls at domestic work, such as washing, ironing, or baking.

The children in Class III. do not make much progress in school subjects; but I have noticed that morally they gain not a little by coming to these classes. The school discipline seems to help them to gain self-control, and they gradually become more orderly, more cleanly, and more obedient. I think it would be advisable that those in Class III. should have a fair trial in these classes, say for one year, and if at the end of that time they are found still only suitable for Class III., they should be removed to an institution, where they will be permanently cared for. They are not educable to any extent, and will derive little benefit from these classes. They will always be children, though adult in years, and, as children, they should have guidance and protection always. They will never be able to fight their own way in the world, and will always be in danger on that account. I believe that most epileptics should be placed in this class.

The feeble-minded children are taught in classrooms belonging to the ordinary Board Schools. These classrooms are, in my opinion, well situated for classes of this kind, being on the ground floor, and having direct communication with the playground. They are also bright, cheerful, and airy, though Oatlands is rather limited as to floor space.

In all the centres, we endeavour to give the children a little knowledge of the three R's. In Oatlands, the day's work is commenced with a short moral lesson, followed by some marching and physical exercises. These exercises exert a most salutary and energising influence over *all* feeble-minded children. They seem to enjoy their performance, and it is almost pathetic to note the willing efforts made by those suffering from paralysis, or nervous diseases, as they try to march, and perform their drill, like little soldiers. The remainder of the forenoon is devoted to the teaching of reading, writing, spelling and arithmetic. In the afternoons, singing and object lessons, as well as drawing, sewing, painting, clay-modelling, and other manual occupations are taught. In these children, the senses of seeing, hearing and feeling have to be aroused and developed. Hand and eye training must play an important part in their education. They must see and touch, before they can understand. Some simple Kindergarten occupations suit these children of eight or even twelve years of age, as they do normal children of four or five years. I have seen feeble-minded children, at nine years of age, who, on first coming to school, could only, with difficulty, string large coloured beads. Few can, at first, string two colours alternately. Their interest in hand occupations is, however, easily aroused and sustained; and it is through these occupations that much of their education should be imparted. It has been found beneficial, in London, and also here in Glasgow, to devote from five to six hours per week to manual occupations.

I do not think it either necessary or advisable to use corporal punishment in dealing with feeble-minded children. They are very often weak physically, as well as mentally. This absence of bodily and mental vigour is marked by extreme timidity. They can therefore be easily governed by gentle but firm treatment. Patience is also needed by the teacher, as good results are often very slow in making their appearance. She must also be sympathetic, in order to help these children and to gain their confidence. I have found it much better to deal in rewards than in punishments. The rewards may be simple, and may take the form of commendation from the teacher, marks, or the wearing of a medal for good conduct or punctuality.

I think that if there were not less than two teachers at each centre, and not more than from fifteen to twenty children in each class, it would ensure better grading of the classes, and quicker progress of the scholars.

I am also of opinion that in winter the children in these classes would be better to be kept at school all day, and supplied there with a suitable dinner. Many of the children who come long distances do not return to school in the afternoons if the weather is bad, and very many come late. Some also look badly nourished, and unfit for school duties. In London, through charities, in the poorer districts, where these classes are taught, the children are supplied with warm milk at eleven o'clock, and an hour later with a suitable dinner, during the winter months. School is made a very haven of refuge to these poor, delicate, feeble-minded little ones. I believe that dinners were regularly supplied to the Camlachie class during last winter with excellent results.

The number and kinds of cases I have already spoken of. I think, however, that in most of our Board Schools there must still be children who would greatly benefit by spending some time at these classes. There are many degrees of feeble-mindedness. Indeed, a hard and fast line between a feeble-minded and normal child cannot be drawn, and many a dull and stupid child in school is, in some measure, defective. The teachers of

ordinary classes should be made to understand this. For example, any child who cannot do the ordinary work of a standard in a year's time is decidedly below the average in intellect, and instead of being kept two or three years in one class, and its life made a burden through terror and hatred of school, it would be much better placed in one of these classes, for a time at least.

Education is as much a right of the educable feeble-minded as it is of any child; and if the normal child benefits thereby, in some degree also does the feeble-minded. It is in school that the feeble-minded child is first aroused, and there it seems to find a new interest in life. The normal child, by his will, his desire, and his originality, learns as much out of school as in school; not so the feeble-minded. When he comes to school, his will power is extremely weak, his desire for knowledge little, and his originality nil. Although he is fond of games, he cannot even play of his own accord; hence it will be seen how utterly helpless and dependent these children are, and how much they require that an effort be made in their behalf to make them happier and more useful members of society, and more fit to contribute towards the sources of national strength.

13,894. Of course drill is not given to your children in such a manner as to hurt them?—No, we just give them a little while at a time.

13,895. They suffer no pain through it?—No.

13,896. Is that physical training only given to them once a day?—Yes.

13,897. It is given altogether?—Yes, and occasionally if they are tired at the end of any lesson they take a short time of it.

13,898. It seems to refresh them and to do them good?—Yes.

13,899. Have you just mild exercise, enough to keep them moving?—Yes, and they generally sing with it.

13,900. Do you have any different exercise in winter from what you have in summer?—We have it outside in summer if the weather is warm enough.

13,901. You quite agree that education, both physical and mental, is the right of a feeble-minded child?—I think so.

13,902. You think that if the normal child benefits, so will the feeble-minded child to a certain degree?—Yes.

13,903. The normal child learns out of school, and the feeble-minded child does not?—That is so.

13,904. You also say that in winter you think that children of this class ought to be kept at school all day and there supplied with a special dinner?—Yes. They have to go further than the ordinary child, because there are so few centres for them, and they are generally delicate and feel the long walk a good deal.

13,905. In Oatlands Public School there is no dinner supplied, but there is, and has been for some time, a dinner supplied at Camlachie?—Yes, that was started last winter.

13,906. *By Mr Fergusson.*—Do these children you tell us of belong to the Glasgow School Board district?—Yes.

13,907. They all live at home?—Yes.

13,908. Have you any experience of any other institutions, such as the Larbert Institution?—I was down one day at Larbert visiting the Institution, but I did not see the school.

13,909. How do your children compare with those at Larbert?—I think they are much higher in intellect than the children at Larbert. I think most of those in Larbert are below Class 3. I think it would be even hurtful for those in Class 3 to go to Larbert unless they were kept separate. There are some very bad cases in Larbert, and then those children are so imitative, they imitate everything.

13,910. Have you found in your experience that a child in Class 1, that is the hopeful class, gets any harm by coming in contact in school or otherwise with less hopeful children, say Class 3?—I don't think so, but perhaps if they were left alone they might. They are always being watched, however.

13,911. They don't mix much together?—Only in the playground. At dinner-time the most of them go home.

13,912. You think that so far as you can carry it out the physical exercise helps those poor children?—Yes.

13,913. You cannot look forward to doing very much for them; they are no use?—Not very much, especially those in Class 3. More can be done for Class 2, and *much* for Class 1.

13,914. What happens to them?—I expect a good many of them die young. They are pretty often delicate.

13,915. As at Larbert, you devote special attention to teaching by the eye?—Yes.

13,916. You teach them by showing how the thing is done, especially in the most hopeful class, and everything is made bright to the eye?—Yes, to interest them. They cannot concentrate their attention unless they are interested in the subject.

13,917. You think it will be desirable to have some arrangements for feeding them at school; you would like that?—Yes, I think it would be a very good thing for them, especially in winter.

13,918. Some of them are hardly fit to go about by themselves?—Some cannot go home alone, and they have to be taken home by others.

13,919. Are they thoroughly well clothed?—Yes, all except one or two in the Oatlands centre, but in the poorest districts of the city there are some who are not properly clothed.

13,920. *By Mr M-Crae.*—Have the School Board considered the question of supplying dinners to the children in winter?—I think that was done by outside charities in Camlachie.

13,921. What is the Board's view as to their supplying dinners to those children?—I do not know their view, but I think if the Board supplied it the children would bring a little money, although perhaps it might not be full value for the meal.

13,922. You yourself would suggest that a small charge should be made?—Yes, but not in the poorest districts.

13,923. Would you say that there they ought to be supplied free?—Yes.

13,924. *By Mr Shaw Stewart.*—How long have you been teaching a feeble-minded class?—A year past last April.

13,925. You have not had an opportunity of following up any individual pupils after they have left school?—No, not yet.

13,926. How do they draft the feeble-minded child into your class? I suppose the distinction sometimes is rather difficult to determine?—When the teacher of an ordinary class sees that there is very little progress with any child, the case is reported to the doctor, and he examines it. I think, however, that those who teach the children can tell best whether they are backward or not, and especially a teacher who has had experience with feeble-minded children. When informing a parent, however, that his child is feeble-minded, or even backward, the doctor's advice often carries more weight.

13,927. *By Mr Alston.*—Can you tell us the total number of feeble-minded children in the Board Schools of Glasgow?—Ninety-two.

13,928. But in all the Board Schools?—I could not tell that.

13,929. Ninety-two cannot cover the number?—No.

13,930. Have you ever heard stated the exact number of feeble-minded children?—Not in Glasgow, but in London they consider that there are 1 per cent. who should have special training.

13,931. In Manchester it is thought to be 2 per cent. Have you heard that?—No.

13,932. What is the total number in Oatlands?—Thirty.

13,933. How many are in the Oatlands Board School?—I think there are 1000 or 1100 children, but, of course, my children come from different schools: they don't all belong to Oatlands.

3 Oct. '02.

13,934. Ninety-two are practically the collection of feeble-minded children, in the meantime, in the four schools?—Yes.

13,935. Has the proportion of boys to girls been a point that has attracted your attention?—Yes. In London we noticed that the proportion of boys was larger than of girls, and we find the same thing in Glasgow.

Special classes
advisable.

13,936. Have you any views as to the advisability of a special class for those children, or do you know that medical opinion is divided on that point?—I have heard that it is.

13,937. What do you think yourself?—I think that classes ought to be provided for these children.

13,938. Special classes?—Yes, I do not think they can learn in the ordinary school at all.

13,939. It is a disadvantage for them to be associated with other children in school?—Yes, not only to the feeble-minded children but to the other children, as it keeps them behind.

Permanent
institution
suggested.

13,940. What is to be done with the feeble-minded after school age?—I think that the worst cases, those in Class 3, ought to be kept always under control and not allowed to mix with the community.

13,941. They should be kept in some home or institution?—Yes.

13,942. Or in some educational home? The education might continue, but manual instruction should be increased?—Yes, it should be the chief thing.

13,943. A considerable proportion are capable of earning their living?—Yes.

13,944. But the dangers are so great that they ought practically to be secluded?—Yes.

13,945. The use of the word 'she' as applied to the teacher shows that you think that the teacher should be a lady to take charge of those children?—Yes.

Special classes
necessary.

13,946. *By Sir Henry Craik.*—You have been teaching for ten years under the Glasgow School Board?—Yes.

13,947. Then you have taught in schools not devoted to those feeble-minded children?—Yes.

13,948. Those children previously used to be taught with the other children?—Yes.

13,949. Or they were neglected altogether?—Yes, very often.

The witness withdrew.

Mr A.
Mackeith.

13,967. *By the Chairman.*—You have prepared evidence regarding crippled and otherwise physically infirm children in the City of Glasgow and their treatment in Board Schools, more particularly in what are called invalid children's schools?—Yes.

13,968. How shall we describe you?—I have been at work among the poor children in Glasgow in a voluntary way since 1856. I am just a business man giving my extra time to work of that kind.

Cripple and
infirm chil-
dren.

13,969. You have been interested all that length of time?—Yes, I have been interested in all kinds of neglected children, more particularly children who had been neglected at home, such as those who composed the foundry boys in the earlier days.

13,970. You have been in Glasgow all that period?—Yes, from 1856.

13,971. You have some notes before you which you will kindly read.—

League:
objects.

The League is a branch of the ameliorative work carried on amongst the young by the Glasgow United Evangelistic Association, aided by the Sabbath School Union and the Foundry Boys Religious Society, and has for its object—(a) To find out all the cripple and otherwise physically infirm children in the city and suburbs, and to have them registered; (b) to put them individually in touch with sympathetic friends, who would, by correspondence, visitation and otherwise, become acquainted with their needs and capabilities, and would seek to awaken and foster in them a spirit of independence and self-help; (c) to

13,950. It had a very bad effect on the children?—Yes, I think it had a worse effect on the feeble-minded child, because it did not get taught at all.

13,951. With epileptic cases did you not find a bad effect on the other children?—I never had one. I think they were kept at home altogether if they were bad.

13,952. Have you ever known instances in small schools in the country where there was injury to the other children?—Yes, there have been cases.

13,953. You think there is no other means of doing?—I think the epileptic cases should be always sent to special classes.

13,954. And the feeble-minded?—Yes.

13,955. And that not for their own sake only?—No, for the sake of others.

13,956. In country districts the only way to do it would be by institutions?—That is so.

13,957. You could not have special classes such as you have in Glasgow or Govan?—No.

13,958. Glasgow and Govan are the only two School Boards in Scotland that have tried it?—I think so.

13,959. Are the arrangements made for the children under the Code quite suitable?—Yes, I think they are.

13,960. They were introduced two or three years ago?—Yes.

13,961. *By the Chairman.*—You have said that about two-thirds of the total number are boys. Can you give any explanation as to why that should be?—I don't know, unless it is the fact that more boys are born into the world than girls. I cannot account for it in any other way.

Proportion of
boys and girls.

13,962. You do not think that if a girl is not right it is not noticed so soon?—No, I don't think so.

13,963. It is the fact, so far as you know, in London and here that two-thirds of these children are boys?—Yes. In my own class I have only nine girls out of thirty.

13,964. *By Mr Alston.*—In the Rottenrow Day Industrial School there are seven boys and one girl feeble-minded?—Yes.

13,965. Your idea of the percentage of male births accounting for it would hardly bring out that proportion?—Would it not?

13,966. The fact is that the boys predominate among the feeble-minded?—Yes.

MR ALEXANDER MACKEITH, examined.

co-operate with other organisations or movements when by such means additional benefit would accrue to the cripples.

I have handed in a table which shows the total number dealt with by us during the last two years, their ages, ailments, number attending ordinary day schools, and the school which has been started for their special benefit, and other particulars.

I take it that when I am asked 'to pay particular attention,' in my statement, 'to the subject of cripple children in the Board Schools, and to explain the system of treatment, the numbers and kind of cases, their progress, condition, and best methods of handling,' special reference to the school for invalid children, and not to the Board Schools in general, is what is meant.

13,972. What we wish you to give evidence on is rather broader than what you have stated.—Do you wish evidence on the question of physical training in connection with Board Schools.

13,973. As much evidence as possible?—I think Physical work that there might very helpfully be a large extension in Board of physical work in connection with Board Schools. I Schools.

I think, for instance, that in the poorer districts of the city there should be in connection with each of the schools a swimming pond, and also a drill room or physical exercise room, where the children could have exercise in cold and wet weather. I think that would be a great advantage over merely having open-air exercise.

13,974. What about the cripple children?—Cripple children.

Mr A.
Mackeith.

children should be completely under medical treatment and advice.

13,975. There are a certain number of children who are not quite right in the Board Schools, and I should like you to refer to them?—There are a number of cripples who go to the ordinary day school. The number is given at 232 who are in attendance at the ordinary day school, and in the special school which has been started for cripple and infirm children there is an attendance of 34. A second school is being started this month in another district, and I have no doubt but that the movement will go over the whole of the other districts of Glasgow. The attendance of such children at the ordinary day school is, as would naturally be expected, somewhat irregular. They are weak, and sometimes unable to go to the school, and the School Board in that case do not demand the same attendance from them as they do from the ordinary scholars.

The educational movement in Glasgow on behalf of cripples is a joint one, and has had a year's trial, with such success that a second school is to be opened this winter. The School Board provides the teachers and furniture, the Glasgow United Evangelistic Association pays for the nurses and meets the cost of conveying the children to and from the schools in ambulance waggons (given by private donors), and Queen Margaret College Settlement Association, for the first school, gives the premises, supplies the food, and provides the lady assistants needed for the work. It is the opinion of many that the whole of this work should be undertaken by the School Board, as is now the case in London. In London they preceded us in this movement, for once going ahead of Scotland in education. It was begun in London, as it has been in Glasgow, by philanthropic organisations, but it has been so successful there that I understand the School Board have got powers to take the whole thing over—the ambulance waggons, nurses, and everything else. It is now entirely under the supervision of the School Board, and the expense has to be met by them. We think that it will ultimately come to be so in Glasgow as well.

The ordinary routine of the school may thus be described—

The ambulance waggon, with the nurse, starts at 8.15 a.m., and collects the children in two rounds. The school begins at 9.30, and the register is closed at 10 o'clock. The school is formed into five classes, and in future will be under two School Board female teachers (hitherto there has only been one), with several lady voluntary assistants. The teaching in the forenoon consists of reading, writing and arithmetic, with object lessons. At 10.30 there is a break of fifteen minutes to rest the children, and permit of their getting milk, biscuit, and cod-liver oil. Cod-liver oil and milk seem a strange mixture, but the medical lady looking after the work here is very strong on them getting the oil. They take it now quite as freely as the milk and biscuit. At twelve o'clock dinner is served (in a room adjoining the schoolroom) by the nurse, with the assistance of lady helpers. The dinner consists of meat, vegetables, bread and pudding—two courses daily, and varied—the aim being to give as nourishing a diet as the children can assimilate. At first some brought their own dinners, now almost all take the school dinner. The parents pay for the food, 7½d. per week per child, and 1d. per week for cod-liver oil. For nine months last year the total contributed by the parents was £26, 11s. 7½d. The nurse, who collects this money, reports that as a rule it is frankly given. After dinner the children are taken by the lady workers in good weather into the playground of the Board School adjoining, and in wet or cold weather into the play-room of the invalid school building, where there are swings, rocking-horses, mail-carts, and a go-cart or walking-horse, and where the children enjoy themselves till the school is resumed at 1.30. The building in which this school is held is a superior one put up by a family in Glasgow, who were particularly interested in girls, and it forms what is known as a girls' club, and has been given to the

Queen Margaret College Settlement Association for their work, as they take an interest in girls as well. It is not every place that is so well adapted for the purpose of cripples as that one is. There is a splendid big room, and all the necessary arrangements for physical exercise. Regarding the physical exercises given these children, it may be well to state here that a doctor visits the school monthly, examines the children, and fixes the kind of exercises suitable—those, for instance, with spine disease and heart affection having these given them in a recumbent position on ilikley couches, etc. At 1.30 work begins again, and consists of drawing, brush work, clay modelling, basket weaving, and paper-mat weaving. These occupations are meant to train the children's fingers, and stimulate application, in view of their ultimately earning a livelihood for themselves. By these means it is found out what each child draws particularly to. Girls get sewing, and knitting is done both by boys and girls. The children are given frequent singing, reading, and repeating exercises for the benefit of their lungs as well as their memories. The nurse is present the entire day, giving the children the attention they need, and doing what bandaging is necessary. Mentally these children are on a par with other children, but not capable of anything like the same amount of work. It has been frequently stated that such children are mentally more acute than other children. That, however, has not been our experience. I had a talk with the teacher, and she said that they were not more acute, but they were on a par with other children. Nevertheless they have made what the teacher considers very good progress, and are anxious for their work and keen to learn any new thing.

The roll of the school is 34; average attendance 24, and average age nine. The ailments of the children are very much of the kinds and in the proportions given in the general table.

At the close of the school—3.30—the children return to their homes in the ambulance under the care of the nurse. Throughout the year these children, along with some 7000 to 8000 of the poor children of Glasgow, enjoy and are greatly benefited by a holiday at one or other of the fresh-air homes with which Glasgow is so richly provided. Those of them requiring special treatment get this change in convalescent and fresh-air homes, where nurses are in attendance.

13,976. *By Sir Henry Craik.*—What precisely is the constitution of what you call the invalid school? It is under the management of the School Board?—
Yes.

13,977. It is practically a Board School?—It is practically part of that particular Board School ad-
joining.

13,978. It is in receipt of an annual grant from the Department?—Yes.

13,979. It is inspected?—Yes, and the Inspector reported exceedingly well on it in his last report.

13,980. The School Board did get a special grant for those children?—Yes, I understand there is an allowance regarding this additional teacher that I have referred to. That is something that has been given lately.

13,981. Beyond that you think that School Boards should be empowered to go further?—Yes, they should take over the whole matter. It is the duty of the School Board to see to the teaching of every child. Yet here is the fact that a number of children, because of their physical conditions, are not in a position to go to the ordinary day school, and if they are to get education, there must be special provision made for them. At present, the School Board of Glasgow, and I suppose the other Boards of Scotland, have not power to go the whole length.

13,982. You would like to see powers given to School Boards and an obligation laid upon them to provide for the bringing of the children to school and for their dieting them to a certain extent?—Yes, the dieting is necessary, but the parents pay for the food.

13,983. Have you made that representation to the

Mr A. Mackeith.

8 Oct. '02

Physical exercises controlled by medical examination.

Mr A.
Mackintosh.
3 Oct. '02.

School Board?—Yes. I think their feeling is that it is certain to come to that. I think they are quite willing to undertake the entire work, had they power.

13,984. You are aware that there is an English Act laying upon School Boards the duty of providing for the board and lodging of children of that class?—I did not know about the lodging.

13,985. On careful consideration, you desire that that power should be given to the School Boards of Scotland, and you think that they would be willing to accept it?—I would not say lodging. That would be taking the children away from their parents.

13,986. There must be many of these children who would thus be better attended to?—That is true. Have the School Boards in England power to take the children from the parents?

13,987. If the child cannot get the instruction otherwise, that obligation is laid upon them?—I would think that they would be better not to take the children from their parents.

13,988. In the case of deaf and dumb children, you know that the power is given to the School Boards?—Yes, and that is done here.

13,989. It is done throughout Scotland?—Yes.

13,990. You wish that extended with regard to weakly children?—Yes, but I don't quite see the need for lodging these children, except in very special cases. I think that parents would be rather sorry to part with their children. It would certainly be much better for the health of the child if it is from that point of view you are looking at it, because many of them are in homes where they are very poorly fed.

13,991. Of course, your attention deals only with one religious community?—No, it is irrespective of any religion, so far as dealing with the poor of Glasgow is concerned. We take any child.

13,992. Do you take any part in their education?—We assist the School Board in this work, but we don't do anything in the way of education.

13,993. *By Mr Shaw Stewart.*—You have taken an interest in these children for many years, and I have no doubt you have followed them up after school age. Could you give us any idea of what sort of proportion can earn their own living?—Are you referring to cripples?

13,994. Yes?—The movement is not old enough for us to answer that question. What is being done just now is this, through the second point which I put as being one of the objects of our league, to put them individually in touch with sympathetic friends, who would, by correspondence, visitation and otherwise, become acquainted with their needs and capabilities, and to seek to waken and foster in them a spirit of independence and self-help. That is the point you are referring to just now?

13,995. Yes; I rather wanted to get from you any results?—As far as we have gone, the best results are with the girls, as would naturally be expected. They take wonderfully quickly to knitting and sewing, and some of the ladies have taught them exceedingly interesting work, such as 'Mount Mellick,' which they do, and for which they get a fairly good return. We want this work extended.

13,996. How long has the League been in existence?—Only four years, but we have been in touch with those cripple children for many years. For instance, for eighteen years we have been sending away on an average between seven and eight thousand of the poor children of Glasgow for a period of a fortnight to fresh-air homes. These numbers have included the poor cripple children, and it was in connection with this work that we came to know that so many of them were in existence. It was not previously thought that there were so many in Glasgow. This register is more a register of children of school age and under than of all the cripples of the city; that you can gather from the fact that over fourteen years there are only 190. We are giving all our energies in the meantime to dealing with children of school age and under, so that the question as to results has not had the same consideration as it will have in future.

13,997. I suppose some of these children have mental powers quite up to the average?—Yes. They are often spoken of as being ahead of ordinary children, because of their being confined to the house and brought more in contact with their seniors, but I do not think that as a rule that is so. I think they are equal.

13,998. Have any of these children educated through your means shown any good results in mental work?—Yes. Of course, there has only been one year of the school, so that we cannot speak to that.

13,999. You quite expect that all these children will develop quite an average power of mind?—Yes, I would say quite an average. Of course the weakness of these children is in a great many instances caused by parental neglect. In speaking about the number of rickety children that we have in Glasgow, some people have attributed that to our Loch Katrine water, as being soft and wanting in lime, but this has been controverted by the fact that the better class children don't show rickets at all. It is really a want of milk and porridge and the good old substantial food that used to be given in Scotland that accounts for it.

14,000. *By Mr Alston.*—About this 804 which you give as on your register, do you think you have got the total number in Glasgow?—No. Since I printed this list I have received a further list of 60, and these are going to be visited.

14,001. Have you any idea what it might amount to, judging from your experience?—It won't be less than 1000. Then you see Glasgow is growing at a marvellous rate, and a very considerable proportion of those that are being added to Glasgow are the poor who are coming from the country.

14,002. Still the health of Glasgow is improving?—Yes.

14,003. You would expect that these would diminish rather than increase?—Yes, were the habits of the parents improving, but if the habits of the parents prevent the children from getting the food they should get, I am afraid that we will have an increase.

14,004. In the ordinary Board Schools, you have 232; there is a difference there of 572. These are not at school?—No, these are not at school. There are 570 of school age from five to fourteen, while 232 are at school. That leaves 338. Thirty-four of these are at the first invalid school that has been started, leaving 304 of school age that are not at any school, with the numbers we have at present.

14,005. They are not in school, and they are in such a condition that they cannot attend an ordinary school?—That is so, but the great bulk of them could attend the special invalid school if they were taken there and back in an ambulance wagon under the care of a nurse.

14,006. You think that the time will come when the School Board will take this matter up and undertake the schooling of all these children?—Yes.

14,007. When that time comes you would advocate the teaching of the children at different centres?—Yes.

14,008. It would necessitate the gathering of the children from their homes and bringing them to these centres?—Yes.

14,009. The cripples of Glasgow could not be treated in the School Board schools?—No.

14,010. In this number of yours are you including the Eastpark children?—No, they are not in this total, because they are really under the care of Mr Mitchell.

14,011. That will be an addition to your numbers?—Yes.

14,012. Something like 120?—Yes. When we find them not in a condition to be sent to school, we tell Mr Mitchell of them.

14,013. You say that seven children are blind as well as being cripples. What do you do with them?—The blindness is caused very largely by paralysis. I expect we will put these in touch with the organisation for the blind. I have not looked up the particular schedules with regard to these.

14,014. You mean the Blind Asylum?—Yes.

14,015. The Commission, of course, are deeply interested in the question of physical training as applied to all children. You don't say much here about the results of physical training as applied to cripples?—It is a very delicate matter to attempt. Just think of some of them having spine disease and heart disease. The doctor comes round once a month and examines the whole of the children, and indicates what each child that is capable of physical training should have, and in what way it should have it, whether in a lying posture or not. Great care must be taken.

14,016. But they do get physical training?—Yes.

14,017. And do they benefit by it?—Yes, decidedly. They go outside on a warm day to the school playground, and on the colder or wet days they are taken into this warm school.

14,018. Do you know the nature of the exercises they get? Is it anything like Swedish drill, extension motions?—It is more individual than anything else, and under the care of the nurse and those ladies.

14,019. At the Queen Margaret Settlement the result is good?—Yes, it is very good indeed. Even although the matter should be taken over by the School Board, I think that there should be some means by which the philanthropic movements in the city should co-operate with the School Board. Coming to your question as to extension schools, which you are pretty anxiously regarding, I think what you are purposing doing in connection with these extension schools was really done in Glasgow as far back as 1865. There was started in that year what is known as the Glasgow Foundry Boys Religious Society. I was one of the four at the starting of it. That was before the days of the Board Schools. Boys were finding their way to foundries and other places at a much earlier age than they dare go now, and parents anxious to get money through their boys' work did not send them to school. A large number of them had no education, and were growing up wild, uneducated fellows. This Society was started to grapple with them, and it divided itself into four departments—religious, educational, social, and provident. Under the educational department gentlemen set apart three nights a week to teaching those boys reading, writing, and arithmetic, a fourth night being given usually to drill. The boys were provided with a simple uniform, consisting of tunic, cap and belt, which was the property of the Society. The boys paid for their own trousers, some 6s. or 8s. The boys went in for all this most enthusiastically, but, of course, there were alongside of them the gentlemen who took an interest in them, and who, perhaps, had some influence over them. Indeed, I am sure that they had, because many of the employers of labour had previous to that started night schools for those boys with a paid teacher, but these were not successful; the boys got wild and played mischief rather than paid attention to the teacher. With us they took an interest, and they came on three nights a week to their various rooms, where they were taught reading, writing, and arithmetic, on the Mondays, Tuesdays, and Wednesdays. On Thursdays they had drill, and on Saturdays, entertainments and Saturday excursions. We found the drill to be of wonderful value in giving them the habit of prompt and unquestioning obedience. I think it would be a most desirable thing if something of that kind could be done in continuation schools. That is what I am coming to.

14,020. This is quite apart from cripples?—Yes, I am speaking of lads in general.

14,021. Over fourteen?—Yes, it was then over twelve. I don't see why there should not be a combination with the School Board even yet. Take the Foundry Boys Society in Glasgow now. It is a very large Association, and there are similar bodies in the large places all over Scotland. I don't see why these should not combine to co-operate just as the Evangelistic Association is co-operating with the School Board in regard to the cripples. Why should not the

churches take a much deeper interest in social work than they do now? Too many churches look askance on social work and rather frown on it, whereas if they co-operated in the improvement of the youths, their influence would be very great indeed.

14,022. *By Mr Fergusson.*—Just continue that line—you would favour in that case the development of continuation classes for lads over fourteen?—Yes.

14,023. Would you make physical training in its most popular form a part of them?—Yes, I would aim at making it very popular. I don't see why there should not be along with the drill, lime-light entertainments, and so on.

14,024. Would you favour compulsion?—No, I would not. I would aim at getting the boys as soon as possible to unite with the volunteer movement.

14,025. You would make it voluntary and as popular as possible?—Yes.

14,026. Coming back to the special point with regard to the cripple children, of course your dealing with these children must largely depend on medical advice?—Altogether I should say, and there should, therefore, be a medical man in touch with each school.

14,027. Would you say that for all schools?—I think so, especially if you are going to extend the physical training.

14,028. You would be in favour of medical inspection in all schools?—Yes.

14,029. With special reference to cripple children, you said that there cannot be very much physical training for these children, but what can be done under the doctor's advice is given, and the effects are good?—Yes. Of course they receive a great amount of benefit from being exercised for a while in the open air.

14,030. What would you suggest could be done with cripple children in country districts where there may be only one or two, and there are not enough for a separate school?—That is where I think if the church was awake and alive to her work she would say, 'There is a child in that home who needs to have 'attention,' and some of the better class people might take an interest in that child and teach it.

14,031. Would you put the expense of that on the School Board?—Yes, whatever expense was incurred.

14,032. You think it is part of the proper work of education?—Yes. Some of the ladies from the Queen Margaret College Settlement go to the homes of the children that are not able to come even in the ambulance waggon, and give these children instruction in their homes.

14,033. You want the School Board to take over this work, and therefore it is of very great importance that you should show the practical good that is done to these children. What can you tell us of the practical result on their lives as they grow up? How do they benefit?—First of all they were growing up before without any education. Now they are educated. There is point number one.

14,034. What use can they make of their education?—Some of them will follow handicrafts, such as wood-carving, and things that do not require much motion of the body. They will do that work all the better if they are fitted by training.

14,035. You think you are really able to put them in the way of doing some work that will support them?—Yes.

14,036. And that will free them from becoming chargeable on the rates?—Yes.

14,037. Your evidence is most pleasant reading, although on a very sad subject, and I hope you don't mind me asking you these questions. I am only wishing to get from you the practical benefits that would enable a School Board to say that they would take over the work?—Our aim is to help them in these ways to be in a position to earn a living for themselves.

14,038. And you think that that is really being accomplished?—Yes, I think that is one of the best ways of doing it, and I think it will do it.

14,039. *By Mr McCrae.*—With regard to the special school for invalid children, the School Board provide the teachers, the furniture, and the building; and the

nurses, and the cost of conveying the children to and from the school are provided by private effort?—Yes.

14,040. Can you give the Commission any idea of the cost outside the provision made by the Board?—The food is very nearly paid for by the money given by the parents. Then there is the cost of the waggon. I am going out to the country to-day to inspect a second waggon that is being given to us. These waggons have been frankly given as gifts. We have two of them, and there are other two on offer so soon as we are ready to go to two other districts. They cost £100 each. The nurse costs about £70 a year, and the ambulancing of the children to and from the school costs a little more than that, perhaps £80.

14,041. Putting it generally, I suppose the expenditure would not be a large one, having regard to the amount expended on education generally?—No, it would be more than for ordinary school work, but that is to be expected.

14,042. You say that in the opinion of many the whole of this work ought to be undertaken by the School Board. That is also your own individual opinion?—Yes, and it is the opinion of many ladies and gentlemen whom I know.

14,043. Speaking of the larger class, the ordinary boy, is the physical training still continued by the Foundry Boys Association?—A good deal of it, but not exactly in the form in which it was originally carried out.

14,044. Have they a uniform yet?—No, they gave it up.

Military drill.

14,045. When did that cease?—When the movement grew, one of the results of this growth of military drill was that the boys demanded rifles. I think, Mr Alston, the same thing has happened in the history of the Boys' Brigade.

14,046. *By Mr Alston.*—No, the rifles are permissive?—But they were not at the beginning.

The witness withdrew.

Mr A. J.
Pressland,
M.A.

Mr A. J. PRESSLAND, M.A., examined.

14,056. *By the Chairman.*—You are a master in the Edinburgh Academy?—Yes.

14,057. You have handed in a most interesting statement of evidence which we have all been reading.—I am afraid it was done in a hurry.

14,058. I am to ask Sir Henry Craik to put a few questions on it. We have been sitting for some time, as you know, and we have got our heads fairly full of the subject, but we wish to get your views on special subjects.—I quite understand.

Physical
training in
Switzerland:
Canton of
Zürich.

Physical training in Switzerland.—Since 1899 I have been engaged on a report to the Board of Education on 'The present state of education in 'Canton Zürich.' Part of this, and a translation of the Act of 11th June 1899, has been published in volume viii. of *Special Reports* to the Board of Education. The whole of the evidence has now been collected, and the full report will be issued within the twelve months.

Résumé of
Act of 1899.

The Public School Act of 1899 fixes a term of eight years for compulsory education. This term begins on the first day of May following the child's sixth birthday. The hours allotted to each standard are—

Standard I.	15 to 20 hours per week.
" II.	18 to 22 " "
" III.	20 to 23 " "
" IV., V., VI.	24 to 30 " "
" VII., VIII.	27 to 33 " "

All children attend the first six standards. Children who intend to enter the Higher Schools do not take Standard VII. and VIII, but pass on to the secondary schools, where their attendance is regulated in the same manner.

It should be noticed that the authorities strive to interpret the Act so that a child must have the

14,047. Yes, at the very beginning?—I did not know that.

14,048. There are some places where they won't use them at all?—Well, we said, 'as a Religious Association it is not for us to put weapons in your hands to fight. The military drill and everything else are 'splendid for your development. When you are eight you can join the volunteers.' We pressed them to join the volunteers, and a large number did as they came to that age. We therefore did away with the uniform.

14,049. *By Mr McCrae.*—Have you any drill now as an exercise?—Yes, some of the branches have drill.

14,050. Then you said you were greatly in favour of swimming baths and drill halls?—Yes, especially in the poorer schools.

14,051. Have you considered the advisability of having a cadet corps attached to each school?—No.

14,052. Do you think it would be a good thing?—I think it would be for the better-class schools.

14,053. But for the ordinary schools?—I do not think it would be so acceptable to parents in the ordinary Board Schools, as there would be some expense.

14,054. Apart from the question of expense, don't you think that the poorer the class of school the more benefit would be derived from the training?—If it was to be provided without additional expense to the parent. That is the only objection they would have.

14,055. I suppose you would approve of those drill halls and swimming baths being used by the children after they had left school in connection with continuation classes?—Yes, and the use of the playground. I think all the playgrounds should be much more utilised than they are. In a city like Glasgow we have too little playground space. With regard to the swimming baths—not merely from the standpoint of physical exercise (I think there is no finer physical exercise), but for the sake of ensuring the habit of cleanliness—I think they should be encouraged, because cleanliness is very largely wanting among our poorer people.

education corresponding to eight standards when it leaves school. If, therefore, the child has remained two years in one standard, it must remain at school till the end of the fifteenth year.

The hours mentioned include the time given to gymnastics. The holidays amount to nine weeks per annum.

The curriculum is drawn up by the council of education, who determine the subjects of instruction and the time allotted to each. The time-table is drawn up by the Communal School Board with the assistance of the teacher. It requires the approval of the District School Board. Apparatus and facilities must be provided by the Commune. The actual instruction in gymnastics must conform to federal decrees.

The Act gives power to the guardians (Vormundschaftsbehörde) to remove their children from the custody of drunkards and criminals. The usual procedure is for the teacher to represent that a child is being neglected or overworked by house duties. The guardians then institute an enquiry.

Medical examinations of children and inspection of school buildings are instituted by the cabinet. These have been for a long time systematically carried out in Zürich town by the Central School Board. The Council of Education issues byelaws as to buildings and inspection by the Board of Health. Permission to occupy new school-houses must be obtained from the latter.

A detailed account of these provisions will be given in our Final Report. From the material in hand, I have drawn up the following statement. In September it was handed to the best authorities in Zürich for criticism, and their suggestions have been incorporated. The statement deals with facts and principles. The work entailed by my general commission has been

Mr

Medical
examinat

very heavy, and I have not been able to give the proper attention to all the particulars. My authorities are—

- The secretary of the Federal War Department;
- The secretary of the Swiss Public Health Society;
- The Colonel Commanding the Federal Army Medical Department;
- The secretary of Education in Zürich Canton;
- The secretary to the Central School Board of Zürich Town.

Medical examination of children is prescribed on their first arrival at school. A child mentally deficient may be referred to a special class or a special institution. A child insufficiently developed may be sent to a Kindergarten or transferred to the list of the succeeding year.

The authorities have power to order the re-examination of any school at any time. The examination may apply to buildings as well as to pupils. It cannot be called a general practice, as the byelaw was only passed in 1900. The Central School Board of Zürich town has instituted re-examinations, as regards sight and hearing, for a number of years. Lately it has ordered an inspection of teeth at the age of twelve. The advocates of these examinations wish to ensure proper attention to eyesight and hearing at the age of six, to eyesight at the age of twelve, when the eye begins to grow fast; to the heart at the same age for the same reason, and to the teeth at twelve, since at this age decay makes rapid progress.

Statistics referring to these examinations will be found in the *Edinburgh Medical Journal* for July 1902. The recent report for 1901 of the Central School Board shows that at age twelve each pupil has on an average 3·7 decayed teeth. To overcome the difficulties with teeth the Board advises—

1. The issue of a pamphlet on the care of the teeth to every pupil entering the school. This pamphlet the pupil gives to his parents.
2. Constant reference to the necessity for care of the teeth by the teacher during class hours.
3. The grant of medical assistance to poor parents.

The cost of medical examinations is estimated at 2000 francs for the town.

Geographical.—The Canton contains about 675 square miles. The population is about 430,000. The town contains 150,000, and Winterthur about 22,000. The Canton is hilly but not mountainous. The agricultural population is mostly native. The town population is engaged in silk spinning and engineering. It is largely cosmopolitan and confessedly socialistic. A large number of the foreigners are Italian.

The physical education of all children begins at the age of six, on their entrance to school. For the first four years boys and girls are exercised together. At the age of ten the boys are subject to the provisions of the federal code, 'Turnschule.' This is an official text-book for all cantons. It was first issued in 1876. A new edition received the approval of the Bundesrat in May 1898. The nature of the alterations that have been made is thus described—

1. Less demand is made on the mental capacity of the pupil.

It was found that pupils came to their gymnastic work mentally tired. To counteract the effects of this, spontaneous movements are encouraged and the number of words of command decreased.

2. Increased opportunities for games are afforded, in particular for those in which running and jumping are prominent.

In the country every able-bodied voter is held liable for service in the Fire Brigade. Training of this nature has a practical value.

3. More care is paid to the development of the inner organs, viz.—the heart and the lungs. Gymnastics are not looked on simply as a muscle-producing exercise.

The Swiss seem to believe that the skeleton develops up to the age of twenty-five, but that the muscular power continues to develop till past thirty years of age.

4. So far as is possible, physical exercise is introduced on every day of the week.

This is a pious wish. One good authority who has had a long experience with girls writes to me thus:—

'Twenty minutes gymnastics per day is a lot better than two hours a week as we have it. We have been fighting for this change on more than one occasion, but the results are poor till now. Two hours is more convenient for making up a time-table.'

5. Open-air gymnastics and free movements are encouraged.

The Federal code takes no notice of the instruction given previous to the age of ten, nor does it make any provision for girls. It is arranged as a preparation for military service in two grades:—

- (1) For boys between the ages of ten and twelve.
- (2) For boys between the ages of twelve and fifteen.

In each year provision is made for eighty lessons of one hour each. Few country schools manage to overtake this amount. For them a special selection, consisting of sixty lessons per annum, is made. This represents the legal minimum. Taking Switzerland as a whole, only 36 per cent. of the schools reached this minimum in 1900. The principal defaulters are to be found south of the Alps.

In country schools pupils of all classes are drilled together. To meet difficulties, which occur owing to difference of physique, the Code assumes three degrees of proficiency for each exercise, and arranges a standard in each exercise for each degree.

From the teachers' point of view the chief change made has been from a purely systematic course to one that is both systematic and methodical. The methodical hints in the new code relate to the words of command, the division of the period, the supervision of the ventilation, the exercises suitable for hot weather, and the precautions to be taken when a class is mentally fatigued. The necessity for variety in the exercises and for the proper division of the work between class performances and individual efforts receive due emphasis.

In all classes marching drill is taught, both quick-step and double. The stave exercises are preparatory to gymnastics with the rifle. The stave is a yard long and weighs about 5 lb. There seems to be no graduation in the weight of the staves. I saw boys of twelve practising with bars that were much too heavy.

A gymnastic period is divided normally as follows:—

(i) Concerted movements and free gymnastics	7 to 8 mins.
(ii) Exercises on apparatus	10 "
(iii) Trunk movements and running	7 to 8 "
(iv) Harder exercises on apparatus	10 "
(v) Jumping and balancing	5 "
(vi) Games (tick, prisoners, leap-frog, rounders, tug-of-war)	10 "
Total	50 "

The third grade of the Federal code overlaps the Code military drill-book. The syllabus is at present under revision. A boy who passes through this third grade is usually put into a separate company when he goes up for his recruits' training. He has also a better chance of becoming a non-commissioned officer. For those who remain at school till the age of eighteen attendance is compulsory. For other persons opportunities are afforded by voluntary gymnastic societies and cadet corps.

At the Kantonsschule (age of pupils 12–18½) two hours per week are devoted to compulsory gymnastics. The third grade of the military code is passed in the following manner:—

Three classes are formed—

Class (I.) for pupils between 15 and 16.
" (II.) " " 16 and 17.
" (III.) " " 17 and 18.

Each of these classes devotes one hour per week during summer to military exercises. Class II. devotes an additional hour per week in winter. The work

Preparation for military service.

Course of instruction.

Mr A. J.
Pressland,
M.A.
3 Oct. '02.

consists of drill, marching, and firing exercises. These classes are given special half-holidays, amounting to six in the summer half-year, for field days and firing practice. The field days fill up the whole afternoon (six hours). For firing practice boys are required to give up two Saturday afternoons in the term from their free time.

Boys above the age of eighteen are preparing for the matriculation examination, and the work is made lighter for them by the omission of drill. This drill comprises the usual company movements, stave exercises, etc., and also obstacle climbing in full military attire.

Cadet corps.

At Winterthur the secondary schools combine with the Higher Grade School to form a cadet corps. There is an infantry detachment of about 300 and an artillery corps with 50 members. The usual time for practice is Saturday afternoon. Great attention is paid to marksmanship.

Optional courses.

In the Higher Grade Schools of Zürich optional courses are arranged for pupils. These courses combine firing practice and marching, and are held in summer only. The marches last, as a rule, about three hours, and take place on free afternoons. Practice in judging distances, obstacle climbing and games are indulged in on the march, so as to prevent it becoming a monotonous tramp. Free gymnastics are no longer demanded when marching.

In these optional courses instruction in the use of fire-arms begins in the second class (thirteen to fourteen years of age). It is confined in that class to an explanation of the mechanism of the rifle and the use of the cross-bow for aiming. In the third class (fourteen to fifteen years of age) the cadet's rifle is used.

Voluntary gymnastic societies.

At various places in the Canton, voluntary gymnastic societies are formed. These at present number 1721 members in the district of the Sixth Army Division. Of these 849 are members of the Zürich Town Clubs, 501 are enrolled at Winterthur, 220 in the Zürich Oberland, and 151 in Schaffhausen (Kt. Sch.). These societies existed long before 1874. Their character may have changed since then. By joining them a boy can manage to pass the 'Militärischer Vorunterricht,' which is noted in section 81 of the Federal Wehrgesetz of 1874. Attendance at this instruction has not yet been made compulsory. In a number of Cantons attempts have been made, since 1884, to carry it out with optional enrolment, but compulsory attendance. The Canton of Zürich, and more especially the town, is in advance of other Cantons in this respect.

It must not be assumed that the sole object of the 'Turnverein' is to enable its members to prepare for military service. A gymnastic club is as frequent among German-speaking people as is an association football club in Scotland. On Sunday afternoons the Swiss villagers practise shooting with the same zeal that the English west countrymen practised single-stick and the men of the Border archery.

Girls.

Girls.—The regulations for boys apply, so far as this is possible, to girls also. Instead of military exercises, games are played at the Girls' High School, for which purpose special afternoons are set apart, and the tennis courts at the Belvoir Park are reserved on these afternoons. This exercise is in addition to the two hours' compulsory gymnastics per week. The value attached officially to gymnastics for girls is best shown in section 12 of the new code (Verordnungen), which decrees that attendance at gymnastics is compulsory for girls in the extended Primary School. The time given to compulsory gymnastics is the same for girls as for boys. The latter, in a number of schools, get one hour more of gymnastics per week while the girls are engaged in the sewing school.

It is to be noted that in some girls' schools too much attention is paid to attractive effect. It is much easier to do graceful movements on the smooth floor of a gymnasium than on the gravelled playground. Some teachers are inclined to keep their classes in the gymnasium too long, and often when the weather is quite good. In Berne, I understand, the authorities seek to prevent this by building no more gymnasia; when the weather is bad the time-table is changed. In

Zürich, of recent years, gymnasia have been built with one side open to the air. This practice may very likely be imitated at Berne in the near future.

Half-timers' School.—In summer a number of country schools are open on two days a week only for pupils between the ages of twelve and fourteen. On each of these days 4½ hours' teaching is given. One half hour is allotted to gymnastics per day, 'as much on account of the moral discipline as for the hygienic results,' to quote the words of the Committee entrusted with the organisation of these classes.

Supply of Apparatus and Facilities.—The Commune, in the first instance, is responsible for providing all facilities. The Canton gives grants to communes in aid of expenses incurred according to a sliding scale of taxable capacity. In 1899 all schools in the Canton, with one exception, had a playground. About 3·7 per cent. of the schools had no apparatus. A considerable number of schools had no covered gymnasium, a source of disappointment to local gymnastic societies, who would be glad to use it at night. When the Commune does not wish to pay for a gymnasium, ardent advocates of open-air gymnastics abound. But the Zürchers are not stingy in supplying facilities. At Küsnacht a new gymnasium is to be built at a cost of £1600. At Kilchberg the estimate is £2320. The school population of the former place is 310, of the latter 230.

These gymnasia are under the control of the School Board. They are readily lent to local gymnastic societies for evening practice. A small fee is charged to clear expenses.

Supply of Teachers.—In Volksschulen the class master is primarily responsible for the teaching of gymnastics. He has usually completed a period of military training, and has been taught to give gymnastic lessons when studying at the Training College. The course at the latter lasts four years. Two hours a week are devoted to gymnastics in each year. Before a certificate is granted a pupil must pass an examination in the method of gymnastics and give a trial lesson.

Most of the teaching in Volksschulen is done by men. The mistresses have passed in a course of gymnastics, but the system of mixed classes makes the authorities prefer men. The latter are taught the main points of difference between gymnastics for boys and gymnastics for girls in the Training College courses. In the lower classes the mistresses take the gymnastic lessons of their classes. I saw a mistress drill a class of 53 boys aged eight to nine without any breaches of discipline save those caused by excessive eagerness. I also saw a mistress drilling a class of weak-minded children who attained to considerable proficiency in marching.

At the Secondary Schools special gymnastic instructors are engaged, some of whom hold commissioned rank in the army.

During vacations intercantonal courses for teachers are held with a view to improving the standard of instruction. These courses last about three weeks. The Cantonal authorities make grants to such of their teachers as attend. When the new Code was issued the canton of Zürich instituted three repetition courses for teachers to enable them to cope with the altered arrangements. The school chapters also discussed the new Code very thoroughly, and model lessons were given at their meetings. At the present date (September 1902) difficulties are still found in teaching gymnastics, owing to the confusion of the words of command.

Similar courses are held for mistresses. The courses for teachers as well as those for mistresses are arranged by the Swiss Gymnastic Club (Schweizerischer Turn Verein) and by the Swiss Society of Teachers of Gymnastics (Schweizerischer Turnlehrerverein). These clubs are subsidised by the Federation. The cantons make grants to the persons attending the courses.

Two types of excursion are organised for pupils, the Field Day, or Ausmarsch, for boys, and the Schulreise (school journey) for

younger pupils. The usual duration of the former is from three to six hours. Some companies make a long route march, from twenty to thirty-five miles, to test endurance. Others, and this is exceptional, may spend a night away from home. The educational aspect of the march is not neglected. Historic sites are visited, and the sentiment of patriotism is kept alive in every manner.

In September of this year I made an Ausmarsch with a class of 55 boys aged seventeen to eighteen. It lasted six hours, from 2 pm. to 8 pm. The work of the company was very creditable, it showed thought in the actual manœuvres and endurance in the physical tests.

In 1893-95 I trained boys at the Edinburgh Academy for the physical endurance test demanded of candidates for Cooper's Hill. One year we got first place and another year third place. With the class mentioned above I could have done quite as well with three weeks more training. The boys were in capital condition and ready to undertake anything.

In the secondary schools marches are combined with military training. In the Primary and Higher Grade Schools, however, they possess a character of their own. Attendance is voluntary but none the less good; about 60 per cent. of those eligible (between the ages of twelve and fourteen) in the town of Zürich took part. The members are organised in squads of thirty. When the squad is drawn from one class and is under the control of the class master discipline is easy. In other cases difficulties occur. In winter few marches take place, as the weather is frequently unfavourable, and other means of exercise, notably skating, are available.

In the country many of the children have a long way to come to school, and out-of-door employment is everywhere at hand. The marches are therefore considered unnecessary.

A report by the Central School Board, dated 13th June 1901, shows that in 1900 there were 918 boys, between the ages of twelve and fourteen, who enrolled themselves for the marches. The length of the march varied from three to twelve hours—the average was five and a half hours. From the reports of those in charge it appears that, while marching was vigorously practised, surveying, photography, and distance judging were freely indulged in. In autumn the pupils devoted a whole day to following the army manœuvres. As an experiment, two squads made a whole day excursion. They were on foot for eight hours, but the total expense, food and train fare included, did not exceed ninepence per head.

The school excursion is a lesson in the open, either in botany, natural history or geology. It should be noted that 'Naturkunde' is a subject in primary classes IV. to VIII., and in the Higher Grade School. It is excellently taught, the accessories (Anschauungsmaterialen) are numerous, and the class is encouraged to make observations in the open for itself, either in the school gardens or in the woods. The excursion is very popular with girls. In the Girls' High School, where geology bulks largely in the work, long tours extending over several days are made. In the Higher Grade Schools less ambitious tours are undertaken. Each party of girls must be accompanied by a teacher and a mistress, both of whom are qualified to render first aid in case of accidents. Small children in the elementary school and Realschule make school journeys (Schulreisen). These are usually festivities at the end of term. The children come home headed by a drummer and bearing a miscellaneous assortment of flowers, weeds or insects.

Games.—Since 1898 serious attempts have been made to organise games for school children in Zürich town. These have met with considerable encouragement, but there have been many difficulties to face, and a number of mistakes have been made. At present games are organised, for boys between the ages of ten and twelve, and for girls between the ages of ten and fifteen. The practices are under the supervision of masters and mistresses, who frequently take their charges into the woods to play. In many parts one

comes across a clearing of an acre or more in the woods. This has been sown with grass and laid out as a playground. The value of such grounds in the pine woods for children inclined to be consumptive is held to be considerable.

In Zürich (old town) games were first introduced by Herr Schurter about 1885. Cricket never found a firm hold, but football has prospered.

In a number of the newer schools (Higher Grade schools) playing fields are provided in close proximity. They seem somewhat too small to British eyes, but it must be remarked that sites are dear. The children seem to be rather too ready to take refuge in the Gymnasium, where they play rounders or practice running maze, instead of playing in the open.

In the secondary schools there are no organised school games' clubs. Pupils join rowing and football clubs in the town. This is rather undesirable, as it introduces a pupil too early to club-life. One master told me he could always tell when a pupil joined a club. His work immediately became worse.

Swimming.—In Zürich town arrangements are made for teaching swimming to children of twelve years of age. A number learn before this age. Altogether about 65 per cent. of those concerned enrol themselves at the beginning of the season. At the end, including previous swimmers, about 60 per cent. of the pupils of age twelve can swim.

These swimming classes are supervised by the members of the Zürich teaching staff. Twelve professional teachers are engaged to give instruction.

The school baths are all spray or hip-baths. No Volksschule has a swimming bath. There are swimming baths in the town to which children get access at reduced charges.

Special arrangements for sickly children. In accordance with section 51 of the Act of 1899, grants are made towards the provision of food for poor children, the maintenance of day-homes, the expenses of holiday colonies and convalescent stations. The funds for this purpose are usually derived from the 'Alcoholzehntel,' which originates as follows:—The manufacture of spirits is a federal monopoly and yields a handsome profit. This is divided among the various cantons, who are bound to expend one-tenth of the amount received in combating the effects of alcohol.

The Annual Report of the Zentral Schulpflege of Zürich Town (1901, pp. 64-75) contains an account of the measures taken by the Board. The total expenditure for food and clothing amounted to £800 in 1901. There were on an average 1787 participants. Some portion of the expenditure was met by private subscription.

The following remarks by a well-known authority in Zürich are worth recording:—"With regard to underfed children I decidedly think the school ought to step in for them. The school authorities can help the poor boys and girls in a much more efficient way than any charitable society. The school stands in higher repute than any society with the public; it enjoys the confidence of all creeds and denominations; it can exert better control and avoid spending in wrong places much better than any benevolent societies. Where charity is mixed up with religious questions it is often ill-used as a means to attract adherents and converts; and sly poor people sometimes succeed in making quite a tolerable living out of this contest."

Holiday Colonies.—These were started in 1876, and have been organised for some years as follows:—Fourteen different stations are chosen in the north-east cantons. At each a large house is taken where the children dine and sleep. The house and the arrangements are under the care of two married teachers and their wives. The average number of pupils per party is fifty. The number of persons in control is calculated at one for ten children. Additional help is rendered, voluntarily, by other members of the Zürich staff. The holiday homes exist for about 25 days, the cost, including railway and office expenses, is about 40 francs per head. It is met partly by communal contributions, partly by private

subscriptions, and partly by parents' payments. These latter are voluntary subscriptions. If a child should not be selected by the Committee it may still join the colony on payment of 50 francs. This concession is taken advantage of by some patrician families who wish their children to have practical acquaintance with democracy.

One of the stations belongs to the Association and is open all the year. In holiday time it is used as a holiday home. During term time sickly children are sent to it from the town. They are fed, housed, and taught (two hours per day), and, when they have regained their health, are able to rejoin their former school classes without difficulty. This station is under the care of a resident teacher who supervises arrangements during the holidays and teaches the children during term-time. On the 17th September I spent the greater part of the day at this home, and can speak in praiseworthy terms of the arrangements. I also inspected the squad of children returning from the house after a month's stay and the squad arriving for a month's cure. The difference in general physique was striking. The behaviour in all cases was much better than one would imagine.

In this manner about 600 of the poorest children in the town get an annual holiday, and nearly 300 others are treated during the session.

Boarding arrangements.—There are no public boarding schools in the Canton. Private persons may take children of school age as boarders under precise conditions. Permission must be obtained from the Board of Health, who consult the local health authorities. The applicant must send a certificate of respectability from the Parish Council and a medical certificate of health. The local health authorities satisfy themselves that the dwelling is in good sanitary condition. They arrange further that each child shall be inspected every quarter by a doctor.

Two items of school arrangement have given perplexity to the authorities. These are the style of writing and the type of desk.

The question of sloping or upright writing has led to a paradox. With an upright hand the eyesight suffers, with a slope hand there is danger of spinal curvature. The question has been discussed times without number. At present a slope hand is in vogue. The elaborateness of the discussion has been caused to a great extent by the system of popular inspection. Herr Grob of Erlenbach, Zürich, writes that he is preparing an article on the subject which will be ready in winter. I have not met this gentleman, but his opinion should carry great weight. In 1893 there was published 'Untersuchung über den Einfluss der Heftlage und Schrift richtung auf die Körperhaltung der Schüler,' by Doctors Ritzmann and Schulthess and Mr Wipf, schoolmaster. Dr Carrière, in a report written from materials in the Federal Office of Health, declares (p. 45) that upright writing has not been made obligatory in any canton.

The type of desk has been described in section 25 of the Verordnungen of 1900, and in the annual report of the Central School Board for 1900. I produce photos of various desks which have received approval. The latest model is the Zürcher Schulbank. It has at 10 cm. from the ground a foot-board with one oblique side which is smooth; this serves to support the feet. The top side is horizontal, and milled so as to receive the dust from the children's feet. The seat is shorter than the table, and underlies the latter by 2 cm. It is fixed in this case (an innovation). The needlework desk has also been remodelled. The top is now horizontal but the seat movable. The new desk is made in eight sizes, the needlework desk in four sizes.

The Zürich Committee for Public Health in Schools has of late years discussed the question of the best method of carrying school-books, and has waged war on the nasty question of parasites. In case of the latter being discovered, pressure is put on the parents, advice as to treatment is given, and the child excluded from festivities. The School Board has,

however, no compulsory power, and wishes to hand the question over to the Board of Public Health, which has compulsory powers and may regard the evil as a contagious disease. The matter is not yet settled. The probable result will be that the Board of Health undertakes the duty of public cleansing while the teachers become its voluntary inspectors.

The time devoted to physical exercise in schools may be summed up as follows:—

1. A break of seven to ten minutes every hour. In a long morning one break is fifteen minutes.
2. In the Kindergarten, no fixed amount.
3. In the Primary School—

Age six to seven, one hour gymnastics per week (often in various detached portions).

Age seven to twelve, two hours' gymnastics per week.

This applies to all pupils. Boys frequently get an extra hour per week while girls are learning to sew.

4. In the Higher Grade and Secondary schools (town).

Boys.—Two hours per week gymnastics. One hour per week for two years (military exercises). Six half holidays for marching and shooting per annum. Two free Saturday afternoons taken for firing classes.

Girls.—Two hours' gymnastics per week. Special games' holidays. Excursions (equivalent of military exercises for boys). At least one extra half-holiday per month.

Note.—In all Higher Grade Schools one game (two hours) is played per week. Enrolment is optional but attendance is compulsory.

Results.—It is difficult to give any positive statement as to results, since physical exercise is often only one factor in determining them.

The following statistics may be of interest:—

1. Mortality.—

	Federation.	Deaths per 100,000.	
		In Towns of 10,000 Inhabitants and upwards.	
<i>(a) Tuberculosis.</i>			
Period 1876-1880, .	234.8	321.5	
„ 1896-1898, .	208.1	238.9	
<i>(b) Diseases of the organs of respiration.</i>			
Period 1876-1880, .	238	} per 100,000	
„ 1894-1898, .	206		
<i>(c) Diseases of the heart.</i>			
Period 1876-1880, .	71.4	} per 100,000	
„ 1894-1898, .	90.0		

2. Medical examination of recruits.—The gymnastic code was introduced in 1876. The medical examination was made more stringent in 1880-1881. Recruits are examined at age nineteen and begin service at age twenty.

Factory Acts.—The Federal Factory Act dates from 1st January 1878. It is modified locally in certain details, e.g., payment for overtime. The following provisions may be of interest:—

1. A factory is an industrial establishment where a number of workmen are employed simultaneously and regularly outside their homes in a circumscribed area. In practice it is assumed that the 'number' must exceed five.

2. A day's work does not exceed eleven hours, with a break of one hour for rest. Before Sundays and feast days the amount is reduced to ten hours per day.

3. In no case may women be employed either on night work or on Sundays. At child-birth a period of eight weeks' absence from a factory is enforced. Of this period six weeks must occur after accouchement. This practically enforces a period of previous rest. The result has been a decrease in the number of still-births and an average increase of ten ounces in the weight of newly-born infants.

4. Children below fourteen years of age may not be employed in factories. From fourteen to sixteen years of age the total week's work for such children (school, factory, and religious services included) shall not ex-

ceed eleven hours a day. No person under eighteen years of age may be employed on night work.

The attitude of the population towards gymnastics is favourable. The sense of discipline is strongly developed in the people who take pleasure in collective work. The love of outdoor games is not so marked. Boys of fourteen have told me it is childish to play with a ball. What is principally lacking is initiative in developing games. In the country there is plenty of outdoor work, and games are not considered necessary. In the town they are considered healthful and valuable as aids to the formation of character. But in all schools the work is the principal feature. There is little danger of the physical education being neglected. There is absolutely no danger of neglect of work. The presence of Germany with its magnificent traditions of Wissenschaft, the long line of Swiss thinkers, and the necessity for wringing a living out of a poor country, all tend to make work the principal feature of the Swiss schools. The moral education which is drilled into pupils, the instinctive recognition of obligation which is so characteristic of Teutonic people, and the feeling that, young as they are, boys are able to repay some of the debt they owe to their country, combine to make gymnastics and collective physical exercise a pleasure to the Swiss boy. You would never get two thousand Swiss boys to look on while thirty others played. If they desired a spectacle they would go to a theatre and see something intellectual.

Two teachers of Gymnastics deserve mention:—

1. Phocion Klias, the son of Swiss emigrants, was born in the U.S.A. On the death of his parents he returned to Switzerland, where he was discovered in 1822 by some British officers at Berne. He was appointed Professor of Gymnastics at Woolwich, Chelsea, and Greenwich, with the rank of captain. For five years he was the fashionable teacher in London. In 1828 he returned to Switzerland, where he took pupils up to the time of his death. He was a splendid performer, but excessively vain. He left his skeleton to the Anatomical Museum in Berne as a model of a perfectly developed man. The democratic trustees, however, buried it.

2. Adolf Spiess was the principal educational gymnast. In 1836 he wrote a book on Gymnastics, in which he demanded:—

(1) That gymnastics should be considered a regular subject of instruction.

(2) That every class should be taught gymnastics by its class teacher.

(3) That every class should get one hour gymnastics per day (one half on apparatus, the other half games).

(4) That gymnasia should be near the schools and used in winter as well as in summer.

(5) That gymnastic exercises should begin at the age of entrance and be compulsory for girls as well as boys.

In 1840 Spiess wrote a Gymnastic Code (Turnlehre), in which he advocated Free Gymnastics.

In conclusion, I would ask the Commission to remember that this report is only a by-product of a much larger report for another Board. It has been written in a hurry, and time has often been wanting to digest the details. I would, however, urge three practical steps.

(1) A compulsory examination of eyesight and hearing of all children on first entering school. A re-examination of eyesight and an examination of the teeth at age twelve.

(2) The issue of instructions to School Board auditors that they shall allow all expenses connected with the teaching and supervision of children sent to holiday homes which may appear in School Board accounts.

(3) The inclusion of some form of moral education in the teaching of children between the ages of twelve and fifteen. This education not to be religious, but to embrace the duties and privileges of the citizen. Attendance to be compulsory. Before this could be introduced, a preliminary course of Moral-Pädagogik will

be necessary at our Training Colleges. Improvised teaching on the necessity for being good is worthless.

The last question is attracting great attention in America and on the Continent. It was discussed in full at the meeting of the Zürich School Synod held at Wetzikon which I attended, and a resolution was unanimously passed by the teachers that such instruction in 'Civics' should be obligatory in all schools and in all classes.

14,059. *By Sir Henry Craik.*—You begin your evidence with regard to the regulations of the Canton of Zürich. These have undergone considerable changes?—Yes. That was in the Act of 1899 affecting the primary schools. The Secondary Schools Act has not passed, as they cannot afford the money just now.

14,060. What bearing has recent legislation had on physical training?—There has been very little increase in the amount of physical training, as it was well developed before. The primary classes 7 and 8 are new classes, and the old half-timers' school has been abolished. These two classes 7 and 8 take its place.

14,061. For older children?—Yes. There is a half-timers' school in the country in summer, and the Commission selected to draw up the time-table insisted on gymnastics for those children. As I say, in regard to the half-timers' school in summer, a number of country schools are open on two days a week only for pupils between the ages of twelve and fourteen. On each of these days four and a half hours' teaching is given. One half hour is allotted to gymnastics per day.

14,062. When you speak of half-timers' school, is that a school where the pupils are in employment for the rest of the time?—Yes.

14,063. What I want to ask you is in regard to both these half-timers' schools, and the ordinary schools; did the Canton of Zürich feel it necessary to increase the stringency of the rules as to physical instruction in their recent legislation?—This has been perfect since 1836.

14,064. It has been carried on for a long time?—Yes.

14,065. It has been a very highly developed system?—Yes.

14,066. I think it varies according to the statistics you give in different places?—Yes, in different cantons.

14,067. And the rules laid down have been carried out, I think you say, only by 36 per cent. of the schools?—Yes, it is 35.2 per cent. in 1898, 37.4 in 1899, and 36 per cent. in 1900.

14,068. There is a slight drop in the number of schools that don't attain even the minimum required by these legislations?—Yes, but I don't think it is a matter of importance.

14,069. Apparently the demands made by these rules have been rather in excess of what the schools found possible to carry out?—I think it is simply a question of money.

14,070. But it is a fact that for one reason or another they could not quite carry out these rules?—That is so. I think they have set the standard too high, but there is a large foreign element which has to be kept in order and has to be taught, and it is a great nuisance.

14,071. What would be the causes that have rendered it difficult for the schools to come up to this required standard? You said the presence of a certain number of foreigners and the want of money?—The want of money is a great thing, but principally the fault is due to political causes, in the main to a want of compelling power by the Federation.

14,072. Do they complain of the want of time?—No, I have heard no complaint as to want of time. A difficulty has arisen lately in consequence of the introduction of this new code. I have given in my evidence some extracts from the new code. Mr Spühler, at Küsnacht, told me that he had found a great difficulty with the girls when drilling in the training college. They were continually giving the old word of command instead of the new one.

Mr A. J. Pressland, M.A.

Regulations.

14,073. You have not found any complaint as to pressure of time brought about by the more intellectual subjects rendering it impossible to comply with this code?—No. The main thing in Swiss education is that they have a fine selection of stuff that they teach.

14,074. We find that these rules apply equally to girls and boys?—Yes. At the training college, the various candidates are taught the difference between gymnastics for boys and gymnastics for girls.

14,075. Do you think generally that these regulations are based chiefly upon the strengthening of the resources of the population, as regards the military power, or are they educational in their aim?—They are both.

14,076. Which do you think prevails chiefly?—I think the military spirit has prevailed hitherto. There is a great outcry for moral education.

14,077. On the part of the population?—On the part of the teachers. I have referred to that at the end of my statement.

14,078. In the training, what courses do the teachers go through? Do all teachers take this physical training?—Yes, unless they are physically incapable of it.

14,079. Men as well as women?—Yes.

14,080. In some cases you say it is carried on by non-commissioned officers in the army?—Commissioned officers; that is in the secondary schools. In the other schools it is done by the Volksschullehrer.

14,081. That is the teacher you mean?—Yes.

14,082. You find that the games are defective, although physical training is carried on very well?—Yes, because they don't have the genius for developing games, and then they get quite enough physical training in the school.

14,083. Physical training has bulked so largely, and perhaps directed and shaped the tastes of the pupils. Do you think it is a regrettable thing that it should have driven out games?—They, the Swiss, do not, because games in Switzerland introduce a boy to club life, where he learns to smoke and drink, and hears generally undesirable conversation.

14,084. Would you not think it a matter of regret if we introduced this systematic training to such a large extent as is done in Switzerland if it had the effect of lessening the games?—I rather think that between 1880 and 1890 (I won't speak of the past five or six years) we played too much in England. I have no acquaintance with Scotland before 1890, but I think games were overdone in England.

14,085. You said you saw the result of the route marches, and you have tried the same thing in the Edinburgh Academy. How did the boys compare?—I should say that with the whole class of fifty-five in Switzerland I could have attained the same standard in three weeks as I was able to do with my boys in the Academy.

14,086. I don't quite understand. How do the Edinburgh boys compare with these Swiss boys? Do you say that you could make the Swiss boys do all the Edinburgh boys can do in three weeks?—Yes.

14,087. And how long would the Edinburgh boys take?—A term.

14,088. How long a term?—Twelve weeks.

14,089. You say that you could have done as much in three weeks with the Swiss boys as you could do in Edinburgh in twelve?—As they were then.

14,090. *By the Chairman.*—You say that the Edinburgh boy is, therefore, inferior to the Swiss boy as he is?—I think that our boys at the Academy could not march so well as the Swiss boys.

14,091. *By Sir Henry Craik.*—You attribute that to the careful and systematic training in Switzerland?—Yes, the training in marching.

14,092. You are inclined to draw the inference from that, that the systematic training is of more value than the games, because there is no doubt that the Edinburgh boys have more games than the Swiss boys?—If I had them on the same footing, I would get the Academy boy to beat the Swiss boy. He would be able to do that if he had the training.

14,093. But without the training he could not?—No.

14,094. Summing up the result of their training, it is very decidedly military in its character?—Yes.

14,095. Do you find any objection to that on the part of the parents?—No. Might I tell you one or two things about the army? There is no standing army in Switzerland. There is a militia. At the age of twenty the recruit goes up for his training, when he serves seven weeks, and every second year he has to come out for three weeks' training up to the age of thirty-two.

14,096. I see also, that besides mere military training there is certain compulsory training in fire brigade work?—They may be called on to qualify, but, as a matter of fact, they pay taxes and keep a brigade. In the country, however, if they don't feel inclined to pay the taxes, then they have to serve. It is simply a matter of arrangement between them.

14,097. Do you think that there would be an objection to the military element on the part of Scottish parents?—I have heard that.

14,098. There would be more objection than you have found in Switzerland?—Yes. In Switzerland there is always the danger of invasion.

14,099. As to the statistics you give of deaths, are they synchronous with the two periods of physical training to which you refer?—Yes.

14,100. You state that during the later period physical training has been a little more developed?—I wrote to Dr Schmidt, and that is what he told me.

14,101. Is it not an odd thing, that although the percentages from tuberculosis and diseases of the organs of respiration have fallen off, the diseases of the heart have increased?—I am just giving you the facts.

14,102. Do you think that points to any possible strain from this marching or the high development of the physical training?—I think it might possibly be developed by those stave exercises. The staves are far too heavy. With the stave exercises they have to raise their arms above their heads, and that puts a strain on the heart. I am certain that the staves are too heavy.

14,103. What inference do you draw from the table of statistics that you have handed in? I have studied the statistics, but I don't quite see the inference?—I have not drawn any inference, but I could tell you some things which might lead you to a result. First of all in French Switzerland, the Germans say that the examinations are not so hard in order to gratify French vanity, so that they may come out at the top. Those figures they say ought, therefore, to be discounted, but I have no personal evidence to give on that point. Columns one, three, five, and six contain the towns; column eight is almost entirely a large country district. I have a map which will show the districts much easier.

14,104. You need not mind. You are accustomed to results of examinations?—Yes.

14,105. Would you not be inclined to agree with me in saying that on the whole these percentages show a surprising uniformity, more uniformity than one would have expected?—Yes. The examination has been made harder since 1879, and if you took 40 for 1879 instead of 42.9, I think you would be nearer the mark. That means, that in consequence of this new federal code of 1876, out of 100 young men you got 40 serviceable recruits, and through the introduction of the later code you get from 51 to 52.

14,106. An increase of about 10 per cent.?—Yes, nearly 12 per cent.

14,107. This training has been going on for a long time?—Yes, in Zürich, but I am not sure about the Federation. In 1874 there was a revision of the constitution, and in 1876 the federal code of gymnastics was introduced.

14,108. Have you worked yourself in State-aided schools, or among the scholars of State-aided schools?—No, I have simply worked in secondary schools.

14,109. You have no experience of State-aided schools?—No, not here, but I have inspected every kind of school in Zürich.

Mr A. J.
Pressland.
M. A.

3 Oct. '02.

Military
training.

Teachers'
courses.

Games and
training.

Scotch and
Swiss boys
compared.

14,110. But not in England or Scotland?—No.

14,111. You have no opinion to express as to the best method of drawing this class in Scotland to attend classes corresponding to 7 and 8?—No, I cannot give a personal opinion.

14,112. On the whole, the result of your examination of these Swiss schools is that you think there has been there a very complete system of physical training, but in later years it has been much developed and increased?—It has been better organised since 1876.

14,113. It is so stringent that the schools have some difficulty in meeting it, not from any want of desire on the part of the parents, but from the want of money?—Yes.

14,114. And the result is, to your mind, to produce good physical types of men who, starting with perhaps a worse physique than the English or Scottish boy, on the whole, after a course of training, turn out to be rather better adapted in physical work?—Yes. I went to a school in the low quarter of Zürich, which boys in classes 7 and 8 attended, the most town-bred of town-bred boys. There was a class of fifty-five boys at drill there, and I looked very carefully at their physique. They struck me generally as having the kind of development seen in a young mechanic serving his first year of apprenticeship. I could not point to more than three or four that looked weak.

14,115. They were not picked boys; they were just an average?—That is so. There was one that looked anæmic, but he may have just been recovering from an illness, and there was another who, I thought, had one leg shorter than the other.

14,116. On the whole, they compared well with any similar group of boys taken in a town in Scotland?—Yes, and that was due to the training.

14,117. *By Mr McCrae.*—Each boy gets physical exercise at school; after he leaves school and before he joins the militia, what provision is there for physical training?—It is entirely voluntary. If he goes through the third course, then in coming up for recruit service he is put into a better company, and has a better chance of being a non-commissioned officer, getting better quarters, better food, and perhaps a few more pence.

14,118. He does not require to go through the ordinary recruit drill if he passes that class?—Not entirely. I have shown my statement to the principal gentlemen in charge of gymnastics in Switzerland, and I have also shown it to one of the sergeants in the army.

14,119. You say that they have a cadet corps attached to the secondary and higher grade schools?—Yes, in Winterthur the secondary schools combine with the higher grade schools, because the secondary schools there are small.

14,120. Are there any cadet corps in connection with the primary schools?—The education in the primary schools finishes at the age of twelve. In my evidence you will find that I say that the federal Code takes no notice of the instruction given previous to the age of ten. It is arranged as a preparation for military services in two grades, first for boys between the ages of ten and twelve, and second, for boys between the ages of twelve and fifteen.

14,121. But that is hardly my question. They get education at the primary schools up to fifteen?—No, up to fourteen.

14,122. In connection with the primary schools, you have no cadet corps?—No. The extended primary has ausmärsche and a little cross-bow practice.

14,123. Have all the secondary schools cadet corps?—Yes, corresponding with the cadet corps here.

14,124. *By Mr Fergusson.*—I suppose, apart from this special Swiss work, you have a large experience of schools in Scotland?—Yes, I have been teaching in Scotland for twelve years.

14,125. Applying all your knowledge and experience

of schools here, if we are going to increase the amount of physical training in Scotland, would you like to see a universal hard and fast rule laid down for all schools?—No, there must be some elasticity.

14,126. What sort of system should be adopted for schools?—You are asking a very hard question.

14,127. You have not considered that?—No. I may say that the statement I have prepared is only a by-product of another report, and it was written in a great hurry. I understood that you would not ask me about systems or courses.

14,128. You are only prepared to speak to the Swiss treatment?—Yes.

14,129. *By Mr Shaw Stewart.*—In the beginning of your evidence you say that the Act gives power to the Guardians, to remove their children from the custody of drunkards and criminals, and that the usual procedure is for the teacher to represent that a child is being neglected or overworked by house duties. You then say that the Guardians then institute an inquiry. What Guardians are those?—I don't know what they are. They are some of the various governing bodies; they are distinct from the school authorities. It is something in connection with the poor law which does not come within my knowledge. There has been considerable friction over that. It was in 1900 that the School Synod brought up the question of the relation between the teaching staff and the supervision of criminally disposed children, and the teachers rather revolted. They refused to look into the home conditions of the children. Pressure was brought to bear on them, and the teachers accepted the situation, and it has been found to be an advantage to the Canton.

14,130. Then the onus of taking them away from intemperate parents really falls on the teacher?—I would not say altogether. There is a high standard of public duty there, and anyone who sees a thing going wrong does his best to put it right.

14,131. He must do it through the teacher?—Not necessarily.

14,132. You say that is the usual procedure?—Yes, the teacher has the best opportunities for observation, but anyone outside who is a member of the Parish Council, for instance, can take it up if necessary.

14,133. *By the Chairman.*—I see you have been engaged since 1899 on a report for the Board of Education?—Yes, and I fear it will take another two years.

14,134. You have been really so busy over this, that you have had little time to think of anything else?—That is so.

14,135. Were you invited to do this work?—I went to Zürich in 1899 in order to study certain questions for myself, more especially in regard to the teaching of mathematics in the Academy. I was asked then by Mr Sadler to write a complete report on the Swiss education from Kindergarten to University; I am going to do it, and it will be complete. There is one other thing I might mention; I am interested in the holiday colony schemes. I believe in Edinburgh this year they are going to found a permanent home; I know money is being collected.

14,136. A home for whom?—A permanent home for poor children, to take children away from the primary schools and send them to the country and teach them there.

14,137. *By Sir Henry Craik.*—During their holiday time?—No, during the term time. You give them an hour or two hours' teaching for purposes of discipline.

14,138. *By the Chairman.*—Is there not some scheme about taking them to the country schools during the holiday time?—I don't know. I think you might ask Mrs Boyd in Edinburgh, who knows about it to give you evidence.

14,139. *By Sir Henry Craik.*—You have not heard of that plan?—No.

Mr A. J. Pressland, M.A.

3 Oct. '02.

Supervision.

Report for Board of Education.

Holiday colonies.

The witness withdrew.

Adjourned.

GENERAL INDEX TO THE MINUTES OF EVIDENCE.

THE FIGURES REFER TO THE NUMBERED QUESTIONS IN THE MINUTES OF EVIDENCE.

Index to
Evidence.

ABERDEEN GRAMMAR SCHOOL:
Description; class of boys at school; physical training in; playing field; athletic sports, 3214. *Simpson.*

ABERDEEN (OLD) GRAMMAR SCHOOL:
Example of secondary school conducted on lines suitable to continuous and exacting study; description of school; intellectual work; short school hours; recreation in open air; forms of exercise; deductions from their example, 6983; methods; opportunities for exercises, 7010-28. *Mackenzie.*

ABERDEEN PHYSICAL TRAINING COLLEGE:
Description, 10,492-502; men and women generally taught separately, 10,496; fees at, 10,497. *Cruden.*

ABERDEEN SCHOOL BOARD:
Number of schools under; pupils; history; gymnasia; outdoor drill; views in 1899 of; cost per head of child in average attendance in 1892 and 1901, 3058: 'physical training' more generally acceptable than 'military drill,' 3189-91. *Craigie.*

ACCOMMODATION:
Central hall in school and shed in playground, 13,233. *Anderson.*
(Inside) inadequate, 11,362. *Beattie.*
More floor space desirable; generally inadequate for health reasons, 5353-60. *Bruce.*
Of North London Collegiate School for Girls, 8579. *Bryant.*
Floor space ample in every school under London School Board, 4056-7; class and room; sizes, 4108-10. *Chesterton.*
Overcrowding; space recognised by Government ample, 5693-704. *Cowan.*
Schoolrooms inadequate; suggestion, 8127: limit, 8194-5 and 8259-61. *Dukes.*
Adequacy of schoolroom and playground, 6709: floor space and ventilation inadequate, 6837-42. *Hay.*
Continuation classes, want of, 13,308-12. *Henderson.*
Limited; special room desirable, 12,105. *Hunter.*
Insufficient, 6312-3. *James.*
Housing; attendances of children differentiated according to class of home, 13,332. *Lyons.*
Schools; construction of class-rooms; light, 9867-9. *Mackay.*
Size of buildings of Shetland, 10,361-8. *Mackay.*
Floor space insufficient for physical exercises, 8978-87. *Mackenzie.*
No floor space for physical training, 4851-3. *Moody.*
Drill hall; playground with covered-in shed, 13,482: for games: lack of, 13,520-6 and 13,582-5. *Muir.*
Grading of exercises suggested, 9378. *Sharples.*
Inadequate, 11,497. *Taylor.*
Special, suggested for physical instruction, 13,744-5. *Thomas.*
Want of light and air, 7299-303. *Warner.*

ADVANTAGES:
Of training, 9737. *Almond.*
Improved carriage, 11,362. *Beattie.*
Should be extended, 3578-91. *Cameron.*
Of physical training, 9566. *Cassells.*
To girls; overstrain; care necessary, 9255. *Chapman.*
To children from five to seven, 5672-4. *Cowan.*
Headmasters of Aberdeen School Board unanimous in advocating drill as beneficial; improves carriage and physique, etc., 3053 and 3122-6. *Craigie.*
Physical, mental, and moral, 10,508. *Cruden.*
Of training; comradeship; slovenly gait and carriage, etc., overcome; alertness; discipline, 11,124 and 11,149-51 and 11,194-8. *Gillanders.*
Value of different forms; benefits and dangers to healthy; to girls, 6709. *Hay.*
Physically, morally, and intellectually, 3617. *Irvine.*
To children; proper lines, 6101-7. *Kerr.*
Manners, morals, 3927-9. *Kingston.*
Physical training improves discipline of a school and is a corrective to slouching gait, round shoulders, etc., 3311. *Mackenzie.*

ADVANTAGES—continued:

Value of physical training; nurture important and difficult question; benefits from suitable physical training, 6983: relation of physical training and moral improvement, 7077. *Mackenzie.*
To girls, 8473. *Meath.*
After school age, 11,400-1: good effects, 11,449-51. *Pater-son.*
Of training on manners and morals, 10,839-43 and 10,910-11. *Porter.*
Boys enjoy exercises; improves children's physique and health, 2974 and 3047-55. *Powell.*
To boys and girls after leaving school, 10,117-8. *Ross.*
To healthy children; complaints from weak children, 4274-80. *Scott.*
Very great for boys and girls, 1718-23. *Scougal.*
Moral and physical, of rifle-shooting, and as a source of national strength, 9177. *Seely.*
Special; main branches, 10,925: of systematic training—to pupil, to teacher, 10,927. *Seymour.*
Great, but time inadequate, 3214 and 3226-8. *Simpson.*
Mental and moral; extended to boys fourteen to eighteen, 10,053-6. *Smith.*
To lads; effects, 6289-93. *Sutor.*
Drill in every sense beneficial, 11,513. *Taylor.*
Manifold, 4565: proofs, 4643-5: essential, 4679-81. *Turnbull.*
More time necessary, 5036. *Wallace.*
Morally and physically, 7509 and 7585-9. *Walsh.*
Makes children better in health, and happier, 2638-40. *Whitton.*
Claimed for physical exercises and drill, 5520-1: city school; girls, 5531. *Wilson.*

ALEXANDER, MR A.:
Principal of Southport Physical Training College and late Director of Liverpool Gymnasium. Evidence of, 8909-9004. *Alexander.*

ALEXANDER, MR C. M.:
Headmaster, Burnmouth Public School, Ayton. Evidence of, 11,277-90.

ALEXANDER, M. A., MR G. W.:
Clerk to the Glasgow School Board. Evidence of, 2799-970.

ALLOWAY SCHOOL BOARD:
Description of facilities, etc.; class of children; teachers; gymnasium; division of training; benefits; suggestions, 4565: Inspector's report on school, 4647: home lessons not given, 4705-13: school specially situated, 4718-25. *Turnbull.*

ALMOND, LL.D., MR H. H.:
Headmaster, Loretto School, Musselburgh. Evidence of, 9727-846.

AMBULANCE INSTRUCTION:
Recommended, 5268-71. *Bruce.*
Instruction given, 10,482. *Cruden.*
Undesirable for children; invaluable to young men and women, 8122. *Dukes.*
Advocated, 6172-6. *Kerr.*
For boys and girls; extent, 6984. *Mackenzie.*
Undesirable; reasons, 6488: desirable only in special circumstances, 6517-8. *Smith.*
Given to sixteen of bigger boys, 9978, § 3. *Smith.*
And first aid; lectures given as alternative part of regular curriculum, 12,364, § iii. *Spenser.*

ANDERSON, MISS M.:
Headmistress, Ferguslie Half-time School, Paisley. Evidence of, 13,204-77.

ANDREW, MR A.:
Headmaster, Ochiltree Public School. Evidence of, 4768-847.

ANTHROPOMETRY:
Anthropometric observations, 8590-3. *Bryant.*
Physical census and data, 738-9 and 773-87. *Legge.*
Important points; experts for enquiry; classes of points observed, 7189-95. *Warner.*

Index to
Evidence.

Index to
Evidence.

APPARATUS :

Of Glasgow School Board, 2800. *Alexander*.
At Hamilton School very little, 4399-401. *Bain*.
For boys of sixteen or seventeen ; gymnastics undesirable for girls, 5729-31. *Cantlie*.
Marine, desirable ; description of present amount, 6010-22. *Davidson*.
Use determined by teachers, 2586-92. *Murray*.
Gymnastic, all out of doors, 4456. *Shearer*.
Provided by Govan School Board, 9475. *Smith*.
Marine, would be advantageous, 6281-3. *Sutor*.

ARDROSSAN SCHOOL BOARD :

Amount of physical training ; suggestions, 4447 : appreciation by, 4474-6 and 4483-5 : status of Academy, 4497. *Shearer*.

ARMY :

Few students preparing for commissions in ; systematic training for students would be beneficial, 12,309-15. *Bower*.
Marching in French, 9723-6. *Breerton*.
Commissions in ; universities, 10,566-8. *Cruden*.
Variety of development of boys for ; no deterioration in general physique of, 8031 : class of men in the, 8035 : improvement in moral tone and intelligence, 8081-5. *Don*.
Private soldiers ; conditions of life, 7864-72 : soldiers and civilians from fourteen to eighteen ; comparison, 7875-8. *Fox*.
Enlistment decreasing, 11,187-9 and 11,214-8. *Gillanders*.
Soldiers ; prematurely aged ; due to lack of training, etc., in early life, 11,708 and 11,783-6 : soldiers in future must depend on themselves individually, 11,710 : popular prejudice, 11,749-53 : popular prejudice ; improvements in barrack life, etc. ; reforms, 11,787-97. *Hamilton*.
Progressive system ; ages for which intended ; tests ; average physical progress, 8295 : boys and drummers receive same instructions as recruits ; reason, 8300-8. *Napier*.
Training in ; effects, 11,452-6. *Paterson*.
Posts in ; might be offered for competition, 5438-44. *Roberts*.
As a career ; good opening in life, 5054-60. *Wallace*.

ARMYTAGE, CAPT. G. A. :

Inspector of Military Gymnasias (Scottish District). Evidence of, 2018-220.

ARROL, M.P., SIR Wm. :

Evidence of, 9093-169.

ATHLETICS :

Once very prominent at Loretto, not so now ; reason, 9727. *Almond*.
Practised intermittently at Glasgow University, 12,289. *Bowser*.
In France ; benefits ; objections by parents and by teachers ; progress ; hindrances ; school association ; failure ; effect on student life ; in primary schools, 9628. *Breerton*.
Aberdeen University students, 10,482. *Cruden*.
And physical education ; results of experience ; secondary schools ; arrangements, 8143-4 : and physical drill ; distinction, 8181-4. *Dukes*.
Sports held annually ; boys encouraged to train systematically, 12,473. *Laming*.
And first-class students compared, 6984 and 7128-37. *Mackenzie*.
Sports held each year ; special training, 11,805. *Reid*.
Two great faults, 6907-8 : and physical training ; definitions, 6942-3. *Savill*.
Catered for by school club, 10,921 (c). *Seymour*.
Advantageous for them to spread over the school's course, not once a year as at present, 3214. *Simpson*.
School sports ; football ; long runs, 9978, § 3. *Smith*.
Often carried to excess, 6488 and 6504-6. *Smith*.
From March till May after school hours, 12,364, § 3 : and intellectual interests ; former more evident in boarding than in day schools, 12,364, § viii. *Spenser*.
Sports are held in spring, 12,840. *Temple*.
Sports organised annually, 13,667. *Thomas*.
No drawbacks to use of ; at universities, 1310-1. *Tuke*.
Would be of greater use if continued throughout year, 9022-3. *Wickham*.

BAIN, MR G. Y. :

Member of Kilmarnock (Burgh) School Board. Evidence of, 4330-445.

BALQUHIDDER PUBLIC SCHOOL :

Description of, 11,362 : good conditions of ; Scotch and English boys compared, 11,371-7. *Beattie*.

BANNATYNE, MR J. :

Chairman, Kilbride (Parish) School Board. Evidence of, 5901-74.

BEATTIE, MR W. :

Headmaster, Balquhiddier Public School. Evidence of, 11,361-92.

BENEFITS :

To all classes of children except mentally defective, 2827-8. *Alexander*.
Health, discipline, and morals, 4334 and 4443-4. *Bain*.
Of physical drill, 13,777. *Bruce*.
Will make children better able to resist adverse conditions, 507-12. *Brunton*.
Discipline, 11,293-6. *Carson*.
From systematic exercises, 3934. *Chesterton*.
Of exercises ; children six to twelve ; boys and girls twelve to fourteen ; public school children, 10,507. *Cruden*.

BENEFITS—continued :

Moral and physical, 10,783-4. *Macpherson*.
Specified ; reasons, 4154 and 4203-5. *Malloch*.
Of physical exercise ; importance, 13,822. *Turner*.

BOARD SCHOOLS :

In towns ; most important to have regular system of physical exercise, independent of games, 9758 : recent improvement, 9811-2. *Almond*.
Education could be greatly improved ; suggestion, 9108. *Arrol*.
Of Aberdeen ; amount of weekly instruction, 10,493. *Cruden*.
Insufficient amount of training given in, 13,060-2. *Cuthbertson*.
And higher grade schools ; children ; comparison ; social condition, 6151-3. *Kerr*.
Teaching of feeble-minded children given in ordinary classrooms of, 13,893. *Monteagle*.
Infants' hours of attendance should be limited, 10,836 : more relaxation necessary, 10,844 : children under five should not be admitted to, 10,875-6. *Porter*.
Girls ; precaution necessary, 11,118-9. *Robertson*.
More training given in ; boys after fourteen capable of more, 10,107-8. *Ross*.
Want of system, etc., 10,945. *Seymour*.
Of Edinburgh ; physical education in ; descriptive account, 2286. *Stevenson*.
No existing opportunities for children under fourteen, 296-303. *Stewart*.
More time could be given in, 11,964-5. *Strachan*.
Drill in, up to the age of fourteen ; gymnastics and physical exercises in, 8 : certain amount of physical exercises per week desirable, 54-8 : physical exercises desirable for those under thirteen in, 109-17. *Struthers*.
Training of children in Leeds : relation between teacher and child ; gradation of exercise ; time allotted to exercise ; effect on timid children ; moral effect of exercise ; music ; pianos in schools ; infants' drills, 13,667, § b. *Thomas*.
Suggests one system for town and another for country, 13,880-1. *Turner*.
Physical training in ; increase desired, 7654. *Walsh*.
Of London and Edinburgh contrasted, 7229-39. *Warner*.

BOWER, F.R.S., PROFESSOR F. O. :
Regius Professor of Botany, Glasgow University. Evidence of, 12,285-362.

BOYS' BRIGADE :
In Glasgow ; opportunities to boys at, 2885-8. *Alexander*.
Suggested ; already in Ochilree, 4788-95. *Andrew*.
Condition of boys perfectly satisfactory, from report of General Hunter, 2209-20. *Armytage*.
Beneficial to boys, 5922-42. *Bannatyne*.
Parents encourage boys to join, Dundee, 3525-34. *Cameron*.
Proof that parents and boys recognise value of military drill and training, 9255 : not sufficient physical training by itself, 9344-8. *Chapman*.
Commended, 12,895. *Chisholm*.
In Aberdeen ; weak point noticed, 3058. *Craig*.
History of ; numbers ; object ; principal features ; standard of drill high ; membership confined to boys twelve to seventeen ; physical exercises plus military drill given in ; Scotch companies ; details of exercises taken ; instruction given by officers ; average time allotted ; games encouraged and organised ; drill and physical exercises preferable to games ; reason ; summer camps very valuable ; continuation classes ; Code of 1900, success ; Code of 1901, impracticable for companies to work under it ; reasons ; instruction ; personal influence of officers of, 12,967A : national movement ; numbers ; Glasgow battalion ; classes of boys ; lowest class tapped ; is interdenominational, not sectarian ; military drill ; beneficial effects in ; and drill class, cadet corps, etc., differentiated ; former introduces *esprit de corps* ; uniform of, small expense ; no objections by parents ; boys conspicuously smart ; age limits, twelve to seventeen ; reason ; cadet corps and ; 'militarism' not fostered ; Volunteer drills irksome to a Brigade boy ; physical as well as military training capable of great extension ; officers are competent to instruct ; games effect great moral improvement in the boys, 12,971-13,022 : effects of training more far-reaching than those of games ; summer camps ; 10,000 boys out in 1901 ; officers have strong hold over boys in ; smoking not allowed in uniform, 13,023-35 : in a position to give material assistance to any scheme for providing further facilities, 13,038-42 : if supported, might reach those not now under influence, 13,063-8 : boys drawn from all classes, 13,077-9 : brings boys under influence of religious teaching, 13,093-104 : attendance at Bible Class or Sunday School compulsory, 13,111-5. *Cuthbertson*.
Value, 8121. *Dukes*.
Objects of, 7981-2. *Dyer*.
Age for admission into, too young, 12,105 and 12,106-7. *Hunter*.
Number in company, eighty, 6360-6 : not regular and systematic enough to fulfil the conditions of further teaching of physical and military exercises, 6435-46. *James*.
Opinion of, 7987. *Laidlaw*.
Might be supplemented by cadet corps, 954-8. *Leage*.
Commended, 11,673. *Macne*.
In Perth ; interest of boys, 8686 : number of companies in Perth of, 8699-701 : drill ; boys enthusiastic, 8710-1 : and volunteers ; difficulty of recruit drill, 8714-20 : drill for schools, 8775-9. *Masterson*.
And military drill ; objects, 8410-5 : and Macclesfield

Physician to St Bartholomew's Hospital, London. Evidence of, 471-559.

BRYANT, S.:

Headmistress of the North London Collegiate School for Girls. Evidence of, 8576-679.

BURROWS, Mr E. H.:

H.M. Inspector of Schools (England). Evidence of, 2221-82.

CADET CORPS:

At Kilmarnock Academy; very popular, 4334: and continuation classes started, 4353. *Bain*.
Of France, failure; causes, 9628 and 9692: in secondary schools of England, 9696-7. *Brereton*.
For those between fourteen and seventeen; compulsory service recommended, 2247. *Burrows*.
Suggests dividing schools into; boys should be encouraged to remain till seventeen, 3445 and 3500-8. *Cameron*.
None existing, but advocated, 12,636 and 12,709-18. *Carrie*.
Drill began at school should be carried on in, 9566. *Cassells*.
Approved, 12,944. *Chisholm*.
Difficulties; insufficient numbers; expense of supplying uniform, 8814-5: difficulty of number for forming, 8878-82. *Clark*.
Favoured, 11,256-60. *Craig*.
And Boys' Brigade; differentiated, 12,990-3: probable effect on Boys' Brigade if established, 13,004-7: might interfere with Brigade, 13,067-8. *Cuthbertson*.
Chief obstacle War Office proviso, 8347 and 8349-51 and 8360-2: age required for entry into: teachers as officers; militarism; voluntary, not compulsory, 8368-79: uniform of, 8389. *Elliott*.
Reasons for disbandment of, 11,168-71. *Gillanders*.
Approved, 11,772-3: cap and belt sufficient uniform, 11,798-800. *Hamilton*.
At school suggested, 3617: cost, 3638-46: and continuation classes, 3647-54. *Irvine*.
Aims, 7987: and circular letter issued to parents at Glasgow, opinion, 8006-10. *Laidlaw*.
Very popular, 12,473: in schools; encouragement and organisation of rifle-shooting advocated; general efficiency enhanced by special school camps, 12,473 and 12,532-7: in schools commended, 12,473: uniform of, popularity, 12,484-7: inability to earn grant, 12,538-9. *Laming*.
Should be no difficulty in forming, 9914-6. *Lee*.
In Ayrshire schools, 1076. *Lobban*.
Favoured for better-class schools; not desirable for poorer schools; expense, 14,051-4. *Mackieith*.

CADET CORPS—*continued* :

For boys after fourteen recommended, 11,673. *Marnee*.
Suggestions; desirable to form, 8783-7: riding instruction suggested; expense, 8791-3. *Masterson*.
At continuation classes suggested; advantages, 8403: uniform of: difficulty, 8467. *Meath*.
Should be formed from continuation classes; suggestions, 2451. *Murray*.
Affiliated with Volunteers suggested, 11,622 and 11,640. *Peacock*.
Switzerland; formation of; attached to secondary and higher grade schools, 14,058 and 14,119-23. *Pressland*.
Number of boys; inspected, 11,805: voluntary, but most boys join, 11,835-6. *Reid*.
Some regulation uniform desirable, 1717: their value, 1750: simple dress desirable, 1826-34. *Scougal*.
A question of money, 3214: undesirable to use compulsion; objects; cost prohibitive, 3240-56: beneficial to intellectual work, 3293-5. *Simpson*.
Composition of, 9978, § 3: in secondary schools might be compulsory; grant, 9978, § 27: for boys fourteen to eighteen, as centre of organisation for physical exercise for youth of district suggested, 9978, § 27: of Merchiston Castle; advantageous, 9995-10,000; officers; instructions, 10,003-8: good uniform might attract Board School children, 10,040-1: of old pupils suggested; if not compulsory, then attractive, 10,057-60. *Smith*.
At Hillhead School; ages of pupils in, 9475: uniform; cost; no objections, 9551-4. *Smith*.
Supported by subscriptions at Glasgow High School: 12,364, § iii: advantages of militarism and, 12,364, § viii: numbers; objections few; reason, 12,434-43: attached to Volunteers, 12,461-8. *Spenser*.
Should be formed in connection with each school, 2286: may be difficult to unite with School Boards, 2441-3. *Stevenson*.
In Scotland, scheme suggested, 245. *Stewart*.
Advocated, 11,505. *Taylor*.
Number of boys; Morris tube shooting, 12,840: desirable for every school, with compulsory attendance, 12,862: difficulties with War Office, 12,886-7. *Temple*.
For lads from fourteen to eighteen, compulsory, 4565 and 4578-9. *Turnbull*.
Must be voluntary, 13,885-91. *Turner*.
At continuation classes advocated, 5036. *Wallace*.
Formation of; reason, 7509 and 7514-6. *Walsh*.
Effects of, 7320-3. *Warner*.
For lads between fourteen and seventeen, 2625: teaching of boys to drill between fourteen and seventeen practicable, 2672-7. *Whitton*.
Suggested for boys over twelve or thirteen; attractions, 5330: expense of uniform, 5641-4. *Wilson*.

CADETS:
At Sandhurst and at Potsdam compared, 11,712: of Germany, ages 14-18: Sandhurst, ages 19½, 11,780-1. *Hamilton*.

CAMERON, THE REV. D. B.:

Chairman of the Dundee School Board. Evidence of, 3442-607.

CANTLIE, M.B., F.R.C.S., Mr J.:

Surgeon and Lecturer in Anatomy. Evidence of, 5705-811.

CAREERS:

Of boys; seek employment in town, not in army or navy, 5953-7. *Bannatyne*.
Of boys and girls 5016-33. *Mackenzie*.
After, of half-timers, 11,900 and 11,953-7. *Strachan*.
Army, as good opening in life, 5654-6. *Wallace*.

CARRIE, M.A., Mr W. L.:

Headmaster, George Watson's College, Edinburgh. Evidence of, 12,635-742.

CARSON, Mr R. W.:

Headmaster, Sanquhar Public School. Evidence of, 11,291-322.

CARTER, M.A., Mr R.:

Rector, Edinburgh Academy. Evidence of, 10,716-59.

CASSELLS, Mr J.:

Vice-Chairman, Govan (Parish) School Board. Evidence of, 9563-627.

CASUAL EMPLOYMENT OF SCHOOL CHILDREN:

Undesirable; philanthropic agencies; overlapping; evil results, 13,589-90. *Muir*.
No interregnum in Edinburgh, 2463-6. *Murray*.
After leaving school and before going into business, 1873-5. *Scougal*.
In Edinburgh, not overdone, 2362-6. *Stevenson*.

CENSUS, PHYSICAL:

Periodical record advisable, 8110. *Dukes*.
Of children; desirable; what it should deal with, 6709. *Hay*.
Might give valuable data; not worth trouble, and unnecessary; suggestion, 6059: by medical superintendents and teachers, 6088-90. *Kerr*.
Advocated, 738: of Reformatory and Industrial Schools taken in 1901; results, 739-43: and data, 773-90. *Legge*.
Of school children favoured, 9848 and 9849: suggests definite system for series of years as advantageous, 9854: certificates granted to school children on leaving might be renewed or revised in continuation classes, etc., 9876-7. *Mackay*.
Necessary; requirements, 6984. *Mackenzie*.
Would be useful, 6483. *Smith*.

Evidence

CENSUS, PHYSICAL—*continued* :

Methods ; physical signs ; anthropometry ; important points ; experts for enquiry ; classes of points observed, 7186-95. *Warner*.

CERTIFICATES :

Of proficiency in drill and rifle shooting might count for volunteer and militia work, 9771-2. *Almond*.

Of proficiency favoured ; value, 11,266-70. *Craig*.

Granted by Aberdeen Physical Training College, 10,495 : of efficiency to teachers ; individual examination, 10,592-6. *Cruden*.

Granted to teachers, but not necessary, 13,163-76. *Cunningham*.

Of proficiency in drill recommended to count towards volunteer drill, 11,124. *Gillanders*.

Of proficiency in drill ; for exemption from compulsory training suggested, 11,776-9. *Hamilton*.

Of proficiency granted, 13,332. *Lyons*.

Showing physical condition of children, should be granted ; benefits, 9848 and 9854. *Mackay*.

Granted for proficiency in examination in physical exercises and drill ; form of, 11,470-2. *Paterson*.

For drill should be issued at continuation classes by Department, and recognised by the War Office, 1659-63. *Robertson*.

Granted to teachers at Dundee Physical Training College, 12,016 and 12,076-83. *Sturrock*.

Of proficiency granted to teachers, 13,667 §(a). *Thomas*.

CHAPMAN, C. B., GENERAL E. F. :

Evidence of, 9250-375.

CHESTERTON, MR T. :

Organising Teacher of Physical Education to the London School Board. Evidence of, 3932-4152.

CHEYNE, M. A., MR G. Y. :

Headmaster, Kennethmont Public School. Evidence of, 6542-612.

CHISHOLM, LL. D., MR S. :

Lord Provost of Glasgow, etc. Evidence of, 12,895-966.

CHURCH LADS' BRIGADE :

Doing good work, 12105 and 12108. *Hunter*.

Teachers ; supervision, 8560-3. *Lilley*.

And Boys' Brigade ; rough lads not touched ; natural organisation required, 8429-33. *Meath*.

In Manchester, 9380-1 ; number of boys in, 9388-9. *Sharples*.

CIRCULAR 279 :

No complaints of military drill received by Scotch Education Department. Nautical training or swimming, 32-35. *Struthers*.

CIRCULAR 347 :

Draws attention to the juvenile offences in Scotland, 8. *Struthers*.

Importance of, 7796-99. *Williamson*.

CLARK, M. A., MR J. :

Rector, Dumfries Academy. Evidence of, 8794-908.

CLASSIFICATION :

Of 'physical training,' 6059. *Kerr*.

Of 'physical training,' 724-9. *Legge*.

Of 'physical training,' 1429-35. *Tuke*.

CLOTHING :

Recommended for girls, 8997. *Alexander*.

Boots : drill with bare feet rather than with bad-fitting boots ; gymnasium shoes cost about 1s. 2d., 2132-40. *Armstrong*.

Satisfactory, 11,362. *Beattie*.

In poor districts of Glasgow described, 13,777. *Bruce*.

Special dress desirable ; corsets deprecated, 5238-41 ; special dress ; reasons, 5391-6 ; harm to school children with wet ; precautions necessary, 5406-11. *Bruce*.

Special dress used of late years : description, 8650 and 8654-9 and 8666-8. *Byrant*.

Boys and girls ; defects ; 5810-1. *Contlie*.

Boots : no trouble with, 3962-6 and 4035-9. *Chesterton*.

Girls : special dress formerly, 8891-91A. *Clark*.

Special, impracticable, 10,504. *Cruden*.

And food ; in necessitous cases supplied by managers, 13,162. *Cunningham*.

Feet and shoes ; precautions, 8067-9. *Don*.

Girls ; special for gymnastics and some games, 8113. *Dukes*, etc. ; great improvement in Portree, 11,124. *Gillanders*.

Special required for girls, under present circumstances, 6709 : for girls should be loose, 6726-8 : for girls, change of garment required, 6846-49. *Hoy*.

Provided to poorest of children at All Saint's Episcopal School, Edinburgh, 12,105. *Hunter*.

Of girls ; swimming costumes, 3804-16 : boots ; shoes preferable ; expense, 3862-71. *Kingston*.

Boots ; bare feet or canvas shoes recommended for physical exercise, 800-6. *Legge*.

And food supplied in necessitous cases, 13,332. *Lyons*.

Boots ; at present exercising of young children without boots impracticable ; canvas shoes would be advantageous, 3335-45. *Mackenzie*.

Special, advisable for girls, 6984. *Mackenzie*, special, desirable, 11,673. *Maence*.

And feeding ; liberal supply by outside agencies, 13,473-5 and 13,547-58. *Muir*.

Girls ; desirable to be loose ; special not necessary, 10,215-7. *Murray*.

As a rule children are well clad, 11,622. *Peacock*.

Girls ; special dress not necessary, 5500-1. *Roberts*.

CLOTHING—*continued* :

Special, desirable for girls ; cost, 11,031-3. *Robertson*.

Recommended for boys and girls, 7362 and 7422-23. *Sandow*.

Special dress for girls recommended, 6904. *Savill*.

Special, required for girls, 6488 : of boys and girls unsuitable, 6495-8 : and feeding of children, 6507-16. *Smith*.

And feeding ; children easily fed and clothed in many of the poorest schools of Edinburgh, 2286 : special dress for girls necessary ; prejudice on parents' part, 2416-21. *Stevenson*.

Special dress unnecessary, 464-6. *Stewart*.

Of half-timers generally good, 11,900. *Strachan*.

Recommended, 12,025 : shoes ; desirable for gymnastics, 12,095-9. *Sturrock*.

Recent improvements, 11,491 : and cleanliness ; improvement due to teachers, 11,597-8. *Taylor*.

Of girls ; special costume required for gymnastics, 13,667, §(c) *Thomas*.

Boots should be substituted for shoes for physical training, 1538-46. *Tuke*.

Boots ; bare feet ; financial aid ; concerts, 4666-73. *Turnbull*.

CLUBS :

For boys and girls ; object ; physical training in ; use of clubs ; advantages ; suggestions, 8490 : instructors in, 8540-8. *Lilley*.

CODE :

Nature-knowledge ; walks should be compulsory, 11,673. *Maence*.

(Art. 24), outdoor lessons, 2556-65. *Murray*.

Federal (Swiss), 14,058. *Pressland*.

Nature-knowledge ; bearing on rifle-shooting, 9199-204. *Seely*.

No definition of 'adequate' physical training in, 1717 : more recognition as an essential subject desirable ; time allotted too meagre, 1717 : (Art. 19), grading in each special subject recommended, 1996-2000. *Scougal*.

Recent grants, 4535-8. *Shearer*.

(Art. 24), special exercises in open air advantageous, 8 : grants under ; amount available for physical training, 40-53. *Struthers*.

(Art. 24), outdoor lessons taken advantage of by some school teachers, 648-51. *Walker*.

Curriculum ; teachers' power, 5599-601. *Wilson*.

CODE, ART. 91 (d) OF (see also under Teachers' Classes) :

Sufficient opportunity given to existing teachers to qualify under, 2864-7. *Alexander*.

Classes under, 2023-35 : defects at, 2038 : describes physical training given at Cupar, 2141-9. *Armstrong*.

No classes under, 3592-4. *Cameron*.

Classes in Ayrshire under, 1107-19. *Lobban*.

No classes in Dundee under, 4161. *Malloch*.

Teachers under forty should qualify under, 2451. *Murray*.

Classes for teachers, 1556. *Robertson*.

Proper training of teachers depends on everything, 1717. *Scougal*.

Classes for teachers, voluntary attendances, 18 : certificates issued by Education Department, 237-9. *Struthers*.

Classes at Aberdeen, 4617-28. *Turnbull*.

Physically good teachers could qualify under, 2704-5. *Whitton*.

CODE ; CONTINUATION CLASS :

Of 1900, Boys' Brigade companies worked with success under ; of 1901, impracticable for companies to work under ; reasons, 12,967A : suggested conditions for companies to work under, 12,967A. *Cuthbertson*.

Physical drill should be made compulsory subject, 1659-63. *Robertson*.

(Art. 38-42), grants offered for instruction in physical exercises and military drill, 8. *Struthers*.

COLVILL, MR J. C. :

H.M. Inspector of Schools (England). Evidence of, 985-1066.

COMPULSORY ATTENDANCE AT CONTINUATION CLASSES :

Strongly recommended ; parents' views, 5414-9. *Bruce*.

Desirable ; but attraction first attempted ; certificates to be recognised by employers of labour, 10,515 : practical inducements rather than compulsion ; Leaving Certificate of fitness suggested, 10,620-5. *Cruden*.

And exemptions ; probable objections, 7913-22. *Dyer*.

How to be enforced ; difficulty, 11,134-9 and 11,219-21. *Gillanders*.

Desirable ; benefits, 11,710 : strongly desired, 11,735-7 : good boys might be attracted, but compulsion desirable for worst, 11,754-60. *Hamilton*.

Favoured, 5882-3. *Hunter*.

Suggested ; and conditions, 11,673 and 11,698-703. *Maence*.

Would be resented, 10,785-9 and 10,817-22. *Macpherson*.

Desirable, 4174-83. *Malloch*.

Not necessary, 2530-34. *Murray*.

Most beneficial ; probably not much opposition in witness' district, 1667-75 : how it could be enforced, 1676-89. *Robertson*.

Necessary ; good results expected, therefore popular, 10,150-6 : for artisan and slum boys beneficial, 10,202-5. *Ross*.

Probably unpopular ; militarism, 10,970-83. *Seymour*.

Beneficial, but difficult to carry out, 2315-6. *Stevenson*.

Advocated ; difficulty, 4692-5. *Turnbull*.

Desirable, 5036 and 5134-39 : up to seventeen ; cadet corps ; suggested scheme for obtaining money, 5161-73. *Wallace*.

COMPULSORY TRAINING :

In Sweden; age limit, 8940-3: in Germany; too much, 8951 and 8955: in America up to fourteen; competitions, 8982-7. *Alexander*.

Strongly advocated, 11,283-4: suggestion as to enforcement of; exemptions, 11,287-90. *Alexander*.

Glasgow School Board averse to; at continuation classes, 2880-4: some supervision desirable, 2889-90. *Alexander*.

At Loretto School to boys, except those medically exempted, 9727: necessary for education of those between five and fourteen; after fourteen should be more freedom, 9764-70: plus teaching rationale of training, 9818-9: treatment of idlers and hooligans difficult in wide application without creating a burden; necessary in our society or school, good results; for those who have not previously received training, 9828-42. *Almond*.

Desirable in all schools, and attraction for those fourteen to eighteen, 13,240-1 and 13,266-7. *Anderson*.

At continuation classes desirable, 9129-33. *Arrol*.

Desirable in day schools; for those fourteen to eighteen undesirable at present, 11,362. *Beattie*.

Undesirable, 12,293A: unpopular but necessary, 12,333-5. *Bower*.

For two years after school desirable, 3761-4. *Bridgeman*.

At continuation classes advocated, 9255: encouragement preferable to, 9312. *Chapman*.

Advocated, 11,237 and 11,244-50. *Craig*.

Advantage to students, 10,488: possible in universities and probably ultimately successful, 10,518-36. *Cruden*.

In all schools desirable, and for those between fourteen and eighteen, 13,167: practicable with Catholics, 13,191-5. *Cunningham*.

Impossible, 12,904-6: inadvisable, 12,923-4: inducements preferable to, 12,945-8. *Chisholm*.

And games, 8256-8. *Dukes*.

Not desirable, 7916-7: applied to loafers desirable, 7923-7. *Dyer*.

For boys after fourteen practicable, 6639-81. *Elphinstone*.

Advocated: gymnasia and drill halls, 7863 (i). *Fox*.

Essential after fourteen, 11,124: difficulty, 11,134-9. *Gillanders*.

Probably unpopular in Universities, 12,230-2. *Gordon*.

Desired in schools and continuation classes; physical exercises in former, semi-military training in latter; reasons, 11,710: strongly desired, 11,734: national defence; continuation classes and certificates of proficiency, 11,776-9. *Hamilton*.

For lads between fourteen and eighteen desirable, 6804-5: for all lads above certain age advocated, 6855-8. *Hay*.

In Volunteers desirable for all lads, 13,286-9. *Henderson*.

Inadvisable for those fourteen to eighteen, 12,105. *Hunter*.

After fourteen recommended, 6420-5. *James*.

Objection to at continuation classes, 6059. *Kerr*.

By London School Board, 3796: in fire-drill for all, 3798. *Kingston*.

If introduced, should be by national decree, 7987 and 8011-4: and loafers; opinion, 8000-5: should be placed before Parliament apart from education, 8020-3. *Laidlaw*.

At continuation classes probably necessary, 12,873 and 12,505-7. *Laming*.

Difficulties, 9885-91: greater hardship in country than in town, 9941-3. *Lee*.

Strongly advocated for youths up to eighteen, 866-76. *Legge*.

Advocated for hooligans; suggests enforcing by school attendance officer; exemptions, 8494-503: with exemption advocated, 8514: universally in elementary schools, 8521-2: not desirable to intellectually-disposed boys, 8569-75. *Lilley*.

Some form desirable, 1078. *Lobban*.

In day schools desirable, 13,332: at continuation classes undesirable, 13,358-63: on Saturdays; inadvisable, 13,445-51. *Lyons*.

Desirable, 10,277: up to eighteen desirable, 10,317. *Mackay*.

Inadvisable, 3364-72. *Mackenzie*.

In universities and secondary schools deprecated, 6992. *Mackenzie*.

Advocated for continuation classes; but attendance voluntary, 13,139-42. *Mackintosh*.

Up to eighteen favoured, 10,771-2: at present undesirable; public prejudice, 10,817-22. *Maepherson*.

Recommended at continuation classes, 4216-20. *Malloch*.

To every healthy scholar advocated, 8403: not desirable after elementary school, 8426-8: not necessary for rough lads: attraction of drill, etc., sufficient, 8434-5: at continuation classes desirable 8436-9, and 8465A-6. *Meath*.

Favoured for all schools; after eighteen to a certain extent, 13,489-90: for those fourteen to eighteen; difficulty, 13,574-7. *Muir*.

In all schools suggested, 8299: desirable for schools, 8299. *Napier*.

From fourteen to eighteen desirable, 11,622. *Peacock*.

Might be introduced at continuation classes. Boards should have some control of boys up to eighteen, 1558. Physical drill should be made a compulsory subject in the Continuation Class Code, 1659-63. *Robertson*.

Attraction preferable, 11,068-70. *Robertson*.

Feasible and probably popular, 10,080-3: necessary for street

COMPULSORY TRAINING—continued:

trading class, 10,141-8: desirable for street arabs, 10,187-88: necessary but probably unpopular, 10,109. *Ross*.

Desirable: amount specified, 6937-41. *Savill*.

Desirable but impracticable: reason, 10,970-3. *Seymour*.

For lads fourteen to eighteen; recent extension of school age may solve difficulty by benefits being more appreciated, 1735-41. *Seougal*.

Advocated for lads up to eighteen, 9397-405. *Sharples*.

Advisable, 3263-70. *Simpson*.

Till end of school life, 6492-4. *Smith*.

In all schools suggested, including physical and military drill, 9978, § 27: cadet corps might be in secondary schools, 9978, § 27. *Smith*.

Impossible: reason, 12364, § xix, and 12415-20. *Spenser*.

Suggested, 2286: desirable, but it should be more systematised than at present, 2297-9: probably be great objection at the outset, 2444-9. *Stevenson*.

Not desirable in continuation classes: physical exercises should be made more interesting, 386-92: deterrent to boys joining volunteers; granting of certificate might obviate difficulty, 415-20. *Stewart*.

Not desirable after fourteen; difficulty, 11,900 and 11,930-9. *Strachan*.

Result of; abroad; obligatory physical training law desirable, 8: result of; in continental countries, 154-8. *Struthers*.

And medical inspection desired, 12,009. *Sturrock*.

Up to fourteen; inadvisable afterwards; reason; cadet corps advocated, 11,505-6; not desirable after fourteen, but attraction advocated, 11,571-4. *Taylor*.

Suggests cadet corps for, and that Department extend compulsory education to drill and shooting, 12,848. *Temple*.

At continuation classes, attraction advocated, not compulsion, 13,697-701: loafers; persuasion preferable to, 13,728. *Thomas*.

Desirable for girls from fourteen to eighteen; probably objected to; with boys less difficulty, 1272-8. *Tuke*.

Attractions desired, not, 7663-6. *Walsh*.

Practicable and beneficial, 2718-20. *Whitton*.

Advocated for Dundee girls, 7772-6. *Williamson*.

CONSCRIPTION :

Advantages of proposed semi-military training; probable alternative is, 11,710: unnecessary with system proposed, 11,761-3. *Hamilton*.

Advocated, 8310. *Napier*.

CONTINUATION CLASSES :

In Leeds; varied and cheerful drill given at, 8997. *Alexander*.

None, due to fishing industry, 11,281-2. *Alexander*.

Under Glasgow School Board; time allowed, 2800-2: Board averse to physical training being made a compulsory subject, 2880-4. *Alexander*.

Suggested for gymnastics and drill; compulsion undesirable, 9727: evening classes; certificates of proficiency in drill and rifle shooting might count for volunteer and militia work, 9771-2: suggestions, 9799-803. *Almond*.

Compulsory training desirable; education suggested, 9129-35 and 9143-6: and apprentices; advantages, 9150-6: compulsory attendance inadvisable, 9157-69. *Arrol*.

Time given at, 4402-11. *Bain*.

No physical work at, 11,362: difficulties, 11,367-9. *Beattie*.

French equivalent, 9628. *Brereton*.

Evening schools; military drill preferable to gymnastics, 2666: more discipline necessary at; suggestions, 3758-60. *Bridgeman*.

Compulsory attendance up to seventeen or eighteen strongly recommended; parents' views, 5414-9. *Bruce*.

Have lately almost disappeared in South of England, 2242-6. *Burrows*.

Suggests cadet corps attached to volunteers at, 3535-9: half-timers; compulsion desirable, 3598-607. *Cameron*.

Special inducements necessary, 11,292 and 11,304-10. *Carson*.

Drill taken at school should be carried on in; attraction preferred, not compulsion, 9566-9: percentage of attendance, 9615. *Cassells*.

Compulsion advocated, 9255. *Chapman*.

Gymnastics should be made compulsory to those who attend, 4052-5: military drill with gymnastics advocated, 4104-7. *Chesterton*.

Number attending; training given, 6579-83. *Cheyne*.

Compulsion impossible, 12,904-6: inducements preferable to compulsion, 12,945-8. *Chisholm*.

Under Division IV. of Continuation Class Code, 8979: ages and class of pupils; attraction desirable, 8852-4: compulsory attendance advocated; probable objection to compulsory training, 8889-90. *Clark*.

Compulsory attendance of those between fourteen and eighteen advocated; perhaps impracticable, 997-1005. *Colvill*.

No physical work given at, 11,237. *Craig*.

Suggestions; extension of time open desirable, 3058: extra evening for physical instruction suggested; financial aid; cost of education per child; increase of rates, 3061-88: and idlers, 3144-7. *Craigen*.

Suggested, 10,515: compulsory attendance desirable; but attraction first attempted; certificates to be recognised by employers of labour, 10,515: systematic course at, 10,524-5: practical inducements rather than compulsion

CONTINUATION CLASSES—*continued* :

Leaving Certificate of fitness suggested, 10,620-5 : military drill *plus* free and applied exercises, 10,643-4. *Cruden*.

Inspectors' reports on, 13,165-6 : would become popular if physical training given, 13,176. *Cunningham*.

Suggested conditions for Boys' Brigade companies to work under Code of, 12,967A : combination of different sorts of instruction ; 1901 Code ; application of grant, 13,043-57 : inadvisable to make physical work an essential part of, 13,058-9 : training must be voluntary, 13,083-9 : boys attending day schools ; exemptions ; two grants, 13,105-10. *Cuthbertson*.

Evening classes ; difficulty, 7910 ; evening classes, conditions of labour, 7912-5 ; evening classes and apprentices ; compulsion undesirable, 7947-8 : compulsion for education up to eighteen desirable, and so catch loafer, 7968-9. *Dyer*.

Military drill at ; as grant-earning subject, 8347 : and day schools ; some organisation required as connecting link, 8398-9. *Elliot*.

Difficulty, 6619 : suggestion to reduce number of weeks in session ; reasons of failure when voluntary, 6642-9 : School Board unwilling to conduct continuation classes at a loss ; duration, 6691-6. *Elphinstone*.

None, owing to counter attractions, 11,124 : scheme of training would be popular at ; difficulty of enforcing compulsory attendance at, 11,134-9 and 11,219-21. *Gillanders*.

Compulsory attendance advocated ; benefits, 11,710 and 11,735-7 : time necessary, 11,741-3 : good boys might be attracted ; but compulsion desirable for worst, 11,754-60. *Hamilton*.

Gymnasia in connection with ; suggested for those fourteen to eighteen ; increase of number in attendance at ; educational subjects more necessary than physical drill, 13,279 : interest of employees ; increased attendances at, 13,284-5 : lately developed by Dundee School Board ; influence of less fees, 13,296-9 : want of accommodation at, 13,308-12 : under Dundee Technical Institute and Y.M.C.A., 13,313-20. *Henderson*.

Difficulties under Code, 5864-9 : compulsory attendance favoured at, 5882-3 : apprentices, 5898-900. *Hunter*.

And cadet corps, 3647-55. *Irvine*.

No physical training ; private classes given in winter for small fee, 6331-6 : no opportunities for training of poor classes at, 6402-4. *James*.

Physical training desirable ; compulsion disapproved, 6180-2 and 6210-1 and 6220. *Kerr*.

Suggestions, 7987 : compulsory attendance ; opinion ; objections stated, 7988-99. *Laidlaw*.

Compulsion probably necessary ; certain course suggested, 12,473 : training must be made compulsory and attractive at, 12,505-7. *Laming*.

Must be some tangible inducement, 9879 : evening classes ; compulsion necessary unless people educated to understand the pleasure involved by physical exercise, 9901-3 : physical work should be part of curriculum, 9955-6 : attractions—bicycle corps, rifle-shooting, 9969-73. *Lee*.

Compulsory attendance up to age of sixteen desirable at, 766-7 : compulsory attendance of those between sixteen and eighteen ; suggestions, 768-772 : compulsory training at, 879-90 : time required for physical training, 928-33. *Legge*.

Compulsory attendance of hooligan class of boys desirable, 8506-8 : compulsory attendance, with exemptions, desirable ; compulsory attendance of girls inadvisable, 8528-35 : continuation schools, committee and girls' clubs ; suggestion, 8549-51 : compulsion, with exemptions, desirable for boys but impracticable for girls, 8556-9. *Lilley*.

Compulsion beneficial to individuals and country, 1120-6. *Lobban*.

Suggestion for encouragement of boys to attend, 11,328. *Lowe*.

No physical exercises given, 13,332 and 13,412-7 : compulsory training at ; undesirable, 13,358-63. *Lyons*.

Successful in the Skerries, 10,453-8. *Mackay*.

Compulsory, not favoured ; preferable to make them voluntary and popular, 14,022-5. *Macketh*.

Suggestions, 3311 : physical training popular with pupils at, 3323-7. *Mackenzie*.

And physical drill ; difficulty of boys and girls ; kind of physical training, 6984 and 7065-7. *Mackenzie*.

Training should be compulsory subject ; but attendance voluntary, 13,139-42 and 13,116 : drill preferable to gymnastics at, 13,147-9. *Mackintosh*.

Suggested attendance, and conditions ; new class of teachers required at, 11,673 and 11,698-703. *Macnee*.

Attendance at, to eighteen desirable ; well attended except by farm servants, 10,760 : for farm servants ; travelling instructors suggested, 10,794-806 : no physical instruction given in Perthshire schools, 10,823-5. *Macpherson*.

Compulsory attendance for boys desirable ; physical training *plus* mental training, 4174-91. *Malloch*.

Elementary school gymnasium used by pupils of, 8686 : grant desired at, 8697-8 : some attraction required, 8712-3 : attraction, not compulsion, desirable, 8734-42 : physical training *plus* drill advocated ; suggests that gymnastic instruction be more military at, 8766-7 and 8773-4. *Masterson*.

CONTINUATION CLASSES—*continued* :

Compulsory physical training desirable, 8436-9 : compulsory attendance favoured, 8441-2 : physical training should be compulsory subject and cadet corps formed, 8465A-6 : compulsory attendance desirable for both boys and girls, 8468-72. *Meath*.

Physical training of day schools should also be carried into, 4856-9. *Moody*.

None at Dobbie's Loan School, Glasgow, 13,484 : physical exercises might be attractive, 13,593-5. *Muir*.

Grant for physical training lower than other subjects ; teacher's pay often depends on grant earned ; hooliganism ; cadet corps, 2451 : physical training would probably be taken advantage of if offered to lads at, 2459 : desirable to have compulsory physical training at ; military drill should take up a more prominent part at ; also gymnastics, 2527-9 : payments for subjects, 2547-52. *Murray*.

Under Kirriemuir School Board fairly attended, 11,622 : physical training should prove popular at ; gymnasium and rifle clubs suggested, 11,622 : after fourteen physical work desirable in ; indifference of parents, 11,630. *Peacock*.

Not properly taken advantage of ; no physical work at, 10,912-7. *Porter*.

Physical training not taught ; boys join volunteers, 5421. *Roberts*.

Drill might well be made compulsory ; Boards should have some control of boys up to eighteen ; certificates for drill, 1558-60 : in rural districts, where drill taught would be popular ; no hindrance to industrial work, 1655-8 : compulsory attendance at ; most beneficial ; probably not much opposition in witness' district, 1667-75. *Robertson*.

Compulsion necessary, but probably unpopular, 10,109 : compulsory attendance necessary, good results expected, therefore popular, 10,150-6 : artisan children would attend voluntarily ; slum children would need compulsion, 10,162-7 : compulsory attendance for artisan and slum children beneficial, 10,202-5. *Ross*.

Suggested to be held in gymnasia attached to schools ; how to be made popular ; fees, 10,947 : attendance should be compulsory ; probably unpopular ; militarism, 10,970-83 : suggests fees, should be returnable if certain number of attendances made at, 11,013. *Scymour*.

No opportunities at ; suggestion, 4267-72. *Scott*.

Progress of physical exercises at, 1717 : advocates that after school ages boys should be induced to attend, 1835-8. *Scougal*.

Physical training should be a compulsory subject, 4463-8 : suggests separate evening for physical exercises, 4561-2. *Shearcr*.

Should be opportunities for training, 9978, § 27. *Smith*.

Evening schools ; physical instruction becoming more popular ; central public well-equipped gymnasium advantageous at, 2286 : compulsory attendance beneficial, but difficult to carry out, 2315-7. *Stevenson*.

Physical exercises made more interesting ; not compulsory, 386-92. *Stewart*.

Discontinued ; reason, 11,910-1. *Strachan*.

Statistics of ; large number of youths without instruction, 8 ; great majority of apprentices able to give some portion of time on Saturday afternoons to systematic exercise or drill, 59 ; Boys' Brigade companies able to earn grants at, 93-108. *Struthers*.

Difficulty, 6259-60 : physical training impracticable at evening classes, 6294-300. *Sutor*.

No physical work at, 11,501 ; and 11,593-6 ; physical work would be popular, 11,510. *Taylor*.

Gymnastic classes for young men and women attended with great success at, 13,667, § 7, and 13,680-2 ; draws attention to value of, 13,667 : attraction, not compulsion, advocated, 13,697-701 : attended by good class, not by loafers, etc., 13,724-7 and 13,748-51 : lads fourteen to eighteen ; classes should be free and attractive, 13,753-67. *Thomas*.

Length of course of physical training ; proposals, 1256-60 : free lessons desirable at, 1286-7 : if opportunities understood, probably would be taken more advantage of, 1375-90 : conditions of grant not properly understood in Dunfermline, 1391-4. *Take*.

Military drill not attractive enough to induce boys to, 4605-10 : compulsory attendance advocated ; difficulties, 4692-5. *Turnbull*.

Gymnastics, physical and military drill desirable for those over fourteen, 600-8 : physical instruction taken in several in Aberdeen ; Boys' Brigade, compulsory attendance ; benefits great but not yet advisable, 622-32 : compulsion inadvisable, but beneficial result ; secondary education committee proper authority to move in the matter, 701-23. *Walker*.

Compulsory attendance desirable ; cadet corps suggested, 5036 and 5134-9 and 5161-73. *Wallace*.

Suggestions ; summer camps, 7509 : for boys and girls ; development necessary ; attractions desired, not compulsion, 7658-66. *Walsh*.

For girls, 2625 : and grant for physical training ; compulsion practicable and beneficial, 2706-20 : teacher's salary, 2756-60. *Whitton*.

Factory girls ; physical training necessary ; gymnastics and swimming desirable, 7670 : ratepayers' objections ; compulsory attendance desirable ; subjects of physical exercises useful and attractive, 7671-98 : with instruction in

CONTINUATION CLASSES—*continued*:
physical training recommended, 7734-40: special classes advocated for poor pupils, 7769-71: for girls and boys in Dundee specified; special school for mill boys and girls, 7800-8. *Williamson*.
Voluntary attendance preferred, 5551-7: and technical classes; compulsory instruction practicable, 5577-83: attraction rather than compulsion, 5646-55. *Wilson*.

COOKING:
Not taught to advantage, 5347-52. *Bruce*.
Useful; has educational value, 6212-4. *Kerr*.

COUNTRY SCHOOLS:
Drill often perfunctory, 1717: forms of physical training, 1858-63. *Scougal*.

COWAN, Miss C.:
Headmistress, Possil Park Public School, Maryhill, Glasgow. Evidence of, 5662-704.

CRAIG, SERGEANT-MAJOR F. W.:
Physical and Military Drill Instructor, Stornoway. Evidence of, 11,236-76.

CRAIGEN, Mr J.:
Chairman of Aberdeen School Board. Evidence of, 3056-211.

CRIME:
Males between twelve and twenty-one convicted at Police Courts; increase; committals to reformatories and industrial schools; youths before Police Courts; of poor physique; kinds of offences; special temptations, 12,895: number of convictions increasing; growth of unruliness among the youth, 12,895B-7: juvenile offences; statistics examined, 12,928-35: convictions; numbers; increase; methods of counting offences, 12,949-55. *Chisholm*.
Juvenile delinquency insignificant, 10,836: juvenile delinquents; recent Act, 10,881-6. *Porter*.
Amongst juveniles in Edinburgh increasing; greatly regulated by home influences, 10,078: increase; causes, 10,128-35. *Ross*.
Circular 347 (by Lord Balfour of Burleigh), drawing attention to juvenile offences, 8. *Struthers*.

CRIPPLES:
Exemptions in curvature cases, 3921-2. *Kingston*.
Cripple and infirm children—League of Glasgow; objects; should be completely under medical treatment and advice; special invalid schools started; education carried on by philanthropic organisations; routine of school instruction; diet; exercises controlled by medical examination, 13,969-75: fresh-air fortnight homes, 13,996: mental capabilities, 13,997-9: numbers of Glasgow cripples, etc.; special education under School Board advocated; physical exercises under medical supervision; benefits; in country districts; suggestions, 14,030-2 and 14,000-18: practical results of special treatment; special school cost, 14,033-41. *Mackenzie*.
Children exempted for reasonable cause, 149-53. *Struthers*.

CRUDEN, M. A., Mr G.:
Lecturer on Physical Education, Aberdeen University. Evidence of, 10,480-715.

CUNNINGHAM, Mr C. J.:
Headmaster, St Mary's Roman Catholic School, Duntocher. Evidence of, 13,162-203.

CURRICULUM:
Lightening of, 3089-97. *Craig*.
Difficulty; some sacrifice necessary, 8341-4. *Clark*.
Work during day well proportioned; during evenings injurious if heavy, 6714-7. *Hay*.
Demands; difficulty, 11,347-9. *Low*.
Board Schools; opinion, 6997-9. *Mackenzie*.
Theoretical scheme suggested, 4227-9. *Malloch*.
Not overcrowded but full, 2478-83: age limit now permits development of physical training, 2543-6. *Murray*.
Lengthened school life advantageous; more time for physical training, 3017-31. *Powell*.
Time given sufficient, 5428-30. *Roberts*.
Pressing demands of school subjects should be lessened; demands of pupils and public opinion, not of Department, 11,091-11,101. *Robertson*.
As at present; slower and more thorough progress desirable; thus sufficient time for sound physical training, 1717: liberty allowed may prove dangerous, 1955-61. *Scougal*.
Military drill should form part of every school; advantages, 9978, § 16. *Smith*.
Overloading of, 2379-86. *Stevenson*.
Physical exercises included at all schools as part of, 250. *Stewart*.
Difficult to find time for physical training, 11,544-6: not demands of Code but of system, 11,563: lack of time owing to competition with other schools, 11,575-80. *Taylor*.
No room for any more subjects in, 4655-8: not overcrowded but full enough, 4733-40. *Turnbull*.

CUTHBERTSON, Mr T. W.:
Treasurer of the Boys' Brigade. Evidence of, 12,967-13,115.

CYCLING:
Benefits of, 9628. *Brereton*.
For girls better than no exercise. Department, 6873-6. *Hay*.
Corps attached to Volunteers suggested, 9925-6. *Lee*.
Dangers of, for girls, 10,225-9. *Murray*.

DANCING:
Is not taught, but good exercise, 11,389-92. *Beattie*.
Strongly recommended, 5248-54. *Bruce*.
Small fee charged, 3380-90. *Mackenzie*.

DANCING—*continued*:

Taught at Edinburgh Ladies' College, 11,022 (b) and 11,044. *Robertson*.
Good form of exercise, 1797-8. *Scougal*.

DANGERS:
Possible in boys' and girls' schools of France, 9628. *Brereton*.
Precautions for training of girls necessary, 5234-7. *Bruce*.
Injuries caused; medical inspection advisable, 487-96. *Brunton*.
Girls; overstraining, 5772-80. *Cantlie*.
Of exercise not being sufficiently short, 8117-8. *Dukes*.
Of ordinary work; may lead to unequal development; and benefits to healthy, 6709: of physical training of girls at periods of puberty and maternity, 6735-8. *Hay*.
To girls; apparatus work bad, 3904-9. *Kingston*.
Of over-exercise; illustrations, 6984. *Mackenzie*.
Indifference and ignorance, 10,208: suggestive precautions, 10,214: of bicycling for girls, 10,225-9: ignorance of, very prevalent, 10,231-40. *Murray*.
In training of girls, lady teachers well qualified; no difficulty, 11,110-7. *Robertson*.
Essence and, 2781-89. *Whitton*.

DAVIDSON, Mr A. P.:
Headmaster, Lamlash Public School, Kilbride. Evidence of, 5975-6052.

DEFECTS AND DISEASES:
In witness' district, 5294-7: abnormal, 5312-23. *Bruce*.
Record book; defects and flat feet and eyesight; influence of town life, 8581-93: defective eyesight, 8604-9. *Bryant*.
Rickets; causes; food and homes; deterioration, 5741-9. *Cantlie*.
Might be minimised by physical training; proportion of, 8031 and 8036-7. *Don*.
Normal and abnormal, treatment desirable, 8171. *Dukes*.
Fatal diseases grouped; ages five to ten; ages ten to fifteen, 6709. *Hay*.
Causes—defects of throat, nose, and ears; percentage of other defects; notification of diseases, 6059-78. *Kerr*.
Special class for defective children, cripples, incurables, 3910-24. *Kingston*.
Will be discovered by exercises, 6984. *Mackenzie*.
Discovered by accident, 11,628. *Peacock*.
Switzerland; sickly children; special measures, 14,058. *Pressland*.
Training beneficial in curing, 11,066-7. *Robertson*.
Causes—insufficient nourishment; bad air, 6488. *Smith*.
Found in lads between fourteen and eighteen, 1262-3: in children under eighteen; all benefited by physical training, 1294-1305. *Tuke*.
Proportion of boys and girls; normal and subnormal; ages, 7196-7201: weaklings, percentages; subnormal females; rickets, small-headedness; measurements, 7202-7216: percentages of small-headedness, 7223-4: feeble-minded and physically defective children, percentage; inheritance, training teachers needed, 7262-77: children of nationalities; proportion of defects; special training necessary for defective children; movements desired, 7280-6. *Warner*.

DEFINITION:
Of terms; military drill; physical exercise 3947-52. *Chesterton*.
Of 'loafer,' 9930-32. *Lee*.
Of terms, 2525-6. *Murray*.
Of physical culture, 7336. *Sandow*.
Of athleticism as against physical training, 6942-3. *Savill*.
Of terms, 1820-5. *Scougal*.
Of 'half-timer,' 11,920. *Strachan*.
Of military training, 7536-41. *Walsh*.

DEGENERATION:
Physical, in towns; schemes of improvement, 9628: in France increasing, 9666. *Brereton*.
Census taken in 1901 show no physical degeneration in towns during last twenty years, 740-3. *Legge*.
'Generational,' transmissible or hereditary; distinction, 6983: 'generational' and hereditary; illustration; permanent or temporary, 6986-8: improved conditions of life should stamp out, 7073-6. *Mackenzie*.
Proofs of, 7355-7. *Sandow*.
Causes, 6897: proofs; army recruits, 6897-8: causes mainly confined to urban population; proofs; army recruits; eyesight, 6918-36A: date of inception; feeding; 6947-56. *Savill*.
Causes probably buildings; defects, 7223-4. *Warner*.

DETERIORATION:
Of race; causes; remedies, 9727 and 9745-6. *Almond*.
None in country, 5378-80. *Bruce*.
Physique of nation deteriorating; standard for recruits lowered; possibly owing to getting dregs of classes; physique of upper classes tending to improve, 551-9. *Brunton*.
Of country children, 5715-7: reasons for opinion, 5746-9: data and conclusions, 5752-62. *Cantlie*.
None in general physique of army, 8031 and 8034. *Don*.
Or improvement of town and country children? Mortality of boys and girls; girls' health at later school ages, 6709. *Hay*.
Among young women of working classes; upper classes greatly improved; diminution of birth-rate of country; causes; enlarged heads and relatively lessened pelvis, 10,269-73 and 10,276. *Murray*.
Of race in Western Highlands not observed, 1698-1700. *Robertson*.

DETERIORATION—*continued* :

- In conduct; boys much the same, but police more vigilant, 10,096. *Ross*.
Not in upper classes, due to compulsory games, 1500-5 : physical condition of nation; historical references, 1521-9. *Tuke*.
If conditions of life unsatisfactory, 13,830-1. *Turner*.

DEVELOPMENT :

- Formation of muscle and physical; distinction, 9652-4 : of games desired by French; hindrances, 9678-85. *Breerton*.
After effects, 5335-8. *Bruce*.
Of lungs and circulation by proper exercises most important, 480 : physical training favours brain, 484-6. *Brunton*.
Improvement; averages, 8645-8. *Bryant*.
Upper and lower extremities should have equal, 5727-8. *Candlie*.
All-round desirable; true aim of education, 12,636. *Carrie*.
Boys for army; variety and extremes of; reasons; boys fourteen to sixteen; lads of seventeen upwards average normal, 8031. *Don*.
Physical, and brain power; bearing on moral; morality, 8106-9 : exercise essential for; danger in not being sufficiently short, 8117-8. *Dukes*.
Physical, of soldiers and civilians compared, 7863 (l). *Fox*.
Remarkable, of children of Portree, 11,124 : probable cause of children's rapid, 11,190-3. *Gillanders*.
Of race and national defence is the object of physical training, 11,764-5. *Hamilton*.
Physical, and brain power; effect, 6709 : physical, beneficial regarding brain power and morale, 6718-20. *Hoy*.
Functional; infant school; suggestion, 6059. *Kerr*.
Physical, desirable for those under fourteen to have more; after fourteen some systematic training, 9947-54. *Lee*.
Physical, depopulation of rural districts; results of experience, 10,277 : remarkable among Shetland boys; due to healthy occupation; girls develop fairly fast, but age quickly, 10,298-301. *Mackay*.
Of chest; bands valuable for, 12,756-8. *McFarlane*.
Physical, and brain improvement; nurture; fatigue; morale, 6983 : of reserve capacity necessary, 6993-4 : spontaneous games best for promoting physical, 6984 : physical and mental; amounts, 7062. *Mackenzie*.
Of boys of Boys' Brigade, 8780. *Masterson*.
And amendment suggested, 11,394, § 9. *Paterson*.
Unequal by games and athleticism, 6944-6. *Savill*.
Of national physique; physical training essential for true; object, 10,944. *Seymour*.
Physical and mental, relation, moral, 6438. *Smith*.
Physical exercise necessary for intellectual, 12,367-71. *Spencer*.
Since 1874 of physical training; good results noticed, 308-13. *Stewart*.
Physical and mental, 13,826 : muscular, aim of, 13,868-70. *Turner*.
Defective in males and females; operative causes, 7217-7221 : mental, 7223. *Warner*.
- DEVERELL, R. N. (retired) COMMANDER, G. S. :
Superintendent, Clyde Training Ship *Empress*, Row. Evidence of, 12,554-634.
- DIFFERENCE(S) :
- Of training of boys and girls, 1046-7. *Colvill*.
Of training boys and girls up to and after twelve, 6059 and 6177. *Kerr*.
Of forms of exercises; respective values, 6984. *Mackenzie*.
Physiological; between boys and girls up to ages eleven or twelve; girls must be separately trained; care necessary for girls after twelve; girls after puberty, great care necessary, 10,208 : training separate for the sexes desirable, 10,209. *Murray*.
Of boys and girls over thirteen, 306-7 : drill and physical training, 432-42. *Stewart*.
Between factories and mills, 7721 and 7741. *Williamson*.
- DIFFICULTIES :
- No prior training, 10,486. *Cruden*.
Rural schoolmaster hard-worked; grounds for complaint, 6621-4. *Elphinstone*.
University field too far distant; time of classes, 12,216. *Gordon*.
Pressure of subjects; understaffed, 6382-94. *James*.
Lads after fourteen; temptations, 9909-11. *Lee*.
Of Dundee School Board; specified, 4154. *Malloch*.
So many other subjects; difficult to find time, 2574. *Powell*.
In outlying districts; how to be avoided; conditions in various districts, 1631-2. *Robertson*.
No organisation at present; lack of facilities; want of system at Board Schools, 10,945. *Seymour*.
Want of training sheds and halls, 6265-69. *Sutor*.
Want of qualified instructors; compulsion; accommodation; teachers; want of apparatus, 5036. *Wallace*.
- DISCIPLINE, ETC. :
- Training desired for, 10,465-6. *Mackay*.
Benefited by physical training, 1556. *Robertson*.
- DIVISIONS :
- Of scientific and natural training, 7509. *Walsh*.
- DOBBIE'S LOAN PUBLIC SCHOOL, GLASGOW :
Very poor class of children, 13,471-2 and 13,527-9 : neglected children; how dealt with, 13,578-81. *Muir*.
- DON, M.D., A.M.S., Lt.-Col. W. G. :
Senior Medical Officer, London Recruiting District. Evidence of, 8026-93.

DRILL :

- Taught by sergeant-major instructor; and gymnastics, order of importance, 9727 and 9776-80 : advocates certificates of proficiency in rifle-shooting and; might count for volunteer and militia work, 9771-2. *Almond*.
None at Glasgow University except Medical Staff Corps, 12,289 : and gymnastics; inducements should be offered for; qualifying classes suggested, 12,293A. *Bower*.
Very popular; effects, physical training one of the most important parts of elementary education; progress in Portsmouth unique; partly due to school bands, 2226. *Burrows*.
And gymnastics; opportunities for; in regular curriculum, 12,636. *Carrie*.
And games compulsory; and outdoor games compared; latter preferable, 10,716 : discipline in respect of; should be certain amount in all schools, 10,733-89 : essential in elementary schools, 10,754-5. *Carter*.
Certificates desirable to relieve boys of part of recruit drill when joining volunteers, 8845-51. *Clark*.
And exercises in poor urban districts, 8158. *Dukes*.
Certificates of proficiency recommended; count towards volunteer drill, 11,124. *Gillanders*.
Cadet corps very popular, 12,473. *Laming*.
In favour of large amount; form recommended, 1137-53. *Lobban*.
Taught to all pupils; exceptions; should be supplement to games and other training, 11,324 and 11,344-6. *Lowe*.
Increase advantageous, 13,442-4. *Lyons*.
And free exercises, 4993-6. *Mackenzie*.
And play; distinction; army and navy compared, 6984 : and nervous strain, 6983 and 6990-1 and 7106 : in-applicable for children from six to twelve, 7119-29. *Mackenzie*.
Taken in dinner interval, 4932-4. *Moody*.
And physical training; both beneficial; reasons, 8298, § 13. *Napier*.
Taught to students; exceptions, 11,394, § 4. *Paterson*.
Taught as part of volunteer corps, 11,805. *Reid*.
Some form universal in district of witness; and military drill; text-book should be officially issued, 1556 : and physical exercises; distinction, 1624-43. *Robertson*.
According to Ling's Swedish system, 11,022 (b). *Robertson*.
Lately more for constables; beneficial for boys in streets 10,100-4. *Ross*.
Amount of time given under Glasgow School Board to, 1717 : desirable to devote half an hour *per diem*, 1745-9 : definition of, 1820-4. *Scougal*.
And gymnastics taught, 10921 (b). *Seymour*.
Should be compulsory from fourteen to eighteen, 4478-80. *Shearer*.
Including gymnastics, taught, 12,364, § iii : systematic; good disciplinary effect, 12,374-6 : parents' objections, 12,379-83. *Spencer*.
And physical exercises; both desirable, 314-322 : its bearing on conduct and tone; relation to mental improvement, 373-385 : and physical training; difference, 432-442. *Stewart*.
In elementary schools up to the age of fourteen; historical references to; existing conditions and present position; problems to be solved before advance can be made, 1-8 : necessary at training colleges since 1901, 8 : relative value of games and drill, 8 : instructors of, 18 ; comparative values of games and drill; supplementary to each other, 36-9 : on Saturday afternoons by apprentices, 59 : and gymnastics; length of time to be allotted, 64-71 : physical exercises desirable for those in Board Schools under thirteen; drill should be deferred to later stage, 109-17 : inspection of, 118-22 : disciplinary effect good; desirable to have it in small quantities and between lessons; middle of day most advantageous time, 189-92 : in Roman Catholic schools a favourite subject and adequately done, 205-18 : monotony of, 240-3. *Struthers*.
No expert instructor; advisable to employ janitor if required, 11,495 : appreciated if strict, 11,498 : no complaints from parents, 11,512 and 11,556-61. *Taylor*.
Taught to most classes, 12,840 : and gymnastics in school hours, 12,842. *Temple*.
And gymnastics distinguished, 9020-1 : benefits, 9022 : reasons of success or failure of, 9025 : not attractive because to be in play hours, 9071-5. *Wickham*.
- DUKES, M.D., B.S., MR C. :
Physician to Rugby School. Evidence of, 8094-294.
- DUMFRIES ACADEMY :
Physical training at, described, 8797 : drill and free gymnastic exercises given, 8800-6. *Clark*.
- DUNDEE PHYSICAL TRAINING COLLEGE :
Descriptions of classes and courses of instruction; fees, 12,013-20. *Sturrock*.
- DUNDEE SCHOOL BOARD :
Resolution; extent of training given under, 3445 : resolution of, 5513-21. *Cameron*.
Attempts of Board to encourage physical training; benefits; suggestions, 3617. *Irvine*.
Difficulties; Blackness School scheme; suggestions, 4154 : lectures, 4156-60 : development of physical instruction at Blackness School, 4166-73 : order of importance, 4211-5 : educational views of witness, individuality, 4230-31. *Malloch*.
Deliverance, 7612-7. *Walsh*.
Luff Road School, 7670. *Williamson*.

- Index to Evidence.
- DUNDONALD SCHOOL BOARD :**
Favourable to increase physical training; objections to military drill, 4315-29. *Scott.*
- DYER, C.E., D.Sc., MR H. :**
Member of Glasgow School Board. Evidence of, 7909-83.
- EDINBURGH ACADEMY :**
Class of school; numbers and ages of pupils; description, 10,716; experience of witness, 10,717-30: Scotch and English boys compared, 10,731-2. *Carter.*
- EDINBURGH LADIES' COLLEGE :**
Class of school and scholars; ages, 11,014. *Robertson.*
- EDUCATION :**
Theoretical, the proper and essential supplement of physical training, 9727: method of; teaching of laws of life and health, 9738-9. *Almond.*
Suggested, 9134-5: technical; illustrations, 9136. *Arrol.*
Physical training now considered part of, 3446-54. *Cameron.*
True aim of; all-round development, 12,636. *Carrie.*
Physical and general; advocates boys and girls together to puberty, 8164. *Dukes.*
Object of, 7910: of Germany; results, 2955-8. *Dyer.*
Physical training must be considered as part of; must be systematic and regular, 11,726-8. *Hamilton.*
Of cripples, etc. (Glasgow), carried on by philanthropic organisations, 13,975: results of special, 13,993-5: special under School Board advocated, 14,006-9. *Mackeith.*
Good effect on feeble-minded children of school, 13,893. *Monteagle.*
Compulsory; effects on parental responsibility, 10,858-74. *Porter.*
Physical and mental; importance, 6897. *Savill.*
- EFFECTS :**
Improvements noticed in children, 11,278. *Alexander.*
On scholars, 4819-21. *Andrew.*
Beneficial on morals; girls, 5212-3: morally, boys and girls, 5219-22: beneficial on manners, 5273: of physical development, 5335-8. *Bruce.*
On mental overstrained girls, 8631-3: on brain work, 8642-4. *Bryant.*
Girls improving in physique; boys not proportionately, 5800-9. *Cantlie.*
On mind and body, 12,636: ambitious aims of pupils; highest places in open competitions gained by clever boys who attended to physical training, 12,699-708. *Carrie.*
On manners and morals, 4004-5. *Chesterton.*
General appearance improved; discipline, 11,237. *Craig.*
Good discipline, 13,162. *Cunningham.*
Good on boys; proof, 12,557 and 12,590. *Deverell.*
On recruits, 8053-4. *Don.*
On morals, 6709: on health, 6806-8. *Hay.*
Good, 3852-3 and 3904-6. *Kingston.*
Physical and mental, 12,473. *Laming.*
Moral, 877-8: mental and moral, 900-3: good moral, 913-24. *Legge.*
Bearing on intelligence of children; probably partly accounts for general improvement, 1160-5. *Lobban.*
Of low vitality, 8403. *Meath.*
Of physical exercises, on feeble-minded children, 13,894-903. *Monteagle.*
Of physical training, 13,500. *Muir.*
Of exercises on boys and girls; no bad effect observed; but insufficient in quality to effect much good or harm, 10,251-4. *Murray.*
Moral, physical, and intellectual, 11,811. *Reid.*
Since physical training became obligatory, children improved, 1588-92. *Robertson.*
No bad, observed, 11,059-61: good for curing defects, 11,066-7. *Robertson.*
Of physical exercises on children, 6502-3. *Smith.*
Moral, physical, and intellectual, 12,364, § viii. *Spenser.*
Good disciplinary, might improve manners, 11,537-42. *Taylor.*
Moral, physical, and intellectual, 12,846. *Temple.*
On timid children; moral, of exercise, 13667, § b. *Thomas.*
Rheumatism versus physical training; good effects will always be retained, 1473-1499: most beneficial within limits, 1530-32. *Tuke.*
On book work; results, 4647-57. *Turnbull.*
Of civilisation, 13,828-9: beneficial on digestion, respiration, circulation, etc., 13,837-44: lung expansion, 13,850-1: improvement of discipline and personal appearance, 13,852. *Turner.*
Counteraction of effects of bad environment; conditions to be affected, 6983: in weaklings, etc., 6984. *Mackenzie.*
In army, 7433-9. *Sandow.*
Should reduce defects, 7228: on mental dulness, 7240-4: good, percentages, 2287-90. *Warner.*
- ELEMENTARY SCHOOLS :**
System of Leeds Board Schools described, 8997. *Alexander.*
Physical training, course advised, 8347. *Elliot.*
Physical training desired for children of, 10,832-4. *Macpherson.*
Physical drill in Perth; instructor; gymnasium, 8686. *Masterson.*
Physical training at Macclesfield by Patriotic Association, 8403. *Meath.*
Compared with higher schools, 1767-76. *Scougal.*
- ELLIOT, MAJOR W. :**
Late Honorary Secretary of the Lads' Drill Association. Evidence of, 8346-400.
- ELPHINSTONE, M.A., MR J. :**
Headmaster, King Edward Public School. Evidence of, 6613-700.
- EMPLOYMENT :**
Boys all get employment after leaving school in Kilmarnock, 4416-25. *Bain.*
Boys after fourteen get sufficient exercise in their, 10,298-9. *Mackay.*
Boys occupied after leaving school, 10,110-13. *Ross.*
Children on leaving school find work immediately, 7809-12. *Williamson.*

Physical exercises taught on; class of boys; importance of physical training, 12,575-89; moral offences; precautions; moral and religious teaching; parents of a low type; naval drill on tender given, 12,591-611; ages of boys on; education, 12,619-23. *Deverell.*
- EXHIBITIONS :**
Value of, 11,292. *Carson.*
- EXISTING CONDITIONS :**
Voluntary organisations in Scotland favourable to movement, 9302-4. *Chapman.*
Under Aberdeen School Board, 3311. *Mackenzie.*
For drill in elementary schools and present position; problem to be solved, 8. *Struthers.*
- EXISTING OPPORTUNITIES :**
At Musselburgh, Loretto School: disinclination of boys at first, 9727 and 9781-4. *Almond.*
Under Kilbride School Board, 5902. *Bannatyne.*
At Glasgow University, 12,289: not much advantage taken of, 12,291. *Bower.*
In South of England, 2226. *Burrows.*
Use of, 6548. *Cheyne.*
Inadequate: larger provision desirable, 12,898-900. *Chisholm.*
For physical training in England and Wales, 989-90. *Colwill.*
Numbers using the, 10,484. *Cruden.*
At Training-ship *Empress*—gymnastics, physical drill, 12,557. *Deverell.*
At Edinburgh University, 12,216. *Gordon.*
Use made of them; Dundee Public Gymnasium, 3617. *Irvine.*
At Reformatory and Industrial Schools, 730. *Legge.*
For physical training; varieties, 1076. *Lobban.*
In schools, 11,339-41. *Lowie.*
In Shetland; time allotted, 10,277. *Mackay.*
At Downhill Training College, Glasgow; drill with music; playground; walks taken daily, 13,116. *Mackintosh.*
Taken advantage of, 11,664. *Macnee.*
Games, drill, athletics; handicrafts; voice training; cadet corps, rifle-shooting; swimming, gymnastics, 11,349, § 4: advantage taken of, 11,394, § 6. *Paterson.*
In Switzerland, 14,058. *Pressland.*
At Glenalmond, 11,805. *Reid.*
Games, drill, gymnastics, dancing, voice training, and swimming, 11,022: advantage taken of, 11,026. *Robertson.*
(1) In elementary schools; (2) higher class day schools; gymnastics, drill, cadet corps, 1711-7. *Scougal.*
Under various heads, 10,921: advantage taken of; training appreciated, 10,926. *Seymour.*
Almost all compulsory, 9978, § 7. *Smith.*
At Glasgow High School, 12,364, § iii: numbers taking advantage of, 12,364, § vi: inadequate; some official supervision necessary, 12,469-71. *Spenser.*
For children over fourteen; none in elementary schools, 296-305. *Stewart.*
At St Andrews University, 12,003: advantage taken of, 12,005. *Sturrock.*
At Glasgow Academy; details, 12,840: advantages taken of, 12,844. *Temple.*
At Inverness High School; departments; other Inverness schools generally; applied gymnastics, 5036. *Wallace.*
In Edinburgh good, 2625. *Whitton.*
At Wyford School, Winchester, 9016A-9. *Wickham.*
Glasgow School Board; dimensions of halls, 5520. *Wilson.*
- EYESIGHT :**
Defects in, 8604-9. *Bryant.*
Defects in, 6709. *Hay.*
Blind children; causes; defective eyesight; percentage, 6060-78; physical training of blind children desirable, 6154-66. *Kerr.*
Of children tested by class teachers of London School Board, 3925-6. *Kingston.*
Defective vision; causes; emmetropia, hypermetropia, myopia, astigmatism; nerve power and vision, 9848: employers of labour have great prejudice against wearing of glasses; evil effects; defective vision; proportion of cases of abnormal vision, 9854: near-sightedness; remedies; careful regulation of work and sufficient physical exercise, 9854: myopia; conditions of school life, 9880-6. *Mackay.*
Army recruits, 6933-6. *Savill.*
Defects in, causes, 1986-8. *Scougal.*
Defects in, percentage, 12,457-60. *Spenser.*
Defects noticed in, suggestion, 11,504. *Taylor.*
Exercises beneficial; training of the eye, 7244-51. *Warner.*
- FARM SERVANTS :**
Sketch of their life and environment; want of discipline; remedies, 9879 and 9880-4: very much scattered;
- Index to Evidence.

Index to
Evidence.FARM SERVANTS—*continued*:

difficulty of volunteering, 9922-4: tinned meat and bread is sole food of, 9944-6: good material wanting careful training at the receptive age fourteen to eighteen; easily trained to be policemen; testimony of Chief Constable of Forfar, 9959-67. *Lee*.

And labourers of Perthshire; description, 10,760: continuation classes for, 10,794-806. *Macpherson*.

Suggestions to occupy spare time of, 10,836 and 10,854-7. *Porter*.

FEEBLE-MINDED CHILDREN:

At Chapelton Reformatory, method of dealing with, 13,634-43. *Hunter*.

Classification of; educational progress of; worst cases; moral but no intellectual progress; teaching given in ordinary Board School classrooms; course of instruction; food; degrees of feeble-mindedness; good effect of school education on, 13,893: contact of different classes; no harm; special teaching by the eye, 13,910-6: determined by medical examination; numbers; special classes advisable; permanent institution suggested; proportion of boys and girls, 13,926-66. *Monteagle*.

And physically defective children; percentage; inheritance; trained teachers needed, 7262-72. *Warner*.

FEEDING:

And clothing; ill-fed and ill-clothed children at Glasgow schools, 2949-52. *Alexander*.

And clothing of half-timers; none supplied, 13,214-6. *Anderson*.

Of recruits in relation to physical instruction, 2189-90. *Armstrong*.

Free for children of indigents at school, 9628. *Brereton*.

Special committee for under-fed children, London School Board, 3765-74. *Bridgeman*.

In poor districts of Glasgow described, 13,777: probable cause of bad, 13,789-92 and 13,802-6. *Bruce*.

Diet of children in Western Highlands; changes, 5375-7: underfed children: meals supplied, 5401-5. *Bruce*.

Exercises, if introduced, will produce appetite; amount of food regulated thereby, 481-3: amount varies for every child, 497-506. *Brunton*.

Meal provided and paid for by boys, 12,730-6. *Carrie*.

Poor children confined to certain districts; underfed children are not given as much exercise as well-fed, 4044-8. *Chesterton*.

Action by Board, 3192-8. *Craigie*.

And clothing in necessitous cases supplied by managers, 13,162. *Cunningham*.

Importance of, 8055-8. *Don*.

And physical training; increase necessary; position of parents; suggestions, 8140-2: porridge and soup; difficulty, 8212-19: value of porridge and soup, 8276-84 and 8290-2. *Dukes*.

Of children; majority well fed, but poverty prevails amongst few; remarkable development, 11,124. *Gillanders*.

Edinburgh University students and their; want of time, 12,251. *Gordon*.

Of children; generally well fed, 6709: attention to underfed children desirable, 6802-3: quality, 6852. *Hay*.

Meals provided to poorest of children at All Saints' Episcopal School, Edinburgh, 12,105 and 12,187-9. *Hunter*.

Tinned meat and bread chief article of, 9944-6. *Lee*.

Underfed children, 760-5: in some reformatories and industrial schools insufficient; corresponding inefficiency of the physical training, 850-60: in reformatories, 925-7. *Legge*.

Weak and underfed children; how dealt with, 8523-7. *Lilley*.

System in rural districts of, 1134-6: meals should be provided, at small cost to parent, 1156-9: supply of meals at cost of parents very desirable, 1208-11: of children generally in towns worse than in country, 1242-5. *Lobban*.

And clothing supplied in necessitous cases, 13,332 and 13,333-6. *Lyons*.

Of cripples, etc. (Glasgow); details, 13,975. *Mackeith*.

Must increase with exercises, 6984: underfed children; suggestion, 7167-71. *Mackenzie*.

Of feeble-minded children; would be better to have meals supplied at school in winter, 13,893 and 13,904-5 and 13,917-23. *Monteagle*.

And clothing; liberal supply by outside agencies, 13,473-5 and 13,547-58: of poor children; meals, 13,596-8. *Muir*.

The more wholesome food digested, greater physical development, 8295, § 7: inspection of food stuffs suggested, 8299. *Napier*.

Daily meal; good results; School Boards should take an interest in question, 11,475-81. *Paterson*.

Children healthy-looking and well-fed, 11,622 and 11,623. *Peacock*.

Of children; meals should not be given free, 1619-25. *Robertson*.

And exercises; results, 7452. *Sandow*.

Probable causes of deterioration, 6950-6. *Savill*.

Underfed children; very few, 4306-12. *Scott*.

And clothing; inspectors must hand poorly fed or clad children to managers to enquire cause; mid-day dinner at cheap rate very beneficial, 1754-5: insufficient fed children in towns; not in country, 1798A-800. *Scougal*.

Additional cause of generation of lower classes, 10,945. *Seymour*.

FEEDING—*continued*:

Of children; generally deficient of animal food; diseases from bad, 6488: and clothing of children, 6507-16: in the Highlands, 6521-8: improper and insufficient feeding; value of animal food, 6527-36. *Smith*.

And clothing; children badly fed and clothed in many of the poorest schools of Edinburgh, 2286: undesirable for School Board to undertake it, 2310-2: weak and underfed children, principally under twelve, 2338-40 and 2408-10A: voluntary effort; neglect by parents; suggestions, 2390-403: amount of exercise (to underfed children); headmasters able to discriminate, 2433-5. *Stevenson*.

Must be good, 327-30: of children in town schools; wrong kind of food, 363-7: system of parents paying for soup supplied to children desirable, 443-9. *Stewart*.

Of half-timers, good, 11,900. *Strachan*.

And health of children most important; must be enquiry, 123-33. *Struthers*.

Children, well-fed, 11,489-90 and 11,516. *Taylor*.

And health; occasionally bad, 13,689-90. *Thomas*.

And physical exercises are of little value separately; the two work together, 1506-9. *Tuke*.

Very few underfed children; exemptions, 4634-7: meals given, 4659-65: underfed children; suggested course, 4689-91. *Turnbull*.

Supply to children at nominal price; advantageous, 682-695. *Walker*.

And clothing; ill-fed and poorly-clad children *versus* physical training, 2626-37: ill-fed children; School Board should make enquiries, 2744-51. *Whitton*.

Underfed children; how dealt with, 5534-40. *Wilson*.

FIRE-DRILL:

In French schools, 9628. *Brereton*

Compulsory for all, 3798. *Kingston*.

Taught, 9978, § 3. *Smith*.

Should be introduced into all schools, 2286. *Stevenson*.

Advantages of; illustration, 11,511. *Taylor*.

FOUNDRY BOYS' RELIGIOUS SOCIETY, GLASGOW:

Athletic clubs for boys and girls, 12,895. *Chisholm*.

Objects of, 14,019-21: and military drill; reason of discontinuance, 14,045-9. *Mackeith*.

FOX, COL. G. M.:

Late Inspector of Military Gymnasia for Great Britain and Ireland. Evidence of, 7861-907.

GAMES:

Organisation of, 9727: school runs; time allotted to games; respective merits; football, cricket, and hockey admirable; hand fives most valuable: sound system is truly recreative and educational; must be properly organised, with individual liberty, 9727: their influence in promoting military spirit, 9734: difficulty of golf as a school game, 9741: football; style of play, 9813-4. *Almond*.

Can be played in park, 4432-3. *Bain*.

Played—football, cricket, etc., 11,362. *Beattie*.

No organisation of, 12,289: necessary to arouse students' interest in; present playing field in danger, 12,293A: and physical exercises; financial assistance desired, 12,359-62. *Bower*.

In France; objections by parents and by teachers; progress, hindrances, 9628: *la box*; lunging, 9673-5: French desire to develop; hindrances, 9678-85: *versus* physical exercises; combination desirable, 9714-8. *Brereton*.

When organised of great value, 3666: and teachers, 3684-91; can be played in many parks and open spaces in London, 3692: *versus* physical exercises, 3717-21: organised, 3722-4: desirable for managers of schools to make some kind of physical exercise sub-committee amongst themselves, 3785-90. *Bridgeman*.

Plus physical training desirable, 5324-8. *Bruce*.

Physical drill as well as, former only exercise certain muscles, 518: preferable to squad drill, 538-9. *Brunton*.

Organised, played, 8579 and 8594: organisation necessary; danger of competition, 8612-23. *Bryant*.

Not organised by teachers, 5720-2: lower extremities of children under fourteen must be exercised; equal development necessary to upper and lower extremities, 5726-8. *Canlie*.

Clubs for, supervised by masters, 12,636: organisation of, satisfactory, 12,636: and training not compulsory, 12,665-70. *Carrie*.

And drill compulsory: organisation by masters: outdoor are best; precautions, 10,716: and gymnastics beneficial; and drill; former preferable, 10,733-48. *Carter*.

Disadvantages of, 10,506: football: personal experience, 10,517: less in Aberdeen University, but more systematic training, 10,561-3; beneficial, 10,618-9. *Cruden*.

Not popular in outlying districts, 11,237: not desirable to have organisation of, 11,241-3. *Craig*.

Football; not organised, 13,165. *Cunningham*.

Encouraged and organised in Boys' Brigade; drill and physical exercises preferable to; reasons, 12,967A: effect great moral improvement in boys; effects of training more far-reaching than those of, 13,024-5. *Cuthbertson*.

Value of, 8104-5 and 8266-7: of schools; values to boys and girls, 8119 and 8145: best for girls, 8135: none injurious 8136: organisation desirable, 8146 and 8177-80: *versus* physical exercises, 8156-7: football; amount at Rugby for strong and weak pupils; difficulty obviated if organised 8222-9. *Dukes*.

Shinty and football organised, 11,124: helped by physical instruction, 11,160-6. *Gillanders*.

Index to
Evidence.

GAMES—*continued* :

Fives courts recommended for Edinburgh University, 12,216. *Gordon*.
And drill; latter preferred, 11,725-8. *Hamilton*.
Should be encouraged; should be obligatory, 6709. *Hay*.
Playground badly situated; playing field; rented by Rothesay Academy, 5852-63: and physical training; more of latter required, 5871-80 and 5885-6. *Hunter*.
With moderate exercises desirable; description of; good; reason, 6059: points of value, 6112: advantageous to children, 6131-2. *Kerr*.
Not compulsory; organisation; time allotted, 12,473: advantages of football, 12,473. *Laming*.
In Reformatory and Industrial Schools, 730-3: competitions organised, 748-56: should be taught, 793-5: occasional supervision desirable, 813-20: cricket not developed in Scottish schools, 941-6. *Legge*.
Organisation undesirable, 1083-8: should be supervised, 1200-3: if playing fields provided, teachers probably willing to help children, 1212-4. *Lobban*.
Organisation of, drill should be supplementary to, 11,234: not compulsory, 11,358-60. *Loxe*.
Playgrounds unsuitable for, 13,332. *Lyons*.
Organised football and cricket teams, 12,755. *McFarlane*.
Description of, in Shetland, 10,434-7. *Mackay*.
Deprecates teachers' supervision of, 3411-6: organisation desirable, 3424-30. *Mackenzie*.
Spontaneous, best for promoting development; athletics and first-class students compared; more space required for, 6984: supervision; effect, 7040-4: compulsion undesirable, 7093-101: athletes and first-class students compared, 7123-37: inadequate space to play, 7162-6. *Mackenzie*.
Organised, 11,662 (a). *Macnee*.
Organisation: trained teachers necessary, 8403. *Meath*.
Lack of accommodation, 13,520-6 and 13,582-5. *Muir*.
Versus physical training; objections, 2451: not so valuable as physical training in a city school, 2514-6: want of space in towns to play, 2553-5. *Murray*.
Cricket and football clubs, 11,394, § 4. *Paterson*.
No organisation of, 11,622: no playing field, 11,642-58. *Peacock*.
(Switzerland)—Organisation of, 14,058: and training; former overdone in England, 14,083-4. *Pressland*.
Not compulsory but organised, 11,805: and drill, etc.: merits, 11,808: part of school system, 11,809: *Plus* drill necessary, 11,832-4: compulsory time to, 11,845-8: teachers take part in, 11,867: compulsory, 11,881-3. *Reid*.
Lawn tennis; golf, 11,022 (a). *Robertson*.
Athletic clubs for, organisation, 10,921A. *Seymour*.
Including physical culture; recommended, 7360A. *Sandow*.
Unequal development, 6944-6. *Savill*.
Of great value, 1717: importance of organisation of; most beneficial, 1717 and 1756-8: children have in many places in country unlimited space for, 1846-51: want of ground to play in Glasgow, 1878-80. *Seougal*.
For infants, 9378: organised; valuable training; special exercises for girls; school associations suggested, 9379; *versus* physical exercises; former preferable; dangers; not compulsory, but physical training also given; attraction of 'spectating,' 9426-61: jumping taught, 9463-70. *Sharples*.
Many boys loaf about instead of play, 3260-2. *Simpson*.
Best exercises; boys and girls; injuries; included in physical training; recommended, 6488. *Smith*.
Organisation, 9978, § 3: should be encouraged in primary schools, 9978, § 27: assistance of teachers desirable, 10,049-51: must be supplemented by gymnastics and drill, 10,066-7. *Smith*.
Part of curriculum at Glasgow High School; alternatives; are organised, 12,364, § iii; if properly organised, are valuable supplement to regular training, 12,364, § v: continuation of, and physical training beneficial; advantages detailed; organisation educationally valuable, 12,364, § viii: of no intellectual value, 12,364, § viii: their value not sufficiently recognised; organisation; difficulties, 12,364, § x: military drill should be supplemented by, 12,373: socially and individually valuable, 12,377-8: specular element disapproved, 12,444-50. *Spenser*.
More facilities should be granted, 2371-3. *Stevenson*.
In Board Schools; competitions; masters supervise; children under fourteen, 280-90: cannot be organised to give pleasure, 331-3. *Stewart*.
Relative value of school drill and, 8: comparative values of drill and, supplementary to each other, 36-9: not desirable to systematise them; must be left to voluntary action of teachers and children, 60-2. *Struthers*.
Football, hockey, golf clubs, 12,003. *Sturrock*.
Football; police courts, 6252-8: ample room to play, 6301-2. *Sutor*.
No organisation of; playgrounds insufficient for, 11,500. *Taylor*.
Organised, 12,840: not compulsory; time allotted, 12,840-1. *Temple*.
Interest of teachers in, 13,667: football league; effect, 13,667: systematic training; advantage over, 13,667: should be encouraged, 13,667. *Thomas*.
Physical training preferable, 1306. *Tuke*.
Teachers take active part in, 4565 and 4652-4: playground and field, 4629-31: *versus* physical exercises, 4675-8. *Turnbull*.

GAMES—*continued* :

Should be encouraged where possible, but otherwise systematic training recommended, 13,876. *Turner*.
No system; compulsory games not advisable for young children, 637-41: not desirable to teach, 678-81. *Walker*.
Should be organised, 5036. *Wallace*.
And military drill, 7509. *Walsh*.
Cricket strongly recommended, 7296-8. *Warner*.
Space required for, public parks should be opened for, 2625 and 2656-64: in their own time many masters teach, 2666: are purely voluntary, 2670-1: evils of football, 2766-8. *Whitton*.
Benefits, 9022: reasons for success or failure, 9023: encouragement of; *plus* compulsory amount of exercise, 9053: and drill; difficulty, 9058-63: better results obtained by supervision of, 9066-70. *Wickham*.
GARDENING:
Suggested; advantages, 9879 and 9898-9: and science farming, 9933-40: desirable, 9974-6. *Lee*.
GILLANDERS, Mr A.:
Headmaster, Portree Public School. Evidence of, 11,123-235.
GLASGOW SCHOOL BOARD:
Views of; resolution, 2828-30: militarism, 2835-8. *Alexander*.
Evening classes; employers and apprentices; resolution, 7910. *Dyer*.
Provision for physical exercises and drill; Chesterton's system taught; advantages, 5520-30: physical exercises encouraged, 5613-22. *Wilson*.
GORDON, Mr R. G.:
Secretary, Edinburgh University Athletic Club. Evidence of, 12,213-84.
GOVAN SCHOOL BOARD:
Carries on efficient and sufficient training, 13,158-9. *Mackintosh*.
Number of children receiving physical instruction; course of instruction, H.M. Inspector's reports, 9475. *Smith*.
GRADING OF CHILDREN:
Impossible in time, 4079-82. *Chesterton*.
For physical exercises quite impossible, 2517-24 and 2607-12: undesirable, 2615-20. *Murray*.
According to physical strength unnecessary, 3001-2. *Powell*.
In gymnastics, 11,022: necessary; good effects, 11,064-5. *Robertson*.
According to physique recommended, 7357-60. *Sandow*.
For physical exercises practicable, 6957-61. *Savill*.
Advantageous; objections, 4742-4. *Turnbull*.
For physical training unnecessary, 2728-30. *Whitton*.
GRADING OF PUPILS:
For games at Rugby, 8234-47. *Dukes*.
GRANTS:
Should be increased; reasons, 2890-900. *Alexander*.
Board's objection, 6592-5. *Cheyne*.
Something additional necessary, 3102-5. *Craigie*.
In Reformatories and Industrial Schools, 837-9. *Legge*.
And subscriptions; sources of funds; proportion, 10,447-50. *Mackay*.
For special subject, 3312-7. *Mackenzie*.
For military drill asked for, 4945: should be given to pupils over eighteen; exceptional circumstances, 4950-8. *Mackenzie*.
Special, recommended, 10,934. *Seymour*.
Conditions of; 'adequate physical instruction,' 4522-7: under Code; recent, 4535-8. *Shearer*.
Suggested for cadet corps, 9978, § 27. *Smith*.
Offered for instruction in physical exercises and military drill under Continuation Class Code (Art. 38-42), 8: under Code; amounts available for physical training, 40-53: can be earned by Boys' Brigade at continuation classes, 94-108. *Struthers*.
For physical training smaller than other subjects, 2706-20 and 2756-60. *Whitton*.
GYMNASIUM, PUBLIC:
Suggested, 13,245. *Anderson*.
In Dundee; private corporation, 3475-7. *Cameron*.
Very desirable, 9594-7. *Cassells*.
Advocated, 9305-7. *Chapman*.
Inadvisable to provide free, for youths fourteen to eighteen, if erected, should be under Educational authorities, 12,937-42. *Chisholm*.
Not practically valuable, 10,711-2. *Cruden*.
Suggestion of special facilities for Catholics, 13,197-203. *Cunningham*.
Recommended, 7898-9. *Fox*.
Few take advantage of, 13,300-1. *Henderson*.
In Dundee; attendance decreasing, 3617. *Irvine*.
Parishes; suggests that every reading-room should be a reading and recreation room, 9913. *Lee*.
Some supervision or control by Roman Catholics desirable, 13,427-30 and 13,394-9. *Lyons*.
Cost, 5002-5. *Mackenzie*.
Desirable; better to be under the Education Authority, 2460-2: school and volunteer hall preferable, 2490. *Murray*.
Advocated, 11,622. *Peacock*.
Advocated, 4447: of great advantage; volunteers, 4470-3: estimated cost to build, 4528-34: Board anxious to get, 4539-43: benefits, if erected, of, 4556-60. *Shearer*.

GYMNASIUM, PUBLIC—*continued*:

Most desirable, 2367-70 and 2404-7. *Stevenson*.
Preferable to be under Local Authority, 13,771-5. *Thomas*.
Suggested, 5036. *Wallace*.
Advocated, 2625: suggests volunteers' gymnasium could be used when not required by them as a, 2648-55: beneficial to; expense of, 2761-5. *Whitton*.
Management would be better under Local Authority, 7818-22. *Williamson*.

GYMNASTICS:

In Switzerland; continued in adult age, 8969: of America; gymnasium; records kept, 8979-80. *Alexander*.
Under Glasgow School Board, 2800. *Alexander*.
And drill; order of importance, 9727. *Almond*.
Versus drill; free gymnastics, 2191-9. *Armytage*.
Would attract boys fourteen to eighteen, 11,362. *Beattie*.
Taught at Glasgow University, 12,289: and drill; inducements should be offered for; qualifying classes suggested, 12,293A: gymnasium well equipped; built by subscription, 12,340-3. *Bower*.

(France)—Objections; in the primary schools; in country schools; kindergarten; in higher primary schools; in normal schools; in *Lycées*; competitions, 9628: association of; no progress; reasons, 9644-51: perfunctory training; failure; reason, 9707-8: after school age, 9720-22. *Brereton*.

Fixed apparatus for children under fourteen undesirable, 3714-6. *Bridgeman*.

Three sections of, 8579 and 8580: applied; not admitted under fourteen, 8584: special dress used, 8650 and 8654-9. *Bryant*.

Undesirable for girls, 5730-31. *Cantlie*.

Large equipped gymnasium with two special instructors, 12,635: and drill; opportunities for; in regular curriculum, 12,636: free, for boys up to fourteen desirable, 12,636. *Carrie*.

Necessary in every school, 11,292. *Carson*.

Form part of curriculum; and games; benefits, 10,716. *Carter*.

At Glasgow Athenæum; disbanded; reason, 9584-93. *Cassells*.

Applied; physical exercises and military drill desirable, 9368-75. *Chapman*.

None done in London Board Schools, 4018-9: systematic; considered sufficiently attractive to children after school age, 4049-51. *Chesterton*.

Classes in, decreasing; cause, 12,895: gymnasium of Glasgow Athenæum now closed; reason, 12,895 and 12,914-7: classes in a city of great value, 12,895: object of erecting apparatus on playgrounds, 12,907-13. *Chisholm*.

Applied; taught to boys and girls, 8807-12. *Clark*.

Under Aberdeen School Board; grant, 3058: advanced; to children above twelve, 3139-43: seldom given to girls, 3173-6. *Craig*.

Clubs formed by Aberdeen University students; gymnasium to be provided, 10,482: free or Swedish drill; advantageous; applied gymnastics after fourteen in cadet corps desirable, 10,516: personal experience, 10,517: free; preferable for young children; very little danger of harm, 10,602-5. *Cruden*.

With competent instructor; attraction for lads fourteen to eighteen, 13,176. *Cunningham*.

Of great value; desiderata, 8120 and 8131: apparatus in country villages, 8159-60: supervision not necessary, 8173-6. *Dukes*.

No, at Edinburgh University, 12,216. *Gordon*.

Not before thirteen or fourteen; supervision always necessary; medical examination desirable, 6709: should be obligatory; in moderation are good for girls, 6755: and military drill; applicability, 6809-12. *Hay*.

In connection with continuation classes, suggested for those fourteen to eighteen, 13,279: physical exercises as distinct from; advantages, 13,302. *Henderson*.

Classes for, desirable; would be inducements, 12,105 and 12,203-7. *Hunter*.

In Morgan Academy, Dundee, 3656-64. *Irvine*.

Cost of gymnasium; music desirable, 6371-8: drill proposed to be given in gymnasium, 6408-14. *James*.

At continuation classes; objection to compulsion, 6059. *Kerr*.

Very little done by girls, 3796. *Kingston*.

Compulsory graduated system taught; gymnasium attached to school, 12,473. *Laming*.

Free and applied; differences, 744-6: need for more fully-equipped in Scotland, 983-4. *Legge*.

Applied; caretakers necessary, 8564-8. *Lilley*.

Taught to all pupils with exceptions; free, up to fourteen; after fourteen applied, 11,324. *Low*.

Gymnasia should be free to boys over fourteen, 13,373-6. *Lyons*.

Applied and free; time allotted, 12,753-4. *McFarlane*.

Apparatus used for, 3311. *Mackenzie*.

Applied; unsuited for children under twelve, 6984. *Mackenzie*.

Free, taught; no gymnasium, 11622 (h). *Macnee*.

Perth gymnasium, 8686: and physical exercises compared, 8743-6. *Masterson*.

Covered gymnasia suggested, with competent instructors established in Dublin; effect, 8403: open-air; in Dublin; description; instruction, 8453-57. *Meath*.

Of army taught, 11,394, § 4. *PATERSON*.

GYMNASTICS—*continued*:

Free, popular, 11,622. *Peacock*.

(Switzerland)—Voluntary classes for, 14,058. *Pressland*.

Taught, 11,805. *Reid*.

Both free and applied taught, 11,022 (b). *Robertson*.

Only as recreative pleasure, 7367: physical culture more advantageous than, 7476-80: applied; ages for commencing, 7486. *Sandow*.

Applied; advocated for girls over fourteen under supervision, 6905-6. *Savill*.

In Glasgow, boys and girls attend, 1864-7. *Scougal*.

And drill taught, 10,921 (b). *Seymour*.

Applied; essential, 4544-52. *Shearer*.

Compulsory at Aberdeen Grammar School, 3214. *Simpson*.

Compulsory, 9978, § 3: and drill; games must be supplemented by, 10,066-7. *Smith*.

Precautions, 6488. *Smith*.

Apparatus provided, 2286: in St John's Hill Day Industrial School, Edinburgh, 2286: public gymnasium most desirable, 2367-70 and 2404-7. *Stevenson*.

In connection with Board Schools; special hours devoted to training; certain amount of exercise per week essential, 54-8: and drill; length of time to be allotted, 64-71. *Struthers*.

Shoes necessary for, 12,095-9. *Sturrock*.

None; great want of gymnasium, 11,494. *Taylor*.

Free and applied, taught to most classes, 12,840: and drill in school hours, 12,842: are compulsory, 12,877-82. *Temple*.

For girls; special costume required; beneficial effects, 13,667, § c: classes at continuation school for; attended with great success, 13,667, § f. *Thomas*.

In Dunfermline, 1261: after course, great improvement, 1268: applied; fixing desirable ages greatly depends on physique of particular cases, 1279-81: courses and fees at Carnegie Gymnastic Club, Dunfermline, and cost of gymnasium, 1282-5: classes who attend 'physical training' not given, 1358-74. *Tuke*.

Gymnasium; situation of; dimensions, 4565: scheme of raising money for, 4566-8: supervision at, 4598-9. *Turnbull*.

Some system for secondary schools desirable, 642-3: with physical and military drill desirable for those over fourteen at continuation classes, 600-8: in secondary schools, 660-1. *Walker*.

Applied, taught, 5036. *Wallace*.

Desirable for both boys and girls, 7509. *Walsh*.

And drill distinguished, 9020-1: must be taken out of play-hours; reasons, 9025. *Wickham*.

Attraction; proper system, 7716-20: in open air for children under fourteen, under supervision, 7777-85 and 7854-6. *Williamson*.

For children over thirteen, 5524-5. *Wilson*.

HALF-TIMERS:

And children in Board Schools; reasons for progress in former; (1) good teachers; (2) smaller classes; (3) good discipline; (4) bright surroundings; good health of; Inspectors' reports, 13,207-8: ages of pupils; class of children, 13,210-3: exemptions, 13,220-1: and Board School education; comparison, 13,222-3: alternate day compared with half-day system, 13,252. *Anderson*.

Switzerland: time to gymnastics, 14,058. *Pressland*.

Work and education of, 11,915-9: definition of word, 11,920: no home lessons given to, 11,922-4: and ordinary children compared, 11,925-6: no physical exercise to girls, 11,945-8: and full-timers compared, 11,959-63: employment at seventeen or eighteen, 11,966-72: girls; morally and physically, 11,980-9. *Strachan*.

Are pick of scholars, 11,547-50. *Taylor*.

Proportion in Dundee; system, 7742-50: and full timers; relative proficiency; employment of boys and girl described, 7751-65. *Williamson*.

HAMILTON, K. C. B., D. S. O., MAJOR-GENERAL SIR IAN S. M.:

Military Secretary, War Office. Evidence of, 11,708-801.

HAY, M. D., C. M., PROFESSOR M.:

Medical Officer of Health for Aberdeen. Evidence of, 6701-892.

HEALTH:

Of Kilbride and district—healthy and strong, 5918-21. *Bannatyne*.

Of students at Glasgow University, 12,306-8. *Bower*.

Of French children, 9623. *Brereton*.

Insanitary houses; unhealthy houses; illustrations, 13,777: number of various ailments in school children; improvement in poorer children during last twenty-five years; country children superior to town children physically but not mentally, 13,777: good, at industrial schools due to good food and proper clothing, 13,807-8: children should be taught conditions of good, 13,809-14. *Bruce*.

Physical training promotes, 5205-10: need for physical training, 5331-4: accommodation in schools generally inadequate for, 5353-60. *Bruce*.

Children sitting in wet clothes; more physical training will make children better able to resist adverse conditions, 507-12. *Brunton*.

Lectures on, given to Aberdeen University students, 10,482: training properly supervised would promote physical, 10,548-55. *Cruden*.

Of children good at Lamlash School, 5980-5. *Davidson*.

Of students at Edinburgh University; breakdown of some; training quite necessary, 12,236-7 and 12,248-9 and 12,262-71. *Gordon*.

- Index to Evidence.
- HEALTH—continued:**
 Of girls at later school ages, 6709. *Hay*.
 At Huntly, good, 6352-4. *James*.
 Of Poor Law school children, bad; reasons, 6059 and 6167-71. *Kerr*.
 Good, due to training and good food at Mossbank Industrial School, 12,810-11. *McFarlane*.
 And growth of boys in Shetland, 10,277. *Mackay*.
 Very few children with bad, 4895-900. *Moody*.
 Of children; as a rule healthy, 4488-90. *Shearer*.
 Lectures given occasionally to pupils, 9978, § 18. *Smith*.
 Of children; investigation by expert; objections by parents unlikely, 368-72. *Stewart*.
 Of half-timers exceedingly good, 11,900. *Strachan*.
 And feeding of children most important; must be enquiry, 123-33: of Board School children; Education Department not in possession of medical statistics: no medical examination, 139-48. *Struthers*.
 Promoted by properly-regulated physical training, 1269-71. *Tuke*.
- HENDERSON, MR W.:**
 Chairman, Technical Institute Committee, Dundee, etc. Evidence of, 13,278-331.
- HIGHER-CLASS SCHOOLS:**
 English and Scotch compared, 9792-8. *Almond*.
 Training now sufficient in, 12,520-1. *Laming*.
 And elementary schools; comparison, 1767-76: Definition of term 'higher class'; classification, 1777-84. *Scougal*.
- HIGHER GRADE SCHOOLS:**
 Definition of term, 3709-12. *Bridgeman*.
 And Board Schools; comparison; social condition, 6151-3. *Kerr*.
 Lack of opportunities for physical training, 1790-2. *Scougal*.
 Training in; eclectic selection of exercise; gymnastics for girls; special costume, 13,667, § c. *Thomas*.
- HINDRANCES:**
 Want of time, apparatus, and qualified teachers, 6548. *Cheyne*.
 Time, 6619. *Elphinstone*.
 To good physical condition in earliest years; home influences; school influences, 6059. *Kerr*.
- HISTORICAL REFERENCES:**
 Under Glasgow School Board, 2930-4. *Alexander*.
 To physical training in South of England, 2226. *Burrows*.
 To physical training, 245. *Stewart*.
 To drill, 8. *Struthers*.
 To physical exercises in Perthshire schools, 565-8. *Walker*.
- HOOLIGANISM:**
 Not much of, in Aberdeen, 3148-9. *Craigien*.
 And loafers; Sir Robert Anderson's scheme almost impracticable, 12,925-7. *Chisholm*.
 And loafers; practicable scheme, 12,627-9. *Deverell*.
 Effect of games on, 8286-88. *Dukes*.
 Effect of systematised physical training, 6747-8. *Hay*.
 Rowdism, etc., prevented by proper physical training, 5896. *Hunter*.
 Product of present education; remedies, 6059. *Kerr*.
 Suggests compulsory physical training, 8490: and continuation classes; compulsory attendance desirable, 8506-8: physical training advocated, 8536. *Lilley*.
 Unknown in Perthshire, 10,763-67. *Macpherson*.
 Boxing classes advocated to decrease, 8403: rough lads; compulsion not necessary; attraction of drill, 'etc., sufficient, 8434-5. *Meath*.
 Continuation classes attract lads where physical training is given, 2451. *Murray*.
 None in Edinburgh, 10,097-9. *Ross*.
 Recent extension of school age should help a great deal to lessen, 1742-4. *Scougal*.
 Extent of, in Scotland, 8: absence of, in continental countries; result of compulsory military discipline, 154-8. *Struthers*.
 In Edinburgh, not much, 2665. *Whitton*.
- HUNTER, MR H. F.:**
 Teacher, All Saints' Episcopal School, Edinburgh. Evidence of, 12,105-212.
- HUNTER, MISS K.:**
 Superintendent, Chapelton Reformatory for Girls, Bearsden, Glasgow. Evidence of, 13,599-665.
- HUNTER, MR W.:**
 Chairman, Rothesay (Burgh) School Board. Evidence of, 5812-900.
- HUNTLY PUBLIC SCHOOL:**
 Number of pupils; cost, 6367-70: physical drill; pressure of other subjects, 6382-7: School Board's attitude, 6415-9: classes; overcrowding and understaffing, 6455-7: infants receive more training than higher classes, 6461-3. *James*.
- HYGIENE:**
 And domestic economy; classes, 8660-1. *Bryant*.
 Teachers' absence of knowledge in, 6059 and 6080-1: useful subject for continuation classes, 6215-9. *Kerr*.
- INCURABLE CHILDREN:**
 Instruction of, 2813-20: number in Glasgow schools of, 2826. *Alexander*.
 Weak and deformed children, teaching of, 3161-5. *Craigien*.
 And cripples; beneficial after disease has become quiescent, 6762-7. *Hay*.
 Proportion of delicate and deformed, 3032-4. *Powell*.
- INDUSTRIAL SCHOOLS:**
 Good health due to good food and proper clothing, 13,807-8. *Bruce*.
 Gratifying improvement in children due to physical training, 12,895. *Chisholm*.
 And reformatories—existing provisions for boys; gymnasia, 730: description of physical training of girls at, 737: census taken in 1901, shows (1) no physical degeneration in towns during last twenty years; (2) effect of systematic physical training, 740-3: ages of boys in, 840-2: percentage of lads going into army and navy, 891-9. *Legge*.
 Mossbank; ages, education, and class of boys, 12,744-9: Mossbank; industries:—farm, garden, bakery, etc., 12,759-65: Mossbank Industrial Boys' Home; details, 12,766; Maryhill, for girls; drill taught; new drill hall being erected; results good, 12,767-71 and 12,783-5: Day, drawbacks, 12,772-6: Mossbank; at least 90 per cent. turn out satisfactorily, 12,788: *Empress* and Mossbank boys; differences, 12,804-8: Mossbank and Day; classes of children compared; results of physical education compared, 12,815-23; Mossbank Boys' Home; no evening classes, but free gymnastics taken, 12,828-32: cripples not admitted; boys respectful and well-mannered, 12,833-6. *McFarlane*.
 Training in; of great value, 10,078: commended, 10,189-92. *Ross*.
 Gymnastics in St John's Hill Day Industrial School at Edinburgh; improvement in boys, 2286. *Stevenson*.
 Training in, 13,667, § d, and 13,673-9. *Thomas*.
- INFANTS:**
 Ages; special education; physical instruction in London schools, 6141-7: strain on nerves of, 6196-200. *Kerr*.
- INSPECTION:**
 Periodically in Sweden, 8921. *Alexander*.
 By ordinary inspector, 2937-9. *Alexander*.
 Necessary; training in all schools; movement growing, 9821-5. *Almond*.
 Is made by H. M. Inspector of Schools as a class; approval of drill, 4329-8. *Andrew*.
 Of teachers' classes; opinion of work done, 2028: necessary at teachers' classes, 2030-1: at first frequently made by expert, 2051-5. *Armstrong*.
 Of exercises, 4335-9. *Bain*.
 By expert desirable, 5386-90. *Bruce*.
 Not by experts, 2263-4. *Burrows*.
 Regularly would be advantageous, 12,636. *Carrie*.
 By a special teacher desirable, 11,314. *Carson*.
 By officers of army and volunteers suggested, 9255 and 9301: by expert desirable; ordinary inspector unfit to make, 9339-43. *Chapman*.
 When and how often classes are examined, 5638-97. *Cowan*.
 Ordinary school inspectors capable for; difficulty, 10,673-5. *Cruden*.
 By expert preferable, 12,565-8. *Deverell*.
 By expert not desirable; by specialised teacher preferred, 11,142-4 and 11,172-3 and 11,228-30. *Gillanders*.
 By H. M. Inspector; results satisfactory, 12,114-6. *Hunter*.
 By ordinary H. M. Inspector, 6327-30. *James*.
 Authority; reports, 3819-27: varies in different districts, 3898-9. *Kingston*.
 By qualified inspector, and detailed report desired, 12,540-53. *Laming*.
 By trained inspector, 796-9. *Legge*.
 Expert inspector beneficial for, 10,410-11. *Mackay*.
 By experts suggested, 11,673. *Macnee*.
 Of schools at present more thorough and valuable than formerly, 2601-6. *Murray*.
 Of food stuffs suggested, 8299. *Napier*.
 Of students teaching drill, 11,416-7. *Paterson*.
 By H. M. Inspector, 5426-7. *Roberts*.
 School inspector should accompany trained expert, 1807. *Scougal*.
 By expert suggested, 10,934 and 10,960-1 and 10,996. *Seymour*.
 Special for physical training suggested, 9378. *Sharples*.
 School inspectors by experience qualified to inspect, 450-3. *Stewart*.
 At Dundee Physical Training College; by Captain Armytage and witness, 12,019: by Captain Armytage; comments on, 12,058-64. *Sturrock*.
 Official, desirable, 12,388-94. *Temple*.
 Method of, 13,667 § (g); and examination by chief instructor, 13,668-70. *Thomas*.
 By qualified instructors, fortnightly, 1254 (c): experience should assist H. M. Inspectors, 1254. *Tuke*.
 By expert, 4565. *Turnbull*.
 No difficulty experienced, 576-9. *Walker*.
 Important to have expert, 5143-7. *Wallace*.
- INSPECTORS:**
 Of London School Board; powers of, 3671-81. *Bridgeman*.
 Paying attention to physical exercises makes teachers enthusiastic, 5634-7. *Cowan*.
 Should be qualified in drill, 1221-32. *Lobban*.
 Responsibility of, 1927-49. *Scougal*.
 Competency of; to examine drill and physical exercises; desirable to let specialist occasionally assist inspector, 118-22. *Struthers*.
 Experience should assist H. M. inspectors, 1254: must be properly trained, 1407-8: know nothing of subject because not experts, 1453-55. *Tuke*.
- Index to Evidence.

INSTRUCTION:

Course of, 11,278. *Alexander*.
 Is chiefly based on Chesterton system at Glasgow, 2800 :
 by army men, 2901-6. *Alexander*.
 Expert assistance desirable, 4782-7. *Andrew*.
 At York Training College; good course of, 11,377-82.
Beattie.
 Of girls, 5242-3. *Bruce*.
 Course of, 11,292. *Carson*.
 Object of, 3934: of children after school age; systematic
 gymnastics considered sufficiently attractive; continuation
 classes, 4049-55. *Chesterton*.
 Annual sum spent by Board on drill, etc., 3058. *Craig*.
 Of teachers; course, 3796. *Kingston*.
 Lack of properly-qualified teachers; large proportion un-
 trained, 1076. *Lobban*.
 Given by army sergeant to those from ten to twenty-two,
 4968-70. *Mackenzie*.
 Popular with teachers and pupils, 4154 : should be supervised
 by experts periodically, 4201-2. *Malloch*.
 Course, to feeble-minded children, of; physical exercises
 and manual occupations; beneficial effect, 13,893. *Mout-
 eagle*.
 Scheme of; at Sciennes Public School, Edinburgh; in-
 structors, 2451. *Murray*.
 Inspectors generally capable, but supervision by War Office
 suggested, 1593-5: should be by ordinary staff; com-
 pulsory officers with military training might be employed
 to teach drill, 1648-54: must be up to date, 1690-7.
Robertson.
 Should be in hands of ordinary teaching staff, 1717.
Seougal.
 Course of, 9475: number of scholars receiving, 9477-80: by
 army men, 9545-50. *Smith*.
 Amount and kind, 2286: proportion of boys and girls
 receiving instruction under Edinburgh School Board,
 2287 and 2343-7: should be a difference between boys and
 girls, 2313-4: not ordinary teachers but special teachers
 should give, 2325-6: by ordinary teachers, supervised by
 expert, 2387-9. *Stevenson*.
 By a drill sergeant at Twyford School, Winchester, 9089-92.
Wickham.

INSTRUCTORS:
 In Leeds, ordinary teachers, 8997: class teachers favoured as;
 reasons, 9003-4. *Alexander*.
 Ordinary teachers plus expert, 2800: should be the ordinary
 staff, 2858. *Alexander*.
 Properly trained, preferred to class teachers, 13,242: if drill
 increased, should be taught by trained, 13,273-4. *Ander-
 son*.
 In schools should be ordinary teachers properly trained,
 2039-41. *Armstrong*.
 Of gymnastics; qualifications, 4353. *Bain*.
 Special, not necessary, 5384-90. *Bruce*.
 Military men not required, 2226. *Burrows*.
 Better class desired, 12,636 and 12,675: experts; no ordinary
 teachers except lowest class, 12,645-8: ordinary teachers
 preferred if properly qualified, 12,721-3. *Carrie*.
 In gymnastics by drill sergeant, 10,716. *Carter*.
 Male and female qualified, 9284-5: ordinary staff desirable,
 and careful inspection, 9286-93 and 9316-7: ordinary staff
 should be properly trained: inspection by expert, 9332-43.
Chapman.
 Special, desirable, 6560-3. *Cheyne*.
 Ordinary teacher properly supervised practicable, 8828-37:
 ordinary staff; civilians unable to give word of command,
 8857-61. *Clark*.
 Class teachers with supervision are, 11,237. *Craig*.
 Ordinary teacher plus trained expert necessary; to be trained
 at proper college; experts necessary, 3058. *Craig*.
 Male and female equally good, 10,649-50. *Cruden*.
 Ordinary teachers if competent could be; if not qualified,
 12,563-4. *Deverell*.
 Ordinary staff desirable; advantages, 8347. *Elliot*.
 Expert, advantageous, 6665-72. *Elphinstone*.
 Ordinary school staff should be, 11,124. *Gillanders*.
 Females desirable; reasons, 6739-43. *Hay*.
 Class teacher is, 12,105: military men are best, 12,105.
Hunter.
 Ordinary teachers; qualifications; how taught, 5815-23.
Hunter.
 Ordinary staff with expert's assistance, 3617. *Irvine*.
 Ordinary staff preferable, 6325-6: ordinary staff preferable;
 expert not desirable, 6426-34 and 6468-76. *James*.
 In clubs; qualifications vary, 8540-8. *Lilley*.
 Of drill are regular permanent staff at Alloway, 1076:
 should be class teachers with advice of expert, 1095-8: of
 military drill should be brought into touch with education
 system, 1196-9. *Lobban*.
 Member of school staff, 11,324. *Low*.
 Class teachers preferred, 13,332. *Lyons*.
 Experts recommended for older teachers, 10,289-91. *Mackay*.
 Ordinary staff plus visiting experts, 3311: of gymnastics and
 drill instructors; a distinction, 3360-3. *Mackenzie*.
 Army ideals for children undesirable, 7138-41. *Mackenzie*.
 Army sergeant instructs those from ten to twenty-two,
 4968-70. *Mackenzie*.
 At elementary Roman Catholic schools, ordinary teachers,
 13,116. *Mackintosh*.
 Special; advantages, 8757-63. *Masterson*.
 Should be teachers supervised by expert, 13,543-6. *Muir*.

INSTRUCTORS—continued:

Desirable to have women, 10,210-3. *Murray*.
 At Sciennes Public School, Edinburgh, 2451: professional
 desirable, 2452-5. *Murray*.
 Trained on Aldershot system; difficulty, 8326-7: skilled,
 and training colleges; difficulty, 8328-9: competent,
 suggestion, 8332: supply of; difficulty, 8340-1.
Napier.
 Preferably school teachers, 10,887. *Porter*.
 Switzerland—Class teachers; qualifications, 14,058: eminent
 gymnastic, 14,058. *Pressland*.
 Qualifications of, 11,864-6. *Reid*.
 Ex-army sergeant; discipline, 5459-68. *Roberts*.
 Difficulties; certificates of efficiency should be granted,
 1556: of drill, should teach modern style with an
 authorised drill book, 1614-8. *Robertson*.
 Trained natives of Sweden and Norway; experts, 11,022 (b)
 and 11,106-9: salaries of lady, 11,120-2. *Robertson*.
 Army men preferred; females not desirable, 7404-15: reason
 why army men are desired as, 7427-32 and 7483-5.
Sandoiv.
 Naval, qualifications of, 4262-6. *Scott*.
 Ordinary teacher should be, 1717; ordinary teacher should
 be, if properly trained, 1814-9. *Seougal*.
 Ordinary teachers properly trained and supervised desirable
 as, 10,958-9: difference between instructors of army drill
 and gymnastics, 10,992 and 11,000-6. *Seymour*.
 Of physical training could also supervise the gymnasium,
 4554. *Shearer*.
 Ordinary staff preferred; are experts, 3214. *Simpson*.
 All teachers should hold certificates of proficiency, 12,364, § x.
Spenser.
 In Edinburgh, professional, 2348-50. *Stevenson*.
 Of drill; teachers preferable to outside experts, 406-14.
Stewart.
 Sergeant-major is drill, 11,900. *Strachan*.
 Of drill, etc.; professional, desirable, 18: for country dis-
 tricts; School Boards have to provide, 136-9: better
 qualified to certify regarding students' ability in Normal
 Schools than outside expert, 222. *Struthers*.
 Special, recommended, 6285-88. *Sutor*.
 Class teachers are, 11,494: disadvantage; want of proper,
 11,497: teachers not properly qualified; necessary to have
 expert, 11,507. *Taylor*.
 Should hold diplomas from some physical training body,
 1254: well trained expert preferable to either ordinary
 teachers or old soldiers; length of training necessary,
 1336-52: to teach teachers and pupils, 1409-12: teachers
 should be taught by qualified instructors: no outsider except
 inspector, 1436-52. *Tuke*.
 Ordinary teachers plus experts, 4745-7. *Turnbull*.
 Qualified, necessary, 13,858-9. *Turner*.
 Army sergeant and class teachers, 5036: appointing of,
 5079-82. *Wallace*.
 Ordinary class teacher plus experts desirable, 7509. *Walsh*.
 Special, 5518-20: ordinary staff supervised by expert desir-
 able, 5541-7. *Wilson*.

INTELLECT AND BODY:
 Tallest races not the highest intellectually, 13,823-5.
Turner.

INVERNESS HIGH SCHOOL:
 Existing opportunities, 5036: duties of medical officer at,
 5083-9. *Wallace*.

IRVINE, Mr W. B.:
 Rector of Morgan Academy, Dundee. Evidence of, 3608-64.

JAMES, Mr D. M. J.:
 Headmaster, Huntly Public School. Evidence of, 6307-481.

KENNETHMONT PUBLIC SCHOOL:
 System described; use of opportunities; hindrances;
 suggestions, 6548: home lessons generally few, 6600-2.
Cheyne.

KERR, M.A., M.D., Mr J.:
 Medical Officer to the London School Board. Evidence of,
 6054-235.

KILBRIDE SCHOOL BOARD:
 Opportunities, 5902. *Bannatyne*.
 Development in Lamash; health of children good; Cruden's
 system taught, 5978-89: improvements; cost, 6000-9.
Davidson.

KILMARNOCK SCHOOL BOARD:
 Amount of physical training given; cadet corps, 4334:
 favourable to more training, 4347-51: classes held, 4353:
 careers of boys and girls, 4412-5. *Bain*.

KING EDWARD PUBLIC SCHOOL:
 Description of exercises; military drill; Cruden's system;
 hindrances; continuation classes, 6619: time-table sub-
 jects; Dick Bequest School, 6652-7. *Elphinstone*.

KINGSTON, Miss E.:
 Organising Teacher of Physical Education for Girls and
 Infants to the London School Board. Evidence of, 3791-
 931.

KINGUSSIE SCHOOL BOARD:
 Progressive system described; suggestions; continuation
 classes, 5421: number of lads eighteen and upwards at
 Kingussie School; careers, 5445-58. *Roberts*.
 Opportunities limited; no continuation classes; suggestions,
 4945-67: pupils after fourteen, 4975-7. *Mackenzie*.

LADS' DRILL ASSOCIATION:
 Objects of; benefits of physical exercises and military drill:
 advocates training of every lad up to eighteen, 8403.
Meath.

Very advantageous, 5566-70 and 5584-5. *Wilson.*
- MANUAL INSTRUCTION OR HANDICRAFTS :**
Part of school work ; examined ; value of, 9727. *Almond.*
Carpentry, drawing and painting, 10,716. *Carter.*
Forms part of regular work, 11,324. *Lowe.*
Carpentry taught, 11,805. *Reid.*
Very desirable and advantageous, 6538-41. *Smith.*
Description of work of boys, 9978 § 3. *Smith.*
Part of curriculum of Glasgow High School, 12,364, § iii. *Spenser.*
Workshops ; benefits and value, 7509. *Walsh.*
Benefits, 9023. *Wickham.*
Want of systematic, 7823-6. *Williamson.*
- MARCHING :**
For infants, good ; suggestion, 5069. *Kerr.*
Exercises could be done with proper supervision, 9378. *Sharple.*
Approved, 7578 : advantages, 7594-9. *Walsh.*
- MASTERSON, MR J. :**
Representative of Perth (Burgh) School Board. Evidence of, 8680-793.
- MEATH, THE RT. HON. THE EARL OF :**
President and Chairman of the Lads' Drill Association. Evidence of, 8403-487.
- MEDICAL INSPECTION :**
None at present ; thinks Board would favour, 2844-6 : advisable and practicable, 2953-8. *Alvander.*
Ledger and school register kept ; measurements of great importance, 9727 and 9815-6. *Almond.*
Of pupils ; desirable, 13,238-9 : advisable, 13,271. *Anderson.*
None, 4340-6. *Bain.*
Unnecessary, 11,362 : desirable, 11,363-5. *Beattie.*
Advocated, 12,294. *Bower.*
French schools are subject to ; primary schools ; secondary schools, 9628 and 9693. *Breerton.*
Teachers are expected to exclude weakly children from training, 3682-3 : of teachers, 3733-5. *Bridgeman.*
Unnecessary, 13,794-801 : general, desirable, 13,815-20. *Bruce.*
What it should include, 5274-87 : officer ; suggested duties and post ; advisable if physical training compulsory, 5298-311 : periodically ; teachers unable to do, 5397-400. *Bruce.*
Advisable ; injuries caused by physical training, 487-96. *Brunton.*
Object and result, 8579 : exemptions ; percentage ; special courses ; medical control ; record book ; description : defects ; flat-foot and eyesight ; influence of town life, 8581-93 : defective eyesight ; causes, 8604-9 : of pupils ; when inspected, 8669-73. *Bryan.*
Desirable ; none at present, 3460-74. *Cameron.*
None at George Watson's College, Edinburgh, 12,636 : desirable, 12,740-2. *Carrie.*
Favoured, 11,315-6. *Carson.*
No regular, 10,716 : beneficial, 10,756-9. *Carter.*
Desirable ; reason, 9257-60 : desirable while children are undergoing training, 9315. *Chapman.*
Most essential, 4000. *Chesterton.*
None in England, 1048-57. *Colwill.*
- Index to Evidence.

MEDICAL INSPECTION—*continued*:

Desirable, 11,237 and 11,271. *Craig*.
No regular medical officer; doctor occasionally called in, 3152-60. *Craig*.
Would be of immense advantage to students, as also would compulsory training, 10,488: of students of training colleges advantageous, 10,503: desirable in elementary schools, 10,676. *Cruden*.
Unnecessary, 13,166 and 13,186-90. *Cunningham*.
Of school premises as well as pupils, suggestions, 8111: physical education and, 8112. *Dukes*.
Advisable, 11,124. *Gillanders*.
Most desirable, 6709: necessary; suggested scheme, 6721-5: of school premises, 6791-7: duty of inspection on Public Health Authority, 6863-72: of scholars under educational authority, 6879-88. *Hay*.
Desirable, especially with regard to eyesight and hearing, 12,105. *Hunter*.
Teachers not capable to undertake, 6405-6. *James*.
Very necessary, 6059. *Kerr*.
For teachers; must all pass medical officer, 3900-3. *Kingston*.
Not necessary but advisable, 12,489-91: desirable in Board schools, 12,525-31. *Laming*.
Desirable, 8509-13. *Lilley*.
Of buildings more effectual than that of children, 1154-5. *Lobban*.
Necessary, 11,324 and 11,325-8. *Low*.
Advisable, 13,332 and 13,345-8. *Lysons*.
Of school children, advocated; certificates should be granted; benefits, 9848 and 9849: should be by medical expert, 9857-9: recommends physical exercise with, 9874-5. *Mackay*.
Beneficial, 10,277 and 10,330-1: possible, 10,439. *Mackay*.
Physical exercises of cripples, etc. (Glasgow), controlled by, 13,975: physical exercises for cripples under, 14,015-9: of all schools advocated, 14,026-8. *Mackeith*.
Necessary generally, 3408-10. *Mackenzie*.
Of scholars necessary; reasons; no violent exercise without; of schools and spraying with disinfectants desirable, 6984: duty of medical officers of Local Government Board regarding school premises, 7000-9 and 7144-50: necessary, 7045-7: Public Health Act, 1897: school clause enforced, 7152-5. *Mackenzie*.
Of training college students annually, 13,116 and 13,117-23: none throughout Roman Catholic elementary schools, but desirable, 13,129-34. *Mackintosh*.
Of students on entering and leaving college, also on being enrolled as Volunteers, 11,671. *Macnee*.
None in Perth Board schools, 8694-6: desirable, 8753-6. *Masterson*.
Feeble-mindedness of children determined by, 13,926. *Monteagle*.
Not desirable; reason, 13,487-8: doctor appointed by School Board, 13,505-10. *Muir*.
Desirable; medical officer of health competent, 10,218-22: doctors; male and female compared, 10,241-3. *Murray*.
Periodically desirable, 2613-4. *Murray*.
More stringent than formerly, 11,394, § 13. *Paterson*.
Desirable, 11,622: of school premises desirable, 11,632. *Peacock*.
None exists, 2987-94. *Powell*.
In Switzerland; of children and buildings; by Central School Board; cost, 14,058. *Pressland*.
None at school, 11,048-53. *Robertson*.
By resident officer; new boys take medical certificates showing their weakness (if any), 11,824-5 and 11,868-9. *Reid*.
Desirable before starting a course of exercises, 7357. *Sandow*.
Desirable for all schools, 6913-7: of school and scholars favoured, 6962-4. *Savill*.
Desirable, 1724-5: should be periodical, and records kept, 1751-3: of school premises, useful, 1856: of teachers; unnecessary, 1919-20: periodically very valuable, 1989-93: further defects might be revealed (Code, Art. 20), 2001-8. *Scougal*.
No systematic; at George Watson's College, Edinburgh, 10,946. *Scymour*.
Necessary; dangers of over-strain, 9410-7. *Sharples*.
Most desirable, 6488 and 6500. *Smith*.
New boys examined; but not again unless specially necessary, 9978, §§ 22 and 23: no regular examination of all boys; very important for Board School children, 10,012-26. *Smith*.
Of teachers, not of children, at Govan; of children advocated, 9494-97. *Smith*.
By school staff twice yearly, 12,364, § xviii.: desirable for heart, 12,451-3. *Spenser*.
Of schools and scholars most desirable, 2426-32. *Stevenson*.
Of children necessary if physical training extended, 459-463. *Stewart*.
No periodical, 11,900. *Strachan*.
Not held by Department, 139-148. *Struthers*.
Desirable, 12,009: of teachers necessary and desirable, 12,024. *Sturrock*.
None; but desirable, 11,503 and 11,617-9. *Taylor*.
None at Glasgow Academy, 12,859. *Temple*.
By witness of those attending gymnasium at Dunfermline, 1264-7: occasionally desirable, 1425-28. *Tuke*.
Unnecessary; reasons: of school premises by sanitary inspector beneficial, 4761-7. *Turnbull*.
Advisable, 13,892. *Turner*.

MEDICAL INSPECTION—*continued*:

Necessary, 585-590: of schools and children necessary, 614-8: statistics; practicable and advisable, 614-6. *Walker*.
Medical officer reports monthly, 5036 and 5061-6: duties of officer, 5083-9: of pupil teachers, 5090-4: of children general; considered sufficient; might be objections if more minute: brain growth, 5096-111. *Wallace*.
Cards used, 7304-5: of schools; desirable, 7332. *Warner*.
MENTAL CAPACITY:
And physical excellence, 13,827. *Turner*.
MENTAL OVERSTRAIN:
Girls; competition; effect of physical training, 8626-33. *Bryant*.
Of university students (Edinburgh); training necessary, 12,236-7, and 12,248-9 and 12,262-71: want of time, 12,280-84. *Gordon*.
And examinations, curriculum, 6829-36. *Hay*.
Tendency of boys to; lack of physical development: honours subjects reduced, 3279-92. *Simpson*.
Of children, 11,585-8. *Taylor*.
MENTAL PRESSURE:
Increasing; more demands, 11,335-57. *Low*.
MENTAL STUDY:
System in Sweden prejudicial to, 8924 and 8947-50. *Alexander*.
Relation between physical exercises and, 9727 and 9742-4. *Almond*.
Necessity of supervision; effect of physical training on brain work, 8640-4. *Bryant*.
Home lessons unavoidable, 12,737-9. *Currie*.
Intervals given for exercises during, 9607-8. *Cassells*.
And physical training; proportion of time, 11,350-6. *Low*.
And physical training; experience, 11,459-64. *Paterson*.
Relation to physical training, proportion of time, 11,814-5 and 11,849-50. *Reid*.
And physical training; relation, 11,034. *Robertson*.
And physical training; relation: training essential for poorer classes, 10,935. *Scymour*.
And physical exercises; results, 10,028. *Smith*.
And physical training; relation; proportion of time, 12,364, § xi. *Spenser*.
And physical training; relation, 12,033. *Sturrock*.
And physical training; relation; proportion of time, 12,849-50. *Temple*.
And physical training; relation, 9029-34. *Wickham*.
MENTAL TRAINING:
And physical; both must be regulated, 5211: and physical; object, 5226-30: and physical; time for, 5263-6. *Bruce*.
And physical; objects, 6033-5. *Davidson*.
And physical; opinion, 5840-2. *Hunter*.
Physical training plus, 4185-91. *Malloch*.
And physical training; differences in objects, 1963-66. *Scougal*.
And physical; proper balance, 6744-5. *Hay*.
Plus physical training essential, 6348-51. *James*.
Physical training will not affect, those wholly deficient, although highly intellectual considered complete exceptions, 1510-20. *Tuke*.
And physical training; latter an essential part of education, but must not dominate, 13,832. *Turner*.
MERCHISTON CASTLE SCHOOL, EDINBURGH:
Training sufficiently organised, 9978, §§ 20 and 21; Rugby system contrasted; better at former, 10,061-3. *Smith*.
MILITARY DRILL OR TRAINING:
And muscular drill preferred, 8944-5: and physical training; contrast; unsuitable for children, 8988-8992. *Alexander*.
Dread of War Office interference and regulation, 9727: soldiering at school undesirable, 9731-2: influence of games in promoting military spirit, 9734: objections to tight uniform, 9789-91: approved; apprehension of War Office, 9804-7. *Almond*.
Glasgow School Board's resolution of May 1902 and, 2835-8 and 2909-24: and physical training at Glasgow; objections to; resolution: opportunities developed by Board, 2961-7: disapproved of by Board, 2968-70. *Alexander*.
Of Boys' Brigade; objection exceptional, 4803-6. *Andrew*.
Introduction might not be popular; therefore desirable to call it 'physical training,' 2200. *Armytage*.
Advantage, 9103: militarism; objections of no value: old soldiers; advantages, 9109-15: all boys up to fourteen; after fourteen, 9119-28: soldiers and civilian employment, 9137-42. *Arrol*.
No objections on score of 'militarism,' 4363-70. *Bain*.
Parents interested, 5943-5. *Bannatyne*.
And physical exercises combined make best system, 2252-6. *Burrows*.
Included in training; more beneficial than severe gymnastics, 3345: some objection in Dundee, 3478-90; no objections by parents to, 3522-4: included in physical exercises; differences between physical training and, 3543-52: and physical exercises; distinction, 3570-6. *Cameron*.
For country children, 5718: approved as meaning physical training: deprecates children walking in step, 5734-9: should be compulsory at universities, 5740: or training; should be compulsory to lads above seventeen or eighteen, 5781-4. *Canthie*.
Commended, 12,636. *Currie*.
Included in physical exercises; advantages, 9566: desires; during school age, elementary; reasons; no objections to

MILITARY DRILL OR TRAINING—*continued* :

militarism ; reason ; as employer of labour advocates, 9575-83 ; and physical exercises together desirable, 9598-9606. *Cassells*.

With gymnastics and physical exercises beneficial, 9368-75. *Chapman*.

System includes, not a military system, 3934 : should form basis of all training adopted in elementary schools, 3934 : and physical exercises ; definition of, 3947-52 : objections to, 3953-56 : should be taught all boys after fourteen, 4025-30 : should be called 'school' drill ; very desirable for senior boys of school age, 4099-113. *Chesterton*.

Given at continuation classes ; size of class, 8855-6 : former objection, 8862-9. *Clark*.

No objections to, 11,255 and 11,261-3. *Craig*.

'Physical training' more generally acceptable than, 3189-91. *Craigen*.

At Aberdeen University to Volunteer company, 10,482 : in national system advocated, 10,517 ; plus free and applied exercises desirable at continuation classes, 10,643-4. *Cruden*.

Including physical exercises given to Boys' Brigade, 12,967A : beneficial effects on Boys' Brigade, 12,986-8 : 'militarism' not fostered, 13,009 : and physical training ; capable of great extension, 13,012-6. *Cuthbertson*.

Example of best form for children, 8031. *Don*.

Valuable exercise, 8121 : time for, 8139. *Dukes*.

Military spirit undesirable, 7910 and 7928-37 : militarism ; Board's resolution ; trend of public opinion, 7938-46 and 7977-80 : for schools ; elementary part approved, 7959-67. *Dyer*.

Militarism ; cadet corps and possible objections, 8377-9 : and physical training ; importance, 8384-8 : included under 'physical exercises,' 8391-3. *Elliot*.

To senior boys ; advanced juniors, 6619. *Elphinstone*.

System in army, 7863 B. *Fox*.

Given to senior boys ; time ; no difficulty anticipated in teaching of, 11,124. *Gillanders*.

And physical exercises ; beneficial effects, 11,708 : new system (semi-military) would remove popular prejudices against army, 11,710 : for boys up to eighteen ; must be progressive course, 11,738-9. *Hamilton*.

For boys of fourteen upwards desirable, 6709 : should be obligatory ; and gymnastics ; applicability, 6809-12 : compulsory for all lads above certain age advocated, 6855-8. *Hay*.

Advocated, 13,303-5. *Henderson*.

Taught to boys, 12105 and 12208-11. *Hunter*.

No objections, 6355-9. *James*.

At continuation classes ; objection to compulsion, 6059. *Kerr*.

Plus healthy recreation suggested, 9879 : advocated for discipline, 9927-9. *Lee*.

No objections thereto by parents ; effects, 1128-33 : objections to word have practically disappeared, 1207. *Lobban*.

Not desirable ; except very elementary movements, 11,324. *Lowe*.

Feelings of parents of boys, 13,366-9 : 'militarism,' possible objections, 13,400-1. *Lyons*.

Half an hour daily given to, 12,750-2 : by old army man, 12,789-95. *McFarlane*.

Taught, 10,429-32 : parents would not object if sons not sent away, 10,478-9. *Mackay*.

Essential ; grant desired, 4945 : and gymnastic exercises ; cost, 4999-5001. *Mackenzie*.

Recommends ordinary teachers be trained to teach, 6984 : not favoured for children, 7068-72 : effects of, 7081-2. *Mackenzie*.

And physical exercise should form essential part of school work, and of continuation classes, 13,116. *Mackintosh*.

Compulsory, favoured : benefits, 10,760. *Macpherson*.

Popular objections : trades unionists' objections ; suggests instruction by an army man, 8722-30 and 8765 : desirable at continuation classes, 8766-7 : and physical training ; amount of time, 8769-72 : as against physical drill, 8774. *Masterson*.

Plus physical exercises favoured, 8404-8 : effect in civilian pursuits, 8446-8 : militarism ; popular objections due to ignorance, 8449-51. *Meath*.

No objections by parents at Dobbie's Loan School, 13,568-73. *Muir*.

Should be included in physical instruction ; difficulties and suggestions, 2451 : no objections heard, 2472-4 : should form a more prominent part, 2527-9 : in country school more need of ; more physical exercises in town, 2566-75 : graded course, 2576-8. *Murray*.

Objections : probable effects, 11,394, § 15 : desirable to omit word 'military,' 11,422-4. *Paterson*.

Advocated, 11,622. *Peacock*.

Effect on manners and conduct ; parental neglect, 10,836 ; after twelve ; under twelve training by ordinary school staff ; reason ; value, 10,836. *Porter*.

Objections to, 3005-10. *Powell*.

No objection in Switzerland by parents ; reason, 14,095-8. *Pressland*.

Necessary, 11,818 : organised by State to those after fourteen suggested, 11,828. *Reid*.

No objections, 5474-7 ; boys trained with idea of joining Volunteers, 5491-2. *Roberts*.

And physical drill ; text book should be officially issued, 1556 ; should be increased, 1644-7. *Robertson*.

MILITARY DRILL OR TRAINING—*continued* :

Undesirable for girls' schools, 11,042. *Robertson*.

For children ; must be preparation, 7440-1 ; training of Germany ; effect, 7487-8. *Sandow*.

Objections, 1794-6 : and physical training compared, 1971-80. *Scougal*.

In peace ; advantages, 9178 : universal, advocated, 9217-9. *Seely*.

Essential, 10,941 : militarism ; compulsory attendance at continuation classes probably unpopular on account of objections to, 10,970-83 : rudiments essential for every system, 11,997-8. *Seymour*.

Taken by all boys in the playgrounds at Manchester schools, 9379 : compulsion advocated for lads up to eighteen, 9397-405. *Sharples*.

In all schools under Ardrossan School Board, 4457-9. *Shearer*.

Should form part of curriculum of every school ; advantages, 9978, § 16 : reasons for preserving name, 9978, § 16A : including physical exercises, should be made compulsory in all schools, 9978, § 27 : in Merchiston Castle, 9993-4 : very important for Board Schools, 10,001-2 : term should be kept ; no objections by parents, 10,029-39. *Smith*.

Given at displays ; toy rifles of no advantage, 9529-44 : no objections to, 9555-9. *Smith*.

New system commenced, 12,364, § v : militarism and cadet corps, 12,364, § viii : advocated in all schools, 12,364, § xv : should be supplemented by games, 12,373 : parents' objections, 12,379-83 ; necessary as comprising best kinds of physical exercise, 12,401-8. *Spenser*.

Given in Edinburgh schools by janitors ; School Board anxious to encourage, 2286. *Stevenson*.

Versus physical exercises, 245 : and physical drill ; advantages, 421-31. *Stewart*.

And physical exercises taught ; advocated in all schools, 11,900 : no objections, 11,976-8. *Strachan*.

Witness' experience of, 12,100-3. *Sturrock*.

Grants offered under the Continuation Class Code, Art. 38-42 : no complaints from School Boards, 32-35. *Struthers*.

Objections not very great ; could be introduced into continuation classes, 6261-64. *Sutor*.

Should be part of curriculum of all schools, 12,853. *Temple*.

Given in Alloway schools, 4600-4 : no objections to, 4609-10. *Turnbull*.

Should not be overdone ; reason, 13,863 : elements should be learned by all, 13,884. *Turner*.

Definition, 5036 : teachers instruct in, 5141-2 : the army ; objections heard ; cause, 5174-9 : no objections recently ; army as a career, very good, 5056-60. *Wallace*.

Expectation of, in day schools ; signs ; in continuation classes and elsewhere ; signs ; for boys fourteen to eighteen, tendency : objections and reasons ; games and military drill ; objections for strong boys ; conclusions of witness ; evidence of militarism and Christian qualities ; comparison, 7509 : meaning of, 7536-41 : no objection to certain forms, 7566-8 : objections explained ; militarism and school training, distinction ; soldiers and Christians ; weapons of destruction and accidents, 7606-40 : and school drill ; resemblance, 7655-6. *Walsh*.

Effects, 7259 : and free exercises should be combined, 7260-1 : useful to boys over fourteen, 7316-31. *Warner*.

Included in physical training, 2641-4. *Whitton*.

Very advantageous, 9054-7. *Wickham*.

Benefits, 5527-9 and 5640 : disapproval of, 5655-6. *Wilson*.

MILITARY SERVICE :

Of France, and Germany, 9700-3. *Brereton*.

Reason for men joining, 8295, § (6) : inducement to men joining, 8342-5. *Napier*.

Preparation for, in Switzerland, 14,058. *Pressland*.

MILITARY STAFF :

Insufficient to instruct civilians, 8330 : insufficient to instruct teachers and supervise work, 8345. *Napier*.

MODEL COURSE (by Board of Education) :

Useful as a uniform foundation of the work, 2226. *Burrows*.

Based on army system ; compulsion desirable, 8347 : military drill and physical exercise ; proper order, 8363-7 : description of, 8394-6. *Elliot*.

Taught, 13,477-9. *Muir*.

Of army ; compilation, 7901-2. *Fox*.

MONTFAGLE, Miss L. :

Teacher of feeble-minded children, Oatlands Public School, Glasgow. Evidence of, 13,893-966.

MOODY, Mr A. :

Headmaster, St Quivox Public School, Ayrshire. Evidence of, 4848-941.

MORALITY :

Influences of school and home life, 6983 : or manners, 7172-7. *Mackenzie*.

MORTALITY :

Boys and girls ; girls' health at later school ages ; fatal diseases grouped ; ages five to ten, and ten to fifteen ; difference between England and Scotland ; rate in Aberdeen ; causes ; comparison of town and country children's mortality rates, 6709 : of children ; recent improvement ; causes, 6710-3 and 6768-76 : decrease partly due to more physical exercises ; differences between England and Scotland ; differences between boys and girls, 6768-90 ; rate in England and Scotland, 6850-1. *Hay*.

Of English and Scottish children ; difficulty, 7178-81. *Mackenzie*.

Headmaster, Sciennes Public School, Edinburgh, and Vice-President of the Educational Institute of Scotland. Evidence of, 2450-620.
- MUSCLES :**
Of body and brain ; relation, 7368-70. *Sandow.*
- MUSCULAR SENSES :**
In tension and movement, 7253-5. *Warner.*
- MUSICAL DRILL :**
And military drill preferred, 8944-5 : advantages, 8967-8 : after first two or three lessons, 9002. *Alexander.*
Taught in central hall ; beneficial effect, 13,225-32. *Anderson.*
When exercises can be done fairly perfect, 4778-81. *Andrew.*
In all schools except one, 5950-2. *Bannatyne.*
Benefits of, 11,362. *Beattie.*
Most drill done to music in Portsmouth : parents teach children to play instruments, 2258-62. *Burrows.*
Advantages, 10491 and 10506 and 10510 : essential for children ; good results ; greater interest, 10,572-9 and 10,640 : given when exercises are more or less perfect without, 10,688-90 : precautions, 10,709-10. *Cruden.*
Desirable for girls, 9281-2. *Chapman.*
Should not be given before exercises can be performed properly, 3957 and 4031-4. *Chesterton.*
Taught according to Cruden's system, 11,124. *Gillanders.*
Beneficial and useful at nearly all ages, 6709 : desirable for young children, 6731A. *Hay.*
Taught, 12,128-32. *Hunter.*
Tried ; now complete systematic course of physical training, with baths ; effects, 13,599. *Hunter.*
Advocated, 6059, and 6190-5 : for young children, beneficial to nerves, 6113-5. *Kerr.*
Undesirable, 3883-4. *Kingston.*
Very attractive ; beneficial, 13,385-7. *Lyons.*
Not so monotonous to children as ordinary drill, 3811. *Mackenzie.*
For children up to twelve, 6984 : system of teaching, 7156-9. *Mackenzie.*
At Dowanhill Training College, Glasgow, 13,116. *Mackintosh.*
Given ; enjoyed by children, 2981-6. *Powell.*
Taught to elementary classes, 11,044 : given children five to eight years, 11081-86. *Robertson.*
Disapproved, 7397-403. *Sandow.*
Advantageous up to twelve, 10,955-7 : when exercises can be done perfectly, for younger children, 11,010-2. *Seymour.*
Not desirable, 10,042-3. *Smith.*
Confined to younger children, 262-5. *Stewart.*
Taught in Fraserburgh School, 6241. *Sutor.*
Taught, 11,511. *Taylor.*
In Leeds Board Schools ; pianos, 13,667, § b : when exercises can be done perfectly without, 13,739-42. *Thomas.*
No objection if sound training previously given out, 1323. *Tuke.*
Undesirable at first, 4589-96. *Turnbull.*
In addition to exercises and drill, 5036. *Wallace.*
Importance of, 2621 : more enjoyable ; exercises given at first without music, 2752-5 : great importance of ; reasons, 2797-8. *Whitton.*
Attraction, 7713-4. *Williamson.*
Occasionally, disadvantages, 5634. *Wilson.*
- NAPIER, C.M.G., COL. THE HON. J. S. :**
Inspector of Military Gymnasias. Evidence of, 8295-345.
- NATIONAL SERVICE LEAGUE :**
Aims, 9182. *Scely.*
- NAUTICAL EXERCISES :**
At Reformatory and Industrial Schools, 736. *Legge.*
Instruction in, 35. *Struthers.*
- NAVAL DRILL :**
Superior to military drill ; reason, 7082-6. *Mackenzie.*
- NAVAL RESERVE :**
Advocated, 10,277 and 10,318-20 : earlier age of entry recommended, 10,429 and 10,460-1 : recommended for Shetlanders ; Scouts for Highlanders, 10,476-7. *Mackay.*
- NERVES :**
Nervous tension of system in Sweden, 8924A. *Alexander.*
Strain on infants', 6196-200. *Kerr.*
Nerve power and vision, 9848. *Mackay.*
Nervous strain on children often great during drill ; proof, 6983 and 6990-1 and 7106. *Mackenzie.*
Nerve signs ; reference to, 7243. *Warner.*
- NORMAL SCHOOLS :**
Instructor better qualified to certify regarding students' ability than outside expert, 122. *Struthers.*
- NORTH LONDON COLLEGIATE SCHOOL FOR GIRLS :**
Accommodation ; physical training described ; medical inspection, objects, and result ; organised games ; swimming, gymnastics, 8579 : physical training for all except those physically unfit, 8597-602 : high-class and State-aided scholars ; comparisons ; mental strain ; effect of physical training, 8624-33. *Bryant.*
- NURTURE :**
Important and difficult question, 6983 and 7057-61 : advantages, 7102-5. *Mackenzie.*
- OBJECTIONS :**
Of headmasters of Glasgow School Board, 2847-57. *Alexander.*
To military drill, 3478-90 : explanation of terms should remove, 3568-9. *Cameron.*
To military drill, 3953-6 : to measurements, 4130-2. *Chesterton.*
From parents about girls ; none, 3817-8. *Kingston.*
In Dundee ; of no consequence, 4192-3 and 4206-10. *Malloch.*
None by parents, 2995-9 : to military drill, 3005-10. *Powell.*
By weakly children, 4281-91 : by School Board to military drill, 4322-9. *Scott.*
None to physical exercises and drill by parents, 1787-89 and 1793 : to military drill, 1794-6. *Scougal.*
By parents to instruction of girls, 2286, 2322-4 and 2416-21 : by young men and women ; some attraction should be offered, 2327-30. *Stevenson.*
To military training explained, 7606-8. *Walsh.*
- OBJECTS :**
Of national physical training, 8994. *Alexander.*
Development of lungs and circulation by proper exercises most important, 480. *Brunton.*
True aims of physical training, 9255. *Chapman.*
And effect, 7863. *Fox.*
Of physical culture, 7336-42. *Sandow.*
Of training, 10,944. *Seymour.*
To improve national physique, 13,667. *Thomas.*
Of physical exercise, 13,834-6. *Turner.*
Of physical training, 7509 and 7581-3. *Walsh.*
Develop muscles and brain, 7225-7. *Warner.*
- OCHILTREE PUBLIC SCHOOL :**
Description ; exercises given, 4770-80 : free exercises, 4810-1 : accommodation, 4822-8 : report on ; cause of good report, 4839-41.
- ORGANISATION :**
Sufficient at present, 11,046. *Robertson.*
- OUTDOOR EXERCISES :**
And indoor exercises, merits respectively, 9727. *Almond.*
Most beneficial, 12,636. *Corrie.*
'Outdoor physical exercises' equivalent to 'military drill' ; objections to latter, 3127-34. *Craigie.*
And indoor compared ; former desirable when possible ; difficulty, 10,612-7. *Cruden.*
Desirable, 8126. *Dukes.*
Open spaces for, should be provided, 11,718-20. *Hamilton.*
Preferable, 6709. *Hay.*
Preferable, 11,324. *Lowe.*
Performed ; more beneficial, 13,332 : intermittent ; covered playground, 13,341-4. *Lyons.*
Advocated ; reasons, 6984 and 7029-30. *Mackenzie.*
Advocated, 11,673. *Macnee.*
Free gymnastics for children four to twelve, 8295, § 8. *Napier.*
Superior, 11,817. *Reid.*
And indoor ; gymnasium ; practical advantages, 11,041. *Robertson.*
And indoor exercises ; former favoured, 10,940. *Seymour.*
Advantages, 9978, § 15. *Smith.*
Advocated, 9508. *Smith.*
Advantages of, obvious, 12,364, § xiv. *Spenser.*
Advantageous, 8. *Struthers.*
Preferable, 12,035. *Sturrock.*
Preferable, 12,843 and 12,851-2. *Temple.*
Gymnastics ; for children under fourteen under supervision, 7777-85 and 7854-56. *Williamson.*
- OVER-EXERCISE :**
Of girls ; care necessary, 9255. *Chapman.*
Prevented by organisation, 8186-9. *Dukes.*
Systematic physical exercise, and bodily fatigue ; comparison, 13,460-4. *Lyons.*
- PARENTS' OPINIONS :**
And influence, 3209-11. *Craigie.*
- PARKS, PUBLIC :**
Gymnasias, etc., provided by Glasgow Corporation, 12,895. *Chisholm.*
Gymnasia should be free to boys over fourteen in, 13,373-6 : games played in, 13,425-6. *Lyons.*
And open space in Kirriemuir ; games, 11,654-5. *Peacock.*
More inducements for children to play there desirable, 10,083-95 : no appliances or inducements, 10,120-3 : want of attraction, 10,136-40. *Ross.*
- PATERSON, B.A., LL.D., MR. M. :**
Rector, United Free Church Training College, Edinburgh. Evidence of, 11,393-483.

- PERTH, SHARP'S INSTITUTION :**
Gymnasium ; course, 8686. *Masterson.*
- PHYSICAL CULTURE :**
And physical training ; former preferred ; benefits, 13,614-33. *Hunter.*
Definition and aims, 7336-53 : more advantageous than gymnastics, 7476-80. *Sandow.*
- Index to Evidence.**

PHYSICAL EDUCATION :

Theoretical education the proper and essential supplement to physical training, 9727. *Almond*.
In France, 9628. *Brereton*.
Plus physical training, 13,778-81: children should be taught conditions of good health, 13,809-14. *Bruce*.
Scotch schools far behind in subject, 1166-7. *Lobban*.
Taught, 11,669. *Maenee*.
Taught at Dobbie's Loan School, 13,501. *Muir*.
Taught, 11,394, § 11. *Paterson*.
'Turnschule,' 14,058. *Pressland*.
Taught, 11,820. *Reid*.
Taught, 11,044. *Robertson*.
Lectures on physiology desirable, 10,943. *Seymour*.
Health lectures, 9978, § 18. *Smith*.
No course of, 12,364, § xvii. *Spenser*.
None given, 12,855. *Temple*.

PHYSICAL EXERCISES :

Compulsory; results: duty; amusement, 9727. *Almond*.
Desirable to make them attractive, 12,332. *Bower*.
Most required for those between five and fourteen, 520-2: should be filled in with school work, 523-7: useful in later years, but more important in early years; both sexes require them, 528-536: most simple are most beneficial, 540-50. *Brunton*.
In England and Wales; history, development, and existing conditions, 989-90. *Colvill*.
Suitable for girls, 10,223-4. *Murray*.
Plus drill, 2469-70: in town, necessary to have more, 2574-5. *Murray*.
Different forms distinguished; value to children; merits, outdoors and indoors; of girls, 6488. *Smith*.
Versus military drill, 245: and drill; both desirable, 314-322: and military drill; advantages, 421-31. *Stewart*.
In Perthshire schools; history, 565-68: in Aberdeenshire; Cruden's system; in town and country schools; introduced in Code, 569-75. *Walker*.
Forms approved, 7600-5. *Walsh*.
In London national schools, 7306-15. *Warner*.
For children up to fourteen desirable, 2625. *Whitton*.

PHYSIQUE :

General result on, of Swedish population, 8946. *Alexander*.
Of recruits; if bad, probably due to want of feeding and proper training, 2065-75: of recruits; course at dépôt improves health and, 2168-88. *Armytage*.
Of University students poor, 12,295. *Bower*.
Of upper classes tending to improve, 551-9. *Brunton*.
Improvement in, 8635-9. *Bryant*.
Of town and country children very little difference, 10,516: defects in, 10,657-61: national system of training; expect great improvement on whole of young population, 10,698-703. *Cruden*.
Of army; improvement, 8071-5: generally improved; environment, 8076-7. *Don*.
National, Germany, 11,712. *Hamilton*.
Town and country children; comparison in, 906-12. *Legge*.
Of children fairly good in Ayrshire, 1134. *Lobban*.
And level of intelligence in north of Scotland lower now than formerly; due to emigration of the best; remedy; development of the Lovat Scouts idea, 10,304-10. *Mackay*.
And saintliness; moral capacity, 7114-7118. *Mackenzie*.
Of students; formerly bigger, 11,677. *Maenee*.
Town and country population compared; condition of city life; example: recruits; rejections, 8403. *Meath*.
Latterly a depreciation, 11,434-41. *Paterson*.
Of children in Lewis, 1603-5. *Robertson*.
Of slum children very low; difficult to enforce disciplinary training, 10,078. *Ross*.
Physical training essential for true development of national; object of training, 10,944. *Seymour*.
Object of physical instruction to improve national, 13,667: improvement of, 13,691-2. *Thomas*.
Physical training, if properly regulated, promotes general health; most beneficial for physique of nation, 1269-70. *Tuke*.
And mental development, 13,826. *Turner*.

PLAYGROUND(S) :

Covered sheds required in, 2810-2: special halls, 2908. *Alexander*.
Want of a shed in; parks used as; games, 4426-31. *Bain*.
Covered sheds very desirable, 5231-33 and 5329-30. *Bruce*.
Covered, easily accessible; necessary for large towns, 5723-5. *Cantlie*.
Locality of, 12,636. *Carrie*.
Exercises given in; beneficial, 11,298-300. *Carson*.
Covered space desirable, 6564-8. *Cheyne*.
Erection of gymnastic apparatus on; object; caretaker provided; very few accidents, 12,907-13 and 12,956-66. *Chisholm*.
Suggests apparatus in, 11,237. *Craig*.
Covered, advantageous, 10,692-3. *Cruden*.
With covered shed, 13,164-5. *Cunningham*.
Central, desirable; common to several schools, 8128-30: expense of central, 8196-202. *Dukes*.
Locality of, Covered-in; absence of, regretted, 11,124. *Gillanders*.
Covered sheds favoured, 6817-24. *Hay*.
Drill in, 12,133-5: no opportunities for games in, 12,177-9. *Hunter*.
Badly situated; playing field rented by Rothesay Academy for games, 5852-63. *Hunter*.

PLAYGROUND(S)—continued :

On roofs of schools, 3799-801. *Kingston*.
Expedient to have central, 1089-94; inadequate, 1204-6. *Lobban*.
Extent and locality, 11,324. *Lowie*.
Unsuitable for games, 13,332. *Lyons*.
At all schools should be enlarged, 10,277 and 10,321-3: covered desirable; expense, 10,333-5. *Mackay*.
Want of space in, 3328-35 and 3349-55: in Aberdeen, public parks can be used for games if permission is obtained, 3417-20. *Mackenzie*.
Larger, common to several schools, desirable, 7031-39. *Mackenzie*.
And gymnasium insufficient, 11,678-81. *Maenee*.
Covered gymnasias suggested; with competent teachers, 8403: caretakers necessary; Saturdays, 8403: qualified caretakers necessary, 8461-5: educational authority could support, 8474-80. *Meath*.
Covered shed would be advantageous, 4854-5. *Moody*.
With covered-in shed, 13,482. *Muir*.
Adequate for drill, 11,622. *Peacock*.
Not large enough for games, 3012-6. *Powell*.
Area and locality, 11,805. *Reid*.
Recreation room better than; for Edinburgh Ladies' College, 11,102-4. *Robertson*.
Quite feasible for Boards to secure a recreation ground common to several schools, 1759-65: should be made fit for children to play games in where ground is rough, 1850-1. *Seougal*.
Covered, desirable; reason, 10,966. *Seymour*.
Inadequate; and open spaces desirable; suggestion, 9378. *Sharples*.
Covered sheds in all, 4493-5. *Shearer*.
Not suitable for games at Glasgow High School, 12,425-32. *Spenser*.
Generally large enough in country, seldom so in towns 291-5: no instance of common one provided for several schools; no objection unless by ratepayers, 359-61. *Stewart*.
Described, 11,900: boys and girls mixed in, 11,952. *Straehan*.
At present unsuitable; suggestions for improvement, 63: building regulations; no objection to School Boards acquiring large field for several schools, 223-36. *Struthers*.
Ample room for games, 6301-6. *Sutor*.
Insufficient for games, 11,500: covered, required, 11,528-30. *Taylor*.
Field used by boys for games, 4629-31. *Turnbull*.
Garden or field suggested, 7509. *Walsh*.
Unsuitable for football, hockey, etc.; suggests opening public parks as, 2656. *Whitton*.

PLAYING FIELD(S) :

Common to all schools has never been suggested to Glasgow School Board, 2868-79. *Alexander*.
Described, 9727. *Almond*.
At present in danger, 12,289 and 12,293A. *Bower*.
Area and locality, 10,716. *Carter*.
Covered, advantageous, 10,692-3. *Cruden*.
Necessary in every school, 8129-30. *Dukes*.
Desirable, 12,141-56. *Hunter*.
Rented by Rothesay Academy for games, 5852-63. *Hunter*.
Extent, 12,473. *Laming*.
Description of, at George Watson's College, Edinburgh, 10,921 (a). *Seymour*.
No, at Glasgow High School; fields hired, 12,364, § iii. *Spenser*.
Probable objections by ratepayers to field for general use of several schools, 2300-9. *Stevenson*.
Centre for group of schools desirable, 11,569-70. *Taylor*.
Locality and extent of, 12,840. *Temple*.

POPULATION :

Town increasing; country districts depopulated; injurious effects of town life; remedy; State provision for physical training; National system advocated, 10,514. *Cruden*.
Town and country; percentage, 8403. *Meath*.
Of Scotland; chiefly urban, 159-73. *Struthers*.

PORTER, MR. A. :

Chief Constable of Roxburghshire and Berwickshire. Evidence of, 10,835-917.

PORTREE PUBLIC SCHOOL :

'Centre' school; ages of pupils; feeding; remarkable development; clothing, etc., great improvement, 11,124. *Gillanders*.

PORTSMOUTH :

In, success chiefly due to personal effort, 2233. *Burrows*.

POWELL, MR. J. :

Headmaster, Newlands Public School, Glasgow. Evidence of, 2971-3055.

PRESSLAND, M. A., MR. A. J. :

Assistant Master, Edinburgh Academy. Evidence of, 14,056-139.

PUBERTY :

And maternity; physical training of girls at periods of; opinion, 6735-8. *Hay*.
Great care necessary for girls after; aids to proper supervision, 10,208: suggestive precautions, 10,214: girls' illness; suggested communication between parent and teacher each month, 10,258-66. *Murray*.
Physical training during period of, 6902-3. *Savill*.

PUBLIC GARDENS ASSOCIATION :

Efforts, 8403. *Meath*.

Index to
Evidence.

PUPIL TEACHERS:

Importance of physical training, 6059: physical condition bad; exercises recommended, 6123-30. *Kerr*.
Work not altogether satisfactory; time given to physical exercises, 3797. *Kingston*.
Medically examined, 5090-4. *Wallace*.

RECREATION:

Should be properly occupied and school hours shortened, 480. *Brunton*.

RECRUITS:

For army; physique of; if bad, probably due to want of feeding and proper training, 2065-75: course at dépôt, improves health and physique; food, 2168-88: food in relation to physical instruction, 2189-90. *Army'age*.

For militia; effect of training, defects—feet, teeth, eyesight, spinal curvature, 8031. *Don*.

Defects in; proportion due to deficient feeding and lack of systematic exercise; remedies; compulsory training; gymnasia or drill halls, 7863 (*f*) (*g*) (*h*) and (*i*): improvement in health of, 7863 (*l*). *Fox*.

Transformed: due to good food, regular life, and physical training, 11,708 and 11,782. *Hamilton*.

Percentage of rejections, 8403 and 8440. *Meath*.

Eighty per cent. who have failed in civilian life; military training a boon to them; physical and moral defects, 8295, § 6: characters not recorded, 8299, § 11: physically unfit; discharged, 8311-2. *Napier*.

Constabulary, training of, 10,836. *Porter*.

Of army; lowering of standard; degeneration, 6897-8 and 6926-32. *Savill*.

REFORMATORIES:

Chapelton, for girls, Bearsden; education; conditions; parents; ages; musical drill tried; now complete systematic course of physical training, with baths: effects, 13,599: feeble-minded girls; method of dealing with, 13,634-43: girls' conditions of life, 13,644-8: parents' control, 13,649-50: manners improved; influence of parents and old associates; plenty of employment for girls, 13,659-64. *Hunter*.

And Industrial Schools; existing provisions for boys; gymnasia, 730: description of physical training of girls at, 737: census taken in 1901, shows (1) no physical degeneration in towns during last twenty years; (2) effect of systematic physical training, 740-3: ages of boys in, 840-2: percentage of lads going into army and navy, 891-9. *Legge*.

REID, M.A., F.G.S., Mr A. S.:

Assistant Master, Trinity College, Glenalmond. Evidence of, 11,802-99.

REPORT:

On physical training from headmasters of Glasgow School Board, with suggestions, 2800: by headmasters; a few against physical training, because lack of sufficient opportunities and ill-feeding of children, 2847-57. *Alexander*.

RESPIRATION:

Fixing attention on lessons affects; diseases; result, 5254. *Bruce*.

Breathing exercises advocated, 7951-4. *Dyer*.

Breathing exercises; not of great importance, 6207-8. *Kerr*.

Bands valuable in developing chests, 12,756-8 and 12,777-82. *McFarlane*.

Breathing exercises described, 7324-6 and 7460-8. *Sandow*.

Breathing exercises very valuable, 9406-9. *Sharples*.

RESULTS:

Of physical exercises—duty; amusement; sound morality produced; of experience, 9727. *Almond*.

Of training given, 10,492: good from boys and girls working together, 10,597-600. *Cruden*.

Good, of training, 11,124. *Gillanders*.

Of systematic training on unpromising material, 80 per cent. turn out well, 13,608-13 and 13,657-8. *Hunter*.

Disciplinary, good; much can be done under bad conditions with a system properly applied, 861-6. *Legge*.

Beneficial; if all-round, beneficial, 11,324. *Love*.

Good; good discipline in school, 12,799-803. *McFarlane*.

Physical, moral, and intellectual, 13,116. *Mackintosh*.

Good, 11,665. *Macnee*.

Improved carriage; slouching habits corrected; alertness; mind and body improvements; moral, 11,394, § 7. *Paterson*.

Of examination in Swiss schools; complete system; conclusions, 14,112-6. *Pressland*.

Physical and mental development; manners, 11,810. *Reid*.

Effects; moral, physical, and mental, 11,027-9. *Robertson*.

Physical, mental and moral advantages, 9978, §§ 8 and 9: advantages of an all-round training, 9978, § 19. *Smith*.

Lungs; circulation; digestion and excretory organs; muscular effort, 12,364, § vi. *Spencer*.

Referred to in H.M. Inspector's reports, 19-23. *Struthers*.

Good, of training, 12,845. *Temple*.

RIFLE CLUB(S):

Plus drill recommended, 9808-9. *Almond*.

Suitable for boys, 13,245. *Anderson*.

Of university; small membership, 12,235. *Bower*.

Would be attraction to boys between fourteen and eighteen, 11,237: benefits; certificates of proficiency desirable to exempt boys from some of recruit drill when joining volunteers, 11,266-70. *Craig*.

Desirable, 11,622 and 11,638. *Pcacock*.

In districts where no volunteers, 9173: age of membership; fees, 9189-94: effect on volunteering, 9215-6. *Seely*.

RIFLE SHOOTING:

And drill, 9727: advocates certificates of proficiency in drill and; might count for volunteer and militia work, 9771-2. *Almond*.

For lads of seventeen upwards—adults, 4814-8. *Andrew*.

At movable objects preferable, 11,333-7. *Beattie*.

In France; schools, 9623 and 9712-3. *Brevelton*.

Desirable for boys to learn, 9570-4: must be in connection with volunteers, 9622-7. *Cassells*.

Importance of, cadet corps desirable, 8798-9: Morris-tube range desirable, 8818-22. *Clark*.

For boys between fourteen and seventeen, not before, 10,506: personal experience, 10,517. *Cruden*.

Outwith sphere of Brigade, 13,073-6. *Cuthbertson*.

Advocated; advantages, 11,124: Morris tubes advocated, 11,153-9. *Gillanders*.

Recommended; reasons, 6221-2. *Kerr*.

With Morris tube fitted in gymnasium: advocates encouragement and organisation of, 12,473: no difficulty in finding time for; Morris tube worked in gymnasium, 12,510-9. *Laming*.

Should be taught, 11,673. *Macnee*.

Should be taught; substitute for conscription, 8428. *Meath*.

By students of Training College, 11,394, § 4. *Paterson*.

Taught to members of cadet corps; competitions, 11,805 and 11,837-40. *Reid*.

Desirable, 1967-70. *Scougal*.

Moral and physical advantages, and as a source of national strength, 9177: personal experiences, 9178: essentials; possibility; difficulty of ranges; practical application; rifle clubs; open-air range desirable; reason; cost; length of ranges, 9178-80: covered ranges and military authorities, 9184-7: Code bears on, 9199-204: long ranges; experience; judging distances important; fixed and moving targets; value for war training, 9220-35: should be learned by boys; rifle practice an attraction, 9236-45. *Seely*.

With Morris tube, 12,364, § iii. *Spencer*.

By members of volunteer corps at St Andrews University, 12,003. *Sturrock*.

ROBERTS, Mr E.:

Headmaster, Kingussie Public School. Evidence of, 5420-512.

ROBERTSON, Mr J. L.:

H.M. Inspector of Schools (Scotland). Evidence of, 1550-1705.

ROPERTSON, Mr R.:

Headmaster, Edinburgh Ladies' College. Evidence of, 11,014-122.

ROMAN CATHOLIC SCHOOLS:

Physical training generally poor, 1058-61. *Colvill*.

St Mary's, Duntocher; food and clothing; necessitous cases supplied by managers; Chesterton's system taught; children healthy; medical examination unnecessary, 13,162-6. *Cunningham*.

Elementary; training given by ordinary staff, 13,116; female teachers for boys and girls at; no medical inspection throughout; but desirable, 13,124-34: no Catholic day

Industrial School in Glasgow, 13,160-1. *Mackintosh*.

Drill a favourite subject, and adequately done, 205-18. *Struthers*.

ROSS, Mr R.:

Chief Constable, Edinburgh (City). Evidence of, 10,068-205.

ROTHERSAY SCHOOL BOARD:

Physical training described; ordinary teachers instruct, 5814-6: no classes under Art. 91 (*d*) of Code, 5829-39:

annual exhibition; much interest, 5846-7. *Hunter*.

ROWING:

Advocated, 12,895. *Chisholm*.

Personal experience, 10,517. *Cruden*.

RUNNING:

Best for children, 934-5. *Legge*.

Drill practised, 11,394, § 4. *Paterson*.

SANDOW, Mr E.:

Professor of Physical Culture. Evidence of, 7333-507.

SAVILL, M.D., Mr T. D.:

Physician to the Hospital for Diseases of the Nervous System, and the Hospital for Diseases of the Skin, London, etc.

Evidence of, 6394-964.

SCHOOL BOARDS:

Invalid schools under management of; wider power necessary, 13,976-92: suggested co-operation with; cripples, 14,021

Macketh.

Should have larger and more summary powers to compel attendance, 13,116 and 13,135-8. *Mackintosh*.

Should take interest in feeding question, 11,475-81. *Paterson*.

Exactions by, 11,551-3: time demanded by, 11,564-7. *Taylor*.

SCHOOL HOURS:

Should be shortened, and hours of recreation properly occupied, 480: four hours of real work sufficient; desirable to reduce to three-quarters of an hour and fill it in

with physical exercises, 523-7. *Brunton*.

SCHOOL PREMISES:

Generally unsuitable for drill, 1076: fixed furniture generally adopted; central halls; not encouraged, 1188-92.

Lobban.

Some not adapted for physical training; principally in towns, 1882-90. *Scougal*.

Evidence.

- SCOTT, Mr W. :**
Headmaster, Troon Portland Public School, Dundonald
Evidence of, 4235-329.
- SCOUGAL, Mr A. E. :**
H.M. Inspector of Schools (Scotland). Evidence of,
1706-2017.
- SECONDARY SCHOOLS :**
Games; arrangements, 8143-4. *Dukes.*
And universities; physical training beneficial; need of
organisation, 6709. *Hay.*
And universities; physical training not essential, 6983 and
6985: compulsory training deprecated, 6992. *Mackenzie.*
Sufficient training, demanded by public opinion, 11,077-80.
Robertson.
Sufficient training, 10,945. *Seymour.*
- SHEELY, D.S.O., M.P., MAJOR J. E. B. :**
Representative of the National Service League. Evidence of,
9170-249.
- SELF-DEFENCE :**
Advantages of boxing, 9727 and 9740-1. *Almond.*
Boxing would probably be attractive to university students,
12,337-8. *Bower.*
Boxing; advantages derived small, 10,506 and 10,691. *Cruden.*
Advantageous from sixteen to eighteen when under control,
8123. *Dukes.*
Fencing and boxing, 6709. *Hay.*
In reformatory and industrial schools, 737. *Legge.*
Disadvantageous; reasons, 6984. *Mackenzie.*
Boxing and fencing; organised, 11,805. *Reid.*
Beneficial; reasons, 6488. *Smith.*
- SENSORY TRAINING :**
Recommended, 6984. *Mackenzie.*
- SEWING :**
In schools of little value, 6212. *Kerr.*
- SEYMOUR, Mr H. RIPPON :**
Gymnastic Instructor, George Watson's College, Edinburgh.
Evidence of, 10,918-11,013.
- SHARPLES, Mr G. :**
Headmaster, Waterloo Road Board School, Manchester.
Evidence of, 9376-470.
- SHEARER, Mr C. J. :**
Chairman, Ardrossan School Board. Evidence of, 4446-564.
- SHETLAND, SKERRIES SCHOOL :**
Description of district; climate; size of school buildings;
population; number of scholars; varying population;
intermarriage; still a healthy population; doctor; hours
of light and darkness, 10,336-403. *Mackay.*
- SIMPSON, Mr H. F. M. :**
Rector of Aberdeen Grammar School. Evidence of, 3212-305.
- SINGING :**
Should not be done with exercises; without exercises bene-
ficial, 4084-6. *Chesterton.*
Given to infants, 5671. *Cowan.*
- SMITH, F.R.C.S., Mr E. N. :**
Senior Surgeon to the City Orthopædic Hospital, London.
Evidence of, 6452-541.
- SMITH, Mr G. :**
Headmaster, Merchiston Castle School, Edinburgh. Evidence
of, 9977-10,067.
- SMITH, B.D., THE REV. J. :**
Chairman, Govan (Parish) School Board. Evidence of,
9471-561.
- SMOKING :**
Of cigarettes among boys; dangers and suggested remedies,
9846. *Almond.*
Of tobacco in the Boys' Brigade; influence of officers over
boys not absolute; not allowed in uniform, 13,032-5.
Cuthbertson.
Of tobacco among children; evils, 13,332 and 13,418-24.
Lyons.
Of cigarettes by boys; legislation necessary, 10,773-7 and
10,826-8. *Macpherson.*
Of tobacco injurious to physical training, 8320-3. *Napier.*
Of cigarettes by boys; should be repressed, 10,836: of
cigarettes by boys; parental control desirable, 10,847-9:
of cigarettes by boys; must be left to moral suasion,
10,909. *Porter.*
- SPENSER, LL.D., Mr H. J. :**
Rector, Glasgow High School. Evidence of, 12,363-471.
- SPIROMETRY :**
Suggests examination of children and youths, 6488. *Smith.*
- STATISTICS :**
Records of measurements kept in American gymnasia,
8981 and 8937. *Alexander.*
Measurements of great importance; ledger and school
registers kept, 9727: lately an increase of chest girth;
causes, 9733-4. *Almond.*
Absence in French schools of, 9628. *Brereton.*
Measurements; anthropometric observations, 8590-3. *Bryant.*
Measurements would be valuable, 12,656-8. *Carrie.*
School register kept, 10,716. *Carter.*
Measurements; objections, 4111-32: result of, 4141-52.
Chesterton.
Register desirable, 10,505. *Cruden.*
Measurements of children; above average, 5990: measure-
ments of boys given, 6036-52. *Davidson.*
Measurements taken periodically, 12,559 and 12,625.
Deverell.
Measurements before 1879 loosely taken, 8031: measure-
ments; averages; chest girth; amount of increase, etc.;
method of measuring chest, 8038-52. *Don.*
- STATISTICS—continued :**
Tables; artisan class; public school boys; naval and military
cadets; university students, 8099. *Dukes.*
Measurements of Scottish children; no records kept in Aber-
deen, 6709. *Hay.*
Measurements; standards, 6059: medical man necessary,
6086-7. *Kerr.*
School register of physical development desirable, 12,473 and
12,501-4. *Laming.*
Desirable; benefits, 11,325-8. *Lowie.*
Measurements; standards, 6983. *Mackenzie.*
Measurements, 8299, § 11: explanation of table of recruits,
8334-37. *Napier.*
Measurements; height and weight register kept, 11,826-7:
measurements; importance of register, 11,891-7. *Reid.*
No register of measurements kept, 11,054. *Robertson.*
Measurements made of witness' pupils; advantages, 10,946.
Seymour.
Measurements; standards, 6488. *Smith.*
School register of measurements kept, 9978, § 24. *Smith.*
No measurements of children taken, 272-8. *Stewart.*
Of continuation classes, 8: of schools are wanted, not general
impressions, 19-23: Education Department not in posses-
sion of mental statistics, 139-48. *Struthers.*
Register of measurements kept of certain classes, 12,860-1.
Temple.
Of children at Board Schools practicable and advisable,
644-7. *Walker.*
London, children below average development, 7222. *Warner.*
- STEVENSON, Miss F. C. :**
Chairman of Edinburgh School Board. Evidence of,
2283-449.
- STEWART, LL.D., Mr T. A. :**
H.M. Chief Inspector of Schools (Scotland). Evidence of,
244-470.
- STRACHAN, Mr A. :**
Headmaster, Dens Works (Half-time) School, Dundee.
Evidence of, 11,900-12,000.
- STREET TRADING :**
Common forms; conducive to crime, 10,078: class; com-
pulsion necessary, 10,141-8: remedies proposed, 10,173-
86. *Ross.*
- STRUTHERS, M.A., Mr J. :**
Principal Assistant-Secretary of the Scotch Education
Department. Evidence of, 1-243.
- STURROCK, Mr A. :**
Gymnastic Instructor, St Andrews University, and Dundee
Gymnasium. Evidence of, 12,001-103.
- SUGGESTIONS :**
System recommended, 8993: physical efficiency test desir-
able; organisation of physical training in schools, 8995-7.
Alexander.
Of School Board of Glasgow, 2800. *Alexander.*
Sound system of practical and theoretical education, 9727:
for general population, 9747-50. *Almond.*
Day schools; continuation of classes, rifle clubs, etc., 4769.
Andrew.
Military drill might not be popular, therefore desirable to
call it 'physical training,' 2200-8. *Armytage.*
For boys after fourteen, 9104: loafers, 9016. *Arrol.*
Games necessary to arouse students' interest; present playing
field in danger; inducements should be offered for
gymnastics and drill; compulsion undesirable, 12,293A;
university training; organisation necessary; poor physique
of students, 12,295: physical exercises desirable to make
them attractive, 12,332: recommendation for increase of
training by Commission would do good, 12,339. *Bower.*
Managers of schools should form a sub-committee on physical
exercises amongst themselves, 3785-90. *Bridgeman.*
Deterioration; military drill; games; swimming; cycling;
medical supervision, etc., etc., 5710: physical training
without fresh air of no value, 5750-1: proper supervision
necessary, 5765-71; as to overstraining girls, 5772-80.
Cantlie.
Training should be in connection with school work, 12,636:
continuation of training; old boys' clubs might form basis,
12,636. *Carrie.*
Church Lads' Brigade; continuation classes should make
military drill attractive feature, 3934. *Chesterton.*
Gymnasium necessary, 6548. *Cheyne.*
As to how evil influence beset youths might be counter-
acted, 12,895: manners at school; direct instruction
necessary, 12,901-3. *Chisholm.*
Forms proposed for physical drawing, 1015-21. *Colwill.*
Necessary requisites; accommodation; teachers; music,
5678. *Cowan.*
As to compulsory games to university students, 10,487:
training should be educational; systematic, 10,489:
halls should be erected, 10,513: State provision of physical
training desirable, 10,514: general principles should be
formulated; national Training Colleges established with
prescribed functions, 10,515: Leaving Certificate of physical
fitness at continuation classes, 10,620-2. *Cruden.*
Attraction for lads, fourteen to eighteen; gymnasium with
competent instructor; organised walks in country; sug-
gested erection of halls, 13,176-8. *Cunningham.*
Boys' Brigade in a position to give material assistance to
any scheme for providing further facilities, 13,038-42:
financial aid necessary to extend existing conditions,
13,091-2. *Cuthbertson.*
Universal training advocated, 12,562. *Deverell.*

SUGGESTIONS—*continued* :

More time desirable; breathing; ventilation; military spirit undesirable, 7910. *Dyer*.

Attraction desirable to lads who have left day schools; teachers must be enthusiastic, 8347; scheme advocated; two advantages, 8400-1. *Elliot*.

For training for those ten to fourteen, and fourteen to eighteen, 7863 (*j*): progressive course desirable for those ten to fourteen, 7863 (*m*). *Fox*.

Holiday course for town children, 11,174-80. *Gillanders*.

Great need of training, 11,710. *Hamilton*.

Physical exercises for those up to fourteen; systematic training necessary: fourteen to eighteen; gymnasia in connection with continuation classes, 13,279; after fourteen, combination of physical and mental instruction, 13,324; further regulations for protection of young factory girls impracticable, 13,328-31. *Henderson*.

School cadet corps: drill instructors, ordinary staff with expert's assistance, 3617. *Irvine*.

Infant schools; development, 6059; proper lines; violent action occasionally recommended, 6103-11: proper function of education, 6136; daily time recommended, 6178-9. *Kerr*.

Recommends teaching of Swedish system to both boys and girls, 3890-5. *Kingston*.

Lads twelve to eighteen and older; disciplinary instruction necessary, 7987. *Laidlaw*.

Compulsory training probably necessary at continuation classes; certain course suggested, 12,473. *Laming*.

Military training *plus* healthy recreation; for country lads' training, 9879; remedy; training and occupation, 9892-7. *Lee*.

For boys, 747; for girls, 757-8: for compulsory attendance of those between fourteen and eighteen at continuation classes, 768-72: course for boys from sixteen to eighteen, 904-5: training of girls should be less severe than boys, 968-71. *Legge*.

For training of those fourteen to eighteen; school age limit a burden, 13,332: public halls; Roman Catholics, 13,394-9: school age limit; should be more exemptions; occupations, 13,402-11: exemptions; School Board should be more lenient in cases of poor parents etc, 13,465-8. *Lyons*.

Training as important for civil life as for army and navy, 12,824-7. *McFarlane*.

Physical exercise with proper medical supervision, 9874-5. *MacKay*.

Specimen of scheme suggested, 10,277: development of Lovat Scouts idea would arrest exodus of population, 10,308-10: mounted militia would be outcome of training; training should be universal, 10,311-2. *MacKay*.

Military drill advocated, 4945. *MacKenzie*.

Necessities for children; air and light; exercise, 6983: physical training necessary; true objects: spontaneous exercises preferred; other improvements necessary; bad housing, etc., 7087-95. *MacKenzie*.

Training of young desirable; preliminary problems to be solved—viz., drink traffic and housing of the poor; School Board should have large and more summary powers to compel attendance; physical exercises and military drill should form essential part of school work and of continuation classes, 13,116: suggested means of dealing with truants, 13,145-6. *MacKintosh*.

Proposed, 4154: continuous system, 4199-200. *Malloch*.

Compulsion in elementary schools; military drill in continuation classes; secondary schools to form cadet corps; and want of military school in Scotland, 8686-8. *Masterson*.

Improvements to save deterioration of race; playgrounds; covered gymnasia, 8403: cadet corps; organisation of games, etc.; trained teachers; grants should be given, 8403: uniform system; qualified teachers; grants; cadet corps, 8403: necessity of caretakers in playgrounds and gymnasia; system desirable, 8403. *Meath*.

Permanent institution suggested for feeble-minded children, 13,940-5. *Monteagle*.

Precautions necessary for girls after puberty, 10,214: suitable exercises for girls, 10,223-4: co-operation between parent and teacher necessary, 10,246-8: communication between parent and teacher each month as to girl's illness suggested, 10,258-66: physical exercise most important before and after fourteen if carried out with physiological knowledge, 10,267-8. *Murray*.

More development desirable; obstacles; for including military drill with physical instruction; difficulties, 2451. *Murray*.

Public cook-houses desirable, 8295-9: system for those ten to fourteen, fourteen to eighteen, 8299: physical training in schools; system, 8299: College of Physical Training at Aldershot, for training teachers; selection of staff; certificates, etc., 8345. *Napier*.

For occupying spare time of youths; volunteers, 10,836. *Porter*.

Cadet corps or public school companies might be formed, 2974. *Porwell*.

Practical—medical examination; School Boards should bear expenses of children sent to holiday homes: moral education, 14,058. *Pressland*.

Accommodation insufficient; posts in army might be offered for competition, 5421. *Roberts*.

Improvements; special clothing; cost, 11,031-3: continuation classes and public gymnasium recommended for spare time of youths, 11,055. *Robertson*.

SUGGESTIONS—*continued* :

For training of school children; time; teachers specially trained; time, 7357: from four upwards require modified physical instruction, 7365-6: limits of a class, 7416-21: modified exercises required; progressive course, 7441-6. *Sandow*.

Physical training should be scientific, under medical supervision; suggested scheme; adaptable and progressive, 6897. *Savill*.

Value of rifle shooting; practical test of; results, 9179-80: for rifle ranges, 9188. *Seely*.

Sketch of scheme; control by State through Department; reasons; special grant desired; expert inspector, 10,934: scheme of training; class teachers; expert inspectors; teachers' training; superintendent; inspection; system; general principles; special grant, 10,946: continuation classes; to be held in gymnasia attached to school; fees, 10,947. *Seymour*.

System of physical training by advising circular rather than by Code, 1876-7: children should be specially graded; (*Vide* Code, Art. 19), 1994-2000. *Scougal*.

Graded physical exercises are wanted, 9378. *Sharples*.

Central gymnasium advocated, 4447. *Shearer*.

Suitable clothes; postures in school; nutritious food; points requiring attention, 6488. *Smith*.

(1) Certain course of training, including physical and military drill, compulsory in all schools; (2) games should be encouraged in primary schools; (3) cadet corps in secondary schools might be compulsory; grant; (4) cadet corps for boys fourteen to eighteen as centre of organisation for physical exercise for youth of a district; (5) continuation classes; should be opportunities for training, 9978, § 27: cadet corps of old pupils; if not compulsory then attractive, 10,057-60. *Smith*.

Measure necessary for the essentials of a good education, 12,364, § ix: systematic training necessary, especially for State-aided schools, 12,391-2: continuation of training desirable but difficult; should be made attractive, 12,415-20. *Spenser*.

Compulsory training advocated; cadet corps should be formed in connection with schools; Boys' Brigade; some connection with the school desirable; fire-drill should be introduced into all schools, 2286: for feeding children, 2390-403. *Stevenson*.

If extended, must be enquiry, and communication with Local Authorities, 174-80. *Struthers*.

Gymnasium desired at St Andrews University, 12,008: proposed course for Scotch universities, 12,010: course recommended; playgrounds should be left open for those past school age, and classes formed, 12,037; systematic training desirable for schools, 12,039. *Sturrock*.

Grant should be increased; certificate, 6245-51. *Sutor*.

Cadet corps for every school, with compulsory attendance, 12,862. *Temple*.

Special hall recommended; value of continuation classes; games should be encouraged; true object of physical instruction, to improve national physique, 13,667. *Thomas*.

Scheme for schools, 1254: scheme for schools, when to be done, 1413-24: desirable that boys and girls should continue physical training between fourteen and eighteen, 1459-65. *Tuke*.

Teachers' training; inspection by expert; open air; universal system advocated; grading of children; underfed children; cadet corps; compulsion, 4565. *Turnbull*.

Systematic training; must not be rigid; various conditions of life of school children to be considered, 13,833. *Turner*.

Co-ordination with mental training; apparatus; teachers; grants; training should be scientific; as to improvements in physical training; handling of animals should be taught, 7509. *Walsh*.

Free and applied exercises; both desirable, 7256-7. *Warner*.

Central classes, 2625: volunteers' gymnasium could be made a public gymnasium when not being used, 2648-55; public parks should be opened for games, 2656-64: liberal system advocated, 2790-92: physical training necessary for boys between ages fourteen to seventeen, 2645-6. *Whitton*.

Better treatment of young workers in Dundee desirable, 7722-6: further regulations within factories desired, 7827-47: physical training should be extended, 7850-3. *Williamson*.

Cadet corps; continuation classes; voluntary attractions, 5530. *Wilson*.

SUTOR, M.A., F.E.I.S., MR J. A. :
Headmaster, Fraserburgh Public School. Evidence of, 6236-306.

SWIMMING :
Drill taught on land at Leeds, 8997. *Alexander*.

Under Glasgow School Board, 2800: for girls; lack of teachers of, 2831-2. *Alexander*.

In sea in summer; no baths, 9727. *Almond*.

Bath; charge made, 4353: bath built by School Board out of rates; no objections, 4382-6: instructor; teaches boys and girls; no objection, 4434-7. *Bain*.

Not taken advantage of, 5915-7 and 5946-9. *Bannatyne*.

Bath; none at Glasgow University, 12,289: bath advocated 12,336. *Bower*.

In France, advancement of, 9628 and 9709. *Breerton*.

Extremely popular amongst the boys; difficulty of instructing girls, 3666. *Bridgeman*.

Instruction by females desirable, 5244-7. *Bruce*.

Evidence.

Index to
Evidence.TEACHERS—*continued* :

- exercises; a healthy class, 1899-918: medical inspection of, unnecessary, 1919-20. *Scougal*.
- Properly trained and supervised could give instruction, 10,958-9: training of; course suggested, 10,967-9: should be trained, 10,993-4. *Seymour*.
- Training of, effect on physique and health beneficial, 9462. *Sharples*.
- Should hold certificates of proficiency in physical training, 12,364, § x. *Spenser*.
- Instruction of pupil teachers, 2286: certificate of proficiency in physical training desirable, 2289-95: in Edinburgh in favour of physical drill, 2331-7. *Stevenson*.
- Ordinary staff of school should be qualified to impart instruction in physical exercises, 393-7: as drill instructors preferable to outside experts, 406-14; ordinary staff should teach physical training with occasional supervision, 454-8. *Stewart*.
- Further instruction of, examined by an expert, 219-21. *Struthers*.
- Not properly qualified; necessary to have expert instructors, 11,507 and 11,581; want of training of, 11,517-27. *Taylor*.
- Use discretion in giving exercises, 13,694-6: compelled to attend evening classes, unless medically exempted, 13,704-6. *Thomas*.
- Should be taught by qualified instructors; no outsider except inspector, 1436-52. *Tuke*.
- Instruct in all subjects of class, 4565: classes not taken advantage of by, 4638-42. *Turnbull*.
- Should be instructors of drill, 662-7. *Walker*.
- Instruction of, 5036: ordinary staff duly qualified, 5067-71: physical training a necessary subject for, 5129-33: different views of, 5157-60. *Wallace*.
- Instruct boys how to play games in their business time, 2666; should be assisted by expert, 2702-3 and 2741-3; should be instructed on one good system, 2777-80. *Whitton*.
- And children; management, 7766-8 and 7788-95. *Williamson*.
- Under expert instructor, 8623-34. *Wilson*.
- TEACHERS' CLASSES (see also *under Code, Art. 91 (d) of*):
- Code, Art. 91 (d); duty to report to Scotch Education Department the result of inspections; carried out under various instructors; inspection; opinion of work done; number of attendances insufficient; Military Gymnasia course described; apparatus used; inspection necessary; granting of certificates, 2023-35: defects at, 2038: describes physical training given at Cupar, 2141-9. *Armytage*.
- None; no opportunity in English Code, 2239-41. *Burrows*.
- Number trained; object; Art. 91 (d) Code, 8979: no difficulties, 8823-7: certificates; conditions, 8892-903. *Clark*.
- At Aberdeen Physical Training College, 10,492 and 10,680-5: course, 10,493. *Cruden*.
- By Colonel Cruden; suggestions, 1076: by Colonel Cruden, 1099-106: Art. 91 (d) of Code, 1107-19. *Lobban*.
- Saturday; physical exercises should be compulsory subject, 8788-90. *Masterson*.
- Switzerland; held during vacations, 14,058 and 14,078-82. *Pressland*.
- Reasonable expenses paid by Department to those attending, 1606-13. *Robertson*.
- Code, Art. 91 (d); voluntary attendance at, 18. *Struthers*.
- Mode of training described; certificates, 12,015-21 and 12,055 and 12,069-83. *Sturrock*.
- Suggested for keeping teachers up-to-date, 11,508. *Taylor*.
- Evening; course of instruction described; certificates of proficiency granted; effect of exercises on the teachers; special recreative gymnastic classes on Saturday mornings, 13,667, § a: teachers compelled to attend in evenings unless medically exempted, 13,704-6. *Thomas*.
- TEMPLE, B.A., MR E.:
Rector, Glasgow Academy. Evidence of, 12,837-94.
- THOMAS, MR R.E.:
Chief Instructor of Physical Exercises, Leeds School Board. Evidence of, 13,666-775.
- TIME:
- Allotted to drill, 11,278. *Alexander*.
- Devoted in Glasgow schools, 2800: devoted in continuation classes, 2800-2. *Alexander*.
- Allotted to games; minimum allowance estimated; daily exercise desirable, 9727. *Almond*.
- Details of, table, 13,221: given to physical drill; more desirable, 13,224: increased training; time table; difficulties and causes, 13,251: allotted; too small, 13,259-63. *Anderson*.
- Lack of, 4796-7: devoted; half an hour per week, 4807-8. *Andrew*.
- Full half hour *per diem* for every child necessary, 2076-8: morning most suitable time for physical training of children, 2113-7. *Armytage*.
- Amount in elementary schools, 4372-81. *Bain*.
- Allotted, half an hour *per week*, 11,362. *Beattie*.
- No time set apart for games, etc., *per diem*, 12,290: want of, arrangement of classes; difficulty, 12,316-7. *Bower*.
- Allotted; deficient, 9628: more required, 9663. *Brereton*.
- Varies in different schools, 3667-70: given; three lessons of twenty minutes *per week*, 3739-49. *Bridgeman*.

TIME—*continued* :

- Training should begin in nursery, 5217-8: for physical and mental training, 5263-6. *Bruce*.
- Allotted, 8650. *Bryant*.
- Insufficient; physical training of great importance, 3552-5. *Cameron*.
- Allotted, 12,636 and 12,639-40: more might be given except in highest classes, 12,662-4: no more time available; demands of Department; Leaving Certificates; subjects, 12,678-96. *Carrie*.
- Desirable; half an hour *per diem*, 11,317. *Carson*.
- Allotted; proportion of, desirable, 10,716. *Carter*.
- Desirable; importance of subject, 3940-6: frequency, not duration, 3959-61: daily proportion, 3998-9. *Chesterton*.
- Difficulty, 6550-9. *Cheyne*.
- Allotted, 8840-1: difficulty of increasing, 8874-7. *Clark*.
- Allotted, 11,237. *Craig*.
- Half an hour *per week*, 3058: only half an hour *per week* possible, 3098-101: teachers' views; reasons, 3179-86. *Craigen*.
- Allotted, 10,483 and 10,493: to be devoted to exercises in relation to study; two half hours *per week*, 10,511: daily training desirable but impracticable, 10,512: two hours for each week in elementary schools ample, 10,677-9: objection to breaking up time into small portions each day, 10,686-7. *Cruden*.
- Allotted *per week*, 13,162. *Cunningham*.
- Average allotted to physical instruction of Boys' Brigade, 12,967A: insufficient in Board Schools, 13,060-2. *Cuthbertson*.
- Half an hour a week; more would be beneficial, 5991-4: two hours a week sufficient, 6023-9. *Davidson*.
- Allotted, 12,612-4. *Deverell*.
- Proportion desirable; daily exercises, 8137-8. *Dukes*.
- Suggested, 7949-50. *Dyer*.
- Hindrances, 6619; table; subjects; Dick Bequest School; extra time impossible, 6652-64: table must be lightened, or teachers supplemented, 6679-83. *Elphinstone*.
- Recommended, amount of brainwork for children, 7863 (o): necessary for training of teachers, 7882-7: necessary for boys and girls from ten to fourteen, 7888. *Fox*.
- Distribution of subjects described in time-table, 11,124: allotted, 11,201-2: given insufficient; difficulty; daily exercises desirable; gymnasia necessary, 11,231-5. *Gilanders*.
- O' classes in winter a difficulty, 12,216: want of; large proportion have no training; more facilities desirable, 12,227-9. *Gordon*.
- Suggested to be allotted, 11,710 and 11,741-3. *Hamilton*.
- To be allotted, 6709 and 6759-61. *Hay*.
- Allotted, 12,105: more should be given, 12,124-7 and 12,172-6. *Hunter*.
- Half an hour daily, 13,601-5. *Hunter*.
- Allotted; half an hour to one hour, 5887-95. *Hunter*.
- Average half an hour *per week*, 6314; desired, 6466-7. *James*.
- Allotted; three times *per week* necessary, 6059; recommended daily, 6178-9. *Kerr*.
- Given; one hour *per week*; compulsory, 3796: division of; allowed pupil teachers, 3797: increased, 3850-1: suggested, 3880-2. *Kingston*.
- Allotted to games, 12,473: to be allotted, 12,473. *Laming*.
- Required for physical training at continuation classes, 928-9. *Legge*.
- Given to drill at Alloway, 1076: given at present; amount proposed, 1079-82. *Lobban*.
- Allotted; short daily exercise if possible, 11,324: difficulty of, 11,330-4: proportion with regard to mental study of, 11,350-6. *Low*.
- In two half hours preferable to one hour; difficulty, 13,332: desires less, to drawing, 13,452-8. *Lyons*.
- Allotted in Shetland schools, 10,277 and 10,332. *Mackay*.
- Average given 30 minutes *per week*, 3311. *Mackenzie*.
- Given in Kingussie schools, 4968: cannot give more, 4983-92. *Mackenzie*.
- Proportion to be allotted, 6984. *Mackenzie*.
- Devoted in Roman Catholic elementary schools, 13,156-7. *Mackintosh*.
- Allotted, 11,663: more, necessary; half an hour daily recommended, 11,667-8: for training in day schools must be increased, 11,673. *Macnee*.
- Advocated, one hour *per week* sufficient, 4194-8. *Malloch*.
- About one hour a week given, 4877-81 and 4925-31. *Moody*.
- Allotted, 13,479: difficult to give more, 13,517-9; desirable to be allotted, 13,530-6. *Muir*.
- Allotted, 11,394, § 5: proportion of, desirable, 11,394, § 10: insufficient, 11,408-15. *Paterson*.
- Exercises once a week, 11,625. *Peacock*.
- Devoted at the Kantonsschule, Switzerland, 14,058: allotted to physical exercise in schools (Switzerland), 14,058. *Pressland*.
- Allotted to various games, 11,806: proportion, in relation to mental study of, 11,815: daily exercise advantageous, 11,816: given to drill, 11,842-4; in State-aided schools small, but more cannot be spared, 11,851-7: free, allowance, 11,876-80. *Reid*.
- Given sufficient, 5428-30. *Roberts*.
- Length of, to be allotted to physical training or drill, 1584-7. *Robertson*.
- Allotted, 11,022 (b); training in school hours, 11,024: pro-

Evidence.

TIME—continued:

portion must vary; might be five hours *per week* in all; training most advantageous if daily by ordinary staff, 11,035-40: daily training desirable, 10,735. *Robertson*.
Necessary, 7344-7: for exercises and place desirable, 7361. *Sandow*.
Insufficient allowance, 4253-6 and 4292-301. *Scott*.
Allotted, too meagre, 1717: desirable to devote half an hour *per diem* to drill, 1745-9: devoted to physical training should be increased, 1868-9. *Scougal*.
Allotted; half an hour twice weekly, 10,924: in relation to mental study; half an hour daily; daily exercise advocated, 10,936-9: daily exercise for half an hour desirable, 10,962-3: course suggested, 10,984-91. *Seymour*.
Half an hour *per week*, 4462. *Shearer*.
Inadequate, 3214: might be lengthened; physical training should be given daily, 3228-34. *Simpson*.
Allotted, 9978, § 4: proper proportion, 9978, §§ 12 and 13: physical exercise should be daily, 9978, § 14. *Smith*.
Allotted, 9475: variation in certain schools; more opportunities in better class schools, 9481-93: desirable that increase should be made in, 9510-28. *Smith*.
Half an hour *per diem*, and one hour a week special instruction in class hours, 2318-22. *Stevenson*.
Desirable to have physical training at beginning of day, or immediately after dinner hour; should not follow mental work; impossible to devote more time in schools, 343-58. *Stewart*.
Allotted to training, 11,927-9. *Strachan*.
Devoted in training in schools, 54-8: to be allotted to drill and gymnastics, 64-71: most advantageous for drill is middle of day, 189-92. *Struthers*.
Allotted to games, etc., 12,004: daily exercise most advantageous, 12,034: half an hour daily desirable, 12,050-1. *Sturrock*.
Half an hour a week; insufficient, 6243-4: should be done daily; difficulty, 6270-9. *Sutor*.
Allotted, 11,496: one hour *per week*, 11,543: demands of School Boards, 11,564-7. *Taylor*.
Allotted to games, 12,841: more desirable, 12,866: want of, militates against development, 12,867-76. *Temple*.
Allotted to exercise, 13,667, § (b): allotted to lessons in swimming, 13,667, § (c): half an hour a day recommended, 13,710-2. *Thomas*.
Amount, 1254 (b): to be devoted to physical training *per diem*, 1396-404: when physical training should be done, 1418-23. *Tuke*.
Allotted; boys and girls, 4565 and 4646-51; amount of, should be same for boys and girls, 4683-4. *Turnbull*.
Instruction should be given at various times, and in various amounts, 580-4: physical drill now taken in all classes; desirable at short times, 633-6; half an hour a day sufficient, if graded for all ages, 696-700. *Walker*.
More necessary, 5036: given; half an hour *per week*, 5148-50: time-table already full, 5151-6. *Wallace*.
More training desirable for boys than girls; reason, 7278-9. *Warner*.
Devoted *per week*, 9079-81. *Wickham*.
More impracticable, 5559-65. *Wilson*.

TOWN AND COUNTRY CHILDREN:
Of France; teachers' opinion of latter, 9662. *Brereton*.
Latter superior physically but not mentally, 13,777 and 13,786-8. *Bruce*.
Former able from adverse conditions to endure privations; quicker mental powers, 513-7. *Brunton*.
Latter quite ready to take drill, 2257. *Burrows*.
Deterioration of latter, 5715-7: walking to school of latter: simple exercises only necessary, 5785-94: physical exercises for urban children, 5719. *Canllie*.
Training equally necessary for both, 1022-34. *Colwill*.
Little difference in physique of, 10,516. *Cruden*.
Superiority of latter; illustration, 8102: ordinary occupation of latter, 8154: cricket and football recommended for latter, 8248-52. *Dukes*.
Suggested holiday courses for former, 11,174-80. *Gillanders*.
Vacation courses favoured for former, 11,730-3. *Hamilton*.
Comparison, 6709: systematised exercises beneficial to both; some form of physical training practicable for latter, 6749-54. *Hay*.
Comparison difficult, 6059 and 6095-9: latter need physical training, but not so much as town children, 6183-4. *Kerr*.
Certain amount of physical training desirable after age; suggestions, 9879. *Lee*.
Latter superior; causes; advantages; comparison; improvement or degeneracy of country children; exercise less urgent for latter; supervision objectionable, 6983: social distinctions, 7063-4. *Mackenzie*.
Suggestions, 2593-600. *Murray*.
Differences, 10,836. *Porter*.
Not much difference should be made, 1563-8. *Robertson*.
Country school in England, 7379-81. *Sandow*.
Beneficial to both, 4247-52. *Scott*.
Country children require discipline and smartening, 1726-34: feeding of, 1798A-800: casual employment of children after leaving school and before going into business, 1873-5. *Scougal*.
Comparison, 3214: physique; no records kept, 3222-4. *Simpson*.
Exercises for latter, 6488. *Smith*.
Requirements different, 181-8. *Struthers*.
Must be differentiation between, 1533-6. *Tuke*.

TRAINING COLLEGE(S):

At York; good course of instruction at, 11,377-82. *Beattie*.
Teachers; physical training at, 10,750-1. *Carter*.
System satisfactory, but requires attention, 9294-300. *Chapman*.
All teachers learn physical drill at; certificates granted but not necessary, 13,167-76. *Cunningham*.
Glasgow, Downhill; residential, for female students eighteen to twenty-three; existing opportunities; annual medical inspection, 13,116. *Mackintosh*.
Church of Scotland, Edinburgh; number of students; ages, etc.; games; drill; hints, 11,660-2 and 11,669-70: examination of students, 11,684-7. *Macnee*.
Volunteer company, 2451: and volunteers, 2579-85. *Murray*.
United Free Church, Edinburgh; number of students; ages; parentage; careers, 11,394, § 2: other physical education given at, 11,394, § 11: female students; drilled separately, 11,402-4: more systematic training desirable; examination; results; training insufficient, 11,408-15: number of students; difficulty of getting men; class and physique of students; latterly a depreciation, 11,428-41. *Paterson*.
Since 1901 drill necessary in, 8. *Struthers*.
Desirable to have a college company attached to volunteers, 2734-6. *Whitton*.

TUBERCULOSIS:
In schools; causes, 6059: chalk is soluble and should not cause, 6223-8. *Kerr*.

TUKE, M. B., C. M., MR A. L. S.:
Medical Practitioner, Dunfermline. Evidence of, 1251-549.

TURNBULL, MR J.:
Headmaster, Alloway Public School. Evidence of, 4565-767.

TURNER, K. C. B., M. B., F. R. C. S., SIR WM.:
Professor of Anatomy in Edinburgh University, and President of the General Medical Council of the United Kingdom. Evidence of, 13,821-92.

UNIFORM SYSTEM:
Undesirable, 8997. *Alexander*.
Undesirable, 9727: inadvisable; reasons, 9728-30: in certain circumstances necessary, 9762-3: plus scope for individuality, 9785-88. *Almond*.
Desirable, 2056-61. *Armistage*.
Option between Swedish and Chesterton's, 3783-4. *Bridgeman*.
Advantageous generally, 3540-2. *Cameron*.
Desirable if coupled with latitude, 12,636. *Carrie*.
Advocated; reasons, 9270-74. *Chapman*.
Desirable, 4087-93. *Chesterton*.
Desirable, 990. *Colwill*.
Not desirable, but a system on certain defined principles, with considerable latitude to teachers, 10,509: should be general Code with great latitude, 10,606-11. *Cruden*.
Compulsion in elementary schools; time, 7863 (o): desirable, 7880-1. *Fox*.
Proposed scheme delayed, certain principles formulated; latitude left to individual, 11,124 and 11,125-7. *Gillanders*.
In universities undesirable, 12,216: and equal facilities desirable in all universities, 12,238-40. *Gordon*.
If adaptable; commended, 6116-22. *Kerr*.
Great advantage, 3828-9. *Kingston*.
Undesirable, but training must be under careful supervision, 12,473: probably necessary, 12,499-500. *Laming*.
Desirable; free gymnastics on Aldershot principle should be compulsory, 746; in physical exercises and applied and free gymnastics should be uniform, 825-7: might relieve burden on teachers, 963-7: recommended, 974-8. *Legge*.
Must be considerable latitude, 11,324. *Lowc*.
Not objectionable if sufficient latitude allowed, 13,116. *Mackintosh*.
Undesirable; general principles with freedom advocated, 11,666 and 11,691-2. *Macnee*.
Desirable in elementary schools, 13,539-42. *Muir*.
Undesirable: reasons, 2456-8 and 2475-7: deprecated, suggestions, 2498-509: teachers should be so trained, 2535-41. *Murray*.
Desirable for schools, 8299. *Napier*.
General principles, but freedom, 11,394, § 8: Paris Congress; complaint, 11,395-6. *Paterson*.
Not desirable in secondary schools, 11,812: rather desirable than necessary, 11,858-9. *Reid*.
Undesirable; must be freedom, 11,030: general principles recommended, 11,087-90. *Robertson*.
Not beneficial, 1717: not desirable; variation should be allowed, 1801-6: necessary for guidance, but some liberty must be allowed, 1808-13: might be imposed through classes under Art. 91 (d), 1853. *Scougal*.
With latitude desirable, 10,930-3. *Seymour*.
Undesirable, 9978, § 17. *Smith*.
Desirable, 9501. *Smith*.
Necessary to secure efficiency, 12,364, § ix. *Spenscr*.
Desirable under certain conditions, 2359. *Stevenson*.
Same principles underlying all, 399-400. *Stewart*.
Of physical exercises not desirable; prevents progress and development, 72-92. *Struthers*.
Necessary, 12,031. *Sturrock*.
Advocated, 11,509 and 11,601-5. *Taylor*.
For particular district; graded according to physical strength, 1254: desirable, 1324-35. *Tuke*.
Advocated; reasons; schemes, 4570-4 and 4582-8 and 4714-7: of drilling and training, 4726-32. *Turnbull*.

Index to
Evidence.UNIFORM SYSTEM—*continued*:

Desirable, 668-9. *Walker*.
Not desired; must be considerable latitude, 2769-76.
Whitton.
Desirable, 5522-3: desirable; reasons, 5657-61. *Wilson*.

UNIVERSAL:

Physical training in Germany, 7373-8. *Sandow*.

UNIVERSITIES:

Glasgow; existing opportunities at, 12,289: Glasgow; physique of students poor; Scotch and English students compared; difficulties; expense; want of time; health, 12,295-308: training as part of university course; compulsion unpopular but necessary, 12,333-5: no facilities furnished by Glasgow University; no encouragement by authorities owing to want of money and time; length of session, 12,344-58. *Bower*.

Opportunities should be given at, 5412-3. *Bruce*.

Military training should be compulsory at, 5740. *Cantlie*.

Aberdeen University; existing opportunities for:—games, organisation; playing-field; volunteer company; King's students; physical drill; gymnastic clubs; gymnasium to be provided; health lectures; athletics; handicrafts; voice training; cadet corps; swimming, no bath; ambulance, 10,482: compulsory training possible, 10,518-9: compulsory training probably ultimately successful; lately increase of opportunities for exercise, but not properly taken advantage of; certain minimum course compulsory; properly supervised training would promote physical health; ages of students seventeen to twenty-one; less games but more systematic training at Aberdeen; commissions in army, 10,518-568. *Cruden*.

Edinburgh; existing opportunities, 12,216: five courts recommended; uniform system undesirable in; Edinburgh Students' Union, 12,222: no swimming bath or gymnasium, 12,216 and 12,220-3: large proportion have no training; want of time, 12,227-9: training quite necessary; break-down of some students, 12,236-7 and 12,248-9 and 12,262-71: number interested in physical exercise, 12,241-7: food; students and their meals; want of time, 12,251: authorities of, should institute course of exercises and grant facilities, 12,274-6. *Gordon*.

And secondary schools; physical training beneficial; need of organisation, 6709: volunteer corps; obligation favoured, 6825-8: examinations and overpressure, 6829-36: of Scotland; compulsory training favoured; reasons, 6877-8. *Hay*.

And secondary schools; physical training not essential, 6983 and 6985: compulsory training deprecated, 6992. *MacKenzie*.

Pupils for; number, 5478-83. *Roberts*.

Little interest taken in physical exercises due to action of secondary schools; want of time might be obviated by proper arrangements, 12,395-400. *Spenser*.

St Andrews, games, existing opportunities, 11,203-5: proposed course for, 12,010: financial difficulty, 12,040-1: should have gymnasias and swimming baths, 12,067-8. *Sturrock*.

No drawbacks to use of athletics noticed, 1310-1. *Tuke*.

Edinburgh; facilities; intellectual ability and physical exercise, 13,860-1. *Turner*.

Advocates course of physical training to prospective teachers at, 5075-8. *Wallace*.

VALUE:

Of physical training, 8031. *Don*.

Forms of physical training; absolute and relative, 8114. *Dukes*.

For boys over fourteen; National Service League; aims, 9182. *Seely*.

Relative, of physical exercises, 9035-8. *Wickham*.

VENTILATION:

In schools; provision insufficient, 5259-62. *Bruce*.

Mechanical gives better results, 6838-45 and 6839-93. *Hay*.

Bad generally, especially for physical exercises, 6448-54. *James*.

Necessity varies, 6082-5. *Kerr*.

VOICE TRAINING:

Taught in lesson hours; value and importance, for lungs, of, 9727. *Almond*.

Singing taught in elementary departments; time devoted, 12,636. *Carrie*.

Taught, 10,716. *Carter*.

Most valuable, 10,506. *Cruden*.

Singing exercises; benefits, 6201-6. *Kerr*.

Part of curriculum of lower school, time allotted, 12,473. *Laming*.

By music master, 11,324. *Lowe*.

Given in connection with music and phonetics, 11,394, § 4. *Paterson*.

School choir, 11,805. *Reid*.

Given in connection with singing; time, 11,022 (f). *Robertson*.

Taught by visiting masters, 10,921 (f). *Seymour*.

VOICE TRAINING—*continued*:

Time given; all boys taught singing; exceptions, 9978, § 3. *Smith*.

Singing classes and school choir, 12,364, § iii. *Spenser*.

Taught at St Andrews University, 12,003. *Sturrock*.

Singing taught to lower classes, 12,840. *Temple*.

Benefits, 9023. *Wickham*.

VOLUNTARY SCHOOLS:

Church schools: physical training depends on the management, 8518-20. *Lilley*.

VOLUNTEERS:

University corps; not exclusively students, 12,322-9. *Bower*.

Similar organisation associated with, desirable, 9255. *Chapman*.

Training given to; commended, 12,895. *Chisholm*.

Boys keen to join, 11,264-5. *Craig*.

Long recruit drill of, possible objection by lads joining, 3058. *Craigen*.

Personal experience, 10,517: value of physical drill to, 10,694-97. *Cruden*.

Recruit drills of, irksome to a Brigade boy, 13,010-11. *Cuthbertson*.

Experience of; variety of physique, 8102. *Dukes*.

Comparison with soldiers, 7895-7. *Fox*.

Experience of, 11,124: training at school facilitates drill when joining, certificate desirable, 11,133: boys keen on, 11,211-3. *Gillanders*.

Corps of Edinburgh University; organised and supervised, 12,216. *Gordon*.

Compulsory training advocated for all lads in, 13,286-9 and 13,303-5. *Henderson*.

Old age pensions would be inducement to lads joining; benefits, 9879 and 9906-8: compulsion undesirable, 9912. *Lee*.

Inducements desirable, 11,324. *Lowe*.

Company of, annual camp, 11,662 (f): important factor, 11,673. *Macnee*.

Many of the Boys' Brigade boys join, benefit, 8714-20 and 8781-2. *Masterson*.

And Training Colleges, 2579-85. *Murray*.

Students attached to Queen's Edinburgh; Report; difficulties; shooting, 11,394, § 4. *Paterson*.

Notes on the system of, suggestions, 10,836. *Porter*.

Duty of every boy to qualify himself; possible objections, 1981-5. *Scougal*.

Shooting an inducement to join, 9123-4. *Seely*.

Company in connection with St Andrews University, 12,003. *Sturrock*.

No difficulty of lads joining; College Company; benefits to College Company, 2678-93: certificates should be given to proficient lads to escape recruit drill when joining, 2725-7: College Company should be attached to, 2734-6. *Whitton*.

Inducements should be offered boys at public schools to join, 9062-4. *Wickham*.

Inducement to lads to join, 5531. *Wilson*.

WALKER, Mr A.:
H.M. Inspector of Schools (Scotland). Evidence of, 560-723.

WALKING AND RUNNING:
Both necessary, 10,506. *Cruden*.

Beneficial; dangers of latter, 6709. *Hay*.

Former a poor exercise: latter hard work and dangerous, 5069. *Kerr*.

Former recommended: reasons, 7096-7. *MacKenzie*.

WALLACE, Mr T.:
Headmaster, Inverness High School. Evidence of, 5034-183.

WALSH, THE REV. W.:
Minister of Gilfillan Memorial Church, Dundee. Evidence of, 7508-666.

WARNER, M.D., F.R.C.P., Mr F.:
Physician to the London Hospital. Evidence of, 7184-332.

WATFORD ORPHAN ASYLUM:
Results of Sandow System at, 7448-51. *Sandow*.

WEAKLINGS:
Chief aims in education, 8116. *Dukes*.

WHITTON, Mr K.:
Assistant-master, Castle Hill Public School, Edinburgh. Evidence of, 2621-798.

WICKHAM, THE REV. C. T.:
Headmaster, Twyford School, Winchester. Evidence of, 9005-92.

WILLIAMSON, THE REV. H.:
Unitarian Minister, Dundee, and Member of Dundee (Burgh) School Board. Evidence of, 7667-860.

WILSON, Mr R J.:
Headmaster, Kent Road Public School, Glasgow. Evidence of, 5513-661.

YOUNG MEN'S CHRISTIAN ASSOCIATION:
Evening classes for those fifteen to thirty, 12,895. *Chisholm*.

YOUNG MEN'S SOCIETY:
Benefits of, 13,332. *Lyons*.
