LIST OF ABBREVIATIONS

1 *General abbreviations*

AB	bachelor of arts
ABC	Australian Broadcasting Corporation
ABC TV	ABC Television
act.	active
A$	Australian dollar
AD	*anno domini*
AFC	Air Force Cross
AIDS	acquired immune deficiency syndrome
AK	Alaska
AL	Alabama
A level	advanced level [examination]
ALS	associate of the Linnean Society
AM	master of arts
AMICE	associate member of the Institution of Civil Engineers
ANZAC	Australian and New Zealand Army Corps
appx *pl.* appxs	appendix(es)
AR	Arkansas
ARA	associate of the Royal Academy
ARCA	associate of the Royal College of Art
ARCM	associate of the Royal College of Music
ARCO	associate of the Royal College of Organists
ARIBA	associate of the Royal Institute of British Architects
ARP	air-raid precautions
ARRC	associate of the Royal Red Cross
ARSA	associate of the Royal Scottish Academy
art.	article / item
ASC	Army Service Corps
Asch	Austrian Schilling
ASDIC	Antisubmarine Detection Investigation Committee
ATS	Auxiliary Territorial Service
ATV	Associated Television
Aug	August
AZ	Arizona
b.	born
BA	bachelor of arts
BA (Admin.)	bachelor of arts (administration)
BAFTA	British Academy of Film and Television Arts
BAO	bachelor of arts in obstetrics
bap.	baptized
BBC	British Broadcasting Corporation / Company
BC	before Christ
BCE	before the common (*or* Christian) era
BCE	bachelor of civil engineering
BCG	bacillus of Calmette and Guérin [inoculation against tuberculosis]
BCh	bachelor of surgery
BChir	bachelor of surgery
BCL	bachelor of civil law
BCnL	bachelor of canon law
BCom	bachelor of commerce
BD	bachelor of divinity
BEd	bachelor of education
BEng	bachelor of engineering
bk *pl.* bks	book(s)
BL	bachelor of law / letters / literature
BLitt	bachelor of letters
BM	bachelor of medicine
BMus	bachelor of music
BP	before present
BP	British Petroleum
Bros.	Brothers
BS	(1) bachelor of science; (2) bachelor of surgery; (3) British standard
BSc	bachelor of science
BSc (Econ.)	bachelor of science (economics)
BSc (Eng.)	bachelor of science (engineering)
bt	baronet
BTh	bachelor of theology
bur.	buried
C.	command [identifier for published parliamentary papers]
c.	*circa*
c.	*capitulum pl. capitula*: chapter(s)
CA	California
Cantab.	Cantabrigiensis
cap.	*capitulum pl. capitula*: chapter(s)
CB	companion of the Bath
CBE	commander of the Order of the British Empire
CBS	Columbia Broadcasting System
cc	cubic centimetres
C$	Canadian dollar
CD	compact disc
Cd	command [identifier for published parliamentary papers]
CE	Common (*or* Christian) Era
cent.	century
cf.	compare
CH	Companion of Honour
chap.	chapter
ChB	bachelor of surgery
CI	Imperial Order of the Crown of India
CIA	Central Intelligence Agency
CID	Criminal Investigation Department
CIE	companion of the Order of the Indian Empire
Cie	Compagnie
CLit	companion of literature
CM	master of surgery
cm	centimetre(s)

Cmd	command [identifier for published parliamentary papers]
CMG	companion of the Order of St Michael and St George
Cmnd	command [identifier for published parliamentary papers]
CO	Colorado
Co.	company
co.	county
col. *pl.* cols	column(s)
Corp.	corporation
CSE	certificate of secondary education
CSI	companion of the Order of the Star of India
CT	Connecticut
CVO	commander of the Royal Victorian Order
cwt	hundredweight
$	(American) dollar
d.	(1) penny (pence); (2) died
DBE	dame commander of the Order of the British Empire
DCH	diploma in child health
DCh	doctor of surgery
DCL	doctor of civil law
DCnL	doctor of canon law
DCVO	dame commander of the Royal Victorian Order
DD	doctor of divinity
DE	Delaware
Dec.	December
dem.	demolished
DEng	doctor of engineering
des.	destroyed
DFC	Distinguished Flying Cross
DipEd	diploma in education
DipPsych	diploma in psychiatry
diss.	dissertation
DL	deputy lieutenant
DLitt	doctor of letters
DLittCelt	doctor of Celtic letters
DM	(1) Deutschmark; (2) doctor of medicine; (3) doctor of musical arts
DMus	doctor of music
DNA	dioxyribonucleic acid
doc.	document
DOL	doctor of oriental learning
DPH	diploma in public health
DPhil	doctor of philosophy
DPM	diploma in psychological medicine
DSC	Distinguished Service Cross
DSc	doctor of science
DSc (Econ.)	doctor of science (economics)
DSc (Eng.)	doctor of science (engineering)
DSM	Distinguished Service Medal
DSO	companion of the Distinguished Service Order
DSocSc	doctor of social science
DTech	doctor of technology
DTh	doctor of theology
DTM	diploma in tropical medicine
DTMH	diploma in tropical medicine and hygiene
DU	doctor of the university
DUniv	doctor of the university
dwt	pennyweight
EC	European Community
ed. *pl.* eds	edited / edited by / editor(s)
Edin.	Edinburgh
edn	edition
EEC	European Economic Community
EFTA	European Free Trade Association
EICS	East India Company Service
EMI	Electrical and Musical Industries (Ltd)
Eng.	English
enl.	enlarged
ENSA	Entertainments National Service Association
ep. *pl.* epp.	*epistola(e)*
ESP	extra-sensory perception
esp.	especially
esq.	esquire
est.	estimate / estimated
EU	European Union
ex	sold by (lit. out of)
excl.	excludes / excluding
exh.	exhibited
exh. cat.	exhibition catalogue
f. *pl.* ff.	following [pages]
FA	Football Association
FACP	fellow of the American College of Physicians
facs.	facsimile
FANY	First Aid Nursing Yeomanry
FBA	fellow of the British Academy
FBI	Federation of British Industries
FCS	fellow of the Chemical Society
Feb.	February
FEng	fellow of the Fellowship of Engineering
FFCM	fellow of the Faculty of Community Medicine
FGS	fellow of the Geological Society
fig.	figure
FIMechE	fellow of the Institution of Mechanical Engineers
FL	Florida
fl.	*floruit*
FLS	fellow of the Linnean Society
FM	frequency modulation
fol. *pl.* fols.	folio(s)
Fr	French francs
Fr.	French
FRAeS	fellow of the Royal Aeronautical Society
FRAI	fellow of the Royal Anthropological Institute
FRAM	fellow of the Royal Academy of Music
FRAS	(1) fellow of the Royal Asiatic Society; (2) fellow of the Royal Astronomical Society
FRCM	fellow of the Royal College of Music
FRCO	fellow of the Royal College of Organists
FRCOG	fellow of the Royal College of Obstetricians and Gynaecologists
FRCP(C)	fellow of the Royal College of Physicians of Canada
FRCP (Edin.)	fellow of the Royal College of Physicians of Edinburgh
FRCP (Lond.)	fellow of the Royal College of Physicians of London
FRCPath	fellow of the Royal College of Pathologists
FRCPsych	fellow of the Royal College of Psychiatrists
FRCS	fellow of the Royal College of Surgeons
FRGS	fellow of the Royal Geographical Society
FRIBA	fellow of the Royal Institute of British Architects
FRICS	fellow of the Royal Institute of Chartered Surveyors
FRS	fellow of the Royal Society
FRSA	fellow of the Royal Society of Arts

FRSCM	fellow of the Royal School of Church Music
FRSE	fellow of the Royal Society of Edinburgh
FRSL	fellow of the Royal Society of Literature
FSA	fellow of the Society of Antiquaries
ft	foot *pl.* feet
FTCL	fellow of Trinity College of Music, London
ft-lb per min.	foot-pounds per minute [unit of horsepower]
FZS	fellow of the Zoological Society
GA	Georgia
GBE	knight or dame grand cross of the Order of the British Empire
GCB	knight grand cross of the Order of the Bath
GCE	general certificate of education
GCH	knight grand cross of the Royal Guelphic Order
GCHQ	government communications headquarters
GCIE	knight grand commander of the Order of the Indian Empire
GCMG	knight or dame grand cross of the Order of St Michael and St George
GCSE	general certificate of secondary education
GCSI	knight grand commander of the Order of the Star of India
GCStJ	bailiff or dame grand cross of the order of St John of Jerusalem
GCVO	knight or dame grand cross of the Royal Victorian Order
GEC	General Electric Company
Ger.	German
GI	government (*or* general) issue
GMT	Greenwich mean time
GP	general practitioner
GPU	[Soviet special police unit]
GSO	general staff officer
Heb.	Hebrew
HEICS	Honourable East India Company Service
HI	Hawaii
HIV	human immunodeficiency virus
HK$	Hong Kong dollar
HM	his / her majesty('s)
HMAS	his / her majesty's Australian ship
HMNZS	his / her majesty's New Zealand ship
HMS	his / her majesty's ship
HMSO	His / Her Majesty's Stationery Office
HMV	His Master's Voice
Hon.	Honourable
hp	horsepower
hr	hour(s)
HRH	his / her royal highness
HTV	Harlech Television
IA	Iowa
ibid.	*ibidem*: in the same place
ICI	Imperial Chemical Industries (Ltd)
ID	Idaho
IL	Illinois

Hanbury, Benjamin (1778–1864), historian, was born at Wolverhampton on 13 May 1778. He was a great-grandson of Joseph Williams of Kidderminster, whose diary (much commended by Hannah More) he edited in 1815. Most of his education was received from his uncle, the Revd Dr Humphrys, pastor of the Union Street congregation, Southwark, London, and afterwards principal of Mill Hill School. For a time Hanbury was engaged in a retail business for which he had no taste. On 18 September 1801 he married Phoebe Lea of Kidderminster, who was a relative of his. They had a son and a daughter.

In June 1803, through the influence of Ebenezer Maitland, Hanbury obtained a situation in the Bank of England, and remained there until 1859. He became one of the deacons at Union Street in May 1819, and held that office until 1857, when he removed to Clapham and from there to Brixton. He published a monograph on the origin of the Union Street congregation entitled *An Historical Research Concerning the most Ancient Congregational Church in England ... Union Street, Southwark* (1820). Hanbury was a strong nonconformist; for more than thirty years he was one of the 'dissenting deputies', who were the guardians of the political rights of the associated nonconformist bodies; and he entered, as an advocate of the voluntary principle, into the controversy on establishments which followed the repeal of the Test and Corporation Acts in 1828. He was a member of a 'society for promoting ecclesiastical knowledge', instituted for the publication of works bearing on nonconformist theories. He edited Richard Hooker's *Ecclesiastical Politie* in 1830, the edition including Walton's *Life*. For the Library of Ecclesiastical Knowledge, he wrote a short life of Calvin (1831). In the same year, on the formation of the Congregational Union of England and Wales, he became its treasurer and held that post until his death. His most important literary service to his denomination was his *Historical Memorials Relating to the Independents ... from their Rise to the Restoration* (1839–44), a rich and accurate collection of documents illustrating the rise of nonconformity. Hanbury died on 12 January 1864 at his residence, 16 Gloucester Villas, Loughborough Road, Brixton, and was buried on the 19th in the Norwood cemetery. His wife and son had predeceased him in 1824 and 1836 respectively, but his daughter, Mary Ann Hanbury, survived him.

Hanbury, Charlotte (1830–1900). *See under* Hanbury, Elizabeth (1793–1901).

Hanbury, Daniel (1825–1875), pharmacologist, was born on 11 September 1825 at Bedford Lane, Clapham, Surrey, the elder son of Daniel Bell Hanbury (1784–1882), and his wife, Rachel, *née* Chrisby. His father was a partner in Allen and Hanbury's, an old-established Quaker chemist and druggist, situated at Plough Court in the City of London. Educated at a private school and, from 1833, at Clapham grammar school, Daniel joined the family business in 1841. He followed the family's traditional route into pharmacy, by qualifying as a pharmaceutical chemist at the Pharmaceutical Society in 1857.

Daniel Hanbury (1825–1875), by Charles Henry Jeens, 1876

Although groomed for a career at Plough Court (he eventually became a partner with his cousin, Cornelius Hanbury, in 1868), Hanbury's career took a different direction. At the Pharmaceutical Society he was influenced by some of the leading pharmacists and botanists of the day, such as Jonathan Pereira, Jacob Bell, and Theophilus Redwood, who awakened his interest in science. Botany became a passion with him, as it was for other Hanburys. (Daniel's younger brother, Sir Thomas Hanbury, laid out a famous botanic garden—La Mortola—at Ventimiglia in Italy.) Daniel became devoted to the study of pharmacognosy, or the knowledge of drugs, which at that time meant a close study of their botanical and geographical origins. While continuing with his work at Plough Court, he began writing to botanists, pharmacists, travellers, government officials, and anyone who could supply him with information and materials. He familiarized himself with classical and contemporary literature, and foreign languages, and, when he could, he travelled abroad extensively to collect specimens. He was particularly interested in Chinese materia medica and the origins of storax.

Hanbury retired from the family business in 1870, after what he described as 'a great deal of weary but not too disagreeable occupation' (Tweedale, 64), so that he could concentrate on research. In 1874 he published *Pharmacographia*, a joint work with Professor F. A. Flückiger, a teacher of pharmacognosy at Bern. The aim of this book

was to investigate anew the field of vegetable materia medica in order, as far as was possible, to remove some of the uncertainties which surrounded the subject. Within a few decades, the development of the pharmaceutical industry was to make such researches seem dated. Nevertheless, Hanbury's investigations into the minutiae of plants and drugs were highly influential among his contemporaries, and were collected and published posthumously in a series of over eighty articles in his *Science Papers* (1876).

Hanbury became a member of several professional societies—the Linnean Society (1855), the Chemical Society (1858), and the Royal Microscopical Society (1867)—and was elected a fellow of the Royal Society in 1867. He was also active as an examiner in the Pharmaceutical Society, which later commemorated his life with the biennial Hanbury memorial medal. However, his lifestyle was that of a shy and reclusive scholar, and he disliked social occasions. This may have reflected his strict Quaker upbringing (though his scholarship seems to have left little time for religious works). He disliked tobacco and alcohol, avoided meat, and never married. His abstemious eating and drinking was said to have contributed to his early death; he died aged forty-nine from typhoid fever at Hollywood, Clapham Common, on 24 March 1875 and was buried at the Quaker burial-ground, Wandsworth, London.

Hanbury [*née* Sanderson], **Elizabeth** (1793–1901), philanthropist and centenarian, was born in Leadenhall Street in the City of London on 9 June 1793. She was the younger daughter of John Sanderson (1750–1816), a tea merchant, formerly of Armthorp, Yorkshire, and his second wife, Margaret, *née* Shillitoe (*c.*1749–1795). Possibly because of the early loss of their mother, Elizabeth and her sister, Mary (later married to Sylvanus Fox of Wellington), were soon actively engaged in the life of the Quaker circle in which they were raised, working in the anti-slavery movement and visiting Newgate prison with Elizabeth Fry. Elizabeth Sanderson was especially concerned with improving the conditions of women sentenced to transportation, and also campaigned against capital punishment for minor offences. On 21 November 1826 she married Cornelius Hanbury (1796–1869), a chemist of Plough Court, Lombard Street, who was a partner with his first wife's father, William Allen, in the pharmaceutical firm of Allen, Hanburys, and Barry. As both her parents were no longer living, Elizabeth was married in Bristol, presumably from the home of an uncle.

Although in the 1830s many evangelical Friends left the society, Cornelius and Elizabeth Hanbury continued as active members, and Elizabeth was acknowledged as a minister in the society in 1833. Their home was at Stoke Newington, Middlesex, though they often spent some winter months in their other London house at Plough Court. They also had a summer 'retreat' at Bonchurch on the Isle of Wight. In 1858, when her husband retired from business, they moved to Wellington, Somerset, the home of their relatives in the Fox family, and seven years later they went to live at The Firs on the Blackdown hills, Somerset, where in 1869 Cornelius Hanbury died. Even in her eighties Elizabeth Hanbury was said by a local observer to 'go dappin' along the road like a maid of sixteen', and she retained a lively interest in the work of her descendants, who maintained the family's tradition of Christian philanthropy. She was in full sympathy with the projects of her daughter, Charlotte [*see below*], and in the missionary work of her granddaughters: Elizabeth Wilson with the China Inland Mission, and Charlotte Hanbury in India with the Zenana Missionary Society. In 1887 she moved with Charlotte to the home of her son Cornelius at Richmond, Surrey. In May 1900, her 108th year, she sent a message to the Friends' yearly meeting in London and another greeting to Queen Victoria from 'her oldest subject'. She retained her sight until her 105th year, and up to her death could hear with the aid of an ear-trumpet. She died at Dynevor House, Richmond, on 31 October 1901, aged 108 years, 4 months, and 3 weeks, and was buried in the Quaker burial-ground at Wellington on 5 November.

Her daughter, **Charlotte Hanbury** (1830–1900), philanthropist, was born at Paradise Row, Stoke Newington, Middlesex, on 10 April 1830. She worked as a girl in local ragged schools in Bonchurch and Stoke Newington. She did not entirely sever her connections with the Quakers, but her Christian activities are better described as evangelical and interdenominational. She was greatly concerned for the welfare of the rural inhabitants of the Somerset and Devon uplands, and her active support of George Brealey's mission and day school work on the Blackdown hills reflects her appreciation of the ministry of the Open Brethren, with whom he was associated. She travelled widely on the European continent, more especially spending time in Germany with the family of Count Adelbert von der Recke Volmerstein, whose daughter had married Elizabeth's half-brother William in 1862. Further afield, from 1889 she began to visit Tangier and Morocco where she became concerned about the conditions of Moorish prisoners. In this connection she established a refuge in Tangier with a reading room from which unobtrusive mission work was conducted. When, in 1900, she learned that she had not long to live, she entrusted the care of the Tangier mission to her cousin Henry Gurney and dictated her autobiography which was edited by her

niece Caroline Head in 1901. She died at Dynevor House, Richmond, on 22 October 1900, and was buried in Highgate cemetery, Middlesex, three days later.

Wealth at death £1613 19*s.* 11*d.*: probate, 2 Sept 1902, *CGPLA Eng. & Wales*

Hanbury, Harold Greville (1898–1993), jurist, was born on 19 June 1898 at Compton Verney, Wellesbourne, Warwickshire, the only child of Basil Hanbury (1862–1933), gentleman of independent means, and his wife, Patience, *née* Verney (1873/4–1965), younger daughter of Henry Verney, eighteenth Baron Willoughby de Broke. He was educated at Warren Hall, Eastbourne, and Charterhouse School, before going up to Brasenose College, Oxford, on a classical scholarship in 1915. During the First World War his father served as a major in the Warwickshire yeomanry, and was made honorary lieutenant-colonel. Hanbury himself enlisted in 1916, serving first in the Artists' Rifles and then (as a lieutenant) in his father's regiment. In 1939, on the outbreak of the Second World War, he re-enlisted, and served as a staff captain until 1942 when he was discharged to run courses for allied troops. It was not surprising that patriotism was an important element in his life.

After the First World War Hanbury returned to Oxford, and took his degree in jurisprudence in 1920, being awarded the Vinerian scholarship. He then came top in the examination for bachelor of civil law in 1921. In that same year he was elected a fellow of Lincoln College. He remained there as a fellow for twenty-eight years, and was an honorary fellow thereafter. On 21 July 1927 he married Anna Margaret Geelmuyden Dreyer (*d.* 1980), daughter of Hannibal Dreyer of Copenhagen, and niece of Georges Dreyer, professor of pathology at Oxford.

At the time of Hanbury's election Lincoln College was less distinguished than it later became, and its poverty was renowned. Hanbury, however, became the archetypal Lincoln man, serving as dean, senior tutor, and sub-rector. His style fitted in well with the Oxford of the 'Brideshead' generation, with rather limited academic expectations of undergraduate commoners at a typical college. Expectations of college tutors were also modest, but this did not prevent Hanbury from publishing *Essays in Equity* (1934), *Modern Equity* (1935)—a textbook which ran to thirteen editions by 1989—and a brief history, *English Courts of Law* (1944; fifth edn, 1979).

Hanbury was immensely popular with his undergraduates. He and his wife entertained warmly and generously. Having no children of his own he took an especially keen interest in the lives and successes of his former pupils. He loved cricket, and also liked cats and was vice-president of the Oxford Cat Club. He was the model of a college man of that era. He was active in university affairs, and served as senior proctor twice, in 1933–4 and 1944–5.

Hanbury was a disciple (and literary executor) of Sir William Holdsworth, the leading academic lawyer of the inter-war years, at a time when academic law in England was in the doldrums. He and A. L. Goodhart edited the last four volumes of Holdsworth's *History of English Law* (1952–66); the final volume was put together from boxes of notes found after Holdsworth's death. The newly created readership in equity was offered to Hanbury in 1948 and it seemed an appropriate reward for college and university service. When in the following year Hanbury was elected Vinerian professor and thus fellow of All Souls, there was considerable surprise, his success owing more to the dislike of more obvious candidates than to Hanbury's academic distinction. He held the chair until 1964 without producing any significant research, though he published the engaging *Vinerian Chair and Legal Education* in 1958. He remained a popular figure: his rather discursive style of lecturing and writing was appreciated by a core of admirers. His tall, ambling, spare figure was a familiar Oxford sight.

Hanbury served on a number of government committees inquiring into industrial disputes (such as the committee of inquiry into the provincial omnibus industry, 1954) and as chairman of inquiries in the West Indies (board of inquiry into West Indian Airways, 1958) and Gibraltar (tribunal for industrials, 1960). He was an honorary bencher of the Inner Temple, London, and was made an honorary QC in 1960. In 1962–3 he served as visiting professor and acting dean of the law faculty at the new University of Ife, Nigeria; and, following his retirement as Vinerian professor, he was dean of the law faculty at the University of Nigeria from 1964 to 1966. He was subsequently an advocate of the Biafran cause, publishing *Biafra: a Challenge to the Conscience of Britain* in 1968.

Following the death of his wife in 1980, Hanbury was consumed with grief and went to live with a god-daughter in South Africa, whence he bombarded friends and acquaintances with letters. He died in a nursing home in Pinetown, Natal, South Africa, on 12 March 1993.

Wealth at death £116,169: probate, 30 Dec 1994, *CGPLA Eng. & Wales*

Hanbury, Sir James Arthur (1832–1908), military surgeon, was born on 13 January 1832 at Somerstoun House,

parish of Laracor, near Trim, co. Meath, Ireland, one of the fourteen children of Samuel Hanbury, a large landowner, and his wife, Louisa, daughter of Charles Ingham, rector of Kilmessan and Kilcool, co. Meath.

Hanbury studied at Trinity College, Dublin, and graduated MB in 1853. In September of that year he entered the Army Medical Service as an assistant surgeon. A brother, William, also in the Army Medical Service, was with the 24th regiment when it was annihilated at Chilianwala in 1849, and assisted Florence Nightingale in establishing the hospital at Scutari. He was in charge of Netley Hospital until his death. Another brother, Fleet Surgeon Ingham Hanbury RN, distinguished himself at Tell al-Kebir, was mentioned in dispatches, and received the bronze decoration and CB.

Hanbury steadily rose through the military ranks. He was promoted surgeon on 20 February 1863; surgeon-major on 1 March 1873; brigade surgeon on 27 November 1879, deputy surgeon-general on 5 May 1881; surgeon major-general on 14 June 1887. He retired from the service on 13 January 1892. He was elected an honorary FRCS Ireland on 19 July 1883, and FRCS England on 14 April 1887 (his diploma of membership being dated 23 February 1859).

Hanbury was quartered for some years at Halifax, Nova Scotia, before being sent to China and then to India. He served with the Bazar valley expedition in the Anglo-Afghan War of 1878–80, and was present during the march from Kabul to the relief of Kandahar. He was under fire in the battle of 1 September in that campaign, and besides being mentioned in dispatches in 1881, he received the CB, and the medal with clasp and the bronze decoration. As principal medical officer under Lord Wolseley during the Egyptian campaign of 1882, he was present at the battle of Tell al-Kebir, where he was instrumental in causing wounds to be dressed for the first time on the battlefield. Twice mentioned in dispatches, he was appointed KCB, the medal with clasp, the second class of the Mejidiye, and the khedive's star, in 1882. He served as principal medical officer at the Horse Guards and at Gibraltar (1887–8), and was surgeon-general of the forces in Madras (1888–92). In 1905 he received the distinguished service reward.

In 1876 Hanbury married Hannah Emily, daughter of James Anderson of Coxlodge Hall, Northumberland, and widow of Colonel Carter. Tall, alert, and handsome, of great independence and energy, Hanbury was a popular master of hounds at Ootacamund, India. He died at his home, Frondjern, Manor Road, Bournemouth, on 2 June 1908, and was buried on 7 June in Bournemouth. His wife survived him. D'A. POWER, *rev.* CLAIRE E. J. HERRICK

Hanbury, John (1664?–1734), landowner and ironmaster, was born at Gloucester, where he was probably baptized at St Nicholas's Church; he was the eldest son of Capel Hanbury (*d.* 1704) and his first wife, Elizabeth, the daughter of William Capel of Barnwood, Gloucestershire. Capel Hanbury's elder brother Richard died in 1660, leaving him sole heir to the family's estate in Worcestershire and Gloucestershire, and also to property (mostly leasehold) in Monmouthshire, on which the family had operated several ironworks since the 1570s.

Hanbury matriculated at Pembroke College, Oxford, on 26 March 1681 and enrolled at the Middle Temple in 1683. But he soon abandoned the law in favour of the family's iron-making interests, of which he seems to have assumed control about 1685, as soon as he was twenty-one. In his own words:

> I read Coke upon Littleton, as far as tenant in dower; but on the suggestion of a friend that I should gain more advantage from the iron works at Pontypool than from the profits of the bar, I laid aside tenant and dower, and turned my attention to mines and forges. (HoP, *Commons*, 105)

He settled at Pontypool, where in the early 1680s his father had built a mansion and created a park close to the ironworks. By 1685 his father had remarried and was living at Hoarstone, Gloucestershire, leaving the family's south Wales interests entirely to John, who became known as Major Hanbury from a commission in the militia.

Capel Hanbury's death in 1704 prompted John to take stock of the ironworks: he decided to concentrate operations closer to Pontypool by giving up outlying sites, and also began using the profits of the business to buy land in adjacent parishes, thus laying the foundations of the Pontypool Park estate of later generations.

Hanbury's ironworks were the scene of two major technical advances, although how far the credit for these should be assigned to him and how far to his managers, notably Thomas Cooke and Edward Allgood, is unclear. Between 1695 and 1697 Hanbury introduced a water-powered rolling mill, with adjustable rolls, at Pontypool, which made it possible to roll iron into thin sheets ('blackplate') of a uniform gauge, thus overcoming one of the major obstacles to the establishment of a tin-plate industry in Britain. Some years later, apparently in the early 1720s (although the date remains uncertain), tin plate itself was produced on a commercial scale for the first time in Britain at Pontypool, after those in charge of the works had overcome the problem of cleaning the blackplate prior to tinning. These two innovations paved the way to the establishment of an industry which remained concentrated in south Wales (although principally further west, around Swansea) until modern times.

In 1701 Hanbury married Albinia, daughter of Major-General William Selwyn of Matson, Gloucestershire, and in the same year, under the patronage of her family, entered parliament as one of the members for Gloucester, a seat which he held as a whig until he was defeated in the general election of 1708. Albinia died in 1702, possibly in childbirth, and on 3 July 1703 Hanbury married Bridget (*d.* 1741), the daughter of Sir Edward Ayscough of South Kelsey, Lincolnshire. She was a friend of Sarah, duchess of

Marlborough, and was probably introduced to Hanbury by his first wife's elder brother John Selwyn, who was for a time aide-de-camp to the duke. The Hanburys remained friends of both the duke and duchess for the rest of their lives; Hanbury was one of Marlborough's executors in 1722. In 1704 Hanbury leased 24 Golden Square, London, as a town house; and he retained this until he built a much larger house on a plot in the old privy garden of Whitehall Palace under a lease of 1721.

In 1720, five years after unsuccessfully contesting another election at Gloucester, Hanbury was chosen as an independent member of parliament for Monmouthshire, a seat which he retained until his death. He was no speaker but proved a competent man of business and chaired several committees. Hanbury died at Pontypool Park, Trevethin, on 14 June 1734 and was buried in Trevethin church, where a monument describes him as one 'who by his great understanding and humanity made the people of this place and neighbourhood rich and happy; and they will tell their children to latest posterity that he was a wise and honest man'. He and Bridget had eight sons who survived infancy, of whom the third, Capel, was his eventual heir. The fourth son, Charles, inherited a fortune from his godfather, Charles Williams, and (as Sir Charles Hanbury *Williams) had a successful career as a diplomat.

Hanbury, John (1700–1758), merchant, was born at Llanfihangel, Monmouthshire, on 15 August 1700, the son of Charles Hanbury (1677–1735) of Pant-teg, and his wife, Grace (*d.* 1710), widow of Jenkinson Beadles. The Hanbury family had been active in the Society of Friends from his grandfather's time. Although John's active career was spent almost entirely in London, there are no surviving records of an apprenticeship there or of his admission to a livery company. He first appears as an independent trader in London about 1724, suggesting that he had spent the immediately preceding years away from London, most likely as a factor in the Chesapeake for an English merchant. He soon became conspicuously active in the London tobacco import trade, ranking second in 1729–31, and first by 1747. His Virginia business was primarily that of a commission merchant, receiving from planters consignments of tobacco for sale, and returning cargoes of manufactures and other goods as ordered. His Maryland business, by contrast, involved substantial dealings with local independent merchants. In both trades he reduced costs and risks by sending out relatively few vessels of his own, depending instead on chartering as needed. To superintend the frequent adjustments needed, he employed a principal agent in each colony with broad powers to charter shipping.

Hanbury's Virginia and Maryland correspondents included planters from the most prominent local families. To attract such a clientele he was expected to provide political as well as the usual commercial services. By the 1740s he was a key player in the competition to influence appointments to desirable public positions in both colonies. In Maryland he was very close to Lord Baltimore, whom he served as 'banker', and in Virginia to Lieutenant-Governor Gooch, whose executor he became. He was also reportedly on excellent terms with all the major figures in the Pelham and Newcastle ministries. Through his access to Lord Granville, lord president of the council, he was able to deflect British legislation requiring loyalty oaths that would have excluded Pennsylvania Quakers from public office. When the issue became pressing at the start of the Seven Years' War, Hanbury negotiated the compromise under which Quakers withdrew from the Pennsylvania legislature during the war but retained their rights to future membership.

In 1747 Hanbury took in as partner his cousin Capel Hanbury (*d.* 1769), son of a Bristol soap maker. Both partners had numerous acquaintances in Bristol and were able to cultivate a political interest there. John Hanbury particularly pleased the duke of Newcastle by soliciting votes and guaranteeing funds for the election in 1754 of Robert Nugent as member for Bristol. Hanbury's closeness to the ministry became controversial at the time of Braddock's expedition the next year. In 1747 the local planters and merchants organizing the Ohio Company of Virginia had asked Hanbury to take a share in the company and act as its London agent. As such, he was consulted by both Henry Pelham and the duke of Newcastle on the French military challenge in North America. He also contracted to pay and victual Braddock's troops; in this work his agents and the warehouses of the Ohio Company were utilized. When the expedition ended in disaster, Dr John Shebbeare and other anti-ministerial publicists tried to depict John Hanbury as the hypocritical and self-serving Quaker mastermind behind the ill-fated strategy. In fact, from 1726 Hanbury had been the member of the Quakers' meeting for sufferings, responsible for correspondence with Virginia and Maryland. Even so, he attracted unfavourable comment from more strictly pacifist Friends for arming his ships in wartime and for investing in privateers in the 1740s.

This John Hanbury, usually termed of Tower Street, must be distinguished from several namesakes, including Major John Hanbury of Pontypool (1664?–1734), ironmaster and MP, and John Hanbury (1671–1732), governor of the

Hamburg Company and subgovernor of the South Sea Company. In 1728 John Hanbury of Tower Street married Anna Osgood (*d.* 1754) from a prominent Quaker family originally from Bristol. When he died intestate on 22 June 1758 at Holfield Grange, Coggeshall, Essex, his real estate (primarily in Essex) passed to his only son, **Osgood Hanbury** (1731–1784), and his personal estate was divided equally between Osgood and his sister, Anna, wife of Thomas Barnard of Kingston, Surrey. She had no children so that, at her death, her share of her father's fortune also went to Osgood's children, including the brewer Sampson Hanbury.

Osgood Hanbury at first continued his father's North American firm in partnership with Capel Hanbury. After the latter's death in 1769, Osgood began to disengage from the now politically exposed Chesapeake trade and thus reduced his ultimate losses from the American War of Independence. In 1757 he married Mary, daughter of Sampson Lloyd (1699–1779) of Birmingham, Quaker iron dealer and banker. During the American War of Independence he compensated in part for the loss of his Chesapeake trade by expanding his West Indies business through the firm of Hanbury and Gosling. In 1770 he had also joined in founding the London bank of Hanbury, Taylor, Lloyd, and Bowman in partnership with his father-in-law. This firm, continued by his descendants for four generations, served as the London correspondents of Taylors and Lloyds, the family's bank in Birmingham, until absorbed in 1884 into what ultimately became the modern Lloyds Bank. Through the marriage of his daughter Anna to Sir Thomas Fowell Buxton, bt, brewer and anti-slavery activist, Osgood Hanbury was also the progenitor of the numerous Buxtons and Hanburys who over many generations managed the Truman, Hanbury, and Buxton brewery. He died in 1784. JACOB M. PRICE

Hanbury, Sir John (1782–1863), army officer, second son of William Hanbury (*d.* 16 Nov 1800) of Kelmarsh, Northamptonshire, and his wife, Charlotte, the daughter of Charles James Parke, was born at Kelmarsh and educated at Eton College. He was appointed ensign of the 58th regiment on 20 July 1799, his subsequent military commissions being lieutenant (26 September 1799), captain (3 June 1802), lieutenant-colonel (20 December 1812), colonel (25 July 1821), major-general (22 July 1830), and lieutenant-general (23 November 1841). Hanbury saw much service with the 58th in Egypt in 1801, where he was present at Abu Qir Bay and Alexandria in March, and received the sultan's gold medal given to the British officers present at these actions.

After a period on half pay Hanbury transferred to the 1st foot guards and served as aide-de-camp to General Warde in Portugal and Spain in 1808–9, being present in the retreat to and subsequent battle of Corunna. He also served with the 1st foot guards at Walcheren, in the retreat from Burgos, and in the campaigns in the south of France in 1813–14. He commanded the 1st battalion of the 1st foot guards, in the expeditionary force under Sir Henry Clinton, which was sent to the aid of the princess regent in Portugal in December 1826. The guards brigade under Major-General H. Bouverie was stationed initially in the area of Santarem, and the 1st foot guards were warmly praised for their high morale and discipline during arduous marches over bad roads in poor weather. In spring 1827 the guards were sent to Lisbon to quell rioting, which was done with great effectiveness. Stationed in Lisbon until 1828, Hanbury returned with his battalion to London in April that year. He was made a knight-bachelor in 1830, and colonel of the 99th regiment in October 1851. He was also a KB (1832), KCH (1832), and KCB (1862). Hanbury married on 17 May 1842 Charlotte, the eldest daughter of Sir Nelson Rycroft, second baronet; she survived him. Hanbury died at his residence, 15 Charles Street, Berkeley Square, London, on 7 June 1863. Hanbury's elder brother, William (1780–1845), was raised to the peerage as Lord Bateman in 1837.

Hanbury, Osgood (1731–1784). *See under* Hanbury, John (1700–1758).

Hanbury, Richard (*c.*1535–1608), goldsmith and ironmaster, was born at Elmley Lovett, Worcestershire, the only son of John Hanbury of Elmley Lovett and his first wife, Elizabeth, daughter of John Brode of Dunclent, Worcestershire. He came of a long line of small landowners in Worcestershire. He married Alice (1538–1593), heir of Jasper Fisher, royal goldsmith to Queen Mary, on 28 April

1560. They had two daughters and lived first in Goldsmiths' Row, in the City of London, and later at Riding Court, near Datchet in Buckinghamshire.

Sworn in as a freeman of the Goldsmiths' Company in 1555, Hanbury progressed through the various offices to prime warden in 1591. Meanwhile in 1570 he had been introduced to the Company of Mineral and Battery Works (founded in 1565) and thereafter concerned himself mainly with developing an iron industry in south Wales. The older iron industry in Sussex and the weald of Kent was by then in decline, at a time when the demand for iron goods was rising fast.

Hanbury's first efforts as an ironmaster were devoted to making a success of the company's wireworks at Tintern and to supplying the necessary high-grade (osmund) iron from his own forges. As time went by, however, he saw better prospects in disengaging from the wireworks and, in effect, holding them to ransom by securing as many as possible of the local sources of ore and most of the nearby woods suitable for charcoal making. As a spokesman for the company put it in 1593, 'the works have no provision of good osmond iron but from him [Hanbury] both that for all the best mines in Monmouthshire be his and almost all the woods within ten miles compas thereof be his also' (Sir Richard Martyn to Lord Burghley, BL, Lansdowne MS, 75/90). However, osmund iron was expensive to produce and there was more profit in producing merchant iron for a wider market. When Hanbury began sending cheaper iron to the wireworks, the company appealed to the privy council, making much play of the hardship caused to the workers and their families when the poor quality of the wire made it difficult to sell. Despite continued pressure on him, Hanbury continued to send inferior iron to Tintern until in 1598 the privy council ordered his arrest, together with his son-in-law Edmund Wheeler, and they were committed to the Fleet prison. Three months later they made their submission and were released. The supply thereafter of reasonable quantities of osmund iron to the wireworks, at a price Hanbury still claimed was uneconomic, does not seem seriously to have reduced his profits.

Another contentious issue at times had been the cutting of timber for charcoal, which had culminated in two or three clashes between Hanbury's woodcutters and armed parties of those who felt that their ancient rights to cut what they needed were being put at risk. For whatever reason, these disputes died down after 1580 and it is now possible to see that the extra value given to Monmouthshire woods by the demand for charcoal did much to ensure their survival.

Richard Hanbury was the most enterprising and successful ironmaster of the sixteenth century in Wales, not least because he had the deviousness and lack of scruple needed to overcome entrenched opposition. His works were principally concentrated around what later became the town of Pontypool, but he also had forges in Brecknockshire and Glamorgan, as well as depots in Bristol and London. His workforce, probably never more than 200 strong, would spend the summer months in the woods producing charcoal, and the winter, when the rivers were better able to turn the water-wheels that worked the bellows, making iron. Hanbury sat for Minehead in the parliament of 1593; Minehead was probably one of the ports to which he shipped his iron.

Richard Hanbury died on 20 May 1608 and was laid beside his wife in Datchet church. His total bequests, besides land in Buckinghamshire, Worcestershire, and south Wales, amounted to £17,850, together with £5000 invested in the ironworks. These last, and his land in south Wales and Worcestershire, passed to his nephew and executor, John Hanbury.

Wealth at death over £25,000: will

Hanbury, Robert William (1845–1903), politician, born on 24 February 1845 at Bodehall House, Tamworth, was the only son of Robert Hanbury of Bodehall, a country gentleman of moderate landed estate but of ample means derived chiefly from collieries, and his wife, Mary, daughter of Major T. B. Bamford of Wilnecote Hall, Warwickshire. Left an orphan in early childhood, Hanbury was educated at Rugby School and at Corpus Christi College, Oxford, where he was well known as an 'oar'. He graduated BA in 1868 with a second class in *literae humaniores*. At the age of twenty-seven he became in 1872 one of the two Conservative members for the safe Tamworth seat. In 1878 he resigned it to move to North Staffordshire at a by-election when he was unopposed. But in 1880 he came third in that two-member constituency. For the next five years he threw himself energetically into the work of Conservative organization. He contested Preston unsuccessfully in 1882, but won the seat in 1885, retaining it with increasing majorities until his death.

A vigilant and unsparing critic of the estimates even in the Conservative parliament of 1886–92, Hanbury was regarded at first as something of a freelance; but when the Liberals returned to power in 1892, he and his allies, Thomas Gibson Bowles and George Christopher Trout Bartley, kept up a ceaseless warfare in the committee of supply upon the policy of the government in every department. He was particularly energetic in attacking from the financial side Gladstone's Home Rule Bill of 1893, and it was largely due to him that the question of the national store of cordite assumed the importance that inspired the motion of June 1895, on which the Rosebery ministry was defeated and resigned.

In Salisbury's subsequent government, Hanbury was made a privy councillor and financial secretary of the Treasury. That post he held until 1900. The Unionist ministry was then reconstructed after the general election of

that year, and Hanbury succeeded Walter Long as president of the Board of Agriculture, with a seat in the cabinet. The change was regarded with some suspicion by the agricultural community; but Hanbury went among the farmers on all available occasions, delivered speeches at agricultural gatherings, and won general confidence.

Hanbury was twice married (but had no children): first, in 1869 to Ismena Tindal (*d.* 1871), daughter of Thomas Morgan Gepp of Chelmsford; second, in 1884 to Ellen (*d.* 1931), only child of Colonel Knott Hamilton, who survived Hanbury, marrying shortly after Victor Bowring, and taking the name of Bowring-Hanbury. Hanbury was known for his exceptionally fine physique. He died suddenly at his London home, Herbert House, Belgrave Square, on 28 April 1903, from pneumonia; he was buried in the churchyard at his country house, Ilam, near Ashbourne. There was an unpleasant family lawsuit about the terms of Hanbury's will and his substantial fortune; it was eventually resolved in a compromise by the law lords (*Times Law Reports*, 21.252).

William Hanbury (1725–1778), by Richard Earlom (after Edward Penny)

Hanbury, William (1725–1778), Church of England clergyman and horticulturist, was born at Bedworth, Warwickshire, on 26 September 1725 and baptized there on 10 October, the son of William Hanbury (*d.* 1750) of that parish and later of Foleshill and his wife, Ann, *née* Ward. He matriculated at Magdalen Hall, Oxford, on 17 January 1745 and graduated BA from St Edmund Hall in 1748. The degree of MA was subsequently conferred on him by St Andrews University on 11 November 1769 in recognition of his achievements in planting.

Hanbury's keen interest in gardening was nurtured at Oxford, after which he sought entry into the established church. He was ordained deacon on 25 September 1748 and priest the next year. A living, latterly acquired by his father, was already awaiting him: the prosperous rectory of Church Langton, Leicestershire, comprising five hamlets and three churches. Hanbury was instituted on his own petition. He married Sarah (*bap.* 1735, *d.* 1813), daughter of Benjamin and Sarah Ellis of Arthingworth, Northamptonshire, on 18 April 1754. Three years earlier he had commenced extensive planting and gardening schemes in Church Langton with a view to raising money for charity from plant and tree sales. By spring 1753 'the seed-beds smiled with their numerous progeny' (Nichols, 2.686) and Hanbury wanted to expand his plantation onto adjacent land. The roots of his ultimate failure lay in the haste with which he pursued these plans before endearing himself sufficiently to influential parishioners—particularly necessary for an outsider of relatively humble origins in mid-Georgian England. He fatally lacked both the charm and diplomatic qualities necessary to win over the two major landowners in the parish, the widowed sisters of West Langton Hall, Dorothy Pickering and Frances Byrd. They judged his expansionist schemes both hurried and unwarranted, and advised against using glebe land for plantations where there existed a right of common after the hay harvest. By 1757 a mortified and frustrated Hanbury would brook no further delay and instead concentrated on his nursery at Tur Langton and his plantation at Gumley, procuring for this purpose seeds and plants from many sources, including North America.

Hanbury's plantations in 1758 were generating sufficient income from the sale of plants, trees, and shrubs for him to vest his enterprise in trustees drawn predominantly from the local gentry; they were annually to dispose of the produce and devote the profits to the creation of a fund. Hanbury's ambitious hopes of growth were set out in his *Essay on planting, and a scheme for making it conducive to the glory of God and the advantage of society* (1758), which he dedicated to Oxford University in the hope of attracting wider notice. He insisted that planting was a patriotic duty as well as suited 'to the preserving of Health, and the prolonging of Life' (Hanbury, *Essay on Planting*, 17). According to this scheme, when the fund reached £1500 the interest was to be applied to the decoration of the church at Langton, providing it with an organ, an organist, and a schoolmaster; when it reached £4000 a village hospital would be founded. Advowsons were to be purchased, by which the

trustees could reward deserving clergymen. In 1760 Hanbury published *A Plan for a Public Library at Church Langton in Leicestershire*, which added a further dimension to his plans for the village: a vast academic library. Though he donated books worth £100 and appealed to the learned world to send him manuscripts the trustees were not impressed and the scheme was stillborn. They were more supportive of fund-raising by means of annual choral festivals for the performance of Handel's oratorios, which began in 1759 at Langton, then moved to Leicester in 1762 and Nottingham in 1763. These festivals were well attended—for the concert on 26 September 1759 'more than two hundred coaches, chariots, landaus, and post-chaises' were seen at Church Langton (Hanbury, *History*, 81)—but failed to bring in the quick profit that Hanbury sought. They were further soured when disputes occurred with the conductor, William Hayes, professor of music at Oxford University, who defended himself in *An Account of the Five Music Meetings* against 'this GOLIAH, who, armed *cap a pie* in his self-sufficiency, bids defiance to all the world' (p. 3). The quarrel and inadequate returns persuaded Hanbury to abandon music as a fund-raiser. His side of the disputes with the trustees and with Hayes was given *inter alia* in his *History of the Rise and Progress of the Charitable Foundations at Church Langton* (1767).

Hanbury's relations with the trustees were not easing by that date; they queried his increasingly unfeasible schemes, he suspected them of suppressing orders for trees. He accordingly established a fresh deed of trust in 1767, which provided for only ten trustees, mostly from non-gentry backgrounds. It coincided with the issue of more ambitious plans. Hanbury proposed that funds should be allowed to accumulate from the annual proceeds of his plantations until the income reached £10,000 or £12,000 p.a. and then (1867 was reckoned an attainable starting date) he prescribed the creation of a minster church 660 ft long and lavishly decorated, comparable with St Peter's, Rome. It would have a major choral establishment, a public library (1000 of his own volumes were set aside for such a purpose in his lifetime), a college with six associated professorships, including one in antiquities (Richard Gough praises it in his *British Topography*), a picture gallery, a hospital for poor women, schools, a printing office, and an annual dole of beef. A further scheme of 1773 provided for the foundation of a major choral college in Oxford with 100 choral scholars for the celebration of divine worship, a convent for women, almshouses for men, a physic garden, and a massive library in the Italianate style. Hanbury's grandiose charitable plans would, his obituary in the *Leicester Journal* suggested, have taken a millennium to be effected. After heavy sales of trees in 1761 income fell far short of expectation, with trust capital in 1778 standing at just £4823. Moneys were regularly invested until in 1863 the whole basis of Hanbury's charity was reordered. A sum of £5000 was raised under a scheme established by chancery court order of January 1864, to be laid out mainly on the churches of Church Langton, Tur Langton, and Thorpe Langton. Educational provision has also been made from the trust for the Langtons at intervals since that date.

The wrangling and the failure to generate income quickly was exacerbated by personal tragedy when Hanbury's son John (Jackey) died, aged ten, in February 1774. Hanbury himself died on 1 March 1778 and was buried at Church Langton in a mausoleum in the churchyard, according to his instructions. His other publications were *The Gardener's New Calendar* (1758) and *A Complete Body of Planting and Gardening* (2 vols., 1770–71), one of the earliest encyclopaedias on forestry and gardening, which was the distillation of his life's work and learning and shows his familiarity with the Linnaean system. A projected translation of Virgil came to nothing through the premature deaths of his friends and collaborators, Charles Churchill and Robert Lloyd. His belief that a programme of controlled tree-planting would accrue large profits was misplaced but never ceased to exercise the imagination of this well-meaning parochial autocrat. Hanbury always proclaimed his good intentions: 'As the amusement of gardening is innocent and the profits arising from it are intended for the glory of God and the good of mankind, I think I cannot be censured for pursuing this bent' (Wilshere, 1). Despite the fact that he never employed a curate he did not allow his passion for planting to sideline his duties as incumbent, although services in the outlying chapelries of Thorpe Langton and Tur Langton were kept to a minimum. Charges for dereliction of duty brought against him by a churchwarden in the archdeaconry court were withdrawn when the official involved recanted on 31 March 1766. His widow died on 17 November 1813, aged seventy-eight. NIGEL ASTON

Hance, Henry Fletcher (1827–1886), diplomatist and botanist, was born on 4 August 1827 at Gloucester Terrace, Old Brompton, London. His early childhood was spent mainly with his maternal grandfather, Colonel Fletcher RN, at Plymouth, but he was educated in London and on the continent, mainly in Belgium, where he learned French, German, and Latin. At the age of seventeen (1844), already a self-taught botanist, he entered the civil service of Hong Kong. On 27 May 1852 he married (Anne) Edith,

the daughter of William Baylis, an accountant; they had one son, Alfred Charles.

In 1854 Hance transferred to the superintendency of trade in China, and shortly afterwards to the British consulate at Canton (Guangzhou). During the riots there caused by the *Arrow* affair, he lost valuable collections of books and botanical specimens when the foreign factories were burnt. War followed, and Hance left for Hong Kong. In 1856–7 he visited Amoy (Xiamen) to collect plants. After the conclusion of the treaties he returned to the consulate at Canton. In 1861 he was appointed vice-consul at nearby Whampoa (Huangpu), but he returned to Canton in 1878 to act as consul. In 1866 he made a botanical excursion up the North River with Theodore Sampson, travelling some 125 miles from Canton. They also visited the island of Hainan; Hance went to Saigon in 1875. His first wife, Edith, died in 1872. Hance remarried in September 1875, and had three further children.

In 1881 and in 1883 Hance again acted as consul at Canton; in September 1883 there were serious riots and the foreign settlement was attacked. Hance sent his wife and children to safety and returned alone to his post, showing courage and good sense. In May 1886 he was appointed acting consul at Amoy.

Despite his capacity to acquit himself well and his forty-two years' experience as a consular official, together with his aptitude for languages, Hance declined to study Cantonese or Mandarin, and so did not rise in his profession as a diplomat. He devoted all his leisure and energy to botanical studies, collecting specimens from travellers and missionaries and encouraging the study of botany throughout China. Both his wives and his son Alfred Charles took an interest and collected for him. Hance's work added significantly to contemporary knowledge of the flora of China. He contributed many papers to Hooker's *Journal of Botany*, and he added a supplement to Bentham's *Flora Hongkongensis* containing seventy-five new species of plants. He was a frequent contributor to the *Journal of Botany*, the *Proceedings of the Linnean Society*, the *Annales des Sciences Naturelles*, and other scientific journals, and his work won respect from eminent botanists of the day. Sir Joseph Hooker, for example, declared that Hance displayed 'rare ability in mastering the technicalities of structural and descriptive botany'; and Theodore Sampson, while feeling that Hance was 'rather too fond of making new species', nevertheless admitted that his contributions to the science of botany were extensive. Hance was awarded an honorary PhD from Giessen University in 1849, and in 1877 was elected a member of the Deutsche Akademie der Naturforscher Leopoldina, one of the oldest scientific institutions in Germany; he was also made a fellow of leading botanical societies in England and abroad. He left his herbarium, consisting of more than 22,000 different species or varieties, to the British Museum, where it was placed in the natural history section. He died of fever on 22 June 1886 at Kulangsu, Amoy, and four days later was buried at Happy Valley, Hong Kong.

Hancock, Albany (1806–1873), zoologist, was born at Bridge End, Newcastle upon Tyne, on 26 December 1806, the third of the six children of John Hancock (*d.* 1812), a saddler and ironmonger, and his wife, Jane Baker, daughter of Albany Baker of Chester-le-Street. His father had made collections of plants, insects, and especially of shells, and, although he died when Albany was six years old, four of the six children, none of whom married, took up the study of natural history. Of these Thomas studied geology, Mary devoted herself to drawing natural history objects, and John and Albany are best-known as zoologists.

Hancock was educated in Newcastle upon Tyne and, at nineteen, was articled to Thomas Chater, a local solicitor. After a time spent in London he took an office over the shop of his friend the conchologist Joshua Alder in 1830 but did not remain long in the law. He had already in the previous year become one of the original members of the Natural History Society of Northumberland, Durham, and Newcastle upon Tyne, and communicated some notes to Alder's *Catalogue of Land and Freshwater Shells* (1830). He associated with a number of Newcastle naturalists, including Thomas Bewick, William Robertson, an able botanist, and his neighbour Alder. At this time he corresponded with W. J. Hooker, then professor at Glasgow, and Dr Johnston, the marine zoologist of Berwick, with reference to a proposed quarto work on British birds, some of the plates for which his brother John had already executed. Though this work was never carried out, it bore fruit in the magnificent John Hancock collection of birds now in the Hancock Museum at the University of Newcastle. Clever with his fingers from boyhood, Hancock from 1835 to 1840 devoted his time very largely to modelling in clay and plaster.

The first of the long list of Hancock's scientific papers, of which over seventy appear in the Royal Society's catalogue, is dated 1836. These are short notes on birds in Jardine's *Magazine of Zoology and Botany*. The great work of his life began in his association about 1842 with Alder in the

study of the Mollusca. The main result of this partnership was the *Monograph of British Nudibranchiate Mollusca*, published by the Ray Society between 1845 and 1855. In this work many of the descriptions and most of the drawings for the eighty-three coloured plates, including all those that are anatomical, are the work of Hancock. The plates are remarkable, alike for beauty of drawing and for delicacy of colour. The type specimens and original drawings are preserved in the Hancock Museum. Having described many new species, in 1844 Hancock began, in conjunction with Dr Embleton, lecturer on anatomy at the Newcastle school of medicine, an exhaustive inquiry into the structure of *Aeolis*, the sea slug. This joint research extended to 1849, and was followed between 1850 and 1852 by a similar investigation of the genus *Doris*, the 'sea-lemon'. Meanwhile Hancock had taken an active part in promoting polytechnic exhibitions at Newcastle in 1840 and 1848, and in founding the Tyneside Naturalists' Field Club in 1846. To the *Transactions* of this club he contributed a series of papers on the boring apparatus of sponges, molluscs, and barnacles, a subject on which he corresponded extensively with Charles Darwin. In 1857 he published in the *Philosophical Transactions* one of his most valuable contributions to anatomy, 'The organisation of Brachiopoda' (lampshells), and in the following year, partly on Darwin's recommendation, he was awarded the royal medal of the Royal Society; but he was too modest to become a candidate for fellowship, or even to accept the presidency of any of the local societies. In 1862 he became a fellow of the Linnean Society, and in 1868 there appeared in the journal of that society his paper 'On the anatomy and physiology of the Tunicata', which was the preliminary to a proposed monograph of the British representatives of the group which he was never able to complete. In 1863, on the occasion of the meeting of the British Association, in conjunction with his brother John, he got together a magnificent collection of scientific and artistic treasures in the Newcastle Central Exchange; and for many years he was an active member of the Literary and Philosophical Society of Newcastle upon Tyne.

Although a modest man, Hancock was very active in the social and scientific life of Newcastle and allowed himself insufficient rest or exercise, ruining his health. Unable for three years to work at his microscope, with characteristic energy he turned his attention to the fossil fish and reptiles of the permian and carboniferous series, and produced, in conjunction with Thomas Atthey, and afterwards with Richard Howse, no fewer than fifteen papers on them. Hancock died at his home in St Mary's Terrace, Newcastle, on 24 October 1873, and was buried in Jesmond cemetery in Newcastle four days later. He was unmarried. The Hancock Museum was proposed by his brother John as a memorial to his work, but was eventually opened as a memorial to both brothers after John's death in 1890.

Hancock, Anthony John [Tony] (1924–1968), comedian, was born at Small Heath, Birmingham, on 12 May 1924, the second of the three sons of John Hancock, hotelier, and his wife, Lilian Thomas. He was educated at Durlston Court, Swanage, and Bradfield College, Reading. He spent much of his youth in Bournemouth, where his father, himself a semi-professional entertainer, kept a small hotel which was often frequented by those appearing in the seaside resort's shows (including Elsie and Doris Waters) from whom Hancock gained an interest in show business.

Hancock found it difficult to settle into employment (he worked briefly for the civil service, and more briefly for a tailor in Birmingham), and made his stage début in Bournemouth in 1940. After joining the RAF in 1942 he graduated naturally to Entertainments National Service Association tours and to the Ralph Reader gang shows, which at that time had a military rather than a scouting membership. On demobilization he struggled to find his feet in variety, and, like many other former service comics, appeared at the Windmill Theatre ('We never closed'), a foil to the stationary nudes and scantily clad showgirls who gave it its reputation. He was never as celebrated for his stage performances as he was for those on radio and television—his regular fare of 'cod' impersonations was a trifle banal. He had some success, especially in a revue in the 1950s at London's Adelphi Theatre, and his presentation as a caged budgerigar in the royal command variety show of 1958 is widely regarded as a classic harmonization of the demands of stage and television screen.

But it was the domestic privacy of radio and television that best suited Hancock's genius for personally buttonholing his audience. He took part in radio programmes such as *Workers' Playtime* and *Variety Bandbox*, and then in 1951 appeared in the popular series *Educating Archie* as tutor to Peter Brough's ventriloquial doll, Archie Andrews, and his irritated catch-phrase, 'Flippin' kids', drew national attention. On 2 November 1954 his own show, *Hancock's Half Hour* was broadcast for the first time. His character, Anthony Aloysius St John Hancock, and his faded address, 23 Railway Cuttings, East Cheam, became famed throughout the land exactly at the moment that television aerials sprouted from the rooftops; the show translated to television in 1956. With Ray Galton and Alan Simpson as his sympathetic and alert writers (he had previously worked with them on *Happy Go Lucky*), and with

Anthony John [Tony] Hancock (1924–1968), by Bob Collins, 1958–9

highly capable support from Sid James (playing the crafty Sancho Panza to Hancock's pretentious Don Quixote), Bill Kerr, and Kenneth Williams, Hancock was hailed by critics and public as an immense comic talent. He was incapable of writing his own material and Galton and Simpson were crucial to his success; reworkings of their material in the 1990s with Paul Merton in Hancock's part indicate how much was owed relatively to performance and script.

The tedious Sunday afternoon, with its pre-Pinteresque pauses and hesitations and its quizzical side-glance at John Osborne's *Look Back in Anger*; the burlesque of Henry Fonda's *Twelve Angry Men* jury film (in which Magna Carta was hailed as 'that brave Hungarian peasant girl'); and the single-handed cameos, such as 'The Blood Donor' and 'The Radio Ham', all contributed richly to a pronounced Hancockian cult: quoting from Hancock was widespread among the same sorts of audience who would later regale each other with recitations of Monty Python's 'Dead Parrot' sketch. Whatever the role, Hancock was always the same picture of injured dignity, outwardly brazen, inwardly uncertain, as he suffered the buffets of life's enduring difficulties, forever sustaining the wordy stream of the semi-cultivated man. In 'The Blood Donor', for instance, possibly the most fondly recalled of the episodes, he was at once boastful of the precious fluid he deigned to offer and scared witless that a pint, rather than a pinprick, was the standard measure.

By eschewing the tinselly showbiz trappings associated with most radio and television comedy at this time, and by committing himself to uninterrupted dialogue and monologue, Hancock at once defined radio and television comedy in his own terms and made it difficult for stand-up stage comics to transfer successfully to the screen (Morecambe and Wise were, by conscious, exaggerated application, the rule-proving exception). This was to be Hancock's lasting professional heritage: he helped to make television safe, not for the conventional comedian, but for the comic actor, such as Ronnie Barker, Leonard Rossiter, and David Jason. Hancock's own comic models included Sid Field, of the versatile gallery of genial characterizations, and, ironically, tragic private life, and Jacques Tati, the popular French comedian of angular frame and optimistic mien.

Hancock's heavily jowled features, all pouches and creases, were moved occasionally to smug conceit, but more often to ruminative melancholy, while the unmistakable voice swooped from complacency to introspection. Together with the Homburg hat, the shabby fur-collared overcoat, the clodhopping feet, and the slightly clumsy, stooping posture, they formed a veritable picture of vanished grandeur, unrealized ambition, and irked resentment, which clearly resonated loudly in the Britain of the 1950s.

However, Hancock became bored with his routines; the radio *Half Hour* ended in 1959, the television series lasted until 1961. As Arthur Marshall observed, 'Seldom has such a dazzling career disintegrated so quickly' (*DNB*). Hancock parted company with Galton and Simpson and Sid James, having already jettisoned much of his talented supporting cast (Kenneth Williams's immensely popular 'snide' character, with his catch-phrase, 'Oooh, stop messing about', was sidelined and he left the show in 1959) and, with grandiose plans for establishing himself as an international star, came uncomfortably close to realizing in reality his comic persona. He made five poor films, starring in two, *The Rebel* (1961) and *The Punch and Judy Man* (1962), and an unsuccessful series for ITV. He sought psychological truth in comedy—he had tactlessly told Kenneth Williams that he did not want to do 'those funny voice "cardboard" characters of yours—but comedy based on truth' (*Kenneth Williams Diaries*, 287)—but without the support of first-rate scriptwriters Hancock stopped being funny. There was nothing humorous about his private life, either. His first marriage, to Cicely Janet Elizabeth Romanis (1930–1969), a model, began on 18 September 1950 and ended in divorce on 6 July 1965, and his second, to his publicity agent, Freda (Freddie) Ross (*b.* 1930), on 2 December 1965, which also ended in divorce, a week before his death in 1968, were both marred by heavy drinking and domestic violence. A tense and neurotic performer, driven by a tortured ambition to evolve and perfect his art, and a most troublesome and discourteous colleague to boot, Tony Hancock drank heavily from 1952, significantly at the very onset of his years of success. As he lurched from occasional generosity to frequent and obstreperous aggression his private life lacked any sign of the ordinary or normal. Many British comedians have been self-confident, self-

made, publicly anarchic, and privately conservative: Hancock was not of that ilk. It all added up to a tragic downward spiral, both personal and professional. While visiting Australia with a view to making a television series about a disgruntled 'pommy' immigrant, Tony Hancock committed suicide in his flat at Bellevue Hill, Sydney; his body was discovered there on 25 June 1968. He was cremated in Sydney, but his ashes were returned to Britain.

Hancock the man left a bitter personal memory, especially among those whom he had slighted: Kenneth Williams's animosity was not alleviated by Hancock's death, and there was certainly truth in his summing up: 'It seems a futile end, but the man was incredibly destructive all his life—never did anyone *waste* people & opportunities, as he did' (*Kenneth Williams Diaries*, 329). Tony Hancock the comedian's legacy was happier: *Hancock's Half Hour* set the standard and the style for British television comedy, and continues to find new audiences whenever it is revived.

Wealth at death £32,559: probate, 10 Dec 1968, *CGPLA Eng. & Wales*

Hancock [*married name* Donovan], Dame **Florence May** (1893–1974), trade union leader, was born on 25 February 1893 in Factory Lane, Chippenham, Wiltshire, one of fourteen children of Jacob Hancock, cloth weaver, and his second wife, Mary Pepler, *née* Harding, who had also been married before. Between them her parents already had ten children from their earlier marriages. Florence was the eldest child of this marriage and had two younger brothers and a sister whom she had to care for when both her parents died before she was eighteen. She was educated at the local elementary school, but left at the age of twelve to start work as a washer-up in a café. Two years later she took employment in a factory, the Nestlé Condensed Milk Company, where she was employed for 55 hours a week for a wage of under 6*s*. The factory was non-unionized, but in January 1913 the Workers' Union, a general union which sought to organize less skilled workers, including women, sent its woman organizer, Julia Varley, to hold a recruitment meeting at the factory.

Florence Hancock was the only woman who attended the meeting and this proved to be the beginning of her lifetime's involvement in the trade union movement. Two of the men who had called the meeting were dismissed, and in the strike which resulted Florence became a member of the strike committee. After the establishment of a union branch at the factory she took on the role of dues collector and then secretary of the branch. In 1917 she was appointed full-time organizer for the Workers' Union and was district officer for Wiltshire. She later recalled that she was given a great deal of support by Julia Varley, who 'gave me all the help that a good colleague could ... I always knew that I could go to her for advice and help which she gave willingly' (Hancock).

Dame Florence May Hancock (1893–1974), by Elliott & Fry, 1956

Hancock always believed that trade unions needed to take part in politics. Her own interest in political events was awakened at an early age through the influence of her father, a radical, who encouraged his daughter to read to him from *Reynold's News* and to discuss current affairs. She later recalled that her mother, a member of the local co-operative society, had also been willing to heckle speakers at political meetings. Although Florence supported the suffragette movement, the emphasis of her politics for most of her life was on the achievement of gradual progress. In 1915 she joined the Independent Labour Party (ILP), and in the 1920s was chair and then secretary of the Gloucester ILP as well as being active in the Labour Party in the south-west. She also went to Clay Cross during general elections to help Charles Duncan, general secretary of the Workers' Union, to defend his parliamentary seat. Despite her political interests, however, she increasingly concentrated her energies on the trade union movement, and when the Workers' Union merged with the Transport and General Workers' Union (TGWU) in 1929 she was made women's officer in Bristol, a post she held until 1942.

Between the wars Florence Hancock worked hard to organize women in the newly expanding light engineering and consumer industries, where it was difficult for unions to retain female members. With her soft west-country voice and neat appearance, usually wearing a tailored suit and blouse, she cut a respectable figure whose effectiveness as a trade union leader was increasingly recognized by her contemporaries. Women working within mixed-sex trade unions, however, found that their male colleagues often had little interest in organizing women or taking account of their needs, and they therefore sought ways to ensure that women's voices would be heard. Along with others, including Ellen Wilkinson MP and Anne Loughlin of the Tailors' and Garment Workers' Union, Hancock pressed the Trades Union Congress (TUC) to set up a women's advisory committee whose members would all be women. This was finally agreed in 1931 at the Conference of Unions Enrolling Women, which she attended as a delegate from the TGWU, and she soon became a member of the committee. She also took part in numerous movements to improve conditions for women workers, such as the campaign in 1937 against legislation which allowed women and young people to work excessive overtime, and on behalf of the TUC she joined in agitation for the establishment of a national maternity service. From 1935 to 1958 she was a member of the general council of the TUC and began to take a prominent part in a range of TUC activities. She took a particular interest in the international trade union movement and visited numerous countries in her role as TUC nominee on the International Labour Organization (ILO).

During and immediately after the Second World War Florence Hancock developed new areas of activity. She was promoted to be chief woman officer in the TGWU in 1942 and was chair of the women's advisory committee between 1941 and 1944, and then again between 1948 and 1952. Her long years of service and her abilities were recognized when she was made chair of the general council of the TUC in 1947–8. Throughout this period she continued to press for improvements in the work conditions of women and children. At the request of Ernest Bevin, minister of labour, she prepared a report, published in 1945, with Violet Markham on the post-war organization of private domestic workers which called for them to be included within unemployment insurance and to receive training. She was also a member of the committee on the Juvenile Employment Service which reported in 1945.

Florence Hancock was one of the first generation of women trade union leaders, along with others including Anne Loughlin and Anne Godwin, who made a career within the trade union movement and became influential both within their own unions and within the TUC. They faced conflicts of loyalty, however, in pursuing women's interests as workers while at the same time seeking to support trade union and Labour Party leaders. Over time Florence Hancock lost her early militancy and was less inclined to push male officials towards an understanding of the needs of rank-and-file women. Instead she developed a strong loyalty towards trade union leaders such as Citrine and Bevin and towards the leadership of the Labour Party, becoming identified after 1945 with the right wing of the TGWU and the TUC. Her presidential address to the annual conference of the TUC in 1948, for example, emphasized how important it was for workers to act responsibly to enable the Labour government to carry out its policies and was critical of all those who tried to incite industrial unrest.

Hancock's aim to support the Labour Party while also pursuing the interests of low-paid women workers did, however, lead to some ambivalence in her attitudes, in particular towards the campaign for equal pay. In her evidence to the royal commission on equal pay in 1944 she criticized employers who refused to pay women the same rate for the job as men, and in 1949 she played an influential role in the ILO conference in Geneva which drafted convention 100 calling for equal pay for work of equal value. On the other hand, when the Labour government refused to accept immediate implementation of all the recommendations of the royal commission on equal pay in 1946 on the grounds that this would lead to wage inflation and hamper economic recovery, she supported its position and emphasized the national interest. As chair she ensured that the women's advisory committee also supported the stand of the government, which meant that she had to face considerable criticism from a younger generation of trade union women who believed that they were being ignored by the TUC. With her strong sense of duty and fierce loyalty to the labour movement she weathered these criticisms and remained 'brisk, cheerful and good natured' (*The Times*, 16 April 1974). Her close colleague Dame Anne Godwin claimed that she made an enemy of anyone—whether communists, non-unionists, or bad employers—who sought to undermine the trade union movement, and that this 'may have made her a little narrow in her outlook at times'. None the less, she also claimed that Florence was 'a wonderfully loyal friend and a trustworthy colleague, incapable of any dirty tricks' (letter from Anne Godwin, quoted in Soldon, 126). Florence Hancock was honoured for her public service when in 1942 and 1947 she was appointed OBE and CBE respectively, and in 1951 was made a dame of the British empire.

Hancock's knowledge and experience of industrial organization meant that she was frequently in demand to sit on public bodies and to give evidence to investigations. She sat on numerous committees of inquiry, including the royal commission on capital punishment (1949–53), the Piercy committee on provision for the disabled, and the Franks committee (1955), which reviewed the operation of administrative tribunals. She was a governor of the BBC between 1956 and 1962, a director of the *Daily Herald* (1955–7), a director of Remploy Ltd (1958–66), a JP, and president of Hillcroft College. Many of these activities continued after her retirement from the TGWU and the general council of the TUC in 1958, when she was sixty-five.

Late in life, on 3 September 1964, Hancock married John Donovan (1891–1971), the son of John Donovan, a stevedore, whom she had known for thirty years as a colleague

in the TGWU. A widower with six grown-up children, he became a member of the docks and inland waterways executive of the British Transport Commission after his retirement from the TGWU in 1947. They lived in Bristol. Hancock died on 14 April 1974, while visiting her sister's home in Chippenham. JUNE HANNAM

Wealth at death £13,995—gross: Soldon, 'Hancock, Dame Florence (May)'

Hancock, Sir Henry Drummond (1895–1965), civil servant, was born in Sheffield on 17 September 1895, the only child of Percy Griffen Hancock, manufacturer of electroplate, and his wife, Margaret Drummond. His father died three years later, the business passed out of the family, and his mother moved to Portsmouth. After periods at school in France and Germany, Hancock was educated at Haileybury College and as a scholar of Exeter College, Oxford. In the First World War he served in the Sherwood Foresters and the intelligence corps, and was mentioned in dispatches. In 1920 he entered the administrative class of the civil service, and was appointed to the Ministry of Labour. He early became secretary of a committee of inquiry into the working of the Trade Board Acts. Then followed a period, which included the general strike, when he was private secretary to Sir Horace Wilson, the permanent secretary. On 1 September 1926 he married Mary Elizabeth, elder daughter of Engineer-Captain Henry Toop RN, of Portsmouth; they had one son and one daughter.

During the ten years from 1928 Hancock was deeply involved in the problems created by unemployment. He first helped to administer various schemes for the transfer of unemployed workers to places where industry was expanding. In 1929 Labour took office, and J. H. Thomas was made lord privy seal to head a team to stimulate and co-ordinate schemes for the relief of unemployment. Hancock was appointed to be his private secretary, a post in which he showed his quality, although the financial orthodoxy of Philip Snowden as chancellor of the exchequer left Thomas without the resources to make any impact on the problem. When Labour went out of office in 1931, Hancock returned to the Ministry of Labour to deal with the problem of assisting those who had exhausted their right to unemployment benefit. He helped to frame the legislation which set up the Unemployment Assistance Board, and in its early years was a member of its staff, helping to build the first nationwide organization to take over responsibilities hitherto left to the poor law.

In 1938 Hancock was transferred to the Home Office to take charge of a division concerned with the expenditure of local authorities, who had been called on to administer a system of air raid precautions. There he put the arrangements for financing civil defence on a sound footing. In 1941 he was sent to the United States as secretary-general of the British Purchasing Commission and the British Raw Material Commission. For his work there he was appointed CMG (1942). He returned to Britain in 1942 to be deputy secretary of the Ministry of Supply, where he had three strenuous years at the hub of war production.

With the return of peace in 1945 and a Labour government in power, the centre of gravity moved back to the social services, and Hancock moved with it, becoming deputy secretary, under Sir Thomas Phillips, of the new Ministry of National Insurance. This was established to frame and administer the comprehensive scheme, based on the Beveridge plan, which replaced and extended the former separate and partial schemes of health and unemployment insurance, old-age and widows' pensions, and workmen's compensation. Hancock was appointed KBE in 1947 and this, and his appointment to succeed Phillips as permanent secretary in 1949, showed how his work was regarded. He was appointed KCB in 1950. By 1951 the national insurance scheme was established and Hancock was moved to a new field of activity, as permanent secretary to the Ministry of Food. The end of rationing could now be foreseen, and it became Hancock's business to dismantle the system of wartime controls and state purchase, so that the remaining functions of the Ministry of Food could be absorbed into what thus became the Ministry of Agriculture, Fisheries and Food. In 1955 this work was done, and Hancock was appointed chairman of the Board of Inland Revenue, a post which he filled with distinction until he retired in 1958.

All through his career in the civil service, Hancock had shown remarkable versatility, and was moved from one critical point to another as the need arose, particularly when some new organization was to be created or some major development of policy had to be steered. In the last ten years he had been permanent head of three major departments, and the principal adviser of three Labour and five Conservative ministers. For him retirement simply meant a change of occupation, and he continued to work as hard as ever. Of his new activities, the most onerous were the chairmanship of the Local Government Commission for England, appointed under the act of 1958 to review the boundaries of county and county borough areas, and membership of the boards of two large companies, Booker Bros., McConnell & Co. and the Yorkshire Insurance Company. To all these he was deeply committed and never spared himself, winning affection by his kindness as well as respect for his thoroughness, clear thinking, and wisdom. No business problem was too much trouble; and, even more important, he was always ready to listen sympathetically and helpfully to the working and personal problems of his colleagues, young and

old. In 1962 he was promoted GCB. But he had taken on too much. On 24 July 1965 he died suddenly at Bacita, Nigeria, while on business. His wife survived him.

Hancock's dedication to work left him little time for outside activities, but he read widely, was fluent in French and German, and had a considerable knowledge of antiques and architecture. In his younger days he was a great walker, and knew many country churches and country houses. But London was his home throughout his working life except in the war; he never owned either a house or a car.

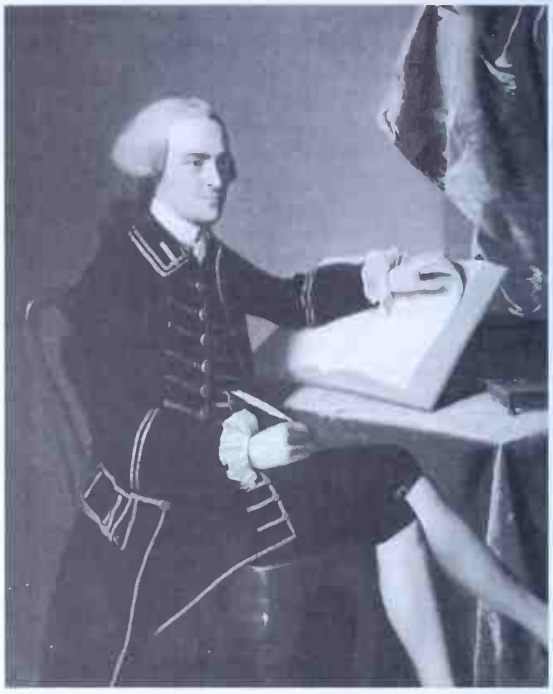
Hancock, John (1737–1793), merchant and revolutionary politician in America, was born on 12 January 1737 in Braintree, Massachusetts, the son of John Hancock (1702–1744), a Congregational minister, and Mary Thaxter Hawke, who later married Daniel Perkin, and who outlived her son. Upon the death of his father his mother sent him to live in Boston with his childless aunt Lydia Hancock (1714–1776) and his uncle, Thomas *Hancock (1703–1764), perhaps the richest merchant in New England. After attending the Boston Latin school, John went to Harvard College in 1750 and graduated AB in 1754. Upon Thomas's death in 1764 he inherited a fortune of about £70,000. Aged thirty-eight, Hancock surprised his acquaintances by marrying, on 28 June 1775, Dorothy (Dolly) Quincy (1747–1830), who was living as the ward of his aunt Lydia. Dolly was probably his mistress before they married, for they had travelled to the continental congress together. They had two children, Dorothy, who died in infancy (1776–1777), and John George Washington Hancock, who lived to be eight (1778–1787).

Hancock was no businessman: he left most of his commercial affairs in the capable hands of his secretary Ezekiel Price, who managed to keep Hancock's wealth from shrinking despite his extraordinary largesse. (Price also doubled as secretary of the Boston Sons of Liberty.) Hancock turned his attention to politics, forging an alliance with Samuel Adams and the opponents of British policy in the Boston town meeting around the time the Stamp Act was passed in 1765. He spent money lavishly: he gave £1000 to the Congregational Brattle Street Church which he attended, bought the town of Boston a new fire engine, and hosted innumerable parties and patriotic celebrations. He ingratiated himself with the people in a time of economic depression by treating them familiarly, in contrast to most members of the élite, and hiring workers to extend Hancock's Wharf and build the first house on Beacon Hill. (This beautiful mansion later fell into disrepair and was torn down in 1863 after a futile campaign to persuade the state legislature to purchase it.)

Such generosity, along with the £39,000 Hancock and his aunt had out on loan and seldom sued to collect, assured his rise in resistance circles, although he was not a



John Hancock (1737–1793), by John Singleton Copley, 1765

writer, a speechmaker, or an organizer of the calibre of John and Samuel Adams. Hancock was first elected a representative to the Massachusetts assembly from Boston in 1765, a post in which he served until he was elected to the continental congress in 1774. Elected to the provincial council in 1768, he was criticized by the governor, Francis Bernard, for his resistance activity, although he did serve as a councillor in 1772 during a brief rapprochement with Governor Thomas Hutchinson.

Like his uncle and many Boston merchants, Hancock earned much of his fortune in illegal trade, notably the importation of rum and wine. In June 1768, the newly arrived American board of customs commissioners seized one of his ships, symbolically named *Liberty*, for failing to declare a cargo of Madeira wine. The Boston crowd rose on Hancock's behalf, if not at his request, dragged the customs house boat in front of Hancock's house, burned it, roughed up the commissioners, and chased them out of town. They responded by informing their superiors of their mistreatment, which caused British soldiers to be sent to Boston. After a complicated case characterized by intimidation of the witnesses against Hancock, the customs officers dropped the prosecution the following March.

Although he flirted with the loyalist faction headed by Hutchinson during the early 1770s, Hancock irrevocably committed himself to the resistance in May 1773. He announced that the Massachusetts house of representatives had come into possession of some (stolen) letters of governors Bernard and Hutchinson which convinced the house that they had intended to overthrow Massachusetts's representative government and establish

arbitrary power. Hancock next moderated the town meetings which protested against the shipment of East India Company tea and plotted the famous Boston tea party of 16 December 1773. According to some witnesses he joined the festivities himself, poorly disguised as a Mohawk Indian.

Hancock's influence in Boston was such that the Impartial Administration of Justice Act, which parliament passed in 1774 to respond to the tea party, singled him out, along with Samuel Adams, as the two individuals to be brought to Britain for trial, possibly for treason. Hancock thereupon fled with Adams to Concord, a farming town 17 miles north-west of Boston. The American War of Independence was sparked on 18 April 1775, when British troops were sent to seize these two men along with illegally stockpiled munitions in Concord.

Having been unanimously elected president of the first continental congress in 1774, Hancock foolishly hoped that body would select him, despite his total lack of military experience, to lead the revolutionary army. Although disappointed in this hope, Hancock at first performed the largely ceremonial functions of his office well, for he craved personal popularity, enjoyed pomp and ceremony, and conciliated many delegates because he had no strong political ideas. His florid signature beneath the Declaration of Independence—which according to folklore he inscribed so large that King George could read it without his spectacles—is so famous in the United States that 'John Hancock' has become a synonym for 'signature'. As he continued to preside over congress, Hancock found himself increasingly attracted to the lavish-spending delegates of the southern and middle states and alienated from his moralistic and parsimonious fellow New Englanders. He grew increasingly lackadaisical in the performance of his duties. When in October 1777 he asked to be restored to office following a two-month leave of absence, only two delegates supported him. His own state of Massachusetts joined a majority of six (to four) which refused even to thank him for his services.

Hancock returned to Massachusetts, and made sure that his popularity with the people remained undiminished. He continued to spend great sums of money, reimbursing Massachusetts troops in silver out of his own pocket in exchange for their paper money, accepting inflated continental paper money at par in his business dealings, donating firewood to the Boston poor, and riding about town in a beautiful coach escorted by fifty horsemen since he commanded the Massachusetts militia. He continued to bridge the gap between classes by treating lower-class people as equals, welcoming them into his mansion and finding employment for them. On 25 October 1780 he became the first governor of the state of Massachusetts under its new constitution.

Hancock was annually re-elected governor, with little opposition, for the rest of his life, except for the years 1785 and 1786, during the tumultuous period of Shays's rebellion, when he decided not to run. Although many of the élite deplored his familiar relations with the people, and the ministers condemned his extravagance and irreligiosity, Hancock retained power by continuing to spend money and avoiding offensive political positions. Following the suppression of Shays's rebellion by his successor Governor James Bowdoin, he benignly pardoned almost all the protesters and conciliated their followers.

Although he personally favoured a strong central government, Hancock hedged his support of the proposed United States constitution, coming down with the gout which he made sure habitually incapacitated him when he had to make a controversial decision. When his supporters persuaded him that he would be a logical choice as president or vice-president, however, his influence narrowly carried the constitution in the Massachusetts ratifying convention by 187 to 168. Disappointed that he was elected to neither national office, he pleaded gout when President George Washington visited New England. He had fancied that Washington would call upon him first and thus acknowledge the precedence of state governors. When Washington refused, Hancock had himself swathed in bandages to emphasize his discomfort and ceremoniously carried to meet the president. In the early 1790s Hancock was reconciled with his old friend Samuel Adams—they had been estranged throughout most of the 1780s. Adams became his lieutenant-governor and then governor upon his death; they won repeatedly despite their anti-federalism in an otherwise staunchly federalist state.

Hancock's opponents, first loyalists and then élite federalists who despised his personality and lack of strong principles, criticized him as superficial and a mere seeker of popularity. They were right about his weaknesses, but they were blind to his virtues. He deserves credit for keeping the resistance movement in Boston alive for much of the decade 1765 to 1775. Unlike many revolutionaries who used public office to enrich themselves, Hancock spent his seemingly bottomless fortune on the people of Massachusetts. He also served invaluably as a genial and impartial symbol of nationalism around which the continental congress in the mid-1770s and the people of Massachusetts in the 1780s could rally. If he did not become president, as he wished, he fulfilled a role similar to that of George Washington by being a figure around whom people of different opinions could rally.

Hancock died in Boston after a protracted illness on 8 October 1793, and was buried at Boston's Park Street churchyard. He left a fortune approximately equal to the one he inherited and his wife, who later married the retired captain of one of his ships, inherited over £12,000, enough to live in comfort for the rest of her days. One of Hancock's extra-political roles was that of treasurer of Harvard College: he lost the books, which were recovered in his stables and elsewhere, some as late as 1936. That he had taken them to Philadelphia when he went to serve in congress and forgotten about them symbolizes the paradoxical mixture of indifference to money, self-centredness, and disinterested patriotism which characterized this fascinating historical figure.

Wealth at death £70,000: Allen, *John Hancock*

Hancock, John (1825/6–1869), sculptor, was born in Fulham, Middlesex, the son of John Hancock (1788–1835), an inventor and rubber manufacturer, and his wife, Fanny Maria Francis (*bap.* 1794). After his father's death John and his eight brothers and sisters lived in Stoke Newington, Middlesex, with their uncle, Thomas Hancock, a noted manufacturer who discovered the process of the vulcanization of rubber. He was also related to the inventor Walter Hancock (1799–1852) and to the animal painter and inventor Charles Hancock (1800–1877).

On 16 December 1842 Hancock was admitted to the Royal Academy Schools at the age of seventeen; however, he probably attended for only a short period and it was about this time that he came into contact with Dante Gabriel Rossetti and other artists of the emergent Pre-Raphaelite Brotherhood. He was a member of the Cyclographic Society, a sketching club active until 1848 which included John Everett Millais and William Holman Hunt, and from 1849–50 his appearance at Pre-Raphaelite gatherings is recorded in William Michael Rossetti's diary, the *P. R. B. Journal*. These associations, and his interest in literary themes in his work, have led to Hancock's being identified as a 'Pre-Raphaelite' sculptor—the *Journal* records that he asked in 1849 whether he might put 'PRB' to his works—although, unlike the sculptor Thomas Woolner, he never became a member of the group. In 1849 he was involved in setting up their magazine *Monthly Thoughts*, which later became *The Germ*, but afterwards withdrew his financial support. In the same year his portrait was painted by Millais.

Outside the Pre-Raphaelite circle Hancock achieved notable early success as a sculptor. His design for a bas-relief representing *Christ's Journey to Jerusalem* (exh. RA, 1849) won the premium in a competition organized by the Art Union of London in 1849, and at the Great Exhibition of 1851 in London his plaster statue of *Beatrice* (1850, V&A), his finest surviving work, gained wide praise. He was appointed a local commissioner to the Great Exhibition, and he later sent works to the international exhibitions in Paris (1855) and London (1862). He contributed frequently to the Royal Academy exhibitions between 1843 and 1864. On 30 August 1851 he married Eliza Ann Ferneley at St Pancras Old Church, Pancras Road, London.

Most of Hancock's recorded works represented 'ideal' subjects—those few which survive show that he was a sensitive modeller of form, with an eye for both classical and Renaissance sculptural precedents. He treated subjects from Shakespeare (*Ariel* and *Ophelia*, both exh. RA, 1858), Milton (*Comus*, exh. RA, 1845), Spenser (*Una and the Lion*, exh. RA, 1848), and Baron de la Motte Fouqué (*Undine*, exh. RA, 1851), as well as religious and allegorical subjects. His statue of *Penserosa* (1862), based on Milton's poem, was placed in the Egyptian Hall of Mansion House, London, and he designed a series of allegorical relief panels (1864–5; still *in situ*) on the former National Provincial Bank in Bishopsgate, London. His only known church monument is that to Edward Colston (*c.*1859) at St James the Great, Devizes, Wiltshire.

Hancock produced few portraits—a staple of the income of most Victorian sculptors—and it has been suggested that the wealth of his uncle Thomas allowed him a relatively carefree career as a sculptor. His last years though remain something of a mystery. In its obituary *The Athenaeum* stated that, after initial success, 'the anticipated progress of the sculptor was somewhat suddenly stayed and not renewed' (23 Oct 1869, 535). Ill health was given as a possible cause, though, despite the assistance from his uncle, Hancock seems to have run into financial difficulties: at his death his assets amounted to under £20. William Michael Rossetti, who harboured some animosity towards Hancock, referred to certain 'unfortunate circumstances into which it is not my affair to enter' (*Reminiscences*, 1.150). He described him as 'an ungainly little man, wizened, with a long thin nose and squeaky voice' (the latter immortalized in 1851 in Dante Gabriel Rossetti's comic poem 'St Wagnes' Eve'; ibid.). Hancock died at 35 Grafton Street East, Tottenham Court Road, London, on 17 October 1869 at the age of forty-three, of gastric irritation and exhaustion.

Hancock, Sir (William) Keith (1898–1988), historian, was born in Melbourne, Australia, on 26 June 1898, the youngest in the family of three sons and two daughters of the Revd William Hancock, incumbent of St Mark's, Fitzroy, and later archdeacon of Gippsland, Australia, and his

Sir (William) Keith Hancock (1898–1988), by unknown photographer

wife, Elizabeth Katharine McCrae. He was educated at Melbourne grammar school, the University of Melbourne, and, after a short spell lecturing at the University of Western Australia, as a Rhodes scholar at Balliol College, Oxford, where in 1923 he gained first-class honours in modern history and became the first Australian to be elected to a fellowship of All Souls College (1923–30). From that base he wrote *Ricasoli and the Risorgimento in Tuscany* (1926). Like much of his later work, the book was about the complexities of nationalism. Already the prose was fluent, supple, and elegant. From 1924 to 1933 he held the chair of modern history at the University of Adelaide. There he wrote *Australia* (1930), which remained the most professional and profound single volume about the country. The young professor had mixed feelings about his native land. Having been accepted at the heart of empire and now returned to a province, he would never be completely at home in either place. His speaking voice was neither quite English nor quite Australian. An account of his life to 1954, entitled *Country and Calling*, signalled the tension.

Birmingham University called Hancock to the chair of modern history in 1934 and Oxford to the Chichele chair of economic history in 1944. He was again a fellow of All Souls from 1944 to 1949. Dearly though he loved Oxford, he was not wholly comfortable in that chair, and left it for the University of London in 1949. Here he directed (until 1956) the new Institute of Commonwealth Studies, which was a monument to his own work. Hancock's *Survey of British Commonwealth Affairs* (3 vols., 1937–42), blending general perspectives with brilliant case histories and exhibiting what he often declared to be the historian's three cardinal virtues of attachment, justice, and span, had transformed the study of empire. The British Commonwealth was in his vision the most benign of modern polities, able, if wisely led and liberally inspired, to deliver democracy and welfare not only to Australians and Canadians but also to Indians and Africans. Jan Smuts, the subject of his two-volume biography *Smuts: the Sanguine Years* (1962) and *Smuts: the Fields of Force* (1968), appealed to Hancock as avatar of the new Commonwealth: a former enemy who freely chose imperial loyalty.

In the First World War Hancock was too young to join up without permission, which his bereaved parents refused, his brother Jim having been named among the missing on the Somme. Like many young British men of his generation who missed the war, he lived after 1918 with a sense of shame and a high appreciation of bravery. In London during the Second World War he threw himself into the most active service he could find, by day directing (1941–6) the production of a thirty-volume civil series of official war histories, by night watching for fires from German bombs. Margaret Gowing, his co-author of the official volume *British War Economy* (1949), thought that by 1945, though not yet fifty, he looked venerable, with 'white hair and end-of-war exhaustion'.

Theaden, daughter of John George Brocklebank, farmer, was even more exhausted. Like Jan Smuts, Keith Hancock had fallen in love with a fellow student of great ability who had had to settle for country school-teaching and then, in 1925, married a man needing (Hancock's words on Sybella Smuts) unfaltering support and heroic constancy. Theaden had been the wife of a busy, prolific, and preoccupied professor ever since their marriage in 1925. In *Country and Calling* he convicts himself of 'barbarous insensitiveness' to her. She found rewarding employment in wartime London as a producer of talks for the Overseas Service of the BBC, but collapsed into depression under the burdens of life and work. Her ill health was among reasons why Hancock did not accept until 1957 an invitation first extended some years earlier to go to Canberra as professor of history (until 1965) and director of the Research School of Social Sciences (until 1961) at the new Australian National University. In Canberra, country and calling were now as nearly reconciled as they would ever be.

Colleagues and postgraduate students in awe of a legend discovered that Hancock was short, slight, charming, and playful; he was also intellectually exacting, and tough and wily (some called him Sir Fox) in his determination to win resources for his school and distribute them according to his own judgement of quality. He had an undisguised sense of his own achievement, no envy, and a humble curiosity. He was good at coaxing underproducers to get on, as he would say, with their scribbling. He encouraged interdisciplinary and intercultural studies before they were fashionable in his world. He had blind spots, among them an Anglophile disdain for many things American and a patrician distaste for trade. He became a kind of archbishop among Australian historians, at a time when most of the bishops, the professors of history in state universities, were Balliol men. The earliest and most enduring project of archiepiscopal inspiration was the *Australian Dictionary of Biography* modelled on the British *Dictionary of National Biography*, which he had served in Oxford as a member of the central committee; eleven gratifying volumes appeared during his lifetime.

Hancock and his wife lived happily in Canberra, enjoying both bush and society, until Theaden was stricken by cancer; she died in 1960. In the following year, as she had counselled, Hancock married Marjorie Eyre (daughter of William Henry Eyre, of Enfield, Middlesex), who had worked for him on every project since the civil war histories, and who gave him support and constancy for the next quarter of a century: she died in 1995. There were no children from either marriage.

After retirement in 1965, country and calling led Hancock to the region south of Canberra, on which he wrote a pioneering study in environmental history, *Discovering Monaro* (1972). He became an activist in the cause of conservation, a member of an alliance which tried in vain to prevent a telecommunications tower from being installed on the forested peak he loved just behind the university, and he served as the group's war historian in *The Battle of Black Mountain* (1974). In a post-imperial epoch, and in his own eighties, he was attracted by the idea of armed neutrality for Australia, and campaigned against the presence of American communication bases on his country's soil. He went on writing, and talking in seminars and on the radio, almost to the end. 'Beyond all else', wrote his close colleague and friend Anthony Low, 'he was the academic animateur'.

Hancock was knighted in 1953 in recognition of a successful mission to Uganda as a negotiator, and appointed KBE in 1965. He was a fellow of the British Academy (1950) and universities and academies in four continents conferred honours on him. When asked to list his achievements, he might leave some out but he included a medal of the Royal Humane Society won at the age of nine for rescuing another child from drowning. He died on 13 August 1988 in Canberra. K. S. Inglis, *rev.*

Hancock, Robert (*bap.* 1731, *d.* 1817), engraver, the son of John Hancock, was born in Badsey, Worcestershire, and was baptized there in St James's Church on 7 April 1731. It is generally accepted that he was apprenticed to the Birmingham engraver George Anderton on 28 January 1746. He was mainly active as an engraver of plates used in the transfer-printing of porcelain and enamels, besides producing book illustrations, mezzotints, and pencil and chalk portraits. He has traditionally been associated, as a key designer and engraver, with Stephen Theodore Janssen's York House enamel works at Battersea before his entry about 1756 as an engraver in the Worcester porcelain works run by John Wall, William Davis, and the Holdship brothers. However, more recent scholarship suggests that it is unlikely that his engravings were used at York House, even though he may have spent some time in London in the early 1750s. Instead of working at Battersea, it is now believed that he and Louis Philippe Boitard were largely responsible for the production of transfers on Birmingham enamels. The so-called swan group of *galant* subjects—which incorporates a pair of swans painted in the foreground of the compositions and dates from about 1751–6—can be seen as a representative example of the Hancock–Boitard co-operation.

Less certain is Hancock's involvement with Bow: according to his biographer Cook, he worked there for some months after the termination of his (now refuted) employment at Battersea. A transfer-printed Bow version of about 1755 of the widely disseminated rococo motif of *L'amour*, designed by Charles Nicolas Cochin, may well have been engraved by Hancock. As was customary in the case of eighteenth-century porcelain designs, only very few examples of transfer-printed pottery bear Hancock's signature or his rebus (a gamecock perched on a hand). This was partly because so few porcelain designs could be described as original compositions: Hancock, for instance, generally adapted motifs from engravings by or after a range of the most popular *genre pittoresque* and rococo artists, including François Boucher, Antoine Watteau, Jacopo Amigoni, Jean Pillement, Nicolas Lancret, Boitard, Francis Hayman, and Francis Barlow. He also used engravings of portraits after Allan Ramsay and Thomas Worlidge.

Hancock remained with the Worcester works until 1774 (by 1772 as one of a new group of partners), when an acrimonious dispute resulted in the buyout of his share by his partners and in his retirement from the manufactury. At Worcester, Hancock had lost considerable savings in a bank failure about 1757, but was able to retain two properties adjoining the porcelain works. One of these houses was relinquished in 1798, the other remained in his property until November 1804. In Cook's evaluation, Hancock's contribution to the manufacture for almost two decades marked the 'heyday of transfer-printing at Worcester' resulting in many sought-after collectors' pieces. In addition to his long-term involvement with the manufactury at Worcester, Hancock was active as a freelance designer for the Caughley porcelain works near Broseley, Shropshire, and for the enamel trade in south Staffordshire. The Victoria and Albert Museum holds a rare example of a signed Hancock piece, a south Staffordshire snuff-box of about 1765, transfer-printed with *The Tea Party*, a motif which was one of the most popular in eighteenth-century ceramics.

A study of Hancock's transfer-printed subject matter provides interesting insights into aspects of English mid-eighteenth-century decorative taste. French influence is very evident in the earlier period, with the production of a range of *galant* and mythological subjects after the artists mentioned above. Another group could be described as nationalist and commemorative, celebrating British achievements in the Seven Years' War. A Birmingham enamel made before 1753 bears an aggressively nationalist motif, probably adapted by Hancock after a design by

Boitard: The *Free British Fishery Society Plaque* has been described by S. Benjamin as probably 'the most famous English enamel' (Benjamin, 68).

Hancock exploited grand tour nostalgia in transfer-printed Worcester pieces featuring scenes of Roman ruins derived from engravings after Gianpaolo Pannini. Another distinct group, of decoratively disposed 'naturalistic' fauna, was, like the French *galanteries*, often derived from contemporary drawing and model books such as Robert Sayer's *The Ladies Amusement* (2nd edn, 1762) and *The Artist's Vade Mecum* (1762). Hancock himself contributed to such publications, including some seven subjects for the 1762 edition of *The Ladies Amusement*. His engravings for model books were not only applied to enamel or porcelain, but, as in the case of the print *The Waterfall* from *The Ladies Amusement*, could also serve as a design resource for textiles. *The Waterfall*, for instance, supplied part of the design of a well-known Bromley Hall calico print of about 1770 entitled *The Country Village*.

After his departure from Worcester in 1775, Hancock allegedly worked as an agent or partner at Caughley, the pottery works by then part owned by his former apprentice at Worcester, Thomas Turner. From 1780 onwards the artist seems to have worked primarily on mezzotint and stipple portraits and engraved book illustrations. In 1780 he was recorded at Oldbury, a year later in Tividale, near Dudley, and in 1784 probably in Birmingham. There he produced a number of book illustrations for the publishers Pearson and Rollason, including some plates for a family Bible and illustrations to the surgeon William Meyrick's *The New Family Herbal*. Among his mezzotints, small portraits in oval of Lady Chambers and of the governor of Fort William, William Kingsley, after Joshua Reynolds, are among the most accomplished. Somewhat more schematic are a number of mezzotints after a Joseph Wright, including the short, stout figure of *William Hopley, Verger of the Cathedral Church of Worcester*, the large portrait of the seated astronomer *R. Lovett, of the Cathedral Church of Worcester, Author of Philosophical Essays in Three Parts*, and another large print of the dwarf *Edward Scofield, Clerk of St Chads, Shrewsbury*. Hancock also engraved a mezzotint of his own portrait, probably by Joseph Wright of Derby, of which an unfinished proof in the British Museum appears to be the only known impression. The marked difference in quality between some of his often mediocre mezzotints and stipples, especially when compared with his delicate, elegant book illustrations, may have contributed to the suggestion (since refuted) that there were two Robert Hancocks at work in the period.

Between 1796 and 1798 Hancock was in Bristol, where he produced some highly regarded pencil and chalk portraits of Robert Southey (1796), Samuel Taylor Coleridge (1796), William Wordsworth (1798), and Charles Lamb (1798), all of which are now in the National Portrait Gallery in London. These drawings were later reproduced in stipple by R. Woodman in illustration of J. Cottle's *Recollections* (1850), while the portrait of Southey was additionally engraved in stipple as a plate to C. C. Southey's *Life of Robert Southey* (1850). Hancock's last recorded works appear to be the two pictures *Portrait of a Gentleman* and *Children and a Donkey*, exhibited at the Royal Academy in 1805 while he was based in Pall Mall. Nothing is known of the last years before his death on 14 October 1817, in Brislington, near Bristol. He was buried in Brislington churchyard on 21 October. His wife, Martha (*b.* 1744), whom he married in Worcester about 1769, survived him for about twelve years. Hancock left all the prints, drawings, and paintings in his possession to one of their seven children, Robert, probably the contemporary miniature painter and drawing-master of that name in Bristol. Another son, Thomas, was active as an engraver in Birmingham. From the later nineteenth century, in spite of the gaps in the artist's biography and the uncertainties of attribution in the field of ceramics, Hancock has received a considerable, and increasing, amount of attention and has been widely recognized as one of the most important and talented contributors to the transfer-printing of porcelain and enamels.

Hancock, Thomas (1703–1764), merchant and politician in America, was born on 17 July 1703 in Cambridge Farms, Massachusetts, the son of John Hancock (1671–1752), the local pastor, and Elizabeth Clark (*c.*1681–1760). Having been apprenticed to Boston bookseller Samuel Gerrish between the ages of fourteen and twenty-one, Hancock opened his own bookshop in the North End, and quickly expanded into publishing and a general trade that soon involved the entire British empire. Some of his leading endeavours were the export of rum, whale oil, and fish to England, the West Indies, Spain, and Portugal; the building of ships; and the importation of books and luxuries from Europe. In 1730 he married Lydia (1714–1776), the daughter of Daniel Henchman, a prominent Boston bookseller and his partner in making paper. He then built a mansion, the first house on Beacon Hill, which in 1856 the Massachusetts legislature refused to save in the interest of urban development.

After his marriage Hancock went into partnership with Charles Apthorp and rose to be one of the leading merchants in Boston. During the War of Jenkins's Ear (1740–44),

King George's War (1744–8), and the French and Indian War (1754–63). Hancock made an even larger fortune supplying British soldiers and sailors in the West Indies, Nova Scotia, and Canada. He held no political office, but remained in close touch with leading figures both in Boston and London such as province agent Christopher Kilby, who facilitated his lucrative military contracts. In 1755 seventeen sloops engaged by Hancock and Apthorp were used to transport the Acadians from Nova Scotia to Louisiana. Other ships served as privateers. Despite this royal bounty Hancock also smuggled tea, paper, and sailcloth from the Netherlands and foreign molasses from the West Indies into New England, though this universal practice among American merchants was legitimate, if not legal, in colonial eyes.

In his later years Hancock suffered from gout and a nervous disorder, which led him to turn more and more of his business over to his nephew, John *Hancock, a future signer of the Declaration of Independence. The Hancocks were childless, and in effect adopted the son of Thomas's brother John, who had died in 1744. Thomas entered politics formally in only 1758, as a member of the Massachusetts council, but was not among its more active members. On 1 August 1764 he died of a stroke while entering the council chamber.

Hancock's fortune has been estimated at upwards of £70,000, one of the largest, if not the largest, in colonial New England. His widow and nephew combined had £21,000 in Massachusetts money (approximately £15,000 sterling) on loan at interest in 1771. John Hancock took less and less interest in business after his uncle's death, leaving it to Ezekiel Price, also the secretary of the Boston Sons of Liberty. Ironically, he spent much of his inherited fortune funding the Bostonian's resistance to British authority, thereby undermining the imperial connection that had been its source. WILLIAM PENCAK

Wealth at death over £70,000—of Massachusetts money: Baxter, *The house of Hancock*

Hancock, Thomas (1783–1849), physician, was born on 26 March 1783 in Lisburn, co. Antrim, the son of Quaker parents, Jacob Hancock and his wife, Elizabeth, *née* Phelps. He was sent to the Quaker school in Ackworth, Yorkshire, after which his medical education began with an apprenticeship to a surgeon-apothecary in Waterford. Hancock graduated MD from Edinburgh in 1806 with a thesis entitled 'De morbis epidemicis', which was dedicated to Dugald Stewart and Alexander Crawford. Following his graduation he moved to London, and in 1809 he became a licentiate of the Royal College of Physicians. From his home in Finsbury Square he developed a considerable practice, and he was elected physician to the City and Finsbury dispensaries. In 1810 he married Hannah Strangman (*d.* 1828), of Waterford. They had eight children: Thomas (*b.* 1813), Emma (*b.* 1814), Elizabeth (*b.* 1816), Mary (*b.* 1818), George (*b.* 1820), John (*b.* 1822), Jacob (*b.* 1824), and Hannah (*b.* 1828). A deeply religious man, Hancock wrote a number of works promoting his Quaker faith and attacking those who criticized it. He was made an elder of his meeting in 1817.

The subject of epidemic disease was one in which Hancock was interested throughout his life. In 1820 he addressed the Medical Society of London on the subject. At their request he published a book on the subject of his address in 1821 entitled *Researches into the laws and phenomena of pestilence, including a medical sketch and review of the plague of London in 1665 and remarks on quarantine*. He returned to this subject in 1831 when he published a work entitled *On the Laws and Progress of Epidemic Cholera*. In 1824 he also published *An Essay on Instinct and its Physical and Moral Relations*, in which he criticized the remarks of a surgeon named Lawrence on the creation. His book *The principles of peace exemplified in the conduct of the Society of Friends in Ireland during the rebellion of the year 1798* (1825), contains eye-witness accounts of the rebellion from a number of Irish Quakers and provides an interesting perspective on that conflict.

Following the death of his wife on 13 October 1828 Hancock left London and moved to Liverpool. There in 1835 he wrote a work defending the Quaker doctrines of immediate revelation and universal and saving light which had been attacked in a work by Isaac Credson entitled *A Beacon to the Society of Friends*. An admirer of John Locke, Hancock translated a number of essays on the philosopher written by Pierre Nicole, a French theologian. He also possessed a small manuscript by Locke. Hancock was an earnest advocate of the abolition of capital punishment, and took a deep interest in many philanthropic movements. In 1840 he addressed the question of Britain's Caribbean colonies in *Are the West India colonies to be preserved? A few plain facts; showing the necessity of immigration into British Guiana and the West Indies, and the utter futility of all efforts towards the abolition of slavery and the slave trade which do not include this*, a work which expanded the views he expressed in a letter to the *Morning Post* in the same year. In 1838 he left Liverpool and returned to Lisburn, where he died from heart disease on 6 or 16 April 1849, aged sixty-six. KARL MAGEE

Hancock, Thomas (1786–1865), rubber manufacturer and inventor, was born at Marlborough, Wiltshire, on 8 May 1786, the second son in the family of twelve children raised by James Hancock, a timber merchant and cabinetmaker at Marlborough, and his wife, Elizabeth, *née* Longman. Walter *Hancock was a younger brother. Thomas was educated at a private school in his native town, and after spending his 'earlier days in mechanical pursuits', according to his *Personal Narrative*, he moved to London

Thomas Hancock (1786–1865), by unknown artist

and by 1815 was in partnership with his younger brother John as a coach-builder, with a factory in Pulteney Street and a shop in St James's Street.

About 1819 Hancock became interested in the uses of rubber, hitherto little used because of the problems of importing and working raw natural latex. His experiments to dissolve and manipulate solid rubber began in 1819 and his first patent, of 1820, covered the application of rubber to various articles of dress, to make them more elastic. He eventually made use of thin strips of Pará rubber and produced numerous articles including braces, waistbands and straps at his new factory in Goswell Road. Observing that two freshly cut surfaces of rubber readily adhered by simple pressure, he was led to the invention of the 'masticator', as it was afterwards called, in which a roller set with teeth chewed up pieces of rubber and worked them into a plastic and homogeneous mass. The rubber that emerged from the masticator was then pressed into blocks, or rolled into sheets. The masticating process was never patented, but remained a secret in the factory until about 1832, when it was divulged by a workman. Experiments showed that masticated rubber was much more easily acted upon by solvents than ordinary rubber, and this discovery brought Hancock into communication with Macintosh, the well-known manufacturer of waterproof garments, who carried on business in Manchester. In February 1826 Hancock obtained a licence from Macintosh for the use of the patent to produce double-layer fabrics sealed with rubber. Hancock's masticated rubber was better able to dissolve as a strong solution than that of Macintosh, and in 1830 they agreed that Hancock would supply Macintosh with his masticated rubber. Eventually Hancock became a partner in the firm of Charles Macintosh & Co., though he still carried on his own business in London.

Rubber articles still possessed serious defects due to the material itself; they became sticky, and at low temperatures lost their elasticity. In 1842 specimens of 'cured' rubber, prepared in America by Charles Goodyear according to a secret process, were exhibited in England. Hancock investigated the matter, suspected that sulphur was involved, and filed a provisional patent on 21 November 1843. His experiments were successful: he discovered that when rubber was immersed in molten sulphur a change took place, yielding 'vulcanized' rubber, which was capable of resisting extremes of heat and cold, and was very durable. He was thus able to submit his specification during the six months allowed by the Patent Office. Goodyear had not applied for a British patent. Hancock also discovered inadvertently that if the vulcanizing process was continued, and a higher temperature employed, a hard substance, known as vulcanite or ebonite, was produced. This material was found to be impervious to chemicals and to be electrically insulating, which made it of considerable value to industry.

Hancock took out sixteen patents in all relating to rubber between 1820 and 1847. He displayed remarkable ingenuity in suggesting uses for what was practically a new material, and the specifications of his patents cover the entire field of rubber manufactures, though many of his ideas were not carried out at the time. His brothers Charles, John, Walter, and William were also associated with him, and were concerned in patents for developing various branches of the trade.

Hancock never married. He retired between 1842 and 1845, handing over his business interests to his nephew James Lyne Hancock, and the factory continued in production until 1939, having been taken over by the British Tyre and Rubber Company Ltd. He died of heart and kidney disease on 26 March 1865, at Marlborough Cottage, Green Lanes, Stoke Newington, where he had lived for fifty years. R. B. PROSSER, *rev.* ANITA MCCONNELL

Wealth at death under £60,000: probate, 2 June 1865, *CGPLA Eng. & Wales*

Hancock, Walter (1799–1852), engineer and inventor of steam carriages, was born on 16 June 1799, the sixth son of James Hancock, a timber merchant and cabinet-maker at Marlborough, Wiltshire. Thomas *Hancock (1786–1865), who developed the manufacture of rubber, was his brother. After serving an apprenticeship to a watchmaker and jeweller in London, he turned his attention to engineering, and in 1824 invented a steam engine in which the ordinary cylinder and piston were replaced by two flexible bags, consisting of several layers of canvas bonded with a rubber solution, and alternately filled with steam. The engine having worked satisfactorily at Hancock's factory at Stratford, east London, it occurred to him that its lightness and simplicity of construction made it particularly

Walter Hancock (1799–1852), by R. Roffe, pubd 1836 (after Charles Hancock)

suitable for powering road vehicles—a use for steam traction to which much attention was then being directed.

Hancock's experiments with vehicles using the new engine were not successful; but he continued to work at the subject, carrying out many trials on the roads in and around London, before introducing an experimental steam carriage, the Infant, into passenger-carrying service between Stratford and the City of London in February 1831. In the following year he built another vehicle, the Era, for the London and Brighton Steam Carriage Company, one of many similar commercial concerns which came into existence about that time, when the success of the Liverpool and Manchester Railway had raised the hopes of speculators. The Era was followed by the Enterprise, which was operated by the London and Paddington Steam Carriage Company from April 1833. In October of the same year the Autopsy ran for a short time between Finsbury Square in the City and Pentonville in north London. It ran again in October 1834, alternately with the Erin, between the City and Paddington. Hancock appears to have continued his efforts until about 1840, by which time he had built ten carriages, making many trips through various parts of the country. After that year the success and rapid expansion of the railways led to a decline in public interest in steam-powered road transport, and all the steam carriage companies which had been formed ultimately failed.

Of all the projectors of steam locomotion on the roads, Hancock was the most successful; his vehicles were ingenious and well built, and often performed very well. He afterwards turned his attention to the manufacture and processing of rubber, working with his brother Thomas, and in 1843 he obtained a patent for cutting rubber into sheets, and for a method of preparing rubber solutions. He died on 14 May 1852, at West Ham, Essex.

Hancock, William Neilson (1820–1888), lawyer and economist, was born on 22 April 1820, at Lisburn, co. Antrim, the second son of William John Hancock, land agent and later a poor-law commissioner, and his wife, Mary, daughter of Samuel *Neilson of Belfast, who took part in the 1798 rebellion. He was educated at the Royal Belfast Academical Institution from 1830 to 1834 and at the Royal School, Dungannon, co. Tyrone, from 1834 to 1838. From there he entered the University of Dublin, Trinity College; he graduated BA in 1843 with a senior moderatorship and gold medal in mathematics. Called to the Irish bar in 1844, Hancock took the degrees of LLB in 1846 and LLD in 1849. In 1846 he entered for the quinquennial examination by which the Whately chair of political economy in the University of Dublin was then filled, and was the successful candidate. In some of his published lectures Hancock showed considerable potential as an economic theorist; but since the magnitude of the calamity which the potato blight had brought upon Ireland was becoming evident, Archbishop Whately suggested to him that he give first priority to considering the relevance of economic doctrine to the case of Ireland, and from that time onwards all Hancock's economic work was applied and policy-oriented.

In 1847 Hancock was the prime mover in founding the Dublin Statistical Society (later renamed the Statistical and Social Inquiry Society of Ireland) and he went on to play a major role in the society's development. When the new Queen's College at Belfast opened in 1849, Hancock became its first professor of jurisprudence and political economy, and for the next two years he discharged the duties of both the Dublin and Belfast chairs. In 1851 he took up residence in Belfast, but in the same year he was appointed secretary to the royal commission inquiring into the affairs of Dublin University. He resigned from the Queen's College post in 1853 and thereafter used his economic and legal expertise in a series of public appointments while continuing his legal practice in Dublin.

Hancock once described himself as a 'liberal unionist' and when Liberal governments were in power he was frequently asked for advice or reports on economic and social questions, as well as being appointed to a number of mainly legal offices. He acted as secretary to four other royal commissions between 1854 and 1867 and was clerk of the custody of papers in matters of idiots and lunatics in the court of chancery from 1855 until 1858, and again from 1859 to 1866. From 1863 until 1873 he was responsible for judicial, criminal, and local taxation statistics for

Ireland and gained a high reputation for accuracy and fairness in collecting and compiling them. He became a QC in 1880, but gave up his practice at the bar in 1881 on being appointed keeper of the records of the Irish land commission; his last public appointment brought him back to the Irish court of chancery, as clerk of the crown and hanaper, from which office he resigned in 1885 because of ill health. In 1858 Hancock married Mary Anne (Nannie), daughter of James *Haughton of Dublin. He died, as the result of a heart attack, at Craigpeatton Cove, the Dunbartonshire home of his brother-in-law James Thomson on 10 July 1888. Survived by his wife, he was buried a week later at Mount Jerome cemetery, Harold's Cross, Dublin.

Hancock was an energetic, compassionate, and fair-minded man, eager for economic and political reform, who strove to reconcile the principles of political economy as he knew them with the needs and problems of the Ireland of his time. His initial conviction was that 'the true business of government' was to establish a framework of just laws within which private enterprise could, and would, ensure progress to prosperity. In later life, however, he came to recognize that more positive action by government was necessary and inevitable, particularly on the question of land tenure in Ireland; the advice on which Gladstone acted in framing his Irish Land Bill in 1869–70, the first measure to recognize the tenants' right to compensation for improvements and damages for eviction, came largely from Hancock.

Hand, Thomas (*d.* 1804), painter, was a follower and assistant of George Morland, and one of his closest companions. His life is shadowy but he exhibited a small landscape with the Society of Artists in 1790, and between 1792 and 1804 was an occasional exhibitor at the Royal Academy. His pictures were painted in Morland's style and are sometimes misattributed to Morland. Hand may even have assisted Morland in the completion of some of his later paintings. He died in London in September 1804. The Tate collection holds a signed *Cottage and Hilly Landscape* by Hand dated 1797.

Handasyde, Charles (*fl.* 1751–1776), miniature painter, is first heard of in an advertisement dated 1 October 1751, which stated that Handasyde had:

> returned from Tunbridge Wells and now lodges at Mr. Brooksby's, Milliner, in Pall Mall; where he continues to draw likenesses in India ink on vellum at 1 guinea apiece and in black lead at ½ a guinea. One hour's sitting only required. (Foskett, 555)

He exhibited two miniatures in enamel and two in watercolour at the Incorporated Society of Artists in 1761, and three miniatures in enamel and one in watercolour at the Free Society of Artists in 1762. In 1765 he received a premium from the Society of Arts for a historic painting in enamel. In 1776, from 3 Hatton Street, London, he exhibited a portrait miniature in enamel at the Royal Academy. He mezzotinted two or three small portraits of himself. On the back of an impression of one of these he is described as 'Mr. Handiside of Cambridge' (BM).

Handel, George Frideric (1685–1759), composer, was born on 23 February 1685 at his family's home on the corner of Kleine Ulrichstrasse and Grosser Schlamm (now Grosse Nikolaistrasse) in Halle-an-der-Saale, then recently transferred from Saxony to Brandenburg. He was the second son of Georg Händel (1622–1697), surgeon, and his second wife, Dorothea Elisabeth (1651–1730), daughter of Georg Taust, pastor of Giebichenstein. The English form of Handel's name is found consistently in signatures on documents that he signed with the full form, the earliest surviving example being on a letter dated 29 June 1716 concerning payment of a dividend on South Sea stock. The register of his baptism at the Lutheran Liebfrauenkirche (also Marienkirche or Marktkirche) in Halle on 24 February 1685 gives his name as Georg Friederich Händel, but Friedrich is the form of his second name found on the signature in the matriculation register of the University of Halle (1702) and on his surviving letters in German. In Italy he mainly used the form G. F. Hendel. The date of his birth is given authoritatively in the funeral sermon for his mother, printed in 1731.

Family and education Handel's grandfather Valentin Händel (1582–1636) was a coppersmith from Breslau who had settled in Halle early in the seventeenth century. His father, Georg Händel, was the sixth son of Valentin, on whose death the coppersmith's business passed to Georg's elder brothers; Georg himself took up the career of surgeon and barber, and was apprenticed to Andreas Beger (a son-in-law of the musician William Brade) and

George Frideric Handel (1685–1759), by Philip Mercier, c.1730

Christoph Oettinger. When the latter died Georg married his widow and took over Oettinger's medical practice. From 1645 he was also surgeon for Halle's northern suburb of Giebichenstein. His career must have prospered, for in 1666 he bought a substantial house in the centre of Halle, at which he also renewed the licence for selling wines. By then he had the title *Geheimer Cammerdiener und Leib-Chirurgo* ('chamber servant and personal surgeon') at the court of Duke August of Saxony, who reigned from Halle as administrator of the former episcopal principality of Magdeburg; his appointment was continued (as chamber servant and honorary surgeon) by the administration of the elector of Brandenburg in Halle from 1680, and he later received promotions. In 1682 his first wife (and his eldest son) died during an epidemic, and on 23 April he married Dorothea Elisabeth Taust at Giebichenstein.

The first child of this second marriage, a son, died soon after his birth in 1684; the second son, Georg Friedrich, born early the next year, fared better, as did his sisters Dorothea Sophie (1687–1718) and Johanne Christianne (1690–1709). Of the children from Georg senior's first marriage, two daughters (who probably lived in the family home) died in 1687 and 1690, the other daughter had married in 1668, and the surviving son, Karl (1649–1711), had followed in his father's profession and become surgeon to Duke Johann Adolf I of Saxe-Weissenfels.

For information on Handel's youth and the early part of his career the principal source is John Mainwaring's biography of the composer, published anonymously in 1760. More than half of the biographical text describes Handel's life before he went to London: most of the material probably came, directly or indirectly, from the composer himself during his last years, and, while the chronology of some events is in doubt, the substance of the narrative is convincing. From this source come the stories of his father's opposition to Handel's early enthusiasm for music, the smuggling of a clavichord into the attic of the family home so that secret practice could be undertaken, and the young child's determination to accompany his father on a visit to his half-brother at Weissenfels, as a result of which the duke heard Handel playing the organ and persuaded his father to provide the child with a proper musical education. About 1692–3 Handel became a student of Friedrich Wilhelm Zachow (1663–1712), organist of the Liebfrauenkirche in Halle's market place, where Handel had been baptized: the training he received was probably in keyboard music and composition, and according to Mainwaring he found himself deputizing at the church for his master, who had a 'love of company, and a chearful glass' (Mainwaring, 15). During the following years he also became proficient in playing the violin (and possibly the oboe), though the organ, harpsichord, and clavichord received his principal attention.

On 14 February 1697 Handel's father died, and young Georg contributed to a collection of memorial poems. In the following years he presumably continued his studies under Zachow and received a good general education at the *Gymnasium*: his letters and business dealings in later life suggest that he never had problems with literacy or numeracy and that he took an interest in languages, literature, and fine art as well as music. On 10 February 1702, just before his seventeenth birthday, he enrolled at the University of Halle; it is not known which faculty he attended, but he may have contemplated an eventual career as a lawyer, as his father had apparently wished.

Professional experience in Halle and Hamburg On 13 March 1702 Handel was appointed organist of the Domkirche in Halle, for a probationary year in the first instance. This helped relieve his mother of financial obligation for supporting him during his time as a student: the post carried a salary of 50 thalers a year and the right to a free lodging in the Moritzburg Castle. The Dom, as part of the former property of the archbishop of Magdeburg, was now administered by the Prussian court (as that of Brandenburg had become in 1701), who paid his salary. His musical duties were not as extensive as those at the Liebfrauenkirche because the liturgical practices were Calvinist: the Dom had been granted to Halle's Huguenot community, who had settled in the city with official encouragement in 1686. The organist's attendance was required on 'Sundays, Thanksgiving Days and other Feast Days, to play the organ fittingly at Divine Service, and for this purpose to preintone the prescribed Psalms and Spiritual Songs' (Burrows, *Handel*, 10).

At this time Handel seems also to have formed a friendship with Georg Philipp Telemann (1681–1767), then a student in Leipzig, about 20 miles from Halle and the closest comparable city. Telemann, while formally studying law, was active in his pursuit of music, in which he currently

enjoyed a more diverse career than Handel: in 1702 he founded a student *collegium musicum* (concert society) and became conductor at the opera house. His friend's activity may have stimulated Handel to look for a career beyond the opportunities offered by his native city. From Halle it would have been natural to investigate the possibilities for patronage from the Prussian court at Berlin, which also received distinguished foreign visitors. According to Mainwaring, Handel and his family declined an offer of support (including an offer of musical training in Italy) from Berlin because it would eventually have tied him to court service there, but apparently the effect of the visit was that, on his return to Halle, Handel became 'conscious of his own superiority' as a musician (Mainwaring, 26).

Handel initially directed his ambitions to the city state of Hamburg. He must have travelled there soon after completing his contractual year at the Dom, where a replacement organist was appointed in September 1703. Hamburg's principal attraction was the opera house, supported by the city and founded in 1678, though the city also had a flourishing tradition in church music and there were opportunities for private music teaching among the international diplomatic and mercantile community. The opera house's leading manager and composer, Reinhard Keiser, had connections in Weissenfels and Leipzig which may have been useful in Handel's transition to his new environment, and he formed a new friendship soon after his arrival with the composer and tenor singer Johann Mattheson (1681–1764). Mattheson subsequently wrote several books on musical subjects and recorded various stories about the exploits of the two young musicians, though his narrative was coloured by the deterioration of his relationship with Handel. In the summer of 1703 they travelled together to Lübeck to investigate the prospects for an appointment as organist of the Marienkirche, from which Dietrich Buxtehude was on the point of retiring, but nothing came of this, partly because the successor was expected to marry Buxtehude's daughter.

Handel's first job at the opera house was, according to Mattheson, as a back-desk violinist in the orchestra, but in about a year he advanced to a place at the harpsichord (from which the operas were directed) and as a composer. This was not achieved without some professional jealousy: Mattheson relates that, after a dispute about the occupancy of the harpsichord seat at a performance of Mattheson's opera *Cleopatra* on 5 December 1704, he and Handel fought a duel outside the opera house, the bad consequences of which were prevented when Mattheson's sword hit a metal button on Handel's coat. By then Handel had one, and possibly two, operas of his own ready for performance: his first, *Almira*, opened in Hamburg on 8 January 1705, and the second, *Nero*, followed on 25 February. He wrote at least one more opera for Hamburg which, according to the librettist Heinrich Hinsch, was so extensive that it had to be divided into two works, and these (*Florindo* and *Daphne*) had to wait for performance until January 1708. By that time Handel was no longer based in Hamburg, though he possibly returned briefly for the performances. Of his Hamburg opera scores, only *Almira* survives in anything like a complete state, and it must be regarded as his earliest surviving major work. (There are some church cantatas and trio sonatas that have been ascribed to Handel's earlier years, but their origins are uncertain and their musical features make the attribution to Handel unlikely.) *Almira* is a colourful, rather prolix, opera well suited to the spectacle-seeking Hamburg audiences of the time.

The other principal surviving music that can be attributed to Handel's Hamburg years is for keyboard, some of it having perhaps been composed for concerts at the home of John Wych, the British resident, or as material for teaching his son. The Hamburg music suggests that Handel had a solid musical technique but a tendency to heaviness in his vocal writing, and the critical period in his development as a composer may well have been his period in Italy about the years 1707–9, which gave fluency and breadth to his style. According to Mainwaring, Handel had been offered a passage to Italy by a member of the Medici family who was on a visit to Hamburg, but he preferred to go 'on his own bottom' (Mainwaring, 41).

Italy, 1707–1709 Handel travelled to Italy during the second half of 1706, perhaps overland to Florence (as Mainwaring's account suggests) or perhaps directly by boat to Venice. He was probably the 'Saxon' who was reported as playing the organ at the church of St John Lateran in Rome on 14 January 1707; his cantata *Il delirio amoroso* is noted in the financial accounts of Cardinal Pamphili for 12 February. The manuscript of *Dixit dominus*, endorsed as having been composed at Rome in April 1707, is Handel's earliest surviving dated musical autograph, although other surviving undated manuscripts may predate it. It shows Handel as a master of exuberant concerted music for voices and orchestra, suggesting previous experience in the composition of church music for which there is now no relevant musical documentation.

Rome was one of Handel's principal centres during his Italian years. It did not provide direct opportunities for extending his operatic career since public opera was currently under a papal ban, though fine singers were employed by the musical patrons, as also were some internationally famous instrumentalists including Arcangelo Corelli. Handel's Roman repertory therefore principally comprises church music and secular cantatas: he composed outstanding works in both genres, and the cantatas in considerable quantity. His Roman patrons included Cardinal Colonna for church music, particularly relating to celebrations of the Carmelite festival, Marchese (subsequently Prince) Ruspoli for cantatas and church music, and Cardinal Pamphili for cantatas; he may also have been supported by Cardinal Ottoboni. Handel's music received essentially private performances at the palaces and estate churches of these patrons, and he was probably an honoured resident at their palaces. It was to Handel's Roman patrons that his first oratorios too owed their existence: Cardinal Pamphili was responsible for initiating the composition of *Il trionfo del Tempo e del Disinganno* (1707), and Prince Ruspoli for *La resurrezione* (1708), both works being performed in the patrons' palaces. *La resurrezione* enjoyed

elaborate resources in the way of performers and a scenic setting: in spite of its private venue, the first performance (on Easter Sunday) received a papal rebuke for the employment of a woman to sing the role of Mary Magdalene, and a castrato was hastily engaged to take over the role for the repeat performance next day.

The cantatas and oratorios gave Handel the opportunity to develop his skills in the operatic forms of recitative and aria, and his first full Italian opera, *Vincer se stesso è la maggior vittoria*, now known as *Rodrigo*, written for performance in Florence towards the end of 1707, was probably mainly composed in Rome. Taken as a whole *Rodrigo* is competent opera, but *Agrippina*, written for Venice two years later, marks a considerable step forward, with its lively treatment of a racy plot involving dynastic jealousies, and with arias that are musically memorable as well as workmanlike. *Agrippina* was given as the first opera of the carnival season in December 1709, and Handel may also have been to Venice for the carnival in one or both of the previous years, when (according to Mainwaring) he met 'Scarlatti' (probably Alessandro): Mainwaring also relates a friendly competition between Handel and Domenico Scarlatti in Rome, at which Scarlatti was judged the better player on the harpsichord and Handel on the organ. In the year between his two operas Handel had an expedition to Naples in June–July 1708, when he composed an extended dramatic cantata, *Aci, Galatea e Polifemo*, for the wedding celebrations of the duke of Alvito, a continuo-accompanied Italian trio, and perhaps a couple of cantatas.

During his time in Italy, spanning just over three years, Handel thus managed to work and to gain experience in four major musical centres, but travel between them necessitated journeying through the Italian theatre of the War of the Spanish Succession. Handel's patrons were divided in their allegiances. The duke of Alvito supported the emperor, and Naples had passed from Spanish to Austrian control in 1707: on the other side, Ruspoli led a mercenary expedition from Rome against the Habsburgs in 1708. Rome's 'Arcadian' literary world, which is reflected in the pastoral texts of many cantatas, may have been partly a reaction to the harsh realities of contemporary politics, and Handel must have steered his way skilfully around the political and military hazards as he moved from one patron to another. The texts of a couple of Italian cantatas written for Ruspoli seem to make specific political reference to Ruspoli and to the pope as 'protectors' of Rome, and it was in Rome that Handel wrote his French and Spanish cantatas, one in each of the languages of the principal nations that were in friendly alliance with Rome.

Hanover and London, 1710–1715 Handel's time in Italy was successful professionally and artistically, but he did not decide to make a permanent career there. Mainwaring attributes this partly to Handel's discomfort with the prospect of living in a Roman Catholic culture, but it seems equally likely that he judged that a more satisfactory and permanent career might be found elsewhere in Europe, where there were plenty of Italian opera houses and courts that offered diverse musical opportunities. According to Mainwaring, Handel had received a warm invitation to visit London from Charles Montagu, fourth earl of Manchester, British ambassador in Venice, and there he also probably made contact with two dignitaries from the court of Hanover: Prince Ernst, the elector's brother, and Johann Adolf, Baron Kielmansegg, deputy master of the horse. Handel departed from Venice early in 1710, travelling north via Innsbruck (which he had left by 9 March). At some stage during the year he visited his mother in Halle. He arrived at Hanover early in June and was appointed kapellmeister to the court there on 16 June, with an annual salary of 1000 thalers. Letters from the dowager electress Sophia to her daughter Sophia Charlotte, queen of Prussia, speak enthusiastically of Handel's keyboard playing, which gave particular pleasure to Electoral Prince George Augustus and Princess Caroline. She also reported that he was 'quite a handsome man' (Burrows, *Handel*, 30), and that it was rumoured that he had been the lover of Vittoria Tarquini, a singer whom Handel had encountered in Italy and who was married to Jean-Baptiste Farinel, now the Hanover konzertmeister. This story is also mentioned by Mainwaring, and is the only documented hint of any sexual liaison during the composer's lifetime.

Hanover had supported a flourishing court opera company during the 1690s under Agostino Steffani's leadership, but changing financial circumstances had brought this to an end in 1698. It is possible that Handel's appointment was made with a view to a revival of the court opera or in anticipation of the prospective dynastic inheritance of the British crown. The kapellmeister apparently did not have much work to do at Hanover in 1710: from Handel's period of service there the only compositions that can be identified are a few Italian duets (a genre that Princess Caroline seems to have favoured), a few cantatas, and possibly some instrumental music. Handel's underemployment was apparently sympathetically considered at court: according to Mainwaring, when the post was offered at Hanover, Handel indicated that he had promised to visit the elector palatine and that he also intended to visit London, but was assured that 'neither his promise nor his resolution should be superseded by his acceptance of the pension proposed. He had leave to be absent for a twelve-month or more, and to go withersoever he pleased' (Mainwaring, 72). Mainwaring also said that Handel did visit the court at Düsseldorf, where the elector palatine was disappointed to learn that he was engaged elsewhere but nevertheless presented him with 'a fine set of wrought plate for a desert' (ibid., 74). The composer's more ambitious destination was London, however, where he must have arrived in November or December 1710.

Handel had probably learned in Venice that an opera company had been formed in London and was just achieving some measure of stability. From January 1708 the opera performers were based at the Queen's Theatre in the Haymarket, managed by Owen Swiny, and in March 1710 for the first time an opera performance was given entirely in Italian. Wordbooks of the operas were sold at

the theatres, with the Italian text and English translation on facing pages. The War of the Spanish Succession had also had the effect of driving a number of excellent instrumental musicians to London, and others came to join them, with the result that there was the foundation for a fine permanent orchestra. Handel, as the composer, fitted exactly the opera company's need of the moment.

His first London opera, *Rinaldo*, to a libretto that was the joint work of Aaron Hill (effectively the opera manager for the 1710–11 season) and Giacomo Rossi, opened at the Queen's Theatre on 24 February 1711. The plot, a crusader story taken from Torquato Tasso's *La Gerusalemme liberata*, was given a colourful treatment that resembled the traditions of the Hamburg theatre (and to some extent also the English masque dramas from preceding decades), and made good use of the theatre's scenic effects: as *The Spectator* described it on 6 March 1711, the opera was 'filled with Thunder and Lightening, Illuminations and Fireworks'. Handel directed the performances from the harpsichord, as was customary, and the final aria in act II incorporated a harpsichord solo: the opera thus introduced him to the London public as performer, director, and composer. Equally significant for his reception in London was a private performance, presumably of arias and keyboard music, in which he took part with other opera performers before Queen Anne on her birthday (6 February) at St James's Palace: this seems to have replaced the performance of the court ode which was traditionally provided by the poet laureate and set to music by the master of the queen's music. The opera season ended in June 1711, and Handel returned to Hanover, via Düsseldorf.

By October 1712 he was back in London, completing his score of a second opera for London, *Il pastor fido*, on 24 October. This received its first performance at the Queen's Theatre on 22 November, and was soon followed by another opera, *Teseo* (completed 19 December 1712, first performance 10 January 1713). *Teseo* marked Handel's first collaboration with the librettist Nicola Haym, who was also a cellist in the opera orchestra and a composer. By the time *Teseo* received its first performance Handel was also engaged in the composition of settings of the English texts of the Te Deum and the Jubilate in anticipation of London's forthcoming celebrations for the peace of Utrecht. In a letter from Hanover, probably written in the summer of 1711, Handel was reported to be learning the English language seriously, and his first English anthem, 'As pants the hart', for the Chapel Royal choir, was probably composed towards the end of 1712. Handel's Utrecht music, and the related ode for the queen's birthday, *Eternal Source of Light Divine*, together reflect a conscious decision by Handel to make his mark in English-language musical genres that were normally the domain of the leading English court composers. The Utrecht thanksgiving service in St Paul's Cathedral on 7 July, and the preceding musical rehearsals, attracted attention from the public and from the newspapers. Towards the end of the opera season Handel had also contributed another Italian opera, *Silla*, the wordbook for which is dated 2 June 1713 but whose performance history is uncertain.

Handel's Utrecht music marked a turning point, not only because it was the composer's first major work in the English language and related to musical settings for the Anglican liturgy in a tradition that derived from Henry Purcell's orchestrally accompanied setting of the Te Deum and Jubilate of 1694, but also because it indicated a conscious attachment to the British court, at the expense of his position at Hanover. In June and July 1713 Handel became the subject of diplomatic correspondence between London and Hanover, as representatives of the Hanover court in London tried to mediate on his behalf following the elector's decision to dismiss his kapellmeister. His dismissal had taken place before the Utrecht service was performed, and the correspondence mentions Handel's wish to 'enter the Queen's service' (Burrows, *Handel*, 72). Handel was rewarded with an annual pension of £200 granted by the queen on 28 December 1713, but his status as a foreigner prevented him from receiving any office under the crown. The originality of Handel's music, and the influence that he seems to have established quickly at court, apparently enabled his music to be accepted for a national and Anglican celebration without any evidence of protest. The web of political interests that affected Handel at this time was complex: the elector of Hanover, while dismissing Handel, must have been aware that his own succession to the British throne would not be far distant and he would soon have dealings with the composer on another basis. When the elector succeeded as George I following the death of Queen Anne in August 1714, William Croft provided the new music for the coronation, but Handel's music was performed at the Chapel Royal for the services which marked the arrivals of members of the Hanoverian family in London. As king, the new ruler had no grounds for difficulty in his relations with Handel, and he continued the pension begun by Queen Anne: as elector, he finally tidied up the situation with the payment of some arrears of the Hanover salary to Handel in October 1715, possibly after a royal water party on the River Thames at which Handel's music was played, though the best-documented account of a performance of Handel's 'Water Music' comes from 17 July 1717.

London and Cannons, 1715–1720 Having established himself in London in 1713, Handel nevertheless did not contribute any new operas to the 1713–14 opera season, though he apparently had a good working relationship with the new manager, John Jacob Heidegger. His next opera, *Amadigi*, received its first performance at the King's Theatre (as it was now called) on 25 May 1715. Heidegger's dedication in the wordbook of the opera to Richard Boyle, third earl of Burlington, said that the opera had been 'composed in your own Family' (Deutsch, 67), and this has been taken to mean that Handel lived for some time at Burlington House. Mainwaring also mentioned that in his early years in London, Handel lived with a Mr Andrews of Barn-Elms (now Barnes), but there is very little firm evidence about Handel's residences or his lifestyle for the first twelve years of his career in London.

From both musical and dramatic aspects, *Amadigi* is arguably the best of Handel's early London operas,

though it lacked the spectacular stage effects that had characterized *Rinaldo* and ensured its better survival in the theatre repertory. *Rinaldo* and *Amadigi* were performed again early in 1717, but by then Heidegger's opera company was near to financial collapse: the company's final performance was given on 29 June. Prospects for subsequent revival of the fortunes of the King's Theatre were set back as a result of a dispute within the royal family which resulted in the prince and princess of Wales being excluded from the court, with wider consequences in the division of the patronage base on which the opera house depended. Handel's response to this difficult situation was to find another outlet for his music with the musical establishment supported by James Brydges, earl of Carnarvon and (from 1719) duke of Chandos. For Carnarvon he composed eleven anthems and a Te Deum that were performed in the recently renovated church of St Lawrence adjoining Carnarvon's estate at Cannons in Edgware during 1717–18. His first extended English dramatic works, *Acis and Galatea* and *Esther*, were also composed at this time. *Acis and Galatea* was certainly performed at Cannons, and *Esther*, his first English oratorio, probably was too. Both works in their Cannons forms seem to have been written as a single succession of scenes without an interval, and they used the full performing resources that Carnarvon was able to employ. It is uncertain whether either work was presented in fully staged form or as a concert work in a scenic setting. The Cannons anthems followed up Handel's experience in English church music from the Utrecht music, but in a different musical context, since the anthems were written for chamber-scale performance: one of them, indeed, was an adaptation of the Utrecht Jubilate. Handel apparently lived at Cannons at least occasionally in 1717–18.

Handel's association with Cannons is important not only for the music composed there, but also as an indication that he had decided that his professional future lay in England: he did not, as the opera company broke up, seek an alternative career by returning to the continent. While the court did not patronize theatre companies or musical performances in the official manner that was normal in other European centres, nevertheless Handel probably recognized that the Hanoverian dynasty would probably provide support to him in the longer term: his own early achievements in English church music, on the other hand, gave his reputation a certain independence in London when he was in danger of being identified unfavourably with Hanoverian interests. Effectively, therefore, his time at Cannons was a waiting period while the personal and political disputes at court were settled and until a new opera company could be formed. He may have returned briefly to Germany in 1716, and he certainly planned to do so towards the end of 1718. In a letter written to his brother-in-law in Halle on 20 February 1719 he apologized that he had been unable to depart for his planned visit because of 'unavoidable business on which my future depends' (Burrows, *Handel*, 102). This 'business' was the plan for the foundation of a new opera company, the Royal Academy of Music—a title clearly making reference to the French court opera, but planned as a joint-stock company with an impressive list of subscribers from the nobility and gentry. In May 1719 the king granted the company £1000, and it received its royal charter on 27 July. By then Handel had left London, travelling via Halle to Dresden, where he attended a lavish opera season at the Saxon court and negotiated with the singers to secure their future services in London. The main target of his attention was the castrato Francesco Bernardi, known as Senesino. At a meeting of the directors of the academy on 30 November Handel was appointed 'Master of the Orchestra with a Sallary' (Deutsch, 97), and he probably returned to London about the turn of the year 1719–20; in his absence preparations for the employment of the orchestral players had proceeded and intricate negotiations were under way to complete the cast of singers. Handel composed a new opera, *Radamisto*, for the academy's first season, but it was not performed on the academy's opening night, 2 April. Instead, Handel's opera was apparently held back until a diplomatic reconciliation between the king and the prince of Wales (and their respective political supporters) had been effected. The first night of *Radamisto*, on 27 April, was also the first public event that the king and the prince attended together: the printed libretto bore a dedication in English, over Handel's name, to the king.

The following November Handel published, apparently on his own account, a set of eight keyboard suites under the title *Suites de pieces pour le clavecin*, many of the movements of which he had probably composed or revised while at Cannons. One movement includes the set of variations on a theme that later became known as the 'Harmonious Blacksmith', associated in sentimental fiction with the local Cannons smithy. The set also included a prefatory note over Handel's name, concluding: 'I will still proceed to publish more reckoning it my duty ... to serve a nation from which I have receiv'd so generous a protection' (Deutsch, 117–18). In preparation for the publication, Handel had secured a royal privilege (dated 14 June 1720) for the 'sole printing and publishing' of his music 'for the Term of Fourteen years' (ibid., 105).

The Royal Academy of Music, 1720–1727 The London opera seasons normally ran from late autumn through to the following spring or early summer, so the opening of the academy in April 1720 left only a short performing span for the first season. Senesino was not available at this time, and *Radamisto* in effect received a relaunch in December 1720 with a revised score incorporating him into the title role. *Radamisto* set the tone for the academy operas with plots involving dynastic jealousies and themes of love and duty, and it was also typical in that its libretto was based on an earlier one that had seen performance (with music by another composer) in Italy. Working principally with Haym and with Paolo Rolli, who adapted the Italian texts to forms suitable for London performers and London conditions, Handel produced a succession of impressive operas in the following years. Apart from *Radamisto*, his only contribution to the 1720–21 season was act III of *Muzio Scevola*, an opera composed jointly with Filippo Amadei (act I) and Giovanni Bononcini

(act II). His subsequent operas (with dates of first performance) were: *Floridante* (9 December 1721), *Ottone* (12 January 1723), *Flavio* (14 May 1723), *Giulio Cesare in Egitto* (20 February 1724), *Tamerlano* (31 October 1724), *Rodelinda* (13 February 1725), *Scipione* (12 March 1726), *Alessandro* (5 May 1726), and *Admeto* (31 January 1727). He reached a peak about 1724–5 with *Giulio Cesare*, *Tamerlano*, and *Rodelinda*, which have scores of sustained musical quality, conveying credible characters through dramas with convoluted plots. These are also some of Handel's longest operas: *Giulio Cesare*, for example, has nearly four hours of music, and the leading characters (Cesare and Cleopatra) have eight arias each. Although there are some similarities in the themes that the plots develop, the academy operas received clearly distinguished scenic settings, and the singers' roles developed individual characterization beyond generic operatic stereotypes.

Most of Handel's academy operas were given at least a dozen performances in the seasons of their first introduction, and the seasons as a whole ran to more than fifty performances each, for which Handel presumably had overall responsibility as 'Master of the Orchestra'. The varied contributions to the score of *Muzio Scevola* provide a reminder that, in the early years at least, Handel was not the only house composer for the academy. In the early years of the academy Handel and Bononcini were perceived to be in rivalry, and this is reflected in John Byron's epigram which concludes:

> Strange all this difference should be
> 'Twixt Tweedle-dum and Tweedle-dee.
> (Deutsch, 180)

In fact, the musical styles of the composers were clearly distinct. In practice, the opera-goers were more interested in the company's singers than in the composers, and public attention focused on Senesino and the successive leading ladies—Margherita Durastanti in the early years and then Francesca Cuzzoni from her arrival at the end of 1722. A new situation arose when Faustina Bordoni joined the company in 1726: the scores of *Alessandro* and *Admeto* reflect the need to provide leading female roles for both Cuzzoni and Faustina. The coincidence of the South Sea Bubble with the foundation of the academy provoked satirical comment, but the first seasons were successful financially as well as artistically: following the 1721–2 season the academy even declared a dividend. Bononcini was dismissed from the academy in October 1722, leaving Handel as the principal composer.

Handel's other principal activity was in the area of church music. In 1724 and 1726 he composed anthems and Te Deums for services at the Chapel Royal marking George I's return from his visits to Hanover, and in 1722 he probably contributed similarly to a Chapel Royal service marking the king's return to St James's Palace from Kensington at the time of the Atterbury plot. On 25 February 1723 he was granted a second annual pension of £200 as 'Composer of Musick for the Chapel Royal'. In July of that year he also moved into the new house in Brook Street, Westminster, which became his home for the remainder of his life. By 1723–4 Handel had also become music teacher to the prince of Wales's elder daughters, thereby adding yet another £200 annually to his income. The eldest, Princess Anne, seems to have been Handel's favourite student, and she became one of the composer's firmest supporters.

The Naturalization Act to which George I gave his assent on 20 February 1727 included Handel's name as an addition to the original text. It allowed the petitioners all property and legal rights, but excluded them from holding civil or military office or from being members of parliament or of the privy council. Following the deaths of George I in June and William Croft in August, George II—according to an annotation in one copy of Mainwaring's biography—insisted that Handel, rather than Croft's obvious successor, Maurice Greene, should compose the music for the forthcoming coronation. Handel took full advantage of the opportunity, producing in his coronation anthems (and particularly in 'Zadok the priest') works that formed a memorable and powerful adornment to the ceremony: the 'grand style' of the Utrecht music was presented once again before a glittering and influential audience. The coronation took place at Westminster Abbey on 11 October, preceded by two public rehearsals of the music. The influence of the anthems reappeared a few years later when Handel turned to theatre oratorio in English.

Extending the academy, 1727–1734 In 1727 the new academy season began early, on 30 September, in order to take advantage of the presence of the opera patrons in London for the coronation. A revival of *Admeto* was followed by a new opera, *Riccardo primo* (first performance 11 November), which, since its subject was Richard I, was apposite for the coronation season, though Handel had drafted the score in May, while George I was still alive. Two new operas from Handel followed in the new year, *Siroe* (17 February 1728) and *Tolomeo* (30 April). On 1 June the ninth and last academy season closed. There had been institutional and personal tensions within the venture for some time. More seriously, the academy had called in all its available capital, and the patrons who had provided their support in 1719–20 were now less enthusiastic. Handel and Heidegger nevertheless tried to raise a subscription for a further season, and on 18 January 1729 they came to an agreement with the academy managers. They were granted use of the theatre and the academy's capital assets (including costumes and scenery) for five seasons—that is, until the summer of 1734—and Handel set off for Italy and Germany soon afterwards to secure a cast of singers for the autumn. He returned to London on 29 June; on 10 October he performed with the opera soloists before the king and queen at Kensington Palace, and the opera season opened, with Handel's new opera *Lotario*, on 2 December. On 11 August Handel had lost an important professional colleague with the death of Haym, and this probably emphasized further the extent to which he had now to rely on his own resources.

Together, Handel and Heidegger managed to sustain five performing seasons at the King's Theatre, presumably raising a subscription for each season separately, and Senesino returned as the leading man in the autumn of 1730.

Handel's new operas for the period were *Partenope* (24 February 1730), *Poro* (2 February 1731), *Ezio* (15 January 1732), *Sosarme* (15 February 1732), *Orlando* (20 November 1732), and *Arianna* (26 January 1734); the serenata *Parnasso in festa* (13 March 1734), although less conventionally dramatic, followed the same conventions as the operas. For these opera seasons also Handel presented pasticcio operas of music by other composers in which he had a substantial part in the creative assembly of the components. In general Handel's new operas sustained the musical and dramatic quality of the preceding academy operas, and they were also rather more diverse in character: settings of the more formal librettos by Pietro Metastasio (*Poro*, *Ezio*) were complemented by the more racy *Partenope* (by Silvio Stampiglia) and the Ariosto-derived *Orlando*, featuring spectacular transformations and supernatural visitations at the behest of the magician Zoroastro.

An event that was to have historic consequences for Handel's career was his introduction of an English work for the first time towards the end of his Italian opera season of 1731–2. The work concerned was *Esther* (2 May 1732), a substantially expanded version of his Cannons-period oratorio. This followed a staged performance of the original version by the choristers of the Chapel Royal at the Crown and Anchor tavern on 23 February, which may have been preceded by a private performance at the house of Bernard Gates, a singer in the Chapel Royal choir and master of the children. The version that Handel presented at the King's Theatre used the current opera orchestra and soloists, strengthened by additional singers, some of whom were probably from the major London choirs including the Chapel Royal. The advertisements for the performance said that there would be 'no Action on the Stage' and that the 'Musick' (performers) would be 'disposed after the Manner of the Coronation Service' (Deutsch, 289), and indeed Handel slipped music from his 1727 coronation anthems into the score. A contemporary description suggests that Handel and the leading singers performed from a gallery constructed on the stage. *Esther* apparently proved a popular novelty, and Handel followed it with a similar revival of his other dramatic Cannons piece, *Acis and Galatea* (10 June), this time performed in Italian as a serenata, against a pastoral scenic background, but once again without stage action. With both *Esther* and *Acis and Galatea* Handel had to rearrange and expand the score considerably in order to create a full-length three-act evening as expected by his opera audiences.

In 1732–3 Handel also came before the London public as an instrumental composer, through the publication of sets of sonatas for solo instruments (later sometimes referred to as 'op. 1'), trio sonatas (op. 2), orchestral concertos (op. 3), and a second set of keyboard suites. The music included in these publications was collected from much earlier works, though some of the sonatas and one of the suites had been composed in the 1720s, and the editions themselves were pirated by John Walsh, who apparently produced them on his own initiative before the expiry of the fourteen-year royal privilege that had been granted to Handel in 1720. In an effort to disguise their origins, Walsh initially put out some copies of the sonatas with spurious title-pages bearing the name of Roger (of Amsterdam) as publisher. Walsh's sources were variable in quality (and included some spurious violin sonatas), but the publications constituted substantial collected editions of Handel's music: indeed, they were almost comprehensive in some areas, for Handel wrote very few new solo sonatas or keyboard pieces after 1734. A collection of fugues, mainly dating back to the Cannons period, followed from Walsh in 1735, under his own imprint and also rather confusingly designated as 'Troisieme Ovarage', since a set of concertos had already appeared as 'Opera Terza'.

Rivalries in London, 1733–1741 In 1732 Handel was apparently successful in his continued management of London's Italian opera, and there were strong hints of the potentially broader appeal of his work through instrumental music and English oratorio. However, there were also undercurrents that threatened the security of his career. Although the musical programme of the opera company remained sound, personal relationships were becoming strained, particularly between Handel and Senesino, and a new generation of opera patrons was emerging for whom Handel and Heidegger represented an old-fashioned taste. A new rival opera company, the Opera of the Nobility, was founded, and this venture coincided with the emergence of the next generation of problems within the royal family. The Opera of the Nobility was to some extent associated with the political dissent that centred around Frederick, prince of Wales, though the prince himself apparently attempted at least a degree of even-handedness in his support of both companies.

The creation of the new opera company was probably under discussion by 1732, but did not come about until 1733. The end of the 1732–3 season was a difficult period for Handel. He introduced a new English oratorio, *Deborah* (17 March 1733), in the latter part of the opera season, but this was accompanied by a controversy over higher ticket prices; moreover, at the last opera performance of the season on 9 June Senesino announced that he would not be returning to Handel's company and, followed by most of Handel's singers, joined the Opera of the Nobility. At the end of the season Handel prepared for a visit to Oxford, where, at the time of the university's celebrations for the commemoration of benefactors, he gave six performances of four English oratorio-style works within a week, including the first performance of a new oratorio, *Athalia* (10 July). His main venue was the Sheldonian Theatre, but he also gave *Acis and Galatea* in the hall at Christ Church and performed various pieces during a service at the university church. It was said at the time that Handel had gone to Oxford to receive a doctoral degree, but there is no formal record that this was offered: for Handel, it was probably sufficient that his visit was well received and (as seems likely) quite profitable. There he may also have met the librettist Charles Jennens for the first time.

On his return to London, Handel assembled a new opera company for the following season at the King's Theatre. In 1733–4 the Opera of the Nobility performed its first season

at the Lincoln's Inn Fields theatre, while Handel's agreement for the use of the premier opera theatre in the Haymarket still had one more year to run. Not surprisingly, his rivals had greater ambitions, and from the next season onwards they secured the King's Theatre. In response Handel successfully negotiated with John Rich for the use of his new theatre at Covent Garden, which had opened in December 1732. His new operas for Covent Garden were *Ariodante* (8 January 1735), *Alcina* (16 April 1735), *Atalanta* (12 May 1736), *Arminio* (12 January 1737), *Giustino* (16 February 1737), and *Berenice* (18 May 1737), plus the pasticcio *Didone* (1737). Covent Garden was not exclusively devoted to musical performances, and Handel gained the use of some of Rich's theatrical resources. Among these in the first season was a dance troupe led by Madame Sallé, for whom Handel incorporated important music into performances of *Alcina* and *Ariodante* and composed *Terpsicore* (9 November 1734), a balletic prologue to a revival of *Il pastor fido*.

With *Alcina* and *Ariodante* (and *Arianna*, first performed in the last King's Theatre season), Handel's operas reached a new peak of attractiveness and musical quality comparable to the remarkable works of the mid-1720s, but in a more expansive musical style and taking full advantage of the vocal talents of his new leading castrato, Giovanni Carestini. In 1735 Handel also gave his first substantial run of oratorios (fourteen performances) in the midst of a London opera season, using the Lenten period that would later become his regular oratorio season. He relied on his accumulated repertory (including the first London performances of *Athalia*) rather than writing new works, and he provided Carestini with some Italian arias in the context of otherwise English performances. An important innovation was his introduction of organ concertos, played between the parts of the oratorios or as overtures to the parts: with these he introduced an important new instrumental genre and also re-established himself as a soloist. At the end of the season he lost Carestini, and he had to delay the start of his next season, eventually beginning early in 1736 with a fine new setting of Dryden's *Alexander's Feast* (19 February) and then a succession of works to English texts. With the arrival of a new castrato (Gioacchino Conti) he returned to opera at the end of the season in May–June 1736, and his following season of 1736–7 had a heavy programme, principally of Italian operas but including a new version of his early Italian oratorio as *Il trionfo del Tempo e della Verità* (3 March 1737).

Handel mounted some diverse and attractive programmes during the years when he had to perform in rivalry with the Opera of the Nobility, though it was difficult to maintain an audience against a company that had Farinelli as well as Senesino for its leading roles. In addition, he may have had to steer a careful path through professional rivalries that affected English as well as Italian musicians. A dispute over the attribution of a madrigal in 1732, which hastened the conclusion of Bononcini's public career in London, may reflect local jealousies which involved Bernard Gates and Maurice Greene, and it seems likely that relations between Handel and Greene were by now rather cool. The situation would not have been improved by a contretemps over the music for Princess Anne's wedding: an anthem for the occasion by Greene was announced and publicly rehearsed, but in the end Handel was given charge of the musical programme for the ceremony on 14 March 1734, which featured his concertos and the anthem 'This is the day'. Handel also provided 'Sing unto God', the anthem for the prince of Wales's wedding on 27 April 1736, and a conflation of the two anthems for the betrothal ceremony for Princess Mary in May 1740.

By the summer of 1737 it was apparent that the Opera of the Nobility was experiencing financial and artistic problems and was not likely to continue in its original form. Handel was indisposed during the last weeks of his own opera season with a 'paraletick disorder' that prevented him from directing his performances from the harpsichord, and in September he went for a health cure to Aix-la-Chapelle, where he reputedly made an astonishingly speedy recovery. At the King's Theatre a subscription season had been arranged for 1737–8, probably managed by Heidegger in association with the remnant of the managers from the Opera of the Nobility and using such performers as were willing to return to London, but not including Farinelli or Senesino. Soon after his return to London (probably at about the time when the opera season began, on 29 October) Handel was approached by the opera company and agreed to write for it, but apparently in circumstances which did not involve him in the management of the company beyond the practical matters concerning his own works. The results were *Faramondo* (3 January 1738) and *Serse* (15 April 1738), and also *Alessandro Severo*, a pasticcio using his own music. As part of the agreement Handel was also given a benefit night at the King's Theatre, at which he performed a miscellany of his own music under the title 'An Oratorio' (28 March 1738) and which may have brought him £1000. The composition of *Faramondo* had been interrupted following the death of Queen Caroline on 20 November 1737, whereupon Handel composed an extended choral anthem, 'The ways of Zion do mourn', for her funeral on 17 December in King Henry VII's chapel, Westminster Abbey. Both this and the revision of the anthem 'As pants the hart' for the benefit performance in March 1738 include movements incorporating themes derived from German chorales, which suggests that Handel may have also visited Germany (or at least obtained a copy of a German hymnbook) during his continental visit in 1737.

The King's Theatre venture failed to raise a subscription for the season of 1738–9, and it seems very likely that his experiences in the preceding season had persuaded Handel that he could not work with the younger generation of aristocratic opera managers led by Charles Sackville, earl of Middlesex, for he seems to have repeatedly turned down requests for further commissions from them in the 1740s. Since the King's Theatre was available, Handel occupied it on his own account for the early months of 1739 and gave a programme beginning with mainly English works including two new oratorios, *Saul* (16 January)

and *Israel in Egypt* (4 April). *Saul* marked a significant step into more ambitious dramatic English oratorio, while *Israel in Egypt* was a short-lived experiment in oratorio mainly presented through choral movements. *Saul* was important also as Handel's first substantial collaboration with Charles Jennens as librettist. The nearest to an opera that Handel gave in this season was *Jupiter in Argos*, a 'Dramatical Composition' in Italian that may have been semi-staged and was mostly constructed from Handel's pre-existing music. In September 1738 he had also drafted an opera score, *Imeneo*, which did not come to completion at once. A significant event during the season was a performance of *Alexander's Feast* on 20 March in support of the 'Fund for Decay'd Musicians'. Handel was one of the original members of the charity concerned, the Society of Musicians, which was founded in April 1738 and formalized by a declaration of trust in August 1739. He gave a further benefit night for the fund in 1740.

Although Handel's 1739 season was apparently well received, he probably felt that, unless he could present operas with recognizably first-rate soloists, the King's Theatre was an extravagant venue, and in the two following seasons he gave performances at the neglected theatre at Lincoln's Inn Fields. For the 1739–40 season he presented his first 'all-English' programme in London, beginning on St Cecilia's day (22 November 1739) with *Alexander's Feast* and his new setting of Dryden's shorter *Song [Ode] for St Cecilia's Day*. The major new work of the season was *L'Allegro, il Penseroso ed il Moderato* (27 February 1740), an engaging work based on the alternation of passages from Milton's poems *L'Allegro* and *Il Penseroso*. The libretto was first drafted by James Harris, a Salisbury gentleman whose family were supporters of Handel and who had entertained the composer at his house in 1739: Jennens then collaborated with Handel in revising Harris's text and adding a new part (*Il Moderato*) as a resolution between the moods of the two characters represented in the poems. Also featured in the season were performances of orchestral concertos, which Handel had composed as a set of twelve in September–October 1739: these were published as his op. 6 in April 1740. Subscriptions to the concertos and sales of the first copies were administered from Handel's house, but the publication was the work of John Walsh junior, who had taken over the family business following the death of his father in 1736. Walsh junior seems to have quickly established himself as Handel's approved publisher, for a succession of printed editions appeared which (unlike those of 1732–4) clearly carried the full authority of the composer: a handsome complete score of *Alexander's Feast* in 1737, then the sets of organ concertos op. 4 in 1738, and trio sonatas op. 5 in 1739. The score of *Alexander's Feast* was complemented by an engraved frontispiece with a portrait of Handel; yet more remarkable was the full-size statue of the composer which was commissioned from Louis Roubiliac and set up in the pleasure gardens at Vauxhall in 1738 by its owner, Jonathan Tyers.

In the summer of 1740 Handel travelled to the continent, visiting Haarlem and possibly travelling on to Hanover, Berlin, and Halle: he was back in London by early October. For his second season at Lincoln's Inn Fields in 1740–41 his programme swung back to Italian opera. His two new operas were *Imeneo* (22 November 1740) and *Deidamia* (10 January 1741), and the season included adapted revivals of oratorio-style works in a mixture of Italian and English. With the three performances of *Deidamia* in January–February 1741 Handel gave his last Italian operas in London: the final performance on 10 February was given at the Little Theatre, Haymarket, though the remainder of Handel's programme then continued at Lincoln's Inn Fields.

Dublin, 1741–1742 In July 1741 Handel composed a couple of Italian duets, presumably for singers currently in London, and then between 22 August and 29 October he drafted two major oratorio scores, *Messiah* and *Samson*, which may have been envisaged for a forthcoming London season. *Messiah* was brought near to completion, but *Samson* was left as an unfinished draft, probably because the work was on too ambitious a scale to meet his needs. By the end of October Handel knew that his immediate future lay with a season of performances in Dublin, at the recently inaugurated concert hall in Fishamble Street. The process by which Handel had arranged his Irish visit is not known, but soon after attending the first performance given by the revived opera company of Lord Middlesex at the King's Theatre on 31 October he left London, and he arrived in Dublin on 18 November. As with his sojourn at Cannons in 1717–18, he may have seen the change of venue as both a new opportunity and a timely excuse for absence from London, so that he would be beyond the reach of the politics of the new opera company.

Handel settled quickly in a house in Abbey Street and made contact with the performers in Dublin whom he would need for his concerts, probably including the singers from the choirs of Christ Church and St Patrick's cathedrals, and the instrumentalists associated with the music room, many of whom probably also held appointments as musicians at Dublin Castle, where the violinist Matthew Dubourg was master of the music. It seems that the only principal performer brought by Handel from London was the soprano Christina Avoglio, though he was also accompanied by his music copyist-cum-secretary John Christopher Smith and at least one other copyist.

Handel's initial scheme was a subscription series of six concerts beginning on 23 December 1741. In a letter written to Jennens six days later Handel recounted his satisfaction: the performers were good, the hall was pleasant, he felt inspired in his performances on the organ (presumably in the concertos), and the audience was large, full of eminent people and 'quality', and enthusiastic. The programme consisted of well-tried English works, adapted to local performing conditions, and Handel advertised for a second subscription series of six concerts, to begin on 17 February 1742. A practical problem arose early in 1742 when Jonathan Swift, dean of St Patrick's, banned his singers from taking part with a 'club of fiddlers', and Handel had to look for some new soloists: these included a tenor named Calloghan and Susannah Cibber, the sister of

Thomas Augustine Arne, who was acting in Dublin at Aungier Street Theatre. In his second series Handel included two performances of *Imeneo*, given in concert format as a serenata: these were the last performances of an Italian opera score that Handel directed.

Before the completion of the second subscription series, Handel advertised his new work, *Messiah*, to be given as an additional performance 'For Relief of the Prisoners in the several Gaols' and for the support of Mercers' Hospital and the Charitable Infirmary. It seems that in view of the charitable nature of the event (which began at noon, in contrast to the evening performances of the subscription series), the cathedral choirs were permitted to take part. Both the rehearsal on 9 April and the first performance on 13 April were well attended and well received. Handel gave two further performances in Dublin, presenting *Saul* on 25 May and *Messiah* again on 3 June, both of them apparently on his own account. Mrs Cibber and her sister-in-law Cecilia Arne also sang some of Handel's music at Mrs Arne's benefit concert at Aungier Street Theatre on 21 July. Handel left Dublin for London on 13 August. He settled down to completing the score of *Samson* and to writing a couple more Italian duets. He talked of returning to Dublin for another subscription season in 1744–5, and had clearly enjoyed his year there, but in the event he never returned.

Although probably not originally composed with Dublin in mind, *Messiah* turned out to be an exactly appropriate work to crown Handel's season there, and its success may have been partly attributable to the fact that, probably by intention, Handel presented it as an additional charity performance and not as part of his regular subscription series. For *Messiah* was not like most of his oratorios: his only precedent for a narrative oratorio with texts taken directly from scripture was *Israel in Egypt*, which had not achieved the recognition of works like *Esther*. Furthermore the subject matter of *Messiah*, which dealt directly with the interpretation of events from Christ's life, was potentially sensitive, as Handel found when he introduced the oratorio into his London theatre seasons. Handel's avoidance of directly dramatic characters in *Messiah* is uncharacteristic, as also is the relatively austere scoring. If it is the best of Handel's oratorios of its type, it is also the only one: in the context of Handel's career, it is matched in quality by other excellent works in different types of oratorio, in opera, and in instrumental music. However, it is the character of *Messiah* as well as its quality that has established the oratorio's place as Handel's best-regarded vocal work in the longer history of musical reception.

The oratorio composer, 1743–1749 For some time after his return to London, Handel was cautious about revealing his future plans. However, he must soon have entered into negotiations with Rich for the use of Covent Garden: he sent the libretto of *Samson* to the inspector of plays on 10 January 1743 with a statement of his intention to perform the work there. Between 18 February and 31 March he gave two six-performance subscription series in which *Samson* accounted for nine of the presentations: Horace Walpole commented on 24 February that 'Handel has set up an Oratorio against the Operas, and succeeds' (Deutsch, 560). The season, fitting into the Lenten period with performances mainly on Wednesdays and Fridays when the regular use of the theatre for plays was restricted, followed a new pattern for Handel but one that would become the foundation of his subsequent career, though not immediately. The season also included the first London performances of *Messiah*, which encountered some controversy concerning the performance of its subject matter in a public theatre. Genuine concerns about its suitability may also have been inflamed in an attempt to undermine Mrs Cibber's return to a successful theatre career in London: she had been involved in a memorable matrimonial court case.

At the end of the season Handel apparently had a return of his health problems, perhaps exacerbated by pressures over *Messiah*. Nevertheless, he had recovered sufficiently by 3 June to begin the composition of two major oratorio-style works for his next season, and also a Te Deum and an anthem in celebration of the successes in the War of the Austrian Succession which were eventually performed in the Chapel Royal (27 November) after George II's return from his participation in the battle of Dettingen. During the summer Handel also had to fend off a very pressing approach from Lord Middlesex's opera company, to which he seemingly acceded initially before changing his mind. His perceived stubbornness on the matter seems to have made him unpopular with the 'opera party' in London and to have given him some trouble for the next couple of seasons, when card parties and alternative entertainments were apparently deliberately promoted on his performing nights. Nevertheless he ran a successful subscription series of twelve performances at Covent Garden during Lent 1744, with the two new major works *Semele* (10 February 1744) and *Joseph and his Brethren* (2 March 1744). The combination of a biblical oratorio with a musical drama (given 'after the manner of an oratorio') on a subject from classical sources was one that he would repeat again the next year.

By the end of the 1743–4 season Lord Middlesex's company had again become unviable, and Handel took advantage of its weakness by planning an ambitious season at the King's Theatre. He announced a subscription series of twenty-four performances, comparable in length to a conventional opera season, beginning on 3 November, initially with performances on Saturday nights only. The season soon ran into difficulties, partly on account of organized opposition from the 'opera party', but mainly because the plan was apparently overambitious in itself: no previous attempt had ever been made to run a similar concert series in a major London theatre over a period of six months. Planned performances in the early part of the season were cancelled as a result of small audiences. Handel had more regular success once the season moved into the familiar Lenten period, but by the time he closed the series on 23 April he had managed to present only sixteen of the promised twenty-four performances. The programme had included the new works *Hercules* (3 January 1745) and *Belshazzar* (27 March 1745).

Not surprisingly, the stresses of the situation brought about a return of Handel's medical problem, and in the summer he travelled to Scarborough to restore his health, visiting on the way the earl of Gainsborough's family at Exton, Rutland (in early June), where he contributed some music to a family production of *Comus*. Soon after his return to London the life of the nation was disrupted by the Jacobite rising under Prince Charles Edward Stuart. Handel contributed a patriotic song to raise the spirits of theatregoers at Drury Lane on 14 November in the face of the Jacobite threat; another song followed the defeat of the Jacobites at Culloden in April 1746. Despite the political insecurity, in February 1746 Handel managed to give three performances at Covent Garden of a new work, the *Occasional Oratorio* (14 February), offering double tickets in order to pay off his obligation for the six performances by which the previous season had fallen short. The oratorio was a morale-boosting piece based on texts (from the Old Testament, Milton, and elsewhere) asserting the ultimate victory of the righteous: as Jennens commented at the time, 'Tis a triumph for a Victory not yet gained' (Burrows, *Handel*, 289).

In the following year Handel fell back into the routine from 1743 and 1744 that served his career for the remainder of his life, presenting oratorio-type works at Covent Garden during the Lenten season. However, there was a radical change in that he abandoned the subscription system, and for the first time relied on the paying audience for each performance. He usually gave about a dozen performances each season, with a repertory of about five works: tickets followed the general level of opera prices, which were rather higher than the normal ticket prices for plays at Covent Garden or Drury Lane. For the 1747 season Handel composed *Judas Maccabaeus* (1 April 1747), an oratorio with a storyline celebrating military victories and with a libretto that was dedicated to William, duke of Cumberland, the victor of Culloden. Two new oratorios rather similar in tone, but rather more subtle in their subject matter and dramatic characters, followed for the 1748 season: *Joshua* (9 March 1748) and *Alexander Balus* (23 March). Between the parts of his oratorios this season Handel presented large-scale orchestral concertos involving complementary groups of wind instruments. This trend reached an impressive climax in 1749 with the 'Music for the Royal Fireworks', performed in Green Park on 27 April as an introduction to the firework display that was part of the official celebrations for the treaty of Aix-la-Chapelle. With this event and the preceding rehearsal at Vauxhall on 21 April, Handel's music enjoyed the largest audience of his lifetime. Handel also contributed some music for the royal thanksgiving service for the peace in the Chapel Royal on 25 April.

The fireworks music followed soon after the completion of Handel's normal oratorio season at Covent Garden, which had included two fine new oratorios, *Susanna* (10 February 1749) and *Solomon* (17 March 1749). After the fireworks, Handel undertook yet another exceptional project by contributing a charity concert in aid of the completion of the chapel of the Foundling Hospital on 27 May 1749: in addition to repeat performances of some of his recent music, the programme included an anthem specially composed for the occasion, now known as the Foundling Hospital anthem. The concert marked an association that remained significant for the rest of the composer's life: the London children's charity may have been related in his mind to the Franckesche Stiftung, the combination of schools and orphanage built in Halle during his youth. The concert itself was a significant social event, attended by the prince and princess of Wales: the Foundling Hospital anthem, and the concert as a whole, concluded with the 'Hallelujah' chorus transferred from *Messiah*, a work that by then Handel had performed only six times in London.

The final decade, 1749–1759 With his oratorio season, the fireworks, and the Foundling Hospital concert, the 64-year-old composer had been on peak form during the summer of 1749; by contrast, the following years saw an abrupt reduction in his activity. In June–July 1749 he drafted one new oratorio for the next season, and he then went to Bath in mid-August. The significance of this need not be exaggerated: by now his stock of oratorios was such that he did not necessarily need to produce two new ones each year, and his visit to Bath may have been for relaxation as much as for attention to a pressing health problem. When he returned to London in September he wrote to Jennens, suggesting the specification for an organ for the chapel in Jennens's Leicestershire home. Just after Christmas he composed music for a planned production of Tobias Smollett's play *Alceste* at Covent Garden. Then, having written a new organ concerto as well, he presented his usual Lenten oratorio season at Covent Garden, introducing his new oratorio *Theodora* (16 March 1750). These works did not receive the attention they deserved, partly because Londoners were disturbed by earthquake tremors. Nevertheless a new castrato singer, Gaetano Guadagni, contributed a welcome musical stimulus to the performances.

Handel had presented the Foundling Hospital with an organ, and the hospital asked him to give a performance to mark its inauguration. He chose to give *Messiah* in the chapel on 1 May 1750, and the event proved so popular that another performance had to be given a fortnight later for the members of the audience who had been turned away the first time. These performances became the start of a tradition whereby Handel gave *Messiah* as the last performance of his Covent Garden season and then presented another performance or two after Easter at the hospital. *Messiah* raised more than £6000 for the charity during Handel's lifetime: the Foundling Hospital performances also played a large part in establishing the reputation of the oratorio. As one member of the audience wrote in 1750 of the first performance at the hospital, 'two or three of the Bishops were there; so that I hope, in a little while, the hearing of oratorios will be held as orthodox' (Burrows and Dunhill). Following the success of the *Messiah* performances, Handel was elected a governor of the hospital on 9 May 1750, without having to pay the conventional £50 donation; unlike Hogarth, however,

he never took any active role in the administration of the charity, preferring (as he said) to 'serve the charity in his way' (Burrows, *Handel*, 299). The 1750 performances of *Messiah* at the Foundling Hospital were important musically for the new settings of some movements that Handel composed for Guadagni, including the version of 'But who may abide the day of his coming?' that is most frequently performed today. By the summer of 1749 the *Alceste* project had apparently been abandoned by Covent Garden, and Handel reused most of the music in the course of a one-act 'musical interlude', *The Choice of Hercules*, that he composed in June and July 1750.

In August 1750 Handel travelled to the continent, and he was reported as having been hurt in a coach accident between The Hague and Haarlem. He was in Haarlem on 27 August and 20 September, and in Deventer on 10 September, when he played the organ to the prince and princess of Orange; he played to them again at The Hague at the beginning of December. It is likely that during October and November he had travelled to Germany, and probably made contact with some of his relations. In London on 1 June he had made his will, in which he had named ten of his relations as beneficiaries and his niece (then living in Copenhagen) as executor.

Although Handel had been active in 1750, the only work that he had composed for the next oratorio season had been the single-act 'musical interlude', and on 21 January 1751, only a month before the next oratorio season was due to commence, he began to make good the deficiency by composing a new oratorio, *Jephtha*, to a libretto by Thomas Morell, a collaborator and personal friend at least since 1746. On 13 February, when his draft had reached the last chorus of part II, he had to abandon composition because of problems with the sight in his left eye. He took up the score again and completed part II on 23 February, but by then the oratorio season had already begun, and it seemed unlikely that he would have the opportunity to finish the score. *The Choice of Hercules* received its first performance on 1 March, complementing *Alexander's Feast*; the evening also probably saw the first performance of the organ concerto subsequently published as op. 7 no. 3, which he had composed in the early days of January. This lively concerto, one of the best of the series, was Handel's last written instrumental composition: the autographs for it are clear and fluent, suggesting that Handel's incapacity came upon him quite suddenly during the following month. The theatres were closed following the sudden death of the prince of Wales on 20 March, when Handel was two-thirds of the way through his season, so the London audiences were never aware that he did not have a new complete full-length oratorio for this year.

The organ that Handel had donated to the chapel of the Foundling Hospital was not completed in time for the 1750 performances which should have marked its inauguration, so the 1751 performances of *Messiah* were the first at which it was heard, and Handel was reported as playing a 'voluntary'; it is possible that he was not able to manage a concerto. Certainly the crisis with his health continued: on 14 March he was reported as having lost the sight of one eye. John Christopher Smith junior (a composer, a former pupil of Handel's, and son of his music copyist) was summoned from the continent to assist Handel in the future management of the oratorios, and in the first half of June Handel went to Bath and Cheltenham in the hope of improving his health. On his return to London he managed, with a considerable struggle, to finish the score of *Jephtha*. About this time he also revised the Foundling Hospital anthem, adding some new solo movements: this may have been in anticipation of the opening of the hospital chapel for public worship, which in the end did not take place until April 1753.

With the assistance of Smith junior, Handel performed the usual oratorio season in 1752, *Jephtha* receiving its first performance on 26 February. A revision to an aria for a revival of *Joshua* in this year is probably Handel's last page of musical autograph. According to a newspaper report on 17 August, a return of his 'paraletick disorder' robbed him of the remainder of his sight, and it seems that any residual vision thereafter was sufficient only for him to be able to sign his name on the codicils to his will. In spite of the attendance of William Bromfield and John 'Chevalier' Taylor, Handel was effectively blind for the last seven years of his life. With the assistance of the two Smiths, however, the routines of the oratorio season and the Foundling Hospital performances continued every year: Handel was probably present at most of the performances and even occasionally played a voluntary or a concerto, in the latter improvising solo passages between the orchestral ritornellos of his existing works. Managerial decisions were probably referred to him from time to time, and Handel may have also had some influence on the annual programme. Most of the adaptations needed for revivals of the oratorios were straightforward, such as transpositions of keys of arias, and required no creative input. Some uncertainty surrounds the responsibility for more major changes that were made in 1756 and 1757, when a new pasticcio was created from Handel's previous music to serve as part I for *Israel in Egypt*, and *Il trionfo del Tempo* emerged in an expanded and English form as *The Triumph of Time and Truth*; furthermore, according to Charles Burney, Handel composed the chorus 'Sion now her head shall raise', which was inserted in 1757 oratorio performances. It may be that all these developments were attributable to musical ideas that originated from Handel, and that he was more active at this time, but the musical execution of the new composition is in a style which does not match Handel's work. On one occasion in May 1756 Handel attended a dinner party given by Charles Jennens, but it seems that he did not leave his home much during his last years except for his professional appearances at the oratorio performances, though he went to Tunbridge Wells in August 1758. On 6 April 1759 Handel attended the last oratorio performance of the season (*Messiah*) and intended to travel to Bath soon afterwards; however, he was too ill to do so, and he died at his home in Brook Street, Hanover Square, Westminster, about 8 a.m. on 14 April (Easter Saturday). While the precise cause of his

death is still unknown there is no hint of any tragic circumstance. As provided for in his will, he was buried in Westminster Abbey on 20 April 1759, and his monument, for which he had left £600, incorporating a statue of the composer by Roubiliac, was revealed to the public on 10 July 1762.

Personality and achievements Twenty-five years after Handel's death, Charles Burney described him thus:

> The figure of Handel was large, and he was somewhat corpulent, and unwieldy in his motions; but his countenance, which I remember as perfectly as that of any man I saw but yesterday, was full of fire and dignity; and such as inspired ideas of superiority and genius. He was impetuous, rough, and peremptory in his manners and conversation, but totally devoid of ill-nature or malevolence: indeed, there was an original humour and pleasantry in his most lively sallies of anger or impatience, which, with his broken English, were extremely risible. His natural propensity to wit and humour, and happy manner of relating common occurrences, in an uncommon way, enabled him to throw persons and things into very ridiculous attitudes. (Burney, *Account*, 'Sketch', 31–2)

Burney would first have known the composer in his mid-fifties, and there are no comparable descriptions relating to the early part of his career; furthermore, many of the anecdotes that might be considered revealing of his character are known only from sources dating from between 1780 and 1857, and it is impossible to distinguish authentic matter from sentimental invention. The tone of the recollections found in Mainwaring, Burney, and Hawkins, and reflected in some of the later anecdotes, indicates the presence of a forceful personality which had a strong influence on those who encountered him. His surviving letters are generally unrevealing: some are rather business-like and those to his brother-in-law are rather formal, but in the letters to Jennens from 1741–4 we can hear something of his 'voice', with a lively (and commanding) use of the English language.

Letters from Handel survive in English, French, and German; according to a source quoted by Burney, in conversation with Handel 'it was requisite for the hearer to have competent knowledge of at least four languages: English, French, Italian and German; for in his narratives he made use of them all' (Burney, *Hist. mus.*, 2.1007). He was also probably fluent in Latin, and at Rome in 1707 he set a cantata text in Spanish. It is difficult to know how seriously to take Burney's reference to his 'broken English', for his English letters show no serious deficiency in vocabulary or syntax in the context of the language as it was used in the first half of the eighteenth century. There are occasional infelicities in his setting of the English language in the oratorios: some of these may be errors, but others may be regarded as legitimate and original creative treatments of the texts. It is difficult to believe that his English was seriously 'broken' after fifty years of social contacts with English speakers living in the capital. He may, however, have retained traces of German inflections in his speech.

There is surprisingly little information about Handel's personal life, and he may have made deliberate efforts to protect his privacy. Although entertaining in company, he seems to have preferred a degree of isolation and independence. We can assume that he had friends from the musical profession, though we probably know more about the difficult relationships—with Mattheson, Senesino, or Greene, for example—than about the positive ones. There are hints that his other friendships were often with members of professional classes of the types represented in his own parentage—doctors such as John Arbuthnot, clergymen such as Thomas Morell, and lawyers such as Thomas Harris. His will suggests further friendships with successful tradesmen such as James Hunter the scarlet dyer and James Smyth the perfumer, at least in his later years. The final codicil to Handel's will includes bequests to two ladies (Mrs Mayne and Mrs Donellan) whose connection to the composer is uncertain, but who may well have been in his circle of personal friends. His sexual orientation has been the subject of some speculation, but convincing evidence on the subject is lacking, nor is it possible to know what weight to give to the rumour of his possible youthful relationship with Vittoria. Personal prudence and the effects of his early religious education probably combined to influence Handel towards caution in his personal life, and John Hawkins was probably correct when he described Handel as 'a man of blameless morals, and throughout his life he manifested a deep sense of religion' (Hawkins, 2.910). Nevertheless, descriptions of the composer are fairly unanimous in relating his short temper, his rather uninhibited language, and his enthusiasm for good food and good drink in profusion. Letters among his acquaintances from the period after his first 'disorder' express specific concern over his eating and drinking habits, and Handel's relationship with the artist Joseph Goupy is reputed to have been severed after Goupy produced a caricature ('The Charming Brute') which was taken to represent the gluttonous Handel.

Handel's London home was a relatively modest house in a prosperous area. Hawkins remarked that Handel did not keep a carriage (though an incidental reference in a letter from 1737 mentions Handel riding a horse after his recovery from illness), but he apparently maintained a lifestyle that was comparable to that of his neighbours, who included MPs, members of the professional classes, and representatives of the lesser branches of landed families. It seems that, for most of his life in London, Handel enjoyed the financial security provided by his pensions and that, while he was to some extent affected by the fluctuating success of his theatrical ventures from 1729 onwards, in the end his relatively restrained lifestyle and the overall security of his later oratorio seasons enabled him to accumulate considerable wealth. His final credit at the Bank of England was more than £17,000, and the specified bequests in his will amounted to more than £9000.

The largest bequest (nominally £1000, but in practice worth more) went to the Society of Musicians, and another provision was for a score of *Messiah* and a full set of performing material to the Foundling Hospital in order to facilitate the continuation of the performances there. Immediately after the composer's death James Smyth

described him as 'the great and good Mr Handel' (Deutsch, 818): the extent of Handel's generosity to these two charities, through his efforts during his last twenty years as well as through the bequests, reflects one of the most positive aspects of his character. Handel was exceptional in that he gained considerable prosperity through his activities as a composer, performer, and impresario: apart from the extravagantly paid opera stars, most professional musicians in London were relatively poorly paid and socially insignificant. One of Handel's achievements was to combine a musical career with a social career in which he achieved both recognition and independence. While he accepted patronage from the élite classes in society, he avoided situations in which he could have been classified as a servant; this seems to account for his refusal to follow a career at Berlin early in life, and also for the absence of his name from the records of the establishments maintained by Ruspoli and Carnarvon, with whom he probably stayed as a guest rather than as a paid official. Early in his career he must have discovered how to gain direct access to situations of wealth and influence: in Rome he was quickly taken up by the leading patrons, and in London his presence was almost immediately acknowledged by Queen Anne's court, where indeed he was given preference over the resident English composers. The social recognition which he demanded for himself is perhaps best symbolized by the dinner party given by John Montagu, second duke of Montagu, on 4 May 1747, at which the duke and duchess of Montagu were joined by the earl and countess of Cardigan, Lord Edgcumbe, Lord Baltimore, and 'Mr Handell'. For his audiences at the theatre Handel relied on the upper classes in London society, though the audience for the oratorios probably included few of the most élite, and financially he relied on his royal pensions. He was able to make use of this patronage while at the same time maintaining his creative independence when faced with unacceptable situations. He led the London audience with the music that he wanted to write, preferring to ride out periods of poor support or indifference but remaining committed to a career in London.

Handel's music forms one of the peaks of the 'high baroque' style. He brought one form of Italian opera to its highest development, created the genres of the English oratorio and the organ concerto, and introduced a new style into English church music which he subsequently transferred to the development of the choral elements in his oratorios. Stylistically he forged his own musical manner against a background of a number of different German, Italian, French, and English models and influences. His use of musical ideas from other composers, which seems to have featured throughout most of his career, was formerly regarded as a moral deficiency, but the careful examination of his use of 'borrowed' material has revealed the subtlety of his compositional technique and the quality of his skill. Because of his flowing command of harmonic movement and his genius for broad effects, this skill has sometimes been taken for granted: he often shows astonishing versatility in his musical constructions, even when employing limited resources, and he was capable of contrapuntal ingenuity when he found it appropriate. His musical autographs reflect a technical fluency which enabled him to compose at great speed and in a concentrated manner; they often also display alterations which belie the notion that he was careless or negligent on matters of detail.

Commemoration and influence The grandeur of the monument at Westminster Abbey and the publication of Mainwaring's biography indicated Handel's continuing status almost immediately after his death. It was reported that 3000 people attended his funeral, and his direct influence lived on through performances of his oratorios at the London theatres. A rather complex interrelationship gradually evolved between the performance of Handel's music and the English taste for 'antient' music that had already developed an institutional base during Handel's lifetime: in the thirty years following his death, Handel was gradually adopted in London (with the encouragement of George III) as the most revered past composer, and with this came a growing tension between supporters of 'antient' and contemporary music. The tension is readily apparent in the writings of Charles Burney, who has a well-informed admiration for Handel's music and an understanding of his historical significance, yet is impatient of 'Handel-worship' and is an enthusiast for the newer styles of music of the 1770s and 1780s (and ultimately the music of Joseph Haydn). The Concert of Antient Music, founded in 1776, devoted a large proportion of its programmes to items from Handel's music, but it was the commemoration of Handel in 1784 that both symbolized and promoted the continuing cultural authority of Handel's music in Britain.

The commemoration, marking the twenty-fifth anniversary year of Handel's death, was almost certainly the first such public celebration of the music of a particular composer, alive or dead. The programme consisted of five performances given between 26 May and 5 June 1784: two mixed programmes (mainly of church music and movements from the oratorios) and two performances of *Messiah* at Westminster Abbey, and a mixed programme including airs from the operas at the Pantheon in Oxford Street. It was managed by noble directors with royal encouragement, but another significant element was its charitable object of raising money for the Society of Musicians. Because of this charitable aspect, the commemoration was able to call on the services of a vast pool of professional musicians, drawn from the provinces as well as London, and the event became important not only for confirming Handel's canonical status, but also for instituting a new manner of performing his music. More than 500 performers, approximately equally divided between players and singers, were listed as taking part. Handel's choral movements could be performed effectively by this gargantuan assembly, though with rather different effect from anything that the composer had experienced.

An equally important form of commemoration was the attempt to publish a collected edition of Handel's music. During the 1760s and 1770s John Walsh's successors had published full scores of several of Handel's oratorios, but

in 1787 a more systematic subscription edition was inaugurated, with Samuel Arnold as editor. Not surprisingly, given the sheer size of Handel's creative achievement, this never became a 'complete' edition of Handel's music, but in ten years a substantial repertory of the oratorios, church music, and instrumental works appeared, and even a few operas.

The 1784 Handel commemoration was followed by others running into the 1790s: Haydn was moved by his attendance at one of them. Within the eighteenth century Handel's music had also spread into continental Europe: in the 1770s his oratorios were performed in Hamburg and in Berlin, where the Austrian envoy Gottfried van Swieten acquired a taste for Handel's music that was to result in his promoting a series of performances in Vienna during 1788–90, for which Mozart arranged the scores. Subsequently Beethoven came to know, and to admire, Handel's music through Arnold's edition, and there is even evidence that Handel's music influenced Schubert's. However, it was in England that his music continued to be principally revered and performed, through oratorio performances and also through performances of favourite items from the church music that were given at provincial festivals. Handel's oratorios had, in any case, achieved an established place in the programmes of the Three Choirs festival and in connection with the commemoration of benefactors at Oxford, even during his own lifetime. A Handel commemoration was held at Westminster Abbey in 1834, but on the whole Handel's music received only rather dutiful attention in the first part of the nineteenth century. All this was changed, however, by the development of the Crystal Palace as a venue for choral music in the late 1850s, and by developments in musical education (principally through the sol-fa system) that brought Handel's choruses within the scope of a large number of amateur singers. Active involvement in Handel's music became available to less affluent sections of British society, for whom cheaper vocal scores of the oratorios were published on the initiative of Novello & Co. Novello published a range of Handel's oratorios, but in practice there was a trend towards the narrowing of the repertory, in which *Messiah* and *Israel in Egypt* became the dominant works performed.

The nineteenth century saw further attempts to produce a complete edition of Handel's music. The first, initiated by the English Handel Society, resulted in the publication of twelve major works and two other volumes between 1843 and 1858; the second was the complete edition inaugurated by the Deutsche Händel-Gesellschaft in 1856 and brought to completion nearly half a century later through the efforts of Friedrich Chrysander. Among Handel's devotees in this period was the Frenchman Victor Schoelcher, who ensured that Handel's 'performing scores' (or 'conducting scores') passed into responsible ownership, eventually at the Staats- und Universitäts-bibliothek, Hamburg. Handel's own autographs had been designated in his will for Smith senior, from whom they passed to his son, then to the Royal Music Library, and then, by donation of Elizabeth II, to the British Museum and eventually the British Library. Among creative musicians, however, the attitude to Handel was more ambivalent by the later nineteenth century: his shadow was sometimes felt to have inhibited innovation, particularly in choral music. This often accompanied a recognition that in his oratorio-type works Handel had provided a repertory of good quality and eminently practical major works in the English language that was difficult to challenge. While Handel's operatic style to some extent survived through the arias in his oratorios, the age of the castrati had passed, public expectations of the genre had changed, and the operas as entities were no longer performed. However, some individual movements from Handel's operas were taken up on account of their melodic attractiveness: in this way the larghetto movement 'Ombra mai fù' had even achieved popular fame in instrumental guises by the 1870s as 'Handel's celebrated largo'.

Twentieth-century reputation and interpretation In Britain the nineteenth-century pattern continued into the first half of the twentieth century among groups of enthusiasts for and scholars of Handel's music, and a broader reception tradition was maintained through a small repertory of popular pieces and the established tradition of *Messiah* performances by choral institutions. A significant event was a performance of *Rodelinda* at Göttingen in 1920, which marked the first attempt for a century and a half to stage a Handel opera: other productions followed at Göttingen, but the lead was not taken up elsewhere in a substantial way until after the Second World War. The German Democratic Republic supported Halle's promotion of Handel's music during the 1950s with the establishment of an annual festival and the foundation of a new collected edition of Handel's works; both ventures continued to flourish following the unification of Germany in 1991. A third centre for the performance of Handel's works in Germany emerged in the 1980s with the foundation of the Händel-Akademie in Karlsruhe. All three German centres have played a role in the encouragement of Handelian scholarship as well as performance, though Halle retains a special position on account of the presence there of the editorial office of the Hallische Händel-Ausgabe.

The 1950s saw the publication of two books that initiated a new stage in Handel scholarship, Otto Erich Deutsch's *Handel: a Documentary Biography* (1955) and Winton Dean's *Handel's Dramatic Oratorios and Masques* (1959). The latter, in addition to being a masterly exposition of the textual history of the oratorios, provided a liberal-humanist perspective on the works, concentrating on their dramatic qualities and providing a timely reminder that they were conceived for performance in theatres rather than churches. In the same year as Dean's book appeared, which was also the bicentenary of Handel's death, a performance of *Deidamia* led to the foundation of the Handel Opera Society in London and the more systematic revival of Handel's operas in theatrical presentation. In parallel to the Handel Opera Society, an initiative at a small theatre in Abingdon, Berkshire, led to a series of opera performances by Unicorn Opera; within

twenty years the combined activities of the two societies had resulted in the revival of most of Handel's operas for the first time in England since the composer's lifetime. A few of Handel's operas were also gradually taken up as repertory pieces by established opera companies, some of whom included them in their circuits of performances in provincial cities.

The movement for 'authentic' performance practices that developed momentum in the 1970s brought a revolution in the instrumental sound, and in the approach of singers, to the repertories of eighteenth-century music, and some of the most successful applications of the new techniques and ensembles were found in performances and recordings of Handel's music. The process was accelerated by developments in the recording industry. Already in the 1950s some fairly complete performances of Handel's operas and oratorios had been attempted, and this process continued sporadically in the following two decades. *Messiah* scholarship had meanwhile made a significant advance through the work of Watkins Shaw, and followed an earlier attempt by John Tobin to produce an 'authentic' performance of the work in 1950. (This was in a succession of such ventures that stretched back to the 1890s when Arthur Henry Mann conducted a well-researched performance in Cambridge, using performing forces comparable in numbers to those used by Handel.) With the advent of the compact disc, recordings of Handel's works gained yet more momentum, and by the end of the twentieth century recordings of Handel's operas and oratorios were available on a scale that would have been unimaginable half a century earlier.

The development of a broader public for opera also enabled Handel's works to reach a wider audience. Handel's operas had by the end of the twentieth century secured a regular, if not yet major, place in the repertories performed throughout Europe, and the same was to a lesser extent true of the wider repertory of his oratorios. Authenticity of staging for the operas did not keep pace with the changes in the orchestral and vocal sounds, but some performances carried the unity of purpose into areas such as scenic and costume design, dance, and gesture. Meanwhile, Handel scholarship in Britain, Germany, and the USA developed a new impetus: the period around the tercentenary of Handel's birth in 1985 saw the foundation of both the Handel Institute in Britain and the American Handel Society. In the last decade of the century plans for the institution of a museum in Handel's London house (a scheme that had been briefly contemplated seventy years earlier) promised to come to fruition, largely through individual initiative and without the municipal support that had successfully sustained the development of Handel's birth-house in Halle. In 1998 the British government announced that the Gerald Coke Handel collection, the most substantial private collection of materials relating to Handel, had been accepted for the nation, though without any matching obligation for its display, conservation, and access.

Wealth at death over £17,500

Handl, Irene (1901–1987), actress and novelist, was born on 28 December 1901 at 13 Leith Mansions, Paddington, London, the second daughter of Frederick Handl, a bank clerk originally from Vienna, and his French wife, Maria Schiepp. She grew up in nearby St John's Wood, and later characterized herself as a fiercely affectionate and rather naïve child who, until she was 'quite old', actually believed that her name was Dolly (television interview, 18 June 1985), because that is what her family had dubbed her in reference to the popular Second South African War song 'Goodbye, Dolly Gray'. An ardent bookworm in later childhood, she was educated locally, and left the Maida Vale High School for Girls at fourteen. For the next twenty years she helped to run her father's household until, at his instigation, she decided in her mid-thirties to embark on an acting career.

Handl promptly enrolled on a short course at the Embassy School of Acting. During her audition for the school she managed to reduce the panel of interviewers to helpless laughter with what was intended to be a serious Shakespearian set piece, and it thus became apparent from the very first that her talent lay in comedy. Having completed her training, Handl made a show-stopping West End début at Wyndham's Theatre, as the maid in Gerald Savory's drawing-room comedy *George and Margaret*: she played her comical 'below stairs' role with relish for the duration of the play's two-year run, and in doing so established a reputation for outstanding character acting which dominated her entire career.

For the next fifty years Irene Handl, who had come to her vocation so relatively late in life, was never out of work. She made her first screen appearance in 1937, playing a chambermaid in the film *Missing, Believed Married*, and this led to a seemingly endless succession of cinematic roles which she undertook in tandem with her theatrical work. From rather modest beginnings (she notched up many cameo appearances in the films of the 1940s, and actually appeared uncredited as an organist in the 1946 cinema classic *Brief Encounter*), Handl went on to become a familiar figure in popular British comedies of the 1950s, 1960s, and 1970s. She featured in almost every well-known film series from *St Trinian's* to *Carry On*, and also gave notable performances as Peter Sellers's wife in *I'm All Right, Jack* (1959) and Tony Hancock's *The Rebel* (1961). Through the increasing popularity of television she became better known to an even wider audience, starring in a number of sitcoms, including *Hancock's Half Hour* (1956), *The Rag Trade* (1961), *For the Love of Ada* (1972), *Maggie and her* (1978), and *In Sickness and in Health* (1985), and in 1980 she endeared herself to yet another generation of viewers when she played the grandmother figure in the hit children's television series *Metal Mickey*. On both stage and screen Handl was best known for what she herself diffidently termed 'the usual old girl in the crossover apron'. Pleasantly plump and always with a twinkle in her eye, she made colourful cockney chambermaids, charladies, housewives, and matrons her dramatic forte and, as she advanced in years, eccentric old ladies of all kinds became an additional speciality. Many of her characters were based on the servants around whom she had grown up in her father's house, but Handl had what can only be described as a great comic presence, which transformed what could so easily have been workmanlike, two-dimensional character performances into something far more memorable. A fan of music-hall humour from an early age, she had an impeccable sense of comic timing, but at her very best she could bring something more to the roles she played: a curious and almost tragicomic blend of mettlesomeness, personal warmth, and childlike innocence that was uniquely hers.

Irene Handl (1901–1987), by unknown photographer

Ever the late developer, Irene Handl astonished the literary scene when, at the age of sixty-four, she published her first novel, *The Sioux* (1965), a work which she had first envisaged in her teens and had, out of boredom, taken up again in the 1960s during an exceptionally long stage run as the eponymous heroine in Arthur Lovegrove's *Goodnight, Mrs Puffin*. A frenetic present-tense account of the neurosis-laden and increasingly tribalistic behaviour of a family of French aristocrats, *The Sioux* not only reflected Handl's own affluent and exclusively continental roots; it also made obvious an eloquence, an acuity of intellect, and a depth of intuition on her part which were generally masked by the kind of characters she played. She came to

view the book as one of her finest and most enduring achievements and published a sequel, *The Gold Tip Pfitzer*, in 1973.

Apart from acting and writing, Handl's interests were many and eclectic. She had a passion for fishing, and was a fellow of the National Geographical Society, as well as a staunch member of the Elvis Presley Club. She was also a devoted animal lover and was for some years president of the British Chihuahua Club, a role which reflected the great affection she always felt for her own pets. She never married and her only full-time companion during the later years of her life was her dog, Rosie. During 1987 Handl was as busy as ever, and completed work on a Channel 4 sitcom entitled *Never Say Die*, in which she played an elderly medium. Towards the end of that year, however, she became unwell, and although she remained confident that 'Dr Theatre' (*The Guardian*, 30 Nov 1987) offered the best available cure, and continued to honour all her previous work commitments, her condition deteriorated.

After a short illness, Irene Handl died in her sleep on 29 November 1987 at her home, 31 Viscount Court, 1 Pembridge Villas, Kensington, London. When asked in an interview by Mavis Nicholson two years before whether she felt she would like 'to be remembered', Handl had chucklingly and with typical self-effacement replied that indeed she would 'because I am an ass' (television interview, 18 June 1985). Her considerable achievements both within and outside the sphere of British stage and screen comedy ensured, of course, that she was and will continue to be remembered as anything but. GILLIAN EVANS

Handley, Thomas Reginald [Tommy] (1892–1949), comedian, was born on 17 January 1892 at 13 Threlfall Street, Toxteth Park, Liverpool, the son of John Handley, a cow keeper, and his wife, Sarah Ann Pearson. Tommy Handley's father, who probably ran a dairy business, died while Tommy was still a baby. On leaving school—there is no record of his academic achievements—Handley worked as a salesman but enjoyed local prestige as a singer with local choirs and concert parties. He became a professional singer in 1916 in a touring company of the operetta *The Maid of the Mountains*. In 1917 he was called up and he served in the Royal Naval Air Service, where his talents were seized upon and he joined a concert party.

After the war Handley undertook a series of short-term touring engagements, including a number for which Jack Hylton (who became a lifelong friend), was the musical director. He eventually devised and starred in a music-hall sketch, *The Disorderly Room*, a skit on army life. This proved to be a great success and remained in his repertory from 1921 to 1941. Ted Kavanagh [*see* Kavanagh, Henry Edward

Thomas Reginald [Tommy] **Handley** (1892–1949), by unknown photographer

(1892–1958)] later recalled that it must have been played on every music-hall stage in the country. Part of its charm lay in the way that its words were fitted to popular songs. While playing at the London Coliseum in 1924 the sketch was chosen to appear in the royal command performance of that year. Soon afterwards Handley's broadcasting career began and he was a regular performer on the wireless from 1924 onwards, becoming a mainstay of BBC variety programmes, both as a solo entertainer and an actor in sketches.

Much of Handley's material in those days, and subsequently in the wartime success *ITMA*, was written by the New Zealander Ted Kavanagh. 'ITMA' (the acronym for 'It's that man again') was a saying of the 1930s relating to the aggressive policies of Adolf Hitler, but it was actually coined in the USA and was used by members of the Republican Party whenever President Franklin D. Roosevelt inaugurated some new policy in his 'new deal' approach to the depression. At first, in pre-war 1939, *ITMA* was set on a cruise ship and was not a success with listeners, but later, set more firmly on land, its mixture of quickfire patter, easily remembered catchphrases, and topical references made it the most successful BBC radio show of wartime Britain. Early in 1942 a special edition of the show was performed at Windsor Castle for Princess Elizabeth's birthday. It was the first royal command performance of a radio programme.

The poet P. J. Kavanagh, son of Ted Kavanagh, has aptly characterized Britain in 1939, at the outbreak of war, as

> a time of officialdom and officiousness [with] that curious strain of self importance that a crisis brings out ... and ... was ripe for deflation. Tommy Handley, with the voice of a disaster-prone con-man, more bent than a six pound note and cheery with it, was the ideal man to do the deflating. (Kavanagh, *People and Places*, 105)

ITMA was indeed a radio cartoon of daily life in the war years and, week by week, it relieved the tension of the times by the fun that it poked at the common hazards and endurances of the British public. In the office of twerps wartime bureaucrats were ridiculed for their pomposity and mismanagement. As the strain of war increased Handley, in a much-needed holiday mood, became mayor of the seaside resort Foaming-at-the-Mouth, with its famous charlady, Mrs Mopp, played by Dorothy Summers, whose catchphrase, 'Can I do you now, sir?', regularly brought the house down. Another very popular figure was Funf, the German spy. Handley later turned his attention to factory work, then to post-war planning, and after the war, taking a fresh leaf from the book of traditional satire, *ITMA* put on the map the island of Tantopia, where the austerities and vanished hopes of a brave new world were genially depicted.

Patrick Kavanagh sums up Tommy Handley's broadcasting style as 'so cheeky, so friendly, and so unpompous' (Kavanagh, *People and Places*, 10), and it is hard to disagree. Handley's style was that of an opportunist, quick-thinking man of affairs, surrounded by a gallery of odd and eccentric characters: there was Joan Harben as Mona Lott, whose lugubrious diatribes usually ended with 'It's being so cheerful as keeps me going'; Jack Train contributed, among other characters, Colonel Chinstrap, a confirmed boozer to whom every remark, however innocent, was an invitation to a drink, receiving the reply 'I don't mind if I do'. Credit for the brilliance of *ITMA* must also go to scriptwriter Ted Kavanagh, and to the BBC producer Francis Worsley. There were also many other regulars in a large and constantly changing cast, but Tommy Handley was the benign master of ceremonies whose crisp delivery and immaculate timing kept the show at the peak of professional excellence. Another facet of Handley's skill was demonstrated by a number of radio appearances he made with old Etonian entertainer Ronald Frankau. They called themselves Murgatroyd and Winterbottom and they jointly wrote and performed a sophisticated cross-talk of quickfire word and idea association, which was very popular on BBC variety programmes of the late 1940s.

Despite his vital and quicksilver personality, Handley remained a very private person. He was quite different from the gregarious and clubbable scriptwriter Kavanagh, whose son has depicted a professional relationship: 'they were friendly—very—but it would be difficult to call them friends. Outside working hours they hardly met.' Tommy Handley liked to go home and read: 'He was either on-stage in the public eye or invisible, gone' (P. J. Kavanagh, 105). On 19 February 1929 Handley married a singer, Rosalind Jean (*d.* 1958), daughter of Robert Allistone, a jeweller, and formerly wife of William Henshall. There were no children. Tommy Handley died suddenly at 29 Cleveland Gardens, Paddington, London, on 9 January 1949; he was much missed by millions of adoring listeners. He was so much the keystone and embodiment of the actual performance that *ITMA* died with him. Undoubtedly the greatest British radio comedian of his generation, Tommy Handley was as unique in radio comedy as Charlie Chaplin was in silent film.

Handlo, Robert (*fl.* 1326), music theorist, may have taken his name from Hadlow in Kent. He was the author of a treatise on music notation, the *Regule*, whose completion is dated in a colophon to 1326. No further details of Handlo's life are known, unless he is to be identified with the Robertus Haudlo or Handlo who is traceable *c.*1315–22 in the service of the Despensers. The treatise was not known to the earlier sixteenth-century antiquarians and literary historians; the first reference to it is a listing in the 1556 manuscript catalogue of the library of John Dee, and its first mention in print occurs in Thomas Morley's *A Plaine and Easie Introduction to Practicall Musicke* (1597).

The *Regule* is an expansion upon one version of a widely circulated brief guide to the notational practices (*c.*1280) of Franco of Cologne that begins in most sources with the words 'Gaudent brevitate moderni'. Handlo's additions amount to about twice the size of the core text itself; not only do they represent new material, they also appear to draw upon an earlier text of his own, and furthermore draw by name upon the work of a number of other late thirteenth- and early fourteenth-century continental music theorists, some of whom are otherwise unrecorded. The treatise is noteworthy for being one of the most comprehensive accounts of late *ars antiqua* music theory, as well as for its refinements of language and conceptualization. An English provenance is demonstrable through its discussion of certain insular notational peculiarities, its citation of known English pieces, and details of subject matter, which it shares with another British treatise, the *Summa de speculacione musice* (*c.*1300) of Walter Odington. The *Regule* was later taken as the point of departure for the *Summa* (*c.*1375) of the English music theorist John Hanboys.

PETER M. LEFFERTS

Hands [*née* Herbert], **Elizabeth** (*bap.* 1746, *d.* 1815), poet, was baptized in Harbury, Warwickshire, on 5 June 1746, the daughter of Henry and Ann Herbert, who at that time

were resident in Harbury. Nothing further is known of the circumstances of her parents. Within a couple of years the family had moved to Rowington, where Elizabeth grew up. A sister, Mary, baptized there on 6 September 1748, was buried on 9 April 1749. A brother, Thomas, was baptized on 17 April 1750.

From a letter, dated 4 November 1788, from Henry Sacheverell Homer (1719–1791), rector of Birdingbury, to the Revd Richard Bisse Riland of Sutton Coldfield, seeking support for the publication of her poems, Elizabeth is known to have worked as a servant in the household of the Huddesford family of Allesley, near Coventry (Bedford, 113). It was in Allesley that on 6 September 1784 Elizabeth married William Hands (1746/7–1825) of Bourton-on-Dunsmore. William was then the blacksmith in Bourton, a position which had previously been held by other members of the Hands family. William and Elizabeth had two daughters: Elizabeth, baptized on 29 August 1785, and Ann, baptized on 8 August 1787. The birth of the former is referred to in the poem 'On the Author's Lying In'.

Elizabeth Hands had had no formal education. In the advertisement for the subscription for her poems it was noted that she had acquired her knowledge of poetry from the reading available to her in the households where she served. Even so, there is evidence of the breadth of her reading both in the range and skill of her handling of poetic forms, and more directly in the subject matter of some of the poems, particularly 'On Reading Pope's "Eloisa to Abelard"' and 'Critical Fragments'.

Hands's single published work, entitled *The Death of Amnon: a Poem with an Appendix, Containing Pastorals and Other Poetical Pieces*, was published by subscription in 1789. At least four of her poems had previously appeared in the Birmingham and Coventry newspapers under the pseudonym Daphne. Henry Homer's letter asserts that her poems would not have been published but for the interest taken in them by his son Philip Bracebridge Homer (1765–1838), who was an assistant master at Rugby School, and was able to enlist the support of the head of that school, Dr Thomas James, and other masters, who all agreed the poems were worthy of publication. The volume was dedicated to Bertie Greatheed of Guy's Cliff near Warwick, with thanks to him and other friends for their support. Its publication by subscription was advertised in *Jopson's Coventry Mercury* of 24 November 1788, and, having attracted some 1200 signatures, its publication was announced in the same paper on 21 September 1789. The reviewer George Ogle, writing in the *Monthly Review*, noted 'the uncommonly numerous list of subscribers' as testament to the poetic achievement of the writer (3 Nov 1790, 346). The list included local notables, literary figures such as Anna Seward and the poet laureate, the Revd Thomas Warton, and also members and friends of the Herbert and Hands families.

Richard Gough, reviewing the poems in the *Gentleman's Magazine* of June 1790, commended the title poem especially (p. 540). He noted the originality of its subject and urged readers to be tolerant of any 'unequal line' which might be found in the five blank verse cantos. The story on which this poem is based is to be found in 2 Samuel 13. Amnon, the son of David, falls in love with his sister Tamar, and with the help of a scheming friend, Jonadab, rapes her. The injury is avenged by her brother Absalom, who orders his servants to kill Amnon. While Elizabeth herself anticipated some opposition to a woman tackling the subject of a rape, she retells the story with sensitivity and control, and provides insights into character which are developed beyond the original material, through the use of dialogue and internal monologue. Hands successfully exploits the potential of blank verse to create a lively narrative which, following the model of earlier eighteenth-century writers, appropriately incorporates heroic similes and moralizing comments from the narrator. Thirty-nine miscellaneous poems complete the collection, providing a variety of poetic form: song, pastoral, ode, pastoral dialogue, epistle, elegy, and occasional poems. A number of common themes run through the collection, most prominently love and friendship. The occasional poems range in subject from the rampage of a mad cow through the village, to a visit of the king and queen to Kew.

Elizabeth Hands's consciousness of the novelty of her situation as a working-class woman poet provides the basis for two comic poems, which anticipate the criticisms her 'superiors' were likely to make: 'On the Supposition of an Advertisement in a Morning Paper on the Publication of a Volume of Poems by a Servant Maid' and 'On the Supposition of the Book having been Published and Read'.

Elizabeth Hands died in June 1815 aged sixty-nine, and was buried in Bourton-on-Dunsmore on 28 June. Her husband, William, lived another ten years, and was buried beside his wife. Hands's poetry was rediscovered in the late twentieth century through the work of Roger Lonsdale, Donna Landry, and Janet Todd, and was republished with an introduction by Caroline Franklin in 1996.

Handyside, Andrew (1805–1887), iron founder and engineer, was born on 25 July 1805 in Edinburgh, the son of Hugh Handyside, ironmonger, and Margaret Baird. As a young man he followed the example of his brother William *Handyside (1793–1850) by going to work with his uncle Charles Baird at his iron foundry and engineering works in St Petersburg. The Baird manufactory was known for an immensely wide range of products, from steam engines to constructional ironwork, and through his experience there Handyside became ideally qualified

to manage a similar enterprise back in England. In 1839 while still in St Petersburg, he married his Polish-born wife, Anastasia Henley: they had no children.

Handyside returned from Russia about 1846 and took over the Britannia ironworks in Duke Street, Derby. This works had been established over thirty years earlier by Weatherhead and Glover and had a wide reputation for its ornamental cast ironwork known as 'Derby castings'. Under Handyside, the scope of its output was considerably extended, and the firm became a leader in the manufacture of iron products for export. During the continued development of the English railway system in the mid-nineteenth century, Handysides supplied bridges, railway equipment, and the ironwork of station buildings, including the roofs of Broad Street, London (1864–5), Liverpool Central (1872–3), and Manchester Central (1876–80) stations. The same range of products was exported for railways throughout the world, notably bridges for India and Australia and the 120 foot span roof of the main station in Amsterdam. Prefabricated buildings were also part of its export trade, supplied ready for erection complete with doors, windows, and fittings. Despite such diversification, the firm still maintained its reputation for traditional castings such as for lamp-posts, pillar boxes, and other ornamental objects, plus the manufacture of steam engines, pumps, and mining machinery.

The more important commissions that Handysides received were based on designs by consultant architects or engineers, for instance the Albert suspension bridge, London (1871–3) by R. M. Ordish, and a winter garden at Leeds Infirmary (1868) by G. G. Scott. However, under Handyside the firm developed the expertise to design as well as manufacture new structures of every kind. This accomplishment was publicized through a promotional book *Works in Iron* (1868 and subsequent editions), which helped demonstrate that less complex structures could be completed without the need for an independent designer. Handyside ran the works on a tight rein and did his best to eliminate traditional customs such as the observance of Mondays as an unofficial holiday. By 1873 he had a workforce of about 360 and decided to open a second site for the firm in Fox Street, Derby. Probably to help finance that extension, the company was incorporated with a capital of £120,000.

Handyside played a modest role in Derby public life. He was a town councillor (1855–8), and was a director of both the Derby water works and the Derby and Derbyshire Banking Company. However dour he may have seemed to his workers, he and his wife maintained Russian customs of hospitality at home, complete with a samovar on the sideboard. He died on 9 June 1887 at 16 Ashbourne Road, Derby, and was buried in the Nottingham Road cemetery. Handyside was survived by his wife. The firm which carried his name continued to flourish and was employing about 1000 people in the 1890s, but from that height of success it plunged to failure and was wound up in 1910.

Handyside, William (1793–1850), engineer, was born on 25 July 1793, in Edinburgh, the eldest child of Hugh Handyside, ironmonger, and Margaret Baird. At the age of fifteen he became a pupil of a Mr White, a local architect, but did not complete his training. In 1810 his uncle, Charles Baird (1766–1843), invited him to join him in St Petersburg, where he had been working since 1786 and had established himself as one of the leading manufacturers. Handyside rapidly demonstrated his ability as an engineer, and played an important role in many of the most important contracts of the Baird works.

After working on the installation of machinery at the imperial arsenal and the imperial glassworks, in 1815 Handyside helped build *Elizabeth*, the first Russian steamship. Over the next ten years he built ten more, improving the design. He was particularly concerned with steam-engine manufacture and installation of associated machinery but displayed his genius in many other fields. For Baird he developed a sugar refining process, a gasworks for lighting the factory, and machinery for production of all kinds of military equipment.

Handyside was involved in building the first Russian suspension bridges, designed by Pierre Bazaine and Wilhelm von Traitteur for St Petersburg, and devised a testing machine for proving the chains. His most famous works were associated with the architect A. R. de Montferrand with whom he worked for many years on St Isaac's Cathedral. This included a colonnade of forty-eight granite pillars, each of 8 feet diameter and 56 feet high, and a circle of thirty-six monolithic pillars (each 42 feet high), raised 200 feet off the ground, and surmounted by an iron dome 130 feet in diameter. He developed machinery to assist in its construction and helped with the design of the iron dome, its gilding, and with casting its decorative bronze work. Handyside and Montferrand worked together on the column erected in memory of Tsar Alexander, Handyside casting the reliefs as well as arranging its erection.

Handyside initially lived with Baird. In 1829 he married Sophia Gordon Busch, a member of the British émigré community in Russia. They had four children. Following the death of Charles Baird, Handyside returned to Britain. Although he became more active in the affairs of the Institution of Civil Engineers, which he had first joined in 1822, he retired from business. Handyside's brothers had followed him to St Petersburg in the 1820s. While some remained, his younger brother Andrew *Handyside (1805–1887) returned with him to Britain and took over the Britannia ironworks, Derby. William Handyside died in Edinburgh on 26 May 1850, exhausted by a lifetime in heavy industry.

Hanff, Helene (1916–1997), writer and Anglophile in the USA, was born in Philadelphia, Pennsylvania, USA, on 15 April 1916, the third child and only daughter of Arthur Hanff and his wife, Miriam, *née* Levy. In his youth, her father had a short-lived career 'as a song-and-dance man', but later settled down with her mother and became a shirt salesman. His love of the theatre persisted, however, and Hanff recalled with affection his depression-era activity of 'swapping shirts for passes with all the box-office men in Philadelphia' (Hanff, *Underfoot in Show Business*, 5, 6). In pursuit of a university scholarship, Hanff was educated at a special academic high school, and was awarded funding for a liberal arts programme at Temple University. After only a year there, however, the money for the scholarship ran out, and she was forced to leave. She felt 'a secret relief' at this, and began a stringent course of self-education, based on the writings of Sir Arthur Quiller-Couch:

> when all my friends were going back to college I was happily mapping out a daily course of study with Q: two hours of Q, two hours of Milton, two hours of Shakespeare, one hour of English essays (dessert). I began reading industriously all day long, unaware that my Depression-ridden parents were anxiously waiting for me to go out and get a job. (Hanff, *Q's Legacy*, 3, 6)

She was regretfully brought to this realization, went to business school, and began working in secretarial jobs, while also becoming involved in amateur theatre.

In 1936 Helene Hanff won a fellowship from the Bureau of New Plays as a result of a nationwide competition. She moved to Manhattan, and under the guidance of Theresa Helburn, a co-producer of the Theatre Guild, she began to write in earnest. She wrote twenty plays in the 1940s, but failed to have a single one produced. Her account of her life in New York at this time, *Underfoot in Show Business* (1961; 1980), is both funny and uncompromising about the hard truths of the business, reflected in chapter titles such as 'If they take you to lunch they don't want your play'. Hanff continued to write (training films for the Women's Army Corps, articles on American history for a children's encyclopaedia, children's bedtime stories) and, in the early 1950s, scripts for television, in particular for *The Adventures of Ellery Queen*. She also supported herself with work as an 'outside reader' for a film studio, reading novels, plays, and short stories, and giving her opinion on their suitability for adaptation (Hanff, *Q's Legacy*, 17). That Hanff was not entirely ahead of her time in this regard is seen in her assessment of:

> J. R. R. Tolkein (I hope I'm spelling his name wrong). I remember opening one volume to a first line which read *Mr. Bilbo Baggins of Bag End announced that he would shortly be celebrating his eleventy-first birthday* ... and phoning several friends to say good-bye because suicide seems so obviously preferable to five hundred more pages of that. (Hanff, *Underfoot in Show Business*, 116)

Hanff was never one for prose fiction, though, as she stated in her most famous book: '"The reader will not credit that such things could be," Walton says somewhere or other, "but I was there and I saw it." that's for me, I'm a great lover of i-was-there books' (Hanff, *84 Charing Cross Road*, 83). And it is the immediacy of the letters making up *84 Charing Cross Road* (1970) that turned it from a successful 'cult book' into a volume that has gone into numerous editions, and has remained in print for thirty years. The book collates the twenty-year correspondence that Helene, as an impoverished New York bibliophile, shared with Frank Doel, the manager of an antiquarian bookshop in London. Its charm persists, with Helene's requests for books becoming increasingly informal and erratically punctuated:

> Frank Doel, what are you DOING over there, you are not doing ANYthing, you are just sitting AROUND. Where is Leigh Hunt? Where is the *Oxford Verse*? Where is the Vulgate and dear goofy John Henry, I thought they'd be such nice uplifting reading for Lent and NOTHING do you send me. you leave me sitting here writing long margin notes in library books ... some day they'll find out i did it and take my library card away. (ibid., 14)

Doel's own replies demonstrate a shift from a formal British reserve to a real warmth and friendship. In response to her needling signature of a 1952 letter, 'MISS Hanff to you (I'm Helene only to my FRIENDS)', Doel responds:

> I quite agree it is time we dropped the 'Miss' when writing to you. I am not really so stand-offish as you may have been led to believe, but as copies of letters I have written to you go into the office files, the formal address seemed more appropriate. (ibid., 46)

But it wasn't just about books. As Hanff put it:

> Most of the books I bought from Marks & Co were probably available in New York. For years, friends had advised me to 'try O'Malley's,' 'try Dauber & Pine'. I'd never done it. I'd wanted a link with London and I'd managed it. (Hanff, *The Duchess of Bloomsbury Street*, 111)

And the link was a strong one. In addition to her persistent and teasing letters, Helene sent gifts of food parcels to the shop's staff during post-war rationing, and received back letters including recipes, photos, gift books, and even an Irish embroidered tablecloth as a Christmas present. The correspondence established a deep and lasting network of international relationships and, in its published form, helped its readers towards a greater transatlantic understanding.

Lack of money thwarted Hanff's desperate wish to visit England and in particular her friends at the bookshop. It was not until she was sent a letter conveying news of Frank's death that she collected the correspondence into a volume published to critical acclaim in America. Ironically, this generated enough interest for André Deutsch to publish it in Britain, and to bring Hanff to London for the launch. Her diary of her first visit to England was published as *The Duchess of Bloomsbury Street* (1974), and despite

her own misgivings ('Garrulous Gertie comes home from London and has to tell everyone about her trip. Who the hell cares about my trip?'; Hanff, *Q's Legacy*, 37), received critical and popular acclaim.

Helene Hanff went on to write a personalized and idiosyncratic guide to New York, *Apple of my Eye* (1977), overcoming the initial disadvantage that, although a passionate New Yorker, she had 'never been to any of the tourist attractions' (Hanff, *Apple of my Eye*, 9). Her ties to London were continued and reinforced by her broadcasting work for the BBC's *Woman's Hour* from 1978 to 1984, for which she produced monthly segments on life in New York; these were later collected and published as *Letter from New York* (1992). An autobiographical tribute to Quiller-Couch, *Q's Legacy*, appeared in 1985.

84 Charing Cross Road was adapted for the stage by James Roose-Evans, and was staged successfully in Britain, though less successfully in New York. The American actress Anne Bancroft, however, was a fan of the book, and her husband, the director Mel Brooks, bought her the film rights to it as a twenty-first anniversary present. He acted as executive producer of a film version (1986) starring Bancroft as Helene. Hardly in Brooks's usual vein of slapstick and broad satire, *84 Charing Cross Road* was true to the spirit of the book. It was brilliantly cast: in addition to Bancroft, Anthony Hopkins played Frank Doel, and Judi Dench appeared as his wife, Nora. The film version was a great success, despite Helene's own reservations: 'Who could have imagined a film about a business correspondence?' (*Daily Telegraph*).

Helene Hanff never married, though Leo Marks, the son of the bookshop owner, said that 'she had a relationship with a very famous American, whom she had to share with two other ladies, and she was never sure whether she was the senior or the junior' (*The Guardian*). Hanff suffered from diabetes later in life, but continued to smoke and drink. In her last years she was 'broke', by her own account, living on royalties and social security, and accepting a $5000 grant from the Authors' League fund to help with hospital bills. In an interview she gave in 1988, expressing her dislike for electric typewriters, she joked: 'If my 1964 model breaks down before I do, I guess I'll replace it, but it looks as though we'll both go roughly at the same time' (Fox and Hanff). Both lasted another nine years; Helen Hanff died on 9 April 1997 at the De Witt Nursing Home in Manhattan, New York City. As she had always wished, she was buried in Brooklyn in memory of the Dodgers. 84 Charing Cross Road is no longer the site of a bookshop, but a plaque has been placed on the wall, stating: '84 Charing Cross Road, The Booksellers Marks & Co. were on this site which became world-renowned through the book by Helene Hanff.'

Hanger, George, fourth Baron Coleraine (1751–1824), army officer and writer, was born on 13 October 1751 at the family seat, Driffield Hall, Gloucestershire, the third and youngest son of Gabriel Hanger, first Baron Coleraine (1697–1773), MP, and his wife, Elizabeth Bond (1715–1780), daughter of Richard Bond, of Cowbury, Herefordshire. Educated at Reading School, Eton College, where he enjoyed affairs with local females, and the University of Göttingen, he briefly served in the Prussian army before entering the British army as an ensign in the 1st foot guards on 31 January 1771. He purchased a lieutenant's commission (which in the footguards then conferred the rank of captain in the army) on 20 February 1776. Long-nosed but reportedly considered handsome when young, he was irascible, violent, dissipated, extravagant, and individualistic sometimes to eccentricity. He fought three duels before he was twenty-one. While a guards officer he married, by Gypsy rites, a Gypsy whom he called 'the lovely Egyptea of Norwood' (Bass, 86), but she ran off with a bandy-legged tinker. He 'retired' on 25 March 1776, allegedly in disgust after a more junior officer purchased promotion over him. An extravagantly and expensively dressed 'macaroni', he claimed to have worn the first satin coat in England.

Hanger was still determined on a military career, and on returning to Germany became a captain in the Hessian Jägers and sailed with them to North America. Commanding a detachment assigned to the expedition against Charleston, South Carolina, in 1780, he was appointed aide-de-camp to the commander-in-chief, Sir Henry Clinton; but when Clinton returned to New York soon afterwards, Hanger remained in North Carolina to assist Major Patrick Fergusson organize the loyalist militia there. This soon proved uncongenial and he transferred to Banastre Tarleton's British legion on 6 August 1780, as commander of its light dragoons with the provincial rank of major, and became Tarleton's lasting friend. His début as a cavalry commander was far from auspicious. He and his men were surprised by the Americans at Wahab's Plantation, North Carolina, on 21 September 1780 and five days later performed badly in another encounter at Charlotte, North Carolina. He missed the disasters of Cowpens and Yorktown through yellow fever. In 1782 Tarleton's dragoons were taken onto the regular establishment, at which time Hanger was confirmed in the substantive rank of major on 25 December 1782. This was merely a paper transaction, however, for the regiment had surrendered at Yorktown in October 1781 and Hanger was placed on half pay when it was formally disbanded in 1783. This ended his active military career, though he was promoted brevet lieutenant-colonel on 12 October 1793.

A beau and clubman—in both senses—who affected the manners of the French court, Hanger assisted Tarleton with his faro bank at Daubigney's Tavern, London, lounging at the entrance with a huge rattan he called 'the

George Hanger, fourth Baron Coleraine (1751–1824), by unknown artist

Infant'. He became one of the dissipated companions of the prince of Wales, indulging in gambling, racing, and pugilism. In 1787 he and Tarleton organized 'bludgeon men' for the whigs at the Westminster by-election. In November 1791 he was appointed equerry to the prince of Wales. In August 1797, in litigation against his elder brother William, third Baron Coleraine, he wrote to the prince begging a loan of £100. His critics considered him among the dregs of society. He was much mentioned in contemporary memoirs and was caricatured by Gillray, Rowlandson, Dighton, and Cruikshank.

Still on major's half pay, Hanger was in increasing financial difficulties, sold out in 1796, and obtained an ensign's commission in the 70th foot on 29 September 1796. As this commission was obtained without purchase he obtained by the exchange a small capital sum with which to pay off his more pressing creditors and at the same time secured a very modest, but assured, income. It did not, however, save him from being imprisoned for debt in the king's bench prison, Southwark, between June 1798 and April 1799. He lived for some time in Paris to avoid his creditors. In 1800, having forfeited his ensigncy, he even set up as a coal merchant. His last connection with the army came on 7 July 1806, when he was appointed captain commissary of the corps of Royal Artillery drivers. This was merely blatant jobbery: his 1808 retirement on full pay was a scandal, and was criticized by the commissioners of military inquiry in their seventeenth report.

Hanger continued to call himself Colonel Hanger and in 1816 'promoted' himself General Hanger. Throughout his life he appears to have deliberately set out to conform to the popular caricature of an Irish gentleman. His publications were mainly on military and sporting subjects. These ranged from the contentious *An Address to the Army, in Reply to Strictures by Roderick McKenzie (Late Lieutenant in the 71st Regiment) on Tarleton's History of the Campaigns of 1780 and 1781* (1789) to the opportunistic *Anticipation of the Freedom of Brabant, with the Expulsion of the Austrian Troops from that Country* (1792), and two treatises on the defence of London: *Military Reflections on the Attack and Defence of the City of London* (1795) and *Reflections on the Menaced Invasion ...* (1804). In both the latter works he drew on his experience of hunting and shooting in the area, and his best-known work was *Colonel George Hanger to All Sportsmen, and Particularly to Farmers and Gamekeepers* (1814), with proposals for an elaborate rat trap and an anti-poacher tower with a gun firing clay balls. He also wrote his *Life, Adventures and Opinions* (2 vols., 1801). He married, before January 1823, at Wapping, London, his cook or housekeeper, Mary Anne Katherine, possibly *née* Greenwood (*c.*1776–1846), an illeducated woman: the John Greenwood Hanger to whom she left her money was possibly her illegitimate son by Hanger. Opinionated, he advocated public urinals with the state profiting from the sale of the urine as fertilizer, and taxes on cutlery and 'absentee Scotchmen' who failed to reside six months a year in Scotland. On the death of his elder brother William, on 11 December 1814, he succeeded to the barony of Coleraine, but preferred to be addressed as Colonel (or General) Hanger. He died 'of a convulsive fit' (*GM*, 457) at his house near Regent's Park, London, on 31 March 1824, and was buried at Driffield, Gloucestershire. At his death the barony became extinct.

Hankeford [Hankford], **Sir William** (*c.*1350–1423), justice, came of a gentry family with property in and around the hamlet of Hankford, near Bulkworthy in north Devon, but his precise parentage is uncertain. He was educated at the Middle Temple and called to the degree of serjeant-at-law in Michaelmas term 1388, by which time, of course, he had been for years an active lawyer: since 1384 he had been retained as counsel by the earl of Devon. He was appointed king's serjeant in 1389 and, as well as pleading in the courts, where his contributions were frequently reported in the year-books, and acting on assize and other commissions in south-east and south-west England, he was active in royal service. He accompanied Richard II to

Ireland in 1394, and in parliament in February 1398 was one of those whose opinion was sought on the responses made by the judges in 1387 to Richard's questions on the nature of treason for which they had been condemned by the Merciless Parliament; Hankeford declared that the responses were good and loyal and that he would have given the same. On 6 May following he was promoted to succeed his friend and associate, John Wadham, who had resigned from his position as justice of the common pleas. Henry IV reappointed him to the bench in October 1399 and created him KB at his coronation a few days later. Hankeford was very active as a justice and commissioner during the following years and his reputation was clearly high, as on the accession of Henry V in 1413 he was appointed to replace William Gascoigne as chief justice of the king's bench. Most of his service was in and around London, though he continued to sit on commissions in his native Devon, and in 1414 he took the king's bench to Shropshire to deal with the endemic disorder there against which he inveighed in his charge to the jury. He seems to have attended parliament regularly, was frequently a trier of petitions, and was sometimes called in to report to the council and parliament. His appointment was renewed by the council after Henry V's death in 1422: he thus enjoyed the unusual distinction of serving as a justice under four monarchs.

Hankeford died on 12 December 1423, not in 1422, as earlier writers state. The extraordinary story of his seeking his own death, by ordering his parker to shoot anyone wandering in his park at night and then deliberately going into the park to be shot, seems first to have been related by Holinshed (who dates it to 1471), and is also told of Sir Robert Danby (*d.* 1474); but it is followed by Thomas Fuller and later Devon historians, who recount that it was still a strong tradition locally, and that the stump of the oak under which the incident occurred was still known as 'Hankford's oak' in the seventeenth century. It is not very plausible, but if he did die in this way it must have been suicide, for he had made his long and complex testament only two days earlier. It is likely enough that he died in Devon, to which he may have returned after the end of the Michaelmas term. Hankeford's testament is dominated by his home county—he made substantial bequests to churches, charities, and religious houses in north Devon, and asked to be buried in Monkleigh church which he had largely rebuilt; his tomb survives there. Among his executors was his successor as chief justice, Sir William Cheyne (*d.* 1443).

Hankeford had one younger brother, John, who died between 1420 and 1423. The parentage of his wife, Cristina (who predeceased him), is unknown, but she was certainly a minor heiress in Devon, and William also added substantially to his family lands, especially in north Devon, by purchase. They were married by 1380 and seem to have had only one son, Richard, who himself married an heiress and was twice knight of the shire for Devon, but died in his father's lifetime. William's lands were inherited by his grandson, another Richard, who was aged twenty-seven on his grandfather's death, married twice into aristocratic families, and died in 1431, leaving two daughters who eventually took the Hankeford property to Sir William Bourgchier, later Lord Fitzwarine, and Thomas, seventh earl of Ormond. Hankey, Beatrice [*called* Help] (1858–1933), evangelist, was born on 17 December 1858 at Bohun Lodge, Barnet, the ninth of ten children of George Hankey (*d.* 1893), a wealthy merchant banker of an old Cheshire family, and his wife, Caroline Donovan (*d.* 1878), whose family originally came from co. Carlow. Her mother's influence endowed Beatrice Hankey with deep religious faith and shaped her highly individual character. As a child she was fun-loving, fearless, and energetic, and in appearance, then and later, 'blue-eyed and fair-haired with irregular features' (Raven and Heath, 14). She was especially close to her sister Eva, five years her senior: Eva's chronic ill health required constant nursing, which Beatrice willingly gave, and they lived all their lives together in mutual dependence.

Shortly after 1871 the Hankeys moved to Henley House, Frant, in Sussex, where one of the girls, Mary, began a Bible-reading class for men on the estate. When Mary married, in 1879, Beatrice took it over and showed 'a particular gift for dealing with men'. One of the older members of the class recalled: 'You had to do what she said. She was our Queen she was, her word was law' (Raven and Heath, 20). Total abstinence from alcohol was one of her rules and if she relaxed this in later life, when the social consequences of drunkenness were less in evidence, she never abandoned the principle.

In 1888 Beatrice Hankey spent six months at St John's Hospital, Lewisham, working as a nurse, the only training that she ever had. It helped her to care for Eva and their father, whose health was failing. After his death, in 1893, the household at Frant dispersed and the sisters moved to Walmer, in Kent, where they began evangelical work with the local fishing community. They used a family legacy to build a mission hall on the seafront; by 1904 there were about 700–800 'members' of the 'Cheriton Club', which housed a sizeable branch of the British Women's Temperance Association, as well as Bible classes for men and women. Children were rigidly excluded from these, as indeed they were from all meetings over which Beatrice presided.

A turning point came in September 1902, when the Hankey sisters invited a few of their younger women relatives to a four-day retreat at the house of the bishop of Dover, William Walsh, in Canterbury, which had been

lent for the occasion. There were poetry readings as well as religious discussion, and those present addressed one another by the name of the room in which they were staying—for example, Hope, Charity, and Rest, the last of which attached to Eva. At a later meeting Eva pinned on her sister's door 'One called Help', from *Pilgrim's Progress*, and it was by the name of Help that Beatrice was thereafter known. The gatherings continued annually and grew in size; those invited were exclusively young women but not necessarily family members. From 1905 they met at St Augustine's Missionary College, Canterbury. By now Help was a confident speaker, and readings from Tennyson's *Idylls of the King* formed a central part of her teaching; the fellowship became a 'knighthood' and its meetings 'camelots', while the early knights took their names from those of the round table. Though Hankey remained a member of the Church of England all of her life she disliked formal organization, and the Tennysonian imagery provided a coherence to the fellowship that was otherwise lacking.

The growth of the knighthood eventually led Help and Rest away from their calling at Walmer. In 1910 they settled in The Chantry, Sevenoaks, a large house that was a home to the knighthood as much as to themselves. It was Rest, the more conventional and less demanding of the two, who kept house, leaving Help to be the evangelical driving force. When in 1912 she learned of the extreme hardship experienced by striking miners she travelled, without any real plan, to the heart of the strike area, arriving at Hednesford, in Cannock Chase. Within days she had set up a mission in a disused drill hall, where she dispensed cocoa and buns and held religious services.

Hankey now demanded of her knights similar action. It marked a parting of the ways for some—perhaps most—of the fellowship but the following summer the remnants were at work among the colliers in Castleford, as well as Hednesford. Temperance was a central tenet of her missionary work, and both at Hednesford and Castleford she ran 'catch-my-pal' movements, devoted to total abstinence. She proved utterly determined in this cause, however unpopular it might prove with the hard-living miners and, later, soldiers among whom she worked. The knighthood was thus already mobilized when war came in 1914 and could quickly provide, to regiments accepting them, 'home huts', where soldiers could find nourishment, recreation, and religion. Help probably financed the first huts herself but later they were run on the profits from the canteens, and about thirty opened in all. During the Second South African War the mission at Walmer had been bedecked in red, white, and blue, and Help showed similar uncomplicated patriotism towards the 1914–18 conflict. She 'spiritualized the struggle as she did the rest of life' (Raven and Heath, 173), and because she interpreted it as part of God's plan for man's spiritual evolution it did not trouble her as it troubled others.

In 1915 the Mothers' Union conceived the idea of a pilgrimage of prayer to more remote villages, an initiative that developed into the 'Women Messengers' movement. Hearing of the idea Hankey made contact and simultaneously carried out a pilgrimage in Kent, in August, with the blessing of the bishop of Rochester, John Reginald Harmer. The participating knights wore blue veils and stoles and it was thus that the Blue Pilgrims were born. They developed alongside the Women Messengers, 'but on characteristic and independent lines' (Raven and Heath, 184). In 1916 'Pilgrim Help' wrote a short pamphlet explaining their work; over the next five years other pamphlets, pilgrimages, and even 'crusades' followed.

The admission of men—'knights-chivalrous'—to the movement in the summer of 1917 signalled fundamental change. The fellowship no longer consisted of leisured young women but embraced a diverse membership, many of whom were wage-earners. The Tennysonian symbolism was mostly set aside. What remained was the atmosphere of love and friendship. In 1921 the *Dragon Fly*, the newssheet of the knighthood, made the first of its irregular appearances, later to be superseded by *The Signaller*. The four years of war, followed by three years spent nursing Rest, who died in November 1921, undermined Help's health to the extent that she took no part in the pilgrimages of the early 1920s. She nevertheless returned to Hednesford during the general strike of 1926 and again the next year. In 1928 she went to south Wales, answering her final call.

In February 1928 two knights investigated the need for relief work in the Rhondda valley. Finding the Society of Friends already active they moved to Blaenau, on the Monmouthshire coalfield, an area of 90 per cent unemployment and 'the saddest place in S. Wales' (Raven and Heath, 270). Shortly before leaving for south Wales, Hankey preached at a late-evening Sunday service in Liverpool Cathedral, under the auspices of Charles Raven, a residentiary canon there and a member of the knighthood. It was a remarkable moment for her and her movement, and a clear statement of Raven's belief in the ordination of women.

At Blaenau the Blue Pilgrims opened a clothing depot and a soup kitchen; revived the allotments association, giving out seeds and gardening implements; and found slate with which to mend roofs. But along with this practical work went an understanding of the spiritual needs of the people. Hankey insisted that respect should go hand in hand with charity, a point which she emphasized in a letter to *The Times* of 14 January 1929. During 1929, with the opening of the Mansion House fund, major relief work began operating in south Wales; the Blue Pilgrims' soup kitchen was no longer needed and the allotments organization was taken over by the Society of Friends. Instead the pilgrims concentrated their efforts on establishing a home camp at Blaenau, in a disused working men's club. It became the base for nearly a hundred men and women, the men repairing boots out of old tyres and making doormats and toys, and the women quilts. The project attracted national attention when the duke and duchess of York visited the camp in March 1932; they showed interest in the camp garden, a converted rubbish tip. Help was unable to welcome them; she was increasingly frail and at

the end of June suffered a stroke, from which she never properly recovered. She died at The Chantry, Sevenoaks, on 5 February 1933 and was buried in the garden, in a grave by the chantry wall, alongside her sister.

Active membership of the Blue Pilgrims was never large—probably in the low hundreds—and there were obvious limits to what they could achieve. In south Wales the amateurism of the movement clearly frustrated more established aid organizations. Help accepted this but she disliked committees and red tape and believed that 'it was not a part of friendship to be a perpetual prop'. This was a somewhat harsh message for those who came to rely on her aid and who, by her own definition, were most in need of it. Her genius, however, lay not in her social work but in her ability to create a sense of Christian community. Charles Raven first encountered the knighthood when he spoke at its Heathfield camelot in July 1921 (Raven and Heath, 235). For him Beatrice Hankey symbolized 'the utter absurdity of excluding women from full recognition and ministry in the life of the Church'; she was, he said, 'to me and to very many others, both men and women, far more a bishop, a mother in God, than any ordained or consecrated Churchman' (Dillistone, 270).

Hankey, Maurice Pascal Alers, first Baron Hankey (1877–1963), civil servant, was born on 1 April 1877 at Biarritz, where his family was wintering. He was the third son and fifth child of Robert Alers Hankey (1838–1906), and his wife, Helen Bakewell (1845–1900), the daughter of a prominent member of the Adelaide bar. His father had been educated at Rugby School and Trinity College, Cambridge; for reasons of health he later established himself as a sheep farmer in South Australia. His health proved a recurrent problem, and the family twice returned to England, finally settling in Brighton. Maurice attended a private day school at Brighton, and was then educated at Rugby School (1890–95). Driven by an ambition to go to sea, he overcame family resistance and was commissioned a probationary second lieutenant in the Royal Marine Artillery, and in 1897 passed out first with the sword of honour from the Royal Naval College. After specialized instruction at Eastney barracks, Portsmouth, he came first in all his examinations. In late 1898 he secured a choice subaltern appointment on the *Ramillies*, the flagship of the Mediterranean station, to which he soon added unofficial and unpaid intelligence work, an activity which he would maintain to the end of his public life and beyond. His performance of duties in the fleet caught the attention of several prominent figures, including that of

Maurice Pascal Alers Hankey, first Baron Hankey (1877–1963), by Sir William Orpen, 1919

the reform-minded Admiral Sir John Fisher, the Mediterranean commander and soon to be first sea lord. In April 1902 Hankey joined the staff of the naval intelligence department, his first Whitehall appointment. With a brief exception five years later, when he served as an intelligence officer upon the *Queen*, another ship of the Mediterranean Fleet, he remained in Whitehall for his entire career; his eventual mastery of its 'corridors of power' prevailed over his earlier love of the sea.

The Whitehall years Hankey's initial responsibilities at the naval intelligence department involved him with coastal defences in home waters and in the empire; on numerous occasions he represented the department at meetings of the colonial defence committee, at that time the only permanent subcommittee of the committee of imperial defence (CID), which had been established in late 1902. As his attention increasingly gravitated towards the empire's far-flung bases he was appointed to a joint Admiralty–CID committee in 1906. His capacious memory for technical details about naval matters from the Atlantic to the Pacific eventually won him 'a high reputation as a walking encyclopaedia of defence matters' (Roskill, 1.79). His travels served him well in reinforcing his facility in languages, which already included French, Italian, German, and modern Greek. Before his return to sea in 1907 he also served as secretary of an Admiralty committee which worked on naval war plans in the event of a war with Germany. On 15 September 1903 he married Adeline Hermine Gertrude Ernestine de Smidt (1882–1979), daughter of Abraham de Smidt, formerly surveyor-general of Cape Colony, who had settled in England in 1890.

Writing to his wife in 1906 Hankey hoped that his career would unfold 'not as a fighting man but as a sound peace administrator' (Roskill, 1.71). On the best of terms with his last chief at the naval intelligence department, Rear-Admiral C. L. Ottley, Hankey had been promised the post of naval assistant secretary to the CID, should Ottley secure the secretary's position. What both men hoped for came to pass, and in January 1908 Hankey returned to Whitehall. The CID, lodged in Whitehall Gardens, which was to be Hankey's base for thirty years, functioned in theory as a prime minister's department to oversee defence planning. In practice, however, it only advised on technical questions and could not contribute to the formulation of defence policies largely because of the rampant departmentalism in the fighting services. The CID advice did not force the military leaders to plan accordingly. Yet its potential role had been enlarged in 1904 by the creation of a secretariat charged with keeping a record of its proceedings, which was the task of its secretary and a permanent staff.

In later years Hankey himself made rather too much of the role of the pre-war CID, but in one significant way its planning did advance Britain's war readiness: between 1911 and 1913 the CID prepared a war book, in effect a timetable which outlined departmental responsibilities both in a 'precautionary stage' and in the first weeks of war. Hankey, with the support of Ottley and Fisher—and buoyed by a successful interview with R. B. Haldane, the war secretary—became CID secretary in 1912 and carried on with the war book, which he considered his greatest achievement. Curiously the war book did not go beyond the very first stages of the war and offered no advice about the direction of the war effort. Although his own organization was no war directorate-in-waiting, Hankey was able to place the CID secretariat at the service of the war council, which the Asquith government in November 1914 established at the sub-cabinet level to function as a 'supreme command' of the war effort. Neither this flawed body—partly advisory, partly executive—nor its two successors, the Dardanelles committee (June–October 1915), and the war committee (November 1915 – November 1916)—enabled the Asquith coalition to prevail over the military authorities in planning what remained an ineffective war effort. While wheels spun and mud was liberally applied to the reputations of 'frocks' and 'brass hats', Hankey moved freely between the British combatants, establishing himself as a key intermediary in the rancorous dialogue, and was widely perceived as a non-partisan figure and a skilled listener, enjoying considerable standing among the military figures.

Divided authority took its own particular toll on Britain's military performance. In the harsh light of the débâcle at the Somme, Hankey registered his deep dissatisfaction with civilian and military leadership alike in late 1916. Fear of 'catastrophe', which brought down Asquith in December 1916, led his successor, Lloyd George, to establish a war cabinet of five, so as to avoid any repetition of divided governmental authority. Lloyd George also moved decisively to establish what he described as 'virtually a new system of government in this country' (Naylor, 26). To organize and administer that entity the secretariat of the defunct war committee was expanded by the addition of a civil side, and Hankey headed the operation—the secretary himself drew up the procedural rules—with these responsibilities, among others:

> (1) to record the proceedings of the War Cabinet; (2) to transmit relevant extracts from the minutes to departments concerned with implementing them or otherwise interested; (3) to prepare the agenda paper, and to arrange the attendance of ministers not in the War Cabinet and others required to be present for discussion of particular items on the agenda; (4) to receive papers from departments and circulate them to the War Cabinet or others as necessary. (Naylor, 27)

Thus Hankey established the precepts for a co-ordinating and record-keeping organization which the cabinet secretariat and its seamless successor, the Cabinet Office (from 1920), subsequently followed. The creation of the cabinet secretariat was his greatest achievement.

The cabinet secretariat was a work in progress, and the precedents of CID record keeping could not settle the questions of the form and content of war cabinet minutes, nor determine the degree of access given to ministers outside the inner circle. The secretary consistently opposed a verbatim account: 'I aim not at an accurate account of what everyone said, but a general synopsis of the expert evidence upon which the Conclusion was based, and a general summary of the arguments for and against the decision taken' (Naylor, 36). Although there is occasional variation over the years Hankey's record keeping for several decades kept closely to this approach. Distribution of complete cabinet minutes (cabinet conclusions, from 1919) was deliberately limited but went to a wider circle of ministers than the war cabinet proper, while the circulation of certain extracts to other ministers involved constant *ad hoc* decisions by secretariat personnel. The circulation of cabinet papers—essentially memoranda—which served to bridge what a later generation would call an information gap between the war cabinet and the departments, also defied a definitive settlement, but by the end of the war Hankey had come to prefer a wide distribution. The reform of cabinet government significantly reduced the morass of indecision and inefficiency which had hampered the British war effort.

After the German collapse of 1918 Lloyd George extended the war cabinet's mandate for the duration of the Paris peace conference, but by October 1919 political pressures led to a governmental reorganization and a peacetime cabinet of about twenty ministers. Hankey's operation was unquestioned, and he easily adapted the secretariat's role to the new pattern, although his own responsibility for note taking—a task sometimes shared with his senior staff—had become more complex. The greater numbers at the cabinet table earned the scribes the pithy compliment from Walter Long: 'I don't know how you make any sort of record with all that talk going on' (Naylor, 65). The new cabinet also agreed to record keeping for the deliberations of cabinet committees,

tying sub-cabinet proceedings into the network administered from Whitehall Gardens. Hankey's innovations were perpetuated into the post-war years, but Lloyd George's presence was key to their survival.

The appointment in 1919 of a new and able permanent secretary to the Treasury, Warren Fisher, who was also named head of the civil service, gave Hankey cause for concern about the future of his own office. However, for the most part, Fisher and Hankey, whose military responsibilities had been underscored by his appointment as secretary of a revived CID, sought to demarcate their respective positions. Yet another concern for Hankey was the constant public confusion and occasional disputes between his operation and that of the prime minister's secretariat, the so-called 'garden suburb' resident at 10 Downing Street. He probably over-involved himself in the post-war years as a prominent member of Lloyd George's travelling entourage, although the choice was not so much his as the prime minister's. Resentment was particularly keen in Foreign Office circles. In the autumn of 1922 Hankey's prospects and those of his office hinged upon the desires of the new premier, Bonar Law—once a member of the war cabinet—and his Conservative associates, a number of whom were well acquainted with the new ways of cabinet government. With Warren Fisher involved in discussions as a hardly disinterested player, and more ominously with Bonar Law sending mixed messages, Hankey fought a skilled and effective bureaucratic battle to preserve his office and himself. He successfully resisted absorption into the Treasury, and assured the autonomy and effective independence of the Cabinet Office while yielding on some technicalities to Fisher, whose take-over bid was frustrated. Indeed, Hankey's secretarial empire was enlarged in 1923 by his appointment, at Fisher's instigation, as clerk of the privy council, which Hankey regarded as a virtual sinecure but accepted as an embellishment of his office's prestige and his own standing. He retained his two secretaryships and his historic clerkship until retirement, calculating in July 1938 that he had taken the minutes of some 1700 meetings of the war cabinet and its peacetime successors.

Hankey was determined to protect the secrecy of the cabinet's proceedings. Since the cabinet accepted collective responsibility for its decisions—whatever individual ministers may have thought about particular policies prior to a cabinet decision or, for that matter, thereafter—Hankey assumed that the records of discussions and decisions would be inviolable, at least for any foreseeable future, and secured the requisite support for this policy from successive cabinets. In the early post-war period his Cabinet Office could not lay claim to the actual custody of cabinet minutes and papers, which were generally retained by ministers, contrary to Hankey's secretarial wishes. But he proved as patient as he was committed to the cause of recovering those documents, and breaches of cabinet secrecy by the press enabled him in 1934 to secure custody of 'official materials' from all but a handful of former cabinet ministers, and to establish the Cabinet Office as their repository. All ministers retained the right of access but were subject to regulation in the way those documents might in future be used. Although these guidelines would be breached in a massive way by Winston Churchill in his memoirs of the Second World War, by and large they prevailed until the altering political and legal climate of the 1960s mandated extensive reform, including public access to most cabinet documents after a stated period of time.

From early on Hankey had also undertaken the censorship—he preferred the term 'vetting'—of ministerial memoirs, acting in the name of the prime minister of the day. His tactful hand can be seen in alterations accepted in such partisan accounts of the First World War as those of Lloyd George and Churchill. By a curious turn of fate Hankey sought to publish his own diary-based account of that war as early as 1943: he asked his successor, Sir Edward Bridges to 'vet' his memoirs and was shocked to encounter strong resistance to an account which, Bridges informed him, revealed too much about his dealings with ministers. When Hankey countered, correctly, that the war period had always been treated *sui generis*, Bridges retorted that Hankey's unique perspective would compromise his own role and that of other civil servants, because any depiction of their influence could undermine the doctrine of ministerial responsibility. Despite Hankey's anguished protest Churchill's war cabinet denied him permission to publish, a situation which lasted nearly twenty years until Harold Macmillan in effect turned a blind eye to the publication of an abridged and expurgated *The Supreme Command, 1914–1918* (2 vols., 1961). Alas, the insightful and often acerbic Hankey diary had been reduced to a near anodyne form, and its full impact would not be known until the publication in 1970 of Stephen Roskill's first volume of his authoritative Hankey biography.

Military adviser and diplomatic confidant Although his secretarial work for the war cabinet after 1916 limited the time available to advisory tasks, Hankey continued to devote some time and his acknowledged tact to dealing with Britain's military leaders, including Haig, Robertson, and Henry Wilson. Inevitably he did not consistently prevail: he was a convinced 'Easterner', but his own standing seemed not to be compromised by the collapse of the Dardanelles venture in 1915. In positive terms he was involved with the initial planning of a 'land battleship' (the tank), and his contribution in overcoming Admiralty opposition to the convoy system was even more highly valued by his associates. With the revival of the CID in 1919, Hankey was well placed to influence the direction of post-war military planning. He advocated causes which were common to his generation and military training: sceptical for the future of the League of Nations, he remarked revealingly that 'the British Empire is worth a thousand Leagues of Nations' (Naylor, 58). In sum he was an unreconstructed 'traditionalist' through those years in which they and the 'collectivists' stared at each other across a great strategic divide. Hankey's support for such doctrines as 'freedom of the seas' and 'belligerent rights' underscored his commitment to the maintenance of Britain's naval strengths and

his suspicions about American designs upon her empire. Though his expression of forceful opinions impresses as ministerial rather than secretarial, his holding such views was known to and accepted by such figures as Baldwin and MacDonald.

As the skies darkened upon the Versailles settlement Hankey mounted a systematic campaign against the 'ten year rule' (the assumption that no war would be fought in the next ten years) which met with some success in 1932, although its constraints upon military expenditures prevailed until late 1933. From that time Hankey chaired a defence requirements subcommittee of the CID—his old rival Warren Fisher contributed to its efforts to repair the 'worst deficiencies' in Britain's armed forces. However, Hankey could not preserve the parent CID as the sole agency for the co-ordination of Britain's defence planning, and the creation of a number of *ad hoc* committees in the defence sector blurs any precise measure of Hankey's personal achievement in securing even the degree of war readiness which Britain possessed in 1939. While he did not challenge the dominant view that the Treasury functioned as a 'fourth arm of defence', dictating a 'rationing' of the overall expenditures needed to sustain any rearmament programme, no one laboured longer, harder, or more consistently than he to move the rearmament programme forward.

During the First World War, Hankey's daily attendance upon Lloyd George led inexorably to his role as a diplomatic confidant; though his role in these matters was unofficial, he was quite willing to offer advice on virtually any aspect of war policy. Since the foreign secretary was excluded from Lloyd George's war cabinet, the prime minister's preference for private rather than official advice added further to Hankey's standing. His activities at allied conferences grew: he acted as adviser as well as functionary at the Rapallo conference of November 1917, which established the inter-allied supreme war council. At the Paris peace conference, initially serving as secretary to the British empire delegation, he soon came to preside over the secretarial apparatus of the council of ten and then the more important council of four (Lloyd George, Clemenceau, Orlando, and Woodrow Wilson). Although the foreign secretary sat in the peacetime cabinet, Hankey continued his close association with Lloyd George in world meetings, serving as secretary of the British delegation to the Washington naval conference (1921–2) and the Genoa conference (1922); the latter meeting witnessed Lloyd George's last exclusion of the foreign secretary from its councils.

When the Lloyd George coalition fell in 1922 Hankey moved quickly to improve his office's relations with the Foreign Office as a key element in his contraction of Cabinet Office responsibilities. Yet within a few weeks Hankey was 'astonished' and 'tickled' to learn from Bonar Law that as the Foreign Office was overstretched in its initial secretarial tasks, he would once more undertake secretarial arrangements for some international meetings. Thus he served as secretary-general to conferences dealing with German reparations, in London (1924) and Lausanne (1932), at the Hague conferences (1929, 1930), and at the London naval conference (1930). Already in the war years he had personally kept the minutes of the imperial war cabinet, meeting in London, and remained as secretary to the imperial conferences of 1921, 1923, 1926, 1930, and 1937. Doubtless his primary focus lay in managing these diverse proceedings, but it may fairly be added that he continued to advise in the affairs of Europe and the empire.

For a quarter-century Hankey's standing was reinforced by his growing expertise in defence matters and, if he was by no means neutral in his assessments of the roles of the three services, his experience and vast knowledge incorporated a broader overall view than individual military advisers could develop. His own recommendations were argued judiciously, and he consistently demonstrated an essential tact in dealing with ministers and their other advisers. In particular Hankey adjusted to the different temperaments of the five premiers he served, from the mercurial Lloyd George to the laconic Baldwin; yet it is the adroit courtship of MacDonald in 1924 that best illustrates his ability to transcend unwelcome political and strategic views. Though not close to Neville Chamberlain, Hankey strongly supported his policy of appeasement, albeit for reasons of military weakness rather than the premier's sense of mission. His dealings with cabinet ministers were a model of gentlemanly manners and moderation, although on occasion pent-up frustration spilled over into critical diary entries, which served in part as a release of his own convictions and emotions. He was driven to breaking point only once, in 1937 privately exchanging recriminations with Winston Churchill—'the most difficult man I ever had to work with' (Roskill, 3.656). Hankey's choice of foe would prove a fateful one, but the incident was part of a pattern, and by 1937 Hankey showed other signs of exhaustion and a shortening temper, as the burden of responsibility in an increasingly ominous European situation grew. Within the Cabinet Office Hankey's tact was less in evidence, and the atmosphere became cool.

Twilight years In July 1938 Hankey retired as clerk of the privy council office, secretary to the cabinet, and secretary to the CID. Created a peer in February 1939, he emerged from a year's retirement in September 1939, when he accepted the position of minister without portfolio and membership in Chamberlain's war cabinet. He was sworn of the privy council in that month. An ill portent for this new career may be found in his remark that 'as far as I can make out my main job is to keep an eye on Winston!' (Roskill, 3.419). In fact he assumed a range of responsibilities, including the monitoring of intelligence activities and the application of science and technology to the war effort. He chaired the cabinet's scientific advisory committee, which played a key role in the development of the atomic bomb programme in 1940–41. The leading scientists with whom he worked valued his administrative contributions sufficiently to elect him a fellow of the Royal Society in 1942. Hankey took great satisfaction from his chairing of the cabinet's committee on preventing oil

from reaching Germany (the POG committee) between October 1939 and August 1940.

Predictably Hankey showed a strong interest in the maritime war, offering suggestions about convoy logistics to the new first lord, Churchill, who in May 1940 succeeded Chamberlain as premier; Hankey remained a Chamberlain loyalist to the bitter end, and he showed little sensitivity to the domestic political dynamics of the transfer of power. He was not a member of Churchill's war cabinet, though he was given the position of chancellor of the duchy of Lancaster, which enabled him to carry on his committee work and the 'special duties' which had been entrusted to him. To these functions Hankey added the chair of the technical personnel committee, which mediated between governmental needs and developing technology, including the training of required personnel. Churchill relegated Hankey to the post of paymaster-general in the ministerial reshuffle of July 1941. Hankey had read the signs of his loss of standing in the ministry, but he persisted in his criticism of Churchill's conduct of the war especially during its darkest hours in the winter of 1941–2. His criticisms ranged from Churchill's war organization and 'dictatorial' methods to a number of strategic issues. The issue about which Hankey felt most strongly was the imperative to divert converted long-range bombers away from strategic mainland bombing, and to use them to protect the lifeline of Atlantic convoys. His criticisms were not without merit, but he shared the particulars with a number of the prime minister's political opponents. Since his dissenting views were openly argued within the government he could not be accused of covert disloyalty, but predictably the breach widened. When Churchill finally dismissed him in March 1942 Hankey returned fire: 'For some time I have felt profoundly dissatisfied with the conduct of the war' (Roskill, 3.544). Thus he had no ministerial part in 'the turn of the tide'.

Hankey's years of ministerial office exposed several weaknesses, the most telling of which was an insensitivity to political nuance, apparent both in his failure to comprehend the necessity for Chamberlain to yield power to Churchill in 1940 and in his disparaging views of the capacity of Labour leaders to contribute to the reorganized government. He placed too much stock in his experiences in the First World War, often using them as a virtual template for the events of the second. Nor could he bring himself to trust Churchill's judgement—whatever his other qualities—and so was ill-placed to succeed under his domineering leadership.

After leaving office Hankey continued to chair the technical personnel committee until 1952, when he withdrew from all official committee responsibilities. He also resumed his role as a director of the Suez Canal Company. In 1938, faced with retirement and an expressed need to secure the financial security of his family, he had negotiated with Neville Chamberlain his appointment as a British government director of the company, with an annual fee of £5000. He had to give up the lucrative position while serving as a minister, but he regained it in 1945 and from 1948 served as a commercial director, consistently defending the company's role and the British military presence in Egypt, until events—and Colonel Nasser—led to the nationalization of the company in 1956. His own financial situation was adversely affected, but he felt even more acutely the diminution of Britain's world standing; nor was he any more reconciled to the predominance of the United States upon that stage than he had been with its emergence three decades earlier. He served on several company boards during his post-ministerial years and undertook some journalism. In addition to his long-suppressed war memoirs, he saw through to publication *Diplomacy by Conference* (1946), a collection of earlier papers and lectures; *The Supreme Command at the Paris Peace Conference, 1919* (1963); and *Politics, Trials and Errors* (1949). The last encapsulated his controversial campaign against the war crimes trials of German and Japanese military leaders. His plea for a general amnesty for war criminals won him little popularity generally, although he drew some strength from a like-minded group of nearly a dozen prominent figures.

Hankey's memoirs were grounded in his full and sometimes caustic diary, subsequently housed with correspondence and other materials at Churchill College, Cambridge. Their availability—thoroughly exploited in Roskill's biography—renders superfluous Hankey's own cautious use of them, essential to secure publication in his own lifetime. Hankey is revealed as a man whose public persona of tact and moderation was matched by a private and often critical perspective on individual ministerial foibles and collective failures. The diary is hubristic and sometimes self-serving, but Hankey utilized such licence to maintain his public neutrality. His own causes and beliefs reflect the certainties of a late Victorian imperialist, whose policies sought to maintain British domination abroad and to avoid as far as possible British entanglement within Europe. His patriotism stands inviolable, but his sensitivity to processes of historical change proved limited. Hankey did not altogether grasp the virulence of fascism, most apparent in Hitler's variant, except as a military threat to Britain; nor did he ever quite comprehend the changing face of domestic politics which Labour's emergence as a party of government entailed, particularly after the party's break with MacDonald and the National Government in 1931. In these shortcomings Hankey was typical of his generation and background; that his responsibility was greater lay in the fact that he was better informed than nearly any of his contemporaries.

Hankey was appointed CB (1912), KCB (1916), GCB (1919), GCMG (1929), and GCVO (1934). He held honorary degrees from Oxford, Cambridge, Edinburgh, and Birmingham. A grant of £25,000 was given to him for his services in the First World War. Although on occasion he found his family finances worrisome—he would die well off, but not wealthy—his family life was otherwise estimable, anchored not only in a happy marriage but also in a close and confidential relationship with his wife, which can be measured in his frequent and full letters while abroad.

The family—three sons and a daughter—was close knit, and Hankey's own hand, while often absent, was exercised supportively if paternalistically. Deeply felt Anglican religious values and a love of music infused the household. While the private Hankey was not on view in the office, George Mallaby offered an insider's perspective on his traits:

> He was busy always, and his moods of relaxation were known only to his family ... His religion was of the type known as 'muscular Christianity'. He took a cold bath every morning, he was an advocate of alfresco meals in unwelcoming weather, he was persistent in physical exercise, and his favourite method of locomotion was on his feet. He was a man of temperate habits. He preferred a diet of whole-wheat bread, raw vegetables, fresh fruit, eggs, and nuts, and this sustained him in full vigour until he was nearly eighty-six. (*DNB*)

Mallaby described his appearance as unimpressive: he was no more than 5 feet 5 inches in height, had an inelegant figure, and was bald from an early age.

In 1958 Hankey was diagnosed with prostate cancer, which was controlled with hormones but took its toll upon his vigour; partially deaf and with diminished vision, he last attended the House of Lords in 1960. In early 1963 he underwent emergency surgery for a strangulated hernia in Redhill General Hospital, Limpsfield, Surrey, and died there in his sleep two nights later, on 26 January 1963. Hankey was buried in Limpsfield parish churchyard. A memorial service was held in Westminster Abbey on 20 February. He was succeeded in the peerage by his son, Robert (Robin) Maurice Alers Hankey (1905–1996), a member of the foreign service and at the time of his father's death the permanent United Kingdom representative to the international Organization for Economic Co-operation and Development.

Hankey, Thomson (1805–1893), politician and political economist, born at Dalston, Middlesex, on 5 June 1805, was the eldest son of the eight children of Thomson Hankey (*d.* 1857) and his wife, Martha, daughter of Benjamin Harrison. He was descended from Sir John Barnard; in 1855 he reprinted for private circulation, with a preface by himself, the *Memoirs* of Barnard, which had first appeared in 1820. He married, on 4 February 1831, Appoline Agatha (*d.* 1888), daughter of William Alexander and half-sister of Sir William Alexander, the chief baron.

Hankey joined his father's firm of Thomson Hankey & Co., plantation owners and West Indies merchants, and became its long-serving senior partner. He was elected a director of the Bank of England in 1835, and later served as deputy governor (1849–51) and as governor (1851–3). In 1853 he was elected as Liberal MP for Peterborough, a seat he held until 1868 and again between 1874 and 1880. In the House of Commons he spoke frequently, and with independence of thought, on economic issues. He also published several tracts, mostly on finance, the most important of which was *The principles of banking, its utility and economy, with remarks on the working and management of the Bank of England* (4th edn, 1887), first delivered as a lecture to the Peterborough Mechanics' Institute in 1858. Hankey held obdurately to the view, encouraged by the Bank Charter Act of 1844, that 'at all times and under almost any conceivable case, the actions of the Bank ought to be governed by the same rules as would govern the proceedings of most well-regulated private Banking Establishments' (Bank of England archives, 'Remarks and opinions on the banking acts of 1844 and 1845', 5 Nov 1856). After the commercial crisis of 1866, this view became less tenable within the bank and outside it, especially as Bagehot in *The Economist* and *Lombard Street* elaborated against Hankey the responsibilities of the bank as lender of last resort.

From April 1855 to July 1877 Hankey was a member of the Political Economy Club. He collected a special library of tracts on financial topics, and at the close of his life gave many to the library of the City Liberal Club, and others to the library of the Bank of England. He studied the works of the leading French and American writers on political economy, and corresponded regularly with them, especially on monetary questions and free trade. He also gave written evidence to the French *Enquête sur les principes ... qui régissent la circulation monétaire et fiduciaire*, 1865–6. In 1878 he led a subscription for a memorial to Lord John Russell.

Hankey died at his London home, 59 Portland Place, on 13 January 1893, and was buried in the churchyard of Shipbourne, near Tonbridge, Kent; a tablet was placed in the church in his memory. He had no children, but his great-nephew Ernest Harvey entered the Bank of England in 1885 and was deputy governor, 1929–36.

Hankin, Edward (1747–1835), writer, is said to have been an MD, but of what university does not appear. From 1800 to 1805 he was a curate at Mersham, Kent, and was then, on the appointment of Lord Abergavenny, rector of West Chiltington, Sussex, from 1807 until 1819. During his tenure, he was largely non-resident. Hankin's *Perpetual War, the Only Ground of Perpetual Safety and Prosperity* (1805) argued that peace would only allow France time to build ships. He published various pamphlets on ecclesiastical affairs, including *The Causes and Consequences of the Neglect of the Clergy* (1803), he frequently denounced Sir Francis Burdett, and he opposed Catholic emancipation. His *Adresse* to the European sovereigns, published in 1817, records his life as a persecutor of politicians for their supposed lack of patriotism. Hankin died at Hull on 14 July 1835.

Hankin, St John Emile Clavering (1869–1909), playwright, born on 25 September 1869 at Southampton, was the third son of the four children of Charles Wright Hankin, headmaster of King Edward VI School, Southampton. His mother was Mary Louisa (*d*. 1909), daughter of Edmund Thomas Wigley Perrot, who inherited estates at Craycombe, Worcestershire. In January 1883 Hankin entered Malvern College as house and foundation scholar, and at the age of seventeen he won an open postmastership at Merton College, Oxford, as well as a close Ackroyd scholarship, for which he was qualified by descent, through his mother. He took a second-class degree in classics in 1890.

Hankin next worked as a journalist in London. From 1890 he contributed to the *Saturday Review*. In 1894 he joined the staff of the *India Daily News* at Calcutta. After a year in India an attack of malaria drove him home. For a time Hankin worked on *The Times*, and contributed to *Punch*. His keen wit and shrewd common sense were seen to advantage in two series of papers which appeared in *Punch* and were afterwards published independently. *Mr. Punch's Dramatic Sequels* (1901) added supplementary acts to the great classics of the English drama, and *Lost Masterpieces* (1904) subtly parodied eminent authors in both prose and verse. In 1901 Hankin married Florence, the daughter of George Routledge, the publisher. They had no children.

Playwriting of a realistic frankness was Hankin's main ambition. The first of his plays to be acted was *The Two Mr Wetherbys*, which was privately performed in London by the Stage Society in February 1903 and later by William Hawtrey in Australia and New Zealand. When in 1905 the strain of a journalist's life in London encouraged Hankin to retire to Chipping Campden in Gloucestershire, he mainly devoted himself to writing for the stage. His translation of Eugène Brieux's *Les trois filles de Monsieur Dupont*, introduced by George Bernard Shaw, was produced, again privately, by the Stage Society in 1905, and its boldness caused controversy. Hankin achieved genuine success in the pungently ironical comedy *The Return of the Prodigal*, which was publicly produced on 26 September 1905 by Vedrenne and Barker at the Court Theatre, and was revived on 29 April 1907. His best-known play, it went through five editions after his death. *The Charity that Began at Home* and *The Cassilis Engagement*, which was perhaps the most popular of his plays among contemporary audiences, proved less incisive; both were first performed privately by the Stage Society in London in 1906 and 1907 respectively, and were afterwards successfully repeated at repertory theatres in Manchester, Liverpool, and Glasgow. Hankin published the three last-named plays in 1907 under the ironic title of *Three Plays with Happy Endings*, with a preface responding to adverse criticism in the press. In *The Last of the De Mullins*, produced by the Stage Society in December 1908 and published in 1909, Hankin's merciless realism went even further than before in telling the story of a 'new woman' opposed by her family because she chooses to earn her own living. He also wrote two one-act pieces, *The Burglar who Failed*, which had a successful run at the Criterion Theatre in November 1908, and *The Constant Lover*, which was produced at the Royalty Theatre in February 1912.

Hankin's dramatic work, in so far as it satirized middle-class conventional morality, bore traces of Bernard Shaw's influence. He cannot, however, be classified simply as a Shavian, as is clear from his preface to *Three Plays with Happy Endings*, in which he stated: 'It is the dramatist's business to represent life, not to argue about it.' His impatience with popular late-nineteenth-century sentimental theatre meant that he chiefly aimed at a coldly acute analysis of character. His finely pointed wit failed to reconcile the public at large or the critics in the press to his cynicism. He was criticized for attacking abuses but failing to suggest remedies: *The Times* described his plays as 'making even Ibsen look cheerful'. His *Collected Plays* in two volumes, edited by John Drinkwater, were published posthumously in 1912 and 1923.

Never robust in health, Hankin suffered much since 1907 from neurasthenia. In a fit of depression he drowned

himself in the River Ithon, at Llandrindod Wells, Radnorshire, on 15 June 1909. His ashes were buried, after cremation at Golders Green on 22 June. His wife survived him.

Hankinson, Thomas Edwards (1805–1843), Church of England clergyman and poet, was born at King's Lynn on 19 June 1805, the third son of Revd Robert Hankinson (1770/71–1863) and his wife, Ann Edwards. He was educated at Wonersh School, near Guildford, and Corpus Christi College, Cambridge, where he graduated BA in 1828 and proceeded MA in 1831. He was ordained deacon in 1828 and priest in 1829. After serving as curate at Castle Rising, Norfolk (1828–9), and St Nicholas Chapel, King's Lynn (1829–35), he became incumbent of St Matthew's Chapel, Denmark Hill (1835–43). On 4 June 1831 he married Caroline Peacock. He published various sermons, hymns, and lectures; his theological opinions were strictly orthodox, and in a sermon published at King's Lynn in 1834 he denounced unitarians as 'blasphemers'.

Hankinson spent much of his leisure time in writing for the Seatonian prize at Cambridge for English verse, of which he was nine times the winner between 1831 and 1842; for each of his poems in 1831 and 1838 he was awarded an extra prize of £100. He died at Stainley Hall, Ripon, on 7 October 1843, and was buried at Danby Wiske. His prize poems, which contemporaries appreciated, were published severally during his lifetime, and collectively after his death with some other fugitive pieces in a small volume, *Poems* (1844), edited by his brothers. They also edited a volume of his sermons which appeared the same year.

Hanlan [Hanlon], **Edward** (1855–1908), oarsman, was born of Irish parents in Toronto, Ontario, Canada, on 12 July 1855, one of two sons and two daughters of John Hanlon, hotel proprietor, and his wife, Mary Gibbs. He married on 19 December 1877 Margaret Gordon Sutherland of Picton, Nova Scotia; they had two sons and six daughters.

Educated at George Street public school, Toronto, Hanlan developed an early taste for rowing, and he gained his first important success at the age of eighteen, when he became amateur champion of Toronto Bay. Soon after turning professional he beat all comers at the Centennial International Exhibition at Philadelphia in 1876, the year in which he unsuccessfully became a hotel proprietor in Toronto. He became champion sculler of Canada in 1877 and of the United States in 1878, beating among others Charles Courtney, the best-known of the American professionals. Further successes in America led him in 1879 to test his powers in England. On 16 June 1879 he defeated the English champion, W. Elliott of Blyth, rowing the course from the Mansion House in Newcastle to the Scotswood suspension bridge on the Tyne in the record time of 21 minutes 2 seconds. On Hanlan's return to Toronto a public subscription of £4000 was raised for his benefit. Hanlan revisited England in 1880, defeating Edward Trickett of Australia on 15 November on the Thames from Putney to Mortlake for the world championship. He beat four subsequent challengers for the title between 1881 and 1884, twice on the Thames, once on the Tyne, and then in Australia, where he contested the championship over the next four years. He was beaten by the Australian William Beach on three occasions between 1884 and 1887 and twice by another Australian, Peter Kemp, during 1888. Hanlan continued to compete well into the 1890s, mainly in North America, but by then professional rowing was losing its appeal because of charges of cheating and match rigging.

During his career Hanlan, who was 5 feet 8¾ inches in height and weighed 11 stone, won over 150 races, and as an oarsman was unsurpassed for finish and style. Unlike his English professional rivals, he used the slide simultaneously with the swing, kept his body well back, and held his arms straight long past the perpendicular before bending them, added strength being given by the skilful use of his great leg power. Hanlan died on 4 January 1908 at Toronto, where he was buried with civic honours; his wife survived him.

Hanley, James (1901–1985), novelist and playwright, was born in Jervis Street, Dublin, on 3 September 1901, the son of Edward Hanley (*d.* 1937), a ship's stoker. The Hanleys had ten children, three of whom died in infancy; another of their sons was Gerald Hanley (1916–1992), also a novelist. The father took to the sea after moving his family to Liverpool in 1908 and they lived in Othello Street (now gone) in Kirkdale, near Bootle. The only school Hanley attended was St Alexandra's Roman Catholic primary school, near his home. At the age of twelve he left school and joined the merchant navy, serving in a submarine during the First World War; the reason for his enlisting while under age has never been made clear, except that the family was poor and needed him to start bringing in a wage. Three years later he jumped ship at New Brunswick to enlist in the Canadian Black Watch and eventually saw action in France. Invalided out of the army suffering from

the effects of gas, he returned to the sea, working as a stoker on troop carriers, which he featured in some of his novels. He continued to educate himself, mainly by reading Russian literature, and having come ashore in the late 1920s earned a precarious living in a variety of jobs in docks, on the railway, and for a while at Aintree racecourse. Many of his early stories were published in the *Liverpool Echo*, the editor of which, E. Hope Prince, became his mentor.

Hanley's first novel, *Drift* (1930), and his first volume of stories, *The German Prisoner* (1930), were published shortly before his move to Wales, where he settled first at Glan Ceirw, Tŷ-nant, near Corwen in Merioneth, and then, in the autumn of 1941, at Bodynfoel Lodge and Tan-y-ffridd in the village of Llanfechain, Montgomeryshire. He lived from about this time with Dorothy Enid Thomas, *née* Heathcote (1902/3–1980), the woman whom he later married at Hampstead register office in London on 6 October 1947; their son, Liam Powys Hanley, had been born at Corwen in 1933. His second novel, *Boy* (1932), an appalling story of sexual violence on board ship, was originally published in an edition of 145 copies for subscribers only. An expurgated trade edition followed, but when in 1934 it was issued in a cheap edition, copies were seized by the police and the book was successfully prosecuted for obscenity. The publisher was fined £400 and copies of the book were burnt. At the International Congress of Writers held in Paris in 1935, which was devoted to 'the defence of culture', E. M. Forster (accompanied by Hanley) delivered a speech entitled 'Liberty in England' which criticized the workings of the obscene publications laws with reference to the trial; the speech is included in Forster's collection of essays, *Abinger Harvest* (1936). Hanley forbade republication of the novel during his lifetime and it was not reissued until 1990.

The first of Hanley's novels about the Furys, a Liverpool Irish family, appeared in 1935 and a volume of autobiography, *Broken Water*, in 1937. On the outbreak of the Second World War he found work with the BBC and later with the Ministry of Information, but his home remained in Llanfechain until 1963, when he and his wife moved to London. During the war he wrote three novels of the sea which are among his best work: *Hollow Sea* (1938), *The Ocean* (1941), and *Sailor's Song* (1943); it was to these that the novelist Henry Green referred in describing Hanley as 'far and away the best writer of the sea and seafaring men since Conrad'. He also wrote the autobiographical *No Directions* (1943), an evocation of London during the blitz. Many of his stories and radio plays were broadcast on the BBC Third Programme during the 1940s. During his long residence in Wales, Hanley wrote four books with Welsh settings: a collection of essays, *Don Quixote Drowned* (1953), and the novels *The Welsh Sonata* (1954), *Another World* (1971), and *A Kingdom* (1978). His *Selected Stories* appeared in 1947 and *Collected Stories* in 1953. His most memorable achievement is the series of novels about the Furys, which continued with *The Secret Journey* (1936), *Our Time is Gone* (1940), *Winter Journey* (1950), and *An End and a Beginning* (1958), all of which are imbued with a sense of the dignity of suffering.

Hanley was a prolific and accomplished writer but, despite the admiration of C. P. Snow, Herbert Read, Edwin Muir, and others, his work has been oddly neglected by literary critics. His output, though uneven, was prodigious: some thirty novels, sixteen volumes of short stories, six plays, numerous scripts for radio and television, and seven volumes of miscellaneous writings, including *Grey Children* (1937), a study of conditions in the distressed mining valleys of south Wales during the depression, and books about John Cowper Powys (a neighbour of his at Corwen) and Herman Melville. The reasons for his neglect may have to do with his subject matter: the brutality of life at sea, the wretchedness of his proletarian characters, and the unglamourized portrait of men at war. There is, too, a recurrent theme of violence which some readers have found repugnant. But Hanley, 'the well-known proletarian novelist', as he was described by the poet and editor John Lehmann when his work appeared in the periodical *New Writing* during the 1930s, had no interest in idealizing working-class life. Although once a member of the Bootle branch of the Independent Labour Party, he had no time for communism, and in later life was hostile to all political parties. His vision of man as essentially solitary, unable to communicate, and inhabiting a bleak and nightmarish world—though unrelenting to the point of obsession—is sometimes relieved by the quality of his writing, which can border on the poetic, and in his best fiction it is redeemed by the author's charity, humility, and courage. It is a mistake to consider Hanley as only a realist writer: there are touches of surrealism in some of his shorter novels and his main interest is always what is going on in the minds of his characters, especially in their dreams, fantasies, and fears. Some of his characters, such as the indomitable Fanny Fury, are among the most vividly drawn in modern English fiction of the first half of the twentieth century.

James Hanley died of bronchial pneumonia at his home, 11 Clevedon Mansions, Lissenden Gardens, Highgate Road, London, on 11 November 1985 and was buried in the churchyard at Llanfechain, the village which he considered his home. MEIC STEPHENS

Wealth at death under £40,000: administration, 3 Feb 1986, *CGPLA Eng. & Wales*

Hanlin, Thomas [Tom] (1907–1953), novelist, was born in Armadale, Linlithgowshire, on 28 August 1907, the son of Francis Hanlin, labourer, and his wife, Hannah, *née* McInulty. He did well at school and won prizes in his final year but his family could not afford higher education for him and he left school at the age of fourteen. After a year spent

working on a farm he started work in the local coalmines, and was a miner for over twenty years.

From an early age Hanlin spent his spare time writing, making a little money by contributing stories to popular boys' papers. After an accident at work he spent three months in Edinburgh Royal Infirmary and there had leisure to write five short stories, which he was able to sell. An essay, 'Sunday in the Village', which he also reworked as a story, won Sheffield University's annual Arthur Markham prize, open to writers who were 'manual workers in or about a coal mine, or have been injured when so employed'.

In 1944 Hanlin submitted the manuscript of his first novel, *Once in every Lifetime*, as an entry in a competition run by the London publishers Wells Gardner Darton for their Big Ben Books, a ninepenny series otherwise consisting largely of thrillers. Hanlin's short novel set in a mining community won first prize. Since the publishers' telegram arrived after he had left for his day's work at the pit his sister chalked the news on a blackboard—'Big Ben Competition. First Prize. £500'—and left it for him to see when he came home at night. Hanlin thought at first that it must be a mistake or a hoax.

Once in every Lifetime was published in 1945 and was described by a reviewer as 'unforgettable in its starkness and simplicity' (*TLS*). Hanlin left the mines for full-time writing in August 1945, found an agent through the *Writers' and Artists' Yearbook*, and moved to London to concentrate on his new career.

In 1946 he received, through his American agent, an offer to work as a scriptwriter in Hollywood. He declined, after long consideration, preferring to maintain his independence as a writer, and continued to work single-mindedly at his vocation. He published two more novels, *Yesterday will Return* (1946) and *The Miracle at Cardenrigg* (1949). His short stories (many, like his novels, drawing on his mining experiences) were published in British and American magazines and he had two radio plays broadcast. However, by the late 1940s he had developed heart problems and shortness of breath, and he died at his home, 148 Mayfield Drive, in Armadale, on 7 April 1953.

Hanlin's work attracted comparatively little critical attention on publication, possibly because newspaper space was still limited at the end of the Second World War (Blake, 38). All three novels soon went out of print. *Once in every Lifetime* was included in a BBC radio series of adaptations of outstanding Scottish novels (*Annals of Scotland, 1895–1955*, broadcast in the winter of 1956–7) but his work was otherwise overlooked by historians of Scottish literature. In 1992 the critic Manfred Malzahn praised *Once in every Lifetime* as a 'proletarian novel' that had deserved more recognition in its time and ought to be rediscovered.

Hanmer, John (1575/6–1629), bishop of St Asaph, was born at Pentrepant in the parish of Selatyn, Shropshire, one of the sons of Thomas Hanmer, a distant cousin of the Hanmers of Flintshire. He was educated at Shrewsbury School before matriculating on 2 June 1592, aged sixteen, from Oriel College, Oxford. Elected a fellow of All Souls in 1595, he graduated BA on 14 July 1596 and proceeded MA on 5 April 1600. In 1603 he became rector of Stoke Lacy, Herefordshire, but he seems to have remained mainly at college, acting as proctor in 1605; he contributed towards £100 given for the 're-edifying' of the college chapel.

Hanmer's career outside Oxford became more fully established in the mid-1610s. Appointed a canon of Worcester and a chaplain to James I in 1614, he was licensed to preach on 23 January 1615, proceeded BD and DD on 1 December, and the same year was instituted rector of Bingham, Nottinghamshire. Elected bishop of St Asaph on 20 January 1624, he was confirmed on 11 February and consecrated on 15 February. To supplement his meagre revenues he was allowed to retain the prebend at Worcester and to acquire the archdeaconry of St Asaph and other benefices, including in 1627 the rectory of Llanfyllin, valued at £150. Compared with his predecessor, Richard Parry, and his successor, John Owen, Hanmer kept a low profile, but he revealed puritan tendencies and his short episcopate showed his concern for the welfare of his clergy and of the diocese in general. He acted as guardian of his kinsman Sir Thomas Hanmer of Hanmer, Flint, who was the father of Sir John Hanmer, first baronet (1591/2–1624) and MP for Flint in 1624. In an effort to improve the quality of religious life in his diocese he persuaded Robert Llwyd, vicar of Chirk, to translate into Welsh *The Plaine Man's Pathway to Heaven*, the devotional work by Arthur Dent, the puritan vicar of Shoebury, Essex. Entitled *Llwybr hyffordd yn cyfarwyddo yr anghfarwydd i'r nefoedd*, it was couched in plain language and cast in dialogue form; it was published in 1630, soon after Hanmer's death, and dedicated to his successor, Bishop Owen. Commissioning this work was Hanmer's lasting achievement but, in addition to corresponding with the antiquary William Camden, he was also a patron of professional bards like Rhisiart Cynwal who, in an ode of praise (preserved in NL Wales, Brogyntyn MS 3241), urged him to preach in Welsh.

Hanmer's will, drawn up on 30 November 1628, contained a strong statement of his Calvinist faith, acknowledging 'the eternall glorie which [Jesus Christ] hath deerely purchased for all the Elect children of God, of which number I assure myself one' (PRO, PROB 11/156, sig. 83). Lands in Shropshire and Denbighshire were left during her lifetime to his wife and executor, Mary, daughter of Arthur Kempe of Hampshire: the date of their marriage is unknown, but the will indicated that they either had, or might expect to have, children. Other bequests went to the poor of Selatyn, Oswestry, and St Asaph, and to Hanmer's three sisters, brother Robert, uncle John Kingston, and servant and nephew Thomas Jones; his manuscripts

and papers went to his chaplain, Robert Foulkes. Hanmer died at Pentrepant on 23 June 1629, probably in his fifty-fifth year, and was buried that night in Selatyn parish church.

Hanmer, John (*bap.* 1642, *d.* 1707). *See under* Hanmer, Jonathan (1606–1687).

Hanmer, John, Baron Hanmer (1809–1881), poet and politician, was born on 22 December 1809 at Hanmer; he was the son of Thomas Hanmer, colonel of the Royal Flintshire militia, who died in 1818, and Arabella Charlotte, daughter of Thomas Skip Dyot Bucknell MP of Hampton Court. He was eighteenth in descent from Sir John de Hanmere, constable of Caernarfon Castle in the time of Edward I. He was educated first at Eton College and afterwards at Christ Church, Oxford, where he matriculated on 3 December 1827, but did not proceed to a degree. He was there a contemporary and friend of Gladstone.

Hanmer succeeded his grandfather, Sir Thomas Hanmer, as third baronet in 1828. He was MP, initially in the Conservative interest, for Shrewsbury from 1832 to 1837, for Kingston upon Hull from 1841 to 1847, and for the Flint boroughs in six parliaments from 1847 to 1872. He was a Peelite and then a Liberal. On 24 September 1872 Gladstone ennobled his Flintshire neighbour as Baron Hanmer of Hanmer and Flint, both in the county of Flint. Though initially a protectionist, Hanmer came to support free trade and religious liberty, voted for the total repeal of the corn laws (though his views in this respect were afterwards modified), and advocated the adoption in their place of a 'moderate fixed duty'. He sought to abolish bribery at elections, and declined to stand for Kingston upon Hull in 1847 on the failure of full assurance that 'his election should be made in obedience to and in conformity with the law'.

In 1836 Hanmer privately printed *Poems on Various Subjects* and in 1839 published *Fra Cipolla and other Poems*, containing, besides new matter, many of the shorter pieces previously printed. The title-poem is a translation of the tale of 'Friar Onion', from the *Decameron*, and the story of the 'Friar and the Ass' is founded on an old Italian novel; both indicate a keen perception of beauty, and some power of describing it. In 1840 appeared *Sonnets*, dealing mostly with Italian subjects and scenes, and nearly all of a high level of excellence. In 1872 he printed *Notes and Papers to Serve for a Memorial of the Parish of Hanmer*, subsequently enlarged for private issue in 1877 as *Memorial of the Family and Parish of Hanmer*. It contains some quaint and interesting information, and in an appendix are added 'Sonnets and Epigrams, with other Rhymes, Written Long since by John, Lord Hanmer', many reprinted from the *Sonnets* of 1840.

Hanmer married, on 3 September 1833, Georgiana, youngest daughter of Sir George Chetwynd of Grendon Hall, Warwickshire; she died on 21 March 1880, aged sixty-six. Hanmer died on 8 March 1881 at Knotley Hall, Leigh, in Kent, and was buried on the 15th at Bettisfield, near Whitchurch; his peerage became extinct on his death. Though his political migration exactly mirrored Gladstone's, he made little impact on Victorian politics.

Wealth at death under £35,000: probate, 13 May 1881, *CGPLA Eng. & Wales*

Hanmer, Jonathan (1606–1687), clergyman and ejected minister, was born and baptized on 3 October 1606, the youngest of the three sons and two daughters of John Hanmer or Davie (*d.* 1629), merchant of Barnstaple, Devon, and Sybil (*b.* 1566), daughter of Henry Downe of Barnstaple. From Barnstaple grammar school he was admitted in 1624 to Emmanuel College, Cambridge, from where he graduated BA in 1628 and proceeded MA in 1631. He was ordained by Bishop Theophilus Field at St Margaret's, Westminster, on 23 November 1632, and immediately instituted to the living of Instow, Devon, vacant through the death of his uncle John Downe. On 10 May 1637 he married at Bideford, Katherine (*d.* 1660), daughter of John Strange, a merchant of the town.

Hanmer's relationship with Martin Blake, vicar of Barnstaple, had a considerable influence on his career; Blake's wife was his first cousin. Blake suggested that Hanmer should preach at the archdeacon's visitation in 1635 with a view to Bishop Joseph Hall's asking him to preach at his visitation in 1636, but he asked to be excused, pleading that his years and abilities made him unworthy. When Blake was suspended as vicar in 1646, owing to his involvement in the surrender of Barnstaple to Prince Maurice three years previously, Hanmer agreed to lecture in the town every Wednesday, saying that he came out of love for Blake but would not take services as that duty belonged to the minister. In October 1647 Blake made a formal agreement with Hanmer that, when he was restored, he would preach in St Peter's every Sunday morning and Hanmer would preach every Sunday afternoon as well as giving a weekday lecture: thus both Anglicans and puritans would be satisfied.

Hanmer did not sign *The Joint Testimonie of Ministers of Devon* drawn up in 1648 in support of the solemn league and covenant but he joined the association of presbyterian ministers of Devon which founded the Exeter assembly in 1655. He continued as vicar of Instow and became vicar of Bishops Tawton in 1652. He also lectured

at Barnstaple but evidently not as frequently as agreed in 1647 as Blake was accused, in 1656, of preventing Hanmer from preaching on many Sundays. Hanmer stated that, on the contrary, he had often refused to come as it was unreasonable to expect him to travel from Instow every Sunday unless Barnstaple made some provision for his subsistence.

Hanmer was evidently a presbyterian of a moderate tenor. A controversy over qualification for church membership led him to write *Teleiosis* (1657), a treatise advocating the restitution of confirmation 'to its primitive use and end'; a letter from Richard Baxter prefaced this 'Learned, Judicious, Pious Exercitation'. A second edition appeared the following year. Hanmer left many manuscript works including discourses against papists and against Quakers and a life of St Paul. Letters to him revealed his support for missionary work among the American Indians of New England.

In 1660 Hanmer's wife died, and two years later, on 7 November, he was ejected from his livings because he could not accept the revised prayer book enforced by the Act of Uniformity. He continued to preach when possible in Devon and also in Bristol and London. In Barnstaple he gathered together a congregation which met privately in a malthouse for fear of informers. Although he is said to have been forced frequently to leave them for fear of arrest, an official report certified that he lived quietly in Barnstaple without disturbing the peace of the church or state. Bishop Seth Ward's letter to secure payment of tithes due from his former parish of Bishops Tawton suggests that Hanmer had reasonable relations with the established church. When the declaration of indulgence allowed nonconformists to meet openly Hanmer was licensed, on 2 April 1672, as a presbyterian minister, his congregation built a meeting-house, and Hanmer drew up a confession of faith and rules of conduct for them. After the declaration was withdrawn in 1673 he and the congregation risked the persecution which restarted immediately in Devon. Hanmer continued with his studies, and was almost certainly the author of *Archaioskopia, or, A View of Antiquity* (1677), an account of the early fathers aimed at the improvement of the faithful. He died on 18 December 1687 in Barnstaple and was buried on 21 December at St Peter's churchyard there. He and his wife had at least six children. A daughter Katherine was the mother of the poet, John *Gay (1685–1732).

John Hanmer (*bap.* 1642, *d.* 1707), Presbyterian minister, the eldest son of Jonathan and Katherine, was baptized in Bideford on 18 October 1642. He was educated at Barnstaple grammar school and went to St John's College, Cambridge, in 1659, graduating BA in 1662. He served in two gentry households before returning to Barnstaple where he was licensed as a presbyterian minister on 11 April 1672. He was ordained privately in 1682 and became assistant to Oliver Peard, pastor of the Barnstaple congregation, whom he succeeded him in 1696. The following year he preached before the assembly of united ministers at Exeter. By 1700 Hanmer's congregation was so large that he needed an assistant and in 1705 two congregations were formed. He married Jane (*d.* 1736), daughter of Richard Parminster, a merchant of Barnstaple and had one daughter. He died on 19 July 1707 from a stroke and at his funeral in Barnstaple on 23 July was described as a talented preacher, an ardent scholar, and broad-minded enough to value a good Christian, regardless of his particular persuasion.

Hanmer, Meredith (1543–1604), Church of England and Church of Ireland clergyman and historian, was born at Porkington, Shropshire, the son of Thomas, commonly called Ginta, Hanmer and his wife. He was educated at Corpus Christi College, Oxford, where he obtained a chaplaincy in 1567, and graduated BA in 1568, MA in 1572, BTh in 1581 (as a nobleman's chaplain), and DTh in 1582.

Hanmer held a number of benefices: he was rector of Long Ditton, Surrey, in 1571, and of Astbury, Cheshire, in 1572; vicar of Hanmer, Flintshire, 1574–84; vicar of St Leonard, Shoreditch, 1581–92; and vicar of Islington, 1583–90. He first came to public notice as a writer, producing in 1581 two semi-official responses to Edmund Campion's famous challenge. But his most lasting scholarly contribution was as a historian of the early church and, later, of Ireland. In 1577 he published *The Ancient Ecclesiastical Histories*, which sought to provide a detailed account of the first six centuries of Christian history by translating near contemporary sources, most notably Eusebius's *Ecclesiastical History*. Frequently republished, even down to the eighteenth century, Hanmer's work provided an essential source for those protestants who wanted to show how rapidly the church had declined from its early purity.

Hanmer married Mary Austin at Shoreditch on 21 June 1581. They had four daughters. Despite his undoubted scholarly achievements, his reputation was dogged by

allegations about his personal conduct. As vicar of St Leonard's it was alleged that he had converted the brass of several ancient monuments to coin for his own use. In 1584 Hanmer was examined about the circulation of a libel that George Talbot, sixth earl of Shrewsbury, had got Elizabeth I pregnant. William Fleetwood, recorder of London, doubted the veracity of his evidence and drew the conclusion: 'surely he is a very bad man' (Wood, *Ath. Oxon.*, 3rd edn, 1.748). Hanmer was also charged between 1588 and 1590 with having celebrated a marriage 'without banns or license' (ibid.). According to an anonymous Roman Catholic opponent he was a 'filthy sodomite' who had been forced to leave his benefice because of the 'lewdness of his life' (Holmes, 56). Whatever the truth of individual accusations, there does appear to be a consistent pattern, and, like many English clergy of dubious reputation, Hanmer sought to rebuild his career in the Church of Ireland, whose desperation for protestant clergy made its standards less rigorous.

Hanmer crossed over to Ireland in or before 1591, and there acquired patronage from Thomas Butler, tenth earl of Ormond, and Thomas, or John, Norris, whom he served as chaplain. He received numerous benefices, including: the archdeaconry of Ross and the vicarage of Timoleague in 1591; appointment as treasurer of Waterford Cathedral on 4 December 1593; the vicarages of Kilbeacon and Killaghy, Muckully, and Rathpatrick in the diocese of Ossory in June 1598; and appointment as chancellor of Ossory, along with the vicarages of Fiddown and St John's, and the rectory of Aglish-Martin, in June 1603. In 1600 he was proposed for the episcopate by Ormond, who suggested to Sir Robert Cecil, principal secretary, that Hanmer be made bishop of Down, together with the remote and impecunious sees of Dromore, Kilmore, and Clogher.

But Hanmer devoted himself to more than pluralism. He developed his historical interests and applied them to Ireland, following in the footsteps of his erstwhile opponent, Campion, who had also come to Ireland and written a history of the country. In 1594 he wrote to William Cecil, Baron Burghley, lord treasurer, telling him of his intention of collecting the country's antiquities and preserving them for posterity: the results, a miscellaneous but interesting collection of contemporary and ancient sources including, significantly, some material in Gaelic, remain in manuscript in the Irish state papers. He also wrote *A Chronicle of Ireland*, which was edited by Daniel Molyneux, Ulster king of arms, and published posthumously by James Ware in 1633. It tackled that difficult period, the early history of Ireland, gathering together materials and tentatively beginning the lengthy task of separating myth, fiction, and fact.

Hanmer was commended to Sir Francis Walsingham, principal secretary, by Captain Christopher Carleill as keeping a good house, and being a diligent preacher. The 'Journal' of Sir William Russell, later first Baron Russell of Thornhough, noted him preaching before the lord deputy several times, and on one occasion his sermon is described as 'very bitter' (Brewer and Bullen, 3.235). He left some revealing and, again, somewhat bitter notes, which made sweeping allegations about the persistence of puritanism in high places in Dublin in the later sixteenth century. Hanmer died in 1604, probably from the plague, and was buried in St Michan's Church, Dublin. ALAN FORD

Hanmer, Sir Thomas, second baronet (1612–1678), gardener and writer, was born on 4 May 1612, the son of Sir John Hanmer, first baronet (*d.* 1624), of Hanmer, Flintshire, and his wife, Dorothy, daughter of Sir Richard Trevor of Trefalun, Denbighshire. Following the premature death of his father in 1624, Hanmer inherited the baronetcy the former had gained in 1620. He was a page at the court of Charles I from 1625 until 1627, when in the Easter term he matriculated from King's College, Cambridge.

At some point between 1630 and 20 February 1632 Sir Thomas married Elizabeth (*d.* 1645), daughter of Sir Thomas Baker of Whittingham, Suffolk, a lady-in-waiting to the queen. Their children included John (*d.* 1701), Thomas, and a daughter, Trevor. From 1638 to 1640, following the fashion, Sir Thomas embarked on a tour of the continent, but was home in time to be returned as MP for Flint in April 1640.

In or before 1642 Sir Thomas was serving as a cup-bearer to the king, and on the outbreak of civil war he was appointed a commissioner of array for his county, with responsibility for raising a band of archers and a dragoon regiment. Early in 1644 Prince Rupert appointed him, with Dudley Wyatt, his representative in north Wales; meeting with the county commissioners, they agreed new local taxes. His property was raided more than once by parliamentarian soldiers, and on 15 May 1644 he obtained leave to go to France with his family. He was fined for delinquency by parliament at the minimum rate.

In July 1645 Lady Hanmer died in Paris, and it seems to have been from there in 1646 that Sir Thomas supplied information to parliament about the king's negotiations with the French and Scots. Leaving his daughter in the care of a Huguenot group and dispatching his son Thomas to a Lisbon seminary, he secretly visited Hengrave Hall, Suffolk, and before February 1646 married Susan Hervey, daughter of Sir William Hervey of Ilkworth. Returning to France, the couple lived first at Nantes and then at Angers. During this period Sir Thomas compiled 'A description of France in 1648', which remained unpublished. His sons William and Thomas (*d.* 1683) were born there about 1648 and 1650 respectively.

After payment of a £1500 fine, Sir Thomas was discharged from sequestration in 1650 in the light of his 'signal service to the commonwealth' (as he was subsequently also from the 1655 decimation tax) and allowed to return to England. Initially he lived with his mother in her dower house at Halghton, before moving back to his ancestral home at Bettisfield. From then onwards Sir Thomas lived the life of a leisured gentleman, preoccupied with his family from his second marriage. He corresponded with and was closely associated with influential horticulturists including John Evelyn, John Rea, and John Rose, keeper of St James's gardens for Charles II. He was a copious notetaker and compiled a manuscript which, although completed in 1659, was not formally published until 1933 under the title *The Garden Book of Sir Thomas Hanmer*. This contained descriptive and cultural notes dealing with herbaceous plants, trees, and fruit. His text gave a perceptive and rare insight into a gentleman's garden of the time and the use of the winter house or room, which was an early form of conservatory used for the unseasonal cultivation of tender plants. Sir Thomas is credited with being the first English author to mention the cedar of Lebanon, predicting its future importance. He also contributed a chapter to John Evelyn's unpublished text 'Elysium Britannicum'.

Like many horticulturists of his time, Sir Thomas favoured tulips, but was interested in anemones, primroses, and cowslips, which he cultivated in his garden. His most outstanding tulip was one that he imported and named Agate Hanmer, which was characterized by having colours in parallel stripes. He was widely regarded as one of the most significant and influential gardeners of the Cromwellian and Restoration eras, being in the vanguard of those who sought to escape from the constriction and formalism of earlier garden design.

Having been returned for Flintshire at a by-election in 1669, Hanmer was a moderately active MP. He was listed on several occasions as a government supporter and speaker, endorsing both the suppression of conventicles and the land tax proposed in 1670, and was claimed to be receiving a £500 p.a. pension. He died on 6 October 1678 at Bettisfield, and was buried at Hanmer. His eldest son from his first marriage, John, an esquire of the body to Charles II, succeeded not only to his baronetcy but also, in 1681, to the Flintshire parliamentary seat. JOHN MARTIN

Wealth at death Bettisfield estate inherited by son

Hanmer, Sir Thomas, fourth baronet (1677–1746), politician, was born on 24 September 1677 at Bettisfield Park, Hanmer, Flintshire, the only son of William Hanmer (*d.* 1695) and his wife, Peregrina North, and the grandson of Sir Thomas Hanmer, second baronet, of Bettisfield Park. He was also heir through his mother to the estates of the North family of Mildenhall in Suffolk. He was educated at Bury St Edmunds grammar school, at Westminster School, and, from 1693, at Christ Church, Oxford, where his tutors were Robert Freind and George Smalridge. Christ Church enjoyed a reputation for nurturing tory principles and polishing a veneer of polite learning. Hanmer was no exception to this rule: although possessed of a less incisive intellect than some of his contemporaries, he was an elegant orator and literary dilettante and, to the end of his days, a committed high-church tory. Having succeeded his maternal grandfather to the Suffolk estates he left Oxford without taking his degree, and in October 1698 married Isabella, *suo jure* countess of Arlington and dowager duchess of Grafton (1667/8–1723). Not only was Isabella ten years his senior, but temperamentally they were grossly mismatched: the somewhat vulgar duchess had been one of the 'Windsor beauties', and the refined Hanmer, though 'tall and handsome', was reputedly impotent. This disparity in age, intellectual attainments, and sexual experience provoked ridicule. It was said that the marriage remained unconsummated, Hanmer preserving his legendary fastidiousness (manifested in a fetish for wearing white gloves) even in the marital bed.

Hanmer's natural progression to a seat in the House of Commons came in the first parliament in 1701. Although he might have contemplated standing for a county, he put up instead at the venal borough of Thetford, on the Grafton interest. Soon afterwards he succeeded an uncle to the Hanmer baronetcy and estates in Flintshire. Elections in that county were the preserve of a cartel of greater gentry, who rotated among themselves the representation in county and borough constituencies. As one of the principals, Hanmer could be sure of a seat in every other election, and, with a considerable proprietorial interest in Suffolk, was left with an embarrassment of possibilities whenever a new parliament was summoned. He sat for Flintshire from 1702 to 1705, for Thetford again from 1705 to 1708, and for Suffolk from 1708 until leaving parliament for good at the accession of George II in 1727.

Early in his political career Hanmer gravitated to the veteran tory Lord Nottingham, whose emphatically protestant churchmanship and stern devotion to principle he emulated. In the parliamentary session of 1703–4 he defended Nottingham over the 'Scotch plot'. He soon became one of the leading spokesmen for the tories in the lower house, and in November 1704 he took part in the campaign to 'tack' the Occasional Conformity Bill to

Sir Thomas Hanmer, fourth baronet (1677–1746), by Sir Godfrey Kneller, *c.* 1715

supply. His reversion to the rotten borough of Thetford in the 1705 election did not represent a retreat from the political storm over the tack; it was his turn to step down in Flintshire, and he did not wish to intrude on the tory candidates for Suffolk. In any case, there was something about his character and deportment that earned him respect even from political enemies and kept him immune from partisan reprisals. The ministry may have entertained hopes of him, for he was the only tory upon whom an honorary degree was conferred during the queen's visit to Cambridge University in 1705, in a public blessing of the whig candidates in the university constituency.

Such a tentative advance had no effect on Hanmer's intransigence. When parliament met he seconded the nomination of the tory William Bromley as speaker, against the court nominee, and then brought forward the so-called Hanover motion, to invite over to England the heir presumptive to the throne—a blatantly opportunist manoeuvre designed to embarrass the ministry. Nevertheless, the secretary of state, Robert Harley, canvassed his support for successive schemes of ministerial reconstruction, designed to free the queen from dependence on the parties by creating a coalition of moderates and ambitious politicians of the second rank. Hanmer's parliamentary conduct betrayed little evidence of moderation, but his self-regard was enough to afford hope that he might be detached from the tory party chieftains by flattery. This hope survived several disappointments: on one occasion, although 'engaged' by a 'great manager' to make a motion for a generous public settlement on the duke of Marlborough, Hanmer developed cold feet, excused himself, and sat silent during the debate (Joseph Addison to George Stepney, 7 Jan 1707, MS sold at Sothebys, 21 July 1980). Matters came to a head during the winter of 1707–8, when Hanmer and other angry tories joined with discontented whigs to keep up a murderous cross-fire on the court. In January 1708 he seems to have accepted a secret offer from Harley to become chancellor of the exchequer in a new administration, although he did not abandon opposition, and indeed made one of the most important speeches of his career in the debate on the war in Spain, on the discrepancy between the number of troops paid for by parliament and the number present at the battle of Almanza. For once his measured style was suited to the occasion, and he was credited with convincing the house to accept a motion of censure. The collapse of Harley's intrigues induced feelings of intense disappointment. Hanmer was initially reluctant to continue in parliament in 1708, but eventually rallied and was able to recover his position as a key figure in the tory opposition.

Hanmer's response to the ministerial changes of 1710 was unenthusiastic. Beyond taking pleasure in the removal of the whig ministry he affected indifference, and spurned offers of a Treasury place. His name was again mentioned in connection with the speaker's chair, but instead he successfully proposed his old friend Bromley. He then made the motion for the loyal address, and was said to have undertaken the drafting entirely by himself, a responsibility that implied a close association with the court. His sentiments at this point are hard to fathom. He shared many of the prejudices of the hotter tories and joined the October Club, but was also inspired by a sincere desire to see the end of the war, which he hoped the ministry would bring about. Thus he consorted openly with ministers, and in May 1711 he found himself expelled from the October Club. Soon afterwards Harley pressed him again to 'consider ... coming into her Majesty's service' (*Correspondence*, 128–9). The response, that 'his private affairs lie so distorted and dispersed that he cannot at present undertake anything else without very great inconvenience to them' (William Bromley to Lord Oxford, June 1711, BL, Add. MS 70214), was little more than an excuse to cover concern with safeguarding his virtue, or at least his reputation. At the same time he was happy to recommend several dependants to Harley (now Lord Treasurer Oxford), including his amanuensis, the Irish soldier and playwright William Philips, who was given a secret pension on the Irish establishment.

During the next session Hanmer inched even nearer the court, expressing a willingness 'to come into the Queen's service' when the session was over, in an employment

which should be 'useful' if not necessarily 'profitable' (*Portland MSS*, 5.133). But at the same time he indulged in flourishes of self-assertion. Interpreted cynically, this recovery of reputation with tory extremists may appear as a prerequisite for the work he was to undertake for the ministry in this session, preparing the way for the announcement of the peace preliminaries by his chairmanship of the committee to draft the Commons' 'representation' on the war (in which he enjoyed the unofficial assistance of Jonathan Swift). His parliamentary activity was curtailed in April 1712, when he accompanied the duke of Ormond (his wife's cousin) to Flanders. Speculation was rife that Hanmer had a secret commission on behalf of the ministry. More likely, he was anxious to be out of the way when the peace terms came before parliament. In September he made a private visit to Paris, where the French, believing him destined for high office, gave him a splendid reception. An intriguing aspect of his stay was the tentative contact established with Jacobite agents, not by Hanmer himself but through Captain Philips, who proclaimed his own allegiance to the Pretender and repeatedly hinted that something might be hoped from 'the knight'.

Even though he was disinclined to return to England, Hanmer yielded to entreaties to give his assistance to the government in the next parliamentary session. His political career was now approaching a crisis, and in the summer of 1713 he broke with the ministry in a very public fashion, though, as things turned out, not finally. Concern for the succession and resentment at Oxford's continuing 'moderation' are among the reasons that have been adduced by historians. Some contemporaries alleged disappointed ambition, which does not square with Hanmer's repeated refusal of office. A more likely explanation is concern for the maintenance of his political virtue. Whatever the cause, he made his decisive move on 18 June, in speaking against at the third reading of the bill to implement the French commercial treaty. Hanmer's motives for selecting this issue are equally problematic: he may have been alarmed at the general unpopularity of the treaty or feared for the particular consequences for his constituents. The loss of the bill prompted Oxford to swift action, with the result that five days later Hanmer was to be found proposing an address of thanks over the peace and requesting the renegotiation of the commercial treaty. Whigs accused him of having been bought off. Certainly, before he left for Suffolk he waited on Oxford to receive his 'commands' (Hanmer to Oxford, 1 Aug 1713, BL, Add. MS 70230), and in the ministerial reorganization of the summer he was offered the speakership, the only place he could accept while claiming he had preserved his liberty.

In the 1714 parliament, in which he was elected unopposed as speaker, Hanmer stood at the head of a group of Hanoverian tories, variously estimated at between thirty and eighty, some his personal followers, and others looking to him as the ablest spokesman for their point of view. His own devotion to the protestant succession is unquestionable, reinforced as it was by an attachment to the Church of England and to notions of political liberty. At first he was prepared to trust Oxford, even after his own proposal to revive the Hanover motion had been rejected out of hand at a presessional management meeting. But in April his position changed, possibly because of the shift in the centre of gravity of the ministry, where Lord Bolingbroke was becoming more assertive. Hanmer attended a meeting with Nottingham and other Hanoverian tories at which it was decided 'to live in friendship with the Whigs and concert with them measures to secure the Protestant succession' (Macpherson, 2.586–9), and on 15 April, in a debate in committee of the whole on the state of the nation, he nailed his colours to the mast in proclaiming that the protestant succession was indeed in danger under the present administration.

When Queen Anne died Hanmer had to be recalled from Flintshire to preside over the Commons. The arrival of King George was the occasion for more expressions of maidenly modesty in refusing office. Along with other Hanoverian tories he was urged to take his part in a mixed ministry, albeit in a subordinate position to the whigs. Once he was observed talking to the prince of Wales, who 'seemed to argue very closely, and had a world of action, and Sir Thomas's answers were obliging smiles' (*Wentworth Papers*, 423). Privately he confided that:

> he could not in prudence accept places which did not admit him into his Majesty's scheme of government, but when conferred on him would lose him the dependence of his friends, and then leave him at the mercy of his enemies. (BL, Add. MS 47027, fol. 179)

In 1715 Hanmer resumed his position as one of the leaders of the tory party in the Commons, making a notable speech, for example, against the Septennial Bill in 1716. At the same time he remained a committed Hanoverian, and in 1717 he attached himself to the Leicester House faction, clustered around the reversionary interest of the prince of Wales. By 1719 he had supposedly become 'the greatest man in England with the Prince' and 'the mouth of that interest' (John Menzies to the Old Pretender, 7 April 1721, Royal Archives, Stuart MS 53/13). But with the reconciliation in the royal family came the demise of Leicester House. Hanmer's political importance rapidly declined, though he was tipped for office in a putative ministerial reconstruction in 1725. He seems to have become estranged from the prince, whose decision to continue with Robert Walpole as prime minister in 1727 effectively ended any prospects of advancement.

During Hanmer's lengthy retirement from political life he combined the cultivation of his estate with some insipid literary efforts. Two anonymous works have been ascribed to him, *A Review of the Text of ... 'Paradise Lost'* (1733) and *Some Remarks on the Tragedy of Hamlet, Prince of Denmark* (1736), and in 1743–4 he published an utterly unremarkable edition of Shakespeare. He also devoted considerable time to the weeding of his private papers, to preserve for posterity only the letters which showed his character in a favourable light, and in particular those beseeching him

in vain to honour government with his talents. This tranquil rustication was marred by an unhappy second marriage in 1725 (the duchess of Grafton having died two years earlier), this time to a much younger woman, Elizabeth Folkes (*d.* 1741), who ran off with the son of one of his friends and again made him appear ridiculous. He died at Mildenhall on 7 May 1746 and was buried at Hanmer. He had no children: the baronetcy became extinct, and the estates were divided between his sister's family, who received the Suffolk property, and a cousin, who inherited in Wales. 'A sensible, impracticable, honest, formal, disagreeable man', according to Lord Hervey (Hervey, 1.78), he passed away 'without having much obliged or disobliged any person or party, and rather pitied than either hated or beloved' (Coxe, 2.48–9). Hann, James (1799–1856), mechanical engineer and mathematician, was born at Lane House, Washington, near Gateshead, co. Durham, eldest of the seven children of James Hann (*bap.* 1777), colliery smith, and his wife, Elizabeth, *née* Smith. Hann's rudimentary formal education at school in Hebburn ceased when he began in childhood to work as a stoker for his father, superintendent of a pumping engine at Hebburn colliery. Until the age of twenty-one he was employed there as brakesman, overseeing the colliery winding engines. He married Isabella Burrell (*c.*1801–1854) from Gateshead, at Heworth on 14 November 1819 and the first of their eight children was born the same year.

During his twenties Hann was fireman and engineer on a succession of Tyne paddle-steamers including the *Industry*, which belonged to friend and Gateshead mechanical engineer Isaac Dodds, and the *XL*. He continued to work as enginewright in and around collieries at Backworth, Hetton, and North Shields, even as he devoured the texts of mathematical practitioners and pedagogues William Emerson and Olinthus Gregory. From 1823 Hann was an increasingly prominent contributor to the extended mathematical section of the vivacious annual forum for provincial savants of both sexes, the *Ladies' Diary* (which Gregory edited), and its companion almanac, the *Gentleman's Diary*.

When Hann joined the Newcastle Literary, Scientific, and Mechanical Institution in its second session of 1825–6 it was as an enginewright; however, soon afterwards he was supporting a growing family by other means, working as Dodds's accountant and teaching at Friar's Goose, an industrial centre east of Gateshead. Although never a member of the venerable Newcastle Literary and Philosophical Society, in 1832 he cemented his social and philosophical ascent by reading before the organization's members a paper on the differential calculus. Soon afterwards his local and private publishing venture with Dodds, *Mechanics for Practical Men* (1833), met with an enthusiastic reception, enhancing substantially his standing in the worlds of letters and engineering mechanics.

Hann travelled with his family to London and the recently reformed nautical almanac office (NAO) in Somerset House, where patronage from his friend and fellow *Diary* contributor, the North Shields mathematical prodigy and NAO deputy superintendent (1830–37) W. S. B. Woolhouse, secured him a post as 'calculator'. He worked closely with Olinthus Gregory in the production of astronomical and other scientific computations. Hann had been brought up a Roman Catholic but had changed his allegiance to the Church of England some time before 1837, when he moved along the Strand to become a master at King's College School, a post which required conformity to the doctrines of the established church. There he replaced the writing and arithmetical master, Frederick Ribbans (who had resigned amid scandal concerning the misappropriation of stationery), and from 1841 served permanently as mathematical master, preparing pupils from the middle classes for the professions, for King's College, and for Cambridge. Infirmity and personal neglect led him to resign in the year of his wife's death (1854), though he continued to attract private pupils from the merchant classes and clergy of London.

Hann pursued a productive and remunerative career of technical authorship drawing upon earlier practical and vocational experiences. He collaborated with Woolhouse in revising Tredgold's *Steam Engine* and with Woolhouse and Gregory on a practical supplement to the *Nautical Almanac* (1841). On 13 June 1843, when Hann became an associate of the Institution of Civil Engineers, sponsorship came from Northumbrian coal-viewers and mining entrepreneurs such as John Buddle, not for practical engineering endeavours but for literary and scientific attainments. Hann's theoretical study of bridges (1843, with King's College professor William Hosking), and his short treatises on the steam engine (1847) and mechanics (1848) were produced under the auspices of John Weale, the London-based technical publisher and architectural writer. For Weale, Hann oversaw a 'rudimentary series' of

cheap, accessible mathematical textbooks, writing volumes on the integral calculus, plane and spherical trigonometry, analytical geometry, and conic sections. By 1847 Hann's works had won him honorary membership of the Philosophical Society of Newcastle, Durham, and Northumberland. Like his *Mechanics*, many of them were directed, appropriately, towards large overlapping readerships of autodidacts and 'practical men'. Hann died at the age of fifty-seven on 17 August 1856 at King's College Hospital. BEN MARSDEN

Hanna, Hugh (1821–1892), minister of the Presbyterian Church in Ireland, was born in Derry, Dromara, co. Down, on 21 February 1821, the son of Peter Hanna, a tenant farmer and former soldier, and Ellen Finiston, daughter of a soldier in the Black Watch. His parents moved to Belfast and he remained in Dromara with his grandparents until his grandmother's death. He rejoined his parents in Belfast where he completed his education at Bullick's Academy before entering the drapery trade. Influenced by the preaching of the Revd Josias Wilson of Townsend Street congregation, he became an active member of that congregation, teaching in Sunday school and, later, as a teacher in the national school associated with the congregation. This necessitated further study which he undertook in the Belfast Academical Institution, with the encouragement of his employer. His success as a teacher led to his nomination for a post as inspector of schools but he decided that he should enter the ministry, beginning his theological studies in Belfast in 1847. Licensed by the Belfast presbytery in May 1851 he was ordained for missionary work among the unchurched of north Belfast and formed a congregation in a redundant Presbyterian meeting-house in Berry Street. On 25 August 1852 he married Fanny Spence (*d.* 1913), daughter of James Rankin of Belfast. So rapidly did the Berry Street congregation grow that an enlarged building was necessary in 1857 and, when that proved inadequate, a church with accommodation for 2000 worshippers, St Enoch's, was built in Carlisle Circus in 1872.

Hanna was a prominent figure in the great religious revival of 1859 and was one of the speakers at a rally in the Belfast Botanic Gardens in August 1859 attended by 20,000 people. He was not only an effective preacher but a successful educationist, organizing Sunday schools for as many as 2000 children and young people and presiding over flourishing national schools—Linfield, Riversdale, Finiston, Hillman, and North Thomas Street, as well as a school attached to St Enoch's congregation. For his services to education he was made a commissioner of national education in 1880.

But it was as an alleged contributor to sectarian division and disturbance in Belfast that Hanna achieved his greatest fame or notoriety. Like many evangelical ministers, he was a regular open-air preacher. Such preaching was primarily evangelistic but was occasionally perceived as anti-Catholic. In summer 1857 sectarian tensions in Belfast were so explosive that the magistrates asked the Church of Ireland clergy of the Belfast Parochial Mission to abandon a proposed series of open-air addresses. Hanna, encouraged by Dr Henry Cooke, regarded this as a denial of liberty to preach the gospel and insisted on preaching. Riots followed and the commission of inquiry into the origins and character of the riots specified provocative open-air preaching as a major cause of the violence. Again in 1886, when tensions over the first Home Rule Bill erupted into violence, Hanna's pulpit attacks on Gladstone's government and his allegations that Roman Catholic policemen from other parts of Ireland had been brought to Belfast to crush resistance to home rule were regarded as having contributed to the explosive situation. On 26 September 1857 *Punch* lampooned Hanna in a series of verses, one of which ran:

> What's faction's flame or hatred's gall,
> What's riot, bloodshed, row or brawl,
> Roaring Hanna,
> To one who boasts an inward call,
> Roaring Hanna.

Liberal opinion may have condemned Hanna but in December 1857 he was presented with a watch and 100 sovereigns 'in testimony of his able and successful maintenance of the right of open-air preaching' and the historian of the Berry Street Presbyterian Church, writing in 1969, quoting *Punch*, commented 'Hugh Hanna was undaunted: he *had* the inward call. And out of doors as well as within the sanctuary he fearlessly wielded the sword of the Spirit ... a soldier of The Cross in truth' (Combe, 15). Son and grandson of Black Watch soldiers, Hanna had a special concern for troops stationed in Belfast and was garrison chaplain from 1867, the upper gallery of St Enoch's Church being reserved for them at Sunday morning worship.

Hanna was never called to the moderatorial chair of the general assembly but he was given an honorary DD by the Irish Presbyterian Theological Faculty in 1885 and an honorary LLD by Galesville College, Wisconsin, USA, in 1888. He died suddenly of a heart attack on 3 February 1892 at 1 Clifton Terrace, Belfast, and was buried in Balmoral cemetery on 5 February. His grave is marked by an impressive pillar. In 1894 his political friends unveiled a large bronze statue in his honour in Carlisle Circus; it was destroyed by explosives in 1970. FINLAY HOLMES

Hanna, Samuel (1771–1852), minister of the Presbyterian Church in Ireland, was born at Kellswater, near Ballymena, co. Antrim, the fifth son of Robert Hanna, a merchant. He was educated locally and at Glasgow University, graduating MA in 1789. In 1790 he was licensed by Ballymena presbytery. He was ordained as minister of the Presbyterian congregation of Drumbo, co. Down, on 4 August 1795. His reputation as a preacher grew rapidly. On 11 December 1799 he was installed as minister of Rosemary Street, Belfast. The following year he married Martha Gemmil (*d.* 1860), daughter of Robert Gemmil, a Belfast muslin manufacturer. They had seven children, four daughters and three sons, one of whom, the Revd Dr William *Hanna, was the son-in-law and biographer of Thomas Chalmers, the Scottish church leader.

The Rosemary Street congregation revived under Hanna's ministry and the meeting-house was handsomely rebuilt. A warm advocate of Sunday schools, Bible distribution, and missionary enterprise, Hanna was moderator of the General Synod of Ulster in 1809. In 1816 the synod resolved to provide a theological training for its students in the recently founded Belfast Academical Institution, instead of sending them to the Scottish universities. Hanna, in June 1817, was unanimously elected professor of divinity and church history, while remaining minister of the Rosemary Street congregation. In the following year he was made DD of Glasgow. In 1835 he was joined in the institution by Samuel Davidson as professor of biblical criticism, and in 1837 by James Seaton Reid as professor of ecclesiastical history and pastoral theology. In 1840 Hanna was freed from active pastoral duties by the election of William Gibson (later professor of Christian ethics in the Presbyterian college, Belfast) as his assistant and successor at Rosemary Street.

On 10 July 1840 Hanna was chosen first moderator of the general assembly, formed at that time by the union of the General and Secession synods. This was an indication of the high esteem in which he was held by Irish Presbyterians, but he was never a distinguished scholar, publishing only a few sermons and pamphlets. His appointment as professor in 1817 had signalled the growing strength of the evangelical party in the synod, and during his long tenure of the chair he exercised an evangelical influence on successive generations of students for the ministry. He held the chair until his death on 23 April 1852, at the home of his son-in-law, the Revd James Denham, minister of the Great James Street congregation in Londonderry. He was buried on 30 April in the new burying-ground in Clifton Street, Belfast. His wife survived him.

Likenesses portrait, Union Theological College, Belfast; repro. in Allen, *Presbyterian College*, 152

Hanna, William (1808–1882), Free Church of Scotland minister and writer, was born at Belfast on 26 November 1808, the son of the Revd Samuel *Hanna (1771–1852), Irish Presbyterian minister and professor of divinity, and his wife, Martha Gemmil (*d.* 1860). He was educated at the University of Glasgow, where he excelled in mathematics and natural philosophy. From Glasgow he went on to study divinity in the University of Edinburgh under Thomas Chalmers; here his debating abilities became apparent.

In June 1834 Hanna was licensed as a probationer of the Church of Scotland, and he was ordained to East Kilbride, a parish near Glasgow, on 17 September 1835. He married Agnes, Chalmers's eldest daughter, on 30 March 1836; they had three sons, two of whom died young, and one daughter. In 1837 he was translated to the parish of Skirling, Peeblesshire. In the controversies preceding the Disruption, he was an active ally of Chalmers, and in 1843 he left the established church, taking his whole congregation with him. On Chalmers's death in 1847 Hanna was entrusted with writing his biography. To secure time for this work, he arranged a temporary exchange with a clergyman, and lived for a time in Edinburgh. *The Memoirs of the Life and Writings of Thomas Chalmers* came out in four successive volumes between 1849 and 1852, and *A Selection from the Correspondence of the Late Thomas Chalmers* followed in 1853. Hanna also edited the *Posthumous Works of Dr Chalmers* in nine volumes. The *Life* met with contemporary approval, and Hanna was awarded the degree of LLD by the University of Glasgow in 1852. The *Life* became, and remained, the standard biography of Chalmers for over a hundred years. Although an eloquent work which contains much material from Chalmers's papers and letters, it was necessarily partisan: Hanna suppressed and altered quotations which were likely to place his father-in-law in an unfavourable light.

In 1847 Hanna was appointed editor of the *North British Review*, a journal started in 1844 by David Welsh (1793–1845). It was designed to contrast with the *Quarterly Review*, which was seen as too conservative, and the *Edinburgh Review*, which excluded religious topics (it had neglected, for example, to detail the circumstances of the Disruption). During his editorship the *North British Review* enjoyed a good circulation, but failed to attract other than Scottish contributors. Having resigned his charge at Skirling, Hanna moved permanently to Edinburgh, where in 1850 he was called to be colleague to Thomas Guthrie, as minister of St John's Free Church. Here Hanna's quieter and

William Hanna (1808–1882), by Thomas Rodger

more thoughtful style of preaching acted as a foil to the flamboyant approach of his colleague.

Hanna's later publications included *Wycliffe and the Huguenots* (1860), *Last Day of Our Lord's Passion* (1862), which sold 50,000 copies, *The Earlier Years of Our Lord* (1864), *The Close of Our Lord's Ministry* (1869), and *The Resurrection of the Dead* (1872). He also edited a volume entitled *Essays by Ministers of the Free Church of Scotland* (1858) and *Letters of Thomas Erskine of Linlathen* (1877), a work which reflected his liberal theological views. Brief memoirs of a personal friend, Sir Alexander Gibson Carmichael of Skirling, and Alexander Keith Johnson were written for private circulation. Hanna was also a frequent contributor to the *Sunday Magazine* and other periodicals. In 1864 Hanna was made DD by the University of Edinburgh, and in 1866 he retired from the ministry. He died in London on 24 May 1882 and was survived by his wife. On the day of his funeral the general assembly of the established church suspended its sittings, and a tribute to his consistency and independence of mind was entered on the minutes of the Free Church assembly on 30 May 1882.

Hannah, John (1792–1867), Wesleyan Methodist minister, born at Lincoln on 3 November 1792, was the third son of a corn merchant. His parents were Wesleyan Methodists in the Lincoln society. He received his early education from various local teachers, but chiefly from the Revd W. Gray of the cathedral. He obtained a respectable knowledge of the classics, and studied French, mathematics, and Hebrew with enthusiasm and success. From his earliest years his thirst for knowledge was insatiable, and his powers of acquisition remarkable. In the intervals of his studies he helped his father in his trade. In his late teens he was converted and became a Wesleyan preacher in the villages around Lincoln, preaching his first sermon at Waddington. When in 1813 Dr Thomas Coke was about to start overseas mission work to India with seven young men, Hannah accepted an offer to fill a vacancy which was anticipated, but did not occur. Nevertheless he retained a strong interest in overseas missions work throughout his life. In 1814 Hannah was received into the Wesleyan ministry, and was speedily recognized as a preacher of unusual eloquence and ability as he served in circuits in Yorkshire and Lincolnshire. He married Jane Capavor on 12 August 1817; they had eight children.

When only thirty-two Hannah came to the attention of Jabez Bunting and Richard Watson, and he was sent out to America with Richard Reece as a representative of the Wesleyan conference of Great Britain to the general conference of the Methodist Episcopal church in the United States. On his return he served in circuits in Leeds, Manchester, Huddersfield, and Liverpool. In 1834 he was appointed theological tutor of the Wesleyan Theological Institution for training candidates for the ministry. Hannah had played an important part in its establishment, despite initial opposition to the scheme. He filled the post with marked success, first at Hoxton and afterwards at Stoke Newington. In 1842 he was appointed to the theological tutorship of the northern branch of the institution, at Didsbury in Lancashire, which he held until a few months of his death. His lectures, later published with a memoir of his life, were delivered with an enthusiasm which awoke a corresponding response in his pupils. More than 400 students trained under him as tutor.

Hannah served the wider connexion as secretary of the conference from 1840 to 1842, and again from 1854 to 1858. He was twice president, in 1842 and 1851. In addition, he was secretary of the Wesleyan Methodist Missionary Society and much sought after as a public orator speaking on behalf of missions and Christian education. In 1856 Hannah crossed the Atlantic a second time, accompanied by F. J. Jobson, later his biographer, as the representative of English Methodism to the Methodists of the United States. For twenty years he was chairman of the Manchester and Bolton district. His calm judgement brought many threatened disputes to a happy conclusion. He died at Didsbury on Sunday 29 December 1867, shortly after resigning his tutorship. Hannah was an impressive

preacher and a ready public speaker. Though no latitudinarian, and clinging tenaciously to the doctrines and practices of Methodism, he was devoid of bigotry or narrowness, and, while regarded with respect by the whole Methodist body, enjoyed friendly relations with the Church of England, into which church his only surviving son, John *Hannah, was ordained in 1841.

Wealth at death under £1000: probate, 8 Jan 1868, *CGPLA Eng. & Wales*

Hannah, John (1818–1888), Church of England clergyman and schoolmaster, son of John *Hannah (1792–1867) and his wife, Jane Caparn (*d.* 1870), was born at Lincoln on 16 July 1818. His father was a Wesleyan minister, who was twice president of the Wesleyan conference. John was the eldest of eight children, the rest of whom died in infancy or early youth. He received his early education from his father until the latter was appointed theological tutor at the Wesleyan Theological Institution at Hoxton, when he was sent to St Saviour's School, Southwark, under the Revd Lancelot Sharpe. In March 1837 he matriculated at Brasenose College, Oxford, and in May of the same year was elected to a Lincolnshire scholarship at Corpus Christi College, Oxford. In 1840 he graduated with first-class honours in classics, and in the same year was elected to a Lincolnshire fellowship at Lincoln College, where he was a contemporary of Mark Pattison.

Hannah was attracted by the Tractarian movement, but never became an adherent of Newman; he was later described as 'an excellent churchman of the old High-Church type' (Overton, 80). In 1841 he was ordained and became a private tutor in the university. On 5 July 1843 he married Anne Sophia (*d.* 1876), sister of his college friend Robert Gregory, now at St Paul's. He was chaplain of the college living of Combe Longa, near Woodstock, from 1843 to 1845, dividing his time between parochial work and private tuition. In 1845 he returned to Oxford, and for the next two years was the leading private tutor in logic and moral science. He became rector of the Edinburgh Academy in 1847, and held that post with marked success for seven years. Although still only in his twenties, he proved a capable manager of the school, and an effective disciplinarian, memorably putting to flight a large gathering of boys, assembled to watch a fight, by brandishing his umbrella at them. In 1853 he took the degree of DCL at Edinburgh University in order to be dignified with the title of doctor, expected of headmasters in Scotland. Although successful as rector of the academy, he disliked having to take boarders in his house, and felt restricted in the presbyterian climate of the academy from giving Anglican religious instruction. In 1854 he accepted the wardenship of Trinity College, Glenalmond, Perthshire, which had been founded in connection with the Scottish Episcopal church. He immediately raised pupil numbers, placed the college on a sound financial footing, and acquired a cricket field for the boys. At Glenalmond he became a friend of Gladstone, who admired his business capacity, and it was to Hannah that Gladstone addressed his public letter on Irish church disestablishment in June 1865.

Hannah resigned from Glenalmond in 1870, following the death of his only daughter. He was nominated by the Gladstone government a member of the royal commission on the Contagious Diseases Acts. Later in 1870 he was presented by Richard Durnford, bishop of Chichester, to the important vicarage of Brighton. He divided the parish of Brighton into ecclesiastical districts, making each district church free and unappropriated for ever, and transferred the parochial rights of the parish of Brighton from the old church of St Nicholas to that of St Peter. A staunch defender of church schools, he was twice elected to the Brighton school board. He was appointed to the archdeaconry of Lewes in 1876. In 1887 he resigned the living of Brighton, but retained the archdeaconry until his death on 1 June 1888 at Brighton vicarage, to which his only son had succeeded him. He was buried in his wife's grave in Brighton parochial cemetery.

Hannah was not only conspicuously successful as tutor, schoolmaster, and parish priest, but achieved considerable reputation as a man of letters. In his early years he showed much literary promise. His early anonymous pieces include an amusing brochure, *Old Mother Hubbard*, written while he was a schoolboy, and a long and thoughtful article, 'Elizabethan sacred poetry', published in the *British Critic* for April 1842. The first work in his own name was an edition of *Poems and Psalms by Henry King, DD, Sometime Lord Bishop of Chichester* (1843); his next was *Poems by Sir Henry Wotton, Sir Walter Raleigh, and Others* (1845). On this work Hannah bestowed very great pains, recovering many poems from manuscript sources. A second edition appeared in 1875. In 1857 he published a volume of sermons entitled *Discourses on the Fall and its Results*; in 1862 he was appointed Bampton lecturer at Oxford, and in 1863 published the lectures under the title *The Relation between the Divine and Human Elements in Holy Scripture*. In 1870 he published *Courtly Poets from Raleigh to Montrose*, and at various times a vast number of single sermons, archidiaconal charges, and popular lectures on subjects of literary, historical, antiquarian, and practical interest. Hannah was a small man, 'slender and delicately built' with long raven-black hair in his young manhood, 'fine features, an aquiline nose, bright eyes and alert movements' (Magnusson, 140).

Hannam, Richard (*d.* 1656), thief, is an obscure figure whose life is largely to be seen through four pamphlets rushed out to capitalize on his execution in 1656. These accounts indicate he was the son of a shoemaker, also Richard Hannam, of Shaftesbury in Dorset. At school he acquired some knowledge of Latin, but was unhappy and ran away to London. He was apprenticed to a silk weaver in Shoreditch, but soon fell into the company of thieves. However, the pamphlets should be treated sceptically; even their claims as to his parentage and education may have been invented to lend plausibility to the narrative. These works all conform to the genre of the cautionary tale. Hannam appears as an apprentice who went to the bad, a thief and conman who inveigled his way into the houses of the grand, including that of the earl of Pembroke, by adopting the airs of a gentleman. He was skilled at breaking out of gaol. In his 'Europian Rambles' he reportedly robbed most of the crowned heads of Europe (including 'the Prince of Turks'; *Speech and Confession*, 5). One pamphlet hinted at a royalist Hannam who denied on the gallows that he had robbed the king of Scots—the exiled Charles II. The pamphlets all suggest that Hannam was active on the continent. Their tales of breathtaking escapes and daring thefts and frauds certainly romanticize the reality of Hannam's life, and seek to embellish his image as a glamorous rogue. One entry in the state papers hints that Hannam could indeed aim high in his targets: in December 1655 the council of state issued a warrant to pay Edward Flowers in reward 'for his services in discovering Hanham's designs upon the Exchequer' (*CSP dom.*, *1655–6*, 585).

Nevertheless, it was an entirely mundane robbery that brought Hannam to the gallows. In 1656 he and his father-in-law, Rudd, robbed an alehouse; caught in the act, Hannam escaped across the roof. When Rudd was accused by the publican and arrested Hannam is reported to have returned to the scene and stabbed the man, the only occasion on which he is said to have caused a victim serious physical harm. He was tried and found guilty on 16 June 1656 and was conveyed to Newgate to await execution the next day.

Later that evening Hannam was visited in the dungeon, where he lay in chains, by Edward Tuke. Hannam did not immediately welcome his visitor: 'I see not what good a minister can do for me, for the matter lies upon myself; If I pray not myself, and repent of my sins', no other man could help or comfort him (Tuke, 2–3). Tuke left a record of the prisoner's remarks on religious and other matters, which are highly abbreviated compared with his own speeches and may not properly represent Hannam's outlook. Nevertheless, however filtered through the preoccupations of an orthodox godly minister concerned with questions of sin and redemption Hannam's remarks are intriguing. He had by no means rejected belief in God: 'I do confesse, that I am a great sinner, and yet I hope there is mercy for me, for I do trust in God's mercy' (ibid., 36). But he had awkward questions on predestination, asking whether a thief sentenced to death was fore-ordained by God to die; on hearing that those who died unregenerate in such a manner were eternally damned, he responded 'that is ready to drive me or make me to despair' (ibid., 121). He rejected his earthly punishment as unjust: '[B]y the scripture thieves were not to be put to death, or men were not to be hanged for stealing; we do not read any where in the scripture that God appointed it' (ibid., 97). And he had evolved or learned some even more unorthodox ideas, which may perhaps reflect contact with London radical circles: 'I cannot think there is any hell, after this life, except that of the conscience'; 'I acknowledge one God but not three persons'; 'I cannot think I should pray unto Christ; to God I should pray but not Christ' (ibid., 25, 7, 11). Hannam also found some extenuation for his crimes: 'In the way that I have followed, I have not shed blood, or have not killed any person, and in taking away from men, I had always respect for the poor ... I took from the rich and such as could spare it' (ibid., 48). Hannam thought this made him a better candidate for God's mercy, asking 'is there not difference in sins, some greater some lesser?' (ibid., 49).

On the following day, 17 June 1656, Tuke and Mr Clarke, the ordinary of Newgate, attended Hannam at the scaffold in the rounds of Smithfield. In his speech Hannam admitted his guilt but was at pains to protest the innocence of the couple from whom he rented his room. His Socinian-style rejection of the Trinity seems to have survived the hostile analysis of Tuke: 'he denied the Messias, and said he ought to pray only to the father and not to the Son, as not believing he was yet come, but that he would come' (*Witty Rogue*, 47). When he had finished speaking Hannam donned a white cap and mounted the ladder. 'When the executioner touched him on the shoulder, he turned himself off the ladder. After his body had hung about half an hour, it was cut down and carried to the Three Tuns in Smithfield, and thence in the evening to St [Se]pulchre's Churchyard and there buried' (*Hannam's Last Farewell*, 14).

Hannan, William (1725–1772), painter, was born on 23 June 1725 in Kelso, Roxburghshire, and baptized there on 25 June, the son of George Hannan and Hanna Pringle. He was apprenticed in 1741 to Thomas Landall, a cabinet-

maker in London. According to a contemporary, however, he had a 'great inclination to painting' (Edwards, 49). Between 1751 and 1754 he painted his best-known works: four views of West Wycombe Park, Buckinghamshire, for Sir Francis Dashwood (Lord le Despencer from 1763). Two of Hannan's drawings of the park are in the British Museum and many variations of the scenes, painted by Hannan or followers, are in collections all over the world.

The paintings were engraved in 1757, and the views appear in unexpected places, such as in *The Ladies Amusement, or, Whole Art of Japanning Made Easy* (2nd edn, *c.*1762); on a Meissen cream jug; and on Catherine the Great's celebrated 'Green Frog' service made by Wedgwood in 1773–4. Hannan was involved in the decoration of the inside of West Wycombe house, painting ceilings following ancient Roman models, probably in the 1760s. He also contributed to his patron's pioneering interest in Greek revival architecture. For the west portico, copied from the temple of Bacchus at Teos, Turkey, he painted three mythological scenes (said to be signed and dated 25 October 1770).

The market for works of art was changing, and artists began to seek a broader clientele. Ian Pears, quoting Edwards, mentions Hannan as an example of an artist dissatisfied with his dependence on one patron and unable to take advantage of an offer to go to Italy (Pears, 144). His *View of Lowther-Hall in Westmoreland* was exhibited at the Society of Artists in 1770, but Sir James Lowther still owed money to Hannan's estate in 1779. Hannan exhibited drawings and paintings, mostly views of the Lake District, with the society from 1769 to 1772, becoming a fellow in 1770. Many of his works seem to be after engravings by other artists, for example, an oil painting in Plymouth Art Gallery after George Lambert's *View of Hamoze and Plymouth Dock*. The catalogue illustrating his *Osterley Park at Dusk* (exh. Roy Miles, London, 1975; Gov. Art Coll.) refers to his 'gentle use of colour and rather serene composition'. Though his works lack originality, they continue to please, possessing 'Little power but much charm' (Grant, 86).

'A man of excellent character' (Edwards, 49), Hannan was buried in the parish church in High Wycombe, the town in which he had died, on 29 July 1772; his wife, Mary, *née* Cockburn, had been buried there on 10 December 1771. Although he left property in trust for his daughter Mary, a sad postscript describes her as a 'poor dear little Orphan ... in very indigent circumstances' (Robert Wilson to Lord le Despencer, 20 May 1779, Bodl. Oxf., MSS DD Dashwood B11/13/24). Continuing interest in English eighteenth-century landscape gardens and country houses means that Hannan's topographical views are also valued as historical documents, providing evidence for research at, for example, West Wycombe and Painshill Park, Surrey.

Hannay, Doris Fergusson. *See* Leslie, Doris (1891–1982).

Hannay, James (1827–1873), writer, was born on 17 February 1827 at Dumfries, the son of David Hannay (1794–1864), a businessman, and Elizabeth Affleck (*d.* 1833). As a student David Hannay had been a member of the Speculative Society at Edinburgh University; in later life he was the author of an unsuccessful novel, *Ned Allen, or, The Past Age* (1849). His son's literary endeavours and his abiding interest in heraldry and family history can be traced to this source. 'Pitchforked into the world as a boy' (Gross, 93), as one modern commentator has put it, James Hannay joined the navy a few days after his thirteenth birthday, after attending schools in Westmorland and Surrey. For the next five years he combined naval duties, mostly in the Mediterranean—he served on the *Cambridge* during the blockade of Alexandria in the Syrian War—with strenuous efforts to improve his mind, even going so far as to take Latin lessons from a priest in Malta. This urge for self-improvement was a feature of his career: at late as his mid-thirties he made an attempt to learn Greek.

Although the evidence of his fiction suggests that Hannay enjoyed the confraternity of life at sea, he found naval routines irksome. This resentment extended to his superior officers, and his first excursion into journalism seems to have been a comic paper got up to ridicule the admirals and captains on the Mediterranean station. His naval service ended ingloriously in 1845, when he and two fellow officers were court-martialled for insubordination and riotous behaviour and dismissed from the service. Although the court's finding was generally thought to

have been vindictive, and was eventually quashed, he did not seriously seek re-employment and instead pursued a literary life in London.

Hannay's early employments were painfully obscure. His first job was as a reporter on the tory *Morning Chronicle*. (Hannay remained an arch-Conservative throughout his life.) Subsequently he worked on the short-lived satirical papers *Pasquin* (1847) and *Puppet Show* (1848–9). A lively volume of naval sketches, *Biscuits and Grog*, appeared in 1848, but even at this early stage his chief literary enthusiasms are apparent, in particular his idolization of William Thackeray and Thomas Carlyle. The influence of both these mentors can be seen in his first novel, *King Dobbs* (1849), which attacked middle-class ostentation and features an imaginary Pacific island whose inhabitants include a 'philosophical novelist' strongly reminiscent of Thackeray and a prophet named Tomasso, transparently Carlyle.

In the 1850s Hannay's prospects began to improve. Taken up by Thackeray, whom he had met early in 1848 and to whom *King Dobbs* is dedicated, he was invited to supply the notes to the printed version of the latter's lectures on English humorists while their author was in the United States. Later he delivered his own moderately successful lecture series, 'Satire and satirists', appropriately enough at the Edwards Street Institute, London, where Carlyle had lectured on hero-worship fifteen years earlier. Two more books that made use of his naval experiences, the novel *Singleton Fontenoy RN* (1850) and *Sketches in Ultramarine* (1853), were followed by a third novel, *Eustace Conyers* (1857). On 24 February 1853 he married Margaret Anne Thompson (1833–1865), daughter of Joseph Thompson, a bank cashier; they had six children. Thackeray introduced him about this time to Whitwell Elwin, editor of *The Quarterly Review*—'a worthy and clever fellow ... who loves reading and letters and is trying his best in the world-struggle' (*Letters and Private Papers*, 3.465)—and electioneering work for the tories in Scotland (he had stood unsuccessfully at Dumfries in 1857) procured him the editorship of the highly partisan *Edinburgh Courant* (1860–64).

Hannay's last years were a decline, compounded by alcoholism and waning influence. In August 1868 he married Jean Hannay (*d.* 1870)—apparently no relation; they had one child. Also in 1868 his political friends got him appointed British consul at Brest in France, a position he contrived to exchange for a similar role at Barcelona, where he skimped his duties, ran into debt, and on the night of 8–9 January 1873, in the suburb of Putchet, finally drank himself to death. His later books include an excellent *Course of English Literature* (1866), previously published in George Augustus Sala's short-lived penny magazine *The Welcome Guest: Studies on Thackeray* (1869), perhaps the best account in Victorian times of the novelist's work; and *Three Hundred Years of a Norman House* (1866), a part history of the Gurney family. Likenesses photograph, *c.*1866–1869, repro. in Worth, *James Hannay*

Hannay, James Owen [*pseud.* George A. Birmingham] (1865–1950), novelist, was born at 75 University Road, Belfast, on 16 July 1865, the son of the Revd Robert Hannay, a clergyman who became rector of the parish church of St Anne's, Belfast, and his wife, Emily, daughter of the Revd William Wynne. He was educated at Haileybury School, Hertfordshire, and Trinity College, Dublin, where he graduated in 1886 as a junior moderator in modern literature. He was ordained deacon in 1888 (obtaining a curacy at Delgany, co. Wicklow) and priest the following year. In 1889 he married Adelaide Susan Wynne (1865–1933), daughter of his mother's second cousin, Canon Frederick Richards Wynne. The couple had two sons and two daughters. In 1892 he was appointed to the rectory of Westport, co. Mayo, where he remained until 1913.

Hannay had been writing under his own name since 1890: magazine stories, newspaper articles, and scholarly works such as *The Spirit and Origin of Christian Monasticism* (1903) and *The Wisdom of the Desert* (1904). It was at Westport that his first novels, beginning with *The Seething Pot* (1905) and *Hyacinth* (1906), involved him in disputes with the local commercial and ecclesiastical establishment who saw their characters impugned in his *romans-à-clef*. In 1908 he struck a vein of humour which he worked, in response to the demands of a faithful public, to the end of his life. *Spanish Gold*, published in that year, had for its central character the Revd J. J. Meldon, a red-haired curate of undaunted audacity and loquacity, and it concerned itself with mystery, treasure, and the inscrutability of the Irish character, as did many of his subsequent novels. His interest in Irish affairs led him to assist Douglas Hyde in the early years of the Gaelic League and his books dealing with Irish issues, such as *The Lighter Side of Irish Life* (1911) and *An Irishman Looks at his World* (1919), and Irish landscape, such as *The Northern Iron* (1907), are among his most characteristic productions. Similar stock characters, such as the doctor in *Send for Dr O'Grady* (1923), enlivened many later novels.

At Westport, Hannay began his career as a playwright. A visit to the rectory in 1911 from Constance Markiewicz and members of the Independent Theatre Company led to his play *Eleanor's Enterprise* opening at Dublin's Gaiety Theatre that same year, and in 1913 his play *General John Regan*, which concerns the erection in a small Irish town of a statue to a totally imaginary Irish hero, opened in London and ran for 275 performances and was later produced in the United States. Many of the novels of George A. Birmingham (the pseudonym he now used) are set around Westport—or 'Ballymoy', as he called it—and among the many islands of Clew Bay. When *General John Regan* was produced in Westport in 1914, there was a riot—ostensibly because Canon Hannay had portrayed a Roman Catholic priest on the stage.

Hannay and his wife left Westport in 1913, going on a lecture tour to the United States and returning first to England and then to a living at Mount Mappas in Killiney, co. Dublin. He returned from a second American tour in 1915 and spent the rest of the war years as an army chaplain in France. These experiences he recounted in *From Connaught to Chicago* (1914) and *A Padre in France* (1918). He was appointed rector of Carnalway in co. Kildare in 1918 and after four years became chaplain to the English legation in Budapest. It was during his time in Hungary, detailed in *A Wayfarer in Hungary* (1925), that the unexpected offer of the living in the Somerset village of Mells was made to him. He accepted and settled there in 1924. In 1929 the rectory was burnt down and in 1933 his wife died. He finally moved to London, to the church of the Holy Trinity in Kensington.

Although known to the general public as a prolific novelist—hardly a year went by without another 'Birmingham novel' being published—Hannay always thought of himself as a priest first and a novelist second. In 1946 Trinity College, Dublin, conferred upon him the honorary degree of LittD. Hannay died on 2 February 1950 at his home, 187 Queen's Gate, Kensington, London, and was buried in St Andrew's churchyard, Mells, Somerset.

Hannay [*née* Wilson], **Jane Ewing** (1868–1938), schoolteacher and women's welfare campaigner, was born on 8 February 1868 at the manse, New Abbey, near Dumfries, the daughter of the Revd James Stewart Wilson, a Church of Scotland minister, and his wife, Jane Ewing, *née* Brown. At the age of fourteen she went to St Leonards School, St Andrews, where she was captain of games for two years and head of school from 1884 to 1886. She passed the London matriculation examination, division one, and subsequently entered Girton as a Girton entrance scholar (bracketed second), where she read classics. In 1889 she obtained third-class honours in the classical tripos.

In 1890 Jane Wilson returned to her former school, St Leonards, as assistant mistress in classics and German. From 1895 to 1899 she was also a housemistress. She was to retain her connection with St Leonards throughout her life; following her election to the council of St Leonards and St Katherine schools she was an active member for more than twenty years, until her death. In 1899 she resigned her teaching post to marry (19 September 1899) Robert Kerr *Hannay (1867–1940), the historian. Their only child, Robert Stewart Erskine Hannay, was born the following year. From 1901 to 1911 she lived in St Andrews and thereafter in Edinburgh, where Robert Hannay became professor of Scottish history.

Jane Hannay became publicly prominent during the First World War, when she was active in organizing and promoting voluntary women's patrols, the forerunners of women police, which concentrated on preventive work, initially near military camps. Despite the doubts of the authorities about the scheme, a Scottish training school for policewomen and patrols was established in Glasgow with Hannay as honorary secretary. In 1918 she was elected to the first executive committee of the Edinburgh Women Citizens Association, which she used to press further for the introduction of women police.

She was a vice-president of the National Union of Women Workers (1911–12), and became a member of the Edinburgh local employment committee, set up in 1916 to assist the Home Office and the Board of Trade extend employment to women, and chair of the women's subcommittee. She was also a member of the central committee on training and employment of women until 1932, and at her death she was still vice-chair of the Scottish committee. In 1920 Hannay was appointed a member of the Scottish savings committee established by the Treasury. The post involved much public speaking, for which she was eminently suited. In 1923 she was a member of a non-parliamentary committee appointed by the Ministry of Labour to inquire into the supply of female domestic servants and the effect of the unemployment insurance scheme. She was a member of two trade boards, and in 1920 became a JP for the county of the City of Edinburgh. She was appointed OBE in 1918 and CBE in 1933.

Hannay was an active member of the Church of Scotland and on one occasion addressed the general assembly from the floor of the house. She was a member of the Church of Scotland Women's Association for Foreign Missions from 1915 and was elected to the influential General Assembly Home Mission Committee in 1930, the first year women were admitted.

Hannay died on 14 April 1938 at her home, 5 Royal Terrace, Edinburgh, after a three-week illness and was buried at New Abbey, Kirkcudbrightshire. A memorial service held on 18 April 1938 in the Moray Aisle, St Giles's Cathedral, Edinburgh, included many prominent representatives from the Scottish women's movement.

Although she might now be criticized for imposing middle-class values and assumptions on working-class women, Hannay was seen by contemporaries as someone tirelessly concerned about all spheres of women's welfare. The *Edinburgh Evening News* (15 April 1938) referred to her as a 'Scots woman pioneer' for her campaign for women police. A hard worker, she was described as having a genius for friendship, great intellectual gifts, a capacity for fun, and a sense of humour. LINDY MOORE

Hannay, Patrick (*fl.* 1616–1630), poet, was the grandson of Donald Hannay, sprung of the Hannays of Sorbie and 'known / To the English by his sword', according to the complimentary poem by John Marshall prefixed to the collection of 1622. But no Donald appears in the Sorbie family tree in *Wigtownshire Charters* (p. 167). Patrick Hannay placed the Sorbie coat of arms with 'a mullet in the collar point' to signify a third son above his portrait in the frontispiece to the 1622 collection (*Poetical Works*, 49). It is, however, impossible from the evidence to advance any solid conjecture about his parentage. According to the title-pages of his two works published in 1619, he was master of arts, but he is not recorded on any of the surviving lists of the British universities. John Dunbar's complimentary verses in *Epigrammaton ... centuriae sex* (6.xii) of 1616 show that Hannay had made a name for himself as a poet by that date. In London, Hannay published *A Happy Husband* (1618/1619?) and *Two Elegies on the Death of our Soveraigne Queene Anne* (1619), a piece that may indicate some attachment to the entourage of James's queen. Hannay served under Colonel Sir Andrew Gray, who raised 1500 foot and set sail in 1620 from Leith to fight for James's daughter, 'that rare Paragon', Elizabeth, queen of Bohemia, at the opening of the Thirty Years' War (*Poetical Works*, 35). Hannay was presumably in England in 1622 when he brought out *The Nightingale; Sheretine and Mariana; A Happy Husband; Elegies on the Death of Queene Anne; Songs and Sonnets*, a collection comprising his former publications and new ones. One panel of its frontispiece consists of an engraving of him, barbered, bearded, and ruffed as a Jacobean courtier should be. Possibly he ingratiated himself at the court of Charles I. On 31 July 1624 Charles granted a Patrick Hannay a patent in reversion to the clerkship of the privy council of Ireland; his tenure was disputed by the incumbent, but confirmed on 28 May 1625 because he had done James 'good and acceptable service beyond the seas, with great charge and danger of his life' and was also recommended particularly by Queen Anne. The case dragged on until October 1630. Hannay seems never to have gained occupancy, but meanwhile presumably the same man was appointed one of the masters of chancery in Ireland in 1627. Records of this Patrick Hannay continue until 1630, though an entry of March 1636 in 'The commisariat of confirmed testaments' (NA Scot., CC 8/8/57, fol. 41) speaks of his death by drowning in 1629.

Hannay's raptures and complaints as a love poet have nothing new. As a moralist of love, his concern is with 'married friendship'. 'Philomela' and 'Sheretine and Mariana' treat its breaches and *A Happy Husband* sets out its conditions, but his sententiousness is not enlivened with wit. What he does best is mythical imagining, as in the metamorphosis of Daphne depicted on Philomela's dress, the ghost of Mariana waiting passage to the underworld that opens 'Sheretine and Mariana', and the delightful Spenserian water fantasy in the second elegy on Queen Anne. Even the awfulness of living in Croydon is got up as a scene from the infernal pit with charcoal burners engaged in destructive work about its fires (song 8 in 'Songs and Sonnets'). Some Scottish linguistic forms survive his London printers.

Hannay, Robert Kerr (1867–1940), historian of Scotland, was born at Glasgow on 31 December 1867, the eldest son of Thomas Hannay, ironmaster, of that city, and his wife, Elizabeth McDowall. He was educated at Albany Academy, Glasgow, the University of Glasgow (MA 1895), and University College, Oxford, where he obtained a second class in classical moderations (1891) and in *literae humaniores* (1893). In 1894 he was appointed lecturer in classics and ancient history at University College, Dundee, and in 1901 lecturer in ancient history at St Andrews University. There he began those studies in Scottish history which were to constitute his life's work. *The College of St. Leonard* (1905) was followed by *The Archbishops of St. Andrews* (5 vols., 1907–15), both written in collaboration with John Herkless; for these Hannay furnished the fresh material from manuscript sources. The reputation thereby gained led to his appointment in 1911 as curator of the historical department of the Register House, Edinburgh. In 1919 he became Sir William Fraser professor of ancient (Scottish) history and palaeography at Edinburgh University, and in 1930 historiographer-royal for Scotland. His other distinctions included the fellowship of the Royal Society of Edinburgh (1922), the honorary degree of LLD of St Andrews University (1923), and honorary membership of the Royal Scottish Academy (1933). In 1899 he married Jane Ewing (1868–1938) [*see* Hannay, Jane Ewing], second daughter of James Stewart Wilson DD, minister of New Abbey, Kirkcudbrightshire, and they had one son. Jane Hannay was appointed OBE (1918) and CBE (1933) for her social services. Hannay died in Edinburgh on 19 March 1940, where his home was 5 Royal Terrace.

Hannay was an unconventional and stimulating teacher of senior students, encouraging them, as fellow workers, to use original sources. No general history of Scotland came from his pen. In his view more research was necessary, especially in his own field of the later middle ages, before the rewriting of the existing narratives could be

justified. But by his numerous contributions to the *Scottish Historical Review*, the *Juridical Review*, the publications of the Scottish History Society, the Stair Society, and the Old Edinburgh Club, and in his introductions to volumes 9 to 14 (1684–89) of the third series of *The Register of the Privy Council of Scotland* (1924–33) and *The Acts of the Lords of Council in Public Affairs, 1501–1554* (1932), as well as in such typical works as the *Rentale Dunkeldense* (1915) and *The College of Justice* (1933), he successfully challenged many accepted views on the educational, ecclesiastical, and institutional history of his country. His *Letters of James the Fourth* (1953) was edited with a biographical memoir by R. L. Mackie, and his *Letters of James V* (1954) was edited by Denys Hay. His complicated style was partly due to a supersensitive dread of inaccuracy in general statements. The style, however, was not the man. Tall and handsome, he was generous in communicating knowledge, genial and sociable, a born raconteur, an excellent golfer, and a musician of considerable gifts. H. W. MEIKLE, *rev.* H. C. G. MATTHEW

Hanneman, Adriaen (*c.*1604–1671), portrait painter, was born in The Hague, Netherlands, into a family of Catholic government officials. He trained under the portrait painter Anthony van Ravesteyn (1580–1669), brother of Jan van Ravesteyn. There is no evidence that he worked as an assistant to Daniel Mytens, and his only known early work, *Portrait of a Woman* (1625; formerly St Lucas Gallery, Vienna), is much indebted to the style of the van Ravesteyn brothers. About 1626 he moved to London, where in 1630 he married Elizabeth Wilson, having unsuccessfully first courted the daughter of the goldsmith Nicasius Russell. Only a few works survive from this period, and all are heavily influenced by Van Dyck, indicating as well that he was probably involved primarily as an assistant in that master's studio in Blackfriars during his English period. Hanneman's best-known early portrait is *Cornelius Johnson with his Wife and Son* (*c.*1637; Rijksmuseum, Amsterdam). He also painted a portrait of the miniature painter Peter Oliver (*c.*1632; Royal Collection). In the lord mayor's survey of foreigners resident in London in 1635 Hanneman is listed as living in the parish of St Andrew, Holborn. He is recorded with one Dutch servant and no mention of an English wife is made; it is possible that Elizabeth was dead by that date.

Between 1638 and 1640, before the civil war broke out in Britain, Hanneman returned to The Hague, where his elegant, accomplished portrait style did much to spread the influence of Van Dyck throughout the Netherlands. Certainly by 1640 he was a member of the painters' guild in

Adriaen Hanneman (*c.*1604–1671), self-portrait, 1656

The Hague, the year in which he also married for the second time, on this occasion securing the hand of his master's niece, Maria van Ravesteyn. It was also in this year that Hanneman executed one of his best-known portraits, *Constantijn Huygens and his Children* (Mauritshuis, The Hague). Huygens was a learned humanist who had served the Dutch embassies in Venice and London and now acted as art adviser to Prince Frederick Henry. This accomplished work owes a compositional debt to Jacob van Campen in the placing of the figures in separate medallions. The central portrait of Huygens himself owes much to Van Dyck, but the work has a distinctive character of its own. It was a significant commission to have secured and heralded the beginning of a successful period in Hanneman's career. Although his reputation was made painting portraits, in 1644 he was commissioned to paint for the town council of The Hague the *Allegory of Justice* (Oude Stadhuis, The Hague). In 1643 he had become a governor of the painters' guild, and in 1645 he took on the role of dean. His successful portrait practice enabled him to live in some style, and he owned an imposing town house in the Nobelstraat, a smart area of The Hague. His large studio often produced numerous copies of portraits.

Hanneman found his English connections particularly useful when from the late 1640s onwards large numbers of exiled royalists began to settle in the Netherlands. He painted the portraits of some of the key figures of the period, including Charles II when prince of Wales (1648–9; original lost, known only in copies), his brother Henry, duke of Gloucester (1643; National Gallery of Art, Washington, DC), and courtiers such as Edward Hyde, first earl

of Clarendon (1649; priv. coll.; of three further versions, one is in the NPG). That of the duke of Gloucester is one of Hanneman's finest works. The portrait of Clarendon, secretary of state to Charles II from 1653 to 1657, who was recorded as having patronized Hanneman, was almost certainly executed in 1648 but may conceivably have been painted in 1654, when the sitter returned to The Hague. It is a masterful characterization of the royalist historian, who went on to be lord high chancellor of England in exile in 1658 and Charles II's leading minister at the Restoration in 1660. Hanneman also found favour at the Dutch court in the 1650s, painting the young William of Orange, later the stadholder king, holding an orange and with a small dog (Rijksmuseum, Amsterdam). In addition he painted William's mother, Mary, princess of Orange, on a number of occasions. The earliest portrait of 1646 (known only from an engraving by Henry Donckerts) does not survive. Hanneman painted her again in 1659 (signed version, priv. coll.) and in the same year produced another variant (Scot. NPG), which has a curtain rather than a tree in the background, and again in 1660, the year of her death (Royal Collection, signed). In 1664 he painted a posthumous portrait of Mary wearing a feathered cloak and turban, with a black servant placing a pearl bracelet on her wrist (Mauritshuis, The Hague), for which he was paid 400 guilders. Mary was evidently an important patron of Hanneman; the painter's fluency in English made him popular with the princess, who did not speak Dutch.

The close family ties between Dutch and English royal families continued to produce commissions for Hanneman even after the royalists had all returned home. In 1664 he executed two copies of a portrait of William of Orange (both Royal Collection), for which he was paid 500 guilders. He also found patrons among wealthy residents of The Hague, including Cornelia van Wouw, whose portrait he painted in 1662 (Van Wouw almshouse, The Hague). For these sitters he combined the glamorous style of Van Dyck with the more sober Dutch tradition of portrait painting. His Roman Catholicism does not appear to have inhibited patronage: in 1661 he painted the Jesuit priest Father Roeland de Pottere (priv. coll.). Hanneman was a successful teacher, training such artists in his studio as Jan Janszoon Westerbaen the younger (1631–*c.*1672) and Reinier de la Haye (1640?–1695). He also received a late commission for the states of Holland, the *Allegory of Peace* (Binnenhof, The Hague).

Hanneman's success began to fade towards the end of his long career. He appears to have ceased painting in 1668, perhaps on account of illness. He married as his third wife Alida Besemer in 1670 and died in The Hague the following year, with little of his former fortune intact. He was buried in The Hague on 11 July 1671. A number of his self-portraits survive, of which the finest is in the Rijksmuseum, Amsterdam. ANN SUMNER

Hannen, James, Baron Hannen (1821–1894), judge, was born in Peckham, Surrey, on 19 March 1821, the eldest son of James Hannen (1788/9–1857), of Kingswood Lodge, Dulwich, a London wine merchant, and his wife, Susan, daughter of William Lee of Nayland, Suffolk. He attended St Paul's School from 1831 to 1839 and then went to the University of Heidelberg, which made him a lifelong Germanophile with a taste for philosophy.

Hannen became a student of the Middle Temple on 30 October 1841, first in Samuel Warren's chambers and then, probably more to his taste, in Thomas Chitty's. He was called to the bar on 14 January 1848 and joined the home circuit. A commendation from Lord Chief Justice Campbell in *Hochster* v. *De la Tour* (1853) secured him a part in the *Shrewsbury peerage case* (1857–8). Thereafter his rise was rapid both in London and on circuit and he consolidated his reputation by his performance as adjudicator on the Anglo-American mixed arbitral commission of 1853–5. As an advocate he was described by a contemporary as a 'clear, but frigid and passionless speaker, accurate, precise, and painstaking, well endowed with practical good sense' (*The Times*). He also wrote for the press and reported cases for the *Morning Chronicle*.

On 4 February 1847 Hannen married his cousin Mary Elizabeth, second daughter of Nicholas Winsland; she died on 1 December 1872. He attempted to enter political life in July 1865, when he stood as a Liberal for Shoreham and Bramber, but was defeated; he never tried again. At that time he was reckoned an advanced Liberal, but he later spoke against the Home Rule Bill of 1892 in the Lords. He would have found it difficult to combine a serious political career with the demands of what had become a huge practice, particularly in mercantile and insurance law, which left him little time for his illustrious pupils, Charles Bowen, Farrer Herschell, and A. L. Smith. As junior Treasury counsel from 1863, he took part in the prosecution of the Fenians in 1867, after a policeman died in Manchester in the course of a prisoner rescue, and of Muller for a notorious railway murder in 1868.

Hannen was made a judge of the queen's bench on 25 February 1868, was sworn as a serjeant the next day, and knighted on 14 May. In queen's bench, he was not regarded as a success, the court being dominated by Cockburn and Blackburn, and on 20 November 1872 he accepted the offer to be judge of the court of probate and the divorce court, which John Coleridge had refused. He was sworn of the privy council on 27 November 1872 and in 1875 became, through the Judicature Acts, president of

the new Probate, Divorce, and Admiralty Division of the High Court.

Hannen's performance in his new role was almost universally held to be masterful in manner and masterly in law. In probate, where he had already had to grapple with the case of Lord St Leonards's lost will, he gave some valuable rulings on the always vexed question of mental capacity, especially *Boughton* v. *Knight* (1873) and *Smee* v. *Smee* (1879) and on undue influence (for example, *Wingrove* v. *Wingrove*, 1885), 'models of lucid exposition and unequalled as clear statements of the law' (Holdsworth, *Eng. law*). But it was in the divorce court that he left the deepest imprint on the administration of the law.

Hannen built on the body of law created by his predecessors Cresswell and Lord Penzance, but the atmosphere of the divorce court was his own unique contribution. The 'Rhadamantine solemnity' (E. Manson, *Builders of our Law during the Reign of Queen Victoria*, 1904, 336) of his demeanour effectively discouraged any tendencies to levity or prurience; he imposed his notions of rules and practice with unarguable decisiveness and maintained an evenness of temper (the product of self-discipline rather than a natural gift) which made him, for many, the embodiment of the judicial ideal. His judgments matched his manner: concise, polished, and graceful. When Sir Robert Phillimore resigned as Admiralty judge in 1883 Hannen's initial idea as president was to have alternate Admiralty sittings with C. P. Butt, Phillimore's replacement, but this upset the practitioners accustomed to a single judge. Hannen gave way, and took little part on the Admiralty side.

Hannen's reputation for strict impartiality and integrity made him an obvious choice to head the judicial tribunal appointed in 1888 to examine the accusations in *The Times* against Parnell and the Irish nationalists. It was a novel and rather unsuccessful expedient, largely because the tribunal (Sir Archibald Smith and Sir John Day were the other members), at Hannen's instance, chose to adopt the passive (and largely silent) role with which they were familiar, patiently sifting whatever evidence was brought on behalf of the parties rather than actively seeking it out. The length of the hearings (129 days) drained public interest after Sir Charles Russell's sensational exposure of the 'Parnell letters' as forgeries. The final report—mostly Hannen's work and very ably written—was excessively cautious in its conclusions, which hardly vindicated the methods of the tribunal, or justified the length of its labours. In 1888 he also sat on a royal commission into university education in London and in the same year he was made a DCL of Oxford University. A bencher of the Middle Temple since 27 June 1878, he was a reader in 1889.

Hannen was seen as a possible successor to Sir George Jessel as master of the rolls in 1883 but Gladstone preferred Brett (Lord Esher). On 21 January 1891 he was made a law lord, taking the title of Baron Hannen of Burdock, Sussex, and in the following year was chosen as the British arbitrator in the Paris arbitration on the serious Anglo-American dispute over seal fishing in the Bering Sea. His able discharge of this heavy task added further to his reputation but his health, which had been poor for some time, failed him during the arbitration and on 15 August 1893 he retired from his judicial duties. He died at his house, 49 Lancaster Gate, London, on 29 March 1894 and was buried at Norwood cemetery. In private life Hannen was very different from the stern figure on the bench: cultivated, well read, and fonder of rural life than society. His son James, a barrister, later served as a divorce commissioner.

The effusive tributes of contemporaries such as his successor as president, Sir Francis Jeune, and Lord Chief Justice Coleridge, who said that there had been no greater English judge than Hannen during his seventy-three years, are perhaps exaggerated, but if his best work had not been done mostly in the backwaters of the Probate, Divorce, and Admiralty Division, his enduring contribution to English law would have been greater.

Hannes, Sir Edward (1663/4–1710), physician and poet, was the son of Edward Hannes of Devizes, Wiltshire. His father's occupation was variously described; Peter le Neve said that he kept a herb shop in Bloomsbury market (*Pedigrees of Knights*, 1873). Hearne suggested that in later life Hannes was reluctant to admit his humble origins. In 1678 he was admitted as a king's scholar to Westminster School, to which he later gave a silver *poculum* or goblet, and in 1682, aged eighteen, was elected to a Westminster studentship at Christ Church, Oxford. Having graduated BA in 1686 and MA in 1689 he was given one of the five faculty studentships—in law, although his studies were now in medicine—which permitted him to retain his position at Christ Church without entering holy orders.

While at Christ Church, Hannes contributed to the collections of poems published on the death of Charles II and on the return of William III from Ireland; the latter was reprinted in *Musarum Anglicanarum analecta* (1692), the same volume which included a Latin ode by Joseph Addison in praise of Hannes. Hannes was one of a group of 'medical' poets at Oxford—including James Gibbs, William Wigan, and Robert Freind—which influenced the young Anthony Alsop. Although he was to censure Hannes's treatment of his wives, and to describe him as

haughty and proud, Thomas Hearne asserted that Hannes was the greatest writer of Sapphic verse of the age. Hannes also assisted William King, a contemporary at both Westminster and Christ Church, in writing his refutation (1688) of the first volume of Antoine Varillas's history of heresy (*Histoire des révolutions*, 1686–9).

Hannes lectured in chemistry at Oxford and was appointed reader in chemistry, succeeding Robert Plot, in 1690. That same year, on 17 July, he gave an eloquent speech to Elias Ashmole at an entertainment in Ashmole's honour held in the Ashmolean museum. He received his BM degree in 1692 and his DM in 1695.

In 1699 Hannes left Oxford to set up medical practice in London. Not licensed with, even actively rejected by, the Royal College of Physicians, he found that, even for a man relying on his Oxford degrees, it was difficult to compete with established practitioners like John Radcliffe. In some desperation, and in order to make his name known in the city, he reportedly sent his footman out on to the streets of London to stop every carriage and make enquiries for the doctor. The servant continued the campaign into the coffee houses and, at Garraway's, encountered Dr Radcliffe who, in response to the servant's enquiry after the whereabouts of a nobleman who allegedly had called for Hannes, quipped that it was not the lords who needed Hannes but 'the doctor wants those lords' (Pettis, 37). Eventually the strategy paid off; his practice grew, and he was appointed principal physician at court.

Hannes resigned his studentship at Christ Church in 1699, probably because of his marriage to Anne Packer, daughter of John, lord of the manor of Shillingford, Berkshire, on 1 October 1698. Hearne suggests that Hannes was a barbarous husband who, through his inhumanity, hastened his wife's death, which must have occurred at the time of, or shortly after, the birth of their only child, Temperance, during 1699 or 1700.

In July 1700 Hannes attended William, duke of Gloucester, son of Princess Anne, on his deathbed. On 31 July he conducted a post-mortem on the duke, whose death effectively ended the Stuart succession. Rival doctors suggested that he had misdiagnosed the duke's illness; what Hannes had stated to be smallpox was, according to Radcliffe, only a heat rash brought on by excessive dancing. His prescribed remedies were, Radcliffe alleged, the cause of the duke's death, and it would have been better for the nation if the doctor had followed his father as a basket-maker. Hannes's report was ridiculed in a satirical poem called *Doctor Hannes Dissected in a Familiar Epistle by way of 'nosce teipsum'*. In spite of this, the princess appointed him her physician when she became queen in 1702. He was knighted in 1705. Hearne, rather acidly, drew attention to the liberality of the queen in her distribution of honours at this time, as did Thomas Clark, vicar of Sparsholt, Berkshire, in a pamphlet published that year.

Hannes married his second wife, Anne Bull, the widow of Dr Henry Bull, of Oxford, and the daughter of John Luffe, regius professor of medicine, on 15 June 1701. Anne was said by Hearne to have been a great beauty—although it was alleged that Hannes married her for her wealth—and possessed of considerable and continued virtue in spite of her husband's persistent cruelty. She appears to have predeceased him. He died on 22 July 1710 of the palsy, having apparently been insane for two years, and was buried, on 12 August, in Shillingford church next to his first wife. In his will, which records him as a resident of St Anne's parish in Westminster, he left sufficient money for a memorial with a marble bust above (on the north wall of the nave of Shillingford church). He was generous in death, leaving £1000 to Westminster School for a new dormitory for the king's scholars, another £1000 to Christ Church to complete the building of Peckwater quadrangle, £2000 to Greenwich Hospital, a further £1000 to the Greycoat Hospital in Westminster, and £1000 for distribution by the governors of Queen Anne's Bounty.

Hanneya [Hanney], **Thomas** (*fl.* 1313), grammarian, wrote a treatise, *De quatuor partibus grammaticae* ('On the four parts of grammar'), generally known as the *Memoriale juniorum*. This work, which discusses all four parts of Latin grammar in 160 pages, is extant in complete form in six medieval manuscripts, and incompletely or fragmentarily in three. A note at the end of the table of contents states that Thomas de Hanneya compiled the treatise, beginning it at Toulouse on 20 April 1313, and completing it on 28 November of the same year at Lewes, presumably in the priory there. It was finished 'at the instance of Master John Chertsey, rector of the schools in that place' (Bodl. Oxf., MS Auct. F.3.9, p. 189). Despite the largely groundless elaborations of his career by the bibliographers John Bale (1495–1563) and Thomas Tanner (1674–1735), there appears to be no evidence that the author was an Englishman beyond his presence at Lewes. If he was English he may be assumed to have taken his name from Hanney, Berkshire. In his notebook, the *Index Britanniae scriptorum*, Bale mistakenly gives the date of the *Memoriale juniorum* as 1363.

Hannibal, Thomas (*d.* in or before 1530), diplomat, is of unknown origins. He studied civil law at Bologna, then at Cambridge (1495–6) where he was admitted DCL and DCnL (1502–4; incorporated DCL at Oxford, 1513). He took holy orders (subdeacon and deacon in 1503–4, priest in 1515) and in addition to a canonry and prebend of York (1504) held other benefices mainly in the diocese of Worcester, of which he was appointed vicar-general by Bishop Silvestro Gigli in 1511. He signed a letter at Bruges on 1

October 1515, together with Thomas More and others, informing Wolsey about inconclusive negotiations with Hanseatic merchants, but the major events of his career came in 1522–3. His initial commission (9 March 1522) was to negotiate in Spain an alliance against France with Emperor Charles V and King John of Portugal, but his letter to Wolsey from Plymouth (28 March 1522) suggests that instead the main purpose was to meet the recently elected pope, Adrian VI. At Saragossa in early May, Hannibal impressed Adrian with an oration affirming Henry VIII's devotion, and urged the extension of Wolsey's legatine faculties. He followed Adrian to Rome and on 8 and 12 September wrote to Wolsey describing the honour paid him at the papal coronation and his warm reception from Cardinal Campeggi (who provided lodging for him and his servants until his own house was ready) and Cardinal Giulio de' Medici. He also reported on the state of the English hospice of St Thomas and advised Wolsey to claim revenues from his title church of Santa Cecilia.

For nine months Hannibal remained sole English ambassador and proctor at Rome, repeatedly assuring Wolsey of the pope's eagerness for an Anglo-imperial offensive against France and willingness to extend Wolsey's faculties, if given financial aid; he also attended to English and Welsh provisions to benefices. On 3 June 1523, however, John Clerk arrived in Rome as ambassador, and although Hannibal and he signed letters jointly, including detailed reports of the conclave and its prospects, assuring Wolsey that if he were there in person he would be elected pope (letters from 14 September to 2 December 1523), it appears that Wolsey had lost confidence in Hannibal as his special agent in the curia. Already, on 9 October 1523, he had been appointed master of the rolls, but after the election of Cardinal Giulio de' Medici as Pope Clement VII his recall to England was still delayed. The new pope wrote to Wolsey in Hannibal's praise on 13 January 1524 ('egit fide, egit prudentia, egit industria', 'he has acted faithfully, wisely, and industriously'), and insisted that on account of age and ill health he should not travel in winter (*State Papers, Henry VIII*, 6.232; *LP Henry VIII*, 4(1), no. 23).

Hannibal finally left Rome on 3 June 1524, entrusted with the papal honour of the Golden Rose for Henry VIII and papal bulls for Wolsey's college at Oxford, but not the enlarged legatine faculties *pro non familiaribus* over which he had expended much effort in vain. He landed at Dover on 1 September and had an honourable escort into London 'to his house at St John's'. Thereafter he is recorded acting in various capacities as master of the rolls, for example, signing on 5 May 1526 the grants of possessions for Wolsey's foundation at Oxford, but he was replaced by John Taylor in June 1527. His death probably occurred before Wolsey's fall in 1530 and not in 1531 as stated in the *Dictionary of National Biography*: the only evidence cited for 1531 is a letter to Thomas Cromwell of 30 August 1531 recording that Hannibal's executor had been Dr Taylor and that Wolsey had claimed a debt (*LP Henry VIII*, 5, no. 386). The inventory of Wolsey's goods in January 1530 included some andirons and carpets 'late dr Hanyballes' (*LP Henry VIII*, 4(3), no. 6184, p. 2767). He may have been the author of an incomplete fragment (subscribed 'hanybal') recording opinions on three abstruse legal questions, whether a king's mother might act as regent, and concerning the rights of captives (BL, Cotton MS Caligula D.IX, fols. 128*r*–131*r*).

Hannington, James (1847–1885), Church of England bishop in east Africa, was born on 3 September 1847 at St George's in the village of Hurstpierpoint, 8 miles from Brighton, the third son of Charles Smith Hannington (*d.* 7 June 1881) and his wife Elizabeth Clark Gardner (*d.* February 1872). C. S. Hannington was a successful fabric merchant ('warehouseman') with a warehouse at Brighton, who purchased his Hurstpierpoint mansion, St George's, shortly before James's birth, and in 1873 became a JP and colonel of the 1st Sussex artillery volunteers. Hannington was educated at home, and travelled and yachted with his parents. He wanted to enter the navy but his parents refused. In 1859, by a gunpowder explosion with a homemade firework, he so injured his left thumb that it was amputated. At thirteen he was sent to the Temple School, Brighton. At fifteen he entered his father's business, which he disliked and in which he remained six years. He continued to yacht and to travel on the continent. In 1864 he was commissioned second lieutenant in the 1st Sussex artillery volunteers; he became captain in 1865, and major in 1866. His family were Independents, and his father built an Independent chapel in the grounds of St George's. In 1867 the family became Anglican, a change not unusual among wealthy dissenters and not always unconnected with social aspiration. Its minister pensioned off, the chapel too became Anglican, as St George's. In 1868 Hannington decided to become an Anglican clergyman, and so in October entered St Mary Hall, Oxford, reading classics. High-spirited—for a bet he wheeled Captain Way up the High Street in a wheelbarrow—energetic and popular, he became captain of the St Mary Hall boat club and president of the Red Club. In 1870 he was coached by the Revd C. Scriven, rector of Martinhoe, north Devon. In June 1873, after some difficulty, he took his BA degree (MA 1875, DD 31 October 1884). In September 1873 he was rejected at the bishop of Exeter's examination, but in spring 1874 he succeeded, and was ordained deacon at Exeter. He was curate of Martinhoe and Trentishoe, Devon, then on 29 September 1875 became curate in charge, without emolument, of St George's, Hurstpierpoint, the chapel his father had built. He threw himself zealously into evangelistic and temperance work, becoming a popular mission preacher throughout the British Isles. On 11 September 1876 he was ordained priest.

Hannington married on 10 February 1877 a member of his congregation, Blanche, second daughter of Captain James Michael Hankin-Turvin, formerly of Terlings Park,

James Hannington (1847–1885), by George J. Stodart, pubd 1887

Gilston, Hertfordshire; they had three children in four years, and she survived her husband. Hannington was tall, well proportioned, with clear grey eyes and a voice with 'a certain plaintive quaver' (Dawson, 46). He was an amateur naturalist, in the faunicidal fashion of his day, and became an FLS and FRGS.

In 1882 Hannington offered himself to the Church Missionary Society (CMS) for a period of not more than five years, for the Victoria Nyanza mission, offering £100 per annum to its funds provided that the CMS paid for a replacement clergyman at St George's during his absence. He was accepted, and appointed leader of a group of six missionaries for Buganda. On 7 March 1882 he broke the news to his wife, 'who was more than brave about it, and gave me to the Lord' (Dawson, 193). Believing that missionaries' wives should not be exposed to danger and disease in Africa—he wrote 'it is little short of homicide to permit them to go beyond the neighbourhood of the coast' (Dawson, 319)—he always left his wife and children in England. The party sailed from London. They reached Zanzibar on 19 June, then travelled inland to Rubaga. After many hardships they reached Msalala, but Hannington's health had so suffered from fever and dysentery that he could not continue. Leaving some of his companions to finish the journey to Rubaga he returned, carried in a hammock, to the coast, reached Zanzibar on 9 May 1883, and on 10 June was back in England. He returned to his work at Hurstpierpoint, but on recovery of his health again placed himself at the disposal of the CMS. Its committee decided that the mission churches of eastern equatorial Africa should have their own bishop. The post was offered to Hannington. He accepted, and on 24 June 1884 was consecrated at Lambeth. On 5 November he sailed for Africa, *en route* visiting Palestine, where he was commissioned by the archbishop of Canterbury to do confirmation and other duty. He reached Mombasa on 24 January 1885, and entered on the charge of his enormous new diocese. From headquarters at Frere Town—where he disliked 'the dissenterish kind of Services' (Dawson, 362)—he moved continually about it. On 31 May 1885 he ordained two Africans deacon. Impressed with the advisability of opening up a new shorter route to Lake Victoria through Maasai country, he decided to lead an expedition and on 23 July 1885 set out with a caravan 226 strong. When Alexander Mackay, the CMS missionary in Buganda, heard of Hannington's intention, he wrote warning him not to come via Busoga because of an old prophecy that strangers advancing through Busoga would conquer Buganda, but his letter reached Mombasa after Hannington had left. At Kwa Sundu, Hannington left the larger portion of the party and went on with fifty porters. In a week he walked 170 miles. By 17 October he was at Lake Victoria. Hannington and his party had anticipated possible danger from the Maasai, but thought they would be safe under Ganda rule. Meanwhile the fears of Mwanga—the young, vicious, and sodomitic kabaka (king) of Buganda, who had already martyred Christian converts—and of his chiefs had been aroused by the report of the approach of this white man by the unusual north-eastern route. Dreading conquest because of recent German annexations at the east African coast, and fearing that Hannington might be the precursor of a hostile British force, Mwanga ordered that he be seized and killed. (A plan to persuade him to retrace his steps and enter Buganda by the customary southern route across Lake Victoria aborted when he missed the boat at Kavirondo.) After eight days' confinement, on 21 October 1885 he and most of his porters were murdered at Lubya's, Busoga, Uganda, by retainers of Luba of Bunia, one of Mwanga's tributary chiefs in Busoga. Reportedly Hannington was shot with his own gun. Before he died he reportedly said: 'I am about to die for the Ba-ganda, and have purchased the road to them with my life' (Dawson, 447). His last journal, written in a Letts pocket diary, survived and was brought back to England. In Britain and later in Uganda he was seen as a martyr. His 'illustrated letters to the youngsters at home', *Peril and Adventure in Central Africa*, was published posthumously in 1886. Two books by the Revd E. C. Dawson, *James Hannington ... First Bishop of Eastern Equatorial Africa* (1887) and *The Last Journals of Bishop Hannington* (1888) became best-sellers in Britain. Hannington's remains were initially buried in October 1885 at Lubya's. Later they were taken to Mumia's in Kavirondo by Basoga, who feared recent troubles had resulted from the murder. The location was divulged to Bishop Tucker in 1892 and on 31 December 1892, with a great service attended by Mwanga, Hannington's remains were reburied at Namirembe. He is commemorated by the Hannington memorial chapel in Namirembe Cathedral, Kampala, Uganda.

Hannington, Walter [Wal] (1896–1966), trade union official and political activist, was born on 17 June 1896 at 22 Randolph Street, Kentish Town, London, the youngest of four sons and sixth of seven surviving children of Henry William Hannington, foreman bricklayer of Kentish Town, and his wife, Eliza Smith. Born and reared in lodgings in the basement of a three-storey house in a working-class district of north London, Wal Hannington attended the local elementary school from the age of five.

Hannington left school at fourteen and after several jobs became apprenticed to a toolmaker, joining the Amalgamated Society of Toolmakers in March 1916. Largely self-taught in Marxist literature, he joined the Marxist British Socialist Party (BSP), where he came into contact with Russian Marxist exiles such as Maksim Litvinov and Georgy Chicherin. By 1917, aged twenty-one, he was a foreman in the Beta Engineering works in Camden Town and president of the Kentish Town branch of the Toolmakers' Society. The First World War, which the BSP opposed, and the Bolshevik revolution in Russia reinforced his commitment to militant activity as part of the shop stewards' movement in the engineering trades.

After a period of unemployment in 1919 Hannington found work at the government-run Slough Transport Depot where he became chairman of the shop stewards' committee, organizing strikes and demonstrations against its eventual closure in April 1920. In July of that year he followed the Toolmakers' Society into the merger which created the Amalgamated Engineering Union (AEU) and in the same month became a founder member of the Communist Party of Great Britain (CPGB) in which the BSP was absorbed. Both the AEU and the CPGB were to retain his allegiance throughout his life.

But it was as a leader of the unemployed that Hannington rose to national prominence. Already established as a meticulous organizer, a good platform speaker, and an activist with a flair for publicity, he was instrumental in October 1920 in bringing together representatives of unemployed groups in the capital into a London district council of unemployed with himself as organizer. Demonstrations were staged outside poor-law offices with the slogan 'Work or full maintenance at trade-union rates.' In April 1921 fifty delegates from England and Wales set up a national organization, the National Unemployed Workers' Committee Movement (NUWCM), with Hannington as national organizer. In 1922 it planned the first of a series of national hunger marches which were to become the NUWCM's principal contribution to the inter-war years. Seen as a subversive organization by the government, the NUWCM was quickly penetrated by police informers and its activities were harried at local and national level.

In 1922 Hannington received his first term of a month's imprisonment for uttering seditious words. Unabashed, he made a clandestine visit to Moscow in 1923 as a delegate to the Red International of Labour Unions. In late 1925 he was one of twelve leading communists arrested and tried on charges of sedition and incitement to mutiny, for which he received twelve months' imprisonment. Released in September 1926, following the defeat of the general strike, he organized national hunger marches in 1929, 1932, and 1934, which were largely ostracized by the labour movement and were harassed by the police, sometimes leading to violence. As a result of the 1932 hunger march Hannington served another three months in prison for offences against the 1931 Incitement to Disaffection Act.

The later 1930s saw small triumphs amid a larger failure. Although led by communists, Hannington's movement was criticized by the Communist Party for failing to politicize the unemployed, large numbers of whom joined the movement only to leave it quickly once work was obtained. By the mid-1930s it was past its peak, but it played a prominent part in the agitation which led to the suspension of the National Government's Unemployment Assistance Board scheme early in 1935. The now renamed National Unemployed Workers Movement (NUWM) mounted a last national march in 1936 which obtained C. R. Attlee and Aneurin Bevan as platform speakers for its rally in London, but even this success was overshadowed by the publicity attracted by the apolitical Jarrow crusade at the same time, the one hunger march in which the NUWM was not involved. With the outbreak of war, the activities of the NUWM were suspended, and finally wound up in 1943. Hannington returned to work as a lathe turner and while serving as convener of shop stewards was elected a national organizer of the AEU in November 1941. Taking up the post in February 1942, he held it until defeated in an election in 1951. In 1952 he was elected assistant divisional organizer for division no. 25, retiring in June 1961. Ebullient, sociable, and respected even by those who disagreed with his political views, Hannington saw his work in the AEU rewarded in 1938 with the Tolpuddle award, the top award of Britain's trade union movement, and the AEU's special award of merit in 1962.

Hannington unsuccessfully contested parliamentary seats in 1929, 1931, 1934, and 1950. Among a large number of writings, *Unemployed Struggles, 1919–1936* (1936), *The Problem of the Distressed Areas* (1937), *Ten Lean Years* (1940), and his unfinished autobiography, *Never on our Knees* (1967), were important polemical documents of the inter-war years. In 1917 he married Polly Winifred, daughter of Edwin Stanley, a railway labourer. There was one daughter of the marriage.

Hannington died of a heart attack on 17 November 1966 at Hammersmith Hospital shortly after attending for a medical examination. He was survived by his wife.

Wealth at death £1232: probate, 13 Jan 1967, *CGPLA Eng. & Wales*

Hanratty, James Francis (1936–1962), petty criminal and convicted murderer, was born on 4 October 1936 in the County Hospital, Farnborough, near Orpington, Kent, the eldest of four sons of James Hanratty (1907–1978), labourer and dustman, and his wife, Mary Wilson.

He attended St James's Roman Catholic school in Burnt Oak (1945–51) but remained illiterate. In the absence of steady or gainful employment James Hanratty spent most of his adolescent and young adult life engaged in crime—indeed, his last seven years were spent in penal institutions. In September 1954 he was put on probation for a year for taking and driving away a motor car without consent and while uninsured. Hardly had he finished his period on probation than he was before the courts and imprisoned for housebreaking and theft (1955). On this occasion he attempted suicide while in custody. Another prison sentence followed in 1957 in consequence of stealing another car. Almost immediately on release from prison he was reconvicted, in March 1958, to three years' corrective training; he left Strangeways prison, Manchester, on 24 March 1961. Overall Hanratty spent 58 of the 66 months after his nineteenth birthday in prison. Up to this time Hanratty had displayed himself as little more than a small-time hoodlum, always aspiring, ambitiously, to greater notoriety.

On 22 August 1961, however, Michael Gregsten and Valerie Storie were abducted from a Morris Minor car parked in a cornfield at Dorney Reach, Buckinghamshire. Their abductor subsequently shot Gregsten dead and raped and gravely wounded Storie at Deadman's Hill, Bedfordshire. Hanratty was charged with the murder on 14 October 1961.

Hanratty's trial (22 January–17 February 1962) was of unprecedented length for a murder trial against one defendant. It was notable for its conspicuous fairness. The trial judge, Mr Justice Gorman, even refused to allow the crown to adduce fresh evidence about some missing black nylon gloves at a boarding-house where Hanratty had contemporaneously lodged. (Valerie Storie had given firm evidence of the assailant's wearing such gloves—a telling pointer to identification.) The jury's verdict, delayed by a further direction on the meaning of 'reasonable doubt', was surprisingly against Hanratty. Junior counsel for the crown, Geoffrey Lane (later lord chief justice of England), had his pen poised to endorse his brief with the words 'not guilty'. The campaign against the verdict was launched, with some justifiable optimism. Its supporters were convinced that they had established an alibi for Hanratty, and attached great importance to the confession to the Deadman's Hill killing by Peter Louis Alphon. A leading legal magazine in an editorial argued that sustaining James Hanratty's conviction in order to avoid embarrassment was carrying factional solidarity to unacceptable extremes. That comment followed an independent inquiry in 1975, conducted in private and largely on the documentation, by Lewis Hawser QC, a much respected practitioner and later an official referee in the High Court. His conclusion was that the case remained overwhelming, and that there was little reason to doubt the jury's verdict. Dispirited, but not dissuaded, the campaigners renewed their efforts to upset the verdict.

On 4 April 1962 Hanratty was executed at Bedford prison, in the precincts of which, on the same day, he was buried initially. He was reinterred at Carpenders Park, Watford, Hertfordshire, on 22 February 1966.

Attempts to declare Hanratty innocent of the crime focused mainly on two aspects of the forensic process: the paucity of direct evidence of complicity and the functioning of an alibi. The identification of Hanratty by the murdered victim's companion, Valerie Storie, was always imperfect, even by the less stringent tests of those days. Hanratty's defence that on the day of the crime he was a couple of hundred miles away, in the north-west of the country, was hotly contested. At the time there was no legal requirement on the defence, pre-trial, to notify the prosecution of an alibi, but, problematically, defence counsel at the committal proceedings before the magistrates at Bedford disclosed his client's case pre-emptively. The jury at Bedford assizes must have been influenced by the prosecution's previous ability to break the alibi. The lack of any scientific evidence proved unavailing.

Of all the perceived miscarriages of justice since the Second World War which scarred the face of English criminal justice, the case of James Hanratty was undoubtedly one of the few most enduring: the campaigners for quashing the 1962 conviction ceaselessly maintained a campaign of literary and other verbal output until the Court of Appeal (criminal division) pronounced finality of the judicial process in late 2001 on a referral under the Criminal Appeal Act 1995. The Court of Appeal's final verdict (the title of the most substantial study of the case by Bob Woffinden in 1997) was that the 1962 criminal investigation and trial were unsafe, but that the facts ultimately revealed that Hanratty was far from innocent of the crime. Unfortunately, this disconcerted a bewildered public about the 'wrongful conviction'. The application of a DNA test on Hanratty's exhumed body in March 2001, on order of the lord chief justice, helped to bolster the soundness of the original guilty verdict, but other aspects of that trial meant that the verdict was nevertheless unsatisfactory, and dictated a quashing of the conviction.

Hanratty's case epitomized the perennial problem of whether the quashing of a conviction was sufficient to demonstrate the individual's innocence of the crime. The public became alive to the fact that the presumption of

innocence (original or revived on a successful appeal) is merely a rule of evidence and not a declaration of non-complicity in crime. As the first commentator on the Hanratty case wrote in 1963: 'Research into the causes of crime—it seems a blindingly obvious statement—should find its most fruitful material from the administration of criminal justice. Sad to relate, in England, it finds little or no assistance from the legal process' (Blom-Cooper, 133). Broadly speaking, that remains true today.

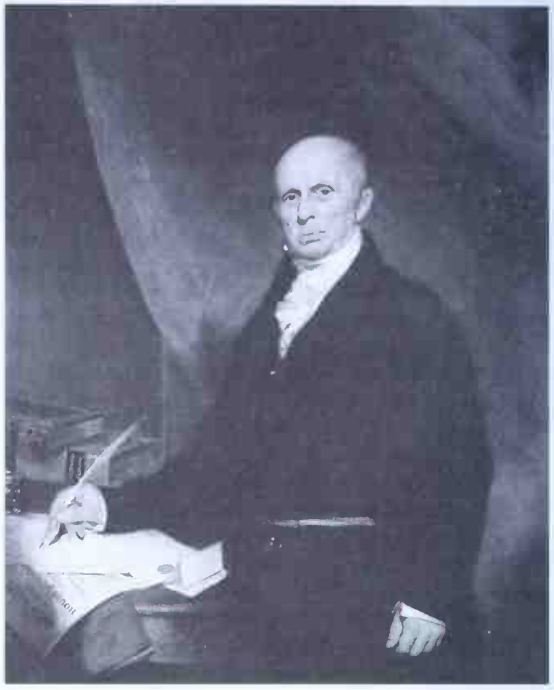
Hansard, Luke (1752–1828), printer to the House of Commons, was born in the parish of St Mary, Norwich, on 5 July 1752, the eldest son of Thomas Hansard (1727–1769), an unsuccessful manufacturer, and his wife, Sarah (1717–1797), daughter of the Revd William Norfolke of Spilsbury, Lincolnshire. He was educated at the free grammar school, Kirton in Holland, Lincolnshire (1759–65). From 1 June 1765 he served seven years, though neither formally indentured nor freed, with Stephen White, printer of Cocky Lane, Norwich. He wrote in his *Auto-biography*: 'My Master was but rarely in the office ... [but] i increased my diligence to serve my Master, because i loved him, and i delighted in my business ... [so that] in a short space of time i became expert; I was proud in being compositor & pressman, corrector and manager, copperplate printer and shopman, book keeper and accountant to this chequered business' (L. Hansard, 9).

Hansard left Norwich for London in the summer of 1772 and soon found work as a compositor with Henry Hughes of Great Turnstile, Lincoln's Inn Fields, who had inherited a prosperous parliamentary, book, and general printing house. His master found him 'handy at jobbing and ready for anything' (L. Hansard, 31). Hughes printed for most of the leading publishing booksellers, and Hansard extended his general education through the works he was given to set and proof-read: Orme's *History of Indostan* printed for Nourse (1763) gave him 'a competent knowledge of Indian affairs, which afterwards became highly useful to himself and to the public' (*GM*, 560) when it came to printing the parliamentary investigations into the operation of the East India Company (1772–8). He was promoted to printing manager in 1793, taken into partnership in 1794 (trading as Hughes and Hansard), and in 1799 he took over the business. The same year he was admitted to the livery of the Stationers' Company. He subsequently gave £2500 for two charitable bequests, one for 'needy printers over the age of 65', the other for a 'neatly bound Church of England prayer book' to be given to every youth bound at the hall (L. Hansard, xv).

On 21 July 1775 Hansard married a Norfolk woman, Elizabeth Curson (1754–1834); they had six children, five of whom outlived their parents. Hansard bound his three sons to Hughes and freed them at Stationers' Hall. The eldest, Thomas Curson *Hansard, left his father's employ, but the younger two, James and Luke Graves (*d.* 1828), were taken into partnership, the name changing to Hansard & Sons. They eventually succeeded to the business. Hansard worked until the end of his life, but in his latter years delegated much to his youngest son and permitted himself some holidays in his native Norfolk, where he stayed with hitherto unknown relatives.



Luke Hansard (1752–1828), by Samuel Lane

The printer to the house came under the authority of the speaker and executed all Commons printing except the *Votes* or agenda papers which were printed by John Nichols. Hansard printed the *Journal* or daily record of the decisions of the Commons and the select committee reports; he worked closely with the speaker in preparing them for publication. He served under seven speakers, but had a special rapport with the meticulous Charles Abbot, speaker from 1802 to 1816 and chairman of several major committees, including that on the public records (1800). Hansard also worked for various government departments, and acquired a virtual monopoly of private parliamentary agency work. Before the house had a library, he undertook a librarian's duties, keeping a complete run of sessional papers, which he and his son Luke Graves indexed (*Catalogue and Breviate of Parliamentary Papers, 1696–1834*). It is a lasting monument to their industry and knowledge of parliamentary procedure, and is still consulted alongside more recent indexes.

The recession of the 1790s curtailed book printing at a

time when parliamentary printing increased vastly, changing the bent of Hansard's business. He invested in more machinery and, in 1800, built a second printing house in Parker Street, which his sons managed. The secret of his success lay in his managerial skill in a rapidly expanding business, combined with meticulous attention to detail. He had a sure eye for type and consummate skill in page design when it came to reducing the complex, cumbersome matter of debates and committee reports to legible, intelligible pages. He told the select committee on public printing in 1822 that whereas in other printing offices the men were left to use their own judgement:

> As soon as the manuscript comes to me, I sit down and draw that scheme out upon paper, the very size the men are to work it to, the quantity they are to take into a page, and the various widths of each; how far they are to go, and what quantity of pages that particular paper is to make. (House of Commons select committee report on public printing, 1822)

Hansard's was the largest printing house in London, employing some 200 men. From the mid-1780s there were constant labour troubles, and at the beginning of the century Hansard combined with the other major master printers to settle disputes and control wage demands. He was a hard taskmaster, and took tough measures to ensure that Commons printing was not disrupted and costs kept down. As parliamentary printer he was caught in the crossfire of a workforce demanding higher wages in a period of inflation and political unrest and a public clamouring for parliamentary reform and a curbing of alleged privilege and exorbitant rewards. In his lifetime were held the first select committee inquiries into printing for parliament (1810, 1822, and 1828). He was called to give evidence at each, and emerged with his and his firm's reputation untarnished. The evidence of John Rickman, clerk assistant to the speaker, at the 1828 committee was a personal eulogy, reprinted as an obituary notice in the *Gentleman's Magazine*; but the committee's attitude and its recommendations, which the Hansards considered were based on ignorance of printing and trade conditions, seem to have broken his spirit and caused a rapid physical decline. He died in Southampton Street, London, on 29 October 1828 and was buried on 6 November in the parish church of St Giles-in-the-Fields. He left a widow, three sons, and two daughters. He dedicated his life to printing for parliament, was a devout Christian, a staunch tory, and a devoted family man. He wrote a memoir for his younger sons, published in 1817. ROBIN MYERS

Wealth at death approx. £80,000—£800 Stationers' Company English Stock share; plus £1404 yield of annuity and shares; printing offices, type, plant, and stock; house at Lambeth: will, PRO 11/1748

Hansard, Thomas Curson (1776–1833), printer and publisher, was born on 6 November 1776 in the Spa Fields district of Clerkenwell, London, the eldest of the four children of Luke *Hansard (1752–1828), printer, and his wife, Elizabeth (1754–1834), the only surviving daughter of John Curson of Swanton Morley, Norfolk. Thomas Hansard was apprenticed to Henry Hughes, the parliamentary printer and his father's partner, on 2 November 1790; he was admitted to the Stationers' Company (after a seven-year apprenticeship) and made a freeman of the City of London on 7 November 1797. He married Anne (or Ann) Palmby (1770–1811), the daughter of Thomas Palmby of Swaffham Prior, Cambridgeshire, at St John's, Clerkenwell, on 12 November 1797.

Through his work as a parliamentary printer, Thomas Hansard met leading politicians and government officials; he developed radical views that differed from his father's conservative opinions. Luke Hansard was also disappointed with his son's progress in the business. In 1803 Thomas Hansard left Hughes and Hansard and purchased, in 1805, the printing house of Thomas Rickaby, in Peterborough Court, Fleet Street, from the latter's executors. An admirer of William Cobbett, he undertook, from the beginning of 1809, the printing of *Cobbett's Political Register* after Cobbett fell out with Cox and Baylis, his previous printers. An article on the flogging of militiamen at Ely, written by Cobbett for the 1 July 1809 issue, led to a charge of seditious libel against Cobbett, Hansard, and the distributors of the periodical. Only Cobbett contested the charge when the trial began at the court of king's bench on 15 June 1810; all the defendants were found guilty, and Thomas Hansard was sentenced to three months in the king's bench prison, with the further obligation to enter into a recognizance to keep the peace for three months with a bond of £200 from himself and two sureties.

Hansard had printed three major publications initiated by Cobbett: *Parliamentary Debates*, *Parliamentary History*, and *State Trials*. Cobbett was persuaded to sell his interest in these titles by financial difficulties arising from his imprisonment, and after protracted and ill-natured negotiations Hansard purchased them in early 1812. While Cobbett had the foresight to initiate these important publications, Hansard had the determination and industry to

continue their production on a regular basis. John Wright, who worked for both Cobbett and Hansard on the parliamentary series, was noted for his indolence, and the main burden of the work fell on Hansard, whose *Parliamentary Debates* was soon recognized as the standard record. This remains his greatest achievement.

Anne Hansard died on 21 July 1811; their two daughters had predeceased her. Hansard married secondly his sister-in-law, Mary Palmby (*c.*1776–1849), by licence at Swaffham Prior on 1 February 1812. He moved in 1823 to Paternoster Row, where he established the Paternoster Press. A lively interest in his craft led Hansard to publish *Typographia* (1825); this fine manual, written in a clear style, is an outstanding guide to the printer's craft and an important source for historians of printing. He included a warm tribute to his father's skills, which betokened an improvement in relations between them since the time of his brief imprisonment. Hansard also described with pride an apparatus which he invented and patented for the improvement of the hand-press. He was, however, quick to adopt the machine presses, which superseded his ingenuity. Hansard was elected one of the common councilmen for the radical ward of Farringdon Without (South Side), 1821–4, and he served on the improvement committee, 1822–4.

Thomas Curson Hansard died in Chatham Place, Blackfriars, on 14 May 1833; he was buried at St Bride's, Fleet Street, London, on 20 May. Mary Hansard, his widow, was buried at St Bride's on 4 August 1849. Hansard was succeeded in his firm by Thomas Curson Hansard (1813–1891), the eldest of his five children with his second wife. He published the parliamentary debates until the rights were sold in 1889 to the Hansard Publishing Union run by Horatio Bottomley. The use of the word 'Hansard' as a colloquial term for the written record of the parliamentary debates was common soon after 1833. When the two houses established, in 1909, their own official reports of the debates, the name disappeared from their titles. The House of Commons ordered, in 1943, that the name should be restored to the title-page of its official report, and it is now used in many Commonwealth parliaments.

Hansbie, Morgan Joseph (1673–1750), Dominican friar, was the younger son of Ralph Hansbie of Tickhill Castle, Yorkshire, and his wife, Winifred, daughter of Sir John Cansfield. He was professed in the Dominican convent at Bornhem, near Antwerp, in 1696, and was ordained priest in 1698. After holding several monastic offices in that convent he was appointed in 1708 chaplain to the Dominican nuns at Brussels, and in 1711 he came on the English mission. He returned, however, to Bornhem in 1712, and in the same year was appointed vice-rector of the Dominican college at Louvain, of which he became fourth rector in 1717. In 1721 he was made provincial of his order and created DD. He was then sent to the mission at Tickhill Castle in England, his family home. In 1728 he was installed prior of Bornhem, and in 1731 appointed vicar provincial for Belgium. In the latter year he was re-elected prior of Bornhem, and a second time provincial in 1734, when he was stationed in London.

From 1738 to 1742 Hansbie was vicar provincial in England, and in 1743 he went to Lower Cheam, Surrey, the residence of the Dowager Lady Petre. Hansbie was an ardent Jacobite, and on 22 December 1745 the house was searched for arms. Only two pairs of pistols were found, but Hansbie was taken before the magistrates at Croydon. He was apparently liberated on bail, for he continued to reside at Cheam until his return to London in 1747, when he was attached to the Sardinian chapel in Lincoln's Inn Fields. In that year he was instituted vicar-general of England, and again provincial in 1748. He died in London on 5 June 1750.

Hansbie published a number of works while at Louvain in Latin, including *Philosophia universa* (1715); other theological treatises were *Theses theologicae ex prima parte (summae D. T. A.) de Deo ejusque attributis* (1716), *Theses theologicae de jure et justitia* (1717), *Theses theologicae de trinitate, homine, et legibus* (1720), and also *Theses theologicae de virtutibus in communi tribus theologicis in specie, cum locis eo praecipue spectantibus* (1721).

Hansell, Edward Halifax (1814–1884), Church of England clergyman, was born at St Mary-in-the-Marsh, Norwich, on 6 November 1814, the fourth son of Peter Hansell (1764–1841), BA of Magdalen College, Oxford, vicar of Worstead, Norfolk, and minor canon and precentor of Norwich from 1811 to his death. Edward was educated at Norwich School under the Revd Edward Valpy (1764–1832). He matriculated at Balliol College, Oxford, on 9 June 1832 but became a demy of Magdalen College in the same year, and in 1847 he was elected fellow of Magdalen. In 1835 he was placed in the first class in mathematics and in the second in *literae humaniores*. He graduated BA on 28 January 1836, MA on 6 December 1838, and BD on 21 October 1847.

Hansell was ordained deacon in 1839 and priest in 1843. He was tutor of his college and mathematical lecturer in 1842, and vice-president in 1852. He gained the Denyer theological prize in 1840; was tutor of Merton College from 1845 to 1849; Grinfield lecturer in 1861–2; master of the schools in 1841; public examiner in *literae humaniores* in 1842–3 and 1858–9; public examiner in mathematics from 1851 to 1853; and public examiner in law and modern history in 1855–6. He was also one of the classical moderators and select preacher to the university in 1846–7. In August 1853 he vacated his fellowship at Magdalen on his marriage to Mary Elizabeth, fifth daughter of David Williams (1786–1860), warden of New College. He remained divinity lecturer of his college until December 1865, when he accepted the college living of East Ilsley, on the Berkshire downs. He devoted himself to his parish duties until his death, at East Ilsley, on 8 May 1884, from the effects of an accident.

Besides the Denyer theological prize essay (1840) Hansell published some other theological works. His chief scholarly effort was on the Greek of the New Testament (3 vols., 1864); he also contributed the articles on the manuscripts of the Greek Testament to Cassell's *Bible Cyclopaedia*. A modest and retiring man, he left three sons and a daughter, his wife having predeceased him.

Wealth at death £38,315 16*s.* 5*d.*: resworn probate, Oct 1885, *CGPLA Eng. & Wales* (1884)

Hansom, Charles Francis (1817–1888), architect, was born on 26 July 1817 at 63 Micklegate, York, the eighth of the nine children of Henry Joseph Francis Hansom (*bap.* 1778, *d.* 1854), builder and joiner, and his wife, Sarah Simpson (*bap.* 1779, *d.* 1856). Coming from a steadfast Roman Catholic family, he was baptized the following day in the chapel of the Bar Convent. He received his professional training in the offices of his brother Joseph Aloysius *Hansom in Birmingham and Hinckley. In 1841 he married Elizabeth Muston (1817/18–1902) of Hinckley with whom he had a son, Edward Joseph Hansom (1842–1900). About the same time he sketched and measured old churches, mastering thereby the character of Gothic architecture. A turning point was the commission for the church of the Holy Sacrament and St Osburg in Coventry (1843–5) for Father William Bernard Ullathorne. By about 1845 he had moved to Clifton, Bristol, where he obtained numerous commissions through the continuing patronage of Ullathorne. In a short time churches at Edgehill (1847), Woodchester (1849), and Erdington (1850) in Warwickshire had established his reputation. Thenceforward Decorated Gothic churches and chapels to the number of about sixty dominated his output, among them examples at Rugeley (1851), Wolverhampton (1855), Selby (1856), Cheltenham (1857), and Bath (1863). His churches are distinguished by their consistent adherence to correct medieval details. Following Pugin's death, Hansom's designs shunned the wayward, experimental paths widely explored by other church architects.

From Hansom's Clifton premises, initially at 1 Richmond Hill, then from Rock House, Bellevue, and from 1866 St Nicholas's Chambers, there issued besides church designs a steady stream of other works, including colleges at Clifton (1861) and Malvern (1865) bearing both Decorated and Perpendicular details. There were also convents at Clifton (1848), Taunton (1849), Loughborough (1850), and Stone (1853) and Stoke (1857) in Staffordshire, besides numerous presbyteries realized in late Gothic domestic terms. In 1854 Hansom was joined by his brother Joseph in partnership. The arrangement was initiated by Joseph, who had more work than he could handle alone from his previous office in Preston, Lancashire. Following an illness late in 1853 Joseph summoned his brother to superintend a church at Minster Acres, Northumberland, which had to be completed by Christmas, and from this crisis the partnership arose and Joseph moved from Preston to join Charles at Clifton. As was customary, each partner carried out his own commissions, but all works issuing from the firm were publicly attributed to J. and C. Hansom. The partnership was terminated amicably in 1859.

From 1867 to 1871 Hansom had his only son, Edward, as his partner in the Clifton office, the style of the firm being C. F. Hansom & Son. From these years date the Franciscan convent at Woodchester, Gloucestershire (1869), and the conversion in 1871 of the Bristol Irvingite Church (built in 1840 from designs of R. S. Pope) to the uses of a Catholic church renamed St Mary on the Quay. Edward Hansom had trained in his father's office and in 1864 was elected a student member of the Bristol Society of Architects. In 1871 he left Clifton to join in partnership Archibald Mathias Dunn (1832–1917), who had also trained in Charles Hansom's office, and had by this time built up a flourishing practice in Newcastle upon Tyne. Numerous Catholic churches in the north-east as well as convents, colleges, and schools emanated from the partnership. Edward Hansom was elected FRIBA in 1881. Meanwhile A. M. Dunn was president of the Northern Architectural Association in 1870, and a justice of the peace for co. Durham. He published *Notes and Sketches of an Architect* (1886) and retired in 1893. By this time the partnership's secular designs had broadened into the terracotta and red brick of late Victorian secular architecture. From 1901 A. M. Dunn resided mainly at Bournemouth, where he died in 1917. While still in practice Edward Hansom died in 1900 from self-inflicted bullet wounds, having suffered from insomnia and depression for about eighteen months.

After his son's departure in 1871, Charles Hansom continued alone at Clifton, taking his former pupil Frederick Bligh Bond (1861–1945) into partnership in 1886, two years before his death. Notable works of these years are: St Joseph's Home, Bristol; Kelly College, Tavistock, Devon; University College, Tyndalls Park, Bristol; and extensive work on Clifton College. He was elected FRIBA in 1865 and was a founder member of both the Bristol Society of Architects and the Bristol and Clifton Junior Architects' Society. The aim of the latter was to revive the moribund Bristol Society of Architects (founded originally in 1850) by involving

young members through meetings, drawing competitions, lectures, and publications. The society flourished between 1881 and 1884 with Charles Hansom as its president. He died at his home, 1 Claremont Place, Clifton, on 30 November 1888 and was buried on 3 December in Perrymead cemetery, Bath. *The Tablet* obituary of Charles Hansom pronounced him 'not only an able architect but a generous and most honourable man' (*The Tablet*, 909).

Hansom, Joseph Aloysius (1803–1882), architect and inventor of the safety cab, was born at 63 Micklegate, York, on 26 October 1803, the second of the nine children of Henry Joseph Francis Hansom (*bap.* 1778, *d.* 1854), joiner and builder, and his wife, Sarah Simpson (*bap.* 1779, *d.* 1856). He was descended of a staunch Roman Catholic family long settled in York. In 1816 he was apprenticed to his father, but in the following year, having shown an aptitude for designing and construction, his articles were allowed to lapse, and new ones were taken out with Matthew Phillips, an architect of York. Following his apprenticeship he, in 1820, became a clerk to Phillips, doing also some work on his own account, and teaching at a night school, where he improved his scant education. On 14 April 1825 he married Hannah Glover (1809–1880), and after settling in Halifax became assistant to John Oates, architect, where for the first time he studied the Gothic style. In 1828 he entered into partnership with Edward Welch, and with him built churches in Liverpool, Hull, and the Isle of Man. Their public and domestic buildings include Beaumaris gaol, Anglesey (1828–9), a suspension bridge at Middleham, Yorkshire (1829), the Gothic King William's College, Isle of Man (1830–33; gutted by fire 1844), and Bodelwyddan Hall, Flintshire (*c.*1830–1840), a Gothic castellated house for Sir John Williams, bt. Following its later use as a girls' school the latter was lavishly refurbished in the 1980s to create an appropriate setting for Victorian portraits from the National Portrait Gallery, including G. F. Watts's famous series of twenty-six portraits of eminent Victorians and a collection of the work of the north Wales sculptor John Gibson. In its importance to scholars of the Victorian period the status of Bodelwyddan Hall has increased since its inception as a private country house.

In 1831 Hansom and Welch won the important competition for the town hall at Birmingham. The classical design was Hansom's, and the building was erected and completed in 1833 with some modifications by Welch. The two young architects unwisely stood surety for the builders, and having underestimated the cost of transporting the hard stone from Anglesey with which the building was to be faced, went bankrupt in 1834. This disaster led to the breakup of their partnership and Hansom took up business management before resuming architectural practice.

On 23 December 1834 Hansom registered his idea of the 'patent safety cab' (no. 6733), the vehicle which was named after him. The principle of the 'safety' consisted in the suspended or cranked axle; the driver's back seat was not in the original patent, and the modern so-called Hansom cabs retain but few of the original ideas. One of the great advantages of Hansom's cab was that, the wheels being much larger than usual, and the body of the vehicle nearer the ground, it could be worked with less wear and tear, and with a diminished risk of accidents. Hansom disposed of his rights to a company for the sum of £10,000, but no portion of this money was ever paid to him. The company got into difficulties, and in 1839 Hansom took the temporary management, and again put matters in working order. For this service he was presented with £300, the only money he ever received in connection with his vehicle.

In December 1842 Hansom brought out the first number of *The Builder*. Want of capital obliged him to retire from this undertaking, and he had to content himself with a small payment from the publishers. He then resumed architectural practice, principally ecclesiastical and domestic architecture for the Roman Catholic church. From 1854 to 1859 he worked in partnership with his younger brother Charles Francis *Hansom, from 1859 to 1861 with his eldest son, Henry John Hansom, and from 1862 to 1863 with Edward Welby Pugin, with whom he then had a disagreement. At the beginning of 1869 he took his second son, Joseph Stanislaus Hansom, who had previously been articled to him, into a partnership which lasted until 1879, when he retired from the firm, retaining a life interest in the business.

Hansom's major achievement was his churches, whose stylistic character followed the trends of the age. The early, Anglican churches of Hansom and Welch at Acomb, Yorkshire, and in the Isle of Man were unscholarly essays in ill-digested Gothic terms. The authoritative teaching, however, of A. W. Pugin's books and actual buildings changed this, and from 1846, when he designed the church of the Immaculate Conception, Spinkhill, Derbyshire, his work incorporated authentic Early English or Decorated Gothic terms. Following Pugin's death, however, architects experimented with wayward details, and at St Walburge's, Preston, Lancashire (1854), Hansom introduced a controversial hammerbeam roof and a spectacular tall spire 306 feet high. His best church work appeared in the 1870s with the Holy Name, Manchester, St Philip Neri, Arundel, Sussex, and the Servite church in

London, all planned in the French Gothic manner, with tall compact outlines and apsidal east ends. Other works of his are to be found all over the United Kingdom, and further designs were carried out in France, Australia, and South America.

On 14 April 1875 Hansom celebrated his golden wedding, surrounded by his children and grandchildren. His wife died in 1880, and he himself died at his home, 399 Fulham Road, Chelsea, London, on 29 June 1882, and was buried in the cemetery of St Thomas's Church, Rylston Road, Fulham, on 3 July. Of Hansom, Gillow wrote that 'his character was one of much power, mingled with still greater gentleness' (Gillow, *Lit. biog. hist.*, 119).

Hanson, (Emmeline) Jean (1919–1973), biophysicist and zoologist, was born on 14 November 1919 in Newhall, Derbyshire, the only child of Thomas Hanson and his wife, Emma Jane Badger, daughter of a Derbyshire police superintendent. Both her parents were schoolteachers. Her father died only a few months after her birth, and she was brought up entirely by her mother, who became headmistress of a primary school. Mrs Hanson was said to be a woman of character and wide interests, and from her Jean developed a love of music and the arts. She was educated at the High School for Girls, Burton upon Trent (1930–38), where she became interested in biology. Scholarships enabled her to attend Bedford College, London, and she graduated in 1941 with first-class honours in zoology.

As a research student Jean Hanson began a very substantial body of research on the vascular system of annelids (segmented worms). However, this work was interrupted by the evacuation of Bedford College to Cambridge during the war, where she worked on the histogenesis of the mammalian epidermis in tissue culture, at the Strangeways Research Laboratory. From 1944 until 1948 she was a demonstrator in zoology, and her PhD thesis was not finally submitted until 1951, three years after she left Bedford College. Meanwhile, in 1947, the Medical Research Council had established a biophysics research unit at King's College, London, intended to apply the powerful new physical methods that were becoming available to structural problems in biology. Jean Hanson joined the unit as a founder member in 1948 and was responsible for building up the biological side of the laboratory. At the unit her interests in muscle began to develop and she initiated the use of isolated myofibrils (prepared from glycerol-extracted rabbit skeletal muscle) which could be caused to contract in physiological salt solutions. These were one of the first examples of the many model systems subsequently used in molecular and cell biology to study the structural and biochemical properties of assemblies of molecules under controllable conditions. Jean Hanson's experience as a microscopist enabled her to realize that myofibrils provided ideal experimental material for examination in the phase contrast light microscope, then just coming into use. After several important initial observations she realized the research would also require use of the electron microscope, an instrument of much greater resolving power, which was then coming into use in the United States. Therefore, in 1953–4, she went to the biology department of the Massachusetts Institute of Technology, which under Professor Francis O. Schmitt had already become a centre for research into biological fine structure. It was there, with H. E. Huxley, also at MIT to learn electron microscopy, that she carried out the experiments which established the structural basis of the sliding filament mechanism of muscular contraction, a theory which long dominated muscle research. Hanson and Huxley discovered the overlapping arrays of actin and myosin filaments which are responsible for the characteristic appearance of striated muscle and which slide past each other by an active process during contraction. They suggested that the sliding force might be produced by moving myosin crossbridges.

Jean Hanson returned to the biophysics research unit in 1954 and continued her studies of muscle structure by light and electron microscopy. She joined forces with a physiologist, Dr Jack Lowy, and was able to demonstrate unequivocally the existence of the double filament mechanism in a wide variety of muscle types, including several smooth muscles from invertebrates.

Jean Hanson's work then turned towards molecular aspects of the contraction mechanism, and together with Lowy she used electron microscopy to elucidate the internal structure of the actin filaments in muscle and the location of the regulatory protein tropomyosin. Her scientific contributions were by now widely appreciated and she received the title of professor of biology in the University of London in 1966 and was elected a fellow of the Royal Society in 1967.

Jean Hanson's abilities as an administrator and teacher contributed to the success of the school of biological sciences at King's College, London; and her qualities of common sense, understanding, and tenacity earned her several offers of important non-scientific office in the academic world. However, she decided to continue with her scientific work and, in 1970, became director of a muscle biophysics unit at King's College, London. Her life was cut short in 1973 when she contracted a rare brain infection and died within a few hours, at her home, 50 Southwood Park, Southwood Lawn Road, London, on 10 August 1973.

Jean Hanson was unmarried and lived alone, but her interests in music and the arts, as well as science, brought

her a wide circle of appreciative friends. Her outstanding qualities in research lay in her ability to pick the right experiment, her capacity for hard work, and her enjoyment of a good scientific discovery for its own sake.

Hanson, John (*fl.* 1604), poet, was perhaps the scholar of Peterhouse, Cambridge, whose residence is documented from 1599 to 1603, and who graduated BA in 1604. The poet's only known work, *Time is a Turne-Coate, or, Englands Three-Fold Metamorphosis* (1604), is prefaced by an 'Epistle Dedicatorie' (addressed to Thomas Bennet, lord mayor, and to William Rowley and Thomas Middleton, sheriffs of London), dated 26 March 1604, in which Hanson claims to 'have long expected ... men of greater experience and graver judgement' to have praised their governance. Its references to the currently 'requisite lawes for the supplanting and depopulating of vice', and to 'the *Anthropophagi* or *Canibals*; who ... gormandize on other mens flesh', seem relevant to the dating of Shakespeare's *Measure for Measure* (1. ii) and *Othello* (1. iii). Hanson's poem is a minor contribution to the literary flood prompted by the events of 1603: Queen Elizabeth's death, King James's accession, and the visitation of plague that delayed his triumphal entry into London. Hanson accordingly appends 'A Panegyricall Pageant-speech or Idylion pronounced to the Citie of London, upon the entrance of her long expected Comfort', and three acrostic 'Pastorall Panegyricks' to the new royal family. Despite its ostentatious ambition, however, Hanson's 'Epilogomena, to Londons late lamentable Heroicall Comi-Tragedie' remains strained and inert, its heroic couplets 'turgid and inflated' (Corser, 7.148).

Another **John Hanson** (*b.* 1610/11), son of Richard Hanson (rector of Himley, Staffordshire), matriculated at Pembroke College, Oxford, on 25 June 1630, aged nineteen, and has been linked (Wood, *Ath. Oxon.*, 3rd edn, 3.473) with John Hanson of Abingdon, Berkshire, the author of a rare tract, *A Short Treatise Shewing the Sabbatharians Confuted by the New Covenant* (1658). According to its title-page, copies were 'left at Captain *Hansons* ... at the West end of *Paul's*'.

Hanson, John (*b.* 1610/11). *See under* Hanson, John (*fl.* 1604).

Hanson, Sir Levett (1754–1814), traveller, was born on 31 December 1754 at Melton, Yorkshire. He was the only son of Robert Hanson of Normanton in Yorkshire and his wife, Elizabeth, daughter of Edward Isaack Jackson, a substantial apothecary and corporation member of Bury St Edmunds. His father was the son of Benjamin Hanson and Elizabeth, daughter of Robert Levett of Normanton. Hanson went in 1766 to a school at Bury St Edmunds, and in 1769 to one at North Walsham, Norfolk, where Nelson was for two years his schoolfellow. In 1771 he studied with Thomas Zouch, sometime fellow of Trinity College, Cambridge, and then rector of Wycliffe in the North Riding of Yorkshire. In 1774 he matriculated from Trinity College, Cambridge. Owing to some brawl he migrated in July 1774 to Emmanuel College as a fellow-commoner, but did not take a degree. In autumn 1776 he made, in company with the antiquary Michael Lort, his first tour on the continent, and acquired a taste for continental life and society, which led him to live out of England. Between 1776 and his death he paid only four brief visits to England (in 1780, 1785, 1786, and 1790).

After long sojourns at many foreign courts, Hanson made the acquaintance, in 1780, of Prince Philip of Limbourg, duke of Holstein, who created him his councillor and knight of his order of St Philip. Later on Hanson was made vice-chancellor and knight grand cross of the order, and resided for several years at Ghent. In 1787 he spent some time at the court of Ferdinand, duke of Parma; in 1789 he visited Naples and saw Sir William and Lady Hamilton, and in 1791 he took up his residence at the court of Ercole III Rinaldo d'Este, duke of Modena, with the rank of brigadier-general and chamberlain. He had previously become a member of the academy of Parma. In 1794 he incurred the suspicion of the Austrian government, and was compelled to leave the court of Modena, though he retained his office and the friendship of the duke until the latter's death in 1803. On arriving at Innsbruck he was arrested, kept eleven months in confinement, and finally tried at Vienna.

On his release Hanson travelled in Germany, finding favour at various courts, notably at Saxe-Hildburghausen, where he was presented with the family order of the duke, and settled in 1797 at Erlangen. In 1800 he was created knight vice-chancellor of the order of St Joachim, an order he was afterwards instrumental in conferring on Nelson, with whom he remained in contact throughout his life. He then devoted himself to the compilation of *An Accurate Historical Account of All the Orders of Knighthood at Present Existing in Europe* (1802), which was dedicated to Nelson. In 1807 he moved to Stockholm, where he was presented to Gustav IV Adolf by the British minister. In 1811 Hanson moved for the last time, to Copenhagen, where he published in the same year his *Miscellaneous Compositions in Verse*, dedicated to his friend Warren Hastings. He died at Copenhagen on 22 April 1814. He was unmarried, and his property passed to his only sister, Mary (1745–1830), wife of Sir Thomas Gery Cullum, bt, of Hardwick House, Bury St Edmunds.

Hanson, Sir Richard Davies (1805–1876), lawyer and politician in Australia, was born in St Botolph's Lane, London, on 6 December 1805, the second son of Benjamin Hanson, fruit merchant. Having been educated at a nonconformist school in Melbourn, Cambridgeshire, he was articled in 1822 to John Wilks, solicitor, of 18 Finsbury Place, London, and after his admission as an attorney in 1828 practised for a short time in London. He actively supported Edward Gibbon Wakefield's system of colonization, in 1830 became associated with the attempt to found the colony of South Australia, and during the thirties wrote for the *Morning Chronicle* and, after 1837, for *The Globe*. In 1838 he accompanied Lord Durham to Canada as assistant commissioner to inquire into crown lands and immigration. Here he worked with Dominick Daly, and his conclusions were published as an appendix to the main Durham report.

Hanson was subsequently employed by the Wakefieldians in the New Zealand Company; he migrated to Wellington in January 1840, but soon fell out with the company, and helped settlers who were aggrieved by its claims. In 1841 he was appointed crown prosecutor and in 1844 commissioner of the court of requests, but, opposing Governor George Grey's anti-Maori policy, in 1846 he went to South Australia; here he was admitted to the bar. He was active in court and as a journalist opposing Governor Robe. On 29 March 1851 he married his housekeeper, Ann Scanlon, *née* Hopgood (*b.* 1827), with whom he had two sons and four daughters, all born in wedlock, despite later assertions to the contrary. When Governor Sir Henry Young appointed Hanson advocate-general, he became an *ex officio* member of the legislature and the government's legal adviser. He helped to stop state aid to religion, in the next year introduced the first Education Act and the District Councils' Act, and subsequently took a prominent conservative part in the drawing up of the colony's constitution, which the imperial parliament enacted in 1856.

Hanson was immediately appointed attorney-general and from 30 September 1857 to 9 May 1860 was premier as well in a thrice reconstructed administration during which the Real Property Act (which established the Torrens system of land registration) was passed. In November 1861 he was appointed chief justice of South Australia, where he steadily opposed the pretensions of Mr Justice Boothby. On 9 July 1869, when on leave in England, he was knighted at Windsor Castle.

A voracious reader, Hanson was keenly interested in science and theology, publishing several important theological works and shocking conservative churchmen by his sympathy with Ernest Renan, Bishop Colenso, Charles Darwin, and others. He enthusiastically supported the foundation of the University of Adelaide in 1874 and was elected its first chancellor; but he died on 4 March 1876, in his garden at Woodhouse on Mount Lofty from a sudden heart attack, before he could give the inaugural address. He was buried on 8 March at West Terrace cemetery, Adelaide. He was survived by his wife, one son, and four daughters, and left an estate of £5000. A. G. L. SHAW

Hanumant Rao (*fl.* 1781–1782). *See under* Indian visitors (*act. c.*1720–*c.*1810).

Hanway, Jonas (*bap.* 1712, *d.* 1786), merchant and philanthropist, was baptized on 2 August 1712 at the parish church of St Thomas, Portsmouth, the second of four children of Thomas Hanway (*bap.* 1671, *d.* 1714), the navy's agent victualler in Portsmouth, and his wife, Mary Hoghen (*c.*1679–1755), widow of Stephen Worlidge, with whom she had had two children. According to the College of Arms, Hanway had no gentle pedigree, but his father's family since the late seventeenth century had advanced in government service, chiefly through careers in the royal and merchant marines.

Early years and foreign travels Thomas Hanway died in 1714 after falling from his horse. His widow was left with six children and slender means. No evidence exists for Hanway's earliest years except a few autobiographical references in his later writings. These suggest that the family settled in rural Hampshire where the children received the rudiments of schooling. In later years they lived in London and followed careers in the navy and in trade.

Young Jonas was sent to London in 1728, most probably to the house of his uncle John in Oxford Street. Major John Hanway, after whom Hanway Street was named, was comfortably off and familiar with the Iberian peninsula, where his nephew was sent in the spring of 1729 as a merchant apprentice to the English factory in Lisbon. He spent the next twelve years in the Portuguese capital, imbibing the patriotic, religious, and economic views of the English factory. Some of his later eccentricities in dress, as well as his philanthropy, can be traced to these formative years. John Pugh, Hanway's amanuensis and contemporary biographer, mentions that Hanway experienced an unhappy love affair in Lisbon, the only reference to a romantic interest in Hanway's life. Hanway confessed later in his life to tipping pretty servant girls well, and Pugh reports he used to entertain reformed prostitutes in his home, providing them with small gifts. However, there is no hint of contemporary scandal or indiscretion. According to Pugh, 'he loved the society of women' (p. 229).

Petitions bearing Hanway's signature suggest that he was one of several merchants to suffer losses to Spanish

Jonas Hanway (*bap.* 1712, *d.* 1786), by James Northcote, 1785

privateers during the War of Jenkins's Ear (PRO, SP foreign). He returned to London in 1741, and cast about for another opportunity in trade. On 18 February 1743 he joined the Russia Company as junior partner with Charles Dingley and Henry Klencke, and took ship for Riga in April, and thence travelled overland to St Petersburg, where he was soon engaged in fitting out an expedition to Persia by way of the Caspian Sea. Hanway's mission was to sell English broadcloth for Persian silk and to evaluate the potential of trade with Persia, then ruled by the last great steppe conqueror, Shah Nadir Kuli Khan (1688–1747). A trans-Caspian trade had been pioneered by the Muscovy Company in 1566, but it was a tenuous link, dependent on political stability in central Asia and the co-operation of rulers in both Persia and Russia—both of which were distant hopes in Hanway's time.

With only an English clerk, a Russian menial servant, a Tartar boy, and a Russian soldier, Hanway travelled to Moscow and thence to Astrakhan, where he boarded a British ship, the *Empress of Russia*, which conveyed him across the Caspian to Langarud. His destination was Mashhad, but his caravan was captured on the way by rebellious Khyars, allied to Turkomans from the steppes to the north. Robbed of his goods, and forced to flee in disguise along the bleak southern shores of the Caspian, he was rescued by merchant colleagues. He was later partially compensated by Nadir Shah, who desired cordial relations with the British in order to enlist British artisans to construct a Persian navy for the Caspian. However, Hanway, and those who sent him, had underestimated the insecurity of the route while exaggerating the potential of the trade. In retrospect he concluded that the trade held no great promise, for Persia was too poor and Russia was wholly disinclined to see the expansion of Persian power on its southern frontier. From these adventures he derived his motto in later life, 'Never Despair'. Hanway spent the next five years in St Petersburg, trying to revive his trade and reputation, before he returned to Britain via Germany and the Netherlands, in October 1750. Apart from two brief trips to the continent in later years, the remainder of his life was spent in England.

London merchant and writer Hanway took lodgings in the Strand with his half-sister Ann and her husband, Richard Townshend, a prosperous woollen draper. Thence he regularly walked to John's Coffee House in the City, just east of the Royal Exchange. There he pursued Russia Company business until 1764. He was a good looking and well-dressed man, but his habit of carrying both a sword and an umbrella must have attracted attention, for swords, as articles of attire, were by the 1750s unfashionable, and umbrellas in the hands of a gentleman unheard-of; indeed, Pugh claims Hanway was the first gentleman to walk the streets of London with one. Through precautions such as flannel underwear, and multiple pairs of stockings, Hanway hoped to ward off ill health, a subject on which he dilated throughout his long life.

Hanway emerged from obscurity through the publication of his adventures in Russia and Persia in *An Historical Account of the British Trade over the Caspian Sea* (4 vols., 1753). This was the most original and entertaining of all his books and its success prompted him to continue writing for the remainder of his life on all manner of subjects, prompting Charles Wilson to call him 'one of the most indefatigable and splendid bores of English history' (C. Wilson, 'The other side of mercantilism', *TRHS*, 1959, 92).

In 1753 Hanway wrote *A Review of the Proposed Naturalization of the Jews* and several additional pamphlets on the same subject, all opposing a bill to permit Jews to be naturalized by private acts of parliament. The bill failed, but raised partisan passions out of all proportion to so limited a concession. Hanway claimed that the bill, if enacted, would harm British foreign interests and compromise the inseparability of church and state: his views reflected his Christian mercantilism, but also the antisemitic sentiments he had imbibed in English factories abroad. He next wrote *A Letter to Mr. John Spranger* (1754) in which he argued forcefully for the paving, cleansing, and lighting of the streets of Westminster and Middlesex.

His mother's death in 1755 prompted Hanway to return to Portsmouth where she was buried, according to her wishes. His brief trip was the inspiration for Hanway's second book, *A Journal of Eight Days' Journey from Portsmouth to Kingston upon Thames* (1756), to which he appended *An Essay on Tea*. These works led to a literary skirmish with Oliver Goldsmith and Samuel Johnson, both of whom found Hanway trite and prolix, and his opposition to tea intemperate. Johnson claimed that Hanway had 'acquired some reputation by traveling abroad, but lost it all by traveling at home' (Boswell, *Life*, 1934, 2.122), but Hanway was

largely right about the adulterated beverage that passed for tea in the mid-eighteenth century.

Philanthropy Hanway in mid-life was on the fringe of a very profitable trade, for the Russia Company enjoyed golden hours in the eighteenth century. Russia Company merchants were noted for philanthropy, and it was natural for Hanway to follow suit, but he did so with a zeal and an attention to detail that would make his name a byword for philanthropy. His first venture was his election as a governor of the Foundling Hospital on 12 May 1756 on a £50 donation (the largest single donation he was ever to make to any charity). The same year he wrote *Thoughts on the Duty of a Good Citizen, with Regard to War and Invasion*. The connecting thread was his effort to increase the population of Britain at the inception of the Seven Years' War. His timing coincided with the House of Commons decision to subsidize the Foundling Hospital for its care of all infants brought to its doors. Hanway plunged into the details of this bold experiment with open admissions, concerning himself with everything from smallpox inoculations to the weight of coal buckets. The experiment with the 'parliamentary children' ended in 1770.

On 25 June 1756 Hanway called a meeting of London merchants to recruit men for the Royal Navy by providing them with clothing kits. The resulting Marine Society was not an entirely new initiative (John Fielding had been clothing boys for sea service since February of that year), but the new charity proved the most sustained and successful of its kind, and received particular support from Russia Company merchants such as John Thornton and William Wilberforce (uncle to the philanthropist). Hanway's younger brother Thomas, a navy captain, also helped in placing men on ships, and the society soon extended its charge to include boys. By the end of the war, the society had recruited 4787 boys and 5452 men volunteers for the navy.

Hanway also supported the Stepney Society, which was designed to apprentice poor boys to marine trades, and the Troop Society, to provide clothing and shoes to British soldiers in Germany and North America. Robert Dingley, another Russia merchant, proposed a charity to help girls abandoned to prostitution, and Hanway gave enthusiastic support to the subsequent Magdalen Hospital for Penitent Prostitutes, which opened its doors in rented premises in Prescot Street in 1758. For each charity he supported, Hanway wrote pamphlets laying down rules for the charity, advising potential recipients and appealing to prospective donors. He was especially prolific in his writings for the Marine Society and the Magdalen Hospital.

Yet Hanway's Russia trade did not prosper and he sought government service to supplement his income. After vainly petitioning the duke of Newcastle, the only results being Hanway's pamphlets attacking the custom of vails-giving, prompted by the duke's over-zealous servants, Hanway finally received a place on 24 June 1762 as one of the navy's victualling commissioners at an annual salary of £400 with a £65 housing subsidy. (He left the Russia Company court of assistants in 1764.) He may have owed his new office to the patronage of Lord Bute, who received favourable mention in several of Hanway's subsequent publications. No sinecure, his commission involved supervision of the bakehouse and mills, and led to writings on diet, particularly on improving the quality of bread, and to the first major dietary experiment in the British navy: the provision of sauerkraut to seamen on the North American station during the American War of Independence, in an effort to reduce the incidence of scurvy.

It is impossible to know to what extent Hanway's philanthropy was motivated by humane or religious concerns (he was a devout member of the Church of England) and to what extent by practical considerations, such as his concern for the 'deep designs' of the French (*A Letter from a Member of the Marine Society*, 1757, 4), and his conviction that '*Increase* alone can make our natural Strength in *Men* correspond with our *artificial* Power in Riches, and both with the Grandeur and Extent of the *British Empire*' (*Serious Considerations on the Salutary Design of the Act of Parliament for a Regular Uniform Register of the Parish Poor*, 1762, 26). Such arguments prevailed in his writings, and even led him to partial agreement with Bernard Mandeville that '*private vices*, in some instances may be deemed *public benefits*, particularly by increasing the number of people' through illegitimate births (*Letters to the Guardians of the Infant Poor*, 1767, 53–4). In all this Hanway found it difficult to separate his private life from his public work. He was especially prone to defend his bachelorhood, but only on the grounds that his philanthropy should be considered as an extenuating circumstance. 'Poor man', Mrs Montagu wrote, 'he never knows when to have done when he is talking of himself' (letter to her sister, 27 July 1770, *Mrs. Montagu, 'Queen of the Blues'*, ed. R. Blunt, 1923, 1.237).

Hanway's acts Hanway praised London on repeated occasions but saw it as a death-trap for infant children in workhouses or in the homes of parish nurses. In 1762 he sought support for a bill, known as the Registers Bill, to require parishes to record the fate of these children. As the expensive experience of open admissions at the Foundling Hospital was coming to an end, parliament was looking for an alternative means of helping poor children, and the bill received the royal assent on 2 June of that year (2 Geo. III c. 22, 1762). This act required parishes to keep records of children in their care and thus provided groundwork for further reform. It became known as Hanway's Act. In 1766 there appeared perhaps the most effective pamphlet he ever wrote, *An Earnest Appeal for Mercy to the Children of the Poor*, which contained accounts of specific cases of gross abuse. Hanway's intense lobbying and further pamphleteering led to the passage of an act in 1767 requiring parishes to remove infants from London to the care of rural nurses (7 Geo. III c. 39, 1767). Dorothy George called the act, which also became known as Hanway's Act, 'the only piece of eighteenth-century legislation dealing with the poor which was an unqualified success' (*London Life in the Eighteenth Century*, 1964, 47). While there were abuses that would degenerate into the baby farms of Charles Dickens's day, Hanway's own estimate that the act in his lifetime saved 1500 lives a year may not be far from the truth (PRO, TI/630, no. 395, 9 May 1786).

Hanway's least successful effort was on behalf of chimney sweeps' young apprentices. While abuses were obvious, there seemed no alternative for the cleaning of narrow, twisted flues, and the number of blighted lives was insufficient to rouse national attention. His new hospital for the treatment of venereal disease, to supplement the work of the Lock Hospital, was similarly a failure. The Misericordia, as it was called, opened in 1774, but closed about 1780. But such failures were inevitable given that there was scarcely a good cause which Hanway did not actively support. He even raised funds to relieve victims of foreign fires: one in Montreal in 1765 and another in Bridgetown, Barbados, in 1766. He was active in the SPCK, using that society to distribute improving pamphlets. However, he was most active with his pen. *Virtue in Humble Life* (1774) was a compendious two-volume work designed to improve the morals of servants. *Defects of Police* (1775) focused on the need for better order in the metropolis. In *Common Sense* (1775) he advised American colonists to submit dutifully, using arguments exactly opposite to those in Thomas Paine's pamphlet of the same name published eleven months later. *Solitude in Imprisonment* (1776) concerned prison reform, and *The Commemorative Sacrifice of Our Lord's Supper* (1777) reflected the growing interest in religious and moral renewal that characterized his later years. Indeed, his last book was *A Comprehensive View of Sunday Schools* (1786). In all, he published eighty-five known works, six of them multi-volumed; five had two or more editions. He often wrote anonymously and pirated his earlier writings to augment the later. A third of his known work was book length, the remainder in pamphlet form, and virtually all of it was exhortative. He was at his best when he wrote to advocate just one cause and supported his case with detail. Unfortunately, most of his work lacked singleness of purpose, economy of words, and telling example.

Last years Authenticated portraits, bust and prints date from his later years; the most flattering is James Northcote's oil painting (1785) in the National Portrait Gallery, but the most representative is Edward Edwards's oil painting (1779) which hangs in the Marine Society offices in Lambeth. The face suggests impatience and determination. Hanway claimed that his somewhat sour look reflected his dislike in posing.

The American War of Independence kept Hanway occupied at the victualling board and at the Marine Society, the society contributing 7955 men and 4271 boys to that war. He still found time for pamphleteering, and for opening the Maritime School in 1777. The war's end greatly reduced activity in naval victualling and Marine Society recruiting, while the Maritime School closed in 1783. The school's closing was precipitated by a small incident in which Hanway offended the governors. It was insignificant in itself, but suggestive of errors of judgement on Hanway's part. That same year he retired from the victualling board, after another dispute, this time involving a contract. His last years were spent in writing, renewed involvement with the Foundling Hospital, support of the Sunday school movement begun by Robert Raikes in 1780, and new initiatives for the Marine Society. In March 1783 he completed a *Proposal for County Naval Free Schools to be Built on Waste Lands*, a lavish production, funded by the society, but whose cost prompted the other governors to fine Hanway for his extravagance. The event reflected the maturation of the society, which was no longer willing to accept all the founder's initiatives. His scheme to set up naval free schools was transmuted by the governors to the more modest initiative of establishing a training ship, a plan Hanway initially opposed. The ship was anchored at Greenwich, staffed and ready to receive a first contingent of boys shortly before Hanway died at his home, 23 Red Lion Square, in the early hours of 5 September 1786. Contemporary opinion ascribed his death to complications arising from an enlarged prostate and modern medical opinion suggests that the enlargement may have resulted in uremia, a condition which in turn may account for his failing judgement in his last years. Pugh claims he left an estate of less than £2000 (Pugh, 250), but his will suggests that even that amount may be an exaggeration. Hanway was buried on 13 September in the crypt of St Mary's Church, Hanwell, after an elaborate funeral designed to advertise the Marine Society's ship school as well as to honour the founder. In 1788 an impressive memorial was placed in Westminster Abbey, the first to commemorate a philanthropist. By the Victorian era he was little known, although Samuel Smiles used Hanway's career to exemplify 'Energy and Courage' (*Self-Help*, new edn, 1880, 245–50). His writings were too dreary and too closely tied to issues of the day to endure. Most of his charities did not survive his century, although the Magdalen Hospital lasted in modified form until 1958, and the Foundling Hospital, renamed the Thomas Coram Foundation and now known as the Coram Family, is still a charity but no longer a hospital. The Marine Society played a significant role in naval recruiting in the nineteenth century, and thrives at the end of the twentieth century, although with altered mission. Less tangible were his various contributions to the quantity of lives and the quality of life in London, and his example to the generation that followed of how philanthropy could lay the foundation for legislative reforms.

Hanworth. For this title name *see* Pollock, Ernest Murray, first Viscount Hanworth (1861–1936).

Hapgood, Edris Albert [Eddie] (1908–1973), footballer, was born on 24 September 1908 at 4 Clark's Buildings, Union Road, Bristol, the ninth of the ten children of Henry Charles Hapgood (1869–1939) and his wife, Emily Clark (1870–1945). Both parents were from humble west country families. For some fifteen years Henry Hapgood had worked in Wales as a miner, before returning to Bristol shortly before the birth of Edris Albert.

Eddie Hapgood was educated at the Emmanuel and (later) Hannah More schools in Bristol. From the age of fourteen he worked as a milkman at his brother-in-law's dairy, playing football in local leagues. Rejected by Bristol Rovers, in 1926 he joined Kettering Town of the southern league, at that time a 'nursery' club for Arsenal Football Club. The following season he signed for Arsenal, a club which, under the managership of Herbert Chapman, was emerging as a leading force in English football. Arsenal's success in the 1930s, which brought five league championships and three cup final appearances, was based on Chapman's strategy of sound defence and rapid counter-attack. Hapgood, as left full-back, played a key role in this system. Of average height and medium build, a non-smoker and teetotaller, he relied upon exceptional speed, precision in the tackle, excellent positional sense, and, despite his height, outstanding heading ability. He always strove for a high level of physical fitness, encouraged by Arsenal's advanced training methods. In the Arsenal defensive formation the full-backs provided cover for the 'stopper' centre half, and in this role Hapgood shaped a new style of full-back play which contrasted with the crude physical methods employed by many full-backs of his day. His technique was to manoeuvre his opponent away from dangerous positions, dispossess with a well-timed tackle or interception, and set up an attack with a shrewdly placed, often short, pass. He rarely used the shoulder charge. His method was acknowledged by his most redoubtable opponent, the Stoke City and England right-winger Stanley Matthews, whose threat Hapgood contained more effectively than most: '[Hapgood] could give and take a pass; a classic player, one of the first footballing full-backs' (Miller, 35). His method became the benchmark by which future generations of full-backs set their standard.

Hapgood possessed a strong self-belief which shaped both his domestic and professional life. On 16 November 1929 he married the twenty-year-old Margaret Ada (Mig),

Edris Albert [Eddie] Hapgood (1908–1973), by Fred Daniels, 1939

daughter of William Henry Althorpe, a works foreman, whom he had met in Kettering. They established a comfortable middle-class home in Finchley, where they brought up four children, to whom Hapgood was devoted. Encouraged by Mig's concern for financial security, he capitalized on his fame, supplementing his footballer's maximum wage by advertising chocolate bars and gentlemen's fashions. Socially he rarely mixed with fellow footballers. Chapman had perceived leadership qualities in him from an early stage, and made him captain of Arsenal in 1930, the season in which the club won its first league championship. He retained the post after Chapman's death in 1934, despite cool relations with the new manager, George Allison.

In 1933 Hapgood was selected for England and in November 1934 the Football Association (FA) appointed him captain of the national team. In his sportsmanship, moral probity, and dignified demeanour he exhibited much of the old amateur ethos still favoured by the FA. His first game as captain was the 'battle of Highbury', an ill-tempered match against the world champions, Italy, which tested his strength of character. A broken nose forced his temporary withdrawal from the field but, in the era before substitutions, he returned to lead his team to victory. He remained England's captain throughout the 1930s, and played thirty times. Stanley Rous, the secretary of the FA, wrote:

> When talking to those who join the ranks of the professionals—an honourable calling—I always stress that they should strive to behave on and off the field as a model

on which young players can mould their play and conduct. That Eddie Hapgood has done. (Hapgood, 8)

None the less, he was a man of principle, not given to subservience. In the politically sensitive match against Germany in Munich in 1938, when the FA was prevailed upon by the Foreign Office to require the England players, as a mark of goodwill to Germany, to give the Nazi salute before the kick-off, Hapgood expressed his opposition on the grounds that English teams should not be expected to participate in local political customs. Overruled, he consoled himself with his team's crushing 6–3 win.

Though Hapgood continued to play in club, international, and services football during the war, when the league resumed in 1946–7 he felt he had reached retirement age. In any event, Arsenal's failure to pay the full long-service benefit he considered was owed to him led to his leaving the club. At a time of limited career prospects for professional footballers he moved into club management, first with Blackburn Rovers, then (after a brief resumption as a player with Shrewsbury Town) with Watford and Bath City. Each club enjoyed some success under his leadership but his achievements as a manager fell far below his success as a player. He refused to comply with some of the established practices at his clubs and he made enemies, especially among directors. His leaving of Bath City in 1956, amid acrimony and litigation, marked the end of his managerial career.

In 1944 Hapgood published his memoirs, *Football Ambassador*, which sold well and went into a second edition in 1951. However, without independent means or a job in middle age he took employment as warden of a YMCA hostel for apprentices at the atomic energy research establishment, Harwell. He was deeply grateful to the organization for this post, but nevertheless considered it less than his due, and resented being unable to continue in football. He enjoyed excellent health throughout his life but at the age of sixty developed heart trouble which forced an early retirement to Leamington Spa. He suffered a fatal heart attack while attending a sports forum at Honiley Hall, Warwickshire, on 20 April 1973.

Wealth at death £1105: administration, 29 May 1973, *CGPLA Eng. & Wales*

Happold, Sir Edmund Frank Ley (1930–1996), civil engineer, was born on 8 November 1930 at 86 Francis Street, Leeds, the son of Professor Frank Charles Happold (1902–1991), professor of biochemistry, and his wife, Annie Margaret Maud, *née* Smith, housing economist and Labour Party politician. His parents were Fabian socialists and members of the Religious Society of Friends, committed pacifists, and involved in the Youth Hostel Association. These formative influences exerted a lifelong influence on Happold and his sister, Margaret Elfrieda.

At Leeds grammar school Happold refused to join the school's cadet force because of his pacifist beliefs. It was wartime, and to end the consequent unpleasantness in 1944 Happold went to Bootham, York, a Quaker public school. From 1949 to 1951 he attended Leeds University, where he read geology. Late in 1951 Happold was called up for national service. As a Quaker he registered as a conscientious objector and was posted to the government's experimental horticultural station at Stockbridge House, Cawood. This gave him practical experience of building a large movable greenhouse and stimulated an interest in construction. He became a junior site engineer for Sir Robert McAlpine & Sons at an office block in Leeds (1953–4) before deciding to read civil engineering at the University of Leeds (1954–7), continuing to work for McAlpines in the vacations. With the encouragement of the architect Basil Spence, who did some teaching at Leeds, he obtained a travel scholarship to study modern architecture and engineering in Scandinavia.

Early work in civil engineering design On his return to Britain, Happold began working for Ove Arup & Partners as an assistant engineer in October 1957. With a multidisciplinary approach to building and civil engineering design within one practice, Arup's ethos, and his work with leading architects of the modern movement, attracted some of the leading young engineers of the time, and Happold found the rapidly growing practice an exciting place. He worked on the design of the Sydney Opera House, a project which established Arup's international reputation, and he helped to design Basil Spence's Coventry Cathedral. He also attended evening classes in architecture at Regent Street Polytechnic. Between April 1959 and October 1960 Happold visited the United States to work with Severus, Elsted, and Krueger. He became acquainted with the cable roof or tensile structures that Severus had helped design in the 1950s.

Happold returned to Arups in November 1960 and was successively promoted until in 1968 he became executive partner of the group known as 'Structures 3'. Early projects included Ankobra Bridge, Ghana; the science buildings at Exeter University; Knightsbridge Household Cavalry barracks in London; and the British embassy in Rome. With Poul Beckmann he established a training scheme for new graduate recruits. He was also becoming more involved in the construction industry generally, organizing a conference on education in building at Cambridge and chairing a conference at Brighton on the image of the construction industry.

Happold's early upbringing informed some of his most important work of the time. He developed a long-standing relationship involving more than thirty projects with the London borough of Lambeth and their architect, Ted Hollanby, creating the Central Hill housing project (1965–73),

and West Norwood Library (1964–9), where he held his wedding reception following his marriage to Evelyn Claire (Eve) Matthews (*b.* 1941/2), a hospital nurse, on 21 December 1967. Happold's marriage gave his energies an alternative focus to his professional work, and a long relationship which brought stability to his life. With Eve and their children, Thomas (Tom) and Matthew, he was able to pursue, in his own words 'his favourite pastime ... to travel with his family experiencing together new and interesting locations' (quoted in Walker and Addis, 13).

In 1963 Arups became involved in the design of a new assembly hall at Bootham School and Happold took over this project. His personal satisfaction was enhanced by the understanding he developed with the architect Trevor Dannatt. They collaborated on the Quaker meeting-house, Blackheath (1970–72), and more importantly on several projects in Saudi Arabia. This was at a time when few Western firms had worked in Saudi Arabia, and success there brought further prestige work.

When Happold and Dannatt went out to the Middle East in January 1967 they met Rolf Gutbrod and Frei Otto, the prize-winners for the conference centre at Mecca. After discussion it was agreed that Arups would co-operate as engineers on the Mecca scheme as well. Otto was the leading pioneer of lightweight tensile structures, a structural form which Happold had encountered while with Severus in the United States. He had already seen and admired Otto's work. He seized on Otto's radical structural ideas, and tensile structures became a characteristic of much of his later work. In the meantime, further projects followed with Arups in the Middle East. Happold developed a strong working relationship with leading Saudi engineers and architects which continued throughout his life.

While Happold's work in Saudi Arabia was arguably the most significant for his later career, his best-known work with Arups is probably the Beaubourg or Pompidou cultural centre in Paris. Happold persuaded the young architects Richard and Su Rogers and Renzo Piano to enter the design competition and created one of the landmark buildings of the twentieth century. To his intense regret, after two years at the helm in Paris, Happold was called back to London full-time following the completion of the foundation work. As work on the Beaubourg proceeded (1971–5), Happold was involved with a number of other significant projects such as Kensington town hall (1970–77), again with Spence; the St Katharine's Dock, London, redevelopment (1972–3) with the architects Renton Howard Wood; and the City Club, Milton Keynes, with Derek Walker Associates.

Happold's work is generally associated with tent, canopy, and freeform tension, and pneumatic structures. Much of this work was with Otto and Gutbrod. In the early 1970s collaboration included the unexecuted design for a pneumatic supported roof to create accommodation for 40,000 people in Antarctica (1971), and a temporary humped tent for the opening ceremony at Dyce near Aberdeen of the BP Forties Field in 1975. Perhaps the most remarkable collaboration was the Mannheim Bundesgartenschau (1973–5) exhibition hall and restaurant, a timber lattice-grid shell supporting a free form PVC membrane, with Otto, and Carlfried Mutschler & Partners.

Professor at Bath University By this time it was clear Happold was unlikely to rise to the top within the Arup organization. His multidisciplinary interests in education and the construction process, and academic background, and no doubt the prospect of a new challenge, led him to accept an offer in 1976 of the position of professor of building engineering at the school of architecture and engineering at Bath University. There he was able to address audiences combining students of architecture and engineering in a curriculum designed to preclude the compartmentalization of the design professions which often created problems within the construction industry of the time.

Happold's interest in research, already in evidence at Arups, was now capable of further development. With the support of the Wolfson Foundation, Happold established a research group to study the performance of air-supported structures, and later the Centre for Window Cladding and Technology. The research was fed into building design partly through the work of Buro Happold, the firm he established in Bath on 1 May 1976. He envisaged the practice on a Quaker model, with all participating in discussions and consensus rather than majority voting as the basis for decision making. Happold was able to attract some distinguished colleagues from Arups, such as Michael Dickson and Ian Liddell. His view, as expressed in a speech to the Institution of Structural Engineers in 1992 (*Structural Engineer*, 20 October 1992), was that 'what I know about engineering is that it has to be a group activity. The best work is done by the most diverse group of talents who can still live together.' Happold had a great ability as a team builder, and by encouraging the realization of bold ideas from young talent, he was able to attract brilliant collaborators and colleagues.

Even after Happold had left Arups, Rolf Gutbrod insisted on his involvement alongside them on the Kocummas project for the Saudi Arabian government in Riyadh. He also continued to be involved with the development with Qatar University, a project on which he had begun working while with Arups (1975–85). From 1976 for twenty years Happold was involved in a succession of exciting projects all over the world, including the Munich Aviary (1978–82); Sainsbury's extension, Worcester College, Oxford (1980–82); the sports complex at King Abdul Aziz University, Jiddah; the British embassy, Riyadh (1981–6); the Crucible Theatre, Sheffield, and Globe Theatre, Southwark (1989–96); the Diplomatic Club, Riyadh; the Royal Armoury Museum, Leeds (1993–96); and the Tsim Sha Tsui Cultural Centre, Ocean Park Aviary, and Kowloon Park—all in Hong Kong—to name but a few. Some of these, such as the Munich Aviary and structures for the Atlanta Olympics, were developments of earlier work on tensile structures, but there were important works in timber such as the West Totton and Bishopstoke schools in Hampshire (1987–90), and the development of joints for green timber at Hooke Park, Dorset (1985–91). Happold became increasingly interested in developing energy-

efficient sustainable buildings; some notable projects such as the pneumatic structure in Alberta (58° N, 1981) and the Commercial Bank competition entry for Frankfurt were not realized, but the design experience informed Happold's work generally, as later exemplified by the energy-efficient Millennium Dome, North Greenwich, London.

Construction industry politics Happold's engineering practice and teaching were paralleled by significant contributions to construction industry politics. These culminated in his work as founder of the Building Industry Council in 1988, acting as its first chairman. In 1990 it became the Construction Industry Council, an inter-institution multidisciplinary body reflecting his own co-operative approach. This strategy was endorsed as an alternative to the confrontation between clients, designers, and contractors which had bedevilled the British construction industry in the second half of the twentieth century by two influential government-funded reports in the 1990s: those of Sir Michael Latham (*Constructing the team: final report of the government / industry review of procurement and contractural arrangements in the UK construction industry*, 1994) and John Egan (*Rethinking construction: the report of the construction task force ... on the scope for improving the quality and efficiency of UK construction*, 1998).

From the late 1960s Happold's reputation won him national and international awards, in part in response to his own determination to enter design competitions, but largely reflecting his numerous contributions to engineering and design. These included the Institution of Structural Engineers gold medal in 1992, and the Murray Leslie medal of the Chartered Institution of Building in 1982. Actively involved in the governance of the Institution of Structural Engineers from 1974, he was elected president in 1986–7. He was also vice-president of the Royal Society of Arts (1991). Honorary fellowships and honorary doctorates abounded. Happold served on numerous government and other technical committees, including the Building Regulations Advisory Committee (from 1988) and the Design Council (1988–94). His many talents were reflected in his appointment as master of the faculty of royal designers for industry (1991–3). He was knighted for his services to the construction industry in 1994.

Sir Ted Happold died at the Royal United Hospital, Bath, on 12 January 1996, survived by his wife and sons. A memorial service was held at Friends' Meeting-House, Euston Road, London, on 31 January 1996. Personally involved in the design of some of the most exciting buildings of the late twentieth century, his work as an educator, researcher, and a driving force for change in the construction process marks Happold as an engineer in the polymath tradition of the eighteenth-century founder of the British civil engineering profession, John Smeaton, whom he much admired. Wealth at death £1,204,250: probate, 10 April 1996, *CGPLA Eng. & Wales*

Harald Hardrada [Haraldr inn Harðráði, Haraldr Sigurðarson] (**1015–1066**), king of Norway, was the son of the Norwegian petty king Sigurd Sýr (Sigurd the Sow) and Ásta Guthbrandsdóttir, who had earlier been the wife of Harald Grenski 'from Grenland' (west of Oslo Fjord), with whom she had had a son, Óláf Haraldsson (St Olaf). In 1030 at the age of fifteen Harald fought in the battle of Stiklestad, in which his step-brother was killed and Harald himself was wounded. After the battle he fled east to Sweden and thence went to Russia (Novgorod-Kiev) where he stayed for three or four years at the court of King Yaroslav (*d.* 1054).

Probably in 1034–5 Harald arrived in Constantinople where he entered the service of the Byzantine emperor. This service is described in a Byzantine source, from which it seems that Harald was a gifted soldier. He rose to command the emperor's special guard of Russians and Scandinavians (Varangians). Norse sources also describe Harald's contribution to the emperor's service, but much of the description of his battles in Asia, Africa, and Sicily is reminiscent of fables and sagas. None the less, the content is partly based in fact. Harald was at one point caught up in the conflict over the Byzantine imperial succession and he amassed a huge fortune in booty. His personal wealth in the end brought him into conflict with the emperor. In 1043 he was forced to flee Constantinople after first securing his riches.

In 1043 Harald was again in Russia at the court of Yaroslav, whose daughter Elizabeth (Ellisif) he married in 1044. They had two daughters. In 1045 Harald made his way back to Scandinavia. His undisguised aim was to become the king of Norway, if necessary by waging war against the then king, Magnús Óláfsson (*r.* 1035–47), Harald's own nephew and the son of Óláf Haraldsson. In preparation for such a war Harald began negotiations with Magnús's Danish enemy, Swein Estrithson, and the Swedish king who was Swein's ally. In the face of this threat Magnús tried to reach an understanding with Harald and in 1046 they agreed to share Norwegian royal power. The following year Magnús died and Harald became sole ruler of Norway.

Harald's reign was of the greatest significance for the consolidation of a Norwegian kingdom, a development already under way but as yet incomplete. Among other things the inland areas to the east were more firmly annexed to the rest of the kingdom. Harald crushed all opposition to royal power and in general favoured the use of force to solve problems. He arranged for a parley with

his chief domestic political opponents where, without provocation, he had them assassinated. If he thought it necessary he ravaged and burnt in Norway just as ruthlessly as he had done earlier during campaigns in the Mediterranean. He also had an autocratic, 'Byzantine' attitude towards the church. He came into conflict with the archbishop in Hamburg-Bremen, who had responsibility for the church in Scandinavia, because he refused to acknowledge his authority. When the archbishop protested by sending envoys, Harald is said to have replied that he knew no archbishop nor lord in Norway other than the king himself.

Harald founded the dynasty of the later Norwegian kings through his son Óláf Haraldsson the Quiet (*b.* *c.*1050), who was king from 1066 to 1093. Óláf's mother was Thóra Thórbergsdóttir, from one of Norway's most prominent families. They had a second son, Magnús (*c.*1049–1069), who ruled jointly with Óláf in the years immediately following their father's death (1066–9).

As the successor to the throne of Magnús Óláfsson, Harald pursued the claim to the kingdom of Denmark that Magnús had made since 1041–2. The claim was disputed by Swein Estrithson. Almost every summer Harald waged war in Denmark, but in 1064 he and Swein began peace negotiations, which resulted in each recognizing the other's kingdom. Similarly Harald claimed that, as the successor to the Danish kings, he had a legitimate claim to the English throne. The dispute over the succession in England in 1066 gave him the opportunity to try to fulfil his claim through an expedition—the last really great viking raid.

At the beginning of September 1066 the Norwegian fleet sailed for England via Shetland and Orkney, where they gathered significant reinforcements. They reached the mouth of the Tyne on about 10 September. The Anglo-Saxon Chronicle puts the number of ships at 300. It seems that contact had been made well in advance between Harald and the exiled Tostig Godwineson, although it is unlikely that Tostig had gone to Norway to seek Harald, as both the Norman chronicles and the Norse sagas suggest. It seems more likely that communication had been established via emissaries, since Tostig returned to England in April 1066. When Harald landed at the Tyne, Tostig joined him and became his earl.

The two allies' initial aim was to conquer Northumbria, but they were met by Harold Godwineson's earls Edwin and Morcar and on 20 September the two armies clashed at Fulford just outside York. Harald and Tostig won and Edwin and Morcar fled. A few days later on 24 September the citizens of York surrendered the town to Harald and Tostig. Harald began to load ships to continue his conquest further south. Meanwhile the Yorkshire thegns agreed that Harald would take hostages from the whole of Yorkshire. He awaited them with a large part of his army at Stamford Bridge, east of York, on 25 September. The choice of location could have been due to the fact that Harald had fortified the place or that he controlled the Derwent with his fleet. However, in the meantime Harold Godwineson had advanced from the south in a forced march with far stronger forces than Harald's and had the previous day arrived in Tadcaster. He attacked Harald and Tostig, taking them completely by surprise. Harold Godwineson won after a short but hard-fought battle, and both Harald and Tostig were killed. Later Óláf Haraldsson, who had remained with the ships during the battle, was allowed to take his father's body home to Norway. Among those that followed Óláf was the Englishman Skúli, head of a powerful Norwegian family, who in Norway was regarded as the son of Tostig. CLAUS KRAG

Harald Maddadson [Haraldr Maddaðarson], **earl of Caithness and earl of Orkney** (1133/4–1206), magnate, was the first earl of Orkney to be born of a native Scottish comital line: his father, Maddad, earl of Atholl (central highlands), married Margaret, daughter of Earl Hákon Paulsson of Orkney, so that their son Harald unusually claimed the earldoms of Orkney and Caithness through his mother. The Countess Margaret is implicated, in *Orkneyinga Saga*, in arranging for the removal of her brother, Earl Paul the Silent, and securing the succession of her son Harald to the joint earldoms at the age of five in 1139. It is probable that there were also weighty political considerations behind this activity, as there is evidence of strong Scottish interest in events in the northern earldoms at this time, particularly with a view to extending royal authority over Caithness.

Earl Rögnvald and his pilgrimage Harald had to contend with the rivalry of his half-cousin **Rögnvald Kali Kolsson** [Rögnvaldr Kali Kolsson] (*c.*1103–1158), who claimed the two earldoms through his mother, Gunnhild, the daughter of Earl Erlend (*d.* 1099), and who conquered Orkney in 1136. Two years later Rögnvald agreed to allow Harald to hold half the earldom, perhaps in return for recognition of his own rights in Caithness. That an agreement was reached by 'all the best men of Orkney and Scotland' (*Orkneyinga Saga*, 72), shows the extent of the pressure from the south on behalf of the young Harald, whose grant of the title of earl at such an age was unprecedented. Moreover, it was done without any apparent reference to the kings of Norway, although some thirteen years later Rögnvald did take Harald to visit King Inge, one of the three rival sons of Harald Gilli. Scottish interest is clearly seen in a charter issued probably between about 1140 and 1145 by King David I to Earl Rögnvald and another, unnamed, earl and the 'good men' of Caithness and Orkney, ordering them to protect the monks—probably from Dunfermline—established at Dornoch in Sutherland.

The political situation changed markedly in 1151 when Earl Rögnvald departed for Palestine on his pilgrimage. This celebrated enterprise takes up five complete chapters of *Orkneyinga Saga*, which provide a unique account of

such a journey by a northern magnate from this period. An entry (sub anno 1151) in the Icelandic annals records only 'The journey to Jerusalem of Earl Rognvald Kali of the Orkneys: and of Erling Skakki' (Anderson, 2.213). The impetus for the expedition was personal piety rather than the call to join a crusade, and it may have been undertaken in emulation of King Sigurd Jorsalafarer's ('Jerusalemfarer's') famous journey in 1108. The earl, with Bishop William and other well-born companions, including Erling Skakki, left Orkney in the late summer of 1151 in fifteen ships. The fleet sailed through the Strait of Gibraltar, after which Eindrid Ungi went straight to Jerusalem with six ships while Rögnvald tarried in Narbonne. During his stay there he composed several verses—included in the saga—in honour of the lovely lady Ermingard, verses which show strong influence from courtly love poetry, possibly the first such examples in skaldic verse. Further verses, many of them Rögnvald's own composition, record events which occurred during the rest of the journey, such as his swim across the River Jordan. Having visited Jerusalem, the party made its way back north via Constantinople, where they were received by the emperor and his Varangian guard, then sailed to Apulia where they took horses for the journey to Rome, arriving back in Orkney for Christmas 1153. This is most impressive evidence for the wide-ranging role of the earls of Orkney as players on the world scene of twelfth-century Europe. They were now fully participating in the cultural and religious activities of Christian Europe rather than threatening them from the periphery.

Rögnvald's return and death Harald was left as sole ruler of the earldoms during Rögnvald's absence. The opportunity was seized by Eystein, joint king of Norway and rival to his brother Inge, to impose his authority on the young earl by a military expedition to the west (the first since that of Magnus Barelegs in 1098). Finding Harald was in Thurso in Caithness, the king sailed with only three skiffs from his fleet over the Pentland Firth to take Harald by surprise. In his submission Harald redeemed himself with 3 gold marks, a payment which has been interpreted as a feudal 'relief', although the relationship between earls and kings was as yet scarcely so formalized. In Rögnvald's absence another claimant, Erlend, son of Harald Smooth-Tongue and cousin to Harald Maddadson, rose to the fore and was given Rögnvald's half of Caithness by the Scottish king, Malcolm IV. Erlend then went to Norway and obtained a grant of Harald's half of Orkney from King Eystein. Behind him lay the support of many powerful kinsmen, including that of the unscrupulous Swein Asleifsson. The safe return of Rögnvald in 1153 from his pilgrimage led to the so-called 'war of the three earls', the events of which are graphically described in the saga narrative. It ended with the death of Erlend on the island of Damsay and the settlement of Harald and Rögnvald as co-earls.

Continuing tensions in this still-violent society led to the murder of Rögnvald on 20 August 1158 by Thorbjorn Clerk at Forsie in Caithness. One of the most talented and best-loved of all the Orkney earls, he was described as 'very popular there in the Isles and far and wide elsewhere. He had been a friend in need to many a man, liberal in money matters, equable of temper, steadfast in friendship, skilful in feats of strength and a good skald' (*Orkneyinga Saga*, chap. 104). He was buried in St Magnus's Cathedral in Kirkwall, the finest surviving Romanesque cathedral in Scotland, which was built in fulfilment of the vow which he took on his attempt to win the earldom in 1136. The expense of the building programme was partly borne by the earl's generosity, although an agreement was made with the Orkney farmers, according to which they contributed funds in return for the abandonment of the threat to impose an inheritance fee on their family estates. In this pious age, the violent death of the popular earl led to his rapid sanctification. His relics are said in *Orkneyinga Saga* to have been taken up by Bishop Bjarne in the 1190s, with leave of the pope, and he became the second Orkney saint.

Harald Maddadson and the kingdom of Scots By contrast with Rögnvald, Harald was less highly regarded, it being said of him only that he was 'a great chief, the tallest and strongest of men, obstinate and hard-hearted' (*Orkneyinga Saga*, chap. 105). Now unrivalled within his own power base, Harald's ambitions seem to have extended in the next phase of his life beyond Orkney and Caithness and southwards to Ross, which had come under the influence of previous earls of Orkney. He became involved in the complex and dangerous situation created by the pretensions of the rebel Macheth dynasty in Moray and Ross, which caused the kings of Scots problems intermittently throughout the twelfth century. That Harald associated himself with the Macheth cause is clear from his bigamous second marriage (in the 1170s probably) to Hvarflod *Macheth, daughter of Malcolm *Macheth [*see under* Macheth family], who was earl of Ross for at least six years until his death in 1168. Harald was probably also strengthening Orkney earldom claims to lands in Ross by this marriage. The military significance of this frontier zone was fully recognized by King William, who built and fortified two castles in 1179 at strategic points in Easter Ross just before the MacWilliam rebellion of 1181, in which, however, Earl Harald played no part. Not until 1196 did he show signs of acting rebelliously, which then gave the king good reason to send one, if not two, expeditions north, one of which actually reached Thurso on the northern coast of the Caithness earldom, the first time royal Scottish forces had penetrated into earldom territory. The explanation given in the later chronicle of John Fordun was that Harald had been goaded into rebelling by his wife's ambitions, and certainly one of the peace conditions demanded by King William subsequently was that Harald put Hvarflod away and take back his first wife, Affreca, daughter of Duncan, earl of Fife (*d.* 1154) (which he refused to do).

There are a remarkable number of contemporary accounts of the royal expeditions north to contain Harald, apart from *Orkneyinga Saga* itself (which is not very coherent or informative about this stage of Harald's life). Some of these accounts suggest that Harald's son Thorfinn had

reacted to the presence of the Scottish king's feudal vassals on the southern frontier of earldom influence by leading an attack into Moray, thereby inviting retaliatory action by the royal Scottish forces. Fordun says that the king's expedition of 1196 subdued both the provinces of the Caithness men (Caithness and Sutherland), and also that the earl's son and heir, Thorfinn, was taken hostage. Roger of Howden says that the earldom of Caithness was first divided and then taken away from Harald altogether. Half of it was given to Harald Ungi ('the younger'), the grandson of Earl Rögnvald, who was later killed in battle near Wick. There was also, according to the saga, an attempt to replace Harald with Rognvald Godredson, king of the Hebrides. At some point Harald was forced to go south to King William's presence, accompanied by the bishops of St Andrews and Rosemarkie, in order to beg for his earldom back, but whether in 1197 or after a later incident in 1202 is not clear. There is, however, no doubt either that Harald had to pay a large fine, or that his son Thorfinn died in prison after having been blinded.

Harald compounded his own problems by making the grave mistake of antagonizing the church, which was to the forefront of Scottish policies regarding Caithness. He was considered responsible for leading the attack on the residence of the bishop of Caithness at Scrabster in 1201, when Bishop John had his tongue cut out and was partially blinded. This was the culmination of problems between the bishop and earl which had been developing in the 1190s, provoked by the bishop's ban on the payment of a church tax instituted by the earl—the ban probably represented an attempt to impose Scottish order in a part of the earl's dominion which had hitherto been under the Orkney bishop's authority. Reports about the ban on the earl's grant of the tax had reached the ears of Innocent III, as, indeed, did information about the attack on the bishop, for which a heavy penance was laid on the chief perpetrator. The mutilation of the bishop provided the earl's Scottish overlord with the perfect opportunity for an avenging expedition north, and for the attempted appointment of more rival earls. Yet the evidence also suggests that Harald was a pious and generous benefactor to the church, giving an annual gift of 1 mark of silver to the canons of Scone, as well as the above-mentioned annual tax of 1*d.* from every house in Caithness for the papacy (modelled on the payment of Peter's Pence which had been recently instituted in Scandinavia, including Orkney). Earl Harald is also named in a lost charter as taking the monastery of 'Benkoren' (probably Bangor, in Down) under his protection, another indication of the range of his seaborne activities.

Defeat and recovery In his Scandinavian earldom Earl Harald also played the dangerous game of being implicated in rebellion against the established king and of having to suffer the consequences. He gave support to the *Eyjaskeggjar* rebels ('Island beardies'), who planned to restore the illegitimate son of King Magnús Erlingsson to the throne against the impostor Sverre. Two years after the defeat of the rebels at the battle of Floruvoe in 1193, Earl Harald was forced to go to Bergen and submit to King Sverre, with his close friend and relative Bishop Bjarne to plead his case. The peace terms were harsh and included the loss of the Shetland Islands and half of the revenues of Orkney, along with the imposition of a royal steward (*sysselman*) in his earldom to collect moneys and administer newly acquired royal estates. The permanent representatives of encroaching royal authority were tolerated only as long as their position was protected by their royal masters, and both the Caithness steward and the Orkney *sysselman* were eventually murdered on the earl's orders.

Harald Maddadson had the misfortune to live at a time when royal power was increasing markedly, making it inevitable that restrictions should be imposed on independent warlords of his class. He was also unlucky to be faced with determined and powerful kings in both Scotland and Norway who would not tolerate any signs of disaffection by the rulers of dangerously independent earldom dynasties, and who were able to reach out to the remoter parts of their kingdoms in their drive to extend their authority. Military expeditions into his territory, confiscations of his hereditary lands, and impositions of heavy fines for his failure to fulfil conditions and abide by restrictions imposed on him after his submission at humiliating peace meetings, all are symbols of the changed world of the late twelfth century in the most northerly kingdoms of Europe. Remarkably, when Earl Harald died in 1206, after a violent life in which he had been earl for nearly seventy years, he held the whole of Caithness once more and had also reacquired Shetland, a notable survival achievement by the last representative of the old-style free-ranging viking earl, whose authority had been challenged by new-style royal overlords.

Harald Smooth-Tongue [Haraldr inn Sléttmáli], **earl of Orkney** (*d.* 1131). *See under* Magnús Erlendsson, earl of Orkney (1075/6–1116?).

Harari [*née* Benenson], **Manya** (1905–1969), publisher and translator, was born at Baku, Russia, on 8 April 1905, the fourth child and youngest daughter of Grigory Benenson, a Jewish financier, and his wife, Sophie Goldberg. While Benenson amassed an enormous fortune Manya's childhood was spent amid the opulence of a rented top floor of

Volkonsky's St Petersburg house, and at Redkino, a splendid country estate. In 1914 the family migrated to London from Germany, where they had been visiting. Manya was educated at Malvern Girls' College and Bedford College, London, graduating with second-class honours in history in 1924. Her father refused to establish a new permanent domicile and, while he was building up another financial empire which later crumbled in the Wall Street crash, the family home was usually a luxury hotel.

In 1925, having become interested in the Jewish question, both from a religious and from a political point of view, Manya Benenson visited Palestine, where she met Ralph Andrew *Harari (1893–1969). They were married in that year. Bored by the social round in Cairo, she began to study, and was shocked by, social conditions in Egypt. Visits to Palestine, where she worked in a kibbutz in 1926, and welfare work in Cairo failed to quell a growing restlessness of spirit. In 1932 she reached a long-pondered decision and became a Roman Catholic; she remained emphatic, however, that this in no way detracted from her Jewish identification. Later, frequently visiting London, she was associated with the inauguration of the Sword of the Spirit movement by Cardinal Hinsley in 1940; she worked on the *Dublin Review* and then edited her own periodical, the *Changing World*; when publication ceased in 1942 she anticipated her husband in joining the political warfare department as a translator.

In 1946, with Marjorie Villiers as her partner, Manya Harari founded the Harvill Press, a small publishing house specializing in books on religion, metaphysics, the arts, and psychology. In 1954 Harvill became a subsidiary of Collins, with Manya and her partner continuing to direct the enterprise. It was as the publisher of *Dr Zhivago* (1958), the novel by Boris Pasternak which she translated with Max Hayward, that Manya Harari became widely known. She also helped to introduce to British and American readers Konstantin Paustovsky, Aleksandr Solzhenitsyn, Andrey Sinyavsky, Ilya Ehrenburg, and Yevgeny Yevtushenko, thus providing expression for what might be regarded as the free voice of Russia. Her discernment as a publisher was matched by her outstanding gifts as a translator.

Working from an attic room in her London home, 32 Catherine Place, Westminster, poised between typewriter and telephone, with manuscripts, authors, intermediaries, their friends, and friends of their friends all jostling for priority, clutching a huge box of cigarettes and for ever smoking, Manya Harari never lost her softness of voice and gentleness of manner; physically she was so slender that her whole presence seemed contained in the intensity and pallor of exquisitely drawn features. Totally without vanity and oblivious of her material surroundings, she pursued her diverse causes with passionate resolution. However busy, she never could bear to be tied to one environment. In 1948 she went to Palestine as a reporter. In 1955 she made her first return journey to Russia, visiting Moscow, Leningrad, and Redkino. She was to return in the spring of 1956 and again in the winter of 1961.

When her husband became seriously ill in 1968 Manya Harari already knew that she herself had only months to live. Characteristically she kept the knowledge to herself until he died in May 1969 and continued to work on an autobiography until a few days before her own death in London on 24 September 1969, having found an almost total serenity in her all-embracing religious faith.

Wealth at death £40,630: probate, 24 April 1970, *CGPLA Eng. & Wales*

Harari, Ralph Andrew (1893–1969), merchant banker and art scholar and collector, was born on 28 October 1893 in Cairo, the third child and elder son of Sir Victor Harari Pasha, civil servant, financier, and leading member of Egypt's Anglo-Jewish community, and his wife, Emma Aghion. The hospitality of their Cairo home during the early decades of the twentieth century provided a valued meeting point for British administrators, resident diplomats, visiting notabilities, and the Turco-Egyptian establishment. Harari was educated at Lausanne and Pembroke College, Cambridge, where he obtained first classes in both parts of the economics tripos (1912–13) and a boxing blue. Back in Egypt in 1914 he participated, as a junior officer, in the Palestine campaign of Sir Edmund Allenby, later serving as finance officer to his father's old friend Ronald Storrs, then military governor of Jerusalem. In 1920 he was appointed director of trade and commerce in the new mandate under Sir Herbert Samuel, also an old family friend. In 1925 he returned to Egypt to help his father's business enterprises. In the same year, in Paris, he married Manya (1905–1969) [*see* Harari, Manya], daughter of Grigori and Sophie Benenson, who later became a publisher and translator.

In 1939 Harari was imaginatively appointed economic adviser to general headquarters Middle East, with the rank of full colonel but no visible signs of any supporting establishment. His duties were unspecified, his services ubiquitous. His advice, modestly conveyed in oracular pronouncements, was widely sought; he became, in effect, a one-man 'think-tank'. Recalled to London for consultation with Lord Keynes after the end of the desert campaign, he was recruited, on the basis of his Cairo reputation, by Peter Ritchie-Calder, then director of plans in the department of political warfare; colleagues were impressed by his shrewdness and practical humanity. Harari was appointed OBE for his services. After the war he remained in London as managing director of the merchant banking firm of S. Japhet & Co., later taken over by the Charterhouse group of companies, whose board he then joined.

Alongside a career moulded by family tradition Harari made his own way as an art scholar and collector. Having become interested in Islamic metalwork in the twenties he emerged as its leading expert and collector, contributing the authoritative chapter 'Metalwork after the early Islamic period' in the *Survey of Persian Art* (6 vols., 1938–9); he donated his own collection to the Cairo Museum. In the

early thirties he began to collect Beardsley drawings, then out of fashion. He added to these after the war and eventually formed the largest private collection, which notably enriched exhibitions in London (1966) and New York and Los Angeles (1967), and has now been acquired by the Victoria and Albert Museum. His Beardsleys were complemented by paintings and drawings of Rouault, Lautrec, Segonzac, Sickert, John, Gavarni, and Keene. It was said of Harari that 'he was essentially sensitive to style taken to the point of mannerism'; perhaps inevitably his attention turned to Japan. Before 1958 he had collected one important album of Hokusai (1760–1849) sketches, and from then onwards he became increasingly fascinated; while concentrating on Hokusai, he acquired a representative range of Japanese paintings and drawings. An exhibition organized after his death by the Arts Council at the Victoria and Albert Museum was the first public glimpse of this unique collection which, amassed without the aid of any vast financial resources, had already inspired and delighted Japanese art scholars.

Harari was also a collector of people; he believed in good food, good wine, and civilizing communication. He and his wife made an art of hospitality at their London home. Both believed passionately in the healing power of reason and persuasion, and their influence, so diverse in its impact, was probably more pervasive than they knew. Both were good listeners as well as very undemanding in their friendship. They had one son, Michael Harari, born in England in 1928, who became a psychiatrist. Ralph Harari became seriously ill in 1968, and died at his home, 32 Catherine Place, Westminster, London, on 26 May 1969.

Harben, Sir Henry (1823–1911), insurance company manager, was born on 24 August 1823 in Bloomsbury, London, the eldest of four surviving children of Henry Harben (1793–1868), wholesale cheesemonger of Bloomsbury, and Sarah (1798–1870), daughter of Benjamin da Costa Andrade, a Whitechapel merchant of Portuguese Jewish descent. The family claimed ancestry from one Thomas Harben of Seaford in Sussex, a clockmaker who became rich through the purchase of salvage in 1747 and commenced banking at Lewes. Henry Harben's grandfather, however, left banking to become a partner in the wholesale provision stores of Harben and Larkin, Whitechapel. Harben's father in turn established his own business about 1820.

Little is known of Harben's education and formative years. He was seven years old when his father left the family to live with Mary Anne Roberts, with whom he had two more children; he went bankrupt in 1835. Harben worked for his uncle in the Whitechapel stores for several years, after which he was articled to a surveyor. On 1 August 1846 he married Ann (*d.* 1883), daughter of James Such; his two surviving children, Mary Woodgate Harben (married name Wharrie), and Henry Andrade Harben, director and chairman of the Prudential, and author of *A Dictionary of London* (1917), were born in 1847 and 1849 respectively.

In 1851 Harben joined the Prudential Mutual Assurance, Investment and Loan Association, founded three years earlier with a modest £2500 of capital paid-up. It had little success until Harben persuaded the directors to act on the recommendation of the 1853 select committee on assurance associations regarding the desirability of assurance for the working classes. Hitherto this had only been offered by friendly societies and the so-called 'burial clubs', which were loosely regulated and frequently unsound. Harben was instrumental in guiding the Prudential into the relatively new field of 'industrial' assurance, by which policies were sold for amounts as low as 1d. a week by agents who collected premiums weekly from working-class households. Initially the Prudential found the expense of house-to-house collection almost ruinous, but Harben's economies brought gradual improvement. In 1860 he negotiated an advantageous amalgamation with a rival company, the British Industry. His dispute with Gladstone about the benefits for working-class customers at the time of the government assurance bill in 1864 brought vindication and helpful publicity for the Prudential. Aided by the increasing public acceptance of assurance, its industrial branch grew so rapidly that during the 1870s it sometimes engaged over 1000 agents a year.

An honorary fellow of the Institute of Actuaries from 1864, Harben insisted on the detailed analysis of mortality figures and the regular valuation of liabilities; these, together with meticulous attention to economy, were the principles underlying the Prudential's success. He published the findings of his statistical department as *The Mortality Experience of the Prudential Assurance Company in the Industrial Branch 1867–1870* in 1871 and *A History of the Prudential Assurance Company* in 1880. As secretary, then as resident director from 1874 and deputy chairman from 1878, he presided over the company's phenomenal expansion: by 1891 it was insuring one person in four in the United Kingdom. Harben fostered the careers of several subordinates—in particular Thomas Dewey—and hence had a lasting influence. He was also largely responsible for commissioning the architect Alfred Waterhouse to build, between 1877 and 1905, the Prudential's London office at Holborn Bars, and twenty-one provincial offices. An Anglican with strong evangelical leanings, and a prominent freemason, Harben created a corporate ethos of self-help and moral improvement, which fuelled a wide range of Prudential cultural and sporting activities.

Harben was exceptionally energetic and hard-working; he could be autocratic, but he had considerable presence, and inspired great loyalty; he was a powerful speaker, and strikingly handsome. His Prudential colleagues encouraged him to enter politics, and he stood (though unsuccessfully) on two occasions as Conservative candidate, at Norwich in 1880 and Cardiff in 1885. He was first cousin to Joseph Chamberlain.

As a major shareholder in the Prudential, Harben became wealthy, and contributed to numerous causes. He

joined the Carpenters' Company in 1878 and served as master in 1893. His most outstanding donation to its educational and charitable work was the Rustington Convalescent Home for Working Men (1897), built and endowed at a cost of over £100,000. An endowment to the British Institute of Public Health, for an annual lecture series and the award of a gold medal, reflected a lifelong interest. Being similarly interested in technical education, he supported King's College, London, in its technical education programmes.

Harben lived in Hampstead from 1865, serving first as a member of the Hampstead vestry, then representing the area on the Metropolitan Board of Works from 1880 to 1889, and the London county council until 1894. He was the first mayor of Hampstead in 1900. He funded the building of the central public library, a wing of the Hampstead General Hospital, a Hampstead hall for the London City Mission, and, with his daughter Mary Wharrie, the headquarters of the 1st cadet battalion City of London yeomanry, Royal Fusiliers, of which he was honorary colonel. He participated in the campaigns to add Parliament Hill Fields and the Golders Hill estate to Hampstead Heath.

Harben's second marriage, on 8 November 1890, to Mary Jane Bulman Cole (*d.* 1914), daughter of another Prudential director, Thomas Bulman Cole, coincided with his purchase of Warnham Lodge, a 90 acre estate near Horsham in his ancestral county of Sussex. As a passionate supporter of cricket, he built a fine private ground and encouraged the sport in the district. He served as a JP and as deputy lieutenant for Sussex, and was high sheriff in 1898. He was knighted in June 1897, on the occasion of Queen Victoria's diamond jubilee.

On the death of Edgar Horne in 1905, Harben became chairman of the Prudential, but he resigned in 1907 in declining health. He held the office of president until his death, of natural causes, at the age of eighty-eight, on 2 December 1911 at Warnham Lodge. He was buried on 6 December at Kensal Green cemetery, the burial-place of his mother. LAURIE DENNETT

Harben, Philip Hubert Kendal Jerrold (1906–1970), television chef and cookery writer, was born on 17 October 1906 at 40 Perham Road, Fulham, the son of Leonard Hubert Storey Harben (1878–1941) and his wife, Mary Jerrold Allen (1877–1955). His parents were both actors, known as Hubert Harben and Mary Jerrold. His sister, Joan Harben, often appeared on the West End stage and was best-known for her role in the BBC radio series *It's that Man Again*, where she played the part of the lugubrious Mona Lott, famous for her catch-phrase, 'It's being so cheerful that keeps me going.' Educated at Highgate School, Harben then went on the stage himself, and later worked with John Grierson on the documentary film *Drifters* (1929), and with Egidio Scaioni doing studio and fashion photography. On 19 July 1930 he married Katharine Joyce Kenyon (*b.* 1906/7), and they had a son and a daughter.

Far from being a chef, Harben never had a formal cookery lesson, but learned to cook because his parents were so often absent while on tour, leaving him to fend for himself in the kitchen. He developed a curiosity about the processes of cooking, and was technically so proficient that his friend Raymond Postgate, the author of the original *Good Food Guide*, referred to him for answers to most technical questions. A member of the avant-garde intellectual left, in 1937 Harben was cooking and running the kitchen at The Isobar, in the basement of the Isokon building, Wells Coates's architecturally advanced block of flats in Lawn Road, Hampstead.

Harben and Postgate founded the Half Hundred Dining Club, 'a poor man's food and wine society'. The club had twenty-five members each of whom could bring one guest, hence the half-hundred. The club's aim was to combine 'good dining with economy'. Members, who included Julian Huxley, Walter Gropius, Marcel Breuer, Ernst Freud, and Francis Meynell, took it in turn to 'direct' the dinner, which could involve anything from planning the menu and getting someone else to cook it, to doing the whole task—buying the ingredients and wine and cooking and serving the meal. A 'blurb' was required from the director, and could be anything from a simple menu to a full-blown mission statement. As each member and guest paid a strictly budgeted total of only 10*s.* (2*s.* 6*d.* for food, 5*s.* for wine, and 2*s.* 6*d.* for service), anything over had to come from the director's own pocket. Harben and Postgate laid down serious criteria for membership: election had to be unanimous and candidates had to profess that they were seriously interested in food and drink with 'no religious or other taboos or unsociable characteristics which may impede conversation' (www.lib.uea.ac.uk/libinfo/archives/pritchard/pp39ch.htm). The club ceased in 1940, though there was a failed attempt to revive it after the Second World War. When the war was over he was canteen manager for British Overseas Airways Corporation, where he came to the attention of the BBC. His first broadcasting work was radio cookery demonstrations after the eight o'clock news.

When BBC television resumed in June 1946 Harben was chosen to front a cookery programme. He was not the first cook on British television (that distinction went to Marcel Boulestin in 1937), but he was generally thought of as the first of the British breed of that hybrid creature—part

entertainer, part teacher. Plump, bearded, and genial, with a racy delivery, his initial BBC television series, *Cookery*, ran from 1946 to 1951. The most bizarre turn required of him was on a programme celebrating Boulestin, when a 1939 sound recording was played of the Frenchman preparing his speciality, the Boulestin omelette. Harben, 'the new culinary star, mimed in vision, with split-second timing', as the eggs were whisked and the butter sizzled in the pan. This was followed by 'verbal homage from a master of the Science of cookery to the master of its Art', wrote Mary Adams, in a postscript to Harben's obituary in *The Times* (*The Times*, 29 April 1970).

In 1950 Harben presented *Cookery Lesson* for the BBC. There were several one-off cookery shows in 1952–3, including one late in 1953 called *An Evening's Diversion of Elizabethan TV*, in which, instead of wearing his usual stout butcher's apron, he cooked in a costume that featured a white ruff, doublets, and hose. In 1956 he had another series, *What's Cooking?* Rationing ended in 1954; before that, it had been difficult even for television cooks to provision their programmes, and it was said that he had sometimes used his own rations to make the programme. Audiences were drawn by his professional-looking skill, his assurance, and his evident pleasure in preparing good food, as well by his clubbable personality.

Harben was not a fraud, like Fanny Cradock, who soon followed him on the television screen, or a mere entertainer, like so many later television cooks; but he had his own lighter moments. Television shows were, of course, live in these years. One well-attested story has him going to the oven to retrieve a dish and saying, 'Well, they're not quite ready yet. Goodbye everybody.' Asked why he'd finished the programme when there were still several minutes to go, he explained, 'It wouldn't have done any good. I forgot to switch on the oven' (bbc.co.uk/thenandnow/wac_snippets).

As a journalist Harben achieved an unusual stature for a writer of recipes. Along with Correlli Barnett and Katharine Whitehorn he wrote in the post-war *Women's Own*. According to Harry Diamond, the sub-editor who handled his copy, his recipes were 'eagerly awaited each week by countless breathless housewives'. Once Diamond had to cut 'three or four completely superfluous words' from a Harben recipe to make the copy fit the layout, and 'an irate Mr. Harben phoned to speak to the "stupid fucking idiot" who had ruthlessly reduced his recipe to unintelligible rubbish'. The editor consequently relieved Diamond of responsibility for the recipe column (www.geocities.com/henry_diamond).

In 1955 Harben was appointed 'cookery ambassador extraordinary' to the government, and even sent to America to praise British cooking. (This was an era before Britain had got its bad reputation for food and cooking, a time when an American publisher could still sell copies of Samuel Chamberlain's nearly 600-page 1963 gastronomic vade-mecum, *British Bouquet*.) His Penguin book, *Cooking* (1960), explained the subject from what was then thought to be a scientific angle. In his last years he lived at 81 Albion Gate, on the Bayswater Road in west London. Harben died on 27 April 1970 at St Mary's Hospital, Harrow Road, Paddington, from cerebral softening due to cerebral atherosclerosis. His wife survived him. He was buried in Highgate cemetery. Harberton. For this title name *see* Pomeroy, Florence Wallace, Viscountess Harberton (1843/4–1911).

Harbin, George (*c.*1665–1744), nonjuror and historical writer, was the only surviving son of John Harbin, merchant (*d.* 1673), of St Helen, Bishopsgate, London, and his wife, Mary. The family claimed descent from the Harbins of Newton Surmaville, near Yeovil, and George's three sisters all married Somerset gentry. Harbin entered Emmanuel College, Cambridge, in 1683, graduated BA in 1687, and migrated to Jesus College in 1688. He was ordained as chaplain to Francis Turner, bishop of Ely. On 10 June 1719 Harbin married Elizabeth (*bap.* 19 April 1685), the daughter of Edward Copley of Batley, Yorkshire. Nothing more is known of her, and neither she, nor any child, is mentioned in Harbin's will.

Harbin became a nonjuror at the revolution of 1688, and lived first at Newbottle in Northamptonshire, as chaplain to Colonel Sackville Tufton. In 1699 he entered the service of Thomas Thynne, first Viscount Weymouth, at the suggestion of Bishop Thomas Ken, on Bishop Turner's recommendation. His connection with the Thynne family continued until his death, though the act of 1702 for imposing the oath of abjuration disqualified him from acting as chaplain.

Harbin read widely during these years in English history and genealogy, on which he came to be reckoned among the foremost authorities of his day. He made voluminous copies of manuscripts held at Longleat House (where he lived for many years) and in the libraries of other gentlemen of his acquaintance. In 1710 he used this learning in *The English Constitution Fully Stated*, which attacked the near equation of *de facto* and *de jure* possession argued for in William Higden's *View of the English Constitution* (1709). A second work, *The Hereditary Right of the Crown of England Asserted*, appeared anonymously in 1713; Hilkiah Bedford was prosecuted and imprisoned for it, and Harbin's authorship was not generally known until many years later.

Harbin was a nonjuror of similar stamp to his friend Bishop Ken; he would not transfer allegiance from James II, but had no enthusiasm for the nonjurors' ecclesiastical separation, or the 'Cyprianic' theology of Henry Dodwell which underpinned it. He attended the parish church in

Newbottle after the revolution, and had no recorded contact with nonjurors' meetings in London during his later years, when he lived in the parish of St James's, Westminster. His will gives no hint of any nonjuring connection. Harbin died on 20 September 1744 at his house in King Street, Westminster, and was buried at St James's, Westminster, on 23 September. JOHN FINDON

Wealth at death £400; plus books, plate, some jewellery, and chattels: will, PRO, PROB 11/736, sig. 256

Harbord, Edward, third Baron Suffield (1781–1835), politician, born on 10 November 1781, in Albemarle Street, London, was the third and youngest son of Harbord Harbord, first Baron Suffield, and his wife, Mary, daughter and coheir of Sir Ralph Assheton, bt, of Middleton, Lancashire. He was educated at Eton College and at Christ Church, Oxford, taking his MA on 23 June 1802. In dress as a young man he was a 'little recherché and fantastic, giving a false impression of effeminacy' (HoP, *Commons*). He was a cricketer, wrestler, and boxer, and was known for running a mile in five minutes comfortably. He sometimes raced for money against professionals. He was wont to bend a poker round his neck, on one occasion nearly throttling himself.

Harbord sat in the House of Commons as MP for Great Yarmouth from 1806 to 1812, and as MP for Shaftesbury in 1820–21. He usually supported the government. Castlereagh sent him to Portugal in 1808 on diplomatic business and invited him to become his private secretary; the offer was lost through delays. He was defeated as an independent candidate for Norwich in 1818, and in 1819, to the disgust of his family, he declared himself a Liberal at a public meeting held at Norwich to petition for an inquiry into the Peterloo massacre. In 1821 Harbord succeeded on his brother's death as third Baron Suffield, and in the House of Lords supported liberal measures with much earnestness. He framed a bill for the better discipline of prisons, the chief clauses of which were adopted in the new law on the subject passed in 1824 (4 Geo. IV, c. 64); and he secured a relaxation of the game laws, and the abolition of spring guns. From 1822 onwards Suffield persistently, and almost single-handedly, advocated in the House of Lords the total abolition of the slave trade, and sat on numerous committees of inquiry appointed by the house.

On 19 September 1809 Harbord married Georgiana Venables-Vernon, daughter of George, second Baron Vernon; she brought him £90,000, Vernon House, and her family's jewels; they had two sons and a daughter; she died on 30 September 1824. He then married, on 12 September 1826, Emily (1799–1881), daughter of Evelyn Shirley of Eatington Hall, Warwickshire, with whom he had six sons and a daughter. Suffield lived much on his estates in Norfolk, where he was an active chairman of quarter sessions; the family seat was Gunton Park, near Norwich. He was a good landlord and allotted land to his cottagers. His love of athletics made him generally popular, and he established the Norfolk cricket club. He died at his London home, Vernon House in Park Place, on 6 July 1835, after falling from his horse on Constitution Hill; the accident occurred exactly at the place where Peel fell in 1850. He was buried at Gunton Park.

Harbord, William (1635–1692), politician and diplomat, was born on 25 April 1635, the second son of Sir Charles Harbord (1596–1679), second baronet, of Charing Cross and Stanninghall, Norfolk, and his second wife, Mary (*d.* 1666), daughter of Jan van Aelst of Sandwich, Kent. On 24 June 1651 Harbord was given a pass to travel to the Netherlands with his mother and sister, and on 14 October 1651 he enrolled at the University of Leiden. On 4 May 1655 he entered the Middle Temple, London, but he did not stay long, for on 29 May 1656 he received a pass to travel abroad. This time he visited the Levant. Harbord had returned to England by August 1660 when he was appointed to minor local office. In February 1661 Harbord succeeded the deceased Thomas Gewen as auditor of the duchy of Cornwall, and at the general election held in April he entered parliament for Dartmouth. On 26 July 1661 he was licensed to marry Mary (*b.* 1638/9, *d.* in or before 1678), daughter and coheir of Arthur Duck DCL, of North Cadbury, Somerset. They had three daughters, one of whom, Margaret (*d.* 1698), married Robert *King, second Baron Kingston. In June 1662 Harbord secured the

reversion of his father's office of surveyor-general of crown lands.

The early part of Harbord's parliamentary career saw him in the shadow of his father, who was a very active member of the Cavalier Parliament (1661–79). Harbord was seen as a court supporter in 1664, and in 1670 he was described as 'under-surveyor, and a court contriver to cheat the king of his lands' (Cruickshanks). The latter may have been a reference to Harbord's estate at Grafton Park, Northamptonshire, where he was resident. Anti-popery was always a significant theme in Harbord's parliamentary career. He was a teller on 14 February 1673 in favour of a joint address of Lords and Commons against the suspending power, and spoke on 28 February 1673 in favour of removing papists from military office. On 27 October 1673 he attacked Edward Seymour as 'an unfit person to be Speaker' (Grey, 2.188). Despite making enemies of Seymour and the lord treasurer, Thomas Osborne, Viscount Latimer (soon to be earl of Danby), in December 1673 he was appointed 'principal' secretary to the lord lieutenant of Ireland, Arthur Capel, first earl of Essex. Consequently on 20 December he was ordered to be sworn an Irish privy councillor. He seems to have owed his advancement in part to Henry Bennet, first earl of Arlington, and on 20 January 1674 was a teller against a motion for an address to the king requesting Arlington's dismissal from office. Harbord was to spend much of his time in England watching Essex's back at court in case Richard Jones, earl of Ranelagh, or James Butler, first duke of Ormond, should attempt to undermine his position. Despite Danby's enmity, on 3 May 1675 Harbord declined to support the fifth article of impeachment against the lord treasurer which related to the management of Irish affairs. However, he acted as a teller on 6 May 1675 in favour of further proceedings against John Maitland, duke of Lauderdale. Although nominally a courtier, at this juncture he was described by Danby's supporter Sir Richard Wiseman as a man who 'disserves the king' (Cruickshanks).

Harbord lost his Irish post upon the recall of Essex in May 1677. The tenor of Harbord's parliamentary speeches was now critical of France and in favour of an alliance with the Dutch. Thus on 25 May 1677 he opined that 'England is not safe but by alliance with the Dutch' (Cruickshanks). His opposition to the court saw Anthony Ashley Cooper, first earl of Shaftesbury, account him 'worthy' in his parliamentary assessment in 1677. His first wife having died, Harbord's links to the opposition to the court were enhanced on 21 February 1678 by his marriage to Catherine (*d.* 1702), daughter of Edward Russell and niece of William Russell, fifth earl of Bedford. Her brother was Edward *Russell, earl of Orford. They had one daughter. Marriage certainly did not temper his criticism of the government and the king's advisers. On 18 June 1678 he supported a test against corruption, suggesting that 'whoever attempts the enslaving and making the legislative power subservient to any particular subject is [guilty of] the greatest crime that can be' (Grey, 6.104–5).

Harbord was able to assist in the return to the Commons of Ralph Montagu, in a by-election for Northampton on 10 November 1678. Montagu was thus able to shelter under parliamentary privilege when he sought to destroy Danby's political career by revealing his negotiations with the French. Harbord served as the chair of the committee put in charge of Montagu's papers before they were revealed to the Commons and, as Barillon later put it, he 'contributed greatly to the ruin of the earl of Danby' (Dalrymple, 1.382). Harbord was rewarded with 500 guineas for assisting Barillon.

Harbord appears to have taken fright following the prorogation of parliament in December 1678, reportedly 'endeavouring to have gone beyond sea, so afraid he is of being taken' (*Sixth Report*, HMC, 389), and failing that taking refuge with his brother John at Gunton in Norfolk. However, he seems to have recovered his nerve with the dissolution of the Cavalier Parliament, and he was returned on 24 February 1679 for Thetford. In the new parliament he was very active, promoting the investigation of the Popish Plot and measures against popery, particularly the banishment of papists from London. However, he voted against the Exclusion Bill. Harbord chaired the committee inquiring into the navy, and was especially severe on Anthony Deane and Samuel Pepys, who were sent to the Tower. He may have had designs on Pepys's job as his old political associate, Sir Henry Capel (brother of Essex), was appointed first lord of the Admiralty in May 1679.

In June 1679 Harbord told Henry Sidney, a confidant of William, prince of Orange (afterwards William III of England), that for the good of the nation the prince should be declared 'protector, in case the succession fell into the hands of a Roman catholic prince' (*Diary of ... Sidney*, 1.8). Following the dissolution of parliament Harbord was again returned for Thetford on 15 August 1679, aided by a generous bequest to the town from his father who had died in May. In July 1680 Barillon included Harbord in a list of the most considerable MPs, and by the time the parliament met in October 1680 Harbord had been converted to exclusion. Indeed, on 2 November 1680 Harbord moved for leave to bring in an exclusion bill, and in the debate on 18 December following the king's speech in which he insisted on the legal descent of the crown, Harbord responded by saying that 'without the bill, and a power to assert that bill, all will signify nothing' (*Beaufort MSS*, 99), before proposing limitations on royal power in addition to exclusion. In January 1681 he was at the forefront of attacks on George Savile, earl of Halifax, the leading exponent of limitations as an alternative policy to exclusion.

In the 1681 election Harbord was chosen for both Thetford and Launceston, choosing to sit for Thetford. After the dissolution of the Oxford parliament in March 1681, Harbord appears to have considered moving his family to Holland 'for a year or two' (*Diary of ... Sidney*, 2.23–4). After the Rye House plot he was accused by a member of Thetford corporation of threatening to seize the king in 1681, and on 17 July 1683 the Northamptonshire grand jury presented him among those they felt to be 'dissatisfied and dangerous' to the government (Cruickshanks). In August Harbord complained to Sir Leoline Jenkins, secretary of state, about the grand jury's presentation and the two

searches which had been made for arms at his home. He explained that he needed the few arms he had to undertake his duties as surveyor-general, and Jenkins duly ordered them to be restored to him.

After the accession of James II, Harbord fled to the Netherlands. He was ordered to return in January 1686, and in February the government took steps to try to remove him from the auditor's office in Cornwall. In the summer he was noted as attending the siege of Buda, and in July he received the thanks of Halifax for rendering his son George assistance after he had been wounded during that campaign. In October 1686 Harbord was reported to have returned to England, but 'not finding a reception to his mind' (*Seventh Report*, HMC, 500) he returned to Holland. Another summons ordering Harbord to 'set aside all excuses' and return (*CSP dom., 1687–9*, 192) was issued on 30 April 1688, but his only response was to offer to give up his office of surveyor-general in return for the withdrawal of the warrant.

Harbord did not return to England until he landed as part of William of Orange's invasion fleet. In November 1688 he was named one of three commissioners for collecting crown revenues in the west of England. On 7 December Henry Hyde, second earl of Clarendon, remarked upon Harbord's animosity to James II, noting that Harbord had said 'he had drawn his sword against the king; that he had no need of his pardon; but they would bring the king to ask pardon of them, for the wrongs he had done' (*Correspondence*, 2.219). When William's supporters met on 8 December at The Bear inn to decide how to answer James II's commissioners, Harbord argued for the cancellation of the writs issued by the king for calling a parliament, presumably because he felt unsure of his own election. Harbord should not have worried as he was returned to the Convention for Launceston, Thetford, and Scarborough, choosing to sit for the Cornish seat.

In the Convention, Harbord was a supporter of William's claims to the throne, telling on 5 February 1689 against the Commons accepting an amendment from the Lords which would have denied that the throne was 'vacant'. He was also an exponent of settling the government as quickly as possible, giving priority to this over the promulgation of a bill of rights. Security for the kingdom lay with voting supply and organizing an army; the government could be held to account through control of the purse, rather than legislating on the constitution, which could be very time-consuming. He was also keen to secure the exception from the Indemnity Bill of those deemed responsible for advising James II, such as Robert Spencer, second earl of Sunderland. Harbord was named a privy councillor on 8 March 1689 and that month was also appointed paymaster of the forces in Ireland. Halifax later remarked that 'at first the K[ing] took Mr Harbord for an extraordinary man of business, but a few months after his being in England, he was undeceived' (Foxcroft, 2.226). The disillusionment of William III had much to do with the travails of the Irish campaign, and the subsequent accusations that Harbord feathered his own nest while failing in his duty to supply the troops with money. Frederick Schomberg, first duke of Schomberg, in command in Ireland, was particularly critical of Harbord's conduct, though Harbord survived a critical vote against him in the Commons in July 1689. Perhaps in response to this criticism, Harbord went to Ireland in September 1689, and stayed until December. Following his departure Schomberg was still complaining of a shortage of funds and of Harbord's non-existent volunteer company.

Harbord was re-elected for Launceston in 1690. In March he was removed as Irish paymaster. In the Commons he continued a firm supporter of the government, even to the extent that in May 1690 he defended the marquess of Carmarthen (formerly Danby), who had become a leading minister to William III. On 16 July 1690 Harbord left England *en route* for the United Provinces as ambassador, a mission of some delicacy given the naval defeat at Beachy Head and the need to gain further naval assistance from the Dutch. He returned about 26 August 1690.

In November 1691 Harbord was made vice-treasurer of Ireland, no doubt as a sweetener for his other important appointment as ambassador to Turkey. He was instructed to travel by way of Vienna (he was there in February 1692) to consult the holy Roman emperor, Leopold I, about mediating in the war with Turkey. He never reached his destination, dying at Belgrade on 31 July 1692. In his will of 20 November 1691 he referred to his wife's 'worthy behaviour to me in my many troubles', and asked her to 'keep my house and gardens at Grafton Park in reasonable good repair' (PRO, PROB 11/232*r*–235*r*). He gave his daughter from his second marriage, Letitia, a portion of £6000. Most of his personal estate he left to be divided among his four daughters, in such a manner as to protect it from the use of their respective husbands. STUART HANDLEY

Harborne, William (*c.*1542–1617), merchant and diplomat, was probably born at Great Yarmouth, Norfolk, the second son of William Harborne (*d.* 1588), administrator, of Great Yarmouth, and his wife, Joan Piers, or Pearce (*fl.* 1520–1590). Harborne senior, originally from Shrewsbury, Shropshire, became a leading citizen of Great Yarmouth, was elected bailiff in 1557 and 1572, and was initially chosen as MP for the borough in 1575 but the election was contested and another candidate got the seat. He probably had trading interests and may have invested heavily in one of his second son's commercial ventures in the Ottoman empire, the failure of which reduced him to penury in 1582 (Skilliter, 34–5, 169–70). William Harborne's elder brother, Thomas Harborne, travelled with him on at least one journey, returning from Constantinople in 1579 as courier of the first official letter from Murad III to Elizabeth I. His younger brother Piers Harborne may also have been a merchant, and was in Portugal about 1579 in contact with Dom Antonio, unsuccessful claimant to the Portuguese throne after the death of Sebastian.

Early career, 1559–1581 Harborne himself probably entered the service of the London merchant Edward Osborne about 1559 and travelled abroad first as the latter's factor and later on his own account. In 1577 he was listed as one of the sixty principal members of the newly incorporated Spanish Company. English traders who met him on the island of Chios in 1581 considered him a rich London merchant and gentleman; his personal prosperity was maintained by involvement in trade throughout his life, despite the unusual expenses of his several years' residence in Constantinople.

English commercial interest during the 1570s in establishing regular trade in the Ottoman empire was complemented by the desire of Sir Francis Walsingham, principal secretary, to explore the diplomatic advantages of having an official, potentially anti-Spanish, presence there. On Osborne's recommendation Harborne was sent as agent to Constantinople to seek from the sultan, Murad III, a guarantee of safe conduct for English traders, to enable them to sail under their own flag rather than that of France, the only other Western nation with appropriate trading privileges. Leaving London in July 1578, he took the overland route via Hamburg, Poland, and the Danubian principalities and arrived in Constantinople on 28 October. This was Harborne's preferred route for subsequent journeys (and for those of his individual couriers and agents), since it helped maintain good Anglo-Polish relations and also avoided the suspicions and hostility of the Venetians and Spanish which would inevitably have been raised by a sea voyage through the Mediterranean. As the principal English trading commodities of tin, lead, woollen cloth, and other military-related items were particularly welcome to the Ottomans after the outbreak of war with Iran in the summer of 1578, Harborne was immediately successful in negotiating individual trade concessions for Osborne, Richard Staper, and himself, confirmed in Murad's grant of privileges in March 1579, and in the opening of friendly diplomatic correspondence between the sultan and Elizabeth. The subsequent 'unilateral charter of privileges to the English nation' granted by Murad in May 1580 formed the basis of Anglo-Ottoman relations and trade capitulations for the next 300 years. English merchants generally were guaranteed freedom of passage for themselves, their servants, and their goods, by land or by sea, through territories held or controlled by the Ottomans, on condition that they 'mind their own business and be occupied with their ordinary duties'. Englishmen were not to be taken prisoner or enslaved; English ships in distress at sea should be assisted. The English trading colonies would be subject to their own regulations as decreed by the ambassador, so long as no disorder ensued; on all matters of trade or other relations with Muslims, the English would be subject to the authority of the kadi's court acting in all fairness. Englishmen would not be subject to the Ottoman poll tax and were entitled to appoint their own interpreters; none would be held responsible for the debts of other Englishmen and their goods would not be seized after death (Skilliter, 86–9). In July 1581 Harborne departed for London, his mission apparently accomplished.

Ambassador in Turkey, 1581–1583 On 11 September 1581 Elizabeth granted the first charter for the newly formed Turkey Company. Although this venture was possible only as a result of Harborne's negotiations in Constantinople, he himself is not listed as one of the twelve London merchants granted a seven-year monopoly of the Turkish trade, possibly because he was absent from London when the company was being formed, possibly because of the *Bark Roe* incident. He was, however, too prominent a figure to be ignored for long. Osborne, as head of the new company, petitioned the queen early in 1582 to send a permanent representative to Constantinople to secure the sultan's recognition of the Turkey Company and to look after the interests of the increased numbers of English traders expected there. On 20 November 1582, after considerable debate over the propriety of establishing such a resident in a non-Christian state and more particularly over who to appoint (the queen or the company was to support him financially), Harborne was named ambassador, at the company's expense. Departing from London almost immediately and this time travelling openly by the Mediterranean sea route in the company's ship *Susan*, he reached Constantinople on 29 March 1583 and was received in audience by the sultan on 24 April.

For the next five years Harborne played a dual role as Elizabeth's 'Orator, Messenger, Deputie and Agent' to the sultan and as representative of the Turkey Company. His immediate commission was to appoint consuls in the main Ottoman trading ports to oversee English interests. On 25 April he appointed Harvie Millers as consul in Alexandria and Cairo, and on 30 June Richard Forster as consul in Syria, to be based on the coast at Tripoli. His organization of the company's local agents was extended by the appointment on 30 March 1585 of John Tipton as consul at Algiers, Tunis, and Tripoli (in north Africa). Consulates may also have been established on Chios and at Patras in the Morea. Harborne was also charged with 'enact[ing]

lawes and statutes' for regulation of traders' behaviour *vis-à-vis* the Ottoman authorities and fellow trading nations, and for disciplining those who failed to observe these rules and thus jeopardized the English privileges generally (Hakluyt, 5.223–4). This point was particularly important since the harm that could be done to English interests by undisciplined traders had already been seen in the *Bark Roe* incident in 1581. Having traded her cargo of cloths and metals in Livorno, Malta, and Chios (and by chance meeting Harborne there), this London-based ship engaged in a series of piratical acts which culminated in the seizure of two Greek ships, belonging to subjects of the sultan and flying Christian flags. Fearing punishment in England for piracy and for disturbing diplomatic negotiations with the Ottomans, the crew of the *Bark Roe* took refuge on Malta, where the knights of St John used the ship for carrying grain and its crew variously as mariners and soldiers before submitting several of them to the Maltese inquisition in July and August 1581. Added to the anti-Christian act of piracy were accusations of English spying in preparation for a joint Anglo-Ottoman attack on Malta, a not unreasonable fear given the long-standing enmity between the Ottomans and the knights and the unsuccessful Ottoman siege of Malta in 1565. The depositions made to the Maltese inquisition by the crew of the *Bark Roe* were read to implicate Harborne, and through him Elizabeth. Murad also had grounds to doubt English sincerity in the light of the attack on his Greek subjects, who had appealed to Constantinople for redress. The fact that the *Bark Roe* had been able to sail from Chios in March 1581 only after Harborne's personal intervention with the Jewish customs farmer detaining the ship, in which he used the new English capitulations to prove the ship's right to sail in Ottoman waters under its own flag, appeared to confirm these doubts. Harborne thus found himself suspect on all sides. He was arrested by the Ottoman authorities and held responsible for reimbursement of the debt owed the Greek shipowners. This ran counter to the stipulations about responsibility for the debts of others in the trade capitulations of May 1580, but the Ottomans argued that as Harborne remained only an 'agent', and the capitulations were still to be ratified by the accrediting of a full ambassador, the agreement was not yet in force. Ironically, Harborne had no option but to seek the protection of the rival French ambassador, whose capitulations were fully ratified, in order to secure his own release. He then wrote an abject letter of explanation and exoneration to Lord Burghley describing 'the intollerable griefe of minde which thees pirattes have caused in me' and pleading for Burghley's favourable intercession with the queen (Skilliter, 154–8).

The *Bark Roe* incident exemplifies the difficulties and pitfalls facing Harborne in his isolated role. It is testimony to his professional competence, wide experience, and strength of character that despite this set-back he was able to return to Constantinople as full ambassador in 1583, ratify the capitulations, organize the consular system, and maintain good standing in the Ottoman capital in the years following. This was achieved despite continuing French, Venetian, and Spanish attempts to discredit him in Constantinople and despite the recurrent problems of English ships falling foul of Ottoman authorities, particularly on the north African coast. Ransoming prisoners was a regular task.

Life in Turkey and writings, 1583–1617 A further complication was Harborne's dual role as servant of both queen and company. Although the company had eventually agreed to support him financially with a salary of £200 per annum, this was primarily in his capacity as their representative and they were loath to underwrite the extra present giving necessitated by his diplomatic role. Harborne complained regularly of insufficient support and irregular payment, asserting that of the £1200 due to him for his service in Constantinople, only £400 had actually been paid while he was there. The shortfall was presumably met from his own resources, as he continued to participate in trading ventures. However, other figures from a balance drawn up in August 1589 after his return from Constantinople itemize Harborne's expenditure during his embassy and suggest that the company did cover £13,246 of the total of £15,341 incurred, the remaining £2095 being met by an allowance from the sultan. One-third of these expenses appear directly connected with his attendance at court in an ambassadorial capacity; ransoming captives cost a further £1203, interpreter's wages £1028, food and housekeeping £4496 (Rawlinson, 15). Harborne's successor as ambassador, Edward Barton, also complained vehemently about insufficient financial support.

On his return to Constantinople in spring 1583 Harborne took up residence at a house he called Rapamat (a corruption of Ahmet) on the Bosphorus in the Findikli area near the arsenal at Tophane. Known to the Ottomans as 'the Lutheran ambassador', he was clearly happy to keep a discreet distance from the other Catholic European communities up the hill in Pera. Harborne's household included his secretary Barton, who accompanied him to Constantinople in 1583, his assistant John Sanderson who arrived in 1585, a locally recruited interpreter, several domestic servants, and a guard escort of at least two janizaries.

After departing from Constantinople in August 1588, leaving Barton as agent in his stead, Harborne advised the Turkey Company and the queen on the need to maintain unbroken diplomatic representation in the Ottoman capital and pressed for Barton to be given full ambassadorial status. He favoured amalgamating the Turkey and Venice Companies into the Levant Company in January 1592, and is named in the letters patent as one of the new company's principal merchants. Meanwhile he had settled at Mundham, Norfolk, and became a freeman of Great Yarmouth in 1591. He wrote an account of his time in Constantinople that was published by Richard Hakluyt in his *Principall Navigations, Voyages and Discoveries of the English Nation* (1589). An unpublished account of these years, 'The relation of my tenn yeares forraine travelle', is preserved among the Lansdowne and Tanner manuscripts. On 16

September 1589 he married Elizabeth, daughter of Anthony Drury of Besthorpe, Norfolk, and his wife. They had several children. He died on 6 November 1617 at Mundham and was buried there.

Harbottle, Michael Neale (1917–1997), army officer and peace campaigner, was born on 7 February 1917 at 57 Beach Road, Littlehampton, Sussex, the son of Captain Thomas Cecil Benfield Harbottle, Royal Navy officer, and his wife, Kathleen Millicent Kent. He was educated at Marlborough College (1930–35) and the Royal Military College, Sandhurst (1935–7), and commissioned into the Oxfordshire and Buckinghamshire light infantry in 1937. On 1 August 1940 (by then a captain) he married Alison Jean (*b.* 1917/18), daughter of Harold Thomas Humfress, chief engineer in the Air Ministry. They had a son and a daughter.

Harbottle saw war service as a company commander in Italy, where he received a mention in dispatches and was wounded, losing two fingers. Despite this he played cricket for the army until 1959, captaining the team that year. During the 1950s he served in the UK and was appointed OBE in 1959 for his work as GSO1, south-west district. He commanded the 1st battalion, Royal Green Jackets, as demonstration battalion at Warminster from 1959 to 1962. From 1962 to 1964 he was garrison commander in Aden, responsible for security at a time when British rule was continuously under challenge from local dissidents, and he was promoted brigadier. He commanded 129th infantry brigade (TA) at Oxford from 1964 to 1966.

From 1966 to 1968 Harbottle was chief of staff to General Martola, commander of the United Nations peacekeeping force in Cyprus (UNFICYP). The republic of Cyprus had become an independent state in 1960. At the end of 1963 tension between the Greek and Turkish communities turned to violence. In March 1964, at the request of the British and Cypriot authorities, UNFICYP was set up with a mandate to 'use its best efforts to avoid a recurrence of the fighting' and contribute to 'a return to normal conditions'. This type of operation had not been provided for in the United Nations (UN) charter, so the rules had to be improvised. The main features later became well known: the consent of parties to the conflict; impartiality; and use of weapons by the UN only in self-defence. These were the ingredients of classical peacekeeping later found effective in Cambodia, Namibia, and Mozambique. Harbottle was among the first to see this type of operation in a positive light. When his tour of duty expired in 1968 the secretary-general of the UN, U Thant, asked for it to be extended. The Ministry of Defence declined, and Harbottle retired at the early age of fifty-one. He took the post of chief security officer for the British-owned mining subsidiary of the Consolidated African Selection Trust in Sierra Leone. Carrying a consignment of diamonds, he was set upon by armed bandits at Freetown airport and robbed of £1.5 million worth of stones. Acting under the implausible pretext that the company had set up its own hijack, the Sierra Leonean government expelled Harbottle and two other British employees.

His first marriage having ended in divorce, on 5 August 1972 Harbottle married Eirwen Helen Simonds (who had already changed her name to Harbottle), secretary, and daughter of Hugh Llewellyn Jones, banker. Harbottle acquired two stepdaughters to join the two children of his first marriage. He spent the 1970s writing and lecturing about United Nations peacekeeping. He was not the first in this field; Rosalyn Higgins had brought out a book in 1969, and in 1970 the International Peace Academy had been set up in New York under General Indar Jit Rikhye, former military adviser to the UN secretary-general. But Harbottle's work came as a revelation, particularly to the military. *The Impartial Soldier* (1970) dealt with his tour in UNFICYP and *The Blue Berets* (1971) assessed the five main operations going on at that time. He had worked with General Rikhye over Cyprus and was a vice-president of the International Peace Academy from 1971 to 1973. From 1974 to 1979 he was a visiting lecturer at the School of Peace Studies, Bradford University. During this period he brought out *The Thin Blue Line: International Peacekeeping and its Future* (1974) and *The Knaves of Diamonds* (1976), the latter describing his experiences in Sierra Leone. In 1978 he acted as collator of *The Peacekeeper's Handbook*, a definitive work which the UN issued to more than seventy countries as an instruction manual.

During the 1980s Harbottle's work took a disconcerting turn. From 1980 to 1982 he was general secretary of the World Disarmament Campaign, founded by Lord Noel-Baker and Lord Brockway. In 1981 he was involved in setting up Generals for Peace and Disarmament, a mixed group of retired admirals and generals, four from Greece, two from Portugal, two from West Germany (one of whom, Gerd Bastian, later shot himself and his lover, Petra Kelly, the Green Party leader, in apparent disillusionment), and one each from France, Italy, the Netherlands, and Norway. No British general joined. This group protested at NATO's deploying cruise missiles in Britain and Pershing II missiles in Germany. In conjunction with some Warsaw pact retired generals they held a conference in Vienna in 1984, of which the results were published that year as *The Arms Race to Armageddon*. Lords Chalfont and Blaker produced evidence of 'a series of direct links running from the Generals for Peace at the bottom to the Politburo at the top' (*Daily Telegraph*), and the book did indeed follow the Soviet line closely in places. In 1983 Michael and Eirwen Harbottle set up their own organization, the Centre for International Peacebuilding, based in their home in Chipping Norton, Oxfordshire, and after

the collapse of the Soviet Union the generals' group became the Worldwide Consultative Association of Retired Generals and Admirals. Harbottle's 1991 monograph *What is Proper Soldiering?* became required reading at staff colleges. More international meetings followed, and in 1996 a statement was issued through the centre signed by some sixty-two officers, including three former supreme allied commanders in Europe, calling for the elimination of nuclear weapons.

Harbottle was tall, handsome, athletic, brave, and an excellent staff officer. He wrote well and his great achievement was to make United Nations peacekeeping recognized as a valuable military role in its own right. Later he and his wife became tireless warriors for peace, but in this endeavour their efforts were regarded by many as sometimes misdirected. He died on 30 April 1997 at the John Radcliffe Hospital, Oxford, of an intracerebral haemorrhage. He was survived by his second wife, Eirwen, his two stepdaughters, and the two children of his first marriage.

Wealth at death £185,000: probate, 12 Aug 1997, *CGPLA Eng. & Wales*

Harbutt, William (1844–1921), inventor of Plasticine and art teacher, was born on 13 February 1844 in North Shields, Northumberland, the seventh of the eight children of Thomas Harbutt (*b.* 1803), a galvanizer, and his wife, Elizabeth Whitehouse Jefcoate (*b.* 1804). Details of his early education are unknown, but later he studied at the National Art Training School, South Kensington, London, where he obtained a medal and several diplomas and became an associate of the Royal College of Art.

In 1874 Harbutt became head of the Bath School of Art, but he left in 1877 after a dispute with the ruling committee. He then worked as a peripatetic art teacher and opened his own school, the Paragon Art Studio, at 15 Bladud Buildings, The Paragon, Bath, where he taught painting and modelling. His wife, Elizabeth (Bessie; 1846–1930), daughter of Owen Cambridge, bailiff, of Wimpole, Cambridgeshire, whom he married on 8 August 1876, was also an artist and teacher at the school. Of their seven children, one died in infancy, but the surviving three sons and three daughters all later worked in the family business. After leaving Bladud Buildings the Harbutts moved to Hartley House, Belvedere, Lansdown, Bath, where Harbutt, who had found that the clay used for students' sculptures was messy and dried out too quickly, first experimented with his modelling material. He then rented 15 Alfred Street, where in 1897 he began small-scale manufacture of the material, which he named Plasticine, in the basement. After experiments with mixing various ingredients he discovered a more suitable material, which consisted of calcium salts, petroleum jelly, and long-chain aliphatic acids, combined with whiting and perfume. After mixing, the material was rolled out with a garden roller and allowed to mature. It was then cut up and packed into boxes at his new studio and annex at 22 Milsom Street. At first all Plasticine was grey, but pigments were added later to produce a range of bright colours. In 1900 a box sold at 2*s.* 6*d.* and contained Plasticine in four colours, a tool, and

William Harbutt (1844–1921), by unknown photographer [with his wife, Elizabeth (Bessie) Cambridge, and their family]

a modelling frame. To promote the product Harbutt wrote *Harbutt's Plastic Method, and the Use of Plasticine ...* (1897), and later he produced further publications on the subject.

'Plasticine' was registered as a trade mark in 1899 and won various awards, including gold medals at exhibitions in Birmingham and Weston-super-Mare (both 1899) and Bath (1900). As it was clean, pliable, and easy to use, it quickly became successful, and Harbutt purchased an old house and adjoining flour mill in the High Street of Bathampton, Wiltshire, where large-scale commercial production commenced on 1 May 1900. In 1912 Harbutt's Plasticine became a limited company and the product eventually achieved worldwide distribution. The company also marketed Playwax and other inventions by Harbutt. Many schools used Plasticine for sculpture, nature study, geometrical modelling, and map making; and architects and engineers liked it as well. During the First World War Plasticine modelling provided excellent therapy for convalescing soldiers.

Harbutt was a kind and generous man and a good employer, sometimes extending factory lunch hours for summer cricket matches or winter ice-skating. He was a non-smoker and teetotaller, and strongly against vaccination and vivisection. An early accident had made him lame, but he coped well with this minor disability. As a regular churchgoer he joined the Bath New Church Society in 1880, becoming president in 1905. He served as a councillor on the Bath rural district council and board of guardians, was chairman of the Bathampton parish council for many years, and supported several local societies.

Harbutt was passionately enthusiastic about his product. Indeed he constantly promoted Plasticine, and while on a business trip to the USA he caught a chill, and died of pneumonia in New York on 1 June 1921. His body was returned to England and buried in the churchyard of St Nicholas, Bathampton. He was survived by his wife. Harbutt's Plasticine has given pleasure to generations of children, and its use for the Wallace and Gromit characters in Nick Park's award-winning animated films is now well known. CHRISTOPHER F. LINDSEY

Harcarse. For this title name *see* Hog, Sir Roger, of Harcarse, Lord Harcarse (1634/5–1700).

Harclay [Harcla], **Andrew, earl of Carlisle** (*c.*1270–1323), soldier, was probably the eldest son of Sir Michael Harclay (*d.* before 1309), a tenant and servant of the Cliffords who later entered the service of the crown, acting as sheriff of Cumberland (1285–98), and of Joan, daughter of William Fitzjohn, a Yorkshire landowner, and brother of the theologian Henry *Harclay. The family name derived from Hartley in Westmorland. First recorded at the Westmorland eyre of 1292, which suggests that he was then at least twenty-one, Andrew Harclay campaigned in Scotland in 1304 and 1310, and in 1309 was ordered to assist Robert Clifford (*d.* 1314) in defending the English west march against Scottish attack. He was appointed sheriff of Cumberland in 1311, was chosen knight of the shire for that county in 1312, and in December 1313 gave energetic leadership against Scots then ravaging the county. Two years later, in July and August 1315, he directed the successful defence of Carlisle against a full-scale Scottish siege, led by King Robert in person—his role is given visual form in the initial letter for the royal charter that Carlisle received in 1316, in which Harclay, identifiable by his armorial bearings, hurls a spear through a Scottish soldier below the walls. Harclay himself was rewarded by a gift of 1000 marks (£666 13*s.* 4*d.*). His rise to prominence in the north-west aroused antagonism, however, and when he was captured by the Scots late in 1315 or in 1316, his temporary absence from the region gave his enemies opportunities to undermine his standing with Edward II.

Harclay had to pay at least 2000 marks (£1333 6*s.* 8*d.*) to recover his freedom. He had royal assistance in raising his ransom, notwithstanding 'malicious charges made by some persons against him at Court' (*CDS*, 3, no. 515/3). But although the king took steps to ensure that the crown's debts to Harclay were paid, only in 1319 does he appear to have been fully restored to Edward II's favour, when he became sheriff of Cumberland, keeper of Carlisle and Cockermouth castles, and warden of the west march. In the following year he was paid 1000 marks by indenture for keeping Carlisle and its march, while in 1321 he received a personal summons to parliament. The apogee of his career came in 1322, when he commanded the loyalist army that defeated Thomas of Lancaster at Boroughbridge on 16–17 March, skilfully deploying his men 'in schiltrom, after the Scottish fashion' (*Chronicle of Lanercost*, 231) to hold the crossing of the Ure against the rebels. On 25 March Harclay was munificently rewarded for his services, being created earl of Carlisle, with the promise of lands worth 1000 marks yearly (and the same amount in cash until the lands were forthcoming) to maintain him in his new dignity. The king himself girded Harclay with the comital belt. Along with his new rank, Harclay now disposed of an impressive degree of military strength. For

the Scottish campaign of August 1322 he mustered 113 men-at-arms, 1435 hobelars (lightly armed cavalry), and 2069 foot soldiers, and after the campaign he was paid to retain a force of 240 men-at-arms and 500 hobelars for the defence of the English west march.

Harclay was unable to bring his men to Edward II's aid before the king's forces were routed at Byland in Yorkshire on 14 October 1322. The extent of the disaster, and Edward's inability to defend his realm against the Scots, led the earl of Carlisle to conclude that the war to conquer Scotland could not be won, and to enter into negotiations with the Scots to end it. When those negotiations began is unknown, but they were concluded on 3 January 1323, when Harclay himself went to Lochmaben to meet King Robert and Thomas Randolph, earl of Moray. Their treaty survives in two forms, clearly meant to circulate in England and Scotland respectively. They have much in common, above all the acceptance that each kingdom should be free of the other. They concur, moreover, that in return for Edward II's consent to the treaty, King Robert would found a monastery to pray for the souls of those killed in the Anglo-Scottish wars, pay the English king 40,000 marks (£26,666 13*s.* 4*d.*) over ten years, and even allow Edward to choose a wife from among his own kin for Robert's male heir. But whereas the English version lays stress on a consensual resolution of remaining difficulties, in the context of 'everything that has to be done for the common profit of both realms' (Stones, 309), the Scottish version speaks of the use of force by the negotiating parties to compel acceptance of its terms. It is certainly this version that represents most fully the intentions of the negotiators, and its terms suggest that the treaty was intended to create a military alliance between English earl and Scottish king, which would culminate in the dictation of peace to Edward II by them. Significantly, the occupants of Carlisle Castle in the following month included Sir Philip Meldrum, an important Scottish knight who can only have been there as King Robert's agent.

Edward knew that Harclay was in negotiation with the Scots within a week of the treaty's being concluded. Half-hearted attempts to secure the earl's arrest alternated with the dispatch of messengers to Carlisle, until on 28 January 1323 the dismissal there of a force of soldiers loyal to the king, followed by the sending out of agents to take oaths in support of himself, indicated that Harclay had resolved to persist in treasonable courses. But his plans were betrayed to the king, and the earl was progressively stripped of his offices, while the castles nearest to north-west England were fortified. Only on 25 February, however, was Harclay overthrown, when a small force led by Sir Anthony Lucy, who had remained at or near Carlisle and was clearly trusted by the earl, took him by surprise in Carlisle Castle and arrested him. On 3 March 1323 Harclay was arraigned for treason on the king's record before royal justices appointed for the purpose. Denied a hearing, he was degraded from his earldom by being ungirded of his sword and having his spurs cut from his heels, and was then sentenced to be hanged, drawn, and quartered as a traitor—a fate he endured with dignity and resolution, publicly declaring at the foot of the gallows the good intentions behind his treaty with the Scots. Following his execution on Harraby Hill, Carlisle, his head was taken to Knaresborough for the king's inspection, then placed on London Bridge, while his quarters were set up at Carlisle, Newcastle, Bristol, and Shrewsbury. Only in 1328 were his remains allowed Christian burial.

The known number of Harclay's followers in his treason is very small, and nearly all of them were able to return to the king's peace after the execution of their leader, who was treated as having been solely responsible for the conspiracy to secure peace with the Scots. There seems no reason to doubt the Lanercost chronicle's claim that it was the destructiveness of the war, and Edward II's unwillingness to end it, that lay behind Harclay's action in opening negotiations. The material weakness of Carlisle may also have prompted Harclay to reflect that if peace was not made soon, the war might be ended by military defeat anyway. His conspiracy was a desperate measure, though given Edward II's refusal to renounce his claim to Scottish overlordship, it is hard to see how else the fighting and associated havoc could have been stopped. As it was, Edward II was compelled to agree to a thirteen-year truce less than three months after the earl's execution. Harclay was hardly realistic, however, if he supposed that he could be reconciled to his king once he had forced him to recognize Scottish independence, and in fact there is evidence for precautions against the failure of the conspiracy—for instance, Harclay's secretary, William Blount, later fled to Scotland and was given lands there, while there were even rumours that the earl planned to marry a sister of the Scottish king—which suggest that Harclay appreciated this difficulty himself. But on the whole there is little evidence that he possessed political as well as military skills. On the contrary, he further antagonized men in the north-west who must have been already alarmed by his dramatic rise—men like Sir Anthony Lucy, whose lands he seized in 1322 on a spurious charge of Lancastrian allegiance—and also made dangerous enemies at court, above all the king's favourite, the younger Hugh Despenser. It may be, therefore, that he failed to appreciate how far his regional pre-eminence depended on royal office and favour, and how vulnerable he might be to local hostility if the king turned against him. Even posthumously, that favour was never restored. A petition by his nephew Henry, early in Edward III's reign, that the verdict on Harclay be annulled as not made by due form of law, went unanswered. Local tradition may have remembered him kindly, on the evidence of a long passage in the mid-fifteenth-century chronicle of the Northumbrian John Hardyng, acknowledging that the earl 'wel dyd mene in takyng of that pese' (BL, Lansdowne MS 204, fol. 183). But in the records of central government Andrew Harclay was always 'lately the king's enemy and rebel'. HENRY SUMMERSON

Harclay [Herkeley], **Henry** (*c.*1270–1317), theologian, was the son of Sir Michael Harclay, a long-serving sheriff of Cumberland, who died before 1309, and brother of Andrew *Harclay, first earl of Carlisle (*d.* 1323). The family name was derived from Hartley in Westmorland. By 25 December 1296, when John Halton, bishop of Carlisle (*d.* 1324), appointed him to the rectorship of the church of Dacre, Henry Harclay was already master of arts and subdeacon. In 1297, probably on 21 December, he was ordained to the priesthood. Harclay studied theology at the University of Paris, commenting on the *Sentences* of Peter Lombard about 1300, when John Duns Scotus (*d.* 1308) was teaching there. Harclay's still unedited commentary on the first book of the *Sentences* is extant in two codices, one found in the Vatican City, Biblioteca Apostolica Vaticana, MS Vat. lat. 13687, fols. 13*r*–97*v*, and another, in a much more legible form, in Casale Monferrato, Biblioteca del Seminario Vescovile, cod. b 2, fols. 1*r*–84*r*. Scotus exercised a strong influence on Harclay at this time. In his commentary Harclay takes solutions verbatim from Scotus, frequently uses Scotus's arguments, and adopts many of his positions; but he was not a slavish disciple, rather, as an acute commentator, he offered independent criticisms which may have influenced Scotus's final edition of his own commentary, the *Ordinatio*.

Harclay returned to England, and attended the University of Oxford, becoming master of theology some time before 1312. He became embroiled in bitter controversies between the university and the Dominicans over a number of privileges claimed by the latter, and he threw himself into the battle on the side of the university, being among those who drew up new regulations that restricted those privileges. In these academic battles Harclay was not above using every means at his disposal. After the Dominican Hugh Sutton had scheduled a public disputation for 17 February 1312, Harclay, against all custom, scheduled his own public disputation for the same day, embarrassing Sutton with the meagre audience he drew. Later that year, on 11 December, Harclay was confirmed by the bishop of Lincoln as chancellor of the University of Oxford, and travelled to the papal court at Avignon on the university's behalf in pursuit of a settlement to the controversy.

Harclay was a particularly active chancellor, solicitous in maintaining the good order of the university. He saw the need for organizing the numerous university statutes, and very probably commissioned a register in book-form, *Registrum A*, that succeeded in bringing some order to the mass of statutes. On 7 July 1313, under Harclay's leadership, the university passed a statute forbidding the carrying of weapons by students and the constant quarrelling among the northern (north of England and Scotland) and southern (south of England, Wales, and Ireland) 'nations' of students. It also issued a statute requiring every master, before taking up his teaching duties, to take an oath not to endanger the peace of the university. In order to reduce the high price of food in Oxford, Harclay obtained a royal writ fixing the price of the most important commodities. On 20 May 1315, moreover, Harclay received from the king a confirmation of a number of important privileges that Henry III had granted to the university.

Harclay was vigilant for the faith, as well as the good order, of the university. On 14 February 1314 he was chairman of the assembly of masters who condemned as heretical eight opinions, held by a group of Oxford theologians, regarding the relation of the Trinity to creation. In addition, he fulfilled his duties as university preacher on feast days, as shown by a surviving sermon (LPL, cod. 61, fol. 143*r* a) for 29 December 1314 on the feast of St Thomas of Canterbury. During his years at Oxford he disputed a number of questions. In his twenty-nine *Quaestiones ordinariae* Harclay exhibits more independence and maturity than in his early Parisian commentary on the *Sentences*. He is familiar with, and sharply critical of, many of the positions and arguments of his contemporaries on a wide variety of theological and philosophical issues, including predestination and divine foreknowledge, the ontological status of divine ideas, universals and relations, the univocal concept of being, the eternity of the world, the plurality of substantial forms in humans, the formal distinction, whether anyone can calculate the end of the world, the immortality of the soul, and various moral questions.

Harclay was not interested in constructing a system. He was a widely read and independent critical thinker, quite anti-Thomist, whose great strength lay in questioning opinions and propositions to others self-evident. Two examples must suffice. Most, if not all, scholastics before Harclay had argued that though creatures are really related to God, he is not really related to them, for this would entail change in him. But in his long and involved question on relations, Harclay developed his own novel position, to argue that God is as really related to creatures as they are to him. Second, Harclay held rather non-traditional views concerning infinity and the 'continuous'. He argued in his own way that not all infinites are equal, that they can be added to and subtracted from without affecting their infinity, and that certain forms of an actual infinite are possible. A number of fourteenth-century thinkers, including William Alnwick (*d.* 1333), Adam Wodeham (*d.* 1358), and Thomas Wylton, attacked him, along with Walter Chatton (*d.* 1344), for being 'atomists', that is, for their non-traditional view that continua, whether of lines, distances, time, or motions of any kind, are composed of indivisibles. Harclay had a tough and creative mind with views and arguments well known and respected by his contemporaries, even when attacked, as he was for example by William Ockham (*d.* 1349), who quoted verbatim from Harclay's anti-Scotist question on

universals and very likely was influenced by Harclay's question on relations. In addition to the early *Sentences* commentary and later *Quaestiones ordinariae*, there is extant his still unedited axioms dealing with relations, *Fundamenta Arcelini* (Assisi, Biblioteca Comunale, cod. 172, fols. 116v–117v).

Toward the end of his life the controversy between the university and the Dominicans rekindled, and Harclay travelled once again to the papal court at Avignon, where he died on 25 June 1317. MARK G. HENNINGER

Harcourt. For this title name *see* individual entries under Harcourt; *see also* Waller, Anne, Lady Waller [Anne Harcourt, Lady Harcourt] (*d.* 1661).

Harcourt [de Harcourt] **family** (*per. c.*1050–1330), gentry, a family of major importance in the central midlands, was first to be found in Normandy before 1066 where sources deriving from the abbey of Bec-Hellouin identify one Anschetil as lord of Harcourt (Eure) and as a close cousin of the magnate family known as the Beaumonts, lords of Beaumont-le-Roger and Pont-Audemer. His son **Robert fitz Anschetil** (*d.* in or before 1118) held a large barony from the Beaumonts. The creation of the earldom of Warwick for Henry de *Beaumont in 1088 brought Robert an estate of seven fees in Leicestershire and Warwickshire formerly held in chief by Robert de Vescy but subordinated to the earldom. The Harcourts secured a number of other estates in the same counties when Henry I created the earldom of Leicester for Robert de Beaumont, count of Meulan (*d.* 1118), in 1107, including Market Bosworth, Leicestershire, which became the Harcourt centre in England in the twelfth century. Robert fitz Anschetil had died by 1118 to be succeeded by numerous sons, at least four of whom took shares of his cross-channel estates. The son who founded the chief English branch of the family was **Ivo de Harcourt** (*d.* in or after 1166) who acquired most of the Harcourt lands in England perhaps in succession (at least in the earldom of Warwick) to his elder, childless brother, Anschetil fitz Robert, who died soon after 1130. Ivo was a major follower of Robert (II), earl of Leicester. He is found frequently in the Leicester household, and accompanied his lord to Normandy in 1154. Perhaps to simplify the problems posed by the split allegiance, Roger, earl of Warwick, transferred to Earl Robert three and a half Harcourt fees in exchange for an equal number of Leicester fees in Warwickshire, in a singular arrangement transacted before 1153. Ivo was still alive in 1166, but probably died not long afterwards.

Ivo was succeeded by his son **Robert de Harcourt** (*d. c.*1205). Robert attested a late charter of Robert (II) of Leicester, and although he acted as a pledge for Earl Robert (III) in a debt to Aaron the Jew before 1179, he seems largely to have separated himself from the Leicester family after 1168. He was an independent figure in the midlands, his concerns centred on estate improvement and enlargement. He promoted the status of his house at Market Bosworth by the building of a substantial private chapel, which involved him in litigation with Bertram de Verdon, patron of the parish church of the place. In the reign of Henry II, before 1184, he made a profitable marriage to Isabel, daughter of Richard (I) de Camville, obtaining in 1192 the substantial marriage portion of Stanton Harcourt, Oxfordshire, and Norton and Stratton in the soke of Rothley, valued at £56 rent p.a. Between 1198 and 1202 he was sheriff of Leicestershire and Warwickshire, and left a debt of £127 3*s.* 0*d.* which was still outstanding on his death *c.*1205.

Robert left several sons, but the bulk of his estates came to his eldest, **Sir William** [i] **de Harcourt** (*d. c.*1223), who was active in King Richard's wars in France, doing service for his father for the fee of Stanton Harcourt in 1197. He was also active on King John's behalf in the campaigns of 1215 and campaigned in 1220–21 for the regents of Henry III against the count of Aumale's rebellion and John's former sheriffs. The exchequer memoranda have him alive in the year Easter 1222–3 but there is reference to the executors of his testament in a fine of April 1223. His son answered for his considerable debts (over £400) in 1224. As with his father, William seems not to have had any magnate links, but rather to have formed a connection with the king direct and entered the group of minor curial magnates: the scale of his debts indicates that his finances may not have equalled his aspirations.

William was succeeded by his son **Sir Richard** [i] **de Harcourt** (*d.* 1258). Richard made a third substantial acquisition for his family in the Staffordshire manor of Ellenhall, which came to him through marriage to Orabilia, daughter of Thomas Noel. He made careful arrangements for the succession to his lands, enfeoffing his younger son, Saher, with two Leicestershire manors, Kibworth and Newton Harcourt, in his own lifetime. He died

early in 1258 leaving his brother, William, rector of Aylestone, as his executor, as appears from a later fine. His eldest son, **Sir William** [ii] **de Harcourt** (*d.* 1270), succeeded to the bulk of his estate, doing homage to the king for his manor of Stanton in April 1258. William [ii] made two marriages, the first (before 1253) to Alice, sister of Alan de la *Zouche, which brought him the manor of Tong, Shropshire, and Braunstone, Leicestershire, from his father. The second marriage was to a certain Hilaria. This William became involved with the Montfortian cause in 1264–5, although there is little evidence to link him with the Montfort affinity in the midlands before then. His brother Sir Saher was, however, a long-term associate of Earl Simon, and was ruined by his involvement with the baronial cause. William [ii] was burdened with fines of 500 marks, but in 1267 found a group of neighbours and relatives able to guarantee and clear 400 marks, which the king had granted to Sir Philip Basset, and in 1269 negotiated the clearing of a further 100 marks owed to William de Valence. William died in 1270, leaving his only son, **Sir Richard** [ii] **de Harcourt** (1256–1293), a minor, as heir. Richard had proof of age in 1277, when his date of birth was agreed as having been 9 December 1256 in Oxfordshire (presumably at Stanton), which would have made him the son of William's first marriage. Richard was already married at that time to Margery Bek of Eresby. Sir Richard died early in 1293 leaving as heir his son **Sir John Harcourt** (1274–1330).

The successive heads of the Harcourt family after the 1160s were men of national significance, and although they clearly found their minor magnate status a financial burden, did not enter into any alliance with the greater magnates. The Harcourts successfully maintained and augmented their already substantial demesne interests in three midland counties throughout the thirteenth century, largely by advantageous marriages, which must be a tribute to their court connections and lineage. Their arms were two bars (seal of Richard [i], *c.*1223) and later or, two bars gules (William [ii], *c.*1285, St George's roll).

Harcourt, Anne. *See* Waller, Anne, Lady Waller (*d.* 1661).

Harcourt, Augustus George Vernon (1834–1919), chemist, was born in London on 24 December 1834, the elder son of Admiral Frederick E. Vernon Harcourt (1790–1883) and his wife, Marcia (*d.* 1868), sister of the first Lord Tollemache. His grandfather was Edward *Harcourt (1757–1847), archbishop of York. Augustus—who used Vernon Harcourt as his surname—was educated on the old classical lines at Cheam and at Harrow, and in 1854 entered Balliol College, Oxford. In the following year Benjamin Collins Brodie arrived at Oxford as professor of chemistry and the Balliol laboratory was placed at his disposal. Harcourt soon became his assistant. In 1858 Brodie moved to the chemistry department of the new museum of the university, and took Harcourt—still an undergraduate—with him as lecture assistant. Under Brodie at the new museum Harcourt began his researches on the exact determination of the oxygen absorbed by the metals potassium and sodium. In 1859 he assisted Brodie in tutoring the prince of Wales, and in the same year was elected Dr Lee's reader in chemistry and a senior student at Christ Church, holding those positions until 1902. He became a close friend of Charles Dodgson (Lewis Carroll) and was, at least in part, the model for the White Knight in *Through the Looking-Glass*. He also tutored a number of men who later distinguished themselves in chemistry, notably H. B. Dixon (1852–1930), D. L. Chapman (1869–1958), and N. V. Sidgwick (1873–1952).

Augustus George Vernon Harcourt (1834–1919), by Jabez Hughes

In the early 1860s Harcourt embarked on a programme of research on the rates of chemical reactions. He settled on two reactions for which the amount of chemical change during definite periods of time could be measured accurately. For help with the interpretation of these reactions he enlisted the collaboration of William Esson, mathematical fellow and tutor of Merton College, and beginning in 1865 the two published articles which for the first time gave detailed treatments of the kinetics of different types of reactions. In 1912, when they were well in

their seventies, they again collaborated, this time on the effect of temperature on the rates of chemical reactions. Here they were not so successful, since the alternative treatment earlier given by J. H. van't Hoff and S. Arrhenius in the end proved more satisfactory. An interesting outcome of this work of Harcourt and Esson is that they predicted a 'kinetic absolute zero' at which all reaction ceases; their value of −272.6 °C is in remarkable agreement with the modern value of −273.15 °C.

In applied chemistry Harcourt was chiefly drawn to questions concerning the purification and analysis of coal gas, as he was appointed in 1872 one of the three metropolitan gas referees. One of the problems with which he was concerned was the purification of coal gas from sulphur compounds, and he devised a sulphur test which came into wide use and later led to the large-scale purification of coal gas. Perhaps his most signal improvement in the testing of gas was the introduction of the pentane lamp as the official standard of light in place of the variable spermaceti candle. Another useful investigation which occupied much of his time between 1899 and 1911 related to the administration of chloroform as an anaesthetic. After much patient labour he devised an inhaler, which his medical colleagues recommended to the British Medical Association as 'possessing the advantages of simplicity, exactness, and portability'.

Harcourt was elected a fellow of the Royal Society in 1868, and served on its council from 1878 to 1880. Admitted to the Chemical Society in 1859, he served as one of its secretaries for eight years in 1865–73, and was elected president in 1895. As became the nephew of one of the founders of the British Association—the Revd William Venables Vernon *Harcourt—he early took an interest in its meetings and made many contributions to the chemical section, of which he was president in 1875. A few years later he was elected one of the general secretaries of the association, an office which he held for fourteen years with conspicuous tact.

In 1872 Harcourt married the Hon. Rachel Mary Bruce (1848–1927), daughter of Henry Austin *Bruce, afterwards first Baron Aberdare. The couple had two sons and eight daughters, one of whom was Janet Vernon Harcourt. In 1878 Christ Church leased to Harcourt some land on the banks of the River Cherwell, and on it he built a house, named Cowley Grange (later part of St Hilda's College, named the South Building). Harcourt and his family lived there until his retirement in 1902, when they moved to the Isle of Wight. He died at his house, St Clare, near Ryde, on 23 August 1919. H. B. DIXON, *rev.* KEITH J. LAIDLER

Harcourt, Sir Cecil Halliday Jepson (1892–1959), naval officer, was born on 11 April 1892 at Maitland Lodge, London Road, Bromley, Kent, the son of Halliday Harcourt, solicitor, and his wife, Grace Lilian, daughter of Dr Jepson. He was educated at Fonthill, East Grinstead, and from 1904 to 1909 at the Royal Naval College at Osborne and Dartmouth. On passing out from Dartmouth, as midshipman in 1909, he was awarded the term first prize in mathematics. By 1913 he was a lieutenant. He might have considered an alternative career as he was on the retired list in 1915, but in May 1916 he returned to the active list. He served on the battleship *Centurion* in the Grand Fleet and was present at the battle of Jutland.

Between the wars Harcourt served with the Atlantic, home, Mediterranean, and reserve fleets in destroyers and mine-sweepers. He was promoted commander in 1926 and captain in 1933. Following staff courses Harcourt was seconded to the Royal Australian Navy as captain (D) in 1935–7. These seagoing and command experiences provided a sound professional background to his appointment in 1938 as deputy director of the Admiralty's operations division. He remained with the operations division until 1941, becoming director in 1939. Thus he was in a crucial staff post at the start of the Second World War, and his contribution to the effective operational use of the navy was recognized by appointment as a CBE in 1940 and command of the modern battleship *Duke of York*. Winston Churchill was his passenger in December 1941 and January 1942 for two transatlantic journeys to meet President Roosevelt.

On promotion to rear-admiral in July 1942 Harcourt began a two-year period of service in the Mediterranean as flag officer of force Q, which comprised a cruiser squadron, destroyers, and other attached ships, such as monitors, as needed. While its main task was to give naval gunfire support to allied landings, it also carried out attacks on axis supply convoys. Force Q was part of the supporting force for the operation Torch landings in Morocco and Algeria. Harcourt's personal command contribution was recognized by the Americans by appointment to the Legion of Merit in November 1942. The citation for the award stated that 'His unfaltering support in the face of heavy odds did much to make possible the success of that operation' (*The Times*, 24 Dec 1959). After operation Torch, force Q operated from the vulnerable Algerian port of Bône, harassing axis supply convoys between December

1942 and spring 1943. Harcourt's immediate superior, Admiral Sir Andrew Cunningham, recognized the risks to Harcourt and force Q but knew that their role was critical and signalled Harcourt that he must 'stick it out' as allied support was coming to the area. For these services Harcourt was appointed CB in 1943. From June to September force Q was in regular action in support of the allied landings at Pantelleria, Lampedusa, and Limosa; in June operation Husky supported the Sicily landings and in September 1943 operation Avalanche, the Salerno landings. Harcourt was mentioned in dispatches for his contribution to the Salerno landings.

Harcourt returned to the Admiralty from February 1944 to summer 1945 as naval secretary to Cunningham, now first sea lord. He was then appointed to the Pacific Fleet as flag officer 11th aircraft-carrier squadron and then, with his carriers plus three cruisers, four destroyers, a submarine, and mine-sweeping flotillas, he commanded task group 111.2 for the reoccupation of Hong Kong in September 1945. A small number of Japanese suicide motor boats were observed near Hong Kong and Harcourt ordered his carriers' planes to destroy them. Pressure from Chaing Kai-shek meant that Harcourt had to receive the surrender of Major-General Okada and Vice-Admiral Fujita on behalf of both the British and Chinese governments. From September 1945 to June 1946 Harcourt was the *de facto* governor of Hong Kong as commander-in-chief and head of the military administration. He was a sensitive administrator, and was called by the Chinese name Ha Kok, a reference to a distinguished fourth-century Chinese nobleman Chung Kok. He was knighted in 1945 (KCB), was promoted vice-admiral in 1946, and awarded the grand cordon of the Chinese order of the Cloud and Banner.

After Hong Kong, Harcourt was appointed flag officer (Air) and second in command of the Mediterranean Fleet. In March 1948 he returned to the Admiralty as second sea lord with responsibility for all personnel and manpower issues. This was an onerous post because government economies required overall manpower reductions in the navy from 178,000 to 147,000 and maintaining even the reduced level by re-engagements was difficult because of the attractions of civilian occupations. The rate of re-engagements had fallen from 61 per cent in 1938 to 22 per cent in 1948. Harcourt was to warn in 1949 of a 'first class breakdown' (Grove, 45) in two years if the shortage of key ratings was not rectified. While second sea lord Harcourt received his final promotion to admiral in June 1949. From 1950 to 1952, when he retired, he was commander-in-chief, Nore command, and he was advanced to GBE in 1953. He was also admitted to the Norwegian order of St Olav in 1951 and the Danish order of Dannebrog in 1952.

In retirement, living in Eaton Place, London, Harcourt played leading roles in the London and Greater London Playing Fields Association, the Royal Commonwealth Society, and the Victoria League. He had married first, in 1920, the noted concert pianist Evelyn Suart, daughter of Brigadier-General W. H. Suart CMG and widow of Gerald Gould. After her death in 1950 he married Stella Janet Waghorn, the widow of Air Commodore D. J. Waghorn; she survived him. There were no children of either marriage. Harcourt died *en route* for St Stephen's Hospital, Chelsea, London, on 19 December 1959, aged sixty-seven. A memorial service was held in January 1960 at St Martin-in-the-Fields.

Wealth at death £25,115 11*s.* 10*d.*: probate, 26 Feb 1960, *CGPLA Eng. & Wales*

Harcourt, Charles [*real name* Charles Parker Hillier] (1838–1880), actor, was born on 23 June 1838, at 80 Charlotte Street, Marylebone, the son of John Hillier, a servant, and Sarah Ann, *née* Parker. After obtaining some experience by acting with amateurs, he made his first public appearance at the St James's Theatre, London, on 30 March 1863, as Robert Audley in George Roberts's dramatic version of Miss Braddon's novel *Lady Audley's Secret*. Between 1866 and 1868 he was seen at Drury Lane, notably in the parts of Captain Thornton in an adaptation of *Rob Roy* and Count Henry de Villetaneuve in the first performance of A. B. Richards's *The Prisoner of Toulon*. By 1873 he had fulfilled engagements at the Royalty, the Strand, the Charing Cross, and the Globe theatres. From Easter 1871 to Easter 1872 he was the lessee of the Marylebone Theatre. Some of the most important parts he played were Captain Absolute in *The Rivals* at the Charing Cross (November 1872); Claude Melnotte in *The Lady of Lyons* at the Haymarket (May 1876); Pygmalion in the revival of W. S. Gilbert's *Pygmalion and Galatea* at the same house (January 1877); and Count d'Aubeterre in F. C. Burnard's *Proof* at the Adelphi (1878). He afterwards appeared as Mercutio in *Romeo and Juliet*, a part which he acted with spirit and discretion, and of which after the death of George Vining he was the best exponent. His last role was the outcast Bashford in Paul Meritt's *The World* at Drury Lane (1880).

Harcourt was an able, vigorous, and conscientious actor. From January 1880 he was the secretary of the National Dramatic Academy. On 18 October 1880, while rehearsing the character of Horatio at the Haymarket Theatre, he fell into the scene dock at the back of the stage, which had inadvertently been left open. The resulting scalp wound was found at an inquest to have led to erysipelas and to his death, on 27 October, at the Charing Cross Hospital. He was buried at Highgate cemetery on 2 November, leaving a widow and daughter.

Harcourt [*formerly* Venables-Vernon], **Edward** (1757–1847), archbishop of York, was born at Sudbury Hall, Derbyshire, on 10 October 1757, the second and younger son of George Venables-Vernon, first Baron Vernon of Kinderton (1710–1780), and his third wife, Martha (1715–1794), third daughter of Simon *Harcourt [*see under* Harcourt, Simon, first Viscount Harcourt] and sister of Simon *Harcourt, first Earl Harcourt. He was educated at Westminster School, which he entered on 5 April 1769, and matriculated at Christ Church, Oxford, on 2 July 1774. He was a fellow of All Souls from 1778 to 1783, and graduated BCL on 27 April 1780 and DCL on 4 May 1786. After ordination he was instituted in 1782 to the family living of Sudbury. On 5 February 1784, at St Martin-in-the-Fields, London, he married Lady Anne Leveson-Gower (1761–1832), daughter of Granville Leveson-*Gower, second Earl Gower, and from 1786 first marquess of Stafford. He was installed a canon of Christ Church, Oxford, on 13 October 1785 and a canon of Gloucester Cathedral on 10 November of the same year. He resigned the latter stall in 1791 but held all his other preferments until 1807, to supplement the income of his see.

Earl Gower was lord privy seal in the government of William Pitt the younger. Venables-Vernon was thus a prime candidate for a bishopric, and obtained one aged only thirty-four. This was the see of Carlisle, for which he was consecrated on 6 November 1791; he held it for sixteen years. There he began to establish his reputation as a moderate church reformer with close connections to Pitt's government. His sermons before the House of Lords in 1793–4 were published. He spent more than the whole income of the see upon the wants of the diocese as a whole. Rose Castle became a family home (ten of his sixteen children were born there) and he made many repairs and alterations to both the fabric and the gardens. This pastoral care made him a particularly suitable candidate to replace William Markham as northern primate, and he was nominated on 26 November 1807 and confirmed archbishop of York on 19 January 1808. He was also gazetted a privy councillor on 20 January 1805, and on 23 January was made lord high almoner to George III, an office that he retained for the rest of his life. He was a member of the council of eight who advised Queen Charlotte as custodian of the person of George III between 1811 and 1818, and was frequently at Windsor during those years.

Venables-Vernon was scrupulously attentive to the duties of the primacy. He conducted a primary visitation of the archdiocese in 1809, the first for almost a century, and another in 1841; there were ordinary visitations in 1817 and 1825. He also held frequent ordinations and confirmation tours. When York Minster was damaged by fire in 1829 and again in 1840 he contributed generously to both restorations, and made another gift of £2000 and

Edward Harcourt (1757–1847), by Sir Thomas Lawrence, 1823

communion plate to the minster. He was a strong supporter of the Society for the Propagation of the Gospel in York, a generous benefactor of new churches, and promoted the new institute at York for the training of schoolmasters. Bishopthorpe, like Rose Castle before it, became a family home, and a nursery was built for the children above the chapel.

In politics Venables-Vernon was a moderate Pittite, from his family connection with the Gowers. However, from his undergraduate days he was the close friend of Thomas Grenville, another future octogenarian, and voted for the election of Grenville's brother William, Lord Grenville, as chancellor of Oxford University in 1809, despite differing from him on the issue of Catholic relief. He retained his connections with the court, and preached the sermon at the coronation of George IV, in 1821, as he did at that of William IV, in 1831, and for Queen Victoria in 1838.

Venables-Vernon loved sacred music and was a director of the concerts of the Society for Ancient Music from 1811. On 23 February 1821 he entertained his fellow directors, George IV and his brothers Ernest, duke of Cumberland, and Adolphus, duke of Cambridge, and the duke of Wellington, at his house on Grosvenor Square the same night that in the adjoining house the Cato Street conspirators planned to murder the cabinet. George Canning jestingly said that the party—three members of the royal family

and a war hero—were in danger of being assassinated in mistake for the ministers.

1830 brought two changes to Venables-Vernon's existence that would shape the rest of his career. In June 1830 his cousin William *Harcourt, third Earl Harcourt, died, leaving him his extensive estates, and in November a whig government under Earl Grey was formed, excluding Venables-Vernon's traditional political allies from power. The first led Venables-Vernon to change his name, when by sign manual he took the surname of Harcourt only. He made the Harcourt seat of Nuneham Courtenay, Oxfordshire, his main family residence and spent considerable sums on restoring the house and park. He was anxious for the Harcourt peerage to be recreated for his family—'*not for my own* sake certainly', he told Sir Robert Peel on 21 September 1841 (BL, Add. MS 40489, fol. 287)—but he reportedly rejected the offer of a peerage from the whigs, feeling that his vote would be compromised, and in the 1840s Peel refused to be bound by any previous assurances.

Grey's new administration gave him the role of a constructive conservative, helping the Church of England to come to terms with the extensive changes of the 1830s and 1840s; Lord Melbourne often consulted him when making senior church appointments. Harcourt set an example by surrendering land and income from the archdiocese of York to establish the new diocese of Ripon in 1836, and by facilitating the transfer of the archdeaconry of Nottingham to the diocese of Lincoln. He preached a valedictory sermon at York Minster on 13 November 1838 and subsequently relied heavily on his son Egerton Harcourt, while carrying out his ecclesiastical duties whenever possible. Harcourt abstained in the vote of 8 October 1831, when the Lords rejected the Reform Bill. He became increasingly detached from politics as he grew older and, though an eloquent speaker, usually reserved his interventions in the upper house for ecclesiastical issues. He was appointed one of the first members of the Ecclesiastical Commission in 1835 and attended its meetings regularly. The archbishop's visitation of the minster in 1841, when the fabric fund was found in deficit, caused particular controversy, coming only a year after the Dean and Chapters Act had reformed the administration and finance of English cathedrals. Dean Cockburn was found guilty of simony by the archbishop's commissary, although the court of queen's bench, on appeal, declared that the archbishop had no power to deprive the dean of his office without due process of law. The affair was deeply divisive and tarnished the last years of Harcourt's ministry.

Harcourt kept fit and active by riding until the age of eighty, and maintained a lifelong interest in country sports. Like his fellow archbishop, Charles Manners Sutton, he was a tall man; by temperament he was patient (though sometimes touchy) and always took his duties most seriously, despite the immense increase in his private fortune after 1831. He entertained Princess Victoria and her mother for a week when they attended the York Music Festival in 1835, and did the same for the young queen and Prince Albert, at Nuneham in 1840.

Following a fall from a bridge into a pond Harcourt died, of a chill, at Bishopthorpe Palace on 5 November 1847, and was buried at the parish church of Stanton Harcourt, Oxfordshire. His will speaks of his 'long and happy life' (Borth. Inst., vol. 218, fol. 12), whose foundation was that of an immensely stable and satisfying family life. Lady Anne Harcourt predeceased him, dying at Bishopthorpe on 16 November 1832, of peritonitis; her body and that of their daughter Caroline were moved from Bishopthorpe to Stanton Harcourt following the archbishop's death. Lady Anne had been a shy, unassuming person devoted to her family.

Harcourt's eldest son, George, succeeded to the Harcourt family estates. The second son, **Leveson Vernon Harcourt** [*formerly* Venables-Vernon] (*bap.* 1788, *d.* 1860), was born at Sudbury and baptized on 9 June 1788. Like his father he attended Westminster School, where he was elected king's scholar in 1801. He matriculated at Christ Church, Oxford, on 17 May 1806, having been elected head of the list of king's scholars from Westminster. He graduated BA in 1810 and MA in 1813, having been ordained priest in 1812. On 19 August 1815 he married Caroline Mary (*bap.* 1790, *d.* 1871), daughter of John Peachey, second Baron Selsey; they had no children.

Leveson Venables-Vernon was chancellor of York (installed 4 August 1827) and held one of the last prebends in the minster under the unreformed constitution, though he lived in London and seldom went to York. He too took the surname Harcourt in 1831 but retained the name Vernon. He was rector of Beckenham, Kent, from 1835 to 1838. He was the author of *The doctrine of the deluge: vindicating the scriptural account from the doubts which have recently been cast upon it by geological speculations* (1837), which insisted that geologists should be ready to revise their conclusion, for 'if geological speculations are at variance with scriptural history, they are not less at variance with the united testimony of all nations from the remotest time to which history or tradition extends' (preface). He also published *Lectures on the Four Gospels Harmonized* (1851) and *A Remonstrance to the Bishop of Exeter on his Recent Letter to the Archbishop of Canterbury* (1850). He died on 26 July 1860.

Edward Harcourt's other children included William Venables Vernon *Harcourt and Octavius Henry Cyril Vernon *Harcourt; many other members of the family were prominent in public life in the nineteenth and twentieth centuries.

Harcourt, Henry. *See* Beaumont, Henry (*c.*1611–1673).

Harcourt, Ivo de (*d.* in or after 1166). *See under* Harcourt family (*per. c.*1050–1330).

Harcourt, Sir John (1274–1330). *See under* Harcourt family (*per. c.*1050–1330).

Harcourt, Leveson Francis Vernon- (1839–1907), civil engineer, was born in London on 25 January 1839, the second son of Admiral Frederick Edward Vernon-Harcourt (1790–1883) and Marcia (1803/4–1868), daughter of Admiral John Richard Delap Tollemache. He was the grandson of Edward *Harcourt, archbishop of York, and cousin of Sir William *Harcourt, the Liberal cabinet minister. Educated at Harrow School and at Balliol College, Oxford, he obtained a first class in mathematics in 1861, and graduated with a first class in natural science in 1862.

From 1862 to 1865 Vernon-Harcourt was a pupil of the civil engineer John Hawkshaw, and was employed on the Penarth and Hull docks. After serving as an assistant, he was appointed in November 1866 as resident engineer on the new works at the East and West India docks in London, continuing in the position until their completion in January 1870. From an open competition he was elected to the post of county surveyor of Westmeath in Ireland but resigned in August 1870, at which time he married, on 2 August 1870, Alice (1843/4–1919), younger daughter of Lieutenant-Colonel Henry Rowland Brandreth RE, with whom he had a son and two daughters. During the same month he took a position as resident engineer at Alderney harbour in Ireland, and his article on this subject (*Proceedings of the Institution of Civil Engineers*, 37, 1874, 60–83) was the first of his many papers to gain distinction from the Institution of Civil Engineers. From 1872 to 1874 Vernon-Harcourt was based in Ireland and was resident engineer on the Rosslare harbour works and the railway to Wexford. He returned to London, and between 1875 and 1878 carried out a number of surveys for Hawkshaw, investigating the disposal of sewage into the River Clyde, and surveying the River Witham and the upper reaches of the River Thames in order to analyse and report on measures to reduce flooding.

In 1882 Vernon-Harcourt began work as a consulting engineer in Westminster, and in the same year was elected professor of civil engineering at University College, London. He mainly devoted himself to the engineering of harbours and docks, rivers and canals, and water supply, and in this branch of engineering he became an acknowledged authority. During his career he reported on the rivers Usk, Ribble, Orwell, and Dee, the Aire and Calder navigation, the Ouse navigation, and the harbours of Poole, Newport, and Sligo. In the numerous books and articles that he wrote, as well as in the many parliamentary inquiries to which he was often called to contribute, he displayed his practical training as well as his natural scientific aptitude. Vernon-Harcourt's main books were *Rivers and Canals* (2 vols., 1882; rev. 2nd edn, 1896); *Harbours and Docks* (2 vols., 1885); *Civil Engineering as Applied in Construction* (1902); *Sanitary Engineering* (1907); and a popular work, *Achievements in Engineering during the Last Half Century* (1891). He also contributed eighteen articles to the *Proceedings of the Institution of Civil Engineers*, having been initially elected an associate of the body on 5 December 1865, gaining full membership on 19 December 1871. For these he was awarded the Telford and George Stephenson medals, six Telford premiums, and a Manby premium. The articles covered all aspects of his field and included 'Harbours and estuaries on sandy coasts' (*Proceedings of the Institution of Civil Engineers*, 70, 1882, 1–32), 'The River Seine' (ibid., 84, 1886, 210–57), and 'The training of rivers' (ibid., 118, 1894, 1–46). He also contributed articles to the Royal Society, the Society of Arts, and the British Association, as well as to the *Encyclopaedia Britannica* (9th edn) and other publications. Although he retired in 1905, being elected emeritus professor in 1906, he continued working in the field until his death.

Vernon-Harcourt, who was fluent in French, regularly contributed to the proceedings and organization of navigation congresses. He represented the Institution of Civil Engineers at the navigation congresses held at Brussels in 1898, at Paris in 1900, and at Dusseldorf in 1902, and was a delegate of the British government at the Milan Congress in 1905. He was the British member of the jury for the Paris Exhibition of 1900, and again at the St Louis Exhibition of 1904, during which year he also served on an international jury in Vienna to consider schemes for large canal-lifts, and for this work was created a commander of the imperial Franz-Josef order of Austria-Hungary. In 1906 he was appointed a member of the international

commission of the Suez Maritime Canal, by which time his expertise had often been required outside his own country. In 1896, for example, he had gone to India to inspect the River Hooghly, reporting to the Calcutta port commissioners on a project for the improvement of the river (*Proceedings of the Institution of Civil Engineers*, 160, 1905, 100–43). Held in high regard throughout his profession, he was, at his death, the oldest member of the council of the Permanent International Association of Navigation Congresses.

Vernon-Harcourt died, after several weeks' illness, at Swanage, Dorset, on 14 September 1907, and was buried at Brookwood cemetery on 21 September. He bequeathed £1000 to the Institution of Civil Engineers for the provision of biennial lectures in his special subjects and a further £1000 to be donated to the University of Oxford after the death of his widow to fund the teaching of engineering. Harcourt, Leveson Vernon (*bap.* 1788, *d.* 1860). *See under* Harcourt, Edward (1757–1847).

Harcourt, Lewis Vernon, first Viscount Harcourt (1863–1922), politician, was born in Pont Street, London, on 31 January 1863, the younger and only surviving son of Sir William *Harcourt (1827–1904) and his first wife, Marie Therese (1835–1863), daughter of the novelist and playwright Thomas Henry *Lister of Armytage Park, Staffordshire. Lewis Harcourt's mother died when he was born, and this resulted in an exceptionally close and protective relationship between father and son. Behind his exuberant manner Sir William Harcourt was a deeply emotional man to whom the precocious and delicate boy (known to everyone throughout his life as Loulou) was 'both a trust and a consoler' (Gardiner, 1.292). The two were constant companions throughout Loulou's childhood, and even Sir William Harcourt's second marriage in December 1876 did not significantly affect the relationship. The thirteen-year-old boy acted as best man at the ceremony in Westminster Abbey, and he was included as a matter of course on the Paris honeymoon. Loulou got on well with his young American stepmother, and in due course became very fond of his half-brother Bobby.

Early life: political partnership with his father Harcourt went to a private school in Eastbourne and then, after some hesitation on his father's part, to Eton College where, in spite of recurrent ill health, he was popular and happy. But in 1881 it was decided that he was not robust enough to go to Cambridge, and he gradually settled into

Lewis Vernon Harcourt, first Viscount Harcourt (1863–1922), by Campbell-Gray, *c.*1906–8

the position of confidential private secretary to his father, who was then home secretary in Gladstone's second government. This was to remain Lewis Harcourt's career for over twenty years, until his father's death in 1904. His surviving journals convey a fascinating picture of the unique working relationship, and also of the social and political world of the 1880s and 1890s. The Harcourts were wealthy and well connected, and Loulou knew everyone who mattered in society, and was able to claim universal entrée to London drawing-rooms and country house parties. One might have expected the father's over-indulgent upbringing to produce an intolerably self-important son, but Loulou seems generally to have been a welcome guest, especially to older women (like Mrs Gladstone) who mothered him. He was interested in everybody's affairs, was a good listener, and loved gossip. The journals also describe some of Harcourt's enthusiastic leisure pursuits—photography (he captured many of his political contemporaries on film), rare books, theatre-going, and grouse shooting.

The political partnership between father and son grew closer over the years, and in spite of the emotional intensity of the relationship, and Sir William Harcourt's fiery temper, there seem to have been no quarrels or estrangements. The physical contrast between the Falstaffian proportions of the father and those of his tall, thin son was matched by corresponding differences in temperament. Whereas Sir William Harcourt was impulsive and sometimes insensitive to his colleagues' feelings, Loulou grew up to be self-controlled and quietly determined. Although totally dedicated to his father's political interests he was not uncritical: every speech was shrewdly and expertly

assessed, and gradually the father came to rely on his son's judgement.

Occasionally Lewis Harcourt realized that his career might suffer from being so closely linked to that of his father: in October 1884 he was briefly tempted by the prospect of succeeding his friend Reginald Brett as private secretary to Lord Hartington. But Sir William Harcourt was reluctant to allow his son to launch himself into the tough world of politics, and in 1892 he declined Gladstone's offer to appoint Loulou as one of the junior whips in his fourth government. Although over the years Lewis Harcourt received invitations from several constituencies to stand for parliament, he preferred to work behind the scenes as long as his father needed him. However, he acted as secretary to the Home Counties Liberal Federation from its foundation in 1887, and was a founder committee member of the National Liberal Club. In September 1893 Sir William Harcourt, then chancellor of the exchequer, asked Gladstone to consider his son for appointment as commissioner of woods and forests ('the first thing I ever asked for in my life' (BL, Add. MS 44203, fol. 96). But Loulou felt that he could not desert his father, and he later declined posts at the Royal Mint and the National Debt Office.

In 1894 Lewis Harcourt played a controversial role at the climax of his father's political career. When Gladstone retired in March 1894, the chief rival candidates for the premiership were Sir William Harcourt and Lord Rosebery. It was widely believed that the queen would send for Rosebery, and many of Sir William Harcourt's colleagues, bruised by his insensitivity over the years, would have endorsed this choice if they had been consulted. But Lewis Harcourt was determined to fight every inch of the way to secure the succession. He first tried to induce Gladstone to stay on, by seeking to persuade Lord Spencer to moderate the bid for increased naval expenditure which had caused the cabinet crisis. He also tried unsuccessfully to persuade his father to make Rosebery's premiership impossible by refusing to serve under him as leader of the House of Commons. When these attempts failed he sought to undermine the preference of John Morley for Rosebery, and to stimulate back-bench radical objections to the prospect of a party leader in the House of Lords.

The only result of all this frantic activity was to increase Sir William Harcourt's ultimate humiliation, and to sour relations between the rival candidates. They were barely on speaking terms during Rosebery's brief premiership, and during the following years in opposition the ill feeling persisted. The highly sensitive Rosebery never forgave Lewis Harcourt for the part he had played in 1894, and the dislike was mutual. When Sir William Harcourt resigned the leadership in 1898, with carefully orchestrated press publicity designed to embarrass Rosebery's supporters, he assured his son that he owed the success of this 'torpedo' to 'your devotion and capacity' (Gardiner, 2.478). However, Campbell-Bannerman and Asquith, left to pick up the pieces, were not impressed by conduct which they considered more appropriate to the nursery (Bodl. Oxf., MSS Asquith, vol. 9, fol. 139). Like his father Lewis Harcourt strongly opposed the Second South African War, which divided the Liberal Party, and in 1903 he helped to set up the Free Trade Union in opposition to Joseph Chamberlain's tariff reform proposals.

In parliament and cabinet, 1905–1917 In March 1904, shortly before his death, Sir William Harcourt proudly introduced his son to the House of Commons, following Loulou's unopposed return at a by-election in Rossendale, Lord Hartington's old Lancashire constituency. After spending nearly twenty-five years in partnership with his father Lewis Harcourt now embarked on a political career of his own. It lasted only twelve years, but for nearly all this time the Liberal Party was in power and Harcourt was in office. This suited him very well. He was not by temperament a back-bencher or a public speaker, but someone at home in the corridors of power: he waited two years, until he was a minister, before making his maiden speech. When Campbell-Bannerman formed his government in December 1905 Harcourt became first commissioner of works, and a privy councillor. He was promoted to the cabinet, while remaining in the same post, in March 1907.

In January 1907 Harcourt declined an offer of the education department: he was in his element at the office of works, with responsibility for the royal parks and palaces and for the facilities in the houses of parliament. Remembering his long years as a political adviser he arranged for the officials' box to be moved to a more convenient position near the government front bench in the House of Commons, and he devised improved procedures for parliamentary divisions.

When Asquith became prime minister in April 1908 Harcourt was retained in his existing post, but in November 1910 he unexpectedly succeeded Lord Crewe as colonial secretary. He was particularly interested in economic development, and during his period of office important new railway links were established in Nigeria (where Port Harcourt was named after him) and east Africa. In addition to his departmental duties Harcourt was responsible for steering several bills through the House of Commons: in 1906 a bill, subsequently rejected by the House of Lords, designed to end the abuse of plural voting by electors with property in different constituencies; in 1907 a Small Holdings and Allotments Bill; and in 1909 a London Elections Bill.

Not all of Harcourt's colleagues found his love of manipulative intrigue congenial. Charles Hobhouse, for instance, described him as 'subtle, secretive, adroit, and not very reliable or *au fond* courageous' (*Inside Asquith's Cabinet*, 229). In cabinet he sat next to Asquith and liked to chat to him in undertones rather than intervening openly in the discussion. The pair got on well: Asquith respected Harcourt's administrative competence and shared many of his social interests, and with his wife was a regular guest at Harcourt's country house at Nuneham Courtenay. The two men also shared the hostility aroused by their opposition to women's suffrage, a reform supported by several members of the cabinet. Harcourt played a leading

role in the anti-suffrage campaign, and in January 1910 he was unsuccessfully opposed in the general election at Rossendale by an independent Labour candidate who campaigned on a platform of votes for women. In January 1912 a *Punch* cartoon showed Lloyd George and Harcourt as the two main government spokesmen arguing respectively for and against women's suffrage. Harcourt voted against both the Parliamentary Franchise (Women) Bill in March 1912 and the Representation of the People (Women) Bill in May 1913. His stance made him a *bête noire* for the militant suffragists, and in 1912 his home became a target for them, when an attempt was made to set fire to the children's quarters at Nuneham.

On other issues Harcourt remained a traditional nineteenth-century radical. He distrusted Lloyd George, who described him as the most implacable of the cabinet critics of the 1909 budget (Stevenson, 322). He regarded some of the budget proposals as extravagant, and blamed Lloyd George's speeches for the Liberal losses in southern England in the general election of January 1910 (Bodl. Oxf., MSS Asquith, vol. 12, fol. 77). But Harcourt strongly supported Asquith's determination to restrict the veto powers of the House of Lords (MSS Asquith, vol. 12, fol. 114; vol. 23, fols. 79 and 96), and during the 1913 home rule crisis he made bluntly clear to the king the consequences for the monarchy of not accepting the decisions of parliament (*Journals and Letters of ... Esher*, 3.131). Above all Harcourt remained totally opposed, as his father had been, to the inexorable rise in naval and military expenditure, and to the assumption of diplomatic obligations in mainland Europe. In February 1908 he was deputed by the cabinet, together with Lloyd George and Reginald McKenna, to negotiate with Sir John Fisher a reduction in the naval estimates. He took an uncharacteristically blunt line, but the attempt failed. Again in 1909 Harcourt was one of a group of cabinet ministers who tried unsuccessfully to resist the increase in the naval estimates.

It was only in 1911 that Harcourt, together with most of his cabinet colleagues, learned of the military and naval conversations with the French which had begun early in 1906. Harcourt resisted any suggestion that there was either a legal or a moral obligation to support France in the event of war, and he co-operated with Haldane in his attempts to reassure Germany and to negotiate peaceful solutions to outstanding sources of disagreement, particularly those involving the African colonies. When the crux came at the end of July 1914 Harcourt was one of the group of cabinet ministers who initially argued the case for neutrality, but unlike John Morley he was persuaded to remain in office by the German invasion of Belgium and by Asquith's appeal to his colleagues to save the country from the alternative of a Conservative or coalition government.

At the beginning of the war Harcourt shared a widespread inability to grasp its likely extent and character, particularly since he was concerned mainly with the colonial aspects of the conflict. In a speech to the Victoria League on 26 January 1915 he referred to 'the thrills and the romance of thinly defended frontiers ... [and] gallantly captured posts' (Hazelhurst, 167). As always Harcourt worked hard behind the scenes on the administration of the war effort, and began to show signs of exhaustion and overstrain. During 1915 he was one of the cabinet ministers most strongly opposed to conscription, having in 1913 resisted compulsory territorial training, and he became a target, together with Haldane, Simon, and McKenna, for press criticisms of the government's conduct of the war. In May 1915 Asquith yielded to the pressure to form a coalition government. Haldane was dropped, but Harcourt survived the reshuffle, being moved back to the office of works to make way for Bonar Law, whose rough manners contrasted strikingly with Harcourt's social smoothness: as Lord Esher commented, in any other country 'Loulou would be the Tory and Bonar Law the democrat' (*Journals and Letters of ... Esher*, 3.137). In the summer of 1916 Harcourt was placed temporarily in charge of the Board of Trade, but his health was failing and at the end of the year he left office when Asquith resigned.

House of Lords: last years Harcourt was pleased when the king agreed in January 1917 to revive for him the old family viscountcy which had been held by Queen Anne's lord chancellor. At the age of only fifty-four his active political career was almost over, although he became chairman of the army agricultural committee, which dealt with food supplies in England, France, and Mesopotamia, and of the empire oil resources committee. He was also associated with the Imperial Institute. During 1917 Harcourt made an attempt, with Margot Asquith's enthusiastic encouragement (Bodl. Oxf., MSS Harcourt, dep. 421, fols. 212–17), to improve the efficiency of the party organization of the Asquith Liberals, and he was active in the House of Lords in January 1918, during the consideration of the Representation of the People Bill. He had finally become reconciled to women's suffrage, although he remained critical of newfangled notions such as proportional representation, which he described as 'the apotheosis of the crank, the *frondeur*, and the mugwump' (*Hansard 5L*, 27, 21 Jan 1918, 845).

In subsequent sessions Viscount Harcourt rarely appeared in the House of Lords, although he maintained his personal links with Asquith, who consulted him on party management (Bodl. Oxf., MSS Harcourt, dep. 421, fol. 218). In February 1920 Harcourt congratulated Asquith on the 'glorious news' of his victory in the Paisley by-election (Bodl. Oxf., MSS Asquith, vol. 33, fol. 194), and only a few weeks before his death Harcourt was urged by Asquith to lend his support to a Liberal demonstration in Central Hall, Westminster, on 21 January 1922 (Bodl. Oxf., MSS Harcourt, dep. 421, fol. 223).

Harcourt had many interests outside politics. On 1 July 1899 he had married Mary Ethel, the wealthy daughter of an American banker, Walter Hayes Burns, and they had a son and three daughters. The Harcourts entertained extensively at their town house at 69 Brook Street (later the Savile Club) and at the family seat Nuneham Courtenay, where Harcourt devoted much time and effort

to the improvement of the estate and the gardens. He enjoyed country life, especially shooting and fishing, and he was conscientious in his many public appointments. With Lord Esher he had helped to found the London Museum in 1911, and he was a member of the advisory committee of the Victoria and Albert Museum, and of the council and executive of the British School at Rome. He was also an honorary fellow of the Royal Institute of British Architects, and a trustee of the Wallace Collection, the National Portrait Gallery, and the British Museum. The latter gave him great pleasure: he told Asquith in February 1913, when he accepted the appointment, that it was 'the only ambition which I have ever permitted myself in life' (Bodl. Oxf., MSS Harcourt, dep. 421, fol. 193). He was a competent photographer and a number of his photographs of politicians are held by the National Portrait Gallery.

On 24 February 1922 Harcourt was found dead in his bedroom at 69 Brook Street, Mayfair. He had taken an overdose of a sleeping draught, and there were widespread rumours of suicide, following accusations of sexual impropriety by Edward James, a young Etonian (Lees-Milne, 337). Similar allegations had been made before, but at the inquest a verdict of misadventure was returned, on the basis of post-mortem medical evidence that the heart was extensively diseased and that the overdose would not have been harmful in other circumstances. The coroner rejected as 'grotesque' the idea of suicide, for which there was 'not the slightest motive' (*The Times*, 1 March 1922). It is perhaps significant that Harcourt spent the last evening of his life checking draft chapters of the biography of Sir William Harcourt which he had commissioned from A. G. Gardiner. He was due to meet Gardiner on the following day to discuss the book and it seems hard to believe that Harcourt would not have wished to see through to completion an enterprise over which he had exercised tight control, and which recalled for him the glorious days of political partnership with his father. Harcourt was buried on 1 March 1922 at the old church, Nuneham Park. He was succeeded as the second and last viscount by his son, William Edward *Harcourt (1908–1979).

Wealth at death £199,290 12*s.* 11*d.*: probate, 1 April 1922, *CGPLA Eng. & Wales*

Harcourt, Octavius Henry Cyril Vernon (1793–1863), naval officer, eighth son of Dr Edward Vernon *Harcourt (1757–1847), archbishop of York, and his wife, Anne, *née* Leveson-Gower (*d.* 1832), third daughter of Granville Leveson-Gower, first marquess of Stafford, was born at Rose Castle, Cumberland, on 25 December 1793. The family assumed the additional surname Harcourt on 15 January 1831. Octavius entered the navy in August 1806 as midshipman on the *Tigre* (74 guns), and in her the following year witnessed the surrender of Alexandria; he was also employed in boat service up the Nile. After assisting at the siege of Toulon, he was transferred into the *Malta* (80 guns); he co-operated with the troops on the south-east coast of Spain, and served in the batteries at the siege of Tarragona. Promoted lieutenant on 11 January 1814, he joined the *Mulgrave* (74 guns), and was the commanding officer of a party of seamen and marines which landed near Piombo, captured a martello tower, and brought out a convoy anchored under its protection. Later that year, in the *Amelia* (38 guns), he served at the blockade of Elba. He was on half pay from 1816 until 2 February 1818, when he was appointed to the *Sir Francis Drake*, the flagship at Newfoundland, where on 3 February 1820 he obtained the command of the sloop *Drake* and for a short time in the same year of the *Carnation* (18 guns). From 1824 to 1827 he served in the West Indies. He was promoted captain on 7 July 1827. His last appointment was to the *North Star* (28 guns), in which he surveyed the coast of Central America and California in 1834–6, returning home with a large freight.

On 22 February 1838 Harcourt married Anne Holwell, second daughter of William Gater and widow of William Danby of Swinton Park, Masham, Yorkshire: 'in her right he became lord of Masham and Mashamshire, and entered into the possession of a very handsome rent-roll' (*GM*). He resided principally at Swinton Park, and was an active magistrate. He was gazetted sheriff of Yorkshire in 1848, and was promoted vice-admiral on half pay on 4 June 1861. He was a generous benefactor of local schools, charities, and the Masham Mechanics' Institute; he built and endowed a church at Healey, near Masham, and another church at Brent Tor, Devon, as well as restoring the parish church of Masham. In 1858 he erected in Masham six almshouses, which he endowed with £1775 three per cent consols. He died at Swinton Park on 14

August 1863; his widow died on 26 June 1879, devising her Yorkshire estates to George, fifth son of Sir Robert Affleck, bt. G. C. BOASE, *rev.* ROGER MORRISS

Wealth at death under £250,000: resworn probate, Jan 1864, *CGPLA Eng. & Wales*

Harcourt, Sir Richard de (*d.* 1258). *See under* Harcourt family (*per. c.*1050–1330).

Harcourt, Sir Richard de (1256–1293). *See under* Harcourt family (*per. c.*1050–1330).

Harcourt, Robert de (*d. c.*1205). *See under* Harcourt family (*per. c.*1050–1330).

Harcourt, Robert (1574/5–1631), colonial adventurer and author, was born at Ellenhall, Staffordshire, the eldest of the five children of Walter (later Sir Walter) Harcourt (*c.*1553–1639) of Ellenhall and of Stanton Harcourt, Oxfordshire, and his wife and stepsister, Dorothy, daughter of William Robinson of Drayton Basset, Staffordshire, and his wife, Grace, daughter of Humphrey Fitzherbert of Upsall, Hertfordshire. Both the Harcourt and Fitzherbert families retained Catholic sympathies, although Sir Walter sat as an MP in the 1580s and 1590s. Robert matriculated as a gentleman commoner from St Alban Hall, Oxford, on 10 April 1590, at the age of fifteen. He remained at Oxford for three years, his studies leaving him, as his later writings on Guiana demonstrate, with a taste for scholarship as well as adventure, and the ability to express himself clearly with his pen. On 10 March 1593 he was admitted to the Middle Temple, but little is known about his activities over the next fifteen years. At an unknown date Harcourt married Elizabeth, daughter of John Fitzherbert of Norbury, Derbyshire; they had no children. Following her death he married Frances, daughter of Geoffrey Vere, the third son of John de *Vere, fifteenth earl of Oxford (1482–1540) [*see under* Vere, John de]. They had three sons, Simon *Harcourt, probably baptized on 20 May 1601, Frances (*bap.* 1605), and Vere (*bap.* 1606), and three daughters, Jane, Dorothy, and Margaret who died shortly after her birth in 1607. Harcourt's father's estates were encumbered with debt and the Oxfordshire landholdings were temporarily seized for non-payment of loans in 1595. Sir Walter conveyed the manor of Stanton Harcourt to his eldest son in 1602, presumably to avoid losing it to his creditors. Sir Walter and Robert Harcourt jointly sold off the South Leigh portion of the estate in 1604. By 1609 Robert Harcourt was receiving income from ironworks developed on the manor of Chebsey, Staffordshire.

On 13 February 1609, through the patronage of Prince Henry, Robert Harcourt and his 'freinds and Associats' received a commission to undertake 'many and sundrie longe journeys by Sea and Shippinge unto the South parte of America ... knowne by the name of Guiana' (PRO, C66/1986). Although he courteously attributed his venture to Guiana to a desire to 'repaire the decay' (R. Harcourt, 61), of Ralegh's enterprise, Harcourt's sense of connection to the region probably came through the Guiana enterprises of his kinsman, Sir Robert Dudley, and his approach to the prince through Sir Thomas Challoner, who had been Dudley's tutor and was now in the prince's household. Harcourt also had contact with the late Charles Leigh's associates. When he sailed for Guiana in April 1609 he took two Guiana natives with him, one 'who was a christian, and had lived in England fourteen years', and the other, who had been brought back from the Wiapoco (Oyapok) four years previously by Leigh's men (ibid., 71, 73).

Harcourt arrived in the Wiapoco on 17 May 1609 with 'one and thirtie land men, two Indians, and three and twentie mariners and Saylers' (R. Harcourt, 5). He was well received by the natives and allowed to settle his men in the villages at the river mouth. In July, once the rains had ceased, he made contact with an inland chief who had 'been heretofore in England with Sr. Walter Raleigh, to whom hee beareth great affection' (ibid., 80) and began to 'travaell abroad in search of those Golden Mountaines, promised unto us before the beginning of our voyage' (ibid., 107). When no goldmines were discovered Harcourt quelled incipient mutiny among his company by sending them out to search for other profitable commodities. His own stay on the Wiapoco was cut short by the news that his ships' drink casks were rapidly deteriorating. He set sail for home in early August leaving his brother Michael and one Captain Edward Harvey to command approximately thirty men left behind on the river. *En route* he reconnoitred the lower reaches of the Caiane (Cayenne) and Marrawini (Maroni), engaged in contraband trade for tobacco with the Spanish settlers at Port of Spain, Trinidad, and tried the hot spring on Meves (Nevis), 'one of the best and most soveraigne in the world' (ibid., 123). Driven by gales into Crookhaven, Ireland, Harcourt became separated from his company and took passage from Youghall to Bristol, arriving on 17 December 1609.

Harcourt returned home to financial troubles, as well as charges of recusancy. His attempt, at about this time, to lay claim to the manor of Norbury in Derbyshire, at the expense of his brother-in-law Anthony Fitzherbert, probably reflects his desperation to increase his income. John Smith reports that he was never subsequently able to supply his settlement, except by sending over a few colonists with Zeeland merchants who left factors on the river from 1612 onwards. In 1611 he settled the manor house of Stanton Harcourt and its demesne on his wife Frances in jointure. Michael Harcourt returned to England in 1612 with stories of rich goldmines and precious stones to be found in the interior, and of the commercial possibilities on the coast, moving his older brother to ask Prince Henry to advance his suit to the king for an exclusive administrative and commercial monopoly of the region 'betweene the Ryver of Amazones [Amazon] and the Ryver of Dessequebe [Essequibo]' (PRO, C66/1986). This was duly granted to Robert Harcourt, with his kinsman John Robinson and Sir Thomas Challoner, on 28 August

1613. In September Harcourt published his *Relation of a Voyage to Guiana*, accompanied by a prospectus setting out conditions for those who chose to adventure with him in either purse or person. Few appear to have been willing to do so. In the previous year Harcourt had sold the manor of Stanton Harcourt in order to raise funds. He may have been able to make contact through traders in late 1613 and again in 1616. One of his associates, Captain Edward Harvey, seems to have tried to carry out some men through the Dutch in 1617.

Although his colony had failed, Harcourt strongly resisted Roger North's efforts to form the Amazon Company in 1619, seeing it as an intrusion of his monopoly. The privy council settled the dispute by allocating the territory south of the Wiapoco to the short-lived Amazon Company while leaving the Wiapoco to Harcourt. However, in 1625, when Roger North saw the opportunity to revive his Amazon ventures, Harcourt showed himself willing to join with him in the formation of the Guiana Company. Samuel Purchas included the text of the first edition of Harcourt's *Relation* in volume 4 of *Purchas his Pilgrimes* in 1625, together with a brief account of explorations of the River Maroni carried out by Harcourt's men in 1610. As part of the effort to raise investors, a second edition of Harcourt's *Relation*, revised to include North's Amazon ventures, was published in 1626. In November 1628 the *Little Hopewell* left Gravesend for the Amazon, carrying out some 100 men for the company's first colony under Robert Harcourt as governor. Harcourt, however, ignored his directives to go to the Amazon, returning instead to his former haunts on the Wiapoco. Arriving in February 1629 he immediately began to undertake fortifications and parcel out land for plantation, with a view to sugar production. The second body of colonists, sent out by the company in summer 1629, settled in the Amazon, leaving Harcourt without any supply. English traders who visited the Wiapoco in late March 1630 found his settlers short of provisions, sick with fevers and dysentery, and harassed by hostile Caribs. Harcourt died on 20 May 1631, almost certainly on the Wiapoco, and was probably buried there the same day. Spanish reports indicate that some of his colonists may still have been on the river in 1637.

Likenesses M. Gerard, portrait, repro. in Harcourt, *Relation*; formerly at Nuneham Park, Oxford

Harcourt, Sir Simon (*bap.* 1601?, *d.* 1642), army officer, was probably baptized at Leckhampstead, Buckinghamshire, on 20 May 1601, the eldest child of Robert *Harcourt (1574/5–1631), of Stanton Harcourt, Oxfordshire, and his second wife, Frances, daughter of Geoffrey Vere, the third son of John de *Vere, fifteenth earl of Oxford (1482–1540) [*see under* Vere, John de, sixteenth earl of Oxford]. A younger brother, Vere Harcourt, became a Church of England clergyman.

The Harcourt estates were already encumbered when Simon was born, a situation which his father's colonial ventures to Guiana did absolutely nothing to remedy; in 1611 Robert Harcourt settled the manor house of Stanton Harcourt and its demesne on his wife in jointure and the following year he sold the manor of Stanton Harcourt. Consequently in his late teens Harcourt went to the United Provinces to serve under the English commander, his mother's brother Sir Horace *Vere (later first Baron Vere of Tilbury), with whom he fought in the campaigns against Spain in the Netherlands. Charles I knighted him at Whitehall on 26 June 1627. In April 1629 Harcourt was in Vere's foot at the prince of Orange's campaign against 's-Hertogenbosch (Bois-le-Duc), and he served in the trenches until the city fell on 17 September. From June to August 1632 he served at the siege of Maastricht, where he was wounded by a bullet in both cheeks and by a grenade in the thigh during an assault on the city early in August. In November 1633 he returned to England on family business; his father had died in South America in May 1631, leaving an entangled and encumbered inheritance. On 14 April 1635 Simon sued Nicholas Roberts for possession of Stanton Harcourt; the latter claimed to have legitimately purchased it from one Ailworth, who had bought it for £8000. The suit went to the court of wards. Back on campaign, in mid-September 1635 he was shot in the mouth.

Harcourt gained the patronage of Elizabeth of Bohemia, who called him 'so worthy a deserving man' (*CSP dom.*, 1635–6, 266). He returned to England in March 1636 to secure his estates with the support of both Elizabeth and Archbishop Laud. The matter was to drag on through the courts for the rest of his life, eventually to be resolved in his family's favour after his death. In July 1637 he acted as a diplomatic courier for the English foreign service in the Netherlands. By late 1638 he had risen to the rank of sergeant major/major-general in the prince of Orange's army. During these years spent crossing between England and the Netherlands, Harcourt married Lady Anne Paget (*d.* 1661), daughter of William, Lord Paget; their eldest son, Philip, was baptized on 15 December 1638.

The outbreak of war in Britain led to a change of Harcourt's sphere of activities. He received command of an infantry regiment in the marquess of Hamilton's expedition against the covenanters in the first bishops' war. On 18 April 1639 his regiment, numbering 1700 men, rendezvoused at Yarmouth. Although disgusted by the quality of the men's arms, armour, and training he embarked them for the voyage to the Firth of Forth. Following Hamilton's orders, his men landed on the island of Inchcolm on 4–5 May. When Charles I recognized his field army's weakness compared with the covenanters he recalled Sir Simon's and another regiment in late May. In 1640 Harcourt again served as colonel of foot against the covenanters. His rather pedestrian campaign diary survives (*Harcourt Papers*, 1.129). On 3 November 1640 he received a parliamentary grant of Irish lands (subsequently confirmed to his widow on 26 June 1657, but lost by her in spring 1661 to Lady Margaret Boulton, widow of an Irish insurgent).

As part of the effort to crush the Irish rising of October 1641 Harcourt received a commission as colonel of 1100 foot on 26 November. By 16 December he had levied the regiment and began moving towards Ireland. The king, envisaging the continued use of his services, wrote to the prince of Orange four days later asking that Sir Simon might retain his Dutch offices during his absence.

On 31 December Harcourt landed in Ireland with his men. Although he had a royal commission as governor of Dublin the incumbent, Sir Charles Coote, would not relinquish the post. Harcourt also had difficulties in working with the lords justices, but he readily co-operated with the earl of Ormond in fighting the rebels. Near Swords, 6 miles from Dublin, he and Coote with 2000 men beat a force of 8000 insurgents while losing only three men. Late in March 1642 he led an expedition from Dublin against Carrickmain Castle, co. Wicklow. He was wounded on the second day of the attack, and died in a cottage in Merrion, Dublin, on 27 March. 'He lived while laste daye ... a saintt' (*Tanner Letters*, 155). Following his death his men took the castle and butchered the 250 men, women, and children inside. Beneath his portrait at Nuneham an illuminated manuscript summarizes his career as follows: 'Holland first prov'd his valour; Scotland stood His trembling foe, and Ireland drank his blood' (*DNB*).

Harcourt's widow's puritanism is vividly witnessed by the spiritual journal which she kept: reflecting in 1649 on the mercies that God had granted her, she was thankful 'if God made me att all usefull to the good of my husbands soul' and regarded it as a providence 'that my husband dyed in an unquestionable quarrell, a usefull and much desired man' (*Harcourt Papers*, 1.170). She later married the parliamentarian general Sir William *Waller. Harcourt's son and heir Philip (*bap.* 1638, *d.* 1688) was knighted on 5 June 1660. He married first his stepsister Anne Waller, daughter of Sir William Waller and his second wife, Lady Anne Finch, and second Elizabeth Lee, daughter and heir of John Lee, merchant, of Anderwyke, Buckinghamshire. He sat in the Cavalier Parliament from 1666 as MP for Boston, Lincolnshire, and, as a whig, in the third Exclusion Parliament of 1681. He died on 20 March 1688. Coincidentally Sir Simon's descendant Sir William Vernon Harcourt married a daughter of John L. Motley, the nineteenth-century historian of the Dutch revolt.

Harcourt, Simon, first Viscount Harcourt (1661?–1727), lawyer and politician, was born probably in December 1661, the only son of Sir Philip Harcourt (*bap.* 1638, *d.* 1688), a landowner and politician of Stanton Harcourt, Oxfordshire, and his first wife, Anne (*d.* 1664), the daughter of Sir William Waller of Osterley Park, Middlesex.

Early years Harcourt's father was a presbyterian who conformed to the Church of England while retaining nonconformists as domestic chaplains. He sent his son to be educated at Shilton School, a nonconformist establishment run by Samuel Birch. Harcourt then entered the Inner Temple on 16 April 1676 and Pembroke College, Oxford, on 30 March 1677, aged fifteen. Although he graduated BA on 21 January 1679 he chose the law as his career, and was called to the bar on 25 November 1683.

To some extent a career was a necessity, as on 18 October 1680 Harcourt had married Rebecca, the daughter of Thomas Clarke, his father's chaplain. This match was opposed by his father, and some contemporaries attributed Harcourt's hard work as a reaction to the financial difficulties of his early married life. The couple set up home in Chipping Norton, Oxfordshire, and had three sons (two of whom died young) and two daughters before Rebecca died (she was buried on 16 May 1687). Harcourt succeeded his father on 30 March 1688, but this availed him little in financial terms, as his stepmother retained control of Stanton Harcourt until her death in 1713. Harcourt seems to have practised on the western circuit, and he became recorder of Abingdon in June 1687 and again in October 1689. His attitude to the revolution is not known, but he did not contest the elections to the Convention Parliament of 1688. He was returned for Abingdon at the 1690 election on the church or tory interest.

The House of Commons Harcourt quickly made his mark as a parliamentary speaker and soon gave evidence of that rhetorical ability which Arthur Onslow judged to be 'the greatest skill and power of speech of any man I ever knew in a public assembly' (Burnet, 5.441). He made his maiden recorded speech on 2 April 1690, and spoke regularly on matters such as the perennial bills for the reform of treason trials and also in defence of habeas corpus. In his first decade in the Commons he usually allied himself with the country tories to attack ministerial measures. He also acted frequently as a manager of legislation through the

Simon Harcourt, first Viscount Harcourt (1661?–1727), by Sir Godfrey Kneller, *c.*1710–15

house. Harcourt's parliamentary career in many ways complemented his legal practice, and it no doubt helped him to extend his clientele. Like many barristers, he often obtained leave of the Commons in the spring to go on circuit. He attended the trials of the Jacobite conspirators at Manchester in 1694, and was subsequently at the forefront of attempts to prosecute some of the prosecution witnesses for perjury.

Following his re-election in 1695 Harcourt was at the centre of resistance to the association of 1696 (to defend William III), being named one of the 'ringleaders' of the 'non-associators' (*Kenyon MSS*, 405) in the Commons, and signing the Association in Oxfordshire only after it had been made compulsory. He was a notable opponent of the bill of attainder against the Jacobite Sir John Fenwick in November 1696, speaking frequently against that method of proceeding. At some point after 1695 he married Elizabeth (1657/8–1724), the daughter and coheir of Richard Spencer, a vintner, of Aldgate, London, and Newington, Surrey, and the widow of Richard Anderson (*d.* 1695), of Pendley, Hertfordshire. They had no children. Such was Harcourt's reputation that he was seen as a potential speaker of the Commons after the election of 1698. In the event he faced a challenge for his seat at Abingdon, which he successfully fought off. His legal reputation continued to grow, as in June 1699 he defended Charles Duncombe from charges of falsely endorsing exchequer bills and in November he made the first of many appearances as counsel before the House of Lords.

Harcourt was one of the tories who led the attack on the whig ministers in 1700, and following the dismissal of Lord Chancellor Somers in April of that year he was seen by some as a possible solicitor-general. Robert Harley, in some ways Harcourt's political mentor, was known to be concerned that lack of recognition might propel him into an alliance with the more rigid tories under the duke of Leeds. Harcourt remained out of office, but the admission of some tories into power saw him more amenable to court influence during 1701. However, he never wavered on party causes such as the impeachment of the leading whigs in the previous ministry, and it was Harcourt who seconded the impeachment of Lord Somers and who played a major role in producing the articles against him. In December 1701 he again secured re-election for Abingdon, despite attempts to smear him as a Jacobite.

The death of William III gave Harcourt the chance of office, and on 30 May 1702 he was named as solicitor-general. He was knighted on 1 June and received a DCL on 27 August. The next few parliamentary sessions saw Harcourt resolve the contradictions between being a country tory and a spokesman for the court in favour of the latter. Although he continued to favour tories in election disputes, and found no difficulty in adopting a tory position when it coincided with the defence of the rights of the Commons, as in the *Ashby* v. *White* case, he was also forced to ensure that nothing prevented the ministry's key policy, support for the war, from being obstructed. Most noticeably this meant that a policy he had hitherto supported, a bill against occasional conformity, had to be opposed when his erstwhile tory friends attempted to tack the bill to the Land Tax Bill in November 1704.

Harcourt lost his seat at Abingdon at the election of 1705 to a more forceful opponent of the tack. However, Harcourt was deemed sufficiently useful to the government as an ally of Robert Harley to ensure that a seat was found for him, at Bossiney in Cornwall. He was also appointed steward of the duke of Marlborough's newly acquired estate at Woodstock, Oxfordshire. Harcourt repaid Harley's support by voting for the court candidate as speaker in November 1705, and also in solid work for the court over such matters as the Regency Bill in 1706 and the Union with Scotland in 1706–7. His reward came in April 1707, when he was promoted attorney-general. However, Harcourt resigned his office on 12 February 1708, the day after the dismissal of Robert Harley, following the defeat of his plan to include more tories in a moderate mixed ministry, and thus curb the growing whig power. Although Harcourt was returned for Abingdon at the 1708 election, he was unseated on petition on 20 January 1709 in what was seen as a blatant abuse of the whigs' parliamentary majority. Harcourt, however, rose to the occasion in a speech in which he deployed all his eloquence to denounce the proceedings and which was later printed so as to be available to a wider audience.

One result of Harcourt's ejection from the legislature was that he was available to act as counsel for Henry Sacheverell in March 1710, when that rather intemperate clergyman was impeached by the Commons for a sermon he had preached in London. Harcourt's main contribution came on 3 March, when he defended Sacheverell against

the first article of the impeachment. His tactic was to suggest that Sacheverell was merely reiterating the Church of England's doctrine of non-resistance to duly constituted authority in the shape of the crown in parliament and had not dealt with exceptions to this general rule such as the revolution of 1688. Many acknowledged the brilliance of the speech, including the future bishop of Bristol, George Smalridge, who thought Harcourt's 'reputation for a speaker is fixed for ever' (Nichols, *Illustrations*, 3.280–81). It was Harcourt's last contribution to the trial, because in February he had been returned at a by-election for Cardigan boroughs, and the return of the writ precluded his further participation.

Lord keeper and lord chancellor When Harcourt went on circuit following Sacheverell's trial he was fêted in each town and showered with local honours. However, the most important political effect of the case was that it paved the way for a new ministry under Harcourt's old ally, Robert Harley. Harcourt was sure to be offered office, but he was in a quandary: to accept office as Lord Cowper's replacement as either lord keeper or lord chancellor would preclude a return to lucrative private practice should the balance of power shift against the tories. Harcourt preferred a return to the attorney-general's post, which was not incompatible with, but rather enhanced, private practice. In any event he avoided the public in August while recuperating from an eye operation for cataracts. On 16 September 1710 he was named attorney-general, but within a week Lord Cowper had resigned the lord chancellorship, and after further pressure from Harley (soon afterwards the earl of Oxford) Harcourt was named lord keeper on 16 October.

On 3 September the following year Harcourt was raised to the peerage as Baron Harcourt, and on 7 April 1713 he became lord chancellor. In the battle for supremacy of the Oxford ministry, Harcourt sided with Viscount Bolingbroke. However, in August 1714 he was vital in ensuring that the dying Queen Anne appointed the duke of Shrewsbury rather than Bolingbroke as lord treasurer. Harcourt lost the lord chancellorship on 21 September 1714 following the Hanoverian succession and was removed from the privy council in October. He had made over £8000 per annum from his tenure of the lord keepership and lord chancellorship, so the loss of office was no financial hardship. In 1710 Harcourt had purchased nearby Nuneham Courtenay, which was to become the family residence, but he retired to Cokethorpe, his residence near to Stanton Harcourt, which, although now his property, was in a poor state of repair. At Cokethorpe he entertained a rich array of literary figures, such as John Gay, Alexander Pope, Matthew Prior, and Jonathan Swift.

After 1715 Harcourt resumed his political career in earnest in 1717, when he helped to organize the defence of Lord Oxford against articles of impeachment. He was in constant contact with Oxford, who was still in the Tower, providing him with information. In a 'handsome and learned speech' (Jones, 72–3) Harcourt persuaded the Lords to insist on prosecuting the charge of high treason first, thereby helping to sow dissension between the houses. He duly voted for Oxford's acquittal on 1 July 1717, and then found himself excluded by the ministry from the Act of Grace passed later that month. However, the turmoil within whig ranks in the years 1717–21 provided Harcourt with a route back into ministerial favour, and the earl of Sunderland's need of parliamentary support saw him rewarded on 24 July 1721, when he was created Viscount Harcourt. The rise of Robert Walpole did not prevent his rehabilitation, as Walpole had assisted Harcourt's efforts on Oxford's behalf. On 25 August 1722 Harcourt was readmitted to the privy council. He was able to assist Bolingbroke in his attempts to return from exile, and he was sufficiently trusted by the Walpole regime to be named a lord justice in 1723, 1725, and 1727 during George I's absence from the realm.

Following the death of his second wife on 16 June 1724, Harcourt married, on 30 September 1724, Elizabeth (*c.*1678–1748), the daughter of Sir Thomas Vernon, of Twickenham Park, and the widow of Sir John Walter (*d.* 1722), third baronet, of Sarsden, Oxfordshire. It was while calling on Walpole on 23 July 1727 that Harcourt was struck down with 'an apoplexy and dead palsy' (*Leyborne-Popham MSS*, 288). He died at 2 a.m. on 29 July at Harcourt House in Cavendish Square and was buried in the family vault in the chancel of Stanton Harcourt. He was succeeded by his grandson Simon *Harcourt, first Earl Harcourt, the child of his second son, **Simon Harcourt** (*bap.* 1684, *d.* 1720), lawyer and Jacobite sympathizer, who was baptized at Chipping Norton, Oxfordshire, on 9 October 1684. After entering Eton College in 1698 he proceeded to the Inner Temple on 28 November 1701 and Christ Church, Oxford, on 3 November 1702. He then travelled abroad, visiting Italy and attending the University of Padua in 1706, and engaging in youthful indiscretions such as drinking the health of the Pretender. On 21 July 1709 he married Elizabeth (*d.* 1760), the daughter of John Evelyn of Wootton, Surrey, the tory divine Francis Atterbury performing the ceremony. Apart from their son, they had four daughters, two of whom died young. Harcourt was returned as a tory to the House of Commons for Wallingford at the 1710 election and on 12 November was called to the bar. This honour, like the bestowal of an MA at Oxford on 13 December 1712, was due to the influence of his father. In the summer of 1713 he was in France, probably for reasons of health, but again he behaved indiscreetly while dining with the duke of Berwick. In the election of 1713 he was returned for Abingdon, but he was defeated in 1715. During the years following the Hanoverian succession he was plagued with ill health, and he died on 1 July 1720 while on another trip to Paris. His host, Viscount Bolingbroke, attributed his demise to a 'bloody flux' (*Portland MSS*, 7.278), but the ultimate cause was drink, a post-mortem examination revealing that his liver had perished. His body was returned to England and was duly interred on 1 September 1720 at Stanton Harcourt.

Harcourt, Simon (*bap.* 1684, *d.* 1720). *See under* Harcourt, Simon, first Viscount Harcourt (1661?–1727).

Harcourt, Simon, first Earl Harcourt (1714–1777), politician and administrator in Ireland, was the only son of the Hon. Simon *Harcourt (*bap.* 1684, *d.* 1720), barrister and MP [*see under* Harcourt, Simon, first Viscount Harcourt], and his wife, Elizabeth, daughter of John Evelyn of Wotton, Surrey. He was educated at Westminster School before travelling abroad with a tutor for four years and then returning to England in 1734. On the death of his grandfather Simon, Viscount Harcourt, in 1727, he succeeded to the family titles and estates. On 16 October 1735 he married Rebecca (*d.* 1765), only daughter and heir of Charles Sambourne Le Bas, of Pipewell Abbey, Northamptonshire, and Mary Moyer. She brought a dowry of £60,000 to the marriage, and they had four children. On 9 May 1735 Harcourt was appointed a lord of the bedchamber to George II, and he was present with the king at the battle of Dettingen. During the Jacobite rising of 1745 he raised a regiment and was awarded the rank of colonel; he became a general in 1772. On 1 December 1749 he was created Viscount Nuneham of Nuneham Courtenay and Earl Harcourt of Stanton Harcourt.

In April 1751 Harcourt was appointed governor to the prince of Wales, the future George III. He did not seem ideally suited to the task. Walpole said that Harcourt was 'minute and strict in trifles', and was convinced that he had done his duty 'if on no account he neglected to make the Prince turn out his toes' (Brooke, 66). He described Harcourt as unable to teach the prince 'other arts than what he knew himself, hunting and drinking' (Walpole, *Memoirs*, 1.60). His tenure was short-lived, as in 1752 a scandal erupted over the education of the young prince. Harcourt and the bishop of Norwich accused their immediate subordinates of indoctrinating the prince with Jacobite

Simon Harcourt, first Earl Harcourt (1714–1777), by Sir Joshua Reynolds, 1754–5

principles and notions of arbitrary rule. Their allegations were unsubstantiated, and came close to treason, but they provided ammunition in later years for those who wished to point to George III's autocratic tendencies. George II was not convinced by the allegations, and he accepted Harcourt's resignation. Harcourt emerged from the episode relatively unscathed, and in July 1761 he was appointed ambassador to Mecklenburg, with responsibility for requesting the hand of princess Charlotte on behalf of the king. He was appointed her master of the horse on 10 September, and then in 1763 lord chamberlain to the queen.

A supporter of Bute and Grenville, Harcourt advised George III against repealing the Stamp Act. The king acknowledged his own reluctance to back repeal but 'said he would never influence people in their parliamentary opinions, and that he had promised to support his ministers'. In response 'Lord Harcourt threw in doubts of their being able to support themselves' and 'named Mr. Grenville as the only man in the House of Commons capable of carrying on the business there' (Smith, 3.353–5). Harcourt temporarily deserted the ministry and voted with the Bedfords against Rockingham, but he was quick to return to the government fold; ultimately he was a court man.

In 1768 Harcourt was appointed British ambassador to Paris. He clearly did not have the experience requisite for such an important post during a time of international crisis. Moreover his own commitment to the job was less than wholehearted, as between 1769 and 1772 his absences from this post added up to over a year. In June

1772 he became Irish viceroy, replacing Lord Townshend, who in reforming the Dublin Castle government had left behind a disaffected parliament and an unsettled populace. Harcourt largely succeeded in pacifying Ireland, for the most part by making judicious concessions. One of these was to be an absentee tax, regarded by Harcourt 'as an expedient likely, in its commencement, to conciliate the body of the nation' (Harcourt, 9.93). However, when an all-party group of British peers, led by Rockingham, made trouble for the prime minister, Lord North, Harcourt successfully had the tax proposals quashed. Despite patriot opposition, Harcourt was able to secure Irish parliamentary support for the American War of Independence, and he gained permission to send 4000 troops for service abroad. His costly acquisition of Henry Flood's support was a less successful move, and his financial reforms brought mixed fortunes. He reunited the revenue boards, reduced the corn bounty, and gained trade concessions. But at the same time he mortgaged a sizeable portion of Irish patronage through the distribution of peerages, offices, and pensions. Harcourt's resignation, in January 1777, resulted from his conflict with the commander-in-chief over control of military affairs. After his sojourn in Ireland he retired to Nuneham.

Walpole described Harcourt as 'an empty man, devoted to the Court but diffident and complaisant' (*Last Journals of Horace Walpole*, 1.251). He certainly had urbane manners, but his time in Ireland hinted at real political ability, and it is clear that he was more than just 'civil and sheepish' (Walpole, *Memoirs*, 1.60). Lady Harcourt died suddenly on 16 January 1765. Harcourt also suffered a precipitate death when on 16 September 1777 he fell into a well at Nuneham Park while rescuing a favourite dog and drowned. He was buried at Stanton Harcourt on 24 September. He was succeeded by his son George Simon. MARTYN J. POWELL

Harcourt, Sir William de (*d.* 1270). *See under* Harcourt family (*per. c.*1050–1330).

Harcourt, William. *See* Aylworth, William (1623–1679).

Harcourt, William, third Earl Harcourt (1743–1830), army officer and courtier, was born on 20 March 1743, the younger son of Simon *Harcourt, first Earl Harcourt (1714–1777), and his wife, Rebecca (*d.* 1765), the only daughter and heir of Charles Samborne Le Bas of Pipewell Abbey, Northamptonshire. He was commissioned ensign in the 1st guards in August 1759 and promoted captain in the 16th light dragoons on 27 October the same year, the unit, called Harcourt's black horse, having been raised at his father's expense. His father's wealth and influence rapidly advanced his military career. Harcourt transferred as a captain to the 3rd dragoons on 30 June 1760, and he held the appointment of equerry to the queen consort between 1760 and 1767 after accompanying his father to Mecklenberg Strelitz in order to conduct the future Queen Charlotte to England.

In 1762 Harcourt served as aide-de-camp to the earl of Albemarle at the capture of Havana. He was promoted lieutenant-colonel in the 31st foot on 28 November 1764, and transferred to the 4th light dragoons on 19 April 1765 and to the 16th light dragoons on 24 June 1768. In 1766 he was appointed an extra groom of the bedchamber. From 1768 to 1774 he was a tory MP for the city of Oxford, having been returned by the corporation, which then controlled representation. There is no record of his speaking in the house, and he apparently showed little interest in politics. In 1774 a corporation faction put forward the earl of Abingdon's brother, Peregrine Bertie, and, rather than face a contest, Harcourt retired.

After accompanying his regiment to America in 1775, Harcourt captured the American Major-General Charles Lee at Basking Ridge in a daring 70 mile raid on 13 December 1776. This act was rewarded by his appointment as aide-de-camp to the king and his promotion to colonel on 29 August 1777.

Having then returned to England, on 3 September 1778, at Kensington, Harcourt married Mary (1749/50–1833), the widow of Thomas Lockhart of Craighouse; she and Harcourt had no children. She was the eldest daughter of the Revd William Danby of Farnley, Yorkshire, and had married her first husband in 1772. Described as 'a woman of warm temper and small reserve' (GEC, *Peerage*), she gained a reputation for meddling in court politics. In 1795 she accompanied the first earl of Malmesbury on his voyage to take Caroline of Brunswick to England for her marriage to George, prince of Wales, but fell out of favour with the king and queen for offering Caroline some 'bad advice'. Domineering, interfering, sometimes malicious, she repeatedly quarrelled with her sister-in-law over the disposal of properties to the French Harcourts, her 'special protégés'.

When the colonelcy of the 16th light dragoons became vacant in 1779, Harcourt succeeded to this appointment on 20 October, and held it until his death. He was promoted major-general on 20 November 1782, and the same year he purchased the estate of St Leonard's Hill, near Windsor, Berkshire, from the duke of Gloucester and was appointed deputy ranger of Windsor Great Park by the king. In 1787 Pitt suggested him to the king as a possible candidate for New Windsor, but a dispute he had with the corporation made him unsuitable. About 1788 he suffered a mild paralytic stroke, and the king did not want him to again go on active service.

From May 1793 Harcourt commanded the 1st brigade of cavalry in the duke of York's army in Flanders, and on 12 October 1793 he was promoted lieutenant-general. For his leadership of the cavalry at the battle of Willems on 10 May 1794 the duke of York presented him with his own sword. He was appointed governor of Fort William on 21 March 1794. Harcourt was the senior British general officer of cavalry by August 1794, and succeeded to the command of the British troops after the departure of the duke of York the following December, whereas the command of the Hanoverians devolved upon General Wallmoden.

This was a particularly difficult period to assume such a responsibility, since the winter campaign had reduced the combat effectiveness of the allied forces considerably, as had the allies' divergent war aims. All Harcourt could do was to conduct a successful withdrawal through the Netherlands in the face of substantial French forces while trying his best to limit the alarming incidence of sickness among his troops. The army eventually halted on the line of the River Ems on 3 March 1795, soon after which the British government decided to evacuate the majority of its forces from the continent.

Harcourt was appointed governor of Hull in 1795, and continued in the post until 1801. Promoted general on 1 January 1798, on the establishment of the Royal Military College at Marlow in 1802 he was appointed its first governor. His inattention to his duties ensured an uneasy relationship with his lieutenant-governor and erstwhile protégé, Gaspard Le Marchant, but he continued in post until 18 July 1811, when he was appointed governor of Portsmouth. He also briefly held the appointment of master of the robes (1808–9).

When his brother, George Simon Harcourt, second Earl Harcourt, died on 20 April 1809, Harcourt succeeded to his titles and estates, as well as his appointment of master of the horse to the queen, which he held until her death in 1818. Two years later he walked as one of the assistants to the chief mourner, the duke of York, at George III's funeral. He was invested with the GCB on 20 May 1820. On 19 July 1821 Harcourt bore the union standard at the coronation of George IV and was promoted field marshal. His last official appointment was as governor of Plymouth, on 1 January 1827. The final act of Harcourt's long connection with the royal family occurred a few days later, on 20 January, when he bore the duke of York's baton at his funeral. A tory member of the House of Lords, in 1829 he followed Wellington on Roman Catholic emancipation.

A tall, angular man, with a prominent nose and a stoop, in his latter years Harcourt was obstinate, dilatory, unbusinesslike, and infirm. He died on 17 June 1830 at his residence, St Leonard's Hill, and was buried at Stanton Harcourt, Oxfordshire. He left no children and his peerages died with him. His estates were left to his cousin Edward Venables-Vernon (afterwards Edward Harcourt), archbishop of York. Statues of Harcourt by Robert William Sievier were erected in 1832 in St George's Chapel, Windsor, and St Michael's Church, Stanton Harcourt.

Wealth at death £180,000: *GM*, 1st ser., 100/2

Harcourt, William Edward, second Viscount Harcourt (1908–1979), merchant banker and public servant, was born on 5 October 1908 at 14 Berkeley Square, London, the fourth child and only son of Lewis *Harcourt, first Viscount Harcourt (1863–1922), MP and cabinet minister, and his wife, Mary Ethel (*d.* 1961), only daughter of Walter Hayes Burns, American investment banker, of New York and North Mimms Park, Hatfield. Known universally as Bill, he was brought up at Nuneham Park, near Oxford, and educated at West Downs School, Eton College until 1927, and Christ Church, Oxford, where he took a third in jurisprudence in 1930. From 1917 he had been known by the courtesy title of Baron Nuneham, and while still at Eton he succeeded as second Viscount Harcourt, following the suicide of his father in 1922.

The great-grandson of J. S. Morgan and the great-nephew of J. P. Morgan, both of the Anglo-American investment bank, in 1931 Harcourt joined the related English merchant bank, Morgan Grenfell; he was the last member of the founding families to work in the bank. He worked his way round the various departments in the time-honoured manner of those destined to become managing directors, after which he spent two months in New York city working at J. P. Morgan & Co. and Morgan, Stanley & Co. before settling down in London. His primary duty during the inter-war years was to support the older managing directors in their work for clients, often sitting in on

William Edward Harcourt, second Viscount Harcourt (1908–1979), by Elliott & Fry, 1959

the discussions with companies or governments, helping and learning. On 1 January 1939, at the age of thirty, he was appointed managing director, an office which he retained until 1968. He acted as chairman from 1968 to 1973, with interludes for public service. As with many merchant bankers, he sat on the boards of a number of insurance companies, serving as chairman of four of them over his working life, most notably the Legal and General Assurance Society.

Harcourt went off to war in 1939 with the 63rd Oxford yeomanry auxiliary territorial regiment, Royal Artillery; he later served at General Alexander's sometime headquarters in Bari, Italy, at the control end of the supplies and aid for the partisans in Yugoslavia. He ended his war service with the rank of captain (and the honorary rank of lieutenant-colonel), and was appointed MBE (1943) and OBE (1945). Harcourt then returned to private life. His family home, Nuneham Park, had been taken over by the army during the war, at the end of which it was sold to Oxford University. Harcourt thereafter made his home at the other family property at Stanton Harcourt and at 23 Culross Street, London W1.

Harcourt rejoined Morgan Grenfell as its youngest director and spent some years rejuvenating a bank which was prestigious, profitable, and sleepy. He brought in staff who developed the bank's overseas interests and he oversaw the birth of its corporate finance department in the 1960s, which by the 1980s had become the most powerful in the City of London. Indeed, Morgan Grenfell's aggressive backing of American Tobacco in its bid to take over the UK tobacco manufacturer Gallaher, in 1968, led it to receive the first public warning issued by the new Takeover Panel—an incident which left Harcourt in a towering fury. He was a pioneer in another area as well: when the Heath government came to an agreement with the French government for the construction of a channel tunnel, Harcourt, whose interest in the project was long-standing (he had been chairman of the Anglo-American-French channel tunnel study group since 1957), became chairman of the British Channel Tunnel Company Ltd. The project, to his disappointment, was cancelled by the Labour government in January 1975 through fear of the rapidly rising costs.

From 1954 to 1964 Harcourt devoted much of his time to public service and was absent from Morgan Grenfell. From 1954 to 1957 he served as minister (economics) at the British embassy in Washington and as head of the UK Treasury delegation in the USA; this included the position of UK executive director both at the International Bank for Reconstruction and Development (the World Bank) and at the International Monetary Fund. He developed a good personal relationship with George Humphrey, the US secretary of the treasury, which stood him in good stead during the Suez crisis in 1956, since they were able to speak plainly to each other but remain on good terms. Harcourt was realistic about the help which the UK could expect from the USA during the associated sterling crisis, and he ensured that the Bank of England and the Treasury had no illusions. When Lord Cobbold was due to retire as governor of the Bank of England in 1961, the Treasury and the bank supported Harcourt to replace him; the then economic adviser to the government, Robert Hall, wrote of him that:

> although he is primarily a business man and spends his time cultivating the right people and on negotiations—which after all is the primary requisite if you are an operator—he seems to me to have a great gift for arriving at the essence of the situation analytically, so that he is very rarely wrong on his economics even if he could not demonstrate them. (Hall, 176–7)

Though Lord Cromer was eventually chosen to replace Cobbold, Harcourt's analytical powers were put to further governmental use by his membership of the Radcliffe committee on the working of monetary and credit policy (1957–9) and of the Plowden committee on overseas representational services (1962–4).

The above activities were centred in London, as was his chairmanship from 1965 of the governors of the Museum of London, but Harcourt increasingly served a number of interests in Oxfordshire. He was from 1963 vice-lieutenant of Oxfordshire, and was sometime chairman of the Oxford Preservation Trust, but increasing amounts of time were spent in university-related activities. He was an honorary fellow of St Antony's College, and was chairman of the Rhodes Trust. With regard to the latter it was Harcourt's proud boast that under his leadership the trust, by establishing the post-doctoral Rhodes fellowships which

were tenable by women at the women's Oxford colleges, had broken Cecil Rhodes's will; the Rhodes scholarships were thereby opened to women as well as to men. In 1978 he was made an honorary DCL of Oxford University, which greatly pleased him, and a DLitt by the City University.

Harcourt was twice married: first, in 1931, to the Hon. Maude Elizabeth (Betty) Grosvenor (*b.* 1909), daughter of Francis Egerton Grosvenor, fourth Baron Ebury; they were divorced in 1942. Then in 1946 he married Elizabeth Sonia Gibbs, daughter of Sir Harold Edward Snagge, a director of Barclays Bank, and the widow of Captain Lionel Cyril Gibbs; his second wife died in 1959. Harcourt and his first wife had three daughters, the youngest of whom, Virginia, drowned in Nigeria in 1972; he had two stepsons through his second marriage.

Harcourt was a man of intelligence and charm, jovial and without side. He had strong ties to the country, and his main weekend preoccupation was the creation of his walled garden of several acres at Stanton Harcourt.

> The house was always full of people at weekends, when hard work in the garden was a notable feature of the entertainment afforded to the guests. Harcourt was never happier than when surrounded by the debris and clutter of reclaiming his garden or bespattered with mud from cleaning out his ponds. (*DNB*)

Harcourt was prominent in the City, liked and respected in Oxford, and a man of substance within the government. He had no heir, and upon his death from cancer at the Royal Marsden Hospital, London, on 3 January 1979, the viscountcy became extinct. KATHLEEN BURK

Harcourt, Sir William George Granville Venables Vernon (1827–1904), politician, was born on 14 October 1827. It is unclear whether he was born at the rectory at Wheldrake in Yorkshire or in the Old Residence at York, where his father was a canon. It was probably at the latter location.

Family, education, and early career William came from a distinguished patrician and ecclesiastical background. His father, William Venables Vernon *Harcourt (1789–1871), was a clergyman of the Church of England, after having had a short career in the navy. He had a concurrent and greater interest in chemistry and was a founder of the British Association. He was both rector of Wheldrake and canon at York where his father, Edward Venables Vernon *Harcourt, was archbishop from 1807 until he died in his ninety-first year in 1847. The family seat was Nuneham

Sir William George Granville Venables Vernon Harcourt (1827–1904), by Sir Arthur Stockdale Cope, 1904

Park, Oxfordshire, which William's elder brother, Edward William Harcourt (1825–1891), eventually inherited. Edward was a tory MP for Oxfordshire from 1878 to 1886 and though inactive deeply resented William's being a Liberal member for Oxford. Allegedly he told his brother so from the terrace of the house at Nuneham, from which the spires of Oxford could be seen in the distance. He certainly wrote to him in 1868 deprecating his candidacy for Oxford. Sir Thomas Gladstone, Gladstone's elder brother, is said to have remarked to Edward Harcourt at the Carlton Club: 'Mr. Harcourt, you and I have two very troublesome brothers.' William had five sisters. His mother was Matilda Mary Gooch (1804–1876), a daughter of Colonel William Gooch, who was the son of Sir Thomas Gooch, in succession bishop of Bristol, Norwich, and Ely. His paternal grandfather, born in 1757, was the son of Lord Vernon; his third wife was sister of Earl Harcourt. So the future Sir William was born into the heart of the English establishment, a world which in many ways he would exemplify at the same time as being dedicated to challenging it. In 1830, when he was three, Harcourt was added to the family name when the archbishop inherited the family estates, accumulated over seven centuries, on the death of his cousin, the third Earl Harcourt.

William Harcourt had an austere childhood. He was educated at first by a Swiss governess, and then at the age of eight went to a small private school at Southwell, near Nottingham, where his uncle was a canon. His father did not wish him to attend a public school—would Harcourt have got on better with his contemporaries if he had?—but sent him instead to be educated by John Owen Parr,

vicar of Durnford, from whom he received a good training in classics. In 1840 Parr and his small group of pupils moved to Preston, where Harcourt witnessed the bread riots of 1842. After leaving Preston he studied at home for two years before entering Trinity College, Cambridge, in 1846. His brother had gone to Oxford, but Harcourt's interest in mathematics led his father to choose Cambridge for him. He was tall—6 feet 3 inches—and, in contrast to his later life, thin. At Cambridge he became a member of the famous secret discussion society the Apostles; among his fellow members were Henry Maine (his tutor) and James Fitzjames Stephen, with whom he debated frequently in the union, Stephen taking the more conservative side. While at Cambridge he moved away from the traditional toryism of his family. In mathematics, which he did not actually enjoy, he was named senior optime, and also received a first in classics. While still an undergraduate he began to write for the Peelite newspaper the *Morning Chronicle*. His future possibilities were a fellowship at Cambridge, which his father preferred, or to enter politics. Choosing neither, he decided instead to pursue the law and journalism, and enrolled at Lincoln's Inn in 1852 and on 1 May 1854 was called to the bar at the Inner Temple, becoming particularly interested in international law. He did not run for political office for eight years and would not enter parliament until 1868. Harcourt's uncle, George Granville Harcourt, was married to the famous political hostess Frances, Lady Waldegrave, and they helped to launch him into London political society. When the *Morning Chronicle* closed Harcourt wrote from 1855 until 1859 for the *Saturday Review*, famed for the high quality of its contributors, among them his Cambridge friends Maine and Stephen as well as Walter Bagehot and the future marquess of Salisbury. He took an increasingly Liberal line in his admiration of W. E. Gladstone and his dislike of Lord Palmerston's foreign policy. In 1859 he stood for parliament for the first time in the Kirkcaldy burghs as an independent Liberal against the long-sitting local magnate, a Liberal, Robert Ferguson; Harcourt argued that the seat needed to be wrested from local 'hereditary rights', and he came within eighteen votes of winning in a poll of 606, much enjoying his first foray into electoral politics.

Marriage, the law, and early political career Shortly thereafter, on 5 November 1859, Harcourt married Maria Thérèse Lister, daughter of Lady Maria Theresa Lewis (formerly Lister), stepdaughter of the politician Sir George Cornewall Lewis and a niece of Lord Clarendon. Her father was Thomas Henry *Lister of Armytage Park, Staffordshire. The marriage was to be tragically brief: she died on 31 January 1863, the day on which she gave birth to her second child. The Harcourts had two sons, the first of whom died in infancy; the other, Lewis Vernon *Harcourt, became his father's devoted assistant—the intensity of their relationship owing something to the circumstances of his birth—and a prominent political figure in his own right.

The following years were devoted to Harcourt's legal practice, in which he specialized in railway law, and commentary, chiefly in *The Times*, on political matters, particularly on topics that had implications for international law. He was not yet fully committed to either political party, and, in fact, in 1866 Disraeli, whom he liked personally and disliked politically, offered him a safe Conservative seat in Wales, which he declined. He became better known through a series of letters to *The Times*, signed Historicus, arguing in favour of a strict neutrality in the civil war in the United States and a refusal to recognize the South. In this he was going against much 'informed' opinion in Britain, which tended to favour the Confederacy. He participated in the controversies over the *Trent* and the *Alabama*, taking the British side. In 1863 he published *Letters by Historicus on some Questions of International Law* and in 1865 a further collection entitled *American Neutrality*. He was thanked in 1868 by Lord John Russell for helping to maintain neutrality between the United States and Britain.

In these years Harcourt's greatest attention was devoted to his legal career; in 1866 he was made a queen's counsel, and in 1869 he became the Whewell professor of international law at his old university, which he remained until 1887, though he devoted increasingly less time to his academic duties. As he became more deeply involved in politics he had less time for the bar as well, making a considerable financial sacrifice (perhaps a loss of £10,000 p.a.). In 1868 he campaigned for the disestablishment of the Church of England in Ireland and he also pleaded for pardons for Fenians. He was also looking for a seat. Liverpool was anxious to have him, but he decided in favour of running for Oxford City, perhaps to exploit the family's connection with the area. He entered parliament in December 1868 as one of the two Liberal MPs for Oxford City (Edward Cardwell being the other) at the age of forty, comparatively late for someone of his background. Yet he rapidly became a leading figure there, largely through his skill in debate. Thanks to his frequent commentaries in *The Times*, he was already well known in the political world. He began his new career as something of an independent and moderate radical: anti-imperialist, anti-military, violently anti-ritualist, and critical of Gladstone's government over what he regarded as concessions to clerical interests in the Education Bill of 1870. He advocated the limitation of religion in schools to the reading of scripture and the repeal of the remaining religious tests at Oxford and Cambridge. His style was forceful; he was regarded as arrogant, and tact was not his strongest characteristic. He favoured reform in land law, in voting procedures, and in the judiciary. He attempted to help trade unions on the basis of the principle of equality before the law. He fought an effort by the Liberal government to limit the right of public speech in the royal parks. He was in favour of freedom and openness, which resulted in what some might regard as inconsistencies with a radical position: he was opposed to the secret ballot in 1872 and against increased regulation of drinking habits, though when he was home secretary in Gladstone's next ministry he did support local option liquor control, having become

convinced of the role that drink played in causing crime. Despite Harcourt's criticisms of the government, Gladstone recognized his qualities and the high standing he had achieved both as a debater in the Commons and as a prominent speaker on behalf of the Liberal Party in the country. In November 1873 Gladstone offered him the post of solicitor-general and insisted, contrary to Harcourt's wishes, that he accept the traditional knighthood. He was only briefly in office, as the government resigned in February 1874.

Harcourt was re-elected for Oxford City in 1874, and for the next six years was a vigorous figure in parliament and a relentless critic of Disraeli's government, with some exceptions—as when, in open disagreement with Gladstone, he, as a devoted 'protestant', supported the government's Public Worship Regulation Bill of 1874. He was quite discontented with Gladstone's position as officially retired yet politically active. Harcourt thought that Lord Hartington should lead the party in fact as well as in name. On 2 December 1876 Harcourt remarried; his second wife was an American, Elizabeth Cabot Ives, widow of J. P. Ives and the daughter of the historian John Lothrop Motley. Two years later they had a son, Robert Vernon. In 1883 Harcourt built Malwood in the New Forest, an area that he had come to love. In 1876 he threw himself into the agitation over the 'Bulgarian atrocities' and attacked Turkey; yet he did not see the campaign as a way for Gladstone to return to his position of leadership.

Home secretary When the Liberals defeated Disraeli and the tories in 1880 there was no alternative to Gladstone as prime minister. Harcourt was appointed home secretary but, having been narrowly returned at the general election, was then defeated by fifty-four votes in Oxford City in the mandatory requirement that a minister be re-elected. The election was challenged by petition and his opponent unseated on the charge of corruption, but in the meantime Samuel Plimsoll had resigned his seat in Derby in order for Harcourt to return to parliament; he was elected at Derby in May 1880.

Harcourt continued his somewhat radical way in parliament, leading the fight for a game bill to give farmers the power to protect their land against hares and rabbits, and to curtail the rights of the hunting squires. He played a crucial role, as home secretary, in the growing dominance of the problem of Ireland in the deliberations of parliament, and he moved forward the government bills for the maintenance of order there, particularly as problems increased in Ireland after the murder of Lord Frederick Cavendish and Thomas Henry Burke in Phoenix Park in Dublin in May 1882 and subsequent 'outrages', including dynamiting in London itself. Despite his doubts about whether Gladstone should have returned to the leadership, he felt himself closer to him during the ministry, both politically and personally. Earlier in the session he had passed a bill through the House of Commons to improve and make more independent the governance of Scotland, only to see the bill defeated in the House of Lords. Similarly, he fought for a bill to consolidate the administration of London, which was later realized in the London county council, but that effort had to be abandoned in the House of Commons in July 1884 (in 1883 a previous bill had involved a sharp row with Gladstone over democratic control of the police, which Harcourt wished to avoid). He was a spirited defender of the government when it was vehemently attacked over the fall of Khartoum and the death of Charles George Gordon in January 1885. Then the government's majority was reduced to fourteen, and in May it was defeated by an alliance of the Irish and tory members over an amendment to the budget.

Chancellor of the exchequer and the Liberal split Harcourt resigned with the government in May 1885 and Lord Salisbury became prime minister with the support of the Irish members. After the general election in November 1885, when Harcourt held his Derby seat, the tory government was defeated when parliament assembled in January 1886. The Irish members reverted to supporting the Liberals, as the tories had recommitted themselves to employing coercion in Ireland. In February 1886 Gladstone formed his third ministry and asked Harcourt to be the chancellor of the exchequer; he accepted even though he was quite pessimistic about the possibility of carrying home rule. Even so he delivered a strong speech in parliament in its favour when it was debated in May 1886. As chancellor he was the second in command, and along with the position went the implication that he might well be Gladstone's successor as leader of the party. He threw himself with enthusiasm into the traditional role of the chancellor: to curtail the expenses of his colleagues' departments. His first budget, introduced on 15 April 1886, was unexciting; existing taxes were to cover a deficit of £2.5 million. On 7 June 1886 the government was defeated over home rule and at the ensuing general election was greatly diminished in numbers, though Harcourt retained his seat at Derby with difficulty. The government resigned after the election, Harcourt leaving office as chancellor of the exchequer in July 1886.

Harcourt was a figure somewhat to the left of the centre of his party. He was the only one of the opponents of home rule in the cabinet—Hartington, Chamberlain, Bright, Selborne, and James—who changed his mind. He had come to the conclusion that it was preferable to coercion. His position as a compromiser was, however, made more difficult by his abrasive personality, which did not ease relations with his colleagues. In an attempt to reunite the party he held a series of talks in early 1887—the so-called 'round-table conference'—with himself, John Morley, and Lord Herschell representing the Gladstonians, and Chamberlain and Sir George Trevelyan the Liberal Unionists; the talks were unsuccessful, though Trevelyan returned to the party that year. For the next six years Harcourt was, second to Gladstone, the most important Liberal speaker in parliament, attacking the government particularly on its policy of coercion in Ireland, and working for the social programme of his party. He was also a prominent figure 'out of doors', speaking on behalf of the party. In 1889 and 1890 he was deeply involved with Parnell, initially on his side on the matter of

the letters forged by Richard Pigott and defending him against the onslaught of *The Times*, in which the letters had been published in 1887. Exposure of the forgeries created a revulsion in favour of Parnell, which was then rapidly reversed when he was cited in a divorce case in November 1890. Those 'in the know' had been aware for a long time of his liaison with Mrs O'Shea; in fact Harcourt may have been the first important politician to be so, as the Home Office had had Parnell under surveillance. But once the scandal became public Harcourt was one of the Liberal leaders who advised Gladstone that the party would have to sever its relations with Parnell.

Chancellor of the exchequer again The Liberals returned to power in 1892 and Harcourt entered into the most important phase of his career. He had lost the slimness of his youth and he was now a jovial, indeed a rather Falstaffian, figure, known as Jumbo, with a formidable temper which made him many enemies, particularly among his immediate colleagues. Forming his government in 1892, Gladstone noted 'the addition of another Harcourt would have gone far to make my task impossible' (Gladstone, *Diaries*, 14 Aug 1892). He appeared to be a convinced radical, but some of his contemporaries chose to believe that he had become one because it provided the most numerous opportunities for conflict—he enjoyed, some felt, personal vendettas more than battles for principles, and seemed to pick a position for its combative possibilities. As Winston Churchill remarked about him in *Great Contemporaries* in 1937, Harcourt had 'an eye fixed earnestly, but by no means unerringly, upon the main chance'. Yet he was a vehement defender of quite a few of the more radical planks of Liberalism. Both in parliament and around the country he spoke on behalf of the Newcastle programme of October 1891, adopted by the National Liberal Federation, favouring a somewhat miscellaneous platform: home rule, disestablishment in Wales and Scotland, local veto, abolition of plural franchises, triennial parliaments, taxation of land values, abolition of entail, extension of small-holdings, the building of rural cottages, district and parish councils, and employers' liability. Parliament was dissolved in June 1892 and the Liberals won the election with a modest majority of forty. In Gladstone's last government Harcourt was again chancellor of the exchequer.

Considering Gladstone's age—he was now in his eighties—Harcourt's responsibilities in the House of Commons were considerable. The other most important members of the government were Lord Rosebery, who had joined the government reluctantly as foreign secretary, and John Morley as chief secretary for Ireland. All three men were highly ambitious, in their different ways, and extremely sensitive. It was apparent to most that Gladstone was unlikely to continue as prime minister very much longer. One of the favourite British pastimes is a leadership intrigue, and the stage was set for one of particular intensity. In theory Harcourt was in the best position to inherit the mantle, but despite the recognition of his skills his personal unpopularity and overbearing manner meant that the issue would be especially complicated. John Morley was likely to be the pivotal figure. Of the three he had the least claim for the position himself, but it would make a considerable difference where he gave his support. In terms of politics Harcourt was his natural ally, but it was far from clear that Morley would actually back him. In temperament they were very different and they disagreed on domestic policy, Morley being a far more fervent believer in home rule than Harcourt. He also supported women's suffrage and opposed an eight-hour working day; Harcourt took the opposite position on these issues. On the other hand they largely agreed on foreign policy, and shared a dislike for Rosebery's far more imperial policies.

The struggle for the Liberal leadership In the meantime ordinary politics continued with Harcourt playing a major role, presenting his budget on 24 April 1893, which raised the income tax a penny—from 6*d*. to 7*d*. A Home Rule Bill passed the House of Commons but was defeated overwhelmingly in the House of Lords in September 1893. Harcourt joined the general Liberal denunciation of the House of Lords for its destruction of legislation enacted by the popularly elected house. But undoubtedly the greatest drama of this second session was Gladstone's decision to resign, and the conflicting emotions that it aroused in his followers. They were losing the long-time leader of the party who had so much greater stature than any of his possible successors. But they were unwilling to take his advice that they should dissolve and leave office. Gladstone resigned in March 1894 because of his opposition to increased estimates for the navy, but the public reason given was the state of his eyes. The queen did not ask his recommendation for his successor. In the struggle for the succession Harcourt's abrasiveness was partially balanced by the suavity of his son, Lewis, known as Loulou, who worked tirelessly on his behalf. Harcourt had a claim upon the post by the right of position and succession. But Rosebery was a more popular figure and seemed to be a 'natural' prime minister, likely to be favoured by the queen. A significant number of the members of the cabinet were more sympathetic to Harcourt's political ideas than to Rosebery's. So the uphill task for Harcourt and his son was to persuade them to decline to serve under Rosebery, likely to be the first Liberal leader the queen would ask to form a government. It was probably true that Harcourt's views were nearer to those of the majority of the Liberal Party. Gladstone's last cabinet was on 1 March (at which Harcourt embarrassed his colleagues by reading out a lengthy encomium which Gladstone had in fact already seen); two days later Rosebery accepted the queen's invitation to attempt to form a cabinet. There had been talk of Harcourt's refusing to serve under him, but when it came to the point he remained as chancellor of the exchequer. It was a bitter blow to be denied the greatest position in the state; on the other hand with Rosebery, the prime minister, in the House of Lords, and in any case inevitably lacking Gladstone's authority, Harcourt had an even more

powerful role to play. The next sixteen months of the Liberal government were the most important period in Harcourt's life.

Harcourt and the death duties The outstanding accomplishment in the time remaining to the Liberal government was Harcourt's: his budget of 16 April 1894 contained the introduction of death duties (the idea was the brainchild of Sir Alfred Milner, chairman of the Board of Inland Revenue). They and other measures in the budget were designed to pay for the increased naval estimates that had played such a large part in precipitating Gladstone's resignation: the estimated deficit was £4.5 million. The sum to be collected was not necessarily greater than the total of the various previous miscellaneous taxes already in existence. But a new principle was introduced—expanded greatly in the years to come—of a single estate duty that could be charged on all property, real and personal. While estates had paid inheritance taxes before, the new death duties were easily expandable, unlike the old fees, and introduced a novel, potentially confiscatory, attitude towards inheritance. It also meant that the state took capital and spent it as income. The proposal was very controversial, and it and other provisions of the budget were debated over three months, during which Harcourt was at his most talented in guiding the debate and belied his reputation for abrasiveness. The budget's passing, on 17 July 1894, was the greatest triumph of his career. In cabinet he was less conciliatory and battled continually with Rosebery over questions of foreign policy. They fought too over the budget, Rosebery being concerned over the loss of the support of the propertied classes. Harcourt almost welcomed such a development. On 8 April he introduced his Local Liquor Control Bill, which passed its first reading but was eventually lost. The government staggered on with difficulty, devoting a fair amount of effort to the pursuit of Welsh disestablishment, as a result of which Gladstone threatened to come out of retirement in order to oppose the issue. Harcourt's fourth and last budget was introduced on 2 May 1895 and passed with little difficulty on 10 May. It was not surprising that the cabinet almost welcomed a chance defeat on 21 June 1895 over a military issue and used it as a reason to resign.

In opposition In the general election campaign of June–July 1895 each leader went much his own way: Rosebery attacking the House of Lords, Morley emphasizing home rule, and Harcourt concentrating on local option as the best means of liquor control. The Liberals were badly defeated, the tories and the Liberal Unionists having a majority of 152. Harcourt himself lost his seat at Derby, particularly harmed by the beer interests. In this case he might have done better to follow his leader and concentrate on the House of Lords which could serve, as Gladstone envisioned when he made it the subject of his last speech in the House of Commons, as an umbrella issue covering the failures of the tories to follow the wishes of the electorate. Harcourt felt, however, that bad trade in Derby was the cause of his losing his seat. He then stood for West Monmouth in Wales and was elected there. The shock of defeat was not sufficient to unite the leadership. Indeed, there was a semi-official separation between Rosebery and Harcourt. Rosebery was titular head of the party, Harcourt the leader in the House of Commons, but they declined to meet each other. They both continued to be active political figures, Harcourt being particularly effective in the House of Commons where, despite their great majority, he forced the tories to abandon their Education Bill. In October 1896 Rosebery resigned his position as leader of the party, using as his excuse his disagreement with Gladstone who, in his last public speech, had called for action on behalf of the Armenians against the Turks, a stand which Harcourt supported.

Rosebery's resignation strengthened Harcourt as the most important Liberal leader, but he received comparatively little support from his colleagues or from the party itself. For the next three years he played a central role inside and, to a lesser degree, outside parliament, though Rosebery was ever present as a potential threat to his position. There was no action by the party to appoint a new leader. Harcourt differentiated himself from Rosebery in his continued support of home rule and on imperial issues. He opposed British advances in the Sudan and moved for a committee of inquiry into the Jameson raid of 1895. He became a member of the committee which was appointed in July 1896 and signed the report in July 1897 blaming Cecil Rhodes, but some felt that the committee, consisting of members of both parties, had chosen to cover up the role that Joseph Chamberlain, the colonial secretary, had played in the event. Chamberlain himself undercut the significance of the report by declaring in the discussion of it in the House of Commons that Rhodes had done nothing contrary to personal honour. Indeed, Harcourt's rather inept handling of the Jameson matter, and particularly his unwillingness to pursue the question of Chamberlain's role, weakened him as party leader. In 1898 he showed signs of his old combativeness, throwing himself into a battle against ritualism in the Church of England, writing a long series of letters to *The Times* on the subject, collected in book form as *The Crisis in the Church*. Although he appeared in public less and less, it was nevertheless a considerable surprise when he resigned his position as leader in the House of Commons on 8 December 1898. His action may have been caused by some Liberal organizations showing signs of restlessness and lack of support. His son became engaged in November 1898 to a wealthy American, much to his father's delight, but without Loulou constantly at hand the impetus to remain in power might have noticeably slackened. In his private letters to colleagues he blamed Rosebery's refusal to work with him as the real cause for his resignation. He now regarded the party as hopelessly split on all major questions, particularly in the area of foreign policy and imperialism but on domestic issues as well: home rule, temperance, disestablishment, eight hours legislation, old-age pensions. On questions of imperialism, intensified by the Fashoda incident in 1898, Rosebery had the following of the bright young men in the party, sympathetic to a more aggressive stance than Harcourt was willing to take. On 6

February 1899 the Liberal members of the House of Commons elected Sir Henry Campbell-Bannerman as their leader at a meeting at the Reform Club.

Final years, death, and reputation Harcourt continued to be a prominent member of his party, though no longer on the front bench. He wished to keep to the fore the traditional domestic concerns of Liberalism, particularly as they were likely to become submerged as politics became increasingly dominated by the Second South African War. He attacked the war because of its expense, but also as a further example of the mistakes of imperialism. As some tories and their allies, most notably Chamberlain, became interested in eroding the policy of free trade, Harcourt was strong in its defence, particularly attacking Michael Hicks Beach's budget proposal in 1902 to impose a tax on imported corn. That spring Edward VII offered to make him a viscount in the coronation honours, but Harcourt declined on the ground that he was unwilling to leave the House of Commons, where he had served for thirty-four years.

Harcourt's health was becoming weaker, and in February 1904 he announced his decision not to stand for office at the next general election. In March he had a happy sense of continuity in that his son became a member of the House of Commons. Indeed, the last months of his life were dominated by family. His elder brother Edward had died in 1891. Edward's only son, Aubrey, died unmarried in March 1904 and the family estates, Nuneham Park and Stanton Harcourt (including Pope's Tower, where the poet had translated part of the *Iliad*), reverted to Harcourt, but in an impoverished state. In the discussion of death duties ten years before Rosebery had urged Harcourt to make allowances for deaths comparatively close to one another but Harcourt had declined, his decision emblematic of his willingness to go against his class interests. His own death a few months later made his family pay a high price for this determination. He still found time to attend the House of Commons and cross swords with Chamberlain over the issue of protection. His last important speech was on 17 May 1904, in which he attacked the burden of taxes, particularly those caused by war, and principally upon those less able to pay. He was now living mainly at his beloved Malwood in the New Forest, which he had no desire to leave, and less frequently at Nuneham; and it was at the latter house that he died unexpectedly on 1 October 1904, survived by his wife. He was buried in the family vault in the church in the grounds of Nuneham Park.

Harcourt was one of the more important politicians of the nineteenth century and came close to the highest office in the land. It might have been his if he had been more tactful; his allegiance to Liberalism's older ideas may also have harmed him. He shared in many worlds, having a distinguished birth, allied with the aristocracy and the church. Yet he was hard to label, moving leftwards from his political heritage, becoming something of a radical without a radical background. He became a member of the professional classes, and his training as a lawyer stood him in good stead in the House of Commons, where he revelled and was highly successful in the cut and thrust of debate. But while he could argue a case with great effect, he did not quite have the moral stature that convinced others that particular beliefs were the essence of his being.

Wealth at death £190,264 19*s.* 3*d.*: resworn probate, 4 Nov 1904, *CGPLA Eng. & Wales*

Harcourt, William Venables Vernon (1789–1871), founder of the British Association for the Advancement of Science, was born on 1 June 1789 at Sudbury, Derbyshire, the fourth son in a family of eleven boys and five girls of Edward Vernon *Harcourt (1757–1847), and his wife, Anne, third daughter of Granville Leveson-*Gower, first marquess of Stafford. His father was bishop of Carlisle (1791–1807) and archbishop of York (1807–47). Harcourt was adopted as the family surname in 1831 after Archbishop Vernon inherited the Harcourt estates at the death of the third and last earl, William *Harcourt (1743–1830). William Venables Vernon thus became William Venables Vernon Harcourt. Educated at home by his father, he imbibed a taste for chemistry from Isaac Milner, dean of Carlisle. From 1801 to 1806 he served in the navy. Intent on

William Venables Vernon Harcourt (1789–1871), by John & Charles Watkins, in or before 1866

a clerical career, in 1807 he went to Christ Church, Oxford, where he graduated in classics in 1811 and was befriended by Cyril Jackson, the dean.

At Oxford Vernon developed an interest in geology, attending Buckland's lectures and making the acquaintance of the Conybeare brothers, John Josias and William Daniel; his commitment to chemistry was strengthened by attending the lectures of John Kidd. After leaving Oxford he received private instruction from two celebrated chemists, William Wollaston and Humphry Davy. In 1814 his ordination launched him on a comfortable clerical career as the incumbent of three livings near York, at Bishopthorpe (1814–24 and 1835–8), Wheldrake (1824–34), and Bolton Percy (1838–61), all presented to him by his father, who was by then archbishop of York. In 1824 he was appointed canon residentiary of York Minster where he was active in ecclesiastical politics until he resigned in 1863. After the minster fire in 1829 Vernon took a leading part in the choir screen squabble which raged for two years. From the late twenties and especially after the minster fire of 1840, he abominated the unbusinesslike nonchalance of William Cockburn, the dean, whose adherence to scriptural geology he despised. As the leading critic of Cockburn in the York chapter, he not only persuaded his father to take the extraordinary step of holding a visitatorial court in 1841 to investigate Cockburn's behaviour but also gave evidence against the dean. Cockburn was deprived of office, a verdict quickly quashed by the court of queen's bench. As the senior canon Harcourt published a reformist hymn-book, *Symmetrical Psalmody*, and concerned himself with diocesan training schools.

In 1824 Vernon met and quickly married Matilda Mary Gooch (1804–1876), fifteen years his junior. They had five daughters and two sons, Edward William Vernon Harcourt (1825–1891) and William George Granville Venables Vernon ˚Harcourt (1827–1904). Happy in his marriage and favoured with extensive and powerful family connections, Vernon interested himself in local philanthropic and scientific affairs. He laboured and lobbied hard on behalf of the Yorkshire School for the Blind, the Yorkshire County Hospital, the York Sanitary Committee, the Castle Howard Reformatory, and St Peter's School, York.

Vernon was above all a masterly developer and consolidator of organizational initiatives or suggestions made by others. In 1822 three York worthies formed a philosophical society to run a museum in the city on the basis of their collections of fossil bones from the famous cave at Kirkdale in north-east Yorkshire. Vernon transformed their plan into one for a county philosophical society which would tap local opportunity and pride by concerning itself primarily with Yorkshire geology and York antiquities. As first president of the Yorkshire Philosophical Society (1823–31), he nursed and promoted it, engaging the young John Phillips (1800–1874) as keeper in 1826 and providing for it, in the grounds of St Mary's Abbey, a Yorkshire Museum (designed by William Wilkins and opened in 1830).

When David Brewster suggested early in 1831 that a meeting of British men of science be held at York later that year, Harcourt remained in the shadow of Phillips, his lieutenant, until late summer when he sketched his ideas to various confidants about a British Association for the Advancement of Science which would give systematic direction to research, and lobby government effectively. At its first meeting, held in York in September 1831, Harcourt produced a title for the new body, proposed for it aims and a constitution which were broadly accepted, and suggested enduring mechanisms such as reports on the state of science. As the general secretary of the association from 1832 to 1837, Harcourt managed it with consummate skill. Typically he helped it in an emergency by assuming its presidency at the meeting held in Birmingham in 1839. In his address he characteristically claimed for science freedom of enquiry, but at the same time rashly pressed the claims of Henry Cavendish against those of James Watt as the discoverer of the composition of water.

Harcourt, who was elected FRS in 1824, deprecated his own scientific work, referring to himself as only a humble worshipper in the porch of the temple of science. Yet in the 1820s he was a practising and respected field geologist and in the 1840s taken seriously as a scientist by the great German chemist Liebig. His main distinction, however, lay in his launching and managing two new scientific organizations, the Yorkshire Philosophical Society and the British Association, the former becoming the mother

of the latter through his efforts. As an organizer and administrator he was distinguished by a fine command of English, an intellectual vision developed in part by his reading of Francis Bacon, a tenacious dedication to the task in hand, and, in his public behaviour, by a persuasive combination of dignity, gentleness, and firmness. In 1861, on the death of his elder brother, George Granville Harcourt, he succeeded to the Harcourt estates in Oxfordshire where he continued the experiments with furnaces he had conducted for forty years. Though most of the results were inconclusive, he studied the effect of long-continued heat on minerals and, encouraged from 1862 by G. G. Stokes, the preparation and optical properties of glasses of a great variety of chemical composition. He died of bronchitis on 1 April 1871 at Nuneham Park, near Abingdon, and was buried on 6 April at Nuncham Courtenay.

Wealth at death under £30,000: probate, 12 May 1871, *CGPLA Eng. & Wales*

Hardcastle, Ephraim. *See* Pyne, William Henry (1770–1843).

Hardcastle, Frances (1866–1941), mathematician, was born at Writtle, Essex, on 13 August 1866, the eldest of eight children of Henry Hardcastle (1840–1922), graduate of Trinity College, Cambridge, a barrister, and director of a brewery. Her mother was Maria Sophia Herschel (1839–1929), seventh child (fourth daughter) of Sir John Frederick William Herschel, so Frances was a great-grandchild of Sir William Herschel, inheriting a notable astronomical tradition. Two of her brothers also graduated from Trinity College; the elder, Joseph Alfred (1868–1917), later became an astronomer.

Frances Hardcastle was educated privately before entering Girton College, Cambridge, in 1888; her aunt Constance Anne Herschel (1855–1939) had previously been resident lecturer in natural sciences and mathematics there. In 1891 Frances Hardcastle passed second class in the mathematical tripos part one examinations, and went on in 1892, somewhat unusually, to sit the tripos part two, in which she gained class 2 (3). Cambridge did not then permit women to graduate but Bryn Mawr College, Pennsylvania, USA, accepted her as a graduate student, and she worked under Professor C. A. Scott, also a Girtonian. She was appointed an honorary fellow in mathematics at Chicago University for 1893/4 and held a fellowship in mathematics at Bryn Mawr during the academic year 1894/5. Her sole publication while in the United States was a translation from the German of Felix Klein's 1881 lectures on algebraic functions. However, it was probably during this time that she began her research into point groups—nowadays called 'divisors' and much studied in algebraic geometry.

Hardcastle returned to Britain in 1895 to become a graduate student at Girton. There her research matured and in papers in the *Proceedings of the London Mathematical Society* (1897–8) and the *Bulletin of the American Mathematical Society* (1898) she set out an extension of the theory of point groups which was said to display great insight. She further synthesized the topic by four articles on the theory of point groups in the *Reports of the British Association* for the years 1900 and 1902–4, which included a historical survey. She deviated only once from single-minded pursuit of this subject—appropriately, to assist Arthur Berry with the publication in 1898 of his *Short History of Astronomy* by verifying the calculations, proof-reading, and drawing many diagrams.

It seems that an accident, possibly in conjunction with ill health, caused Hardcastle to leave Cambridge in 1904 and abandon her mathematical research. She was able to live in adequate comfort on money settled on her by her father, increased later by inheritance. She and her sister Mira Francisca were named joint executors of her father's will, despite the availability of several brothers. She lived in London for a period, and worked for a year as a joint secretary, with Frances Sterling, for the National Union of Women's Suffrage Societies (the suffragist organization), before moving to Newcastle where she served as secretary of the North-Eastern Federation of Women's Suffrage Societies. She spent her eventual retirement beside the Northumberland moors at Stocksfield, in a house she had built with Dr Ethel Williams, a former Newcastle GP. She died on 26 December 1941 while visiting Cambridge, and was buried in Girton churchyard.

Wealth at death £4400: probate, 16 May 1942, *CGPLA Eng. & Wales*

Hardcastle, Thomas (*bap.* 1637, *d.* 1678), clergyman and ejected minister, was born at Barwick in Elmet, the son of John Hardcastle (*d. c.*1643), yeoman, and was baptized there on 24 February 1637. After attending nearby Sherburn School, Hardcastle matriculated at St John's College, Cambridge, in 1652 and graduated BA in 1656. He married Anne Gerard, daughter of the Cromwellian army officer

and protectorate governor of Chester Castle, Colonel Gilbert Gerard of Crewood, Cheshire. They had two children, Prisona, alias Mary, and Joshua (*b.* 1678).

Hardcastle became vicar of Bramham, near Leeds, and was ejected under the 1662 Act of Uniformity. He shared the convictions of those ejected that the faith and order of the Church of England should not be subordinate to state control but to scripture; that the historic episcopate was not an essential mark of the visible church nor necessary for its effective ministry; and that the orderly public worship of God was not exclusively contained within the liturgy of a particular book. After 1662 he was employed by:

> Lady Barwick, of Toulsten in Yorkshire, to whom I had the happiness to be chaplain for several years, and must own myself to be much obliged; and no less to the right honourable the Lord Henry Fairfax, her son-in-law, and my constant and my faithful friend in my sufferings for Christ. (Palmer, 3.426–7)

(Henry Fairfax, the cousin and heir of Lord Fairfax, the civil war general, was regarded as a leading patron of the godly in Yorkshire.)

Between 1666 and 1670 Hardcastle was frequently imprisoned for his nonconformity in Leeds, Chester, Wakefield, York, and London. During 1669–70 he moved to London, where he became a member of Henry Jessey's congregation, the Swan Alley Baptist Church. In 1670, while imprisoned in London under the Conventicle Act, he was invited to consider becoming pastor at Swan Alley, and at the same time he was approached by Broadmead Baptist Church, Bristol. An account of what followed may be found from Broadmead's records, supplemented by *The Records of the Church of Christ* (1847), edited by E. B. Underhill, which contains a transcript of additional correspondence between Broadmead, Swan Alley, Edward Terrill, Vavasor Powell, and Hardcastle. When Terrill, the Broadmead elder, contacted Powell about his brother-in-law's becoming their new pastor, he was told Hardcastle was a member at Swan Alley, though presently in prison, and '*upon trial* to be their pastor' (Underhill, 108). Nevertheless, Broadmead invited him to be their pastor, despite Hardcastle's indicating that Swan Alley were 'altogether unwilling to hearken to it, or to part with their interest in me' (ibid., 111). At first Hardcastle hoped this would end the discussions, but it did not. Eventually Swan Alley asked him to visit Bristol during May 1671 to explain the situation; before he returned to London the Broadmead congregation had confirmed their invitation. His visit to Bristol completely changed Hardcastle's perception and he returned to London hoping the call to Bristol could be agreed amicably. Hardcastle wrote to Terrill, 'how little inclination I found in myself to come to Bristol, till I saw you and understood your call', but now convinced that his future lay with Broadmead, he continued 'that so far as I see at present, my call is to Bristol ... I intend to desire my dismission shortly, and if I cannot have it, I must take it' (ibid., 141, 144f.). Swan Alley wrote deprecating that Broadmead had felt 'constrained to take him by force' (ibid., 154), but Hardcastle went to Bristol on 28 July 1671, and after three years on trial was appointed pastor on 19 May 1674; his wife became a member on 12 November 1676. At that time some London Baptist ministers, who were engaged in settling a dispute in Wiltshire, were asked to ordain Hardcastle, but declined. As late as May 1678 three Swan Alley members came and tried to claim Hardcastle as their pastor.

On 5 September 1672 Broadmead secured a licence for Hardcastle to preach lawfully in their licensed Bristol meeting-house. Between October 1671 and October 1672 Hardcastle gave 'Thirty-five catechetical lectures addressed to the young', based on the Westminster catechism. These detailed expositions (which survive in manuscript in the Bristol Baptist College Library) of the Christian faith illustrate Hardcastle's ability to provide a good foundation for the congregation in the years of persecution which followed. In 1674 he published a set of sermons which he had preached, aptly titled for a congregation in the second port of the kingdom, *Christian geography and arithmetick, or, A true survey of the world: together with the right art of numbring our dayes therein*. When the licences to preach were made void by the government in February 1675 Hardcastle was immediately arrested, sent to London for trial on 15 May, and returned to Bristol on 4 June before being released on 2 August 1675. He preached at Broadmead the Sunday following his release, was rearrested under the Five Mile Act, and was imprisoned for a further six months in Newgate, Bristol.

Hardcastle issued from prison between August 1675 and February 1676 a remarkable series of twenty-two letters which were read to the church as it worshipped each week. He discusses the meaning of 'true faith' in a time of persecution and affirmed persecution by the authorities was 'a season of grace' in which:

> Ministers ... must meet with the waters of affliction and stand in them and see to the safety of the whole, with hazard to themselves, ... and ... when God calls for it, take up the cross of imprisonment when it directly lies in our way. (Underhill, 259, 265)

Christian faith in times of persecution would deepen patience, purify the heart, be a shield in danger, and bring deep and lasting joy. Christians must heed the warnings which God's judgments provide and develop an appropriate lifestyle. Hardcastle was not a controversialist and constantly sought to reconcile differences, as evidenced by his patient handling of his call to be minister at Broadmead and his broad view of believers' baptism. He believed that 'dipping or plunging into water' was 'the right sense of the word baptize, it sutes with the ends and uses of Baptisme that is to signify our being buried with Christ' (Hayden, 52). However, he was not for its imposition upon everyone, being an open-communion Baptist who refused to make believers' baptism a requirement for attendance at the Lord's supper.

Writing of Hardcastle's unexpected death at 3 a.m. on Sunday 29 September 1678, after his return from an arduous journey to Chester, Terrill calls him 'a Champion for the Lord, very courageous in his work and sufferings ... [whose] zeal provoked many' (Hayden, 203). Hardcastle

was buried in St James's, Bristol, on 30 September 1678 and Terrill noted:

> Att the funeral of said Br. Hardcastle wee gave no Wyne, but some bread to the poore. Gloves and Hatt-bands to the 6 ministers that went by the Hearse; yet it amounted well towards thirty pounds, all charge paid, with putting his widdow and children in Mourning Apparel, and putting a Tombstone over his Grave. All which Cost the Church was att. (ibid., 205)

Thirty-eight Broadmead church members collected £150 for Hardcastle's widow and children, which was given to her on 12 November 1678. ROGER HAYDEN

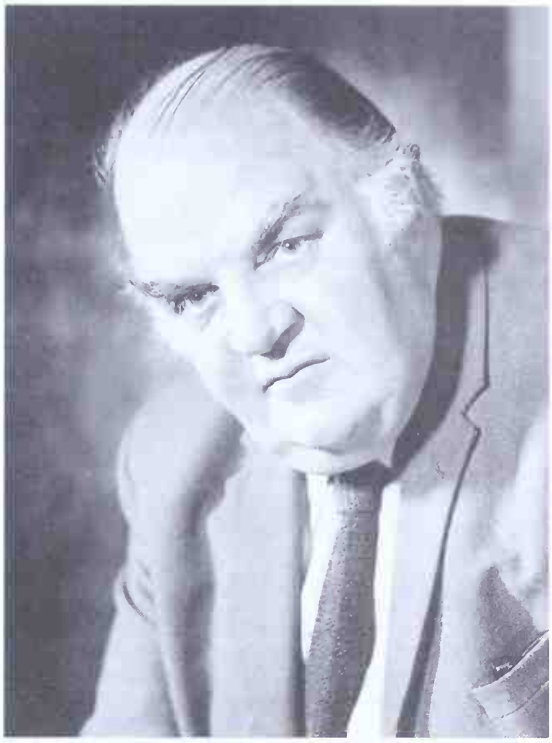
Wealth at death church paid for burial and tombstone in St James's, Bristol: Broadmead Baptist Church, Bristol, record book, 1640–1784



William Hardcastle (1918–1975), by Godfrey Argent, 1970

Hardcastle, William [Bill] (1918–1975), journalist and radio broadcaster, was born on 26 March 1918 at 5 Sydenham Terrace, Newcastle upon Tyne, last of the four children of William Hardcastle (1873–1924), medical officer at Newcastle prison, and his wife, Mary Constance Wardroper (1883–1967). William (Bill) Hardcastle's education at Durham School was cut short when, aged sixteen, he contracted osteomyelitis, and was in and out of hospital for the next four years. Nevertheless he read voraciously in the intervals between repeated painful operations which left his arms and legs deeply scarred. Though he had to abandon long-standing plans to become the fourth successive Hardcastle in the medical profession, he was able, in 1938, to start work with a Newcastle house agent. He hated the job and soon left to become a cub reporter on the *South Shields Gazette* and later the *North Shields Evening News*. His three years on Tyneside during the depression of the late thirties were to leave a lasting mark.

Unfit for military service in the Second World War, Hardcastle moved to Yorkshire to become a sub-editor on the *Sheffield Telegraph* and then on to London to work briefly for Kemsley Newspapers. In 1943 he joined Reuters news agency on the editorial desk and early in 1945, after a brief spell at SHAEF (Supreme Headquarters, Allied Expeditionary Force), was sent to New York and later to Washington as Reuters junior correspondent. His first big break was a casually distributed White House handout on what had seemed a slow day for news, with President Truman on the way home from the Potsdam conference. Dull the handout was not: in a state of shock he rushed to the phone to dictate his copy to London: 'The first atomic bomb, most powerful bomb in the world, was dropped sixteen hours ago on Hiroshima' (Hardcastle, 'Time of my life').

Long afterwards, Hardcastle remembered those early post-war years in the USA as 'a newspaperman's dream', and indeed it was the ideal place for an ambitious young journalist to learn his trade. He was in his element, making many friends and greatly enjoying the whole lively Washington scene with his wife and young family. He had in 1945 married the widow of a Royal Air Force pilot, Constance May Turton, *née* Ashmore (1923–1987); they had four children. The marriage was dissolved in 1960.

Hardcastle's eight years in America were briefly interrupted when, in May 1949, Reuters made him their chief of bureau in Rome—a promotion; yet after only three months in the job he resigned. Early in 1950 he was again in Washington, this time correspondent for the *Daily Mail*. In December 1952 he returned to London to become news editor and later deputy editor on the *Daily Mail*. By then Hardcastle had become every inch the tough, American-style newsman—shirt-sleeved, cigarette-smoking, hard-drinking, insatiable in the pursuit of news. So successful did he prove that in October 1959 the proprietor of Associated Newspapers, the second Lord Rothermere, appointed him as editor of the *Sunday Dispatch*, and his revitalization of that ailing journal prompted Rothermere after only two months to sack Arthur Wareham, the 'quiet man' who had edited the *Daily Mail* for eight years, and install Hardcastle in his place.

Circulation had been falling, the paper needed a face-

lift, and this tough newsman seemed the man for the job. Yet, although he tried to widen the appeal of a dyed-in-the-wool Conservative journal by bringing in writers with a wider, more radical outlook and recruiting lively columnists and gossip writers, readers gradually fell away despite over a million inherited from the *News Chronicle* when it was taken over by the *Mail* in October 1960.

In fact, Hardcastle was not entirely at home in the editorial chair: for one of his temperament it provided too little action and too much administration, which he did not enjoy and for which he proved unsuited. One of his columnists, Alan Brien, recalled how his in-tray piled up with urgent decisions he seemed unable to face, and how he gradually sank into a deep depression when 'nothing seemed of any importance'. After three years Rothermere too had had enough: Hardcastle was dispatched on a fact-finding trip to the USA early in 1963, only to find himself out of a job on his return.

Without salaried employment for the first time in his working life, Hardcastle launched into freelancing for radio and television; and when, in 1965, the BBC planned an innovatory lunchtime radio news programme, *The World at One*, its editor, Andrew Boyle, chose Hardcastle as presenter. So began a second career which was not only to make his a household name in radio journalism but to give the 'wireless', as he liked to call it, a much-needed shot in the arm at a time when television seemed to be taking over.

Boyle and Hardcastle between them injected a new immediacy into the BBC's carefully correct current affairs output. Not only was the latter's urgent, breathless presentation—so alien to the hitherto customary staid and measured delivery—a somewhat startling innovation, but *The World at One* itself set out to be provocative. Stimulating new commentators were brought in; hot news was relentlessly pursued wherever it might be happening; and, basically serious though the programme remained, it took a not always reverent look at the passing scene.

Hardcastle quickly adapted to the new medium, bringing with him as presenter and interviewer an encyclopaedic knowledge of home and foreign affairs from his years in print journalism, as well as an instinctive ability to know what questions to ask, whether interviewing some quaking newcomer to the microphone or an evasive politician. With the latter his questioning was relentlessly persistent; but seldom rude and abrasive.

For Hardcastle the great attraction of radio was the speed, immediacy, and flexibility with which it could tackle the news: planned items or even a whole programme could be abandoned if some important story broke at the last moment. No wonder, then, that for him *The World at One* marked 'a real adventure in journalism', and its later Sunday edition, *The World this Weekend*, 'a further stride down the same exciting road'.

'It was journalism of the highest order,' wrote Asa Briggs, author of the official history of British broadcasting, but he continued: 'none the less, the programme did not escape criticism from politicians, including the Prime Minister' (Briggs, 578). The prime minister in question, Harold Wilson, had complained to the BBC's governors, who, while agreeing that 'occasional lapses of judgment' were unacceptable, added that they were 'loath to sacrifice the real achievements of these programmes in the field of popular news presentation' (ibid.). Yet Wilson and his Conservative successor, Edward Heath, were always ready to face yet another of Hardcastle's tough, searching grillings: according to Heath, 'an interview with him was always an important matter' (*Daily Mail*, 11 Nov 1975).

As Hardcastle wrote in *The Listener* shortly before his death, 'it would be wrong to assume that we were greatly loved. We were brash and cheeky and unappreciative of the many excellences of the BBC' (Hardcastle, 'Ten years'). For their part too, top people in the BBC hierarchy were themselves sometimes unappreciative of these often provocative programmes: indeed, when in 1974 Hardcastle's appearances as presenter were cut from four to three days a week, there were those who believed that the BBC management had yielded to political pressure on the grounds of his alleged left-wing bias, though he was always careful not to let his personal opinions obtrude.

Yet audiences for *The World at One*, *The World this Weekend*, and the afternoon edition, *P.M. Reports*, multiplied, and within a decade similar programmes had become a commonplace in both radio and television.

Hardcastle was a large, untidy person, never happier than when working under pressure in shirt-sleeves in a kind of creative chaos. He was stimulating though not always easy to work with: his professionalism made him impatient with those who did not match his high standards, though his often searing strictures were tempered by an unfailing sense of humour and ready support for inexperienced young journalists.

Always a workaholic, he drove himself too hard, with weekly columns in *Punch* and *The Listener* and other journalism, as well as the relentless pressure of twice-daily radio programmes. He paid the price: on a Friday evening after a heavy day at the BBC and on the eve of a fortnight's holiday, he had a massive stroke and died three days later, on 10 November 1975, in Epsom Hospital. He was buried at St Mary's churchyard at Headley in Surrey, across the fields from Webb's Farm Cottage, which had been his home for the past fifteen years. ELEANOR RANSOME

Wealth at death £77,687: administration, 11 May 1976, *CGPLA Eng. & Wales*

Hardeby, Geoffrey (*c.*1320–*c.*1385), Augustinian friar and theologian, was born in Harby, Leicestershire, and entered the order at the friary in Leicester. There he studied philosophy and theology, and was then assigned to the *studium generale* in Oxford, where he attained the degree of doctor in theology. He probably lectured on the *Sentences* of Peter Lombard in 1353–4 and incepted as master of theology in 1357. From 1357 to 1359 he acted as regent master in the university, and therefore as head of the Augustinian studium in Oxford, and by 23 September 1359 he was *sacre pagine professor*. In this capacity he became closely involved in the mendicant debates provoked by Richard Fitzralph (*d.* 1360), challenged the latter's views on dominion, and prepared the first version of his major surviving work, a defence of the mendicant orders known as the *Liber de vita evangelica* (Bodl. Oxf., MS Digby 113), which, however, he did not publish until 1385.

Hardeby received a papal dispensation from the canonical consequences of his illegitimate birth, in order to allow him to assume all offices in his order except that of prior provincial. It was presumably granted so that he could represent the English province as diffinitor at the Augustinian general chapter that opened at Padua on 28 August 1359. He collected information from a 'certain doctor' in Italy which he used in his defence of his order shortly afterwards. When the juridical status of the Friars Hermit of St Augustine was challenged at Oxford in 1360—possibly by the Benedictine Uthred Boldon (*d.* 1396)—Hardeby defended their position in several *quaestiones*, intended to prove that Augustine had lived as a hermit. He subsequently incorporated these into the *Liber de vita evangelica*.

On 15 May 1360 Hardeby received a further papal dispensation, clearing the way for his election as provincial of the English Augustinians, and he held the office from 1360–61 until 1366. On 23 March 1363 Hardeby once again petitioned the pope, and received permission to accept any dignity in his order short of that of prior-general. His term as provincial coincided with a period of expansion of the English province, thereby supporting the tradition that he was influential at the court of Edward III. In 1369 he again held the office of provincial, but had relinquished this by January 1372. Hardeby was granted on 8 April 1377 an annual pension of 50 marks for life; this was cut by half two years later, on 13 March 1379.

Earlier sources often refer to Hardeby as having been counsellor to Edward III. According to the fifteenth-century chronicler John Capgrave, Hardeby was 'Confessoure to the Prince', a statement which has been usually interpreted as meaning the future king, Richard II, who became prince of Wales on 20 November 1376, but is more likely to mean the latter's father, Edward, the Black Prince (*d.* 8 June 1376). On two separate occasions, after 12 September 1375 and by 2 July 1376, he was proposed for the bishopric of Bangor in Wales. He revised the *Liber de vita evangelica* in the light of Wyclif's denunciation of all religious orders in 1381.

Apart from the *Liber de vita evangelica*, and his inaugural sermon preached in the church of St Mary the Virgin in Oxford, probably on 27 November 1356, few of Hardeby's writings have survived. The sermon shows Hardeby's interest in the scientific investigations current in fourteenth-century Oxford. Some *quaestiones* from his commentary on the *Sentences* have recently been discovered in a manuscript in Palermo (Biblioteca Comunale, MS 2. Qq. D. 142), and his *quaestiones quodlibeta* are known to have circulated at least in England. From contemporary reactions to his theological writings among the Dominicans in Prague, and following these some fifteenth-century German theologians, it is clear that in his commentary on the *Sentences* Hardeby adopted a critical stance with regard to indulgences. The exact date of his death is unknown, but it is likely to have been about 1385.

Harden, Sir Arthur (1865–1940), chemist, was born in Manchester on 12 October 1865, the third of the nine children of Albert Tyas Harden, a Manchester manufacturer, and his wife, Eliza, daughter of John MacAlister, of Paisley. He was educated at Victoria Park School, Manchester, and later at Tettenhall College, Staffordshire. When he was sixteen years old he entered Owens College, Manchester, and studied chemistry under H. E. Roscoe. He graduated with first-class honours in chemistry in 1885 and embarked on an investigation of the action of silicon tetrachloride on aromatic amide-compounds under the guidance of Julius Berend Cohen. The results of this research were published by the Chemical Society and on its merits he was awarded the Dalton scholarship by the

University of Manchester in 1886. The next two years were spent in Germany at the University of Erlangen where, under Otto Fischer, he prepared a nitrosonaphthylamine and investigated its properties. For his thesis on this subject he was awarded a PhD there.

In 1888 Harden was appointed a lecturer in chemistry at the University of Manchester. He took his responsibilities very seriously and for the next few years was preoccupied with teaching. He published a few papers on chemical topics and in 1896, with Roscoe, an interesting piece of historical research on the genesis of the atomic theory of John Dalton. From the study of Dalton's notebooks they concluded that it was his observations on the diffusion of gases which led him to formulate his atomic theory.

In 1897 Harden became chemist to the British Institute of Preventive Medicine (later known as the Jenner Institute) in London. He became head of the new department of biochemistry in 1907 and held this position until his retirement in 1930. In 1900 he married Georgina Sydney (*d.* 1928), elder daughter of Cyprian Wynard Bridge, of Christchurch, New Zealand; they had no children.

In 1912 Harden was appointed professor of biochemistry at the University of London. His first venture in biochemistry was to investigate the fermentation of sugar by various bacteria. The observations were necessarily limited to a quantitative study of the products, and what happened in the intermediate stages could be only imperfectly deduced from their nature and amounts. This research laid some of the foundations of bacterial chemistry. Shortly after Harden began work on bacterial metabolism, the German chemist Eduard Büchner (1860–1917) published experiments that concluded that living yeast was not, as maintained by Pasteur, essential for alcoholic fermentation, which could be induced by an expressed juice free from cells. Appreciating that if Büchner's contention were true, his yeast juice would provide material for the study of the conversion of sugar to alcohol step by step, Harden repeated his experiments and confirmed his results. Büchner thought that yeast juice contained an enzyme zymase, which broke up the sugar, but the chemical transactions involved in the conversion of one molecule of glucose into two each of alcohol and carbonic acid were mysterious.

For the next thirty years, Harden's principal researches were directed to the solution of the mystery. In this he was supported by able pupils and collaborators and notably by William John Young and Robert Robison. He discovered that in the transformation of sugars to alcohol and carbonic acid a complex series of reactions was involved and he made two fundamental discoveries. The first was that before any breakdown of the sugar molecules occurred, combination with phosphoric acid was necessary and that it was only after this preliminary phosphorylation that they became susceptible to disruption by the zymase in yeast. The second was that yeast juice contained not one but several enzymes which catalysed different reactions during the progress of conversion of sugar into alcohol and carbonic acid. One of these he presumed to activate the preliminary phosphorylation of the sugar molecules; another, a phosphatase, produced the separation of the phosphoric acid from the first products of the split sugar molecule, allowing it to combine with further sugar molecules. The essential part played by phosphorylation and dephosphorylation in the breakdown of sugars by yeast was soon found to apply to fermentation by other microorganisms and provided a clue to the understanding of the conversion of glycogen into lactic acid in muscle during activity. Recognition of the significance of Harden's discovery constituted a turning point in the history of muscle chemistry.

During the First World War Harden suspended his work on alcoholic fermentation to study the chemistry of the two known water-soluble vitamins. Although he did not succeed in isolating these active principles, some of his observations on their properties became useful in the solution of nutritional problems confronting the armies, and they were a valuable contribution to the early knowledge of these accessory food factors.

Harden wrote two textbooks for students on chemistry while he was at Manchester. He also revised and edited the *Treatise on Chemistry* (1894) by Roscoe and Carl Schorlemmer. His most important monograph was *Alcoholic Fermentation* (1911). He contributed the article on this subject to *Thorpe's Dictionary of Applied Chemistry*, and one entitled 'Bacterial metabolism in the system of bacteriology' published by the Medical Research Council in 1930. For twenty-five years he was joint editor of the *Biochemical Journal*.

The importance of Harden's contributions to biochemistry was recognized by his election in 1909 as a fellow of the Royal Society, and by the award in 1929 of the Nobel prize for chemistry, which he shared with Hans von Euler-Chelpin. Honorary degrees were conferred on him by the universities of Manchester (1931), Liverpool (1935), and Athens (1937). In 1935 he was awarded the Davy medal of the Royal Society and he was knighted in 1936. Harden died at his home, Sunnyholme, Bourne End, Buckinghamshire, on 17 June 1940.

Hardham, John [*pseud.* Abel Drugger] (*d.* **1772**), tobacconist, was born at Chichester, the son of a wholesale provision merchant. He is believed to have trained as a lapidary, or diamond cutter, although one source suggests he began life as a servant. He moved to London, where he was a constant frequenter of Drury Lane Theatre. He attracted the attention of David Garrick, who made him 'numberer' (counter of the pit) and under-treasurer. At one time Garrick was his security for £100. About 1744 Hardham set up as a tobacconist and snuff-merchant at the Red Lion, 106

Fleet Street. On several occasions Garrick is said to have alluded when on the stage to Hardham's No. 37 (a mixture of Dutch and rapee, or rough snuff, probably named after the number of the shop drawer in which it was kept). The snuff became fashionable among celebrities, including Sir Joshua Reynolds, and Hardham's modest trade was transformed into a prosperous business.

Under the pseudonym Abel Drugger, Hardham wrote one unsuccessful play. He taught acting in the back parlour of his shop and is said to have dissuaded the Chichester poet William Collins (1721–1759) from taking holy orders. His wide circle of friends included many entertainers and actors. Noted for his honesty, Hardham was often called upon by his wealthy patrons to act as trustee for their charitable funds. Sometimes, when the donor died, he continued to pay the annuities.

Hardham was predeceased by his wife. There were no children. He died in September 1772. In his will he set aside £10 for his funeral because, he said, 'only vain fools spent more on such pageants' (Thornbury and Walford, 1.69). Apart from minor bequests, including £10 to Garrick and £5 to each of his four nieces, he left the interest on his capital to his housekeeper, Mary Binmore, for the duration of her life, and then to John Condell, boxkeeper at Covent Garden Theatre. After the latter's death, the estate of £22,289 passed to the city of Chichester so that Hardham might benefit the city for ever. The will was unsuccessfully contested by his relatives, and from 1786 Hardham's trust was used to subsidize the city's poor rates.

Hardie [*née* Pettigrew], **Agnes Agnew** (1874–1951), politician, was born on 6 September 1874 at Barnhill in the Springburn district of Glasgow, the daughter of John Pettigrew, the assistant governor of the Barony poorhouse, Barnhill, and his wife, Margaret (*née* Drummond). Nothing is known of her early life and education, beyond her later recollection of a sternly religious elementary schoolmaster and her regret that she never had the opportunity of an academic education (*Hansard 5C*, 391, 21 July 1943, 965). In her teens she was working as a shop assistant, and it was during this period that she was drawn into the labour movement. About 1893 she helped to organize Scottish shoemakers, which eventually led to an appointment as the first woman full-time organizer with the National Union of Shop Assistants. She was a lifelong campaigner to improve shopworkers' conditions, citing her own experience of working twelve hours a day, six days a week: 'I never had a half holiday or a Saturday afternoon until I was married' (*Hansard 5C*, 344, 24 Feb 1939, 814; 376, 10 Dec 1941, 1564).

Hardie was active in the Independent Labour Party and in 1907 she became a platform speaker whose ability, it was said, lay in 'unfolding practical Socialism to women taking up politics for the first time' (Haddow, 63). Speaking in public was highly unusual for women at this time, but perhaps because of this Hardie was selected as the Independent Labour Party candidate in the 1909 Glasgow school board elections. She was successful and served on the board for three years. This made her the first female member of the Independent Labour Party in Glasgow to sit on a public authority board. She also became the first female member of the Glasgow Trades Council, on whose behalf she helped to organize mill girls in the sewing trade of Bridgeton, Glasgow. In 1909 she married George Downie Blyth Crookston Hardie (1873–1937), half-brother of Keir Hardie and later Labour MP for Glasgow Springburn (1922–31, 1935–7). They had one son, born in December of that year. He predeceased his parents.

During the First World War Hardie was associated with the anti-war movement as a member of the Women's Peace Crusade, which also included Helen Crawfurd and Agnes Dollan. At the end of the war she was appointed women's organizer for the Labour Party in Scotland, a position she held until her resignation in 1923, following her husband's election as MP for Springburn. The Hardies moved to London, where Agnes was active at various times in the Ealing and Finchley branches of the Labour Party.

On the death of her husband in a London hospital on 26 July 1937 Hardie herself was elected to Westminster for Glasgow Springburn, easily defeating her Conservative rival in the by-election. She represented the constituency until 1945 when she decided not to seek re-election. In the House of Commons she concentrated on social issues, particularly maternity and child welfare, school meals, and hygiene facilities in the poorer areas of Scotland. She also championed the cause of higher pensions for old people. She was strongly against conscription. In opposing the Military Training Bill of 1939 she claimed to be a pacifist, and declared: 'I have taken no part in recruiting: I could never ask anyone to go and face the horrors of a war' (*Hansard 5C*, 346, 4 May 1939, 2169). Her pacificism was reinforced by what she had seen of the effects of the First World War; for example, meeting a young woman travelling on the night train to Glasgow in trepidation at the prospect of seeing for the first time her husband in his blinded and disfigured state (ibid.). When in December 1941 conscription was extended to women Hardie again spoke in opposition, believing that the conditions of military service were inappropriate to women (*Hansard 5C*, 376, 10 Dec 1941, 1565), and she also opposed the lowering of the age at which young men could be called up: 'My little Glasgow undersized, underfed boys are to be pushed into all these horrors' (*Hansard 5C*, 385, 8 Dec 1942, 1494).

As an advocate of greater sexual equality Hardie was an outspoken critic of discrimination against women. She campaigned for more nursery schools to be built; she argued for earlier old age pensions for women; in 1942 she served on a Commons select committee that recommended payment of equal compensation for war injuries to both sexes (at that time men received 7*s*. a week more

than women) and this was accepted by the Ministry of Pensions in 1943; as a member of a number of consultative committees set up by the Ministry of Health in 1941 she did much to improve maternity services for women.

Although progressive in the pursuit of women's rights, Hardie was old-fashioned and puritanical in other areas of social life. She was a strong temperance advocate and while serving as a member of the royal commission on licensing (Scotland) in 1930–31, chaired by Alexander Morrice Mackay, she opposed the findings of the majority report, which sought to regularize drinking in Scotland, and joined Louise Forrester-Paton, Robert Stewart, and Peter Chalmers in signing a minority report that advocated the 'complete emancipation from the tyranny of drink' (*Parl. papers*, 1930–31, 15.90, Cmd 3894). Hardie was convinced that alcohol was a major cause of vice among young people and urged that they be prevented from entering public houses. In the early 1940s she blamed the increase in the incidence of venereal disease cases in Britain upon the demoralization brought about by war, parental neglect, the lack of supervision of school leavers, the availability of alcohol, and the presence of foreign seamen (*Hansard 5C*, 385, 15 Dec 1942, 1813–18).

Hardie's views were in many ways representative of the early socialist pioneers, with her stress on the moral and social uplifting of the working class. Her pacifism was nurtured by her marriage into the Hardie family, but her idealism was tempered by an equal emphasis on the practical methods of social advance. She died in London on 24 March 1951 and was cremated at Golders Green crematorium on 2 April. W. W. J. KNOX

Wealth at death £1695: NA Scot.

Hardie [*married name* Hughes], **Agnes Paterson** [Nan] (1885–1947), socialist and political activist, was born in the Scottish mining town of Cumnock, Ayrshire, on 5 October 1885, the eldest daughter of James Keir *Hardie (1856–1915), socialist and politician, and his wife, Lillias (Lillie) Wilson. Keir Hardie had two sons, James and Duncan, but it was Agnes—or Nan as she was later to be more commonly known—whom he treated as his political heir. She consequently developed an unusual political awareness and insight into labour politics and socialism, augmented by contact with many of her father's associates—such as Bruce Glasier.

On 8 August 1924 Nan married Emrys Hughes (1894–1969), acting editor of *Forward* and a well-known journalist. He was active in the labour movement and an advocate of Keir Hardie's attitudes towards pacifism and socialism. Nan placed herself mainly at his disposal, acting as housewife in Cumnock and supporting her husband's ambitions in the Labour Party. She was involved in Hughes's successful attempt to become provost of Cumnock.

In the 1930s, however, Nan became more active in municipal politics, with a particular interest in housing and welfare provision. In 1933 she was elected as a Labour candidate to Cumnock town council, and she became convenor of Cumnock public health committee in the following year. In 1935 she succeeded her husband as provost and the two of them initiated a major programme of slum clearance and council-house building. Opposition from the chief landlord in the area, Lord Bute, was eventually overcome, with the result that by the start of the Second World War three-quarters of Cumnock's population had been rehoused in low-rent, partially furnished accommodation.

Nan's campaigning led to further improvements in the leisure and welfare facilities in Cumnock. These included an open-air swimming-pool and park. As a magistrate of the juvenile court in the late 1930s, she was able to put her own liberal imprint on the treatment of offenders, preferring to encourage the participation of youth within the community through sports activities rather than imposing draconian sentences. A measure of her popularity in the area was her appointment during the war as joint chairman of the Cumnock Red Cross and war work party. This enabled her to officiate at all public meetings and to help to alleviate the wartime exigencies imposed on the inhabitants. Nan's contribution to the war effort suggests that by 1939 she had modified her earlier attachment to her father's pacifist principles, though she tended to explain her stance in terms of supporting individuals' needs rather than endorsing the country's mobilization.

In 1946 Emrys Hughes was elected as Labour MP for South Ayrshire, with Nan having relinquished her council duties during the campaign tour. When he became ill soon afterwards Nan again absented herself from duties, only then to fall seriously ill also. This compounded ailments from which she had suffered since childhood and ended her public career. She had served unopposed on Cumnock town council for more than eleven years, playing a part in the transformation of the area's welfare and housing facilities. She regarded herself as a firm supporter of the Labour Party and socialism but displayed only limited personal ambition. With both her father and her husband, her assumed role was that of a helpmate, working behind the scenes for the cause instead of acting as its crusading proponent. Her modesty and retiring nature were accompanied by a striking appearance very similar to that of her father: 'She had a distinctive and well-defined bone structure and her face had a forthright and warm expression'. In later years her white, wavy hair was offset by broad, dark eyebrows (Corr, 139).

Nan Hardie Hughes died in Ballochmyle Hospital, Mauchline, Ayrshire, on 27 June 1947, and her funeral took place in Cumnock, attended by many prominent members of various local government bodies in Ayrshire; she was buried at the new cemetery, Cumnock. Emrys Hughes continued his career as a journalist and an MP. They had no children. HELEN CORR

Hardie, Colin Graham (1906–1998). *See under* Hardie, William Ross (1862–1916).

Hardie, (James) Keir [*formerly* James Kerr] (1856–1915), founder of the Labour Party, was born in Legbrannock, Lanarkshire, on 15 August 1856. He was the illegitimate son of a farm servant, Mary Kerr, and was named James Kerr. The probable father was William Aitken, a Holytown miner. On 21 April 1859 Mary Kerr married David Hardie, a ship's carpenter from Falkirk, in Holytown kirk. From that time onwards, their child was known as James Keir Hardie.

Mining, self-education, and marriage The family moved to Glasgow, where David Hardie found work in the Govan shipyards, but he was laid off in 1866 during a lengthy shipyard strike. The Hardies then moved back to the coalfield and settled first at Newarthill, then at Quarter in Lanarkshire. Hardie had no formal education. From the age of eleven he worked down the mine as a 'trapper', ventilating the mine through releasing the air shaft trap. It was a dangerous occupation for a young boy. Later on, he was to use the pen-name Trapper in his newspaper columns. He remained a working collier for the next eleven years in no. 4 pit, Quarter, and became a skilled hewer. He witnessed sombre events, notably the pit disaster at Blantyre in October 1877, which cost the lives of over 200 miners.

Hardie was already a worker out of the ordinary. He read widely in history and literature, and was particularly impressed by Thomas Carlyle's *Sartor Resartus*. He attended night school and taught himself Pitman's shorthand in the darkness of the mine, using the wick miners used to adjust their lamps. He also became very active in the Scottish temperance movement (partly perhaps because of his father's frequent drunkenness) and simultaneously became converted to Christianity. He joined the Evangelical Union, or 'Morisonians', in 1877, a radical offshoot of the United Secession church, and was active as a lay preacher and crusader for temperance. At this time he met Lillias (Lillie) Balfour Wilson, daughter of a Hamilton publican. They married on 3 August 1879 and were to have two sons, Jamie and Duncan, and two daughters, Agnes *Hardie (1885–1947) and Sarah (who died in childhood).

Trade unionism and socialism In 1878–9 Hardie gave up being a working miner to become involved in trade unionism. He opened a small shop and started journalistic work for a Glasgow paper. In 1879 he became corresponding secretary for the Hamilton miners; later that year, he became miners' county agent for Lanarkshire. The local coal manager promptly dismissed him: 'We'll hae nae damned Hardies in this pit' (Stewart, 8). A crucial test came in the summer of 1880, when the Hamilton miners defied their union and went on strike against a wage reduction. This so-called 'tattie strike' (the miners eked out a living by picking potatoes during the strike) was inevitably crushed, but Hardie then accepted an invitation from the Ayrshire miners to become their secretary instead. He moved to Old Cumnock in Ayrshire, where he and his family were eventually to be based for the rest of his life. The next few years were precarious as he strove to build up the organization of the Ayrshire miners. He made a living partly through working for the Evangelical Union, partly as a local insurance agent, partly as weekly correspondent for the *Ardrossan and Saltcoats Herald*. He met many leading radicals at this time, including the American land taxer Henry George when he visited Scotland. A key moment came in 1884, when Hardie left the Evangelical Union in support of a dissentient minister of radical outlook, the Revd Andrew Scott, though Hardie still considered himself a Christian in broad terms thereafter. In 1886 the Ayrshire Miners' Union came into being on a stable basis with Hardie as its full-time secretary.

(James) Keir Hardie (1856–1915), by George Charles Beresford, 1905

Hardie was now increasingly moving on from the world of mining trade unionism and into politics. He had hitherto been a staunch Gladstonian Liberal and often spoke at Liberal meetings. But the realities of class conflict in the western Scottish coalfield pushed him into more advanced positions. He founded a monthly journal, *The Miner*, which advocated a Scottish miners' federation. Soon after, there was a bloody suppression of the Lanarkshire miners when they went on strike, with violent clashes with the police at Blantyre. Hardie had an angry political confrontation at the Swansea Trades Union Congress (TUC) with the leading Lib–Lab Henry Broadhurst.

Hardie also met the Romantic radical-nationalist, R. B. Cunninghame-Graham, who introduced him to Tom Mann in London, and, through him, to Marx's colleague Friedrich Engels. By the end of 1887 Hardie's political outlook had clearly changed from orthodox Liberalism to a kind of socialism. He called openly for the overthrow of the capitalist order. Historians have differed on the precise significance of this conversion. Some regard him as an ideological socialist from then on. Most, however, see

his socialism as an undoctrinaire outgrowth of advanced Liberalism, and as ethical rather than economic in its basis. He was never a Marxist. But from 1887 he was clearly an apostle of the gospel of socialism and the political independence of labour.

As an MP This emerged dramatically at the Mid-Lanark by-election of April 1888. Rebuffed by the local Liberal association in favour of a wealthy London barrister, Hardie decided to stand as an independent 'labour' candidate. He resisted financial inducements and promises of a safe Liberal seat at the next election. His campaign suffered from religious controversies with Catholic voters, and he attracted only 617 votes, coming far down at the bottom of the poll. But 'the noble 600' were a major landmark in Labour's rise as a distinct political force. Soon after, a short-lived Scottish Labour Party was founded in Glasgow, with Hardie as its secretary. Another important development was that he launched his own monthly newspaper, the *Labour Leader*. He also attended the inaugural Socialist International meetings in Paris, shrewdly attending both the Marxist and the non-Marxist congresses there. He resisted Liberal blandishments to offer him a Scottish seat. Instead, he accepted the offer of a candidacy by the Liberals of West Ham South in London, a constituency much affected by the 'new unionism' among unskilled workers. He moved to London in 1891, and resigned as secretary of the Ayrshire Miners. Thus, he largely moved from his Scottish base and into a wider world of national politics.

In the 1892 general election Hardie was returned for West Ham South as 'independent Labour' candidate, along with John Burns in Battersea. He lived at first in the Chelsea house of Frank Smith, a Salvationist and spiritualist attracted to socialism. Much later, in 1902, he was to buy a small flat in Nevill's Court, just off Fleet Street. After his election he was triumphantly driven to take his seat at Westminster by his working-class supporters. He was hailed as 'the man in the cloth cap' although in fact he wore something like a deerstalker, then and later. In the House of Commons he eloquently promoted the cause of London's unemployed. But he was not a great success as an MP and attracted much notoriety for his attack on the royal family at the time of the Albion colliery disaster in south Wales in 1894. In the general election of the next year he lost his seat at West Ham South at the hands of a Conservative, when the local Liberals withdrew their support.

The *Labour Leader*, the ILP, and the LRC However, Hardie had already developed his career in other important directions. In 1894, as editor–publisher, he started up the *Labour Leader* on a weekly basis, an important platform for his views. More crucial still, he promoted a famous meeting in Bradford in January 1893 that saw the birth of the Independent Labour Party (ILP). Its evangelistic, populist style made it appropriate for Hardie's own flexible brand of radical socialism: his lieutenants included his fellow Scot J. Bruce Glasier and his wife, Katharine. Even though its candidates were all defeated in the 1895 election, the ILP was a rising force, not least in mining areas in the West Riding, Lancashire, and, later, south Wales. Meanwhile, Hardie established himself as an internationalist with a tour of the United States, which he was to visit on two further occasions. In later years he also travelled to Canada, Australia, New Zealand, South Africa, Japan, and India. His main strategic objective now was to create a 'labour alliance' between the trade unions and the socialist societies. In the 1899 TUC, the unions narrowly voted in favour of such a proposal. The Labour Representation Committee (LRC) subsequently came into being in February 1900, with Hardie as its first chairman. Its executive consisted of seven trade unionists and five socialists—two ILP, two from the Marxist Social Democrats (who left shortly), and one from the Fabian Society. From 1906 it was to be known as the Labour Party, a new working-class third force in politics.

MP again, and chairman of the Labour Party Hardie was now anxious for a parliamentary seat. He was heavily defeated in a by-election for East Bradford in 1896. In the 1900 'khaki' election, during the Second South African War (which he bitterly opposed), Hardie was defeated again in Preston. However, he had received an unexpected invitation from the miners and others in the two-member constituency of Merthyr Tudful. He was already known in south Wales for his speeches during the six-month lockout of the Welsh miners in 1898. He was duly elected for Merthyr, in large measure because of a split vote among the local Liberals, and this was to remain his political base for the rest of his life.

The next few years were largely occupied in enlisting trade union support for the fledgeling LRC. The Taff Vale rail dispute and the law lords' eventual verdict, which threatened the right to strike by imposing financial penalties on trade unions, led rapidly to large unions such as the engineers and the cotton spinners affiliating, followed eventually by the miners in 1908. In political terms, Hardie's aim was to create a viable partnership with the Liberal Party, but in a way that did not compromise Labour's independence. The outcome was the secret 'entente' negotiated with the Liberals in 1903 by Ramsay *MacDonald, the secretary of the LRC and a fellow Scot, with whom Hardie had a complex relationship. This guaranteed Labour a free run in about fifty seats at the general election of January 1906. Twenty-nine of them were returned, including Hardie at Merthyr. By a one-vote majority he was then elected first chairman of the Parliamentary Labour Party.

Hardie's time as leader was not a happy one—'a trial and a torment'. He did not enjoy parliamentary politics, and felt more at home on the platform or the street-corner soapbox. His Labour members, consisting variously of trade unionists and socialists, were fractious and Hardie gave up his chairmanship at the end of 1907. His reputation as a radical figure had, however, been much reinforced in this period. His visit to India in the autumn of

1907 and a subsequent stormy visit to South Africa confirmed the Liberal government's view of him as an irresponsible agitator. At home, he became deeply involved in promoting the cause of women's suffrage. This was partly the result of his friendship with the Pankhurst family. The younger daughter, Sylvia Pankhurst, was a very close friend, and probably his mistress. Some complained that Hardie's feminism was taking over his socialism. He now combined a role as Labour's elder statesman with endorsement of a wide range of left-wing causes, though he, Glasier, and MacDonald were agreed in fighting off the grass-roots challenge within the ILP from an unstable young orator, Victor Grayson. It was, indeed, a time of frequent personal conflict for Hardie, not only with past allies such as John Burns (now a Liberal minister) and Robert Blatchford, editor of *The Clarion*, but also with many in the ILP itself. Hardie took a leading part in upholding the rights of British workers during the 'labour unrest' of 1910–14, notably the disturbances in Tonypandy, when he bitterly condemned police brutality. On the other hand, he urged the workers to adopt constitutionalism and to steer clear of ideas of class war or direct industrial action.

As an internationalist Hardie continued to build up his international role as chairman of the British section of the Socialist International, and in campaigning with German comrades against the Anglo-German naval arms race. In addition, with the French socialist Edouard Vaillant, he strove in vain to get the International to commit itself to the principle of a worldwide workers' strike against war. He remained a supremely active propagandist at home, too. He had sold the *Labour Leader*, amid much argument over the financial settlement, back in 1904, but found a new platform in the Merthyr *Pioneer* in his own constituency. He also wrote many influential pamphlets such as *Killing No Murder* (1911), after striking railwaymen were shot and killed at Llanelli. His socialism led to Merthyr Liberals proposing to run a Liberal against him, and his parliamentary base was never wholly secure. But he remained a figure of unique charisma in the world of Labour. An emotional episode came at Bradford in April 1914, when he presided over a memorable 'coming of age' annual conference for the ILP, of which he had been founder and inspiration.

War, ill health, and death Hardie's career came to a watershed on 4 August 1914, when Britain declared war on Germany. He led anti-war demonstrations in London and in his own constituency, but workers in Britain, as in Germany and France, seemed caught up in war fever. A peace meeting in Aberdâr was broken up by local workers. His health suffered from the strain of being attacked as an anti-war traitor, and his attendances in parliament became fewer. He also encountered left-wing criticism when he appeared to justify enlistment in the army. In the summer of 1915 he suffered a second breakdown and he died in a Glasgow hospital, at the age of fifty-nine, on 26 September 1915. The cause was given as pneumonia. His funeral took place at Maryhill crematorium on 29 September. His daughter Agnes (Nan) was to marry the Welsh socialist Emrys Hughes, who lived on in the house, Lochnorris, in Old Cumnock. Hughes served as Labour member for South Ayrshire from 1946 to 1969, the last custodian of Hardie's socialism.

Reputation and character Keir Hardie was perhaps the best-hated and best-loved man in British politics. His opponents found him dour and intractable, as well as impractical. A. G. Gardiner called him 'the one man in the parliamentary Labour Party who was unqualified to lead it' (*Prophets, Priests and Kings*, 1917, 86). John Burns (in his diary) jeered at 'the leader who never won a strike, organised a union, governed a parish or passed a bill, Barren Cumnock in the Duchy of Doctrinaire' (26 Sept 1915, BL, Add. MS 46337). For them, Hardie was an extremist, a politician of protest, happiest in the doctrinal purity of the wilderness. Certainly, he was never a major theorist, political or economic. His one general book, *From Serfdom to Socialism* (1907), is a rambling historical survey, though full of shrewd insights on practical matters. He had little understanding of economics or finance, and his judgements on international issues were too often predictable and secondhand.

Yet it is difficult to escape the conclusion that without Hardie the British Labour Party would never have come into existence, at least not in the way it did. He was its leading strategist, the major architect of the working alliance of the trade unions and the socialists, devoted only to the defence of Labour in the political arena. Here he proved himself subtle and pragmatic. It was ironic that it was during the First World War, which Hardie abominated, that the opportunity arose, partly through the split in the Liberal Party, for Labour to emerge as a national party, ready for government. Again, Hardie was its supreme prophet and evangelist. More than any other politician of his time, he spoke directly from Westminster to the industrial workers of the late Victorian and Edwardian eras. His oratory, rhetorical and often sentimental, but powerful and passionate, was deeply stirring, not least to nonconformist workers in mining and textile areas alienated by the capitalist ethic of chapel congregations. Hardie's influence as a journalist in the *Labour Leader* and elsewhere, and as a pamphleteer, should also not be underestimated. In personal affairs, there were often complications on financial matters, as with the sale of the *Labour Leader* or the donations from the Kippen sisters. The latter were given to causes he favoured, rather than to Hardie personally, a distinction not always easy to draw. Yet his evident incorruptibility stood out like a beacon: he died a relatively poor man. His almost mystical strength of character gave him a kind of Christ-like simplicity. In August 1914 he observed that he now knew the sufferings of his saviour at Gethsemane.

In personal appearance Hardie was a man of average height, strong in the shoulder, broad of brow. His flowing beard and an early air of *gravitas* made him seem older than his years. Although he died at only fifty-nine, he had long been known as 'labour's grand old man'. His marriage to Lillie was not an easy one; she did not share in his political activities and was tied to family and home. There

were frequent quarrels. With his daughter Agnes, however, his bonds were strong. A passionate and impressionable man, Hardie developed close attachments to several young socialist women at times, though only with Sylvia Pankhurst, perhaps, was the relationship physical. Young socialist men such as Fenner Brockway became warm disciples. The view of him as 'the man in the cloth cap', a typical Scottish miner, was misleading. In fact, his style and dress were bohemian. Cartoonists depicted him as 'Queer Hardie'. He belonged in some ways to the *fin de siècle* ethos of the 1890s. His extensive travels gave him a cosmopolitan outlook and a following in Australia, Canada, and India hardly less devoted than in Britain. He identified Labour with Indian independence and the black majority in South Africa even at this early time. At home, he could be very much the Scot, a cheerful story-teller with a love of ballads and of highland dancing. With all his limitations, Hardie's ability to project his socialist gospel against the realities of British working-class society, and to convey it in direct human terms, was unique. Sylvia Pankhurst described him emotionally as 'the greatest human being of our time' (*Woman's Dreadnought*, 2 Oct 1915). It was a view that later generations of socialists were to echo.

Wealth at death £426 10s. 11d.: confirmation, 1915, *CCI*

Hardie, Martin (1875–1952), art historian and art administrator, was born at 1 Clifton Villas, Pancras, London, on 15 December 1875, the son of James Hardie of East Linton, near Dunbar, and his wife, Marion Pettie. Two of his uncles, John *Pettie (1839–1893) and Charles Martin Hardie, were professional artists. Hardie was educated at Linton House, a preparatory school in London, where his father was headmaster; he later attended St Paul's School, London, and there won prizes for drawing. In 1895 he went as an exhibitioner to Trinity College, Cambridge, where he took his degree in the classical tripos in 1898. Having graduated, Hardie found work in the library of the Victoria and Albert Museum; he was to stay with the museum for thirty-seven years. On 11 June 1903 he married Agnes Madeline (*b.* 1876/7), the daughter of Rear-Admiral John Robert Ebenezer Pattisson; they had three sons. The Hardies' address from 1908 to 1920 was 7 Baldwyn Gardens, Acton, and from 1920 to 1936 they lived at 82 Ladbroke Road, London.

Martin Hardie (1875–1952), by James McBey

Hardie spent his spare time studying under Sir Frank Short, professor of etching at the Royal College of Art, which at that time shared premises with the museum. Short was also president of the Royal Society of Painter-Etchers and Engravers (RE), to which Hardie was elected in 1907. After war service, in which he reached the rank of captain, Hardie was appointed, in 1921, keeper of the combined departments of painting, and of engraving, illustration, and design, at the Victoria and Albert Museum; by the time he retired, in 1935, the museum's collections of prints and drawings were among the finest in the world. Hardie was particularly conscious of his responsibility towards contemporary artists, an obligation fostered by the museum's creative relationship with the Royal College of Art. 'His study and studio were one', Dudley Snelgrove commented, Hardie's desk and the table where he drew and etched being side by side (Snelgrove, 1.3). Hardie later claimed that in a time when important acquisitions could be made for little money many of his purchases for his own considerable collection were paid for with pennies saved from his lunch money. Perhaps Hardie's most exceptional achievement was his celebrated exhibition of 1926, which reinstated Samuel Palmer as a major artist; Palmer's work was to have an immediate influence on artists such as Graham Sutherland and Paul Drury.

Hardie's many publications include catalogues of the Victoria and Albert's prints in the National Art Library (1903) and of its modern wood-engravers (1919), as well as individual works: *English Coloured Books* (1906), on John Pettie (1908), *The British School of Etchers* (1921), and on Charles Meryon (1931); he also published catalogues of the work of Short, W. Lee-Hankey, and James McBey, as well as *A Sketch-Book of Thomas Girtin* (1939) for the Walpole Society. Hardie's greatest work, his *Water-colour Painting in Britain*, in three volumes, was written in his retirement and partly as a relief from the stresses of wartime. It was published between 1966 and 1968 and remains a classic text on the subject, combining his experiences both as practitioner and as scholar.

'A man of delightful modesty', Hardie was also highly regarded as an administrator (Snelgrove, 1.3). He served as honorary secretary both to the RE and to its associate body, the Print Collectors' Club; he was also vice-president of the Royal Institute of Painters in Water Colours and a member of the Royal Scottish Society of Painters in Watercolour: in 1943 he was made an honorary member of the Royal Watercolour Society. Hardie continued to be active as an artist in his own right; as well as exhibiting regularly at the Royal Academy from 1908 he held several one-man shows. The Victoria and Albert has thirteen of his watercolour drawings, signed Martin Hardie; the Ashmolean Museum, Oxford, possesses most of his 189 prints and some twenty-five sketchbooks. In 1918 he published *Boulogne: 32 Drawings by Captain Martin Hardie*. Although Hardie painted in western Europe and Morocco his best work was done in the watery landscapes of East Anglia. His subject matter and methods were, however, derivative.

> Like Short's landscapes, Hardie's are reticent and contemplative, and humans play only a subordinate part. They vary in quality and some of the emptiest views are the most attractive. Perhaps Hardie was so familiar with the work of other men that his own efforts were unconsciously hampered, reducing him to the commonplace. (Guichard, 42)

Hardie was appointed CBE on his retirement from the Victoria and Albert. During the Second World War he served as an air raid warden; after his retirement he was active in the local affairs of Tonbridge, Kent, where he then lived. He was also an officer of the Artists' General Benevolent Institution and a vice-president of the Imperial Arts League. Aberdeen Art Gallery possesses two etchings of Hardie by James McBey, and another of his wife, made between 1914 and 1919. Of the former, one shows Hardie in his etching studio; his small face has wide-set eyes, a moustache, and a receding hairline. Hardie died at his home, Rodbourne, Yardley Park Road, Tonbridge, on 20 January 1952. SIMON FENWICK

Wealth at death £29,319 os. 10*d*.: probate, 4 March 1952, *CGPLA Eng. & Wales*

Hardie, Matthew (1754–1826), violin maker, was born in Jedburgh, Roxburghshire, on 23 November 1754, a son of the clockmaker Stephen Hardie. He was apprenticed to a joiner, and on 19 May 1778 became a member of the south fencibles, a volunteer regiment set up by Henry Scott, third duke of Buccleuch. He obtained a discharge in 1782 by presenting another man as substitute. On 12 February 1779 he married Juliet, daughter of Alexander Baillie, from Ross-shire, in the College Kirk, Edinburgh.

Although the Hill family of violin dealers thought that Hardie may have studied with the London violin maker John Betts, no proof is available. A more likely influence is thought to be his Edinburgh contemporary John Blair (*fl.* 1790–1822), whose work is charming and beautifully varnished. Between 1784 and 1788 Hardie occasionally repaired stringed instruments for the Edinburgh Musical Society. In 1790 he was trading as a maker in Edinburgh's Old Town, in the Lawnmarket; in 1794, as a 'Fiddle Maker' (*Williamson's Edinburgh Directory*, 1794–6, 23) in Carrubber's Close; in 1795–6, at Baxter's Close; and in 1799, 'opposite the Fountain Well north side' (Hill archive, fol. 131). He and Juliet had at least two children, William (*b.* 1796) and Charles (1801–1802). By 1801 Hardie was in financial difficulties, perhaps because the Edinburgh Musical Society had disbanded in 1798, although in 1797 a cello had been commissioned for Nathaniel Gow, a 'very good Stradivari copy' (private information (C. Beare)). The quality of his work earned him the title 'the Scottish Stradivari'.

The duchess of Buccleuch sponsored benefit concerts for Hardie. One advertisement read:

> Since the conclusion of the American War, when the South Fencibles were discharged in which corp Matthew Hardie had the honour of serving, he has applied himself to making violins, etc, but on account of his numerous family, has never been able to acquire a sufficient stock to carry on trade to advantage. (Glen, 1.xxii)

The concerts may have brought him an order from an army captain for a violin, completed in 1801, which featured in an exhibition of British makers in London in 1998; the catalogue states that his best work is 'very fine, and although firmly based on classical principles and often modelled on the long pattern of Stradivari, is full of idiosyncratic touches'.

Juliet died on 17 September 1801, and on 29 May 1802, at Canongate Kirk, Edinburgh, Hardie married Hannah McLaren, with whom he had three children, Thomas (1803–1858), who succeeded him in the business, Hannah (*b.* 1804), and Henrietta (*b.* 1806). His second wife must have died by 26 May 1806, when he married Jean McBain at

Canongate Kirk. They had a more settled life 'by the Fountain Well' (*Edinburgh and Leith Post Office Directory*, 1810–11, 110) until 1811. In 1812 he moved to Baillie Fyfe's Close, and in 1814 to Low Calton. He married for the fourth time in Edinburgh on 27 July 1817; his new wife was Marion Gilles. He was living at 10 Paul's Work in 1822; and at 15 Shakespear Square in 1824, by which time he was trading as Matthew Hardie & Son with Thomas, who had probably started working with his father when he was about ten years old. Hardie had another able assistant, David Stirrat, and also may have employed Alexander Youle and George Ferguson, among others.

Hardie and his son were both reputed to be alcoholics, but if so, Hardie's condition was not so severe as to inhibit his friendships with Edinburgh's best musicians, and some of his humorous and witty stories have been recorded by various authors. In 1826 he was imprisoned for debt and sent to St Cuthbert's poorhouse, where he died on 30 August 1826. He was buried in Greyfriars' kirkyard, Edinburgh, in an unmarked grave. Many of his instruments, mostly violins and cellos, remain in use in the twenty-first century; illustrations of them may be found in various books about British violin makers.

Hardie, William Francis Ross (1902–1990). *See under* Hardie, William Ross (1862–1916).

Hardie, William Ross (1862–1916), classical scholar, was born in Edinburgh on 6 January 1862, the elder son of William Purves Hardie, tailor, of Edinburgh, and his wife, Agnes Ross. He entered Edinburgh University at fourteen and learned high ideals of scholarship from William Young Sellar. Graduating MA he went in 1880 to Oxford as a scholar of Balliol. He was the most brilliant undergraduate classicist of his generation and won an unusual number of university distinctions, including in 1882 alone the Hertford and the Ireland scholarships, and both the Gaisford prizes. Elected to a fellowship at Balliol in 1884, he spent a year abroad, mostly in Greece and Italy, and returned to his college as tutor, remaining there until his appointment as professor of humanity at Edinburgh in 1895. He held the Edinburgh chair until his death. In 1901 he married Isabella Watt, third daughter of the Revd William Stevenson, of the Madras Christian College; they had three sons and one daughter.

At Balliol, Hardie established a new tradition in the teaching of classical scholarship. He had the whole field of classical literature at his command, and in lectures and private classes discussed general literary questions in a strikingly simple manner with a wealth of illustration: some specimens of his method were published later in his *Lectures on Classical Subjects* (1903). He was a most brilliant composer with an unrivalled memory and a remarkable sense of idiom: several of his most felicitous versions were included in *Anthologia Oxoniensis* (1899). The stimulus of his teaching was perhaps accentuated by his peculiarly shy manner.

The tradition of the chair of humanity at Edinburgh concentrated Hardie's work on Latin, though at Balliol he had been regarded as an even greater Greek scholar. On large classes of pass students his fine scholarship and conscientious methods were to some extent lost, but to the honour students who could appreciate these qualities he gave himself with a rare devotion, and with the help of his assistants he developed at Edinburgh a system of individual teaching on Oxford lines. He published two characteristic volumes, *Latin Prose Composition* (1908), the introduction to which expounds the art—for such it was to Hardie—in its more advanced form, and *Silvulae academicae* (1911), a collection of experiments in Latin and Greek verse, including the *Panegyricus* composed for the 500th anniversary of the University of St Andrews. *Res metrica* (1920), published after his death, is a penetrating analysis of some problems of Latin verse-rhythms, written with his usual sanity and caution.

That Hardie's literary production was not large was due to his complete absorption in his teaching: indeed, his devotion to the work of his professorship was the chief cause of his early death on 3 May 1916. His lasting memorial, apart from his few books, was the large number of his pupils who attained distinction in academic life, in the civil service, and in other professions. Naturally taciturn, he would often sit silent even among close friends—but amused and sympathetic. He had a fine eye for colour and was a naturally gifted painter in watercolours; he was also a keen and skilled fisherman and an enthusiastic golfer.

Hardie's eldest son, **William Francis Ross** [Frank] **Hardie** (1902–1990), classical scholar and philosopher, was born in Edinburgh on 25 April 1902 and educated at Edinburgh Academy and at Balliol College, Oxford, where he won all the major undergraduate prizes in both classics and philosophy, and gained firsts in classical moderations (1922) and *literae humaniores* (1924). He spent a year as a fellow by examination at Magdalen College, Oxford, before being appointed in 1926 to a tutorial fellowship at Corpus Christi College, Oxford. He remained there—except for war service in the Treasury from 1940 to 1945—until his retirement in 1969. In 1938 he married Isobel St Maur Macaulay, third of the six daughters of the Revd Professor Alexander Beith Macaulay, theologian; they had two sons.

He published two books, *A Study in Plato* (1936) and *Aristotle's Ethical Theory* (1968), and numerous articles in philosophical journals; he was also credited with inventing the term 'psephology', when asked by his friend Ronald Buchanan McCallum for a word to describe the study of elections. He served as president of Corpus Christi College from 1950 to 1969 (a period when the fellowship more than doubled in size, and a new residential building was built), and in 1962 chaired the committee which investigated Oxford's admissions system, whose recommendations were subsequently implemented. He remained in close touch with his college in retirement, and died in Oxford on 30 September 1990. He was survived by his wife and one son; the other son predeceased him.

Hardie's youngest son, **Colin Graham Hardie** (1906–1998), classical scholar, was born in Edinburgh on 16 February 1906 and educated at Edinburgh Academy and Balliol College, Oxford, where (like his brother) he won all the major undergraduate prizes in classics, and gained firsts in classical moderations (1926) and *literae humaniores* (1928). He was a junior research fellow (1928–9), then fellow and classical tutor (1930–33) at Balliol, before spending three years as director of the British School at Rome. In 1936 he was appointed fellow and tutor in classics at Magdalen College, Oxford, where he remained—except for war service in the War Office (1941–3) and the admiralty (1943–5)—until his retirement in 1973. In 1940 he married Christian Viola Mary Lucas (*b.* 1910), daughter of Percival Lucas; she had graduated with a first in *literae humaniores* from St Hugh's in 1932. They had two sons. A member of the Inklings, and a friend of C. S. Lewis and J. R. R. Tolkien, he converted to Roman Catholicism in 1945. His scholarly work was devoted largely to Virgil and Dante, and for the 700th anniversary of Dante's birth he gave the Waynflete lectures on him. He was public orator in Oxford from 1967 to 1973, and was renowned for his Latin style. In retirement he lived at Rackham Cottage, Greatham, near Pulborough, Sussex, where he indulged his love of gardening. He died in Chichester on 17 October 1998, and was survived by his wife and two sons.

Hardiman, Alfred Frank (1891–1949), sculptor, was born at 17 Orde Hall Street, Holborn, London, on 21 May 1891, the son of Alfred William Hardiman, master silversmith of Holborn, London, and his wife, Ada Myhill. On leaving school Hardiman trained as a draughtsman and entered the Central School of Arts and Crafts. In 1912 he won a London county council scholarship to the Royal College of Art. Fellow students included Charles Wheeler, Gilbert Ledward, and William McMillan, all of whom, with Hardiman, contributed to the sculptural transformation of London in the inter-war period. In 1915 Hardiman received his diploma and showed his first works at the Royal Academy summer exhibition: a bust, *My Lord of S*, and a plaque, *Madeline*. With a special talent scholarship and a British Institute scholarship he entered the Royal Academy Schools in July 1915. He enlisted in the Royal Flying Corps later that year, and served as an engineer's draughtsman when the school was closed to male students from 1916 until the armistice. Hardiman resumed his studies after the war, winning the Landseer scholarship and, in December 1920, the Rome prize with his group *Sacrifice*.

On 21 December 1918 Hardiman married Violet (1897–1977), daughter of Herbert Clifton White of London. During the years they spent in Rome Hardiman developed his style, a blend of naturalism and stylized classicism greatly influenced by Roman and Etruscan art and early fifth-century Greek sculpture. Ancient forms imbued with a strong decorative sense reflected an archaic modernism widespread in sculpture of the 1920s in the work of artists such as Paul Manship, Adolfo Wildt, and Carl Milles. Clarity of design, formal simplification, and precise craftsmanship pervaded Hardiman's career.

On his return to London in 1924 Hardiman's works such as *The Boxer* (bronze; exh. RA, 1924) and *Portrait of an Athlete* (bronze; exh. RA, 1926) displayed these influences. Fine portraits include *Cecil Rhodes*, commissioned by Sir Herbert Baker for Rhodes House, Oxford (bronze; exh. RA, 1930; *in situ*), but monumental and architectural sculpture were to dominate Hardiman's career. His stone carvings for the eastern half of County Hall, London (*c.*1925) completed the sculptural decorations begun by Ernest Cole. Hardiman's elegant classicized bronze niche figure of St George (1930) for Stephen Courtauld, originally sited in Carlos Place, London, was moved in 1936 to the Courtaulds' new residence, Eltham Palace, where it remains. Among the sculpture executed for Norwich city hall, the lions epitomize Hardiman's style (bronze, exh. RA, 1937); similar figures flanked the entrance to the British pavilion at the 1939 world fair. His other works include heraldic figures (models exh. RA, 1941) for St John's College, Cambridge (architect Edward Maufe), and the Viscount Southwood memorial, St James's Church, Piccadilly, for the architect Professor A. E. Richardson (fountain model exh. RA, 1947; two figures exh. RA, 1948; two groups exh. RA, 1949).

However, it is for the controversial equestrian statue of Earl Haig in Whitehall that Hardiman is chiefly known. A first model was commissioned in 1929 by a committee with a £10,000 grant of parliamentary funds at its disposal. Immediately criticized by Lady Haig for the absence of accurate portraiture, Hardiman's generalized artistic treatment underwent modification. A second model, revealed in the press in 1931, precipitated furious reaction

to the stylized portrait of Haig and the stance and configuration of the horse. Military and civilian equestrians became art critics; equine anatomy, artistic stylization versus accurate portraiture, and the affront to protocol of the hatless earl were hotly debated in lengthy exchanges in the press. The monument's admirers praised it as a modern work in the tradition of equestrian sculpture, whose vitality was artistic, not that of flesh and blood. When the statue was finally unveiled in 1937 Hardiman's enforced compromises were evident, the newly detailed portrait resting somewhat uneasily on the simplified bodies of rider and mount. Lady Haig refused to attend the ceremony protesting that her husband would never have ridden such a horse. Hardiman's friend Charles Wheeler noted, 'through the storm Hardiman stood firm and silent; he allowed his work to speak for itself ... its nobility of design ... has sculpturesque qualities which are missing in many other equestrian statues in London' (*DNB*). But papers in the archives of the British School at Rome reveal that the public furore had detrimental effects on Hardiman's finances, legal affairs, and health.

Elected associate of the Royal Society of British Sculptors in 1918 and a fellow in 1938, Hardiman was awarded the society's silver medal in 1939 for the Haig memorial, and a gold medal for his bronze fountain figure (exh. RA, 1947; statue never erected) for the New Council House, Bristol (1946; architect E. Vincent Harris RA). He was elected an associate of the Royal Academy in 1936, and Royal Academician in 1944. He often lunched with friends at the sculptors' table of the Chelsea Arts Club. When the house and one of the studios at 37 Greville Road received a direct hit in 1941, Hardiman moved his family to Farthing Green, Church Lane, Stoke Poges, Buckinghamshire. He re-opened the remaining London studio after the war. He was an expert fisherman and a fine gardener. Alfred Hardiman died of cancer at his home on 17 April 1949, aged fifty-seven, and was cremated at Golders Green crematorium on 21 April 1949. His ashes lie in the garden of remembrance at Stoke Poges.

Hardiman, James (1782–1855), historian and lawyer, was born in Westport, co. Mayo, in February 1782. He came of a family known in Irish as O'Hartigan. His father, who owned a small estate in Mayo, hoped that his son would become a priest. Hardiman was drawn to the priesthood, but changed his mind. He went to Dublin, where he studied law and about 1814 he became a solicitor. He successfully revived the dormant peerage claim of Lord Netterville.

In 1811 Hardiman was appointed a sub-commissioner by the public records commission, where he worked on calendaring legal documents. In 1825 he wrote a report on the grants and conveyances passed under the Irish Act of Settlement, and the sales under the forfeitures of 1688. When the commission ceased work in 1830, Hardiman became solicitor to the Galway town commissioners. In 1848 he was appointed librarian and legal adviser by the new Queen's College, Galway.

Hardiman became an active member of the Royal Irish Academy and of the Iberno-Celtic Society. In 1820 he published *A History of the County and the Town of Galway*, one of the few good Irish county histories then in print. Irish was his mother tongue, and in 1831 he published *Irish Minstrelsy, or, Bardic Remains of Ireland, with English Poetical Translations*. The collection was an interesting one, but its value was diminished by the lack of attributions. The majority of the songs were probably taken from manuscript collections.

Hardiman died in Galway on 13 November 1855. He donated a thousand books from his library to the Galway Royal Institute and was a major benefactor of the Franciscan monastery of Errew, co. Mayo.

Hardimé, Simon (1664/1672–1737), painter, was born at Antwerp, of Walloon parentage. In 1685 he became a pupil of Jan Baptist Crepu, the flower painter, and, after remaining with him for four years, was admitted a master of the Guild of St Luke in 1689. He painted from nature both flowers and fruit, which were excellent in colour, but he was far surpassed by his younger brother and pupil, Pieter Hardimé. He received commissions from the earl of Scarbrough, from several wealthy merchants of Antwerp and Brussels, and in particular from two brothers who were canons of St Jacques at Antwerp. He was described by his contemporary Campo Weyerman as having been a droll little fellow, who spent the greater part of his time at the church or the tavern, and at length became so embarrassed that he had to leave Antwerp and go to his brother at The Hague, where he was not particularly welcome. While there, however, he did decorate rooms in a number of town houses. He then moved to London in 1700, where he died in 1737. He painted a flower piece for the palace at Breda, reconstructed by William III of England, and now a military school. There are two works by him in the museum at Bordeaux. His brother, Pieter Hardimé, was born at Antwerp in 1677, and died at The Hague in 1758.

Harding [*née* Orchard], **Anne Raikes** (1781–1858), writer, was born on 5 March 1781 at Bath. She married Thomas Harding, a merchant of Bristol, who died young and intestate in 1805 and left her with three children (one of them a disabled daughter) to bring up on a few hundred pounds. Her son, Thomas Harding, became a solicitor at Birmingham, and her other daughter married the Revd William Kynaston Groves. She kept a school and worked as a governess for thirty-five years, meanwhile writing a series of novels under direct and imposing titles: *Correction* (1818), *Decision* (1819), *The Refugees* (1822), *Perseverance* (1824), *Realities, not a Novel* (1825), *Dissipation* (1827), and *Experience* (1828). All these have strong moral overtones and quote Hannah More extensively, though they are not without humour. They take for their subject matter female conduct in high and low life, in a wide variety of settings from India to Scotland. In the preface to *Realities*, Harding claims to point out 'the necessity of subduing our own passions and feelings, and of placing a firm reliance on Divine Providence, however adverse its dispensations may appear' (p. vii). She also claims that the 'incidents are all gleaned from memoranda, made during a life whose "varied hues" has offered abundant opportunity for observation, and are all strict to the letter' (ibid.). This combination of naturalism with moralism was popular with reviewers, the *European Magazine* commenting on *Correction*, for example, 'We heartily recommend this novel to the perusal of mothers' (July 1818, 55). Harding's later work, apart from *Sketches of the Highlands* (1832), became still more openly didactic or instructional (*Little Sermons*, 1840; *An Epitome of Universal History*, 1848). She was also credited with 'a number of other instructive and popular volumes; besides which Mrs. Harding was a large contributor to the reviews and different periodicals of the day' (*Morning Chronicle*, 3 May 1858).

According to her desperate application to the Royal Literary Fund, dated 18 November 1851, Harding had been retired for two years when her banker decamped after losing her hard-won savings in ruinous speculation, and she was left to manage 'a superior style of Boarding House' (at 28 Cumberland Street near Hyde Park) with great difficulty and little profit. Her son-in-law and others (including her publisher and her brother) added their support and she received £30. On 16 June 1853 she appealed again from a boarding-house in Boulogne, having retired there (possibly to avoid creditors), and received £20. A small annual subscription was made by friends. Even with assistance from her married daughter and her husband, her income was something below £50 per year; she appealed again to the Royal Literary Fund on 2 October 1855, and for a final time on 17 November 1857, each time receiving £10. She died on 28 April 1858 at her son-in-law's house, possibly in Boulogne.

Harding, Edward (1755–1840). *See under* Harding, Silvester (1745x51–1809).

Harding, Edward Archibald Fraser (1903–1953), radio producer, was born on 1 October 1903 at Palmyra, Lermot Road, Southsea, Hampshire, the elder son of Colonel Edward West Harding, of the Royal Marine Artillery, and his wife, Maria Maud Ryves. Educated at Cheltenham College (1915–22) and Keble College, Oxford (1923–6), Harding became an Oxford intellectual Marxist. His upbringing, D. G. Bridson later noted, 'was impeccably Upper Class. It was just this background which Oxford and intellectual restiveness had taught him first to challenge, then finally reject' (Bridson, 29).

A year after he entered the newly established British Broadcasting Corporation (BBC) as announcer for London Station in June 1927, Harding became a member of a special research section within the drama department, a privileged group whose sole task was to experiment with new programmes and which laid the foundation of what was ultimately to become the features department. Along with his colleagues Lance Sieveking, Mary Hope Allen and E. J. King-Bull, Harding explored the largely uncharted seas of studio-production technique. By weaving together sound, words, and music to make an aural picture, they evolved the 'feature'. It was in this spirit of adventure that Harding produced a broad range of programmes, including a memorable feature on the sixteenth-century French poet François Villon, written in collaboration with Ezra Pound, and the first British example of radio reportage, *Crisis in Spain*, broadcast in June 1931, recapturing the recent events of the Spanish revolution. In 1932 Harding produced the first Christmas day programme linking speakers from various Commonwealth countries and ending with a message from King George V. The programme was an instant success and he was immediately asked to compile a similar programme linking the countries of Europe.

New Year over Europe on the last day of 1932 was Harding's final fling in London. The new year's feature was usually a bland medley of events from the year that was passing, but Harding's more overtly political programme, which introduced the Poles with a line about how much they spent on armaments, led to a diplomatic storm in a teacup. The Polish ambassador in London protested to the Foreign Office and the BBC; there were questions in the House of Commons and letters to *The Times*. Harding was summoned before the BBC's director-general, John Reith, and banished to Manchester. He was always very proud of

the fact that Reith had said to him: 'You're a very dangerous man, Harding. I think you'd be better up North where you can't do so much damage' (Bridson, 22).

Harding treated what might have been regarded as exile to the north as an opportunity to challenge London and over the course of three years as programme director, north region, he completely invigorated broadcasting. He set about collecting around him a group of talented young producers and writers who, like him, were committed to giving voice to ordinary people. Within a few months the offices in Piccadilly, Manchester, became the spearhead of new advances in technique, in programme ideas, and in microphone performance.

No one was safe from Harding's all-conquering, all-embracing enthusiasm and he effected a revolution in broadcasting by acting as a flame to set all kinds of people alight. He raided the *Manchester Guardian*—from which he captured four journalists, Kenneth Adam, Donald Boyd, Robert Kemp, and E. R. Thompson. He persuaded Edgar Lustgarten to leave the bar, he recruited Geoffrey Bridson, a budding poet and civil servant who was to go on to have a very distinguished career at the BBC, and he encouraged Francis (Jack) Dillon, then working as a tax collector, to turn to writing and production. He also nurtured the acting talents of Wilfred Pickles, Ewan MacColl, and Joan Littlewood (whom he spotted at the Royal Academy of Dramatic Art). Bridson later wrote: 'His whole attitude to the medium was stimulating and somehow exciting. To him, the microphone had been an invention no less revolutionary than the printing-press' (Bridson, 30).

In 1936 Harding returned to London to join the BBC's newly formed staff training department (known as St Beadle's, after Gerald Beadle, director of staff training, 1936–7), first as chief instructor and then as director. On 2 May 1940 he married Joan Clara Monkhouse (*b.* 1903/4), daughter of the Manchester political journalist George Leach. They had no children and lived at Byron Cottage, Highgate village, Middlesex. In 1948 Harding moved to the drama department as deputy to its director, Val Gielgud, where his most notable productions included Hardy's *The Dynasts* and Goethe's *Faust* in Louis MacNeice's translation. Indeed, Harding had recruited MacNeice to the BBC and was immortalized as Harrap in MacNeice's autobiographical poem *Autumn Sequel*.

Archie Harding, as he was known, remained throughout his life committed to radio as an art form that tested the boundaries and to the belief that broadcasting should offer listeners 'the best that the medium could provide'. He was perhaps the leading figure in the early evolution of the feature programme and the motivating force behind the long battle to get the voices of 'ordinary people' heard on BBC radio. He died on 25 January 1953 at his home in Highgate after succumbing to cancer of the pancreas.

Harding, Sir Edward John (1880–1954), civil servant, was born on 22 March 1880 in St Osyth, Clacton-on-Sea, Essex, the only son of Revd John Harding (1841–1926) and his wife, Laura Catherine Hewlett. He had two sisters: Eleanor Laura (Nellie), who married Harry Batterbee, a friend from his university days and future civil service colleague, and Evelyn (Eva), who remained unmarried and to whom he seems to have been particularly close. He himself remained single until 15 January 1929, when at the age of forty-eight he married Marjorie (1891/2–1950), daughter of Henry Huxley, physician. There were no children.

Harding was educated at a preparatory school in Beckenham, then at Dulwich College (1893–9, with a short break in 1894–5 at Osborne House School, Margate), and finally as a scholar at Hertford College, Oxford (1899–1903). After winning a first in classical moderations in 1901 and a second in *literae humaniores* in his finals in 1903, he took his MA in 1907. He was called to the bar at Lincoln's Inn in 1912. He later became a governor of Dulwich College, and in February 1940 he was elected as an honorary fellow of Hertford College, to which on his death he left a considerable bequest.

Not only was Harding's father an Anglican clergyman, but on his paternal side so were three uncles, two great-uncles, and his grandfather. However, his great-grandfather William Harding (1766–1851) had a notable career at the Admiralty, and Edward entered the civil service by competitive examination in November 1903, when he was placed twelfth. He elected for a post as second-class clerk in the marine department at the Board of Trade, but transferred on 31 May 1904 to the Colonial Office, where he worked initially in the crown colonies division. Formal promotion was not rapid, but his abilities were noted and on 14 October 1912 Harding was appointed as assistant private secretary to Lewis Harcourt, secretary of state for the colonies. His next role as secretary of the dominions royal commission secured recognition of his abilities and defined his area of expertise. The commission was appointed following a recommendation of the Imperial Conference of 1911 that representatives of the United Kingdom, Canada, Australia, New Zealand, South Africa, and Newfoundland should report on ways of developing the natural resources and trade of the white settler societies of the British empire. Harding was not its first secretary, but it was he who in December 1912 took over the job, and with it the responsibility for arranging and accompanying the overseas tours of the commission in 1913, 1914, and 1916 and for drafting reports. In their final report (1917) the commissioners paid more than formal compliments to their secretary. He was promoted to first-class clerk on 4 June 1916, and was made CMG in 1917.

Although Harding had enlisted in the Royal Garrison

Artillery (second lieutenant, 1915; lieutenant, 1918), his abilities were put to better use during the war as junior assistant secretary at the imperial war conferences in 1917 and 1918. His personal knowledge of the dominions and of their political and business leaders ensured that after the war his expertise would be employed within the dominions division of the Colonial Office. His professional advance was thereafter rapid. He was reclassified as a principal on 1 April 1920 and promoted as one of the Colonial Office's ten assistant secretaries in 1921, in which capacity he helped to service the Imperial Conference in 1923 as deputy secretary. When the dominions division became the Dominions Office and a separate government department in 1925, Harding was a natural choice as the office's sole assistant under-secretary. The dominions commissioners in 1917 favoured centralizing the empire for the purposes of economic development and security. However, the post-war trend was towards self-government, which the British government sought to reconcile with the continued unity of the white Commonwealth through conceding dominion status. Given the sensitivity and suspicions of political leaders from the Irish Free State, South Africa, and Canada, striking the balance was tricky, but until the 1950s it was largely achieved.

Harding endorsed and increasingly guided these adjustments. Certain as to aims and flexible as to methods, he tried over two difficult decades to maintain the co-operation of the dominions with the United Kingdom. His advisory role was much appreciated by L. S. Amery, secretary of state for the dominions, at the Imperial Conference in 1926 which led to the famous Balfour declaration on dominion status. His expertise brought its rewards, a CB in 1926, a KCMG in 1928, as well as appointment on 24 January 1930 as permanent under-secretary at the Dominions Office. He was heavily involved in the passage of the Statute of Westminster in 1931 and in managing the imperial conferences in 1930, 1932, and 1937. He thus helped secure the united reaction of most of the Commonwealth when war eventually broke out in Europe and the Far East. He was promoted to KCB in 1935 and to GCMG in 1939.

Harding had one more political role to play. In September 1939 he was appointed high commissioner to the protectorates of Bechuanaland, Basutoland, and Swaziland and also to the Union of South Africa, taking up his post in January 1940. The immediate task was to secure the assistance in the war effort of the protectorates and, in a largely diplomatic role, of South Africa, in the face of some Afrikaner opposition to the allied cause. Harding helped by establishing adequate, though not warm, relations with the prime minister, J. C. Smuts, and his colleagues. Sadly, he had a heart attack late in 1940 and retired on grounds of ill health in February 1941. However, he had recovered sufficiently by 1942 to represent in Cape Town the new high commissioner (based in Pretoria) until his final retirement in 1944.

Harding's education accounts for the allusions to classical literature in his private letters and perhaps for his scrupulous concern for accuracy and clarity in official correspondence. A former junior colleague at the Dominions Office described him as a man of 'the utmost integrity' but 'a perfectionist ... congenitally incapable of accepting a draft without making some amendment' (Garner, 20–21). To the same observer he appeared 'cold, even distant', with steel grey eyes, no sense of humour, no warmth, no social graces, not good at public speaking (ibid., 182). But the amused tone of his private letters leaves a different impression, and another colleague recorded a generous side to his character and 'many acts of personal kindness' (*DNB*). He also retained an interest in music and the arts and served, for example, on the council of the Royal College of Music.

Since their marriage in 1929, Marjorie had been Harding's close companion, and her death in 1950 was a terrible blow which accelerated his own decline. He died at the Royal Surrey County Hospital, Guildford, on 4 October 1954 and was cremated at Woking three days later.

Harding, George Perfect (1779/80–1853), miniature painter, was born in Town Malling, Kent, the son of the miniature painter Silvester *Harding (1745x51–1809) and his wife, Sarah, daughter of William Perfect MD, also of Malling. The family came from Staffordshire where his father was born at Newcastle under Lyme and his uncle the engraver Edward Harding (1755–1840) was baptized on 1 April 1755 at St Mary's, Stafford. Harding's brother Edward, who engraved some plates for his father, died of putrid fever on 11 September 1791, aged twenty. Probably taught by his father, Harding began work as a miniature painter, exhibiting in 1802 at the Royal Academy from his parents' home, 127 Pall Mall, London. In 1804 he painted a miniature self-portrait (National Portrait Gallery, London), for which he wore the uniform of the Royal York Marylebone volunteers. He exhibited eighteen portraits at the Royal Academy up to 1840, one in 1812 of a Mrs G. P. Harding (presumably his first wife, Mary Ann). He sent to the academy two other pictures: in 1823 *The Dean of Westminster Holding the Crown at the Coronation of His Majesty King George IV*, and in 1839 *The Library at Strawberry Hill, Seat of the Earl of Waldegrave*. He also exhibited twice at the Society of British Artists.

Harding devoted himself to producing minute copies in watercolour of works of historical and antiquarian interest. In 1822–3 he published eighteen portraits of the deans of Westminster, engraved by J. Stow, R. Grave, and others, intended to illustrate E. W. Brayley's *The History and Antiquities of the Abbey Church of St Peter, Westminster* (2 vols., 1818–23), illustrated by J. P. Neale, followed by his own *Antiquities in Westminster Abbey: ancient oil paintings and sepulchral brasses, engraved from drawings by G. P. Harding, with an historical, biographical and heraldic description, by T. Moule* (1825). He produced in 1828 an elaborately illustrated manuscript account, 'The princes of Wales'; with this he issued a privately printed description. These are now in the Royal Library at Windsor. Among many other historical works to which he supplied plates was J. H. Jesse's *Memoirs of the Court of England during the Reign of the Stuarts, Including the Protectorate* (1840).

Harding moved from 38 Strand about 1822 to Hercules Buildings, Lambeth, London. He married on 25 January 1834 his second wife, Charlotte Brown (*b. c.*1800, at Mildenhall, Suffolk) at St James's, Westminster. They had two daughters, Georgina (*b. c.*1837) and Catherine (*b. c.*1839). (Harding's eldest daughter from his first marriage, Eleanor Jane, was baptized on 23 November 1815 at St Martin-in-the-Fields, London.)

In 1839 Harding was elected a fellow of the Society of Antiquaries, but withdrew in 1847. In 1840 he took a leading part in establishing the Granger Society, whose object was to publish previously unengraved historical portraits. Through mismanagement the society ended in 1843. Harding continued publication by subscription for five years, and during this period he issued a series of fifteen plates, engraved by Joseph Brown and W. Greatbach with biographical notices by Thomas Moule. With his means much reduced, his chief resource was the disposal of his accumulated works, which were sold by auction. Harding died on 23 December 1853 at his home in St Mary Newington, Surrey, aged seventy-three. Examples of his work are in the National Portrait Gallery and the British Museum, London; the Scottish National Portrait Gallery, Edinburgh; the National Museum and Gallery of Wales, Cardiff; Newport Art Gallery; and Bath City Art Gallery.

Harding, Gilbert Charles (1907–1960), radio and television broadcaster, was born at Hereford on 5 June 1907. His parents, Gilbert Harding and May King, were workhouse officials, and he used to boast that he was born in a workhouse. He was educated at the Royal Orphanage, Wolverhampton, and Queens' College, Cambridge, where he obtained third classes in both parts of the historical tripos (1927–8). A man of very deep religious feeling, he became a strong Anglo-Catholic at Cambridge and went to Mirfield to train for the Anglican priesthood with the Community of the Resurrection. He left when in 1929 he became a convert to, and a devoted member of, the Roman Catholic church, but he remained sympathetic to Anglicanism from the emotional point of view and never spoke of Mirfield with anything but the warmest affection and admiration. After some years as a schoolmaster, and as a professor of English at St Francis Xavier University, Antigonish, in Nova Scotia, he joined the Bradford city police. An accident forced his retirement and he returned to teaching in Cyprus, where he also acted as correspondent for *The Times*. He took a very strong dislike to British rule in Cyprus and was regarded with a great deal of hostility by the administration. He returned to London and read for the bar at Gray's Inn, but when war broke out in 1939 he joined the BBC monitoring service. His health prevented him from serving actively in a war to which he was very much dedicated because of his detestation of Fascism. After two years in the outside broadcasting department he was sent in 1944 to Canada where he carried out extremely useful propaganda work. Back once more in London in 1947 he got his first personal show in broadcasting as quizmaster in *Round Britain Quiz*.

Gilbert Charles Harding (1907–1960), by Cornel Lucas, 1960

From that point on, in radio programmes such as *The Brains Trust* and *Twenty Questions*, and on television in *What's my Line?*, Harding became a great popular figure, especially of television in which he was probably the best-known performer in the country. He was a man under great emotional pressure, something of which was revealed in his *Face to Face* interview with John Freeman on

BBC television in September 1960. He disliked 'the Establishment' and continually involved himself in rows with authority. He was often the victim of alleged martyrs, many of whom were bogus. The apparent rudeness which brought him much notoriety was not an act, as was widely believed; he never suffered fools gladly, and he 'loved justice and hated iniquity' in no uncertain terms (*The Guardian*, 18 Nov 1960). 'I just behave as I am and talk as I think, which for some reason appears to be remarkably novel', was his comment (private information, 1971). It was for this refreshing novelty and his genuine humanity that the public loved him; yet he thought it quite absurd that he should be so highly paid for being himself and, being fully aware of his difficulties of character and temperament, wanted desperately to be somebody different and better. His public performances often concealed the fact that he was in many ways a learned man. He had a wonderful memory for English poetry, which he loved. He was frustrated, among other things, by what he felt to be the waste of his talents, and looked upon himself as a don manqué. In this he was almost certainly deceived but quite sincere. Despite the frustrations, he was candidly enough capable of enjoying, somewhat to excess, the luxuries that his large income made possible. He had known very hard times and did not pretend not to enjoy the easier times. He was lavishly generous of time and money, and the people who knew him best liked him most. His political views were always very much to the left, and he continued in his prosperity to believe in the Labour Party and in the need for more equal distribution of wealth.

For most of his adult life Harding was in bad health, above all from asthma. He expected death to come at any moment and in fact dropped dead at 1 Portland Place on 16 November 1960, as he was leaving the studio after a performance in *Round Britain Quiz*. 'But I do wish that the future were over' (Harding, 224) had been the concluding words of his autobiography *Along my Line* (1953), a book that does not do justice to his remarkable intelligence and warmth of character. A later autobiographical volume was called *Master of None* (1958). He never married. The requiem mass in Westminster Cathedral, at which Cardinal Godfrey presided, was crowded.

Harding, Sir Harold John Boyer (1900–1986), civil engineer, was born in Wandsworth, London, on 6 January 1900, the younger son and younger child of Arthur Boyer Harding, who was employed by an insurance company, and his wife Helen Clinton, daughter of the Revd William Lowe. With the loss of his father in 1902, support through school, Christ's Hospital, and university depended on his mother's sister's husband, Jack Robinson. Harding entered the City and Guilds College (part of Imperial College) in 1917, serving through 1918 as a full-time Officers' Training Corps cadet. He resumed his studies in 1919, struggling in mathematics and excelling in geology. He received a BSc (Eng.) in 1922.

In 1922 Harding joined the 'old, respected and feudal firm' of John Mowlem & Co., engineering contractors, where he was to become the outstanding engineer in soft ground tunnelling and shaft construction in Britain. His early work concerned underground railway development in and around London, including the reconstruction of Piccadilly Circus Station (1926–9). The sheer complexity of this project spurred him to build, with his future wife Sophie, then a student at the Slade School of Art, a model of the underground works, subsequently displayed at the Science Museum and later at the London Transport Museum. Sophie Helen Blair, whom he married in 1927, was the daughter of Edmund Blair Leighton RI, artist. They had two sons and a daughter.

Harding's particular skills were soon exercised in overcoming major foundation problems encountered at Dagenham for the powerhouse for the Ford motor works, unwittingly placed exactly where Sir Cornelius Vermuyden had closed a breach in the Thames 300 years before. This experience led to Harding's special interest in expedients for ground treatment, with pioneering work in Britain on the Joosten and Guttman processes of chemical consolidation. From 1936 to 1939 he directed construction of the Central Line of London Underground from Bow Road to Leytonstone.

During the Second World War, Harding was responsible for defence works and emergency repairs to underground damage in London. In 1943–4 he organized the construction of precast concrete petrol barges and eight of the concrete floating monoliths of Mulberry harbour for the Normandy landings. During a night of air raids in 1941 he had a discussion with a distinguished colleague, which was to lead to a significant geotechnical advance in Britain, the foundation of Soil Mechanics Ltd in 1942. From this date he was increasingly involved in the management of the firm, being a director from 1949 to 1955; from 1950 to 1956 he was also a director of the parent company, Mowlem. Subsequently, until 1978, he worked as a consultant and arbitrator. From 1958 to 1970 he was joint consultant, with René Malcor, to the channel tunnel study group. In 1966–7 he was a member of the Aberfan disaster tribunal, chaired by Lord Justice Edmund Davies, following a flow slide of mining waste, which engulfed part of a mining village in south Wales.

Harding was an active and loyal fellow of the Institution of Civil Engineers through a period of radical reform; he served as president in 1963–4. He was first chairman of the British Tunnelling Society (1971–3) and set the pattern for its instructive informal discussions, encouraging participation by young engineers, thus recreating an original

objective of the parent institution. He gave great encouragement to others to undertake research to explain phenomena he had observed, for research often lagged behind their practical manifestation. He was a governor of Westminster Technical College (1948–53), Northampton Engineering College (1950–53), and Imperial College (1955–75). In 1952 he was elected a fellow of the City and Guilds Institute. He was knighted in 1968 and received an honorary DSc from City University in 1970. In 1976 he was elected a founder fellow of the Fellowship of Engineering (later the Royal Academy of Engineering), and he became a fellow of Imperial College in 1968.

Harding was a man of great energy and application, an imposing figure with a high forehead, slightly aquiline nose and a severe expression which readily dissolved into a smile, and a penetrating eye which could be seen by the discerning to twinkle. His portrait, painted by his wife, hangs in the Institution of Civil Engineers. To his schooldays at Christ's Hospital, in the 'engineering side' taught by T. S. Usherwood, he attributed much of his command of English, interest in history, and facility for the apt quotation, learned with enthusiasm in association with science and technology. He was a witty and captivating speaker, dismissive of pomp and arrogance. He recognized that successful geotechnical projects depended on the early identification of unexpected change and the consequent need for modification of the scheme. This, he emphasized, required moral courage in those concerned to admit the errors in their original perceptions. Harding died in Topsham, Devon, on 27 March 1986.

Harding, James Duffield (1797–1863), landscape painter and lithographer, was born at Deptford, Kent, the son of John Harding (*c.*1777–1846), an engraver and drawing-master who had been one of the few professional pupils of Paul Sandby. His father gave him a good artistic education and a grounding in perspective, before sending him to Samuel Prout for a course of lessons in watercolour. When his father complained of the boy's lack of ideas, Prout told him, 'Let him draw till they come' (Roget, 1.509). He found trees, later his great strength, particularly difficult. Nevertheless he exhibited drawings at the Royal Academy from 1811 when he was thirteen. He was articled to the engraver Charles Pye and then worked in the office of the architect Peter Frederick Robinson, further educating himself by absorbing Turner's *Liber Studiorum* (1807–19) and James Malton's *The Young Painter's Maulstick* (1800). In 1816 he was awarded a silver medal by the Society of Arts, and two years later he exhibited for the first time with the Society of Painters in Water Colours. He was elected an associate of the society in 1820 and a member in the following year. He resigned in 1847, in hopes of election to the Royal Academy as an oil painter, but meeting no success there returned to the watercolourists in 1856. Although he is said not to have taken to engraving during his apprenticeship, he was an early and prolific practitioner of lithography, at first working rather tentatively from drawings by others, but in time mastering the art as a means of reproducing his own work and reaching a wide public. On 29 June 1818, at St Alfege, Greenwich, Kent, he married Ann Roberts, with whom he had a son, Arthur Raymond Harding, who was baptized on 14 August 1836 in the Old Church, St Pancras, London.

As a boy in London, Harding had shyly approached an artist in Greenwich Park and been rudely rebuffed, and this had made him vow that, should he succeed as an artist, he would teach everybody. Through his numerous drawing books, as well as a successful practice as a drawing-master, he fulfilled his pledge. He also promoted schemes for training art teachers, in which he interested Sir Robert Peel and Dr Arnold of Rugby. He was something of an innovator, in materials at least. In 1830 he exhibited Italian views sketched on papers of various tints and textures. This led to the popular range of 'Harding papers' manufactured by Whatman. Then in 1841 he published *The Park and the Forest*, in which the sketches were drawn on the lithographic stone with a brush rather than a crayon. These prints he called 'lithotints'. Among his best publications were *A Series of Subjects from the Works of R. P. Bonington* (1829–30), *Sketches at Home and Abroad* (1836), which won him a Sèvres breakfast service and a diamond ring from King Louis-Philippe, and *Picturesque Selections* (1861), his last and finest achievement. He was awarded two gold medals by the French Académie des Beaux-Arts for lithographic drawings exhibited at the Louvre, and when exhibiting in Paris during the 1820s he used the address of the publisher Ostervald. According to H. Ottley in the supplement to M. Bryan's *Biographical and Critical Dictionary of Painters and Engravers* (1903, 1.626), his reputation was high among foreign artists, in particular because of his teaching books: 'In the schools of Paris especially, which he often visited, he had always an enthusiastic reception from professors and students'. In 1824 he was in Italy, probably for the first time, with the lithographer Charles Hullmandel, and he made frequent tours of France, Germany, Switzerland, and Italy. He also continued to work up views by others of places which he had not himself visited. He shared Turner's penchant for river and lake views, often on a large scale, but despite his pupil Ruskin's warm championship—'unquestionably the greatest master of foliage in Europe'—he stands high in the second rank of the English school rather than in the first (J. Ruskin, *Modern Painters*, 1843–60). On the other hand his obituarist in *The Athenaeum* was unduly dismissive on his death: 'he will be missed by Amateurs', and was a 'Society drawing master whose work would well embellish ladies' albums' (12 Dec 1863, 804). His closest colleagues were in two minds about him, as a letter from William Collingwood Smith to Joseph John Jenkins indicates: 'Although unpopular with many of our body the Society

has lost a distinguished Artist and old member and the only one of our body who has gone into authorship to advance a knowledge of art in this country' (letter, W. C. Smith to J. Jenkins, Royal Watercolour Society archives J. 43/13). William Evans of Eton, himself a very difficult character, attacked him as 'a vain disappointed, jealous man ... however he has not brains enough to do real mischief' (letter, W. Evans to J. Jenkins, ibid., J. 30/18). Between 1848 and 1860 Harding lived at 3 Abercorn Place, St John's Wood, London, and thereafter at 15 Lonsdale Terrace, Barnes, Surrey, where he died of granular induration of the liver, jaundice, and internal haemorrhaging, on 4 December 1863; he was survived by his wife. He was buried at the West London cemetery, Brompton. His will was proved at under £14,000, and his remaining works, together with a few drawings by colleagues from his collection, were sold at Christies on 19–20 May 1864, realizing £4000. Examples of his work are in many British public collections including the British Museum, the Victoria and Albert Museum, the Ashmolean Museum, Oxford, and the Fitzwilliam Museum, Cambridge.

Harding, John (*bap.* 1601, *d.* 1665), alchemist and translator, was baptized on 8 November 1601 at Great Haseley, Oxfordshire, eldest of the three sons and four daughters of John Harding (*c.*1562–1610), rector of Great Haseley, and his wife, Isabel, whose former married name was Clarke. As regius professor of Hebrew at Oxford University, Harding's father was one of the appointed translators of the Bible, and was president of Magdalen College in 1607–8. Harding matriculated at Magdalen on 25 October 1616; he graduated BA in 1620, held a fellowship in 1622–8, and proceeded MA in 1623. He held the offices of bursar in 1625 and of vice-president in 1626. In or after 1628 Harding married Martha (*d.* 1682); they raised at least two sons, John (*d.* 1690), who graduated at Magdalen in 1650, and Edward (*d.* 1679), who graduated at Christ Church, Oxford, in 1653 and practised medicine at Northampton.

From 1642 Harding was rector of Brinkworth, Wiltshire. In pursuit of his interest in science he had become an avid follower of Paracelsus, and while at Brinkworth he became a significant translator and disseminator of Paracelsian works. His first collection, issued in 1659, was entitled *Paracelsus his Aurora & treasures of the philosophers, as also the water-stone of the wise men* (the third text taken from Johann Siebmacher's *Der Wasserstein der Weisen*). The second and more important collection, *Paracelsus his Archidoxes*, together with many smaller treatises, was published in 1661 and reissued in 1663 as *Paracelsus his Archidoxes, or Chief Teachings, Comprised in Ten Books*. Harding had drawn mainly on Huser's German edition, but incorporated material from other German sources. A third work, *The Triumphant Chariot of Antimony* (1660), was supposedly translated from the fictional Basil Valentine. All Harding's publications were identified simply as 'by J. H. Oxon'.

In the *Archidoxes* Harding alludes to the frustration he was experiencing with his self-imposed task of translating and publishing Paracelsian and other medical texts which formed the canon of a more empirically orientated school than the traditional one of medical practice. Its innovative element was the wedding of chemistry with medicine, wherein the body was seen as an extension of the chemical cosmos. Harding's prefaces show him to be an advocate of empirical studies. Alchemy was a tradition dominated by the search for gold and the elixir of life. With his translation of *Archidoxes*, Harding indicated his broad knowledge of Paracelsian works as well as his own wish to guide English alchemical and medical practice away from Galenic traditionalism and towards specific cures, founded on chemical substances and knowledge. In publishing these works, Harding had more than personal and academic difficulties to surmount; in the preface to *Archidoxes* he mentions his pleasure at publishing the tenth book of the work, its having previously been suppressed. Paracelsians were not popular figures in established medical or academic circles because they accused medical practitioners of ossification, callousness, and downright charlatanism.

Harding's declared intention to publish a complete translation of Paracelsus's *Paramirum* came to nought when in 1662 he was ejected from his living 'as a most violent presbyterian'. He retired to Northampton where his nephew Edward, son of Edward Reynolds, bishop of Norwich and Harding's sister Mary, held the rectory of St Peter's. He died in April 1665 and was buried at St Peter's on 19 April.

Harding, John (1805–1874), bishop of Bombay, was born in Queen Square, Bloomsbury, London, on 7 January 1805, the third son of William Harding, chief clerk in the transport office, and his wife, Mary Harrison Ackland. The Revd Thomas Harding, vicar of Bexley from 1833 until 1874, was his twin brother. John was educated with Thomas at Westminster School (1818–21) and at Worcester College, Oxford, where he graduated BA (third class in *literae humaniores*) in 1826 and MA in 1829. In the latter year he was ordained priest by the bishop of Ely and became curate of Wendy in Cambridgeshire.

In 1834 Harding was appointed in London to Park

Chapel, Chelsea, and in 1836 to the rectorship of St Andrew by the Wardrobe with St Anne Blackfriars, a united parish which counted the celebrated evangelicals William Romaine (1714–1795) and William Goode (1762–1816) among its previous incumbents. Harding himself was staunchly opposed to high-church ritualism and greatly enhanced the parish's reputation as an evangelical powerhouse during his fifteen years there. He was for some years secretary of the Pastoral Aid Society and also a member of the Church Missionary Society, preaching the latter's anniversary sermon at St Bride's, Fleet Street, in 1849.

In 1851 Archbishop Sumner selected Harding as the second bishop of Bombay. He proceeded to the degrees of BD and DD at Oxford and was consecrated at Lambeth Palace in London on 10 August 1851. With only thirty chaplains, Bombay was the poor sister of the two larger and more active Indian sees, Calcutta and Madras, and Harding appears to have lacked the imagination or spirit that might have galvanized the East India Company and the Church Missionary Society into contributing more resources for pastoral and evangelical work there. Moreover, his horror of Tractarianism led him to look coldly on 'brotherhoods' and other proposed agencies of the high church for supplementing missionary work in the diocese. He presided over a period of increased church building, especially in the late 1850s and the 1860s, and in 1864 he helped to establish Bishop's High School at Poona, a future standard-bearer of European education in western India. He also articulated in a precise form the state's obligation (and hence that of the Indian people) to pay for the religious needs of the state's Christian servants. Generally, however, scholars of the Indian church have struggled to find anything outstanding about Harding's ecclesiastical administration, one concluding in the absence of evidence to the contrary that 'he appears to have been competent, devoted and sensible' (Gibbs, 170).

In 1867 poor health compelled Harding to take furlough and in 1869 he resigned the see. With his wife, Mary, third daughter of W. Tebbs, proctor in Doctors' Commons, he settled at Ore, near Hastings in Sussex. In old age his religious opinions mellowed and the clerical meetings at his house brought together clergy of widely differing views—a broadening of sympathies which was reflected in his late publication *Texts and Thoughts for Christian Ministers* (1874). He was a frequent preacher at St Mary's-in-the-Castle, Hastings, of which his friend the Revd T. Vores was incumbent. Harding died at his residence, St Helen's Lodge, Ore, on 18 June 1874, and was survived by his wife, but not by any children.

Wealth at death under £3000: probate, 8 July 1874, *CGPLA Eng. & Wales*

Harding, John [Allan Francis], **first Baron Harding of Petherton** (1896–1989), army officer, was born on 10 February 1896 at Rock House, South Petherton, Somerset, the second child and only son in the family of four children of Francis Ebenezer Harding, solicitor's clerk and local rating officer, and his wife, Elizabeth Ellen, daughter of Jethro Anstice, draper, of South Petherton. At the age of ten he was sent as a weekly boarder to Ilminster grammar school. His headmaster, Robert Davidson, was a sound scholar; in later years, when already a lieutenant-general, Harding would attribute his capacity for hard work to Davidson's example and his gift of logical thinking to hours spent construing Ovid with him. The family had not enough money to finance a career either in farming, his own preference, or the law, which Davidson recommended; he became at the age of fifteen a boy clerk in the Post Office Savings Bank. After attending night classes at King's College, London, he was promoted and in his new posting he was influenced by his superior in the office to apply for a commission in the Territorial Army. Two regular officers interviewed him and, although he was only eighteen and from a station in life different from that of most regular officers, they showed discernment and lack of prejudice in recognizing his quality. He was gazetted as second lieutenant in the 1st battalion 11th London regiment (the Finsbury Rifles) in May 1914.

Harding first saw action on 10 August 1915 in the Dardanelles campaign, where he was wounded after only five days. When Gallipoli was abandoned his battalion went to Egypt. Here he decided to apply for and in March 1917 was granted a regular commission as a lieutenant in his county regiment, the Somerset light infantry. By now he was specializing in machine-guns. In the third battle of Gaza he was divisional machine-gun officer, as acting major at the age of twenty-one, and was awarded the MC (1917). In 1918 he was made corps machine-gun officer at 21st corps headquarters. From experience on the staff he learned, among other things, the value of strategic deception, which was practised with great success in both wars by British commanders in the Middle East.

Between the wars Harding served in India from 1919 to 1927, first with the machine-gun corps and then with his regiment. In 1927 he married Mary Gertrude Mabel (*d.* 1983), daughter of Joseph Wilson Rooke, solicitor and JP, of Knutsford, Cheshire, and sister of an officer in his regiment. They had one son. From 1928 to 1930 Harding attended the Staff College, Camberley. In May 1933 he was appointed brigade-major of the 13th infantry brigade, which was chosen as the British contingent in the international force which supervised the Saarland plebiscite. It was a good preparation for the tasks of collaborating with forces of different nationalities which were to fall to him later in the Mediterranean theatre; he also made a special study of the Italian contingent, whose light tanks were to prove so ineffective in the desert. In July 1939, at the age of forty-three, he was given command of the 1st battalion of

John Harding, first Baron Harding of Petherton (1896–1989), by Elliott & Fry, 1952

his regiment, again in India. He earned a mention in dispatches for frontier operations, but his reputation ensured that he would soon be required for more serious service; in the autumn of 1940 he was posted to Egypt, where staff officers were required.

Harding's first task was to plan Compass, the offensive against the Italian Tenth Army organized by Sir A. P. Wavell; he went on to become brigadier general staff to Richard O'Connor, commanding the western desert force, later 13th corps. Compass was brilliantly successful, expelling all Italian formations from Cyrenaica and capturing 125,000 prisoners, at little cost in British casualties. Harding's services were rewarded with a CBE (1940) and a second mention in dispatches. When the counter-attack led by Field Marshal Erwin Rommel overwhelmed the British in Cyrenaica, and both O'Connor and his successor, Philip Neame, were taken prisoner, it was Harding who took temporary charge, organized the defence of Tobruk, and persuaded Wavell that it could be held. After the first two misdirected German attacks on the fortress had been repulsed, he was transferred to be brigadier general staff of a revived western desert force at Matruh and appointed to the DSO (1941).

For Crusader, the operation which saw Rommel's army defeated in the field and the siege of Tobruk relieved, Harding was brigadier general staff to A. R. Godwin-Austen, a robustly competent commander whose qualities were harmoniously supplemented by Harding's intellectual grasp of the often perplexing problems created by Rommel's ineffectual precipitancy. He received a bar to his DSO for this victory. In January 1942 he supported Godwin-Austen's correct appreciation of the capabilities of the German counter-offensive and found himself organizing for the second time a hurried withdrawal through western Cyrenaica. The differences between the army and the corps commanders being irreconcilable, Godwin-Austen was replaced. Harding considered he was also honour bound to ask for a transfer; he went to general headquarters as director of military training. He was promoted brigadier and then major-general in 1942.

In Cairo, Harding found himself frequently at variance, in practical matters of organization, with the chief of staff and his deputy. It was a relief to be given command, in September, of 7th armoured division, the original desert armoured formation. In the second battle of Alamein his division was originally employed on the southern flank, its purpose mainly to deceive General Stumme into maintaining the original faulty disposition of his armour; but, with the return of Rommel and the intensification of the struggle in the northern sector, 7th armoured was transferred there. In the pursuit that followed the successful change of plan, Harding fretted at the constraints imposed on him, but drove hard, always up with the forward troops. In January 1943, when approaching Tripoli, he was severely wounded by a nearby shell burst. He received a second bar to his DSO but was not graded fit to return to duty until ten months had passed.

In November 1943 Harding took command of 8th corps, having been promoted lieutenant-general, but six weeks later, by the personal decision of Sir Alan Brooke, chief of the Imperial General Staff, he was transferred to be chief of staff to Sir Harold Alexander, commander-in-chief, allied armies in Italy. This was an inspired appointment. Harding and Alexander not only got on well together but admirably complemented each other. Alexander was both an intellectual and a fighting soldier, combining a tactical grasp of the battlefield with the talent of an imaginative and fertile strategist. In Harding he had someone who could be relied on without reservation to implement his ideas.

After the capture of Rome, Harding was appointed KCB (1944). He chose to be known as Sir John Harding, that being the name he had used in the regiment and the family since 1919. After fifteen months as chief of staff he was at last, in March 1945, given the chance to command a corps in action; he took over 13th corps, with which he had served in the desert nearly five years earlier. The last battle in Italy was as hard-fought as the first. Harding's corps, originally on the British left, changed direction in the closing stages and pursued the retreating enemy up to and across the Po with a speed and effectiveness greater than he had been allowed to achieve after Alamein. That headlong pursuit brought him to Trieste on 2 May, just after the Yugoslavs, and to the centre of a long-lasting dispute with Britain's former ally. The acute stage of the confrontation with the Yugoslavs was overcome when they backed down in June, the first victory, it has been called, in

the cold war. For two years Harding ruled with popular acclaim over what became the free city of Trieste in reasonable tranquillity.

In the summer of 1947 Harding was appointed to southern command and two years later became commander-in-chief, Far East. He arrived just as what was euphemistically called 'the emergency' was beginning in Malaya; it was destined to last for twelve years. The foundations of the system by which this formidable Chinese communist insurrection was eventually suppressed were laid by Harding. Malcolm MacDonald, the special commissioner for the Far East, paid a firm tribute to the sagacity and tenacity of purpose with which Harding dominated the defence co-ordinating committee.

Promoted general in 1949 and appointed GCB at the beginning of 1951, Harding was transferred in August 1951 to command the British army of the Rhine. After the Russian take-over in Czechoslovakia and the Berlin blockade, Britain had begun rearming and NATO set up the Supreme Headquarters, Allied Powers in Europe (SHAPE), commanded by Dwight Eisenhower. The British army was being transformed. New defence plans were studied. Harding had to display prodigies of inter-allied tact, organizational flair, and determination. By contrast his period as chief of the Imperial General Staff, three years from 1952 to 1955, passed off with little more excitement than the Mau Mau uprising in Kenya and the beginning of the dissolution of the British base in Egypt. In November 1953 he was promoted field marshal and presented with his baton by the young queen.

As the end of the three-year term approached and Harding was making plans for his retirement, a proposal was made to him by the new prime minister, Sir Anthony Eden, that he should become governor of Cyprus. Eden considered that his experience in Malaya and Kenya would help him to control the demand for union with Greece, which was supported by the majority of Greek Cypriots. Harding accepted reluctantly, from a sense of duty. He realized at once that the only favourable prospect lay in negotiating with Archbishop Makarios for some acceptable form of self-government. The two men were well matched in quickness of intelligence; Makarios later declared that Harding was both the cleverest and the most straightforward of the governors he had known. Though circumstances denied them the pleasure of a successful agreement, Harding's measures brought greatly improved security in the island, with the Greek Cypriot insurgent leader, George Grivas, reduced to impotent clandestinity. After the two years' term for which he had originally stipulated, Harding was able to hand over in October 1957 to his successor, Sir Hugh Foot, a sound basis for the eventual achievement of Cypriot independence.

In January 1958 Harding was raised to the peerage in acknowledgement of his service in Cyprus. In retirement he accepted several directorships, including one on the board of Plesseys, a major supplier of telecommunication equipment of which he became chairman in 1967. In 1961 he was invited to become the first chairman of the Horserace Betting Levy Board. He was colonel of three regiments, the Somerset light infantry (from 1960 the Somerset and Cornwall light infantry), the 6th Gurkha rifles, and the lifeguards. He was awarded the honorary degree of DCL of Durham University (1958).

Harding was slight in build with a frank and courteous expression, clear blue eyes, and a trim moustache. His manner was open and friendly; throughout a career that could have excited jealousy no one spoke badly of him. Apart from a notable skill in personal relationships, his leading characteristic was a lucidity of intellectual apprehension and strength of reasoning that enabled him to grasp the essence of every problem. Those who served with him were exhilarated by the speed and certainty with which he arrived at the right solution. Lady Harding died in 1983. Harding died on 20 January 1989 at his home, The Barton, Nether Compton, Dorset. His son John Charles (*b.* 1928) succeeded to the title.

Harding, Sir Robert Palmer (1821–1893), accountant, was born on 18 February 1821, the son of Robert Harding (*d.* 1862), an auctioneer and house agent. It is thought that he had originally operated a fashionable West End hatters, a business which ran into difficulties, and according to legend a court official advised him to embark on a career in accountancy. He established a practice in July 1847, entered a partnership with Edward Pullein in August 1848, and by 1850 the firm operated from 16 Gresham Street in the City of London. In November 1857 Frederick Whinney, who joined Harding and Pullein as a clerk in December 1849, was admitted as a partner. In December 1858 James Boatwright Gibbons joined the partnership, which continued as Harding, Pullein, Whinney, and Gibbons from January 1859. Harding remained the senior partner until October 1883, when he retired from the firm, which by then was named Harding, Whinney & Co.

As a specialist in liquidations and bankruptcy work, Harding was in 1864 appointed a commissioner to inquire into the working of the Bankruptcy Acts. In 1866 he was appointed (in conjunction with William Turquand) liquidator of Overend, Gurney & Co., a long-term bank liquidation which was finalized only weeks before Harding's death. He also liquidated other large concerns, including Marylebone Bank (from 1853), Royal British Bank (1856), Mexican and South American Co. (1857), Professional Life, Life Assurance Treasury, National Assurance (Bank of Deposit) (all in 1861), Unity General Assurance (1864), and East India and London Shipping (1866). In 1866 the select committee on the limited liability acts revealed that Harding, Whinney, and Gibbons was handling the winding up

of sixty-one of the 259 companies then in liquidation. Such commitments appear to have presented Harding with limited scope for audit engagements. Nevertheless, he was the auditor of the Central Argentine Railway, and he secured Morgan Bros., the Battersea iron founders, as a client of the firm.

Harding was a founding father of professional accountancy in Britain. He was among the thirty-seven accountants to sign the draft rules of the Institute of Accountants in London, founded in 1870. Later, he became a founder of the Institute of Chartered Accountants in England and Wales (ICAEW), and was its vice-president when the charter of incorporation was granted to the body on 11 May 1880. Both Harding and the institute's first president, Turquand, actually received the charter. Together with Turquand, Whinney, Arthur Cooper, and Charles Kemp, Harding was delegated to negotiate with the Board of Trade on matters which might affect the accounting profession. Harding succeeded Turquand as the institute's president and served in this role during 1882–3.

In 1883, on retiring from Harding, Whinney & Co. and the ICAEW, where he simultaneously resigned his seat on the council and also his membership, Harding accepted appointment as chief official receiver in the bankruptcy department of the Board of Trade. Appointed because of his 'large experience in the administration of estates' (*The Accountant*, 9, 1883, 4), he served in the role of chief official receiver until his retirement in 1890, when he received a knighthood—the first awarded to a professional accountant—in recognition of his contribution to the department.

An obituary in a professional journal described Harding as 'a conspicuously able man, although, unlike his talented partner [Frederick Whinney], not showing to great advantage in public. But his powers of organisation and control were superb; but this will be apparent from the long list of large concerns he was engaged in' (*The Accountant*, 19, 1893, 1093). The firm which Harding co-founded became Whinney, Smith and Whinney in 1894.

In 1845 Harding married Marion Martha, the daughter of Joseph Ryle; they had six daughters and two sons. He died of a cranial tumour at 20 Wetherby Gardens, his residence in South Kensington, on 22 December 1893, and was buried on 27 December in Stanstead Old Church, St Margaret's, Hertfordshire, the burial place of his ancestors.

Harding, Samuel (1615/16–*c.*1643/1699), playwright, was born in Ipswich, Suffolk, the son of Robert Harding. He was educated at Exeter College, Oxford, having matriculated on 17 April 1635 aged nineteen as a sojourner; he graduated BA on 29 May 1638. In 1640 his tragedy *Sicily and Naples, or, The Fatal Union* was published at Oxford by a friend signing himself P. P., reputedly without Harding's approval. He took holy orders and became chaplain to a nobleman.

There is ambiguity about Harding's subsequent career. He may have died 'about the beginning or in the heat of the Civil War' (Wood, *Ath. Oxon.*, new edn, 3.32) or he may have been the Samuel Harding who was vicar of Norwich St Stephens from 1642 to 1662, and rector of Barford in Norfolk, from 1662 to 1699, also taking responsibility for Colney, Norfolk, from 1670 to 1694. On 30 April 1670 this Samuel Harding gained a licence to marry Rebecca Burwell, widow, of Codicote, Norfolk. F. D. A. BURNS

Harding, Sidnie Milana. *See* Manton, Sidnie Milana (1902–1979).

Harding, Silvester [Sylvester] (1745x51–1809), artist and publisher, was born at Newcastle under Lyme, Staffordshire, on 5 August 1745, the son of Sylvester and Mary Harding who married there on 11 August 1745. He was looked after by an uncle in London, but at the age of fourteen ran away and joined a company of strolling actors, with whom he played under an assumed name for some years. In 1775 he returned to London and married on 17 October 1775 at St Matthew's, Bethnal Green, Sarah, daughter of Dr William *Perfect of Town Malling, Kent. Harding took up miniature painting, exhibiting at the Royal Academy in 1776 and subsequent years. On 25 November 1776 he entered the Royal Academy Schools, when his age was given as twenty-five on '5 Augst last' (Hutchison). In 1786 he joined his younger brother Edward [*see below*] in setting up a book and printseller's shop in Fleet Street, where they published many prints designed by him and engraved by Bartolozzi, Delatre, Gardiner, and others. He was chiefly employed in drawing portraits of theatrical celebrities, and in copying ancient portraits in watercolours. The latter, executed with care and skill, illustrated various historical works issued by him and his brother. Their first publication of this kind was *Shakespeare illustrated by an assemblage of portraits and views appropriated to the whole suite of our author's historical dramas* (1789–93), consisting of 150 plates, issued in thirty numbers. In 1792 they moved to 102 Pall Mall, where they maintained a successful business. Here they produced Anthony Hamilton's *Memoirs of Count Grammont* (1793); *The Economy of Human Life* (1795), with plates by W. N. Gardiner from

designs by Harding; G. A. Bürger's *Leonora*, translated by W. R. Spencer (1796); and John Dryden's *Fables* (1797), both illustrated with plates from drawings by Lady Diana Beauclerk. The first volume of their extensive series of historical portraits, known as *The Biographical Mirrour*, with text by F. G. Waldron, appeared in 1795. Before 1798 the brothers dissolved partnership. Silvester moved to 127 and Edward to 98 Pall Mall; the former continued *The Biographical Mirrour*, of which he issued the second volume in 1798, and the third was ready for publication at the time of his death in 1809. Among other original works by Harding were a portrait of Sir Busick Harwood MD, engraved on a large scale in mezzotint by John Jones, and a set of six illustrations to Thomas Lodge's *Rosalynde, Euphues Golden Legacie* (the source of Shakespeare's *As You Like It*), with notes by F. G. Waldron, which were engraved and published by his brother Edward in 1802. The largest of his watercolour copies, *Charles II receiving the first pine-apple cultivated in England from Rose, the gardener at Dawney Court, Bucks, the seat of the duchess of Cleveland, from a picture at Strawberry Hill*, was engraved by R. Grave in 1823. He was well known to and much esteemed by the collectors of his time. Silvester Harding died in London on 12 August 1809; his obituary in the *Gentleman's Magazine* gives his age at death as 'about 64'. Of his children, George Perfect *Harding is noticed separately. His son Edward engraved some good plates for his father's publications, but died at the age of twenty in 1796. The print room of the British Museum possesses many copies of portraits by Silvester Harding.

Edward Harding (1755–1840), engraver and publisher, was the younger brother of Silvester Harding. He was born on 29 March 1755 at Stafford and baptized on 1 April at St Mary's, Stafford, the son of Sylvester Harding and his wife, Mary. He was apprenticed to a hairdresser, and after pursuing this occupation for a few years in London he abandoned it, and set up with his brother as an engraver and bookseller. After the dissolution of their partnership he carried on business alone, for a few years, employing W. N. Gardiner as his copier of portraits, and publishing, among other works, John Adolphus's *British Cabinet* (2 vols., 1799–1800); but in 1803 he was appointed librarian to Queen Charlotte, and resided first at Frogmore, and afterwards at Buckingham Palace. He became a great favourite with the queen, and grangerized many historical works for her amusement. In 1806 he published *Portraits of the Whole Royal Family*, engraved by Cheesman and others from pictures by Gainsborough and Beechey. After Queen Charlotte's death in 1818 Harding became librarian to the duke of Cumberland, afterwards king of Hanover, and held that post until his death, which took place at Pimlico, London, on 1 November 1840.

Harding, Thomas (1516–1572), theologian and religious controversialist, was born at Bickington in Devon. By a curious coincidence he attended Barnstaple grammar school, where John Jewel, later his chief literary opponent, was also to study. He won a scholarship at Winchester College, aged twelve, and in 1534 went to New College, Oxford, where he graduated BA in 1535 and took the degree of MA in 1542; he was admitted BTh in 1552 and inceptual DTh in 1554. He was a scholar of Hebrew, and in 1542 was elected the second regius professor of Hebrew by Henry VIII. At this point in his life Harding seems to have held at least some protestant opinions, becoming chaplain to Henry Grey, marquess of Dorset, and lending Frith's book attacking purgatory to one of his students, John Lowthe, subsequently a confirmed protestant. Harding admitted later in life, 'In certaine pointes I was deceived (I confesse) by Calvine, Melanchthon, and a few others' (Harding, *A Rejoindre*, sig. CCC ir), but maintained he was never a true protestant, despite the attempts of Pietro Martire Vermigli (known as Peter Martyr) to persuade him by inviting him to the private sermons he gave in Italian at home. Harding also asked of Jewel in 1566:

> if I were so ernest and so vehement a Gospeller, as now to discredite me you say I was, why did I freely and without al compulsion geve over the Kinges Hebrew lesson, which was so good and so quiet a living, that I might not depart from that Catholike Colledge, in which I was brought up, unto Christes church in Oxford, where the freshest Gospellers were then placed? (ibid., sig. CCC iiv)

This referred to the relocation of the regius chair to Christ Church when Henry VIII refounded the college in 1546, but since Harding resigned his chair in 1547 to become chaplain to Henry Grey, it seems doubtful that the avoidance of protestantism was his chief motive. Harding also claimed that the two Paul's Cross sermons he delivered during Edward VI's time were 'very much misliked' because they praised charity and good works, deplored the marriage of priests, and warned against the misuse of God's word (ibid., sig. CCC iiir). Yet the evidence suggests that his reformed opinions were clear, if perhaps moderate, and he was certainly considered a protestant by contemporaries. He wrote an affectionate letter to Bullinger dated 19 October 1551 in which he records staying with the reformer on his way to study in Italy three years earlier. Furthermore, in 1552 Edward VI sent letters encouraging the fellows of New College to appoint Harding as the next warden, although he was not in the end elected.

Within a year of Mary's succession, however, Harding had returned to Catholicism and had been ordained priest, publicly recanting his more reformed opinions in Oxford. When this became known Lady Jane Grey wrote to him from prison, declaring:

> I cannot but marvel at thee, and lament thy case, which seemed sometime to be the lively member of Christ, but now the deformed imp of the devil; sometime the beautiful temple of God, but now the stinking and filthy kennel of Satan; sometime the unspotted spouse of Christ, but now the unshameful paramour of Antichrist. (*Acts and Monuments*, 6.418)

Yet Harding's new allegiance stood firm: he became chaplain to John White, bishop of Lincoln, and chaplain and confessor to Stephen Gardiner, bishop of Winchester, both in 1555. He was made canon of Winchester in July 1554, and on 17 July 1555, Gardiner secured his appointment as treasurer of Salisbury diocese, where he was made canon on 8 October 1558. Gardiner also appointed him as one of the eight executors of his will in 1555.

On Elizabeth's accession Harding was identified as a favourer of the old religion, and his movements were limited by the ecclesiastical commissioners. He soon moved to Louvain, matriculating in the university there in 1563, and later became a professor at Douai. In exile he began to write the polemical works for which he is famous. The so-called 'Jewel–Harding controversy' arose from the 'challenge sermon', which John Jewel, bishop of Salisbury delivered at Paul's Cross in 1559, and from Jewel's *Apologia Ecclesiae Anglicanae* of 1562. Harding became Jewel's most important opponent, publishing seven vernacular works in the 1560s. *An Answere to Maister Juelles Chalenge* (Louvain, 1564) appeared first, with an augmented version published in Antwerp a year later. A further Paul's Cross sermon by Jewel prompted *A Breife Answere of Thomas Harding Touching Certaine Untruthes* (Antwerp, 1565). Jewel's work of 1565, *A Replie unto M. Hardinges Answeare*, resulted in the publication of two rejoinders, *A Rejoindre to M. Jewels Replie* (Antwerp, 1566), concentrating on the issue of 'private mass', and *A Rejoindre to M. Jewels Replie Against the Sacrifice of the Masse* (Louvain, 1567), giving a broader defence of sacramental doctrine. A second strand of debate arose over Jewel's *Apologia*, prompting Harding's work, *A Confutation of a Booke Intituled 'An Apologie of the Church of England'* (Antwerp, 1565), and after Jewel's reply in 1567 Harding published *A Detection of Sundrie Foule Errours* (Louvain, 1568).

Harding's books revealed great erudition, and quoted extensively from scripture and the early church fathers and councils. He was supported in the debate with Jewel by his fellow exiles Thomas Stapleton, John Rastell, Thomas Dorman, Nicholas Sander, and John Martiall, all of them former members of New College. The personal and academic flavour of the debate was further enhanced by the fact that Jewel was also an old Oxford contemporary. Harding suggested that he had never been much of a theologian, urging him to:

> remember, that your tyme hath ben most bestowed in the studie of humanities and of the latine tonge, and concerning divinitie, your most labour hath ben imployed to fynde matter against the churche, rather then about seriouse and exacte discussing of the truth. (Harding, *An Answere*, fols. 20*v*–21*r*)

Initially Harding dealt politely with his opponent, claiming in his work of 1564 that 'my hart served me not to deal with M. Juell myne old acquainted, felow and countreyman other wise, then swetly, gentilly and courteouslye' (ibid., fol. 6*r*). The debate soon became vicious, however, in part in reaction to the anti-Catholic rioting in the Low Countries in 1566, which seems to have shaken Harding. Yet he was also willing to admit the past abuses within the church, and could be broad-minded about reform. He maintained his humanist outlook, and grounded his opinions on scripture and the practice of the primitive church. He petitioned Rome, with Nicholas Sander, urging that English Catholics be given special permission to read books in the vernacular, and asking that an English translation of the Bible be produced. He was a leading member of the exile community, and seems to have been granted quasi-episcopal jurisdiction over the English community to absolve repentant heretics and arbitrate irregularities, which grant led to a publication by Thomas Norton in 1570, entitled *A bull graunted by the pope to Doctor Harding and other, by reconcilement and assoyling of English papistes, to undermyne faith and allegeance to the quene*.

Harding died at Louvain in 1572. His assets, even without his property in England, were valued at 1766 florins, and he left a range of bequests to English priests and nuns in exile, to his friends at Louvain, and £10 to New College in the event of a Catholic restoration. He was buried in the church of St Gertrude, Louvain, before the altar of the Holy Trinity, and his tomb bore a depiction of a man propping up a tottering church with his right hand.

Wealth at death 1766 florins, excl. property in England: de Vocht, 'Thomas Harding'

Harding, Thomas (*d.* 1648), church historian, is of obscure origins. He attended St John's College, Cambridge, where he graduated BA early in 1605, and proceeded MA in 1608 (incorporated at Oxford in 1611) and BD in 1629. He was appointed second master of Westminster School in 1610, and served until in 1622 he became rector of Souldern, Oxfordshire, a position under the patronage of his Cambridge college from 1623. In 1625 he married, by licence dated 14 May, Joyce Neile, *née* Stapleton (*c.*1600–1650),

widow of William Neile (*d.* 1624), chapter clerk of Westminster Abbey, and daughter of William Stapleton of Littywood, Staffordshire. The couple were praised in their epitaphs for their piety, charity, and hospitality; the parsonage at Souldern was rebuilt during their incumbency. Harding was renowned for his command of the Greek language, but chiefly for his unpublished history of church and state affairs, 'Annals of church affairs', which relates especially to England for the eight hundred years prior to 1626 (CUL, MS 2609). A committee of the House of Commons licensed and recommended it for publication in 1641, yet this, as with several efforts made after Harding's death, did not come to fruition. About 1645 Harding was said to have been sequestered from his living. He died on 10 October 1648 and was buried at Souldern, as his epitaph put it, 'in the tyme of the great Revolution and change of Church and State ... a true sonne of the church and professor of the auncient Catholique faith'. His widow died at Hart Hall, Oxford, on 28 May 1650 and was buried in the chancel of the university church, St Mary's.

Harding, William (1792–1886), antiquary and army officer, third son of Robert Harding (*d.* 1804) of Upcott, Pilton, Barnstaple, Devon, and his wife, Dionisia, daughter of Sir Bourchier Wrey, bt, of Tawstock, was born on 16 August 1792. He was educated at Blundell's School, Tiverton, from 1801 to 1807, and became an ensign in the North Devon militia. He became an ensign in the 5th foot in 1812, and a lieutenant in the 95th rifles in 1813. He served in the Peninsular War from August 1812 to the end of the campaign, including the siege of Burgos, capture of Madrid, and battles of Vitoria, Pyrenees, Nivelle, Nive, Orthez, and Toulouse. He subsequently received the Peninsular medal and clasps. He became captain of the 58th foot in 1823, major unattached in 1826, and retired as lieutenant-colonel by the sale of his commissions, having first exchanged to full pay in the 2nd foot in 1841.

After his retirement from the service, Harding lived for some years at Tiverton and then at Exeter. He wrote an excellent *History of Tiverton* (2 vols., 1847), which appears to have been his only published work. He was a magistrate, a fellow of the Geological Society, and a member of some local societies. He died at his home, Upcott, on 13 January 1886. His extensive manuscript compilations on Devon and Cornwall were deposited in the North Devon Athenaeum Library, Barnstaple.

Hardinge, Alexander Henry Louis, second Baron Hardinge of Penshurst (1894–1960), private secretary to Edward VIII and George VI, was born on 17 May 1894 at the British embassy, Paris, the younger son of Charles *Hardinge, later first Baron Hardinge of Penshurst (1858–1944), diplomatist, and his wife, Winifred Celina Sturt (1868–1914). He was educated at Harrow School (1907–11) and Trinity College, Cambridge, where he was recalled by a contemporary as 'perhaps the wildest of our set' (Rhodes-James, 129). His early wish to be an architect was not fulfilled. Instead he followed his father into the diplomatic service. His mother died in 1914, the same year as that in which his elder brother was killed in the First World War. Hardinge himself served in France and Belgium with the Grenadier Guards from 1916 to 1918, was badly wounded, won the MC, and became adjutant of the 4th battalion. Afterwards his health was never robust. He formally retired from the army in 1935. On 8 February 1921 he married Helen Mary (1901–1979), the only daughter of Lord Edward Herbert Gascoyne-*Cecil (1867–1918); they had two daughters and one son, George Edward Charles Hardinge (1921–1997), who succeeded him as third baron.

In 1920 Hardinge was appointed assistant private secretary to George V, serving under Arthur Bigge, Lord Stamfordham. Under the latter's tutelage he was trained in the unchanging, if reassuring, ways of George V's court, whose routine was inflexible, and he became 'the most correct of courtiers' (Rhodes-James, 129). Stamfordham believed that the king's private secretary worked directly with the sovereign, and the other private secretaries were not always taken into his confidence. Hardinge followed in this tradition. After the death of Stamfordham in 1931, Lord (Clive) Wigram became private secretary and Hardinge moved into quarters at St James's Palace in London, and in the Winchester Tower in Windsor Castle. He was appointed MVO (1925), CVO (1931), and CB (1934), and served George V until the king's death in January 1936.

In May 1936 Edward VIII appointed him private secretary in succession to the retiring Wigram after the new king's first choice, Godfrey Thomas—his private secretary as prince of Wales—had turned down the post. The elevation of Hardinge, who was sworn of the privy council in October, surprised those who thought that the new king would sweep away the more traditional of his father's courtiers. Unsurprisingly, Hardinge found the new monarch's informality uncongenial; particularly distressing for him was the king's lack of attention to official papers and relaxed attitude to their security, along with his failure to keep regular hours. The great matter of contention, however, was Edward VIII's friendship with Mrs Simpson; Hardinge later wrote of his concern in the early months of 1936 about her 'overwhelming and inexorable' influence (Donaldson, 184). When her intention to divorce Ernest

Simpson, and the king's determination to marry her, became plain, he attempted (initially, with little success) to galvanize Stanley Baldwin, the prime minister, into taking action. In October he wrote independently to Lord Tweedsmuir, the governor-general of Canada, to ascertain opinion there. When, in the same month, the anonymous 'Britannicus' letter was written to the editor of *The Times* by a British subject resident in New York, accusing the king of being 'an incalculable liability' to Britain's image abroad (Hardinge, *Loyal to Three Kings*, 121), Hardinge saw at once that it was his duty to warn him directly. He wrote to King Edward on 13 November, telling him that the silence of the British press on his relationship with Mrs Simpson was not going to be maintained; that the prime minister was meeting senior members of the government to discuss the matter; and that the resignation of the government would lead to a general election in which the sovereign's private life would be the main issue. To avoid damage to the crown, he urged the king to persuade Mrs Simpson 'to go abroad *without further delay*' (Rhodes-James, 133).

The king did not reply, but acknowledged the letter by telephone and asked to see the prime minister and others. Soon afterwards negotiations began which culminated in his abdication on 11 December. Hardinge, though still in charge of the king's normal business, was not asked for his advice, nor did the king take him into his confidence. The king channelled all his dealings with the government over the abdication through his confidant Walter Monckton, with whom Hardinge was also in touch. Hardinge, for his part, found the conduct of the king—especially in regard to the distress caused to his mother, Queen Mary—to be excusable only on the grounds of temporary derangement, a view wholly supported by Queen Mary herself.

Hardinge's prime duty during the abdication crisis was to place the interests of the crown as an institution before the wishes of an individual monarch—once Edward VIII's position as king had become untenable—and eventually to facilitate the smooth succession of the king's brother. Following the publication of memoirs by the duke and duchess of Windsor in the 1950s that showed his conduct in an unfavourable light, Hardinge went into print with his version of events in *The Times* (29 Nov 1958); after his death, his wife published a longer apologia, *Loyal to Three Kings* (1967). Both rebutted the charge that he had been a tool of Baldwin, of Geoffrey Dawson (the editor of *The Times*), and of Cosmo Lang (the archbishop of Canterbury) in a plot to remove the king; it was admitted that Hardinge had shown his November letter to the king to Dawson, but it was also asserted that its conception and wording were his alone.

Hardinge was retained in his post by George VI, and resumed his duties after taking a three-month recuperative break in India early in 1937. He was appointed GCVO and KCB that year. He had known the new king for many years, while Queen Elizabeth had been an intimate friend of both his wife and his sister, Diamond. It was he who had first warned the then duke of York about the possibility of his brother's abdication. Yet their relationship was not easy. Hardinge was astonished to discover the extent of the king's ignorance about public affairs, the business of the sovereign, and the constitutional limitations of crown authority. Hardinge's advice to the king was crucial, especially in the early years of the reign. In the first few years almost every public action, message, or statement from the king originated with Hardinge. But—once more—he found it difficult to adapt to a new king's working practices; George VI's failure to give him briefings after important meetings (as his father had invariably done) being a particular source of frustration. There were also political differences: the king supported the appeasement policy of the Chamberlain ministry, Hardinge did not. These differences led the king to turn to others for advice on political and constitutional matters, though after the German invasion of Bohemia and Moravia in March 1939 he paid more heed to his private secretary's view of international events. Hardinge's advice may have been crucial in the fortunate decision not to honour Chamberlain—as had been mooted—in the wake of the Munich agreement. How far he steered the king towards accepting Churchill as prime minister is a matter of dispute; he certainly acted as a bridge to anti-appeasement opinion, and perhaps herein lay his greatest achievement.

By the time of the king's morale-boosting visit to the troops in north Africa in June 1943, on which Hardinge accompanied him, he was already tired. The king and Queen Elizabeth were now more confident, and in a sense Hardinge had to go. Immediately on his return from north Africa, Hardinge was met at Northolt airport by Lascelles, who presented him with a letter of resignation. Lascelles was angry because he had felt unable to conduct the business of the private secretaries' office in Hardinge's absence. Hardinge maintained that he was with the king and thus still in control. But though Hardinge questioned Lascelles's resigning in the middle of a war, he realized that he could not work without Lascelles, and that, in any event, he would soon retire, his health being poor. A lengthy and acrimonious exchange of letters took place between the two private secretaries, with the eventual result that Hardinge resigned. George VI welcomed the opportunity of replacing him, noting in his diary: 'I know I shall miss him in many ways, but I feel happier now it is over' (Rhodes-James, 248).

Hardinge succeeded to his father's peerage in 1944. In retirement he was an active governor of St Bartholomew's Hospital in London and of the King's School, Canterbury, and he played a prominent role at the coronation of Elizabeth II. He died of liver cancer at his home, Oakfield, Penshurst, Kent, on 29 May 1960, and was buried at nearby Fordcombe church on 2 June.

Hardinge perceived his role as a lonely one: as the only person solely concerned with the interests of the sovereign, the private secretary must 'plough a lonely furrow', he once wrote (Bogdanor, 210). He was certainly hard-working, persevering, and fastidious, if at times inflexible. It might be argued that it was precisely this moral rectitude, as applied to the great issues of the time, that made

him of greatest service to the institution of monarchy in the long term. Historians have tended to judge him harshly, giving insufficient credit to his undoubted integrity or to his achievements in difficult circumstances.

Wealth at death £35,316 15*s.* 8*d.*: probate, 28 Feb 1961, *CGPLA Eng. & Wales*

Hardinge, Sir Arthur Edward (1828–1892), army officer, born on 2 March 1828, was the second son of Henry *Hardinge, first Viscount Hardinge (1785–1856), and Lady Emily Jane (1789–1865), seventh daughter of Robert *Stewart, first marquess of Londonderry, and widow of John James. Charles Stewart *Hardinge, second Viscount Hardinge, was his elder brother. Arthur was educated at Eton College, and commissioned as ensign in the 41st regiment on 7 June 1844. He exchanged to the 53rd regiment on 28 June, and in July went to India as aide-de-camp to his father, appointed governor-general. Hardinge served in the First Anglo-Sikh War, and was present at the battles of Mudki, Ferozeshahr, and Sobraon. He was mentioned in dispatches, and obtained a lieutenancy in the 80th regiment on 22 December 1845 and a company in the 16th regiment on 1 June 1849. On 22 June he exchanged to the Coldstream Guards as lieutenant and captain. He passed through the senior department at Sandhurst, and obtained a certificate.

Hardinge served on the quartermaster-general's staff in the Crimea from 8 March 1854 to 25 June 1856. He was present at the Alma with the 1st division as deputy assistant quartermaster-general, and was mentioned in dispatches. He was also at Balaklava and Inkerman and the fall of Sevastopol. After receiving a brevet majority on 12 December 1854, he became captain and lieutenant-colonel in his regiment on 20 February 1855. He was awarded the Légion d'honneur (fifth class) and the Mejidiye (fifth class), and was made CB on 2 January 1857. On 25 May 1858 he became brevet colonel. On 30 December 1858 Hardinge married Mary Georgiana Frances, eldest daughter of Lieutenant-Colonel Augustus Frederick Ellis, second son of the first Lord Seaford. They had three daughters and a son, Arthur Henry *Hardinge (1859–1933), Foreign Office official and ambassador.

Hardinge was assistant quartermaster-general at Shorncliffe and Dublin from 1 October 1856 to 29 July 1858, when he was appointed equerry to Prince Albert, on whose death in 1861 he became equerry to the queen. His subsequent military career lacked any active service or notable achievement. Following various promotions, appointments in the United Kingdom and India, and honours, he was promoted general in 1883. He commanded the Bombay army from 1881 to 1885, and was governor of Gibraltar from 1886 to 1890.

Hardinge died at 10 Belvedere, in Weymouth, on 15 July 1892 from injuries he had received in a carriage accident there nine days before. He was buried at Fordcombe church, near Penshurst, Kent.

Hardinge, Sir Arthur Henry (1859–1933), diplomatist, was born on 12 October 1859 at 10 Chester Square, London, the only son of General Sir Arthur Edward *Hardinge (1828–1892) and his wife, Lady Mary Georgiana Frances Ellis (1837–1917). As a boy he served as a page to Queen Victoria, to whom his father was an equerry. He re-established links with the court through his marriage on 4 November 1899 to Alexandra Mina (*b.* 1870/71), goddaughter of the princess of Wales, and daughter of Major-General Sir Arthur Ellis, a member of the household of Edward VII, who became godfather to their second son. The couple also had a daughter.

At Eton College, where he was known as Hoppy for his peculiar gait, Hardinge was remembered for the elegance of his Latin verse. At Balliol College, which he entered in 1876, he took a second class in classical moderations, but followed with a first in modern history and, in 1881, a fellowship at All Souls. Renowned for his sparkling wit, he had a lasting affection for Oxford, timing home leaves wherever possible to attend college meetings and gaudies at All Souls, and corresponding on college business with Warden Anson until he reluctantly relinquished his fellowship in 1894.

Hardinge entered the Foreign Office in July 1880, before he had taken his degree, with a nomination from Lord Salisbury, who remained a patron. As an undergraduate he had travelled widely. He subsequently seized every opportunity to travel in remote places and was privately commended by Salisbury for his political reporting. Fluent in French from an early age, his success in Foreign Office language examinations provided welcome additions to his salary.

After spells in the Turkish and German departments of the Foreign Office, Hardinge's first overseas appointment in 1883 was to Madrid, under Sir Robert Morier. In 1885, following a short period in England as a précis writer to Lord Salisbury, Hardinge followed Morier to St Petersburg as his private secretary and subsequently travelled extensively in Russia and central Asia. There followed a series of appointments to Constantinople, under Sir William White, in 1887; to Bucharest in 1890; as a companion to the tsarevich (the future Nicholas II) to India, where he crossed swords with the redoubtable Lord Harris, governor of Bombay, for which he was commended by Lord Salisbury; and to Cairo in 1891 under Sir Evelyn Baring. Of these, Constantinople made such an impression that it became his ambition to become ambassador to the Porte. When the post went to another (Gerald Lowther) in 1906 his disappointment was such that he nearly resigned, but was dissuaded by Curzon, an old Balliol friend.

Before this, however, in 1894, Hardinge had been appointed to Zanzibar, as political agent and consul-general, a post which he had accepted with delight. To this was added in 1895 the position of commissioner for the new East Africa Protectorate. The administration of the little known territory between Mombasa and Lake Victoria, acquired for the strategic purpose of building a railway to Uganda, was a challenge to which Hardinge rose with enthusiasm. Whether defeating an Arab rebellion at the coast—and then championing the cause of dispossessed Arab slave owners—or demonstrating the efficacy of a maxim gun to potentially hostile 'chiefs', Hardinge revelled in his independence and freedom from protocol. The railway having passed through the protectorate, and rudimentary administration having been established, Hardinge left Mombasa in October 1900 amid general acclamation. The demands of more traditional diplomacy returned when he took up his next appointment, as minister to Persia, later that year. This gave him further opportunities for travel, including a visit to the gulf with Curzon, now viceroy of India, but this period also saw the early death of his first son.

Summoned to Balmoral when on leave in 1905, Hardinge recounted in his memoirs that, on the urgings of his father-in-law 'anxious for the sake of our two children and his daughter's health', he was invited by Edward VII to become minister at Brussels. His heart 'was and remained for long afterwards in the Mohammedan East' but 'domestic considerations overcame my personal preferences' and 'I decided to accept the King's offer' (Hardinge, *Diplomatist in the East* 350). From that time, it seems (to quote from a contemporary) 'he was not quite in the same bright spirit we had known', and it became clear that he was not to reach the highest positions in the service that had earlier been predicted (*The Times*, 29 Dec 1933). Hardinge's European posts after he left Brussels in 1911—minister at Lisbon from 1911 to 1913 and ambassador at Madrid from 1913 to 1920—seem to have become increasingly onerous. He retired in 1920, having been knighted in 1897 and made KCB in 1904 and GCMG in 1910.

The deaths of his two sons, in separate and tragic accidents, and his own failing health marred Hardinge's later years. His *Life of Lord Carnarvon* is thought by some to have been altered by another hand before publication in 1925. His own memoirs, *A Diplomatist in Europe* (1927) and *A Diplomatist in the East* (1928), gave excellent individual portraits of his colleagues, and flashes of his old humour. He died at his home, 31 York Avenue, Mortlake, Surrey, on 27 December 1933 and was buried in the churchyard of Fordcombe church, near Penshurst, Kent.

Hardinge, Charles, first Baron Hardinge of Penshurst (1858–1944), diplomatist and viceroy of India, was born at Dufferin Lodge, Highgate, Middlesex, on 20 June 1858, the second son of Charles Stewart *Hardinge, second Viscount Hardinge (1822–1894) of South Park, Penshurst, Kent, and his wife, Lady Lavinia (*d.* 1864), daughter of George Charles Bingham, third earl of Lucan, one of the field marshals tainted by the 'Valley of Death' disaster of the Crimean War. Hardinge's other grandfather, Henry *Hardinge, first Viscount Hardinge, had also been a field marshal and from 1844 to 1848 was governor-general of India, a post to which his grandson aspired from an early age. It was not an unnatural ambition. The family had little wealth or land and knew only the professional route to acquiring honours; service to the nation was bred into the Hardinge boys.

Education, early career, and marriage Charles Hardinge, only six when his mother died, was raised by his father in a well-meaning if austere fashion at South Park before being sent, at age ten, to Cheam School, and in 1873 to Harrow, where he played cricket for the school at Lord's. A childhood hernia having disqualified him from the navy, he entered Trinity College, Cambridge, in 1876. He graduated with third class honours in the mathematical tripos in 1880. In the same year he joined the Foreign Office, attached initially to the German department. He served as attaché at Constantinople under George Joachim (later

Charles Hardinge, first Baron Hardinge of Penshurst (1858–1944), by Sir William Orpen, 1919

Viscount) Goschen and subsequently under Lord Dufferin (1881–4), as third secretary at Berlin (1885), and as second secretary at Washington (1885–6), from which last post he returned after a prolonged bout of malaria. After six months in Whitehall in the Eastern department, he went as secretary to Sofia (1887–9), and from there to Constantinople again, as senior second secretary under Sir William Arthur White.

Throughout these years he had been courting his first cousin Winifred Selina, nicknamed Bena (1868–1914), daughter of Henry Gerard Sturt, first Baron Alington, of Crichel, Dorset, a racing magnate and close friend of Edward, prince of Wales. Family opposition to the match was high on account of their cousinhood and Hardinge's relative indigence, but on 17 April 1890 they were married, and when Hardinge returned to Constantinople, Winifred went with him. It was a successful partnership. Hardinge quickly came to rely on his wife's loyal affection, and Winifred's beauty and good humour softened the impact of Hardinge's physical stiffness and off-putting regard for dignity and show. Moreover, her personal friendship with the princess of Wales (the future Queen Alexandra), whose intervention with Lord Alington had expedited their marriage, thrust Hardinge into an exceptionally well-connected circle. Winifred joked about her contacts, but there was some truth in her playful assessment of her husband's subsequent success:

> My family knows Lord Salisbury well and, as everyone knows, Lord Salisbury cannot remember names. So each time there's a new post to be filled, Lord Salisbury says to one of his staff: 'What's the name of that diplomat Winifred Sturt married?'—and it's still Charlie Hardinge, so then he gets the post. (Hardinge, *Loyal to Three Kings*, 18)

In September 1892 Hardinge was transferred to Bucharest as chargé d'affaires (1892–3), where he negotiated the marriage of Ferdinand, crown prince of Romania, with the seventeen-year-old Princess Marie of Saxe-Coburg and Gotha, granddaughter of Queen Victoria. It was an advantageous match in more ways than one, for when the lonely princess asked for Winifred as her companion, the princess of Wales rescued the couple from permanent Romanian exile by claiming Winifred as her own lady-in-waiting. From Bucharest, Hardinge also negotiated an extradition treaty between Britain and Romania and procured the entry of British cotton goods, previously banned, into Romania. The trading agreement was not an isolated achievement; throughout his career Hardinge was considerably ahead of his colleagues in ranking British commercial needs high in his understanding of a diplomatist's duties.

In 1893, at the request of his old chief Lord Dufferin, Hardinge was appointed head of the chancery in the Paris embassy. In 1895 Lord Rosebery obtained a CB for him and in 1896, encouraged by this early recognition, he swapped Parisian elegance for promotion and became the first secretary to the legation at Tehran, a post which schooled him in Britain's long-running rivalry in Asia with Russia. He had by now earned a reputation as a sound, hard-working career diplomat. Something of his professionalism can be seen in the delight of J. R. Preece, British consul at Esfahan, at having Hardinge for his boss. To Lord Curzon at the Foreign Office, Preece enthused:

> Hardinge is without exception the very best chief I've yet served under ... for the first time, I know where I am and what I can do and how far I may expect to be backed. Questions are answered and business is not allowed to take care of itself. It is a real pleasure to work under such a man. (BL OIOC, Curzon MSS, MS Eur. F111/64, fol. 26)

While Hardinge expected to enjoy every privilege due to seniority in the Foreign Office, he had few qualms about trampling on the like claims of others, and in 1898 he accepted Lord Salisbury's offer of the secretaryship of the embassy in St Petersburg, even though it meant leap-frogging over seventeen senior colleagues. Anglo-Russian relations were poor, exacerbated by competition over Persia and Afghanistan and by the Russian press's delight at Britain's early discomfiture in the Second South African War, but the Hardinges were popular at the imperial court, and Hardinge was already sufficiently worried about German expansion, and Russian fears of the same, to press slowly for Russian recognition of their common, anti-German interests.

The Foreign Office and Edward VII In 1903 Hardinge accepted nomination as one of the four under-secretaries at the Foreign Office. It was an unlikely appointment which had been pressed upon the foreign secretary, Lord Lansdowne, by *Edward VII and was also supported by Hardinge's predecessor in the job, Sir Francis Bertie, who was a close friend and shared with him an ambition to

transform the Foreign Office servants from their traditional position of clerks and copyists into policy advisers of real weight. The king further favoured Hardinge by appointing him his adviser on his first major diplomatic initiative, a state visit to Portugal. Again, it was an unusual choice, as a roving sovereign was usually accompanied by a cabinet minister, not a civil servant, and Hardinge embarked on the tour in March 1903 knowing that Lansdowne was offended by his unexpected elevation. The tour was a grand success, not least for Edward's impromptu decision to visit France and attempt a *rapprochement* in Anglo-French relations. Much to the surprise of the cabinet, the king's genial courting of the French laid the diplomatic ground for the Anglo-French agreement of 1904, and, crucially, tipped the balance in favour of a British pursuit of a Franco-Russian alliance to keep the growing German threat at bay. The king and Hardinge were as one on this policy and Edward ever after treated Hardinge as one of his confidential advisers, letting it be understood that he was not to be posted beyond the continent. For Hardinge honours flowed from the royal tour. In 1904 he was sworn of the privy council and appointed KCMG and KCVO, and in May of that year, only fifteen months after his departure as first secretary, he returned to St Petersburg as ambassador. He arrived in the midst of the war with Japan, with Russian belligerence towards Britain high, especially in the navy which was using the hostilities as an excuse to attack British merchant ships. In October 1904 the crisis deepened when reports were received that Russia's Baltic fleet had fired upon British fishing trawlers off the Dogger Bank in the North Sea, killing several Britons, on the grounds that the fishing vessels had been shielding Japanese torpedo boats. Hardinge's task was a delicate one. He knew that Britain would demand appropriate reparation, but also that pro-war ministers in Russia believed that Britain was secretly aiding her Japanese treaty partner and itched for an excuse to declare outright war on her. Relying heavily on his good relations with Count Lamsdorff, the foreign minister and one of Tsar Nicholas's more peaceable advisers, Hardinge nudged both Russia and Britain towards a mutually face-saving appeal to the Hague tribunal. In this he was ably supported at home by Lansdowne and the king, and was additionally rewarded by the latter, who appointed him GCMG. By early 1905, like most independent observers, he thought that Russian defeat was inevitable, but believed that although this would weaken the value of the Franco-Russian counterweight to Germany it would also make war with Russia over Afghanistan unlikely. With this in mind, Hardinge urged Lansdowne to get the Anglo-Japanese alliance extended (which was done in August 1905), so that at the war's end Britain could face Russia with a stern but friendly offer of alliance, safe in the knowledge that Russia no longer posed much threat in the east.

Permanent under-secretary Hardinge left St Petersburg in January 1906 to become permanent under-secretary of the Foreign Office. The ambassadorship was possibly the high point of his diplomatic career; he had won widespread acclaim as Capability Hardinge and was subsequently judged to have set up the conditions for the Anglo-Russian agreement of 1907. His new post necessitated a huge cut in salary (from £8000 to £2800), but it was mitigated by another mark of honour from the king, who made him GCVO. Moreover, it was an office of real weight. The Foreign Office was now at the peak of its powers and it was accepted that the permanent under-secretary should have a say in policy making, a situation brought about partly by the relative inexperience of the Liberals' foreign secretary, Sir Edward Grey, and also by the king's great respect for Hardinge which had effectively turned him into Britain's ambassador at large. Tours with the King to Spain, Italy, and Russia were accounted political successes, but to Germany less so. Diplomatic niceties aside, Hardinge rarely saw anything of merit in nationalities other than his own, and at the Foreign Office he became the leading exponent of anti-German sentiment.

Viceroy of India In 1910 Hardinge was appointed viceroy of India and raised to the peerage as Baron Hardinge of Penshurst, and was also made GCB, GCSI, and GCIE. The appointment was widely acclaimed, and Lord Curzon, his predecessor-but-one in the post, was especially cheered by the choice, seeing in Hardinge a man to carry on his own thwarted policies. India, however, posed an unfamiliar challenge to Hardinge. His customary approach to problem-solving of relentless, conscientious application was insufficient to see him through the morass of emerging nationalism, sporadic terrorism, and, subsequently, the peculiar circumstances of war. He began well. Although a conservative by temperament, he regretted the aggravation caused by unwinnable sedition trials and pressured the Bengal government to reduce its reliance on repressive legislation. Attempts to foster technical education, to increase the Indianization of the subordinate civil service, and to defend the rights of Indians in South Africa also won him admirers, as did his support for new universities at Aligarh and Benares, Muslim and Hindu institutions respectively. He was wary, however, of addressing the most contentious issue of the day: Curzon's 1905 partition of Bengal which had turned Bengali Hindus against the government and triggered a ferocious campaign of anti-British bombings and assassinations. The new king-emperor, George V, was less cautious. He proposed visiting his Indian empire in December 1911 and wanted a reconciliation with Bengal to feature in the package of boons that he would announce at a durbar in Delhi. Hardinge held out against a reversal of the partition until, in June 1911, his home member, Sir John Jenkins, suggested that the durbar be used to announce the transfer of the imperial capital from Calcutta to Delhi. Hardinge leapt at the idea, for, by taking the capital away from Calcutta, Bengal could be reunified without seeming to reward the Hindus of Bengal for their terrorist agitation. There was a chance too that the Muslims, who by the reunification would lose the majority they had been given in the new province of East Bengal, might be placated by

the recognition of the old Mughal capital of Delhi as modern India's premier city. Each idea had been mooted before, but as a package the reunification of Bengal and the transfer of the capital became Hardinge's own scheme, and he now addressed the exhausting arrangements for the durbar with new enthusiasm. Remarkably, news of the scheme was not leaked before George V proclaimed it in regal splendour at the Red Fort on 12 December 1911. Even Curzon was not told of the scheme beforehand, and while the British community in Calcutta expressed predictable outrage at their city's downgrading, this was as nothing to his howls of betrayal over the reversal of the partition. Henceforth, in public and private, Curzon sniped at Hardinge's viceroyalty, destroying their friendship and embittering their future together at the Foreign Office.

The building of Delhi, and the viceroy's near escape Whatever the criticism, Hardinge was determined that the new capital would succeed, deftly heading off London's not unreasonable worries about the cost of the move. He chose the exact location for the city, 3 miles to the south of old Delhi, and he kept a close, sometimes overbearing, watch on the principal architects—Edwin Lutyens and Herbert Baker—neither of whom was his own choice. By December 1912 the government was ready to make the formal move, and on the 23rd of that month Hardinge arrived in state at Delhi railway station and, with Winifred, mounted a caparisoned elephant to process to the Red Fort. The atmosphere was celebratory and, by Hardinge's own request, security was light. Suddenly, from the rooftop of a bank in Chandni Chauk, a member of a Bengali terrorist cell lobbed a devastating needle bomb into the viceroy's howdah, killing instantly one of his servants and ripping an 8 inch gash in the viceroy's back and neck, exposing the shoulder blade beneath the shredded muscles. Fading in and out of consciousness, Hardinge handed his blood-stained speech to an aide and ordered the ceremonies to go ahead as planned, before being rushed to the new viceregal lodge for surgery.

Remarkably, within two months, and driven almost purely by will, Hardinge was back at work. But his spirit never recovered; years of Machiavellian politicking in the courts of Europe had perhaps blinded him to the fact that peasants too could dissemble, and his bewilderment at the ingratitude of India corroded his confidence. Worse was to come. In July 1914 Winifred died suddenly in London, after an operation to remove a malignant tumour, and in the following December his elder son, Edd, succumbed to wounds received in early fighting in France. (A nephew and seven of his aides-de-camp were also to be sacrificed to the war.) Hardinge's daughter Diamond, a sparkling, good-humoured teenager, stepped into her mother's shoes as vicereine. She lifted the gloom of the viceregal residence with delightfully irreverent practical jokes, including the making of a floured apple-pie bed for the maharaja of Gwalior, but Hardinge was inconsolable. For years no-one dared mention Winifred's name in his presence and it was only his iron sense of duty that kept him at his post for a year after the expiry of his term.

The First World War and Mesopotamia It is against this background that Hardinge's failure of judgment over Mesopotamia needs to be seen. From the beginning of his viceroyalty Hardinge's military policy suffered from inconsistencies. The European diplomat in him warned that war with Germany, and probably Turkey also, was inevitable and that Indian soldiers would eventually have to be committed to the Middle East, but in matters of military reform he acted with the government of India's traditional concern for economy and concentrated his efforts on trimming what he saw as the bloated inefficiency of the Indian army. When war broke out in August 1914 he pressed for Indian soldiers to be sent to France to fight alongside Europeans, arguing with prescience that the rejection of the military colour bar would boost India's contribution to the war effort more than any other act. He was initially doubtful about the move to commit Indian troops to the Middle East, but after the first successes of the Mesopotamian expeditionary force in 1914–15, he became convinced of the 'prestige value' of a big victory such as the taking of Baghdad. His own pre-war knowledge of the Indian army's deficiencies should have led him to query the optimistic projections of the commander-in-chief of 'force D', General Sir John Nixon, but Hardinge admired Nixon as 'a great thruster' (Goold, 'Lord Hardinge and the Mesopotamia expedition', 933), and in October 1915 the representations of Nixon and Hardinge together overcame the cabinet's reservations about authorizing a further advance up the Tigris to Baghdad. One month later, at the disastrous battle of Ctesiphon on 22–4 November 1915, General Charles Townshend lost 4600 of his 14,000 men and was forced to retreat to Kut-al-Amara. There the remnants of force D's 6th (Indian) division, desperately weakened by disease and exhaustion, remained in a state of siege until they finally surrendered to the Turks in April 1916. The hopes of a great victory had been turned into humiliation at the hands of 'Orientals'.

Return from India and final years Hardinge had left India just weeks before the awful climax of the Mesopotamian campaign and, after chairing the royal commission into the causes of the Irish uprising of Easter 1916, returned to his old post of permanent under-secretary of the Foreign Office. He was unhappy and frustrated in the job; under the premiership of Lloyd George it was an office in which civil servants no longer had the power they had enjoyed before the war. Increasingly shrill and authoritarian, he regarded the official commission of inquiry into the Mesopotamian disaster as a Labour plot to destabilize the government. The commission's report, published in June 1917, was critical of Hardinge's role in the affair and Hardinge duly offered his resignation, but he bitterly resented what he saw as unjust and vindictive criticism. His resignation was not accepted (although Curzon let it be known that he thought he should have gone anyway), and it did not ultimately prevent him from being appointed, in November 1920, as ambassador to Paris. This final posting, a long-cherished goal of Hardinge's, allowed his talents for diplomacy to shine again, effecting some repair to his damaged reputation. In prickly, occasionally farcical,

encounters with Curzon, he managed to soften the Foreign Office's policy towards France, but in December 1922, faced with a climate of deteriorating Anglo-French relations, he decided to retire. For all their personal animosity, Curzon had respected Hardinge as ambassador and was unexpectedly fulsome in bidding him farewell from the job.

After Paris, Hardinge settled at Oakfield, a house he had purchased near South Park. He had few interests outside his work and his retirement activities were semi-political and diplomatic ones. He represented India at the League of Nations in Geneva in 1923–4, was sometime chairman of the Kent Conservative Association, and enrolled himself as a special constable during the general strike. He revisited India in 1931–2 at the invitation of the viceroy, Lord Irwin, a trip which prompted him to publish a book of Indian hunting reminiscences, *On Hill and Plain* (1933). Always reserved, he had only a few close friends, and the picture of his latter years is one of increasing loneliness, especially following the death in 1927 of his beloved daughter Diamond. The two memoirs which, after much revision, he authorized for posthumous publication, *Old Diplomacy* (1947) and *My Indian Years, 1910–16* (1948), proved to be chiefly catalogues of achievement and self-justification, and confirmed what many of his former colleagues saw in him as an unbecoming degree of self-regard. The books stand today as testimony to the totality of the transformation of diplomacy effected by the First World War. Even at the time of their publication they appeared to refer to a bygone age.

Hardinge died at Oakfield, aged eighty-six, on 2 August 1944, and was buried in the grave of his wife at Fordcombe churchyard, Kent, on 5 August. The peerage descended to the only one of his three children to survive him, his younger son Alec, Sir Alexander Henry Louis *Hardinge (1894–1960), who achieved the unusual distinction of serving as private secretary to three kings in succession: George V, Edward VIII, and George VI.

Wealth at death £71,087 15*s.* 2*d.*: probate, 13 Dec 1944, *CGPLA Eng. & Wales*

Hardinge, Charles Stewart, second Viscount Hardinge of Lahore (1822–1894), politician, was the eldest son of Henry *Hardinge, first viscount (1785–1856), and Lady Emily Jane (1789–1865), seventh daughter of Robert Stewart, first marquess of Londonderry, and widow of John James. He was the elder brother of Sir Arthur Edward *Hardinge; he was born in London on 12 September 1822. He was educated at Eton College and destined for the army, but while a boy suffered a severe accident which compelled him to use an artificial leg for the rest of his life. In 1840 he matriculated at Christ Church, Oxford, and graduated BA in 1844. Within a month after taking his degree he accompanied his father to India as private secretary, and was with him during all the period of his governor-generalship. From 8 August 1851 to 1856 he was Conservative MP for Downpatrick, and after his succession to the peerage (in 1856) he was under-secretary for war in Lord Derby's second administration (March 1858 to March 1859). He never held office again, but always remained a supporter of the Conservative Party. In 1868 he was appointed a trustee of the National Portrait Gallery, and in 1876 chairman of the trustees, an office which he actively filled until his death. He was also a trustee of the National Gallery from 1874. Owing to his father's friendship with Sir Francis Grant (1803–1878) and Sir Edwin Henry Landseer, Hardinge was brought up among artistic influences, and was himself no mean painter in watercolours. In 1847 his friends in England published a folio volume entitled *Recollections of India*, consisting of twenty lithographs from his drawings made in India, particularly interesting for its portraits of Sikh chieftains and views of scenery in Kashmir, then an almost unknown country, which he visited in company with John Nicholson (1821–1857). In 1891 he wrote a brief memoir of his father for the Rulers of India series (Oxford, Clarendon Press).

Hardinge married, on 10 April 1856, Lavinia, third daughter of George Charles Bingham, third earl of Lucan, with whom he had a family of five sons, including Charles *Hardinge, who became viceroy of India, and three daughters; she died on 15 September 1864. Hardinge died at his home, South Park, near Penshurst, on 28 July 1894, and was buried in the churchyard of Fordcombe, Kent.

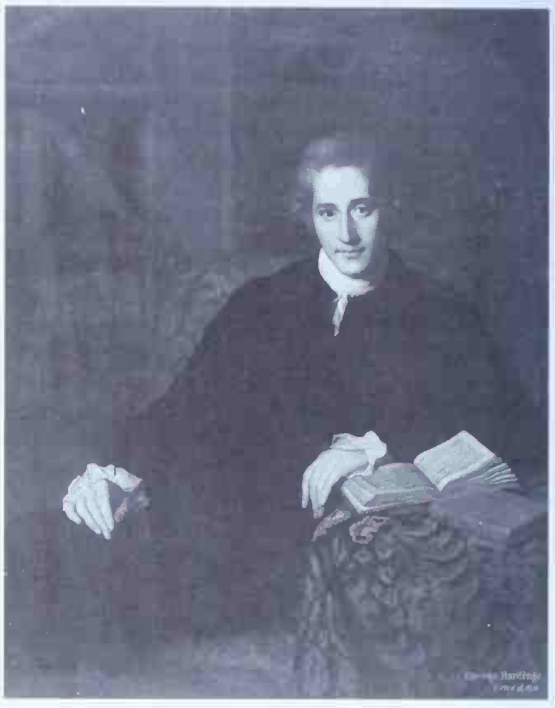
Hardinge, George (1743–1816), judge and writer, was born on 22 June 1743 at Canbury Manor, near Kingston, Surrey, the eldest surviving of nine sons and three daughters of Nicholas *Hardinge (1699–1758), barrister, Latin scholar, and politician, and Jane (1708–1807), daughter of Sir John Pratt of Wildernesse in Kent and sister of Charles *Pratt, first Earl Camden. Hardinge was educated at home from an early age before moving to Kingston grammar school under Richard Woodesdon. He attended Eton College between 1753 and 1760, under the instruction of Dr Edward Barnard, where he 'took up, in the boarding-house, a rage for acting plays' (Nichols, *Illustrations*, 3.9). Two years before he graduated from Eton, Hardinge's father died, bequeathing to his fifteen-year-old son the whole of the Canbury estate. On 14 January 1761 Hardinge was admitted at Trinity College, Cambridge. Despite his taste for literature, Hardinge aspired to follow in his father's footsteps and was accordingly admitted at the Middle Temple on 15 May 1764 and called to the bar on 9 June 1769. That year, he also obtained an MA from Cambridge by royal mandate, and in November was elected a fellow of the Society of Antiquaries. By 1770 he had served for four years as secretary of commissions to his uncle, Lord Chancellor Camden, and the following year became commissioner of bankruptcy, a post he held until 1782. He had also become a friend and correspondent of Horace Walpole, with whom he shared his literary and antiquarian enthusiasms. In 1776 Hardinge visited France and Switzerland and the following year, on 20 October, he married Lucy Long (*d.* 1820), daughter of Richard Long of Hinxton, Cambridgeshire. The couple reputedly separated in later life and although they had no children of their own, Hardinge did adopt George Nicholas *Hardinge, son of his brother Henry Hardinge. Soon after his marriage, Hardinge moved to Ragman's Castle at Twickenham, close to his friends Walpole and the poet Richard Owen Cambridge.

In his literary pursuits Hardinge 'had a rare humility for an author, being ready at all times to adopt his friends' suggestions in preference to his own expressions' (*GM*, 1st ser., 86/1, 1816, 563). His major works include *Rowley and Chatterton in the Shades* (1782); *A series of letters to the Right Hon. E. Burke as to the constitutional existence of an impeachment against Mr Hastings* (1791), which was printed in three editions; *The essence of Malone, or, The beauties of the fascinating writer extracted from his immortal work ... 'Some account of the life and writings of John Dryden'* (1800), published in two editions; and *Another Essence of Malone* (1801). Besides several other minor works like *The Russian Chiefs: an Ode* (1813; reprinted 1814), Hardinge also edited his father's Latin verses in one volume in 1780, published *The Filial Tribute*



George Hardinge (1743–1816), by Nathaniel Dance, exh. RA 1769

(1807) in honour of his mother, and made a profound contribution to John Nichols's *Literary Anecdotes* and *Literary Illustrations*, including extensive biographies of Daniel Wray and Sneyd Davies. Hardinge also wrote several unpublished works, including memoirs of Sir John Pratt, Lord Camden, and Richard III, and his various speeches, prose, and poetry were collected together in three volumes by Nichols and published posthumously as *Miscellaneous Works* (1818). In April 1788 he was elected a fellow of the Royal Society.

Literature provided Hardinge with a diversion from his professional endeavours. In April 1782, the year he produced his first major prose, Hardinge was appointed solicitor-general to Queen Charlotte and in early 1794 was promoted to the post of attorney-general to the queen, a position he held until his death. Although he had several unrealized ambitions during his career, including aspirations for the lord chancellorship of Ireland in 1789, a futile attempt to gain auditorship at Greenwich Hospital in 1791, and a desire to replace Henry Beaufay at the Board of Control in 1795, Hardinge nevertheless managed to distinguish himself within his profession. His vindication of Sir Thomas Rumbold as counsel in the House of Commons and his speech at the bar of the House of Lords as counsel for the directors of the East India Company in 1783 were considered 'patterns of elegance and ingenuity' (*GM*, 1st ser., 86/1, 1816, 470), and Lord Camden, having heard the latter speech, declared: 'I ... am able to pronounce upon my judgement that in language, wit and voice he has no superior at the bar' (Namier). Some years later, in April 1792, Hardinge was counsel for those charged for damages

by Joseph Priestley after the riots at Birmingham and his speech on this occasion was later described as 'a masterpiece of legal ingenuity' (*GM*, 1st ser., 86/1, 1816, 470). For nearly thirty years, between 1787 and 1816, he served as chief justice of the counties of Brecknockshire, Glamorgan, and Radnorshire, duties he fulfilled with 'the truest sentiments of humanity and legal discrimination' (ibid.). Hardinge was, in fact, a man of great humanity and benevolence in other aspects of his life, having collected more than £10,000 for charitable purposes over the years and serving as vice-president of the Philanthropic Society.

Despite the burdens of his professional duties, Hardinge sought political office, and unsuccessfully asked for Walpole's help in 1782. He finally secured his political ambitions in 1784 when he was returned as MP for Old Sarum by the patronage of Thomas Pitt, first Baron Camelford. He delivered his first speech on 8 June 1784 in a debate on a Westminster petition and he was subsequently returned to parliament in 1787, 1790, 1796, and 1801. In parliament Hardinge was a regular though surprisingly inconsistent orator, described in June 1786 by Daniel Pulteney as an able speaker, 'better indeed than I could have ever imagined, as I have heard him very indifferent two or three times before' (Namier). He voted in favour of William Pitt's motions for reform in the mid-1780s and was prominent in his support of Pitt's resolution on the Regency Bill on 16 December 1788. In subsequent years he often sided with the government, on issues such as the impeachment of Warren Hastings in 1790, the Aliens Bill in 1793, and the suspension of habeas corpus in 1795. Hardinge's political career came to an abortive end in 1802 when Old Sarum was sold. Forced into retirement, Hardinge spent his final years conducting his duties as a Welsh judge and devoting time to his literary interests.

Hardinge was dubiously notorious for borrowing books without promptly returning them, but this was considered by some to be his 'worst crime' (*DNB*). His pride in his connections to the powerful irritated Walpole, who on 12 September 1795 called him an 'out-pensioner of Bedlam' (Walpole, *Corr.*, 35.636.). Others could find cause for great praise for Hardinge: 'so various were his powers that he was a judge, a Member of Parliament, a poet, a prose writer, and a writer of sermons. ... no one had a finer choice of words and few a more graceful delivery' (*Annual Biography and Obituary*, 1817, 299). He died of pleurisy on 26 April 1816 at Presteigne in Radnorshire and was buried in the family vault at Kingston, Surrey. He was survived by his wife, Lucy, although, allegedly as a consequence of Hardinge's 'very irregular' (Thorne) behaviour, she had parted from him by 1805. MICHAEL T. DAVIS

Hardinge, George Nicholas (1781–1808), naval officer, was born on 11 April 1781, the second son of the Revd Henry Hardinge (1754–1820), rector of Stanhope, co. Durham, and his wife, Frances, daughter of James Best of Wrotham, Kent. He was the grandson of Nicholas *Hardinge and elder brother of Henry *Hardinge, first Viscount Hardinge of Lahore. He was early adopted by his uncle, George *Hardinge, attorney-general to the queen, and was sent to Eton College, where he was in the lowest form. In 1793 he entered the navy; he was midshipman of the *Meleager* (32 guns, Captain Charles Tyler) at Toulon and the capture of Corsica, and served under the same captain in the prize-frigate *San Fiorenzo* (40 guns). He was also present in the *Diomede* (60 guns) in Hotham's action off Hyères and in various operations on the coast of Italy, and afterwards in the *Aigle* (38 guns), in which he was wrecked on the Isle of Planes, near Tunis, on 18 July 1798. He was in the *Foudroyant* (80 guns, Captain Sir Edward Berry) at the capture of the *Guillaume Tell* on 30 March 1800, and obtained his lieutenancy on board the *Tiger* (Commodore Sir Sidney Smith) off Alexandria, during the Egyptian campaign of 1801 (in which he obtained the Turkish gold medal).

In 1802 Hardinge became a master and commander, and in 1803 commanded the bomb (that is, mortar) vessel *Terror* off Boulogne. Early in 1804 he was appointed to the sloop *Scorpion* (18 guns), in which he distinguished himself by the cutting out of the Dutch brig-corvette *Atalante* in Vlie Roads, Texel, on 31 March 1804. For this action he received post rank, and was presented by the committee of Lloyd's with a sword of 300 guineas' value. In August he was posted to the *Proselyte* (20 guns), an old collier, and ordered to the West Indies with convoy; but his friends, fearing the effects of the West Indian climate on his health, obtained his transfer to the *Valorous*, which proved unfit for sea. Hardinge next accepted the offer of the frigate *Salsette*, said to be just off the stocks at Bombay. On his way out he served on shore at the capture of the Cape of Good Hope, but on arrival at Bombay found the *Salsette* only just laid down. He was promised command of the frigate *Pitt* (late *Salsette*), and in the meantime was appointed to the frigate *San Fiorenzo* in which he made several short and uneventful cruises. The *San Fiorenzo* left Colombo to return to Bombay; but on 6 March 1808, off the south of Ceylon, they sighted the notorious French cruiser *Piedmontaise*—'which had long been the terror of the Indian Seas' (*GM*)—in pursuit of some Indiamen. A three days' fight followed, in which both ships were handled with bravery and skill. Hardinge was killed by a grape-shot on the third day, 9 March, during a well-contested action of 1 hour 20 minutes, which ended when the French ship surrendered. The captures of the *Atalante* and *Piedmontaise* were among the actions for which the war medal was granted to survivors some forty years later.

Hardinge, who died unmarried, was buried at Colombo with military honours, and was voted a public monument in St Paul's Cathedral, London.

Hardinge, Henry, first Viscount Hardinge of Lahore (1785–1856), army officer and governor-general of India, was born at Wrotham, Kent, on 30 March 1785, the third son of Henry Hardinge (1754–1820), rector of Stanhope, co. Durham (a living then worth £5000 a year), and his wife, Frances, daughter of James Best of Park House, Boxley, Kent. Captain George Nicholas *Hardinge (1781–1808) was his brother. His grandfather was Nicholas *Hardinge (1699–1758).

Early life Hardinge passed much of his childhood at The Grove near Sevenoaks amid a deeply religious tradition and in the care of two maiden aunts, and went to school at Durham. In July 1799 he joined as ensign the Queen's rangers in Upper Canada. On returning to Britain in 1802, in March he purchased a lieutenancy in the 4th foot, went on half pay, and became a captain by purchase in the 57th foot in April 1804.

A formative military career From February 1806 to November 1807 Hardinge attended the senior department of the Royal Military College, High Wycombe, and passed his examination. He became deputy assistant quartermaster-general in Sir Brent Spencer's force, which was sent, in December 1807, to join troops in Portugal under Sir Arthur Wellesley (later duke of Wellington). Hardinge took part in the battles of Roliça and Vimeiro (where he was badly wounded); and he was present at Corunna (16 January 1809) when Sir John Moore was killed, and had by then established a sound reputation in which his 'conduct and courage' (Hardinge, 14) were admired.

After a brief return home Hardinge was promoted major and took up an appointment as deputy quartermaster-general of the Portuguese forces in April 1809. Wellington soon noted his qualities; he asked General Beresford to send him 'Hardinge or some other staff officer who has intelligence, to whom I can talk about the concerns of the Portuguese army' (*DNB*). Promoted lieutenant-colonel in 1811, Hardinge saw many of the key engagements of the Peninsular War, most notably the hard-fought action at Albuera (22 May 1811) where he urged General Cole to ignore Beresford's caution and advance with the 4th division to seize the day, and at Vitoria (21 June 1813) where he was again badly wounded. The precise circumstance of Hardinge's intervention at Albuera has been debated but his actions further reinforced his reputation as a key and intrepid staff officer; he was awarded the Portuguese order of the Tower and the Sword. Despite the discomfort of his wounds from Vitoria he continued at the front and, in 1814, commanded the Portuguese brigade at the battles of Orthez and Toulouse. He was promoted, without purchase, to a lieutenant-colonelcy in the 40th foot in April 1814 and transferred to the 1st foot (later the Grenadier Guards) the following July; he was made KCB in January 1815, and received foreign orders.

Henry Hardinge, first Viscount Hardinge of Lahore (1785–1856), by Sir Francis Grant, 1849 [replica]

After the defeat of France in 1814 Hardinge attended the Congress of Vienna, but once Napoleon's escape from Elba was known Wellington dispatched him to observe the emperor's movements. Hardinge was next attached to Marshal Blucher's staff, as brigadier-general, to liaise with the Prussians; at the battle of Quatre-Bras (16 June 1815) Hardinge's left hand was shattered, and it was later amputated at the wrist. The wound, which was initially poorly treated, prevented him serving at Waterloo (18 June) but he was again with Blucher in Paris two weeks later. In February 1816 Hardinge became assistant quartermaster-general to the British forces while retaining a liaison role with the Prussians; he remained in Paris until the withdrawal of allied forces in November 1818. Hardinge's efforts won him the Prussian order of Military Merit and Wellington's gift of Napoleon's captured sword.

Soldier turned politician Hardinge returned to the Grenadier Guards in 1818 and was elected a tory MP for the city of Durham at the 1820 general election. On 10 December 1821 he married Lady Emily Jane (1789–1865), seventh

daughter of Robert Stewart, first marquess of Londonderry, sister of the second Viscount Castlereagh and widow of John James, former British minister in the Netherlands. Theirs was a loving and happy marriage; Hardinge gladly accepted Walter, Emily's son by her first husband, and they had four more children, including Sir Arthur Edward *Hardinge and Charles Stewart *Hardinge, second Viscount Hardinge.

From 1823 to 1827 Hardinge was clerk of the ordnance and worked to improve military administration. In April 1827 he retired from the army and in July 1828, once Wellington was prime minister, he became secretary at war in succession to Lord Palmerston, though without a seat in the cabinet. He held this post until July 1830; he found the office in 'a state of great efficiency' (Bourne, 132) but still proposed to reduce its staff by a seventh. Overhauling the system of military pensions to reward longer service, he established basic principles that endured for decades. He voted in favour of Catholic emancipation. In 1830 he supported Lord Ellenborough during the debate on the latter's celebrated divorce from Jane Digby; Lady Hardinge was sister to Ellenborough's first wife, Lady Octavia Stewart.

Between July and November 1830 Hardinge briefly became chief secretary for Ireland. He was initially unsure about taking on such a difficult post, but Wellington had no doubts of his ability: 'Hardinge will do; he always understands what he undertakes, and undertakes nothing but what he understands' (Hardinge, 31). In the House of Commons Hardinge had to respond to Daniel O'Connell's attacks.

Hardinge was re-elected as MP for Durham four times. At the 1830 dissolution he was considered as a candidate for Northumberland but was adopted by Newport in Cornwall, where he was returned in the 1830 and 1831 elections. In 1830 he was promoted major-general. Newport lost its member under the 1832 Reform Act, but Hardinge was next adopted by neighbouring Launceston, which he represented until he left for India in 1844. He was a leading opponent of the 1832 Reform Act. In one heated debate he told ministers: 'the next time you hear those guns they will be shotted and take off some of your heads' (Brock, 192).

Hardinge returned as chief secretary for Ireland in Peel's 1834–5 administration, and successfully introduced a settlement of the Irish tithe question. He was again secretary at war in Peel's government from 1841 to 1844, and influenced Peel over British policy in Afghanistan; he also supported the annexation of Sind. He was promoted lieutenant-general in 1841.

Hardinge had by now supplemented a distinguished military record with a solid political career. He had earned the reputation of a competent, generally popular, and indefatigable political administrator and was described as plain, straightforward, and a just if somewhat partisan politician. He had also become a close confidant of several key figures: he acted as Wellington's second in the duke's duel with Lord Winchilsea and, although of a fundamentally tory outlook, he maintained a close relationship with Peel and saw in him the only future for the Conservatives after the Reform Act.

Appointment as governor-general of India Early in 1844 the East India Company's court of directors recalled governor-general Lord Ellenborough in opposition to Peel's wishes. In a calculated move of compromise it offered the governor-generalship to Hardinge, although it seems that he was also the most generally accepted candidate. In addition, the court was attracted by Hardinge's background. As a senior officer of considerable experience he was no warlike adventurer and was more conscious of the limitations of military power than civilians such as Ellenborough. Peel agreed; Hardinge would work hard for peace despite the pressures on the ground. Peel concluded that 'I think he is by far the best man that could be named' (*Letters*, 4).

Hardinge himself was not so sure, having already declined going to India as commander-in-chief. His reservations were based on his age (at fifty-nine he would be the oldest governor-general to date), worries over his wife's health and children's welfare (she and the children would almost certainly have to remain at home), and an absorbing interest in redeveloping his house at South Park, near Penshurst, Kent, for retirement. Peel eventually persuaded Hardinge to accept. No doubt Hardinge was also swayed by the awareness that the governor-generalship would crown his career with one of the most important posts within the British empire and provide a lucrative addition to his family's fortune. On hearing of Hardinge's decision Lord Ripon, president of the Board of Control, wrote: 'You have made a noble sacrifice in accepting what has been offered to you. The country is deeply indebted to you' (*Letters*, 4).

Arrival in India Hardinge characteristically set about familiarizing himself thoroughly with Indian affairs and read much 'with profit' (*Letters*, 28). He arrived in Calcutta on 22 July 1844, having travelled by way of Egypt, accompanied only by his son Charles and his wife's nephew Robert Wood (as private secretary and military aide-de-camp respectively). Having adjusted to the climate Hardinge established a rigorous pattern of work. He rose at 5 a.m. and retired at 10 p.m.; official business occupied ten or twelve hours a day, usually preceded by a short ride at daybreak. Generally Hardinge found his head 'clearer' and that he could 'work longer than in England' (*Letters*, 32). He did, however, stop the practice of government work on Sundays. Hardinge established regular discussions with his council and normally divided his time between the governor-general's residences in Calcutta and Barrackpore. By December 1844 he was noting that 'I never knew what it was really to work until I came here' (*Letters*, 6); he hoped that he was working 'to good purpose' (ibid., 39), and disclosed that 'I relieve my mind by the reflection that I am doing my duty both to the public and my family' (ibid., 95). Once under way Hardinge took the work in his stride.

Apart from an insurrection in Kolhapur in western India, the first sixteen months of Hardinge's incumbency

were peaceful, and he concentrated on the question of education. Hardinge was impressed by the calibre of Indians attending government colleges who could quote 'Shakespeare fluently—aye and [explain] accurately all the most difficult passages' (*Letters*, 7). He resolved that 'in every possible case a preference shall be given in the selection of candidates for public employment to those who have been educated in the institutions thus established' by government, individuals, and societies (Hardinge, 63). This was an important stimulus to education in both English and the vernaculars.

Other issues, such as law reform, continued misgovernment in Oudh, the overhaul of the Bengal salt tax, the initial steps towards railway construction, the cultivation of American cotton, the suppression of human sacrifice, the powers of the governor-general *vis-à-vis* his council, and the state of the military establishment also took up time. Hardinge oversaw the settlement of Sind with the flamboyant governor Sir Charles Napier as well. Ripon wrote approving of all that Hardinge had done in acting in accordance with his instructions which, the governor-general noted, 'I have never received' (*Letters*, 47). Turmoil was, however, growing beyond the company's borders in the Punjab. Hardinge studied events there carefully and cautiously augmented the frontier garrisons so that, by November 1845, they were doubled in strength. He recorded how he wrote 'all the most important letters myself, leaving the originals in my handwriting in the office so that the extent of my interference can be traced at any future time' (*Letters*, 52).

Crisis in the Punjab and the First Anglo-Sikh War After Ranjit Singh's death in 1839 the Sikh military leadership was riven with dissensions. In 1843 power passed to those antagonistic to British influence, while their opponents reckoned a clash with the company might destroy their rivals. By November 1845, therefore, most observers held that conflict was inevitable although Hardinge still hoped to preserve both the peace and the buffer policy on the north-west frontier. It was his firm view that 'with such an overgrown empire we want consolidation and not extension of territory' (*Letters*, 110).

On 11 December 1845, without warning, the Sikhs crossed the Sutlej, thereby initiating a war that became the pivot of Hardinge's tenure in India. They clashed with British forces at an inconclusive encounter at Mudki (18 December) and the bloody battle of Ferozeshahr (21–2 December) which the company won but at considerable cost. At Aliwal (28 January 1846) and Sobraon (10 February) British forces regained the initiative but the Sikhs had proved to be far more formidable than the British expected.

Hardinge moved up to Ambala for the conflict and, somewhat unusually, insisted on serving in the field as second-in-command to Sir Hugh Gough, the commander-in-chief, about whose rashness he had doubts. On 13 December 1845 a proclamation was issued declaring all Sikh possessions east of the Sutlej forfeit. The campaign forced a re-examination of Hardinge's frontier policy. Casualties among European troops were high, and he lacked confidence in the sepoys and doubted that sufficient force was available to prolong the war. Continued fighting might allow Afghan incursions towards Peshawar and stir unrest within the company's existing territories. Hardinge was also reluctant, following the Afghanistan débâcle of 1841–2, to share a frontier with Muslim power to the north-west:

> We shall keep what we have confiscated on this side [of the Sutlej], make them pay the expenses of the war, clip their wings and lessen their power, but I have always been averse to annex the territory [and] I still hope to keep up a Sikh nation that is a Hindoo people as contradistinguished from a Mohamedan. (*Letters*, 9–10)

Hardinge was equally reluctant to endorse a client state 'which by British bayonets enables a native govt. to grind the people to dust' and it seemed that annexation was unsound on financial grounds. Another concern was Hardinge's worry about reactions at home to the annexation of the Punjab (*Letters*, 142).

Hardinge had to make some difficult choices without access to officers versed in the ways of the Punjab in whom he had real trust. Major Broadfoot and Lieutenant Nicholson, political agents, had been killed at Ferozeshahr and his secretary Frederick Curry, whom he held in considerable respect, was a civilian while the governor-general conceived the problem mainly in military terms. Hardinge opted for a weakened but independent Punjab, and a consolidated and defended frontier. The war was ended by treaties on 9 and 16 March 1846. The Sikh army was reduced, the Cis-Sutlej states, Jullundur Doab, and Kashmir (granted in turn to Gulab Singh) were surrendered to the company, and an indemnity of £500,000 exacted. Hardinge wrote 'a diminution of strength of such a war-like nation on our weakest frontier, seems to me imperatively required' (Yapp, 543).

In practice, however, the settlement seemed unlikely to endure. Sikh military power remained beyond company control, and the presence in Lahore of a British agent and troops to support the young maharaja (Dulip Singh) provided a focus for friction. Hardinge himself recognized inconsistencies in the policy; he told Ripon that the settlement would allow easy annexation if required. By December 1846 an additional treaty (of Bhairowal) was needed. British troops would remain until 1854 and the agent, Henry Lawrence, took on supervision of the Sikh government through a regency council. Hardinge accepted these changes with great reluctance but the only alternative seemed annexation. He noted: 'It is in reality annexation brought about by the supplication of the Sikhs without entailing upon us the present expense and future inconvenience of a doubtful acquisition' (Yapp, 548). Hardinge later argued he had secured the best possible military frontier for British India in response to criticism that his Punjab policy had been too moderate.

Hardinge visited Lahore in February 1846 and was cordially received by the Sikh leadership. He next travelled to Simla, where he found it difficult to settle back 'to red boxes and the humdrum business of the state' (*Letters*, 156) because, despite the strains, the campaign had been an

invigorating experience. In May 1846 Hardinge learned that he had been created a viscount in recognition for his services in India; Ripon told him that, at home, 'Everybody of whatever party, admires every part of your conduct' (Yapp, 556), although, in fact, the initial reactions to Mudki and Ferozeshahr had been horror at the scale of British losses.

Closing months in India Hardinge was by now increasingly concerned by political events at home; he always regarded Peel's motives to be both 'praiseworthy and high minded' (*Letters*, 91). On 29 June 1846 Peel resigned as prime minister in the wake of the corn law crisis. Hardinge was not attracted by the prospect of serving a whig government under Lord John Russell likely to contain old political adversaries such as Auckland; he offered his resignation but Russell refused it, urging him to remain to see the Punjab settled. Others, including Peel, also pressed him to stay. Hardinge relented and continued working hard ('I must omit nothing under Whig masters'; *Letters*, 11–12), giving particular attention to budgetary and military policy. He continued, however, to plan for a return home as soon as practicable and was unsettled by news of his wife's illness.

In January and February 1847 Hardinge again visited the Punjab and the Cis-Sutlej states before viewing progress on one of his favourite projects, the Ganges Canal. He hoped the canal would 'be some redemption of our character, for we have hitherto done very little for the people'. At this time the governor-general conducted an angry exchange with Gough over the conduct of the battle at Ferozeshahr and, although relations were restored, Hardinge's feelings were hurt. Renewed attention was given to civil administration such as the introduction of tea culture, measures against infanticide, and improved financial management in the wake of Anglo-Sikh War expenses. On 5 April he wrote home reporting his task in India was nearly complete, and saying that he intended to leave by the end of 1847. Hardinge stuck to this decision despite renewed requests for him to stay, especially as he had concluded that both Sir John Hobhouse (president of the Board of Control) and Lord Palmerston (foreign secretary) were against his Punjab policy (*Letters*, 13–14).

Hardinge left Simla for Calcutta on 26 October 1847. Overall he believed he had made a constructive contribution to Indian government: 'Every part of the country is quiet—the harvest most abundant and the crops for the spring most promising, the river [Ganges] crowded with boats and trade increasing' (*Letters*, 15). On 12 January 1848 he relinquished the government of India to his successor, the earl of Dalhousie, returning home with a tiger for Queen Victoria which had allegedly eaten thirteen people and certainly gave Lady Dalhousie fleas.

After India Notwithstanding his desire to retire Hardinge was asked by Russell's government to use his political and military experience in Ireland amid the Smith O'Brien riots of 1848. In July 1850 he attended Peel in his dying hours. From March to September 1852 he was master-general of the ordnance. Concerned at the possible French invasion threat he initiated an inquiry into the effectiveness of existing coastal batteries against steam vessels. He resisted military conservatives' demands for a return to smooth-bore muskets and—influenced by his Anglo-Sikh War experience to a belief in large-calibre field guns—he augmented and improved the artillery. In 1852 he also wrote a series of memoranda on military policy, one of which has been described as possibly the most comprehensive and important survey of the requirements of a full army produced between 1815 and 1854 (Strachan, 104–6).

After Wellington's death, in March 1852 Hardinge, allegedly because a royal favourite, succeeded him as general commanding-in-chief, and became field marshal in October 1855. Encouraged by Prince Albert, he carried out much needed reforms—including introducing Enfield rifles, improving army training with the establishment of a permanent camp at Aldershot and the School of Musketry at Hythe, and introducing heavier coastal artillery—but, overall, his new responsibilities proved onerous. Hardinge's age had begun to tell and he proved somewhat reluctant to interfere with the arrangements of his illustrious predecessor. He shared, therefore, some of the blame for army shortcomings in the Crimean War. He contributed to the 1855 committee of inquiry, accepting that he had responsibility for the equipment, stores, transport, and medical arrangements. The army did, however, also depend on its field commander (Lord Raglan) and commissariat, of whose precise arrangements Hardinge was unaware. It was Hardinge's view that no force had ever left Britain as well equipped, and he drew supporting analogies from experience in the Napoleonic wars although he also accepted that Wellington's troops were in a better state of overall efficiency. Although the inquiry laid most of the blame on the cabinet, Hardinge suffered some public criticism and could not be expected to accept the report without mixed feelings; when at Aldershot to present its conclusions to the queen, on 8 July 1856 he suffered a paralytic stroke. He never fully recovered, and on 15 July 1856 he resigned and was succeeded by George, duke of Cambridge, as general commanding-in-chief. He died on 24 September 1856 at his residence, South Park, and was buried on 1 October at Fordcombe church, near Penshurst. His wife survived him. In a general order to the army issued on 2 October 1856 Queen Victoria paid a fitting tribute to Lord Hardinge's long and varied career when she wrote of his 'valuable and unremitting services' (Hardinge, 196).

Hardinge, Nicholas (1699–1758), Latin poet and politician, was born at Kingston, Surrey, on 7 February 1699, the eldest son of Gideon Hardinge (*d.* 1712), vicar of Kingston, and his wife, Mary Westbrooke. He was educated at Eton College (1711–18) and King's College, Cambridge (BA 1722, MA 1726), and, with a reputation as a fine classical scholar, became a fellow of the college in 1722. While at Cambridge his analysis of a college dispute led him to take up the study of law. He was called to the bar in 1725, and in 1731 accepted the post of chief clerk to the House of Commons. He was the first person to receive a regular salary for his services and was responsible for reporting on and modernizing the parliamentary journals. In the following year he was appointed law reader for William, duke of Cumberland, for whom he wrote his *Essay on Regency*, and later he became the duke's attorney-general.

On 19 December 1738 Hardinge married Jane, the daughter of Sir John *Pratt, the lord chief justice; they had nine sons and three daughters. Hardinge was MP for the borough of Eye, Suffolk, between 1748 and 1758, during which time (17 April 1752) he resigned as chief clerk to become joint secretary of the Treasury. Alongside his political career he maintained his academic interest in the classics. He wrote Latin verses throughout his life, though no collection was published until after his death, on 9 April 1758. His eldest son, the politician and barrister George *Hardinge, published a volume entitled *Latin Verses by the Late Nicholas Hardinge, Esq* (1780), which was later expanded to incorporate Hardinge's English verse and other writings, and published as *Poems, Latin, Greek, and English* (1818).

Hardisty, Roger Michael (1922–1997), haematologist, was born on 19 September 1922 in Finchley, Middlesex, the only child of William Henry Hardisty (1878–1938), insurance assessor, and his wife, Ada Winifred, *née* Woodcock (1882–1972). Educated at Oundle School and at St Thomas's Hospital medical school, London, he qualified in 1944. After house appointments he did his national service, mostly in Germany and Denmark, as medical officer to the Welsh Guards and the British mission in Denmark. While stationed in Hamburg he met his future wife Jytte Jarnum (*b.* 1924), of Copenhagen. They married on 24 March 1947 and had two children, Jan Botli, later a photographer, and Jocelyn Sandra, later a music teacher. Following the completion of his national service Hardisty returned to work as a junior clinical pathologist at St Thomas's. He became MRCP in 1949 and proceeded MD in 1950. In 1950–51 he held a University of London travelling scholarship to Arhus, Denmark.

From 1956 to 1958 Hardisty was senior lecturer in clinical pathology at the Welsh National Medical School in Cardiff. In 1958, despite having had no formal training in paediatrics, he was appointed consultant haematologist at the Hospital for Sick Children, Great Ormond Street, London. Over the next thirty years he built up the first paediatric haematology department in Britain. This rapidly acquired an international reputation, and Hardisty trained many young paediatric haematologists from Britain and overseas. His own interests were in platelets, both in haemostasis and in initiating the processes that lead to the formation of a blood clot. In addition he ran a major centre for the treatment of haemophilia and similar disorders, and he also became involved in the management of childhood leukaemia.

By the time Hardisty was appointed to Great Ormond Street it was known that leukaemia might respond to treatment with drugs such as steroids or antimetabolites. Nevertheless, the disease inevitably recurred within a short period. The suggestion was then made that a positive response might be prolonged if more than one drug was administered at a time, and even that carefully controlled schedules might eventually produce cures. Hardisty became one of the prime movers in the development of clinical trials to determine the best combination of agents, serving first as secretary and then as chairman of the Medical Research Council's working party on childhood leukaemia. The initial difficulties were formidable: the toxic effects of the drugs added to the miseries of the disease, which might anyway recur a few months later in another guise—as a lump in the testicle or ovary, for instance, or as leukaemic meningitis (which Hardisty was

the first to describe). As a result both the parents and the medical carers of the children involved were sometimes reluctant to have them treated with the new agents. Nevertheless, Hardisty showed the same attributes as his pioneering colleagues in transplantation surgery, termed 'the courage to fail'. His humane but obsessive persistence was rewarded when a trial disclosed that 70 per cent of patients with acute lymphoblastic leukaemia had survived long term. Another reward came at his retirement in 1987: a secretly organized tea party held in the Great Ormond Street boardroom attended by many survivors from leukaemia.

Hardisty was also highly influential in the development of the wider aspects of the emerging new specialism of clinical haematology. He was a founder member and later president of two societies in the field, as well as vice-president of the International Society on Thrombosis and Haemostasis. The co-author of two notable books, *Bleeding Disorders: Investigation and Management* (1965) and *Blood and its Disorders* (1974), he was an outstanding editor of the *British Journal of Haematology*. He loved pellucid prose, and would spend hours revising his own and his juniors' drafts (and shunned the reprehensible but common practice of gift authorship—the mere addition of the chief of department's name to papers with which he had not been directly concerned). He could also conduct seminars in Danish and French (for example, during his sabbatical as visiting professor at the University of Paris in 1978–9), and the French government made him a *chevalier* of the national Order of Merit in 1988.

Hardisty was quintessentially a Thomas's intellectual—irreverent, disdaining the then division between juniors and consultants, wearing bright clothes, and respecting the primacy of the National Health Service. Above all, throughout his life he saw research, followed by more research, as the priority. His outside interests were in photography, the theatre and music (Sir Thomas Beecham being a lifelong hero), travel, and food and wine. Although he continued some research into platelets as emeritus professor at the Royal Free Hospital, London, after retirement, he also devoted much time to bookbinding, which he took up with the same obsession that he had formerly devoted to his department. He died of stomach cancer at his home, 4 Ruskin Close, Hampstead, London, on 18 September 1997, and was cremated seven days later. He was survived by his wife, two children, and four grandchildren. Hardman family (*per. c.*1820–1935), manufacturers of ecclesiastical furnishings, came to prominence via the family firm's association with the architect, designer, and pioneer of the Gothic revival, Augustus Welby Northmore Pugin (1812–1852), for whom it executed designs for metalwork, stained glass, and decorative painting. The firm's founder was **John Hardman** (1811–1867), who was baptized on 9 August 1811 at St Peter's Roman Catholic Church in Birmingham, the third of the four surviving children of **John Hardman** (1767–1844), button maker and medallist, and his second wife, Lydia Wareing (*d.* 1816). His father, who later became known as John Hardman senior in order to differentiate him from his son, was a stalwart of the Roman Catholic community in Birmingham. He made significant contributions to the building of St Chad's Cathedral and founded the Convent of Mercy in Handsworth, Birmingham (three of his daughters entered the religious life), as well as a number of Catholic charitable organizations. Educated at Stonyhurst College (1824–7) John Hardman became a partner in his father's thriving button making business (Hardman and Lewis, later Hardman and Iliffe) at Paradise Street, Birmingham. The Hardmans probably met Pugin when he later was working at St Mary's, Oscott: according to Pugin's diary he was invited to dine with the Hardmans on 29 May 1837 (V&A, L 5158-1969). While there is no doubt that he admired the elder Hardman it was with the younger man that Pugin formed a close and lasting friendship. Pugin, who always experienced difficulty in finding manufacturers who met his exacting standards of craftsmanship, was evidently delighted to make the acquaintance of someone with expertise in metalwork who in addition shared his deep religious and moral convictions and interest in the Roman Catholic revival. This shared commitment to the revival of their religion and its practice evolved into a new manufacturing venture to provide furnishings mainly for churches but also for domestic use. Describing themselves as the first of the medieval metalworkers, Pugin and Hardman were supplying a modest range of articles from June 1838, including book clasps, silver mounted cruets, and ciboria designed by Pugin and manufactured by Hardman. In 1841 production was expanded to include monumental brasses. The two men were guided by Pugin's belief that the Gothic was the only appropriate Christian style. They benefited from the increasing demand for truly Gothic products from newly constructed Catholic churches as well as from new Anglican churches and those undergoing restoration. Turnover of the firm was £1000 in 1841.

Hardman had married Anne (*c.*1809–1880), daughter of George Gibson of Manchester, probably on 23 August 1832 in Manchester, and on 5 May 1843 their first son, John Bernard Hardman, was born at the family home, St John's, Hunter's Lane, Handsworth. They had two surviving sons and five daughters in all.

In 1845 Hardman's increasingly diverse enterprise moved from the premises of the button making firm into its own workshops at Great Charles Street (the button business continued to thrive and won a prize medal at the Great Exhibition of 1851.) At the new premises Hardman had a number of workshops, but he continued to employ outworkers and also used subcontractors, often local

firms. The business expanded from producing church furnishings, such as candlesticks, chalices, pyxes, and thuribles in precious and base metal, to producing stained glass (from 1845) and undertaking decorative painting in addition. To the growing ecclesiastical orders from Great Britain, Europe, and Australia were added numerous and valuable requests for fitting out the Palace of Westminster, the largest secular commission that Hardmans undertook. It accounted for the rapid rise in business which saw turnover exceed £12,000 in 1848.

Pugin provided the inspiration for the astonishing quantity and range of individual designs, but without the manufacturing acumen, organizational skills, and commitment of Hardman the project could not have succeeded. From the surviving ledgers, letters, and workbooks it is clear that Hardman's role involved liaison with clients and designer, interpreting Pugin's designs for the workmen, overseeing production, and managing the accounts.

Pugin claimed to be reviving traditional working methods, and Hardman was credited with having done so, but an examination of the surviving objects reveals a more pragmatic approach. Most of the Hardman production in Pugin's lifetime was in base metal and nearly all was machine made, using the most sophisticated modern methods available in a nineteenth-century metal foundry. Objects were cast or die-stamped, bowls of chalices spun, and full use was made of electroforming. More emphasis was placed on traditional silversmithing skills in the manufacture of items in precious metal, although raising and chasing were often used in conjunction with more industrial practices. It would appear from correspondence between Pugin and Hardman that both were satisfied with an impressive finish rather than the exclusive use of medieval methods of manufacture.

The enormous orders for the Palace of Westminster (for which it supplied all the metalwork and all the stained glass except for one set of windows in the Lords' chamber), continuing important commissions, and the preparations for the Great Exhibition of 1851 must have stretched the capacity of the business to its limit. The firm's work for Pugin's medieval court at the Great Exhibition won the highest accolade, a council medal, in the general hardware class and a prize medal for church articles. Every aspect of church furnishings was shown, with the Hardmans' exhibits covering an impressive area, 560 square feet of floor space and 1360 square feet of wall space. From the unlikely formula of the strongest of religious, moral, and artistic convictions Pugin and Hardman had found a market for the products that they wanted to supply and had succeeded in making a profitable business from it. John Hardman had sacrificed his health for the business, financial strain, hard work, and anxiety all contributing to his decline. He retired from an active role in the firm in 1857 and retired completely in the summer of 1863, when he moved with his wife to Pemberton Villa, 3 Clifton Park, Bristol. He died there on 29 May 1867, his body being brought back to Birmingham for burial on 18 June in the crypt of St Chad's Cathedral in a chantry that had been presented to his father as a gift in recognition of his benefactions. Hardman himself had been instrumental in founding a choir at St Chad's for the performance of Gregorian chant and had personally managed the choir until his departure from Birmingham. He had performed as a baritone in the choir, as had a number of his exclusively Catholic workforce. In appearance he was the archetypal middle-class Victorian gentleman, complete with goatee beard and spectacles. He was a leading figure in the establishment of a Catholic reformatory for boys at Mount St Bernard's in Charnwood Forest, Leicestershire, in 1855. For a short time he served on Birmingham town council and on one of the committees of the Great Exhibition. Above all though, as his obituary in *The Builder* (25, 1867, 408) claimed, he gave Birmingham a new industry. Hardman was succeeded as senior partner in Hardmans by his elder son, John Bernard Hardman (1843–1903); his younger son, Mary George Edward Hardman (1844–1904), was also involved in the firm.

Following Pugin's death in 1852 Hardman's nephew **John Hardman Powell** (1827–1895) became his chief designer. Powell was born in Birmingham on 4 March 1827, the seventh of the twelve children of William Powell (1789–1861), brass-founder, and his wife, Lucy (1793–1863), embroiderer, daughter of John Hardman senior and his first wife, Juliana Weetman. Lucy Powell's textile business was closely allied to her half-brother's metalworks, and she undertook commissions for vestments and other textiles for Pugin. Her firm continued in existence throughout the nineteenth century under the successive titles Mistress Powell & Daughters, Powell and Browns, and finally (after her death) the Misses Brown.

John Hardman Powell (also known as John Powell) showed early evidence of his artistic abilities and was placed under George Elkington (of Elkington & Co., Birmingham) to learn modelling. He also spent some time as a pupil at the Birmingham School of Art. However, the association of his uncle John Hardman with Pugin, and the latter's need for an assistant, led to his being dispatched in December 1844 to Ramsgate to take up residence in Pugin's home, The Grange, and to be trained by him. Powell and Pugin's own son, Edward, were his only pupils. Initially Pugin complained to John Hardman about the injury done to Powell by Elkington's style (as well as Powell's propensity for somnambulism), but soon even the perfectionist Pugin found his work satisfactory. There is evidence that even before Pugin's death Powell was drawing a significant number of cartoons for Hardman windows, as well as designing many pieces of metalwork. With the exception of the first half of 1848 Powell remained in Ramsgate until Pugin's death. Thus it was in Ramsgate on 21 October 1850 that he married Anne (1832–1897), Pugin's eldest daughter by his first wife, Anne Garnet.

Following Pugin's death Powell returned permanently to Birmingham, living in the same street as his uncle, Hunter's Lane, Handsworth, and assumed Pugin's mantle as chief designer for Hardmans. He was instrumental in

the relocation of the firm's premises to New Hall Hill, where it remained until 1970. Powell was also taken into partnership by his uncle, joining his two elder brothers, William Powell (1820–1895) and James Powell (1825–1865). From the early 1850s the firm was known as John Hardman & Co. Two younger brothers, Edward (1833–1876) and Henry (1835–1882), worked for the firm in Ireland.

John Hardman Powell was concerned with all aspects of design as artistic director of both glass and metal departments until the business was divided in 1883, whereupon his activities were confined to the glass making. Although he adhered faithfully to the Gothic principles of his master, and never strayed too far from the basic premise of most of Pugin's designs, he nevertheless had his own distinct style which gave his creations a somewhat softer appearance than Pugin's. While opinion of his inventiveness varies he was without doubt an extremely talented designer who worked effectively in the diverse fields of Hardman production and was a major contributor to the firm's continued success throughout the nineteenth century, some of his windows being particularly fine. Although energetic and hard-working he was of a retiring disposition and, unlike his Hardman relatives, took no part in public life beyond a small amount of lecturing, notably to the Birmingham School of Art, and rare excursions into print. During the mid-1880s he left Birmingham and settled at 12 Lee Road, Blackheath, Kent, in order to be able to superintend the firm's London office. He died at his home of pneumonia on 2 March 1895 and was buried in the chantry of The Grange, Ramsgate. His obituary in the *Birmingham Weekly Post* (9 March) described him as modest, amiable, and charming, and surviving likenesses show him as a slightly diminutive, dark-haired, and moustachioed figure. His second and eldest surviving son, Dunstan John Powell (1861–1932), succeeded him as a partner and principal designer for the firm.

John Hardman Powell's brother William Powell appears to have been involved in the business from its earliest days, always on the metalwork side. He effectively took over control of that arm when it was divided from the glassworks in 1883 to form a distinct firm under the name Hardman, Powell & Co. and moved to separate premises in King Edward's Road, Birmingham. The declining demand by the early twentieth century for the type of metalware the firm produced led to its reabsorption into John Hardman & Co. in 1914, and, following family disagreements, to the eventual shedding of this aspect of the firm's business.

At its zenith in the third quarter of the nineteenth century John Hardman & Co. could boast that it had supplied windows or church plate or other metal furniture to the majority of the Roman Catholic and Anglican parish churches of England and Wales besides a number in Ireland. It also exported to Australia, the USA, South Africa, and other destinations abroad. The firm's popularity declined in the twentieth century, and the last family member to be involved in the business, John Tarleton Hardman (1872–1959), son of John Bernard Hardman, retired in 1935. The firm continues in existence, however, under different ownership and the slightly altered title of the John Hardman Studios, specializing in glasswork.

Hardman, Edward Townley (1845–1887), geologist, was born on 6 April 1845 at Drogheda, co. Louth, Ireland, of an old and respected family from that neighbourhood. He was educated at Drogheda and in 1867 won an exhibition to the Royal College of Science in Dublin. He graduated with a diploma in mining, receiving many prizes, and in 1870 joined the staff of the Geological Survey of Ireland. He was elected as a fellow of the Royal Geological Society of Ireland in 1871 and the Chemical Society of London in 1874. His early work largely involved geological mapping, mineralogy, coal geology, and the study of bone-bearing caves.

In 1883 Hardman was chosen by the Colonial Office for the temporary position of government geologist in Western Australia, primarily to report on the geology and gold prospects of the Kimberley district. He accompanied

expeditions to that area in 1883 and 1884. During the second expedition, Hardman found strong traces of gold near what subsequently became known as Halls Creek in east Kimberley. The colony's first commercial goldfield was found in that area in 1885 by prospectors who were guided by Hardman's report. Although he had hoped that his appointment in the colony would be made permanent, the legislative council demurred at the cost and Hardman returned to his duties with the Geological Survey of Ireland in October 1885. The permanent appointment of a government geologist in Western Australia was finally approved in 1887, and Hardman was sent an offer of appointment. However, it arrived after he had died, at Adelaide Hospital in Dublin, from typhoid, on 30 April 1887. He left a widow, Louisa (whose maiden name was Gilholy), and two children. At the time of his death he was an applicant for the reward of £5000 that had been offered for the first discovery of payable gold in Western Australia. In 1888 the colonial government decided that the full conditions for the reward had not been met, but they made an *ex gratia* payment to Hardman's widow of £500.

Hardman was the author of many important maps and publications dealing with the geology of Ireland, but he is principally remembered for his pioneering work in Western Australia, leading to the first discovery of gold and the beginnings of the state's major mining industry. His name has been commemorated through the naming of three geographic features in the Kimberley district: Hardman range, Mount Hardman, and Hardman Point. His premature death was a tragic loss to Western Australian geology.

Hardman, Frederick (1814–1874), journalist and novelist, was the son of Joseph Hardman, a London merchant of Manchester extraction, and his wife, Frances Anna Rougemont. Joseph Hardman was a friend of Coleridge, and a contributor to *Blackwood's Edinburgh Magazine*. On leaving Whitehead's School at Ramsgate, Frederick worked briefly as a clerk in the office of his maternal uncle, but disliking the sedentary life he volunteered in 1834 for the British Legion. He was recruited by Sir George de Lacy Evans to assist the Spanish government forces against the Carlist rebels, serving as a lieutenant in the second lancers. Severely wounded in one of the last engagements with the Carlists, he spent a period of convalescence at Toulouse before returning to England, where he became a regular contributor to *Blackwood's Magazine*. His first article (1840) was an account of an expedition with the guerrilla chief Zurbano, reprinted with other pieces based on his Spanish experiences in *Peninsular Scenes and Sketches* (1846). He published a novel of the Carlist war, *The Student of Salamanca*, in 1847. Between 1840 and 1868 he contributed almost two hundred articles and stories to *Blackwood's*, besides writing for *Bentley's Magazine*, the *Foreign and Quarterly Review*, the *New Monthly Magazine*, *Ainsworth's Magazine*, and the *Monthly Chronicle*.

A critique of the Paris salon which Hardman forwarded to *The Times* led to his engagement about 1850 as one of its roving foreign correspondents. He was stationed at Madrid in 1854, before proceeding the following year to Constantinople, where he acted as political correspondent and administered the *Times* fund for the relief of soldiers wounded in the Crimea. His exposure of the drunkenness which demoralized the British army after the suspension of hostilities led to vigorous counter-measures. After a Balkan tour he proceeded in 1857 to Turin, where he won the confidence of Cavour. In 1859 he was a war correspondent with the Spanish expeditionary force in Morocco, vividly described in his *The Spanish Campaign in Morocco* (1860), and he also reported the campaigns in Lombardy and Schleswig-Holstein. He was denied a permanent posting until March 1873, when he was finally appointed as chief correspondent of *The Times* at Paris, a post he had long coveted, but his short tenure was marred by an uneasy relationship with his assistant, Henri de Blowitz. He died unmarried at his residence, 6 rue de Solférino, Paris, on 6 November 1874.

Hardman, John (1767–1844). *See under* Hardman family (*per. c.*1820–1935).

Hardman, John (1811–1867). *See under* Hardman family (*per. c.*1820–1935).

Hardoon, Silas Aaron (1851–1931), merchant and property owner, was born in Baghdad, one of the six children of Aaron Hardoon. He moved with his family to Bombay about 1856. His family was poor and he received only an elementary education, possibly supported by the local Baghdadi Jewish community.

Hardoon's career was made within the trading diaspora of Baghdadi Jews in India and in east Asia. Employed while still in his teens by David Sassoon & Co., the major Baghdadi Jewish merchant house in Asia, he was transferred to its Hong Kong office about 1868, and then to its Shanghai branch in 1874. In its early years the firm competed with Jardine Matheson & Co. in exporting opium from India to China. About 1882 Hardoon left David Sassoon & Co. and

after a brief engagement as cotton broker, he joined E. D. Sassoon & Co. (a firm established by one of the sons of David Sassoon) either in 1886 or 1887. In the later nineteenth century E. D. Sassoon & Co. was advancing into cotton mills, brewing, paper mills, shipping, tramways, and banking. Hardoon acted as manager and, after 1893, as partner, and mainly handled opium imports and purchase of properties. He severed his association with this enterprise in 1911.

Meanwhile, in 1901 Hardoon had founded the Hardoon Company, which also dealt in opium and real estate. It remains difficult to assess the degree of his involvement in the opium trade, but it was probably not the focus of his operations. The key to his commercial success was his continuous and far-sighted purchase of properties in the central district of the Shanghai international settlement, where the value of land rose dramatically after the beginning of the century. In 1916 he became the major owner of properties along Nanking Road, which was the main commercial thoroughfare. He served as councillor of the Conseil Municipal Français of the Shanghai Concession Française from 1892 until 1903. He was also elected, from 1900 until 1904, to the same position in the British-dominated Shanghai municipal council, where he represented the interests of E. D. Sassoon & Co.

Apart from his economic achievements, Hardoon is mostly remembered for his strong ties with Chinese society. His marriage on 26 September 1886 to Liza Roos (1864–1941), more commonly known as Luo Jialing, a Eurasian Buddhist who identified almost exclusively with her Chinese background, reinforced these links. They married according to Chinese rites, but in 1928 they also entered into a British civil marriage in the Shanghai British consulate-general. Although Hardoon and his wife did not have any offspring, they jointly adopted eleven foreign children who were brought up as Jews. Luo Jialing also adopted numerous Chinese children under her Chinese surname Luo.

Hardoon sponsored the reprinting of the canon of sacred Buddhist texts (accomplished about 1913), and also funded other Buddhist enterprises, such as the construction of the Pingshe retreat house. Such projects were conceived under the influence of his wife. After the foundation of the Chinese republic in 1911, Hardoon also financed educational and cultural activities within the most conservative Chinese intellectual circles, and he became well respected as a philanthropist. The Peking government duly bestowed on him at least twelve decorations in the seven years following 1917, including, in 1924, the first-class decoration of the Zhaowu order with Big Belt, possibly the highest honour ever conferred on a foreigner.

Hardoon remained a regular contributor to the religious and philanthropic activities of the Shanghai Jewish community. In 1925 he donated the funds to build the Beth Aharon Synagogue. His participation in community affairs was, however, considered lukewarm compared with his more enthusiastic support for Chinese causes and attracted censure from the Jewish community.

When Hardoon died, on 19 June 1931 at his private residence in Bubbling Well Road, Shanghai, his assets were estimated to be worth $35 million. He was buried on 21 June in his private garden in Shanghai, and Buddhist monks and Daoist priests attended his Jewish Orthodox funeral. An obituary in the *Shanghai Evening Post and Mercury* (3 July 1931) described him as a 'unique local character': 'He was a blend of all faiths and hopes, a talented man who lived his life in an exotic setting as he thought best' (*Israel's Messenger*, 3 July 1931). Above all, however, he was during the last quarter of his life the pre-eminent property owner in the international settlement and one of the richest foreigners in east Asia. CHIARA BETTA

Wealth at death $35,000,000 [150 million Chinese dollars]: *China Weekly Review*

Hardres, Sir Thomas (1609/10–1681), lawyer and politician, was the fourth son of Sir Thomas Hardres (1575–1628) of Upper Hardres, Kent, and Eleanor, sole surviving daughter and heir of Henry Thoresby of Thoresby, a master in chancery. He was descended from a family which owned the manor of Broad Oak at Hardres near Canterbury. Shortly after his father's death Hardres entered Gray's Inn, on 15 June 1629 (as late of Staple Inn), and was called to the bar on 29 May 1636. On 21 September 1639 he was licensed to marry Dorcas (*c.*1617–1643), daughter and heir of George Bargrave of Bridge, Kent. They had one son and one daughter. Although his brother was an active member of the Kentish county committee until the second civil war, when he joined the king, Hardres was fined £15 for delinquency, and was held in suspicion by the protectorate authorities. In 1649 he became steward of Lambeth and by 1651 was married again, this time to Philadelphia (*d.* 1690), daughter of James Francklyn of Maidstone and widow of Peter Manwood of Sandwich. They had five sons and a daughter. After the Restoration Hardres was made first a freeman of Canterbury (1661), then a common councilman (1662), and eventually recorder (1664). He then succeeded the deceased recorder as MP for the borough in April 1664.

Hardres was not an active MP, but his legal career continued to progress. In November 1669 he was made a serjeant-at-law, and in 1675 survived an attempt by his political enemies in Canterbury to have him removed from the recordership after the mayor of Canterbury and several aldermen had been taken into custody by the House of Commons. Possibly with a view to winning his support

in parliament the king appointed him a king's serjeant on 11 May 1676 and knighted him six days later. By this date Hardres was a court supporter, hence his appointment about 1679 to the place of steward of the chancery court of the Cinque Ports. His support for the court may explain the loss of his parliamentary seat in the first election of 1679. He won it back at the election of October 1679. He chaired the Kentish quarter sessions in January 1680, refusing to countenance a petition calling for the meeting of parliament. Hardres died on 18 December 1681, aged seventy-one, his corpse being carried from Serjeants' Inn to Upper Hardres for burial. His widow was buried on 15 April 1690. Hardres's *Reports of Cases in the Exchequer, 1655–1670* was published in 1693. STUART HANDLEY

Hardwick, Charles (1817–1889), antiquary, was born at Preston, Lancashire, on 10 September 1817, the son of William Hardwick, a coachman, and his wife, Mary Taylor. He was apprenticed to a printer, but subsequently practised as a portrait painter in the Preston area: he was, however, a 'minor talent'. Having joined the Odd Fellows friendly society, he took an important share in the reform of the Manchester Unity, and was elected grand master of the order. He was also a vice-president of the Manchester Literary Club, of which he was a founder.

Hardwick was an enthusiastic amateur historian and archaeologist. He was primarily responsible for the discovery, and first tentative investigation, of the important Roman site at Walton-le-Dale and of the motte and bailey at Penwortham. He wrote a number of local history books, of which the most important was *A History of the Borough of Preston* (1857). He died at Manchester on 8 July 1889.

Wealth at death £1077 8s.: probate, 13 Aug 1889, *CGPLA Eng. & Wales*

Hardwick, Charles (1821–1859), ecclesiastical historian and Church of England clergyman, was born at Slingsby, near Malton, in the North Riding of Yorkshire, on 22 September 1821, one of the sons of a farmer and joiner, Charles Hardwick, and his wife, Sarah. After receiving some education at Slingsby, Malton, and Sheffield, he acted briefly as usher in schools at Thornton and Malton, and as assistant to the Revd Henry Barlow at Shirland rectory in Derbyshire. In October 1840 he unsuccessfully competed for a sizarship at St John's College, Cambridge. He became instead a pensioner, and afterwards a minor scholar, of St Catharine's College. The influence of his tutor George Elwes Corrie in forming his taste for antiquarian scholarship and churchmanship was most marked.

Hardwick graduated BA in 1844, and became tutor in the family of Sir Joseph Radcliffe, a Yorkshire baronet, at Brussels. He returned to St Catharine's in 1845, when he was elected Skerne fellow there. He was ordained deacon in 1846 and priest in 1847, in which year he also proceeded MA. During 1846 he edited Sir Roger Twysden's *Historical Vindication of the Church of England*, and edited as a supplement Francis Fullwood's *Roma ruit* in 1847. He then edited *A Poem on the Times of Edward II* (1849) and an *Anglo-Saxon Passion of St George*, with a translation (1850). He was editor-in-chief of the *Catalogue of the Manuscripts Preserved in the Library of the University of Cambridge*, contributing descriptions of early English literature to the first three volumes (1856–8). In 1849 he read before the Cambridge Antiquarian Society 'An historical inquiry touching Saint Catherine of Alexandria', and in 1850 he helped to edit the Book of Homilies under Corrie's supervision. He was select preacher at Cambridge for that year, and in March 1851 became preacher at the Chapel Royal, Whitehall. His *History of the Articles of Religion* first appeared in 1851, 'a very remarkable work for so young a man' (*Annual Register*, 1859, 431), and a second edition, mostly rewritten, was published in 1859.

From March to September 1853 Hardwick was professor of divinity in Queen's College, Birmingham, the ill repute of which caused his speedy resignation. In the same year he printed *Twenty Sermons for Town Congregations*, a selection from his Whitehall sermons, and *A History of the Christian Church, Middle Age*. In 1855 he was appointed lecturer in divinity at King's College, Cambridge, and Christian advocate in the university. In the latter capacity he published *Christ and other masters: an historical inquiry into some of the chief parallelisms and contrasts between Christianity and the religious systems of the ancient world* (1855–9). In 1856 he was elected a member of the newly established council of the senate, being re-elected in 1858. Early in 1856 he published the second volume of his *History of the Christian Church*, embracing the Reformation period, and in 1858 completed an edition of the Anglo-Saxon and Northumbrian versions of St Matthew's gospel, begun by J. M. Kemble. For many years he was secretary of the university branch association of the Society for the Propagation of the Gospel, and enthusiastically promoted the proposed Oxford and Cambridge mission to central Africa. He also served as college praelector and chaplain, and was known for 'his pleasant courtesy, not the less acceptable to young men because rather prim' (Browne, *St Catharine's*, 225).

In 1859 Hardwick became archdeacon of Ely, and commenced BD. On 18 or 19 August of that year, during his annual energetic travels abroad, he was killed by falling down rocks in the Pyrenees. A monument was erected on

the spot. He was buried on the 21st in the cemetery at Luchon, France, and memorial windows were later placed at Cambridge, Great St Mary's, and Slingsby.

Hardwick, Elizabeth. *See* Talbot, Elizabeth, countess of Shrewsbury (1527?–1608).

Hardwick, John (1790–1875). *See under* Hardwick, Thomas (1752–1829).

Hardwick, Philip (1792–1870), architect, the youngest son and fifth child of Thomas *Hardwick (1752–1829), architect, and his wife, Elizabeth, *née* Hardwick (1763–1804), of St Marylebone, Middlesex, was born on 15 June 1792 at 9 Rathbone Place, London. 'His life,' wrote an obituarist, 'was singularly uneventful' (*The Times*, 31 Dec 1870). Having been educated at Dr Barrow's school in Soho Square he became a pupil in his father's office and entered the Royal Academy Schools in 1808; he exhibited seven drawings at the academy between 1807 and 1814. He matured at that period when it was possible to unite the skills of architect and engineer. Visiting Paris in 1815 he concentrated on French work in iron, 'as they are many years before us in this branch of building' (letter to his father, 5 Sept 1815; Hobhouse, 139, n.5). In 1818–19 he spent a year in Italy (his drawing of the Paestum temples he exhibited at the Royal Academy in 1820). On his return from France he had joined his father and subsequently took over the whole practice, paying his father an annuity. On 18 October he married Julia Tufnell (1801–1881), daughter of John Shaw (1776–1832), architect, at St James's, Westminster; the elder of their two sons died while at Eton College.

Hardwick soon collected a pocketful of surveyorships that provided a regular income: he worked for the Bridewell and Bethlem hospitals (1816–36), St Katharine's Dock Company (from 1825), St Bartholomew's Hospital, in succession to his father (1826–56), the Goldsmiths' Company (1828–68), the Westminster Bridge estates (from 1829), Lord Salisbury's London estate (1829–35), and the London and Birmingham Railway Company (from 1839). He was also surveyor to the Portman London estate, to the first duke of Wellington (from 1842), and to Greenwich Hospital. A member of the Institution of Civil Engineers from 1824, he was a founder member of the Institute of British Architects (1834), vice-president in 1839 and 1841, and gold medallist in 1854. He was elected ARA in 1840 and almost immediately promoted RA (1841; retired 1868); he was treasurer from 1850 to 1861. He was also elected FSA in 1824, FRS in 1831, and FGS in 1837. At the Paris Exposition of 1855 he exhibited drawings of Lincoln's Inn and Goldsmiths' Hall, and was awarded a gold medal (second class).

Early commissions Philip Hardwick assisted his father, Thomas, in at least one of his commissions for the Church Building Commissioners—Christ Church, Cosway Street, St Marylebone (1822–4; secularized), of which he exhibited an interior view in the Royal Academy in 1828—and probably also in Holy Trinity, Bolton, Lancashire (1823–5; Perpendicular). He himself was employed by the commissioners to design Stretton church, in Cheshire, (1826–7; dem. 1907), in a plain, Gothic, style but his subsequent church work, apart from St David's, Rhymni, Monmouthshire (1840–43), was limited to repairs and reinstatements, as at St Anne's, Limehouse, London (1850–51), after a fire.

Employed by the St Katharine's Dock Company in the complex compensation cases consequent upon the compulsory acquisition of the site (1824–5) Hardwick was then commissioned to design the dock-house (Doric, 1827) and six stacks of warehouses (1827–9; Eastern three bombed, 1940; all but one of the western ones demolished *c.*1970), 'more grand than useful' (*Dockland*, 16). He overcame the constrictions of the site by erecting these vast structures on impressive quay-edge arcades of hollow cast-iron Tuscan Doric columns, founded via inverted arches onto strip footings of brick, and carrying a Portland-stone entablature with concealed cast-iron beams; above these rose cliffs of brickwork with wide cast-iron framed windows and pilaster strips, finishing in semicircular arches. This introduced to warehouse façades the giant, blind arcade familiar in domestic architecture. Hardwick's warehouses established a lasting pattern (notably copied in Liverpool docks, where he himself contributed the Albert Dock traffic office, 1846–7).

Major commissions Far from utilitarian, however, was the work that established Hardwick's reputation as a classical architect: in the van of Sir Charles Barry's and Sir John Soane's Renaissance revival came Goldsmiths' Hall, Foster Lane (1829–35), ceremonial seat of one of the grandest City livery companies, its florid Roman façade screening Hardwick's own stair and livery hall of overwhelming grandeur, as well as a reconstruction of Edward Jerman's 1669 courtroom. His success brought the commission for the City of London Club (Old Broad Street, London, 1833–4), but again with an idiosyncratic flavour: Palladian with Doric pilasters to the upper storey, in contrast to Barry's astylar West End club-houses. He further used Doric for the Globe Insurance office, Cheapside (1837), but Sefton House, Belgrave Square (1842), and 10 Kensington Palace Gardens (1846–9; altered 1896 and 1903–4) were Italianate *palazzi* more in Barry's mould.

Hardwick employed his liking for the masculinity of Doric brilliantly in creating the greatest monument of the railway age: the propylaeum fronting the London and Birmingham Railway terminus at Euston—the so-called

'Doric arch' (1836–8, £35,000; dem. 1961–2). This was modelled on the entrance to the Acropolis at Athens, only the noblest gateway of antiquity being symbolically appropriate for such an overwhelming achievement as the world's first long-distance railway. Additional buildings at Euston, including flanking hotels, were completed in 1839, 'the last work executed by [Philip] Hardwick without the assistance of his son' (*DNB*). Major additions approved in 1846, redesigned and carried out by his son, are considered below. Hardwick's corresponding gateway for the railway's Birmingham terminus was in the Ionic order.

Predominantly working in the public eye as an institutional architect in the classical style, Hardwick had only a small country-house output, where he early adopted the fashionable 'Old English' or 'Jacobethan' style. Babraham House, Cambridgeshire (*c.*1829–37), is somewhat coarse, resembling—but more robust than—houses by his contemporary Edward Blore. Similar were his additions to Kneller Hall, Middlesex (*c.*1830), the bishop's palace at Hereford (*c.*1833–41), and Westwood Park, Worcestershire (*c.*1840), and the new house at Hall, near Barnstaple, Devon (1844–7). Tudor Gothic was also favoured for schools and hospitals, including the Bethlem Hospital's schools at Lambeth (1829–30; dem. *c.*1932) and Wainfleet St Mary, Lincolnshire (1830–32); the Goldsmiths' Company's grammar school at Stockport, Cheshire (1830–32; dem. 1923); and the naval asylum at Penge, Kent (1847–9). However, in his several additions and restorations at St Bartholomew's Hospital, London (new gateway, medical theatre, and museum, 1834–5; new ward block, 1842; recasing, 1851), he adhered to the character of James Gibbs's work.

Hardwick's important commission for a new hall, council room, and library for the great legal focus, Lincoln's Inn, London, proved innovative and was much admired—the first conspicuous metropolitan building 'in which the piquant possibilities of articulated Gothic composition were made strikingly evident' (Hitchcock, 1.315). Having criticized an inadequate plan by John White submitted for his advice in 1839 Hardwick was then himself asked to design a larger complex; he proposed a new, insulated site overlooking Lincoln's Inn Fields. His carefully researched plans were approved in 1842. Despite his classical antecedents he recommended the late fifteenth-century 'Collegiate style of Architecture ... before the admixture of Italian architecture' as 'most appropriate' for the site (Lincoln's Inn, black books, xxiv, 164), isolated from the inn's Palladian Stone Buildings. Of red brick (a remarkable choice at that date but practical in the smoky atmosphere), diapered in dark brick, with crisply modelled Anston-stone trim to the windows and buttresses, the range stands out impressively, its skyline embellished with ornamented chimneys, turrets, spires, and heraldic beasts—an outstanding work of Perpendicular revival and a daring discord with the inn's earlier buildings. Also marching with the avant-garde were Hardwick's asymmetrical touches to his symmetrical T-plan, masked by the picturesque outline of the clearly articulated, functionally distinct masses of the hall and library, their high but distinct roofs at right angles and linked by the benchers' block with its crowning octagonal lantern (the hidden symmetry was subsequently distorted by Scott's eastward extension of the library in 1871–2). The contract figure of £55,000 was, however, greatly exceeded.

Contract drawings at Lincoln's Inn, dated November 1842, specify extensive use of wrought and cast iron in the construction and call for preliminary models of the remarkable hammerbeam roofs of hall and library—the former based on Westminster Hall, with pendants borrowed from Hampton Court (where Hardwick's father had been clerk of the works); the latter, resembling the roof of the great hall at Eltham Palace (though partially ceiled), with hints from that of the Middle Temple, may also be interpreted as a unique transmutation into wood and iron of the structure of the vault of Henry VII's chapel in Westminster Abbey, as represented in Professor Willis's paper to the Royal Institute of British Architects published in 1842, its giant pendants dividing the upper space of the library into nave and aisles. But as building began Hardwick, about May 1843, fell ill, followed by his son, who had been assisting him. Supervision fell to Hardwick's current assistant, John Loughborough Pearson (1817–1897); the younger Hardwick returned about January 1844 to arrange 'the crowning features and all the fittings' (Pearson, 291–2). In 1844–5 Philip Hardwick also completed Lincoln's Inn Stone Buildings to the original Palladian design of 1774.

Later years Hardwick was admired for his unswerving probity and notable business efficiency—qualities marked by his election as vice-president of the Institute of British Architects, an invitation to join a limited competition for the Carlton Club, in Pall Mall, in 1844; selection as a judge in the important Royal Exchange (1839) and Oxford Museum (1854) competitions; and appointment as an examiner of candidates for district surveyorships under the Metropolitan Buildings Act (1843). Lord Mahon in 1842 found him 'an architect of very agreeable manners and intelligent conversation' (Stanhope, 218); Thomas Henry Wyatt (1807–1880) was a pupil. From about 1845 a spinal complaint confined his practice to such 'as could be followed in his own room' (*The Builder*, 14 Jan 1871) although he was able to drag himself to committees, only gradually surrendering his offices and surveyorships before retiring from business in 1861. In the 1850s the Hardwicks had moved from bourgeois Russell Square to aristocratic 21 Cavendish Square, where they enjoyed the services of a butler, footman, lady's maid, cook, and two housemaids. Suffering from heart disease Hardwick retreated about 1865 to Westcombe Lodge, Wandsworth, where, 'helpless in body and infirm in mind' (ibid.) he died on 28 December 1870. He was buried at Kensal Green cemetery on 3 January 1871. Apart from an £800 annuity to his widow, and lesser legacies, he bequeathed his estate, sworn at £120,000, to his surviving son, **Philip Charles Hardwick** (1822–1892), architect. Born on 12 September 1822, he trained first in Edward Blore's office (when he visited Belgium and Germany) and then in that of his father. He subsequently travelled in Germany in the 1840s.

He took over on the collapse of the elder Hardwick's health, in the 1840s, eventually succeeding to many of his surveyorships, including those of St Bartholomew's Hospital (1856–71), Greenwich Hospital, and the Charterhouse. The practices of father and son form a seamless web and have left confusion about who designed what. Philip Charles Hardwick was elected fellow of the Royal Institute of British Architects in 1850 and of the Society of Antiquaries in 1860.

Philip Charles Hardwick Philip Charles Hardwick, a 'careful and industrious student of mediaeval art' and 'an extremely able and prolific sketcher and a very good draughtsman' (*Journal of Proceedings of the RIBA*, new ser., 8), nevertheless stands in the second rank of Gothic revival architects, although his work—in general cold and dry, if stylistically correct and fashionable—has occasional brilliant flashes. But apparently it suited his aristocratic patrons. For the fourth Earl Spencer, for whom he subsequently built a billiard room on the north front of Althorp (1851; dem. *c.*1891), he designed the church at Little Brington, Northamptonshire (1850; with school) and for the fourth Earl Beauchamp that at Newland, Worcestershire (1862–4; with quadrangle of almshouses, 320 ft by 170 ft, £60,000). He designed St Edmund's Clergy Orphan School and its chapel, at Canterbury, in 1854. Other churches of his design include St John's, Deptford, London (1855); St Mark's, Surbiton, Surrey (1855; bombed, rebuilt 1960); All Saints', Haggerston, London (1855–6; enlarged); St Thomas, Portman Square, London (with school, 1858; dem.); All Saints', Aldershot, Hampshire (1863); and St Barnabas, Mayland, Essex (1867). In Ireland he designed St John's Roman Catholic Cathedral in Limerick (*c.*1860). He rebuilt the churches of St Margaret, Collier Wood, Kent (1847–9); St Mary, Lambeth, London (1851–2); and St Nicholas, Elstree, Hertfordshire (1853), and was also extensively employed on restorations, both in London and small country churches.

Like his father, Philip Charles Hardwick was much employed in the City of London, where he became the leading architect of grandiose banking offices, mainly in an Italianate manner, setting the pattern for suburban and provincial designs for almost three decades. In the City he executed the Bank of Australasia (1854; dem.), Jones, Loyd & Co., Lothbury (*c.*1857; dem. 1949), Robarts, Curtis, and Lubbock, Lombard Street (1863), Barclay and Bevan, Lombard Street (1864), the Union Bank of London (Poultry, eclectic; 1865), and, at Charing Cross, Drummond's (1877–9). As architect to the Bank of England he had little to do at Threadneedle Street but altered Uxbridge House, London (1855), and designed branch offices at Hull (1856) and Leeds (1862–5). He also designed a number of large schools. The Royal Freemasons' School, Wandsworth, London (1851; dem. 1933), was his first major contribution (with the symmetrical façade characteristic of his father), in red brick with dark diapering, a central tower, and an exuberant skyline. His most important school, Charterhouse, at Godalming in Surrey (1865–72), was in collegiate Gothic, its buildings separate yet forming an architectural group, a brilliantly asymmetric assemblage of gabled dormers, chimney shafts, oriels, and towers 'far above Hardwick's usual level', comprising 'probably the most picturesque of the C19 public schools' (*Surrey*, 143–4). He also designed several public buildings, including Durham town hall (Perpendicular; 1849–51) and markets.

The younger Hardwick's public prominence came, however, with his work for the railway companies that were establishing metropolitan termini. He continued his father's work at Euston, enlarging the station block (1846–9; £150,000), notably by introducing a great hall into station design. Roman Renaissance in style and grandiose in concept, it was executed in inferior materials, its plaster walls and columns painted to imitate granite. As surveyor to the Great Western Railway he designed the terminus hotel for Paddington Station (1851–3), 'really the first grandiose and monumental hotel in Britain' (Hitchcock, 1.211), vying with the new American and continental hotels. The *Illustrated London News* (21, 1852, 538) described its style as 'French of Louis XIV or later'; Hitchcock suggests that its plastic massing suggests 'Second Empire *avant la lettre*' (Hitchcock, 1.211). But the convex-concave roofs of the towers derive from the gatehouses at Westwood Park, Worcestershire, that Hardwick had reorganized in 1840.

Country-house commissions Unlike his father the younger Hardwick enjoyed an extensive country-house practice, partly for City contacts. Despite his reputation as a classical architect he designed his houses almost entirely in asymmetrical versions of Gothic. Hall, near Barnstaple, Devon (1844–9), often ascribed to his father, was probably his first; certainly he himself completed it. It is distinguished by its virtually free-standing, quasi-medieval great hall. At Aldermaston Court, Berkshire (1848–51; £20,000), he replaced a Carolean house destroyed by fire with a vast, restless, towered, and chimneyed Tudor-Gothic house in the diapered red brick and cream stone of Lincoln's Inn. Gilston Park, Hertfordshire (1852), is similar in character but executed in random stone rubble. In the same style he added a new wing to Adare Manor, Ireland (1850–62), begun by James Pain and A. W. N. Pugin for the third earl of Dunraven (for whom he also rebuilt two churches at Adare), though his 'Wyndham Tower' strikes a discordant, foreign note. Also with French Renaissance elements was the Jacobethan Addington Park, Buckinghamshire (1856), for the governor of the Bank of England, where Hardwick introduced plate-glass sash windows, an extensively followed innovation for Gothic houses. At Sompting Abbots, Sussex (1856), he employed the local flint in a superficially picturesque but meanly detailed Tudor (with a French tower), inconveniently planned. More satisfactory—and probably his best house—was the centrally planned Rendcomb, Gloucestershire (1865–7; over £40,000), for the bullion broker Sir Francis Goldsmid QC, superbly constructed by Thomas Cubitt in Charles Barry's Italianate style; Hardwick's dominating tower, however, is less well integrated in his composition than

usual. A huge service wing is cleverly masked, and the separate stable block, of a French character, is architecturally impressive. Hardwick also designed seven blocks of semi-detached estate cottages. For Hassobury, Farnham, Essex (1868), he returned to Tudor. He found an unusually light touch in his prolonged restoration of Madresfield Court, Worcestershire (1863–85), for the fifth and sixth earls Beauchamp. Confronted with a crumbling medieval house, he considered it 'necessary to substitute reconstruction for repair' (Beauchamp, 104–10). 'The restricted site, bounded by the moat, brought out the best in Hardwick ... the effect is magical', and the reconstructed inner courtyard produced 'an evocation of the world of old Nuremberg' (Aslet, 'Madresfield Court', 1460–61). Ante-room, billiard room, and library on the ground floor, with the long gallery above, are part of his work, as is the dining-room, of great-hall type, with a hammerbeam roof resembling that at Lincoln's Inn.

Hardwick exhibited regularly at the Royal Academy between 1848 and 1854, and occasionally thereafter. He was regarded by contemporaries as 'an able architect and an honest man' (*The Builder*, 13 Feb 1892, 120) and his 'sound common sense, combined with his artistic and literary attainments' (*The Athenaeum*, 6 Feb 1892), assured his professional prominence. He was selected as a participant in the competition for a memorial to Prince Albert in 1863; his huge, gilded statue of the prince, raised on a sculptured podium above a curved double staircase, initially was Queen Victoria's choice but was merely commended by the advisory committee. Much in demand as a referee, he declined to serve as a judge in the competition for a new national gallery or to compete for the new law courts (1866–7) but acted as adviser in the new War Office and Admiralty competition of 1884. Arthur William Blomfield was his pupil in 1852–5.

Personal charm and kindliness and his wide range of interests secured Hardwick many friends. Having gradually withdrawn from practice he was active in good works, particularly as treasurer of the Artists' Benevolent Institution. He married Helen (*b.* 1849), eldest daughter of Robert Eaton, of Bryn-y-Mor, Swansea, and Claverton Manor, Bath, on 15 August 1872; they had at least three sons and two daughters. Having for two years suffered from cancer of the rectum, Hardwick died at his home—2 Hereford Gardens, Park Lane, London—on 27 January 1892, survived by his wife and leaving an estate of nearly £211,000. Like his father he was buried in Kensal Green cemetery, on 1 February. M. H. PORT

Hardwick, Philip Charles (1822–1892). *See under* Hardwick, Philip (1792–1870).

Hardwick, Thomas (1752–1829), architect, was born on 22 May 1752 in the parish of St Laurence, New Brentford, Middlesex, the only child of Thomas Hardwick (1725–1798), a prosperous master mason and architect, and his wife, Sarah Witham (*bap.* 1728, *d.* 1787). In 1767 he became a pupil of William Chambers, and he entered the Royal Academy Schools in 1769, in which year he won the silver medal. He exhibited at the academy almost continuously from 1772 to 1805. In October 1776 he travelled at his own expense via Paris and Lyons to Italy in company with the artist Thomas Jones, and on 27 November he arrived in Rome. He remained there, except for an excursion to Naples, until 26 May 1779, when he left for home via Venice, diligently measuring antique buildings and ruins, particularly the baths of ancient Rome, and compiling a portfolio with which to impress prospective patrons and to serve as a basis for his own designs. To hasten this work he co-operated with John Soane for a short period, and subsequently purchased reconstructive drawings by James Byers that he enlarged for his own portfolio. Hardwick

was an accomplished artist, and added illusionistic landscape to his architectural drawings with skill learned from Chambers.

Soon after returning to England, Hardwick won a competition for a model female prison under the Penitentiary Act 1779, but the government turned from imprisoning to transporting criminals and his plans were never realized. He subsequently established a reputation in and around London as a church architect in a conservative neo-Palladian style. Hardwick's father had rebuilt Hanwell church, Middlesex, in 1781–2; when Hanwell's rector moved to Wanstead, Essex, in 1786 and determined to rebuild St Mary's Church, he commissioned the son (1787–90). Hardwick's design, strongly influenced by James Gibbs's St Martin-in-the-Fields (1722–6), was much admired by contemporaries, and one of only four English churches illustrated in C. L. Steiglitz's important survey of contemporary architecture (1800). Hardwick followed this success by renovating Inigo Jones's St Paul's, Covent Garden, including a thin cladding in Portland stone (1788–9; £11,700), repairing St James's, Piccadilly (1789; with a drastic refitting in 1803–4), and constructing a daughter church, St James's, Hampstead Road (1790–2; dem. *c.*1965), and judiciously repairing St Bartholomew-the-Great, West Smithfield, his mother's natal parish (1791; with further work in 1808), so saving it from demolition. A serious fire at St Paul's, Covent Garden, necessitated a new bell-turret and roof of improved construction and a new but Jonesian interior, where Hardwick's important architectural furniture has largely survived (1796–8; £13,300; altered 1871, 1887). Similarly conservative was his addition in 1792–4 and 1800–04 of a second quadrangle to almshouses at Bromley College, Kent, originally built in 1670–72. The shire hall, Dorchester, Dorset (1796–7; £7162), is austerely Palladian, and the St Pancras parish workhouse (1807–9; £30,000; dem.) utilitarian.

Elected FSA in 1781, Hardwick in 1785 contributed a paper on Vespasian's Colosseum (*Archaeologia*, 7, 1786, 369–73), where he had made excavations in 1777, and a model constructed to his own exact direction (later presented to the British Museum, but now lost). An original member of the Architects' Club (1791), Hardwick was regarded by his fellows as a 'very respectable man' (Farington, *Diary*, 4.1271, 6.2407), but he failed to secure election as an associate of the Royal Academy, partly through a failure to canvass academicians. Unlike his acquaintance John Soane, Hardwick, bred in comfortable circumstances, lacked not only genius but also the passion for self-advancement. Although in 1784–9 he rebuilt the interior of Ruperra Castle, Glamorgan (1784–9; gutted 1941), after a fire (a commission probably resulting from his paternal connection with the Welsh borders), he designed only one new country house, Quex Park, Birchington, Kent (1806–13). His practice was grounded in surveyorships: St James's parish (from 1789; St Paul's, Covent Garden, parish from 1795); Lord Salisbury's London estate (from 1804); and St Bartholomew's Hospital (from 1809). He was clerk of works at the office of works at Hampton Court (1810)—where he failed to reside constantly in his official house—with Kew added in 1815; he retained all the above positions until death. His church work was also a key part of his practice, and was resumed in 1813 with a design for a chapel of ease for his home parish of St Marylebone, Middlesex, that was then aggrandized to replace the parish church (1813–17; altered 1883). St John's Chapel, St John's Wood, also in St Marylebone, followed in 1814, and then several churches for the church building commissioners under the act of 1818: St Barnabas, King Square (1822–6); Christ Church, St Marylebone (1822–4; now secularized); St John's, Workington, Cumberland (1822–4); and two small Gothic churches in Lancashire—Holy Trinity, Bolton (1823–5), and St John's, Farnworth (1824–5). He also extended the east end of Kew church, Surrey, in 1822 and rebuilt George Dance's St Bartholomew-the-Less, West Smithfield, with an iron roof (1823–5; altered 1862; restored 1950).

Having revived his early study of prison architecture to design Galway county gaol, Ireland (1802–3), Hardwick conducted preliminary works for the 7 acre, marsh-sited Millbank penitentiary, London (1812–13), but resigned after the failure of the foundations. Voting in Middlesex as a Brentford freeholder in the 1802 election, and as a householder in the 1818 Westminster election, Hardwick plumped for ministerialists. He visited Flanders in 1816 and returned to Paris in 1822. His memoir of his master, Sir William Chambers, printed in Gwilt's 1825 edition of Chambers's *Civil Architecture*, was republished in 1860 and 1862. Among Hardwick's pupils were J. M. W. Turner (whom he advised to abandon architecture for painting), Samuel Angell, John Foulston, and his younger son Philip, who became his partner and to whom about 1825 he made over his practice in return for a pension.

Hardwick married Elizabeth Hardwick (*bap.* 1763, *d.* 1804) of Credenhill, Herefordshire, on 1 December 1783. They had three sons and two daughters, of whom the youngest son, Philip *Hardwick, is noticed separately. Hardwick died at his house, 55 Berners Street, St Marylebone, on 16 January 1829, and was buried on 23 January in the family vault in the now derelict churchyard of St Laurence, New Brentford (rebuilt by his father). His elder surviving son, **John Hardwick** (1790–1875), magistrate, was born on 3 December 1790 in the parish of St Marylebone, Middlesex. An excellent linguist, he was educated privately and at Balliol College, Oxford, from 1808, where he proceeded BCL in 1815 and DCL in 1830. He practised as a barrister after being called to the bar at Lincoln's Inn, on 28 June 1816, until appointed stipendiary magistrate at Lambeth in 1821, and later transferred to Great Marlborough Street in 1841. He retired in 1856, when *The Times* commented on the 'inflexible uprightness of his judgments' and his 'extreme urbanity and courtesy of manner' (*The Times*, 3 June 1875, 12f). He was elected FRS on 5 April 1838, and was a deputy lieutenant for Tower Hamlets. He married Charlotte Aurora, daughter of colonel Thomas de Béton of the Swedish artillery, with whom he had an only son. After several years of failing health he died on 31 May 1875 at his residence at 101 Lansdowne Place, Hove. His wife survived him.

Hardwicke. For this title name *see* Yorke, Philip, first earl of Hardwicke (1690–1764); Yorke, Philip, second earl of Hardwicke (1720–1790); Yorke, Philip, third earl of Hardwicke (1757–1834); Yorke, Charles Philip, fourth earl of Hardwicke (1799–1873); Yorke, Charles Philip, fifth earl of Hardwicke (1836–1897); Yorke, Albert Edward Philip Henry, sixth earl of Hardwicke (1867–1904).

Hardwicke, Sir Cedric Webster (1893–1964), actor, was born on 19 February 1893 at Lye in Worcestershire, the eldest of three children and the only son of Edwin Webster Hardwicke, medical practitioner, and his wife, Jessie Masterston. He was educated at King Edward VI Grammar School, Stourbridge, and at Bridgnorth School. At first intended to follow his father's profession he failed in a preliminary examination and was then allowed to follow his own desire. He joined the Academy of Dramatic Art and in 1912 had some small part and understudying experience at the Lyceum, His Majesty's, and the Garrick theatres. In 1913 he joined the Shakespeare Company of Frank Benson, which gave him experience in the provinces, South Africa, and Rhodesia, and in 1914 he was in the Old Vic Company, still struggling for recognition. Up to this point he had not shown any remarkable acting talent, nor did it seem that he was taking his stage career very seriously, for when he joined the army at the end of 1914 he remained a soldier for no less than seven years, becoming in 1921 the last British officer officially to leave the war zone, having served in France in the Royal Army Service Corps horse transport and in the Northumberland Fusiliers. Hardwicke felt himself a misfit in civil life in post-war England. According to his own account in his autobiography *A Victorian in Orbit* (1961) it was a chance visit to the Birmingham repertory theatre, at that time under the direction of Barry Jackson, that gave him 'for the first time' the desire to do something worth while as an actor.

Hardwicke joined Jackson's company in January 1922, starting his career again virtually from scratch, and for two years he remained in Birmingham playing a wide variety of increasingly important parts. In February 1924 Jackson took over the Court Theatre in London and he gave Hardwicke the chance of repeating there the three parts in Shaw's play cycle *Back to Methuselah* that he had already created. This production was followed in March by Eden Philpotts's *The Farmer's Wife*, in which Hardwicke's share was a quite extraordinary performance in a 'character' part as Churdles Ash, a bent and sharp-tongued old farm labourer. The piece did not at once find popular favour in London, but Jackson's faith in it held steady and he nursed it to success. In the end, largely owing to the growing fame of Hardwicke's performance, it had a run of 1324 performances, then one of the longest in theatrical history. After this triumph Hardwicke found himself in constant demand for important parts over a wide range of contrasted styles: in 1926 he was a crusty old misogynist in Philpotts's *Yellow Sands*; in 1928 Captain Andy in the musical *Show Boat* by Oscar Hammerstein and Jerome Kern; in 1929 the highly sophisticated King Magnus in Shaw's *The Apple Cart*; in 1930–31 the sinister Edward Moulton-Barrett in Rudolf Besier's *The Barretts of Wimpole Street*. In 1932 at the Malvern Festival he played Abel Drugger in Ben Jonson's *The Alchemist*, and he gave contemporary audiences a chance to understand why David Garrick in his day had been inspired to make this comparatively minor part into a *tour de force* of comic acting. In 1933 as the doctor in Emlyn Williams's *The Late Christopher Bean* he was a great success and was rewarded with a knighthood in 1934. His run of good fortune did not end there, for his next two plays, *Tovarich* (1935) and *The Amazing Doctor Clitterhouse* (1937), both lasted over a year. In 1936 he gave at Cambridge the Rede lecture, 'The drama tomorrow'.

The year 1938 brought Hardwicke to an altogether new phase in his career. He went to America and made his first appearance on the New York stage as Canon Skerritt in *Shadow and Substance*. After a good run in this play, followed by a tour, he went on to Hollywood, where he was destined to spend almost the whole period of the Second World War making films, such as *Stanley and Livingstone* (1939), *Tom Brown's Schooldays* (1940), and *The Moon is Down* (1943), designed in general to keep up the morale of an embattled Britain. Hardwicke had made films since 1911, and his many credits included *Nelson* (1926), *Nell Gwyn* (1934, with Anna Neagle), *The Winslow Boy* (1948), and Cecil B. de Mille's biblical blockbuster, *The Ten Commandments* (1956). But his acting on film was not of the same high quality as his stage work and, like other leading stage actors, he had a dislike of the scrappy way in which film acting has to be done. But he was one of a group of fine British players above military age whose contribution to the war effort lay in this field.

Hardwicke returned to London in 1944 and for four rather unsettled years he shuttled back and forth between London and New York, sometimes to act, sometimes to direct, but without finding anything very rewarding. In

1948 he joined the Old Vic Company at the New Theatre to play Sir Toby Belch in *Twelfth Night*, Doctor Faustus, and Gaev in Chekhov's *The Cherry Orchard*, but it was about this time that he confessed to a friend that he was finding the competition in London too hot for him. He returned to New York and spent the rest of his career there, making himself invaluable either to play the lead in, or to direct, the more important plays brought over from London.

Hardwicke was twice married: first, in 1927, to an English actress, Helena Pickard (1899–1959); second, in 1950, to an American actress, Mary Scott. Both wives divorced him; he had a son with each. Sir Cedric Hardwicke died in University Hospital, New York, on 6 August 1964.

Hardwicke, Robert (1822–1875), publisher, was born on 2 October 1822 at Dyke, near Bourne, Lincolnshire, the third son of William Hardwicke, farmer (or butcher) and his wife, Mary. Nothing is known of his early education, but by 1897 he had obtained his articles as a printer. In that year he became a partner in the firm of Salisbury and Bateman, printers, of 4 Clement Court, near Lincoln's Inn in London. By 1850 the firm had moved and become Bateman and Hardwicke, printers, publishers, stationers, and booksellers, and in 1852 Hardwicke set up on his own at 192 Piccadilly.

Initially Hardwicke published general titles, but he had a lifelong interest in natural history, especially botany. His older brother William, a surgeon in private practice, introduced him to Edwin Lankester (1814–1874). Lankester was very active in the contemporary movement for the popularization of science and Hardwicke subsequently published a number of works by him, and by his botanist wife, Phebe. Lankester introduced Hardwicke to the Ray Society (established in 1844 for the publication of works concerning natural history), for which he eventually published thirty-six titles. Lankester also introduced Hardwicke to M. C. Cooke, then about to start his remarkable mycological career. Hardwicke subsequently commissioned Cooke's first book on fungi, an example of his 'judgement [to which] many valuable and popular books owe their existence' (*Journal of the Quekett Microscopical Club*). However, he had a hard head for business too, and both Cooke and T. H. Huxley complained of his treatment of them on occasion. Most of Hardwicke's publications were in the popular field, but his medical list was almost entirely professional and technical, the authors doubtless having been recommended to him by his brother.

In 1861 Hardwicke started a quarterly journal, the *Popular Science Review*, and three years later Cooke proposed an even more popular magazine, the monthly *Hardwicke's Science Gossip* which flourished for many years. Hardwicke's growing contribution to biological science was recognized in 1863 when he was elected a fellow of the Linnean Society for his interest in 'the progress of natural history, especially botany'.

A number of Hardwicke's authors had been meeting regularly on his premises for several years for informal discussions and in 1865 Cooke, Hardwicke, and his manager, Thomas Ketteringham, formalized this arrangement by setting up the Quekett Microscopical Club with Lankester as president and Hardwicke as treasurer. Membership rose rapidly, excursions were organized, and a journal published, and the club still flourishes.

Hardwicke was reported to be a warm and attractive character, portly, but with a pleasant face. His genial temperament allowed him to make friends easily. He had a wife, Harriet Martha; no details are known about her, and the couple had no children. Hardwicke died suddenly on 8 March 1875 at the age of fifty-two, following a stroke suffered while travelling to work from his home at 1 Versailles Villas, Upper Norwood. He died at 24 Queen Square, Bloomsbury.

In 1863 Hardwicke had made an error of judgement, undertaking the publication of Smith and Sowerby's multi-volume *English Botany* which, with its numerous hand-coloured illustrations, was extremely expensive for so small a firm to produce; indeed, it almost bankrupted it, so that on his death Hardwicke left under £1500 and leaseholds. The combination in Hardwicke of a sound knowledge of biology, encouragement of promising new authors, and an enthusiasm for popularizing natural history make his contribution to the science of his time a unique one.

Hardy, Sir Alister Clavering (1896–1985), zoologist and investigator of religious experience, was born in Nottingham on 10 February 1896, the youngest of the three sons (there were no daughters) of Richard Hardy (*d.* 1895), architect, and his wife, Elizabeth Hannah Clavering. He attended Oundle School and entered Exeter College, Oxford, in 1914. His studies were interrupted by the First World War, during which he served as lieutenant and captain in the northern cyclist battalion, and as a camouflage officer on the staff of 13 army corps. In 1920, having returned to Oxford the previous year, he was awarded the Christopher Welsh scholarship and graduated with distinction in zoology. He also spent six months in Naples as Oxford biological scholar at Stazione Zoologica.

In 1921 Hardy was appointed assistant naturalist at the Ministry of Agriculture and Fisheries laboratory in Lowestoft; in 1924 he became chief zoologist to the Colonial

Sir Alister Clavering Hardy (1896–1985), by Walter Bird, 1966

Office *Discovery* expedition, to study the biology of the Antarctic whales. He returned in 1927, the year in which he married Sylvia Lucy (*d.* 1985), second daughter of Walter Garstang, professor of zoology at Leeds. He and his wife had been fellow students, and she was behind all he did. They had a son and a daughter.

In 1928 Hardy was appointed professor of zoology (extended in 1931 to include oceanography) in the newly founded University College of Hull. In 1942 he became regius professor of natural history at Aberdeen, and in 1945 Linacre professor of zoology at Oxford. In 1961 he became professor of field studies at Oxford, retiring in 1963. He then immediately founded and became director of the religious experience research unit at Manchester College, Oxford (later renamed the Alister Hardy Research Centre, subsequently established in Oxford and Princeton, New Jersey, USA).

Hardy's professional career ranged through zoology, with special emphasis on plankton, insects, and evolution. On the *Discovery* expedition he invented the continuous plankton recorder, which for many years formed the basis of the broadest and most regular ecological monitoring system in the world. In his teaching and research Hardy stimulated innumerable students and colleagues, many of whom, especially his continuous plankton recorder team, have paid tribute to his influence. At Oxford he is said to have revitalized and integrated the work of the department.

Having had a sense of the numinous from youth onwards, in 1963 Hardy set out to lay the foundations of what he termed 'a future science of natural theology', by investigating religious experience. In this he aimed to remove the barriers between science and religion, and to reconcile current theories of evolution (he was a neo-Darwinian) with his view that religious experience is a biological fact which can be studied by scientific methods.

Hardy sketched and painted in watercolour, and wrote easily and extensively. In addition to his *Discovery Reports* (1928–1935), and many other scientific papers, he wrote three fascinating books, *The Open Sea*: part 1, *The World of Plankton* (1956), and part 2, *Fish and Fisheries* (1959); and *Great Waters* (1967). The transition to religion is developed in his Gifford lectures, *The Living Stream* (1965) and *The Divine Flame* (1966), followed by *The Biology of God* (1975) and *Darwin and the Spirit of Man* (1984), among many other books and essays.

Hardy was a tall man of enormous energy, a great walker and cyclist, and fascinated by flying. He was loyal, as demonstrated by his annual meetings with the pitmen members of his wartime cyclist company, and by the famous Christmas cards, illustrated by him with his wife's help, sent annually to countless friends.

Hardy received many distinctions and honours, from his Oxford DSc in 1938 and scientific medal of the Zoological Society in 1939, to his election as FRS in 1940 and his knighthood in 1957. He became emeritus professor on retirement in 1961 and fellow and then honorary fellow of Merton and Exeter colleges, receiving the honorary degrees of DSc of Southampton and Hull and the LLD of Aberdeen. Finally, just before being incapacitated by a stroke which shortly killed him, he was awarded the Templeton prize for progress in religion ($185,000), which he planned to spend on his new institute. He died in Oxford on 23 May 1985. CYRIL LUCAS, *rev.*

Hardy, Sir Charles, the elder (*c.*1680–1744), naval officer and politician, was a son of Philip Le Hardy (1651–1705), commissioner of garrisons in Guernsey, where Charles was born, and his wife, Marie Le Filleul. He was therefore a grandson of John Le Hardy (1606–1667), solicitor-general of Jersey, and a first cousin of Admiral Sir Thomas *Hardy (1666–1732). He entered the navy on 30 September 1695 as a volunteer on the *Pendennis*, under the command of his cousin Thomas. He afterwards served in the *Portsmouth* and *Sheerness*, and on 28 February 1701 was promoted third lieutenant of the *Resolution*, with Captain Basil Beaumont; in December 1702 he was appointed to the *Weymouth* (48 guns), and two years later to the guardship *Royal Ann*, before becoming commander of the sloop *Weasel* on 27 November 1705.

In September 1706 Hardy was moved by Sir John Leake into the *Swift*, which he commanded initially in the Mediterranean and then in the North Sea. He was appointed to the *Dunwich* on 14 January 1709, advancing to post rank in her on 28 June and commanding her on convoy duty on the east coast of England. In 1711 he commanded the *Nonsuch* and in 1713 the *Weymouth*, but neither was employed actively. About 1715 Hardy married Elizabeth (*d.* in or before 1744), only daughter of Josiah *Burchett, for many

years secretary of the Admiralty. The couple had three daughters and three sons.

In 1718 Hardy was captain of the *Guernsey* in the Baltic under Sir John Norris, and in 1719–20 of the *Defiance* on similar service. In January 1726 he was appointed to the *Grafton*, but in May he was moved into the *Kent*, which he commanded in the fleet under Sir Charles Wager in the Baltic, and afterwards in support of Gibraltar. In November 1727 he was moved by Wager into the *Stirling Castle*, and in the following April he returned to England. On 9 February 1730 he was appointed to the command of the yacht *Carolina*, a position he held until promoted rear-admiral on 6 April 1742.

Hardy had been knighted on 26 September 1732, and on 14 December 1743 he was elected MP for Portsmouth on the Admiralty interest. On 7 December 1743 he was advanced to the rank of vice-admiral; a few days later he was appointed one of the lords-commissioners of the Admiralty, and early in the following year he took command of the squadron ordered to convoy a fleet of victuallers and storeships to Lisbon. Having performed this duty he returned to England by the end of May, without accident, except the loss of the *Northumberland* (70 guns), which, having parted company from the squadron, was captured by the French on 8 May. Shortly afterwards, Hardy resumed his seat at the Admiralty, where he died on 27 November 1744.

Hardy's three daughters were Elizabeth, Margaret, and Charlotte; his three sons were Josiah *Hardy, royal governor of New Jersey; Sir Charles *Hardy the younger, naval officer and governor of Greenwich Hospital; and John (*d.* 1796), a naval officer and the compiler of a *List of the Captains of his Majesty's Navy from 1673 to 1783* (1784).

Wealth at death £3000 bequeathed to eldest son; £2000 to eldest daughter; smaller bequests to other children: will, PRO, PROB 11/736, fol. 287

Hardy, Sir Charles, the younger (*bap.* 1717, *d.* 1780), naval officer and politician, was baptized on 7 March 1717 at St Martin-in-the-Fields, Westminster, the second son of Vice-Admiral Sir Charles *Hardy (*c.*1680–1744) and his wife, Elizabeth, *née* Burchett (*d.* in or before 1744). His elder brother, Josiah *Hardy (*bap.* 1716, *d.* 1790), later became proprietary governor of New Jersey at Charles's instigation. The younger Hardy entered the navy on 4 February 1731 as a volunteer on the *Salisbury*. On 26 March 1737 Sir John Norris appointed him third lieutenant of the *Swallow*. After serving as lieutenant of the *Augusta* and *Kent* he was promoted to command the *Rupert's Prize* on 9 June 1741, and gained post rank on 10 August 1741 when he became captain of the *Rye*, which he commanded for the next two years on the coasts of Carolina and Georgia. On 30 April 1744 he became captain of the *Jersey* and commander of the Newfoundland convoy, but he was unable to reach his station because of sixty-three days of adverse winds, a defence accepted by the court martial held to investigate his alleged neglect of duty. As captain of the *Torrington* in 1745 he convoyed troops from Gibraltar to Louisbourg on Cape Breton Island. In summer 1745 he commanded the *Jersey* off the Portuguese coast, fighting a fierce but inconclusive action in July against the French *Saint Esprit* (74 guns).

Sir Charles Hardy the younger (*bap.* 1717, *d.* 1780), by George Romney, 1780

Hardy was unemployed from the peace of 1748 to January 1755, when he was appointed governor of New York. He arrived in the colony on 6 September 1755, having been knighted on 20 April. He was involved in the ongoing disputes over finance with the colonial assembly, and in developing New York as the main arsenal for the British forces in North America at the start of the Seven Years' War. Hardy was promoted rear-admiral in 1756 and in May 1757 hoisted his flag in the *Sutherland* as second-in-command to Vice-Admiral Francis Holburne. In June he convoyed from New York to Halifax the ships intended to support an attack on Louisbourg. The attack was abandoned, partly as a result of Hardy's urging, on the grounds that the French squadron at Louisbourg was too strong and that the weather was too bad for the British fleet to keep its station. Hardy gave up his governorship of New York on 3 June 1757, returned to England in November on the *Windsor*, and in July 1758 acted as Boscawen's second-in-command during the successful siege of Louisbourg, flying his flag successively in the *Captain* and the *Royal William*. In 1759 Hardy was second-in-command of Sir Edward Hawke's fleet, flying his flag in the *Union* during the battle

of Quiberon Bay, and he helped to maintain the Brest blockade under the successive commands of Hawke and Boscawen until October 1762, when he was promoted vice-admiral. Hardy effectively retired at the peace, acquiring an estate at Rawlins, Oxfordshire, and serving as MP for Rochester from 1764 to 1768 (he subsequently served for Plymouth from 1771 until his death). In September 1767 he was one of the eight admirals who supported the canopy over the body of the duke of York during the duke's funeral at Westminster Abbey. On 28 October 1770 he was promoted admiral of the blue, and on 16 August 1771 he succeeded Holburne as governor of Greenwich Hospital, with a salary of £1000 per annum.

In March 1779 the navy was riven with faction-fighting as a result of the court martial of Admiral Augustus Keppel. Hardy was keen to take command of the Channel Fleet, and received the appointment on March 19. His seniority placed him above the squabbling of the younger admirals, but Hardy was quickly perceived as a 'political' appointment by the first lord, the fourth earl of Sandwich; the king had doubts about his ability, and others, such as the duke of Richmond, commented caustically on the facts that he had been dragged out of a comfortable retirement at Greenwich, had not been to sea in almost twenty years, and had never been more than a second-in-command. Nevertheless Hardy's natural good nature won over some of the doubters among his officers. Benjamin Thompson, who was on Hardy's flagship, *Victory*, at first thought that 'Sir Charles Hardy is not a fit person to command this great fleet at this time', but later came:

> to think that our Admiral has acted a very prudent, if not a spirited part ... he is a worthy good man, and I respect and love him from my heart ... he is good natured to a fault, and it would make you die with laughing to see him kick my hat about the deck. ('Channel fleet in 1779', 3.136, 143)

The position Hardy faced was dire, with invasion by the combined Franco-Spanish fleet expected imminently. On 12 June 1779 he received intelligence that the French were at sea, and he sailed from Spithead with twenty-eight ships of the line. Off Ushant on 23 June he learned that the Spanish were also approaching the channel. Wind drove Hardy back to Torbay, where he arrived on 5 July. A division over strategy was now apparent among both Hardy's political advisers and his officers: some argued that he should attack even a greatly superior enemy force, while others believed that he should adopt a cautious 'fleet in being' strategy, avoiding direct action but retreating before the enemy, thereby menacing any potential invasion. Hardy sailed again on 14 July and was off Plymouth by 25 July, where he was ordered to take station west of the Lizard, regarded as the best station for guarding both England and Ireland. Adverse winds meant that he did not reach this station until 12 August, three days before the Franco-Spanish fleet of forty-five ships entered the channel. It was before Plymouth from 16 to 19 August, and Hardy tried to work eastwards towards it, but the winds meant that he reached Land's End only on 29 August. The two fleets were in sight of each other on 31 August, but the combined fleet withdrew and avoided an engagement. Hardy then ordered his fleet to Spithead, ostensibly to replenish his water but also hoping that he could draw the enemy into more confined waters; he arrived there on 3 September 1779.

Hardy's withdrawal to Spithead prompted a torrent of criticism, for it was believed that the combined fleet was still an active threat, rather than a sickly and dispirited force which was already withdrawing towards Brest. The criticisms have often shaped the perception of Hardy as an over-cautious, incompetent commander, but many such remarks were motivated by blatant factionalism—notably those of his captain of the fleet, Richard Kempenfelt, who sought to advance himself, and of the likes of Thompson and Captain Walsingham of the *Thunderer*, who were trying to ingratiate themselves with Sandwich's rival, Lord George Germain. Indeed Hardy himself was so much a part of the political arena that he wrote to Sandwich on 12 August, 'it is my utmost wish to do everything in my power to satisfy the public and to defeat the evil designs of your Lordships' enemies and mine' (*Private Papers of ... Sandwich*, 3.56).

Modern historians take a more sympathetic view, pointing out how few options were open to Hardy, how calmly he coped with almost intolerable pressures from both above and below—though at the time his subordinates interpreted the latter as an unwillingness to take advice—and how he regularly stated his determination to fight if he got the chance. In the event Hardy remained in command of the fleet for its autumn cruise, beginning on 22 October 1779, defended his conduct in parliament on 1 December, and on 17 May 1780 hoisted his flag on the *Victory* in order to resume command once more. However, he died of a seizure caused by inflammation of the bowels at 3 a.m. on 19 May. By his will he left the estate at Rawlins to his eldest son; £1000 and an annuity of £400 to his wife; £3000 to each of his three sons; and £4000 to each of his two daughters. In July 1749 he had married Mary Tate of Delapre, Northamptonshire; she died before 4 January 1759 when he married Catherine, daughter of the historian Temple Stanyan. Catherine died on 21 February 1801 when she fell asleep in front of a fire which ignited her headdress.

Hardy, Elizabeth (1793/4–1854), novelist, was born in Ireland but nothing else is known of her personal life apart from the fact that she never married. In 1845 she published *Michael Cassidy, or, The Cottage Gardener*, which advocated small allotments, green crops, crop rotation, and hard work as a remedy for the economic misery of the Irish peasant. *Owen Glendower, or, The Prince in Wales*, a historical novel in two volumes, appeared in 1849. *The Confessor*, 'a Jesuit tale of the times based on fact' with a preface by the Revd C. B. Tayler MA, was published in 1854. Since Elizabeth Hardy published her novels anonymously, it is possible that she wrote more works than those novels attributed to her, but by the time of her death it was known that she was the author of *The Confessor*. Her novels reflected her zealous protestantism.

Elizabeth Hardy died suddenly on 9 May 1854, aged sixty, in the queen's bench prison (probably in London) where she had been imprisoned 'for about eighteen month for a small debt' (*GM*, 670). It appears that she was not able to repay the debt, nor did she have influential friends to assist her. Her death was unnoticed by both the Irish and English press, and by literary journals, suggesting that she had already sunk into obscurity during her lifetime. BRIGITTE ANTON

Hardy, Francis (1751–1812), politician and biographer, the son of Harry Hardy, was born in Dublin. He entered Trinity College, Dublin, on 8 July 1766 and graduated BA in 1771. He attended the Middle Temple and was called to the Irish bar in 1777. 'In person he was short, with penetrating eyes, and a strong voice of much compass' (*DNB*).

Through the interest of the earl of Granard, Hardy was returned as a member for the manor of Mullingar, co. Westmeath, in the Irish parliament in 1783. He represented that constituency until the parliamentary union with Great Britain in 1800. He was a political associate of Henry Grattan and other 'patriot' parliamentarians, who wished to preserve and build on the legislative independence gained in 1782. Hardy was a regular attender and speaker in the Irish House of Commons, particularly in the 1780s. In 1783 he made his first major speech, on the subject of parliamentary reform, which he favoured. His next significant speech was delivered in 1785, when he opposed Thomas Orde's motion for introducing a bill to establish the commercial propositions. In 1789 he voted for an address calling upon the prince of Wales to assume the regency of Ireland, and supported a number of popular measures of reform. Also, in June of that year, he became one of the original members of the Whig Club formed in Dublin.

During the 1790s Hardy continued to vote with the parliamentary opposition. He supported the enfranchisement of the Roman Catholics in 1793, and favoured gradual progress towards emancipation. In 1798 he was one of the minority of nineteen who supported Sir Laurence Parsons's motion for a committee to inquire into the state of the country and to suggest conciliatory measures. Over the next two years Hardy, although in straitened circumstances, declined government overtures, by which it was sought to induce him to vote for the legislative union. Hardy's service to his country was eventually rewarded, to some degree, when he was appointed one of the commissioners of appeals in 1806—a post worth £500 per annum, out of which he had to pay £200 in expenses.

Beyond the political arena, Hardy was an active intellectual. He acquired an intimate knowledge of Latin and Greek authors, as well as of continental literature. In 1785 he co-operated with Lord Charlemont in the establishment of a society for the purpose of promoting science, literature, and antiquities, which became known as the Royal Irish Academy. In 1788 he contributed to its publications a dissertation on some passages in the *Agamemnon* of Aeschylus. His literary skills were rested during the 1790s as he focused his attention on the political scene. However, his lifelong friend, Grattan, felt that there were other reasons for his inactivity. In a letter of 25 October 1792 to the Revd Edward Berwick, Grattan described Hardy as 'that fat, lazy, studious, postponing fellow'.

Hardy planned to publish some of the writings of his friend and political ally Lord Charlemont, who died in 1799. In the end he undertook to write a biography of that peer, at the suggestion of Richard Lovell Edgeworth. For this work he received assistance from the Charlemont family, as well as from Grattan and others, and it appeared at London in 1810 entitled *Memoirs of the political and private life of James Caulfield, earl of Charlemont, knight of St Patrick, &c.* The memoirs contain much interesting matter, but are rather diffuse, and not free from inaccuracies. Hardy is most commonly remembered as the biographer of Lord Charlemont and, certainly, the memoirs are his best-known literary work. He died just weeks after the publication of its second edition, on 26 July 1812, and was interred at Kilcommon, co. Wicklow. DAVID LAMMEY

Hardy, Frederick Daniel (1826–1911), genre painter, was born on 13 February 1826 at Windsor, the son of George Hardy, a musician in the private band of music in the royal household at Windsor. He studied at the Royal Academy of Music in Hanover Square, London, but in 1846 devoted himself to painting under the influence of his elder brother George Hardy (1822–1909), also a painter of domestic subjects, and the painter Thomas Webster, a family friend and also the son of a royal musician.

Hardy's work strongly depended in style and subject on the early work of Webster, and on other contemporary imitators of Dutch and Flemish seventeenth-century genre painting. His earliest paintings, of the 1850s and 1860s, are small, highly finished cottage interiors with figures, combining careful detail with delicacy of tonality, lighting, and subject. They accurately depict the vernacular architecture, costume, and lives of the villagers of Buckinghamshire and Kent. From the late 1860s the social class of his subjects rose, the anecdotal content of his pictures dominated, and his handling of paint coarsened.

Hardy's work rapidly achieved critical and commercial success. In 1865 *The Leaky Roof* was described as 'pre-eminent for knowledge, character and objective truth' (*Art Journal*, 1865, 170); *The Sweep* (1862; replica at Wolverhampton Art Gallery) sold for £200 in 1862 and resold for £640 in 1874, at the height of his career. He exhibited ninety-three pictures at the Royal Academy between 1851 and 1898, and five at the British Institution between 1851 and 1856. His work is well represented in British public collections, most notably by the nineteen paintings at the Wolverhampton Art Gallery, including *The Clergyman's Visit* and *Preparing for Dinner*, both *c.*1852; *The Dismayed Artist*, 1866; *The Chimney Sweep*, 1866; *Baby's Birthday*, 1867; and *Sorrowful News*, 1872. Among his other better works are *The Volunteers* (1860; York); *The Young Photographers* (1862; Tunbridge Wells); *Children Playing at Doctors* (1863; V&A); and *The Wedding Breakfast* (1871; Atkinson Art Gallery, Southport).

Hardy lived in Windsor until 1852 when he married, on 11 March, Rebecca Sophia Dorrofield (*c.*1828–1906), the daughter of a farmer from Chorley Wood. They had five sons and a daughter. After a few years at Snell's Wood, near Amersham, Buckinghamshire, Hardy settled in Cranbrook, Kent, in 1854. A group of artists and friends soon gathered around him: Hardy's brother George, Thomas Webster, John Calcott Horsley, George Bernard O'Neill (1828–1917), and briefly Augustus Edwin Mulready. However, the 'Cranbrook colony' was held together more by ties of family and friendship than by artistic kinship. Hardy lived at 2 Waterloo Place, Cranbrook, from 1854 until about 1875, and had a studio in Thomas Webster's house in High Street, Cranbrook, until at least 1894. He also kept a house in Brunswick Gardens, Kensington, London, from about 1875 to 1890. He died at 1 Waterloo Place, Cranbrook, on 1 April 1911 and was buried at St Dunstan's Church, Cranbrook. His daughter (Amelia) Gertrude, the sole beneficiary of his will, continued to live and paint in Cranbrook until the 1930s.

Wealth at death £326 19*s.* *od.*: probate, 23 May 1911, *CGPLA Eng. & Wales*

Hardy, Gathorne Gathorne-, first earl of Cranbrook (1814–1906), politician, was born on 1 October 1814 at the Manor House, Bradford, the third son in the family of twelve children of John Hardy (1773–1855) and his wife, Isabel, eldest daughter of Richard Gathorne of Kirkby Lonsdale, Westmorland. The basis of the Hardy family's wealth was ownership of the Low Moor ironworks. John Hardy was also a barrister, recorder of Leeds, and MP for Bradford from 1832 to 1837 and again from 1841 to 1847, beginning as a reformer but adopting Conservative colours from 1835 mainly from anxiety at challenges to the position of the established church in Ireland and England. He was of evangelical tendencies, and was friendly with William Wilberforce. Of Gathorne's two brothers, Sir John Hardy (1809–1888) also became a Conservative MP and was created a baronet, while Charles (1813–1867) managed Low Moor.

Education, early career, and home life Hardy attended preparatory schools at Bishopton, near Studley, at Hammersmith, and at Haslewood, near Birmingham, before going to Shrewsbury School in 1827 and Oriel College, Oxford, in 1833. He joined J. H. Newman's congregations. He remained staunchly opposed to Romanism, but became a devout, uncomplicated high-churchman, deeply respectful of Church of England traditions and tolerant of men of differing views within it. He graduated BA in 1836 with (to his disappointment) a second-class degree. He then studied for the bar, to which he was called in 1840, joining the northern circuit. His abilities, industry, and local connections attracted many clients and earned him substantial financial rewards. By 1855 he had obtained a complete lead on sessions, and marked success at the parliamentary bar and in the *nisi prius* courts, and he was earning around

Gathorne Gathorne-Hardy, first earl of Cranbrook (1814–1906), by Henry John Whitlock

£5000 per year. In 1854, 1855, and 1856 he applied for silk, but was refused. This upset him greatly. His father died in 1855, a rich man, and with his legacy Hardy was able to retire from the bar and devote himself to politics and to family life. On 29 March 1838, in Ireland, he had married Jane (*d.* 1897), third daughter of James Orr of co. Down; she was the sister of a close college friend. Their marriage was long, close, and fecund; eleven children were born in all, of whom eight survived to adulthood, and Hardy derived enormous pleasure from his role as paterfamilias, which indeed in later years distracted him from Commons attendance and other duties and detracted somewhat from his political success. From 1858 they had two homes, 12 Grosvenor Crescent, London, and Hemsted Park, near Cranbrook in Kent. Hardy aimed to spend weekends at Hemsted throughout the parliamentary session. In the 1860s he extended the estate and carried out many improvements. He paid for the restoration of the parish church and the construction of a nonconformist chapel, became lord of the manor at Benenden, and was chairman of the Kent quarter sessions from 1859 to 1867. He loved the life of a country gentleman and was an active sportsman; almost every autumn he shot, hunted, and fished in Scotland.

In office and opposition, 1856–1866 As an upwardly mobile and resolute admirer of the church and the lifestyle of the landed classes, and a warm defender of property rights and law and order, Hardy was naturally drawn to the Conservative side in politics. He had contested Bradford on his father's retirement in 1847, but had refused to give the pledges against state support for Roman Catholic schools which extreme protestants demanded, and lost. From 1856 to 1865 he was MP for Leominster, a small constituency which did not fetter his independence. On the recommendation of Spencer Walpole he became undersecretary for the Home Office during the minority Conservative government of 1858–9, headed by Lord Derby. At one point during this ministry, Hardy, a rather impetuous man who struggled with some success to control a fiery temper, offered to resign: the government had not supported the course which he had taken over a compensation case, and at the same time the whip had sent him a mild rebuke concerning his parliamentary attendance record.

In opposition between 1859 and 1866, Hardy strengthened his political reputation. This was based on his vigorous and telling parliamentary performances. He was a plausible and fluent speaker who pleased back-benchers by articulating straightforward party views effectively, trenchantly, and combatively. He was no political philosopher; nor did he care for subtlety or casuistry. He was a man in whom the Conservative squires could have confidence. Moreover, especially after 1867, he bolstered his position by making similarly reassuring speeches to audiences of propertied provincial Conservatives, defending crown, church, law, and empire with warmth. His attacks on John Bright and Lord John Russell contributed to the withdrawal of the parliamentary reform bill of 1860, while in 1862 he was active in the successful opposition to the proposal to relieve nonconformists from liability to church rate. Having proceeded to his MA degree at Oxford in 1861 in order to vote against W. E. Gladstone, the sitting MP for the university, who had moved to the Liberal camp, he was chosen by the Oxford Conservatives in 1865 to defend their interests. He won a safe victory over Gladstone at the election of that year (and was made DCL at Oxford in 1866).

At the poor-law board and the Home Office, 1866–1868 When Derby formed a minority Conservative government in July 1866, Hardy joined the cabinet as president of the poor-law board, and was made privy councillor. His major legislative responsibility in this post was the act of 1867 reforming the administration of poor relief in London. It made two changes of principle which had long-term significance for social policy: it spread the burden of the poor rate more equitably across the metropolis, rather than confining it to individual parishes of widely differing social composition; and it transferred the care of the sick poor and lunatics away from penny-pinching guardians and into specialist hospitals, recognizing that their needs were different from those of the able-bodied. These reforms owed most to pressure from lobby groups and civil servants, and reflected something of a consensus.

Hardy was at no time a pioneering social reformer, nor was he keen to extend state influence in education at the expense of the established church. However, he had never been an extreme advocate of *laissez-faire* principles, and some of the interventionist toryism prevalent in Yorkshire in the 1840s rubbed off on him. He appreciated the need for the party to introduce social legislation, approved of the idea of self-funded old age insurance in the 1870s, supported the rhetoric of his future leader Benjamin Disraeli, and, as home secretary in 1868, set up the royal commission on sanitary laws which led to the major public health legislation of 1871–5.

As a staunch opponent of radicalism, Hardy disliked the prospect of a far-reaching extension of the franchise. However, unlike three of his colleagues, he did not resign from the cabinet in early 1867 in the dispute over the major parliamentary reform bill which Derby and Disraeli had planned. His continued presence apparently reassured some back-benchers who were unhappy at the drift of events. It also benefited him. In May 1867 Spencer Walpole resigned as home secretary, after much criticism of the weakness of his policy. He had indicated the government's displeasure at the demonstration which the Reform League planned in Hyde Park, but did not use the powers which he possessed to close the area (a royal park). The demonstration took place successfully, humiliating the government in many eyes. Hardy was promoted to home secretary in Walpole's place. Given his tough reputation, this move satisfied the party, especially since it appeared to give a further security against the drift towards radical reform. In practice, it tied Hardy even more closely to the shifting reform policy being pursued by the leadership. He introduced a bill declaring illegal the use of the royal parks for meetings on political objects, but was forced to withdraw it by the Liberals.

As home secretary, Hardy had charge of the government response to the Fenian outrages at Manchester and at Clerkenwell in late 1867. He refused to commute the capital sentences passed on those convicted for the murder of a policeman during the rescue of prisoners at Manchester, despite some public sympathy for the romantic spirit in which the affair had been conducted. The explosion outside Clerkenwell Prison, which killed several bystanders, was especially embarrassing to the government since the Dublin authorities had received good advance intelligence of it, but the London police had failed to act accordingly. Hardy found the Metropolitan Police commissioner, Sir Richard Mayne, too set in his ways; his pressure resulted in an increase in the number of policemen, and the employment of a few detectives of foreign origin. He also set up a new intelligence bureau in the Home Office, reporting directly to him, headed by Captain Feilding. This, however, was only a temporary affair to meet the Fenian emergency, though one Home Office servant continued to be employed on surveillance work thereafter.

In opposition and government, 1868–1876 In opposition again after the election of 1868, Hardy attacked vigorously the Irish Church Bill of 1869, and was a forceful critic of the government on many other occasions; he was especially effective in condemning its malpractice in appointments concerning Sir Robert Collier and the Ewelme rectory. He became secretary of state for war when the Conservatives returned to office in February 1874. He continued the implementation of the reforms instituted by his predecessor Viscount Cardwell. He disliked the lack of adequate arrangements for promotion within the army, and set up a commission to address the issue, but took no major initiatives to tackle the recruiting problem. In general, during his tenure of office, the influence of the military over War Office policy increased. He supported Disraeli rather than the fifteenth earl of Derby in the cabinet debates of 1877–8 on the Eastern question, and in early 1878 was active in preparing the dispatch of an expeditionary force to the Mediterranean, in case of war. In March 1878 he became secretary of state for India. He enjoyed good relations with the viceroy, Lord Lytton, whose anxieties about Russian intentions in central Asia he shared. He upheld the policy of coercing the amir of Afghanistan into accepting British influence. The murder of the British party in Kabul in September 1879 was an embarrassment to ministers, and though Lord Roberts's victories restored the position, the situation in Afghanistan remained unsettled when the government fell from office in April 1880. Hardy was made GCSI in that year.

In the sessions of 1871 and 1872, Hardy had stood in for the ailing Disraeli on a number of occasions, and seemed a strong contender for the leadership in the Commons should it be vacated. However he was passed over in favour of Stafford Northcote when Disraeli finally departed to the Lords in 1876. He had not improved his chances by his opposition to the Public Worship Regulation Act of 1874, a measure aimed at safeguarding the church against ritualistic practices, which aggressively protestant Conservatives applauded but which he considered wrong-headed and unworkable. The main reason for the reverse of 1876, however, was the preference of Disraeli, Derby, and the whips for Northcote, whose temper and attendance seemed more reliable and whose emphasis on financial issues and especially low taxes seemed attractive and uncontroversial in the new electoral climate. Hardy was never very interested in economic questions, and it may have been thought that his image on issues of public order and strikes was too combative.

In the Lords The decision naturally upset Hardy, and proved the turning point in his career. He accepted it loyally, as he did all requests of the leadership, but indicated that in due course he wished to go to the Lords rather than to compete with Northcote. This change was effected in 1878. Hardy took the title Viscount Cranbrook of Hemsted (4 May 1878) and assumed the additional surname of Gathorne, apparently at the desire of his family. His departure from the Commons was widely regretted in the party; 150 MPs signed a memorial urging him to reconsider. Perhaps pique entered into the decision. Perhaps, had he

remained in the Commons, he would have been the beneficiary of the later campaign in the party against Northcote's weak leadership. Perhaps, again, he foresaw that possibility and acted to forestall it.

In the Lords, Cranbrook lost much of his political utility and influence as a lightning conductor for back-bench sentiment. He knew that he was serving out time, and his interest in the political battle became less intense. However, he was still the most vigorous survivor among Disraeli's rather complaisant band of cabinet ministers. As such, he played an important part in the process which led to Salisbury becoming recognized as the overall leader of the party in the years after Disraeli's death in 1881. He was a respected elder statesman, sitting in the cabinets of 1885–6 and 1886–92 as lord president of the council. (He would have preferred the Colonial Office. In 1886, at a tricky time for the party, he was offered the viceroyalty of Ireland and later the foreign secretaryship, but did not consider either offer seriously, regarding the latter as out of the question on account of his poor grasp of foreign languages.) Salisbury consulted him on tactical matters, and on church appointments. The creation of a separate department for agriculture removed significant powers from the president of the council, and Cranbrook was in effect in charge merely of education, in which he saw little scope for initiative. Though friendly with Salisbury, he was never as close as to Disraeli, and relations were not helped by Cranbrook's unwillingness to assert himself against his officials in the education department, whose policy of steadily increasing the standards expected of schools in return for government grants was alienating the voluntary Church of England schools. In order to secure their position, Salisbury demanded the withdrawal and revision of an education code. He then took up the idea of 'free education', replacing parental fees for all elementary schools by government grants, but without the increased local control over denominational schools which Liberal advocates of free education desired. Cranbrook found free education a rather distastefully radical proposal, but consented to it; it became law in 1891. On the fall of the government in August 1892 he was promoted earl of Cranbrook, signalling the end of his political career near his seventy-eighth birthday.

Final years, death, and assessment Cranbrook lived another fourteen years, dying on 30 October 1906 at Hemsted Park. He was buried in Benenden parish churchyard. Almost to the end, he remained physically and mentally vigorous. He sat in the house of laymen in convocation, was a member of a number of London clubs, a governor of several schools, and a trustee of Keble College, Oxford, and in 1894 was elected an honorary fellow of Oriel. He liked visiting the theatre and art galleries, and had firm views about what he saw. He was happy in his family, his surroundings, his sport, and his religion. His political career was remarkable more for its longevity than for its achievement. He brought to parliament his barrister's facility of speaking, but was neither a legislator nor an intellectual. His guiding principle was loyalty to his party and his leaders, who naturally found this attractive. By this loyalty he aimed to serve his country, his church, his class, his empire, and his queen; his attachment to all was very strong, and few things in politics gave him more satisfaction than his long association with Queen Victoria, who treated him as a trusty servant. Wealth at death £274,098 11*s.* 10*d.*: probate, 28 Dec 1906, *CGPLA Eng. & Wales*

Hardy, Godfrey Harold (1877–1947), mathematician, was born on 7 February 1877, at Cranleigh, Surrey, the elder of two children of Isaac Hardy (1842–1901), a master at Cranleigh School, and his wife, Sophia Hall (*b.* 1846). His mathematical talent was evident early: by the time he was two he could write down numbers up to millions, and later in church he amused himself by factorizing the numbers of the hymns. Throughout his life he frequently played about with numbers of taxicabs, railway carriages, and

Godfrey Harold Hardy (1877–1947), by unknown photographer

the like. In 1890, after Cranleigh School, he went to Winchester College, where he was never taught mathematics in a class: Dr George Richardson, head of College, always coached him privately. Hardy strongly disliked public-school life; Winchester at that time was a rough place and not to his taste. Although he was grateful to the school for the excellent education it gave him, once having left it he never again visited it.

Fellowship at Trinity As a Wykehamist Hardy was expected to go to New College, Oxford. However, when he was about fifteen, he read a highly coloured novel of Cambridge life and set his heart on becoming, like its hero, a fellow of Trinity. He went up to Trinity College, Cambridge, as an entrance scholar in 1896, his tutor being Dr A. W. Verral. Even in Trinity, he thought of mathematics as an essentially 'competitive' subject. His eyes were opened by A. E. H. Love, who not only gave him his first serious conception of analysis, but also introduced him to Camille Jordan's *Cours d'analyse de l'école polytechnique*. Hardy was fourth wrangler in 1898 and in 1900 he achieved his childhood ambition when, on the basis of a dissertation, he was elected into a prize fellowship at Trinity. Hardy and J. H. Jeans, in that order, were awarded Smith's prizes in 1901.

Having secured a fellowship in Trinity, Hardy could spend all his time on mathematical research and in 1900 he published the first of his more than 350 research papers. In 1906 when his fellowship was to expire, he was made a college lecturer in mathematics, a position he held until 1919. His success in research was soon recognized: he became a fellow of the Royal Society in 1910, and in 1914 the University of Cambridge gave him the honorary title of Cayley lecturer. His book *A Course in Pure Mathematics* (1908; 9th edn, 1948) determined the outlook of English analysts for the next fifty years.

Although Hardy's earlier work had been good enough to earn his election as FRS his research really took off the following year, in 1911, when he began a collaboration with J. E. Littlewood (1885–1977), a colleague in Trinity. The Hardy–Littlewood partnership is the most famous in the history of mathematics: together they wrote a hundred papers, the first published in 1912 and the last in 1948, after Hardy's death.

Hardy and Littlewood made fundamental contributions to many branches of number theory and analysis: the summation of divergent series; the theory of Fourier series; the theory of the Riemann zeta-function and the distribution of prime numbers; the solution of Waring's problem; and the theory of Diophantine approximation. Their series of eight papers, Partitio Numerorum, on Waring's problem and the Goldbach conjecture, was especially influential. Later they worked on inequalities: with George Pólya they wrote *Inequalities* (1934), which became an instant best-seller, and a set of twenty-four papers on the theory of series.

In 1914 Hardy embarked on another successful collaboration, this time with the Indian genius Srinivasa Ramanujan, whom Hardy considered, rightly, to be his own 'discovery'. Ramanujan had no formal university education, and worked unaided in India until he was twenty-five. In 1913 he sent some of his results in a letter to Hardy in Trinity College, and Hardy and Littlewood soon decided that he was a mathematician of the highest calibre. Hardy arranged a scholarship for Ramanujan, who arrived in Cambridge in April 1914. Hardy and Ramanujan wrote five papers together, but the collaboration was cut short by Ramanujan's return to Madras in 1919, and his early death in April 1920.

In his political views and in his interest in mathematical philosophy, Hardy was a disciple of Bertrand Russell. Before 1914 Russell, Hardy, and Littlewood spent several summer holidays together, discussing mathematics, physics, philosophy, and politics. Like Russell, Hardy was strongly opposed to the First World War, although he did not go to the lengths which resulted in Russell's gaol sentence. He tried to prevent the rift between Trinity College and Russell, and was instrumental in the later reconciliation. He described the affair in a little book entitled *Bertrand Russell and Trinity*, which he had printed for private circulation in 1942 (reissued by Cambridge University in 1970).

Life at Oxford The tragedy of the war and the fight in Trinity over the Russell affair depressed Hardy, and he was relieved when, in 1919, he was elected to the Savilian chair of geometry at Oxford, and could migrate to New College. This was the happiest period of his life: his collaboration with Littlewood rose to new heights. The Oxford–Cambridge distance caused no difficulty since most of the collaboration was done by mail. According to their unwritten 'axioms', it was completely immaterial whether what

they wrote was right or wrong; the recipient of a letter was under no obligation to open it, let alone read it and work on it; it was preferable that they should not both think about the same detail; and it was quite irrelevant if one of them made no contribution to the contents of a joint paper.

The informality and friendliness of New College suited Hardy—he was more at home in Oxford than he had ever been in Cambridge. He lectured on numerous subjects, including geometry (to fulfil the conditions of his chair) and mathematics for philosophers. He was an admirable research supervisor, always willing to help and always full of ideas, and many an Oxford DPhil dissertation owes much to him. He made many visits to American universities, and loved the country, but the only time he spent an extended period abroad was in 1928–9, when he visited Princeton and the California Institute of Technology.

Hardy liked all forms of ball games, and was obsessed with cricket: he would not miss a test match at Lord's and spent some of his happiest hours in Cambridge at Fenners, watching university cricket. He was an excellent batsman and, had he had any coaching at Winchester, could have come close to being first-class. His highest term of praise of a human achievement was 'in the Bradman class': thus Archimedes, Newton, and Gauss were in the Bradman class. Even in his sixties Hardy was a good real tennis player, and excelled at bowls.

Sadleirian professorship In 1931 Hardy succeeded E. W. Hobson in the Sadleirian chair at Cambridge, and became again a fellow of Trinity. As the most influential British mathematician Hardy secured jobs for many young people, and from 1933 he was deeply concerned with the fate of his fellow mathematicians on the continent, and directed attempts to find places for those whom persecution had driven out. He also took up his pen to ridicule the view that there is a strong link between mathematical creative style and race. The highlight of Hardy's later years was the Hardy–Littlewood 'conversation class', in which mathematicians of all ages lectured on a great variety of topics.

Throughout his life Hardy took a great interest in education. He was an implacable enemy of the mathematical tripos at Cambridge which he blamed for the dearth of great English mathematicians and so wished to abolish. He worked much for the success of the London Mathematical Society; he was president twice and left the royalties from his books to the society. He held honorary degrees from many universities, and was an *associé étranger* of the Paris Académie des Sciences. The Royal Society awarded him a royal medal in 1920 and its Sylvester medal in 1940; the Copley medal, its highest award, was to be presented to him on the day he died.

As an editor, Hardy was 'in the Bradman class'. It was largely due to him that the *Quarterly Journal* was started in Oxford, and as an editor of the Cambridge Tracts in Mathematics and Mathematical Physics from 1914 to 1946, he was instrumental in establishing it as a major series. He contributed four volumes to the Tracts: *Integration of Functions of a Single Variable* (no. 2, 1905); *Orders of Infinity* (no. 12, 1910); *The General Theory of Dirichlet's Series* (with M. Riesz, no. 18, 1915); and *Fourier Series* (with W. W. Rogosinski, no. 38, 1944). His last textbook, *Divergent Series*, was published posthumously, in 1949.

From the second half of the thirties Hardy's mathematical output greatly diminished, due partly to the onset of Littlewood's depression, and this reinforced his belief that mathematics was a young person's game. Nevertheless, he wrote two masterpieces: *An Introduction to the Theory of Numbers* (1938), with E. M. Wright, and *A Mathematician's Apology* (1940), the most poetic writing about being a mathematician.

Character and philosophy Writing at the outbreak of the Second World War, in his *Apology* Hardy was preoccupied with war and the role of the sciences: 'There is one comforting conclusion which is easy for a real mathematician. Real mathematics has no effect on war' (Hardy, *Apology*, 140). On a personal note, he claimed, 'I have never done anything "useful". No discovery of mine has made, or is likely to make, directly or indirectly, for good or ill, the least difference to the amenity of the world' (ibid., 150). Later there came at least two major exceptions to this claim: in 1908, in a letter to *Science* entitled 'Mendelian proportions in a mixed population', he made an important contribution to population genetics, which is now in every textbook as the Hardy–Weinberg law. Another example is modern 'control theory', in which a number of problems are best formulated in terms of the Hardy space, H_∞, of the right half-plane and require, both theoretically and computationally, a fair amount of deep theory, whose origin is in Hardy's work.

Hardy had many peculiarities. He strongly disliked mechanical gadgets, in particular the telephone, and never used a watch or a fountain pen. He was unashamedly heliotropic and loathed the English climate. He loved conversation, odd little word games, walking, and gentle climbing; he liked cats and was meticulously orderly in everything but dress. He delighted in good literature but did not appreciate music. He hated war, cruelty of all kinds, dogs, hot roast mutton (memories of Winchester!), politicians, and any kind of sham. He preferred the downtrodden and those handicapped by race to the people he called 'large bottomed'. He was indifferent to noise, even when doing creative work, and his best time of work was the long vacation, with tennis or cricket in the early afternoon. Hardy was violently opposed to religion, although he had many clerical friends: he considered God his personal enemy, and went to great lengths to foil him.

Until he was about thirty, Hardy looked incredibly young; later everyone thought him striking. According to Russell, he had the bright eyes that only very clever men have. Nevertheless, he hated mirrors: the first thing he did on entering a hotel room was to cover up the mirror. He disliked having his photograph taken—there are hardly a dozen snapshots of him. Hardy had no women friends: according to Littlewood, he was a 'non-practicing homosexual' (private information) and P. A. M. Dirac found him 'uncomfortably unusual'. He was shy throughout his life,

but in his remarks he could be merciless. He was wont to pass people in the street without any sign of recognition. The Second World War and the deterioration of his creative powers and health drove Hardy into depression. After a suicide attempt and a long illness, he died at the Evelyn Nursing Home, Cambridge, on 1 December 1947, with his devoted sister, Gertrude, at his bedside.

Mathematics books age notoriously quickly; nevertheless, three of Hardy's books are not only classics, but are constantly reprinted and remain best-sellers more than fifty years after their first appearances. Hardy described himself as a problem solver rather than a theory builder, but he had a profound influence on modern mathematics and ranks as one of the greatest English mathematicians of the twentieth century. Together with Littlewood, he brought pure mathematics in England to the highest level, and was instrumental in improving the teaching of mathematics throughout the world. He was fiercely proud of pure mathematics; as he wrote in *A Mathematician's Apology*:

> If intellectual curiosity, professional pride, and ambition are the dominant incentives to research, then assuredly no one has a fairer chance of gratifying them than a mathematician ... as history proves abundantly, mathematical achievement, whatever its intrinsic value, is the most enduring of all.
> (Hardy, *Apology*, 80)

Hardy, Henry Ernest [*name in religion* Andrew] (1869–1946), Anglican friar and Church of England clergyman, was born on 7 January 1869 at Kasauli, India, the fourth son of Colonel Edmund Armitage Hardy, Indian army officer (*d.* 1903), and his wife, Grace Maxwell (1838–1911), daughter of Peter Aiken of Clifton, banker. He spent his childhood in India and, after his father's retirement from the army, attended Clifton College briefly before persuading his parents to send him to an art school in Bristol. After two years there he went in 1888 to Keble College, Oxford, graduating in 1891 with a fourth in theology (he was handicapped by ill health).

His motive in forsaking art for theology had been to 'get a theory to live by and a quest to follow' (*Green Quarterly*), but he passed his Oxford days without any set religious convictions and thought only vaguely in terms of ordination. The spur to deeper involvement came from the future bishop of London A. F. Winnington-Ingram, then head of Oxford House, Bethnal Green, who was visiting the university to appeal for volunteers to serve the underprivileged in London's East End. Hardy responded to the challenge and took up residence at Oxford House in October 1891, his duties combining administration with practical welfare work. His thoughts now turned to the religious life, but his problem was to find a way of combining a vocation to such a life with a parallel vocation to work among the impoverished masses of east London.

The answer came in the form of a fateful meeting with Winnington-Ingram's predecessor at Oxford House, James Adderley, whose ideals resembled Hardy's. They were joined by a third enthusiast, Henry Chappel, and following a retreat at Pusey House, Oxford, the three pledged themselves on 20 January 1894 to a rule of life and to the religious vows of poverty, chastity, and obedience. Hardy then completed his training for the priesthood at Ely Theological College before joining his companions at Plaistow, in east London, where they took charge of the mission church of St Philip. The new community was christened the Society of the Divine Compassion (SDC), its rule and way of life resembling those of the original followers of St Francis of Assisi; it was built on the twin foundations of faith and good works.

After Adderley's departure in 1897 and Chappel's death in 1915 Father Andrew—as Hardy was now universally known—became the dominant character in the community, acting as its superior from 1912 to 1916 and again from 1924 to 1935. From 1916 until his death (apart from a year in 1932–3 at the SDC mission in Southern Rhodesia) he was priest-in-charge of St Philip's, where his influence and reputation became immense. He was also famed for his skills as a confessor and retreat conductor; he wrote endless letters to correspondents struggling with personal problems of faith and conduct; and he was a prolific author, publishing during his lifetime eight books of poems and sixteen works in prose which established him as one of the leading devotional writers of the day. He made full use of his talents and early training as a painter; he shone as a watercolourist and would sell his sketches in aid of charity. And he put his passion for the theatre to good use by writing religious plays for his parishioners to perform.

His parish suffered badly in the blitz, the church being wrecked twice, and his wartime ordeal took its toll on his health. Cancer was diagnosed in August 1945, and he died in Bushey Heath District Hospital, unmarried, on 31 March 1946. After his funeral in St Andrew's, Plaistow, on

4 April his body was borne in procession through the streets of the parish for burial in the East London cemetery.

He was a man of tall, dignified presence, a regular Friar Tuck in build, with rugged features which acquired a striking spiritual beauty over the years. Throughout his ministry he radiated holiness. 'He somehow took us up into the supernatural', one friend observed (Burne, 81). And a bishop remarked after his death: 'He was a great man, such as God sends us—only one or two—in a generation' (ibid., 86). BERNARD PALMER

Herbert Hardy Cozens-Hardy, first Baron Cozens-Hardy (1838–1920), by Reginald Grenville Eves

Hardy, Herbert Hardy Cozens-, first Baron Cozens-Hardy (1838–1920), judge, was born on 22 November 1838 at Letheringsett Hall, Dereham, Norfolk, the second son of William Hardy Cozens-Hardy (1806–1895), a Congregationalist solicitor with a large practice at Norwich, and his wife, Sarah (*d.* 1891), daughter of Thomas Theobald, of the same city. His father had assumed by royal licence in 1842 the additional name and arms of Hardy. Educated at Amersham Hall School and at University College, London, Cozens-Hardy graduated at London University in 1858. He took the degree of LLB in 1863, and afterwards became a member of the senate of London University and a fellow of University College, London. In 1862 he was called to the bar at Lincoln's Inn after obtaining a studentship and a certificate of honour. He read in the chambers of Thomas Lewin and James Dickinson, both eminent as equity draftsmen. On 26 July 1866 he married Maria (*d.* 1886), the daughter of Thomas Hepburn, of Clapham Common; they had two sons and two daughters. Between 1871 and 1876 he was an examiner for London University in equity and real property law.

Cozens-Hardy soon acquired practice as a Chancery junior, his nonconformist and Liberal connections being considerable assets. After twenty busy years he took silk in 1882. Attaching himself at first to the court of Mr Justice Fry, he took his seat before Mr Justice North when Fry went to the Court of Appeal in 1883. He proved so successful as a leader that in 1893 he joined the small band of 'specials' of which John Rigby and Horace Davey were also members. In this distinguished company he held his own, and was constantly employed in heavy cases both in the Chancery Division and before the appellate tribunals.

A layman 'would have been puzzled to understand' Cozens-Hardy's success as an advocate (*The Times*). Although he was of unimpressive appearance, and without the vigour of Rigby or the subtlety of Davey, he had industry, knowledge, and lucidity of speech, and judges listened to him with respect. He was kindly and courteous, and his popularity with the practising members of the profession was shown by his election as chairman of the general council of the bar. Among the important cases in which he appeared as counsel were *Sheffield* v. *London Joint Stock Bank* (1888, the right of a bank to sell securities deposited by a borrower with limited authority), *Bradford Corporation* v. *Pickles* (1895, the effect of a malicious motive on the lawful use of property), *Trego* v. *Hunt* (1896, the right of the seller of a business to canvass his old customers), and *Attorney-General* v. *Beech* (1899, the liability of a remainderman who has bought a life interest to pay estate duty).

At the general election of 1885 Cozens-Hardy was elected Liberal member of parliament for North Norfolk, and he continued to sit for the constituency until elevated to the bench in 1899. In the House of Commons, although never a prominent figure, he was a not infrequent speaker. As a rule he confined himself to matters of which he had professional or local knowledge, such as married women's property, the winding-up of companies, bankruptcy, and the law relating to trustees. His most notable achievement was the passing of an act relating to the law of mortmain, which was known among Chancery lawyers

as Cozens-Hardy's Act. In 1886, when the Liberal Party split on the subject of home rule for Ireland, Cozens-Hardy remained faithful to Gladstone, having in May 1886 been wavering towards Joseph Chamberlain and the Liberal Unionist defectors. He was never a violent partisan in the politically disruptive period which followed.

In February 1899 the death of Lord Justice Chitty and the promotion to his place of Sir Robert Romer created a vacancy in the Chancery Division. Lord Halsbury, who was not ordinarily predisposed towards political opponents, disregarded Cozens-Hardy's Liberalism, and with the full approval of the profession raised him to the bench. He received the customary knighthood. Halsbury offered the post in a letter of 21 February 1899 beginning: 'My dear Cozens-Hardy. Notwithstanding your abominable politics I think you are the fittest person to succeed Romer ...' (Heuston, 59). The incident inspired Theo Mathew to produce a cartoon entitled 'Kiss me—Hardy' (Mathew, 70). As a judge Cozens-Hardy showed the industry and care that had marked his work at the bar. His findings of fact were more often criticized than his decisions on points of law. In November 1901, on the resignation of Lord Justice Rigby, he became a lord justice of appeal and was sworn of the privy council.

In March 1907 Cozens-Hardy succeeded Sir Richard Henn Collins as master of the rolls. In this onerous office he performed his duties with ability and dignity. Appeals under the Workmen's Compensation Act of 1906 were numerous, and Cozens-Hardy, although unversed in this branch of the law, dealt with them satisfactorily. His familiarity with equity law and practice made him a strong president of the court when Chancery appeals were being heard. Many of his judgments as master of the rolls stood the test of appeal, and afterwards proved of value to his successors. They were marked 'by clarity of reasoning and succinctness of expression' (*The Times*). In 1913 he was one of the three commissioners of the great seal during the absence in Canada of the lord chancellor, Lord Haldane, and in July 1914 he was raised to the peerage with the title Baron Cozens-Hardy. For some years he chaired the Council of Legal Education; he was also a chairman of quarter sessions in Norfolk. His chief interests outside law were gardening and religion, and he was a frequent speaker at the Whitfield Tabernacle while his son-in-law the Revd C. Sylvester Horne was the minister there. His health had been failing for many months before his retirement in April 1918. He died at Letheringsett Hall on 18 June 1920, and was buried at Kensal Green. He was succeeded as second baron by his eldest son, William Hepburn Cozens-Hardy KC (1868–1924), who sat as Liberal coalitionist MP for South Norfolk (1918–20).

Hardy, John (1679/80–1740), Presbyterian minister and Church of England clergyman, was born at Garstang, Lancashire, the son of the Revd Richard Hardy of Kirkland. He was educated at Mr Firbank's school at Kirkby Lonsdale before being admitted a pensioner at Christ's College, Cambridge, aged seventeen, in February 1697. After two years he left without a degree, having quarrelled with his father. 'At length they fell out to that degree, that the father turned the son out of doors, leaving him to shift for himself in the wide world, with but three shillings and sixpence in his pocket' (Calamy, 501). Being destitute, Hardy approached the dissenters of Liverpool; they sent him to finish his ministerial education at James Owen's academy in Oswestry, where he was supported by a grant of £8 a year from the Presbyterian Fund between 1699 and 1702. After he had completed his studies he went to London. Edmund Calamy discovered him starving in a garret because he was too 'modest and shy of making the particulars of his case known' (ibid., 502). Calamy paid his debts and took him into his house until he found him a place with Lady Caroline Clinton, a member of his congregation. After Hardy was ordained, she sent him to preach in the church at Sempringham near Folkingham with an allowance of £60 a year, where he 'was much resorted to by persons that came from the neighbouring parishes' (ibid., 502). William Wake noticed him during his primary visitation of the diocese of Lincoln in the summer of 1706 following complaints that Hardy acted as a minister of the Church of England though not ordained. Following opposition from Wake, Lady Clinton fitted up an old Catholic chapel on her estate and placed Hardy there with a handsome allowance. 'Now he pretends to be a Dissenter, & keeps a meeting in a chapell-house. What he really is nobody knows, but he is a ready man & a good scholar' (Sykes, 199). On 12 January 1708 Hardy married Mary (*bap.* 1686), the daughter of John Greene of Dunsby Hall, as his second wife. They had one son, Richard, and two daughters, Philippiana and Mary.

In 1714, with Calamy's encouragement, Hardy accepted an invitation from the Presbyterian congregation at High Pavement, Nottingham, to become John Whitlock's colleague following the death of John Barret the previous year. From 1714, and perhaps earlier, Hardy kept an academy preparing students for the nonconformist ministry. Caleb Fleming (1698–1779) studied theology, logic, ethics, natural philosophy, astronomy, geometry, and trigonometry with him. The names of only two other students are known, John Brekell (1697–1769), minister of Kay Street Chapel, Liverpool, and John Johnson, who later conformed and became librarian of Lambeth Palace. Hardy was a considerable scholar and antiquarian. Philip Doddridge noted that he was 'universally allowed to be an excellent critic, especially in the Sciptures', and he considered Hardy had 'few equals in learning' (*Correspondence*

and Diary, 1.68, 2.361). Hardy corresponded with Ralph Thoresby of Leeds and was friendly with William Stukeley, who dedicated a plate to his erudite and dear friend in his *Itinerarium curiosum* (1724). He was also closely associated with Maurice Johnson, the founder of the Spalding Gentlemen's Society, and a considerable benefactor of the society's library, his outstanding gift being Caxton's edition of John Gower's *Confessio amantis* (1483). He was elected a member of the Society of Antiquaries on 26 August 1718 and of the Spalding Gentlemen's Society on 24 December 1724. Hardy, like his friend Thoresby, had a collection of coins and curiosities which he called his museum. After his death he left his son two-thirds of his books, as well as 'my Mathematical Instruments Natural Curiosities and other things strictly belonging to my Library and all my Medals and other parts of Antiquity' (will).

In 1727, without warning, Hardy conformed to the Church of England, to the great consternation of his congregation and of dissenters generally. He claimed that it was the result of two years of deliberation, but was presumed by the dissenters to have been influenced by the expectation of some preferment from his wife's uncle. His conformity occurred at a time when a number of younger ministers also conformed. It is 'the most considerable conquest which the Establishment has made upon us for several years; ... as he was a very celebrated scholar and at the head of the dissenting interest in this neighbourhood' (*Correspondence and Diary*, 2.361). Hardy was vicar of Kinoulton, Nottinghamshire, a peculiar of the archbishop of York, from 1729 until 1735, when his son, Richard, succeeded him, and vicar of Melton Mowbray from September 1731 until his death. He died on 28 June 1740 at Melton Mowbray, and was buried in St Mary's Church. He was survived by his wife.

Hardy, John James (1854–1932), manufacturer of fishing tackle, was born at Grosvenor Terrace, Alnwick, Northumberland, on 4 April 1854, the second son of John James Hardy (*b.* 1831), coroner for north Northumberland, and his wife, Jane Newton. After attending Duke's School, Alnwick, in 1862–8 he was intended for a career in marine engineering but instead joined a firm making guns and fishing rods, which was founded in Alnwick in 1872 by his elder brother, William Hardy [*see below*].

The first of its type in the town, the business grew steadily. Traditional handicraft skills were combined with detailed engineering innovation to produce rods made from bamboo segments (some, especially the Palakona range, built round a steel core) and aluminium reels such as the Model Perfect, much sought after by collectors. The gunmaking was soon supplanted by angling goods, shown in increasingly comprehensive catalogues; the 1905 issue had 400 pages, mostly of items made in house. By the time it moved to a substantial new factory, Alnwick's North British Works, in 1890, the firm had acquired a reputation as the manufacturer of some of the world's finest, and most expensive, fishing tackle, with retail branches in Edinburgh, Manchester, and London, as well as extensive overseas outlets.

Although its employees grew rapidly in number, from thirty to, eventually, several hundreds, it remained a paternalistic family business, with annual works' outings paid for out of the profits; when it was made into a private limited liability company in 1907 many of the employees, including women fly tyers, bought shares. The firm's success lured competitors to Alnwick but they never matched its achievements. John James Hardy served as managing director until his seventies. He developed considerable skills as a publicist and Hardys became a major exhibitor at international exhibitions, winning fifty-two gold medals and other awards for the quality of its products. William held royal warrants from George V and from the kings of Italy and Spain.

A dedicated fisherman from childhood, John James used his prowess as a pleasure angler to win international casting competitions, using ordinary Hardy production rods as another form of advertising. After his first victory in Edinburgh in 1892, and a good placing in Scarborough two years later, he established his reputation at the Crystal Palace in 1904 by winning four separate events in the trout and salmon sections, the first person ever to do so, and then triumphed at the Franco-British exhibition in 1908, together with his nephews as back-up. After further victories in France, in competitions sponsored by the Casting Club de France, his last appearance was in London's South Norwood at the age of seventy-eight, when he demonstrated various casting techniques. He was also a prolific and highly regarded angling journalist, which led *Country Life* to commission his major standard work, *Salmon Fishing*, in 1907. In that book he demonstrated his deep understanding of riparian ecology and his passion for inventing new fishing lures.

A solid Conservative and Anglican, Hardy never married. An inveterate traveller in Britain and Europe in search of business, fishing, and shooting, he remained firmly attached to Northumberland, settling eventually in Alnmouth. He died in his house there, Alnbrae, on 24 June 1932, from the after-effects of a seizure brought on by fishing the River Coquet a month earlier; his funeral in

Alnwick parish church on 28 June was packed by Hardys employees. Apart from bequests to servants and local churches, he endowed a university entrance scholarship for boys from his old school, Duke's.

His elder brother, **William Hardy** (1852–1928), was born at Clayport Street, Alnwick, on 29 October 1852 and attended Duke's School from 1861 to 1867. Apart from founding the gun and fishing tackle business, he also had interests in the Alnwick Brewery and the *Alnwick and County Gazette*, being a director of both companies. William married, on 19 October 1882, Barbara Mary, the daughter of Robert Leighton of Felton, Northumberland; they had five sons and a daughter. Two of the sons, Lawrence Robert and Harold John, were also casting champions and all the family held posts in the firm; at incorporation seven of the family were directors. William died at his house, Oaklands, Alnwick, on 7 February 1928. He was survived by his wife. J. R. LOWERSON

Hardy, John Stockdale (1793–1849), antiquary, was born at Leicester on 7 October 1793, the only child of William Hardy, a manufacturer of that town, and his wife, Jane Harrison. He was educated in a private school in Leicester until the age of fourteen, when he was taken into the office of his maternal uncle, William Harrison, to serve a clerkship. Harrison was a proctor, and registrar of the archdeaconry court of Leicester, a post in which he succeeded his own maternal uncle, John Stockdale, after whom Hardy was named. In due course Hardy was admitted as a proctor and notary public, and thereby qualified to practise in the ecclesiastical courts.

In addition to his practice Hardy succeeded his uncle, on the latter's death in 1826, to a number of ecclesiastical offices: he became registrar of the archdeaconry court of Leicester, registrar of the court of the commissary of the bishop of Lincoln, and registrar of the court of the peculiar and exempt jurisdiction of the manor and soke of Rothley. He also succeeded Beaumont Burnaby as registrar of the court of the peculiar of Evington, and registrar of the prebendial court of St Margaret, Leicester. He was elected a fellow of the Society of Antiquaries in 1826.

Hardy was a staunch conservative in politics and in the 1820s was a firm opponent of Catholic emancipation; he corresponded frequently with Lord Eldon on the subject and published in 1820 *A Series of Letters Addressed to a Friend, upon the Roman Catholic Question* under the pseudonym Britannicus. Hardy was a frequent correspondent of the *Gentleman's Magazine* and in 1845 he also brought out a collection of poems entitled *The Palace of Fantasy, or, The Bard's Imagery*. In pursuance of his will his *Literary Remains* were collected and published in 1852 by John Gough Nichols FSA.

Hardy married Elizabeth, daughter of Thomas Leach of Leicester, in 1827; she died childless in 1838. Hardy died on 19 July 1849 at his residence, in Friar Lane, Leicester. His funeral at St Mary's Church, Leicester (where he was buried), was attended by a large congregation of framework-knitters, whose interests he had promoted.

Hardy, Josiah (*bap.* 1716, *d.* 1790), colonial official, was born in Westminster, London, and was baptized there at St Martin-in-the-Fields on 7 May 1716. He was the eldest child of Sir Charles *Hardy (*c.*1680–1744), commissioner of the Admiralty, and Elizabeth Burchett (*d.* in or before 1744), daughter of Josiah *Burchett (*c.*1666–1746), MP for Sandwich, 1705–41. His brother Sir Charles *Hardy (*bap.* 1717, *d.* 1780) was the governor of New York (1755–7), and MP for Rochester (1764–8) and for Plymouth (1771–80). Hardy's early life is obscure. He was baptized in the Church of England and raised at Greenwich, Kent. His father and two brothers became admirals, but the sea did not beckon him. He held no important office until 14 April 1761, when the king appointed him New Jersey's governor—undoubtedly through his brother Charles's intercession.

The new governor crossed the Atlantic accompanied by William Alexander, a member of his council (the legislature's appointed upper house). A wealthy, sophisticated, and ingratiating country squire, Alexander spent the interval convincing the callow Hardy that his best strategy for a successful administration lay in allying himself with Alexander's political confederates, the East Jersey proprietors, who were the heirs to the individuals given private possession of that province by Charles II until it was absorbed by New Jersey in 1702. With proprietary backing, Hardy would be buttressed by his colony's wealthiest and most politically influential families—from whose ranks had come most councillors and assembly leaders since 1720—and he readily embraced their support.

Hardy established excellent relations with the legislature, in which the assembly's speaker and most councillors were eastern proprietors, and he therefore enjoyed notable success in getting his initiatives enacted. In return, he often acquiesced to proprietors' suggestions while making executive decisions and reserved the cream

of the positions subject to his patronage for them or their clients.

This deference to provincial opinion became Hardy's undoing shortly after he took office. Hardy did not fully realize that British colonial policy was undergoing a fundamental change, by which Whitehall intended to reverse the colonies' drift towards *de facto* local autonomy by vigorously asserting crown prerogatives. The chief justice and two associate justices, all of the proprietary party, had applied to renew their commissions on the grounds of 'good behaviour'. Hardy had been instructed by the privy council, however, that all judges were now to serve at 'the king's pleasure'. Although the previous governor had rejected the applications, Hardy accepted them after the council unanimously resolved that the petition be granted. The privy council had previously winked at many similar indiscretions by governors, but the current administration was determined to curb the independence enjoyed by colonial judges through good behaviour appointments. Hardy hastily persuaded the three justices to accept new commissions at royal pleasure, but still could not placate his superiors. His dismissal came in August 1762.

Hardy's stoic acceptance of his fate helped his appointment as consul at Cadiz on 12 November 1764. He retired there in old age, then returned to Kent. Leaving a widow, Harriet, and at least one daughter, he died about April 1790 at Greenwich. THOMAS L. PURVIS

Hardy [*née* Raven], **Mary** (1733–1809), diarist, was born on 12 November 1733 at Whissonsett, near Fakenham, Norfolk, the second daughter of Robert Raven (1707–1778), farmer, and his wife, Mary Fox (*d.* 1751). She was probably educated at a school in Fakenham, where she later sent her daughter. In 1765 aged thirty-two she married William Hardy (1732–1811), tenant farmer in East Dereham, from a farming family in Scotton, near Knaresborough, Yorkshire. Two sons were born in East Dereham: Raven (1767–1786) and William (1770–1842). In 1770 William Hardy took over the lease of a brewery and farm in Coltishall, near Norwich.

The diary begins on 28 November 1773 at Coltishall, when Mary Hardy was forty, and three weeks after the birth of her daughter and last child, Mary Ann (1773–1864). The first week records the first time she went to church after her lying-in, and preparing for and holding a baptism party. Mrs Hardy records almost daily her husband's activities, his travels, and his business dealings, a mixture of farming, brewing, and trading. There are frequent mentions of his negotiations for public houses to lease or buy as outlets for his beer, with prices often noted. She records tax problems, excise payments, dealings with the justices over licences, and financial transactions with the banker Gurney of Norwich. The canalization of the 'new River' Bure to Aylsham, mentioned in the diary in 1773, allowed river trade to Yarmouth. Mr Hardy acquired a staithe, and in 1776 he built his own wherry boat, the *William and Mary*. He imported cargoes of hops, coal, cinders, muck, and bricks, exporting grain and malt. He began looking for a brewery to buy, and at auction on 11 November 1780 he bought Hagon's brewery with 50 acres of land and a substantial house in the centre of the village of Letheringsett, near Holt and 4 miles from the seaport of Cley. On 1 April 1781 the family moved in. In 1799, at the age of sixty-seven, Mr Hardy retired, signing over his leases and business to his son William, then aged twenty-nine. Throughout the diary Mr Hardy was active in the town vestry.

Every day Mary Hardy described the weather and main activities of the household, its visitors and those visited. There are occasional entries by her husband and children. They walk and ride and take tea, some of the frequent social evenings lasting late into the evening. She notes births, marriages, illnesses, accidents, bankruptcies, and deaths among her Raven relatives, her servants, her friends, and neighbours. In 1777 her brother Robert spends a period in the Norwich Bethel Hospital, but recovers. She records that private care cost 100 guineas a year, the Bethel 4*s.* 6*d.* a week. She notes labourers' gatherings, boxing and wrestling matches, tithe and other frolics, election and coming-of-age dinners. The diary includes 'news from the paper': at first 'marvellous' crimes and events, and then increasingly serious entries, with notes about national events, parliament, victories in the war in America and against France, and the effects of war taxes. She was against the wars, and records several local meetings to prepare for French invasion. The family have their portraits painted by a French refugee, Mr Hugnier, in 1785.

The other preoccupation of Mary Hardy was religion. The diary regularly records sermons, with occasional adverse comments. As well as attending their parish church, the Hardy family also attended Quaker services. Mary was active in the parish Sunday school founded in 1787, but in 1790 felt excluded by Mr Burrell the rector. In 1790 there was a quarrel over access to the churchyard and Mr Hardy stayed away from the parish church for over two years. The new rector may have been upset by the family's increasing involvement with the Methodists, especially the dissenters of the Countess of Huntingdon's Connexion, who had a meeting at Briston nearby. The Hardys attended her funeral sermon there in 1791. In London in 1800 Mr and Mrs Hardy and Mary Ann went to twenty-two different chapels, tabernacles, and meetings, and also visited the Jewish synagogue. However, there was nothing puritanical about the Hardys—their main business was beer, and they enjoyed in moderation plays and dancing, dinners, fairs, travelling players, and cards.

Mary Hardy died at Letheringsett Hall on 23 March 1809,

and was buried on 29 March in the family vault in Letheringsett churchyard. The last entry in the diary was made two days before she died. The significance of the diary lies not only in its illustration of the everyday life of neighbourhood and family in rural Norfolk, but in its woman's view of a male world of business, religion, politics, and local administration. It is an impersonal diary: it records events, news, and activities with little comment or explanation; the only emotional entry is on the death of Raven Hardy at the age of nineteen. It has a wider range and is less domestic than that of Mary Hardy's contemporary, Parson James Woodforde of Weston Longville, only 20 miles away. It was edited by a descendant, Basil Cozens-Hardy, for the Norfolk Record Society in 1968.

Hardy [*née* MacDowell], **Mary Anne, Lady Hardy** (1824–1891), novelist and travel writer, born on 19 February 1824 at Fitzroy Square, London, was the only child of T. Charles MacDowell (*d.* 1823) and Eliza, his second wife. Her father, a timber merchant, had died five months before, and she was educated at home by her mother. In 1848 she became the second wife of Sir Thomas Duffus *Hardy (1804–1878), archivist. They had one daughter, Iza Duffus Hardy (1850–1922), who also became a novelist. Lady Hardy received a civil-list pension of £100 a year (later increased by £55) in recognition of her husband's services.

Hardy did not begin to publish her writings until after her marriage. In 1853 her first novel, *Savile House: an Historical Romance*, appeared, under the pseudonym Addlestone Hill, followed in 1855 by *War Notes from the Crimea*, a collection of travel writings. Other novels followed, including *The Artist's Family* (1857) and *The Two Catherines* (1862), but she enjoyed little success until 1868, when her novel *A Hero's Work* appeared, which drew upon her experiences of the Crimean War, and which was popular in Britain and the United States. She continued this success with *Paul Wynter's Sacrifice* (1869), *Daisy Nichol* (1870), *Lizzie* (1875), and *Madge* (1878). All four novels were light romances which enjoyed a wide readership on both sides of the Atlantic and which were translated into French, but they failed to find favour with contemporary literary critics. As a reviewer in the *Saturday Review* noted:

> a single personage, even when the leading one, no more makes a good novel than a single swallow makes a summer. Paul Wynter, we freely confess, is excellent; a lofty conception consistently worked out. The others are all more or less weak and forced. (*Saturday Review*, 852)

After the death of her husband Hardy toured the United States with her daughter, Iza, promoting her fiction and gathering material for two volumes of travel writings, *Through Cities and Prairie Lands: Sketches of an American Tour* (1881) and *Down South* (1883). Towards the end of her life she wrote several essays on moral issues, and she also published many short stories in the high-class women's magazines *The Gentlewoman* and *Queen*. Hardy died on 19 May 1891 at her home, 124 Portsdown Road, Maida Vale, London, and was buried at Willesden.

Hardy, Nathaniel (1619–1670), dean of Rochester, son of Anthony Hardy of St Martin Ludgate, London, and his wife, Ann, was born in Old Bailey in 1619, probably on 14 September, and baptized in the parish church of St Martin on 3 October. His father appears to have been a respectable well-to-do tradesman with a house valued at £15 in 1638 for its moderated rent (implying a full rental of £20 per annum) and sat on a parish committee for the election of a lecturer in early 1641. Hardy was admitted at the age of fourteen a commoner at Magdalen Hall, Oxford, on 11 October 1633. He graduated BA from Magdalen Hall on 20 October 1635 and proceeded MA from Hart Hall, Oxford, on 27 June 1638 (incorporated at Cambridge in 1639).

Having entered holy orders Hardy returned to London in the early 1640s and soon proved to be a popular preacher in the City. On 3 April 1643 the vestry of St Mary-at-Hill chose him lecturer, but later in the year, on 20 October, upon the sequestration of George Hume, the House of Commons appointed him to the ministry of St Dionis Backchurch, where he may have preached since the previous year. At this time Hardy's religious beliefs were probably puritan. However, early in 1645, while attending the treaty of Uxbridge between the commissioners of the king and those of the parliament, Hardy was won over, according to Anthony Wood, to the doctrines and worship of the Church of England by the persuasive arguments of Henry Hammond, and upon his return to the City he preached a sermon of recantation. Indeed, in the subsequent years of the revolutionary era Hardy was one of the few unsequestered ministers in puritan London whom we know to have remained loyal both to the church and to the crown. Although he took part in the proceedings of the fourth classis of the presbyterian church government in London, it is also unmistakably clear that after 1645 he declined to preach on the officially appointed fast days. During the constitutional crisis of 1648–9, as he himself later stated, he was one of 'the small number of those who did in their Pulpits earnestly deprecate, and vehemently

declaim against' the army's design to put the king on trial, and after the death of Charles I, 'at the yearly Returne, either upon or near the day, I adventured to become a remembrancer' (Hardy, *Loud Call*, 'The epistle dedicatory'). He was said to have also kept a 'loyal lecture', at which monthly collections were made for poor sequestered clergymen or their widows.

Hardy occupied, therefore, a rather unusual position in civil war London. His ministry at St Dionis Backchurch had the sanction of an order from the House of Commons, and he had the firm and steadfast patronage of such prominent civic leaders as Sir John Gayre and Sir Thomas Adams. In spite of complaints about his thinly veiled denunciations of religious radicalism and rebellion he was neither molested nor silenced. Early in November 1646, when Gayre was lord mayor, Hardy was invited to preach the anniversary sermon of the Gunpowder Plot, and he turned it into a condemnation of the civil war. Using the gunpowder plotters as the foil, Hardy told the London magistrates that wicked men were always ready 'to defend slaughter with conscience, cover mischief with Necessity, patronize Rebellion with Religion'. And with rather uncommon perception he observed: 'It is the worst madness *insanire cum ratione*, nay *religione* ...: men are never more violent, then when they think God is of their party' (Hardy, *Justice Triumphing*, 23). When he preached before the House of Lords on 24 February 1647 he spoke of the groans of the nation under the irregular practices of the parliamentary committees, the quartering of an army in the country, the burden of new taxations and the general decay of trade. During the Commonwealth and the protectorate Hardy became a favourite preacher of the royalists or neo-royalists. He preached at the funerals of Sir John Gayre in 1649 and Richard Goddard in 1653. In 1654 he preached on the Act Sunday at the University of Oxford. In 1653 and 1658 he delivered farewell sermons respectively for the voyages of Sir Thomas Bendish, the English resident at Constantinople, and Nathaniel Wych, president of the East India Company. On 27 May 1658 he preached at the yearly feast of native London citizens, and on 13 June, five days after the execution of Dr John Hewit for royalist conspiracy, he preached what was generally thought to be Hewit's funeral sermon at St Gregory by Paul. Perhaps more interestingly Hardy was invited to preach on 9 June 1659 at the funeral of the earl of Warwick, during whose illness, Hardy said, 'I had the Honour to wait upon and administer to him in holy things, which my conscience beareth me witnesse, I dealt with him freely and faithfully and I trust not without good success' (Hardy, *Man's Last Journey*, 27).

On the eve of the Restoration, 30 April 1660, Hardy was invited to preach before the House of Lords. As preachers at the parliamentary pulpits had played the role of 'the Trumpetters of war' in the previous twenty years, Hardy said, 'it is high time we should be now the Heralds of peace, perswading a blessed accomodation' (Hardy, *Choicest Fruit*, 29). And he made a moderate plea for future settlement: 'order in the State by a fit subordination of the Subjects Liberty to the Soveraigns authority' and 'order in the Church by a sweet attemperation of paternall presidency with fraternall presbytery' (ibid.). In the following month he was chosen one of the ministers to attend the City commissioners to meet Charles II at The Hague, where, in a sermon on 20 May, 'he applied his discourse to the then present Estate of affairs in England so pathetically and learnedly, that there was not any one present, but admired his elegancy and learning' (Wood, *Ath. Oxon.*, 2.336–7).

Upon the return of Charles II to England Hardy was made one of the royal chaplains-in-ordinary and was created DD of Hart Hall on 2 August 1660. A week later, on 10 August, he was instituted as rector of St Dionis Backchurch. On 6 December he preached at the consecration of seven bishops in Westminster Abbey, and on 10 December was made dean of Rochester. On 6 April 1661 the king presented him to the vicarage of St Martin-in-the-Fields. He also held briefly the rectory of Henley-on-Thames, Oxfordshire. On 30 January 1662 he was invited to preach before the House of Commons in commemoration of the death of Charles I. He was installed archdeacon of Lewes in the diocese of Chichester on 6 April 1667. Hardy continued to maintain his London connections and cherished his memories as a native son of the City. In 1666 he lamented over the great fire of London in a sermon on 9 September. The sermon, delivered on the Sunday after the fire had destroyed perhaps four-fifths of the buildings in the City, was poorly received by Samuel Pepys, who had earlier heard and admired Hardy's preaching: 'a bad poor sermon, though proper for the time—nor eloquent, in saying at this time that the City is reduced from a large Folio to a Decimo tertio' (Pepys, 7.283). When the sermon was published Hardy dedicated it to Sir Thomas Adams, 'a singular Friend, as well as a prime Parishioner', from whom, Hardy gratefully acknowledged, he had received 'not only that liberal bounty, those free entertainments, but those sage advices, and forward encouragements ... in the late perilous times' (Hardy, *Lamentation*, 'The epistle dedicatory'). Two years later he also preached Adams's funeral sermon.

Hardy died at Croydon, Surrey, on 1 or 2 June 1670 and was buried on 9 June in the chancel of St Martin-in-the-Fields. He was survived by his wife, Elizabeth Hardy, who, a few months later, married Sir Francis Clarke of Ulcombe, Kent. His funeral sermon was preached by Richard Meggott. In the later years of his life Hardy appears to have possessed considerable wealth, and he contributed generously to the rebuilding of St Dionis Backchurch, the embellishment of St Martin-in-the-Fields, and the repair of Rochester Cathedral. Hardy, Sam (1882–1966), footballer, was born at Back Lane, Newbold, in Derbyshire, on 26 August 1882, the younger son (he had three elder brothers and three sisters) of Thomas Hardy, a coalminer, and his wife, Hannah Fidler. He went to the Newbold church school and became an enthusiastic footballer, so much so that he left his first job in a Chesterfield drapery store because it did not allow him Saturday afternoons off. He played centre forward at first and only went into goal when the selected incumbent failed to turn up. While playing for Newbold White Star he caught the attention of Chesterfield of the second division, who signed him in April 1903 at a wage of 5*s*. (25p!) a week. When Liverpool won the second division title in 1904–5 they scored six goals against Chesterfield but were so impressed by Hardy that they paid £500 for his transfer. They went on to win the championship of the first division in the following season and he made thirty appearances in the side.

Hardy's international career began in 1907 and, although it was interrupted by the war, included twenty-one appearances for England between 1907 and 1920; he also played in the three 'victory' internationals in 1919–20. With Bob Crompton and J. Pennington he formed a celebrated defence, and in 1908–9 England defeated Ireland, Scotland, and Wales without conceding a goal, with Hardy saving a penalty against the Scots. This feat had not been accomplished before and was not repeated until 1982.

In May 1912 Hardy moved to Aston Villa together with centre half J. Harrop for a combined fee of £1250. In his first season Aston Villa won the FA cup and finished second in the league. He was also in the team which won the first cup final after the First World War. In August 1921, at the age of thirty-eight, Hardy moved to Nottingham Forest, helping them to become champions of the second division in that season. He retired in 1925 after a career of 552 league appearances.

It used to be thought axiomatic that goalkeepers had a screw loose. Before 1893–4 they could be charged whether they had the ball or not. Even when the laws of the game were changed to provide them with more protection, the fact could not be hidden that if a goalkeeper made a mistake, unlike the other ten players, it was usually irretrievable. This psychological pressure helps account for their reputation for eccentricity. If that was a rule, then Samuel Hardy appears to have been a clear exception to it. He was known in the game as Silent Sam, a name which epitomized his unobtrusive style. Goalkeepers in his time did not come out and seek to dominate the penalty area in the modern fashion. Mostly they stayed on their line and relied on accurate handling, instinctive positioning, and anticipation. Judgement was the master quality and Hardy's anticipation was such that he seemed to magnetize the ball into his arms, and only an unforeseeable deflection would oblige him to go full length to save it. In 1908 he wrote an article for the *Liverpool Echo* entitled 'Aspects of a difficult art', in which he placed anticipation as the highest of the goalkeeper's gifts. He also said that he watched the striker's foot as a clue to the likely power and direction of the shot.

Poker-faced and phlegmatic he may have been, but Hardy also showed distinct signs of an independence of character not always welcomed by the football authorities. He supported the players' union, and took part in a benefit match to raise funds in 1919. He also insisted throughout his playing career on living and training in his Derbyshire home. He married Maria Cannon of Newbold on 7 October 1908 at Chesterfield register office; they had three sons.

After retirement from football Hardy worked on the administrative side for Nottingham Forest and later acted as a scout for Aston Villa. But for many years he was the licensee of the Gardeners' Arms in Chesterfield; the magistrate who granted the licence remarked that if he kept the public house as well as he kept goal there would be nothing to complain of. He was also proprietor of several billiard halls. He died at his home, 4 West View Road, Chesterfield, on 24 October 1966. His wife survived him.

Hardy, Samuel (1636/7–1691), nonconformist minister, was born at Frampton, Dorset, of unknown parents. He matriculated from Wadham College, Oxford, on 1 April 1656. After graduating BA on 14 October 1659 he returned to Dorset and became chaplain to the Trenchard family of Wolfeton House, Charminster, a peculiar to which they owned the right of presentation. Here he remained after the Act of Uniformity of 1662, refusing institution by the bishops. Exempt from harassment by the church courts, he was protected against local justices through the influence of his patron, Thomas Trenchard (1640–1671). Hardy gestured towards conformity by 'reading the scripture sentences, the creed, commandments, lessons, prayer for the king and some few other things' (*DNB*). During his time at Charminster he exerted great influence over Thomas Trenchard and his brother John, the future whig politician. He was married at least twice, first to Joyce (*d.* 1673), who gave birth to a son, Samuel (*bap.* 1672), and was perhaps the daughter of Richard Fowler, the ejected curate of Westerleigh, Gloucestershire. His second wife,

Elizabeth (*d.* in or after 1691), may have been the mother of three other sons, Peter, Nathaniel, and Eden.

In 1667, on the invitation of the parishioners, Hardy took up the ministry at the chapelry of St James in Poole, Dorset, an impropriate rectory appended to Canford Magna, a royal peculiar. Here too he could shelter from the bishop and his officers, who could not remove him. In 1668 the corporation of Poole agreed to pay Hardy £15 a quarter during the time of his curacy, and from this position of relative security he appears to have acquired great influence. During his time at Poole it is reported that he collected nearly £500 for ransoming captives from slavery. He became involved in the by-election of November 1670 on behalf of Thomas Trenchard, and seems to have been important in securing his victory over Sir Anthony Ashley Cooper's son, Anthony. Incensed, Cooper 'wrote a very angry letter to Mr Hardy. When he was in London, he was advised to wait upon the chancellor, and make his peace' which counsel Hardy found it prudent to accept (Hutchins, 1.56). After Trenchard's death Cooper was able to ensure the acceptance by the town of his nomination for the vacant seat. However, Trenchard's will left £100 to Hardy, who clung on to his ministry at Poole for more than another decade.

However, by 1681, at the Dorset assizes, the grand jury requested that the king be informed of many

> opposers of his majesties government, influenced by the [seditious] preaching of one Samuel Hardy, an hired Nonconformist preacher, who ... hath made use of the church of [Poole], reading little or none of the liturgy of the church of England. (Densham and Ogle, 187)

Residents too now complained of his dissent from Anglican rites.

Given the status of the peculiar, a royal commission was appointed, headed by the bishops of Bristol and Salisbury. Hardy was initially deprived, but upon a successful petition to the lord chancellor he resumed his preaching. Later his commission of appeal was deemed irregular, however, because as a royal peculiar the church could be visited only by the king's commissioners and the only appeal from them was to the king himself. Accordingly, on 23 August 1682 Hardy was (once again) deprived for 'his manifest and incorrigible offences and disobedience, neglect of office, and not executing the same, contrary to the ecclesiastical laws of England, and canons required in his oath' (Hutchins, 1.56). He moved to Baddesley, Hampshire, but was again in trouble for nonconformity in 1683 and appears to have abandoned the public ministry shortly afterwards. In 1685–7 he was chaplain to the Heal family at Aldborough Hatch, Essex, but moved to Newbury, Berkshire, in 1688. In early 1690 it was reported that 'Att Newbury [Mr Hardy] has 1000 people as some say, has £50 per annum' (Gordon, 6). He died at Newbury, aged fifty-four, on 6 March 1691 and was buried there on 9 March. He left property in Gutter Lane, off Cheapside in London, and in the Isle of Purbeck, Dorset, to his widow and sons Samuel, Peter, Nathaniel, and Eden, who all survived him.

Hardy, Theodore Bayley (1863–1918), army chaplain, was born on 20 October 1863 in the Southernhay district of Exeter. He was the son of George Hardy, a commercial traveller, and his wife, Sarah Richardson; George was her second husband, her first having died. George himself died in 1866 and Sarah supported her large family (several boys from the first marriage and two, including Theodore, from the second) by running a preparatory school.

Theodore was educated at home until he was nine and then went as a boarder to the City of London School, from where he went on to London University. On 13 September 1888 he married Florence Elizabeth Hastings, the third daughter of William Hastings, a Belfast civil engineer. Hardy graduated BA in 1889 and then taught for two years in London before moving to teach at Nottingham high school, where he remained for sixteen years. During this period he was ordained deacon (1898) and then priest (1899) and was licensed as a curate for Burton Joyce.

In 1907 Hardy became headmaster of a small establishment, Bentham grammar school, which had the advantage of being situated in Hardy's beloved countryside, as well as providing closer access to his wife's family in Northern Ireland. In 1913 Florence was diagnosed terminally ill, and so Hardy resigned from the school and took the living of Hutton Roof (in the diocese of Carlisle), which gave him time to nurse her. In June 1914 his wife died; their two children had left home—William studying to be a doctor in Belfast, and Elizabeth at London University. After the war broke out Hardy tried numerous times to enlist as a chaplain, and even considered alternatives, such as going as a volunteer stretcher bearer, to which end he attended an ambulance class.

Eventually Hardy was accepted as a chaplain, being commissioned as a temporary chaplain of the fourth class on 16 September 1916, despite his advanced years (he was almost fifty-three), and proceeded to France. He was attached to the infantry base depots at Étaples but pressed insistently to be sent up to the line and in December 1916 joined the 8th Lincolnshire regiment (and later was also attached to the 8th Somerset light infantry), part of 63rd brigade of the 37th division. He saw service in the Loos, Arras, Ypres salient, Somme, and Cambrai sectors.

Hardy soon became renowned for his devotion to the men under his pastoral charge. He insisted on staying in the front-line trenches, anxious to be of as much use as possible to those who were most threatened. His willingness to risk his life in looking after the wounded, or trying to ensure that men were tended, or buried, or brought in

Theodore Bayley Hardy (1863–1918), by unknown photographer, 1918

from no man's land endeared him to those who could be cynical about their chaplains.

The only still photographs of Hardy in the field show him in typical mode, working at the advanced dressing station at Feuchy chapel, near Arras. He refused all attempts to move him back from the line, even if only to give him a rest; he frequently said that he was a dreadful coward, but that his place was at the front, and in any case, with his wife dead and his children grown up, the prospect of death did not perturb him. He told his senior chaplain, the Revd Geoffrey Vallings DSO, that he 'loved his children intensely but that he believed that he could do no better, if God so willed, than join his beloved wife in the presence of the Lord' (Raw, 44).

In the opening days of third Ypres (his division was in action to the east of Wytschaete) Hardy was made DSO (gazetted 18 October 1917). It was awarded for his concern for the wounded, in particular for staying out with a wounded man, trapped in mud, in no man's land for many hours and under constant fire, and despite the fact that his own wrist was broken. He remained with this man until he died. Hardy collapsed with exhaustion shortly afterwards. He was to win the MC in October 1917 for his bravery near Hill 60 (Ypres salient) when he assisted with the evacuation of the wounded from a heavy battery position while it was under a severe bombardment.

During the dismal winter of 1917–18 the division remained in the salient; Hardy invariably accompanied the ration parties to the front and then stayed on and visited the outpost positions, bringing cigarettes, sweets, and conversation. His arrival was frequently accompanied by the sentence with which he is most popularly identified: 'It's only me, boys' (Raw, 61).

In a series of incidents in April 1918 the bravery that Hardy displayed was recognized by the award of the Victoria Cross, gazetted on 11 July 1918. Among other things he stayed with and tended a wounded officer some 10 yards from a German machine-gun position and then sought help to bring him back to the British lines; he rescued a man buried by a shell and endeavoured to save another, all the time under heavy shell fire; and he saved the life of an officer by tending his wounds, received out in no man's land while on a patrol.

Theodore Hardy was now the most highly decorated chaplain in the army; he was presented with the VC by George V at Frohen-le-Grand on 9 August, the event being briefly captured on film. He was wounded on 10 October 1918 while returning from a visit to forward troops who had recently crossed the River Selle. He died of his wounds and pneumonia at the no. 2 base (Red Cross) hospital at Rouen on 18 October two days short of his fifty-fifth birthday, and was buried in the vast Commonwealth war graves cemetery, the St Sever cemetery extension in Rouen, on October 20. A memorial was erected in Carlisle Cathedral.

Wealth at death £739 16*s.* *od.*: probate, 14 Nov 1919, *CGPLA Eng. & Wales*

Hardy, Sir Thomas (1666–1732), naval officer, was born in Jersey on 13 September 1666, the son of John le Hardy (*d.* 1682), solicitor-general of Jersey, and first cousin of the naval officer Sir Charles *Hardy the elder. Thomas was a captain's clerk in the navy by 1688 and later became purser to Captain George Churchill, who subsequently promoted Hardy's career, and with whom he served as first lieutenant of the *St Andrew* at the battle of Barfleur. Early in 1693 he was promoted to the command of the *Charles* fireship, from which he was soon afterwards transferred to the *Swallow Prize*, stationed in the Channel Islands for the protection of trade.

In September 1695 Hardy was appointed to the *Pendennis* (48 guns), which he commanded until the peace in September 1697. In May 1698 he was appointed to the *Deal Castle*, in April 1701 to the *Coventry*, and in January 1702 to the *Pembroke*, the last forming part of the fleet on the coast of Spain under the command of Sir George Rooke. During

Sir Thomas Hardy (1666–1732), by John Faber junior, 1722 (after Michael Dahl, 1714)

the failed attack on Cadiz the *Pembroke* ran aground because she had gone too far inshore. Subsequently she was one of a small squadron under Captain James Wishart in the *Eagle*, which put into Lagos for water. There the chaplain of the *Pembroke*, also a native of Jersey, who was assumed on shore to be a Frenchman, learned that the combined Franco-Spanish fleet from the West Indies had put into Vigo. The news was taken to Hardy, who at once sent it to Wishart, and on to Sir George Rooke. Acting on this intelligence Rooke sailed to Vigo, and there, on 12 October 1702, captured or destroyed the whole of the enemy's fleet. Hardy was sent home with the news, and, as a reward for his services, was knighted by the queen (31 October) and presented with £1,000. In January 1703 he was appointed to the *Bedford* (70 guns), in which he served under Sir Cloudesley Shovell in the Mediterranean during 1703, and with Sir George Rooke in 1704, taking part in the battle of Malaga, where the *Bedford* had a loss of seventy-four men, killed or wounded.

On 13 December 1704, soon after his return to England, Hardy was appointed to the *Kent*, and during the summer of 1705 he was again in the Mediterranean with Shovell and Sir John Leake. In the summer of 1706 he was attached to the squadron under Sir Stafford Fairborne in the Bay of Biscay and at the capture of Ostend. In November 1706 Hardy was appointed to command a small squadron cruising in the Soundings for the protection of trade, a service which extended well into the summer of 1707. In July he was ordered to escort the outward-bound trade for Lisbon, about 200 sail, clear of the channel. Meeting with contrary winds, they were only 93 leagues from the Lizard on 27 August when they saw a squadron of six French ships directly to windwards. Finding it useless to chase these, and fearing that the French might savage the convoy if he pursued them and they avoided him, Hardy contented himself with keeping his convoy well together. He escorted it to the prescribed distance of 120 leagues, after which the merchantmen proceeded safely on their way to Lisbon. On his return to England Hardy was charged with neglect of duty in not having chased the French squadron: he was tried by court martial at Portsmouth on 10 October and fully acquitted, the court finding that he had 'complied fully with his orders'. Nevertheless Hardy found himself also facing an examination before a committee of the House of Lords, his having become a 'test case' for the perceived failures of trade defence over several years. His treatment was attributed to merchants' pressure on the government and part of a broader political attack on the incumbent ministry; moreover, being 'tried' again after an acquittal at a court martial was widely denounced as 'un-English'.

Sir John Leake, who was president of this court martial, further showed his complete approval of Hardy's conduct by selecting him as first captain of the *Albemarle*, and going out to the Mediterranean as his flagship despite the fact that even some of Leake's circle thought Hardy unpopular, a coward, and an incompetent seaman, 'and of that unhappy, proud, malicious disposition, that it was impossible to live a day with him, without observing some ill-natured act' (Leake, 2.168). He returned to England in October 1708, and in December was appointed to the *Royal Sovereign*, from which in the following May he was transferred to the *Russell*, in home waters. On 27 January 1711 he was promoted rear-admiral of the blue, and during the following summer, with his flag in the *Canterbury* (60 guns), commanded the small squadron off Dunkirk and in the North Sea. In April 1711 he had been returned to parliament as tory member for Weymouth, and on 6 October he was appointed to the command-in-chief at the Nore and in the Thames and Medway, which he held during the winter. In the summer of 1712 he again commanded in the North Sea, and afterwards off Ushant, where in August he captured a convoy of five ships, which the government thought it advisable to release, owing to uncertainty over the legal status of prizes taken during the temporary armistice which prevailed while peace negotiations proceeded.

In the summer of 1715, with his flag in the *Norfolk*, Hardy was second in command of the fleet sent to the Baltic under Sir John Norris. This voyage marked the end of his active service. Like a number of other officers with secondary political careers, he found it difficult to flourish in the circumstances which prevailed after the Hanoverian succession, and he was dismissed after his return from the Baltic. At some time before 1710 Hardy had married Constance (*d.* 1720), daughter of Henry Hook, lieutenant-governor of Plymouth; they had one son, Thomas, and

two daughters. Hardy was elected master of Trinity House on 2 June 1729 and again on 25 May 1730. He died on 16 August 1732, and was buried next to his wife in Westminster Abbey. J. K. LAUGHTON, *rev.* J. D. DAVIES

Hardy, Thomas (1748–1798), Church of Scotland minister and ecclesiastical historian, was born on 22 April 1748 in Culross, Perthshire, the third of five children of the Revd Henry Hardy (1717–1752) and his wife, Ann (1719–1805), daughter of John Halkerston, the town clerk of Culross. He was educated at the University of Edinburgh and was licensed to preach on 16 February 1772. He was ordained minister of the parish of Ballingry, Fife, on 16 June 1774, and married Agnes (1755–1812), the daughter of the Revd William Young, minister of Hutton, Dumfriesshire, on 28 June 1780. They had five sons and four daughters.

In 1782 Hardy published a widely read pamphlet defending the position of the moderate party in the Church of Scotland concerning the law of patronage, entitled *The Principles of Moderation* (which was reprinted in 1842 just before the disruption). He attacked the preference of the evangelical party for popular elections, and he invited them instead to join the moderates in seeking a mutually satisfactory change in the law, suggesting that a minister should be chosen by a combination of the patron and a delegate each from the heritors and the kirk session.

He was called to St Giles, the high church in Edinburgh, in 1784, and was translated there on 25 November. This large charge, although collegiate, proved too much for his weak health, and he transferred on 3 December 1786 to the New North Parish (West St Giles, or 'Haddo's Hole'). On 31 July 1788 he took up the chair of ecclesiastical history at the University of Edinburgh in conjunction with his parish. He was awarded the degree of DD on 4 October 1788. Four weeks later he was one of the ministers required to attend the notorious Deacon William Brodie at his execution. Hardy became one of the founding members of the Church of Scotland's Society for the Benefit of the Sons of the Clergy; in 1793 he was moderator of the general assembly, and was appointed a chaplain to the king and a dean of the Chapel Royal.

He was an acclaimed preacher and an exceptional lecturer. A bookseller offered to print his highly regarded

Thomas Hardy (1748–1798), by John Kay, 1793 [*The Rev'd Patriot*]

exposition of John's gospel, but Hardy had spoken only from short notes and had to decline. Similarly, he did not permit his students to take notes from his lectures, prompting the suggestion that he meant to publish them at a later date, but this did not materialize either. He presented his opinions boldly (for instance, his opposition to the slave trade), mixed with dry humour, and his classes were reputedly the best attended in the university. Besides *The Principles of Moderation* Hardy also published *The Patriot* (1793), which refuted the views of Thomas Paine and for which he received a government pension, a *Plan for the Augmentation of Stipends* (1793), and six single sermons (1775–94). He died, probably from tuberculosis, on 21 November 1798 in Edinburgh.

Hardy, Thomas (1752–1832), radical and a founder of the London Corresponding Society, was born in Larbert, Stirlingshire, on 3 March 1752, the son of a merchant seaman. By his own account he was originally intended for 'the clerical profession', but his father died in 1760 returning from the Americas and the estate was mismanaged, leaving insufficient money to pay for an appropriate education. Thomas was sent to school by his maternal grandfather, Thomas Walker, and then brought up in the latter's trade as a shoemaker. He followed this trade as well as working for a short period as a bricklayer in the

Thomas Hardy (1752–1832), by unknown engraver, pubd 1794

Carron iron works. During the spring of 1774 he travelled to London, where he settled.

In London Hardy attended the dissenting congregation which met in Crown Court, Russell Street, Covent Garden. He also joined the semi-masonic order of Gregorians, and it appears to have been from them that he learned a system of organization subsequently employed by the *London Corresponding Society (LCS). In 1781 he married the youngest daughter of a carpenter and builder named Priest from Chesham, Buckinghamshire. They had six children, all of whom died in infancy. Ten years after his marriage he opened his own boot and shoe shop at 9 Piccadilly.

Shortly after Hardy's arrival in London the friction between the American colonists and the British government developed into war. Hardy subsequently maintained in his *Memoir* that his initial sympathies were with the government, but that, at the time, he also felt himself to be ill informed on political matters. In an attempt to remedy this he set about reading political and constitutional tracts; among these tracts was Richard Price's *Observations on the Nature of Civil Liberty* and this had a profound effect on his thinking. It is unclear precisely what occasioned the beginning of his public role in radical politics; towards the end of 1791 his new shop was nearly ruined when business associates let him down, and Hardy claimed that, at the same time, a re-reading of some old political pamphlets convinced him that distress in the country was the fault of a corrupt parliament whose members were interested in self-aggrandizement rather than the common good. Two tracts in particular helped shape his ideas for reform: Major John Cartwright's celebrated *Give us our Rights* (1782), with its call for universal suffrage and annual parliaments; and the duke of Richmond's letter to Lieutenant-Colonel Sharman of the Irish Volunteers (1783), which proposed to foster reform by establishing a society to correspond with like-minded individuals and groups. In January 1792 Hardy and a group of friends founded the London Corresponding Society.

Hardy had originally intended that this new society should be made up exclusively of the unenfranchised, but he soon came round to the belief that this would make it too restricted. The LCS announced from the outset that its membership was to be unlimited, and the weekly subscription of 1*d*. ensured that it was open to all. At the inaugural meeting on 25 January 1792 at The Bell inn, off the Strand, Hardy was appointed secretary and treasurer. He was confirmed in these posts in May, when nine elected delegates from nine separate divisions met to form the first general committee. From the early summer the LCS began publishing addresses and other material calling for universal manhood suffrage and parliamentary reform. It corresponded with similar popular radical societies which had emerged elsewhere, most notably in Norwich and Sheffield. It also developed links with more genteel reformers and groups such as the Society for Constitutional Information, originally established as one of the more radical elements of the Association Movement of 1780, but revived during the excitement generated by the centenary of the revolution of 1688 and the French Revolution; indeed, Hardy acknowledged that the LCS received considerable assistance from educated gentlemen, such as the Revd John Horne Tooke, who were committed to reform. By the end of 1792 membership of the LCS ran into hundreds, but the society was also beginning to face a backlash organized principally by the Associations for the Preservation of Liberty and Property against Republicans and Levellers under the slogan 'Church and King'. There were further difficulties generated in January 1793, when the French National Convention, which the LCS had warmly congratulated the previous September, executed Louis XVI and in February declared war on Britain.

In spite of the setbacks the LCS continued to campaign throughout 1793. In May it sent a petition to parliament to coincide with Charles Grey's motion for reform. In October it sent two delegates to the Edinburgh convention organized by Scottish reformers. When this body was dispersed, and its leaders, including the two LCS delegates, were tried for sedition and sentenced to fourteen years' transportation, the society began discussing with its correspondents the possibility of a new convention to be held in England. In the event the government pre-empted such a move. On 12 May 1794 Hardy was arrested by Bow Street runners and king's messengers. Other arrests followed. The prisoners were interrogated before the privy council, and on 29 May Hardy and six of the others who had been arrested were moved from the houses of the king's messengers where they had been lodged since their arrests, and committed to the Tower of London charged with high

treason. Less than two weeks after this committal, crowds celebrating Lord Howe's naval success over the French at the battle of the Glorious First of June attacked Hardy's house, even though it was appropriately illuminated in honour of the victory. Mrs Hardy, pregnant with her sixth child, escaped with the help of neighbours, but on 27 August she died in childbirth and her child was stillborn.

On 6 October the grand jury of Middlesex returned a true bill for high treason against Hardy and eleven others. Those held in the Tower were removed to Newgate on 24 October, and the accused were formally arraigned at the Old Bailey the following day. They all pleaded not guilty; at the request of their defence counsel Thomas Erskine and Vicary Gibbs, the crown agreed to try the accused separately, beginning with Hardy. Sir John Scott (later Lord Eldon), the attorney-general, who led for the crown, considered separate trials as the best move, believing that he could prove Hardy to have been actively concerned in the plans to call the English convention and that Hardy would be compromised by correspondence between the LCS and societies in Sheffield and Norwich on the subject of arming. However, the prosecution case was by no means simple. Scott argued that Hardy, and by implication the others, were guilty not of direct treason but of constructive treason; essentially he maintained that their attempt to summon a popular convention, if carried out, would have subverted both the legislature and the executive, leading ultimately to the deposition and death of the king. His introductory speech lasted nine hours. Erskine's deft summing up for the defence denied that Hardy and the others were crypto-republicans, and also insisted that the law demanded an assessment of intentions, not speculation upon possible consequences. It was Erskine's interpretation that the jury accepted and in the afternoon of 5 November, after deliberating for three hours, the jury brought in a verdict of 'not guilty'. That evening Hardy was drawn through London in a coach by crowds of exultant supporters; they paused for a few minutes' silence outside his house and shop in Piccadilly, before taking him on to the house of his brother-in-law in Lancaster Court, where he intended to lodge. Two other trials followed (those of the Revd John Horne Tooke and John Thelwall) with similar verdicts, before the government released all of the remaining prisoners.

Hardy had lost everything. He contemplated emigrating to the United States, but was dissuaded by friends and given sufficient financial assistance to open a new shoe shop in Tavistock Street, Covent Garden. Initially business boomed, not least because he was a celebrity; but soon he found himself having to lay staff off and in September 1797 he moved to a smaller establishment in Fleet Street. The month following his house was attacked by loyalists during the celebrations of Admiral Duncan's victory at Camperdown; Hardy had refused to illuminate his windows on the grounds that this had done his wife no good. Friends and members of the LCS fought with the loyalists until troops arrived and the combatants dispersed.

While he ceased to have a high profile in radical politics, Hardy maintained links with leading radicals such as Sir Francis Burdett and Major Cartwright. He does not appear ever to have argued or worked for a radical insurrection, yet he seems to have been ambivalent on the issue. He became an ardent admirer of Napoleon from the first descriptions of him in the British press, and he continued as such even after the first consul had elevated himself into an emperor, possibly with some vague ideas of French assistance for bringing about reform in Britain. The government believed that Hardy was aware of Colonel Despard's conspiracy, but that he would have nothing to do with it. He corresponded with Tom Paine in America, though he regarded the latter's *The Age of Reason* as injudicious, and he was critical of Richard Carlile's subsequent republication of the pamphlet; Hardy considered that God's word could withstand deist speculation, but he feared that the circulation of such ideas provided ammunition for those who opposed the advance of civil liberty. In the first two decades of the new century he was active in the radical cause during parliamentary campaigns in Westminster. He also became involved in City of London politics first as a freeman of the Cordwainers' Company and subsequently as a liveryman of the Needlemakers' Company. In 1798, at the request of Francis Place, he had acted as treasurer of a fund collected for those radicals arrested under a new suspension of the Habeas Corpus Act, and, twelve years later, when Maurice Margarot returned from his sentence of transportation for his part in the Edinburgh convention, Hardy took an active role in organizing financial assistance for him. He wrote numerous letters to the press under his own name and a variety of pseudonyms—Omega, Crispin, A Shoemaker—on a variety of subjects from shaking hands to leather, but his notions of liberty and justice were rarely far in the background. During 1815 to 1816, for example, he focused his attention and reformist zeal on the plight of chimney-sweep boys.

In the summer of 1815 Hardy retired from business, and at some point shortly thereafter he moved to Queen's Row, Pimlico. He had £700 saved, which he believed would support him and his widowed sister, who kept house for him, for the rest of their lives. However, by the beginning of 1823 this money was all but expended and Hardy appealed to Sir Francis Burdett for assistance. Burdett arranged for £100 a year to be available for Hardy and his sister; it was to be drawn, as needed, from William Frend and, after 1827, from Francis Place. In his last years Hardy was keen to leave a record of the political struggles in which he had been involved. He collected his personal letters, together with the first minute book of the LCS, and drafted a history of the society; all of these papers were handed over to Francis Place. Hardy lived just long enough to see the Great Reform Act of 1832. He died in Queen's Row, on 11 October 1832, and was buried in Bunhill Fields. His *Memoir of Thomas Hardy*, which he had begun towards the end of the 1790s, was published shortly after his death.

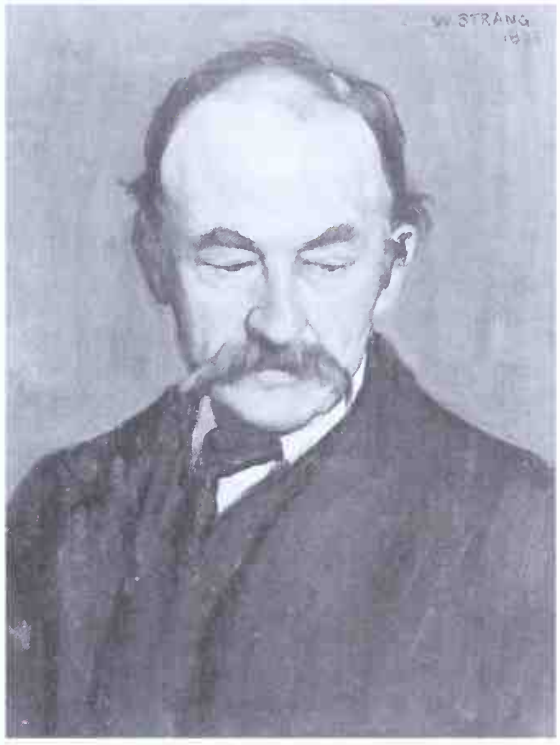
Hardy, Thomas (1840–1928), novelist and poet, was born on 2 June 1840 in the Dorset hamlet of Higher Bockhampton, the first of the four children of Thomas Hardy (1811–1892), stonemason and jobbing builder, and his wife, Jemima (1813–1904), daughter of George and Betty Hand of Melbury Osmond, Dorset. At birth—slightly more than six months after his parents' marriage (22 December 1839)—he is said to have been at first given up for dead and saved only by the watchfulness of the midwife.

Early life The family's cottage, built of 'mudwall' and thatch by Hardy's great-grandfather at the turn of the century and held on 'lifehold' tenure from the nearby Kingston Maurward estate, stood alone on the edge of open heathland. As a sickly child, not confidently expected to survive into adulthood and kept mostly at home, Hardy gained an intimate knowledge of the surrounding countryside, the hard and sometimes violent lives of neighbouring rural families, and the songs, stories, superstitions, seasonal rituals, and day-to-day gossip of a still predominantly oral culture. He had young cousins nearby but depended chiefly on the always sympathetic company of his sister Mary, just a year his junior; his brother, Henry, was born later, in 1851, his second sister, Katharine (Kate), in 1856. Their easy-going father was in only a small and sometimes unprofitable way of business, but their mother, tough-minded and managerial, held the family determinedly together and ingrained in her eldest child habits of prudence, economy, and limited expectation that became lifelong.

Hardy learned to read early and developed a love of church ritual and music. He was taught to play the violin by his father—once a member, like Hardy's uncle and grandfather, of the little group of Stinsford church musicians subsequently memorialized in the novel *Under the Greenwood Tree* (1872)—and they sometimes performed together at local parties and dances. Hardy may have attended a local dame-school and was certainly 'taken up' by Julia Augusta Martin of Kingston Maurward House, but he received no regular schooling until, at the age of eight, he entered the (Anglican) national school just opened in Bockhampton village under Mrs Martin's patronage. In September 1850 his mother—responding in part to Mrs Martin's perceived possessiveness—sent him to the (nonconformist) British School in Dorchester, the county town, some 3 miles off, a distance Hardy walked twice daily for several years, even though he remained weak and slow to develop until well into his teens. Eventually he grew more robust but remained, at around 5 feet 6 inches, rather below the average in height.



Thomas Hardy (1840–1928), by William Strang, 1893

At the British School Hardy flourished under the teaching of the headmaster, Isaac Glandfield Last, and in 1853 he followed Last to the latter's newly established 'commercial academy'—Jemima Hardy, ambitious as always for her son's advancement, finding the money for him to take Latin as an additional subject. Later on he attempted to learn Greek without formal teaching and dreamed of eventually attending Cambridge, taking orders, and becoming the incumbent of a rural parish—a position evidently envisaged as offering ample leisure for the writing of poetry. In 1856, however, his parents took the more practical step of apprenticing him to a local ecclesiastical architect named John Hicks. Hardy remained in Hicks's office for six years, and while he learned to regret his participation, then and later, in church 'restorations' that involved the destruction of ancient structures and associations, he never despised the excellent professional training Hicks had given him. The period was also marked by sustained private study of Latin and Greek, by fluctuating religious enthusiasms, and by a hesitant emotional development that was perhaps confused by the homosexuality of his much admired friend Horace Moule, the brilliantly literary but disastrously unstable son of the Revd Henry Moule, evangelical vicar of one of the Dorchester churches.

The move to London In April 1862, two months before his twenty-second birthday, Hardy left Dorchester for London, where he quickly found work as a draughtsman in the busy office of Arthur William Blomfield, a leading

Gothic architect of the day. He went to plays, operas, museums, and galleries, and seems thoroughly to have relished the vitality and density of a still 'Dickensian' London. He admired Blomfield, liked his colleagues, was elected to the Architectural Association, and won in 1863 the silver medal of the Royal Institute of British Architects for an essay (since vanished) entitled 'On the application of coloured bricks and terra cotta to modern architecture'—a success somewhat marred by the judges' withholding the cash segment of the award. He kept up his private studies, worked at shorthand, French, and art history as possible avenues to a journalistic career, and in 1865 embarked with intensity and ambition on the study and writing of poetry—as witnessed by the exercises contained in his 'Studies, specimens &c.' notebook (1865–8, published 1994) and by the survival (Dorset County Museum) of dictionaries and poetry volumes purchased in the mid-1860s and often bearing the address, 16 Westbourne Park Villas, at which he lived for most of this London period. No poems appeared in print at the time, but he did publish a humorous sketch, 'How I built myself a house', in *Chambers's Journal* for 18 March 1865.

Early writings Hardy's religious faith significantly eroded during his London years—partly, perhaps, in response to the publication in 1859 of Darwin's *On the Origin of Species*—and by the time ill health brought him back to Higher Bockhampton in the summer of 1867 he had abandoned his old aspirations to a university education and a country ministry. He now wanted to write and, if at all possible, to live by writing. In Dorset, living mostly with his parents, he resumed work as an architect—for Hicks again and then, after Hicks's death, for his successor, the Weymouth architect G. R. Crickmay—but undertook at the same time a long first-person novel called *The Poor Man and the Lady*. The central story of the socially transgressive love and marriage of an impecunious young architect and the daughter of the nearby 'great house' was once described by Hardy himself as 'socialistic, not to say revolutionary' in character (*Life and Work*, 63), and while the manuscript's readers—remarkably, they included Alexander Macmillan, John Morley, and George Meredith—recognized its narrative strengths, they advised against publication of so outspoken an attack on the attitudes and pretensions of the upper classes. Meredith in particular urged Hardy 'not to "nail his colours to the mast" so definitely in a first book' but to attempt instead 'a novel with a purely artistic purpose' and a more complicated plot (ibid., 62, 64).

The Poor Man and the Lady remained unpublished but not entirely unused, in that Hardy incorporated portions of its manuscript into later works. What did appear, in 1871, was his perhaps somewhat cynical response to Meredith's advice, a 'sensation' novel entitled *Desperate Remedies* and published in three volumes by Tinsley Brothers, partly at the unnamed author's expense. Although the few reviews were extremely mixed, Tinsleys in 1872 brought out, unsubsidized but still anonymously, a second, two-volume novel called *Under the Greenwood Tree*. The crucial moment in Hardy's career came, however, in July 1872 when Tinsleys commissioned the writing of *A Pair of Blue Eyes* as a serial for *Tinsleys' Magazine*, to be followed in 1873 by publication in three volumes with Hardy's name on a title-page for the first time. Because serial writing was the prime source of income for Victorian novelists, Tinsleys' invitation gave Hardy, just turned thirty-two, the confidence to devote himself to literature full-time.

Courtship and marriage Hardy's early fascination with Horace Moule, whose suicide in September 1873 affected him profoundly, coexisted with the series of youthful infatuations reflected in such poems as 'To Lizbie Browne' and 'To Louisa in the Lane'. While in London between 1862 and 1867 he was involved with, perhaps temporarily engaged to, the religiously-minded Eliza Bright Nicholls, who had formerly lived with her coastguard father at Kimmeridge, on the south Dorset coast. By the late 1860s that relationship—its termination probably reflected in the poem 'Neutral Tones'—had been succeeded by attachments, of uncertain depth and duration, to his young schoolteacher cousin Tryphena Sparks, later remembered in the poem 'Thoughts of Phena', and to Catherine ('Cassie') Pole, the daughter of the butler at West Stafford rectory.

Of far greater importance was Hardy's meeting in March 1870 with Emma Lavinia Gifford (1840–1912), daughter of a Plymouth solicitor and sister-in-law of the rector of the lonely and dilapidated Cornish church of St Juliot, which Crickmay had sent Hardy to inspect. Beguiled by the romantic location, entranced by Emma Gifford's social pretensions, literary enthusiasms, and vivid personality—perhaps entrapped to some degree by her eagerness (at twenty-nine) to seize a chance of marriage—Hardy entered into an engagement that distressed both families by its challenge to class barriers and assumptions. Emma Gifford gave her fiancé material assistance during the writing of *A Pair of Blue Eyes*, which drew heavily on the circumstances of their Cornish courtship, and loyally supported his exchanging the relative security of architecture for the riskier prospects of literature, but Hardy seems nevertheless to have had serious qualms about his engagement during its four-year course. The wedding itself—conducted by the bride's uncle the Revd Edwin Hamilton Gifford (1820–1905), later archdeacon of London, but otherwise witnessed only by Emma's brother and the daughter of Hardy's London landlady—took place in London on 17 September 1874, and after a short honeymoon in Rouen and Paris the couple returned to rent a share of a house in Surbiton in order that Hardy might have ready access to London and its literary market place.

Early novels Though Hardy's first three published novels are not generally considered central to his achievement, each is in its way remarkable. *Desperate Remedies* (1871), though somewhat hectically plotted, treats sensitively and even disturbingly of the physical and sexual threats encountered by its heroine, while the 'idyllic' and deeply personal *Under the Greenwood Tree* (1872) possesses a deceptively simple elegance unmatched by any of Hardy's later

fiction. *A Pair of Blue Eyes* (1873) may betray signs of Hardy's having padded some instalments of this first serial, but its romantic setting, the interplay of class and gender issues within its tragicomic plot, and the vitality of its heroine (closely based on Emma Gifford) served to make it a favourite novel of many Victorians, Tennyson and Coventry Patmore among them.

Far from the Madding Crowd, however, was the first of Hardy's major novels, and the one that made him famous. Serialized in the prestigious pages of the *Cornhill Magazine* between January and December 1874, published in two volumes by Smith, Elder in November 1874, it established precisely the kind of richly specific rural and agricultural setting that was to characterize his most widely admired work. It also introduced, as integral to that setting, the fictional region of Wessex, closely based on the topography of Dorset and the adjacent counties, that became increasingly the central organizing feature of his fiction. And through the often melodramatic, sometimes humorous story of the beautiful but headstrong Bathsheba Everdene and her diverse suitors it enacted an effective variation on the kind of marriage plot Hardy had already invoked in *A Pair of Blue Eyes*.

The next novel, *The Hand of Ethelberta*, was also serialized in the *Cornhill* (July 1875 – May 1876) and published by Smith, Elder (3 vols., 1876), but its settings are more often urban or suburban than rural, its central characters either servants or their middle- and upper-class employers, and its romantic elements subordinated to the central story (perhaps remotely suggested by Hardy's having been waited on at table by Catherine Pole's father) of how, at what cost, and with what ironic implications, a butler's daughter, Ethelberta Petherwin, wins her way to social and financial power as the wife of the wealthy but dissolute Lord Mountclere. Hardy doubtless intended to demonstrate that his professional range extended beyond rural settings, but the novel was poorly received and he was never again invited to write a *Cornhill* serial.

It was only after some difficulty, indeed, that Hardy placed his next book, *The Return of the Native*, in the January to December 1878 issues of *Belgravia*, a magazine best known as an outlet for 'sensation' fiction. A renewed preoccupation with regional materials and topography is immediately signalled in the three-volume first edition (Smith, Elder, 1878) by the presence, as frontispiece, of Hardy's own 'Sketch map of the scene of the story', identifiably based on the heathland of his childhood. Also quickly apparent is the ambitiousness of the novel's conception. Its principal characters may ultimately lack grandeur—the reformist Clym Yeobright emerging as an arid idealist, the romantic Eustacia Vye as a woman of very ordinary imagination and desires—but structure, imagery, and allusions persistently evoke both a native primitivism and the conventions of classical theatre. From the very first chapter Egdon Heath, the novel's bleak setting, is powerfully established as (to quote a later Hardy novel) one of

> those sequestered spots outside the gates of the world ... where, from time to time, dramas of a grandeur and unity truly Sophoclean are enacted in the real, by virtue of the concentrated passions and closely-knit interdependence of the lives therein. (*The Woodlanders*, chap. 1)

The Return of the Native, even so, was not enthusiastically reviewed, and Hardy, perhaps in search of more 'popular' audiences, next wrote three novels of somewhat lighter weight: *The Trumpet-Major* (3 vols., 1880), a primarily comic but sometimes poignant Wessex story of sexual rivalry and fraternal loyalty during the period of the Napoleonic wars; *A Laodicean* (3 vols., 1881), contrastively 'modern' in period and theme and drawing extensively on Hardy's experience as an architect; and *Two on a Tower* (3 vols., 1882), glancing towards contemporary science in juxtaposing a young astronomer's rapt contemplation of the stars with his inattentiveness towards the older woman who loves and assists him. During the novel's serialization in the *Atlantic Monthly* some readers objected to the spurned heroine's marrying an unsuspecting bishop in order to provide a father for her unborn child, and the magazine's editor complained that he had been promised a family story but supplied instead with a story in the family way.

Return to Dorchester The Hardys left Surbiton for a more central London lodging in March 1875 and moved again, four months later, to the Dorset seaside resort of Swanage, where *The Hand of Ethelberta* was written and partly set. In the spring of 1876, following a brief stay in Yeovil and a holiday visit to the Rhine valley and Belgium (including the Waterloo battlefield), they took a house overlooking the River Stour in the little Dorset market town of Sturminster Newton. There Hardy wrote *The Return of the Native*, responded with eager interest to local events and festivals, and enjoyed with his wife what—despite the continuing childlessness of the marriage—he later called 'Our happiest time' (*Life and Work*, 122). Their next move, to the London suburb of Tooting in March 1878, was motivated by a renewed sense of Hardy's needs as a professional novelist and by Emma Hardy's dissatisfaction with Sturminster's rural isolation. But while Hardy made good use of his professional opportunities, forming important friendships with editors, illustrators, and fellow writers, his marriage fared less well: it was at 1 Arundel Terrace, Upper Tooting, so he enigmatically remarked, 'that their troubles began' (ibid., 128). It was there also, in the autumn of 1880, that he fell seriously ill, apparently with complications from a bladder infection, just as the serialization of *A Laodicean* had begun. Bedridden throughout the ensuing winter, Hardy kept up with the printer's schedule only by invoking his wife's assistance as amanuensis.

Hardy's illness, reinforced by his growing sense that city living 'tended to force mechanical and ordinary productions from his pen, concerning ordinary society-life and habits' (*Life and Work*, 154), prompted a move back to Dorset. In June 1881 the Hardys rented a house in Wimborne, formed new friendships, and took an active part in local life—including a Shakespeare reading group. They spent several weeks in Paris in the autumn of 1882, and in the spring and early summer of 1883 initiated what became

for many years a regular pattern of renting accommodation in London for up to two months of the 'season', visiting galleries and theatres, hearing music, and meeting and entertaining friends. Though not elected to the Athenaeum until 1891, Hardy was already a familiar figure at the Savile Club, took an active interest in copyright and other issues addressed by the recently founded Society of Authors, and dined occasionally with the Rabelais Club and other such convivial coteries.

That same summer of 1883 the Hardys moved finally to Dorchester itself, so central to the territory Hardy was claiming as a novelist yet rendered problematic by its associations with his humbler upbringing and by the fears—soon realized—of continued hostility between his wife and the family still living at Higher Bockhampton. A house in the town was rented for two years while Hardy's father and brother built a new house, to Hardy's own design, just outside Dorchester, on a plot of open downland purchased from the duchy of Cornwall. Called Max Gate (after a nearby toll-gate long kept by one Henry Mack) and often criticized for the villa-style eclecticism of its architecture, the red-brick building was much enlarged, if little modernized, over the years and became increasingly secluded by the Austrian pines Hardy had planted in December 1883. Though still exposed in June 1885, when the Hardys first moved in, it was a comfortable and compact house that stood solidly in its own grounds and asserted—together with Hardy's early appointment as a local magistrate—a claim to middle-class status that seems at first to have gained only grudging local acceptance.

Later fiction The move to Dorchester was reflected in Hardy's work by a renewed attentiveness to Wessex scenes and subjects. In *The Mayor of Casterbridge*—serialized (in a bowdlerized form) in the weekly *Graphic* between 2 January and 5 May 1886, then published in two volumes by Smith, Elder (1886)—Casterbridge itself is a busy market town modelled on the Dorchester of four decades earlier, economically vibrant as the nodal point of the rich surrounding countryside but riven by internal class-based conflicts. The central opposition, at once commercial and profoundly personal, between Michael Henchard, the rooted traditionalist, and Donald Farfrae, the modernizing newcomer, dramatizes the processes of historical change in the countryside even as it draws on classical and biblical analogies reminiscent of *The Return of the Native*.

The Woodlanders (serialized in *Macmillan's Magazine* from May 1886 to April 1887, published in three volumes by Macmillan in March 1887) is set in the part of north-west Dorset in which Hardy's mother's family had lived. Although it lacks the structural assurance of its predecessor, its plot again depends on the intermeshing of emotional and economic issues. The characters live among the trees on which their livelihoods depend, and when Giles Winterbourne suffers financial losses he loses also his promised bride, educated to higher levels of class expectation, and eventually his own life. In the late 1880s Hardy also began to collect the short stories he had long been publishing in magazines. *Wessex Tales* (2 vols., 1888) comprised just five stories, among them 'The Three Strangers', 'The Withered Arm', and 'The Distracted Preacher'. *A Group of Noble Dames* followed, somewhat less impressively, in 1891, and in 1894 came *Life's Little Ironies*, containing such notable stories as 'On the Western Circuit', 'A Tragedy of Two Ambitions', and 'The Fiddler of the Reels'. A somewhat miscellaneous supplementary volume, *A Changed Man and other Tales*, appeared in 1914 and a scholarly edition of *The Excluded and Collaborative Stories* in 1992.

The final phase of Hardy's career as a novelist is curiously framed by the short and enigmatically personal fable of sexual and artistic obsession that was serialized as 'The Pursuit of the Well-Beloved' in 1891 and heavily revised for volume publication, as *The Well-Beloved*, only in 1897. Although published by the same firm—the London-based but American-owned house of Osgood, McIlvaine—as *Tess of the d'Urbervilles* (3 vols., 1891) and *Jude the Obscure* (1895, but dated 1896), *The Well-Beloved* had little in common with them beyond the hostility its sexual frankness aroused in a significant number of its reviewers. With both *Tess* and *Jude*, as on a number of earlier occasions, editorial concern at Hardy's handling of sexual matters led to his making to the serializations cuts and adjustments that were for the most part restored in the volumes.

The occasional negative reviews of *Tess*, though hurtful to Hardy himself, were overwhelmed by the popular response to the novel's deeply imagined portrayal of a heroine moving through hopes and betrayals, surmounted difficulties and deceptive idylls, to a tragic conclusion whose 'justice' the author's passionate advocacy profoundly challenges. *Tess* is also the most eloquently written of the novels, and the one in which the natural world and the topography itself—the landscapes Tess so doggedly traverses—are most continuously and richly represented. *Jude*, in contrast, is more sparely written, and its haunted characters, trapped within an intricately disastrous plot, move restlessly from one unfriendly town to another, loving without fulfilment, striving without achievement. By representing Jude Fawley as encountering persistent persecution in his attempts to gain admission to a Christminster (that is, Oxford) college and share with Sue Bridehead a life outside wedlock, Hardy was deliberately attacking the existing educational system and marriage laws. The novel's sexual directness fuelled the hostility of its reception in some quarters, and while Hardy affected to laugh off a bishop's claim to have consigned the book to the flames he could not easily remain indifferent to reviews with headings such as 'Jude the Obscene' and 'Hardy the Degenerate'.

Middle life Emma Hardy took personal offence not only at *Jude*'s attack on marriage but also at what she saw as its dark pessimism and irreligiousness. Max Gate provided Hardy himself with a congenial working environment, but it had not proved fortunate for his marriage. As a professional novelist writing to deadlines, peremptory as to his priorities and impatient of interruptions, he was not easy to live with, and he had failed—had perhaps not sufficiently tried—to resolve the antagonism between his wife

and the family he now regularly visited. Emma Hardy, temperamentally restless and impulsive, lacking satisfying occupations and sympathetic friends, grew ever more deeply resentful—and publicly critical—of her husband's self-sufficiency and fame. The marriage was kept up to the end as a more or less functioning day-to-day arrangement. The Hardys shared a devotion to the Max Gate cats (subsequently buried in the pets' cemetery there) and a hatred of all forms of cruelty to animals. They continued to go to London together almost every spring and even to share occasional holidays, including an extended Italian trip in 1887. But Emma Hardy led an increasingly separate life, eventually withdrawing into the two attic rooms created at the time of the construction of Hardy's final study. And in London the literary and social worlds which welcomed and lionized her husband increasingly saw—and shunned—her as plain, ill-dressed, and dull.

It was in those same worlds, especially following the publication of *Tess*, that Hardy received flattering attentions from numerous women handsomer and more stylish than his wife and often better educated. In the late 1880s he was sexually fascinated by the poet Rosamund Tomson (who published as Graham R. Tomson), only to be deterred by a lack of genuine responsiveness on her part and perhaps by the freedom of her lifestyle. She subsequently published a description of him at that time as 'slightly below the middle height, but strongly built, with rugged, aquiline features, pallid complexion, a crisp, closely trimmed brown beard, and mustache short enough to disclose an infrequent smile of remarkable sweetness' (New York *Independent*, 22 Nov 1894, 2). His 'bright, deep-set eyes' (ibid.) and greying, slightly receding hair were also noted, but not the slightly crooked nose evident in some of the portraits and busts. The beard was evidently shaved off in the early 1890s and, to judge from contemporary photographs, that was by far Hardy's smartest decade, his appearance on social occasions attaining almost to dapperness.

In the mid-1890s Hardy was strongly attracted to another acknowledged beauty, Agnes Grove (later Lady Grove), the daughter of General Pitt-Rivers, but it was only with Florence Henniker, daughter of Richard Monckton Milnes (Lord Houghton), that he seems to have fallen seriously in love. At their first meeting in 1893 she struck him immediately as a 'charming, *intuitive* woman' (*Life and Work*, 270), and she, for her part, valued his friendship and literary eminence and was happy, as a novelist herself, to collaborate with him in a short story called 'The spectre of the real'. But she never wavered in her loyalty to her husband, a distinguished soldier, or to the religious views that Hardy so deeply deplored. The limits of the relationship are suggested by the poem 'A Thunderstorm in Town' when, trapped together inside a London cab by a sudden downpour, 'I should have kissed her if the rain / Had lasted a minute more'.

By 1900, the year of his sixtieth birthday, Hardy's melancholic temperament found much in his personal life on which to brood. Professionally, however, his position was strong. New United States copyright legislation had enabled him to profit from the American as well as the British popularity of *Tess*; the notoriety of *Jude* was further reviving interest in his earlier titles; a first collected edition of his fiction had been brought out by Osgood, McIlvaine in 1895–6; and with the general shift in publishing to a royalty system of remuneration he could expect to benefit indefinitely from future sales of what (with silent nods to Scott and Trollope) he now consistently referred to as 'the Wessex novels'.

Return to poetry It was Hardy's improved and stabilized economic situation, rather than his anger at reviewers, that chiefly determined the timing of his long contemplated return to poetry. His first collection, *Wessex Poems*, published in 1898 by Harper & Brothers (successors to Osgood, McIlvaine), brought together newly written poems, poems composed during the novel-writing years, and still others revised from originals drafted in London during the 1860s. Because a similar mix occurs in all of his volumes, individual poems are often hard to date and the volumes themselves elusive of characterization. *Wessex Poems*, however, uniquely included thirty-one of Hardy's own idiosyncratic drawings. Some reviewers saw the naïvety of the drawings as symptomatic of weaknesses in the poems themselves; others were troubled by the number of ballads in the volume; one marvelled that Hardy 'did not himself burn the verse, lest it should fall into the hands of the indiscreet literary executor, and mar his fame when he was dead' (*Saturday Review*, 7 Jan 1899, 19). Even the more favourable commentators tended to suggest that Hardy's range as a poet was narrow, his technique clumsy, and his vocabulary often perversely provincial, even dialectal. Hardy had in fact no intention of following the example of William Barnes, the Dorset dialect poet, whom he had known and admired and whose poems he selected and edited a few years later. But he declined to limit his use of distinctively English words, however unfamiliar or 'unpoetic', and remained determined to challenge what he saw as the current fashion of subordinating content to form and 'saying nothing with mellifluous preciosity' (*Collected Letters*, 2.208).

Poems of the Past and the Present, published by Harper in 1901 (but dated 1902), contained fewer ballads than its predecessor but more poems overall, varying in subject from the Second South African War (such as 'Drummer Hodge' and 'The Souls of the Slain') and the bleakness of the universal scheme of things ('The Subalterns', 'The Lacking Sense') to such intense introspections as *'In Tenebris'*. It also demonstrated—what all the succeeding poetry volumes would amply confirm—the exceptional number of different stanza forms and metres, whether inherited or invented, that Hardy was able to deploy. A third, equally various, collection, *Time's Laughingstocks* (Macmillan, 1909), reinstated the ballad as a central Hardyan verse form, notably in the shape of 'A Trampwoman's Tragedy', which Hardy himself is said to have considered, 'upon the whole, his most successful poem' (*Life and Work*, 517). It has been argued that many of the nearly one thousand poems Hardy published are too weak or trivial to have been preserved, that such proliferation was and is damaging to his

reputation, and that he is best approached through selections. But for Hardy the extraordinary and the everyday were equally matter for poetry: the technical range of his verse is matched by the exceptional diversity of subjects, moods, and emotions of which it treats, and even little regarded poems are likely to seem indispensable once attentively addressed.

Hardy had long been dissatisfied that Harper & Brothers' absorption of Osgood, McIlvaine should have resulted in his having a New York publisher for his British as well as his American editions, and when his agreements with Harper expired in 1902 he transferred all British rights in his works to the house of Macmillan. Frederick Macmillan was delighted to reissue the 1895–7 collected edition of the novels as a Macmillan imprint and, in due course, to bring out the handsome and extensively revised Wessex Edition of 1912–31 and the signed Mellstock Edition of 1919–20—both containing the verse as well as the prose. He was perhaps less delighted to receive, in September 1903, the manuscript of Part First of *The Dynasts*, Hardy's long-contemplated epic drama of Britain's struggle with Napoleonic France. The initial reception of the three parts in 1904, 1906, and 1908 was generally lukewarm, but when, early in the First World War, Harley Granville-Barker adapted for the London stage what Hardy had always intended as a 'closet' drama, to be read and not performed, *The Dynasts* achieved a wider, specifically patriotic, resonance that fed into the high reputation it enjoyed between the wars.

It did not, however, share in the late twentieth-century rise in critical estimation of Hardy's poetry that led to his being recognized, uniquely, as both a great nineteenth-century novelist and a great twentieth-century poet. The verse of *The Dynasts* has come to seem flaccid, its structure ponderous, and the cosmic apparatus of the Spirits perhaps a little absurd. At the same time, it remains highly readable, impressive in its historical scope, and innovative in its visual perspectives, and the Spirits clearly offered Hardy a technique, beyond the scope of the pre-Joycean novel, for giving voice and form to his own shifting and often self-contradictory musings about human experience. It is characteristic of Hardy, whose temperamental pessimism was tempered by belief in what he himself called 'evolutionary meliorism' ('Apology' to *Late Lyrics and Earlier*), that even the central idea of *The Dynasts*—that of the universe as controlled by a blind and unconscious Immanent Will—is not rigidly sustained throughout. He always disclaimed possession of a consistent philosophy, and in the preface to *Poems of the Past and the Present* described his poems as 'a series of feelings and fancies written down in widely differing moods and circumstances'—adding, perhaps with *The Dynasts* already in mind, 'Unadjusted impressions have their value, and the road to a true philosophy of life seems to lie in humbly recording diverse readings of its phenomena as they are forced upon us by chance and change.'

Years of fame Completion of *The Dynasts* in 1908 did much to enhance Hardy's emerging status as a uniquely 'national' writer. In 1909 he was appointed to the Order of Merit and succeeded George Meredith as president of the Incorporated Society of Authors, and during his remaining two decades he was unquestionably the most famous living writer in Britain and, indeed, in the Western world. In the years preceding the First World War he was often on his own in London and elsewhere—Emma Hardy now preferring to avoid the annual dislocation of taking a London lodging—and able to pursue his friendship with a young schoolteacher and aspiring writer named Florence Emily Dugdale (1879–1937). They first met, as author and admirer, in 1905, and by the end of 1906 she was visiting the reading room of the British Museum to look up references he needed—or pretended to need—in completing *The Dynasts*. As time passed, Hardy became emotionally more dependent on her as well as increasingly exploitative of her typing skills, and she sometimes accompanied him to the gatherings, at once intellectual and congenial, hosted in Aldeburgh by his rationalist friend Edward Clodd.

In 1910, after meeting Emma Hardy at a women's literary club in London, Florence Dugdale spent several weeks at Max Gate typing and editing the poems, stories, and religious meditations which Emma was then trying to write, and although the quarrels between husband and wife deterred her from returning to Max Gate she kept up her separate friendships with both. Whether her relationship with Hardy became actively sexual cannot be known: opportunities, clearly, were ample, but Florence Dugdale was thirty-eight years Hardy's junior, her lower middle-class background was rigidly conventional, and when writing privately to Clodd she spoke freely of the comic aspects of 'the Max Gate ménage' (*Letters of Emma and Florence Hardy*, 66).

Second marriage In November 1912 Emma Hardy died, aged seventy-two. Her health had for some time been in decline—her death-certificate refers to 'impacted gallstones'—but the suddenness of her actual departure precluded any last-minute marital reconciliation and left Hardy with only the bitter comments on himself discovered in the private diaries she proved to have been keeping for many years. He soon destroyed the diaries themselves—apart from the pages (published as *Some Recollections* in 1961) devoted to his wife's early memories—but their contents contributed indelibly to the mood of remorseful retrospection that revived and glorified his early memories of Emma, impelled him to revisit St Juliot with his brother early in 1913, and inspired the astonishing sequence of elegiac love poems ('The Voice', 'I found her out there', 'After a Journey', 'Beeny Cliff', and so on) later published as 'Poems of 1912–13' and widely regarded as his finest work in verse.

Florence Dugdale, supported by Hardy's sisters, took over the running of Max Gate after Emma Hardy's death, although fear of local gossip kept her effectively housebound. The logic of the situation seemed to override the age difference and impel her towards an eventual marriage, but she hesitated over the decision and laid down a number of conditions before finally giving her consent. The wedding itself, an intensely private occasion, took

place in Enfield parish church, near the Dugdale home, early in the morning of 10 February 1914, the bride and groom immediately rushing back to Max Gate in order to avoid newspaper reporters and the especially dreaded risk of a civic reception at the Dorchester railway station.

Although she was already well attuned to the rhythms of life at Max Gate, Florence Hardy's altered status brought with it a new and sometimes burdensome sense of responsibility that was soon tested by the emotional and practical pressures of the First World War, by her husband's celebration of his first wife's virtues in the 'Poems of 1912–13', published in *Satires of Circumstance* in November 1914, and by certain aspects of Hardy's behaviour in old age. Despite his achieved affluence Hardy lost neither his sensitivity to public opinion, however voiced, nor the frugal habits of his childhood. Servants and tradespeople found him mean and hard to please and were delighted, years later, to exaggerate his foibles and failings for the delectation of eager interviewers. Though genial to visitors, he could be temperamental in private; the hypochondria that coexisted with his generally excellent health was the source of frequent alarms and despondencies; and although he himself spent so much of every day working alone in his study, he would object to his wife's going away for even a single night.

Florence Hardy took over ever-increasing amounts of the voluminous Max Gate correspondence, often typing up and signing letters that Hardy had drafted in pencil. During the years 1917–20 she also made, as typist, an indispensable contribution to Hardy's secret generation of the third-person 'Life and work'—published, as always intended, after his death as an official biography authored by Florence Emily Hardy. Hardy necessarily left his life's narrative incomplete, and because his widow made alterations to the first volume, *The Early Life of Thomas Hardy* (1928), and had to write the conclusion of the second, *The Later Years of Thomas Hardy* (1930), its status as autobiography is somewhat open to question. That status was speculatively reclaimed by the re-edited *The Life and Work of Thomas Hardy* (1984), but the destruction of notebooks and other original source materials, before and after Hardy's death, had in any case bequeathed to prospective biographers a record selected, compiled, and angled by the subject himself.

Final phase Hardy in his later years depended heavily on the advice and practical assistance of Sydney (later Sir Sydney) Cockerell, the forceful director of the Fitzwilliam Museum, who had originally assisted in the distribution of his manuscripts to various libraries and subsequently facilitated Florence Hardy's publication of limited edition pamphlets of her husband's writings. But for guidance in professional matters Hardy relied on the continuation of his congenial relationship with (now) Sir Frederick Macmillan and with the Macmillan firm, publishers of all his later books. These included the four collections of poetry subsequent to *Satires of Circumstance*—*Moments of Vision* (1917), *Late Lyrics and Earlier* (1922), *Human Shows* (1925), and the posthumous *Winter Words* (1928)—as well as an important *Selected Poems* (1916) and the short verse-drama called *The Famous Tragedy of the Queen of Cornwall* (1923), later set to music by Rutland Boughton. Even *Winter Words* contains important poems evidently written or at least drafted many years earlier, but it remains none the less extraordinary that volumes issued by a poet in his middle and late eighties should show neither a decline in quality nor any significant shift in emotions, attitudes, or beliefs. Long characterized and chastised as a 'pessimist', Hardy continued to contest any such categorization—publicly in the important 'Apology' prefixed to *Late Lyrics*, privately when noting on the page proofs of *Human Shows* (Dorset County Museum) that only two-fifths of the poems were expressive of 'tragedy, sorrow or grimness' as against three-fifths that dealt with 'reflection, love, or comedy'.

Hardy lost his beloved sister Mary in 1915 and was deeply shaken by the First World War—in which a favourite cousin, Frank George, was killed. He was apprehensive as to the long-term consequences of the Versailles treaty, and in contemplating the troubled social scene of the 1920s he was torn, as always, between an intellectual progressivism and an instinctual conservatism. He rarely ventured outside Dorchester now, but went to Oxford in February 1920 to see an Oxford University Dramatic Society production of *The Dynasts* and add an honorary degree to those already received from Aberdeen and Cambridge, and made in May 1920 a final visit to London to attend the wedding of Harold Macmillan. At the same time he remained alert to events in Dorchester itself, visiting recent archaeological excavations, making a few speeches on local occasions, and taking a particular interest in the dramatizations of his novels written, produced, and performed by the group of local amateurs who came to call themselves the Hardy Players. In 1923 he gave them the *Queen of Cornwall* to perform and in 1924 his own stage version of *Tess*, deeply distressing his wife on the latter occasion by becoming so obviously infatuated with Gertrude Bugler, the young and beautiful Dorset actress who took the part of Tess.

Max Gate was now a place of pilgrimage, and it became a regular afternoon routine for Hardy, after several hours' solitary work in his study, to come downstairs to greet the day's contingent of tea-time visitors—typically ranging from the rich, aristocratic, and powerful to Dorset relatives, acquaintances, and clergymen, old friends such as Cockerell, Edmund Gosse, Sir James Barrie, and the Harley Granville-Barkers, poets such as Walter de la Mare, Siegfried Sassoon, and Edmund Blunden, and those enthusiasts, academics, and tourists who had politely written ahead or simply refused to be turned away by the watchful Max Gate servants or even the ever-threatening presence of Wessex, the unmannerly Max Gate dog. The prince of Wales paid a much publicized call in July 1923: 'My Mother', he reportedly said, 'tells me you have written a book called *Tess of the d'Urbervilles*. I must try it some time.' A more frequent, and especially valued, visitor was T. E. Lawrence ('of Arabia'), then serving, incognito, as a private in the tank corps at nearby Bovington camp.

Although Florence Hardy underwent two operations in the 1920s Hardy himself had only occasional colds and

mild recurrences of the bladder troubles he had suffered since 1881. He rode his bicycle until he was well into his eighties and Gosse, writing on 25 June 1927, could describe him as being 'in his 88th. year, exactly where he was in his 36th., when I knew him first' (letter to T. J. Wise, BL). But in December 1927 Hardy became suddenly tired and took increasingly to his bed; doctors were called, anxieties voiced, and a summons was sent out to his wife's sister Eva Dugdale, a trained nurse. He was able to contribute a final poem to *The Times* for publication on Christmas eve but grew progressively weaker as the days passed. On 11 January 1928 he rallied sufficiently to joke a little with his doctor and dictate bitter epitaphs on two *bêtes noires* of long standing, G. K. Chesterton and George Moore, only to have a sudden heart attack that evening, call out 'Eva, what is this?', and die within a few minutes.

Afterwards Hardy's family had always assumed that he would be buried at Stinsford, along with his parents, grandparents, first wife, and sister, and Hardy himself had left instructions to the same effect. Cockerell, however, appointed co-literary executor with Florence Hardy and present at Max Gate at the time of Hardy's death, insisted that the instructions were less than absolute and that Hardy, although a well-known agnostic, was too important a national figure to be buried anywhere other than in Westminster Abbey. Barrie, in London, enlisted the support of Stanley Baldwin, the prime minister, and Geoffrey Dawson, editor of *The Times*, and permission for an abbey interment was quickly obtained from an only mildly reluctant dean. Dorset opinion, however, was outraged at the thought of Hardy's lying anywhere other than in his 'own' county, and Florence Hardy, grieving and distressed, was persuaded to accept the suggestion, apparently emanating from the Stinsford vicar, that since only Hardy's ashes were to be placed in the abbey his heart might be removed before cremation and given a separate Stinsford burial. On 16 January 1928, therefore, two events took place simultaneously, the national funeral in the abbey, in the presence of Hardy's widow and sister, and the heart burial at Stinsford, attended by Hardy's brother.

Some public disapproval was prompted by the perceived grotesquerie of the duplicated obsequies and renewed, a month later, when it became known that Hardy's will, probated at the very substantial sum of £95,418 3*s*. 1*d*., included no significant bequests, public or personal, outside his own family. Partly because of negative reaction to the will, the appeal for funds for a national memorial attracted only meagre support, and the resulting Eric Kennington statue in Dorchester was, in the event, largely funded by the subject's own bequests to his wife and sister. Disagreement over the form the memorial should take proved to be only the first of many issues over which the two literary executors differed and quarrelled, and Florence Hardy's relationship with Cockerell, which had once seemed so close, collapsed in bitterness and mutual recrimination long before she died of cancer in October 1937. The contents of Max Gate, including the bulk of Hardy's library, were then dispersed at auction. Max Gate itself was also auctioned but purchased by Hardy's sister Kate, who subsequently bequeathed it to the National Trust. And in 1948 the trust acquired, by purchase, the Higher Bockhampton birthplace.

Wealth at death £95,428 3*s.* 1*d.*: resworn probate, 1928, *CGPLA Eng. & Wales*

Hardy, Sir Thomas Duffus (1804–1878), historian and archivist, was born at Port Royal, Jamaica, on 22 May 1804, the third son of Thomas Bartholomew Price Hardy (*d.* 1813), then a captain-lieutenant of the Royal Artillery, and his second wife, Frances Duffus (*b.* 1776), of Kingston, Jamaica. His family was from Jersey, and three of his forebears were admirals: Sir Thomas Hardy (1666–1732), Sir Charles Hardy (1680–1744), and Sir Charles Hardy (*bap.* 1717, *d.* 1780). Hardy moved to England at the age of seven, with his younger brother William *Hardy (1807–1887). On 1 January 1819 he was appointed a junior clerk in the record office in the Tower of London, of which his uncle Samuel Lysons (1763–1819) was then keeper. Like his brother William, Hardy owed his archival training to Lysons's successor Henry Petrie.

Hardy's post and Petrie's tuition gave him a wide acquaintance with medieval records, and during his clerkship he published editions of five categories of the early chancery rolls (charter, patent, close, Norman, and fine) in the Tower. He also in those years worked with, and came deeply to dislike, Sir Francis Palgrave. On Petrie's retirement in 1840, Hardy became a senior assistant keeper of the Public Record Office, but he remained at the Tower in charge of the reçords there until he moved to Chancery Lane in 1856. When Petrie died in 1842 Hardy took over the materials for the first and only volume of the *Monumenta historica britannica*, on which Petrie had laboured since 1823, and published it with a general introduction in 1848.

In 1830 Hardy married Frances Offley, younger daughter of Captain Charles Savery Andrews. She died on 2 August 1841 and he married again in 1850. His second wife was Mary Ann MacDowell (1824–1891), who later published fourteen novels and a number of travel books, at first under her pseudonym of Addleston Hill, but later in her own name as Mary Anne, Lady *Hardy. Their elder daughter, Iza Duffus Hardy (*d.* 1922), was also a novelist.

Although Hardy had resented Palgrave's appointment to the deputy keepership of the public records, and was himself an adequately competent administrator, he was temperamentally more inclined to scholarly work than to management. When he became deputy keeper, on 15 July 1861, he was anxious to promote the publication of records, but his energies were increasingly directed to material outside the Public Record Office. In 1857 he had taken a substantial part in establishing Chronicles and Memorials of Great Britain and Ireland during the Middle Ages, known as the Rolls Series because its volumes, funded by the Treasury, were published under the direction of the master of the rolls. When he took over the *Monumenta* he acquired Petrie's other working papers, and he ordered and augmented them to make his *Descriptive catalogue of materials relating to the history of Great Britain and Ireland, to 1327*, which appeared in three volumes in the Rolls Series between 1862 and 1871. The notes for a fourth volume, to 1485, were bound after Hardy's death and preserved in the Public Record Office. A century's work since then, much of it stimulated by Hardy himself, has modified or superseded some of his judgements on manuscripts and individual writers, but he showed a remarkable knowledge of the medieval narrative sources, and a keen eye for their interrelationships.

Hardy published only one other work in the Rolls Series, the episcopal register from 1311 to 1316 of Richard Kellaw of Durham, under the title of *Registrum palatinum Dunelmense* in 1873–8, but Gaimar's *Lestorie des Engles*, on which he was working at the time of his death, was finished by his colleague Charles Trice Martin, and published in 1888–9. He played a considerable part in setting up the Royal Commission on Historical Manuscripts, which under its warrant is concerned with all records other than public records. In 1869, when he was knighted, he was appointed to the commission, and remained a force in its affairs until the end of his life. John Cordy Jeaffreson, for whom Hardy secured a post in the Public Record Office, has left a characteristically breezy but interesting account of the way in which his friend trained him for the commission's inspectorate.

There were several substantial developments in the Public Record Office in Hardy's time. The round reading room in the new wing was opened in 1866, and the block towards Fetter Lane was completed in 1869. The additional accommodation enabled the office to house the records of the palatinate of Durham, transferred under warrant in 1868, and the much richer records of the duchy of Lancaster, which the queen deposited as a gift to the nation in 1870. The duchy records brought Hardy's brother William, their keeper, into the office with them.

Hardy also procured, in 1866, the abolition of fees for legal searches in the records, a reform which he had long

advocated. In the last years of his life he oversaw the making of the second Public Record Office Act of 1877, which sought to relieve pressures on the office by authorizing the destruction of modern records deemed to be redundant.

Hardy's administration of the office was generally characterized by common sense and humanity rather than by any strong professional purpose. His direction was criticized throughout the 1870s by the cantankerous John Pym Yeatman and some other users who wished to see more intensive work on sorting and listing the records. Whether or not Hardy used his resources to the best advantage, he certainly neglected to shape the senior management of the office, and made no effective provision for a successor. He died on 15 June 1878 at his home, 126 Portsdown Road, Maida Vale, London, and was buried at Paddington old cemetery. G. H. MARTIN

Hardy, Sir Thomas Masterman, baronet (1769–1839), naval officer, second son of Joseph Hardy of Portesham, Dorset, and his wife, Nanny, daughter of Thomas Masterman of Kingston, Dorset, was born at Martin's Town, near Dorchester, on 5 April 1769. In 1781 he entered the navy on the brig *Helena*, but he left her in April 1782 and for the next three years was at school, though on the books of the guardships *Seaford* and *Carnatic*. He was afterwards a few years in the merchant service, but in February 1790 he was appointed to the *Hebe*. From her he was moved to the sloop *Tisiphone* with Captain Anthony Hunt, whom he followed to the frigate *Amphitrite* in May 1793, and in her went to the Mediterranean. On 10 November 1793 he was promoted lieutenant of the frigate *Meleager* (Captain Charles Tyler), attached during the following years to the squadron off Genoa under the immediate orders of Horatio Nelson, whose acquaintance Hardy reportedly then first made. In June 1794 Captain George Cockburn succeeded to the command of the *Meleager*, and in August 1796, on being transferred to the *Minerve*, took Hardy with him. Hardy was still there in December 1796, when Nelson hoisted his broad pennant on her, and was with her in her encounter with the *Sabina*. When the *Sabina* surrendered, lieutenants Culverhouse and Hardy were sent to her with the prize crew; and the gallant way in which they afterwards drew the Spanish squadron away from the *Minerve*, defending the prize until dismasted, earned the praise of Nelson. Culverhouse and Hardy became prisoners of war, but they were exchanged, rejoining the *Minerve* at Gibraltar. On 10 February 1797, as the frigate was passing through the straits with the Spanish fleet in chase, Hardy jumped into the jolly boat to save a drowning man. The boat was carried by the current towards the leading Spanish ship. 'By

Sir Thomas Masterman Hardy, baronet (1769–1839), by Richard Evans, 1833–4

God,' said Nelson, 'I'll not lose Hardy! Back the mizen topsail!' This bold measure caused the Spanish ship to hesitate and shorten sail, enabling the boat to reach the frigate in safety. The *Minerve* rejoined the fleet three days later and served at the battle of Cape St Vincent on the 14th.

In May 1797 the *Lively* and *Minerve*, looking into the Bay of Santa Cruz, discovered there a French brig of war, the *Mutine*, which was cut out on the 29th by the boats of the frigates under the command of Hardy, who was at once promoted by Lord St Vincent to command the prize. On 5 June 1798 Hardy, in the *Mutine*, joined Nelson near Elba, announcing the approach of reinforcement under Captain Thomas Troubridge; and he was present at the battle of Abu Qir Bay, immediately after which he was promoted to the *Vanguard*, Nelson's flagship. In the *Vanguard*, and afterwards in the *Foudroyant*, Hardy continued with Nelson at Naples and Palermo until October 1799, when he was appointed to the frigate *Princess Charlotte*, in which he returned to England. In 1801 he was again with Nelson as flag captain in the *San Josef*, and afterwards in the Baltic in the *St George*; and although the size of the *St George* prevented her taking part in the battle of Copenhagen, Hardy the night before sounded close up to and around the enemy's ships. His soundings were correct, and it was by deviating from his route, on the pilots' advice, that some of the ships grounded. On Nelson being relieved by Vice-Admiral Charles Morice Pole, Hardy remained in the *St George* and returned in her to England. He was then appointed to the *Isis*, and in the following spring to the *Amphion*, in which, in May 1803, he took Nelson out to the

Mediterranean, moved with him to the *Victory* in July, and continued as flag captain during the long blockade of Toulon and the pursuit of the combined fleet to the West Indies. He was still in command of the *Victory* when Nelson again embarked on her on 14 September 1805, and in the absence of a captain of the fleet acted virtually as such before and at the battle of Trafalgar. With Captain Henry Blackwood he witnessed Nelson's last will, was with Nelson when the latter was shot, and was frequently with him during his dying hours. It was to him that Nelson's dying words, 'Kiss me, Hardy', were addressed (R. Southey, *Life of Nelson*, 1813, ch. 9). Nelson's body was sent home in the *Victory*, and at the funeral on 9 January 1806 Hardy carried the 'banner of emblems'.

On 4 February Hardy was created a baronet, and in the spring was appointed to the *Triumph*, which he commanded for three years on the North American station under Sir George Cranfield Berkeley, whose daughter, Anne Louisa Emily, he married at Halifax, Nova Scotia, in 1807. They subsequently had three daughters: Louisa-Georgina, Emily-Georgina, and Mary-Charlotte. In May 1809 he was appointed to the *Barfleur*, in which Berkeley hoisted his flag as commander-in-chief at Lisbon, and he continued in that post until September 1812. In August 1812 he was appointed to the *Ramillies*, in which he was again sent to the North American station. On 25 June 1813, while in command of a squadron off New London, blockading an American squadron under Captain Stephen Decatur, he captured a schooner, apparently laden with provisions. Hardy, possibly remembering an attempt made thirty-seven years before, ordered her to be secured alongside another prize, and while this was being done she blew up, killing a lieutenant and ten seamen: she was an explosion vessel.

In January 1815 Hardy was nominated a KCB; he returned to England in June, and from 1816 to 1819 commanded the yacht *Princess Augusta*. On 12 August 1819 he was appointed commodore and commander-in-chief in South America, with his broad pennant in the *Superb*. The wars of independence and the different interests involved made the command one of difficulty and delicacy, and Hardy's tact won the approval of the Admiralty and the public. He returned to England at the beginning of 1824. On 27 May 1825 he became a rear-admiral, and in December 1826, with his flag in the *Wellesley*, he escorted the expeditionary force to Lisbon. On his return he commanded an experimental squadron from the *Sibylle* and later the *Pyramus*. On 21 October 1827 he struck his flag and was not employed again at sea.

In November 1830 Hardy joined the Admiralty board as first sea lord under Sir James Graham, and on 13 September 1831 he was appointed a GCB. Hardy refused to enter parliament and adopted a purely professional view of his duties; his absence from the House of Commons was a source of whig complaint. He favoured larger and more powerfully armed vessels of all classes, and the introduction of steam warships. Working with the surveyor of the navy, Sir William Symonds, he increased the sailing performance and fighting strength of the battle fleet, which his experience convinced him was the key to naval superiority. He left office in April 1834, when the post of governor of the Royal Naval Hospital at Greenwich fell vacant, in disgust at the excessive economies pursued by Graham. He was appointed governor of the hospital, the king agreeing on the understanding that in a war he would return to active service. The rest of his life was devoted to the pensioners under his care, improving their treatment and abolishing the yellow coat with red sleeves, worn as a punishment for drunkenness on a Sunday. He became a vice-admiral on 10 January 1837. He died on 20 September 1839 at the hospital and was buried on the 28th in its old cemetery. His widow and daughters survived him, but without male issue the baronetcy became extinct. An imposing memorial pillar was erected to his memory on Black Down, above Portesham, in Dorset. Hardy's enduring fame rests on his connection with Nelson, but his subsequent service afloat and at the Admiralty revealed a man of outstanding good sense and judgement, and this was reflected in his refusal to adopt a party political line on naval expenditure.

Hardy, William (*d.* 1832), horologist, was apparently Scottish, but nothing is known of his place and date of birth nor of his early life and training. Yet by 1805 he was sufficiently renowned to be one of the fifteen eminent watchmakers recruited by the board of longitude to assess the merits of the rival chronometric claims of John Arnold (*d.* 1799) and Thomas Earnshaw (1749–1829), and in the following years he regularly received awards from the Society of Arts for ingenious inventions in horology. None ever saw general adoption, due largely to trade conservatism, but the best must be recorded here.

Hardy was the first practical horologist in England, and

probably anywhere, to make comparatively accurate cycloidal cutters for wheels and pinions. His patterns were supplied to the famous Thomas Leyland (1790–1861) of Prescot, Lancashire, who, according to D. S. Torrens, produced without doubt the finest horological gearings that have ever been known. At the time of the 1862 International Exhibition in London the great Victorian horologist Charles Frodsham wrote: 'the train of wheel-work in Hardy's regulators is among the best in England, and the shape of the wheels and pinions makes the most perfect gearing I have ever witnessed' (Frodsham, 10). Hardy's career reached its apogee in 1811 thanks to the truly remarkable performance of an astronomical regulator clock with a very delicate detached spring-pallet escapement made for the Royal Observatory, Greenwich. The astronomer royal, Nevil Maskelyne, had in 1807 tested its prototype at Greenwich with most promising results. Unfortunately, he died before the new regulator and a new mural circle by Edward Troughton could be used together. His successor, John Pond, was at first satisfied with Hardy's clock even though its escapement needed frequent cleaning by its maker.

Good reports reached the ears of astronomers and scientists everywhere. Among the first was Ferdinand Hassler, a distinguished Swiss geodesist who had emigrated to America in 1805 and who in 1812 was in London seeking equipment for a survey of the east coast of the United States. He ordered from Hardy two regulators of the Greenwich type, together with box chronometers and special timers. Hardy's reputation was established. He received orders for regulators and chronometers from both observatories and amateur astronomers. In 1820 outstandingly good clock rates were recorded at Greenwich, Sandhurst, and Vilna. The celebrated astronomer William Pearson acquired a Hardy regulator in 1816 and published an illustrated description of the type in 1829. Hassler had done the same in 1824.

In 1823 Pond moved Hardy's regulator to the transit room, thus making it the most important clock in the world. In 1830, however, his records show that it had 'accelerated on its mean by nearly 4s per day'. Hardy, perhaps ill, ignored two notices to attend. Had he then simply cleaned the escapement, events would almost certainly have turned out differently. In his absence his detached escapement was removed by the envious E. J. Dent and replaced by a conventional deadbeat one. Hardy's regulator at the Cape observatory soon suffered the same indignity. Pearson's clock and those at Vilna, Cambridge, and Fyvie continued to perform well although, one by one (and in one case as late as *c.*1990), their fragile escapements were broken by inexpert handling. Hardy died at his home, 5 Wood Street, Cold Bath Square, Clerkenwell, London, on 12 November 1832. CHARLES R. P. ALLIX

Hardy, Sir William (1807–1887), archivist, was born in Jamaica on 6 July 1807, the fourth son of Captain Thomas Bartholomew Price Hardy (*d.* 1813), of the 1st battalion, Royal Artillery, and his second wife, Frances Duffus (*b.* 1776), of Kingston, Jamaica. He moved to England in 1811 with his brother Thomas Duffus *Hardy, and was educated at Fotheringhay, Northamptonshire, and later at Boulogne. In February 1823 he obtained a clerkship in the record office in the Tower of London, and like his brother Thomas, who had held a similar post since 1819, he was trained in the care and uses of archives by the keeper of the records there, Henry Petrie (1772–1842). The brothers subsequently ran a record agency in partnership. They also worked as transcribers for Francis Palgrave (1788–1861), with whom they quarrelled, and nursed a lasting animus against him.

In 1832 Hardy was appointed clerk of the records of the duchy of Lancaster, a rich archive kept mainly at the Savoy. His stipend was small, but his duties were correspondingly unexacting, and he was left free to continue his practice as a record agent. Robert Somerville remarked that over almost forty years of service Hardy 'left singularly little trace of his activities' ('The duchy of Lancaster records', *TRHS*, 4th ser., 29, 1947, B) at the Savoy. He did

nevertheless spend some time in arranging and listing the records, and published *Charters of the Duchy of Lancaster* in 1845. His only other substantial publication was an edition of the historical collections of Jean de Waurin, which appeared in the Rolls Series as *Recueil des croniques et anchiennes istories de la Grant Bretagne par Jehan de Waurin, seigneur du Forestal*, and in translation as *Collection of Chronicles by John de Waurin*, between 1864 and 1891. In his time at the Savoy, however, he built up a substantial and profitable consultancy, specializing in peerage cases, and in foreshore and common rights. On 31 December 1840 Hardy married Eliza Caroline Seymour Lee, of Cholderton, Wiltshire. There were two sons of the marriage, one of whom, William John Hardy (*d.* 1922), an antiquary and editor, wrote the lives of his father and uncle in the *Dictionary of National Biography*.

In 1870, after some fifteen years of intermittent negotiation, the Public Record Office was able to take in the duchy records, which the queen released as a gift to the nation. Hardy then joined the staff of the office as an assistant keeper. In 1878, on his brother's death, he was made deputy keeper, and was appointed to the Historical Manuscripts Commission in the same year.

It fell to Hardy to implement the act passed in 1877 to allow the selective destruction of governmental records which were held to be of no historical value. A committee of inspecting officers was set up, of whom one was Hardy himself and another an assistant keeper who was required to be a barrister of at least seven years' standing. The office was already reviewing the records of the courts of common law, and the first schedule was submitted for parliamentary approval early in 1882, together with a description of the categories of records reviewed, and a lucid account of the processes of the court of queen's bench. Over the next decade the exercise was extended to more than thirty departments. There was at the time some public criticism of the principle of destruction, and in the course of a century opinions on the criteria of historical interest have naturally changed, but there is no doubt that some measure of control was needed.

Hardy, who was knighted in 1883, secured more generous scales of pay for all grades in the office, though at the cost of some reduction of the establishment, and he also persuaded the Treasury of the uniquely demanding nature of the department's work. He was, however, a less energetic man than his brother, and in his last years was in poor health. He left many matters of policy haphazardly to his subordinates, and added no impress of his own. After consulting the master of the rolls, Sir William Baliol Brett (later Viscount Esher), he approached Henry Maxwell Lyte (1848–1940), and asked him whether he would accept the deputy keepership. When Lyte agreed to act, Hardy resigned his post in January 1886. He died on 17 March 1887 at his home, Milton Cottage, St German's Road, Forest Hill, London. G. H. MARTIN

Hardy, William (1852–1928). *See under* Hardy, John James (1854–1932).

Hardy, Sir William Bate (1864–1934), biologist and food scientist, was born at Erdington, Warwickshire, on 6 April 1864, the only child of William Hardy, of Llangollen, Denbighshire, and his wife, Sarah, eldest daughter of William Bate. As a boy Hardy was sent to sea with the Brixham fishermen—he retained a love of the sea throughout his life. He was educated at Framlingham College and entered Gonville and Caius College, Cambridge, in 1884. He was elected scholar in 1885 and was awarded a first class in the natural sciences tripos (zoology) in 1888. He was elected a fellow of the college in 1892, and was a tutor from 1900 to 1918. In 1898 he married Alice Mary, eldest daughter of Gerrard Brown Finch, barrister; they had a son and two daughters.

Hardy was a lecturer in histology within the department of physiology at Cambridge from 1898 to 1929. Sceptical of the significance of much that was seen, after fixing and staining, under the microscope, he began studying the effect of such treatment on colloidal systems. His important discoveries included the stability of colloid sols in relation to their electric charge, the theory of flocculation, the nature and importance of the iso-electric point, the theory of protein ampholytes, and the electric charges of the positive and negative colloid ions. According to Sir Ernest Rutherford, 'The modern theory of protein solutions ... is very largely due to his pioneer work in that field' (E. Rutherford, Presidential address to Royal Society on awarding the royal medal to Hardy, 1926).

Hardy went on to study the molecular physics of films, surfaces, and boundary conditions, passing on to static friction and so to the action of lubricants. 'For the first time ... the dependence of friction and lubrication on the structure and molecular orientation of surface films and the force-fields of molecules in relation to their structure and polarity have been elucidated' (ibid.). He had been elected FRS in 1902 and was the society's biological secretary from 1915 to 1925; he gave the Croonian lecture in 1905, 'On globulins'. In 1925–6 he became the first biologist to give the Bakerian lecture and to be awarded the royal medal.

In 1915, when Britain was dangerously short of food, Hardy organized the food (war) committee of the Royal Society, which did very important work in advising the government. He seemed a strange choice to those in the food industry, for he knew little of food and its deterioration. However, he believed strongly in scientific method and recognized how little was known about the changes occurring when food was preserved. After the formation of the Department of Scientific and Industrial Research he instigated the Food Investigation Board, becoming its first chairman (1917–28) and director of food investigation

(1917–34). He was also responsible for creating the Low Temperature Research Station at Cambridge of which he became superintendent (1922–34), the Torry Research Station, and the Ditton Laboratory. From 1919 to 1931 he was chairman of the advisory committee on fisheries of the Development Commission which issued a very valuable series of confidential reports on fisheries (including freshwater fisheries) whereby the fishery departments were strengthened and great progress made.

The organizations which Hardy founded bear the stamp of his conviction that the science of food is not simply physics, chemistry, and engineering, as previously considered, but that of living material, stating, 'one thing has been, I think, forgotten, ... namely that the storage of food is primarily a biological problem and the function of the engineer is merely to express in practice biological facts' (W. B. Hardy, *Physics in the Food Industry*, 1927). Hardy 'never wavered in his conviction that no solution of a practical problem was worth while unless it was based on an adequate knowledge of the fundamental science that lay behind it'; to him biology and molecular physics were equally fundamental. His *Collected Scientific Papers* covering the years 1891 to 1934, edited by Rideal, was published in 1936.

Hardy was later disappointed by the reluctance of the British food industry to adopt his scientific results, but the colonies proved much more receptive. Hardy placed the growing resources of his group at the disposal of the various colonial administrations and trained and encouraged their research students. He was knighted in 1925. He received honorary degrees from the universities of Oxford, Aberdeen, Birmingham, and Edinburgh. In 1931 Hardy was Abraham Flexner lecturer at Vanderbilt University, USA. At the time of his death, at his home, 5 Grange Road, Cambridge, on 23 January 1934, he was president of the British Association, and had been a trustee of the National Portrait Gallery since 1922.

All his life Hardy was an adventurer in new fields, finding joy in fresh discovery, content not to interfere with others if they wished to exploit and profit by what he had found. He was large and energetic, believing strongly in self-reliance and initiative. One of the finest yachtsmen of his time, he combined with perfect seamanship a capacity for instant decision in emergency. His first yacht, *Cockatoo*, was equipped as a floating laboratory for marine biology: his last, *Estrella*, served as a houseboat on the Helford River in his later years. He became a master mariner and is supposed to have been the model for the hero of Erskine Childers's novel *The Riddle of the Sands*. He was survived by his wife.

Hardyman, Lucius Ferdinand (1771–1834), naval officer, was the son of Thomas Hardyman (1736–1814) of Portsmouth, a captain in the army. His six brothers were all in the army, and three attained the rank of general. He entered the navy in 1781 on board the *Repulse*, with Captain Dumaresque, and in her was present at the battle of Dominica on 12 April 1782. In June he followed Dumaresque to the *Alfred*, and in 1783 returned to England. From 1791 to 1794 he served on the *Siren*, with captains Manley and Graham Moore. On 5 March 1795 he was promoted lieutenant, and appointed to the *Sibylle* under Captain Edward Cooke. He was first lieutenant of the *Sibylle* when, on the night of 28 February to 1 March 1799, she engaged the French frigate *Forte*, and he succeeded to the command when Cooke was mortally wounded. He won the action and was immediately promoted by Vice-Admiral Rainier to command the prize. From the East India Company, and from the insurance companies of Calcutta and Madras, he received three swords of honour.

On 27 January 1800 Hardyman was advanced to post rank, and continued to command the *Forte* on the East India station until, on 29 January 1801, she struck an uncharted rock going into the harbour of Jiddah, and became a total wreck. Hardyman was acquitted of all blame, but the master of the flagship, who was piloting her in, was sentenced to lose twelve months' seniority. In 1803 Hardyman commissioned the frigate *Unicorn*, which he commanded in 1805 on the West India station, in 1807 in the expedition against Montevideo under Sir Charles Stirling, and in 1809 in the Bay of Biscay under Lord Gambier. He was also present at the destruction of the French ships in Basque Roads on 11 April, when the *Unicorn* was one of the few ships actively engaged. He was afterwards transferred to the frigate *Armide*, which he commanded on the coast of France until the peace.

In 1815 Hardyman was made a CB; he commanded the *Ocean* from 1823 to 1825 as flag-captain to Lord Amelius Beauclerk, and became a rear-admiral on 22 July 1830. He married, on 29 December 1810, Charlotte, youngest daughter of John Travers of Bedford Place, London, a director of the East India Company; they had three daughters and one son, Lucius Heywood Hardyman, lieutenant 5th Bengal cavalry, who was killed on the retreat from Kabul in January 1842. Hardyman died on 17 April 1834 at his home, Cornwall Terrace, Regent's Park, London. His widow died, in her ninety-third year, in 1872.

Hardyng, John (*b.* 1377/8, *d.* in or after 1464), chronicler and forger, is of unknown parentage, but was probably

John Hardyng (*b.* 1377/8, *d.* in or after 1464), manuscript painting

born in Northumberland. Almost all the details of his life are derived from his own writings. He says that he entered the household of Henry Percy (Hotspur) at the age of twelve, and remained there for the next thirteen years. His position in the employment of the Percys is unknown, but may have been of some consequence, since he was able to hear (or at least overhear) the first earl of Northumberland discussing the circumstances of Richard II's deposition, and he fought for the Percys in numerous border campaigns, including that of 1402 which culminated in the battle of Homildon Hill and siege of Cocklaws. Present when Hotspur was defeated and killed at Shrewsbury in 1403, Hardyng (who was then twenty-five) passed into the service of Sir Robert Umfraville, whom he greatly admired, and whose death in 1437 he lamented in the finest passage in his chronicle. He became constable of Warkworth Castle under Umfraville, with whom he served in France in 1415 and 1416. While in France, Hardyng attracted—or drew himself to—the attention of Henry V. Perhaps in response to Scottish raids into northern England in 1417, Henry wished to reassert English claims to suzerainty over Scotland, and accordingly sent Hardyng there to find evidence in support of them. Hardyng spent three and a half years north of the border:

> On lyfes peryle, maymed, in grete distresse,
> With costages grete as was necessite.
> (BL, Lansdowne MS 204, fol. 3)

On one occasion he was pursued from Lanark to Ayr, and he claimed that his searches cost him 450 marks of his own money.

Back in England in the summer of 1421, Hardyng waited upon Henry V at the Bois de Vincennes in May 1422 with three documents, at least two of which—recording competitors to the Scottish throne submitting themselves to Edward I in 1291—he appears to have abstracted from the English treasury. As a reward for his efforts, Henry promised Hardyng the Northamptonshire manor of Geddington, but the king's death prevented this, greatly to Hardyng's disappointment. However, hoping for generosity from the government of Henry VI, Hardyng produced more documents in support of the English king's claims over Scotland, handing over six at Easthampstead in 1440, and a further six at Westminster in 1457. He may have returned to Scotland during these years, since he also produced a patent purporting to have been issued in March 1435 by James I, giving Hardyng a safe conduct to come to Scotland, and offering him 1000 gold marks for 'the thynges whiche we spake to yow of at Coldyngham' (Palgrave, *Documents and Records*, 376). However, it is just as likely that Hardyng, who by 1429 was living in Lincolnshire, and in 1434 was described as 'of Kyme' (the principal Umfraville manor in that county), had not in fact crossed the border again, for James's patent is certainly a forgery, and so are all the other documents produced in 1440 and 1457 (which were stored in the exchequer, in a box labelled 'Scocia Hardyng'). A principal motive for this campaign of falsehood was Hardyng's determination to secure his proper reward for his dubious services. Recorded in 1440 as living in the Augustinian priory at Kyme, maintained by a corrody, he continued to hanker after Geddington, even though in that same year, following the delivery of his second tranche of documents, he received a grant of £10 yearly from the Lincolnshire manor of Willoughton, specifically as the sum promised by Henry V 'for acquiring from the Scots evidences of the king's overlordship of Scotland' (*CPR*, *1436–41*, 484–5). In 1451, so he claimed, he even received a writ of privy seal granting Geddington to him, but the chancellor, Cardinal John Kemp, refused to pass it. The handing over of his last six documents brought him a grant of £20 p.a. from Lincolnshire, but nothing further. His creative impulses may have been subdued by disappointment, for although he gave two documents to Edward IV at Leicester, probably in May 1462, these were copies of texts he had handed in earlier. By now a very old man, Hardyng must have lived into 1464, since his chronicle refers to Edward IV's queen, but he clearly stopped writing, and probably died, at about this time.

The work in which he referred to Queen Elizabeth Woodville was the second of two versions of a lengthy

verse chronicle, relating the history of England from Brutus down to Hardyng's own time. The earlier, which contains nearly 2700 stanzas in rhyme-royal metre, is dedicated to Henry VI, and was doubtless handed over in 1457 with the last batch of forged documents. It survives in a manuscript (BL, Lansdowne MS 204) which shows every sign of being prepared for presentation to royalty, with capital letters picked out in gold, and a fine, if stylistically old-fashioned, illuminated 'pe de gre', representing the kings whose ancestry lay behind Edward III's claim to the throne of France. The second, which Hardyng must have begun soon after the completion of the first, and which contains just under 1800 stanzas, is for most of its length addressed to Richard, duke of York, but was plainly not finished before the duke's death in December 1460, for its closing verses appeal to Edward IV. The heavy stress laid in this revised version on Richard's and Edward's hereditary claim to the English throne may indicate that it was intended to serve as Yorkist propaganda. In fact the second version was never entirely completed; it survives in several texts, all of which contain metrical loose ends, indicating that Hardyng—who in one of them refers to himself as 'through age distillid in to debilite' (Riddy, 'John Hardyng in search of the grail', 428)—died before he finished work.

The two versions differ in more than length, dedications, and chronological range—the earlier concludes in 1436, the second in 1463. Thus the second version contains a more detailed account of Henry V's French wars, and of Sir Robert Umfraville's campaigns on the Anglo-Scottish borders in the years around 1420, but abbreviates the first version's recital of the virtues of Henry V, and lacks its moving eulogy of Umfraville altogether. And most notably they differ in their accounts of the deposition of Richard II and the usurpation of Henry IV. The first version describes Richard's overthrow as the result of a straightforward invasion by Henry of Lancaster, soon assisted by the Percys and others, as a result of which the king was arrested, deposed in parliament, and replaced. But the second version tells how on his return from exile Henry swore that he had only returned for his duchy, and thereby deceived the Percys, who subsequently rebelled in disgust. Yet the differences between the versions should not be overstated. Though understandably holding back from denouncing the grandfather of its dedicatee as a perjured usurper, the first version of Hardyng's chronicle does in fact contain a good deal of implicit criticism of Henry IV. And, in a series of comments, comparisons, and apostrophes, it is no less critical of the rule of Henry VI.

These interjections often appear in passages about mythical kings of early Britain, presented in distinctly anachronistic terms. And although they are technically skilled, showing that he was able to write in at least three different hands, and that he could falsify seals as well as documents, Hardyng's forgeries, too, are demonstrably lacking in historical perspective; his charter attributed to Malcolm Canmore, for instance, endows that eleventh-century king with a seal and a parliament. Yet his patent concern with the affairs of his own time sheds much light on Hardyng's outlook and personality. Taken as a whole, his work shows him to have been interested in heraldry, coins, and topography—the map of Scotland in the first version of his chronicle is the earliest separate map of that country to survive. In matters of religion he was conservative and hostile to Lollards, though himself occasionally given to speculation on such issues as predestination and divine foreknowledge. Though generally an undistinguished poet, Hardyng was a man of wide, if hardly deep, reading. He sometimes refers deferentially to authors in terms that make it clear that he had not in fact read them, but still seems to have used, among others, Nennius (referred to as Gildas), Bede, Geoffrey of Monmouth, John of Worcester, Henry of Huntingdon, Ranulf Higden, Peter Langtoft, John Gower, the *Gesta Henrici quinti*, legendary accounts of such figures as Joseph of Arimathea and St Helena, and at least one version of the *Brut*. He quotes the Latin Vulgate Bible, and appears to have known the poems of Chaucer and Lydgate. He probably also drew on northern tradition, as in his recurring references to the fortunes of the Umfravilles, and his sympathetic account of Andrew Harclay's fall.

Hardyng used this material in ways that illustrate his interests, and, indeed, his obsessions. These were interrelated. He wanted a reward for his services. He wanted the English king to conquer Scotland, which was the latter's rightful possession—as Hardyng's chronicle and forgeries set out to prove. And he wanted good government in England, both for its own sake (he was very much afraid of social disruption), and because stability at home would allow campaigns abroad, and above all in Scotland, which he believed could be conquered in three years, so recreating 'Great Britayne enclosed with a sea' (*Chronicle*, ed. Ellis, 179). And he would earn gratitude, and so his reward, by showing how this could be done, both in immediately practical terms—hence his production of a map—and through just and effective administration at home. To this end he used his chronicle to explain to Henry VI (rather less so to Richard of York and Edward IV, who presumably stood less in need of such advice) the distinguishing features of good kingship—co-operation with the barons, military success, low taxation (coupled with a willingness to live off his own, though with a display of splendour when necessary), and a constant readiness to do justice and maintain order. Arthur, and later Edward I and Henry V, were held up for admiration as models of kingship after Hardyng's heart. However pedestrian its verse, Hardyng's chronicle was evidently popular in its second version, and at least twelve manuscript texts survive. It was used by Malory, and later by Spenser, while Richard Grafton issued two printed versions in 1543, with a continuation by himself bringing the history of England down to his own time. Sir Henry Ellis published an edition of the second version of Hardyng's chronicle, based upon Grafton's edition with some additional material collated to it, in 1812. The first version, which gives the fullest access to Hardyng's idiosyncratic personality, remains unpublished.

Wealth at death £20 p.a. from crown estates in Lincolnshire (?): *CPR*, 1452–61, 393

Hare, Alan Victor (1919–1995), army intelligence officer and businessman, was born at 14 Bryanston Square, London, on 14 March 1919, the fourth of the four sons and six children of Richard Granville Hare, Viscount Ennismore and later fourth earl of Listowel (1866–1931), who listed his occupation as 'big game hunter', and his wife, Freda, daughter of Francis Vanden-Bempde-Johnstone, second Baron Derwent.

After education at Eton College and New College, Oxford, Hare was commissioned into the Irish Guards in March 1940. He transferred to the Household Cavalry in 1941 and served in Cyprus, the Levant, and the western desert. In 1943 he volunteered for the Special Operations Executive (SOE), Britain's secret sabotage organization. Earmarked as staff captain in Brigadier E. F. ('Trotsky') Davies's mission to help the Albanian partisans, he parachuted into occupied Albania in October 1943. After being chased by Germans and Albanian quislings through the snowbound mountains for much of the winter, Davies and many of his headquarters mission were finally caught in January 1944. Hare and another officer, Lieutenant-Colonel Arthur Nicholls, together managed to evade their hunters, but at a terrible cost. Nicholls succumbed to his frost-bitten wounds and was awarded a posthumous George Cross. Hare received an immediate Military Cross for his 'magnificent example of coolness and courage' during the ambush of Davies's party and his efforts to treat Nicholls (private information).

Hare remained in Albania until the autumn of 1944. Recovered from his own frost-bitten injuries, he worked through the spring and summer with both communist-led partisans and nationalist guerrillas, becoming one of the few SOE officers to spend extended periods with both groups. Interestingly, in view of his later activities, he was convinced of the superior dynamism and fighting ability of the partisans over the nationalists.

After leaving Albania, Hare was sent by the SOE to the east, where he served in Ceylon, and finished his military service in Thailand as a lieutenant-colonel in charge of the far eastern publicity mission and working as press attaché. In 1945 he married Jill Pegotty North. They had one son and one daughter.

After a brief spell in freelance journalism, in 1947 Hare joined the Secret Intelligence Service (SIS), where his wartime knowledge of Albania was much in demand. During his early years with the service, when he was based mostly in London and Greece, he was involved in the ill-fated efforts of the SIS and the Central Intelligence Agency (CIA) to undermine Enver Hoxha's communist regime in Albania: the first cold war attempt at 'rolling back' communism through covert force. Later his SIS career took him to Tehran, where he worked for the return to power of the shah of Iran. Other postings included Geneva in 1953 and Athens, where he was head of station, for three years from 1957. In 1960 he returned to London and was appointed head of the political intelligence section of the SIS. In the following year, although seemingly well set for a long and successful career in the service, he applied for voluntary retirement.

From 1961 to 1963 Alan Hare worked for Industrial and Trade Fairs, a subsidiary of the Pearson Group, before embarking on a rapid rise through the management ranks of the *Financial Times* (*FT*), also owned by Pearson. Michael John Hare (*b.* 1938), grandson of the second Viscount Cowdray and later the second Viscount Blakenham, was the head of the Pearson family and one-time chairman and chief executive of the group. He was also Hare's son-in-law and nephew, being the son of Hare's brother John Hugh *Hare, first Viscount Blakenham (1911–1982) and husband of Hare's daughter, Marcia, from 1965. Alan Hare was managing director of the *FT* from 1971 to 1978, chief executive from 1975 to 1983, and chairman from 1978 to 1984. He also held directorships at Pearson Longman Ltd from 1975 to 1983, and Industrial and Trade Fairs from 1977 to 1983, being chairman of the latter from 1979 to 1983. Unkind remarks were made in some quarters that Alan Hare owed his appointments to family connections. It was not denied that he was 'family'; what is certain is that Hare brought to his new career the same integrity, determination, and professionalism that made him such an asset in his earlier secret work.

With the retirement of Lord Drogheda in 1975, Hare inherited control of a newspaper confronted by union militancy and almost crippled by overstaffing, restrictive practices, obsolete machinery, and the general stagnation of the British press industry. One of Hare's proposed solutions was to internationalize the paper, and in 1979, despite some scepticism by the *FT* board, he launched its European edition in Frankfurt. After early losses and other teething problems the European edition became the cornerstone of the *FT*'s subsequent recovery and growth. But when striking printworkers forced the paper off the stands for ten weeks in the summer of 1983, Hare faced problems he was less able to circumvent. His response, particularly his proposed deal with a rival print

union to exclude the *FT*'s printworkers and instead print in continental Europe, and his idea of using a non-union plant in Nottingham, drew much criticism. Eventually Pearson gave in. The strike cost the group £6 million and Hare retired shortly afterwards.

Hare then took a job that gave him enormous pleasure and to which he was ideally suited: president of Château-Latour, at that time another of Pearson's concerns. He held the post from 1983 until 1990, living with his wife in a small château on the Gironde. Until 1989 he still maintained an active interest in the press, holding a directorship at *The Economist* from 1975 and acting as chairman of the journal from 1985. He was also a director of the English National Opera (1982–8) and from 1985 served as a trustee of Reuters.

Bespectacled since childhood and of slight, slim build, Alan Hare was a gentle, cultured man of great natural charm and kindness. Never wholly comfortable in the public eye, he loathed making speeches and perhaps lacked the aggressiveness that the world of commerce could demand. But his substantial intellect and reserves of physical and mental stamina were proven time and again, and he faced cancer in later life with typical courage and a steady faith. He died of the disease at his London home, 53 Rutland Gate, on 10 April 1995. RODERICK BAILEY

Wealth at death £113,419: probate, 24 July 1995, *CGPLA Eng. & Wales*

Hare, Augustus John Cuthbert (1834–1903), author, born on 13 March 1834, at the Villa Strozzi, Rome, was the youngest child in a family of three sons and two daughters born to Francis George Hare (1786–1842) of Herstmonceaux, Sussex, and his wife, Anne Frances, daughter of Sir John Dean Paul of Rodborough and sister of Sir John Dean *Paul (1802–1868). Augustus William *Hare and Julius Charles *Hare were his uncles. In August 1835 he was adopted by his godmother, Maria, daughter of Oswald Leycester, rector of Stoke upon Tern, Shropshire, and widow of his uncle, Augustus Hare. His godmother made her home in Herstmonceaux parish and his parents renounced all further claim on him. The account he gives of his childhood in his autobiography has unwisely been taken at face value by some authors, and his account of its grimness sits ill with his obvious devotion to his adoptive mother and his wish to be buried beside her. Hare was educated at Harnish rectory from 1843 to 1846 and was sent in 1847 to Harrow School, but ill health compelled him to leave the following year. He then studied under private tutors until in 1853 he matriculated at University College, Oxford, graduating BA in 1857. After living abroad, mostly in Italy, from June 1857 until November 1858, he returned to England and in the following year undertook for John Murray a handbook of *Berks, Bucks and Oxfordshire* (1860). A *Handbook to Durham*, in the same series, followed in 1863. His adoptive mother's failing health then made residence in a warm climate necessary, and, except for occasional visits to England, he remained abroad, mostly in Italy and the Riviera, from 1863 until June 1870. In November of that year Maria died, and Hare sought to perpetuate her memory in *Memorials of a Quiet Life* (3 vols., 1872–6). The book ran into eighteen editions, and inaugurated a series of biographies written by him in the same mildly deferential key and which found an audience despite criticisms of their prolixity.

Hare's biographies were outnumbered by his guidebooks, for which with his autobiography he is now chiefly remembered. They combined his own lively and often witty observations with extracts from other books, often more copious than was justifiable. Freeman charged Hare with appropriating in *Cities of Northern and Central Italy* (3 vols., 1876) articles of his in the *Saturday Review*. He was accused, too, of copying Murray's *Handbook to Northern Italy*, and was involved in consequence in legal proceedings. But despite these complaints Hare's practice remained unaltered. His writings earned him considerable wealth: he left more than £22,000 in his will, having spent very considerable sums enlarging his home at Holmhurst, St Leonards, Sussex, and on his library and collection of works of art. He was a competent watercolourist, and he illustrated many of his own works. An exhibition of his watercolour sketches took place in London in 1902.

Hare enjoyed society and when in England spent much time visiting country houses, where he was well known as a raconteur of ghost stories. His large circle of distinguished friends included Oscar II, king of Sweden, who decorated him with the order of St Olaf in 1878. His *The Story of my Life* (6 vols., 1896–1900) was described in 1912 as 'a long, tedious, and indiscreet autobiography' (*DNB*). By the late twentieth century, however, Hare was undergoing something of a revival. A society of enthusiasts and collectors of his works was formed: a one-volume condensed edition of his autobiography was edited by A. Miller and J. Papp in 1995, and it and the original proved a useful source for those interested in country-house life in the later nineteenth century. The play *Eminent Victorian* by James Roose-Evans (1996) is based on the life of Hare. He died, unmarried, on 22 January 1903 at Holmhurst, and was buried in the graveyard of All Saints' Church, Herstmonceaux, Sussex. ELIZABETH BAIGENT

Wealth at death £22,157 17s. 0d.: probate, 17 April 1903, *CGPLA Eng. & Wales*

Hare, Augustus William (1792–1834), Church of England clergyman, second son of Francis Hare-Naylor (1753–1815) of Herstmonceaux, Sussex, and his first wife, Georgiana (*c.*1755–1806), daughter of Jonathan Shipley, was born at Rome on 17 November 1792. He received his names from his godfathers, Prince Augustus Frederick and Sir William Jones. At five years old he was adopted by Anna Maria (*d.* 1829), Sir William's widow, his mother's eldest sister, and his parents took him to England to place him in her care. Henceforward his home was entirely with his aunt at Worting House, near Basingstoke, and he paid only occasional visits to his parents.

After boarding at Revd L. M. Stretch's school at Twyford, Lady Jones sent Hare to Winchester College as a commoner in 1804, and he went into college at election 1806. Weak health prevented his especially distinguishing himself, but in 1810 he was elected to a vacancy at New College, where he held a fellowship until 1829. With his schoolfriends he established one of the first Oxford debating clubs, the Attic Society, whose members included Thomas Arnold. Lady Jones wished him to qualify himself for the rich family living of Herstmonceaux by taking orders, and he incurred her extreme displeasure by the repugnance he felt to such a step. In the last years of his undergraduate life he offended the college authorities by an attempt to extinguish the privileges of founder's kin at Winchester and New College, and he printed an attack, in the form of a letter to his friend George Martin, on the exceptional privilege which permitted New College men to graduate without examinations. Hare himself graduated BA in 1814 and MA in 1818.

After a long absence in Italy, Hare returned to New College as a tutor in 1818. In June 1824 he published a defence of the gospel narrative of the resurrection, entitled *A Layman's Letters to the Authors of the 'Trial of the Witnesses'*. In 1825 he was ordained in Winchester College chapel. In 1827 with his brother Julius Charles *Hare he published *Guesses at Truth, by Two Brothers*, a collection of essays and aphorisms inspired by Coleridge and Wordsworth.

On 2 June 1829, having been recently appointed to the college living of Alton-Barnes, Wiltshire, Hare married Maria, daughter of Revd Oswald Leycester, rector of Stoke upon Tern. In his tiny parish, isolated in the corn-plains at the foot of the Wiltshire downs, he spent the next four years as the loving father and friend of his people. He spoke in the familiar language of ordinary life, making use of apt illustrations drawn from his parishioners' simple surroundings. After his death many of his sermons were widely read, through the two volumes known as *The Alton Sermons, or, Sermons to a Country Congregation*, first published in 1837 and frequently reprinted. On the death of an uncle in 1831 the family living of Herstmonceaux fell vacant, and was offered to him by his eldest brother, but he could not bear to leave his quiet home at Alton. He continued to lead with his devoted wife an ideally happy existence until his failing health obliged them to go for the winter to Italy, where he died at Rome on 18 February 1834. He was buried at the foot of the pyramid of Caius Cestius, in the old protestant cemetery. His widow, who lived until 13 November 1870, took up residence in the parish of her brother-in-law Julius, and was buried in Herstmonceaux churchyard.

Hare, Dorothy Christian (1876–1967), physician, was born on 14 September 1876 at 1 Lansdown Place, Bath, the third of four daughters and seventh of eight children of Major Edward Hare (*d.* 1897), formerly of the Indian Medical Service, and his wife, Mary Ann, *née* Wood (1835–1889). As their father disapproved of formal education and careers for girls, Dorothy and her sisters were educated by governesses and given generous bequests in case they never married. Dorothy decided to read medicine, went to Cheltenham Ladies' College in 1897, passed the London intermediate science examinations in 1899 and 1900 with honours, and entered the London (Royal Free Hospital) School of Medicine for Women in 1900. She graduated MB BS in 1905 and MD in 1908, received the DPH at Cambridge in 1912, and was admitted MRCP in 1920. In 1936 she became only the third woman elected a fellow of the Royal College of Physicians.

Dorothy Hare practised initially in London, as casualty house surgeon at the New Hospital for Women (renamed the Elizabeth Garrett Anderson Hospital in 1917) and as house physician at the Royal Free Hospital. A clinical student recalled the 'sculptural correctness of her features, calm and impressively confident manner, obvious intellectual ability and respect with which she was treated by her Chief' (*BMJ*, 559). After appointments as assistant clinical pathologist at the Royal Free and assistant medical officer at Kingswood Sanatorium she then practised privately in Cambridge (1910–16).

Responding to the War Office's urgent appeal, Dorothy Hare next served in Malta from 1916 to 1918, first in association with the Royal Army Medical Corps. The clinical experience was valuable but conditions of service were deplorable. From April 1918 to October 1919 she was chief medical officer of the newly formed Women's Royal Naval Service (WRNS), ranked as assistant. Her work was largely administrative, with tours of inspection of all naval establishments employing women in various duties. In 1920 she was invested CBE for her distinguished services. While with the medical corps she became gravely concerned by the plight of women with venereal diseases, rare in the WRNS but rife in the other services. Dismissed from the forces, often rejected by their families, and, if pregnant, refused admission to homes for mothers and

babies, they faced poverty and long and painful treatment without rehabilitation.

After a temporary post at the South London Hospital for Women, Dorothy Hare was successively medical registrar at the Royal Free (from 1921), and clinical assistant and physician to the Royal Free and Garrett Anderson hospitals from 1929 to 1937. Contemporaries remember her as reserved and soberly dressed, an encouraging teacher and a splendid trainer of her juniors. She demanded careful history-taking and clinical examination, accurate records, and judicious selection of special investigations. On ward rounds she greeted every patient by name, and her kindness was memorable, especially to young patients suffering from ulcerative colitis, then an illness with a very high mortality rate. She played a significant and generous part in establishing three hostels and long-term follow-up and rehabilitation for women with venereal diseases. With the advent of penicillin the need for the hostels passed, but she never forgot the almoner (social worker) responsible for aftercare and left her a small legacy.

Dorothy Hare produced relatively few publications but they were succinct and comprehensive. The three most important were *Simple instructions for diabetic patients. With prescription sheet for the use of patients, nurses and practitioners* (1933) and two presidential addresses to the section of therapeutics and pharmacology of the Royal Society of Medicine, entitled 'Therapeutic observations on non-specific ulcerative colitis' (1935) and 'Therapeutic trial of raw vegetable diet in chronic rheumatic conditions' (1936).

Dorothy Hare retired to Falmouth and shared her house with a long-standing friend, Dr Elizabeth H. Lepper, former pathologist at the Elizabeth Garrett Anderson Hospital. She travelled widely, visiting former students and young relatives, skilfully illustrating the letters and diary of her two-year trip round the world. She arranged art exhibitions with the help of the Arts Council and supported the Royal Cornwall Polytechnic and amateur operatics, painting scenery and acting as property manager and stage carpenter. Friends of all ages 'were legion and [her] interest in their doings, successes and problems [was] inexhaustable. The cold grey eyes which daunted students became the bright and eager eyes of a wonderful old lady' (*Lancet*, 1213). As her strength gradually failed her cousin Ewan Hare and his wife, Elsie, invited her to their home, 1 Castle Park, Appleby, Westmorland, where she died peacefully after a cerebral thrombosis on 19 November 1967. She was buried on 22 November in the graveyard of the Anglican church of St Lawrence, Appleby, at which she had been a regular attender.

Wealth at death £32,967: probate, 6 Feb 1968, *CGPLA Eng. & Wales*

Hare, Francis (1671–1740), bishop of Chichester, was born on 1 November 1671 in London, the son of Richard Hare (*b.* 1636) of Leigh, Essex, and of his second wife, Sarah, daughter of Thomas Naylor. Hare was educated at Eton College, where he was elected fellow in October 1712. He was admitted to King's College, Cambridge, on 16 April 1689 and graduated BA in 1692, MA in 1696, and DD in 1708. He was a fellow of King's from 1692 to 1706. At Cambridge he was tutor to Anthony Collins and, more usefully, to the future Sir Robert Walpole and John, marquess of Blandford, son of the first duke of Marlborough. His friendship with Charles Townshend, later Viscount Townshend, dates from this period.

In the autumn of 1709 Hare married his cousin Bethia Naylor. They had one child, who as Francis Hare-Naylor inherited an estate from his uncle George Naylor, which included Herstmonceux Castle, near Battle, Sussex. Hare raised his son at Herstmonceux, 'making him speak Greek as his ordinary language' (Cole, fol. 101a), and himself residing there occasionally at least until 1736. A second marriage, in April 1728, to Mary Margaret, daughter and coheir of Joseph Alston of Edwardstone, Suffolk, and Easthamstead, Berkshire, produced five daughters and two sons, the eldest of whom, the Revd Robert Hare, was godson to Sir Robert Walpole and succeeded his half-brother to the Hare-Naylor name and estate. This second marriage brought Hare property in Suffolk, Norfolk, and Buckinghamshire, where he principally resided, during his later years, at The Vache, near Chalfont St Giles. Hare's preference for London during the parliamentary season prompted William Whiston to criticize him and other 'political Bishops' neglectful of their dioceses; Hare's letters, however, show that he was attentive to his duties in Chichester.

Hare was named chaplain-general to Marlborough's army in 1704. His letters describe some of the principal battles of the War of the Spanish Succession; a manuscript 'Account of his grace the duke of Marlborough's expedition into Germany' (1704–5), possibly misattributed to Hare (Horn, 154, n. 19), contains more detailed accounts. Hare's *Life and Glorious History of John D. and E. of Marlborough* (1705) was probably written in fulfilment of the duke's wishes. His sermon *The Charge of God to Joshua* (1711), preached two months before the duke's dismissal, criticized tory demands for peace; it was denounced in *A Learned Comment upon Dr. Hare's Sermon* (1711) by Delariviere Manley and by Jonathan Swift, who also attacked Hare in *The Examiner*. Hare remained loyal to Marlborough after the duke's fall; his other publications on Marlborough's behalf include *Bouchain* (1711); the four instalments of *The Management of the War* (1711); *The Conduct of the Duke of Marlborough* (1712); and *The Allies and the Late Ministry Defended*

(1711–12), a four-part response to Swift's *The Conduct of the Allies* (1711).

Hare's tenure with Marlborough initiated his rapid rise in church and state. On 20 July 1707 he was named canon-residentiary of St Paul's and prebendary of Portpool in St Paul's Cathedral; he held the prebend until his death. He received a royal chaplaincy under Queen Anne and was reappointed in that capacity by George I. Hare was rector of Barnes, Surrey, from 1713 until 1723, and on 29 April 1715 he was made dean of Worcester, in which capacity he continued until 26 October 1726, when he was elected to the more lucrative deanery of St Paul's. In 1722 Walpole appointed him usher to the exchequer; Henry Pelham, then a lord of the Treasury, estimated the worth of the position at £800–£1000 annually, even if executed by proxy. On 17 December 1727 Hare was made bishop of St Asaph; Queen Caroline, a supporter of Hare, almost certainly, but unsuccessfully, promoted Hare's candidacy for the bishopric of Bath and Wells about this time (Nichols, *Lit. anecdotes*, 97–8). On 25 November 1731 Hare was translated to the see of Chichester.

Not unfairly portrayed by John Toland as fancying himself 'a Drawcansir in Controversy' (Toland, fol. 44b), Hare was involved in polemical exchange throughout his adult life. The ironic and antideistic *Difficulties and Discouragements which Attend the Study of the Scriptures* (1714) led Whiston to accuse Hare of 'Scepticism' (Whiston, 109) and prompted a more forgiving contemporary to remark that at this date Hare's 'Credit in Point of Orthodoxy stood in no very good Light in the Eye of the World' (Cole, fol. 98a). The work was censured by convocation but eventually printed in eleven editions; Whiston claims that Hare unsuccessfully attempted to deny its authorship (Whiston, 116). Hare's involvement in the Bangorian controversy produced three anti-dissent pamphlets, including *Church-Authority Vindicated* (1719), which appeared in five editions within two years. Benjamin Hoadly, bishop of Bangor, and Richard Steele were among those who answered Hare.

Hare's scholarly pursuits were also marked by controversy. A friendship with Richard Bentley, who had dedicated his *Remarks upon a Late Discourse of Free-Thinking* (1713) to Hare and had in turn been dedicatee of Hare's *The Clergyman's Thanks to Philoleutherus* (1713), soured when Hare published an edition of Terence (1724) that drew on Bentley's annotations for his own intended edition. Bentley's edition appeared in 1726; in it Hare was repeatedly criticized. By adding to this volume a hastily prepared edition of the *Fables* of Phaedrus, Bentley pre-empted an edition on which Hare was then at work. Hare responded with a furious *Epistola critica* (1727) against Bentley's sloppy Phaedrus. One account of the spat over Terence, perhaps apocryphal, has Sir Isaac Newton wondering why two divines were 'fighting with one another about a play-book' (Monk, 235). Hare returned to textual criticism in 1736, when he published an edition of the Psalms in Hebrew. The edition of Plautus that he was preparing toward the end of his life was never published.

Hare's acquaintance with William Warburton proved less tempestuous, perhaps because Hare was able to play the patron to the younger scholar, if testily at times. His admiration for Warburton's *The Alliance between Church and State* (1736) prompted Hare to recommend Warburton to Queen Caroline, whose death prevented her from patronizing Warburton. Warburton's dedication to Hare of the second part of the second volume of *The Divine Legation* (1741), earlier instalments of which Hare had praised, illustrates both the fulsomeness with which Warburton often addressed Hare and the respect that he had for Hare's learning.

Hare compromised his reputation in 1732, when, commemorating the death of Charles I, he preached a sermon before the House of Lords, praising the dead king more profusely than Hanoverian custom allowed and criticizing dissent more stridently than the government's apologists generally did. Fourteen pamphlets and newspaper leaders were published on the sermon; Hare's detractors included the Walpolite journalist Thomas Gordon. Probably worried by accusations that he had embraced a high-church and thus anti-whig doctrine Hare reasserted his loyalty by aggressively supporting his old patron Thomas Pelham-Holles, duke of Newcastle, in the 1734 elections. Walpole's twentieth-century biographer believes that Hare was writing for the pro-government *Daily Courant* around this time (Plumb, 315). Walpole continued faithful to Hare; John, Lord Hervey, claimed that only his intervention prevented Walpole from appointing Hare archbishop of Canterbury in 1737. Letters to Newcastle and Edmund Gibson, bishop of London, demonstrate that Hare was a committed Walpolite until the end of his life, seeking to mend a rift between Newcastle and Walpole, defending the government's troubled foreign policy, and criticizing the coalescent 'patriot' opposition.

Hare died at his home, The Vache, on 26 April 1740 after a thirteen-month illness contracted, according to his widow, 'by being too free in walking in the garden' and exacerbated by the unusually cold winter of 1739–40 (*Buckinghamshire MSS*, 258). In his final days he 'suffered much with a fever, cough and swelling in his hand, and side' (ibid.). He was buried at the parish church, Chalfont St Giles, on 3 May 1740 in a vault ordered by his widow for him and for three of their children previously buried at St Paul's. Hare bequeathed approximately £50,000 to the sons of his second marriage upon the decease of their mother.

Because Hare refused to sit for portraits no likenesses remain. Hervey, perhaps fancifully, remembers that 'Dr Hare had the cruel, sharp, dark-lanthorn, stiletto countenance of an Italian assassin' (Horn, 162). Hare's impressive record of preferment attests to his associations with prominent whigs as well as to his talents as a cleric. In 1763 the *Critical Review* remembered Hare as 'the tool of a faction' with 'little else to recommend him ... but blind zeal for his party' (83); but Alexander Pope, no friend to whig faction, complimented Hare's preaching in the third book of his expanded *Dunciad* (1743). Wealth at death approx. £50,000 left to sons; also large fortune in the estates of Newhouse in Suffolk, the ancient manor of Hos-Tendis near Skulthorpe in Norfolk, and The Vache near Chalfont St Giles in Buckinghamshire: *DNB*; BL, Add. MS 5817, fol. 103a

Henry Hare, second Baron Coleraine (*bap.* 1636, *d.* 1708), by unknown engraver, 1703

Hare, Henry, second Baron Coleraine (*bap.* 1636, *d.* 1708), antiquary and architect, was baptized on 21 April 1636 at Totteridge, Hertfordshire, the eldest son of Hugh *Hare, first Baron Coleraine (1605/6–1667), and his wife, Lady Lucy (*d.* 1682), daughter of Henry *Montagu, first earl of Manchester, and his wife, Catherine Spencer. Henry Hare visited Italy in the late 1650s or the 1660s and translated a work of 1656 by Giovanni Francesco Loredano as *The Ascents of the Soul, or, David's Mount*. Completed in 1665, it was dedicated to his mother but not published until 1682, after her death. He married in or before 1667 Constantia, daughter of Sir Richard *Lucy (1592–1667), of Broxbourne, Hertfordshire; they had three children, Hugh *Hare (*bap.* 1668, *d.* 1707), Lucius (*d.* 1699), and Constantia. From about 1667 Hare, who became second Baron Coleraine that year, sat on the commission of the peace for Hertfordshire. The following year he became deputy lieutenant for Wiltshire and a gentleman of the privy chamber. In the 1679 parliament he was MP for Old Sarum, close to his Wiltshire residence and once represented by his father-in-law; he was a fairly active member, who probably opposed the exclusion of the duke of York from the succession. Although his privy chamber office ended with the death of Charles II, he continued to hold some local offices in Middlesex and Wiltshire through the 1680s and 1690s, but his candidature in 1690 for one of the Wiltshire county seats was unsuccessful.

Coleraine's first wife having died in 1680, he married secondly, by licence dated 17 July 1682, Sarah (1632–1692), daughter and coheir of Sir Edward *Alston and his wife, Susan Hussey, and widow successively of George Grimston (*d.* 1655) and of John Seymour, duke of Somerset (*d.* 1675). They subsequently separated, and he married thirdly, on 4 August 1696 at the Charter House chapel in Middlesex, Elizabeth (*c.*1646–1732), daughter of John Portman, a London goldsmith, and widow of Robert Reade of Cheshunt, Hertfordshire. Coleraine lived most of his life at Tottenham, Middlesex, the four manors of which his father had purchased in 1626. He remodelled the family house, Bruce Castle, adding a two-storey porch and clock tower with cupola, which still survived at the end of the twentieth century. In carrying out this work Coleraine was guided by the antiquarian principles that dictated his life, relating in his manuscript 'The history and antiquities of the town and church of Tottenham' (1705) how 'in respect to its great antiquity more than conveniency, I keep the old brick tower (of the earlier house) in good repair'. This history, which deals with the etymology of Tottenham's name, the parish church, and the parochial charities, was Coleraine's principal written work but he also compiled accounts of his other antiquarian observations, including his inspection in 1675 of the skeleton of the medieval bishop of London, Robert Braybrooke, while

in 1694 he wrote the 'Longford Inventory', a poem celebrating Longford Castle, bought by his father in 1641, where he appears to have completed the rebuilding of the domestic offices, begun by his father, after damage in the civil war. He also corresponded regularly with other antiquaries, among them Walter Charleton and John Woodward, and was a noted collector of medals.

Coleraine's taste for the romantic is clearly seen in his instruction to workmen in 1690 to pin back the roots of ivy torn from the tower of Tottenham church, an idea drawn from Longford, in order to increase its picturesque effect, but a more permanent contribution was his addition in 1697 'at his own only and great expence' of a vestry/mausoleum at the east end of the church, a large circular structure of classical form with blind niches, pilasters, frieze, and cornice surmounted by a ribbed lead dome with tapering obelisk. His will (made in 1702 and disposing of assets of over £6000) left £100 to be invested in land for the repair of this building with the surplus to be used for the benefit of the parish but in 1875 the vestry was demolished and the family burials reinterred. He died at Tottenham on 4 July 1708 and was buried on 15 July in the mausoleum he had built, the barony passing to his grandson, Henry *Hare (1693–1749). NICHOLAS DOGGETT

Henry Hare, third Baron Coleraine (1693–1749), by George Vertue, 1740

Hare, Henry, third Baron Coleraine (1693–1749), antiquary, was born at Blechingley, Surrey, on 10 May 1693, the eldest son of the Hon. Hugh Hare (*bap.* 1668, *d.* 1707), landowner, and his wife, Lydia, daughter of Matthew Carlton, merchant, of Edmonton, Middlesex. In 1707 his father died, and when the following year his grandfather, Henry *Hare, second Baron Coleraine, died, he succeeded to the title. He also inherited the family seat known as Bruce Castle at Tottenham, Middlesex. He was educated at Enfield by a Dr Uvedale, and subsequently matriculated from Corpus Christi College, Oxford, in February 1712. At the university he was tutored by John *Rogers (*bap.* 1678, *d.* 1729), a fellow of Corpus Christi College, who in 1716 married Coleraine's sister, Lydia. On 20 January 1718 Coleraine married Anne (1699–1754), the only daughter of John Hanger, merchant and sometime governor of the Bank of England, and his wife, Mary Coles. Anne brought her husband an inheritance of some £100,000, but the marriage was not a success. In October 1720 Lady Coleraine left her husband; there were no children and they were never reconciled.

In 1723 Coleraine undertook his second tour of Italy (the date of the first is unknown) with Conyers Middleton, during which he made a collection of prints and drawings of the antiquities, buildings, and paintings. Coleraine was proficient in Latin and Greek, and was admitted to the Republica Litteraria di Arcadia, a learned society promoting Italian poetry. He was included by Maurice Johnson and Browne Willis in the circle of antiquaries who met frequently at the Temple, Exchange, Fountain, and other taverns and coffee houses around the Temple in London during 1709 and 1710, and which was the genesis of the revived Society of Antiquaries established in 1718. He is listed among the founders of the society, and on 18 May 1727 was elected vice-president. The following year he was made grand master of the freemasons, and he was also a member of William Stukeley's Brazen-nose Society of Stamford, and from 18 May 1727 of the Spalding Gentlemen's Society. He became a close friend and patron of George Vertue, the Society of Antiquaries' official

engraver, and together they made a number of antiquarian tours around England. Although a keen collector of coins, medals, and other antiquities, as well as paintings and drawings, Coleraine did not publish anything on antiquarian subjects. His grandfather had preserved a collection of material relevant to the history of Tottenham, and the bookseller Thomas Osborne's posthumous catalogue of Coleraine's library included 'A MS history of Tottenham High Cross', by the second Lord Coleraine, 'curiously written, and neatly bound, with his lordship's arms on the cover' (Nichols, *Lit. anecdotes*, 3.650). In 1731 Coleraine met the antiquary Thomas Hearne in Oxford, who described him as 'a very sober, studious, regular man. His Grandfather and Father were likewise men of great Learning and Virtue'. Hearne also observed that Coleraine was a devoutly religious man. Though Hearne did not know the reason for Coleraine's separation from his wife, he recorded a possibly telling anecdote: 'It is said that he was so studious that when his Lady and he lived together, he would (as he lay in bed with her) have one [of his servants] come up to him at midnight and read Greek to him' (*Remarks*, 423–4). From 1730 to 1734 he sat in the Commons as a tory MP for Boston.

In 1740 Coleraine contracted an unorthodox and legally unrecognized conjugal arrangement with Rose Duplessis, or du Plessis (1710–1790), the daughter of Francis Duplessis, a French clergyman. In his will Coleraine recorded that 'about the beginning of April 1740, I employed James West, esq. of Lincoln's Inn' to offer terms of reconciliation to Lady Hare. He stated that he was not led to this act 'by the lucre of that ample provision her father left her', and was doing it in spite of her 'most obstinate, though undeserved, hatred and contempt of me' (Nichols, *Lit. anecdotes*, 5.351). Lady Coleraine refused this solicitation and on 29 April 1740 Coleraine entered with Rose 'into a solemn, mutual engagement to take each other for husband and wife'. They had a daughter, Henrietta Rosa Peregrina, who was born at Crema, Italy, on 12 September 1745, during Hare's third and final tour of Italy. Vertue recorded meeting Coleraine in London in September some time between 1745 and 1748, and observed that he 'looks mighty well after his travels, and invites me to Tottenham' (Nichols, *Lit. anecdotes*, 6.151). But Coleraine died at Bath on 4 August 1749, of unknown causes, and was buried in the family vault at Tottenham on 24 August. His 'marriage' contract and generous bequests to his mistress—including two annuities worth in total £660 a year—together with the bequest of his estates to their illegitimate daughter led to a complex legal entanglement. As foreign born, his daughter was not legally entitled to inherit her father's estate. Joseph Ames recorded meeting Coleraine's lawyer, James West, in September 1749, and talked with him regarding 'the affair of Lord Colerane, who appear'd to be a very bad man' (Nichols, *Illustrations*, 8.604). It seems that the bulk of Coleraine's estate was inherited by his wife, as it was only following her death on 10 January 1754 that his collection of antiquities and paintings was sold at auction, in March 1754, for £904 13*s.* 6*d.*, and his library of books was bought by Thomas Osborne. His collection of drawings from his Italian tours was bequeathed to Corpus Christi College, Oxford, and those of the antiquities and buildings of Britain were left to the Society of Antiquaries. Though this last bequest was declared void, as the society was then unchartered and legally unable to accept endowments, the drawings were eventually presented to the society by Rose Duplessis. The complications arising from this bequest was one of the prompts that led the Society of Antiquaries to petition for and obtain a royal charter in 1751. On 2 May 1763 Coleraine's daughter married James Townsend, an alderman of London, and a grant to him from Coleraine's estates was subsequently obtained. The title of Baron Coleraine passed to Gabriel Hanger, the third son of Lady Coleraine's uncle, Sir George Hanger, in 1762. Rose Duplessis died on 30 March 1790.

Hare, Hugh, first Baron Coleraine (1605/6–1667), royalist nobleman, was the grandson of John Hare of Stow Bardolph, Norfolk, and the son of John Hare (1546–1613) and Margaret (*d.* 1653), daughter of John Crowch of Cornbury in Buntingford, Hertfordshire. Hugh's father, John, a London citizen and resident of Fleet Street, was called to the Inner Temple bench in 1591, was treasurer of the inn in 1605, and was member of parliament for Horsham in 1587. Hugh Hare had an uncle of the same name, also a bencher of the Inner Temple, who became master of the court of wards and died in March 1620 leaving more than £30,000 to his fortunate nephew.

Hare followed his father and uncle into the Inner Temple, where he was admitted as a student in November 1620. On 26 April of that year his mother remarried; her husband was Sir Henry Montague, lord chief justice of king's bench and later first earl of Manchester. Hare himself married, before 1636, Lucy (*d.* 1682), Montague's second daughter by his first wife, Catherine, daughter of Sir William Spencer of Yarnton, Oxfordshire. Admitted to court and advancing quickly in the royal favour, on 31 August 1625 Hare was created Baron Coleraine of Coleraine. From this time, he 'continued ever afterwards a faithful adherent of the king' (GEC, *Peerage*, 3.365–6). Unable or unwilling to attend the parliament in Ireland, he displayed his loyalty by allocating his proxy to Viscount Loftus of Ely, the lord chancellor, whose authority to use it was accepted by the Lords on 30 July 1634. The exercise of a further proxy was accepted in May 1641.

Also in 1641 Coleraine bought the manor and castle of Longford, near Salisbury, Wiltshire, from Edward, Lord Gorges, who was deeply in debt. The following year this must have appeared a fortunate stroke, since at the outbreak of the civil war many royalists in parliamentarian

areas had to abandon their estates and Coleraine, who suffered sequestration in Middlesex and Hertfordshire, and who also had property at Barking, was no exception. But he met little but trouble in Wiltshire. First, as his chaplain, Pelate, reported, he found Longford 'so encumbered that he spent in a very short time £18,000 to secure his title in suits of law'. Then, in April 1644, he was compelled to surrender the place to the king as a garrison. By then he had 'too great a family of young children (to abide with them among soldiers)', but he was concerned to keep an eye on his impressive new property, and moved into his steward's house at nearby Britford. In these months, adds Pelate, he suffered 'barbarous usage' at the hands of Colonel Barnabas Pell, royalist governor of Longford, who determined 'with spiteful intent to dismantle the comeliness as well as the strengths of the place' (*Shrewsbury and Coventry MSS*, 171). Military necessity must have played a role in the changes. Clarendon reported that while the king marched to engage Waller, who lay at Andover, he arranged for his large cannon to be secured at Longford Castle.

Some time in 1645, probably after Naseby, Coleraine tired of watching his house used as a barracks. Obtaining permission from Charles to leave Wiltshire, he arrived back at Totteridge before the surrender of Longford to Cromwell on 18 October 1645. Now the castle came under the control of 'a knavish committee of clowns of neither fortune nor understanding'; in May 1646 parliament and the county committee decided that it must be slighted. Longford was preserved through the influence of Coleraine's brother-in-law, now the earl of Manchester. In 1650, however, on revisiting his mansion, Hare found there 'nothing but filthiness and desolation' (*Shrewsbury and Coventry MSS*, 172).

On 12 February 1655 it was reported that despite his prominence among the king's supporters, no evidence had been found that Coleraine had compounded for delinquency. Nothing is known of his activities during the interregnum, and it may be that he went abroad. *The Ascents of the Soul*, a translation of a work by Loredano published in 1681 or 1682, bound with a book called *La scala sancta*, contains material written in the 1650s. It reports the translator's travels in Italy, but it is probably to be attributed to Coleraine's eldest son, Henry *Hare (*bap.* 1636, *d.* 1708). It contains poems in praise of Coleraine's wife, Lucy, who evidently inspired much love and respect, and who died in 1682. The marriage produced at least five boys and three girls. Coleraine is reported to have been an enthusiast of heraldry, a lover of art and music, and 'a great florist' or landscape gardener (Nichols, *Lit. anecdotes*, 5.348).

Coleraine's enormous fortune was proof against all catastrophes. He told his chaplain that he had lost £40,000 through the misfortunes of war, but was still able at an unknown date to 'set about levelling the ditches and mounds, and rebuilding the offices, which he in a good measure restored' (Hoare, 34). On 6 May 1661 a proxy was accepted from him, since he was too ill to attend the upper house of the Irish parliament. He died suddenly at his house at Totteridge on 2 October 1667, aged sixty-one, and was buried there on 9 October. His will was dated 18 January 1653, and probate was granted on 11 November 1667 to Henry, his son and successor to the barony of Coleraine.

Hare, Hugh (*bap.* 1668, *d.* 1707), translator, baptized at Totteridge, Hertfordshire, on 2 July 1668, was the eldest surviving son of Henry *Hare, second Baron Coleraine (*bap.* 1636, *d.* 1708), and his first wife, Theodosia (*d.* 1680), daughter of Sir Richard Lucy, baronet, of Broxbourne, Hertfordshire. He lived at East Betchworth, Surrey, and married Lydia, daughter of Matthew Carlton of Edmonton, Middlesex; they had four children. On being appointed chairman of the general quarter sessions for Surrey, held at Dorking on 5 April 1692, Hare delivered a 'religious, learned, and loyal' charge, which he published by request in 1692. In the following year there appeared his translation from the Italian of Agostino Mascardi, *An historical relation of the conspiracy of John Lewis count de Fieschi, against the city and republick of Genoua in the year 1547*. He was also one of 'several eminent hands' who helped in the four-volume translation of the *Works of Lucian* (1710–11), to which is prefixed a life by John Dryden. Hare's precise death date is unknown; however, he was buried at Tottenham on 1 March 1707 with his wife. He was survived by his son Henry *Hare (1693–1749) who became the third Baron Coleraine on his grandfather's death in 1708.

Hare, James (*bap.* 1747, *d.* 1804), social celebrity and politician, was baptized on 9 April 1747 at Somerton, Somerset, the second son of Joseph Hare, an apothecary at Wells, and his wife, Frances. For many years he was wrongly identified as the son of one Richard Hare of Limehouse and as having been educated at Oxford University. In fact he attended Thomas Hodgkinson's school in Exeter and Eton College between 1760 and 1765. In the latter year he matriculated at King's College, Cambridge, where he was a fellow (1768–74), and in April 1768 he entered Lincoln's Inn. It was at Eton and Cambridge that Hare met Charles James Fox, Frederick Howard, fifth earl of Carlisle, and William Cavendish, fifth duke of Devonshire, whose friendship ensured his elevation into the sophisticated and privileged whig society centred on Devonshire House. With a growing reputation for scholarly excellence, wit,

James Hare (*bap.* 1747, *d.* 1804), by Sir Joshua Reynolds, *c.*1774–5

and social polish, during the early 1770s he became a much sought-after guest within this circle.

In May 1772 Hare was elected MP for Stockbridge, Hampshire, whereupon there was considerable interest in how this most eloquent and entertaining man would address the house: 'Wait till you hear Hare', Fox was rumoured to have said on being praised for his own maiden speech in 1769. However, Hare's early political career was characterized by diffidence and taciturnity, and there is no record of his having attempted to speak during the two years that he sat for Stockbridge. On 21 January 1774 he married Hannah (1752–1827), the daughter of Sir Abraham Hume. The union, which, according to Nathaniel Wraxall, was financially highly advantageous to Hare, produced one daughter, but broke down soon after. His new wealth was directed to financing Hare's lavish metropolitan lifestyle, in which, as with many members of his set, gaming featured prominently. Although he was never as indulgent as richer friends such as Fox, Hare's extravagance ensured that his financial situation remained precarious, prompting a concerned correspondence between his whig associates.

After a failed bid to become MP for Pontefract in 1774, Hare spent several years pursuing a diplomatic career. Carlisle's influence with the prime minister, Lord North, secured him the post of minister-plenipotentiary in Poland, though Hare twice delayed his departure for Warsaw on account of the unresolved state of his affairs in London. In June 1780, having failed to meet his second departure, he resigned the position. During this period Hare continued to balance his desire for financial security with his love of Brooks's gaming table, to which he was easily led by Fox (whose house in St James's Street, London, he shared). In July 1781 he was elected as MP for Knaresborough in the interest of the duke of Devonshire. Hare held the seat until his death, though he was from the start never an assiduous parliamentarian. 'I had much rather ... remain out of Parliament', he wrote to Lord Carlisle on 13 February, 'and the privilege of freedom from arrests is the only one I care a farthing for' (Namier). Hare's preference for political dealing at Brooks's Club rather than in the chamber irritated some members of whig society, who noted the inappropriateness of such actions from someone of modest social origins. However, his reputation for tactfulness and sincerity in an otherwise gossipy and distrustful society made him a valued friend and confidant of the duke of Devonshire and especially of the duchess, Georgiana, whom he frequently attended at Chatsworth.

Despite voting with Fox against the North administration in 1780, Hare did not gain office under Rockingham or Shelburne, or indeed during the Fox–North coalition. Thereafter he sided with Fox for the opposition. Despite his sympathy for Burke's *Reflections on the Revolution in France* (1790), he again fell behind Fox, to whom he remained committed as the whig party split over the question of war with revolutionary France. While he was celebrated for his social ease and gentlemanly wit, Hare was rather less impressive on first meeting. He was, in Sir Alexander Clifford's view, 'the thinnest man I ever saw', with a face so pallid that it resembled a 'surprised cockatoo' (Stokes), and often gave him the appearance of being nearer death than life.

In August 1802 Hare travelled to Paris to join other members of the whig club. Here he suffered from an attack of asthma, a condition made worse by his imprisonment following the resumption of war with Britain in May 1803. He suffered a relapse in his health soon after his return to England. His death at Bath on 17 March 1804 was marked with warm praise from Charles James Fox, his friend of forty years, and the duchess of Devonshire, whose verses on Hare were reprinted in the *Gentleman's Magazine* (76, 1806, 512).

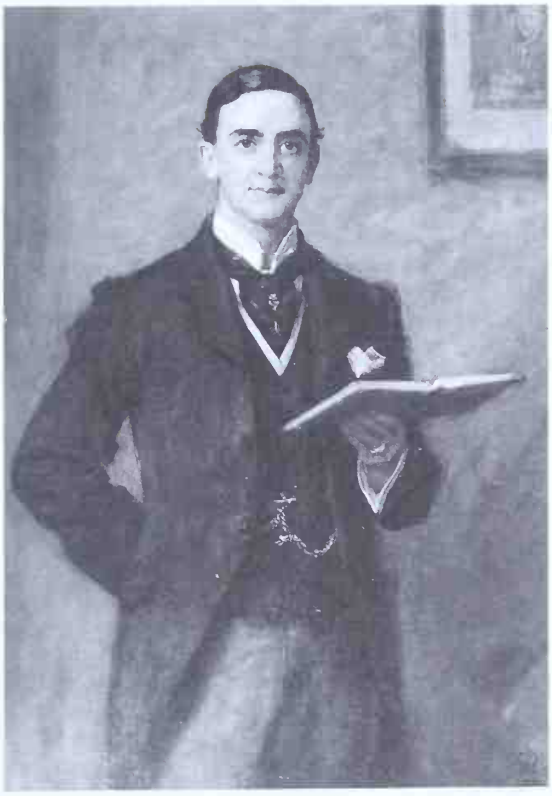
Hare, Sir John [*real name* John Joseph Fairs] (1844–1921), actor and theatre manager, was born on 16 May 1844, probably at Giggleswick, Yorkshire, the son of Thomas Fairs, a London architect. Very little is known of his boyhood years, although they were spent in London. His parents apparently died while he was young, and an uncle became



Sir John Hare (1844–1921), by Sir John Everett Millais, 1893

his guardian. He managed to see some leading contemporary actors (such as Charles Kean at the Princess's Theatre) by pretending to visit a fictitious aunt living in Brixton. He was educated partly at Loudoun House, St John's Wood, before his uncle sent him to Giggleswick grammar school, where the headmaster was J. R. Blakiston, his uncle's personal friend and a noted teacher. Blakiston prepared the boy for an intended career in the civil service, but in the meantime he was invited to participate in some private theatricals in Settle, Yorkshire, and quickly found himself directing a play and stepping into the leading role at the last minute. His first public appearance was in an amateur benefit performance for the Lancashire Distress Fund on 29 January 1863, when one of his roles was Box in F. C. Burnand's *Cox and Box*. This experience confirmed his ambition to be an actor, and Blakiston persuaded his guardian to allow him to go on the stage. So for six months the ailing Henry Leigh Murray (1820–1870), an accomplished, versatile actor and excellent mimic, became his drama coach. Murray also secured a first engagement for him at the Prince of Wales's Theatre, Liverpool, and accompanied him for the ordeal.

One of Fairs's early acquaintances at Liverpool was Squire Bancroft, and they became lifelong friends. His first minor role was as the fop Smallpiece in Ben Webster the younger's *A Woman of Business* on 28 September 1864, with J. L. Toole (eventually another intimate) in the lead. On the first night he suffered stage fright and forgot his lines, but, despite the audience hissing him, he quickly recovered. Another star visitor, recreating his London successes, was E. A. Sothern, and he too offered encouragement. The part of an old man in Charles Reade's *The Lyons Mail* revealed a particular talent for make-up. However, Fairs aspired to more than a career in the provincial theatre and set his sights on London. But before securing an engagement he married, on 12 August 1865, his childhood sweetheart, Mary Adela Elizabeth Hare-Holmes (*d.* 1931), part of whose surname he immediately adopted as his stage name. Their happy marriage lasted over fifty years, and in his will Hare called her his 'helpmate, best friend, and wisest counsellor'. They had one son, Gilbert (1869–1951), who became a well-known actor, and two daughters, one of whom, Effie, married the actor George Pleydell Bancroft, the son of Squire Bancroft.

The desired London engagement materialized at the Prince of Wales's Theatre, the newly renamed and refurbished home of Marie Wilton and H. J. Byron. (Squire Bancroft, soon to be Marie Wilton's husband, had also joined the same theatre.) So the second and most influential phase of Hare's career began with the role of Short in the anonymous *Naval Engagements* (25 September 1865). However, he did not attract critical notice until 11 November 1865, when he performed Lord Ptarmigant in *Society* by T. W. Robertson, with whose plays he became particularly associated. Even though Ptarmigant was a small role, Hare's thorough attention to detail reformed the way in which old male characters were recreated on stage. His achievement was also a reflection of the Bancrofts' managerial policy, which emphasized ensemble acting and realistic stage presentation. Other Robertson roles he created were Prince Perovsky in *Ours* (1866), Sam Gerridge in *Caste* (1867), Hon. Bruce Fanquehere in *Play* (1868), Beau Farintosh in *School* (1869), and Dunscombe Dunscombe in *MP* (1870). For these roles he was complimented repeatedly for his thorough impersonation, polish, refinement, costume, and make-up. He also scored hits as Sir John Vesey in Bulwer-Lytton's *Money* (1872) and Sir Peter Teazle in *The School for Scandal* (1874), his final part for the Bancrofts. Even though he was unhappy with his performance, he killed the tradition of making Teazle a figure of low rather than high comedy. After nine years with the Prince of Wales's company, Hare had established his own distinguishing niche in the London theatre as a character actor; however, he also harboured the desire to manage a theatre on his own account.

For this third phase of his career, Hare secured the Court Theatre with William Hunter Kendal as his silent partner. Kendal's wife, Madge, provided a further connection with T. W. Robertson, since she was one of his younger sisters, and she played the title role in Charles Coghlan's *Lady Flora*, Hare's first managerial production, on 18 March 1875. Hare hoped to foster original modern English comedies and so extend the Robertsonian tradition. However, original plays by Coghlan and W. S. Gilbert were not as successful as Coghlan's French adaptation, *A Quiet Rubber*, which opened on 8 January 1876, and provided Hare with

one of his most enduring stage triumphs. J. Palgrave Simpson's adaptation of Sardou's *Les pattes de mouche*, entitled *A Scrap of Paper* (1876), was also successful, and notable for Hare's settings, which were praised as realities rather than mere imitations. A revival of an older English comedy, *New Men and Old Acres* (1876), by Tom Taylor and A. W. Dubourg, also succeeded. As an actor-manager, Hare did not believe he should always be in the spotlight, and indeed one of his major triumphs was W. G. Wills's adaptation of Goldsmith's *The Vicar of Wakefield*, entitled *Olivia* (30 March 1878), in which he did not have a role. He frequently contented himself with the demands of stage management, which Ellen Terry admired. If any criticism of his tenure of the Court Theatre could be made it would be that (as with *Olivia*) he allowed a play's dramatic merits to be overwhelmed by the stage decoration. His management of the Court concluded on 19 July 1879, not with an original English work, but with Robertson's adaptation of a Scribe and Legouvé play, *The Ladies' Battle*.

After a brief three-month hiatus, Hare joined with Kendal again to manage the St James's, considered at the time to be an unlucky theatre. They aimed both to amuse and to improve public taste, in which they succeeded by providing a mixture of French adaptations and original English plays. Their first production on 4 October 1879 was a revival of G. W. Godfrey's *The Queen's Shilling*. More significant, some sixteen months later, was *The Money Spinner* (1881), the first of several of Pinero's plays Hare and Kendal presented. The play was regarded as rather unconventional and a risky venture, but it caught on with the public. In it Hare created one of his most famous roles, Baron Croodle, a disreputable but delightful old reprobate and card-shark. Other plays by Pinero included *The Squire* (1881), with Hare as the Revd Paul Dormer (and additionally notable because Pinero was accused of plagiarizing Hardy's *Far from the Madding Crowd*), *The Ironmaster* (1884), *Mayfair* (1885), and *The Hobby Horse* (1886), in which Hare played Spencer Jermyn. His sole excursion into Shakespeare, *As You Like It* (1885), was somewhat controversial and was criticized for being overdone—his Touchstone was considered by some to be the worst ever seen. When the management terminated on 21 July 1888, Hare and Kendal had produced twenty-one plays, fairly evenly divided among English plays, French adaptations, and revivals. However, their tenancy was distinguished by the Pinero productions.

A year later Hare was again a manager, this time of the Garrick, a handsome theatre which W. S. Gilbert had built at a cost of £44,000. The initial production, *The Profligate* (24 April 1889), with Hare as Lord Dangars, continued the association with Pinero and was a great success (especially given Pinero's serious theme in the play). Two other Pinero plays followed: *Lady Bountiful* (1891), and *The Notorious Mrs Ebbsmith* (1895), the latter consolidating Mrs Patrick Campbell's earlier success in Pinero's *The Second Mrs Tanqueray* (1893). Two other outstanding productions at the Garrick were Sydney Grundy's *A Pair of Spectacles* (1890), in which Hare was more than memorable as Benjamin Goldfinch (another 'dear old man' role), and a revival of *Diplomacy*, with a magnificent cast that included the Bancrofts and Johnston Forbes-Robertson. Hare closed his career as a manager on 15 June 1895 with single reprise performances of *A Pair of Spectacles* and *A Quiet Rubber*.

Thereafter, and perhaps surprisingly, Hare did not venture into management again, and his career became rather unfocused. He visited America in 1895 and again in 1897, re-creating his successful London roles in *The Notorious Mrs Ebbsmith*, *A Pair of Spectacles*, and *A Quiet Rubber*. In addition he toured the provinces extensively. His major new roles were Quex in Pinero's *The Gay Lord Quex* (1899) and the earl of Carlton in J. M. Barrie's *Little Mary* (1906). His knighthood in 1907 was a fitting and well-received accolade. From 1907 until his actual retirement in 1917, he undertook an extended series of farewell tours, and gave several royal command and benefit performances, playing his signature roles.

On 21 December 1921 Hare fell ill with influenza and then pneumonia, and died as a result on 28 December 1921, at his home, 187B Queen's Gate, London. After a funeral service at St Margaret's, Westminster, he was buried in Hampstead cemetery on 31 December; the ceremonies were attended by his children and numerous leading members of the theatrical profession, including Bancroft and Pinero. His wife of fifty-six years was unable to attend because she, too, was suffering from influenza.

Hare was said to have modelled his acting on François Joseph Regnier (1807–1885), whom he had studied closely in Paris, but the influence of the Bancrofts at the Prince of Wales's is also undeniable. Hare was a polished and subtle actor and he understood his somewhat limited capabilities. The roles he tackled were memorable because of his mastery of impersonation, and he was particularly adept at expressing gentle emotions with perfect simplicity. He strived for natural deportment and facial expression, and never degenerated into caricature. As a manager he encouraged English dramatists and actors and generally improved the stage. His choice of repertory was governed by a secure taste and vivified by finished, polished stage management. Although he was modest and retiring, he could as a director be strict and peppery, and even sarcastic. However, this slight man, with a remarkable stage presence, was suffused with personal charm and was both respected and loved by his profession. J. P. WEARING

Wealth at death £30,066 5*s*. 6*d*.: probate, 1 March 1922, *CGPLA Eng. & Wales*

Hare, John Hugh, first Viscount Blakenham (1911–1982), politician, was born in London on 22 January 1911, the third of four sons and the third of six children of Richard Granville Hare, fourth earl of Listowel (1866–1931), and his wife, Freda (1885–1968), daughter of Francis Vanden-Bempdé-Johnstone, second Baron Derwent. After schooling at Eton College he worked for two years on Wall Street. Shortly after his return he married, on 31 January 1934, the Hon. (Beryl) Nancy (1908–1994), daughter of Weetman Harold Miller Pearson, second Viscount Cowdray. They had a son and two daughters.

John Hare's eldest brother, William Francis *Hare, fifth earl of Listowel, supported the Labour Party (and served as a junior minister in the Attlee government); his father-in-law had been a Liberal MP. But Hare himself was a Conservative with paternalistic views and a strong desire to contribute to public life. From 1937 to 1952 he served as an alderman on London county council, and at the time of his first election he was its youngest member. He was opposition leader on the London county council's housing committee, and became chairman of the London Municipal Society (1947–52), which ran the Conservative Party's local government activity in London.

Despite Hare's career in London politics, he was based in Suffolk, where he had a 600 acre dairy farm. During the Second World War he served with the Suffolk yeomanry, seeing action in north Africa and taking part in the Salerno and Anzio landings in Italy. A brave soldier who was mentioned in dispatches, he ended the war with an OBE and the US Legion of Merit. By then he had been promoted to lieutenant-colonel.

At the general election of 1945 Hare was returned as MP for the safe Conservative seat of Woodbridge (from 1950 Sudbury and Woodbridge), which he represented until 1963. He was not an inspiring speaker, and when his party regained office in 1951 he did not obtain a ministerial post. Instead he was given special responsibility for the Conservative Party candidates' list, as a deputy chairman of the party under Lord Woolton. This proved to be an inspired appointment. In the wake of the Maxwell-Fyfe reforms, and the much-praised 1950 intake of MPs, the party needed to maintain its drive to field candidates more representative of the general public. Hare was an extremely shrewd judge of character, and was prepared to champion talented recruits who did not conform to the traditional profile of Conservative MPs.

After the general election of 1955 Hare received his first government appointment as minister of state for colonial affairs. In October 1956 he was promoted to secretary of state for war, and was plunged almost immediately into the Suez crisis. He made clear his opposition to the adventure, but chose not to resign at a time when the survival of the government was at stake. By January 1958 he had proved his administrative capabilities, and he was moved again to a more congenial post. With his farming background he was a natural minister for agriculture, fisheries, and food, but the fact that he often knew more about the issues than his officials could sometimes be a handicap. After two and a half years at agriculture he was moved again, reaching the cabinet as minister of labour in July 1960.

Hare's new task was crucial for the government of Harold Macmillan. The prime minister was preparing a more interventionist strategy in the hope of reversing Britain's relative economic decline, for which good relations with the trade unions were essential. He worked closely with his friend, the chancellor of the exchequer Selwyn Lloyd, in promoting the National Economic Development Council ('Neddy'), which brought government, industry, and unions together in a tripartite forum. Hare was present at its first meeting on 7 March 1962. He also introduced legislation (the Contracts of Employment Act) which established minimum standards for conditions at work. He had a particular interest in industrial training, initiating some of the earliest efforts to establish industrial training boards with government assistance. But although Hare was an emollient character, the trade unions did not share his desire for constructive co-operation. In 1962 a record number of workers (more than 4 million) were involved in industrial disputes, and he found himself having to fend off demands from within the party to remove some of the trade unions' legal immunities.

Hare was personally involved in the events which led to Macmillan's downfall. During the 'night of the long knives' in July 1962 he had contemplated resigning in support of Selwyn Lloyd following the latter's dismissal; instead, he sought an undertaking from Macmillan that Lloyd's budgetary policy would be maintained. Hare was also a close friend of the disgraced secretary of state for war, John Profumo. The immediate effect of Macmillan's departure in October 1963 was congenial to Hare, who admired the new prime minister, Alec Douglas-Home. Originally Hare had supported Lord Hailsham, but changed his mind when the latter's conduct at the party conference provoked adverse comment. In the ensuing reshuffle Hare left the Ministry of Labour and took over as party chairman from Iain Macleod and Oliver Poole, retaining his seat in the cabinet as a sign of the prime minister's special trust. He left the Commons, taking a hereditary peerage in November 1963 as Viscount Blakenham (the name commemorated his home in Suffolk).

Blakenham had a difficult period as Conservative Party chairman. Almost immediately the Conservatives lost Luton in a by-election (on the day that Home survived his own electoral test at Kinross and West Perthshire). On

Blakenham's advice, the prime minister decided against a general election in the spring of 1964. But although the gap in the opinion polls narrowed just before October's general election, the Conservatives were always trailing Labour. The party's task was not helped by the abolition of resale price maintenance, which Blakenham opposed; but the new prime minister, Harold Wilson, proved a more serious handicap. Even if Blakenham had been a master of public relations he could not have sold Home to a modern electorate. During the campaign Blakenham dutifully attacked the opposition, but he seemed ill-suited to the new demands of a television age.

Blakenham resigned as party chairman in January 1965, against Home's wishes. His personal sense of failure was unjustified; always a popular figure at central office, he had worked tirelessly to keep up morale and in view of the party's handicaps the organization had performed extremely well in confining Labour's overall majority to four. Ironically, although Blakenham might not have worked smoothly with Edward Heath, who took over from Home in August 1965, his own successor as chairman, Edward du Cann, was even less congenial to the new leader.

Blakenham was not quite fifty-four when he resigned, but he never returned to front-line politics. Instead he devoted himself to his farming, and undertook various charitable works. He was on the council of Toynbee Hall (where Profumo was also active) from 1966. He had a great love of gardening and cultivated a woodland garden at his home, Cottage Farm, Little Blakenham. After 1971 he was treasurer of the Royal Horticultural Society, for which he was awarded the society's Victoria medal of honour in 1974. But his health in his final years was poor. He died in London on 7 March 1982. MARK GARNETT

Wealth at death £1,656,711: probate, 9 Aug 1982, *CGPLA Eng. & Wales*

Hare, Julius Charles (1795–1855), author and Church of England clergyman, was born on 13 September 1795 at Valdagno, Italy, the third of five children of Francis Hare-*Naylor (1753–1815), author, and his first wife, Georgiana Shipley (*c.*1755–1806), daughter of Jonathan *Shipley, bishop of St Asaph. He was baptized on 12 October 1795; his siblings were three brothers and a sister.

Hare was almost four when his parents moved to England from Italy, the country to which they had eloped and where they had found congenial shelter for their genteel poverty and republican views. His bluestocking mother tutored him for five years, until he briefly attended Tonbridge School from January to March 1804. In 1804 he accompanied his family to Weimar, where they met Goethe, Schiller, and fellow expatriate Henry Crabb Robinson. There Julius's eldest brother, Francis, began teaching him German and Greek. After his mother's death in 1806 Hare attended Charterhouse School in London until 1812. There he received a solid, albeit narrow, education in the classics. His father's remarriage in 1807 and sale of the family's estate at Herstmonceaux, Sussex, led to some estrangement, and strengthened the attachment of the children to their maternal aunt, Lady Jones, the widow of the orientalist Sir William Jones.

Julius Charles Hare (1795–1855), by John Henry Robinson, pubd 1852 (after George Richmond, 1850)

At Michaelmas 1812 Hare matriculated as a pensioner at Trinity College, Cambridge, with a knowledge of German—then uncommon in England—and a passionate devotion to German literature and scholarship. His closest friends at Trinity, and for many years after, were Connop Thirlwall and William Whewell. At Cambridge Hare adopted some small spelling 'reforms', which he was said to have 'cherisht till he parisht', despite their failure to win wide acceptance. He succeeded, however, in inducing a circle of friends to study German, independent of the curriculum; thus began his pioneering efforts to promote German thinkers and writers. Familiarity with German ideas greatly influenced the careers of Hare, Thirlwall, and Whewell, but this foreign dimension in their work offended many critics. One of Hare's surviving manuscript commonplace books testifies to his devotion to classical and German writers, his wide reading of English literature and theology, and his deep admiration for the works of William Wordsworth and Samuel Taylor Coleridge. Despite his excellence as a classicist, Hare's disdain for mathematics excluded him from highest honours when he graduated BA in 1816. In October 1818 he was elected a fellow of Trinity. This provided a modest income,

but long-term tenure of a fellowship would have required him to take holy orders and maintain celibacy. During a holiday spent in Paris that year, his eldest brother persuaded him to study law. In 1819, without his customary zeal, he took up residence in Hare Court, Middle Temple, and began desultorily reading for a career at law.

In 1822 Hare won a reprieve when Whewell obtained a classical lectureship for him. Hare's excellence as a teacher was attested by many students. Lecturing on Whewell's side, Hare taught only one-third of Trinity's undergraduates, but they included some remarkable students. Some, such as J. F. D. Maurice and John Sterling, became Hare's close friends. Both were Apostles, as members of the Cambridge Conversazione Society were known. As Charles Merivale, another Apostle, reminisced: 'Coleridge and Wordsworth were our principal divinities, and Hare and Thirlwall were regarded as their prophets.' Hare instilled respect in his students for literature as a serious pursuit, impelled some to the study of German thinkers and scholars, and inspired some to pursue scholarly careers. In 1825 Hare sought the regius professorship of Greek. While ideally qualified for the post, the religious partisanship of his own college's master blocked his election, and his best chance of devoting his life to the university. Hare's fellowship and lectureship supported his bibliomania, which produced a collection of 12,000 volumes. In 1825 Crabb Robinson judged it 'the best collection of modern German authors I have ever seen in England'. Lack of independent means, however, bound Hare to the college. Over the years this forced him to terminate two lengthy betrothals. He eventually married Jane Esther Maurice (1814–1864), younger sister of J. F. D. Maurice, on 12 November 1844; they had no children. His ordination as priest in 1826 was necessary both to retain his fellowship and to satisfy Lady Jones, from whom he expected a legacy. However, she died intestate in 1829.

While still at the inns of court Hare had begun a literary career which provided a distraction from the law and yielded some profit, without which, he explained to publisher Charles Ollier, he could ill spare the time to write. His rendering of Fouqué's Gothic tale *Sintram, and his Companions* appeared in 1820. Other translations and criticism appeared in *Ollier's Literary Miscellany*, *London Magazine*, *Quarterly Magazine*, and *The Athenaeum*; the latter was briefly run by former Cambridge students, including members of the Apostles led by Maurice and Sterling. Hare acted as editor and agent for Walter Savage Landor, and demonstrated his capacity for devoted friendship by supervising publication of Landor's *Imaginary Conversations* (1824–9). With his elder brother Augustus Hare, he compiled *Guesses at Truth* (1827), which went through at least twenty editions. *Guesses* also brought him the friendship of Daniel and Alexander Macmillan, whose bookselling and publishing business was founded upon a loan from Hare of £500. The Macmillans later reciprocated by buying up Hare's copyrights, and keeping many of his books in print for decades. Hare also assisted with publication of Thirlwall's translations of Schleiermacher's controversial essay on the gospel of St Luke (1821) and stories by Ludwig Tieck (1825), and together they founded and edited the *Philological Museum* (1831–3) to promote the study of classical history and philology. Hare's largest, and perhaps most significant, scholarly work, also produced with Thirlwall, was a translation of the first two volumes of Barthold Niebuhr's history of Rome (1828–32). Thus they introduced English-speaking readers to prime examples of the German higher criticism in theology and historiography. This gained a foothold as the 'Germano-Coleridgean' school, whose exponents included several Trinity men and Apostles, as well as Hare's friend Thomas Arnold of Rugby. Unfortunately, in the eyes of many, these contributions tainted Hare and Thirlwall with German heterodoxy, and thus limited their opportunities for advancement in the church.

In 1832 the Hare family living of Herstmonceaux fell vacant. His brother Augustus refused it, so Julius became rector, but not before undertaking a nine-month tour of the continent with Landor, and acquiring valuable additions to his collection of Italian paintings. Hare's diffidence about his ability to communicate with common people was borne out in his parish career; his lengthy sermons went well over the heads of his parishioners and were the 'detestation' of Hare's hostile nephew and first biographer, A. J. C. *Hare.

Hare's main contribution to the church stemmed not from the cure of souls, but from his administrative work as archdeacon of Lewes, a position which he held from 1840 until his death, his non-partisan leadership, and his pursuit of his vision for the future of the Church of England. He strove for a truly national church, comprehending a broad spectrum of belief and theological opinion. The narrow partisanship of the high and low factions of the Church of England were so repellent to Hare and those who, like his brother-in-law, Maurice, shared his ideals that they vehemently rejected the label of 'broad-church party' which was later attached to them. Equally repugnant to Hare were Benthamites, Malthusians, and political economists, whose anti-Christian theories he denounced for arrogant self-righteousness in his best-known sermon, 'The Children of Light' (1828). Hare's commitment to religious toleration is best illustrated in his association with Henry Edward Manning, archdeacon of Chichester. Within their diocese they worked in harmony to build and restore churches, abolish pews, and establish schools. Hare sought to accept Manning's Tractarian sympathies and to minimize their doctrinal differences, while Manning emphasized them. However, Manning's later conversion to Rome even Hare could not rationalize. Hare's zeal for church reform and projects for reunion led him to promote the revival of convocation and rural deaneries, and to collaborate with his friend, Prussian diplomat and scholar Baron Christian J. K. Von Bunsen, to create in 1841 a protestant bishopric of Jerusalem, sponsored by the British and Prussian governments.

While Hare persisted in viewing Manning as an ally, he had no such illusions about J. H. Newman, who cast doubt on Arnold's Christianity. Newman's later attacks upon

Luther, of whose works Hare was an avid collector and student, elicited spirited rebuttals in Hare's *The Victory of Faith* (1840) and *The Mission of the Comforter* (1846). (The latter prompted the king of Prussia to award Hare his government's gold medal of science, which only confirmed Hare's critics in their hostility.) Hare's career as polemicist had begun somewhat earlier, in 1829, when his *Vindication of Niebuhr's History* appeared in response to criticisms in the *Quarterly Review*. Thomas De Quincey's criticism of Coleridge in 1834 elicited from Hare a passionate defence. His outraged sense of justice later prompted him to write defences of Bunsen, Bishop Hampden, and Sterling. No labour pained him more than the last, for his biography of Sterling, prefixed to his edition of Sterling's *Essays and Tales* (1848), started the controversy by publicizing Sterling's religious doubts. (Sterling named Hare and Thomas Carlyle as his literary co-executors.) Displeasure with Hare's work inspired Carlyle's better-known *Life of John Sterling* (1851). This is precisely what Hare had hoped to prevent. Hare's admirers have regretted that he dissipated his energy upon polemics, but these expressed the passionate side of his temperament. They also reinforced the impression that Hare, Maurice, and others—whose common bond was a shared dream of a national church and a non-literal reverence for the Bible—were a formal church party. By his pen Hare became, in the view of Thirlwall and others, both the archetype for, and principal defender of, the broad church.

Maurice's dismissal from King's College, London, in 1853 marked a watershed; it was clear that the broad-church advocates of toleration would not be tolerated within the church establishment. On this occasion, though Hare lent his support to an organized protest, he wrote no vindication. His health had broken down, and he was haunted by the idea that his defence of Sterling had done more harm than good. Despite ill health and the sight of friends subjected to calumnies within an increasingly divided church, Hare maintained a stoic optimism. Crabb Robinson noted that Hare was 'consistent, to a degree I envy, in his faith that all will end well'. Hare took pleasure in his appointment as a royal chaplain in June 1853, but regretted that his health left him unable to execute his duties. Suffering with chronic erysipelas, he died on 23 January 1855, and on the 30th of that month was buried in Herstmonceaux churchyard.

Twentieth-century scholarship, including that focused upon Maurice and his theology, retrieved Hare from obscurity: in the nineteenth his role as influential teacher, proponent of German literature and scholarship, and defender of broad-church ideals were obscured by Maurice's failure to produce a promised memorial biography and by Hare's own, perhaps too diffuse, labours. In the end, Hare's example, friendships, and influence on others form his most lasting claim to remembrance.

Hare, Sir Nicholas (*c.*1495–1557), lawyer and speaker of the House of Commons, was the first son of John Hare of Homersfield, Suffolk, and Elizabeth Fortescue. He was a pensioner of Gonville Hall, Cambridge, in 1509, and was admitted to the Inner Temple on 4 February 1515, probably after studying in one of the inns of chancery. He occupied chambers in the Outer Temple in the 1520s. Already by 1523 he was reckoned among the eighteen members of his inn liable to pay the poll tax, and was assessed as having £40 in goods. Later in the 1520s he was one of Wolsey's legal advisers. He was elected to parliament in 1529, 1539, 1545, and 1547, serving as speaker in 1539. He was married by 1528 to Katherine (*d.* 1557), daughter of Sir John Bassingbourne of Woodhall, near Hatfield, Hertfordshire, with whom he had three sons. In 1531 he was appointed counsel to the city of Norwich and a justice of the peace for Norfolk, becoming recorder of Norwich in 1536, perhaps in each case through the patronage of the third duke of Norfolk. His own home remained in Suffolk, however, and he established his seat at Bruisyard Hall in 1539.

When in 1532 Hare became a bencher of the Inner Temple, he touched in his reading on the topical subject of ecclesiastical jurisdiction, doubtless an indication that he was already bent on the royal service. The first principal appointment came in 1537, when he was made a stipendiary member of the king's council, or master of requests, and knighted. He held this judicial position until 1553, apart from an interval between 1540 and 1545 when he was chief justice of Chester. The latter post may have been a form of demotion following an incident in February 1540 when, together with Sir Humphrey Browne and William Coningsby, he was committed to the Tower by Star Chamber for advising Sir John Shelton on a means of avoiding the revenue consequences of the Statute of Uses, an event which led directly to the penning of the Statute of Wills of 1540. This was evidently considered to be a

breach of his oath to serve the king. Only a few months later, however, he addressed the throne as speaker of the Commons upon the dissolution, comparing the English constitution to the microcosm, in which the king was the head, the peers the body, and the Commons the rest of the machine. His speech was received by the king with a gracious nod. Hare was also about this time steward of the Marshalsea. His favour with the king is evident from a mention in his will of a gilt pot 'of the sorte that king Henrye the eight gave me'.

On 18 September 1553 Mary I appointed Hare to be master of the rolls in place of Sir Robert Bowes, with a retrospective grant of the profits of the office from 1 April. Considered one of Mary's most trusted advisers, he is nevertheless said to have opposed her marriage to Philip of Spain. In 1554 Hare was one of the commissioners for the trial of Sir Nicholas Throckmorton in Westminster Hall for high treason, and had several angry exchanges with the accused. Throckmorton mortally offended him by stating that it was from him that he had learned to mislike the Spanish match, and Hare retaliated injudiciously by refusing to examine one of his witnesses. Throckmorton was acquitted. In 1555 Hare sat on a commission for the trial of certain conjurors charged with compassing the queen's death by unlawful arts. In November of the same year he was for a short time sole commissioner of the great seal after the death of Stephen Gardiner.

Hare died in office on 31 October 1557 and was buried on 8 November in Temple Church, where there was formerly a monument with his arms. His wife died on 22 November the same year. He left the profits from a meadow in Homersfield 'to be yerely converted for evermore into deedes of charitie ... for my freendes soules and all christen soules', and £5 to the Inner Temple for church ornaments. His three sons, Michael, Robert *Hare (*d.* 1611) (the antiquary and member of parliament), and William were all to be recusants in the time of Elizabeth I; all died without issue, and the family estates passed to the descendants of Nicholas's younger brother John, a mercer of London and of Stow Bardolph, Norfolk. Three of John's sons became benchers of the Inner Temple and gave their name to Hare Court there. John's grandson Hugh Hare (*d.* 1667) was created Lord Coleraine in the peerage of Ireland in 1625, and another grandson, Ralph Hare, was created a baronet in 1641. J. H. BAKER

Hare, Robert (*c.*1530–1611), antiquary and benefactor of Cambridge University, was the second of the three sons of Sir Nicholas *Hare (*d.* 1557), master of the rolls, and Katherine, daughter of Sir John Bassingbourne. He matriculated as a fellow-commoner of Gonville Hall, Cambridge, on 12 November 1545, the same day as his elder brother, Michael. Like many of his station he did not graduate but was admitted to the Inner Temple (his father's inn) on 2 February 1548. In 1551 Hare may have been travelling on the continent: he acquired in that year a copy of Thomas Netter's *Doctrinale*, previously owned by the Carmelites of Ghent, and another manuscript of northern French provenance, but he was back in England by 15 July 1555, when he was one of the gentlemen appointed to bear the bannerols at the funeral of Anne of Cleves. Three years later he was in the service of William Paulet, marquess of Winchester, lord high treasurer to Mary and Elizabeth, and on Paulet's nomination he was admitted, on 14 June 1560, clerk of the pells, and was returned as MP for Dunwich to the parliament which met on 11 January 1563. Shortly afterwards he was again on his travels, buying manuscripts in Louvain in 1563 and in Paris in 1564 and 1565.

Thus far Hare's career had closely followed his father's, but whereas his father had risen to enjoy high offices of state Robert resigned the clerkship of the pells in 1570 or 1571 and thereafter devoted his life entirely to antiquarian activities. The pursuit of manuscripts was not unusual among gentlemen of his background, and he was certainly well known to his contemporary antiquaries, being at various times recorded as giving assistance to, or receiving it from, such scholars as Michael Heneage, Arthur Agarde, and John Stow. However, an additional reason for his withdrawal from public life may well have been Hare's recusancy and, in particular, the abortive rising of the Catholic families of East Anglia in 1570. In 1577 he, his brothers, and two others featured in the list for the Inner Temple in the diocesan return for recusants in England and Wales as 'not of a longe tyme continued emongst us but [to be] publikyelye noted to be verie backward in religion' (Ryan, 105), and in October the following year he was reported among the papists resorting for mass to the house in Spitalfields of Lord Chidiock Paulet, brother of his patron, the marquess of Winchester. It has been suggested that he maintained connections with the exchequer which helped protect East Anglian recusants from fiscal pressure. On 23 January 1601 Cambridge University voted to write to the chancellor, Sir Robert Cecil, praying that Hare be not hindered in his good works towards the university, which suggests that he was in trouble of some kind. As executor of William Mowse, sometime master of Trinity Hall, who died in 1588, Hare had increased by £600 Mowse's bequest of £1000 for the improvement of the highways, still evidenced today by the two men's arms on the first and sixteenth milestones on the road to Barkway.

Hare's other remarkable benefaction to Cambridge was his *Liber privilegiorum et libertatum universitatis Cantebrigiensis*, comprising transcripts of charters and letters patent relating to the university and, in one case, the town. This survives in three copies, of two, three, and four

volumes respectively, the first, presented in 1590, magnificently illuminated. A similar set was presented to Oxford, but Hare's working papers for the Cambridge volumes (BL, Cotton MS Faustina c.iii), which also contain some original documents, including a letter from the university to Thomas Cromwell, suggest that he at one time contemplated a full-scale history of the university, meticulously sourced. It is alleged that Hare was prompted to this work by Dr Copcot, vice-chancellor in 1587 and master of Corpus Christi from 1588, but Hare seems to have started work on the project far earlier than the 1580s. He also wrote, between 1556 and 1557, 'A treatise on military discipline, and rules to be observed in time of war' (BL, Cotton MS Julius, fol. v).

Hare amassed a considerable collection of manuscripts, all of which he seems to have disposed of during his lifetime. In 1594 he returned to Cambridge University the collection of university records made by Thomas Markaunt, proctor in 1417/18, and presented manuscripts to several colleges, twelve of them to Trinity Hall, including Thomas Elmham's *Speculum Augustiniensis* of about 1414. Many of his printed books are also to be found in Cambridge libraries.

On 11 April 1611 Hare's brother Michael died and Robert inherited the estate at Bruisyard, Suffolk, formerly a Franciscan nunnery, which had been bought by his father in 1539. He did not enjoy it for long, however, for on 1 July following, describing himself as 'of greate age joyned with some infirmitye of bodye' he drew up his will (PRO, PROB 11/118, fol. 234). Hare's note in his manuscript of Elmham records how he had obtained it after the dissolution of St Augustine's, Canterbury, and provides for its restitution thither 'if hereafter, by God's favour, the monastery should happen to be rebuilt' (McKisack, 60–61), and his will, too, is a defiantly Catholic document, dedicating his soul to 'our blessed Ladie St Marie the virgin Mother of Christe my Savyoure, to St Michael the Archaungell and to all the holie Aungells and Archaungèlls and to the Rest of the glorious Company of heaven' and requesting the prayers of his friends. He had never married, but maintained links with his nephews, nieces, and cousins, ten of whom received bequests. Several of them were recusants like himself. One of the latter was 'my welbeloved neiphue Nicholas Tymperley the elder of Hintlesham esquire', who not only was made Hare's sole executor and residuary legatee, but also received the bequest of silver spoons and 'all my paynted pictures of Kynges Queenes Bishopps and other greate personages'. Hare's first named beneficiary was William Sebright, town clerk of London, 'my deere and steadfast freind in all my adversitie and trouble', and he also remembered his attorney in the exchequer and his solicitor. His will records the names of six servants, who were left cash bequests totalling £135, household goods, and the proceeds of the sale of his printed books. £5 were left to the parson of Bruisyard, 40s. to the poor of the parish. Most of the other legatees were to receive pieces of plate or gold coins, the latter often in the form of 'ducketts' or 'portugues'.

Hare died at Bruisyard on 2 November 1611 and was buried in St Paul's Cathedral, having obtained the grant of his burial place, at the west end of the nave, twenty years earlier. His will was proved four days after his death.

Hare, (John) Robertson (1891–1979), actor, was born on 17 December 1891 at the family home, 26 Cloudesley Street, Islington, London, the younger child and only son of Frank Homer Hare, an accountant and later a newspaper manager, and his wife, Louisa Mary, *née* Robertson. He was educated at Margate College in Kent and was then coached for the stage by Lewis Cairns James. His first professional stage appearance was in 1911 when he played the Duke of Gallminster in a provincial production of *The Bear Leaders*. The following year he made his London début as one of the crowd in the Covent Garden production of *Oedipus Rex*, and in 1913 he had his first part in a metropolitan production, as Kaufman in *The Scarlet Band* at the Comedy Theatre. He then toured the provinces for a number of years, notably in the title role of *Grumpy*, which thereafter remained his favourite part. It commanded considerable success on tour during the early years of the First World War. He served for the last two years of the war with the army in France, having married (Alice) Irene Mewton (1890/91–1969), daughter of Samuel Mewton, on 16 December 1915. They had one daughter.

1922 was the crucial year of Hare's career. He played James Chesterman in *Tons of Money* at the Shaftesbury Theatre in London under the joint management of Tom Walls and Leslie Henson. In February 1924 he transferred, with the same management, to the Aldwych, where he opened as William Smith in *It Pays to Advertise*. This inaugurated the era of the famous Aldwych farces, and, for over ten years, the outrageous comedies of Ben Travers offered their contribution to the madcap climate of the twenties and early thirties in London. Chief among Hare's parts were the Revd Cathcart Sloley-Jones in *A Cuckoo in the Nest* (1925), Harold Twine in *Rookery Nook* (1926), Hook in *Thark* (1927), and Ernest Ramsbotham in *A Cup of Kindness* (1929). In all, he featured in twelve consecutive farces at the Aldwych between 1924 and 1933. The pattern of his career was by then firmly established. Apart from an occasional appearance in revue—*Fine Fettle*, for instance, in 1959—or

in period farce in 1963, as Erronius in *A Funny Thing Happened on the Way to the Forum*, he was fairly strictly typecast as the nervy and fussy innocent, continually trapped in awkward situations. Between 1933 and 1960 he created such a character in over twenty more farces, several of them at the Strand Theatre. Herbert Holly (*Aren't Men Beasts!*, 1936), Humphrey Proudfoot (*One Wild Oat*, 1948), and, very successfully, Willoughby Pink (*Banana Ridge*, 1938) are perhaps his best-remembered roles from this period. During the sixties his extraordinarily active stage appearances began to diminish as he rested on his well-earned laurels, though he toured in *Arsenic and Old Lace*—a rare example of his playing in a comedy already well tried—and, after opening in the play at the Lyric in 1968, he visited South Africa as Dr Simmons in *Oh, Clarence!* in 1970, when he was almost eighty years old.

Hare's cinema work was of early vintage. In 1929 Herbert Wilcox, production chief of British and Dominion Studios at Elstree, began the straightforward and uncomplicated filming of several of the Aldwych farces, and Hare also made a few film appearances in the post-war years. *Thark* (1932) is usually regarded as the best cinematic translation of a Travers comedy. Hare wrote, not too successfully, a couple of plays and then, late in life, turned energetically to television. To the seventies' generation, who would scarcely have recognized him as a stage performer, he was best-known for his playing of the archdeacon in *All Gas and Gaiters*, a creditable comedy series with a clerical orientation, starring Derek Nimmo as Noote, a young and naïve clergyman.

Hare created a cosily familiar style and was identified completely with, in effect, one part, that of the prissy little man, constantly in a state of unease and agitation, invariably sucked into some maelstrom of domestic upset and dislocation, unfailingly compromised and often trouserless. The bald dome, with brows furrowing anxiously beneath it; the spectacles, emphasizing the shock and bewilderment with which he responded to his travails; the jerky, staccato movements as his distress grew—these made him a highly recognizable stage figure. In concert with the worldly wise Tom Walls and the affable Ralph Lynn and, later, in alliance, on stage or screen with the likes of Gordon Harker or Alfred Drayton, he became one of the premier exponents of English farce, particularly in the period between the wars. Above all, there was the somewhat archdeaconal, tremulous, and vacillating (though, from an audience stance, always clearly intelligible) voice. Rarely has a comic actor become so intimately associated with one word. Hare, faced with disaster, was wont to warble the five syllables of 'Oh, calamity' in a characteristic kind of plainchant. It is fitting that many should remember and identify him thus, and that 'Oh, calamity' should have passed into popular usage. *Yours Indubitably*, his autobiography, was published in 1957. He was appointed OBE just before he died in London on 25 January 1979. ERIC MIDWINTER, *rev.*

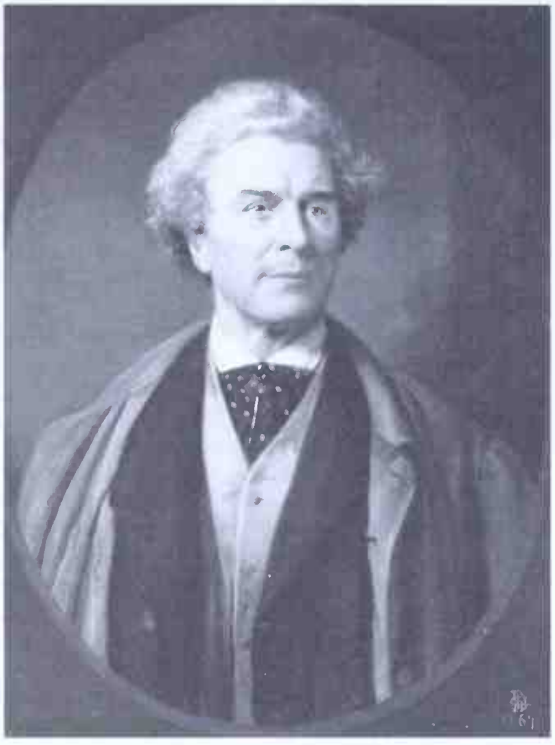
Hare, Thomas (1806–1891), political reformer, born on 28 March 1806, was the illegitimate son of Anne Hare (*d.* 1853) of Leigh, Dorset; Hare later recorded his father as being Thomas King, a farmer (m. cert.). On 14 November 1828 he was admitted as a student of the Inner Temple, and on 22 November 1833 he was called to the bar. He married on 7 August 1837 Mary (*d.* 1855), daughter of Thomas Samson, farmer, of Kingston Russell. He practised in the chancery courts and from 1841 reported in Vice-Chancellor Wigram's court. With Henry Iltid Nicholl and John Monson Carrow he edited the first two volumes (1840 and 1843) of *Cases Relating to Railways and Canals in the Courts of Law and Equity, 1835–1840*. His reports of cases adjudged by Wigram were published in eleven volumes (1843–58), and were regarded as authoritative. He published in 1836 *A Treatise on Discovery of Evidence by Bill and Answer in Equity*. A second edition, 'adapted to the supreme court of judicature acts and rules 1873 and 1875', was published by his eldest son, Sherlock Hare, in 1876. In 1872 he was elected a bencher of his inn.

Hare was appointed an inspector of charities on 22 October 1853, and on 7 December 1872 was created assistant commissioner with a seat at the board. He married, secondly, on 4 April 1872, Eleanor Bowes Benson (1833–1890), second sister of Edward White Benson. On 21 December 1887 he retired from official life. During these years he was engaged in reporting on the charities of the United Kingdom; his reports on London charities filled, in a collected form, the third volume of the reports of the royal city charities commission. He was well known for his hard work, wide interests in life, and clearness of intellectual vision. He belonged to the Athenaeum and Political Economy clubs, and until his death was actively interested in their proceedings.

Hare's principal fame rests in his efforts to devise a system of proportional (or, as he put it, personal) representation of all classes and opinions in the United Kingdom, including minorities, in the House of Commons and other electoral assemblies. His views, sharpened by the 1857 election, which saw the defeat of the opponents of the Crimean War, Liberal radicals and Peelite tories, were set out at first in *The Machinery of Representation* (1857, 2 edns), and they were afterwards more fully developed in his *Treatise on the Election of Representatives, Parliamentary and Municipal* (1859, 1861, 1865, and 1873). This was a very technical work setting out machinery (including a national constituency comprising thousands of candidates) that was generally regarded as too complicated for practical operation, but 1500 copies of the treatise were sold by 1875, and many societies were formed for its propagation. Hare's views received powerful endorsement when John Stuart Mill commended them in the second edition of *Thoughts on Parliamentary Reform* (1859) and he helped Henry Fawcett in



Thomas Hare (1806–1891), by Lowes Cato Dickinson, 1867

the preparation of the latter's pamphlet *Mr Hare's Reform Bill, Simplified and Explained* (1860). Fawcett thought Hare's scheme offered 'the only remedy against the great danger of an oppression of minorities' (Stephen, 170). With the aid of Mill, Fawcett, G. J. Holyoake, and Max Kyllmann, Hare had some success in popularizing the scheme of personal representation among the working class, and he formed the Representative Reform Association with George Howell and Edmond Beales. Through Mill, Hare also became involved in the co-operative movement (he was on the committee of the 1869 congress and delivered a paper there) and joined Mill's Land Tenure Reform Association, serving on the executive committee in 1873.

Hare's other works included: a pamphlet in support of the relaxation of the navigation laws, published in 1826 at the request of his early mentor, William Huskisson; *The Development of the Wealth of India* (1861), a reprint from *Macmillan's Magazine*; *Usque ad coelum: Thoughts on the Dwellings of the People, Charitable Estates, Improvement and Local Government in the Metropolis* (1862); *The Distribution of Seats in Parliament* (1879); and *London Municipal Reform* (1882), which contained many papers he had previously published on that subject. He contributed to Alfred Hill's volume of *Essays upon Educational Subjects* (1857) a paper on 'Endowments created for the apprenticeship of children'. He was also a regular contributor to the *Fortnightly Review* between 1865 and 1885.

Hare died at his London home, Carlyle Mansions, Chelsea, on 6 May 1891, and was buried at Hook, near Surbiton, Surrey, on 9 May. Of the eight children by his first marriage, the eldest daughter, Marian, wife of the Revd William Ryton Andrews, wrote under the pseudonym Christopher Hare. The second daughter, Alice, married John Westlake. The only child of his second marriage, Mary Eleanor (1874–1883), predeceased him.

Hare, William (*b.* 1792/1804). *See under* Burke, William (1792–1829).

Hare, William Francis, fifth earl of Listowel (1906–1997), politician, was born on 28 September 1906 at 37 Wilton Crescent, London, the eldest child in the family of four sons and two daughters of Richard Granville Hare, Viscount Ennismore, and later fourth earl of Listowel (1866–1931), and his wife, Freda (1885–1968), younger daughter of Francis Vanden-Bempde-Johnstone, second Baron Derwent. His younger brothers all served with distinction in their chosen fields. Richard Gilbert Hare (1907–1966) became professor of Russian literature at the University of London; John Hugh *Hare (1911–1982) was Conservative MP for Woodbridge, Suffolk, from 1945 to 1963 and chairman of the Conservative Party from 1963 to 1965, and was ennobled as the first Viscount Blakenham in 1963; and Alan Victor Hare (1919–1995) served in MI6 before becoming chairman of the *Financial Times*.

At the time of his birth, Hare's family, an Anglo-Irish offshoot of the ancient Hares of Norfolk, owned estates in Ireland and London; the latter included Kingston House, his grandparents' residence in Knightsbridge, and Ennismore Gardens. Young Billy (as he was universally known) grew up with his younger siblings at 14 Bryanston Square, spending holidays with his Derwent grandparents at Hackness Hall, near Scarborough in Yorkshire. Most unusually for someone of his background and upbringing, he became a socialist during his schooldays at Eton College, having been deeply affected by the sight of ragged children playing barefoot in the street near Bryanston Square. From that time, he said, he viewed the Labour Party as 'the standard bearer of radical social change' (private information). The only other person at Eton thought to share his views was the headmaster's wife, Mrs Alington. From Eton, he went up to Balliol College, Oxford, to read politics, philosophy, and economics. But his father removed him after a year, having read newspaper reports of his socialist opinions (discussion of party politics was

banned at home), and wrongly suspecting that the left-wing master of Balliol, A. D. Lindsay, was to blame for them. A place was found for him at Magdalene College, Cambridge, where he switched to reading English. After Cambridge—where his political views, and his preference to be known as Mr W. F. Hare rather than Viscount Ennismore (a courtesy title to which he became entitled in 1924 when his father became fourth earl of Listowel) continued to attract press interest and to infuriate his father—he went to the Sorbonne in Paris to study aesthetics under Professor Victor Basch, later developing his research into a well-received doctoral thesis at London University. It was published as *A Critical History of Modern Aesthetics* in 1933; a revised edition was published as *Modern Aesthetics: an Historical Introduction* in 1967.

In 1931 Hare's father died, disinheriting him and his next brother, Richard (an intellectual who had failed to show any interest in sport), in favour of his brothers John and Alan. Nevertheless he succeeded his father in both the Irish earldom of Listowel and the UK barony of Hare, under which title he took his seat among the handful of Labour peers in the then entirely hereditary House of Lords, and there he soon made an impression as a knowledgeable and earnest debater. Perceiving the growth of European fascism to pose a dire threat to his hopes for social reform, he made several visits to the continent at this period. In 1934 he and the Labour MP Ellen Wilkinson were censured by the national executive of the Labour Party for acting without authority in visiting Spain to protest about the maltreatment of miners in the Asturias. The pair had eventually been escorted to the French frontier by the national guard. With the outbreak of war in 1939, Listowel—who had by then been sitting on the Labour front bench in the Lords for three years—joined up as a private in the Royal Army Medical Corps. Shortly afterwards, because he knew some German, he was transferred to the intelligence corps and commissioned, along with A. J. Ayer, the Oxford philosopher, as a second lieutenant. But in 1941 he was required by his leader in the Lords, Lord Addison, to return to civilian life as opposition chief whip.

Listowel's involvement with India began in October 1944, when he became deputy leader (to the marquess of Salisbury) in the Lords and under-secretary of state at the India Office, under Leo Amery. Three years later, when the Labour government had resolved on independence for India and appointed Mountbatten as viceroy, the latter requested that Listowel, by then postmaster-general, be appointed secretary of state. He took up this post (which included responsibility for Burma) in April 1947. The India Independence Bill was introduced into the Commons on 4 July 1947, and Listowel then steered it through the Lords, unamended, by the end of the month. With parliament's summer recess impending, any amendment would have jeopardized the timetable for independence on 15 August. While honours were then showered on Mountbatten, Listowel was simply thanked by the king and by the prime minister, Clement Attlee. He remained as secretary of state for Burma until January 1948, when Burma became an independent republic and left the Commonwealth.

In January 1948 Listowel was given a post outside the cabinet as minister of state for the colonies. He went to Malaya for the inaugural session of the federal legislative council, and to Barbados to preside at a meeting of all the governors in the region (the first such meeting of its kind). In British Guiana he was surprised to find Amerindian children learning English from a book which began 'The Scottish nobleman strode out from his castle into the snow' (private information). His last ministerial post was as joint parliamentary secretary at the Ministry of Agriculture and Fisheries, from November 1950 to October 1951—an odd post, he once observed, for someone who had never tended more than a window-box in London. In March 1957 he was appointed, at Kwame Nkrumah's request, governor-general of Ghana. He was scrupulous in remaining above politics, restored relations between Nkrumah and the Asantahene, and in later life would remember his three years in Accra with particular pleasure. He returned to England when Ghana became a republic within the Commonwealth in July 1960. Labour regained power in 1964, and the next year he was appointed chairman of committees and deputy speaker of the House of Lords. Thereafter, until retiring in 1976, he adhered strictly to the non-party line demanded, and by his patience, acuity, and attractive manner never failed to achieve a consensus. He was sworn of the privy council in 1946, and was appointed GCMG in 1957. By the time of his death he was the longest-serving member of both the House of Lords and the privy council.

Listowel was thrice married. He married first, on 24 July 1933, Judith de Marffy-Mantuano, only daughter of Raoul de Marffy-Mantuano, Hungarian diplomat and politician, and herself a prominent political activist, though of a different political persuasion from Listowel. There was one child of the marriage, Deirdre Mary Freda (*b.* 1935), which ended in 1945 in divorce. Listowel married second, on 1 July 1958, Stephanie Sandra Yvonne Currie, otherwise known as Stevie Wise, jazz singer, daughter of Sam Wise of Toronto, and former wife of Hugh Currie. There was one daughter of this marriage, Fiona Eve Akua (*b.* 1960), which also ended (in 1963) in divorce. Listowel then married third, and happily, on 4 November 1963, Pamela Mollie Reid, hairdresser, daughter of Francis Day, bus driver, of Croydon, and former wife of John Alexander Reid, middleweight boxer. There were three children of this marriage, Francis Michael (*b.* 1964), Diana France (*b.* 1965), and Timothy Patrick (*b.* 1966).

Mild-mannered and unassuming, but nevertheless tenacious in his political beliefs, Listowel was held in great affection by all who came across him. He died in London of heart failure on 12 March 1997, and was survived by his third wife and his five children. He was succeeded as sixth earl of Listowel by the older son of his third marriage.

Harewood. For this title name *see* Lascelles, Henry, second earl of Harewood (1767–1841); Lascelles, Henry George Charles, sixth earl of Harewood (1882–1947).

Harflete, Henry (*b.* 1580), writer, was the eldest son of Henry Harflete of Hills Court, Ash-next-Sandwich, Kent, and Mary, daughter and heir of George Slaughter of Ash. His was an old Kentish family, traceable to the reign of Henry II. About 1620 he married Dorcas, daughter of Joshua Pordage of Sandwich; they had six sons and four daughters. Henry's eldest son, also called Henry, was born on 27 September 1633, remained unmarried in 1663, and was buried at Ash in 1679, and with him the line expired.

Harflete inherited his father's law books in 1608 and in 1630 was admitted to Gray's Inn. Like some of his more famous contemporaries, he found the law tiresome and fulfilled himself instead in literary pursuits. In 1632 he published *The Hunting of the Fox, or, Flattery Displayed*. He treats this Jonsonian theme intelligently, noting, for instance, that flattery kills 'two at a blow; the flatterer, and the flattered' (p. 12), and his prose occasionally rises to an impressive combination of clarity and suggestiveness.

Harflete is better known for his next and very different work, *Vox coelorum: Predictions Defended*, in which he aligns himself with the controversial astrologer William Lilly, and argues for the dignity of astrological science, quoting scripture, appealing to experience, and seeing in the heavens the designing hand of God. The date of 1645 written in the British Library copy is too early, for it contains references (pp. 55, 58) to Lilly's almanac for 1646. There is a distinct note of personal disappointment. Harflete addresses a supposedly indifferent reader and contends that the world is in its Iron Age, the position of intellectuals precarious. Lilly, the author of *Monarchy and No Monarchy* (1651), was a republican: Harflete observes in his preface that he has himself 'laboured day and night in the Parliaments service'.

In his prefatory epistle to *Vox coelorum*, Harflete had signed himself 'a well-wisher to the Mathematicks' and in 1653 he brought out an almanac for Sandwich and Dover praising and deploying the new decimal arithmetic. He also published in that year *A Banquet of Essayes*, consisting of seven prose pieces on one of Owen's epigrams, in which there are frequent translations from Horace, Owen, and others. Lately the defender of learning, Harflete now emerges as the opponent of pedantry. 'The world is a sea', he writes, 'upon which the theoretical reader floates in the pinnace of self-opinionated praise, driven by the winde of vaine-glory' (p. 12). Again the note of frustrated hopes is heard, but tempered now by a lofty resignation. Harflete admits, 'I have little sought to winde my selfe into the worlds favour, since I have experienced its ficklenesse' (p. 76), and his sixth essay disclaims praise. And yet, from the beginning there had been a strain of *contemptus mundi* in his writings, as well as an undercurrent of more particular misogyny. The preface to *The Hunting of the Fox* had favourably quoted St Gregory's comparison of this world to 'a rotten nut, which being opened with the knife of verity, you shall find nothing within but rottenness, and vanity'. It is not known when Harflete died.

Harford family (*per. c.*1700–1866), merchants, brass manufacturers, and bankers, came to prominence with Charles Harford (1631–1709). He and his immediate descendants were Quakers. Charles Harford, the first Harford to enter trade in Bristol, was the son of Mark Harford (1570–1652) of Marshfield in Gloucestershire. He was active in soap-boiling in the 1680s and 1690s, and in plans to set up a brassworks in 1700. In an eventful life he was among many Bristol Quakers imprisoned for not attending national worship, and in 1691 he was fined heavily for customs fraud. By his first marriage in 1656, to Mary Bushe (*d.* 1667), Charles Harford had six children. His second son, Charles Harford the younger (1662–1725), merchant, was the father of Trueman Harford (1704–1750), father of James *Harford (1734–1817), iron and tin-plate manufacturer. His eldest son, Edward, was the head of the three branches of the family in brass-making and banking.

Edward [i] **Harford** (1658–1705) continued in his father's trade of soap-making and married Elizabeth Jones (1670–1729) in 1689; they had ten children. He expanded into the tobacco trade, and became part-owner of a ship. His three grandsons in the separate Blaise Castle, Stapleton, and Stoke Bishop lines became especially prominent.

The Stoke Bishop line was the branch most intimately involved with brass-making. It began with Mark [i] Harford (1700–1788), eighth child of Edward [i] Harford and Elizabeth Jones. Mark [i] Harford was a haberdasher of small wares who became connected with the brass trade through his marriage to Love Andrews, granddaughter of one of the founders of the Bristol Brass Company. The company was begun as the Bristol Brass Wire Company in 1702 by Quaker merchants including John Andrews, Nehemiah Champion, Thomas Coster, Abraham Darby, and Edward Lloyd, and it dominated the British brass trade for nearly a century. Mark [i] Harford's only child, **Mark** [ii] **Harford** (1738–1798) of Stoke Bishop, increased the family's stake in the company by marrying Sarah (*d.* 1798), daughter of Samuel Lloyd, in 1762, and became its leader. In the following years it became one of the most important industrial enterprises in the world, owning copper mines, smelters, and brassworks, in Cornwall, Bristol and its environs, Esher in Surrey, Lower Redbrook in the Wye valley, and Swansea. Mark [ii] Harford headed a committee of nine, on which sat five Harfords, including

his first cousins Edward [iii] and Joseph, of the Blaise Castle and Stapleton branches. He reorganized the company in 1788 as the Harford and Bristol Brass and Copper Company with additional capital of £100,000 and ten members, of whom six were Harfords.

Mark [ii] Harford retired in 1796, and leadership of the company passed for six years to his cousin Joseph Harford of Stapleton before returning to his second son, Mark [iii] Harford (*b.* 1768). In 1799 it could still be described by its chief rival, Thomas Williams, as 'perhaps the most considerable brass house in all Europe' (Day, 112). However, it was already declining and was managed largely as a static investment. The company continued to use slow methods to make traditional goods such as brass ingots and wire, copper sheets, and battery-ware pans and kettles. By contrast the Birmingham industry was developing new techniques and products such as gas fittings and machine components. The industrial empire began to fall apart, and even its central sites were allowed to decay. Woodborough battery mill was derelict by the 1790s, Weston battery mill was sold about 1811, and Baptist Mills was abandoned around 1814. All smelting had ceased by 1820. From 1833 the company was simply a property owner, with its remaining premises leased for £500 per annum; it was sold by the Harford family in 1862.

The Stapleton line originated with Charles Harford (1704–1746), grocer, youngest child of Edward [i] Harford and Elizabeth Jones. Charles married Mary (*d.* 1742), the daughter of Joseph Beck of Frenchay and niece of one of the partners in the Old Bank. Their sons were Trewman Harford (*fl.* 1727–1761), merchant, and **Joseph Harford** (1741–1802), born at Frenchay, Bristol. Joseph Harford's commercial interests were based upon his father's wholesale grocery business in Queen's Square, but he extended into important new areas. He was a founding partner of the New Bank in 1786 and a partner in the bank of Ames, Cave & Co. from 1786 to 1798. He was a member of Merchant's Hall, and master of the Society of Merchant Venturers in 1796. His industrial interests centred on the Bristol Brass Company, of which he was a committee member, and leader from 1796 to 1802, but he also had interests in the iron, tin, and glass trades, and financed Richard Champion's Bristol China Works in 1768.

Joseph Harford aggrandized the family by marrying in 1763 Hannah (*d.* 1811), daughter of Joseph Kill of Stapleton Grove, near Bristol, where they took up residence. He became a justice of the peace, treasurer of Bristol Infirmary, promoter of the Bristol Library Society, and chairman of the Bristol slavery abolition committee. He was prominent in Bristol politics during the radical campaign of 1769 and was in 1771 one of Edmund Burke's two sponsors to become a member of parliament, opening his campaign with a subscription of £300. Burke said, 'You could not have a better man than Mr Harford. He has a great bottom for confidence. He has a firm Integrity; very enlarged notions; and one of the most solid and well cultivated understandings I have met with' (Underdown, 137). Harford himself was elected to Bristol common council in 1779 and acted as high sheriff on three occasions. The Society of Friends disavowed him for taking his oath, resulting in his conversion to the Church of England. Joseph Harford died at Stapleton Grove on 11 October 1802.

The Blaise Castle descendants of Edward [i] Harford and Elizabeth Jones sprang from their son Edward [ii] Harford (1691–1779), merchant, who married Elizabeth Lloyd, daughter of Edward Lloyd of the Brass Company. Edward [ii] expanded his father's mercantile and industrial interests, beginning to import tobacco from Virginia in 1724 and owning a ship, taking a partnership in a glassworks in 1724, and holding membership of the Brass Company. His business was carried on by his only child, **Edward** [iii] **Harford** (1720–1806) of Frenchay, merchant, who joined the committee of the Brass Company. Unlike his father, he became a Merchant Venturer and was progenitor of the family's lucrative banking interests, leading the six original partners in creating the Harford Bank in 1769. In 1747 he married Sarah Scandrett (1725–1776) of Birmingham, the daughter and heiress of John Scandrett (*d.* 1730), who was also related to the Lloyds. Of their seven children, only one survived him: **John Scandrett Harford** (1754–1815).

John Scandrett Harford ensured the transition of his line from commerce to landed gentry; this was to be consolidated by the conversion of his son John Scandrett *Harford the younger (1787–1866) to the Church of England, as well as the latter's advantageous marriage and literary concerns. The elder J. S. Harford maintained the family's industrial interests as a committee member of the Brass Company, and as an iron merchant and a partner in Lydney ironworks in Gloucestershire. He continued as the leading partner of Harford's Bank until his death. In 1782 he was warden, and in 1798 master, of the Bristol Merchant Venturers' Guild. He married another Quaker, Mary Gray (*d.* 1830) of Tottenham, Middlesex, in 1780, and they had nine children. By his death he was said to have trebled the fortune inherited from his father nine years earlier, and left nearly £300,000. He lived at Brunswick Square, Bristol, until 1789, when he purchased the Blaise Castle estate, near Bristol; this signified perhaps the greatest single step in the gentrification of the Harfords. He built a grander house to designs by William Patey about 1795, and commissioned additions by John Nash, Humphrey Repton, and George Stanley Repton. He is best remembered for Blaise Hamlet, the estate pensioners' houses built by Nash in 1810–11 at a cost of £3800, one of the most successful examples of picturesque architecture in England now in the care of the National Trust. J. S. Harford the elder died at Blaise Castle on 23 January 1815.

The Harford family, through its principal Bristol branches, formed a major business empire. This advanced fastest in the generation of the mid- to late eighteenth century led by the first cousins Joseph Harford (1741–1802) of Stapleton, Edward [iii] Harford (1720–1806) of the Blaise Castle line, and Mark [ii] Harford (1738–1798) of Stoke Bishop. Each of these made considerable fortunes in their different sections of the mercantile, banking, and brass trades, and they were linked by their Quakerism, kinship,

and common interests. They built upon several generations of expertise and capital, which increased in parallel with the commercial and industrial revolutions. They handed on substantial fortunes to their children, who entered the landed gentry, and for the most part left industry and commerce behind.

The Harford businesses developed over several generations, and included the major brass-making company of the eighteenth century, mercantile activities, and banking interests which provided capital and credit for the second port of the kingdom. The family progressed from trade to industry, finance, and eventually gentrification. It was the chief among several interrelated Quaker families in Bristol who began as grocers or ironmongers and became wealthy business leaders, including the Champions, Goldneys, Andrews, Scandretts, Truemans, and Lloyds. Harford, Edward (1658–1705). *See under* Harford family (*per. c.*1700–1866).

Harford, Edward (1720–1806). *See under* Harford family (*per. c.*1700–1866).

Harford, Edward (1837/8–1898), railwayman and trade unionist, was born in Bristol on 21 March 1837 or 1838, the son of Edward Harford, a policeman. When he was five years old the family moved to Tiverton in Devon and Edward was educated until the age of fourteen at the Tiverton factory school from which he was apprenticed to the confectionery trade. He disliked this employment and after enduring it for five years, transferred to the recently established Devonshire county constabulary. In Hatherleigh, on 26 October 1857, he married Fanny Ann Reed Sanders, a domestic servant; they had five sons and two daughters.

Shortly after this Harford began his railway career as a porter employed by the Bristol and Exeter Railway Company. For nearly twenty years thereafter he was employed in a variety of grades in the goods departments, first of the Midland and then of the Manchester, Sheffield, and Lincolnshire Railways. Harford became a keen trade unionist and on 24 June 1872 represented Grimsby at the first great delegate meeting of the Amalgamated Society of Railway Servants (ASRS), held in London. In 1873 colleagues in the Sheffield area persuaded him to become a full-time, locally paid, organizer. He accepted the proposal, but subscriptions from the branches were so uncertain that for some months he felt obliged to take employment in an iron foundry. However, by 1881 he was again active for the union as joint secretary of the movement for a nine-hour working day.

At that time union organization presented many difficulties. The directors of the railway companies, with the partial exception of the North Eastern Railway, were vehemently opposed to union recognition. Victimization was widespread and it was not until the annual general meeting of October 1889 that delegates decided to give their personal, as well as their branch name, to reporters. In 1882 Harford was appointed by the union's executive as paid national organizer, and in February 1883, when his predecessor, Frederick Evans, had a nervous breakdown and deserted his post, he was chosen as the only person legally qualified to be general secretary. Apart from this, his good organizing abilities and his wide range of experience in railway employment ensured his succession.

Harford's policy after election was to increase the union's membership and hence its bargaining strength. He detested strikes, declaring at a public meeting in Birkenhead on 12 February 1897 that strikes would be a thing of the past as soon as every man was a member of his trade society. He campaigned vigorously for reduced working hours in the belief that overwork was an important cause of the horrendous level of railway accidents. He gave well-prepared evidence to both the royal commission on labour of 1890 and the select committee on railway servants' hours of labour of 1890–91.

Harford played an active role in the establishment of the labour electoral committee in 1886, and served as its treasurer. His union decided in 1892 that it should be represented in parliament through the general secretary, and Harford subsequently stood as a Liberal for Northampton in the general election of 1895, but was defeated because of a split opposition vote. He served on the parliamentary committee of the TUC from 1887 to 1892 (chairman in 1890) and from 1894 to 1897.

By 1898 the union was in a much stronger position than it had been when Harford took over in 1883. Membership had risen from 8077 to 54,426, and reserve funds had grown from £37,000 to nearly £200,000. It was well established in Ireland and strong in the north-east and Scotland, following the merger of the Scottish ASRS with the main body after the defeat of the Scottish rail strike in 1892. Above all it had become an industrial organization, or, as Harford described it, 'a trade union with benefit funds, not a friendly society with a few mutual protection benefits' (Bagwell, 1.149).

In 1897 Harford defied his executive by settling disputes with the boards of the North Eastern Railway and the London and North Western Railway. He was also drunk at an important stage of negotiations. The union dismissed him in October 1897 with a pension of £100 a year. Harford died of pneumonia on board the SS *St Paul* on 4 January 1898 while returning from a conference in the USA. His funeral

took place in Abney Park cemetery in London on 11 January 1898, and was attended by large numbers of railway workers walking beneath their banners. Harford was survived by his wife. PHILIP S. BAGWELL

Harford, James (1734–1817), iron and tin plate manufacturer and merchant, was the son of Truman Harford (1704–1750), merchant and manufacturer, and Mary Taylor of Baldock, Hertfordshire, and grandson of Charles Harford (1662–1725), a merchant, of Bristol [*see* Harford family]. He developed a powerful network of tin plate- and iron-making interests and was the foremost among many Bristol merchants who became industrial entrepreneurs in south Wales. He lived at Felindre, Melingriffith, near Cardiff, and at his estate at Chew Magna in Somerset. In 1756 he married Anne Summers, daughter of his business partner, Richard Summers; they had six sons and four daughters.

Harford developed industrial interests while maintaining his connections in Bristol, where he was a member of the Society of Merchant Venturers and part of an extensive Quaker merchant family. He succeeded by linking and developing existing enterprises rather than establishing new ventures, and was one of the few ironmasters to prosper in the eras of both charcoal and coke fuel. His numerous interests included the Pen-tyrch, Ebbw Vale, Nant-y-glo, Sirhowy, and Caerphilly smelting works in south-east Wales; Redbrook furnace, Monmouth forge, Newent forge, and New Weir forge in the Wye valley; and the Machen and Basaleg forges near Newport, Monmouthshire.

Harford's central industrial concern was the Melingriffith forge and tin plate works near Cardiff, which was established by Bristol merchants about 1750. He became a partner about 1768, along with the noted ironmaster Richard Reynolds, Richard Summers, and a number of others. By the 1770s he was in partnership with John Partridge sen. (*fl.* 1730s–1770s) and John Partridge jun. (*c.*1736–1816), Quaker ironmasters of Ross, Herefordshire, and Monmouth. In 1795 Harford and his younger brother John Harford (1736–*c.*1816), with James's sons Richard Summers Harford [*see below*] and Samuel Harford (1766–1838), were major figures in the enterprise. At this time Melingriffith was the largest tin plate works in the world. The main products were tin plate, and wrought-iron bars, sheets, rods, and hoops, but the company also dealt in cast-iron pots, frying pans, anvils, hammers, and spades, some purchased from other manufacturers. Goods were exported under the auspices of James Harford & Co., merchants, of Bristol. In 1805 the nearby Pen-tyrch furnace was bought, and both enterprises were enlarged. However, in 1808 the partnership was dissolved, as the Harfords concentrated on more recently acquired, larger ironworks. They left Felindre, their local residence, in 1810 and Melingriffith and Pen-tyrch were transferred in 1812 to a group led by Richard Blakemore (*b.* 1775), the grandson of John Partridge sen.

Of the other ironworks interests, most were intended initially to complement the existing business, such as Redbrook furnace and Lydbrook forge, brought into the group through partnership with the Partridges. Caerphilly furnace was acquired in 1781 with a rolling and slitting mill. Although a blowing engine was installed in 1793, the furnace remained charcoal-fuelled and output in 1796 was only 600 tons. It was out of blast by 1805, made obsolete by the larger coke-fuelled works the Harfords had acquired.

The acquisitions which carried the Harfords into the production of bulk iron began in the 1790s. The only new venture was the ironworks at Nant-y-glo, promoted in 1792 with Thomas Hill, already a successful ironmaster at Blaenafon. Unfortunately, Hill complained that £485 was spent above his £10,000 capital and refused to let production start, even though Harford, Partridge & Co. had spent £16,381. The company was obliged simply to smelt material in stock, and the works lay idle from 1796 until 1802, when Hill returned with different partners.

Immediately before this débâcle, however, Harford, Partridge & Co. had become partners of Jeremiah Homfray at Ebbw Vale ironworks, introducing capital for expansion. It became the sole owner in 1796. This was the first element in what was to become one of the most powerful ironworks enterprises in south Wales. James Harford as senior partner and his brother John as managing partner expanded Ebbw Vale from one blast furnace to four. Then, around the time of James's death in 1817, the company acquired the adjacent Sirhowy works (much to the anger of another ironmaster, Richard Fothergill, who had confided his own plans to renew the lease). This site too was expanded, from two furnaces to five. The period of greatest growth in the Harford iron fortunes ensued, under the management of Richard Summers Harford. Output at Ebbw Vale in 1805 had been 3664 tons; but from the two combined works it was 10,425 tons in 1823 and 26,020 in 1830. The capital value in 1820–21 was over £62,000 and rising rapidly.

As the possessor of an extensive industrial empire, James Harford was an enthusiastic promoter of improvements to transport. In 1785 he became a trustee of the turnpike from Merthyr Tudful to Tongwynlais, which brought iron to Melingriffith. When the Glamorganshire Canal Company was established in 1790, he was its first honorary treasurer and he and his sons were among the

largest shareholders. Richard Crawshay, the Merthyr ironmaster, was constantly at loggerheads on the canal committee with Harford, whom he described as 'a rude, selfish Jew Quaker', insolent, and 'a mercenary fellow who must be treated as Circumstances require' (*Letterbook*, xx, 92). Harford, Partridge & Co. and James Harford were also leading shareholders in the Monmouthshire Canal Company.

Harford's interests in education and workers' welfare were demonstrated at Melingriffith. From about 1775 the works had a scheme for medical attendance, as well as a reading-room. In 1786 a friendly society, the Melingriffith Benefit Club, was established, one of the earliest in south Wales. In 1798 there were sixty-three members, including John Harford, the employees at Melingriffith, and other local people. The club provided social activities, benefits, and pensions, and similar ones were started at Caerphilly in 1787 and at Ebbw Vale. A school for workers and their children existed at Melingriffith before 1786, and in 1807 James Harford invited Joseph Lancaster to address a meeting which resulted in the establishment there by subscription of a Lancastrian school for boys and girls.

James Harford's sons and grandsons continued in the iron industry. His eldest son, Truman Harford (1758–1803), took the lease of Caerphilly furnace with his father and Philip Crocker in 1789 and dealt with iron orders at Melingriffith in the 1790s, but he established himself also as a brewer in Limehouse, London. Samuel, his fourth son, participated at Melingriffith. John Harford (1768–1851), his fifth son, and his daughters Elizabeth Harford (*d.* 1836) and Sophia Harford (*b.* 1779) lived at Gelliwastad, Machen, about 1816 and may have overseen Caerphilly furnace and Machen forge.

However, it was James's second son, **Richard Summers Harford** (1763–1837), iron manufacturer, who became his effective heir. Richard established Nant-y-glo ironworks and lived nearby at Trosnant until 1799, and continued to operate associated collieries until 1801. He was increasingly involved at Ebbw Vale, which became the focus of the Harford interests, and he built a three-storey mansion, Ebbw Vale House, in 1817. He led the company from the time of his father's death in 1817 until his own in 1837. He followed his father into the Society of Merchant Venturers in 1825 and inherited the Chew Magna estate. In 1792 he married Jane Lloyd Perkins; their sons, Summers Harford and Charles Lloyd Harford, appear subsequently to have taken responsibility for the works. Their iron business was severely damaged by defaults on credits in Maryland, USA, which led to the bankruptcy of Harford, Davies & Co. of Ebbw Vale in 1842. Significantly, the meeting of creditors was held in Bristol. Although Ebbw Vale continued to expand under new owners, this ended almost a century of the Harfords' leadership in the iron trade of south Wales.

Harford, John Scandrett (1754–1815). *See under* Harford family (*per. c.*1700–1866).

Harford, John Scandrett (1787–1866), biographer, was born at Bristol on 8 October 1787, the second son of the banker and manufacturer John Scandrett Harford (1754–1815) [*see* Harford family] of Blaise Castle, Henbury, Gloucestershire, and Mary (*d.* 1830), daughter of Abraham Gray of Tottenham, Middlesex. He was educated under the Revd Lloyd at Peterley House, Buckinghamshire, later studying for several terms at Christ's College, Cambridge. The death of his elder brother, Edward Gray Harford, on 25 April 1804, produced deep religious impressions, which continued throughout his life. His parents were members of the Society of Friends, but he left that connection and was baptized at Chelwood church, Somerset, in 1809. He became a firm supporter of the Church Missionary Society and the Bible Society, and assisted at the formation of the Bristol branches of those associations in 1813. He was a close friend of Hannah More from 1809, and of William Wilberforce from 1812, and he was the model for the hero of Hannah More's novel *Coelebs in Search of a Wife* (1809).

On 31 August 1812 Harford married Louisa Davies, eldest daughter of Richard Hart Davies, MP for Bristol. The following year he visited Ireland with his wife, and his subsequent 'Letter on the state of Ireland', addressed to William Wilberforce, was published in the *Christian Observer* (June 1813). On the death of his father in 1815 Harford succeeded to the family estates, and was made a magistrate and a deputy lieutenant for Gloucestershire and Cardiganshire. While in Rome in 1815 he obtained an interview with Pius VII and requested his influence in putting down the Spanish and Portuguese slave trade. He possessed considerable taste in art and literature, and during visits to Paris and other European cities in 1815–17 laid the foundation of a valuable collection of pictures which adorned the walls of Blaise Castle. About 1821, on the death of his brother-in-law, Hart Davies, formerly MP for Colchester, he came into the Peterwell property, Cardiganshire, where he made improvements and took in tracts of waste land.

In 1822, on the advice of Thomas Burgess, bishop of Salisbury, Harford and his brother donated the site of the castle of Lampeter for the foundation of a college in south Wales. The same year, the University of Oxford created him honorary DCL, and he was elected FRS on 29 May 1823. In 1824 he was appointed high sheriff for Cardiganshire. On the completion of St David's College in 1827 Harford was appointed sub-visitor and watched over its interests with great care.

In January 1841 Harford was present in Bristol at a discussion between John Brindley and Robert Owen, when he strongly denounced socialism. He was elected Conservative MP for the borough of Cardigan on 6 July 1841, but as a result of the loss of a poll book a double return was made to parliament and on a petition his name was erased from the roll on 18 April 1842. He contested the same place again on 12 February 1849, without success. For fifteen years he acted as president of the Bristol Infirmary. He contributed towards the restoration of the cathedrals of Llandaff and St David's, and at Lampeter he drained the Gorsddu bog, and made it into cottage garden allotments, while also providing a supply of pure water for the town. During two visits to Italy, in 1846 and 1852, he collected materials for his best-known literary work, the *Life of Michael Angelo* (1857); he also had a copy of the ceiling of the Sistine Chapel made at his own expense. After the loss of his sight in 1862 he found employment in dictating to his wife his *Recollections of W. Wilberforce* (1864) from notes of conversations and correspondence in his possession. He died, childless, at Blaise Castle on 16 April 1866, and was buried on 23 April. He was succeeded by his nephew, John Battersby Harford.

Hargood, Sir William (1762–1839), naval officer, youngest son of Hezekiah Hargood, a purser in the navy, was born on 6 May 1762. In 1773 he was entered on the books of the *Triumph*, flagship in the Medway, but had his first experience of sea life in March 1775, on the *Romney*, going to Newfoundland as flagship of Rear-Admiral Robert Duff. On her return to England in the winter, Hargood was appointed to the *Bristol*, carrying the broad pennant of Sir Peter Parker, an old family friend, under whose care he went to North America, and was present in the attack on Sullivan's Island on 28 June 1776. In the following September he followed Parker to the *Chatham*, and then, in December 1777, back to the *Bristol*, which was shortly afterwards sent to Jamaica. Hargood continued in her, under the direct patronage of Parker, until January 1780, when he was promoted lieutenant of the sloop *Port Royal*, in which he was actively engaged in the unsuccessful defence of Pensacola, captured by the Spaniards in May 1781. By the terms of the surrender, he and the rest of the prisoners were sent to New York, from where he returned to England. He was immediately appointed to the *Magnificent* (74 guns), which sailed from Spithead in February 1782, and joined Rodney in the West Indies in time to take part in the actions to leeward of Dominica on 9 and 12 April; he was then with Hood in the Mona passage on 19 April, when he assisted in the capture of a scattered detachment of French ships.

On the peace of 1783 the *Magnificent* returned home, and in May 1784 Hargood was appointed to the frigate *Hebe* with Captain Edward Thornbrough, in which ship, in 1785, Prince William Henry (later William IV) served as a junior lieutenant. In 1786, when the prince was appointed to the command of the *Pegasus*, Hargood, at his request, was appointed one of his lieutenants; in the same way, in 1788, he was appointed first lieutenant of the *Andromeda*, which the prince paid off in April 1789. Two months afterwards Hargood was promoted commander, and in the following December was appointed to the sloop *Swallow* from which, after a year on the coast of Ireland, he was advanced to post rank on 22 November 1790. In April 1792 he commissioned the frigate *Hyaena* (24 guns) for service in the West Indies, where she was captured off Cape Tiberon on 27 May 1793 by the *Concorde*, a powerful French frigate of 44 heavy guns. Hargood and the other officers were landed on their parole at Cape François, Haiti; but on 20 June, on the outbreak of the insurrection there, they escaped for their lives on board the *Concorde*, where the commanding officer declined to receive them as prisoners, but allowed them to take a passage for Jamaica. There was some disposition to blame Hargood for surrendering to the *Concorde* without sufficient resistance; but as the *Hyaena* was partially dismasted, and under the guns of a frigate of at least four times her force, supported by a couple of 74-gun ships and three other frigates in the offing, she could offer no effective defence, and Hargood was honourably acquitted by the court martial held at Plymouth on 11 October 1793.

In April 1794 Hargood was appointed to the frigate *Iris*, and employed in convoy service in the North Sea, to the coast of Africa, and to North America, until, in August 1796, he was transferred to the *Leopard* (50 guns), one of the ships involved in the mutiny of the following year. On 31 May Hargood was put on shore at Yarmouth, Isle of Wight, by the mutineers; but ten days later those of his officers who had been kept on board succeeded in regaining possession of the ship and taking her into the River Thames under heavy fire from the mutinied ships. Hargood did not resume the command, and on 12 July was appointed to the *Nassau* (64 guns), which during the next two months formed part of the North Sea Fleet under Duncan; but having received serious damage in a gale, it was sent to Sheerness to refit in the early days of October. In February 1798 Hargood was appointed to the *Intrepid* (64 guns), and on 30 April he sailed for China in charge of a convoy, afterwards joining the flag of Vice-Admiral Peter Rainier, then commander-in-chief in the East Indies.

Hargood returned to England in the spring of 1803, and in the following November was appointed to the *Belleisle* (80 guns), then off Toulon, under the command of Nelson. Hargood joined her in March 1804, and continued under

Nelson's orders during that year and the next, taking part in the watch off Toulon through 1804, and in the pursuit of the allied fleet to the West Indies and back, from April to August 1805. On joining the Brest fleet under Cornwallis, the *Belleisle* was ordered to Plymouth to refit, which was done only just in time to enable her to join the fleet off Cadiz on 10 October and take part in the battle of Trafalgar; following in the wake of the *Royal Sovereign*, she was one of the ships earliest in action. She lost thirty-three men killed and ninety-four wounded, besides being totally dismasted and having her hull much damaged. She was sent home the following January to be refitted. In February she was again commissioned by Hargood, and in May joined the squadron sent to the West Indies under Sir Richard John Strachan. On 18 and 19 August the squadron was scattered by a hurricane south of Bermuda. Hargood sailed northward, and being joined on 5 September by the *Bellona* and the frigate *Melampus*, continued cruising off the mouth of the Chesapeake, where on 14 September he fell in with the French ship *Impétueux*, jury-rigged, having been dismasted in the storm which had scattered the French squadron as well as the British. The *Impétueux*, in no condition to resist or escape, ran herself ashore. She was captured and burnt, her officers and crew being sent on board the British ships. This action was a breach of neutrality; but it seems to have passed unnoticed by the United States government, and was approved by the Admiralty. In November 1806 the *Belleisle* returned to England, and, after being docked and refitted, was again sent out to the West Indies, where Sir Alexander Cochrane hoisted his flag on board her, Hargood changing into the *Northumberland* (74 guns) and taking home a large convoy. After this he joined the fleet at Lisbon under the command of Sir Charles Cotton, and was employed in the blockade during the summer of 1808, under the immediate orders of Rear-Admiral Purvis, until, after the sudden change of alliances in July, the *Northumberland* joined the flag of Lord Collingwood, who sent her into the Adriatic, to co-operate with the Austrians. In October 1809 Hargood again joined the admiral, and in the following summer returned to England. Shortly afterwards, in 1811, he married Maria, daughter of T. S. Cocks, banker; they had no children.

On 7 August 1810 Hargood was promoted rear-admiral, and hoisted his flag at Portsmouth as second in command, which post he held until 13 March, when he took command of the squadron at the Channel Islands. He was promoted vice-admiral on 4 June 1814, and admiral on 22 July 1831. In January 1815 he was made a KCB, and in September 1831 a GCB. He had previously (22 March 1831) been specially made a GCH by the king, who had kept up a personal correspondence with Hargood throughout his career. From March 1833 to April 1836 he was commander-in-chief at Plymouth. He died at Bath on 11 September 1839. Admiral William Hargood, who died in 1888, was his nephew. J. K. LAUGHTON, *rev.* ROGER MORRISS

Hargrave, Francis (1740/41–1821), legal writer, was the son of Christopher Hargrave (*c.*1710–1787), a chancery solicitor. He was admitted to Lincoln's Inn in 1760, and his father was admitted to the same inn two years later. Francis was not called to the bar until 1771, having presumably practised below the bar for several years. But within a year of call he attracted wide attention and admiration for his successful argument on behalf of the escaped slave James Somerset upon his application for habeas corpus. Hargrave's learned argument, which was printed in 1772 and several times reprinted, drew upon recondite sources such as the medieval law of villeinage to persuade Lord Mansfield that no one could be a slave in England.

Hargrave's practice at the chancery bar was chiefly in chambers, as a draftsman and writer of opinions, and from 1781 to 1789 he was parliamentary counsel to the Treasury. He was also retained to prepare arguments for the use of others, doubtless because he was less gifted in the oral part of advocacy. Among those who benefited from his assistance were Edward Thurlow, for whom he devilled when he was attorney-general and after he became lord chancellor, and Charles Jenkinson, later first earl of Liverpool. In 1776 he drafted the statute 16 Geo. III c.43, a criminal law amendment act which allowed convicts to be employed in cleaning the Thames. His own speeches, though painstakingly accurate, were prolix and tortuous, and Lord Erskine once related how he had benefited professionally from the overnight adjournment of a case in 1778 after a long-winded speech by Hargrave which 'tired the court' (Townsend, 1.406). Hargrave had to leave the court once or twice during that speech because of 'strangury', and ill health pressed severely upon him in the years to come. In 1785, after completing about half of his important new edition of *Coke upon Littleton*, he retired from the task, saying that he could no longer sustain the weight of the labours involved, for personal reasons which it might be 'improper and disgusting' to particularize. He nevertheless continued to work when he was able; he was a commissioner of bankrupts, became recorder of Liverpool in 1797 and a bencher of Lincoln's Inn in 1802, and in 1806 he was given a silk gown by Lord Erskine. He published many of his own speeches and opinions in *Juridical Arguments* (1797–9) and *Jurisconsult Exercitations* (1811–13), the latter a three-volume collection chiefly of reprinted matter. Hargrave had intended to continue the *Exercitations* in at least three further volumes, but the 1813 instalment was delayed by 'causes beyond his power of controuling ... a subject involving much of delicacy' (Hargrave, *Exercitations*, vol.3, preface), and it was the last. The unspoken reason was an increasing failure of his mental faculties. Probably his last professional function was to serve as treasurer of Lincoln's Inn in 1813–14.

Hargrave married Diana, the daughter of the Revd Mr Fountaine of Marylebone, on 4 November 1776. She made

Francis Hargrave (1740/41–1821), by Sir Joshua Reynolds, 1787

a public appearance in 1813 when she petitioned parliament for assistance, her husband's selfless contributions to jurisprudence having left him in debt and unable to support her; and by vote of the House of Commons on 1 July his law library was purchased for the nation for £8000 and placed in the British Museum. Besides 499 manuscripts, still kept as a separate collection (catalogued in 1818 by Sir Henry Ellis), more than 100 printed books contain annotations in his hand. Some further manuscripts, mostly containing unpublished works by Sir Matthew Hale, were purchased by Lincoln's Inn in 1843 from one of his sons.

Hargrave pioneered the editing of modern legal manuscripts, 'which hitherto have either been confined to the small circle of those few who visit public repositories of books, or have been destined to occupy private libraries in a state nearly dormant except to the particular proprietors' (Hargrave, *Tracts*, preface). In 1776 he published eleven volumes of state trials from the reign of Henry IV to 1769, and this formed the basis of the vulgate edition by T. B. Howell. His *Collection of Tracts Relative to the Law of England* (1787) contained eleven previously unpublished items, from the time of James I to his own day, beginning with Hale's *De jure maris*, edited from a manuscript given to him by George Hardinge of the Middle Temple. It was followed by *Collectanea juridica: Consisting of Tracts Relative to the Law and Constitution of England*, which first appeared in periodical parts in 1791–2 and included an important edition of William Hudson's *Treatise on the Star Chamber*. It combined edited texts with opinions, articles, case notes, and lists of recent publications, and may be considered to have provided a model for the law journal of later times.

In 1796, in pursuance of his keen interest in the unpublished writings of Sir Matthew Hale, he produced an edition of Hale's *Jurisdiction of the Lords' House of Parliament*.

Hargrave died on 16 August 1821, and was buried in the undercroft of Lincoln's Inn chapel a week later in the presence of Lord Eldon. He left at least two sons—the second of whom, Francis Albany James, was called to the bar by Lincoln's Inn in 1809—and a daughter, Fanny Maria.

Hargrave, John Gordon (1894–1982), writer and illustrator, was born on 6 June 1894 at Midhurst, Sussex, the son of Gordon Hargrave, landscape painter, and his wife, Babette, *née* Bing. He attended Hawkshead grammar school in Lancashire for a short time and when he was fifteen illustrated Swift's *Gulliver's Travels* and Thackeray's *The Rose and the Ring*. Two years later he was appointed chief cartoonist of the *London Evening Times* and in 1914 joined the staff of C. Arthur Pearson Ltd.

On the outbreak of the First World War Hargrave enlisted in the Royal Army Medical Corps and later served with the 10th (Irish) division at Gallipoli and in Salonika. Having been invalided from the army at the end of 1916, he became art manager of C. Arthur Pearson Ltd from 1917 to 1920. On 28 November 1919 he married Ruth Clark (*b.* 1899/1900), daughter of William Clark, engineer; they had one son. The marriage ended in divorce in 1952. He continued his work as a cartoonist over the next thirty years and in 1952 created the animal character Bushy for *The Sketch*.

At the age of fourteen Hargrave had joined the Boy Scout movement, recently formed by Robert Baden-Powell, and by 1921 he was commissioner for woodcraft and camping. In that year, however, he left the movement, having inaugurated in 1920 the Kindred of the Kibbo Kift (an old Scottish term meaning a feat of strength). The purpose of this organization was to encourage youth 'to seek health of body, mind, and spirit' and to become expert at woodcraft and other open-air pursuits while believing in disarmament and the brotherhood of man. In its early years the Kibbo Kift, whose members wore a woodcraft costume of cloak, hooded jerkin, and shorts, numbered only a few hundred, but it was supported by such eminent people as H. Havelock Ellis, Julian

Huxley, H. G. Wells, and Emmeline Pethick-Lawrence. After 1931, when the movement developed into the Green Shirts, a paramilitary organization, the membership increased to thousands.

In the meantime Hargrave had met and come under the influence of Clifford Hugh Douglas, the originator of the theory of social credit. In brief, the ideas of Douglas were based on the premiss that the economic problems of his time were caused by a shortage of purchasing power which stemmed from a flaw in the system of price-fixing. To remedy these defects he advocated the issue of additional money to consumers or of subsidies to producers to enable them to set prices below the costs of production. Hargrave had sufficient influence with his followers to persuade the movement of which he was the leader to adopt these theories in opposition to the prevailing banking and financial structure of the capitalist system. Although Hargrave and the Green Shirts were opposed to the activities of Sir Oswald Mosley and his Black Shirt fascists, both movements were equally affected by the Public Order Act of 1937 which banned the wearing of political uniforms; and two years later the outbreak of the Second World War effectively brought to an end the activities of both organizations. After the war Hargrave attempted to revive the Green Shirts, but his efforts ended in failure, and in 1951 the organization was dissolved.

In 1936–7 Hargrave had been honorary adviser to the Alberta government planning committee which was seriously concerned with the introduction of the social credit system into that province of Canada. The Alberta government, led by William Aberhart, accepted the theories set out in the report, in the preparation of which Hargrave had played an influential part, but never succeeded in putting its plans into effect as, in the last resort, the governor-general declared them to be unconstitutional.

Hargrave was indefatigable in setting out his ideas in writing. By 1913 he had written *Lonecraft* and five other books on camping and similar outdoor activities. His *Social Credit Clearly Explained* (1934) gave chapter and verse for his theories on that subject, and in other publications, such as *Professor Skinner, alias Montagu Norman* (1939), he castigated mercilessly the exponents of monetarism and other policies of contemporary financiers. *The Confession of the Kibbo Kift* (1927) explained the purpose of that movement; he also wrote *Words Win Wars* (1940).

Hargrave demonstrated his versatility in many other books, including *Summer Time Ends* (1935) and five other novels. He was also a lexicographer and published his *The 'Paragon' Dictionary* in 1953; he wrote *The Life and Soul of Paracelsus* (1951), the German-Swiss physician and alchemist on whom he was a recognized authority; and his wartime experiences led to *The Suvla Bay Landing* (1964). In 1968 he married Gwendoline Florence Gray, an actress.

Another aspect of the career of this extraordinary man, with his intense personal enthusiasms and keen, if unorthodox opinions, was Hargrave's invention of an automatic navigator for aircraft which he claimed to be the basis for equipment used in Concorde and other supersonic aeroplanes. These claims were argued in *The Facts of the Case Concerning the Hargrave Automatic Navigator for Aircraft* (1969) but he failed to win his case in a public inquiry held in 1976. Hargrave died on 21 November 1982 at his home, Branch Hill Lodge, Branch Hill, Hampstead, London.

Hargraves, Edward Hammond (1816–1891), gold prospector in Australia, the third son of John Edward Hargraves, a lieutenant of the Sussex militia, and his wife, Elizabeth Whitcombe, was born at Stoke Cottage, Gosport, Hampshire, on 7 October 1816. His schooling was at Brighton and Lewes. In 1832 he emigrated to the colony of New South Wales, where for about sixteen years he followed a variety of pursuits, which included in 1835 several months' work on a cattle property near Bathurst. On 26 December 1836 he married Eliza Mackie (1815–1863), the daughter of a leading Sydney merchant.

Cattle-raising had been Hargraves's business. From 1836 to 1839 he worked his 100 acre property near Wollongong; he then sold it to settle at Brisbane Water in East Gosford, where his wife owned residential properties. For about three years he was agent for the General Steam Navigation Company, but when the British downturn of the 1840s carried the New South Wales economy into depression he was again forced to run cattle, having leased pasture land along the Manning River. By the time of the 1848 California gold discoveries he was still struggling.

Hargraves joined the rush to California, but failed to improve his lot. Its terrain, however, had 'very forcibly impressed' on him that in 1835 he had been in a gold region near Bathurst. He returned to Sydney in January 1851; he was penniless, but confidently borrowed the finance so as to test his belief. He knew that shepherds had picked up isolated pieces of matrix gold in the Bathurst region, and his Californian experience had taught him that it was likely alluvial deposits of gold should also exist.

On 12 February an exuberant Hargraves, accompanied by a local lad, John Lister, panned five specks of gold. Then, aided by an experienced bushman, James Tom, they made a determined but inconclusive search of the inhospitable inland waterways for payable gold. After supervising the construction of a gold cradle by William Tom, the brother of James, Hargraves returned to Sydney where, on 3 April, he hopefully lodged a personal claim for a reward as the discoverer of an 'extensive goldfield'.

While Hargraves was attending to his own affairs, William Tom and Lister, between 7 and 9 April, had arrived at 'the grand desideratum': ground which produced payable gold. When informed, Hargraves hurried back and took the equally shared 4 ounces of gold to Bathurst, whose citizens, stirred by Californian events and buoyed by the

local discoveries of copper, had become awakened to the mineral potential of their district. After Hargraves's lecture many rushed to Ophir, where Tom and Lister had dug the gold. This event, in the middle of May 1851, marked the beginning of the Australian gold rush.

The tall, heavily built, and well-connected Hargraves was fêted by business and rewarded by governments; he received initially £10,000 from New South Wales and £2381 from Victoria. He had made no representations on behalf of the aggrieved Lister and the Tom brothers, nor had he confided in them. He argued that he had taught them the mining techniques, such as cradling, and stimulated their enthusiasm for prospecting; and, although he had referred to them in correspondence as 'colleagues', he regarded them merely as his 'guides'. At first Hargraves stated he had dug the historic gold himself; then, when challenged, shifted his ground and asserted that its role in the rush was not important.

In 1854 Hargraves toured England as the 'Gold Discoverer'. The following year his polemical publication, *Australia and its Gold Fields*, appeared. Having returned to Australia and spent his money, between 1862 and 1865 he unsuccessfully prospected for gold, employed by the governments of Western Australia, South Australia, and Tasmania. He died at his home, Mertonville, 64 Westmoreland Street, Forest Lodge, Sydney, on 29 October 1891, leaving two sons and three daughters. He was buried in Waverley cemetery on 31 October. Wealth at death under £375: *AusDB*

Hargreave, Charles James (1820–1866), judge and mathematician, was born at Wortley, near Leeds, Yorkshire, in December 1820, the eldest son of James Hargreave, woollen manufacturer, and his wife, of whom little is known. He was educated at Bramham College, near Leeds, and at University College, Dublin (1836–8), graduating LLB in the University of London.

Hargreave spent several months working for a solicitor at the beginning of his studies, and afterwards was the pupil of Richard James Greening, and then of the conveyancer Lewis Duval. He was called to the bar at the Inner Temple on 7 June 1844, and, before his own practice began to take off, helped Jonathan Henry Christie as his draughtsman. In 1843 he was appointed professor of jurisprudence in University College, a position which he held until he left London in 1849.

Following the great famine in Ireland and the passing of the Encumbered Estates Act in 1849, a court was established in Dublin to receive applications for the sale of the estates. Hargreave was appointed as one of the three commissioners who made up the court, at a salary of £2000 a year, and in August 1849 took up residence in Dublin. For the next nine years his official duties kept him fully occupied, although he did find time on 3 September 1856 to marry Sarah Hannah, daughter of Thomas Noble of Leeds. The amount of work accomplished by the court during this period was very large. The commissioners were involved in the reading of titles, statements, petitions, and affidavits, and protecting the rights of absent persons, infants, and others. They dealt with 4413 petitions and the sale of the estates produced £25,190,389. Hargreave was of the opinion that no mistake of consequence was ever made by the court. After the Conservatives came to power in 1858 a new measure for establishing the court in perpetuity, under the designation of landed estate court, was passed; Hargreave was appointed one of its judges, and held this position until his death.

Hargreave was made a bencher of the Inner Temple in 1851, master of the library in 1865, reader in 1866, and had he lived would have succeeded to the office of treasurer. In 1852 he was created a QC. Hargreave was given charge of the judicial business arising out of the Record of Title Act 1866 (29 & 30 Vict. cap. xcix), an act which he conceived in order to establish a registry of Irish titles. Thus, Hargreave will be remembered as having masterminded the introduction of registration of title into Ireland, but was prevented from carrying out his later duties by his last illness. He was also interested in the subject of the registering of the title of QC.

In addition to his legal work, Hargreave was also deeply interested in mathematics, and published a number of scholarly papers in the field. One of his earliest mathematical essays, 'On the solution of linear differential equations' (*PTRS*, 138, 31–54), obtained the gold medal of the Royal Society, and on 18 April 1844 he was elected a fellow of the Royal Society. Other papers included 'General methods in analyses for the resolution of linear equations in finite differences' (ibid., 140, 1850, 261–86); 'On the problem of three bodies' (*PRS*, 1857–9, 265–73); 'Analytical researches concerning numbers' (*London and Edinburgh Philosophical Magazine*, 35, 1849, 36–53); 'On the valuation of life contingencies' (ibid., 5, 1853, 39–45); 'Applications of the calculus of operations to algebraical expansions and theorems' (ibid., 6, 1853, 351–63); 'On the law of prime numbers' (ibid., 8, 1854, 14–22); and 'Differential equations of the first order' (ibid., 27, 1864, 355–76).

Hargreave was awarded the honorary degree of LLD by the University of Dublin in 1852. In 1866 his attention was again drawn to a new method of solving algebraic equations, and he began to write an essay on this problem. Exhaustion and brain fever were thought to have killed him: he died at Bray, co. Wicklow, on 23 April 1866. He was survived by his wife. G. C. BOASE, *rev.* SINÉAD AGNEW

Wealth at death under £30,000: probate, 6 July 1866, *CGPLA Eng. & Wales*

Hargreaves [*née* Liddell], **Alice Pleasance** (1852–1934), prototype of the character Alice, was made famous by Lewis Carroll (Charles Lutwidge *Dodgson) in *Alice's Adventures in Wonderland* (1865) and *Through the Looking-Glass* (1872). She was the second daughter of Henry George *Liddell (1811–1898) and his wife, Lorina Hannah (1826–1910), daughter of James Reeve of Lowestoft. Alice was born at 19 Dean's Yard, Westminster, on 4 May 1852, while her father was headmaster of Westminster School. In 1855 he was appointed dean of Christ Church and the family moved to Oxford, where Alice and her sisters were educated by a governess, Mary Prickett, at their home within the college walls, the spacious, handsome deanery, fronting on Tom Quad and backing on a large private garden. As the girls grew they received additional instruction in art from John Ruskin and in foreign languages and music. In later years Alice recalled that, although she and her sisters were compelled to take a cold bath every morning, it was at the deanery that 'we spent the happy years of childhood' (A. and C. Hargreaves).

Mrs Liddell, according to W. M. Thackeray, Liddell's schoolboy friend, was 'a 3d rate provincial lady' but 'first rate in the beauty line' (*Letters and Private Papers*, 2.641–2). She transformed the staid deanery into a grand social venue with her musical evenings and dinner parties, and the children came to know some of Britain's most eminent personalities, even Queen Victoria, who stayed at the deanery when the prince of Wales was an undergraduate at Christ Church.

On the afternoon of 25 April 1856 Alice, not quite four, first met Charles Dodgson, then aged twenty-four and in his second year as mathematical lecturer at Christ Church. He had come to the deanery with his friend Reginald Southey to take a photograph of the cathedral, and although their efforts failed they encountered Alice, her older sister, Lorina, and her younger sister, Edith, in the garden: 'we became excellent friends', Dodgson recorded. 'We tried to group them in the foreground of the picture, but they were not patient sitters' (Dodgson, *Diaries*, 1.83). Photography, the new rage, provided Dodgson the entrée to the deanery and he became a regular visitor, not only taking photographs but also playing croquet with the children in the garden, inventing and playing other games with them in the nursery, telling them stories, and, in good weather, taking them on river picnics up and down the Isis. On 4 July 1862, on one of these picnics, he invented the story of Alice in Wonderland. The real Alice was then aged ten and pleaded with him to write Alice's adventures down for her, which he carefully did, supplying his own illustrations, in a green notebook that has become one of the most cherished literary manuscripts in the British Library.

Alice Pleasance Hargreaves [Liddell] (1852–1934), by Lewis Carroll (Charles Lutwidge Dodgson), 1858 [*The Beggar-Maid*]

The friendship between the Oxford don and the dean's daughter flourished until the following summer, when an unexplained incident that some assume was a marriage proposal exiled Dodgson from the deanery. Polite relations were later re-established, but the earlier warmth was gone for ever. Marriage proposal or no, Mrs Liddell would not consider Dodgson, a mere don with a stammer and a deaf right ear, an appropriate suitor for her daughters. She destroyed all the letters that Dodgson wrote to the children and kept her eye trained on the titled and the rich. She even kept any mention of Dodgson and the *Alice* books out of the authorized biography of her husband, published in 1899.

A beautiful child and young woman, Alice attracted numerous eligible men including, in the mid-1870s, the queen's youngest son, Leopold, duke of Albany, who, like his brother, had been sent to be educated at Christ Church. But the queen insisted upon royal consorts, and Alice was rejected. From the shadows emerged another dashing Christ Church undergraduate, Reginald (Regi) Gervis Hargreaves (1852–1926), the sporting scion of landed gentry. He wooed and won Alice, aged twenty-eight, for his bride. They were married in Westminster Abbey on 15 September 1880. Although Dodgson sent a wedding present, his name does not appear in the list of gift givers. Relations with his 'dream-child' then became

formal; the few letters he wrote to her in later life are addressed to 'Mrs Hargreaves'.

The newly-weds moved into the Hargreaves's family home, Cuffnells, a Georgian mansion at Lyndhurst in the New Forest surrounded by 160 lush acres, and Alice, as chatelaine, sought to reproduce the grand parties she had grown accustomed to at the deanery. The couple had three sons and named the third Caryl. They lived comfortably, but were devastated by the deaths of their two eldest sons in the First World War. The crumbling estate, moreover, no longer sustained itself, and Regi was forced to sell off outlying lands. After he died in 1926 and Caryl inherited the property, Alice continued to live there, virtually alone, berating her servants, objecting to her son's extravagant London lifestyle, and criticizing his decision to marry a widow. In 1928 she tried to alleviate another financial crisis by selling at public auction the manuscript booklet of *Alice's Adventures* and other books and memorabilia that Lewis Carroll had given her as a child. In 1932, the centenary of Carroll's birth, the lonely woman was invited, with a sister and her son, to New York to receive an honorary degree at Columbia University, to be fêted, interviewed, filmed, and written about. She succumbed, but on her return confessed that she was 'tired of being Alice in Wonderland' (A. Hargreaves to C. Hargreaves, Liddell-Hargreaves Collection). Alice died at The Breaches, Westerham, two years later, on 15 November 1934, at the age of eighty-two; her ashes were buried at Lyndhurst. Cuffnells continued to decay, and after the Second World War was demolished. MORTON N. COHEN

Wealth at death £13,471 10s. 1d.: administration, 4 Feb 1935, *CGPLA Eng. & Wales*

Hargreaves, Alison Jane (1962–1995), mountaineer, was born on 17 February 1962 at 67 Brisbane Road, Mickleover, Derbyshire, the younger daughter and second of three children of John Edward Hargreaves, a senior scientific officer at British Rail, and his wife, Joyce Winifred, *née* Carlile, a teacher. Her family moved to Belper, Derbyshire, in 1971, and often went hillwalking. She began rock climbing with school groups in 1975, and soon led 'very severe' climbs. She broke her leg when another climber knocked her off a cliff in 1977, and the following year she began part-time work at an outdoors shop in Matlock Bath. On her eighteenth birthday she left home and moved to Meerbrook Lea, Whatstandwell, outside Matlock Bath, to live with James Herbert Ballard, son of Albert Ballard, a naval ordnance inspector. Jim Ballard, an extroverted Yorkshireman sixteen years her senior, had recently separated from his wife, Jean, and owned the outdoors store where Hargreaves worked. Hargreaves had previously applied to study geography at universities near climbing centres, but then scored too low on her A levels to gain admission. She began producing climbing equipment for her own label and making rock climbs of increasing difficulty, both of which led to a modest reputation among the climbing *cognoscenti*.

After attending a 'meet' for women climbers in 1982 Hargreaves began to consider herself a professional mountaineer. In 1986 she went to the Himalayas with Bill O'Connor to attempt Ama Dablam, and appeared in *Games Climbers Play*, a film. She joined an American expedition led by Jeff Lowe in 1987, when she and Mark Twight ascended a new route on the north-west face of Kantega (22,240 ft). Spending most of her time at home, however, she was isolated from the mainstream climbing community and suffered from low self-esteem. She also lacked the distinctive profile of other contemporary women climbers, such as the feminism of Jill Lawrence or the *savoir-faire* of Catherine Destivelle. She first attracted public attention by combining mountaineering and motherhood. After deciding to have children, she married Ballard at the register office in Belper on 23 April 1988. His divorce had been made final only months previously. Hargreaves (who retained her maiden name) then climbed the north face of the Eiger while five-and-a-half months pregnant. Although her ascent was the first by a British woman, it was her pregnancy that made it newsworthy. She told the ITV television programme 'Women of Today' (27 July 1989) that her 'bump' made it difficult to tie her boots at a bivouac; she confided to her diary that she felt the foetus kicking before and during the climb. She gave birth to a son, Tom, in October 1988, and a daughter, Kate, in March 1991. During this period she spent less time climbing in order to concentrate on raising the children.

Ballard's outdoors business had been struggling financially for years, and when it went bankrupt in 1993 their home was repossessed. They fled creditors and moved to the Alps to pursue a multi-year plan for Hargreaves to make solo climbs of north faces in the Alps and a solo ascent of Everest. Their only income was Hargreaves's £600 a month sponsorship from an outdoor clothing manufacturer. Ballard and the children camped at the foot of each peak while Hargreaves became the first person to climb solo, in a single season, six classic north faces: Grandes Jorasses, Matterhorn, Eiger, Piz Badile, Petit Dru, and Cima Grande di Lavaredo. In her book, *A Hard Day's Summer* (1994), she claimed that the elapsed time climbing these faces was just twenty-four hours. Climbing snobs sneered that her achievements were exaggerated by taking easy routes on the Eiger and the Grandes Jorasses. To

answer her critics, she became the first woman to climb solo the formidable Croz Spur of the Grandes Jorasses, in November 1993.

In the autumn of 1994 Hargreaves attempted to climb Everest 'alone' in affiliation with a British medical expedition while her family stayed at base camp in Nepal. She turned back at 27,600 ft to prevent frostbite. In 1993 Rebecca Stephens, a journalist, had become the first British woman to climb Everest, receiving the lucrative endorsements that still eluded Hargreaves. Hargreaves replaced Ballard as her agent with Richard Allen, a retired executive, and developed an ambitious new plan to climb the world's three highest peaks—Everest, K2, and Kanchenjunga—all in one year. In 1995 she returned to Everest without her family to attempt the north-eastern ridge from Tibet unsupported by porters and without supplemental oxygen. On 13 May she reached the summit and radioed a message to her children: 'To Tom and Kate, I am on the highest point in the world and I love you dearly' (BBC, 9 Feb 1996). After Everest she spent two weeks at home in the media spotlight, escaping only for a few days with the children, and bought a new home in the Great Glen beneath Ben Nevis in Scotland. A book contract paid off her debts and covered the cost of her next expedition, to K2.

After several unsuccessful attempts on K2 in July 1995 Hargreaves was minutes away from returning home when she resolved to try again. During a brief period of calm weather she reached the summit of K2 on 13 August; on the descent, a savage storm killed her and six other climbers, among them Americans, Spaniards, and a New Zealander. When their deaths were reported several days later, Ballard suggested to their children, then aged six and four, that they visit 'mum's last mountain'. Their arduous trip to K2 in the autumn of 1995 resulted in a BBC television programme, 'Inside Story: Alison's Last Mountain' (9 Feb 1996), and Ballard's book, *One and Two Halves to K2* (1996). Commentators debated whether the voyeuristic scenes of her grief-stricken children in bereavement counselling on the K2 trek were ghoulish or moving. A wider debate in the press centred on whether a mother should climb. Some considered Hargreaves self-centred or foolhardy for leaving her children for Everest and K2, while others noted that male climbers who died and were fathers were not subject to the same criticism. Her personal motives were at least as complex as the commentary. A biography by David Rose and Ed Douglas, based on extensive interviews and diaries she started in 1973, reported that her relationship with Ballard had been tempestuous and at times violent. She often considered leaving him, but was frequently indecisive: she even died intestate. She told friends and relatives that she planned to divorce Ballard but feared that courts would not give her custody of her children if she continued to climb. Since climbing was her only means of support, she could not stop until she attained financial security. She believed the ascent of Everest and K2 would provide this, and her diaries record the anguished conflict between her desire to be with the children and her obsession with climbing K2.

Hargreaves was petite, standing 5 feet 4 inches tall, with a wide, round face, wavy, dark blonde hair, and a warm smile. Friends admired her terpsichorean grace on rock, her stamina and organizational skill at high altitudes, and her devotion to her children. Tom and Kate built small memorial cairns in sight of K2, and the government of Pakistan erected a plaque in her honour in the Skardu valley. A memorial service was held at Belper in November 1995. She was posthumously awarded a doctorate by the University of Derby in 1996. PETER H. HANSEN

Hargreaves, James (*bap.* 1721, *d.* 1778), inventor of the spinning jenny, was born in Oswaldtwistle, Lancashire, and baptized at Church Kirk on 8 January 1721. His exact birthplace is unknown, and apart from the fact that he became a hand-loom weaver, little has been discovered of his early life. His parents had one other child, Elizabeth, who was three years younger than James. On 10 September 1740, Hargreaves married Elizabeth Grimshaw at Church Kirk. Both were described as 'of Oswaldtwistle'. They had six sons and six daughters. About 1762, while living at Stanhill, on the outskirts of Oswaldtwistle, Hargreaves helped his neighbour, Robert Peel, the calico printer and grandfather of the future prime minister, to construct an improved carding machine. In the mid-1760s he invented the spinning jenny, having observed a spinning-wheel overturned on the ground, when both the wheel and the spindle continued to revolve. The spindle having thus exchanged a horizontal for an upright position, it seems to have occurred to him that if a number of spindles were placed upright and side by side several threads might be spun at once.

The spinning jenny was invented at a time when it was urgently needed. The fly shuttle, invented by John Kay, and supposed to have first come into general use in cotton

manufacture about 1760, had doubled the productive power of the weaver, while that of the worker on the spinning-wheel remained much the same. The spinning jenny at once multiplied eightfold the productive power of the spinner, and because of its form could be worked much more easily by children than by adults.

Very soon after the jenny came into use, other inventors sought to make it more efficient, replacing the horizontal driving wheel with the vertical one familiar from most illustrations. The original machine was suitable only for spinning cotton, but once improved, it was widely adopted in the woollen industry. Samuel Crompton combined the principles of the jenny and Arkwright's water frame in his mule. The earliest description of the jenny—a northern word for engine—occurs in a letter in the September 1807 issue of Aitkin's *The Athenaeum*. The writer states that Hargreaves made his first machine 'almost wholly with a pocket knife. It contained eight spindles, and the clasp by which the thread was drawn out was the stalk of a briar split in two' (September 1807, 221–2).

Hargreaves's daughter, Mary Burgess, who dated the invention at 1766, said the machine enabled Hargreaves to dispense with hand spinners. This aroused the interest of his employers, Jonathan Haworth and Robert Peel, who were allowed to inspect the machine. 'When they saw my father spin upon it, Mr Peel said, "James, if you do not make this public we shall", though he had previously pledged his word and honour he would not make the invention known' (Aspin, 120–21).

Shortly afterwards the family moved to Ramsclough, a farm on the edge of Oswaldtwistle Moor, where Hargreaves set up a workshop. Mary Burgess stated that local people who feared the jennies 'would ruin the country ... came to our house and burnt the frame work of 20 new machines which were in the barn, and all the working implements.' Not wishing to risk further hostility, Hargreaves became a bookkeeper for Peel, but within a year accepted an invitation to make jennies in Nottingham for the merchant hosiers Shipley, Rawson, Heath, and Watson.

In 1770 Hargreaves became a partner in a new mill at Hockley on the outskirts of Nottingham, and for the rest of his life he lived in a house close by. His partners were Thomas James, a machine maker; William Sadlier, a framework knitter; and Thomas Marlow, a hosier. On 12 June 1770 Hargreaves applied for a patent, which was granted. In the patent he stated that 'after much application and many trials' he perfected a method of making 'a wheel or engine of an entire new construction ... [that] will spin, draw and twist sixteen or more threads at one time by a turn or motion of the hand and the draw of other' (patent no. 962, 1770). A threat by the partners to prosecute anyone infringing the patent caused alarm in Lancashire, where many jennies were in use. Hargreaves is said to have refused an offer of £3000 from a delegation representing the manufacturers, but his plans to prosecute the pirates were frustrated when it was shown that he had sold jennies before leaving Lancashire.

Hargreaves died at Nottingham on 18 April 1778, and was buried four days later at St Mary's Church there. John James, son of Thomas James, said that he paid Elizabeth Hargreaves £400 for her husband's share in the business (Baines, 163), and this seems to have been the bulk of his estate. He left 2 guineas to each of his nine surviving children. There is no known portrait of Hargreaves, and the only description is that left by John James: 'a stout, broad-set man, about five feet ten inches high, or rather more' (Aspin and Chapman, *James Hargreaves*, 22).

Hargreaves, James (1768–1845), Baptist minister, was born near Bacup, Lancashire, on 13 November 1768. His family was poor: he began work at the age of seven, and between the ages of thirteen and eighteen was employed in his uncle's public house. He became a keen student of the Bible and began to preach in 1791, the year he married. He joined Bacup Baptist Church in 1794, became active in its work, and was chosen pastor at Bolton in 1795 and at Ogden in 1798, where he remained until 1822. The congregation's poverty compelled him to keep a school at Ogden in addition to his pastoral duties. While at Ogden he was a frequent speaker at the meetings of the Lancashire and Yorkshire Baptist Association, and twice wrote its circular letter. He compiled a catechism for younger Sunday school children, and wrote a biography of his Bacup pastor, John Hirst, and a 300-page history of the Bacup Baptist Church, which is a model of its kind.

Hargreaves removed to Little Wild Street Chapel, London, in 1822 and to the Baptist church at Waltham Abbey Cross, Essex, in 1828. He was active in the affairs of the Baptist Board and the London Baptist Building Fund, and in home and overseas missionary work generally. He wrote on religious subjects from a moderate Calvinistic standpoint: his *Essays and Letters on Important Theological Subjects* was published in 1833. He was an active member of the Peace Society (founded 1816), being for a time its secretary, and was not averse from using the pulpit to express his peace sentiments. After 1822 he kept in close touch with his north-country brethren, thereby linking them more closely with Baptist life in the capital, and may also be regarded as a link between the anti-war stance of many Baptists in the 1793–1815 period and the denomination's peace testimony in the Victorian age. He died at his home in Waltham on 16 September 1845. IAN SELLERS

Hargreaves, James (1834–1915), chemical manufacturer and inventor, was born in May 1834, at Hoarstones, Pendle Forest, Lancashire, the eldest of the seven sons of John Hargreaves, a schoolmaster. Hargreaves's education began at his father's school in Slaithwaite. In 1844 his father left schoolmastering to become a druggist and Hargreaves was introduced to medicine and chemistry. In 1856 he turned to technical chemistry, especially the problem of recovering sulphur from alkali waste. John Mercer persuaded him to contact William Gossage, who had been experimenting on similar lines, and in 1859 Hargreaves joined Gossage's soap works. Here he invented methods for recovering chromates used for bleaching oils and fats in soap manufacture and bleaching common brown soap. He was also the first to prepare blue mottled soap.

After leaving Gossage in 1865, Hargreaves worked for two other soap manufacturers in Runcorn and Liverpool. In 1871 he and his youngest brother, John, set up as consulting chemists in Widnes. Turning to metallurgy, James proposed a modification of the Bessemer process for the manufacture of steel, using sodium nitrate instead of air. James Heaton of Widnes tried this on a small scale at Langley Mill, Nottinghamshire, but the cost proved too high. Hargreaves also devised a method for recovering phosphorus from blast-furnace slag; the by-product, ferric chloride, was converted into ferric oxide and chlorine.

About 1872 Hargreaves, with Thomas Robinson, an ironfounder, invented a process and plant for making salt-cake from salt without using sulphuric acid. The Atlas Chemical Company, Widnes, was formed in 1873 to make salt-cake and hydrochloric acid by Hargreaves's method. Hot gases from pyrites burners, mixed with steam, were passed over small blocks of moulded salt, a process which worked successfully for many years; the works was absorbed by the United Alkali Company in 1890 and the last Hargreaves–Robinson salt-cake plant closed in 1918.

With Thomas Bird, an electrical engineer, Hargreaves about 1893 invented an electrolytic process for decomposing common salt, using an asbestos diaphragm. After trials the General Electrolytic Alkali Company was established in 1899 with Hargreaves as a director, and production began at Cledford Bridge near Middlewich in 1901. In 1914 the company was reorganized as Electro-Bleach and By-products Ltd. The process, which was highly efficient, was extensively adopted in Europe and America.

Hargreaves's inventions were numerous and diverse; besides his innovations in the soap, alkali, metallurgical, and electrochemical industries, his 'thermo-motor' anticipated the idea of the diesel engine, and he was among the first to advocate the use of gaseous chlorine for treating sewage. Shrewd in business, he had a ready wit and a distinctive appearance, with a full beard and piercing eyes.

The name of Hargreaves's wife and the date of their marriage is unknown but they had one son and five or six daughters. Hargreaves died at 32 Sayce Street, Widnes, on 4 April 1915. N. G. COLEY, *rev.*

Hargreaves [Hargraves], **Thomas** (1774–1847), miniature and portrait painter, was born on 16 March 1774 in Castle Street, Liverpool, and baptized on 7 April at St Nicholas's, the son of Henry Hargreaves, a woollen draper of Castle Street. He entered the Royal Academy Schools in London on 29 March 1790, possibly on the advice of Sir Thomas Lawrence, to whom he served an apprenticeship from 10 May 1793 until he returned to Liverpool because of ill health in August 1795. He went back to London in October 1797 and exhibited intermittently at the Royal Academy between 1798 and 1843 and at the Society of British Artists (of which he was a founder member) between 1824 and 1831. By 1803 he had established a practice in Liverpool where he also assisted his father in his drapery business until 1818. He built up a large clientele in Cheshire and Lancashire and in 1810 was elected a founder member of the Liverpool Academy, exhibiting there between 1810 and 1835.

Hargreaves worked primarily, and, during his final years, only, in miniature, and 785 sketches for his miniatures became part of the collections of the local history department of the City of Liverpool Library. Among those whose portraits he painted in miniature were Mr John Gladstone, Mrs Gladstone, W. E. Gladstone and his sister as children (all at Hawarden Castle, Flintshire), Sir Thomas Lawrence (exh. 1865, South Kensington Museum, London), the comedian Richard Suett, and the singer James Bartleman (Victoria and Albert Museum, London). Some of his miniatures were engraved. The Athenaeum Library and the Walker Art Gallery, Liverpool, both have important collections of his work. With Sophia Shaw Hargreaves had seven children. At least two of his sons, George Hargreaves (1797–1870) and Francis Hargreaves (1804–1877), became miniature painters and assisted in the family miniature-painting business, Hargreaves & Co., conducted in Bold Street, Liverpool, from about 1834. Thomas Hargreaves died on 5 January 1847 in Liverpool.

Wealth at death many old masters and some eighteenth-century paintings from estate sold after death

Hargrove, Ely [*pseud.* E. H. Knaresborough] (1741–1818), topographer, born on 19 March 1741, was the son of James Hargrove of Halifax, Yorkshire, and his wife, Mary, daughter of George Gudgeon of Skipton in Craven in the same county. In February 1762 he settled at Knaresborough, Yorkshire, as a bookseller and publisher. A few years later he opened a branch business at Harrogate. On 25 October 1762 he married Christiana Clapham (*bap.* 1743, *d.* 1780), daughter of Thomas Clapham of Firby, near Bedale, Yorkshire. They had twelve children.

In 1769 the first edition of Hargrove's *History of the castle, town, and forest of Knaresborough, with Harrogate and its medicinal waters* appeared anonymously. This was frequently republished, latterly with Hargrove's name on the title-page. The York edition of 1789 contains plates and woodcuts by Thomas Bewick. An 'Ode on Time' is appended to the sixth edition, later reprinted in William Hargrove's *York Poetical Miscellany* of 1835 (pp. 60–61). Hargrove also wrote *Anecdotes of Archery from the Earliest Ages to the Year 1791*, which contained details on the life of Robin Hood. A revised edition of this with new material, including an account of the principal existing societies of archers, a life of Robin Hood, and a glossary of terms used in archery, by Alfred E. Hargrove, was published in 1845.

Hargrove was also author of *The Yorkshire Gazetteer* (1806), and he provided an account of Boroughbridge for the fifth volume of Abraham Rees's *New Cyclopaedia*. He was a contributor to the *Gentleman's Magazine* on the topography and antiquities of Yorkshire under the signature of E. H. Knaresborough (*GM*, 1st ser., 59/1, 1789, 438). His manuscript collections on Yorkshire history filled sixteen folio and quarto volumes. Following his wife's death in 1780, he married Mary Bower (*d.* 1825), daughter of John Bower of Grenoside Hall, near Sheffield. They had four children, the youngest of whom was the historian and newspaper proprietor William *Hargrove.

Hargrove died at Knaresborough on 5 December 1818, and was buried in the churchyard there. His widow died at York in April 1825 and was buried at Knaresborough.

Hargrove, William (1788–1862), historian and newspaper proprietor, born at Knaresborough, Yorkshire, on 16 October 1788, was the youngest of the four children of the topographer Ely *Hargrove (1741–1818) and his second wife, Mary (*d.* 1825), daughter of John Bower of Grenoside Hall, near Sheffield. Being intended for the church, he was placed in the care of his godfather Robert Wyrell, curate of Knaresborough, who recommended that his pupil should be trained as a journalist. He was accordingly apprenticed to a Mr Smart of Huddersfield and, after the expiration of his articles, returned to Knaresborough. In 1813 Hargrove and two partners purchased the *York Herald*, a weekly newspaper. He moved to York on 1 July of that year, and the first issue of the newspaper under his management was published on the following 13 July. For the next thirty-five years he was an energetic editor, taking over rival newspapers and installing up-to-date machinery. He added to the staff a verbatim and descriptive reporter, engaged a special correspondent in nearly every town in the shire, and in 1848 bought the shares in the business possessed by his two sleeping partners. In 1818 he published a two-volume *History and Description of the Ancient City of York; Comprising All the most Interesting Information Already Published in Drake's 'Eboracum', with much New Matter and Illustrations*. In October of the same year Hargrove entered the corporation as a common councilman. He defended Queen Caroline in the *York Herald*, and announced her acquittal in 1820 by torchlight from the steps of the Mansion House. In 1827 he successfully promoted, with Charles Wellbeloved (1769–1858), a scheme for the erection of a mechanics' institute, of which he became the first secretary and treasurer. In 1831 he was elected a sheriff of York. He married, on 2 September 1823, Mary Sarah, daughter of William Frobisher, banker, of Halifax, with whom he had several children; in 1855 he took his eldest sons, Alfred Ely and William Wallace Hargrove, into the management of his newspapers.

Much of Hargrove's leisure was devoted to antiquarian studies; he wrote a regular column for his newspapers and produced a pocket guide to the city in 1842. He collected the Roman and medieval remains excavated in and around York, and in 1846–7 he transferred the entire collection to the museum of the Yorkshire Philosophical Society. Hargrove died at York on 29 August 1862; his wife survived him.

Wealth at death under £3000: probate, 2 Dec 1862, *CGPLA Eng. & Wales*

Harington [*formerly* Poë], **Sir Charles** [Tim] (1872–1940), army officer, was born Charles Poë at Oaklands, Chichester, on 31 May 1872, the youngest son of Emanuel Thomas Poë (*d.* c.1900), of London, an indigo planter of Behar, India, and his wife, Isabella Jane Crowdy. When Charles was four years old his father adopted his own mother's maiden name and thereafter the son became known as Charles Harington. He entered Cheltenham College in 1886, before passing into the Royal Military College, Sandhurst, in 1890; he was commissioned into the Liverpool (later the King's) regiment, alternating thereafter between regimental and staff duty overseas and at home. Harington was appointed DSO (1900) for service on the staff during the Second South African War. There followed in 1903 a tour as instructor at Sandhurst and qualification (1906) at the Staff College, Camberley. On 7 January

1904 he had married Gladys Norah, eldest daughter of Brigadier O'Donnel Colley Grattan of the King's regiment. They had no children. During these early years, as later, he excelled at all games, especially cricket and hockey, possibly because hunting was beyond his means. When he was in his fifties he swam the Hellespont and back and in his sixties he was still playing high class cricket.

Shortly after the outbreak of the First World War Harington, then a major, was appointed general staff officer, grade 2 (GSO2) to 3rd corps in France. Early next year he was promoted GSO1 (the sole regular staff officer) to the 49th (West Riding) division, territorials newly arrived from England. Towards the end of 1915 he became brigadier-general, general staff, to the Canadian corps, then being formed and in the line near Messines. With them he first became known as a staff officer who was always out and about near the front line.

In June 1916 he was selected major-general, general staff of the Second Army, whose commander was General Plumer. Together they made a splendid team, Harington's brilliant staff work complementing Plumer's powers as a commander.

The first and major test of this partnership occurred in June 1917 when the Second Army's hundred battalions made a successful assault on the Messines Ridge. It began with the explosion of nineteen gigantic mines, dug over more than a year in anticipation of such an attack. Each assaulting unit had been intensively trained in its role. In the first stages the fire of the entire artillery, numbering 2266 weapons, was concentrated under a single commander. Control of the air was complete; 154 mobile workshops supported 12,500 motor vehicles. Tanks had learned how to co-operate with the infantry. Morale was high, largely due to the excellence of the arrangements. By this meticulous and imaginative planning, the first major British victory of the war had been won with comparatively modest casualties.

The subsequent autumn losses and stalemate at Passchendaele were largely due to general headquarters' failure to follow up this Messines victory before the weather broke. For this disaster Harington's staff work was never blamed.

The respective contributions of Harington and Plumer to the successes of the Second Army continue to intrigue historians, hampered as they have been by the fact that both men destroyed their papers. In the plethora of condemnation of First World War leaders, the reputation of neither man has suffered. Harington was especially noteworthy for the way in which his meticulous attention to detail ensured the co-ordination of the various arms and the well-being of the men. He was also well ahead of his time in his relations with the press, whom he habitually took into his confidence. In his somewhat fulsome biography, *Plumer of Messines* (1935), Harington took no credit for his own achievements.

Shortly after Passchendaele Plumer and Harington were ordered to Italy; but they returned to the Second Army at Kassel in March 1918, where the situation had deteriorated. Three months later during the great German spring offensive Harington was appointed deputy chief, Imperial General Staff, but was allowed to remain in Flanders until the situation became stabilized. In May 1918 he took up his new duties at the War Office. In October 1920 he was promoted lieutenant-general and left for Constantinople as general officer commanding-in-chief the army of the Black Sea.

In Constantinople, in the aftermath of the treaty of Sèvres, Harington became commander-in-chief of the allied forces of occupation in Turkey. There he encountered what was to become known as the Chanak crisis, the most serious challenge of his career.

The occupation by Greek troops of Smyrna (Izmir) and their subsequent ill-judged drive into the heart of Anatolia led to their ignominious defeat by resurgent Turkish troops. The result was the burning of Smyrna with its accompanying horrors. In charge of the Turks was General Mustafa Kemal (later Kemal Atatürk, the modernizer of Turkey).

After crushing the Greeks, Kemal turned to expelling the meagre allied forces occupying Constantinople and the Dardanelles. By September 1922 Kemal had deployed some 50,000 men against Chanak, on the southern shore of the Dardanelles, held by six British battalions. With the leading Turkish troops jeering at the British soldiers from the further side of their barbed wire defences, the start of another war seemed imminent. This Harington was determined to avoid. Doubtful whether the Turks wanted war or would press matters to a conclusion, he had for some time been trying to establish personal contact with Kemal; in so doing he had well exceeded his strictly military duties.

On 29 September 1922, as tension rose, Lloyd George's coalition government instructed Harington to give the Turks an hour's notice to withdraw from the vicinity of Chanak; if they failed to comply, his forces were to open fire. This instruction Harington failed to obey, concerned that it was an order both foolish and dangerous. On 4 October, accompanied by the other allied commanders, he met Kemal's senior representatives, still with his government pressing him to take offensive action. A week later he had achieved success: agreement was reached that the Turks would withdraw. With fine courage, skill, and diplomacy, Harington had avoided what could well have become another major war. It would have been fought with neither allied nor dominion support.

The immediate aftermath was the collapse of the already unpopular and divided coalition government, in which Winston Churchill had both encouraged and supported the prime minister while Curzon, the foreign secretary, had sought peace. The general election that followed brought Bonar Law's Conservative government into office.

Harington, who loathed personal publicity, had by directly disobeying orders become a public figure. He wrongly assumed that his military career was at an end, although he never achieved the position of chief of the Imperial General Staff, generally thought to have been his due.

He returned home in December 1923 to become general officer commanding-in-chief, northern command, at York. There he spent the next three and a half years, and he was promoted general in March 1927. He was sent to India the following October as general officer commanding-in-chief western command, where he spent an uneventful but happy few years at Quetta. In 1931 he became general officer commanding-in-chief, Aldershot, and was made aide-de-camp general to the king (1930–4). He accepted the governorship of Gibraltar in 1933. Here he found life very pleasant until the outbreak of the Spanish Civil War in 1936 with its problems of refugees and neutrality.

Ill health necessitated Harington's retirement and in October 1937 he settled in Sussex. There he occupied himself with many varied interests. He was appointed CB in 1917, KCB in 1919, GBE in 1922, and GCB in 1933. The honorary degree of DCL was conferred upon him by Oxford University in 1924, and he was given the freedom of the city of York in 1927. He founded and became first president of the army sports control board.

Harington was 'a spare, highly strung man, with a charming manner and remarkable clarity of vision' (*DNB*). A deeply religious person, he had a great sense of humour and was liked everywhere. He died at Cheltenham on 22 October 1940, the year in which his autobiography, *Tim Harington Looks Back*, was published.

Harington, Sir Charles Robert (1897–1972), biochemist and medical administrator, was born on 1 August 1897 at Llanerfyl, north Wales, the elder son (there were no daughters) of the Revd Charles Harington (1862–1921), and his wife, Audrey Emma, daughter of the Revd Robert Burges Bayly, vicar of Hampton Bishop, Herefordshire.

In 1906 Harington went to a preparatory school at Malvern Wells, Worcestershire. The next year, however, he developed tuberculosis of the hip, which left him with a permanent severe limp, and for the following six and a half years he was immobilized at home. Despite this, he won a scholarship to Malvern College, from which in 1916 he won an exhibition to Magdalene College, Cambridge. In 1919 he took a first class in part one of the natural sciences tripos. Having developed an interest in the chemical aspects of pharmacology, in 1920 he went to the department of medical chemistry in Edinburgh under George Barger, and subsequently to the department of therapeutics under J. C. Meakins, where he acquired a PhD in 1922. In 1923 he married Dr Jessie McCririe, younger daughter of the Revd James Craig, minister of Kirkpatrick Durham, near Dalbeattie; they had a son and two daughters.

On Barger's strong recommendation Harington was appointed lecturer in charge of the new department of chemical pathology at University College Hospital medical school in London. He arrived there in 1923, after a year at the Rockefeller Institute in New York, began research on the internal secretions of the thyroid gland, and only four years later succeeded in establishing the chemical constitution of the prototype, thyroxine, and effecting its synthesis. For this he was elected FRS in 1931 and promoted professor (he had become reader in 1928). He was editor of the *Biochemical Journal* from 1930 to 1942.

Harington's research expanded rapidly, so that by the end of the decade his achievements put him in the first rank of biochemists. It was not this, however, that accounted for his growing reputation in wider circles, but the range of his understanding in the biomedical field. Thus, in his book *The Thyroid Gland: its Chemistry and Physiology* (1933) he covered not only the gland's chemistry but also its physiology, pathology, and the clinical features of its disorders. In 1938 he was appointed a member of the Medical Research Council (and in 1941–5 of the Agricultural Research Council), and in 1942, despite his lack of medical qualifications, he was chosen to succeed Sir Henry Dale as director of the National Institute for Medical Research.

Both professionally and temperamentally Harington was well suited to direct a major multidisciplinary research institute. Because of his wide knowledge of biomedical subjects, he was capable of appraising its activities both individually and collectively. He saw that, without overall direction, such an institute could easily become a collection of self-centred interests. To counteract this tendency he paid close attention to the balance of effort within the institute, and its continuing relevance to developments in biomedical knowledge and the fields in which these found practical expression. On this basis he formed his decisions or recommendations to the Medical Research Council on the recruitment of staff, the initiation or expansion of particular lines of work, and the contraction or closing down of others.

When Harington took over the institute he found that it would be impossible to combine, as his predecessor had done, the post of director with that of head of one of its divisions, in his case biochemistry, because of the expansion of its programme and staff. He therefore devoted himself to his job as director. Harington retired in 1962; however, he agreed to act as consultant adviser to the secretary of the Medical Research Council on non-clinical matters. This he did for five years with objectivity and insight. Thereafter his health declined.

In 1944 Harington gave the Croonian lecture and won the royal medal of the Royal Society. In 1951 he was elected FRSE and in 1959 honorary FRSM. He was knighted in 1948 and appointed KBE in 1962. In 1963 he was elected honorary FRCP, one of the first two non-medical men (the other

was Austin Bradford Hill) to be accorded this honour. He was awarded honorary doctorates by Paris (1945), Cambridge (1949), and London (1962). Harington died on 4 February 1972 at Mill Hill, London.

Harington, Sir Edward (1754–1807), traveller and essayist, was born on 27 February 1754 in Wells, Somerset, the only son of Henry *Harington MD (1727–1816), musician and author, and his wife, Martha Musgrave. He was knighted on 27 May 1795, when, as mayor of Bath, he presented to the king a congratulatory address from the corporation on his escape from the attempt of Margaret Nicholson. He was twice married: first, on 10 February 1800 at St Marylebone, Middlesex, to Frances Boote, and then, on 13 February 1804 at St James's, Bath, to Frances Wake with whom he had a number of children; one of his sons, Edward (1774–1811), was father of Edward Charles *Harington (1804–1881). Harington was described as clever, but eccentric. His writings include *A schizzo on the genius of man, in which ... the merit of Thomas Barker, the celebrated young painter of Bath, is particularly considered* (1793) and *Remarks on a letter relative to the late petitions to parliament for the safety and preservation of his majesty's person, and for the more effectually preventing seditious meetings and assemblies ...* (1796). He died at his lodgings in London on 18 March 1807, aged fifty-three. GORDON GOODWIN, *rev.* REBECCA MILLS

Harington, Edward Charles (1804–1881), Church of England clergyman, born on the Isle of Man, was the only son of the Revd Edward Harington (*d.* 1811) and his wife, Frances, daughter of John Boote of Fifield House, Oxfordshire. Sir Edward Harington was his grandfather. He traced an unbroken descent from John Harington of Kelston, near Bath, father of Sir John Harington. He appears to have been educated privately, and entered Worcester College, Oxford, on 6 July 1824, aged nineteen, where he graduated BA in 1828 and MA in 1833. After entering orders, he became incumbent of St David's, Exeter, and having come to the attention of Bishop Phillpotts of Exeter was made a prebendary of Exeter in 1845, and in 1847 chancellor of the church. He resigned his incumbency and concentrated on diocesan work, especially education. He persuaded contending parties within the church to co-operate in establishing the diocesan training college for teachers in church schools. For many years he taught at the college, and was a generous contributor to its endowment.

In 1856 Harington became canon residentiary of Exeter, and was energetic in turning the cathedral into 'a house of prayer'. He spent £15,000 on the repairs of the fabric, and £1000 in providing seats in the nave. A wealthy man, he was munificent in private charity, sending poor clergymen with their wives and families to the seaside for weeks, and paying all expenses. He shared Bishop Phillpotts's taste for religious controversy, in which he took a high-church position, producing pamphlets and sermons on the history of the Scottish church (1843) and apostolical succession (1844), and several rebuttals of Roman Catholic claims (1846–56).

Harington was shy, retiring, and somewhat eccentric in manner, living at first with his sisters and afterwards alone. He always attended the turning of the first sod of every new railway in England. Though not a great scholar he was a man of considerable learning, and collected a fine library. On 4 July 1881 he was attacked by apoplexy while attending a meeting at the guildhall of Exeter of the Society for the Prevention of Cruelty to Animals, and died at his canon's lodgings, the close, Exeter, on 14 July 1881. He was buried with his ancestors at Kelston, near Bath, to the poor of which parish he left £300. By his will he bequeathed his library to the dean and chapter of Exeter, with £2000 for a librarian. He left many legacies to church institutions and to poor dependants.

Harington, Henry (1727–1816), composer and physician, was born at Kelston, Somerset, on 29 September 1727, the son of Henry Harington and his wife, Mary Backwell. He was descended from Henry VIII's treasurer of the army, Sir John Harington (*d.* 1553). He matriculated at the Queen's College, Oxford, on 17 December 1745, graduating BA in 1749 and MA in 1752. At Oxford he joined the Club of Gentlemen Musicians, founded by Dr William Hayes; he both sang and played the flute. On 7 December 1752 he married Martha Musgrave; they had at least one daughter and two sons, Sir Edward *Harington (1754–1807) and Henry *Harington (1754/5–1791). Abandoning the idea of taking holy orders, in 1753 Harington established himself as a physician at Wells. He took the degrees of MB and MD at Oxford in 1762, and in 1771 moved to Bath, where he continued his medical practice. He was an alderman and magistrate of Bath, and the town's mayor in 1793, and was appointed physician to the duke of York.

Harington devoted his leisure to composition and music, and in 1784 was appointed 'composer and physician' to the newly founded Harmonic Society of Bath. He was one of the leading composers of glees of his day, and published four collections of glees and songs (that of 1800 was edited by his daughter Susanna Isabella Thomas) in addition to many single items. His most popular works were a round, 'How great is the pleasure', and a duet for two sopranos, 'How sweet in the woodlands'. His satirical catches, such as 'The Alderman's Thumb', have been judged 'particularly successful' (*New Grove*). He also wrote some sacred music, poetry, *A Treatise on the Use and Abuse of*

Musick, and *The Geometrical Analogy of the Doctrine of the Trinity Consonant to Human Reason* (1806). Harington died at Bath on 15 January 1816 and was buried in the chancel of Kelston church. A subscription was raised for a monument to his memory in Bath Abbey (occasioning five celebratory stanzas in the *Gentleman's Magazine*, 86/1, 1816, 352); his collection of music was sold by auction.

Harington, Henry (1754/5–1791), antiquary and Church of England clergyman, was born at Wells, Somerset, the younger son of Henry *Harington (1727–1816), physician and composer, and Martha Musgrove. He matriculated at Queen's College, Oxford, on 2 July 1770, aged fifteen, proceeding BA (1774), MA (1777), and BD and DD (1788). He married Esther Lens at Norwich on 3 April 1782. Following ordination he became rector of North Cove with Willingham, Suffolk; rector of Heywood, Norfolk; prebendary of Bath and Wells on 1 May 1787; minor canon of Norwich Cathedral; and assistant minister of St Peter Mancroft, Norwich.

From an early age Harington began to use family papers belonging to his father to compile the collection of literary pieces and historical notes known as *Nugae antiquae*. The volumes deal chiefly with the life and writings of Sir John Harington (1560–1612) and his father. The first volume appeared in 1769, without the editor's name; a second volume (1775) bore his name on the title-page, and was dedicated to Lord Francis Seymour, dean of Wells. A second enlarged edition in three volumes, dated 1779, was dedicated to Charles, bishop of Bath and Wells. The work was re-edited by Thomas Park in 1804 in two volumes. Harington died at St Giles, Norwich, on 25 December 1791.

SIDNEY LEE, *rev.* J. A. MARCHAND

Harington, Sir John (*d.* 1553), administrator, was the eldest son of Sir John Harington of Exton, Rutland (*d.* 1524), and Alice, daughter of Henry Southill. By the terms of his marriage settlement of January 1513 to Elizabeth, daughter and heir of Robert Moton of Peckleton, Leicestershire, the ward of Sir Richard Sacheverell (*d.* 1534), Harington established an independent estate in Leicestershire, Lincolnshire, Nottinghamshire, and Suffolk.

The death of Harington's father placed him among the prominent gentry of the kingdom. Beginning in 1520 he was four times sheriff of Rutland, and sheriff once each of Lincolnshire, and Warwickshire and Leicestershire. Harington was junior knight of the shire for Rutland in the parliament of 1529, and senior knight in 1539 and 1542. He was among the first to oppose the Pilgrimage of Grace and was subsequently made esquire of the body to the king (1539) and knighted (16 January 1542). Local honours, offices, and responsibilities multiplied, including the commissions for the survey of the monasteries (1536) and church goods (1553), stewardship of Stamford, bailiffship of Leicester, keepership of Beaumanor Park, and receivership of the duchy of Lancaster for Leicester honour (1537–53).

On 30 August 1542 Harington was appointed treasurer of war for the autumn campaign against Scotland of Thomas Howard, duke of Norfolk, and was responsible for disbursements of £60,129. He repeated this service in 1543 for Charles Brandon, duke of Suffolk, warden of the Scottish marches, but was replaced as treasurer of war in the north by Sir Ralph Sadler in February 1544. Harington became vice-treasurer of the army in France for the king's campaign of 1544 when he contributed 10 horsemen and 100 foot, and then was treasurer of the expedition to France of 1546 led by Edward Seymour, earl of Hertford. In October 1549 Harington became a royal councillor to Henry Manners, earl of Rutland, as warden of the east and middle marches against Scotland.

Harington purchased extensive property, profiting considerably from the dissolutions of the religious houses and more than doubling his inheritance. He had a reputation for litigiousness and was implicated in the malfeasance of his former treasurer's clerk in France, John Bradford, the Marian martyr. Harington himself appears to have been a religious conservative. He made his will on 20 August 1553 and died on 28 August in the parish of St Helen, Bishopsgate, London. Extensive masses and dirges were conducted upon his death, and he was buried in Exton on 8 September following. By his marriage to Elizabeth Moton he had five sons and four daughters, including his heir Sir James Harington (*d.* 1592) of Exton and the MP Edward Harington of Ridlington, Rutland. His grandson, Sir John Harington (*d.* 1613), the guardian of Princess Elizabeth, daughter of James I, was created Baron Harington of Exton on 21 July 1603.

Harington, John (*c.*1517–1582), courtier and writer, was the son of Alexander Harington (*d.* 1539), and a member of the northern, staunchly Yorkist branch of the family which flourished under Edward IV but forfeited much of its land as a result of Richard III's defeat in 1485. His father, who was son of James, dean of York, settled in Stepney. John Harington had entered the service of Henry VIII by 1538. He studied music under Thomas Tallis, and wrote an anti-monastic hymn which the king liked to sing.

Probably in 1547 Harington married Ethelreda (also

known as Esther or Audrey) Malte, supposedly the natural daughter of Henry VIII, who had been passed off as the illegitimate daughter of a tailor named John Malte in exchange for grants of land and revenues. Through this match Harington received dissolved monastic estates in Berkshire and Somerset, among them the manor of Kelston, which he would later make the family's country seat. By the spring of 1546 he had entered the service of Sir Thomas Seymour, and his life was much affected by his master's rise and fall in the reign of Edward VI. Thanks to Seymour's influence, he sat in the parliament of 1547 as the member for Pembroke. After Seymour's arrest in January 1549, Harington was imprisoned and questioned about his master's relationship with the young Princess Elizabeth, and about his own part in negotiations to marry Edward VI to Lady Jane Grey.

Harington remained in the Tower until the spring of 1550, long after his master's execution. There he took advantage of spare time and distinguished company (including that of Sir Thomas Smith) to learn French and to translate a French version of Cicero's *De amicitia* into English; this text was published in 1550 with a dedication to Catherine Willoughby, duchess of Suffolk (a second edition appeared in 1562). He may also have caught a first glimpse of his future second wife, Isabell, daughter of the lieutenant of the Tower, Sir John Markham, and one of the maids in attendance on Princess Elizabeth. However, Harington's first wife was still alive when he was imprisoned again in 1554, this time for suspected involvement in Wyatt's rebellion; both John and Ethelreda attended Princess Elizabeth during her confinement in the Tower. Ethelreda was still alive in early 1556, and they had a daughter, Esther, probably born about 1549; she is last heard of in 1568. Ethelreda evidently died some time before the end of 1559, the year in which Harington married Isabell Markham, who served as a lady of the queen's privy chamber until her death in London in 1579.

After Elizabeth's accession Harington's fortunes recovered. As 'the queen's servant', he obtained two exchequer posts and various land grants. Elizabeth stood godmother to his son John *Harington, baptized on 4 August 1560; his second son, Francis, was probably born in 1562 or 1563. On 12 February 1569 he received a grant of arms, and on 5 August 1570 he received the reversion of the Harington estates forfeited at Bosworth, although he was never to obtain them. Harington represented Old Sarum in the parliament of 1559 and sat for Caernarfon in 1563 (he had been appointed constable of Caernarfon Castle in June 1551, a post he held until his death). He died at Stepney, 'at a Prebende house neere the Bishop's Palace of London', on 1 July 1582 and was buried alongside Isabell in St Gregory by Paul, London.

Harington stands out as a vigorous champion of the vernacular, both in his own poetry and in poems by others which he collected. Thirty poems, some of which were printed in Tottel's *Songes and Sonettes* of 1557, can be attributed to him with confidence; these include a translated stanza from Ariosto's *Orlando Furioso* which his son John incorporated into his complete English translation of that poem. He also played an important role in preserving the works of Wyatt and Surrey, copying their poems, along with many by their contemporaries and successors, into a verse miscellany which was continued by his heir, and which is now in the library at Arundel Castle. Harington's biographer, Ruth Hughey, sums up his significance by describing him as 'a representative gentleman of the new order in the Tudor age' (Hughey, *John Harington*, 4), a scholar–courtier who negotiated the reigns of four monarchs and whose reformed learning assisted his rise from relative obscurity to considerable wealth.

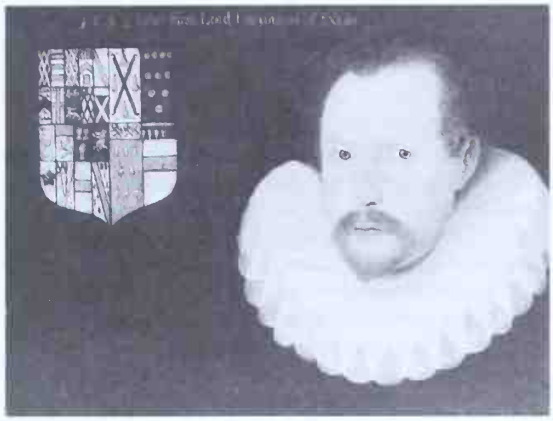
Harington, John, first Baron Harington of Exton (1539/40–1613), courtier and landowner, was the eldest son of Sir James Harington (*c.*1511–1592), landowner and administrator, of Exton Hall, Rutland, and his wife, Lucy (*c.*1520–*c.*1591), daughter of Sir William Sidney and his wife, Anne. His family held the most extensive estates in Rutland during the late sixteenth century and, with the Digbys of Stoke Dry and the Noels of Brooke, monopolized the parliamentary representation of the county throughout Elizabeth I's reign. In 1558 Harington entered the Inner Temple, where his future father-in-law, Robert *Keilwey, surveyor of the court of wards, was treasurer.

Harington represented Rutland in parliament in 1571, his father being unable to sit as MP because he was sheriff. About this time he married Anne (*c.*1554–1620), daughter and heir of Keilwey and his wife, Cecily; through Anne he acquired Combe Abbey, Warwickshire, on her father's death in 1581. They had two sons and two daughters. Harington divided his time between Exton in Rutland, which had been magnificently renovated by his father, and his newly acquired property at Combe Abbey. He was placed on the commission of the peace for Kesteven, Lincolnshire, from about 1559 until 1593, probably through family influence, and became JP for Rutland and Warwickshire from about 1579 and 1583 respectively. These and other local appointments enhanced his influence and power. Harington also had a service relationship with the Dudleys, who were the dominant family in the west midlands. He exchanged gifts and hospitality with Robert Dudley, earl of Leicester, served under him in the Netherlands in 1585, was an assistant mourner at his funeral, and keeper of Kenilworth Castle, Warwickshire, from 1588 to



John Harington, first Baron Harington of Exton (1539/40–1613), by unknown artist, 1592

1590 for Ambrose Dudley, earl of Warwick. He served as sheriff for Warwickshire in 1582–3, was knighted in 1584, and was county MP in 1586. He was more active in this and subsequent parliaments. In September 1586 he was chosen to accompany Mary, queen of Scots, through Warwickshire on her way to Fotheringhay in Northamptonshire.

In 1592 Harington succeeded his father and was MP for Rutland in 1593 and 1601 as the senior member. His county prestige was advanced further with his appointment as deputy lieutenant of Rutland and Warwickshire during the 1590s. He shared the former position with Sir Andrew *Noel, the husband of his sister Mabel. In 1597 ill health prevented him from standing for parliament and shortly after his cousin Sir John *Harington, the writer, described him and Thomas Cecil, first earl of Exeter and second Baron Burghley, together at Bath, suffering from gout: 'It gave me some comfort to hear their religious discourse and how each did despise his own malady and hold death in derision, because both did not despair of life eternal' (Harington, 1.236). Harington was replaced as MP by his younger brother James Harington of Ridlington, continuing the family's parliamentary influence. The political unity of Rutland was broken during the 1601 parliament when a dispute over the second seat led to a rift with Noel and brought the 'bane of faction' to the county (Neale, 131).

At the end of Elizabeth's reign Harington was one of the leading knights in the country, whose wealth equalled that of many barons. He was considered a suitable candidate, based on wealth and service, for elevation to the peerage. In 1602 John Chamberlain described him as keeping a 'royal Christmas' with Edward Russell, third earl of Bedford, who had married his daughter Lucy *Russell, Roger Manners, fifth earl of Rutland, William Herbert, third earl of Pembroke, Sir Robert Sidney, and others (*CSP dom., 1601–3*, 271). On the accession of James I, Harington took care to consolidate his position, travelling to Yorkshire with his brother James to meet the king and subsequently entertaining him to dinner at Burley on the Hill, his second Rutland residence. In June 1603 Princess Elizabeth stayed at Combe Abbey on her journey south. In July Harington was raised to the peerage at the coronation as first Baron Harington of Exton and in October he was appointed Elizabeth's guardian. His daughter Lucy meanwhile established herself as the constant companion of the queen, Anne of Denmark, and his son John *Harington, later second Baron Harington, joined the intimate circle of Henry, prince of Wales. Elizabeth and her entourage were established at Combe, from where members of the Gunpowder Plot intended to abduct her in 1605. Hearing a report of a raid on the stable at Warwick Castle, however, Harington removed his charge to the safety of Coventry with only a few hours to spare. The strong protestant beliefs espoused by Elizabeth throughout her life were undoubtedly influenced by the godly piety of her guardian and his wife, who continued to control her household until her marriage to Frederick V, elector palatine.

The vagaries of Jacobean royal accounting and his unwillingness to defraud the king led Harington to incur substantial costs in maintaining Elizabeth's household and in 1612 he petitioned for the privilege of coining brass farthings for three years in recompense. These coins were known as Haringtons. This grant was agreed before his wife and he accompanied his former charge and her husband to Germany in April 1613 at their own expense. In Heidelberg Harington spent four months arranging the princess's financial and household affairs. During the return journey he died of fever at Worms on 23 August 1613, aged seventy-three. His widow returned his body to Exton for burial. His elder son, Kelway, having died in infancy, he was succeeded by his younger son, John, who survived him by little more than six months. This dynastic accident prevented his family from recovering the costs of their involvement with the royal family. Despite an income of £5000–£7000, the family debt stood at £30,000–£40,000. Lucy, countess of Bedford, dying without children, the family survived only through Anne, the child of Harington's younger daughter, Frances, and her husband, Sir Robert Chichester.

Wealth at death approx. £30,000–£40,000 in debt

Harington, Sir John (*bap.* 1560, *d.* 1612), courtier and author, was the first of two sons of John *Harington (*c.*1517–1582), courtier, and his second wife, Isabell Markham (*d.* 1579). He was baptized in the church of All Hallows, London Wall, on 4 August 1560. Thanks to his parents' high favour, his godparents were Queen Elizabeth and William Herbert, second earl of Pembroke. By 1570 he

was at Eton College, where he and his schoolfellows translated into Latin the story of Elizabeth's sufferings during the reign of Mary Tudor, from Foxe's book of martyrs; the resulting volume, no longer extant, was presented to the queen. The queen sent 'Boye lacke' a copy of her 1576 end-of-session speech to parliament defending her right to celibacy, telling him that although 'it cannot be suche striplinges have entrance into Parliamente Assemblyes as yet', he would if he studied her words 'perchance, fynde some good frutes hereof when thy godmother is oute of remembraunce' (*Nugae antiquae*, 2.154). Harington matriculated at King's College, Cambridge, in 1576, graduated BA in 1578, and proceeded MA in 1581. While at Cambridge he received advice on his studies from the lord treasurer, William Cecil, and acknowledged the support of the secretary of state, Sir Francis Walsingham. In November 1581 he was admitted to Lincoln's Inn, but his time there was cut short by the death of his father; he took possession of the family estate in Kelston, near Bath, in June 1583. On 6 September of the same year he married Mary (*d.* 1634), daughter of George Rogers (*c.*1528–1582) of Cannington, Somerset, and granddaughter of Edward Rogers (*c.*1500–1568), a prominent office-holder under Henry VIII, Edward VI, and Elizabeth I.

The translator of Ariosto Harington refused to subscribe to the 1584 bond of association, believing it prejudicial to James VI's claim to the English throne. In 1586, in the company of his brother-in-law Edward Rogers, he visited Ireland with an eye to participating in the plantation of Munster. Probably he began to sit as justice of the peace around this time, initiating an involvement in county government which would continue throughout his life. But in general the 1580s are a poorly documented part of Harington's life. This is doubtless because 'some yeeres, & months, & weeks, and dayes' (*Letters*, 176) of this decade were devoted to the huge task which earned him his place in literary history, the first complete translation into English of Ludovico Ariosto's epic romance poem *Orlando Furioso*. A celebrated anecdote (first recorded in the late eighteenth century) relates that these labours were a penance; when his godmother the queen caught him circulating a translation of the lewd tale of Fiametta from canto 28 of the *Orlando* among her ladies-in-waiting, she banished Harington from the court until he had translated all thirty-three thousand lines of it. The folio volume, published by Richard Field in 1591, was a triumph of book design, lavishly illustrated and indexed, each canto furnished with highly individual, gossipy notes. It was dedicated to Elizabeth, but Harington also presented large-paper copies, some of them hand-coloured, to potential patrons, including James VI, William Cecil, and Sir Thomas Coningsby; the work's title-page, incorporating portraits of the translator and of his beloved dog Bungay, covertly advertised Harington's desire for public office. The translation was reprinted, with revisions, in 1607; a third edition appeared in 1634. Although Ben Jonson's damning judgement that Harington's Ariosto 'under all translations was the worst' (C. H. Herford and P. Simpson, eds., *Ben Jonson*, 11 vols., 1925–52, 1.133) has coloured much subsequent commentary, the work has won admirers and is often seen as part of a key moment in the history of Anglo-Italian literary relations, alongside Spenser's *Faerie Queene* (1590–96) and Fairfax's translation of Tasso's *Gierusalemme liberata* (1600).

The Metamorphosis of Ajax Harington's next published work grew out of a convivial gathering at Wardour Castle in Wiltshire, home of the fanatical horse-lover Sir Matthew Arundell; the company included Henry Wriothesley, earl of Southampton, and his sister Mary. The conversation turned to matters of sanitary technology, and the idea of keeping a permanent cistern of water above a privy, with a primitive flushing mechanism, was conceived. Harington outlined the design (with illustrations supplied by his servant, the emblematist Thomas Combe) in his *New Discourse of a Stale Subject, called the Metamorphosis of Ajax* (1596). 'Ajax' played on 'a jakes', meaning 'a privy', a device here transformed in the manner of Ovid's Ajax. The punning title gives some idea of the work that follows, a complex blend of scatological comedy, moral reflection, and social satire. Although Harington wrote the *New Discourse* under the pseudonym Misacmos ('hater of filth'), he dropped many clues to his identity throughout, so that he became known as Sir Ajax Harington. On the basis of his first two publications, critics have speculated about his relevance to the Jacques and Orlando of his contemporary Shakespeare's *As You Like It*. As a result of the *New Discourse*'s satire, Harington was threatened with Star Chamber suits; for a derogatory remark about the earl of Leicester, 'the great Beare that caried eight dogges on him when Monsieur [the duke of Alençon] was here' (*New Discourse*, 171), he languished for some time in royal disfavour. Harington avowed to Elizabeth Russell that his aim in writing the pamphlet was to 'give some occasion to have me thought of and talked of' (*Letters*, 66), and in this he was undoubtedly successful. The work enjoyed considerable if short-lived popularity, going through four editions in 1596 and attracting an anonymous response in an animadversion entitled *Ulysses upon Ajax*. Although the *New Discourse* was merely an octavo pamphlet, there is evidence that Harington tried to use it to further his career. In the final section of the book (the 'Apologie') he created a complex fictional vehicle which allowed him to flatter potential patrons and to promote the toleration of conformist recusants such as his friend Ralph Sheldon and his uncle Thomas Markham. And Harington's water-closet itself became a gift in the patronage economy; he installed one at the royal palace of Richmond and sent another to Robert Cecil for use at Theobalds.

In 1599 Harington returned to Ireland, this time with the army sent to crush the rebellion of Hugh O'Neill, second earl of Tyrone. Robert Devereux, earl of Essex, newly appointed lord lieutenant, wrote directly to Harington appointing him to lead a mounted troop under the command of the earl of Southampton. On 30 July Harington became one of the scores of soldiers knighted by Essex in the course of his ill-fated campaign. From Ireland he sent letters describing the English military defeat at the Curlew Mountains in Connaught, and recounting his meeting

with Tyrone in the company of Sir William Warren. He recalled proudly that he had presented Tyrone's sons with a copy of his *Orlando* and, asked by the earl to read a section aloud, turned '(as it had been by chance)' to the beginning of canto 45, a passage describing how fortune's wheel raises men up and throws them down again. Then they had breakfasted together on Tyrone's 'fern table and fern forms, spread under the stately canopy of heaven' (*Letters*, 78). Harington returned to England 'in the very heat and height of all displeasures' (ibid., 79), sharing in the wrath which Elizabeth vented at Essex. Soon, however, he was granted a private audience and restored to favour.

Throughout the 1590s Harington had been engaged in writing epigrams in imitation of Martial, and on 19 December 1600 he made two manuscript collections of them. He sent one to Lucy, countess of Bedford, the daughter of Sir John Harington of Exton. In it his poems followed three psalm paraphrases by Mary Sidney, attending them 'as a wanton page is admitted to beare a torche to a chaste matrone' (*Letters*, 87). The other, larger collection Harington gave to his widowed mother-in-law, Jane Rogers; here the epigrams followed a copy of the *Orlando*, with printed and manuscript sections joined in an elaborate gold-tooled binding. For this collection Harington chose those poems he had written on domestic occasions, recapitulating a troubled history of relations between the courtier, his wife, Mall, and her mother. Harington decreed that the gift should descend through the female line, a stipulation which betrays the book's part in his broader project to oust his scapegrace brother-in-law Edward as Lady Rogers's heir. In this he appears to have been successful. Jane Rogers died on 19 January 1602, naming as her executors Mary Harington and Francis Rogers; the latter, Edward's eldest son, was a minor. The events which followed her death were hotly disputed in Star Chamber between December 1603 and July 1604. Harington claimed that Edward Rogers had besieged him in Lady Rogers's house at Cannington, subsequently locking him up for nine hours and ransacking his personal belongings. Edward claimed that Harington had conferred with a physician in order to predict the likely date of his mother-in-law's death, and that he had kept the news of that event under wraps while he carried away her possessions. The terms of the arbitrated settlement of the dispute remain obscure.

The search for patronage Meanwhile Harington had also been speculating about his godmother's death and, although discussion of the question was prohibited by law, he completed a substantial *Tract on the Succession to the Crown* in 1602. This work adduced writers from the three most populous sects, 'Papists, protestants, and purytans', in order to convince the whole spectrum of confessional opinion of the justice of the Stuart claim to the English throne. The work survives in a single manuscript copy in the chapter library at York, among the books of Archbishop Tobie Matthew. Matthew, at this time bishop of Durham, was known to be hostile to James's claim, and Harington may well have given him the manuscript to win him round. The *Tract* was one of several gestures which Harington made in anticipation of James's accession. In 1602 he sent the Scottish king a richly symbolic lantern, comparing himself with the good thief crucified alongside Christ and asking his lord to 'remember me when you come into your kingdom'. He also sent James a manuscript of his epigrams, which were now over four hundred in number, arranged into four books. Before the death of Elizabeth, Harington made contact with Sir William Maurice, a vociferous supporter of union between England and Scotland in the early Jacobean parliaments.

On 14 April 1603, as the nation awaited the arrival of its new king, Harington bade 'Farewell to his muse' at Eton. Ironically, he saw her off in verse, and less than a fortnight later he was in Rutland, presenting the new king and queen with 'gratulatorie Elegies'. But his hopes of gaining public office in the dawn of a new regime were dashed by extreme misfortune. In the summer of 1603 he was incarcerated in the Gatehouse prison, Westminster, as guarantor of a £4000 debt incurred by his uncle Thomas Markham. In this period of enforced *otium* he revised a translation he had made of the sixth book of Virgil's *Aeneid*, which he presented to King James in June 1604 for use in the instruction of Prince Henry. From this point forward Henry became the focus of Harington's search for patronage. In 1605 he gave him a collection of his epigrams, and in 1608 he presented him with a weighty quarto volume containing Bishop Francis Godwin's printed *Catalogue of the Bishops of England* (1601), to which he had added marginalia, two indexes, and a 'Supplie or addicion', a substantial supplement updating Godwin with colourful biographies of the Elizabethan episcopate. Harington claimed that his work was a defence of the established church hierarchy, written in response to a prophecy which ran:

> Henry the 8. pulld down Abbeys and Cells
> But Henry the 9. shall pull down Bishops and bells.

None the less, Harington's opposition to clerical marriage, which he argued out in correspondence with Bishop Joseph Hall around this time, gave a critical edge to many of his portraits. The *Catalogue* was first printed by Harington's grandson John Chetwind in 1653 as a justification for the dismantling of episcopacy. Harington's support for the ecclesiastical hierarchy is perhaps best evidenced by his extraordinary attempt to join it. In 1605 he sent Robert Cecil and Charles Blount, earl of Devonshire, manuscript copies of a 'short relation ... contayning my humble and zelows offer for his Majesties sarvyce in Ierland' (*Letters*, 118). Having heard that the lord chancellor of Ireland, Adam Loftus, was sick, Harington applied for his job in a treatise outlining his solutions to Anglo-Irish conflict; and with it he asked for Loftus's other position, as archbishop of Dublin. This extraordinary request was perhaps inspired by the example of Prince Henry's tutor Adam Newton, a layman whose successful bid for the deanery of Durham Harington had supported. Harington's suit was rejected. Yet it was part and parcel of his behaviour under James. He seems to have viewed the accession of an adult male monarch, after decades of

'anomalous' rule by women and children, as a return to Henrician values, with courtiers as bishops and humanists in high office. In his final years Harington remained active, completing a metrical paraphrase of the psalms and pursuing a scheme to persuade Thomas Sutton, the richest commoner in England, to declare Prince Charles his heir. He died on 20 November 1612, and was buried at Kelston on 1 December; his wife, Mary, died in 1634. Their eldest son, John (1589–1654), became a noted parliamentarian and diarist.

Thanks largely to the care of his descendants, whose pride in their ancestry led to the publication of the historical miscellany *Nugae antiquae* (1769–75; 2nd expanded edn 1779), Harington is one of the best-documented writers of his age. The printer's copy for large sections of the *Orlando* and *New Discourse* survives; we also have memoranda, first drafts, reworkings, and texts customized for presentation. From the last few years of his life we have two remarkable booklists, one of which shows that he owned a large collection of printed playtexts. Combined with this documentary wealth, the fact that he devoted so much effort to publicizing himself in his writings makes him seem an unusually knowable figure. Since his self-presentation was always designing, it is unreliable; indeed, much of the foregoing biographical narrative should be treated with caution, since Harington is often our only source for what we 'know' about him.

Assessment Historical estimates of Harington are divided; some dismiss him as a failed careerist and minor writer, others celebrate him as a maverick figure, the licensed fool of Queen Elizabeth and King James. His letters, which offer cool analyses of the machinations of these monarchs from the perspective of a disaffected suitor, are enduringly fascinating. Equally involving is the sheer intricacy of his attempts to win favour and public office through textual transactions, involving sophisticated exploitation of the media of manuscript and print. But Harington was far from being merely self-interested; he had a humanistic concern for 'the commonweal', and his works promote many causes, from the restoration of Bath Abbey to religious toleration. He had a strong leaning towards Catholicism, although he called himself a 'protesting Catholicke Puritan' (*New Discourse*, 263). The complex blend of 'high' and 'low' cultural elements in his writings made them broadly popular. His epigrams, particularly those which satirized 'puritans', circulated widely in manuscript in the seventeenth century; partial (and censored) collections were printed in 1615 and 1618. His *Englishmans Docter*, a translation of the medieval medical poem *Regimen sanitatis Salernitanum*, went through five editions between 1607 and 1624, only the last of which bore Harington's name; it may well have reached print without his knowledge.

Harington justified his references to friends and kinsfolk in the notes to his *Orlando* by recalling that Plutarch had criticized Homer for leaving no account of himself; his translation, 'a worke that may perhaps last longer then a better thing' (*Letters*, 15), would not be thus blamed. In the event, it is the unashamedly personal element in Harington's writings which has made them last.

Harington, John, second Baron Harington of Exton (*bap.* 1592, *d.* 1614), courtier, was baptized at Stepney, Middlesex, on 3 May 1592, the only surviving son of John *Harington (1539/40–1613) and his wife, Anne (*c.*1554–1620), daughter and heir of Robert Keilway of Minster Lovell, Oxfordshire. He may have been the 'Mr Harington' listed as a page to the countess of Rutland (his second cousin) in 1600, but if so he was presumably withdrawn from service when the earl of Rutland was arrested for his part in the rebellion of Robert Devereux, second earl of Essex, in February 1601.

Although Harington's father cultivated relations with Sir Robert Cecil, his links with Essex's faction meant that he did not return to favour until the accession of James I in 1603, when he received a peerage as Baron Harington of Exton and the governorship of the king's daughter Princess Elizabeth. Harington himself was created a knight of the Bath on 5 January 1604 and became one of the aristocratic companions of the king's eldest son, Prince Henry, two years his junior, encouraging the latter in his studies and developing a close relationship best illustrated by a joint portrait of the two men on a stag hunt. In 1607–8 Harington spent a year at Sidney Sussex College, Cambridge, which his father had helped to found a decade earlier, and in the summer of 1608 he and his tutor, John Tovey, a former master of Coventry Free School, embarked on an eighteen-month grand tour on the continent. Prince Henry, who interceded with the king in person to secure Harington's passport, was then beginning to develop his own network of policy advisers and his friend's itinerary was clearly intended to provide the prince with eyewitness reports of most of the potential diplomatic flashpoints of western Europe.

Having left England with an entourage of ten gentlemen, Harington met Archduke Albert and his wife, Isabella, at Brussels and attended lectures at Heidelberg and Basel before travelling to Florence, where he just missed the nuptials of Grand Duke Cosimo de' Medici. He sent Prince Henry a printed copy of the wedding celebrations and stated his intention to travel home through France, but changed his plans, heading for Rome upon an invitation from the Catholic exile Sir Anthony Standen. Fearing that Tovey would be arrested by the inquisition Harington went instead to Venice, where he arrived a few days before Christmas 1608 and was warmly recommended to the doge by the English ambassador, Sir Henry Wotton, who claimed that 'being the right eye of the Prince of Wales, this world holds that he [Harington] will one day govern the kingdom' (*CSP Venice, 1607–10*, 216).

Harington spent six months in Venice 'to study the form of this government', informing Prince Henry about the criticisms of Rome which had been circulating within the city since the papal interdict of 1606. Attending the church of San Lorenzo, he reported that 'every day during Lent a Brother Fulgenzio [Micanzio] of the Servite order has preached the word of God purely and without intermixture', an assessment which owed much to the fact that the sermons denigrated papal claims to temporal authority and supported the English line in the oath of allegiance controversy. The Venetians expressed their regard for Harington by giving him dispatches to take to their ambassador at the imperial court in Prague upon his departure from the city in July 1609.

Harington returned homewards via Vienna and Prague, reporting to Prince Henry about the looming conflict between Archduke Mathias and the estates of Lower Austria, then on to Frankfurt, where he commented upon the Jülich–Cleves succession crisis, and Paris, where he observed the French king's increasing resolve to intervene in Germany. He probably returned to England in the entourage of the Venetian ambassador, arriving a few days after the performance of the masque *The Barricades*, which Prince Henry used to lay claim to the leadership of the protestant cause. Six weeks after his return Harington was returned to the Commons at a by-election for Coventry, undoubtedly at his father's behest. Although named to a number of committees, he made no recorded speeches.

The death of Prince Henry in November 1612 had a major impact on Harington's long-term prospects but he was able to maintain his position at court with an annuity of £1000 from his father and a reversion to the clerkship of common pleas, an enormously lucrative sinecure. Tipped for the governorship of Guernsey, his plans changed when his father died suddenly in August 1613 leaving an estate burdened with debts of £30,000. Harington's father had hoped to marry him to Salisbury's only daughter, and at the end of his life he was spoken of as a match for one of the daughters of the ninth earl of Northumberland, but he was still unmarried when he was struck down by smallpox at Kew, where he died on 26/27 February 1614. There was widespread grief at his early demise, particularly among the godly clergymen he had patronized, while John Donne observed 'thou dids't intrude on death, usurps't a grave' (J. Donne, 'Obsequies to the Lord Harrington', line 192). Harington was buried at Exton, Rutland, on 31 March 1614. His funeral sermon, delivered by Richard Stock, the rector of All Hallows, Bread Street, London, and published as *The Churches Lamentation for the Losse of the Godly* (1614), portrayed him as a model of puritan piety.

Harington's mother paid off many of the family's creditors by selling the family's main estate at Exton to Sir Baptist Hicks. The remainder of the family's lands were dispersed by his childless sister, Lucy *Russell, countess of Bedford, before her death in 1628. SIMON HEALY

Harington, John Herbert (1764/5–1828), administrator in India and Persian scholar, obtained a writership in the East India Company's service in Bengal in 1780 and in 1781 was made assistant in the revenue department. By 1783 he had mastered Persian sufficiently to be appointed Persian translator to the revenue department and thereafter to begin work on his two-volume edition of *The Persian and Arabick Works of Sadi*, published in Calcutta in 1791 and 1795.

Harington was briefly employed in the secret department, but most of his career was given over to the internal administration of British India. In 1796 he became registrar of the *sadr diwani* and *nizamat adalats* and in 1799 fourth member of the board of revenue. In 1801 he was appointed puisne judge of the *sadr diwani* and *nizamat adalats*, being further promoted in 1811 to chief judge. He married Amelia Johnston in Calcutta on 4 June 1808. Two of their five children died in infancy.

Harington was an enthusiastic educationist and, although of an earlier generation of civil servants, he welcomed the establishment in 1800 of the new training college of Fort William, Lord Wellesley's proposed 'Oxford of the East', and became the college's law specialist and a member of the Persian department. In 1809 he presided over the college council and throughout his time in India always defended the college against intermittent calls for its abolition. In turn, in its law classes the college promoted Harington's principal work, *An Elementary Analysis of the Laws and Regulations Enacted by the Governor General in Council*, published in three volumes by the company's press in Calcutta, 1805–17.

In the emerging debate about Indian education Harington pursued a moderate course between the orientalist and Westernizing extremes. He favoured the reinvigoration of classical Indian scholarship and the promotion of the vernaculars, but he also wanted Indians to be exposed to European knowledge and the English language. An evangelical, he liberally supported the missionaries' educational experiments in Bengal and variously held office in the Calcutta School Society, the Calcutta School Book Society, the Church Missionary Society (of which he was an honorary life governor), the British and Foreign Bible Society, and the Society for the Propagation of Christian Knowledge. He was also an active member of the Asiatic Society of Bengal and was instrumental in the society's decision to build a permanent home for itself in Calcutta.

In 1819 Harington took furlough, returning to India in 1822 on his provisional appointment to the supreme council. In 1823 he became senior member of the board of revenue of the Western Provinces and agent to the governor-general at Delhi. In April 1825 he joined the supreme council and became president of the board of trade. He went home to England again in 1827 on absentee allowance and died in Bloomsbury Square, London, on 9 April 1828. KATHERINE PRIOR

Harison, Anthony (1563–1638), Church of England clergyman and episcopal secretary, son of William Harison, was born on 18 November 1563, at Over, Cambridgeshire. He matriculated sizar from King's College, Cambridge, at Easter 1580, but apparently did not graduate. Nevertheless, he acquired legal expertise, became a notary public and, according to his own notebooks, a solicitor and attorney of the university. In May 1603 he was chosen by John Jegon, the newly appointed bishop of Norwich, as his secretary, a post he filled until Jegon's death in 1618. In 1609 he was ordained and presented to the rectory of Catfield, Norfolk, a living which was in two medieties, one held by the king and one by the bishop. After 1618 he retired to Catfield but continued to be consulted by subsequent bishops of Norwich about the temporal affairs of the see. On his appointment in 1603 Harison found the financial affairs of the bishopric in disarray with alarming gaps in the estate records: many of the latter he claimed had been embezzled after Bishop Redman's death. He made it his life's work to bring order to this chaos, first to help Jegon to improve his income, subsequently to strengthen the long-term financial position of the bishopric. A few years before his death he reflected that he had long been 'a diligent observer and preserver of all matters which did concern the Bishop of Norwich' (*Registrum vagum*, 1.11).

Harison's observations were kept in a series of meticulously detailed notebooks, mainly concerned with the leasing of the episcopal estates, which show a thorough grasp of every possession of the see. His published *Registrum vagum* reveals the broader nature of his work as episcopal secretary. Its charm derives from its eclecticism: it records diocesan and national religious business but includes personal letters and poems, and is as much commonplace book as precedence text. Jegon's successors angered Harison by being insensitive to the fiscal needs of the see: Bishop Samuel Harsnett, who carried 'court holy water' (*Registrum vagum*, 1.12), particularly offended by appropriating some of Harison's notebooks, though they were subsequently reconciled.

Harison was married twice. The name of his first wife is unknown; his second, Margaret, was named with several of his five surviving children in leases made to him at Ludham. One son, Oliver, became a clergyman and another, Joshua, was a student at Trinity College, Cambridge, in 1616. Harison died at Catfield on 17 September 1638 and was buried there the next day: his successor recorded in the register that 'he was a man of admirable parts both of nature and grace' (*Registrum vagum*, 1.15). Oddly for so punctilious a man, Harison seems to have left no will. FELICITY HEAL

Harkeley, Henry. *See* Harclay, Henry (*c.*1270–1317).

Harker, Alfred (1859–1939), petrologist, was born on 19 February 1859 at Kingston upon Hull, Yorkshire, the son of Hull corn merchant Portas Hewart Harker, and Ellen May Harker (*née* Tarbotton). His schooling was at the Hull and East Riding College, and then Clewer House School, Windsor. Even in his teens, Harker contributed articles on a variety of scientific topics, some geological, to the *English Mechanic* and *Design and Work*. He went up to St John's College, Cambridge, as a sizar in 1878, and while a student secured an exhibition and then a foundation scholarship. Eighth wrangler in 1882, he received a first in the natural science tripos the same year, and in physics in 1883. Even before his finals he was demonstrating in mineralogy and petrology, and he became demonstrator in petrology in January 1884. The following year he was elected to a fellowship at St John's. In 1904 he was appointed university lecturer, and in 1918 he became reader in petrology, a position he held until his retirement in 1931. Harker was a notable teacher, his *Petrology for Students* passing through seven editions in his lifetime.

Harker's first research field was concerned with slaty cleavage, for which he received the Sedgwick prize in 1888. In the following two years, in company with John Marr, Harker worked at Carrock Fell and Shap, broaching the problem of igneous masses of composite composition. Analogous investigations were subsequently made

in Skye. The question was whether there was more than one kind of 'primeval' magma in the earth's interior, or whether magmas self-differentiated during crystallization. Harker came to the view that fractional crystallization was the principal process, but he also described what he took to be hybrid admixtures, arising from the intrusion of magma into a still-hot igneous mass of different composition.

In the early 1890s there was a major controversy between Archibald Geikie and John Judd regarding the order of emplacement of the basic rocks of the Cuillins and the acidic rocks of the adjacent Red Hills in Skye. The solution was to be found by detailed field-mapping and Harker, by then the country's leading petrologist, was invited by Geikie to map the region for the geological survey, being seconded part-time from Cambridge for the purpose. This work, began in 1895 and completed with the publication of *The Tertiary Igneous Rocks of Skye* (1904), vindicated Geikie's view that the Red Hills were younger than the Cuillins; but more importantly Harker produced a magnificent set of geological maps, superseded only in the late twentieth century. Harker's empirical and theoretical work at Blá Bheinn, the mountain where the Cuillins and the Red Hills meet, is particularly renowned.

With his work in Skye, Harker developed a great love for the Hebrides, which he revisited, year after year, into old age. His *Geology of the Small Isles of Inverness-Shire* (1908) was another major contribution. However, *The Natural History of Igneous Rocks* (1909) was Harker's principal monograph; it was followed by *Metamorphism* (1932). Perhaps his major theoretical suggestion was that the general character of different regions of igneous rocks might be related to the tectonic environment—the conditions of temperature and pressure under which the rocks were formed. Following the studies at Shap, Harker showed that the rocks surrounding the Shap granite had been reconstituted without significant changes in bulk composition. In subsequent years he was disinclined to adopt the views of those who advocated fundamental changes induced by percolating hot liquors (metasomatism).

Harker was elected FRS in 1902 and received a royal medal in 1935. He was president of the Geological Society (1916–18), and received its Murchison medal (1907) and Wollaston medal (1922). He was awarded an honorary LLD by McGill University in 1913 and an honorary DSc by Edinburgh University in 1919. Harker's whole academic life was based at St John's, where he was for several years senior fellow. He did not marry, and was somewhat reclusive. He was, however, a keen cricketer, and liked the occasional game of billiards, poker, or tennis. One of his most important gifts to Cambridge University was his collection of some 40,000 thin sections of rocks. Harker died in the Evelyn Nursing Home in Cambridge on 28 July 1939, mourned by numerous former students who attested to his gifts as a teacher. DAVID OLDROYD

Harker, (William) Gordon (1885–1967), actor, was born at 60 Fullerten Road, Wandsworth, London, on 7 August 1885, the second among six sons of Joseph Cunningham Harker (1855–1927), a successful designer and scenic artist, and his wife, Sarah Elizabeth Hall. Like four of his brothers, who later became notable scene painters in their own right, young Gordon was initially apprenticed in his father's Horsley Street studio in south-east London, but his own ambitions lay elsewhere. After enjoying performing in a school play during his education at Ramsey grammar school, Isle of Man, in the late 1890s, he was intent on a more active theatrical career, and as a first step persuaded the actor-manager Fred Terry to employ him as prompter for a provincial tour in 1902. Joining Fred's celebrated older sister Ellen Terry during her management of the Imperial Theatre, Harker made his London début on 23 May 1903 by walking on in her production of *Much Ado about Nothing*, directed by her son Gordon Craig and co-starring Oscar Asche. Harker was then engaged by the latter when he took the lease of the Adelphi Theatre in 1904, and acted with the company for nine years, throughout Asche's joint managements of other West End theatres with his wife Lily Brayton and their overseas tours of Australia and South Africa—a solid grounding of supporting roles in a mixed, but predominantly Shakespearian, repertory.

Early in the First World War Harker enlisted in the 8th Hampshire regiment and served with it in Gallipoli and Palestine, but in 1917 he was so badly wounded as to be pronounced unfit for action and was left with a permanent limp (which he later exploited for theatrical effect). Invalided out in 1919, he rejoined Asche briefly to understudy in his long-running musical fantasy *Chu-Chin-Chow* at His Majesty's before appearing in the British première of Robert Hichens's *The Garden of Allah* at Drury Lane in June 1920, both productions designed by his father. Over the next five years Harker was cast in a motley collection of plays, including a revival of J. M. Barrie's *Quality Street* (Haymarket, 1921), John Drinkwater's *Robert E. Lee* (Regent, 1923)—challengingly, as the ineffectual Confederate president Jefferson Davis—and modern comedies by Seymour Hicks, Ian Hay, Arnold Bennett, and Eden Phillpotts, but did nothing which caught the public's imagination. In 1926, however, he was introduced to Sir Gerald Du Maurier, who was looking for a resourceful Cockney actor to play Sam Hackitt, the 'old lag', in his production of Edgar

Wallace's *The Ringer* at Wyndham's, and Harker's phenomenal success in this role catapulted him to fame. The encounter proved crucial for both author and performer, helping to determine their subsequent theatrical fortunes: Harker went on to appear in a succession of similar crime and mystery plays, written by (or adapted from) Wallace and containing parts intended specifically for him, on either the right or wrong side of the law but always to provide comic relief—*Persons Unknown* (Shaftesbury, 1929), *The Calendar* (Wyndham's, 1929), *The Case of the Frightened Lady* (Wyndham's, 1931), *The Frog* (Princes, 1936), and *Number Six* (Aldwych, 1938)—as well as a stage version of Sapper's detective novel *Bulldog Drummond* (Adelphi, 1932) and other comedy-thrillers. He was also constantly in demand for light or romantic comedies, and enjoyed a close collaboration in the thirties with the expatriate American playwright-producer Walter Hackett, starring in three of his plays, *Road House* (Whitehall, 1932), *Afterwards* (Whitehall, 1933), and *Hyde Park Corner* (Apollo, 1934).

At the same time Harker was building a solid (and profitable) reputation in the cinema. Produced quickly and cheaply in studios in or near London, his films were not difficult to combine with his stage work; indeed, many were merely adaptations of his theatrical successes, making the process simpler still. In the twelve years between his screen début in Alfred Hitchcock's silent *The Ring* in 1927 and the outbreak of war in 1939 Harker appeared in no fewer than fifty films, all targeted at the home market, playing an assortment of rough diamonds, likeable rogues, and ponderous policemen. The coming of sound served to redouble his popularity, adding to the familiar, rather solemn-looking face a rich, husky-voiced East End accent and slick verbal timing, which endeared his comic creations to filmgoers throughout the country; in 1933 he acknowledged its importance by contributing an article, 'Cockney humour on the screen', to a national film magazine.

Harker remained active throughout the Second World War, registering particular success with two comedies—Frank Harvey's *Saloon Bar* (Wyndham's, 1939) and Denis and Mabel Constanduros's *Acacia Avenue* (Vaudeville, 1943)—the thriller *Once a Crook* by Evadne Price (Aldwych, 1940), and Vernon Sylvaine's spy drama *Warn that Man* (Garrick, 1941), all of which were subsequently filmed. He also added one more to his formidable repertory of policemen, borrowing from a popular radio programme the character of Inspector Hornleigh, who featured in three films between 1939 and 1941. Harker's film career continued uninterrupted until 1959, when he made his last film—*Left, Right and Centre*, for Sydney Gilliat—though his post-war stage appearances became more intermittent. His final performance, at seventy, as an ageing waiter artfully resisting replacement by a young waitress, in Rex Frost's comedy *Small Hotel* (St Martin's, 1955), afforded opportunities for amusing characterization in a suitably valedictory role. Harker had married comparatively late in life, on 18 July 1938, the young actress Grace Underwood (stage name Christine Barry; 1911–1964); she appeared with him in several West End productions before their marriage, but predeceased him by three years. His own last days were spent quietly, and he died at his home—11 Carlyle Mansions, Cheyne Walk, Chelsea—on 2 March 1967.

Harker was a gifted and highly original comedian of few pretensions. That he could respond so well to more complex and demanding characters like the truculent Bill Walker of George Bernard Shaw's *Major Barbara* (Wyndham's, 1929) or Alfred Doolittle in his *Pygmalion* (Embassy, 1951), may indicate untapped imaginative potential, but for most of his career he seemed content to inhabit a regular comic persona of blunt, dry-humoured understatement. Capitalizing on his hooded eyes, crooked nose, and protrusive underlip, and ringing occasional changes on a largely deadpan expression, now morose, now sardonic or pugnacious, this persona was one in which audiences found him inimitable. DONALD ROY

Wealth at death £31,023: probate, 3 May 1967, *CGPLA Eng. & Wales*

Harker, Joseph Cunningham (1855–1927), scene painter and theatrical designer, was born on 17 October 1855 in Levenshulme, Lancashire, the third of the three children of William Harker and his wife, Maria O'Connor. When Harker was three years old, his father, a well-known character actor in Manchester, died, and his mother, an actress, toured the provinces to support her children. Although Harker spent these early years performing occasionally in child roles, he showed more interest in scene design, and by the age of twelve he began building and painting his own toy-theatre models. In 1870 he moved to London, where his uncle, John O'Connor, a principal scene painter at the Haymarket Theatre, arranged for him to be apprenticed as a scene painter's assistant at the Globe for Thomas W. Hall, whose daughter, Sarah Elizabeth, Harker married on 10 May 1877. During this period,

Harker gained further experience through his occasional work for his uncle at the Haymarket, Albert Callcott at the Alhambra, and Ada Cavendish at the Olympic. In 1874 he ended his apprenticeship, and for the next eight years his freelance work at various London theatres included supervising scenes for *The Ring* at Her Majesty's Theatre, painting in its entirety the scenery for *Parsifal* at Covent Garden, and painting scenery for George Sanger's pantomimes at Astley's and Augustus Harris's spectacular pantomimes and melodramas at Drury Lane. Harker's many years of freelancing at various studios under the supervision of prominent London scene designers afforded him a breadth of training that greatly enhanced his proficiency in both designing and painting according to different styles and for different genres, ranging from Shakespeare to musical comedy.

After spending six years in Scotland, Dublin, and the United States—where he was employed to paint the backgrounds for large panoramas (open-air pictures) which were very much in vogue—Harker returned to London in 1888 and secured his first significant commission, which paved the way for the development of his professional career. In the autumn of 1888 he was hired to paint several scenes for Henry Irving's Lyceum production of *Macbeth*. Shortly afterwards, Irving, who had befriended Harker's father while the two had performed together in Edinburgh, furnished Harker the money to open his own painting studio and offered him work in subsequent Lyceum productions. From 1888 until Irving relinquished management of the Lyceum in 1899, Harker designed and painted dozens of sets for the Lyceum, including scenery for *King Lear*, *Cymbeline*, and *Henry VIII*.

Harker's prestigious position as a principal scenic artist for Irving garnered him other commissions during the 1890s from some of London's prominent theatre managers, including George Alexander at the St James's Theatre, Richard D'Oyly Carte at the Savoy, and Herbert Beerbohm Tree at the Haymarket. By 1900 he had secured a reputation as one of the leading scene painters and designers for the British stage. Because he preferred to work as an independent scene artist and not as a stock artist for any one particular house, he received commissions to design scenery from almost every London theatre manager. In addition to providing scenery for more than half of Beerbohm Tree's sixty-odd productions at Her Majesty's Theatre between 1898 and 1917, Harker also designed scenery for Otho Stuart at the Adelphi and the Court, John Vedrenne at the Comedy and the Savoy, George Grossmith at the Shaftesbury and Winter Garden, and George Edwardes at the Gaiety and Daly's. His prolific output as an independent scenic artist was aided by his collaboration with his four sons, who joined the scene studio some time after 1910, and their partnership earned special recognition for their expert designs of oriental settings, including those for *Kismet* (1914), *Cleopatra* (1925), and *Chu-Chin-Chow* (1916), the latter regarded by Harker's contemporaries as his finest work. By the time of his death in 1927, his studio (which was later named Harker, Homan, and Bravery Studios Ltd, and continued in business until the 1950s) had provided scenery for most of London's major theatres and managers.

As a master scenic artist of the Victorian and Edwardian eras, Harker, like the other prominent contemporary scene designers with whom he was ranked (Hawes Craven, Walter Hann, and William Telbin), worked according to a scenographic tradition of pictorial realism, which equated the proscenium arch to a frame in which the painted setting represented 'real' environments and locales. Applying the principles of realistic scene painting required that Harker depend on visual source material based on direct observations of natural and geographical environments or on research in historical and archaeological facts, but his designs were not merely photographic realism *per se*, for they were governed by his careful selection and manipulation of compositional details that created stage pictures that served myriad illustrative ends, from showing character psychology to vivifying dramatic atmosphere. Harker, believing in the primacy of the scene painter in creating visual effects, preferred to design and paint sets without three-dimensional pieces, advocating instead the use of drops painted to simulate three-dimensional detail. He excelled particularly in painting realistic exterior settings with vibrant colours and sunlight effects; J. Comyns Carr, recalling Harker's designs, remarked that 'the foliage of the trees seems actually to move in the breeze' (Harker, 198).

Towards the end of Harker's career, the pictorial aesthetic that had long governed his profession and dominated the Victorian and Edwardian theatres was being challenged by the new stagecraft of Poel, Appia, and Craig, who advocated non-illusionistic, non-representational settings. Harker remained a strong proponent of traditional stagecraft, and in 1924, when the new scenography was gaining increasing supporters, he wrote his memoirs, *Studio and Stage*, devoting over half of it to criticism of the new stagecraft and a defence of scenic realism and scene painting.

Harker died on 15 April 1927 at his home at 4 Lyndhurst Road, Hampstead, and his ashes were interred on 19 April at Golders Green crematorium. B. A. KACHUR

Harkes, Garbrand (*fl.* 1539–1590). *See under* Garbrand, John (1541/2–1589).

Harkey, Joan (*d.* 1550), prioress of Ellerton, may well have come from a parish gentry family in the North Riding of Yorkshire. At an unknown date she became a Cistercian nun and subsequently prioress of the very small convent

of Ellerton in Swaledale. At least one other of her nuns derived from a similar background, Agnes Aslaby being possibly able to claim descent from William Aslaby, one of the putative founders of the priory in the late twelfth century. Life cannot have been easy in the early Tudor period for a tiny community of only six religious in an inadequately endowed house which could count on an income of no more than £15 10*s.* per annum, and the nuns had difficulty in observing the rule. At their visitation in February 1536 Cromwell's commissioners reported that Cecily Swale had given birth to a child and was seeking release from her vows. Ellerton immediately became vulnerable on the passing of the act authorizing the dissolution of religious houses with an annual income of less than £200 per annum, and on 18 August 1536 Joan Harkey surrendered her house to the crown. At this early stage of the dissolution only heads of houses qualified for compensation, with pensions calculated in proportion to the total revenues of the house, with the result that the prioress gained a very meagre allowance of £3 per annum and the rest of her sisters nothing at all. It may partly have been because of this lack of provision for the rest of the community that several of the Ellerton nuns chose to move to larger Yorkshire nunneries which had won a temporary respite; Agnes Aslaby and Elizabeth Parker transferred to Nun Appleton Priory, and Cecily Swale, despite her alleged desire to abandon the religious life, joined the nunnery at Swine.

On losing her office Joan Harkey moved to the nearby town of Richmond where she lived in retirement for a further fourteen years. On 8 April 1550 she made her will as Dame Joan Harkey of Richmond, consigning her soul to almighty God, and beseeching the Virgin Mary and all the saints in heaven to pray for her before requesting burial in the parish church. She gave 6*d.* to every priest in Richmond, double that to Sir John More and Sir Gabriel Loftus, a former monk of Kirkstall Abbey; and 20*d.* each to Sir Cuthbert Hutchinson and Sir William Loftus. Her natural family did not concern her overly much at this time: Christopher Harkey's son, perhaps her nephew, received 20*d.*, Cecily Conyers a silver spoon, and her daughter Emmot a spruce coffer. Instead her thoughts turned to her former community and she bequeathed 12*d.* each to four of her sisters in religion, Dame Alice Tomson, Dame Cecily Swale, Dame Agnes Aslaby, and Dame Elizabeth Parker, and appointed as her executor another former nun, and possibly also a one-time member of Ellerton Priory, Dame Margaret Dowson, whom she charged with disposing of the residue of her estate for the health of her soul. Her possessions, which included two brass pots, some pans and pewter dishes, a basin and ewer, two little chests and a coffer, fire irons, a chair and three cushions, an 'evil' feather bed and bedding, an ambry, a kirtle, a coat, and other linen gear, were valued at a mere £3 12*s.* 4*d.* She had died before 22 July 1550 when grant of probate was made.

Harkness, Edward Stephen (1874–1940), philanthropist, was born on 22 January 1874 in Cleveland, Ohio, USA, the second son and youngest of the four children of Stephen Vanderburg Harkness (*d.* 1888), businessman, and his second wife, Anna M. Richardson (*d.* 1926) of Dalton, Ohio. Stephen Harkness, one of the six original stockholders in John D. Rockefeller's Standard Oil Company, had amassed a large fortune, and after his death his widow moved with her family to New York city. Harkness was educated at St Paul's School, Concord, New Hampshire, and after graduating from Yale University in 1897 he joined his brother, Charles, in New York, helping him to administer the family investments. In 1904 he married Mary (*d.* 1950), daughter of Thomas Edgar Stillman, lawyer, of Brooklyn, New York. There were no children.

The Commonwealth Fund was set up in 1918 by Anna Harkness with an endowment of $10 million, in order to pursue humanitarian goals, with Edward as president (Charles had died in 1916). Harkness was particularly interested in child welfare, and the fund helped to establish child guidance clinics in a number of large cities to finance research into child psychology and to train teachers in child guidance work. It also helped to build rural hospitals from 1926.

Harkness had become interested in medical research, convinced that medicine should prevent disease and not just cure it. Elected to the board of trustees of Presbyterian Hospital in New York in 1910, he offered a $1,300,000 endowment to enable the hospital to affiliate with Columbia University College of Physicians and Surgeons, in order to create a medical centre combining the services of a large hospital with medical education and research—a very new idea at the time. The two institutions were affiliated in 1911, and Harkness and his mother later bought a 22 acre site on Washington Heights for the new Columbia-Presbyterian Medical Center, which opened in 1928, when Columbia University conferred an honorary LLD on him. He continued to make donations, including a $4½ million endowment for the medical centre in 1930, and $5 million for the construction and endowment of the Institute of Ophthalmology, which opened in 1933.

Another major beneficiary of the Harkness fortune was education. Harkness, concerned at the growing size of American colleges, wanted to create small residential units on the lines of Oxford and Cambridge colleges. The presidents of Harvard and Yale had been thinking along similar lines, but had found it difficult to persuade their trustees. After his offer of funds was turned down by Yale, the 'house plan' was launched at Harvard by President Lowell in 1928, with the help of $10 million of Harkness

Edward Stephen Harkness (1874–1940), by James Russell & Sons

money, making Harkness the greatest benefactor to Harvard in the history of the college. In 1930 Yale accepted $16 million from Harkness to build eight residential quadrangles. He also gave $5 million to Phillips Exeter Academy, a leading boys' boarding-school, to enable the reorganization of the school curriculum according to the 'conference' system of teaching, with students seated around what came to be known as Harkness tables.

Harkness was very proud of his Scottish ancestry—he was descended from William Harkness, who left Dumfries for Massachusetts in 1716—and had great admiration for the people and institutions of the British Isles. He was convinced that the future of civilization depended on better understanding between Britain and the United States, and to this end in 1925 the Commonwealth Fund established twenty two-year fellowships, to be awarded annually to British or Commonwealth graduates from British universities for postgraduate study and travel in the United States, intended to parallel the Rhodes scholarships offered to Americans. The scheme was later extended to British civil servants. The London Child Guidance Clinic and the Child Guidance Council were also set up by the Commonwealth Fund.

The Pilgrim Trust, based in Britain, was established in 1930 with a £2 million gift from Edward Harkness. He imposed no conditions on how the gift was to be spent, although he did appoint the original trustees, and the first chairman, Stanley Baldwin. The first grant was to help the Educational Settlement Association extend its work in areas of high unemployment, and social service continued to be one of the main beneficiaries, with grants to boys' clubs, training ships, children's homes, and day nurseries. The other main activity was the preservation of Britain's heritage, with grants for the repair and restoration of churches, including the lady chapel in Ely Cathedral, and the housing of archives, including the conversion of the monastic kitchen in Durham Cathedral into a muniment room.

Harkness gave generously to various British institutions, including the Shakespeare Memorial Theatre at Stratford upon Avon, Oxford University, and the University of St Andrews, where he helped to restore the collegiate system, and was awarded an honorary LLD in 1926. In recognition of his generosity to Great Britain, Harkness was invited to the coronation of George VI, and was received at Buckingham Palace.

A modest, unassuming man, Harkness hated publicity. He devoted his life to spending his vast inheritance for the benefit of mankind, giving all proposals his personal attention. Although he disapproved of reckless spending—'a dollar misspent is a dollar lost, and we must not forget that some man's work made that dollar' (Irvine, 7)—he also once said, 'what's the use of having money if you can't have the fun of spending it' (Lamb, 333). Harkness gave away $130 million during his lifetime. He died on 29 January 1940 at his New York home, 1 East 75th Street, and was buried at Woodlawn cemetery, New York. His wife survived him. He was believed to have left more than $100 million. ANNE PIMLOTT BAKER

Harkness, Margaret Elise (1854–1923), author and journalist, was born on 28 February 1854 at Great Malvern, Worcestershire, the second of five children of Robert Harkness (1826–1886), a Church of England clergyman, and Elizabeth Bolton Toswill (1821–1916). At the time of her marriage to Robert Harkness, Elizabeth, whose maiden name was Seddon, was a widow with a daughter. Margaret's mother was related to the family of Beatrice Potter, later Webb; Margaret and Beatrice were second cousins. Her father's family was related through marriage to George Henry Law, bishop of Bath and Wells, and this connection may be in part responsible for Margaret

Harkness's decision to adopt the pen name of John Law for most of her published work.

Harkness was educated at home, although at the age of twenty-one she was sent to Stirling House, a finishing school in Bournemouth. From there she went to London in 1877 to be trained as a nurse at Westminster Hospital. On completion of her training she took up a post at Guy's Hospital, although letters of the time suggest she had little aptitude for the nursing profession. Some time early in the 1880s, therefore, she decided to try to earn her living by her pen, perhaps prompted by Beatrice Potter, who, with her sister Kate, helped Harkness financially and introduced her to a circle of intellectuals whose chief meeting-place was the reading-room of the British Museum.

Harkness now began to take an increased interest in radical politics, and her direct experience of poverty in London's East End, together with her friendship with such women as Eleanor Marx and Annie Besant, helped shape her growing conviction that socialism offered a solution to the problems of social inequality, poverty, and hardship which she saw about her. She was for a short time a member of the Social Democratic Federation, and through her membership met Henry Champion (1859–1928), John Burns, and Tom Mann, with all of whom she would work during the London dock strike of 1889. Her major contribution to the strike was her visit to Cardinal Manning on 5 September 1889, which may have been instrumental in persuading him to intervene. When she came to write of her experiences of working in the labour movement, in *George Eastmont: Wanderer* (1905), she dedicated the book to 'the memory of His Eminence Cardinal Manning with whom the author was associated during the Great Dock Strike of 1889'.

By the time of the strike Harkness was the author of two novels. The first, *City Girls* (1887), had drawn favourable comments from Engels, to whom she had sent a copy. Her second and finest novel, *Out of Work* (1888), is concerned with key events in London during jubilee year, especially the famous occasion of 'bloody Sunday', the march of the unemployed on 13 November 1877 which ended with police charging the crowd that had assembled in Trafalgar Square. One man was killed, many injured, and Burns was arrested and then sentenced to six weeks' imprisonment. Harkness puts the occasion to good use in her novel.

In 1888 Harkness also published in book form a series of articles she had edited for the *British Weekly: a Journal of Social and Christian Progress* on the temptations awaiting young men and women in London. From this came her best-known work, originally called *Captain Lobe: a Story of the Salvation Army* and republished two years later under the title by which it is still known, *In Darkest London*. In 1890 she published *A Manchester Shirtmaker*, based on a short stay in that city. She also worked in Scotland in 1887 and 1888 as a contact for Champion with the Scottish miners' leader Keir Hardie. Other trips took her out of England, to Germany, and then in 1891 to New Zealand and Australia, where, after a brief return, she seems to have stayed for some years.

After that Harkness's movements become increasingly difficult to trace. From 1906 until the outbreak of the First World War she appears to have spent most of her time in the Indian subcontinent. Annie Besant seems to have introduced her to Theosophy, which led her to attend the annual convention in Madras in 1907. However, she soon became more interested in Indian nationalism and set out to explore Indian life: *Glimpses of Hidden India* (1909), revised and reissued under a new title, *Indian Snapshots* (1912), tells something of her wanderings. By now she had abandoned socialism—conjecturally as a result of the failure of her relationship with Henry Champion—in favour of the ideals of the Salvation Army. Her last known work, *A Curate's Promise: a Story of Three Weeks, September 14–October 5 1917* (1921), recounts a curate's decision to join the Salvation Army rather than become an army chaplain. During her last years she lived in France and then Italy. She died at the Pensione Castagnoli in Florence on 10 December 1923. JOHN LUCAS

Harkness, Robert (1816–1878), geologist, was born at Ormskirk, Lancashire, on 28 July 1816, the son of Richard and Ellen Harkness. He was educated at Dumfries high school and Edinburgh University (1833–4) where he studied under Robert Jameson and J. D. Forbes. Between 1834 and 1848 he lived in Ormskirk, where he investigated the geology of south Lancashire. In the latter year he and his father moved to Dumfries.

Harkness's first scientific paper, read before the Manchester Geological Society in April 1843, was entitled 'The climate of the Coal epoch'. However, much of his work centred on south-western Scotland, where he discovered Permian reptile footprints in the local breccias and sandstones. In the Lower Palaeozoic rocks of the southern uplands he discovered fourteen new species of graptolites. Indeed, Harkness worked out the structure of the southern uplands of Scotland and the north of England as well as identifying the metamorphic rocks of north-western Ireland and Scotland. In conjunction with Professor H. A. Nicholson, he did much to clarify the structure of the graptolitic deposits of the Coniston series.

In 1853 Harkness was appointed professor of geology in Queen's College, Cork. In 1854 he was elected fellow of the Royal Society of Edinburgh, and in 1856 of the Royal Society of London. In 1876 he was required to add substantially to his teaching load, and this seriously damaged his health. He had just resigned his chair, and was on his way to visit his sister in Penrith when he died, unmarried, on 5 October 1878, in a Dublin hotel. He was buried in Penrith. Harkness was a sound reasoner, an acute observer, an excellent teacher, and an enthusiast in his work, and was valued as a cheerful and generous colleague. He published more than sixty papers. Wealth at death under £6000 effects in England: probate, 5 Dec 1878, *CGPLA Eng. & Wales*

Harland, Sir Edward James, baronet (1831–1895), shipbuilder, was born on 15 May 1831 in Scarborough, the fourth of six sons (the third of whom died in infancy) and seventh of ten children of Dr William Harland, physician, a close friend of the engineer George Stephenson, and his wife, Anne, daughter of Gowan Peirson of Goathland, Yorkshire. He was apprenticed to Robert Stephenson & Co. at Newcastle from 1846 to 1851. Through his uncle, Dr Thomas Harland, he got to know Gustav Christian Schwabe, a partner in the Liverpool shipping company of John Bibby & Sons. Schwabe arranged for him to work for the Clyde engineering and shipbuilding firm of J. and G. Thomson, who were building ships for Bibby. He returned to the Tyne in 1853 to manage a shipyard, leaving the following year to take up a similar post at Robert Hickson's shipyard in Belfast. Here he quickly became notorious for his stern management, which turned the shipyard round, allowing it to survive the financial embarrassment of the owner in 1855. Two years later he recruited Gustav Wilhelm Wolff, Gustav Schwabe's nephew, as his personal assistant. In 1858 he purchased the yard, renaming the business Edward James Harland & Co. Immediately Bibby placed a contract for three boats. They were so pleased with these that they ordered a further six vessels in 1860 of novel long design, with a narrow beam and flat bottom, which earned them the nickname of 'Bibby's coffins'. Harland and Wolff went into partnership in 1861 to form the company of that name.

Over the next thirty years the shipyard prospered. Building on the technical success of the Bibby ships, the partners established a strong relationship with the White Star Line of Thomas Ismay, Cunard's principal competitor on the north Atlantic. In 1879–80 the partners added an engine works to their enterprise and the following year equipped the yard to handle the newly introduced open-hearth steel. By this time most of the contracts were being negotiated by William James Pirrie, who had become a partner in 1874. During the home rule crisis in 1885, Harland made secret preparations to withdraw to mainland Britain if the situation became intolerable. This proved unnecessary and massive investment followed to provide facilities for the construction of the latest generation of Atlantic liners. In 1891, when shipbuilding was distressed, Harland was persuaded to introduce a system of cost plus contracts for favoured customers which secured a large volume of business over the next four years.

The success of the shipyard depended on improvement to the Lagan waterway made by Belfast harbour commissioners. Harland served as a commissioner from 1875 and was chairman from 1875 to 1885. Although a unionist in politics, he tried to pursue a policy of non-discrimination in the shipyard, strained by the sectarian troubles in 1864 and in 1884–5. He was mayor of Belfast in 1885–7 and helped co-ordinate the campaign against the Home Rule Bill. He was elected MP for North Belfast in 1887, moving to London but rarely speaking in parliament. He was knighted in 1885 and created a baronet later the same year.

A Presbyterian, Harland was a member of the First Congregation in Rosemary Street, Belfast. In January 1860 he married Rosa Matilda, of Vermont, near Belfast, the daughter of Thomas Wann, a stockbroker and insurance agent. They had no children and the baronetcy became extinct when Harland died on Christmas eve 1895 at his Irish home, Glenfarne Hall, near Enniskillen, co. Leitrim.

Harland, Henry (1861–1905), novelist and journal editor, mythologized his origins, claiming a St Petersburg birthplace. The son of Thomas Harland (1830–1900), then a journalist on the *New York World*, and Irene Jones Harland (1839–1925), and the only one of three children to survive childhood, he was born in Brooklyn on 1 March 1861. Young Harland attended Brooklyn city schools, then from 1877 the College of the City of New York, leaving without a degree to study briefly at Harvard divinity school (1881–2). Further fabricating his past, he later claimed a *baccalauréat* from the University of Paris.

Harland's first employment was as tutor to two boys in Manhattan, after which he travelled abroad. In Rome he became, at least emotionally, a Roman Catholic. Returning home he became a clerk, writing in his spare time: his novel *Grandison Mather* (1889) exploits that experience. His attraction to Jewish life in New York, which he saw as exotic and picturesque, led to his earliest efforts in fiction. Despite unpromising prospects he married on 5 May 1884 the musically talented Aline Herminie Merriam (1860–1939). They had no children. Her interests were reflected in Harland's first novel, *As it was Written: a Jewish Musician's Story* (1885), published under a seemingly Jewish pseudonym, Sidney Luska. Its earnings enabled the couple to divide their time between New York and Paris, during which period Harland wrote two further 'Jewish' novels, *Mrs. Peixada* (1886), and *The Yoke of the Thorah* (1887). Exposure of his identity ended his career as Sidney Luska.

Late in 1889 the Harlands moved to London, where Harland began to write, one acquaintance quipped, as 'a lemonade Henry James'. Fame followed a chance meeting with Aubrey Beardsley in the offices of a physician treating both men for tubercular symptoms. In collaboration they devised a hard-cover quarterly, the *Yellow Book*, which

would display what they saw as the quintessence of contemporary art and literature, with the gifted Beardsley creating as well as acquiring the art, and Harland procuring and editing the letterpress portion. John Lane of the Bodley Head became the publisher, and the first number appeared to great acclaim in April 1894. From the beginning Harland demonstrated his shrewdness as editor in the writers he solicited as contributors, who ranged from the eminent and safe to the upcoming and experimental. Although the quarterly opened with a novella by Henry James and art by J. S. Sargent, critics sniffed scandal in the yellow covers, used in France for racy novels, and in the artifice of Max Beerbohm and Beardsley himself. Other writers who appeared during its abbreviated life were such representatives of respectability as Edmund Gosse, William Watson, Richard Garnett, and George Saintsbury, and, as their modish antithesis, George Moore, Frederick Rolfe (Baron Corvo), John Davidson, and Arthur Symons.

The *Yellow Book* might have lived down abuse as precious and depraved, had Oscar Wilde not been described on his arrest a year later as carrying 'a yellow book'. The Bodley Head offices were stoned, and Beardsley—who had refused Wilde a place in the publication—was sacked by Lane to save the journal.

When the *Yellow Book* expired in 1897, Harland, now jobless, resumed writing novels, often suffused with Romanism. He and Aline were received into the Roman Catholic church in 1898, inspiring his novel *The Cardinal's Snuff-Box* (1900). Its popular success financed stays in France and Italy as Harland's tuberculosis worsened. Two novels with a Roman Catholic ambience followed, *The Lady Paramount* (1902) and *My Friend Prospero* (1903), with fashionable ladies and transparent questions of identity.

Slight, moustached, and bearded in mid-life, as he was drawn by Beardsley, Harland at the end was wan, spectacled, and clean-shaven. His last novel, *The Royal End* (1909), unfinished at his death in San Remo, Italy, on 20 December 1905, was completed by his widow. Aline added a further fiction by referring to her late husband as Sir Henry, and to herself as Aline, Lady Harland. After initial burial in San Remo cemetery the day he died, Harland was reburied on 1 March 1906 at Yantic cemetery, Norwich, Connecticut.

Harland's enduring claim to significance lies in his packaging of a publication that, although no manifesto of a movement, became the model for future reflections of aesthetic moments in time. The *Yellow Book*, as exemplar of later periodicals with similar ambitions, has, as a metaphor, remained alive. STANLEY WEINTRAUB

Wealth at death seemingly little; widow sent begging letters to publishers

Harland, John (1806–1868), journalist and antiquary, was born at Hull on 27 May 1806, the eldest child of John Harland and his wife, Mary, the daughter of John Breasley of Selby. He was apprenticed to Messrs Allanson and Sydney, the proprietors of the *Hull Packet* newspaper, in 1821 to learn letterpress printing. He quickly achieved promotion, taught himself shorthand, and became a reporter. In 1825–6 he designed his own system of shorthand and became the most expert shorthand writer in the country at that time. This brought him to the notice of John Edward Taylor of the *Manchester Guardian*, who travelled to Hull to secure his services; he moved to Manchester in November 1830.

Harland soon placed the *Guardian* at the head of the provincial press because of his full and reliable reporting. He exhibited remarkable endurance in the pursuit of his profession, undertaking long journeys and writing out the notes of the day in the stagecoach. He presided over the reporting staff of the *Guardian* until 1860, when he retired, owing to lameness. He had for several years used crutches.

Harland was married twice, first in 1833 to Mary (*d.* 1840), the daughter of Samuel Whitfield of Birmingham, and then in 1852 to Eliza, daughter of Joseph Pilkington of Manchester. He had four children by his first marriage and five by his second. Although raised as a member of the Church of England, he became a Unitarian in 1828 and was for some time a Sunday school teacher.

Harland possessed an extensive knowledge of early English history, was skilled at medieval Latin, and was at that time one of the foremost antiquaries in Lancashire. He was elected a fellow of the Society of Antiquaries and was on the council of the Chetham Society, for which he edited fourteen volumes, mostly relating to Manchester. He was also a founder member of the brotherhood of Rosicrucians. He published independently a collection entitled *Ballads and Songs of Lancashire* (1865) and, in conjunction with T. T. Wilkinson of Burnley, *Lancashire Folklore* (1867). He was in the process of a major revision of Edward Baines's *Lancashire* at the time of his death. Harland died on 23 April 1868 at Bride Oak Street, Cheetham, Manchester, and was buried at Rusholme Road cemetery.

Wealth at death under £9000: probate, 12 May 1868, *CGPLA Eng. & Wales*

Harland, Sir Robert, first baronet (*c.*1715–1784), naval officer, son of Captain Robert Harland RN, entered the service on 10 February 1729 as a volunteer per order in the *Falkland* (50 guns). After serving as able seaman, master's mate, and midshipman in the *Dreadnought*, *Suffolk*, *Hector*, *Greyhound*, and *Romney* on the home, Lisbon, and Mediterranean stations he passed his lieutenant's examination on 11 July 1735. He was at this time described as 'upwards of 20' but it may be assumed that he was, in fact, under age, since his father was one of his examiners.

Harland's first commission appears not to have been until 25 February 1742 when he became third lieutenant of the *Weymouth*; from her he was appointed to the *Princessa*, in which he was present in the action off Toulon on 11 February 1744; and a few days afterwards he moved into the *Namur* as first lieutenant. On 4 January 1745 he was promoted to the command of the fireship *Scipio*; and on 19 March 1746 he became captain of the *Tilbury* (60 guns), in which he took part in Hawke's engagement with *L'Étenduère* off Cape Finisterre on 14 October 1747. He was then appointed to the *Nottingham* (60 guns), in succession to Captain Philip Saumarez, who had been killed in the 14 October action.

On 31 January 1748, while with Hawke's squadron off Ushant, Harland in the *Nottingham* and Captain Charles Stevens in the *Portland* (50 guns) intercepted and, after a six-hour engagement, captured the French ship *Magnanime* (74 guns) limping back to Brest after being dismasted in a gale.

During the peace after 1748 Harland commanded the *Monarch* guardship at Portsmouth. On 1 November 1749 he married a daughter of Colonel Rowland Reynold, with a fortune of £40,000. They had three daughters and a son, Robert.

After the outbreak of hostilities Harland was again at sea, from 20 March 1755, in the *Essex*, cruising in the channel and the Bay of Biscay. On 23 May 1758 he was appointed to the *Conqueror* (70 guns), and the following year he was sent into the Mediterranean with Boscawen. At Gibraltar he exchanged into the *Princess Louisa* (60 guns), in which he took part in the battle of Lagos on 18 August 1759.

On 18 October 1770 Harland was promoted rear-admiral of the blue, and in the following March he was created a baronet, and, with his flag in the *Northumberland*, went out to the East Indies as commander-in-chief, a post which he held until 1775. On 7 December 1775 he became vice-admiral of the blue, and in 1778 vice-admiral of the red. He hoisted his flag on board the *Queen* (90 guns) as second in command of the Channel Fleet under Admiral Augustus Keppel at the battle of Ushant on 27 July 1778, during which Harland commanded the van, and Palliser the rear, and in the October cruise. On 10 May 1779, after siding with Keppel at the time of his and Palliser's courts martial, he resigned his command. Under Lord Sandwich's administration he had no further command, but on the change of ministry he was appointed on 27 March 1782 to the Board of Admiralty under Keppel. On 8 April he became admiral of the blue. He quitted the Admiralty, with Keppel, on 28 January 1783, and on 21 February 1784 he died at Sproughton, near Ipswich. His son, Robert (1765–1848), succeeded to the baronetcy.

Harland, Sydney Cross (1891–1982), agricultural botanist and geneticist, was born on 19 June 1891 at Snainton, near Scarborough, the son of Erasmus Harland and his wife, Eliza. He was educated at the municipal secondary school in Scarborough and at King's College, London, where he graduated in 1912 with honours in geology. He then took a job as a schoolmaster in the Danish colony of St Croix (later part of the US Virgin Islands). Within a year he became assistant to the director of an agricultural experiment station on the island, where he was given responsibility for investigating hybrids between local and North American cottons. So began a career which advanced understanding of the genus *Gossypium*, and successfully applied that knowledge to the breeding of improved varieties.

In 1915 Harland married Emily Wilson Cameron; the couple later had two daughters. Also in 1915 he moved to St Vincent as assistant agricultural superintendent. His studies on the genetics of cotton continued, and his published work from this period was recognized by the award of the London DSc degree. He returned to England in 1920 as head of botany at the British Cotton Industry Research Association (the Shirley Institute) in Manchester, but in 1923 he returned to the West Indies as professor of botany and genetics at the Imperial College of Tropical Agriculture, Trinidad. Here he resumed his field studies on cotton, and also became a skilled teacher.

Harland's reputation now attracted the attention of the Empire Cotton Growing Corporation (ECGC) and from 1926 to 1935 he took charge of cotton genetics at their new Trinidad research station. The outstanding success of his work during these years came from Harland's vision and originality, but it was also helped by the freedom and independence allowed him by the corporation. He gained an extensive knowledge of the world's cottons and established a classification of *Gossypium* based on genetic criteria, thus providing a new basis for breeding strategies. His achievements were academic as well as agricultural. He made contributions to the understanding of evolutionary processes and of speciation; his paper 'The genetical conception of the species' (1936) was of crucial importance. It was followed in 1939 by his only book, *The Genetics*

of Cotton, in which he described the results of his own research.

In 1934, after his first marriage had ended in divorce, Harland married Olive Sylvia Atteck, daughter of a prominent Trinidad family, and they had a son who later became professor of child health in the University of the West Indies.

Harland was affable and respected by close colleagues, but he could also be outspoken and obstinate. His contract with the ECGC came to an end during a time of disagreement in 1935, and he moved to Brazil as general adviser to the state cotton industry. In 1940 he went to Peru as director of the Institute of Genetics at Lima, and in 1949 he was appointed reader in genetics at Manchester University; he became professor of botany there in 1950. By this time his most productive research had been done, but he continued to travel widely to cotton growing regions in an advisory capacity. Within the university he insisted that genetics should feature largely in the curriculum of any student of biology in its broadest sense, and the introduction of genetical teaching for students of medicine and psychology was largely due to his influence.

Harland received many honours, including FRS (1943), FRSE (1951), honorary fellowship of the Textile Institute (1954), and an honorary DSc from the University of the West Indies (1973). He was also president of the Genetical Society from 1952 to 1955. He retired in 1958 and lived for some years on a small private estate in Peru where he bred tropical crops. But he never ceased to be a Yorkshireman at heart, and he finally returned to Snainton, his birthplace, where he died on 8 November 1982.

Wealth at death £56,668: probate, 29 March 1983, *CGPLA Eng. & Wales*

Harlaw, William (*c.*1500–1578), Church of Scotland minister, was born in Edinburgh, where he became a tailor in the Canongate. He was associated with the early stages of the movement for religious reform in Scotland and fled to England, where he is said to have been ordained a deacon. However, it is quite certain that he was never appointed a chaplain to Edward VI, as has also been claimed. Probably he has been confused with John Harley, later bishop of Hereford. Harlaw returned to Edinburgh on the death of Edward VI, unlike some of the more prominent Scottish reformers who fled to the continent. There he became one of the ministers who conducted services privately in the homes of evangelicals. Later he also preached in public, and, as the number of unofficial congregations grew, he travelled widely throughout the country. Denounced for preaching at Dumfries in 1558, he was summoned to appear before the lord justice at Stirling on 10 May 1559, when he was proclaimed a rebel along with Paul Methven, John Christison, and John Willock, for usurping the authority of the church in taking into his own hands the ministry within the burgh of Perth and places nearby. He may have come to know John Willock and other Scottish exiles during his stay in England; he certainly held similar theological views to theirs, which were greatly influenced by Zwingli and Bullinger.

Harlaw became minister of St Cuthbert's, Edinburgh, in 1560, and was a commissioner for St Cuthbert's along with Robert Fairley of Braid at the first general assembly, which began on 20 December that year. He was also present at the assembly of June 1562, his last recorded appearance there. He does not appear to have ever been appointed by a general assembly to undertake any duties on behalf of the church, but concentrated on his ministry within Edinburgh. On 25 June 1566, a supplication was presented to the assembly on behalf of Robert Stewart, commendator of Holyrood Abbey and patron of the benefice, for the appointment of a former canon of Holyrood as minister of St Cuthbert's in place of Harlaw. The assembly summoned some of the elders of the parish, who opposed this proposal because—according to the order of admission of ministers to parishes—the congregation had to 'elect' the presentee. The congregation was not prepared to do this, and Harlaw remained minister there. Following the death of the vicar, Archibald Hamilton, who had been in possession since at least 1547, Harlaw was presented to the vicarage under the privy seal on 6 February 1573. From 1574, however, he was overshadowed by the appointment of Robert Pont, one of the outstanding ministers of that era, as his junior colleague. On his death in 1578 Harlaw was succeeded by Pont. Nothing is known of Harlaw's wife, but she may have been English, as their grandson William, the son of Nathaniel, minister of Ormiston, became a minister in the Church of England. DUNCAN SHAW

Harlech. For this title name *see* Gore, William George Arthur Ormsby-, fourth Baron Harlech (1885–1964); Gore, (William) David Ormsby, fifth Baron Harlech (1918–1985).

Harley, (John) Brian (1932–1991), geographer and map historian, was born on 24 July 1932 in Ashley, Bristol, and spent some of his infant years in Oxford. On 15 March 1935 he was adopted by John Jack Harley (*b.* 1883), farmer, and his wife, Emily Louise Rogers (1890–1963), who lived in rural Staffordshire. He was given the name John Brian Harley. To his great delight, a few years before he died he met his natural mother, whom he had last seen on his fifth birthday. From 1943 to 1950 he attended the grammar school at Brewood near Wolverhampton, where the children exploited his family circumstances to make him miserable. However, he excelled at Brewood, gaining the school essay prize and representing the school at cross-country running and football.

Harley's two years of national service from 1950 to 1952

were spent in the army in Trieste, Egypt, and Cyprus and were a character-forming experience which surfaced occasionally in hilarious stories. Harley was not a favourite of the officer class: the army taught him to type as a punishment. Life at school and in the army left Harley with a strong sympathy for the underdog and contempt for those with status he felt they did not merit.

In 1952 Harley gained a place at Birmingham University. Personal distractions robbed him of his expected first in geography in 1955 but he won the W. A. Cadbury prize. Perhaps uncertain of an academic future, Harley decided to teach, gaining his DipEd from University College, Oxford, in 1956. He then returned, however, to Birmingham for graduate work on the historical geography of medieval Warwickshire under the supervision of Harry Thorpe, whose speciality was to study past landscapes through maps. He took inspiration from Rodney Hilton, then working on the social structure of medieval Warwickshire, and whose Marxism suited Harley's own political ideology. Harley graduated PhD in 1960, publishing an important paper on population and agricultural trends as seen through the hundred rolls of 1279 in the *Economic History Review* the year before.

Harley married Amy Doreen (1921/1922–1983), daughter of Frederick Chatten, a welder, at St Clement's Church, Nechells, Birmingham, on 14 December 1957. In the following September he began teaching at Queensbridge School, Moseley, but in the same month he was offered an assistant lecturership in geography at Liverpool University and took up the post in January 1959.

In Liverpool Harley turned to the history of cartography. His book *Christopher Greenwood, County Map-Maker* (1962), written at Hilton's suggestion, was a landmark in English map history. With the significant exceptions of one further paper on medieval Warwickshire and a chapter on 'England in 1850' in H. C. Darby's *New Historical Geography of England* (1973), virtually all his subsequent output was on maps and map makers. At first he concentrated on English mapping, mostly of the eighteenth and nineteenth centuries. His work on the Ordnance Survey gave him a reputation beyond the academic realm. He was influenced and supported by R. A. (Peter) Skelton, head of the map room at the British Museum, who pointed him towards the mapping of North America, notably during the American War of Independence, and through the career of William Faden.

Harley formed lasting associations at Liverpool: as he wrote soon after leaving, 'I shall always remember that the really formative years of my life were spent at Liverpool' (letter to Rôbert Steel, 7 Oct 1969). He even admitted to 'occasionally missing the very different world enshrined somewhere between the Senior Common Room and the last night of a field week', but in 1969 Harley resigned from Liverpool to become sponsoring editor with the publishers David and Charles in Newton Abbot. This was a bold move for a man with a wife and three children. Harley commissioned a substantial number of works in fields entirely new for David and Charles; yet he hankered after the academic life, and by March in the following year a chance to return presented itself.

The death of the Montefiore reader in geography at the University of Exeter in 1970 left a vacancy for a historical geographer which Harley was appointed to fill, initially as a lecturer but from 1972 as the Montefiore reader. His writing at Exeter was dominated by the history of the Ordnance Survey. His notes on the popular David and Charles reprints of the old series one-inch maps (with A. G. Hodgkiss) led to more substantial syntheses in a series of co-authored regional volumes of facsimiles, text, and carto-bibliography. He wrote *Ordnance Survey Maps: a Descriptive Manual* (1975) and wrote a substantial part of the official history of the Ordnance Survey, which appeared in 1978. In 1985 Harley graduated DLitt by accumulation from the University of Birmingham, an achievement of which he was particularly proud.

From the early 1980s Harley turned his attention to a philosophical view of maps and their meanings. By 1986 he had virtually completed a book-length manuscript, 'The map as ideology'. In contributions to journals, books, conferences, and symposia he revised his ideas and, shortly before he died, proposed a new book combining a selection of these essays with a guide to the map philosophy they expounded. This was published in 2001 under his own title, *The New Nature of Maps* (ed. P. Laxton). Harley showed how the map is more than a skilfully constructed artefact with geographical outlines. Absorbing ideas from art history and literary criticism, he revealed their hidden agendas: 'silences' that speak, names that have other levels of meaning, signs and icons with subliminal messages; some reflecting deliberate propaganda, most reflecting cultural values unacknowledged by either the map maker or his society. Harley showed maps to be not just passive mirrors of landscape and society but potent agents of governments and tools of propaganda.

Yet despite Harley's obvious distinction and notwithstanding a huge international body of admirers, he failed to secure promotion and recognition in the British academic world. His perceptive, often blunt, and sometimes angry observations on academic life gained him an unjustified reputation as a difficult colleague, despite his success in forming scholarly partnerships and his being a good administrator who served on the councils of several learned societies, including the Institute of British Geographers (1971–4). To professional frustrations were added personal tragedy: in 1983 his wife, Amy, died, followed less than a year later by his son John. Harley began to think of a new life in the USA. He was familiar with the country through fellowships and invitations to lecture (notably the Kenneth Nebenzahl lectures at the Newberry Library, Chicago, in 1974), but the main attraction was that in 1977 he and David Woodward, of the University of Wisconsin at Madison, had persuaded Chicago University Press to publish a multi-volume *History of Cartography* (1987–). This dominated the rest of Harley's life, particularly after 1986 when he was appointed full professor of geography at Madison's Milwaukee campus. This multi-disciplinary project involving some 130 scholars worldwide is the first

comprehensive history of maps in world cultures, a synthesis of existing and new research.

Harley continued his cartographic research outside the confines of the *History*. He was involved in controversies over the Columbus celebrations. He broadcast on the topic and wrote *Maps and the Columbian Encounter* (1990), the interpretative guide to a travelling exhibition of maps. He was due to give twelve public lectures on the topic in 1992.

Harley said that he wished to go out in full flood while lecturing. He did die suddenly and unwarned, of a heart attack as he arrived at his Milwaukee office on 20 December 1991. He was survived by his three daughters. He was cremated in December 1991 in Milwaukee, and his ashes were interred on 16 March 1992 at Highweek, Newton Abbot, Devon, after a memorial service. Harley's death deprived the *History of Cartography* project of his vision and panache, which would have come especially into their own in the volumes covering the eighteenth and nineteenth centuries, periods in which his authority was supreme. Bearded and with alert eyes, Harley was an utterly single-minded, formidably hard-working scholar. He judged people by the quality of their discourse and their capacity for conviviality. Beneath his strongly held views lay a characteristic uncertainty, covered by a self-mocking modesty which failed to hide his enthusiasm for both the chase and the writing. He always wrote well with an unfailing nose for the comic and tragic sides of early cartographic projects, and his lectures turned potentially abstruse subjects into an eye-opening delight.

Wealth at death £63,702—in England and Wales; most property presumably in America: probate, 11 June 1992, *CGPLA Eng. & Wales*

Harley [*née* Conway], **Brilliana**, Lady Harley (*bap.* 1598, *d.* 1643), parliamentarian gentlewoman, was baptized in 1598 at the English garrison at Brill, Netherlands (hence her unusual forename), the second daughter of Edward *Conway, first Viscount Conway and first Viscount Killultagh (*d.* 1631), of Ragley, Warwickshire, and Dorothy (*d.* 1612), daughter of Sir John Tracy of Toddington, Gloucestershire, the widow of Edward Bray of Great Barrington, Gloucestershire. Brilliana's father was lieutenant-governor of the cautionary town of Brill at the time of her birth and she, her sisters, Heilwaie and Mary, and brother, Ralph, were naturalized by private act of parliament in 1606.

Brilliana was the third wife of Sir Robert *Harley (*bap.* 1579, *d.* 1656) of Brampton Bryan, Herefordshire, whom she married in July 1623. The couple had three sons, Edward *Harley (1624–1700), Robert (1626–1673), and Thomas (*b.* 1628), and four daughters, Brilliana (*b.* 1629), Dorothy (*b.* 1630), Margaret (*b.* 1631), and Elizabeth (*b.* 1634), the sole child to die young. Little is known about Lady Harley's life before her marriage, but the survival of approximately 375 letters written mainly to her husband from 1623 and to her eldest son, Edward, from 1638 until her death in October 1643 provides a rich illustration of her married life. The letters have been widely cited as evidence of her domestic and maternal concerns, but as a staunch puritan and parliamentarian Lady Harley was also engaged in the religious and political debates of the time. Her letters constitute the most detailed single source of information about the outbreak of the civil war in Herefordshire from 1640 to 1643. They also record the active political role that she played as the senior representative of the Harley family in the county during the early 1640s.

Her letters reveal Lady Harley to have been a literate woman, well read in contemporary religious works, by her own account more at ease with reading French than English, and able to teach her sons Latin when the schoolmaster proved unreliable. With her letters she dispensed medicines, advice about health to her family, and gifts of food. When her husband attended parliament in the 1620s and the early 1640s, Lady Harley kept him informed about his family and estates as well as local political affairs. She also used her letters to pass on her own puritan beliefs to her children and as a vehicle for the transmission of news. Her letters to Edward at Oxford in the late 1630s reveal her disapproval of Laudian innovations in ceremonial and church decorations. The debates of the Long Parliament encouraged her to believe that the church would finally be fully reformed and in June 1641 she rejoiced at the progress of the root and branch bill to abolish episcopacy.

Lady Harley also organized the Harley family's response as local governors to national events during her husband's absence as one of Herefordshire's representatives to the Long Parliament. In the winter of 1640–41 she orchestrated the collection of information about the parish clergy in Herefordshire for the House of Commons committee for scandalous ministers. In June 1642, on the

instructions of Sir Robert, Lady Harley tried unsuccessfully to buy up arms from the royalist Croft family on behalf of the parliamentary commission for Irish affairs. As the civil war progressed she played an active role in maintaining the Harley estates and family influence in the county, including her successful resistance to the royalist siege of her home in the summer of 1643, which lasted for nearly seven weeks.

From the outbreak of the civil war in 1642 Herefordshire remained largely under royalist control and Lady Harley had to protect her family and dependants. In March 1643 she received the first formal demand from the sheriff to surrender Brampton Bryan Castle and its armaments to the royalists, which she refused. The siege was commenced under the command of Sir William Vavasour in late July 1643. Throughout it Lady Harley conducted a series of negotiations by letter, parley, and a petition to the king, in which she maintained that she and her family were faithful subjects, and that Vavasour should withdraw. These protestations were not entirely truthful, since she had arranged for the delivery of two horses and £500 worth of family plate to her husband for the parliamentarian war effort in the summer of 1642. In June 1643 her elder sons, Edward and Robert, had joined Sir William Waller's forces in the west of England and Lady Harley had encouraged local recruits to join them, furnishing one man with a horse worth £8. She had also offered refuge at Brampton to local parliamentarians, and had taken some fifty soldiers into the house for her own defence, in effect turning it into a garrison.

Lady Harley's strategy of spinning out the negotiations was successful and in early September Vavasour's men were called away to the siege of Gloucester. Sir Robert then advised his wife to leave Brampton, but she was unwilling to do so without a guarantee of safe conduct. Instead Lady Harley took decisive action to forestall a renewal of the siege. The troops under her command compelled her tenants to level the earthworks raised by the royalists, neighbours who had been active supporters of the siege were plundered for 'necessities', and Lady Harley ordered forty of her soldiers to attack a royalist camp 4 miles away at Knighton. In one of her last letters to her husband, in October 1643, Lady Harley described the foundation of her resistance to the royalists as the desire to defend Harley property and to preserve the influence of the godly in Herefordshire. She died at Brampton Bryan on 29 October 1643. Lady Harley's actions were a response to the demands of civil war in the mid-seventeenth century, but they were also an integral part of the political and social role of élite women, which can be traced back to the later middle ages, if not earlier.

Harley, Sir Edward (1624–1700), politician and parliamentarian army officer, was born on 21 October 1624 at Brampton Bryan, Herefordshire, and baptized there on 24 October. He was the third but first surviving son of Sir Robert *Harley (*bap.* 1579, *d.* 1656), politician, and the first son with his third wife, Brilliana, Lady *Harley, *née* Conway (*bap.* 1598, *d.* 1643), parliamentarian gentlewoman, the second daughter of Edward Conway, first Viscount Conway. After attending school in Shrewsbury and Gloucester, Edward Harley matriculated in 1638 from the puritan Magdalen Hall, Oxford. He took with him as his servant George Griffiths, who later became a noted Welsh divine. In 1640 he left Oxford to join his father in London, and in 1641–2 he attended Lincoln's Inn.

By 1643 Harley had joined the parliamentarian army under Sir William Waller, commanding a troop of horse, and by the following year he had raised and taken command of a regiment of foot. He distinguished himself particularly in the conflict at Redmarley, near Ledbury, on 27 July 1644, where, according to John Corbet, he routed the enemy's cavalry and captured nearly all the foot, receiving a wound in the process. Having been appointed governor of Monmouth in the same year, he was given command of a foot regiment in the New Model Army in April 1645. In the conflict between Prince Rupert and Colonel Massey in Ledbury that same month he was once again wounded. Appointed governor of Canon Frome, a garrison near Hereford, in August 1645, he was recommended in the following January to the committee of both kingdoms to hold some command or employment worthy of him in that county. Consequently he was soon made general of horse for the counties of Hereford and Radnor, and he later served as one of the commissioners appointed to treat for the surrender of Exeter and Oxford.

On the removal from the Commons of Humphrey Coningsby, member for Herefordshire, Harley was elected in his place in November 1646, defeating Colonel John Birch, governor of Hereford. In September that year he had backed a plan to disband Birch's Herefordshire forces. He strongly resisted the growing influence of the military in politics and achieved notoriety in the eyes of his army colleagues on 29 March 1647 when he informed the Commons of the continued circulation of an army petition of grievances condemned by Westminster, prompting parliament's declaration of dislike against the army. His attempt to win his regiment to service in Ireland having failed, he had resigned his command by June. In the same month and on grounds of his behaviour in March, he was among the eleven presbyterian MPs against whom the army presented charges of impeachment, and with those MPs he withdrew from the Commons. Having retaken his

Sir Edward Harley (1624–1700), by Samuel Cooper

seat in the following year, he was excluded and arrested, alongside his father, at Pride's Purge in December 1648. Released in February 1649, both men remained objects of suspicion to the Cromwellian regime.

In August 1650 Edward was summoned by letter from Major Stephen Winthrop at Leominster to appear at Hereford before the commissioners of the militia. His papers were searched, and after appearing before the authorities in London he was briefly detained and banished from Herefordshire. Even so in 1654 he was appointed to the county's committee for scandalous ministers and made a JP two years later. On 26 June 1654 he married Mary, daughter and coheir of Sir William Button of Parkgate, Tawstock, Devon, with whom he had four daughters. He rebuilt the church at Brampton Bryan, which had been damaged during the civil war, in 1656 and augmented the living there and at Leintwardine, Wigmore, Leinthall Lingen, Knighton, and Stow, where following his father he promoted puritan ministers. At the elections for the second protectorate parliament in 1656 he was again returned for Herefordshire, despite the combined efforts of the local sheriff and major-general to rig the contest. Nevertheless when parliament met in September he was promptly purged by Cromwell as one of the members who had signed a remonstrance against the protector's rule. In February 1660 he resumed his seat in the Long Parliament with the secluded members and was elected to the council of state.

Having been returned for Herefordshire to the Convention Parliament in April 1660, Harley met Charles II at Dover in May, and on the recommendation of General Monck was appointed governor of Dunkirk. During the short time he held the office he much improved and strengthened the town, aware that the French intended to take it by surprise. He strenuously opposed the mooted sale of the port to the French and proposed an act of parliament to declare it inalienable. With the government well aware that he would never willingly hand over the port, he was honourably discharged from the post in May 1661, the king having acknowledged his prudent management. It was said that Harley had supported the garrison at his own expense, and he informed Charles that the stores he left were worth more than the £500,000 the French were to pay for the port in the following year. According to family tradition he was offered a peerage in the coronation honours in April 1661 but preferred to be made a knight of the Bath. On 25 February 1661 he married Abigail, daughter of Nathaniel Stephens of Eastington, Gloucestershire. The couple had four sons and a daughter: Robert *Harley, first earl of Oxford and Mortimer (1661–1724), Edward *Harley (1664–1735), Nathaniel (1665–1720), Brian, who died in infancy, and Abigail (1664–1726).

Soon after 1660 Harley built a new brick house at Brampton Bryan, adjoining the ruined castle. He also reclaimed the ancient deer park, which had been 'wholly laid open and destroyed' during the civil wars (*Letters*, ed. Lewis, 230). Further damage had been inflicted during the storm which coincided with the death of Oliver Cromwell on 3 September 1658. He reportedly complained:

> I wish the devil had taken him any other way than through my Park, for not content with doing me all the mischief he could while alive, he has knocked over some of my finest trees in his progress downwards. (Sidebotham, 21)

Looking back in 1673 he referred to the many years when his estate was a 'waste region of the shadow of death' but now restored to 'a goodly heritage' (*Letters*, ed. Lewis, 245). Together with his sons he took considerable pains to establish a fine garden adjoining his new house and in 1692 contemplated employing a royal gardener, George London, to 'make a draught of what he thought the place capable of' (*Portland MSS*, 3.494). He was a fellow of the Royal Society from 1663 to 1685; the beginnings of the family's antiquarian interests can be traced back to 1671 when he lent the Wormsley priory ledger book to Sir William Dugdale, who used it for his *Monasticon*. Sir Edward duly received a copy of the book in 1673.

Harley sat in all the parliaments of Charles II's reign, representing the borough of New Radnor in 1661 and March 1679, and Herefordshire in October 1679. Although a regular attender he was not a prominent committeeman or orator during the Cavalier Parliament, though he helped secure an act in 1662 (and again in 1695) which rendered the River Wye navigable. He personally conformed to the established church but vigorously opposed acts passed against dissenters and regarded the Clarendon code as a 'national sin' (*Portland MSS*, 5.642–3). Richard Baxter spoke of him as 'a sober and truly religious man', and Harley lamented the 'incomparable' Baxter's death in 1691 (*Reliquiae Baxterianae*, ed. M. Sylvester, 1696, 59–60).

His support for nonconformity saw him draw closer to the earl of Shaftesbury, who noted him as 'thrice worthy' in 1677, and he duly voted for the First Exclusion Bill in 1680. In the following year he wrote a tract on religious comprehension, attacking the imposition of rites and ceremonies, and attended the third Exclusion Parliament at Oxford. To his opponents Harley was a presbyterian rogue and naturally suffered during the tory reaction, being removed from all local office in 1682 and briefly imprisoned during Monmouth's rebellion three years later. Because he was identified as an obvious opponent of James II attempts were made to win him over by restoring him to local office, but he urged the bishop of Hereford not to read the declaration of indulgence, and neither he nor any of his family ever took an oath to the king. Acting on behalf of his constituents he concerned himself with improving road communications between Hereford and London and fought to preserve the chartered rights of the city of Hereford. It was during James II's reign that he set aside a 'greater part of one day' a week to pray that 'the storm which seemed then to be falling on the nation might be averted' (*Letters*, ed. Lewis, xxxvi).

In 1688 Harley and his sons took up arms on behalf of William of Orange. Although into his sixties, he raised a troop of horse and rode to Worcester to hold the city for the prince. Elected without opposition for Herefordshire in 1689 to William III's first parliament, he avoided party connections and helped obtain an act for the abolition of the court of the Welsh marches. He was defeated at the general election the following year but returned to the Commons for Herefordshire in 1693 and 1695. As a former parliamentarian and proponent of exclusion he was a natural supporter of the king. However, he did not find the new regime particularly appreciative of his services, and his support for William gradually waned as the wars against Louis XIV saw increased taxation and the extension of the power of the state. Along with his eldest son, Robert, he became a leading figure in the country whig opposition determined to resist the growing encroachment of the executive upon the ancient liberties of the political nation. He retired from public life in the final years of his life, and died on 8 December 1700 at Brampton Bryan, where he was buried in the church two days later. His son Robert succeeded him.

Although never a figure of national political importance Harley was of significant stature within his county, relying on his character rather than his moderate territorial power in securing support. Herbert Aubery, a political opponent, could write to him 'That you are kind and good all persons own' (Helms and Rowlands, 3.496). Although Brampton Bryan Castle suffered estimated damage of £60,000 during the civil wars he refused the offer of the sequestered estate of Sir Henry Lingen, the commanding officer who had laid siege to the castle, instead returning the estate to Lady Lingen. His love of his country was also renowned, George Monck describing him as 'a man of public spirit, firm to the interests of his country', while other admirers called him '*ultimus Anglorum*' (*Letters*, ed. Lewis, xxiv, xxviii). His son Edward referred to his habit throughout his life of constant reading of the scriptures, and Brampton Bryan in Harley's time perhaps epitomized the ideal of the spiritual puritan household.

Harley, Edward (1664–1735), politician, was born at Brampton Bryan, Herefordshire, on 7 June 1664, the second son of Sir Edward *Harley (1624–1700), politician, and his second wife, Abigail, the daughter of Nathaniel Stephens of Eastington, Gloucestershire. Robert *Harley, first earl of Oxford, was his elder brother. He was probably educated at Westminster School and was called to the bar at the Middle Temple. About 1683 he married Sarah Foley (*d.* 1721), the daughter of Thomas Foley of Witley, Worcestershire; they had three sons and one daughter.

Harley took an active part in the transactions which preceded and accompanied the landing in England of William of Orange in 1688. With a fellow Herefordian, Colonel John Birch, he met the prince at Salisbury, where he organized the approach to London, suggesting a crossing of the Thames at Wallingford. With his father and brother he later declared for the prince at Worcester. He was a staunch Presbyterian with close connections with several London dissenting congregations and was one of the executors of Richard Baxter's will. He was first elected to parliament in 1695 for Droitwich in Worcestershire but afterwards he was closely associated with the town of Leominster, and held the office of recorder there from 1692 until 1732; from 1698 until 1722 he served as its MP. There was a bitter feud between the Harleys and Thomas, Lord Coningsby, of Hampton Court, Herefordshire. When the latter tried to undermine the Harley interest in Leominster about 1720 by challenging the borough's charter in parliament, Harley repelled the assault at considerable cost to himself. He was long remembered in Hereford for his endeavours in parliament and the courts for the passage

of the Wye Navigation Act in 1696. Although his parliamentary activity is difficult to distinguish from that of his brother he was responsible for inaugurating several bills, among them the legislation to confirm the privileges of the Hudson's Bay Company (1698). In 1702, through his brother Robert's good offices, he obtained the office of auditor of imprest, an ancient department of the Admiralty. In this position, which he held for life, he is said to have 'acted with care, integrity and ability' (Hutchinson, 57), earning him the name 'Auditor Harley'. This brought him close to the Marlborough–Godolphin administration and his actions in parliament between 1702 and 1708 show his support for the government. However, on a list of 1708 he is classed as a tory and he followed his brother Robert into opposition in this year. When Robert returned to office as chancellor of the exchequer in 1711, Harley worked hard to organize financial support for the continuing war, playing an important role in raising £1,500,000 via the lottery. He also helped frame the act which established the South Sea Company, becoming one of its founding directors. He was a strong supporter of the Hanoverian succession, and on Queen Anne's death signed the proclamation of George I. Harley remained in parliament, notwithstanding the collapse of his brother's interest in the 1715 election.

Harley was a most ardent advocate of his brother, collecting documentation of the latter's achievements and providing a generous tribute in his unpublished memoir of the Harley family. During moments of stress, Robert Harley frequently sought his brother's counsel: Edward negotiated the details of Robert's second marriage, looked after his London and Herefordshire property, and, according to McInnes, 'deliberately sacrificed his chances of a front line political career in order to smooth his brother's pathway in every way he could' (McInnes, 184). In parliament the lord treasurer could always rely upon his brother's assistance. During the treason crisis of 1708, Robert's impeachment by Lord Coningsby in 1715, and in the later struggle with Bolingbroke, Harley was always very visible in his brother's defence. Characteristically, he attributed Robert's success to divine 'dispensations' and their 'excellent parents'. Harley's own career was in danger in 1717, when he was accused of having embezzled the funds of the state as auditor; however, he proved that, while £36 million passed through his hands each year, his accounts were correct to within 3*s*. and 4*d*., and that this sum had been mischarged through the neglect of a clerk. Priding himself on his own financial probity, he regularly complained in his letters of court extravagance and blamed many of the ills of society on immorality and profanity.

On his own account Harley purchased considerable property in west Herefordshire and the adjoining counties of Wales, and established himself at Eywood in the parish of Titley, where he built a new house about 1705. With James Brydges, duke of Chandos, a political ally of the Harleys, he sponsored attempts to find coal and copper in south Shropshire and mid-Wales. Also with Brydges, between 1717 and 1721 he was joint developer, on behalf of his young nephew Edward Harley, of the Cavendish–Harley estate in the West End of London, and, having planned a new garden at Brampton Bryan in 1693, he was directly involved in the layout of Cavendish Square. He was a patron of nonconformist education, and maintained schools at Titley, Brampton Bryan, and in Wales. In 1714 he spoke in the Commons against the Schism Act, which was aimed at the closure of nonconformist schools, and in 1725 was chosen as chairman of the trustees of charity schools in London. He was also the author of a number of pious works of a puritan character, including *An Essay for Composing a Harmony between the Psalms and other Parts of the Scripture* (1724). He died on 30 August 1735 in his chambers in the New Square, Lincoln's Inn, and was buried on 15 September in Titley churchyard, where his monument with its long inscription remained legible at the end of the twentieth century. He was survived by his eldest son, Edward *Harley (*bap.* 1699, *d.* 1755), who succeeded Robert's son, also Edward Harley (1689–1741), as third earl of Oxford. The third earl was the father of Thomas Harley (1730–1804), lord mayor of London.

Harley, Edward, second earl of Oxford and Mortimer (1689–1741), book collector and patron of the arts, was born on 2 June 1689, the only son of Robert *Harley, first earl of Oxford and Mortimer (1661–1724), politician, and his first wife, Elizabeth (*d.* 1691), daughter of Thomas Foley of Witley Court, Worcestershire. He was educated at Westminster School and at Christ Church, Oxford, from 1707; he graduated MA on 2 January 1712 and DCL on 4 June 1730. He left university in 1711 to become the MP for Radnor, but lost the seat in 1714. He was MP for Cambridgeshire from 1722, but entered the House of Lords on 21 May 1724 upon succeeding to his title. He became FRS on 20 March 1711.

On 31 August 1713 Harley married Lady Henrietta Cavendish Holles (1694–1755) [*see* Harley, Henrietta Cavendish], only daughter and heir of John *Holles, first duke of Newcastle upon Tyne (1662–1711), and his cousin Lady Margaret Cavendish. She had a reputed fortune of £500,000, as well as Wimpole Hall in Cambridgeshire, which the

Edward Harley, second earl of Oxford and Mortimer (1689–1741), by Michael Dahl

couple made their principal home. In 1716 they inherited Welbeck Abbey in Nottinghamshire from the duchess of Newcastle. However, their early married life was troubled by a legal dispute, over her father's will, with the Pelham family (who succeeded to the Newcastle title and some of his estates). This dispute was resolved by act of parliament in 1719, involving substantial payments from Harley's resources. The Harleys had a daughter, Margaret Cavendish (1715–1785), who married William Bentinck, second duke of Portland, on 11 June 1734 [*see* Bentinck, Margaret Cavendish]; a son was born on 18 October 1725 but died four days later.

Unlike his father, Edward Harley took no significant part in public affairs: 'He loved the society of men of letters and of learning; he dabbled in archaeology; he patronised the arts; he made the collecting of manuscripts, of books, and of coins, medals and miniatures the consuming passion of his life' (Turberville, 1.344–5). Jonathan Swift, who had been a protégé of Robert Harley, continued to correspond with and visit his son. Alexander Pope was also a frequent guest at Wimpole, and benefited from Harley's patronage in many ways; he made use of Harley's influence in publishing the second edition of the *Dunciad*, and was helped to avoid threatened lawsuits. They maintained an extensive correspondence between 1721 and 1739. However, Harley was closest to the diplomat and poet Matthew Prior, who had been left destitute following his impeachment and imprisonment (1715–17). Harley helped to arrange for the publication of Prior's *Poems*, which earned him £4000 and a lasting literary reputation. He also patronized and corresponded with many other scholars and antiquaries, and frequently assisted the publication of their works; these included William and Elizabeth Elstob, John Anstis, and Zachary Grey, who wrote a memoir of Robert and Edward Harley. Likewise Harley helped Thomas Tudway publish his collection of early ecclesiastical music. He subscribed to large numbers of contemporary works, frequently in multiple copies—such as twelve copies of John Covel's account of the Greek church. Many of these duplicate copies were subsequently donated to libraries and literary societies. William Warburton described Harley as 'the most distinguished Patron and Friend of Letters that this age can boast of' (ibid., 1.349).

Harley also patronized architects and artists, employing James Gibbs to design extensions to Wimpole Hall, and acting as agent for the purchase of pictures by continental artists such as Carracci and Lorrain. He gave commissions to the engraver George White, and the painters John Wootton and Christian Zincke. Above all he was the close friend and constant patron of the antiquary and engraver George Vertue, who made frequent use of Harley's library and accompanied him on tours of the south-eastern counties in 1738 and East Anglia in 1739. These extended annual tours throughout different parts of Britain during the summer months were a regular feature of Harley's life from 1723 onwards, and gave rise to lively accounts, written by Harley and his guests, among the Welbeck and Portland manuscripts. In other respects he was 'utterly indifferent to society, in which he played little or no part, and by which he was in consequence looked upon as an eccentric if harmless outsider' (Lees-Milne, 169).

Harley is principally remembered for the library that bears his family's name. Indeed he devoted most of his energies and fortune into turning his father's already substantial collections of manuscripts, charters, and rare books into the finest private library of the time. He assumed partial control over the collection in 1711, when his father became lord treasurer, but took over full control in July 1715 upon his father's impeachment and imprisonment in the Tower of London. At this time there were only 3000 printed and manuscript books, but the 13,000 charters represented 'the largest collection known to be anywhere', and the unbound manuscripts and state papers represented 'much the best and most valuable and numerous of any now in England, excepting only that of Sir Robert Cotton' (*Diary of Humfrey Wanley*, 1.xxviii). The collection was then primarily genealogical, heraldic, and political in coverage. Edward expanded the existing collection 'enormously both in range and bulk, guided largely by the advice and knowledge of his library-keeper Humfrey Wanley' (ibid., 2.450). He also absorbed the library of the duchess of Newcastle at Welbeck Abbey into his own in 1718, and incorporated many manuscripts from his family's ancestral home at Brampton, Herefordshire,

following the death of his father in 1724. He continued collecting manuscripts with 'incessant Assiduity and at an immense expense' (*Catalogue of the Harleian Manuscripts*, 1.7), employing agents to seek out and purchase collections on the continent. He also had extensive dealings with London booksellers, notably Nathaniel Noel, who was for many years his principal supplier and agent. Among many other significant purchases were the collections of Greek manuscripts of John Covel (1716) and an important collection of Italian manuscripts from Conyers Middleton, librarian of Cambridge University. When his agent John Bagford died, Harley purchased his collections relating to the history of printing. He likewise amassed a substantial collection of Hebrew and oriental manuscripts from individual collectors, merchants, or the consuls and chaplains of the Levant Company. Ultimately his library contained 7639 manuscript volumes and 14,236 original rolls, charters, deeds, and other legal documents, as well as extensive collections of antiquities, coins, medals, and other items of historical significance or curiosity.

Yet it was principally in the area of printed books and pamphlets that Harley devoted his energies and resources. These were held at his home in Wimpole Hall, whereas the manuscripts and charters remained at his Dover Street house in London. The number of printed books grew to 'upwards of 12 thousand' (Wright, 'Portrait', 161) by 1717, and 50,000 by the time of his death. He had by then also collected 350,000 printed pamphlets and 41,000 prints. Harley's printed books 'were the most choice and magnificent that were ever collected in this Kingdom' (Collins, 213), including some of the earliest-known examples from many European countries. These were used extensively by Michael Maittaire in the compilation of his *Annales typographici*, the second volume of which was dedicated to Harley. The collection was particularly strong with respect to items from Caxton's and de Worde's presses in England and those of Sweynheym and Pannartz, Jenson, and Aldus on the continent. Many of these were used by Joseph Ames to illustrate his *Typographical Antiquities*. According to C. E. Wright 'every conceivable subject was represented; the collection of Bibles, in all the languages of Europe, was immense' (Wright, 'Portrait', 172–3). Harley likewise spent considerable sums upon the binding of the books in his collection. As an undergraduate he had developed a taste for expensive tooled bindings in what Wanley later described as 'My Lord's Marocco Leather' (*Diary of Humfrey Wanley*, 1.120). For many years he retained a binding workshop in Dover Street where he insisted that his most valuable works should be bound.

Collecting on this scale, combined with Harley's generosity and his want of attention to everyday business affairs, inevitably damaged his finances. He had been warned several times about his extravagance, and as early as 1726 he needed to raise £16,000 to meet his creditors. Wanley died in the same year, and after 1728 Harley was guided by William Oldys, his literary secretary. In June 1728 he confessed to his wife that the state of their financial affairs was 'in very great measure due to my own Folly and my neglect in looking into them as I ought to have done' (Turberville, 1.384). In spite of resolutions to reform, matters deteriorated throughout the 1730s until he was forced to sell his house at Wimpole to Lord Chancellor Hardwicke for £86,740 and move to Dover Street in 1740. The shock of the sale was so great that Harley sought increasing solace in drink. His health rapidly deteriorated until his death, at his home, on 16 June 1741. He was buried in the duke of Newcastle's vault in Westminster Abbey on 25 June 1741.

The library was left to Harley's widow during her lifetime and thereafter to their daughter. The antiquities, coins, medals, and pictures were sold by auction on 8 March 1742. Later in the same year the printed books were sold to the bookseller Thomas Osborne for £13,000, a price that was somewhat less than the cost of binding them. They were catalogued by Oldys and Samuel Johnson (who wrote an account of the library) and dispersed in various sales until 1748. Many of the rare pamphlets were reprinted in the *Harleian Miscellany*, also edited by Oldys and Johnson (1744–6). The manuscripts were retained until 1753, when the family agreed to sell them to the nation for £10,000 (a fraction of their contemporary value). They now form one of the foundation collections of the British Library.

Edward Harley's reputation suffered following his death, when he was unfavourably compared with his father and criticized for his want of financial prudence. The earl of Orrery, writing to Swift, spoke of his having sacrificed £400,000 to 'indolence, good-nature, and want of worldly wisdom' (*Correspondence of Jonathan Swift*, 206), and Horace Walpole wrote of the 'rubbish' in his collection, implying that he was an extravagant and mediocre dilettante (Walpole, 17.357–8). However, the Harleian library was both well used and loved by its owner, and was made available to a generation of scholars, including William Stukeley, Richard Bentley, Thomas Tanner, and Richard Fiddes, who both used and valued its resources. The public preservation of Harley's invaluable manuscript collection is now a fitting monument to his life.

Wealth at death approx. £100,000; had squandered £400,000: *Correspondence of Jonathan Swift*, 206

Harley, Edward, third earl of Oxford and Mortimer (*bap.* 1699, *d.* 1755), politician, was baptized on 27 August 1699, the eldest of the four children of 'Auditor' Edward *Harley MP (1664–1735), and his wife, Sarah (*d.* 1721), the daughter of Thomas Foley and his wife, Elizabeth. He was educated at Westminster School, and progressed in 1717 to Christ Church, Oxford, where he became the first gentleman commoner in the eighteenth century to be awarded the degree of honorary MA. Harley's serious, even priggish, character was already apparent during his student days, as was his passion for politics and his indulgence in the two family vices, drink and books. Little is known about his activities in the years immediately after he left Oxford, but he seems to have acted as a man of business for his father and uncle. On 16 March 1725 he married Martha (*d.* 1774), the daughter of John and Martha Morgan of Tredegar, Monmouthshire. Their closeness and affection is revealed in numerous letters written while Harley was attending parliament or electioneering. Together they had five sons and two daughters. The eldest, Edward, Lord Harley (1726–1790), served as MP for Herefordshire before succeeding his father as fourth earl of Oxford and Mortimer. The third son, John Harley (1728–1788), became bishop of Hereford, while the fourth, Thomas *Harley (1730–1804), set up as a wine merchant in London and served as lord mayor in 1767–8.
