London Within a year of his arrival in London, Samuel Hartlib married Mary Burningham (*d.* 1658), on 20 January 1629 at St Dionis Backchurch, London. His first venture thereafter was establishing a private academy for gentlefolk at Chichester, Sussex, in 1630, which is where he came to know John Pell and William Speed. When this collapsed, it was the latter who advised Hartlib to retire to London, where Hartlib hoped God would 'provide me some commodious house' in which he might maintain himself with 'some borders and scollars', probably intending to establish another school (Hartlib papers, 7/16/5B). By the summer of 1631 he was living in a house at Duke's Place 'by the Living Vine' amid the City of London's merchant rich. He stayed there until early 1650, when he moved to 'Charing Cross, over against Angel Court' (Turnbull, *Samuel Hartlib*, 42). In his latter years, after his wife's death, he went to live with his son Sam in Axe Yard, Westminster, a near neighbour of Samuel Pepys, who later recalled that he had been 'much below Hartlibb in all respects' before the Restoration (Pepys, 5.30).

It was at Duke's Place that Hartlib began to cultivate an international network of correspondents. On his return to Elbing in 1627 he had made the acquaintance of John Dury, the Calvinist minister there from 1625 to 1630. Dury would become 'a most dear and precious friend', with whom he became 'a Co-agent' (Dury, 1). Together they had shared an intoxicating vision of reconciling protestant divisions, and became associated with a fraternity whose goal was to establish a model godly community (referred

to as Antilia) by colonizing a Baltic island. In due course Hartlib would become the London agent for John Dury's peregrinations in search of ecclesiastical pacification that began in 1631. Dury went to 'settle a way of Correspondency' between protestant divines so that 'they may be able to communicate in all spiritual things' (BL, Sloane MS 654, fols. 247–9). He promised to 'gather, to elaborat, and to observe severall things of great profitt' (ibid.) as he went and send them back to Hartlib—information about rare books, inventions, scientific developments, and technological innovations. Dury remained one of Hartlib's main sources for information but he had many others, especially among the protestant refugee networks of central Europe. This was the basis on which Hartlib started a manuscript newsletter service in the 1630s, providing international intelligence to the protestant (mainly puritan) English political élite that had become alienated from the Stuart court. At the same time, Hartlib's house provided shelter to various scholars from abroad who made it to London. His manuscript diary (or 'Ephemerides') for the years 1634–5 and 1639–43 reveals his fascination with the processes of learning that had already led him to admire and reflect on the works of (among others) Francis Bacon. His correspondence with the Czech educationist Jan Amos Komenský (Comenius) had begun at least as early as 1632, and the transhipment of Baconian materials to Comenius was an early subject of their letters. By 1634 Hartlib was collecting money for Comenius to engage a secretary to advance his ambitious pansophical projects and to visit London. Although Comenius declined to make the journey in 1636, Hartlib was undeterred, and published (albeit without the author's permission) the manuscript sketch of pansophy that Comenius had sent him under the title *Conatuum Comenianorum præludia* (Oxford, 1637). The work was distributed around Hartlib's contacts at home and abroad with a request for comments and an appeal for funds. Support and scepticism were expressed in roughly equal measure to the pansophical design, and financial contributions dribbled in. Hartlib published a second, expanded edition of Comenius's blueprint, the *Pansophiæ prodromus* (London, 1639), and the stage was set for Comenius's arrival in London on 21 September 1641, after which he stayed, lodging with Hartlib, for nine months.

Intelligencer The involvement with Comenius established Hartlib's reputation as an imparter of scientific ideas and information. He was on the way to becoming an 'intelligencer'—an agent for the dissemination of news, books, and manuscripts. He was encouraged by his (and Dury's) belief that Christian solidarity arose out of relations of exchange, or communication (the term 'communicatio' having a religious signification, since it was the Latin rendering of the Greek 'koinonia' or 'shared communion'). Their shared sense was that God had given all human kind a 'talent' that should not be 'hidden under a bushel' but placed at the disposal of the common weal. Those talents would be best released by a reformation of learning (or 'Reformation of schooles' as Hartlib entitled the translation into English of Comenius's *Prodromus* in 1642). That reformation would be best engaged by the establishment of a model college of learning, a 'Solomon's House' as envisaged in Bacon's *New Atlantis*. Hartlib saw Chelsea College, whose reform was a matter of current debate before the Long Parliament, as a possible institution, and Comenius as its ideal director. The possibilities of such a reformation of learning had been publicly preached before the House of Commons in a sermon on 29 November 1640 by Dr John Gauden. It had both practical and utilitarian as well as millenarian implications. In October 1641 Hartlib published a small utopian treatise that he entitled *Macaria* (after an off-shore island of Utopia). Its authorship used to be ascribed to him, but it was evidently drafted by his projector friend Gabriel Plattes. In it, the contentious debates of church and state (that were about to recommence in the second session of the Long Parliament) were replaced by a commonwealth whose government and people collaborated in prosperity generated by the practical application of diffused knowledge. Pansophy was an encyclopaedic project whose ultimate goal was a millennial recovery of the knowledge that mankind had lost when expelled from the Garden of Eden. In a remarkable pact or 'Foederis fraterni ad mutuam in publico Christianismi bono promovendo ædificationem sanctè in conspectu Dei' ('Fraternal pact in the sight of God for mutual advancement in the promotion of the public good of the Christian religion'), drafted by Comenius and signed by himself, Hartlib, and Dury on 3 March 1642, they pledged themselves to a secret fraternity devoted to the advancement of religious pacification, education, and the reformation of learning (Hartlib papers, 7/109/1A–2B). It was a pledge that would overshadow Hartlib for the rest of his life.

During the English civil war Hartlib remained in London, acting as an unofficial agent for the parliamentary cause. He sponsored military innovations such as novel siege tanks and assisted in the importation of Swedish 'leathern' guns while publicly advocating in *A Faithfull and Seasonable Advice* (1643) and *The Necessity of Some Nearer Conjunction and Correspondency* (1644) the 'necessity' for the parliamentarians to make common cause with protestantism elsewhere. His proposed reformation of learning induced Milton to write his treatise *On Education* (1644), which was dedicated to Hartlib. His advocacy of a world of correspondency unfettered by monopolist restraint was one of the stimuli to Milton's composition of the *Areopagitica* (1644), with its criticism of censorship tempered by a defence of authorial rights. He received parliamentary grants of £50 (on 14 January 1645) and £100 (on 25 June 1646) in respect of his services, and 'some place at Oxford … for his future Support' was discussed.

The 'Hartlib circle' Following the parliamentary victory in 1646 Hartlib devoted himself to establishing an 'Office of Address' with elements borrowed from the model of the 'Bureau d'Adresse' set up by Théophraste Renaudot in Paris. The initial pamphlet in which he advertised his scheme, *Considerations Tending to the Happy Accomplishment of Englands Reformation in Church and State* (1647), was published to coincide with the parliamentary vote of £300 to

him 'in Consideration of his good Deserts, and great services' and the recommendation that he be given 'some Place of Benefit in the University' of Oxford (*JHC*, 5.131–3). The novel scheme combined two elements, the first being an 'Office of Address for Accommodations', or labour exchange, based in London and directed by Henry Robinson, which sought to ameliorate the economic dislocations after the civil war. The second was the 'Office of Address for Communications', based in Oxford around Hartlib, whose purpose was to maintain registers of information on 'Matters of Religion, of Learning and Ingenuities' and to act as a 'Center and Meeting-place of Advices, of Proposalls, of Treaties and of all Manner of Intellectual Rarities' (Hartlib, *Considerations*, 46, 48). The proposal created comment and spawned imitators but it was never officially instituted. Instead, Hartlib was voted an annual pension of £100 a year for 'the Advancement of Arts and Learning' on 26 April 1649, although securing warrants for its actual payment in the 1650s proved time-consuming and frustrating (*JHC*, 6.227).

It was on this basis that Hartlib felt himself 'obliged to becom a conduit pipe ... towards the Publick' (Weston, sig. A4a). He employed scriveners and translators to copy portions of letters and treatises for circulation to others, seeking in turn their own comments and intelligence on a remarkably diverse range of practical scientific matters, including chemistry, medicine, engineering, colonization, horticulture, charitable endeavour, the 'natural history' of Ireland, and agronomy. At the same time, he did not neglect to pursue the possibilities afforded by the new regime to reform the universities, establish new instruments of learning, and seek the conversion of the Jews to Christianity. What is sometimes now regarded as the 'Hartlib circle' was, in reality, a diverse and self-selecting group of enthusiasts or 'ingenui', whose interests in the possibilities of technical change were supported by a shared viewpoint in which the potential of free and 'real' knowledge to benefit the commonwealth was contrasted with the greed of individual monopolists and the obfuscation of old institutions and learning. His surviving papers were purchased after Hartlib's death by Lord Brereton and were last heard of in his Cheshire house in 1667 before being recovered in a London solicitor's office by G. H. Turnbull in 1933. Through them, it is possible to estimate the extent of Hartlib's informal communicative energies both at home and abroad. It is evident that his reputation among contemporaries as 'born and framed to be an Instrument of God for stimulating, sharpening and uniting men's inborn talents' (Comenius), 'that painfull and great instrument' (Petty), 'the incitement of great good to this Iland' (Milton), and 'the greatest instrument of public edification' (Dury) was not entirely misplaced (*Complete Prose Works of John Milton*, 2.363; Petty, 1; Turnbull, *Hartlib, Dury and Comenius*, 67). Hartlib had a hand in over half the patents for new inventions issued by the English government during the Commonwealth and protectorate period, was on good terms with the secretary of the council of state, and attended audiences with Lord Protector Cromwell.

The most visible impact of Hartlib's circle lay in the numerous pamphlets that he published. A reasonably complete list of sixty-five publications associated with Samuel Hartlib is to be found in G. H. Turnbull, *Hartlib, Dury and Comenius*. Hartlib's most substantial publications, *Samuel Hartlib his Legacie* (1651 and subsequent editions), *Chymical, Medicinal, and Chyrurgical Addresses* (1655), and *The Reformed Commonwealth of Bees* (1655), were, in reality, offshoots of his scribal network. They comprised letters and treatises solicited or received from individuals in his circle upon a particular subject, which had then been circulated for additional comments, the results edited, and then launched upon the public (often without the express consent of the original author), anticipating utility and inviting comment and amendment. Less than 5 per cent of the copy was generated by Hartlib himself, generally as prefaces, his talents being more as an editor and publisher. He used Richard Wodenothe and William Dugard as his preferred printers in the 1650s. His treatises spread a solvent of new ideas in a variety of contexts, but they were particularly successful in husbandry. He publicized the advantages of planting new leguminous crops, experimenting with fertilizers and manures, and using seed drills and new ploughs, and advocated the possibilities of apiculture, rabbit farming, fruit-tree propagation, and silk cultivation (in Virginia). His network included a group of innovative farmers willing to experiment. But his pamphlets should also be read as ideas, models, or patterns as to how the processes of reformation would occur. In the case of the *Commonwealth of Bees* (1655), for example, the analogy was particularly evident. The bees are Hartlib's correspondents, collecting the pollen of information in a providentially bountiful and free nature and bringing it back in a spirit of public service to the hive of the office of address.

It is difficult to determine Hartlib's own overall intellectual dimensions with precision. He readily adopted the dominant ideas and language of others, and his agenda evolved over time. He was a self-effacing individual, receding even in his own diary behind a kind of anagram of his name (Albureth) that Dury had derived for him. There is no known portrait of him. Francis Bacon's blueprint for a reformed natural philosophy became Hartlib's, as did Comenius's pansophical designs. He regularly supported the laudable but ultimately unrealistic efforts of John Dury to be the peacemaker among Europe's divergent protestant traditions. He took a keen interest in Paracelsian chemical medicine and Helmontian chemistry. But Hartlib's adoption of other people's ideas also involved conscious thought and adaptation, and the common thread that linked them was his perception that through the dissemination of knowledge the public good would be served and the coming of the millennium achieved. His commitment to that dissemination gave him a distinctive voice, even though it was a goal that would be eventually articulated in very different ways by the Royal Society of London.

Final years Hartlib's later years were overshadowed by illness, penury, and disappointment. He began to suffer

from a kidney stone as early as October 1642; by 1656 it kept him confined to his house. His papers document numerous remedies, but they probably contributed more to his suffering rather than its relief. In 1653 he began to complain of his eyesight, with cataracts in both eyes. His wife died in early November 1658, but he continued to raise money for the exiled Czech brethren around Comenius in Leszno in 1658 and 1659. He had a stroke towards the end of 1660, and moreover a household fire in 1662 destroyed some of his papers. His financial circumstances had never been entirely secure, and the Restoration in 1660 removed his pension. His petition to parliament in 1660, which alluded to his reduced circumstances, went unanswered. The new age reasserted gentry civilities as the means by which knowledge should be circulated and truth validated. Hartlib was readily parodied as a fanatic and a 'projector', someone seeking to make a quick fortune at the public expense. He died on Monday 10 March 1662 in Axe Yard, Westminster, where he had been living since 1658, and was buried on the following Wednesday at St Martin-in-the-Fields, although there is a suggestion in Evelyn's correspondence that he had permitted his body to be used for anatomical dissection.

By the time of Hartlib's death, there were three surviving children. Samuel (Sam) was probably the eldest. He was an officer in the excise who was employed as the London agent for Berwick upon Tweed in 1653, and, in 1656, appointed a solicitor for the Merchant Adventurers of Newcastle upon Tyne. Of only modest abilities, he later became a drinking companion of Samuel Pepys and was accused of corruption as one of the collectors of hearth money in 1667. He escaped imprisonment but was dismissed from office. On 6 January 1672 a warrant for his arrest was issued 'for seditious speeches and for publishing libels' and he was rescued only by the intervention of friends in high places (*CSP dom.*, *1672*, 70). Eventually, perhaps later that same year, he fled England for the Netherlands to escape his debts and never returned. Mary, probably the eldest daughter, married Frederick Clodius, a chemical laborant who came to live with the Hartlibs. Clodius attempted to treat his father-in-law's illness with chemical remedies and probably thereby abused the naïve trust that Hartlib had placed in him. Nan Hartlib, Mary's sister, married a wealthy Fifth Monarchist from Utrecht, Jan Roth (Roder), gaining a dowry the equivalent of £6000, and went to live in the Netherlands.

Hartman, Dame (Gladys) Marea (1920–1994), sports administrator, was born on 22 June 1920 at 33 Honeybrook Road, Clapham, London, the daughter of Ernest George Hartman and Esther Brook, who both worked in the hotel catering trade and eventually rose to senior positions at the Savoy and the Waldorf respectively. She became a regular runner at her local track and was invited to join the mainly male Spartan athletic club by its founder, Terry Knowles. She won a gold medal as a sprinter for Surrey, and attended the international meeting in Cologne in 1939, six days before the Second World War broke out. During the war she served in the army welfare division. Her fiancé was killed in the war and she never married. Although she achieved modest success as an athlete, it was as an administrator that she achieved international sporting fame. Shortly after the war the Spartan club asked her to become its treasurer, and her career in that field was launched.

In 1950 Hartman was appointed honorary treasurer of the Women's Amateur Athletic Association (WAAA), a post she held for a decade. During her regime she secured sponsorship for the women's annual championships from companies such as Bovril, Kraft, and Sunsilk, capitalizing on the attractiveness of the female performers. Indeed throughout her career she understood the value of publicity for her sport. In 1961 she became honorary secretary, effectively chief executive, of the organization, a position that she held for thirty years. She was initially an opponent of a merger between the men's and women's AAAs, but eventually came round to support the idea. She was unanimously elected the first president of the Amateur Athletic Association of England in 1991.

In 1956 Hartman was appointed manager of the British women's athletics team and took them to the Melbourne Olympics. She retained this position for twenty-two years, leading the team to five further Olympic games and as many European championships and Commonwealth games, as well as numerous international team competitions. In 1958 she became a member of the women's commission of the International Amateur Athletics Federation, and served as chairman from 1968 until 1981. While

in this role she was presented with the Prince Chichibu award in recognition of her work in fostering athletics for women in Japan. Other posts included serving on the executive committee of the Central Council of Physical Recreation (representing the main national sporting bodies) from 1972 and becoming both the council's deputy chairman and its honorary treasurer. As chairman of the British Amateur Athletic Board (1989–91), she was instrumental in the creation of its replacement body, the British Athletics Federation.

As a manager Hartman was a firm but flexible disciplinarian. She is alleged never to have imposed a curfew on the women in her charge, preferring to organize entertainment and hospitality for the group as a whole, and accompanying them on their evenings out. Her regard for 'her girls' was epitomized in her establishment of a trophy in memory of the 400 metres runner Lillian Board, who died of cancer in 1970, two years after the Mexico Olympics. Hartman had been at Board's bedside when she died. Nevertheless not all she did was regarded as positive. She brought embarrassment to her sport by banning padded brassières as giving an unfair advantage in a close finish, and her attempt in 1969 to recruit intelligent 'big girls' to combat the East German women was notably unsuccessful. Following a dismal British athletic performance at the Montreal Olympics in 1976, she was criticized as being out of touch with modern athletics. She survived a vote of no confidence but in 1978 lost her position as manager of the women's team.

Perhaps Hartman's major contribution to women's sport was her long and ultimately successful campaign to increase the number of track and field events open to female athletes in Britain—from five in the 1950s to twenty at the time of her death. Her greatest regret was the decision of 1975 to combine the men's and women's AAAs championships into a single event, a move that she had strenuously resisted. An ebullient personality, she met problems with determination and humour, had a taste for Campari and soda, and always a ready smile for the cameras. She cited her recreations as music, reading, and the theatre, but essentially she devoted her life to sports administration. For over thirty years she was personnel officer at Bowaters, the paper manufacturers. They were extremely tolerant, given that much of her time was devoted to nurturing female athletics and athletes. All her work for sport was unpaid. She was appointed MBE in 1967, advanced to CBE in 1978, and DBE in 1994, for services to women's sport. Despite suffering from cancer, she attended the AAA championships in 1994 but was too ill to leave her Wimbledon home to go to the Commonwealth games in Canada. She died of cancer at the Harestone Marie Curie Centre, Harestone Drive, Caterham, Surrey, on 29 August 1994. A memorial service was held at St Martin-in-the-Fields, London, on 28 November 1994.

Hartnell, Sir Norman Bishop (1901–1979), fashion designer, was born on 12 June 1901 at 2 Streatham Hill, Streatham, London, the only son and younger child of Henry Bishop Hartnell, hotelier, and his wife, Emma Mary Coulson, *née* Polley. He had three half-sisters. He was educated at Mill Hill School and, from 1921, Magdalene College, Cambridge, which he left after two years. While at Cambridge he joined the Footlights dramatic club where he acted and designed the costumes and sets. His creations were acclaimed, and on leaving Cambridge he sought a job in London's high fashion industry. After initial difficulties he and his sister, with some financial help from their father, opened, in 1923, a couture establishment at 10 Bruton Street. The business survived and prospered. Apart from society ladies his clients increasingly included many of the leading actresses of the day such as Gertrude Lawrence, Mistinguett, Evelyn Laye, and Alice Delysia. He also designed dresses for many of the shows produced by Charles Cochran, the André Charlot reviews, and the plays of Noël Coward. Hartnell was best known for his lavishly embroidered, romantic evening and bridal gowns. In 1935 he was requested by Lady Alice Montagu-Douglas-Scott to produce her wedding gown for her marriage to the duke of Gloucester. He was also asked to produce the dresses for the bridesmaids, among whom were the princesses Elizabeth and Margaret. The wedding dress was a great success and shortly afterwards he was asked to produce some designs for the duchess of York (the future Queen Elizabeth the queen mother).

However, the pre-war highlight of Hartnell's career came in 1938 when he was asked to design the clothes for the queen's state visit to Paris. At the request of the king he based his designs on the crinoline gowns depicted in the 1860s portraits by F. X. Winterhalter at Buckingham Palace. The court was in mourning and it was Hartnell's suggestion that the clothes, which became the subject of worldwide admiration, be in white, a lesser-used colour of summer mourning. In spring 1938 Hartnell presented crinoline gowns in his own collection and this style was to become his signature. For Hartnell's services to fashion the French government made him an officier d'Académie (1939). In 1940 he received his first royal warrant of appointment to the queen.

The war brought about two developments in Hartnell's career. First he started to design utility dresses for the mass market, and then became a founder member of the Incorporated Society of London Fashion Designers (established 1942), a couture body which was formed to deal with government departments and to promote British fashion talent at home and abroad. He became its second chairman with his period of office lasting from 1947 to 1956.

The year 1947 was excellent for Hartnell. He was asked to design the wedding dress for Princess Elizabeth together with the dresses for her bridesmaids, the maid of

Sir Norman Bishop Hartnell (1901–1979), by Snowdon, 1968

honour being Princess Margaret. In the same year he received the prestigious American Neiman-Marcus award given annually for an outstanding contribution to world fashion.

In 1953 Hartnell produced the coronation robe for Elizabeth II. This again proved to be a resounding success and he was appointed MVO. He then designed wardrobes for the queen's royal tours to Australasia and other parts of the Commonwealth and for state visits to the capital cities of Europe. He increasingly became known as the royal dressmaker. He was a much loved man with great personal charm who made a major contribution to enhancing the prestige of élite British fashion.

Hartnell was a talented and versatile designer whose work was disseminated to a broad market. From 1949 he introduced ready-to-wear garments and during the 1950s he designed for Berkertex and conceived a range of paper patterns for *Women's Illustrated* magazine. Hartnell also designed for the services: in 1949 his anonymous design was selected for a uniform (in lovat green) for the officers of the Women's Royal Army Corps; he subsequently designed the uniform for the British Red Cross and in 1967 was invited to design a new uniform for Metropolitan policewomen.

In 1977, the year of the queen's silver jubilee, Hartnell was appointed KCVO, the first knighthood conferred for services to fashion. Shortly afterwards his health began to deteriorate and he died at King Edward VII Hospital, Windsor, on 8 June 1979 and was buried at Claydon, Sussex. He was unmarried. Collections of dress designed by Hartnell are in the Royal Ceremonial Dress Collection (the Royal Collection), the Victoria and Albert Museum, the Museum of London, and the Museum of Costume, Bath.

Hartnell, William Henry (1908–1975), actor, was born at 24 Regent Square, St Pancras, London, on 8 January 1908, the son of Lucy Hartnell of that address, a commercial clerk, and an unnamed father. He was enrolled at the Italia Conti Stage School with the assistance of his unofficial guardian, Hugh Blaker. Conti herself had been a member of the repertory company of actor-manager Sir Frank Benson and Hartnell followed in her footsteps, joining in 1924. Billy Hartnell, as he was known at this time, could often appear in eight plays in a single week, especially those of Shakespeare, for the production of which the Benson company was well known. He was also keen to be offered comedy roles so he could try to emulate his hero, Charlie Chaplin.

In 1928 Hartnell appeared in a romantic comedy by R. N. Stephens and E. Lyall Swete, *Miss Elizabeth's Prisoner*, with an actress called Heather McIntyre (*d.* 1984) of Chelsea. She was born Amy Heather Miriam Armstrong McIntyre in 1906 or 1907, the daughter of Thomas McIntyre, a company director, and was later a playwright. They married on 9 May 1929 at the Chelsea register office; they had one daughter.

Hartnell made his first appearance on the London stage in 1932 but his first feature film, *School for Scandal*, was in 1930. Still appearing as Billy Hartnell (until the mid-1940s), he was the star of a handful of films in the 1930s (*Follow the Lady* and *I'm an Explosive*, 1933; *Seeing is Believing* and *Swinging the Lead*, 1934; *Nothing Like Publicity*, 1936). Such films, though, were often made very quickly and with cheap production values. After the outbreak of war Hartnell was drafted into the tank corps. He was invalided out after eighteen months after suffering a nervous breakdown. Returning to acting he had his first major success as Sergeant Fletcher in Carol Reed's film tribute to the British army, *The Way Ahead* (1944); the role made him a leading actor. In 1940 he had toured, and appeared in the West End, with Richard Attenborough in the play of Graham Greene's novel *Young Scarface*. In 1947 they were reunited in John Boulting's screen version, Hartnell playing Dallow. His theatrical appearances became much less frequent after the war, but he did star in the West End again in 1950 in Hugh Hastings's long-running comedy-drama, *Seagulls over Sorrento*.

In films Hartnell alternated starring roles in lesser films (*Murder in Reverse*, 1945; *Appointment with Crime*, 1946; *Temptation Harbour*, 1947; *Date with Disaster*, 1957; *On the Run*, 1958) with leading roles in better films (*Odd Man Out*, 1947; *Now Barabbas was a Robber*, 1949; *The Dark Man*, 1951; *Yangtse Incident*, 1957; *The Mouse that Roared*, 1959) and featured roles in major films (*The Magic Box*, 1951; *The Pickwick Papers*, 1952; *Private's Progress*, 1956; *Hell Drivers*, 1957; *Shake Hands*

William Henry Hartnell (1908–1975), by Harry Todd, 1964 [with two extra-terrestrials during filming for *Doctor Who*]

with the Devil, 1959; *Heavens Above*, 1963). In 1957–8 he appeared on television as Sergeant-Major Bullimore, an unpopular, aggressive character, in the series *The Army Game*. He left the series to make perhaps his best-known film, *Carry on Sergeant*, the first in the famed series of British comedies. In perhaps a third of his films Hartnell played figures of authority, often in the police force or the services, but here, as Sergeant Grimshawe, he was able also to display a softer side to his usual harsher character. Despite beginning to feel typecast in what he referred to as 'bastard roles', he returned to *The Army Game* for a further season in 1960–61.

One of Hartnell's best film roles was one of his last, as the old rugby league talent scout, Johnson, in Lindsay Anderson's *This Sporting Life* (1963), written by David Storey. As a result of this role in the same year he was offered the lead in *Doctor Who*, a new BBC television series. His Doctor was a quirky, even irascible, time-traveller, with long white hair and eccentric clothes, who travelled the universe in a timé machine which was not only bigger inside than out but took the form of an everyday blue police telephone box. Although the series included the head of drama at BBC television, Sydney Newman, as one of its devisers, some other BBC executives had little confidence in its future, but Hartnell was convinced it would be hugely successful and, thanks largely to him, it was. He played the part for three years (1963–6) in 134 episodes; at one point the viewing audience numbered over twelve million. Seeing the role as 'manna from heaven' after playing so many tough army types, he sought to bring out the element of magic in the Doctor. In so doing he became a national celebrity and a hero to thousands of children, and attracted a huge personal fan mail, not just from them but from adults too. It was a great disappointment for him to have to leave the series owing to a combination of poor health (he suffered from arteriosclerosis) and disputes with the new producer. That he went straight into touring with the pantomine *Puss in Boots* suggests that the latter reason was predominant.

Despite continuing ill health, occasional television appearances punctuated the next few years for Hartnell. He even returned to the stage in 1968 (in *Brother and Sister*); but the roles he could now manage were few and he made his last major television appearance in 1970. Since leaving *Doctor Who* he had become known for playing that one role, despite his theatre background and over sixty film appearances, so it was perhaps fitting that he reprised it in his final appearance when he managed to record a few scenes for a tenth anniversary episode featuring the other two Doctors to that date. He had retired to Marden in Kent but his health was now in serious decline and his wife became his full-time nurse. He was admitted to Linton Hospital, Coxheath, near Maidstone, for a short time in August 1974 and in December was admitted permanently. Following a series of strokes he died there on 23 April 1975. He was survived by his wife, who died in December 1984, and his daughter. ROBERT SHARP

Hartnup, John Chapman (1806–1885), astronomer, was born on 7 January 1806 in Hurst Green, Sussex. Nothing is known of his life before 1831, when he became an assistant to John (later Lord) Wrottesley at the latter's private observatory in Blackheath, Kent. Wrottesley's ambition was to use a transit telescope to measure the right ascensions of some 1318 specially selected stars. The observing programme lasted from May 1831 to July 1835, and the resulting catalogue contained over 12,000 observations; in 1839 it won for Wrottesley the gold medal of the Royal Astronomical Society (RAS). In fact, the observations were secured by Hartnup, and provided him with a very solid grounding in positional astronomy and set the course for his career.

After leaving Wrottesley's employment, Hartnup became a supernumerary computer at the Royal Observatory, Greenwich. In March 1838 he became assistant secretary to the RAS. His basic yearly salary was £80, although he supplemented this with commissions for collecting subscriptions and selling the society's *Memoirs*. He had married Elizabeth Furness on 7 January 1837 at St Mary, Lewisham, Kent. While working for the RAS, he resided in its apartments in Somerset House, and it was here that his

son John was born; the child was baptized on 7 February 1841 at St Mary-le-Strand.

In November 1843, on the recommendation of G. B. Airy, the astronomer royal, Hartnup was appointed as the first director of the Liverpool observatory. During the 1830s there had been in Liverpool a strong local feeling that an observatory should be founded to serve the interests of its rapidly growing port. After much discussion, involving, among others, the British Association for the Advancement of Science, various commercial interests, and private individuals, the Liverpool Dock Act of 1841 was passed with a section relating to the establishment of an observatory. This act enabled the town council to erect an observatory and meet the expenses out of dock dues. The observatory building was opened on Waterloo Dock in 1845. There was a residence for the astronomer, and the observatory apparatus included a transit instrument, an equatorially mounted refracting telescope, and associated clocks and meteorological instruments. The choice, design, and construction of the instruments owed much to Airy: the large refracting telescope, with an object glass of 8½ inches by Merz of Munich, was erected on an 'old English' mounting entirely under his superintendence.

As director of the Liverpool observatory, Hartnup was given three main tasks: to determine the longitude of Liverpool with as much accuracy as possible; to give accurate time to the port (this was to be done by use of a time-ball like that at Greenwich); and, most importantly, to test and rate chronometers. It was the third area that consumed the bulk of Hartnup's efforts and led to his invention of the 'Hartnup balance'.

Through his chronometer work at Liverpool, Hartnup soon focused on the so-called middle temperature error, which was inherent in the standard compensation balance employed in chronometers. To pursue this matter he designed a gas-heated oak box to test chronometers at a range of temperatures. In 1847 he conceived of a new sort of balance and his design was put into effect by William Shepherd, a Liverpool chronometer maker. Hartnup's balance, however, suffered various drawbacks, which meant it was not widely employed despite its definite advantage in terms of maintaining very close to the same rate at a wide range of temperatures.

As the port of Liverpool's business continued to expand, so Hartnup's chronometer work became ever heavier. This, together with advancing age, at first cut down and eventually curtailed his more directly astronomical pursuits. However, he had taken some excellent photographs of the moon in 1854. In Hartnup's earlier years at Liverpool Richard Sheepshanks, secretary of the RAS, had encouraged him to make extensive use of the refracting telescope to observe the positions of comets and minor planets. Good and large refractors were then so few that this work was important.

In 1863 the observatory was transferred from the Waterloo Dock to nearby Bidston on the Wirral. Shortly before the move, Hartnup's son had become an assistant to his father. In failing health, Hartnup resigned the directorship in May 1885, handing it over to his son, and moved to London in search of medical advice. He died suddenly on 20 October 1885 at his then home, 20 Langham Street, Portland Place, from causes that, according to the death certificate, derived from several years' senility. Seven years later, on 21 April 1892, Hartnup's son was killed when he fell from the observatory roof while making meteorological observations. ROBERT W. SMITH

Wealth at death £6201 14*s.* 11*d.*: probate, 21 Nov 1885, *CGPLA Eng. & Wales*

Hartog, Numa Edward (1846–1871), campaigner for Jewish rights, was born at 55 Mansell Street, Whitechapel, London, on 20 May 1846, the elder son among the five surviving children of Alphonse Hartog (*c.*1815–1904), a native of France and professor of French in London, and his wife, Marion, *née* Moss (*c.*1821–1907), a writer and teacher. Philip Joseph *Hartog was his youngest brother. Educated by his father and then at Dr Pinches' City Commercial School, Hartog was later enrolled at University College School, whence he proceeded to University College, London. His remarkable intellectual powers were soon reflected in the award of numerous monetary prizes, and his University of London BSc degree, awarded to him at the age of eighteen, was gained 'with honours and emoluments for proficiency in mathematics, classics, French and German' (*The Times*, 21 June 1871, 9).

In October 1865 Hartog was admitted to Trinity College, Cambridge, to read for the mathematical tripos. Elected a foundation scholar the following year, he was judged senior wrangler—that is, top in his year—in January 1869, thus becoming the first professing Jew to gain this distinction. Hartog declined to be admitted to his degree using the Christian form of words then prescribed, and a 'special grace' was passed, unanimously, by the Cambridge Senate on 29 January 1869 to enable the vice-chancellor to admit him in a manner which did not offend his religious sensibilities.

Legislation enacted in 1854 had made it possible for professing Jews to take the bachelor's degree at Oxford University; in 1856 this right had been extended to Cambridge. However, higher degrees, fellowships, and offices at these universities were still barred to them. Hartog was thus unable to benefit from the customary practice whereby the senior wrangler was elected to a Trinity College fellowship more or less automatically. Instead, he had to make do with a post in the Treasury, subsequently entering the office of the parliamentary draftsman, Henry Thring, having been admitted to the Inner Temple in 1864.

But his fate became a *cause célèbre*, a test of the reality of the civic emancipation which the Jews of Britain were supposed to have won a decade earlier. The case was taken up by Gladstone's Liberal government, and a bill was introduced to abolish religious tests at the ancient universities; Hartog's disability was frequently quoted in the many parliamentary debates which followed. In 1869 and again in 1870, bills passed by the Commons were vetoed by the Lords. But on 3 March 1871 Hartog himself appeared before a select committee of the House of Lords established to inquire into 'university tests'; his evidence was said to have made a particular impact, and was perhaps decisive in persuading the upper house that it should endorse the legislation, which received the royal assent on 16 June.

Hartog, tragically, did not live long enough to be able to benefit from it. He contracted smallpox (for the second time), and died, unmarried, at his home, 15 Belsize Square, Hampstead, on 19 June 1871; he was buried on 20 June. His younger brother, Marcus Manuel Hartog (1851–1924), followed him in 1870 to Trinity College, Cambridge, where he obtained first-class honours in the natural sciences tripos and graduated BA in 1874 and MA in 1878; he subsequently became professor of zoology at University College, Cork. Wealth at death under £300: administration, 27 July 1871, *CGPLA Eng. & Wales*

Hartog, Sir Philip Joseph (1864–1947), educationist, was born in London on 2 March 1864, the third son of Alphonse Hartog (*c.*1815–1904) and his wife, Marion (*c.*1821–1907), *née* Moss. The family was poor but its members were distinguished. Alphonse Hartog, who belonged to a Jewish Dutch family which had settled in Paris in the late eighteenth century, had come to London to teach French in 1845 and was married to Marion Moss, daughter of Joseph Moss and member of one of the oldest Jewish families in Portsmouth, whom he met while she was teaching in London. Marion Moss was a writer and an accomplished teacher who, with her husband, ran schools for Jewish children. Their pupils included Philip Hartog's cousin Sarah Marks, who became the physicist Hertha Ayrton in later life. As neither parent possessed a flair for business the schools failed to prosper.

The Hartogs had seven children of whom five survived. Philip (named Philippe at birth) was the youngest, born when his mother was past forty. His eldest brother was the brilliant Numa Edward *Hartog, whose untimely death at the age of twenty-five occurred when Philip was only seven. The family never ceased to grieve for Numa but the surviving brothers and sisters supported one another emotionally and materially, focusing much attention on Philip and planning for him a distinguished career in the mould of the lost brother.

From 1875 Philip attended University College School, London, where his fees were paid by the Baroness Mayer de Rothschild, who had helped Numa; this arrangement ended abruptly in 1878 when her daughter cancelled the gift, stating that Hartog showed insufficient promise. His horrified family managed the final year at University College School before sending him to live with his brother Marcus, then an assistant lecturer in biology at Owens College, Manchester. Philip became a pupil of Sir Henry Roscoe and graduated BSc of Victoria University in 1882 at the age of eighteen. When Marcus was appointed professor at the University of Cork, Philip went to Paris to live with the family of his sister Helena and her husband, the philologist Arsène Darmesteter. In that cultured household he acquired an interest in language that was to last a lifetime, although he continued to pursue a scientific career, working on the composition of sulphites with Professor Berthelot at the Collège de France, and was placed first in his class for the degree of licencié-ès-sciences. The Darmesteters then paid for Philip to spend a year at Heidelberg University working with Bunsen. Hartog graduated BSc (London) with second-class honours in chemistry in 1885 and lived happily in Paris until his brother-in-law's sudden death. Faced with the necessity of helping his widowed sister, in 1889 Philip obtained a Bishop Berkeley fellowship in chemical physics at Victoria University of Manchester, where he became assistant lecturer in chemistry in 1891.

Hartog lived in Manchester from 1889 to 1903, a happy period of friendship with the academic circle that surrounded T. F. Tout and with C. P. Scott of the *Manchester Guardian*. In this period his contentment was marred only by his failure to obtain the London degree of DSc in 1890, a growing suspicion that he would never distinguish himself as a research chemist, and a persistent lack of money, as he contributed to the support of his parents and sister. To earn extra money he wrote book reviews and scientific articles for the *Manchester Guardian* and Tout introduced him to writing for the *Dictionary of National Biography*. His wife wrote that in 1891 he was entrusted with the biographies of Macadam, Mayow, and Mercer 'and he eventually wrote the biographies of all the chemists from the letter "M" onwards', nearly forty altogether (Hartog, 22). This work gave him a lucid prose style and an interest in Priestley, to which he would return in later life.

Philip Hartog was a natural teacher and a popular lecturer (he was flattered to be chosen to lecture in chemistry at the Manchester High School for Girls until he found out that the headmistress was looking for a homely lecturer to avoid distracting the girls). In 1895 Principal Ward offered him the post of secretary of the extension committee, of which Tout was chairman. This fortunate partnership called forth both Hartog's talent for teaching and a previously unrecognized genius for administration. His extension work led to friendship with Michael Sadler, and Sadler's influence led Hartog to accept that, for him, teaching and administration were to be of greater importance than research. He worked at the Ancoats settlement and was a respected member of its short-lived Ruskin Hall. This work gave him an abiding interest in clear expository writing; he was to publish two influential books on the

subject, notably *The Writing of English* (1907). From 1902 to 1903 he was secretary of Alfred Mosely's commission to study educational methods in the USA.

Despite his happiness at Manchester, Hartog realized that advancement was unlikely there. With the support of Roscoe, Schuster, and the physicist Will Ayrton (who had married Hartog's cousin) he applied for the post of and was appointed academic registrar of the University of London. He served in this post from 1903 to 1920 and was instrumental in organizing and drafting statutes for the newly reorganized university. Both his talent for administration and his innate courtesy served him well in this position, in which he exerted considerable influence.

In 1905 Hartog became secretary of a committee of London University to reorganize oriental studies. He brought to the project, which resulted in the foundation of the school of oriental studies (1916), an 'almost missionary enthusiasm' (*Bulletin*, 491). The undertaking required his best diplomatic and managerial skills; when the school came into being he regretfully declined to be its first head in preference to a recognized oriental studies scholar. He continued to serve the school for thirty years as crown member of its governing body. He was appointed CIE in 1916 for his work for the school and in old age it was his delight to hear himself described as its founder.

Hartog's parents died early in the twentieth century; he remained close to his two sisters until their deaths in 1940. On 9 April 1915 Hartog married Mabel Hélène (*d.* 1954), daughter of Henry Joseph Kisch. She was to write several books on India, together with her husband's biography. They had three sons. The family were enthusiastic walkers and climbers, and Hartog continued to climb until at least his early seventies.

Despite his domestic felicity, Hartog was restless during the war years, longing for work of national importance. Despite his age, he tried unsuccessfully to get himself sent to France as an interpreter. In 1917 Sadler invited him to join a commission on the University of Calcutta. Six months' work turned to eighteen months, but, despite personal inconveniences (his second son was born during his absence), for Hartog the work was stimulating, calling for both his meticulous attention to detail and his qualities of tact and good humour. It led to an involvement with India that would continue for the rest of his life.

In 1920 Hartog was appointed first vice-chancellor of the new University of Dacca, created to serve the Muslim community of Bengal. He and his family spent five happy years in Dacca, where he was instrumental in establishing the university as a residential, tutorial body, with a staff engaged in serious research and a mission to train its students for life and citizenship, a model unfamiliar in existing Indian universities but one which proved highly popular with students and community alike. Despite communal disturbances and almost routine criticism in the local press, Hartog kept the university open and secured it reliable funding, leaving it in 1925 well established with harmonious relations between its Muslim and Hindu students. His own reputation as an academic administrator was enormously enhanced; he received the honorary degree of LLD of the university in 1925 and a knighthood in 1926 for services to India.

Hartog returned to England in 1925 but felt unoccupied and quickly returned to India as a member of the newly created Indian public service commission. In 1928 and 1929 he chaired a commission on the growth of education in India which exposed appalling wastage in elementary education, especially among girls. In 1930 Hartog resigned from the public service commission eighteen months early, wishing to spend more time with his wife and young sons, and he was appointed KBE.

People who knew Hartog remarked on how little he seemed to age and how much he accomplished after what is generally thought of as the age of retirement. In the 1930s Eleanor Rathbone enlisted Hartog, who had championed women's suffrage at the University of London, to chair a group pressing for women's franchise in the new constitution of India; he debated with Gandhi, refuting Gandhi's claim that literacy had declined in British India; he returned to his study of Joseph Priestley; and he became an active member of the Academic Assistance Council, working to help displaced academics from Nazi Germany.

Hartog had a long-standing interest in the operation of examinations and in 1931 he was appointed as director, under Sadler, of an international committee, the International Institute Examinations Enquiry, whose object was to promote objective and scientific methods of examining. With Gladys Roberts he conducted two major surveys of the intelligence tests used by local authorities in the United Kingdom. His studies with E. C. Rhodes, published as *An Examination of Examinations* (1935) and *The Marks of Examiners* (1936), helped to secure recognition of the distinction between examinations designed to test mastery of specific skills and those that tested educational progress.

Hartog was a deeply religious individual, in Manchester a member of the Reform synagogue, and later a member of the council of the Liberal Jewish synagogue in London. He worked for various Jewish organizations, including the Liberal Jewish movement led by C. J. Goldsmid-Montefiore. Although never a Zionist, Hartog came to see Palestine as a refuge against persecution and in 1933 chaired a small committee to report on the organization of the Hebrew University of Jerusalem. He worked hard to establish its department of English and served on its board of governors.

During the Second World War Hartog chaired a committee to create a register of linguists available for war work, hoping to avoid the waste of talent he remembered from the First World War. He slowly completed his last work in defence of rhetoric, *Words in Action: the Teaching of the Mother Tongue for the Training of Citizens in a Democracy* (1947), which he hoped would replace the meaningless prose compositions then still assigned in many schools. He coined the phrase 'intellectual conscience' to describe the critical habits of mind that made individuals resistant to propaganda. His health declined early in 1946 and he died at 5 Collingham Gardens, Kensington, London, on 27 June

1947. Mabel Hartog was killed in a mountaineering accident in 1954.

Hartog was a small man; his wife described him in Manchester days as 'short and dark with [a] small head, rather like an eager little bird, inconspicuous though not easily forgotten' (Hartog, 159). He was by nature kind, modest, and unassuming, of a legendary absent-mindedness which often led to his arriving home with alien articles of clothing. He himself said his life was never dull because he had 'a constitutional interest in and liking for people' (ibid., 159). The universities of Manchester, London, Dacca, and Jerusalem, the Jewish communities in London and Palestine, and the educational systems in England and India as a whole benefited from his formidable administrative talents. He was remembered not just for these talents but also for his belief in the liberating possibilities of clear writing and his gift for friendship.

Wealth at death £18,571 4s. 2d.: probate, 31 Oct 1947, *CGPLA Eng. & Wales*

Hartopp, Sir John, third baronet (*bap.* 1637, *d.* 1722), politician, was baptized on 31 October 1637, the only surviving son of Sir Edward Hartopp, second baronet (*d.* 1658), landowner, and Mary, daughter of Sir John *Coke of Melbourne, Derbyshire. He matriculated from St John's College, Oxford, on 25 July 1655, but did not graduate; he was admitted on 19 June 1656 to Lincoln's Inn. He succeeded as third baronet in March 1658, inheriting his father's estate at Freatby, Leicestershire. In 1664 his mother married the former republican general Charles *Fleetwood and went to live with him in Stoke Newington, Middlesex. On 8 November 1666 Sir John Hartopp married Elizabeth (*d.* 1711), Fleetwood's daughter from his first marriage.

In September 1673 the churchwardens of Stoke Newington presented Hartopp and Charles Fleetwood 'for not coming to their said parish church nor receiving the sacrament at Easter last past nor since to this day' (Cliffe, 84). Hartopp worshipped at the Leadenhall Street congregation of the Independent minister Dr John Owen; after the death of Joseph Caryl in 1672, his followers and those of Owen joined forces to form 'one of the most aristocratic of the London Nonconformist congregations', meeting at Bury Street in the parish of St Mary Axe (Whiting, 78). Hartopp made shorthand notes of Owen's sermons and as a result thirteen were published for the first time in 1756.

Hartopp represented Leicestershire in the three Exclusion Parliaments of 1679 and 1681. He was an exclusionist, but was otherwise inactive in the first parliament; following his re-election in October he sat on eight committees, including those charged to 'inquire into the conduct of Sir Robert Peyton, into abhorring, and the proceedings of the judges. He was also among those instructed to bring in bills to regulate parliamentary elections, to unite Protestants, and to reform the Post Office' (Cruickshanks). Though he was returned unopposed in 1681, he appears once more to have lapsed into inactivity. In April 1686 fines totalling £7000 were levied on Hartopp and Charles Fleetwood on the grounds that they were guilty of holding conventicles at Stoke Newington, though it appears that some of this was recovered following legal objections.

According to Isaac Watts, his chaplain for five years, Hartopp:

> had a taste for universal learning; and ingenious arts were a delight from his youth ... mathematical speculations and practices were a favourite study with him in his younger years; and even to his old age he maintained his acquaintance with the motions of the heavenly bodies ... But the Book of God was his chief study, and his divinest delight. His bible lay before him night and day. (Watts, 242–3)

Hartopp himself gave sermons: 'he entertained his family in the evening worship on the Lord's day with excellent discourses' (ibid., 250). In addition to his Stoke Newington mansion he had a house in Epsom, and Watts sometimes preached in the adjoining Independent chapel. He also stayed at the family's property at Freatby near Melton Mowbray, acting there as tutor to Mary Hartopp, probably Sir John's daughter.

Hartopp died at Stoke Newington on 1 April 1722 and was buried on the 11th in Stoke Newington church beside his wife, who had died on 9 November 1711 and had been buried on 26 November. He left £10,000 for the training of dissenting ministers, but his heirs used a legal technicality to appropriate the bequest; it seems that eventually nearly half the money was restored to its intended purpose. Sir John and Elizabeth Hartopp had a family of four sons and nine daughters. Of these Frances married Nathaniel *Gould of Stoke Newington (1661–1728), a director of the Bank of England (1697) and later MP for Shoreham. She died on 15 November 1711, six days after her mother. The eldest boy, John (1680?–1762), married Sarah, the daughter and coheir of the wealthy Sir Joseph Woolfe of Hackney, an alderman in 1705 and brother of Sir John Woolfe (sheriff of London, 1696–7). Soon after this union, Sir John Hartopp handed over the estate to his son, with the proviso that the young man should settle £500 per annum on each of his six unmarried sisters, who all lived in the Fleetwood house and died between 1739 and 1764.

Hartree, Douglas Rayner (1897–1958), mathematician and theoretical physicist, was born on 27 March 1897 in Cambridge, where his father, William Hartree, a grandson of Samuel Smiles, was a member of the teaching staff of the engineering laboratory; he retired in 1913, but thereafter continued to do scientific work, much of it as assistant to his son. Hartree's mother, Eva Rayner, was the daughter of a prominent Stockport physician and sister of E. H. Rayner, who for many years was superintendent of the electricity division of the National Physical Laboratory. She was herself active in public affairs, serving as president of the National Council of Women and as mayor of Cambridge.

Douglas Hartree was the eldest of three sons, but alone survived to manhood. He was educated first in Cambridge, then at Bedales School, in Petersfield, from 1910 to 1915, where the excellent teaching of mathematics shaped his chief interests in later life. In 1915 he entered St John's College, Cambridge, as a scholar, but after a year he abandoned his studies for work in a team under A. V. Hill developing the new science of anti-aircraft gunnery. After the war Hartree completed his university courses and was awarded a PhD in 1926. In 1923 he had married Elaine, daughter of Eustace and Beatrice Charlton of Keswick, and an ex-pupil of Bedales School. They had one daughter and two sons. Hartree was elected fellow of St John's (1924–7) and of Christ's College (1928–9). He was appointed to the chair of applied mathematics (1929–37) and of theoretical physics (1937–45) in the University of Manchester. In 1946 he became Plummer professor of mathematical physics at Cambridge, a chair which he held until his death, and was again a fellow of Christ's. He was elected FRS in 1932.

The main scope of Hartree's work was largely determined by his early experiences in anti-aircraft gunnery. The calculation of trajectories involved much numerical work with pencil and paper, a type of mathematics in which he became expert; already at the age of twenty he had introduced outstanding improvements into the calculation of trajectories. He continued to develop this kind of work all through his life, and he came to be regarded as a world leader in computation, called in as consultant in many countries.

In the 1920s Hartree applied his methods to the solution of problems associated with the new quantum theories of the structure of the atom, particularly wave mechanics. In this field his most conspicuous work was the invention of the method of the self-consistent field. This made possible the practical solution of a problem which, if exactly treated, would have a quite impossible degree of complexity. Ten years later numerical methods were much changed by the invention of the differential analyser by Vannevar Bush in America. Hartree visited him at Massachusetts Institute of Technology in the summer of 1933 and gained both theoretical knowledge and valuable practical experience with the analyser. After returning to Britain Hartree first constructed (with graduate student Arthur Porter) a model of Bush's machine using the children's construction toy, Meccano. Successful operation of the model machine to solve differential equations allowed Hartree to persuade philanthropic benefactor and Manchester University deputy treasurer, Sir Robert McDougall, to fund a full-scale machine. This differential analyser, built by Metropolitan-Vickers, was widely used for military and scientific calculations. Hartree also became a leader in developing methods of automatic control for many complicated processes of manufacture: for example, his three term controller, used in chemical engineering plants, was a significant new technique of automation.

Hartree was also involved in the development of the digital electronic computer, which emerged from wartime attempts to automate calculation further, and was to replace differential analyses as the means of rapid solution of equations. In 1946 Hartree's advice was sought in the application of the United States army's ENIAC (electronic numerical integrator and computer) to the production of ballistic tables. A process which previously took a team of workers several days could now be done in thirty seconds. The first electronic digital stored program computer, based on the ideas of the ENIAC designers, was built at Manchester University in 1948, but Hartree had left for Cambridge two years previously.

Hartree's distinction as a scientist was not so much in the depth of his researches as in their breadth. With the new methods it became possible to attack many problems in a great variety of subjects which had before been insoluble, and it was he who largely led the way in this new attack. His book, *Numerical Analysis* (1952), came to be regarded as a classic of the subject. He was remembered as a good lecturer and brilliant at clarifying a subject by an intuitive knowledge of the level of understanding of his listener.

From boyhood Hartree had a strong interest in railways and their signalling methods, and in later life this proved useful to the railway companies in relation to their complicated traffic problems. He served on a committee of the British Transport Commission and showed how to use the high-speed computing machines to solve traffic problems which had previously taken months of calculation. Music was among his other interests: he played the piano and other instruments and also conducted an amateur orchestra. Hartree died of heart failure in Addenbrooke's Hospital, Cambridge, on 12 February 1958. He was survived by his wife.

Hartry, Malachy [*formerly* John] (*b.* 1580?, *d.* in or after 1651), historian, was born in Waterford city, Ireland, soon after 4 July 1580 of 'respectable parents', whose names do not survive (Hartry, 293). He was educated in the humanities at the Irish College, Lisbon, and became a Cistercian monk at the abbey of Palacuel in Spain. In 1619 Hartry returned to Ireland to work in Cistercian communities at Holy Cross, co. Tipperary, Kilkenny, Drogheda, Mothel, co. Waterford, and Waterford city. As an essential part of his missionary work, he devoted himself to investigating the history of the Irish branch of the order.

Of Hartry's many Latin writings, under the name Malachy, only two substantial pieces survive. One, entitled 'Triumphalia chronologica de coenobio sanctae crucis sacri ordinis Cisterciensis in Hibernia', is dated 4 July 1640, and contains an autobiographical note in which the author describes himself as nearly sixty. It comprises an account of the establishment of Holy Cross Abbey, with notices of its relics and administrators. The other, entitled 'De Cisterciensium Hibernorum viris illustribus' and completed on 18 April 1651, contains over forty biographical sketches of illustrious members of Irish Cistercian houses. Both were edited and published in 1891 under the title of the 1640 piece. Among Hartry's works which do not survive was a biography of the Irish Cistercian monk Thomas Lombard.

Hartry's corpus made a significant contribution to the ecclesiastical historiography of Ireland in the late medieval and immediate post-Reformation periods. The leading Cistercian historians on the continent, Juan Crisostomo Henriquez and Angelus Manrique, knew and thought highly of Hartry, and made use of his researches in their own work. Hartry died some time after 18 April 1651, at a date and place unknown. COLM LENNON

Hartshorn, Vernon (1872–1931), trade union leader and politician, was born at Cross Keys, Pont-y-Waun, Monmouthshire, on 16 March 1872, the elder son of Theophilus Hartshorn, coalminer, and his wife, Helen Gregory, daughter of a farm labourer. He began work in the mines before taking employment as a clerk in a colliery company's office at Cardiff docks. Having returned to work at Risca, he was elected by the miners as their checkweighman. In 1899 he married Mary Matilda, daughter of Edward Winsor, a Somerset coalminer. They had two sons and a daughter.

Hartshorn, whose political career developed from his early commitment to Primitive Methodism, was one of the pioneers of the Independent Labour Party in Wales. In 1905 he was elected miners' agent of the Maesteg district of the South Wales Miners' Federation. In 1911 he was elected to its executive council and to the national executive council of the Miners' Federation of Great Britain, one of a number of young radicals who displaced more established figures, following the Cambrian combine strike of 1910–11. He took a leading part in the minimum wage strike of 1912 and was prominent in local government business.

During the First World War, Hartshorn served on the coal trade organization committee, the coal controllers' advisory committee, and the industrial unrest committee in south Wales, and his services were recognized by his appointment as OBE in 1918. At the general election of 1918 Hartshorn, who had in 1910 twice unsuccessfully contested the Mid-Glamorgan division as an independent socialist candidate, was returned unopposed as the first member for the newly formed Ogmore division of Glamorgan, and he held the seat until his death. Notwithstanding parliamentary duties, he aided the miners in their strike in 1920, but he resigned from both the miners' executive councils to which he belonged because of a disagreement over the tactics employed in the strike. He returned to both councils from 1922 to 1924, having been elected president of the South Wales Miners' Federation.

In parliament Hartshorn was elected chairman of the Welsh Labour group in 1923, and in the first Labour administration in 1924 he was postmaster-general and sworn of the privy council. In 1927 he was appointed to the seven-man Indian statutory commission, which he later considered to have achieved outstanding results. The chairman, Sir John Simon, stated that those portions of the commission's report which dealt with the franchise and the method of election were especially due to Hartshorn.

On the formation of the second Labour administration, in 1929, the prime minister announced that a place for Hartshorn would be found as soon as the commission had completed its work. Accordingly, in 1930 he was appointed lord privy seal with special responsibility for the government's policy on employment. Hartshorn showed great promise in this post, earning Ramsay MacDonald's high praise for a report he handed to the prime minister after two months in office; but he was prevented from fulfilling this early promise by death.

Vernon Hartshorn (1872–1931), by Bassano, 1924

Hartshorn owed his rise to his detailed knowledge of the mining industry, his outstanding ability as a negotiator, and his moderation and pragmatism. He died at Hill Crest, Maesteg, Glamorgan, on 13 March 1931, survived by his wife. W. L. COOK, *rev.* ROBERT INGHAM

Hartshorne, Albert (1839–1910), archaeologist, was born on 15 November 1839 at Cogenhoe rectory, Cogenhoe, near Northampton, one of the eight children of Revd Charles Henry *Hartshorne (1802–1865), antiquary, and his wife, Frances Margaretta (*d.* 1892), younger daughter of Revd Thomas *Kerrich (1748–1828), sometime president of Magdalene College, Cambridge, and principal librarian of the university library at Cambridge. After attending Westminster School (1854–7) he completed his education in France and at Heidelberg. In 1872 he married Constance Amelia (*d.* 1901), younger daughter of Revd Francis MacCarthy of Ballyneadrig and Lyradane; they had no children.

Hartshorne's antiquarian curiosity was unsurprising given his family background; both his father and maternal grandfather had earlier studied church monuments, which became one of his chief interests. His major work on *The Recumbent Monumental Effigies in Northamptonshire* was published in parts between 1867 and 1876, with illustrations made by photographing ink copies of original pencil drawings which had been prepared to scale on the spot. In their faithful likeness to the original sculptured figures, showing details of armour, dress, and jewellery at actual size, the drawings and descriptions of the individual dated monuments contained useful information of costume history, which Hartshorne himself developed in later studies of sword belts (1891) and portraiture (1899). His draughtsmanship also included measuring and planning buildings, together with drawing Anglo-Saxon pottery and other objects. His interest in artefacts extended to more recent items, and he wrote a monograph on drinking glasses from early times to the end of the eighteenth century, published as *Old English Glasses* (1897).

Hartshorne was twice secretary of the Royal Archaeological Institute of Great Britain and Ireland, between 1876 and 1883 and from 1886 to 1894, and during that time also edited its annual proceedings, the *Archaeological Journal*, from 1878 to 1892. He was elected a fellow of the Society of Antiquaries of London in 1882 and served for a time on its council, as well as becoming the local secretary for Derbyshire. He remained active in national archaeological affairs and frequently contributed papers to meetings in London, as well as continuing to publish historical research until his death. In later life Hartshorne lived chiefly at Bradbourne Hall, Derbyshire, but died at his home at 7 Heene Terrace, Worthing, on 8 December 1910, and was buried in Holdenby churchyard, Northamptonshire, where his father had been appointed rector in 1850. Hartshorne, Charles Henry (1802–1865), antiquary, was born in Broseley, Shropshire, on 17 March 1802, the only child of John Hartshorne (1759–1805), known probably from involvement in the local trade as 'the ironmaster', and his wife, Frances, *née* Holleyshead (1777–1849). The Hartshornes had long been settled at Broseley and neighbouring Benthall. His father's premature death impaired Hartshorne's early prospects. He entered Shrewsbury School late, aged sixteen, in 1818 and was advised by the judge Sir James Alan Park that exertion was essential and that the expense of studying for the bar (£250–£300 a year) was likely to be prohibitive. Hartshorne soon 'fixed upon the Church', Park urging him in letters to aspire to be a learned divine, to strive for perfection of character, and to avoid the 'quicksand' of fanaticism, enthusiasm, and

Methodism. Hartshorne was admitted pensioner at St John's College, Cambridge, in 1821, graduated BA in 1825, and proceeded MA in 1828.

Hartshorne's earliest source of antiquarian and bibliophilic inspiration was Thomas Frognall Dibdin, though a more important—and more fateful—contact was Richard *Heber, the bibliophile and MP for Oxford University, whom he had met before going up and visited a number of times while at Cambridge. Heber brought him into the circle of the Roxburghe Club and introduced him to Frederick North, fifth earl of Guilford. North, who was chancellor of the University of Corfu, invited Hartshorne to accompany him there; he travelled through Italy and also toured the Levant. An account of this journey was one of his many uncompleted literary projects.

On returning to England in September 1826, Hartshorne discovered that a rumour had been circulating for some time of a homosexual relationship between himself and Heber, and that this had been referred to by innuendo in the muck-raking magazine *John Bull* during the previous May. Heber had since gone abroad, and could not be prevailed upon to return to rebut the charges; it seems likely that there was nothing to hide in this case, but he may have wanted to avoid scrutiny of other episodes in his private life. Hartshorne accordingly sought, and was granted, a criminal information against *John Bull* in king's bench, and its editor was fined £500. But Heber's exile effectively ended Hartshorne's hopes of obtaining a post in the British Museum or the civil service. He was ordained deacon in 1827, becoming curate of Benthall, Shropshire, near his family home. He was ordained priest in 1828 and was curate of nearby Little Wenlock from 1828 to 1836. On 10 December 1828 Hartshorne married Frances Margaretta, younger daughter of the Revd Thomas *Kerrich, principal librarian of the University of Cambridge, who had died earlier that year. She brought with her a considerable fortune, and they had fourteen children, four of whom died in infancy. By 1829 Hartshorne's mother had been widowed again, and the indefatigable Park (letter of 10 June, Hartshorne MSS) was rejoicing over the power her late husband's kindness had left her, 'of providing handsomely for you'.

After two years in Leamington, Warwickshire, 'which everything intellectual shuns', Hartshorne took charge of Cogenhoe church, Northamptonshire, in 1838, rejoicing to find it, as he told his fellow antiquary Albert Way, 'hoary with grey lichen ... the natural abode of an Antiquary' (Hartshorne MSS). A few years later he was conscious of being more antiquary than divine, having to confess that he was 'woefully deficient' in books 'on my own profession'. Nevertheless his mention of 'Oxford poison' suggests that he was armed against enthusiasm of a non-Methodist kind (letter to Way, ibid.). He was elected a fellow of the Society of Antiquaries in 1839 and became a member of the Roxburghe Club, belatedly, in 1861. He was honorary chaplain to the seventh and eighth dukes of Bedford, and in 1850, during the premiership of the seventh duke's brother Lord John Russell, he was presented to the crown living of Holdenby rectory, Northamptonshire.

Hartshorne's publications include *Ancient Metrical Tales, Printed Chiefly from Original Sources* (1829), referred to by Scott in his introduction (1830) to *Ivanhoe*; *Sepulchral Remains in Northamptonshire* (1840); *Salopia antiqua, or, An Enquiry into the Early Remains in Shropshire and the North Welsh Borders* (1841), including a glossary of the 'Provincial Dialect' of Shropshire; *Historical Memorials of Northampton* (1848); and *Memoirs Illustrative of the History and Antiquities of Northumberland* (1858), a useful contribution to the history of the borders. He contributed an article, 'The Latin plays acted before the University of Cambridge', to the *Retrospective Review* and was a frequent writer in the *Archaeological Journal*. His archaeological papers cover the architectural history of medieval towns and castles, various medieval parliaments, the royal councils of Worcester, the obsequies of Katherine of Aragon, early remains in the great isle of Arran, the itineraries of Edward I and II, and domestic manners in the reign of Edward I. He was also author of papers on the drainage of the New Valley, and subjects connected with social science. *Salopia antiqua*, a genuinely original archaeological synopsis which may still be consulted with profit, was founded on an extensive and vigorous exploration of his native county: in 1837 he wrote (to Way) describing long tramps, of 30–50 miles daily, over the Shropshire hills. The book was in some respects pioneering, for example in its inclusion of material on dialect and place names which were anticipations of later, more systematic work by Georgina F. Jackson and others. Much of his work, however, contains errors and internal inconsistencies, and is characterized, according to one modern assessment, by 'wide learning and shallow scholarship' (Hunt, 31).

Hartshorne died of heart disease at Holdenby on 11 March 1865, a week short of his sixty-third birthday. His library was sold at Sothebys, but owing to the water damage caused to many items following a fire, the sale prices were disappointing. His wife survived him; his third son, Albert *Hartshorne, achieved distinction as an archaeologist, and a daughter, Emily Sophia, was the author of *Memorials of Holdenby* (1868) and three other books.

Hartstonge, John (1659–1717), Church of Ireland bishop of Derry, was born on 1 December 1659 at Catton, near

Norwich, the second son of Sir Standish Hartstonge (*d.* *c.*1702), one of the barons of the Irish exchequer, and his first wife, Elizabeth (*d.* 1663), daughter of Francis Jermy of Gunton in Norfolk. Having attended schools at Charleville and Kilkenny, he entered Trinity College, Dublin, on 20 May 1673, and graduated BA in 1677 and MA in 1680. Meanwhile he had entered Gonville and Caius College, Cambridge, on 19 June 1676, where he took his MA in 1680. After travelling for a year until he had reached the canonical age, he took orders and was elected a fellow of Caius in 1681. He became chaplain to the first duke of Ormond, and through his influence was collated to the archdeaconry of Limerick on 24 June 1684. He served as chaplain to the second duke of Ormond during his campaigns in Flanders, and in 1693 was appointed bishop of Ossory (patent 8 April, consecrated 2 July).

In the reign of Anne, Hartstonge emerged as a militant member of the tory and high-church party. In 1704 he was one of three bishops whom the primate, acting through his chaplain, condemned as 'incendiaries'. When convocation in 1709 became involved in a conflict with the lord lieutenant, Wharton, Hartstonge was one of two bishops sent to London to appeal against his authority. Later, in 1711, Dominic Langton, a renegade friar who had come forward with wild allegations of treasonable conspiracy among the whig gentry of co. Westmeath, claimed immunity from arrest as Hartstonge's chaplain. In January 1713 Swift reported that Hartstonge was not to succeed to the see of Hertford, 'to the great grief of himself and his wife' (Swift, *Journal to Stella*, 597–8). He was appointed bishop of Derry on 3 March 1714. In May 1715 his agent, a Mr Jeffreys, was arrested carrying what were held to be treasonable papers addressed to Swift and others. According to Archbishop William King the packages included 'two letters of the bishop of Derry that were not very prudent I confess, but there being nothing directly against his majesty we ordered them to be restored' (*Correspondence of Jonathan Swift*, 5.232).

Swift, who saw Hartstonge regularly when they were both in London in 1711, described him to Stella as 'the silliest, best natured wretch breathing, of as little consequence as an egg shell' (Swift, *Journal to Stella*, 424). Hartstonge died in Dublin on 30 January 1717 and was buried in St Andrew's Church. He left lands in co. Kilkenny, Hertfordshire, and Radnorshire, as well as £10,000 to a daughter aged under ten. S. Wealth at death £10,000—lands

Hartwell, Abraham (*b.* 1541/2, *d.* in or before 1585), Latin poet and translator, was educated at Eton College and was admitted to King's College, Cambridge, on 25 August 1559, aged seventeen. He became a fellow of King's College in August 1562 and graduated as BA in 1563 and MA in 1567, in which year he resigned his fellowship. He was a protégé of Sir Walter Haddon, the influential statesman and controversialist, created regius professor of civil law at Cambridge in 1550/51 and master of requests in 1558. Hartwell wrote his most important work, *Regina literata* (1565), for Haddon.

As an active Cambridge University Latin poet, Hartwell wrote verses for the rehabilitation, soon after the accession of Queen Elizabeth, of the protestant martyrs Paul Fagius and Martin Bucer. These verses were later printed on page 954 of Bucer's *Scripta Anglicana*, published in Basel in 1577, and take the form of a poem of some eighty lines consisting of a dialogue between Bucer and the university. Hartwell also wrote prefatory or commendatory verses for Walter Haddon's collection of speeches, letters, and poetry, the *Lucubrationes* (1567), and for the 1570 edition of John Foxe's *Acts and Monuments*. There are a few unpublished verses by Hartwell extant in Cambridge manuscripts. He translated from Latin into English one of Haddon's refutations of the Portuguese controversialist Osorius da Fonseca as *A Sight of the Portugall Pearle* (1565). Some poems by Hartwell also appear in Gabriel Harvey's *Gratulationes Valdinenses* (1578), including a poem on Lord Burghley and one on Robert Dudley, earl of Leicester, in which he urges the latter's suitability as a husband for the queen.

Hartwell's reputation as a Latin poet rests principally on the *Regina literata* of 1565. The poem, handsomely printed by William Seres (a printer favoured by Lord Burghley), is almost 1400 lines long, and is an account of Queen Elizabeth's ceremonial visit to the University of Cambridge in August 1564, which lasted for five days. Hartwell supplies many details of the university's elaborate arrangements to celebrate this occasion, including, in fluent elegiac couplets, such matters as the composition of the greeting parties, where the queen slept, her apparel and demeanour, plot summaries of the plays which she saw during her visit, the Latin disputations which she attended, and the speeches made both by and to Elizabeth at the colleges she visited. The poem celebrates the queen as a learned protestant monarch, ably discharging the responsibilities of the sovereign. The *Regina literata* concludes with some further verses by Hartwell—an acrostic poem on Elizabeth, a few epigrams, and a series of nineteen distichs which versify biblical observations on the nature of monarchy.

Hartwell was ordained deacon in London on 13 October 1566. He became rector of Stanwick, Northamptonshire, in 1568, of Toddington, Bedfordshire, in 1570, and of Tingrith, also in Bedfordshire, in 1572. He must have died in or

before 1585, the year in which his widow, Anne, remarried; Thomas Newton in his *Illustrium aliquot Anglorum encomia* (1589, p. 124) speaks of him as having died recently.

Hartwell, Abraham (1553/4–1606). *See under* Society of Antiquaries (*act.* 1586–1607).

Harty, Sir (Herbert) Hamilton (1879–1941), conductor and composer, was born on 4 December 1879 in Main Street, Hillsborough, co. Down, Ireland, the fourth of ten children of William Michael Harty (1852–1918), organist of Hillsborough church, and his wife, Annie Elizabeth, daughter of Joseph Hamilton Richards, soldier, from Bray, co. Dublin. Harty was raised in the Anglican faith.

Educated mainly at Hillsborough local school, Harty studied the organ, piano, and viola with his father. Though he also benefited from playing the viola in the family string quartet, his father's extensive music library was the basis for much of his early musical education. Having had no formal training as a musician, Harty used these scores to develop his skills as both composer and executant. In 1894 he was appointed organist at Magheragall, and in November 1895 he became organist at St Barnabas's Church, Belfast. There he continued to play the viola, joining chamber music groups and becoming a member of an orchestral society. But he was unimpressed by the industrial character of the city and applied for, and was appointed to, the post of organist at Christ Church, Bray. Being close to Dublin, Harty sought musical guidance from Michele Esposito (1855–1929), professor of piano at the Royal Irish Academy of Music. Though never a formal pupil, he was influenced heavily by him. Encouraged by his mentor to further his skills as a piano accompanist, Harty found that his reputation as a sympathetic musical partner soon flourished: with Ella Russell he played for Queen Victoria, and in 1900 he worked as an accompanist at the Feis Ceoil (Dublin). It was there that he had an early success as a composer: he was awarded a prize for his string quartet, op. 1.

Limited by the opportunities available to him in Ireland, Harty moved to England. After resigning from his post at Bray in January 1901, he was appointed organist at All Saints' Church, Norfolk Square, London, but his tenure there lasted for only one week. Now unemployed as an organist, he earned his living by playing the piano at soirées and working as an accompanist at both the Boosey ballad concerts and the South Place Sunday popular concerts. But he never severed his links with Ireland, and he continued to submit works to the Feis Ceoil during the first decade of the twentieth century. Among the compositions entered was his 'Irish' symphony, with which he made his début as a conductor in 1904. He later revised the symphony twice and made it a regular feature of his concert programmes.

Sir (Herbert) Hamilton Harty (1879–1941), by Harold Speed, 1905

It was on 15 July 1904 that Harty married the singer **Agnes Helen Nicholls** (1877–1959). Born at Cheltenham on 14 July 1877, she studied at the Royal College of Music. After performances of Purcell's *Dido and Aeneas* at the Lyceum Theatre in 1895, she sang privately for Queen Victoria. She made her Covent Garden début in 1901 and continued to perform at that theatre until 1924. A principal of the British National Opera Company, she later became a director of that organization. But it was her professional relationship with the Hungarian conductor Hans Richter that was of greatest importance to Harty. After performing in Wagner's *Der Ring des Nibelungen* under Richter in 1908, she approached him on her husband's behalf. And it was through this connection that Harty secured his first important conducting engagement: a performance of his tone poem *With the Wild Geese* with the London Symphony Orchestra in March 1911. The performance was a success, and he was engaged to conduct the orchestra again during its 1912–13 season. Hoping to reinforce his status as a composer-conductor, Harty gave the first performance of his *Variations on a Dublin Air* with the same orchestra in February 1913. Unfortunately, neither the critics nor the public shared his enthusiasm for his music: his concerts made a loss and he was not invited back for the following season. Nevertheless, his reputation as a conductor continued to

grow, and he was invited to perform Wagner's *Tristan und Isolde* and Bizet's *Carmen* at Covent Garden in 1913. But he had little sympathy with opera, preferring, instead, symphonic music. In January 1914 he conducted the Liverpool Philharmonic Orchestra, and in April he made his début with the Hallé Orchestra of Manchester. His career was interrupted briefly by the First World War: in June 1916 he joined the Royal Naval Volunteer Reserve and was posted for duties in the North Sea, and he rose to the rank of lieutenant in 1917 before leaving in June 1918. In December he substituted for an indisposed Sir Thomas Beecham at a performance of Handel's *Messiah* with the Hallé Orchestra, and on 27 March 1919 he again replaced Beecham at a performance of J. S. Bach's mass in B minor.

Harty was appointed permanent conductor of the Hallé Orchestra in 1920, at a time of financial difficulty, and he participated fully in the management of the ensemble. But his primary responsibilities were musical, and, with the benefit of tenure, he was able to explore his interests thoroughly. In an interview with the *Musical Times* that was published shortly after his appointment, he set out his thoughts on music in general. For him, Berlioz and Mozart were 'deities', whose works reflected their abilities as 'intuitive composers'. Conversely, he argued that with Wagner he 'sometimes [felt that] a mechanical process [was] at work', causing him to 'rate him below Berlioz'. Harty liked Stravinsky and Ravel, but had reservations about the music of Franck, Brahms, and Skryabin. His preference for all-male orchestras proved most controversial: he claimed that the inclusion of women precluded a homogeneous orchestral style and caused logistical difficulties on tour. At a time when the role of women in the workplace was an important social and economic issue, this argument was difficult to sustain. Though challenged widely, he maintained his position and appointed only one woman to the orchestra: the harpist. Because of his responsibilities with the Hallé Orchestra, Harty's activities as a composer diminished during his Manchester period. Even so, he continued to compose and to arrange, completing his transcriptions of Handel's 'Water Music' and 'Music for the Royal Fireworks' in 1920 and 1923 respectively. A keen chamber musician, Harty was the driving force behind the Manchester chamber concerts in 1921 and later the Harty chamber concerts. Having improved the Hallé Orchestra's standard of playing, he took the ensemble to London during the 1924–5 season, its first visit to the capital since 1913. It returned regularly to London thereafter and undertook the Hamilton Harty symphony concerts at the Queen's Hall in the 1929–30 and 1930–31 seasons. Though successful musically, the concerts were a financial disaster: Harty, acting as promoter, was responsible for a deficit of £3000. But his troubles were more than financial: his reluctance to perform works from music's cutting edge also caused concern. In his lecture 'Some problems of modern music' (1929) he raised the question: had contemporary music 'wandered aside into barren and unfruitful wastes?' Yes, he said; but he was forced to review his position, and in his last three seasons with the Hallé Orchestra he included works by Prokofiev, Bartók, Walton, and Krenek. In 1931 and 1932 he toured North America, and on his return from his second tour it was announced that he had been appointed artistic adviser and conductor-in-chief of the London Symphony Orchestra. Although his agreement with the Hallé Orchestra was not exclusive, the Hallé Concerts Society decided to end his contract after the season of 1932–3. Distressed by their decision, Harty announced his resignation on 5 February 1933 and appeared for the last time as permanent conductor at Preston on 30 March 1933.

As conductor of the London Symphony Orchestra, Harty was scheduled to lead eight concerts and two tours during the season of 1933–4. But it soon became clear to the directors that he was not the right man for the job. At Manchester he exercised influence and power, but this approach was unsuitable for a self-governing orchestra. It was agreed, therefore, that Harty's contract should be terminated after 1934. But that year was not a complete disaster for the conductor: he performed in Australia and toured the USA twice. Triumphant in North America, he returned there in 1935 and 1936. But he also maintained a heavy schedule in Britain, conducting the first complete performance of Walton's symphony no. 1 and the première of Bax's symphony no. 6 on 6 and 21 November 1935 respectively.

Harty's health began to deteriorate sharply in 1936: a malignant brain tumour was discovered and surgery was required. After both the growth and his right eye were removed, Harty convalesced in Ireland and Jamaica during 1937 and 1938. Unable to conduct, he returned to composing: he set five Irish songs and wrote his last original composition, *The Children of Lir*, during his convalescence. Following two studio concerts with the BBC Symphony Orchestra in December 1938 and February 1939, Harty returned to the Queen's Hall on 1 March 1939, directing the première of *The Children of Lir* with the BBC Symphony Orchestra. And after another period of convalescence in the summer of 1939 he undertook a full programme of concerts during the 1939–40 season. But his illness continued to trouble him, and he conducted for the last time on 1 December 1940.

Remembered primarily for recordings that only partially reflect his interests and abilities, Harty was an executant of influence and standing. His achievements with the Hallé Orchestra compare favourably with those of Hans Richter but are less important historically than those of Sir John Barbirolli. His skills as an accompanist have been likened to those of Gerald Moore, but his talents as a creative artist are less convincing. A self-taught composer, Harty often used derivative methods, and his works soon fell from the standard repertory. Only his transcriptions of Handel's 'Water Music' and 'Music for the Royal Fireworks' were heard regularly after his death, but these too have fallen from favour and are performed rarely. His work was recognized formally in 1925 when he was knighted. After being made a fellow of the Royal College of Music in 1924, he received honorary doctorates from several universities and on 22 November 1934 was

awarded the gold medal of the Royal Philharmonic Society. The Hamilton Harty chair of music was established at the Queen's University, Belfast, in 1951; from 1952 an annual Hamilton Harty memorial concert, at which one of his major works was to be performed, was given at that university. Because of Harty's estrangement from his wife, who died in London on 21 September 1959, the conductor was nursed through his final illness by his secretary and intimate friend, Olive Elfreda Baguley, who survived him. Harty died at 3 Palm Court, 33 Brunswick Square, Hove, on 19 February 1941; after cremation his ashes were placed at Hillsborough parish church.

Harty, (Fredric) Russell (1934–1988), television broadcaster, was born on 5 September 1934 in Blackburn, Lancashire, the only son and elder child of Fred Harty, greengrocer (who, his son claimed, introduced Blackburn to the avocado pear), and his wife, Myrtle Rishton. He was educated at Queen Elizabeth's Grammar School, Blackburn, and Exeter College, Oxford, where he read English and was taught by Nevill Coghill, who noted of an early essay, 'Sex in the *Canterbury Tales*', 'Energetic and zealous but very naïve'. He took a third-class degree (1957) and taught briefly at Blakey Moor secondary modern school in Blackburn before moving in 1958 to Giggleswick School in Yorkshire. Giggleswick was a school and a village with which he was to have close connections for the rest of his life. In 1964 there followed a spell at City College, New York, and at Bishop Lonsdale College of Education, Derby, but with many of his friends and contemporaries busy in the theatre and broadcasting he was increasingly dissatisfied with teaching.

In 1966 Harty made his first foray into television, an inglorious appearance as a contestant on Granada TV's *Criss Cross Quiz*; the only question he answered correctly was on Catherine of Braganza. It was such a public humiliation that his mother refused to speak to him. Still, it was a beginning and in 1967 he was taken on by BBC radio as an arts programmes producer, his hankering to perform whetted by the occasional trip to the studio down the corridor whenever *Woman's Hour* wanted a letter read in a northern accent.

As an undergraduate Harty had invited Vivien Leigh round for drinks and this precocious appetite for celebrity stood him in good stead when, in 1969, he became producer and occasional presenter of London Weekend TV's arts programme, *Aquarius*. He might not have seemed the best person to film Salvador Dalí, but the elderly surrealist and the boy off Blackburn market took to one another and the programme won an Emmy award; in another unlikely conjunction he set up an encounter on Capri between the eminent Lancashire exiles Sir William Walton and Gracie Fields. Harty was never abashed by the famous (his critics said that was the trouble), but it was his capacity for provocative half-truths and outrageous overstatement, which made him such a good schoolmaster, that now fitted him for a career as the host of a weekly talk show (*Eleven Plus* and later *Russell Harty*) and made him one of the most popular performers on television. Plump, cheerful, and unintimidating, he was particularly good at putting people at their ease, deflating the pompous, and drawing out the shy.

In 1980 Harty returned to the BBC, but his output remained much as it had been for the last ten years, the same mixture of talk shows varied by occasional films like *The Black Madonna*, and his *Grand Tour*, shown in 1988. He wrote regularly for *The Observer* and the *Sunday Times*, publishing a book of his television interviews, *Russell Harty Plus* (1976) and also *Mr Harty's Grand Tour* (1988). He was a regular broadcaster on radio besides presenting the Radio 4 talk show *Start the Week*.

'Private faces in public places are wiser and nicer than public faces in private places' (W. H. Auden) did not anticipate television, where the distinction is not always plain. For his friends Harty was naturally a private face but for the public he seemed a private face too and one that had strayed on to the screen seemingly untouched by expertise. That was why, though it infuriated his critics, so many viewers liked him and took him to their hearts as they never did more polished performers. He giggled, he fumbled, and seldom went for the right word rather than the next but two, and though his delivery could be as tortured as his mother's on the telephone, it did not matter. It was all part of his ordinariness, his deficiencies, his style.

Harty never made much of a secret of his homosexuality. He did not look on it as an affliction, but he was never one for a crusade either. His funniest stories were always of the absurdities of sex and the ludicrous situations it had led him into, and if he was never short of partners, it was because they knew there would always be laughs, sharing a joke being something rarer than sharing a bed.

In the second half of the 1980s the spread of AIDS

enabled the tabloid press, and in particular those newspapers owned by Rupert Murdoch, to dress up their muckraking as a moral crusade, and they systematically trawled public life for sexual indiscretion. Harty, who had not scrupled to question his more celebrated interviewees about their sex lives, knew that he was in a vulnerable situation. Early in 1987 a young man who had had a previous fling with Harty was wired up with a tape recorder by two *News of the World* reporters and sent to call on Harty at his London flat. To the reporters' chagrin nothing newsworthy occurred, but the paper fell back on printing the young man's account of the previous association, thus initiating a campaign of sporadic vilification in the tabloid press which ended only with Harty's death just over a year later.

The cause of Harty's death was liver failure, the result of hepatitis B, but in the hope that he was suffering from AIDS the press laid siege firstly to his home at Rose Cottage, Giggleswick, and then to St James's Hospital in Leeds, where he was in intensive care. A telescope was trained permanently on the window of his ward and a reporter tried to smuggle himself into the ward disguised as a junior doctor, in order to look at his case notes. When Harty was actually on his deathbed one of the journalists responsible for the original 'scoop' could not be restrained from retelling the tale of her exploits on television. Harty died in Leeds on 8 June 1988 and was buried in Giggleswick, the gravestone evidence of the vulgarity from which he never entirely managed to break free.

Harty, William (1781–1854), physician, was born in Kilkenny, the son of Timothy Harty, gentleman. He entered Trinity College, Dublin, as a pensioner on 27 April 1797, became a scholar two years later, and graduated BA in 1801, MB in 1804, and MD in 1830, with a thesis on the Dublin bills of mortality. Harty was an unsuccessful candidate for the chair of botany at the university in 1808. He became a licentiate of the King and Queen's College of Physicians in Ireland in 1818, a fellow in 1824, and a censor in 1826. He resigned his fellowship in the following year, for reasons which are now unknown, but was made an honorary fellow in 1833.

Harty was a staunch Anglican, familiar with scripture and with Irish church history, and evinced a strong commitment to the poor throughout his professional career. Shortly after graduation he became one of the physicians to the Sick Poor Institution in Dublin's teeming Liberties district, where the most common illnesses were fevers and diseases of the chest, stomach, and bowels, as well as rheumatic and dropsical complaints. Harty and others attributed the prevalence of these ailments to the wretched living conditions of the poor. In January 1818 he was one of the founders of the Association for the Suppression of Street-Begging in Dublin, commonly known as the Mendicity Association. The economic crisis that followed the fall of Napoleon was responsible for an upsurge in mendicancy and vagrancy throughout Ireland and triggered off a fever epidemic which may have affected as many as 1,500,000 individuals. Harty's *Historic sketch of the causes, progress, extent and mortality of the contagious fever epidemic in Ireland during the years 1817, 1818, and 1819*, which appeared in 1820, is his most notable published work. In it Harty criticized the government's role as reactive and remedial rather than preventive, contending that the adoption of temporary expedients for the suppression of fever was useless; the evil itself had to be rooted out. This could only be achieved, Harty believed, by direct government intervention—by changing the social conditions that gave rise to disease and in effect ridding the country of pauperism.

Harty depicted fever as Ireland's greatest scourge and dysentery as its close companion. A revised edition of his 1805 pamphlet *Observations on the History and Treatment of Dysentery* appeared at the beginning of 1847, when the country was again racked by famine and its attendant diseases. Fifteen years earlier, he had also contributed a characteristically polemical article on the fearful cholera epidemic to the *Dublin Journal of Medical and Chemical Science* (3.1833). Harty's interest in infectious diseases may have stemmed from his involvement with a number of Dublin institutions. In addition to his dispensary work in the Liberties, he served as physician to the King's Hospital, or Blue Coat School, and to the prisons of Dublin, for more than forty years. About 1820 he acquired Finglas House, a private lunatic asylum in co. Dublin, which, under an act of 1843, was licensed for eighteen inmates. Ownership of this institution involved Harty in a number of legal wrangles over the detention of patients and the rights of the insane.

Early in 1851 Harty committed Henry William Mathew, a 25-year-old student at Trinity College, Dublin, to Swift's Hospital for the Insane. In the following December, Mathew sued Harty for assault and false imprisonment, and damages were laid at £5000. The defence pleaded that Mathew was a dangerous lunatic who had to be confined for his own protection and treatment. The revelation on the fourth day of the trial that he was Harty's natural son caused a sensation; the jury found a verdict for the plaintiff for £1000 damages and 6*d*. costs. It was stated during the course of the trial that Harty was married and had a legitimate family. A son, William, had been born in 1814, had entered Trinity College, Dublin, as a pensioner in July 1830, had graduated BA in 1835, and had been called to the Irish bar in 1838. His half-brother, Henry Mathew, graduated BA in 1855.

Harty did not long survive his public humiliation in the courts. He died at Ballickmoyler, Queen's county, on 30 March 1854. LAURENCE M. GEARY

Harvard, John (1607–1638), educational benefactor, was baptized on 29 November 1607 at St Saviour's Church, Southwark, Surrey, the fourth of the nine children of Robert Harvard (*d.* 1625), butcher, and the second with his second wife, Katherine (1584–1635), the daughter of Thomas Rogers, yeoman and alderman, of Stratford upon Avon, Warwickshire. An active resident of his parish, Robert Harvard held a series of influential local offices, including vestryman, churchwarden, overseer of the poor, and governor of the parish grammar school, which his son John almost certainly attended, probably beginning in or about 1615.

John Harvard was seventeen years old in the summer of 1625 when his father died of the plague, a disease which also carried off a half-sister from his father's first marriage and two brothers. Since four other siblings and half-siblings had already died of other causes, only his mother and his brother Thomas survived to share in a comfortable inheritance. Katherine Harvard took a second husband, John Elletson, a cooper of Middlesex, in January 1626; after Elletson died five months later, in June 1626, she married Richard Yearwood, a grocer of Southwark, in 1627, each marriage significantly increasing the family resources.

Harvard had not continued his education following the completion of grammar school, but after the deaths of his father and most of his siblings, as the family assets became concentrated in increasingly fewer hands, the opportunity for further learning opened to him. He was entered pensioner at Emmanuel College, Cambridge, on 19 December 1627, responsible for his own charges without college assistance. In 1632 he graduated BA, and three years later, in 1635, he proceeded MA. Harvard's selection of Emmanuel offers a clear indication why he resumed his education. Sir Walter Mildmay had endowed the college in 1584 specifically for the education of a preaching ministry. The obvious reason for entering Emmanuel was to prepare to take holy orders, and only those who were attracted to its strict faith chose this stronghold of puritanism.

Katherine Yearwood died in July 1635, and less than two years later Harvard's last surviving sibling, Thomas, a cloth worker, died in the spring of 1637. Their deaths left John Harvard the primary heir to family assets worth some £2000. These included money, rental properties, and an inn, the Queen's Head, in Southwark. By now, Harvard had married: on 19 April 1636 he had taken as his wife Ann (*b.* 1614), the daughter of John Sadler, minister of Ringmer, Sussex, and the sister of John *Sadler (1615–1674), a close college friend.

In the 1630s and early 1640s Emmanuel College furnished thirty-five emigrants to puritan New England—more than a quarter of the 130 university men who arrived before 1646—and the Harvards prepared to join this stream during the spring of 1637. John had apparently already taken holy orders; although generations of assiduous researchers have failed to find a record of his ordination either in England or New England, by 1635 several surviving documents, including his mother's will, referred to him as 'John Harvard Clarke' (Morison, 212). Harvard was still in England in late May 1637 when he laid claim to a debt of about £300; by 1 August he and his wife were living across the harbour from Boston in Charlestown, Massachusetts, where this town of perhaps 150 families accepted him as a freeman. The couple had probably sailed from London in early June and spent a month or more at sea, arriving in Massachusetts Bay at some point in July. Their impedimenta had included his large personal library of about 400 books on subjects both sacred and secular.

Churches in early Massachusetts frequently called two clergymen—a pastor and a teacher—and the church in Charlestown had recently lost the services of its teacher, Thomas James, who had been too choleric for his parishioners. Harvard succeeded James as colleague to the church's pastor, Zechariah Symmes, an Emmanuel man. Surviving records do not indicate when Harvard took up the teacher's duties, but on 6 November 1637 John and Ann were admitted to membership in the church.

The Harvards lived in Charlestown for slightly more than thirteen months before John died there of consumption, childless, on 14 September 1638, and was buried in the town. During those months they built or bought a substantial house, and in April 1638 Harvard served on a town committee to assist in drafting a legal code for the colony. A leader in the community from his arrival, he received large portions on several occasions in recognition of his station when the town divided common lands. When he preached and prayed in public he spoke 'with teares [of] affection strong' (Morison, 218).

While the Harvards were establishing themselves in their new home, the college that would bear the family name was being organized a few miles away in Newtown (renamed Cambridge in 1638). Authorized on 28 October 1636 and granted £400 by a vote of the colony's general court, the school opened under the mastership of Nathaniel Eaton, a college contemporary of Harvard, some time between early June and 7 September 1638. John Harvard's only claim to lasting recognition results from his bequest to this infant institution. The beneficiary of several inheritances himself, by nuncupative will he left the college about £800—half of his monetary estate—as well as his entire library. In money alone, the bequest was about twice the size of the legislature's original grant. Six months later, on 13 March 1639, the general court voted 'that the college agreed upon formerly to bee built at Cambridge shalbee called Harvard College'. Harvard's widow, who received the remainder of the estate, married Thomas Allen, his successor as the teacher of the Charlestown church.

A fire in 1764, which destroyed the college library, consumed all but one of the books in John Harvard's bequest. Aside from it and his signature in a volume of records at

Emmanuel College, no Harvard artefacts have survived. A seated statue of him by Daniel Chester French, now located in Harvard Yard, is an idealization, not a likeness.

Wealth at death approx. £1600; plus 400 books: Morison, *Founding of Harvard College*, 222

Harvel, Edmund (*d.* in or before 1550), merchant and diplomat, was probably the gentleman of that name of Besford and Cowley, Worcestershire, who appears on the pardon roll at the accession of Henry VIII and in a genealogical table in a Worcestershire heralds' visitation of 1564. Little else is sure about his family and early life, except that he had a brother, a London merchant, who visited him in Venice in 1539. This man was almost certainly the Richard Harvel who was an exile in Zürich and Geneva in the reign of Mary I. Edmund Harvel was in Venice by 1524, when he acted as an agent for the Paduan philosopher Niccolò Leonico Tomeo. He was by then a friend to Tomeo's circle of English students, which numbered Thomas Lupset, Reginald Pole, and Thomas Starkey. He developed particularly strong relations with Starkey and Pole, and in the 1530s came to be on close terms with Starkey's associate Richard Morison, and with one of Pole's servants, Bernardino Sandro. By the 1540s a succession of English students and tourists were in contact with him as a potential aid and protector in Venice, and several of them, including Thomas Hoby and John Denny, stayed in his home.

Harvel's semi-official activities on behalf of Henry VIII date at the latest from 1530, when he acted as an agent for Richard Croke and John Stokesley, who were in Italy to find solutions to the problem of the royal divorce. He transmitted money from England to Croke in Venice, and sent back to the king Croke's letters and writings, activities for which he received royal grants in 1530 and 1531. It was probably through Thomas Starkey—who was back in England by 1534, and with whom Harvel carried on a regular correspondence in the mid-1530s—and through Thomas Winter, Cardinal Wolsey's illegitimate son, that Harvel became known to Thomas Cromwell, who offered him employment in 1535 and advised him to move back to England. At this time Starkey was himself in Cromwell's service as an intelligencer for Italian affairs, and was working to persuade Reginald Pole to come to terms publicly with Henry VIII's divorce and royal supremacy. Although Harvel wrote to Starkey in 1535 communicating his plans to return to England as soon as he had tied up his business affairs in Italy, and reassuring him that Pole would satisfy the king, it appears that Harvel was misleading Starkey. In the autumn of 1535, while Pole stayed in his house in Venice, Harvel visited Sicily. This journey, apparently made to settle his business interests, was at least in part a mission on Pole's behalf to Charles V, then in Palermo, probably intended to persuade the emperor to take action against the schismatic king of England. In April 1536 Pole, whose passionate denunciation of Henry VIII had by then reached England, still regarded Harvel as one of his clients, claiming to his friend Alvise Priuli that he could not send Harvel again to Charles V without causing suspicion in England. This material explains why Harvel in the event thought it prudent not to return to England, instead marrying Apollonia Uttinger, the daughter of an Augsburg merchant resident in Venice, in 1538. Uttinger brought a substantial dowry worth 1500 Venetian *ducati* to the union.

Harvel's work for Pole also testifies to his skills of concealment: in 1537 he entered government service and through Cromwell was granted a stipend from the crown and a licence to export wool from England. Thereafter he sent regular newsletters to Cromwell until the latter's death in 1540. But his diplomatic status remained ambivalent. From the English side he was not yet an official agent in 1538, when Richard Morison begged Cromwell to make him so. By 1539 he was specifically instructed as an intelligencer by Cromwell 'under the colour of his feate and trade of merchandise, keping this Commission secrete from all men'. His task was to include spying on the papacy and on Reginald Pole; fostering evangelical and anti-papal sentiment among 'notable and honest persons'; and secretly conveying the king's favourable disposition to the duke of Urbino, who was under threat of invasion from the pope (Merriman, 2.167–75). His letters to Cromwell also include extensive reports on Mediterranean and Turkish matters. After Cromwell's fall Harvel wrote directly to Henry VIII, or occasionally to Thomas Wriothesley and William Paget.

From the Venetian government Harvel gained some, but not total, diplomatic recognition. In 1542 he was granted permission for his thirteen servants, four of them English, to carry arms, and the authorities gave him retrospective exemption from taxes on the basis of his ambassadorial status in 1545. On the other hand, although permitting him a grand funeral in 1550, partially paid for by the state, the signoria did not follow the procession because Harvel was considered more of an 'envoy' and 'vice-ambassador' than a full ambassador. Although most of his business activities remain obscure, they included trade in corn in Sicily and, more importantly, the export of wool from England to Venice and elsewhere. The Venetian republic's traditionally warm relations with England were maintained in this period because of the wool trade in particular, and some of Harvel's diplomatic dealings reveal the Venetian authorities' anxieties not to alienate Henry VIII because of this. For example, the republic

was reluctant to act against the Bolognese *condottiere* Ludovico dalle Armi, accused of various criminal activities in the 1540s, in part because he was in the employment of the king; Harvel acted as a negotiator over this matter, helping to postpone dalle Armi's execution until after Henry VIII's death.

Harvel's marriage to a German probably reflected his religious sympathies. His connections in the late 1530s and 1540s with Italian evangelicals, Lutherans, and critics of the established church were wide-ranging. His physician (Girolamo Donzellino) and his secretary (Baldassare Altieri) were both noted heretics, while he maintained relations with Pietro Aretino, Antonio Brucioli (whom he recommended to Cromwell as a potential spy in Rome in 1539), Ortensio Lando (who dedicated to him his *Lettere di molte virtuose donne* in 1548), and, possibly, Michelangelo Florio and Vincenzo Maggi. Harvel used his diplomatic position to protect evangelicals in Venice and to foster protestant connections between England and Italy, but apparently always with sufficient prudence and discretion not to come under suspicion himself.

It was indeed for his prudential qualities that Harvel was highly regarded by the Venetian government as a diplomat. He also gained a reputation for kindness, friendship, and learning. By the 1540s his household was a substantial one and the inventory of his goods, drawn up after his death, indicates possessions (including 170 books) valued at 930 Venetian *ducati*. From this, 446 *ducati* and 12 *grossi* were spent on paying off his servants and on his funeral in the church of San Geremia and burial in the church of Santi Giovanni e Paolo; these took place before 7 January 1550. His wife, by whom he was deeply mourned, inherited the remainder as the return of her dowry.

Wealth at death 930 Venetian ducati: 1550 post-mortem inventory, repr. in Brown, ed., 'Marriage contract'

Harvey, Alexander [Alex] (1935–1982), popular singer, was born on 6 February 1935 at 40 Govan Road, Kinning Park, Glasgow, the first of the two children of Leslie Harvey (*d.* 1992) and his wife, Greta. A son of the infamous violent era of Glasgow, he left school at fifteen and had reputedly had thirty-six jobs by the age of twenty-two. He was married twice: first to Mary Martin (*d.* 1999), with whom he had a son, Alex, and, after their divorce, to Trudy, with whom he had another son, Tyro.

Harvey's first musical engagement was as a trumpeter at a wedding, but his break came in 1957, when he won a newspaper contest. The *Sunday Mail* had been looking for 'Scotland's Tommy Steele' and found it in Alex, 'a first-rate rock'n'roll singer with unlimited vitality' (*Sunday Mail*, 10 April 1957). His reputation quickly spread—especially as he had friends appearing in ballrooms all over Scotland pretending to be him. After some years in skiffle and folk outfits, he created the Big Soul Band by asking musicians if they wanted to get into debt. They supported many chart acts of the time in Scotland, then travelled to Hamburg, where they released *Alex Harvey and his Soul Band* (1964). On returning to Britain, Harvey worked with his brother, Les, on *The Blues* (1965). Another stint on the Scottish circuit led to several unsuccessful singles and to disillusionment, which led Harvey to move to London, where he joined the band of the cult musical *Hair* for five years. After the release of *Roman Wall Blues* (1969) he became disillusioned again and dropped out of music altogether.

Along with having witnessed Jimi Hendrix's early appearances, the death of his brother is credited with inspiring Harvey's return to work: Les Harvey was electrocuted on stage in May 1972. Close friends said Alex never really recovered from the experience. He joined up with Zal Cleminson (guitar), Hugh McKenna (keyboards), Ted McKenna (drums), and Chris Glen (bass), and the Sensational Alex Harvey Band first performed on 29 June 1972. They released eight albums in five years: *Framed* (1972), *Next* (1973), *The Impossible Dream* (1974), *Tomorrow Belongs to me* (1975), *Live* (1975), *The Penthouse Tapes* (1976), *SAHB Stories* (1976), and *Rock Drill* (1978). The band had two hit singles: 'Delilah' (1975) and 'Boston Tea Party' (1976).

The Sensational Alex Harvey Band became noted for powerful live performances. Harvey was older than the rest of the band and the audiences, but commanded their respect. He took to wearing a pink-and-black striped jumper, and discarded the crooning soul voice in favour of his gravelly Glaswegian accent. Theatrical presentation was a priority: Harvey said he always wanted to be a director. He played various parts during the shows: a street thug during 'Framed'; a private detective for 'Man in the Jar'; a drunkard in 'Gamblin' Bar Room Blues'. The rest of the band had roles too—notably Zal, who performed as a harlequin. The interplay between the Harvey and Cleminson characters became a trademark.

Regarded by many as the 'oldest punk in the world' (a description apparently coined by the *New Musical Express*), Alex went to lengths to exact a response from every audience. When Slade were the biggest band in Britain, the Sensational Alex Harvey Band were the only outfit who dared to support them and they thrived on the mixed reactions. Harvey once invaded the Tubes' stage and drowned out their show with two bagpipers; and he performed 'I was Framed' in Germany dressed as Hitler. On and off stage his dominant personality was difficult to ignore: as his drummer, Ted McKenna, noted, 'Alex could dominate a room just by entering it'. The theme of violence followed Harvey through his career. He stopped performances if trouble broke out in the audience, and even stopped fights himself, often saying: 'Don't make any bullets, don't buy any bullets, don't shoot any bullets ... and don't pish in the water supply'. Despite this, he failed to escape the image of backstreet Glasgow. He regarded himself as a conscientious objector, as his father had been; but he was fascinated by military history, and collected books, toy soldiers, and memorabilia.

Contrary to his public image, Harvey was often racked

by personal doubt, and would ask friends, 'What do they want from me?' He did not find an answer to his recurring disillusionment. The death of his manager, Bill Fehilly, in 1976 shook him dramatically, and during rehearsals for the *Rock Drill* tour in late 1977 he announced his retirement. One year later he returned with a new band and released 'The Mafia Stole my Guitar' (1979), which had no more success than his pre-Sensational Alex Harvey Band material. On tour with his new Alex Harvey Band he died of a heart attack in Zebrugge, Belgium, on 5 February 1982. He was survived by his second wife and his two sons. The respect he held in the public eye was reflected by Charles Shaar Murray's obituary six days later in the *New Musical Express*: 'I've lost my sergeant'.

Harvey, Beauchamp Bagenal (1762–1798), barrister and Irish nationalist, was born at Bargy Castle, co. Wexford, the son of Francis Harvey (*d.* 1792), barrister and landowner, of Bargy Castle, and Martha, daughter of the Revd James Harvey of Killan. He was tutored by Mr Ball as a boy and entered Trinity College, Dublin, in February 1771. He graduated BA in 1775 and, after studying at the King's Inns, was called in 1782 to the Irish bar, where he hoped to emulate his father's successful legal career. His Trinity contemporary and circuit associate Sir Jonah Barrington claimed that Harvey was a popular, courageous, and generous young man. In 1792 Harvey inherited his father's estates in Wexford and Waterford, which provided him with an annual income of £3000. Like many liberal protestants he supported Catholic emancipation and campaigned for the reform of parliament. His interest in politics evidently dated from 1782 and by 1792 he was prominent in Wexford's influential Catholic committee. He was also then a leading member of the republican Dublin Society of United Irishmen, over which he occasionally presided. An experienced duellist, he defended the honour of the society by wounding Ambrose Hardinge Giffard on 8 May 1794.

In March 1795 a meeting of Wexford freeholders selected Harvey, Edward Hay, and Cornelius Grogan to deliver a petition supporting the retention of Earl Fitzwilliam as viceroy. Harvey's journey to England on this business aroused the extreme hostility of Wexford's powerful conservative interest. As a comparatively moderate United Irishman he had little contact with the clique attached to Lord Edward Fitzgerald that actively sought French military aid and plotted insurrection in Ireland. Instead his closest United Irish associates included Hay, John Henry Colclough, William Hatton, and Mathew Keugh, who, like him, were not deeply concerned with the military side of the Wexford organization prior to the 1798 rising. In 1797 he reputedly married Judith Steevens of Arklow.

The mass arrest of republican leaders at Oliver Bond's house in March 1798 may have enhanced Harvey's importance in the movement and his name was linked to senior conspirators in neighbouring co. Wicklow during this period. He hosted a famous dinner party during the April assizes attended by the Sheares brothers; Barrington was one of the few non-United Irishmen present and inferred from the guarded conduct of other guests that an insurrection was imminent. Martial law was imposed on Wexford in April 1798, and although Harvey's former activism attracted suspicion the authorities' failure to penetrate the security of the county leadership shielded him until the rising began. On 23 May 1798 he continued to feign loyalty by complying with a proclamation demanding the surrender of arms. He brought a cartload of his tenantry's weapons to Wexford town and was at lodgings near by that night when arrested by Captain James Boyd.

Harvey was in Wexford gaol when fighting spread to the county on 26–7 May. The battles of Oulart Hill and Enniscorthy turned the tide of the rising in favour of local insurgents who menaced Wexford town from Forth camp on 30 May. Harvey was requested to use his influence to safeguard the lives and properties of the pro-government community and was unharmed when the unnerved garrison abandoned the town later that day. On the night of 31 May he entertained United Irish leaders Edward Hay and Edward Fitzgerald of Newpark in his town house but was disturbed when a crowd demanded that they send out Edward Turner. Turner, a liberal magistrate, was subsequently imprisoned and Harvey realized that it would be difficult to defend such men from those wishing to avenge loyalist atrocities. The same night a meeting of rebel officers at Windmill Hill unexpectedly appointed Harvey rather than Fitzgerald as commander-in-chief of Wexford forces. Informed observers considered Harvey a compromise candidate whose protestantism reassured his co-religionists that they had nothing to fear from the nascent Wexford republic. Dissension within the county command structure arising from regionalism and tactical arguments remained unresolved and Harvey consequently lacked supreme authority. His was a largely honorary position in what remained a committee-led irregular army.

The delay of south Wexford insurgent forces in attacking the strategic border town of New Ross has been attributed in part to Harvey's indecision and complacency. The insurgents left Carrickbyrne on the night of 4 June and took up positions overlooking New Ross at Corbet Hill. Harvey established his headquarters in the local mansion and dined well ahead of what he assumed would be a short battle. His planned three-pronged attack on the town on 5 June using 10,000 men was tactically sound but was cancelled when an insurgent emissary was shot under flag of truce. A poorly executed assault, commenced at dawn, eventually drove the garrison from their positions but his failure to consolidate this costly victory exposed him to severe criticism when the army's counter-attack succeeded. He was also dismayed by reprisals taken against loyalist prisoners at Scullabogue and his last act in

the field was to issue a proclamation threatening the abetters of such crimes with death.

Harvey stood down, or was deposed, as commander of the dwindling insurgent forces on 7 June and accepted another largely honorary position as 'president' of the administration in Wexford town. His attempt to open negotiations with government on 14 June was frustrated by hardliners, and the dispatch of a delegation to General Lake on the 21st also ended in failure the following day. Harvey decided to flee via Bargy Castle to Great Saltee Island off the Wexford coast with John Henry Colclough, probably intending to escape abroad at a later stage. They were seized on the information of Dr Richard Waddy on 23 June by a landing party of the revenue cutter *Rutland* and committed to Wexford gaol the following morning. Harvey was tried for eight hours on 26 June and defended himself with claims that he had accepted command only to encourage restraint. Capital conviction for treason was almost a formality and Harvey was executed on 27 June on Wexford Bridge, a structure he had helped finance in 1795. His body was thrown into the river and his head spiked on Wexford court house. He left no children. An act of attainder against Harvey's estate received royal assent on 6 October 1798 but was not effected. The lands were instead leased to Harvey's brother James who received their formal regrant in 1810 before their ultimate restoration to his older brother, John.

Wealth at death Wexford and Waterford estates, town house in Wexford, Bargy Castle

Harvey, Charles Barnet Cameron [Roscoe] (1900–1996), army officer and racing administrator, was born on 19 July 1900 in Sarawak, the son of Charles David Harvey, merchant of the Borneo Company. Following his father's death in 1901 he came to England with his mother. She rode to hounds with the Beaufort and Harvey learned to ride at an early age and fox-hunted throughout his youth. Despite inherited myopia which forced him to wear thick spectacles he was an outstanding games player and fine amateur rider. His first ride was at Cheltenham, when he fell off at the last fence while lying fourth. He also took up showjumping and lost the King George V Cup at the royal international horse show only after a jump off. He was known as Charles until one day in 1921 when he rode 2 pounds overweight at an Irish steeplechase; a fellow officer likened him to the film star Roscoe (Fatty) Arbuckle and the sobriquet stuck.

Educated at Downside, where he scraped through his school certificate, and at Sandhurst, where he required an interview to compensate for his poor entrance exam, Harvey joined the 10th hussars in 1920. After a spell at the Weedon Cavalry School he was appointed regimental equitation officer. On 25 October 1926 he married Iris Daphne (Biddy) Mylne (*b.* 1902/3), daughter of Ernest Mylne, merchant. There was one son and one daughter of the marriage, which ended in divorce. In 1929 Harvey went with his regiment to Egypt, where he spent his leisure time organizing a racing stable. He was then posted to Meerut in India, where he took up polo to international standard, tent-pegging, and pig-sticking, in which he reached the final of the Kadir cup, the blue riband of that sport. Later he was involved in the mechanization of his squadron and, wearing a red hat rather than the official tin one, he proved a dashing, front-line leader of armour in the Second World War, in which he was awarded three DSOs. In May 1940 he embarked for France as second in command of the 10th hussars and fought several brisk actions in tanks which, in his own words, 'wouldn't even stop a rifle bullet' (*The Times*, 30 March 1996) before being evacuated from Brest in June. He served in the Middle East in 1941 and for the final stages of the north African campaign he was commander of the 8th armoured brigade. On one occasion his thirty tanks, most of which were destroyed, engaged 160 Panzers of the German Afrika Korps and halted the German advance long enough for the British army to retreat behind the Alamein line. He also found time to organize horse-races in the sands of Tripoli. Later he took the 11th armoured division into France, where it fought its way across the Orne. Despite heavy casualties Harvey's vigorous leadership kept morale high. He spearheaded the recapture of Antwerp and was the British officer responsible for liberating Belsen. His men also captured William Joyce—Lord Haw Haw—and Heinrich Himmler, the SS chief. He once told Montgomery that 'being a master of hounds is a damn sight more difficult than being a general' (*Daily Telegraph*, 29 March 1996). In Schleswig-Holstein at the end of the war he organized a series of race meetings with commandeered German thoroughbreds.

At the age of forty-six Harvey decided to leave the army, though he later became colonel of the 10th hussars. He wrote to his friend at the Jockey Club, Sir Humphrey de Trafford, enquiring about becoming a stipendary steward. On leaving the army in 1946 he was appointed a stewards' secretary, becoming senior stewards' secretary five years later. In this position he had a major role in controlling the discipline of British racing for two decades, though generally he aimed to prevent malfeasance rather than to punish it. As in his army days his humour and imperturbability concealed a determined and imposing character. He owned and bred National Hunt horses at Oddington Top, his Cotswold home near Moreton in Marsh, Gloucestershire. For three years he was also a member of the British Boxing Board of Control. On 23 February 1966 he married Betty Stoddard Horn (1905/6–1980), a widow, and daughter of Louis Ezekiel Stoddard, financier. On Harvey's retirement in 1970 he was elected a member of the Jockey Club. Although he modestly claimed that he continued as senior steward for so long 'because he couldn't do anything else', champion jockey Sir Gordon Richards acknowledged him as 'the greatest man racing has known

in my lifetime' (*Daily Telegraph*, 29 March 1996). He died at his Gloucestershire home, Oddington Top, Oddington, on 28 March 1996 of bronchopneumonia, a few months after taking the salute from his wheelchair at the VJ parade at Stow on the Wold. He was survived by the daughter of his first marriage, Marion Jennefer Matthey.

Harvey, Christopher (1597–1663), Church of England clergyman and poet, was the son of the Revd Christopher Harvey (*d.* 1601) of Bunbury in Cheshire, a clergyman, and his wife, Ellen. He probably attended Bunbury grammar school, where his father had been headmaster, until his widowed mother married Thomas *Pierson and moved to Brampton Bryan in Herefordshire. He was enrolled as a batteler at Brasenose College, Oxford, in 1613, graduated BA on 19 May 1617, and was licensed MA on 1 February 1620. Having taken holy orders, by 1630 he was working in the parish of Whitney in Herefordshire, where the baptism of a daughter was recorded on 13 March and where he was appointed rector on the death of the incumbent in December. He was the first headmaster of Kington grammar school in Worcestershire from September 1632 until March 1633, when he resumed his duties in Whitney. On 14 November 1639 he was instituted into the vicarage of Clifton-on-Dunsmore in Warwickshire. According to a dedication in Pierson's *Excellent Encouragements Against Afflictions* (1647), which Harvey edited after his stepfather's death, he owed these livings to the patronage of Sir Robert Whitney. His wife, Margaret, bore nine children, five baptized at Whitney between 1630 and 1639 and four, including twin daughters, baptized between 1642 and 1645 at Clifton.

Harvey is best-known as the author of *The Synagogue*, a collection of religious poems first published anonymously in 1640 and bound with the sixth edition of *The Temple* by George Herbert. Subtitled 'The shadow of the temple', it was originally conceived as a modest imitation of a revered master but the ecclesiastical reforms of the 1640s led to a change of emphasis in later editions. Groups of poems on church festivals and church utensils added in 1647 indicate a determination to defend the doctrines and practices of the established church against puritan attack, and new poems on church offices in the third edition of 1657 were part of 'a canny political campaign' during the interregnum 'for the restoration of high Anglicanism' (Bell, 268–9). His main literary ally was Izaak Walton, who quoted Harvey's poem on the outlawed Book of Common Prayer in the second edition of *The Compleat Angler* (1655). Harvey contributed a commendatory poem to this volume and Walton reciprocated in the 1657 edition of *The Synagogue*. There was no further expansion of Harvey's collection, which continued to be issued as an appendage to *The Temple* at regular intervals up to 1709. The two were still yoked together when an eleventh edition came out in 1799, and there were further joint editions in the nineteenth century. Alexander Grosart eventually issued the poetic works of Harvey as a separate volume in the Fuller Worthies' Library in 1874, which was the last edition of *The Synagogue* to appear.

Harvey's other venture into verse, *Schola cordis*, published anonymously in 1647, was an emblem book adapted from the Latin of Benedict van Haeften. His explications of forty-seven engravings depicting the spiritual travails of the human heart exploited the 'mixture of literalness and symbolism' (Freeman, 135) made popular by Francis Quarles and, in spite of a statement in the third edition of 1674 that it was 'by the author of the *Synagogue*', the work was later ascribed to Quarles and reprinted with his emblem books. Harvey's 'predictable, stolid didacticism' (Bell, 274) and 'piety served up with a sauce of wit' (Dundas, 98) have not appealed to modern taste but Walton praised *The Synagogue* as a true picture of the poet's mind, Grosart discerned here and there 'an imaginative faculty in *kind* resembling Herbert and Vaughan's' (Harvey, xxxvi), and Freeman found 'considerable variety in metre and in treatment' in the adaptations of van Haeften (Freeman, 137).

In his edition of Pierson's *Excellent Encouragements* (1647) Harvey expressed an 'obstinate resolution never to send mine own name to the presse' unless it were 'to bring to light another mans labours' (sig. aa2*r*) but he acknowledged his authorship of two early prose works when they were printed towards the end of his life. *Self-Contradiction Censured, or, A Caveat Against Inconstancy* (imprimatur 14 June 1662) exposes the deceitfulness of 'Phanatick spirits' (title-page) and defends the 'sacred secrecie' of royal government (p. 148) in the form of a dialogue between Affection and Judgement. Harvey claims in a dedicatory letter that it was 'penned in the year 1642, under the borrowed name of Irenaeus Philalethes' and permitted to circulate in manuscript, 'not without approbation from some, both loyal Subjects of the Crown, and obedient sons of the Church of England' (sig. A3*r*).

The Right Rebel: a Treatise Discovering the True Use of the Name by the Nature of Rebellion (1661), which was reissued in 1663 as *Faction Supplanted, or, A Caveat Against the Ecclesiastical and Secular Rebell*, is said in a preface to have been completed on 3 April 1645 and made public in two manuscript copies because no printer could be found for it in London. In a postscript dated 11 March 1661 Harvey states that he was 'a constant sufferer' for his 'loyalty and conformity' so long as 'any usurpers of pretended authority were in power' (p. 173) and regrets that he has had to set aside two other intended treatises, *Logick for Loyalty* and *A Motion for Moderation*, because of age and infirmity (pp. 175–6). Harvey died at his vicarage at Clifton-on-Dunsmore, and was buried at Clifton on 4 April 1663.

Harvey, Daniel Whittle (1786–1863), politician, newspaper proprietor, and police administrator, was born on 10 June 1786 in Witham, Essex, the son of Matthew Barnard Harvey of Witham, a merchant and banker, and his wife, a daughter of Major John Whittle of Feering House, Kelveden, Essex. Harvey trained as a lawyer; he was articled first in Colchester and subsequently with a law firm in Chancery Lane, London. In 1807 he took possession of his maternal estate, Feering House, and began to practise as a country solicitor in the Colchester district. In partnership with his father he also began speculating in the buying and selling of estates. On 23 May 1809 he married Mary, the only daughter of Ebenezer Johnston of Bishopsgate Street in London, who reputedly brought a dowry of £30,000.

Harvey's various business ventures brought him into conflict with other local attorneys, in particular with Thomas Andrew. Between 1808 and 1814 Harvey was involved in three court actions. The first was a case of slander against Andrew following accusations of theft and fraud. The other two also indirectly involved Andrew. Harvey lost on each occasion. On 7 November 1810 he was admitted as a student of the Inner Temple, and in 1819, with the intention of taking up the post of recorder of Colchester, he applied to be called to the bar. His application was refused on the grounds of the stigma of defeat in the slander case against Andrew. When Harvey's appeal was heard in February 1822 the judges, as visitors to the inn, upheld the decision of the benchers. Twelve years later, in 1834, the benchers heard the appeal again, and confirmed their original decision; and when, later that year, a select committee of the House of Commons investigated the case and exonerated Harvey entirely, the benchers continued to reject him.

Harvey served as a member of the common council of the City of London for the Bishopsgate ward from 1808 to 1818, and from early on he sought an active involvement in national politics. He canvassed Maldon, Essex, in 1807. In 1812 and again in a by-election in 1818 he unsuccessfully contested Colchester. In the general election of June 1818, however, after a particularly expensive campaign, Harvey was elected. In 1820 he was unseated when his election was declared void, but he successfully contested the seat again in 1826. The Reform Act of 1832 changed the nature of the constituency, leading Harvey to sense that his seat was under threat from the tories. In the general election of 1835 he stood down in Colchester and was elected for Southwark; he held this seat until 1840. In parliament Harvey was an eloquent advocate of radical causes, notably religious toleration, and reform of both parliament and the established church.

Financial problems, exacerbated by his own extravagance, dogged Harvey's career. His lawsuits cost him considerable sums. In 1814 the Rochford and Billericay Bank, owned by his father and uncle, collapsed, and while Harvey succeeded in paying off his own creditors, he was left with very little. In 1822, in settlement of a debt, he acquired the ownership of the new *Sunday Times*. An article in the edition of 9 February 1823 declared George IV to be mad, like his father. The suggestion had already been made elsewhere in the press, but Harvey was singled out as an example. Prosecuted for a libel, he was found guilty, fined £200, and imprisoned for twelve months in the king's bench. Yet the *Sunday Times* was a considerable success, due in no small measure to Harvey's ideas and innovations such as the use of wood-engravings and of advertising in agricultural and sporting supplements. Within five years Harvey was able to sell the paper at a profit, and, over the next few years, he sought to repeat its success. He ran the daily *True Sun* from 1833 to 1837, the *Weekly True Sun* from 1833 to 1839, and *The Statesman, or, The Weekly True Sun* from January to December 1840. The *True Sun* was a London evening paper which attempted to mediate between working-class and middle-class radicalism, and was in the forefront of the campaign to repeal newspaper stamp duty. But, like its weekly offshoot, it was not a commercial success.

It was financial difficulties which encouraged Harvey to accept the office of registrar of metropolitan carriages in February 1839. The offer of the post, however, appears to have been a ploy to oust him from his Southwark constituency. The post of registrar was held by some to be an office of profit under the crown and thus incompatible with a seat in parliament. Writs were issued for a by-election. Harvey contested the charge against him, and was re-elected for the borough. A similar issue occurred later in the year when Harvey sought the newly created office of commissioner of the City of London police. He had strong backing from members of the corporation, and he intended to combine the office with his duties as an MP. However, a disqualifying clause was inserted in the bill establishing the City police; allegedly, this was aimed specifically at Harvey. Peel, then leader of the opposition in parliament, supported the government's proposal, pointing out that the commissioners of the Metropolitan Police were similarly barred, and warning against the possibility of a police commissioner sitting in the Commons and challenging the home secretary on police matters. The disqualifying clause was passed, together with a clause which limited the power of the court of common council in police management largely to finance. The common council, furious that it would have only a limited say in the appointment of a commissioner and none at all in his retention of office or dismissal, responded by slashing the salary for the post from £1000 a year to £800. Harvey considered withdrawing his candidacy, but was urged by his supporters that the move would be dishonourable. He was sworn in as the first commissioner of the City of London police on 11 November 1839.

Harvey never appears to have given up hope of returning to national politics. In 1847 he was nominated Liberal candidate for Marylebone, and he promised his supporters there that he would give up his police post. However, dependence on his City salary meant that, in the event, he had to stand down since his parlous financial state would not have allowed him to take a seat in the Commons. Whatever his hopes, Harvey continued to serve as commissioner until his death. While he had no experience of police work, or of commanding men, in many respects his career as commissioner can be judged a success. He was inflexible in the way that he controlled and directed his men; nevertheless he established and maintained a body of men as disciplined and effective as any other police force during the period. As in the earlier stages of his life, he clashed publicly and damagingly with others. There were lengthy disputes with the City's police committee and common council over his official residence and his determination that he alone should make decisions regarding the deployment and management of his men. This latter was in keeping with the 1839 legislation, but it was not the way in which policing had traditionally been organized in the City.

Harvey died on 27 February 1863 after a short illness, beginning with a carbuncle in his mouth which was rapidly followed by erysipelas. He was buried in the grounds of the Unitarian chapel at Hackney. The City police paid for a monument to be erected over his grave. His wife, disabled long before by a fall sustained crossing a road, survived him by a year. CLIVE EMSLEY

Harvey, Edmund (*c.*1601–1673), regicide, was the first son of Charles Harvey (*fl.* 1600–1634), merchant, of London and his wife, Alice, daughter of Ralph Houghton of Houghton, Leicestershire. Harvey's grandfather had moved to London from the west country and his father was a London citizen and member of the Fishmongers' Company. Edmund Harvey followed his father into trade, being apprenticed in 1619 and becoming a freeman of the Drapers' Company in 1627. On 8 December 1629 he married Elizabeth, daughter of Samuel Gott of London. They had at least three sons. A silk merchant in partnership with Alderman Edward Sleigh, Harvey contributed with him £300 towards equipping the naval force raised to aid suppression of the Ulster rising in 1642. At the outbreak of civil war he was commissioned as a colonel of the city horse. He was probably the 'one Harvey' referred to by Clarendon as 'a decayed silkman, who from the beginning had become one of the most confided in' and whose troops in 1643 dispersed 'with sad inhumanity ... as an enemy worthy of their courage ... a rabble of women' (Clarendon, *Hist. rebellion*, 3.139) presenting the House of Commons with a peace petition.

Harvey had acquired property in Suffolk, where he was a deputy lieutenant in 1643, receiver-general for the county in 1644, and an assiduous member from 1643 to 1645 of the parliamentary committee there, signing many orders. He was at the siege of Gloucester in the summer of 1643 and later served in the north, to be accused afterwards of plundering there. In May 1644 he resisted the instruction of the committee of both kingdoms to march with the earl of Essex unless his men's and his own arrears were first paid. The committee was thereupon ordered to 'secure his horse and arms, discharge his quarters, take his muskets and despatch his pay' (*JHC*, 3.490, 505). By an ordinance of 3 March 1647 he was paid £1448 in settlement of his arrears.

In 1646 Harvey had been recruited MP for Great Bedwyn, Wiltshire. He was an active MP, being named to many committees: he was particularly involved with the issues of indemnity and confiscated lands, and by January 1647 he was chairman of the indemnity committee. In July 1648 he opposed the motion that the king be taken at his word that he would not try to escape, arguing that Charles I could not be trusted. Throughout the 1640s he evidently managed skilfully and profitably to exploit the opportunities thrown up by the war and his contacts to his own profit, sliding into speculation, if not embezzlement. A summation as 'a time serving profiteer and a dishonest racketeer' seems not unjust (Underdown, 87, 134–5). When bishops' lands were sold off during 1647 and 1648 he was able to find £7617 2*s.* 10*d.* to acquire the manor of Fulham, £674 10*s.* for other land in the same area, and a fee farm rent out of the manors of Burton and Holnest, Dorset. Other purchases included the great tithes of the see of London and the episcopal palace at Fulham, where he lived over the next decade in great style and comfort. An enemy later wrote that on Harvey's purchase of bishops' lands he was transformed 'from a furious Presbyter to a Bedlam Independent' (F. T. K.). Edward Walker names him 'late a poor silkman' among a list of MPs and army officers obtaining, contrary to the self-denying ordinance, money, offices, and land.

Harvey sat as a commissioner for the trial of Charles I and was on a committee to prepare the final charge, but though present on 27 January 1649, did not sign the death warrant. This, however, did him no harm under the Commonwealth. Still 'Colonel', he became first commissioner of the customs, was on the navy committee, and continued in office into the protectorate. It is not known when Harvey's first wife died but he probably married Judith (*d.* 1668), daughter of George Langham of London and widow of Thomas Bales of London, in the early 1650s. They had at least ten children before Judith's death in September 1668. Harvey's career began to decline when, on 7 November 1655, only two days after lavishly entertaining

Cromwell at Fulham, he was committed close prisoner (along with his brother-in-law Henry Langham), charged with divesting state funds to his own use, estimated at £57,000. On 13 November his papers were ordered to be examined, but on 27 November, reported as ill by his wife, he was given the liberty of the Tower. Dismissed from his offices, on 24 December he was allowed, on security of £10,000, to live at Fulham for a month. In January 1656 proceedings against him were started in the exchequer. In February 1657 a remarkably low charge of £326 6s. 8d. was levied on his goods and chattels and he was released from custody.

Though out of office, Harvey was still financially active, notably on behalf of Bulstrode *Whitelocke, then a commissioner of the treasury, with whom he had been involved in arranging the purchase of the City house of the divine Cornelius Burgess. Harvey's son Samuel, 'a sober young man', married Whitelocke's youngest daughter, Cecilia, in September 1658 and Fulham Palace was settled on them. On the recall of the Rump in 1659 Harvey returned to parliament but his committee appointments were generally confined to those considering private petitions. After the restoration of Charles II in 1660, Whitelocke was negotiating on Harvey's behalf the palace's return to Gilbert Sheldon, the new bishop of London, when troops were suddenly sent in to search it on 24 December. The place was ransacked, a traumatic experience for Harvey's daughter-in-law, who was pregnant, and Whitelocke somewhat implausibly blamed this incident for the premature deaths less than two years later of Samuel, Cecilia, and the child (*b.* June 1661).

Harvey, having surrendered himself, was excepted from the Act of Indemnity and Oblivion as to life and property. Tried on 16 October 1660, he was spared his life. In November Whitelocke was still working to secure him a pardon but Harvey was sent to Pendennis Castle, Cornwall, in 1661 and died there in June 1673; he was buried in Falmouth parish churchyard. His son Samuel was survived by a younger brother, Charles.

Harvey, Edmund George (1828–1884), author and composer, was born on 20 February 1828 at Penzance, the eldest son of **William Woodis Harvey** (1798–1864) and his first wife. The father was born in Alverton Vean, Penzance, on 15 June 1798. He was educated at a school in Market Jew Street, Penzance, and then at a Wesleyan school. He was a Wesleyan missionary in Haiti between about 1818 and 1824. In 1825 he married Sarah, daughter of William Morgan of Penzance. Encouraged by the vicar of Penzance to attend university, he matriculated at Queens' College, Cambridge, in 1824, graduated BA in 1828, and proceeded MA in 1835. He was ordained in the Church of England and was curate of St Mary's, Penzance (1828–30), and of King Charles the Martyr, Falmouth (*c.*1834–1838), before becoming rector of St Mary's, Truro (1839–60). In 1846, after the death of his first wife, he married Frances Fox, of Penn Cottage, Penn, Buckinghamshire. He was the author of *Sketches of Hayti* (1827) and various sermons, and he edited John Wesley's minor works. He died on 5 October 1864 at Alverton, near Torquay.

Edmund George, his eldest son, entered Queens' College, Cambridge, in 1845 and graduated BA in 1850. He afterwards lived for a few years on the continent, and made a pair-oar expedition through France and Prussia, which he described in *Our Cruise in the 'Undine'*. He was ordained deacon in 1851 and priest in 1855, and he became in 1859 curate, and in 1860, rector, of St Mary's, Truro. From 1865 to 1884 he was vicar of Mullion, Cornwall.

Edmund George Harvey published very widely on topics ranging from sermons and devotional works to antiquarian works relating to Cornwall, but particularly on music. He was honorary secretary of the Cornwall Association of Church Choirs and wrote hymns and pointed psalms for local use. His secular music included dances, parlour songs, and folk tunes. The music fairly soon fell into obscurity.

Harvey died at the vicarage at Mullion on 21 June 1884, and was buried at Truro. He left a son, but nothing is known of his wife, Sarah.

Wealth at death £745: administration, 1 Aug 1884, *CGPLA Eng. & Wales* • under £30,000—William Woodis Harvey: probate, 29 Oct 1864, *CGPLA Eng. & Wales*

Harvey, Sir Edward (1783–1865), naval officer, was the third son of Captain John *Harvey (1740–1794) and his wife, Judith, daughter of Henry Wise of Sandwich, Kent; he was a younger brother of Admiral Sir John *Harvey. He was with his father as a first-class volunteer on board the *Brunswick* (74 guns) in the battle in the north Atlantic on 1 June 1794; he was afterwards with his brother John in the *Prince of Wales* (98 guns); then, in the frigate *Beaulieu* (40 guns), he was at the battle of Camperdown; and was again with his brother in the *Southampton* (32 guns) and *Amphitrite* (28 guns). In July 1801 he was made lieutenant; and after continuous service, mostly in the North Sea and Mediterranean, was promoted in January 1808 to command the sloop *Cephalus* (18 guns) in the Mediterranean. On 18 April 1811 he was posted to the frigate *Topaze* (36 guns), which he brought home and paid off in 1812.

From 1830 to 1834 Harvey commanded the *Undaunted*

(46 guns) on the Cape of Good Hope and East India stations; in 1838 the *Malabar* (74 guns) in the West Indies; and from 1839 to 1842, the *Implacable* (74 guns) in the Mediterranean, where he took part in the operations on the coast of Syria, including the bombardment of Acre in 1840. He attained his flag on 17 December 1847, and from 1848 to 1853 was superintendent at Malta, with his flag in the *Ceylon*. He became vice-admiral on 11 September 1854, was commander-in-chief at the Nore from 1857 to 1860, and was promoted admiral on 9 June 1860; he was made a KCB on 28 June 1861, and a GCB on 28 March 1865, a few weeks before his death at his residence at Walmer, Kent, on 4 May 1865. He had married Miss Cannon of Deal, and they had six children, one of whom was Henry, a captain in the navy, who died in the West Indies in 1869, while in command of the *Eclipse*.

Wealth at death under £14,000: probate, 23 May 1865, *CGPLA Eng. & Wales*

Harvey, Sir Eliab (1758–1830), naval officer and politician, was born on 5 December 1758 at Chigwell, Essex, the fourth but second surviving son of William Harvey (1714–1763), MP for Essex, and his wife, Emma (*b. c.*1729), daughter of Stephen and Emma Skynner of Walthamstow. William Harvey, the discoverer of the circulation of the blood, was his great-great-uncle. Eliab was educated at Westminster School (1768–9) and at Harrow School for most of the period 1770–74; meanwhile on his fourteenth birthday his name was sagaciously entered on the books of the yacht *Mary*. He spent the summer of 1773 in the *Orpheus* (32 guns) and from May 1774 served in the sloop *Lynx* for two years in the West Indies. In September 1776 he returned to North America in the *Mermaid* (28 guns), before transferring to Lord Howe's flagship, the *Eagle* (64 guns), in the following July. In December 1777 he was lent to the *Liverpool* (28 guns), in which he was wrecked in heavy surf off Long Island in February 1778. He rejoined the *Eagle*, returned home in her in October, and was then ashore for three years.

On 25 February 1779 Harvey was promoted lieutenant of the *Resolution*, which he did not join. In April, on the death of his elder brother, William, he succeeded to the family's very handsome property. He wasted no time in making his mark as a man about town and a reckless plunger. Soon after his twenty-first birthday he lost £100,000 at hazard to

> an Irish gamester, Mr O'Byrne, who said 'you can never pay me'. 'I can', answered Harvey; 'my estate will sell for the debt.' 'No', said O'Byrne, 'I will win £10,000; you shall throw for the odd ninety.' They did, and Harvey won. (Walpole, *Corr.*, 25.12)

He was, however, still £10,000 short.

In May 1780 Harvey was elected MP for Maldon, Essex, a seat he held until 1784, though he returned to sea in September 1781 for four months as lieutenant of the *Dolphin* (44 guns) in the Downs. After promotion to commander on 21 March 1782 he commanded the sloop *Otter* until his speedy advancement to captain (20 January 1783). He was then unemployed until 1790. On 15 May 1784 he married Louisa (*d.* 1841), younger daughter and coheir of Robert, first Earl Nugent. They had six daughters and two sons; the elder son was killed at the siege of Burgos in 1812.

From May 1790 Harvey commanded the *Hussar* (28 guns) for six months in the Spanish armament. When war broke out in 1793 he was appointed to the *Santa Margarita* (38 guns), serving under Vice-Admiral John Jervis (later earl of St Vincent), and took part in the capture of Martinique and Guadeloupe in March and April 1794. After returning to England in May the *Santa Margarita* joined the Channel Fleet and on 23 August was one of the squadron under Sir John Borlase Warren which drove a French frigate and two corvettes ashore in Brittany. In August 1795 Harvey took command of the *Valiant* (74 guns) and went to the West Indies with Sir Hyde Parker's squadron.

In February 1797 ill health obliged him to return home and in the following year he commanded the sea fencibles in Essex. In 1800 he was appointed to the *Triumph* (74 guns), serving in the channel and off Brest until the peace of Amiens. He was elected MP for Essex in June 1802, and represented the county until 1812; in November 1803 he commissioned the *Temeraire* (98 guns).

After fifteen months off Brest and the Bay of Biscay the *Temeraire* formed part of Nelson's fleet at Trafalgar. As second ship of the weather column, closely astern of the *Victory*, she was soon in action and, as Harvey was to write to his wife (23 October 1805), for 'more than three hours two of the enemy's line of battleships were lashed to her, one on each side' (Jackson, 2.223). Although herself much damaged, the *Temeraire* forced both French ships to strike to her deadly broadsides. 'Nothing could be finer', wrote Vice-Admiral Cuthbert Collingwood of the *Temeraire's* part; 'I have not words in which I can sufficiently express my admiration of it' (PRO, ADM 1/5396, Collingwood to Harvey, 28 Oct 1805). Unfortunately Harvey's subsequent bragging irritated his fellow captains. Joseph Turner's painting of *The Fighting Temeraire* hangs in the National Gallery.

On 9 November 1805 Harvey was promoted rear-admiral of the blue, and in March 1806 he hoisted his flag in the *Tonnant* (80 guns) in the channel and off Finisterre under St Vincent; later he hoisted it under Admiral James Gambier.

In April 1809 Harvey returned from two months' leave to rejoin his commander-in-chief, Lord Gambier, off Basque Roads where preparations were in hand for an attack on the French fleet by fireships. Harvey was so angry that the Admiralty had appointed Captain Lord Cochrane and not him to command the fireships that he went to the flagship, marched into Gambier's cabin, and 'used vehement and insulting language to Gambier ... showed great disrespect to him ... and treated him in a contemptuous manner' (PRO, ADM 1/5396, minutes of court martial, 22, 23 May 1809). He then spoke disparagingly of Gambier in public on the flagship's quarterdeck.

For this he was court martialled and dismissed the service. His behaviour was evidently in line with his reputation: 'His intemperate manner is such', wrote Lord Gardner to Joseph Farington (26 May 1809), 'that, had I been told the circumstance without a name being given, I should have supposed it to be Admiral Harvey' (*Farington Diary*, ed. Greig, 5.173).

On 21 March 1810 Harvey was, in consideration of his long and meritorious service, reinstated in his rank and seniority, but he was never employed again. He was promoted vice-admiral on 31 July 1810, created KCB in January 1815, and advanced to admiral on 12 August 1819 and GCB in 1825. In 1820 he was again elected MP for Essex, and he held the seat until his death on 20 February 1830 at his home, Rolls Park, Chigwell, Essex. He was buried on 27 February in the family mausoleum at Hempstead church.

Harvey, Sir Ernest Musgrave, first baronet (1867–1955), banker, was born on 27 July 1867 at 1 Oak Hill, Hampstead, London, the third son of the Revd Charles Musgrave Harvey, curate of St John's Church, Hampstead, and later rector of Acton and vicar of Hillingdon, Middlesex, and his wife, Frances Harriet, *née* Brewster. He was educated at Marlborough College, and in 1885 obtained a clerkship in the Bank of England. In 1896 he married Sophia Paget (1871–1952); they had a son and three daughters.

During fifty years at the Bank of England Harvey—among the first of a new breed of central banker—became only the second of its officials to be elected a director and the first to enter the ranks of 'governors'. Appointed deputy chief cashier in 1902 at the early age of thirty-five, from 1914 he played a large part in the bank's tasks of arranging massive war loans and then post-war monetary reconstruction for Britain and its European allies. For these services he was decorated by the French and Belgian governments, made a CBE in 1917, and knighted in 1920. He succeeded Sir Gordon Nairne as chief cashier in 1918 and again as comptroller in 1925, before joining him as a director in 1928.

These promotions of senior officials to a court of directors traditionally composed of merchant bankers introduced a new professionalism to the Bank of England's highest levels as part of wider organizational reforms arising from its recognition that, amid post-war financial dislocations, central banking had become a much more active and complex function. The customary two-year rotation of governors was also abandoned. Just as Montagu Norman was the first modern, long-term governor, so Harvey in 1929 became the first modern deputy governor.

Harvey's great strength was his thorough knowledge of the Bank of England's organization and practices, making him 'the perfect permanent secretary' for Norman by relieving him of responsibilities for administration and co-ordination (Sayers, 2.622–3, 635, 650–52). He was also unusually articulate in expounding his understanding. On trips to European capitals, and in a visit to Australia in 1927, he was an apostle of the bank's conception of central banking principles under the restored gold standard. With Norman absent through illness in late 1929, Harvey gave the bank's long opening evidence to the Macmillan committee of finance and industry, impressing even Keynes with what remains the most comprehensive and lucid source for the inter-war Bank of England.

Another of Norman's illnesses left Harvey as the bank's acting head during the sterling crises of August and September 1931. He not only orchestrated defensive actions by the City, the Treasury, and American and French banks, but with his fellow director Sir Edward Peacock became a principal adviser to successive governments, even attending cabinet committees. Calling for urgent balancing of the budget as the best means to restore international confidence, they contributed to the pressures which fatally divided the second Labour cabinet. Consequently they figured prominently in accusations of forming a 'bankers' ramp' against a socialist government, although Harvey had scrupulously left discussion of specific taxes and expenditure cuts to the politicians. Under the emergency all-party National Government they criticized Conservative efforts to force a general election, and believed these helped to precipitate the final collapse of confidence. After two months of strenuous struggle, Harvey had to preside over the Bank of England's decision to advise abandonment of the gold standard, announced on 21 September 1931.

What then seemed a catastrophe was soon accepted as an economic relief. One result was the implementation in June 1932 of the long-prepared plans of Harvey and Sir Richard Hopkins of the Treasury for a great war loan conversion, which inaugurated the 'cheap money' that assisted Britain's economic recovery in the 1930s. Harvey also participated in Bank of England rescues of commercial banks and in its novel industrial reorganization schemes, notably of the Lancashire Cotton Corporation. From 1934 he chaired the R. M. and E. D. Realisation Companies, the Bank of England-led arrangements for liquidating the failed Royal Mail–Elder Dempster shipping combine. Harvey was created a baronet in 1933. He retired from the Bank of England in 1936, but during the Second World War was a member of the General Claims Tribunal. He died at his home, Pennings, Mildenhall, Marlborough, on 17 December 1955.

Harvey, Sir Francis (*c.*1568–1632), judge and politician, was a younger, but the eldest surviving, son of Stephen Harvey (*d.* 1606), an auditor of the duchy of Lancaster, of Cotes, Cotton End, Hardingstone, Northamptonshire, and his wife, Anne (*d.* 1590), daughter of Richard Greene of Broughton, Hertfordshire. Admitted to the Middle Temple in 1582 from Barnard's Inn, with which a family connection possibly existed (Brooks, 147), Harvey then matriculated at Cambridge University as a pensioner of Christ's College in March 1583. He took his BA from Corpus Christi in 1586, graduated MA from the newly founded Emmanuel College in 1589, then contrived to be called to the bar in 1591. His first marriage, to a widow, Elizabeth James, *née* Heming, probably took place about 1596. A second wife, Christian, survived him. Although his father's duchy connections may have secured his return as member for Aldeburgh in the 1597 parliament, Harvey's recorded role in the Commons' proceedings was confined to possible attendance at one committee meeting.

Harvey's subsequent professional advancement was assisted by Henry Hastings, fifth earl of Huntington, whose steward Thomas Harvey was a kinsman, and by the influential Montagu family, whose intervention may have secured his appointment as counsel to the town of Northampton in 1602. In 1609 he was promoted to the bench of the Middle Temple. He succeeded Augustine Nicolls, another Northamptonshire resident, as recorder of the borough of Leicester in 1612, but declined invitations to become one of the town's MPs two years later. He was promoted serjeant-at-law in the general call of 1614 and delivered a brief three-day reading that August on the statute 21 Hen. VIII c. 13 (non-residency), some notes from which survive in manuscript. He then moved on to Serjeant's Inn, Fleet Street. Among the busier and most widely practised serjeants-at-law during the second decade of the seventeenth century, Harvey was constantly on the move; asked whether he would be in London for Hilary term 1617, he brusquely replied that he did indeed so intend, 'for from thence came his living' (*Buccleuch MSS*, 3.198).

In October 1624 Harvey became a justice of common pleas; according to Lord Keeper Williams the king recognized him as eminent in his profession, 'grave, discreet and religious', and a good governor in his own country (*Diary of Sir Richard Hutton*, 54). Knighted in July 1626, when Westminster Hall flooded in October 1629, Harvey rode in on horseback to adjourn his court. Next year he retorted to an assize sermon attacking judicial corruption 'that we can use conscience in our places, as well as the best clergie man of all' (*Diary of John Rous*, 62). After his death at Hardingstone, Northamptonshire, on 2 August 1632 a judicial colleague memorialized Harvey as 'reverend and learned ... temperate, patient and upright, a man of good courage ... honoured, beloved and respected' (*Diary of Sir Richard Hutton*, 92). He was buried, as he had desired, in the family aisle of Hardingstone parish church, where he still kneels in effigy beside his first wife and their children.

Harvey, Frederick William (1888–1957), poet and army officer, was born on 26 March 1888 at Murrel's End, Hartpury, Gloucestershire, the eldest of the five children of Howard Harvey (1853–1909), a farmer and horse dealer, and his wife, Matilda (Tillie), *née* Waters (*d.* 1945). In 1891 the family moved within Gloucestershire to Minsterworth and took up residence in a large Georgian farmhouse, The Redlands, where Harvey, known as Will, spent his youth and acquired his love of the countryside.

From the age of nine Harvey attended King's School, Gloucester, where he met and became a close friend of Ivor Gurney. At fourteen he was sent by his parents to Fleetwood, Lancashire, to board at Rossall School. His musical abilities came to the fore and he was considered a fine singer, offering concert recitals, performing solo in competitions, and winning a school prize in 1905, the year he left Rossall.

Following the advice of a phrenologist, Harvey's family decided he should study law and he became articled to a Gloucester solicitor, Frank Treasure. He qualified in 1912 and then moved to Chesterfield to become a solicitor's assistant. Here, despite his Anglican upbringing, he first began to consider the possibility of joining the Roman Catholic church.

Harvey, who felt that the church would bring order and discipline to his life, eventually became a Roman Catholic in 1914, just after he joined the fifth battalion of the Gloucestershire regiment, along with his brother Eric, on 8 August. On 29 March 1915 the 1st battalion 5th Glosters sailed from Folkestone for Boulogne and then marched to the front-line trenches at Ploegsteert. Soon after the battalion's arrival in France a trench newspaper, the *Fifth Glo'ster Gazette*, was founded, and Harvey became a regular

contributor. In 1915 he gained promotion to lance corporal and days afterwards he participated in a night reconnaissance for which he was decorated with a Distinguished Conduct Medal. He also gained a commission, and after returning to France following an officer-training course on Hayling Island, he was captured while reconnoitering alone in 1916. Over the next two years he experienced seven different German prison camps and gained the title of the Poet for his essays, lectures, and verse.

Harvey's uncensored poems home were published in two volumes by Sidgwick and Jackson: *A Gloucestershire Lad at Home and Abroad* (1916) and *Gloucestershire Friends* (1917). On returning from solitary confinement he saw that a fellow prisoner had drawn a picture of a duck in a pool over his bed, and this inspired Harvey's most famous poem, named in the title of his third collection, *Ducks and other Verses* (1919).

Physically and mentally exhausted, Harvey convalesced at The Redlands following his return to England in spring 1919. Here he wrote an account of his prison-camp experiences, published as *Comrades in Captivity* in 1920. In the following year he married an Irish nurse, (Sarah) Anne Kane, at the Holy Rood Church in Swindon on April 30.

Also in 1921 a further volume of verse was published, *Farewell*. Harvey and his wife moved from Swindon back to Gloucestershire, acquiring a cottage in Cranham Woods. They had two children: Eileen Anne, born in 1922, and Patrick, born in 1925. Sidgwick and Jackson published *September and other Poems*, Harvey's finest collection, in 1925, and there the influence of Edward Thomas is clear. He also decided in this year to set up on his own as a solicitor in Lydney, but he was not particularly successful and the 1930s saw him sell the practice. Still troubled by his war experiences, he became increasingly withdrawn. Two further books of his poetry were published in 1926, the year in which he made his final move, to Yorkley, in the Forest of Dean: *In Pillowell Woods and other Poems* and *F. W. Harvey* in the *Augustan Books of English Poetry* edited by Humbert Wolfe. Harvey served in the Home Guard in the Second World War. An anthology of his poetry was published by Oliver and Boyd in 1947, entitled *Gloucestershire*. He died of cardiac failure at High View, Yorkley, on 13 February 1957, and was buried in the family grave at Minsterworth; his wife survived him. Having come to be known as the 'laureate of Gloucestershire', Harvey was commemorated by a slate memorial tablet on the south transept of Gloucester Cathedral in 1980. PETER CHILDS

Harvey, Gabriel (1552/3–1631), scholar and writer, was born at Saffron Walden, Essex, the eldest son of Alice (*d.* 1613) and John Harvey (*d.* 1593), a yeoman farmer and master rope maker who was a prominent member of the town's corporation. Richard *Harvey and John *Harvey were his younger brothers. Gabriel was educated first at Saffron Walden grammar school and then, the first of four sons sent to study at nearby Cambridge, matriculated as a pensioner at Christ's College on 28 June 1566, and proceeded BA in 1569–70, coming ninth in the order of seniority. On 3 November 1570, thanks in part to the patronage of another worthy of Walden, the statesman Sir Thomas Smith, he was elected a fellow of Pembroke College.

Early Cambridge career and friendship with Spenser It was at Pembroke in 1573 that the first of many storms in Harvey's career blew up. A group of fellows led by Thomas Neville, later master of Trinity and dean of Canterbury, attempted to obstruct Harvey's admission as master of arts. His colleagues levelled a variety of charges against him, chiefly relating to his intellectual singularity (in particular his devotion to the writings of Peter Ramus, and consequent disparagement of Aristotle) and his arrogant, unsociable demeanour. Harvey defended himself vigorously in letters to Pembroke's master, John Young, who forced through his admission later in 1573; this time he was placed first in seniority. There followed another brief fracas over Harvey's appointment as the college's Greek lecturer. But Harvey soon recovered from these setbacks, becoming junior treasurer of the college by the end of 1573 and senior treasurer in 1575. In April 1574 he was appointed university praelector of rhetoric, lecturing at least four days a week to halls which were (by his own account) packed. Among his earliest published works were his opening spring-term orations for 1574 and 1575, printed as *Rhetor*, and his Easter-term oration for 1576, printed as *Ciceronianus*. The former maps out the pathway to true eloquence, via 'nature', 'art', and 'practice'. The latter describes the author's realization (upon reading Ramus's *Ciceronianus*) that superficial imitation of Cicero is not enough; the orator's style must, like Cicero's, grow out of his broad expertise in all fields of human knowledge. Harvey's efforts to attain such expertise are attested by his library, which he had begun to gather by the early 1570s, and which receives explicit mention in the *Ciceronianus*. Harvey's orations appeared in print in 1577, two years after his first publication, an elegy to Ramus entitled *Ode natalitia*.

At some point early in his Cambridge career Harvey made the acquaintance of his close contemporary Edmund Spenser, who had entered Pembroke College as a sizar on 20 May 1569. Their friendship, which would last until the poet's death in 1599, is first documented in 1578, when Spenser gave Harvey a number of books. In 1579 Harvey starred in *The Shepheardes Calender* as Colin Clout's 'especiall good freend Hobbinol'; he was also the addressee of E. K.'s dedicatory epistle to the volume, which urged him to defend the new poet's work 'with your mighty Rhetorick and other your rare gifts of learning'. A year later the public was granted a deeper insight into the Spenser–Harvey relationship in *Three proper, and wittie, familiar letters: lately passed betwene two universitie men,*

touching the earthquake in Aprill last, and our English refourmed versifying. The letters (which he later, somewhat implausibly, claimed had been published without his consent) offered Harvey an opportunity to display his scholarly talents in analysing the causes of a recent English earthquake; they also demonstrate the friends' shared interest in applying classical, quantitative versification to vernacular poetry, and tell of their devotion to the courtier poets Philip Sidney and Edward Dyer. Along with many tantalizing references to lost and possibly fictitious works by the two writers, the letters also contain the earliest (somewhat deprecating) notice of Spenser's *Faerie Queene*, the first part of which would appear a decade later.

Harvey was a firm believer in the superiority of the active to the contemplative life, and across the course of the 1570s he worked to realize his aspirations for public office by cultivating court connections, in particular to the circle of the stridently protestant earl of Leicester. Some time between October 1576 and February 1577 he was engaged by Leicester's nephew Philip Sidney, about to set out on an embassy to the emperor Rudolph II, as a professional reader of the Roman historian Livy (a role he had already performed in 1571 for Sir Thomas Smith's son, who was preparing for a colonial venture in Ireland). Early in 1578 there were plans for Harvey himself to travel abroad on official business, as part of a deputation of English scholars and courtiers joining the conference of protestant princes at Schmalkalden; the project never came to fruition. On 26 July of the same year Harvey was among the Cambridge scholars who disputed before Queen Elizabeth at Audley End; he took advantage of the occasion to present four large folio manuscripts of Latin verse to monarch and courtiers. Then, in September 1578, he published the poems in expanded forms as *Gratulationes Valdinenses*, and presented them to the queen again, this time at Hadham Hall, Hertfordshire, home of Harvey's friend Arthur Capel. In their revised versions the poems noted several details of Elizabeth's dealings with Harvey at Audley End (she permitted him to kiss her hand, and told him he had the look of an Italian); they may also have attempted (in veiled terms) to strike a blow against the proposed marriage of the queen to the Catholic duke of Alençon. Harvey's support for the pro-Leicester camp was made evident in the *Three Letters* of 1580, the third of which contained a poem entitled 'Speculum Tuscanismi', which was taken (probably with some justice, although Harvey denied it) as a libel on Sidney's enemy Edward de Vere, earl of Oxford. Oxford was alerted to the poem by his client, the writer John Lyly, and Harvey endured a brief spell in the Fleet prison which ended when he convinced the peer of his innocence. (This was apparently the second 'Fleeting' Harvey received for the *Letters*, which had also offended the controller of the queen's household, Sir James Croft.)

The death in August 1577 of Harvey's esteemed patron and role model, Sir Thomas Smith, spurred him to write a set of Latin elegies, published as *Smithus, vel, Lachrymae musarum* in 1578. It also, indirectly, sparked off a new round of academic feuding. Smith's widow and her co-executors had given Harvey 'certaine rare manuscript books' from his library. Preaching the funeral oration was Andrew Perne, vice-chancellor of Cambridge University, an inveterate bibliophile who wanted the manuscripts for himself. Perne, 'between jest, and earnest', called Harvey a fox, to which the younger man replied, 'betweene earnest, & jest, I might haply be a Cubb, as I might be used, but was over young to be a Fox, especially in his presence' (Stern, 38). Perne was apparently silenced by Harvey's witticism at the time, but he took ample revenge later, opposing his candidacy for the university oratorship in 1579 and intervening to prevent him from becoming master of Trinity Hall in February 1585. Harvey had jumped ship to Trinity Hall in 1578, pursuing his plan to train as a civil lawyer. This seems to have been just one of several options the perennially hard up academic was considering at this time (in April 1579, for example, he had asked Leicester to procure a prebend of Lichfield for him). For five months, from May 1583, he was appointed by the college as deputy proctor of the university. In 1584 he completed his legal training and obtained his LLB, but for reasons which remain unclear he was not subsequently inaugurated and he eventually incepted doctor of civil law at Oxford in July 1585. (Spenser's sonnet to 'HARVEY, the happy above happy men', may have commemorated this event.) Although Harvey retained his Trinity Hall fellowship until 1591–2, and possibly received a stipend from the college still longer, he moved to London at some point between about 1586 and 1588 to take up legal practice in the court of arches. Doubtless he viewed the law as another step on the ladder to a career at court.

Controversy with Nashe Unfortunately, Harvey was to enter the public eye by another, altogether more problematic route. Shortly after his move to London, he became embroiled in a seemingly interminable series of vernacular print controversies with some of the most significant pamphlet writers of his day. Several factors conspired to force this new role on Harvey. First, there was the reputation he had acquired in certain quarters of the university for arrogance and singularity. He had for many years been the butt of poetic and dramatic satires, chief among which was *Pedantius*, a play performed at Trinity College on 6 February 1581, about a Ciceronian orator whose overblown ambitions in love and at court end in humiliation. Second, there was his family. Gabriel's fortunes were closely tied to those of his brothers, and especially Richard, another devotee of Ramus, who attracted much mockery for his publication, in 1583, of an astrological pamphlet predicting that dramatic and apocalyptic upheavals would follow the conjunction of Saturn and Jupiter in April of that year. Third, there were the celebrated 'Marprelate tracts', a radical protestant attack on the established ecclesiastical hierarchy, written by the pseudonymous 'Martin Marprelate'. When John Lyly, fighting back on behalf of the authorities in his *Pap with a Hatchet*, hinted that Harvey or someone associated with him might lie behind Marprelate, the new print war was poised to begin.

Although Gabriel wrote an immediate reply to Lyly,

entitled 'An advertisement for Pap-hatchet, and Martin Mar-prelate', he held back from publishing it, for reasons unknown. Richard Harvey, however, weighed into the controversy with two tracts, both probably published in 1590. One of these made the mistake of criticizing the 22-year-old Thomas Nashe for 'peremptorily censuring his betters at pleasure' in his preface to Robert Greene's *Menaphon* (1589). Among the 'betters' named were Sir Thomas More, Roger Ascham, and 'my brother Doctor *Harvey*' (Stern, 89). Greene retaliated in his *Quip for an Upstart Courtier* (1592) by pillorying the Harvey brothers and their father, a 'knave' whose 'cheefe living is by making fatal instruments, as halters and ropes, which divers desperate men hang themselves with' (ibid., 92). (Perhaps fearing lawsuits or punishment in the hereafter, Greene excised the satirical passage from later editions of the *Quip* before his death in September 1592.) In the same year Nashe published his *Pierce Pennilesse*, which (without naming him) poured scorn on Richard Harvey, the 'son of a ropemaker' (ibid., 93) who had grown into an overweening critic of Aristotle and an astrologer mocked for his prognostications by the likes of the clown Richard Tarlton and the balladeer William Elderton. At this point, Richard fell silent, and Gabriel stepped in on his brother's behalf, publishing his *Foure letters, and certain sonnets: especially touching* Robert Greene, *and other parties, by him abused* shortly after Greene's death. 'Wedded ... to private study, and devoted ... to publike quietnesse' (sig. G2*r*), he claimed that he was venturing into print most unwillingly, duty bound to defend his family's honour. In his judgement, 'the Print is abused, that abuseth' (sig. H1*r*). Despite this professed aversion to controversies, Harvey used his pamphlet to denigrate Greene, patronize Nashe, and praise himself, 'a very excellent generall Scholler' (sig. A3*r*) who might be a great asset to the commonweal.

Spotting an opportunity, Nashe quickly produced a mock-scholarly commentary on Harvey's *Foure Letters* entitled *Strange newes, of the intercepting certaine letters, and a convoy of verses, as they were going privilie to victuall the Low Countries* (entered in the Stationers' register in January 1593). In sprightly, conversational prose, this pamphlet punctures Harvey's every pretension and leaves his often sophisticated argumentative and stylistic manoeuvres looking clumsy and amateurish. Such a vicious assault could not go unanswered, and Harvey energetically defended his credit in *Pierces Supererogation, or, A New Prayse of the Old Asse* (probably completed by the summer of 1593). Here he turns Nashe's sarcasm back on him, mocking his voguish satire as shallow and unprofitable, while continuing to lament his own embroilment in the very thing he condemns. (Perceiving the similarity of Nashe's style to Marprelate's, Harvey bulked out this already lengthy book with the 1589 'Advertisement for Pap-hatchet' mentioned above.) In September 1593 Harvey wrote another attack on Nashe, prompted by the latter's attempt to call a truce in the preface to his *Christ's Tears over Jerusalem*. Realizing the error of his ways, Nashe now attributed 'all acknowledgements of aboundant Schollership, courteous well governed behaviour, and ripe experienst judgement' (Stern, 111) to Harvey. Harvey's *New Letter of Notable Contents* weighed Nashe's repentance in the balance and deemed it hollow. The impulse to go on railing may not have been all his own; it is quite possible that Harvey's printer, John Wolfe, with whom he was probably living and working at about this time, was responsible for prolonging an altercation which both parties felt had run its course.

Stung by the *New Letter*, Nashe returned to the offensive in a revised epistle prefacing the 1594 edition of *Christ's Tears*; in the same year he may have taken another swipe at Harvey via the figure of the university orator in *The Unfortunate Traveller*. Finally, in 1596, he published a substantial counter-blast to *Pierces Supererogation*, entitled *Have with you to Saffron-Walden, or, Gabriell Harveys Hunt is up*. His delay in producing this riposte was, Nashe declared, due to his desire of obtaining 'perfect intelligence of [Harvey's] life and conversation' (sig. E2*v*) for the fantastically embroidered biography of the 'eldest sonne of the Halter-maker' which formed the work's centrepiece. This comic *tour de force* is accompanied by a full-length woodcut portrait which purports to be '*The picture of Gabriell Harvey, as hee is readie to let fly upon* Aiax' (sig. F4*r*) ('Aiax' being 'a jakes', a water-closet); this is almost certainly a recycled image rather than a genuine attempt at a likeness. Nashe insists that his repeated assaults on his enemy's 'humble' origins are motivated not by any snobbery of his own, but rather by Harvey's denial of his background; being the son of a rope maker would not be 'anie such hainous discredit simply of it selfe, if his horrible insulting pride were not' (sig. 12*v*–13*r*). An anonymous reply to *Have with You*, entitled *The Trimming of Thomas Nashe*, appeared in 1597; although it has frequently been attributed to Harvey, it is almost certainly not his work. Thus ended the Nashe–Harvey controversy, which received dishonourable mention in the ban on satire decreed by Archbishop John Whitgift of Canterbury and Bishop Richard Bancroft of London in 1599. It ordered that 'all Nasshes and Doctor Harvyes bookes be taken wheresoever they maye be found and that none of theire bookes bee ever printed hereafter' (Stern, 129).

Final years and reputation In the last three decades of his life, Harvey largely disappears from view. He had left London several years before Nashe struck his final blows (the *New Letter* of 1593 was dated from Saffron Walden), and there is no evidence of his residence in the capital thereafter. It has been suggested that the motives for his withdrawal were chiefly financial. Nashe reports having lodged in the same Cambridge inn as Harvey, unbeknownst to him, some time in 1595–6, and in 1598 Gabriel wrote a long letter to Robert Cecil, bidding unsuccessfully to replace the grievously ailing Thomas Preston as master of Trinity Hall. Thereafter Harvey seems to have lived retired in the town of his birth. In 1608 his sister Marie and her husband sued him in chancery for £60 which she was due by the terms of their father's will; the dispute appears to have been resolved amicably. In 1626 Harvey, 'aged threeskore and thirteene yeres or thereaboutes' (Eccles, 61), testified in the town on behalf of Thomas Byrd, a member of a local family. There is some evidence to suggest that Harvey put his lifelong interest in medicine into

practice in the final years of his life, and his last literary work may have been an epitaph on an apothecary of Hadleigh, Suffolk, dated 1630 and initialled 'G. H.'. Harvey died in Saffron Walden on 7 February 1631 and was buried there on the 11th.

Aside from his friendship with Spenser and his paper-wars with Greene and Nashe, Harvey's interest today lies chiefly in his books. Although there is no catalogue of his library, which was dispersed after his death, it is likely to have been one of the most substantial of its day; more than 180 extant volumes from it have so far been identified in collections around the world. Furthermore, Harvey was one the most assiduous annotators in an age of annotation. His books are instantly recognizable from the sheer density of his marginal commentary, which sometimes tells of several readings conducted across the course of decades. He often used every scrap of available white space to record his thoughts on the printed text, employing astrological symbols to note the subject under discussion (Mercury for eloquence, Mars for war, and so on), and making repeated references to a mysterious cast of characters (with names like 'Axiophilus', 'Angelus Furius', 'Eudromus', and 'Eutrapelus') who may represent aspects of himself, or may refer to as-yet-unidentified acquaintances.

Attitudes to Harvey's annotations reflect broader divisions of opinion over his reputation. Some historians are inclined to see his marginal ruminations as 'self-therapy' (Stern, 180), and to view Harvey as little more than a fantasist, over-assured of his own capabilities and blind to his failings, who came nowhere near to attaining the position of authority he sought. Their case is strengthened by some of the more bizarre contents of Harvey's letter-book of the 1570s, including a series of missives relating to the attempted seduction of his sister Mercy by an unnamed nobleman, identifiable as Philip Howard, earl of Arundel; the drama, in which Gabriel plays a prominent role, may well be entirely the product of his imagination. Critics have also frequently echoed Nashe's attacks on Harvey, condemning his repetitious, 'euphuistic' style and accusing him of trying to lead Spenser into the literary cul-de-sac of quantitative metrics. But for others, Harvey's marginalia merely reflect the fact that his books were a semi-public resource, which needed to be customized in order to be useful. It is known that Harvey made them available for loan to friends and colleagues, and that he employed them in his capacity as a 'professional reader' to those (like Sir Philip Sidney) who needed the wisdom they enshrined. In this light, Harvey appears as a paradigmatic Elizabethan man of letters, a humanist who sought to bring ancient learning to bear on modern problems and who believed, like many of his contemporaries, that the best route to power was through knowledge.

Harvey, Sir George (1806–1876), figure and landscape painter, was born at St Ninians, Stirlingshire, on 1 February 1806, the son of George Harvey (*d.* 1835), a watchmaker, and his wife, Elizabeth Jeffrey. Shortly after his birth the family settled in Stirling where Harvey attended the high school before being apprenticed to a bookseller. At the age of eighteen his devotion to art took him to Edinburgh, where he studied for about two years at the Trustees' Academy under Andrew Wilson and then William Allen. In 1826 he exhibited his first picture, *The Village School* (exh. Edinburgh Institution for the Encouragement of the Fine Arts in Scotland, 1826; NG Scot.), its subject continuing the tradition of David Wilkie. In the same year he became one of the original associates of the Scottish Academy, to whose first exhibition in 1827 he contributed seven works. In 1829 he became a full member of the academy, to whose interests, in its early days of struggle, he devoted himself unweariedly. Treasurer in 1843, he succeeded Sir John Watson Gordon as president in 1864, and received the honour of a knighthood in 1867. His *Notes on the Early History of the Royal Scottish Academy* (1870) gives curious particulars regarding its foundation and progress.

From the late 1820s Harvey devoted himself to figure painting, the subjects of which were mainly derived from the history and the daily life of Scotland. He became best-known for his series depicting scenes from the covenanting period, including *Covenanters Preaching* (1829–30, exh. Royal Scottish Academy, 1830; Glasgow Art Galleries and Museum) and *The Covenanters Communion* (exh. Royal Scottish Academy, 1840; NG Scot.). Although sentimental, such works dealt with contemporary concerns. Along with genre pieces like *The Curlers* (exh. Royal Scottish Academy, 1835; NG Scot.), and *The Schule Skailin* (exh. Royal Scottish Academy,. 1846; NG Scot.), his work became widely popular through engravings. His history paintings included *Shakespeare before Sir Thomas Lucy* (1836–7, exh. Royal Scottish Academy, 1837; Royal Scottish Academy) and *First Reading of the Bible in the Crypt of St. Paul's* (1839–40, exh. RA, 1846). However, owing to his use of bitumen, many of his works have now deteriorated. He produced a small number of portraits, such as *Professor John Wilson* (exh. Royal Scottish Academy, 1851) and *David Ramsay Hay* (Royal Scottish Academy). However, it was as a landscape painter that Harvey excelled; his execution was singularly spontaneous and unlaboured in the expression of the very

spirit of border landscape and of the quiet sublimity of great stretches of rounded grassy hills. His landscapes were mostly the work of his later life and many are now lost. Among the finest of them are *The Enterkin, Leadhills* (exh. Royal Scottish Academy, 1846) and *Glen Falloch* (exh. Royal Scottish Academy, 1868; NG Scot.). The *Art Journal* called *Glen Dhu, Arran* (exh. Royal Scottish Academy, 1861) 'one of the grandest landscapes ever produced by the Scottish School' (*Art Journal*, 1861, 86).

On 2 July 1839 Harvey married Elizabeth Margaret Carstairs, with whom he had two daughters, Ellen and Elizabeth. Following Elizabeth's early death in 1844 or 1845, he married Margaret Muir on 6 April 1847. In 1867 Harvey was elected a fellow of the Royal Society of Edinburgh, to which he delivered, on 21 December 1868, a paper, 'On the colour of aërial blue'. He died peacefully at his home, 21 Regent Terrace, Edinburgh, on 22 January 1876, in the jubilee year of the Royal Scottish Academy, whose interests he had made his own. His wife predeceased him. J. Gideon Harvey (1636/7–1702), by Pierre Philippe, pubd 1663

Harvey, Gideon (1636/7–1702), physician, was born in the Netherlands, the child of John Harvey and his wife, Elizabeth. His parents were probably Dutch, although two of Harvey's siblings, Frances and Nathaniel, also later lived in England. He was educated in the Low Countries before coming to England and matriculating at Exeter College, Oxford, on 31 May 1655. He left Oxford without a degree and entered Leiden University on 4 January 1657, aged twenty, where he studied medicine, anatomy, and botany. According to his account in *Casus medico-chirurgicus*, while in Leiden he was also instructed in surgery, chemistry, and pharmacy by practitioners outside the university. He apparently then travelled to Paris, where he studied at the hospitals before making the *petit tour* of Europe, during which he claimed to have taken his MD, although he never specified the university. On reaching Paris again he assisted the surgeon at one of the hospitals, observed anatomies, and studied chemistry.

Harvey then returned to the Netherlands, where he became a fellow of the College of Physicians of The Hague. He did not, however, remain in The Hague for long, and soon went to London. In July 1659 his name was put forward to the committee of public safety by John Desborough as a candidate for the post of physician to Dunkirk, which had recently been taken by the English, but he had not left London in January 1660 and it is unclear if he actually went. Following the Restoration he apparently spent some time as physician to the army in Flanders, and then travelled through Italy and Germany before returning to take up practice in London. In December 1661 he successfully petitioned for denization. Harvey never joined the College of Physicians, but seems to have established a successful practice with several aristocrats among his patients. In 1664 he married Elizabeth Leigh of St Matthew's, Friday Street, London, with whom he had at least two children, Elizabeth and Gideon Harvey [*see below*].

It was as a medical author and controversialist that Harvey was most prominent over the next three decades. He was a prolific writer with a lively and witty style. His earliest published work, *Archelogia philosophica nova*, appeared in 1663, and he followed it with a series of books on a variety of diseases, including plague, scurvy, venereal disease, and fevers. Although he recommended many chemical medicines and questioned the validity of humoural medicine, the core of Harvey's physic appears to have remained largely traditional and rationalist. His main emphasis throughout these works was on the (slightly

self-serving) importance of experience and expertise, and the dangers of credulity and conformity to unsubstantiated traditions. One of his most direct assaults on contemporary medicine, *The Art of Curing Diseases by Expectation* (1689), in which he railed against the cunning 'sects' of physicians who impress their patient with shows of activity while waiting for nature to cure the disease, earned the patronage of Georg Ernst Stahl, who published a Latin version on the continent with notes of his own. Harvey also published several medical handbooks for lay use containing critical discussions of contemporary practice and recommendations for treatments, and, in *The Family Physician and House Apothecary*, details of the costs of ingredients so that readers could calculate for themselves 'what the *Apothecary* deserveth for his pains' (sig. A5*v*). Harvey was also a strong opponent of the use of Peruvian bark.

Harvey's writing took on a more confrontational tone in 1678 with the publication of *Casus medico-chirurgicus, or, A most Memorable Case of a Noble-Man, Deceased*. His relationship with the College of Physicians appears to have been amicable to this point, and two years earlier he had written a strongly worded defence of several of its members against the 'clandestin scurrilous Cabal' of apothecaries who were attacking them (*Accomplisht Physician*, 91). Now, however, he appears to have fallen out with the college over the treatment of Lord Mohun, one of Harvey's patients, who had died after the unsuccessful treatment of a duelling wound, first by several college physicians and then by Harvey. In the work he defended his treatment of Mohun and lambasted the other physicians who had attended him, barely disguising their names. His attack on the college was even stronger in *The Conclave of Physicians* (1683), in which he ridicules their pretences to learning—particularly through anatomy and experiment—and avaricious practices. Anonymous replies lacking Harvey's satirical bite appeared in verse (*Gideon's Fleece*, 1684, attributed to Thomas Guidott) and prose (*A Dialogue between Philiater and Momus*, 1686).

Despite these controversies Harvey won the patronage of the crown and acquired land in Middlesex and Cambridge. He was appointed physician to the Tower of London and possibly served as physician-in-ordinary to the king. He moved to Sawley, Middlesex, and died in 1702.

Gideon Harvey (*c.*1671–1755), physician, son of Gideon Harvey and his wife, Elizabeth Leigh, entered St John's College, Oxford, in May 1686. He left without taking a degree and entered Leiden University on 12 May 1688, where he graduated MD in May 1690 with a thesis entitled 'De febre ardente', dedicated to Robert Lucas, Lord Shenfield, governor of the Tower of London. In 1698 he was created MD at Cambridge by royal letters.

By this time Harvey was already settled in London and practising there. He had been licensed to marry Mary Fothergill of St Dunstan-in-the-West in September 1695, when he was apparently living in Westminster. The year after receiving his MD he became a candidate of the Royal College of Physicians, and was elected a fellow in March 1703. He held a number of college offices in subsequent years, serving as censor twice, consiliarius on numerous occasions, and elect in 1716, and was father of the college at his death. Little is known of his practice and he never published, but it is clear that his career was supported by court patronage. In February 1702 he was made physician to the Tower of London in succession to his father, a position he held for the following half century, despite having been appointed as a compromise after a dispute between two rivals who expected him to die shortly. Harvey died on 24 April 1755 in Petty France, London.

Harvey, Henry (*d.* 1585), civil lawyer and college head, was the son of Robert and Joan Harvey of Stradbroke, Suffolk. He graduated LLB from Trinity Hall, Cambridge, in 1538 and LLD in 1542. An active and successful ecclesiastical lawyer, Harvey was admitted to the court of arches on 10 November 1549 and as an advocate of Doctors' Commons on 27 January 1550. About 1550 he became vicar-general to Bishop Ridley of London; he was vicar-general of Canterbury in 1551 and Ely in 1559/60. He became dean of the court of arches and president of Doctors' Commons in 1567, and a master in chancery in 1568. Harvey secured a lease from the dean and chapter of St Paul's for the mortuary house in the parish of St Benet Paul's Wharf, which was then maintained by Trinity Hall for the use of Doctors' Commons. He also secured Trinity Hall as the home of Cambridge's regius professorship in civil law. Under Elizabeth I most of the advocates in Doctors' Commons were supplied by the university.

Harvey was elected master of Trinity Hall about 1557–8, before Mary I's death. He succeeded Stephen Gardiner, who had been master since 1525 (save under Edward VI, when he had been replaced by first Walter Haddon and then William Mowse). Mowse was removed in 1553, allowing Gardiner to be reinstated. Mowse himself was then reinstated upon Gardiner's death in 1555, but forced to resign within two years for religious reasons. Harvey became master following this tumultuous period, making him 'the first fully home-bred Master since Walter Hewke', and the last clerical master until the nineteenth century (Crawley, 56). He openly held conservative religious commitments, but his moderate approach allowed Trinity Hall to enjoy a peaceful existence and avoid the doctrinal battles that other Cambridge colleges endured during Elizabeth I's reign. Harvey's success was partly a result of the college's constituency. After 1535, when the

degree of canon law was abolished and civil lawyers became the exclusive practitioners for ecclesiastical courts, he continued Stephen Gardiner's work of establishing Trinity Hall as the 'nursery for civilians'—and this at a time when most other colleges were concentrating on training parish clergy. Although only one Marian exile, Christopher Southhouse, became a fellow at Trinity Hall during Elizabeth's reign, the college included several 'Catholic-minded fellows', prompting Cambridge puritans to complain that 'he hath scarce chosen one Protestant Fellow these twelve years' (Strype, *Parker*, 2.175). However, this variety helped Harvey to achieve relative peace in the college.

Harvey fulfilled a variety of other roles at Cambridge. In 1556 Cardinal Pole placed him on the commission assigned to root out protestant books and heresy in Cambridgeshire. He actively participated in the visitation of the university by Pole's delegates in January and February 1557. At the opening of the visitation (11 January) he exhibited the cardinal's letters of authority to the assembly in King's College chapel, and gave a short speech in Latin. On 23 January he provided the visitors with a copy of the university statutes, which he had previously been commissioned to revise, along with the composition for the election of proctors. He was one of the four doctors to bear the canopy over the sacrament in the great procession of 8 February. In 1560 he became vice-chancellor to the university, the first to be identified with Trinity Hall. On 27 November 1564 the privy council commissioned him in an effort to establish perpetual concord between the university and town. In 1570 he again assisted Whitgift in revising the university statutes and in settling disputes. Bishop Cox used him during his visitation that year to frame new statutes, and the next year as a visitor for St John's College in 1576. He helped compile new statutes for St John's the same year.

Harvey served in a number of ecclesiastical posts. He was archdeacon of Middlesex between 1551 and 1554, when Bonner made him precentor at St Paul's (12 April 1554). He held the sinecure rectory of Littlebury, Essex, from 12 March 1554; the prebend of Oxton in Southwell Minster (7 September 1558); the stall of Curborough in Lichfield Cathedral (1559–60); and the prebend of Torleton in Salisbury Cathedral (25 October 1559). He was commissioned to visit Ely, York, Durham, Carlisle, and Leicester cathedrals in 1559, and was also collated to the canonry of Ely on 27 June 1567. As a benefactor Harvey created a scholarship and supported building projects for Trinity Hall and various sites around the university; Emmanuel College also benefited from his generosity. In 1561 he was part of the commission to repair the great bridge in Cambridge. It is noteworthy that in 1558 he presided over a deposition in an enclosure case regarding lands claimed by the hospital of St John and Mary Magdalen, Ely. He was subsequently listed as one of the parties to whom Edward Leeds, then master of the hospital and of Clare College, conveyed the lands and rents of that hospital in 1562 to endow Clare College.

Harvey died on 20 February 1585, and his will shows a generous man who left considerable sums to care for the poor. He made provision for scholars at Trinity Hall, willed gifts to all of the college heads at Cambridge and to his family, and endowed Trinity Hall with ceilings of oak and wainscot. Four coats of arms are attributed to him.

Wealth at death see will, Cooper, *Ath. Cantab.*, 1.505–7

Harvey, Sir Henry (1737–1810), naval officer, was born in July 1737, the second son of Richard Harvey of Eastry, Kent, and Elizabeth, *née* Nichols. The Harvey family, long settled in the county, was connected by marriage with Captain Peircy Brett who was later knighted for his services to the navy. Henry received his early education in France and entered the navy in May 1751 with Captain Cosby on the *Centaur*. In her, and three years later in the *Nightingale*, the greater part of his junior time was served on the North American station. On 10 March 1757 he was promoted third lieutenant of the *Hampshire*, in which he served on the channel, North American, and West India stations; and from her he was moved as first lieutenant to the *Hussar*, which was wrecked off Cape François on 23 May 1762.

Harvey was released on parole and returned to England in the *Dragon*, on which he made the acquaintance of one of the ship's lieutenants, the Hon. Constantine Phipps (later Lord Mulgrave and a lord of the Admiralty). In April 1763 Harvey was first lieutenant of the *Mermaid*, again on the coast of North America; and in 1764–5 he commanded the schooner *Magdalen*, employed in the Gulf of St Lawrence for the prevention of smuggling. From August 1768 to April 1771 Harvey commanded the revenue cutter *Swift* in the channel and North Sea; and in March 1773, after two years on half pay, he was invited by Phipps (now Captain Phipps) to go with him as first lieutenant of the *Racehorse* on his voyage of discovery towards the north pole. On the return of the expedition he was promoted commander (15 October 1773).

In January 1776 Harvey was appointed to the sloop *Martin* in which he served under Commodore Charles Douglas at the relief of Quebec. In July 1776 he joined the squadron under Admiral John Montagu at Newfoundland, and in May 1777 he was promoted to the command of the frigate *Squirrel*, which was employed for the next eighteen months on convoy duty.

In December 1778 Harvey was appointed to the *Convert* (32 guns) and in May 1779 he assisted at the relief of Jersey under Captain Gideon. Subsequently he commanded a small squadron sent off the Isle of Man to look for the American revolutionary naval officer John Paul Jones; convoyed the trade to Quebec and home; and was in

December 1779 sent out to join the flag of Sir George Rodney in the West Indies. Here the *Convert* was chiefly employed in active cruising and scouting, but was with the fleet in the action off Dominica on 12 April 1782. In the following August she was sent home with convoy. In March 1786 Harvey was appointed to the frigate *Rose*, but he was shortly afterwards ordered to take temporary command of the *Pegasus*, fitting for Newfoundland and the West Indies. At this time Prince William Henry was her first lieutenant, and it was understood that when she was ready for sea he was to take command. Harvey discharged this delicate duty with 'such discretion as secured to him the lasting friendship of His Royal Highness' (NMM, MS 81/041, fol. 12). He afterwards rejoined the *Rose*, and in August the two ships sailed together for Newfoundland. In 1788 the *Rose* returned to England, and in 1789 she was paid off.

During the Spanish armament (1790) Harvey for a few months commanded in succession the *Alfred* and the *Colossus*; and in 1793 he was appointed to the *Ramillies*, which joined the Channel Fleet under Lord Howe. Through her relief of the *Brunswick* (commanded by Harvey's brother John *Harvey) the *Ramillies* played a distinguished part in the battle of 1 June 1794. On 4 July of that year Harvey was promoted rear-admiral, and was immediately ordered to take command of a small squadron in the North Sea. In January 1795 he hoisted his flag on the *Prince of Wales*, attached to the Channel Fleet, and on 23 June he took part in the action off Lorient; he remained through the winter to cover the landing in Quiberon Bay, under Sir John Borlase Warren.

In April 1796 Harvey was appointed commander-in-chief in the Leeward Islands, and in the following February, jointly with Sir Ralph Abercromby, he took possession of Trinidad, after capturing one and destroying three ships of the line. An attempt on Puerto Rico in April failed, owing to the unexpected strength of the defences. In July 1799 Harvey resigned the command to Lord Hugh Seymour, and returned to England in the frigate *Concorde*. He had been already nominated a KB, and was invested with the insignia of the order in January 1800. In the summer he hoisted his flag in the *Royal Sovereign* as second in command of the Channel Fleet, under Lord St Vincent, and in this post he remained until the peace of Amiens, with which his active service terminated. He attained the rank of admiral on 23 April 1804, and died at Walmer, Kent, on 28 December 1810. Harvey had married Elizabeth Boys (1739/40–1823), daughter of the naval officer William Boys; they had five children.

Harvey was survived by his wife, who died on 4 March 1823, aged eighty-three. Three of their five children—Henry, Richard, and Thomas *Harvey—entered the navy. Henry drowned in 1788 while serving in the *Rose*.

Harvey, Hildebrand Wolfe (1887–1970), marine biologist, was born on 31 December 1887 in Streatham, London, the elder son of Henry Allington Harvey, paint manufacturer in the firm of Foster, Mason, and Harvey of Mitcham, Surrey, and his wife, Laetitia, daughter of Peter Kingsley Wolfe. After attending Gresham's School at Holt in Norfolk from 1902 to 1906 he entered Downing College, Cambridge, to read natural sciences. He gained a second class in both parts of the tripos (part one in 1909 and part two—specializing in chemistry—in 1910). During the First World War Harvey—a keen sailor—served in minesweepers and patrol vessels in the Royal Naval Volunteer Reserve. His skill at navigating these in stormy waters in all seasons, including northern winter nights, became legendary. In 1921 he joined the staff of the Marine Biological Association of the United Kingdom in Plymouth as administrative and hydrographical assistant. Two years later he married Elsie Marguerite Sanders. The marriage was later dissolved.

Harvey's early work at the Marine Biological Association was on the physical oceanography of the western English Channel. At that time useful measurements were largely confined to salinity and temperature and the theory for interpreting these in shallow seas was much behind that available for the waters of the deep ocean. Though Harvey quickly saw that an understanding of biological productivity which his colleagues sought needed a more biochemical approach, it took him a decade to develop a quantitative method. His first success was a method for analysing nitrate, which he considered that marine plants were likely to need. Though no more than semi-quantitative and using a highly corrosive medium it was immediately and widely used by expedition ships. The broad picture of distribution in the world oceans which it yielded was confirmed by the far better methods developed since. The publication in 1928 of Harvey's monograph on the biological chemistry and physics of sea water illustrated the ordered and economical way in which he carried through all his researches. In 1933 Harvey published his classic paper on the rate of diatom growth. In the same year he married Marjorie Joan Sarjeant. The couple later had a son.

Harvey succeeded in enlisting the help of three specialist colleagues to produce a seminal paper on plankton production and its control, in which the methods of physics, chemistry, plant physiology, and zooplanktology were applied to the waters of the English Channel for a year. He also wrote two further books.

The words in which the Murray committee of the

United States National Academy of Sciences recommended the award of the Agassiz medal in 1952 to Harvey convey the seminal value of his work:

> H. W. Harvey ... has been the leading student for many years of the changes in the chemical constituents of sea water brought about through the agencies of plants and animals and also of how the availability of nutrient chemicals determines the fertility of the sea.

His field observations were mainly limited to the English Channel, but many of his conclusions applied to the whole biologically active zone of the marine environment. Indeed, Harvey's talent lay in recognizing untilled fields ready for strategic research and cultivating those fields with maximum production of pertinent knowledge. In 1945 he was elected to fellowship of the Royal Society, and in 1958 he was appointed CBE.

Harvey had a combination of qualities rarely found in one man. He was a gifted synthesizer of existing knowledge, from which he constructed powerful hypotheses. This was combined with the patience to undertake meticulously designed experimental work needed to test these hypotheses. He was a master of the experimental method, able to minimize the time spent on experiment by his intuitive flair for rejecting work likely to be unproductive.

Harvey was a kindly man who taught quietly by precept. Always considerate, he once offered a colleague a lift in his car, to receive the reply 'No thank you, Dr Harvey, I am in a hurry'. And so he drove through life. He died in Freedom Fields Hospital, Plymouth, on 26 November 1970.

Harvey, Jane (*bap.* 1771, *d.* 1848), writer, baptized at Gateshead on 8 July 1771, was probably the daughter of William Harvey, wharfinger (*b. c.*1738), and his second wife, Jane, daughter of James Marshall. According to *The Feminist Companion to Literature in English* she was the daughter of Lawrance and Elizabeth Harvey of Barnard Castle, but there seems no evidence to connect her with this place.

Harvey's earliest known work is *A Sentimental Tour through Newcastle*, by 'A Young Lady', published in 1794. This takes the form of a guide to various aspects of the city 'certainly in no way inferior to any provincial town in England' visited by the 'young lady'. As well as more typical sights the tour takes in the infirmary and the prison, with digressions, including political comment, on fishing and the coal trade. Her second book, *Poems on Various Subjects*, appeared in 1797.

Harvey continued to publish poetry throughout her life, including two collections for children—*Sacred Hymns* and *Poems Original and Moral*—both in 1818, but she is probably better known for her romantic novels, especially *The Castle of Tynemouth* (1806). Her books enjoyed wide currency and are represented in surviving catalogues of a number of private and circulating libraries. However, contemporary critical reaction was not always kind. The annual publication *The Flowers of Literature*, for example, says of *The Governor of Belleville* (4 vols., 1808) that 'there are two volumes too much of it' and describes the author as 'lamentably deficient in the knowledge of character'.

Little is known of Harvey's life but her obituary published in several Newcastle newspapers states that she ran a circulating library in Tynemouth for some years. At the time of her death, on 4 March 1848 in Saville Row, she was living in Brunswick Place, Newcastle upon Tyne. She was buried in the Newcastle general cemetery, at Jesmond, on 6 March. She was unmarried.

Harvey, John (*bap.* 1564, *d.* 1592), astrologer, was baptized at Saffron Walden, Essex, on 13 February 1564, the third son of John Harvey (*d.* 1593), a prosperous master rope maker and farmer, and his wife, Ales (Alice; *d.* 1613). Like his older brothers Gabriel *Harvey and Richard *Harvey, he attended the local grammar school before proceeding to Cambridge, where he matriculated pensioner of Queens' College in June 1578, graduating BA in 1581 and MA in 1584. Thomas Nashe, a fierce enemy, claimed later that Harvey had been notorious for his trysts with 'the wenches in Queenes Colledge Lane' (*Works of Thomas Nashe*, 3.81), but he was also clearly an assiduous scholar. On leaving university he became a tutor in the household of Thomas Meade of Wendon Lofts, near Walden, a justice of the queen's bench, whose son had been a school and college friend. Subsequently he 'stole away' and married Meade's daughter Martha (ibid.), probably in 1583 when he was still only nineteen, though he was soon reconciled to his new father-in-law. In 1587 Cambridge granted him a licence to practise medicine and he became a successful practitioner at King's Lynn where, according to his brother Gabriel, he was highly respected among the Norfolk gentry.

Harvey's first publication was *An Astrologicall Addition* (1583), a supplement to his brother Richard's notorious *Astrological Discourse* on the great conjunction of Saturn and Jupiter in 1583. The dedication, to Meade, was dated 1 April 1583. To this work Harvey appended a translation of the *Iatromathematica* of Hermes Trismegistus, a guide to astrological medicine, undertaken at the request of a friend he identified only as M. Charles P., and one of the

earliest hermetic writings to appear in English. Harvey shared his brother's conviction that the conjunction of 1583 heralded dramatic woes. He speculated that an Antichrist or new Mahomet might appear, or 'some Turkish Martiall Tyrant' (Harvey, *Addition*, sig. C5), but promised that God would protect the faithful and thought a great new monarchy could arise to restore peace.

Harvey commenced a series of almanacs in 1584 to monitor these developments. The first, *Leap Year*, was dedicated to Meade, and subsequent editions to the lord chancellor, Sir Thomas Bromley, and his successor, Sir Christopher Hatton. The failure of the astrological prophecies concerning the great conjunction brought a flood of ridicule and abuse against the two younger Harvey brothers, and led John to reassess his position. In 1588 he published *A Discoursive Probleme Concerning Prophesies*, completed in August 1587 and dedicated to Hatton, in which he distinguished sharply between astrological and other predictions. The prophecies of Merlin, the Sibyls and other ancient seers were dismissed as 'flimflams packed up in pedlers prose' and he demanded, 'Who laugheth not at their ... beggerly trumperie?' (Harvey, *Discoursive Probleme*, 65). Harvey also now took a far more critical approach to the astrological prophecies of Regiomontanus, Leowicz (Leovitius), and others concerning the conjunction of 1583, wholly rejecting their apocalyptic claims. 'I cannot sufficiently marvell', he remarked, 'what mooved so famous learned men in this facultie, to ascribe, or attribute so exceeding much unto that silly Conjunction' (ibid., 110). He passed over his own and his brother's earlier sensational writings on the subject. Harvey still defended judicial astrology itself, however, citing Ptolemy as a sound guide on the effects of eclipses, and he also endorsed a 'true, and right Naturall Magique' (ibid., 79). His almanac for 1589 stressed that astrological predictions were at best contingent.

Harvey died at King's Lynn in July 1592, aged only twenty-eight, after a short illness, and was survived by his wife and their two young daughters. The settlement of the estate generated a fierce dispute. Martha had brought a dowry of £300, in return for which John and his father promised her £600 in the event of his death, with the house and land at Saffron Walden as security. Relations between the couple appear to have been strained; Martha repeatedly asked, in vain, for a formal jointure on the terms agreed verbally and urged him to make a will confirming the settlement. After his death, intestate, she asked his brother Gabriel to handle the administration on her behalf, and later claimed that he cheated her of everything. In May 1593 she petitioned Sir John Puckering, the lord keeper, for redress and commenced an action in chancery against Gabriel and his father, though the matter seems eventually to have been compounded. Nothing further is known of her or her children.

John Harvey shared both the intellectual energy and the pugnacious temperament of his two more celebrated brothers. All three were the targets of merciless attacks by Nashe and Robert Greene. Harvey's *Discoursive Probleme* was none the less a significant contribution to intellectual debate, and all the more striking for its author's readiness to review his previous position in the light of experience.

Harvey, John (1740–1794), naval officer, was born on 9 July 1740, at Elmton, Kent, the third son of Elizabeth, *née* Nichols, and Richard Harvey of Eastry, Kent. His younger brother was Sir Henry *Harvey, who also achieved distinction in the navy. In 1754 John Harvey joined the *Falmouth* (50 guns) with Captain William Brett. Under the patronage of Admiral Francis Holbourne and Sir Peircy Brett (a distant family relation) he was promoted lieutenant on 30 January 1759, and appointed first to the sloop *Hornet* (18 September) and then in March 1761 to the frigate *Arethusa*. With the conclusion of the peace in 1762 Harvey came ashore, and on 27 September 1763 he married Judith, daughter of Henry Wise of Sandwich; the couple had a large family.

In November 1766 Harvey was appointed to command the cutter *Alarm* on the coast of Scotland, a duty he performed until his promotion to the rank of commander in 1768 when he was placed on half pay. In January 1776 he was appointed to the sloop *Speedwell*; and in September 1777, as war loomed with France, he was posted from her to the *Panther* (60 guns) as flag-captain to Rear-Admiral Robert Duff in the Mediterranean. Harvey distinguished himself in the defence of Gibraltar during the early part of the siege in 1779–80, latterly as senior officer after the departure of Duff and of his successor Commodore Elliot. In July 1780 the *Panther* sailed for England, and in November she was sent to the West Indies in the squadron under Sir Samuel Hood; from here she returned in the following summer.

Early in 1782 Harvey was appointed to the *Sampson* (64 guns), which formed part of the Channel Fleet, and he was present at the relief of Gibraltar and the encounter off Cape Spartel. During the interlude of peace between the American War of Independence and that occasioned by the French Revolution, Harvey continued in employment. In 1787 he was regulating captain at Deal and from 1788 to 1792 he commanded the guardship *Arrogant* at Sheerness.

In February 1793, following the outbreak of war with France, Harvey was appointed at the special request of Admiral Lord Howe to the *Brunswick* (74 guns), one of the Channel Fleet. In the battle of 1 June 1794 she was stationed second astern of Howe's flagship, *Queen Charlotte*, but was separated from her by the close order of the French line astern of the *Jacobin*.

Harvey attempted to force an opening ahead of the

John Harvey (1740–1794), by Gilbert Stuart

Vengeur, when the *Brunswick*'s starboard anchor hooked in the *Vengeur*'s forechains and dragged the *Vengeur* along with her. The master proposed to cut her free. 'No', said Harvey, 'as we've got her we'll keep her.' The two ships remained firmly grappled through a great part of the battle. Towards the close other English ships came to the *Brunswick*'s help; and the *Ramillies*, commanded by Harvey's brother, poured two tremendous raking broadsides into the *Vengeur*. The grappling had been cut away, but after a short time the *Vengeur*, dismasted and with the water pouring in through her smashed side, surrendered. Without a seaworthy boat the *Brunswick* was unable to take possession, and the *Vengeur*, dropping astern, endeavoured to make off when she was brought to by the *Culloden* and *Alfred*. Every effort was made to remove her men, but she sank with more than half her crew still on board. The *Brunswick*, severely damaged, had fallen far to leeward, and being unable to rejoin the fleet bore up, and reached Spithead on 12 June with a loss of 44 men killed and 114 wounded.

Early in the action Harvey's right hand had been shattered by a musket-ball; afterwards he was stunned by a heavy splinter striking him in the small of the back; and a round shot afterwards smashed his right elbow. He was landed at Portsmouth, where he died on 30 June 1794. He was buried at Eastry; a monument, jointly to his memory and to that of Captain John Hutt of the *Queen*, who also died of his wounds on 30 June, was erected in Westminster Abbey. Two of Harvey's sons, Sir John *Harvey and Sir Edward *Harvey, also entered the navy.

Harvey, Sir John (1772–1837), naval officer, was the second son of Captain John *Harvey RN (1740–1794) and his wife, Judith, daughter of Henry Wise of Sandwich. Sir Edward *Harvey was his younger brother. After serving as midshipman of the frigate *Rose* with his uncle, Sir Henry Harvey, he was promoted lieutenant on 3 November 1790; on 5 September 1794 to command the sloop *Actif* in the West Indies; and on 16 December to be post captain, as a tribute to the memory of his father. In January 1795 he was chosen by his uncle as his flag-captain in the *Prince of Wales* (98 guns), in which he was present in the action off Lorient, in the operations on the coast of Brittany in the following winter, and in the West Indies, including the capture of Trinidad, when he was sent home with dispatches. He afterwards commanded the *Southampton* (32 guns) and the *Amphitrite* in the West Indies and off Cadiz; the *Agamemnon* (64 guns) in Robert Calder's action off Cape Finisterre; the *Canada* (74 guns) in the West Indies; and the *Leviathan* (74 guns) and *Royal Sovereign* (110 guns) in the Mediterranean. He became rear-admiral on 4 December 1813. From 1816 to 1819 he was commander-in-chief in the West Indies; he was made vice-admiral on 27 May 1825, KCB on 6 June 1833, and admiral on 10 January 1837. He married in 1797 his first cousin, daughter of William Wyborn Bradley of Sandwich; they had one daughter. He died at Upper Deal, Kent, on 17 February 1837.

J. K. LAUGHTON, *rev.* ROGER MORRISS

Harvey, Sir John (1778–1852), army officer and administrator in Canada, was born on 23 April 1778 in England. Complete mystery surrounds his background. Rumours that he was an illegitimate son of the first marquess of Anglesey are undoubtedly untrue. Nothing certain is known about his youth except that he was brought up in Dronfield, Derbyshire, by the vicar, the Revd John Russell. On 18 September 1794 he became an ensign in the 80th regiment of foot, and from 1794 to 1802 he served in the Netherlands, at the Cape of Good Hope, in Ceylon, and in Egypt. From 1803 to 1807 he was in India, where he joined the staff of the commander-in-chief, Lord Lake, whose daughter, Elizabeth (*d.* 1851), he married on 16 June 1806. They had five sons and one daughter. On 15 July 1798 Harvey became a lieutenant, on 9 September 1803 a captain, and on 28 January 1808 a major. After being employed in England during the first half of 1808 as an assistant quartermaster-general, he was stationed in Ireland from July 1808 to 1812.

On 25 June 1812 Harvey became a lieutenant-colonel and deputy adjutant-general in Upper Canada. By travelling overland from New Brunswick on snowshoes, he arrived in Upper Canada early in 1813 and played a conspicuous part in the Anglo-American War of 1812–14. On 6 June 1813, at the battle of Stoney Creek, he attacked and drove back an American force five times larger than his own. In November 1813 he earned a medal at the battle of Crysler's Farm, and he was wounded during the siege of Fort Erie on 6 August 1814. Although he went on half pay in 1817, he became knight commander of the Royal Guelphic Order in 1824 and in May 1825 was made a colonel. Through seniority he rose to the rank of major-general in January 1837 and lieutenant-general in November 1846.

Without private means Harvey desperately needed a civil appointment. In 1825–6 he served on the commission to determine the price of crown land in Upper Canada and from 1828 to 1836 as one of the four inspectors-general of the newly formed Irish constabulary, with responsibility for Leinster. During the tithe wars of the 1830s Leinster was the centre of agitation: Harvey did everything in his power to promote compromise and avoid bloodshed and won recognition for his moderation. In 1832 he gave evidence to the House of Commons select committee on Ireland and recommended the solution to the tithes question that was eventually adopted. In April 1836 the Irish constabulary was reorganized and his post abolished, but he was compensated with the position of lieutenant-governor of Prince Edward Island.

In 1767 the whole of Prince Edward Island had been divided into townships, distributed by lottery to landlords in Britain, and on his arrival in August 1836 Harvey was confronted by an assembly controlled by a popular party demanding confiscation of the estates, a policy opposed by the Colonial Office. Harvey sought to take the initiative out of the hands of the escheat party by persuading the landlords resident in Britain to make concessions to their tenants, and he supported a measure to increase the taxes paid by non-resident landlords. These measures temporarily restored a degree of tranquillity to the island and won Harvey considerable popularity and a reputation for being able to handle recalcitrant assemblies. This reputation was later enhanced in New Brunswick, where he was transferred in May 1837 to succeed lieutenant-governor Sir Archibald Campbell, who was at loggerheads with his assembly. By surrendering to the assembly control over the rapidly increasing revenues derived from the sale of crown lands, and reconstructing his executive council to include the leaders of the colony's reform movement, Harvey established a harmonious working relationship with the majority in the assembly and ensured New Brunswick's loyalty during the Canadian uprising of 1837–8. In 1838 he was created KCB for his services and he was fulsomely praised in the Durham report in 1839 and by Governor-General Lord Sydenham in 1840.

Harvey was less successful in resolving the Maine–New Brunswick boundary dispute. Although he prevented friction along the border from evolving into a serious conflict, he was not sufficiently aggressive in upholding the British claims, and in 1841 he was abruptly dismissed, although later that year he was reassigned as governor of Newfoundland. In Newfoundland sectarian violence between the predominantly English and protestant urban middle class in St John's and the largely Irish and Roman Catholic majority in the outports had led to the suspension of the constitution. The new constitution imposed by the Newfoundland Act of 1842 was opposed by the largely Catholic Reform Party, but Harvey again showed his remarkable abilities as a conciliator. He put an end, at least temporarily, to the sectarian violence and won the respect of the colony's Roman Catholics, although in 1846 he could not convince the reformers to agree to a renewal of the Newfoundland Act. None the less, his sojourn in Newfoundland was not a particularly happy one. He went deeply into debt maintaining a lifestyle he could not afford, and he was reprimanded by the Colonial Office for borrowing money from his colonial secretary.

In August 1846 Harvey was given the more lucrative post of lieutenant-governor of Nova Scotia. His instructions were to engineer a coalition between the colony's Conservatives, who dominated the assembly and the executive council, and the reformers, who were likely to win the next election and were demanding the introduction of responsible party government. Despite his best efforts, Harvey was unable to construct a coalition, and following the election of August 1847 he had no option but to dismiss the Conservatives and admit the reformers to office. On 2 February 1848 he therefore reluctantly presided over the introduction of the first formally responsible party ministry in the British empire. The transition did not prove easy. A stream of petitions was sent to London accusing Harvey of identifying himself with the new reform administration, and he lost the confidence of the secretary of state for the colonies, the third Earl Grey, who was unwilling to accept the full implications of the new system and criticized Harvey for not restraining the partisanship of his new advisers. Harvey suffered a shattering blow when his wife died on 10 April 1851, and his health rapidly deteriorated. He began a six-month leave of absence in May, but on his return was incapable of performing even routine tasks. On 22 March 1852 he died at Government House, Halifax, Nova Scotia, and was buried in the military cemetery in Halifax alongside his wife.

Harvey was lucky in that the long wars against France opened up unusual opportunities for the promotion of officers like himself who had neither family connections nor large personal fortunes. Repeatedly he won recognition for acts of daring and bravery: but most of his military service was spent in backwaters. During the Anglo-American War of 1812–14 Harvey became one of the best-known military officers in British North America, but after the war he was just one of a vast number of young officers with an uncertain future. After a false start in Ireland, at the age of fifty-eight he began a new career as a colonial administrator and eventually served in more British North American colonies than any other governor. Partly because his origins were humble, he did not find

exile among the colonists as tedious as did most of his contemporaries, and everywhere he served he won popular support. Noted for his tolerance and flexibility, he was the ideal colonial administrator during a period when the role of the governor was undergoing a fundamental transformation.

Harvey, John Hooper (1911–1997), architectural and garden historian, was born on 25 May 1911 in St John's Wood, London, the only child of William Harvey (1883–1962), architect, and his wife, Alice Mabel Wilcox (1874–1958). He attended St John's School, Leatherhead, from 1923 to 1927. In 1928 he joined the office of Sir Herbert Baker, architect, and while there went to the Regent Street Polytechnic (1929–32) to study architecture, in both cases following in his father's footsteps. He spent the years 1933 to 1935 with his father in Palestine assisting in the compilation of survey reports on ancient buildings. In 1934 he returned to marry, on 24 February, (Sarah) Cordelia Story (1903–1996). They had two sons, Richard (*b.* 1938) and Charles (1940–2000), and one daughter, Eleanour (*b.* 1945).

Harvey entered the office of works in 1936. As he refused all forms of war work 'on aesthetic and historical grounds' (private information), he was imprisoned in Wormwood Scrubs for six months in 1942. After release he joined his father—now living in Bookham, Surrey—in identifying buildings of historic interest at risk from enemy action. This early 'listing' of buildings was resumed on a more general footing in 1947, and Harvey briefly became one of its investigators in 1949. He was appointed consultant architect (for conservation matters) to Winchester College (1947–64), and this gave him the experience needed to become in 1950 the lecturer in the first dedicated conservation course at the Bartlett school of architecture at University College, London (until 1959). In 1972 he published *The Conservation of Buildings*. For over thirty years from 1960 he sat on the council of the Ancient Monuments Society.

In 1930 Harvey had begun to compile biographical information about medieval architects, and it became his mission to celebrate their work and enhance their status in the eyes of history. A short biography, *Henry Yevele* (1944), was followed over the next thirty years by a constant stream of articles and an overlapping series of books, including *Gothic England: a Survey of National Culture* (1947); *The Plantagenets* (1948); *Tudor Architecture* (1949); *The Gothic World* (1950); *The Mediaeval Architect* (1972); *Mediaeval Craftsmen* (1975); *The Black Prince and his Age* (1976); and *The Perpendicular Style* (1978). Although the range of scholarship displayed in all these books was impressive, the most significant was *English Mediaeval Architects: a Biographical Dictionary Down to 1550* (1954, with contributions by Arthur Oswald). This work of reference rapidly became indispensable: as Eric Fernie wrote, it 'demolishes the idea of medieval architectural anonymity' (Fernie). An expanded edition was published in 1984, funded by subscription. This won Harvey the Alice Davis Hitchcock medallion of the Society of Architectural Historians of Great Britain in 1987. Of his other works, *The Perpendicular Style* contained the fullest account of his researches.

Throughout this body of work Harvey sought to establish the artistic importance of England in the fourteenth and fifteenth centuries. He wanted to demonstrate that in this period the visual arts cohered to form a national style, analogous to the national language used by Chaucer. For Harvey, the fortunes of this artistic movement were closely bound up with those of the later Plantagenets. It was their wish to foster national identity through architecture which had made the Perpendicular 'the most important phenomenon of English art' (J. Harvey, *The Perpendicular Style*, 1978, 13) with Yevele as 'our greatest architect' (J. Harvey, *Henry Yevele*, 1944, vii). While the depth of his scholarship was freely acknowledged, many contemporaries were not convinced by these central ideas. Younger scholars have, however, vindicated his methods and confirmed the concept of artistic identity in this period.

In the later stages of this campaign Harvey was living (from 1963) in York, where he was employed by the Royal Commission on Historical Monuments (England) as an editor (1963–70). In 1975 the family moved to Frome in Somerset. Although he maintained his wide interests concurrently, in these later years he moved increasingly into the field of garden history, which he pursued through a similar attention to neglected sources and an interest in the techniques and materials available to English gardeners. *Early Gardening Catalogues* (1972) and *Early Nurserymen* (1974) were crucial texts in establishing the story of how plants were introduced, propagated, and diffused. Many articles, mostly published in *Garden History*, examined this story in greater detail and supplied the background to introductions from other countries, especially in the Islamic world, where he delighted to travel. In 1981 he published *Mediaeval Gardens*. He became a leading figure in the Garden History Society and was president from 1982 to 1985; in addition to his articles, the society published his *Availability of Hardy Plants of the Late Eighteenth Century* in 1988.

Contemporaries were dazzled by the breadth and authority with which Harvey wrote, and he was elected a fellow of the Society of Genealogists (1939), the Royal Society of Literature (1945), and the Society of Antiquaries (1949). The University of York conferred an honorary doctorate in 1976. He was a shy man, and of unbending principle; he could seem reserved and austere. The prodigious, almost obsessive labours by which he transformed medieval architectural studies were driven by a faith in the past, and hatred of much of modern life, which set him apart from most of his contemporaries, although to his

inner circle he was jovial and to all who sought information he was punctiliously generous. He died at his home, 32 Christchurch Street East, Frome, on 18 November 1997 of heart failure, and was cremated at Bath crematorium. He was survived by his three children, his wife having predeceased him.

Wealth at death under £180,000: probate, 17 March 1998, *CGPLA Eng. & Wales*

Harvey, Sir John Martin- (1863–1944), actor and theatre manager, was born in Wivenhoe, Essex, on 22 June 1863, the eldest son to survive infancy and the fourth of the seven children of John Harvey, naval architect and builder of yachts, and his wife, Margaret Diana Mary, daughter of the Revd David George Goyder, a Swedenborgian minister. His mother died while he was still a child, and he was cared for temporarily by family friends in Paisley, Renfrewshire, where he attended the grammar school before continuing a sound if largely unprofitable education at Linton House, Colchester, and King's College School, London. Expected to inherit the family business, he was apprenticed as a shipwright in his father's yard at fifteen, but despite a gift for draughtsmanship he evinced little interest in the work, and his response to a chance visit to a London theatre persuaded an indulgent parent to enrol him for acting lessons with the veteran tragedian John Ryder. After making his stage début in a walk-on part at the Court Theatre on 24 September 1881, he had one of his father's yachting clients, W. S. Gilbert, to thank for a brief engagement with Charles Wyndham. In September 1882 a letter of introduction from a friend of his maternal grandfather's who knew Henry Irving brought him employment as a 'Lyceum gentleman', a secure position though little more than a 'super'.

Harvey remained at the Lyceum for fourteen years without playing any parts of substance except during Irving's provincial and American tours or during the company's annual summer break, when with other young colleagues he formed a small touring group calling itself the Lyceum Vacation Company. But it proved a crucial apprenticeship, enabling the novice to assimilate both the art of acting and the business of management, and thereafter he freely acknowledged his indebtedness to Irving by referring to him always as 'the master'. At the Lyceum, too, he met his future wife, Angelita Helena Margarita (Nina; *d.* 1949), daughter of Don Ramón de Silva Ferro, a Spanish diplomat and businessman of distinguished parentage. After their marriage on 24 January 1889 she was his devoted helpmate, managerial partner, and leading lady for the rest of his life. They had two children, a son, Jack Seaforth Elton, and a daughter, (Margaret) Muriel de Melfort, who also became a well-known actress.

After leaving the Lyceum in 1896 Harvey was a freelance actor for three years, notably as Osric in *Hamlet* with Johnston Forbes-Robertson, Erhart in Ibsen's *John Gabriel Borkman* for the New Century Theatre Society, and Pelléas to Mrs Patrick Campbell's Mélisande in the British première of Maeterlinck's drama. He then ventured into management at the Lyceum in February 1899 with *The Only Way*, an adaptation from Dickens's *A Tale of Two Cities*; both husband and wife had a hand in fashioning it into a vehicle for their respective talents, and its phenomenal success helped to determine their entire career. Not only did it ensure their continuing prosperity, registering over 5000 performances in forty years and still featuring in their farewell tour of 1938–9, but it afforded a melodramatic template for subsequent additions to their standing repertory, such as *Rouget de Lisle* (1900), *A Cigarette-Maker's Romance* (1901), *Eugene Aram* (1902), *The Exile* (1903), *The Breed of the Treshams* (1903), *Boy O'Carroll* (1906), and *The Last Heir* (1908). Amid all this costumed romance and swashbuckling adventure he presented his first *Hamlet* in 1904, *Richard III* in 1910, *The Taming of the Shrew* in 1913, and a revival of *Pelléas and Mélisande* in 1911. In 1912, with conspicuous daring and at vast expense, he mounted a revolutionary production of *Oedipus rex*, using Gilbert Murray's recent translation and with Max Reinhardt as director; he accommodated the elements of a classical Greek theatre to the stage and auditorium of Covent Garden, then compounded his ambition by touring the production to provincial theatres as well.

With comparable enterprise Harvey marked Shakespeare's tercentenary in 1916 with a five-week season at His Majesty's Theatre. This added *Henry V* to the three works already in his repertory, and demonstrated four radically different approaches to Shakespearian staging: the archaeological, the fit-up, the expressionistic, and the quasi-Elizabethan. His aim was to exemplify what might be accomplished through the establishment of a national theatre, a cause that he constantly promoted in public lectures. During the war years he also staked his personal popularity on producing two new plays bearing uncomfortably on the current conflict—Stephen Phillips's *Armageddon* (1915) and Maeterlinck's *The Burgomaster of Stilemonde* (1918). He delivered recruiting speeches, spent a

month at the front line giving dramatic recitals to the troops, and raised handsome sums for the Red Cross and various war charities. For this fundraising as much as for his services to the theatre he was knighted in 1921. On 28 October of that year he assumed by deed poll the additional surname Martin.

After the war Martin-Harvey premièred fewer new plays, Rafael Sabatini's *Scaramouche* (1927) and Frederic Jackson's *The King's Messenger* (1931) being notable exceptions; as he disarmingly admitted in his autobiography: 'I could find little work by authors of the day which would satisfy that taste for the purely dramatic which audiences expected from me. I was rather hoist on my own petard of "stardom"' (Martin-Harvey, 527). Instead he resorted again to *The Corsican Brothers*, which he had already revived in 1906, and to two of Irving's other Lyceum triumphs, *The Lyons Mail* (1927) and *The Bells* (1932). He appeared in film versions of four of his own successes—*A Cigarette-Maker's Romance* (1913), *The Breed of the Treshams* (1920), *The Only Way* (1925), and *The Lyons Mail* (1931)—while *The Burgomaster of Stilemonde* was broadcast by the BBC. Recognition for a lifetime's theatrical achievement came in 1938 with the conferment of an honorary doctorate of laws by Glasgow University. He died peacefully at his home, Primrose Cottage, 31 Fife Road, East Sheen, Surrey, on 14 May 1944, and was buried on 17 May at East Sheen cemetery.

The longevity of Martin-Harvey's career served at last to make his style of acting seem magnificently old-fashioned, though for a practitioner so firmly rooted in late-Victorian tradition he was surprisingly receptive to new ideas, some of his original scenic designs showing the influence of his friend Gordon Craig, Reinhardt, or Willam Poel, while alone among his peers he attempted to acclimatize contemporary Spanish drama to the English stage, with pieces by José Zorrilla, José Echegaray, and Angel Guimera. Accustomed to deploying *The Only Way* and similar stand-bys to subsidize performances of Shakespeare and Sophocles, he was prepared to lose money on other plays he considered worthy of presentation: drawn by a Swedenborgian upbringing (he later joined the Church of England), or perhaps the untimely loss of his mother, to the spiritual and homiletic, he essayed *Great Possessions*, a morality play from the German of Carl Rössler in 1907, and challenged the hedonistic twenties with *Via crucis* (1922), an adaptation of Hofmannsthal's *Jedermann*. That he never had a regular West End base and spent most of his time 'on the road' in the provinces or North America (especially Canada, where he was lionized) made it easier for metropolitan critics to ignore or patronize him, but the so-called 'last of the romantics' was also a manager of great resourcefulness and an actor capable of tragic grandeur. Wealth at death £12,737 12*s.* 7*d.*: probate, 26 Aug 1944, *CGPLA Eng. & Wales*

Harvey, Laurence [*real name* Hirsch Moses Skikne] (1928–1973), actor and film director, was born on 1 October 1928 in Joniskis, Lithuania, the youngest of the three sons of Orthodox Jewish parents, Ber Skikne (1895/6–1974) and his wife, Ella Zotnickaita (1897/8–1974). In 1929, endeavouring to improve his prospects as a building contractor, his father emigrated to South Africa, where the family followed in 1934 and settled in a Jewish suburb of Johannesburg. Educated initially at the Earl of Athlone High School, young Skikne proved a rebellious, unscholarly pupil and was sent away to Meyerton College, Meyerton, Transvaal, a private boarding-school, to be taught discipline. At the age of fourteen he absconded and, claiming to be an orphan, enlisted in the South African navy. After being brought home to Johannesburg he took desultory jobs while studying architecture part-time and found a ready escape into counterfeit reality by joining a semi-professional theatre group and affecting the stage names Larushka Mischa or Larry M. Skikne. In 1943, again having lied about his age, he was recruited into an infantry regiment and soon posted to an entertainment unit, which toured north Africa and Italy giving variety performances to front-line troops.

Aided by an ex-service grant, Skikne travelled to London in 1946 and auditioned successfully for the Royal Academy of Dramatic Art, but he abandoned his training after one term to take up a four-month engagement from January 1947 with André van Gyseghem's newly established Library Theatre in Manchester. Among other leading parts he played Konstantin in Anton Chekhov's *The Seagull*, the

Warrior in Jean Giraudoux's *Amphitryon 38*, and Aimwell in George Farquhar's *The Beaux' Stratagem*. By arranging his parents' naturalization in South Africa he acquired the status of British subject, while a further change of name served to conceal his Slav-Hebrew origins and, through association with the Knightsbridge store of Harvey Nichols, enhanced the suave English image he now sought to project. As Laurence Harvey he made his West End début at the Cambridge Theatre in May 1951 in the role of Rafi, King of the Beggars, in an ill-fated revival of James Elroy Flecker's *Hassan*. He had also become the constant companion of Hermione Baddeley, who introduced him to London theatrical circles, and whose brother-in-law Glen Byam Shaw, co-director of the Shakespeare Memorial Theatre, invited him to join the company for the 1952 season. He appeared as Aufidius in *Coriolanus*, Malcolm in *Macbeth*, and Castrone in *Volpone*, and his tall, good-looking, sensitive Orlando in *As You Like It* was much admired. On his return to Stratford upon Avon in 1954 he confounded expectations by offering a 'contemporary', aggressively demotic Romeo (likened by one reviewer to a Berwick Street barrow boy) and a virile but woefully unpoetic Troilus. A foray to New York in October 1955, to play Angelo in the American première of Ugo Betti's *Goat Island*, also miscarried. He fared better in 1956 with two traditional comedies, both his Jack Absolute in R. B. Sheridan's *The Rivals* at the Saville in February and his Horner in William Wycherley's *The Country Wife* at the Royal Court in December being well received, and he achieved an unlooked-for triumph in the title role of *Henry V* during the Old Vic's American tour of 1958–9.

Meanwhile Harvey had been pursuing a parallel career in cinema: under contract first to Associated British Pictures, then to the Woolf brothers' Romulus Films, he appeared in more than fifty films in twenty-five years. Beginning in 1948 with *House of Darkness*, he played an assortment of criminal or unsavoury characters in low-budget British second features before graduating via the lead in a British-Italian *Romeo and Juliet* and the playboy protagonist of *The Good Die Young* (both 1954) to Christopher Isherwood in *I am a Camera* (1955), Johnny Jackson, the unscrupulous showbiz agent in *Expresso Bongo* (1959), and, more resourcefully still, Joe Lampton, the social-climbing north-country anti-hero of Jack Clayton's *Room at the Top* (1959), a performance which earned him an Oscar nomination. This, and the film's commercial success in America, promptly made him *persona grata* in Hollywood, and there followed a decade of extraordinary 'bankability', when he was cast in a rapid succession of leading roles in major films on both sides of the Atlantic, notably *The Alamo* (1960), *Butterfield 8* (1960), *The Long and the Short and the Tall* (1961), *Summer and Smoke* (1961), *Walk on the Wild Side* (1962), *The Manchurian Candidate* (1962)—arguably his best screen performance, as a brainwashed Korean War veteran—*The Running Man* (1963), *The Outrage* (1964), *Of Human Bondage* (1964), *A Dandy in Aspic* (1968), and *WUSA* (1970). He also appeared frequently on television. It was a period of ceaseless activity, most acutely in the autumn of 1964, when he shot *Darling* with John Schlesinger by day while at night playing King Arthur in the Lerner and Loewe musical *Camelot* at Drury Lane. Commuting by jet between film studios and locations, he surrounded himself with the accoutrements of stardom—luxury homes, expensive clothes, vintage wines—wherever he went, amassed a fleet of classic cars, and found time to set up a business selling antique furniture.

Imputations of bisexuality notwithstanding, Harvey was married three times. His first two marriages, to the West End actress Margaret *Leighton (1922–1976) from 1957 to 1961, and from 1968 to 1972 to Joan Perry Cohn, the widow of the former head of Columbia Pictures, doubtless benefited his career, although both ended in divorce. His third wife, and the mother of his daughter, Domino, was the London model Paulene Stone (*b.* 1942), whom he married on new year's eve 1972 and who published a memoir of their life together, *One Tear is Enough*, in 1975.

When the offers from Hollywood dwindled, Harvey continued to make films elsewhere: *The Magic Christian* (1969) and *Night Watch* (1973) in Britain, *Kampf um Rom* (1968–9) in Germany, *Rebus* (1968) in Lebanon, *L'assoluto naturale* (1969), which he also produced, in Italy, *Escape to the Sun* (1972) in Israel, and Orson Welles's multinational co-production *F for Fake* (1973) in Yugoslavia. He returned to the theatre spasmodically but with inveterate bravado: undeterred by criticism of his posturing and vocally mannered Leontes in *The Winter's Tale* at the 1966 Edinburgh festival, he contributed a provocatively un-Shavian, albeit effective, Sergius to *Arms and the Man* at Chichester in 1970, while at the same time co-producing Siobhan McKenna's touring one-woman show *Here are Ladies*, and abortively challenged the West End in March 1971 with Robert Marasco's melodramatic *Child's Play* at the Queen's, in which he made his last stage appearance as a suicidal Catholic schoolmaster. Enterprisingly, he also produced and directed two independent films, *The Ceremony* (1963), a thriller with overtones of political allegory set in Franco's Spain, and *Welcome to Arrow Beach*, dubbed by him 'a Gothic tale of romance and cannibalism', which he shot and edited while terminally ill and in constant pain. Harvey died of stomach cancer at his home in Kidderpore Avenue, Hampstead, on 25 November 1973, survived by his third wife, Paulene. He was cremated at Golders Green later that month.

Harvey's career was one of vaulting ambition and wayward focus, a paradox embodied in his conflicting desires to be taken seriously as a stage actor and renowned as an internationally successful film star. His genuine appetite for artistic advancement was matched, if not exceeded, by a compulsive need for material rewards and a free-spending lifestyle. After welcoming his early promise, critical reaction to his performances became increasingly cool or unsympathetic, and he inspired widespread animosity among professional colleagues, alienating many by an element of detachment, not to say egotism, in his playing, though he could be congenial and engagingly witty in company. A driven man, impatient with underachievement yet masking insecurity behind a display of

aloof self-sufficiency, he was continually moving from project to project, and dissipating a real if circumscribed talent through a restlessness of temperament.

Wealth at death £34,349 in England and Wales: Bahaman administration sealed in England, 16 July 1975, *CGPLA Eng. & Wales*

Harvey, Margaret (1768–1858), poet, was the daughter of John Harvey, surgeon, of Sunderland. During the early years of her life she lived with her two younger sisters, Ann and Jane, in the care of an aunt, a Miss Ilderton, in Mosley Street, Newcastle upon Tyne. About 1812, after the death of their aunt, the Harvey sisters moved to a house at the White Cross, and it was here that Margaret Harvey wrote her first poem, at about the age of thirty-six. *The Lay of the Minstrel's Daughter: a Poem in Six Cantos* was published by subscription in 1814, and her *Monody on the Princess Charlotte* was published in 1818. About this time Margaret Harvey moved to Bishopwearmouth, co. Durham, where she assisted in keeping a ladies' school, and published *Raymond de Percy, or, The Tenant of the Tomb: a Romantic Melodrama* (1822). In the preface she invokes the spirit of Garrick. The piece was performed at Sunderland in April 1822, and some accounts maintain that she and her sisters lived in Sunderland for a time. Margaret Harvey wrote some other minor poems. She was described as 'endowed with remarkable energy of character', and 'slightly marked by the smallpox' (*N&Q*, 4th ser., 10.260). She died at 27 Villiers Street, Bishopwearmouth, on 18 June 1858.

Margaret Harvey's sister Jane was a painter of miniatures on ivory; Andrew Morton (1802–1845), the portrait painter, was her pupil.

Harvey, Sir Nicholas (*c.*1491–1532), diplomat, was the third son of William Harvey (*d.* 1538) of Ickworth, Suffolk, and Joan, daughter of John Cokett of Ampton, Suffolk. Descended from a leading Bedfordshire family, Nicholas Harvey's grandfather had settled in Suffolk, near Bury St Edmunds. By 1512, probably soon after he came of age, Harvey had married Elizabeth, daughter of Sir Thomas Fitzwilliam of Aldwark, Yorkshire, and the widow of Sir Thomas Mauleverer; they had at least one son, Thomas. About 1519, following the death of his first wife, Harvey apparently enjoyed the king's support in an (unsuccessful) attempt to wed an unknown widow; he subsequently married Bridget, daughter of Sir John Wiltshire of Stone Castle, Kent, and widow of Sir Richard Wingfield (*d.* 1525) of Kimbolton, Huntingdonshire. They had at least three sons and two daughters.

Having received the manor of Ickworth from his father in 1511, the young Harvey left Suffolk to seek his fortune. In 1513 he fought at Tournai under his kinsman Sir George Harvey, who probably introduced him to royal service. A member of the king's household by 1521, Harvey joined the garrison at Berwick soon afterwards. While serving there he regularly commanded men in border raids, and in 1523 was entrusted by Thomas Howard with urgent messages for the king concerning threats anticipated from Scotland. As reward for his military service, in May 1522 the king granted him the Bedfordshire manor of Backenho. By 1527 Harvey was once again at court, where he jousted to entertain the French ambassador, and in 1529 he was chosen first knight of the shire for Huntingdonshire in the Reformation parliament, reflecting his new standing in that county following his marriage to Lady Wingfield. By this time he had also been formally knighted.

Harvey's attendance at Westminster was cut short, however, for in June 1530 he was dispatched as English ambassador to Charles V, on the recommendation of his former commander Thomas Howard (now duke of Norfolk). He was a wise choice: the imperial ambassador Chapuys described the new envoy as 'well acquainted with the French and Flemish tongues, besides his being a man of great integrity, incapable of intriguing or lying', but also as a strong partisan of Anne Boleyn (*CSP Spain, 1529–30*, 586). Both Harvey and his wife were friends of Anne, and sympathetic to the evangelical cause. Harvey travelled first to Augsburg, where the emperor had convened a diet, arriving there early in July. There the court remained until late November, before returning to Flanders. Harvey proved an adept defender of his royal master's Great Matter; he later related to the chronicler Edward Hall how at Ghent he had confounded a Spanish nobleman in debating the king's case. Despite such success, Harvey was replaced early in 1531 by Sir John Hacket, leaving Brussels on 12 February. The reason for his recall is unknown, but perhaps reflected the urgent need in parliament for defenders of the divorce proceedings.

Upon his return Harvey continued to promote Henry's cause, and it was while attending the king during a visit to Ampthill, Bedfordshire, where Queen Katherine resided,

that Harvey fell ill and died on 5 August 1532. He was buried in Ampthill church, where a brass commemorates him. Although he left a will, it is now lost. His widow married Robert Tyrwhitt and probably died *c.*1535. But she was cited posthumously as a source of evidence against Queen Anne in 1536. P. R. N. CARTER

Harvey, Oliver Charles, first Baron Harvey of Tasburgh (1893–1968), diplomatist and diarist, was born on 26 November 1893 at Rainthorpe Hall, near Norwich, the only son of Sir Charles Harvey, second baronet (1849–1928), landowner, and his second wife, Mary Anne Edith (*d.* 1929), daughter of G. F. Cooke, of Holmewood, Norwich. There were two half-sisters and a half-brother from his father's first marriage. Harvey was educated at Malvern College and at Trinity College, Cambridge, where he obtained a first in part one of the historical tripos in 1914. He served throughout the war in the Norfolk regiment, in France, Egypt, and Palestine, and was mentioned in dispatches.

After the war Harvey began his career in the diplomatic service, from 1920 in partnership with his wife, Maud Annora (Maudie; *d.* 1970), daughter of Arthur Watkin Williams-Wynn, landowner, of Coed-maen, Montgomeryshire, a woman of taste and accomplishment, whose Matisse-like sketch of her husband (reproduced in his *Diplomatic Diaries*) sympathetically captures his owlish mien. He served as second secretary in Rome from 1922 to 1925, and as first secretary in Athens from 1929 to 1931. In the latter year he found his niche in Paris, where he remained five years as head of chancery, and was a discriminating student of all things French. His path thereafter was an alternation between Paris and London, punctuated by Boswellian periods as private secretary and confidant to the temperamental Anthony Eden (1936–8 and 1941–3), then in his crown prince phase—a difficult and significant achievement.

Harvey served Eden with a devotion to which his posthumously published diary bears eloquent witness. 'Eden gave me his confidence most fully and I endeavoured to return it in the same spirit, loyally and to the best of my ability'. The diary itself, written 'hot' at the time, as he said, 'by one who then held a privileged position as observer and confidant', is a fascinating chronicle—hotter indeed than the diarist's equable exterior—a catalogue of the folly and foible of high stakes and high politics (*Diplomatic Diaries*, 11–12). It is especially illuminating on his beloved 'AE', and, by way of baleful counterpoint, on the ungovernable Winston Churchill:

> Really the PM is a lunatic: he gets in such a state of excitement that the wildest schemes seem reasonable. I hope to goodness we can defeat this one. AE believes the Cabinet and finally the King will restrain him, but the Cabinet are a poor lot for stopping anything. (*War Diaries*, 70)

Oliver Charles Harvey, first Baron Harvey of Tasburgh (1893–1968), by Walter Bird, 1958

As private secretary to the foreign secretary, and as a convinced anti-appeaser, Harvey interpreted his duties widely, often proffering advice on matters of policy in terms critical of the prime minister and of his interference in foreign affairs. After Eden's resignation in February 1938, Harvey continued to offer unofficial advice to his former chief. His personal relations with Eden's successor, Halifax, were good but unenthusiastic; he noted that the new foreign secretary was less inclined to rely on his private secretary for political counsel, and more in the habit of resorting to the conventional channel, via the permanent under-secretary, for any advice on policy. Harvey remained at his post, with diminished influence, until he became minister in Paris in the dismal December 1939.

There Harvey's time was brief but eventful. France fell within a few months and Harvey was involved in the embassy's odyssey from Paris, via Touraine to Bordeaux, and evacuation in a British warship. He worked briefly at the Ministry of Information in charge of propaganda to the occupied countries of Europe, but it was no surprise that when Eden returned to the Foreign Office in December 1940 he took the first opportunity of reappointing his old private secretary, although Harvey was by now well above the rank normal for the post. 'What a signal justification of his previous period there', commented Harvey.

'He now succeeds his own successor who leaves with a very dusty reputation' (*War Diaries*, 10). From then on Harvey was closely involved in all the complicated issues which beset the Foreign Office during the war. He accompanied Eden on three trips to Moscow, the first at the dramatic moment when the Germans had been halted a bare 20 miles away in December 1941, and once to the United States. He was closely involved too in the controversies over the employment of Darlan and Giraud, the struggle over the recognition of the national committee of De Gaulle, the difficulties with the exiled Polish government, and the like. In all these questions his advice was forward looking, realistic, and on the side of the new forces which he believed would emerge in the open at the end of the war. His admiration for Eden in this period was not unqualified, though he continued to hope for his succession as prime minister, discouraging him from accepting the viceroyalty of India proffered by Churchill in 1943. That same year Harvey finally left Eden's service to become assistant under-secretary, and in 1946 deputy under-secretary (political) at the Foreign Office, where he worked closely with Ernest Bevin, whom he much admired.

In 1948 Harvey was appointed ambassador in Paris in succession to Duff Cooper. His intimate acquaintance with European and in particular French problems made the appointment natural, almost inevitable; his long tenure extended until 1954. Harvey's embassy was a very different one from the dazzling display of Duff and Diana Cooper, a display which he did not seek to emulate; but he was skilfully alert to the temper of the times. Strict in excluding from the embassy anyone tainted by collaboration with the Germans, he filled the beautiful house in the Faubourg St Honoré with carefully-selected parties of leading Frenchmen, mainly politicians. The food was delicious, the Harveys's distinguished collection of modern paintings ornamented the salon vert, and the discriminating style of their entertaining was exactly suited to the ethos of the Fourth Republic, whose leading statesmen were mostly men of refinement. To this ethos Harvey was almost ideally suited. His tenure marked one of the least acrimonious periods of Anglo-French relations in recent history.

In 1954, on retirement, Harvey was created a baron; in the same year he succeeded his half-brother as fourth baronet. He had been appointed CMG in 1937, CB in 1944, KCMG in 1946, GCMG in 1948, and GCVO in 1950. He took little part in the debates in the House of Lords although he attended with some regularity, sitting on the cross-benches and normally voting on the Labour or Liberal side. His retirement, spent in London with winters in the south of France, was peaceful and uneventful. He enjoyed his trusteeship of the Wallace Collection, and was active in the Franco-British Society, of which he became chairman. He died, at 37 Parkside, Knightsbridge, on 29 November 1968. His elder son, Peter (*b.* 1921), succeeded to the baronetcy and the barony; his younger son, John (*b.* 1923), edited the diary for publication, according to his father's wishes:

> Its whole value, if it has a value, lies in its 'hotness', in the immediate impression and atmosphere. I am the first to recognise how many of the first reactions and impressions and judgements were proved wrong and would be admitted wrong by myself now, but that is not the point. This is how we saw things at the time. ... The more light that can be shed on the circumstances in which impressions were formed, decisions and actions taken, the better. (*Diplomatic Diaries*, 11–12)

It is a fitting final testament. ALEX DANCHEV

Harvey, Sir (Henry) Paul (1869–1948), civil servant and writer of reference books, was born on 1 October 1869 in Paris, France, the only child of Henri Joseph François de Triqueti, baron de Triqueti (1804–1874), a respected French sculptor, whose commissions included the cenotaph of Prince Albert in the Albert Memorial Chapel, Windsor Castle. Orphaned at an early age, Paul was brought up in Paris and at the Château de Varennes, near Montargis, Loiret, by Blanche Lee Childe, *née* de Triqueti, a cultivated Frenchwoman married to an expatriate American. When she died in 1886 her friend (Isabella) Augusta, Lady Gregory (later a dramatist), took responsibility for Harvey (the surname by which he was known), then at Rugby School. He took a first in *literae humaniores* after studying at New College, Oxford, from 1888 to 1892. Early adversity, thought Lady Gregory, had moulded a character of rare gentleness and rectitude.

Harvey entered the civil service in February 1893 as a clerk in the War Office. His talents were soon recognized, for he became first assistant private secretary and then private secretary to the secretary of state for war (1895–1900), Lord Lansdowne, who had him appointed a CB in 1901. Harvey, who longed for marriage and a home of his own, enjoyed matrimonial advice from the novelist Henry James, another friend of Mrs Lee Childe. On 6 August 1896 he married Ethel Frances Persse (1873–1966), niece of Lady Gregory. Their only child, Susan (*b.* 1897), grew up to be a *Picture Post* photographer, publishing as Merlyn Severn.

In 1902 Harvey was appointed auditor of the 2nd army corps. His subsequent career was financial rather than military in its focus. He moved to Athens in 1903 as the British delegate to the International Commission for the Control of Greek Finance. After the indemnity imposed at the end of the Graeco-Turkish War (1897) drove Greece into bankruptcy, the great powers had taken control of Greek indirect tax revenues in order to service foreign debt. He then represented Britain on the rather more controversial International Commission for the Control of

Macedonian Finances, created in May 1905 as part of the Mürzteg reforms of Turkey in Europe to manage the budgets of the troubled provinces of Kosova, Salonika, and Monastir. While living in Salonika (Thessaloniki), he held the local rank of counsellor with the British embassy in Constantinople.

Having displayed tact and ability in handling the Ottoman Turks, Harvey replaced Sir Vincent Corbett as financial adviser to the Egyptian government in October 1907. Egypt, while nominally part of the Ottoman empire, had been occupied by British forces since 1882, so the financial adviser was effectively a senior imperial official. Harvey looked the part: tall and handsome with a large moustache. He faced an Egyptian economy in severe recession. The *entente cordiale* (1904), by mollifying French creditors of Egypt, had allowed a fiscal relaxation that began a speculative bubble—and now it had burst. He pursued a tough retrenchment policy and suggested extending the Suez Canal Company's concession (due to end in 1968) by another forty years in return for £4 million in Egyptian currency. Though Egyptian nationalists blocked this revenue-raising scheme, he had succeeded in balancing the budget by 1911, when he became Sir Paul Harvey KCMG. However, after Kitchener, the new British agent and consul-general, proposed a land reclamation programme that Harvey deemed too costly, a swift battle of wills ended in Sir Paul's resignation in 1912.

Back in London, Harvey acted as the chief auditor of the National Health Insurance Commission from 1912 until 1918. He represented Britain (1913–14) on the International Commission for the Settlement of Financial Questions arising out of the Balkan War, directed the prisoners of war information bureau (1914–16), and went to the USA in October 1915 to administer the Anglo-French war loan on behalf of the Treasury. His efforts to boost a flagging bond market were hindered by friction with J. P. Morgan & Co., who saw his presence as a slight on their own performance as American financial agents of the British government. In February 1916 Harvey was appointed secretary of the new Air Board, an advisory body intended to deal with the competing demands of the Royal Naval Air Service and the Royal Flying Corps. He opined in private that its first chairman, Lord Curzon, merely exacerbated disagreement. A new Air Ministry superseded the board in January 1918.

Harvey returned to Cairo as financial adviser in September 1919, when, despite serious political unrest, the Egyptian economy was enjoying the tail-end of a wartime boom. A year later he chose to retire, receiving the order of the Nile to add to his earlier Ottoman honours. Although not in the best of health—he endured fierce headaches—he was finding time heavy on his hands by the late 1920s. After indexing *The Persian Gulf* by Sir Arnold T. Wilson in 1927, he asked Oxford University Press if it had any other work for him. Kenneth Sisam of the press offered to pay £500 for a large new A–Z reference book to contain short biographies of English authors, synopses of major works, and explanations of literary allusions. *The Oxford Companion to English Literature*, 866 pages long, appeared in 1932. Harvey had written nearly all of it himself, being both highly industrious and well read. The entries derived a semblance of objectivity from the deliberate conventionality of their judgements. Sales exceeded expectation, and Oxford University Press persuaded him to follow it up with *The Oxford Companion to Classical Literature* (1937). Much of *The Oxford Companion to French Literature* (1959) was also his work. Harvey, who latterly lived at Bierton House, Midhurst, Sussex, died on 30 December 1948 at Pendean, West Lavington, Sussex. The body was cremated. His companion to English literature became a standard reference volume and passed through four editions before being supplanted by a new version in 1985.

Harvey, Richard (*bap.* 1560, *d.* 1630), astrologer and polemicist, was born in Saffron Walden, Essex, and baptized there on 15 April 1560, the second son of John Harvey (*d.* 1593), a prosperous master rope maker, and his wife, Ales (Alice; *d.* 1613). Like his elder brother, Gabriel *Harvey, and younger brother John *Harvey, he attended the local grammar school and went on to Cambridge, matriculating at Pembroke College as a pensioner on 15 June 1575. He proceeded BA in 1578, and MA in 1581, when he was also elected a fellow and appointed university praelector in philosophy. Harvey shared his elder brother's pugnacious disposition as well as his diminutive stature, and his university career was marked by controversy. His enemy, the writer Thomas Nashe, who dubbed him 'Pigmey Dicke' (*Works of Thomas Nashe*, 1.270), pronounced him 'a notable ruffian with his pen' (ibid., 3.81) and declared he was always 'in hate' (ibid., 3.82). Harvey was a zealous champion of the reformed logic of Peter Ramus against Aristotelian methods and, according to Nashe, once 'set [an effigy of] Aristotle, with his heeles upward, on the Schoole gates at Cambridge, and asses eares on hys head' (ibid., 3.85). Not surprisingly, such behaviour provoked much resentment. The students of Clare College devised a satirical college play about the three Harvey brothers, and another college play at Peterhouse, entitled *Duns Furens: Dick Harvey in a Frensie*, so enraged its victim that he smashed the college windows in protest and was put in the stocks as punishment. Harvey promoted Ramist dialectics in more seemly fashion in

Ephemeron (1583), a collection of fifteen short Latin dialogues dedicated to the court favourite, Robert, earl of Essex.

In the spring of 1583 Harvey achieved far greater notoriety with his first and only publication on astrology. *An astrological discourse upon the great and notable conjunction of the two superiour planets, Saturne and Iupiter*, entered in the Stationers' register on 22 January, commented on the conjunction itself and on prophecies concerning the year 1583 by the Bohemian astrologer Cyprian Leowicz (Leovitius) and Regiomontanus. Harvey predicted dramatic and apocalyptic upheavals. A great wind would spring up at noon on Sunday 28 April 1583 (the precise moment of the conjunction), heralding great woes which might culminate within a few years in the final dissolution or total reconstitution of the world. Harvey had discussed his ideas with John Young, bishop of Rochester, and Dr Lewen, son-in-law to John Aylmer, bishop of London, and he dedicated his tract to Aylmer, who received it graciously. The text itself is addressed to his brother Gabriel, who was far more sceptical about judicial astrology. Despite the sober tone of the work, its sensational message provoked widespread alarm and controversy. In March Harvey's younger brother John published *An Astrologicall Addition* to answer the critics, while at the end of the month the astrologer and mathematician Thomas Heth rushed out a formidable *Confutation* of Harvey and other English and continental writers on the conjunction. Bishop Aylmer, no doubt now highly embarrassed, felt it necessary to preach against Harvey's work in a sermon at Paul's Cross. The total failure of the predictions brought a storm of ridicule, both in Cambridge and in London. Richard Tarleton mocked Harvey on the stage while William Elderton composed derisive ballads. Even before publishing the *Discourse*, Harvey had decided to pursue an ecclesiastical career, and he was to write nothing more on astrology.

Given his combative nature, it was unlikely that Harvey would be able to avoid controversy for long, and at the end of the 1580s he intervened in the pamphlet war raging over the radical puritan squibs published under the name of 'Martin Marprelate'. In *Plaine Percivall, the Peacemaker of England* (1589), published anonymously, Harvey condemned both the so-called Martinists and their opponents and called for peace between them. Despite the work's eirenic professions, its pugnacious style was calculated to inflame passions rather than still them. It certainly irritated Thomas Nashe, who had published several pieces against the Martinists, and he alluded to it dismissively in his *First Parte of Pasqvils Apologie* (1590). Harvey's *A Theologicall Discourse of the Lambe of God and his Enemies* (1590), dedicated to the earl of Essex, was a much longer and more wide-ranging work, based on sermons he had given earlier at Cambridge. It staunchly defended the established church against its puritan critics, whom he condemned as subversive hypocrites. Though much of the work was relatively restrained in tone, Harvey included a long, intemperate attack on Marprelate, branding him 'a bloudy massacrer and cutthroat in iesters apparell'. In a provocative epistle added as an afterthought he also attacked Nashe, whom he dubbed an insolent upstart tilting at authority in the literary world just as Marprelate did in the church. Nashe had to some degree provoked this snub, which was to trigger a celebrated literary row. In a preface to Robert Greene's *Menaphon* (1589), which itself contained a verse ridiculing the Harvey family, Nashe had lavishly praised Greene while naming Gabriel Harvey among the literary pygmies of the age. The fact that Richard Harvey and Nashe held very similar views on the Martinists was ignored in the storm which now broke.

It was not, however, Richard Harvey but his brother Gabriel who took up the cudgels to defend the family's honour. Richard did not reply in print to the abuse Nashe flung at him, and his later years are poorly documented. He was appointed rector of Chislehurst, Kent, in 1586 and remained as minister there for over forty years until his death. Marlowe allegedly dismissed him as 'an asse, good for nothing but to preach of the Iron Age' (*Works of Thomas Nashe*, 3.85). His father died in 1593, leaving him an annuity of £20 payable on the death of his mother. 1593 also saw Harvey's last publication, *Philadelphus, or, A Defence of Brutes, and the Brutans History*, dedicated again to the earl of Essex. In this curious patriotic tract he defended the traditional account of Brute's escape from Troy and settlement in England against the criticisms of the Scottish historian George Buchanan, and offered moral reflections on early English history as recounted by Geoffrey of Monmouth. In 1593 Nashe referred contemptuously to Harvey as 'a blind Vicar' (ibid., 1.262) with 'decayed eyes, ... starke blinde' (ibid.), and it is at least possible that physical disability explains the subsequent silence. In a letter addressed to Essex in 1598, Richard Harvey (or a namesake) complained of his remote living and the hostility of his bishop. Certainly Harvey progressed no further in the church, and the death of Essex in 1601 deprived him of his main patron.

Harvey never married. Several contemporary anecdotes touched unflatteringly on his private life, however, and Nashe described a comically bungled attempt to seduce a Cambridge milkmaid. He alleged too that Harvey had preached against dancing while secretly admiring his 'wench' dancing on the green. Robert Greene claimed that Harvey's parishioners resented him for being too familiar with their wives, a smear Gabriel Harvey angrily repudiated in his *Foure Letters* (1592). Richard Harvey died in 1630, some time before 10 June. In his will, drawn up in 1625, he left bequests to his surviving nephews and nieces, and his aged brother Gabriel acted as executor. Nashe claimed that Harvey was also the author of *A Defence of Short Haire* (entered in the Stationers' register in 1593 but now lost), and that in his early years he 'was wont to pen Gods iudgements upon such and such and one, as thicke as Water-men at Westminster bridge' (*Works of Thomas Nashe*, 3.84). Though neither claim is impossible, there is nothing to confirm them.

Harvey, Stephen (1655–1707), lawyer and poet, was born on 20 October 1655 at Walthamstow, the son of Stephen Harvey (1622–1688), of East Beechworth, a barrister of the Middle Temple, and his wife, Dorothy (1631–1694), daughter of William Conyers, of Walthamstow, sergeant-at-law. He had two younger sisters, Dorothy and Elizabeth. After attending Merchant Taylors' School, 1668–71, he matriculated as Merchant Taylor fellow and Sir Thomas White scholar at St John's College, Oxford, on 27 June 1671, was admitted to the Middle Temple on 12 February 1673, and was called to the bar on 21 May 1680. He married his cousin Anne, daughter of John Harvey, of St Mary-at-Hill, on 15 August 1693. They had seven children: John, admitted to the Middle Temple on 17 May 1709, Elizabeth, Stephen, born at East Beechworth on 14 February 1700, Ann, Dorothy, Frances, Martin, and William.

Harvey made three contributions as a verse translator to the publishing ventures of Jacob Tonson. His translation of Juvenal's notorious ninth satire appeared in *The Satires of Decimus Junius Juvenalis, Translated ... by Mr. Dryden and Several other Eminent Hands* (1693 [i.e. 1692]). His translation of 'The Passion of Byblis' from the ninth book of Ovid's *Metamorphoses*, which borrows some phrases from John Oldham's translation of the same episode, and of 'Jupiter and Europa' from the fourth book, both appeared in *The Annual Miscellany: for the Year 1694* (1694). All three poems treat of an unusual sexual situation without prurience, and Harvey shows himself to be a fluent versifier whose competence occasionally rises to excellence.

Harvey's friendship with John, Baron Somers, led to his being appointed steward of the royal manor of Reigate when it was granted to Somers on his becoming lord chancellor in 1697, and the following year he became MP for the borough of Reigate, holding both positions until his death. Harvey acted as deputy steward or steward for other manors, including John Evelyn's Surrey estates, where he is recorded as serving as steward in September 1701. In May 1706 he was appointed a puisne justice of the Anglesey circuit, and on 25 October that year he became a master of the bench of the Middle Temple. Harvey died on 24 May 1707. ALEXANDER LINDSAY

Harvey, Sir Thomas (1775–1841), naval officer, was fourth son of Admiral Sir Henry *Harvey (1737–1810) and his wife, Elizabeth (1739/40–1823), daughter of Captain William Boys RN. He entered the navy in 1787, served as master's mate of the *Ramillies*—then commanded by his father—in the action in the north Atlantic of 1 June 1794, and was promoted lieutenant in the following October. As lieutenant of the *Prince of Wales* (98 guns), with his father and cousin Sir John *Harvey (1772–1837), he was present in the action off Lorient on 23 June 1795. He was promoted commander in July 1796, commanded the sloop *Pelican* at the capture of Trinidad in February 1797, and was advanced to post rank on 27 March 1797. He afterwards commanded the frigates *Lapwing* and *Unité* in the Mediterranean and West Indies; upon returning to England in the latter, he joined the squadron in the Thames under Nelson, who for a short time hoisted his flag on board the *Unité*.

Towards the end of 1805 Harvey was appointed to the *Standard* (64 guns), which joined Lord Collingwood's flag in the Mediterranean, and which, in February 1807, was one of the squadron under Sir John Thomas Duckworth in the Dardanelles, and was specially engaged in the destruction of the Turkish squadron at the entrance to the straits. In the return passage she was struck by one of the huge stone shot, 2 feet or more in diameter and weighing 800 pounds, which broke through to the lower deck, caused an explosion of cartridges which wounded several men, and set the ship on fire. After returning to England in the autumn of 1808, Harvey was appointed early in the following year to the *Majestic* (74 guns), attached to the fleet in the Baltic; he afterwards commanded the *Sceptre* (74 guns) in the North Sea. In June 1815 he was made a CB, and from 1819 to 1821 he commanded the guardship *Northumberland* (74 guns) at Sheerness, from which he was superseded on attaining his flag on 19 July. In April 1833 he was made a KCB; he became vice-admiral on 10 January 1837, and in March 1839 was appointed commander-in-chief in the West Indies, a post previously held by his father and his cousin John.

Harvey married on 28 March 1805, his first cousin Sarah, youngest daughter of Captain John *Harvey (1740–1794); they had five daughters and three sons, of whom Thomas, born in 1810, died a rear-admiral in 1868, and Henry, born in 1812, died an admiral in 1887; the third, William, was in holy orders. Harvey, during his tenure of office, died at Admiralty House, Clarence Hill, Bermuda, on 28 May 1841; he was buried in Bermuda.

Harvey, Thomas (1812–1884), philanthropist, was born on 15 March 1812 at Barnsley in Yorkshire, the second of five children of William Harvey, a linen manufacturer, and his wife, Susanna, *née* Atkinson. Both parents were Quakers. He was educated at a dame-school and Barnsley grammar school before being sent to the Quaker school at Ackworth, Yorkshire, in 1822, where he remained about three years, followed by a further year at William Simpson's school at York. Shortly after leaving school he was apprenticed to W. and T. Southall, chemists and druggists of Birmingham, and during his apprenticeship made the acquaintance of Joseph Sturge. He subsequently commenced business as a pharmacist in Leeds.

From his youth Harvey took great interest in philanthropic movements, and in 1836 he accompanied Sturge to the West Indies to make inquiries into the condition of the former slaves, visiting Antigua, Montserrat, Dominica, St Lucia, Barbados, and Jamaica. He returned in the following year, and in 1838 published, together with Sturge, a lengthy report calling for the termination of the unpaid apprenticeship system which had replaced slavery. He gave much time to promoting measures for the relief of the former slaves. On 16 October 1845 he married Sarah Grace, daughter of Joseph Fryer of Rastrick, a Quaker. They had three children.

In the autumn of 1856 Harvey accompanied Sturge to Finland. While the British fleet was stationed in the Baltic during the Crimean War much damage had been done to property, and the tsar's Finnish subjects endured considerable hardship. Sturge and Harvey published a report of this visit in the same year, and they formed a committee which raised, chiefly from Quakers, the sum of £9000 for distribution in Finland. In 1866 Harvey again visited Jamaica, accompanied by Thomas Brewin, to inquire into the Gordon riots, which had been suppressed with great harshness in 1865, and to distribute among the sufferers funds subscribed by the British Quakers. In 1867 the two men published a narrative of their tour. In that year, accompanied by Isaac Robson, Harvey travelled to the colonies of Mennonites in southern Russia, which had been persecuted for their pacifism. Harvey and other Quakers superintended the resettlement of many Mennonites in Canada.

In the same year Harvey retired from business and devoted himself to religious, philanthropic, and charitable work in Leeds and elsewhere. He was recorded as a Quaker minister in 1868. He retained his interest in slavery, publishing a volume on the Polynesian slave trade in 1872, and was a dedicated worker for temperance and international peace. For many years he acted as honorary secretary of an institution for blind, deaf, and deaf mute people. During his early years in business Harvey was hard-pressed financially, but later he contributed substantially to his charities with the help of funds bequeathed by his brothers. In May 1884 the Quaker yearly meeting appointed Harvey, J. B. Braithwaite, William Robinson, and Thomas Pumphrey as a deputation to their co-religionists in Canada, among whom there existed doctrinal differences. The labour injured Harvey's already feeble health. He died on 25 December at Ashwood, his residence at Headingley Hill, near Leeds. His condition was diagnosed as pneumonia acting on a chronically weakened heart. He was buried four days later in the Quaker burial-ground at Adel, near Leeds. His wife survived him.

Harvey was a man of considerable scientific acumen, a good classical and Hebrew scholar, and a conscientious student even in his old age. He was as remarkable for severe integrity in business as for his gentleness and refinement in private life. He was a member of the Leeds school board during its earlier years, and was always a zealous promoter of education. A clear and simple speaker and efficient preacher, he also wrote on scriptural themes and was a frequent contributor to the Quaker and secular periodical press.

Wealth at death £48,061 3*s.* 10*d.*: probate, 13 Feb 1885, *CGPLA Eng. & Wales*

Harvey, William (*d.* 1567), herald, is first referred to on 8 December 1540, when he was sent with dispatches to Bishop Gardiner on embassy to Emperor Charles V. Nothing is known of his origins or parents, but one sibling, Thomas, a London grocer, is recorded. Harvey joined the College of Arms on his appointment as Hampnes pursuivant, 5 February 1541, at a salary of 8*d.* per day. On 18 June 1544 he was promoted to the office of Bluemantle pursuivant, and by patent dated 28 September 1545 he was created Somerset herald. During these years his employment was mainly in France and the Low Countries, attending particularly the embassy of William (afterwards Lord) Paget, who became his patron. Other diplomatic missions took him to Denmark, Spain, and several times to Germany. In August 1547 he was attached to the army sent against the Scots. By patent dated 4 February 1550 Edward VI created him Norroy king of arms. In the same year he became a member of the Skinners' Company, and on 10 June 1560 he was elected a warden of the company, marking the occasion with a most lavish feast. Queen Mary deputed him to declare war on France at Rheims on 7 June 1557, with a reward of £20. Having created him Clarenceux king of arms on 6 September 1557 following the death of Thomas Hawley, the queen herself set a crown upon his head in a ceremony at St James's on 21 November.

Harvey's visitations were more extensive and thorough than those of his predecessors. It was while he held the office of Clarenceux that the practice of visiting individual gentlemen in their own houses was superseded by a more judicial system of summoning groups of gentry to

appear before him on specified days. As Norroy he made a visitation of the north (1552), and as Clarenceux he visited in person or by deputy fifteen southern counties, an intensive campaign continued by his successor Robert Cooke. He was similarly energetic in granting arms and in undertaking the ceremonial arrangements for funerals. His learning and integrity, however, not only attracted the strictures of J. H. Round (who demolished a number of his pedigrees), but were also the subject of vicious attacks from his contemporary, Gilbert Dethick, Garter king of arms. The rivalry between the two appears to have reached its height in 1562, in an unseemly quarrel over the funeral of the first Lord Mordaunt, in the course of which Harvey claimed that rather than give up his official books to Dethick 'he would stoppe Jakesses with them' (Coll. Arms, Vincent MS 92, p. 488). In June 1565 the earl marshal imposed a temporary prohibition on Harvey from visiting his province. Dethick's petition to the earl marshal listing complaints against Harvey alleged the granting of false or incorrect arms and impropriety over Harvey's executorship of Thomas Hawley's will. The will was declared invalid, but Harvey nevertheless appears to have secured the prized bequest of Hawley's books.

With his wife, Etheldreda (surname perhaps Welles) Harvey had at least two daughters: Anne, who married John Sackville esquire, and Meldred, whose baptism on 24 July 1562, in the parish of St Bride's, was attended by godparents Sir William Cordell, master of the rolls, Lady Bacon, and Lady Cecil, evidence of the strength of Harvey's connections. One indication of his material prosperity, even early in his career, is the grant to him on 4 July 1548, following the surrender of a £20 life annuity, of Trinity Hall and other property of the dissolved fraternity of the Holy Trinity in Aldersgate. He died at Thame, on 27 February 1567, while on a visitation of Oxfordshire, and was buried there. The administration of his goods was granted to his widow on 26 March. ANN PAYNE

Harvey, William (1578–1657), physician and discoverer of the circulation of the blood, was born on 1 April 1578 at Folkestone, Kent. His father, Thomas (1549–1623), and his second wife, Joan (1556–1605), *née* Halke, had two daughters, Sarah (1580–1591) and Amy (*b.* 1596), and six other sons, John (*b.* 1582), Thomas (*b.* 1585), Daniel (*b.* 1587), Eliab (*b.* 1590), and the twins Michael and Matthew (*b.* 1593). William was thus the couple's eldest child. There was also a daughter from Thomas's previous marriage. Thomas was a farmer and a carrier with a business between Folkestone and London; Harvey's birthplace was accordingly known as 'the Post House'. Harvey's brothers succeeded as merchants, or at court, and were able to assist him in his career in a material way. Harvey was short, with black hair, as a young man, and bright brown eyes; John Aubrey thought him 'very cholerique'.

Education, marriage, and early career Details of Harvey's early education are sketchy; however, by 1588 he was attending the King's School, Canterbury. Here he learned his Latin, which was businesslike rather than elegant, and occasionally idiosyncratic. He went on to Gonville and Caius College, Cambridge, to which he was admitted on the last day of May 1593. The old Gonville Hall had been refounded by John Caius in 1567, who was its master on his death in 1573. Caius was a notable scholar who had studied medicine under Montanus and who had shared lodgings with the anatomist Vesalius; possibly his college was attractive to those with an eye on medicine as a career, for one of Caius's innovations was to procure the bodies of executed criminals for dissection. These anatomies were probably still performed in Harvey's day, although his tutor was not a medical man but George Estey, a clergyman who taught Hebrew.

In Michaelmas 1593 Harvey was awarded a Matthew Parker scholarship. The intention of its founder, the archbishop, was that his endowment should enable a man born in Kent and educated at the King's School to study medicine. Harvey graduated BA in 1597 and continued to receive his annual stipend of £3 os. 8*d*. until 1599; clearly he was taught the bulk of his natural philosophy and medicine in Cambridge.

In early 1600 Harvey was in Padua, an understandable choice for an ambitious medical student. He furthered his anatomical education with Girolamo Fabrizi of Acquapendente (Fabricius) who was carrying out original anatomical research in a manner derived from Aristotle. This was to be of great importance to Harvey. Little more than two years after arriving in Padua, Harvey was awarded his MD degree on 25 April 1602. He was incorporated at Cambridge in the same year. On his return to England, Harvey

William Harvey (1578–1657), attrib. Daniel Mytens, *c.*1627

took a house in the parish of St Martin Ludgate, London, and sought to be admitted to the College of Physicians, in order to be able to practise in the capital. He was first examined on 4 May 1603 but not admitted, although he was allowed to practise. He was examined a second time nearly a year later and a third on 11 May 1604, when he was approved for a candidateship. Further rituals of admission followed in August, and finally on 5 October he was sworn in as a licentiate. Harvey was now in a position to marry, and he did so the following month, the marriage licence being dated 24 November 1604. His wife was Elizabeth Browne (*d.* 1645x52), daughter of Lancelot *Browne (*d.* 1605), physician to James I and an important fellow of the College of Physicians. William and Elizabeth had no children; all that we know of her from Harvey's own words was that she kept a parrot. Before his death Browne tried unsuccessfully to secure a position for his son-in-law as physician to the Tower of London. Nevertheless Harvey became known at court, perhaps through the good offices of his brother John, who was in the king's service, and ultimately Harvey became physician to St Bartholomew's Hospital, on 14 October 1609.

Harvey pursued his career in the College of Physicians with vigour. He was appointed a censor in 1613 and reappointed in 1625 and 1627. Therefore, on the eve of publishing a book that demonstrated the circulation of the blood and undermined the theories of Galen, he was examining applicants to the college on the orthodoxy of their Galenism. He became an elect of the college in 1627 and treasurer in 1628.

Discovery of the circulation of the blood When, in 1615, Harvey was elected to the Lumleian lectureship in the College of Physicians he made detailed preparations for his course of lectures (the notes survive). He had no special interest in the heart, but was aware that for several centuries its primacy in the body, asserted by Aristotle and defended by scholastic philosophers, had been challenged by the medical men, who based their views on Galen (who believed that the brain was the primary organ). Two things were important in Harvey's approach to the heart. First, his notion of anatomy was the Aristotelian one that knowledge of a part of the body was primarily knowledge of its function. Second, as a pupil of Fabricius in Padua he saw that this function could be seen most clearly in a range of examples: that is, in different animals. Whatever it was that hearts did, their characteristic and identifying action must be present in all cases.

Harvey's preparation for his lectures included vivisectional experiments. There was nothing new about this, especially in the case of the heart, as its motion was unique: being involuntary, very obvious, immediately necessary for life, and not muscular (since all muscles were held to move with voluntary motion). Harvey's first concern was to identify the two traditional phases of the heart's action, systole (contraction) and diastole (expansion). He could not do so. The exposed heart of a living animal rose up vigorously and then subsided, without obvious change in size. Harvey tackled the matter from theory. The vigorous erection of the heart seemed like its purposeful action. In Galenic theory the purpose of the heart was to initiate the pulse, a flow of arterial blood into the arteries. It accordingly expanded vigorously, drawing in blood from the large veins, and then subsided as a wave of forcible expansion—the pulse—passed down the arterial coats, drawing blood from the collapsing heart. Harvey sought confirmation of this view by puncturing the principal artery and observing how the spurting of blood from it correlated with the rise and fall of the heart. He found that as the heart rose up with its vigorous motion, so the blood leapt from the hole in the artery. This was inconsistent with the Galenic doctrine that blood moved into the arteries as the heart passively contracted after its forcible diastole. Harvey concluded that the active phase of the heart's action was a forceful systole—its rising up in the vivisected animal—which produced the pulse by pushing the blood into the arteries as it contracted.

Harvey was proud of his new doctrine about the forceful systole and pulse and argued in the lectures that it corrected an ancient mistake. He continued with his experiments while giving the first few lectures, as his modifications in his notes show. His new doctrine was a radical departure from the accepted professional Galenism of the college and not all the members accepted it. Harvey represented himself as conducting an academic disputation on the topic, with the president of the college, John Argent, acting as the presiding master. Harvey strove to convince his audience by emphasizing the force of blood emerging from the heart, and his emendations to his notes for the lectures show that he now chose a stronger verb for the spurting of the blood from the punctured artery.

Harvey also emphasized the quantity of blood emerging from the forceful systole. He made a rough estimate of the

amount of blood contained in the left ventricle of the relaxed—expanded—heart, and of the amount ejected as the ventricle contracted. However modest he made his estimate of the amount ejected at every beat, he soon saw, given a heart beating more than seventy times a minute, that in a whole day the total would be impossibly large. Impossible, that is, because Galenic theory held that the arterial blood from the heart was absorbed as necessary by the tissues; and that venous blood was supplied to the heart by the conversion of ingested food into blood in the liver. No amount of food could supply this amount of venous blood and the arterial blood was emerging from the heart in quantities too great to be absorbed by the tissues.

In his efforts to convince his audience of his new doctrine of the forceful systole Harvey had been led into a crisis. He could not say where all the arterial blood went, nor whence came the venous. As he sought for an answer he had in mind the newly discovered structures in the veins which seemed to slow down the centrifugal flow of blood from the liver to the parts of the body so that it would not accumulate there. These structures looked like valves, and Galen had argued that valves were open in one direction and allowed a small, controlled, flow in the other. In the case of the valves in the veins the controlled flow was towards the parts of the body from the central liver. Harvey suddenly saw that the open direction of the valves was towards the centre of the body, and that the motion of the blood was from the ends of the arteries to the beginnings of the veins, which terminated in the vena cava, returning blood to the heart.

The *De motu cordis* Harvey had given the first of the Lumleian lectures in 1616 and the changes he made in his notes for them, indicating his discovery of the forceful systole and circulation, seem to date from the second delivery of the lectures in 1618. For more than nine years he argued in favour of the circulation with his colleagues and demonstrated it in the lectures. The conventional academic procedures of the day meant that this discussion took the shape of a disputed question, in which his opponents had the opportunity to challenge the form of his arguments, his authorities, and the status of his observations.

This process prepared Harvey for the writing of the book in which he announced the discovery of the circulation. It appeared in 1628, printed by Fitzer in Frankfurt. Harvey was not on hand to see it through the press, and there were many errors in the set type. The erratum sheet that accompanied some copies is now rare. Harvey called his book *Exercitatio anatomica de motu cordis et sanguinis in animalibus*. As this title suggests it is a formal academic exercise about two things, the motion of the heart and that of the blood. That the context is the animal world indicates that this was a philosophical enquiry, not medical. His philosophy was derived from Aristotle and Fabricius and was directed at discovering what hearts are and what they do.

Harvey knew how radical his new doctrine was and that its reception in the College of Physicians had been mixed. He was obliged, both in the lectures and in the book, to proceed with great care in putting his case. Only rigorous and agreed academic procedures would convince physicians educated in a university. Conventionally in anatomical commentary any novel finding was located almost in the last place, so that the reader was already familiar with the authorities and their arguments before judging the new finding. Had Harvey *begun* his book by announcing the discovery he would have lost much of the force of his argument. He began, therefore, with an account of his first discovery, the forceful systole and true nature of the pulse. This was both logically and historically prior to the circulation. The first half of *De motu cordis* is therefore devoted to establishing the forceful systole. Then Harvey takes the reader through the moment of crisis that had occurred after he had made his calculations of the amount of blood leaving the heart and explains how he resolved the crisis. He states the thesis about circulation formally, with propositions that are shown to have certain consequences. The remainder of the book is taken up with certain observations that could be explained best on the assumption of circulation.

Reactions As in the College of Physicians, so in the world at large, reactions to the doctrines of the forceful systole and pulse were mixed. Almost no one accepted both in the way Harvey wanted them to. The two doctrines were generally separated, and accepted or rejected on their own. Yet when Harvey died some sort of consensus about the fact of circulation had been reached and produced the biggest change in medical theory since the Alexandrian discovery of the nervous system, about a thousand years earlier.

But the arguments about Harvey's doctrines were not simply between those who could see the truth and those who could not. The main argument against Harvey was that circulation had no medical use. This argument was used at two levels. First, medical philosophers like Caspar Hofmann asserted that circulation had no purpose, no Aristotelian final cause: it was therefore incapable of proper demonstration in a philosophical sense. Hofmann concluded that Harvey was not a philosopher, but a mere accountant, totting up quantities (of blood leaving the heart); philosophers, with Aristotle, thought that mathematics could not uncover essences. At the second level educated medical practitioners, like Harvey's countryman James Primrose and the French anatomist Jean Riolan, found that a Galenic understanding of how the body worked served them fairly well in practice. If the blood circulated the basis of practice would be destroyed as the humours of the body would be mixed together and could not be changed or evacuated separately, and there would be no basis for the letting of blood.

Harvey understood these objections. Although an Aristotelian, he could not give a final cause of circulation and was driven to say that it had to be enough to show that a thing is, despite being unable to say what it is for. He had no convincing answer to the charge of destroying the

basis of medical practice. Harvey's doctrine, because radical, was isolated; opponents such as Primrose could use all the authority and arguments of Galenic physiology and its vehicle, an Aristotelian natural philosophy, that reached and explained all the phenomena of the physical world.

There were a number of factors that contributed to the eventual consensus. One was generational. Students were attracted to the idea of circulation, partly because it was radical. When they became teachers themselves the notion that the blood circulated was more popular. Many of these students were anyway being educated at a time when attacks were being made on the old orthodoxies of natural philosophy on which the theory of medicine rested, and Harvey could be seen as part of those attacks. More important, René Descartes, the greatest of the neoteric philosophers, accepted that the blood circulated. It seemed to him that the circulation was an excellent example of how the body worked in a purely mechanical way and indeed he used it in his *Discourse on Method* (1637) as his most important example of mechanism. He was obliged to deny Harvey's account of the forceful systole because the parts of the contracting heart seemed to move closer to each other by attraction, a species of motion impermissible in mechanism. He substituted a heat driven forceful diastole in which the blood entering the heart was vaporized. The vapour expanded the heart and forced its way into the arteries, where it condensed. Descartes' works were very widely read, and this transformed version of Harvey's doctrine of circulation must have reached a bigger audience than it would otherwise have done, ironically in tandem with a neoteric philosophy that Harvey despised.

Court business Harvey's abilities were not limited to experimental anatomy. Before or early in 1618 he was appointed physician-extraordinary to James I; his senior colleague was Sir Theodore Turquet de Mayerne. When James died in 1625 Harvey's appointment continued under Charles I, and the two men developed a friendship. Harvey was able to demonstrate to Charles a virtually exposed beating heart in the young Viscount Montgomery, and Charles provided deer which Harvey dissected while working on his book on animal reproduction. In 1630 Charles ordered Harvey to accompany the young duke of Lennox on a grand tour, and while we know that Harvey was in Paris in September, he was back in London in October and December. In February 1632 he was in Spain, and recorded the destructive effects of war that he had seen on his travels. When Charles progressed to Scotland in 1633 for his coronation Harvey went with him as royal physician, and was perhaps a witness when Charles demonstrated his royal line by touching for the king's evil. It was court business too when in the following year Harvey examined some 'witches' of Burnley. The historical literature here does not always distinguish the English term 'witch' from older European terms relating to intelligences less material than man. James I had in 1597 published in Edinburgh a dialogue about 'demons', a category universally accepted in pre-Reformation Europe, but not one necessarily co-terminous with the English word 'witch'. Possibly Calvinist Scotland entertained different ideas about witches than did early seventeenth-century London; at all events Charles showed less antagonism to them than his father might have done and ordered a medical enquiry, under Harvey, to investigate their physical normality or abnormality. The point at issue was largely to determine whether they had supernumerary nipples to feed their familiars. Harvey, William Clowes, Alexander Read, and the midwives who conducted the examination concluded that they were normal. The women were pardoned by Charles.

It was court business too when the king in 1635 ordered Harvey to perform an autopsy on the body of Old Parr, probably a Shropshire tenant of Thomas Howard, the earl of Arundel. Parr was reputed to have been born in 1483 and so to have lived through the lives of ten sovereigns (and the Reformation) when Arundel brought him to London for the amusement of the king. He appeared vigorous for a man of 152, joked about doing penance for adultery at 100, carefully evaded questions as to his religion, and died before the year was out. Harvey dissected the body in the presence of some important physicians of the time and declared that the cause of Old Parr's death was removal to London and his way of life rather than anything pathological in the body.

In April 1636 Harvey left England as part of an embassy to the emperor Ferdinand under the earl of Arundel. The purpose was to secure the rights of Charles's nephew, Prince Charles Louis, as elector, and Harvey was chosen as physician to the large retinue, probably because of his friendship with both Charles and the earl. On 11 May the party reached Nuremberg and on the 18th Harvey gave a demonstration of the circulation of the blood before Caspar Hofmann, his principal opponent after Riolan. Hofmann was not convinced and it was here that he argued that Harvey's quantitative argument was a mere accountant's trick and not a philosophical demonstration; like all of Harvey's opponents he argued that a doctrine of circulation had no medical use, either in theory or practice.

Charles I's favours to Harvey culminated in Harvey becoming physician-in-ordinary on 6 December 1639. His duties included accompanying the king on three journeys to Scotland and caused him to be absent on many occasions from the College of Physicians and St Bartholomew's Hospital. Harvey does not seem to have been much interested in religion or politics, but had bitter words to say about would-be revolutionaries, whether in philosophy or civil life. He accompanied the king as he gathered his army and was present at the battle of Edgehill. Harvey had charge of the young prince of Wales and duke of York, and is said to have read a book under a hedge until the artillery came uncomfortably close. At Oxford with the king, Harvey was incorporated DM on 7 December 1642, and in the following year was by royal command made warden of Merton College following the departure of Sir Nathaniel Brent. After the surrender of Oxford in

1646 Harvey returned to London and lived with his brothers.

In 1649 Harvey made his only printed reply to his opponents in the form of two addresses to Riolan. It was prompted by two publications in which Riolan denied circulation in Harvey's sense and claimed as his own a much reduced doctrine of a circulation through anastomoses of the major vessels only. Harvey's reply, the *Exercitatio anatomica de circulatione sanguinis*, reviewed the history of the controversy and offered some new experiments; he recognized, however, Riolan's need to defend the professional Galenism of the medical corporations.

De generatione animalium Harvey's other major work was on what we call animal reproduction, the *Exercitationes de generatione animalium* of 1651. He had been working on it for many years, though would probably not have published it but for the determination of his friend George Ent. Like the book on the pulse and circulation this is an academic exercise, or rather a series of small, formal, exercises, each limited in scope to an aspect of the whole topic. It is again Aristotelian in its methods, and Harvey says that his starting point is the adult animal and that the investigation will be into the causes that make the adult possible. Again Harvey used a large number of animals and where before he had sought for a common understanding of the heart, he was now looking for the essence of the egg.

By the time he was writing the final version of the book on the generation of animals, Harvey's thoughts had changed on a topic central to both generation and circulation: the blood. While at Oxford with the king he continued to work on fertilized eggs and doubtless reflected on the reception accorded to his doctrine of circulation. He had shown that it was the *same* blood that circulated, and that arterial blood was not produced in the heart from venous blood by the addition of spirits as traditional medicine held. Harvey was no mechanist, but he could not allow that the blood contained spirit, or that the vital or natural faculty of the soul moved the heart, as so many of his opponents said. What prompted the heart into action, he came to think, was the blood itself. It was the blood too that was the first thing to be seen in the developing egg, in a pulsating point that was at first so small that it disappeared as it contracted. A primal active blood was at the beginning of the cycles both of generation and circulation; it was vital and constantly moving with an expansive force for which Harvey even used the Aristotelian analogy of boiling potage. This took him dangerously close to arguments used against him that denied his quantitive argument on the assumption that the blood merely expanded and contracted within the heart without leaving it. Despite the danger Harvey retained the analogy because he could use Aristotle's definition of nature as an internal principle of motion. If he could, Harvey always used Aristotle's principles (and so was traditionalist in a sense) even though in working them out to the level of practice he disagreed with Aristotle's conclusions (that is, Harvey was also 'a modern'; although it is not a terminology that Harvey adopted).

By now, preparing the final version of the book on generation, Harvey had seen a great deal of the controversy over the circulation and had failed to convince major figures like Riolan and Hofmann. He had come to despair of philosophical sceptics and the neoteric philosophers. As an old man he now wanted to defend his method of acquiring knowledge—what we would call research—which he believed had helped him in his discovery of the circulation and which he felt to be threatened as Aristotle's natural philosophy was vanishing from the schools. Accordingly a part of *De generatione animalium* was given over to a consideration of how many observations of sensory particulars could lead to the creation of a universal in the mind. Harvey now argued that philosophical induction could indeed lead to universals, which could in turn produce a kind of demonstration.

There were still some Aristotelian philosophers who would have agreed with him, but the new natural philosophers believed in a particulate, mechanical world quite devoid of local purposeful action (they did not deny that God had originally made purposeful action in it). In such a world there could be no final cause and no demonstrative knowledge. It was now often argued that medicine was an art, not a science, thus swinging the pendulum to one side of a debate that had been initiated with the successful search for the new Aristotle of the late twelfth century and the new Galen of the late thirteenth. Intellectual systems, like that of Aristotle, came under suspicion because rationality was uncorrected by observation. Sensory observation gave conviction but the knowledge it provided was only probable, that is, that which could not be built up into a rational system.

Experiment was a special case of sensory observation, and here Harvey played a more important role than his discussion of method in *De generatione animalium* would suggest. The medical experiment had been a method of demonstration since medieval physicians and philosophers had read of Galen's demonstrations in Rome in the second century. Anatomists demonstrated hollow organs by inflation and injection, and Harvey knew in detail the work of sixteenth-century anatomists who, on the Galenic model, had vivisected animals to show movements that were invisible in the dead animal. They showed the development of embryos in the uterus by vivisection of pregnant bitches and illustrated Galen's doctrines by exposing and sometimes excising the beating heart. Harvey differed in having a research programme and making systematic dissections and vivisections in order to understand the heart. The medical experiment was central to experimental philosophy. Harvey drew upon an old medical tradition and argued the case for the forceful systole and circulation experimentally. The European battle for and against Harvey was most often experimental. Medical experiments and apparatus influenced wider and often later philosophical experiments. Even the great rationalist Descartes struggled to prove his version of Harvey's

doctrines by means of experiments drawn from the medical tradition.

Last days and reputation The old Harvey did not fit comfortably into the new Commonwealth. Early in the civil war his lodging had been ransacked and the loss of notes from much work on the generation of 'insects' was a great blow to him. He was temporarily banished from London by parliament because of his connections with the king. His royalist brothers, Daniel and Eliab, with whom he was now lodging, were fined large amounts of money. Disliking the political atmosphere of Cambridge, Harvey chose to be remembered in the College of Physicians, though even here there were some who preferred to ignore him. Harvey's gift to the college, a library, was completed on 2 February 1654; a statue of him had already been erected. He was elected to the presidency of the college on 30 September 1654, but declined because of his age. In 1656 Harvey gave his estate at Burmarsh, Romney Marsh, Kent, to the college. Harvey died, apparently from a stroke, on 3 June 1657 at a house of his brother Eliab, either at Roehampton, or at Cockaine House in London. According to Aubrey, Harvey prepared himself for death on finding himself unable to speak. His last acts were to indicate to his apothecary to let blood from his tongue (a therapy inconsistent with the circulation) and to give the watch which he had used in experiments to one of his nephews. He was buried on 26 June 1657 in the family vault at Hempstead church, in Essex. On 18 October 1883 (St Luke's day) his body was moved and placed in a sarcophagus in the Harvey chapel of Hempstead church, where a memorial was set on the north wall of the transept. The Royal College of Physicians commemorates Harvey with an annual oration.

Harvey has been justly celebrated as the author of a major medical discovery. Nineteenth-century historians tended to assess Harvey according to contemporary ideals and saw Harvey as a 'scientist', either patiently accumulating evidence or endowed with early but authentic scientific spirit. He was universally admired for overcoming the dead weight of ancient authority and revealing the truth. His contemporaries were assessed on their ability or failure to recognize this truth when presented with it. In contrast, scholarship has since the 1950s been more inclined to explain Harvey's work by treating it in its historical context. Harvey discovered something which became accepted as a physical truth; however, this was far from the case during his own time. Then his work had no value at all for the many intelligent and earnest men who opposed him. Much scholarship at the end of the twentieth century was therefore concerned with the processes by which the validity of Harvey's discovery came to be accepted, and its immense significance acknowledged.

Wealth at death considerable; left £1800 in bequests and annuities totalling £136; remainder to brother: will

Harvey, William (1796–1866), wood-engraver and book illustrator, was born on 13 July 1796 at Newcastle upon Tyne, where his father was keeper of the public vapour baths and swimming pool outside the west gate of the city wall. He was one of Thomas Bewick's favourite pupils [*see* Bewick, Thomas, apprentices] and 'came on Tryal' to him on 27 November 1809. On 1 January 1810 he was bound apprentice, a few months younger than the usual fourteen years, and he first appeared on the wages in January 1813 at 5*s.* per week (this rose to 8*s.* in his last year). His contribution to Bewick's *Fables of Aesop and Others* (1818) was considerable, and, unusually, his initials appear against named engravings in the workshop records from July 1811 onwards. But the claim of earlier authorities that he copied onto the wood the drawings of a former apprentice, Robert Johnson, who had died in 1795, can relate to only a small number. Bewick, in a letter of 29 January 1816 to Robert Pollard, described how he himself prepared his designs for the *Fables* by drawing directly on the wood with the highest degree of finish, 'otherwise my Boys cou'd not cut them'; their work required 'close superintendance' and a subsequent 'going over'. Harvey's apprenticeship ended on 1 January 1817, and on 9 September following he left for London. Desperate to complete the printing of the *Fables*, and not having heard from his pupil, Bewick feared that some blocks he had prepared—'with the finish of miniature paintings'—had been taken to London by Harvey 'to make a blaze' about their being of his doing, at Bewick's expense (letter, 5 Feb 1818). He was ever quick to suspect an injury, but such an action would have been at odds with what is known of Harvey's honest nature. In his *Memoir*, Bewick described Harvey as one of 'the first in excellence ... who both as engraver & designer stands preeminent at this day' (*Memoir*, 200).

When Harvey arrived in London in 1817 he would have been overwhelmed and preoccupied with the search for work, although within a year Bewick was worried that he had taken on more than he could accomplish. One of his earliest commissions was a small tailpiece for *Puckle's Club*, published in that year as an elaborate display of the skills of the printer John Johnson and the principal wood-

engravers of the day. In its list of engravers Harvey is noted as being a pupil of Bewick.

In a letter of 11 February 1818, the painter William Bewick, a native of Durham (and, although acquainted, not a relative of the engraver), sent a letter to his brother in Newcastle through his friend Harvey: 'a very clever fellow' whom he had found in an obscure part of the town, with very few acquaintances, and in need of 'bringing forward' (Landseer, 40–41). It was thus that Harvey was introduced to the Landseers, Edwin and Thomas, sons of the engraver John Landseer, and with them became a fellow student of figure painting under Benjamin Robert Haydon; for the study of anatomy they were taught by Sir Charles Bell. From this association came Harvey's remarkable *Assassination of Dentatus*, after Haydon. A greatly ambitious large multiple block of 15 inches by 11, published in 1821 after three years' work, it was intended to rival copper but wavers in its mixture of the wood-engraver's white line and its imitation of the copper-engraver's black and crossed line. The block joints failed to hold, and sound impressions are rare. But the work showed Harvey's mastery to the full, as did his designs and engravings for Henderson's *History of Ancient and Modern Wines* (1822) and his portrait of the printer John Johnson engraved for the latter's *Typographia* (1824).

On the death of John Thurston in 1822 the mantle of leading draughtsman to the London wood-engravers soon fell to Harvey, who almost completely abandoned the graver and by 1839 was reckoned to have completed more than 3000 drawings for the trade. As a practical wood-engraver, he always made his drawing sympathetic to the process and helpful to those who worked to his drawings.

Of the principal books for which Harvey produced designs, apart from the many publications of Charles Knight, note should be made of Northcote's *Fables* (first and second series, 1828 and 1833); *The Tower Menagerie* (1829); *The Gardens and Menagerie of the Zoological Society Delineated* (1830–31); *The Children in the Wood* (1831); and Lane's *Arabian Nights* (1840), for which he provided some 600 illustrations. Harvey's drawing was well observed but later prone to mannerism, a trait which no doubt stemmed from his swift facility and which was to curtail his employment by the Revd J. G. Wood for his *Illustrated Natural History* (1851–3). He was good with natural history, but often his animals displayed a curious daintiness of posture, and something of this is also seen in a few of his early watercolour drawings. The backgrounds to his natural history figures were often reduced to light pencillings, thus giving added emphasis to the principal subject, rather in the manner of the steel-engraved plates in such works as Jardine's *Naturalist's Library* (1840–).

Harvey established no school of engravers, although he employed assistance, and it is recorded that John Jackson came to him from Bewick to finish his time. He was described by the engraver F. W. Fairholt, who worked for him, as honest and unpretentious, free from vanity or jealousy, and of fertile invention and rapid hand; only by noticing his penetrating eye might one be aware of his active mind and great powers of observation (*Art Journal*, 1866, 179–80). He was infinitely generous to the aspiring young. In the words of the Dalziel brothers, 'William Harvey was a great and highly gifted artist, a true man, a friend and a counsellor to us from the time of our earliest efforts to the day of his death' (G. Dalziel, *The Brothers Dalziel: a Record of Work*, 1901, 14). He died, unmarried, at Prospect Lodge, Richmond, Surrey, his home for many years, on 13 January 1866, and was buried in Richmond cemetery.

Wealth at death under £600: probate, 1866 • under £800: probate, resworn, 1866, *CGPLA Eng. & Wales*

Harvey, William Henry (1811–1866), botanist, was born at Summerville, Limerick, on 5 February 1811, the eleventh and youngest child of Joseph Massey Harvey (1764–1834), a Quaker merchant, and Rebecca Mark (*d.* 1831). He went to Newtown School, Waterford, and thence to Ballitore Quaker school, co. Kildare, before joining his father's business, as he himself described it, 'exchanging the dross of Mammon for the store of Ceres' (Nelson, 'Juvenile correspondence', 58).

Harvey's interest in natural history can be traced to his days at Newtown School where he helped assemble a natural history collection. As a boy he collected shells on the coast at Miltown Malbay, co. Clare, and there also developed his fascination for cryptogamic plants, especially seaweeds. In the summer of 1831 Harvey collected the minute moss, identified as *Hookeria laetivirens*, in two places near Killarney, co. Kerry, and this discovery prompted him to write to Professor William Jackson Hooker, after whom the moss was named, at the University of Glasgow. The subsequent correspondence between Harvey, then calling himself 'a very young Cryptogamist' (Fisher, 21), and Hooker developed into a close, lifelong friendship.

Following his father's death Harvey was listless and thought about travelling abroad. In 1835, through political patronage and a bungled warrant, his brother Joseph

(1793–1836) was appointed treasurer of Cape Colony; William was the intended appointee although he had no experience of government or financial affairs. Unable to correct the warrant, William accompanied Joseph to the Cape of Good Hope where he commenced studying the flora of southern Africa. Joseph was unfit for his duties and resigned after seven months; he died at sea on 26 April 1836 during their return voyage. William petitioned to fill the vacant post and was quickly appointed. He returned to Cape Town and served two short terms as colonial treasurer but he too was unable to fulfil his duties and twice was sent home suffering from 'aberration of the mind' (most probably acute depression; Dr S. Bailey RN, 6 Dec 1841, PRO, CO 48/214). When he recovered Harvey resigned the colonial treasurership and began to pursue his outstanding career in botany. The retirement of Professor William Allman (1776–1846) left the chair of botany in the University of Dublin vacant, and as a result of Dr Thomas Coulter's death in 1843 the university's herbarium was without a curator. Harvey canvassed for the combined positions, which were within the School of Physic, but his lack of medical qualifications precluded his election. The university overcame this legal difficulty by awarding him an honorary degree (MD, 20 March 1844). This caused much debate, and eventually Harvey was offered only the curatorship. His appointment took effect on 30 March 1844. In 1856, however, he was elected to the again vacant chair of botany, succeeding Professor George James Allman (1812–1898).

While Harvey spent most of his working life in Trinity College, Dublin, in 1848 he was elected professor of botany to the Royal Dublin Society and thus effectively he became director of the society's botanic gardens at Glasnevin. He took no part in the gardens' administration, but gave public lectures and helped to identify plants. In 1854, when the Royal Dublin Society's professorships were transferred to the Museum of Irish Industry, Harvey's links with Glasnevin diminished.

Harvey was an acknowledged authority on marine algae by 1836 when he contributed to J. T. Mackay's *Flora Hibernica*. Subsequently he published many papers and books on phycology, including *Manual of British Algae* (1841), *Phycologia Britannica* (1846–51), *Nereis Australis* (1847), *Nereis boreali-Americana* (1852–8), *Phycologia Australica* (1858–63), and one popular work, *The Seaside Book* (1849). He also published numerous papers on flowering plants and, most notably, seminal works on the flora of southern Africa, particularly *The Genera of South African Plants* (1838) and, with O. W. Sonder, the first three volumes (1859, 1862, 1865) of *Flora Capensis*. Harvey drew and often also lithographed hundreds of illustrations for his publications, and thus must be counted among the most accomplished botanical artists.

Harveya, a genus of root parasites native in Africa, is a beautiful, witty memorial for this impishly witty man. 'All I have taste for is natural history, and that might possibly lead in days to come to a genus called Harveya, and the letters F. L. S. after my name, and with that I shall be content,' he wrote (Fisher, 6). He was indeed elected a fellow of the Linnean Society of London (1857) and also of the Royal Society of London (1858), and was a member of the Royal Irish Academy (1844).

Harvey had been brought up as a member of the Society of Friends and remained a Quaker until 1846 when he converted to the Anglican Church of Ireland. He published his religious views in the form of a pseudonymous letter to his friend Josiah Gough, entitled *Charles and Josiah, or, Friendly Conversations between a Churchman and a Quaker* (1862). Deeply held religious views and his work as a naturalist combined to cause Harvey to dismiss Charles Darwin's work *On the Origin of Species* (1859). 'It strikes me that there is fallacy at the very base of Mr. Darwin's argument', Harvey wrote in the preface to a 'serio-comic squib', printed privately under the title *An Inquiry into the Probable Origin of the Human Animal, on the Principles of Mr. Darwin's Theory of Natural Selection, and in Opposition to the Lamarckian Notion of a Monkey Parentage* (1860). By publishing this, Harvey's mischievous sense of humour evidently overwhelmed his common sense, and Darwin commented that the pamphlet was not worthy of its author. Harvey seems to have had second thoughts, for one of the copies of this work, in the National Library of Ireland, Dublin, was inscribed 'This is *rubbish*—merely got up to amuse an evening meeting of a *private* society. W. H. H.', and another copy has, again in Harvey's distinctive handwriting, '(To be burned when read) (Suppressed by the Author)' on the title page.

On 2 April 1861, in Limerick, Harvey married Elizabeth Lecky Phelps (1804/5–1895). Symptoms of pulmonary tuberculosis appeared shortly afterwards and from that time until his death Harvey rarely enjoyed good health. He died in the home of Lady Hooker, at Torquay, Devon, on 15 May 1866, and was buried in Torquay.

Harvey, William Wigan (1810–1883), Church of England clergyman, was born at Great Stanmore, Middlesex, on 17 February 1810, the second son of George Daniel Harvey, barrister and commissioner of bankruptcy, and his wife, Mary, daughter of William Wigan. A king's scholar at Eton College, he matriculated at King's College, Cambridge, in 1829, graduating BA in 1832, MA in 1836, and BD in 1855. He was elected a fellow of King's in 1831, holding office as divinity lecturer from 1836 to 1844 and algebra lecturer from 1837 to 1844. He was ordained deacon in 1833 and priest in 1834, holding curacies in Cambridge parishes before his institution in 1844 to the rectory of Buckland, near Royston, Hertfordshire, a living in the gift of King's. He became a magistrate for Hertfordshire. His fellowship was vacated on his marriage in 1844 to Anne, youngest daughter of the Revd Fairfax Francklin, rector of Attleburgh, Norfolk, with whom he had at least two sons.

Harvey, who had gained the Tyrwhitt Hebrew scholarship at Cambridge in 1833, devoted much of his time to preparing works of orthodox theology. He published an account of the Anglican articles, *Ecclesiae Anglicanae vindex Catholicus* (3 vols., 1841–3), *History and Theology of the Three Creeds* (2 vols., 1854), an edition of the works of St Irenaeus (2 vols., 1857), and *Sermons upon the Doctrines and Evidences of the Christian Religion* (1859). In 1867 he was an unsuccessful candidate for the Gresham professorship of divinity, when his churchmanship was likened to that of John Kaye, the old high-church bishop of Lincoln, 'equally removed from the Puritan and Romanising parties of the time' (*Hansard 3*, 209, 1872, 1695).

Harvey would have remained a comparatively obscure, scholarly clergyman, but for the political row early in 1872 following his presentation by the prime minister, Gladstone, to the rectory of Ewelme, Oxfordshire. He had become oppressed by 'the raw airs of the winters' (BL, Add. MS 44431, fol. 170) at his Hertfordshire rectory and in 1871 approached Gladstone, an Eton contemporary and occasional correspondent in the intervening years, angling for a cathedral stall on the strength of his opinions in favour of cathedral reform. Gladstone seems to have considered his claims insufficient for a stall, and thought him unsuited for the vacant crown living of Southam, which, with its large population, called for a younger man. Instead Harvey was offered Ewelme, a small country parish that had already been declined by one claimant for preferment, W. E. Jelf. Earlier in 1871 Ewelme had been severed by act of parliament from the regius chair of divinity at Oxford and in compensation to the university, at Gladstone's own suggestion, a proviso was inserted in the act stipulating that the incumbent should be a member of the university convocation, to ensure that an Oxford man would always receive the presentation (Gladstone, *Diaries*, 7.465). Gladstone now indicated that this restriction could be circumvented by Harvey incorporating at Oxford, and brushed aside Harvey's misgivings about the proposed subterfuge (ibid., 8.8). He was duly incorporated at Oriel College, Oxford, on 10 October 1871, keeping the requisite forty-two days' residence in Oxford before being admitted a member of convocation on 22 November 1871. Presented on 15 December 1871, he was unable to attend his formal institution to the living for several weeks owing to ill health.

Harvey's appointment, following that of R. P. Collier to a judicial position in similarly dubious circumstances, was a clear violation of the spirit of the act of parliament. Gladstone's justification of it, during the long debate on 8 March 1872 in response to a question in the House of Commons raised by Sir John Mowbray, MP for Oxford University, amply confirmed some contemporaries' view of his casuistry and obduracy. It was regarded as a scandal, though by later standards it was trifling: Harvey was a tory, he had no particular familiarity with the prime minister, his personal qualities were not in question, and no issue of financial gain was involved. More than once he offered to stand down to avoid the embarrassment which his appointment had caused. Harvey proved an active parish priest at Ewelme, carrying out repairs to the church, while continuing his antiquarian researches, being elected FSA in 1881. His eldest son, Charles Wigan Harvey, served for a while as his curate. Harvey died at Ewelme on 7 May 1883 and was buried on 11 May in the churchyard.

Harvey, William Woodis (1798–1864). *See under* Harvey, Edmund George (1828–1884).

Harward, Simon (*fl.* 1572–1607), Church of England clergyman and author, was probably related to the Hawarde (or Harward, or Heyward) family of Tandridge, Surrey, though the nature of that relationship is unclear. He was sufficiently wealthy to matriculate as a pensioner from Christ's College, Cambridge, in December 1572, graduating BA early in 1575. In 1577 Harward was incorporated in that degree at Oxford and in 1577 was appointed chaplain of New College there, proceeding MA the following year. In 1579 he acquired the rectory of Warrington, Lancashire. On 4 July 1581 a Michael Johnson MA was instituted to the rectory, but there is no record of his having paid the first fruits. On 8 May 1582 Harward signed from Warrington a preface to two sermons recently preached in Manchester, where on 25 September that year he married Mary, daughter of its sometime reeve Robert Langley. It was apparently as a minister of Warrington (and not as master of the Boteler School there) that he acted as one of the moderators of the thrice-yearly exercises or synods of the Lancashire clergy which originated in October 1582. It may be that Harward actually remained in occupancy at Warrington for some time, perhaps until the institution to the rectory of John Ashworth on 3 June 1589.

Using Harward's published sermons Wood assembled a list of places at which he preached, strongly implying that

he was an itinerant priest or that he had many temporary appointments, having 'a rambling head'. There was an element of truth in this assessment of his character, for Harward was encouraged to issue *The Solace for the Souldier and Saylor* (1592), as the preface reveals, by 'certain godly and valiant Captains and ship masters, with whom being on the Spanish seas, under the conduct of the most noble earl of Cumberland' he had for some time served, before October 1592, apparently as a naval chaplain and perhaps also as a doctor. This phase of Harward's career had not met with universal approval: Harward recalls the 'obloquies and reproachful speeches of many, which have not sticked to affirm, that these my voyages upon the seas have been some blot and discredit to the doctrine which is or shall by me be delivered upon the land'; in reply he did not shrink from condemning 'seditious malcontents' in their 'unnatural refusing to help their country' in time of war.

However, Wood's evaluation of Harward's career should be revised. He was not a preacher at Bletchingley, Surrey, a place which, as he himself reported in 1607, he had never visited. He certainly preached at Crowhurst, Surrey, on 9 July 1598 but signed his preface to the published version, *The Danger of Discontentment*, from Tandridge, about 3 miles distant, only two days later. This preface was addressed to Sir Edward Bower, a Surrey JP, and John his brother, who had been among the congregation and with whom Harward had been acquainted for some years. William Cole reported that Harward had been recommended by Archbishop Whitgift as master of a school at Tandridge, and it was from Tandridge that he signed his *Enchirideon morale* (December 1596, dedicated to Whitgift), his *Phlebotomy* (August 1601), and his *A Discourse Containing the Soule and Spirit of Man* (December 1603), which contains another dedication to Sir Edward Bower. It was in Tandridge and Crowhurst that he preached in 1597 two of his *Three Sermons* (1599). It seems likely that from 1596, and possibly since his return to England in 1592, Harward was master at Tandridge School, and that he remained so until 1604. This may in turn suggest that he was related, possibly as a nephew, to Henry Heyward, alderman and fishmonger of London and his wife, Agnes, whose son and heir John Hawarde was a barrister of the Inner Temple, and who had purchased substantial properties in Surrey, including Tandridge Hall. It may be that Simon Harward stayed there as a guest.

Harward's *Phlebotomy, or, A Treatise of Letting of Blood*, is of particular interest. In its preface the author deplored the fact that, while in London there were many learned and competent physicians and surgeons, in the country towns far too many thoughtlessly bled their patients. This caused them 'more hurt and danger than ease and succour', for if 'rashly and inconsiderately attempted, the spirits and blood are spent and wasted, the natural heat is plucked away and dispersed ... [to the] unrecoverable destruction of their health and life' (sigs. A2*v*–A3*r*). It seems, therefore, that the tradition that the schoolteacher also practised medicine at Tandridge and elsewhere may be well founded, and that he preached only occasional sermons, delivered at the invitation of resident parsons and the local authorities. In 1604 Harward was instituted to the rectory of Banstead, Surrey. From there he signed his *Discourse ... written by occasion of a fearful lightning which ... did in a very short time burn up the spire steeple of Blechingly in Surrey, and in the same melt into infinite fragments a goodly ring of bells*, an event which occurred on 17 November 1606 and which is attributed by the author to God's judgment on the inhabitants of the place. After the publication of this account in 1607 nothing further is heard of Simon Harward.

Harwood, Basil (1859–1949), organist and composer, was born on 11 April 1859 at Woodhouse, Olveston, Gloucestershire, the eighth son and youngest of the nine children of Edward Harwood (1818–1907), a banker and JP, and his first wife, Mary (1840–1867), the daughter of Young Sturge of the Bristol Quaker family. He was brought up in strict accordance with Quakerism until 1869, when, following his father's marriage to an Anglican, the family began to attend Olveston church.

Harwood was educated first at Walton Lodge preparatory school, Clevedon. He returned home from Clevedon in 1863, when he started to take piano lessons from Joseph Roekel. He entered Charterhouse School in 1864, and in 1876, with a scholarship, entered Trinity College, Oxford, where he gained a second class in classical moderations (1879) and a third in modern history (1881). He took the Oxford BMus degree in 1880, studying theory with C. W. Corfe, choragus to the university. After leaving Oxford he travelled to Leipzig and spent a year studying composition with S. Jadassohn and the organ with H. Papperitz. On returning to England he took further lessons with George Riseley, organist of Bristol Cathedral, and secured his first employment, as organist of St Barnabas's Church, Pimlico, London. In 1887 he moved on to Ely Cathedral, succeeding E. T. Chipp. Five years later he was appointed organist at Christ Church, Oxford (succeeding Charles Harford Lloyd), which proved to be his last professional position. On 27 December 1899 he married a former pupil, Mabel Ada Jennings (1871–1974), the daughter of George Jennings, of Castle Eve, Parkstone, Dorset, and Ferndale, Clapham. They had two sons, John Edward Godfrey (*b.* 1900) and Basil Anthony (*b.* 1903).

While at Oxford, Harwood entered fully into the musical life of the university. Besides his duties at Christ Church, he was precentor at Keble College (1892–1903) and conductor of the Oxford Orchestral Association

(1892–8). In 1896 he helped to found the Oxford Bach Choir and became its first conductor, a post he retained with distinction until 1900. On Hubert Parry's appointment as Heather professor of music at Oxford in 1900, he became choragus, a position he held until his retirement. He took the Oxford DMus in 1896, submitting his setting of Psalm 86, *Inclina domine*, op. 9.

As a composer Harwood belongs firmly within the diatonic 'English' tradition established by S. S. Wesley, John Stainer, Parry, and C. V. Stanford. He produced several works for chorus and orchestra, including *Inclina domine*, op. 9 (Gloucester, 1898), 'As by the streams of Babylon', op. 20 (Oxford, 1907), 'Thy boundless love to me', op. 22 (St Paul's Cathedral, 1909), *Ode on May Morning*, op. 27 (Leeds, 1913), and 'Love incarnate', op. 37 (composed 1922, performed Gloucester, 1925), and a concerto for organ and orchestra, op. 24, in which he appeared as soloist (Gloucester, 1910). Harwood's most important contribution, however, was to the repertories of Anglican liturgical music and the organ. Several anthems, such as 'O how glorious is the kingdom', op. 12 (1898) and 'When the son of man shall come', op. 13 no. 2 (1900, published in 1902), show an originality of thought, while his service in A♭, more conservative in style, has remained popular among cathedral and church choirs. Arguably his finest music is for the organ. While at St Barnabas's Church, Pimlico, he completed his organ sonata no. 1 in C♯ minor, op. 5 (1886), a symphonic work of Germanic proportions and treatment, suggesting the influence of Rheinberger. A second sonata, in F♯ minor, op. 26 (1912), dedicated to Charles Harford Lloyd, shows a similar boldness in the handling of climax and registration. Harwood's organ style is distinctive and technically challenging; he was a fine pianist and this is amply reflected in his dexterous writing for manuals. The scope of his musical thought, even in the shorter pieces, tends to demand a large instrument, as is demonstrated by *Paean*, op. 15 no. 3 (first played by Sir Walter Parratt at the opening of the new rebuilt organ in York Minster in 1902), the fantasia *Christmastide*, op. 34, and the rhapsody, op. 38.

Many of Harwood's organ works and anthems reveal his love for plainchant and hymn tunes. This is particularly evident in the quasi-improvisatory finale of the organ sonata no. 1 and in shorter pieces such as the *Short Postlude for Ascensiontide*, op. 15 no. 4, where hymn or plainsong melodies serve as an important structural feature. Harwood published numerous hymn tunes, edited *The Oxford Hymn Book* (1908), and lectured on the whole manner of hymn singing, notably to the church congress at Liverpool in 1904. Among his best-known tunes are 'Thornbury' ('Thy hand, O God, has guided'), written at the request of Sir George Martin for the London Church Choir Association's twenty-fifth annual festival in 1898, 'Luckington' ('Let all the world in every corner sing'), and 'St Audrey' ('Sing ye faithful, sing with gladness').

Harwood, a deeply religious individual, had a quiet, gentle, and reserved personality. In 1907 his father died, having outlived all his other children. Harwood, who was faced with the dilemma of whether to continue his career in music or to manage the family estate in Gloucestershire, decided on the latter and retired in 1909 after his work as music editor of *The Oxford Hymn Book* was completed. It was a decision made to the dismay and sorrow of his colleagues. On moving back to Olveston he participated actively in the musical life of Bristol. He was president of its musical club and the Madrigal Society (1914–19).

In 1936 Harwood and his wife left Woodhouse in charge of tenants and moved to London. When war broke out in 1939 they moved away temporarily, and lived first in Bournemouth and then at Shiplake, near Reading. After war was over they returned to London, where they settled at 50 Courtfield Gardens, Kensington. Harwood died there eight days before his ninetieth birthday, on 3 April 1949. His ashes were interred under a memorial tablet in St Barnabas's Church, Pimlico, where he had held his first appointment. JEREMY DIBBLE

Harwood, Sir Busick (*bap.* 1750, *d.* 1814), anatomist, the fourth son of Mary and John Harwood, was born in Newmarket, Suffolk, and baptized on 15 December 1750. Educated at a private school, he was apprenticed to a Newmarket apothecary and later to William Forfitt, a surgeon at Uppingham, from 1766 to 1771. In January 1772 he became a dressing pupil at the London Hospital. Leaving for India on 22 April 1773 as surgeon to the Indiaman *Harcourt* (a brother was already in the country), he joined the Indian Medical Service (IMS) and was appointed assistant surgeon in Bengal. On 29 April 1776 he was posted as surgeon to officers deputed to serve the nawab of Oudh and benefited financially from treating members of the Oudh court. He resigned on 4 February 1778 and returned to England.

On 22 September 1779 Harwood was admitted a fellow commoner at Christ's College, Cambridge, to read medicine. Maintaining a connection with the London Hospital, and concerned about the teaching of medicine, he helped William Blizard raise money for the London Hospital medical college, built by 1783, where he gave a course of lectures on botany. Harwood's pupils gave him a silver cup in thanks for the lectures and his help in establishing the college. At the formal opening in 1785 he gave a lecture on 'The utility of physic in general'. On 10 June 1782 Harwood obtained an MD by examination from St Andrews University. Described as 'well versed in History, particularly that of oriental nations and many other parts of curious and useful learning' (society minutes, 3 April 1783, S. Antiquaries, Lond.), he was elected a fellow of the Society of Antiquaries on 3 April 1783. He was elected a fellow of the

Royal Society on 22 April 1784, being 'well versed in various branches of natural history and particularly in Botany' (Royal Society election certificate IV. 114, RS). Harwood graduated MB at Cambridge with a thesis on blood transfusion in 1785 and was appointed professor of anatomy at Cambridge in succession to Charles Collignon; in 1786 he was granted a licence to practise and became a physician at Addenbrooke's Hospital. Having moved to Emmanuel College he graduated MD in 1790.

Cambridge University provided little for the very few who chose to read medicine each year. Harwood published synopses of his lectures (the only medical lectures in Cambridge) and the third edition, published in 1792, outlined a very adequate course of anatomy and related physiology. He demonstrated the transfusion of blood from sheep to blood-depleted dogs under differing experimental conditions. Student annotated copies of the synopsis record relevant comments from all fields of medicine and indicate that Harwood possessed an extensive knowledge of contemporary medical research. Having failed to get attendance at lectures and dissections made compulsory, Harwood gave up public dissections because nobody came to them. In 1796 he published *A System of Comparative Anatomy and Physiology*, volume 1, dealing with the brain and sense organs, particularly the olfactory organ, suggesting that their development in different animals was affected by their dependence on a sense of smell to find food. He received no encouragement to continue this work, though a German translation was published in 1799. On 21 July 1798 he married Elizabeth Maria (*d.* 1836), daughter of the Revd Sir John Peschell (*d.* 1778) of Horsley; there were no children from the marriage. First they lived in St Andrew's Street, Cambridge, but by 1803 had moved to Bartlow House, Bartlow, Cambridgeshire, 20 miles away. In 1800 Harwood was elected Downing professor of medicine though continuing as professor of anatomy. His lectures now concentrated on comparative anatomy supported by preparations, made mainly by himself, of which he published a catalogue in 1803 of those preserved in spirit. A full catalogue was prevented by serious illness. An 1807 synopsis of his Downing lectures, open to members of the university, covered domestic medicine and the treatment of infectious diseases.

Harwood was also concerned to reform the examination system for MDs at Cambridge. MBs could proceed after five years to an MD, desirable because only MDs of Oxford and Cambridge could become fellows of the Royal College of Physicians. Harwood fought for the strict enforcement of the regulations governing the award of the degree as the examination of candidates' medical knowledge was not taking place (Winstanley). He raised the problem with Sir Lucas Pepys, president of the Royal College of Physicians, hoping that he also would exert pressure for reform, but Sir Isaac Pennington, the regius professor of medicine and fellow of the college, had sufficient influence to prevent reform as it was he who awarded the MD degree. Harwood once challenged Pennington to a duel which he refused to accept.

Harwood was knighted in 1806 partly for having raised and captained a volunteer corps in 1798. Expanding further his anatomy course, he published in 1812 *A synopsis of a course of lectures on the philosophy of natural history and the comparative structure of plants and animals*. Having sold Bartlow House in 1810 he moved into East Lodge, Downing College, assigned to the professor of medicine, where he died on 10 November 1814. His will left everything to his wife and a request to be buried in the college grounds. Permission having been obtained from the bishop of Ely, he was buried where it had originally been proposed to build the chapel. His grave was marked by a stone set in the grass. Though Henry Gunning gave an unfavourable account of Harwood in his *Reminiscences of ... Cambridge* (1854), he was generally well liked in the university, being witty and sociable. He did his best to improve Cambridge medicine against much opposition. Easy financial circumstances enabled him to endow an annual scholarship of £10 for a medical student at Emmanuel. HELEN BROCK

Harwood, Sir Edward (c.1586–1632), army officer, was the eldest son of William Harwood of Thurlby, Lincolnshire, and his wife, Eliza (*née* Grenham). Harwood went to the Netherlands in 1599 as a page, possibly joining Colonel Sir John Ogle, who came from nearby Pinchbeck. He spent most of the rest of his career in the service of the Dutch republic.

After good service at Ostend in 1602 Harwood was consistently promoted until by 1607, still very youthful, he was captain of a company of 150 foot. About this time he attracted the favour of Prince Maurice of Nassau, captain-general of the United Provinces, becoming one of the prince's 'servant[s] ... in the privy chamber': a great honour (*Downshire MSS*, 3.83). It may well have been at Maurice's behest that he was knighted, which, as Henry Peacham records, he had been by the time of the Cleves–

Jülich campaign of 1614 (Peacham, sig. D3). After the earlier Jülich campaign of 1610 Harwood and General Sir Edward Cecil (nephew of James I's chief minister Robert Cecil, earl of Salisbury), had 'exchanged as much bitterness as rage and malice can think'. Maurice prevented a duel and, it was reported, 'studieth to compound' the dispute, yet it still dragged on into 1613. Eventually a panel of English nobility was appointed to judge its rights and wrongs (*Downshire MSS*, 3.82–3, 98, 4.205–6).

By 1620 Harwood was a lieutenant-colonel and by 1626 he was colonel of an English regiment (one of only four in Dutch pay) 1820 strong. Harwood had thus become one of the premier English soldiers of the day. He was one of the colonels in the disastrous English expedition to Cadiz in 1626 (commanded by Cecil) and got the rearguard away safely. He then returned to the Netherlands where he served for the rest of his life. Harwood was mortally wounded at the siege of Maastricht in June 1632 'pierced through by three successive bullets' (Knight, 72). In his will he requested that, if 'my Leutenant Coll. [Sir Henry Herbert] shall thinke good some small superscription of the time of service and the charges I have borne' be made (PRO, PROB 11/162, fol. 225*r*); in 1636 Herbert and one of Harwood's captains, Nicholas Byron, erected a monument to his memory in The Hague, where he had been buried at Maurice of Nassau's command.

Harwood was known for his courage, both on the battlefield and in sieges. He was unquestionably a supporter of 'godly' religion. He opposed a Spanish marriage for Prince (later King) Charles; he used his influence with Maurice to have the exiled puritan William Ames appointed professor of divinity at Franeker University; and in his will he bequeathed £100 'to piouse uses to be disposed of by my brother by such Ministers advise as he knowes I most respecteth' and left jewels and medals to the exiled queen of Bohemia's family (PRO, PROB 11/162, fol. 225*r*). Harwood also made several bequests to his officers. This, together with their loyalty to his memory and his ability to charm the prickly Maurice, suggests he was very personable. He never married and left the bulk of his possessions to the family of his brother, George, a London merchant who, in 1642, published a manuscript treatise by his brother on the appropriate defence policy for England, *The Advice of that Worthy Commander, Sir Ed. Harwood*. It included a memoir of his life and death by the celebrated puritan minister Hugh Peter, who stressed Harwood's military skill, bravery, and reformed godliness, declaring: 'Religion, fidelity, and prowesse met in him' (Harwood, sig. B2*v*). It is an admirable summary of Sir Edward Harwood's character and career. D. J. B. TRIM

Harwood, Edward (1729–1794), Presbyterian minister and biblical scholar, was born at Darwen, Lancashire, but his parentage is not clear. W. A. Abram believed he belonged to the Lower Darwen branch of the Harwood family and suggested that he was probably the son of Edmund Harwood (*d.* 1764) and the grandson of William Harwood (*d.* 1741), both of whom are described as yeoman farmers and trustees of the Presbyterian chapel in Lower Darwen. Harwood received his early education at the school in Darwen run by Mr Belsborrow, where he learned Latin and Greek. In 1745 he proceeded to Blackburn grammar school, then under the direction of Thomas Hunter, who tried to persuade him to enter Queen's College, Oxford, with a view to becoming an Anglican clergyman; but Harwood's father, being a strict Presbyterian, would, according to Harwood, 'have died if he had seen me in a surplice' (*GM*, 63/2, 1793, 994). He instead became a student in 1748 at the academy managed by the Coward Trust in Wellclose Square, London, where he was trained for the nonconformist ministry by David Jennings, the principal and theological tutor, and the Revd Samuel Morton Savage, the classical and mathematics tutor. He remained there for five years, but found unrewarding the strict adherence to Calvinist orthodoxy insisted on by Jennings and the Coward trustees. He later criticized the theology taught there as 'a gloomy heavy Dutchman's divinity', a reference to Johannes Marck's *Medulla*, the standard divinity textbook at the academy, and described his time there as 'the only blank in my life; for what systems of ethics and divinity I learned, I afterwards took pains to unlearn' (ibid., 994).

On leaving Wellclose Square in 1753 Harwood became a tutor at a boarding-school in Peckham and preached occasionally for George Benson in Poor Jewry Lane, Crutchedfriars. He also gained the friendship and respect of two other notable London divines, Nathaniel Lardner and Samuel Chandler, and soon after married Chandler's youngest daughter, possibly Elizabeth. In 1754 he moved to Congleton, Cheshire, where he taught at the grammar school run by William Turner and preached on alternate Sundays at Wheelock, Cheshire, and Leek, Staffordshire. While in Cheshire, Harwood became a friend and associate of two local dissenting luminaries, Joseph Priestley, minister at Nantwich (1758–61) and afterwards a tutor at Warrington Academy, and John Taylor, the first principal of that academy. How far Harwood deviated from orthodox Calvinism is not clear, but he certainly belonged to the rational wing of dissent. He associated and corresponded with many leading Arians and Socinians of his day and in 1785 he defended Priestley's Socinianism against the attacks of the Revd Samuel Badcock, a former Socinian turned Anglican clergyman. Yet he always denied being an Arian or a Socinian, preferring to label himself 'a

moderate and candid dissenter' (*GM*, 63/1, 1793, 409) and dismissed accusations that he had become a Deist as 'mean illiberal malice' (ibid., 53/2, 1783, 691).

In 1765 Harwood accepted the invitation to succeed John Wright as pastor at the Presbyterian chapel in Tucker Street, Bristol. He was ordained on 16 October 1765 at Samuel Chandler's meeting-house in Old Jewry, London, where the ordination sermon was preached by Thomas Amory, the former principal of the academy at Taunton. While at Bristol, Harwood continued his classical studies and became an authority on the Greek language and the Greek fathers of the first three centuries. He was awarded in 1768 the degree of DD by Edinburgh University for the textual criticism outlined in his *Introduction to New Testament Studies* (1767). His detractors, however, claimed the award owed more to the influence and intercession of his father-in-law, Samuel Chandler, than to Harwood's scholarship. Harwood's ministry at Bristol was bitter and acrimonious. His heterodox views revealed in *The Melancholy Doctrine of Predestination* (1768) and his publication of a second edition of William Williams's *On the Supremacy of the Father* made him locally unpopular and led to his castigation in the Bristol press as an Arian, a Socinian, and a Deist. Charges of immorality, which he was never able satisfactorily to answer, were also preferred against him. So his congregation dwindled and with it his income. Over twenty years later he still smarted over what he considered to be an unwarranted desertion by members of his congregation. 'About twenty years ago', he wrote in May 1793, 'I was extremely ill used by a very small society whose subscription, though I had a wife and numerous family, was continually dwindling' (*GM*, 63/1, 1793, 409).

Harwood resigned in 1772 and moved to London where, after failing to obtain a position at the British Museum, he was able to support himself and his family by private tuition and by his literary endeavours. However, in 1782 he suffered a severe stroke which in his own words, 'instantly deprived me of the use of my left side, confined me to the sick room for many months and hath eversince rendered me a helpless cripple' (*GM*, 53/2, 1783, 691). Henceforth he lived in much straitened circumstances. He appears to have relied upon charitable donations and was one of the first individuals to whom the benefits of the Literary Fund were extended.

Harwood was a prolific writer and author of numerous religious and biblical treatises and classical works. He once claimed to have written more books than anyone then living with the exception of Joseph Priestley. Of these the one which contributed most to his reputation as a scholar was *A View of the Various Editions of the Greek and Roman Classics* (1775), which by 1790 had run to four editions and had been translated into German (1778) and Italian (1780 and 1793). Another important work was *A New Introduction to the Study of the New Testament*, the first volume of which appeared in 1767, a second in 1771, and a second edition in 1773. His reconstructed text of the Greek New Testament, published under the title *New Testament Collated with the most Approved MSS with Select Notes in English* (1776), was remarkable for the independent critical judgement it displayed. In the preface he hoped

> that the Text of the inspired writers here exhibited will approve itself to every Scholar who is a Judge of sacred criticism, to be as near to the original autograph of the Evangelists and Apostles as any hitherto published in the world.

He certainly departed from the *textus receptus* in countless passages and according to Metzger pre-empted 'the epoch-making critical edition of Lachman published in the nineteenth century' (Metzger, 117). Another of his biblical works to attract attention was *A Liberal Translation of the New Testament* (2 vols., 1767), which was well received by rational dissenters but to the orthodox traditionalists it was 'more the New Testament of Dr. Harwood than of the apostles' (Allibone, *Dict.*, 1.798). Notwithstanding the interest these works aroused, his biblical studies never gained the recognition his scholarship deserved. This was in part due to the author's turgid style but also owed much to the lack of encouragement from his fellow dissenters. After the deaths of Chandler (1766) and Lardner (1768) he had few influential friends to commend his work.

From August 1793 Harwood was confined to his bed. He died at his home, 6 Hyde Street, Bloomsbury, on 14 January 1794. His wife had died on 21 May 1791. A Latin epitaph to their memory was written by their eldest son, Edward *Harwood (*d.* 1814), a distinguished naval surgeon and numismatist, and was published appropriately in the periodical to which Harwood had regularly written, the *Gentleman's Magazine* (64/1, 1794, 185). Harwood, Edward (*d.* 1814), numismatist, was the eldest son of Edward *Harwood (1729–1794), Presbyterian minister and biblical scholar, and his wife (possibly called Elizabeth), who was the youngest daughter of Samuel *Chandler and died in 1791. He was for many years a surgeon in the navy, and served under Captain (afterwards Admiral) William Bligh on board the *Providence* in 1791–4. He was a collector of ancient coins, specializing in the large bronze and copper coinage of Rome and the Greek world. He assisted John Pinkerton with the third edition of his *Essay on Medals* (1808), and in 1812 he himself published *Populorum et urbium selecta numismatica Graeca ex aere descripta*, with brief notes and a list of places that issued autonomous and Greek imperial coins. The work was

dedicated to his friend the barrister and coin collector Philip Le Neve.

For a period Harwood lived at Castle Hedingham, in Essex, but he was living in Kirby Street, Hatton Garden, London, when he died there, unmarried, on 6 January 1814. Le Neve was one of his two executors. His coins and books were sold by auction at Leigh and Sothebys on 28–30 April 1814; the first seven lots were the coins illustrated in the plates of his book. He is described in his obituary notice in the *Gentleman's Magazine* as combining 'the warmest affections of a kind, benevolent friend, and the taste of a deep, elegant scholar' (*GM*, 84/1).

Harwood, Elizabeth Jean (1938–1990), singer, was born on 27 May 1938 at Hawnby, Markton Lane, Barton Seagrave, Kettering, Northamptonshire, the daughter of Sydney Curtis Harwood, local government officer, and his wife, Constance Read. Her mother had herself been a professional soprano (after studies at the Royal Academy of Music, London) and gave Elizabeth her first childhood singing lessons. Harwood was educated at Skipton Girls' High School and went on to the Royal Manchester College of Music, the family having moved to Yorkshire. As a vocal student there of Elsie Thurston she was encouraged by the college principal, Frederic Cox, to involve herself in opera; he had recognized that with her alluring blonde glamour and outgoing personality Harwood, a soprano, was a 'natural' for the stage.

After graduating in 1960 Harwood won the Kathleen Ferrier memorial prize and joined the Glyndebourne Festival Chorus, making her début there as Second Boy in Mozart's *Die Zauberflöte*. In the following year she was engaged by Sadler's Wells Opera in London, where she was first cast in coloratura roles and won success as Gilda (*Rigoletto*), Zerbinetta (*Ariadne auf Naxos*), and Constanze (*Die Entführung aus dem Serail*). Colin Davis, then music director of the company, was a strong influence on her stage development, while audiences much enjoyed the sense of fun she regularly imparted in her singing.

Harwood's international reputation developed after she was joint winner of the 1963 international Verdi competition at Busseto, Italy, and in 1965 she toured Australia in starring roles with the Sutherland–Williamson company, an *ad hoc* ensemble formed primarily to showcase Joan Sutherland's return to her native country as an international celebrity and for whom Harwood was engaged as the alternate soprano for specific performances. These included the title role in *Lucia di Lammermoor* (Donizetti) and the leading roles in *La sonnambula* (Bellini) and *L'elisir d'amore* (Donizetti), parts that Harwood then also sang after her return to England. In the year after the Australia tour, on 15 January 1966, she married Julian Adam Christopher Royle (*b.* 1937/8), a company director, with whom she shared a happy home life in the Essex countryside, becoming an accomplished horsewoman and keen swimmer. They had a son.

During the next decade Harwood was probably heard at her best, although not always on first nights, while recurring throat infections forced her to cancel some performances altogether. She nevertheless became a famously memorable partner to Janet Baker in productions of *Così fan tutte* and *Der Rosenkavalier* for Scottish Opera (their complementary eloquence and style in both Mozart and Richard Strauss were an enduring memory). Harwood further enhanced her reputation with engagements at the major festivals of Aix-en-Provence in 1967–9, while also making her Covent Garden début in 1968 as the Fiakermilli in *Arabella* (Strauss). Here she went on to sing Gilda, Teresa in *Benvenuto Cellini* (Berlioz), and, in a rare excursion into contemporary opera, Bella in *The Midsummer Marriage* (Tippett).

At Aix-en-Provence Harwood was heard in *Don Giovanni* by the conductor Herbert von Karajan, who engaged her for the prestigious Salzburg Festival in 1970; she regularly returned there until 1976, mainly singing Mozart roles. Meanwhile she made her début at the Metropolitan Opera, New York, in 1972 as Fiordiligi (*Così fan tutte*), and returned there in subsequent seasons, also making successful guest appearances in Hamburg, Stuttgart, and Paris and at La Scala, Milan. In 1975 she captured Viennese hearts as Rosalinde in *Die Fledermaus*, and even persuaded listeners that an Englishwoman could successfully become the quintessentially Viennese operetta heroine, Hannah Glawari, in the title role of Lehár's *Die lustige Witwe* (*The Merry Widow*) with the recording she made under Herbert von Karajan, treasured by many for the infectious vocal character she brought to the role.

Harwood was often described as 'bubbly', an apt epithet for her offstage persona, which was warm and friendly, even to a professional critic whom she was not averse to accompanying to a concert that interested her. She also brought endearing vocal character to her varied oratorio and song performances, of which several recordings fortunately constitute a living legacy, and she liked to organize musical evenings at home as well as bringing the benefit of her experience to aspiring young singers, whom she greatly enjoyed musically 'mothering'. She died after a long struggle against carcinomatosis and cancer of the breast at her home, Masonettes, Fryerning, Ingatestone, Essex, on 22 June 1990, aged fifty-two. Her husband survived her.

Harwood, Francis (1726/7–1783), sculptor, worked primarily in Italy. Of his place of birth and his parents, nothing is known. At Easter 1752, when he was twenty-five, he was living at the Palazzo Zuccari, Rome. In Rome he shared accommodation with Sir Joshua Reynolds and Simon Vierpyl. In the following year he was working with the sculptor Joseph Wilton in Florence. He was admitted to the Florentine Academy on 12 January 1755 as a 'pittore Inglese' but he matriculated as a 'scultore'. There is evidence that soon afterwards Harwood worked with Giovanni Battista Piamontini (*b. c.*1690) in a studio near SS Annunziata. In 1758 both sculptors were among those contracted to decorate Porta San Gallo, where Harwood's statue *Equity* was installed the following year. After Piamontini's death Harwood acquired his studio. Before long his stock in trade was to provide the grand tourist market with copies after the antique; Lord Northampton was among the first to buy a selection. Using more imagination, Harwood sculpted a bust of Cromwell (1759) and a black person (1758; Getty Museum, Malibu, California), which shows exceptional ability. In 1767 he carved an elaborate monument showing Virtue pointing to heaven and to a cherub holding a portrait medallion of William, second Earl Cowper (Hertingfordbury church, Hertfordshire).

In 1768 Thomas Patch made an etching of Harwood which endorses his reputation as 'a drunken Englishman' and in the following year, writing to Thomas Banks, Joseph Nollekens described him as 'knocking the marbil about like feway & belive he has got more work to do than any One Sculptor in England' (Whitley, 41). He was able to meet the growing demand for his work by employing Pietro Pisani (whom he also taught), Pietro Bastianelli, and Niccolò Kindermann as assistants, and his work shows a consequent reduction in quality. From the late 1760s his output began to include garnitures and chimney-pieces. There are records of Harwood providing vases and other items for Charles Townley (1768), Sir Watkin Williams Wynn (1768), the earl of Shelburne (1772), and Sir John Griffin Griffin (1772; Audley End, Essex). He also provided chimney-pieces for Pietro Leopold II (Salone Celesti, Palazzo Pitti, Florence), Catherine the Great (Tsarskoye Selo, near St Petersburg), and Patrick Home (1774–5; Wedderburn Castle, Berwickshire). Others were made after designs by George Dance for Sir William Mainwaring (*c.*1761; Peover Hall, Cheshire) and, after a design by Sir William Chambers, for the earl of Charlemont (1768; Casino, Dublin). Sir Lawrence Dundas commissioned both fireplaces and other objects (1768–9; Aske Hall, Yorkshire). In 1776 Harwood contributed one of the copies of a Harpy after Giambologna for the Isolotto in the Boboli Gardens, Florence. By 1779 Harwood's success was envied by the young Canova, who remarked on the large number of assistants in his studio and his extensive stock of plaster models, materials, and sculpture. Harwood converted to Catholicism shortly before his death in Florence in December 1783.

Harwood, Harold Marsh (1874–1959), businessman and theatre manager, was born at Ellesmere Park, Barton, near Manchester, on 29 March 1874, the son of George Harwood (1845–1912), cotton spinner and Liberal MP for Bolton from 1895, and his wife, Alice, *née* Marsh. The family's fortune was based on the cotton firm of Richard Harwood & Sons, founded by Harold's grandfather in 1860. Harold was educated at Marlborough College, Trinity College, Cambridge, and St Thomas's Hospital, London, where he gained his MD. Harwood later claimed that it was at Marlborough that it was determined by a 'high power', meaning his father, that he should become a doctor. After a brief spell as a house physician at St Thomas's he set up his own practice at Throgmorton Avenue in the City of London. Harwood acknowledged that his choice of location might 'appear a queer place for a young doctor to start' but he wanted a practice where there would be no calls at night, and he could indulge a passion that was to shape the rest of his life—writing plays. At Throgmorton Avenue, Harwood wrote two plays, and although neither was produced he was encouraged by Sir John Hankin to continue writing. Certainly Harwood did not see his future in the medical profession, and had been lobbying his father to join the family firm at Bolton. In 1900 Harwood's father gave way, and at the age of twenty-six Harold began his career in business. He started learning the cotton trade just at the time when the Lancashire industry entered a phase of export boom, and found the work so demanding that within two years his health broke down. He took a year's complete rest from the business, returning to the firm in 1903.

As part of his recovery Harwood again turned to writing, and helped set up the Bolton Amateur Dramatic Company, where he produced two or three plays a year. During this period he also wrote a one-act play called *The Mask*, an adaptation of a short story written by his future wife, Fryn Tennyson Jesse, and *The Interloper*, a play produced in 1913. The outbreak of the First World War meant for Harwood a temporary return to medicine. He joined the Royal Army Medical Corps, reached the rank of captain, and served in France and Egypt. Even war, however, did not prevent Harwood from maintaining his link with the theatre and in 1916 a play he had written two years previously, *Please Help Emily*, ran with Gladys Cooper in the lead role. This was followed by *Theodore and Co.* at the Gaiety Theatre with Harwood's play put to the music of Ivor Novello. On 9 September 1918 he married Fryniwyd Tennyson (Fryn) *Jesse

(1888–1958), the daughter of Eustace Tennyson, a clergyman, and the great-niece of the poet Tennyson; they collaborated on a number of theatrical projects throughout their married life.

In the inter-war years Harwood was a man of the theatre and his contact with the cotton trade was kept to a minimum. He achieved considerable artistic success, producing an English version of *The Marriage of Figaro* for Sir Thomas Beecham, being invited to Hollywood as a script writer in the early 1930s, writing and producing numerous plays, and entering management at the Ambassador Theatre. His plays were generally in the genre of light comedy, and, while popular with audiences, only one from this period achieved serious critical acclaim: *The Grain of Mustard Seed*. This was written and produced in 1920, and Harwood, departing from type, used comedy as a vehicle for exploring the world of politics. Its success established Harwood as a West End playwright, and expressed his commitment to the liberal individualism which had run deeply in his own family's politics and was subsequently to shape his opposition to the business policies of the post-war Labour government. Harwood added to his reputation with three further successful plays in the 1920s. A somewhat uneven period followed with disappointing productions in 1927, and two rather thin comedies written in collaboration with R. Gore Brown, before he returned to form in 1932.

Following the outbreak of the Second World War Harwood relinquished his theatrical interests and once more became actively engaged in the cotton trade. In 1920 the family firm had been absorbed by the Fine Spinners' and Doublers' Association and Harwood became an ordinary director of the association. His role before 1940 was passive; indeed in 1936 Harwood offered the association the family's preference shares. But within four years there was a dramatic turn of events: Harwood was elected vice-chairman of the association in April 1940, and within four months, following the death of the incumbent, was chairman of one of the largest firms in the cotton industry. Harwood set himself two basic objectives as chairman of Fine Spinners: to return the group to profitability, and to project himself as champion of the small shareholder and staunch defender of the private enterprise system. In his first year as chairman the long-suffering preference shareholders received their first dividend for nearly a decade. Later he implemented a rationalization programme and this, coupled with a capital reorganization scheme, delivered profits of over £1 million by 1950, while the company gained a reputation as a progressive innovator, particularly in the field of new product development.

Harwood aspired to be something more than a company chairman, and sought to present himself as a defender of the private enterprise system against the encroachment of the state. As early as 1942 he had warned shareholders that profits would be reduced because of the imposition of state controls, and he was particularly critical of the 1944 white paper on employment. He believed it threatened the survival of the small shareholder, a group which for him was crucial to the well-being of industry in Britain, and he repeatedly returned to his theme that businessmen should be left to control their own affairs. By the late 1940s opinion seemed to be moving in Harwood's direction as a series of political and economic problems weakened the authority of the Labour government. In 1947 he was elected to the grand council of the Federation of British Industry, and in the following year he used the occasion of Fine Spinners' jubilee to attack what he considered to be the apologetic attitude towards profit making. For Harwood profit making was a wholly useful activity that had helped make Britain a great international power. He espoused a business philosophy which assumed the superiority of the private enterprise system over state planning, and towards the end of his chairmanship could draw on the satisfaction that his views were no longer out of fashion.

For most of the 1940s Harwood's theatrical activities were restricted but in 1948 he and his wife wrote *A Pin to See the Peepshow*, a play based on a book written by his wife in 1934 about an actual murder case. The play embroiled Harwood in a controversy when the lord chamberlain refused to grant a licence for its public performance. It was shown privately in London in 1951, and gained its first public production on Broadway, but it received mixed notices, and had only a short run. It was eventually shown in Britain on television in 1979.

Outside business and the theatre Harwood was a keen yachtsman, a passion he shared with his wife; they sailed in the Mediterranean, and along the coast of Africa. Harwood retired from business on 22 July 1950. He died at his home, Pear Tree Cottage, 11 Melina Place, Marylebone, London, on 20 April 1959, a year after his wife.

Harwood, Sir Henry Harwood (1888–1950), naval officer, was born in London on 19 January 1888, the son of Surtees Harwood Harwood, barrister, of Ashman's Hall, Beccles, Suffolk, and his wife, Mary Cecilia Ullathorne, a distant relative of Archbishop Ullathorne. He was educated at Fosters School, Stubbington, and, choosing the navy as a career, he became a cadet in the *Britannia* in 1903. He soon displayed his intellectual capacity by gaining first-class certificates in all subjects in his examinations for lieutenant. In 1911 he specialized in torpedo and thereafter served as torpedo officer in a number of ships. He did not see action in the First World War, although his service in

Sir Henry Harwood Harwood (1888–1950), by Walter Stoneman

the Grand Fleet was recognized when he was made an OBE in 1919.

Harwood's first post-war service was a two-year commission in the South American squadron, during which he gained a working knowledge of Spanish which was of use to him again twenty years later. His subsequent peacetime service was largely in staff posts and included periods at the Naval Staff College, the Admiralty plans division, the Imperial Defence College, on the staff of the senior officers' war course, and as fleet torpedo officer in the Mediterranean. He was promoted to commander in 1921 and to captain in 1928. In 1924 he married Joan, who survived him, daughter of Selway Chard, of West Tarring, Sussex. They had two sons, both of whom entered the Royal Navy.

In 1936 Harwood was appointed commodore in command of the South American division of the America and West Indies station. With the outbreak of war in 1939 reinforcements were sent to this station and then, after some weeks, arrived the news that the German pocket battleship the *Admiral Graf Spee*, with heavier guns and thicker armour than any of his own ships possessed, was operating in the south Atlantic. Harwood went in search with the three cruisers *Ajax*, *Exeter*, and *Achilles*, and by skilful estimation of her movements sighted the enemy off the River Plate early on 13 December. Harwood had planned at length for such an engagement. He was said at the time, and in later reports, to have 'handled his ships brilliantly' in the engagement, splitting his force in two and attacking from widely different angles (Grove, 350), although recent historical accounts have suggested that his general approach to the encounter was relatively pedestrian and timid, and his tactics a 'sensible compromise' on the options (Stephen, 30). The German captain stood his ground for about twenty minutes and then made for the land. Harwood followed, but although the action was pressed for more than another hour, with much damage on both sides, the *Admiral Graf Spee* had not been crippled before shortage of ammunition compelled Harwood to break off the fight and resort to shadowing. The German ship was thus able to reach Montevideo about midnight. The British were able to convince the Germans that a much larger force was waiting outside the harbour, and on 17 December the *Admiral Graf Spee* emerged only to blow herself up rather than be interned.

This British success could not have been more timely or welcome, for it gave Hitler his first rebuff and was of immense propaganda value. Harwood, by wireless, was appointed KCB and promoted to rear-admiral. It is likely, however, that his elevation 'may have placed him higher than his abilities merited' (Stephen, 30).

A year later Harwood was taken home to be an assistant chief of the naval staff at the Admiralty, where he became 'a favourite of Churchill's' (Grove, 366), and in 1942 the latter appointed him commander-in-chief, Mediterranean, in succession to Sir Andrew Cunningham. For a rear-admiral to receive such a post was almost unknown in modern times. But he was less than successful. A number of failed naval operations through late 1942 and January 1943 caused the army commander, Montgomery, and Churchill to lose confidence in Harwood and he was relieved of his command soon after. He held the less exacting Orkneys and Shetlands command for some months before being finally invalided from the navy in 1945 with the rank of admiral.

Harwood had received honours from many quarters. He was appointed to the Chilean order of merit for earthquake rescue work and received the Greek war cross. He received in 1940 the freedom of Exeter; the Gosport council gave his name to a road on its Bridgemary estate, an avenue was called after him in the new town of Ajax, Ontario, and in South America two streets were named after him, one in Punta del Este and one near Carrasco, Montevideo.

A keen sportsman, Harwood was an excellent shot, a fine fisherman, and had a golf handicap of seven at Sandwich. His personality played no small part in his success. A natural geniality and charm of manner brought out the best in his subordinates and smoothed his relations with others, notably in the South American countries where these qualities, reinforced by his command of Spanish, had already earned him much goodwill among influential civilians when his victory off the Plate made him the most popular British figure for generations.

He died at his home, White Cottage, Goring-on-Thames, Oxfordshire, on 9 June 1950. After his death public requiem masses were said for him—for he was a Roman Catholic—in the cathedral at Montevideo and in the basilica at Buenos Aires.

Harwood, Isabella Neil (1837?–1888), novelist and playwright, probably born on 14 June 1837, was the daughter of Philip *Harwood (1811–1887), Unitarian minister, journalist, and editor of the *Saturday Review* from 1868 to 1883, and his wife, Isabella Neill or Neil (*d.* 1899), of Scottish descent and daughter of Robert Neill, a solicitor and member of the Edinburgh congregation. At the time of Isabella's birth the Harwoods were resident in Bridport, Dorset, where Philip Harwood was minister of a Unitarian congregation. They later settled in London. Little is known about Isabella Harwood's education or early life.

Harwood began her literary career as a reviewer. From 1864 to 1870 she wrote several successful novels, published anonymously, including *Abbot's Cleve* (1864), *Carleton Grange* (1866), *Raymond's Heroine* (1867), and *The Heir Expectant* (1870). Harwood adopted some conventions associated with the popular genre of sensation fiction in her novels; *Carleton Grange*, for example, relies on the familiar sensational devices of complex plotting and mistaken identity. Some critics found her fiction to be 'excessively wholesome' (Sutherland, 283), although *The Heir Expectant* contains some interesting departures from contemporary fictional norms. It features an intellectual, independent heiress, Olivia Egerton, who remains defiantly unmarried until the end of the third volume, and suggests that the love between brother and sister may be stronger than that between husband and wife.

Under the masculine pseudonym Ross Neil, Harwood published a number of blank verse dramas, including *Lady Jane Grey* and *Inez* (1871), *Elfinella* (1876), *Tasso* (1879), and *Andrea the Painter* (1883). *Elfinella* was produced at the Princess's Theatre, Edinburgh, in 1875, and at the Princess's Theatre, London, on 6 June 1878. *Inez* was produced as *Loyal Love* at the Gaiety Theatre in 1887. Such so-called 'poetical dramas' were out of fashion at the time. Although contemporary critics felt that Harwood brought 'engaging freshness' to familiar issues, and wrote about historical subjects like Lady Jane Grey in a style 'completely free from affectation', her dramatic works did not enjoy great popular success (*Saturday Review*, 2 June 1888, 644; 16 Dec 1871, 782).

Editing a selection of Harwood's works for *The Poets and Poetry of the Nineteenth Century* (1907), Richard Garnett observed that, like Joanna Baillie a generation earlier, Harwood 'kept the torch of the poetical drama alight without the power to send it abroad'. Although he praised her 'intellectual ability, singular elegance of diction, and accurate delineation of character', he considered her dramas to be 'too manifestly works of reflection' (Garnett, 147).

Harwood never married, and lived with her father in London and then in Hastings until his death in 1887. She shared not only his interest in literature, but also his musical taste and proficiency. She did not long survive him, dying of breast cancer at her home, South Bank, Baldslow Road, Saint Mary-in-the-Castle, Hastings, on 29 May 1888. MEGAN A. STEPHAN

Harwood, Philip (1811–1887), Unitarian minister and journal editor, was born in Worcester on 22 March 1811, the second son and fifth child (of eight) born to William Harwood (1773?–1848) and his wife, the former Abigail Hawley (*d.* 1847). Following their marriage in Shrewsbury in 1802 the Harwoods moved to Worcester, and soon after Philip's birth settled in Bristol. There William Harwood, who lived in Portland Square, may well have joined Harwood, Hawley, and Holden, sugar refiners and wholesale grocers in Counter Slip. By 1825, with his eldest son (also William), he was operating a business dealing in raw sugar.

The religious background of the family was quite possibly Baptist—Harwoods and Holdens appear as subscribers at Broadmead Chapel, Bristol—but no Harwood is entered in the registers of Baptist chapels in Shrewsbury or Worcester. In the Lewin's Mead records for 1831, William Harwood, presumably Philip's brother, is noted as a pew renter, and Philip was recorded as having contributed half a guinea. That connection supports the assertion (not otherwise confirmed) of Alexander Gordon (1841–1931), the dissenting historian (notes for a history of St Mark's, Edinburgh), that Philip Harwood was educated in the well-known school of Lant Carpenter, the minister of the Unitarian chapel in Lewin's Mead. It seems more likely, however, that Philip, articled to a solicitor, attended the much renowned informal classes that Carpenter conducted for young people in the congregation.

In 1833 Philip Harwood and his youngest brother, Reynold (1816–1889), entered the divinity course at the University of Edinburgh. The Lewin's Mead connection seems to falsify the assertion of one obituarist (*The Inquirer*, 24 Dec 1877) that his intention was to enter the Baptist ministry, while lending credence to the report that he was appalled by lectures on the atonement given by Thomas Chalmers, the celebrated evangelical who was then professor of divinity, although neither brother's name appears on Chalmers's class list. After withdrawing from the university in his first year, Philip Harwood came under

the influence of George Harris, minister at Glasgow, and Bartholomew Teeling Stannus, minister at Edinburgh; he preached at the Unitarian chapel in Young Street during Stannus's absence in England in 1834–5.

In 1835 Harwood became minister of the small, distinguished Unitarian congregation at Bridport, Dorset, where he grew increasingly heterodox. On 26 April 1836 he married Isabella (*d.* 1899), the daughter of Robert Neill, a solicitor and a leading member of the Edinburgh congregation, newly housed and renamed St Mark's; their only child, Isabella *Harwood, became a novelist and playwright. In 1839, during a visit to Edinburgh, he preached several times at St Mark's. His views, which by then included rejection of gospel miracles, alienated the minister, R. E. B. MacLellan, and split the congregation; one faction, led by Harwood's father-in-law, set up a separate church which in time became associated with Owenite socialism.

A gap in the minute books of the Bridport congregation prevents direct confirmation of a reported disagreement there over Harwood's theological views. However that may be, in 1840 he became (in the phrase used in the South Place records) 'co-adjutor' to W. J. Fox, who was by then formally separated from the Unitarians, in his chapel in South Place, Finsbury. In 1841, with warm expressions of appreciation from the South Place congregation, he moved to the Beaumont Institution, a museum, reading-room, and chapel opened in east London a year earlier by the wealthy insurance merchant J. T. Barber Beaumont; a list of the lectures delivered by Harwood and his colleague Thomas Wood, an Anglican turned Unitarian, appears in Harwood's *The Object of the Sunday Lectures at the Philosophical Institution, Beaumont Square* (1842).

From the institution's founding, many in the audience came 'from the antipodes of Mile End' (Hennell, 52–3). Among them was the diarist Henry Crabb Robinson, who noted others in attendance and commented on the lectures: although he was often favourably impressed, he thought on one occasion that Harwood's message was that of 'an inferior Carlyle' (Robinson, diary, 6 Aug 1841) and often expressed grave doubts about his theology. Harwood was also in close touch with Charles Christian Hennell, the Unitarian biblical critic; the memoir of Hennell by his sister throws much light on the Beaumont period.

Harwood's published sermons and lectures, in Bridport and London, cover a wide range of topics. In one he condemned religious 'materialism', by which he meant devotion to forms, and in another argued for 'church extension' dedicated to moral and cultural improvement. His call, no doubt influenced by Coleridge, for a broadly based national church to accomplish these ends provoked a stern rebuke from his old mentor George Harris (*Christian Pioneer*, 555–7) for his apparent abandonment of the voluntary principle. An ethical utilitarian and a political liberal, Harwood threw himself into the free-trade agitation, arguing that the corn laws were unbiblical. His most important contribution, however, was six lectures at South Place published as *German Anti-Supernaturalism* (1841), one of the earliest public expositions in England of the religious views of David Friedrich Strauss (1808–1874), whose *Leben Jesu* (1835–6) had advanced a mythic explanation of Christian appeal.

Thomas Wood soon left the institution, and in 1842 Harwood was dismissed because Beaumont's son and heir found his views unacceptable. Introduced by Fox to John Forster, the drama and literary critic of *The Examiner*, in 1843 Harwood became sub-editor on the paper. In 1844 he published a sympathetic *History of the Irish Rebellion of 1798*. He subsequently moved to *The Spectator*, and in 1849 became sub-editor at the *Morning Chronicle*, then a Peelite organ edited by John Douglas Cook (1808?–1868). He followed Cook to the *Saturday Review*, begun in November 1855, a weekly journal whose able contributors and brashly brilliant style placed it among the most influential periodicals for more than thirty years. He was by repute 'the best sub-editor who ever lived' (Bevington, 352), and the obituary in that journal gives a glimpse into his methods. On Cook's death in 1868 he succeeded to the editorship, in which he was successful, if less brilliantly so than his predecessor.

The anonymity of Harwood's later years reflected both personal choice and professional principle; he wrote little, even for his own journal. Outwardly shy, but genial and amusing with friends and steadily encouraging to his writers, he found his deepest interests in music—he played the violin—and politics, though his early radicalism had substantially abated. The obituary in the *Saturday Review* names Sir Stafford Northcote and Lord Hartington as his favourite politicians, and Richard Garnett, the British Museum librarian and W. J. Fox's biographer, recalled that Harwood's terrier, Moses, would show 'vehement demonstrations of disapproval' at the mention of Gladstone and Bright (Garnett, 217–18).

Troubled by illness from 1881, Harwood resigned in 1883, retiring to Hastings, where he died of bronchitis at his home, South Bank, Baldslow Road, on 10 December 1887. The obituarist in *Christian Life* (17 December 1887), who claimed to know him well, said that he had become a high-churchman—the strongly held position of the *Saturday Review*'s proprietor, Alexander Beresford Hope (1820–1887)—but the only funeral service was held at the interment in the borough cemetery, Hastings, on 15 December; Reynold Harwood, who had become an Anglican priest in 1859, was among the mourners. Harwood, Thomas (1767–1842), Church of England clergyman and writer, was born on 18 May 1767 at Shepperton, Middlesex, of which parish his father and grandfather had been both patrons and rectors. His father was Thomas Harwood (1728/9–1796). The younger Thomas Harwood went to Eton College on 18 November 1773, when only six and a half years old, and in September 1775 he was admitted on the foundation. In 1784 he was matriculated at Oxford as a commoner of University College. In 1789 he was ordained deacon, and was admitted sizar of Emmanuel College, Cambridge. He was headmaster of the grammar school at Lichfield from October 1791 until 1813, but the school was effectively defunct and he had very few pupils. In 1813 he gave up his post to live in a house of his own in that city. He married, on 7 January 1793, Maria (*d.* 1830), eldest daughter of Charles Woodward, of Birmingham, and they had a family of ten children.

From 1800 to 1842 Harwood was perpetual curate of Hammerwich, near Lichfield. He graduated BD at Cambridge in 1811, and in 1814 was presented, on his own nomination, to the rectory of Stawley, Somerset, but after living there two years, he resigned the living in 1819, and returned to Lichfield, where he was a magistrate and president of the public library. He was created DD of Cambridge University in 1822, and for many years was a fellow of the Society of Antiquaries. He was presented in 1828 to the chapelry of Burntwood, which he served, together with Hammerwich, until his death. In politics Harwood was a follower of C. J. Fox and an upholder of civil liberties. He strenuously and consistently supported Roman Catholic emancipation. It is thought that these sentiments stood in the way of his professional preferment.

Harwood wrote on various topics. After trying his hand at drama with two verse plays (1787 and 1788), he went on to produce various theological works and sermons, works on classical antiquity, a biographical dictionary, and a manual of geography. In later life he turned to topography and published a *History and Antiquities of Lichfield* in 1806 and an edition of Sampson Erdeswicke's *Survey of Staffordshire* in 1820. Harwood died at Lichfield on 23 December 1842 and was buried in Hammerwich church in the same vault as his wife.

Hary [Harry; *called* Blind Hary] (*b. c.*1440, *d.* in or after 1492), poet, was the author of *The Actis and Deidis of the Illuster and Vailzeand Campioun Schir William Wallace* (title as in a 1570 edition by Robert Lekpreuik), an epic poem in which Scottish patriotic sentiments are embodied in an elaborately presented, but historically much distorted, life story of William *Wallace. It is the only work which can be attributed with certainty to him. The earliest text of the poem is a manuscript by John Ramsay dated 1488 (NL Scot., Adv. MS 19.2.2), written, according to a colophon, for the vicar of Auchtermoonzie in Fife; this was part of the estate of Sir William Wallace of Craigie, who may have been Hary's patron.

Contemporary documentation of Hary's life is very sparse. His name appears five times in the Scottish treasurer's accounts in the years 1490–92, with reference to payments made to him 'at the Kingis command' (for what service is not specified), and in each instance the name is written as Blind(e) Hary. The same appellation is used by William Dunbar in his 'Lament for the Makaris', probably written in 1505, in which Hary is stated to be dead. Since this is the invariable form of his name in early sources, it may be taken as authentic. The practice of referring to him as Henry, which became customary after John Jamieson in his 1820 edition of *Wallace* styled its author Henry the Minstrel, is without historical warrant.

A reference by John Mair identifies Hary (Henricus) as the author of *Integrum librum Guillelmi Wallacei*. A vague clue to the date of the poem is furnished by Mair's statement that the book was written during his own childhood, which, as he was born in 1467, presumably implies the 1470s. This dating is confirmed by Hary's own mention of Sir William Wallace of Craigie as being alive at the time of the poem: Wallace was knighted in 1471–2 and killed at the siege of Dunbar in 1479. Mair also states that Hary was blind from birth, and that he earned food and clothing by telling tales to noble patrons (a detail which probably suggested to Jamieson his designation of minstrel). The internal evidence of the poem, however, by no means supports the claim that Hary was born blind. Topographic descriptions and references to conditions of natural light are frequent, and a quite striking visual intensity is noteworthy in many passages: a good example is Wallace's dream-vision, a pivotal episode in the poem, in which the symbolism of colours, metals, and precious stones is central to the interpretation of the passage.

Evidence for other details of Hary's life must be sought within the poem. Frequent references to families with seats in central and eastern Scotland—Perthshire, Stirlingshire, Linlithgow, and Fife—and a detailed knowledge of the topography of that area suggest that it was his place of origin. That he was a man of wide reading is evident from the breadth and variety of his literary influences, an aspect of his work which has only recently been fully recognized. The many scenes of conflict, ranging in scale from single combats to pitched battles, show a familiarity with the nature of warfare which could hardly have been

acquired without firsthand experience—clearly a further argument against the poet's having been blind from birth. (Hary's most recent editor, Matthew P. McDiarmid, suggests that he may have fought in the wars between Louis XI of France and the duke of Burgundy, perhaps as a member of the former's Garde Écossaise). Manifest throughout the poem is not only an intense Scottish patriotism, but a bitter opposition to James III's policy of alliance with Edward IV, seen by Hary as a foolish and treacherous risking of the subjugation of Scotland to the traditional enemy. Since the king's pro-English policy was not unpopular with the merchants and bourgeoisie, it may be conjectured that both Hary and his patrons belonged to the landowning class.

The poem, written mostly in easy and fluent pentameter couplets, tells the story of William Wallace's career as a patriotic hero of Scotland's struggle against the occupying English forces of Edward I. The protagonist is shown growing to manhood in a Scotland suffering under English oppression, and increasing in stature from a young adventurer bent on taking vengeance for injuries to himself and his kinsfolk to the ruthless and dedicated leader of the national resistance movement, and finally to a divinely appointed martyr to the cause of Scottish independence. The pace is rapid, and sequences of exciting events are related with a high degree of narrative skill. Famous episodes include his single-handed victory over a party of five English troopers intent on stealing his catch of fish, his vengeance for the murder of his wife by the sheriff of Lanark, his burning of the garrison of Ayr in retribution for the treacherous hanging of a group of Scots nobles, his victory at the battle of Stirling Bridge, and his defiant bearing at his execution. Throughout Wallace is presented as ardently patriotic, indomitably brave, ferocious in combat, and merciless to his and his country's enemies, but personally loyal, courteous, and strong in his affections. Underpinning the entire poem is the author's passionate commitment to the justice of the Scottish cause: the English are shown as brutal, arrogant, and treacherous, and Wallace in his vision is charged by the Blessed Virgin herself with the task of liberating Scotland from English oppression. (It is possible that Hary's treatment of his hero was inspired to some extent by the story of Jeanne d'Arc.)

Despite its outstanding merits as a dramatic narrative and as a stirring manifestation of patriotic feeling, the poem has been much criticized for its lack of historical accuracy. Many episodes have no other surviving attestation, several are distorted, and some are obvious fabrications (such as a victory by which Wallace partially redeems his defeat at the battle of Falkirk and an invasion of England from which he desists at the pleading of the English queen). This has been explained as the result of Hary's uncritical use of doubtful sources: besides the early fifteenth-century chroniclers Walter Bower and Andrew Wyntoun, from whom part of his material is clearly derived, and an unidentified (and almost certainly fictitious) Latin book by Wallace's chaplain John Blair to which Hary himself refers, many episodes probably have their origin in the gestes of Wallace which, according to Wyntoun, existed in great numbers. Recent critics, however, setting the patent inauthenticity of much of the narrative against the literary sophistication of the poem and its strongly emphasized political message, have attributed Hary's cavalier treatment of facts neither to naïvety nor to simple mendacity, but to a desire to reinforce the patriotic sentiments of the Scots of his own time, and their determination to maintain Scotland's integrity, by presenting Wallace's conflicts in the most dramatic and morally inspiring manner possible.

Despite the lack of contemporary evidence regarding Hary himself, his poem has proved to be one of the most enduringly popular and most influential in all Scottish literature. John Mair and Hector Boece used it in the sixteenth century as a historical source; Robert Burns remarked on how it had inflamed his patriotic feeling; Sir Walter Scott drew on it for his *Tales of a Grandfather*; and its influence is visible in the hugely popular film *Braveheart* (1995). The place held to this day by Wallace in the popular imagination is principally due to Hary's portrayal; and on a more general level, his contribution to the Scottish sense of national identity is fundamental, matched only by that of Scott. This has long been recognized, but recent critical reassessments of his poem have materially raised his accepted standing as a writer, demolishing the notion of an untutored 'minstrel' and revealing him as a poet of genius.

Haryett [*married name* Trelawny], **Elizabeth Ann** [*known as* Lizzie Howard], **countess of Beauregard in the French nobility** (*bap.* 1823?, *d.* 1865), courtesan, was, like most of her kind, of obscure origins, but she has been tentatively identified with the Elizabeth Ann Haryett who was baptized at the church of St Nicholas, Brighton, on 13 August 1823, the daughter of Joseph Gawan Haryett and Elizabeth Alderton. After an early introduction to the life of a courtesan, she took the name Lizzie Howard and rapidly advanced in her profession; by 1840 she was among the most sought-after whores in London. She rapidly made a large fortune (one client was said to have paid £1000 for one night's entertainment).

Haryett was introduced to Prince Louis Napoleon, later Napoleon III, by the Count D'Orsay at Gore House in 1839, and apparently fell in love. Whether she part-financed his Boulogne expedition of 1840 as was often claimed is not now known, but over the next eleven years she certainly advanced him large sums of money. The son she bore in 1842, Martin Constantin Haryett, was widely regarded as Louis Napoleon's, although it is equally likely that he was not. She rebuffed a potential client, the historian A. W.

Elizabeth Ann Haryett [Lizzie Howard], **countess of Beauregard in the French nobility** (*bap.* 1823?, *d.* 1865), by Sir William Charles Ross

Kinglake, at about this time: he was unremittingly hostile to the French emperor. In 1846, when Louis Napoleon escaped from his captivity and returned to London, he set her up as his mistress in a house in Berkeley Street, where they remained until, following the revolution of 1848, he returned to France to contest the presidential elections. Miss Howard, who followed him across the channel, contributed largely to the presidential coffers (the sums have been estimated at anything between £13,000 and £320,000) and lived openly as his mistress. She evidently hoped to emulate the great mistresses of previous French kings, but in 1852, having declared himself emperor, Napoleon III decided to marry. Miss Howard was now surplus to requirements and, after some difficult scenes, was paid off. Accounts of the total amounts she received from the emperor vary as wildly as those of her gifts to him, but it is certain that she was created countess of Beauregard, and given the Château Beauregard and its 450 acre estate near Versailles, together with an annual pension estimated at £20,000. Her son was created count of Bechevet, which some have taken as an acknowledgement of his imperial parentage.

On 16 May 1854 the countess married Clarence Trelawny (*b.* 1826), a scion of the Salusbury-Trelawny family, who was at that time an officer in the Austrian army. It was an unhappy marriage and ended in divorce in February 1865. (No mention of it is made in the genealogies of *Burke's Peerage*.) Elizabeth long bore a grudge against the emperor, and especially against his wife, the Empress Eugénie, and when in Paris flaunted herself before them, taking boxes at the opera opposite theirs and driving her carriage behind the empress's. In the early 1860s Trelawny took a shooting lodge in Scotland for two years, but they did not visit the neighbours; great was the consternation when it was discovered that the religious and moral society of Ross-shire had been harbouring so notorious a woman. After the divorce the countess returned to her château outside Paris, and to her amusement of pestering the imperial couple. She died unexpectedly on 19 August 1865 at the Château Beauregard. Rumours of foul play were probably unsubstantiated. Her entry in the death registers of La Celle St Cloud described her as 'Elizabeth Ann Haryett, called Miss Howard, Countess de Beauregard, born in England in 1823'.

Haschenperg, Stephen von (*fl.* 1535–1547), military engineer, was a native of Moravia, who probably followed Mary of Hungary to the Netherlands when she became regent there for her brother, the emperor Charles V, in 1531. He is first recorded in an English context in 1535, when he offered his services to Thomas Cromwell as 'armourer and architect' ('pro armamentario et architecto'; PRO, SP 1/100, 60), having first approached the duke of Suffolk. He was not then employed, but cannot have been entirely rebuffed, for on 12 April 1539 he wrote again to Cromwell, from Dol in Brittany, in terms suggesting both that he was an intelligence agent for the secretary, and also, since he claimed to be able to understand the speech of Polish sailors, that he knew eastern Europe and the Baltic.

The threat of foreign invasion in 1539, and perhaps also this reminder of his existence, now led to Haschenperg's finding employment in England, at first on the south-east coast. In 1539–40 he undertook works at Sandgate and Camber castles, devising fortifications of considerable, indeed unnecessary, complexity. With their concentric defences and use of bastions they were among the earliest English fortifications to show a knowledge of Italian innovations in military design, though Haschenperg, who seems to have been a land surveyor by training, may not in fact have fully understood the significance of the models he imitated. Hence, for instance, his repeated tendency to leave dead ground in front of his defences. His technical weaknesses were not appreciated at first, however, and he was granted an annuity of £60 in 1539, raised to £75 in July 1540. Then in November 1540 he was sent to Calais, to survey its defences and prepare a plan for their strengthening.

Having returned to England, Haschenperg went north shortly afterwards. At Berwick with the duke of Norfolk in January 1541, by June he was at Carlisle, where substantial works on the defences of both castle and city were in progress. Perhaps he was here executing works planned by others rather than a programme of his own devising, a

possibility that could explain why he achieved more of lasting utility at Carlisle than elsewhere. Haschenperg was responsible for strengthening the castle so that it could carry more guns, for building an elaborate half-moon battery to protect its inner ward and bulwarks to act as outworks, and for at least beginning a citadel designed to command the city from its southern end. Nevertheless, he soon ran into difficulties, at least some of them apparently of his own making. He had begun his time at Carlisle with quarrels, with his colleague Thomas Gower, who was sent to Berwick, and with the captain of the castle, Sir Thomas Wentworth, who was ordered to 'use himself more temperately' (*LP Henry VIII*, vol. 16, no. 958). By the end of 1542 the progress of the works was giving rise to concern. The march warden and the bishop of Carlisle were ordered to inspect them, and in the following July Haschenperg was dismissed, on the grounds that he had 'behaved lewdly and spent great treasure to no purpose' (*LP Henry VIII*, vol. 18/1, no. 901). Perhaps his lack of qualifications had caught up with him, though he did not help his own cause by his disrespectful bearing towards the king's council.

Haschenperg left England in 1543, subsequently forfeiting property at West Ham, Essex, and went to the Baltic; on his return in 1544 he persuaded Mary of Hungary to write to Henry VIII on his behalf. He himself then approached Henry's agent in Brussels with offers of intelligence concerning Scots who were recruiting soldiers in Denmark, but received a cool reception, as one who 'will pretend more knowledge than he hath indeed' (*LP Henry VIII*, vol. 19/2, no. 132). On 4 August 1545 he wrote to Henry from Lübeck, lamenting his loss of favour and offering to put a number of useful inventions at the king's disposal, for instance a method of making saltpetre; he also referred to the evangelical princes of Germany in terms suggesting that he was himself of their religious persuasion. Later that year he returned to London, hoping to enlist the support of the duke of Suffolk, but his expedition was in vain—the duke died that year—and he returned to 'Oestlandt'. In January 1547 he was back in London, this time with his (unnamed) wife, trying to persuade the imperial ambassador to speak up for him. The latter was unenthusiastic, and seems to have been correct in believing that Haschenperg 'will only find a refusal here to his petition' (*CSP Spain, 1547–9*, 1), for he makes no further appearance in English records, and it is not known when or where he died. Haselbury, Wulfric of. *See* Wulfric of Haselbury (*c.*1090–1154/5).

Haselden, Thomas (*d.* 1740), mathematician, spent nearly twenty years as a schoolmaster in the navy, after which he established a school at Wapping Old Stairs. He was later 'head-master of the Royal Academy at Portsmouth'. In 1722 he published *Description and use of … that most excellent invention commonly call'd Mercator's chart, to which is added the description of a new scale whereby distances may be measured at one extent of a pair of compasses*. To this was prefixed a letter to Dr Halley concerning the 'globular chart', an invention of Henry Wilson, who claimed that it was superior to Mercator's chart and was all that was necessary to solve the problem of great circle sailing. Haselden's letter sparked a controversy between the two men which Haselden attempted to settle by enlisting Halley's support and provoking a debate in the Royal Society. Halley was noncommittal but the argument subsided when Wilson's planned atlas was abandoned.

In 1722 Haselden called himself 'Teacher of Mathematics to his Majesty's Volunteers in the Royal Navy'. In 1730 he published *Mathematic lessons for students in the mathematics and natural philosophy, composed by the Abbot de Molières, done into English by T. H.* In 1761 a new edition of the *Seaman's Daily Assistant*, said to be by Haselden, appeared.

Haselden was elected to the Royal Society on 17 January 1740, but he may not have lived to attend as fellow. He died at Portsmouth in May of the same year.

Haselden, William Kerridge (1872–1953), cartoonist and caricaturist, was born on 3 December 1872 in Seville, Spain, the second of the five children of Adolphe Henry Haselden (1834–1878), a civil engineer, and his wife, Susan Elizabeth, *née* Kerridge (*d.* 1929). His parents were both English but met in Seville where his father was director of the Seville gasworks. In 1874 the family moved from Seville to Linares. During a holiday in England in 1877 his father contracted pneumonia and died the following year. The remaining family stayed resident in England, settling in Hampstead, London, living off the profits from shares in the family business, and William was sent to private school in Carlton Hill, St John's Wood, in north-west London. His education was, however, cut short by his mother's increasingly desperate financial straits following the sale of the family mines, and he left school in 1888 at the age of sixteen. He received a little extra private tuition after this date but never received any formal artistic training.

Haselden obtained a post as an underwriter at Lloyd's in London through the patronage of a family friend. He remained there unhappily for thirteen years and his first step in the direction of following a career as a cartoonist did not come until 1902 when, indulging his recreation of sketching, he submitted to the periodical *The Sovereign* a caricature of one of the Lloyd's underwriters. It was published and he was invited to join the staff of the paper, drawing mainly political cartoons along with theatrical sketches. Temporarily unemployed after *The Sovereign* ceased publication in April 1903, he produced some freelance cartoons and sketches for *The Tatler* and *St James's*

Gazette, though he did not manage to obtain a full-time staff post until later in 1903 when he approached the offices of Alfred Harmsworth. He was referred to a colleague of Harmsworth's, Arkas Sapt, who hired him at a salary of £5 a week for a new journalistic venture, the *Daily Mirror*.

Originally starting with political work similar to that of *The Sovereign*, by 1906 Haselden had settled on the formula which remained intrinsic to his work in the *Daily Mirror* until his retirement in 1940. Social commentary replaced political satire in his daily cartoons, in which he reflected on the different fads, fashions, manners, and modes of the average middle-class householder in a single frame divided into a number of panels, a style which merits his position as the father of the British newspaper strip cartoon. Central to each cartoon was his own quintessential brand of gentle, conservative, subtle wit rather than the perfection of drawing which, even so, managed to capture the expressions and emotions of the characters he illustrated. Walter Sickert complimented his ability to 'draw everything, even ideas and expressions with complete mastery' (*A Free House!*, 247). Between 1906 and 1935 annual collections of these cartoons were gathered together in twenty-nine volumes of *'Daily Mirror' Reflections*. In 1907 he married Eleanor Charlotte Lane-Bayliff (1875–1944). They had two children, Celia Mary and John Kerridge.

Haselden made his mark most clearly in the popular memory during the First World War. The wartime series ridiculing Kaiser Wilhelm II and his son, the crown prince, in the guise of 'Big and Little Willie' remains his crowning achievement and his only genuinely sustained attempt at political caricature. The first six months' worth of the series was collected in the publication *The Sad Adventures of Big and Little Willie* (1915). It was claimed after the war that the crown prince deemed these cartoons 'damnably effective' (Cudlipp, 70), though this is unsubstantiated. Alongside these Haselden narrated a comic social history of the war with characters including Joy Flapperton, the young 'flapper', and Colonel Dugout, government administrator.

From 1906 Haselden also contributed to *Punch* as a theatrical caricaturist. His caricatures were praised by Max Beerbohm who complimented them for the portrayal of 'the figures and faces of even the people who, until one sees your drawings of them, seem to have no distinct appearance whatsoever' (*The Times*). As a result of increasing deafness Haselden was forced to retire from this role in September 1936. In the late 1990s a near complete collection of his work for the *Daily Mirror* and *Punch* was loaned to the Centre for the Study of Cartoons and Caricature at the University of Kent at Canterbury.

Haselden's work was greatly admired. Sickert declared that he would live 'like Aristophanes as the most important historian of our age' (*The Times*). Paul Nash similarly endorsed him as 'not only a valuable historian of our age but one of the best craftsmen of our times' (Nash, 71). He also found devotees in the fields of politics and society. Baldwin and McKenna both owned original artwork, and Margot Asquith declared that she only took the *Daily Mirror* for his cartoons. According to family tradition he was offered a knighthood by Baldwin in 1923 but turned it down, not wanting 'all the fuss'.

Haselden was conservative in personality and appearance, having the mien of 'a tall, elegant insurance clerk' (Cudlipp, 70) with raven black hair and a serious, almost melancholic air. Resident at 1 Pelham Place in south-west London for most of his career, from the mid-1930s he spent more and more time at the family's holiday home, Dudley Dene, Lee Road, Aldeburgh, Suffolk, where he eventually retired and spent the rest of his life. He died of natural causes at Dudley Dene on Christmas day 1953 and was cremated at Ipswich crematorium on 31 December.

Haseley, William of (*d.* in or before 1283), monastic writer, was sub-prior and novice-master of Westminster Abbey. His name, if a toponym, points to an origin in Oxfordshire, Warwickshire, or Wiltshire. Haseley was the actual compiler of the customary, or directory relating to liturgical and other matters, which became known as Ware's customary from the circumstance that Richard of Ware was abbot of Westminster at the time (1258–83). It was in four parts, of which only the final part survives, in a fifteenth-century copy (BL, Cotton MS Otho C.xi). The colophon records that Haseley began his work in 1266. Given the derivative character of much of the contents, it may have been finished quickly, although ordinances of Abbot Ware published in chapter in, respectively, 1270 and 1275 were interpolated later. The extensive, though unattributed, quotations from the monastic constitutions of Lanfranc of Canterbury were doubtless present in Haseley's exemplar: this was probably the customary of the Anglo-Norman abbey, hitherto unrevised. Ware's customary provided the main source for the new customary compiled for their own use by the monks of St Augustine's Abbey, Canterbury, in the early fourteenth century. Two books which, according to their inscriptions, Haseley procured, and which were added to the library of Westminster Abbey after his death, may have been part of a larger collection of which he was allowed the use during his lifetime. On 5 November 1283, perhaps soon after Haseley's death, Hugh of Balsham, bishop of Ely, granted twenty days' remission of enjoined penance to those who

should attend divine service at the abbey and pray at his tomb—an indulgence suggesting that Haseley had a connection with Ely diocese or with Balsham in person. The customary was published in 1904 in an edition by Edward Maude Thompson.

Hasell, Elizabeth Julia (1830–1887), writer, was born on 17 January 1830, the second daughter of Edward Williams Hasell (1796–1872) of Dalemain, near Penrith, Cumberland, where he was an extensive landowner, and his wife, Dorothea, daughter of Edward King of Hungerhill, Yorkshire. She was carefully educated at home, at the same time teaching herself, with little or no assistance, Latin, Greek, Italian, German, Spanish, and Portuguese.

From 1859 until her death Hasell wrote a large number of essays and reviews including over thirty for *Blackwood's Magazine*. Her contributions show a wide knowledge of European literature from Homer to recently published works by English poets: her reviews in *Blackwood's* include Lord Derby's translation of the *Iliad* (April 1865), Tennyson's *Idylls of the King* (November 1859), *Enoch Arden* (November 1864), and *Becket* (July 1885), and William Morris's *Poems* (July 1869). Some of her essays compare the treatment of Greek myths by dramatists of various periods; she also wrote extensively on Spanish and Portuguese authors. She compiled two volumes in the series of Foreign Classics for English Readers on Calderon (1879) and Tasso (1882). She also reviewed occasionally in *The Athenaeum*.

Besides pursuing her studies Hasell gave a large portion of her time to promoting education and the general welfare of the district in which she lived, walking long distances across the hills to teach in village schools or deliver extempore addresses, in which she showed an unusual facility. Her philanthropic exertions probably hastened her death, as in her desire to do good to a scattered population she made light of fatigue and exposure to rain and cold. A deeply religious woman, she was well read in theology, and published several devotional works. She died, unmarried, at Dalemain on 14 November 1887.

Hasell, (Frances Hatton) Eva (1886–1974), traveller and missionary, was born on 13 December 1886 at Dalemain, Dacre, Penrith, Cumberland, the younger of two daughters of John Edward Hasell JP DL (1839–1910), a substantial landowner in Cumberland and Westmorland, and his wife, Frances Maud Flood (*d.* 1911). She grew up in Cumberland where she did voluntary work for the Church of England in the diocese of Carlisle. In 1910 she became a collector for the fund launched jointly by the archbishops of Canterbury and York to provide for clergy in the isolated parts of western Canada. The diocese of Carlisle raised £3000 for the Western Canada Fund, and Hasell's involvement marked the beginning of a lifelong commitment to this cause.

In 1914, after becoming diocesan Sunday school organizer for Carlisle, Hasell was sent to St Christopher's College, Blackheath, for specialized training in religious education and religious social work. While there she met Aylmer Bosanquet, an Anglican missionary who later went to work in the diocese of Qu'Appelle, Saskatchewan, an area about twice the size of England without a single Sunday school. Bosanquet feared for the future of the Anglican church in the vastness of the prairies, and believed that the teaching of children was essential to its survival there. In letters home she inspired Hasell with her vision of a small army of itinerant women Sunday school teachers, travelling in pairs by caravan to remote regions during the short summers, and conducting the Sunday schools by post from the larger towns in the rest of the year.

Bosanquet proposed horse-drawn caravans for this work but Hasell, who learned to drive while carrying out her diocesan work in Carlisle, knew that only motorized transport would be practicable. During the First World War she drove for the Red Cross and took a course in car mechanics, gaining practical experience for the caravan work that she planned for after the war. She used her contacts in the Victoria League, the women's imperial movement, to make the necessary preparations, and with the help of a 'daughter of the empire' in Winnipeg purchased a Ford caravan. In February 1920 she left Liverpool with her companion, Miss Winifred Ticehurst, a fellow graduate of St Christopher's. They spent two months giving lectures in Regina, Saskatchewan, before setting out on 21 May equipped with all the necessities for survival. Their caravan bore an unfortunate resemblance to a Black Maria, but its light body and high chassis made it ideal for the rough roads and dirt tracks of the prairie, where they expected to achieve an average speed of only 10 m.p.h. In three months they covered over 3000 miles, visiting ten existing Sunday schools, beginning four new ones, and enrolling sixty children in the Sunday school by post. They also held religious services, spoke to schoolteachers, and generally 'did a lot of visiting' (Hasell, *Across the Prairie*, 98). They met with great hospitality and enthusiasm wherever they went, but witnessed too the extreme poverty in which many settlers lived. And they experienced considerable hardship themselves, negotiating dangerous roads, forest fires, bears, swarms of mosquitoes, and extremes of temperature. Occasionally they encountered the unwanted attentions of lonely farmers, whose help might be sought in pulling the caravan out of mud, and who invariably asked the question, 'Are you married?' and its inevitable sequel, 'Why not?' (ibid., 69).

The success of the caravan mission in 1920 laid the foundation for future ventures, and before leaving Regina in September Hasell reported to senior Anglicans there. She had found the prairie settlers 'in an intensely receptive state', but was aware also of their sense of desertion by the church, which appeared unwilling to send clergy to areas where they could not be guaranteed a stipend. It was a serious problem, to which the church must respond: 'The worship of the almighty dollar may easily take the place of true religion unless this present hunger for spiritual things is satisfied' (Hasell, *Across the Prairie*, 104, 105). On her return to England she began raising money for future caravan missions and later established the Western Canada Sunday School Caravan Fund, of which she became honorary secretary and treasurer. The expedition of 1920 had cost £1000, excluding personal expenses which she had met herself. Future funding came from the church, as well as from groups such as the Mothers' Union, to whom Hasell lectured about her experiences. She returned to Canada in the spring of 1922, spent that summer in the diocese of Calgary, and returned to England in the autumn. It was a pattern repeated in the years ahead when, always with a woman companion, she pioneered missionary trails. The caravans were welcomed with enthusiasm by the bishops of the 'frontier' dioceses who struggled to cope with increasing numbers of settlers, and in November 1926 the bishop of Kootenay praised Hasell's initiative as 'the greatest work being done for the Church or Empire in Western Canada' (Hasell, *Canyons*, 113). By 1935 there were seventeen caravans operating in nine western dioceses, run by thirty-four women workers. The work reached its peak in the early 1950s when there were thirty-two vans in action.

Hasell worked in loose association with the women's branch of the Anglican Church Missionary Society for Canada, the 'women's auxiliary', and also with the Fellowship of the Maple Leaf, a teaching organization that aimed to inculcate values of empire, Englishness, and Anglicanism among settlers. She saw the diversity of nationalities and religions in western Canada as a potential threat to the moral development of the children there and she feared in particular the rise of militant atheism. There were 1700 'Bolshevist Sunday schools' in western Canada, she informed a meeting of the Society for Promoting Christian Knowledge in London, in March 1930, warning that the Bolsheviks were better organized than the Christians. Believing that poverty was a key factor in the spread of Bolshevism, she argued that the mother country must do more to support Canadian farmers. She told a London audience in February 1931:

> It is no wonder that feeling sometimes runs high that Britain should buy her wheat from Russia and Germany, instead of from her dominions; these settlers had been persuaded to leave England for Canada only to be left to starve. (*The Times*, 13 Feb 1931)

Her religious work was inextricably bound up with the advance of empire, in which she believed Canada would play an important part: 'This nation in the making may be a great power, for good or evil, when the Mother Country is on the wane' (Hasell, *Through Western Canada*, 252).

In the 1950s Hasell reluctantly gave up her missionary work and retired to her Lake District home, Dacre Lodge, Dacre, in Penrith. She had been created MBE in 1935. In 1965 she became the first woman awarded the degree of doctor of divinity by the College of St Emmanuel and St Chad, Saskatoon, and in 1969 she was invested as an officer of the order of Canada. Hasell, who wrote three books about her caravan experiences, died, unmarried, at Penrith Hospital, Penrith, on 3 May 1974.

Hasilwode [Haselwood], **Thomas** (*fl.* 1321), chronicler and Augustinian canon, of Leeds Priory, Kent, is said by John Bale to have acted as a schoolmaster at the priory, teaching the young in 1321 (Bale, *Cat.*, 1.398). He is also said to have devoted himself to the reading of history, and to have compiled a *Chronicon compendiarum* as well as other works; Bale had not seen this chronicle (or he would have stated its opening words), and he appears to have relied on a statement by William Worcester, whose collectanea he cites; however, this cannot now be verified.

John Weever, in his *Ancient Funerall Monuments* (1631), quotes a short eulogistic account of Edward, the Black Prince, from the 'compendious chronicle' of Canterbury in the Cotton Library, which he says was written by Hasilwode, but his quotation is merely from the *Chronica bona et compendiosa de regibus Angliae* or *Abbreviationes chronicorum*, which comes down to 1377 (or sometimes 1399). This survives in many copies, including five in the Cotton collection in the British Library, and there is no other ground for attributing its authorship to Hasilwode; it has sometimes been ascribed to Ranulf Higden. NIGEL RAMSAY

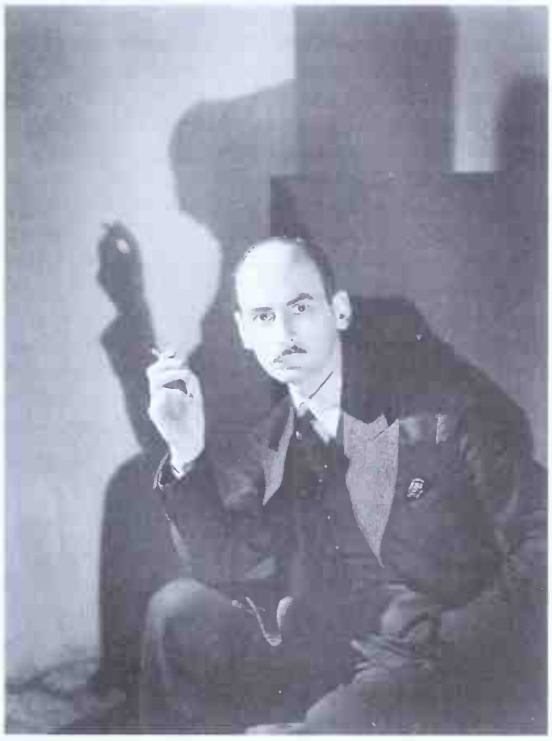
Haskell, Arnold Lionel David (1903–1980), ballet critic, was born on 19 July 1903 in London, the only child of Jacob Silas Haskell, banker, of Queen's Gate, London, and his wife, Emmy Mesritz. He was educated at Westminster School and at Trinity Hall, Cambridge, where he studied law, obtaining a second class (division two) in part one (1924). He received his BA with an *aegrotat* on account of



Arnold Lionel David Haskell (1903–1980), by Gordon Anthony, 1937

illness, and, after a brief and unsuccessful attempt at business, worked as a reader for William Heinemann Ltd from 1927 to 1932. He was a joint founder of the Camargo Society in 1930, from 1933 to 1934 worked as an administrative assistant to Colonel De Basil's Russian Ballet on its American tour, and in 1934 published a widely successful book, *Balletomania*, adding that word to the language. From 1935 to 1938 he was dance critic to the *Daily Telegraph* and again worked with the Russian Ballet on its Australian tour of 1938–9. During the Second World War he assisted air raid precautions and gave lecture tours for the forces and industry. In 1946 he was asked by Ninette de Valois to become director of the new Royal Ballet School, which became his main activity from 1946 to 1965.

Slight and small in build, Haskell had considerable charm and force of personality. He fell in love with ballet early in life, and, as a result of childhood friendship with Alicia Markova, had an immediate entrée to the dazzling world of the Diaghilev Ballet when Markova joined that company in 1925. His enthusiasm and attractive personality quickly gained friends among dancers and choreographers, and his wide interests as an avowed dilettante, particularly in sculpture and painting, but also literature and music, gave him the necessary intellectual background to make the most of the Diaghilev company, then reaching the height of its influence as the élitist avant-garde of Parisian culture.

Yet Haskell's real strength was as a popularizer, and in a stream of books and articles on ballet, all well written and compulsively readable, he helped to spread enthusiasm for ballet from a small if influential upper-class opera house audience to the average middle-class theatre-going public. During the 1930s De Basil's Russian Ballet, gathering popular success on the coat-tails of Diaghilev's status and largely depending on past achievement, captured Haskell's allegiance more than the struggling British Ballet, but by 1946 what was to become the Royal Ballet was firmly established, and, as director of its school for the first two crucial decades, Haskell established as an educator a style and an ambience that influenced succeeding generations of dancers. His urbane, civilized, and tolerant approach helped to counterbalance the fiercely competitive pressures inevitable in a specialized school where pupils were very much aware that only a few precious places would be available at the end of each year in the dance company itself.

Appropriately for a ballet critic Haskell was fascinated by sculpture, vigorously defending Jacob Epstein in *The Sculptor Speaks* (1931). After visiting Australia with the Russian Ballet in 1938 he wrote three books on Australia, *Waltzing Matilda* (1940), *Australia* (1941), and *The Australians* (1943). He also wrote two books of autobiography, *In his True Centre* (1951) and *Balletomane at Large* (1972), but his major achievement rests on over twenty books on the art of ballet. Closely in touch with dancers and choreographers, his judgement widened and assisted by his lifelong enthusiasms in so many arts, he approached new work with an open mind, was sympathetic to current trends, and had a rare gift for defending, explaining, and clarifying for his readers what ballet was attempting to achieve. His careful analysis invariably spotted what was wrong as well as what was right, and as a critic his kind but firm integrity shone through everything he wrote. The development of British ballet was fortunate to have such a persuasive and influential publicist to espouse its cause in its vital early years, and the subsequent popularity of the art owed something to Haskell's efforts as well as to the dancers, choreographers, composers, and designers he wrote about so attractively.

In 1927 Haskell married Vera Saitsova (*d.* 1968), daughter of Mark Saitzoff, a Russian émigré industrialist; they had two sons, one of whom, Francis James Herbert Haskell (1928–2000), became professor of the history of art at Oxford University, and one daughter. In 1970 he married Vivienne Diana, third daughter of Arthur Tristman Marks, mining engineer, and sister of Alicia Markova. Haskell died at his home, 6A Cavendish Crescent, Bath, on 15 November 1980.

He became a chevalier of the Légion d'honneur (1950), was appointed CBE (1954), was awarded an honorary degree of DLitt by Bath (1974), became FRSL (1977), and won the Queen Elizabeth coronation award of the Royal Academy of Dancing (1979).

Haskell, Francis James Herbert (1928–2000), art historian, was born on 7 April 1928 in London, the eldest of three children (two sons and one daughter) of Arnold Lionel David *Haskell (1903–1980), a ballet critic, and Vera Saitsova (*d.* 1968), a Russian émigrée. His parents' common language was French, which Francis spoke before he learned English. He was educated at the London Lycée and later at Eton College, where he was a scholar, specializing in science. His initial ambition was to study medicine. Immediately after the Second World War he visited Paris, where he attended some of the trials of the Vichy collaborators in order to experience a major historical event at first hand. After a period of military service in the education corps, in 1948 he went up to King's College, Cambridge, where he read history and then English. His tutors included the young Eric Hobsbawm, who remained a lifelong friend, and Dadie Rylands, who later eliminated hundreds of adjectives from his first book.

After taking his degree, Haskell was given a grant by his college to write a fellowship dissertation. The topic was suggested by Nikolaus Pevsner, then Slade professor of the history of art at Cambridge. Pevsner proposed that he should investigate the relationship between baroque art and the Jesuits. The notion that changes in artistic style closely mirrored wider intellectual developments was then widely accepted, and the idea that there was some link between the Jesuit mentality and the baroque was something of a commonplace. Pevsner probably expected that Haskell would explore this relationship by means of analogies, but instead his pupil chose to investigate what had actually happened. On his arrival in Rome in 1951 he had the good fortune to live briefly with a well-connected Catholic family, and was thus able to gain access to the Jesuit archives. He soon realized that in their early days the Jesuits were extremely poor and that they had little say in the crucial decisions about the decoration of their principal churches, which instead were taken by wealthy patrons with agendas of their own. The Jesuit style, in short, was a myth.

Haskell completed his dissertation while working as a clerk in the House of Commons library, and in 1954 he was awarded a fellowship at King's, which was to remain his home until 1967, and whose distinctive intellectual and social ambience he found extremely congenial. But instead of publishing a specialized study based directly on his research, he chose instead to attempt something much more ambitious, extending his studies to provide a survey of Italian patronage from the beginning of the seventeenth century to the end of the eighteenth. The result was *Patrons and painters: a study in the relations between Italian art and society in the age of the baroque* (1963), which remains his most famous and influential book. The topic was one on which the secondary literature was still very limited and the abundant primary sources scarcely explored. To survey this material was a prodigious achievement, based on exceptionally wide reading, on massive archival research, and on a familiarity with the works of art themselves which few scholars could then equal. Haskell himself later stated that the encouragement of the émigré scholars at the Warburg Institute and the resources of its unique library were decisive for the direction of his work. He was not the first to shift the focus away from the artists themselves to those who employed them, but he did so without ideological preconceptions and with notable insight into the motives and personalities of a huge range of characters.

In 1962, while completing his research in Venice, Haskell met Larissa Salmina, curator of Venetian drawings at the Hermitage, who was then acting as commissar at the Soviet pavilion at the Biennale. Three years later they were married in a Soviet palace of weddings in Leningrad. Given Haskell's apparent incapacity when confronted with any practical problem, as well as his deeply rooted pessimism and anxiety, the fact that he managed to obtain the consent of the Soviet authorities seems scarcely credible, and without the influential help of his father, whose status as an expert on ballet had gained him great prestige in the eyes of the Russians, it would never have happened. From the moment Larissa arrived in Cambridge six months later, she and Haskell were inseparable, and their marriage gave him a happiness and a security he had never expected to find.

In 1967 Haskell was appointed professor of the history of art in Oxford, a post which he held until his retirement in 1995, and which was associated with a fellowship at Trinity College. By this time he had decided to study an entirely new topic, one related to his teaching in Oxford, namely the process by which French academic art of the nineteenth century lost its prestige and ceased to be admired. His research, which paralleled a similar reappraisal undertaken by scholars in France, led to a series of important articles. It also encouraged him to turn his department in Oxford into a centre of international importance for the study of French art and attracted a series of highly gifted doctoral students.

Related to his research on French art was his second major book, *Rediscoveries in Art* (1976), based on his 1973 Wrightsman lectures at the Metropolitan Museum of Art in New York. Here he extended his work on French art to explore the dramatic changes in the canon of great artists in the late eighteenth and nineteenth centuries, showing how such developments were often prompted by accidents of history and the vagaries of the art market. His conclusions provided a powerful challenge to the prevailing idea of art as a repository of timeless values. A similar idea underlay *Taste and the Antique* (1981), written jointly with Nicholas Penny; this was concerned with the rise and fall of the taste for a number of ancient, principally Roman, statues, which for centuries were widely regarded as the supreme creations of Western art, before being almost entirely forgotten except by a small number of specialists.

In *History and its Images* (1993) Haskell returned to some of the issues that had preoccupied him in his early

research on the Jesuits, namely the use, or more often misuse, of art by historians, from the late middle ages until the early years of the twentieth century, and notably the idea that art provided a particularly sensitive indicator of wider social attitudes and ideals. The subject was too vast and too diffuse to permit a comprehensive treatment, and Haskell's conclusions were characteristically tentative and nuanced. The great value of the book lies in the range of topics that he examined and the issues that he raised, as well as in the characteristic scepticism of his conclusions. His last book, *The Ephemeral Museum* (2000), was again concerned with an unexplored but important topic, the growth of exhibitions of old master paintings, a phenomenon about which he had ambivalent feelings.

Rather than concentrating on artists and their works, Haskell chose to study the circumstances which led to the production of art and the responses it aroused among contemporaries and later generations. In doing so, he extended the frontiers of his subject more than any other scholar of his generation. Scornful of all talk of theory, he was an empirical historian of exceptional range and originality, with an unsurpassed gift for asking new questions. He was also convinced of the need to understand as fully as possible the character, attitudes, and foibles of those he studied. His writing was informed by an encyclopaedic knowledge of European art acquired through constant travel with Larissa, which was his greatest pleasure. In his later years, having overcome a fear of flying which had long confined him to Europe, he was also a regular visitor to the Getty Research Center in Los Angeles.

Haskell lectured with equal fluency in English, French, and Italian. His house at Walton Street in Oxford, presided over by Larissa, was the centre of a vast and international network of friends, which included many of the leading art historians of his day, as well as past and present students. Witty, gregarious, candid, and entirely without solemnity or self-importance, Haskell was wonderful and wonderfully indiscreet company. He was also a highly effective member of committees concerned with the support of museums and of the study of art history. Elected a fellow of the British Academy in 1971, he was awarded their Serena medal for Italian studies in 1985. A chevalier of the Légion d'honneur, he was a corresponding or honorary member of ten foreign or learned societies and an honorary fellow of King's College, Cambridge, and Trinity College, Oxford. When he learned, late in 1999, that he had incurable liver cancer, he set to work to complete his last book, while continuing to receive a stream of friends from all over the world. He died at home in Oxford on 18 January 2000 and was cremated at Oxford crematorium on 25 January. CHARLES HOPE

Haslam, Sir Alfred Seale (1844–1927), engineer and politician, was born on 27 October 1844 in Derby, the fourth of the five sons and the fourth of the eight children of William Haslam, ironmaster of Derby, and his wife, Ann, daughter of Joseph Smith of Branstone, Staffordshire. He was educated privately in Derby and was taken into apprenticeship with the Midland Railway Company. Once qualified, he joined the firm of Sir William G. Armstrong in London as a hydraulic engineer. In 1868, in partnership with his father and financed by his uncle Joseph Smith, he purchased the old Union foundry in Derby.

He started the Haslam engineering works with a staff of twenty and by 1871 he was able to repay the loan from his uncle and later dissolve the partnership with his father, leaving himself in sole charge. By 1876 the firm had become a limited company. In 1875 he married Annie (*d.* 1924), the daughter of Thomas Tatam, farmer, of Little Eaton, Derbyshire. They had three sons, one of whom was killed in the First World War, and three daughters.

Haslam was a perceptive developer of the promising research of others, having that rare combination of commercial acumen and technical expertise, making him one of the great engineers. He could see that refrigeration would bring about a complete change in people's lifestyles and in 1880 he took over the patents of the Bell–Coleman cold-air machine and developed what was known as the dry air refrigerator. The excellence of this machine eventually gave him a monopoly in refrigerated shipping. His equipment on board ship and on land enabled British people to enjoy meat, fruits, and other perishable products from countries overseas. On 5 October 1881 the SS *Orient* docked at Plymouth with 150 tons of frozen Australian meat on board, an event described vividly by many newspapers (for example, *Daily News*, 5 October).

By 1900 the dry air refrigerator had lost its place to chemical machines using carbon dioxide or ammonia. Haslam produced equipment using these refrigerants for most purposes where cold was required, such as meat freezing stations, meat cargoes on board ship, cold stores of all kinds for perishable food, ice factories, chemical works, dye works, and works for the manufacture and storage of explosives and ammunition on land and on warships.

Haslam also played a busy role in public life. In 1879 he became a Derby town councillor and in 1886 was made a JP for the borough. In 1890 he was elected mayor of Derby and in 1891 became JP for the county. His biggest achievement in his year of office was the replacement of the old William Strutt Infirmary. He invited Queen Victoria to lay the foundation stone for the new Derbyshire Royal Infirmary and at the end of her visit she knighted Haslam (1891).

Politically Haslam was prominent in the Liberal Unionist cause. In 1892 he unsuccessfully contested Derby, but

he entered parliament in 1900 as a representative of Newcastle under Lyme, retaining his seat until the election of 1906. He was a generous benefactor—for example, he presented bronze statues of Queen Victoria to Newcastle under Lyme, Derby, and London.

His fellowships and honours were numerous and included membership of the Iron and Steel Institute, the Institution of Mechanical Engineers, the Royal Institution, and the Institute of Refrigeration, of which he was president in 1914–15. He was a liveryman of the City of London and in 1905 was presented with the freedom of Newcastle under Lyme, having occupied the chair of mayor for three consecutive years (1901–4).

Haslam died at the St Pancras Hotel, London, on 13 January 1927 while on a business trip. He was buried in Morley churchyard, Derbyshire. Two sons and a daughter predeceased him. A. J. COOPER, *rev.*

Haslam [*née* Fisher], **Anna Maria** (1829–1922), campaigner for women's rights, was born in Youghal, co. Cork, in April 1829, sixteenth of the seventeen children of Abraham Fisher (1783–1871), a corn miller, and his wife, Jane Moor (1789–1877), of Neath, Wales. She had eight sisters and eight brothers. She was educated at the Quaker school at Newtown, co. Waterford, from 1840 to 1842, and then, until 1845, at the Quaker school at Castlegate in York. Her parents were active in the anti-slavery, temperance, and international peace movements, and the family helped in a soup kitchen in Youghal during the great famine. Anna later linked her activism in women's rights to her upbringing, noting in an interview that she 'could not remember any time when she was not a believer in women's equality. It came to her naturally and was always taken for granted in her household' (*Irish Citizen*, 21 March 1914).

From 1847 Anna taught at Ackworth School, Yorkshire, where she met her future husband, a fellow teacher, **Thomas Joseph Haslam** (1825–1917). Born in Mountmellick, Queen's county, he had been educated at the Quaker provincial school in that town. In 1840 he became an apprentice teacher at the Friends' School, Lisburn. He became interested in the issue of women's suffrage from reading the works of Herbert Spencer. The couple returned to Ireland and married in Cork in 1854. They then moved to Dublin, where Thomas was employed as a clerk, but in 1866 his health broke down and Anna was left to support them both. This she did by opening a 'stationer's and fancy goods repository' at their home in Rathmines, Dublin; the business survived until 1906, when the assistance of friends made the enterprise unnecessary. The nature of Thomas's illness remains a mystery, and he continued to be an active scholar, a member of the Rathmines Public Library Committee, and a 'great figure' at the Dublin Friends Institute, where he regularly read papers. The marriage appears to have been a particularly happy one; there were no children. The suffragist Margaret Cousins, who met the Haslams in 1906, described them as 'a remarkable old pair, devoted to one another and dedicated to the cause of the advancement and enfranchisement of women ... she a dynamo of energy, small and sturdy; he intellectual, tall, rather like a university don, a good speaker, very refined and kindly' (Cousins and Cousins, 129).

Anna Haslam's interests spanned a range of organizations and campaigns. In 1861 she helped establish the Irish Society for the Training and Employment of Educated Women in Dublin. She campaigned to have girls included in the Intermediate Education (Ireland) Act of 1878, and in 1882 was involved in setting up the Association of Schoolmistresses and Other Ladies Interested in Irish Education, which sought to protect rights won for girls' education and to fight for further changes. In 1870 she established a branch of the Ladies' National Association for the Repeal of the Contagious Diseases Acts in Dublin. She also served as an executive committee member of the National Association for the Repeal of the Contagious Diseases Acts. In 1886 she became secretary to the Women's Vigilance Committee, part of the social purity movement which developed from the Contagious Diseases Acts campaign. When the First World War broke out in 1914 she was instrumental in setting up 'women patrols' which aimed to keep young girls off the streets of Dublin for fear they would fall into prostitution.

Anna Haslam established the first suffrage society in Dublin in 1876. After many name changes, this organization was to become the Irish Women's Suffrage and Local Government Association (IWSLGA) in 1901. She was secretary to this association from 1876 until 1913, and was then elected life president. A pacifist throughout her life, she did not support the militant tactics of the Irish Women's Franchise League. In addition to campaigning for the national franchise, the IWSLGA also sought to win the right for women to become poor-law guardians and to vote in municipal elections, rights which were eventually won in 1896 and 1898 respectively. Anna Haslam, a leading figure in these campaigns, wrote a number of articles on these issues in the *Englishwoman's Review*.

Anna Haslam was a staunch unionist and opposed the introduction of home rule for Ireland, fearing that its passage would result in the loyalists of Ireland being 'politically extinguished'. She nevertheless welcomed women and men of all political persuasions and all religious denominations into her organizations. To the end of her life she was held in very real affection by feminists of widely differing political opinions.

In the 1918 election, the first in which women over thirty were allowed to vote, Anna Haslam was paraded to the polling booth by members of different suffrage groups, as a symbol of the long years of struggle to attain the franchise. Thomas Haslam, a significant feminist in his own right, did not live to see his wife cast her vote. Like his wife, he had devoted his energies to securing rights for

women, and had been active in the IWSLGA. Interested in birth control, he published *The Marriage Problem* on the subject in 1868 under the pseudonym Oedipus. In 1870 he wrote a pamphlet, *A Few Words on Prostitution and the Contagious Diseases Acts*, as a contribution to the Irish campaign for the repeal of the acts. He published the first newspaper in Ireland to support women's suffrage, the *Women's Advocate*; but it ran to only three issues, in April, May, and July 1874. He wrote a number of pamphlets on women's suffrage, the last being published in 1916, a year before his death. He was buried in the Quaker burial-ground at Temple Hill, Blackrock, in co. Dublin. Anna Haslam died in Dublin on 28 November 1922 at the age of ninety-three, and was buried beside her husband in the Quaker burial-ground.

Haslam, John (*bap.* 1764, *d.* 1844), physician and specialist in insanity, was baptized at St John Zachary, London, on 12 February 1764, the son of John Haslam (1737–1829), and his wife, Mary. Little is known of Haslam's early life. After serving a period of apprenticeship he gained clinical experience as a student and subsequently as a house surgeon at St Bartholomew's Hospital, London, attending the lectures of George Fordyce (1736–1802) and serving as a pupil under David Pitcairn (1749–1809). Subsequently, during 1785–7, Haslam pursued his education at Edinburgh University, the leading centre for medical instruction at the time, attending lectures and becoming acquainted with Andrew Duncan sen. (1744–1828) and the young Thomas Beddoes (1760–1808). Haslam took an energetic role in student life, writing dissertations for the university's medical society, of which he was president in 1786, and defending student rights of admission to the Edinburgh Royal Infirmary. He proceeded to take further studies in Uppsala, Sweden, finally enrolling as a student at Pembroke College, Cambridge, but did not take the degree of MD. Lacking the qualification required to practise as a physician in London, Haslam qualified instead as a member of the Company of Surgeons.

Haslam was appointed as resident apothecary to Bethlem Hospital in July 1795. His starting salary of £100 per year, with additional supplements for necessaries and furniture, was ultimately raised to £335 as the hospital's governors grew more appreciative of the demands of the post. Although subordinate to the physician, Haslam's duties were the most exacting of any medical officer at Bethlem, requiring him to visit patients every morning at least, to supervise the keepers' management of them and to oversee the preparation and quality of all medicaments. Serving in that capacity until 1816 Haslam succeeded for almost two decades in building up a creditable reputation as an experienced and able specialist, in particular through a number of early and widely read publications on insanity. While at Bethlem, Haslam also received regular payments for recommending patients to Sir John Miles's Hoxton madhouse, and for his twice-weekly inspections of naval patients at Hoxton.

However, Haslam's record and reputation were seriously marred when he forfeited his office (along with the physician, Thomas Monro (1759–1833)) as a result of the 1815–16 House of Commons select committee enquiry into madhouses. Its report made trenchant and resounding criticisms of the conditions and treatment of patients at Bethlem, and also of the naval patients Haslam had been responsible for scrutinizing. Haslam's case was not helped by the way in which he and other Bethlem officers turned upon each other under cross-examination. To some extent Haslam was made a medical scapegoat by asylum reformers and Bethlem's own governors for the endemic failings of old Bedlam's management and an increasingly outmoded style of therapeutics. Certainly, he had only limited authority over the attendants with whom many of the abuses originated. Yet, as the medical officer most regularly in attendance (even if his day-to-day influence may have declined after 1803, when he was obliged to live outside of the hospital), Haslam was perhaps more responsible than any other officer for the abuses exposed by the reformers. His attempts to explain away the severity of mechanical restraint employed at Bethlem and the evidence of abuse and neglect of patients' health and comfort reveal how entrenched was the ineffective managerial and therapeutic mindset at the hospital. Haslam and Monro made spirited defences of their conduct in some observations addressed to the governors which they immediately published (in 1816), but to no avail. Having originally supported their medical officers the hospital's governors eventually caved in under the combined pressure of political and press influence and the weight of public opinion, as much as a result of the evidence thrust before them. In May 1816 they voted resoundingly not to re-elect Haslam and Monro to their posts, and cast Haslam off without a pension. Lacking a livelihood Haslam was forced within months of his dismissal to auction off his large library. Two years later he published a letter to the Bethlem governors confirming (while denying personal responsibility for) the failings of inferior officers and implicating the governors for their mismanagement of the institution over the previous twenty years.

Haslam was a prolific author on various aspects of mental diseases. His earliest and major work was *Observations on Insanity* (1798). The book, translated into German as early as 1800, was greatly enlarged and retitled for its second edition in 1809. Despite its somewhat exaggerated claims for uniqueness, it was widely read by fellow specialists, and incorporated one of the earliest statistical surveys of insanity. Haslam's commitment to detailed

post-mortem investigation in order to understand the pathology of mental diseases won particular plaudits from other authors, including Francis Willis jun. and Thomas Mayo (1790–1871). Although occasional aspersions were cast on Haslam's intellectual rigour in some quarters of the English medical press, especially after his somewhat disgraceful exit from Bethlem, his writings on insanity generally received a great deal of praise, especially from conservative colleagues who shared Haslam's faith in experience as the key to success in mental science and his disdain for lay interference in asylums. His publications and their promotion of some of the tenets of moral management helped to ensure that Haslam's reputation as a specialist on mental diseases remained high, especially on the continent where his books were in great currency. Philippe Pinel (1745–1826) repeatedly made reference to Haslam's work in his *Treatise on Mental Alienation* (1801), Haslam returning the compliment in his own second edition. Haslam's stress on management via gentleness and kindness, and via the moral authority of the mad-doctor, chimed in particularly strongly with Pinel and a new generation of asylum practitioners beginning to espouse moral (more than medical) means of treating the insane. The English doyen of moral therapy, Samuel Tuke (1784–1857), likewise accorded Haslam repeated endorsements in his *Description of the [York] Retreat* (1813). Others among Haslam's contemporaries were more critical. Joseph Mason Cox (1762–1822), for example, sniped intermittently at his assertions, and criticized Haslam's somewhat bigoted attitude to Methodism and views on the role of religion in encouraging insanity. However, Cox himself had been piqued by Haslam's criticisms of his own first edition, and such critics were mostly in the minority.

Despite Haslam's advocacy of some of the tenets of the new moral therapy, the discoveries of the 1815–16 committee on madhouses had revealed the superficiality of his status as an especially progressive practitioner of moral management. Indeed, Haslam still remained wedded to techniques more redolent of older, 'terrific' forms of management. For example, he was renowned for his defence of mechanical restraint with chains as more practical and more humane than strait waistcoats. He was also distinguished for inventing and promoting an instrument for the more effectual force-feeding of patients, known as Haslam's key, which he claimed made damage to patients' teeth less liable to occur. Although a practical device in its time, by the 1850s it was being taken (somewhat out of context) as a symbol of dark age asylumdom.

Haslam has also been distinguished for being the first English practitioner to publish a book devoted to a single psychiatric case history. His *Illustrations of Madness* (1810) in which he presented the case of the Bethlem patient James Tilly Matthews has often been seen by modern psychiatrists and historians as one of the earliest and most complete presentations allowing for a confident retrospective diagnosis of schizophrenia. However, Haslam's approach to Matthews's case had a propensity to dismiss the testimony of the insane as meaningless, and his design of merely illustrating madness, by presenting Matthews's words verbatim as self-evidently mad, and therefore not worth much deeper exploration, was not free of a tendency to ridicule his patient. Ironically, Matthews was to have his posthumous revenge: Matthews had passed on documents to the 1815–16 parliamentary committee which had helped to expose Haslam and other medical officers to charges of medical negligence and cruelty.

Aggrieved by what he saw as his unfair treatment at Bethlem, Haslam devoted more and more attention to his publications and to securing a path back to a respectable position within the medical establishment. Uncontrite and arrogant, if not indignant, towards his critics, he proceeded in ensuing publications to defend his record at Bethlem, and to go on the attack against the reformers and against his former employers. Firmly dissociating himself from the proponents of moral treatment, his tract on the subject (1817) assailed those who threatened to supplant medicine and medical officers with lay managers, and to dispense with mechanical restraint. In subsequent publications he censured those framing a bill to set up a central madhouses inspectorate for their inexperience and antipathy towards medical practitioners. His treatise *Medical Jurisprudence* (1817) sought further to assert the importance of medical expertise on insanity and his own claims to such. From early in his career Haslam had begun to establish his reputation and bolster his income as an expert witness in insanity trials. It was on this experience that he relied for his 1817 treatise, and his work on the subject was cited approvingly by a number of subsequent authors. Other publications, such as his book *Sound Mind* (1819) and a letter to the lord chancellor (1823) on the same subject with reference to Lord Portsmouth's case, attempted to define more clearly the criteria on which insanity should be defined.

Haslam continued to practise medicine privately after his ousting from Bethlem, including certifying patients for admission to private madhouses. He gained the degree of MD from Marischal College, Aberdeen, on 17 September 1816, but this did not permit him to practise in London. It was evidently with a view to complying with College of Physicians regulations for medical practice that Haslam enrolled at Pembroke College. He finally gained a licence to practise medicine in the metropolis from the Royal College of Physicians on 12 April 1824 but was never elected a fellow. A month later he paid the 50 guineas required to become a governor of St Bartholomew's Hospital, and also gained election as a governor of St Luke's. During 1826–8 Haslam delivered a course of public lectures before the London Medical Society, comprising one on the study of the human mind and a course of six on the intellectual composition of man; these were well received and were published in *The Lancet*. In such ways Haslam was clearly seeking to rebuild his reputation, an ambition he realized with qualified success. Notably, in 1827 he was elected president of the Medical Society, chairing its meetings until 1829. Haslam seems to have been on friendly terms with the famous anatomist John Hunter (1728–

1793), whom he had studied under at Edinburgh, but he was rather closer to Alexander Morison (1779–1866), physician to Bethlem from 1835 to 1853. His intimate friendship with Dr William Kitchiner (1775–1827) saw him become one of the founding members of the Committee of Taste, a small dining and conversational club. His relations with these men and others, such as William Jerdan (1782–1869), the editor of the *London Literary Gazette*, to which Haslam was a regular contributor, permitted him to widen his social circle, and to cement his links with sympathetic figures within and outside of the medical profession, while sniping in print at others he disagreed with.

In subsequent years Haslam persisted in his defence of traditional therapeutics against the claims of asylum reformers which he attacked in his writings as fashionable, pseudo-philanthropy. Following the report of the parliamentary select committee of 1827 and the ensuing legislation of 1828, which saw a metropolitan commission established to inspect madhouses in the city, Haslam published an impassioned and comprehensive attack on the commission and on the wider programme of the reformers. Allying himself with other critics within the profession and the college, who resented central and lay interference in medical matters, Haslam published a letter to the commissioners (1830), in particular condemning the involvement of 'ignorant' laymen in asylum visitation and administration as 'detrimental interference', and censuring the influence of religious evangelicals on the committee's composition and on the reform movement in general. In *On the Nature of Thought* (1835) he rehashed many of the propositions he had made in *Sound Mind*. Haslam was also one of the first to join and deliver a paper before the Society for Improving the Condition of the Insane (founded in 1842 by his friend Alexander Morison), attacking the non-restraint movement and endorsing the historical and continuing importance of restraint in the treatment of insanity. The last papers he gave, on the distinction between crime and insanity and on the causes of the increase of insanity, were delivered before the same society, the first asserting the need for expert psychiatric assessment before trials, and the latter complaining about the premature discharge of asylum patients.

Haslam and his wife (*d.* before 1825) had two children. His first born, also named John Haslam, was baptized in 1790 at St Leonard's Church, Shoreditch, became a naval surgeon, and occasionally substituted for his father at Bethlem. By the 1820s the family was living at 1 Hart Street, Bloomsbury. In 1830, relying on and inspired by the experience she had gained as a result of her father's long career in the asylum business, Haslam's widowed daughter, Henrietta Hunter, succeeded in securing the post of matron to Dundee Asylum, where she served until 1840. In that year she was appointed in the same capacity to Bethlem, until yet another official enquiry and scandalous revelations forced her own and the physician's resignation (for neglect of duty) in 1852.

By the 1840s Haslam had retired from active medical practice. He died of 'debility' at his house at 56 Lamb's Conduit Street, St George the Martyr, London, on 20 July 1844. JONATHAN ANDREWS

Haslem, John (1808–1884), enamel painter, was born in Carrington, Cheshire, and baptized on 21 February 1808. He left home as a boy to live at Derby with his uncle, James Thomason, afterwards manager of the Derby china works. He entered the china works at the age of fourteen and he studied under George Hancock. He spent thirteen years there as a china painter, when he first devoted himself to flower painting, but subsequently took to figure painting, in which he was very successful. He painted *c.*1830 for the duke of Sussex a miniature of Lord Byron after the portrait by Thomas Phillips (1813; priv. coll., version at Newstead Abbey, Nottinghamshire) as a present for Otto, king of Greece, and at the duke's instigation went to London and studied under E. T. Parris. He copied many pictures in miniature on enamel, and was a frequent exhibitor at the Royal Academy from 1836 to 1865. In 1843 he obtained a silver medal from the Society of Arts for a portrait on china. He painted a small enamel portrait of Queen Victoria, and thenceforward obtained many

commissions from the royal family and the nobility, especially for copies of ancestral portraits. He was also frequently employed by jewellers and art dealers, and on one occasion was employed to paint a set of enamels in imitation of miniatures by Jean Petitot, which were so successful that they appeared in the loan exhibition at South Kensington in 1862 and the exhibition of portrait miniatures held there in 1865, as the work of Petitot himself. In 1857 Haslem returned to reside with his uncle in Osmaston Road, Derby, where he died on 30 April 1884. He was apparently unmarried. In 1876 he published *The Old Derby China Factory: the Workmen and their Productions*.

Hasler, Herbert George (1914–1987), inventor of sailing equipment and Royal Marines officer, was born in Dublin on 27 February 1914, the younger child and younger son of Lieutenant Arthur Thomas Hasler, quartermaster, of the Royal Army Medical Corps, and his wife, Annie Georgina Andrews. His father was drowned when the troopship *Transylvania* was torpedoed on 4 May 1917, leaving his mother to bring up the young boys on her own. She sent Herbert, with a bursary, to Wellington College, where he distinguished himself at cross-country running, rugby football, and as captain of swimming. He also boxed but, according to him, with rather less distinction.

Blondie Hasler, as he became known, except to his family, because of his (thinning) blond hair and fair moustache, combined remarkable powers of physical endurance with above average strength and fitness (he was about 6 feet tall). Yet, throughout his subsequent career, he was loath to take advantage of these attributes, although they stood him in good stead in war and peace, preferring a well-reasoned, calm, and quietly conducted discussion to make his case. He also hated punishing men under his command, believing that their failure was the result of his lack of leadership. He had a totally original mind.

Hasler was commissioned into the Royal Marines on 1 September 1932, and by 1935 had already achieved yachting distinction by sailing a 12 foot dinghy single-handed from Plymouth to Portsmouth and back again. It was then that he began expounding advanced nautical theories through illustrated articles in the international press—a hobby that he pursued until his death. After the Second World War broke out, as fleet landing officer in Scapa Flow in 1940, he was sent to Narvik in support of the French Foreign Legion. In just a few weeks he was appointed OBE, mentioned in dispatches, and awarded the Croix de Guerre.

On his return he wrote a paper suggesting the use of canoes and underwater swimmers to attack enemy shipping, but this was rejected by combined operations as being too radical and impracticable. However, in January 1942 Hasler was appointed to the combined operations development centre where, after the Italians had severely damaged HMS *Queen Elizabeth* and HMS *Valiant* in Alexandria harbour by the use of 'human torpedoes', his paper was immediately resurrected. He was ordered to form the Royal Marines boom patrol detachment (later to be dubbed the 'Cockleshell heroes'—an expression of which he disapproved). When the problem of blockade-runners operating out of Bordeaux was identified in September, Hasler had his solution ready the next day. The submarine HMS *Tuna* launched a raid on the night of 7 December 1942. Four men out of the original twelve reached the target in tiny two-man canoes, and only two, Hasler and Corporal Bill Sparks (1922–2002), returned, having made their way overland to Spain. Hasler was recommended for the VC, but was technically ineligible, having not been fired on. He was appointed DSO. The episode was turned into a film, *Cockleshell Heroes* (1955), which was only loosely based on fact; it starred José Ferrer and Trevor Howard.

Subsequently, Hasler experimented with different methods of attack, employing some of these ideas between 1944 and 1945 while serving as training and development officer with 385 Royal Marines detachment in the small operations group (Ceylon), planning submarine- and flying boat-launched raids into Burma.

In 1946 Hasler won the Royal Ocean Racing Club's class three championships in his unconventional yacht, the 30 square-metre *Tre Sang*. This was a remarkable achievement for a young officer. Hasler was invalided out of the Royal Marines in 1948 with the wartime rank of lieutenant-colonel. Retirement now allowed him time to concentrate on exploring, writing (in 1957 he wrote a play with Rosamund Pilcher, *The Tulip Major*, which was performed in Dundee), inventing, and developing a wide range of ideas, many of which are still in daily use. They included a floating breakwater and towed dracones (Hasler developed an earlier idea into a feasible design for transporting bulk oil).

In 1952 Hasler published *Harbours and Anchorages of the North Coast of Brittany* (rev. 1965), which set the standard for the genre, but his greatest civilian triumphs of invention—and quiet, gentlemanly persuasion—were yet to come. In 1953 he conceived and built *Jester*, based on a modified 26 foot Folkboat design, as a test bed for various sail plans (he eventually settled on the junk rig), and the internationally acclaimed, and first commercially successful, Hasler self-steering gear. *Jester* was a radical advance in British yacht design and she was not the last yacht to come from his drawing-board.

In 1957 Hasler proposed the idea of a quadrennial single-handed transatlantic race for yachts and after many setbacks this was sailed in 1960 by five yachts; Hasler came second in *Jester*. He followed this in 1962 with a search for the Loch Ness monster and in 1966 by the first quadrennial two-handed round-Britain and Ireland race, in which Hasler (again, the instigator) was crewed by his wife in the

equally radical *Sumner*. These two races spawned almost all modern, short-handed racing worldwide, with Hasler acknowledged as the founding father: he received a number of international awards. In his later years he moved to the west of Scotland, where he farmed organically and wrote *Practical Junk Rig* with J. K. McLeod (1988). His most important invention had been the self-steering gear, which became standard equipment and revolutionized sailing.

Hasler was married in 1965, when in his early fifties, to Bridget Mary Lindsay Fisher, then in her mid-twenties, the daughter of Rear-Admiral Ralph Lindsay Fisher, and herself an experienced yachtswoman. Despite the age difference the marriage brought them immense happiness and a son and a daughter. Hasler died of a heart attack in Glasgow on 5 May 1987. EWEN SOUTHBY-TAILYOUR, *rev.*

Hasleton, Richard (*fl.* 1577–1595), captain in the merchant marine, was born in Braintree, Essex. He sailed from London in May 1582 on board the *Mary Marten*. He states himself to have been nearly five years before this a captain in the Algiers trade. Bound for Petrach, he and his crew successfully discharged their business there and were headed for home some twenty-eight days later when their troubles began. The ship survived being grounded off Lepanto, but was then attacked and sunk by Turkish galleys, and Hasleton was forced to serve as a galley slave on a Turkish ship for two years. He managed to escape only to become a galley slave on a Genoan vessel, from where he was taken to a prison in Majorca. Brought before an inquisitor he consistently refused to abandon his allegiance to the Church of England in favour of Rome. He survived interrogation and imprisonment underground in solitary confinement for a year before managing to escape. He was recaptured and returned to prison, where followed further interrogation and torture, which he describes graphically in his later account.

Having escaped again, Hasleton managed to reach the Barbary coast, where he met with the only kindness in his ten years of misery when an old man gave him food and shelter and helped him on his way. He was, however, recaptured, and there began a new phase of his troubles in which various parties tried to convert him to Islam, as unsuccessfully as the Inquisition had tried to win him for Rome. Escapes proved only temporary before finally he reached Algiers. His hopes of reaching home shortly afterwards were dashed when he was pressed into slavery again on a Genoan galley after the English consul in Algiers had refused help. His final enslavement lasted three years before he finally managed to sail home on board the *Cherubim* of London, arriving home in February 1593. He describes his extraordinary adventures in *Strange and Wonderful Things* (1595), which is engagingly written and illustrated with woodcuts. Nothing further is known of Hasleton, other than that he was married and had children, but the details of his family are unknown.

Haslett, Dame Caroline Harriet (1895–1957), electrical engineer and electricity industry administrator, was born at Worth, Sussex, on 17 August 1895, the second of the five children of Robert Haslett (*b. c.*1864, *d.* after 1957), a railway signal fitter and a pioneer of the co-operative movement, and his wife, Caroline Sarah, formerly Holmes (*d. c.*1939). She was educated at Haywards Heath high school (1906–13) and then took a post as secretary with the Cochran Boiler Company. Clerical work did not particularly attract her and she asked to be transferred to the works where she was given practical engineering training. For a period she was associated with Sir Charles Parsons, the inventor of the Parsons turbine, in the promotion of a journal devoted especially to women in the engineering industry.

Haslett was the first secretary of the Women's Engineering Society founded in 1919 by Lady Parsons, wife of Sir Charles, and she edited the society's journal, *Woman Engineer*, from 1919 to 1932. Haslett was never an ardent feminist but perceived the possibilities of engineering to raise the whole social status of women. She did valuable work in persuading engineering institutions to admit women to their examinations and not least in inducing employers to engage female labour. She founded the Electrical Association for Women in 1924 and became its first director. Through this organization she exercised a powerful influence on the development of the domestic use of electricity, encouraged by progressively minded people in the electrical industry. A strong personality, Haslett yet had the capacity for self-elimination at public functions, almost invariably preferring to delegate to other women such activities as would bring them into prominence. She aroused intense loyalty and enthusiasm among her colleagues. She resigned the directorship in 1956 owing to ill health, remaining as an honorary adviser. Appointed CBE in 1931 and DBE in 1947, Caroline Haslett was a justice of the peace for the county of London and in 1932 was made a companion member of the Institution of Electrical Engineers. She was president of the Women's Engineering Society from 1939 to 1941.

An ardent champion of the causes she advocated, Dame Caroline spoke and wrote frequently on the subjects which she had at heart, and the pages of the *Electrical Age*, the journal of the Electrical Association for Women, which she edited from 1926 to 1956, reflect her tireless energy in promoting the development of electricity for domestic purposes. In 1934 she edited the *Electrical Handbook for Women*, which went through six editions during her lifetime, and in 1949 she wrote *Problems Have No Sex*. At

Dame Caroline Harriet Haslett (1895–1957), by Sir Gerald Kelly, c.1949

the time of her withdrawal from active work the association had 14,000 members, most of them housewives, domestic science teachers, and educationists, organized in 160 branches. The association continued to flourish after her death but by the 1980s it was clear that it was no longer attracting new members and it was voluntarily dissolved in 1986. Dame Caroline's solicitude for the well-being of women in their homes was only rivalled by her enthusiasm for the development of electricity as an agent in reducing domestic chores. She early realized the need for ensuring the safety and efficient design of these devices and devoted much of her energy to promoting this.

Dame Caroline was the first and only woman to be appointed a member of the British Electricity Authority on its inception in 1947 and to serve on its successors until the time of her death. Her keen mind and refreshing zest were a valuable asset to the newly integrated industry. Her practical wisdom and lively sense of humour did much to lessen the stresses and tensions of the early years when organization and human problems of some complexity had to be resolved. A motor vessel of the authority's collier fleet was named *Dame Caroline Haslett*, and the association founded the Caroline Haslett Trust to provide scholarships and travelling fellowships and exhibitions for its members.

Dame Caroline served on numerous public bodies including the British Institute of Management, the Industrial Welfare Society, the National Industrial Alliance, the British Electrical Development Association, the Royal Society of Arts, Bedford College for Women, the London School of Economics, Queen Elizabeth College, the Administrative Staff College, King's College of Household and Social Science, and the Crawley Development Corporation. She travelled widely, and on government missions, to the United States, Canada, Sweden, and Finland. She attended the World Power Conference several times as a British delegate and was the author of papers on home management to international scientific management congresses in Europe. In 1950 she became the president of the International Federation of Business and Professional Women. After the Second World War she took a leading part in conferences organized for women in Germany by the British and American authorities and at the invitation of the United States government visited the American zone of Germany to address conferences there.

Dame Caroline never swerved from her high purpose of raising the social status of women, and her flair for organization and administration, her integrity of mind, healthy common sense, and love of simple things endeared her to those who had the good fortune to work with her. She never married, although she maintained a close relationship with F. S. Button of the National Union of Railwaymen until his death in the 1940s.

When her health began to fail Dame Caroline left London to live with her widowed sister, Rosalind Messenger, at Worth Cottage, Bungay, Suffolk; she died there on 4 January 1957. In fulfilment of her wish to be cremated by electricity she was cremated at the City of London crematorium, Manor Park, and her ashes were scattered in its garden of remembrance. A memorial service was held on 25 January 1957 at St Martin-in-the-Fields, London.

Haslewood, Joseph (1769–1833), bibliographer and antiquary, was born at the lying-in hospital, Brownlow Street, Covent Garden, Westminster, on 5 November 1769, and baptized on 9 November, the son of Richard Haslewood and his wife, Mary Dewberry. He was apprenticed to his mother's brother, a solicitor in Conduit Street, and became a partner in the firm before eventually succeeding his uncle. From an early age he took a keen interest in early English literature, and although never wealthy he began to collect books. This brought him into contact with other antiquaries and book collectors, who found his enthusiasm and vigour congenial. His first literary publication was a collection of dramatic anecdotes, *Green-Room Gossip, or, Gravity Gallinipt* (by 'Gridiron Gabble, Gent., godson to Mother Goose', 1809); his choice of a mock-ancient

title was characteristic. He provided Sir Samuel Egerton Brydges with material for *Censura literaria* (1807–9) and *The British Bibliographer* (1810–14). Along with his friends Philip Bliss and Thomas Frognall Dibdin, Haslewood was a founder of the Roxburghe Club, which was started on 16 June 1812—the eve of the sale at record-breaking price of the Valdarfer Boccaccio (1471), part of the library of John, duke of Roxburghe.

By this time Haslewood had achieved some renown as an editor of early English literature; with Samuel Waller Singer, he became one of the most prolific publishers of sixteenth- and seventeenth-century texts. In 1810 he produced the first modern editions of Thomas Tusser's *Five Hundred Points of Good Husbandry* and of *The Book of St Albans*, then attributed to Juliana Berners. These were followed by Puttenham's *Arte of English Poesie* (1811), Painter's *The Palace of Pleasure* (1813), and *The Mirror of Magistrates* (1815); he was the first to draw attention to the importance of the last two as Shakespearian sources. His compilation *Antient Critical Essays upon English Poets and Poesy* (1811–15) and his edition of *Drunken Barnaby's Journal* (1817–18) have lasted better; the second edition of the latter (1820), a well-known picaresque travelogue of northern England, contained a long account of Richard Brathwaite which firmly established his claim to its authorship. Haslewood also wrote a series of articles on old London theatres for the *Gentleman's Magazine* (1813–14) under the pseudonym Eu. Hood, and also contributed a series entitled 'Fly leaves' (1822–5). His chief literary legacy is probably the series of books that he edited for the Roxburghe Club, among them the fine edition of Cutwoode's *Calthea poetarum* (1815); the production of such texts became an important and ongoing activity of the club. At the same time Haslewood enjoyed its tradition of informal fun (the Horatian 'dulce desipere in loco' tradition), which he recorded in his own mock-antique style in 'Roxburghe Revels', an account of the club's early activities (the original manuscript of which was presented to the club by the earl of Powis in 1932).

This light-hearted piece had an unfortunate impact on Haslewood's posthumous reputation. After his death on 21 September 1833, at Addison Road, Kensington, Middlesex, his book collection was sold on the following 16 December. The manuscript of 'Roxburghe Revels' was injudiciously included in the sale, and was bought by the bookseller Thomas Thorpe, who sold it on to the editor of *The Athenaeum*. Thence it passed directly or otherwise to the author (almost certainly James Silk Buckingham) of a violent attack on Haslewood and the Roxburghe Club, citing the manuscript in such a manner as to denigrate both. This appeared in *The Athenaeum* in January 1834, after which the Scottish antiquary James Maidment, a friend of Haslewood, reprinted the articles, with replies, as *Roxburghe Revels, and other Relative Papers* (1837). This also featured a memoir of Haslewood.

Haslewood is better remembered as a collector of ephemera and other material that stood in danger of being lost or forgotten, including the large collection of printed proclamations, now in the library of the duke of Buccleuch; nine volumes of cuttings, playbills, and dramatic prints in the British Library; and, most especially, the volumes of tracts that he assembled, often under alliterative titles of his own devising (one of these volumes, bought by Isaac D'Israeli, remains at Hughenden).

Some of Haslewood's own letters, which are written in a lively style, are held at the British Library—most notably those to Brydges, Bliss, and Dibdin; he remembered the last two in his will, which was proved on 9 November 1833.

Hasluck, Frederick William (1878–1920), archaeologist and ethnologist, was born at Eythan Lodge, Southgate, Middlesex, on 16 February 1878, the son of Percy Pedley Hasluck and his wife, Edith Louisa (*née* Battley). He was educated at the Leys School, Cambridge (May 1893–July 1897), where he won a prize for his original drawings of Cambridgeshire antiquities. He then went to King's College, Cambridge, with a foundation scholarship, gaining a first in the classical tripos part one and (with distinction) part two, and thereafter a fellowship. He spent the years from 1899 to 1916 mainly in Greece and Anatolia. He was noted for his gentleness, refinement, and gift for friendship. His witty letters, very much influenced by the allusive style of Edward Lear, charmed his friends. Extracts of his letters to Richard Dawkins were published by his widow in 1926 as *Letters on Religion and Folklore*. He was well known in the Levant as a traveller and latterly as a student of the Bektashi order of dervishes then to be found in Albania, Serbia, and northern Greece. He was widely believed to know more of their customs and history than they did themselves.

In 1901 Hasluck became a student of the British School of Archaeology at Athens and in 1905 its librarian for one year. From 1905 to 1910 and again from 1911 to 1915 he was assistant director and librarian of the British School, building up the library holdings in early travellers and in medieval and post-medieval Balkan culture and history. On 26 September 1912 he married Margaret Masson Hardie (1885–1948) [*see* Hasluck, Margaret Masson], who joined the British School in 1911, and who shared his interests in contemporary Balkan culture. They did not have children. In the same period he travelled widely in the Greek islands and in Anatolia with the school's director, Richard Dawkins. These travels resulted in more than fifty articles and three books, building on the fieldwork of Sir William Ramsay, with whom he often disagreed. Most of this work, dealing with medieval and modern Smyrna, the development of the monasteries of Athos, and Genoese and Venetian influences on the Aegean, remains of great value and some of it still the only work in the field.

His study of the city of Cyzicus and its environs (*Cyzicus*, 1910) was his only foray into classical archaeology and, for its time, a model of competent field archaeology. It is still a starting point for any research on that area. His other books were *Athos and its Monasteries*, published posthumously in 1924, and, with H. H. Jewel, *The Church of Our Lady of the Hundred Gates at Paros* which appeared in 1920: both works are still consulted. In the spring of 1913 Hasluck visited Konia and became interested in the interrelationship of Christianity and Islam. The fruit of his labours was the monumental *Christianity and Islam under the Sultans*, published posthumously in 1929. It is a fine example of interdisciplinary research and writing notable not just for its arcane material but for the sensitivity, acumen, and sheer knowledge of its author. This was Hasluck's most important work. As a reference work it may be read as much for pleasure as for instruction.

Hasluck's knowledge of the Levant was put to use in the summer of 1915 when he joined the intelligence department of the British legation in Athens, working among the refugees who came to the city. Something of his work in this role as well as insights into his character may be gleaned from Compton Mackenzie's *First Athenian Memories* (1931). It was work which Hasluck did not enjoy and it certainly led to the breakdown of his health. In 1916 tuberculosis forced him to retire to France and in 1917 to a sanatorium, Beau Réveil, Leysin, Switzerland, where he died on 22 February 1920, a few days after his forty-second birthday.

He was survived by his wife, Margaret. After his death she spent much time researching in Albania, living at Elbasan until April 1939, and editing Hasluck's manuscripts for publication, in addition to her own books. There is a wall monument in Hasluck's memory in the Penrose Library at the British School in Athens.

Hasluck [*née* Hardie], **Margaret Masson** (1885–1948), ethnographer, was born on 18 June 1885 at Chapelton, Drumblade, near Elgin, Scotland, the eldest of the nine children of John Hardie, a farmer, and his wife, Margaret Leslie. Brought up jointly by her grandparents, she was educated at Elgin Academy before taking first-class degrees in classics from Aberdeen and Cambridge universities. In 1910 she became the first woman nominated for a studentship at the British School at Athens. In the following summer she joined a dig in Anatolia under William Ramsay.

In Athens, Margaret met the distinguished archaeologist Frederick William *Hasluck (1878–1920), and they married at her home in Scotland on 26 September 1912. For the rest of her life she blamed herself for her husband's early death, convinced that the tuberculosis that slowly killed him had been contracted on a trip to Konia in 1913. The trip had been his wedding present to her; the destination had been her choice. After his death she spent many months assembling and editing his notes for posthumous publication.

Gradually Hasluck returned to her own work and interests. In 1921, having received a travelling fellowship from Aberdeen University, she began ethnographic fieldwork in Macedonia and Albania. From 1923 she lived in Albania, where her husband had studied the Bektashi. She became 'the first west European scholar, female or male, to do systematic, sustained, ethnographic work' in large parts of the country (Clark, 128). She travelled all over Albania, in all weathers and by all modes of transport, spending whole seasons in the mountains. Her extensive notes and data covered a wide variety of topics: from local dialects, coinage, and customs, to witches, blood feuds, and botany. She sent dozens of artefacts to the Marischal Museum in Aberdeen. Indeed, in methodology and commitment, Hasluck far surpassed her contemporary Edith Durham (1863–1944). Unlike Hasluck, Durham never learnt Albanian, for example, and she spent only a fraction of Hasluck's sixteen years in the country.

In 1935 Hasluck settled in the town of Elbasan, where in the following year she built a house. Elbasan was also the home of Lef Nosi, a distinguished Albanian patriot and a cabinet minister in Albania's first government. He shared her interests in archaeology and ethnography and the pair became very close, though the claim by Albanian communist writers that Hasluck was Nosi's mistress is impossible to substantiate. Whatever the relationship, it too ended in tragedy. In April 1939, on the eve of the Italian invasion of Albania and for reasons still unclear, King Zog demanded that Hasluck leave the country. She never returned to Albania or saw Nosi again. A member of a puppet government set up by the Germans in 1943, he was shot by Albania's communist regime in 1946.

In February 1942, while living in Cairo, Hasluck was recruited by the Special Operations Executive (SOE) and charged with exploring possibilities of encouraging resistance in occupied Albania. During the First World War both she and her husband had spent time working for British intelligence, as had many members of the British School at Athens. At that time her own work had been of little account, but she now assumed a significant role. From Istanbul she established lines into Albania and sought to recruit exiled Albanians for operations. By 1943 she was back in Cairo as head of SOE's Albanian section, briefing SOE operatives before they parachuted into Albania, teaching them the rudiments of the language, and providing and collating intelligence. Within SOE she became known affectionately as Fanny Hasluck, a reference to the many younger FANYs, women of the First Aid Nursing Yeomanry, who worked for SOE in administrative

roles. For her tireless efforts she was appointed MBE in 1944.

To Hasluck's great dismay, however, SOE came to support Albania's communist-led partisans, the most committed and dynamic of the country's guerrilla bands. And as the partisans became stronger, threatening to tear apart the pre-war Albania she had known of relative peace and established order, she resigned, although it is likely her deteriorating health also played a part. Early in 1944 she was diagnosed with advanced leukaemia and given little time to live. SOE considered it possible that overwork had exacerbated her condition.

Margaret Hasluck was a tall, handsome woman whose height and bearing had, on occasion, caused her to be mistaken in Albania for a man. To the end, her life interspersed moments of distinction and achievement with others of terrible tragedy and loss, but any depression she may have nursed was disguised beneath enormous reserves of energy, enthusiasm, and kindness. Yet she could be obstinate and impatient, traits that could alienate her even from friends. And though she loved and was rigorous in fieldwork, self-doubt made her slow to publish. Had she published more and for a wider audience, she might have become as well known as Edith Durham.

After spells spent for health reasons in Switzerland and Cyprus, Hasluck moved to Dublin, where she died of leukaemia on 18 October 1948. She was buried beside her parents in the churchyard at Dallas, Scotland. Her most significant work, *The Unwritten Law in Albania* (1954), a comprehensive study of the Albanian custom of blood feud, was published after her death. RODERICK BAILEY

Hasluck, Sir Paul Meernaa Caedwalla (1905–1993), diplomatist and politician, was born on 1 April 1905 at Perth, Western Australia, the second child of English-born parents, E'thel M. C. Hasluck and his wife, Patience Eliza Wooler. Both parents were Salvation Army officers and moved at regular intervals around the state to wherever the army required them to work. Hasluck attended various state schools. The four years spent at Collie in the south-west of Western Australia from 1913 left 'a deeper imprint' on him than any other period of his life (Hasluck, *Mucking About*, 52). He took part in farm work, learned to ride and to love horses, and read avidly. He also became acquainted with several Aboriginal boys at the home, whom he greatly admired. In bush life Hasluck found a 'sense of peace' and 'intimacy with the whole of existence', which he would always 'search to recapture' (ibid., 54).

Hasluck won a scholarship to the Perth modern school, which he attended from 1918 to 1922. In January 1923 he began work as a cadet journalist on the *West Australian*. Journalism gave him a 'crash course of education in the ways of the world', and the chance 'to meet people of all kinds' (Hasluck, *Mucking About*, 120). He became an active

Sir Paul Meernaa Caedwalla Hasluck (1905–1993), by unknown photographer, 1969 [with his wife, Alexandra, Lady Hasluck]

member of the Australian Journalists' Association. Through the association he became friendly with a future prime minister, John Curtin. In 1928 and 1929 Hasluck won the Lovekin prize for journalism, and went on to complete a diploma of journalism course at the University of Western Australia. A founding member (1926) and office-bearer of the Royal Western Australian Historical Society, Hasluck was one of the 'earliest and most innovative practitioners of oral history' (G. Bolton, 'Oral historian', Stannage, Saunders, and Nile, 37). On 14 April 1932 he married Alexandra Margaret Martin Darker (*d.* 1993), a schoolteacher whom he had met at university. They had two sons. In 1934 he commenced an arts course at the University of Western Australia. He graduated BA in 1937 and later completed an MA.

From 1925 Hasluck read widely in Aboriginal anthropology. He found that 'being interested in Aboriginals was unusual in those days'. He was invited to accompany the 1934 Moseley royal commission into the social and economic condition of Western Australian Aborigines. He continued to write about the social problems of Aboriginal communities, and was highly critical of official incompetence and neglect. His MA thesis, on nineteenth-century native policy in Western Australia, was published in 1942 as *Black Australians*.

In 1939–40 Hasluck held a temporary appointment as lecturer in history at the University of Western Australia. Early in 1941 a chance encounter with John Curtin (by then federal opposition leader) resulted in Hasluck accepting an offer of appointment to the department of external affairs in Canberra. From 1942 he worked closely

with his minister, Dr H. V. Evatt, as speechwriter and adviser. He was a delegate to the San Francisco conference of June 1945, where the United Nations charter was drawn up. He was then appointed to the executive committee of the United Nations preparatory commission, which met in London over several months in late 1945. He then became Australia's first permanent representative to the Security Council. The beginnings of the cold war saw constant conflict between the Soviet Union and other council members, and Hasluck performed admirably under testing circumstances. His task was not made easier by Evatt's capricious personality. Hasluck resigned his post in March 1947. He later accused Evatt of wishing to make the staff of external affairs 'his personal possession'.

Hasluck returned to the University of Western Australia as reader in history in March 1948. He worked half-time on the political and social volume of the official history of Australia's participation in the Second World War, having in 1943 accepted an invitation to contribute two volumes. The first volume was published, to considerable acclaim, in 1952. However, by this time Hasluck had left academic life and embarked on a career in politics (the second volume did not appear until 1970). In 1948 he was invited to contest the federal seat of Curtin for the Liberal Party. Hasluck had not sought a political career. His own approach to politics was humanitarian and non-ideological, emphasizing both individual respect and individual responsibility. He was pleased to hear himself described as a 'nineteenth-century liberal' (Hasluck, *Mucking About*, 282–3). He won the seat at the general election of December 1949, which saw the Liberals, led by Robert Menzies, returned to power. As Hasluck saw it, he did 'not have to clamber and contrive' to be elected to parliament. He 'was asked to do it and complied' (ibid., 286).

In May 1951, after only eighteen months on the back benches, Hasluck was appointed minister for territories, a post he was to retain for twelve years. The newly created portfolio, which gave him responsibility for both the Northern Territory and Papua New Guinea, presented formidable difficulties. Both territories required policies for the development of indigenous populations, were severely lacking in infrastructure and basic services, were heavily dependent on parsimonious Australian commonwealth funding, and were further handicapped by inadequate administrative structures. Both territories were also on a path of constitutional development that would, eventually, lead to self-government. In the case of Papua New Guinea there was the further need to create a sense of nationhood. Hasluck was criticized for proceeding too cautiously along the road to independence. Yet he set an 'often frenetic pace' to bring about change, securing significant funding increases for infrastructure, and for education and social welfare (Porter, 157). He succeeded in his broad goal of promoting truly national institutions. Central to his approach was his belief that the people of Papua New Guinea should make their own choice as to when independence should come and what form it would take.

Hasluck was a formidable administrator. He was 'remarkably successful in being able to move from bold policy principles to a methodical and painstakingly close scrutiny' of policy implementation (Porter, 154). 'Uncompromising in his readiness to monitor, inspect and scourge', he was, it was accurately said, determined to be both his own minister and departmental head (H. Nelson, 'Papua New Guinea', Stannage, Saunders, and Nile, 158). His exacting standards and impatience for results did not make him easy to work with. None the less, he retained the respect of his senior officers. His 'nation building' achievements on behalf of Papua New Guinea constituted an outstanding legacy.

The territories portfolio made Hasluck *de facto* minister for Aboriginal affairs, a position for which he was well suited. His first major speech in parliament had called for 'comprehensive national action' to improve the conditions of Aborigines (Porter, 194). In line with his belief in the primacy of local solutions, he proposed commonwealth–state co-operation, with the commonwealth of Australia offering new funding for state programmes rather than taking direct responsibility for Aboriginal affairs. Hasluck was disappointed and bewildered by the indifferent response from the states. He responded by working vigorously to increase provision for health, education, and welfare for Aborigines in the Northern Territory. He also sought to lead by example by abolishing racially based legislation, but the principal measure, the 1953 welfare ordinance, created new problems of racial categorization.

Hasluck's personal ethos placed great emphasis on individual responsibility. In *Black Australians* he had noted how, over the course of the nineteenth century, Aborigines had gradually lost their status as British citizens, and had been reduced to the condition of dependent beings in need of protection. Accordingly, while not the originator, he became the most prominent advocate of the policy of 'assimilation', which he saw as a process by which Aborigines would gradually regain full citizenship and, as he put it, come to 'live in the same manner as White Australians do' (Porter, 197). The cultural paternalism implicit in assimilation provided justification for the long-established practice of removal of half-caste children from their families. Hasluck was not an unqualified supporter of that practice, but neither did he condemn it. Although he respected Aboriginal cultural values, his historical perspective had convinced him that these values could not endure sustained contact with white society. He underestimated the resilience of Aboriginal culture, with its focus on the group rather the individual. In the context of the 1950s Hasluck's policies, based upon equality and social justice, were 'innovative and idealistic', raising expectations and bringing Aboriginal issues into the mainstream of political debate (Read, 285).

Hasluck served briefly as minister for defence during 1963–4. For the next five years he held the post of minister for external affairs under four prime ministers, Menzies, Holt, McEwen, and Gorton. Vietnam was the dominant foreign policy issue, and Hasluck maintained a firm line against what he saw as Chinese-inspired aggression by

communist North Vietnam. In early 1968, in the aftermath of the death by drowning of the prime minister, Holt, Hasluck was the most obvious choice as Holt's successor. Hasluck 'adopted a Coriolanus-like attitude' and refused to lobby his party colleagues for their votes (A. Downer, quoted in H. S. Albinski, 'Vietnam', Stannage, Saunders, and Nile, 180). He was defeated narrowly by John Gorton. On 10 February 1969 his parliamentary career ended, concurrently with his appointment as GCMG and the announcement that he would be Australia's next governor-general. (He had already been sworn of the privy council in 1966, and was appointed GCVO in 1970.)

Hasluck's performance of his constitutional role was flawless. As governor-general he took seriously his right 'to be consulted, to encourage and to warn', and lucidly expounded the role and responsibilities of his office (Hasluck, 'Tangled in the harness', *Light that Time has Made*, 1995, 187). He was known to be discreet and could offer advice, based on years of political experience. Gough Whitlam's inexperienced ministry found Hasluck's 'interest and counsel very valuable' (G. Whitlam, *The Truth of the Matter*, 1979, 17). Whitlam offered him an extension of office, but in deference to his wife's wishes he relinquished the post at the end of his five-year term in July 1974. He was appointed KG in 1979.

Freed from the requirements of public office, Hasluck relished the opportunity to return to writing. In 1976 he published *A Time for Building*, a consideration of his stewardship of Papua New Guinea. An autobiography, *Mucking About*, appeared in 1977. *Diplomatic Witness* (1980) was an account of his time in external affairs, and an indictment of Evatt. *Shades of Darkness* (1988) reflected on Aboriginal affairs and administration. His *Collected Poems* had been published in 1969, but two more volumes now followed. There was a steady output of book reviews and journal articles. The posthumous *The Chance of Politics* (1997), drawn from notes written during his years in parliament, contained some scathing portraits of his political contemporaries.

Hasluck's character defies easy assessment. His was a long and active life, with a remarkable variety of significant achievements. Yet in his judgements of himself and of the value of his work, there is a recurrent sense of pessimism. In *Mucking About* he describes himself as a 'failure as a human being' (Hasluck, *Mucking About*, 28). He ended *Mucking About* at the point where he was about to enter politics, saying:

> From that point onward my life ceased to be my own. I was unable to do many things I would have liked to do and was required to do many things I had no personal interest in doing. Duty took charge ... I kept assiduously to my political career, often feeling I was the wrong driver in the wrong truck. (ibid., 287)

Some of the sense of loss may have reflected family circumstances. He became estranged from his wife, although they remained under the one roof. In 1973 one of their sons, Rollo, died suddenly of viral myocarditis.

Hasluck's devotion to 'duty' meant the suppression of many youthful character traits. The gregarious young man, who was also capable of a mystical sense of communion with the bush and with animals, was not easily recognized in the prim and pedantic public man, who inspired respect rather than affection. Away from official tasks, youthful exuberance could return. In New York the minister for external affairs was once reported as having spent the early hours of the morning playing bongoes and snare drums at a party. Among friends he was regarded as excellent company, appreciative of good talk, wine, and food. He died in Perth on 9 January 1993. His son Nicholas, a novelist and judge, survived him, as did his wife, who died five months later. Dame Alexandra Hasluck was herself a distinguished social historian. Hasluck's state funeral was held at St George's Anglican Cathedral, Perth. At his wish, eulogies were replaced by trombonists playing 'When the saints go marching in'.

Hassall, Arthur Hill (1817–1894), physician and microscopist, was born at Teddington, Middlesex, on 13 December 1817, the son of Thomas Hassall (1771–1844), surgeon, and Ann Sherrock (1778x80–1817). After attending school at Richmond, Surrey, he was apprenticed in 1834 to his uncle Sir James Murray, who had a fashionable Dublin medical practice. In 1839 he became a member of the Royal College of Surgeons, in London, and in 1841 he was awarded the diploma of the Society of Apothecaries. Hassall's apprenticeship had included walking the wards of Jervis Street Hospital in Dublin, and the Mercers' Hospital. He had also taken the midwifery diploma in 1837 from Trinity College, Dublin, studied the nearby seashore and the coasts, and won a prize in botany. He presented his *Catalogue of Irish Zoophytes* to the Dublin Natural History Society on 6 November 1840. Hassall went on in 1848 to graduate MB from University College, London; in 1851 he proceeded MD and became a member of the Royal College of Physicians.

His return to Richmond, near the Royal Botanic Gardens

at Kew, enabled Hassall to study structural and physiological botany at Kew. Between 1840 and 1845 he published several articles and books on botanical topics, mostly on freshwater algae, though many of the papers suggested a rather haughty concern with claims to priority. His *History of the British Freshwater Algae* (1845) became something of a controversial classic in the field; most of his research for this work came from the region of Cheshunt, Hertfordshire, and the specimens he left are now largely in the possession of the Natural History Museum, London. Hassall's studies on fungal rot of fruits and potatoes by experimental inoculation of sound tissues were highly apposite given the subsequent potato famine in Ireland. On 26 May 1846 Hassall married Fanny Augusta, daughter of Alexander Du Corron.

Hassall came to public attention with his book *A microscopical examination of the water supplied to the inhabitants of London and the suburban districts* (1850), in which he reported on the state of the water supplied by each of the London water companies. Containing colour illustrations of the organisms found, this work helped to convince people of the revolting nature of having living organisms in their water and drew their attention to the 'carcasses of dead animals, rotting, festering, swarming with flies and maggots' on the banks of the Thames (Hamlin, 115). According to Christopher Hamlin, the book was 'one of the most effective appeals to sensibility in the history of public health', and that one of the most important things it did 'was to make microscopic life a new category of impurity' (ibid., 104). There was, however, a great deal of debate about what the presence of such organisms in the water signified. Hassall found that all waters contained microscopic life but 'was not able to recognise a distinct flora and fauna for each company as he had hoped to' (ibid., 111). He testified before the Board of Health in March or April of 1850 and in parliament Sir Benjamin Hall used Hassall's drawings to attack opponents of water reform. Organisms came to be seen as proof of impurity.

Over this same period, and despite ill health, Hassall began to study food adulteration. This brought him to the attention of Thomas Wakley, who between 1851 and 1854 published in *The Lancet* reports by Hassall concerning the virtually universal practice of adulteration. *The Lancet* reports led in 1855 to a parliamentary select committee (with Hassall as chief scientific witness) and later to the first general preventative (and other) Adulteration Acts (1860), as well as to the presentation on 4 May 1856 from both houses of parliament to Hassall, for public services, of an elegant silver statuette of Angel Ithuriel. Hassall established a reputation as Britain's leading food analyst and was employed as an analytical microscopist by the General Board of Health.

Hassall also became a physician at the Royal Free Hospital, London, which later named a ward after him. By 1866 he was suffering from severe lung problems. His recovery involved long periods confined to bed at his brother's house in Richmond, at Hastings, and at St Leonards, before he transferred to Ventnor, Isle of Wight, as winter approached. Hassall made his home there until at least mid-1877, though he was still able to undertake professional duties in London at least twice a week. During 1866 he was allotted a civil-list pension of £100 per year for public service. While at Ventnor, Hassall and his assistants continued to investigate food adulteration, using the laboratory he had built there.

Hassall decided that Ventnor would be an ideal place to establish a hospital for treating lung disease. The first block was completed in 1868 and the Ventnor Hospital inspired moves to establish similar institutions in Vienna and elsewhere. Hassall's concept was so successful that, by 1908, 23,000 or more patients had been treated there. This hospital finally closed on 15 April 1964, the remaining patients being transferred to the Hassall ward in St Mary's Hospital, Newport, Isle of Wight.

Hassall left Ventnor in 1877 and was presented with a silver service and 300 guineas. Aiming to rest in warmer climes, he spent over a year in Germany and one winter season in Cannes. Italy's ready acceptance of foreign medical qualifications led Hassall finally to settle in San Remo, with occasional stays in London over the summer. Hassall acquired permission to practise in Switzerland and thereafter worked in Lucerne in summer and San Remo in winter; at San Remo he attended Edward Lear. Hassall's time on the continent enabled him to establish a role in pioneering climatic cures for consumption. His *San Remo and the Western Riviera Climatically and Medically Considered* (1879) was a classic of its kind. Hassall died at his home, Casa Bosso, San Remo, on 9 April 1894 and was buried at All Saints' Church, San Remo. He was survived by his second wife, Alice Margaret, whom he had married some time between 1858 and 1866. JAMES H. PRICE

Hassall, Christopher Vernon (1912–1963), writer and librettist, was born in London on 24 March 1912, the son of John *Hassall (1868–1948), the painter and illustrator, and his second wife, Constance Maud Brooke Webb (*c.*1878–1950), daughter of the Revd Albert Brooke Webb, rector of Dallinghoe, Wickham Market, Suffolk. He was the younger brother of Joan *Hassall (1906–1988), the wood-

Christopher Vernon Hassall (1912–1963), by Howard Coster, 1955

engraver, who decorated many of the title-pages and jackets of his books. He was educated at Brighton College (for which he composed the school song), and Wadham College, Oxford, which, because of a family financial crisis, he left without taking finals. After leaving Oxford, where he played Romeo alongside Peggy Ashcroft, Edith Evans, and George Devine in the Oxford University Dramatic Society *Romeo and Juliet*, a notable production directed by John Gielgud, he spent some years as an actor. He toured with Ivor Novello in 1933, having a small part in his play *Proscenium*. In 1934 Novello asked him to write lyrics for his melodies and their first joint success was *Glamorous Night* (1935). Novello introduced Hassall to Edward Marsh, who acted as *advocatus diaboli* and critic for Hassall's early poetry, *Poems of Two Years* (1935). Convinced of his limited talent as an actor, he performed for the last time in his own play *Devil's Dyke* in 1937.

Hassall was adopted by Marsh as a protégé. Under his tutelage Hassall produced *Christ's Comet*, a poetic drama for which he composed the music, written for the 1938 Canterbury Cathedral festival, and *Penthesperon* (1938) which won the Hawthornden prize. In this year, on 28 December, he also married Evelyn Helen Lynett Hill (*b.* 1908/9), daughter of Eustace Chapman. They had a son and a daughter. In 1939 *Crisis*, a sonnet sequence, won the A. C. Benson medal. *S.O.S. ... 'Ludlow'* (1940) was published soon after he had joined the Royal Artillery as a gunner. In 1941 he was commissioned, and in 1942 he joined the army education corps, in which he attained the rank of major. After the war he published *The Timeless Quest* (1948), a biography of his friend the actor Stephen Haggard. *The Slow Night*, containing some of his most moving poetry, was published in 1949, and *The Red Leaf* in 1957. Poetry collections were interspersed with drama: *The Player King* was the Edinburgh festival play of 1952. *Out of the Whirlwind* (1953) was the first secular play to be staged in Westminster Abbey since the Reformation.

Novello's early patronage had enabled Hassall to concentrate on his own writing but he continued to compose original librettos for cantatas and operas, most notably *Tobias and the Angel* (1960) for Arthur Bliss, and *Song of Simeon* (1959) for Malcolm Arnold. His English versions of foreign works, notably Bartók's *Bluebeard's Castle*, placed him foremost among contemporary librettists. His libretto for Walton's *Troilus and Cressida* (1954) was described by Ernest Newman as 'the best poetic opera text since Hofmannsthal'.

Hassall also made his mark as a biographer. His major biography *Edward Marsh: Patron of the Arts* (1959, awarded the James Tait Black memorial prize) is a lasting contribution to the cultural and social history of the first half of the twentieth century, and was the result of his long friendship with Eddie. Hassall also contributed the notice of Marsh to the *Dictionary of National Biography*. *Ambrosia and Small Beer*, a record of their voluminous correspondence, appeared posthumously in 1964, as did also his biography of *Rupert Brooke* (1964), though he was able to complete and revise the text before his sudden death. He did not, however, live to see the publication of *Bell Harry and other Poems* (1963), which contained a sequence of forty sonnets in memory of his friend the poet Frances Crofts Cornford.

Hassall's lifetime covered a period of accelerating and often hectic change in the arts. Temperamentally he was not always in sympathy with the new developments and this was partly the legacy of Marsh, who had schooled him in Georgian aesthetics. Though his interest in the younger poets never flagged, his own work showed a concern to further and expand the traditional, rather than a desire to break with it. His poetry, sometimes lyrical and sometimes ruminative, almost conversational, was always direct in theme and statement. At its best it was distinguished by emotional depth and clarity, with a startling fluency of expression. He will also be remembered for his poetry recitals on behalf of the Apollo Society. He was a councillor and fellow of the Royal Society of Literature and a governor of the London Academy of Music and Dramatic Art.

During the last six years of his life Hassall lived at Tonford Manor, near Canterbury, a fortified house dating from the twelfth century which he carefully restored. He suffered a heart attack on a train and died at St Bartholomew's Hospital, Rochester, on 25 April 1963. The funeral service was in the crypt of Canterbury Cathedral, and he was buried on 2 May at the church of St Nicholas, near his home, where he had regularly worshipped. He was survived by his wife, Evelyn.

Hassall, Edward. *See* Halsall, Edward (*c.*1627–1686).

Hassall, Joan (1906–1988), artist and wood-engraver, was born on 3 March 1906 at 88 Kensington Park Road, Notting Hill, London, the only daughter and elder child of John *Hassall (1868–1948), painter and illustrator, and his second wife, Constance Maud, daughter of the Revd Albert Brooke Webb, rector of Dallinghoe, Wickham Market, Suffolk. Her brother was the poet, biographer, and playwright Christopher *Hassall. She was educated at Parsons Mead School, Ashtead, Surrey, and though she wished to study music, trained instead as a schoolteacher at the Froebel Educational Institute, Roehampton. For two years (1925–7) she worked at her father's London School of Art, as its secretary and as a student, but on its closure went to the Royal Academy Schools from 1928 to 1933, winning the Landseer scholarship in 1931. She learned to engrave on wood in 1931, being taught by R. J. Beedham at the London County Council School of Photo-engraving and Lithography. At the time she felt she was remembering rather than learning how to handle the tools.

Joan Hassall's first substantial book illustration was for Francis Brett Young's *Portrait of a Village* (1937), which established her as an illustrator of consequence. She studied nineteenth-century women's costume for the engravings for the 1940 edition of Elizabeth Gaskell's *Cranford*, which were a pattern for much later work. During the war she taught printing and engraving at Edinburgh College of Art (1940–46), and between 1943 and 1951 designed and illustrated eleven chapbooks for the Saltire Society. The light-hearted designs for *A Child's Garden of Verses* by Robert Louis Stevenson (1947) had much of Thomas Bewick about them, as did the thirty vignettes for the National Book League's *Reader's Guides* (1947–51). Mary Russell Mitford's *Our Village* (1947) followed *Cranford* in its style, but with *The Strange World of Nature* (1950), by Bernard Gooch, she started a long series of engravings of wildlife, conveying with consummate skill the textures of hair and feathers. For *Fifty-one Poems* by Mary Webb (1946) and *Collected Poems by Andrew Young* (1950) she cut a great many small vignettes that give visual life to the poems they decorate.

Troubled with arthritis in the early 1950s, Joan Hassall turned to scraperboard, drawing about 150 small designs for *The Oxford Nursery Rhyme Book*, edited by Peter Opie and his wife, Iona (1955). She engraved some 120 blocks for the Folio Society, illustrating two collections of Anthony Trollope's stories in 1949 and 1951, and, during periods of remission from the arthritis, a complete Jane Austen in seven volumes (1957–63). The usual sobriety of her figures disappeared in the last of these, with a new excitement in their character, and this same vivacity was continued in the seventy-seven vignettes (two of them in colour) for *The Poems of Robert Burns* (1965). She added twenty-eight scraperboard drawings to a new edition of the Jane Austen, issued in 1975. In all she illustrated over eighty books.

Joan Hassall did a great deal of more ephemeral work, providing drawings and engravings for British Transport, the BBC, and various publishers and booksellers, as well as for a number of magazines including *Housewife*, *London Mystery Magazine*, and *The Masque*. She designed thirty-five bookplates, including twenty-four on wood, and was responsible for the £1 royal silver wedding stamp (1948) and the queen's invitation card to her guests for the coronation (1953). A fine artist, skilled as a watercolourist as well as at drawing, it was as an engraver that she excelled, cutting perhaps a thousand blocks, which she proofed with great skill on an Albion hand-press. Inspired by Bewick, she preferred small vignettes to full-page illustrations, and enjoyed engraving for ordinary people, ordinary readers, rather than moneyed collectors. She preferred descriptive work to mere decoration. No more than the outlines of her designs would be drawn on the surface to be engraved, the detail coming from the burin, whose movement had sometimes the careless ease of a pencil. She was a slow worker, a perfectionist who would recut a design that had failed in some way, without regard for any urgencies of publication. Financial help from her brother and Sir Edward Marsh enabled her to escape from home in 1937, but she always had to live very modestly. She lived in her father's house in Notting Hill after his death in 1948, then moved in 1976 to Priory Cottage in Malham, Yorkshire, which had been bequeathed to her by a friend. She was a friend of Sydney Cockerell and her letters to him from Italy and France in April–May 1950 were published in 1991 as *Dearest Sydney* (edited by Brian North Lee).

Joan Hassall was a plumpish woman, shy in her early years, but with a friendly disposition that made her many friends and admirers. She played the harpsichord, harp, viola da gamba, piano, and recorder, and in her retirement was organist at Kirkby Malham church. In 1938 she was elected an associate, and in 1948 a fellow of the Royal Society of Painter-Etchers and Engravers, and in 1947 a member of the Society of Wood Engravers. She was made a fellow of the Society of Industrial Artists and Designers (1948), and was one of the first three women members of the Art Workers' Guild (1964) and its first woman master in 1972. She was awarded the bronze medal of the Paris Salon (1973) and was appointed OBE in 1987. For many years suffering from arthritis, and latterly from failing sight, Joan Hassall died of bronchopneumonia and diabetes on 6 March 1988 in Airedale General Hospital, Keighley, Yorkshire. Her remains were cremated at Oakworth crematorium, Keighley, and her ashes were scattered in the grounds of the crematorium. She never married. She is commemorated by a memorial window by David Peace in Kirkby Malham church. DAVID CHAMBERS, *rev.*

Hassall, John (*bap.* 1571, *d.* 1654), dean of Norwich, was baptized in St Andrew's parish, Norwich, on 4 December 1571, the son of John Hassall. He was educated at St Paul's School, London, and from 1587 at Winchester College (where in 1588 in typical schoolboy fashion he carved his name on one of the piers of the south aisle in the cathedral) before matriculating at New College, Oxford, in 1593. He was a fellow there from 1594 to 1603, graduating BCL in 1600. In July 1601 he was made minister of Burton upon Trent, Staffordshire, by William Paget, to whom he was also chaplain. From July 1604 to about April 1606 he was prebendary of Eccleshall in Lichfield Cathedral. He was also preferred to two Norfolk rectories—Brancaster in 1603 and Great Bircham in 1608—and presented to the third prebend in Norwich Cathedral on 11 December 1615. Although he resigned his Burton cure in 1609 he remained close to Paget, cataloguing Paget's library in 1617 (BL, Harleian MS 3267).

For eight years, probably from 1617 to 1625, Hassall was preacher to Sir Horatio Vere's regiment in the Netherlands, and while at The Hague he secured both the reputation as a good preacher and the patronage of Elizabeth, queen of Bohemia. Having gained a DD in 1626, through her patronage he was in July 1628 made dean of Norwich, a post for which he had been angling since the end of 1624. At Burton he had been on good terms with his neighbour William Bradshaw, the puritan preacher in Stapenhill, Derbyshire, who described Hassall as 'a man of very rare parts for all kind of learning' (Clarke, 55). On his return from the Netherlands, however, Hassall changed with the times, gaining the approbation of the anti-puritan Samuel Harsnett, bishop of Norwich until 1628, and the grudging acceptance of William Laud. During Matthew Wren's episcopate at Norwich (1635–8), although he had made an unsuccessful bid for the bishopric himself, he co-operated fully in reforming cathedral and diocese along ceremonial and Laudian lines: in 1636 he was described by one of Wren's associates as 'very right to the Church gouernement' (MS Tanner 68, fol. 82*r*). Even while soliciting for the deanery of Norwich, Hassall had described it as a poor piece of preferment, but he was frustrated in his hopes of further advance, acquiring only the rectory of North Creake, Norfolk, in 1640. About 1647 he was twice saved from losing Brancaster by his fellow Norfolk minister Thomas Thorowgood. After the abolition of cathedral offices in 1649 he lived at North Creake where he died on 27 December 1654. So great was his poverty there, it was later alleged, that after his death one of his daughters was maintained by the parish. Hassall was also survived by his wife, Mary, *nee* Harris, who as executrix gained probate of his will on 15 February 1655. He was buried at North Creake.

Wealth at death presumed very little: Walker, *An attempt*

Hassall, John (1868–1948), poster designer, was born on 21 May 1868 at Walmer, Kent, the eldest son of Lieutenant Christopher Clark Hassall RN (1838–1876), of a Cheshire family of wine merchants, and his wife, Louisa Sparkes, daughter of the Revd Joseph Butterworth Owen, incumbent of St Jude's, Chelsea, London, and son of the architect Jacob Owen. Hassall's father, who had served in the fleet at the siege of Sevastopol during the Crimean War, was paralysed as the result of an accident on his ship and died at the age of thirty-eight. His mother remarried; her second husband was an officer in the Royal Marines at Chatham who later became General Sir William Purvis Wright. John Hassall, who was educated at Newton Abbot College, Devon, and Neuenheim College, Heidelberg, Germany, was intended by his stepfather for the army, but he twice failed to pass the examination for Sandhurst. Accordingly in 1888 he and his brother Owen were sent on a cattle boat to a ranch in Minnedosa, Manitoba, Canada, to study farming. The two years that he spent there were vital to the development of his imagination and personality. For a time he acted as pathfinder to a group of Sioux.

Hassall occupied his spare time with sketching, and his efforts were so much admired that he sent some pen drawings depicting a Manitoba 'surprise party' to the *Daily Graphic*, which published them on 26 February 1890. This decided him to make a living as a draughtsman. He returned home and was sent by his mother to the Koninklijke Academie voor Schone Kunsten in Antwerp, where he worked under Piet van Havermaet and his son Charles. He studied there for two years, spending six months in Paris at the Académie Julian. In 1893, while abroad he married a fellow student, Isabel Dingwall (*c.*1866–1900), with whom he had one son and two daughters.

Hassall returned to London, where he made his first appearance at the Royal Academy exhibition in 1894 with two large paintings which were hung 'on the line'. Meanwhile, his drawings were appearing in *The Sketch*, *Pick-Me-*

Up, and other papers. In 1895, in answer to a recruiting circular issued by David Allen & Sons, the printers, Hassall entered on a career which lasted for fifty years, earning the title of 'the poster king' and, in 1939, the grant of a civil-list pension for his services to poster art. When he began, poster advertising as an art was in its infancy and his designs were a cheerful addition to the street scene. His work was humorous, robust, and simple, with a direct advertising message which nevertheless attained a high standard of decorative art. He advertised many commodities and also designed the posters for many of the Drury Lane pantomimes.

In 1901 Hassall was elected a member of the Royal Institute of Painters in Water Colours, and in 1903 president of the London Sketch Club. Also in 1903—his first wife having died young in 1900—he married Constance Maud Brooke Webb (*b. c.*1878, *d.* 1950), daughter of the Revd Albert Brooke Webb, rector of Dallinghoe, Wickham Market, Suffolk; they had a son, the author Christopher Vernon *Hassall, and a daughter, the painter and engraver Joan *Hassall. In 1905 he opened an art school in London, whose students were to include the cartoonist H. M. Bateman.

Hassall was working at this time as an illustrator of children's books, which became the delight of generations of youngsters. He also helped Baden-Powell to design the uniform for the Boy Scouts. His *Jolly Fisherman* tourist poster dates from this period. The fat man in oilskins prancing along the sands, with the caption 'Skegness is so Bracing', was typical of his work. The poster was still in use after his death and remains an instantly recognizable image. During the First World War he was a special constable in London and frequently appeared at charity shows, where over 3000 of his drawings were auctioned. In later years he illustrated the works of several British poets, including Robert Burns, William Dunbar, John Donne, and William Wordsworth.

During his holidays at Walton on the Naze, Essex, Hassall accumulated one of the largest private collections of prehistoric flint implements, which substantially contributed to the archaeological history of East Anglia. He was a man of strong personality whose great friendliness and charm made him a much loved member of the Savage Club in London. John Hassall died at his home, 88 Kensington Park Road, Kensington, London, on 8 March 1948; he was survived by his second wife.

Wealth at death £2844 16*s.* 2*d.*: probate, 24 April 1948, *CGPLA Eng. & Wales*

Hassan, Sir Joshua Abraham (1915–1997), chief minister of Gibraltar, was born in Gibraltar on 21 August 1915, the son of Abraham M. Hassan, a cloth merchant, from a distinguished merchant family of Moroccan Sephardi extraction that had first settled in Gibraltar in 1728. He was educated by the Christian brothers of Line Wall College, then studied law in London, and was called to the bar by the Middle Temple in 1939. For most of his life he managed to combine both law and politics.

Hassan's particular eminence derived from the exceptional circumstances in which Gibraltar found itself during and immediately after the Second World War. After the fall of France in 1940, the early successes of the axis powers in north Africa had an immense impact on the vulnerable but vital crown colony. While the colonial authorities were obliged to stay put, the safety and well-being of the women, children, and elderly could not be guaranteed in the desperate military situation, and they were evacuated. Hassan gained respect for his work on the Gibraltar evacuation committee and by his equally energetic efforts in 1944 to have the evacuees returned, despite severe transport restrictions. His active participation in Gibraltar's defence as a Bofors gunner enhanced his political credentials. Meanwhile, in 1941 he became deputy coroner, and in 1945 he was elected to the city council of Gibraltar. He served as mayor from 1945 to 1950 and from 1953 to 1969 (when the city council was merged with the legislative council to form the house of assembly). He married, in 1945, Daniela Salazar, of La Línea de la Concepción, Spain. They had two daughters.

The wartime privations on the Rock demonstrated to authorities and inhabitants alike the limitations of the chaotic multiple administrative systems that had developed in *ad hoc* fashion. By 1949 the administration of Gibraltar, with its total area of 1360 acres and population of 27,000 civilians and military, was divided among no fewer than five semi-autonomous authorities: the three military services plus the colonial and municipal institutions. Such complexity was 'neither intelligible, reasonable, or sensible', noted a Colonial Office report in 1949, but 'foolish, absurd, and extravagant' (PRO, CO 91/537–9). As a result a new legislative council was set up in 1950. The elections to the new council held that autumn brought in two conservative independents and three candidates (including Hassan) sponsored by the Association for the Advancement of Civil Rights (AACR). The AACR had been founded by Hassan during the war and was closely linked to the Gibraltar Confederation of Labour, which he had long championed. Two positions on the executive council

Sir Joshua Abraham Hassan (1915–1997), by unknown photographer, *c.*1950

could be nominated by the governor. The favourite from the shortlist proved unavailable, since the American consulate for which he worked would not release him, and a second, on account of a communist affiliation, was regarded as unsuitable. The Colonial Office wanted at least one position to go to an AACR member. Hassan, though a one-time radical activist, had all the right qualifications. He was a Gibraltarian, he was a lawyer, he was fiercely loyal to Britain, and he had strong links to Gibraltar's workers, whose votes would prove vital in upholding the colony's links with Britain.

Hassan's appointment to the executive council and as chief member of the legislative council marked the beginning of a career dedicated to making clear Gibraltar's rejection of Spanish claims while at the same time minimizing Whitehall's control as much as possible. In this, the international situation was to Hassan's advantage. Of all Britain's colonial possessions during this period of intense decolonization, the escalation of the cold war ensured that Gibraltar remained the most significant strategically and politically. Consequently the Gibraltar question was handled with exceptional tact and co-operation by the Colonial Office and Gibraltarians alike.

Hassan was knighted in 1963 (he had been made LVO in 1954 and CBE in 1957). In 1964, under a new constitution, he became the first chief minister of Gibraltar. He headed petitions in 1963, 1964, and 1966 before the United Nations Committee of Twenty-four, created in November 1961 to examine questions of independence. His aim, contrary to Spanish demands, was for Gibraltar not to relinquish ties with Britain but to have an administration similar to that of the Channel Islands or the Isle of Man. This had been suggested in a Colonial Office report of 1949, possibly at the instigation of Hassan himself. The United Nations was unimpressed by the arguments he and his colleague Peter Isola put forward. Nevertheless, a referendum of 10 September 1967 infuriated Spain but vindicated his approach, with a vote of 12,138 (95.8 per cent) in favour of remaining, as he put it, 'With Britain, but not under Britain' (*The Independent*, 2 July 1997). In 1969 Hassan achieved his aim of a new constitution, which removed the anomaly of separate city and legislative councils, and in which Britain guaranteed that Gibraltar would never be ceded to another state against the wishes of its citizens. For Gibraltarians this proved something of a pyrrhic victory, however, with the closing in June 1969 of Spain's border with Gibraltar. Hassan's private life caused controversy the same year, when he introduced a private member's bill allowing him to divorce his wife, Daniela. Divorce was then otherwise impossible in predominantly Roman Catholic Gibraltar. Following the divorce Hassan married, the same year, Marcelle Bensimon. They, too, had two daughters.

In the election of 1969 Hassan's AACR was narrowly defeated by Robert Peliza's Integration with Britain party. He nevertheless returned as chief minister in 1972, an office he retained through subsequent elections until 1987. Although Spain's claims to Gibraltar and its closure of the border continued after General Franco's death in 1975, the situation could be approached with less tension. Prime Minister Margaret Thatcher found the new Spanish premier someone with whom she could converse, if not agree. Thatcher used the threat of a veto on Spanish entry into the EU and NATO to force the reopening of the border; the price, through the Brussels agreement of 1984, was discussion of sovereignty. Hassan's albeit reluctant endorsement of the agreement undermined his position with the people of Gibraltar. The closure of Gibraltar's airport for flights to anywhere but Britain, following the breakdown of a 1983 agreement with Spain, further weakened Hassan's support. He resigned as chief minister on 9 December 1987 and retired from politics at the election the following year. He was appointed KCMG in 1986 and GBE in 1988.

Throughout his years as chief member and chief minister, Hassan continued to work as a practising lawyer, the position of chief member/minister being only part-time. He represented Robert Maxwell, whose holding company was registered in Gibraltar, and following his retirement as chief minister he represented one of the witnesses at the inquest into the shooting by the SAS of three suspected IRA terrorists in Gibraltar in 1987. He was chairman of the Gibraltar bar council from 1992 to 1995.

Hassan was 'an open and accessible man, greeting people on the street of his colony, and claiming to know the names of most of them' (*The Independent*, 2 July 1997). He enjoyed wide popularity, being fondly known as Salvador—though also, less fondly, as El Pulpo, the octopus, whose tentacles reached into every aspect of Rock life. He died in Gibraltar on 1 July 1997, survived by his wife, Marcelle, their two daughters, and the two daughters of his first marriage.

Hassé, Christian Frederick (1771–1831), composer and organist, born at Sarepta, southern Russia, was educated at Barby, near Halle, in Prussia, and at Niesky in Silesia, under Gregor, a Moravian bishop and composer of hymns. After filling the post of classical master at Barby, Niesky, and Hennersdorf, near Herrnhut, Hassé taught music and foreign languages at Fulneck, the Moravian settlement near Leeds, and became organist to the church of the United Brethren there. He did much to improve musical taste and knowledge in that part of Yorkshire, by introducing foreign masterpieces and organizing orchestral meetings. He arranged the music for James Montgomery's *Polyhymnia, or, Select Airs by Celebrated Foreign Composers, Adapted to English Words* (1822) and also compiled *Sacred Music, Partly Original, Partly Selected*, which included his chorus, 'Blessed are they', his recitative and air 'The Mountains Shall Depart', and a bass solo and chorus entitled 'Amen, praise the Lord'. In addition he composed many hymns which have not been collected. Hassé died very suddenly at Fulneck on 1 May 1831; he was buried there. L. M. MIDDLETON, *rev.* NILANJANA BANERJI

Hassel, Werner (*fl.* 1674–1710), portrait painter, lived in London but was probably a native of Germany, where he also worked; his first name is sometimes incorrectly given as William. He was a pupil of Sir Godfrey Kneller, who painted a portrait of him in 1700, which was engraved by P. Schenck. Hassel is known by a few portraits, some of which have been engraved, including two mezzotints by J. C. Smith of C. L. Fels (1690) and J. Witt (1707), a Frankfurt merchant, and a line engraving of an unidentified sitter by P. Vanderbank. He also painted miniatures in watercolour and enamel as well as full-size portraits in oil. Foskett noted that 'Hassel was a good artist whose works are scarce' (Foskett, 559). An enamel battle piece, signed 'Werner Hassel 1674 Decembris', is in the Bayrisches Nationalmuseum, Munich; a miniature on parchment of a lady, signed and dated 'WH 1687', is in the Victoria and Albert Museum, London. Although Vertue recorded that the painter George *Lambert 'learnt of ... Hassel' (Vertue, *Note Books*, 3.6), whether Lambert was ever his pupil remains conjectural. L. H. CUST, *rev.* ANNETTE PEACH

Hassell, Edward (*d.* 1852). *See under* Hassell, John (1767–1825).

Hassell, John (1767–1825), watercolour painter and engraver, was born in 1767 and was probably the individual of that name, son of John and Ann Hassell, who was baptized in November 1767 at St Mary, Whitechapel, Stepney. He exhibited twenty paintings at the Royal Academy between 1789 and 1819, including many scenes of waterfalls, castles, and salmon leaps in Wales, and of houses and cities, including a view of the city of Bath (exh. 1796). He published many guidebooks, illustrated with engravings in aquatint from his own drawings, including *A Tour of the Isle of Wight* (1790), *A Picturesque Guide to Bath, Bristol Hot-Wells, the River Avon and the Adjacent Country* (1793), *Views of Noblemen's and Gentlemen's Seats ... in the Counties Adjoining London* (1804), *Picturesque rides and walks, with excursions by water, thirty miles round the British metropolis* (1818), and *Excursions of Pleasure and Sports on the Thames* (1823). Working also as a drawing master, he wrote works on painting and drawing, including *The Speculum, or, Art of Drawing in Watercolours* (1809), *Calcographia, or, The Art of Multiplying Drawings* (1811), and *The Camera, or, Art of Drawing in Watercolours* (1823). A life of his friend, the painter George Morland, was published in 1806. Hassell died in 1825.

Edward Hassell (*d.* 1852), watercolour painter, the son of John Hassell, painted landscapes and the interiors of Gothic churches and buildings. He exhibited thirteen paintings at the Royal Academy between 1827 and 1840, and also showed frequently at the Society of British Artists from 1827 to 1852. Elected a member in 1841, he became secretary in 1846. Some of his paintings are in the National Gallery, Dublin, and *Barrow, Derwentwater* is held in the Victoria and Albert Museum. He died in Church Street, Lancaster, on 3 November 1852.

Hasted, Edward (1732–1812), county historian, was born on 20 December 1732 at Dove Court, Lombard Street, London, the only son of Edward Hasted (1702–1740), landowner, of Hawley, in Sutton-at-Hone parish, and Anne Tyler, daughter and coheir of Joseph Tyler of London. His father was a member of Lincoln's Inn, but did not practise law, living instead as a country gentleman. He served as clerk to the Wax Chandlers' Company. The landed wealth of the family had been assembled by Hasted's grandfather Joseph Hasted, chief painter-stainer to the Royal Navy at Chatham Dockyard. Hasted's father died young, at the age of thirty-eight, in 1740, and the family, under financial constraints, moved to Rome House in Chatham. Hasted was educated privately at Darent (1737–40), at King's School, Rochester (1740–44), at Eton College (1744–8), and at a private school in Esher (1748–50). He became a student of Lincoln's Inn in 1750, but was not called to the bar.

Hasted first collected material on Kent as a pleasurable activity, to give him knowledge of the past. Only later was he persuaded by scholarly friends to collect more systematically and to contemplate publication. But the many volumes of his manuscript notes in the British Library show his original interest in collecting documents on a wider variety of subjects, including the sequestrations of royalist estates in the English Civil War, seizures by the

Edward Hasted (1732–1812), by unknown artist, 1801

commissioners for prizes taken during the Dutch War, and stores and ammunition sent to Ireland in the Commonwealth period.

Hasted inherited enough land and rents to live as an independent country gentleman. He married in 1755 Anne Dorman (*d.* 1803), third daughter of John Dorman of Sutton-at-Hone, described by him as 'a wife without any fortune'. After living for two years in Canterbury, the couple moved to a commandery of the knights of St John, at Sutton-at-Hone, a house which Hasted refurbished expensively; it now belongs to the National Trust. They lived there from 1757, then returned after nineteen years to Canterbury in 1776. Hasted served as a JP from 1757, was briefly chairman of quarter sessions, and also deputy lord lieutenant of the county. He made friendships with learned antiquaries, notably Dr Charles Lyttleton, bishop of Carlisle and president of the Society of Antiquaries, and Dr Andrew Coltee Ducarel, librarian at Lambeth Palace, and thus he was introduced to archives. Two months in 1763 spent at his mother's house in London consulting records in the Tower of London, the British Museum, and Lambeth Palace, were a decisive experience, and more purposefully thereafter Hasted's *History of Kent* took shape. He became a fellow of the Society of Antiquaries in 1763, and was elected a fellow of the Royal Society on 8 May 1766.

For his Kent history Hasted scoured sources everywhere. For documents in the Public Record Office he relied on calendars, or on lists found in other collections such as the Lansdowne Manuscripts. But he himself abstracted wills in the prerogative court of Canterbury, worked extensively at the British Museum, the Tower of London, Lambeth Palace, in Canterbury Cathedral, using both archives and books, and among the private papers of the Dering family at Surrenden. He also perambulated parishes himself. A basic framework for his *History of Kent* was built from earlier histories of Kent and other printed sources, but he relied on a large number of local informants among gentry, lawyers, and parsons, to whom he sent questionnaires. His work occupied nearly forty years from about 1763 to 1799; it was prolonged by his care to incorporate corrections and the most up-to-date information, but was also complicated by a flight to France in 1790 to escape creditors, and a spell in the king's bench prison from 1795 to 1802, though in both places he continued to work.

The first edition of the *History of Kent*, in four folio volumes, appeared between 1778 and 1799. Debt obliged Hasted to sell his manuscripts in 1796, and a large number are now in public collections. While the fourth and last folio volume was in preparation, Mr Bristow of Canterbury undertook in 1796 to publish an octavo edition in twelve volumes, and dictated a different style. The new edition (1797–1801) was much revised by one, or more probably two, unknown editors, omitting many footnotes and much detail about families and their lands, especially about female descendants, but containing new and more complimentary descriptions of landscape, and giving prominence to charities, numbers of poor, and other lively, gossipy detail, thereby increasing its popular appeal. Hasted, impoverished and in prison, acquiesced. His other lesser publications included articles in the *Philosophical Transactions* and *Gentleman's Magazine*, *A Genealogical and Historical Table of the Families of Heron of Newark* (1797), and *A Canterbury Guide* (*c.*1805).

Hasted had loyal and long-suffering helpers with local knowledge, notably William Boteler, William Boys, John Lyon, and John Thorpe, who organized and digested much material before it reached him. Hasted is accused of many inaccuracies in his work, including serious errors on his maps, revised from the *Atlas of Kent* of 1769 by Andrews and Drury, which for east Kent was dubbed by Boteler 'shocking work'. Yet for its time it was a heroic achievement, since Kent is a county of innumerable small manors which, through the system of land tenure known as gavelkind, underwent subdivision and many changes of ownership. Hasted was indefatigable in his research.

Hasted and his wife had six sons and three daughters, of whom one son and one daughter failed to survive infancy. But in 1785 he deserted his wife to live with a young woman, Mary Jane Town: he moved with her into lodgings around Kent, then in London, then in France, and returned in 1793 to live in Cirencester, and finally London. There he was arrested for debt and imprisoned with her in 1795 in the king's bench prison. He parted from her in 1797, and was reconciled with his wife and family in 1798. He was discharged of his debts in 1802. His wife died in 1803.

Hasted owned land in seven or eight parishes round Rochester and Sittingbourne but lived above his means

and in 1784 mortgaged some land, and in 1787 sold some. More secret sale negotiations followed before he fled to France. His failure to redeem the mortgages deprived him of his whole estate. His solicitor was subsequently charged with corrupt dealings, but Hasted's version of this story, told in his self-written obituary, proclaimed him as the triumphant plaintiff. This was untrue: he was the defendant who did not recover his estate, nor did his family; the final decree was dated 1822.

Hasted obtained his release from prison through an agreement with the two mortgagees who prosecuted the above lawsuit, to whom he assigned all interest in the outcome. He lived in straitened circumstances in London until the earl of Radnor presented him in 1807 to the mastership of Lady Hungerford's Hospital at Corsham, Wiltshire. He died at the master's house there on 14 January 1812, and was buried in an unmarked grave in Corsham.

Hasted was a tireless gatherer of facts, but his writing is dull and unimaginative, and his papers do not always reveal an agreeable or honest person. A contemporary, Sir Samuel Egerton Brydges (1762–1837), described him harshly in his autobiography as:

> a voluble and flighty talker ... a little, mean-looking man, with a long face and a high nose; quick in his movements and sharp in his manner. He had no imagination or sentiment, nor any extraordinary quality of the mind, unless memory. (*The Autobiography, Times, Opinions and Contemporaries of Sir Egerton Brydges*, 1834, 1.50–51)

Nevertheless, as regards the *History* Brydges admitted that 'altogether it is a great work' (ibid.). JOAN THIRSK

Hasted, William Freke (1897–1977), army officer, was born on 28 September 1897, in Waltair, India, son of William Anderson Hasted (1864?–1928), an official of the Madras survey department of the Indian Civil Service (1884–1922), and his wife, Mabel Jessie. After attending Cheltenham College (*c.*1910–1915), Hasted was commissioned in the Royal Engineers (1915) and served in the First World War, receiving the MC. On 9 June 1920 he married

William Freke Hasted (1897–1977), by Walter Stoneman, 1948

Helen Elizabeth Mary, daughter of Lieutenant-Colonel Arthur Edward Cuming; they had no children. He represented England at hockey in 1923. Hasted was an instructor at the Royal Military Academy, Woolwich (1924–6) and at the Royal Military College of Canada (1926–30). After being posted to India in 1936 he served with the Bengal sappers-miners (Peshawar) before appointment to northern command headquarters (1937).

For his part in Waziristan operations Hasted was appointed DSO (1937). He was commander of the Royal Engineers in Waziristan (1938–41) and then deputy chief-engineer at headquarters of the Tenth Army (1941–2). As deputy engineer-in-chief for air at New Delhi general headquarters (1942–3), he was in charge of airfield construction. In Burma during 1944–5 he was chief engineer of the Fourteenth Army: Viscount Slim hailed him as 'one of the heroes of the campaign' (Slim, 397–8). Hasted reciprocated Slim's admiration. Among other contributions to military transport he built roads, in the absence of road-metal or road-making machinery, with overlapping strips of bitumen-soaked Hessian cloth ('bithess'). Hasted was afterwards chief engineer of allied land forces of south-east Asia command (1945–6). Some 200 airfields, depots, and stations costing £100 million were erected under his wartime directions. Hasted was gazetted major-general in 1946 and was last holder under the raj of the appointment of engineer-in-chief in India (1946–7) before going onto retired pay in 1948. He was appointed CBE (1941), CIE (1943) and CB (1946).

Hasted was controller of aerodromes under the Ministry of Civil Aviation (1947–8). As such he developed and administered state-owned airports in Britain and advised on those in the colonies. Next in 1951 he became president of Loughborough College, which specialized in engineering, but he did not remain long in higher education. In the early 1950s the sheikhdom of Kuwait (a British protectorate since 1899) was induced to begin spending some of its immense oil revenues on modernizing its institutions and infrastructure. After the formation of the Kuwait development board to supervise this expenditure (1952) Hasted accepted the position of controller of development. The board's first priorities were school-building, water distillation, power stations, and the design of a new port at Shuwaikh. Kuwait Airways had its inaugural services in 1954, the year of Hasted's retirement from the Persian Gulf.

As a military engineer Hasted was resourceful, determined, reliable, and taciturn. Shortly after his wife's death in Ireland on 4 January 1961 he married, on 4 April 1961, Catherine Levis (*b.* 1920), a widow with whom he was farming in Devon; she was the daughter of John Crowley, a farmer. They had two sons. Hasted died of prostate cancer on 29 October 1977, at Norfolk and Norwich Hospital, and was cremated on 3 November at Ipswich.

Hastie, James (1786–1825), British agent in Madagascar, was born to a Quaker family in Cork. He found his religious upbringing constraining and enlisted in the 56th foot, leaving for India where he served during the Second Anglo-Maratha War. In 1815 Hastie, now a sergeant, was quartered with his regiment at Port Louis, Mauritius, and attracted the notice of Governor Farquhar by his conduct during a fire. He was recommended for a commission, and in the meantime appointed preceptor to two Malagasy princes, with whom he returned to Madagascar. There he became assistant agent to Mr Pye, the civil agent of the British government at Tamatave.

Hastie reached the court of King Radama I, at the capital of Imerina, on 6 August 1817 and soon won the trust and friendship of the Hova monarch, with whom he was able to negotiate, in 1817 and 1820, treaties of friendship and commerce, and a treaty for the prevention of the export slave trade. From 1818 to 1825 Hastie acted as civil agent in Madagascar (including two years *per interim* at Mauritius), helping to reform the military, and accompanying King Radama throughout the campaigns which subjugated the eastern, northern, and western peoples of the great island. Hastie's journals, later deposited in the Public Record Office, London, gave the only geographical information which was then available of the interior of Imerina, Antaukay, and Iboina, and his observations on the manners and character of the inland Malagasy tribes were treated as authoritative throughout the nineteenth century. He died on 18 October 1825, at Tananarive, where he was buried in a vault prepared by King Radama who, largely through Hastie's help, had won recognition as the sole ruler of Madagascar. Hastie was survived by his one-year-old son.

Hastie, William (1842–1903), Church of Scotland minister and theologian, third son and fourth child in the family of four sons and three daughters of James Hastie (*d.* 1873) and his wife, Catherine, *née* Weis (*d.* 1890), was born on 7 July 1842 at Wanlockhead, Dumfriesshire, where his father was a manager of lead mines. After education in the local school under John MacArthur he taught in the neighbourhood, and studied privately. Entering Edinburgh University in 1859, he distinguished himself in both his arts and his divinity courses, graduating MA with first-class honours in philosophy in 1867, and BD in 1869; he also won the Pitt theological scholarship. He supplemented his theological studies at Glasgow (1870–71), attending the class of Dr John Caird, professor of divinity. After becoming a licentiate of the Church of Scotland, he was for some years a wandering student among continental universities—in Germany, Holland, and Switzerland—mastering foreign languages and widening his theological knowledge. In the intervals passed at home he took occasional work as a university deputy, or as assistant to parish ministers, among them Paton James Gloag, at Galashiels.

In 1875 Hastie was fully licensed for the ministry of the Church of Scotland. He had developed wide intellectual and theological interests, but, with little inclination for the life of a parish minister, he was restless. At this time he published translations of works on Romanism by J. Froschammer. In 1878 he was appointed principal of the Church of Scotland College at Calcutta, where he arrived in January 1879. His acceptance of the post was perhaps rushed and unwise (his ambition was a chair in a Scottish university), but he proved a competent and energetic administrator, and he determined on a wider role for the Church of Scotland in India, identifying Govindpore as a suitable place for an evangelical mission centre. At the same time, though, he quarrelled with Free Church of Scotland missionaries and was censured. In 1881 he published the first part of *The Elements of Philosophy*, and in 1882 he issued *Protestant Missions to the Heathen*, an enlarged version of the work by Dr T. Christlieb. In 1883 his *Hindu Idolatry and English Enlightenment* (a reprint of six letters from the Calcutta *Statesman*) caused a furore among educated Hindus, whose reaction was exacerbated perhaps by the general political tension in India at that time. In January 1883 Hastie was attacked in his carriage. In addition, allegations of gross mismanagement of the orphanage run in

Calcutta by the Scottish Ladies' Association were forwarded to Edinburgh by Hastie, with his support. In response there arrived in Edinburgh in 1882 the orphanage's superintendent, Miss Pigot, seen by Hastie as his 'enemy' (Macmillan, 96). She sued him for libel in Calcutta in 1883: he was fined 1 anna and the costs were divided; in the trial, Hastie made a number of allegations against Miss Pigot. The case caused a sensation in Calcutta (Miss Pigot being of Indian and European parentage), and it led to his dismissal as principal in November 1883. Miss Pigot appealed and was vindicated by the second judge; Hastie was required to pay 3000 rupees and all costs, and his witnesses received especial condemnation. His appeal to the general assembly in Edinburgh against his dismissal was rejected on 29 May 1884 by 193 votes to 90; he unsuccessfully sued the assembly and other parties. Somewhat provocatively, he then returned to Calcutta knowing that his failure to pay the libel damages and costs would lead to imprisonment, as it did on 13 February 1885.

Hastie declared himself bankrupt and was released, leaving India in April 1885 and retiring to Wanlockhead to write. He earned a living by translating, notably *Philosophy of Art* (1886), a translation of *Vorlesungen über die Ästhetik* by Hegel, and works by other German authors including Kant, Schliermaster, and Pünjer. His introductions to these did much to encourage educated interest in German theology and philosophy. Opinion began to swing Hastie's way, and the Church of Scotland repented of its treatment of him. He became examiner in theology, and in 1892 he was Croall lecturer at Edinburgh. On 13 April 1894 he received the honorary degree of DD from Edinburgh University, and in 1895 he succeeded William Purdie Dickson as professor of divinity at Glasgow, having previously failed in a number of similar applications. There he was popular with his students, whom he impressed with his attainments and method. He began a libel action against a Dutch professor but was persuaded to abandon it. He published *Theology as Science* (1899), and was an important contributor to the broad church movement in Scotland. His course of philosophical lectures, published posthumously at Edinburgh in 1904 as *The Theology of the Reformed Church in its Fundamental Principles*, proved valuable. He also published poetry. Hastie suffered from depression after 1883, and was in poor health in the 1890s; it may be the case that he was mentally unstable from an earlier date. He died suddenly and intestate at Edinburgh on 31 August 1903, and was interred on 4 September in the family burying-ground at Wanlockhead. He was unmarried; Macmillan mentions his 'gallantry to ladies' (Macmillan, 185). A memorial Hastie lecture was established in Glasgow University and his friends founded the Hastie Club.

Hastings. For this title name *see* individual entries under Hastings; *see also* Rawdon, Elizabeth, *suo jure* Baroness Botreaux, *suo jure* Baroness Hungerford, *suo jure* Baroness Moleyns, *suo jure* Baroness Hastings, and countess of Moira (1731–1808).

Hastings family (*per. c.*1300–*c.*1450), gentry, had established themselves in Allerston in the North Riding of Yorkshire in the early thirteenth century, but enhanced their wealth and social status during the fourteenth century through military talent and magnate service. Although **Sir Nicholas Hastings** (*d.* before 1316) inherited from his father, Hugh, lands at Wistowe, Leicestershire, and Gissing, Norfolk, the prospects of advancement offered by the wars in Scotland led him to concentrate his activities around the family's most northerly manor at Allerston. Summoned to serve against the Scots in 1300 and 1301, he entered the service of Sir Ralph Fitzwilliam of Hinderskelfe, Lord Greystoke, in May 1311, taking a rent of £8 per annum as his retaining fee, and subsequently served in the English garrisons at Berwick and Dundee.

It was the career of Sir Nicholas's son and heir, **Sir Ralph** [i] **Hastings** (*d.* 1346), that transformed the expectations of the family, however. By 1332 he had established himself in the service of Henry, third earl of Lancaster (*d.* 1345), acting as constable and steward of the earl's honour of Pickering and serving with the earl's eldest son, Henry of Grosmont (*d.* 1361), on a series of successful military campaigns—in Scotland (1336), Brittany (1342), and Aquitaine (1344, 1345–6). The substantial rewards of this service (a fee of £20 as steward of Pickering and an additional £40 retaining fee) enabled Sir Ralph to expand the Hastings family estates, both in the North Riding, where he purchased the manors of Slingsby, Howthorp, and Colton, and in Leicestershire, where he acquired estates at Newton Harcourt and Welford. A series of royal privileges, including free warren in all his lands (1329) and a licence to crenellate and impark his new residence at Slingsby (1344), underlined his increased status and prosperity, while the acquisition of the advowson of Sulby Abbey, Northamptonshire, in 1343 allowed the Hastings family to treat this Premonstratensian house as their mausoleum—both Sir Ralph and his eldest son requested burial there. Appointed a keeper of the peace in the North Riding in 1332, Sir Ralph served as sheriff of Yorkshire between March 1337 and October 1340 and was closely involved, during his tenure of the shrievalty, in implementing Edward III's schemes for the regulation and financial exploitation of the wool export. He died in November 1346, less than a month after he had led the rearguard of the army that defeated the invading Scots at Nevilles Cross.

Where his father had led, his son and heir, **Sir Ralph** [ii] **Hastings** (*c.*1322–1397), followed, confirming the Hastings' position among the most substantial Yorkshire gentry families and establishing himself as a figure of some national consequence. After early military experience at Nevilles Cross and in the sea-fight off Winchelsea (1350),

Sir Ralph [ii] made his reputation in the service of successive dukes of Lancaster. He was in Henry of Grosmont's company at Calais (1347) and on the Rheims campaign (1359–60), before serving with the duke's son-in-law, John of Gaunt, in Spain (1367)—where Hastings was captured and put to ransom—France (1369, 1373), Aquitaine (1370), Scotland (1385), and at sea (1372). As a brave and experienced soldier, who 'cared not two cherries for death' (Pope and Lodge, ll. 2729–30), Sir Ralph was a valued member of the Lancastrian affinity, retained by both Grosmont and Gaunt at a yearly fee of 40 marks, whose reputation brought him additional fees from regional magnates such as John, Lord Neville, and Thomas, Lord Ros. Such influential connections, and the substantial landed estate his father had assembled, gave Sir Ralph [ii] considerable local consequence in Yorkshire: he was chosen as sheriff of the county in October 1376 and October 1380, and was returned to parliament twice by the shire electors, in October 1378 and January 1380. He had already served as one of the MPs for Leicestershire in January 1365, soon after inheriting the estates of his mother, Margaret, daughter of Chief Justice Sir William Herle, at Braunston and Kirby Muxloe, Leicestershire. In addition, the close involvement of John of Gaunt, his principal patron, in the government of the realm meant that Sir Ralph was entrusted with some tasks of national significance: he was appointed a warden of the east march in October 1371, and continued to be involved in marcher business for several years thereafter, while in January 1380 he was chosen as one of the three knights on the parliamentary committee established to inquire into the conduct of the great officers of state and the expenses of the royal household.

Sir Ralph [ii] married twice: his first wife was Isabel, daughter and heir of Sir Robert *Sadyngton, and his second was Maud, widow of Sir John Meaux; he left a large, young family at his death in October 1397. His eldest son, **Ralph [iii] Hastings** (*c.*1379–1405), was still under age and the Hastings' local influence fell temporarily into abeyance; it was left to a cousin, Sir Edmund Hastings of Roxby, Yorkshire, to assume the place in Lancastrian service traditionally enjoyed by the head of the Slingsby branch of the family. Their social position was placed more permanently at risk when Ralph [iii] joined the Percy-influenced rising of north Yorkshire gentry against Henry IV in May 1405, for, following his trial and execution at Durham (20 July 1405), all Ralph's estates were forfeited to the crown. Seventy years of loyal Lancastrian service did not go unrecognized, however, and in 1410 Richard Hastings (*c.*1387–1436), Ralph's eldest surviving brother, was fully restored to the family lands. His career, and that of his brother Leonard (*d.* 1455), swiftly re-established the traditions of loyalty and reliability that had transformed the fortunes of the Hastings family.

Hastings family (*per.* 1759–1907), farmers, were tenant farmers from 1759 to 1907 on the Holkham estate belonging to the Coke family of Norfolk, who were created earls of Leicester in 1837. Their farming activities were representative of the progressive tenants of the large Norfolk farms which made the estate famous for its part in promoting agricultural improvements.

The first member of the family to lease land on the estate was Thomas Hastings (1729–1804), who took over Hall Farm, Longham, in 1759. In 1776 he was paying £225 per annum in rent for 'Hall Farm, Brakelands and sheep walk'. This entry in the Holkham audit book suggests that at this date part of the farm was still open heath and intermittently ploughed breck.

John Sutton Hastings (1790–1869), another member of the family, who was born at Longham on 4 December 1790, held the farm from 1816. An enclosure act for Longham parish had been passed in 1813, when the common was enclosed and the fields rearranged to form a compact farm of the large rectangular fields so typical of the Holkham estate. Although these improvements were initiated by the landlord, much of the work was done by the tenants, who were responsible for claying newly enclosed land, planting new hedges, and grubbing up and levelling old hedgerow banks.

A detailed investigation of the estate in 1816 included a brief vignette about Hall Farm. 'Much money has been expended upon the improvement of the farm with a *very* far distant prospect of a return', it reported; 'A very large sum is still required to complete the present improvements.' The rent of this 580 acre farm was £600, which the agent considered 'high'. Mr Hastings was described as 'a zealous and industrious tenant heart-broken by his present undertaking'. However, a note was added to this description by the agent, Francis Blaikie, saying, 'Mr Coke has promised to take him by the hand' (Blaikie, report, 1816, Holkham Hall). This probably involved financial assistance and in 1822 the rent was reduced to £400.

After the recession of the early 1820s, agricultural fortunes improved and John Sutton Hastings was at the forefront of progress. By 1845 he was a member of the Royal Agricultural Society of England and in 1843 he responded to a farming questionnaire circulated by R. N. Bacon of the *Norwich Mercury* in order to obtain information for his book on the agriculture of Norfolk. By this time the farm was farmed on a four-course rotation (although Hastings believed that there were some circumstances in which two grain crops could be grown in succession). Hastings fed half his turnips to the sheep in the field, but he also bought oil cake and malt dust as feed. He drilled his seeds rather than sowing or dibbling them by hand, and he altered the standard implements to suit his purposes. He

did try new methods, 'but generally went back to the old' (Norfolk RO, Bacon MS). His belief in the scientific basis of the high-input, high-output system of 'high farming' was illustrated by his optimistic closing comment, so different from the sentiments expressed in 1816, that 'production will increase as knowledge itself increases' (ibid.).

Married by 1816, Hastings and his wife Barbara had one surviving daughter, Charlotte; she and their nephew, John, described as 'farm manager' in the 1851 census, were living at their home. During this period the farm continued to be well farmed and stocked. Large numbers of animals were kept and in 1864 the possibility of using modern fertilizers meant that John Sutton Hastings was given permission to depart from the terms of his lease and grow two crops of corn in succession (Holkham Hall, letter books).

Active in the community, John Sutton Hastings was instrumental in organizing the building of Longham School in 1859 and the restoration of the church in 1867, with much of the finance being provided by the Holkham estate. Hastings himself built 'a double cottage for two married couples or four widows not under the age of 60 years' (White, 403). His interest in parish affairs was recorded on his monument in Longham church, which stated that 'during more than half a century he was a steady friend and benefactor of this parish'. He died at Longham on 9 July 1869. **John Hastings** (1830/31–1884), his nephew, took over the farm on his uncle's death. He had married, by 1853, Mary Alice Hunt (*b.* 1828/9), of neighbouring Gressenhall parish. Hastings died at Hall Farm on 31 December 1884, and was survived by his wife.

The general decline in farming fortunes as cereal prices collapsed during the 1870s meant that, in spite of the large number of cattle kept on the farm, profits fell and the rent was unpaid in 1883. The previous year the estate had been informed that the family intended to quit. Following the death of his father, **John Hastings** (1853–1907) took over the farm, but was never able to make the levels of profit typical of the middle of the century. Rents were reduced from a peak of £1013 in the 1870s to £700 in 1885, £600 in 1887, and £477 in 1895. On four separate occasions between 1882 and 1895 John Hastings handed in notice that he intended to quit, and the family finally left the farm after he died at Longham on 10 May 1907. By this time the farm was running relatively smoothly as John had developed a business breeding horses for hackney carriages, which was more likely to remain profitable than conventional farming.

This mid-Norfolk family, renting the same farm from a famous estate for more than 150 years, illustrates the reaction of intelligent farmers of capital to the changes in agricultural practice and fortunes over the periods of the 'agricultural revolution', 'high farming', and the 'great depression'. Hastings, Anthea Esther. *See* Joseph, Anthea Esther (1924–1981).

Hastings, Barbara Rawdon [*née* Barbara Yelverton], **marchioness of Hastings and *suo jure* Baroness Grey of Ruthin** (1810–1858), fossil collector and geological author, was born on 20 May 1810 at Brandon House in Warwickshire, the only child of Henry Edward Yelverton, Baron Grey of Ruthin (1780–1810), and his wife, Anna Maria Kelham (1792–1875). In 1811, following the death of her father, Barbara Yelverton became Baroness Grey of Ruthin. Little else is known of her early life or education. On 1 August 1831 she married George Augustus Francis Rawdon Hastings, second marquess of Hastings (1808–1844), with whom she had six children. On 9 April 1845 Barbara Rawdon Hastings married her second husband, Hastings Reginald Henry (1808–1878), a captain in the Royal Navy. (In 1849 her husband took, by royal licence, the surname Yelverton [*see* Yelverton, Hastings Reginald].) The couple settled at Efford House, near Lymington in Hampshire, and had a daughter.

Hastings's life was a mixture of social and scientific activity. During her first marriage she was nicknamed the jolly fast marchioness, and developed a taste for foreign travel and gambling. However, she was also a keen collector of fossil vertebrates, and during her second marriage established a private museum at Efford House for her specimens. The palaeontologist Richard Owen noted that among the thousands of fossils in the museum were some of the finest in the world (Owen, *Life*, 1.296).

Hastings's fossil collection was a valuable scientific resource. 'Most of the specimens', she told G. R. Waterhouse of the British Museum in 1854, 'are figured in the Palaeontological work' (Archives of the British Museum of Natural History, Correspondence, 1851–5, DF 100/7). However, Hastings did more than simply amass raw material for research; her detailed knowledge of local geology (particularly of the Eocene beds of Hordle cliff), together with her painstaking reconstruction of fossil remains, gave her an expertise that was valued by her contemporaries. She was, said geologist Edward Forbes, 'a "fossilist" and knows her work' (Wilson and Geikie, 423). Richard Owen named a fossil crocodile from Hordle cliff *Crocodilus hastingsae* 'in honour of the accomplished lady by whom the singularly perfect example of the species had been recovered and restored' (Owen, 'Fossils', 66).

Nevertheless, despite her expertise, Hastings occupied an ambiguous place in Victorian geology. At a time when science was the preserve of gentlemen scholars she often

took on the role of female drudge: 'I have been six hours mending bones, & feel tired & stupid', she wrote to Owen in 1847 (Archives of the British Museum of Natural History, Owen correspondence, vol.14 NH 14:400). High birth and independent wealth, however, secured her access to the world of her male contemporaries, able to pursue their chosen specialism at leisure. In 1847 Hastings became 'a fixed star' (Owen, *Life*, 1.296) of the Oxford meeting of the British Association when she exhibited two crocodile skulls and a turtle shell excavated from Hordle cliff. Genuine significance was attached to these specimens, as Owen explained when he addressed the meeting. Some of the reptilian remains, he suggested, indicated that there was 'a new genus of Pachyderm' (Owen, 'Fossils', 65), named Paloplotherium by Owen, between the Palaeotherium and Anoplotherium. Hastings also addressed the meeting and argued that the presence of crocodile remains on both the Hampshire coast and the Isle of Wight revealed that the space occupied by the Solent had once been occupied by a freshwater lake or river (see 'On the freshwater Eocene beds of Hordle cliff, Hampshire', *Report of the British Association for the Advancement of Science*, 18.48).

Hastings continued her studies of local geology and published papers on the stratigraphy of Hordle cliff in 1852 and 1853. Having spent six years on very minute researches of the strata she was well placed to assess the impact of phenomena such as cliff falls and sea erosion which might have eluded the short-term observer (see 'On the Tertiary beds of Hordwell, Hampshire', *Philosophical Magazine*, 4th ser., 1853, 1). Hastings's were the first accurate stratigraphical accounts of Hordle cliff to be published, and contributed to knowledge of the Tertiary period.

In 1855 Hastings sold her collection of mammalian and reptilian fossils. Her gambling instincts seemed to come in to play for, after threatening to send the fossils to Paris (where 'they would be treated as immense treasures'), she secured £300 for the entire collection from the British Museum (Archives of the British Museum of Natural History, Correspondence, 1851–5, DF 100/7). The collection subsequently went to the palaeontology department of the Natural History Museum in London. Hastings died of apoplexy in Rome on 18 November 1858, and was buried in the English cemetery there a week later. She was survived by her second husband. PORTIA DADLEY

Wealth at death under £100: administration with will, 1859, *CGPLA Eng. & Wales*

Hastings, Beatrice. *See* Haigh, Emily Alice (1879–1943).

Hastings, Sir Charles (1794–1866), physician and founder of the British Medical Association, was born on 11 January 1794 at a lodging house in Ludlow, Shropshire, the ninth of the fifteen children of James Hastings (1755–1856), Church of England rector, and his wife, Elizabeth (*née* Paget). In 1795 the Hastings family moved from Bitterley in Shropshire to Martley, Worcestershire. Little is known of Hastings's early education except that he attended the grammar school in Martley. In 1806 his father suffered a riding accident which rendered him permanently unfit for work owing to physical and mental incapacity. Soon afterwards his clerical living was placed in chancery and the Hastings family, in reduced financial circumstances, moved to Worcester.

In September 1810, after toying with the possibility of a naval or military career, Hastings began a two-year medical apprenticeship with Richard Jukes and Kenrick Watson at their practice in Stourport-on-Severn. In 1812, following a few months of further study in London, Hastings was elected house surgeon at Worcester Infirmary. Three years later he entered Edinburgh University medical school; he graduated MD in August 1818 with a doctoral thesis on the blood vessels. It has been said that he alone of his Edinburgh student contemporaries made use of the microscope in his studies. For a short time Hastings was clerk to the Edinburgh Royal Infirmary but, though offered the post of extramural teacher of anatomy and physiology in his university, he returned to Worcester and in November 1818 was appointed junior physician at the infirmary. He spent the rest of his professional life in Worcestershire, retaining his infirmary post (as senior physician from 1858) until 1862.

On 20 May 1823 Hastings married Hannah (*d.* 1866), the eldest daughter of George Woodyatt, a prosperous Worcester medical practitioner; they had three children, Mary Anne Elizabeth, who was born on 8 May 1824, George Woodyatt *Hastings (1825–1917), and Elizabeth Frances (*bap.* 1827). In early 1824 his father-in-law died and Hastings moved into his house at 43 Foregate Street, Worcester, and took over a large part of his lucrative practice. Thereafter, with patients as far afield as north Wales, he became 'the best known physician in the West Midlands' (McMenemey, 55). As he gained financial security, so he was able to avoid becoming 'a mere receiver of fees' (*The Lancet*, 11 Aug 1866, 163). He continued to practise medicine, taking on the additional appointments of physician to Ledbury Infirmary in 1824, and visiting physician to Droitwich Asylum in 1828, but from the age of thirty he had the means to pursue his interests in medical science,

Sir Charles Hastings (1794–1866), by Samuel William Reynolds junior, pubd 1839 (after Benjamin Rawlinson Faulkner)

professorial fellowship, natural history, and public service.

In 1828, while recovering from a serious accident, Hastings conceived the idea for a quarterly medical journal entitled the *Midland Medical and Surgical Reporter and Statistical Journal* (*MMSR*). It is unclear whether it was the success of this publication, or the example of the British Association for the Advancement of Science, which provided the inspiration for the foundation of a provincial medical society, but the new society, entitled the Provincial Medical and Surgical Association (PMSA), was formally established at a meeting convened by Hastings and held in the boardroom of Worcester Infirmary on 19 July 1832. The PMSA was renamed the British Medical Association (BMA) in 1855, and two years later the PMSA's weekly publication, the *Provincial Medical and Surgical Journal* (*PMSJ*) (founded in 1840 and which had come into the PMSA's proprietorship in 1844), became known as the *British Medical Journal* (*BMJ*). Hastings's original idea was for a scientific and social society, the main object of which was 'the diffusion and increase of medical Knowledge in every department of science and practice' (*MMSR*, 1831–2, no. 3, 302–3). This object was to be achieved by members coming together at an annual meeting in a provincial town or city and by the publication of an annual volume of transactions.

Although 'maintenance of the honour and respectability of the profession' (*MMSR*, 1831–2, no. 3, 302–3) was one of the association's original objectives, Hastings at first had little interest in medical politics; by the late 1840s, however, he was at the centre of the PMSA's medical reform campaign which helped to bring about the Medical Act of 1858. Throughout his life he was the association's driving force and dominating personality, and there were few aspects of its affairs in which he was not closely involved. He was its joint secretary between 1832 and 1843; its treasurer from 1843 to 1866; its president of council for the same period; its president in 1849–50; and its permanent vice-president from 1851 until his death. However, though held in high esteem by most members, Hastings received criticism for his shortcomings as treasurer and his lack of enthusiasm for the *PMSJ*/*BMJ*; he was also reproached for his opposition to the association's democratic governance, its change of name, and its proposed relocation as a national body in London.

Aside from his involvement with the PMSA/BMA Hastings was throughout his life an enthusiastic participant in numerous learned societies and public bodies. While at Edinburgh he belonged to the Royal Medical Society and served as its president; on his return to Worcester he was active in the Worcester Medical and Surgical Society, over which he presided in 1819; in the early 1830s he became a member of the British Association for the Advancement of Science; and in 1833 he was prominent in the formation of the Worcester Natural History Society. He was elected an alderman for the city of Worcester in 1835 and regularly attended council meetings until pressure of work made this impossible. In 1839 he rejected the opportunity to become mayor. In 1857 Hastings was a member of the founding committee of the National Association for the Promotion of Social Science, of which his son was for many years the secretary. He read a paper on tobacco smoking and health at the association's 1860 annual meeting in Glasgow, and he delivered the presidential address to its public health section at the 1864 York meeting. In November 1858, following the passage of the Medical Act, Hastings was appointed to the newly created General Medical Council, on which he sat until his retirement in November 1862. He was also associated, in various capacities, with the Epidemiological Society, the Sydenham Society, and the New Equitable Assurance Company. In addition he was a corresponding member of the Massachusetts Medical Society, president of the Medical Officers of Asylums for the Insane, a charity commissioner for Worcestershire, and deputy lieutenant for the same county.

Hastings gained several honours, the foremost of which was the knighthood conferred upon him in July 1850 following political lobbying by senior members of the PMSA. He was also awarded the diploma of the Royal Medical Society in 1818 and an honorary DCL degree by Oxford University in 1852. He published many scientific papers and newspaper articles. His first book, *A Treatise on Inflammation of the Mucous Membrane of the Lungs* (1820), which was translated into German in 1822, confirmed him as an authority on chest diseases. His one other book, *Illustrations of the Natural History of Worcestershire* (1834), was an expanded version of his inaugural address to the Worcester Natural History Society.

Hastings possessed a genial personality but could also

be forthright and abrasive. On several occasions he clashed with colleagues over their conduct of business meetings and alleged professional 'poaching'. In his youth he was tall and strikingly handsome but a carriage accident he sustained in 1828 inflicted permanent hip damage which afterwards prevented him from standing upright or walking without a limp. Five of his siblings died before reaching adulthood, and while a student in Edinburgh a serious bronchial disorder compelled him to return to Worcester for many months. Thereafter he enjoyed good health until a few years before his death. Hastings died from cancer of the colon on 30 July 1866, at Barnard's Green House, Malvern, one of the several houses he possessed. His wife had died a few months earlier, on 21 March 1866. He was buried at Astwood cemetery in Worcester on 6 August 1866. His medical books were eventually deposited in the British Medical Association's library.

Wealth at death under £20,000: probate, 2 Oct 1866, *CGPLA Eng. & Wales*

Hastings, Edmund, Lord Hastings of Inchmahome (1263x9–1314), soldier and administrator, was the younger son of Henry *Hastings (1235?–1269) and his wife, Joanna de Cantilupe. The birth of his elder brother, John *Hastings, first Lord Hastings, in May 1262 and the death of his father before 5 March 1269 place his birth between 1263 and 1269. On 26 December 1295 Edward I restored his lands in Suffolk because he was a loyal Englishman who had not deserted to the Scots; and on 28 August 1296 he swore fealty to Edward as overlord of Scotland. Through Edward's favour, he had recently married Isabel, widow of William Comyn of Kirkintillock and daughter and heir of Isabel, countess of Menteith in her own right, and of John Russell. In 1259 Countess Isabel had been deprived of the earldom of Menteith following accusations that she had poisoned her first husband. Menteith was then held by Walter Stewart, her brother-in-law, until he was compelled by judgment of the Scottish parliament in 1285 to partition it with the younger Isabel and Comyn; and half the earldom lands, without the title of earl, were duly acquired by Hastings on his marriage *c.*1293. Shortly before it, on 5 January 1293, Edward I ordered King John Balliol to release Isabel from her oath not to marry without his consent, curtly reminding him that he had already promised her to Edmund Hastings when the Scots realm had been in his possession (1291–2). Although Edmund had difficulty controlling his wife's estates after the outbreak of the Scottish wars, his rights were specifically protected when on 22 May 1306 Edward I granted to his elder brother, John Hastings, the forfeited lands of Alan, earl of Menteith, Walter Stewart's grandson. Edmund also held or claimed property in Dundee and shares of the baronies of Inverbervie, Kincardineshire, and Longforgan, Perthshire, as part of the Hastings inheritance from David, earl of Huntingdon (*d.* 1219).

Hastings was summoned by the English crown for military service against the Scots (1298–1310) and to parliament (1299–1313). He supported Edward I in Annandale early in 1300, and was at the siege of Caerlaverock in July. Taking the title of Lord Hastings of Inchmahome, Perthshire, after the chief lordship of Menteith, he was one of many English nobles to join in the letter of 12 February 1301 protesting that the pope had no jurisdiction over Edward I's claims to Scotland. During the next few years he played a full role in upholding English rule in Scotland. He was appointed warden of Berwick in February 1302, keeper of Perth in July 1306, and one of Edward II's three military governors between the Forth and Orkney in June 1308. He occurs as constable of Dundee in 1310–11, and returned to Berwick as warden and sheriff in May 1312. According to the *Annales Londonienses*, a knowledgeable source, he was slain at the battle of Bannockburn (23–4 June 1314). He left no known children.

Hastings, Sir Edward (1382–1438), soldier and litigant, was born on 21 May 1382 at Fenwick, Yorkshire, the second son of Sir Hugh Hastings (*d.* 1386/7) of Elsing, Norfolk, and great-grandson of Sir Hugh *Hastings (*c.*1310–1347). His father, a noted soldier, served on most of the principal campaigns of the 1370s and 1380s, and was a prominent retainer of John of Gaunt, duke of Lancaster: he died on Gaunt's expedition to Galicia in 1386–7. On the death in 1389 of John Hastings, earl of Pembroke, Edward's brother Hugh, and after Hugh's death at Calais in 1396 Edward himself, were the heirs of the half-blood, being descended from the earl's great-great-grandfather, John *Hastings, first Lord Hastings (*d.* 1313), and his second wife, Isabel Despenser, in an unbroken male line. Reynold, Lord Grey of Ruthin, however, claimed priority, as heir of the whole blood, being descended in the female line from John, Lord Hastings, and his first wife, Isabel de Valence. There were other descendants too, but most of the earl's lands passed eventually to Grey: Hugh and

Edward, being under age, were in the 1390s in a poor position to contest his claims.

In 1399, soon after Henry IV's accession, Edward Hastings was knighted: he is described as a 'king's knight' and was granted £40 p.a. to maintain his knighthood while his minority lasted. On Henry IV's expedition to Scotland in 1400 both Edward Hastings and Lord Grey appeared in the arms of Hastings of Pembroke, 'or a manche gules', and Grey challenged Edward's right to them. In the next year Grey petitioned the king to appoint a procurator for Sir Edward, who was still a minor, so that the case could be heard, and there were some proceedings before the constable; but full proceedings only began after the issue of a commission to hear the case, from John of Lancaster as constable of England, in May 1407. The hearings in the case, which became one of the *causes célèbres* of the middle ages, were lengthy (a full record is preserved in a seventeenth-century transcript in *Processus in curia marescalli*, London, College of Arms). Judgment was finally given in favour of Grey on 9 May 1410: Hastings was condemned in costs, but at once appealed against the judgment.

At the coronation of Henry V in 1413 Hastings made another claim as heir to Hastings of Pembroke, to the right to carry the royal spurs and the second sword, and to perform the office of naperer, which claim appears not to have been allowed. Later in the year he was imprisoned in the Tower of London, but in April 1414 he was set free. Commissions were appointed to hear his appeal, on 22 May and 22 November 1413, and again on 8 February 1415, but, probably owing to the French war, no hearings took place. In 1415–16 Hastings was in war service in the retinue of the earl of Dorset, at Harfleur. On 11 February 1417 Grey obtained an order for the taxation of costs of the original trial (which were assessed at £987 10s. 10*d*.) and when Hastings refused to pay, lest this should be construed as acknowledgement of Grey's rights, he was imprisoned in the Marshalsea, where he remained until some time after January 1434.

Though at times 'boundyn in fetters of iron liker a thef or traitour than lik a gentilman of berthe' (Young, xiv), Hastings steadfastly refused to purchase his release by abandoning his claims. In 1420 he made an offer that, if his son John should marry a daughter of Lord Grey, he would bestow on the pair 100 marks a year and the Hastings inheritance and arms, but this was refused. He was still in prison in January 1434 when he wrote from the Marshalsea an appeal to his peers: he was probably released soon after that.

Hastings seems finally to have paid off his costs; on 20 October 1436 his recognizance in the sum of £1000 to John, earl of Huntingdon, Reynold Grey, and his son John was cancelled, the earl and the Greys acknowledging themselves to be content. Hastings was twice married, first to Muriel (who died before 1420), daughter of Sir John Dinham, with whom he had a son John and other children; and second to Margery (*d*. 1456), daughter of Sir Robert Clifton of Bokenham, who after his death on 6 January 1438 married Sir John Wyndham. John Hastings never prosecuted the family claim to the arms 'or a manche gules', nor did he use the title his father had claimed, Lord Hastings and Stuteville. He married Anne, daughter of John, Lord Morley, and died in 1471. He was buried in Elsing church (Blomefield 9.519). His descendants in the male line became extinct in 1542; the barony of Hastings fell into abeyance until 1841 when it was revived, in favour of Sir Jacob Astley, who was able to trace his descent (at several points through the female line) from John, Lord Hastings, via Sir Edward. Hastings, Edward, Baron **Hastings of Loughborough** (1512x15?–1572), nobleman and soldier, was the third son of George *Hastings, third Baron Hastings of Hastings and first earl of Huntingdon (1486/7–1544), and Anne Stafford, sister of Edward Stafford, third duke of Buckingham. Anne had previously been the wife of Sir Walter Herbert, and married Hastings in December 1509. Edward was therefore probably born between 1512 and 1515. Nothing is known of his upbringing, but he was trained as a soldier, becoming a gentleman pensioner in 1540 and serving in the French campaign of 1544, and in the duke of Somerset's army against Scotland in 1547. According to William Patten he was knighted by the duke, along with fifty-one others, at the close of the campaign. He sat in the parliament of 1545 for the borough of Leicester, and in November 1547 was returned as a knight for Leicestershire, where the influence of his brother Francis *Hastings, since 1544 second earl of Huntingdon, was strong. He was clearly regarded as a competent officer, because in October 1549 he was designated for a responsible command in the sensitive garrison at Boulogne, although that intention was not fulfilled. In 1550 he served with his brother the earl on a commission to delimit the boundary of the Calais pale, and in 1551 was sheriff of Warwickshire and Leicestershire. During the Christmas season of 1552 he was present at Calais, where he fell out with Edward Underhill, a militant evangelical who was also controller of the ordnance there. According to Underhill they disputed on the nature of the real presence in the eucharist, Hastings taking the traditional or Catholic position on the mass (by that time illegal in England). A rather inarticulate religious conservatism does not seem to have impeded his career under the protestant government of Edward VI, and he again sat for Leicestershire in the parliament of March 1553.

Edward Hastings, Baron Hastings of Loughborough (1512x15?–1572), by unknown artist

After Edward's death on 6 July 1553 Hastings took a leading role in assembling supporters of Princess Mary in the Thames valley; their threat to London was an important factor in destroying support in the privy council for Lady Jane Grey. He then joined Mary at Framlingham where he was sworn of the privy council on 28 July. He quickly became one of her inner circle of trusted confidants, and was appointed master of the horse. During the disputes over the queen's marriage in the autumn of 1553 he was one of those councillors who sided with the lord chancellor, Stephen Gardiner, in opposing Philip's candidature, but like Gardiner he accepted her decision once reached. Later, after Gardiner's death on 12 November 1555, he became a supporter of Lord Paget. Hastings was regularly used for missions that required a high level of trust. On 28 January 1554 he was sent with Sir Thomas Cornwallis to negotiate with Sir Thomas Wyatt, then raising forces in Kent to oppose the queen's marriage. The mission achieved nothing positive, but it did serve to make Wyatt's hostile intentions clear. On 11 February Hastings accompanied Lord William Howard in the even more sensitive task of escorting Princess Elizabeth from Ashridge to London to face questioning about her role in the disturbances (a move of which he disapproved). In November 1554 he accompanied Lord Paget to Brussels to escort Cardinal Reginald Pole back to England, and in the spring of 1556 was one of those councillors selected for the tedious task of unravelling the so-called Dudley conspiracy. He held a number of minor but lucrative offices during the reign, and sat for Middlesex in the parliaments of 1554 and 1555, a clear indication of the trust in which he was held. In the latter parliament he was a strong supporter of anti-protestant bills, and nearly came to blows with Sir George Howard on the issue on the floor of the house. He also received substantial grants of land in Leicestershire and Somerset, and was elected to the Order of the Garter in 1555. During Philip's residence in England in 1554–5 Hastings served as a gentleman of his privy chamber, and he accompanied the king back to the Low Countries on his departure in August 1555, apparently remaining with him for several weeks. On 25 December 1557 he succeeded Sir John Gage as lord chamberlain after a vacancy of some eighteen months, and was created Baron Hastings of Loughborough on 19 January 1558.

Hastings remained personally close to the queen, and was among those chosen to be an executor of her will. His only military service during the reign was in the army that the earl of Pembroke led to support Philip at the siege of St Quentin in August 1557, but it is not known that he played an active role. As a councillor of irreproachable religious conservatism, Hastings was regularly involved in the policy of persecuting heretics, but he seems to have regarded this as an unavoidable duty rather than a virtue, and was not noted by John Foxe for particular zeal. Initially Elizabeth showed no disfavour to Hastings. Nevertheless, Mary's death spelt the end of his public career, as it did for most of her intimate councillors. He was not reappointed to the privy council, and was replaced as lord chamberlain by Lord Howard of Effingham. He performed minor services at court in November 1558 and September 1559, but there was nothing to attract him there, and he was completely out of sympathy with the new protestant ascendancy. In April 1561 he was arrested and sent to the Tower for hearing mass, it being the government's policy to make examples of a few prominent offenders. Hastings, however, was not made of the stuff of martyrs; he sued for pardon, took the oath of supremacy, and was released. It is very unlikely that he changed his opinions, but he was discreet and was not troubled further. In April 1563 he is known to have attended the Garter feast, when he stood as one of the sponsors for the election of the fourth duke of Norfolk. After 1558 he spent most of his time on his estates at Stoke Poges in Buckinghamshire; there he carried out various improvements, which included building a hospital and almshouses, and there he died on 5 March 1572.

Virtually nothing is known about Hastings's private life. He married about 1544 Joan, the daughter of John Harington of Bagworth, Leicestershire, and widow of George Villiers. She survived him, but they are not known to have had children. He made a will in May 1556, making no reference to her but mentioning an illegitimate son, Edward, then a minor, so they may have been estranged. He also made various traditional religious bequests, but when he died sixteen years later the will was not admitted to probate and his nephew the earl of Huntingdon was granted administration. The chill of royal disfavour had an adverse effect upon his fortunes after 1558, and he died owing the crown £1800.

Hastings, Lady Elizabeth [Betty] (1682–1739), benefactor, was born on 19 April 1682 at Great Charles Street, London, the eldest daughter of Theophilus * Hastings, seventh earl of Huntingdon (1650–1701), and his first wife, Elizabeth (1654–1688), eldest daughter and coheir of Sir John Lewis, bt, of Ledstone Hall in Yorkshire. Of eight children born to the earl and his first wife, only Lady Elizabeth and the second son, George (*d.* 1705), who succeeded his father as eighth earl, reached adulthood. Their mother died in childbirth in December 1688, and in May 1690 the earl married Frances, widow of Viscount Kilmorey, with whom he had a further two sons and five daughters. Following the seventh earl's death in May 1701, George inherited his maternal grandfather's estate at Ledstone. The eighth earl bestowed this on Lady Elizabeth on condition that she abandon any claim to their father's estate, a generous settlement which included a yearly income of £3000. Lady Betty (as she was known) was a beauty (as is evident in a portrait by Sir Godfrey Kneller), and had several suitors, but preferred to remain single. Her half-sisters, the ladies Anne, Frances, Catherine, and Margaret Hastings, lived with her at Ledstone for many years, and she supervised the education of her half-brother Theophilus, the ninth earl (1697–1746), and his brother Ferdinando.

Lady Betty became notable for her intelligence, her pious character, and her support of charitable causes. She was commemorated in no. 42 of *The Tatler* (16 July 1709) as 'Aspasia', a 'female philosopher', possibly by William Congreve, who was a friend of the family. In no. 49 Richard Steele stated that 'to behold her is an immediate check to loose Behaviour, and to love her is a liberal education' (Bond, 302, 349). Her household, where prayers were said four times a day, entertained a constant stream of visitors, including prominent theologians such as Richard Lucas, Thomas Wilson, bishop of Sodor and Man, John Sharp, archbishop of York, Robert Nelson, and William Law. As this list indicates, Lady Betty's religious sympathies inclined towards the high church, and she gave financial support to the Society for the Propagation of Christian Knowledge (SPCK) and the Society for the Propagation of the Gospel (SPG). Her political opinions are unknown, but her father was noted for his Jacobite views.

The objects of Lady Betty's charity included members of her family and indigent families in her neighbourhood, as well as several parish churches. She purchased several advowsons and gave money to charity schools both local and distant, with special attention to her own school for girls at Ledsham. In addition, she supported Mary Astell's school at Chelsea, subscribed to George Berkeley's missionary project, and was probably the unnamed benefactor of William Law's charity school for girls. She may have been the model for the pious and charitable Miranda in Law's *A Serious Call to a Devout and Holy Life* (1728). In 1716 Lady Betty and her banker, Henry Hoare (1677–1725), proposed to found a hospital in Bath for the sick poor, but she was not involved in the hospital's eventual organization. Lady Betty spent about half of her yearly income on charity, and lived comfortably at Ledstone on the remainder. Although known for her personal abstemiousness in clothing, food, and drink, she was a generous host. Her personality was, by all accounts, exceptionally warm, gracious, and courteous, and she was known as a conversationalist. She managed her estate with great skill and imagination, and hired the architect Charles Bridgeman to design the grounds, which included one of the first ha-has in England. Her attention to planting trees, irrigation, and fertilizing places her among the improving landlords of the era.

During the ninth earl's childhood, Lady Betty acted as the head of the family, and negotiated the marriage of Lady Catherine Hastings to Grenville Wheler in 1725 and that of the earl himself to Selina Shirley, daughter of Earl Ferrers, in 1728. Despite her own and her family's commitment to high Anglicanism, Lady Betty also undertook a period of theological investigation during which she met John Wesley in 1730. While remaining quite orthodox, she was clearly sympathetic to Methodism. Via the SPG she contributed to Wesley's missionary career and that of George Whitefield, one of her scholars at Queen's College, Oxford. Their companion Benjamin Ingham later married Lady Betty's half-sister Margaret. Her family's turn towards Methodism was inspired in part by Lady Betty's fortitude in her final illness. A cancer was discovered in her right breast early in 1738, and despite a mastectomy—a harrowing operation without anaesthesia—Lady Betty continued to decline. Her piety only increased during her final illness, and she continued her charitable dispositions up to the moment of her death, unmarried, at Ledstone Hall, on 21 December 1739, aged fifty-seven. She was buried on 7 January 1740 at Ledsham church, where, against her wishes, a monument was erected with a portrait drawn from Kneller's portrait.

Hastings's lengthy will, signed on 23 February 1739, indicates both the extent of her charities and her meticulous attention to detail. While the bulk of her estate went to her nephew Francis, Lord Hastings, son of the ninth earl, she made many individual bequests to churches, hospitals, charity schools, and relatives. A codicil to the will, dated 24 April 1739, bequeathed the manor of Wheldale to Queen's College, Oxford, for the maintenance of five poor scholars from twelve specified schools in the north of England. The Hastings Trust still supports scholarships and exhibitions at Queen's College, open to students from thirty schools with a focus on institutions in Cumberland and Westmorland; in addition, senior scholarships are awarded to graduates of the universities of Leeds, Sheffield, Hull, York, and Bradford.

Lady Betty's life, and especially her fortitude and piety at her death, inspired a number of eighteenth-century pamphlets, most of them drawing liberally from Thomas Barnard's 1742 biography, *An historical character relating to the holy and exemplary life of ... Lady Elizabeth Hastings*. She exercised considerable influence by her philanthropy and by the example of her life. ANITA GUERRINI

Wealth at death estate of Ledstone; £3000 p.a.; considerable number of bequests indicating substantial wealth: will, copy at University of York

Hastings, Lady Flora Elizabeth (1806–1839), courtier, was born on 11 February 1806, the eldest of the four daughters and two sons of Francis Rawdon *Hastings, first marquess of Hastings, and his wife, Flora Mure-Campbell (1780–1840), in her own right countess of Loudoun. Brought up at Loudoun Castle, Ayrshire, she was beloved by her sisters, despite her reserved temperament, and was noted for her piety. Early in 1834 she was appointed lady of the bedchamber to the duchess of Kent, the widowed mother of the future Queen Victoria, with the express aim of providing companionship for the princess, and the veiled intention of detaching her from her governess, Lehzen. The duchess's household was dominated by Sir John Conroy, and Lady Flora was immediately aligned with the faction which supported his ambitions, earning in consequence the dislike of the young Victoria, who described her as 'an amazing *spy*, who would repeat everything she heard' (Woodham-Smith, 162).

The tory politics of the Hastings family were in strong opposition to the whig ministry, and the royal household formed by Lord Melbourne (as prime minister) on Victoria's accession was almost exclusively whig; politics were to add a significant dimension to the crisis which broke in the relationship between Lady Flora and the queen early in 1839, and which was not fully played out until the establishment of Peel's ministry in 1841. After spending the Christmas of 1838 in Scotland, Lady Flora returned to London in a post-chaise which she shared with Sir John Conroy, and immediately upon her resumption of her waiting at Buckingham Palace, she consulted one of the royal physicians, Sir James Clark, about pains and a swelling in her stomach, for which he prescribed a mild remedy. The change in Lady Flora's figure rapidly aroused the suspicions of the court; the queen, willing to believe all evil of her mother's household, confided in her diary that Lady Flora was '*with child!!*', attributing the fatherhood to 'the Monster and demon Incarnate', Sir John Conroy

Lady Flora Elizabeth Hastings (1806–1839), by W. & E. Finden, pubd 1840 (after E. Hawkins)

(Longford, 121). The whig ladies of the queen's household were outraged and sent one of their number, Lady Tavistock (the sister-in-law of Lord John Russell), to Melbourne to demand action. The prime minister consulted Clark, who was unable to deny the unfavourable appearance of the case: in exoneration of his gross misdiagnosis, Lady Flora had declined physical examination. No action was taken until Lady Portman came into waiting and required Clark to inform Lady Flora of the suspicions of the household. The duchess of Kent resolutely supported Lady Flora, and Lady Flora herself determined upon a medical examination to prove that her condition was not pregnancy. The examination entirely vindicated Lady Flora by establishing her virginity. Victoria sought a reconciliation, despite being encouraged by the doctors to believe that, the evidence notwithstanding, pregnancy was still a possibility.

By March, gossip about the affair was beginning to circulate widely outside the palace. Lady Flora had, naturally, communicated with her family the details of the case, and, incensed, they demanded to know who had originated the slander. Accusations and counter-accusations flew about, coloured by the opposing political views of the participants; the whigs' precarious hold on office and the queen's well-known horror of an incoming tory ministry formed the background to the heightened atmosphere of the spring of 1839. The affair took on renewed energy when members of the Hastings family went to the press with their story, publishing correspondence which showed Victoria, her ladies, and her prime minister in a most unfavourable light. On 7 May, Melbourne's ministry

resigned; the subsequent 'bedchamber' crisis, in which Victoria refused to part with any of the ladies of her household to accommodate Peel's wishes and which resulted in Melbourne's return to office, was a continuation of the Lady Flora Hastings affair. Removal of any of the whig ladies who had been involved in the scandal would be interpreted as an admission of Victoria's errors in the affair, and a triumph for the tory Hastings faction. Lady Flora herself continued to appear in public to counter the rumours of her pregnancy, despite her worsening condition. By early June, she had taken to her bed at Buckingham Palace, the swelling in her stomach having returned with renewed force. On 26 June Victoria finally visited her, finding her 'stretched on a couch looking as thin as anybody can be who is still alive' (Woodham-Smith, 179). Lady Flora lingered for a few more days, dying at two o'clock in the morning of Friday 5 July 1839. The post-mortem, which Lady Flora herself had requested, showed that she had been suffering from a tumour on the liver for several months. She was buried at Loudoun, Ayrshire, on 15 July.

The affair did not end with Lady Flora's death, which the press greeted with fresh excoriation of the queen and the court: one pamphlet, *Lady Flora Hastings: her Life and Death*, ran through twenty-five editions in the six months after her death. However, when her brother, the marquess of Hastings, published further documents on the case in September, public interest was waning, although the Hastings family maintained their feud with the court for years. Lady Flora's *Poems* (1841) was edited by her sister Sophia, marchioness of Bute. K. D. REYNOLDS

Hastings, Francis, second earl of Huntingdon (1513/14–1560), magnate, was the eldest of the five sons of George *Hastings, first earl of Huntingdon (1486/7–1544), and his wife, Anne, daughter of Henry Stafford, second duke of Buckingham. When his father, a personal friend of Henry VIII, was made an earl on 8 December 1529, Francis, though still a very young man, was himself summoned to parliament as a baron. In the autumn of 1530 he obtained a reversionary stewardship of the lands of Coventry Priory and stewardships of the lands of Launde Abbey and of the college of the Newarke in Leicester. In 1531 his father entered into negotiations with the countess of Salisbury and Henry, Lord Montague, for Francis's marriage to Katherine Pole, Lord Montague's daughter and coheir, which took place in the summer of the following year. In 1533 Lord Hastings attended the coronation of Anne Boleyn, at which he became a knight of the Bath; in 1537 he participated at both the baptism of Prince Edward and the funeral of Jane Seymour, and through Cromwell's agency early in 1538 procured a grant of the lands of Burton upon Trent Priory. Despite his close connections with the Pole family he avoided involvement in the alleged plot against the Tudor dynasty for which Lord Montague was executed late in 1538 and the countess of Salisbury in 1541, and in 1539 served in the reception party for Anne of Cleves. He also began taking part in Leicestershire administration, viewing the musters at Shepshed in the spring of 1539, and in the summer of 1541 bore the sword before the king on his visit to Lincoln. He succeeded to the earldom on the death of his father on 24 March 1544, when he was said to be thirty years old.

For the remainder of Henry VIII's reign Huntingdon alternated between local government in Leicestershire and attendance at court where his eldest son, Henry *Hastings, was being educated alongside the young Prince Edward. Soon after the latter's accession Lord Grey of Wilton in the summer of 1548 asked Somerset to dispatch Huntingdon or some other young gentleman to Berwick to aid him in campaigns against the Scots, and the following year the government employed him to quell enclosure riots in Leicestershire. An ally of the earl of Warwick, in the *coup d'état* of October 1549 he helped conduct Protector Somerset to the Tower and in the same month was admitted a knight of the Garter.

From this time onwards Huntingdon gained rapid promotion. In November 1549 the king made him, 'a brave and hardy man, but not over experienced in war' (*CSP Spain, 1547–9*, 477), lieutenant-general over the army sent to relieve Boulogne and he spent four ultimately fruitless months in France until given leave to return to England in April 1550. Created lord lieutenant of Leicestershire and Rutland in May 1550, on 4 September that year he was sworn of the privy council, which he then regularly attended for the last two and a half years of the reign. He appeared at the reception for the regent of Scotland on her visit to London in 1551, and accompanied Edward VI on his progress in May 1552. On the disgrace in that year of John Beaumont, master of the rolls, the duke of Northumberland (as Warwick now was) procured for Huntingdon the custody of Beaumont's Leicestershire lands. In May 1553, days after the marriage of Lady Jane Grey to Guildford Dudley, Huntingdon bound himself yet further to Northumberland with the marriage of his own eldest son to Katherine Dudley, the duke's youngest daughter.

When Edward VI died Huntingdon lent Northumberland his full support in his attempt to secure the crown for Lady Jane Grey, with his son joining the forces which set out from London to capture Mary Tudor. When the duke capitulated at Cambridge on 24 July 1553 Huntingdon and his son were sent to the Tower. Their imprisonment, however, proved to be relatively brief; Huntingdon was allowed the liberty of the Tower garden in August and released to house arrest on 12 October, and a month later Mary granted him and Lord Hastings a full pardon. The

good offices of his wife and his brother, Sir Edward *Hastings, Mary's master of the horse, did much to accelerate the earl's rehabilitation. Eager to demonstrate his new allegiance as lord lieutenant of Leicestershire, Warwickshire, and Rutland at the time of Wyatt's rebellion in late January 1554, Huntingdon routed the rebels in the midlands and seized the duke of Suffolk on 2 February. In this instance public and private interest coincided and Leicestershire, long divided between the Grey and Hastings families, from this date became a Hastings preserve.

In response to a parliamentary petition in 1554 Mary restored the countess of Huntingdon and her sister Winifred, who had married Thomas Hastings, to the blood and estates of Henry Pole, Lord Montague. Even before the return to England of her uncle, Cardinal Pole, the countess began corresponding with him, among other things inviting him to become godfather to her youngest son, Walter. Huntingdon attended the joint session of parliament at which the cardinal presided over the reconciliation of the nation to the Roman obedience, and in August 1555 he helped escort King Philip to Brussels. In 1556 he received from the queen a confirmation of various Leicestershire offices and in the same year gained an apparently advantageous discharge of debts of almost £2500 to the crown, but he never recovered the political influence he had exercised in the previous reign.

On Mary's death Huntingdon had no difficulty in transferring his loyalty to the new queen, attending with his son some of the debates in the first parliament of the reign. In May 1559 the queen appointed him lord lieutenant of Leicestershire, with permission for his son to deputize for him during his sickness, and in June of the same year master of the hart hounds. Elizabeth's accession meant the restoration of the Dudleys to favour, and in particular Robert Dudley. Adroit as ever at utilizing his connections in high places, Huntingdon in October 1559 began making overtures to the new favourite, who was also Henry Hastings's brother-in-law.

Huntingdon died at Ashby-de-la-Zouch on 20 June 1560 (the date on his monument is a year out), leaving five sons and five daughters, most of them still under age. In addition to the marriage of his eldest son, he had also contracted the alliance of his eldest daughter, Katherine, to Lord Clinton's heir, and that of his second son, George, to a Derbyshire heiress, Dorothy Porte. Moreover, in his will he bequeathed to each of his other sons estates of £60 a year for life, and to his four other daughters £1000 apiece as a dowry. One of them, Frances, subsequently wed the eldest son of the earl of Northampton, and another, Elizabeth, the heir of the earl of Somerset; but despite the Russian ambassador's attempt to obtain Mary Hastings as a bride for his master, Ivan the Terrible, the other daughters Anne and Mary both died unmarried. His fifth son, Sir Francis *Hastings, became a politician and author. The third earl of Huntingdon erected an elaborately carved monument in the chancel of St Helen's Church at Ashby-de-la-Zouch, with life-size figures of his father and mother; the latter survived her husband by sixteen years.

Hastings, Sir Francis (*c.*1546–1610), politician and author, fifth son of Francis *Hastings, second earl of Huntingdon (1513/14–1560), military commander, and Katherine Pole (*d.* 1576), daughter of Henry *Pole, Baron Montagu (1492–1539), was still a minor on the death of his father in June 1560. He owed his education to his revered eldest brother, Henry *Hastings, third earl of Huntingdon, who arranged for him to study under Lawrence Humphrey at Magdalen College, Oxford, thereby reinforcing his lifelong commitment to protestantism. He also attended Gray's Inn. When he came of age, Huntingdon granted him the manor of Market Bosworth in Leicestershire and may well have had a hand in his marriage in 1567 to Magdalen (*d.* 1596), widow of Sir George Vernon and daughter and coheiress of Sir Ralph Langford. In Leicestershire he associated himself closely with Anthony Gilby, Huntingdon's preacher at Ashby-de-la-Zouch, and Thomas Sampson, for whom the third earl had found a refuge at Wyggeston's Hospital in Leicester.

On Huntingdon's appointment as president of the council in the north late in 1572 Francis Hastings deputized for him in Leicestershire, combating recusancy and fostering the cause of protestantism generally. A justice of the peace from about 1573, he first represented Leicestershire as a knight of the shire in the parliament of 1571 and thereafter actively participated in every session of every

parliament, apart from that of 1572, until his death, attempting in season and out of season to promote the further reformation of the church.

In financial difficulties from the moment he succeeded to the title, Huntingdon found it impossible to supervise his far-flung estates from York, and in 1583 gratefully accepted Hastings's offer to move to Dorset, initially for three years, to act as his representative in the west country. This marked the beginning of Hastings's permanent residence in the south-west. In 1586, in exchange for Market Bosworth, Huntingdon granted his brother manors and lands in the vicinity of North Cadbury, where Hastings rebuilt the manor house. He at once gained a place for himself in Somerset local government, sitting for the county in the parliaments of 1589 and 1593. He was knighted in 1592. The death of Huntingdon in December 1595, followed by that of Lady Hastings on 14 June 1596, robbed his life of much of its purpose; his brother George, the new earl of Huntingdon, had no need of his services, and he could not bear to continue living in Somerset without his wife. So he sold the North Cadbury house and returned for a time to Leicestershire, sharing one of the two county seats with his brother Sir Edward Hastings in the parliament of 1597.

Hastings did not, however, remain long in Leicestershire. His clerical friends begged him to return to Somerset, and a judicious second marriage, to the recently widowed Mary Hannam, daughter of Richard Watkins, brought him by 1598 to Holwell, where he took charge of his new wife's children and their portions. Perhaps because of his temporary absence from the south-west he had to content himself with the borough seat of Bridgwater in the 1601 parliament.

In 1587 Hastings had submitted a 'Christian treatise' to a supportive Thomas Cartwright, and in 1596 circulated in manuscript a long eulogy of the third earl of Huntingdon and Magdalen Hastings; but he did not venture into print until 1598, when, impelled by his detestation of popery, he published *A Watch-Word to All Religious, and True Hearted English-Men*. This provoked the next year *A Temperate Ward-Word* from the Jesuit Robert Parsons. In 1600 Sir Francis retaliated with *An Apologie or Defence of the Watch-Word*, the choleric exchange reaching an impasse in 1602 with Parsons's *The Warn-Word to Sir Francis Hastinges Wast-Word*.

Almost as a matter of course Hastings took his seat as one of the knights for Somerset in parliament in the spring of 1604. Like many forward protestants disappointed by the failure of the Hampton Court conference to countenance substantial further reform of the church and dismayed by the ensuing eviction of nonconforming clergy, at the prompting of some midlands friends, who included Sir Edward Montague and Sir Richard and Sir Valentine Knightley, Hastings composed an appeal on behalf of the dispossessed ministers of Northamptonshire. The petition, signed by forty-five local gentlemen, came before the king in early 1605. James regarded it as a veiled incitement to rebellion and commanded Hastings, Montague, and the Knightleys to appear before the privy council. Hastings readily acknowledged his fault in intruding in the religious affairs of a county not his own, but stood by the ministers, who he maintained had refused to observe the ceremonies for conscience's sake and not for factious reasons. His resistance did nothing to assuage the king's anger and, some individual sympathizers notwithstanding, the privy council corporately had little choice but to strip him of all his local offices and order his retirement to his house in the country.

Hastings felt his disgrace acutely, but despite numerous appeals to Salisbury, never regained royal favour nor restoration to the commission of the peace, and spent the last five years of his life as a mere private gentleman. Only his seat in parliament remained to him, and there he played as active a part as ever in the sessions of 1606, 1607, and in the first part of that of 1610, still advocating measures to curb recusancy and advance reform in the church. Troubled by debts in his final years, he died intestate at Holwell and was buried alongside his first wife in North Cadbury church on 22 September 1610. He had no children by either of his marriages. Hastings, Francis John Clarence Westenra Plantagenet, sixteenth earl of Huntingdon [*known as* Jack Huntingdon] (1901–1990), artist and politician, was born on 30 January 1901 in Manchester Square, London, the only son and youngest of three children of Warner Francis John Plantagenet Hastings, fifteenth earl of Huntingdon (*b.* 1868; whom he succeeded in 1939), and his wife, (Maud) Margaret (*d.* 1953), daughter of Sir Samuel Wilson, MP for Portsmouth. He was educated at Eton College and at Christ Church, Oxford, where he played in the university polo team and obtained a third class in modern history in 1923. Descended from George, duke of Clarence, brother of Edward IV, he was the senior legitimate male Plantagenet. But the undoubted hereditary claim of his ancestor Henry Hastings, third earl of Huntingdon, to succeed Elizabeth I did not pass to him, being diverted through a female line. Huntingdon was more interested in an alleged but impossible descent from Robin Hood, described in folklore as the earl of Huntingdon.

In 1925 Jack Huntingdon, who painted under the name John Hastings, married (Maria) Cristina (*d.* 1953), daughter of the wealthy Marchese Casati, head of one of the families which had ruled Milan for centuries. They travelled extensively in Australia and the Pacific, living for a while on the island of Moorea, after which they named their only child, a daughter. In San Francisco the couple met Diego Rivera, the celebrated Mexican communist mural painter. Huntingdon, who had studied at the Slade School of Art after leaving Oxford, became a pupil of Rivera's and learned the technique of fresco. He became Rivera's assistant, branching out into mural painting on his own account. In 1933 he painted a mural depicting dentistry in the Hall of Science at the Chicago World Fair, to accompany a display of George Washington's teeth. Already inclined to be left-wing at Oxford, he was further influenced by Rivera's ideology, and involved himself in the Spanish Civil War, taking medical assistance to republicans. His parents' anger at his marriage to a Roman Catholic foreigner, who shared their son's political outlook and eventually became a communist, was not assuaged by her high aristocratic lineage and there was a long breach during which the couple had little money other than a legacy from his grandmother.

On return to England, Huntingdon in 1935 painted a remarkable 10 feet by 20 feet fresco on a wall in the Marx Memorial Library, Clerkenwell Green, London, entitled *Worker of the Future Upsetting the Economic Chaos of the Present*. Though slightly wooden in the Soviet realist manner, it had distinctive original and pleasing touches. For his friend Lord Faringdon, the eccentric and rich socialist, he painted murals at Buscot Park depicting local Labour Party activities. Despite his far-left phase, he was a second lieutenant (Territorial Army) in the Royal Horse Guards. He was deputy controller of civil defence for Andover from 1941 to July 1945, when he joined Attlee's government as parliamentary secretary at the Ministry of Agriculture and Fisheries. He stayed there until November 1950, when he left politics for the painting he preferred.

As Huntingdon's faith in socialism declined, his paintings abandoned ideology for almost surrealist shapes and writhings of serpents in bright colours, expressing cheerful distaste for conventional restraints, whatever their provenance. He was chairman of the Society of Mural Painters in 1951–8 and his works were widely exhibited. Among his murals are those at Birmingham University (1965), the Women's Press Club in London (1950), and the Casa dello Strozzato, Tuscany (early 1970s). He taught fresco at the Camberwell and Central schools of art in London.

Huntingdon's marriage to the strong-willed Cristina, whose southern temperament did not easily fit with his gentler, more placid English ways, ended with divorce in 1943 and she married Wogan Phillips (previously married to Rosamond Lehmann) who, as the second Baron Milford, was the first communist to take his seat in the House of Lords.

Tall, athletic, and an expert yachtsman, Huntingdon strongly resembled the portrait he owned of the Elizabethan third earl in the reddish colour of his hair and finely delineated features. He played a number of musical instruments well and was a wine connoisseur with impeccable taste. He was the quintessence of a cultured, civilized man and in addition to his talents as a painter he was the author of two intelligently written books, *Commonsense about India* (1942) and *The Golden Octopus* (1928), a book of legends of the south seas. A delightful, convivial companion with a lively, intelligent wit, full of kindness and amusing stories and quick to laugh at himself, he was vague, gentle, courteous, and charming, with exquisite manners sometimes taken for weakness, but he was politely resolute in avoiding inconvenience to himself. When his second wife, the author Margaret *Lane (1907–1994), whom he married in 1944, proposed that her father should live with them, he said nothing but quietly packed his bags ready to move out. She was formerly the wife of Bryan Wallace and daughter of Harry George Lane, newspaper editor, of Vernham Dean, Andover. This second marriage ran less excitingly and more smoothly than the first. From it there were two daughters, of whom one, Lady Selina Hastings, wrote a number of successful biographies. Huntingdon died on 24 August 1990 in a nursing home in Beaulieu, Hampshire. He was succeeded in the earldom by a first cousin once removed, William Edward Robin Hood Hastings Bass (*b.* 1948).

Hastings, Francis Rawdon, first marquess of Hastings and second earl of Moira (1754–1826), army officer and politician, was born in Dublin on 7 December 1754, the eldest of the six sons and the second of the ten children of Sir John Rawdon (1720–1793), fourth baronet, of Rawdon Hall, Yorkshire, and Moira House, co. Down, created Baron Rawdon in the Irish peerage (1750), and his third wife and kinswoman, Lady Elizabeth Hastings (1731–

Francis Rawdon Hastings, first marquess of Hastings and second earl of Moira (1754–1826), by George Chinnery

1808), the daughter of Theophilus Hastings, ninth earl of Huntingdon. Styled Lord Rawdon from 1762, when his father became earl of Moira, he was at Harrow School by 1770, and in October 1771 entered University College, Oxford, though he never graduated. Tall and statuesque, in August 1771 he was commissioned ensign in the 15th foot. He attended a Hoxton academy for aspirants to East India Company service, and toured the continent, particularly Italy, with his uncle and mentor Lord Huntingdon.

Army career Having been promoted lieutenant in the 5th foot in 1773, the following year Rawdon went to North America. He was commended for fearlessness in 1775 at Bunker Hill, where two bullets passed through his hat, and obtained a company in the 63rd foot. After seeing further action during the New York, New Jersey, and Philadelphia campaigns as aide-de-camp and adjutant to Sir Henry Clinton, he was promoted lieutenant-colonel in 1778 and appointed adjutant-general to the British forces. In August 1779 he resigned, having fallen out with Clinton by his championing of regular officers against rankers assigned to the provincial corps. His raising of a provincial corps, the volunteers of Ireland, at Philadelphia involved him in further action. He checked the South Carolina rebels until Cornwallis arrived, and was a divisional commander in the battle of Camden on 16 August 1780. On 25 April 1781 his success in the battle of Hobkirk's Hill against General Greene's superior numbers earned him Cornwallis's admiration. He afterwards retreated to Charlestown. That summer severe illness caused him to leave America, and the vessel in which he sailed was captured by a French cruiser and taken to Brest. A prisoners' exchange enabled his release, from Paris, in December 1781, despite an American bid to extradite and hang him for ordering the execution of the turncoat Isaac Hayne.

When in Ireland, where he obtained the freedom of Dublin and became a volunteer, Rawdon was arraigned on 4 February 1782 by the duke of Richmond in the British House of Lords for hanging Isaac Hayne at Charlestown. Challenging Richmond, he obtained a public apology. His friend Thomas William Coke recalled that he dissuaded him from also challenging Charles Fox, to whom Coke introduced him. On 20 November, ranked colonel (having been lieutenant-colonel commandant of the 105th foot since 1781), he was appointed an aide-de-camp to George III.

Political development From 1781 to 1783 Rawdon was an MP in the Irish parliament, returned in absentia by John O'Neill for Randalstown, but he had little chance to sit and apparently never voted. On 5 March 1783, at Shelburne's instigation, he became Baron Rawdon of Rawdon in the British peerage, and took his seat in the House of Lords on 25 March. His maiden speech opposing Fox's India Bill, on 17 December 1783, adumbrated his leaning towards Pitt, at least until 1787 (the year he became FRS). Malice attributed his defection from Pitt to failure to obtain office to match his ambition.

On 22 May 1787 Rawdon advocated relief of imprisoned debtors; the ensuing bill was lost in 1788. On 20 February 1788 he pleaded for naval officers denied promotion, and on 12 March he objected to infringing East India Company control. A member of the Northern Irish Whig Club, but also of the 'armed neutrality' at Westminster, he championed the prince of Wales's sole regency bid in December 1788. Persisting, he was rebuked by the lord chancellor for his desertion of the government. Rawdon nevertheless objected on 18 February 1789 to the queen's sole control of the royal household. This conduct attached him for life to the prince. He also cultivated the younger royal princes and defended their interests in parliament. In May 1789 he was the duke of York's second in his duel with the duke of Richmond's nephew. That July he was Sir Joshua Reynolds's last portrait sitter. In November 1789 he claimed that he would take office only at the prince's wish. On 10 February 1790, by royal licence, he added Hastings to his surname, having succeeded, with £3000 a year, to most of the estates of his maternal uncle, Francis Hastings, tenth earl of Huntingdon, whose earldom temporarily lapsed, his baronies passing to Rawdon's mother. He was acting grand master, under the prince, for English freemasons (1790–1813). From 1790 to 1792 Rawdon opposed ministerial policy on three fronts. He twice advocated Catholic relief, particularly for Ireland, whose Catholic delegates he welcomed to London; deprecated the bank loan (a published speech) and multiplication of paper money; and

supported immediate abolition of the slave trade. He attempted to exonerate the Society of the Friends of the People from unconstitutional intentions, and he criticized preparations for war against revolutionary France.

Further military and political career Following his father's death in June 1793, Rawdon succeeded as earl of Moira, with an income estimated at £18,000. No longer a royal aide-de-camp, he resumed active service, having been promoted major-general on 12 October 1793. Cornwallis had recommended him for an expeditionary force to Brittany to assist the royalist rebels. Waiting unavailingly for artillery and stores, he embarked in December, but arrived too late; he returned, his force lingering in Cowes until June 1794, when he led a reinforced army of 7000 men to Flanders to assist the duke of York. Again too late, he fought his way across the French lines to join the duke, but returned home, frustrated, in December: his military journal was published (1796). He was again prepared for a Breton expedition, with French émigré cavalry, in July 1795, but following the loss of Quiberon resigned the command beforehand. He continued to associate with, and succour, leading French émigrés. Pitt proposed a British earldom, but he demurred. His debts and expeditionary expenses provoked the sale of his Meath inheritance.

In the House of Lords Moira criticized Earl Fitzwilliam's recall from Ireland (8 May 1795) and the allegedly inadequate financial provision offered the prince (24 June). He tried in 1796 to reconcile the prince with his bride, Princess Caroline, and with the king. On 9 December he criticized the bill against seditious meetings, and on 27 February 1797 he voted against the Austrian subsidy. In March he feared imminent French invasion of Ireland, urging the remedying of Irish discontent—to which he had alerted Chief Secretary Pelham—in order to forestall it. He supported a motion of 27 March to dismiss Pitt's ministry, playing figurehead until June in a neutral party bid to take power, procure peace and retrenchment, and alleviate Irish grievances. He wanted Charles James Fox as premier, but the king objected, pushing the prince, who had offered to go to Ireland as viceroy—probably with Moira as commander-in-chief—into opposition. Lady Holland wrote of Moira:

> he is a conceited, solemn coxcomb, with as much ambition as the coldness of his disposition allows. Since the unpopularity of the Prince of Wales he has been the only man of distinction ... who has supported him. He is his adviser and certainly looks forward to being at the head of affairs in this country after the King's death if not before ... He is a man of veracity, a quality strictly necessary to him ... His politics he conducts so that he may be in power with either side. (*Journal*, 1.165–6)

Moira's concern for Ireland, caricatured by Gillray ('Lord Longbow the alarmist'), inspired speeches at Westminster of 30 May and 22 November 1797 (published), and a motion defeated on 19 February 1798 in Dublin, published alongside the reply, among others, of Lord Clare. Continuing his criticism of the Irish government, he accused the Irish army of illegal methods of repression. On 26 March 1798 he clashed in debate with the marquess of Downshire over the application of military force to disarm the United Irishmen; in the 1790s he frequently entertained Wolfe Tone and others at his mother's Dublin house. The Ards rebels' last stand was on Moira's estate at Montalto, co. Down (while Moira was in London). He and his mother helped Lord Edward FitzGerald (who had served under him in America), and, fearing reprisals by government forces, he moved his family and library to England. He attempted to have Lord Lieutenant Camden recalled. Although he had recently been promoted lieutenant-general, Moira disclaimed any wish for a military command. On 19 March 1799 he claimed that Anglo-Irish union was worthless without forsaking coercion and reforming the Irish parliament through Catholic relief. Having voted by proxy against union in Dublin, he changed his mind at Westminster on 30 April 1800, hoping it would meet his objectives. He immediately opposed Addington's ministry in 1801. If the king's illness produced a regency, he was expected to be a councillor, if not the framer of a new administration. He had rallied the opposition to his town house to concert measures. He then modified his stance by approving peace preliminaries with France in November 1801, when he was thought, with Charles Grey, to be coming to terms with Addington. Moira approved, as a courtier, the redress of civil-list arrears on 29 March 1802. He opposed renewed restriction of cash payments by the bank (17 and 22 February 1803), but advocated home defence against invasion (9 March), publishing his views. He was then reported to have refused office, singly. French encroachments on the continent seemed to him a far better cause for ending the peace of Amiens and resuming hostilities than Malta. His reputation was such that on 23 October 1803 John Freeman-Mitford, first Baron Redesdale, the lord chancellor of Ireland, described him as 'that wild, wrong-headed man, with a considerable show of talent and much earnestness of manner' (Johnston-Liik, 6.148).

In Scotland In September 1803 Moira was appointed commander-in-chief in Scotland, and in October he was promoted general. He found this laborious, and wrote that, but for the prince, he would readily give up public life. The following May he became colonel of the 27th Inniskilling foot. He was narrowly defeated in the election for Glasgow University in December 1803. In 1804, summoned by the prince, he joined the combined opposition to Addington, expecting a cabinet place in a comprehensive ministry, and snubbing Addington's competitive offer. Pitt's exclusive return to office thwarted his scheme to detach Lord Melville's party in Scotland, assiduously cultivated by him. He opposed Pitt's Additional Forces Bill on 25 May, advocating more regulars, although he praised Scotland's volunteers. On 12 July 1804 he married Flora Mure-Campbell (1780–1840), countess of Loudoun in her own right, the only child of James Mure-Campbell, fifth earl of Loudoun. They had two sons, the elder of whom died in infancy, and four daughters, among them Lady Flora Elizabeth *Hastings. A few months later Moira was reportedly offered Dublin Castle or the Foreign Office if Pitt succeeded, with his help, in reconciling the king and

prince over Princess Charlotte's education. This exasperating process required frequent mediation, but he declined office, as well as the governorship of Stirling Castle, in December 1804. The prince, in April 1805, desired him to resign the Scottish command, but the king's contrary wish detained him, though he returned to the Lords to advocate Irish Catholic relief.

In political office In Lord Grenville's January 1806 'ministry of all the talents' Moira was expected to become Irish viceroy, but the prince, to keep him near, approved on 8 February his becoming master-general of the ordnance, with a cabinet seat and privy councillorship. On 12 February the constableship and lord lieutenancy of the Tower of London were added. His colleague William Windham expected Moira to assume the home command in case of invasion. He failed, however, to become ministerial manager for Scotland, where his military command ceased, though he acted as masonic grand master from 1806 to 1808. Lord Holland, believing Moira's pretensions in Scotland had sunk those of Lauderdale, recalled that patronage was lavished on him and the prince to the government's detriment. Moira found little to do at the ordnance, but defended Windham's military reforms, particularly substitution of limited for life service on 13 June 1806. For the prince he investigated Princess Caroline's alleged indiscretions, of which the cabinet acquitted her. On Fox's death he declined the Foreign Office. In cabinet on 7 January 1807 he shocked Grenville by advocating revolution in South America. Lady Holland thought his wish to assume Fox's mantle distanced him from Grenville. He supported the abolition of the slave trade. The ministry fell in March 1807, and Moira resigned from the ordnance office.

Out of office Moira assured Lord Holland that he would shortly have resigned, even if ministers had retained office; he wished to give up both the military and party politics. Royal opposition to Catholic relief vexed him, although in cabinet he had favoured procrastination in order to stay in office, and he argued in debate on 26 March that ministers were justified in refusing to forswear a measure conciliating Irish loyalty in wartime. He defended the Irish Catholics' right to press their claims on 13 April. Although Moira informed Holland on 27 April 1807 that he adhered only to the prince, he was a critic of the Portland ministry, particularly of the imprudent—if well-conducted—Copenhagen expedition, their military organization, and their failure to defend reversionary appointment to office. His mother's death in April 1808 brought him English baronies vested in the Hastings family. He therefore took his seat as Baron Hastings on 19 January 1809, when he blamed ministers' faulty planning for the convention of Cintra, although he had agreed in a court of inquiry against prosecuting the conduct of the British generals. Privately he was critical, particularly of Sir Arthur Wellesley, and condemned Sir Harry Burrard's omission from the vote of thanks on Vimeiro. On 25 January he described Corunna as the extinction of British hopes in Spain. He supported a censure motion on 7 February, and on 21 April deplored the lack of co-ordination with patriotic Spaniards. Rumours of his obtaining a command arose when the duke of York faced forfeiture of the command-in-chief because of the scandal of his mistress Mary Anne Clarke (whom Moira had allegedly tried to buy off) receiving bribes for supposedly influencing military promotions. He understood the unlikelihood of his obtaining a foreign expedition unless as York's accomplice. He joined Grenville on 23 January 1810 in condemning the stagnant war effort in a speech he thought ill-reported, and spoke again on 22 February and 8 June.

After allowing time, ostensibly as the prince's spokesman, though without consultation, for the ailing king's recovery (15 November 1810), Moira advocated a regency (29 November and 27 December). In January 1811 he defended the regent's interests, opposing restrictions. He had drafted much of the prince's reply to the regency offer, and it was expected that if this produced a fresh administration he would go to Ireland as viceroy. He was ready for this, regardless of the ministry's composition, urging the regent to appoint him and Lord Wellesley to office. The regent, refusing Wellesley, offered to make Moira a secretary of state, but he declined. By August 1811, when the regent was happy to send him to Dublin, he refused that too if Spenser Perceval remained premier—though Perceval was ready to appoint him. Moira had, on 18 February, opposed suppression of Irish public meetings. While the regent avoided him and any change, Moira distanced himself from the opposition leaders. In debate he welcomed the victory of Albuera and resumed his championship of imprisoned debtors, which he had previously undertaken in 1793, 1797, 1801, 1806, 1808, and 1809 (he finally obtained some success in 1812), and as doggedly supported the compensation claims of John Palmer, the Post Office reformer.

In January 1812 Moira tried to reconcile the regent and the opposition leaders: a dukedom for this was rumoured, but the regent merely sought his mediation. On 28 February he refused the Garter, hinting at political betrayal by the prince: they were estranged until May. Lord Wellesley, who had joined, but resolved to quit, the ministry, thought Moira should head a new administration. He had insisted on Irish Catholic relief in debate on 31 January, having backed their appeal to the regent. On 5 March he advocated a new ministry to propitiate discontent, and on 19 March he supported a motion calling for change, deploring ministerial contempt for Catholic aspirations at a time when Ireland furnished half the country's forces. Following Perceval's assassination (11 May 1812) and parliamentary pressure for a stronger administration, he wrote to Wellesley on 23 May defining his objectives as Irish Catholic relief and support of Spanish patriots against Bonaparte. Wellesley, then the regent's first choice for premier, conveyed this information to the prince and consulted Moira, but found the opposition leaders unamenable.

The regent, having composedly received Moira four days before at Wellesley's instigation, turned to him in

tears on 26 May. According to Creevey, Moira described the plight of the country, of which the regent admitted ignorance. After another meeting with him, Moira met Grenville and Grey at Wellesley's house, negotiating three days running. Moira still did not look beyond a cabinet seat under Wellesley, who now withdrew. Moira deplored this in the Lords on 3 June, and on the 5th added that the regent was not responsible for the animosities of which Wellesley complained. However, prodded by Grenville, Moira refused to elaborate in Wellesley's absence, a move calculated to encourage renewed negotiation. After a speech from Grey he pointed to his own support of opposition for seven years, without explaining that the regent had commissioned him to form a ministry. Knowing that Wellesley, though supportive, would not take second place to him, he tried to conciliate Grenville and Grey. After ascertaining his credentials they required, on 6 June, changes in the regent's household to remove the Hertford clan. Moira demurred, and turned desperately to Lord Melville and Canning, and more amenable oppositionists. On 8 June he admitted failure, and the regent reverted to Liverpool, who had refused Moira's overture from doubts about Catholic relief. Samuel Whitbread reported that Moira's programme had embraced revocation of orders in council, reconciliation with America, and retrenchment, possibly parliamentary reform. It was at once supposed that the regent had intended the outcome, Moira being his dupe. In debate Moira denied this, but offered conditional support to Liverpool. He published the negotiations, with the regent's consent. He accepted the Garter on 12 June 1812 and confirmed the truth of the publication, maintaining that he disliked ejecting office-holders from non-political departments. To his cousin Charles Hastings, Moira wrote that the need to vote the allies' subsidy had curtailed negotiations, but he also escaped admitting that there was inadequate support for Catholic relief and giving offence to the regent and the Hertfords. He nevertheless believed that the opposition would eventually succeed.

A journey to India On 1 July 1812 Moira supported Wellesley's narrowly defeated motion for Catholic relief, warning that ministerial policies limped fifty years behind the times. But by now he knew that not even the premiership would solve his financial problems, and on 31 August he confided that he could not afford to be Irish viceroy. In September he was reported to be going to India as governor-general, and on 18 October his appointment, instigated by the regent, was confirmed. Lady Charlotte Bury alleged that this 'honourable banishment' arose from the regent's inability to 'bear to have him near his person', having 'for years accepted unstinted financial assistance from him, unrepaid. 'Vanity and ambition were his only flaws, but his attachment to the Regent was sincere, chivalrous, and of a romantic kind' (*Diary of a Lady-in-Waiting*, 1.55). Nevertheless his bankruptcy was also political. In approving the vote of thanks to his predecessor in India, he had stated on 10 January 1812 that he disliked adding colonies to the empire while the enemy remained undefeated in Europe. Although he was appointed both commander-in-chief and governor-general, he was unaware that Sir George Nugent, commander in Bengal, would remain in place, which he did until December 1814. Before leaving, Moira presented a Galway Catholic relief petition on 4 March 1813, and on the 22nd denied Whitbread's allegations that he had secretly concocted evidence damaging the princess of Wales and published anonymous statements against her. He was entangled too in another royal imbroglio, having, to the queen's annoyance, procured a member of her household as governess to Princess Charlotte.

Moira took leave of the regent by letter on 22 April 1813, having sailed for India with his family in the man-of-war *Stirling Castle* two days before. He blamed Lord Melville for his protracted voyage as part of a trade convoy, for he reached Calcutta only on 4 October. Once there he restored etiquette, in Dublin Castle style, to the viceregal household, changed by his predecessor's informalities. He expected no trouble, except on the borders. On 6 December he wrote to the regent fearing that they would never meet again, but discounted subsequent reports that the regent was maligning him. Following Gurkha encroachments on Oudh, on 1 November 1814 he declared war on Nepal. Sir David Ochterlony defeated the Gurkhas at Mukwanpoor (February 1816), and they made peace in March 1816. Moira received parliamentary thanks on 6 February 1817, and on the 13th was created Viscount Loudoun, earl of Rawdon, and marquess of Hastings. He had meanwhile persuaded the India Board of Control under Canning that the Pindaris, encroaching on Hyderabad, should be checked, as well as their Maratha backers. The East India Company's directors hesitated, but further Pindari aggression provoked the Calcutta council into approving military action. In late 1817, with Indian allies, Hastings advanced to Cawnpore, commanding the central division himself. The peshwa at Poona, after making peace in 1816, resumed hostilities in November 1817; but following his defeat, and that of the raja of Nagpur and the army of Indore by Hastings's commanders, the governor-general was able to offer the East India Company both Poona and its choice of other territories. This was beyond his remit, but the success of the Third Anglo-Maratha War effectively extended British dominion in India. Hastings was awarded the GCB on 14 October 1818, then the GCH, and in 1819 was thanked by the company and by parliament. The company awarded him £60,000 to purchase an estate administered for his family by trustees. In 1819 he supported Raffles's securing of Singapore for the British.

Despite the cost of his campaigns, Hastings boasted that the company's revenues had multiplied threefold and could easily cover the outlay. He had, however, in 1816 suspended a statutory prohibition of loans to Indian princes by British subjects in order to accommodate William Palmer & Co. and the nizam of Hyderabad. When a new loan, with large interest, was made in 1820, the company directors ordered an end to it. Hastings was implicated because a ward of his was married to Palmer's partner, Sir William

Rumbold. Always touchy about aspersions on his integrity, he resigned in 1821. Writing to George IV's secretary in advance, on 11 November 1820, he blamed Canning's intrigues for company hostility to him. This letter was to be handed over by a trusted emissary, at his discretion. Canning's removal from the India board did not affect Hastings's resolve, but in June 1821 he switched his retirement motive to domestic considerations. When Doyle eventually proffered the letter in November, the king treated it as stale news, but neither he nor Liverpool warmed to Doyle's verbal suggestion that Hastings should become a duke, though Liverpool approved his becoming ambassador to Austria and receiving parliamentary thanks for his services. The king suggested the Paris embassy. Canning was appointed his successor in India in March 1822, but delayed his departure until he could exonerate himself personally to Hastings, and so never went. Hastings received the company's thanks in May 1822, and left India on 1 January 1823. His debts soon drove him to the continent, but he was mollified by appointment as governor and commander-in-chief of Malta on 22 March 1824. He delayed departure, hoping for financial redemption. Douglas Kinnaird appealed to the company, but the general court of proprietors called for papers relating to the Hyderabad loan, which were not printed until 1825, whereupon, in March, the court voted them a blot on Hastings's reputation. He was by then in Malta, where he published his refutation. He returned home and on 17 June 1825 introduced a bill to regulate the interest rate on loans in India, then well above the 12 per cent ceiling previously fixed in 1773, but inapplicable to British residents under native princes. The bill lost, he returned to Malta a broken man, having made his will. A riding accident exacerbated his hernia weeks before his death, on 28 November 1826, aboard HMS *Revenge* in Baia Bay, Naples. He was buried in Malta, his right hand cut off, at his request, to be placed in his widow's coffin.

Financial problems and reputation Hastings was habitually extravagant, generous, and hospitable, and spent beyond his large income. In the late eighteenth century he sold some of his Irish landholdings, and by 1807 the Moira estate was no longer his, unbeknown to his wife; an arrangement was afoot to pay debts of £270,000 and secure him an adequate allowance, which he hoped to enlarge. In 1811, still insolvent, he borrowed from bankers and brokers. The following year he was reported to be about to abscond to Germany, and in 1813 his London house was sold. In 1817 he reduced his expenditure in India. His wife, returning to England in 1816, when even Princess Charlotte felt sorry for her, lingered there until 1819. His requirements allegedly provoked, inadvertently, a financial scandal and the ruin of Sir Gerard Noel's bank. Hastings was honourable and offered interest on unpaid bills, had his life insured repeatedly as a security, and disclaimed the departing Nugent's commander's salary in Bengal. Nevertheless his extravagance was, effectively, his worst characteristic. More engaging were his hallmark courtesy and his ready assistance in redeeming others humiliated by their misfortunes or vices. However, his championship of imprisoned debtors served to highlight his own parliamentary immunity from arrest. Overconfident of his nurtured abilities, he encountered a series of fiascos, military and political, and thwarted ambitions. He was therefore jealous of the professional triumphs of Cornwallis and Wellington, and was outmatched by the political nerve of Pitt, Grenville, Grey, and Canning. In 1858 his daughter Lady Bute published a journal he kept in India until 1818 for family edification: it simplified public affairs, but showed a certain affection for India, where Hastings had interested himself in improving administration, justice, education, and freedom of the press: he valued publicity. His marquessate became extinct on the death of his grandson, the fourth marquess, in November 1868.

Hastings, Frank Abney (1794–1828), naval officer in the Greek service, was the younger son of Lieutenant-General Sir Charles Hastings, baronet, an illegitimate son of Francis Hastings, earl of Huntingdon. He entered the navy when about eleven years old, and was present at Trafalgar on board the *Neptune*. During his fifteen years of service he visited every quarter of the globe, and was finally sent to the West Indies, in command of the *Kangaroo*, for surveying. Entering Port Royal harbour, Jamaica, he reportedly brought his ship to anchor in an unseamanlike way. The flag captain of the admiral's ship consequently so insulted him that (once on half pay) Hastings challenged him to a duel. The admiral reported this, and Hastings was dismissed from the service in 1820. He resolved to take service under a foreign power. After living in France to learn the language he sailed from Marseilles on 12 March 1822 to join the Greeks. He reached Hydra on 3 April, and was welcomed by the brothers Jakomaki and Manoli Tombazes, then commanding the Greek fleet. On 3 May 1822 this fleet, which was poorly manned, sailed from Hydra with Hastings on the *Themistocles* as volunteer. The value of his services was soon evident, and he built a furnace on board for heating shot. He first became popular among the Greek sailors by saving the Tombazes' corvette off Cape Baba, north of Mitylene, which had accidentally got within range of Turkish guns. When the naval campaign ended, Hastings joined the siege of Nauplia, and assisted in the defence of the little Greek-held port of Burdzi. He raised a company of fifty men, armed and equipped at his own expense. During part of 1823 he served in Crete as commander of the artillery, but left the island in the autumn because of a violent fever.

Hastings recommended the construction of armed steam vessels to give the Greeks command of the sea, and in the latter part of 1824 he went to England to purchase steamers which were to be armed under his direction. In May 1826 the *Karteria* departed for Greece and was put under his command. This steamer, the first seen in Greece, was armed with 68-pound guns, firing shells and red-hot shot. Her crew consisted of Englishmen, Swedes, and Greeks. After a troubled passage she arrived in September. In February 1827 Hastings co-operated with Thomas Gordon (1788–1841), and attempted to relieve Athens, then besieged by the Turkish commander Reshid, by steaming into Piraeus and shelling the enemy's camp. His attack was successful, but the city was forced to capitulate to the Turks on 5 June. Hastings interrupted Turkish communications between Volo and Oropus, and captured several vessels. At Tricheri he destroyed a Turkish man-of-war, but the *Karteria* suffered severely, and was obliged to go to Poros for repairs. On 29 September 1827 Hastings destroyed Turkish ships, in the Bay of Salona. Ibrahim Pasha, who was at Navarino, prepared to attack him, but the allied fleets closely blockaded his fleet and on 20 October 1827 annihilated it at the battle of Navarino.

On 29 December 1827 Hastings took Vasiladi, the key to the fortifications of Missolonghi. He released the prisoners he captured, together with the Turkish governor.

Capodistrias arrived in Greece as president, and Hastings, disgusted with the negligent conduct of the war, proposed to resign. In 1828 Hastings's pamphlet *Memoir on the Use of Shells, Hot-Shot and Carcass Shells from Ships' Artillery* was published in London. In May 1828 he resumed active operations in command of a small squadron in western Greece. On the 25th he was wounded in an attack on Anatolikon, and amputation of his left arm was believed necessary. He sailed for Zante in search of a competent surgeon, but tetanus set in and, on 1 June 1828 he died on board the *Karteria* in Zante harbour. Hastings's service in the Greek cause demonstrated both technical expertise and strategic vision. George Finlay, his friend and the historian of the war, described him as the best foreign officer who embarked in the Greek cause, and the only foreigner in whose character and deeds there were the elements of true greatness.

George Hastings, first earl of Huntingdon (1486/7–1544), by Ambrosius Benson

Hastings, George, first earl of Huntingdon (1486/7–1544), magnate, was the son of Edward, second Baron Hastings (*c.*1465–1506), and Mary, Baroness Hungerford (*d.* *c.*1530), granddaughter of Robert, third Baron Hungerford. Born four years after the execution of his grandfather, William, Lord Hastings, the principal councillor of Edward IV, he was created a knight of the Bath at the wedding of Prince Arthur to Katherine of Aragon in November 1501, suggesting close court connections from an early age. Five years later, still a minor, he succeeded as third Baron Hastings on the death of his father on 9 November 1506, being summoned to parliament in October of the following year. In June 1507 he was said to be twenty years old. In December 1509 he married Anne Stafford, daughter of Henry, second duke of Buckingham, and from this date if not earlier actively participated in many court celebrations. He served in the vanguard of the royal army when Henry VIII invaded France in 1513, and in 1516 had to answer in Star Chamber for displaying too many of his servants in livery at a meeting with the Scottish queen dowager. In 1520 he accompanied the king to the Field of Cloth of Gold, was present in 1522 at the signing of the treaty of Windsor between the king and the emperor, and a year later took part in Suffolk's expedition to France.

In addition to stewardships of the lands of local monasteries his developing friendship with the king brought Hastings a number of grants from the crown which included the manors of Enderby (1510) and Evington (1527). Both were in Leicestershire, which his grandfather, with his castle at Ashby-de-la-Zouch and fortified manor house at Kirby Muxloe, had made the main power base of the family. However, George Hastings seems to have preferred his mother's estate at Stoke Poges, Buckinghamshire, because of its greater proximity to the court. When on 8 December 1529 he was elevated to the earldom of Huntingdon his family at last attained a title commensurate with its standing. In 1531 Huntingdon set in train negotiations with the countess of Salisbury and Henry, Lord Montague, for the marriage of Lord Montague's eldest daughter and coheir, Katherine Pole, to his eldest son, Francis *Hastings, later obtaining Lord Montague's other daughter, Winifred, as a wife for one of his younger sons, Thomas Hastings; early in 1538 the earl's debts caused him to seek an alteration in the terms of the settlement. In 1536, moreover, he procured the marriage of his daughter Dorothy to Richard Devereux, son of Lord Ferrars.

During Cromwell's supremacy Huntingdon frequently sought his favour, particularly over legal suits concerning the inheritance of his mother. In 1537 he sold some of his Oxfordshire lands to Cromwell, and when in residence in Leicestershire reported to the king's minister on possible instances of sedition in the county. As a peer of the realm he took part in the trials of Lord Dacre in June 1534, of Sir Thomas More in July of the following year, and of Anne Boleyn in May 1536. The Pilgrimage of Grace provided him with the opportunity of making his most signal demonstration of loyalty to the monarchy. At Ashby-de-la-Zouch in early October 1536, when news came of the risings in the north, he was swift to indicate his readiness to raise troops against the king's rebellious subjects, and together

with the earls of Shrewsbury and Rutland joined the forces headed by the duke of Norfolk, remaining in Yorkshire until the dissemination of the royal pardon in December.

Despite Sir Geoffrey Pole's attempt to implicate him in the alleged plot against the crown which resulted in the execution of Lord Montague late in 1538 and the countess of Salisbury three years later, Huntingdon survived the crisis unscathed, retaining his office as a servant of Prince Edward and his wife that of a servant of Princess Mary. About this time a Spanish observer dismissed him as a courtier 'of great power, little discretion and less experience' (*LP Henry VIII*, 13/2 no. 732).

Huntingdon was appointed to levy the subsidy in Leicestershire in 1543, and early in 1544 he and his son Francis were commissioned to raise troops for the invasion of France, but by this date the earl had become too infirm to face further military service. He died on 24 March 1544 with debts approaching £10,000 (apparently caused by the expense of court life and the need to provide for a large family), and was buried in the church of his manor of Stoke Poges. He was survived by his wife.

Wealth at death £9466 in debt: PRO, E 150/1146/5

Hastings, George Fowler (1814–1876), naval officer, second son of Hans Francis *Hastings, twelfth earl of Huntingdon (1779–1828), and his first wife, Frances (1780/81–1820), daughter of the Revd Richard Chaloner Cobbe, rector of Great Marlow, Buckinghamshire, was born on 28 November 1814. He entered the navy in September 1824, and on 7 January 1833 was promoted lieutenant. He was then appointed to the gunnery training ship *Excellent* at Portsmouth; in May 1834 to the *Revenge* (74 guns) in the Mediterranean; and in September 1837 to the steamer *Rhadamanthus*, also in the Mediterranean. On 30 June 1838 he was made commander; in the following January was appointed to the coastguard, and then, in August 1841, to the *Harlequin* (16 guns), in which he went out to China, arriving in time to take part in the closing operations of the war, after which he was employed in the suppression of piracy on the coast of Sumatra.

On paying off the *Harlequin*, Hastings was advanced to post rank, on 31 January 1845. From September 1848 to February 1851 he commanded the steam frigate *Cyclops* on the west coast of Africa; and from August 1852 to May 1857 the *Curaçao* in the Mediterranean and Black Sea during the operations of the Crimean War. This latter service was acknowledged by a CB (2 January 1857), and the Mejidiye (third class). In January 1858 he was appointed superintendent of Haslar Hospital and the Royal Clarence victualling yard, in which post he continued until he gained his flag on 27 April 1863. On 14 September 1864 he married Mathilde Alice (*d.* 6 July 1916), only daughter of W. H. Hitchcock (later Degacher); they had three sons and one daughter. In November 1866 Hastings was made commander-in-chief in the Pacific, with his flag in the *Zealous*, one of the earlier wooden-built ironclads; he became vice-admiral on 10 September 1869, shortly before the end of his service in the Pacific in November. In February 1873 he was appointed commander-in-chief at the Nore, which office he held for the usual term of three years, ending on 14 February 1876. He died suddenly at his residence, 41 Stanhope Gardens, South Kensington, London, on 21 March 1876.

Wealth at death under £800: resworn administration, Feb 1879, *CGPLA Eng. & Wales*

Hastings, George Woodyatt (1825–1917), social reformer and politician, was born on 28 September 1825 at 43 Foregate Street, Worcester, the second of three children, and the only son, of Sir Charles *Hastings (1794–1866), physician and founder of the British Medical Association (BMA), and his wife, Hannah (*d.* 1866), eldest daughter of George Woodyatt MD, physician to the Worcester Infirmary. He was educated at Bromsgrove grammar school and at Christ's College, Cambridge (1844–50), where he took a first class in civil law; he was admitted to the Middle Temple in November 1846 and called to the bar in May 1850. He practised as a barrister for the next twenty-one years. From his father, a Liberal in politics who not only helped organize the medical profession but was active in several causes, including anti-slavery and the improvement of public health, he inherited a taste for public service. He assisted his father and the BMA in drafting, and lobbying for, versions of the bill which became the 1858 Medical Act and established the modern medical profession in Britain. In the 1850s he was secretary of the Society for Promoting the Amendment of the Law, a London-based pressure group seeking to rationalize and improve aspects of English law, and of the National Reformatory Union, concerned with the care and moral redemption of young offenders. Lord Brougham, who provided patronage for Hastings, was president of both organizations. In the period from 1855 to 1857 Hastings was instrumental in joining together these two groups with a third constituency—those women who had come together as the Langham Place circle to publish the *English Woman's Journal*—to form the National Association for the Promotion of Social

Science, which held the first of its annual congresses in 1857 and which disbanded in 1886.

The Social Science Association, so-called, was modelled on the British Association for the Advancement of Science, and became an important forum for the promotion of institutional and legislative reform in mid-Victorian Britain. It was Hastings's role at the heart of the organization, first as secretary and then, from 1868, in succession to Brougham, as president, which brought him a place in public life. He was known to the whole political and administrative class of the age as an expert on social questions. His interests were broad, including not only legal and penal reform but also the promotion of women's causes. Among other projects, he assisted the foundation of Girton College, Cambridge.

Hastings was married first, on 10 August 1858, to Catherine Anna, daughter of the Revd Samuel Mence, rector of Ulcombe, Kent. She died without children in 1871. His second wife, Frances Anna (*d.* 1915), whom he married in 1877, was the only child of the Revd W. H. Pillans, rector of Himley, Staffordshire. They had three children.

From 1854 Hastings was unsuccessful in several attempts to secure the Liberal nomination as a candidate for various seats in parliament. Adopted for West Worcestershire, he failed to win election in 1874 but was elected Liberal MP for Worcestershire East in 1880, which he represented until 1892, sitting after 1886 as a Liberal Unionist. He served in many capacities in Worcestershire, including chairman of the quarter sessions and of the new county council. Hastings was representative of a new type of figure who entered politics through campaigns and movements for social reform. But Victorian Britain had not yet developed professional structures and organizations for this kind of public service, which remained voluntary and unpaid. He was expelled from the House of Commons on 21 March 1892 following his conviction for fraudulent conversion. As sole trustee of a substantial fund for the education of a deceased friend's children, he had used the capital for his own purposes, could not repay it, and was sentenced to five years' penal servitude. He had many outstanding debts in addition: his finances had never been adequate for the life he led as a public figure, and he had speculated without success. On his expulsion, the prime minister, Gladstone, paid tribute to his 'special services to the House'.

On his release Hastings lived quietly in his native county. In 1909 he published *A Vindication of Warren Hastings*, his famous ancestor, and two years later, *The Story of the Malverns*. He died on 21 October 1917, and was buried in the churchyard of Guarlford, near Malvern.

Hastings, Gilbert of (*d.* 1166?), bishop of Lisbon, acquired that office after the conquest of Lisbon by Afonso Henriques, first king of an independent Portugal, with the aid of seaborne forces, among whom Gilbert had served, drawn from England, Flanders, and the Rhineland. Apart from his presumed origins in Sussex, nothing is known of Gilbert's antecedents. His appointment to the see of Lisbon is mentioned by the English author, designated only by his initial R., of the *De expugnatione Lyxbonensi*, who had participated in the events that he so vividly described. R.'s testimony appears to date Gilbert's appointment to the week between the sack of the city on 24 October 1147 and the consecration of the principal mosque to be its Christian cathedral on All Saints' day, 1 November—a speed of decision that suggests that Gilbert had already made his mark as a man of episcopal potential. His consecration cannot be dated, but its circumstances gave rise to controversy. Gilbert was consecrated by João, archbishop of Braga, to whom he made written profession of obedience, despite the well-founded claims of the archbishop of Santiago de Compostela that Lisbon lay within his province. The metropolitical loyalties of the see of Lisbon were to be a matter of contention for some years to come.

Little is known of Gilbert's episcopate at Lisbon. He received endowments from the king, organized a cathedral chapter, and started to build a new cathedral. His subscriptions to royal diplomas indicate regular attendance at the king's court. In a frontier zone where jurisdictional boundaries were still fluid Gilbert reached accommodations, invariably not without difficulty, with neighbouring ecclesiastical corporations such as the Augustinian canons of Santa Cruz de Coimbra, the Cistercian monks of Alcobaça, and the knights templar. It was in order to resolve conflict with the latter order concerning jurisdiction over the town and territory of Santarém that Gilbert travelled to the papal curia in 1153, probably visiting the court of the Emperor Alfonso VII of León-Castile on his return journey. In 1150–51 Gilbert went to England to preach and recruit for a military campaign to be directed against Seville. The source of information on this point, John of Hexham, may have been a little hazy about Iberian geography: it has been suggested that English troops participated in King Afonso's unsuccessful assault, not on Seville, but on Alcácer do Sal to the south-east of Lisbon, in 1151 or 1152. It appears that on this or other occasions Gilbert also recruited clerical personnel in the north. The dignitaries and canons of the Lisbon Cathedral chapter, their names known from episcopal *acta* dating from 1150, 1156, and 1159, included Walter of Hastings and Walter of Flanders, and several others bearing names then common in England or Flanders but rare in Portugal,

such as Robert, the dean, Durand, the precentor, Bartholomew and Matthew, the archdeacons, and canons named Arnulf, Nicholas, and Rainald. Episcopal encouragement may be suspected, but remains unproven, in the settlement of lay colonies in and near Lisbon: for example, a certain Gilbert de Chent (Kent or Ghent), apparently a layman, subscribed the deed of 1150. The importation of some English liturgical uses to the bishopric of Lisbon has also been attributed to Gilbert. Gilbert was described by a near contemporary Portuguese author, in wholly conventional phraseology, as learned and pious. The meagre documentation relating to his episcopate at Lisbon suggests that he was energetic and forceful too. Gilbert's death was dated 27 April 1166 by Lisbon's seventeenth-century historian Da Cunha. If this date, which might have been drawn from a now lost cathedral necrology, is accurate, Gilbert must have resigned his see a little earlier. He makes no certain appearance in surviving documents after March 1162 and his successor, Alvaro, was in place as bishop of Lisbon by October 1164.

Hastings, Hans Francis, twelfth earl of Huntingdon (1779–1828), naval officer, fourth and only surviving son of George Hastings (*b.* 1734/5, *d.* 6 Feb 1802), lieutenant-colonel, 3rd regiment of foot, and his wife, Sarah, daughter of Sir Richard Fowler, second baronet, of Harnage Grange, Shropshire, was born in London on 14 August 1779. He was educated at Repton School, Derbyshire, from 1787 to 1790 and at John Bettesworth's academy at Chelsea, London, from 1790 to 1793. Early in 1793 he began his naval career under Sir John Borlase Warren, then captain of the *Flora*. He took part in the action off Cancale Bay, Brittany, in April 1794, and in the following year was wounded in the battle of Quiberon Bay. After having served six years with Warren, he was appointed acting lieutenant in the brig *Sylph*, and subsequently received his commission as second lieutenant of the *Racoon*. Early in 1800 he was appointed first lieutenant of the *Thisbe*, in which he accompanied the expedition to Egypt. He was afterwards appointed second lieutenant of the *Aigle*. He married, on 12 May 1803, at St Anne's, Soho, London, Frances (*b.* 1780/81, *d.* 31 March 1820), third daughter of the Revd Richard Chaloner Cobbe, rector of Great Marlow, Buckinghamshire; they had ten children, including George Fowler *Hastings.

At the outbreak of war in 1803 Hastings was sent to Weymouth Roads to impress seamen. His party was attacked by protesters, and seventeen of his men were wounded and three of their assailants killed. Upon landing at Weymouth he was seized, and committed by the mayor, on the charge of murder, to Dorchester gaol. After six weeks in prison, he was removed by habeas corpus to Westminster, when he was bailed out by his relative, Lord Moira, and was subsequently acquitted at the Dorchester summer assizes. From the *Aigle* Hastings joined the *Diamond*, and afterwards served as second lieutenant on the *Audacious*, and as flag lieutenant on the *Hibernia*. On his refusal to go out to the West Indies, where two of his brothers had died, he was appointed acting ordnance barrackmaster in the Isle of Wight, and in 1808 was promoted to the post of ordnance storekeeper in Enniskillen, where he lived for more than nine years.

When Francis, tenth earl of Huntingdon, died in October 1789, the earldom of Huntingdon became dormant, while the ancient baronies of Hastings devolved upon his elder sister, Lady Elizabeth Hastings, third wife of John Rawdon, first earl of Moira. Although Theophilus Henry Hastings, the eccentric rector of East and West Leake, Nottinghamshire, and uncle of Hans Francis Hastings, assumed the title of earl of Huntingdon, to which he was entitled by his descent from Francis, the second earl, he never took any steps to prove his right. Upon the death of his uncle in April 1804, Hastings made some attempt to investigate his claim to the earldom, but was soon compelled to abandon it for want of money. In July 1817 his friend Henry Nugent Bell took up the case, and it was mainly owing to his exertions that the attorney-general, Sir Samuel Shepherd, reported on 29 October 1818 that Hastings had 'sufficiently proved his right to the title of Earl of Huntingdon'. On 14 January 1819 he took his seat in the House of Lords, where, as a tory, he does not appear to have taken any part in the debates. Though successful in his claim to the earldom, he failed to recover the Leicestershire estates, which formerly went with the title. On 28 September 1820 he married his second wife, Eliza Mary Thistlethwayte, *née* Bettesworth (*d.* 9 Nov 1846), eldest daughter of Joseph Bettesworth of Ryde, Isle of Wight, and widow of Alexander Thistlethwayte of Hampshire; they had no children.

On 7 March 1821 Huntingdon obtained the rank of commander and the command of the *Chanticleer*. While cruising in the Mediterranean he was appointed governor of Dominica, in the West Indies, on 13 December 1821, and took the oaths of office on 28 March 1822. In 1824, because of a misunderstanding with the other authorities on the island, he resigned and returned home. He was promoted post captain on 29 May 1824, and on 14 August was appointed to command the *Valorous*. Illness compelled him to relinquish his command in the West Indies. He returned to England in May 1828 and died at Green Park, Youghal, co. Cork, Ireland, on 9 December of that year, aged forty-nine. He was succeeded in the earldom by his eldest son, Francis Theophilus Henry Hastings. On 26 April 1838 his widow married her third husband, Colonel Sir Thomas Noel Harris KH; she died at Boulogne.

Hastings's career revealed the limits of patronage: Warren, his early patron, had many protégés, and Hastings, lacking other support, and his own means, was condemned to fall behind his contemporaries after receiving his first commission. Only a lack of money could explain his failure to press the claim to his family title. His career was dogged throughout by ill fortune and ill health.

Hastings [*née* Daunais], **Hazel Mary** (1897–1993), teacher and Roman Catholic laywoman, was born on 8 November 1897 on a farm at Eagle Hills, near Battleford, Saskatchewan, Canada, the daughter of Charles Michel Daunais (*d.* 1901), a farmer, and his wife, Mabel Grant Hutchison (1873–1961). Of old French Canadian stock, her father hailed from a village near Montreal while her mother had emigrated from Devon and become a Roman Catholic at the Peigan Reserve mission. Before she was three Hazel's showpiece was to sing 'Vive la Canadienne', and she always retained her Canadian citizenship.

In May 1901 her father died and her mother returned with her to England; a little later her mother became a Benedictine nun, with the name of Paula, at Stanbrook Abbey, Worcestershire. In consequence of this extraordinary decision, something she never afterwards criticized, Hazel, at little more than five, found her home to be the tiny school of no more than twelve girls, a relic of former ages, inside the monastic enclosure. It was a strangely medieval education. The girls wore a black habit and a veil for much of the time, shared in the liturgy and became expert in plainsong, Latin, calligraphy, heraldry, and astronomy, but not much else. Holidays were spent with her grandmother or in the homes of fellow pupils, such as the Eystons at East Hendred, descendants of Thomas More, for whom Hazel developed a lifelong passion. In 1911 she was sent for two years to the English convent at Bruges to perfect her French and, incidentally, become a natural European through the international mix of the Bruges girls and the Belgian homes where she stayed during the holidays.

With the First World War came work, first in a bank—Cox & Co.—and then in the machine-gun corps pay office in South Kensington. In her shared room in the Queensberry Club, opened by Baroness von Hügel for Catholic girls, Dorothy Howell lay on her stomach on the floor putting in the orchestral score to her symphonic poem 'Lamia'. When Sir Henry Wood conducted it at the Queen's Hall with Howell at the piano Hazel was there to applaud. Soon afterwards she married Major William George Warren Hastings (1881–1952), just demobilized, a lawyer who had already arranged to join a firm in Malaya. They first met in September 1919; they were married on 13 October and he had left within a month. The 1920s she spent mostly in Malaya, where she gave birth to five of her six children, and threw herself into the activities with Malay and Chinese girls as deputy commissioner for the Girl Guides. At one fund-raising concert for them she appeared as a bearded conjuror, the mysterious Professor Zog. She was, however, never happy with the conventions and racial barriers of formal colonial life. From 1930 she settled back in England with her children in St Werstan's, a ten-bedroomed Malvern house, while her husband continued his legal practice in Malaya. Here her combination of Catholic devotion, liberal attitudes, and open hospitality flourished. When Baldwin retired to the House of Lords in 1937, producing a Worcestershire by-election, she raised the Liberal flag in the forlorn hope of overturning a huge tory majority. Her father-in-law, George Woodyatt Hastings, had been a Liberal MP for Worcestershire fifty years before.

In 1938, endeavouring to economize, she moved the family to a north Oxford flat, tiny in comparison with the house she had left, but the atmosphere of Oxford was far more congenial and she welcomed into it numerous central European refugees like the historians Willie and Hans Schenk, as also Dominicans from Blackfriars, German prisoners-of-war, and innumerable friends of her children studying at the university. They all became her friends too, as did, very particularly, Penelope Betjeman. Never keen on the chores of regular housekeeping (though she did them without complaining), she excelled in making fancy dress, icing fantastic birthday cakes, and laying treasure hunts. On one memorable occasion the clues were scattered up and down the banks of the Cherwell and the groups of participants were all in punts.

After her husband died in 1952 Hazel Hastings sold their retirement home at Childrey, near Wantage, and resolved to start a new life, teaching English, something which had long excited her. Three of her children were working in Uganda in the late 1950s and she went there too, offering to live at the Generalate of the Bannabikira, at Bwanda, a large congregation of African nuns whose English needed improving. Later, in her mid-sixties, she taught English at Bukalasa seminary very successfully up to the A level Shakespeare paper.

After leaving Uganda, and spending a while at Mindolo Ecumenical Foundation, Zambia, Hazel Hastings set off again, this time for the continent of Europe, teaching English first in Lisbon and then at Tor Lupara, Rome, and finally, from 1973, now over seventy-five, at Offenburg in the Black Forest, becoming the resident expert on English in another large convent school but—to her great regret—unable to learn German. In her eightieth year she moved to Aberdeen, to housekeep for her university lecturer son. Her last years were spent with her daughter Barbara back in Oxford, where she died, at 186 Iffley Road, on 27 January 1993. She was buried beside her husband in the graveyard of the Roman Catholic church at East Hendred three days later.

Hazel Hastings was short, sturdy, and extremely strong. She had a huge capacity for friendship and letter-writing; she loved music, travel, especially long sea voyages, fine

handwriting, and language precision. Always a deeply committed Catholic, she grew ever more liberal and ecumenical in both religion and politics but, above all, she excelled in generosity. She left no will. There was no need, because she had already given almost everything away.

ADRIAN HASTINGS

Sources H. M. Hastings, 'A mingled yarn', unpublished autobiography, priv. coll. • personal knowledge (2004) • private information (2004) [family]

Hastings, Sir Henry (1235?–1269), nobleman and baronial leader, was the son of Henry Hastings (*d.* 1250) and Ada, third daughter of *David, earl of Huntingdon, brother of William the Lion, and Maud, daughter and coheir of Hugh, earl of Chester. His grandfather William Hastings (*d.* 1226) took part with the barons against King John, and in 1216 his lands were forfeited; he was taken prisoner at Lincoln in 1217, and was one of William of Aumale's supporters at Bytham in 1221. Henry Hastings the elder, in contrast, was loyal to Henry III; he fought for the king on the Breton campaign in 1230 and in Poitou in 1242, and was taken prisoner at Saintes; he served in Scotland in 1244. His lands were much enriched by his wife's being a coheir to John the Scot, earl of Chester (*d.* 1237): in the subsequent settlement they received manors 'in tenancy' from the king, allegedly in lieu of one-third of the value of the earldom. In 1250 he was one of the nobles who took the cross, but died in July of the same year. Matthew Paris called him 'a distinguished knight and wealthy baron' (Paris, 5.174). His estates, in fact, extended over eleven counties, the core being in the north and west midlands.

Henry Hastings the younger was about fifteen at his father's death, worth more than £600 per annum, and early in 1251 the king divided the wardship of the huge estate between no fewer than eight grantees, the lion's share going to Guy and Geoffrey de Lusignan and Guy de Rochford. Hastings's marriage was granted to Guy de Lusignan, but about a year later Lusignan sold it, along with the marriages of his sisters, to Hastings's near neighbour, William (III) de *Cantilupe. Hastings himself remained a ward in the queen's care, with a yearly pension of £10, along with the Lord Edward and other young nobles. He married between 1252 and 1261 Joanna de Cantilupe, the daughter of William de Cantilupe, niece of the prominent Montfortian St Thomas of Hereford, and sister and coheir of George de Cantilupe, lord of Abergavenny. She received in 1269 dower extended at £230 p.a., but died about July 1271. They had three daughters and two sons, John *Hastings, first Lord Hastings, born on 6 May 1262 at Allesley, Warwickshire (*d.* 1313), and Edmund *Hastings, Lord Hastings of Inchmahome.

In 1255 Hastings accompanied the king to Scotland, losing a horse in the process. He came of age on 10 May 1256 and in August 1260 received his first military summons from the king. By 1261, however, he was in rebellion against Henry III. It is possible that he was drawn to support Simon de Montfort through their common sphere of interest in the west midlands, or their mutual close ties with the Cantilupes and Segraves, links strengthened by Hastings's father's interest in crusading. The Hastings family, in turn, may well have felt cheated by the king out of their full share of the earldom of Chester. Hastings himself certainly resented Henry III's Lusignan half-brothers: there is evidence that they had despoiled his estates while in their wardship, and they demanded over £200 in entry fines from him when he came of age. While in the queen's custody Hastings also built up friendships with other rich wards of similar age, especially Geoffrey de Lucy, later his executor, who had similarly received rough handling from the Lusignans. This group, among whom, besides Hastings and Lucy, William de Munchensi and Nicholas of Segrave were most prominent, can be seen in action even in July 1260 when they stood bail for Geoffrey de Lucy in a hunting offence. In the winter of 1261 Hastings and the same young friends lay at the core of the opposition to the king's overthrow of the provisions of Oxford; they were required by him to send their seals to be affixed to the treaty of Kingston if they wished to be pardoned. They seem to have remained unreconciled, for it was Hastings and his friends who were noted by the chronicler Thomas Wykes as the young nobles who, at the parliament held in May 1263, supported Simon de Montfort in his complaint of non-observance of the provisions of Oxford. In May the king attempted to summon them to fight against the Welsh and to take up knighthood from him, but they refused. Hastings sided with the baronial opposition in the war of 1263 and was one of those excommunicated by Archbishop Boniface. On 13 December 1263 Hastings also joined in signing the instrument which bound the barons to abide by the award of Louis IX. In April 1264 he was in Kent with Gilbert de Clare and took part in the siege of Rochester. Hastings put pressure on David of Ashby, and no doubt others, to support Montfort. He marched with Earl Simon to Lewes and was knighted by him, either on the morning before the battle on 14 May 1264 (according to Gervase of Canterbury) or at London on 4 May (according to the Dover chronicle in BL, Cotton MS Julius D.ii). In the battle of Lewes Hastings, along with (depending on various accounts) Geoffrey de Lucy, Hervey of Boreham, or Humphrey (V) de Bohun, commanded the Londoners, and took part in their flight from Edward. Afterwards Montfort made him constable of the castles at Scarborough, Kirtling in Cambridgeshire, and Winchester; he was summoned to Montfort's Model Parliament on 14 December 1264. In June 1264 Hastings was one of the judges assisting Simon de Montfort the younger in his arbitrary vendetta against William de Braose of Sussex, whereby the latter was fined 10,000 marks, and he was one of those who were to take part in the abortive tournament at Dunstable in February 1265.

Hastings was wounded and taken prisoner by Thomas de Clare at Evesham on 4 August 1265. Half his retinue of four knights was slain in the battle. The king afterwards granted Hastings's wife £100 p.a. from his estates but the residue was divided among no fewer than eight royalists. Hastings obtained his release after February 1266 and joined Robert de Ferrers, earl of Derby, at Chesterfield in the following May, and only escaped capture with him because he was out hunting. He then went to Kenilworth,

and, joining with John de la Ware, Montfort's old retainer, and others, ravaged the surrounding country, and held the castle against the king from June to December 1266. Hastings, as leader of the Kenilworth garrison which had cut off the hand of a royal messenger, was specially excepted from the dictum of Kenilworth, and sentenced to pay a fine of seven years' value of his estates. But on his release he broke his oath not to take up arms again; he joined the disinherited in the Isle of Ely and became their leader. He was, however, forced to submit to Edward in return for the dictum of Kenilworth in July 1267. He seems to have settled most of his ransom without difficulty, being in the end probably only charged a fine at a five-year rate.

Hastings died, aged about thirty-four, before 5 March 1269, perhaps from wounds obtained during the war. On his death his estates once again became valuable royal patronage, the wardship of his heir, John, being granted to the king's brother and nephew, Richard and Edmund of Cornwall; in 1269 John was contracted to marry one of the daughters of the Lusignan, William de Valence, and it is interesting that in 1275 it was alleged before the pope that this marriage was intended to settle the enmity between the Hastings family, Henry III, and Edward I. Hastings and his wife were buried in the chapel of the Friars Minor at Coventry. Wykes, who was a royalist, spoke of his inordinate pride and violence, and called him 'malefactorum maleficus gubernator' (*Ann. mon.*, 4.203).

Henry Hastings, third earl of Huntingdon (1536?–1595), by unknown artist, 1588

Hastings, Henry, third earl of Huntingdon (1536?–1595), nobleman, was the eldest son of Francis *Hastings, second earl of Huntingdon (1513/14–1560), and his wife, Katherine Pole (*d.* 1576). His grandfather George *Hastings, first earl of Huntingdon, a personal friend of Henry VIII, introduced him to the court at a very early age. A year or so senior to Edward VI, Lord Hastings joined the young prince at his studies at the king's invitation. Francis Hastings became second earl of Huntingdon in 1544, and three years later Lord Hastings was knighted at the coronation of Edward VI. In 1548 he spent a brief period at Queens' College, Cambridge, profoundly influenced by the evangelical protestantism he encountered at court and at the university. During the reign of Edward VI the second earl of Huntingdon threw in his lot with the duke of Northumberland, sealing the alliance with the marriage of his eldest son to Katherine Dudley [*see* Hastings, Katherine, countess of Huntingdon], the duke's youngest daughter, in May 1553. Both Huntingdon and Lord Hastings backed Northumberland in his attempt to divert the succession in favour of Lady Jane Grey in July 1553, and on Mary Tudor's triumph they found themselves imprisoned for a time in the Tower.

In the Marian period the countess of Huntingdon used her family connections to rehabilitate her husband and son. Having granted a free pardon to Lord Hastings in November 1553, the following year, out of devotion to her godmother, the countess of Salisbury, Mary restored the lands of Henry *Pole, Lord Montagu, to his coheirs Katherine and Winifred Pole. In his turn, Reginald, Cardinal Pole, responded with great eagerness to the overtures of his nearest surviving relative, and soon after his arrival in England he congratulated his niece on the accomplishments God had disposed upon her eldest son. In 1555 he took Lord Hastings with him briefly to Calais and later encouraged him to translate Osorius's *De nobilitate*. Hastings was also a member of King Philip's English household.

The deaths of both Mary and Pole in November 1558 brought a further change in the family fortunes. Together with the second earl, Lord Hastings received a summons to the Lords in the first parliament of Elizabeth, and attended assiduously, being present (among much else) at

the passage of the Acts of Supremacy and Uniformity in the spring of 1559. The second earl of Huntingdon, who had been unwell for some years, died prematurely in June 1560, and Hastings acceded to the title at the age of twenty-four. He thus assumed responsibility for his widowed mother and his ten brothers and sisters, only two of whom, his eldest brother, George, and his eldest sister, Katherine, had gained their inheritance in their father's lifetime.

With his humanist education, experience of court life, and a brother-in-law, Robert *Dudley, high in the new queen's favour, Huntingdon might well have expected early advancement. However, he soon discovered that his Yorkist ancestry barred his way. When Elizabeth fell ill with the smallpox in October 1562, the protestant group put him forward as a potential successor and, though he subsequently did all in his power to convince her of his loyalty, the queen proved very slow thereafter to employ him outside his native county of Leicestershire.

On the eclipse of the Grey family in the second half of the sixteenth century, Leicestershire became a Hastings fiefdom governed by Huntingdon from Ashby-de-la-Zouch. He was assisted by his four brothers, Sir George at Loughborough and then Castle Donington, Sir Edward at Leicester Abbey, Sir Francis *Hastings at Market Bosworth, and Walter at Kirby Muxloe. From the first, Huntingdon gave priority to the religious complexion of the county. Within months of his father's death he brought the Genevan exile Anthony Gilby to be his chaplain at Ashby-de-la-Zouch, and helped finance the ministry of William Whittingham and other itinerant preachers in the county. Subsequently he provided Thomas Sampson with the mastership of Wyggeston's Hospital after his deprivation in 1565 from the deanery of Christ Church, Oxford, for his nonconformity at the time of the vestiarian controversy. Huntingdon engineered the appointment of a civic lecturer at Leicester as early as 1562, and established or re-established protestant grammar schools at both Ashby and Leicester. He always retained this interest in education, settling his four best livings in Leicestershire and Somerset upon Emmanuel College, Cambridge, soon after its foundation in 1584. It was also during this period that he began the patronage of protestant writers which he continued for the remainder of his life.

The flight of Mary Stuart to England in the spring of 1568 caused Elizabeth to see Huntingdon's birth in a somewhat different light. On the disclosure of plans for Mary's marriage to the duke of Norfolk, the queen, considering the earl of Shrewsbury too lenient a gaoler, to Mary's great indignation named Huntingdon as her joint custodian. For three months during the northern uprising in the autumn of 1569, Shrewsbury and Huntingdon shared the guardianship of the Scottish queen, first at Tutbury and then at Coventry, until, the crisis over, Elizabeth restored Mary to Shrewsbury's sole care in January 1570. Throughout this period Huntingdon corresponded with Cecil almost daily, and in the process secured an important new advocate at court. Elizabeth formally recognized his service by creating him a knight of the Garter in April 1570 and from this time seems to have regarded him as a suitable recipient for high office.

The rebellion of the earls had demonstrated the ineffectiveness of Sussex as president of the council in the north, and in a deliberate attempt to strengthen the control of the central government over the region, in the autumn of 1572 the queen appointed Huntingdon as Sussex's replacement. With jurisdiction in civil matters over Yorkshire, co. Durham, Northumberland, Westmorland, and Cumberland, and in ecclesiastical affairs throughout the northern province which extended additionally to Lancashire, Cheshire, and Nottinghamshire, the promotion at a stroke transformed Huntingdon into the most powerful royal official in the whole of northern England. At the start his fellow councillors considered him to be very inexperienced, but within a short time Grindal was commenting upon the way in which his office had 'made manifest to many those excellent virtues and good gifts which afore were in a manner hid in him' (Nicholson, 355). Since Northumberland's execution had taken place in York only three months previously, Huntingdon's first priority was the restoration of good government in the region. With the earls of Northumberland, Westmorland, and Cumberland broken or confined to the south, he worked incessantly to fill the power vacuum with loyal northern gentlemen. As cases of land rights had contributed to the restiveness of the commons earlier in the century, Huntingdon now used the conciliatory services of the council in the north to resolve conflicts between landlords and tenants and to arbitrate in trading disputes among rival northern towns.

Throughout the period the north of England stood as a buffer zone against Scotland, still in a highly volatile state after Mary's flight. As soon as he arrived in York, Huntingdon added his weight in support of the protestant regent, Morton, subsequently acting as the chief government negotiator when border raids threatened to disrupt the peace. When, after Morton's fall, the young James VI began to take power into his own hands, Huntingdon did his best to maintain the previously good relations between the two countries. With the office of lord lieutenant permanently annexed to his presidency from 1580, as fears of a Spanish invasion were intensifying in July 1586 he obtained with Lord Eure a defence pact with Scotland. Assigned supreme control over all the forces in the north at the time of the Armada, Huntingdon moved to Newcastle in the autumn of 1588 to secure the border in the event of invasion. Even after the threat from Spain had diminished, and James had become a pensioner of the English crown, he continued building up northern resources to withstand any fresh onslaughts from Spain.

As an administrator, diplomat, and military commander Huntingdon considered himself an instrument of central government. He was at times almost obsessively anxious to fulfil to the letter the commands of the queen and the privy council, but in the sphere of religion he never felt any hesitation about seizing the initiative. After the papal excommunication of Elizabeth in 1570 he, like

Cecil, equated Catholicism with disloyalty to the state. From the beginning of his presidency he launched a campaign to bring the north to religious conformity. During his first decade in office he used the northern high commission to try to overawe conservative gentry and townspeople, and after the passing of the penal laws from 1581 preferred the more stringent penalties obtainable in the secular courts. Over and above those seminary priests dispatched for trial in the south, between 1582 and 1595 thirty priests and eight lay people were sentenced to death at York; most of them had previously appeared for a preliminary examination before the president and council in the north.

Alongside Huntingdon's unrelenting attack on Catholicism went his self-imposed mission to promote protestantism. Sir Francis Hastings maintained with little exaggeration that his brother 'never sett a straying foote in anye place where hee did not labor at the leaste to settle the preachinge of the word to the people' (Cross, *Letters*, 59). In 1575 he sided with William Whittingham, then dean of Durham, when Archbishop Sandys was questioning the validity of his ordination in a protestant church abroad; in 1579 he began pressing for the appointment of a civic lecturer in York, with which the corporation reluctantly complied in 1582; and he encouraged the town of Newcastle to invite John Udall to serve as town preacher after his silencing at Kingston upon Thames. He furthered preaching exercises throughout the north and, though he owned no direct patronage in the region, still contrived to place evangelical protestants in strategic town livings such as Leeds, Guiseley, Hull, and Halifax and used his best efforts to encourage 'the well plantinge of the gospell in Manchester' (CUL, Add. MS 17, fol. 38*v*).

This absorption with the government of the north exacted a heavy price. Almost as soon as he succeeded to the title, Huntingdon began making inroads into his inheritance, perhaps raising as much as £100,000 from land sales by the time of his death. His obligations towards his mother and his brothers and sisters accounted for his indebtedness in his early years, and an unwise investment in copperas mines at Canford in Dorset and ensuing lawsuits subsequently made his situation worse; but there seems little doubt that royal service in the last instance caused the financial chaos from which the family never fully recovered. Huntingdon himself claimed in 1587 that since he had become president he had spent 'more than her majesty's allowance above 20,000 li.' (*Salisbury MSS*, 3.275). Despite commissioning Sir Francis Hastings from 1583 to supervise his estates in the south-west, he succeeded only in stalling these debts.

Having gone north to Newcastle to oversee the musters in the autumn of 1595, Huntingdon planned to join his wife at court for Christmas and to use the opportunity to reorder his finances. On his return to York in late November, however, he fell ill with a fever and died there, much mourned, on 14 December 1595. As he had tried to set an example of protestant commitment all his adult life, so at the end he strove to achieve a Calvinist death. At court Elizabeth went out of her way to comfort his distraught widow, though she did little to mitigate the debts. Childless, Huntingdon had educated Francis Hastings, the eldest son of his brother Sir George Hastings, as his heir, sending him for a time to Geneva. Francis's ten-year-old son Henry was being brought up in his great-uncle's household at York in 1595. Since his brother had died intestate, George, fourth earl of Huntingdon, tried to avoid taking up the administration of his estate, but the queen insisted upon Huntingdon's being given a funeral commensurate with his rank, and he was buried with his nephew, Francis, who had outlived him by three days, at St Helen's Church, Ashby-de-la-Zouch, on 26 April 1596. A portrait of Huntingdon in armour dated 1588 now hangs in the Tower.

Wealth at death many thousands of pounds in debt: Cross, *Puritan earl*, 306–4

Hastings, Henry (*bap.* 1562, *d.* 1650), landowner and eccentric, was the second son of George Hastings (*d.* 1604), who in 1595 became fourth earl of Huntingdon, and his wife, Dorothy Port (*d.* 1607). His epitaph states that he died on 5 October 1650, aged ninety-nine, so indicating that he was born in 1550 or 1551, but this exaggerates his age. His parents were married in 1557, his elder brother was born in 1560, and Henry himself was baptized on 20 June 1562 at Lubbesthorpe, a family manor in Leicestershire where he was presumably born. His uncle Henry, the third earl, took an active interest in his nephews, and in 1587 arranged Henry's marriage to Dorothy, second daughter of Sir Francis Willoughby of Wollaton Hall, Nottingham, who gave the couple the estate of Woodlands, near Horton in Dorset, which the Willoughby family had inherited. Hastings was later to acquire other properties in Dorset and Hampshire, where he was appointed one of the keepers of the New Forest, but Woodlands remained his principal home. In 1645 the estate, which had been valued at £300 in 1641, was sequestered owing to his royalist sympathies, but he compounded for it with a payment of £500.

At Woodlands, Hastings led a life almost entirely devoted to hunting, hawking, and fishing, and still rode well in his old age. He kept all sorts of hounds; dogs and cats and their litters had the freedom of the house, so that he kept a short stick on his table to defend his meals from them. The hall was full of hawks on their perches, hunting equipment, and trophies of the chase, and the floor was strewn with marrowbones from his hospitable table, for he entertained widely though not extravagantly; he was unusually moderate in his drinking. In the parlour a Bible, Foxe's book of martyrs, old hats containing pheasants' eggs, dice, cards, and used tobacco pipes lay close together. The pulpit of the disused chapel held such dishes as a venison pasty, a cold joint of beef, or a large apple pie. In person Hastings was short and sturdy, and always dressed in green. He was popular locally, and it was said that there was not a woman in the neighbourhood 'under the age of forty, but it was extremely her fault if he was not intimately acquainted with her' ('Character of Mr Hastings', 160). The principal source of all these details is an account written by his godson and neighbour Sir Anthony Ashley Cooper, later first earl of Shaftesbury, which has been copied several times, notably by the *Gentleman's Magazine* in 1754 and later in Hutchins's *Dorset* and Nichols's *Leicestershire*. Shaftesbury and Hastings can have had little in common and supported opposing sides during the civil war, which may explain the satirical tone of the description of Hastings, especially in the allusion to his attentions to the local women, with an insinuation that he had illegitimate children. Shaftesbury had a portrait of his godfather in his mansion at Wimborne St Giles; an engraving of it by James Bretherton (1782) is reproduced by both Hutchins and Nichols.

Henry Hastings (*bap.* 1562, *d.* 1650), by unknown artist

Dorothy Hastings died on 5 December 1638. According to some writers Hastings subsequently married Jane Langton, who had already borne him a son, but no record of such a marriage appears to have been traced. It is possible, however, that the Henry Hastings, son of Henry Hastings of Woodlands, Dorset, who is recorded as having matriculated at St Edmund Hall, Oxford, on 2 April 1641, aged fifteen, was the child of this union. Hastings died on 5 October 1650, aged eighty-eight, and was buried at St Wolfrida's Church, Horton on 8 October. With his wife, Dorothy, he had five sons and one daughter. His eldest son, George (1588–1651), was knighted by James I in 1619. In 1818, during investigations to determine the succession to the earldom of Huntingdon, it was established that the male line of descendants from Henry Hastings had become extinct in 1755. T. Y. Hastings, Henry, fifth earl of Huntingdon (1586–1643), nobleman and landowner, was born on 24 April 1586 at Exton, Rutland, the eldest son of Francis Hastings, Lord Hastings (1560–1595), heir apparent to the earldom of Huntingdon, and Sarah, daughter of Sir James Harrington, of Exton. As a boy he was described as 'low in stature, but of comely countenance and lively wit' (*CSP dom.*, *1595–7*, 164). He was educated under the direction of his great-uncle, the third earl, by a 'learned and godly schoolmaster', probably Nathaniel Gilby, the earl's chaplain. His Latin exercises suggest a curriculum parallel to that established by the third earl for Leicester grammar school. Later he was entered at Gray's Inn and at Queens' College, Cambridge, matriculating in 1601. This education endowed the fifth earl with sense of his lineage, the importance of honour, and a deep-seated religious conviction. Although his uncle the puritan Sir Francis Hastings congratulated the new earl for 'resolving religiously' on 'the godly government' (*Letters*, 98) of his household, and although religiosity shapes his patronage (he continued to support Arthur Hildersham into the 1620s), Huntingdon's own religious attitudes were moderately protestant.

From 1595 to 1604 Hastings was styled Lord Hastings, inheriting the earldom from his grandfather George Hastings, fourth earl of Huntingdon, in 1604. As a minor he succeeded to some local family offices such as keeper of the royal forest of Leicester, but not to the lord lieutenancy of Leicestershire which he regained in 1607, retaining the office until his death; he was lord lieutenant of Rutland from 1614 to 1642. He married Lady Elizabeth *Stanley (*bap.* 1587, *d.* 1633), one of the coheirs of Ferdinando *Stanley, fifth earl of Derby, on 15 January 1601 at Stoneleigh, Warwickshire. The couple had four children: Alice (*b.* 1606), Ferdinando (*b.* 1608), Henry *Hastings, Baron Loughborough (1610–1667), and Elizabeth (*b.* 1612).

Huntingdon inherited an impoverished estate which curtailed his activities and he lamented how 'without meanes honour look[s] as naked as Trees that are cropped' (Hunt. L., Hastings papers, HAP 15/8). Even with his wife's £4000 dowry he faced catastrophe. It was estimated that the third earl had sold lands worth £90,000 and the fourth earl alienated further lands, reducing his annual income in 1604 to just over £37. The estate, encumbered with two dowagers, was so bereft of cash that no money existed in 1604 to cover immediate expenses and creditors, including the exchequer, threatened land seizures. Further land sales commenced and the countess's jointure was renegotiated. By 1622 the deficit had fallen to £11,662 and Huntingdon's income stabilized at about £2032 although after his costs and repayments the remaining £900 failed to match his annual expenditure of about £1400. Vigorous measures such as the collection of arrears, deforestation, coalmining, personal borrowing, the dowry from his future daughter-in-law, and even payments from lawsuits (he gained £2506 from the Fawnt case in 1639) barely kept the earl afloat.

Impoverishment appears to have limited Huntingdon's participation in national politics, although he was associated with the earls of Southampton and Pembroke and supported the Bohemian war as part of the pro war patriot faction on his occasional parliamentary appearances. A portrait even existed of him holding the petition of right. Interestingly, he did remain involved with the Virginia Company, and was elected to its council for his efforts in finding settlers, although he was perhaps motivated by the hope of riches as his letters to his agent, Captain Martiau, illustrate. His most distinctive contribution lay in local governance and as lord lieutenant and *custos rotulorum* Huntingdon used his expanded powers to dominate the local élite and, in general, even ensured the collection of extra-parliamentary levies. Much of this local power was directed towards sustaining his familial position and the continued feud with the Greys of Groby. His two famous lawsuits, against Shirley and Fawnt, are both products of this feud, although in the late 1630s Huntingdon found himself employed by central government, perhaps precisely because of his 'quasi-feudal paternalism' and rigorous county governance. Thus, although of little significance in national politics, Huntingdon's career has been studied for the detailed information it provides about aristocratic attitudes and the interaction of local politics and central government in the 1620s and 1630s. Huntingdon wrote extensively, including 'The directions' (a compendium of his views for his son Ferdinando), household ordinances, directions on the etiquette of gift-giving, travel journals, and numerous notes on honour, his family history, religion, and aristocratic precedent and privilege. It is precisely the lack of originality of these works that renders them a valuable source.

Within his financial limits Huntingdon patronized the arts, and was interested in gardening and architecture. His most singular act of literary patronage was the performance of John Marston's *Entertainment at Ashby* (August 1607, with additions by Sir William Skipwith), celebrating the arrival of his mother-in-law, the dowager countess of Derby, and Huntingdon's own coming of age. During his lifetime eight books were dedicated to him, largely by authors associated with his family estates, or recipients of his family's educational and clerical patronage, although he also amassed a substantial library. Significantly, these books from Leicestershire authors were often printed by Samuel Macham, a printer from Ashby who worked from the Bull's Head (the Huntingdon device) in St Paul's Churchyard and who acted as Huntingdon's agent in London.

Faced with a limited material patrimony and an extensive spiritual and aristocratic lineage, Huntingdon fostered his local roots in order to sustain his dignity. He relied on the rigorous exercise of local and hereditary offices, extensive hospitality, the cultivation of county and familial networks, and the judicious use of ecclesiastical, educational, and other notably cost-effective means of patronage to represent his status and views. Until the 1630s he cultivated a deliberately non-court oriented position and an ascetic protestantism that translated poverty into virtue. Indeed, Huntingdon is summed up by his motto *Honorantes me honorabo* which, according to his grandson, showed his 'true sense of religion', the motto

'intimating that those only should be esteemed by him who did faithfully honour God' (Bodl. Oxf., MS Carte 78, fol. 410). He died at Ashby-de-la-Zouch on 14 November 1643 and was buried there on 16 December. Ferdinando succeeded to the title as sixth earl of Huntingdon.

Hastings, Henry, Baron Loughborough (1610–1667), army officer, was born on 28 September 1610, the second son of Henry *Hastings, fifth earl of Huntingdon (1586–1643), and Lady Elizabeth *Stanley (*bap.* 1587, *d.* 1633), daughter of Ferdinando *Stanley, fifth earl of Derby. As Lord Henry Hastings he was admitted to Queens' College, Cambridge, on 30 June 1627 and later in that decade he was apparently at court, where his father thought he was wasting his time. Although the family's financial difficulties meant that his landed inheritance was small and probably explains why he never married, its local preeminence established him as a notable figure in 1630s Leicestershire: about 1638 he served as a deputy lieutenant during the joint lord lieutenancy of his father and his elder brother Ferdinando Hastings, Lord Hastings (1609–1656), and he was a captain of the Leicestershire trained bands during the bishops' wars.

As civil war became imminent in the early summer of 1642 Henry, in contrast to his brother, emerged as one of the king's earliest supporters. Having joined Charles at York he returned to Leicestershire with royal authority to raise a commission of array and to take command of the resulting regiment. However, it was Henry Grey, earl of Stamford, an old rival of his family's, who armed with a parliamentary militia ordinance won over the trained bands in a confrontation beginning at Leicester on 4 June. The king responded by making Hastings high sheriff of the county, but initially his efforts at securing stores of weapons and powder gained him only parliamentary impeachment. By August he managed to raise a regiment of horse with which he joined Prince Rupert in a devastating raid on Stamford's home. He finally controlled most of the militia's munitions, but at the cost of significantly escalating violence in the locality. Having fought with the king's field army during the autumn at Powick Bridge and Edgehill, he was dispatched from royalist headquarters at Oxford at the end of November to raise forces and establish bases in the midlands. In January 1643 concerted but fruitless efforts were made to dislodge him from his father's fortified manor house at Ashby-de-la-Zouch. On 25 February Hastings was appointed colonel-general (under the command of William Cavendish, earl of Newcastle) of Derbyshire, Leicestershire, Nottinghamshire, Staffordshire, Rutland, and Lincolnshire. The last two counties were soon regrouped under another of Newcastle's subordinates, but Hastings retained authority over the rest for the next three years.

Over the spring and summer of 1643 Hastings gradually established a degree of control over the region. Three county towns had already fallen into parliamentarian hands—Derby to John Gell in October 1642, Nottingham to John Hutchinson in November, and Leicester to Thomas Grey, Lord Grey of Groby, in January 1643; a fourth, Stafford, fell to Sir William Brereton in May, though this proved less significant. In February Hastings had fended off attacks by Sir Thomas Ballard on Newark, and in late April with Prince Rupert's help he recaptured Lichfield, held for the previous two months by Gell. In June he and Sir Charles Cavendish, commander of the Lincolnshire forces, joined Queen Henrietta Maria on her march from York to Oxford. Using their combined forces, Hastings attacked Nottingham, where they made little headway, and then on 2 July successfully stormed Burton upon Trent. Interventions by the earl of Newcastle in Nottinghamshire and Lincolnshire in the following months enabled Hastings to improve his position, and by the end of the year his midland counties were controlled by at least sixteen minor and eight major garrisons, with forces numbering about 5000 men, sufficient to hold in check the small parliamentarian garrisons at Nottingham, Leicester, Stafford, and Derby. His success was acknowledged in October, when he was created by the king Baron Loughborough; he was also appointed lieutenant-general.

However, though in 1644 he attended the House of Lords in the Oxford parliament, Loughborough had reached the limit of his power and influence. His very success led the king to make use of his resources from early 1644. Some of his forces were assigned to Sir Charles Lucas and sent north in an attempt to stem the invasion by the Scottish covenanting army. Resulting military weakness was compounded by internal dissension. Hastings's authority was challenged by several of his commanders. Two Staffordshire colonels, Thomas Leveson and Richard Bagot, had a series of territorial disputes in which they refused to recognize Hastings's arbitration. After the battle of Marston Moor, Colonel Gervaise Lucas, governor of Belvoir Castle, refused to acknowledge Hastings's command and would not attend councils of war, claiming that as the earl of Newcastle had gone into exile, Hastings's authority was at an end. When parliamentarian forces besieged Newark from late March 1644 Hastings had to request support from Prince Rupert. On 21 March Hastings and Rupert executed a lightning march from Ashby-de-la-Zouch and surprised Sir John Meldrum's army east of

Newark. This strengthened Hastings's position temporarily, but, unfairly, he was accused of failing to aid the Yorkshire royalists in April when they were defeated at Selby. Hastings had sent Major-General George Porter into Yorkshire, but Porter returned south and obtained Prince Rupert's permission to stay in Nottinghamshire. When three of Hastings's Derbyshire colonels and two of his Staffordshire colonels joined Prince Rupert's march to the relief of York, Derbyshire parliamentarians took the opportunity to attack minor county garrisons, while the south Staffordshire garrison at Dudley was attacked by the earl of Denbigh. The defeat of the earl of Newcastle and Prince Rupert at Marston Moor had dire consequences for Hastings. The eastern association army, having marched unhindered from York, occupied northern Derbyshire and Nottinghamshire, and local parliamentarians began to capture outlying garrisons across Hastings's territory. On 30 October 1644 Hastings's army and forces from Newark were defeated at Denton near Belvoir Castle.

Following rumours early in 1645 that Hastings was disgruntled with the cause, George Digby urged Prince Rupert to solve Hastings's problems: being still of 'great importance' he was not to be 'sent home discontented, as here he appears to be highly' (Warburton, 3, 65–7). Hastings was involved, during the spring of 1645, in Rupert and Maurice's attempts to secure the northern Welsh marches. Sections of his army were later involved in the Naseby campaign and, after the capture of Leicester, Hastings was appointed governor with Sir Matthew Appleyard as his deputy. Sir George Lisle was appointed to serve as Hastings's lieutenant-general in Leicestershire, suggesting that Hastings may have received promotion at this time or earlier in the spring. However, the defeat of the royalists at the battle of Naseby on 14 June ended the renaissance of the royalist forces in the midlands and Hastings's territorial hold declined steadily during the next nine months. At the end of February 1646 through his brother, now the sixth earl of Huntingdon, Hastings arranged to surrender Ashby-de-la-Zouch on advantageous terms. Hastings eventually compounded with parliament for a mere £87 10s. in 1653.

In 1648 Hastings participated in the Essex rebellion and served as commissary-general in the garrison at Colchester. On its surrender to Sir Thomas Fairfax, Hastings was sent to Windsor Castle, becoming termed one of the seven 'great delinquents'. Probably destined for trial by the high court of justice, he escaped from Windsor on the eve of the king's execution and went to the Netherlands, where he joined Charles Stuart in March 1649. In the winter of 1650–51 it was hoped that Hastings should lead a rising in the midlands, but this never materialized. During the 1650s Hastings was a founder member of the Sealed Knot, on several occasions returning to England under assumed names. He was summoned before the council of state in 1652. He was also involved in plotting which led to the mistimed Penruddock's rising in 1655. It would appear that his brother supported him with financial aid during this period, though his exploits had occasioned first the installation of a parliamentary garrison at Ashby, and then, to the family's despair, its demolition.

After the Restoration Hastings was appointed lord lieutenant of Leicestershire. However, he set up home in London at Loughborough House in Lambeth. In 1664 he was granted the right to make navigable the river from Brixton Causeway to the Thames. He was given a concession on the export of cattle to Ireland, which was later commuted to a pension of £500 a year, in an effort to settle his outstanding debts from the war, estimated at £10,000 at the time of his death, at Lambeth, on 10 January 1667. He was buried at St George's Chapel, Windsor, near his great-uncle Edward Hastings, Baron Hastings of Loughborough, as he had requested in his will, signed on 1 August 1665. His executors, Francis Colles, his agent in Ireland, and Francis Eaton, his servant at Baty Lodge, Sussex, were to administer the profits of the manor of Okethorpe, Derbyshire, on behalf of his sister, Lady Alice Clifton, who was to receive a £200 annuity, and his nephew, Theophilus Hastings, earl of Huntingdon. Hastings, Henry Weysford Charles Plantagenet Rawdon, fourth marquess of Hastings (1842–1868), rake, was born on 22 July 1842, at 6 Cavendish Square, Marylebone, Middlesex, second son of George Augustus Francis Rawdon Hastings, second marquess of Hastings (1808–1844), and his wife, Barbara Yelverton, *suo jure* Baroness Grey of Ruthin (1810–1858) [*see* Hastings, Barbara Rawdon, marchioness of Hastings], only child of Henry Edward Yelverton, the nineteenth Baron Grey of Ruthin, who had initiated his country neighbour the poet Byron in homosexuality. In 1851 Hastings succeeded his brother in the marquessate, three earldoms, a viscountcy, and nine baronies; he inherited his mother's barony in 1858. Together with the dukes of Abercorn, the marquesses of Lansdowne, and the earls of Verulam, the marquesses of Hastings were the only peers who enjoyed distinct peerages in the three kingdoms of England, Scotland, and Ireland. He was educated at Eton College (1854–5) and at Christ Church, Oxford (1860–61), but left both institutions abruptly for unknown reasons.

Having already owned racehorses under the alias of Mr Weysford, Hastings was elected as a member of the Jockey

Club on his twenty-first birthday. He was not wildly extravagant at horse sales—his two best runners, the Duke and the Earl, cost him 500 and 450 guineas respectively—but his craving for the odds became excessive. This feeble, runtish, orphaned *enfant gâté* revelled in the deference of the betting ring and the admiration which accompanied his huge wagers. Initially his betting coups were so brilliant that he believed in his power to break the ring. Although for Hastings the excitement of gambling was more intense and enduring than sex, he attracted Lady Florence Cecilia Paget (1842–1907), youngest daughter of the second marquess of Anglesey. On 16 July 1864, shortly before her intended marriage to a rich squire, Henry Chaplin, afterwards first Viscount Chaplin, she went to Marshall and Snelgrove's drapery store in Oxford Street, entering by one door and swiftly leaving by another for the nearby church of St George, Hanover Square. There she married Hastings. This elopement raised a great stir in society. The marriage proved anxious, discontented, and childless.

In 1866 Hastings became master of the Quorn hounds, but never cared much for hunting and knew little about the sport. Dissolute living was ruining his judgement and health: mackerel poached in gin, with caviare on devilled toast, washed down by claret cup was his favourite breakfast; an eternal cigarette in his mouth maintained his famous pose of nonchalance. He lost heavily at Crockford's gaming club as well as on the turf. His estate at Donington, Leicestershire, was neglected; he sold Scottish land to the third marquess of Bute for £300,000. By the winter of 1867–8 he had gravely damaged his kidneys. It is difficult to say whether, knowing that he was doomed by illness, he became wilder in his betting, or whether his losses drove him deeper into desperate, self-destructive courses. Despite the magnanimity of Chaplin after the theft of his fiancée, Hastings developed a spiteful and immature obsession against him. This came to focus on his rival's colt Hermit, and he lost £120,000 in wagers against the horse when it won the Derby by a neck at 66 to 1 (22 May 1867). Much of that money was lost to Hermit's owner. 'Every one will be glad that [Chaplin] has this sweet revenge for Lord H.'s shabby conduct about Lady F. P.', noted John Wodehouse, afterwards first earl of Kimberley (*Journal*, 203). Rather than retrench after this fiasco, Hastings persisted in a reckless gambling campaign which only more tightly ensnared him in the moneylenders' traps. 'For the sake of the peerage wh. he disgraces the sooner he disappears from public view, the better', Wodehouse wrote in May 1868 of 'that miserable man Lord Hastings' (ibid., 220).

Hounded by creditors, Hastings resigned from the Jockey Club, and broken in fortune, nerves, and health succumbed to Bright's disease on 10 November 1868, at 34 Grosvenor Square, Mayfair. Reportedly his last words were, 'Hermit's Derby broke my heart; but I did not show it, did I?' (Blyth, 266). On 14 November he was buried at Kensal Green cemetery. E. H. Stanley, afterwards fifteenth earl of Derby, noted in his diary on 16 November:

> Much writing in the papers about the death of Lord Hastings, aged 26: in five years he had destroyed a fine fortune, ruined his health, and by associating with low characters, on the turf and elsewhere, considerably damaged his reputation. To the peerage his death is a clear gain: and as his titles (except a Scotch earldom) die with him, the ruin of his family matters less. His sister has saved the family place.

Wealth at death under £90,000: probate, 20 Nov 1868, *CGPLA Eng. & Wales*

Hastings, Hubert de Cronin (1902–1986), editor, was born on 18 July 1902 at Spring House, Kingston Road, Merton, Surrey, the third son of Percy Hastings, proprietor of the Architectural Press and founder in 1896 of the *Architectural Review*, and Lilian Julie Bass. He was educated at Berkhamsted School, Hertfordshire, but circumstances prevented him from going to university, and in 1918 he joined the Architectural Press. He was eventually allowed time off to study architecture at London University's Bartlett School of Architecture, under Professor Albert Richardson. However, he disliked the school's emphasis on *beaux arts* discipline, and in an act of revolt he threw his T-square across the studio, and walked out and into the Slade School of Fine Art, next door. There he was influenced by cubism and by Clive Bell's hypothesis of 'significant form'. He also developed a skill for caricature (with architects largely his target); a small book of them was published in the 1930s.

On 23 July 1927 Hastings married Hazel Rickman (*b.* 1902/3), a daughter of Charles Frederick Garrard, with whom he had a son, John, and a daughter, Priscilla, both of whom eventually worked with him on occasion. Also in that year Hastings was appointed joint editor, with Christian Berman, of both the weekly *Architects' Journal* and the prestigious monthly *Architectural Review*. Their first acts were to define policies for both magazines and to raise standards. The weekly was to be concerned with the practice of architecture and building techniques, and the monthly with the arts in general, giving emphasis to architecture. The journal was promptly given a new look by adopting the new type faces, Baskerville and Plantin, and, over time, colophons heading different sections, drawn by Edward Bawden. Eric Gill was commissioned to do two wood engravings—an Inigo Jones medallion and an emblem of a boy architect—both of which appeared in the magazines and signalled a departure from tradition.

Hastings commissioned contributions from a rising

generation of new writers: Robert Byron, Evelyn Waugh, Cyril Connolly, Sacheverell Sitwell, and P. Morton Shand. He was an innovator in graphic design and page layouts, and the review broke new ground, to the discomfort of traditionalists. He had basic rules: details large, general views small, and—most important of all—every page a surprise. By 1929 he was starting to bleed photographs over the generously-sized pages of the review. In 1930 John Betjeman joined the review, bringing an irreverence that may have stimulated H. de C. (as he came to be called) into being more experimental with Victorian typefaces and into employing type to emphasize different literary moods. Sheets of special coloured papers were inserted, even a William Morris wallpaper. Also accelerating change was the contributor P. Morton Shand, who was convinced of the logic of the new modern movement in architecture and the irrelevance of historical styles. Hastings saw the logic of this as a bright new future for society and also as a highly desirable editorial campaign for both magazines. His journalistic campaigning streak never left him, and within a few years he was campaigning for a 'new monumentalism' and a 'new empiricism'. He also believed in the *genius loci* and in the picturesque (of the eighteenth-century English landscape tradition) to combat the heavy-handed discipline of axial planning.

Hastings was an idealist and a perfectionist. He dressed well and ensured that his staff were well accommodated in Queen Anne's Gate, a distinguished publishing house and not just an office. He had immense charm but a certain diffidence; on the only occasion that he gave a talk—at the Architectural Association—he turned his back on the audience. In 1973 he was the first editor awarded the royal gold medal by the Royal Institute of British Architects (RIBA). At a meeting with the RIBA, during which the president, Peter Shepheard, started describing the constituents of a town, Hastings suddenly shouted that, at the risk of losing his medal, he had never heard such bloody nonsense. This irascibility tormented his editorial board of Nikolaus Pevsner, Hugh Casson, Osbert Lancaster, James Richards, and others.

After the war, partly with his own hands Hastings created the facsimile bars of a public house in the basement of Queen Anne's Gate (dismantled); he also organized an architectural competition for the design of a modern pub and had the designs exhibited at the Victoria and Albert Museum. Hastings saw the potential that existed in the near derelict canal system after the war, and with the brilliant photographs of Eric de Maré, who had explored those canals still open, published a special issue of the *Architectural Review* that launched a national campaign to preserve them if not for commerce, as Hastings hoped, then at least for tourism.

One of Hastings's most important achievements was to popularize the idea of townscape. In this he was helped by exceptional draughtsmen: Donald Dewar Mills, Kenneth Browne, and—greatest of all—Gordon Cullen. This led to other-scapes: roofscape, floorscape, wirescape—all the aspects of semi-civilized life of which engineers, surveyors, town planners, and even architects, he believed, were either unaware or ignorant. This climaxed in a special issue of *Architectural Review*, entitled 'Outrage', produced by Ian Nairn. It sought to expose the consequences of the lack of visual education in Britain—poor design and poor planning, which Nairn stigmatized as 'Subtopia'. It was an 'outrage' that stirred politicians and led Duncan Sandys to create the Civic Trust.

Hastings did not himself contribute many articles to the *Architectural Review*; when he did it was always under a pseudonym, usually Ivor de Wolfe (Wofle was a printer's error that was allowed to stand). He published two books on town design: *The Italian Townscape* (1963) followed two years of studying and photographing many Italian cities, and *Civilia: the End of sub-Urban Man* (1971) was a passionate attempt to create, with photo-montage, the ideal city. A third book, *The Alternative Society*, which addressed sociological issues, was published in 1980. Hastings died on 4 December 1986 at Bedham Farm, Fittleworth, Sussex. Following cremation his ashes were removed to Bedham.

Hastings, Sir Hugh (*c.*1310–1347), administrator and soldier, was the second son of John * Hastings, first Lord Hastings (1262–1313), and his second wife, Isabel, daughter of Hugh * Despenser the elder, earl of Winchester (*d.* 1326). He married, before 18 May 1330, Margery Foliot (*c.*1312–1349), who had been his mother's ward since 1325. Margery was the elder sister and coheir of Richard Foliot, and it was in her right that Hastings acquired the manors of Elsing and Weasenham, Norfolk, and property in Nottinghamshire and Yorkshire. Following his mother's death in December 1334 Hastings inherited the manor of Monewdon, Suffolk, and a moiety of the manor of Sutton Scotney, Hampshire; he obtained livery on 28 March 1335.

Hastings pursued an administrative and military career befitting his social position. On 8 November 1338 he was appointed justice of the peace in the West Riding of Yorkshire. Thereafter, when not on campaign, he was employed on commissions of oyer and terminer and in various other administrative capacities with great regularity. He never served as sheriff or knight of the shire, but was one of 106 lay magnates summoned to the council that met at Westminster on 29 April 1342. He was also Queen Philippa's steward in the mid-1340s. Hastings was no less active as a soldier. It is not known when he first bore arms, but he certainly campaigned each year in Scotland from 1335 to 1338. He accompanied Edward III's army to the Low Countries in July 1338 and again two years later, when he fought at the battle of Sluys (24 June 1340). Much of this military service was performed in the retinue of Henry of Grosmont, earl of Derby, later duke of Lancaster (*d.* 1361), from whom Hastings held several manors; but for the expedition to Brittany in 1342–3 he served in the *comitiva* of his half-nephew, Laurence Hastings, earl of Pembroke (*d.* 1348), from whom he had acquired a life interest in the manor of Oswardbek, Nottinghamshire, shortly before. It was also under Pembroke's banner that

Sir Hugh Hastings (*c.*1310–1347), memorial brass

Hastings took part in the earl of Derby's successful campaign in Aquitaine in 1345. Since Pembroke arrived on the field too late to take part in Derby's triumph over the French at Auberoche (21 October 1345), Froissart was probably wrong to place Hastings at that battle. Nor is it likely that Hastings was involved in the defence of Aiguillon (April–August 1346), for he seems already to have returned to England.

The climax of Hastings's career, and the clearest indication of the high regard in which he was held by Edward III, was his appointment to the post of king's captain and lieutenant in Flanders on 20 June 1346. While the king landed in Normandy with the main English army, Hastings mounted a diversion on the northern frontier of France. With a personal retinue of about 250 men, mainly archers, Hastings recruited a large but undisciplined army from the Flemish towns and laid siege to Béthune. This proved unsuccessful, and the Flemish army dispersed before the end of August. Although probably not present at the battle of Crécy (26 August 1346), Hastings did serve at the siege of Calais with a company of men-at-arms and archers. Towards the end of the siege, in early May 1347, Hastings was appointed seneschal of Gascony, with a personal retinue of fifty men-at-arms and eighty archers. He was never to take up this post, however, for having drawn up his will at Old Ford, Middlesex, on 22 July 1347, he died a week later, perhaps as a result of sickness contracted in the siege-camp outside Calais. He was buried in the chancel of the church that he had built at Elsing, Norfolk.

Here Hastings's life as a man of action is admirably commemorated by one of the most celebrated of all English brasses, in which his armoured image is flanked by smaller figures bearing the arms of some of the great men with whom he had been associated during his military career, including the king and the earls of Lancaster, Warwick, and Pembroke. Investigation of the contents of Hastings's tomb in September 1978 revealed a man about 5 feet 10 inches tall, who had been buried wearing a cow-hair wig or hat. The cause of death was not revealed, but various injuries, including damaged incisor teeth, apparently the result of a severe blow to the mouth, and the presence of osteoarthritis in shoulder and elbow joints, suggest that Hastings's military career had taken its toll. His widow, Margery, died on 8 August 1349, leaving two sons, John (*c.*1328–1393) and Hugh (*d.* 1369), and a daughter, Maud.

Hastings, James (1852–1922), United Free Church minister and journal editor, was born on 26 March 1852 at Huntly, Aberdeenshire, the second son and fifth child of James Hastings, miller, of the mill of Huntly, and his wife, Hope Ross. He was educated at Huntly School, then at Aberdeen grammar school (*c.*1864–1871), before matriculating at the University of Aberdeen. He graduated MA in 1876, and then proceeded to study divinity at Christ's College, the Free Church college in Aberdeen. He later received two honorary doctorates, the first from Aberdeen in 1897, followed in 1920 by one from Queen's University, Halifax, Nova Scotia.

After serving as assistant minister in Broughty Ferry, Dundee, Hastings was ordained and inducted in 1884 to the charge of Kinneff Free Church, Kincardineshire, with a stipend of £160. In that same year, he married Ann Wilson, daughter of Alexander Forsyth of Elgin. They had one son and one daughter.

In 1897, Hastings accepted a call to Willison church, Dundee. But he found the demands of a city charge were

too great and four years later, he was translated back to rural Kincardineshire, and to the United Free church in St Cyrus. He remained in this position until he retired from the ministry in 1911, after which he returned to Aberdeen.

James Hastings had a lively Christian faith, which was coupled with a love of learning. He was a notable preacher, simple and direct, and an eager supporter of social welfare. But over and above all these concerns, his real achievement lies in his commitment to promoting knowledge of the Christian faith, but especially of the Bible. He is particularly remembered for his works of reference. These include his two-volume *Dictionary of Christ and the Gospels* (1906–7), his *Dictionary of the Bible* (1898–1902), and his *Dictionary of the Apostolic Church* (1915–18); but these pale into insignificance when compared to his thirteen-volume work, the *Encyclopaedia of Religion and Ethics* (1908–21). These works bore witness to Hastings's conviction that modern biblical criticism, far from undermining Christian belief, would serve to reinforce the fundamental tenets of his faith.

Hastings was a man of many interests and had a most impressive library; several scholars travelled from England just to view his collection. But he also loved games and would regularly go to England to watch cricket matches. For his own exercise, he would take long walks, often late at night. In 1913, he was awarded the Dyke Acland medal, which was awarded biennially to a distinguished scholar whose work is especially directed to making knowledge of the Bible more accessible to all.

Hastings died unexpectedly at his home, 11 King's Gate, Aberdeen, on 15 October 1922. The *Expository Times*, which Hastings had founded in 1899, continued to be published after his death under the joint editorship of his two children. MICHAEL D. MCMULLEN

Hastings, John, first Lord Hastings (1262–1313), soldier and landowner, was born on 6 May 1262 at Allesley, Warwickshire, the eldest son and heir of Sir Henry *Hastings (1235?–1269) and Joanna, sister and heir of Sir George de *Cantilupe (*d*. 1273). He was given possession of his mother's family's castle and barony of Abergavenny on 12 July 1283, having reached the age of twenty-one. During the next few years he undertook a number of missions for Edward I, to Scotland, Ireland, Wales, and Gascony. In 1285 his sister Ada married Rhys ap Maredudd and Hastings granted the couple all his lands in St Clare, Angoy, and Pemmlick. Two years later Rhys rebelled against the English and captured Emelyn Castle, where Hastings was ordered to attack him. The uprising was put down and Hastings was permitted to receive the fines, which were not to be severe, from his own Welsh tenants who had supported Rhys.

In 1291, as grandson of Ada, youngest of the three daughters of David, earl of Huntingdon (*d*. 1219), and thus great-great-great-grandson of David I of Scotland, Hastings put forward a claim to the vacant throne of Scotland. He had little chance of becoming king since, unlike John Balliol, he was not descended from the eldest daughter of Earl David, nor, unlike Robert (V) de Brus, was he nearer by degree. Instead he asserted that Scotland, as an English fief, was not a kingdom and that the royal lands therein should be treated like any other landed estate and divided between the descendants of the three coheirs. The auditors, eighty of whom represented Balliol and Brus, rejected this argument, but when it became clear that John Balliol was likely to win, Robert de Brus was suddenly persuaded by Hastings's reasoning, to no avail. Brus had previously sought to deprive both Balliol and Hastings of their share of Earl David's lordship of the Garioch.

Present among the magnates in the parliament of 1290, and regularly summoned to parliament from 1295, Hastings is consequently regarded as having become Lord Hastings. In 1296 he played an active part in the campaign which brought Scotland directly under King Edward's control. However, war broke out again a year later and Hastings regularly served in royal armies in the north. The war also affected his financial arrangements, since Joan de Clare, the dowager countess of Fife, who owed him 960 marks sterling, was forced to repay him by granting him a number of her manors in Scotland and England because her lands and property had been plundered by a 'rebel' Scot, Sir Herbert Morham. She was re-enfeoffed in these lands three years later. In 1300 Hastings, who had also been formally knighted, was present at the siege of Caerlaverock Castle in Dumfriesshire and consequently featured in a poem composed for the occasion. It was noted that he conducted the banner of his close friend Antony (I) Bek, bishop of Durham (*d*. 1311); Hastings was described as a man who 'was known by all to be in deeds of arms daring and reckless, but in the hostel mild and gracious, nor was there ever a judge in eyre more willing to judge rightly' (Moor, 2.194).

Hastings's standing with and usefulness to the crown is attested by his appointment as seneschal of Gascony in December 1302. He returned to English, and Scottish, affairs in 1306, after the uprising of Robert Bruce, now king as Robert I. Hastings remained in Scotland for the next few years and was rewarded for his commitment to the English cause by a grant of the earldom of Menteith, forfeited by the late Earl Alexander for supporting Bruce. His most important function was to maintain a naval blockade up and down the west coast of Scotland from a base at Ayr. He was subsequently ordered to continue these activities as commander of Brodick Castle on Arran. He was not entirely effective in this, however, since in February 1307 a group of Bruce's followers, led by James Douglas and Robert Boyd, managed to land on Arran from Kintyre and seize arms and equipment from a contingent

on its way to reinforce Brodick. This was a precursor to the successful Bruce landing in Carrick.

Hastings seems to have gone back to England about the time of the accession of Edward II, whose coronation he attended on 25 February 1308. He returned to Gascony on the new king's behalf in October 1309 and became seneschal of Guyenne a month later. He was dead by 28 February 1313 and was buried in the Hastings chapel in the church of the Friars Minor at Coventry. He married first Isabel (*d.* 1305), daughter of William de *Valence, earl of Pembroke (*d.* 1296), and they had a son, John. His second wife was another Isabel (*d.* 1334), daughter of Hugh *Despenser (*d.* 1326); she married Ralph de Monthermer five years after Hastings's death.

John Hastings, second Lord Hastings (1287–1325), was twenty-six when he succeeded his father in 1313. He attended Edward I's queen, Margaret, when she came to Scotland in 1306 and was a regular participant in the Scottish wars between 1311 and 1319. Especially as a leading retainer of his uncle Aymer de Valence, earl of Pembroke (*d.* 1324), he also played a role in English politics. He attested the treaty of Leake of 9 August 1318, which sought to reconcile Edward II and his opponents, led by the earl of Lancaster, at the price of substantial constitutional concessions on the part of the king. In the same year Hastings was acknowledged as coheir of the earl of Pembroke, along with David Strathbogie, titular earl of Atholl (*d.* 1326), whose wife, Joan, was the sister of Hastings's mother. In 1320, when Lancaster again challenged Edward, Hastings at first sided with the rebel lords, but he later joined the king at Cirencester. He evidently found it easy to make his peace with Edward and was sent to take control of Glamorgan, while in 1323 he became governor of Kenilworth Castle. He fell foul of the younger Hugh Despenser, however, to whom he was obliged to make a recognizance of £4000 in August 1324. At some point before his death in 1325 Hastings arranged that the French monks of Abergavenny Priory should be replaced with Englishmen. The supplanted Frenchmen brought an action against him, but the case was still not settled when he died. He married Juliana *Leybourne (1303/4–1367), granddaughter and heir of William Leybourne. Their son, Laurence *Hastings, became earl of Pembroke through his descent from his grandmother Isabel de Valence.

Hastings, John, second Lord Hastings (1287–1325). *See under* Hastings, John, first Lord Hastings (1262–1313).

Hastings, John, thirteenth earl of Pembroke (1347–1375), magnate and soldier, was the only child of Laurence *Hastings, twelfth earl of Pembroke (1320–1348), lord of Abergavenny in Monmouthshire, Pembroke Castle, the Irish lordship of Wexford, and substantial English estates, and of Agnes (*d.* 1368), a daughter of Roger (V) *Mortimer, first earl of March. In 1328 Laurence Hastings had been married as a child of eight to Agnes Mortimer, in the presence of King Edward III. In 1330 Agnes's father was executed. When Laurence was old enough, the marriage was consummated and John, their only child, was born on 29 August 1347 at Sutton Valence, a Hastings manor in Kent. Exactly one year later Laurence died and John spent his early years in his mother's care. Agnes quickly remarried, but her new husband, John Hakluyt, was dead by 1357. The wardship of the Pembroke land had been distributed among a number of royal nominees including Agnes and her husband, John's grandmother, now countess of Huntingdon, and Sir John Grey of Ruthin, whose nephew inherited the Hastings lands after 1389. In the 1360s John Hastings gradually gained control over his estates and on 12 September 1368 he finally proved his age.

In May 1359, at the age of eleven, John Hastings had been married to Margaret (*b.* 1347), the twelve-year-old daughter of *Edward III, but she died late in 1361. Now in 1368, a man of twenty-one, the earl married Anne (*b.* 1355), daughter and sole heir of the legendary soldier, Sir Walter *Mauny. Anne was only thirteen in 1368 and her husband left her in England while he pursued a military career overseas.

In January 1369 Pembroke accompanied the king's son Edmund of Langley, then earl of Cambridge, to Aquitaine with 400 men-at-arms and 400 archers, to reinforce the position of Edward, the Black Prince, after his disastrous intervention in the Spanish Civil War. Pembroke and Cambridge landed at St Malo in Brittany and marched south to join the prince in Angoulême. A *chevauchée* into Perigord culminated in a successful eleven-week siege of the castle of Bourdeilles, the earl's knighting, and his triumphant return to Aquitaine.

Pembroke, Cambridge, and John Chandos, along with Sir James Audley, then besieged La Roche-sur-Yon in the Vendée in July and August 1369. The fortress fell to the English through the treachery of the French captain, but aristocratic arrogance had made Pembroke unwilling to serve under Chandos, despite Chandos's appointment as seneschal of Poitou to replace Audley. In October Pembroke campaigned alone in Anjou but was ambushed and had to be rescued by Chandos. This did nothing to abate the ill feeling between the two leaders: it damaged the English cause and contributed to Chandos's failure to recapture the abbey of St Savin in the Vienne from the French late in November: this in turn led directly to the death of Chandos on 1 January 1370. This was a serious blow to Edward III's attempts to stabilize Aquitaine, and neither Pembroke nor Cambridge could command the respect that Chandos had earned as a soldier and as a knight. None the less Pembroke was nominated by the king to the Garter stall vacated by the death of Thomas Beauchamp, earl of Warwick, on 13 November 1369. Still in Aquitaine early in 1370 Pembroke, in company with Cambridge, relieved the French siege of Belle-Perche in

Anjou and then both earls rejoined the Black Prince. Despite severe ill health, the prince embarked on a major campaign, supported by another brother, John of Gaunt, duke of Lancaster, and by the two earls. This culminated in September and October 1370 in the major siege of the episcopal city of Limoges. Pembroke participated in the severe treatment meted out to the citizens of Limoges for allowing the French to occupy the city too easily late in August, although the deaths among civilians seem to have been greatly exaggerated.

When the Black Prince returned to England in January 1371, Pembroke stayed behind with Cambridge under the overall command in Aquitaine of John of Gaunt. Pembroke soon returned to England, however. He attended the parliament of February–March 1371, where he seems to have led the successful Lancastrian attack on Edward III's clerical ministers. On 12 March his Garter robes were ordered for him in the expectation that he would attend the order's annual feast in April. He was still in England early in 1372, when his wife, now aged sixteen, conceived a child, but on 20 April 1372 he was appointed lieutenant of the English forces in Aquitaine, in succession to Gaunt. In June 1372 Pembroke sailed for the Bay of Biscay: he did not see England again and never saw his child.

Pembroke's orders were to recruit a substantial army in Aquitaine itself and he took with him £12,000 in treasure to meet the wages of this army. He himself travelled with a retinue of only 160 men, horses, and supplies, in a fleet of little more than a dozen small vessels protected by three larger ships with towers requisitioned from Dartmouth. Off La Rochelle, still held by the English, his fleet was intercepted by a much more impressive contingent of some twelve Castilian galleys. This was the first naval result of the Franco-Castilian treaty of 1368 and was disastrous for Pembroke. Early on the second day of the engagement, on 23 June 1372, after Pembroke had been obliged to lie offshore while the galleys commanded the approaches to La Rochelle, the entire English fleet was either burnt or captured. Many of Pembroke's troops were killed; some two dozen others, including Pembroke, were captured and taken to Castile before being ransomed. At the coastal town of Santander the knightly captives, including the earl, were kept in irons, and the *Chronique des quatre premiers Valois* describes how the less important prisoners were 'encoupples comme chiens en lesse en une corde' (Luce, 235). Later in 1372 the Castilian king, Enrique da Trastamara, sold the right to ransom Pembroke to the constable of France, Bertrand du Guesclin, in return for Soria and Molina, which had been part of du Guesclin's territorial gains in Spain.

Du Guesclin then negotiated with England, offering to free Pembroke for 120,000 francs, a proportion to be paid before the earl was released from captivity. Despite Pembroke's royal connections, no movement towards paying any part of the ransom was made until early 1375, when moneys were deposited in Bruges, to be paid when Pembroke embarked for England. But as du Guesclin was taking his prisoner from Paris to Calais, the earl died on 16 April 1375. Walsingham recounts a rumour that he had been poisoned by the Castilians, but ill treatment and poor conditions in the earlier part of his captivity seem more likely causes. While his political reputation rests on a single important intervention in government, there are signs of his immaturity in his relations with Chandos. But no particular failure of leadership is discernible in the disaster off La Rochelle. Pembroke was luckless and arrogant, but not necessarily incompetent.

While Pembroke was in chains in Santander, his only child, another John, had been born in England. Dugdale observed that after Aymer de *Valence concurred in the death sentence on Thomas of Lancaster 'none of the succeeding Earls of *Pembroke* ever Saw his Father, nor any Father of them took delight in seeing his Child' (Dugdale, 1.578). In 1375 the two-year-old John Hastings succeeded to the earldom and the family's ill luck persisted. The third Hastings earl was accidentally eviscerated at a tournament in December 1389, the earldom became extinct, and the barony of Hastings, together with many of the family's estates, was successfully claimed by Reynold *Grey, third Baron Grey of Ruthin. Hastings [*née* Dudley], **Katherine**, countess of **Huntingdon** (*c.*1538–1620), noblewoman, was one of the youngest of the thirteen children of John *Dudley, duke of Northumberland (1504–1553), and his wife, Jane (*c.*1509–1555), daughter of Sir Edward Guildford. On 25 May 1553, four days after the marriage of Guildford Dudley to Lady Jane Grey, Northumberland celebrated Katherine's wedding to Henry *Hastings (1536?–1595), the eldest son of Francis *Hastings, second earl of Huntingdon. Within a year the bride saw her father executed and her husband imprisoned in the Tower for their involvement in the

attempt to divert the succession in favour of Lady Jane Grey, though Mary quickly pardoned Lord Hastings, great-nephew of her archbishop of Canterbury, Cardinal Pole. Elizabeth's promotion of Robert Dudley immediately after her accession further reinforced the young couple's connections with the court.

The premature death of the second earl of Huntingdon in June 1560 placed upon the new earl responsibility for the education and settlement of his nine brothers and sisters, while the countess increasingly concerned herself over her husband's financial difficulties. Both having been introduced to protestantism at an early age, as soon as they came into their inheritance they set about creating a godly household at Ashby-de-la-Zouch in Leicestershire under the guidance of the former Genevan exile Anthony Gilby. In 1570 Gilby published for the use of their family his translation of Calvin as *Commentaries ... upon the Prophet Daniell*, following it in 1580 with another translation from Beza, *The Psalmes of David Truely Opened and Explaned*, intended specifically for Lady Katherine.

When Elizabeth fell ill with smallpox in November 1562, the protestant party looked to Huntingdon as her successor, on which account his wife received a 'privy nippe' from the queen the following spring (BL, Harley MS 787, fol. 16). Handicapped by his birth, Huntingdon obtained no major public office until 1569, when the queen employed him to guard Mary, queen of Scots. Then, late in 1572, she appointed him president of the council in the north and the countess, while still frequently attending court, assumed charge of the viceregal household at the King's Manor in York. Although she had no children of her own (she may have suffered a miscarriage in early 1566), she showed a particular interest in the training of young people. As he lay dying in Dublin in 1576, the first earl of Essex entrusted his two daughters and younger son to the earl and his wife at York, where they also welcomed the countess's favourite nephew, Thomas Sidney, after his father's death in 1586. The household established at Hackness in Yorkshire at the turn of the century by Margaret Hoby with its round of public and private religious observances almost certainly mirrors the practices she learned from her mistress the countess of Huntingdon, who at this time received the dedications of Nathaniel Gilby's translation of G. Sohn as *A Briefe and Learned Treatise ... of the Antichrist* (1592), John Stockwood's translation of L. Daneau entitled *A Fruitfull Commentarie upon the Twelve Small Prophets* (1594), and Francis Bunny's *A Comparison betweene the Auncient Fayth of the Romans, and the New Romish Religion* (1595).

The earl of Huntingdon was planning to join his wife at court when he died unexpectedly at York on 14 December 1595. Despite the great care the queen took over breaking the news, the countess was devastated by grief. Refusing to accept the administration of her husband's much encumbered estate, she settled in Chelsea and remained very close to Elizabeth until the queen's death. In her widowhood she devoted herself to advancing the career of Sir Robert Sidney, delighting in having his young children in her care during his embassies abroad. Theological writers also continued to seek her patronage, and books dedicated to her in her latter years included Henry Holland, *The Workes ... of M. Richard Greenham* (1599), Thomas Savile, *The Raising of them that are Fallen* (1606), and Thomas Collins, *The Penitent Publican* (1610). Approaching eighty in 1618, she still prided herself on her ability 'to breed and govern yong gentlewomen' (*Rutland MSS*, 1.99). She died at Chelsea, and was buried in her mother's tomb in Chelsea Old Church on 14 August 1620. CLAIRE CROSS

Hastings, Laurence, twelfth earl of Pembroke (1320–1348), soldier, was the son of John *Hastings, second Lord Hastings (1287–1325) [*see under* Hastings, John, first Lord Hastings], and Juliana *Leybourne (*d.* 1367). He was born at Allesley, Warwickshire, on 20 March 1320. He was, therefore, not yet five years old when his father died early in 1325 and his inheritance passed into wardship. Custody of his lands was held, successively, by Hugh Despenser the younger, Edward III, and William Clinton, earl of Huntingdon, Laurence's stepfather. Shortly after Trinity Sunday (29 May) 1328 Hastings was married at Hereford to Agnes (*d.* 1368), third daughter of Roger (V) *Mortimer, first earl of March. Hastings is recorded as an esquire in Queen Philippa's household at the baptism of her daughter Isabella in July 1332. Having received financial assistance from the king—a gift of 100 marks in April 1338 and an annuity of 200 marks in September—Hastings served with Edward III in Flanders from July 1338 until the end of October 1339, accompanied by a retinue of three men-at-arms. Although Laurence was still a minor, on 4 February 1339 the king ordered that he should have livery of his inheritance, excepting the lands in the custody of Henry of Grosmont, earl of Derby. In the autumn of the same year Hastings participated in the king's *chevauchée* in the Cambrésis, Vermandois, and Thiérache, during which, at the nunnery of Mont-St Martin on, or a day or two after, 9 October, he was created earl of Pembroke, as grandson of

Isabella, eldest sister of Aymer de *Valence (*d.* 1324), with the prerogatives and honour of earl palatine in the lands inherited from Aymer. He accordingly bore the arms of Valence quartered with those of Hastings. His first summons to parliament was dated 16 November 1339 and for several years thereafter he was more involved in domestic affairs than military activity. There is no reliable evidence that he served at either the battle of Sluys or the siege of Tournai during the summer of 1340; nor, indeed, that he accompanied the king's army to Scotland during the winter of 1341–2. Pembroke was, however, summoned to all parliaments and councils held during 1340 and 1341; on 30 September 1340 he was appointed keeper of Ferns Castle, Wexford, with custody of the late earl of Atholl's land in Ireland during the minority of his heir; and he was present at the great tournament at Dunstable on 11 February 1342. He was also at this time gaining control of the entirety of his inheritance (he proved his age in May 1341) and attracting men into his service: four who received grants of land from Pembroke can later be seen in his military retinue. One of these was his half-nephew, Sir Hugh *Hastings (*d.* 1347), whose fine brass at Elsing, Norfolk, included a depiction of Pembroke (now lost, but shown in late eighteenth-century rubbings) as one of eight side figures.

During the last weeks of 1342 Pembroke resumed his military career, serving with Edward III in Brittany until early in the following year. According to the payroll, his retinue had a peak strength of 64 men-at-arms and 100 mounted archers. Adam Murimuth relates that Pembroke was one of the knights of the Round Table in January 1344; he was not, however, included in the regular foundation of the Order of the Garter. Pembroke was actively involved in the intense military activity in France during the mid-1340s. Contracted to provide a retinue of 80 men-at-arms and 80 mounted archers, he accompanied Henry of Grosmont to Aquitaine in early August 1345 and for a year took a prominent part in Henry's campaigns there. He was present at the capture of Bergerac on 24 August 1345, but missed the battle of Auberoche on the following 21 October, arriving on the battlefield a day after the action. According to Froissart, he was much hurt that Henry had not awaited his coming, and plainly expressed his feelings. He was one of the principal captains of the English garrison at Aiguillon, which was unsuccessfully besieged by John, duke of Normandy, from late March until early August 1346. Pembroke returned to England in December; Henry Knighton relates that the sea journey was made hazardous by a severe storm. Within a few months Pembroke was involved in the siege of Calais. In June 1347 he was appointed with the earl of Northampton to command a fleet that was to prevent the introduction of provisions into the town; on the 25th they won a complete victory, and dispersed the French near Le Crotoy. This was Pembroke's last exploit, for, having made a will on 24 August 1348, he died a few days later at his principal residence, Abergavenny, and was buried there in the priory church of St Mary. He was succeeded by a one-year-old son, John *Hastings, who became thirteenth earl of Pembroke (1347–1375). His widow, Agnes, married John Hakluyt.

Hastings [*née* Davies], **Lucy, countess of Huntingdon** (1613–1679), noblewoman, born on 20 January 1613 in Dublin, was the daughter of Sir John *Davies (*bap.* 1569, *d.* 1626), attorney-general of Ireland, and his wife, Eleanor *Davies (1590–1652), daughter of George Touchet, Baron Audley. At the age of five Lucy moved to England when Davies sought to further his career at court. Educated at home, she learned Latin, French, Spanish, Greek, and Hebrew, and inherited her mother's interest in religion. Basua Makin, who taught her, paid tribute to her sagacity: she was 'an ornament of our sex' (*Hastings MSS*, 4.348).

In 1623, first without licence at the house of the dowager countess of Derby, and again on 7 August at Englefield parish church, Berkshire, Lucy married Ferdinando, Lord Hastings (1609–1656), the eldest son of Henry Hastings, fifth earl of Huntingdon. Her dowry was £6500. Letters between Lucy and her husband during this period demonstrate affection and friendship. However, tensions existed between the two families, in particular between Lucy's mother and mother-in-law. After the death of her father in 1626 a legal battle commenced between her mother and the Hastings family for the manor of Englefield. Lucy's mother, Eleanor Davies, was imprisoned from 1633 to 1635 and from 1637 to 1640 due to her prophetic activities. Lucy petitioned the king in 1633 on her mother's behalf and in 1640 secured her release from the Tower.

Ferdinando Hastings succeeded as sixth earl of Huntingdon on 14 November 1643. During the 1640s his brother, Lord Loughborough, a royalist soldier, garrisoned the family castle of Ashby-de-la-Zouch, Leicestershire, which was besieged by parliamentary forces and surrendered on 28 February 1646. Due to the damage suffered by the castle the Huntingdons made Donington Park their main residence. They also had a house at Highgate, near London.

Huntingdon's estates were eventually sequestrated and after successfully compounding his income was reduced

Lucy Hastings, countess of Huntingdon (1613–1679), by John Hoskins, 1649

from £1808 to only £900. He had to sell some land to pay his debts and obtained an act of parliament in 1653 to break the entail. He and his wife also petitioned the committee on articles of war to secure their Irish estates which were threatened with seizure.

Of the Huntingdons' ten children, at least three of their six daughters—Elizabeth [*see* Langham, Lady Elizabeth], Mary, and Christiana—and only their youngest son, Theophilus *Hastings (1650–1701), survived to adulthood. Their eldest son, Henry, born in 1630, died of smallpox in 1649; Lady Huntingdon may be the author of a manuscript poem in the Huntington Library copy of *Lachrymae musarum* (1650), a collection of commemorative verse on the young man. Possibly also a contributor to *The New Proclamation, in Answer to a Letter* (1649), a defence of, and usually attributed to, Lady Davies, she was certainly actively exercising her intellectual skills on her children's behalf, educating her daughter Elizabeth in Latin, French, and Italian as well as instructing her in the Bible.

When Lady Huntingdon's husband died 'of an asthma' (*Hastings MSS*, 4.351) on 13 February 1656, Theophilus succeeded him as earl aged only five, and the full burden of his upbringing and of contending with a debt-burdened estate fell on Lady Huntingdon's shoulders. She, or perhaps someone acting on her behalf, tried in 1656 and 1657 to get a private bill through parliament to confirm the sale of land her husband had made to pay his debts and also to confirm the sale of other land for payment of the remaining debts. At this time she was also involved in a dispute with her brother-in-law, Lord Loughborough, over her jointure estates. In addition to estates in England she had charge of land in Ireland for which she received rents, dealt with tenants, and instructed solicitors and stewards.

Despite financial difficulties and other distractions, Lady Huntingdon, in common with other aristocratic women in similarly taxing circumstances, was instrumental in safeguarding her family's interests through the interregnum and beyond. She continued to campaign to restore her mother's reputation, enlisting the help of first her friend Katherine Stanley, marchioness of Dorchester, and later her son Theophilus in protesting against the portrayal of Lady Davies in the 1660 *Continuation* of Richard Baker's *Chronicle*; offending passages were eventually removed. She also successfully arranged marriages for her children—Elizabeth to Sir James Langham in 1662, Theophilus to Elizabeth Lewis in 1672, and Mary to Sir William Jolliffe in 1674. Although sale of her Irish estates in 1673 helped fund portions for her daughters, these dowries were not large, and they were considered to have married beneath them. In particular, Jolliffe was not considered good enough for the daughter of an earl. However, in spite of such criticism, Theophilus was supportive of his sisters and encouraged their marriages. Lady Huntingdon died on 14 November 1679 and was buried at Ashby.

Hastings, Marian [*née* Anna Maria Apollonia Chapuset; *other married name* Marian von Imhoff, Baroness von Imhoff] **(1747–1837)**, wife of Warren Hastings, was, on the evidence of the act granting her British nationality in 1796, born in Nuremberg. No date is stated, but a secondary source indicates 2 February 1747. Her grandfather was Charles Chapuset de St Valentin, protestant officer in the household troops of the king of France, who was obliged to go into exile following the revocation of the edict of Nantes in 1685. He went to Berlin as a teacher of languages and of dancing but finally settled at Altdorf, near Nuremberg, where, as a widower, he married Katharina Maria Müller, a clergyman's daughter, in 1693. They had two sons. Another son was born from a third marriage. This last son, Johann Jakob, married Caroline Friederike Grundgeiger or Krongeiger (*b.* 1720) at Karlsruhe. He is

said to have died in 1758, leaving a widow and two children, Anna Maria Apollonia, the future Mrs Hastings, and Johann Paul Thomas (*b.* 1749).

Nothing is known of Anna Maria Chapuset's childhood and adolescence, and the place and date of her marriage to Baron Christoph Carl Adam von Imhoff (*c.*1734–*c.*1802) are uncertain. Nuremberg, Stuttgart, and Strelitz have all been advanced as hypothetical venues and the years from 1765 to 1768 as likely dates. Imhoff was an officer in the Württemberg army left unemployed by the end of the Seven Years' War. Some sources maintain that he met his future wife in Nuremberg; others argue for Strelitz, where she was said to be a maid of honour at the court of the duke of Mecklenburg-Strelitz. The Imhoffs and their two sons, Charles and Julius, moved to England in 1768 through the good offices of Elizabeth Schwellenberg, Queen Charlotte's mistress of the robes. Imhoff soon obtained a cadetship in the East India Company's Madras army but, as an accomplished miniature portraitist, he no doubt also saw a market for his artistic skills in India. Early in 1769, accompanied by his wife and elder child, he embarked for Madras in the *Duke of Grafton*. Among the passengers was Warren *Hastings (1732–1818), then a widower of thirty-seven, returning to India. The baroness took Hastings under her care when he fell ill and a shipboard romance blossomed. Imhoff lived in Madras with his wife until the latter part of 1770, when, having resigned his army commission, he moved to Calcutta in search of a wider clientele for his portraits. His wife remained in Madras, for part of the time at least, a resident in Hastings's house. She joined her husband in Calcutta in October 1771. Hastings followed in February 1772 on taking up his new appointment as governor of Bengal. In a company general letter to Madras dated 25 March 1772 Imhoff was ordered to return to Europe for declining military service. He arrived back in September 1773 and, presumably, started divorce proceedings.

Many questions remain unanswered regarding the course of events that led up to the marriage of Warren Hastings and the former Baroness von Imhoff in Calcutta on 8 August 1777. It is supposed that she lived in Hastings's house at Alipore or one nearby. Suggestions by Macaulay and Wraxall that Hastings simply paid Imhoff a large sum of money to divorce his wife oversimplify more sophisticated transactions. Hastings undertook to adopt the Imhoffs' two boys and almost certainly made funds available for legal and other expenses which probably erred on the side of generosity. However Hastings and the baroness may have lived before their marriage, discretion prevailed. Philip Francis, Hastings's severest political foe, mocked the liaison but never seriously traduced it. In fact he wrote of Marian Hastings as 'accomplished' and deserving of 'every mark of respect' (Parkes and Merivale, 2.96). Relations between Imhoff, his former wife, and Hastings remained amicable during and after the divorce proceedings.

A decree of divorce, dated Weimar, 1 June 1776, was granted by the duke of Saxony on Imhoff's petition that he considered himself 'an abandoned conjugal mate' (BL, Add. MS 39903, fol. 65). It did not reach Calcutta until July 1777, where its validity was confirmed by an English missionary. The baroness reverted to her maiden name, and a marriage licence was issued on 5 August 1777 in which she was described as a 'singlewoman' (BL, Add. MS 39904A). The wedding took place three days later. The marriage brought enduring happiness to both parties, but also regrets that there were no children. Marian Hastings, as she became known, sailed to England for her health in

Marian Hastings (1747–1837), by Johan Zoffany, 1784–7 [with her husband, Warren Hastings, and an Indian servant]

1784. Hastings left India in 1785, and they eventually settled at Daylesford in Worcestershire, where Hastings built a new house on his ancestral estate. Marian continued to live there after her husband's death in 1818.

Hastings took his wife into his confidence over political affairs, but Wraxall exaggerated when he wrote that Marian 'invariably maintained her ascendancy over his [Hastings's] mind as well as his affections' (*Historical and Posthumous Memoirs*, 4.17–18). Certainly Hastings indulged her and she had influence, but ultimately he kept his mind his own. In their personal financial affairs Marian's prudence contrasted with Hastings's extravagance. In a statement to the East India Company in 1795 Hastings declared his wife's fortune to be £40,000, her marriage settlement accounting for the greater part of the total. However, it has since been estimated that 'at the time she actually possessed at least £107,725' (Marshall, 252). Marian's financial affairs in India remain an enigma and she appears to have concealed her wealth from her husband. She palpably suffered a substantial loss in 1797 when one of her bankers stopped payments.

Marian's jewel-bedecked figure dazzled society in London and Calcutta. It was a gift to caricaturists and satirists, and a general source of amusement or concern. 'Our weather remains unparagoned', wrote Horace Walpole. 'Mrs. Hastings is not more brilliant' (Walpole to Mary Berry, 7 Nov 1793, Walpole, *Corr.*, 12.55). Fanny Burney complained that she made everyone else look underdressed and thought that 'a modest & quiet appearance & demeanour' would be more becoming during Hastings's trial (*The Journals and Letters of Fanny Burney (Madame D'Arblay)*, ed. J. Hemlow, 1, 1972, 25 May 1792, 165–6). In spite of this, Burney thought well of Marian Hastings. She was indeed an agreeable and handsome woman with especially beautiful hair, which she wore loose and unpowdered. Her imperfect command of English, in speech and in writing, perhaps added to her distinctly exotic air. She died at Daylesford House on 29 March 1837 and was buried in the churchyard close to her husband on 7 April 1837.

Hastings, Sir Nicholas (*d.* before 1316). *See under* Hastings family (*per. c.*1300–*c.*1450).

Hastings, Sir Patrick Gardiner (1880–1952), lawyer, was born in London on 17 March, St Patrick's day, 1880 and was consequently given the name of Ireland's patron saint, there being Irish blood on both sides of the family. He was the younger son of Alfred Gardiner Hastings and his wife, Kate Comyns Carr, a Pre-Raphaelite painter who exhibited in the London galleries and elsewhere. The elder Hastings, although originally a solicitor, can hardly have been long in practice and seems to have been an unreliable parent. His son's early memories were of alternating penury and affluence. 'Bankruptcy in my family', he wrote, 'was not a misfortune, it was a habit' (Patrick Hastings, 5). His recollections of childhood included hours spent in his mother's studio where he was allowed to play with the paints on her palette, and of late nights spent in company with his father and his father's 'business friends', which frequently ended with himself falling asleep across the table. At ten he was sent to a preparatory boarding-school which he hated, and the two years spent at Charterhouse School were no improvement. He resented both the discipline and the classical regimen which taught him, he claimed, none of the practical things he required to know. He left Charterhouse at sixteen, undistinguished in work or games and a victim of chronic asthma.

Family fortunes at this time were at a low ebb. After eighteen months of precarious living in Corsica, France, and Belgium with his mother and elder brother, Hastings took a subordinate post as a mining engineer in north Wales. The mine proved unproductive and with his brother he joined the Suffolk imperial yeomanry and saw two years of active service in the Second South African War. On his return he found his parents in no position to help him towards a career. From quite early years, however, he had wanted to be a barrister and with scarcely a penny in his pocket he was admitted as a student to the Middle Temple. He did all his reading there since he could not afford to buy books. From Putney he walked to work each day, went without lunch, but treated himself to dinner at a Soho restaurant for the price of 1*s.* 6*d.* He earned a few pounds weekly by writing theatre reviews and gossip for several newspapers. With no dress clothes for attending the theatre, he wore a greatcoat tactically fastened over a white shirt and white tie. By such expedients he saved the £100 to pay for his call in 1904.

Hastings contrived almost immediately to obtain some devilling work from Charles Gill, a busy lawyer with a large criminal practice; some two years later he found a

Sir Patrick Gardiner Hastings (1880–1952), by Dudley Glanfield

seat in the chambers of Horace Avory. When Avory went to the bench Hastings boldly took on the chambers. He always declared that his debt to Avory was enormous. From him he learned never to make notes but to read a brief thoroughly and commit it to memory; then, as soon as the case was over, dismiss the whole thing from his mind.

In 1906 Hastings married Mary Ellenore, the third daughter of Lieutenant-Colonel Frederick Leigh Grundy; they had two sons and three daughters. At the time of his marriage he and his wife possessed no more than £20 between them; but this did not last for long, for during the next few years he became one of the busiest juniors at the common-law bar. When in 1919 he took silk, having been rejected during the war as medically unfit for service, his reputation as an advocate was firmly established. He was no less successful as a silk, and at forty found himself with 'all the cases that I wanted and perhaps more than I could do' (Patrick Hastings, 147).

Politically Hastings was always to the left and he was adopted as the Liberal candidate at Ilford in 1918. But he was soon disillusioned by the feud between Asquith and Lloyd George, as well as by the 'coupon' election itself, and he quit both the party and the campaign. In 1921 he was adopted as Labour candidate for Wallsend, in Northumberland, an industrial seat which, at the general election in 1922, he won against the odds. The move to Labour cost Hastings friendships as well as clients, but he was driven by a genuine desire to improve the living conditions of the poorest. Parliament, however, proved 'a bitter disappointment' to him (Patrick Hastings, 229). He was frustrated by its slow working, and shocked at the hostility of Conservative members towards their Labour counterparts. He nevertheless attended the house regularly, and Ramsay MacDonald valued his presence there. When the first Labour government was formed in January 1924 he became attorney-general, with the customary knighthood.

Hastings later wrote that he never worked harder than during the short period of this administration, in whose downfall he played a central part. Much of his time was taken up with the Irish boundary commission, but in July, in an apparently routine matter, he authorized the prosecution under the Incitement to Mutiny Act (1797) of John Campbell, acting editor of the communist *Workers' Weekly*, over an article that urged soldiers not to fire on striking workers. The indignation with which this action was met in Labour circles took Hastings by surprise, and after a cabinet meeting on 6 August, in which ministers voiced fears that a trial would only advertise the communist cause, he withdrew the prosecution. But this opened the government to the charge that it had subverted the law on grounds of political expediency, and in October it fell on a censure motion over its handling of the 'Campbell case'. Hastings defended himself adroitly in parliament in the face of severe criticism, which was echoed in two *Times* leaders, but he was deeply disillusioned by the lack of loyalty shown him by Ramsay MacDonald, and perhaps even more by the cynical opportunism of erstwhile legal friends on the opposition benches. Although he held Wallsend at the ensuing general election, his political career was effectively over; in 1926, in poor health, he resigned his seat. According to MacDonald's biographer 'Hastings was a brilliant advocate, but a novice in Labour politics' (Marquand, 365).

From this date began Hastings's rapid climb to leadership of the common-law bar, an eminence which he shared for many years with his friend and frequent opponent Norman Birkett. Spectacular cases, such as the actions between Marie Stopes and Halliday Sutherland, and the Savidge tribunal, brought him much publicity. In 1936, in the case widely known as the 'Talking Mongoose', he successfully represented Richard Lambert, the editor of *The Listener*, in a slander action against Sir Cecil Levita. The latter had, among other things, alleged that Lambert had given credence to the claims of an Isle of Man farmer, supported by a psychical researcher, to have seen a remarkable mongoose which possessed the power of speech in several languages. But most of what became a very large income inevitably derived from less exciting commercial work. Hastings had a great gift for simplification and could make a commercial case so easy to follow that what might otherwise have taken weeks was completed in a few days. Although he often appeared in the criminal courts, he had a deep dislike of murder cases.

In the Second World War Hastings served for a time as an intelligence officer at Fighter Command headquarters, but his health proved unequal to the strain, and he returned to a law practice in which most cases were heard without a jury and the importance of an advocate's role

had greatly diminished. The death in action of his younger son, David, hit him hard. His last great success, in 1946, the defence against an action for libel brought by H. J. Laski, took a heavy toll on him; in 1948 he decided to retire. He occupied himself by writing, and achieved considerable success with his *Autobiography* (1948), *Cases in Court* (1949), and *Famous and Infamous Cases* (1950). The theatrical sense was very strong in him and he tried his hand at half a dozen plays, of which only *The River* (1925), *Scotch Mist* (1926), and *The Blind Goddess* (1947) achieved any real success; the latter, a play about the law courts, was also made into a film.

Hastings was not an intellectual by temperament and his reading was largely confined to law reports and thrillers such as those of his friend Edgar Wallace. A devoted husband and father, he enjoyed nothing better than an open-air country life spent with his family and intimate friends. He was a good horseman, a first-class shot, and a passionately keen fisherman. Tall, thin, dark-haired, with blue eyes and a very straight carriage, he had a forceful and somewhat intolerant personality; he was a master of simple, unadorned language. Above all, he was a man of tremendous enthusiasms and great courage.

Hastings's stature as an advocate was the result primarily of his brilliance in cross-examination. He learned from one of his early mentors, Sir Edward Carson, the art of brevity and of getting under a witness's skin with the first question. Once he had done this he pursued his case ruthlessly and relentlessly, firing questions 'in such quick succession that he sometimes laid himself open to the charge of bullying' (Hyde, *Norman Birkett*, 221). He was a dangerous, but always an honourable opponent, at his best when speaking directly to a jury. For the thundering emotional appeals which used to be the fashion he substituted an incisive appeal to intelligence. He is said by his family to have been incapable of dissimulation, but Birkett watching him in court was fascinated by the play of expressions on his face—'anger, surprise, incredulity, disdain ... They were meant for the jury and were indeed more eloquent than words' (Hyde, *Sir Patrick Hastings*, xiv–xv).

In 1950 Hastings visited his son Nicholas who was farming in Kenya; there he suffered a slight stroke from which he never fully recovered. He died at his London home, 9 Dorchester Court, Sloane Street, Belgravia, on 26 February 1952. ANTHONY LEJEUNE, *rev.* MARK POTTLE

Hastings [*née* Shirley], **Selina, countess of Huntingdon** (1707–1791), founder of the Countess of Huntingdon's Connexion, was born on 13 August 1707, probably at Astwell House, Northamptonshire, the second of three daughters of Washington Shirley, second Earl Ferrers (1677–1729), and Mary (*d.* 1740), daughter of Sir Richard Levinge of co. Westmeath, Ireland, and his wife, Mary. Nothing is known of Liny's early life, some of it probably spent in Ireland. The child of a broken marriage, she sided with her father and rejected her mother.

Marriage and conversion, 1728–1746 Lady Selina married, on 3 June 1728, Theophilus Hastings, ninth earl of Huntingdon (1696–1746), and they lived at his Leicestershire seat at Donington Park. Her father's death the following year created extensive conflict, especially with her mother, over his estate. All seven of the countess's children were born during the first decade of her marriage, and early on she developed gynaecological complications. In 1731 she and her husband leased a summer house outside London, The Grove, at Enfield Chase, Middlesex; other seasons were spent at additional rented houses, first at 2 Savile Row, later in Downing Street and in Chelsea. In January 1739 the countess attended the prince of Wales's birthday party, dressed the 'most extraordinary' of all, in a costume 'much properer for a stucco staircase than the apparel of a lady' (Llanover, 2.28). Six weeks later she joined a cadre of a dozen aristocratic ladies who vehemently opposed the ministry's pacifying position regarding Spain, and who noisily disrupted a sitting of the House of Lords by barracking speakers with whom they disagreed.

During the first decade of her marriage, Lady Huntingdon supervised many of the practical details on her husband's estates, supported the religious enterprises connected with them, and engaged in various charitable activities. What led her to accept Methodism in 1739 was a combination of increasing religious, emotional, health, family, and financial anxieties, when she was telling others that she had lived a 'disagreeable' life (Hastings MS 13035). That summer she received visits from several men of Methodist inclination. Yet her noted sister-in-law, Lady Betty *Hastings, rejected Methodism, and upon her death late that year deprived the Huntingdons of an expected inheritance. Soon after, the countess was described as having a 'very choleric and violent temper' (Benham, 68).

In 1741 Lady Huntingdon initiated a relationship with John and Charles Wesley. Hoping they 'might think on me as you would do on no one else!' (Huntingdon to J. Wesley, 24 Oct 1741, *Works of John Wesley*, 26.67), she adopted John Wesley's belief in Christian perfection and when in London attended his West Street Chapel. For a brief period

Selina Hastings, countess of Huntingdon (1707–1791), by unknown engraver, pubd 1773 (after John Russell, 1773)

Donington provided Wesley with a base in the midlands. The countess read religious works to her servants and attempted to convert society ladies at Bath. Continuing clashes with various family members over financial settlements, together with the deaths of two of her four sons, increased her anxiety. 'No soul can conceive the darkness perplexity misery I have constantly surrounds me ... O! the distress of my soul' (Methodist archives, black folio, 13, 85). Finding no comfort in Wesley's notion of perfection, by 1744 she shifted towards Calvinistic predestination, especially as proclaimed by George Whitefield, with whom she began a correspondence. In 1743 she had met the Welsh Calvinistic exhorter Howel Harris, who by the following year was frequently preaching to small groups of her friends in London. Under his influence she attended the Tabernacle Chapel in London, yet was still attracted to the mystical writings of William Law, who had often visited her. The earl and countess were fatefully caught up in the turmoil of the Jacobite rising of 1745, both secret supporters. Its defeat drove him to despondency and fears that his estates might be confiscated. Totally careless of his health, he died in London on 13 October 1746; she erected an elaborate memorial to him in Ashby-de-la-Zouch parish church, Leicestershire.

Emergence as a Methodist leader A widow at thirty-nine, Lady Huntingdon assumed responsibility for her four surviving children, her husband's dying intestate adding further burdens. Still religiously insecure, she sought direct mystical union with God, yet contact with Harris and other Calvinists led her to appoint Whitefield her personal chaplain. He immediately proclaimed her divine calling to pursue England's redemption: 'This honour hath been put upon your Ladyship by the great head of the church' (*Works of the Reverend George Whitefield*, 2.294). She always expected deference from her followers, and Whitefield proved the most adept at offering it. The countess's relationship with him put further distance between her and John Wesley, to whom Calvinism was abhorrent. To her Chelsea salon services she invited the titled and wealthy to hear Whitefield and other fervent preachers, hoping to foster England's religious rebirth from the top. Although unsuccessful in 'converting' these worthies, all ardent political supporters of Frederick, prince of Wales, she sought to induce the prince to secure protection for the Methodist movement. Through personal contact with various Church of England bishops, she attempted to soften their opposition and to persuade them to ordain evangelical clergymen. In this she met with some limited success.

Frederick's death in 1751, soon followed by Whitefield's departure for America, threw Lady Huntingdon back into spiritual turmoil and a serious dabbling in mysticism and millenarianism. To one religious friend, 'what she talks appears to me a Hotch Potch of Opinions glean'd from every where without direction' (Methodist archives, DD Pr 1.6.75). She found consolation in contact with Charles Wesley during the mid-1750s but in the process drove a serious wedge between him and his brother John. Taking a house in the Clifton area of Bristol, she formed a small group of women to counter Moravian activities. Though she struggled to inculcate her beliefs into her children, none responded. Her elder daughter found life with her mother 'void of every thing agreeable' (Hastings MS 6294). Viewing the countess as 'righteous over-much' (J. Wesley to Lady Rawdon [E. Hastings], 18 March 1760, *Letters of ... John Wesley*, 4.88), she married Lord Rawdon and moved to Ireland, saying that escaping her mother was her sole inducement. Following the death of her other remaining daughter, Lady Huntingdon's hope rested with her firstborn, Francis, who at his father's death had assumed the earldom. Yet he died in 1789, also immune to her religious entreaties.

Trevecca and Georgia During the 1760s the countess established chapels at major watering places of the noble and wealthy. In 1761 she appointed William Romaine and Martin Madan chaplains and opened her first chapel—in the grounds of her Brighton residence. The Bath chapel, opened in 1765, was to prove the jewel in her crown outside London. A chapel at Tunbridge Wells was established in 1769. In 1768 she became drawn into the controversy surrounding the parish living of Aldwincle, Northamptonshire. Madan and another cleric, Thomas Haweis, stood accused of simony regarding its ownership, and Lady Huntingdon was required to purchase the living in an attempt to remove the scandal.

At the same time the countess secretly supported evangelical students at St Edmund Hall, Oxford. When six were expelled from the university, it fitted a long-held plan to

establish her own college. Apparently locked out of the universities and spurning the existing academies of the dissenters (whom she always rejected, apart from Philip Doddridge), she could expand evangelical preaching by providing the training of ministers, for whom she sought episcopal ordination. With Howell Harris's assistance, a Brecknockshire farmhouse was renovated and opened as Trevecca College on 24 August 1768. Fascinated with overseas missions, she sent two students to the East Indies. Though the venture proved a disaster, Whitefield's death in America in 1770 opened prospects for a mission to Georgia, where he had bequeathed her the Bethesda orphanage. She sent a small group of Trevecca students to use it as a base from which to 'convert the poor people in America' (Granard MS T3765/M/2/21) and seriously considered accompanying them. In the event, they were led by an evangelical cleric, William Piercy, whose overbearing leadership they unanimously rejected. He also so infuriated the Georgians that Bethesda was burnt to the ground; this and his squandering her open purse in the end cost Lady Huntingdon well over £6000. Part of this was to purchase slaves, and the countess proved immune to rising calls against the ownership of slaves, even instructing her Georgia managers to purchase a slave to 'be called SELINA, after me' (Seymour, 2.266).

Relations with Wesley The catastrophic failure in America hardened Lady Huntingdon's belief that only her personal control could ensure productive religious fruit. She was drawn into Augustus Toplady's rigidly Calvinistic camp. Matters had come to a head with Wesley's 1770 conference minutes, which claimed continuing good works a condition of a Christian's salvation. This notion she frantically countered, stating that she abhorred Wesley more than any other person in the world, denouncing him as 'a papist unmasked, a heretic, an apostate' (Tyerman, 195). She mounted a vigorous campaign, sponsoring Toplady's anti-Wesley *Gospel Magazine*. Egged on by the countess and Wesley, the preachers they sent out actively attacked one another, a combat in the field lasting many years. Her relationship with the Wesleys was never re-established. Towards the end of her life, when she learned that one of her former ministers was to preach in John Wesley's chapels, she wrote that this was intended 'as an imposition & an affront to our People & *first* to me' (Methodist archives, black folio, 129). Demanding that Trevecca be cleansed of any Wesleyan sentiments, Lady Huntingdon lost the services of its overseer, John Fletcher, and tutor, Joseph Benson. She exerted total control over the institution, which became her home for at least six months each year, and where she was, according to one student, 'a stern disciplinarian' (Avéling, 17), supervising all aspects of her students' education. More importantly to her, she assumed full control of the places and times they preached, and they referred to her as their 'commanding officer' (Cheshunt Foundation MS F1/1290).

Lady Huntingdon's wondrous energy and increasingly aggressive activities exposed her to the satirical pen. Her sanity had frequently been questioned by those about her. Now, as Lady Sherwood, she was depicted as 'labouring under a hypochondriacal distemper' (Graves, 204). Another publication fixed on her the charge of antinomianism, which would long cling to her and her followers. At her death, an engraving portrayed her seated in a Gothic church, wearing nun's robes, with clasped hands and upturned eyes, while beside her rested a skull. This correctly conveyed her taste for the Gothic and Romantic, in which she frequently indulged with the architecture and fittings of her chapels. Another distinctive feature was her insistence on the use of the Book of Common Prayer at main services of worship. She rejected for herself and other women the role of preacher and never published her own religious views. The only exceptions were a brief introduction and conclusion to a work attacking Wesley's 1770 conference minutes; a preface to a 1789 reprinting of the sermons of the seventeenth-century Calvinist cleric William Bridge; and a pious letter to her students.

By the late 1770s the extent of her enterprises meant that the countess was seriously financially embarrassed. She continued a bitter struggle with the Ferrers family over her father's unresolved estate, not settled until well after her death. She occasionally sold valuables to raise cash and regularly let her houses at Tunbridge Wells and Brighton to members of the nobility, using these funds to support her ministers. She now rejected giving to normal charitable enterprises: providing preaching was the 'greatest of all charitys I know on earth' (22 July 1785, Countess of Huntingdon Connexion MSS). She famously refused appeals that she intercede for William Dodd, condemned to death for forgery.

Secession, 1777–1787 By 1777 it was observed that 'the Countess of Huntingdon's people are peculiarly obnoxious to the bishops in general' (Aveling, 33). Although she had consistently professed loyalty to the Church of England, her activities—especially dispatching disruptive itinerant preachers and building chapels—appeared tangible evidence to the contrary. A determination in the late 1770s to establish her work in London set the stage for the final break. When a former amusement house in Clerkenwell was converted into a chapel, the bishop of London's consistorial court ordered its closure. She immediately took over and altered the chapel. Hard against the building stood a private dwelling, where she took up residence and had a door knocked through to the chapel, an arrangement similar to earlier chapels; she maintained that they were merely extensions to her private residences. She appointed Thomas Haweis one of her chaplains and claimed that, in spite of seating over 2000, what she christened Spa Fields was her private chapel. The following year, 1780, the consistorial court forbade Haweis to preach there. In a despondent rage, Lady Huntingdon seceded from the Church of England, and Spa Fields formally became a dissenting chapel on 12 January 1782. Those Anglican clerics who had assisted her, refusing now to be tarred with a dissenting brush, fled from her service, and she denounced them all as 'plausible pleaders for Satan only' (Cheshunt Foundation MS E4/10/19). In the process she lost all four of her chaplains, and in the end only

two clerics followed her into secession. In 1783 the rigidly Calvinistic Countess of Huntingdon's Connexion was born when several Trevecca students were ordained at Spa Fields.

The secession crisis led the countess to believe that she was being comprehensively persecuted. Curiously, her attention was diverted from Trevecca, and a lack of funds meant that by 1788 its ten students were virtually in rags. Ever refusing to allow any of her preachers to settle, to the end of her life she frequently devoted six or seven hours a day to writing letters, attempting to exercise a meticulous control over their movements, together with all aspects of her chapels' affairs.

Final years, 1787–1791 After American independence, Lady Huntingdon projected plans to resuscitate Bethesda and to develop other enterprises, all under her direct control. A suspicious new America rejected these schemes, and her Georgia property was finally confiscated by the state. In 1787 she planned her first step outside Great Britain, having been informed that a large chapel in Brussels had been 'taken for me' (Cheshunt Foundation MS B4/3). The project was aborted when she was assured that it was part of a papal plot to orchestrate her assassination. In highly charged circumstances during the spring of 1789 she expelled the two clerics who had joined her secession and, desperate for assistance, induced Thomas Haweis to return. From then until her death two years later he manoeuvred himself into a commanding position, and he and his wife were two of the four trustees to whom Lady Huntingdon left control of her connexion, together with the ownership of much of its property. In her final year, cynical about her work in England, her hopes were fixed on mounting a missionary crusade to the south seas, where she could 'get some precious souls out of the Devils fingers' (Leete collection, countess of Huntingdon MS 129). She died at Spa Fields from respiratory complications on 17 June 1791 and ten days later was buried next to her husband in Ashby-de-la-Zouch parish church. Her personal annual income of £1200 ceased at her death, and she left overall debts of £3000, with no bequests for her chapels or college.

Although she was personally brave and frequently self-giving, the countess of Huntingdon's enterprises were hindered by her highly impulsive cyclothymic temperament. Always sincere, she was too often sour. The arbitrary nature of her leadership played a significant part in religious conflict and kept her contribution to English evangelicalism from proving more than a mixed blessing.

Despite her importance to the Hanoverian Methodist movement, the countess of Huntingdon was subsequently dwarfed by the historical reputation of her associates and rivals, Whitefield and the Wesleys. The serious defects of a voluminous biography, *The Life and Times of Selina, Countess of Huntingdon*, published in 1839, have since been redressed by Edwin Welch's *Spiritual Pilgrim* and by the present author's *Queen of the Methodists* (1997).

At her death more than sixty chapels were formally associated with the countess, though only a handful as a result of her financial assistance. During the nineteenth century, without her leadership and owing to significant internal conflict, the denomination experienced serious atrophy, with large numbers of ministers and congregations leaving to join the Independents. At the beginning of the twenty-first century the connexion had twenty-three chapels, all in England, supervised by the evangelical Christian denomination, the Countess of Huntingdon's Connexion. In 1792 her college at Trevecca was relocated to Cheshunt, Hertfordshire, and in 1906 to Cambridge. The Cheshunt College Foundation maintains the countess's reputation as a benefactor, providing funds for the training of ministers in England and, since the 1970s, in Sierra Leone, through the connexion's Sierra Leone mission.

Wealth at death £1200 p.a. from husband's estate; debts of £3000: Cheshunt Foundation archives, C4/1, p. 79; Hunt. L., HAP 31(7)

Hastings, Somerville (1878–1967), surgeon and politician, was born on 4 March 1878 in Boreham Road, Warminster, Wiltshire, the son of Henry George Hastings (1850?–1905), Congregationalist minister, and his wife, Ellen (*née* Ward). He was educated at Wycliffe College, and, on a medical scholarship, at University College and the Middlesex Hospital, London, during which he received a number of prizes, including medals in botany, an enduring interest. Hastings's academic and professional qualifications were MB, MRCS, and LRCP (1902); BS (1903); FRCS (1904); and MS (1908). Alongside his lucrative private practice, Hastings had a lifetime association with the Middlesex Hospital, specializing in ear, nose, and throat medicine. On 19 October 1911 he married Bessie Tuke (1881/2–1958), daughter of William Tuke, architect; they had two children.

Hastings was active in labour and medical reform politics before 1914, and by the 1920s he had formulated what were to remain his core beliefs. Hastings's socialized health service was to have a full-time, salaried medical personnel, and hence no private practice; and an integrated hospital system. Free and comprehensive services were to be organized around health centres, with an accompanying shift from curative to preventive medicine. Control was to be by democratically elected local authorities, centrally co-ordinated by the Ministry of Health.

After the First World War Hastings emerged as an important figure on the medical left. He became a leading member of the Labour Party's public health advisory committee; and, in 1923–4 and again in 1929–31, the Labour member of parliament for Reading. In 1930 Hastings helped form the organization with which he is most closely associated, the Socialist Medical Association, which affiliated to the Labour Party in 1931. Hastings was its founding president and he retained the presidency until 1951. He expended considerable energy, particularly in the association's crucial pre-war and wartime period, on socialist medical politics. He was often the association's delegate to the Labour Party conference, and was instrumental in having the party commit itself by 1934 to a national health service. He wrote and lectured extensively on his vision of a socialized medical service, and travelled abroad to study foreign medical systems and meet other socialist doctors. Most significant of all was his election in 1932 to the London county council as member for Mile End. Hastings held this seat until 1946, during which time he served (in 1944–5) as council chairman. Thereafter he was, from 1946 to 1964, an alderman, and he continued to serve on various committees. He was also a member of the London Labour Party's executive committee from 1934 to 1950. Membership of the London county council was Hastings's most successful and important venture into politics. After Labour took control in 1934 he was chairman of its hospital and medical services committee for ten years. As London was the largest provider of hospital beds in the country, this was a great responsibility. His council experience confirmed Hastings's view that

Somerville Hastings (1878–1967), by Rodrigo Moynihan, exh. RA 1946

medical services should be provided by democratic local bodies.

During the Second World War the influence of Hastings and the Socialist Medical Association increased. He was one of the three original association representatives on the British Medical Association's medical planning commission; and he was chairman of Labour's revived advisory committee on public health, a body charged with formulating proposals for a national health service. It seemed possible that Hastings's vision of a socialized medical service would be realized, given his own and his organization's heightened influence in labour and medical politics.

Hastings was elected member of parliament for Barking at the 1945 general election, a seat he held until his retirement in 1959. He claimed publicly that the post-war Labour government's National Health Service was in large part attributable to the work of the Socialist Medical Association. However, not all that Hastings desired was achieved. The minister of health, Aneurin Bevan, would have little to do with Hastings or the association. Bevan created a centrally controlled system and made concessions to the medical profession over issues such as private practice. Although a commitment was made to develop health centres, this did not happen. Hastings therefore welcomed and defended the National Health Service, but only as a first, imperfect, step towards a socialized medical service. He continued to agitate for his ideal of socialized medicine; to work as an active constituency member of

parliament; and to serve on numerous boards and committees. He died at the Royal Berkshire Hospital, Reading, on 7 July 1967.

Hastings deserves acknowledgement as a pioneer of socialized medicine. But while it is easy to obtain a picture of the public figure, it is harder to see beyond this to the private individual. Hastings was a lifelong Christian (this being central to his political beliefs) and a teetotaller, and seems to have led an unpretentious, possibly somewhat austere, life. Some contemporaries have described him as rather cold, even aloof, with colleagues and patients. He was, however, regarded by others with considerable respect. He was described, on occasions, as shy; but also as enthusiastic in his passions, generous to his friends, and without pomposity. Hastings typifies the professional, altruistic, middle-class Christian socialist of his time.

Wealth at death £41,905: probate, 9 Oct 1967, *CGPLA Eng. & Wales*

Hastings, Theophilus, seventh earl of Huntingdon (1650–1701), politician, was born on 10 December 1650 at Donington Park, Leicestershire, the fourth, but only surviving, son of Ferdinando Hastings, sixth earl of Huntingdon (1609–1656), and Lucy *Hastings *née* Davies (1613–1679), his wife, daughter of Sir John *Davies of Englefield, Berkshire, and his wife, the prophetess Lady Eleanor *Davies. He was born to his parents in the twenty-seventh year of their marriage, after they 'despaired of a son'; Lady Elizabeth *Langham was one of his six sisters. His grandmother Davies, 'one not a little Enthusiastical', conferred the name Theophilus on him (MS Carte 77, fol. 201). He succeeded to the earldom upon his father's death on 13 February 1656. At his mother's direction, his education was 'wholly domestic' (*Hastings MSS*, 4.353). Living principally at the family's Leicestershire estates of Donington Park and Ashby-de-la-Zouch during his early years, he married on 19 February 1672, by his mother's choice, Elizabeth Lewis (1654–1688), eldest daughter and coheir of Sir John Lewis, bt, of Ledstone Hall, Yorkshire, and his wife, Sarah. They had eight children, of whom six died as minors. Their eldest daughter, Lady Elizabeth (Betty) *Hastings, became a notable benefactor.

Huntingdon was called to the House of Lords in 1672, but took his seat by proxy (the duke of York) on 15 February 1673. He became *custos rotulorum* of Warwickshire in 1675 and high steward of the honour of Leicester in 1677. In 1677 he moved to London, where he became heavily involved in the factional politics of the day, initially allying himself with Anthony Ashley Cooper, first earl of Shaftesbury. In December 1678 he chaired the Lords' committee on the Children of Recusants Bill, while in May 1679 he joined the lords protesting the bill to banish popish recusants from London, because it adversely affected dissenters. While attending a lord mayor's dinner with other whig lords in December 1679, he proposed the health of the duke of Monmouth and 'confusion to Popery', precipitating a pointed exchange with Chief Justice Scroggs (Thompson, 208–9). He later protested against Scroggs's freedom from commitment while under impeachment for treason (7 January 1681), and he protested the Lords' vote against impeaching Edward Fitzharris. In 1680 he was left off the commissions of the peace for Leicestershire and Derbyshire. By October 1681, however, he had experienced a political change of heart, kissing the king's hand at Whitehall on 21 October. Thereafter, he remained a staunch supporter of Stuart monarchy, enjoying the favour of Charles II and James II. He became captain of the king's band of gentleman pensioners in February 1682 (paying £4500 for the privilege) and was sworn of the privy council on 28 February 1683. His elevation at court raised his profile in provincial politics; he promoted candidates in parliamentary elections and helped suppress dissenting conventicles in the midlands. He also orchestrated the surrender and regrant of the town of Leicester's charter in 1684, being named recorder of the corporation in the new charter (10 December 1684). The earl was present in the bedchamber at King Charles's demise and was among the lords who proclaimed James II. At James's coronation, he served as cupbearer to the king (*Hastings MSS*, 4.353). During Monmouth's rebellion he raised a regiment of foot, holding the rank of colonel until November 1688.

Although he remained a lifelong member of the Church of England, Huntingdon was greatly in grace with King James. He held the offices of chief justice in eyre of the royal forests south of Trent (16 January 1686 – 23 December 1688); commissioner for ecclesiastical causes (12 January 1687 – 5 October 1688); lord lieutenant of Leicestershire (4 August 1687 – 23 December 1688) and Derbyshire (2 December 1687 – 23 December 1688); and groom of the stole and gentleman of the bedchamber to Prince George of Denmark (December 1687 – December 1688). He claimed he was present in the queen's bedchamber at the birth of the prince of Wales in June 1688 (*Hastings MSS*, 4.353). Huntingdon dutifully enforced James's policies, making inquiries of Leicestershire and Derbyshire JPs concerning the Test Act and supporting the purge of the corporation of Leicester in 1688. He also signed the warrant for commitment of the seven bishops to the Tower of London. At the news in November of the arrival of the Dutch fleet under William, the earl headed to Plymouth with his regiment, hoping to hold the citadel for King

James. Instead, Huntingdon was imprisoned in late November by the Williamite earl of Bath, governor of Plymouth, whom, it was rumoured, Huntingdon 'and the papists' tried to poison (Luttrell, 1.480). Huntingdon was released on 26 December, upon the news that his wife had died in childbirth two days earlier.

Huntingdon retired from public life and forfeited all of his offices for his adherence to James's cause. He was among those few excepted from the Act of Indemnity in July 1689. On 8 April 1690 he joined the Lords' protest against affirming the acts of the Convention. On 8 May 1690 he took as his second wife Frances (*d.* 27 Dec 1723), daughter and sole heir of Sir Francis Levison Fowler of Harnage Grange, Shropshire, and widow of Thomas Needham, Viscount Kilmorey. The couple had two sons and five daughters. Huntingdon remained loyal to James to the end of his life. In 1692, upon rumours of a Jacobite invasion, the earl was suspected in the plot; he received a letter purportedly from James and his stables were found full of horses. He was sent to the Tower in May 1692 and bailed in August. In March 1696 he refused to sign the association in favour of William III, and in 1701 protested against the Act of Settlement. Towards the end of his life he fell out with his son and heir, George, over the estates of his first wife in Yorkshire, but George ultimately succeeded him to the title. He died on 30 May 1701 in Charles Street, St James's, London, and was buried in the family chapel in the parish church at Ashby-de-la-Zouch.

Hastings, Thomas (*bap.* 1741, *d.* 1801), pamphleteer, was baptized on 24 May 1741 in Sunderland, Durham, the son of William and Eleanor Hastings. He was apprenticed to an uncle who helped to build Lord Lyttelton's mansion at Hagley, Worcestershire. After rambling over England, Hastings worked for a while as a carpenter on the new buildings in Marylebone, Middlesex. He supported Charles James Fox in the Westminster election of 1784, with *The book of the wars of Westminster, from the fall of the Fox at the close of 1783, to the 20th day of the 3rd month of 1784, an oriental prophecy by Archy Macsarcomica* (1784), which was followed by other pamphlets in the style of oriental apologues, such as *The regal rambler, or, The eccentrical adventures of the devil in London, with the manoeuvres of his ministers towards the close of the 18th century, translated from the Syriac MS. of Rabbi Solomon* (1793). These productions were hawked by the writer about the town. For some years he published in the newspapers on 12 August an 'ode' on the birthday of the prince of Wales, for which he received a small annual present from Carlton House. He was a regular attendant at the popular Sunday lectures; he dressed as a clergyman, and became known as Dr Green. He died in New Court, Moor Lane, Cripplegate, London, on 12 August 1801.

Hastings, Sir Thomas (1790–1870), naval officer, eldest son of the Revd James Hastings, rector of Martley, Worcestershire, and a distant cousin of Warren Hastings, was born on 3 July 1790. He entered the navy in September 1803, served on the channel, West Indies, and home stations, commanded a gunboat in the Walcheren expedition in 1809, and in January 1810 was promoted lieutenant of the *Badger* in the North Sea. From 1811 to 1813 he served in the *Hyacinth*, and from 1813 to 1815 in the *Undaunted*, on the Mediterranean coasts of France and Spain, where he was frequently engaged in boat expeditions. He was first lieutenant of the *Undaunted* when she took Napoleon to Elba in 1814. He continued on active service, principally in the Mediterranean, until promoted commander in May 1825. He married, on 12 May 1827, Louisa Elizabeth, daughter of Thomas Humphrey Lowe of Bromsgrove, Worcestershire, and his wife, Lucy, *née* Hill.

In November 1828 Hastings was appointed to the sloop *Ferret*, again in the Mediterranean, and was posted from her in July 1830. He was a favourite of William IV. In April 1832 he was selected as captain of the *Excellent*, the new gunnery training ship at Portsmouth. He held this important post for thirteen years, during the last six of which he was also superintendent of the Royal Naval College at Portsmouth. He played the major role in establishing professional gunnery training and scientific education in the navy. He taught the seamen gunners by example and created the traditions that made the *Excellent* the pride of the navy. For fifteen years he was directly involved in the design of new artillery, being an early proponent of shell-firing guns, and he advised the government to adopt screw steam warships in 1844. His services were rewarded by a knighthood in July 1839; and in August 1845, when he retired from the *Excellent*, he was appointed storekeeper to the ordnance, where he continued his work on improved heavy artillery design. In November 1850 he was made a CB civil division; and in September 1855, on reaching his flag by seniority, he was placed on the retired list. He was made a KCB civil division in March 1859, and became in due course vice-admiral in October 1862 and admiral in April 1866. He died at his residence, 7 Seymour Street, Marylebone, London, on 3 January 1870; his wife survived him.

Wealth at death under £5000: probate, 15 March 1870, *CGPLA Eng. & Wales*

Hastings, Thomas (*fl.* 1803–1837), customs officer and artist, whose origins are unknown, had been, according to his own statement of 1813, a captain and assistant quartermaster-general in the army. This position frequently required drawing skills for surveying duties, but Hastings has not been traced in either the British or the East India Company forces. His earliest surviving sketches (now in BL OIOC) were made in India in 1803 and on his voyage to England, in that year or the next, via the Cape of Good Hope and St Helena. These probably formed the basis for his now untraced paintings *Junction of the Rivers Malpoorba and Kistnah in the Interior of India* and *Painted from a Sketch Taken during a Storm off the Cape of Good Hope*, shown at the Royal Academy in 1821.

Hastings publicly exhibited in 1812–14 at the Liverpool Academy, first with *Ruins of St Pancras, in the Entrance to Canterbury* (1812). The picturesque decay of early nineteenth-century Canterbury and its cathedral caught his imagination and in 1813 he published *Vestiges of Antiquity, or, A Series of Etchings of Canterbury*. He later supplied drawings and worked up H. S. Storer's sketches for engraving by W. Woolnoth in that artist's *Canterbury Cathedral* (1816). He exhibited at the Royal Academy in 1813 and 1821, and at the British Institution in 1823, always giving London addresses. Surviving paintings, in particular *Woodbury Tower, Devon* (signed and dated 1813) and *One of the Great Ponds between Hampstead and Highgate* (signed and dated 1831; both formerly priv. coll.), are influenced by the landscape painter Richard Wilson. Between 1820 and 1824 Hastings made forty etchings of paintings by this artist (two owned by himself and thirty-eight either in, or previously in, the celebrated collection formed by Benjamin Booth and inherited by Lady Ford). These were published by subscription as *Etchings from the Works of Richard Wilson* (1825). Drawings connected with the project are in the National Museums and Galleries of Wales, which also formerly held an oil copy made by Hastings of Wilson's *The Tiber: Rome in the Distance*, when owned by Lady Ford.

Hastings was sworn in the customs service on 3 March 1819 and eventually rose to be collector at Cowes, on a salary of £400, in 1834. Between 1827 and 1833 he paid rates as a resident of Whippingham, East Cowes, in respect of a house and land. He founded in 1829 the Carisbrooke Archery Society. To celebrate archers of the past and to promote the fashionable contemporary sport, he wrote and illustrated *The British Archer, or, Tracts on Archery* (1831). After his departure from the island he was, in 1837, made an honorary member of the society. On boxing day 1834 he drew, much in the manner of Joseph Farington, *Lees Water* (now Thirlmere; Abbot Hall, Kendal), the latest dated work to be traced. Nothing is known of his final years.

Hastings, Warren (1732–1818), governor-general of Bengal, was born at the rectory at Churchill in Oxfordshire on 6 December 1732. Hastings proudly traced his descent from a family that had been settled at Daylesford in Worcestershire since the twelfth century. By the eighteenth century, however, the family was in reduced circumstances. The Daylesford lands had been sold, although Hastings's grandfather, Penyston Hastings (*d.* 1752), and his father, also called Penyston (*d.* 1743), both in holy orders, continued to live nearby. Hastings's mother, Hester, *née* Warren (1705–1732), died shortly after giving birth to him. He and his elder sister, Anne, were left as virtual orphans when, within nine months of Warren's birth, their father abandoned them, remarried, and moved to Barbados, where he lived out the rest of his life. Hastings was brought up first in the Cotswolds by his grandfather and then by his uncle Howard Hastings, who took him to London in 1740.

Schooling and first years in India Howard Hastings sent his nephew to school at Newington Butts and then in 1743 to Westminster School, where he became king's scholar and captain of the school in 1747, leaving prematurely on his uncle's death in 1749, to the dismay of the headmaster, John Nicoll. In later life Hastings was inclined to portray himself as a person who had been cut off from formal education at an early age and thus been forced to equip himself for the great responsibilities that came to him by native wit and practical experience. His time at Westminster seems, however, to have been a good preparation. It left him with a capacity to write cogently and elegantly, with a facility to learn languages, with a cultivated taste for literature, and above all with a quick, inquiring intelligence that absorbed new knowledge very readily.

With the death of his uncle Hastings had to fend for himself. His new guardian, Joseph Creswicke, used his influence to get him an appointment as a writer in the East India Company's Bengal service. After the obligatory brief course in merchant's accounts he sailed for India in January 1750, arriving at Calcutta in September.

Calcutta in 1750 was already a rich commercial city. It was the centre for the huge trade conducted by the East India Company in what had become a virtually autonomous province under the rule of governors, or nawabs, who owed only a nominal allegiance to the Mughal emperor at Delhi. From Calcutta and a series of subordinate commercial 'factories' in other parts of Bengal the East India Company procured its cargoes for London, consisting largely of cotton cloth and silk. The employees of the company, private British merchants, and many Indian ones who worked with the British also traded on a large scale. Commercial expansion was, however, creating political tensions. On the south-east or Coromandel coast

Warren Hastings (1732–1818), by Sir Joshua Reynolds, 1766–8

Anglo-French rivalry had already led to open warfare in which Indian contenders for power participated. In 1750 the Bengal nawabs were still able to maintain control, but within a few years Bengal too was to be thrown into turmoil and a political revolution was to ensue that would transform Hastings's career.

In 1750 Hastings's prospects were those of company servants of previous generations. He had to learn how to order textiles and check their quality. Were he to survive the high mortality from disease, he could expect to rise in the service and would try to accumulate a fortune from his personal trade. Hastings's first appointment was at Cossimbazar, a major centre for procuring silk, near the nawab's capital at Murshidabad. He was at Cossimbazar in 1756 when relations between a new nawab, called Siraj ud-Daula, and the East India Company broke down catastrophically. The nawab was provoked to attack and storm Calcutta, rounding up the British at Cossimbazar in the process. Hastings's release was secured by Dutch merchants and he went to Falta, where refugees from Calcutta had gathered. At Falta in 1756 he married Mary, *née* Elliott, widow of Captain John Buchanan, who had been killed at Calcutta. Neither the first Mrs Hastings nor the two children that she bore her husband were to live long. Her daughter, Elizabeth, was dead within a month of her birth. Mary Hastings died on 11 July 1759. The son, George, was sent to England in 1761, where he too died in 1764. Rumours that Elizabeth, daughter of Philadelphia Hancock, born in December 1761 and cousin of the novelist Jane Austen, was in fact Hastings's child rather than that of his business partner, Tysoe Saul Hancock, cannot be substantiated.

The 'Plassey revolution', 1757–1765 Hastings's brief first marriage spanned the years of what contemporaries came to call the 'Plassey revolution'. In 1757 an expedition from Madras under Robert Clive, with which Hastings served as a volunteer, forced the nawab out of Calcutta and recovered it for the company. Clive's army then became the force that brought about the overthrow of Siraj ud-Daula at the battle of Plassey on 23 June 1757 and his replacement by a new nawab. In theory, the new nawab, Mir Jafar, was the independent ally of the company. In practice, the company maintained a large army that assumed the responsibility for the defence of Bengal and insisted on payments from the nawab for its services, thus quickly eroding his autonomy. The appointment of a British resident at Murshidabad to exert pressure on the nawab was a clear sign of his altered status. From 1758 Hastings served as resident. He was still at Murshidabad in 1760, when a coup engineered by the British brought down Mir Jafar and replaced him with another nawab, Mir Kasim.

Shortly afterwards Hastings went to Calcutta and succeeded to the council that managed the company's affairs under a new governor, Henry Vansittart. Hastings formed a close friendship with Vansittart, who was a man of intellectual tastes similar to his own. He allied with the governor in disputes that split the council. Contention raged around the extent to which the nawab should be permitted to regulate the private trade of British merchants. Mir Kasim tried to impose controls, which Vansittart and Hastings, although they themselves traded on a large scale, accepted that he had a right to do. On two missions to the nawab in 1762–3, once on his own and once with Vansittart, Hastings attempted to reach agreements with him. The treaty drawn up during the second mission was, however, rejected by a majority on the council, in spite of a spirited defence of it by Hastings. Tensions then erupted into armed conflict. Mir Kasim was driven out of Bengal and he and his allies were defeated in 1764 at the battle of Buxar. The violence with which Mir Kasim took revenge on the British whom he captured and on Indians who had allied with them seemed wholly to discredit Vansittart's and Hastings's policy of conciliation. Vansittart resigned his governorship and returned to Britain. In January 1765 Hastings followed him.

Early assessments and return to England, 1765–1769 Hastings's first fifteen years in India had ended in failure. His family had been wiped out. He had vainly sought to achieve a settlement with Mir Kasim and had created many enemies in doing so. One of them wrote of him, 'never was a worse Politician, credulous and to the highest degree; alarm'd by every idle report, wholly diffident in himself' (J. Carnac to R. Clive, 2 Nov 1760, BL OIOC, MS Eur. G 37/28, fol. 120). He had by no means made his fortune. Vansittart had accepted large presents from Mir Kasim, and it was strongly rumoured that Hastings had also taken

money. These rumours were never substantiated and, if it is likely that money was promised, nothing significant seems to have been handed over. He had traded extensively, but he had not realized his assets, and his friends warned him that little could be recovered.

Nevertheless, Hastings lived in some style in Britain, where he sought to influence future Indian policy and to secure his return with a prestigious position. A striking portrait depicting him holding documents in Persian script, which he commissioned from Joshua Reynolds, seems to be a clear statement of his ambitions. He drew up a proposal for a 'Professorship of the Persian Language' at Oxford, which he sent to Samuel Johnson, among others. In the proposal he used arguments that he was to develop in the future. Knowledge of Asian languages was not simply a tool for ruling in Asia; it created awareness of rich cultures of which British people were ignorant and inclined to be contemptuous. Such awareness would be, he was later to write, the means of a 'reconciliation' of 'the people of England to the natives of Hindostan' (Marshall, 'Hastings as patron and scholar', 256). On 31 March 1767 he gave evidence to the first parliamentary inquiry into Indian affairs. Neither the Mughal emperor nor the nawabs of Bengal, he told the committee, now had any effective authority. 'Possession of the country is in the English' and 'we have it in our power to make Bengal the most beneficial spot to this country' (BL, Add. MS 18469, fols. 20–30). In 1768 he was given the chance to go back to India when he was appointed second in the council of the settlement at Fort St George, Madras.

Return to India, 1769–1772 Hastings sailed for Madras on 26 March 1769. Also on the ship was the person who eventually became his second wife. She was Anna Maria Apollonia Chapuset, always Marian to Hastings [*see* Hastings, Marian (1747–1837)], born at Nuremberg of a Huguenot family. Then aged twenty-two, she was married to Baron Carl von Imhoff, who was going to India as a cadet in the Madras army and also to paint miniatures. Hastings evidently fell in love with Anna Maria during the voyage. When Imhoff moved on from Madras to Bengal, she apparently lived in Hastings's house before she followed her husband. The Imhoffs continued to live together in Calcutta when Hastings arrived there in 1772, but in February 1773 the baron went back to Europe leaving his wife in India. Imhoff applied for a divorce in a German court on grounds of desertion. This was granted in 1776. A year later, on 8 August 1777, when news of the divorce had reached India, Hastings and Marian were married. They had no children, but Hastings seems to have become attached to his wife's two sons by her former marriage, Charles and Julius Imhoff. The marriage was a source of great happiness to him for the rest of his life.

Hastings spent two successful years at Madras. His management of the company's commercial concerns was particularly commended. In 1771 the directors of the East India Company, looking for a new governor of Bengal, where recent administration was regarded as seriously flawed, chose Hastings. He returned to Calcutta on 17 February 1772.

Governor: Bengal in 1772 In his evidence to the House of Commons in 1767 Hastings had stated bluntly that Bengal was now effectively a British province. By 1772 this proposition was irrefutable. Mughal authority in Bengal was extinct, while British interference and a series of coups had left the nawabs powerless. In 1765 by the treaty of Allahabad the *diwani*—that is, the right to collect a territorial revenue, usually assessed at the equivalent of around £2 million—had been surrendered to the East India Company. What remained to the nawabs was responsibility for the defence of the province, the maintenance of law and order, and the enforcement of criminal justice. Inroads had, however, been made here too. The nawabs' army had been disbanded, and they had no power to implement any decision that was not acceptable to the company.

Hastings saw himself in 1772 as governor of what was now fully part of the British empire. He dismissed as harmful fictions formal acknowledgements of Mughal authority. Since 1765 the company had delegated a great part of its new responsibilities to what was styled a deputy nawab, called Muhammad Reza Khan. Hastings had orders to dismiss the khan and to assert the company's direct authority. He complied with alacrity and expressed the hope that no similar appointment would ever be made. He had no qualms about making further incursions into areas of government allocated to the nawabs. He believed that sovereignty, a concept that he frequently invoked, was vested in the 'British nation' (Jones, 191) and that there must be no equivocation about that. The East India Company might for the present be the duly constituted agent of the British nation, but it must be guided by national purposes, and in due time he anticipated that the company would surrender its powers over Indian government to the state, a prospect that he welcomed.

Hastings's view of his task From the outset of his government Hastings saw himself as bound to impress on British opinion the importance of what Britain had acquired in Bengal. Its 'extent ... and its possible resources, are equal to those of most states in Europe' (Gleig, 1.368). Its population was usually estimated at some 20 million people, its public revenue amounted to about one quarter of that of Britain itself, it maintained a British army of approximately 25,000 men, it had its own foreign policy with other Indian states, and the value of its exports to Britain was rising towards £1 million a year. Hastings pointed out that the management of the complex affairs of this great possession was a task of the highest responsibility. In the past he had been accused of timidity and self-mistrust, but now he had no inhibitions in proclaiming his ambition to discharge these responsibilities with éclat. 'I have catched the desire for applause in public life' (ibid., 1.375). 'I own I possess a more than ordinary degree of ambition to act in an elevated sphere under the auspices of my sovereign' (ibid., 1.472). Previous governors of Bengal had, he believed, regarded their tenure of office as an opportunity

to round off their careers by adding to their fortunes before making a quick retreat to Europe. He would serve for a long period and honourable recognition would be his chief reward. He was in fact to stay in Bengal for thirteen years.

Hastings shared the view, universal among contemporary Europeans, that Bengal was a naturally rich province with a highly productive agriculture and skilled manufacturers that had suffered from misgovernment under its later Indian rulers and during the British takeover. It had been afflicted in 1770 by a very severe famine. The new regime's task was to enable recovery to take place. In the years after 1772 Hastings developed a distinctive point of view on how this should be done. He believed that Bengal must be governed in ways to which its people were presumed to be accustomed. Indian methods of government and Indian law must be preserved. The British should aim 'to rule this people with ease and moderation according to their own ideas, manners, and prejudices' (Gleig, 1.404). He considered that Hinduism and Hindu and Islamic law were in certain respects admirable in themselves as well as being suited to the needs of the population who had come under British rule. He encouraged British officials to learn languages, make studies, and translate texts. While he believed that there could be no limitations on the company's sovereignty and that no Indian authority could be allowed to compete with it, he felt that the exercise of the powers of government under British direction should for the most part be left in Indian hands. He had no high opinion of the capacity or the disinterestedness of the great bulk of the company's British servants.

The revenue issue Revenue was the central issue of early British government in India. The huge sums levied in taxation made Indian provinces colonial possessions of unique value. Hastings always felt himself to be under irresistible pressures to maximize the revenue yield on which the company's army, its capacity to make war, and the volume of its trade depended. On the other hand, he also believed that moderate rather than rapacious management of the revenue would generate long-term prosperity that would ultimately enrich Bengal and therefore make it an even more valuable asset for Britain. Attempts to devise policies that would meet these potentially contradictory aims were gravely handicapped by ignorance. The British were uncertain both as to how much they could extract from the province without inflicting damage on it and from whom they should receive their revenue. The revenue originated in a tax that was in theory a proportion of the value of the crops grown by millions of cultivators. It was extracted from them by a complex system of intermediaries who paid a quota assessed by the government. The commonest term for these intermediaries was *zamindar*, literally landholder. The status of a Bengal *zamindar* was the subject of much debate. To some British people, they were the equivalent of European landlords, who owned the land from which they collected revenue from a mass of tenants. To Hastings, they were government-appointed tax collectors who had acquired a hereditary right to their offices.

In 1772 Hastings decided that the best way of finding out what Bengal could afford to pay was to invite competition for the right to collect revenue for a period of five years. Where the *zamindars* did not make adequate offers, higher bids would be accepted. This so-called 'farming' system was adjudged even by Hastings to have been a failure. Bids for lands were often unrealistically high and the farmers failed to pay their quotas, in spite, it was often alleged, of oppressively rigorous exactions from the cultivators. In 1776 Hastings ordered an inquiry into local revenue accounts in order to give the government some indications of what had been collected in the past. This failed to provide an effective basis for an assessment, and for the rest of Hastings's administration the company negotiated revenue assessments year by year, usually with the *zamindars*.

The role that Europeans should play in the management of the revenue was also contentious. Hastings inherited a system in which British company servants had been appointed to districts to supervise the assessment and the collection. He had no liking for this. He thought that most of the British 'collectors' were ignorant and corrupt, and he had much more confidence in experienced Indian revenue administrators. In 1781 he withdrew nearly all Europeans from the districts.

By the time he left India in 1785, Hastings's revenue administration was generally regarded as a failure. There seemed to be no evidence of improvement or growing prosperity in the countryside; the yield of Bengal's revenue to the company, in spite of higher assessments, had hardly increased and Hastings had been forced to augment the company's finances by indirect taxes, such as the monopolies created over the sale of salt and opium. British opinion began to turn against what seemed to be a policy of experiments in favour of certainty. *Zamindars* were declared to have property rights to their lands, the level of tax they paid was fixed for ever, and British collectors were reappointed to manage districts. In old age Hastings may have derived some satisfaction from knowing that it was becoming clear that these measures, embodied in the so-called 'permanent settlement' of 1793, were not proving markedly more successful in stimulating rural prosperity.

The administration of justice As *diwans* of Bengal after 1765 the company acquired responsibility for administering civil justice, cases of property and inheritance being closely involved with the payment of revenue. Criminal justice was the concern of the nawab's courts, which enforced the Islamic criminal law. Europeans had a hearty contempt for Bengal courts, dismissing them as incurably corrupt, but no effective intervention was attempted before Hastings's governorship. He believed that the British must intervene to restore a decayed system of indigenous justice. He created new hierarchies of courts, both civil and criminal. Local civil courts were to be supervised by British revenue officials. There were to be new criminal courts, which would remain under the nawab's law officers until the appointment of British magistrates in 1781. Appeals were to be heard by new British appeal courts in

Calcutta. The law administered by the courts was to be the law of Hindus and Muslims. Hastings set about obtaining translations that would make the law accessible to those Europeans who had to administer it. He launched projects for the translation of commentaries on Muslim law and of a code of Hindu law done for him in Sanskrit by a group of pandit scholars. The extent to which Hastings was able by these means to bring about the restoration of indigenous justice that he intended is highly debatable. It was impossible for European judges, with their preconceptions, such as a commitment to equality before the law, to behave like Indian judges. The translations made under Hastings's patronage were remarkable works of scholarship, but translations of classical texts were a somewhat unreal guide to current usage in evolving legal traditions. Rather than guaranteeing legal continuity, as he intended, Hastings's judicial reforms began the process, accelerated by subsequent reforms and new codifications, of producing the hybrid Anglo-Indian law that survives in contemporary India.

Diplomacy in India As governor of Bengal, Hastings not only had to direct the internal administration of a huge province, but he had to conduct a complex diplomacy with Indian states and on occasions with other European powers trading in India. By the 1770s it was impossible for the British in Bengal or indeed in their other settlements at Madras and Bombay to isolate themselves from the new order of states that was replacing the Mughal empire. Bengal was relatively invulnerable to attack, except on its western frontier. Along the Ganges valley the British province of Bihar bordered on the territory of the wazir of Oudh. Since 1765 the wazirs had been linked in a close alliance with the British and had British troops stationed with them for their defence. On the south-western frontier of Bengal were the lands of one of the chieftains of the Maratha confederacy that extended to the west coast, where the Marathas hemmed in Bombay. In the late eighteenth century the Marathas were pressing northwards. They had raided into Bengal in the past and for most of the period the Mughal emperor at Delhi was under their patronage. In the south the British at Madras had turned the neighbouring Carnatic territory into their satellite. This brought them into close contact with two powerful rulers, the nizam of Hyderabad and Haidar Ali, who had seized control of Mysore.

The armies which the British had deployed in the wars of the mid-eighteenth century had made them a formidable force in India, but they certainly could not as yet aspire to supremacy. Indian rulers were imitating European methods of equipping and training troops. Wars would not necessarily produce decisive results and would be certain to cost a great deal. Attempts to expand British territory by conquest were therefore almost universally rejected as an option for the company: great gains had come through war, but these must now be consolidated in peace. Debate focused on the extent to which the British should seek influence beyond their boundaries. Some argued for policies of strict non-intervention. Hastings had no ambition to make new conquests, but he was strongly in favour of seeking influence by alliances. In his most elaborate statement of his aims he wrote of

> a general system ... to extend the influence of the British nation to every part of India not too remote from their possessions, without enlarging the circle of their defence or involving them in hazardous or indefinite engagements and to accept the allegiance of such of our neighbours as shall sue to be enlisted among the friends and allies of the King of Great Britain.

British agents were to be posted as residents at Indian courts, Indian rulers should sign treaties, preferably directly with the British crown, and they should accept garrisons of British troops, for which they would pay subsidies (Weitzman, 87–8).

Hastings's ideal of peaceful influence over allies bore little relation to the way events unfolded. Alliances tended quickly to become subordination, as the pattern played out in Bengal after 1757 repeated itself elsewhere and rulers who entered into connections with the British faced escalating demands on their resources. Moreover, the company was to be repeatedly drawn into war, as events very early in Hastings's administration demonstrated. In order to strengthen the company's major ally in northern India, the wazir of Oudh, Hastings was willing to sanction his ambitions to absorb the territory dominated by the Rohilla people of Afghan origin. Company troops would be used against the Rohillas and be paid for their services, while the wazir would gain a secure boundary against Maratha incursions. The Rohillas were duly expelled in a short campaign in 1774. This was the first of many wars that were to mark Hastings's governorship and to prove extremely damaging to his reputation.

The business of administration The company's government was one of record. Business was transacted in consultations on which councillors entered minutes. Dispatches were sent to the directors, and men in power in India kept their friends at home well briefed. In minutes and letters Hastings was extremely adept at presenting persuasive rationalizations for his policies and in outlining ambitious future plans. To one friendly critic, he was rather too fluent on paper. 'I like Hastings's private Character exceedingly', wrote a Scottish company servant. 'I also think he would make a damnd good Governor if he was not so clever, that is, he has *too much Sail and no Ballast*. He deceives people by his writings and he is a great Schemer' (C. Alexander to D. Anderson, 13 Nov 1784, BL, Add. MS 45424, fol. 144).

Hastings's minutes and dispatches were often little more than a façade. Much of the essential business of government was transacted not on paper but in face-to-face contact between the governor and a group of Europeans and Indians upon whom he relied. When he was not actually quarrelling with his fellow councillors, he was still ill at ease with them and had no taste for collective government or shared responsibility. He dealt instead with younger company servants, often well-educated Scots, such as David Anderson, George Bogle, and Alexander Elliot, brother of the future governor-general, the earl of Minto. Such men were sent as envoys to Indian rulers or

given key posts in the revenue administration. He saw them as his own appointments, personally giving them their orders and receiving their reports rather than using official channels.

Hastings also dealt directly with Indians in a way that would have been inconceivable for his successors. He seems to have been a good linguist. The sketch for a painting by Johan Zoffany in 1784 shows him speaking, presumably in Urdu, to a Mughal prince without an interpreter. He could also conduct diplomatic and revenue negotiations in Urdu on his own. Indian rulers and great Bengal *zamindars* had to maintain personal relations with him. They corresponded directly with him and appointed Calcutta agents who paid court to him. Hastings made it abundantly clear that he expected their loyalty to be to him personally as well as to the company. He was unforgiving to those whom he supposed to be cultivating his opponents. Hastings considered that few Europeans had as yet mastered revenue and judicial administration to any great depth. The company had, in his view, to depend on learned pandits to expound the law, like Radhakanta Tarkavagisa, on Muslims brought up in the Mughal tradition of state service, and on revenue administrators, like Ganga Govind Singh, described as Hastings's 'prime minister' and as 'looked upon by the natives as the second person in the government, if not the first'. Finally, like all prominent Europeans, Hastings had a banyan, or personal agent, to manage his household and private business affairs, in this case the redoubtable Krishna Kanta Nandy (Cantoo Babu), who was a highly successful businessman in his own right and held lucrative revenue contracts.

The confident programmes of reform which he sent back to Britain did not necessarily bear much relation to the intractable realities facing Hastings: a limited direct British engagement with the great mass of their new subjects and relations with other Indian states upon which it was beyond his capacity to impose his will. Even with a high level of Indian assistance, the British could not form an accurate assessment of the revenue resources of Bengal. Nor could they re-create and apply authentic Indian jurisprudence in their courts, which in any case had a very restricted jurisdiction outside certain towns. Hastings certainly could not slot the states of post-Mughal India into a system of dependent alliances. Indian rulers could be as adept at manipulating the British for their own purposes as the British were at manipulating them. Even if he had enjoyed uncontested authority over the government of Bengal and had been able to avoid major wars, Hastings's governorship would still have been a struggle from one expedient to another. In the event, Hastings was to enjoy neither uncontested authority nor peace for most of his administration.

Structure of government and disputed authority From his arrival in Bengal in 1772 Hastings had complained about the form of government that he had to operate, inherited from the practice of a trading company and, in his view, unsuited to ruling a great political concern. As governor, he was merely one of a large council chosen by seniority and subject to orders from directors elected by a body of shareholders in Britain. In 1773 the national government intervened to impose reforms on the company. By what was called the East India Regulating Act of that year authority in Bengal was concentrated in a governor-general and a new supreme council of five. A supreme court, staffed by royal judges, was to be established in Calcutta. The members of the supreme council were named in the act and were thus the nominees of the national government. Hastings was chosen as the first governor-general, apparently without serious opposition, evidence of the good reputation he had won for his work in Bengal since 1772. Three men were sent out to join the council from Britain, General John Clavering, George Monson, and Philip Francis, to whom Richard Barwell, who was already in India, was added.

Whatever expectations Hastings may have had from the honour done to him and from the powers added to his office were quickly dashed by the unremitting opposition to all his policies shown by the three new councillors from Britain immediately after their arrival in Calcutta on 19 October 1774. Acting together, they constituted a majority against him and Barwell. The motives for the virulence of their opposition have been much debated. They quickly professed to find corruption behind every policy of the old government and to believe that, far from having begun the regeneration of a great national asset, Hastings was allowing the resources of Bengal to be plundered and wasted. They were fed inflammatory material by British company servants and Indians who were disaffected to Hastings, and there is no reason to doubt, particularly in the case of the soldiers, Clavering and Monson, that they believed what they heard and that their sense of outrage was genuine. Francis was a more complex case. An intellectual of a calibre to match Hastings, he had held minor government offices and was well versed in political intrigue, which he practised unremittingly in India. Within a few years the main aim of his life came to be to force Hastings out and to succeed him. Yet Francis too was an idealist who believed much of what he wrote. He too was appalled by what he interpreted as corruption and, from material largely supplied to him from the dismissed deputy nawab, Muhammad Reza Khan, he formulated a version of an idealized Mughal constitution which he accused Hastings of violating.

The new councillors began by denouncing the war against the Rohillas and demanding an investigation into the motives behind it. Hastings's revenue policy was also denounced as destructive of the province by displacing its natural gentry in favour of extortionate adventurers. Within a few months accusations of personal corruption were levelled against Hastings himself.

Accusations of corruption The accusations were brought in March 1775 by Nandakumar, a man who had been active in the administration of the nawabs and who, like others in his position, had sought to secure a role for himself in the new order of the East India Company. In the faction-ridden company government of the 1760s this had meant allying with certain Europeans against others. Hastings had been his enemy in the past and, although there had

been a limited reconciliation since 1772, Nandakumar evidently calculated that he stood to gain ample rewards were the new councillors to displace Hastings. To help them bring Hastings down, he accused him of having accepted presents from the court of the nawabs worth some £40,000, and other allegations were added. Hastings refused to answer these charges at the time. Much later he admitted that over £15,000 had been paid to him as the customary allowances given to the governor visiting the nawab. If the rest of Nandakumar's charges cannot be substantiated and his crude allegations of selling offices are most implausible, Hastings probably had accepted other customary emoluments. He frequently declared his lack of interest in making money, but he considered that the governor should live in a manner appropriate to his office and he was determined to send money home which would enable him to rebuild the shattered fortunes of his family. His personal accounts reveal that he sent more than £120,000 to Britain in the first four years of his government, a sum which comfortably exceeded all his official emoluments. Hastings was therefore vulnerable, if not in his own eyes, to such accusations.

Those who brought accusations against the governor-general were even more vulnerable, as Nandakumar was soon to discover. Charges of forgery were brought against him in the new supreme court. He was found guilty, sentenced to death, and executed on 5 August 1775. 'With the life of Nundcomar has ended the prevalent spirit of informants and of the litigious; the Blacks know not which way to look' (Marshall, *Impeachment*, 141), wrote an exultant British observer. The case of Nandakumar has attracted much controversy. Critics of Hastings from his own time onwards have drawn the not unreasonable inference that he promoted the prosecution and may have influenced the verdict. He stoutly denied such accusations and he has found a succession of defenders who have tried to substantiate his denials. The independence of the judges, whatever the merits of their verdict, seems in retrospect to be beyond question. It seems also clear that the prosecution against Nandakumar was promoted by his Indian enemies. There are no indications that they communicated directly with Hastings, but evidence has come to light to show that one of his closest friends was well aware of what they were doing and encouraged them.

In sentencing Nandakumar and refusing a reprieve or stay of execution, Sir Elijah Impey, the chief justice of the supreme court, an old friend of Hastings since school, and the other royal judges had acted in a way that was highly advantageous to Hastings. In other respects, however, the court proved to be another unwelcome consequence for him of the 1773 Regulating Act. Its jurisdiction was ill defined, and its attempts to extend this, and with it the use of English law in conflict with the Indian courts set up by the company, provoked bitter disputes, which required a further act of parliament of 1781 to resolve.

Even if he had no direct hand in it, the destruction of Nandakumar was an important success for Hastings in halting the flow of accusations. Whether he survived the onslaught of his opponents now largely depended on the reactions of the authorities at home, both in the company and in the national government, to the material from the rivals in Bengal with which they were being bombarded. The government tried to dismiss Hastings in 1776, but the company rejected this. Even so, Hastings's friends in Britain thought it wise to negotiate an honourable resignation on his behalf. Before this could take effect, events in India went his way. One of his opponents, Monson, died in September 1776, and by use of the governor-general's casting vote in council Hastings regained control of the government. When news of his resignation reached India, Hastings repudiated it and defeated an attempt by Clavering to assume the governor-generalship in June 1777. Two months later Clavering died. Francis alone remained to carry on the opposition against Hastings, which he did until a truce was patched up in 1780. It broke down over conflicting interpretations of its terms. Hastings accused Francis of being 'void of truth and honour' in his public and private conduct. Francis called him out, and in a duel on 17 August Francis was slightly wounded. Francis left India in December 1780. By then the national government had become reconciled to keeping Hastings in India as the least bad alternative in difficult times.

Wars: saving the empire in India? War was the main source of difficulty. From early in Hastings's administration the British at Bombay had been involved in the politics of the Maratha states seeking small territorial gains on the west coast. In 1778 fresh opportunities for intervention presented themselves when a claimant to the authority of the peshwa, or titular leader of the Marathas, sought Bombay's support. Hastings backed intervention, believing that it would enable the British to establish a dominant influence over the Marathas. Bengal troops were assembled to cross northern India in support of Bombay's efforts. Questions of influence over Indian states seemed to Hastings to become urgent with the entry of France into the American War of Independence in 1778. French diplomats were believed to be already active, and in January 1781 the first French expeditionary force arrived in India.

Unhappily for Hastings, projects for limited operations to assert British influence were engulfed in a series of wars that threatened the stability of British India. Bombay's intervention in Maratha affairs ended in the defeat of their army. In spite of Hastings's efforts to win over some of the Maratha powers, they combined against the British and in 1780 extended the alliance to include other states normally hostile to one another, Hyderabad and Mysore. Mysore was by far the most dangerous enemy. In 1780 its troops routed British armies outside Madras and the French were able to land forces to co-operate with Mysore.

Hastings took some credit for the diplomacy that broke up the formidable Indian coalition opposing him, for directing operations by the Bengal army that forced the Maratha states into a peace concluded in 1783, and for sending money, supplies, and troops on a very large scale from Bengal to Madras, thus enabling the Mysore forces to

be pushed back and the French to be contained. With some justification, Hastings saw himself as the saviour of the British empire in India, in sharp contrast with those who had lost an empire in America.

Nevertheless, the scale of the wars did Hastings great damage. Massive military exertions put a huge strain on the resources of Bengal. Its government went heavily into deficit. Virtually no funds were available for trade for some years, while some Indian costs were passed back to Britain, causing an acute financial crisis for the East India Company, which eventually had to call for aid from the state. Instead of being an asset for Britain, India was becoming a liability. Hastings was blamed for this. He was accused of being a warmonger with a lust for conquest. While he certainly had no ambitions for conquest, he was vulnerable to accusations that his intervention in Maratha affairs had been reckless and provocative.

Benares and Oudh, 1781 The needs of the war affected Hastings's dealings with the company's dependants and allies in northern India. These too damaged his reputation. During the eighteenth century the rulers of Benares had carved out a domain for themselves which came under British authority in 1775 by an arrangement carried by Hastings's opponents against him. Chet Singh, the raja of Benares, was required to pay a subsidy which, in line with the company's increasing needs, Hastings forced him to augment. On the pretext that he was evading legitimate demands, Hastings proposed to exact a large fine from him on a personal visit in 1781. The raja's retainers resisted the demand and forced Hastings to flee from the city. With considerable coolness he organized military measures to crush the uprising and eventually imposed a settlement that fully incorporated Benares into British territory. The episode left, however, a strong impression that Hastings had acted tyrannically as well as subjecting himself to needless risks.

At Benares in 1781 Hastings also tried to settle the company's relations with Oudh, its major ally in northern India. Since 1765 the wazirs of Oudh had been obliged to maintain British troops in their territory and to pay subsidies for them. The number of troops increased, as did the size of the subsidy required from Oudh. The wazir proved to be extremely adept at preventing the British from getting access to his resources and thus fell heavily into arrears with his subsidy. In 1781 Hastings tried to clear off these arrears, which were urgently needed for the war effort, by forcing the wazir to resume alienations of land revenue and by confiscating a large hoard of treasure in the possession of his mother and grandmother, the begums of Oudh. British troops stormed the begums' palaces in a largely ineffectual search for treasure. Again, Hastings appeared to have acted with a ruthless high-handedness.

Hastings in private life and as a patron As governor-general, Hastings lived either in a house to which his offices were attached, rented for him in Calcutta, or in the 'garden house' that he had built for himself at Alipore, just outside the city. Those who visited the Alipore house described it as 'most superbly fitted up with all that unbounded affluence can display' (Grier, 30). If he and his wife spent lavishly, he had little taste for public display. A slight figure, 5 feet 6 inches high and weighing 8 stone 10 pounds in his fifties, he dressed without ostentation and was abstemious in food and drink. He seemed shy and reserved in public. 'I neither drink, game, nor give my vacant hours to music, and but a small portion of them to other relaxations of society', Hastings wrote towards the end of his governorship. He then went on to describe his main relaxations as literary, encouraging accomplished British linguists to make translations from Indian texts (letter to J. Scott, 24 Nov 1784, BL, Add. MS 29129, fol. 270). Hastings rightly regarded the translation of the *Bhagavad Gita* by Charles Wilkins, for which he wrote a memorable preface ('Letter to Nathaniel Smith', *The Bhagvat-geeta, or Dialogues of Kreeshna and Arjoon*, 1785), as the crowning achievement of his patronage. In spite of his disclaimer, Hastings was also a patron of Indian music. He employed Indian musicians and was said himself to sing what were called 'Hindostannie airs' 'perfectly well' (Woodfield, 196). He collected Indian paintings and was extremely generous to European painters: William Hodges travelled in India under his patronage and Zoffany received several rich commissions from him. He sent young employees of the East India Company on missions to territories largely unknown to Europeans, such as Bhutan, Tibet, or Vietnam, not only in search of commercial opportunities, but to gather and disseminate information about their peoples. Hastings's role as patron of the arts and learning, which laid the foundations for the Asiatic Society of Bengal of 1784, is evidence not only of the sophistication of his taste but also of his sense of what was appropriate to the holder of what he regarded as now one of the most important offices in the British empire.

Resignation, 1785 By 1785 Hastings had seen war give way to peace for all parts of British India. His standing at home had, however, deteriorated. He was widely held to be responsible for the extent of the wars. Since 1781 Philip Francis had been doing his utmost to discredit him and to propagate alternative views about the governance of India. Francis gained success with politicians who were in opposition to the government that had been giving Hastings support for the last few years. Most portentously for the future, Francis's arguments about what had been happening in Bengal and what should be done in future made a favourable impression on Edmund Burke, who was giving increasing attention to India. Committees of the House of Commons, dominated by Burke and by Henry Dundas, another formidable politician who was beginning to take a serious interest in India, produced reports generally hostile to Hastings. Burke frequently denounced Hastings in extravagant terms in parliamentary speeches. When the old government fell in 1782, it was common ground for the administrations that succeeded it that there was a crisis in the government of India. Peace, reform, and retrenchment must be imposed on the company, and Hastings must be removed. Hastings's support in the company meant that he could defy orders for his

recall, but his willingness to continue serving was evaporating. In January 1784 illness had forced his wife to leave India, a separation that he found very taxing. A year later, in failing health and convinced that he had little to hope for from the new administration of William Pitt the younger, he resigned and sailed from Bengal on 7 February 1785.

Retirement Hastings landed at Plymouth on 13 June 1785, after an absence from Britain of over sixteen years. He immediately set about trying to realize the objective that he had long set himself, the recovery of the Daylesford estate for the Hastings family. After three years of negotiations he was successful, acquiring 550 acres and a ruined house. He commissioned a new house, designed for him by Samuel Pepys Cockerell, and he laid out gardens and pleasure grounds. On 29 June 1791 he moved into his new house. By then, however, he had spent some £60,000. This was greatly in excess of what he could realistically afford. He had made a considerable fortune in India, sending more than £220,000 to Britain during the period of his governorship, most of it probably acquired by perquisites of office and by private trade in the first years of his return to Bengal. Even before he reached Britain, he had, however, with characteristic generosity and lack of financial prudence permitted most of this to be spent on gifts to his family and others, and in payments to his agents, who were trying to frustrate efforts to remove him. Even in favourable circumstances, it is hard to see how he could afford to live in Daylesford.

It soon became apparent that circumstances would be far from favourable. Hastings had not unreasonable expectations of acclaim and honours on his return. He was in fact to meet attacks which culminated with his being put on trial. The trial began in 1788 and lasted until he was acquitted in 1795.

Impeachment and trial, 1787–1795 Unfortunately for Hastings, Edmund Burke, whose passionate concern for what he saw as gross misgovernment in British India had focused on Hastings, was not prepared to let him go. Burke believed that the East India Company was laying India waste by rapacious policies within its own provinces, by the exploitation of its allies, and by its wars. He held Hastings to be responsible for all this. Whatever may be thought about his judgement, there can be no question of Burke's sincerity or of his lack of ulterior motive. He stood to gain neither personally nor politically by what seemed to be a forlorn attempt to make an example of the former governor-general. Burke was now in opposition to the Pitt ministry, and Indian policies for which he had previously been responsible were held to have done much to ensure Pitt's victory. So forlorn did Burke's attempt seem that Hastings appears seriously to have underestimated the danger that he was in when in 1786 Burke produced charges for an impeachment to be voted by the House of Commons and then to be heard by the House of Lords. On 1 and 2 May Hastings delivered a hastily compiled defence. Characteristically, he refused to admit that there was a case to answer or to plead his great services in mitigation of any faults. The first charge, which related to the Rohilla War, was thrown out by the Commons, but the second, on Hastings's dealings with the raja of Benares, was passed, as were others introduced in the 1787 session of parliament. On 10 May 1787 Hastings was formally impeached.

Burke's wholly unexpected success seems to have been largely due to the attitude towards Hastings of Pitt and most members of his administration. Although Hastings had some fervent admirers, notably George III, ministers did not wish to be identified with him, and they waited for expressions of opinion by ordinary members of parliament. In 1786 and 1787 the House of Commons and a wider public was very inclined to take a high line on moral issues such as the evils of the slave trade. Burke was able to present Hastings's record in India as such an issue. Uncommitted members together with Pitt and his colleagues clearly thought that there was a case to answer and voted for the impeachment.

The case was presented in Westminster Hall in orations taking several days by Burke himself, by Richard Brinsley Sheridan, and by Charles Fox and other opposition politicians. The orations were followed by the examination of witnesses and documentary evidence. Huge crowds attended the early sessions of the trial, which was regarded as a great public spectacle. For Hastings, who could never concede that he deserved other than the gratitude of his country, the ordeal must have been unendurable. He cultivated a resigned stoicism, seeing himself, as he had so often done in the past, as a heroic lone individual battling against malignant adversity. 'You may rest assured', he told one of his friends in India, 'that the worst shall affect me no more than the spray of the wave, or the Beating of the Tempest, can injure the Plumage of an Albatross in the wide Ocean' (letter to G. Thompson, 10 April 1788, BL OIOC, MS Eur. D 1083).

By 30 May 1791, when the prosecution closed their case, only four articles of charge had been heard, that relating to the raja of Benares, a charge of oppressive treatment of the begums of Oudh, allegations of personal corruption in accepting presents, and of political corruption in distributing contracts to perform services for the company on prodigal terms to favoured individuals. By the time the prosecution case ended, few could doubt that the tide was running in Hastings's favour. His lawyers effectively emasculated allegations about presents by objections to the most important evidence. Effective press campaigns were mounted in his favour, extolling his virtues and ridiculing the prosecution. In the new climate of opinion of a more assertive nationalism in reaction to the French Revolution, empire came increasingly to be seen as part of Britain's greatness rather than as a cause of shame. Hastings's claims to have been the saviour of empire were therefore viewed increasingly sympathetically. In 1791 Hastings delivered a relatively brief statement on his own behalf, and his counsel then took two more years to reply to the prosecution's case. The 1794 session of the trial was taken up by more prosecution speeches, including a nine-day concluding speech by Burke. In 1795 the Lords gave judgment. Twenty-nine peers delivered verdicts. In every case

a large majority voted 'not guilty', the largest number voting against him on any count being six.

Assessment of Hastings's career The stark legal alternatives of 'guilty' or 'not guilty' are an inappropriate basis for any assessment of a career as complex as Hastings's. It is impossible to endorse Burke's extravagantly vituperative depiction of him in terms such as 'the captain-general of iniquity'. Few would now believe that he deserved impeachment, let alone being found guilty. Those likely to be hostile to him because of their dislike of British imperialism in India still find it difficult to see how he could be convicted on a prosecution that assumed the continuation of empire; for them he is being made a scapegoat for a rotten system. On the other hand, equally unsustainable is the tendency in much writing until quite recently which identifies Hastings's cause with the cause of empire in India against its liberal and later against its Indian nationalist critics and denies that he had any significant case to answer, beyond some minor blemishes committed in a good cause. Strictly within the terms argued out in the impeachment, Hastings was vulnerable to accusations of high-handedness in Benares and Oudh, he had accumulated a fortune by methods that the new official morality of the late eighteenth century did not sanction, and he had undoubtedly used contracts as a form of patronage.

Any assessment of him in terms that go beyond those of the impeachment must recognize Hastings's exceptional qualities of mind. He brought a creative intelligence of a very high order to Indian government. He also showed an appreciation of Indian culture and a regard for individual Indian people most unusual in any British official in high office at any time. This closeness to Indians had its harsh as well as its benevolent sides, epitomized in his dealings with the city of Benares, whose raja he drove out in 1781 but the greatest of whose Hindu temples he endowed with a 'music-house'. Partly in reaction to him, British administration in India would be more closely bound by rules and more distant from Indians.

Hastings's government can in general be seen as a mixture of benevolence and harshness writ large. He professed his desire 'to rule this people with ease and moderation' (Gleig, 1.404), but he fully recognized the difficulty of reconciling his government's 'primary exigencies with those which in all States ought to take place of every other concern, the interests of the people who are subjected to its authority' (ibid., 2.149). His primary exigency was to raise money, through revenue assessments, duties on monopolized commodities, and subsidies paid by the company's allies. In reality he lacked the knowledge and the means to extract as much as he felt that British needs required, but the pressure to extract what he could left its mark on his administration, especially in its later years, when he faced the demands of ever more expensive wars.

After the acquittal The impeachment left Hastings with bills of over £70,000, which he had no means of paying unless he sold Daylesford. The East India Company gave him an annuity backdated to 1785—that is, to when he had left India—and an interest-free loan. This did not clear his accumulated debts, nor provide him with what he regarded as an adequate income. He continued to live beyond his means and to contract new debts, in spite of further help from the East India Company, for the rest of his life.

After his acquittal in 1795 Hastings lived for another twenty-three years. Most of that time was spent at Daylesford, where he lived the life of a country gentleman, engaged in local affairs and farming that part of the estate that he kept in his own hands. He continued to read extensively and, as he had done for much of his life, to write verse. Visits were made to London and to the houses of friends, nearly always connections from India. Friends were received at Daylesford in return. Hastings frequently confessed to being content with domesticity and with rural life. No doubt he was, but frustration sometimes broke through. He then confessed that he found his life 'inconceivably dull' and that, were a return to public life possible, he would not 'cast a reflective thought on my wheat, turnips or sheep' (letters to D. Anderson, 6, 8 June 1800, BL, Add. MS 45418, fols. 98, 100).

Public employment never came again, but at least in the last years of his life Hastings received some public recognition. In 1813 he was asked to give evidence to the House of Commons on the renewal of the East India Company's charter. When he finished, 'all the members by one simultaneous impulse rose with their heads uncovered, and stood in silence, till I passed the door of their chamber' (Gleig, 3.460). He received an honorary doctorate from Oxford University and was made a privy counsellor. Had he known, he would no doubt have derived further comfort from the apprehension of those preparing for publication the impeachment speeches of the long-dead Edmund Burke that public opinion had swung strongly to Hastings's side. In the summer of 1818 Hastings complained of swelling in his throat, which eventually prevented him from swallowing anything except water. Emaciated and in much pain, he died in the evening of 22 August in his eighty-sixth year. He was buried in Daylesford churchyard, probably on 9 September. A monument to him was placed inside the church. His wife inherited Daylesford. Showing, as she had always done, much greater financial acumen than her late husband, she continued to live there until her own death in 1837.

Wealth at death none; technically insolvent: Marshall, 'Personal fortunes' • mortgaged Daylesford estate for £24,000 to wife; had other debts; lived on annuity from the East India Company that ended on death

Hastings, William, first Baron Hastings (*c.*1430–1483), courtier and administrator, was the eldest son and heir of Sir Leonard Hastings of Kirby, Leicestershire, and Alice, daughter of Thomas, Lord Camoys.

Yorkist attachment and ennoblement William Hastings was aged twenty-four and more at his father's death in October 1455. Leonard had been a retainer of Richard, duke of York, since at least 1435, and William turned to the duke for lordship in his turn. He succeeded his father as ranger of York's chase of Wyre, Shropshire, and in the following year was granted an annuity of £10 by the duke. He was pricked as sheriff of Warwick and Leicester just one month after his father's death, during the period of York's ascendancy following the first battle of St Albans. He was with the Yorkist forces when they confronted Henry VI at Ludlow in 1459 but did not accompany the leaders into exile, and managed to secure a pardon. He may have sought to keep a low profile during the events of the following year. He was not with York at Wakefield and the next firm reference to him is in the company of York's heir, Edward, after the battle of Mortimer's Cross in 1461. He was present at the battle of Towton on 29 March 1461 and was knighted on the field.

From that point Hastings's rise was extremely rapid. In May he was made receiver of the duchy of Cornwall. By July 1461 his closeness to the king had been recognized by his appointment as chamberlain of the royal household. In the previous month he had received a personal summons to Edward IV's first parliament as Lord Hastings of Hastings. A grant of the lordship, barony, and rape of Hastings followed in November. More land to support his new status was granted to him in the following February, including Ashby-de-la-Zouch in Leicestershire, which had been forfeited by the earl of Wiltshire, and land forfeited by Viscount Beaumont and Thomas, Baron Ros. In October 1464 the grant was backdated to the beginning of Edward IV's reign, and Hastings was granted in addition more Beaumont and Ros land, including Belvoir, Nottinghamshire, during the lifetime of Katherine Neville, dowager duchess of Norfolk. In the following month he was granted the honours of Peverel, Boulogne, and Hagenet, late of John Hastings, earl of Pembroke (*d.* 1389).

Alongside these landed gains Hastings received extensive office within the duchy of Lancaster, complementing his inherited interests in Warwickshire and Leicestershire. In July 1461 he was made steward of the duchy lands in those counties and in Northamptonshire and Huntingdonshire, including the lordships of Leicester, Castle Donington, and Higham Ferrers. In April 1469 he was made steward and surveyor of the king's own lordship of Fotheringhay and master of the game there.

Relations with Edward IV and Warwick, 1461–1471 Early in the reign Hastings was involved in the Yorkist military efforts in the north of England, where he took part in the sieges of Alnwick and Dunstanburgh. The trust Edward IV placed in him is reflected in the grant to him, in June 1462, of full power to receive persons into the king's grace at his discretion. In the same year he was made a knight of the

Garter. In 1465–6 Hastings became active in Edward's diplomacy, being commissioned to treat with Burgundy, Brittany, and France. In 1467 he played a leading role in negotiating the marriage of Edward's sister Margaret to Charles, count of Charolais, the heir to the duchy of Burgundy.

In the embassies of 1465–6 Hastings acted with his brother-in-law Richard Neville, earl of Warwick. The earl subsequently became increasingly distanced from Edward's court, but apparently remained on good terms with Hastings, and in 1468 made him steward of all his lands in Leicestershire, Rutland, and Northamptonshire. After Warwick's rebellion of the following year, which culminated in the king's imprisonment at Middleham, Hastings was granted the chamberlainship of north Wales—which he had initially been granted by the king in July 1461 but which he had subsequently surrendered to William Herbert, one of the victims of Warwick's coup. The grant suggests that Warwick saw Hastings as the acceptable face of Edward IV's court circle, but is certainly not evidence that Hastings had supported the earl. His loyalties remained with Edward, and after Warwick and Clarence had fled into exile in the spring of 1470 he was rewarded with the earl's office of chief steward of the duchy of Lancaster. When, later that year, Warwick and Clarence returned with French backing and drove Edward from his kingdom, Hastings accompanied the king into exile in the Low Countries. He played a leading role in the efforts to broker an agreement between Clarence and his brother the king—efforts that bore fruit when Edward returned to England, with Burgundian backing, in 1471. According to the author of *The Historie of the Arrivall of Edward IV in England* (10–11) Hastings was also largely responsible for raising the 3000 men who joined the king at Leicester and provided his first significant body of recruits.

The Hastings affinity In the redistribution of power that followed Edward's restoration, Hastings was not initially given major new responsibilities within England. The chief stewardship of the duchy of Lancaster, which he had been granted in May 1470, was now shared instead between the duke of Gloucester and the earl of Essex, although Hastings retained the lesser office of steward of Pickering, which he had been granted at the same time, and was also made constable of Nottingham and steward of Sherwood Forest, which extended his existing midland power base northwards. The new role envisaged for Hastings lay instead in Calais, where Warwick had been influential and where the garrison urgently needed to be brought securely under Yorkist control. Hastings was made lieutenant on 17 July 1471, replacing Anthony Woodville, Earl Rivers, and shortly afterwards crossed to Calais with his deputy, John, Lord Howard, and reduced the garrison to submission. Hastings was to hold the lieutenancy for the rest of his life, although he spent relatively little time in Calais, relying on his brother Ralph to watch his interests there.

It was not until the territorial reorganization of 1474 that Hastings was given a significantly enlarged regional role in England, after Edward's resumption of the duchy of Lancaster estates in the north midlands held by his brother Clarence. Hastings was not given the lands themselves, but was awarded all the key offices within them, including those of steward and constable of Tutbury and the High Peak, and steward of Newcastle and Ashbourne. Hastings was also granted (on 31 July 1474) the wardship and marriage of George, son and heir of John Talbot, earl of Shrewsbury, who had died earlier that year, along with the castle and manor of Sheffield. The eclipse of the Talbots contributed to Hastings's new importance in the region, but that importance rested essentially upon his ability to call upon the loyalty of the duchy of Lancaster affinity: a loyalty primarily owed to Hastings as steward rather than in his own right. Analysis of Hastings's retaining in the area shows how narrowly it was restricted to the areas of duchy influence. He did not, for instance, build up links with the Staffordshire gentry outside the honour of Tutbury.

Hastings was formally granted the Tutbury offices on 30 March 1474 (the High Peak appointments followed in August) and began retaining extensively in the region in April. Significantly, he did not generally offer a fee—a reflection of the value attached to his lordship within the duchy. In the course of 1474 he retained thirteen local men, and the same number in the following year. Hastings continued to build up his retinue throughout the rest of Edward's reign, and it has been calculated that members of Hastings's retinue were sheriffs of Staffordshire eight times, of Nottinghamshire and Derbyshire eight times, and of Warwickshire and Leicestershire five times (Rowney, 'Hastings affinity', 37). He evidently used the region as a recruiting ground for the Calais garrisons, which still contained a perceptible north midlands element in the early years of Henry VII. Hastings also extended his influence beyond the duchy of Lancaster, into north Warwickshire and Leicestershire, through followers such as Catesby and Ferrers of Tamworth.

Influence and its rewards, 1471–1483 Hastings's power derived from his closeness to the king. His influence was already apparent to a Paston correspondent in May 1461 and in 1472 a Paston servant commented: 'what my seyd lord Chamberleyn may do wyth the Kyng and wyth all the lordys of Inglond I trowe it be not unknowyn to yow, most of eny on man alyve' (*Paston Letters*, 1.581). Awareness of that influence made Hastings's fortune. *Ad hoc* gifts for his goodwill are generally invisible, but temporal and spiritual lords as well as religious houses created a more permanent bond by making him their steward or granting him an annuity, the fees ranging from the £3 6*s.* 8*d.* offered by Welbeck, Nottinghamshire, to the £26 13*s.* 4*d.* paid by Richard, Earl Rivers, and his wife. In March 1472 Clarence made Hastings his chief steward and master of game in Tutbury and steward of High Peak, with combined fees of £40. Foreign rulers read his importance as well. In May 1471 Charles, duke of Burgundy, rewarded him with an annuity of 1000 écus for his services to the king of England in his recovery of his realm, and in 1475 Louis XI granted him a pension of 2000 crowns. Putting a total value on such gains is impossible, but some measure of his wealth

comes from his ability to buy land and his planned building works at Ashby-de-la-Zouch, Bagworth, Thornton, and Kirby Muxlowe, Leicestershire, and at Slingsby, Yorkshire. Only work at Ashby and Kirby survives, but the outlay was clearly enormous, even after the cannibalization of other properties. He is said to have stripped the lead off Belvoir to roof Ashby, for instance.

Unusually for a royal favourite, Hastings seems to have been not only successful, but well liked too. There seems no reason to quarrel with the later verdict of Thomas More: '[an] honourable man, a good knight and a gentle ... a loving man, and passing well beloved' (More, 52). He was not criticized by the rebels in 1469–70 or by Richard III in 1484, when he was distancing himself from his brother's regime. There are, however, some suggestions of friction between Hastings and other members of the royal circle in the 1470s. There seems to have been confusion, if not tension, between Hastings and the queen over the division of the lands of the earldom of Shrewsbury; and More believed that the queen's brother Rivers was jealous of Hastings's command at Calais and sought to undermine him. Mancini gives an account of the queen's personal dislike for Hastings, and of tension between him and the marquess of Dorset (the queen's son by her first marriage), but his reading of events, like More's, may have been shaped by the desire to explain what happened in 1483.

Relations with Gloucester and execution Edward IV's death on 9 April 1483, leaving an under-age heir, gave any existing tensions a new significance. Chronicle accounts of what followed are inevitably coloured by hindsight, but there seems general agreement that Hastings feared that the queen's family would seize an undue share of power. He apparently spoke out strongly against Rivers putting himself at the head of a large force to escort the new king from Ludlow to London, and argued for a formal minority, with the appointment of the duke of Gloucester as protector, rather than the immediate coronation of the young king, which seems to have been Edward IV's own preferred solution. Gloucester and Hastings had been on good terms in the previous reign: Gloucester's role as chief steward of the duchy of Lancaster in the north had meant that their spheres of interest in the north midlands had overlapped and they had apparently worked harmoniously together. But there is no contemporary suggestion that they had formed a 'faction' opposed to the queen's family. Indeed, there is no evidence that Gloucester was perceived as a rival by the Woodvilles before his seizure of Edward V at the end of April.

That action pre-empted discussion about the form the minority government should take, and Gloucester was recognized as protector from his arrival in London with the young king at the beginning of May. Hastings presumably welcomed this turn of events and the Crowland chronicler's description of him as 'bursting with joy over this new world' (*Crowland Chronicle Continuations*, 159), although deliberately overdrawn, seems more plausible than Polydore Vergil's claim that the seizure of Edward V triggered Hastings's anxieties about Gloucester's ultimate intentions. The two men apparently remained on good terms throughout May and early June, although Hastings was inevitably less close to the protector than he had been to Edward IV. But on 13 June 1483 Gloucester had Hastings summarily executed in the Tower of London for conspiring against him. The chroniclers who mention the conspiracy are clear that the accusation had no substance and that Hastings's real fault lay in his unwillingness to countenance the deposition of Edward V, although a few later historians have argued that there was a genuine conspiracy involving Hastings and the Woodvilles and that Richard was panicked into seizing the crown.

Hastings's royal grants were seized, with the duke of Buckingham the chief beneficiary in the north midlands. This transfer of authority was evidently anticipated, and on 21 June Simon Stallworth could already report 'All þe lord Chamberleyne mene be come my lordys of Bokynghame menne' (*Stonor Letters and Papers*, 2.161). But Hastings's family escaped further penalties. His widow was allowed the custody of his land and heir, and was also confirmed in possession of the Shrewsbury wardship. Hastings's executors were able to prove his will, and shortly after his execution he was buried, as he had wished, near Edward IV in St George's Chapel, Windsor, and a chantry was founded for him there in 1503. He was also commemorated in Leicester, by the dean and chapter of the collegiate church, and in Northampton, where he and his brother Ralph had been chosen founders by the fraternity of the Holy Rood in the Wall in the church of St Gregory.

Succession and reputation Hastings had married, by February 1462, Katherine (*d.* 1503/4), the daughter of Richard Neville, earl of Salisbury, and Alice Montagu. Katherine was the widow of William Bonville, Lord Harrington (*d.* 1460), with whom she had a daughter, Cecily, who married Thomas Grey, marquess of Dorset, in 1474. Hastings's heir with Katherine was Edward, born in 1466. In 1472 Hastings was already negotiating for Edward to marry Mary, the heir of Thomas Hungerford, whose marriage he had acquired from the king. If Edward were to die, or Mary refused him, his place was to be taken by his younger brothers Richard and George in turn, but this eventuality did not materialize. Letters of dispensation were granted in 1479 and the couple had married by 1481. By this date Edward's brother George was probably dead, for Hastings's will of June 1481 names his sons as Edward, Richard, and William. He also had a daughter, Anne, whom he married to his ward George Talbot, earl of Shrewsbury.

As chamberlain, Hastings naturally took a leading role in court festivities and ceremonial. He was an active tourneyer, at least in the 1460s, leading one of the teams at the Eltham tournament of 1467. He was prominent in the celebrations surrounding the visit of Lord Gruthuyse in 1472. He shared Edward IV's enthusiasm for remodelling the household and court along Burgundian lines in the 1470s, and wrote in 1474 to Olivier de la Marche for a copy of his *État de la maison du duc Charles*. His own artistic tastes were influenced by Burgundy and he evidently favoured

the style of the Master of Mary of Burgundy. Appropriately, it was another contemporary admirer of Burgundy, Philippe de Commines, who summed up Hastings as 'a man of great sense, virtue and authority' (Commynes, 2.241). ROSEMARY HORROX

Haston, Duncan Curdy McSporran [Dougal] (1940–1977), mountaineer, was born on 19 April 1940 at 21 Dolphin Road, Currie, Midlothian, Scotland, the second of two children of Robert Bremner Haston (1900–1972), journeyman baker, and his wife, Margaret Curdy McSporran (1900–1967). He was educated at state schools in Currie and, an early beneficiary of British educational reforms easing working-class access to higher education, attended Edinburgh University in 1959 to read philosophy, but did not complete his degree.

Youthful adventures on the Currie Railway walls were followed by Haston's first visits to the highlands while at West Calder high school. By the late 1950s he had become a serious climber on rock and snow and ice. He was part of the small group of Edinburgh climbers who helped to regenerate Scottish climbing at this time, and he made a number of important first ascents. Haston also began climbing in the Alps, and came to prominence with the second British ascent of the north face of the Eiger in 1963.

At Easter 1965 Haston was involved in an automobile accident that resulted in the death of a hiker in Glencoe. He was charged with causing death by careless driving and served a sixty-day prison sentence. His friends disagree about the chastening effect of the incident, but he never drove again. Subsequently, Haston decided to devote himself to alpinism and began to spend the majority of his time outside the UK.

Duncan Curdy McSporran [Dougal] Haston (1940–1977), by Doug Scott

Haston joined John Harlin at the International School of Mountaineering (ISM) at Leysin, Switzerland, where they planned a direct ascent of the north face of the Eiger. The successful ascent in winter 1966, on which he teamed up with a rival German group, made Haston famous, but Harlin fell and was killed when a rope broke during the climb (Gillman and Haston; Haston, *The Eiger*).

Haston took over from Harlin as director of the ISM in 1967, and carried out a series of major ascents (including first ascents and first winter ascents) in the Alps, and a notable early attempt on Cerro Torre (Patagonia, 1968), during the next three years. He met Anne Jennifer (Annie) Farris, an English registered nurse, at Leysin; they married on 8 October 1969. The marriage is given one line in his autobiography (*In High Places*, 1972) which, characteristic of the terse style of writing he developed at university (cf. 'Nightshift in Zero', *Edinburgh University Mountainering Club Journal*, 1962), contains very few details of his private life. The élite French Groupe de Haute Montagne invited him to join in 1969, and Annie notes that he was 'inordinately proud' of being one of the first foreigners admitted.

In 1970 Haston and Don Whillans (1933–1985) reached the summit of Annapurna via the south face—the first major face route in the Himalayas. Midlothian county council presented him with an address on 19 May 1971, in honour of his mountaineering achievements; and he was also awarded the Royal Scottish Geographical Society medal. In 1975, during the south-west face expedition, Haston and Doug Scott became the first British climbers to reach the summit of Everest. This was the sixth attempt on the difficult high-altitude route (Haston had been on three of the previous attempts), and the best publicized, adding to Haston's fame. His other important ascents with Scott include Changabang (Himalayas, 1974), and the south face of McKinley (Alaska, 1976).

Scott notes that Haston 'was very much like a Sherpa—reticent, self-contained, economical in word and deed'; he 'never wasted a step'. Other views of Haston characterize him on the one hand as anti-social, critical, icy, and aloof, and on the other as a hard-drinking risk taker who,

according to Jimmy Marshall, 'set out to test every transgression, every canon prevailing in climbing society'. His appearance also left a strong impression. Jim Gilchrist likened him to a rock star, and Dennis Gray to a Pre-Raphaelite poet. Robin Campbell recalled Dougal's 'long loping stride, narrow hips, wide shoulders, a lipless grin and bright blue bivouacked eyes' (Campbell).

Dougal Haston died in an avalanche while skiing alone below the Col de Luisset, near Leysin, on 17 January 1977. The accident was foreshadowed in his novel *Calculated Risk* (1979), which his girlfriend, Ariane Giobellina, typed up and sent to a publisher after his death. The title captures Haston's driving, single-minded, and self-reliant approach to climbing. He was buried in Leysin cemetery and is memorialized by a stone plinth outside the post office in Currie. Hatch, Edwin (1835–1889), theologian, was born at Derby on 4 September 1835 into a nonconformist family; Samuel Hatch was his father. In 1844 his family moved to Birmingham, and he entered King Edward's School, at that time under Dr Prince Lee. Hatch began on the modern side, but his promise was discovered, and he was transferred to the classical department, where he rapidly rose until he left with an exhibition for Pembroke College, Oxford, in 1853. Shortly before this he had joined the Church of England, through the influence of Dr J. C. Miller. At Oxford he moved in a stimulating society, of which the artist Edward Burne-Jones, an old schoolfellow, and the poets William Morris and Algernon Swinburne were prominent members. Hatch was already contributing to magazines and reviews when he took his degree, with second-class honours in *literae humaniores* at the end of 1857. Ordained deacon in 1858, he worked in an East End parish in London and was ordained priest in 1859. That year he was appointed professor of classics at Trinity College, Toronto. He held this post until 1862, when he accepted the rectorship of the high school of Quebec. Here he married. His work at Quebec left a lasting impression; but in 1867 he returned to Oxford to become vice-principal of St Mary Hall, an office which he resigned under pressure of other duties in 1885. Along with his teaching at St Mary Hall he took private pupils, and actively shared in the practical work of the university. It was through him that the university *Gazette* was started in 1870, and he was its first editor. Not much later he compiled the first edition of *The Student's Handbook to the University*, and in 1879 edited Aristotle's *Ethics* in a new translation begun by his brother the Revd W. M. Hatch (*d.* 1879). In 1884 he was appointed secretary to the boards of faculties. Meanwhile he was collecting materials for the work which he had planned in theology. The first fruits of these labours appeared in a series of important articles ('Holy orders', 'Ordination', 'Priest') in the second volume of the *Dictionary of Christian Antiquities* (1880). In the same year he delivered the Bampton lectures on 'The organisation of the early Christian churches', published the following year. The bold and original views put forward in these lectures aroused considerable controversy, in which Hatch himself took little part. In Scotland and Germany the recognition that the lectures received was even greater than in England. In 1883 the University of Edinburgh conferred on the author the distinction of an honorary DD, while the eminent theologian Adolph Harnack himself translated the lectures into German. In 1887 Hatch brought out a little volume, *The Growth of Church Institutions*, intended to be the pioneer of a larger work, continuing the Bampton lectures, and dealing comprehensively with the whole subject.

From 1882 to 1884 Hatch was Grinfield lecturer on the Septuagint, another branch of study to which he had devoted himself. The substance of the lectures was published in *Essays in Biblical Greek* (1889). His long-planned concordance to the Septuagint was published posthumously, completed by H. A. Redpath (1892).

In 1883 Hatch was appointed to the living of Purleigh in Essex, and in 1884 he was made university reader in ecclesiastical history, lecturing on 'Early liturgies', the 'Growth of canon law', and the 'Carlovingian reformation'. In 1888 his philosophical interests found expression in his Hibbert lectures on the Greek influence on Christianity, published in 1890 under the editorship of A. M. Fairbairn.

Hatch had difficulty maintaining his momentum on all these projects. His restless curiosity was based in a 'strictly inductive method' (*DNB*), but he aimed also—partly as a response to the polemical antiquarianism of the authors of the Tracts for the Times—at the rather un-English objective of the compilation of something approaching a systematic theology. In the latter he was unsuccessful, but his breadth of reading and writing was unusual for an English theologian of his time, and his contribution was and remains undervalued. By the 1880s he was seen as something of a relict of the theological liberalism of the 1860s. Though sceptical about certain aspects of belief, he was not at all a sceptic. His private difficulties with aspects of Christian belief—he had ceased to believe in miracles—are recorded in his poems *Towards Fields of Light* (1890) and in his privately printed *Between Doubt and Prayer* (1878). His still popular hymn 'Breathe on me, breath of God' exemplified his theology. His optimistic chapter on liberal theology in *The Reign of Queen Victoria* (ed. T. H. Ward, 1887) claimed a success for broad-church views which was, ironically, perhaps truer in the secular than in

the ecclesiastical sphere. Overburdened with work, Hatch died from pleurisy and heart disease at his house, Marchfield, Canterbury Road, Oxford, on 10 November 1889 and was buried in Holywell cemetery, Oxford, where his wife, Bessie, was also buried. H. C. G. MATTHEW

Wealth at death £1712 19s. 9d.: administration, 9 Jan 1890, *CGPLA Eng. & Wales*

Hatch, Frederick Henry (1864–1932), geologist and mining engineer, was born on 7 March 1864 at 7 Westbourne Park Place, Bayswater, London, eldest son in the London family of five sons and two daughters born illegitimately to Henry Hatch (1817–1885) of Oxford, boot- and shoemaker (later merchant, draper, Liberal councillor, and lessee of the Theatre Royal, Oxford) and his common-law wife, Elizabeth Ann (*bap.* 1832) of Witney, Oxfordshire, daughter of William Collier, weaver, and his wife, Elizabeth. (In 1838, Henry Hatch had married Eliza, daughter of John Thomas Dobney, superintendent registrar of births, deaths and marriages for the district of Oxford, and his wife, Ann; their four sons and two daughters were born between 1840 and 1847.)

Hatch was educated at private schools in London and Paris. By 1879 he was studying general science, both privately and at University College, London. Passing the intermediate science exam in 1883, he was second in the first division with honours in chemistry, his 'obtained number of marks qualifying [him] for Scholarship, Exhibition or prize' (private information). His subsequent claim to have 'gained a gold medal and the Tuffnell scholarship for proficiency in analytical chemistry' (Hatch, 'Vita') appeared widely in contemporary biographical notices. However, University of London records do not show him receiving such an award, nor taking a London degree. Nevertheless, in 1883 he began study at the University of Bonn, and from April 1885 also worked as assistant to A. von Lasaulx in the museum of the Institute of Mineralogy. He completed his dissertation 'Ueber die Gesteine der Vulcan-Gruppe von Arequipa' ('On the volcanic rocks of Arequipa' [Peru]) in December 1885 and was awarded his PhD in 1886.

Having returned to London, Hatch joined the Geological Survey of Great Britain as a temporary assistant geologist (petrologist for England and Wales), undertaking studies of rocks from Britain and Ireland. He translated K. H. F. Rosenbusch's *Hilfstabellen zur Mikroskopischen Mineralbestimmung in Gesteinen* in 1889 and published his own *Introduction to the Study of Petrology* (1891) and *Mineralogy* (1892). He was also instructor in geology at the Royal Geographical Society and lectured aspiring explorers in the subject.

On 13 September 1890 Hatch married Mary Elizabeth (1866–1921), eldest daughter of William Henry Randall, merchant and one-time American consul in Madeira, and his wife, Mary Ann de Villiers. She was an intrepid, high-spirited woman of feminist views who felt that 'a career in the civil service however distinguished did not offer the prospects commensurate with the talents she believed her good-looking husband possessed' (private information). She persuaded him, in 1892, to go to Johannesburg as a mining engineer. Hatch joined the South African Trust and Finance Company, and soon demonstrated that the apparently separate gold-bearing 'reefs' being worked in several mines were all down-faulted parts of the same main reef leader, thus providing an important guide for future exploration.

In 1893, Hatch became assistant to the American mining engineer John Hays Hammond (1855–1936) who had recently joined the De Beers Consolidated Mines company. Early in the following year Hammond was invited by Cecil Rhodes to become chief consulting engineer to Consolidated Gold Fields of South Africa, and Hatch moved with him. He subsequently accompanied Hammond and Rhodes on a two-month expedition to evaluate the gold-mining potential of Matabeleland and Mashonaland. By 1895, Rhodes was encouraging Dr Leander Jameson and Hammond (by then a ringleader of the reform movement) to engineer a general uprising against the Boers. Hatch wisely returned with his family to England that summer. The subsequent failure of the Jameson raid on the fort at Johannesburg at the turn of the year 1896 resulted in the imprisonment by the Boers of Hammond and other leading reformers.

After some months of work on copper mines in Huelva, Spain, Hatch returned to South Africa where, under difficult conditions, he mapped 8000 square miles of the southern Transvaal, greatly assisting subsequent exploration for the main reef. A steadily worsening political situation led Hatch to return to England in October 1897. Subsequently, as a consultant, he studied gold, copper, and nickel mines in Canada, Spain, India, and Eritrea. He returned to Johannesburg as a mining engineer following the end of the Second South African War in 1902. His subsequent proof that gold-bearing reefs similar to those of the Central Rand were also present at depth in the East Rand was another important aid to future gold exploration. He also served as president of the Geological Society of South Africa for 1905–6.

Hatch returned to England in March 1906, and again set up as a consultant mining engineer, travelling to the Orenburg goldfields in Siberia (1906) and undertaking a survey of the mines and mineral resources of Natal and Zululand, South Africa (1909). From 1910 to 1913 he was a member of Christ's College, Cambridge, and he lectured in economic geology. He gave the James Forrest lecture to the Institution of Civil Engineers (1911) and was a member of the advisory board of the Royal School of Mines, London (1912–14).

The First World War began shortly before Hatch became president of the Institution of Mining and Metallurgy (IMM) for the 1914–15 session. As the war progressed,

stocks of imported iron and manganese ores, vital to production of the steel used in munitions and ship construction, became increasingly critical. Hatch was appointed to the Imperial Institute advisory committee on mineral resources in 1916 (a move which soured his relationship with the IMM) and in March 1917, he moved to the iron and steel production department of the Ministry of Munitions with responsibility for ensuring a sufficient home-production of ferrous ores. Following the armistice, he was appointed director of the mineral resources development branch of the Board of Trade (1919–20). He became a technical adviser to the mines department (1920–32) and was on the governing boards of the Imperial Mineral Resources Bureau (1919–25) and Imperial Institute (1927–32).

Hatch's publications include *The Gold Mines of the Rand* (with J. A. Chalmers, 1895); *The Geology of South Africa* (with G. S. Corstorphine, 1905); *An Introduction to the Study of Ore Deposits* (1929); and the two volumes of *The Textbook of Petrology—Igneous Rocks* (1914; 8th edn, with A. K. Wells, 1926; 10th edn, with A. K. and M. K. Wells, 1949) and *Sedimentary Rocks* (with R. H. Rastall and T. Crook, 1913; 3rd edn, with M. Black, 1928)—which became standard university texts, in addition to over one hundred scientific papers and discussions.

Photographs show Hatch to have been an imposing moustached figure. His contemporaries knew him as 'a painstaking, studious, highly-cultured scientist' who 'always retained a scholar's intellectual integrity and ... intolerance of sham' (private information); as president of the IMM he had 'by example, and by precept, cultivated the habit of studiously short speeches' (Trewartha-James). Correspondence and anecdotal evidence suggest that, at least in later life, he may have had a somewhat irascible nature. He was a keen golfer and a member of the Bath Club and the Athenaeum. He was appointed OBE in 1920, principally for his work on ore-supplies during the First World War. The rare sulphide mineral hatchite is named after him.

Hatch's wife accompanied him to the Transvaal and on fieldwork in the Indian jungle. They had four sons, the two youngest of whom were killed in action in 1915 and 1916, and one daughter. Following his wife's death from influenza in 1921, he married Amie (*b.* 1873) (daughter of William Henry Poole, and the divorced wife of Henry Farquharson Kerr, president of the Kerr Steamship Company of Kingston, Jamaica) in 1923, but they appear to have lived apart in 1925–7 and finally separated in 1928. Hatch died of bronchopneumonia on 22 September 1932, at his home, D3 The Albany, Albany Square, Piccadilly, London, following an operation, and was buried in Gap Road cemetery, Wimbledon, the next day, adjacent to his first wife's grave. Hatch, John Charles, Baron Hatch of Lusby (1917–1992), author and politician, was born in Stockport, Cheshire, on 1 November 1917, the son of John James Hatch (1864–1939), temperance advocate, and his wife, Mary, *née* White (1886–1980), headmistress. Although Lancashire-born he was brought up in Yorkshire, and his early education was at Keighley Boys' Grammar School. He graduated from Sidney Sussex College, Cambridge, in 1942 and, rejecting military service, became a tutor with the National Council of Labour Colleges. From 1944 to 1948 he was national organizer of the Independent Labour Party and a lecturer at Glasgow University. On 1 November 1941 he married Laura Alberta Brown (*b.* 1915), a nurse, and daughter of Jonathan Brown, an engine driver. There were two sons of the marriage, which ended in divorce.

In 1954 Hatch was appointed head of the Commonwealth department of the Labour Party, and in 1961 he became director of the extra-mural department of the University of Sierra Leone. From 1964 to 1970 he was the founder director of the African studies programme at Houston, Texas, and from 1980 to 1982 director of the department of human relations at Zambia University. Later he became honorary lecturer in the school of development studies at the University of East Anglia. He knew most of the African leaders before they were leaders, and he became political adviser to men he had taught as students, including Julius Nyerere and Kenneth Kaunda. He recognized the quality of Nelson Mandela and was tireless in demands for his release from prison long before the true stature of the man was generally accepted. Later Mandela invited him to the first post-banning meeting of the African National Congress, where he was greeted as an honoured guest. He had, of course, been banned from South Africa during the years of apartheid. On this last visit to Africa he also stayed with Kenneth Kaunda, accompanied by his second wife, Evangelia (Eva) Grant (*b.* 1924), a divorced lecturer and guide and daughter of Theodore Copellos, a stage manager, whom Hatch had married on 29 May 1991. Hatch was Commonwealth correspondent of the *New Statesman* from 1950 to 1970, and his books included *The Dilemma of South Africa* (1953), *A History of Post-War Africa* (1964), *The History of Britain in Africa* (1966), *Tanzania* (1969), *Nigeria* (1971), *Africa Emergent* (1974), and *Two African Statesmen* (1976).

Hatch's life, however, was not confined to political endeavour. He was keen on sport, particularly cricket and

John Charles Hatch, Baron Hatch of Lusby (1917–1992), by unknown photographer

rugby football, and was a referee for rugby union at senior level. Needless to say, when a tour of the Springboks from South Africa was arranged Hatch made it publicly clear that he would not be available. Some of his fellow members of the county championship panel thought he was being immodest in supposing himself to be on the shortlist of referees for the tour, but others agreed with him that in avoiding a possible choice and refusal scene he was simply being sensible. Certainly there were few people less interested in personal publicity.

The shape of Hatch's career precluded parliamentary candidature for the Commons, but he was delighted when in 1978 he was created Baron Hatch of Lusby and thus enabled to further, at the place of government, causes dear to his heart while still in full possession of his considerable, indeed exceptional, abilities. He was a formidable presence in the Lords, calm and burly, but not fat. When he spoke in his deep voice from his place high on the top back bench, noteless and unhurried, the house listened. Even those irritated by his explicit exposure of cherished beliefs as questionable if not fallacious could only put their heads in their hands, for experience showed that Hatch would seize on interruption to argue his case at even greater length. He would not sit down until he was good and ready, even when his own front bench was showing signs of becoming restive. On one occasion his fellow peers were forced to use a little-known device, 'that the Noble Lord be heard no longer'. We had adjacent desks in a room with eight others, which was said to contain the nearest thing to a left wing the Lords was likely to experience. There John explained to me that in a time-limited debate he would always take slightly less than his allotted five minutes, or whatever it was, but if he took part in an unrestricted discussion he alone would determine the extent of his contribution. As he did his homework and seldom strayed outside the range of his own expertise that seemed reasonable, even if it sometimes strained the patience of the less tolerant or more percipient.

Hatch remained active until his death from heart failure on 11 October 1992 in a London hospital. He donated his body to London University for medical research, and his remains were subsequently cremated. He was survived by his second wife, and by Stuart and Barrie, the two sons of his first marriage. Although personally agnostic, Hatch respected and enjoyed the friendship of many believers, and a memorial service was conducted by the Revd Lord Soper at St Mary Undercroft in the Palace of Westminster, on 19 January 1993. Among those who spoke were the Most Revd Trevor Huddleston, the Zambia high commissioner, lords Pitt and Judd, the dean of the school of development studies at the University of East Anglia, and Hatch's fellow agnostic, the present writer. Hatch will be remembered as a man of total integrity, a true internationalist of proud commitment to his socialist conviction.

Hatchard, John (1768–1849), publisher and bookseller, was born on 17 October 1768. He is thought to have been the youngest among the three sons of Thomas Hatchard and Sarah Clarke, of St Margaret's, Westminster. Educated at Grey Coat Hospital, on 7 January 1782 Hatchard went on trial to the printer Thomas Bensley, of Swan Yard, Strand. Not liking it there, he left before the end of the month and in June went to Mr Ginger, printer and bookseller, of Great College Street, Westminster. He was bound as an apprentice—in reality, an errand-boy—on 18 September of that year. Ginger had connections with Westminster School and the Royal Society, and Hatchard made acquaintances that were important to his later career. He celebrated the completion of his apprenticeship in October 1789 with friends, enjoying at his father's expense 'a good supper and flowing bowl of punch, with some good songs, toasts, and sentiments' (Humphreys, 5). According to his biographer, Arthur L. Humphreys, it was one of the few occasions when Hatchard 'gave way to right merry jollity. He was too industrious ever to give much time to amusements' (ibid., 9).

After completing his apprenticeship Hatchard became shopman to the leading London bookseller Thomas Payne, starting on 26 October 1789. He married on 11 July

John Hatchard (1768–1849), by unknown artist

1790 Elizabeth Lambert, daughter of Thomas and Elizabeth Lambert; they had two sons and two daughters. The elder son, the Revd John Hatchard, became vicar of St Andrew's, Plymouth, and the younger, Thomas [*see below*], succeeded his father in running the family business. Hatchard learned from Thomas Payne respect for the book trade and the importance of 'fair dealing'. Payne's shop in Mews Gate, Castle Street, St Martins, was the first to be known as a 'Literary Coffee House and Bookseller's combined', and Hatchard met there 'the best book-buyers in a great book-collecting period' (Humphreys, 11). The experience was of inestimable value to him and on 30 June 1797 he left Payne's employment and opened business on his own account. Although confident of his future he was unable to pay the modest rental on premises at 173 Piccadilly and relied on the help of friends. He later recalled: 'When I commenced business I had of my own a property less than five pounds, but God blessed my industry, and good men encouraged it' (ibid., 6).

Hatchard's new premises were on the unfashionable side of 'the most magnificent street in London' (Humphreys, 27). He was a shrewd and determined businessman and not unduly worried by competition, realizing that the principal West End thoroughfare could sustain a healthy book trade. Nearby Albany in particular brought him many wealthy patrons. As a bookseller and publisher Hatchard favoured works that reflected his own tory and evangelical beliefs, and in both 'he was speculating on a rising market' (Laver, 11). By the mid-1790s the conservative reaction against the revolution in France was in full swing. Within a year of setting up in business Hatchard published the ultra-respectable admonitory tract *Reform or Ruin: Take your Choice* (1797), by John Bowdler. This sold in phenomenal numbers and laid the foundation for Hatchard's future success. He stocked a wide assortment of anti-revolutionary tracts, posters, and songs, and among the early works to issue from 173 Piccadilly were *The Anti-Jacobin* and pamphlets by Edmund Burke. Hatchard also sold the halfpenny tract *Prospect* which foretold the consequences of a Napoleonic invasion: 'Universal Pillage. Men of all Parties Slaughtered. Women of all Ranks Violated. Children Murdered. ... The remaining Inhabitants carried away by Ship-loads to Foreign Lands' (ibid.).

Hatchard was the early publisher and bookseller of Hannah More, and issued the reports of the Society for Bettering the Condition of the Poor, founded in 1796 by William Wilberforce, Sir Thomas Bernard, and E. J. Eliot, the brother-in-law of William Pitt. Such was his standing that he was made bookseller to Queen Charlotte, from 1800 to 1809. About June 1801 he moved to larger premises at 190 Piccadilly and in the next year gained an important commission when he was appointed publisher of the *Christian Observer*. This famous periodical circulated among members of the Clapham Sect, including Wilberforce, Granville Sharp, and Zachary Macaulay. Members of the group regarded Hatchards 'as a kind of club' and according to Sydney Smith, a tory but not an evangelical, those who gathered there were 'well in with the people in power, delighted with every existing institution and almost with every existing circumstance' (Laver, 13). It was at Hatchards, too, that the inaugural meeting of the Royal Horticultural Society took place on 7 March 1804.

According to a voluminous 3 shilling catalogue the general stock at 190 Piccadilly comprised some 7000 items, ranging from Hogarth to Hooker, Juvenal to Josephus, Southey to Scott. There was considerable emphasis on 'improving' literature, with Paley well represented, and an extensive collection of classical authors. The list of works published by Hatchard ran to fifty pages and began with *The Anti-Jacobin* and *Antidote to Infidelity*:

> Here in a nutshell (the mere chance-bracketing of an index) is that Grand Alliance of tory and Evangelical which did so much to determine the course of English history ... and upon which ... the fortunes of the House of Hatchard were built. (Laver, 17)

In addition to a wide variety of books Hatchards was famous for pamphlets, which were specially important in the days before the proliferation of newspapers and magazines, and 'an avalanche of instruction and exhortation' fell from the shelves (ibid., 18). Hatchard also published plays and poetry, notably the poems of George Crabbe in 1807, but works of literature were outnumbered by singly issued sermons.

In February 1817 Hatchard was found guilty of libel after publishing an uncorrected error in an official report. Although technically guilty he was, as many publishers found themselves in such cases, 'the scapegoat for the delinquencies of others'. Reflecting on the outcome of the trial William Wilberforce wrote: 'We, of course, shall prevent his suffering' (Humphreys, 47–8). Hatchard was not damaged by the verdict and in 1823 moved premises for the last time, settling at 187 Piccadilly. There he continued the tradition of the literary coffee house. In the centre of the room was a table with newspapers and old-fashioned chairs, where readers could sit and talk and, not infrequently, fall asleep by the fireside. Outside the shop was a bench for the coachmen to sit. Hatchard, the epitome of the 'conversible' bookseller, had risen from an errand-boy to the front rank of the London book trade. Long-standing

patrons and friends included George Canning, the dukes of Wellington, Richmond, and Leeds, Earl Bathurst, Robert Peel, and lords Palmerston and Derby. Nearly all Canning's publications bore the Hatchard name, which appeared, such was the firm's reputation as a 'church house', on *Defence of the Church* (1838) by W. E. Gladstone, then 'the rising hope of stern and unbending Tories' (ibid., 58). In the 1830s Gladstone was a regular visitor to Hatchards, where, eschewing company and the comfort of an armchair, he would busy himself with a list of pamphlets for purchase, 'even then demanding ten per cent. or threatening to go elsewhere' (ibid., 67).

Hatchard was held in high esteem by a large circle, not least for 'his strict piety and goodness of heart, his extensive benevolence and upright character' (*Annual Register*, 1849, 249). Though a warmly attached member of the Anglican faith, he respected those who differed from him but who acted with Christian charity towards others. He was empowered by members of the Clapham Sect to receive subscriptions for charitable causes, and helped to find situations as governesses for young ladies whose parents had given them an education but little or no money to live on. He was forced by ill health to retire in 1845 and died after a short illness on 21 June 1849, at his home on Clapham Common, London. He left legacies to over thirty-seven charitable institutions in his will. In appearance he was 'the very acme of respectability' (Humphreys, 63), habitually wearing semi-clerical dress with a black frock coat in the style of a bishop's. He always had a word for the errand-boys bearing their loads of books into his shop, 'encouraging them to be industrious, and never afraid of work' (ibid., 64).

Thomas Hatchard (1794–1858), publisher and bookseller, was born on 24 April 1794, the second son of John Hatchard and his wife, Elizabeth, *née* Lambert. He was baptized at St Martin-in-the-Fields in Westminster on 25 May 1795. He married on 23 May 1815, Elizabeth Goodwin; they had one son and three daughters. Thomas Hatchard became a partner in Hatchards in 1819 and after taking over the firm in 1845 ran it along the same lines as his father. Although 'cast in a smaller mould', he had his father's reputation for generosity, philanthropy, and probity (Laver, 28). He was, though, 'a little more flighty in appearance', commonly wearing 'a blue dress coat with velvet collar, gilt buttons, white cravat, yellow waistcoat, and brown nankeen trousers' (Humphreys, 73). Thomas Hatchard died on 13 November 1858 at Chichester Terrace, Brighton. The family connection in the firm continued after his death, and although Hatchards faded as a publishing house it continued to thrive as a bookseller, notably under the management of Edwin A. M. Shepherd and Arthur L. Humphreys from 1891. MARK POTTLE

Hatchard, Thomas (1794–1858). *See under* Hatchard, John (1768–1849).

Hatchard, Thomas Goodwin (1818–1870), bishop of Mauritius, was the son of Thomas *Hatchard (1794–1858), the publisher [*see under* Hatchard, John]. He was born at 11 Sloane Street, Chelsea, on 18 September 1818, and educated at King's College, London. He matriculated at Brasenose College, Oxford, on 11 April 1837, where he was inscribed as Thomas Goodwyn Hatchard. He graduated BA in 1841, MA in 1845, and DD on 4 February 1869. After being ordained by the bishop of Winchester in 1840, he served as curate of Windlesham, Surrey, from 1842 to 1844; as domestic chaplain to Marquess Conyngham from 1845 to 1869; as rector of Havant, Hampshire, from 1846 to 1856; and as rector and rural dean of St Nicholas, Guildford, Surrey, from 1856 to 1869.

On 19 February 1846 Hatchard married Fanny Vincent Steele (*d.* 7 Dec 1880), the second daughter of the Right Revd Michael Solomon Alexander, bishop of Jerusalem. They had at least one daughter, called Adelaide Charlotte, who died young, and a son. Hatchard was consecrated bishop of Mauritius in Westminster Abbey on 24 February 1869. He was a moderate evangelical in his religious outlook and was a conscientious parochial clergyman. He published four sermons as pamphlets between 1847 and 1862, and also *The German Tree: a Moral for the Young* in 1851 and a brief memoir of his daughter, entitled *The Floweret Gathered*, in 1858.

Hatchard died of cholera in Mauritius on 28 February 1870. His widow published a number of works about motherhood, including *Eight Years' Experience of Mothers' Meetings* (1871), *Mothers' Meetings and How to Organize Them* (1875), and *Mothers of Scripture* (1875). His son, Alexander, joined the family publishers.

Hatcher, Henry (1777–1846), antiquary, was born at Kemble, near Cirencester, on 14 May 1777, the son of a farmer. His parents moved to Salisbury about 1790. Educated by a schoolmaster named West, Hatcher excelled in classics and mathematics. At the age of fourteen he became junior assistant in the school, and during the next three years filled similar posts elsewhere. He left an affectionate memoir of another Salisbury mathematics teacher, a Mr Moon.

About 1795 Hatcher was engaged as assistant to the historian and archaeologist the Revd William Coxe. He was a fine linguist, versed in Latin, Greek, French, German, Italian, Spanish, Portuguese, and Dutch; in his *Memoirs of the Kings of Spain of the House of Bourbon* (1813), Coxe acknowledged Hatcher's assistance in the translation of Spanish

and Portuguese. Coxe later left Hatcher a legacy of £220. Both men helped Sir Richard Colt Hoare with his edition of Gerald of Wales's *Itinerary* (1806); this induced Hatcher to undertake a translation of the *Speculum historiale* of Richard of Cirencester. In 1814 he supplied the letterpress for *An Historical Account of the Episcopal See, and Cathedral Church, of Sarum* (1814), published under the name of William Dodsworth; in 1834 he wrote *An Historical and Descriptive Account of Old and New Sarum*. He assisted Hoare with his *Classical Tour through Italy and Sicily* (1813) and his *Recollections Abroad* (1817), and John Britton with the third volume of his *Beauties of Wiltshire* (1801) and the Salisbury part of his *Picturesque Antiquities of English Cities* (1830).

On 22 May 1817 Hatcher married Anne (*d.* 1846), daughter of Richard Amor of Durrington. In the same year, he became postmaster in Salisbury, but continued to assist Coxe. At Christmas 1822 he resigned his post, and started a private school at Fisherton Anger, near Salisbury, moving to Endless Street in Salisbury two years later. In 1835 he published *A Supplement to the Grammar, Containing Rhetorical and Logical Definitions and Rules*, for the use of his pupils.

About 1835 Hoare renewed an offer that Hatcher should compile the Salisbury part of *The History of Modern Wiltshire* (1822–44), and he was given the materials which Richard Benson, the recorder of Salisbury, had earlier collected. Benson proposed that his name should appear on the title-page as joint author; although Hatcher objected, Benson's influence with Hoare was the greater and the two parts of the publication appeared in 1843 with both names, and a preface by Benson. The dispute was never resolved, and it embittered Hatcher's last years. Hatcher died suddenly at home in Endless Street, on 14 December 1846, and was buried five days later at St Edmund's, Salisbury. Among the manuscripts which he left behind him were an Anglo-Saxon glossary and grammar, a treatise on the art of fortification, and a dissertation on military and physical geography. A monument by William Osmond, a local sculptor, was placed by public subscription in Salisbury Cathedral.

Hatcher, Thomas (*d.* 1583), antiquary, was born at Cambridge, probably in St Edward's parish, the son and heir of John Hatcher MD (*d.* 1587), fellow of St John's College, regius professor of physic (*c.*1554), and vice-chancellor of the university (1579–80). His mother was Alice, daughter of Edward Green of London. Hatcher was educated at Eton College, where he was elected in 1555 to King's College, Cambridge. He proceeded BA in 1559–60, MA in 1563, and was a fellow of the college from 1558 to 1566. Hatcher studied law at Gray's Inn, where he was admitted in 1565, and subsequently studied medicine, but there is no evidence that he practised either profession. In 1565 Hatcher and other fellows of King's College wrote a letter of complaint against the provost, Phillip Baker, accusing him of Catholic tendencies.

Hatcher married Catharine, daughter and heir of Thomas Rede, son of Richard Rede of Wisbech. They had three sons, John (1566–1640), who was elected from Eton to King's College, Cambridge, in 1584, succeeded to his grandfather's estates, and was knighted; Henry, of St John's College, Cambridge; and William. In addition Hatcher was survived by three daughters, Alice, wife of Nicholas Gunter, mayor of Reading, Elizabeth, and Anne.

Hatcher's friends included John Caius, who in 1570 inscribed to him 'De Libris suis propriis', and John Stow. Hatcher wrote to Stow on 15 January 1581 returning borrowed books, raising questions about authors cited in Stow's chronicles, and asking him to speak with William Camden about publishing the history of Tobit, from the biblical Apocrypha, in Latin verse. In 1565 he wrote to Sir William Cecil requesting his patronage for publication of the collected writings of the ecclesiastical lawyer Walter Haddon, who was also famous for his Latin verses.

Hatcher duly edited Haddon's *Lucubrationes et poemata* (1567, STC 12596, 12597), and also *De scriptorum Britannicorum paucitate* (1576, STC 4686) by Nicholas Carr (formerly regius professor of Greek at Cambridge). Among his own manuscript works, the most notable is a catalogue of the fellows and scholars of his college, 'Catalogue praepositorum, sociorum, et scholarium Collegii Regalis Cantabrigiae, a tempore fundationis ad annum 1572' (Gonville and Caius College Library, Cambridge, MS 173/94, fols. 119–203; BL, Harleian MS 614, Add. MSS 5954 and 5955). In this chronological list, with biographical details attached, Hatcher was responsible for the first 869 names, from 1441 down to the end of 1562, after which the work was continued by other hands until 1646. His continuators clearly added to Hatcher's entries; for example the notice of Richard Cox, who entered the college in 1519, concludes with his death in 1581, nineteen years after Hatcher ceased to be responsible for the catalogue. Such additions make it hard to tell exactly what Hatcher's work consisted of, or what sources he employed, but he seems to have consulted college and university records, to have scrutinized the plate and contents of the library at King's, and to have been alert to the value of inscriptions in stone and glass. He also records college traditions and gossip: thus the young Nicholas West, later bishop of Ely, is said as a young man to have been a trouble-maker who 'set fire on the provosts lodgings & stole away silver spoones', and Robert Bygs was 'alwayes a peacemaker of such controversies as hapned in the Colledge' (BL, Add. MS 5955, fols. 9*v*, 13*v*). The entry on Hatcher himself in the catalogue also records him as the author of '2 bookes according to the Centuries of Baleus of excellent men that had bene of this universitie since the foundation of our Colledge & a

Chronographie of Cambr. Antiquities' (BL, Add. MS 5954, fol. 25*v*); these works do not appear to have survived. His catalogue with its continuations was subsequently incorporated in William Cole's 'History of King's College, Cambridge' (BL, Add. MSS 5814–5817). Manuscript writings in Latin verse also survive. In 1567 he gave a Greek text of the gospels, probably dating from the twelfth century, to the library of Gonville and Caius College.

During his later years Hatcher lived on his father's manor at Careby, near Stamford, Lincolnshire, where he was buried on 14 November 1583. In his will (PRO, PROB 11/66, fols. 218*v*–219*r*), dated 10 November, Hatcher said, 'I have hetherto lyved and have bene maintayned cheiflye by [my father's] paynes and travell'. After committing his soul 'to our heavenly Christ in whome and by whome all externall fantasies sett asyde I hope assuredly to be saved', he divided his goods and chattels among his wife and children. His eldest son was to have the use of his books of logic and philosophy while he was at university. He bequeathed to his 'loving' wife horses and sheep as well as the residue of his estate. Money was provided for the three daughters payable on the day of their marriage or at age eighteen. At the end of the will Hatcher begged his father to assist his wife and children, and to permit them to remain at Careby, where they had lived together with 'some comforte'. The will leaves little doubt that Hatcher's father provided the means that allowed him to pursue a life of scholarship.

Hatcher, Thomas (*c.*1589–1677), parliamentarian army officer, was the first son of Sir John Hatcher (*d.* 1640) of Careby, Lincolnshire, and his first wife, Anne Crewes (*d.* 1595), daughter of James Crewes of Fotheringhay, Northamptonshire. He was admitted to Emmanuel College, Cambridge, on 18 June 1603 (there is no record of his graduation), and to Lincoln's Inn on 9 May 1607. On 14 October 1617 he married Katherine Ayscough (*d.* 1651), daughter of William Ayscough of South Kelsey, Lincolnshire, with whom he had two children. Although the Hatchers were a prominent Lincolnshire family, Thomas was the first of his line to enter parliament. He was returned for Lincoln in 1624; and for Grantham in 1628. He probably owed these electoral successes to his family's intimacy with Lincolnshire's influential puritan knights Sir William Armyne, Sir Edward Ayscough, and Sir Thomas Grantham. Although largely inactive at Westminster, Hatcher became a close friend of Sir John Eliot, who numbered him among the 'honest sons of Lincolnshire' (Forster, 2.650).

Hatcher was returned MP for Stamford (near Careby) in March 1640, and again in October. In the early months of the Long Parliament he was named to numerous committees for reforming the 'abuses' of the personal rule of Charles I, suppressing popery, and abolishing Laudian innovations. In the spring of 1642 he was named to several parliamentary commissions for securing Lincolnshire and for assisting Sir John Hotham at Hull. In June Lord Willoughby of Parham appointed him a deputy lieutenant and militia captain for Lincolnshire, and on 1 September he was commissioned a captain in the earl of Essex's army. In October 1642 Hatcher and Sir Christopher Wray led their troops into Yorkshire, where they joined the forces under Ferdinando, Lord Fairfax and Captain John Hotham fighting the earl of Newcastle's army.

By summer 1643 Hatcher was closely identified with John Pym's policy of seeking Scottish military support, and he was one of the Commons' commissioners who negotiated the solemn league and covenant at Edinburgh in August and September. He played a leading role in parliament's efforts to meet its political and logistical commitments under the covenant, and, having entered England with the Scottish army in January 1644, did not return to Westminster until after the battle of Marston Moor. In August the earl of Manchester appointed him governor of Lincoln in place of the quarrelsome Colonel Edward King. Hatcher's spell as governor (which was terminated by the self-denying ordinance) was marked by 'sweet harmony' between the county committee and local commanders (*CSP dom.*, *1644–5*, 473). In April 1645 the Commons appointed him a commissioner to persuade the Scots to bring their army south to cover for the fledgeling New Model Army. During the course of 1645 Hatcher seems to have gravitated towards the anti-Scottish 'Independent' faction. In July the Commons appointed him a commissioner to negotiate with the Scots for the surrender of the English towns they held, and in December he was appointed to yet another parliamentary commission—this time to supply and police the ill-disciplined Scottish army at Newark in order to prevent any 'plundering, robbing or spoiling' (*JHC*, 1644–6, 4.374).

Hatcher was largely inactive in the Commons after 1645, though his tellership with the radical MP Herbert Morley on 29 March 1647 suggests his continuing alignment with the political Independents. He retained his seat at Pride's Purge, but withdrew from the house completely, and on 14 June 1649 was issued with a pass to go to France 'for recovery of his health' (*JHC*, 1648–51, 6.228). He had returned to England by July 1653, and in 1654 was elected for Lincolnshire to the first protectorate parliament. Of the ten successful candidates who stood for Lincolnshire in 1656 he apparently received the second-largest number of votes, and was deemed by Major-General Edward Whalley to be conformable to the protectorate. Hatcher was returned for his county a third time in January 1659. He did not sit in the restored Rump, and was omitted from the July 1659 militia commission. His son John was one of

the Lincolnshire gentlemen who presented the county's petition for a 'free, full Parliament' to General Monck (*A Letter from Divers of the Gentry of the County of Lincolne ... to General Monck*, 18 Feb 1660, BL, MS 669, fols. 23/51). Hatcher stood for Lincolnshire with Colonel Edward Rosseter in April 1660, but following his defeat by George, Viscount Castleton, was returned for Boston with the help of Sir Anthony Irby. At the Restoration Hatcher retained his place on the Kesteven bench and was appointed a Lincolnshire deputy lieutenant. He died in 1677 and was buried at Careby church on 11 July.

Hatchett, Charles (1765–1847), chemist, was born in Long Acre, London, on 2 January 1765, the son of John Hatchett, a successful coach-builder, and his wife, Elizabeth. Hatchett attended Fountayne's, a fashionable private school in Marylebone Park, Middlesex; he was self-taught in chemistry and mineralogy. He entered his father's business and in 1786 married Elizabeth Collick (1765–1837), daughter of a London wig maker. On a business journey to Russia (where he delivered a coach to Catherine II), Poland, and Germany in 1790–91 he met many prominent figures in politics, commerce, and science.

On his return Hatchett equipped a private chemical laboratory at his home in Hammersmith. An analysis of lead molybdate in 1796 established his reputation as a mineral chemist and in the same year he toured England and Scotland visiting mines, factories, and geological sites. He was elected FRS on 9 March 1797. About 1800 he employed the young William Thomas Brande in his laboratory, teaching him chemistry and mineralogy. Brande, who later succeeded Humphry Davy as professor of chemistry at the Royal Institution, married Hatchett's second daughter, Anna Frederica. In 1801 Hatchett discovered a new metal in a mineral from North America. He named this metal 'columbium' but could not isolate it. He also analysed animal substances such as bones, shells, dental enamel, and other natural materials including an artificial tannin extracted from charcoal. He observed the formation of bitumen from vegetable matter and examined Bovey coal. Between 1796 and 1806 he published at least nineteen important scientific papers, mainly in *Nicholson's Journal* and the *Philosophical Transactions of the Royal Society*. After his father's death in 1806 necessary attention to business caused a decline in his scientific work, but in 1808 he was a founder member and president of the Animal Chemistry Club, a special-interest group within the Royal Society.

Hatchett had wide cultural interests apart from science. He was a good organist and owned a large collection of rare books, musical scores, pictures, and curios. In 1810 he moved to Bellevue House, Chelsea, built by his father in 1771. There is a brief description of the house and its contents in Thomas Faulkner's 1829 history of Chelsea. Hatchett was wealthy, and his distinguished appearance, good humour, and lively conversation made him a popular member of London society. On 21 February 1809 he was elected to the Literary Club, established in 1764 by Dr Johnson and Sir Joshua Reynolds. In 1814 Hatchett became its treasurer and he wrote an account of the club, with a complete list of its members, for Croker's edition of Boswell's *Life of Johnson* (1832). He was a long-standing member of the Royal Society Club and was frequently asked to serve on public committees, especially when scientific issues were involved. Hatchett's last publication was a small brochure *On the Spikenard of the Ancients* (1836). He died of 'water on the chest' (pleurisy) at Bellevue House on 10 February 1847, aged eighty-two, and was buried at Upton, Buckinghamshire, near his parents and wife.

Wealth at death £80,000–£90,000: administration

Hatfield, John (*c.*1758–1803), impostor and forger, was born at Mottram in Longdendale, Cheshire, one of the many children of a poor estate woodsman. His mother, the daughter of a schoolteacher, taught him to read and write but he received no formal education. After the imprisonment of his father and the death of his mother he was apprenticed to a Chester linen draper. At the age of fifteen he married a natural daughter of Lord Robert Manners, who gave him £1500 as her dowry. Hatfield took his bride to London, where they rented a house in Mayfair and lived in luxurious style. Trading on his Manners connection, Hatfield ran up heavy debts which Lord Robert settled on condition he left the capital. The Hatfields emigrated

to the American colonies but, after his wife had given birth to three daughters, John deserted his family and returned alone to England. The first Mrs Hatfield was said to have died broken-hearted and destitute.

In 1782 Hatfield reappeared in London where more debts landed him in the king's bench prison. Again he was bailed out by Lord Robert. Still exploiting the Manners name, he followed the duke of Rutland to Dublin in 1784, when the duke was appointed lord lieutenant. Another unpaid bill put him in the Dublin Marshalsea until rescued by the duke and escorted to the packet boat bound for Holyhead. For a time he frequented the resorts of southern England before making his way north to Scarborough. There, still claiming falsely that he had Rutland's favour, he presented himself to the corporation as Major Hatfield, prospective parliamentary candidate for the borough. Failure to meet the New Inn's bill led to his arrest, and from 1792 until 1800 he languished in the local debtors' gaol. During his incarceration he somehow succeeded in publishing anonymously *A New Scarborough Guide* (1797), dedicated to John, duke of Rutland, who failed to respond with the necessary release money. However, across the street from the prison were rooms occupied by a Devon woman, Michelli Nation, and almost every day for more than six years John and Michelli gazed at each other until finally she secured his freedom by satisfying all his creditors. The next morning, 14 September 1800, they were married by special licence in St Mary's parish church. Soon afterwards the couple left Scarborough to live in Tiverton, but within eighteen months Hatfield had abandoned his pregnant wife and daughter without a penny and resumed his life of deception and extravagance in London. To circumvent the demands of a growing number of creditors he tried and failed to get himself elected MP for Queenborough.

In July 1802, now posing as the Hon. Colonel Alexander Augustus Hope, brother of the earl of Hopetoun and MP for Linlithgow, Hatfield arrived at Keswick in a handsome carriage. He carried off his new role with such skill that all the neighbourhood accepted it without question. At Grasmere he duped John Crump, a wealthy Liverpool merchant, into advancing him money, but his scheme to marry a rich heiress was frustrated by her guardian's insistence on proof of identity. Nevertheless, Joseph Robinson, landlord of The Fish inn at Buttermere, was delighted to agree to the marriage of his only daughter **Mary Robinson** (1778–1837), shepherdess and social celebrity, to 'Colonel Hope' on 2 October 1802 in Lorton parish church. Mary was already famed as 'the Maid of Buttermere' and the wedding of a supposed earl's brother to a shepherdess aroused widespread public interest. Under the heading 'The romantic marriage', Samuel Taylor Coleridge's report of the event was soon printed in the London *Morning Post*. George Hardinge, senior justice of Brecon and an old friend of Colonel Hope, sought out the bridegroom at Keswick. Confronted by Hardinge, Hatfield said he was Charles, not Alexander, Hope, MP for Dumfries, but his lies were exposed when the real Charles Hope denounced him as an impostor in a letter to the *Morning Post*. None the less Hatfield eluded arrest by taking a 'fishing trip' on the lake which turned into a successful flight. Letters he left behind at Buttermere revealed him as a forger as well as a bigamist and a police notice was circulated describing his appearance in detail and offering £50 for information regarding his whereabouts.

Hatfield was finally caught in south Wales, questioned before Bow Street magistrates, and sent for trial at Carlisle assizes. Though neither Michelli Nation nor Mary Robinson would condemn him, he was found guilty on two out of three indictments for forgery, and was hanged at Carlisle on 3 September 1803. His corpse was buried in the town's St Mary's churchyard in a place reserved for criminals. Hatfield's 'widow', Mary Robinson, won the sympathy and admiration of poets, dramatists, journalists, and biographers. Public subscriptions were raised for her benefit. Four years later she married Richard Harrison, a prosperous farmer of nearby Caldbeck in Cumberland; they had four children. The death of 'the Beauty of Buttermere' was considered sufficiently noteworthy to be published in the *Annual Register*.

Hatfield was a professional liar constantly on the run from law officers, creditors, and victims of his deceits. It is therefore impossible to be sure of his exploits and movements. His 'extraordinary career' is 'veiled in mystery and will, most likely, remain so' (*Annual Register*, 1803, 422).

Hatfield [*married name* Nesbit], **Martha** (*b.* 1640), prophet, was born on 27 September 1640, the third child and second daughter of Anthony Hatfield (1598–1666) of Laughton-en-le-Morthen, West Riding of Yorkshire, and his second wife, Faith (*d.* 1659), daughter of Thomas Westby of Gilthwaite in the same county. The family in which she grew up was a godly one and had many links with prominent parliamentarians in Yorkshire. Her father's brother, John, was an officer in the parliamentarian cavalry, and another uncle, James Fisher, had become vicar of Sheffield by 1646.

Martha was assiduous in prayer and read pious books to her sick mother. Whether as a result of a physical condition or for emotional and spiritual reasons, the young girl 'was observed to be of a sad spirit, oft retiring into corners, and weeping'. This was followed by physical ailments such as vomiting and convulsions, which were attributed to 'Spleen-wind' (Fisher, 2), and in April 1652 her family became convinced that she was on the point of death. Instead she fell into convulsions, which were followed by two seventeen-day periods divided by a brief interval of illness in which she lay stiff, silent, and trance-like, taking no food and just having her mouth washed out with small beer or water. However, on 19 May, just as her mother came into the room where she was lying, she began to

speak, and up to 21 June 1652 she uttered a succession of pious sayings. Thereafter her pronouncements became less frequent, and after she was examined by a physician on 8 September, her mouth became closed fast and her teeth clenched until December (though on occasions she still managed to testify). During this interval she took no food except what milk and other sustenance could be poured into her mouth through a gap where she had lost a tooth. Despite this prodigious abstinence she remained healthy and actually gained weight. Early in December the family began a prolonged period of prayer and fasting, petitioning God to restore her to health, and after some days her jaw relaxed; on 8 December she became aware of her family and the following day was restored to health and was once again playing with her toys. By the day of thanksgiving on 28 December she was able once again to walk.

Hatfield's long affliction attracted a good deal of attention; she was attended not only by medical practitioners and members of her extended family but also by other interested parties including Quakers, possibly from Tickhill nearby, and by Lady Lambert, wife of General John Lambert. As with other notable contemporary cases of prolonged abstinence and religious pronouncements or prophecy, such as Sarah Wight or Anna Trapnel, Hatfield's condition was open to a range of possible interpretations ranging from demonic possession or divine inspiration to physical disease.

The interest which Hatfield had aroused, along with the desire to provide a record of these events and to place them within a providential framework, led her uncle James Fisher to publish a long account of them. Fisher, who was to be deprived in 1662, was not only vicar but also pastor of an Independent congregation in the town. In his account he demonstrated a familiarity with learned commentaries on spirits such as Ludwig Lavater's *De spectris*, (Fisher, 17), but was careful to note the scriptural passages to which Martha seemed to be referring. He further noted that he doubted whether she:

> ever had in her thoughts, or ever read many of those Scripture-phrases which she uttered, but God did specially help and guide her in her expressions, to the praise of his glorious grace; in a poor weak unlikely instrument. (ibid., 19)

His publication clearly sought to co-opt her testimony to sectarian ends, for he noted the way in which Martha testified against Quakers—refusing at one point during her recovery to wear shoes made by a Quaker cobbler.

Materially Martha Hatfield seems to have gained little from her experiences, except by being sent to writing school. She certainly played no part in the publication of her experiences, and Fisher notes that she wept after the book came out, fearing that she would be seen as a hypocrite and that God would withdraw from her. However, the five editions of the book between 1653 and 1664 kept alive the memory of her experiences and her testimony, particularly among nonconformists. In November 1666 the dissenting minister Oliver Heywood noted visiting the Hatfields at Laughton and recorded in his diary that he had met there both Fisher and 'that precious gentlewoman Mtris Martha Hatfield, concerning whom so many strange things are recorded in a book concerning her' (*Autobiography*, 1.233). Just over eight years later, in 1675, Martha married Thomas Nesbit of York, clerk; no further record of her appears to survive. The memory of Martha's experiences and testimony seems to have faded from public consciousness—satirical references to 'Hatfield's vision' or the 'Hatfield Maid' during the exclusion crisis refer not to Martha Hatfield but to the visions of Elizabeth Freeman of Bishop's Hatfield, Hertfordshire, which were published in *A True and Perfect Relation of Elizabeth Freeman of Bishops-Hatfield* (1680). Hatfield, Thomas (*c.*1310–1381), administrator and bishop of Durham, was probably born about 1310—this is suggested by the fact that in 1337 he received a royal presentation to his first benefice, Stanford-on-Avon, Northamptonshire, and on his election to the episcopate in 1345 was termed *iuvenis*. The nineteenth-century antiquarian George Poulson claimed him as a son of Walter Hatfield of Holderness, but two separate chantry ordinances name his parents John and Margery, his brother William (a knight), and his sisters Joan and Margaret. He himself claimed that he had been brought up under Edward III's protection, and he also enjoyed the favour of Queen Philippa. There is no evidence of his attending university.

On his promotion to the bishopric of London in 1338 Richard Bintworth was ordered to provide Hatfield with a benefice. As receiver of the chamber (1338–44), an internal promotion, Hatfield was engaged in raising money for the French war, but for part of that time was with the king in the Netherlands. His goods and chattels were confiscated during the purge of officials in the Stratford crisis of 1340–41. Soon restored to favour, in 1341–2 he was contracted to go abroad in the king's service with a substantial military retinue. He resigned his office in 1344, to become king's secretary by 12 October.

As a royal clerk Hatfield received generous advancement: canonries and prebends at Lincoln, Salisbury, Wells, and St Paul's; he secured another at York by exchange. When the see of Durham fell vacant on 14 April

1345, he was Edward III's candidate. Hatfield was elected on 8 May; the temporalities were restored on the 24th, and he received Archbishop William Zouche's confirmation on 1 June. But the see had been reserved. According to the St Albans chronicler the cardinals considered him to be *levis et laicus*, to which Clement VI (*r.* 1342–52) allegedly replied that had the king petitioned on behalf of an ass he would have been accommodated on that occasion. Adam Murimuth, a cynical contemporary critic of episcopal appointments, declares Hatfield's elevation to have been the outcome of significant lobbying. None the less, a papal bull of provision was issued on 10 June, but his consecration has been variously dated 1 June, 10 or 11 July, and 7 August. Both 10 July and 7 August fell on a Sunday, as appropriate. A papal licence permitting consecration *alibi*—saving the rights of the archbishop of York—is dated 20 June 1345. Murimuth writes that Hatfield was consecrated by Archbishop John Stratford at Otford on 7 August and he may well be correct, since the royal chancery addressed him as 'elect and confirmed' until 5 August but as bishop of Durham on the 10th. He was enthroned on Christmas day.

Thanks to the survival of Hatfield's register—although there are gaps between 1345 and 1350 and between 1355 and 1359—much is known about his episcopate. It is largely made up of the 'registers' of his chancellors, masters John Grey (1352) and John Maundour (1375), and is supplemented by the various *acta* surviving either as originals (enumerated in the *Repertorium magnum*) or as copies in the calendars, registers, and cartularies that constitute the unusually coherent medieval archive at Durham. His continued service with the king meant that he was often absent on that account or for business concerning his diocese. He was therefore obliged to appoint vicars-general: masters William Legat in 1351, John Appleby in 1353 and 1360, and Alan Shutlington in 1374. The intervals between these commissions and other evidence suggest that for the greater part of his episcopate Hatfield was occupied with northern affairs, both ecclesiastical and secular. None the less, he was reluctant to carry out ordinations in person. Out of some 103 recorded ordinations (Durham, Register Hatfield, fols. 92*r*–113*r*) he conducted a mere handful himself, only two of them—the eve of Trinity 1368 and Saturday in Embertide after the eve of the Exaltation 1370—in his cathedral church. The remainder were celebrated by four suffragans: the last of these, Bishop Philip 'Lechlinensis', was initially appointed by an indenture of January 1372 for a year at a salary of £10.

The relationship between bishop and chapter had been regulated by *Le convenit*, a mutual agreement sealed in 1229. Hatfield confirmed this in 1354 with an exemplification covering doubtful points. In 1346 he ratified the right of the sub-prior and monks to have complete charge of the priory during vacancies in the priorate. Visitation was subject to the canonical regulation *Debent*. Three personal visitations of the cathedral priory were undertaken, in February 1347, July 1354, and May 1371 respectively. In each instance the chapter appointed a monk 'assessor'. Following the 1354 visitation the brethren were summoned to respond to *comperta*. Hatfield subsequently issued injunctions, but offered to indemnify the monks if his visitation had contravened *Debent*. Evidence for visitation of the diocese itself is fragmentary, but between visitations the diocesan official was under obligation to hold general inquisitions for the reform of behaviour and the punishment of offences.

Hatfield's relationship with the archbishops of York, William Zouche (*r.* 1342–52), John Thoresby (*r.* 1352–73), and Alexander Neville (*r.* 1374–88) was not harmonious. He was suspected of being behind a 'disgusting disturbance' of 1349 in York Minster caused by two members of his clerical *familia*, William Legat and John Grey. In 1358, following an inquiry, the king issued an official denial of Hatfield's complicity in an armed attack on Thoresby's suffragan, the bishop of Chrysopolis. In the York convocation of February 1360 Hatfield caused his chancellor, Grey, to publish a protest declaring his complete exemption from obedience or subjection to the archbishop (Durham, Register Hatfield, fol. 39*v*). When Neville attempted as metropolitan to visit Durham diocese in 1376–7, the king prohibited such action as being likely to promote disturbance.

On 30 July 1345 Edward III, who was in Flanders, appointed Hatfield a councillor for his son Lionel, then regent. Hatfield was abroad with Edward in 1346 and at the battle of Crécy came to the aid of Edward, the Black Prince. Afterwards he conducted the funeral of John, the blind king of Bohemia, and accompanied King Edward to Calais. Prior John Fossur warned him about danger from the Scots and then sent details of the victory of Nevilles Cross (17 October 1346). To enable him to attend the Westminster parliament of 1354 he was provided with three ships. In October–November 1355 he went with Edward III to France with a hundred men-at-arms, and crossed to Calais in 1360 for the ratification of the treaty previously arranged at Brétigny. In 1356 he was one of those charged with the defence of the northern border and was present at the negotiations that culminated in October 1357 with arrangements for David II's release. After David's death in 1371 he was instructed in 1372 and 1377 to guard against Scottish incursions.

The chronicler William Chambre wrote appreciatively of Hatfield's attitude towards the monastery. While approving his bounty he was critical of his acquisitiveness. He was, says Chambre, a formidable figure, who strove to be foremost among the magnates, was tenacious of the rights of his see, open-handed to the poor, and conscious of his own importance. On the south side of the choir he had built a remarkable structure ('curiosum opus construxit') incorporating his episcopal seat with ingenious carvings. Below was a place for his tomb, where he was subsequently buried. He also provided an altar where a monk was to pray for his soul. The surviving structure, occupying a bay between two Norman pillars, is highly ornamented. There is no inscription, and the once elaborate paintings have disappeared. The episcopal throne

flanked by two seats on each side—a symbol of ecclesiastical and secular authority—is surmounted by an ornate tabernacled canopy. The throne rests on a gallery reached by steps. Beneath is a mutilated alabaster effigy placed upon an elaborately panelled altar tomb.

At Durham Castle, Chambre claims, Hatfield restored and enlarged the bishop's hall; likewise the constable's hall, to which he is thought to have added a high-pitched timber roof as well as inserting the west window; and also other buildings. He added a tower to the city's defences. This, Hamilton Thompson suggested, was a (possibly loftier) polygonal shell-keep (destroyed in 1840), which replaced the Norman keep on the castle mound. Hatfield joined the prior and convent in forwarding a project of earlier bishops by endowing a college of eight monks and eight secular scholars at Oxford. He bequeathed £3000 to the project and his executors were charged with its completion. But it was not until the early fifteenth century that Durham College was firmly established. Subsequently it was incorporated in Trinity College.

In London, Hatfield built an episcopal residence, Aldeford (Old Ford), with a chapel and rooms on a sumptuous scale, south of the Strand, off Ivy Lane. It was later known as Durham House. At Northallerton, Yorkshire, he gave land to the Carmelites and was accounted one of the founders of their house there. In 1349 he drew up a 'foundation' document for the twelfth-century leper hospital at Sherburn (Durham, Register 2, fol. 322*v*). To support his chantry in the cathedral he granted lands to the priory at 'Henknoll' by Auckland, and in 1378 pensions from Simonburn, Benton, and Ovingham churches.

Hatfield became a *confrater* of St Albans Abbey, and to mark the occasion presented a covered cup later called Wesheyl; in the St Albans book of benefactors he is painted as a stout figure holding the cup. On his deathbed he gave 100 marks to the monks. At the Augustinian abbey of Lesness, Kent, in gratitude for his gifts, a chantry was founded (1381) for the souls of Edward III and Queen Philippa and for those of Bishop Hatfield and his family. Another was established at the Cistercian abbey of Stratford Langthorne, Essex, but here the consideration is unknown. In return for building two cells at the London Charterhouse, their occupants were to say masses for the bishop and his family, and for property in Bow Lane a daily mass was to be said for his soul at the hospital of St Katharine by the Tower. Yet another chantry was being supported by St Albans Abbey at Aldeford in the 1380s.

Despite his largesse Hatfield remained a wealthy man. During his episcopate a survey of his lands was undertaken, though probably not completed until after his death. He lent 2000 marks to Edward III and in his will assigned a debt of 1000 marks to his godson, the king's youngest son, Thomas of Woodstock, and to his nephew, John Popham. This sum was owed by William Windsor, knight, on account of his wife, Alice Perrers, the king's mistress. To Thomas he also left an embroidered bed.

In December of 1379 or 1380 Hatfield requested the prayers of his cathedral monks for the amendment of his life and his soul's salvation. He made his will at his London house on 28 March 1381 and died there on 8 May. His body was conveyed to Durham on a funeral chariot. The exequies were marred by a dispute between his executors and the monks with respect to the latter's perquisites. His will was proved on 6 June 1381 before the archbishop of York at Beverley. It provided 100 marks for the poor on the day of committal and until the eighth day thereafter. Fifty poor men with wax torches were to act as mourners. Among his executors were Bishop John Gilbert of Hereford, the Dominican Thomas Stubbs, believed to have been the biographer of the archbishops of York, William Walworth, the celebrated mayor of London, and John Popham.

Wealth at death wealthy: Raine, ed., *Testamenta Eboracensia*, 121–2

Hathaway, Richard (*fl.* 1696–1702), alleged victim of witchcraft, details of whose parents and upbringing are unknown, moved to Southwark about 1696 to be apprenticed to Thomas Welling, blacksmith. According to the testimony of a neighbour, Hathaway had suffered from convulsive fits before moving into the house of Welling and his wife, Elizabeth; he subsequently received medical treatment for his condition. In 1700 Hathaway began to talk of witchcraft. Early that year he publicly declared that Sarah Moredike, wife of Edward Moredike, a waterman of Southwark, had bewitched him. As a consequence he had, he claimed, been unable to eat, drink, or open his eyes for ten weeks. If this was not bad enough, he also vomited

crooked pins and nails, a distressing affliction he apparently demonstrated several times before witnesses.

It was suggested that the only cure for Hathaway's condition was to draw blood from Moredike. Accordingly, on 11 February 1700 she was forcibly taken to Welling's house, where Elizabeth Welling scratched her face, while her husband kicked her in the belly and stamped on her. Hathaway claimed to feel much better after the assault, thus confirming Moredike's guilt. It was not long, however, before his debilitating fits returned and another scratching of Moredike was called for.

These events caused a sensation in the neighbourhood, and the local minister, Dr Martin, decided to investigate Hathaway's claims. He found him in an apparently semi-conscious state, struck deaf, dumb, and blind. Martin brought with him Sarah Moredike, her brother James Hearne, and a woman named Johnson. To test Hathaway's condition Martin asked Sarah to speak to the stricken young man while silently requesting Johnson to present her arm for the invalid to scratch. Blood having been drawn, Hathaway experienced an instant and miraculous recovery, but his sense of well-being was short-lived as the trick played upon him was revealed. Martin upbraided him for his imposture in front of the Wellings and other neighbours who had gathered in their house. It later emerged that the Wellings were manipulating Hathaway and orchestrating the campaign against Sarah Moredike. When she fled to London, they even sought out her new lodgings and whipped up a mob to surround it. An alderman was called but instead of taking action against Hathaway's supporters, he had Moredike searched for teats and allowed Hathaway to scratch her again. He then had her committed for trial.

Moredike's case was heard at the Guildford assizes on 28 July 1701. She was acquitted, and Hathaway was arrested for imposture three days later and taken to the Marshalsea prison. The constable assigned to watch over him reported that he slept, drank, and ate well during that time. He was then taken to the house of a surgeon named Kensey who wished to examine his extraordinary symptoms. Kensey made a hole in the wall of Hathaway's bedchamber secretly to monitor his behaviour. Although the young man continued to maintain that he was under Moredike's spell, and so was unable to eat or drink, Kinsey saw him eating and drinking everything that was left for him. On one occasion, having been offered an extra allowance of spirits, a tipsy Hathaway was even seen dancing before the fire while playing a tune with the tongs.

All this evidence was heard during Hathaway's trial at the Surrey spring assizes, presided over by Judge John Holt. He was indicted not only for imposture but also for riot and assault along with Thomas and Elizabeth Welling. Found guilty on all charges, Hathaway was fined, ordered to stand in the pillory at Southwark, Cornhill, and Temple Bar, and sentenced to a flogging and six months' hard labour. OWEN DAVIES

Hathaway [*née* Collings], Dame **Sibyl Mary** (1884–1974), dame of Sark, was born on 13 January 1884 in Guernsey at the house once owned by her privateer great-great-grandfather, John Allaire, whose business dealings led to the seigniory of Sark passing into her family. The elder daughter (there were no sons) of William Frederick Collings, twenty-first seigneur of Sark, and his Canadian wife, Sophia Wallace (daughter of George Moffat of Montreal), she grew up on Sark to become a lively, intelligent, and headstrong young woman, encouraged by her eccentric father to ignore her congenital lameness and follow many physically demanding pursuits. With the rest of the household she also had to contend with his uncertain temper and even wilder moments during occasional drinking bouts. Few of her governesses stayed for long and, with the exception of two terms at a French convent near Tours, she had little formal education.

She met Dudley John Beaumont, son of Captain William Spencer Beaumont, of the 14th King's hussars, in the spring of 1899 when he visited Sark and painted her portrait. Two years later, following a fierce argument with her father, she fled to England and married Beaumont in London. The marriage produced four sons and three daughters, the youngest of whom was born seven months after her husband's death at the age of forty-one in the influenza epidemic of 1918.

From 1921 to 1923 Sibyl Beaumont lived with her family in Cologne, helped run YMCA canteens, and learned the German which twenty years later was to prove so useful to her. On her father's death in June 1927 she succeeded to the seigniory and became dame of Sark, determined from the outset to bring improvements to the island without sacrificing its unusual charms. After a brief engagement to a man later convicted for bigamy and fraud, in 1929 she married American-born Robert Woodward Hathaway (second of three sons of Charles Hathaway, a Wall Street banker). According to Sark law, by her marriage her estate, including the seigniory, passed to her husband, but she had no intention of relinquishing her hold on island affairs and, although he then became the official seigneur, she sat beside him at meetings of the chief pleas (Sark's governing body), prompting his actions and continuing, albeit illegally, to give voice to her own opinions.

It was during the Second World War that Sibyl Hathaway faced her greatest challenge, when Sark, with the other Channel Islands, was occupied by the Germans in July 1940. She managed throughout the following years to maintain a front of firmness and dignity, earning the respect of the Germans and at the same time extracting the best terms she could for Sark and its people, with whom she shared the hunger and other privations of occupation, the anxieties engendered by two unsuccessful British commando raids, and the pain of separation when many islanders, including her husband, were deported to German prison camps. Liberation finally came on 10 May 1945.

Dame Sibyl Mary Hathaway (1884–1974), by Pamela Chandler, 1961

When Robert Hathaway died in December 1954 she regained her full status as dame of Sark and, despite many stormy passages with her islanders, continued to be treated by the majority with the greatest respect, if not always with affection. Through her travels and writings (which included a novel, *Maid of Sark*, in 1939 and an autobiography, *Dame of Sark*, 1961) and television, radio, and press interviews, her island became known worldwide and its subsequent prosperity owed much to her determination to retain its unique laws and peaceful atmosphere, unpolluted by cars or aeroplanes. She was appointed OBE (1949) and DBE (1965). She died on 14 July 1974 on Sark, having outlived five of her children. Her eldest son was killed in an air raid on Liverpool in 1941, the second died in Australia in 1973, the third (aged nine months) in 1909, and two of her daughters in 1948 and 1967 respectively. Her grandson (John) Michael Beaumont succeeded her to the seigniory. BARBARA STONEY, *rev.*

Hathway, Richard (*fl.* 1598–1603), playwright, made his living by writing for two acting companies that were contemporary with Shakespeare's. Despite previous speculation, Hathway was not related to the Shottery family of Shakespeare's wife, Anne Hathaway, or to her father, Richard Hathaway. Nor is there any evidence that he wrote for the playing companies with which Shakespeare was involved (the Chamberlain's Men and the King's Men), and he was not the Richard Hathway who was awarded his BA at Oxford in 1592 (this Hathway was later vicar of Frocester, Gloucestershire, 1610–40). However, Richard Hathway probably was the 'poett' whose son Edmund was baptized on 28 March 1601 at St Giles Cripplegate, London, the parish associated with the Fortune Playhouse and the Admiral's Men, the company for whom Hathway wrote most of his plays (McManaway, 561–2). Moreover, he might also have been the 'Poet' who, the next year, baptized a son at St Botolph, Aldgate (Eccles, 65).

Hathway can be associated with seventeen plays during the five years that define his brief heyday. Many were multipart dramas; most seem to have been histories or comedies. He composed 'King Arthur' ('Life of Arthur, King of England') alone, for which he received a payment from Philip Henslowe, the financier of the Admiral's Men, on 12 April 1598 (*Henslowe's Diary*, 1961, 89). In collaboration with Anthony Munday he wrote 'Valentine and Orson' (19 July 1598; ibid., 93), but during the next eighteen months Hathway was involved only in parts 1 and 2 of *Sir John Oldcastle* (ibid., 125–6).

Within the next three years, fourteen plays by Hathway followed in rapid succession. All were written in collaboration with different professional playwrights, including Anthony Munday, Michael Drayton, Robert Wilson, Thomas Dekker, William Rankins, William Haughton, Wentworth Smith, and John Day. In 1600 he composed 'Owen Tudor' and '1, 2 Fair Constance of Rome'. During the next year he completed five plays: 'Hannibal and Scipio', 'Scogan and Skelton', 'The Conquest of Spain by John of Gaunt', and parts 1 and 2 of 'Six Clothiers'. In 1602 Hathway worked on two plays, 'Too Good to be True' and 'As Merry as May Be', also for the Admiral's Men; however, soon thereafter he began to write for Worcester's Men, who were then performing at Henslowe's Rose Playhouse. The reason for this change is unclear, although Henslowe was clearly financing both companies. In the period from November 1602 to February 1603 Hathway collaborated on parts 1 and 2 of 'Black Dog of Newgate' and 'The Unfortunate General'. Yet there was no apparent animosity between Hathway and the Admiral's Men. He wrote his final play for them in 1603 ('The Boss of Billingsgate'), collaborating with John Day and other 'felowe poetes' (Chambers, 3.333–4).

Greg concluded that Hathway's periods of frantic activity, in combination with what appear to be long intervals of professional silence, suggest that he probably wrote for other playing companies for which there are no extant records (*Henslowe's Diary*, 1908, 2.270). The letter from the actor-playwright Samuel Rowley to Philip Henslowe

(April 1601?) would suggest that this is indeed plausible. In it Rowley asks that Hathway be allowed to take back his 'papers' of 'John of Gaunt', presumably because Hathway wished to withdraw the play from the Admiral's Men and sell it to another company (*Henslowe Papers*, 56). This might also have been the case with *Sir John Oldcastle*, which was originally contracted by Henslowe to be written in two sections, but there is no evidence that the second part was ever completed for, or delivered to, the Admiral's Men. Consequently, *Sir John Oldcastle* has for some time attracted great attention, not only because it is the sole extant play in which Hathway had a hand, but because it has become part of the Shakespeare apocrypha. Theatre historians commonly agree that *Oldcastle* influenced Shakespeare's *Henry IV*, parts 1 and 2, and *Henry V* (Corbin and Sedge, 9–12). Moreover, there are two recorded court performances of *Oldcastle* by the King's Men, the playing company in which Shakespeare was earlier an actor and shareholder. These were preserved in the office book kept by the master of the revels, Sir Henry Herbert, in entries for 6 January 1631 and 29 May 1638 (Bentley, 1.96, 99).

Possibly it was William Rankins, with whom Hathway wrote two plays in 1601, who fostered Hathway's poetic career. Both Hathway and Rankins contributed verses to John Bodenham's *Belvedére, the Garden of the Muses* (1600), a collection of poems by distinguished contemporary poets. (Another poet whose verses preface the volume, identified only as A. M., could well have been Anthony Munday, the dramatist-collaborator involved with Hathway and his plays.) Although Bodenham states in his preface that some of the verses were taken from 'Maskes, Shewes, and devises perfourmed in prograce [progress]' (*Bodenham's Belvedére*, sig. A4*r*) before the queen, it would seem that Hathway's ten-line poem 'Of the Booke' was written specifically in praise of Bodenham's collection. Here Hathway characterizes the book as a 'Guide to the soule, and ruler of the sense', likening the individual poems to 'beames proceeding from the Sunne'. Nevertheless, Hathway's literary reputation seems to have depended primarily on his talents as a playwright. Francis Meres referred to him as 'the best for comedy' in 1598 (Chambers, 3.332).

A play entitled *Hannibal and Scipio* was performed by Queen Henrietta's Men at the Phoenix, or Cockpit, in Drury Lane (1635). It was subsequently entered into the Stationers' register (6 August 1636) and published the following year as written by Thomas Nabbes. Some historians have assumed that Nabbes was borrowing or revising the earlier play by Hathway and Rankins; however, there is no evidence by which the later play can be identified with the earlier play of the same name. It is not known when Hathway died. S. P. CERASANO

Hatry, Clarence Charles (1888–1965), company promoter, was born on 16 December 1888 at 48 Belsize Park, London, the eldest of four sons of Julius Hatry (1856/7–1907), silk merchant, and his wife, Henriette Ellen Katzenstein (1861/2–1943). In childhood he felt lonely, browbeaten, and disheartened by a severe father and a mother whom he thought snobbish and neglectful; he was a dreamy, inward, and dissatisfied child. After attending St Paul's School (1903–5) he studied French and German on the continent before marrying in 1909 Violet Marguerite ('Dolly') (1892–1980), daughter of Charles Ferguson. They had at least one son and at least one daughter. In March 1910 Hatry took over the family silk business, which had been conducted by his mother since his father's death; shortly afterwards he was stricken with rheumatic fever, and the business failed in October, with Hatry bankrupt for personal guarantees of £8000 and his mother following him into bankruptcy. Despite this set-back, he paid off all the debts in less than two years.

About 1911 Hatry became an insurance broker. After acquiring control of City Equitable Fire Insurance for £60,000 in 1914, he reorganized it before selling it for £250,000 in 1915. This success encouraged his taste for making deals. In 1916 he took over the Commercial Bank of London, which he renamed in 1921 the Commercial Corporation of London to reflect its interest in the provision of finance rather than banking services. In the false boom at the end of the war Hatry proved a keen and successful speculator. In 1919 he bought Leyland Motors for a reputed £350,000 and immediately resold it for double that figure. He professed a belief in strength through consolidation. Jute Industries, which he formed in 1920, had some success, but there was little strategic logic or managerial vigour in such creations as British Glass Industries (formed in 1919) and Amalgamated Industrials (also in 1919), a hodgepodge of cotton spinning, shipbuilding, and pig farming. Hatry made a quick fortune, which he began spending ostentatiously, but the Commercial Corporation collapsed in 1923 with a deficit approaching £3 million.

In 1925 Hatry organized a private company called the Aylesbury Trust to take over his liabilities to earlier creditors and to act as a finance house. Later that year he bought department stores in London and the provinces for combination in the Drapery and General Investment Trust, which he sold at a handsome profit to Debenhams in 1926. In the same year Hatry formed Corporation and General Securities, which operated in the money market and vied with the stockbroking firm of Robert Nivison, Lord Glendyne, in providing funds for municipal corporations. In 1927 Hatry registered the Austen Friars Trust and embarked on an energetic campaign of amalgamations and promotions. His methods were complex, involving voluntary liquidations, reconstructions, name changes, and intra-group share dealings. Sir Gilbert Garnsey, the accountant who was eventually appointed liquidator of Hatry's interests, believed that the Austen Friars Trust was

insolvent from its inception. In 1928 Hatry, who had a lifelong weakness for gadgetry, became obsessed with promoting a system for securing photographic impressions electronically; his company Photomaton became a severe drain on his resources, and was mistrusted by those in the City whose goodwill he needed.

His successful promotion early in 1929 of Allied Ironfounders, a combine of light castings manufacturers, led Hatry to attempt the rationalization of the steel industry. In April 1929 he acquired control of the United Steel companies. The election of a Labour government in May depressed stock exchange values, and Hatry's plans were ruthlessly opposed by Montagu Norman, governor of the Bank of England. To surmount his difficulty in raising money for the United Steel stock, Hatry borrowed £789,000 from banks on the security of forged Corporation and General scrip certificates ascribed to the municipalities of Gloucester, Wakefield, and Swindon. £822,000 was withheld from these three corporations and another £700,000 was raised by duplicating shares in other companies he had promoted. As rumours about the Hatry companies circulated in the City, he spent large sums vainly trying to support their share values. On 20 September Hatry voluntarily confessed his frauds to Sir Archibald Bodkin, director of public prosecutions, inaccurately taking all blame.

Hatry and three colleagues appeared at the Old Bailey before Sir Horace Avory on 20 January 1930. After the attorney-general Sir William Jowitt had closed the prosecution case, the defendants changed their pleas to guilty (on 25 January). Hatry was sentenced to the maximum term of fourteen years' penal servitude. A campaign for clemency, organized by his son Cecil and supported by his counsel, Norman Birkett, enlisted the parliamentary support of Harold Nicolson and J. T. C. Moore-Brabazon, and he was released in 1939.

Private investors in Hatry's companies lost about £15 million. The 'first impressions of Hatry' of the marquess of Winchester, who was the guinea-pig chairman of Corporation and General:

> were that he was an example of the alert business brain having an unusually quick perception of any proposition, a marvellous gift for shifting the intricacies of a Balance Sheet, a power of putting his case with a clarity of expression rarely found apart from legal training, coupled with an apparent frankness which amounted to a charm of manner.

After the crash, in which Winchester lost money and reputation, he decided that Hatry had:

> the supreme quality of dangerous optimism coupled with inordinate conceit ... his brain was honeycombed with crevasses into which unpleasant facts were allowed to slip and there he permitted them to remain in the hope that the glacier would never reveal its secrets. (Winchester, 250, 268, 274)

After Hatry's release he published *Light out of Darkness* (1939), advocating mass migration to solve global economic and political tensions: black Americans were to be relocated in equatorial Africa, and Ukrainians, Czechs, and Jews were to be given new homelands to prevent them cramping Germany. He owned the Piccadilly bookshop of Hatchard's in the early 1950s and London coffee bars in the late 1950s, and he maintained other business interests until his death of heart failure on 10 June 1965, at Westminster Hospital, Horseferry Road, Westminster, London. After a funeral service at St Paul's Church, Onslow Square, Knightsbridge, he was cremated on 16 June. He was survived by his wife. Dame Ngaio Marsh's novel *Death at the Bar* (1939) contains a fictionalized version of Hatry's crimes. RICHARD DAVENPORT-HINES

Wealth at death £828: probate, 18 Aug 1965, *CGPLA Eng. & Wales*

Hatsell, Henry (*d.* 1667), naval official and politician, was probably born in Plymouth of a commercial family. He married at Barnstaple on 6 February 1637 Margaret Dawe, with whom he had at least one son, Sir Henry *Hatsell (*bap.* 1641, *d.* 1714), later baron of the exchequer. He became a freeman of Plymouth in 1641, and after the outbreak of civil war was commissioned as an army officer on the side of parliament. By April 1645 he was a captain in the Plymouth garrison, and lent the committee of safety £50 to help sustain the defence against the besieging royalists. After the victories of Sir Thomas Fairfax in the south-west in 1646 Hatsell was able to act on a wider stage for the parliamentary cause, beginning work for the navy in a variety of locations. He was imprisoned by the royalists in Jersey and the Isles of Scilly in 1649, and on his release became pressmaster at Minehead. After moving to Plymouth he first made a significant impression in April 1651 when his promptness and efficiency in assembling men and boats helped General Robert Blake embark nine companies of foot for a successful campaign in the Isles of Scilly against the desperate royalists. Hatsell gave a personal account of the campaign to the House of Commons, which he delivered on 13 June.

In 1652 Hatsell was appointed naval agent at Plymouth, a position he held with that of check of customs there. This gave him an unrivalled authority in maritime affairs in the south-west, with a degree of initiative more appropriate to the post of navy commissioner. His routine problems of recruiting for the navy over far-flung territory and providing it with *matériel*, often from unsympathetic or self-interested suppliers, were punctuated by consultations with the generals-at-sea, who evidently valued his expertise and godly commitment to the republic. He nominated men for naval captaincies, often with comments on their godly qualities. After the dismissal of the Rump Parliament, Hatsell retained his post and his importance was enhanced with a place on the bench of magistrates in Devon. He survived the transition to the protectorate, and

in 1654 became a commissioner for ejecting 'scandalous' ministers.

Fierce hostility to the drink trade and other vested interests in Plymouth made Hatsell a natural ally of John Disbrowe in his tour of duty as major-general for the south-western counties in 1655–6. Hatsell was appointed commissioner under him, given command of a militia troop, and helped manage the trials of the Penruddock rebels. He was responsible for arranging the transportation to Barbados of a number of people implicated in these disturbances. His religious outlook accorded with that of the regime, although his antipathy to Quakers, including James Nayler, indicates that his tolerance was not unlimited.

From 1651 Hatsell sought to recover sums he had laid out in the service of parliament by acquiring the properties of sequestered royalists and, when available, crown estates. The most important of these was Saltram House, Plympton St Mary, home of the royalist Bagge family, which Hatsell occupied by 1656. With his new estate went status of another kind: he was elected to sit for Devon in the 1654 parliament and in 1658 for Plympton and Tavistock, choosing the former. In the House of Commons he was named to a wide range of committees, with matters of trade, revenue, and religious provision in the south-west being dominant among them. In March 1657 he was among those attending Lord Protector Oliver Cromwell on the details of 'The humble petition and advice'. He spoke frequently, took an interest in procedural matters, and resisted moves to allow the 'other house' to resume the title and privileges of the House of Lords lest it allowed the king to return. Hatsell was active in resisting moves towards monarchy in 1659, and ordered part of the western squadron to Chester Water to prevent help reaching Sir George Booth by sea. When the Restoration did come, he was slow to recognize the implications for his career. He lost all local government office, but stayed for the time as navy agent. Imprisoned at Exeter early in 1661, he returned to his post in February until he was dismissed in September. He may have married, on 17 June 1661, Susanna Evanse. Throughout the 1660s until his death he was identified by the government as one who might cause trouble, but in fact he retired to Saltram. He died there in 1667 and was buried at Plympton St Mary on 19 March. The family lost Saltram at his death.

Hatsell, Sir Henry (*bap.* 1641, *d.* 1714), judge, was the eldest son of Henry *Hatsell (*d.* 1667) of Saltram in Plympton St Mary, Devon, and Margaret Dawe. Hatsell's father had been an active Cromwellian, serving as soldier, customs official, navy commissioner, godly magistrate, and MP. At the Restoration he retired to Saltram, which he had bought from the Royalist delinquent Sir James Bagg. Hatsell was baptized at Barnstaple, Devon, on 7 March 1641. He matriculated at Exeter College, Oxford, on 15 June 1657, graduating BA on 4 February 1660. Almost immediately he entered the Middle Temple (3 March 1660), and was duly called to the bar on 17 May 1667, shortly after the death of his father. He presumably continued quietly in practice and was made a serjeant-at-law in May 1689.

Before 1698, when a daughter was baptized, Hatsell married Judith (*bap.* 1662, *d.* 1729), daughter of Josiah Bateman, a London merchant, and the widow of Sir Robert Shirley, second baronet, of Preston, Sussex, who died in 1692. Political conditions were ripe for Hatsell's further advancement, and on 25 November 1697 he was appointed a baron of the exchequer and was knighted on 12 December. His most notable case as a judge was to preside over the trial at Surrey assizes of Spencer Cowper for the murder of Sarah Stout in 1699. On 8 June 1702, in the changed political climate after the accession of Queen Anne, his patent was revoked. Hatsell lived on in retirement and on 20 June 1713, 'very weak in limbs', he made a will in which he expressed the wish that his two sons study the common law or become merchants. He was buried in the Temple Church on 10 April 1714.

Hatsell, John (1733–1820), clerk of the House of Commons, was born on 22 December 1733, the eldest son of Henry Hatsell, lawyer, and Penelope, daughter of Sir James Robinson of Cranford Hall, Kettering. He was admitted to the Middle Temple in 1750, and made senior bencher in 1789 and treasurer in 1802. In 1778 he married Mrs Barton (*d.* 1804), widow of Major Newton Barton of Irthlingborough.

Hatsell's reputation derived from his unrivalled knowledge of parliamentary procedure. In 1760 he was appointed clerk assistant to the Commons, and succeeded as clerk in 1768. His friends included the speakers Henry Addington and Charles Abbot. The latter, who was himself

an expert in procedure, acknowledged Hatsell as the foremost authority. Hatsell published *A Collection of Cases of Privilege of Parliament* (1776) and *Rules and Standing Orders of the House of Commons* (1809), but is best known for *Precedents of Proceedings in the House of Commons* (4 vols., 1776–96), which provides a thorough and systematic analysis of practice and procedure. Further improvements were made by the inclusion of Abbot's marginalia in 1818, together with a new index compiled by John Rickman. It remains a standard work.

On 11 July 1797 Hatsell retired in favour of John Ley, who became deputy clerk. Although Ley conducted day-to-day business, Hatsell retained his official title and house, together with substantial emoluments. He continued to influence clerical appointments, clashing with Ley in an acrimonious dispute from 1811 to 1814, in which Hatsell sided with Abbot in resisting the growing hegemony of the Ley family. Hatsell died, from an apoplectic stroke, on 15 October 1820 at his house at Marden Park, near Godstone, Surrey, and was buried in the Temple Church, in London. Hatteclyffe, William (*d.* 1480), physician and diplomat, was admitted as a fellow of Peterhouse, Cambridge, in June 1437. He was a foundation fellow of King's College in 1441/2. In January 1446, as an MA of the diocese of Lincoln, he was studying medicine at Padua, where he was admitted MD on 5 March 1447. He returned to King's College, where he was bursar in 1447/8. He was one of Henry VI's physicians by November 1452, when he was granted £40 p.a., and on 15 March 1454 he was one of the doctors commissioned to attend the king during his illness. By March 1457 he was also acting as physician to Queen Margaret, but by the beginning of 1461 he had apparently joined the Yorkists. After the Lancastrian victory at St Albans in that year he tried to flee to Ireland, but his vessel was captured by the French. Edward IV contributed to his ransom, and in January 1462 he was granted his fee as the king's physician, backdated to the first day of the reign.

Hatteclyffe began to be employed on diplomatic missions in September 1464, when he was sent to treat with François, duke of Brittany, and by January 1466 he had become one of the king's secretaries—an unusual change of career that may owe something to his acquaintance with Henry Sharpe, the king's protonotary. Over the next decade he was extensively employed on diplomatic missions without entirely giving up his medical interests. He appears to have specialized in negotiations with Burgundy and the Hanse, but also had dealings with Denmark and Scotland. During the readeption of Henry VI, Hatteclyffe was imprisoned and was thought to be in some danger of being put to death, but on Edward's return he was restored to his former position and was also made master of requests and a royal councillor. He had links with the queen's circle, and in 1473 was acting with the queen on behalf of her kinswoman Anne Haute. He attended Edward IV to France in 1475, and his last diplomatic assignment was in 1476, after which the king's French secretary, Oliver King, appears to have taken over his diplomatic responsibilities. In June 1480 King was made his coadjutor as secretary and granted the reversion of the office. Hatteclyffe died later the same year and was buried in the lady chapel of Westminster Abbey. His wife Elizabeth survived him. They had moved to a house in Westminster in 1478, after living in London. Hatteclyffe also owned property on the south bank of the Thames, and in East Greenwich, Deptford, and Rotherhithe.

Hatteclyffe was a member of an extensive bureaucratic and clerical dynasty and several namesakes exist. One, who witnessed his will, was an administrator in the stable of the Yorkist kings and Henry VII; he died in 1510. Another **William Hatteclyffe** (*d.* 1519) was the clerk of accounts of Henry VII's household and was appointed under-treasurer of Ireland on 26 April 1495. In 1497–8 he was appointed to levy fines from Perkin Warbeck's adherents in the western counties. Under Henry VIII he combined the office of clerk of the green cloth with *ad hoc* responsibilities such as victualling the royal army. His home was at Lewisham, where he was visited in 1518 by Cardinal Campeggi. He died in late 1518 or early 1519 and was buried in St Mary-at-Hill, London, where his kinsman and namesake Dr William Hatteclyffe was rector. He married, probably as his second wife, Isabel, widow of John Legh of Addington and stepdaughter of John Paston (*d.* 1503). ROSEMARY HORROX

Hatteclyffe, William (*d.* 1519). *See under* Hatteclyffe, William (*d.* 1480).

Hattersley, Richard Longden (1820–1900), manufacturer of textile machinery, was born on 1 December 1820 at Keighley, the eldest of seven sons of George Hattersley, textile machine maker, and his first wife, Elizabeth, *née* Mitchell. He had a limited education at a private school in Keighley, and at Mr Turley's West House, Yeadon, near Leeds, before starting work, at the age of fifteen, as an apprentice in his father's business of textile machine manufacture and repair.

Richard Hattersley was born at the time when his father was trying to rebuild the family business, founded by his grandfather in 1789. Its main activity had been the manufacture and repair of rollers, spindles, and flyers: precision parts for textile machinery. The grandfather died in 1829, just as the business was beginning to experiment with the manufacture of power-looms for the wool textile industry, for which it was to become world famous in later decades. It passed to Richard Longden Hattersley's father, and two of his father's brothers, but there was personal friction, and after the bankruptcy of the firm in 1832 the brothers separated, George being the only one to stay in Keighley. He took over the premises and trade of the old firm, and struggled to rebuild the business by concentrating on the manufacture of power-looms. At this stage, the business was very small and later accounts suggest that Richard Hattersley received a grounding in all branches of the business, as George had done under his father. On 22 December 1846 Hattersley married Ann Smith (1819–1905), second daughter of James Smith, grocer, of Keighley. They had seven daughters.

As an apprentice, Little Dick—as he was familiarly known throughout his life—appears to have developed technical skills that were to contribute to the subsequent engineering success of the business, but his more significant role was through his commercial acumen, and his active search for business and technical opportunities. It was reported that he was ever on the look-out for patents and sought to employ men with inventive capacity to work out and experiment with new technical ideas. He encouraged his workforce to suggest contrivances or improvements. By 1882 he had filed thirteen patents, including those for a revolving box-loom, and looms for weaving fancy goods.

From 1846 Hattersley began to travel widely. He kept detailed notebooks of his summer excursions to the continent, recording itineraries and sales. At first he drew on contacts through the Leeds machine makers that the firm had supplied with components, but soon developed his own, gathering information, establishing a reputation, and encouraging sales. His regular European tours were interspersed with visits further afield. And at a time when British industrialists were being criticized for their laxity in adapting to the languages, weights, measures, and customs of their foreign customers, and for their complacency, Hattersley was producing sales material in several languages and dispatching his expert staff worldwide. In the year of his death, 1900, the firm manufactured over 3500 looms, about half of which were exported.

In 1860 Hattersley was taken into partnership in the business by his father, along with his brother, Edwin Greaves Hattersley. Other brothers joined the firm, but did not enjoy the advantages and risks of partnership. George retired in 1863, ceding control to Richard, who then took the opportunity to expand rapidly the loom-making activities of the business at North Brook Works, Keighley. Edwin ran the firm's subsidiary worsted-spinning interests in the nearby Worth valley, and at Bradford. George died in 1869. The firm was incorporated in 1888, with a share capital of £100,000 in Hattersley, Sons & Co. Ltd, the textile branch, and £90,000 in George Hattersley & Sons Ltd, the machine makers. By this time the firm had become an internationally famous loom manufacturer, establishing a reputation that was to survive to the middle of the twentieth century.

It is difficult to judge the relative importance of Hattersley's technical and commercial contributions to the firm. On the technical side his skill may primarily have been identifying, recruiting, and encouraging highly competent technical staff. On the commercial side, his role was undoubtedly strong. Besides his market-opening foreign travels, he was active at the Bradford and Manchester exchanges, and at the Keighley chamber of commerce. He went out to the market, rather than waiting for the market to come to him.

Hattersley took a benevolent interest in the well-being of his workers, but expected strong loyalty from them and opposed trade union membership. His personality was described as outwardly haughty, cold, and self-contained, but inwardly warm-hearted and kindly. He was a man of few words, and rather brusque to strangers. An obituarist said he never stooped to flattery, evasion, expediency, or opportunism. He was described as having great vitality, and physical endurance. A commitment to Wesleyanism, which involved Sunday school teaching for a while, and a belief in the Liberal cause underlay his personal attitudes. He was an active member of his local Liberal Party until 1894, when he transferred his affiliation to the Unionist cause.

As a major employer in Keighley, Hattersley played a significant role in the affairs of the town. He held a variety of civic offices between 1869 and 1894, including being elected as mayor in 1883. He applied his energies to such varied tasks as the improvement of local gas supply, the running of the mechanics' institute, serving as a governor of several local schools, and acting as a chief magistrate. He was a director of the Craven Banking Company. His interests were primarily local. Hattersley died at his town residence, Burrage House, York Place, Harrogate, on 3 August 1900. He was buried four days later in Keighley cemetery. His personal worth had been extended by the earlier death, childless, of his brother Edwin. Before his own death, he had given £100,000 to each of his seven daughters.

Hatton [*née* Kemble; *other married name* Curtis], **Ann Julia** (1764–1838), writer and actress, was born on 29 April 1764 in Worcester, the daughter of Roger *Kemble (1722–1802), owner of a travelling theatre company, and his wife, Sarah Ward (1735–1807). Her siblings included Sarah *Siddons (1755–1831), John Philip *Kemble (1757–1823), Charles *Kemble (1775–1854), and Stephen George *Kemble (1758–1822). Congenitally lame and scarred by smallpox, she claimed that she was neglected by both parents, and although nicknamed the Genius by other members of the family, received little schooling. She was apprenticed to a mantua maker before going on the stage. Her marriage to an actor, C. Curtis (*d.* 1817), proved bigamous but it was as Ann Curtis that she published *Poems on Miscellaneous Subjects* (1783). Accusing her family of failing to help her, a newspaper advertisement of 1783 solicited donations from the public to relieve her financial distress; she lectured at James Graham's notorious 'Temple of Health', and later attempted to poison herself in Westminster Abbey. A press report of 1789 indicates that she was working in a bagnio when she was accidentally shot in the eye.

On 30 January 1792, Ann Julia married William Hatton (*d.* 1806), and a year later went to America where she addressed an ode to the Democratic Society of New York and wrote the libretto for an opera, *Tammany, or, The Indian Chief*, first performed in 1794. Yellow fever drove the Hattons to Nova Scotia but by 1799 they had returned to Britain and settled in Swansea where William Hatton took out a lease on the bathing house, providing bathing machines, an assembly room, and lodgings for visitors to the 'Brighton of Wales'. After her husband died in 1806 Ann Julia kept a dancing school in Kidwelly; she returned to Swansea in 1809 and made her home there for the rest of her life. For many years she received an allowance from her relatives on condition (so it was said) that she lived at least a hundred miles from London.

For some years Ann Julia Hatton was connected with the Swansea Theatre. In 1803 J. T. Barber described her as lame and grossly overweight, but in reciting 'Alexander's Feast', 'the lady did not fail to exhibit a vivid tincture of the family genius' (Ross, 83). In 1810 she wrote *Zaffine* for Edmund Kean and the following year adapted a novel by Madame de Genlis. At Neath in 1815 her performance of Lady Randolph in *Douglas* was so well received that it was announced in *The Cambrian* that she intended playing Calista in *The Fair Penitent*, 'expressly after the manner of Mrs Siddons' (Price, 120). According to J. Jones, however, the 'Old rancarous hag' [*sic*] had become 'The scoff of grinning Neath' (Jones, 'To Mrs Hatton').

Ann Julia Hatton's first prose work was possibly 'The Unknown, or, The Knight of the Blood-Red Plume' (Haining, 1.200–26), a story which appeared anonymously in *Welsh Legends* (1802). In 1810 *Cambrian Pictures*, the first of her fourteen novels, was published under the pen-name Ann of Swansea. At her best, she was capable of writing fluent narrative and lively dialogue, but the novels are immensely long and for the most part undeniably tedious. As she confesses in the preface to *Lovers and Friends* (1821), 'an author finds his inventive faculties spun as thin as a cobweb in supplying the requisite number of pages for his story'. The novels, all but one published by the Minerva Press, have some generic interest in reflecting the literary fashions of the time—*Sicilian Mysteries* (1812) is a pale imitation of Ann Radcliffe's Gothic tales while both *Secret Avengers* (1815) and *Cesario Rosalba* (1819) feature Byronic antiheroes. *Cambrian Pictures*, *Secrets in every Mansion* (1818), and *Gerald Fitzgerald* (1831) utilize motifs familiar in contemporary fictions of Wales, Scotland, and Ireland. *Gonzalo de Baldivia* (1817), dedicated to William Wilberforce, includes the story of an African family brutally transported to the Peruvian silver mines, annotated with a personal statement by the author deploring slavery. *Conviction* (1814) is notable for a self-portrait: Mrs Mortimer, author of *Welsh Likenesses*, a 'coarse, large, ill-shaped creature', who squints abominably and is pitted with the smallpox (3.204), vigorously denies that she is about to bring out a novel containing 'scandalous anecdotes of this most immaculate town' (3.238). Ann Julia Hatton herself, however, did not scruple to reveal in *Chronicles of an Illustrious House* (1816) that 'your little town of Gooselake abounds with all the vices of the metropolis' (2.120). The novel caused a furore in Swansea.

Ann Julia Hatton was a prolific writer of verse. *Poetic Trifles* (1811) includes the celebrated 'Swansea Bay'. In 1832 she was seeking subscriptions for *Fifty-Two Poetic Cumaean Leaves. Predicting the Destiny of Ladies and Gentlemen*. In 1834 she approached the publisher Richard Bentley with *The Raconteur*, and presented a scrapbook of verse to the young Swansea physician, Dr Douglas Cohen, fulfilling a promise that she would write him a poem every day for a year. Although 'A Resident of Swansea' described her at seventy as 'still a splendid woman' (Highfill, Burnim & Langhans, *BDA*, 7.175), her autobiographical verses are a poignant expression of her sense of desolation in old age, as well as conveying her bitterness towards her family.

Ann Julia Hatton wrote 'Farewell Lines' to Dr Cohen on 28 September 1838 and dictated her last letter to him on 21 December, 'when in *articula mortis*' (D. Cohen to J. D. Francis). She died on 26 December 1838 at 15 Park Street, and was buried in St John's churchyard on 31 December. Brought up a protestant like her mother, it is said that she died a Catholic like her father. The bulk of her estate was left to Mary Johns, her servant. MOIRA DEARNLEY

Hatton, Sir Christopher (*c.*1540–1591), courtier and politician, was the second son of William Hatton (*d.* 1547) of Holdenby, Northamptonshire, and Alice, daughter of Lawrence Saunders. The family were lesser gentry with modest resources. Hatton entered St Mary Hall, Oxford, *c.*1556–7, probably as a gentleman commoner, where William Allen (afterwards cardinal) was president. On 26 May 1560 he was enrolled in the Inner Temple. He may have been a barrister, but was never reader or bencher.

Early career In the new year festivities of 1562 at the Inner Temple, members presented the play *Gorboduc* to an audience that included the queen; Robert Dudley participated in the performance of a masque in which Hatton probably figured. It was here or on a similar occasion that he attracted Elizabeth's attention. He became a gentleman pensioner some time between 25 March and 30 June 1564 when a royal warrant commanded the issue of a suit of armour for Hatton's use. In September of that year the queen sent him to welcome Sir James Melville, ambassador from Scotland, and to escort him to the royal presence. In 1566 he was a member of Bedford's suite when the earl was sent to Edinburgh to attend the baptism of Prince James.

Hatton continued his association with the Inner Temple and was one of four joint authors of *Gismond of Salem*, played before the queen in 1566 or 1567. He was active in the social life of the court, a participant in the tilts celebrating the earl of Warwick's marriage in 1565 and again on two occasions in 1571 where the other participants were the earls of Leicester and Oxford, and other court notables. Tangible rewards for his service at court soon began to appear. In 1568 he exchanged his hereditary manor of Holdenby for the site of Sulby Abbey and then received Holdenby back on a forty-year lease. In the same year he became keeper of the parks of Eltham (Kent) and Horne (Surrey); in 1569 he had the farm of a Pembrokeshire chapel. In 1571 there followed the reversion of the office of queen's remembrancer in the exchequer, a London inn, lands in Yorkshire and Dorset, monastic lands in Leicestershire, and the keepership of Wellingborough, Northamptonshire. From 1572 he joined in the customary exchange of gifts between courtiers and queen. The queen's gift to him singled him out since he received 400 oz of silver plate, twice the amount awarded to ranking dignitaries and eight times the usual gift of 50 oz.

Sir Christopher Hatton (*c.*1540–1591), by Nicholas Hilliard, *c.*1588–91

The courtier In July 1572 Hatton was appointed a gentleman of the privy chamber and captain of the yeomen of the guard. In 1569 he appears in a list of Northamptonshire JPs and in 1571 he sat in parliament for Higham Ferrers; in the following year he represented his native county. His seat in parliament was the first step in his transformation from courtier to politician. The flow of gifts from a sovereign usually so sparing in her benefactions was an effect of Elizabeth's fascination with Hatton's personal qualities. Tradition, not of contemporary date, ascribed his appeal to his skill as a dancer. Camden wrote of the attractions of a man 'young and of comely tallness of body' and 'modest sweetness of condition' (Camden, 2.43).

Whatever the circumstances, Hatton had established a personal relationship with Elizabeth which would last a lifetime. It was more private than that with Leicester, whose ambitions were straightforwardly public: success in politics and—he hoped—as a soldier. Failing the royal marriage, the earl quickly emerged on the public stage where he took the initiative as a promoter of causes and patron of an extensive following. Hatton was content for the first decade of his court career to enjoy a wholly private relationship with Elizabeth.

Beyond his personal charms Hatton was a consummate player of a game which Elizabeth adored, that of courtly love. His role was that of the perpetual suitor, who forever worships an earthly goddess with unwavering devotion—

a devotion that cannot be fulfilled but never wanes. Hatton was a master of the extravagant rhetoric in which the play was acted out. In 1573, forced by illness to seek relief, he travelled to Spa. His letters to Elizabeth survive: 'This the twelfth day since I saw the brightness of the sun that giveth light unto my sense and soul, I wax an amazed creature' (Nicolas, 27). He describes himself her 'most happy bondman', Lyddes, who with 'pure love and diligent faith may everlastingly serve you' (ibid., 29). The queen gave him, as with other intimates, special names—her 'lids' or her 'sheep'—and he used the special symbol of three parallel triangles in writing to her. In later years when a new favourite, Walter Ralegh, appeared on the scene, Hatton sent her a token, a silver bucket, symbol of wa[l]ter. Water, he wrote, an unstable element, would breed confusion. She responded that her *pecora campi* were so dear that she had bounded the banks so that no water should overthrow him. She sent him a symbol, a dove, the biblical herald of receding flood.

Behind all this play-acting there stood a stable relationship. Sealed by their constant companionship, Hatton's offices at court kept him in close contact. He not only stood closer to her than any other man, but his loyalty was undivided. Unmarried, he had no family ambitions. Given the special nature of his relationship with Elizabeth, he could not, like Dudley, risk marriage, even had he wished it. The only public cause for which he spoke was the conservative churchmanship of Whitgift in which his sympathies chimed with those of his mistress. Yet this does not explain the metamorphosis from courtier-in-chief to senior councillor of state.

Parliamentary manager One clue lies in Hatton's first open participation in business of state. In the parliament of 1572 (his second) he was a member of the committee dealing with the case of the queen of Scots. At a crucial moment in the debate it was he who whispered in the speaker's ear a royal message ordering him to shorten discussion. After parliament went into recess Hatton complained that he was being blamed for the failure of a bill concerning Mary Stewart and the duke of Norfolk as well as bills on religion. There is no parliamentary evidence, but he may well have been employed in relaying royal interference in the business of the house.

In the parliament of 1576 Hatton, sitting again for Northamptonshire (as he would until his lord chancellorship), played a much expanded role. He sat on no fewer than fourteen committees, including those of the subsidy and the queen's marriage. The session had opened with Peter Wentworth's motion on liberty of speech, for which he was sent to the Tower of London. Hatton sat with the privy councillors in the house as one of Wentworth's examiners, and subsequently announced to the house Elizabeth's order for his release. Later in the session he became involved in the complicated case of Arthur Hall over the issue of parliamentary privilege. The privy councillors in the Commons intervened to bring about a settlement. Their collaborator was again Hatton who took an active role in pressing, unsuccessfully, Hall's case. Hatton's association with the privy councillors was a token of his coming promotion to their ranks, which occurred in November 1577. At the same time he was made vice-chamberlain of the household and knighted.

When parliament reassembled in 1581 Hatton in his new dignities was even more to the fore. At the opening of the session the motion proposed by the indefatigable Peter Wentworth for a public fast was given approval, sparking off the indignant intervention of the queen. Hatton delivered a message from Elizabeth, condescendingly forgiving the house but warning them that on religious matters they should await direction from the crown. Hatton was charged by the house to carry to the queen their humble submission and the next day reported Elizabeth's gracious acceptance. He was settling into a permanent role as spokesman for the queen, the regular channel of communication between sovereign and parliament.

The first piece of crown legislation in 1581 was a bill imposing harsh penalties on recusants. Passage was deflected when Hatton proposed a conference with the Lords where a similar bill was pending. Presumably he acted on royal command. Certainly the resulting statute reflected the queen's leniency towards recusants rather than the Commons' harsh proposals. A second measure, sponsored by the government, was entitled 'an act against seditious words and rumours uttered against the Queen's Most Excellent Majesty' which provided extreme penalties and added a new crime, prophesying how long Elizabeth would live or who would succeed her. The religious left wing, scenting dangers to their spokesmen, sought to amend the bill, softening the extreme penalties and adding a specifically anti-Catholic clause, punishing anyone who asserted the Church of England to be heretical or schismatic. The Lords rejected the amendments. The council then put Hatton forward. In an emollient speech, which blamed the Lords, he persuaded the house to adopt a new bill in which the crucial amendment was omitted.

Even before his promotions Hatton had attained a semi-official status, both in Commons and in state business. When in 1576 Champagny, the special ambassador of the Spanish government in Brussels, went to London, Hatton was called upon to entertain him officially. In the course of the affair Hatton took aside Philip's agent in London to assure him of Elizabeth's desire to act as mediator in the Low Countries dispute. He was again acting as a royal messenger, this time to the Spanish king.

Privy councillor With his appointment to the council Hatton was quickly inaugurated into its business. His attendance record equalled that of Lord Burghley and Francis Walsingham, the two principal executive officers. In 1578 the urgent business before the council was the troubled situation in the Low Countries where all was in confusion following the collapse of Spanish authority and where French intervention threatened. Secretary Walsingham and Lord Cobham had been dispatched to Brussels in June as prospective mediators. Correspondence with them was handled by a small committee, Burghley, Leicester, the earl of Sussex, Sir James Croft, and Hatton. They also received the ambassador of the states general in March. Walsingham was already looking to Hatton as a

mediator with the queen, who was angry at the secretary's handling of negotiations; the vice-chamberlain was able to soften the royal displeasure. Walsingham's trust in Hatton was further revealed in their correspondence, where he freely expressed his criticism of royal policy towards both the Low Countries and Scotland. In the meantime news of French encroachments in the Low Countries led the worried queen into consultation with Burghley, Leicester, and Hatton and a month later, when the duc d'Anjou sent an agent with proposals for renewing his courtship, it was the same trio who, with the queen, saw the envoy and composed an answer to the duke.

Hatton had entered the council just as the Anjou marriage project, which would focus its attention for the next three years, emerged. After various exchanges, Simier, Anjou's representative, arrived in January 1579 to open serious discussion. It fell to Hatton to entertain him. According to the Spanish ambassador, Leicester and Hatton had now become allies in forwarding the match and also in promoting Thomas Bromley as chancellor, in which they succeeded. The ambassador's accuracy may be questioned, although they may have temporized in the early stages of negotiation.

Debate continued through the summer while the council waited to see what direction matters would follow. In August the duke himself arrived for a ten-day visit. In the early autumn the queen signalled her willingness to marry and sought the council's advice. By then there had been a strong public reaction, most forcibly expressed in Stubbs's *Gaping Gulf*. Whatever their earlier views, Hatton and Leicester now joined with the rest of the council in a sullen acquiescence, offering to support the match if it pleased her. Any affirmative commitment lacking, a tearful queen vented her wrath on the offenders. According to the Spanish ambassador it was in the wake of this episode that Hatton and the queen quarrelled and she banned him from her presence for a week.

Elizabeth was still unwilling to break off the Anjou suit altogether and in November she appointed a commission of seven, including Hatton, Burghley, and Walsingham, but not Leicester, to negotiate with Simier on articles for a marriage treaty. But by new year 1580 the queen had admitted to Anjou that public opinion made their marriage impossible.

When Anjou seemed about to become commander of the states army, Burghley, Hatton, Sussex, and Walsingham pressed the queen to succour the prince of Orange if he rejected Anjou. Failing that, they renewed the possibility of alliance. Finally Anjou himself reappeared in England in November 1581. The queen, to their dismay, gave the duke a ring as a token of her acceptance of his wooing. Then, again according to the Spanish ambassador, Hatton spoke forthrightly to Elizabeth warning her of the dangers of a marriage being popularly rejected. He was backed by Leicester. Whatever the exact circumstances, the queen saw Anjou and retracted her promise. In 1581, when Burghley proposed overtures for a treaty with France, Leicester, Hatton, and Walsingham opposed him. Negotiations were in fact begun but soon failed. The queen, compelled to become Anjou's paymaster in the Low Countries, could only look on as his folly alienated the Dutch.

How should Hatton's part in this prolonged episode be interpreted? He entered high politics reputedly pro-Spanish, in other words favouring some kind of negotiated settlement. This may well have represented his earlier views, but once on the political stage he attached himself to Leicester. Their alliance continued through 1581. Thereafter the record is blank as to Hatton's views on foreign policy. Rumour reached the Spanish ambassador that during a revival of the Leicester–Sussex rivalry in 1582 Hatton supported Sussex.

The only clue to Hatton's position in these years is a letter of 1580 in his own hand to Walsingham. He sings a familiar litany. Philip II, now master of Portugal, will be free to assist the pope in his designs. England must foresee the dangers of his ancient and crooked malice and prepare to resist it. He then recounts the besetting dangers that surround England—French influence in Scotland, the risk that James may be taken to France, French alliance with Spain, the broken state of Ireland, the weakness of the French protestants. Why does the queen delay, if she intends to marry? All this chimes in with Walsingham's grim view of England's prospects.

From the sparse and scattered sources available it would appear that Hatton regularly sided with Leicester and Walsingham in the struggle over the Anjou match. The Spanish ambassador, Mendoza, regarded him as an outright enemy of his master, alleging that Leicester and he sought his expulsion. What this reveals is a political figure who took no initiative of his own but did follow a consistent line of action. His support was highly valuable since his unique relationship with Elizabeth enabled him to report her views in these matters and, on occasion, to sway them. It secured him an essential place in the inner circle where decisions were made. His relations with his fellow councillors seem to have been smooth.

Hatton's personal ambitions did not clash with those of others while his special status enabled him to avoid the petty rivalries of less privileged courtiers. He made little effort to build up a clientele. Aside from his ecclesiastical connections he had few protégés. Sir Henry Unton, the diplomat, was one such. In 1587–8 he made some effort to protect Thomas Wilkes, the clerk of the council, against Leicester's wrath. The unlucky William Davison seems also to have looked to him for backing and his fellow councillor, Sir Thomas Heneage, spoke of him as the man he best loved in court. He was, of course, the recipient of countless petitions from office-seekers or others hoping for some benefit from the crown, but his help was also sought by those who, for one reason or another, suffered from the queen's personal disapproval. Archbishop Grindal, for instance, turned to Hatton in hopes of softening the royal displeasure, an instance quite surprising given Hatton's own religious allegiance. Lady Sussex, after her husband's death, sought his help in recovering the queen's good graces.

When in 1585 Elizabeth finally agreed to an alliance

with the states general, Hatton was a member of the committee to deal with their delegation in drawing up the terms. Later, when Leicester went off on his Low Countries venture, it was Hatton's aid that he sought after having invoked Elizabeth's anger by accepting the governorship. Both he and Burghley acted as buffers between the earl and the queen. With Burghley and Walsingham he was immersed in the business of the war. Letters to the queen from the Netherlands were sent to Hatton for him to pass them on to her.

While Philip was assembling his Armada, a feeler was put out from Brussels through a Flemish merchant in London. Burghley, responsive to this opportunity, obtained the queen's consent and opened the matter to a small group of fellow councillors; Comptroller Croft, a long-time friend of Spain, was the leading figure. The only others included were Hatton, Cobham, and Sir Walter Mildmay. Leicester and Walsingham were carefully excluded. The negotiations continued up to the arrival of the Armada; nothing further of Hatton's role is known, but clearly Burghley thought him sympathetic to this negotiation with Spain.

Lord chancellor Hatton's attentions were now suddenly wrested in a wholly new direction. Lord Chancellor Bromley died on 12 April 1587. The vacant office was offered to the earl of Rutland, whose death followed almost immediately. The queen then turned to Hatton, signing his patent on 24 April, and in early May he rode in state to his inauguration, accompanied by Leicester on one side and Burghley on the other.

The legal profession was much affronted by this appointment. Apart from his youthful days at the Inner Temple, Hatton had no formal legal experience, although as a councillor he had sat in Star Chamber. Camden reported that Hatton's appointment was the work of his rivals, who hoped his necessary absence from court would diminish his attendance with the queen. Leicester, writing to Walsingham just after Bromley's death, expressed his satisfaction that Elizabeth was willing to hear of Hatton's appointment to the great seal, declaring he would surely be fittest for it.

Of Hatton's four years as chancellor little record remains (for only one case is there a report). He sensibly turned to skilled assistants, particularly Richard Swale, a fellow of Caius College, a man who had been accused of papist leanings and had been refused the proctorship by Burghley as chancellor of Cambridge. However, he had been elected president of Caius and in May 1587 was appointed a master in chancery. He and a team of four assistants provided their services in aid of Hatton. Camden's judgement on Hatton's legal career was that what he lacked in legal knowledge he sought to supply by equity. In 1588 the queen augmented his honours by the Garter, and Oxford University chose him as chancellor in succession to Leicester.

Hatton was employed in a semi-legal role in the two conspiracies against Elizabeth's life in the 1580s, the Parry plot and the Babington plot. In the former the accused was both an MP and a former secret agent employed by the government. Hatton, as a trial commissioner, took special pains to establish Parry's guilt and to discredit any suggestion he was acting as an *agent provocateur*. Hatton intervened again at the conclusion of the trial to ensure maximum publicity was given to Parry's confession. In the Babington case Hatton was again a major player, sitting on the trial commission. Here he took the lead in pressing the prisoners to full confession of their intent. He made no further recorded intervention in the trial, but it fell on him to make the condemnation a public and a national act. Among the conspirators three were connected with Hatton. One, Captain Jacque (Jacomo di Francisci), was a shady character whom Hatton had employed in Ireland, for what purpose is unclear. He had returned with a letter of commendation from Archbishop Loftus. He was then put to work spying on Ballard, an exiled priest and zealous plotter. When the trials of the conspirators took place, the government was careful to avoid placing him on the witness stand. A nominal sentence of a year in the Fleet prison was deemed sufficient. This man afterward defected to the Spanish in Flanders. The other two, Henry Donne and Chidiock Tichborne, were part of the cluster of young Catholic gentry moving in court circles. Donne was named by the Spanish ambassador as Hatton's 'secretary'. Clearly these two were commonly regarded as moving in Hatton's circle, but there is no evidence of formal service. Hatton singled each of them out, loading them with reproach.

Hatton was also a commissioner for the trial of the queen of Scots. When in the opening session she pleaded that as a queen she could not be tried by a foreign court, he persuaded her to lay aside her dignity so that she might prove in court her innocence. Further proceedings were in Burghley's hands.

Hatton's parliamentary appearances in these great causes reflected the continuing role he had in that body's business. That role embraced two functions. On the one hand he continued to shepherd bills proposed by the ministers through the process of enactment to statute. Beyond this he continued in his special task of mediating between sovereign and Commons. This task increased with the growing restiveness of a small but determined minority who pushed for discussion of the sensitive question of religion, seeking to unsettle the settlement of 1559. Hatton's function was to check these manifestations. Often a peremptory command sufficed, but on other occasions subtler means were used and it was here that Hatton held the stage.

In 1584 the puritan party in the house put forward a bill and a book which aimed at nothing less than the replacement of the Book of Common Prayer and establishment of a presbyterian polity. Hatton rose to urge the house not to read the bill but to trust the queen to reform the grievances alleged. The house agreed and nothing more was heard of the bill. In 1586–7 the reformers did succeed in getting the bill read and debated; the queen ordered the speaker to give her the bill while the ringleaders in the house went to the Tower. When a member proposed a

petition for their release, Hatton rose to reply, embarking on a reasoned defence of the royal policy. After defending the superiority of a formal liturgy, which the common people could learn by often hearing so that it became a common inheritance, over extempore prayers, he went to the core of the matter. Presbyterian government of the church would deprive the queen of her rightful and necessary power and open the door to rebellion as preached by Buchanan and Beza. In an address opening the parliament of 1589 Hatton dwelt on the same theme, going on to rank the puritans as much enemies of the crown as the papists. He then straightforwardly charged the Commons not to meddle in matters religious except to bridle the activities of the queen's enemies, papist and puritan alike.

Hatton's parliamentary functions went beyond the negative tasks of checking incursions on the royal prerogative to the positive promotion of patriotic response to encompassing danger. From the early 1580s onwards England faced compelling decisions in its foreign relations with the looming threat of war in the background. These threats would incur heavy costs; the people of England must be prepared to bear them. In 1584–5 Hatton, speaking on measures to protect the queen's safety, took the opportunity to review Anglo-Spanish relations since 1558, recounting the expulsion of the English ambassador in 1566 and successive events down to the Throckmorton plot and the consequent dismissal of Mendoza. A member of the Commons expressed his amazement at the confidence in the house displayed in his speech: 'They were *magnalia regni*' (Neale, 2.28). Hatton shared with Burghley the need to involve public opinion in support of crown policy.

In the parliament of 1586–7 Hatton followed up by telling the house it was the royal pleasure that he disclose to them the dangers threatening their country from the Catholic crusade now preparing. Philip had assembled a great fleet, composed of Spanish and Italian ships, and an army of similar composition. Aid to the Low Countries was imperative, given the long-standing commercial and diplomatic ties as well as the overriding strategic consideration. 'It must not be suffered that a neighbour should grow too strong' (Neale, 2.167). In a later session he expanded this theme. Spain in control of the narrow seas could check England's commerce, choking the cloth trade; defending the Low Countries was defending England's commercial survival. He went on to hint that all this would cost more than the routine single subsidy. The house responded by offering a benevolence, accompanied by a petition that Elizabeth accept the sovereignty of the Low Countries. She thanked them and declined the benevolence. How far this whole episode was an effort of Leicester and Walsingham to press the queen to accept the government of the Low Countries remains a speculation.

In 1589 Hatton, now chancellor, gave the opening oration, in which he surveyed the post-Armada state of the nation. Burghley had provided him with a brief on the matters to be included. In a historical survey going back to Henry VIII he traced the history of papal hostility, of the measures taken by the present pope ('that wolfish bloodsucker') and his champion the king of Spain ('that insatiable tyrant') (Neale, 2.197). He then listed and excoriated English traitors from Cardinal Pole to Cardinal Allen. It was an appeal designed to rouse both patriotic and ideological responses.

Another great parliamentary occasion in which Hatton had a major part was the case of Mary Stewart. She had already been tried and condemned, but the government wanted an expression of public support. Hatton opened debate by a speech condemning the Scottish queen's whole course of action since 1559. As the Catholic candidate for the throne she constituted a deadly menace to the queen. He ended with a ringing declaration, 'Ne pereat Israel pereat Absalom' ('Let Absalom perish that Israel perish not'; Neale, 2.107). The result was a petition to the queen to approve the execution, which Hatton duly presented to Elizabeth. She thanked them but gave no answer. Hatton then engineered a joint petition of both houses only to produce another burst of cloudy royal rhetoric. At last, at adjournment, Hatton could tell the members that the sentence against Mary would be proclaimed, a step towards execution of judgment. In the storm that followed the execution Hatton was the first to feel Elizabeth's wrath, but it was Burghley who suffered the longest expulsion from the court.

Hatton had, of course, continuing routine responsibilities in the dispatch of parliamentary business—promoting, with Mildmay, an unpopular bill on wardship or, unsuccessfully, pushing renewal of Cecil's Wednesday fast. In the bill formalizing the oath of association Hatton intervened to protect the rights of James of Scotland. His membership on countless committees enabled him to promote government-sponsored legislation while watching over other bills, intervening where crown interest obtained. He did not apparently follow Burghley's example in promoting measures of his own.

It fell to Hatton to carry the queen's prohibitions or rebukes to the house. He felt the need to sweeten such episodes by countervailing exchanges of mutual goodwill. One such occasion offered at Christmas 1584. The house had just finished giving the oath of association statutory form. The queen, considerate of her subjects' pleasures, adjourned parliament so that members could enjoy the festival at home. The house returned its thanks for the favour. Elizabeth responded, through Hatton, with her gracious acceptance, ascribing the successes of her reign to the virtues of her subjects. Hatton then capped this effusion of mutual regard by moving that the Commons join in a prayer for their sovereign for the continuance of the blessings poured on them. All fell on their knees to recite a prayer, opportunely provided by him for the occasion.

Religion and private affairs If Hatton took few initiatives of his own in foreign policy and made little attempt to form a political clientele, there was one area in which he did take a positive, clearly directed position—that of religion. Throughout his career there had been recurrent rumours of his Catholic sympathies. He had been at Oxford in

Mary's time when William Allen (afterwards cardinal) was head of his college. The latter wrote of him years later, presuming him to be a fellow believer. In 1573 a fanatic attacked Sir John Hawkins under the mistaken impression that he was Hatton, whom he considered to be a papist. These allegations, which continued through his career, are not borne out by contemporary evidence. Camden wrote of him as someone whom Catholics thought inclined to their side and opposed to fire and sword in matters of religion. Whatever his private views, in public life he denounced the pope in ringing terms and condemned Allen as a savage priest.

However, within the framework of the Elizabethan settlement, Hatton was a consistent and active opponent of the puritans. It was shown above how skilfully he deflected the first attempt to bring forward the book and bill measure and how in the parliament of 1586–7, in a speech drafted by Bancroft, he brought his heaviest artillery to bear in denunciation of its sponsors. In 1589 Bancroft, his chaplain, preached at Paul's Cross a sermon pushing the divine right of episcopacy. It was published at the direction of Hatton and, somewhat surprisingly, Burghley. At the same time, he pushed for a new set of articles, incorporating Bancroft's views; the queen refused it her backing.

It is plain that from the early 1580s on Hatton was zealous in promoting the programme of an ally—John Whitgift. For instance, when a group of Kentish gentry appealed to the council for the release of some imprisoned non-signers of the articles required by the primate, Hatton sent the text of their petition to Whitgift to enable him to anticipate their argument. He was, of course, an invaluable ally for the archbishop in winning royal approval for his programme. In all probability this was an easy task, given the royal predisposition. In this activism he parted company with Burghley, who shared the royal objections to the radicals but declined to punish recalcitrant clergy. Hatton's death was a loss to Whitgift, but his cause was firmly established.

Hatton's rise from courtier to statesman had been paralleled by the rise of his private fortune. In 1575, at a time when he complained of his debts of £10,000, he received a £400 annuity and in 1578 the receivership of first fruits and tenths. In 1576 the queen gave him the Isle of Purbeck with Corfe Castle. At some time he had the farm of sweet wines, although for one term only. He shared in the spoils of Ireland with a grant from the confiscated Geraldine lands of some 10,000 acres in extent.

All these benefactions, however, failed to match his expenditure. Determined to surpass his colleagues' seats, such as Burghley's Theobalds, in grandeur, Hatton set out to erect on his ancestral Northamptonshire manor of Holdenby a palace that would fulfil his ambition. First, however, in 1576 he purchased the newly built Kirby Hall, not far from Holdenby. The erection of his own house began shortly thereafter. He himself, tied as he was to the royal presence, rarely saw either property. In 1580 he declared he would not visit Holdenby until his holy saint, to whom it was dedicated (namely Queen Elizabeth), came to sit in it. That vow was not kept literally nor did the 'saint' ever visit the shrine. Many of Hatton's associates did, among them Burghley and Mildmay in 1579, but in his absence. On one festive occasion he did inhabit his house, when in June 1589 his nephew and heir was married there and the chancellor shed his gown to join the dance. The house, of which one wing still survives, was built on the same general plan as Theobalds; there were two great courts—one 128 feet by 104 feet, the second 140 feet by 110 feet, covering 2 acres, about the same size as Hampton Court—a chapel, and a characteristic long gallery, 146 feet by 22 feet. This enormous structure, built between 1578 and 1583, effectively bankrupted its owner. His too generous estimate of his fee as receiver of first fruits and tenths occasioned a rebuke from Burghley. On his death, Hatton owed the queen £18,071 in arrears.

Given Hatton's situation a London residence was also a necessity. Here he set his sights high: nothing less than the palatial residence of the bishops of Ely, England's fourth wealthiest see. At Hatton's request the queen pressed the reluctant Bishop Cox to yield, first in 1576 a short-term and then a perpetual lease at a nominal rent. Hatton spent £1900 in repairs to an establishment some 7 acres in extent with a hall, garden, and chapel.

Another aspect of Hatton's courtly career was his patronage of men of learning. Both Burghley and Camden attested to his reputation as a lover of learned men. There are over a dozen dedications by authors to Hatton. Three of these authors had a traceable connection with the favourite and seem to have enjoyed material benefits given by him. Thomas Churchyard was a correspondent for some years and probably received some financial assistance. Barnaby Rich completed *Riche his Farewell to Military Profession* while enjoying the hospitality of Holdenby. The Elizabethan magus Dr John Dee was in regular contact up until his departure for Poland. None of the other authors who dedicated work to Hatton seems to have enjoyed personal contact.

Hatton, always in need of money, was an eager investor in overseas enterprises. He joined Leicester and Walsingham in supporting—and investing in—Drake's circumnavigation voyage of 1577–80. Two of his nominees, one a ship's captain, the other Drake's trumpeter, served in the expedition. On entering the Strait of Magellan, Drake renamed the *Pelican*, his own ship, the *Golden Hind* in Hatton's honour. His investment is not known, but his profit was a substantial £2300. When on Drake's return Burghley persuaded the queen to seize the treasure, holding it for restitution to Spain, Leicester, Hatton, and Walsingham refused to sign the council order. The money in fact ultimately came to the investors.

Hatton's interest in overseas expeditions continued. He invested in Frobisher's three north-west passage voyages, sending a nominee, George Best, in one of them. Best published an account of the voyage, dedicated to Hatton. He ventured again in Fenton's East India voyage, a sum of £250. He shared in the intended Moluccas voyage (which became the Indies voyage of 1584) to the extent of £1000

and another £1000 went into the Portugal expedition of 1589.

At home Hatton had various interests. In the 1570s, when he acquired Corfe Castle with the office of vice-admiral of the Isle of Purbeck, he added the keepership of Branksea Castle in Poole harbour. This gave him admiralty jurisdiction over a stretch of Dorset coast with various privileges. Private jurisdiction of this kind offered cover for pirates and their booty. On at least one occasion Hatton fell under suspicion as a protector of such gentry. In 1577 Burghley rebuked Hatton for his relations with a notorious pirate, Callis. Presumably he had sought Corfe because of the large opportunities that the office opened for increasing his always inadequate income.

Hatton's active life continued to the end. In October 1591 he was writing to Essex in Normandy; he died at Ely Place on 20 November, having been visited by the queen who, according to some accounts, brought him broth. He was buried on 16 December 1591 in St Paul's Cathedral, where an elaborate monument was erected by his nephew and heir, Sir William Hatton.

Hatton, Christopher, first Baron Hatton (*bap.* 1605, *d.* 1670), politician, was baptized on 11 July 1605 at Barking, Essex, the eldest surviving son of Sir Christopher Hatton (*d.* 1619) and his wife, Alice (*fl.* 1570–1630), daughter of Thomas Fanshawe of Ware Park, Hertfordshire. As the cousin and heir male of Sir Christopher Hatton, the Elizabethan lord chancellor, he inherited a substantial estate, including the ostentatious Kirby Hall in Gretton, Northamptonshire, described by John Evelyn in 1651 as 'a very noble house' (Evelyn, 3.133). He succeeded his father in September 1619 and was admitted to Jesus College, Cambridge, and Gray's Inn in 1620. Created MA of Cambridge in 1622 he returned afterwards to take his place as one of Northamptonshire's principal gentlemen.

Hatton was elected MP for Peterborough in 1625 and for Clitheroe in 1626, and was created KB at Charles I's coronation in February 1626. He strengthened his Northamptonshire ties through his marriage, on 8 May 1630, to Elizabeth (*c.*1610–1672), daughter of Sir Charles Montagu of Boughton. In 1631 the king named him to Northamptonshire's commission for knighthood fines and in 1636 he became high steward of Higham Ferrers as well as of several other Northamptonshire manors. In 1640 Higham Ferrers returned Hatton as a member of the Long Parliament. Active for the king as a commissioner of array in Northamptonshire by August 1642, Hatton did not resume his seat at Westminster, and joined the king at Oxford. The university bestowed an honorary doctorate upon him, and the king took him into his service. Charles appointed him comptroller of the household, named him to the privy council, and in July 1643 raised him to the peerage as Baron Hatton of Kirkby. Clarendon pronounced him a 'person of great reputation at that time' (Clarendon, *Hist. rebellion*, 7.396) and in December 1646 he served as one of the king's negotiators at Uxbridge. But the end of the first civil war and the possible loss of his estates forced Hatton to reconsider his royalist commitments. He left his post as comptroller, and in December 1646 asked leave to compound for his property. In March 1647 parliament fined him £4156, a sum later reduced to £3226.

Fundamentally a royalist, however, Hatton left England for France in 1648. Throughout the interregnum he struggled to stave off the loss of his property while remaining loyal to the king. This careful balancing act earned him the enmity of some in the exiled court, including Clarendon. In the spring of 1651 he was in London, apparently in an attempt to reverse the government's seizure of his property, ordered in May 1650. Unsuccessful, he returned to Paris, where he distanced himself from the royalist exiles. In November an English government spy reported: 'Hatton, to save his own estate in England, never comes at [Charles II] by his own consent' (*CSP dom.*, 1651–2, 3). At the same time, however, Hatton claimed to be working hard in the king's behalf in a letter to the royalist Lord Inchiquin. In February 1654 Lady Hatton, in England, petitioned the committee for compounding for the return of the family property, asserting that her husband's exile was not political, but rather 'to lead a quiet life and pay his great debts' (Green, *Compounding*, 1579–80). An investigation of Lady Hatton's claims reported that her husband had ended his contact with the royalists. Angry at being excluded from the privy council, he had refused an offer to serve as ambassador to Sweden. He was, the report said, 'not countenanced by the English Court' (Green, *Compounding*, 1580). As a result, in May 1654 the government discharged Hatton's estate.

The committee's report notwithstanding Hatton did maintain some connections with the Stuarts. In December 1654 he played host to the duke of Gloucester, then quarrelling with his mother the queen, and was said to be angling for the duke's guardianship. It is also clear that he lent the king money which, given his circumstances, he could ill afford. He returned to England in late 1656 and spent the rest of the interregnum recouping his fortunes. One of his projects during this period was the development of his London property at Hatton Garden, which was subdivided and built upon.

Given Hatton's ambivalence during the interregnum

and Clarendon's enmity, it is perhaps unsurprising that rewards for his services were slow in coming. He was named to the privy council in January 1662, but soon after dispatched to Guernsey as governor. While in Guernsey he provoked several furious disputes with his deputy, who in 1664 accused him of pocketing money meant for the garrison, as well as of favouring dissenters. Hatton denied the former charge, though he admitted that he sometimes dealt with nonconformists in secular matters. In December 1664 the king ordered him home for consultations—an order that had to be repeated twice, to Charles's great annoyance. While he did not lose his office Hatton never returned to Guernsey. In any event he preferred life in London, where he was prominent in the fledgeling Royal Society, of which he was an original member. A collector of books and antiquities, he patronized Gregory King and William Dugdale and carried on an extensive correspondence on scientific and philosophical matters. He died on 4 July 1670 at Kirby Hall, and was buried the following month at Westminster Abbey. He was succeeded by his son Christopher *Hatton, first Viscount Hatton.

Hatton, Christopher, first Viscount Hatton (*bap.* 1632, *d.* 1706), politician, was baptized on 6 November 1632 at St Bartholomew-the-Great, London, the eldest of the two sons and three daughters of Christopher *Hatton, first Baron Hatton (*bap.* 1605, *d.* 1670), and Elizabeth (*d.* 1672), daughter and coheir of Charles Montagu of Boughton, Northamptonshire.

Hatton, who was educated at home, followed his father's politics. In 1654 he was involved in cavalier plotting and was the principal agent in bringing his cousin Edward Montagu, later the earl of Sandwich, over to the Stuarts. He subsequently joined his father in exile in Paris. At the Restoration he became steward of Higham Ferrers, Northamptonshire, a gentleman of the privy chamber in 1662, and a justice of the peace in Northamptonshire in 1663. In 1664 he became a captain of foot (Guernsey) and made a report to Colonel William Legge on the state of the island of which his father was governor. The following year he deputized for his father in his absence. In 1663 he was elected to parliament for Northampton, a seat he held until his father's death elevated him to the House of Lords. He was not an active MP and was noted as a court dependent.

On 12 February 1667 Hatton married Lady Cicely (1648–1672), daughter of John Tufton, second earl of Thanet. They had three daughters. Her £5000 portion helped to save the family from the financial disasters wrought by the civil war and his father's subsequent extravagances. In 1667 he was made a captain in the Earl of Manchester's Foot and in March 1670 became a deputy lieutenant in Northamptonshire. On his father's death, on 4 July 1670, he succeeded as second Baron Hatton and governor of Guernsey, and was granted a pension of £1000 per annum. Roger North credited his 'unparalleled prudence and application' at this time with restoring his family's estate, setting his brother and sisters at ease, and comforting the last years of his mother's life (R. North, *The Lives of ... Francis North ... Dudley North ... John North*, new edn, 1826, 2.293). As part of this financial prudence he sold 112 medieval manuscripts accumulated by his father to the Bodleian Library. His Northamptonshire estate was valued at £1370 per annum.

On the night of 29–30 December 1672 the powder magazine at Cornet Castle, Guernsey, exploded following a lightning strike while Lord Hatton and his family were in residence. His wife and mother were killed, although he and two of his children escaped serious injury. Despite the tragedy he spent a further eight years on the island. In 1675, by 27 December, he married Frances, only daughter of Sir Henry Yelverton, second baronet, of Easton Maudit, Northamptonshire. They had several children, although only one daughter survived beyond infancy. In 1680 he compiled a report on the state of Guernsey for Charles II (BL, King's MS 48); in the same year he returned to the family estate at Kirby, Northamptonshire, and exercised his governorship thereafter by deputy. On his return he became *custos rotulorum* for Northamptonshire. Having shown his loyalty to the Stuarts by voting against the second Exclusion Bill in 1680, on 17 January 1683 he was created Viscount Hatton of Gretton, the warrant reciting that a warrant had been signed at St Germain-en-Laye in 1649 for conferring that rank on his father.

After the death of Frances, on 15 May 1684, Hatton married, in August 1685, Elizabeth (*d.* 1733), the daughter and coheir of Sir William Haslewood of Maidwell, Northamptonshire, a rich heiress. They had three sons and three daughters. In 1687 he became captain of grenadiers in the Earl of Huntingdon's Foot. Although he had supported Charles II in his struggle with Shaftesbury and the exclusionists, in 1687 Hatton was listed as one of the opponents of James II. A naturally cautious man he avoided providing active support to either side in 1688 by excusing himself on the grounds of illness. In 1696 he was sent for by the House of Lords to explain his non-attendance and was one of the last peers to sign the 1696 Association proclaiming William III's right to the throne and abjuring James II. Thereafter he lived with his growing family predominantly at Kirby, where he developed a fine garden. Throughout his life he displayed a reluctance to live in London and many of the Hatton papers deposited in the British Library were letters written to him either on Guernsey or at Kirby. In 1697 he was removed from the stewardship of Higham

Ferrers by the earl of Stamford, chancellor of the duchy of Lancaster, but was restored in 1702. In 1704 he was again sent for by the House of Lords.

Hatton died in September 1706 and was succeeded by his son William (1690–1760), who died unmarried and was in turn succeeded by his brother Henry Charles (1693–1762). As Henry Charles also died unmarried the title expired and the estate passed to their sister Elizabeth. On her death she bequeathed it to the youngest son of her half-sister Anne, Hatton's daughter by his first wife, and Daniel Finch, earl of Nottingham, on condition that he took the name Finch-Hatton. Wealth at death value of estate £1370 p.a. in 1660s

Hatton, Denys George Finch- (1887–1931), settler in Kenya and lover of Karen Blixen, was born on 24 April 1887 at 22 Prince of Wales Terrace, Kensington, London, son of Henry Stormont Finch-Hatton, thirteenth earl of Winchilsea (1852–1927) and Annie Jane (*d.* 1924), eldest daughter of Sir Henry John *Codrington KCB (1808–1877), admiral of the fleet, and his first wife, Helen Jane Smith. His father's brother was Harold Heneage Finch-Hatton. With his parents, elder sister, and younger brother he lived in a dower house on the Haverholme estate, near Sleaford, Lincolnshire. At Eton College (1900–06) he gained a reputation for charm and easy success in sport and music, but he failed to gain the scholarship to Balliol which he expected, and went up instead to Brasenose, from where he graduated BA in 1910 with a fourth-class degree in modern history and a golf blue.

In the same year Finch-Hatton sailed for British East Africa, reaching Nairobi in 1911. With uncertain finances and no experience of business or farming his aims were unclear, but he was immediately fascinated by the country and its people. He bought farmland at Sosiani (later Eldoret) and Naivasha and traded on a small scale, but his plans, such as they were, were disrupted by the First World War. He joined the East Africa Protectorate forces in 1914 as a temporary captain and saw action in the guerrilla war against General von Lettow-Vorbeck's troops with the force raised by his close friend Berkeley Cole known as Cole's Scouts. He served with distinction, being mentioned in dispatches and awarded the Military Cross. He was later ordered to Mesopotamia where in 1918 he joined the Royal Flying Corps and qualified as a pilot before returning to Kenya after the end of the war.

In 1918 Finch-Hatton first met Karen *Blixen (1885–1962), then the wife of Baron Bror von Blixen-Finecke and a struggling coffee farmer; later she became a famous writer under various names including Isak Dinesen. They

Denys George Finch-Hatton (1887–1931), by unknown photographer

quite openly became lovers before the Blixens formally separated: indeed at one point the two men used the same bedroom in the Blixen house between safaris. After her husband's departure Finch-Hatton moved his possessions into her house, which he regarded as his home. Suggestions that theirs was a companionate relationship, fostered by Blixen's great discretion in her writings, are refuted by Blixen's manuscripts, which show that she twice thought herself pregnant by Finch-Hatton (Thurman, 174, 208). To her disappointment, but not his, her expectations ended in miscarriage or the realization that she had been mistaken, and both died childless. Many of their circle expected them to marry after Blixen's divorce was finalized in 1925, but the marriage never took place. From about 1924 Finch-Hatton increasingly turned to leading safaris for a living. His talents for meticulous organization and hunting itself were widely admired, and in 1928 and 1930 he led the prince of Wales on highly successful safaris. His success as a guide enhanced his own reputation, but strained his relationship with Blixen as it prolonged his absences from her farm and cut her off from his life, particularly when, as with the prince of Wales's safaris, he worked with her former husband and his new wife, or when he led parties interested principally in photography. She shared his enthusiasm for hunting, but not photography. Their affair ended in a bitter quarrel in 1931 shortly before his death and her departure for Denmark.

Though a friend of Lord Delamere (they shared a bungalow after the war) Finch-Hatton took little part in the debate surrounding east Africa's destiny as a white settler or an African colony. His own rather desultory efforts at farming suggest he was little moved by the notion of a settler colony. He was more concerned with the great expansion of hunting. He condemned the indiscriminate slaughter practised by many hunters (for example in an article in *The Times* of 21 January 1928), but it was the excess, not the killing *per se* which he disliked. He advocated shooting with the camera as a means of combining the excitement of hunting while conserving game stocks, though such photographic hunts still involved considerable slaughter.

In 1930 Finch-Hatton took out from England a Gipsy Moth aircraft, partly for the sheer enjoyment, but also to locate animals for his safaris, a practice employed by Beryl *Markham (1902–1986), the pioneer aviator with whom some, notably Markham herself, suggest he had had an affair. He and his passenger, his African servant, died when his aircraft crashed at Voi on 14 May 1931 shortly after taking off. He was buried later that month high in the Ngong hills, a place chosen earlier by him and Blixen as their graves. Finch-Hatton's brother later erected an obelisk on the spot. A stone bridge designed by Lutyens was erected in his memory by his school contemporaries at Eton.

Finch-Hatton is best known through Karen Blixen's *Out of Africa* (1st edn 1937) and *Shadows on the Grass* (1960) and especially in the film version of the former (1985, script Kurt Luedtke, direction Sydney Pollack), in which Robert Redford played Finch-Hatton to Meryl Streep's Blixen. In her book Blixen portrays their relationship as one of equals: he shares her home and hospitality, and in return reveals the landscape to her on safari and from the air. They share equally in the triumphs of hunting and simultaneously appreciate the pleasures of European civilization and empathize with Africa and its people. He teaches her Latin and to read the Bible and the Greek poets, and she describes how he knew great parts of the Old Testament by heart and how he had the Bible with him on all his journeys. He reveals to her pleasure in music and fine wine: she provides stories, and fine china, food, and glass. The film script and Errol Trzebinski's *Silence will Speak*, on which it is based, are less sympathetic. Finch-Hatton dictates the nature of their relationship, appearing when it suits him, but rejecting the more permanent ties she seeks after her estrangement from her husband. Blixen is a social climber whose jealousy ultimately drives away Finch-Hatton. Subsequent archival research has revealed how far her farm, to which she clung desperately, depended on his financial support. He was universally thought captivating, both physically (he was tall, slim, and handsome, though his blond hair fell out prematurely, leading him to adopt a characteristic blue bowler hat to hide his baldness) and in personality (his taste and cultivation set him apart from most of his contemporaries). Blixen describes him and his companion Berkeley Cole as outcasts:

> It was not a society that had thrown them out, and not any place in the world either, but time had done it, they did not belong to their century. No other nation than the English could have produced them, but they were examples of atavism, and theirs was an earlier England, a world which no longer existed. In the present epoch they had no home, but had got to wander here and there ... He did cut a figure ... but it did not quite fit in anywhere. (Blixen, 184, 186)

She captures the contradictions of a man who continues to arouse sympathetic curiosity, despite having left few marks. ELIZABETH BAIGENT

Hatton, Edward [*name in religion* Anthony; *pseud.* Constantius Archaeophilus] **(1701–1783)**, Dominican friar, was probably the son of Edward Hatton, yeoman, of Great Crosby, Lancashire. He was educated in the English Dominican College at Bornhem, near Antwerp, and on being professed in 1722 took the name in religion of Anthony. After teaching for some years he was ordained priest, and sent to the English mission in 1730. He officiated as chaplain to several gentlemen in Yorkshire, and in 1739–40 served as chaplain to Bishop Williams, vicar apostolic of the northern district. In 1749 he went to assist Father Thomas Worthington at Middleton Lodge, near Leeds. That mission he subsequently moved to Stourton Lodge, a few miles distant. In 1754 and again in 1770 he was elected provincial of his order. In 1776 he started the mission at Hunslet, near Leeds, but died at Stourton Lodge on 23 October 1783.

Hatton was the author of *Moral and Controversial Lectures upon the Christian Doctrines and Christian Practice* (not dated); and he also compiled (under the name Constantius Archaeophilus) *Memoirs of the Reformation of England*, in two parts (1826 and 1841), which contained relevant acts of parliament and extracts from protestant historians.

Hatton, Edward Finch- (1697?–1771), diplomatist, was born Edward Finch, the fifth son of Daniel *Finch, seventh earl of Winchilsea and second earl of Nottingham (1647–1730), politician, and Anne Hatton (1668–1743). After attending Mr Ellis's school in Isleworth, Middlesex, he was admitted fellow-commoner of Trinity College,

Cambridge, in 1713 and he proceeded MA in 1718. He went on the grand tour to France, Italy, and Hanover from 1720 to 1723 and his hopes of a diplomatic career were met with his appointment as envoy-extraordinary to the imperial diet of Regensburg (September 1724–February 1725). He served in succession as envoy to the Polish court from 1725 to 1727, to the Swedish court from 1728 to 1739, and to the Russian court from 1740 to 1742.

In 1727 Finch was elected MP for Cambridge University, which he represented until 1768. A fellow of Christ's College, Cambridge (1728–46), he and his fellow MP Thomas Townshend instituted the members' prizes in the university for essays in Latin prose. On his return from abroad in 1742 he declared his support for Lord Carteret and was appointed groom of the royal bedchamber; in spite of the subsequent changes in government, the king ensured that Finch remained in post until 1756. On 6 September 1746 he married Elizabeth Palmer, daughter of Sir Thomas Palmer, fourth baronet, of Wingham, Kent; they had three daughters and two sons. He assumed in 1764 the additional name of Hatton, under the terms of the will of his great-aunt, Anne Hatton, daughter of Christopher, Viscount Hatton. He was appointed master of the robes in June 1757 and surveyor of the king's private roads in November 1760; he retired from the Commons before the general election of 1768. Finch-Hatton died on 16 May 1771. [ANON.], *rev.* R. D. E. EAGLES

Hatton, Elizabeth [*née* Lady Elizabeth Cecil], **Lady Hatton** [*other married name* Elizabeth Coke, Lady Coke] (1578–1646), courtier, was the fourth daughter of Thomas *Cecil, first earl of Exeter (1542–1623), and Dorothy Latimer (1548–1609). In the early 1590s she married Sir William Hatton, who died in 1597, bequeathing her Corfe Castle, the Isle of Purbeck, Hatton House in Holborn, and the care of her stepdaughter, Frances Hatton. On 6 November 1598 she married Sir Edward *Coke (1552–1634), a lawyer, who had ten children by his previous marriage, and they had two daughters, Frances and Elizabeth. She was popular at court, performing with the queen as one of the goddesses in the masque *The Vision of Twelve Goddesses* (1604), and was well known for her lavish and lively entertainments at Hatton House. Jonson's masque *The Hue and Cry after Cupid* (1608) commended her as one of the loveliest court ladies. In 1621 she was one of the select members of the audience directly addressed by one of the Gypsies in Jonson's *The Gypsies Metamorphosed* (1640):

> Others' fortunes may be showne
> You are the builder of your owne
> (p. 71)

exemplifying her reputation as an independent, forceful, and powerful woman. She corresponded with Elizabeth of Bohemia and visited her in exile at The Hague in 1627.

Elizabeth's marriage to Edward Coke was difficult. She initiated several legal actions against his appropriation of lands and revenue inherited from her first husband, in 1617 and after Coke's death in 1634. The 1634 text of her petition to the privy council outlines their financial disagreements, claiming Coke refused her maintenance and used profits from her lands to advance the children of his first marriage. Lady Hatton's resistance to the view that a husband owned his wife's property displays her strong, intelligent, and independent temperament, exemplifying how powerful married women conceived of their property, and the fight they faced to retain it. In 1600 she left him for at least a year, using her connections with influential men to force Coke to grant her an annual allowance. She refused to take his name, continuing to use 'Lady Hatton', and for most of their marriage they lived apart. In 1617 she petitioned the council for her assets, condemning his appropriation of land, revenue, and a mortgage. Chamberlain described her performance before the council: 'divers said Burbage could not have acted better' (*CSP dom., 1611–18*, vol. xcii, no.42). The dispute was settled by negotiation.

Coke treated his wife's daughters as he did her property. In 1605 he forced the marriage of her stepdaughter Frances Hatton to Sir Robert Rich. The marriage of Coke's and Hatton's own daughter, Frances Coke, to Sir John Villiers, George Villiers's brother, is renowned. Coke negotiated the details, to which neither mother nor daughter were party, in 1617. Lady Hatton removed her daughter, but Coke obtained a warrant, forcing entry to obtain her. Francis Bacon, then lord keeper, was petitioned by Lady Hatton, who described herself as 'like a cow that has lost a calf' (Spedding, 4.225). He ruled that both parents' consent was needed (given Frances was heir to her mother's estates), ordering Coke to return Frances to her mother. Lady Hatton agreed to the marriage on terms ensuring her daughter an income, but Frances's life with Villiers was unhappy and she was arraigned for adultery in 1627. Lady Hatton provided equivocal support for her daughter, but did leave her estate to her son.

Hatton was actively involved in the financial management of her estates: there are records of disputes about leases for Hatton House and about access over her land. Her will gives precise details of the disposal and care of her properties and large bequests for poor relief in Holborn and Stoke Poges. During the civil war she supported parliament. She died on 3 January 1646 and was buried in St Andrew's parish church in Holborn. There is no monument, despite a request in her will that one be erected to her there; the exigencies of the civil war may explain its absence. KATE AUGHTERSON

Wealth at death properties and bequests: Norsworthy, *The Lady of Bleeding Heart Yard*

Hatton, Frank (1861–1883), explorer, only son and second child of Joseph *Hatton (1841–1907), journalist, and his wife, Louisa Johnson (1840/41–1901), was born at Berkeley Road, Horfield, Bristol, on 31 August 1861. Soon after his birth his family moved to Durham, then Worcester, before settling in London. Hatton was educated from 1874 at Marcq, near Lille, and in 1877–8 at King's College School, London. He then studied geology and chemistry at the Royal School of Mines, South Kensington, where he obtained the Frankland prize of the Institute of Chemistry, entitling him to associateship of the institute at the age of twenty. He had considerable laboratory and field experience when he was appointed mineral explorer to the British North Borneo Company. He left England in August 1881, and arrived at Labuan in October, and on 19 November at Abai, Keppel province. After a two months' expedition to the interior, he had to recover his health at Singapore. From March to June 1882 he made further explorations, but found few traces of minerals. From July to October he explored the Kinoram district. After another rest at Singapore he started on 19 December for Sandakan, and journeyed up and down the Kinabatangan River until near the end of February, when he reached the Segamah River. On 1 March 1883, while returning from pursuing an elephant, he was killed by the accidental discharge of his rifle, which caught in the thick jungle. His body was carried by canoe for several days along the Kinabatangan River, to the principal settlement, Elopura. A European jury recorded a verdict of accidental death and he was buried at Sandakan cemetery.

Hatton's work, so far as it had gone, and his diaries give evidence of high promise as a scientific explorer. He had learned the Malay and Duson dialects, which contributed to his success in dealing with the local tribesmen, and had the true explorer's temperament, power of command, fertility of resource in the presence of danger, cool courage, and self-control, and was a bright and engaging companion. He contributed to popular and learned journals, and was a skilful pianist and a keen sportsman.

Frank Hatton (1861–1883), by unknown engraver, pubd 1883

Hatton, George William Finch-, tenth earl of Winchilsea and fifth earl of Nottingham (1791–1858), politician, was born at Kirby, Northamptonshire, on 22 May 1791. He was a grandson of Edward Finch-*Hatton, and son of George Finch-Hatton (1747–1823) of Eastwell Park, near Ashford, Kent, MP for Rochester in 1772–84, and his wife (whom he married in 1785), Elizabeth Mary (*d.* 1825), eldest daughter of David Murray, second earl of Mansfield. George William, who had one younger brother and three sisters, was educated at Westminster School and at Christ's College, Cambridge (BA, 1812). In 1809 he became a captain in the Ashford regiment of the Kentish local militia; in 1819 began acting as a lieutenant of the Northamptonshire regiment of yeomanry; and in 1820 was named a deputy lieutenant for the county of Kent. On 2 August 1826, on the death (without legitimate issue) of his cousin, George Finch, ninth earl of Winchilsea, and fourth earl of Nottingham, he succeeded to these peerages.

Winchilsea was tall, well-built, and black-haired, and in his prime was an imposing figure and an inspiring orator. His integrity and sincerity impressed his contemporaries. He presided at a very large and influential meeting held on Penenden heath, Kent, on 10 October 1828, when strongly worded resolutions in favour of protestant principles were carried. In his place in the House of Lords he was a very frequent speaker and vigorously defended the protestant tory cause. He was particularly noted as being almost the only English nobleman who was willing to identify himself with the Orange party in Ireland, and he was accustomed to denounce in forceful terms Daniel O'Connell and Maynooth College and its system of education. Occasionally he took the chair at May meetings at Exeter Hall, but his protestantism was more political than spiritual and he did not become a leader of evangelicalism.

The Catholic Relief Bill of 1829 aroused Winchilsea's most vehement hostility, and led him to fight a duel with the duke of Wellington. In a published letter he wrote that the duke, 'under the cloak of some outward show of zeal for the Protestant religion', had carried on 'insidious designs for the infringement of our liberties, and the introduction of Popery into every department of the State'. The duke asked for an apology, and, when this was

not forthcoming, demanded satisfaction. The meeting took place in Battersea Fields on 21 March 1829, the duke being attended by Sir Henry Hardinge, and his opponent by Edward Boscawen, Viscount Falmouth. The duke fired and missed, whereupon Winchilsea fired in the air and then apologized for the language of his letter (*Annual Register*, 1829, 58–63).

In November 1830 Winchilsea was a leading figure in the ultra-tory rebellion which led to the downfall of the Wellington government. At this time he professed himself favourable to moderate reform, but in June 1831 he withdrew his support from Earl Grey's administration (*Hansard* 3, 4.107–11) and subsequently strenuously opposed the Reform Bill and other whig measures. He was gazetted lieutenant-colonel commandant of the East Kent regiment of yeomanry in 1830, named a deputy lieutenant for the county of Lincoln in 1831, and created a DCL of Oxford on the occasion of Wellington's installation as chancellor of the university in 1834. His protestant convictions continued undimmed in later life, and in 1851, in a letter to *The Times*, he denounced the new Roman Catholic hierarchy and the Russell administration's half-hearted response to it.

Winchilsea was married three times: first, on 26 July 1814, to Lady Georgiana Charlotte, eldest daughter of James Graham, third duke of Montrose. An 'earnest disciple of the Evangelical school of her day' (GEC, *Peerage*), she died, leaving a son and a daughter, at Haverholme Priory on 13 February 1835. His second wife, whom he married on 15 February 1837, was Emily Georgiana, second daughter of Sir Charles Bagot GCB; she died childless at Haverholme Priory on 10 July 1848. His third marriage was on 17 October 1849, to Fanny Margaretta (*d.* 26 April 1909), eldest daughter of Edward Royd Rice of Dane Court, Kent. There were three sons, including the politician Harold Heneage Finch-*Hatton, and a daughter from this marriage. Winchilsea died at Haverholme Priory, near Sleaford, Lincolnshire, on 8 January 1858.

Wealth at death under £40,000: probate, 20 March 1858, *CGPLA Eng. & Wales*

Hatton, Harold Heneage Finch- (1856–1904), politician, born at Eastwell Park, Kent, on 23 August 1856, was fourth son of George William Finch-*Hatton, tenth earl of Winchilsea (1791–1858), and his third wife, Fanny Margaretta (*d.* 1909), daughter of Edward Royd Rice, of Dane Court, Kent. His brother, Murray Edward Gordon Finch-Hatton, twelfth earl of Winchilsea (1851–1898), MP for South Lincolnshire (1884–5) and the Spalding division (1885–7), was well known as a leading agriculturist. Finch-Hatton was educated at Eton College, and he matriculated at Balliol College, Oxford, on 20 October 1874, but did not graduate.

In 1876 Finch-Hatton joined his brother Henry in Queensland, remaining in the colony until 1883. For some time he was engaged in cattle-farming at a settlement later named Mount Spencer, but subsequently went prospecting for gold in the Nebo goldfields, some 40 miles further inland. Gold was found at Mount Britten and shares were bought in other claims; but he made a return of only about £10,000 in an outlay of £16,000 (*AusDB*). After some eighteen months the Finch-Hatton brothers disposed of their rights to a Melbourne syndicate, retaining only a fourth share in the concern. Finch-Hatton always preserved his interest in Queensland, and as permanent delegate and chairman of the London committee of the North Queensland Separation League (of which he was for a time the sole member) rendered energetic service to the colony. In 1885 he published a readable record of his Australian experiences in a book entitled *Advance, Australia!* containing a sympathetic account of the Aborigines, founded on his personal contacts with them. He favoured cheap coolie labour for the sugar industry. The final chapter on imperial federation condemned the action of Lord Derby as colonial secretary in dealing with the New Guinea question.

On his return to England Finch-Hatton occupied himself in financial work. But his chief interest was in imperial politics. He was one of the founders of the Imperial Federation League, and for some time acted as its secretary; he was also secretary to the Pacific Telegraph Company, formed for the promotion of cable communication between Vancouver and Australia. When, in the autumn of 1885, he contested East Nottingham as a Conservative he strongly advocated imperial federation as a prelude to free trade within the empire. He was defeated by a majority of 991; he was also defeated there in July 1886 and July 1892. In 1895 he was returned unopposed for Newark. His political career, however, was brief. He made an able but highly conservative maiden speech (28 April 1896) on agricultural rating but before long fell victim to bad health. Falling out of sympathy with his party, he resigned his seat rather suddenly in May 1898 (*The Times*, 13 May 1898). He regarded Lord Salisbury as insufficiently imperial, and he disapproved of the Irish Land Act of 1896 and of what he saw as excessive concessions to the Liberal Unionist wing of the Unionist coalition.

When not in London Finch-Hatton henceforth lived at Harlech, and in 1903 was high sheriff of Merioneth. Highly skilled in field sports, a good rifle shot and keen huntsman, he excelled at golf, often competing for the amateur championship. He was also a skilled thrower of the boomerang.

He died, unmarried, from heart failure, on his own doorstep at 110 Piccadilly, London, on 16 May 1904, 'after having completed the last of his morning runs round the park'. He was buried in Ewerby churchyard, near Sleaford, Lincolnshire.

Hatton, John Liptrot (1809–1886), composer and conductor, born in Concert Street, Liverpool, on 12 October 1809, was the son and grandson of professional violinists. With the exception of some musical tuition received at the academy of a Mr Molyneux, he was virtually self-taught; yet by the time he was sixteen years old he was already organist at Woolton and Childwall churches, Lancashire, and at the Roman Catholic church in Liverpool, for the last of which he wrote a mass, which remained in manuscript. He was later organist at the Old Church (St Nicholas) in Chapel Street, Liverpool. It is characteristic of the irrepressible animal spirits which in after years made him universally popular that he should have ventured to play 'All round my hat' (a street song of the time), of course carefully disguised, when competing for one of these appointments. In his youth he also acquired some experience as an actor, successfully playing the part of Blueskin in *Jack Sheppard* at the Little Liver Theatre in Church Street. In 1832 he moved to London, and made his first public appearance there as an actor. A playbill was preserved by him, containing his name as playing Marco [*sic*] in *Othello* with W. C. Macready and Charles Kean at Drury Lane on 20 December 1832. In the following year he wrote some piano pieces, among them six impromptus which attained considerable success.

At Drury Lane Theatre Hatton obtained his first important musical engagement when he directed the choruses in the season of English operas given from 1 October 1842 to 3 April 1843. On 25 February in the latter year his own operetta *The Queen of the Thames* (words by Edward Fitzball) was given successfully six times. It contains some pretty numbers, and the madrigal 'The Merry Bridal Bells' shows his technical skill and familiarity with seventeenth-century models. Among the company engaged for the operatic performances was Joseph Staudigl, who encouraged Hatton to write another opera, *Pascal Bruno*, to a libretto by Fitzball. This was translated, mainly by Staudigl himself, into German, and was brought out at Vienna on 2 March 1844 for the benefit of the singer, who performed the principal role. The only part of the opera to be published was a song, 'Revenge', sung by Staudigl, which became very popular in England. While staying in Vienna to supervise the production of the opera, Hatton was the guest of Staudigl, who introduced him to the Concordia Society. His piano playing, more especially of Bach's fugues, which he performed from memory, attracted much attention. Meanwhile he took advantage of the opportunities for advanced study of music, and received counterpoint lessons from Simon Sechter. On his return to England Hatton published several vocal trios and a set of eighteen songs to words by T. Oliphant. They were furnished with German translations, and published under the pseudonym 'Czapek', the genitive plural of a Hungarian word for 'hat'. These and some other songs published about the same time were considered by some critics to be on a level with those of Schubert. They were obviously influenced by German models, and one song, 'To Anthea', was felt to reveal particular beauty and sincerity of expression.

The popularity of Hatton's songs (numbering some three hundred in all) resulted partly from his practical experience as both a singer and a pianist. At the Hereford festival of 1846 he appeared as a vocalist and played a concerto by Mozart. In the same year he began a series of tours with Camillo Sivori, Henry Vieuxtemps, and other celebrated performers. In August 1848 he paid his first visit to America, remaining there until the spring of 1850, when he returned in order to accompany Sims Reeves on a tour; he went again to America in the following September. His playing and singing were both admired, and he introduced some of Mendelssohn's music to the Boston public. Frequently, it was unclear whether the position assigned him in the programme would be filled by a Bach fugue or instead by a comic song he had written himself. It is said that his hearers were delighted with a song called 'The Sleigh Ride', in the course of which he produced 'realistic' effects by means of bells tied to his leg. Soon after his return to England at the end of 1850 he became conductor of the Glee and Madrigal Union, a post which he retained for some years. He was for a time (probably 1853–9) conductor and arranger of the music for Charles Kean's management at the Princess's Theatre, but it is difficult to disentangle his own compositions from those of other composers arranged by him during this period for theatrical purposes. The music to *Henry VIII*, *Richard II*, *Sardanapalus*, and *The Winter's Tale* is undoubtedly by him; the first and third sets of compositions were published, and contain some vigorous and effective numbers. It is probable that few of the plays produced by Kean were altogether without original work by Hatton. In many of the Shakespearian performances he skilfully adapted old English airs.

Meanwhile the concert tours continued. In the course of one of these journeys Hatton's once popular song 'Goodbye, sweetheart, good-bye' was composed for Giovanni Matteo Mario. On 26 August 1856 his cantata *Robin Hood*, to words by George Linley, was delivered at the Bradford music festival, with more success than attended most of his longer works. The last of his operas, *Rose, or, Love's Ransom*, set to words by H. Sutherland Edwards, was produced at Covent Garden by the English Opera Association on 26 November 1864; the libretto was based on Halévy's *Val d'Andorre*. In 1866 Hatton contributed several songs to Watts Phillips's play *The Huguenot Soldier*, and in the same year he went again to America. The 'ballad concerts' at St James's Hall, London, were begun in this year, and for the first nine seasons Hatton held the post of accompanist and conductor. In October 1875 he went to Stuttgart, which he frequently revisited afterwards. There he wrote an oratorio entitled *Hezekiah*, which, when given at the Crystal Palace on 15 December 1877, failed to please. Though much of the choral writing was censured on account of its imitations of Handel and Mendelssohn, traces of Hatton's old taste for counterpoint and the severer forms of music could still be detected. Among his later compositions were a cantata to words by Milton

(manuscript), a trio for piano and strings, published in Germany, and a chorus, 'The earth is fair'. His Aldeburgh Te Deum (published) commemorates his fondness for the Suffolk village in which some part of his later years was spent. He edited many song albums, collections of old English songs, ballad operas, and other works for Boosey & Co.

Hatton married Emma, the second daughter of William Freelove March, of Southampton, and the widow of R. F. Poussett, consul at Buenos Aires; they had two daughters. He was a freemason and a member of the Goldsmiths' Company, and belonged also to the Royal Yacht Club. He died at 31 Marine Terrace, Margate, where he had chiefly lived since 1877, on 20 September 1886, and was buried at Kensal Green cemetery on 25 September.

Hatton's musical reputation has not endured; contemporaries admired his natural gifts, but deplored his lack of artistic earnestness. His part-songs, such as 'When evening's twilight', remained popular for some years, as did a number of his songs; his humorous song 'Simon the Cellarer' was recorded by Sir Charles Santley in 1913. Hatton was popular wherever he went, having the reputation of a bon vivant, though a temperate one.

Hatton, Joseph Paul Christopher (1841–1907), novelist and journalist, was born at Andover, Hampshire, on 3 February 1841 (although there appears to be no official record of this date), the son of Francis Augustus Hatton, a printer and bookseller at Chesterfield who in 1854 founded the *Derbyshire Times*. He was educated at Bowker's School, Chesterfield, and was intended for the law, entering the office of the town clerk at Chesterfield, William Waller. However, on 5 April 1858 he married Louisa (1840/41–1901), the daughter of Robert Johnson, a stud groom. From this time he engaged in journalism and in 1861 published *Provincial Papers*, a collection of tales and sketches. In 1863 he was appointed editor of the *Bristol Mirror*, holding that and other provincial posts until he moved to London in 1868. Pushing and energetic, he was entrusted by Messrs Grant & Co., newspaper and magazine proprietors, with the editorship of the *Gentleman's Magazine*, the *School Board Chronicle*, and the *Illustrated Midland News*. Mark Lemon, editor of *Punch*, was among Hatton's early London acquaintances and in 1871 Hatton published a volume of reminiscences of Lemon, *With a Show in the North*, based on articles originally published in the *Gentleman's Magazine*. A further series of articles, entitled 'The True Story of Punch', appeared in *London Society*. In 1874 Hatton retired from his editorship of Grant's periodicals and acted as London correspondent for the *New York Times*, the *Sydney Morning Herald*, and the Berlin *Kreuz-Zeitung*, besides editing for a time the *Sunday Times* and making his name as a novelist. In 1881 *The Standard* sent him to the United States to establish on its behalf an independent telegraph service. He described his activities in *Journalistic London, being a Series of Sketches of Famous Pens and Papers of the Day* in 1882, a volume derived from articles published in *Harper's Magazine*. He also recorded his impressions of the United States in *Today in America: Studies for the Old World and the New* (2 vols., 1881). It was during his American visit that President Garfield was shot and Hatton cabled the news to *The Standard* in London with what was then the longest recorded telegraphic message, having held the line for 3 hours (*The People*, 4 Aug 1907). A member of the Garrick Club, he was an intimate of Sir Henry Irving and J. L. Toole, accompanying the former on his visit to the United States in 1883 and describing the visit in *Henry Irving's Impressions of America, Narrated ... by Joseph Hatton* (2 vols., 1884). In 1889 he 'chronicled' J. L. Toole's reminiscences (2 vols.). In 1892 Hatton became editor of *The People*, a Conservative Sunday newspaper, and contributed to that paper (and also to a syndicate of provincial papers) his 'Cigarette papers for after-dinner smoking', a weekly medley of reminiscences, stories, and interviews (issued in book form in 1892). He was latterly a close friend of the sculptor Alfred Gilbert and published, as the 1903 Easter art annual, a pioneer study of Gilbert's life and work.

In addition to his journalistic work, Hatton's literary industry was considerable. His novels include *Bitter Sweets: a Love Story* (1865), *Christopher Henrick: his Life and Adventures* (1869), *Clytie: a Novel of Modern Life* (1874), *The Gay World* (1877), *Cruel London* (1878), *The Park Lane Mystery: a Story of Love and Magic* (1887), *By Order of the Czar: the Tragic Story of Anna Klostock* (1890), *The Banishment of Jessop Blythe* (1895), *The Dagger and the Cross* (1897), *When Rogues Fall Out: a Romance of Old London* (1899), and *In Male Attire: a Romance of the Day* (1900). He also worked steadily for the stage. *Birds of a Feather: a Serio-Comic Play*, his adaptation of his story 'Kites and Pigeons', was published in 1871, and he later adapted *Clytie*, *Cruel London*, and *By Order of the Czar* for the stage, the first being produced at the Amphitheatre, Liverpool, on 29 November 1875 before transferring to the Olympic, London, on 10 January 1876. A dramatic version of Hawthorne's *The Scarlet Letter* proved popular in the United States. His other works include *Old Lamps and New: an After-Dinner Chat* (1889) and *Club-Land, London and Provincial* (1890).

Hatton's only son, Frank *Hatton (1861–1883), an explorer, also influenced his writing and in 1882 he published *'The New Ceylon': being a Sketch of British North Borneo, or Sabah*. In 1886 he issued a biographical sketch of his son, who had been killed while travelling in North Borneo (*North Borneo Explorations ... with a Biographical Sketch and Notes*). His novel *Captured by Cannibals: some Incidents in the Life of Horace Durand* (1888), aimed at the juvenile market, also bears on this incident.

Joseph Hatton died at his London home, 15 Elm Tree Road, St John's Wood, on 31 July 1907 and was buried in St Marylebone cemetery, East Finchley, Middlesex. He was survived by his two daughters: Ellen Howard Hatton, wife of the artist William Henry Margetson, and Bessie Lyle Hatton, a novelist. ANDREW SANDERS

Hatton, Sir Ronald George (1886–1965), horticulturist, was born in Hampstead, London, on 6 July 1886, the youngest child of Ernest Hatton, barrister, and his wife, Amy, daughter of William Pearson KC, the brother of Karl Pearson, the biometrician. Hatton was educated at Brighton College and Exeter School and was an exhibitioner at Balliol College, Oxford, from 1906 to 1910. He obtained a fourth class in modern history in 1910, graduating BA in 1912 and MA in 1913. He worked as a labourer on a farm near Bristol and wrote *Folk of the Furrow*, published in 1913 under the pen-name of Christopher Holdenby. In 1912 he went to study agriculture at Wye College in Kent. In 1914 Hatton married Hannah Rachel, daughter of Henry Rigden, of Ashford, Kent; they had one son. The Wye College Fruit Experimental Station became the East Malling Research Station in 1914 with Hatton as acting director after its first director had left on military duties.

Hatton was appointed director of East Malling in 1918, and spent the next thirty years of his life developing it into the leading fruit research institute in the world, enlarging its area from 22 to 360 acres and its staff to more than eighty. His enthusiasm and financial acumen enabled him to raise funds for this expansion from fruit growers, the Empire Marketing Board, and the Treasury. His best-known contribution to research was the study of the effect of rootstock on scion growth and fruiting of apples, pears, and plums. In the course of this work he classified and standardized fruit tree rootstocks, including those which were ultimately known as the Malling series which became widely used. His influence and that of his co-workers transformed horticulture, and fruit growing especially, from folklore to science. He emphasized field experimentation, keen observation, and work on control measures against pests and diseases.

Hatton initiated productive collaborations with the John Innes Horticultural Institute, which resulted in the production of the Malling–Merton apple rootstocks, one of which proved the most successful stock for Cox's orange pippin, and with the Institute of Plant Physiology of the Imperial College of Science, London, which laid the basis of fruit tree physiology.

Many graduate students came to East Malling to study for higher degrees after 1932 when the University of London recognized the station as suitable for this purpose. Hatton's influence thus reached the many countries from which these students came, and he visited and advised on fruit growing in Australia, Canada, Ceylon, Java, New Zealand, South Africa, and the United States of America.

Hatton published many papers on fruit culture. He was instrumental in starting, in 1919, the *Journal of Pomology* (after 1948 the *Journal of Horticultural Science*) and was its joint editor from 1924 until 1947. He was the first director of the Imperial (later Commonwealth) Bureau of Horticulture and Plantation Crops when it was established at East Malling in 1929. Its journal, *Horticultural Abstracts*, begun in 1931, became the standard source for information on fruit and other tree crops. Hatton also played a leading role in the Royal Horticultural Society, which awarded him its Victoria medal in 1930 and elected him vice-president in 1952. He was appointed CBE in 1934, knighted in 1949, and elected to fellowship of the Royal Society in 1944.

After his retirement in 1949 Hatton continued as an enthusiastic grower of fruit and flowers. He died at his home, Sleightholme, Benenden, Kent, on 11 November 1965 and, by his request, was buried in the East Malling churchyard adjoining the land of the research station.

Haughton, Sir Graves Chamney (1788–1849), orientalist, was the second son of John Haughton, a Dublin physician, and his wife, the daughter of Edward Archer of Mount John, co. Wicklow. He was educated principally in England, and, having obtained a military cadetship on the Bengal establishment of the East India Company in 1808, went to India. He gained his first commission on 13 March 1810. At the cadet institution of Barasat, near Calcutta, he distinguished himself by his progress in Hindustani and won the highest honour of the institution, a sword and a handsome pecuniary reward. After serving some time with his regiment, Haughton was among the first who responded to the permission, granted in 1812 by the government of Bengal to young officers, to study oriental languages in the college of Fort William at Calcutta, and he there received seven medals, three degrees of honour, and various financial awards for proficiency in Arabic, Persian, Hindustani, Sanskrit, and Bengali. On 16 December 1814 he was promoted to a lieutenancy. Ill health, caused by his application to study, obliged him to return on leave to England at the end of 1815. In 1817 he was appointed assistant oriental professor in the East India College at

Haileybury. When Alexander Hamilton retired in 1819 Haughton succeeded to the professorship of Sanskrit and Bengali at Haileybury, and he held it until 1827. During this period he published a number of pedagogical works, including *Rudiments of Bengáli Grammar* (1821), *Bengáli Selections, with Translations and a Vocabulary* (1822), and *A Glossary, Bengáli and English* (1825), in which he was assisted by John Panton Gubbins, then a student at the college. He also issued an edition, admirable for its time, of the Sanskrit text of the *Institutes of Menu* (2 vols., 1825), with a revision of Sir William Jones's translation and additional notes. Further editions were published in Madras (1863) and London (1869). Ill health prevented Haughton from adding a third volume, which was to have contained either the whole or a selection of the commentary of Kulluka Bhatta.

Haughton resigned his commission on 12 February 1819, and was created an honorary MA at Oxford on 23 June of that year. He was elected FRS on 15 November 1821, a foreign member of the Asiatic Society of Paris in 1822, a corresponding member of the Royal Society of Berlin in 1837, and a member of the Asiatic Society of Bengal in 1838. In May 1832 he was elected a member of the Royal Irish Academy, and he was also a foreign member of the Institute of France. He took a warm interest in the formation of the Royal Asiatic Society in London, of which he was an original member. He acted as its honorary secretary from November 1831 to May 1832, when the labour of bringing out his *Dictionary, Bengáli and Sanskrit, Explained in English* (1833) compelled him to resign. Among his contributions to the society's *Transactions* was a brief note in vindication of Henry Colebrooke's views of the Vedanta philosophy against the remarks of Colonel Vans Kennedy. The latter replied angrily, and Haughton ably retorted in the monthly *Asiatic Journal* for November 1835. This communication, with some additions, was printed separately in the following December. In 1832 he printed for private circulation *A short inquiry into the nature of language, with a view to ascertain the original meanings of Sanskrit prepositions; elucidated by comparisons with the Greek and Latin*, of which another edition appeared in 1834. The essay was also printed as part of the introduction to the Bengali and Sanskrit dictionary (1833). Early in 1832 he was a candidate, with the support of some of the leading scholars of that time, for the new Boden professorship of Sanskrit at Oxford, but he withdrew in favour of his old fellow student Horace Hayman Wilson. On this occasion he received a complimentary address from two hundred professors, fellows, and graduates, including seven heads of houses. On 18 July 1833 he was made a knight of the Royal Guelphic Order. A metaphysical paper, published in the *Asiatic Journal* for March 1836, on the Hindu and European notions of cause and effect, was followed in 1839 by his *Prodromus, or, An inquiry into the first principles of reasoning; including an analysis of the human mind*. intended as a prelude to a larger work upon the 'necessary connection, relation, and dependence of physics, metaphysics, and morals', entitled *The Chain of Causes*, of which only the first volume appeared (1842). He printed a tabular view of his system on a single folio sheet in 1835, exhibiting the 'development of minds and morals from their original divine source'. In 1833 he published an *Inquiry into the Nature of Cholera, and the Means of Cure*; in 1840 a *Letter to the Right Hon. C. W. Williams Wynn on the danger to which the constitution is exposed from the encroachments of the courts of law*; and in 1847 were printed his experiments to prove the common nature of magnetism, cohesion, adhesion, and viscosity, in Brewster's *Philosophical Magazine*. He also corresponded with the *Literary Magazine* on the related subject of electricity. Haughton spent much of his later life in Paris. After a prolonged period of ill health he died of cholera at St Cloud on 28 August 1849 and was buried in the east cemetery, Paris, on 30 August. A funeral address was delivered by the president of the Institut de France, who spoke of the affection and respect Haughton had enjoyed, though illness had in his final years limited both his energy and his social contact with friends and colleagues. Upon the death of Sir Charles Wilkins in May 1836 he had written a memoir in the *Asiatic Journal*. He was intimately acquainted with Dr F. A. Rosen, and liberally helped to raise an appropriate monument to his memory. Among his papers preserved in the Bodleian Library, Oxford, is a file of correspondence of over twenty years with his friend Dr Julius Mohl, the French Persian scholar. Mohl was named as one of the executors of his will. Haughton did not marry, but in his will he bequeathed in trust all his property to two daughters, whom he acknowledged and named as Sophia and Eliza Haughton. Their mother was Fanny, probably Chaseman, later Mills. The girls were baptized on 25 February 1828 at Clerkenwell.

Haughton, James (1795–1873), social reformer and temperance activist, son of Samuel Pearson Haughton (1748–1828) and Mary, daughter of James Pim of Rushin, Queen's county, Ireland, was born in Carlow on 5 May 1795. He was educated at Ballitore, co. Kildare, from 1807 to 1810, under James White, a Quaker. After holding several situations to learn business, in 1817 he settled in Dublin, where he became a corn and flour factor, in partnership with his brother William. He retired in 1850.

Although educated as a Friend, Haughton joined the

Unitarians in 1834, and remained throughout his life a strong believer in their tenets. He supported the anti-slavery movement from an early period and in 1838 and 1840 he attended the World Anti-Slavery Conventions in London as a delegate of the Hibernian Anti-Slavery Society.

Haughton was also one of the earliest and most devoted disciples of the leading Irish temperance reformer, Father Mathew (1790–1856). For many years he gave most of his time and energies to promoting total abstinence and to advocating legislative restrictions on the sale of intoxicating drinks. In December 1844 he was the chief promoter of a fund which was raised to pay some of the debts of Father Mathew and release him from prison. He was a vice-president of the United Kingdom Alliance, an auxiliary society of which was formed in Dublin in January 1854.

In 1838 Haughton began a series of letters in the public press which made his name widely known. He wrote on temperance, slavery, British India, peace, capital punishment, sanitary reform, and education. His first letters were signed 'The Son of a Water Drinker', but he soon began using his own name and continued to write until 1872. He took a leading part in a series of weekly meetings which were held in Dublin in 1840, when so numerous were the social questions discussed that a newspaper editor called the speakers the 'anti-everythingarians'. In association with Daniel O'Connell, of whose character Haughton had a very high opinion, he advocated various plans for improving the condition of Ireland and for the repeal of the union, but was always opposed to physical force.

Haughton became a vegetarian in 1846, both on moral and sanitary grounds: for two or three years before his death he was president of the Vegetarian Society of the United Kingdom. He was one of the first members of the Statistical Society of Dublin (1847), a founder of the Dublin Mechanics' Institute (1849), and a member of the committee of the Dublin Peace Society. He aided in abolishing Donnybrook fair (1855), which had long been a target of temperance reformers owing to the alleged high incidence of drunkenness at the popular Dublin event, and took a chief part in 1861 in opening the botanic gardens at Glasnevin on Sundays. He was the author of *Slavery Immoral* (1847), *A Memoir of Thomas Clarkson* (1847), and *A Plea for Teetotalism and the Maine Liquor Law* (1855).

Haughton died at his home, 35 Eccles Street, Dublin, on 20 February 1873, and was buried in Mount Jerome cemetery on 24 February in the presence of a large crowd. He had married, but his wife died after only a few years. He was survived by one son and one daughter.

Haughton, John Colpoys (1817–1887), army officer, was born in Dublin on 25 November 1817, the son of Richard H. Haughton, professor of oriental languages at Addiscombe College, and his wife, Susanna. Sir Graves Champney Haughton was his uncle; his grandfather, Dr John Haughton, was an eminent Dublin physician.

Haughton was educated at Shrewsbury, and on 30 March 1830 was entered on the books of HMS *Magnificent*, receiving ship at Jamaica, as a first-class volunteer. His relative, Admiral Edward Griffiths Colpoys, was then commanding on the West India, North American, and Newfoundland station. On 11 May 1832 he was appointed midshipman to the *Fly*, and on 8 December 1834 to the *Belvidera*, both on the above station, but on 12 January 1835 he was invalided from the Royal Navy.

On 15 February 1837 Haughton obtained a Bengal cadetship, and on 9 December 1837 was appointed ensign in the 31st Bengal native infantry. He served in the First Afghan War of 1839–42 as adjutant of the 4th Gurkha regiment, in the service of Shah Shuja, commanded by Captain Christopher Codrington of the 49th Bengal native infantry. In April 1841 the 4th Gurkhas was sent to occupy Charikar, about 40 miles north of Kabul. Major Eldred Pottinger, who had shortly before become famous by his defence of Herat, was stationed at Laghman, 3 miles off, as political agent. On 2 November 1841, the day on which Sir Alexander Burnes was killed at Kabul, an attack was made on Laghman. After a gallant defence Pottinger took refuge in Charikar. Charikar was besieged by the insurgents, and gallantly defended from 5 to 14 November, despite being in the worst condition for defence. The insurgents amounted for some days to more than 20,000 men, and had control of the water supply. Pottinger was present only in a political capacity, and confined to his bed by a wound. Codrington was killed on 6 November, and the command then devolved on Haughton. On 14 November a mutiny occurred among some of the shah's gunners, in which Haughton was cut down and seriously wounded in the neck, shoulder, and arm. The same night the Gurkhas evacuated Charikar. Pottinger and Haughton, with his right hand freshly amputated, with his head hanging on his breast from the severing of his neck muscles, and held in his saddle by a faithful Gurkha orderly, got separated from their following, and eventually succeeded in reaching Kabul on 16 November, where they were received as men risen from the dead. Haughton published an account, *Char-ee-kar*, in 1867, and a revised edition in 1879.

When Elphinstone withdrew from Kabul at the end of December 1841, Haughton was unable to move, and stayed with a friendly chief until after the second advance of the British under General Sir George Pollock in September 1842. He then collected the remains of his late regiment, and returned with Pollock to India. On 15 December 1842 he was appointed lieutenant in the late 54th Bengal native infantry, his army rank dating from 16 July previous. On 8 January 1844 he was appointed second in command of the Bundelkhand police battalion.

On 16 June 1845, at Calcutta, Haughton married Jessie Eleanor, daughter of Colonel Presgrove, with whom he

had four children, of whom two sons and a daughter survived him. On 23 February 1847 he was made first-class assistant to the governor-general's agent on the south-west frontier, and principal assistant on 24 December 1851. Awarded a brevet captaincy on 15 February 1852, he was appointed magistrate at Moulmein in Burma on 5 September 1853 and promoted captain on 15 November 1853. From 19 July 1859 he served as superintendent at Fort Blair and the Andaman Islands (promoted major on 18 February 1861), and from 17 March 1862 was deputy commissioner first class at Sibsagar. While acting commissioner he accompanied the expedition to the Khasi and Jaintia hills in 1862–3, and the Bhutan expedition of 1864–5. He was made brevet lieutenant-colonel on 15 February 1863, and full lieutenant-colonel three days later. From 16 May 1865 he served as commissioner at Cooch Behar, and also managed the large estates of the infant maharaja, who had been made his ward. He was made CSI in 1866 and brevet colonel on 15 February 1868, and accompanied the expedition to the Garo hills in 1872–3.

Haughton retired in 1873, returning to England to live in Gerrards Cross. In January 1874, his first wife having died, he married Barbara Emma, daughter of the Revd Canon Pleydell Bouverie; they had no children and she survived him. He was promoted major-general on 18 December 1880 and lieutenant-general on 1 April 1882. Haughton was over 6 feet in height, with a spare wiry frame capable of great physical endurance, aquiline features, and a kindly, resolute face. He died at 4 Sion Hill, Ramsgate, on 17 September 1887. H. M. CHICHESTER, *rev.* ALEX MAY

Haughton, Matthew (*bap.* 1766, *d.* 1821). *See under* Haughton, Moses, the younger (1773–1849).

Haughton, Moses, the elder (*bap.* 1735, *d.* 1804). *See under* Haughton, Moses, the younger (1773–1849).

Haughton, Moses, the younger (1773–1849), miniature painter and engraver, the son of William Haughton (1737–1769), a gun locksmith, and his wife, Elizabeth, was born on 7 July 1773 in Wednesbury, Staffordshire, where he returned as an adult to be rebaptized, on 20 October 1807. About 1790 he went to Liverpool and was befriended by William Roscoe, whose portrait he painted; later he engraved the frontispieces for Roscoe's *Leo X* (1805). Haughton was reputedly a pupil of George Stubbs. He entered the Royal Academy Schools on 31 July 1795 as a student of engraving, although in January 1801 he had to request reinstatement, perhaps because of his absence in Liverpool from 1798 to 1800.

Haughton's first engraving after Fuseli was the proposed frontispiece (not used) to Roscoe's *Nurse* (1798). Fuseli complained that Haughton had 'travestied' his figures but later praised his qualifications (*English Letters*, 187). In 1803 Haughton became Fuseli's resident engraver, and he paid the latter 100 guineas per annum to cover rent. In 1805, when Fuseli became keeper of the Royal Academy, Haughton accompanied him to Somerset House. Haughton engraved a total of fourteen large plates in stipple and aquatint after Fuseli, culminating with the grandiose *Vision of the Lazar House* (1813); nine of these were published as 'from the Royal Academy'. Haughton also engraved Fuseli's four illustrations to Erasmus Darwin's *Temple of Nature* (1803) and four to Joel Barlow's *Columbiad* (which were not used).

Although best known as Fuseli's engraver, Haughton was a successful miniaturist, who charged 5 to 8 guineas a head. He exhibited more than eighty portraits at the Royal Academy between 1804 and 1848, three paintings at the British Institution in 1840–41, and fourteen at the Liverpool Academy between 1810 and 1838. His portraits of Fuseli, Roscoe, and John McCreery were engraved. Haughton's designs for the booksellers included 105 for Edward Moor's *The Hindu Pantheon* (1810) and at least four drawings and two 'large miniature pictures' for the *British Gallery of Contemporary Portraits* (1813). In May 1819 he left Somerset House and moved to 86 Newman Street, thence to 38 Great Marlborough Street. By 1838 he was at 4 Percy Street, and from 1844 at 5 Percy Street. He married Elizabeth Sarah Blackburn on 2 August 1827 at St James's, Westminster; their son Moses Cartwright was baptized on 12 December 1828. The child's godmother was Fuseli's widow, Sophia, who resided from about 1825 in the Haughton household. Haughton died at his home in Percy Street on 26 June 1849.

His uncle, **Moses Haughton the elder** (*bap.* 1735, *d.* 1804), portrait and still-life painter, the second of the three sons of Moses Horton and Mary Tibbetts, was born at Wednesbury and baptized there on 27 March 1735. He was trained by an uncle, Hyla Holden, in his Wednesbury factory as a painter on enamel and in 1761 moved to Birmingham to work for John Baskerville and Henry Clay, manufacturers of superior enamelled, japanned, and papier-mâché ware. Typical articles decorated by Haughton were 'tripod salt-cellars and mustard pots with small landscapes in panels on pink, green or dark blue backgrounds' (Cope, 130).

The elder Haughton also executed numerous portraits, but his strength was as a painter of still life, most famously his *Dead Game* and *Kingfisher*. He executed twenty-six designs and sixteen drawings after biblical paintings (engraved by Robert Hancock) for Pearson and Rollason's *Holy Bible* (1788). Between 1788 and 1803 he exhibited six paintings at the Royal Academy (Graves has conflated the contributions of uncle and nephew). Three of his paintings formed part of Matthew Boulton's series of 'mechanical paintings' (*Burlington Magazine*, 112, 1970, 505, 507). On

10 January 1765 he married Elisabeth Austin (*b.* 1749) at St Martin's, Birmingham. He died on 24 December 1804 in Ashted, Birmingham, but was interred in St Bartholomew's Church, Wednesbury. There is a high-relief portrait of him in profile in St Phillip's Cathedral, Birmingham.

His only son, **Matthew Haughton** (*bap.* 1766, *d.* 1821), painter and engraver, was born in Birmingham and baptized there at St Martin's Church on 10 October 1766. He entered the Royal Academy Schools on 19 November 1790 as a student of engraving. In the mid-1790s he settled in Liverpool and became a protégé of William Roscoe, for whom he executed (1795) a miniature and engraved fourteen vignettes for the *Life of Lorenzo de' Medici* (1796). He also executed (1794) 'an ambitious watercolour, *L'Allegro*, somewhat in Samuel Shelley's allegorical manner' (Williams, 148). He died on 24 March 1821 at West Bromwich, bequeathing his cousin Moses '1 shilling and a volume of Dr. Young's *Night Thoughts*'. D. H. WEINGLASS

Haughton, Samuel (1821–1897), geologist and physiologist, was born on 21 December 1821 in Carlow, Ireland, the second of three sons of Samuel Haughton (1786–1874), merchant, and his wife, Sarah (*d.* 1861), who was the daughter of John Hancock, a linen merchant from Lisburn. The Haughtons were descended from a Quaker family established in Ireland during the Cromwellian settlements. Samuel was brought up within the Church of Ireland, as his father had withdrawn from active membership of the Society of Friends at the time of his marriage, but his upbringing undoubtedly reflected the Quaker tradition to which so many of his relatives and close family friends adhered. Growing up in the Carlow countryside, in the fertile and attractive valley of the River Barrow, stimulated his interest in natural history and the environment: this interest was further encouraged by the local rector, whose school in Carlow the boy attended.

Samuel Haughton (1821–1897), by Sarah Purser, 1883

Haughton entered Trinity College, Dublin, in 1838. He studied mathematics, obtaining a gold medal in 1843, and was elected to fellowship the following year. The fellowship examination was a formidable one and it was quite unusual to succeed, as Haughton did when he was only twenty-two, at the first attempt. His early scientific work was in mathematical physics. A paper entitled 'On the laws of equilibrium and motion of solid and fluid bodies', published in the *Cambridge and Dublin Mathematical Journal* in 1846, won him the Cunningham medal of the Royal Irish Academy and he published various other papers on fluid dynamics and wave propagation. From his teacher and colleague James MacCullagh he had also acquired an interest in the refraction of light within crystalline media. This led him to a wider interest in mineralogy and it was presumably on the basis of this that he was deemed eligible for appointment to the chair of geology which became vacant in 1851. He was professor for thirty years until he was required to resign on becoming a senior fellow in 1881. Throughout that time he was diligent in promoting and developing his subject.

Haughton's geological work encompassed a wide span including aspects of regional geology, stratigraphy, palaeontology, mineralogy, petrology, and structural geology. He calculated the age of the earth on the basis of sedimentary thicknesses and estimated rates of deposition. His first results suggested about 2000 million years but he subsequently revised this result, reducing it by a factor of ten. Climatic change was another of his interests; in this context he calculated the effect of geological changes on the direction of the earth's axis, carried out detailed calculations of solar radiation, and also examined the effect of

ocean currents on climate. He examined the distortion of fossils, drawing conclusions from this about rock development, and carried out chemical rock analyses. He established the Trinity Mining Company, which in 1854 opened a copper mine at Ardtully in co. Kerry, but this venture was not a commercial success. He was an expert on tides, correlating and analysing observational data from Irish coastal stations and producing detailed tables. Later he carried out similar analyses of data from the Arctic seas. He used his tidal calculations to throw light on the sequence of events at the battle of Clontarf in 1014 and to examine the evidence at a murder trial which had taken place ten years previously.

Fellows of Trinity College were normally required to take holy orders and Haughton was ordained a priest in the Church of Ireland in 1847. Although not obliged to undertake any particular pastoral function, he took his orders seriously and preached regularly throughout his life. Many of his sermons were published: these display his robust and confident religious faith. His view of the world, profoundly shaped by his firmly held, biblically founded religious beliefs, was one with which Darwin's evolutionary theories did not appear to be reconcilable.

In 1859 Haughton, although by that time well established as a professor and a scientist of recognized standing, chose to become a medical student and, while still retaining his fellowship and his chair, pursued the Trinity medical course for three years, graduating MB in 1862. It is said that as a boy he had the idea that he might one day work as a medical missionary in China; this may have been a factor in drawing him towards his medical studies, but it is likely that his primary motivation was scientific. Studies of animal fossils had stimulated an interest in the anatomy and physiology of vertebrates and Haughton used his training in anatomy to pursue this through an ongoing investigative programme of detailed dissection. His investigations were not limited to human subjects. Drawing on material available from the Dublin Zoo, of which he had become a council member in 1860, he compiled data from over a hundred dissections of large animals. One account describes how, when a hippopotamus died, he rushed to the zoo armed with saws and butcher's knives and spent forty-eight hours dissecting the huge beast.

Haughton's particular interest in these comparative anatomical studies was to understand the detailed basis of muscular action. He became convinced that the very different modes of organization of limbs and muscles in the wide range of animal species which he had examined could all be explained in terms of the principle of least action, which he took from mathematical physics and reformulated in the following terms: that the muscular action is organized in such a way that the work done in performing a particular limb movement is less than would be the case for any alternative form of muscular arrangement. These conclusions, and the detailed basis for them, were set out in his book *Animal Mechanics*, published in 1873. One conclusion which he drew from this work was that, as far as bones, muscles, and joints are concerned, the permanence and stability of each species is absolutely secured. He was quite satisfied that his studies lent no support to the Darwinian postulate that the similarities found to exist in the bones, muscles, and joints of animals may be explained by common descent from a supposed common ancestor. It was clear to him that each limb and its mode of action had been planned by a foreseeing mind.

One application of Haughton's physiological studies which gained him some notoriety was his investigation of the practice of execution by hanging. In a paper published in 1866 in the *Philosophical Magazine* he put the case on humane grounds for a significantly longer drop than was normally used, so as to ensure instantaneous death. He derived a formula for the length of drop as a function of the weight of the unfortunate'patient' (as the doomed individual is described in the paper). The scientific interest in the vertebrates went hand in hand with a genuine affection for animals. Haughton's dog, shown with him in Sarah Purser's portrait, was a constant companion. The zoo, which he served as secretary and later as president, was a special interest. The building known as the Haughton House was erected after his death by public subscription in recognition of his outstanding services.

Although Haughton never engaged in clinical practice, he none the less exercised a major influence on Irish medicine. In 1863 the Trinity board appointed him registrar of the medical school, a post he held for fifteen years during which time he introduced substantial reforms despite a sometimes strained relationship with the clinical professors. He also represented the university on the General Medical Council. He served on the board of Sir Patrick Dun's Hospital for thirty-four years, becoming its dominant figure. It was his initiative that led to the extension of the hospital from a purely medical one to include surgical as well as obstetric and gynaecological services. To encourage students in their clinical work he endowed clinical prizes and medals in both medicine and surgery, leaving the residue of his estate for that purpose.

The fact that Trinity graduates were particularly successful in obtaining coveted positions in the Indian Civil Service was significantly due to Haughton and his colleague J. A. Galbraith, who introduced courses to prepare candidates for the Indian Civil Service competitive examination. Haughton and Galbraith also collaborated in writing a series of elementary manuals on various topics in mathematics and physics, and at Haughton's initiative the college established a lectureship in pathology in 1895, and erected a building to house that activity. He was deeply interested in education at both school and university level. He contributed to the public debate in the 1860s on the future of the Irish universities: he maintained that Trinity College should continue to be linked with the Church of Ireland, but was not averse to the setting up of a college for Catholics and dissenters should a genuine demand for this become evident. Haughton was also an active member of the Royal Irish Academy, to which he had been elected in 1845, and was its president from 1886

to 1891. He was elected to the Royal Society in 1858, and received various other honours including honorary degrees from Bologna, Cambridge, Edinburgh, and Oxford.

Haughton's wife, Louisa (1828–1888), *née* Haughton, was a half-first cousin—her father and his were half-brothers. They had four sons and two daughters, one of whom died in infancy. Louisa died in 1888 and Haughton died at his home at 12 Northbrook Road East in Dublin on 31 October 1897. Following a funeral service in the college chapel his remains were buried in the family plot at Killeshin church, just outside Carlow, on 3 November.

Haughton, William (*d.* 1605), playwright, was probably born in the mid-1570s, since Philip Henslowe called him 'yonge horton' in November 1597 (*Henslowe's Diary*, 72). Cooper's assertion that he was incorporated MA at Cambridge in 1604 is based upon a misreading of the name 'Langton', but Baugh suggests that he may have had some connection with Oxford because of his favourable comments about that institution. An apparent reference in Philip Henslowe's diary to 'will hamton sadler' led Chambers to suggest that Haughton was related to William Houghton, saddler, who held a house in Turnmill Street in 1577, but Foakes and Rickert read the reference as 'will hauton fidler' (*Henslowe's Diary*, 295). Haughton was living in London by 1594, when he married Alice Agar on 22 March at St Mary Abchurch.

Haughton wrote his first known play, *Englishmen for my Money, or, A Woman will Have her Will*, for the Lord Admiral's Men at Henslowe's Rose Theatre in early 1598. The plot concerns a Portuguese usurer living in London, Pisaro, who wants to marry his three daughters against their wills to a Dutchman, a Frenchman, and an Italian. The daughters instead love three witty young Englishmen who have become indebted to Pisaro after being swindled by him. After much amusing trickery, the three English youths outwit Pisaro to marry his daughters and cancel their debts. Many elements of this plot were familiar to Elizabethan audiences, but Haughton was the first to combine them in a contemporary London setting, making *Englishmen for my Money* the first of the immensely popular genre of London city comedies. The play was entered in the Stationers' register in 1601, but the earliest surviving edition is from 1616, with further editions in 1626 and 1631.

Between August 1599 and May 1600 Haughton wrote a dozen plays for Henslowe's Admiral's Men, many in collaboration with other playwrights. Eight of these are now completely lost: 'Beech's Tragedy' (with John Day), 'The Arcadian Virgin' (with Henry Chettle), 'The Seven Wise Masters' (with Day, Chettle, and Thomas Dekker), 'Strange News out of Poland' (with 'Mr. Pett'), and 'The Poor Man's Paradise', 'Ferrex and Porrex', 'The English Fugitives', and 'Judas' (alone). Another collaboration with Day, 'Cox of Collumpton', survives only in a description in the diary of astrologer Simon Forman, who saw it at the Rose on 9 March 1600. This bloody domestic tragedy told the story of Cox, who slays his uncle for his land but is himself slain seven years later to the day. Two of his sons subsequently kill their brother and later commit suicide. These various deaths occur, as Forman notes, 'all on St Markes dai' (Cerasano, 158).

Two of Haughton's collaborations from this period do survive. The first of these is the moral comedy *Patient Grissil*, written with Dekker and Chettle in early 1600 and printed in 1603. It elaborates a familiar story, previously told by Chaucer and Boccaccio, in which the nobleman Gwalther cruelly tests his humbly born wife, Grissil, before ultimately proclaiming his true love. Haughton is probably responsible for two sub-plots, in which a Welsh knight woos and wins the widow Gwenthyan (much as in Shakespeare's *Taming of the Shrew*) and Gwalther's sister Julia entertains and rejects three foreign suitors (much as in *Englishmen for my Money*).

Haughton also collaborated with Dekker and Day in early 1600 on a play called 'The Spanish Moor's Tragedy', now generally identified with *Lust's Dominion*, printed in 1657 with a dubious attribution to Christopher Marlowe. This revenge tragedy about the evil Spanish Moor Eleazar is strongly influenced by Marlowe and by Shakespeare's *Titus Andronicus*, but it also shows clear signs of Dekker's hand. Haughton's contribution was small, perhaps limited to scenes involving the friars Crab and Cole. Hoy suggests that the 1600 version was a revision of an older play, with John Marston also contributing to the revision.

Haughton's final surviving play is the comedy *Grim the Collier of Croydon, or, The Devil and his Dame*, written in 1600 but not published until 1662. Although the printed version is attributed to 'I. T.' (perhaps a reviser), Henslowe paid Haughton in May 1600 for 'a Boocke wch he wold calle the devell & his dame' (*Henslowe's Diary*, 134), and Baillie and Sykes summarize the strong internal evidence for Haughton's authorship. The main plot centres around Belphegor, a devil sent from hell disguised as a Spaniard to test the shrewishness of earthly women. He marries the sharp-tongued shrew Mariana, who cuckolds him with three different lovers before poisoning him, sending him back to hell in disgrace. Haughton skilfully weaved his

plot from various sources, primarily Machiavelli's *Marriage of Belfagor* and the pamphlet *Tell-Trothes New-Yeares Gift* (1593), but this play was the first to have a devil as such a central character, and it inspired numerous other devil plays.

After a seven-month absence, Haughton wrote or co-wrote nine plays, all now lost, for Henslowe's companies between December 1600 and November 1601. These included 'Robin Hood's Pen'orths' (by himself), '2 and 3 The Blind Beggar of Bednal Green', 'The Six Yeomen of the West', '2 Tom Dough', and 'Friar Rush and the Proud Woman of Antwerp' (with John Day), 'The Conquest of the West Indies' (with Day and Wentworth Smith), and '1 and 2 The Six Clothiers' (with Smith and Richard Hathway). After one final play for the Admiral's Men in September 1602 called 'William Cartwright' (also lost), Haughton disappears from the theatrical record. However, he may be the author of the anonymous plays *Wit of a Woman* (1604) and *Wily Beguiled* (1606).

Because the name is relatively common, Haughton's non-theatrical activities are difficult to trace. Henslowe lent 10*s.* to have Haughton released from the Clink prison on 10 March 1600, and directly lent Haughton 4*s.* the following June, suggesting that the playwright's finances were precarious. Baugh suggests plausibly that he was the William Haughton who was taxed on £3 of goods in October 1599 in St Botolph, Aldgate, London. On 6 June 1605 Haughton made his nuncupative will in neighbouring All Hallows Staining, with his fellow playwright Wentworth Smith as a witness. He gave all his goods, valued at £19 1*s.*, to his wife, Alice, toward the raising of their children. He probably died within a day or two. DAVID KATHMAN

Hauksbee, Francis (*bap.* 1660, *d.* 1713), natural philosopher and scientific instrument maker, was baptized on 27 May 1660 in the parish of St Mary-at-the-Walls, Colchester, the fifth of five sons born to Richard Hauksbee (*b.* 1621), a draper and common councillor of Colchester, and his wife, Mary. Hauksbee entered Colchester grammar school in 1673, and from 1678 to 1685 was apprenticed as a draper in the City of London, initially to his eldest brother, John. He was married to Mary (*d.* after 1730) by May 1687, when a daughter was born. Five out of eight children survived infancy: Ann, Mary, Francis, Richard, and Calvin; Francis graduated BA from the Queen's College, Oxford, in 1722. Hauksbee took the freedom of Colchester (by patrimony) in 1710 and was free of the Drapers' Company in 1712.

Nothing is known of Hauksbee's move from drapery into the emerging and fashionable business of mathematical and scientific instrument making. He was praised in John Harris's *Lexicon technicum* (1704) as one of six 'Ingenious and Industrious Artificers' (Preface). He made air-pumps and pneumatic engines from premises in the City's Giltspur Street, near the pioneering mathematical school of Christ's Hospital, where he had lived since at least March 1701. Isaac Newton certainly knew of his reputation: Hauksbee was admitted at the first meeting of the Royal Society under Newton's presidency on 15 December 1703. He demonstrated a new air-pump and the intriguing, unstable phenomenon of 'mercurial phosphorus' (actually an electrostatic discharge), showing that his ability was already rare. Thereafter he experimented regularly before the society; the work made his name.

In 1704 Hauksbee expanded into the more genteel and 'philosophical' business of public lecturing, and engaged the experienced James Hodgson to teach a course in experimental philosophy. Hauksbee's performances in 1704 rehearsed his staple pneumatic experiments, but from April 1705, when Newton was revising his *Opticks*, he returned to the mercurial phosphorus. He became FRS on 30 November 1705, his status the lowest among the gentry elected hitherto. He offered an important and dramatic experiment at the next meeting, when a 'fine *purple* Light, and *vivid*' was produced by a glass sphere rotated rapidly against woollen cloth. The light diminished when air was let in, suggesting that it depended neither upon mercury nor air.

Hauksbee's success at the society stemmed from his usefulness to Newton. The new president revived the tradition of weekly experiments, specifically to further his research into light, magnetism, and other phenomena suggesting the existence of active principles or attractive effluvia. Besides the wide-ranging nature of his experiments, Hauksbee's particular skill was the development of apparatus that rendered 'Effluvia more remarkably conspicuous and ... pleasing to the eye of a Spectator' (*Physico-Mechanical Experiments*, 52)—and thereby more investigable. From Newton's acknowledgements and Hauksbee's use of Newtonian discourse, one infers that Newton was Hauksbee's philosophical master. In return, Hauksbee made many highly novel and significant experimental discoveries, especially in the field of electricity. Indeed, the society left experimenting to Hauksbee and filled its *Philosophical Transactions* with his accounts, which he collated in his *Physico-Mechanical Experiments on Various Subjects* (1709); a posthumous second edition, including later work, appeared in 1719.

In accordance with Newton's speculation that light was

an emitted effluvium, Hauksbee pursued in 1706 the effects of friction upon large evacuated glass tubes. When he found that air-filled tubes emitted no light, but crackling sounds, he recognized the similarity to well-known 'electric' effects. His improved apparatus, of sturdy glass tubes and small pieces of leaf brass, enabled him to observe attraction, repulsion, the effect later known as 'electric wind', and the screening effect of muslin. It quickly became standard equipment.

Hauksbee then developed the first continuous generator of static electricity, using a glass globe rapidly rotated by a geared handle and rubbed, and a primitive electroscope, a semicircle of wire from which dangled woollen threads. Placed around the globe, the threads straightened as if they were attracted to the centre of the globe, suggesting that electricity was a centripetal force like gravity, but caused by the emission of effluvia. Placed inside the globe, threads were repelled from the centre. Despite his Newtonian distaste for 'Vain Hypotheses', Hauksbee philosophized that the globes had 'some little Resemblances of the Grand Phenomena of the Universe' (*Physico-Mechanical Experiments*, 57). Such highly visual experiments changed Newton's theory of forces from one of action at a distance to one of 'subtle effluvia' modelled on electricity.

Hauksbee's second ground-breaking experimental series, on 'the ascent of liquors', was equally Newtonian. In 1708 came the first methodical work on capillarity, showing that it varied with the internal diameter of the tube, but not the thickness. To prove that the attractive forces were possibly universal, Hauksbee demonstrated the rise of liquids between plates not only of glass but also of marble and brass, and showed the attraction also to operate in a vacuum. Later he produced 'a very Curious Experiment', which Newton related to the 'Congruity or Agreement of the Parts of Matter' (Royal Society, *Journal Book*, 24, 31 Jan 1712). This developed into a series in which drops of liquid were trapped between a horizontal glass base plate and another plate on top, angled down from the top of the drop to the base. Surface tension sucked the drop into the angle, and Hauksbee found a relationship between the angle and the force required to move the drop. In his last work, concluding on 29 January 1713, he confirmed Brook Taylor's conjecture that the meniscus between two plates of glass, inclined at a slight angle to each other, resembled a hyperbola.

In at least ninety experimental performances Hauksbee also investigated prisms, gunpowder, thermometers, and various engines. He carried out more sustained work on the refractive indices of liquids, combustion and respiration, and attempts at a law of magnetic attraction. He also read numerous papers, and was on hand to impress the society's visitors with his striking experiments.

By 1709 Hauksbee had relocated to Wine Office Court, and by 1712 to Hind Court, both off Fleet Street and near to the Royal Society's house at Crane Court. After the publication in 1709 of his internationally acclaimed *Physico-Mechanical Experiments* he appears to have given lectures himself, and was sought out as a natural philosopher by visiting foreigners such as Abraham Vater and Zaccharius von Uffenbach.

By January 1712 the science business was more competitive. Francis *Hauksbee junior, son of his brother John, established a rival instrument shop in Crane Court itself, and advertised the educated Humphry Ditton as his lecturer. Hauksbee immediately counter-advertised a course of experiments, based on his Royal Society work, and stressed that he was 'the only Person to whom the late Improvements are owing' (*Daily Courant*, 14 Jan 1712). In the summer he engaged the renowned but theologically disgraced William Whiston, who went on to lecture for Francis junior from March 1713. After Hauksbee's death the rising star Jean Theophilus Desaguliers briefly lectured for his widow. Although the venture failed, it was Desaguliers, not the ambitious Francis junior, who filled Hauksbee's position at the Royal Society.

Hauksbee's *Physico-Mechanical Experiments* was translated into Italian (1716), Dutch (1735), and French (1754), and was widely read throughout the eighteenth century; it established his international reputation. The French introduction eulogized his experiments as the first exemplification of the systematic spirit in science and Hauksbee himself as possessing the four 'qualités dont la reunion forme le Physicien' ('qualities that together make up the natural philosopher'; Desmarest, xliii). The opinions of outsiders were not shared by his London colleagues, nor perhaps by Hauksbee. Presenting himself as 'undeserving' with a 'want of a learned Education' he merely proffered 'surprizing observations' to 'the Intelligent *Philosophical* Reader' (*Physio-Mechanical Experiments*, dedicatory letter). For Desaguliers, Hauksbee's experiments were not true philosophy because they followed no mathematical order.

Other fellows of the Royal Society did not treat Hauksbee as a natural philosopher. Although its curator of experiments *de facto*, he was never curator by office as had been Robert Hooke, his predecessor. He was treated as a servant, employed part-time, ordered to experiment, occasionally chastised, and given no fixed salary. The society's council remunerated him retrospectively 'as he deserves'. His deserts ranged from £15 to a maximum in 1707 of £40 'for his last years waiting upon the Society and shewing and trying their experiments' (Royal Society, council minutes, 2 July 1707). Hauksbee died in Hind Court, intestate, aged fifty-two, and was buried on 29 April 1713 in the churchyard of St Dunstan-in-the-West. The society acknowledged his death only by granting his widow £20 outstanding remuneration. In 1714 Mary was granted administration of a surely meagre estate. She moved to a Tower Hill almshouse, returned to drapery (taking three apprentices, including her son Calvin), and was given charity by the Drapers' Company in 1716 and, grudgingly, by the Royal Society in 1731.

Hauksbee, Francis (1688–1763), instrument maker and lecturer on science, was born in April 1688 in London, the son of John Hauksbee of the Drapers' Company and his wife, Mary. He was the nephew of the instrument maker Francis *Hauksbee the elder (*d.* 1713). Hauksbee was apprenticed in 1703 to John Marshall, a noted optical instrument maker. In 1710, the German traveller Conrad Zacharias von Uffenbach met him at the elder Hauksbee's house in Wine Office Court, Fetter Lane, London. By 1712 uncle and nephew were in competition, the younger Hauksbee having set up as a rival instrument maker and experimental lecturer in Crane Court, near Fetter Lane, close to the new premises of the Royal Society. Thus began a career among the public scientific lecturers that emerged in the reign of Queen Anne. Here the younger Hauksbee forged links with the mathematician Humphry Ditton and with the controversial natural philosopher and theologian William Whiston.

With the death of his uncle in 1713, Hauksbee had the opportunity to assume many of the activities in which the elder Hauksbee had been concerned. He soon engaged with Whiston in a series of lectures that were to take place at the house in Crane Court. The nearby Royal Society from time to time called him in to demonstrate, especially before their foreign visitors, such as the duc d'Aumont. He did not however replace his uncle as permanent demonstrator, which post went to the rival lecturer and Newtonian experimentalist John Theophilus Desaguliers. Hauksbee soon advertised the production of scientific instruments like hydrostatic balances, reflecting telescopes, and air-pumps for which his uncle had been renowned. Hauksbee got into a dispute with Richard Bridger, a former apprentice to the elder Hauksbee, over the nephew's advertising of improvements to the air-pump.

Hauksbee was undeterred and became very active in the lecturing world, advertising courses given with Whiston at Crane Court. His co-operation with Whiston, who like Hauksbee failed to obtain the distinction of FRS, continued for many years. In 1715 Hauksbee took in subscriptions for Whiston, who was then proposing a new and highly ridiculed method for discovering longitude, which Whiston projected as a means for mapping the coasts of Britain. Whiston had long been interested in the problem of longitude and had hoped to plot coastal positions by means of the difference in time between the flash of an explosion and the time taken for the sound to travel. At least until 1727 Hauksbee was still giving 'A Course of Mechanical and Experimental Philosophy' with Whiston, in which Newton's improvements to the reflecting telescope were demonstrated, along with magnetical experiments and entertainments.

In 1723, ten years on from his first involvement with the Royal Society, in competition with many applicants who were better educated, Hauksbee was appointed to a secure post, not as demonstrator, but as housekeeper and clerk to the society. This position precluded the possibility of his election as fellow, and he was required to provide the then considerable but customary surety of £400–500. To what extent his family connections to the society were significant is unclear. During his tenure his widowed aunt, Mary Hauksbee, while carrying on her own trade as a draper, continued her late husband's instrument business for a short time, and also petitioned the society for a pension to assist in supporting the large family with which she had been left. Moreover, though he was not a fellow, Hauksbee appears to have frequented the Royal Society dining club at The Sun in St Paul's Churchyard, where the discussion frequently dealt with theological and natural philosophical issues.

Overshadowed by the reputation of his more famous uncle, whom the Royal Society had at least taken seriously as an experimentalist, the younger Hauksbee had to compete in the world of lecturers and inventors that developed in Hanoverian London. Hauksbee performed experiments while Whiston provided the explanations to subscribing audiences, which included the anatomist Alexander Monro *primus*, but they also published and sold printed versions of their courses with plates, which may have served to advertise Hauksbee's instruments. Hauksbee's connection with John Hadley, inventor of the optical sextant, led him to try manufacturing a reflecting telescope.

Hauksbee also forged an alliance with the chemist and physician Peter Shaw in the provision of lectures on chemistry. By 1731 they were marketing a portable laboratory for 'the improvement of Philosophy, Arts, Sciences, Trade and Commerce'. Hauksbee, perhaps because of his trade background, was alert to such commercial possibilities, and like many others at the time was involved with inventors who were eager to secure patents for their inventions. He collaborated with Benjamin Robinson, who in 1728 obtained a patent for a concoction that would allegedly preserve wood. There were many such claims at the time, especially in the almost desperate need to protect wooden pipes and ships' bottoms. In the same year

Hauksbee was similarly involved with the mining promoter Benjamin Lund in his patent for the manufacture of copper, brass, and silver. Hauksbee was an entrepreneur and about 1742 he entered into a partnership with the apothecary J. Watson, probably of the Strand, to market an alternative therapy for the treatment of venereal disease. In 1753 he was still advertising his cure in the daily press.

The identity of Hauksbee's wife is unknown; she probably predeceased him, for his six children were cared for by a widow, Mary Powell, at his house in St Paul's Churchyard. In his will Hauksbee left instructions that his clocks, his instruments and apparatus, his artificial jewels, the stocks of materials ready to be made up into the antivenereal medicine, as well as his personal valuables, should be sold and the proceeds shared among his dependants. He died in London on 11 January 1763.

Archives RS | BL, letters to T. Birch, Add. MSS 4309–4443

Hausted, Peter (*c.*1605–1644), playwright and Church of England clergyman, was born in Oundle, Northamptonshire. His parentage is uncertain but William Hawsted, a yeoman of Oundle who testified at an inquest at Peterborough in 1603, may have been the poet's father. Hausted was probably educated at the free Oundle School before he matriculated as a sizar at Queens' College, Cambridge, in Easter term 1620. He proceeded BA in 1624 and MA in 1627 but remained at Cambridge for seven more years, studying divinity.

In 1623, while still an undergraduate, Hausted became involved in academic drama, playing the minor role Hirsutus in Robert Ward's anti-puritan allegorical satire *Fucus histriomastix*. Before 1630 he wrote 'Verses Made by Mr. Hausted in Amputationem comae suae' (BL, Add. MS 15227, fol. 83b), in which he seems to express reservations about acting. To this period may also belong *Hymnus tabaci*, his translation of Raphael Thorius's poem, published posthumously in 1651.

In 1632 Hausted became embroiled in controversy when his comedy *The Rival Friends* was acted before the king and queen on 19 March with Hausted himself acting the leading role of Anteros. In Jonsonian fashion this play satirizes the abuse of poorer clergy by impropriation of parish churches, a practice opposed by King Charles. Despite the king's presence Hausted's play was ridiculed and cried down, in contrast to Thomas Randolph's play *The Jealous Lovers*, which was received much more favourably three days later. Hausted rushed his play into print with a long, defensive 'Preface to the reader' and commendatory verses by two of the actors in the play, Edward Kemp and John Rogers. Randolph, in turn, ridiculed Hausted in his Latin speech *Oratio praevaricatoria* in July, and more subtly in the printed version of *The Jealous Lovers* later the same year.

Hausted responded by having his Latin play *Senile odium* printed the following year, 1633, with commendatory poems by Edward King (Milton's Lycidas), Kemp, and Rogers, all praising and defending Hausted. The play itself had been written before *The Rival Friends* (a manuscript version survives in the marquess of Bath's collection at Longleat, G. drawer 9); it is a skilled comedy which shows deep knowledge of classical drama, especially that of Terence and Plautus, and also satirizes euphuism and alchemy. Another Latin play existing only in a manuscript dated 1635, *Senile amor*, has been attributed to Hausted but the attribution is rejected by Mills. The rivalry between Hausted and Randolph was ended by the latter's premature death in 1635, after which Hausted wrote the epitaph for Randolph's grave at the request of Sir Christopher Hatton.

In 1634 Hausted was appointed curate at Uppingham, Rutland, by Dr Edward Martin. On 2 November of that year he was preaching at Great St Mary's in Cambridge when his pointed criticisms of lax religious practices at the university caused him to be arrested on the spot, hauled through the streets, and suspended by a *de facto* tribunal. Martin, who described the event as 'the greatest uproare and concourse of people that ever I saw at any arraignment' (Mills, *Peter Hausted*, 39), upbraided his curate the next day but apparently forgave him. Two years later, in 1636, Hausted published *Ten Sermons*, with a dedication to Sir Christopher Hatton, and in 1638 he left Uppingham. Wood says that he became rector of Hadham, Hertfordshire, but there is no trace of him in the records there (Wood, *Ath. Oxon.*, 2.29; Mills, *Peter Hausted*, 49).

Hausted became vicar of Gretton, Northamptonshire, on 13 March 1640 but upon the outbreak of civil war in 1642 he joined the royalist cause as chaplain with the earl of Northampton's forces. He may have written the royalist *Satyre Against Separatists* (1642) and almost certainly wrote *Ad populem* (1644); he also wrote a manuscript elegy on Colonel Robert Arden, who died in August 1643 (Bodl. Oxf., MS Ashmole 36–37, fol. 125). On 26 February 1643 he was appointed rector of Wold, Northamptonshire, through the influence of Hatton but he apparently never

lived there. He died on 20 July 1644, on the second day of the siege at Banbury Castle, Oxfordshire, and was probably buried there. DAVID KATHMAN

Haute family (*per. c.*1350–1530), gentry, was active in Kent and Sussex from at least the early thirteenth century. Bishopsbourne, between Canterbury and Dover, was their principal residence from the end of the fourteenth century, and they acquired Ightham Mote, near Sevenoaks, through the marriage of **Sir Nicholas Haute** (1358–1416) and Alice, daughter of Sir Thomas Cawne, probably in 1389. Sir Nicholas was a Kentish MP and sheriff during the 1390s, and for the 1412 subsidy he was assessed at £122 6*s.* 8*d.*, putting him among the wealthiest in the county. His eldest son, **William** [i] **Haute** (*c.*1390–1462), enjoyed the reputation of a capable soldier: he served in the duke of Gloucester's retinue for the Agincourt campaign in 1415, and he was appointed to his first two commissions of array in 1419 and 1420. He was also elected MP in 1419, and was appointed to the county bench in 1424, as well as serving a term as sheriff in 1420–21.

William [i] Haute's first marriage, to Margaret Berwyk, brought property in Berkshire, Somerset, and Buckinghamshire, but it was his second marriage, to Joan, daughter of Richard Woodville of Maidstone, in 1429, which laid the foundations for the family's significance in a wider sphere, by allying his family with that of a future queen of England. Woodville, who was captain of Calais, where William was serving when the marriage was contracted, was father of Richard *Woodville, first Earl Rivers, and grandfather of Queen *Elizabeth (*née* Elizabeth Woodville). The settlement suggests that William was very eager for this alliance with an up-and-coming family, even going so far as to disinherit his daughter from his first marriage. Later the same year he was again elected to parliament for Kent. He served with his father-in-law in France from 1434, and was among Woodville's executors in 1441. Simultaneously, he maintained links with members of Humphrey of Gloucester's circle, men like Geoffrey Louther, Gloucester's lieutenant as warden of the Cinque Ports, with whom he sat as MP in 1432. In April 1450 he was a Kentish commissioner of array, and was among those pardoned in July, in the immediate aftermath of the Cade rising, but he is unlikely to have sided with the rebels. In 1460 Haute was commissioned to resist the Yorkist earls, but he joined them after their landing in Kent. Although he was appointed to a Yorkist commission of array in January 1461, he was by then too old to play a significant part in the new regime. His will is notable for its mention of a number of religious relics, including the stone on which the archangel Gabriel stood during the annunciation. Haute was buried in the Austin Friary at Canterbury, next to his wives.

William [i] Haute's eldest son, **Sir William** [ii] **Haute** (*d.* 1497), was knighted at the coronation of his cousin Elizabeth Woodville as queen of England in 1465, and thereafter he was a mainstay of Kentish administration. Appointed sheriff in 1465, 1474, and 1482, JP from 1467, and a frequent commissioner, his only periods of rest from county service were enforced: the first during the readeption of Henry VI, the second during the reign of Richard III. He joined his Woodville cousins in their uprising against King Richard in October 1483, and after its failure he was among those for whose capture a reward was offered. He returned to favour under Henry VII. In his leisure time he composed music (including carols and polyphonic settings of the Benedicamus domino) and patronized musicians. His are the only known English amateur compositions before the reign of Henry VIII. He died on 2 July 1497, leaving Kentish property of an annual rental value of over £62.

The existence of two contemporary Richard Hautes with parallel careers complicates the family's later fifteenth-century history. The list of offices held by one or other of these two Richards is long: sheriff of Kent in 1477–8; JP from 1479 to 1481 for Kent, and for Essex, Gloucestershire, Hereford, Shropshire, and Worcestershire in the 1470s; MP for Canterbury in 1478, and on numerous Kentish commissions under Edward IV; carver to Queen Elizabeth Woodville from 1466 to 1469, and nominated by the queen as a justice in her forest eyre in 1477; among those who accompanied Margaret of Anjou to France in 1475; steward of Gower and constable of Swansea Castle from 1481 to 1483. But it can at least be said that the elder **Richard Haute** (*d.* 1487) was the son of William [i] and Joan, and that in 1469 or 1470 he married Elizabeth (*d.* after 1487), the daughter of Sir Thomas Tyrell and widow of Sir Robert Darcy of Danbury in Essex (which manor she brought to Richard). This Richard was probably lieutenant of the Tower from 1471 to 1473. He too rose in 1483, for which he was attainted and suffered forfeiture. This was reversed by Henry VII, under whom he served as a Kentish JP and justice of gaol delivery.

The mother of the younger Richard, **Sir Richard Haute** (*d.* 1492), was named Margery, and he may have been the son or grandson of Nicholas Haute (*b. c.*1395), William [i]'s younger brother. It was probably this Richard who was appointed to the household of the prince of Wales at Ludlow in 1473, although both Richards were active in south Wales and the marches. He was knighted in 1482, during Richard of Gloucester's Scottish campaign. Less than a year later he was among those members of the Woodville circle taken at Stony Stratford during Gloucester's *coup d'état*; but unlike Rivers, Grey, and Vaughan his life was spared, and he lived out Richard III's reign in quiet obscurity. After Bosworth, however, he made a successful return to court life: he was one of the bearers of Elizabeth of York's canopy at her coronation, a royal carver by 1488, and knight of the body three years later. He also served in a military capacity: he was part of the royal bodyguard

during Henry VII's northern progress of Easter 1486, he fought at Stoke in 1487, and in 1488 he was at sea defending the channel. His final mission was to meet the French ambassadors come to sue for peace after the siege of Boulogne in 1492. He died in the December of that year, possibly while returning from France. He held property in Kent, Berkshire, Essex, and London. This Richard married first, in 1474, Eleanor, daughter of Sir Robert Roos of Northamptonshire; she died about 1486, and between then and 1489 he married Katherine Boston (*d.* 1493), the widow of Walter Wryttel and of John Green. Katherine was the heir to four of Wryttel's Essex manors. Richard seems to have had literary interests: he may have owned an English version of Christine de Pisan's *Livre du corps de policie*, perhaps translated by his friend, Anthony Woodville, while Eleanor was bequeathed a volume of French grail romances by her uncle, the poet and translator Sir Richard Roos, which she signed, 'thys boke ys myne dame Alyanor Haute' (BL, Royal MS 14 E. iii).

The Haute family's Woodville connections increased its members' value on the marriage market. In 1468 or 1469 Anne Haute, probably William [i]'s daughter, was betrothed to Sir John Paston of Norfolk. This relationship persuaded the Woodvilles to promote Sir John's interests at court, but did not lead to marriage, and the Pastons had to procure an expensive papal dispensation to annul it.

The Woodville connection brought other Hautes into the court circle, among them Edmund (*d.* 1488?), who may have been a son of Nicholas, the younger brother of William [i], and who became Queen Elizabeth's carver, and **Martin Haute** (*fl.* 1466–1483), possibly his brother. Martin was a yeoman of the king's household and receiver of the queen's Northamptonshire properties from 1466 (and remained receiver until the end of Edward IV's reign), and ten years later he was described as a servitor and usher of the chamber to Queen Elizabeth. His son, James [i] Haute, followed his father into royal service, and in September 1485 he was granted the stewardship of Hanslope, Northamptonshire. He was one of three contemporaneous James or Jakes Hautes in the Yorkist and early Tudor period, whose separate identities and careers are impossible to disentangle. **James** [ii] **Haute** (*d.* 1505x8) was the son of William [i] Haute, and father, by his marriage to a woman named Katherine, of Edward (*d.* 1537?), of Alan (*fl.* 1518–1529), and of Henry Haute [*see below*]. This James was pardoned in 1483, when he was described as of London, late of Bishopsbourne, Kent, and late of Harpenden, Hertfordshire, where he had held the manors of Annables and Kingsbourne Hall since at least 1473. He was probably a member of Elizabeth of York's household from at least 1502, and it may have been this James who organized court festivities from 1494 to 1501. James [iii] Haute was probably dead by 1496. One of these three was a member of the royal household by 1469, and in 1482 one was granted the reversion of the keepership of the exchange and mint at the Tower, to be held for life. More surprisingly, one James did not join the rest of his family in opposing Richard III, and in March 1484 was rewarded for his good service against the rebels with the grant of the elder Richard Haute's confiscated Kentish properties, including Ightham Mote, to the annual value of over £28 (this property was returned to Richard by Henry VII in November 1485). This was probably the James who seems to have died by 1496: the ready acceptance of the others into the Tudor court may argue against Ricardian sympathies on their part.

Henry Haute (1474–1508), the son of James and Katherine Haute, was an apostolic protonotary at the age of twelve in 1486, and four years later he went up to Oxford with a letter of recommendation from his cousin, Elizabeth of York. From 1495 he was rector of Great Hallingbury in Essex and Hothfield in Kent, and in 1498 he became a canon of Salisbury. Hothfield was a royal advowson, and in 1500 he was a chaplain in Henry VII's entourage at his meeting with Archduke Philip at St Pierre, near Calais. He may have been a member of the household of William Blount, Lord Mountjoy, who had humanist interests, and he was working on 'Les petites oeuvres contemplatives' (BL, Royal MS 16 E. xiv), a French translation of works by Erasmus and Pico della Mirandola, when he died in January 1508.

Edward Haute (1476–1530), the son and heir of Richard Haute and Elizabeth Tyrell, established himself as a London mercer (he also imported wine and woad), in which trade he was associated with his cousins Alan and Henry, the sons of James and Katherine. Edward did not have a head for business. In 1514 his property in Wrotham, Ightham, and Dover was confiscated to pay his debts. To satisfy his creditors he also sold his manor of Bearsted in Wrotham in 1518, and the Newark-on-Trent property of his wife, Elizabeth, daughter of Thomas Frognal, in 1528. In July 1518 he mortgaged Ightham Mote for £360; in December he sold his remaining share, and the house passed out of the family: in 1521 it was bought by Sir Richard Clement. After a spell in Ludgate prison for debt Edward died in Ireland in 1530, whither he had presumably fled from his many creditors. His wife was still alive in 1544.

Hauville, Jean de [John de Hauteville] (*d.* 1200?), poet, was probably Norman by birth, rather than English as was once believed. Hauville, near Rouen, has been suggested as a possible birthplace. Little is known about his life, but the fact that he was still young in 1184, when he composed his only known work, the Latin satirical poem *Architrenius*, makes a date *c.*1150 (or perhaps even slightly later) likely for his date of birth. The name Magister Johannes de Hauvilla appears on Rouen Cathedral witness lists of 1199, suggesting that by then he had become a master at the cathedral school. It was most likely at Rouen that Jean taught the noted grammarian, Gervase of Melkley, who refers to the *Architrenius* and his former tutor in his prose *Ars poetica* (1216). There is, however, no reason to believe that Jean de Hauville was a monk of St Albans, as claimed by the Benedictine Hugh Legat in his fifteenth-century commentary on *Architrenius*. Legat's work was also the source of Bale's assertion that Hauville had connections with Oxford, another claim now considered to be false. It is thought that Jean died in 1200.

Jean de Hauville's only known work, the nine-book hexameter epic *Architrenius*, was dedicated to Walter de Coutances at the time of the latter's translation from the bishopric of Lincoln to the archbishopric of Rouen in 1184. The title *Architrenius* means 'Arch-mourner'; the poem relates how the narrator, lamenting humanity's natural tendency towards vice, seeks out Nature for an explanation. On his journey, the arch-mourner travels through the various institutions of medieval life and the familiar subjects of twelfth-century satire: the church, the court, the schools. In all of these places he discovers nothing but greed, pride, arrogance, and ambition. The narrator eventually encounters the ancient philosophers, who lecture him on the vices and the need for self-discipline. At the end of his journey he finds Nature; she reveals to the arch-mourner that moral philosophy is the solution to the problems of the world, and presents him with the maiden Moderation as a bride.

Although modern scholarship has deprived Jean de Hauville of all his personal English connections, his *Architrenius* nevertheless made a significant contribution to medieval England's intellectual formation. It was known, for instance, to Walter of Wimborne in the thirteenth century and Thomas Walsingham in the fourteenth, and copies of it survive in several manuscripts in English collections. In 1872 Thomas Wright published it in his Rolls Series compilation, *The Anglo-Latin Satirical Poets and Epigrammatists of the Twelfth Century*. Late twentieth-century editions and translations by Schmidt (1974) and Wetherbee (1994) have made Hauville's work accessible to a modern readership. VICTORIA CHRISTINE APPEL

Havard [Harvard, Haverd], **William** (1710–1778), actor and playwright, was born on 12 July 1710 in Dublin, the son of a vintner. He was briefly apprenticed to a surgeon before he moved to London in 1730. His first noteworthy acting appearance was as Fenton in *The Merry Wives of Windsor* for Henry Giffard's company at Goodman's Fields Theatre on 10 December 1730; this inaugurated a career on the London stage, confined almost exclusively to supporting roles, which was to last for nearly four decades. He remained at Goodman's Fields, playing a wide range of minor parts, until 1736, when he moved with Giffard to the Lincoln's Inn Fields Theatre; when this closed a year later he joined Charles Fleetwood's company at Drury Lane. Apart from brief spells at Covent Garden, in Bristol and Dublin, and on tour in the north of England between 1740 and 1747, Havard remained at Drury Lane for the rest of his working life. On 22 May 1745 he married the actress Elizabeth Kilby, who acted periodically at Drury Lane as Mrs Havard, and the pair took up residence in Hanover Street, Longacre.

From 1747, when David Garrick took over the management of the theatre, to his retirement in 1769, Havard was a stalwart of the Drury Lane company, 'the graceful, reliable wheelhorse for excellency in supporting roles' (Stone and Kahrl, 25). Although he occasionally aspired to major roles (Prospero in *The Tempest*, Ford in *The Merry Wives of Windsor*, Plume in Farquhar's *The Recruiting Officer*) he was generally cast as middle-ranking courtiers, ministers, and citizens. His competent approach to his craft was regarded with polite appreciation and affection rather than admiration. Contemporary accounts refer to his solid dependability and amiability, but also to his predictability and lack of range; his supporters usually preferred to stress his personal virtues—his amiability, intelligence, and sound moral character—rather than make great claims for his histrionic prowess. Havard's solid diligence was not immune to satirical attack: in *The Rosciad* (1761) the

William Havard (1710–1778), by Edward Fisher, 1773 (after Thomas Worlidge)

Revd Charles Churchill wrote of 'poor Billy Havard' whose 'easy vacant face proclaimed a heart, Which could not feel emotions, nor impart'. Even Garrick, who maintained an enduring friendship with Havard, could not resist a slightly barbed comment in the epitaph he composed for his gravestone:

> Howe'er defective in the mimic art,
> In real life he justly played his part!
> The noblest character he acted well,
> And heaven applauded—when the curtain fell.

Havard enjoyed some modest success as a playwright and poet. His *Scanderbeg*, which appeared in 1733, was played twice: it was not well received, and provoked the accusation that Havard had plagiarized its plot from a play by Thomas Whincop then in Giffard's possession. Both Havard and Giffard denied the charge. His tragedy *Regulus* was more successful, and was first performed with Garrick in the title role in 1744. Havard's most durable and highly regarded play, however, was *King Charles I*, billed as 'an historical play' written 'in imitation of Shakespear', which played to large audiences at Lincoln's Inn Fields over three months in 1737, and which ran to ten editions between 1737 and 1810. According to Tate Wilkinson, a performance of the play in Hull in 1777 or 1778 was also the occasion of 'a melancholy accident', where a young female member of the audience 'in almost a second after the play finished ... dropped down dead'. While the part played by Havard's play in her untimely demise is unclear, it is a measure of the sensitivity of its subject matter and of the volatility of opinion over the theatre at the time that the incident provoked some debate: 'some urged that the melancholy of the tragedy had affected her senses: the enemies of the theatre were certain it was Divine judgement, as a punishment for her being in so profane a place as the devil's house' (Wilkinson, 2.7–8). Havard also wrote occasional verses, on subjects ranging from the death of a friend's dog to the duke of Cumberland's return from the battle of Culloden. His 'Ode to the Memory of Shakespeare' was set to music by William Boyce and performed at Drury Lane in 1756; reprinted in the *London Chronicle* of 7 April 1757, it was, characteristically, attended by the kind of faint praise that greeted its author's stage appearances: 'lofty jargon Mr Harvard [*sic*] has not aspired to, but has modestly contented himself with uniting both sentiment and suitable diction' (Vickers, 289). In 1769 Havard wrote to Garrick offering the ode as a contribution to the latter's Stratford jubilee: although the offer was declined, Garrick's own ode for the occasion not only had a number of echoes of Havard's but also appropriated a number of its lines.

If Havard's talents were widely perceived by his contemporaries as limited in scope, he was none the less a popular actor, and a gregarious, well-liked, and respected individual. He retired from the stage for reasons of ill health in 1769 and settled in Tavistock Street (his wife, Elizabeth, had died five years previously, on 27 April 1764). He remained there until his death on 20 February 1778, and was buried on 26 February in the churchyard of St Paul's, Covent Garden. ROBERT SHAUGHNESSY

Havell family (*per. c.*1775–1934), artists and publishers, came to prominence with **Luke Havell** (*d.* 1810) and **Daniel Havell** (*d.* 1825/6). The exact relationship of these two men, who represent the two branches of the Havell family, remains unclear but it is thought that they were either brothers or cousins. They came from an ancient but impoverished Reading family and it was not until the artistic talents of the farmhand Luke Havell were brought to the attention of the local squire that he was apprenticed to a local signwriter named Cole. Soon afterwards he was appointed drawing-master at Reading School and set up a modest print shop, also in Reading. In 1778 he married Charlotte Phillips (*d.* 1825) and they had fourteen children including Edmund Havell senior (1785–1864) who took over his father's business and succeeded to his post at Reading School. With his wife, Maria Binfield, Edmund had three sons: Edmund Havell junior (1819–1894), Charles Richard Havell (1827–1892), and George Havell (*d.* 1840), who all became practising artists and printmakers specializing in landscape and topography. Of these three, Edmund set his sights much wider than his siblings and

after training under Benjamin Robert Haydon, he regularly exhibited paintings in London and also visited the USA, where he exhibited work in Philadelphia. Among their grandfather Luke's other artistic offspring were Frederick James Havell (1801–1840/41), who worked in line engraving and mezzotint, and his much more successful older brother William *Havell (1782–1857), the genre and landscape painter, who was born in Reading on 9 February 1782. William Havell earned a reputation for his sensitive lakeside views in the manner of J. M. W. Turner. The best known of these were, undoubtedly, his designs for *Twelve Picturesque Views of the River Thames* (1812), a series of coloured aquatint plates engraved and published by his uncle Daniel and his cousin **Robert Havell senior** (1769–1832), who was born in Reading on 29 December 1769. This was the first collaborative work between the two branches of the Havell family.

Although born in Reading, Daniel Havell moved to London, where he worked for publishers such as Rudolph Ackermann who specialized in aquatint. His first commercial venture with his son Robert Havell senior was on Henry Salt's *Twenty Four Views Taken in St. Helena* (1809–10); however, this partnership was short-lived and in 1816 Daniel was working independently at 5 Charles Street, Covent Garden. His last series of aquatints were commissioned for Edward Wedlake Brayley's *Historical and Descriptive Accounts of the Theatres of London* (1827), which appeared after he died in 1825 or 1826.

After severing business relations with his father Daniel, Robert Havell senior set up at 79 Newman Street in Fitzrovia, London. With his wife, Lydia Miller Phillips, he had a son, **Robert Havell junior** (1793–1878), a printmaker and painter, who was born in Reading on 25 November 1793. The firm of R. Havell & Son produced lavish suites of aquatints; the first was *A Series of Picturesque Views of Noblemen's & Gentlemen's Seats* (1814–23), followed by a variety of projects such as a *Series of Views of the Public Buildings & Bridges in London* (1821–2) or *Views in the Himala Mountains* (1820), after the designs of the traveller J. B. Fraser. The Havells' most famous enterprise commenced in 1827 when, following a failed relationship with William Lizars of Edinburgh, the celebrated American ornithologist John James Audubon commissioned a series of plates to illustrate his *Birds of America* (4 vols., 1827–39). Such was the magnitude of this project that the Havells had to employ fifty new staff and move to larger premises at 77 Oxford Street which they proudly named the Zoological Galleries, as a reference to their new-found artistic speciality. On 21 November 1832, the year after this expansion, Robert Havell senior died and was buried at St Pancras, London. From this time Robert junior was completely responsible for the production of Audubon's 435 ornithological plates, which are noted for their skill, accuracy, and subtle colour tones.

During this period Robert Havell junior established a firm friendship with Audubon and, following the untimely deaths of his two young sons in 1829 and 1838, Robert and his wife Amelia Jane Edington (*d.* 1878), whom he had married in 1824, decided to emigrate to America. On their arrival in 1839 they stayed with Audubon in New York and Havell's first American publication was a *Panoramic View of New York* (1840). Although he continued as an aquatint engraver, during the following few years Havell began to focus on oil painting and after moving to Tarrytown, in upstate New York, in 1857 he became a leading member of the Hudson River school, exhibiting over seventy-five canvases of American landscapes. He died on 11 November 1878 and it is fitting that he was buried in Sleepy Hollow cemetery, overlooking the Hudson which he loved so much.

The last member of the Havell family to come to prominence in the art world was Ernest Binfield *Havell (1861–1934), teacher of art and specialist in Indian art who was born in Reading and was a great-nephew of William Havell. After training at the South Kensington School of Art and studying in Italy and Paris in the early 1880s, he left Europe to teach art in India. In 1884 he was appointed superintendent of the Madras School of Industrial Arts and in 1896 moved to the Calcutta School of Art. During the next forty years he published sixteen polemical studies on the history and state of Indian art and craft and was an ardent supporter of the first Indian nationalist art movement. He died in Oxford on 30 December 1934, when the Havell family's prominence in the art world came to an end.

Havell, Daniel (*d.* 1825/6). *See under* Havell family (*per. c.*1775–1934).

Havell, Ernest Binfield (1861–1934), artist and art teacher, was born on 16 September 1861 at 1 Jesse Terrace, Reading, the second son and third child in the family of three sons and two daughters of Charles Richard Havell, professional artist, and his wife, Charlotte Amelia Lord. The *Havell family had been leading artists and publishers since the late eighteenth century. He was educated at Reading

School, and trained at the Royal College of Art, at Paris studios, and in Italy. Havell joined the Madras School of Industrial Arts as principal in 1884, a post he held until 1892, when he returned to England. He won early recognition with his report on Indian industrial arts, thus laying the foundations of his later influential doctrine on the Indian arts. The revival of traditional handloom weaving initiated by him was later to win the support of M. K. Gandhi.

Appointed principal of the Calcutta School of Art and keeper of the Government Art Gallery in 1896, a post he held until 1906, Havell was responsible for momentous changes in the art school curriculum which led to the first Indian nationalist art movement, the Bengal school of painting, under the artist Abanindranath Tagore. Although a believer in raj paternalism, Havell's aesthetically radical, anti-Renaissance, arts and crafts tenets, and his synthetic vision of architecture as unifying all the different traditional arts of India, helped undermine the primacy of salon art in India, hitherto identified as one of the triumphs of the raj westernization of the subcontinent.

Even though his period in Calcutta was extremely brief—for he was forced to retire in 1906 after a breakdown—Havell became celebrated in the West and in India for advocating the greatness of Indian art with a fervour that bordered on fanaticism. He was largely responsible for its recognition in the West: by his pioneering studies in ancient Indian art, such as *Indian Sculpture and Painting* (1908) and *The Ideals of Indian Art* (1911); by encouraging the fledgeling Bengal School with sustained writings on its behalf; and finally by helping to found the India Society with William Rothenstein, for many years the bastion of Indian culture in Europe. The society was set up in 1910 in the aftermath of the controversy surrounding the disparaging remarks of Sir George Birdwood about Indian art.

Although Havell was away from Britain between 1916 and 1923 as a member of the British legation in Copenhagen, 'India was his first and remained his only love.' He plunged headlong into the controversy over the architectural style for New Delhi, urging the imperial government to adopt the Mughal style for its new capital as a gesture of goodwill towards their Indian subjects. The appointment of Sir Edwin Lutyens as the city's architect put an end to Havell's dream. None the less the pronounced Indian elements in the otherwise classical design of New Delhi were a tribute to Havell's persistence.

Havell married Lili, daughter of Admiral George Jacobson, of the Danish royal navy, in 1894; they had one daughter. He died on 30 December 1934 at the Acland Nursing Home, Oxford, and was survived by his wife.

Havell, Robert, junior (1793–1878). *See under* Havell family (*per. c.*1775–1934).

Havell, William (1782–1857), landscape painter, was born in Reading on 9 February 1782, the son of Luke *Havell (*d.* 1810) [*see under* Havell family (*per. c.*1775–1934)], a drawing-master and printseller, and his wife, Charlotte Phillips. The third of fourteen children, William Havell is now considered as the most talented of his artistic family. Despite his natural talent it is said that his father did not want him to become an artist and so he was given a classical education, between 1794 and 1797, at Reading grammar school, where his father was drawing-master. Nevertheless, the determined and adventurous spirit that characterized Havell's career was quickly evident; through practice and observation he taught himself to paint in watercolours and adopted a style much influenced by the work of J. M. W. Turner. In 1802 he made his first tour of Wales during which he amassed an extensive number of *plein air* sketches; during this trip he also met up with other young artists such as watercolourists Cornelius Varley (1781–1873) and Joshua Cristall (1768–1847).

In 1804 Havell moved from Reading to London and quickly joined a number of London-based sketching societies where he gained a reputation as an acute observer of nature. In the following year he was invited to become one of the founder members of the new Society of Painters in Water Colours and remained an active member and exhibitor until 1816, specializing in lakeside and Thames subjects. During this time he also regularly exhibited oil paintings, many of which were worked up from his watercolour sketches, at the Royal Academy and the British Institution. He also produced commissioned designs for a number of topographical publications including John Britton's *Architectural Antiquities of Great Britain* (1814) and for *Twelve Picturesque Views of the River Thames* (1812), a series of coloured aquatint plates engraved and published by his uncle Daniel Havell and his cousin Robert Havell senior. He also made a number of sketching tours, for example to Hastings in 1812, and continued to exhibit his landscapes at the Society of Painters in Water Colours, the Royal Academy, and the British Institution.

Havell's alleged desire for acclaim and his impetuous nature are evident in the events surrounding his oil painting of *Walnut Gathering at Petersham* (1815), which was rejected by the British Institution and failed to attract a buyer. After complaining vociferously to the British Institution, and being ridiculed in the press for doing so, Havell took on a commission to accompany William Pitt, Earl Amherst of Arracan, on an embassy to China which departed in February 1816. After landing in August that year, Lord Amherst was abruptly dismissed for refusing to *kowtow*, in the Chinese court. Thus Havell was left in China

without purpose or protector. He quickly obtained a passage to India and was established in Madras by 1820, where he supported himself by painting portraits; he also turned his hand to sketching landscapes and scenes of local life. After ten years abroad, during which he suffered cholera and yellow fever, he left India on 14 January 1826 on the *Alfred* bound for Liverpool.

Once back in England, Havell began again to exhibit with the revived Society of Painters in Oil and Water Colours, many of his subjects being drawn from his Chinese and Indian experiences. Dogged by ill health and enjoying only limited success, Havell journeyed to Italy to join the painter Thomas Uwins (1782–1857) who noted in a letter to his brother David Uwins from Naples, 1 July 1828, 'Havell is now with me' (Uwins, 2.109), and in October that year he wrote to his other brother, Zechariah, that 'Havell and I have taken a house at the foot of Vesuvius' (ibid., 2.132). There he hoped not only to improve his health but also to tailor his style to the Neapolitan subjects which were popular among British patrons. This was not to be the case and after his return in 1829 Havell concentrated on oil painting, again with only limited success. He also developed an interest in early photography and read a paper to the Chalon Society in 1839. After the failure of an Indian bank resulting in the loss of all his savings, Havell eventually became a recipient of the Royal Academy's Turner Fund for the relief of poor artists in 1856. His final years were impoverished and lonely and he died, unmarried, in Kensington, on 16 December 1857 and was buried at Kensal Green cemetery. LUCY PELTZ

Havelock, Sir Arthur Elibank (1844–1908), colonial governor, born at Bath on 7 May 1844, was the fifth surviving son in a family of six sons and seven daughters of Lieutenant-Colonel William *Havelock (1793–1848) and his wife, Caroline Elizabeth (*d.* 1866), the eldest daughter of Major Acton Chaplin of Aylesbury. He was a nephew of Sir Henry Havelock. In 1846 the family went to India, where his father commanded the 14th light dragoons at Ambala. After his father's death, during the battle of Ramnagar on 22 November 1848, the Havelocks went back to England, but returned to India in August 1850 and settled at Ootacamund in the Nilgiri hills. Havelock attended Mr Nash's school there, but completed his education in England at a private school at Lee, near Blackheath, London (1859–60).

In 1860 Havelock entered the Royal Military College, Sandhurst, and on 14 January 1862 was gazetted ensign in the 32nd Cornwall light infantry. Having been promoted lieutenant on 10 April 1866, he was stationed at Gibraltar (1866–7), at Mauritius (1867–8), and at the Cape (1868–72). He married, on 15 August 1871, Anne Grace (*d.* 6 Jan 1908), the daughter of Sir William Norris; they had one daughter. In August 1872 Havelock returned to Mauritius, where he acted as paymaster; he was promoted captain on 1 February 1873, and served as aide-de-camp successively to the acting governor, and then to Sir Arthur Gordon (afterwards Lord Stanmore), the governor. From February 1874 to 1875 he was chief civil commissioner in the Seychelles, and from 1875 to 1876 colonial secretary and receiver-general in Fiji. After returning to England in 1876 he joined the colonial civil service, and he retired from the army with the rank of captain in March 1877. In the same year he went to the West Indies as president of Nevis, and in August 1878 was transferred to St Lucia as administrator. In 1879 he returned to the Seychelles as chief civil commissioner, and in 1880 was made CMG.

In February 1881 Havelock became governor of Sierra Leone and the west African settlements. Before assuming office he acted as British commissioner at a conference in Paris for the provisional demarcation of boundaries between Sierra Leone and French Guinea. During his administration he was actively engaged in a frontier dispute with the republic of Liberia: on 20 March 1882, by order of the Colonial Office, he went to Monrovia with four gunboats and demanded from the Liberian government the immediate extension of the British protectorate to the River Mafa and an indemnity of £8500 for British merchants. A treaty was signed to this effect, stipulating that Havelock should intercede with the British government to fix the River Mano as the frontier, and that Liberia should be repaid all the sums she had spent in acquiring territories west of the Mano. The Liberian senate refused to ratify the treaty and Havelock returned to Monrovia with the gunboats on 7 September 1882. His diplomacy averted hostilities, but the senate would not give way, and in March 1883 Havelock quietly occupied the territories claimed by the British government between the rivers Sherbro and Mano. The boundary between Sierra Leone and Liberia was eventually defined in 1903 by a mixed commission.

In 1884 Havelock was created KCMG, and the following year he served as governor of Trinidad. In 1886 he became governor of Natal. The colony was in a financial depression, and administrative difficulties were increased by the annexation of Zululand in May 1887 and Dinizulu's unsuccessful rebellion in 1888. Havelock returned to England in 1889 and served on the international anti-slavery commission at Brussels. In 1890 he was appointed governor of

Ceylon, where he carried out the railway extension to Kurunegala and Bandarawela, and abolished the obnoxious 'paddy' tax, or levy on rice cultivation.

Havelock was nominated governor of Madras in 1895, and became a vigorous champion of its interests. He defied orders from the Calcutta government to allow the Mecca pilgrim ships to touch at Madras. His action was later justified by the comparative immunity of the Madras presidency from the plague of 1899 and 1900. He was made GCMG in 1895, GCIE in 1896, and GCSI in 1901, when he left Madras. In poor health, in 1901 he refused the governorships of the Straits Settlements and of Victoria, but later accepted the more congenial governorship of Tasmania. He resigned in 1904 and retired to Bishopstone, Torquay. He died at Bath on 25 June 1908, less than six months after his wife. Competent and painstaking, Havelock was a humane and sympathetic administrator.

Sir Henry Havelock (1795–1857), by Frederick Goodall, *c.*1857

Havelock, Sir Henry (1795–1857), army officer, was born on Easter day, 5 April 1795, at Ford Hall, Bishopwearmouth, near Sunderland, second son of William Havelock (1757–1837), shipbuilder and shipowner, and Jane, daughter of John Carter, solicitor, of Stockton-on-Tees. She gave her children a strict religious upbringing and her premature death in 1810 came as a grievous shock to young Henry. While he was still a child the family moved to Ingres Park, Dartford, Kent, and Henry was sent with his elder brother William to the Charterhouse in London. Intended for the law, he was a student at the Middle Temple in 1813–14. Unfortunately his father lost his money, through solicitors' fraud and the loss of uninsured ships, and the failure in 1820 of the London firm of Howard and Gibbs, through which he had been speculating in mortgages and annuities. He had to move to Clifton, and later to Teignmouth. Henry was thrown on his own resources in 1814, having quarrelled with his father, but with his brother William's help, and against his father's wishes, he joined the army. William had already done so and had distinguished himself at Waterloo.

Havelock joined the 95th foot (Rifle brigade) and was commissioned second lieutenant on 30 July 1815, spending the next eight years at home on garrison duties. He was fortunate to serve under Captain (later Major-General Sir) Harry Smith, a truly professional soldier, who encouraged Havelock to study his profession. He decided to try his fortunes in India (where his brothers William and Charles Frederick were already serving), but not before he had made intensive studies in Hindustani and Persian at the Oriental Institute; he then exchanged into the 13th foot (Somerset light infantry) which was under orders for India. He was now a lieutenant but dependent solely on his pay in an army ruled by purchase of promotion. He sailed for India on 3 January 1823, in the contingent of his regiment commanded by Major Robert Sale, who was to play an important part in Havelock's career. An even more important part was that played by a fellow subaltern, James Gardner, who rekindled Havelock's deep religious faith, an evangelical theology which became the guiding principle of his life.

The regiment was bound for Calcutta, and there, soon after his arrival, Havelock met Bishop Heber. He also became a regular visitor to the Baptist mission station based in the Danish enclave at Serampore, where he met doctors Carey and Joshua *Marshman, whose daughter Hannah he later married. Less than a year after their arrival in India the 13th embarked for Rangoon for the First Anglo-Burmese War (1823–6), under General Campbell. It was a war of ambushes and stockades fought in thick jungle, and casualties from tropical diseases far exceeded those from battle. Havelock distinguished himself, and was also noted for his conduct of religious services, on one occasion at least in a Buddhist temple. In the soldiers' argot he was known as a 'Bible-puncher', and those who followed him were nicknamed 'Havelock's saints'. On the occasion of a night attack these men were called for by the general to take the place of men unfit for duty owing to drink, the 'saints' always being sober and

dependable in an emergency. Eventually Havelock fell victim to the climate and spent a year in India convalescing with his brother William at Poona. After his return to Burma he again distinguished himself in numerous actions, and as the war dragged to a close Havelock was made a member of the British delegation appointed to negotiate a peace treaty with the Burmese.

Havelock published an account of the Burma campaign after his return to India, while at the same time preparing for his marriage. He often resorted to his pen to add to what was a miserable stipend, but his first book did not arouse much interest. He had probably been inspired to write it by his brother-in-law John Marshman, one of the most prominent civilians in India, and the founder and editor of *The Friend of India*, printed in Serampore. On 9 February 1829 Havelock married Hannah (1809–1882), youngest daughter of the Revd Dr Joshua Marshman (1768–1837): they had four sons and four daughters. Previously Anglican, Havelock had earlier that year been baptized into the Baptist community. He continued his religious and philanthropic activities among the troops, forming a regimental temperance society and himself taking the pledge. In 1836 Havelock was still a subaltern but adjutant of the 13th at Karnal. He had sent Hannah and the children—two boys and a baby girl—to the hills at Landour to escape the hot weather. In the last week in October he learned that the bungalow had burnt down, and that Hannah and the baby were dying of their burns. The two boys had escaped. Hannah, though badly burnt, survived, but both the baby and her ayah died. The Havelocks lost almost all their possessions. When the family returned to Karnal in mid-January 1837 they were met by a deputation from the regiment who offered to help them replace their losses by each man contributing a month's pay. Naturally the offer was refused but it demonstrated Havelock's personal standing in his regiment.

On 5 June 1838 Havelock was promoted captain without purchase in a vacancy caused by the death of 'a dear friend'. Havelock was then forty-three years old, and had twenty-three years' service. Well might he grumble that without the means to purchase, promotion proceeded at the pace of a glacier. However, the First Anglo-Afghan War was about to begin. He was appointed aide-de-camp to Major-General Sir Willoughby Cotton who commanded the Bengal division of the 'army of the Indus'. Havelock spent the next year in Afghanistan, and was present at the storming of Ghazni and the triumphal entry into Kabul. Cotton was keen to retain his services, but Havelock wanted to publish an account of the war and returned to Serampore for the writing. It is a remarkably clear and impartial narrative, in two volumes, but it did not turn out to be a best-seller. Disappointed with his lack of success with his pen, he again took up his sword and set off for Afghanistan with reinforcements for the Kabul garrison. On the journey he fell in with Major-General William Elphinstone, who was on his way to succeed Cotton in Kabul. Elphinstone was impressed by Havelock and took him on his staff as Persian interpreter. It was fortunate that Havelock had left his family in India since matters in Afghanistan went from bad to worse. Before long it became clear that communications with India were likely to be cut off by the tribes. Brigadier-General Sir Robert Sale was sent with the 13th foot and the 35th native infantry to clear the passes as far as Jalalabad. This involved hard fighting in which Havelock, who had obtained a few days' leave to accompany Sale, was much to the fore. When Jalalabad was eventually reached on 13 November 1841 there followed orders for the return of the force to Kabul. Sale, whose wife and daughter were in Kabul, was inclined to agree but was dissuaded from returning by George Broadfoot, his engineer officer, strongly supported by Havelock. Instead they worked hard to put Jalalabad in a state of defence. On 13 January 1842 a lone horseman, Dr William Brydon, brought news of the annihilation of the Kabul garrison while they were withdrawing through the passes. (Havelock was to meet Brydon again at the relief of Lucknow, where Brydon survived the siege.) A month later, on 19 February, an earthquake levelled the laboriously constructed defences. Broadfoot and Havelock set to work to restore them, and Havelock found time to conduct church services and prayer meetings.

On 7 April 1842 the garrison sallied out in three columns, one commanded by Havelock, and totally defeated the Afghans under Akbar Khan. Havelock called this battle his 'Crowning Mercy'. On 16 April the relief force under General Pollock marched into Jalalabad, and its siege was over. Havelock accompanied Pollock in his advance to Kabul which was re-occupied on 15 September 1842. Thereafter he accompanied Sir Richmond Shakespear in the rescue of the prisoners held as hostages, and was responsible for planning the successful attack on Istalif on 29 September. When Havelock was told that, had he been present, Kabul would never have fallen to the Afghans, he replied: 'I will not undertake to say that I could have saved Kabul, but I feel confident George Broadfoot could have done it' (Pollock, 97). The reward for his Afghanistan service was being made a CB and receiving a brevet majority. Back he went to commanding a company and complaining that none of the generals he had served remembered him afterwards. He even quarrelled with Sale. None the less the *London Gazette* of 30 June 1843, which he did not see until late August, announced he had been given a regimental majority without purchase. A week later he was appointed Persian interpreter to Sir Hugh Gough, the newly arrived commander-in-chief, in time to take part in the Gwalior campaign. He was present at the battle of Maharajpur, for which he received the medal and a brevet lieutenant-colonelcy.

At the close of 1845 the First Anglo-Sikh War began. Havelock was present at the battles of Mudki and Ferozeshahr; in the former he had two horses shot under him, and in the latter lost two old friends, Broadfoot and Sale. He was later present at Sobraon. By then he had exchanged into the 39th, from which he later exchanged into the 53rd. He was not permitted to serve in the Second Anglo-Sikh War, in which his brother William was killed leading the 14th light dragoons in their charge at Ramnagar (22 November 1848). Havelock wrote a memoir of his

brother which was published in Dr Buist's *Annals of the Year*. He then went home on furlough after some twenty-six years' continuous service in India.

On 20 June 1854 Havelock obtained his regimental lieutenant-colonelcy and brevet colonelcy. He had left his family in Bonn when he returned to India at the end of 1851. War with Persia was declared on 1 November 1856, and early in 1857 Havelock was given a brigade in a force commanded by Brigadier-General Sir James Outram, an officer of the East India Company. Havelock drew up the plan for the successful attack on Muhammarah, but the war petered out when a peace treaty was signed in Paris on 4 March 1857. Havelock then returned to India, arriving back in Bombay on 20 May to find that the Bengal native army had broken out into mutiny. Travel overland being unsafe, he took the first available ship for Calcutta but was wrecked off Ceylon. He eventually reached Calcutta via Madras on 17 June. He was at once given command of a column to be sent up-country to relieve Cawnpore where the garrison was besieged in makeshift entrenchments. Thereafter he was to support Sir Henry Lawrence who was under siege in the residency compound in Lucknow. Havelock's appointment was not universally approved in Calcutta, but as Lady Canning, wife of the governor-general, was to comment:

> General Havelock is not in fashion, but all the same we believe he will do well. No doubt he is fussy and tiresome, but his little, old, stiff figure looks as active and fit for use as if he were made of steel. (Pollock, 153)

Havelock's force consisted of the 64th foot (North Staffords), four companies of the 78th highlanders (Seaforths), two companies of the 84th (York and Lancaster) regiment, and a detachment of the 1st Madras European fusiliers (an East India Company regiment), the balance of which was in Allahabad under Lieutenant-Colonel J. G. Neill. There was a scratch collection of gunners to serve the six guns, twenty assorted officers and civilians to form the few cavalry, and some native irregulars. In total the force amounted to fewer than 2000 all ranks. There was also a huge train of transport to be gathered: elephants, camels, horses, bullocks, carts, and Indian followers. Havelock reached Allahabad, 120 miles from Cawnpore, on 29 June. It was the hottest season of the year, with frequent torrential rainstorms which reduced the low-lying fields to a bog. The news from Cawnpore, such as it was, was grim. They did not hear of the capitulation and massacre of the garrison until 3 July. Leaving Neill and some of his Madras fusiliers to hold Allahabad, Havelock on 7 July marched out for Cawnpore. The sun soon proved to be far more deadly than sepoy bullets, many men dropping out from the heat. The rainstorms made movement off the road difficult, particularly for the gun teams and supply carts, but Havelock pressed on remorselessly. He defeated the rebels at Fatehpur on 12 July, and again at Unao on 15 July. At the Pandu Nadi, a broad stream in flood, the only bridge was seized by the Madras fusiliers with the bayonet, and a full-scale battle followed. For a moment it seemed that the 64th, exhausted by the marching, had had enough, but they were rallied by Havelock's eldest son and deputy assistant adjutant-general, Henry (Harry) Marshman Havelock (1830–1897) [*see* Allan, Sir Henry Marshman Havelock-], who displayed great bravery. Meanwhile his father, dismounted after having two horses shot under him, placed himself at the head of the 78th and led their final bayonet charge as darkness fell. When it was all over after three hours of fighting, the highland officers gathered round Havelock who told them:

> I have never seen anyone behave so well as the 78th Highlanders this day. I am proud of you, and if ever I have the good luck to be made a major-general the first thing I will do will be to go to the Duke of Cambridge and request that when my time comes for the colonelcy of a regiment, I may have the 78th. (Pollock, 185)

The relief column entered Cawnpore on 17 July, too late to save the hard-pressed garrison or the women and children who had been butchered on the orders of the treacherous Nana Sahib. Lucknow must be the next objective, and on 25 July they crossed the flooded Ganges and set foot in Oudh. Havelock left Neill to safeguard Cawnpore. The two men were not on good terms, Neill disloyally corresponding with Calcutta behind Havelock's back. The cholera had arrived to add to Havelock's burdens and the ranks were thinning rapidly. After several hard fought actions which brought them within sight of Lucknow, Havelock decided he lacked the strength to fight his way into the city. He ordered a withdrawal to Cawnpore to await the reinforcements he believed to be on the way. This resulted in a furious letter from Neill that provoked a thunderous reply. He was lucky to avoid arrest. None the less it required great moral courage to turn about with Lucknow on the horizon. Even Harry Havelock found it hard to understand, and so did most of the soldiers. Once Cawnpore was regained, however, it did provide the opportunity to march on Bithur, Nana Sahib's palace, and give him and his followers a good drubbing.

In Cawnpore, Havelock found awaiting him a copy of the *Gazette* announcing the appointment of Sir James Outram as commissioner of Oudh, and to supersede Havelock as commander of the troops. This was a bitter disappointment, and not surprisingly it was attributed by many to Havelock's failure to relieve Lucknow. However, Outram set the record straight when he arrived on 15 September with some reinforcements. He paid great tribute to Havelock and announced that he intended to waive his rank and leave to Havelock the honour of relieving Lucknow. Outram would accompany the force in his purely civilian capacity, only taking over the command after Lucknow had been relieved. This has been described as 'one of the most memorable acts of self-abnegation in military history' (*DNB*). Havelock was duly grateful. He and Outram were old friends and respected each other. Generously meant, and generously accepted, it could never work: there cannot be two commanders of the same military force at any one time. Outram continually interfered with Havelock's plans, and both men became exasperated. It is clear that towards the end Outram regretted his generous impulse, ascribing it to allowing sentiment to

obscure duty. The relieving force had to fight hard to reach the residency, which it did before it grew dark on 25 September. Outram had been wounded, though not seriously, and Neill was killed.

Harry Havelock distinguished himself, but his left arm was broken. He was lucky to escape when the sepoys set about killing the convoy of wounded. He was to return later. Outram was put to bed in the residency, assuming the command the next day, and Havelock was taken to dinner by Mrs Inglis, wife of Colonel John Inglis who had commanded the beleaguered garrison after the death of Sir Henry Lawrence. Havelock had believed the garrison was running short of supplies and was surprised to sit down to a dinner of beef cutlets, with mock turtle soup and champagne. Lucknow had been relieved at a cost of 535 men killed and wounded. Carts for the evacuation of women, children, and wounded were impossible to obtain. It was clear that a retreat to Cawnpore would be a difficult, if not impossible, operation. Outram, with Havelock's agreement, decided to remain in the residency and reinforce its garrison. They knew that the newly arrived commander-in-chief, Sir Colin Campbell, was gathering together a substantial force for Lucknow's relief. It was a wise decision.

Campbell finally arrived on 16 November after hard fighting. Outram and Havelock went to meet him and were greeted as 'Sir James' and 'Sir Henry', the first time Havelock learned that he had been made a KCB. There was also a letter from the duke of Cambridge telling Havelock he had been promoted major-general. This was wonderful news, but Havelock was daily growing weaker as a result of dysentery, added to the effects of six months' campaigning in a difficult climate. Nursed by Harry, one arm in a sling, and his faithful aide-de-camp Hargood, Havelock was quietly slipping away. At 9.30 a.m. on Monday, 24 November 1857, he finally did so, in the arms of his son, to whom his last words supposedly were, 'Harry, see how a Christian can die' (Pollock, 252). Campbell had already decided to evacuate the residency, leaving a substantial force under Outram at the Alambagh as a base for a future attack. By the day of Havelock's death the evacuation was virtually complete. They buried him in the garden of the Alambagh, under a mango tree on which Harry carved the letter 'H', and took careful measurements of the grave before smoothing it down. It is there to this day.

The British public seem to find a strange attraction in religious generals, and Havelock's death was a great shock. Before news of his death reached Britain, letters patent were directed, on 26 November, to create him a baronet. His widow was given the rank of a baronet's widow, a pension for life of £1000 a year, and a grace-and-favour residence. She died on 25 August 1882. A bronze statue (1861) of Havelock, by William Behnes, was erected by public subscription in Trafalgar Square. (In October 2000 this was the subject of public controversy when Ken Livingstone, mayor of London, demanded its removal as he 'hasn't a clue' who Havelock was: this caused strong protest from Scots and others in defence of the statue.) Harry Havelock was created a baronet in January 1858 and given an annuity of £1000 a year for life. He was awarded the VC in 1858, and continued in the army until 1873 when he retired as a lieutenant-general. He was a Liberal Unionist MP (1874–81, 1885–92, 1895–7), and in 1880 he inherited from a distant cousin the estate and fortune of the Allans of Blackwell in co. Durham, taking by royal licence the additional surname and arms of Allan. On 30 December 1897, when accompanying a parliamentary commission to the north-west frontier of India, he was shot by an Afridi and bled to death.

His father, Henry Havelock, was one of the best British generals of his time, a clever tactician with a good eye for ground. Cool in action, he won the confidence of his troops, who admired his courage. Something of a martinet, his deep religious feeling kept him somewhat apart. A lion in action, he could be pernickety in barracks. His religion was crucial, and he died a national hero, perceived particularly as a Christian hero. He was a supreme exemplar and symbol of what historians later called Christian militarism, and his reputation—partly the result of his brother-in-law J. C. Marshman's influential and much reprinted biography, *Memoirs of Major-General Sir Henry Havelock* (1860)—was indicated by the popularity of Havelock as a Victorian Christian name and by something of a Havelock cult in Victorian Britain.

Havelock, Sir Thomas Henry (1877–1968), mathematician, was born in Newcastle upon Tyne on 24 June 1877, the son of Michael Havelock, marine engineer, of Newcastle, and his wife, Elizabeth Burn Bell. Four of their six children (two boys and two girls) survived to maturity, but only the eldest girl married. For most of his life Thomas Havelock lived with his younger sister and his brother, who became a director of the Moor Line, and he shared the family love of ships. At first Thomas hoped to become

a draughtsman in the Neptune Works of Swan, Hunter, and Wigham Richardson on Tyneside, but while waiting for an apprenticeship to fall vacant he entered Durham College of Physical Science in Newcastle upon Tyne, and a natural gift for mathematics and physics soon became apparent. Having completed a BSc course in 1895 at the age of eighteen, he stayed for a further two years of postgraduate studies in the college before entering St John's College, Cambridge, in 1897, first as a pensioner and the following year as a scholar. Nevertheless, all his life he retained his love of ships.

In 1898 Havelock suffered serious injury when some railings, which he had climbed in order to get a better view of Lord Kitchener, who had come to receive an honorary degree, gave way outside the Senate House at Cambridge; as a result his health was impaired for the rest of his life.

Despite the consequent interruption of his studies Havelock was placed in the second division of class one in part one of the mathematical tripos in 1901, with J. E. Wright alone above him in the first division. In 1902 he shared the Smith's prize with Wright, and was awarded an Isaac Newton studentship. He was elected to a six-year Gregson fellowship in his college in 1903, but in 1906 returned to Armstrong College (as the Durham College of Science had become in 1904) as a special lecturer in applied mathematics. He received a DSc there (by examination) in 1907. He was elected to fellowship of the Royal Society in 1914, and the following year Armstrong College created a second chair of (applied) mathematics especially for him. His damaged health ruled out active service in the First World War.

Havelock's scientific work lay in two main areas: the passage of light through materials and naval hydrodynamics. Although he wrote some twenty papers on the first of these, they did not attract lasting attention, and Havelock himself appears to have lost interest in optics by 1930. He did, however, do pioneering work on the wave resistance of ships and related problems, topics which interested him into his eighties. His most significant contributions started in 1923 after he had discovered a much neglected, but fundamental, paper by J. H. Michell (1898). In following years he applied and generalized its methods with conspicuous success. He discovered much about the way a ship's resistance to motion depends on the form of its hull. Later in his life he answered sophisticated questions about the trim and the heaving and pitching of a ship. He constantly compared his theory with experiment, and sought to improve the extent of the agreement between the two.

Havelock's impact on this branch of naval architecture was strong and fully recognized in his lifetime. He was made an honorary member of the Institution of Naval Architects in 1943, and awarded its first William Froude gold medal in 1956. Durham University conferred an honorary DCL in 1958, and Hamburg an honorary DSc in 1960; he became an honorary fellow of St John's in 1945. The French Académie des Sciences made him a corresponding member in 1947. He was the featured guest of the United States Society of Naval Architecture and Marine Engineers in 1950, and in 1963 the United States office of naval research paid him the unusual compliment of collecting together and publishing sixty of his papers on hydrodynamics. He was knighted in 1951.

In 1928 Havelock became head of both the pure and the applied mathematics departments in Armstrong College. He maintained strong links with the department of naval architecture, of which he became honorary acting head for three years from 1941, when Sir Westcott Abell retired. He was vice-principal of Armstrong College from 1933 to 1937, and took a leading part in the negotiations which brought it and the College of Medicine together to form King's College of the federal University of Durham at Newcastle upon Tyne. He was sub-rector of King's College from 1937 to 1942, and retired from his chair in 1945. His work for the university was marked in 1968 by the opening of Havelock Hall for student residence.

Havelock owed much of his success, and perhaps also his longevity, to the devoted care of his sister, Alice, who survived his death, at their home, 8 Westfield Drive, Gosforth, on 1 August 1968, by only a few weeks.

Havelock, William (1793–1848), army officer, was born on 23 January 1793, the eldest son of William Havelock (1757–1837) of Ingress Park, Kent, a Sunderland shipbuilder, and his wife, Jane (*d.* 1811), daughter of John Carter of Stockton-on-Tees. He was the brother of Sir Henry *Havelock and of Major-General Charles Havelock (*d.* 1868), of the 16th lancers, who commanded a brigade of Turkish irregulars in the Crimean War. He was educated at Charterhouse School and by a private tutor.

On 12 July 1810 Havelock was appointed ensign in the 43rd (Monmouthshire) light infantry, in which he became lieutenant on 12 May 1812. He immediately saw active service in the Peninsula. He carried one of the colours of the 43rd at the passage of the Coa in 1810, and was present in all the subsequent actions in which the Peninsula light division was engaged to the end of the war, latterly as aide-de-camp to Count Alten. Havelock displayed conspicuous bravery at the engagement at Vera in October 1813, when a Spanish force was held in check by a formidable abattis defended by two French regiments. Havelock, who had been sent to ascertain their progress, called on the Spaniards to follow him, and, putting spurs to his horse cleared the abattis in one bound and charged headlong among the enemy. Then the Spaniards, cheering for 'el chico blanco' (the fair boy), for he was very young, and had very light

hair, followed Havelock and broke through the French lines. Havelock continued to serve as Alten's aide-de-camp at Waterloo, where he was wounded at Quatre Bras, and during the occupation of Paris. On 19 February 1818 Havelock was promoted captain in the 32nd foot, and served with that regiment in Corfu. On 19 July 1821 he exchanged to the 4th (Queen's Own) light dragoons, with which he went to India. In 1824 he married Caroline Elizabeth (*d.* 1866), daughter of Major Acton Chaplin of Aylesbury; they had thirteen children, including the colonial governor Sir Arthur Elibank *Havelock.

Havelock was for some time aide-de-camp to Sir Charles Colville when commander-in-chief at Bombay, and was military secretary to Lord Elphinstone while governor of Madras. He was promoted major in the 4th light dragoons on 31 December 1830 and exchanged into the 14th (King's) light dragoons, becoming lieutenant-colonel of that regiment on 30 April 1841. He commanded it in the field under Sir Charles Napier, and with the Bombay troops sent to reinforce Lord Gough's army during the Second Anglo-Sikh War of 1848–9. He fell mortally wounded at the head of his regiment in a desperate charge under artillery fire on the Sikhs at Ramnagar, on the banks of the River Chenab, on 22 November 1848. His sword arm disabled, his left arm and leg nearly cut off, after eleven of his troopers had been killed beside him, he was left for dead on the field.

Haverfield [*née* Scarlett], **Evelina** (1867–1920), suffragette and aid worker, was born at Inverlochy Castle, Kingussie, on 9 August 1867, the third daughter of William Frederick Scarlett, third Baron Abinger (1826–1892), landowner and army officer, and his wife, Helen (*c.*1840–1915), daughter of Commodore George Allan Magruder of the US navy. She was educated at home by governesses and in 1880 attended a school in Dusseldorf, becoming fluent in German. Spending much of the year on the family's Scottish estate, she was a keen sportswoman, especially adept at riding astride. On 10 February 1887 in the parish church of St Stephen's, Kensington, she married Henry Wykeham Brook Tunstall Haverfield (*c.*1847–1895), a major in the Royal Artillery; the couple moved to Dorset, and had two sons (John, who was killed in 1915, and Brook, who emigrated to Canada). Widowed in 1895, on 8 July 1899 in the parish church at Caundle Marsh, Dorset, she married John Henry Balguy (1859–1933), another Royal Artillery major. Within a month of the marriage she enacted a document by which she reverted to the name Haverfield. She spent two years with her husband in South Africa during the Second South African War, and while there formed a retirement camp for horses left to die on the veldt. Evelina Haverfield returned to an active country life in Dorset and, although she had never previously evinced any interest in politics, at some point joined the Sherborne branch of the National Union of Women's Suffrage Societies. As the campaign for women's enfranchisement gathered momentum, she transferred her allegiance to the militant section of the movement in March 1908, and after attending a large rally in the Albert Hall, joined the Women's Social and Political Union (WSPU). In June 1909 she was arrested after taking part in a WSPU deputation to the House of Commons. With that of Mrs Pankhurst, hers was treated as a test case, Sir Robert Cecil defending her on the grounds that she had been wrongfully arrested while exercising a constitutional right. She was found guilty, however, and fined; the case went to appeal, and the fine was upheld. Although she was determined to go to prison, the fine was paid without her consent. She was arrested again in November 1910, charged with assaulting a policeman after taking part in a WSPU demonstration in Parliament Square. She denied neither the charge nor the suggestion that she had said that the next time she would bring a revolver. She was sentenced to a fine or a month's imprisonment, but again the fine was paid without her consent. Imprisonment for the suffrage cause was at length achieved in November 1911, after she had attempted to break a police cordon by leading police horses out of their ranks; she spent two weeks in Holloway. Sylvia Pankhurst noted of Mrs Haverfield that:

> When she first joined the Suffragette movement her expression was cold and proud ... I was repelled when she told me she felt no affection for her children. During her years in the Suffrage movement her sympathies so broadened that she seemed to have undergone a rebirth. (Pankhurst, 345)

On the outbreak of the First World War in August 1914 Evelina Haverfield founded the Women's Emergency Corps and in late 1914 served briefly as commander-in-chief of the Women's Reserve Ambulance (Green Cross Corps), which was a founding unit of the future Women's Army Auxiliary Corps. In May 1915 she joined Elsie Inglis and the Scottish Women's Hospital unit in Serbia, working there until forced out in February 1916 by the German advance. Undeterred, in August Mrs Haverfield sailed for Russia, in charge of the unit's transport column, which comprised seventy-five women noted for their smart uniforms and shorn locks. She herself is invariably described as being small, neat, and aristocratic, able to command devotion from her troops, although some of her peers, not so enamoured, were scathing of her ability. By March 1917 the harshness of the weather, combined with the disrepair of the vehicles and internal feuding, led Mrs Haverfield to return to Britain where, for the remainder of the war, she campaigned for the Serbian cause. After the armistice Mrs Haverfield founded an orphanage in Serbia and was working there when she contracted pneumonia and died on 21 March 1920 at Baijna Bashta, where she was

buried. A plaque in her orphanage building, later a co-operative health centre, commemorates her work for the Serbian people. ELIZABETH CRAWFORD

Haverfield, Francis John (1860–1919), historian and archaeologist, was born at Shipston-on-Stour, Worcestershire, on 8 November 1860, the only son of the Revd William Robert Haverfield (*d.* 1882) and his wife, Emily, sister of John Fielder Mackarness, bishop of Oxford. He was a great-grandson of the miniature painter Jeremiah Meyer. Haverfield's mother died when he was still in early childhood, and soon afterwards his father fell into a hopeless and prolonged decline. Growing up without experience of a normal home life, Haverfield was seriously handicapped. He developed a certain abruptness of manner, which, superimposed upon a character of marked strength and individuality, often prevented the recognition of what he really was—a simple, kind, and unselfish man.

From a preparatory school at Clifton, Bristol, Haverfield entered Winchester College as senior scholar in 1873. Six years later he went up to New College, Oxford, once more as scholar. He obtained a first class in moderations with no great difficulty. A second class in Greats was the penalty of paying less attention to Greek philosophy than to Latin lexicography. In 1884, a year after taking his degree, he went as sixth-form master to Lancing College, Sussex, where his somewhat unconventional methods proved highly successful. During this time he pursued various lines of original research, but finally concentrated on Roman epigraphy and Roman Britain, mainly under the influence of Mommsen, for whose work he had a profound admiration and whose personal acquaintance he had made during one of his frequent visits to the continent. This contact resulted in Mommsen's invitation to him to undertake the corrections of the seventh volume of the *Corpus inscriptionum Latinarum*.

In 1892, as a result of his growing reputation, Haverfield was invited to return to Oxford, where he resided at Christ Church as a senior student and tutor. This period allowed him to consolidate the contacts he had made. Practically every important classical book that appeared was reviewed by him in *The Guardian* or elsewhere; and he edited Henry Nettleship's *Essays* and re-edited Conington's *Eclogues* and *Georgics* (1895). Among his various interests, Roman Britain became more and more his chief concern. During his vacations he travelled around the country, visiting museums and excavations, guiding and advising local antiquaries.

In 1907 Henry Pelham Francis died, and Haverfield was chosen to succeed him as Camden professor of ancient history at Oxford, the appointment carrying with it an official fellowship at Brasenose College. In April 1907, a month before his election, he had married Winifred E. Breakwell (*d.* 1920). This was his happiest and most fruitful period. Freed from college routine, he was able to concentrate on his research interests. At home his influence grew and abroad he commanded a respect such as few British scholars of the time enjoyed. The outbreak of war in 1914 was thus a stunning blow, bringing the loss of many friends and students of his work. At the end of 1915 the continuous strain and anxiety induced a stroke. Despite a partial recovery he never regained full vigour. The end came quite suddenly, on 1 October 1919, at Winshields, the house that he had had built for himself and his wife on Headington Hill, Oxford. The couple had no children.

Haverfield redefined the study of Roman archaeology as it was then understood in Britain. His work was prompted by Mommsen's development of the study of ancient history and in particular by his use of archaeological evidence. When Haverfield first approached it, the subject of Roman Britain was, to use his own phrase, 'the playground of the amateur'. Before his death he could claim that 'our scientific knowledge of the island, however liable to future correction and addition, stands by itself among the studies of the Roman Empire'. He might truthfully have added that this was his own achievement. And it was accomplished almost single-handed; such good work as was done by others was done largely through his inspiration and example. Although never a significant figure in the academic politics of his own university, Haverfield played a crucial part in the establishment of Romano-British studies as part of the nationwide university curriculum. Much of this was accomplished by his own teaching, and by co-ordinating a series of major excavations. His ability to obtain appointments for some of his former students in universities and elsewhere facilitated the wider recognition of the discipline. Through his membership of numerous regional archaeological and antiquarian societies, he was able to direct research into the areas that he considered most important. This aspect of his work culminated in 1910 in the creation of the Society for the Promotion of Roman Studies, which remains the pre-eminent body in Britain for Roman studies. His European connections combined with his knowledge of the archaeology of the continent created an important counter-balance to the largely parochial nature of Roman history and archaeology in Britain at this time.

Although Haverfield did not live to produce the systematic treatise which he contemplated, the bibliography of his writings, containing some 500 entries, is singularly impressive. His principal publications were the two sets of *Additamenta* (1892, 1913) to the Berlin *Corpus inscriptionum*

Latinarum, his *Romanization of Roman Britain* (1905; 4th edn 1923), and the numerous chapters that he contributed to the Victoria History of the Counties of England. His Ford lectures, published posthumously in 1924 as *The Roman Occupation of Britain*, provide the most convenient conspectus of his results. The decades since his death have not seen a diminution of his reputation or influence. Although advances in methods and in intellectual perspectives have rendered many of his conclusions doubtful, if not redundant, and there is now available a range of evidence that he could never have imagined, his significance remains in the way that he defined Romano-British archaeology. What he thought important continues to be debated.

Havergal, (Grace) Beatrix Helen (1901–1980), horticulturist and teacher, was born on 7 July 1901 at Roydon Manor House near Bressingham, Norfolk, the second of three children of the Revd Clement Havergal (1858–1941), vicar of Bressingham, and his wife, Eveline Mary Barrett (1869–1931). The children had a happy life despite friction between their father, an eccentric and repressive character, and their artistic and romantic mother. In 1902 the family moved to Inkberrow, near Redditch, after which they moved to Paris, where the Revd Havergal was assistant chaplain to the British embassy for two years. After a short stay in Bagthorpe about 1905, he became rector of Brent Eleigh, in Norfolk. At first the children were educated at home by a governess but in 1912 Trix, as she was called, and her elder sister, Frances, went to St Katherine's, a boarding-school at Walmer in Kent. In 1914, after a legal separation, Mrs Havergal took the children to live at 13 Sidney Road, Bedford, and they then attended Bedford high school.

Trix left school in 1916 and took on local gardening jobs under the auspices of the Women's War Agricultural Committee. Clement Havergal rejoined the family and

(Grace) Beatrix Helen Havergal (1901–1980), by Valerie Finnis, 1960s

fortunes improved sufficiently for his daughter to consider some training; she had to choose between an outdoor life and a musical career. She had a strong and beautiful contralto voice and played the cello with a skill that matched the family traditions. Both her paternal grandfather and great-grandfather had been talented musicians and her great-aunt, Frances Ridley Havergal, was a well-known composer of Anglican hymns.

Trix chose horticulture and went as a student to Thatcham Fruit and Flower Farm near Newbury, Berkshire, where women were trained in the art and craft of gardening. She spent three years there and in 1920 she obtained the Royal Horticultural Society's certificate with honours. Her first challenge was to design and make a garden at Cold Ash, near Newbury. Here chance played a part, for her excellent work was noticed by Miss Willis, the founder and headmistress of nearby Downe House boarding-school, who asked her to become the head gardener and to make six grass tennis courts, later known as the Havergal courts.

Inspired by Miss Willis's gift for making learning exciting, Beatrix Havergal longed to teach as well as to do. This strong desire and her outstanding ability to illustrate how each job should be done led to the idea of starting her own school. At Downe House she met Avice Sanders, the school's housekeeper, who was to become her lifelong partner and who made the creation of their school of horticulture possible. Music was not forgotten, however: Beatrix continued to play the cello and to sing with the Newbury choral society and later with the Bach Choir in Oxford. She also joined the Thatcham special police rifle club and became a skilled shot.

In 1927, with the help and encouragement of Miss Willis

and with less than £250 capital, Beatrix Havergal and Avice Sanders moved to a cottage at Pusey near Faringdon, rented some land, and took their first students. Money was very short, so cash crops were grown for sale in Swindon market. The partners and students worked together, the course aiming to combine theory and practical expertise with high standards of efficiency and speed. This unique training endowed the students with a good reputation. Beatrix Havergal studied in her spare time and in 1932 obtained the Royal Horticultural Society's national diploma of horticulture (later master of horticulture).

By 1932 larger premises were needed and Havergal and Sanders moved to Waterperry House, near Wheatley, Oxfordshire, a small manor house which they rented from Magdalen College. At the outbreak of war the school was well established, offering a two-year course for fifteen to twenty students; these came from every type of background, from all over the British Isles and abroad. At first all paid their own fees but after 1958, when the school was inspected and officially recognized by the Department of Education, scholarships were granted by some county councils. The syllabus covered all aspects of gardening. The working day began at 7 a.m. and tasks were arranged so that each student became proficient at every job. Crops were sold in Oxford market, where students soon learned if their produce was not up to standard. Each had charge of a section of glasshouse and took turns to stoke the boilers before the introduction of an oil-fired system. Towards the end of their two years students took the Royal Horticultural Society general examination and the Waterperry diploma, which was examined externally and became an accepted qualification. Beatrix fought to have her women's qualifications recognized on an equal footing with those of men, particularly in the public parks department. The Waterperry diploma was accepted by the Institute of Parks Administration in 1960 as one equivalent to the Kew and Edinburgh diplomas for exemption purposes, and in 1962 as an appropriate qualification for associate membership of that institute.

Students and staff at Waterperry worked side by side, shared accommodation, and often spent free time together, boating, fishing, playing tennis, rehearsing plays, or going into Oxford to the cinema or theatre. Although the principals were strict, even stern at times, they were deeply interested in and concerned for their students' welfare and happiness. 'Miss H.', as she was known, was always the life and soul of any gathering—even a cinema queue! She held prayers for students and staff each morning in the village church, where she was also church warden and played the harmonium for regular services.

Waterperry Gardens were gradually developed to establish a series of teaching units: fruit, flowers, and vegetables were grown, and new glasshouses were built. Growing fruit was Beatrix's particular joy but she also loved the herbaceous border and took great pride in its design. During the war the two-year course was suspended in favour of short courses for women in the land army, and a further 30 acres were cultivated for food production as part of the war effort; Beatrix herself chaired the horticultural subcommittee of the Oxfordshire agricultural committee. The two partners also wanted to reach a wider audience and from 1943 onwards gardening demonstrations were held for the general public in aid of the Queen's Institute of Nursing. The estate had nearly been sold to the John Innes Institute in 1940 but the sale had fallen through at the last moment and in 1948 Havergal and Sanders were finally able to buy the estate with the help of an anonymous benefactor. In 1963 a further gift allowed day classes to be started.

Beatrix Havergal was appointed MBE in 1960, and was awarded the Royal Horticultural Society Veitch memorial medal and Victoria medal of honour in 1966; she was also president of the Horticultural Education Association. She published little, though she took part in various radio programmes, and she took films of the work in the gardens from which a short video was made. She was liked and admired throughout the horticultural world and was well known to a wider public for her exhibits of strawberries at the Chelsea flower show, where she received fifteen gold medals.

Beatrix Havergal was a well-built, handsome woman, nearly 6 feet tall, and a commanding figure in her uniform of green breeches, green overalls, and felt hat. She had a warm personality and infected others with her tremendous zest for life and work. Her generous spirit and obvious enthusiasm created a loyalty in her staff which was vital in developing and maintaining the high standards of workmanship and attention to detail which she demanded, but she did not delegate easily. However, though she was strict and had high moral standards, she was also great fun with a keen sense of humour and a flair for, and constant flow of, anecdotes. Her partner was shy and retiring, but of vital support behind the scenes, running the domestic side of the school with great skill and efficiency. Avice Sanders died in 1970 and was buried at Waterperry.

In 1971, in failing health, Beatrix Havergal sold the estate and retired to live in one of the cottages in the grounds. She died on 8 April 1980 at Tower House, Woolton Hill, near Newbury, when visiting her brother. She was buried in Waterperry churchyard on 14 April 1980.

Havergal, Frances Ridley [*pseuds.* Sabrina, Zoide] (1836–1879), poet and hymn writer, the youngest of the six children of William Henry *Havergal (1793–1870), Church of England clergyman and composer, and his first wife, Jane Head (*d.* 1848), was born on 14 December 1836 at her

father's rectory at Astley, Worcestershire. She was an intelligent child and an eager student, attending Belmont School at Campden Hill, London (1850), and Powick Court at Worcester (1851), but a severe attack of erysipelas brought an end to her formal education. In 1852 she accompanied her father and his second wife, Caroline Ann Cooke, to Germany, where she studied first for over a year at the Louisenschule at Düsseldorf, coming first in the final examination, and then with a German pastor's family at Oberkassel near Düsseldorf, returning to England in December 1853. She wrote fluent verses from the age of seven and her poems were published in *Good Words* and other religious periodicals and pocket books, under the pseudonyms Sabrina and Zoide. In 1865–6 Havergal revisited Germany; while there she sought Professor Ferdinand Hiller's opinion of her musical talent. Hiller believed that she had the skill to become a professional musician; however, she never followed his advice, which was to study with a good teacher. Her father died suddenly in 1870, and she prepared for the press a new edition of his *Psalmody*. With Reverend C. B. Snepp she edited *Songs of Grace and Glory* (1872). After her stepmother's death in 1878, she moved from Leamington Spa in Warwickshire to Caswall Bay in south Wales, near Swansea and The Mumbles. She died of hepatitis and acute peritonitis at Park Villa, Newton Oystermouth, Glamorgan, on 3 June 1879 and was buried at the church in Astley on 9 June.

Havergal energetically committed her life to religious and philanthropic work, contributing most of her author's earnings to good causes. In fact, her religious devotion was such that she refused several offers of marriage. Collections of her poems and hymns were published in many separate volumes. Among them were *The Ministry of Song*, which first appeared in 1869 and ran into five editions; *Under the Surface* (1874); *Loyal Responses* (1878); *Life Chords* (1880); *Life Echoes* (1883); and *Coming to the King* (1886). Her poems and hymns were also collected by her sister, Maria Vernon Graham Havergal, in two volumes of *Poetical Works* (1884). Havergal also wrote many short devotional tracts and prose narratives, some designed for children. Her introspective nature is reflected in her writing, which emphasizes piety and dedication. Her religious poetry became popular in evangelical circles, and her hymns are still to be found in many collections. Her autobiography was published in *Memorials of Frances Ridley Havergal, by her Sister, M. V. G. Havergal* (1880), and in the last decades of the nineteenth century it achieved the extensive popularity which her poems had enjoyed. It presents an account of single-minded and committed spiritual life. RONALD BAYNE, *rev.* ROSEMARY SCOTT

Havergal, Francis Tebbs (1829–1890). *See under* Havergal, William Henry (1793–1870).

Havergal, Henry East (1820–1875), Church of England clergyman and organist, was born on 22 July 1820 at Coaley, Gloucestershire, the second child and eldest son in the family of six children of William Henry *Havergal (1793–1870), curate of Coaley and later rector of St Nicholas, Worcester, and his first wife, Jane, the daughter of William Head of East Grinstead, Sussex. His mother died in 1848 and his father remarried in 1851. His sister, Frances Ridley *Havergal (1836–1879), became well known as a writer of religious poetry. He was a chorister at New College, Oxford, from 1828 to 1834, and was Bible clerk there from 1839. He matriculated from Magdalen Hall on 18 May 1839, and graduated BA 1843 and MA 1846. In 1843 he became chaplain of Christ Church, and from 1844 to 1847 he was chaplain of New College. On 16 September 1847 he married Frances Mary, the eldest daughter of George J. A. Walker.

From 1847 until his death Havergal was vicar of Cople, Bedfordshire. He built an organ himself for the church there, on which he carried out many experiments. He also acted as organist. He constructed a chiming apparatus, and often chimed the bells himself before service. For some years he was the conductor of a music society at Bedford. He had a natural alto voice, and in a run-through of William Crotch's oratorio *Palestine* he played the double bass and sang the alto part in the choruses at the same time. He also played the trumpet.

Havergal's many musical publications included *A Selection from the Hymns and Songs of the Church by George Wither* (1846), *Tunes, Chants, and Responses* (1865), and *Forty-Two Chants* (1870). He died at Cople vicarage on 12 January 1875. G. C. BOASE, *rev.* ANNE PIMLOTT BAKER

Wealth at death under £1500: probate, 9 March 1875, *CGPLA Eng. & Wales*

Havergal, William Henry (1793–1870), composer, the only son of William Havergal (*d.* 1854) and his wife, Mary, the daughter of Thomas Hopkins, was born at Chipping Wycombe, Buckinghamshire, on 18 January 1793. After beginning his education at Princes Risborough in 1801, he entered Merchant Taylors' School in July 1806. From the age of fourteen he often played the organ in his parish church. He was originally intended for the medical profession, but eventually went to Oxford, and matriculated from St Edmund Hall on 10 July 1812. He graduated BA in 1816 and MA in 1819, and was ordained on 24 March 1816 to an assistant curacy under Thomas Tregenna Biddulph at the churches of St James, Bristol, and Creech Heathfield. On 2 May of that year he married Jane, the fifth daughter of William Head of East Grinstead, with whom he had several children; she died on 5 July 1848.

In June 1820 Havergal became curate in charge of Coaley, Gloucestershire, and lecturer of Dursley, and took pupils. On 25 June 1822 he became curate of Astley, Worcestershire. He visited Cornwall and Yorkshire in 1826 and the two following years in connection with the Church Missionary Society. On 14 June 1829 he was thrown out of a carriage and suffered concussion, which appears to have had long-term consequences; in 1832 he virtually went blind, and his sight was never fully restored. Despite his accident he was presented to the rectory of Astley on 13 November 1829. At about that time he began seriously to devote himself to music.

Havergal's first published composition was an anthem-like setting of Reginald Heber's 'From Greenland's icy mountains', the proceeds of which (£180) he devoted to the Church Missionary Society. In 1836 he published his op. 36, *An Evening Service in E♭ and One Hundred Antiphonal Chants*. One of these, a 'recte et retro' chant in C, sometimes called Worcester chant, became very widely known. In the same year Havergal was awarded the Gresham prize medal for an evening service in A, op. 37. In 1841 he gained a second medal for the anthem 'Give thanks', op. 40. He became well known for his exertions for the restoration of metrical psalmody to its original purity. In 1844 he published a reprint of Ravenscroft's *Whole Booke of Psalmes*, and in 1847 he brought out his *Old Church Psalmody*, op. 43, which made a significant contribution to the development of the Victorian hymn tune. *A Hundred Psalm and Hymn Tunes*, op. 48, entirely his own composition, was published in 1859. Handel and Corelli were his models, and his aim was to preserve purity of style. He also wrote songs, rounds, and catches for the young, besides carols, hymns, and sacred songs, for which he composed both words and music. Many of the sacred songs and carols appeared in the earlier volumes of *Our Own Fireside*, and were republished under the title *Fireside Music*. His sacred song 'Summer tide is coming' and his psalm tune 'Evan' became widely known.

In June 1845 Havergal moved to St Nicholas rectory, Worcester, and was soon appointed an honorary canon of Worcester Cathedral. In the early 1850s he was involved in a dispute with his curate, Joseph Hesselgrave Thompson, which became a matter of public notice. Three years after the death of his first wife he married Caroline Ann, the daughter of John Cooke of Gloucester, on 29 July 1851. She outlived him by several years, and died on 26 May 1878. Because of declining health Havergal resigned St Nicholas in March 1860 and was presented to the country vicarage of Shareshill, near Wolverhampton. In 1867 increasing infirmity forced him to give up all regular parish work and move to Leamington Spa, where, with the exception of visits to the continent, he continued to reside. He died at his home, Pyrmont Villa, Binswood Terrace, Leamington Spa, on 19 April 1870, and was buried at Astley on 23 April.

Havergal published a number of books and pamphlets on religious, moral, musical, and other subjects, including several volumes of sermons, an essay on the biblical doctrines relating to the use of the death penalty for murder (1849), *A History of the Old Hundredth Psalm Tune* (1854), in which he attempted to prove that it was by William Franc, and an account of the curative properties of the waters at Pyrmont, which was posthumously published by his second wife.

Havergal's children Henry East *Havergal and Frances Ridley *Havergal are separately noticed. Another daughter, Maria Vernon Graham Havergal, who died on 22 June 1887, wrote several books, including an autobiography. This was edited by her sister Jane Miriam Havergal, who married, in October 1842, Henry Crane. Mrs Crane also published records of her father's life.

Havergal's youngest son, **Francis Tebbs Havergal** (1829–1890), author and editor, born on 27 August 1829, was a Bible clerk of New College, Oxford (BA 1852, MA 1857). He served as vicar-choral in Hereford Cathedral (1853–74), vicar of Pipe with Lyde (1861–74) and of Upton Bishop (1874–90), and prebendary of Hereford (1877–90). He died at Upton on 27 July 1890. He wrote a number of books on Hereford Cathedral and on other matters connected with Herefordshire, as well as *Memorials of the Rev Sir Frederick Arthur Gore Ousley, Baronet* (1889).

Wealth at death £15,673 7*s.* 1*d.*—Francis Tebbs Havergal: resworn probate, March 1892, *CGPLA Eng. & Wales* (1890)

Havers [*married name* Morgan], **Alice Mary** (1850–1890), genre and landscape painter, was born at Thelton Hall, Norfolk, the third daughter of Thomas Havers (*d.* 1870), colonial governor, and his wife, Ellen, daughter of the numismatist Rogers Ruding (1751–1820). The writer Dorothy Henrietta *Boulger (Theo Gift) (1847–1923) was her sister. Alice Havers's childhood was spent in the Falkland Islands where her father was governor (1854–61) and in Montevideo, Uruguay (1861–70). On her father's death in 1870, the family returned to England and she enrolled as a pupil at the South Kensington art schools, having been granted a free studentship during her first year.

On 13 April 1872 Alice Havers married the artist Frederick Morgan (1847/8–1927) and lived at various London addresses before settling at 1 Cathcart Road, Redcliffe Gardens (1875–82) and subsequently at 11 Marlborough Road, St John's Wood (1884–90). She exhibited widely (and always under her maiden name) at the Society of British Artists (1872/3–1881/2), the Royal Academy (1873–89), the Liverpool autumn exhibitions (1874–89), the Royal Glasgow Institute (1875–88), the Dudley Gallery (1878–9), the Royal Manchester Institution (1879–90), the Grosvenor

Gallery (1881–7), the Society of Lady Artists (1883–90)—of which she became an honorary member in 1885—the Royal Hibernian Academy (1883), the Institute of Painters in Oil Colours (1883–4), and the Paris Salon (1889). She quickly gained a reputation: *'Ought and Carry One'* (exh. RA, 1874) was bought by Queen Victoria and engraved, while *A Montevidean Carnival* (exh. RA, 1875) was commissioned by Henry Blackburn. According to Harry Furniss she achieved popularity as a result of German reproductions of her pictures showing subjects in semi-classical costume. The majority of her exhibited paintings were genre scenes depicting rural life and work, often featuring women and children: examples include *'They Homeward Wend their Weary Way'* (exh. RA, 1876; National Museum and Gallery of Wales, Cardiff), *Blanchisseuses: 'What, No Soap!'* (exh. RA, 1880; Walker Art Gallery, Liverpool), *Rush-Cutters* (exh. RA, 1880; Mappin Art Gallery, Sheffield), and *The Belle of the Village* (exh. RA, 1885; Atkinson Art Gallery, Southport). Several of her most ambitious paintings involved social comment on the condition of the poor: *The End of her Journey* (exh. RA, 1877; Rochdale Art Gallery) represents a woman who has collapsed by the roadside with her child, while *Trouble* (exh. RA, 1882) portrayed 'a cottage family in time of want and sickness' (*Art Journal*, 44, 1882, 238). Both these works were priced at £200 when exhibited at the Glasgow Institute of the Fine Arts in 1878 and 1884 respectively. *'Tis a Very Good World we Live in* (exh. Liverpool autumn exhibition, 1874; ex M. Newman, 4–21 May 1966) which contrasts the lot of rich and poor and *The Rights of the Poor* (exh. Institute of Painters in Oil Colours, 1883/4) further exemplify this theme in her work.

Two other paintings by Alice Havers are noteworthy: *'But Mary kept all these things and pondered them in her heart'* (exh. RA, 1888; Castle Museum, Norwich), which received an honourable mention when exhibited at the Paris Salon in 1889, and *'The Moon is up and yet it is not night'* (exh. RA, 1878), a hayfield scene which was offered at £250 during its exhibition at the Glasgow Institute of the Fine Arts in 1880. Between 1875 and 1890 Havers was also a successful illustrator of stories—including many by her sister, Theo Gift—and in the years following her death several collections of poetry contained illustrations by the artist: *A Book of Modern Ballads*, *A Book of Old Ballads*, *Some Old Love Songs* (all 1892), and Lewis Morris's *Odatis* (1892) and *Love and Sleep* (1893).

By 1888 Alice Havers had separated from her husband because of what a contemporary described as 'incompatibility' (Fox, 225); the couple later divorced. After the separation she took her two children, Lilian and Reginald, to Paris where she studied under the artist Filippo Colarossi. After what Furniss described as a sad life, Alice Havers committed suicide on 26 August 1890 at 11 Marlborough Road, St John's Wood, London.

Havers, Clopton (1657–1702), physician and anatomist, was one of at least three sons of the Revd Henry Havers (1620–1705x13), rector of Stambourne, Essex, who was ejected in 1662 for his Presbyterian convictions. Clopton Havers entered St Catharine's College, Cambridge, as a pensioner on 6 May 1668, but did not complete any degree. He was admitted an extra-licentiate of the Royal College of Physicians on 28 July 1684. On 3 July 1685 he graduated MD at Utrecht, where his dissertation, *De respiratione*, was published in 1685 in quarto. He then settled in London, where he was elected a fellow of the Royal Society on 17 November 1686. He became a licentiate of the College of Physicians on 22 December 1687, probably practising in Fenchurch Street. On 9 January 1692 a licence was issued for the marriage of Havers, and Dorcas Fuller (1668/9–1743), daughter of the Revd Thomas Fuller (*d.* 1701), rector of Willingale, Essex, and nephew of Archbishop Thomas Fuller (1593–1667).

Havers provided the first European account of the minute structure of bone. Communicated to the Royal Society in sections that were published as *Osteologia nova, or, Some New Observations of the Bones and the Parts Belonging to them* (1691), it described what subsequently became known as 'Haversian canals', the tiny channels of bone through which blood vessels course. The text, which was well received on the continent, was published in two Latin editions (Frankfurt, 1692; Amsterdam, 1731). Havers also oversaw publication of the English version of Johann Remmelin's *Catoptrium microcosme*, which he titled *A Survey of the Microcosme, or, The Anatomy of the Bodies of Man and Woman* (1695). It used superimposed slips of dissected anatomical plates to show the relations of parts of the body with descriptions. Two of his articles were published in *Philosophical Transactions* during the 1690s: 'An account of an extraordinary haemorrhage at the glandula lacrymalis', which described a case involving the shedding of bloody tears, and 'Discourse of the concoction of the food'. Havers died of a malignant fever on 15 April 1702 and was buried at Willingale Doe, Essex, leaving a widow and children. His daughter Mary was buried at the same church in May that year. Lilly Butler, minister of St Mary Aldermanbury, London, preached his funeral sermon, which was printed in 1702. In it Butler described Havers as:

> a most respectful, dutiful son to his aged Father ... Having engag'd himself in an honourable and useful Calling, he faithfully perused the designs of it, as one who remembered

> the account he must give to the Maker of those Bodies he had undertaken the care of, and truly *Watched for their Lives* ... His countenance was grave and serious, without any Lines of Sowreness or Affectation; his speech was soft and obliging, without any Air of Conceit or Flattery; his behaviour gentile and Courteous, without any Appearance or Art or Design. (Dobson, 704–5)

Havers, (Robert) Michael Oldfield, Baron Havers (1923–1992), lawyer and politician, was born on 10 March 1923 at 126 Mortlake Road, North Sheen, Surrey, the second of three sons and third of four children of Sir Cecil Robert Havers (1889–1977), barrister and High Court judge, and his wife, Enid Flo (*d.* 1956), daughter of William Oldfield Snelling. His sister Dame (Ann) Elizabeth Oldfield Butler-Sloss (*b.* 1933) also practised at the bar, and became president of the Family Division of the High Court.

Education, war service, and early legal practice Educated at Westminster School, Havers joined the Royal Navy in October 1941. While he was serving as a cadet, the converted Belgian cross-channel ship in which he was serving received a direct hit. Fortunately he was uninjured. This was the first of three occasions on which he 'came to' in the water, after the ships in which he was serving were destroyed. He was appointed midshipman in October 1942 and commissioned a lieutenant in the Royal Naval Volunteer Reserve in 1943. He served in the Mediterranean, Normandy, and the Far East. The first of these gave him, he claimed, unrivalled knowledge of the brothels of Alexandria—not on his own account but from having to extricate his sailors and return them to his ship. The final posting gave him his first experience of advocacy, defending in courts martial.

In 1946 Havers left the navy to attend Corpus Christi College, Cambridge, for two years, where he read law. He was called to the bar in 1948 and joined the chambers of Fred Lawton as pupil to Gerald Howard, who became an MP shortly thereafter. On 3 September 1949 he married Carol Elizabeth (*b.* 1928/9), daughter of Stuart Lay, company director. They had two sons.

Havers's attractive and vigorous style as an advocate enabled him to build up a substantial civil and criminal practice on the south-eastern circuit, primarily in East Anglia. There, in successive summers, he prosecuted a number of heavy frauds, including the Suffolk lime fraud trials, which ended with the Court of Appeal laying down guidelines as to the number of counts to be included in an indictment. His most famous client was probably Mick Jagger, whose sentence of three months' imprisonment for a minor drugs offence, promptly set aside by the Court of Appeal, produced a public outcry. Havers was appointed QC in 1963. From 1962 to 1968 he was recorder of Dover, and then until 1971 recorder of Norwich. He was chairman of the west Suffolk quarter sessions from 1965 to 1971, having been vice-chairman for the previous four years. He also served as chancellor of the dioceses of St Edmundsbury and Ipswich from 1965 to 1973 and of Ely from 1969 to 1973.

(Robert) Michael Oldfield Havers, Baron Havers (1923–1992), by unknown photographer

Member of parliament Havers entered politics comparatively late, when he was elected for the then safe Conservative seat of Wimbledon in succession to Sir Cyril Black, with a majority of 13,000 in June 1970, a seat he held until his appointment in 1987 as lord chancellor. He was elected a bencher of the Inner Temple in 1971. In November 1972 he was appointed solicitor-general by Edward Heath, succeeding Sir Geoffrey Howe, who had moved to the cabinet, and he worked closely with Sir Peter Rawlinson, the attorney-general, until the fall of the Conservative government in February 1974. He was knighted on assuming office in 1972.

Following the Conservatives' defeat, Havers was appointed shadow attorney-general and continued to serve in that capacity and as legal adviser to the shadow cabinet throughout the period of Conservative opposition in 1974–9. Nineteen seventy-four saw his first and, in his own memory, his greatest parliamentary occasion, in the attack on the Labour attorney-general, Sam Silkin, over the Housing Finance (Special Provisions) Bill. This granted retrospective immunity to the Clay Cross councillors who faced surcharges and disqualification from office for having refused to increase council rents under the Housing Finance Act of 1972. The roar of support from the Conservative benches behind him as he laid into the attorney-general for advocating this legislation in the teeth, as was known from a leaked letter, of even his own advice, was something he never forgot.

Attorney-general On taking office on 4 May 1979, Margaret Thatcher immediately appointed Havers attorney-general. That office had, in the words of Professor J. Ll. J. Edwards, been 'no sinecure throughout its long history'

and frequently the subject of stormy controversy (Edwards, 57). This was equally true of Havers's period in office. Those eight years from 1979 to 1987 were the longest unbroken tenure of the office since the eighteenth century, and included the Falklands War, where he was a member of the small inner 'war cabinet', the miners' strike of 1983, and the Westland crisis.

The first significant controversy of Havers's long period of office came in the autumn of 1979. The Rhodesia sanctions affair, in which his stout endorsement of the decision of the director of public prosecutions not to prosecute anyone for breaching sanctions occasioned some criticism. It related, however, to events involving ministers and senior officials of both major parties in the late 1960s and early 1970s, in circumstances where witnesses were very unlikely to be available, although there were strong grounds for suspecting that at least some in high places both in government and in the oil industry must have known very well what was going on. No one, however, suggested that there had been any political involvement in the decision. Havers was always scrupulous to prevent any attempt at such interference. He believed firmly in the constitutional convention that has applied ever since the Campbell case which brought down the first Labour government in 1924, that the attorney-general, though of cabinet rank, should not be a member of the cabinet, and that the independence of his legal advice and of prosecution decisions should be beyond question.

Two major issues, which were to arise continually during Havers's term of office, were the need to prosecute on several occasions under the Official Secrets Act of 1911, and the growing difficulty of effectively prosecuting cases of serious financial fraud. The latter was a problem highlighted in particular by the Lloyds cases of Peter Cameron-Webb, and the so-called 'Gang of Four' case involving Kenneth Grobb, Ian Posgate, and others, which took some seven years from initiation by the Department of Trade until conclusion of the unsuccessful prosecution. It was Havers's initiative in setting up and encouraging the fraud investigation group concept, whereby for the first time hand-picked teams of lawyers, accountants, and police officers worked together as dedicated teams on such cases, which began to turn the tide, and led, following the report of Lord Roskill's commission in 1986, to the subsequent establishment of the Serious Fraud Office.

On those difficult issues, particularly those involving prosecution under the Official Secrets Act, which required his express authorization, Havers demonstrated not only his personal skills as an advocate but also his pre-eminent recognition that his duty as her majesty's attorney-general was owed not to the government of which he was a member but to the crown and to the upholding and impartial administration of the law. He was centrally involved in Thatcher's decision to expose in the House of Commons the government's knowledge of Anthony Blunt's treacherous links with the Soviet Union. His forensic skills were engaged in the prosecution of the traitors Geoffrey Prime and Michael Bettany, and, most dramatically, in 1982 when his cross-examination of Professor Hugh Hambleton, a Canadian economist, culminated in Hambleton's confessing in court to having passed NATO secrets to the Soviet Union. He was also closely involved in the prosecution of Sarah Tisdall, a Foreign Office clerk. She had leaked details of cruise missiles arriving at Greenham Common and, despite her plea of guilty, was sentenced by the lord chief justice to nine months' immediate imprisonment. He was likewise closely involved in the unsuccessful prosecution of Clive Ponting for disclosing secret information concerning the sinking of the *General Belgrano*.

Meanwhile the danger of his involvement in high-profile terrorist cases, both as attorney-general and as former prosecutor of the Birmingham six and Guildford four, had been vividly brought home to Havers when his flat in Wimbledon was bombed by the IRA, fortunately at a time when he and his wife were on holiday in Spain. He reacted publicly with insouciance, being reported as saying to his wife, 'Darling, we seem to have had a slight accident at home' (*The Times*, 3 April 1992). But the narrowness of his escape was not lost on him. He described how he went to his clothes cupboard to find his row of suits hanging apparently untouched, until he felt one and the material simply lifted away in his fingers like cotton wool. He kept his small steel safe from the flat, the one he used to store secret documents, in his room at the law courts. It was crushed like a beer can and he kept it on a high desk like a memento, a St Jerome's skull. Thereafter he had to put up with the burdens of round-the-clock protection.

Echoing an earlier tradition in which the attorney-general would prosecute personally in major criminal cases, Havers led for the crown in the case of the Yorkshire Ripper, where he found himself embarrassed by the refusal of Mr Justice Boreham to countenance the crown's acceptance of the defendant's plea of diminished responsibility. However, he proceeded calmly to cross-examine all four psychiatrists who propounded that defence, including the two called by the prosecution, to the effect that a conviction for murder was obtained. The net result was the same, detention for life, but justice was at least seen to be done. However, such tactics would not have been open to him had the option of capital punishment still been available.

The episode which Havers regarded as the most fascinating of his career was his involvement as a member of the small inner cabinet appointed by Thatcher to supervise the conduct of the Falklands War. His experience was engaged in particular in relation to the deployment of and rules of engagement for the nuclear-powered submarine HMS *Conqueror* in relation to the 26,000 ton Argentine cruiser the *General Belgrano*. Thatcher valued not only his legal expertise, especially in relation to international law and the actions available to Britain under article 51 of the United Nations charter, but also because he was the only member of the inner cabinet with firsthand naval experience.

It was a significant disappointment to Havers when, following the general election of June 1983, Lord Hailsham continued as lord chancellor and the promotion for which

he had hoped was not forthcoming. His second parliament as attorney-general, from 1983 to 1987, saw the groundwork for the major change in the prosecution system nationally which came with the advent of the crown prosecution service, though the detailed preparation for this major change fell, on account of Havers's illness, on the solicitor-general, Sir Patrick Mayhew.

In the autumn of 1985 Havers was taken ill while out shooting and was obliged to undergo major heart surgery to correct aortic stenosis. The operation was performed on the National Health Service at St George's Hospital, Tooting. It was during that illness that the Westland helicopter crisis, in which his courage and independence were put to their sternest test, took place. The protagonists were Leon Brittan as secretary of state for trade and industry, backed by the prime minister, and Michael Heseltine, the secretary of state for defence. In the course of the dispute it had fallen to Havers's deputy, Sir Patrick Mayhew, to write to Heseltine with advice on legal aspects of the problem, and passages from this confidential letter, harmful to Heseltine's political case, were published in the media. There was little doubt that the leak, by a civil servant to the Press Association, must have been authorized at a high level and that it had taken place after exchanges between Leon Brittan's department and 10 Downing Street. Havers returned to work, contrary to medical advice, at the heart of this crisis. He was quite clear that to breach the confidentiality of the letter of a law officer of the crown was a gross impropriety, and secondly that the leak had to be treated as an offence under the Official Secrets Act, just as much as the one which had sent Sarah Tisdall to prison. When the suggestion was made that he was taking an unduly legalistic approach, he replied that unless the leak were taken seriously, he would order the police to enter Downing Street the next morning and conduct a criminal investigation. After this it became almost inevitable that heads would roll, and Leon Brittan accepted ministerial responsibility and resigned.

The last of the famous cases with which Havers had to deal as attorney-general was the attempt to suppress the book *Spycatcher* (1987), written by the former MI5 agent Peter Wright, or at least to prevent his profiting from it. Havers not only accepted responsibility for the overall conduct of this difficult case but, despite criticism, pursued the matter with determination. It led at one point to a contretemps with the cabinet secretary, Sir Robert Armstrong, who in giving evidence in the Australian court had indicated that Havers had been party to an earlier decision not to prosecute the author of another book on the security services, a point which Havers insisted be retracted.

Following the general election of 1987 Thatcher showed her loyalty to Havers by promoting him to be lord chancellor. Sadly his health was not good enough to enable him to continue and in October 1987 he resigned. His heart surgery had never really succeeded and he suffered far more pain than he ever made known to any but his closest family and confidants.

Character and interests Key features of Havers's character were his ebullience and his determination to live life to the full. About 5 feet 10 inches tall, with a distinguished head of grey hair, he was friendly, gregarious, and a noted bon viveur with a considerable appetite for fine wines and good cigars. His favourite clubs were the Garrick and Les Ambassadeurs. At the Garrick he enjoyed the company not only of many lawyers and actors but also of several members from Fleet Street, and it is from his conversations there that a number of the indiscretions for which he became celebrated, and some of which got him into hot water, were said to have come.

Havers loved the theatre and was interested also in literature. He co-authored, with different writers, three books on famous trials, which included *The Poisoned Life of Mrs Maybrick* (1977), about the Liverpool poisoner, and *Tragedy in Three Voices: the Rattenbury Murder* (1980), about Alma Rattenbury, who was acquitted for the murder of her husband. His book *The Royal Baccarat Scandal* (1977) was turned into a successful West End play by Royce Ryton. In 1987 he was a judge on the panel for the Whitbread literary awards.

Following his retirement from the woolsack Havers became chairman of RHM Outhwaite, the Lloyds underwriters, the Solicitors' Law Stationery Society, and the Playhouse Theatre, London. He died of heart failure on 1 April 1992, at St Bartholomew's Hospital, Smithfield, London. He was survived by his wife, Carol, and their two sons, Philip (*b.* 1950), a barrister, and Nigel (*b.* 1951), an actor. A memorial service was held on 8 June 1992 at the Temple Church, London. Haversham. For this title name *see* Thompson, John, first Baron Haversham (1648–1710); Hayter, Arthur Divett, Baron Haversham (1835–1917) [*see under* Hayter, Sir William Goodenough, first baronet (1792–1878)].

Haverty, Joseph Patrick (1794–1864), painter, was born in Galway city, but spent most of his life in Dublin. He also resided in Limerick and, sometimes for considerable intervals, in London. It is not known where he received his artistic training, but in 1814, he sent for exhibition four portraits to the Hibernian Society of Artists in Dublin, followed by a picture entitled *Cupid and Psyche* in 1815. With his wife, Maria (*d.* 1852), whom he married in 1816, Haverty had several children. His second son, Thomas (*b.* 1825), was also a painter, exhibiting pictures at the Royal Academy in 1847–58.

Haverty must have become well established over the following few years, as in 1823, on the foundation of the Royal Hibernian Academy, he was elected an associate. He exhibited at their first exhibition in 1826, and remained a regular contributor until 1861. He also exhibited at the

Royal Academy between 1835 and 1838, and with the Society of British Artists in Suffolk Street. During his career, Haverty enjoyed considerable celebrity as a portrait painter, but also produced a large number of historical and religious works. Perhaps his best-known history painting, *The Monster Meeting* (National Gallery of Ireland, Dublin), referred to by a reviewer in the *Freeman's Journal* as 'the most valuable monument of Irish history, Irish enthusiasm and Irish genius' (30 July 1864), was painted over several years. At the centre stands Daniel O'Connell, whose likeness was acclaimed by some at the time as the best ever painted. Around him are grouped some of the leading political figures of the day. Despite its artistic merits and positive reception by press and public alike, the painting remained unsold. Haverty painted other works of political significance, including *The Embarkation of George IV from Kingston, September 3, 1821*. His portraits included the Reilly family of Scarvagh (1823; priv. coll.); Father Theobald Mathew (*c.*1838; National Gallery of Ireland, Dublin); the Manders sisters of Breckdenstown (priv. coll.); Captain Wickham (priv. coll.); Richard Robert Madden (National Gallery of Ireland, Dublin); the Dunalley family (priv. coll.); and the children of John J. Blake (1844; priv. coll.). Among his religious works were a series of paintings the *Seven Sacraments*, a large *Disrobing of the Saviour*, of which he wrote a lengthy description for the *Freeman's Journal* (25 March 1837), and a rather unusual picture entitled *First Confession* (National Gallery of Ireland, Dublin). Numerous churches throughout Ireland were believed to have purchased altar pieces or other pictures by the artist, including the chapel of St Joseph's Asylum in Limerick, which held a copy of Murillo's *Immaculate Conception* by him. Haverty received considerable patronage in that city, and while living there executed such works as his well-known *Limerick Piper* (exh. British Institution 1844; version, National Gallery of Ireland, Dublin), and a portrait of O'Connell and a picture of the Irish Jacobite commander Patrick Sarsfield for the town hall. Yet another portrait of O'Connell was painted for the Catholic Association, and later acquired by the Reform Club in London.

Haverty's ambition seems to have offset a lack of self-confidence; he was prolific, and in spite of a lengthy illness, continued painting up to within a fortnight of his death. He died of dropsy on 27 July 1864, at his home at 44 Rathmines Road, Dublin, and was buried on 30 July at Glasnevin cemetery. The journalist and antiquary Martin *Haverty was his brother.

Wealth at death £800: probate, 20 Sept 1864, *CGPLA Ire.*

Haverty, Martin (1809–1887), journalist and antiquary, born in co. Mayo on 1 December 1809, was educated at the Irish College at Paris, and went to Dublin in 1836. In the following year he joined the staff of the *Freeman's Journal*, with which he was closely connected until 1850. In 1851 he made an extended tour through Europe, which he described in a long series of dispatches. On his return to Dublin he was made sub-librarian at the King's Inns, where he remained for nearly a quarter of a century, devoting himself principally to the preparation of a general index to the library.

Haverty's *Wanderings in Spain in 1843* (2 vols., 1844) gives a balanced and informed account of the political scene, and evinces a thorough acquaintance with Spanish literature and art. His major work, *The history of Ireland, ancient and modern, derived from our native annals ... with copious topographical and general notes* (1860), is remarkable for its impartial tone and original research, largely conducted in foreign archives; an edition for schools was published in the same year as the original work. His report on the excursion of the ethnological section of the British Association to the Aran Islands in 1857, published in 1859, gives a vivid and entertaining account of that memorable expedition, led by Sir William Wilde and attended by the leading Irish scholars of the day.

Haverty died at his home, 40 Alphonsus Road, Drumcondra, co. Dublin, on 18 January 1887, and was buried in Glasnevin cemetery. The painter Joseph Patrick *Haverty was his brother.

Wealth at death £233 3*s.* 2*d.*: probate, 25 Feb 1887, *CGPLA Ire.*

Haviland, John (1785–1851), physician, son of John Haviland, a Bridgwater surgeon, and his wife, Mary Glover, was born at Bridgwater on 2 February 1785. He was educated at Winchester College, matriculated in 1803 at Gonville and Caius College, Cambridge, and migrated to St John's College, where he graduated BA as twelfth wrangler in 1807; he subsequently became a fellow of his college. He proceeded MA in 1810, ML in 1812, and MD in 1817. He studied medicine at Edinburgh for two sessions, and for three years at St Bartholomew's Hospital, London. He was elected a fellow of the Royal College of Physicians in 1818 and delivered the Harveian oration there in 1837.

Haviland was elected professor of anatomy at Cambridge in 1814 on the death of Sir Busick Harwood. He delivered an annual course of lectures on human anatomy, which Harwood had not done for some twenty years. On Sir Isaac Pennington's death in 1817, Haviland was appointed regius professor of physic, resigning the anatomical chair. In the same year he was elected physician to Addenbrooke's Hospital, Cambridge, a position he held until 1839, when he retired from practice after an attack of typhus fever followed by a slight paralysis. On 31 March 1819 he married Louisa, youngest daughter of the Revd G. Pollen. They had five sons, one of whom, Henry James

Haviland, was physician to Addenbrooke's Hospital from 1861 to 1863.

Haviland's contribution to the history of the Cambridge medical school was largely forgotten until his reputation was justly restored by Sir Humphry Rolleston in his book *The Cambridge Medical School: a Biographical History* (1932). In 1819 Haviland began a systematic course of lectures on general pathology and the principles of medicine. In the same year he instituted a private written examination for the MB, conducted in English, which tested candidates' knowledge of anatomy, botany, chemistry, pharmacy, and therapeutics. He taught clinical medicine at the bedside in Addenbrooke's Hospital. Attendance at his lectures was made mandatory for candidates for the MB degree. Haviland lectured, ensured his students attended, and examined them on what they had learnt: it was, by the standards of his predecessors, startling behaviour. These changes, ratified by the university in 1829 and 1834, bore fruit as the number of students studying medicine at Cambridge increased through the 1820s, but Haviland's efforts were dashed by a combination of the 1832 Anatomy Act (which, in stark contrast to its major contributions to medical education in London, effectively stopped the supply of bodies for dissection in Cambridge) and the reform of the Royal College of Physicians in London, which opened its fellowship to physicians not educated at Oxford or Cambridge.

Haviland published little, but was active in the early affairs of the Cambridge Philosophical Society, serving as its president from 1823 to 1825. He presided over the committee of anatomy and physiology of the 1833 meeting of the British Association for the Advancement of Science, held in Cambridge. He spent much of his time in the 1830s and 1840s defending the medical faculty from its many critics; he gave evidence to the select committee on medical education in 1834, to the select committee on medical registration in 1848, and to the Cambridge University commissioners in 1850. In his time he built up a programme of elementary teaching in clinical medicine and surgery which served to deflect criticism that the university had no interest in the professional aspects of medical education, and therefore could not survive as a medical school. Haviland himself was an inspirational role model for his students, whom he advised to study surgery as thoroughly as medicine; he was remembered as an excellent practical physician of high character and good judgement. He died of apoplexy on 8 January 1851 at Trumpington Street, Cambridge. He was buried at Fen Ditton.

Haviland, William (1718–1784), army officer, was born in Ireland, the only son of a scion of an old English gentry family, Peter Haviland (1691–1775), a long-serving (1714–44) subaltern and captain in the 31st foot, and his wife, Lucy. Having acquired his first commission, a lieutenancy in Spotswood's regiment of foot dated 26 December 1739, he accompanied Colonel William Blakeney to North America early in 1740, when that officer went on ahead of the Cartagena expedition to assist in raising Spotswood's (later Gooch's), an American corps. Haviland sailed with Gooch's for Jamaica late in 1740, and served throughout the expedition's ill-fated West Indian operations, including the 1741 assault on Cartagena. On 7 September 1742 he was promoted to a death vacancy as captain in Blakeney's 27th foot, in which he was to serve for the next eighteen years; shortly thereafter he went home with the expedition's survivors, the 27th disembarking in England in December 1742. Haviland and the 27th were still in England late in 1745 when the Jacobite rising broke out, and he acted as aide-de-camp to Blakeney in the 1745–6 operations. After Culloden he rejoined his regiment, which remained in Scotland during 1746–8 as part of the 'pacification' of the highlands. He returned to Ireland early in 1749 when, with the post-war redistribution of the forces, the 27th embarked for Belfast, and remained there until 1757.

On 5 July 1748 Haviland married Caroline, the daughter of Colonel Francis and Lady Elizabeth Lee and the granddaughter of the first earl of Lichfield; when she died, childless, in 1751, he married secondly Salusbury (*d.* 1807), the daughter of Thomas Aston of Beaulieu, co. Louth, with whom he had a son, Thomas (*b.* 1757, entered the army in 1773), and a daughter, Mary (*b.* 1756).

Haviland continued as a regimental officer in Ireland during the inter-war years. He was promoted major on 24 May 1751 and lieutenant-colonel on 16 December 1752, in both cases by purchase. With the new war he embarked with his regiment at Cork in May 1757 and reached Halifax, Nova Scotia, early in July for Loudoun's abortive attempt on Louisbourg; from there he and the 27th were sent on to the upper New York theatre and wintered at Fort Edward, where he commanded. He was promoted to the local rank of colonel on 9 January 1758 and, having been appointed brigadier, took part in Abercromby's disastrous attack that July on Montcalm's lines before Fort Carillon. He commanded again at Fort Edward during the ensuing winter, led the advance down lakes George and Champlain under Amherst in 1759, and commanded at Crown Point over the winter of 1759–60. In 1760 Amherst chose Haviland to lead the 3400-man force of regulars and provincials that advanced down Lake Champlain and the Richelieu, mopping up the French works at Ile-aux-Noix, St Jean, and Chambly, the central command of the three-pronged operation that saw Amherst, Haviland, and Murray converge on and take Montreal (and with it French Canada) in August and September. For this success he was rewarded on 9 December 1760 with the colonel-commandantcy of the 3rd battalion of the 60th foot. Once Canada was taken, Haviland sailed from New York in November 1761 with Monckton's expedition to the West Indies, and was second-in-command at the capture of Martinique in January and February 1762. That May he sailed

with Albemarle's Cuban expedition, once again in command of a brigade, and landed before Havana in July; the town was captured in August. He had been promoted major-general on 10 July 1762. The advance on Montreal and the capture of Havana were the high points of Haviland's career, during which he earned the confidence of Abercromby and the friendship of Amherst.

With the peace of 1763 Haviland and his 3/60th were reduced to half pay, but on 1 June 1767 he was rewarded for his services with the colonelcy of the 45th foot, which he retained until his death. To the regiment 'he was a kind of father, and to the younger officers of it his house was literally a home' (*GM*, 1st ser., 54, 1784, 718–19). He was promoted lieutenant-general on 25 May 1772. During the years 1768–77 he was occasionally on the staff in England as a reviewing officer. When the French entered the War of American Independence he joined Amherst's staff, and from 1779 commanded the western district from Plymouth; he commanded encampments of regulars and militia in the vicinity during the annual troop concentrations of 1779 through 1782, sometimes carrying on advanced manoeuvres in his camps. He was promoted full general on 17 February 1783. Haviland died at his seat of Penn, in Burnham parish, Buckinghamshire, on 16 September 1784, 'of a constitution harrassed and broken, not least from the variety than from the length of his services'. His liberality meant that he left his family 'in very narrow circumstances' (*GM*, 1st ser., 54, 1784, 718–19). Edmund Burke, whose niece Haviland's son married, was his neighbour and friend. J. A. HOULDING

Sir Geoffrey de Havilland (1882–1965), by Sir Oswald Birley, 1940

Havilland, Sir Geoffrey de (1882–1965), aircraft and aero-engine designer and manufacturer, was born at Magdala House, Terriers Wycombe, Buckinghamshire, on 27 July 1882, second of three sons of the Revd Charles de Havilland (1854–1920) and his first wife, Alice Jeannette (1854–1911), daughter of Jason Saunders, of Medley Manor, Oxfordshire. His early life was tense and miserable, with an irascible, improvident father and a harassed, tearful mother, who eventually suffered a depressive decline. Originally destined for the church, de Havilland was educated at Nuneaton grammar school, St Edward's School, Oxford, and the Crystal Palace School of Engineering (1900–03). He then served an apprenticeship at Rugby with Willans and Robinson, engine manufacturers. In 1905 he became a draughtsman at 30s. a week with the Wolseley Tool and Motor Car Company in Birmingham, but, disliking the dull work and harsh management, he resigned after a year. He then worked for two years in the design office of an omnibus company in Walthamstow.

Inspired by the aeronautical flights of Wilbur Wright, de Havilland in 1908 borrowed between £500 and £1000 from his maternal grandfather (an Oxford businessman) and designed his own aeroplane and engine. During 1910 he taught himself to fly in a second prototype. His first employee was Frank Trounson Hearle, who in 1914 married de Havilland's fiery socialist sister, Ione (1885–1953). De Havilland himself married, in 1909, Louise (1881–1949), daughter of Richard Thomas, engineer, of Chepstow; his wife had formerly been companion to his mother and governess to his two sisters. She made the fabric coverings of the first De Havilland aircraft on a hand-turned Singer sewing machine which she continued to use until her death. They had three sons.

In 1912, flying one of his own machines, de Havilland established a new British altitude record of 10,500 feet. During the following two years he evolved an important range of generic aeroplanes before his appointment in January 1914 as an inspector of aircraft in the aeronautical inspection directorate. He felt miserable and wasted at leaving design work, and in May 1914 became chief designer for the Aircraft Manufacturing Company (Airco) of George Holt Thomas at an annual salary of £600 plus commission on aircraft sold. After the outbreak of war he joined the Royal Flying Corps but continued working at

Airco. In the next four years he designed and flew eight military aeroplanes, five types going into war service in large production. He was an original but never outlandish designer who had an unerring instinct about his work. The number of 'DH' aeroplanes built in Britain and the USA amounted to about 30 per cent of the total output of those two allies.

Following the closure of Airco in 1920, de Havilland raised £20,000 and founded the De Havilland Aircraft Company with a staff of fifty. He was neither chairman nor managing director of his company, begrudging all time lost to technical work and feeling exasperated by financial responsibilities. He preferred instead in the 1920s to devote himself to the possibilities of civil aviation. In 1925 he pioneered the light aeroplane movement with the Moth. This famous model, originally selling at £650, had a simple, practical design and sturdy construction. Over 7000 Moths of different marks were built in Britain in the next seven years, and there were many overseas sales. Thousands of civilians learned to fly in Moths, inaugurating the era of popular civil aviation and winning financial security for De Havillands. The Tiger Moth trainer (first sold in 1931) became the standard Royal Air Force trainer in the Second World War, 8300 being built.

As a result of design work begun in the 1920s, the De Havilland Aircraft Company manufactured 862 airliners in Britain during the 1930s, of the Dragon, Express, and Dragon Rapide types. All were equipped with De Havilland engines. In 1934 the De Havilland Comet Racer (of which only five were built) won a race from London to Melbourne in under seventy-one hours. During the following year de Havilland pioneered the British manufacture of American controllable pitch propellers, which subsequently were crucial in winning the battle of Britain.

De Havilland's prime contribution in the Second World War was the Mosquito, perhaps the most versatile warplane ever built, and for most of the war, the fastest aircraft. His company also operated the government's 'shadow' factories of the second aircraft group and the northern propeller division. Group personnel (including shadow factories) rose from 5191 in 1937 to 38,311 in 1944, and aircraft production from 200 in 1937 to 2327 in 1941. Turnover rose from £1.4 million in 1936 to £25 million in 1945.

After the war De Havillands returned to civil markets with the Dove and Heron types, and built the jet-powered Vampire fighter. Rocket engines followed in 1947 and guided weapons in 1951. The company's engine division had produced the first British jet propulsion engine in 1942, and its Comet airliner, which first flew in 1949, pioneered the civilian jet airliner. Twenty-one Comets were built in Britain up to 1954, when production was suspended after metal fatigue caused two machines to crash with heavy loss of life. De Havilland was distressed by these accidents, and although manufacture of an improved prototype was resumed in 1958, memories of the catastrophe were never erased.

De Havilland was not involved in design work after 1945, and he retired from active involvement in his company in 1955, thereafter remaining as president. His eldest son, Geoffrey de *Havilland, who first flew at the age of eight weeks, was killed while flying an experimental DH fighter near the speed of sound; his youngest son, John (1918–1943), died in an air collision. His wife suffered a nervous breakdown after these deaths and died in 1949. In 1951 de Havilland married Joan Mary (1900–1974), daughter of Edward Philip Frith, chartered accountant, and the divorced wife of Godfrey Mordaunt (*d.* 1951).

De Havilland was a keen natural historian and photographer, whose attractive personality shines from his memoirs, *Sky Fever*, published in 1961. Imaginative, sensitive, enthusiastic, and tenacious, he was tactful, friendly, and disarming in manner. As the leader of a design team he was deeply admired by his assistants. His modesty and dislike of fuss were such that for two decades he limited his entries in reference books to three or four lines. He was a brave pilot, who won the king's cup air race in 1933 and continued flying until his seventieth year. He was probably unique among the pioneer designers in flying his own creations. He was made OBE in 1918 and CBE in 1934, received the Air Force Cross in 1919, was knighted in 1944, and appointed to the Order of Merit in 1962. He received numerous national and international gold and silver medals and honorary fellowships of learned and engineering societies. De Havilland died of a cerebral haemorrhage on 21 May 1965 at Watford Peace Memorial Hospital, Stanmore, Middlesex.

Wealth at death £63,959: probate, 6 Aug 1965, *CGPLA Eng. & Wales*

Havilland, Geoffrey Raoul de (1910–1946), aviator, was born on 18 February 1910 at Crux Easton, Hampshire, the son of Sir Geoffrey de *Havilland (1882–1965) and his wife, Louise (1881–1949), daughter of Richard Thomas, of Chepstow. His father in 1920 founded the De Havilland Aircraft Company Ltd, which became a worldwide enterprise under his technical leadership.

The eldest of three sons, Geoffrey Raoul was born near to the site of his father's first flying experiments, which attained the success of full controlled flight in the summer of 1910. It was about this time that he experienced his first flight, carried in his mother's arms in a plane piloted by his father. When he and his brothers later went to school—Geoffrey was educated at Stowe School (1924–7)—their parents would visit them by Gipsy Moth, landing in a field in the school grounds for a picnic lunch. All three

boys grew up with the sound of aeroplane engines a constant presence in their lives.

In 1928 Geoffrey entered the De Havilland company at Stag Lane, Edgware, as an apprentice. While serving his three years in the engineering departments, he learned to fly at the Royal Air Force Reserve School on Stag Lane aerodrome, and then spent about a year in South Africa, where he gained useful flying experience. After returning to England in 1932 he became a flying instructor at the De Havilland Aeronautical Technical School and later at the London Aeroplane Club, which had by then moved to the company's new aerodrome at Hatfield, Hertfordshire. From the first he had shown exceptional ability as a pilot, and a desire to follow this calling in its most exacting branch led him to turn, at the age of twenty-five, from flying instructor to test pilot on the staff of the parent De Havilland company.

The first aircraft which de Havilland tested was an economical twin-engined transport called the Dragon, which was being manufactured for world use. Aircraft of this class, including Dragonflies, Dragon Rapides, and four-engined DH 86s, occupied him for a couple of years until the company produced a clean, high-performance twenty-two-passenger monoplane airliner, the Albatross, for Imperial Airways. The later development trials of this were conducted by Geoffrey de Havilland when he became chief test pilot in succession to Robert John Waight, who was killed in a flying accident on 1 October 1937.

Taking Waight's place was a considerable step for one who had not up to that time flown a wide variety of aircraft. Fifteen months later de Havilland undertook the first flight of a twin-engined metal transport aircraft, the Flamingo, and conducted its whole flight development. For the next seven years he made the first flight, and did the tests, of every De Havilland prototype. They were the years of the war when the De Havilland company entered wholesale the field of military aviation, and the aircraft concerned were high-performance combat machines, the fastest in their categories. Notable among them were the Mosquito twin-engined two-seat multi-purpose aircraft, first flown on 25 November 1940; the Vampire jet fighter with De Havilland Goblin engine, 20 September 1943; and the Hornet long-range twin-propeller fighter, 28 July 1944. He visited Canada in 1942 to test the Canadian-built Mosquito and to demonstrate it in Canada and the United States. In recognition of his services he was appointed OBE in 1945.

De Havilland was a keen sporting pilot and took part in a great many races and contests. He shone in the low turns of pylon racing and was one of the finest exhibition pilots British aviation has known. His favourite personal racer was a clean little monoplane, the TK 2, designed and built by students of the De Havilland Aeronautical Technical School. With a love of the sport he combined a serious attitude to his work. His upbringing helped him to become a practical and analytical test pilot of the calibre most valuable to the aerodynamicist and the designer. In 1933 de Havilland married Gwendoline Maud Alexander. The marriage was dissolved in 1942 and he married in 1943 Pipette Marion Scott Bruford. There were no children of either marriage.

Geoffrey de Havilland met his death above the Thames estuary on 27 September 1946, when testing an experimental tailless high-speed jet aircraft, the DH 108, in preparation for an attempt on the world speed record. It is probable that he exceeded this during his last flight. The wreckage of his plane was found the next day, scattered over the mudflats of Egypt Bay, near Sheerness, and his body was discovered at West Beach, Whitstable, over a week later. The precise cause of the crash was never established. Geoffrey's youngest brother, John, had been killed while testing a Mosquito on 23 August 1943, and their father later recalled how he had discussed with both of them the dangers of test flying, but that neither had taken these talks 'very seriously':

> They started a strange habit of refusing to call aeroplanes by their proper name. Geoffrey usually referred to them as 'boilers'. 'If I take a boiler up and it blows up,' he used to say, 'it's just bad luck. But nothing's going to stop me.' (de Havilland, 197)

They were buried in Tewin churchyard, near Hatfield, where their mother was also laid to rest, not long after her eldest son's death. MARTIN SHARP, *rev.* MARK POTTLE

Havilland, Thomas Fiott de (1775–1866), army officer in the East India Company, was born in April 1775 at Havilland Hall, Havilland, Guernsey, the eldest son of Sir Peter de Havilland (*d.* 1821), knight, of Havilland Hall and his wife, Cartaretta, daughter and heir of the Revd Thomas Fiott. In 1793 he obtained a Madras cadetship, and on 3 May 1793 was appointed ensign in the Madras engineers (Pioneers). He served at the siege of Pondicherry in 1793, and in the campaign in Ceylon in 1795–6; he was promoted lieutenant on 8 January 1796. He marched with Colonel Browne's force from Trichinopoly to assist in the operations against Tipu Sultan in 1799, and accompanied Sir David Baird's troops to Egypt in 1801. On his return he was captured by a French cruiser, but was speedily released. He was made brevet captain on 12 August 1802, and captain on 1 January 1806.

In 1808 Havilland married Elizabeth, daughter of Thomas Saumarez. They had two daughters and two sons, Thomas, an army officer, and Charles, a clergyman, both of whom died before their father. Meanwhile, Havilland served with his corps until 1812, when he returned home on furlough, and was commissioned to build the Jeybourg

barracks, Guernsey. He was made brevet major on 4 June 1813.

In 1814 Havilland was appointed civil engineer and architect for the Madras presidency. He proved an officer of much zeal, ability, and originality. When stationed at Seringapatam, he proposed to bridge the Cauvery with five brick arches of 110 feet span and only 11 feet rise. The authorities scouted the idea, and to prove its feasibility Havilland erected a similar arch in his garden. He attempted to determine the mean sea level at Madras from daily observations extending over six months, and a datum line, known as De Havilland's benchmark, was inscribed on the wall of Fort St George. He constructed the Mount Road, the bulwark or old sea wall of Madras, the cathedral, and St Andrew's Presbyterian Church, Madras. He recommended the survey of the Panjam passage for the improvement of the port, a work carried out by one of his subalterns, Sir Arthur Thomas Cotton.

After his retirement, which took place on 20 April 1825, Havilland devoted himself to the affairs of Guernsey, where he was a justice and member of the legislature. He died at Beauvoir, Guernsey, on 23 February 1866, aged ninety. H. M. CHICHESTER, *rev.* ALEX MAY

Haward, Charles (*fl.* 1668–1689), musical instrument maker, was part of a family of harpsichord, spinet, and virginal makers living and working in the City of London. Nothing is known of his parents, or of his early life, but his earliest surviving instrument, a single-manual harpsichord, is signed and dated 'Carolus Haward 1683', while the latest is a wing spinet signed 'Carolus Haward fecit 1689'. The one harpsichord noted above plus seven wing spinets have survived, and a further four surviving spinets are probably from his workshop. He lived in Aldgate Street, London, as is evidenced by a well-known excerpt from the diary of Samuel Pepys for 4 April 1668:

> Up betimes, and by coach to White-hall, took Aldgate street in my way, and there called upon one Hayward that makes virginalls, and did there like of a little Espinettes and will have him finish them for me: for I had a mind to a small Harpsicon, but this takes up less room and will do my business as to finding out of Chords—and I am very well pleased that I have found it.

It seems that Pepys called again on Haward on 13 July 1668, and on 15 July he took delivery of the spinet: the cost was £5. In 1672 Haward was referred to by Thomas Salmon in his *Vindication of an Essay to the Advancement of Music* (1672) in the statement: 'A curious pair of Phanatical Harpsichords made by that Arch Heretick Charles Haward' (p. 68). The exact meaning of a pair of 'Phanatical Harpsichords' is unclear, as is the reason for Salmon's description of Haward as an 'Arch Heretick'.

However, the esteem in which Haward's work was held can be judged from the fact that Queen Anne was said to have highly prized a virginal by him—but the loose way in which the terms 'spinet' and 'virginal' were applied to the smaller domestic instruments in the seventeenth century makes it unclear whether the instrument was a wing-shaped spinet as bought by Pepys, or the rectangular coffer-shaped instrument built in England in the period 1641–84, of which only nineteen survive.

A transcript from the lord chamberlain's accounts relating to music and musicians records a payment in 1674 of £6 10s. 'for mending the harpsichords and pedalls in the Great Hall in the Privy Lodgings and for the private musick, for 2 whole years', and in the next year £2 was paid to 'Mr. Haward, the virginall-maker, for mending the harpsichords' (Lafontaine). The mention of 'pedalls' may indicate that it is John Haward (*fl.* 1649–1667) to whom the payment was made, for Thomas Mace, *Musick's Monument* (1676) has a long and interesting section (pages 235–6) on 'the Pedal' (for changing the registration of a harpsichord) 'contriv'd ... by one Mr. *John Hayward* of London'. So far as is known, Charles Haward did not make such pedals. This John Haward was almost certainly a relative of Charles Haward, as was also probably a third member of the family, Thomas Haward (*fl.* 1656–1663).

CHARLES MOULD

Sources Pepys, *Diary* • H. C. de Lafontaine, ed., *The king's musick: a transcript of records relating to music and musicians, 1460–1700* [1909] • D. H. Boalch, *Makers of the harpsichord and clavichord, 1440–1840*, ed. C. Mould, 3rd edn (1995)

Haward, Francis (1759–1797), engraver, was born on 19 April 1759 of unknown parentage. He was apprenticed to the engraver Thomas Watson in 1774 for a £75 premium. In 1776 he became a student of the Royal Academy Schools and in the same year engraved a portrait of the astronomer James Ferguson after James Northcote. He scraped only *Master Bunbury* (1781) after Sir Joshua Reynolds and *Euphrasia* (1782) after William Hamilton before abandoning the process to work in techniques based on stipple. In an attempt to imitate Reynolds's style in particular, Haward developed idiosyncratic methods combining the use of various roulettes and other tools to produce a richly textured surface which Sir Joshua evidently admired. He was elected an associate engraver of the academy in 1783. *The Infant Academy* (1783) was a first attempt, but his interpretation of *Mrs Siddons as the Tragic Muse* (1787) saw the fruition of his efforts. The painting was exhibited by Reynolds in 1784 and Valentine Green sought permission to publish it from the painting's owner, Siddons's manager, Sheridan. But Sarah Siddons wrote to Reynolds asking that the painting be given to the engraver of the *Infant Academy*, which she admired. So her portrait went to Haward, who shared publication with James Birchall, publisher of most of his earlier plates. Green was so annoyed that he never produced another engraving after Reynolds. Haward exhibited the print at the Royal Academy in 1787, dedicated it to George III, and presented it to him in January 1788. Other prints exhibited at the academy included *A Cupid* (1783), a portrait of the transsexual fencer and spy Madam D'Éon (1788), and in 1792 an unfinished engraving, followed the next year by the finished plate of *The Prince of Wales* after Reynolds. On the strength of this last, Haward was appointed engraver to the prince of Wales. For many

years Haward and his wife Mary lived at 29 Marsh Street, Lambeth, London, and there he died in June 1797, shortly after completing a last plate after Reynolds, *Cymon and Iphigenia*. He was buried on 30 June at St Mary Lambeth. Mary Haward received a pension of £20 from the Royal Academy until her own death in 1839.

Haward, Nicholas (*fl.* 1564–1569), author, was born in Norfolk of unknown parents, and described himself as a student of Thavies Inn. He produced a translation of Flavius Eutropius, published by Thomas Marshe in 1564 as *A briefe chronicle, where in are described shortlye the originall, and the successive estate of the Romaine weale publique*. The text was dedicated to the old Oxonian Master Henry Compton, praised by Haward as a man of great learning and gentleness. The prefatory letter contains a defence of history, and answers to the charge that translation of the classics into English contributes to the decay of knowledge. In 1569 the same printer published Haward's *The line of liberalitie dulie directinge the wel bestowing of benefites and reprehending the comonly used vice of ingratitude*, written in praise of generosity, and dedicated to Sir Christopher Heydon, dubbed by Haward the 'most courteouse Creditour of many his bounties and benefites'.

CATHY SHRANK

Haward, Sir William (*c.*1617–1704), courtier and antiquary, was the third son of John Haward (*c.*1571–1631) of Tandridge Hall, Surrey, and his first with his second wife, Elizabeth, daughter of William Angell, gentleman pensioner to James I. In November 1635 Haward—his own preferred spelling of the name—was granted special admission to the Inner Temple as the son of a bencher. Soon afterwards he purchased Tandridge Hall and two Surrey manors worth £600 per annum from his older half-brother John. From 1641 to 1646 he served as gentleman of the privy chamber to Charles I, who knighted him on 9 September 1643 at Sudeley Castle. Five days earlier, in the garrison at Oxford, he had married Martha (*d.* 1689), youngest daughter of John Acton, a London goldsmith. She brought with her a dowry of £1250, and in due course they had six daughters and four sons. In the autumn of 1645 Haward retired to Tandridge, claiming in his petition to compound of the following April that he had never borne arms. His fine, fixed in January 1647 at the rate of one sixth of his estate, totalled £437.

Although Evelyn dismissed Haward as 'a greate pretender to English antiquities &c' (*Diary*, 6 Dec 1671), Aubrey pronounced him 'a learned Gentleman and great *Antiquary*' (Aubrey, 3.36). Dugdale too thought him 'well accomplisht with learning especially in points of Honour and Armes' (*Life ... of Sir William Dugdale*, 32). By 1663, when he was elected fellow of the Royal Society, he had already begun to collect or make copies of monastic and genealogical records. His transcripts are executed in a bold and regular script well suited to the large folio format in which he preferred to work. Examples range from a volume of genealogical, heraldic, and historical material that includes a copy of a Glastonbury chartulary (BL, Add. MS 58216), by way of Becher's account of the amours of Henri IV of France (BL, Sloane MS 841), to an important 700-page miscellany that mingles Restoration verse, scandal, and politics with history, commerce, and much else (Bodl. Oxf., MS Don. b. 8). Peter Le Neve, who in 1695 bought an even larger antiquarian compilation (BL, Harleian MS 3875), along with two original chartularies (BL, Harleian MSS 391, 4809), drew up a list of twenty-seven Haward manuscripts purchased by Lord Chancellor Somers in 1697 (Bodl. Oxf., MS Rawl. D. 888, fol. 41v). Several of these later found their way to the earls of Oxford and are now BL, Harleian MSS 4785, 4786, 6016, 6025, 6166, 6193, 6266, and 6829. A catalogue of Haward's library belonged to Richard Rawlinson (sale catalogue, Barnard, 4 March 1733/4, lot 387).

At the Restoration Haward resumed his post in the household, retaining it under each successive sovereign until 1702. From 1661 to 1678 he sat in the Cavalier Parliament for his father's old seat of Bletchingley and was moderately active for the court party, serving on some seventy committees. In 1672 he gave money towards rebuilding the College of Heralds, though he failed five years later in his bid to become Garter. Three years after the dissolution of parliament he sold his Surrey estate and bought an interest in the Broken Wharf waterworks, while continuing to occupy his official lodging in old Scotland Yard. In the following decade he was constrained to sell his collection of manuscripts. His wife was buried in Westminster Abbey cloisters on 24 March 1689. In May 1704, when aged almost ninety, he petitioned Queen Anne for relief but did not long enjoy it, being buried on 28 July in St James's, Piccadilly.

Hawarde, John (*c.*1571–1631), barrister, was the third and surviving son, and the heir, of Henry Hawarde (*d.* 1610), citizen and fishmonger of London, and his second wife, Agnes Castell, daughter and heir of a London merchant. Henry had acquired considerable property around Tandridge, Surrey, including the seat which his son John inherited in 1610. By 1586 Hawarde had married Agnes Wilkinson, whose mother was Henry Hawarde's third wife. His second wife, whom he married about 1600, was Elizabeth Angell, whose father was fishmonger to James I. He had two sons and one daughter with Agnes and two sons and eight daughters with Elizabeth.

Hawarde was admitted to the Inner Temple from Clifford's Inn in 1588, and was called in November 1598. His dilatoriness in taking a decade to complete the exercises for the bar might be explained by his diligence in court-watching, particularly in the Star Chamber. Such was a large part of the education of students at the inns, and it also provided entertainment. Even after call, possibly because his practice began modestly and with his father still seated at Tandridge he preferred town to country, Hawarde was a frequent attender in the court. The fruit of his assiduity was a manuscript volume of reports, entitled 'Les reportes del cases in camera stellata', between January 1594 and February 1609. In its 364 pages a total of 224 Star Chamber cases are reported, most of them of trials with judgments (there are only a few interlocutory matters noted), covering in considerable detail a period for which otherwise reports are thin. A privately printed transcription of the volume by William Paley Baildon published in 1894 has given considerable prominence to Hawarde's reports for want of much else in print. A comparison of Baildon's work with the original (now in the Carl H. Pforzheimer Library, New York) indicates some few but not disfiguring errors and inspires confidence in its accuracy.

Hawarde's reports include a few cases at Surrey assizes, Newgate, king's bench, chancery, and wards, along with *Calvin's Case* (1608)—much truncated by Baildon—the trial of the Gunpowder Plot conspirators (1606), and the dispute between Sir Christopher Yelverton and Thomas Cecil, second Lord Burghley, heard before the privy council in 1602. There is incidental material, including charges of the lord chancellor to the judges of assize, accounts of Garter ceremonies, the death of Elizabeth, and the accession of James. There is only one reference, dating from before he was called, in which Hawarde indicates having spoken in Star Chamber, though he clearly was involved in some of the cases in the other courts. In fact, he seems to have had a very slight practice in Star Chamber: he signed pleadings in only three cases there between 1603 and 1625, and two were from Surrey. He was one of those county-based counsel who had a mixed practice with occasional appearances in Star Chamber. His clientele was substantial but local, such neighbouring gentry as Sir Nicholas Carew and Sir Thomas Gresham prominent among them. Indeed, Hawarde was almost as much litigant as counsel in the court, bringing a bill in 1597 for a riotous assault and battery sustained by him in Maidstone and himself being charged with subornation of perjury in a London case involving bigamy in 1613. He was prominent enough to be made a bencher of the Inner Temple in 1613. He held no office in the inn, though in the late 1620s he was an auditor of the steward's accounts. In 1615 he was the Lent reader. There is no indication of the subject of his reading, and he does not appear to have written anything else.

After he took up residence at Tandridge Hall in 1610, Hawarde's ties to London became increasingly tenuous. He was a Surrey justice of the peace (of the quorum) and coroner for the county. He sat in the parliaments of 1621 and 1624 for the nearby borough of Bletchingley. He did not distinguish himself in debate, though his disputed election in 1624 provided some excitement in the early days of the session. He was a careful steward of his extensive estates in Surrey, which he fully settled before his death. He found portions for three married daughters and provision for the remaining surviving spinsters. He cut out his eldest son entirely, deeming him 'undutifull and unthriftie' (will), but looked to the education in both the law and the church of his other sons. His churchmanship was decidedly puritan. He died in January 1631 at Tandridge, and was buried there. THOMAS G. BARNES

Hawarden. For this title name *see* Maude, Clementina, Viscountess Hawarden (1822–1865).

Hawarden, Edward (1662–1735), Roman Catholic priest, probably the son of Thomas Hawarden of Croxteth, Lancashire, and Jane Tarleton of Aigburth, Lancashire, was born on 9 April 1662, had entered the English College at Douai by 1676, and was ordained priest on 7 June 1686. He had been previously engaged as tutor of classics in the college, and after ordination was appointed professor of philosophy. He took the degree of BD at the University of Douai, and was immediately afterwards placed at the

head of a group of priests sent in September 1688 from Douai to Oxford. When James II had determined to make Magdalen College a seat of Catholic education, Hawarden was intended for the tutorship of philosophy there. The expected revolution forced him to leave Oxford on 16 November and return to Douai, where he was installed as professor of divinity, an office he held for seventeen years. He took the degree of DD at Douai University soon after his return, and was appointed vice-president of the college in 1702 to Edward Paston. In the same year he was an unsuccessful candidate for one of the royal chairs of divinity in Douai University. A little later, having seemingly made himself some enemies in the concursus for the catechetical chair at the university, he was groundlessly and unjustly accused of Jansenism.

Hawarden left Douai in September 1707, and at first resided with the Dalton family at Thurnham in Lancashire. Then for a few years, from about 1709 to 1711, he conducted the mission at Gilesgate in Durham. On the death of his friend Bishop Smith in 1711 he returned to another Dalton house, Aldcliffe Hall, near Lancaster, where he is reported as celebrating midnight mass at Christmas 1713. He probably left in 1715, on the seizure of the hall by the commissioners for forfeited estates. Appointed to the chapter, and to the position of 'catholic controversy writer', by 1719 he was settled in London, a more convenient location for publishing his many books in defence of the Catholic faith. He published an important work, entitled *The True Church of Christ*, containing treatises on supremacy, transubstantiation, and the invocation of the saints. On the publication of the second edition of Samuel Clarke's *Scripture Doctrine of the Trinity*, which came out in 1719, a conference was arranged by the desire of Queen Caroline between Hawarden and Clarke for the express purpose of discussing the trinitarian doctrine. The meeting took place in the presence of the queen, and Hawarden was thought to have the best of the dispute. He returned to the subject some years later in his *Answer to Dr. Clarke and Mr. Whiston*, which was first published in 1729. His many other works caused him to be eulogized by Bishop Milner as 'one of the most profound theologians and able controversialist of his age' (*DNB*). He died on 23 April 1735 in London. C. W. Haweis, Hugh Reginald (1838–1901), author and Church of England clergyman, born on 3 April 1838, at Egham, Surrey, was grandson of Thomas *Haweis, the friend and trustee of Lady Huntingdon, and was son of John Oliver Willyams Haweis (1809–1891), Church of England clergyman, and his wife, Mary. His father matriculated in 1823 at Queen's College, Oxford, graduating BA in 1828 and proceeding MA in 1831. From 1846 he was morning preacher at the Magdalen Hospital in London, and from 1874 to 1886 rector of Slaugham, Sussex. In 1883 he was made Heathfield prebendary of Chichester Cathedral. He was the author in 1844 of *Sketches of the Reformation*.

Hugh Reginald, the eldest son in a family of four children, showed great musical sensibility and aptitude for violin playing from early years, but poor health prevented systematic education. He suffered from hip disease, and when he was twelve Sir Benjamin Brodie, the surgeon and anatomist who had written on the hip, pronounced his case hopeless. He was taken to his grandmother's house at 54 Brunswick Square, Brighton, and recovered, although his growth had been badly stunted (he was scarcely 5 feet tall) and he was left with a club foot and continued to suffer periodically from pain in his hip. At Brighton he practised the violin assiduously, receiving instruction from several masters including Antonio Oury, the distinguished violinist and professor at the Royal Academy of Music. He also gained orchestral experience and wrote for the Brighton papers.

By the age of sixteen Haweis was so much stronger that he was sent to a tutor to prepare for matriculation at Cambridge. In 1856 he matriculated at Trinity College, Cambridge, his paternal grandfather's college, and quickly became a notoriety. He was the principal violinist of the Cambridge Musical Society, formed a quartet society, read German poetry and philosophy, started a short-lived magazine called *The Lion*, and wrote voluminously for several newspapers. He made the acquaintance of a French violinist, J. G. R. R. Venua, who interested him in violin-making, a subject upon which he began researches. After graduating BA in 1860 (he proceeded MA in 1864) he travelled for his health. His father had wished him to avoid Italy, but he fell in with Signor Li Calsi, a professional musician whom he knew at Brighton, and the pair went to Genoa, and thence to join Garibaldi at Capua. Haweis survived the war unscathed. He met King Victor Emmanuel and was present at the peace celebrations in Milan. He described his part in the war of independence in *The Argosy* in 1870.

Before leaving Italy Haweis decided to seek orders in the English church, and in 1861 he passed the Cambridge examination in theology and was ordained deacon in London that year, becoming priest in 1862. He was curate of St Peter, Bethnal Green (1861–3). In east London he threw himself enthusiastically into parish work. He was a close friend of John Richard Green, who was in sole charge of Holy Trinity, Hoxton, and Green greatly influenced his views on social questions. From 1864 to 1866 he was curate to St James-the-Less, Westminster, and then to St Peter, Stepney. In 1866 he was appointed perpetual curate of St

Hugh Reginald Haweis (1838–1901), by Barraud, pubd 1888

James, Westmoreland Street, Marylebone. He found the church nearly empty and in need of immediate repair. By his energy, ability, and somewhat sensational methods he quickly filled his church, and kept it full and fashionable for thirty-five years until his death.

Haweis was a powerful preacher. His theatrical manner and vanity (he always preached in a black gown) frequently exposed him to charges of charlatanry and obscured his genuine spiritual gifts: but he was sincere and untiring in his efforts. He organized in his church 'Sunday evenings for the people', at which orchestral music, oratorio performances, and even exhibitions of sacred pictures were made 'to form portions of the ordinary church services'. His aim was to provide edifying entertainment and simultaneously keep his followers from the entertainments of the public house. His success encouraged him to use St James's Hall, Regent Street, for Sunday morning services of a similarly unconventional character, and he received numerous invitations to preach elsewhere. Haweis's theology was controversial as well as his style. He explicitly and repeatedly repudiated the doctrine of eternal damnation and was an outspoken advocate of the compatibility of spiritualism and Christianity. He attended séances and was a member of the Society for Psychical Research. His unconventional style filled his churches and lecture halls, although it stood in the way of church preferment.

An energetic advocate of the provision of wholesome recreations for townspeople, he was an early promoter of the Sunday opening of museums and picture galleries. He interested himself in the provision of open spaces in London and in the laying out as gardens of disused churchyards.

Haweis continued to write prolifically, not least because he needed money. His lecturing fees often failed to cover his expenses, and invitations to fashionable social gatherings involved him in considerable expense. He wrote much for magazines, *The Times*, the *Pall Mall Gazette*, and *The Echo*. His musical books included *Music and Morals* (1871), *My Musical Life* (1884), and *Old Violins* (1898). As musical critic to *Truth* and the *Pall Mall Gazette* Haweis helped to introduce Wagner's works to English audiences. His best work was on music, although his theological writings were more numerous. They included works which reflected on current debates, such as *Thoughts for the Times* (1872) and a historical survey of the origins of Christianity, which he published in 1886–7 in five volumes as *Christ and Christianity*. He also published many sermons, edited the work of others, and wrote books on popular themes.

Haweis's chief success was achieved as a popular lecturer in England and the colonies, as well as in America, on musical and religious themes. In 1885 he gave the Lowell lectures in Boston, USA. During the Chicago Exposition in 1893 he was an Anglican delegate to the Parliament of Religions, and in the following year he visited the Pacific coast, preaching to crowded congregations in Trinity Church, San Francisco. Thence he toured through Canada, the south sea islands, Australia, and New Zealand, lecturing and preaching. He described his American and colonial experiences in *Travel and Talk* (2 vols., 1896).

Haweis was short, with olive skin and hazel eyes, and long black hair. Described by his future wife in her journal as vivacious and with a reputation for lack of ceremony extending to flirtatiousness, he retained to old age his capacity to attract and inspire.

In 1867 Haweis married Mary Eliza (1848–1898), elder daughter of Thomas Musgrave *Joy (1812–1866), portrait painter, and his wife, Eliza. As Mary *Haweis she became a distinguished artist and book illustrator. They were at first a devoted couple in their private life, and each helped the other in their writing and publishing, he with his experience of editors and publishers, she with her talent for illustration. Their first child died in infancy but they had three surviving children, a girl and two boys. After D. G. Rossetti's death in 1882 the Haweis family occupied the poet's house, the Tudor House, renamed the Queen's House, in Cheyne Walk, Chelsea. Haweis died suddenly of heart seizure on 29 January 1901 at 15 Bulstrode Street. His body was cremated at Woking, and the remains interred beside his wife in the churchyard of St Peter's Church, Boughton Monchelsea, Kent, her family graveyard.

Haweis's public reputation survived unchallenged until the publication in 1967 of a biography of his wife by Bea Howe. Written with the help of the brothers Stephen and Lionel Haweis, to the former of whom it is dedicated, and relying extensively on Mary Haweis's letters and journals, the book portrays the dark side of Haweis. His and Mary Haweis's once happy and mutually supportive marriage

began to break down in the 1880s. Haweis, who had always been attractive to women, began to take an interest in a parishioner, Miss Emmeline Souter, which made his wife unhappy and which exposed him to gossip. Mary Haweis, who had been unable to understand why her husband was so short of money and why the household depended so heavily on her own earnings, discovered the answer when her husband's mistress and their six-year-old illegitimate child arrived at the family home in 1894 when her husband was away on a preaching tour. His erratic, deceitful, and unreasonable behaviour had already forced a rift between Mary Haweis and her daughter Hugolin, though his efforts to embitter her relations with her sons failed. He was aided by his sisters, 'those interfering and rude women' as Mary Haweis called them in a letter to Lionel of 31 March 1897 (Howe, 261). He grew increasingly jealous of her popularity as a writer and particularly her involvement in social movements, such as women's suffrage, in which he played no part. Such jealousies were especially apparent as his own popularity grew uneven and it became clear to him that preferment in the church would elude him. Despite her increasingly frenetic writing and journalism, his imprudent spending obliged them in 1897 to move from Queen's House, in Chelsea, which Mary loved, to the dingy house in Devonshire Street which she loathed. Exhausted, Mary Haweis finally died on 24 November 1898. Her husband spent her last days trying unsuccessfully to persuade her to alter the terms of her will, under which she left everything to her son Stephen rather than to him. Legal wrangling surrounding the will continued until his death in 1901, by which time he had managed to deprive Stephen, a minor in his legal guardianship, of much of his inheritance. He destroyed many of his wife's letters and journals, which she had expressly left to Stephen, not least because they showed him in an unflattering light. Howe attributes Haweis's behaviour less to malice than to mental instability, and perhaps most of all to an unlimited capacity for self-deception. Certainly he regarded himself as the aggrieved party in the marriage and insisted until the end on his affection for his wife. He seems to have died a lonely, frustrated, and sad figure, having at his best put unstinting effort into his music, preaching, and family life.

Haweis [*née* Joy], **Mary Eliza** (1848–1898), writer and illustrator, was born on 21 February 1848 in London, the elder daughter of Thomas Musgrave *Joy (1812–1866), genre and portrait painter, and Eliza Rohde Joy, *née* Spratt. Mary Eliza herself had considerable artistic talent: at eighteen she exhibited at the Royal Academy and also undertook some portrait commissions. In later life she illustrated both her own books and those of her husband, Hugh Reginald *Haweis (1838–1901), whom she married on 30 November 1867 at St Mary's Church, Kilburn. Hugh Reginald Haweis was an author and popular preacher, and incumbent at St James, Westmoreland Street, Marylebone. Their first-born son, Reginald Joy, died in infancy in 1869, but three further children survived to adulthood: Lionel (*b.* 1870), Hugolin Olive (*b.* 1873), and Stephen Hugh Wyllyams (*b.* 1878). Mary accompanied her husband on preaching tours of the continent and North America, and adopted many philanthropic causes, including women's suffrage.

Haweis's knowledge of art and literature can be seen in the range of her published books. The first, *Chaucer for Children: a Golden Key* (1st edn 1877, 2nd edn 1882), skilfully combined both interests; aiming at a historically accurate representation of medieval costume and furniture, it was meticulously illustrated with woodcuts and colour plates whose details were drawn from medieval manuscripts. Her knowledge of the history of fashion clearly informed her series of publications on domestic décor: *The Art of Beauty* (1878), *The Art of Dress* (1879), and *The Art of Decoration* (1881), and these books also provided a forum for the expression of her wholesome views on the dangers fashion posed to health, and on the necessity that decoration should be both useful and in harmony with natural proportion.

Haweis economically recycled material between publications. Essays on certain well-known artistic houses were first published in the journal *Queen* during 1880–81 and were then reprinted in *Beautiful Houses* (1882). Her somewhat more advanced edition of Chaucer's poetry, *Chaucer for Schools* (1881; 2nd edn 1899), reused material from *Chaucer for Children*, though not the illustrations. Her comparatively scholarly approach led her to provide her own modernized translations of Chaucer's verse, an extended introduction and critical apparatus; she checked her text against F. J. Furnivall's six-text edition. Haweis believed that Chaucer's lines could be enjoyed by anyone who had 'moderate intelligence and an ear for musical rhythm' (M. Haweis, *Chaucer for Schools*, 1881, xi). Further attempts to popularize Chaucer may be seen in two more ephemeral publications: *Chaucer's Beads: a Birthday Book, Diary and Concordance of Chaucer's Proverbs or soothsaws* (1884), a collection of Chaucer's pithy sayings with glosses and suggested modern equivalents, for every day of the year; and *Tales from Chaucer* (1887), a small-format volume in the Routledge's World Library series edited by her husband, which included paraphrases of ten of the *Canterbury Tales*, mostly composed by herself, with selections of original verse. At the same time she continued to publish material relating to home management, producing *Rus in urbe, or, Flowers that Thrive in London Gardens and Smoky Towns* (1886),

and *The Art of Housekeeping: a Bridal Garland* (1889). The latter was intended as a practical guide for newly married women and offered advice on economical budgeting, equipping a home, managing servants, and dealing with infestations of beetles; Haweis practised such economies in her own household, where money was always in short supply. Her last publication, the novel *A Flame of Fire* (1897), reflects her strong support for the women's franchise movement.

Mary Haweis died at Lansdown Grove House, Bath, on 24 November 1898 from kidney disease and heart failure; she was cremated at Woking on 26 November, and her ashes were interred in the Joy family vault at St Peter's, Boughton Monchelsea, Kent. MARGARET CONNOLLY

Haweis, Thomas (1734?–1820), Church of England clergyman, was probably born at Truro, Cornwall, on 1 January 1734, but was baptized in Redruth on 20 February. His father, Thomas Haweis, was a Redruth solicitor, and his mother was Bridgeman Willyams of Mawgan in Pydar, Cornwall, through whom he was eventually to inherit considerable property. His father, however, died leaving little fortune, and his mother took her young son to live in her family home. Haweis was sent to Truro grammar school, where the master, George Conon, and the curate, Samuel Walker, were at the centre of a religious revival. After leaving school Haweis was apprenticed to a local surgeon and apothecary (for which training he eventually received a Scottish MD). After completing his apprenticeship he decided that he had a call to the ministry. His relatives raised sufficient money to send him to Oxford, where he matriculated at Christ Church in 1755, but subsequently moved to Magdalen Hall in 1757. He does not appear to have graduated at Oxford, but after moving to Northamptonshire he became a fellow-commoner at Christ's College, Cambridge, in 1772 and was given an LLB. His attempt to obtain an LLD in 1776 was unsuccessful despite the support of his diocesan bishop, who was also master of Trinity College. His account of his life at Oxford concentrates on his efforts to obtain ordination. Despite Bishop Lavington's opposition, the bishop of Oxford finally ordained him deacon on 9 October 1757 and priest on 19 February 1758 on the title of St Mary Magdalen. His Methodist sermons attracted the attention of the university, and its students were already causing disturbances in his church by December 1761. Eventually the refusal of the bishop formally to license him to his curacy caused him to leave Oxford for London in 1762.

In London Haweis became assistant to the Revd Martin Madan at the Lock Hospital. Here on 17 February 1764 John

Thomas Haweis (1734?–1820), by Ridley, pubd 1796 (after Henry Edridge)

Kimpton, a member of the Revd Samuel Brewer's Independent congregation, came to consult Madan. Kimpton had married one of the three daughters of Miles Fleetwood, a descendant of Cromwell's general. Their only dowry was shares in the advowson of Aldwincle All Saints, and Kimpton had concocted a plan to buy out his sisters-in-law and sell the advowson for a profit since the present incumbent was very old. Unfortunately the incumbent died before the transaction was completed, which meant that the sale could not proceed until a new incumbent was inducted. Kimpton had considerable difficult in finding a clergyman who would resign when requested, and came to Madan, probably at Brewer's suggestion, because he had trained as a lawyer. Madan merely read him the oath against simony and took him to Haweis. The meeting ended with Kimpton convinced that Haweis had made a verbal promise to resign when requested, and with Haweis believing that Kimpton wanted an evangelical minister for the parish. On 25 February 1764 Haweis was instituted by the bishop of Peterborough after a searching enquiry into the arrangements. As a result the scene was set for a national scandal involving Brewer, his friend the Revd John Newton, and the Madan and Cowper families.

Kimpton soon began to ask Haweis when he was ready to resign and after several indignant refusals, resorted in 1766 to a pamphlet stating his grievances. Replies and replies to replies followed, including an attack on Kimpton's treatment of his mother-in-law, all of which gave the opponents of Methodism ammunition for their attacks. Haweis was even to be ridiculed on the stage.

Kimpton was now in a debtors' prison, having defaulted on the loan of £700 with which he had paid his sisters-in-law. Attempts by the Olney Methodists, the London tabernacle, Selina, countess of Huntingdon, and others to achieve a compromise had failed, so the countess decided in March 1768 to pay the £1000 owing to Kimpton's creditors in exchange for the advowson. This was successfully accomplished by George Whitefield and John Thornton, both of whom considered Kimpton a villain. Martin Madan objected to this as impugning his character, and others thought it savoured of simony. The animus against Haweis continued for many years, but with a rich benefice, a small parish (Aldwincle was divided between All Saints' and St Peter's), and a private income from mines in Cornwall and south Wales, Haweis was in a strong position.

Haweis did not quarrel with Lady Huntingdon and soon received invitations to preach for her. He had successfully converted most of his parish—one of his congregation attended her college and became a minister in her connexion—and the surrounding area, so he was free to travel. This continued until March 1779, when she appointed him one of her chaplains and invited him to preach at her new chapel, Spa Fields in Clerkenwell, London. Haweis thus became one of the ministers cited to appear in the London consistory court by the incumbent for preaching in his parish without his permission. Fortunately proceedings against him were dropped at an early stage. This, together with Lady Huntingdon's decision to ordain her students, led Haweis to cease preaching for her, since as a beneficed clergyman he had the most to lose. In this he chose discretion over valour, because he had no personal objection to her actions. He appears to have kept on good terms with his diocesans, the bishops of Peterborough, and especially Spencer Madan (1794–1813), who was the brother of Martin. In 1808, after he had resumed preaching for Lady Huntingdon, he wrote to Spencer assuring him that he took no part in connexion ordinations—a letter more important for its omissions than its content. From as early as 1810, and probably much earlier, he was able to obtain licences of non-residence from the bishops, on the grounds of the illness of either his wife or himself. He then spent much of his time at Bath, leaving All Saints' to a succession of underpaid curates. After his move to Bath he was not only able to take charge of the connexion's chapel, but also to attend meetings in London and widen his circle of acquaintances. In 1794 he was an original member of the London Missionary Society—a successor to attempts by Lady Huntingdon and Haweis to send missionaries to the Pacific. This was also the year when he preached at the Brighton chapel, and rescued a party of French Catholic clergymen who had fled from persecution. When the society's first mission was ready to sail in August 1796, Haweis attended the ceremony of 'setting apart' the missionaries, helped with the outfitting in the Thames, and followed their ship, the *Duff*, to Portsmouth to ensure that all went smoothly. While there he launched a short-lived campaign to convert the local Jews. He continued to help the London Missionary Society until old age and illness prevented him.

On Lady Huntingdon's death in 1791 Haweis found himself among a list of friends to whom she had bequeathed the chapels which she owned; however, he always refused to act as the principal agent, and he may have insisted on the chapels being put in trust in 1807—a vital step to avoid their being seized by the next of kin under the Mortmain Act. He had little to do with the countess's college at Trefeca (Talgarth, Brecon), which the Apostolic Society moved to Cheshunt after her death. The Apostolic Society consisted of a group of London merchants and tradesmen who worshipped at connexion chapels. They rigidly excluded clergymen from their deliberations, and Haweis merely paid an annual subscription of 1 guinea to the society. His energies turned instead more to writing. From a large history of the church, to pamphlets addressed to soldiers, sailors, and householders, Haweis produced more than forty books.

Haweis married three times. His first wife was Mrs Judith Wordsworth, sister of the Revd Joseph Townsend of Pewsey. Her first husband, John Wordsworth, was a drunken, very unpleasant man, from whom she had fled to her brother and the consolations of Methodism. As soon as her first husband was dead, Haweis married her in London on 3 January 1771. At her death in August 1786 he was devastated, but in 1788 he followed her advice to remarry. His second wife was Janet Payne Orton, one of Lady Huntingdon's companions. She died on 15 February 1799, and his third wife, whom he married in 1802, was Elizabeth McDowall (*d.* 1855) of Bath, who had nursed him through a dangerous illness. Together they had his only child, John Oliver Willyams Haweis, rector of Slaugham, Sussex, and author of *Sketches of the Reformation* (1844), whose family inherited Thomas Haweis's extensive archives. Haweis died on 11 February 1820 at Beaufort Buildings, Bath, and was buried in Bath Abbey church.

Hawes, Sir Benjamin (1797–1862), politician, was the son of Benjamin Hawes, a wealthy Lambeth soap-boiler, and his wife, Ann, *née* Feltham. The soapworks stood opposite the Temple and was a prominent London landmark. Hawes was educated at a private school in Putney run by

the Revd William Carmalt. In 1820 he married Sophia Macnamara, daughter of Marc Isambard Brunel, and supported the various engineering projects of his brother-in-law Isambard Kingdom Brunel. He first lived at New Barge House, Lambeth, moving by 1846 to Queen Square (now Queen Anne's Gate), Westminster. Hawes entered the family business in 1818 and later championed the industry in parliament, once complaining that the president of the Board of Trade, C. P. Thomson, 'betrayed a very singular want of acquaintance' with soap-boiling (*Hansard* 3, 32, 15 March 1836, cols. 373–4). Although he probably soon withdrew from active involvement in this declining trade, he was always tagged as 'Hawes the Soap-Boiler'. He became a Surrey magistrate in 1828, and 'acquired a little county fame' (*The Times*, 21 May 1862, 5) before his election as MP for the new constituency of Lambeth in 1832, after the withdrawal of Lord Palmerston. Physically short, Hawes was mocked for wearing evening dress and kid gloves in the house. Detractors felt that he 'took a more active part in the public business than either his position or his experience appeared to warrant' and his trade 'was an additional enormity' in the eyes of gentlemen (Francis, 345). Monckton Milnes described him as 'the type of the respectable and intelligent bourgeois' (Reid, 1.380). During a visit to the zoo in 1833, Sophy Horsley, a family friend, was very relieved when Hawes chose to inspect the elephant because it was 'a decent animal'. It would have been 'most indelicate' to look at monkeys in male company (Gotch, 48).

As an MP Hawes backed standard radical causes; he campaigned for reform of parliamentary procedure, such as the publication of division lists, and for the introduction of the penny post. He was an early supporter of the electric telegraph. In the planning of new buildings after fire destroyed the old Palace of Westminster in 1834, he wished to encourage 'young and aspiring artists' (*Hansard* 3, 30, col. 620). His motion in 1841 for a select committee to consider 'the promotion of the fine arts of this country' led to the establishment in 1841 of the (Royal) Fine Arts Commission, of which he was an initial member (*Hansard* 3, 67, 30 April 1841, col. 1289). He chaired the committee that recommended the installation of the unsuccessful ventilation system designed by David Boswell Reid.

After 1841 Hawes emerged as a leading opposition speaker for free trade. But he was not a member of the Anti-Corn Law League and hinted that he would accept a low fixed duty. A supporter of the New Zealand Company, in 1845 he delivered an uncharacteristically vitriolic attack on the Colonial Office. Samuel Wilberforce feared that Hawes would become the first middle-class cabinet minister in 1846, but Lord John Russell made him undersecretary for colonies, believing that this would be acceptable to Earl Grey, the incoming secretary of state. In fact, Grey would have preferred Charles Buller, and Hawes immediately offered to resign. The senior civil servant, the aloof James Stephen, described Hawes as 'an underbred man in manner, something of a shopkeeper with no great promise of capacity' (J. Stephen, diary, 12 July 1846, CUL, ADS MS 7511). Despite this unpromising reception, Hawes quickly made his mark as an administrator. When Stephen retired in 1847, Russell considered appointing Hawes as his successor.

Hawes paid the price for taking junior office in a ministry whose policy he could not determine. In 1847 he was defeated at Lambeth after a raucous campaign, thanks to the defection of nonconformist supporters who objected to Russell's education policy and the creation of the Manchester bishopric. After a vacancy failed to materialize at Wolverhampton, Hawes retreated in March 1848 to the corrupt Irish borough of Kinsale, where he was elected by just three votes. Critics said he had 'put on the Whig livery' as Russell's 'parliamentary lacquey' (*Weekly Dispatch*, 249) and that he should 'lend Lord Grey a little of his own excessive humility' (*The Spectator*, 199). In April 1851 his vote for the Ecclesiastical Titles Bill led to angry repudiation of him by Catholic voters in Kinsale.

In November 1851 Hawes became deputy secretary at the war department and left parliament in the following February. Thanks to the Crimean War, the new post did not prove to be a 'quiet haven' (H. G. Ward to Hawes, 11 Nov 1851, NL Scot., Gleig MS 3871, fols. 11–12). Although Hawes favoured integration of the various military departments, his opposition to root-and-branch reorganization in wartime made an enemy of Florence Nightingale who denounced him as 'a dictator, an autocrat irresponsible to Parliament, quite unassailable from any quarter' (Woodham Smith, 308). Hawes commissioned Brunel to design a prefabricated hospital for Scutari, and in February 1856 was created KCB for war services. Although his retirement had been rumoured in 1861, his death at his home, 9 Queen Square, Westminster, on 15 May 1862 was unexpected. An obituary in *The Times* praised his ability 'to reconcile the zeal of a reformer with the routine of office', adding that 'he had a clear head which could take in a new idea, and he had a practical talent which could give it effect' (*The Times*, 5). He was buried in Highgate cemetery and survived by his wife.

Hawes, Edward (*b.* 1589/90), poet, was the son of Christopher Hawes (*b. c.*1562), a Lincolnshire cleric who had spent two terms at Magdalene College, Cambridge. Edward Hawes was author of *Trayterous Percyes and Cateshyes Prosopopeia* (1606). According to the title-page Hawes was, at the time of writing, 'Scholler at Westminster, a Youth of sixteene yeers old'. On 23 June 1606 Hawes was admitted as a pensioner at St John's College, Cambridge, and on 9 June 1607 he migrated to Gonville and Caius College. The *Prosopopeia* is dedicated to Tobias Matthew, bishop of Durham and later archbishop of York.

Hawes, Maria Dowding Billington (1816–1886). *See under* Hawes, William (1785–1846).

Hawes, Richard (1603/4–1668), clergyman and ejected minister, was born in East Anglia to unknown parents. His father was 'a religious man, dying when he was very young', and his mother married 'soon after ... a man wholly carnal ... utterly negligent about instilling the principles of religion into his family' (*Nonconformist's Memorial*, 2.290). When he was about nine Hawes was sent to school in Ipswich, where he heard the lecturer Samuel Ward, and repeating the lectures to his stepfather's mother, with whom he was lodging, effected her conversion. Admitted a pensioner to Corpus Christi College, Cambridge, on 16 June 1620 (as 'of Suffolk'), he graduated BA in 1624 and proceeded MA in 1627.

According to Edmund Calamy, Hawes was then disowned by his stepfather, having declined the latter's offer of a valuable living which he claimed to have in his gift. Hawes accepted instead from the rival claimant, Lord Keeper Sir Thomas Coventry, the alternative offer of the rectory of Humber, Herefordshire, on 1 September 1627. On 9 December that year he was also inducted as vicar of Ilketshall St John, Suffolk. From 23 March 1638 he was rector of Kenderchurch, Herefordshire. Having lost at university the faith of his childhood, 'for many years after he entered into the ministry, he continued much addicted to vain company, and was sometimes guilty of excessive drinking' (*Nonconformist's Memorial*, 291). At some date he married, but his wife's name is unknown.

When Hereford was garrisoned by the royalists during the civil war, Hawes was imprisoned and 'a council of war ordered to try him for his life', but once the governor, 'a man of violent temper', was replaced, the prosecution was discovered to have been malicious, and he was 'courteously' freed. After this experience Hawes's behaviour visibly altered: he gained the respect of the godly and 'became a plain, earnest and useful preacher' (*Nonconformist's Memorial*, 291). He did not, however, escape abuse and plunder by the soldiers. In 1651 he was ministering in Llangua, Monmouthshire, and having had little success in Kenderchurch, 'a Paganish and brutish place', was about 1659 induced by Sir Edward Harley to accept the rectory of Lantwardine, Herefordshire.

Shortly after the Restoration Hawes was again imprisoned 'upon the noise of plots' (*Nonconformist's Memorial*, 291) at the instance of Sir Henry Lingen, but released when Lingen died. As a moderate, he was expected to conform in 1662, but when he refused, was ejected, although Bishop Herbert Croft allowed him a month's grace in preaching. Thereafter he lived with a daughter, probably Grace (*d.* 1701), and her husband, Nicholas Billingsley (1633–1709), from 1657 vicar of Weobley, Herefordshire; they lived first at Weobley, then at Abergavenny, where Billingsley was schoolmaster from February 1664, and finally at Awre, Gloucestershire. Both Bishop Hugh Lloyd of Llandaff and Bishop Nicholson of Gloucester permitted Hawes to preach without subscribing, and he occasionally made use of their licence. After an illness 'occasioned by a journey to Kidderminster, for Mr Hieron', during which Calamy visited him and he expressed 'in his last hours, great satisfaction with his Nonconformity', Hawes died at Awre in December 1668 'in his 65th year' (*Nonconformist's Memorial*, 291). VIVIENNE LARMINIE

Sources *The nonconformist's memorial ... originally written by ... Edmund Calamy*, ed. S. Palmer, [3rd edn], 2 (1802), 290–93 • Venn, *Alum. Cant.* • *Calamy rev.*, 54–5, 253

Hawes, Robert (1664/5–1731), lawyer and topographer, was the eldest of the five children of Henry Hawes (1634–1718), a yeoman farmer of Brandeston, Suffolk, and Mary, his wife (*c.*1640–1718), daughter and coheir of John Smith of Pyshalls in Dennington, also in Suffolk. His father was the second son of Robert Hawes (1601–1679), who had served as chief constable of Loes hundred through two reigns and the interregnum. Hawes, who was well educated and a competent Latinist, probably acquired a taste for heraldry under Zaccheus Leverland, first master of Sir Robert Hitcham's Free School in Framlingham. He could have trained for the law under Richard Porter, steward of the lordships and manors of Framlingham and Saxstead and of other manors in Loes hundred, left in 1636 to the masters and fellows of Pembroke College, Cambridge under Hitcham's will. He married Sarah Sterling (*c.*1668–1731), youngest daughter of George Sterling of Charsfield, at Framlingham on 11 August 1686. They had no children.

When in 1703 Porter died, Hawes collected the working documents for the next steward, on whose death in 1712 Hawes succeeded with the unanimous consent of the college. He was intensely proud of his appointment, and was ready to address his manuscript 'History, or, Memoirs of Framlingham and Loes-hundred in Suffolk' to the master and fellows, enthusing that his 'only design at first, was to reduce ... your Lordships or Manors ... out of the confusions wherein I found them, to a better order and method' (BL, Add. MS 33247, fol. 4*r*). 'Time and opportunity' (ibid.), for he finished in 1724, encouraged him to gather information about the whole hundred, particularly its chief town, the church, and castle. Richard Attwood, fellow and college antiquary, helped him bring Matthew Wren's earlier account of the masters and fellows up to date; he also acknowledged the help of Thomas Tanner, then chancellor of Norwich diocese. Hawes made four complete copies on paper, each of over 700 folio pages, legibly written in his own hand: one for the college, for which he was

rewarded with an engraved silver-covered cup costing the estate £14 3s., and two others which are now lost. It is his own copy, with additions made up to the year of his death, now in the British Library, which has had the most use. Hand-coloured arms and pasted-in portrait prints of monarchs and others associated with the lordship fill the margins. Most usefully, he drew head-on elevations of all the churches and the more important houses, and a few monuments, all tolerably accurate and having a peculiar charm. The master set of the larger drawings are in Craven Ord's Suffolk collections, also in the British Library. For his friend John Revett (1691–1756), of Brandeston Hall, collaborator in collecting materials, he produced the Brandeston and Cretingham sections in duodecimo in 1725, but Revett also inherited Hawes's personal copy. It was John Revett the grandson who in 1806 allowed David Elisha Davy and Henry Jermyn to copy both Hawes manuscripts into their Suffolk collections.

When in 1729 the town was 'at great charge' to build 'a large worke house' (Framlingham MS N5, Cambridge, Pembroke College) inside the castle walls, extending the one provided by the college a century earlier, the chief parishioners received only a lofty letter of thanks from the Pembroke president. This led Hawes to pen a critical history of the management of Hitcham's estate, showing that the fellows had where possible evaded their responsibilities. By then his firm script was shaky, but he drew as well as ever. He died in Framlingham on 26 August 1731 and was buried three days later in St Michael's, Framlingham; his wife survived him by only six weeks and died on 11 October 1731. Both lie under a modestly inscribed grey stone in the south aisle near Hitcham's fine tomb.

Always looking for promising material, Robert Loder (1749–1811), the Woodbridge bookseller and printer, borrowed the Hawes–Revett copy and prepared the Framlingham and Saxstead sections for publication in 1798. Loder added much additional material from Ord and Ashby, an extensive list of local flora by George Crabbe, the poet-parson of Great Glemham, and ten engravings after drawings by Isaac Johnson. The edition was said to be limited to 250 copies, but the volume is commoner than that figure would indicate. Hawes's useful observations in the other parishes of the hundred have been largely overlooked.

Hawes, Stephen (*b.* *c.*1474, *d.* before 1529), poet, was possibly born in East Anglia, where the surname was fairly common in the later middle ages. He may have attended Magdalen College, Oxford, in 1493. Bale asserts that he studied in Scotland and France as well as England but corroboration is lacking (Bale, *Cat.*, 632). He first appears in official records as groom of the chamber to Henry VII in 1503: this title appears in the first printings of all his poems. Bale reports that Henry 'called him to his court, to his inner chamber and to his private counsels, on the sole recommendation of his virtue' (Bale, *Cat.*, 632). In 1506 he is recorded in the king's book of payments as receiving 10s. for 'a ballet that he gave to the kings grace in reward' (Gluck and Morgan, xi). He was certainly dead before 1529 when a poem by Thomas Feylde includes a prayer for his soul.

Hawes's earliest recorded poem was *The Example of Virtue*, first published in 1509 but, according to the colophon, composed in 1503/1504 and presented to Henry VII. Set in the form of a dream vision it comprises 2129 lines, almost entirely in rhyme royal. The dreamer is taken by a beautiful guide, Discretion, on a voyage to an island where Nature, Fortune, Hardiness, and Wisdom all debate before Justice which is the most profitable to man. The dreamer then sets out to seek a lady, subsequently called Cleanness. On his journey, accompanied by Discretion, he meets various temptations, before arriving at her dwelling. There he kills a three-headed dragon and marries Cleanness. The final part of the poem deals with the death of the protagonist. The poem ends with prayers to Henry VII, his mother, Margaret Beaufort, and his son, Prince Henry.

The visionary and allegorical form of this poem is elaborated in Hawes's most famous work, *The Pastime of Pleasure*, first published in 1509, but composed in 1505/1506. This comprises 5816 lines, in rhyme royal and couplets. It traces the career of Graunde Amour as he pursues the active life in his quest for the lady, La Belle Pucelle. To prepare him for this quest he receives instruction at the tower of doctrine in the seven liberal arts, before undergoing a series of battles, after which he wins La Belle Pucelle. The educational and chivalric aspects of the poem are counter-balanced by two lengthy passages in couplets in which a dwarf, Godfrey Gobelive, recounts anti-feminist anecdotes and is subsequently punished for telling them. After their marriage and Graunde Amour's death, the poem concludes with visions of the seven deadly sins, time, the nine worthies, and eternity. The poem contains acknowledgements to Hawes's 'masters', the medieval triumvirate of Chaucer, Gower, and Lydgate. Lydgate has often been held to be an important influence on Hawes's writings, but his role seems largely limited to offering the latter a model of highly aureate lexis on which he occasionally drew.

Hawes's other poems are briefer. His *Conversion of Swearers*, which was written in a mixture of rhyme royal and tail rhyme, attacks those who take Christ's name in vain. He also wrote a poem in praise of the coronation of Henry VIII. Both these were also first printed in 1509.

Hawes's last poem, *The Comfort of Lovers*, is the only one not to be first printed in 1509. The title-page of the only surviving edition, published *c.*1515, reports that it was

composed in 1510/1511. It comprises 938 lines in rhyme royal. Composed after Henry VIII's accession, the narrative seems to suggest that Hawes had fallen into disfavour in courtly circles. It is again set in the form of a dream vision in which the dreamer laments his lost love. In his dream he (Amour) encounters Pucell (his love). A lengthy dialogue ensues which concludes with Pucell establishing that their love must be resolved by Venus and Fortune. The dreamer then awakes. The cryptically allusive texture of the poem suggests that its allegorical mode may conceal some autobiographical element. It has been speculated, on insubstantial grounds, that the poem refers to Hawes's relationship with the future queen Mary Tudor (Gluck and Morgan, 154).

The publication of Hawes's verse is unusual in some respects. It was all first published by one contemporary printer, Wynkyn De Worde. The relationship between printer and poet seems to have been unusual in its exclusivity and in De Worde's attention to the production of Hawes's poems. He seems to have executed woodcuts specifically for his editions of *The Example of Virtue* and *The Pastime of Pleasure* and to have sought a degree of careful integration of text and image that on occasions incorporates passages from Hawes's verse into the woodcuts.

Hawes's poems enjoyed some popularity in the sixteenth century. *The Pastime of Pleasure* was reprinted in 1517, 1554, and 1555, the *Example of Virtue* *c.*1520 and 1530, and *The Conversion of Swearers* in 1510, 1530, and 1551. The *Pastime* was probably an influence on Spenser's *Faerie Queene* and earned the approval of Thomas Warton, who praised Hawes as 'the restorer of invention' to English poetry (Warton, *Observations*, 2.105–6) and included a lengthy appreciation in his *History of English Poetry* (Warton, *History*, 3.43–71). William Hawes (1736–1808), by Pierre François Bertonnier (after A. Lefèvre)

Hawes, William (1736–1808), philanthropist and physician, was born on 28 November 1736 at the Thatched House tavern, midway between Astey's Row and Cross Street, Islington, the son of the landlord, Thomas Hawes. Educated first at John Shield's academy, Islington, he became a scholar at St Paul's School on 4 November 1748. After apprenticeship to Robert Carsan, a medical practitioner near Vauxhall, he assisted Mr Dicks in the Strand, shortly taking over his practice as apothecary and surgeon. In May 1759 he married Sarah Fox (1740–1814); their children were Harriot (*bap.* 1760), Sophia (*bap.* 1762), Thomas (*bap.* 1765), Sarah (*bap.* 1772), Sarah (*b.* 1773), William (*b.* 1774), Mary Ann (*b.* 1781), Mary Ann (*b.* 1782), and Benjamin (1770–1861). Benjamin, soap-boiler and philanthropist, married Ann Feltham in 1796; their sons, Benjamin *Hawes (1797–1862) and William (1805–1885), continued the family tradition of public service.

In 1773 Hawes attracted attention by his interest in resuscitating victims of apparent drowning and other causes of asphyxia. This project had been encouraged by a sporadic campaign in the *Gentleman's Magazine* since 1745, and was the subject of two pamphlets by Thomas Cogan and by Alexander Johnson (1716–1799), published in 1773, both of which recommended the establishment of institutions similar to the Amsterdam society for the resuscitation of the drowned, founded in 1767. At first, Hawes encountered much opposition and some ridicule from those who doubted the practicability of resuscitation. He put matters to the test by offering financial incentives to anyone who recovered persons from the water between Westminster and London bridges, within a reasonable time after immersion, and who then brought them to an appointed place where treatment could be provided, and let him know immediately. The response was enthusiastic: Hawes and other medical men were credited with saving many lives which would otherwise have been lost.

After a year Cogan warned Hawes that he was incurring excessive expense, and suggested they should form a public charity. Each man agreed to bring fifteen friends to an inaugural meeting. A setback threatened when Hawes's friend, Oliver Goldsmith, the most celebrated potential founder, died on 4 April 1774; his death was allegedly hastened by taking Dr James's powders, a proprietary remedy whose principal active ingredient was antimony. Acting as Goldsmith's apothecary, Hawes had supplied some of

the powders himself, though he strongly advised against their use. He defended his conduct, and exposed the dangers of rash self-medication, in *An Account of the Late Dr Goldsmith's Illness* (1774). The proposed meeting eventually took place at the Chapter Coffee House on 18 April 1774, and 'The Institution for affording immediate relief to persons apparently dead from drowning' was founded; this became the Humane Society in 1776, acquiring the prefix 'Royal' in 1787. It promoted research into the causes and treatment of asphyxia, disseminated information about resuscitation techniques, rewarded people who attempted rescues and resuscitations, recruited physicians and surgeons to act as unpaid medical assistants, and appointed receiving houses, including the Thatched House, which was conveniently situated near the New River.

Hawes became registrar in 1778, and treasurer in 1796, preparing reports from 1780 until his death as well as pocket-cards for emergency use, and organizing the annual festivals. An indefatigable publicist, he rose at five every morning to write numerous lengthy letters. He slipped pocket-cards into letters on unrelated matters, and frequently introduced the topic of resuscitation into private conversations. In numerous publications, including pseudonymous magazine articles, he applied the society's principles to every eventuality from still birth to premature burial, and appealed powerfully, though unsuccessfully, for government support. His *magnum opus* was *The Transactions of the Royal Humane Society* (1795), a rich source of information on resuscitative practice, which, however, contained no reference to Alexander Johnson; instead, he made the untenable claim that Cogan 'opened the door to the practice of resuscitation' in England. Hawes became a revered public figure, senior physician of the Surrey and London dispensaries, vice-president of the London Electrical Dispensary, and honorary member of humane societies from Bath, Manchester, and Edinburgh to Massachusetts.

Resuscitation was not, however, Hawes's only interest. His *Examination of the Rev. John Wesley's 'Primitive Physic'* (1776) condemned Wesley for dangerously misleading his readers, ridiculed his remedies, and cast doubt on his religious and personal probity. Resident in Palsgrave Place by 1778, Hawes received the degree of MD from Marischal College, Aberdeen, in 1779, and began to practise as a physician. In 1780 he republished some early works, announcing in the preface that 'I have made Quacks of all denominations my enemies: but what Medical Man of honour and reputation, would wish to be upon tolerable terms with the Murderers of the Human Race' (Hawes, *An Account*). In 1782 he moved to Great Eastcheap. Elected physician to the London Dispensary in 1785, he moved to Bury Street in 1786. In 1791 he moved to Spital Square; appalled by the poverty of local unemployed silk-weavers in 1793, he organized a campaign which saved 1200 families from destitution.

Hawes was an elder in Abraham Rees's Presbyterian church at St Thomas's, Southwark, but maintained Anglican affiliations. He fell ill and died at Spital Square on 5 December 1808 and was buried on 13 December in the cemetery near St Mary's Church, Islington. Those who knew him admired his undeviating friendship, cheerful society, and rational conviviality. Although his features were rugged and unsymmetrical, his expression was considered habitually benevolent. Contemporary assessments of Hawes as a guileless innocent who never made an enemy were excessively bland. He was, however, an energetic philanthropist, whose personal generosity equalled his institutional zeal.

Hawes, William (1785–1846), composer, born in London on 21 June 1785, was a pupil of Reginald Spofforth. He was a chorister of the Chapel Royal from 1795 to 1801, and a gentleman of the same chapel from 1805. In the interim he played the violin in the Covent Garden orchestra and also taught singing, and in 1803 served as deputy lay vicar at Westminster Abbey. He sang at Gloucester shortly after the festival of 1811. He was appointed master of the choristers at St Paul's Cathedral in 1812, and was one of the original associates of the Philharmonic Society on its foundation in 1813. On the death of Samuel Webbe in 1816, he competed (unsuccessfully) for the prize offered for the best setting of a memorial ode by William Linley. On 1 July 1817 Hawes was appointed master of the children of the Chapel Royal, in which post he became known as a harsh disciplinarian; in the same year he became lay vicar of Westminster, a position he retained until 1820. In 1818 he edited in score the great collection of English madrigals known as *The Triumphs of Oriana*, first published in 1601, prefixing an introduction and short biographies of the composers (see *Quarterly Musical Review*, 500–15).

Hawes later became associated with the Royal Harmonic Institution in the Argyll Rooms, Regent Street,

which operated as a kind of publishing company, but which ultimately failed, leaving Hawes and one other as the only representatives of the original promoters of the scheme. Hawes declared himself bankrupt and afterwards set up as a publisher in the Strand. In 1822 he tried to establish exclusive rights to one of twelve Scottish songs which he had edited and published, but the suit he brought against the proprietors of the *Gazette of Fashion* with this action was dismissed by the lord chancellor.

From 1804 Hawes had been increasingly involved with the theatre and adapted a number of continental operas, to which, according to the fashion of the day, he added his own musical interpolations. He gave much assistance to his intimate friend Samuel Arnold during the latter's management of the English Opera House at the Lyceum Theatre; in 1824 he was appointed musical director there, and the theatre became the venue for the staging of many of his adaptations. It is said that the production of Weber's *Der Freischütz* in July 1824 was mainly Hawes's doing, and he certainly wrote several songs which were interpolated in Weber's score. Other works arranged by him included Salieri's *Tarare* (1825), Weber's *Preciosa* (1825), Peter Winter's *Das unterbrochene Opferfest* (1826), Ferdinando Paer's *I fuorusciti* (1827), Mozart's *Così fan tutte* (1828) and *Don Giovanni* (1830), Ferdinand Ries's *Die Räuberbraut*, H. A. Marschner's *Der Vampyr* (1829), and Hérold's *Le pré aux clercs* (1833). Hawes also wrote several original operettas and songs for plays, a Requiem, and a monody on the death of Princess Charlotte (1817), and published some collections of glees, madrigals, and church music. His glee 'The bee, the golden daughter of the spring' won the prize at the Glee Club in 1836. In 1825 he directed a series of Lenten oratorios at Covent Garden, and in 1830 engaged in similar ventures at both the patent theatres. In 1828 he managed a festival in Brighton (29–31 October). He was for many years conductor of the Madrigal Society and organist of the Lutheran chapel of the Savoy. Hawes died at his home in Adelphi Terrace, London, on 18 February 1846.

His second daughter, **Maria Dowding Billington Hawes** (1816–1886), to whom Elizabeth Billington stood godmother, was a distinguished contralto, for whom Mendelssohn wrote the aria 'O rest in the Lord'. She was the principal contralto in the first performances of that composer's *Lobgesang* (23 September 1840) and *Elijah* (26 August 1846). She died at Ryde, Isle of Wight, on 24 April 1886; her husband, J. D. Merest, had predeceased her.

Wealth at death £875 14*s.* 10*d.*—Maria Hawes: probate, 12 June 1886, *CGPLA Eng. & Wales*

Hawford, Edward (*d.* 1582), college head, was the son of Thomas Hawford and Margaret Wade of Clipston, Northamptonshire. He was educated at Cambridge, graduating BA from Jesus College in 1542/3 and MA from Christ's in 1545. A fellow of the college from 1559 to 1582, Hawford was awarded his bachelor of theology degree in 1554 and his doctorate in 1564. He was appointed a university proctor in 1552/3 and served as vice-chancellor in the year 1563/4. He was rector of Glemsford, Suffolk, between 1553 and 1574. On 12 June 1554 he was instituted to two-thirds of the rectory of Clipston, and was reinstituted, possibly to the last third, on 8 February 1561; he also held the advowson of this living, which he bequeathed to Christ's College. In 1560 he acquired another rectory, that of Kegworth, Leicestershire, which he also held for life. In his will he provided for a preacher to give sermons at these three parishes. On 14 February 1560, on the death of William Collingwood, he was collated to the fifth prebend of Chester Cathedral, probably holding it until his death.

Hawford is chiefly remembered, however, for his university career, and especially for his mastership of Christ's College, Cambridge, between 1559 and 1582. He had been one of those members of the college who on 26 July 1555 signed the Catholic articles of subscription, to which was appended a 'detestation' of all heretics. However, Hawford was a mere fellow, and less compromised than many in the university hierarchy. On the accession of Elizabeth his business acumen and moderate church views found influential supporters, including Dr John Pory, who had the ear of William Cecil. Despite heavy government hints, the then master of Christ's, William Taylor, clung on for several months before decamping at the end of June 1559. On the recommendation of Cecil the fellows elected Hawford, one of their own number, as Taylor's successor and he was admitted as master on the following 23 July.

Hawford was not an enthusiast of the old religion, but a competent administrator, conservative in his general outlook, distrustful of religious enthusiasm in general. Probably his instincts were not far removed from those of the queen herself. In the summer of 1564 Elizabeth paid a royal visit to Cambridge, and it was to Hawford that Cecil wrote, on 12 July and 1 August 1564, committing the arrangements to his charge. Hawford was one of the four doctors who bore the canopy under which the queen entered the chapel of King's College on Saturday 5 August, and it was he who made the presentation to her of the traditional pair of gloves on the ninth. It seems, however, that Elizabeth tired of the elaborate efforts in her honour, and she left somewhat abruptly early the following morning.

From the first Hawford's commitment to the protestant cause was regarded with deep suspicion. In November 1570 Edward Dering wrote to Burghley that Hawford 'could not be brought to take away popish books nor garments without great importunity, and in the end all the best and richest he hath conveyed the fellows know not whither' (Strype, *Parker*, 2.175). It is likely that Hawford's motives were financial rather than religious: an early end to the Elizabethan settlement might restore the value of college treasures sold cheaply in haste. As the new establishment took root, however, the fellows increased their

pressure to jettison the relics of the old religion. Thus, in 1568:

> three chalices were sold to Mr Ringstede for £17 14, also certain 'chapel stuff'. In 1570 there was received £15 for copes, vestments, tunicles, and altar cloths; and 'Malton 71 Bell' with two great candelsticks and a cross, went for £4 19 9d. (Peile, *Christ's*, 72)

During Hawford's tenure Christ's became famous as the centre of Cambridge puritanism and a large proportion of fellows elected were eager for further reformation in religion. Hawford himself was strongly opposed to the puritan tendency. He was active against Thomas Cartwright in summer 1570 and was one of the nine heads who in December formally deprived him of his Lady Margaret professorship. The case was a catalyst for the redrafting by Whitgift of the university statutes in September. In this he enjoyed the active support of Hawford, who had just succeeded him as deputy vice-chancellor, and other college heads who favoured the 'bridling of the untamed affections of young regents' by curbing their powers of election (Peile, *Christ's*, 78). The new rules strengthened the powers of college masters, but were opposed by many of a puritan disposition, including Edward Dering. In a letter to Burghley he attacked the college heads who supported Whitgift as 'either enemies to God's gospel or so faint professors that they do little good in the church' (Strype, *Parker*, 2.175).

In 1579 Hawford was involved in a battle with another famous puritan, Hugh Broughton, who had been elected to a fellowship granted by Edward VI. Formally the case turned on the conflict between the terms of that grant and a statute of Christ's College. The statute, invoked by Hawford in order to exclude Broughton, proscribed the simultaneous tenure of college fellowships by more than one man of any given county. The grant of Edward VI provided otherwise for its own foundation. Broughton was able to point to a precedent case in support of the contention that this scholarship had been treated as exceptional. Despite his departure for the north-east, Broughton's cause aroused extraordinary rancour. The fellows split along party lines, the conservatively minded minority of four supporting Hawford, the puritan majority of eight siding with Broughton. Several appeals on his behalf were addressed to Lord Burghley, who made clear his sympathy with the disbarred fellow, but Hawford would not relent. In 1581 the case was remitted to Vice-Chancellor Perne and two college heads, who judged that the county restriction did not apply to the Edwardian fellowship. Hawford was told that, accordingly, Broughton should be readmitted, but this appears not to have happened.

Hawford's long tenure at Christ's and his good relationship with Cecil contributed to his prominence in university affairs. In the college the growing strength of puritan radicalism contributed to the growth of a party atmosphere which his policy in some cases exacerbated. Edward Hawford died on 14 February 1582, leaving £700 in the college treasury. His business skill helped restore the finances of Christ's, but it is not clear whether the growth in the number of its fellows is to be attributed to his administration or to the ideals and ideas of his puritan opponents. Haw-Haw, Lord. *See* Joyce, William Brooke (1906–1946).

Hawisa, *suo jure* countess of Aumale, and countess of Essex (*d.* 1213/14), noblewoman, was the child of *William le Gros, count of Aumale and sometime earl of York (*c.*1110–1179), and of Cecily de Rumilly (*d.* 1188x90?), daughter and coheir of William fitz Duncan and Alice de Rumilly. Her father's title was derived from Aumale, on the north-east border of Normandy; William also held the honour of Holderness in east Yorkshire, with lands in Lincolnshire and elsewhere. Although Hawisa had an illegitimate brother, Geoffrey, and may possibly have had a sister, Amice, she inherited all her father's lands, and also her mother's baronies of Skipton in Yorkshire and Copeland in Cumberland. Nothing is known of her birth and early years: she was unmarried at her father's death, and became a royal ward. Her marriage to William de *Mandeville, third earl of Essex, took place at the earl's castle of Pleshey in Essex on 14 January 1180. He occasionally used the title of count of Aumale until his death on 14 November 1189; the marriage was childless.

After the earl's death Richard I arranged for Hawisa to marry his Poitevin naval commander, William de Forz. The countess refused the match, and her goods were distrained until she capitulated. Before Michaelmas 1190 Hawisa travelled with Queen Eleanor in the royal galley to Normandy, and possibly to Sicily. It seems likely she married Forz at the end of 1190, as he was responsible for scutage from her lands at Michaelmas 1190. Forz died in 1195, leaving at least one son from this marriage, William de *Forz (*d.* 1241).

Hawisa's third husband was the household knight Baldwin de Béthune, an aristocrat of Flemish origin. One of the men captured with King Richard in 1192, he played a significant role in obtaining the release of the king, for whom he was a hostage. He married Hawisa at Sées in 1195. The only recorded child of this marriage, Alice, married William (II) *Marshal in 1214. Béthune died in the autumn of 1212, and was buried at Meaux Abbey.

After Béthune's death Hawisa made fine with King John, offering 5000 marks for her inheritance and dowers, and for not being forced to marry again. The large sum is easily explained, for she was one of the great Anglo-Norman landowners of the early thirteenth century, with castles at Aumale, Skipsea, Castle Bytham, and Skipton, and an important manor house at Burstwick in Holderness. The

constant warfare around Aumale seems to have resulted in her living mainly in England. That Richard of Devizes should have described her as 'a woman who was almost a man, lacking nothing virile except virility' (*Chronicon*, ed. Appleby, 10), underlines the impression conveyed by other sources of her independence and reluctance to marry. A lost story lies behind an entry on the pipe roll of 1209, that the bishop of Winchester owed a tun of good wine, because he did not remind the king to give a belt to the countess of Aumale. Recipients of her charters include her chief officer, Fulk de Oyry, her chamberlain, and her nurse: unusually, on two occasions she used women as witnesses.

Hawisa died in either 1213 or 1214, and probably before 8 March 1214, when it was ordered that the profits of her lands should be kept in the Temple, London. Her seal was vesica-shaped, and shows a woman (presumably Hawisa herself) in a long, pleated robe with a cloak. Her right hand is on her hip, and she carries a hawk with jesses on her left wrist. Four impressions of her seal survive, which suffice to show that, although she is styled countess of Aumale in all her surviving charters, until the end of her life she continued to use the seal of her first marriage, which carried the legend '† SIGILLUM.HAWIS.DE ALBEMARLA.COMITISSE.Essexe'. Hawke, Sir (John) Anthony (1869–1941), judge, was born on 7 June 1869 at Tolgulla, near Redruth, Cornwall, the second son of Edward Henry Hawke, merchant, and his wife, Emily Catherine, daughter of Captain Henry Wooldridge RN. He was educated at Merchant Taylors' School and at St John's College, Oxford, of which he was a scholar and from 1931 an honorary fellow. He gained a first in jurisprudence in 1891, and was called to the bar by the Middle Temple in 1892. In 1894 he married Winifred Edith Laura, daughter of Nicholas Henry Stevens, surgeon, of London; they had a son and a daughter.

Both in London and on the western circuit, where he was marked as a future judge and became a keen and deservedly popular figure, Hawke showed himself a vigorous and forceful advocate who, although a doughty opponent, never violated the good traditions of his profession. He took silk in 1913. Although his all-round practice did not involve him in many *causes célèbres*—perhaps the most notable was that inquiry in which he defended the cause of Miss Violet Douglas-Pennant in 1919—it was with universal approbation, both from the bar and from his fellow Cornishmen, that he was appointed a justice of the King's Bench Division by Lord Chancellor Cave, with a knighthood, in 1928.

Before this the closeness of Hawke's ties to his native county had appeared in his appointment as recorder of Plymouth in 1912, and in 1923 as attorney-general to the prince of Wales. That his affection for Cornwall was reciprocated was proved by his being returned twice to parliament: in 1922 and, after a defeat in 1923, in 1924 as a Conservative member for the traditionally Liberal constituency of St Ives. Although he addressed the house only occasionally, he appealed to his fellow Cornishmen not only by his frank and candid approach to local and national problems, but also by his diligence in serving the constituency to which he devoted all his vacations. He was president of the London Cornish Association for many years, and he saw the association grow from a comparatively small body to one of the largest and most active of the county associations.

On the bench Hawke showed himself industrious, conscientious, and essentially kindly, and he invariably maintained its dignity. In criminal trials he never overstrained the case against the prisoner, and his sentences were tempered with understanding and mercy. In the case of *Fender* v. *Mildmay* (1935), he was called on to decide whether a promise of marriage made between the decree *nisi* and absolute was void; he decided that it was. The decision was upheld in the Court of Appeal, but was reversed by three to two in the Lords. On more than one occasion, however, after reversal in the Court of Appeal, his judgments were restored by the House of Lords. He was elected treasurer of the Middle Temple in 1937. On 30 October 1941 Hawke was found dead in his bed at the judges' lodgings at Chelmsford. He was survived by his wife. His son, Sir (Edward) Anthony *Hawke, became recorder of London.

Hawke, Sir (Edward) Anthony (1895–1964), judge, was born in London on 26 July 1895, the son of Sir (John) Anthony *Hawke (1869–1941), judge, and his wife, Winifred Edith Laura, daughter of Nicholas Henry Stevens, surgeon. He had one sister. He was educated at Charterhouse School and in 1914 went to Magdalen College, Oxford. His undergraduate career was interrupted by the outbreak of the First World War, after which he did not return to Oxford. Instead he studied law and was called to the bar by the Middle Temple in 1920.

Hawke joined the western circuit and the Devon sessions. On 1 January 1931 he married Evelyn Audrey Lee Davies (1905/6–1977), a widow and the daughter of Major John Norman Meares; they had one daughter. As the years

passed his practice became more confined to the central criminal court, where he was junior prosecuting counsel in 1932, third senior prosecuting counsel in 1937, second senior prosecuting counsel in 1942, and senior prosecuting counsel from 1945 to 1950. Among the trials in which he prosecuted were those of the murderers Neville Heath and Daniel Raven and of the two men found guilty of the chalk-pit murder, one of whom was a former minister of justice in the government of New South Wales.

Hawke began to occupy official positions, holding the recordership of Bath from 1939 to 1950 and the deputy chairmanship of Hertfordshire quarter sessions from 1940 to 1950. He became a bencher of his inn in 1942 and in 1950 was appointed chairman of the county of London quarter sessions. In 1954 he was knighted and made common sergeant of the City of London. Held in high esteem, he could look forward to prospects of further promotion and indeed succeeded Sir Gerald Dodson as recorder of London in 1959, in which year also he became a member of the standing committee on criminal law revisions.

With such a background and experience of the criminal law Hawke was a successful and highly respected recorder whose gaiety, handsome and debonair appearance, and keen sense of humour made him a popular friend throughout and beyond the legal profession. One of the last cases to come before him at the Old Bailey (in December 1963) was that in which Christine Keeler was convicted of perjury. He showed himself, especially in the sentence that he imposed, to be possessed of a superb judicial temperament which enabled him to conduct the trial free from any consideration of events (concerning the accused) which caused considerable public and political concern for the security of the state—events which had occurred before the perjury and had led up to it.

In 1962 Hawke became treasurer of his inn. When in this capacity he exercised his right to nominate honorary benchers, he showed his interest in cricket by nominating Sir Learie Constantine, who thus became a valued and popular colleague of the other benchers of that inn. Hawke was also a keen golfer. As a master of the bench his qualities of kindness, wisdom, and humour endeared him to his fellows. He also added the weight of his authority, as editor, to the fifteenth edition of Roscoe's *Criminal Evidence*. Hawke died in Italy on 25 September 1964 while on holiday at Menaggio, Lake Como.

Hawke, Edward, first Baron Hawke (1705–1781), naval officer, was born in London, the only son of Edward Hawke (*d.* 1718), barrister of Lincoln's Inn, whose family was for many generations settled at Treriven in Cornwall. His mother was Elizabeth, daughter of Nathaniel Bladen of Hemsworth in Yorkshire, granddaughter of Sir William *Fairfax of Steenton, and sister of Colonel Martin *Bladen. It was on his uncle, Colonel Bladen, who was a commissioner of trade and plantations from 1717 to 1746,

Edward Hawke, first Baron Hawke (1705–1781), by Francis Cotes, *c.*1767–70

that Hawke depended for his early naval patronage. On his father's death in 1718 Hawke became his uncle's ward. He joined the navy on 10 February 1720, having been appointed by warrant a volunteer in the frigate *Seahorse* (20 guns; Captain Thomas Durell).

Early career A superfluity of officers from the War of the Spanish Succession, together with a lack of very powerful connections, permitted Hawke's career to advance at only a modest pace. Having served as a midshipman, he passed for lieutenant in Galleons Reach on 2 June 1725. From that date onwards he was in the *Kinsale* (40 guns) on the west African coast as well as in the West Indies, where he had been in the *Seahorse*. He was apparently unemployed from 12 July 1727 until he was at last commissioned on 11 April 1729 as third lieutenant of the *Portland* (50 guns). Of special interest is the month that he then spent, from 25 November 1729, in the *Leopard* (50 guns) commanded by Captain Peter Warren who would rise by 1747 to command the western squadron and recommend Hawke as his relief. After a spell on half pay from January 1730 to May 1731, Hawke was in the *Edinburgh* (64 guns) with Admiral Wager's fleet which suffered severe storm damage in the Bay of Biscay during November and December 1731. From January 1732 he was again with Captain Durell on the North American station. Then comes a crucial sequence, plausibly attributed to Colonel Bladen's influence. Hawke was sent to Jamaica to be first lieutenant of the *Kingston* (60 guns), the flagship of Commodore Sir Chaloner Ogle. The fearsome toll of disease on the station enabled Hawke's new patron to promote him master and commander of the *Wolf* (10 guns) on 13 April 1733 and, on 20 March 1734,

to post him captain of the frigate *Flamborough* (24 guns). She paid off in England in September 1735. Hawke then remained on half pay until war with Spain opportunely threatened in 1739.

On 3 October 1737 Hawke, aged thirty-two, had married Colonel Bladen's seventeen-year-old niece, Catharine Brooke (1719/20–1756). The marriage proved a happy one and Hawke was an affectionate father to their three sons and one daughter; three other children died in infancy. On 30 July 1739 Hawke commissioned the *Portland* (50 guns) and was sent again to protect trade in the West Indies. On this occasion his wife went out to be with him when he was in Barbados. As ever, the main problems were health aboard ship and seasonally tempestuous weather—excellent, if stressful, preparation for future campaigns in the Bay of Biscay. Hawke's own constitution proved strong. On 17 March 1743 the storm-damaged *Portland* paid off at Longreach in the Thames.

Colonel Bladen's friendship with Admiral Cavendish, a lord commissioner, underlay Hawke's appointment to a new ship, the *Berwick* (70 guns). Taking command at Deptford on 14 June 1743, he had difficulty in manning her. He told the Admiralty that he had had to take 'very little, weakly, puny fellows' who had 'never been at sea, and can be of little or no service' (Mackay, *Admiral Hawke*, 20). The Admiralty waxed impatient but it was not until 24 September that Hawke could sail to join Admiral Thomas Mathews's fleet in the Mediterranean. Not only did his men need much training; they also fell sick in numbers. Nearly half of the complement of about 500 was sent ashore to the hospital at Mahon. On 11 January Hawke finally joined Mathews off Toulon.

The battle of Toulon, 1744 When, on 9 February 1744, a Franco-Spanish fleet slowly emerged from Toulon, Mathews knew that France had now joined Spain as a belligerent power. He had an apparent equality of force and it was his duty to attack. What ensued on 11 February was a notorious fiasco, due partly to Mathews's poor relations with his second-in-command, Richard Lestock, and especially to his own tactical error in the matter of signals. He had the initiative, being to windward of the allies as they sailed slowly southwards with a light breeze at east-north-east, but found that his line of battle lagged behind that of the allies. It is evident that, when bearing down to attack, Mathews should have struck his signal for the line at the moment when he hoisted that to engage. Although Mathews and his seconds became quite closely engaged, most of his fleet did not, on account of the enemy's evasive tactics. Hawke, however, saw from his station in the van division that enemy ships were edging away from the fire of the British centre. He boldly decided on his own initiative, much as Nelson later did at Cape St Vincent, to leave the line and attack the Spanish *Poder* (60 guns) which was escaping from Mathews's aligned group. Not only did Hawke manage to get to leeward of the *Poder*; he fought her for over an hour, closing to pistol shot (a range of less than 50 yards). After suffering heavy casualties, the *Poder* struck to the *Berwick*. The rate of fire achieved by Hawke with so unpromising a ship's company is shown by the *Poder*'s having about 200 dead or wounded against only six wounded in the *Berwick*, even allowing for some Spanish losses before Hawke's intervention. Hawke's moral courage and good tactical judgement were fully appreciated later by Lord St Vincent.

No prize money was forthcoming from this feat of arms because the *Poder* was recaptured by the French and finally burnt by a British pursuer, much to Hawke's understandable annoyance. However, during the subsequent eighteen months Hawke gained valuable experience in the Mediterranean through being detached as commodore in command of squadrons consisting respectively of seven, eight, and six ships. Having finally shifted into the *Neptune*, he brought a convoy into Plymouth on 20 September 1745. He was then kept available to testify at the successive courts martial which dissected the British performance at the battle of Toulon. Meanwhile the death of Colonel Bladen in 1746 removed his sole political backer. However, although Hawke testified only at the trial of Robert Pett, the evidence relating to his own conduct much impressed George II. The king's support now proved timely in ensuring the survival of Hawke's naval career. Under an important new 'yellow admiral' scheme devised by Vice-Admiral George Anson, the Admiralty was keen to force Hawke's retirement and to promote to rear-admiral three senior captains of stronger political background. However, the king refused to allow Hawke to be 'yellowed' (retired with the rank of rear-admiral). Having already on 30 March 1747 been appointed to command the *Mars* (64 guns) at Plymouth, Hawke was promoted on 15 July to rear-admiral of the white and was ordered on 17 July to take command of the port.

The second battle of Cape Finisterre, 14 October 1747 Hawke's career as an admiral was much influenced by Anson's victory over the French at the first battle of Cape Finisterre in May 1747. This featured effective, if somewhat cautious, use of a general chase to defeat the much inferior, though important, escort of an outward-bound French convoy. Anson, who had strong political connections, was made a baron. He was also enriched by the exceptional resulting prize money. Hawke was soon to benefit from Anson's work, dating from August 1746, in raising the efficiency of the western squadron.

On 3 August 1747 Vice-Admiral Peter Warren (Hawke's commander in 1729), who had succeeded Anson in the chief seagoing command, came unexpectedly into Plymouth in the *Yarmouth*, suffering from scurvy. Warren's recommendation that Hawke should relieve him prevailed, despite concerns raised by Anson at the Admiralty about Hawke's junior status as an admiral. As Warren's second-in-command, Hawke was ordered to report to him, presumably at Portsmouth—an arrangement that eventually proved unworkable. Warren supplied Hawke with all the instructions which he had received from Anson, including a set of Anson's additional fighting instructions. These, annexed to the general printed fighting instructions, were duly distributed over Hawke's name to all his ships, but he was not, as sometimes supposed, their originator.

On 9 August Hawke hoisted his flag at Plymouth in the *Windsor* (60 guns). By 12 August he was off Ushant where he found four ships of the line. His instructions were to cruise between the latitudes of Belle Île and Ushant, keeping about 100 miles west of Ushant. Although he could, and did, go down to Cape Finisterre, the only connection between that Cape and Hawke's forthcoming battle, fought about 200 miles west of Ushant, is that it took place almost in Cape Finisterre's meridian.

Hawke's squadron was progressively reinforced until it consisted of fourteen of the line. Accumulated intelligence indicated that a large convoy would soon come out from La Rochelle, and Hawke prepared for battle. On 27 September he shifted his flag to his most powerful ship, the *Devonshire* (66 guns). Dignified but affable, he made himself accessible to his captains. From their performance on 14 October, it may be inferred that he effectively communicated his basic principle—already exemplified by his own conduct off Toulon—that every captain should aim to engage at pistol shot. Otherwise, as in 1759, he was ready to signal for a general chase in order to close quickly, make maximum use of daylight, and achieve a concentration on the enemy's rear.

At 7 a.m. on 14 October enemy ships were sighted. Hawke immediately signalled a general chase. He was to leeward of the French and it took over four hours to catch up with them. At 10 a.m., to concentrate his force, Hawke signalled for a line of battle ahead. Captain Thomas Fox signalled that the French had twelve large ships. The breeze was moderate at south-east by south and the French convoy of about 150 vessels was seen crowding away westwards, covered by its escort which formed a close-hauled line of battle standing south-west. Contrasting somewhat with Anson's more cautious approach on 3 May, Hawke, at 11 a.m., hauled down the line signal and substituted that for a general chase. This he left flying until the end of the day. The enemy turned out to have only eight ships of the line, but five of them carried more guns and had larger complements than the *Devonshire*.

Hawke's insistence on very close action can be traced in the records. At 11.30 a.m. he deemed his leading ships to be 'within a proper distance' and signalled to engage (Mackay, *Hawke Papers*, 51). Almost immediately Captain Charles Watson 'got within pistol shot of the enemy's sternmost ship of 70 guns' and *then* opened fire. 'The Monmouth', Watson continued, 'came up and seconded me with great bravery, and as I found the rest of our ships were coming up, I stretched ahead to engage the other ships' (captain's log, *Princess Louisa*, 14 Oct 1747). Henry Harrison of the weatherly *Monmouth* (like Watson, John Bentley, and Philip Saumarez) had not been able to engage during Anson's battle. On 14 October Harrison got to windward of the French and gave good measure. Meanwhile George Rodney in his turn engaged the *Neptune* at 'pistol shot' (Mackay, *Hawke Papers*, 73). None of Hawke's ships was as powerful as the *Monarque* (74 guns), the *Terrible* (74 guns), or the *Neptune* (70 guns), yet all three were battered into submission. The mighty *Tonnant* (80 guns), together with the *Intrépide* (74 guns) finally escaped the pursuit, well after dark, of Saumarez (who was killed) and Charles Saunders. After fighting various ships the *Terrible*, the *Trident* (64 guns), and the *Severn* (50 guns) all finally struck to the *Devonshire*. The *Fougueux* (64 guns) was also taken.

On 29 October the six severely damaged prizes were triumphantly carried under jury masts into Portsmouth harbour. The French navy had lost some 4000 seamen—a crippling blow. Hawke's conclusive victory was marked by the admirable conduct of his captains. Pointedly several of them complained that Captain Fox had not engaged closely enough and he had to face a court martial. As for Hawke, he became a knight of the Bath and an MP for Portsmouth, also receiving a share of prize money. Suddenly he was a person of some consequence, though still quite weak politically.

In 1748, from April to July, Hawke cruised under Warren's command in the Spanish approaches, being promoted in May vice-admiral of the blue. Enemy shipping, whether French or Spanish, was notably absent. After peace was concluded in October Hawke commanded at Portsmouth until 1752 when he went on half pay. In February 1755 he was recalled to the Portsmouth command. Having seen two squadrons fitted, he himself cruised in the Bay of Biscay before France formally declared war on Britain in May 1756. The Seven Years' War had begun.

Minorca, Rochefort, and the Basque Roads, 1756–1758 After a month's leave Hawke, now a vice-admiral of the white, was recalled to make good the impending loss of Minorca. With Rear-Admiral Charles Saunders he was sent, as the wits said, to hearten the Mediterranean Fleet with a 'little cargo of courage'. On 2 July Hawke arrived at Gibraltar and superseded Admiral John Byng who was sent home under arrest to be tried for his conduct off Minorca. Hawke hoisted his flag in the *Ramillies* (90 guns) and hurried to sea. Despite his own best endeavours, however, he could do nothing to recover the island from the French invaders to whom the British garrison had surrendered on 27 June. Augustus Hervey, a spirited captain attached to Byng, served with Hawke for some months. In his entertaining, if tendentious, *Journal* he points accurately to a certain naïveté in Hawke's character in his acquisition, dating from 1747, of one John Hay: 'a damned interested Scotch secretary with whom Sir Edward was ever cursed', who 'had the impudence to show his ascendancy over the Admiral to the whole fleet' (*Hervey's Journal*, 217, 220). Until 1762 Hay (formerly a purser) remained an abiding, if usually minor, nuisance in Hawke's flagships. Meanwhile a great personal misfortune had befallen the admiral with the death of his wife, Catharine, at Lymington on 29 October 1756.

On arriving back at Portsmouth on 14 January 1757, Hawke applied for leave to re-establish his health. 'Since my embarking', he wrote, 'I have never slept one night out of the ship, or scarce ever set my foot on shore' (Mackay, *Hawke Papers*, 145). Hawke soon went to The Grange in Swaythling, near Southampton, where he had settled his family.

From July to October 1757 Hawke commanded the naval

side of the expedition intended to capture Rochefort. Writing after 1766 (when hoping to see Hawke dislodged from the Admiralty) Hervey noted that he had, in 1757, anticipated the 'miscarriage' as he 'had much experience' of Hawke's 'not having a head to conduct an expedition, however much he certainly had a heart to gain an engagement' (*Hervey's Journal*, 262). Even if William Pitt, the originator of the expedition, was also inclined to mete out to Hawke a share of blame for the failure, the facts of the case do not support such criticism. The question is whether, having conducted fifty transports safely to the Basque Roads under cover of sixteen of the line and other warships, Hawke was to blame when the soldiers, commanded by Sir John Mordaunt, despite every assistance from the navy, refused to land. On arriving in the Basque Roads Hawke (now an admiral of the blue) agreed with Mordaunt that the first step must be to capture the fortified island of Aix. On 23 September this was accomplished, on Hawke's orders to Vice-Admiral Charles Knowles, by Captain Richard Howe of the *Magnanime* (74 guns). As Hawke afterwards reported, Howe intrepidly 'brought up within less than forty yards of the fort, where he kept up an incessant fire for about thirty-five minutes ... About three-quarters after one ... the garrison ... surrendered' (Mackay, *Hawke Papers*, 177). But nothing that the navy could do, or Hawke could reasonably propose, sufficed on 29 September, with all preparations made, to persuade Mordaunt to go ahead and land his troops.

On 8 October the fleet returned to Portsmouth and a derisive welcome. At court the king gave an appropriately good reception to Hawke and an indifferent one to Mordaunt, who soon had to face a court martial. On 22 October Hawke sailed again with Vice-Admiral Edward Boscawen, then a lord of the Admiralty, as his second-in-command, but boisterous weather prevented him from intercepting a French squadron returning from Louisbourg. However, he had, on 21 October, issued to his squadron copies of the general printed fighting instructions containing a remarkable amendment whereby he ordered his captains 'on no account to fire until they shall be within pistol shot' (Mackay, *Admiral Hawke*, 181). This highly aggressive order applied to any form of engagement.

March 1758 found Hawke sailing with a sense of grievance. Lacking frigates, fireships, or bomb vessels, he was nevertheless ordered, with six ships of the line, to attack a convoy assembling in the Basque Roads for the relief of Louisbourg. The French evaded destruction by precipitate lightening of warships and beaching of merchant ships. However, their plan was completely disrupted and Louisbourg duly fell to Boscawen. Two months later, influenced by his secretary, the execrable Hay, Hawke unfortunately took it as an affront when the Admiralty ordered him at Portsmouth to equip Commodore Richard Howe, apparently for an attack on Rochefort, a place about which Hawke remained sensitive. In fact, the undisclosed target was St Malo. On 10 May, believing that his honour was at stake, Hawke committed a serious act of indiscipline by striking his flag at Portsmouth. The situation was regularized by Anson's (then first lord) taking over the command in chief and sailing with Hawke as his second-in-command.

The blockade of Brest, 1759 In the spring of 1759 it seemed that the French fleet at Brest was preparing to escort an invasion force to the British Isles. It is a measure of Hawke's indispensability that he was now restored to the chief seagoing command. At Spithead on 14 May he again issued his order (dating from 21 October 1757) that ships were not to fire until within pistol shot. On 20 May, with his flag again in the *Ramillies*, he sailed from Torbay with twenty-five ships of the line, four 50-gun cruisers, nine frigates, and a fireship. The Admiralty envisaged the possibility of a prolonged blockade. Hawke was to station his battle fleet near Ushant and detach some of his smaller ships to intercept seaborne supplies bound for Brest or Rochefort. During the next six months the blockade of Brest was the key to British grand strategy and to the future of Canada and India.

By 24 May Hawke was off Ushant and by 27 May he had stationed Captain Robert Duff to keep a continuous inshore watch on Brest. When, early in June, westerly gales drove Hawke back to Torbay, he left Duff's light squadron to find shelter near Brest and report the course and number of any French ships emerging on a change of wind. The Admiralty, recognizing that so large a fleet could more easily shelter in Torbay than in Plymouth, made great efforts to replenish the fleet there. Likewise the subsequent victualling of the fleet at sea was a notable achievement. Having got back to sea, Hawke had barely reached the Lizard when a violent storm drove him back into Torbay with many damaged ships. He finally sailed on 19 June and was much relieved on 21 June to find Duff on watch and the French still in port. During the following four months Hawke settled down to a systematic close blockade. This entailed the constant readiness of the battle fleet to move in and support the inshore squadron if any large French warships stirred. Meanwhile, before leaving Torbay, Hawke had informed Augustus Hervey that he intended to put him in command of a strengthened inshore squadron, and this he did on 3 July. Hawke's selection of Hervey for this important role, like his earlier choice of Duff, proved well founded. Until forced in early November, by the state both of his ship, the *Monmouth*, and of his health, to go into port, Hervey showed great imagination, courage, and enterprise.

Besides avoiding the danger presented by a rocky lee shore, Hawke's main concerns were the health and morale of his men, the exercising of the fleet and regular gunnery drills, the victualling of the fleet, and the system whereby his ships were relieved and cleaned in port. As originally intimated by the Admiralty, he had to detach most of his lighter ships, either singly or in groups, to collect intelligence (largely from neutral vessels), to blockade such subsidiary ports as Lorient and Port Louis, and to seal off the narrow channels whereby coastal craft might slip into Brest. Duff was at first employed on this last-mentioned task, but in September Hawke sent him to take command of the light squadron in Quiberon Bay, in the

northerly recesses of which the French transports had collected, ready to embark an army of invasion. The army was quartered at Auray and Vannes; the transports lay within the entrance to the Auray estuary and the Gulf of Morbihan. From Duff's ships in Quiberon Bay hundreds of masts could be seen.

In September the news of Boscawen's victory off Lagos relieved Hawke from the possibility of French warships coming round from Toulon. By mid-October, however, the weather finally began to loosen Hawke's blockade; yet his fleet was ready for the crisis to come. As the naval physician James Lind observed, Hawke's ships were enjoying 'a most perfect and unparalleled state of health'. That 14,000 men could, in cramped conditions, be kept for six months in better fettle than 'on the most healthful spot of ground in the world' was indeed an extraordinary and crucial achievement (Lloyd, 121).

The battle of Quiberon Bay, 20 November 1759 In mid-October Hawke in the *Ramillies* was again, with most of the fleet, forced by westerly gales to seek refuge—this time in Plymouth. After hasty replenishment he was relieved on 19 October to find Hervey's three ships still on station. The French fleet at Brest had not stirred. Hervey, however, was now suffering from gout in both feet and, with the *Monmouth* leaking badly, he soon had to be sent into port. On 5 November Hawke was informed that the French admiral, Hubert de Brienne, comte de Conflans, had been ordered to sail at the first opportunity, but a great westerly gale arose and by 9 November Hawke had to bear up for Torbay. Even the inshore squadron had to follow him in. The *Ramillies*, Hawke's flagship since July 1756, had become unseaworthy. He therefore on 14 November shifted his flag to the *Royal George* (100 guns), commanded by Captain John Campbell, without fuss or discernible loss of efficiency.

Meanwhile on 7 November Conflans had received a welcome reinforcement of experienced seamen from Bompart's squadron which, returning from the West Indies, was blown into Brest. On 14 November Conflans sailed for Quiberon Bay with twenty-one of the line. He was 200 miles ahead of Hawke, with only 120 miles to go. However, for the next five days the winds, often strong, proved contrary and Hawke's fleet derived critical advantage from its superior seamanship, perfected by the rigours of the long blockade. Moreover, the morale and health of the fleet exceeded reasonable expectation. Having been, on 15 November only about 30 miles from Belle Île, Conflans was even closer to it by dawn on 20 November—unaware that Hawke, with twenty-three of the line, was nearby to the north-west. With the wind now westerly, Hawke brought to before 7 a.m., calculating that he would find the French near Belle Île at first light. At 8.30 a.m. one of Hawke's frigates sighted ships to the east. Conflans meanwhile began chasing Duff's frigates which had, thanks to a warning, escaped from Quiberon Bay.

At 9.45 a.m. Howe's *Magnanime* confirmed that it was an enemy fleet that was coming into view ahead. Hawke soon afterwards hoisted the signal for a general chase. This, despite the mounting dangers, he resolutely kept flying throughout the day. A strengthening north-westerly gale, soon reaching about 40 knots, was combining with unfamiliar rocks and shoals to produce a setting for a battle unique in the days of sail. By firing three guns Hawke implemented an article of Anson's additional fighting instructions whereby the seven leading ships formed a line ahead as they chased. As on 14 October 1747, the leaders would attack the enemy's rear ships and then stretch ahead as other ships came up.

Despite the gales, Hawke's ships carried a great crowd of sail—even topgallant sails were set by the *Royal George* and the *Magnanime*. Meanwhile Conflans, surprised by sightings of Hawke's fleet, stopped chasing Duff's ships, but he lost precious time in forming a single line with his flagship, the *Soleil Royal* (90 guns), at its head. It was not until he had rather slowly, by 2 p.m., got round the Cardinals Rocks into Quiberon Bay that he appreciated the speed and astonishing purpose of Hawke's pursuit, namely to follow him in. With hard gales blowing from west-north-west and all sails set, the estimated speed of the *Royal George* was 8 knots. Meanwhile the French in the bay steered close-hauled in a disorderly line to the north-east. At 2.45 p.m., on seeing his headmost ships coming into action, Hawke hoisted the red flag to confirm an engagement. A heavy northerly squall was experienced at 3.17 p.m., after which the gales blew from north-west. Conflans feared that tacking up towards the Morbihan might now prove impractical.

By 3.55 p.m. Hawke himself had got round the Cardinals and he soon knew that the *Formidable* (80 guns), the flagship of the French rear division, had surrendered. The closeness and persistence of the British fire had left her 'pierced like a cullender' (Marcus, 152). As his ships progressed up the disordered French line Hawke gathered that the *Thésée* (74 guns), while returning the fire of Augustus Keppel's *Torbay* (74 guns), had foundered. Despite the dangerous conditions, Keppel's boats rescued twenty-nine survivors.

Frustrated by the northerly veering of the gales Conflans, with a dozen following ships, could be seen heading back towards the entrance. Tradition has it that Hawke commended the flagship's master for reminding him of the hidden dangers, and then reiterated 'Lay me alongside the French admiral!' (Mackay, *Admiral Hawke*, 247). Effectively the French were acting as trustworthy pilots.

Hawke swiftly converged on the *Superbe* (70 guns) and fired two broadsides whereupon, at 4.41 p.m., she abruptly sank—a remarkable testimony to the closeness and ferocity of his onslaught. He then tried to rake the *Soleil Royal*. The *Intrépide* bravely intervened but Conflans was forced far to leeward. By 5 p.m. it was dusk and Conflans could no longer weather the Four Shoal and escape from the bay. Hawke and most of the fleet anchored for the night between Dumet Island and the Cardinals. Meanwhile some French ships had weathered the Shoal and run out to sea. Eight of the line reached Rochefort. Otherwise Conflans's fleet was annihilated. The *Soleil Royal* and the *Héros* were burnt next day on the rocks near Croisic. The *Juste* was wrecked near the mouth of the Loire and the *Inflexible* foundered on the bar of the Vilaine, within which

six ships of the line were imprisoned. Altogether seven, as mentioned, had been destroyed or captured. Meanwhile two of Hawke's ships were lost on the Four Shoal. He afterwards commented: 'Had we but two hours more daylight, the whole had been totally destroyed or taken' (Mackay, *Hawke Papers*, 347). As it was, he had ensured unchallenged British maritime predominance over France until the war ended in 1763.

Hawke henceforth based his blockade of the Biscay ports on a sheltered anchorage in Quiberon Bay. In miserable weather and with supplies curtailed, he himself remained there until 11 January. As the sailors' doggerel ran: 'Ere Hawke did bang Mounseer Conflans, You sent us beef and beer. Now Mounseer's beat, We've nought to eat, Since you have nought to fear' (*DNB*).

On 21 January 1760 Hawke was given a flattering reception by the king and, on 28 January, the thanks of the House of Commons. He was granted a pension of £2000 a year for two lives but, on account of his continuing political isolation, no peerage. In February Hawke was shocked by news that the *Ramillies*, manned by many who had served with him, had been wrecked on Bolt Head. More than 700 lives were lost. He promptly acted very much in character by entreating the Admiralty to provide for the widows of four warrant officers 'left destitute of everything' and for the widow of his former flag-captain, Witteronge Taylor (Mackay, *Admiral Hawke*, 265).

Hawke again commanded in chief in Quiberon Bay from August 1760 to March 1761. He investigated the defences of Belle Île (subsequently captured in the summer of 1761). On board the *Royal George* during 1760 and 1761 was Lieutenant William Locker (later Nelson's mentor) who noted the admiral's 'manly decision' and civilizing influence. 'He was a strict but temperate disciplinarian—affable rather than familiar with his officers' (Mackay, *Admiral Hawke*, 278). During a final cruise between April and September 1762 Hawke derived benefit from the capture of some valuable Spanish prizes.

Hawke's tactical contribution Hawke's use of a general chase in October 1747 and November 1759 has tended to categorize him as a tactician. Under sail no other tactical approach brought on an engagement more expeditiously. Moreover if, as usual, the enemy formed a single line of battle, the chase would probably ensure a concentration of power against the enemy's rear ships. Hawke clearly assumed superior British seamanship and gunnery. His reliance on very few signals limited the likelihood of confusion.

Less noticed has been his doctrine, demonstrated in action on 14 October 1747 and explicitly formulated in his amendment of 21 October 1757, which was reissued on 14 May 1759, that his captains were 'on no account to fire until they shall be within pistol shot'. This handwritten amendment (applicable to line or chase engagements) radically transformed the unaggressive tendency of article 13 of the general printed fighting instructions (copies of which were supplied unaltered—though open to amendment—during most of the eighteenth century to commanders-in-chief when asked for). At Quiberon Bay the weather prevented some captains from achieving this maximum of aggression, but the *Formidable*, *Superbe*, and other French ships certainly experienced it. No other admiral seems to have emulated Hawke's explicit order but its essence was certainly transmitted to his successors, culminating with Nelson. Captain William Locker was brought up in the Seven Years' War as a young officer by Hawke and (as already indicated) much admired him. After the battle of the Nile Nelson wrote on 9 February 1799 to Locker: 'I have been your scholar ... It is you who always said "Lay a Frenchman close and you will beat him"' (*DNB*). Hawke finally, on 16 July 1759, issued an emphatic additional instruction to ensure close engagement by every ship if he had to fight in a line of battle. But his preference for the chase, whenever circumstances permitted, is clearly demonstrated in his two great, yet contrasting, victories.

First lord of the Admiralty When Anson returned to the Admiralty in 1757 he wished to have Hawke as a member of his board, but Hawke's lack of political weight counted against him. For the same reason, when it was rumoured on Anson's death in 1762 that Hawke would succeed him as first lord, he failed to do so. It was only in 1766 that Lord Chatham, faced with politically motivated resignations from the Admiralty, turned belatedly to Hawke. On 11 December 1766 he became first lord. Nicholas Rodger's researches have reinforced much that was supposed about Hawke's tenure at the Admiralty. On the one hand, as a naval officer, he was, like Anson, better placed than a career politician to resist political encroachment on naval patronage; and it is also clear that he sustained a rate of shipbuilding which compares well with that achieved by Lord Sandwich, who succeeded him in 1771. On the other hand, by the late 1760s Hawke lacked the comparative youth and vigour offered by Sandwich, together with Sandwich's proven talent for initiating and effecting administrative reform.

On 15 January 1768 Hawke succeeded Sir William Rowley as the one and only admiral of the fleet. Meanwhile he attended conscientiously at the board, presiding at 118 out of 131 meetings in 1767, 126 out of 144 in 1768, 118 out of 146 in 1769, and 156 out of 186 in 1770, despite worsening health. In general his record of health while at sea had been very good, but from 1763 he had suffered increasingly from a painful urinary complaint, common among seamen, called the gravel.

While Hawke's board transacted its business with humanity and good sense, being always open to suggestions of technical improvement, the war scare of 1770 over the Falkland Islands revealed the unreadiness of several guardships. These had been rotting internally as they lay in the navy's contingency reserve, partly due to their having been hastily built of unseasoned timber during the Seven Years' War. After Hawke's retirement through ill health in January 1771, Sandwich managed to tighten the Admiralty's administrative control and improve the

navy's readiness for war, as Hawke was, in 1778, generous enough to intimate to George III.

Later years After retiring in 1762 from seagoing service, Hawke lived comfortably at Sunbury, while from 1770 his eldest son and heir, Martin Bladen Hawke (1744–1805), lived in a house owned by the admiral in Bloomsbury Square. Hawke's own household continued, somewhat as in his wife's time, to be run by one Sally Birt. In 1770 Martin (a qualified barrister) married Cassandra, youngest daughter of Sir Edward Turner, and they soon had a daughter, followed by a son and heir, much to Hawke's pleasure and satisfaction. In 1773 his second son, Edward, a lieutenant-colonel aged twenty-seven, was, to Hawke's great distress, killed in a hunting accident.

On 20 May 1776 the admiral was at last elevated to the peerage as Baron Hawke of Towton in Yorkshire, where he had inherited property from his wife. Meanwhile Hawke's daughter Catharine lived at home, apparently often unwell. In 1777 his third son Chaloner, a wild young man and a spendthrift, was killed while riding recklessly. Hawke himself died at Sunbury on 17 October 1781 and was buried near his wife in the church of St Nicolas at North Stoneham, near Swaythling, on 31 October. His surviving son, Martin, succeeded him as second Baron Hawke.

Tall, dignified, unostentatious, affable, Hawke was a committed Christian and a civilizing influence on the navy. Inspiring through example and timely word, he was a firm but humane disciplinarian, consistently concerned for the welfare of his officers, men, and their families. Like many contemporaries, he was sensitive on points of honour. His simplicity, straightforwardness, and common sense served him well at sea, but less well as first lord.

Hawke's resolute, but finely judged, acceptance of risks, especially at Quiberon Bay, left a deep impression on his naval successors. His proto-Nelsonic stature as the winner of two conclusive victories has been recognized by British and French historians (especially Georges Lacour-Gayet). However, though a fair amount has been published about Hawke since Montagu Burrows's original biography of 1883, he has not been well remembered by the general public. His undemonstrative character and unsensational private life have not endowed him with universal appeal.

Hawke, Martin Bladen, seventh Baron Hawke (1860–1938), cricketer, was born at the rectory, Willingham, Lincolnshire, on 16 August 1860, the second and eldest surviving son of Edward Henry Julius Hawke (1815–1887) and his wife, Jane (*d.* 1915), third daughter of Henry Dowker of Laysthorpe, Yorkshire. His father, who was rector of Willingham from 1854 to 1875, succeeded as sixth Baron Hawke in 1870. His great-great-grandfather was Edward Hawke, first Baron Hawke, the celebrated admiral.

Hawke's first school was at Newark, where the headmaster, the Revd Herbert Plater, forbade him to bat left-handed. Thereafter, Hawke, who was naturally left-handed as a child, would bat right-handed. In later life he played billiards left-handed and put his gun to his left shoulder. When he was ten Hawke was sent to St Michael's, Aldin House, Slough, then a preparatory school for Eton College, which he attended from 1874 to 1879. Hawke was tall and strong for his age, and although a moderate scholar he became a superb all-round athlete at Eton. In the winter he concentrated on running, sprints up to the quarter-mile, and the field game, the Eton version of football. In the summer he played cricket. An erratic, hard-hitting batsman with a disregard for personal injury, he gained his cricket colours in 1878, playing against Harrow that season, and again in 1879.

After Eton Hawke's father sent him to a private tutor for two years. This decision, made on both scholastic and financial grounds, in no small measure changed the course of his life. During his time at Eton, Hawke and his father were frequent companions. The enforced interregnum enabled Hawke to throw himself into country pursuits. He also regularly turned out for the Yorkshire gentlemen's cricket club, bringing him to the attention of the committee of the Yorkshire County Cricket Club. In the late summer of 1881 he was invited to make his début for the county club, in two matches at the Scarborough festival. Both matches were lost but he had begun a lifelong connection with the Yorkshire club with which his name will always be associated.

Hawke went up to Magdalene College, Cambridge, in the autumn of 1881 and entered swiftly into the university cricket eleven; he won blues in 1882, 1883, and 1885. At Cambridge he was planning a military career, and in 1884 his militia duties impinged upon his cricket to the extent

Martin Bladen Hawke, seventh Baron Hawke (1860–1938), by Elliott & Fry, pubd 1904

that they cost him his place in the side against Oxford. The following year he returned to captain the Cambridge side to victory.

Hawke might have captained Yorkshire in 1882, but wisely he declined the opportunity, preferring to extend his apprenticeship by another year. While the county club boasted several of the finest professional cricketers of the age, the eleven lacked collective discipline and had never fulfilled their potential. The problem was partly on the field, partly in a committee room entirely dominated by the unrepresentative Sheffield districts. The club lacked a sense of common purpose, a leader behind which it could unite. When in 1883 Hawke accepted the captaincy, he had no illusions as to the task ahead. The early years were not plain sailing and there were times when his commitment to the county club wavered, but gradually he rebuilt the county eleven and instilled a philosophy of attacking cricket into his players. His was a pragmatic root-and-branch reform and modernization of the whole club, a model of changes he would see adopted throughout the English game in later years.

As captain of Yorkshire until 1910 and president of the club from 1898 until his death, Lord Hawke (he succeeded to his father's title in 1887) came to control almost every aspect of the county's affairs. In matters of discipline he could be harsh. Several players were summarily dismissed for transgressing Hawke's law, most notably Robert (Bobby) Peel in 1897 for drunkenness. But these incidents apart, no man of his era did more for the welfare of the professional cricketer than Hawke. Moreover, his concern for his players went far beyond the cricket field. He introduced winter pay for his professionals and ensured that moneys they received from benefit matches were wisely invested.

In 1893 the Yorkshire eleven, now leavened with amateurs—including F. S. Jackson, arguably the finest all-round amateur cricketer of the day—won the championship under Lord Hawke's command for the first time. It was a feat to be repeated in 1896, 1898, 1900, 1901, 1902, 1905, and 1908. The achievements of the Yorkshire sides Hawke captained have tended to obscure his own playing contribution. He was a useful batsman, a dangerous, tenacious hitter rather than a master of his craft, as his career first-class average of 20.15 indicates. However, he often made runs when his side was in trouble, when the competition was hottest. His highest score, 166 against Warwickshire in 1896, was made in a partnership of 292 that was still in 1998 the English record for the eighth wicket.

If Hawke the batsman is overshadowed by his incomparable Yorkshire elevens of the 1890s and 1900s, his place in cricket history is assured for his work spreading the gospel of cricket. He was responsible for organizing and leading cricket tours from England to the farthest corners of what was then the empire, and to other parts of the world. His first tour was to Australia in 1887. Owing to his father's death in December that year he was obliged to return home, but later he took teams to India (in 1889 and 1892), the United States of America and Canada (in 1891 and 1894), South Africa (in 1895 and 1898), the West Indies (in 1896), and Argentina (in 1911). He lived to see South Africa, India, and the West Indies admitted to full test-match status. If, in the history of cricket, the immortal W. G. Grace was the ultimate exponent of the game and George Harris, fourth Lord Harris, its foremost administrator, Hawke was its great exporter.

Although the ancestral Hawke estate at Towton had long been lost to the family, Hawke's father, the sixth baron, had enjoyed the friendship of the millionaire Andrew Montague, who furnished him with a fifty-year lease on Wighill Park, near Tadcaster, and enabled him to become in later years, something of a 'City man'. Hawke inherited from him extensive estates in the West Riding of Yorkshire. He also held a number of company directorships, income from which allowed him to devote much of his life to the game he loved. On 1 June 1916, he married Marjory Nelson Richie (*d.* 1936), third daughter of William Peacock Edwards JP, of Edinburgh, and widow of Arthur J. Graham Cross. There were no children of the marriage.

When his playing career ended Hawke found it hard to avoid controversy. His friends wondered how the tactful, hard-working, kindly man they knew could behave so ineptly in public. Hawke's impulsiveness and his willingness to speak his mind were his downfall in the public arena. His infamous off-the-cuff remark at the Yorkshire annual general meeting in 1925 that 'Pray God, no professional shall ever captain England', made in defence of A. E. R. Gilligan's much criticized captaincy of England in Australia, drew a torrent of criticism. Later, he explained that what he had meant to say was that it would be a bad day for England if there was no amateur good enough to play for his country, but by then the damage had been done. He was god-fearing, having found Christianity as a child, and decent to the core. He could be very naive, but knew his limitations. Although he regularly attended the House of Lords, he never made his maiden speech, recognizing that he was a poor public speaker. In the 1920s and 1930s he travelled widely. At home grouse moors and golf links became safe havens from his critics in the press.

For many years Hawke served the MCC as a member of various committees, including that charged with selecting the England team between 1899 and 1911. He was elected president of the club in 1914, normally an annual appointment, which owing to the exigencies of war he held until 1918; on the death of Lord Harris in 1932 he became treasurer.

Lord Hawke died on 10 October 1938 at 12 Randolph Crescent, Edinburgh, a few days after collapsing at North Berwick. He was succeeded as eighth baron by his brother Edward Julian (1873–1939). Hawke's portrait hangs in the Long Room at Lord's, looking down on the comings and goings of the modern players of the game that in his life he did so much to promote. JAMES P. COLDHAM

Hawker, Edward (1782–1860), naval officer, son of Captain James *Hawker (*b.* in or before 1730, *d.* 1786), had his name placed by Prince William Henry on the books of the frigate *Pegasus* in 1786, but he first went to sea in 1793 on the *Pegasus*, and afterwards in the *Swiftsure*, with his brother-in-law Captain Charles Boyles. In July 1796 he was promoted lieutenant of the *Raisonnable*, also with Boyles. In 1799–1800 he was in the sloop *Spitfire* with his brother-in-law Commander Michael Seymour (1768–1834), and from 1801 to 1803 in the frigate *Thames* with Captain Aiskew Paffard Hollis, at Gibraltar and on the coast of Egypt. He afterwards commanded the cutter *Swift* in the West Indies, and in August 1803 was promoted to the command of the brig *Port Mahon*.

In June 1804 Hawker was advanced to post rank, and in the following month was appointed to the *Theseus* (74 guns), flagship of Rear-Admiral Dacres, on the West Indian station. He afterwards commanded there the *Tartar* (32 guns) and the *Melampus* (36 guns) until 1812, continually and successfully cruising against privateers. From 1813 to 1815, first in the *Bellerophon* (74 guns) and afterwards in the *Salisbury* (58 guns), he was flag captain to Sir Richard Goodwin Keats, commander-in-chief at Newfoundland, and from 1827 to 1830 was flag captain to the earl of Northesk at Plymouth.

Hawker had no further service afloat, but became in due course rear-admiral in 1837, vice-admiral in 1847, and admiral in 1853. During his later years he was a frequent correspondent of *The Times*, writing as 'A Flag Officer'. He was also well known in low-church religious and philanthropic circles. He was married and had children, including Edward James Hawker, of Ashford Lodge, near Petersfield, Hampshire. He died at Brighton, Sussex, on 8 June 1860. J. K. LAUGHTON, *rev.* ROGER MORRISS

Wealth at death under £6000: probate, 12 July 1860, *CGPLA Eng. & Wales*

Hawker, Sir Frank Cyril (1900–1991), banker, was born on 21 July 1900 at Walthamstow, Essex, to Frank Charles Hawker, civil servant, and his wife, Bertha Mary Bastow. Educated at the City of London School, Hawker was briefly at the stock exchange and at a firm of solicitors before joining the Bank of England in 1920. He remained there for forty-two years and left only to become chairman of Standard Bank. In 1931 he married Marjorie Anne, daughter of Thomas Henry Pearce and his wife, Amelia Harriet; they had three daughters.

Hawker rose rapidly through the Bank of England's ranks. He served as deputy to George Bolton, when the latter was made head of the bank's new foreign department in 1934. Then he became, successively, deputy chief cashier (1944), chief accountant (1948), adviser to the governor (1953), and executive director (1954).

In 1953 the then governor of the bank asked Hawker to contact various industrialists as part of a crusade to make the bank less isolated. Hawker did so, first in the UK and then in the Commonwealth. For this he was knighted in 1958. He also acquired an extensive knowledge of the banking industry of the Commonwealth and especially of South Africa, which was going through the difficult period that culminated in its withdrawal from the Commonwealth.

In 1962 Hawker was appointed chairman of Standard

Bank, whose core business had traditionally been in South Africa. He was one of the few strategic thinkers of his day in the banking profession, and in his new position he tried to restructure and reorganize British overseas banking to meet the needs and pressures of the modern world.

By the 1960s the future of British overseas banking looked bleak. The end of the British empire meant that London was no longer automatically the centre of trade finance. Banks faced a future in which business would have to be fought for, against strong foreign, especially American, competition. Moreover, the advent of new independent governments meant that banks had to confront tough political constraints in areas where traditionally they had had a free hand. Logic therefore dictated that there should be fewer and larger banks, based in London, rather than many localized overseas banks.

Within Standard this idea was known as the 'grand design', and Hawker was its chief proponent. Given the particular political circumstances of South Africa and of emergent Africa, he looked to amalgamation for geographical diversification. While the negotiations were necessarily complex, there were three main strands to this design: a link with a British domestic bank, a link with an American bank, and mergers with other overseas banks. None of these strands was altogether successful, but each set of negotiations resulted in moves which changed the face of British overseas banking. Standard succeeded in consolidating its trans-African persona and in 1969 it amalgamated with the Chartered Bank, which traditionally banked in the East. The merger, creating the Standard Chartered Bank Ltd, was a triumph, though Hawker's considerable management skills were required to combine two very different banking cultures.

As well as being the first chairman of the Standard and Chartered group, Hawker was chairman of the Bank of West Africa (taken over by Standard in 1965) from 1965 to 1973, and of the Union Zairoise de Banques from 1969 to 1974. He was also deputy chairman of Midland and International Banks, and of two industrial companies: Head Wrightson and the Davy Corporation.

Despite his highly successful career Hawker's first love, arguably, was cricket; he was a talented batsman and captained several club sides. He was also a keen footballer and sportsman generally. In later life he became chairman of the Amateur Football Alliance and the Minor Counties Cricket Association; he was the finance committee chairman for the National Playing Fields Association, and then the association's honorary vice-president; and he was vice-chairman of the Football Association. The summit of his sporting career came in 1970–71, when he was made president of the MCC, though his South African connection led to adverse press exposure in a year when the South African touring team visited England.

Hawker died on 22 February 1991 at his home Hadlow Lodge, Burgh Hill, Etchingham, Sussex, aged ninety, and was survived by his wife and daughters.

Hawker, James (*b.* in or before 1730, *d.* 1786), naval officer, was the son of a Plymouth wine merchant and his wife, daughter of an alderman of Plymouth. He entered the navy on 1 July 1743 in the *Shrewsbury* (Captain Solomon Gideon) as servant to the first lieutenant, Lucius O'Bryen, and moved with him when he was made commander of the *Portsmouth* storeship. Subsequently he was in the *Sheerness* with George Brydges Rodney in the North Sea, and then the *Colchester*, *Unicorn* and the *Peggy* sloop, again with O'Bryen. After nearly eleven years' service he passed for lieutenant on 4 June 1755, when he was stated 'as more than 24 years of age'.

On 31 December 1755 Hawker was appointed as lieutenant to the *Colchester* at the request of Captain O'Bryen. Sir George Pocock, as MP for Plymouth, obtained for him on 6 August 1761 the command of the *Barbados* sloop, though he did not join her until November, and he served at the capture of Martinique and later at Havana, until moved to the *Sardoine* in April 1763 for the North American station. He did not, however, attain post rank until 26 May 1768, and was then appointed to the *Aldborough* from 1770 to March 1773 for the Newfoundland station, followed by the *Mermaid* in North America from 8 April 1776 until she was chased ashore in the Delaware River on 8 July 1778 by d'Estaing's squadron. On return home he commissioned the *Iris*, again for North America, where on 6 June 1780 he fought a well-conducted action against the French frigate *Hermione*, in which both ships were much damaged and were obliged to return to their respective bases. Some angry correspondence ensued, apparently to determine who ran away from whom. Soon after, Hawker was moved to the *Renown* and took a convoy home. He was then appointed on 10 November to the *Hero*, which formed one of Commodore George Johnstone's squadron, which fought the action at Porto Praya on 16 April 1781. Hawker soon after resigned his command at St Helena on grounds of ill health, and returned home in the *Jason*. He had no further service.

Hawker married Dorothea O'Bryen, sister of his captain, with whom he had at least three sons; John and James entered in the *Mermaid* as captain's servants, but eventually went into the army, while the youngest son, Edward *Hawker, became an admiral. Three of his five daughters married naval officers, namely Charles Boyles, E. Oliver Osborne, and Sir Michael Seymour, bt. A fourth daughter married Sir William Knighton, private secretary and keeper of the privy purse to George IV. A Captain Thomas Hawker may have been a relative, as he was an able seaman in the *Peggy* sloop from 1750, and moved, as did James, to the *Colchester* when Captain O'Bryen was appointed to that ship. James Hawker died in early 1786, probably at Plymouth, where he held property at Mount

Gould and in Caskin Street with a lease on a timber yard at Britton Side, possibly inherited from his father and left to his eldest son, John. His wife survived him.

Hawker [*alias* Collis], **James** (1836–1921), poacher and autobiographer, was born in Daventry, Northamptonshire, and baptized there in the Wesleyan Methodist Chapel on 29 August 1836. He was the first of the eight children of Charles Hawker and his wife, Charlotte Parbery (*bap.* 1816).

Hawker's early life is scarcely documented, other than in his own recollections. It is clear that his early years were spent in poverty, as his father failed first as a tailor and later as a second-hand clothes dealer. Hawker must have received some education, though he later denied it, writing a clear, sloping hand in later life, but by the age of eight was in full-time employment as a bird scarer. In 1848 he was apprenticed to a bootmaker and from 1850 supplemented his family's income further by poaching.

In 1852 Hawker enlisted in the Northamptonshire militia. Though he later claimed this was solely to gain the 10*s.* bounty and thereby buy a gun for poaching, the military life clearly suited him. On disbandment Hawker received a further £1, which was spent on a better, percussion-cap, firearm. In 1854 the militia was again embodied and Hawker, promoted to corporal, served in Dublin.

In 1857 Hawker fled Daventry following a confrontation with the head gamekeeper at Badby. By his own account Hawker worked in Leicester until spring 1858 under the assumed name of James Collis. He enlisted in the Leicestershire militia and is recorded in the muster roll as corporal of the light company. He enlisted in and deserted from the regular army, and by July 1858 was established once again as a bootmaker, with lodgings in Town Hall Lane, Leicester.

On 10 November 1861 Hawker's first child, Albert, was baptized at Oadby, Leicestershire, under the mother's surname, Norman. On 31 May 1863 Sarah Norman became Mrs James Collis at St John's Church, Leicester. Six months later, on 8 November 1863, Charlotte Ann, their daughter, was baptized at Oadby, followed by James on 4 August 1867. The following year Hawker fled again to avoid a fine of £8 for poaching, his family settling first at New Duston, Northamptonshire, and then at Northampton.

The Hawkers remained in Northampton until 1880. From 1875 Hawker developed a passion for bicycling, forming with friends the Rovers Bicycle Club. The attempts by the atheist and radical Charles Bradlaugh to gain and keep a Northampton seat in parliament also gave rise to a more conventional interest in radical politics. His political views having been formed by bitter experience of poverty and harsh treatment, Hawker had hitherto regarded poaching as his personal attempt at a fairer redistribution of wealth. He also strengthened his stand against drink, though he had little sympathy for the more violently outspoken temperance campaigners: 'a man Has as much Right to Drink has we Have to abstain' (*Hawker's Journal*, 40).

In 1890, after ten years in Leicester, Hawker moved to Oadby. He continued to poach but had achieved some respectability. In 1893 he was elected, with the support of the Working Men's Club, to the Oadby school board, and in December 1894 joined the new Oadby parish council. His eldest son, Albert, had gained considerable fame as a racing bicyclist and the younger, James Hawker junior, prospered as a boot and shoe manufacturer.

In 1909, on the death of his wife, Hawker moved in with his daughter, Charlotte, who had married James Barker, at 13 Sandhurst Street, Oadby. He became a village character, still poaching, until his death from a heart attack in Stoughton Road, Oadby, on 7 August 1921.

Hawker wrote his memoirs, seemingly in several versions, in 1904–5. They are a mixture of autobiography, poacher's handbook, and radical philosophy. The illegality of much that is described, coupled with the memory of an old man, make them suspect as the only source for much of Hawker's life. 'If i Had been Born an idiot and unfit to Carry a Gun but with Plenty of Cash they would Call me a Grand Sportsman but for being Born Poor i are Called Poacher' (*Hawker's Journal*, 151). Hawker's celebrity was secured in 1961 when Oxford University Press published his memoirs as *A Victorian Poacher*, edited by Garth Christian. In 1980 the Emma Theatre Company produced a play by Andrew Marley and Lloyd Johnston, *The Poacher*, based on Hawker's life. A public collection at the first performance funded a headstone for Hawker's grave in Oadby cemetery. In addition to his name and dates, it bears his motto: 'I will Poach till I die'.

Hawker, Mary Elizabeth [*pseud.* Lanoe Falconer] (1848–1908), writer, was born on 29 January 1848 at Inverurie, Aberdeenshire, the elder daughter of Major Peter William Lanoe Hawker (1812–1857), of the 74th highlanders, and his wife Elizabeth, *née* Fraser (*d.* 1901). The family home, to which they returned in 1854, was Longparish House, near Whitchurch, in Hampshire. Hawker's grandfather, Lieutenant-Colonel Peter *Hawker (1786–1853), was the author of *Instructions to Young Sportsmen* (1814).

Although Hawker's formal education could be characterized as desultory, she read widely and was an accomplished pianist. Her father died in 1857, and after her mother's second marriage, to Herbert Fennell, with whom Hawker did not have a good relationship, the family lived from 1863 until 1868 in France and Germany, and Hawker became proficient in both French and German. She began to write early in life for family publications and private theatricals, producing a few stories and essays that appeared in magazines and newspapers. Her first real success came in 1890 with the publication of *Mademoiselle Ixe* under the pseudonym Lanoe Falconer. Having been rejected by many publishers this short mystery novel formed the initial volume in the Pseudonym Library, a new series of shorter fiction published by T. Fisher Unwin and designed to compete with John Lane's Keynotes series. The heroine of *Mademoiselle Ixe* is a governess in an English country house who is connected with Russian nihilists and becomes involved in an assassination attempt. Hawker was not familiar with Russian people, but her political sympathies, already liberal, were evidently inspired by the 'anguish' and 'torment' of a Russian musical air (Phillips, 'Lanoe Falconer', 232–3). *Mademoiselle Ixe* also contains some pointed satire on the narrow English view of foreigners. Circulation of Hawker's book was forbidden in Russia; Hawker gave a portion of her royalties to help Russian exiles. Hippolyte Adolphe Taine and Gladstone admired the book, and the English edition sold over 40,000 copies. An American edition was printed, as were translations in French, German, Dutch, and Italian.

Hawker's subsequent works of fiction include *Cecilia de Noël* (1891), a 'morbid psychic romance' (Sutherland, 285), and *The Hôtel d'Angleterre* (1891), a collection of character sketches and other short atmospheric pieces. Hawker also contributed an essay, 'The short story' to *On the Art of Writing Fiction* (1894), which foreshadowed the importance of her preferred fictional form to the modernist writers of the early twentieth century. Hawker believed that 'the length of a work is no measure of its importance or effect' (Phillips, *Lanoe Falconer*, 206).

Hawker's health declined from 1894, interrupting her work. She was unable to take up an offer of £250 for a short story to be published in a series with Rudyard Kipling and J. M. Barrie. Hawker, who did not marry, cared for her mother before she died in the spring of 1901 and for her stepfather in his final illness in 1902. Family commitments occupied her time, although she was able to travel to Switzerland with her sister's family in 1904. She died from rapid consumption on 16 June 1908 at what may have been her sister's house, Broxwood Court, Pembridge, Herefordshire, and was buried at Lyonshall, Herefordshire.

Hawker, Peter (1786–1853), army officer and writer, born on 24 December 1786, was the son of Colonel Peter Ryves Hawker (*d.* 6 Feb 1790) of Longparish, Hampshire, and his wife, Mary Wilson Yonge, who was of an Irish family. He was born in London and educated at Eton College. Like his father and many of his ancestors Hawker entered the army, his commission as cornet in the 1st (Royal) Dragoons dating from 1801. In 1803 he joined the 14th light dragoons, in which regiment he became captain the following year and served with it in the Peninsular War. Being badly wounded at Talavera, he retired from active service in 1813, but by the recommendation of the duke of Clarence he was made major (1815) and then lieutenant-colonel (1821) of the North Hampshire militia.

Hawker, a man of wide interests, was a good musician as well as a keen shot and active sportsman. In 1818 he studied harmony and composition at the London academy of J. B. Logier, and in 1821 was a piano student of H. J. Bertini in Paris. He composed much music, and in 1820 patented his invention of hand moulds to facilitate pianoforte playing. At the Great Exhibition of 1851 some improvements in firearms manufacture which Hawker devised attracted attention, and he hoped in vain that they would be adopted by the War Office.

Hawker was twice married, and with his first wife, Julia, daughter of Hooker Bartellot, whom he married in 1811, he had two daughters and a son, Peter William Lanoe Hawker, who served as a lieutenant in the 74th Highland regiment.

Hawker's publications included *Journal of a Regimental Officer during the Recent Campaign in Portugal and Spain* (1810) and *Instructions to Young Sportsmen in All that Relates to Guns and Shooting* (1814). This work, by which Hawker became widely known, passed through many editions. Hawker died at 2 Dorset Place, Dorset Square, London, on 7 August 1853. W. A. J. ARCHBOLD, *rev.* JAMES FALKNER

Hawker, Robert (1753–1827), Church of England clergyman, born at Exeter on 13 April 1753 and baptized at St Mary Steps, Exeter, on 14 May, was the son of Jacob Hawker (*d.* 1754), surgeon, and Sarah Smith (*d.* 1801). After the early death of his father, he was raised by his mother and two aunts. He was educated at the grammar school,

Exeter, before becoming a pupil of Mr White, surgeon, of Plymouth. He married at the parish church of Charles, Plymouth, on 6 January 1772, Anne Rains (*d.* 3 April 1817), daughter of Lieutenant Rains RN; they had four sons and four daughters. Three of their sons entered the Anglican ministry, one of whom, the Revd John Hawker, seceded to protestant dissent, while another, the Revd Jacob Hawker, was father of the Revd Robert Stephen Hawker, poet and vicar of Morwenstow, Cornwall.

During his surgical training Hawker attended lectures at various London hospitals. On returning to Devon he obtained an appointment as assistant surgeon in the Royal Marines. After about three years, however, and for reasons which are not entirely clear, he abandoned surgery for the church; he matriculated on 27 May 1778 at Magdalen Hall, Oxford, but left before taking a degree. He was ordained deacon on 20 September 1778 by John Ross, bishop of Exeter, and priest on 30 May 1779, and was presented to the curacy of St Martin's, Looe, Cornwall; three months later he became curate of the parish of Charles, Plymouth, under the Revd John Bedford. On the death of Bedford in 1784 Hawker became vicar of Charles, where he remained for the next forty-three years. His *Sermons on the Divinity of Christ* (1792) procured for him the diploma of DD from the University of Edinburgh.

Hawker carried on a varied and energetic ministry, which touched the lives of many in Plymouth and further afield. In 1797 he became deputy chaplain of the local garrison. He also founded, or became involved in, a number of voluntary societies, including the Religious Tract Society (1799–1808), the Great Western Society for Dispersing Tracts among the Poor (1802–27), the London Missionary Society (1802–8), the Corpus Christi Society (1813–27), and the Gospel Tract Society (1824–7), which competed with its moderate rival, the Religious Tract Society, provoking a bitter, albeit short-lived, public controversy. Hawker was also interested in community issues, promoting Sunday schools as a remedy for social problems and encouraging penal reform; at his urging, a penitentiary for women was established at Plymouth in 1808.

Hawker exercised an important, albeit sometimes controversial, influence in evangelical circles. His voice was powerful, yet harmonious, and as a pulpit orator he was impressive and fascinating. For many years he paid an annual visit to London, preaching to large congregations. Doctrinally he was reckoned an ultra-Calvinist, and his parish of Charles was notorious for its high predestinarian doctrine. Having rejected 'growth in grace', Hawker was denounced by one critic as 'the great patron and apostle of antinomianism' (J. Cottle, *Strictures on the Plymouth Antinomians*, 2nd edn, 1841, 4, 11). William Wilberforce prohibited his children from attending services at London's Locke Hospital when Hawker was preaching, lest they drink in his 'poison' (R. I. Wilberforce and S. Wilberforce, *The Life of William Wilberforce*, 1838, 3.473). His impact, however, both direct and indirect, can be clearly traced on the spread of extreme forms of 'serious religion' in the west of England, for the Western Schism (*c.*1815–17), the Oxford evangelical secessions (*c.*1831–5), and the (Plymouth) Brethren (*c.*1830s) were all influenced by his teachings.

Hawker was the author of a large corpus of religious writings, his *Works* (1831) filling ten quarto volumes. He was also a frequent contributor to various religious journals, especially (from 1798) *Zion's Trumpet*. He died at Plymouth on 6 April 1827, aged seventy-four, and was buried in the church at Charles, where a tablet, surmounted by a marble bust, was erected to his memory. Although his church was almost entirely destroyed by aerial bombardment during the Second World War, its outer walls have been preserved as a memorial. GRAYSON CARTER

Hawker, Robert Stephen [*pseud.* Reuben] (**1803–1875**), poet and Church of England clergyman, was born on 3 December 1803 at Charles Church vicarage, 6 Norley Street, Plymouth, the eldest of the nine children of Jacob Stephen Hawker (*c.*1775–*c.*1845), doctor, and his wife, Jane Elizabeth Drewitt. The vicarage belonged to his grandfather Dr Robert *Hawker (1753–1827) who was famous in the west country as a charitable and eloquent Calvinist divine. The younger Robert was baptized on 29 December by Dr Hawker's eldest son, John, at Stoke Damerel church, near Plymouth. A few years after his son's birth Jacob Hawker took holy orders, serving as curate (later vicar) of Stratton, near Bude in north Cornwall, and leaving Robert to be brought up by Dr Hawker.

Robert Hawker was a high-spirited youth who reacted against the evangelical discipline of his family. He sought adventure among books discovered in a pawnbroker's warehouse and revelled in the beauties of sea and woods, subjects of his early verse. He ran away from several preparatory schools and played practical jokes on the inhabitants of Plymouth and Stratton. The most celebrated of these was his impersonation of a mermaid, singing dirges and combing his seaweed hair, on Bude breakwater. At sixteen he left Liskeard grammar school, Cornwall, to train as a solicitor. But he soon decided to become a clergyman and his aunt Mary paid for him to attend Cheltenham grammar school. By 1823 he had published (under the pseudonym Reuben) his first volume of poetry, *Tendrils*, and gained a place at Pembroke College, Oxford.

After his first term Hawker, aged only nineteen, married

Charlotte I'ans (1781/2–1863), a 41-year-old gentlewoman with an income of £200 a year. Their marriage in 1823 was a love match, though it is true that her money helped him to complete his education. In 1824 he transferred to Magdalen Hall, and continued to write poetry. *The Song of the Western Men*, the most familiar of his works, was published in 1825, attracting favourable attention from Scott, Macaulay, and Dickens. Two years later he won the Newdigate prize for a poem on Pompeii, which smacked of plagiarism. During his five years at university Hawker assimilated some ideas of the embryonic Oxford Movement but he never became an acknowledged high-churchman. After graduating in 1828 he prepared for holy orders and was ordained in 1831. His curacy was spent at North Tamerton, Cornwall. In 1834 Bishop Phillpotts appointed him to the remote living of Morwenstow on the north Cornish coast, where he remained until his death.

Hawker became well known not only as a romantic poet but as an eccentric vicar. He dressed flamboyantly, wearing a brown cassock, scarlet gauntlets, and a hat like a fez, or a claret-coloured coat, fisherman's jersey, and sea boots. He talked to birds, and his congregation often included his nine cats and many dogs, which he preferred to the uncharitable farmers, over whom he once 'read the Exorcistic Service' (Byles, 227). He cultivated his reputation as a local character, which attracted many visitors, including Tennyson. Behind his showmanship, however, there lay a genuine concern for his parishioners. He built a new bridge, a vicarage, and a school. He instituted church collections for the poor—a controversial move to counteract the effects of the new poor law, movingly evoked in his poem *The Poor Man and his Parish Church* (1840), which haunted John Keble. Hawker also gave generously from his own pocket to help the labourers of Morwenstow, including dissenters. He restored his beautifully situated church, in which he performed services twice daily even if no one was present except his wife, whom he would address as 'Dearly Beloved Charlotte' (Brendon, 101). He tried to attract more parishioners to the services, improving carol singing and reviving harvest festivals.

A task which Hawker found most disturbing was the burial of corpses of shipwrecked sailors (or putrefying parts of them) which were frequently washed up on the rugged shore of his parish. This gruesome duty, combined with the struggle to prevent local people from stripping the wrecks, contributed to his mounting mental instability. From the timbers of the ships he built a hut on the cliff-top, where he watched for wrecks and heard 'in every gust of the gale a dying sailor's cry' (Byles, 532). Here he also saw devils, mermaids, and mystical visions, wrote poetry, succumbed to persecution mania, and fell into depression. Increasingly he took refuge in opium.

Hawker's mental distress became acute in 1862 during Charlotte's final illness—he nursed her until she died, on 2 February 1863. In that year there was also a fire at the vicarage and two shipwrecks so harrowing that he felt a 'terrible dread of losing power over my own mind' (Byles, 487). Yet this burly, flaxen-haired, blue-eyed, ruddy-faced priest never lost his power to charm and, after a brief courtship, he married a young governess, Pauline Anne Kuczynski (1844–1892), on 21 December 1864. His second marriage was also a happy one, and the couple had three children: Morwenna, Rosalind, and Juliot, born respectively in 1865, 1867, and 1869. Hawker delighted in his daughters (though he had yearned for a son) but agonized about his ability to provide for them. He begged shamelessly and even sold Charlotte's family silver.

Throughout these troubles Hawker continued to write prose and poetry, published in such journals as *Notes and Queries* and Dickens's *Household Words*. In fact it was during the wretched year of 1863 that he wrote *The Quest of the Sangraal*, praised by Longfellow and Tennyson and still considered one of the most successful nineteenth-century renditions of the Arthurian legend. In 1869 he published a collection of his poems under the title *Cornish Ballads*. Although it received a 'long and kindly notice' in *Fraser's Magazine* (Byles, 579), the book brought him little profit. Nevertheless these ringing ballads memorably sealed his association with the north Cornish coast,

> Where rock and ridge the bulwark keep,
> The giant-warders of the deep.
> ('The Storm')

He wrote little poetry after 1869 but published his collected prose sketches, *Footprints of Former Men in Far Cornwall*, in 1870. They have modest literary merit but are full of antiquarian interest.

Latterly Hawker found himself increasingly at odds with the secular and religious temper of his day. His letters suggest that he was turning from protestantism, which amounted to nothing more than 'a gigantic sneer of religious negation' (Brendon, 228), towards the positive dogmas of the Roman Catholic church. Nevertheless it was a shock to almost everyone except his wife when the vicar of Morwenstow was baptized a Roman Catholic on his deathbed. Pauline wrote afterwards that her husband had been 'at heart a Catholic' ever since she had known him (Lee, 2).

Hawker died on 15 August 1875 at 17 Lockyer Street, Plymouth, and was buried three days later in Plymouth cemetery. Within a few months the Revd Sabine Baring-Gould had published his confessedly 'gossiping' biography (Baring-Gould, 63), which exaggerated Hawker's eccentricities. Despite subsequent corrections and several further biographies, notably the authoritative *Life and Letters* compiled by Hawker's son-in-law C. E. Byles in 1905, Baring-Gould's myth still lingers on. When, in 1880, Pauline Hawker received a civil-list pension of £80 a year, W. E. Gladstone assured her that it had been 'awarded on the ground of true poetical merit' (Byles, 651). Although a minor poet, Hawker did pen some 'magnificent images and lines, unsurpassed in Victorian blank verse' (Brendon, 20). Nevertheless he is best remembered for his strange, lonely ministry beside the 'Severn Sea'.

Wealth at death under £3000: probate, 15 Nov 1875, *CGPLA Eng. & Wales*

Hawker, Thomas (*b.* before 1641?, *d.* in or after 1721?), portrait painter, was of obscure origins. Waterhouse noted that Hawker was 'pretty certainly the same as the painter called by Walpole (after Vertue) "Edward" Hawker' (Waterhouse, 117). According to Vertue, Hawker came to live in Sir Peter Lely's house after Lely's death, in the hope of benefiting by the famous associations of the house. This hope was not realized; he defaulted on the lease. He was still in Covent Garden in 1700. He is known by a full-length portrait of the duke of Grafton (*c.*1680/1681), engraved in mezzotint by Isaac Beckett, a portrait of Titus Oates, engraved in mezzotint and published by R. Tompson, and a head of Sir Dudley North. Described by Waterhouse as 'a close but pedestrian follower of Lely', Hawker charged £15 for a work 50 inches by 40 in 1683 (ibid.). One Hawker (called by Vertue, perhaps in error, Edward Hawker) is stated to have been admitted a poor knight of Windsor, and to have been living in 1721, over eighty years of age. L. H. Cust, *rev.* Annette Peach

Hawkes, (Charles Francis) Christopher (1905–1992), archaeologist, was born on 5 June 1905 at 35 De Vere Gardens, Kensington, London, the elder child and only son of Charles Pascoe Hawkes (1877–1956), a lawyer, soldier, and author, and his wife, Eleanor Victoria (1874–1966), daughter of Charles Davison Cobb, a wine shipper, and his Spanish wife, Victoria. Christopher was a precociously clever child, and after preparatory school in Surrey he went to Winchester College in 1918. He flourished as a classical scholar, also showing a talent for music and drawing. His father's military service included postings in the north-east of England and on Salisbury Plain, and Hawkes became familiar with monuments such as Hadrian's Wall, the monastery church at Jarrow, and Stonehenge. At Winchester he wrote to O. G. S. Crawford, the newly appointed archaeology officer of the Ordnance Survey, whose encouragement to him to explore the field monuments of the district led to his first published work.

In 1924 Hawkes went up to New College, Oxford. He became increasingly interested in ancient history and archaeology, studying Roman Britain with R. G. Collingwood and acquiring his basic training in excavation with Mortimer Wheeler at Brecon in 1925 and with Donald Atkinson at Wroxeter in 1926. In 1925–6, with Nowell Myres and Charles Stevens, he began to excavate the medieval chapel on St Catherine's Hill, Winchester; in 1927–8 this work was extended to the Iron Age hill fort there.

After taking a first-class degree in 1928 Hawkes moved to the department of British and medieval antiquities at the British Museum, as (successively) assistant, assistant keeper (second class), and assistant keeper (first class). He was responsible for compiling the accessions register, and though this was often behind schedule his scholarship and talent for drawing made the registers of this period a mine of information. His intellectual ambition spread far beyond the museum, however, and he continued busily writing, researching, and excavating. His excavation in 1930–32 with Rex Hull at Colchester was the first serious attempt to understand the complexities of a late Iron Age town. From 1935 to 1939 he excavated three more Iron Age hill forts in Hampshire.

Hawkes's work launched a new phase of Iron Age studies. His article on hill forts (*Antiquity*, 5, 1931, 60–97) reviewed the evidence for this type of site, and introduced a new chronological and cultural scheme for the Iron Age, linked to a theory of cultural change by migration, which dominated the subject for the next forty years. Another article, written with Gerald Dunning, on the Belgae (*Archaeological Journal*, 87, 1930, 150–335), provided detailed documentation of the continental background to the final period of the Iron Age in Britain. With Thomas Kendrick he produced *Archaeology in England and Wales, 1914–1931* (1932), a major synthesis of recent archaeological work which offered a new formulation of later prehistory.

At Colchester Hawkes had met (Jessie) Jacquetta Hopkins (1910–1996) [*see* Hawkes, (Jessie) Jacquetta]. They were married on 7 October 1933, and collaborated fruitfully in several subsequent projects. Their only child, Nicolas, was born in 1937, but the marriage ended in June 1953. Strained by his intellectual ambition, his heavy workload, and his lifelong inability to start the day promptly, Hawkes's relationship with his departmental keeper, Reginald Smith, became increasingly sour. Matters improved after Smith's retirement in 1937, but it was clear that Hawkes's future lay elsewhere. Further progress was stalled by the Second World War, when he was seconded to the Ministry of Aircraft Production. He returned to the museum in 1946, but was soon appointed to the new chair of European archaeology at Oxford. He took up the post on 1 October 1946, and held it until his retirement in 1972. On 30 January 1959 he married the archaeologist Sonia Elizabeth Chadwick [*see below*]. After a brief period living at Dorchester-on-Thames, they settled at 19 Walton Street,

Oxford, which with the later inclusion of no. 20 remained their home until his death.

Hawkes did not have an easy ride at Oxford. His informative and entertaining memorandum submitted in 1965 to the Franks commission on the plight of new subjects at Oxford (Franks commission, written evidence, part 11, 55–64) was tartly reminiscent of Cornford's *Microcosmographia academica*. With mock puzzlement it described the ingenuity of Oxford's devices for politely blocking change, and boldly sought a remedy in 'a period of directorial government' (ibid., 61). Beneath the humour lay Hawkes's deep frustration at the complex structures and short-sighted priorities which caused Oxford to lag behind other universities in its research and teaching. The frustration born of long years spent in trying to advance his subject also stood out in Hawkes's oral evidence to the committee. In the time spent writing memoranda during his eighteen years at Oxford he said, 'I could have written at least one archaeological book'. When asked if there had been rows, he replied: 'A good many ... some of them exceedingly fierce, of which I have been the centre' (Franks commission, oral evidence, O. 33, p. 12).

Hawkes made Oxford a centre for postgraduate teaching and research in archaeology. His interest in the later prehistoric and early historic periods were complemented in 1956 by the appointment of Ian Richmond to a chair in the archaeology of the Roman empire. These developments culminated in the establishment of the Institute of Archaeology in 1961. Hawkes was an inspiring teacher; though there were never many students the proportion who went on to prominent positions in archaeology was remarkable. He quickly appreciated the potential contribution of the natural sciences to knowledge of the past, and responded enthusiastically to Lord Cherwell's suggestion that Oxford should found a research laboratory for archaeology; it came into being in 1955. He was also instrumental in founding its journal *Archaeometry* (a word he claimed to have invented).

Hawkes continued to publish well into his eighties. He declined to revise his one major work of synthesis, *The Prehistoric Foundations of Europe* (1940), because his interests were now firmly in the first millennium BC, but a stream of articles on Bronze Age and Iron Age Europe confirmed his position as Britain's leading authority on these periods. He did not accept a divide between prehistory and history, and believed firmly in the value of the written sources. His work was characterized by a detailed familiarity with the textual and material evidence and by a firm commitment to understanding the past on a pan-European scale. From the 1930s he was a regular visitor to Europe, and he was greatly respected by his continental contemporaries. Though some of his ideas, especially the explanation of culture change by a series of migrations, became unfashionable, the rapid progress made in Iron Age studies would have been impossible without his pioneering efforts.

Hawkes was a striking figure, despite his spare build and his increasingly severe limp. He had penetrating pale eyes behind his thick glasses, and a shock of dark hair, which later turned to silver. He was a good listener, but also an intimidatingly well-informed, though always witty, talker. His distinctive handwriting was matched by an idiosyncratic English style, which, though always accurate, could be highly compressed. He died in Oxford on 29 March 1992. His funeral took place on 3 April 1992 at St Cross Church, Oxford.

Hawkes's second wife, **Sonia Elizabeth Hawkes** [*née* Chadwick] (1933–1999), archaeologist, was born on 5 November 1933 at Barnes Cray Nursing Home, Crayford, near Dartford, Kent, the only child of Albert Andrew Chadwick, engineer, and his wife, Doris, *née* Benger. She was educated at school in Dartford, and read English at Bedford College, London, before becoming an archaeologist and expert on the artefacts of the fifth to seventh centuries AD. From 1958 to 1959 she was curator of the Scunthorpe Museum. After her marriage to Hawkes in 1959 she was research assistant (1959–73) at the Oxford Institute of Archaeology. There she began her most significant research, on Anglo-Saxon graves and grave goods, focusing on the Kent cemeteries and especially Finglesham. Elected FSA in 1961 she was university lecturer in European archaeology from 1973 to 1994. She suffered from stage nerves and disliked lecturing, but was an effective supervisor of graduate students and created a notable seminar series which resulted in *Weapons and Warfare in Anglo-Saxon England* (1989). In 1979 she was a founding editor of *Anglo-Saxon Studies in Archaeology and History*. She nursed her husband in his declining years, took early retirement in 1994, and married Svetislav Petkovic (*b.* 1923/4), a retired factory inspector, on 13 May 1995. Following a long illness she died of cancer on 29 May 1999 at Sobell House, Oxford, and was cremated on 8 June at Oxford crematorium. She was survived by her second husband.

Hawkes [*née* Hopkins; *other married name* Priestley], **(Jessie) Jacquetta** (1910–1996), archaeologist and writer, was born on 5 August 1910 in Cambridge, the younger daughter and third and youngest child of Sir Frederick Gowland *Hopkins (1861–1947), biochemist and Nobel prize winner, and his wife, Jessie Ann (1869–1956), daughter of Edward William Stevens, ship's fitter, of Ramsgate. Her

(Jessie) Jacquetta Hawkes (1910–1996), by Jorge Lewinski, 1968

eminent father was a distant cousin of the poet Gerard Manley Hopkins. In her imaginative writing style she was to embrace both academic exactness and poetic form, producing work that was ahead of its time in its lyrical synthesis of science and art; she would argue that the two were inseparable. In the range of her published work—poetry, plays, journalism, fiction, biography, popular guide books, and academic papers—she communicated, at all levels, her passion for archaeology, and the response of people, and places, to change over time. In a childhood essay she declared that passion. She was already inspired by visits to museums with her mother, and the discovery that her own home, at 71 Grange Road, Cambridge, was built where a Roman road overlapped an Anglo-Saxon cemetery. She attended the Perse School for Girls (1921–8) and then went to Newnham College, Cambridge, in 1929, the first woman to read archaeology and anthropology for the new undergraduate degree. In her second year she took part in her first proper excavation, a Roman site near Colchester, and met (Charles Francis) Christopher *Hawkes (1905–1992), a young and already brilliant archaeologist, whose proposal of marriage she preferred over several others.

Privately surprised at gaining a first, Jacquetta went on to excavate at Mount Carmel in Palestine with Dorothy Garrod. Her work there, unearthing a Neanderthal skeleton, moved her to poetry. On 7 October 1933 she married Hawkes in the chapel of Trinity College, Cambridge, her father's college. It appeared a blissful union of mutual interests, but some fifty years later, recalling the Majorcan honeymoon in her partly autobiographical *A Quest of Love* (1980), Jacquetta wrote simply and revealingly: 'We enjoyed the sun and visiting antiquities—and were not unhappy' (Hawkes, *Quest of Love*, 212). Her only child, Nicolas, was born in 1937, and from a marriage at that time 'admirably well-balanced and free' (ibid.), the pair also produced a book together, *Prehistoric Britain* (1943), largely written by her. They set up home in London, most notably at 39 Fitzroy Road, Primrose Hill, the back garden of which featured in Jacquetta Hawkes's most acclaimed work, *A Land* (1951). This fusion of geology, archaeology, literature, and art, illustrated by her friend Henry Moore, was hailed for its Donne-ish lyricism. It was a considerable departure from her other solo publications, the second volume of the *Archaeology of the Channel Islands* (1938), on Jersey, and *Early Britain* (1945), and its unique appreciation of the past, and the problems of the dawning nuclear age, set its author apart as an archaeologist not shy of offering up a new perspective. Her literary interests also found a place in her private life, in an affair with the Australian poet Walter *Turner. Jacquetta Hawkes's only volume of poetry, *Symbols and Speculations* (1949), was a response to Turner's early and sudden death in 1946. During the war she had also become involved in an affair with a woman which, although platonic, left her emotionally confused.

Christopher Hawkes's work for the British Museum was successful but all-demanding, and the couple's increasingly separate lifestyles and interests were exacerbated by his wartime employment as a principal in the Ministry of Aircraft Production. Finding her niche as a consummate communicator, Jacquetta also joined the civil service in 1941, working on post-war reconstruction, and for the Ministry of Education from 1943. In her role as editor-in-chief of its film unit she produced *The Beginning of History*, which was a novel attempt at presenting prehistory, then thought unfilmable, in a new format, with an Iron Age site reconstructed at Pinewood Studios. In 1943 she was also made principal and secretary of the UK national commission for UNESCO, and protested vigorously against the inclusion of the playwright and author, John Boynton *Priestley (1894–1984), on the grounds that he was not of sufficiently high literary calibre. She only admitted later that she had not read his books. Her objection was overruled, Priestley and Jacquetta met, and at a conference in Mexico City in 1947 began an affair which she held to be the great love of her life and which ultimately led to two much publicized divorces. In July 1953 the couple were married. They lived at the Albany in London, and at Brook Hill on the Isle of Wight, and moved to Kissing Tree House at Alveston, near Stratford upon Avon, in 1960.

Jacquetta Hawkes gave up the civil service in 1949 to concentrate on writing. As well as producing archaeology books she collaborated with Priestley on two plays, one of which, *A Dragon's Mouth* (1952), was experimental but well received, as was *Journey Down a Rainbow* (1955), a series of letters based on their travels in south-west America, dedicated to Carl Jung, to whose works Priestley introduced Jacquetta. Marriage with Priestley was deeply and mutually satisfying, as Jacquetta often pronounced, but she did not neglect her other passion. Her post-war role as archaeology adviser to the Festival of Britain gave her a stage for

her own sweeping view of the history of Britain, and in 1952 she was made an OBE. In subsequent years she travelled widely as a correspondent for *The Observer* and the *Sunday Times*, and maintained a high profile. She wrestled with the hugely ambitious UNESCO project *The History of Mankind*, as co-editor of the prehistory volume, and provoked debate with her 1971 John Danz lecture, delivered in Seattle, in which she urged that science should be complemented by intuition. This was published as *Nothing But or Something More*. In 1950 she became a governor of the British Film Institute and was instrumental, with Priestley and their great friends Canon John Collins and his wife, Diana, in the founding of the Campaign for Nuclear Disarmament—being distinguished at the front of the Aldermaston march by her stature and large hat. In 1971 she was made vice-president of the Council for British Archaeology, and in 1982 produced a biography of her close friend and fellow archaeologist Sir Mortimer Wheeler. Her last publication was the *Shell Guide to British Archaeology*, published in 1986.

After Priestley's death in 1984, Jacquetta Hawkes, who firmly believed that death was the end, moved to Littlecote in the Cotswold town of Chipping Campden, Gloucestershire. She remained a trustee of the Shakespeare Birthplace Trust, and continued her interests in church architecture and ornithology, as well as in such issues as homosexual law reform and education; she was a governor of two grammar schools. She died in Cheltenham on 18 March 1996, and was cremated on 25 March at Warwickshire crematorium, near Chipping Campden. Her ashes were interred near the resting place of J. B. Priestley at Hubberholme, Yorkshire.

Her death left archaeology bereft of one of its most enigmatic personalities, whose personal life overshadowed her response to a rapidly evolving discipline, as it oscillated between science and humanities. Her life presented a veritable Minoan labyrinth of apparently contradictory paths: she championed Robert Graves's 'mother goddess' theories, but spoke against the champions of women's liberation; she demanded respect as an academic, but courted disaster by the sexual frankness of *A Quest of Love*. Some never forgave her for breaking up Christopher Hawkes's family life (as noted by Vincent Brome, *The Guardian*, 20 March 1996). Jacquetta Hawkes strove to achieve the Jungian balance; she was a unique woman who, if often haughty and aloof, was also, to those who knew her well, both compassionate and passionate—'a mixture of Athena and Aphrodite', as Diana Collins contended (*The Independent*, 20 March 1996). As Priestley famously remarked on first meeting her: 'What a woman! Ice without, fire within!' (ibid.). CHRISTINE FINN

Hawkes, Sonia Elizabeth (1933–1999). *See under* Hawkes, (Charles Francis) Christopher (1905–1992).

Hawkesworth, John (*bap.* 1720, *d.* 1773), writer, was born in Tottenham Court, London, and baptized on 28 October 1720 at St Pancras, the second of three children of John Hawkesworth (*d.* 1752), a watch engraver, and his wife, Ann, *née* Cornford. His father, who was a dissenter, probably presbyterian, had some knowledge of Latin and Greek and was fluent in French. Partly because of the collapse of the South Sea Bubble, partly because of ill health, he failed in trade and became a French teacher.

Hawkesworth received an elementary education in writing, arithmetic, and 'knowledge of his own language, chiefly from the Bible, from which text his parents diligently inculcated religious principles on his mind' (Abbott, 5). The mastery of French displayed in his translation of Fénelon, *The Adventures of Telemachus* (1768), was presumably acquired from his father. Through wide reading he later became knowledgeable on many subjects, but in the eyes of contemporaries his lack of a classical education remained a deficiency. Sir John Hawkins called him 'a man of fine parts, but no learning' (Hawkins, 252). At sixteen he was apprenticed to an attorney in the City. The dullness of this work was relieved by literary conversations with John *Ryland, a young merchant, who married Hawkesworth's sister Honor in 1742. By then Hawkesworth had found employment as writing-master at a girls' boarding-school in Kent run by Mary Brown (*d.* 1796), daughter of a Bromley butcher. On 11 May 1744 Hawkesworth married Mary, and the couple moved into Thornhill Mansion, Bromley, a handsome Tudor building which also housed the school. Hawkesworth became governor of the school, and the couple remained in Bromley throughout their evidently happy and prosperous married life. Mary Hawkesworth was described by friends as intelligent, capable, and 'a very well-bred, obliging, & sweet tempered Woman' (*Early Journals and Letters*, 1.241).

Hawkesworth's first known composition, a poem of impassioned sentiment, was written in 1738. It was never published, but his verse fable, 'The Fop, Cock and Diamond', written in 1740, was printed in the *Gentleman's Magazine* in June 1741. The publication of more of his fables in the magazine in 1741–2 provided Hawkesworth with an entry into the literary world, for it was in the offices of Edward Cave, founder of the *Gentleman's Magazine*, that he first met Samuel Johnson. Johnson was

already writing and editing for Cave, and Johnson and Hawkesworth became close friends. From 1743 onwards Hawkesworth gradually assumed Johnson's responsibilities on the magazine: writing up parliamentary debates, editing the poetry section, and contributing his own essays, reviews, and poems, finally becoming literary editor in 1756. His work 'gave him great opportunities of improvement by an extensive correspondence with men of all professions' (Hawkins, 252), and he remained until his death a dominant force on this influential periodical.

In 1749 Hawkesworth joined Johnson's literary group the Ivy Lane club, where he was valued as an 'instructive and entertaining companion' on account of his eclectic knowledge and 'good share of wit' (Hawkins, 252). Encouraged by fellow members, he became editor and principal writer for a new journal, *The Adventurer* (7 November 1752–9 March 1754), successor to Johnson's *Rambler*. As he explained retrospectively, his aim was to provide moral guidance for the young, but by indirect means: 'I knew it would be necessary to amuse the imagination while I was approaching the heart' (*The Adventurer*, no. 140, 2.356). Of about seventy papers written by Hawkesworth himself, the majority were in narrative form: stories of middle-class English life, or oriental tales, a genre in which he was particularly adept; his formula, blending moral sentiment with exotic trappings, magic, and melodrama, proved a popular one. As an essay writer, too, he was considered a rival of Addison and Johnson. His achievements on *The Adventurer* were rewarded in 1756 by grant of the Lambeth degree of doctor of laws from the archbishop of Canterbury. This honour gratified Hawkesworth but failed to impress his Ivy Lane friends and caused a rupture in his friendship with Johnson, who felt that 'Hawkesworth—who had set out as a modest, humble man—was one of the many whom success in the world had spoiled' (Prior, 441). This judgement was endorsed by the testimony of other acquaintances.

Hawkesworth's next successful venture was an edition of *The Works of Jonathan Swift* (6 vols., 1755), which for a long period supplanted Faulkner's Dublin edition (1735) as the authoritative text of Swift. Modern scholarship has exposed its editorial deficiencies, but Hawkesworth's critical notes retain some historical interest. The life of Swift prefixed to the first volume was a milestone in literary biography, being the first attempt at a balanced and judicious assessment of an author's character. From 1756 Hawkesworth was involved in theatrical activities, through his long-standing friendship with David Garrick. He supported Garrick in his theatrical quarrels, supplied him with versions of Dryden's *Amphitryon* (1756) and Southerne's *Oroonoko* (1759), and wrote oratorios and dramas of his own. His *Edgar and Emmeline: a Fairy Tale* (1761), a combination of romance, farce, and comedy of manners, embellished with music by Michael Arne, played to packed houses at the Theatre Royal, Drury Lane, and was enthusiastically reviewed by Arthur Murphy.

Hawkesworth's most popular literary work, *Almoran and Hamet: an Oriental Tale* (1761), was also written initially in dramatic form, but recast as narrative when Garrick took fright at the potential costs of staging it. Hawkesworth had a political motive in rewriting it after the accession of George III, to whom it was dedicated: Mary Hawkesworth recalled that he 'thought the sentiments peculiarly adapted for the use of a young monarch' (Abbott, 113). Although *Almoran and Hamet* may have been influenced by Johnson's *Rasselas* (1759) in its ethical framework, it has a more fantastic plot, involving a genie and magic spells. Comparing the two, Thomas Percy thought Johnson superior 'in style, and in having confined his narrative within the Limits of possibility', but Hawkesworth 'contrived to interest his readers more, by introducing a very pleasing Love-Story' (*Correspondence of ... Percy and ... Shenstone*, 7.102).

Hawkesworth was busy in other spheres at the same time. Through his interest in scientific subjects and his friendship with Benjamin Franklin he was elected to the Society for the Encouragement of Arts, Manufactures, and Commerce in 1761, and his experience as a political writer led to a close association with the Irish baronet Sir James Caldwell whom he served from 1759 for several years as literary and personal adviser. By this connection Hawkesworth made aristocratic friendships of which he was naïvely vain. A much older friendship with Charles Burney, however, led to Hawkesworth's most lucrative and prestigious commission. On the recommendation of Burney, supported by Garrick, he was appointed by Lord Sandwich, first lord of the Admiralty, to compile the official account of the voyages to the south Pacific in 1764–71, based on the journals kept by Captain James Cook and others. Hawkesworth sold the copyright to the publishers Strahan and Cadell for the then colossal sum of £6000, a deal which led to a breach with Garrick, who thought Thomas Becket should have had the option to publish and accused Hawkesworth of putting financial gain before friendship. Hawkesworth was also involved in litigation in 1773 to prevent publication of a rival account of Cook's voyages. In both affairs he acted within his legal rights, but his reputation as a high-minded moralist was tarnished. In April 1773 Hawkesworth was elected to the board of the East India Company, a position for which he had been angling since 1771, and in June *An account of the voyages undertaken by ... Commodore Byron, Captain Wallis, Captain Carteret, and Captain Cook* (3 vols., 1773) was published. Although it became a best-seller, it proved disastrous for Hawkesworth. He was publicly attacked on three different counts: by the captains for tampering with the texts of their journals, by prudish readers for reprinting descriptions of the sexual freedoms of the South Sea islanders, and by devout churchmen for impiety in the general introduction to the work, in which Hawkesworth had rashly challenged the doctrine of providential intervention. He was devastated by this critical barrage, and it was thought to be the main cause of his death. The rumour recorded by Malone that he killed himself with an overdose of opium is uncorroborated, but Fanny Burney's conviction that his health was destroyed by the vilification he suffered seems well founded. He died at Lime Street, London, of 'a slow Fever' on 17 November 1773; 'his

6000 l. was dearly purchased, at the price of his Character & peace' (*Early Journals and Letters*, 1.324–5). He was buried in the churchyard of St Peter and St Paul, Bromley, on 22 November.

Ironically, the lasting popularity of 'Hawkesworth's *Voyages*', as they soon came to be known, kept his name alive among general readers more successfully than anything else he wrote. But as a man of versatile talents who was widely read and a leading figure in the cultural life of eighteenth-century London, his virtual eclipse in the twentieth century seems curious.

Wealth at death see widow's will discussed in Abbott, *John Hawkesworth*

Hawkesworth, Walter (*c.*1573–1606), playwright, was probably the son of John Hawkesworth, an attorney in the exchequer of pleas at Westminster, a member of the Hawkesworth family of Hawkesworth, in the parish of Otley, West Riding of Yorkshire. He has been confused with his nephew of the same name. Walter matriculated as a pensioner of Trinity College, Cambridge, on 30 March 1588, was elected scholar in 1590 (graduating BA in 1592 and MA in 1595), and was admitted minor fellow in October 1593 and major fellow two years later.

Hawkesworth's long and successful university career is now remembered for his contribution, as actor and author, to his college's theatrical activities. His *Labyrinthus*, erroneously attributed to Thomas Goffe, an adaptation in Latin of Giambattista della Porta's *La cintia* with a subplot borrowed from the anonymous Spanish novel *La vida de Lazarillo de Tormes*, was performed at Trinity College in March 1603 and supposedly before James I in December 1624. *Labyrinthus* was published in 1636, and may have been the play of the same name dismissed by Pepys on 2 May 1664 as 'the poorest play methinks that ever I saw' (Pepys, *Diary*, 5.139). Hawkesworth was also the likely author of *Leander*, sometimes attributed to William Johnson, the author of another Cambridge Latin play, *Valetudinarium*. *Leander*, based on Sforza degli Oddi's *Erofilomachia*, was performed at Trinity in 1598 and again in 1603, the day after *Labyrinthus*. Cast lists in contemporary manuscripts of the plays name Hawkesworth as the eponymous hero in both performances of *Leander* and as the old hedonist Tiberius in *Labyrinthus*. The popularity of these comedies of sexual intrigue and infidelity is attested by the survival of seven manuscript copies of *Labyrinthus* and eight of *Leander*. Claims for Hawkesworth's contributions to revisions of the play *Pedantius* published in 1631 and to a collection of verses on the death of Sir Edward Lewkenor and his wife in 1606 are unsupported by contemporary evidence. Hawkesworth's importance lies in introducing to England the Italian *commedie erudite* as source material and being the first adapter of the work of Giambattista della Porta, establishing a precedent for the use by popular dramatists of the plays of Italy as well as its novels.

Hawkesworth resigned his university fellowship at or before Michaelmas 1605, when he became secretary to Sir Charles Cornwallis, also a Trinity man, appointed earlier that year as James I's ambassador in Madrid. Hawkesworth's family, like many in Yorkshire, had Catholic sympathies, and it has been suggested that Hawkesworth himself was 'not an unprejudiced party' (Speight, 272) in the affairs of the embassy, which were extremely delicate in the months following the Gunpowder Plot in November 1605. He may have been among the seven recusants on Cornwallis's staff who, according to contemporary gossip, were reclaimed for the church.

Hawkesworth's diplomatic career was brief, but he was entrusted with confidential and important matters of state before his death, of the plague, in Madrid between 25 and 30 September 1606, when Cornwallis wrote to the earl of Salisbury: 'For myne own particular I am yet continuing in my infected House, where sythence my last Letters advertizeing the Death of Hawkesworth and four more; ... there are lately fallen downe of the same Dissease three more' (Sawyer, 2.261). Hawkesworth was unmarried and without children. His will, dated 5 October 1606 NS (25 September 1606 OS), names as his sole heir and executor Edward Goldingham, 'my boy', who played the role of Hawkesworth's servant on stage in *Labyrinthus* and, it seems, in real life.

Hawkey, John (1702/3–1759), classical scholar, the son of John Hawkey, gaoler, may have been born in Cove, Devon.

He may have been educated at Mr Spare's school in Liskeard before he entered Trinity College, Dublin, in 1720, aged seventeen. He won a foundation scholarship in 1723 and graduated in 1725. Little is known of him, except for his translation of Xenophon's *Anabasis*, before the publication in 1745 of his elegant and accurate editions of Virgil and Horace. In the same year he dedicated an edition of *P. Terentii Afri comoediae* to the earl of Chesterfield. By 1746 he had established a school in Dublin, but continued his scholarly publications with editions of the satires of Juvenal and Persius (1746), dedicated to Bishop Mordecai Cary, and of Sallust in 1747. Hawkey projected an edition of Cicero in twenty volumes, which, however, was not printed. The year 1747 also saw the publication of Hawkey's edition of Milton's *Paradise Lost*, fated to be overshadowed two years later by Bishop Newton's compendious variorum edition. His aim was to present a clean text, 'freed from all blunders and absurdities', by careful collation with the earliest editions. He included only a very few of the 'bold corrections of Dr. Bentley' in his endnotes; he rather followed Zachary Pearce in affirming both Milton's authority and his peculiarities. An edition of *Paradise Regained* followed in 1752. Hawkey died in Dublin in 1759.

Hawkins, Sir Anthony Hope [*pseud.* Anthony Hope] (1863–1933), novelist, was born on 9 February 1863 at Clapton House, Clapton, London, the third and youngest child of the Revd Edwards Comerford Hawkins (*d.* 1906), headmaster of St John's Foundation School for the Sons of Poor Clergy, and Jane Isabella Grahame, daughter of Archibald Grahame of Brighton and aunt of the author Kenneth Grahame (1859–1932). His mother also claimed descent from Robert the Bruce. Hawkins was educated at his father's school in Clapton, at Leatherhead when the school moved there, and at Marlborough College, where he excelled at athletics and edited *The Marlburian*. He proceeded to Balliol College, Oxford, with an exhibition (which in his first term was raised to a scholarship) in 1881. He was a member of the college rugby team, obtained a first class in classical moderations (1882) and in *literae humaniores* (1885), and became president of the Oxford Union (1886). He was called to the bar by the Middle Temple in 1887 but had already started writing short stories. He privately published *A Man of Mark* in 1890; it was his first experiment with the romance form by which he would make his name, and a 'skit on democracy' in South America.

Hawkins made his home for the next seventeen years with his widowed father who had been presented to St Bride's Church, Fleet Street, and was juggling careers in law, authorship, and politics (a staunch Liberal, he stood without success but without disgrace for a Conservative constituency, South Buckinghamshire in 1892). At this time his appearance combined elements of the dandy and the staid barrister. After six years at the bar he was finally holding important briefs from the Great Western Railway. But by June 1893 he had published five novels: *Father Stafford* (1891), a story of a moral and religious quandary; *Mr Witt's Widow* (1892), which gave him his first taste of success; *Sport Royal* (1893), an early romance fantasy using a favourite trope of mistaken identity; *A Change of Air* (1893) and *Half-a-Hero* (1893), both political novels.

On 28 November 1893 Hawkins's career choice was made for him when he was struck by the sight of two men of very similar appearance on his walk back to the Temple. *The Prisoner of Zenda*, set in the fictional kingdom of Ruritania, and a story of court intrigue and romance, unrolled itself before him and he began it the next morning and finished it rapidly. It was published in April 1894 and enjoyed almost immediate success and popularity. Andrew Lang acclaimed it at the Royal Academy banquet; R. L. Stevenson sent congratulations from Samoa; while Hawkins ascribed its success to the combination of 'royalty and red hair' (Mallet, 76). The novel insinuated itself into the collective consciousness giving rise to the romanticizing of middle Europe and to a new term, 'Ruritania', to describe 'the novelist's and dramatist's locale for court romances in a modern setting' (*Oxford English Dictionary*). According to his biographer, Sir Charles Mallet, the novel has been abridged as a 'primer for young Indians', serialized in a Japanese newspaper, and given the name Zenda to a town in Canada. It has been filmed on six occasions; the most acclaimed was the 1937 adaptation starring Ronald Coleman, Douglas Fairbanks junior, and Madeleine Carroll.

Summer 1894 saw the publication of *The Dolly Dialogues*, a serial which had originally appeared in the *Westminster Gazette* dramatizing the flirtation between Dolly Foster, later Lady Mickleham, and Samuel Carter. It is a witty if poignant evocation of *fin de siècle* society which spawned numerous imitations and parodies in *Punch*. This book enhanced the fame and profits gained by *The Prisoner of Zenda*, which in its turn had increased demand for the author's previous novels, and on 4 July Hawkins left the bar and established himself in rooms off the Strand to devote the next twenty years to writing.

From now on Hawkins would alternate between romances and more 'serious' fiction. *The Indiscretion of the Duchess* (1894) was a return to adventure, while *The God in the Car* (1894) was a study of power and politics with parallels with empire-builder Cecil Rhodes. *The Chronicles of Count Antonio* was marred by archaisms and had a lukewarm reception, while the Ruritanian *The Heart of the Princess Osra* (1896) and *Phroso* (1897) were favourably reviewed. Hawkins embarked on a three-month lecture tour of America from October 1897. In 1898 *Simon Dale* was not a completely satisfactory experiment with the historical novel but the *Zenda* sequel *Rupert of Hentzau* (1898) restored him to public affection. *The King's Mirror* followed in 1899; it was well received and was considered by many, including J. M. Barrie and Hawkins himself, to be his best book along with *Double Harness* (1904). The political adventure

Quisanté (1900) kept him in the public eye, and in January 1900 he was elected chairman of the committee of the Society of Authors on which he served for twelve years, for four years as its chairman; he was founder of its pension scheme. *A Servant of the Public* (1905) revealed his lifelong love of acting. During this period he also turned playwright. *The Adventure of Lady Ursula* was produced in October 1898, with Evelyn Millard and Herbert Waring, and was followed in 1900 by *English Nell*, a version of *Simon Dale*, with Marie Tempest as Nell Gwyn. Both were profitable, but *Pilkerton's Peerage* (1903), a satire on the distribution of honours, also added to his reputation.

On the return journey from his second tour of America Hawkins met Elizabeth Somerville (1885/6–1946), daughter of Charles Henry Sheldon, of New York. They were married soon after, on 1 July 1903, and had two sons and a daughter. They lived thereafter at 41 Bedford Square, London, but, warned by ill health, Hawkins rented and subsequently bought Heath Farm, Walton on the Hill, Surrey, exchanging the big London house for a smaller one in Gower Street.

After mixed reviews and poor sales for *Sophy of Kravonia* (1906), *Second String* (1910), and *Mrs Maxon Protests* (1911), Hawkins's reputation was in decline and he relied on film rights and reprints for income. He enjoyed a period of activity and fulfilment during the war working for the editorial and public branch department (later the Ministry of Information) as part of a government initiative to counteract German propaganda under the direction of Charles Frederick Gurney Masterman at Wellington House. Among other tracts he wrote *The New (German) Testament* (1914), which argued against German militarism, and he was knighted for his services in 1918. After the war, however, Hawkins found literary composition increasingly arduous and was plagued by depression. He continued to publish, but only *Beaumaroy Home from the Wars* (1919) was applauded. *Memories and Notes*, a partial and modest autobiography, was published in 1927. Hawkins had suffered from a heart condition since 1900 and he died at his home at Heath Farm on 8 July 1933 of cancer of the throat. He was buried at Leatherhead.

Considered old-fashioned by the next generation of writers, Hawkins deplored the way more philosophical fiction was superseding the novel of character and manners. To his great distress Hawkins recognized this fact and believed that he had not achieved greatness. He never recaptured the freshness of *The Prisoner of Zenda*; although it can be argued that some of his other fiction deserves reassessment, including *Sophy of Kravonia*, which it is said inspired Graham Greene to take up travel (Henderson). *The Prisoner of Zenda* will, however, ultimately secure his reputation as one of the pre-eminent romance writers. As Tony Watkins observes, this novel 'set the style of romantic adventure novels for at least thirty years after publication' (Watkins, xxi). CLARE L. TAYLOR

Hawkins, Benjamin Waterhouse (1807–1889?), natural history artist and sculptor, was born on 8 February 1807 in Devonshire Street, London, of unknown parents. Educated at St Aloysius College, he studied sculpture under William Behnes. He specialized in natural history subjects and displayed a number of paintings of animals at the Royal Academy, the British Institution, and elsewhere from 1832 to 1849. He illustrated numerous works, including contributing forty-nine plates, illustrating fish and reptiles, to Charles Darwin's *The Zoology of the Voyage of HMS Beagle* (pts 4 and 5, 1838–43). In 1842–7 he produced a series of studies of living animals from the menagerie of the earl of Derby at Knowsley. Other early works included animal sculptures for the gardens of Biddulph Grange, Staffordshire. Elected a member of the Society of Arts in 1846, a fellow of the Linnean Society in 1847, and a fellow of the Geological Society in 1854, he was an assistant superintendent and exhibitor at the 1851 Great Exhibition.

In September 1852 Hawkins was appointed director of the fossil department of the Crystal Palace, under reconstruction at Sydenham, south London, and in collaboration with Richard Owen began to construct the first major public display of the progression of life on earth, comprising life-sized iron and stone models of fourteen genera of extinct animals, together with reconstructions of fossil plants and geological strata. He held a dinner party on 31 December 1853 in the mould of the largest model, of the dinosaur *Iguanodon*. The Crystal Palace work was terminated in the summer of 1855, with the display incomplete, but it made a significant contribution to popular understanding of the nature of the development of life on earth and now provides an important insight into palaeontological knowledge in the mid-1850s.

Hawkins travelled to the United States in 1868 and was commissioned to create a similar display of models of extinct animals in Central Park, New York. By early 1871 he had completed numerous moulds and some finished models. The project was abandoned, however, following

the destruction of the work on the orders of a new, corrupt, New York administration. He continued to work in the United States, producing a number of casts of fossil skeletons of hadrosaur dinosaurs (including the first mounted dinosaur fossil in the US). In 1875 he began a series of paintings of prehistoric scenes at Princeton University, New Jersey. His subsequent fate is obscure. He may have returned to England to spend his remaining years at his house, Fossil Villa, near the Crystal Palace, the scene of his greatest work. His death is not recorded in the UK, however, and he may have remained in the United States. One report suggests that he died in New York in 1889.

Hawkins, Sir Caesar, first baronet (1711–1786), surgeon, son of Caesar Hawkins (1688–1750), surgeon practising in Shropshire, and his wife, Ann Bright (*d.* 1725), was born at Kelston, Somerset, on 10 January 1711, and studied with his father and with John Ranby for seven years. On 1 July 1735 he was admitted to the Company of Barber-Surgeons, and on 19 August 1736 was made a member of the livery and chosen demonstrator of anatomy. This latter office he resigned in the next year on being appointed surgeon to the prince of Wales and to one of the troops of guards. In 1735 he was elected surgeon to St George's Hospital, and held this office until 1774. He was made sergeant-surgeon to George II on 7 September 1747, and occupied the same post in the next reign. On 3 September 1778 he was created a baronet. He married Sarah (1718/19–1801), daughter of John Coxe, and left a family; one of his sons, Charles, was also sergeant-surgeon, and another, the Revd Edward Hawkins, was the father of Edward Hawkins, provost of Oriel College, Oxford, of Francis Hawkins, and of the surgeon Caesar Henry Hawkins (1798–1884). The post of sergeant-surgeon was also held by Pennell Hawkins, a brother of Sir Caesar, and by George, son of Pennell, being thus occupied by four members of the same family in three generations.

Hawkins's professional success was mainly due to patronage. His baronetcy 'clearly rewarded his royal practice, not his intellectual or scholarly attainments' (Lawrence, 221). He is said to have made £1000 a year by phlebotomy alone. He was the inventor of an instrument called the cutting gorget, but published nothing. Hawkins died at Kelston on 13 February 1786 and was buried there. A monument to him and his wife was erected against the south wall of the south aisle of Kelston church.

Wealth at death property at Kelston; freehold messuage in Pall Mall, London; leaseholds in Pall Mall, Pall Mall Court, and Jermyn Street, London: James, 'Two celebrated Salopian surgeons'; will, PRO, PROB 11/1140, sig. 159

Hawkins, Caesar Henry (1798–1884), surgeon, was born on 19 September 1798 at Bisley, Gloucestershire, one of the ten children of the Revd Edward Hawkins (*d.* 1805) and his wife, Margaret, *née* Howes (*d.* 1859). His grandfather Sir Caesar Hawkins, baronet, was surgeon to St George's Hospital, London, and sergeant-surgeon to both George II and George III. Edward *Hawkins (1789–1882) and Francis *Hawkins (1794–1877) were his elder brothers. Hawkins received his early education at Christ's Hospital, London, but was withdrawn from the school in 1813 when it became apparent that he was not destined for either Oxford or Cambridge. After serving as pupil to a Mr Sheppard, of Hampton Court, he entered St George's Hospital in London under Sir Everard Home and Benjamin Brodie in 1818. He became a member of the Royal College of Surgeons in 1821, and he taught anatomy with Sir Charles Bell in the Hunterian School, Windmill Street, where he started a collection of specimens that was later to become part of St George's Hospital pathological museum. In 1823 he set up practice in Vere Street, off Oxford Street. In 1825 he moved to Half Moon Street, where he took house pupils. He was appointed surgeon to St George's Hospital

in 1829, and held this office until 1861, when, on his resignation, he was appointed consulting surgeon. Hawkins was president of the Royal College of Surgeons in 1852 and again in 1861; he was examiner for many years, and delivered the Hunterian oration at the college in 1849. In 1862 he was appointed sergeant-surgeon to Queen Victoria, having previously been one of her majesty's surgeons. He was elected a trustee of the Hunterian Museum in 1871, and was also a fellow of the Royal Society.

Hawkins was an eminent and successful surgeon, though he never received a title in recognition for his work. His opinion was especially valued in difficult cases. While in comparative retirement as consulting surgeon he was often seen in the wards of St George's Hospital, where he gave his colleagues the benefit of his long experience. For a long time he was known as the only surgeon to have performed the operation of ovariotomy successfully in a London hospital, and he did much to popularize the operation of colotomy. But he always leaned towards conservative surgery, and it was said of him that 'he was always more anxious to teach his pupils how to save a limb than how to remove it'.

Hawkins contributed many memoirs and lectures to medical journals which were collected and printed for private circulation with the title *The Hunterian Oration, Presidential Addresses, and Pathological and Surgical Writings* (2 vols., 1874). Among the more important are 'The Hunterian oration for 1849'; 'On the relative claims of Sir Charles Bell and Magendie to the discovery of the functions of the spinal nerves'; 'Experiments on hydrophobia and the bites of serpents'; 'On excision of the ovarium'; 'On stricture of the colon treated by operation'; and 'Lectures on tumours'.

Hawkins was twice married: his first wife was a Miss Dolbel; his second wife, who survived him, was Ellen Rouse. There were no children of either marriage. Hawkins died on 20 July 1884 at 26 Grosvenor Street, London, where he had lived since 1842.

Hawkins, Edward (1780–1867), museum curator and numismatist, was born on 5 May 1780 at Macclesfield, the eldest son of Edward Hawkins, banker, and his wife, Ellen, daughter of Brian Hodgson of Ashbourne, Derbyshire. He was educated at Macclesfield grammar school, and privately from 1797 to 1799 by George Ormerod, vicar of Kensington and father of George Ormerod, the Cheshire historian. He returned to Macclesfield about 1799 and received a commission in a local volunteer corps. He was employed under his father in the Macclesfield Bank until 1802, when the family moved to Court Herbert, Glamorgan. While there he was a partner with his father in a bank at Swansea, and they also superintended the copper works at Neath Abbey. He left Court Herbert in 1807 and lived in various places in north Wales and at Cadoxton, Glamorgan, before moving to Surrey in 1819, first to Nutfield and then to East Hill, Oxted. He married on 29 September 1806 Eliza, daughter of Major Rohde, with whom he had three sons and a daughter: Edward (*d.* 1867); the Revd Herbert Samuel, rector of Beyton, Suffolk; Major Rohde [*see below*]; and Mary Eliza, wife of John Robert Kenyon QC, and mother of Sir Frederic Kenyon.

In early life Hawkins was interested in botany, and in 1806 he was elected a fellow of the Linnean Society. Another field of interest at this time was the local history of Chester, on which he formed a large collection of books and prints. He was elected a fellow of the Royal Society in 1821 and of the Society of Antiquaries in 1826, and of both societies he subsequently served as a vice-president. He was a founder member and president (1839–41, 1849–51) of the Numismatic Society of London.

In May 1825, at the age of forty-five, Hawkins obtained a post as assistant keeper in the British Museum's department of antiquities, and the following year, on the unexpected death of Taylor Combe, he became keeper, a position he retained for some thirty-five years. This was very much a formative period both for the museum and for the development of archaeology. The department of antiquities then covered a vast field, encompassing most of the present departments of the British Museum after the separation of natural history and the British Library. Hawkins, a man with wide interests in antiquities, combined the talents of a meticulous scholar and a highly acquisitive curator. Under his care the collections grew dramatically and purposefully, two of the most notable achievements being the acquisition of Henry Layard's rich finds of Assyrian and Babylonian material from Nineveh and elsewhere and the establishment of a collection of prehistoric, Roman, and medieval artefacts from western Europe. The antiquities galleries also expanded enormously during his term as keeper, although shortage of space always remained a problem. These developments were achieved against a background of frequent disputes between the museum's trustees and its keeper staff, and latterly the ageing Hawkins ran his much enlarged department with little reference to the trustees. On his retirement antiquities was divided into three separate departments.

As a scholar, Hawkins's main contribution was in the field of numismatics. Besides a stream of articles in the *Antiquaries Journal* and the *Numismatic Chronicle*, including a remarkably detailed account of the 1840 Cuerdale hoard, he was the author of two major works. One was his *Silver Coins of England* (1841; 2nd and 3rd edns revised by his grandson R. Lloyd-Kenyon in 1877 and 1887), which remained the standard manual on English coinage for almost a century. The other was on English historical medals, of which he formed an outstanding personal collection that the British Museum bought on his retirement

in 1860. His interest in medals dates from before his appointment to the museum, and in the 1830s he had sought, without success, government funding to publish a portfolio of engravings of British medals with an accompanying catalogue. He continued to pursue plans for a descriptive catalogue, based largely on his own and the museum's collections, and a volume, *Numismata Britannica*, to the end of William III's reign, was typeset in 1852, but the trustees refused to sanction its publication, mainly because it contained some paragraphs expressing strong anti-Catholic sentiments. It was subsequently revised and completed by A. W. Franks and H. A. Grueber and published as Hawkins's *Medallic Illustrations of the History of Great Britain and Ireland* (2 vols., 1885), with plates added in 1904–11. Over a century later it was still the standard work on British medals before 1760.

Hawkins, partially bald and with strong features, struck a handsome and vigorous profile even at the age of seventy, to judge from the wax portrait by R. C. Lucas in the Victoria and Albert Museum. He died at his house, 6 Lower Berkeley Street, London, on 23 May 1867.

Major Rohde Hawkins (1820–1884), architect and antiquary, the third son, was born on 4 February 1820 at Nutfield, Surrey. He studied architecture, and in 1841 was appointed travelling architect to the expedition sent out under Sir Charles Fellows to Caria and Lycia. The Harpy Tomb at the British Museum, and other antiquities, were reconstructed from his drawings and measurements. He subsequently worked as architect to the committee of the council on education. He died at Redlands, near Dorking, Surrey, on 19 October 1884. M. A. S. BLACKBURN

Hawkins, Edward (1789–1882), college head, was born at Bath on 27 February 1789, the eldest child of Edward Hawkins (*d.* 1805), successively vicar of Bisley in Gloucestershire and rector of Kelston in Somerset, and his wife, Margaret (*d.* 1859), daughter of Thomas Howes of Morningthorpe, Norfolk. After about four years at a school at Elmore in Gloucestershire, he was sent to Merchant Taylors' School in February 1801. While he was a schoolboy he

Edward Hawkins (1789–1882), by Sir Francis Grant, 1854

was placed in a position of great responsibility by the death of his father, who left behind him a widow with ten children (who included Caesar Henry *Hawkins and Francis *Hawkins) and had appointed Edward one of his executors. In June 1807 he was elected to an Andrew exhibition at St John's College, Oxford, and in 1811 graduated BA with a double first class in classics and mathematics (MA 1814, BD and DD 1828). In 1812 he became tutor of his college, and in 1813 he was elected fellow of Oriel.

Oriel was at this time the most distinguished college in Oxford. Its system of 'open fellowships', that is, without restriction to a candidate's college or place of birth, as well as the insistence, introduced by the provost of the time, John Eveleigh, that election to a fellowship was to be on the basis of merit alone, attracted to the college some of the keenest minds in the university. When Hawkins was elected the college already had among its fellows leading figures in the university such as Edward Copleston, Richard Whately, and John Keble, and in the years after his election he was joined by Thomas Arnold (1815), John Henry Newman (1822), and E. B. Pusey (1823). Oriel was noted also for a group of its fellows led by Copleston and Whately and known as the Noetics, a school of free-thinkers who subjected received traditions, institutions, and beliefs to Socratic-like debate and critique. Hawkins, at this stage of his life on the 'progressive' wing of thought, found in such new colleagues kindred spirits to his own and readily associated himself with them. Both Copleston and Whately were to remain his close friends throughout their lives.

Although Hawkins had at first considered a career at the

bar, his family responsibilities persuaded him that ordination offered a more secure source of income. Devoting himself to divinity, he was ordained in 1816. He made an early impact as a theological thinker, delivering what was perhaps his most remarkable sermon in the university church in May 1818, the substance of which was published in 1819 under the title *A Dissertation upon the Use and Importance of Unauthoritative Tradition*. Newman, who as an undergraduate heard it preached, later wrote in his *Apologia* of the profound effect it had upon him:

> It made a most serious impression upon me. ... He lays down a proposition, self-evident as soon as stated, to those who have at all examined the structure of Scripture, viz, that the sacred text was never intended to teach doctrine, but only to prove it; and that if we would learn doctrine we must have recourse to the formularies of the church: for instance, to the Catechism and to the Creeds. (Newman, 22)

Hawkins afterwards treated the same subject more fully in his Bampton lectures (1840). When Newman became a fellow of Oriel in 1822 he came under the more direct influence of Hawkins, who immediately befriended him and set about weaning him from his Calvinist upbringing. From 1823 to 1828 Hawkins was vicar of St Mary's, a college living and the university church, and he is believed to have introduced the Sunday afternoon sermon, which afterwards became so famous under his successor, Newman.

By the 1820s Hawkins, who had resided in college since his election, was one of its leading fellows, and when in 1827 Copleston, who succeeded Eveleigh as provost in 1814, was appointed bishop of Llandaff he was an obvious candidate for the provostship. The other candidate was Keble. Hawkins gained the strong backing of both Pusey and Newman, who considered him the more likely of the two to maintain discipline, which they regarded as having of late become lax, and to further the educational reputation of Oriel. For personal and family reasons Keble soon withdrew his candidature, and Hawkins was elected on 2 February 1828. Later that year, on 20 December, he married Mary Anne (*d.* 1892), daughter of Richard Buckle of Clifton. Annexed to the provostship were a canonry at Rochester and the living of Purleigh in Essex.

Hawkins's provostship of Oriel was however, disappointing, and when Dean Burgon gives him the title of 'the great provost' the epithet requires much qualification. His stern demeanour impaired his relationship with the undergraduates. In a letter, as distinct from his published memoir of Hawkins, Burgon wrote that as an undergraduate he 'hated to have anything to do with him: there was nothing genial in his manner to us, though I have no doubt that he felt a real responsibility for our well-being' (Burgon to Greenhill, 6 Jan 1890, Oriel letters, F1262), adding, however, what many others also recorded, that when he became a fellow Hawkins at a personal and private level always showed great kindness to him. He was over-jealous of his authority and became intolerably autocratic in his management of the college. Keble accused him of overrating his own importance at the expense of the wishes of the fellows. He failed to take any constructive initiatives in the development of the college. Even his friend Whately warned him of the risk of failing to take a larger and comprehensive view of issues.

Burgon described Hawkins as provost, during the years of the Tractarian theological movement, as feeling 'like the Captain of a crew on the verge of mutiny' (Burgon to Greenhill, 6 Jan 1890, Oriel letters, F1262). His handling of a number of internal matters gradually alienated the fellows from him. In 1831 the three tutors, Newman, Froude, and Robert Wilberforce, wished to make some changes in the tutorial system, especially to establish a more intimate and pastoral relationship with their best pupils. The provost, fearing that this would lead to favouritism, refused his assent, assigned no more pupils to them, and the three tutors resigned. He made energetic efforts to supply their place by lecturing himself and engaging Renn Dickson Hampden, formerly a fellow of Oriel, to assist him, but the college never quite recovered from their loss. Ignoring wise advice he received on the matter from both Copleston and Keble, he also rejected a move to abandon the custom of admitting gentlemen commoners, whom Newman and others regarded as idle and the ruination of the college. In these and other matters the essential cordial co-operation necessary between the provost and the fellows was more and more eroded. Burgon, who became a fellow in 1845, later wrote of those years that 'Democratic rule was in the process of being substituted for a (rather unlimited) monarchy' (ibid.), while Oriel gradually lost the pre-eminence it had achieved under his two predecessors.

Hawkins was one of the most influential among the Oxford heads of colleges, taking the lead in their measures against the Oxford Movement. In 1835 he supported the unsuccessful move to replace subscription to the Thirty-Nine Articles by undergraduates at matriculation, which the Tractarians set out to uphold, with a declaration of conformity to the Church of England, and was subsequently a defender of R. D. Hampden against his Tractarian opponents. When in 1841 the university's hebdomadal board moved to condemn Tract 90, which Newman had composed, it was Hawkins who was commissioned to draw up the document. Dean Church later wrote that he was 'in Oxford, at least, the ablest and most hurtful opponent' of the Oxford Movement, a 'hard hitter' from whom 'it received its heaviest blows and suffered its greatest losses' (Church, *Occasional Papers*). While extolling Hawkins's virtues, Church also accused him of misunderstanding and intolerance towards the founders of the movement, and of resenting 'its taking out of his hands a province of theology which he and Whately had made their own, that relating to the church'. Unmentioned, however, are the many provocations of which Newman was guilty towards the episcopal and academic authorities of the time, and the fact that Hawkins was naturally exasperated by the Tractarians' doubtful claims to be the true heirs of Caroline Anglican theology. Hawkins's reputation as a theologian within the old high-church tradition was recognized by his election by his fellow heads in

1847 to the newly established chair of the exegesis of the holy scripture, the Dean Ireland professorship, which he held until 1861.

Winds of change began to blow across the university as a whole with the setting up of the royal commission of 1850. Hawkins was one of the heads of colleges who supplied no official information to the commissioners, and he drafted the heads' retort to the commissioners' report in 1853. After the government was informed that in several colleges—Oriel included—the heads had not consulted the fellows, Palmerston issued a direct enquiry to be sent to each college asking that it should be considered by the college as a whole. At Oriel counsel's opinion established that the college's response could not be limited to the provost and the senior fellows, as laid down in the original constitution. This ruling removed the provost's last defence against majority rule, and thereafter Hawkins frequently found himself in a minority, as low at times as two, in measures and changes voted upon by the fellows. Though he became an embattled figure in his own college, he enjoyed a wider reputation as a defender of the principle that government and teaching in the university should remain in the hands of members of the established church. He became a trusted friend of W. E. Gladstone, who stayed and dined with him frequently at Oriel, regarding him as an important point of reference in university affairs.

In 1874 the visitor (the crown) granted a petition from Hawkins that a vice-provost be appointed to manage the college, and he retired, at the age of eighty-five, to his house in the precincts of Rochester Cathedral, where he had almost always been a reformer among his fellow canons. He protested in vain in 1875 against the future severance of the canonry at Rochester from the provostship of Oriel, which removed the remaining obstacle to the laicization of the provostship, and in 1879 he petitioned Oxford University commissioners against the abolition at Oriel of the necessity for all fellows, except three, to be in holy orders. Hawkins died at his Rochester home, after a few days' illness, on 18 November 1882, and was buried on 24 November in the cathedral cemetery. On 20 December 1882 the fellows elected David Binning Monro, a layman who had been vice-provost since 1874, as provost.

Hawkins was 'of middle size, or rather under, slender, with pale, finely cut, and beautiful features' (*DNB*). He had two sons and three daughters, of whom two daughters and his eldest son died before him; the latter went out on the universities' mission to central Africa, and died in 1862.

Wealth at death £29,061 8*s.* 8*d.*: probate, 30 Dec 1882, *CGPLA Eng. & Wales*

Hawkins, Ernest (1802–1868), missionary society administrator, sixth son of Henry Hawkins of Lawrence End in the parish of Kimpton, Hertfordshire, and Anne, only child of John Gurney of Bedford, merchant, was born at Lawrence End on 25 January 1802; his father was a major in the East India Company's service. Hawkins was educated at Bedford and at Balliol College, Oxford, where he matriculated on 19 April 1820 and graduated BA in 1824, MA in 1827, and BD on 14 June 1839. On his ordination he became curate to the Revd Joseph Gould of Burwash, Sussex, and he subsequently travelled on the continent with a pupil. He returned to Oxford as a fellow of Exeter College on 26 December 1831, and then acted as an under-librarian of the Bodleian Library, and as curate at St Aldates in the city of Oxford. After leaving Oxford about 1835 he undertook the curacy of St George's, Bloomsbury, London.

In 1838 Hawkins was appointed under-secretary of the Society for the Propagation of the Gospel (SPG), and he succeeded the Revd Archibald Campbell in the secretaryship in 1843. It was during this period that he assisted Charles Blomfield, bishop of London, in launching the Colonial Bishoprics Council at a meeting in Willis's Rooms on 27 April 1841. They were supported in this by W. E. Gladstone, who was a member of the standing committee of the SPG and later a treasurer of the Colonial Bishoprics Fund, of which Hawkins himself was secretary until 1864. Hawkins's pamphlet *Documents Relating to the Erection of Bishoprics in the Colonies, 1841–1855* (1855) includes a lengthy historical preface in which he analyses the failure of the Anglican church to provide bishoprics for the colonies. The success of the fund is evident, for by his retirement the number of colonial bishoprics had increased from eight to forty-seven.

Hawkins was the first secretary of the SPG to travel overseas, making a private visit to the eastern parts of the USA and Canada in 1849. This was partly to study the differences between the American and Canadian churches, and partly to see for himself the conditions under which many SPG clergy were labouring. He was also concerned to help the Canadian church towards greater financial independence through an equitable settlement of the problem of the clergy reserves (lands from which the Anglican church in Canada derived most of its income). His close association with Bishop Strachan of Toronto over this vexed question led to a satisfactory outcome in 1855, after fifteen years of uncertainty. Also during this visit Hawkins had discussions with Lord Elgin, governor-general of Canada, about the creation of a new see at Montreal. It was proposed that Hawkins should be its first bishop, but with typical modesty he declined. From the journal he wrote

during this visit it is clear that Canada was dear to his heart, and three of its bishops—Fulford, Medley, and Field—were among his closest friends.

One other important contact that Hawkins made during his Canadian visit was Captain Lefroy, later Sir John Lefroy, the scientist and colonial administrator. Hawkins married Lefroy's sister, Sophia Anna (1823–1897), on 29 July 1852. John and Sophia Lefroy were children of John Henry George Lefroy, rector of Ashe in Hampshire, who was distantly connected to the family of Jane Austen. The Hawkinses had no children.

Apart from some devotional works, an edition of St John's gospel, and various works on colonial church history, Hawkins's literary energies bore fruit, soon after he became secretary, in initiating the SPG periodicals *The Church in the Colonies* and *Missions to the Heathen*. These were followed in 1852 by *The Gospel Missionary*, designed for children, and in 1856 by *The Mission Field*, which became the society's most popular journal.

Hawkins seems to have been sympathetic to the Tractarians but was not doctrinaire. It is perhaps noteworthy that in the notorious controversy surrounding William George Ward, also of Balliol College, he voted against Ward's degradation at the meeting of the university convocation in Oxford on 13 February 1845. Known as a fair-minded man, this seems not to have harmed his reputation.

The 150th anniversary of the founding of the SPG occurred in 1851, coinciding with the Great Exhibition and with the mid-point of Hawkins's twenty-six years of service to the society. The expansion of the SPG's work abroad owed much to Hawkins's energy and zeal, but perhaps more to his tact and patience, his gift for friendship, and his freedom from self-interest and narrow party feeling. By the time he retired in 1864 the SPG's income had risen from £16,557 to £91,703; missionaries from 180 to 493; and parishes supporting the society from 290 to 7270. Hawkins was not, however, to visit any other colonial territories despite serving as vice-president of Bishop's College, Cape Town, in 1859, and maintaining a cordial correspondence with the Revd Alfred Street, professor at Bishop's College, Calcutta.

Apart from his responsibilities in London at the SPG, Hawkins became assistant preacher at Lincoln's Inn in 1844, a prebendary of St Paul's Cathedral, and in 1850 minister of Curzon Chapel, Mayfair. On his retirement he was promoted by the crown on 7 November 1864 to a canonry at Westminster, vacated expressly for him by the voluntary resignation of William Henry Edward Bentinck, archdeacon of Westminster. Hawkins died in London at his home, 20 Dean's Yard, Westminster, on 5 October 1868, and was buried in the cloister of the abbey on 12 October.

Wealth at death under £10,000: probate, 17 Dec 1868, *CGPLA Eng. & Wales*

Hawkins, Francis (1628–1681), Jesuit, was born in London, the son of John *Hawkins (*c.*1587–*c.*1641), a physician and grammarian, and his wife, Frances Power of Bletchingdon, Oxfordshire. He was the nephew of both the poet Sir Thomas *Hawkins and the Jesuit Henry *Hawkins. During his youth Francis produced two translations: *An Alarum for Ladyes*, from a work by M. de La Serre, which appeared in 1638 with a dedication to Edward Sackville, fourth earl of Dorset; and *Youths Behaviour, or, Decency in Conversation amongst Men*, which was published, at John Hawkins's request, by the London bookseller William Lee in 1641. The latter work may have been circulating before 1638, as the preface to *An Alarum for Ladyes* noted that the 'first Treatise I presented the[e] with, was of good behaviour' (preface). *Youths Behaviour* ran to a further ten editions by 1672; the fourth edition of 1646 is the earliest that survives. A second part, *Youths Behaviour, or, Decency in Conversation amongst Women*, was added by the puritan Robert Codrington in 1664. As proof of the child's precocity the address to the reader in the 1646 edition of *Youths Behaviour* observes:

> Though here be wonder when 'tis knowne,
> A Child should make this worke his owne,
> (Since he that can translate and please,
> Must needs command two Languages).
> (sig. A4*r*)

Editions of both translations carry engraved portraits of the boy in their frontispieces although while *An Alarum for Ladyes* is inscribed 'Francis Hawkins tirant a l'aage des dix ans', the 1654 edition of *Youths Behaviour* claims the likeness was drawn 'a l'aage huict ans'.

On 8 October 1649 Hawkins entered the noviciate as a scholastic at the English Jesuit College at Watten and from 1650 to 1653 he studied theology at the English Jesuit house of studies in Liège. In 1654 he returned to the noviciate at Watten. Before being professed of the four vows on 14 May 1662 he moved between Watten, Ghent, and St Omer colleges and spent two years at the Holy Apostles and Blessed Aloysius colleges in England during 1657 and 1658. This was to be the pattern of his future career: in 1663 he became prefect of the church at St Omer before moving back to Watten, where he was socius to the master of novices; he returned to St Omer in 1667, taking the office of confessor to the Jesuits and students and acting as both admonitor and spiritual prefect. He was again moved to Watten, where he could be found in 1672–3 as assistant prefect, consultor, confessor, and again acting as assistant to the novice master. In 1673 he was sent again to Ghent becoming confessor and tertian master. In 1675 he moved to Liège where he remained until his death. During these

Francis Hawkins (1628–1681), by John Payne, pubd 1654

last few years of his life he was spiritual prefect and confessor to the Jesuits and in 1676 was professor of holy scripture. He died on 19 February 1681; the cause of death is unknown although his last recorded entry describes his health as 'firme' (transcripts of Jesuit catalogues, catalogi III). ROBERTA ANDERSON

Hawkins, Francis (1794–1877), physician, was born at Bisley, Gloucestershire, on 30 July 1794, the son of the Revd Edward Hawkins and his wife Margaret, daughter of the Revd Thomas Howes, of Morningthorpe, Norfolk, and sister of Francis *Howes. His grandfather was the eminent surgeon Sir Caesar *Hawkins; Caesar Henry *Hawkins and Edward *Hawkins were his brothers. He was educated at Merchant Taylors' School, London (1805–12), and St John's College, Oxford, where he gained a fellowship. He won the Newdigate prize in 1813, and in 1816 took a double second-class degree in classics and mathematics. He graduated BA 1816, BCL 1819, MB 1820, and MD 16 April 1823. He was admitted as an inceptor candidate of the Royal College of Physicians on 16 April 1821, as a candidate on 30 September 1823, and as a fellow on 30 September 1824. He became physician to the Middlesex Hospital in 1824, and was elected the first professor of medicine at King's College, London, in 1831. He resigned the chair in 1836, and left his hospital appointment in 1858. He was physician to the royal households of William IV and Queen Victoria.

Hawkins was connected with the Royal College of Physicians for many years, and held various offices. He gave the Goulstonian (1826), Croonian (1827–9), and Lumleian (1832–4, 1840–41) lectures, as well as the Harveian oration (1848). However, his most important contribution to the college was through serving as registrar, an office he held for twenty-nine years from 30 September 1829. Hawkins only resigned this post to become registrar of the General Medical Council on its foundation in 1858, and remained in this office until 1876. He was highly regarded as an excellent and courteous administrator. In both cases a special vote of thanks, accompanied by a liberal honorarium, was presented to him when he resigned the office.

Hawkins was married twice. In 1831 he married Hester (*d.* 1847), third daughter of Sir John *Vaughan, baron of the exchequer, with whom he had three sons and one daughter. He married his second wife, Sarah Jane (*d.* 1890), daughter of G. Haywood, in July 1859.

Hawkins was an accomplished physician, whose genial temperament made him very popular in professional circles. His Harveian oration in 1848 was admired for its Latin style. He also wrote *Lectures on Rheumatism and some Diseases of the Heart and other Internal Organs* (1826). He died on 13 December 1877, at his address at 16 Ashley Place, Victoria Street, London. J. F. Hawkins, George (1809–1852), lithographer, was the son of the landscape painter and engraver George Hawkins (*fl.* 1795–1820). He began as an architectural draughtsman and then became a successful lithographer. The *Art Journal* noted: 'his pencil was peculiarly correct and delicate, and his knowledge of effect enabled him to produce pictures out of the most unpromising materials' (*Art Journal*, 14, 1852, 375). He worked chiefly for the lithographic printers Messrs Day. Hawkins recorded contemporary as well as historical architecture, which included bridges, churches, railway viaducts, and marine views after his own designs and those of contemporaries; his views of the Great Exhibition were published by Ackerman & Co. in 1851. His *Bath from Beacon Hill* (a pair with *Bath from Beechey*

Hill, both after John Syer) is reproduced in Mackenzie's *British Prints* (1987). One of his most important undertakings was a series of plates in *The Monastic Ruins of Yorkshire*, from sketches made by W. Richardson, and with historical descriptions by E. Churton (2 vols., 1844–56). He was frequently employed by architects in colouring their designs, and many of these were exhibited at the Royal Academy between 1830 and 1848. Hawkins died at 116 Camden Road Villas, Camden Town, London, on 6 November 1852. GORDON GOODWIN, *rev.* JOANNA DESMOND

Hawkins, Henry (*bap.* 1577, *d.* 1646), Jesuit, was born in London or Kent and baptized in Boughton under Blean, near Canterbury, on 8 October 1577, the second son of Sir Thomas Hawkins (1548/9–1617) of Nash Court, Boughton, and Ann (1552–1616), daughter of Cyriac Pettyt and his wife, Florence, also of Boughton. The Hawkins and the Petits were both recusant families. Henry's elder brother, Sir Thomas *Hawkins (*bap.* 1575, *d.* 1640?), was a translator of recusant books. Other surviving brothers were Daniel (*bap.* 1578); Richard (*bap.* 1581), who married Mary Langworth (daughter of church papist John Langworth DD); John *Hawkins, a physician and author; and Cyriac. His surviving sisters were Susanna (*bap.* 1580), who married the recusant John Finch of Grovehurst, Milton next Sittingbourne; Anne, who married William Hildesley of Oxfordshire; and Bennet (*bap.* 1586) and Benedicta (1588–1661), both nuns in Brussels. A monument in Boughton church to Hawkins's father, Sir Thomas, and his family was designed by Epiphanius Evesham with exquisite sensitivity. The monument shows a group of thirteen children. The tall bearded man, raising his hand in blessing, is considered to be Henry Hawkins.

As a boy Henry Hawkins would have received private tuition: the name of Mr Greene, a recusant schoolmaster in his father's house about 1587–9, appears in the Hussey manuscripts at Lambeth Palace (Lottes, 146). Following his brother Thomas, Henry matriculated from Gloucester Hall, Oxford, on 3 November 1592, aged fourteen. On 9 February 1604 he married Aphra (*b.* 1583/4), daughter of Thomas Norton, in Fordwich, Kent. She died on 16 January 1605, her brass in Fordwich church describing her as 'scarcely having arrived to 21 yeares of age yet fully attayned perfection'. Hawkins is believed to have studied humanities at the English College, St Omer, before entering the English College, Rome, under the alias Brooke, on 19 March 1609, being described as 'a man of mature age, intelligent in affairs of government, very learned in the English laws', and having 'left ... office, and many ... expectations' (Foley, 3.491–2). His choice of alias 'may have been inspired by Sir Basil Brook, a prominent recusant' (Lottes, 146). He was ordained priest on 25 March 1614 and entered the Society of Jesus in 1615. On coming to England he seems to have been captured and imprisoned, and in 1618 was sent into exile with eleven other Jesuits. He returned and worked principally in London for twenty-five years. He is named among the 'veterani missionarii' in the list of Jesuits found among the papers seized in 1628 in Clerkenwell.

Seven of the eight works attributed to Hawkins appeared between 1630 and 1634. Most were translations, including saints' lives and devotional works, from Latin, French, and Italian. His *History of St. Elizabeth* (1632) was dedicated to the recusant Lady Mary Teynham of Lynsted Lodge, near Sittingbourne. He was responsible for producing two of the three extant recusant emblem books in English. He translated Stephen Luzvic's *The Devout Heart* (1634), the object of which was to combine the functions of an emblem book with those of a devotional manual. His own composition was the remarkable *Partheneia sacra* (1633), subtitled 'the mysterious and delicious garden of the sacred Parthenes'. In it the garden provided a framework for devotion. Twenty-four symbols associated with the Virgin Mary are all in the frontispiece and provide its framework and main themes. The book has been considered 'stylistically, in the mainstream of English prose of the seventeenth century' while his translations have been deemed 'significant contributions to vernacular prose literature' (Secker, 242, 250). He was said to be residing in London in 1641. 'In his old age Hawkins withdrew to the house of the English Tertian Fathers at Ghent, established in 1622 under the patronage of Lady Anne, countess of Arundel and Surrey' (Lottes, 146). He died there on 18 August 1646. ANTONY CHARLES RYAN

Hawkins, Henry, Baron Brampton (1817–1907), judge, was born at Hitchin on 14 September 1817, the son of John Hawkins, a solicitor with a considerable 'family' practice, and his wife, Susanna, daughter of Theed Pearse, clerk of the peace of Bedfordshire. After attending Bedford School until 1835, Hawkins was employed in his father's office long enough to take a dislike to solicitors' work, and with his parents' reluctant consent on 16 April 1839 entered the Middle Temple, taking out a special pleader's licence in

Henry Hawkins, Baron Brampton (1817–1907), by Barraud, pubd 1889

1841. He was the pupil of Frederick Thompson, a special pleader, and of George Butt, later a QC. On 3 May 1843 Hawkins was called to the bar, joining the home circuit and the Hertfordshire sessions. Although his earlier progress was not exceptionally rapid, it was unbroken from his call until he took silk in 1858. For the next eighteen years Hawkins's lively intelligence in handling complicated factual issues, well-chosen language, attractive voice, histrionic ability, sense of humour, thoroughness of preparation, and mastery of the art of cross-examination made him exceedingly successful in winning the verdicts of juries. He equalled the ablest of his contemporaries, serjeants Ballantine and Parry, as a leader of the common-law and criminal bar, being engaged in many cases of great ephemeral importance.

In 1852 Hawkins was counsel for Simon Bernard, who was acquitted of complicity in the Orsini conspiracy against Napoleon III. As junior to Serjeant Byles he defended Sir John Dean Paul, who was convicted in 1855 of fraud. In 1862 he was led by William Bovill in *Roupell* v. *Waite*, in which Roupell confessed himself guilty of forgery. He also appeared for various defendants in the prosecutions instituted after the failure of Overend and Gurney's Bank in 1866, all of them being acquitted. Appearing for Miss Sugden, he was largely instrumental in securing the establishment by secondary evidence of the will and codicils of Lord St Leonards, and was able to hold his judgment on appeal (1875–6).

Hawkins was at the height of his powers when he appeared in all but the earliest stages of the litigation in which Arthur Orton, claiming to be Sir Roger Tichborne, was the principal figure (1867–74). When he was originally retained for the family in the civil action (1871–2), it was no doubt intended that he should cross-examine the 'claimant', but before the trial John Duke Coleridge, who had also been instructed, became solicitor-general, and as such the leader in the defence. This accident which deprived Hawkins of the right to cross-examine Orton was a bitter disappointment, though his cross-examination of several other important witnesses maintained his reputation as a master of that art. When the criminal trial for perjury followed the collapse of the 'claimant's' civil action, Hawkins led for the crown (23 April 1873). His opening speech and his reply, which lasted 8 and 10 days respectively, were masterpieces of concise exposition, compared with the prosecution, which lasted 188, and Lord Chief Justice Cockburn's summing-up, which lasted 20 (February 1874). Coleridge by contrast had spent 23 days in opening the case for the defence in the civil action. Hawkins's handling of this extraordinary prosecution was widely admired, though even at the time some thought that the relentless and not wholly scrupulous vigour with which he pursued the 'claimant', the ferocity of his cross-examinations (which sometimes elicited protests from the judges), and the ridicule he poured on the defendant and his witnesses were not altogether seemly in a prosecutor.

Hawkins was also continually, and lucratively, employed in compensation cases, before either juries or arbitrators, notably in those connected with the purchase of the site for the Royal Courts of Justice. He had too a considerable practice in election petitions when, after the general election of 1868, those disputes were first tried before judges. He himself stood unsuccessfully as one of two Liberal candidates for Barnstaple in 1865; he made no other effort to enter the House of Commons.

Hawkins declined the judgeship offered him on the conclusion of the Tichborne prosecution in 1874, but in November 1876 he was appointed a judge of the Queen's Bench Division, knighted, and almost immediately transferred to the Exchequer Division, where he remained until it was absorbed in the Queen's Bench Division in 1880. Like Chief Baron Kelly he resented the provision of the Judicature Acts by which every High Court judge was to be styled 'Mr Justice' and the old title of baron of the exchequer was dropped. He made vain efforts to secure the appellation of 'Baron Hawkins', and invariably called himself Sir Henry Hawkins, instead of Mr Justice Hawkins. Hawkins's conduct of his first major murder trial at the Old Bailey in September 1877 was much criticized, and earned him the undying enmity of Edward Clarke who, for more than forty years, repeatedly denounced Hawkins as a 'wicked judge'. Louis and Patrick Staunton, Patrick's wife, and a servant, Alice Rhodes, were jointly indicted for the murder, by ill treatment and intentional neglect, of Louis's wife, Harriet. Her death was certainly welcome to them, but it was less clear that they had intended to bring

it about, and even less so that she had died of starvation rather than of tubercular meningitis, while the sufficiency of the evidence of complicity against Alice Rhodes was open to question (and had been questioned by Sir James Stephen when directing the grand jury). But Hawkins had not shaken off the habits of a prosecutor. He summed up for murder convictions against all four defendants, ignoring the conflicting medical evidence, and keeping the jury in court from before eleven in the morning until after ten at night, when he required them to consider their verdict. All four were convicted of murder and sentenced to death, but a petition signed by 700 doctors, headed by Sir William Jenner, led the home secretary to consult three senior judges. To Hawkins's displeasure, Rhodes received a free pardon and the sentence on the others was commuted to penal servitude for life.

The Stauntons' trial, together with a number of other murder cases coming before him which attracted public attention, together with the alliterative attractiveness of the nickname Hanging Hawkins, gave rise to the popular view that Hawkins was a judge of a peculiarly severe or even savage temper. To this his cruel practice of postponing sentence on all (except murderers) convicted at an assize until the last day, when he had them all brought up into the dock, often filling it, sentencing one after another 'in a grand *battue* of punishment' (Purcell), certainly contributed. Hawkins was none the less in many ways an admirable criminal judge. Extremely patient and thorough, he generally took care that both the case for the crown and that for the accused should be exhaustively stated and tested. His summings-up—in which in his later years it was his invariable practice never to open his notebook unless to read to the jury some fragment of the evidence in which the actual words used were important—were models of lucidity and completeness. His manner, while dignified, was (unless he was crossed) considerate to the point of being almost gentle. In the gravest cases he did not shrink from severity. But he supported the contemporary movement for greater leniency in sentencing, taking the view that recidivism did not justify significantly greater sentences than the offences committed warranted, and being strongly opposed to corporal punishment. He favoured the establishment of a sentencing commission, as a means of reducing the great disparities in sentencing that then prevailed. He thus stood in striking contrast to Sir James Stephen, his only judicial contemporary who was his equal as a criminal judge. Hawkins's foreword to the police code (1882) in several respects anticipated the judges' rules (1912–84) on the interrogation of suspects by the police.

As a civil judge, however, Hawkins failed to convey the impression that to do justice between the parties was his single aim. Innumerable stories were told—some of them with substantial foundation—of the ingenious devices whereby he contrived that cases should either be referred by consent to arbitration or not tried out to a clear determination on the merits. The principal motive for these mischievous devices, usually extremely adroit, was, no doubt, to avoid the reversal of his decisions on appeal. He admitted to 'a horror of adverse criticism, to which I am perhaps unduly sensitive'. He also took what those appearing before him saw as a malign pleasure in causing the greatest possible inconvenience to counsel, litigants, and witnesses. He even went to great lengths to exclude fresh air from his courtroom, keeping it as hot and stuffy as possible. On circuit, where his judicial brethren sought to avoid his company, he often sat for very long hours (he was once said to have passed sentence of death at 1 a.m.), although in London, he habitually rose quite punctually.

Hawkins's judicial behaviour presented other strange contrasts. When doing the work he liked—summing up important or complicated evidence in a criminal case—he had a command of excellent English, accurate, forcible, and dignified, which would have stood the test of absolutely literal reproduction in print. But in delivering a considered judgment he was verbose and tautological; he failed to grasp the principles of the law or to deduce from them the true effect of the facts before him, and he fell into contradictions. Two examples of such judgments are those in *Hicks* v. *Faulkner* on malicious prosecution, and in *R.* v. *Lillyman* (1896) on the admissibility of evidence of a complaint of a sexual offence. The latter judgment of the Court for Crown Cases Reserved was so unsatisfactory that for nine years it was invariably construed as meaning the contrary of what it said, until in *R.* v. *Osborne* (1905), in the same court, it was substantially overruled.

Hawkins resigned his judgeship at the end of 1898 after the legal press had begun complaining about his 'advanced age and crippled health rendering necessary neglect of his duty in order to recover in foreign climes', urging him to take his pension and give way to 'an efficient successor'. He asked for and was given a peerage (27 January 1899), becoming Baron Brampton; the prime minister (Salisbury) commented to the lord chancellor (Halsbury), 'Hawkins' letter is pathetic. I have had considerable prepossessions against him, but considering that he is 83 and childless I have put the said prepossessions in my pocket, and have sent in his name to the Queen' (Heuston, 58). Until August 1902 he sat occasionally in the House of Lords (as a peer who had held judicial office) or the privy council (of which he was sworn on 7 March 1899). His speeches in such famous cases as *Allen* v. *Flood*, the Taff Vale Railway case, and *Quinn* v. *Leatham* exhibited the same weaknesses as his judgments given when a puisne judge. In 1904 he caused or permitted to be published two volumes entitled *The Reminiscences of Sir Henry Hawkins, Baron Brampton, Edited by Richard Harris, KC*. This book, though written in the first person, was the work of Harris. It has no pretence of arrangement and is a miscellaneous collection of anecdotes wholly lacking in literary skill and in verisimilitude, many of them being demonstrably inaccurate and none of them in any degree trustworthy. It did nothing to increase the reminiscent's reputation.

Brampton was a small man of slender build, but his features were handsome and imposing and his aspect eminently judicial. He was extremely fond of horse-racing. He

never ran horses himself, but he had been standing counsel to the Jockey Club, of which he was elected an honorary member in 1878, and an ordinary member in 1889. Brampton was twice married but had no children by either marriage. His first wife, Hannah Casey, who died in September 1886, was said to have been 'an illiterate person of the domestic servant class, who was bed-ridden for some years before her death' (GEC, *Peerage*). His second wife, whom he married on 17 August 1887, and who survived him by only six weeks, was Jane Louisa (*c.*1827–1907), daughter of Henry Francis Reynolds of Hulme, a former actress and a Roman Catholic. Hawkins, who had long been a friend of Cardinal Manning, was himself received into the Roman Catholic church in 1898, and in 1903 with his wife presented the chapel of Sts Augustine and Gregory to Westminster Cathedral. Originally envisaged as 'the Brampton chantry' (complete with tomb chest), it contains an opus sectile picture, *The Just Judge* (Solomon). But after his death at his house at 5 Tilney Street, Park Lane, London, on 6 October 1907, Brampton was buried at Kensal Green cemetery. The bulk of both his estate (£141,000) and that of his wife (£315,000) was left to the archbishop of Westminster and applied, as they had wished, to the Hospital of St John and St Elizabeth. Antony Hope (Hawkins), the novelist, was a relative.

Hawkins, Herbert Leader (1887–1968), geologist and palaeontologist, was born in Reading, Berkshire, on 1 June 1887, the only son of John Luther Hawkins and his wife, Mary Elizabeth Leader. His father was a master baker and the family were Quakers. Hawkins was educated at Reading School and afterwards at the grammar school at Kendal, Westmorland. He entered Manchester University with a classical scholarship in 1905 and transferred from classics to geology. He gained a first-class honours degree in that subject and the first Mark Stirrup palaeontological scholarship in 1908. A further two years of postgraduate work resulted in his MSc in 1910. During this time he settled on what was to be his principal palaeontological research—the study of fossil echinoids. In 1909 he was appointed part-time lecturer at the University College of Reading (from 1926 the University of Reading), and even before completion of his studies at Manchester was given a full-time post, which enabled him to initiate and develop the department of geology in that institution. In 1912 Hawkins married Amy (*d.* 1953), daughter of Alexander Morrison Mitchell, a photographer. They had two sons and a daughter.

Hawkins was appointed professor of geology at Reading in 1920, the year in which Manchester University awarded him the degree of DSc. He was elected a fellow of the Royal Society in 1937, by which time he was recognized as the foremost specialist on fossil Echinoidea in the United Kingdom.

Between 1909 and 1965 Hawkins published 102 scientific communications, almost half of which report his fossil echinoid research, mainly on the morphology of the Holectypoida. Meticulous observation, new techniques, and laborious, patient dissection revealed new morphological features which Hawkins interpreted in terms of phylogeny. Particularly admirable papers were those on 'Morphological studies on the Echinoidea Holectypoida and their allies', in twelve parts between 1917 and 1922. The papers are illustrated with fine drawings made by himself.

Another aspect of Hawkins's writing concerned certain philosophical aspects of palaeontology, its contribution to evolution extrapolated into the future, and its implications for humankind. This phase culminated in *Humanity in Geological Perspective*, the Alexander Pedler lecture in 1938, which achieved international acclaim when it was republished the following year by the Smithsonian Institution. The lecture reveals Hawkins as an accomplished writer and an imaginative thinker, with a deep concern for humanity.

As a teacher Hawkins was unusual. He lectured without notes. He was concerned to fire the imagination and engender a devotion to the subject. His students found his lectures entertaining, enjoyable, and often inspired performances. Of the six of his students who proceeded to higher degrees, four eventually occupied chairs in British universities, while the other two attained high office in the national geological surveys.

Hawkins made significant contributions to British Tertiary stratigraphy, periglacial phenomena, and some aspects of economic geology. He was much in demand as lecturer and president of minor natural history societies, and in 1936 served as president of the geological section of the British Association for the Advancement of Science.

Hawkins was awarded the Lyell medal of the Geological Society (1940) and served as its president (1941–2). He took great interest in the Geologists' Association, serving as president (1938–40); he was elected honorary member in 1949. The *Proceedings of the Geologists' Association*, vol. 78, 1967, comprising papers by his students and associates, was issued as a Festschrift for his eightieth birthday. He

was president of the Palaeontographical Society from 1943 to 1966.

Tall and spare, moustached, with brilliant blue eyes, Hawkins was gentle and entertaining, ever ready to talk about his subject at any level. He partly had and partly assumed a bewildered helplessness in the face of administrators, technologists, and rich benefactors, as a consequence of which a new building and cash endowments fell into his hands to form the nucleus of a department, in which he continued to take an interest after his retirement in 1952, and subsequent appointment as professor emeritus. In 1961 he was appointed consulting geologist to the Thames Valley Water Board.

Following the death of his first wife in 1953, Hawkins married in 1955 Sibyl Marion Hampton, his former research student, who survived him. Hawkins died in Reading on 29 December 1968. F. HODSON, *rev.*

Hawkins, James (1662/3–1729), organist and composer, was apparently a chorister of St John's College, Cambridge, from which college he graduated MusB in 1719. In the same year he dedicated his anthem 'Behold, O God, our defender' (the manuscript of which is in the Royal College of Music) 'to the very Revnd Mr Tomkinson, and the rest of the Great, Good and Just Nonjurors of St John's College in Cambridge'. In 1682 he became organist of Ely Cathedral and master of the choristers, retaining the posts until his death. Hawkins's compositions (some seventeen services and seventy-five anthems survive at Ely Cathedral) have been deemed 'in no way significant' (*New Grove*), but the transcripts he made of manuscripts at Ely remain useful to scholars, and he assisted Thomas Tudway in the formation of the Harleian collection of musical manuscripts. He died on 18 October 1729 and was buried in the cathedral, where a memorial inscription (now obliterated) recorded his 'cheerfulness' and remarked that he was in his sixty-seventh year. His wife, Mary (*d.* 1732), 'the tender mother of ten children', was buried in the same place three years later. Their son **James Hawkins** (*bap.* 1688) was organist of Peterborough Cathedral from 1714 to 1750. One of his anthems, 'O praise the Lord', is in Tudway's collection.

Hawkins, James (*bap.* 1688). *See under* Hawkins, James (1662/3–1729).

Hawkins, Sir John (1532–1595), merchant and naval commander, was born in Plymouth, the second son of William *Hawkins (*b.* before 1490, *d.* 1554/5), merchant, sea captain, and shipowner, and his wife, Joan, only child of Roger Trelawny of Brightor, Cornwall.

Sir John Hawkins (1532–1595), attrib. Federico Zuccaro, 1591

Early years Hawkins was probably brought up in the family home in Kinterbury Street, Plymouth. Nothing is known of his education, though the script and orthography of his letters, and his technical memoranda as navy treasurer, suggest a cultivated man, schooled in mathematics and navigation. By the time he was twenty Hawkins had killed a man, a Plymouth barber named White; but the coroner adjudged White to have been the aggressor, and Hawkins's father, realizing the seriousness of the offence, shrewdly secured translation of the verdict into a royal pardon, inscribed on the patent roll. During the negotiations for the marriage of Queen Mary to Philip of Spain, Hawkins seems to have performed some useful service for Spanish emissaries passing through Plymouth. The later Spanish claim that Philip actually knighted him seems far-fetched; but Hawkins did persistently refer to the king of Spain as 'my old master', probably as a formula designed to lend some legitimacy to his commercial forays in the Caribbean.

In the 1550s Hawkins was a partner with his elder brother, William *Hawkins (*c.*1519–1589), in the family shipping business. He spent considerable time in France (1556), attempting in the law courts of Brest to retrieve one of the firm's ships, captured as a prize but later impounded by its original owners. It is unclear whether Hawkins was successful, but his diplomatic skill was evident in his enlisting both the French ambassador in England and the English envoy in France in support of his suit.

During the Anglo-French war (1557–8) Hawkins and his brother were successfully engaged in channel privateering. By the end of the decade he was a man of importance in Plymouth, where he had become a freeman (1556) and a common councillor (1558). But from *c.*1559 he began to denote himself as 'of London'. Hawkins bought a house in Deptford, and soon afterwards another in the city, in the parish of St Dunstan-in-the-East, which he retained for the remainder of his life. Until recently historians have believed that Hawkins's move to London coincided with his marriage to Katherine (*d.* 1591), daughter of Benjamin *Gonson [*see under* Gonson, William], treasurer of the navy. It now seems clear that the marriage, at St Dunstan-in-the-East, did not take place until 20 January 1567. This means that their only child, Sir Richard *Hawkins (*c.*1560–1622), may have been born to John and Katherine before they got married, only to be legitimated by their subsequent union. Since Richard later spoke affectionately of Katherine, this would seem more likely than the view that he was Hawkins's illegitimate son by a mistress or an unrecognized earlier Catholic marriage. It is unclear whether Richard is synonymous with the base-born son of Hawkins who allegedly captained a pinnace involved in Drake's 1587 Cadiz expedition. Hawkins's move from Plymouth resulted in the winding up of his formal partnership with his brother, from which he emerged with £10,000; but he kept his properties there, maintained many of his ships in the port, and he and his brother continued to invest in each other's undertakings.

By 1561 Hawkins had made several voyages to the Canary Islands. There he became known as an honest trader, and from the friends he made he heard about the possibilities of trading slaves, garnered on the coast of Guinea, with the Spanish Caribbean colonies. He received promises of help to enter this trade, not least from the influential Pedro de Ponte, a scion of one of the great Canarian families. Such ventures would require more powerful backing than Plymouth could provide: hence the move to London.

The first voyage, 1562–1563 Hawkins received support for a first, exploratory voyage from a syndicate that included his father-in-law, Gonson, Sir William Winter, surveyor of the navy and master of the ordnance, and two leading city merchants, Sir Lionel Ducket and Sir Thomas Lodge. These men had all been active in the Guinea gold trade, which lately had become less attractive; Hawkins's slaving voyage provided a tempting alternative for further profit.

Sailing in October 1562, in at least 3 small ships totalling 260 tons and with 100 men from Plymouth, Hawkins picked up an experienced Caribbean pilot at Tenerife, and by the end of the year reached the Guinea coast, which he followed as far south as Sierra Leone. The account in Hakluyt, provided by Hawkins a quarter of a century later, says that he captured at least 300 African slaves. Hakluyt ignores Portuguese allegations that Hawkins took 6 of their ships. These may in part have been reports by local factors afraid of punishment for trading with interlopers; but Hawkins certainly used the largest ship to help transport his slaves across the Atlantic. On reaching Hispaniola, where de Ponte had already confirmed he and his cargo would be welcome, he avoided the seat of government at San Domingo, and disposed of his English merchandise and slaves, without violence, at the small north coast ports of Isabella (25 April 1563), Puerto de Plata, and Monte Christi, which were poorly served by official shipping. Hawkins was careful to appear as a peaceful trader rather than a pirate: he paid the correct customs dues to collusively participating local officials, from whom he secured written permissions to trade and certificates of fair dealing. He combated the dearth of coined money in the Indies by exchanging his goods for bills drawn on Seville, or bartering them for small quantities of gold, ginger, sugar, pearls, and—the bulk of his homeward cargo—hides.

In addition to his own ships, Hawkins chartered a vessel locally and, possibly angling for an official *asiento* to supply slaves, sent it, with part of his new cargo, to Hugh Tipton, one of the most important English merchants at Seville, headquarters of the Spanish colonial administration. There the goods were confiscated as contraband, Tipton was arrested, and Spanish officials in the Caribbean were forbidden to trade with English interlopers. The Portuguese ship he also sent to Seville, under its Portuguese captain and crew; but it sailed to Lisbon, where its cargo was seized by the farmers of the Guinea trade. With the rest of his ships Hawkins reached England in August 1563 and, on hearing of the seizure at Seville, he went to London, and by 8 September had persuaded the government to take up his case. But although the queen wrote to Sir Thomas Chaloner, her ambassador in Spain, and to Philip II himself, Hawkins's cargo remained confiscated; he had no redress either on the Portuguese cargo. Although Hawkins claimed that the two seizures had cost him £20,000, the voyage still paid a handsome dividend.

Hawkins had travelled to and traded with the Spanish Caribbean colonies without the requisite licences, carrying goods not previously declared at Seville. He may have thought that the Anglo-Spanish commercial treaty of 1489 (which allowed English trade to the Canary Islands) would extend to territories 'beyond the line' discovered since that date; or that Philip would grant him privileged access to the Indies because of his past services, and as a potential aid against French, mainly Calvinist, freebooters who were sacking Spanish West Indian ports. But he had clearly contravened declared Spanish and Portuguese monopolies; and he should not have been too surprised at the confiscations, given a deteriorating Anglo-Spanish alliance and Spanish concern at Elizabeth's alleged patronage of a projected French colony in Florida. What he had done was to prove the possibility of extending the long-established English triangular trade via Guinea to Brazil—in which his father had taken a pioneering role thirty years earlier—to a new, and readily available commodity, namely African slaves, and to a new Caribbean destination, where Spanish colonists welcomed slaves as an important constituent element in

their internal economy—a valuable, harder-working, and longer-living antidote to the chronic wastage of the aboriginal population, and furnished more cheaply than their own compatriots managed via Seville.

The second voyage, 1564–1565 By the time of Hawkins's second slaving voyage, a semi-official venture, Anglo-Spanish relations had further deteriorated. The investing syndicate was joined by three privy councillors: Robert Dudley (earl of Leicester from the summer of 1564), the earl of Pembroke, and Lord Clinton, the lord admiral. William Cecil did not invest in the voyage, but he had a clear supervisory role. Hawkins, possibly using his connections with the court through west-country gentry like the Carews, managed to get the queen's backing. He was allowed to charter one of the largest ships in her navy, the 700 ton *Jesus of Lubeck*, purchased from the Hanseatic port under Henry VIII (but now riddled with dry rot), and to sail under the royal standard. Williamson suggests that this voyage had a more overtly political motive: to examine the newly planted French colony in Florida, which clearly threatened Spanish Caribbean hegemony, and to rebuild the moribund Anglo-Spanish alliance by helping to defend their colonies against the French—a task seemingly beyond Spanish capacity—in return for privileged access to colonial trade, possibly even a slaving monopoly on the lines of Spanish arrangements with the Genoese. But Andrews denies that, once in the Caribbean, Hawkins made more than vague and insincere promises to aid Philip, and these merely to show goodwill to the colonists for trading purposes: 'There is no evidence that he meant to serve the king of Spain in any other way than by doing business with his subjects' (Andrews, *Trade, Plunder and Settlement*, 120). De Silva, the Spanish ambassador in London, clearly voiced his government's opposition to the voyage, but his protests were ignored.

In addition to the *Jesus*, Hawkins took 3 of his own, Plymouth-based, ships, totalling 220 tons. For a combined tonnage of 920, he used a crew of only 150. This use of only 1 sailor for 6 tons reduced overcrowding and meant that he lost no more than a dozen men from sickness on the whole voyage. Hawkins sailed from Plymouth on 18 October 1564. Off north-west Spain a head wind delayed him for five days, and there he issued his famous orders to the crews: 'Serve God daily, love one another, preserve your victuals, beware of fire and keep good company' (Williamson, 71)—the last an instruction to sail close together. Hawkins secured over 400 slaves on the coast of Sierra Leone, partly from the Portuguese, partly by direct seizure, but he lost 7 men while seeking gold at Bymba (27 December). Leaving the African coast on 29 January 1565, he reached Borburata in Venezuela (3 April) where, to marry the colonists' wish to trade and a trade ban imposed by the *audiencia* at San Domingo, he was induced into the charade of a threat of force to protect the governor, Bernaldez, which turned into a more serious incident, to achieve satisfactory trading terms. After lading a cargo of hides at Curaçao, which he left on 15 May, Hawkins traded profitably at Rio de la Hacha, after again using force to dictate slave prices. Here he offloaded 300 negroes, wine, flour, biscuit, cloth, linen, and ready-made clothing. So successful was his stay, that he even took orders for slaves and other goods to be furnished on a subsequent voyage. Hawkins was paid in gold and silver nuggets, and worked precious metals, so that he had room for a further consignment of hides, which he hoped to acquire on Hispaniola. Unfortunately the Caribbean currents carried him west of Jamaica, and he failed to land at Havana; on reaching Florida (July) he found René de Laudonnière's French colony at Fort Caroline (established in June 1564) in the direst straits. His aid to the French sits uneasily with Williamson's view that he aimed to help Philip clear the Caribbean of French privateers. They refused his offer of a passage home, but he sold them his smallest ship, shoes, beans, and meal. Now low on victuals for the voyage home, Hawkins late in August caught and purchased cod off Newfoundland, and arrived back at Padstow, Cornwall, on 20 September, having lost only 20 men overall.

The voyage had clearly yielded a good profit: de Silva reported it to have been 60 per cent. Hawkins also brought back the sweet potato; tobacco, at first used as a fumigant and narcotic; and a detailed and encouraging report of Florida's potential value as a site for permanent self-sufficient settlement. In celebration the queen granted Hawkins a coat of arms: the crest, a demi-Moor proper bound in a cord, was a direct reference to his slaving activity. Over the next six months, in two meetings with de Silva, Hawkins seems to have discussed the possibility of aiding Philip II against the Turks in the Mediterranean with armed ships; the king did not take up the idea. Indeed Philip's intentions in the Caribbean were made perfectly clear. Only weeks after Hawkins's visit, the French colony in Florida was brutally destroyed (Hawkins had been fortunate to avoid the avenging Spanish fleet), and the governor of Borburata was sent back to Spain as a prisoner. At the ambassador's request, Hawkins signed a bond promising not to trade again in the Spanish West Indies.

The third voyage, 1567–1569 In summer and autumn 1566 four ships owned by the Hawkins brothers were fitted out at Plymouth for another slaving expedition to the Spanish main. After further charades with the privy council over their destination, to satisfy Spanish protests Hawkins was barred from going (31 October 1566). But from spring 1567 he was involved in preparing for his largest and most momentous voyage, which had more the appearance of a national undertaking, possibly a veiled threat by the queen to increasingly menacing Spanish pressure in north-west Europe. She was again a shareholder, supplying the still-rotten *Jesus*, and an even older 300 ton vessel, the *Minion*, built in 1536. No list of the new syndicate survives, but Winter and Clinton were involved and the whole scheme was again masterminded by Cecil. Using the fiction that the ships were bound merely for the African coast to exact reparation for previous injury, the promoters fooled de Silva by alleging they were also to investigate vague claims of the existence in Africa, unoccupied by Portugal, of a rich goldmine, surrounded by fertile, dye-wood producing land; these were being peddled in

England by two renegade Portuguese, Luis and Homem, who were supposed to sail with Hawkins. De Silva was given renewed assurances after he discovered that the ships being loaded at Chatham contained beans, the staple food for slaves on the middle passage, and fine cloths and linens, suitable for Spanish planters.

To the queen's ships were added 4 owned by Hawkins and his brother, together 333 tons; the crew totalled 408, 1 man to 3¼ tons, almost double the proportion of Hawkins's second voyage. By the end of July the ships had assembled in the deep anchorage of the Cattewater, at Plymouth. A month later an armed Spanish squadron under the Flemish admiral de Wathen, allegedly driven into the harbour by bad weather while waiting to escort Philip II to the Netherlands, but possibly also aiming to delay the expedition, refused to dip its flags—a clear sign of hostile intent. Hawkins opened fire to enforce the salute, an action for which he was publicly reproved by the government, after Spanish protests. On 16 September Luis and Homem disappeared from Plymouth, so demonstrating their imposture. Hawkins easily persuaded the government to approve conversion of the expedition into the slaving voyage he had probably always meant it to be.

Hawkins set sail on 2 October 1567. Despite a severe gale north of Finisterre, which scattered his ships and destroyed some of their boats, they were able to rendezvous at Santa Cruz, in Tenerife, where Hawkins was wounded above the eye in a fracas with Edmund Dudley, and managed to anticipate hostile Spanish fire from the guns of the fort. On the African coast he took an abandoned Portuguese caravel, bought another, and was joined by two French ships, which helped to replenish his stock of boats, needed to enter the various rivers for slaving. But Hawkins found slaves hard to come by, and the Portuguese factors unwilling to trade. Near Cape Verde he was wounded by a poisoned arrow when trying to surprise a native village; the antidote of a clove of garlic allegedly saved him. It took a joint attack, with the local king, on the town of Conga in Sierra Leone to bring his slave numbers up to over 500, though he had lost at least 17 men in their capture. Hawkins sailed west on 7 February 1568, and after a lengthy seven-week crossing spent nine days in friendly trading at Margarita, followed by two months at Borburata. But early in June, at Rio de la Hacha, the truculent governor, after Drake had shot up his house, forced Hawkins to take the town by direct assault before trading took place. After a further revictualling stop at Santa Marta (10 July) Hawkins did not attempt an attack on the heavily fortified Cartagena, and, reducing his ships to 8, turned for home (24 July) as the hurricane season set in. After the *William and John* became detached (and made her own way home), Hawkins was determined not to lose the *Jesus*, by now a floating, worm-eaten wreck, through whose gaping holes fish swam among the ballast.

Hawkins put in to San Juan d'Uloa, on the Mexican coast, for repairs (16 September), hoping to sail away before the Spanish plate fleet arrived to transport the year's silver output at the end of the month. The Spaniards, believing Hawkins's ships to be the plate fleet, made no resistance, and he occupied a low, 240 yard island 500 yards off the shore as a safeguard during refitting. Unfortunately the plate fleet arrived the next day: it contained Don Martin Enriquez, the new viceroy of Mexico, who resented the presence of a heretic corsair on the threshold of his dominion. After being allowed to enter the harbour he took on board, by night, 120 soldiers acquired from Vera Cruz, and at 10 a.m. on 23 September began a six-hour battle. The Spanish soon captured the island, and although Hawkins sank 3 Spanish ships, only the *Minion* and the *Judith*, commanded by Francis Drake, escaped. Hawkins managed to transfer most of his treasure from the stricken *Jesus* to the *Minion* before fire-ships increased the English panic. Next morning the *Judith*, with most of the stores, had vanished; in Hawkins's words, it 'forsook us in our great misery' (Williamson, 145). It made its own way back to England, but to this day it is unclear why Drake deserted his commander.

Hawkins, having lost about 90 of his 320 surviving men at San Juan d'Uloa—about 30 of them being taken prisoner to Spain aboard the *flota*—was left with about 200 men on the badly leaking and unvictualled *Minion*, reduced to stewing oxhides and eating rats and parrots. After a fortnight battling against contrary winds, Hawkins landed 96 in the Gulf of Mexico, north of the area of Spanish settlement, giving each man cloth for barter. Most were captured by the Spaniards and later tried by the Mexican Inquisition: only 4 are known to have reached England. On 16 October Hawkins sailed for home. After a protracted Atlantic passage, on which many more died, he reached the port of Vigo on 31 December, there losing perhaps a further 45 crew through their devouring an excess of red meat. He reached Mount's Bay in Cornwall on 25 January 1569, with perhaps 15 survivors, and wrote to the queen, 'All is lost, save only honour' (Rowse, 381). His brother dispatched from Plymouth a fresh crew to bring the *Minion* home. Although the voyage had been a disaster, it was not a financial failure: admiralty court records confirm that nearly all the treasure—gold, silver, and pearls—arrived safely. The Spanish actions at San Juan d'Uloa were not forgotten for generations: English slaving voyages ceased, but were replaced by open attacks on Spanish cities and treasure ships.

1569–1577 Early in February 1569 Hawkins proceeded to London, where he published a brief pamphlet on his third voyage, and he and his syndicate opened proceedings against Spain in the admiralty court. The damage suffered in Mexico, allegedly over £25,000, was clearly outside the court's jurisdiction; what Hawkins wanted was leave to make reprisals—which he failed to get. He was probably the commander of a 60-strong fleet which between April and July went to land supplies and English volunteers at the French Huguenot stronghold of La Rochelle, and returned with a cargo of wine, prize goods, and church bells. From mid-1569 to February 1570 there is no evidence of Hawkins's presence in England: Spanish sources reported him to have been seen off Cape St Vincent and near Tenerife, supposedly on his way to rescue the men he

had left behind in Mexico. In February 1570 he was certainly in England, since he received a commission to impress men for his *New Bark*—to be employed on an unspecified service to the queen. At the end of April he helped escort the Merchant Adventurers' fleet to Hamburg. He pressed Philip II's ambassador, de Spes, to intercede for the release of the survivors of his third voyage, who were languishing in dungeons at Seville. Hawkins was also meditating capture of Spain's homeward-bound plate fleets off the Azores (August 1570), employing a fighting squadron of 10–12 ships he had established at Plymouth, 'the first appearance of a western squadron in the plan of national defence' (Williamson, 174). But the government forbade Hawkins to leave the English coast: the papal bull excommunicating the queen had been issued in February, and in the summer Alva threateningly sailed from the Netherlands down the channel with a fleet of 90 ships. By the time he had left English waters it was too late to attack the plate fleets.

In March 1571, as part of the government's web of counter-espionage, Hawkins offered de Spes, obviously with Cecil's connivance, the services of his Plymouth fleet to further Spanish designs, especially the enthronement of Mary, queen of Scots (a captive in England since 1568), and the restoration of Catholicism. In return for the release of the English captives in Spain (which did occur) he was to take his fleet to the Netherlands, so leaving the west of England unprotected against assault, and help facilitate an invasion of England by Alva's troops. Using as an intermediary George Fitzwilliam, one of Hawkins's former shipmates imprisoned at Seville, but released earlier, probably because of his kinship to Jane Dormer, the English wife of the duke of Feria, Hawkins received the endorsement of Mary, queen of Scots, and details from Feria, in invisible ink, of the Ridolfi plot. Philip made Hawkins a Spanish noble, pardoned him for his Caribbean offences, and promised to pay for the upkeep of 16 ships and 1600 men for two months (September–October). Hawkins passed all his information on to Cecil, and after the duke of Norfolk, the main English conspirator, was put in the Tower (7 September), and Mary's ambassador, the bishop of Ross, confessed everything, there was no insurrection and Philip dropped his invasion plans. De Spes was expelled from England (January 1572), carrying with him a cipher from Hawkins, by which they could continue to communicate.

By spring 1572 England was growing closer to France, and Hawkins was involved in March in the pressure to clear out from the ports of south-east England the mainly Dutch privateers who damaged French trade. In the summer he was prepared to lead a contingent of English volunteers to aid William of Orange and Louis of Nassau in an invasion of the Netherlands to expel the Spanish—but he was stopped by the privy council. The massacre of St Bartholomew (August) caused the end of the invasion plans, and Hawkins and his brother helped instead to equip an English expedition which failed to relieve La Rochelle. Between 1569 and 1573 they were involved in various expeditions for trade and reprisal, financed and equipped in London, fitted out, manned, and managed from Plymouth, which the Hawkinses made 'an ocean port, a naval base, a privateers' mart, the western bastion of England's defences' (Williamson, 196). From 1571 to 1581 Hawkins was MP for Plymouth; in February 1576 he sat on a committee concerned with ports. On 11 October 1573 he narrowly avoided death in London. While riding near Temple Bar with Sir William Winter, he was stabbed by Peter Burchet, a puritan fanatic of unsound mind, who confused Hawkins with Sir Christopher Hatton, possibly because of the fine clothes Hawkins habitually wore. For some days his recovery was uncertain.

Throughout the 1570s details of merchantmen owned by Hawkins and his brother occasionally reveal themselves: in 1575 and 1576 two of their ships freighted currants to England from Zante and Cephalonia: in 1577 four were chartered to ship alum from Civitavecchia. On one occasion the underwriters challenged Hawkins's collusive activities with Huguenot privateers at Plymouth. In 1577 he invested £500 in Drake's voyage of circumnavigation, and he was vice-admiral of the squadron sent to patrol the Irish coast against the threatened invasion of Thomas Stucley.

Treasurer of the navy On 18 November 1577 Hawkins, having acquired the reversion some years previously, succeeded to the office of treasurer of the navy, at first jointly with his father-in-law, Gonson (who died ten days later). His appointment was clearly engineered by Burghley, who, as lord treasurer (from 1572), supervised naval administration. Hawkins's influence on the navy board, probably through Gonson, seems to have antedated his formal appointment, after which he became the dominant figure, presiding over its affairs. The old orthodoxy, led by Williamson, that Hawkins, disgusted with the performance of the high-castled *Jesus* in the Caribbean (but impressed with her devastating firepower), spearheaded a change in naval design to favour low-built warships, better for oceanic voyages, almost solidified into fact. But, although he may well have persuaded the admiralty to accept such designs, he did not invent the 'galleon': its design indeed derived from the galleasses of Henry VIII's reign. 'Accumulated experience rather than the inspiration of any one man tilted the balance of opinion within the naval hierarchy' (Quinn and Ryan, 66). The 300 ton *Foresight* had been built on the new lines as early as 1570, and the *Revenge*, prototype for later battleships, in 1575. Overall, much more credit should be given to Sir William Winter, who made the ships into floating gun platforms, gradually replacing the demi-cannon with the more accurate, longer-range culverin, and to the royal shipwrights, Peter Pett, Matthew Baker, and Richard Chapman. Hawkins, the only member of the navy board who had actually sailed outside Europe, did arguably produce the overall drive which ensured that by 1588 two-thirds of the queen's ships had been built or rebuilt to the new design, so making them more adept at operating on the high seas.

The majestic, but unwieldy, old carracks, with top-heavy castles at bow and stern, floating fortresses mainly

useful in close fighting, and prone to unfortunate stresses and strains, were replaced by streamlined galleons, with proportion of beam to length on the water line of about 1:3½, and lower poop and forecastle. This, together with a more efficient sail plan, increased their speed and manoeuvrability, caused them to roll less in heavy weather, and, with their armament increased, greater use could be made of the gun-ports on the lower decks in fighting at long range. After his experiences in the tropics Hawkins introduced the double skin method of ship construction, with horsehair between the planking, to keep out woodboring beetles. In the ships' interior economy, he encouraged a ratio of 1 man to 2 tons rather than 1:1½, so reducing victual consumption, and prolonging the time a fleet could stay at sea to four, even six months. He also increased the basic pay for ordinary seamen by a third to 10s. a month, partly to improve the quality of recruits, and ensured that his sailors were properly clad. Williamson regards Hawkins as 'the only captain of his generation recorded to have shown any interest in hygiene' (Williamson, 85). On his own ships he kept live sheep and pigs, carried apples and pears, experimented with 'Brasill beds' (probably hammocks), and, on his final voyage, loaded macaroni and instruments for seventeen musicians.

A report by Hawkins—probably to Burghley, and probably dating from the first half of 1579—lambasted the rampant corruption present in the dockyards whereby over half the queen's naval expenditure and the best materials were finding their way into private hands, 'which proceeds of the wilful covetousness of one man, and to set forth his glory' (Williamson, 252). This was Winter, who appears to have dominated the navy board until Hawkins's arrival and, although he had been a partner in Hawkins's transatlantic voyages, was to be a thorn in the treasurer's side for some time. Hawkins's central proposal was an offer to reduce the combined ordinary charge and repair expenses to £4000 per annum from the £7000 he alleged they had recently been costing. By the so-called 'first bargain' with the crown of 29 September 1579, Hawkins agreed to maintain fleet moorings at Chatham for £1200 per annum. A similar crown agreement with the shipwrights Pett and Baker covered the regular grounding and caulking of ships. The bargain aimed to save the queen from peculators, so implicitly reducing the need for extraordinary warrants. To help protect Chatham, the navy's principal dockyard, from a sudden cross-channel raid, Hawkins reconstructed the fort at Sheerness and laid an iron chain boom across the river at Upnor Castle. At Dover a barrier with sluice gates prevented drifting shingle from choking the harbour entrance, so that even the largest royal ship could enter the port. From *c.*1582 Hawkins was a JP for Kent.

But Hawkins's activities did arouse opposition, especially from Winter, who had powerful allies on the privy council. Charges that Hawkins was corrupt and his ships unseaworthy peaked at the end of 1582, and were investigated (together with Hawkins's countercharges) by a privy council commission of 1583. Its original report is lost. A version of 25 January 1584 has recently emerged—possibly a submission to it, or a summary of its findings—which plainly exonerates Hawkins; but since it seems Hawkins was the paper's author, it clearly did not fully resolve the dispute. Hawkins did reduce ordinary naval expenditure to about £4000 per annum, as he had promised in 1579; but only once, in 1583, did he reduce total annual spending on the navy significantly below £10,000, and he never fully avoided reliance on extraordinary warrants. Indeed, total naval expenditure increased from £17,903 in 1585 to £90,813 in 1588. Hawkins was criticized for a lower rate of repair, but he changed the emphasis to rebuilding a single ship annually. His ambitious rolling plan for such repairs (which extended up to 1599) was the basis of the 'second bargain' of June 1585, best viewed as a compromise between Hawkins and his opponents. Winter described it as 'nothing ... but cunning and craft to maintain [Hawkins's] pride and ambition' (Quinn and Ryan, 67), but henceforth they seem to have collaborated amicably. Hawkins additionally took over, for a further £1714 per annum, the master shipwrights' responsibility for extraordinary ship-repairs, principally heavy repair activity in dry dock, including payment of wages and provision of the necessary materials and victuals. The second bargain was never effectively implemented, since war with Spain broke out soon after it was signed and Hawkins's orderly plans were overtaken by extensive new shipbuilding, which rendered a regular repair schedule impossible. Six brand-new ships were built (1586–7) and major reforms were made to 13 others, under extraordinary warrants. By December 1587 the queen had 25 fighting ships of 100 tons or above, and 18 ocean-going pinnaces, useful for inshore activity. By the end of 1587 the second bargain had become unworkable, and was terminated, at Hawkins's request; he wished to free himself for the role of commanding the western squadron, based at Plymouth.

The Armada, 1579–1588 As early as August 1579, in a memorandum on an opening naval campaign in the event of war, Hawkins suggested sending such a squadron to capture the *flota* and systematically raid the Spanish Indies to stem Spanish wealth. A more precise memorandum to Burghley of July 1584, as war loomed, suggested an agreement with the Portuguese pretender, Dom Antonio, for Englishmen to fight under his flag alongside Dutch and Huguenot raiders. The aim was to encourage revolt in the Portuguese colonies against Spain, destroy Spanish fishing by attacking the annual Basque fleets to the Newfoundland Banks, sack the Atlantic islands, and keep the coast of Spain under constant alarm, all the while accommodating the queen's aversion to a formal declaration of war, and fighting in a way that was largely self-financing and, for Hawkins, self-enriching (since booty taken would be disposed of in Plymouth). All this would avoid expensive military adventures. In 1586 Hawkins was given command of a squadron which may have been intended for some of these objectives. But the Babington plot, the presence of Guise troops in Normandy, and the realization that Philip's Armada was being constructed, led to the

council limiting Hawkins's activities to plying up and down the channel. When, in late summer, he was allowed off the leash, he failed to intercept either the silver fleet or the Portuguese East Indian carracks; but, after cruising along the coasts of Spain and Portugal, he did return home in late October with four minor prizes. It had been a low-key venture, and its primary object may have been support for the Huguenots in La Rochelle rather than the disruption of Spanish commerce. But as Rodger notes, Hawkins had shown that English ships could remain at sea for three months, off an enemy coast, 600 miles from base—a rare feat.

During the wait for the Armada Drake had been put in command at Plymouth, while Hawkins remained at Chatham at the elbow of the lord admiral, Lord Howard of Effingham. In December 1587 Hawkins showed he could fully mobilize the fleet in little more than a fortnight; Howard confirmed to Burghley (21 February 1588) that the ships were in excellent condition. It was early in June 1588 before Hawkins finally joined the assembled fleet at Plymouth. He owned 3 of the ships that fought the Armada and, as rear-admiral and later vice-admiral, he commanded the 800 ton *Victory*, one of the ships he had rebuilt at Deptford. Ranking third in seniority after Howard and Drake, he was a member of the war council. When the fleet spread out towards Ushant, Hawkins commanded the inshore squadron towards the Isles of Scilly. He hotly engaged a group of Spanish ships off Eddystone (21 July), expended much powder and shot off Portland Bill (23rd), and, after commanding one of the four squadrons at the Isle of Wight (25th), he was knighted by the lord admiral on board the *Ark Royal* (26th). The English galleons completely outsailed and outmanoeuvred the clumsy Armada carracks, and decisively outgunned them at their chosen range. Not a single English ship withdrew from the fight through damage by the elements or the enemy, and Hawkins's effective victualling of the fleet allowed it to chase the Armada past the Firth of Forth.

The last years, 1589–1595 Once it was clear that Parma's invasion had been baulked, Hawkins began paying off the sailors and refitting the ships at Chatham. Delays through bad weather and shortage of money made Burghley angry, and he wrote a sharp letter to Hawkins, who complained to Sir Francis Walsingham:

> My pain and misery in this service is infinite ... God, I trust, will deliver me of it ere ... long, for there is no other hell. I devise to ease charge and shorten what I can ... but my Lord Treasurer thinketh I do little. (Read, *Lord Burghley*, 431)

From 1 January 1589 Hawkins was given a year's leave of absence from the office of navy treasurer to enable him to sort out the muddled accounts left by the Armada campaign. Later in that year he took on the additional navy board role of comptroller. In spring 1589, although he distrusted continental military operations, he and his brother helped to collect supplies for Drake's disorderly and abortive attempt to capture Lisbon.

Hawkins submitted to Burghley (July 1589) a scheme for a 'silver blockade', which he had suggested to Walsingham the previous year. This involved maintaining a continuous patrol of the area between Spain and the Azores, in relays of 6 large ships and 6 pinnaces, with 1800 men, victualled for four months, and partly financed by private adventurers. The aim was to stop the flow of East Indian and American wealth to Spain, so crippling her war machine, as well as assuring handsome profits by way of prizes, and opening the way for further English oceanic enterprises. This influenced Elizabethan strategic thinking, but it is unclear whether Hawkins was right, since the continuity essential to the plan was never realized, even for a single year, and such a commitment would have meant half the Royal Navy being unavailable for home defence. Early in 1590 Hawkins did fit out an expedition in two squadrons: 7 galleons under Sir Martin Frobisher were to sail to the Azores; Hawkins, victualled for six months, was to operate off the Spanish coast with a further 6 ships. The aim was to intercept the Spanish treasure fleet. But the queen, worried by reports of another Spanish armada massing at Corunna, and of Philip's intention to use Brittany as a base for the invasion of England, kept Hawkins in port until late June, when the treasure was safely home, transported in fast frigates (*gallizabras*). He captured some prizes off the Spanish coast, but abandoned his blockade to relieve Frobisher off the Azores, so allowing a Spanish fleet to sail unmolested and occupy Blavet in Brittany. As a result Hawkins was summoned home, and he returned to Plymouth in October. Even such an ineffective blockade certainly disrupted Spanish trade, and persuaded Philip to hold back the main *flota* in Havana that year. Indeed, during the period 1589–91, 236 English privateering vessels, working as individuals rather than a team, took 300 prizes, worth £400,000.

In 1590 Hawkins and Drake took the lead in founding the pioneer scheme of contributory social insurance known as the Chatham chest, a fund used to compensate injured and disabled sailors, pay pensions to the aged, and burial money for the dead—so-called because the 5 per cent deducted from the wages of all seamen on the royal ships was lodged in a large chest. Hawkins also built an almshouse at Chatham (1592) for 12 poor seamen and shipwrights (and their wives), known as Sir John Hawkins' Hospital; it survives today. Hawkins's wife died early in July 1591; soon after he married Margaret (*d.* 1619), daughter of Charles Vaughan, of Hergest Court, Herefordshire, and a lady of the bedchamber to the queen. They had no children. After Hawkins's death she behaved meanly to her stepson Richard, withholding money which would have ransomed him from Spanish captivity.

After Hawkins's expedition of 1590 the government made no attempt to launch a silver blockade. The fleet was kept at Chatham to prevent a Spanish army landing, while English troops were employed in costly military operations in France and the Netherlands. The fleet was increased by the construction (1590–96) of 16 more ships. In July 1592 and February 1594 Hawkins attempted to resign from the navy board, but was not allowed to do so.

On 12 February 1593 he was awarded £2400 from the plunder of the *Madre de Dios*. In 1594 his son Richard was captured by the Spaniards in Peru; he was not to return to England until 1602.

1595 saw Hawkins, with Drake, embarking on his final expedition, which aimed to follow up John Oxenham's abortive attempt of 1576–7 and land at Nombre de Dios, cross the isthmus, and capture Panama, thereby choking off supplies of Peruvian silver from Spain. It was clearly a mistake to give Hawkins and Drake equal command: they were temperamentally unsuited to co-operation. Hawkins worked with foresight and careful planning; Sir Thomas Gorges reported from Plymouth on 16 July that Hawkins 'sees all things done properly' (Harrison, 1.308). By contrast Drake disliked administration, rarely thought ahead, and was mercurial in his changes of plan. The choice of Hawkins may have represented the influence of the queen, to provide a moderating influence on the impetuous Drake; or it may have been a temporary alliance between competing privateering factions. The two commanders were each to take a third of any booty. The queen, who provided 6 ships, was to receive the rest. By the beginning of March, reports of the preparations had reached Spain; by early in May the ships were in Plymouth, ready to depart, with 2500 men on board (half of them soldiers). But a long delay, for which the queen personally blamed them, allowed a Spanish raid from Brittany (23 July) to burn three Cornish ports. Elizabeth, to the fury of her commanders, frequently changed her mind, ordering them to cruise off the Irish and Spanish coasts—to forestall a further Spanish armada, aimed at Ireland or England—then banned them from sailing at all.

When Hawkins and Drake finally departed, it was only on condition that they returned within six months, to counter the Spanish invasion envisaged in 1596. This was hardly enough time in which to capture Panama, and clearly reduced the expedition to a mere hit-and-run treasure hunt. Before the 27-strong fleet finally left Plymouth on 28 August, with Hawkins in the 660 ton *Garland*, built in 1590, they had learnt that the plate fleet was already in Spain, apart from its bullion-laden but crippled flagship, lying at San Juan, Puerto Rico; this Drake aimed to capture. Since Drake and Hawkins sailed on different ships, often out of communication for days on end, factional disputes were liable to occur. Hawkins agreed only reluctantly to a time-wasting and ultimately abortive diversion to Gran Canaria (27 September) for further victualling of Drake's ships. The delay allowed Philip to send ships to the Caribbean, which captured the *Francis* off Guadeloupe, so discovering the fleet's destination. They then moved to strengthen the defences at Puerto Rico. On 31 October 1595 Hawkins became ill; by 2 November he was unable to leave his bed, and at about 3 p.m. on the 12th he died. He was buried at sea off Puerto Rico.

The fleet returned with a fifth of the complement dead, including Drake, and a pitiful £5000 in booty. 'It represented the nadir of Elizabethan strategy' (Andrews, *Trade, Plunder and Settlement*, 241). Hawkins's will left funds for the poor of London, Deptford, and Plymouth; in a codicil he left the queen £2000. There was no monument to Hawkins in Plymouth. But his will provided for one to be erected to his memory in the church of St Dunstan-in-the-East, in which parish he had lived for thirty years. This had a long Latin inscription; another, even longer, in English, appeared on a nearby mural tablet. Both perished, along with the church, in the fire of 1666.

Character and achievement The Victorians, judging sixteenth-century morals from the standpoint of Wilberforce, saw Hawkins as primarily the greedy and unscrupulous father of a lucrative English slave trade. Williamson's three, increasingly refined, volumes (1927–69) produced an exhaustive and very readable narrative that embraced Spanish sources and widened the picture to show Hawkins's role as a maritime strategist and naval reformer. But both he and Lewis (a Hawkins descendant), in a rather cloying work of familial piety, portrayed him in roseate hues, at times approaching idolatry. A further corrective has been spearheaded by Andrews, whose lucidly sharp yet temperate writings emphasize the immaturity of Elizabethan sea power and naval strategy, and view Hawkins as a more autocratic figure, whose hands were less clean and heart less pure than Williamson suggests. More recently specialist periodical articles have further clarified Hawkins's role as naval treasurer.

A product of his age, which accepted slaving with an easy mind, Hawkins was probably happier at sea than ashore, and showed a mastery of all aspects of ship-handling. As a commander he enforced strict discipline, but seems to have won affection as well as respect—praying with dying seamen, showing an interest in their families, and less prone to use corporal punishment on shipboard than many of his contemporaries. He was a first-class businessman, and his three slaving voyages demonstrated his robust and opportunistic eye for profit. His drive, method, and relative honesty in an age when public and private funds are difficult to disentangle, helped advance a revolution in English ship design, though his criticism of Winter is not substantiated elsewhere. As a naval strategist, his boldness and imagination paid insufficient attention to the needs of home defence. Hawkins took every chance of personally acquainting himself with politicians and courtiers. His courtesy, charm, and diplomatic finesse could gull Philip II and his ambassadors in England, and caused Castellanos, his adversary at Rio de la Hacha in 1565 and 1568, to be reported as saying, 'No-one talking to him hath any power to deny him anything that he doth request ... not through any villainy ... but because of his great nobility' (Lewis, 107). Once an orthodox Catholic, by degrees his letters developed a puritan ring, so that the queen, on reading his letter to Burghley of 31 October 1590, is alleged to have exclaimed, 'God's death! This fool went out a soldier and has come home a divine' (*DNB*). Overall, if Drake's maritime pyrotechnics have given him a higher historical profile, it was the steadying ballast provided by Hawkins that did more to stiffen the Elizabethan response to the challenge of Spain. Long after his death, when naval administration was ineffective and the condition of the royal

ships had noticeably deteriorated, observers looked back at Hawkins's stewardship as a golden age of efficiency and probity.

Hawkins, John (*c.*1587–*c.*1641), grammarian and translator, belonged to the old Catholic family of Hawkins from Nash Court, Boughton under Blean, Kent. He was the son of Sir Thomas Hawkins (1548/9–1617), landowner, and his wife, Ann, *née* Pettyt (1551/2–1616). Two of his elder brothers, Sir Thomas *Hawkins and Henry *Hawkins, matriculated at Gloucester Hall, Oxford, in 1591 and 1592 respectively, but did not graduate. John's medical degree was probably obtained at Padua, a popular university with English Catholics; but he is not included in the roll of members of the Royal College of Physicians. He is recorded in the Kent visitation of 1619–21 as doctor in 'physick' in London, and in 1624 he was described by John Gee as 'a popish physition' resident there in Charterhouse Court. He married Frances Power of Bletchingdon, Oxfordshire, and they had a son, Francis *Hawkins, an infant prodigy as a translator, and a Jesuit in adult life.

Hawkins's most important publications were his grammatical writings, since in them he claimed to have introduced to English scholars the works of the great Spanish linguist Nebrissa, whose grammar of Castilian (1492) was the first grammar of any European vernacular to appear in print. Nebrissa also compiled a Latin grammar (1481), part of which was edited and translated by Hawkins as *A Brief Introduction to Syntax ... Collected out of Nebrissa* (1631). A third linguistic work by Hawkins was a dictionary of Latin verbs with their derivatives (1634), in an arrangement which he claimed was entirely original. Finally, he composed a treatise on the use of Latin particles (1635).

Hawkins published only one original non-linguistic work, a Latin text on melancholia (*Discursus de melancholia hypochondriaca*, 1633), but he also produced several translations from Italian and Spanish. Their dedications show how greatly he was admired by influential (largely Roman Catholic) friends such as Kenelm Digby and the dramatist James Shirley. Hawkins probably died before being able to see through the press a translation made by his son from the French, *Youths Behaviour* (*c.*1641); he seems never to have been accorded the recognition which he deserved for his pioneering advocacy of Nebrissa.

Hawkins, Sir John (1719–1789), music scholar and lawyer, was born on 29 March 1719 at Green Dragon Court, Cow Lane, London, the only surviving son of John Hawkins (1691–1771) and his wife, Elizabeth (*bap.* 1686, *d.* 1760), daughter of Thomas Gwatkin of Fownhope, Herefordshire. Nothing further is known about his paternal relatives: though family tradition claimed descent from the English admiral Sir John Hawkins (*c.*1520–1595), no surviving evidence substantiates the claim. The memoirs of Laetitia-Matilda *Hawkins, only daughter of the present subject, further suggest that the family was upwardly mobile from her grandfather's time, but in fact it seems unlikely that the subject's father was anything more than a carpenter.

Hawkins originally studied architecture with Edward Hoppus, but in 1737 he exchanged this for the law on the advice of his cousin Thomas Gwatkin. Hawkins was successfully examined for an attorney in November 1742. He may have realized that legal studies alone would not fit him with the profile of a true gentleman that he apparently craved, so he also made time during his apprenticeship to study the arts. He began to write pieces for the *Gentleman's Magazine*, the first being published in March 1739. Edward Cave, the magazine's editor, knew Samuel Johnson, and it seems likely that he introduced the two men, initiating an acquaintance which lasted until Johnson's death. Thus Hawkins became one of only nine founder members of Johnson's Ivy Lane Club in 1749, and of his literary club in April 1764. He contributed notes to Johnson's edition of Shakespeare (1765), and with Sir Joshua Reynolds and William Scott he was an executor of

Johnson's will. His edition of Johnson's works and his *Life of Samuel Johnson*, the first substantial biography to appear, were published in 1787.

From the 1740s Hawkins was active in musical circles, numbering John Stanley, William Boyce, and even Handel among his acquaintances. Late in 1741 he sent a text, 'In vain Philander at my feet', to Boyce, who subsequently set it to music. In 1742 he collaborated with Stanley on six cantatas, contributing texts for five of them. Finding their work successful at the London pleasure gardens, the two men promptly produced a further six. In spite of his musical leanings there is no evidence that Hawkins himself composed music; and while he surely must have been able to play an instrument, no definitive data on this matter survive, Busby noting only (Busby, 1.157) that he played a 'variety of instruments' to a high level. At some time between 1743 and 1748 Hawkins became a member of the Academy of Ancient Music, in whose support he wrote a history in 1770; and in 1748 he was accepted for membership of the Madrigal Society, of which he remained a member until March 1765. Through the brewer Richard Hare he met the attorney Peter Storer, whose second daughter, Sidney (1726–1793), he married on 24 March 1753: this circumstance, unusual because it was conventionally the bride rather than the groom who was expected to marry to advantage, brought him a dowry of £10,000. This enabled him to move from lodgings to a house of his own in Austin Friars, near Broad Street, London. He hosted fortnightly concerts at this residence, attended by some distinguished musicians. A further upturn in his affairs occurred in August 1759, upon the death of his brother-in-law Peter Storer: Storer's legacy enabled Hawkins, his wife, and his son John Sidney to move to Twickenham House, Middlesex, which they used as a 'country' residence until 1771. The house apparently included a circular room that Hawkins used for concerts (R. S. Cobbett, *Memorials of Twickenham: Parochial and Topographical*, 1872, 347). For a town house they leased a property in Hatton Garden. Most importantly for Hawkins's later literary activities, his new wealth made it possible to abandon his solicitor's practice.

Three further opportunities now presented themselves. Hawkins's interest in fishing led to his publishing the first of several editions of Izaac Walton's *Compleat Angler* in summer 1760. Second, and according to Laetitia-Matilda at the suggestion of Horace Walpole (L.-M. Hawkins, *Anecdotes*, 101), he began thinking seriously about writing a history of music. And third, in 1761 he became a Middlesex magistrate, a position he improved upon in 1765 when elected chairman of the Middlesex quarter sessions, which office he occupied until February 1781. This promotion was probably partly due to two legal publications: his *Observations on the State of the Highways* (1763), subsequently made into law; and a plea for the inhabitants of Middlesex to be relieved of the financial burden of rebuilding Newgate prison. As magistrate he also had to deal with riots at Brentford in 1768 and with an uprising of weavers at Moorfields in 1769, partly in consequence of which he was knighted in October 1772. The first half of the 1770s was mostly spent writing and researching his music history, which he appears to have produced at the rate of one volume per year from 1771. The whole work, in five volumes, was available from November 1776 under the title *A General History of the Science and Practice of Music*, and was the first extended treatment of its subject to appear in English. For assistance with its compilation Hawkins twice visited the musical antiquarian William Gostling at Canterbury to collect musical reminiscences (upon Gostling's death Hawkins penned some appreciative verses, set to music by Boyce). In 1772 he visited several Oxford libraries, taking with him an engraver to make copies of portraits in the university's music school. Hawkins's history appeared several months after volume 1 of the *General History of Music* of Charles Burney, and although Burney's final (fourth) volume was not published until 1789, his history was preferred to that of Hawkins in its day. Hawkins was attacked on several fronts, the chief criticisms of his work being that he, not being a trained musician, was being presumptuous in writing a history of the subject; and that his writing style was pompous and its writer too readily inclined to digress at length on subjects not strictly relevant to his narrative. George Steevens, who after early good relations with Hawkins had transferred his allegiance to Burney, has been credited with trying to spike sales of Hawkins's book (Nichols, *Illustrations*, 5.428); while Davis (*A Proof of Eminence*, 134) suggests that Burney and the actor David Garrick may deliberately have tried to sabotage Hawkins's work by contributing several critical articles to London's *Morning Post* early in 1777. The nineteenth century regarded Hawkins more highly, probably because his work, while not perhaps as entertaining as Burney's (Hawkins was an antiquary who preferred the music of an earlier age, while Burney was at his best when commenting on his own century), is factually very accurate. As a consequence, when a decision came to be taken on a new edition, it was Hawkins's history, not Burney's, that was favoured, a second edition appearing in 1853, and a third in 1875.

Following three attempted burglaries at his Hatton Garden house in November 1777, Hawkins and his family moved to Westminster, where he spent the remainder of his life. His literary work now confined itself to antiquarian topics, and to occasional pieces such as the appreciation of Boyce provided as a preface to the 1788 edition of Boyce's anthology *Cathedral Music*. In November 1784 Hawkins took instructions from Johnson regarding his will. Several people criticized Hawkins's performance as an executor, Edmond Malone accusing him of stealing some of Johnson's property and others claiming that he was parsimonious over Johnson's funeral. Various accounts survive of how Hawkins subsequently came to be asked to write a biography of Johnson: Laetitia-Matilda (L.-M. Hawkins, *Memoirs*, 1.155) states that Johnson himself entrusted it to Hawkins, and that this was backed up by Hawkins being commissioned by a consortium of London booksellers. James Boswell, whose own life of Johnson appeared in 1791, and George Steevens (Hawkins's old

enemy) attempted to discredit Hawkins's biography, Boswell suggesting that it was inaccurate, wordy, prone to digression, and of a 'dark uncharitable cast' (J. Boswell, *The Life of Samuel Johnson*, 1791, introduction). Even Laetitia-Matilda preferred Boswell's book, declaring it 'entertaining to a degree that makes my father's appear stiff, cold, and turgid' (L.-M. Hawkins, *Memoirs*, 1.230).

In May 1789, feeling unwell, Hawkins took the waters at Islington. On 14 May he was 'seized with a paralytic affliction' (probably meaning a stroke), and following a further attack he died at Broad Sanctuary, Westminster, about 2 a.m. on 21 May. He was buried in Westminster Abbey on 28 May under a stone that, on his own instructions, carried only his initials, date of birth, and age. He left three children: John Sidney *Hawkins and Laetitia-Matilda, already mentioned, and Henry. Two daughters, both named Charlotte, born in 1755 and 1763, died in infancy. His estate included several thousand pounds' worth of stocks, plus significant quantities of land in the London area.

Forming an accurate character sketch of Hawkins is difficult, because most surviving accounts are affected, in one way or another, by partiality. He himself left few autobiographical details, most of them in his history of music or *Life of Samuel Johnson*. His daughter, if occasionally mildly critical, tends in general to cast him favourably, though having been born when Hawkins was in his forties she would surely have been unable to make objective judgements of her parent until he was in his fifties. The account in the *New and General Biographical Dictionary* (1798), largely repeated in Chalmers's *New Biographical Dictionary* (1814), was compiled 'from information communicated by the family'; and the 'Life of Sir John Hawkins, compiled from original sources' that prefaces the second and third editions of Hawkins's musical history seems likewise to rely on the family. The 1853 life notes that:

> while few persons have been, both during life and after death, so rancorously attacked as Sir John Hawkins, none have come out of an ordeal so severe as that to which his reputation has been exposed, more thoroughly than he has done.

Madame D'Arblay (Fanny Burney) reported in her *Diary* (p. 66) Johnson's opinion that Hawkins 'was an honest man at bottom, but it must be owned that he had a degree of brutality and a tendency to savageness which cannot easily be defended', a blow followed up by Johnson's criticism that Hawkins was a most 'unclubbable' man. He seems to have been viewed by his Twickenham neighbours as a mixed blessing, his usefulness over Newgate prison and the state of English highways being overshadowed by a litigious nature that initiated petty disputes at those neighbours' expense. Walpole, a critic of Hawkins the lawyer, wrote that 'he grew hated by the lower class, and very troublesome to the gentry, with whom he went to law on both private and public causes' (H. Walpole, *Last Journals*, ed. A. F. Stuart, 1910, 2.399). His death went largely unremarked by the press. Twentieth-century commentators were more sympathetic, with historical research by Percy Scholes and especially by Bertram H. Davis removing much of the misrepresentation, some of it surely politically motivated, that affected Hawkins during his lifetime. Davis views him as an over-proud man whose virtues outnumbered his vices (Davis, *A Proof of Eminence*, 373). Clarence Miller noted that 'There has been written into the [history] books an anthology of abuse of Sir John Hawkins such as no other man of his era has had to overcome in order to stand before the world with his accomplishments recognized', and that 'everybody, except his devoted daughter, has concentrated on his minor human weaknesses to the prejudice of his really good qualities' (Miller, 2).

The only portrait of Hawkins ever painted is now in the faculty of music of Oxford University. It is by James Roberts, and was probably presented to the university in 1788. According to Hawkins's daughter (L.-M. Hawkins, *Anecdotes*, 137) it was Dr Philip Hayes, at that time professor of music in the school of music, who persuaded him to have it painted, in 1786. She also reports that the family did not like the image. An engraved copy of the portrait appeared in the supplementary volume of portraits appended to the second and third editions of Hawkins's history of music.

Hawkins, John (1761–1841), traveller and geologist, was born on 6 May 1761 at Trewithen, Probus, Cornwall, the fourth and youngest son of Thomas Hawkins (1724?–1766), MP for Grampound from 1747 to 1754, and his wife, Anne, daughter of James Heywood, of Austin Friars, London, a merchant. He was educated at Helston School, Winchester College (1775–7), and Trinity College, Cambridge, whence he matriculated in 1778 and graduated BA in 1782.

The family's Cornish estates included much mining property. Hawkins's first interests were in mineralogy and about 1780 he took lessons from Rudolf Eric Raspe (1737–1794), a German-born geologist whom he helped bring to Cornwall. Hawkins originally intended to follow family tradition and enter the law and he was admitted at

Lincoln's Inn in June 1782. But, being a man of considerable property, he instead decided to travel and went first to Germany, inspired by Raspe. In 1786 he became the first English student to attend the Freiberg Bergakademie under Abraham Werner, where he studied mining and became a Neptunian geologist. He then studied mineralogy in Berlin under Martin Heinrich Klaproth (1743–1817), who acknowledged Hawkins's help in providing mineral specimens and analyses for his *Observations Relative to the Mineralogical and Chemical History of the Fossils of Cornwall* (1787).

Throughout 1787 and 1788 Hawkins travelled in Austria, Hungary, Greece, Turkey, and Italy. At Constantinople towards the end of a journey from Vienna via the Hungarian mines through the Balkans, and after a first visit to Crete, he joined the botanist Dr John Sibthorp (1758–1796) and the army captain (and later Wernerian geologist) Ninian Imrie (*c.*1752–1820). Together they toured the Greek islands, inspired again by Raspe, who had described Thira after it was raised from the sea in 1707, Cyprus, and the coasts of Greece and Asia Minor. Hawkins reported to Sir Robert Murray Keith in February 1788 how 'few men have made a more complete tour of Greece' and that he had had to undergo a month's quarantine at Messina (26 Feb 1788, BL, Add. MS 35540).

On his return to England, Hawkins graduated MA from Cambridge in 1789 and in May 1791 was elected FRS, particularly for his mineralogical and metallurgical knowledge. He was now an enthusiast for revolutionary France and was soon travelling again. He was away from 1793 to 1798, collecting plants in Crete in 1794 and, again with Sibthorp, in Greece in 1795, and later exploring Greece and parts of Turkey. He wrote to his friend Davies Gilbert (1767–1839) on his return late in 1798, how 'there is scarcely any part of Greece which I have not examined ... I have accomplished a regular Trigonometrical Survey of almost all Greece having drawn a chain of triangles from Salonica and Mount Athos to Cape Matapan' (Gilbert to Wedgwood, 5 Jan 1799, Wedgwood MS 1548-2, Keele University). Hawkins's geological survey of Thira was never published, but his essays on his travels in the area were published by the Revd Robert Walpole (1781–1856) in 1817–20, and he directed the posthumous publication of Sibthorp's *Flora Graeca* up to his death. In 1801 Hawkins advised Robert Brown (1773–1858) of HMS *Investigator* on gathering geological specimens in Australia.

On 17 August 1801 Hawkins married Mary Esther Sibthorp (1778–1861), daughter of Humphrey Sibthorp (1713?–1797), MP for Lincoln, and half-sister of his former botanical co-explorer. They had four daughters and two sons, John Heywood (1802–1877), who was MP for Newport, Isle of Wight, and inherited his Sussex estates, and Christopher (1820–1903), who inherited his Cornish estates. In 1806 Hawkins bought the estate of Bignor Park, near Petworth, Sussex, and henceforth divided his residence between Sussex and London. Between 1826 and 1830 he completely rebuilt his Sussex home in Grecian style, filling it with his fine artistic and scientific collections. He was an enthusiastic gardener, having been a founder member of the Horticultural Society in 1804. In 1808 he was elected an early honorary member of the Geological Society of London. He took a considerable interest in archaeology, particularly after the discovery in 1811 of the great Roman villa at Bignor, Sussex. In 1814 he became a founder member and early supporter of the Royal Geological Society of Cornwall and contributed a number of papers on Cornish mineral veins and mining technology to its journal from 1818, drawing particular attention in his earliest papers to the extraordinary submarine mining at Wherry mine near Penzance. In his last years Hawkins was active in disseminating and supporting geological work in Sussex and was an important correspondent of the geologist Gideon Mantell (1790–1852). In 1826 he served as sheriff of Sussex and he was also a magistrate in both Sussex and Cornwall. He died at Trewithen on 4 July 1841 and was buried there.

Hawkins had extraordinarily wide interests. Davies Gilbert noted how he was 'celebrated throughout Europe for his general knowledge on all subjects, his science, literature, and travels, especially through Greece, the most interesting portion of the ancient world' (*Parochial History of Cornwall*, 1, 1838, 358). But Hawkins failed to write up many of his researches and later historians have been hindered by the dispersal of his very fine mineral collection by public auctions in 1905 and the deliberate destruction of all his notebooks and manuscripts on mines and minerals just before this. Hawkins, John Edward [Jack] (1910–1973), actor, was born at Lyndhurst Road, Wood Green, Middlesex, on 14 September 1910, the son of master builder Thomas George Hawkins and his wife, Phoebe, *née* Goodman. The youngest of four children in a close-knit (though not at all theatrical) family, Jack joined his school choir (at Trinity

John Edward [Jack] **Hawkins (1910–1973)**, by Anthony Buckley, 1968

county school, Middlesex) at the age of eight; two years later he sang in the local operatic society's *Patience* by Gilbert and Sullivan.

Enrolment with the Italia Conti School led to Hawkins's stage début in Clifford Mills and John Ramsey's *Where the Rainbow Ends* at the Holborn Empire on 26 December 1923. Soon after, his professional acting career began with Lewis Casson casting him as Dunois's page in the original production of Shaw's *Saint Joan* (1924). In the course of three years with the Casson-Thorndike company he played in *Macbeth*, *Henry VIII*, *Medea*, and Shelley's *The Cenci*. In the last play, critic James Agate singled him out as the most promising boy player he had ever seen. As a (by now) juvenile actor, Hawkins distinguished himself under Basil Dean's direction in John Van Druten's *Young Woodley* (1928). Under the same director he played opposite Laurence Olivier in *Beau Geste* (January 1929). He first appeared on the New York stage as Second Lieutenant Hibbert in R. C. Sherriff's *Journey's End* (22 March 1929).

During the 1930s Hawkins extended his range over a wide spectrum of classical roles such as Milton's Comus, and Shakespeare's Caliban, Orsino, Horatio, Leontes, Benedick, and Orlando; but he also performed in more lightweight plays such as those of Dodie Smith or the stage adaptation of Edgar Wallace's *The Frog* (1936). As early as 1933 the drama critic of the *Evening News* called him 'the most indubitable of matinée idols' (Hawkins, 71) and predicted that he might outstrip talented contemporaries such as Ralph Richardson and John Gielgud, and in the pre-war years Hawkins often worked with the latter. The high point of this collaboration was Gielgud's staging, in the period of the phoney war, of *The Importance of Being Earnest* in which Hawkins scintillated in the role of Algernon Moncrieff.

After the fall of France in 1940, Hawkins volunteered for service with the Royal Welch Fusiliers. Posted to India with the 2nd British division, he was put in charge of troop entertainment; by July 1944 he was a colonel commanding the administration of the Entertainments National Service Association for India and South-East Asia. On demobilization in 1946 he returned to the London theatre. After his comeback as Magnus in Shaw's *The Apple Cart*, he played Othello in a British Council-sponsored tour of recently liberated continental countries. At this point his life was to see a change. No novice to film acting (though initially camera-shy), he had appeared in a good many prewar motion pictures from *Birds of Prey* (1930) onwards. But following the *Othello* tour he launched himself on a predominantly cinematic career; he signed a three-year film contract with Alexander Korda and later switched to Rank, ceasing to appear on the stage after 1951. When he played a group captain in a war film, *Angels One Five* (1952), the reception was such that he tended thereafter to be typecast as a senior British officer: his rugged features and resolute persona matched the public's ideal expectations of the type. Corvette commander Ericson in *The Cruel Sea* (1953), test pilot John Mitchell in *Man in the Sky* (1956), Major Warden in *The Bridge on the River Kwai* (1957), and General Allenby in *Lawrence of Arabia* (1962) all confirmed this stalwart image. As he put it himself: 'Every time an army, navy or air force part comes up they throw it at me. There is nothing left now but the women's services!' (Hawkins, 122). An amusing variation was Norman Hyde, a former army officer who collects a group of wartime comrades to plan and execute a bank robbery, in *The League of Gentlemen* (1960). Other authoritative screen characterizations included the headmaster of a school for deaf mute children in *Mandy* (1951), Quintus Arrius in the 1959 version of *Ben Hur*, and Inspector Gideon of Scotland Yard in *Gideon's Day* (1959). Opinion polls in 1953, 1954, and 1957 declared him to be the most popular British film actor—a standing confirmed by his appointment as CBE in 1958. He also performed in television drama from 1956 onwards, notably in the thirty-nine-episode series *Four Just Men* (1959–60).

Jack Hawkins was married twice: from 22 October 1932 until 1942 to the actress Jessica *Tandy (1909–1994), with whom he had a daughter, and from 31 October 1947 until his death to actress Doreen Lawrence (whose real name was Doreen Mary Atkinson, *née* Beadle), with whom he had a daughter and two sons.

A throat condition which had long troubled him worsened appreciably during the making of *The League of Gentlemen*; cobalt treatment afforded only temporary relief. It was—ironically enough—while working on the television play *The Trial and Torture of Sir John Rumpayne* (1965) that he was discovered to be suffering from throat cancer. After an operation which practically deprived him of his voice, he

continued to act in films (either in near silent parts or having his voice dubbed over) with a fortitude equal to that of the wartime heroes he had so often portrayed. Following an unsuccessful operation to fit him with an artificial voice box, he died at St Stephen's Hospital, Fulham Road, London, on 18 July 1973, mourned by his fellow actors and the general public. Hawkins, John Sidney (*bap.* 1758, *d.* 1842), antiquary, was baptized at St Peter-le-Poer, London, on 11 February 1758, the elder son of Sir John *Hawkins (1719–1789), author of *The General History of the Science and Practice of Music* (1776), and Sidney (*d.* 1793), youngest daughter of Peter Storer of Highgate. The author Laetitia-Matilda *Hawkins (*bap.* 1759, *d.* 1835) was his younger sister. His parents moved in 1777 from Hatton Street to Queen Square, Westminster, from where the young Hawkins often accompanied his father to the abbey to hear the music and study the architecture. In 1782–3 he contributed essays on some plates from subjects in Westminster Abbey to *Specimens of Ancient Sculpture and Painting* (1780–94) by the architect John Carter. On Dr Johnson's recommendation to John Nichols in 1784, Hawkins published in 1787 an edition of George Ruggle's Latin comedy *Ignoramus* (1630). From 1791 he contributed to Jacob Schnebbelie's newly founded *Antiquaries' Museum*, and in 1792 he edited a fifth edition of his father's edition of Izaac Walton's *Compleat Angler*, originally published in 1760. In 1802 he published *A Treatise on Painting*, a translation by John Francis Rigaud (1742–1810) of Leonardo da Vinci.

Hawkins undertook to write an account of the paintings discovered in 1800 on the walls of the House of Commons, to accompany drawings made by John Thomas Smith. A misunderstanding arose and Smith completed and published the work himself in 1807 as *Antiquities of Westminster*. Hawkins immediately published *A Correct Statement and Vindication* of his conduct, to which Smith issued *A Reply* (1808). The material originally intended for inclusion in Smith's *Antiquities* was published by Hawkins in 1813 as *An History of the Origin and Establishment of Gothic Architecture*. This elicited a highly critical review from John Carter, which precipitated a protracted dispute conducted through the pages of the *Gentleman's Magazine* during 1814 and billed by the editor as 'Hawkins v. Carter'. Hawkins thought Carter parochial; Carter, passionate but knowledgeable only about things English, considered Hawkins unqualified and disliked his partiality towards continental examples. Hawkins simultaneously engaged in a similar dispute in the same journal with Isaac D'Israeli in vindication of his father, after D'Israeli had accused Sir John, as Johnson's executor and editor, of 'ingenious malice', 'meanness', and being 'guilty of *Clipping*' (*GM*, 1st ser., 84/2, 1814, 664). Hawkins seems to have got the worst of it. In 1817 he published *An Inquiry into ... Greek and Latin Poetry* and *An Inquiry into the Nature of ... Thorough Bass on a New Plan*.

Hawkins married, probably in middle age, Emily, with whom he had a son, John Sidney Hawkins (*bap.* 13 Nov 1817), and a daughter, Emily Louisa Hawkins (*bap.* 4 March 1826). He died on 12 August 1842, aged eighty-four, at Lower Grove, Brompton, the family home for many years, and was survived by his wife. He was a fellow of the Society of Antiquaries, and an obituary described him as 'an antiquary of much learning, research, and industry, but his talents were overshadowed by a sour and jealous temper; and he had lived in such retirement that his existence was scarcely known to the present generation' (*GM*, 2nd ser., 18, 1842, 664).

Hawkins, Laetitia-Matilda (*bap.* 1759, *d.* 1835), writer, was born in London and baptized on 8 August 1759, the second of three children and only daughter of Sir John *Hawkins (*d.* 1789), attorney, musicologist, and biographer whom Samuel Johnson famously called 'unclub[b]able' (Hill, 2.297–8), and his wife, Sidney Storer (*d.* 1793), whose inheritance (added to her original dowry) enabled the family in 1760 to acquire a fine house in Twickenham.

Hawkins's first novel was published before 1780 by Thomas Hookham after rejection by Thomas Cadell. Written to raise money for 'a whim of girlish patronage' (Hawkins, *Memories*, 2.156), it brought in twice as much as was needed. The work is now unidentified, as are 'many subsequent volumes' whose production she was too ashamed to mention.

After the deaths of her father and mother in 1789 and 1793 respectively, Hawkins remained at Twickenham, living with her scholarly brother Henry and a friend, Margaret Mitchell. In 1793 she replied to the politically radical *Letters from France* of Helen Maria Williams with *Letters on the Female Mind, its Powers and Pursuits*. After maintaining that with few exceptions 'the feminine intellect has less strength but more acuteness' (*Letters*, 1.2), she argued the Christian anti-revolutionary case.

Hitherto anonymous ('I chuse to be concealed'; Hawkins, *Letters*, 1.2), Hawkins set her name in 1806 to her translation from German of Johann Martin Miller's *Siegwart* and then, 'with the utmost repugnance', to *The Countess and Gertrude, or, Modes of Discipline* (1811, xxix). Hawkins is a busy authorial presence in this *Bildungsroman*, which she dedicated to Henrietta Maria Bowdler, not for her own writings but as friend and editor of the scholar Elizabeth Smith. The popularity of this novel has been linked to its didacticism; a second edition followed the next year. *Rosanne, or, A Father's Labour Lost* (1814), in which a daughter becomes her father's religious and moral salvation, and *Heraline, or, Opposite Proceedings* (1821) share many of its features: slightly heavy-handed authorial notes, careful attention to the influences which shape their heroines' moral and intellectual development, condemnation of various aspects of behaviour prescribed for women, and matter-of-fact presentation of libertinism in high life. Each is published by name and dedicated to a noblewoman. Jane Austen called *Rosaline* 'very good and clever, but tedious' (Austen, 289). The anonymous *Annaline, or, Motive-Hunting* (1824) is also ascribed to Hawkins.

Hawkins collaborated with her brother Henry on *Sermonets* (1814) 'Addressed to Those Who have not yet Acquired, or who may have lost, The Inclination to Apply the Power of Attention to Compositions of a Higher Kind'. Her topics include female dress, female education, and 'the female Character of the present Age', which begins with the fact that Christ chose to confide in women. She compiled *Devotional Exercises* (1823) from an earlier book by Bishop Simon Patrick, and left to Margaret Mitchell a manuscript diary of travels round much of England and Wales between 1824 and 1827. Her *Anecdotes, Biographical Sketches, and Memoirs* (1822) and the more personal and autobiographical *Memoirs, Anecdotes, Facts and Opinions* (1824) are her best-known works; they were abridged and adapted by Francis Henry Skrine (1926) and D. H. Simpson (1978). Laetitia-Matilda Hawkins died on 22 November 1835 in Twickenham. She was unmarried.

Hawkins, Major Rohde (1820–1884). *See under* Hawkins, Edward (1780–1867).

Hawkins, Nicholas (*c.*1495–1534), Catholic ecclesiastic and diplomat, was born at Putney, the nephew and godson of Nicholas West, bishop of Ely. He was educated at Eton College, where he was a king's scholar, and was admitted to King's College, Cambridge, in 1514. He graduated BA in 1519 and, apparently, proceeded MA in 1522. There is no record of his receiving a degree in law but he is said to have devoted himself to the study of civil and canon law, and was admitted as an advocate in 1528.

Thanks to his uncle, Hawkins was rector of Doddington, Cambridgeshire, from 1519, resigning when he was named archdeacon of Ely in 1527. He held the benefice of East Dereham, Norfolk, from 1520 and of Snailwell, Cambridgeshire, from 1526. He may also have been rector of Haddenham and of Wilburton, both in Cambridgeshire, but was certainly presented to the benefice of Fakenham, Norfolk, by the king on 30 January 1532, presumably as a reward for his services in obtaining convocation's recognition of the king as supreme head of the English church in the previous year. However, later in 1532 he petitioned the king to pass that benefice to one Croke out of pity for his circumstances.

Eustace Chapuys, in a letter to the emperor dated 1 October 1532, claimed that Hawkins was attracted to the teachings of Luther and was imprisoned for his heterodox opinions while a young man. After recantation, he was required to carry a faggot as penance by his uncle the bishop of Ely. Hawkins himself never refers to this incident, but he was friendly with Cranmer and appears to have made himself useful to the king in the first stages of the break with Rome. He is alleged by Chapuys to have written against the authority of the pope but, if so, these writings do not survive. By 1527 he was abroad, possibly serving the crown as a diplomat, but more likely studying law, and he appears to have been still abroad when he was collated by proxy to the archdeaconry of Ely on 9 November 1527. In 1529 he was back in England and attended the convocation as archdeacon.

By 1532 Hawkins had acquired enough of a reputation as an ecclesiastical lawyer and a diplomat to be appointed to succeed Thomas Cranmer as ambassador to the imperial court of Charles V. He was sent with letters of credence to the king of Hungary and various German princes. According to Chapuys, Hawkins was instructed to procure opinions concerning the king's proposed annulment of his marriage to Katherine of Aragon and had been provided with ample funds to do this. He was also given a commission, with Cranmer and others, to treat with the emperor for universal peace, in conjunction with the French ambassadors. Chapuys's intelligence was accurate and Hawkins was sending a book treating *De potestate papae* from Mantua in December 1532, while reporting back to the king by February 1533 that he had found a monk in Bologna with a favourable opinion of the king's position. He was also well provided for, being paid in advance 30s. a day (a total of £447 10s. for a year) for his maintenance. After landing at Calais on 5 October, he had arrived at Mantua by 16 November, when he received an audience with the emperor and was acknowledged as Cranmer's successor.

Some time before his dispatch to the imperial court, Hawkins had been commissioned to translate into Latin Henry VIII's treatise *The Glass of Truth*, on the unlawfulness of marriage with a deceased brother's wife. By 21 November 1532 he had half finished this work, although he

seems to have felt that some of the passages might be politically too sensitive to be translated into Latin and thus made available to a wider audience. He had, however, completed his translation by Christmas eve, 1532, when he arrived at Bologna where Pope Clement VII and Charles V were in conference. In a letter to Cromwell written on the same day he complained that, unlike other ambassadors, he had no silver plate and had to eat off pewter or tin. He desired permission to 'turn unprofitable plate into profitable' (*LP Henry VIII*, 5, no. 661).

On 22 February 1533 Hawkins had an audience with the pope and discussed the question of the annulment. He found Clement cordial but noncommittal. In conjunction with Geronimo Ghinucci, bishop of Worcester, Edmund Bonner, and others, he participated in negotiations with the pope until April 1533. During this time he reported, with some frustration, on the delaying tactics of the pope and formed a low opinion of the papal strategy, writing that the pope acted only out of 'worldly motives'. He was, however, also able to pass on some useful information to the king regarding the state of Italian politics.

By 12 April 1533, Hawkins was reported to be travelling overland to the emperor at Barcelona, because he claimed to be a bad seaman. For part of the way he had been in the company of Augustine de Augustinus, who praised Hawkins's amiability and gravity. From 11 June he reported to the king on events at the imperial court. At the same time, he wrote to Cranmer claiming that he was short of funds and missing home. Cranmer's reply on 17 June must have taken Hawkins by surprise, because in addition to 400 ducats Cranmer also sent news of the annulment of the king's first marriage at Dunstable, and of Henry's secret marriage to Anne Boleyn. In July Hawkins received a packet of letters from the king instructing him to inform the emperor of events, and setting out how he was to justify them. Having received the instructions on 18 July, on the 27th he delivered the king's message verbally (in Italian because of the emperor's poor French), and subsequently in writing. The response that Hawkins received was hardly encouraging, and the rest of his time at the imperial court became an exercise in damage limitation. Reports that Katherine and Princess Mary were being mistreated in England had reached Spain and Hawkins was instructed to counter these rumours with urgency. However, Hawkins found the men in Spain 'immovable' and despite his efforts the rumours persisted.

On 17 June 1533 Hawkins was nominated bishop of Ely, but he was still in Spain on 20 December when Cranmer informed him of the birth of Elizabeth. Cranmer's reference to the appointment to Ely was ambiguous, but there can be little doubt that Hawkins began his journey home expecting to be elected. However, no formal election had taken place when news arrived in England of Hawkins's death. He died of dysentery in January 1534 at Balbase in Aragon and was buried there, according to provision made in his will. The emperor sent him medicine in his illness, an action that, as Chapuys later reported, prompted Anne Boleyn, with whom Hawkins was friendly, to suggest that he had been poisoned.

It is difficult to get a firm grasp on Hawkins's personality. On the one hand, there seems to have been a general opinion that he was a serious but amiable man, given to acts of charity and self-restraint. On the other, the man who emerges in letters to Cromwell and Cranmer is one who seems overly concerned that the outward trappings of his station be maintained, and who continually complains of a lack of money. However, taking into account the fact that the archdeaconry of Ely was worth £100, Dereham £49, and Snailwell £24 per annum, it is hard to see him as impoverished, especially given the ample provision made for him by the king during his ambassadorship. He was, however, a useful and diligent, if not acute, observer of the imperial court. Despite the awkward messages he had to present there, he seems to have earned himself the emperor's respect. D. Hawkins [Hawkyns], **Sir Richard** (*c.*1560–1622), naval officer, was born in Plymouth, the only son of Sir John *Hawkins (1532–1595) and his first wife, Katherine Gonson (*d.* 1591). He had the sea in his blood on both sides, because Katherine was the daughter of Benjamin *Gonson [*see under* Gonson, William], the treasurer of the navy whom John Hawkins succeeded in 1577. Where Richard received his education is not clear. He seems never to have attended a university or inn of court, but he had a respectable command of Latin and of the intellectual skills by that time expected of a gentleman. Consequently, although he is reputed to have been 'brought up among ships and seamen', he must have enjoyed some sustained period of schooling, probably in Plymouth. Much of what is known about his life and career is derived from his autobiographical *Observations of Sir Richard Hawkins, knight in his voyage into the southern sea, anno domini 1593*, which he wrote in the last years of his life and which was published shortly after his death. There is no reason to doubt either the substance of his story or the self-revelation of Hawkins's character, though details, where verifiable, do not always appear to be correct.

His first known voyage took place in 1582, when Hawkins sailed under the command of his uncle William Hawkins to the West Indies. Three years later he was given the command of the galliot *Duck* in Drake's raid on the West Indies and Florida, and was the first to bring back the news of the success of that expedition. At 20 tons, the *Duck* was not much more than a rowing boat, so its young captain must have possessed considerable skill. By 1588 he was well enough established and regarded to be entrusted with the 360 ton *Swallow* in the campaign against the Armada. He sailed in the squadron commanded by his

father, and acquitted himself with credit, if no particular distinction. At this stage in his career he was very much in the shadow of his father, for whom he had the warmest admiration, but he seems to have been ambitious to establish his own individuality. In 1590 he again accompanied Sir John, first to the coast of Portugal, in command of the *Crane*, and later to the Azores, when he was vice-admiral and captain of the queen's ship *Nonpareil*. By this time his great project was already in the planning stages. Later, in 1622, he claimed that his intention had been to sail around the world 'to make a perfect discovery of all those parts where he should arrive'. However, the commission under which he sailed authorized him 'to attempt some enterprise against the king of Spain', and his subsequent actions appear to confirm that priority. Perhaps the two aims were not entirely incompatible, but in 1593 his expedition was an act of war.

Hawkins left Plymouth in the *Dainty* about the middle of June, accompanied by a pinnace and a victualler. By this time he had married, probably about the end of 1591, Judith Hele (*c.*1565–1629), the daughter of a west country merchant family similar to his own, and their first child, a daughter, was born in November 1592. The first part of the voyage was marked mainly by the routine hazards of storms and scurvy. Remarkably, he appears to have had on board some apparatus for distilling sea water, and even more remarkably gave up using it after a while. Perhaps it was not very effective, or too heavy on fuel, but the idea is extraordinary at that date. By early November he had reached the Santa Anna Islands to the north of Cape Frio, where they emptied out and burned the victualler, presumably in accordance with plan. Not in accordance with plan was the disappearance of the pinnace, which at this point deserted and made her way home. Between mid-December and the end of January (the height of summer), the *Dainty* made the hazardous passage of the Strait of Magellan, and revictualled at the island of Mocha in mid-April 1594. During May Hawkins attacked and plundered the town of Valparaiso, but the Pacific coast was no longer the soft touch that it had been sixteen years earlier, and on 19 June the *Dainty* was caught at San Mateo by two large and well armed Spanish galleons, which had been sent out specifically for that purpose. The reduced crew of the English ship now numbered no more than seventy-five fit men and, uncharacteristically, its guns were poorly serviced and maintained. Whether this was mainly the fault of the master gunner, whose responsibility they were, or of Hawkins himself, who had a misplaced confidence in his subordinate, is not clear, but the consequences were fatal. The *Dainty* held out for three days and then, with Hawkins severely wounded and the ship virtually knocked to pieces, surrendered.

The Spanish commander, Beltran de Castro, pledged that the prisoners of war would be spared and returned to their own country. The first part of his pledge he was able to honour without difficulty, and Hawkins recovered from his injuries. However, the Inquisition then attempted to claim them and, though Beltran managed to stall off the Inquisition, release became virtually impossible. After being held at Lima for almost three years Hawkins was transferred in 1597 to a prison in Seville, to Beltran's indignation and chagrin. In September 1598 he attempted to escape, but was recaptured and confined more strictly. His *Observations* come to an end with his capture at San Mateo, but he wrote a separate account of his unsuccessful breakout, which he addressed to the earl of Essex and was able to smuggle out, probably in 1599. He was then confined to a close prison in Madrid, whence he wrote a number of letters to the queen, and to the English ambassador in Paris, begging for their good offices. Meanwhile his father had died in 1595, leaving in his will the large sum of £3000 towards his son's ransom, a sum which Sir John's second wife apparently attempted to withhold, although there is no clear evidence that it was ever called for. Beltran was still exercising what influence he had on Hawkins's behalf, and the war was becoming desultory on both sides. In June 1602 Richard addressed a plea to Sir Robert Cecil which was finally successful, and he was released after eight years in captivity.

Hawkins returned to Plymouth late in that year and picked up the threads of his disrupted life with surprising speed. In 1603–4 he was mayor of the town and on 23 July 1603 was knighted by the new king (who was generous with such honours). In 1604 he was elected to serve for the town in parliament and was appointed vice-admiral of Devon, effectively taking up the local responsibilities to which he was entitled as head of the Hawkins family. Neither his faculties nor his energy seem to have been impaired by imprisonment. In 1604 he wrote to the commissioners charged with the negotiation of peace with Spain, making extravagant claims for compensation from the Spanish government. These went back to losses allegedly incurred by his father at San Juan de Ulúa in 1568. It is unlikely that he expected these claims to be met and the real purpose of his petition was probably contained in the rider that if no 'clause of satisfaction' for him could be included in the peace terms 'that I may not be concluded by them, but left free to seek my remedy according as the law of God and nations alloweth'. In other words, he wanted to be permitted to wage his own private war until he chose to regard his claim as satisfied. Needless to say, no such permission was granted, and the king of Spain proved unforthcoming. Hawkins seems to have regarded this lack of satisfaction as sufficient pretext for extensive abuse of his office as vice-admiral. He 'had dealings with almost every pirate of note who set foot in the west country' (Senior, 131), using his office to enrich himself and pervert the course of justice. He took a share of the loot and in return issued them with discharges over his signature, sometimes blank. One John Payne is noted as having paid him £40 for such a discharge. He did not confine his patronage to those attacking Spanish ships. In 1605 the Venetian ambassador complained bitterly that valuables belonging to him, which had been looted out of a French ship from Toulon by English pirates, had ended up in the possession of Sir Richard Hawkins. At the same

time he was unwise enough to quarrel with one of his successors as mayor of Plymouth, who also denounced him to the council.

This combination of local and international pressure forced the lord admiral, the earl of Nottingham, to send his secretary Humphrey Jobson to Plymouth with a commission to investigate. Hawkins did everything in his power to obstruct Jobson, and there was a furious quarrel. He was suspended from office, fined, and briefly imprisoned in August 1606 but had sufficient local influence, and enough friends at court, for this set-back to be only temporary. He was allowed to purge himself and in April 1607 was restored to his post. The fact that he was not reappointed after 1610 may reflect the fact that his misdemeanours were well enough established, and that his friends had been mainly concerned to save his honour. He did not retire because of advancing age or ill health, being no more than fifty and active in other respects. In 1614, when the governors of the East India Company were planning to send an expedition through the Strait of Magellan into the Pacific, he was named as commander and was eager to accept the mission. However, the plan was aborted, possibly to avoid causing offence to Spain, with whom relations were at a delicate stage. In 1617 he was again considered for the command of a company fleet, but nothing came of the proposal.

During these years Hawkins seems to have been at sea for other reasons, and was not losing his sea legs ashore, but fleeting glimpses do not give any indication of what he was about. There were no further complaints against him and he seems to have become increasingly prosperous, so probably he had resumed the family business. In the later years of his life he left Plymouth, perhaps seeing no further advantage in involvement with the town's affairs, but more likely to build up his credentials as a country gentleman. He went to the manor of Slapton, 22 miles to the east, where he had a small estate, but this withdrawal does not seem to have impaired his active participation in business; Richard Hawkins was not of a retiring disposition. In 1620–21 he was appointed vice-admiral under Sir Robert Mansell of the fleet sent into the Mediterranean against the Algerian corsairs. He commanded the 600 ton *Vanguard*, probably the largest ship he had ever sailed in. At this point he was described as 'a very grave, religious and experienced gentleman', which may reflect no more than a normal progression from an adventurous youth and a somewhat lawless middle age. A serious but not obsessive puritanism seems to have characterized him throughout his life, as it had such kindred spirits as his father and Sir Francis Drake. The expedition against Algiers was prolonged, exhausting, and eventually a miserable failure, all of which factors were calculated to undermine the health of a man already over sixty. When he made his will on 16 April 1622 he was already sick, but not, it would seem, too sick to attend the privy council the following day on business. There, apparently in the council chamber itself, he died of a stroke. His wife, Judith, survived him until 1629. After an enforced interval she had presented him with three more daughters and two sons: John, who went to sea with no very great success, and Richard, who remained quietly ashore and ensured the continuity of the Hawkins family in south Devon.

Hawkins, Susanna (1787–1868), poet, was the daughter of John Hawkins, a blacksmith near Burnswark near Ecclefechan, Dumfriesshire. She was in early life a herd- and dairymaid at Gillesbie but later improved on her basic education to become an author in her middle age. The owner of the *Dumfries Courier* was charmed by her and printed her poems for free in little volumes with paper covers. She published her *Poetical Works* in nine volumes (1829–61), on local and occasional subjects. For half a century Hawkins was known as a wandering minstrel of the borders, selling her booklets from house to house and travelling as far as England in search of natives of Dumfries. A genial Manchester patron declared that there were two forces a Dumfriesian in England could not escape—death and Susy Hawkins (Boase, *Mod. Eng. biog.*). Sir F. W. Johnstone, bt, of Wester Hall, Dumfriesshire, granted her ground for a cottage at Relief, near her brother's home in the neighbourhood of Ecclefechan, where she died of a head injury sustained in a fall on 29 March 1868.

Hawkins, Sir Thomas (*bap.* 1575, *d.* 1640?), poet and translator, was baptized on 20 July 1575 at Boughton under Blean, Kent, the eldest son of Sir Thomas Hawkins (1548/9–1617) of Nash Court, Boughton, and his wife, Ann (1552–1616), daughter and heir of Cyriac Pettyt, esq., of Colkyns, Boughton. The Hawkins family had held land in the parish since the fourteenth century and by 1640 the family estates in Boughton, Faversham, Herne Hill, and Seasalter comprised some 110 acres. Hawkins was the eldest of six brothers, who included the Jesuit Henry *Hawkins (*bap.* 1577, *d.* 1646), and the physician and translator John Hawkins. Hawkins's parents' magnificent tomb at Boughton under Blean parish church, carved by Epiphanius Evesham, includes side panels of alabaster depicting Thomas and his siblings kneeling in prayer.

Between about 1587 and 1589 Mr Greene, a recusant schoolmaster, was living in the Hawkins household and presumably provided private tuition to the sons. On 15 October 1591 Hawkins matriculated at Gloucester Hall, Oxford (where his age is erroneously given as fifteen), but he evidently left before taking a degree. At an unknown date he married Elizabeth, daughter of George Smith of Ashby Folville, Leicestershire, probably the George Smith from Leicestershire who matriculated at Gloucester Hall two years before Hawkins but was almost exactly the same age. The Smith family were, like his own, noted

Catholics. The couple had two sons, John and Thomas. On the death of his father on 19 April 1617 Hawkins succeeded to the family estates, and in the following year, on 4 May, he was knighted by James I at Whitehall. However, his religious sympathies did not go unnoticed. In 1626 he and his wife were indicted for recusancy, and in December 1633 the privy council authorized a search of Nash Court, describing Hawkins as 'a great papist and harbourer of priests'; however, his wife refused entry to the officers on the ground that her husband had apparently received formal exemption under the great seal, and the matter seems to have been dropped (*CSP dom., 1633–4*, 319). None the less further local indictments against other members of his family were issued in 1636 and 1637.

In 1624 Hawkins was one of eighty-four nominees for Edmund Bolton's proposed Royal Academy. He was a friend and correspondent of the author and traveller James Howell, probably from at least 1621. In 1632 Howell wrote effusively to Hawkins thanking him for the 'choice Stanzas' he had sent:

> I find that you were thoroughly heated, that you were inspir'd with a true Enthusiasm when you compos'd them ... your Muse soars up into the upper; and transcending that too, takes her flight among the Celestial Bodies to find a fancy. (Howell, 413)

It is also clear that Hawkins was connected with the Jonson circle. In April 1636 a letter from Howell began by noting that Hawkins had been 'deeply remember'd' at a dinner with the poet (Howell, 403). Hawkins knew Jonson's patron, Sir Kenelm Digby—he was staying at the Digby household on the morning that Digby's wife was found dead in 1633—and Hawkins composed an elegy on Jonson for the commemorative collection *Jonsonus virbius* (1638). He also was a friend of Sir John Beaumont and wrote an elegy of him for Beaumont's *Bosworth-Field* (1629).

Wood described Hawkins as an 'ingenious man ... as excellent in the fac[ulty] of music as in poetry' (Wood, *Ath. Oxon.*, 3.524); however, it is as a translator that he is primarily known. In 1625 he published a translation of Horace, *The Odes of Horace the Best of Lyrick Poets*, which was republished in 1631, 1635, and 1638. Offering a slightly more chaste selection of poetry than John Ashmore's Horatian translations of 1621 Hawkins claimed that his work was 'a reflection, from that brighter body of his living *Odes*' that 'sought his *Spirit*, [rather] than *Numbers*' (sig. A1r–v). Plagiarized by Barton Holyday's *Horace* of 1652, Hawkins's translations were also included in a collection of Horatian translations published in 1666. Hawkins also translated works by Giovanni Botero (*The Cause of the Greatnesse of Cities*, 1635), Giovanni Battista Manzini (*Political Observations upon the Fall of Sejanus*, 1634) and three works by Pierre Matthieu (including another on Sejanus); the translation *A Saxon Historie, of the Admirable Adventures of Clodaldus and his Three Children* (1634) was also his work. In addition to this literary and historical work his translating skills were used extensively by the Jesuits, presumably through his brother Henry, to produce pious works aimed at the English market. Between 1626 and 1638 came Hawkins's translation, with the assistance of Sir Basil Brooke, of the massive four-volume work, *Holy Court*, by the French Jesuit Nicholas Caussin. Published in France these volumes were dedicated to Queen Henrietta Maria, the earl of Dorset, the countess of Portland, and the duchess of Buckingham respectively. The work, which included biographies and portraits of Mary, queen of Scots, and Cardinal Pole, proved immensely popular among Catholics; at least three editions of the work were published in London between 1650 and 1678. Hawkins also translated Caussin's *Christian Diurnal* (Paris, 1632), dedicated to Viscountess Savage (this edition differs from the Cambridge edition of 1648 which was aimed at protestant readers), and Étienne Binet's *The Lives and Singular Vertues of Saint Elzear* (Rouen, 1638), dedicated to the earl and countess of Shrewsbury. Hawkins has also been plausibly identified as the translator of *The Angel-Guardian's Clock* (Rouen, 1630) by the Jesuit Jeremias Drexelius; Hawkins's brother Henry had already produced a translation of another of Drexelius's works.

Hawkins died at some point between the drawing up of his will on 29 October 1639 and its proving on 13 April 1641, probably towards the end of 1640. Although he asked to be buried in Boughton parish church as close to his parents as possible his burial is not recorded in the parish registers. Hawkins outlived both his sons (neither of whom married) and his wife. He left his estate to his brother and executor, Richard (*bap.* 1581), conditional on the payment of £300 to Hawkins's nephew, John Kirton, a physician. The will refers to a house in St Sepulchre, London, which Hawkins presumably used when attending court, and it is possible that he was buried in that parish (the relevant registers are lost). He left all his books 'in my studdy at London and at my house at Nash' to Richard's eldest son, John, except his music books which, with his viols, he bequeathed to John's brother Charles (PRO, PROB 11/185, sig. 41, fol. 317*r*). His Mercator atlas was left to his friend Thomas Chester.

The Hawkins family remained Catholic into the eighteenth century; during the Jacobite rising of 1715 the valuable library was destroyed by fire when a protestant mob attacked Nash Court. ANTHONY R. J. S. ADOLPH

Wealth at death over £300

Hawkins, Thomas (1810–1889), palaeontological collector, was born on 25 July 1810 near Glastonbury, the son of John Hawkins (*d.* 1830), farmer and cattle dealer, and his wife, Edith (*d.* 1811). After his father's marriage in 1812, to Jane, his first wife's sister, Hawkins apparently lived for a time with his maternal grandmother. Details of his early education are unclear but he was at least tutored by William Seabrook, a dissenting minister of Glastonbury. He professed knowledge of the classics and of Hebrew. He was apprenticed to a Mr R. C. King of Saxmundham, probably a surgeon, and he entered Guy's Hospital as a surgeon's pupil in 1831. It is not known whether he completed the course. He claimed to have studied anatomy under Sir Astley Cooper.

From about 1832 to about 1845 Hawkins lived at Sharpham Park, near Glastonbury. A fellow of the Geological Society, he collected superb dolphin-like ichthyosaurs and long-necked plesiosaurs from Jurassic rocks, through quarriers at Street, Somerset, and through professional collectors such as (the younger) Mary Anning of Lyme Regis, Dorset. He sold two collections to the British Museum (1834 and 1840) for a massive £3110 5*s*., after intensive lobbying by the geological community. Together with Gideon Mantell's collection, these made the museum the pre-eminent collection of fossil reptiles. Hawkins also donated smaller collections to the universities of Cambridge (1856) and Oxford (1874). His collections contain some of the oldest known complete plesiosaurs and remain scientifically important.

Hawkins seems to have aspired to social success through science. He was respected as a collector and preparator, often supervising his specimens' excavation and carefully cleaning rock from the bones himself, though he was known for over-restoring missing parts with plaster or extraneous bones, and confusion over this marred one British Museum sale. Two huge books, *Memoirs on Ichthyosauri and Plesiosauri* (1834), and *The Great Sea Dragons* (1840), mixed anatomical description and fine illustration with autobiography, sacred history, eschatology, and grandiloquent visions of the 'Gedolim Taninim of Moses, extinct monsters of the Ancient Earth'. Such admixture was not then unusual in geologists' writing, but Hawkins's extreme lack of restraint was far more typical of the 'hyper-Miltonic' poets, whose style he later followed in his epic poetry, for example *The Wars of Jehovah in Heaven, Earth and Hell* (1844), illustrated by John and Alfred Martin. John Martin's frontispiece of battling sea-saurians in Hawkins's *Great Sea Dragons* is the classic expression of fossil saurians' impact on the Romantic imagination.

Hawkins's social failure was presumably due to his eccentricity. He mentions his own deafness and tinnitus but the underlying problem was evidently a serious personality disorder of unclear nature and onset. Manifestations include his delusion that he was the 'Rightful Earl of Kent' (as he described himself, for example, in the 1871 census), and crankish letters to the great and good, and to newspapers, as well as pamphlets about current affairs and real or imagined slights. His litigiousness led to court cases and a prosecution for perjury. He claimed involvement in progressive schemes such as the London improvements, and to have saved Robert Peel from assassination after he lost office (in Hawkins's mind because of his support for acquiring the 1840 fossil collection for the nation). Hawkins's desperate sycophancy drove him to offer collections directly to Cambridge University's vice-chancellor, Whewell, and Oxford's chancellor, the marquess of Salisbury, rather than the museums in question. To equals and inferiors, however, Hawkins was dangerously quarrelsome. Somerset people remembered him for feuds and provoking riots. Hawkins threatened Edward Charlesworth, editor of the *Annals and Magazine of Natural History*, with a criminal libel prosecution over dinner-table remarks about Hawkins's restoration practices. Charlesworth retorted that 'Mr Hawkins could adopt the language of cringing adulation, as well as that of the coarsest bullying, just as it chanced to suit his purpose'.

According to Somerset gossip Hawkins obtained his money by marrying two or three wealthy women. Only one marriage is, however, known. This took place on 30 June 1855, and his wife was Mary (*bap.* 1796, *d.* 1858), daughter of James Webb, of Northumberland Street, London. They had no children. By the end of 1856 they were apparently living apart. Hawkins appears to have received at least £800 from her will.

Hawkins's autobiography, *My Life and Works* (1887), like anything he wrote about himself, is unreliable, notably omitting his marriage to Mary Webb. After leaving Sharpham Park about 1845 he lived in a sequence of mostly rented houses, hotels, and lodgings in London, the Isle of Wight, Oxford, Chester, Somerset, and elsewhere, interspersed with continental visits. In the 1860s he formally adopted Charles F. Bonney (1851–1919), the son of a Southampton stationer and book-seller, presumably as a companion-attendant. He had no known profession or trade other than his sale of specimens to the British Museum (an attempted auction in 1844 was unsuccessful), and as far as is known he lived off this capital supplemented with inheritances and a marriage settlement. He died of intestinal blockage and haemorrhage at Schönberg Villa, St Boniface Road, Ventnor, Isle of Wight, on 15 October 1889, and was buried at Ventnor under a grandiloquent epitaph. He was described as 'of middle height, (with) light hair, and a foxy unpleasant face' (Clark). M. A. TAYLOR

Hawkins, William (*b.* before 1490, *d.* 1554/5), merchant and sea captain, was probably born in Tavistock, Devon, the eldest of three children of John Hawkins (*d.* in or before 1490), merchant, of Tavistock, and his wife, Joan, daughter of William and Margaret Amadas of Launceston, Cornwall. Hawkins may have been master of Henry VIII's 'great galley' during the Anglo-French war of 1512. By about 1518 he had married Joan, only child of Roger Trelawny of Brightor, Cornwall. They had two sons: William *Hawkins (*c.*1519–1589) and Sir John *Hawkins (1532–1595), respectively a merchant and sea captain and the treasurer of the Elizabethan navy.

By the early 1520s Hawkins was certainly based in Plymouth, and in 1523 he was one of the town's five richest men, worth £150 per annum. He was a collector of the subsidy in Devon in 1523 and 1524, and receiver for Plymouth (1524–5), when the town's revenue he handled was less than half his own. In 1527 Hawkins contributed to Plymouth's defences by selling to the town 196 lb of gunpowder and two brass guns, which helped repel a French raid. But the same year he and five others were hauled before the courts, accused of a serious assault; no decision is recorded. Hawkins was mayor of Plymouth in 1532–3 and 1538–9. The town's politics in the 1530s were robustly factional, with Hawkins and his allies, Horsewell and Elyot, involved in a prolonged dispute, which led to a summons before the privy council (1535). The case initially went against Hawkins, but the next year, Thomas Cromwell, sweetened by his discreet gifts of hake, a local delicacy, set up a commission of county magnates, which decided in his favour. The contest developed into one between Plymouth and Saltash for pre-eminence in the sound, and Hawkins brought the case to Star Chamber (1538). The record of the decision is missing, but it is clear that Hawkins triumphed; henceforth his position in Plymouth was unchallenged, he was in favour with the government, and Hakluyt suggests he could claim the unnerving privilege of being 'esteemed and beloved' (Blake, 299) by Henry VIII. In 1543–4 he was sent by the corporation to London to purchase arms after disposing of some former church plate. Hawkins was MP for Plymouth in 1539, 1547, and October 1553, when he was noted as a firm protestant. In Plymouth he lived in Kinterbury Street, he clearly owned quays and warehouses on Sutton Pool, and in 1544 he purchased the manor of Sutton Vautort for 1000 marks.

If factional triumph secured Hawkins's position in Plymouth, it was transatlantic commerce that gave him a national profile. In the 1520s he traded with France and Spain, himself visiting Andalusia. The surviving Plymouth customs ledgers (1539–41) show him exporting cloth and tin to western European ports, and importing salt, French and Iberian wine, sugar, pepper, soap, and fish from Newfoundland, probably bought from French middlemen. In the early 1530s he became the first Englishman to trade regularly across the Atlantic from Guinea to Brazil, possibly using French pilots. Details of three voyages (1530–32), made in the 250 ton *Paul*, were narrated to Hakluyt half a century later, from family tradition, by John Hawkins. In 1530 Hawkins collected ivory, and possibly pepper, in upper Guinea (now Liberia), then crossed to the coast of Brazil, probably south of Pernambuco, where he laded local produce, presumably including brazilwood, valuable in the dyeing of cloth, and largely re-exported to the Mediterranean. On a second voyage (1531) Hawkins's friendship with a Brazilian chief led to his coming to England and being exhibited before Henry VIII, for Hawkins a valuable contact with the crown. Unfortunately, the chief died on his return voyage (1532), but Hawkins allayed native suspicions sufficiently to secure the release of Martin Cockeram, who had been left in Brazil as a pledge for the chief's safety. From October 1533 to July 1536 Hawkins's whereabouts are unknown, but during that period at least one further Atlantic voyage was made, which 'miscarried' under another captain, as Hawkins indicated in a letter (1536) to Cromwell, when he requested, seemingly in vain, brass ordnance, powder, and a £2000 loan over seven years for further voyages. The *Paul*'s best-documented venture (25 February 1540), on which Hawkins himself did not sail, saw the export of hatchets, combs, knives, cloth, copper and lead (partly in the form of arm rings), and over 200 nightcaps. She returned with ivory and brazilwood, and showed a net profit of at least 1000 per cent.

During the Anglo-French hostility and invasion fears of the 1540s Hawkins abandoned transatlantic trading for privateering nearer home. In September 1544 he received letters of marque for up to eight ships to take prizes from the French. His lack of scruple sometimes led him into trouble. In 1545 one of his ships captured a Spanish vessel, whose cargo he correctly alleged was really French; the case reached the admiralty court, and when Hawkins arrogantly sold the goods before the case was settled, he was imprisoned for contempt, probably a gesture to appease Charles V. Hawkins was in trouble again when his frigate, the *Mary Figge*, illegally captured some Flemish goods, and he took a Breton ship just after peace with France was signed in 1546. But he was too valuable to be cold-shouldered, and appears to have acted as an unofficial crown agent in the west country: in 1549–50 he strengthened Plymouth's fortifications, supplied victuals for the navy, and was paid £50 under a privy seal writ for building

the 200 ton *Jesus of Plymouth*. The final reference to Hawkins, a pardon dated 2 May 1554, shows him suspected of being involved in subversive activity in Plymouth against the possible landing of Philip II of Spain. On 8 February 1555 he was noted as recently dead.

Hawkins was clearly a troublesome, headstrong figure, bold in his approach, even to king or minister, contemptuous of officialdom, who saw the law as a weapon rather than a restraint. Self-reliant and a shrewd businessman, he was ready to take initiative and responsibility in serving town and country, without pay, but rewarded by power and place through his achievements as a merchant and pioneer of oceanic enterprise. Hawkins, William (*c.*1519–1589), merchant and sea captain, was the elder of two sons of William *Hawkins (*b.* before 1490, *d.* 1554/5), merchant and MP, and his wife, Joan, only child of Roger Trelawny, of Brightor, Cornwall. Little is known of his youth, but he probably served on some of his father's voyages to Brazil. By the 1550s he was a Plymouth shipowner, in active partnership with his brother John *Hawkins. During the Anglo-French war (1557–8) they made successful privateering forays into the western channel, though Hawkins, like his father, occasionally fell foul of the admiralty court over seizure of neutral shipping and the sale of booty in anticipation of court decisions. He also shared his father's litigiousness: local records show him bringing a suit for debt (1555–6) and claiming 1000 marks in damages for slander (1557). In 1558 an act of parliament fixed Hawkins' quay as the sole legal place for landing goods in Plymouth.

The formal partnership with his brother seems to have ended in the early 1560s, possibly when John went to London, but each continued to invest in the other's concerns, and Hawkins was a major contributor to his brother's three voyages to Africa and the West Indies (1562–9). Yet Plymouth remained the centre of his activities: he lived in Woolster Street, and was mayor in 1567–8, 1578–9, and 1587–8. During his first term he took into custody Spanish treasure, destined for the duke of Alva's troops in the Netherlands. In January 1569, after Francis Drake, in Hawkins's own ship the *Judith*, brought news of his brother's disaster at San Juan d'Ulloa, Hawkins wrote furiously to Cecil and the privy council, demanding sequestration of this treasure, or reprisals on Spanish shipping. He completed (1570), at his own expense, a new conduit to enhance Plymouth's water supply; in 1573 he and his brother provided the tide-powered town mills with a weigh-house and transport for the townspeople's grain; and in 1579 he procured the patent that gave Plymouth authority over St Nicholas (later Drake) Island, which lay across the entry to the port. By his first wife, whose identity is unknown, Hawkins had a son, William *Hawkins, and three daughters. His second wife was Mary, daughter of John Halse, of Efford, Devon, with whom he had four sons and three daughters; after his death she married Sir Warwick Hele, of Wembury, Devon.

In the 1560s Hawkins masterminded further privateering in the channel, largely on behalf of foreign protestants, using Plymouth as both supply base and emporium for the sale of spoil. In 1569 he held a Huguenot commission from the prince de Condé to attack Spanish shipping, and in April he produced eight ships for an expedition to aid La Rochelle. Spanish sources (1569–70) suggest that Hawkins was involved in a voyage to Brazil or the Caribbean, and compliment him on his treatment of Spanish prisoners, but there is no evidence of ships reaching either destination. Hawkins and Richard Grenville managed to avoid punishment in 1576 when one of their ships captured a vessel from St Malo. After the Spanish takeover of Portugal in 1580, Hawkins led an expedition of seven ships (1582–3), probably with a commission from Dom Antonio, pretender to the Portuguese throne, which went via the Cape Verde Islands to the Caribbean, visiting Margarita and Puerto Rico, and returning with a rich cargo of hides, sugar, pearls, and treasure. In November 1584 he invested £1000 in Drake's aborted Moluccas expedition. He led Plymouth's provision of seven ships against the Armada.

Hawkins died on 7 October 1589, probably at his brother's house, at Deptford, where he was buried in St Nicholas's Church; John Hawkins erected a monument and Latin eulogy to his memory, of which no trace remains. His will was proved on 20 October.

Hawkins, William (*b.* *c.*1560), sea captain and merchant, was the eldest of the three children of William *Hawkins (*c.*1519–1589), sea captain, merchant, and shipowner, and his first (unknown) wife, and nephew of Sir John Hawkins (1532–1595). He served in Sir Francis Drake's circumnavigation of 1577–80, probably in the *Elizabeth* though possibly in the *Golden Hind* with Drake himself. On 17 June 1581 Hawkins had his horoscope calculated by Dr John Dee at Mortlake. He was nominated (October 1581), apparently at the request of his uncle, then treasurer of the navy, as lieutenant to Edward Fenton, appointed to replace Martin Frobisher in command of an expedition to the East Indies via the Cape. The voyage, promoted, among others, by Leicester, Burghley, Drake, and the Muscovy Company, was designed to follow up Drake's contact with the Moluccas by establishing an English factory there and a regular

trade in spices. At an early stage of the planning Hawkins had been nominated to command the *Bark Francis*, though it was recommended that some other strong personality be joined with him. Clearly there was a body of mercantile opinion which felt that Hawkins, despite his relative youth, should have commanded the whole expedition. Henry Oughtred, previous owner of the *Galleon Leicester*, on which Hawkins and Fenton sailed, in a letter to Leicester (17 March 1582) called Hawkins '(the chief) hoope of the viyage, butt wthall ... made ... an underlyng to one (Fenton) who ys (without) knowledge, which att the sea will make great dis(content)' (Taylor, 33–4). The diary of Richard Madox, a chaplain on the voyage, suggested that 'Fenton feareth lest William Hawkins should outmatch him' (ibid., 152). Fenton was clearly a fussy, stubborn, choleric soldier, with little understanding of the responsibilities of commanding such an expedition, and somewhat despised by his sailors; but he was Leicester's choice as 'general', and Leicester had provided the voyage's flagship. Fenton's powers were, however, on 9 April limited on all weighty matters by a ten-strong council of assistants which included Hawkins.

It was already late for the projected voyage round the Cape when the four ships on the expedition gathered at Calshot on 1 May; for twenty days unpropitious channel weather kept them idle around the Isle of Wight, while Hawkins liberally entertained the sailors. Relations with Fenton were not improved when he tried to leave Hawkins ashore while he was visiting Drake at Buckland (1 June); crew protests resulted in Hawkins being picked up the following day. Fenton and Hawkins were to remain at odds throughout the voyage, and Hawkins's 'Narrative', written on their return (6 July 1583)—and damaged by fire in the nineteenth century—says, 'I had not from that tyme till my comyng home any good countenaunce' (Taylor, 277). A two-month delay in Sierra Leone (August–October 1582) annoyed Hawkins, intensified antagonisms, caused morale to decline, and saw alternative courses being projected on the indecisive Fenton, who seems to have decided early in the voyage to avoid the hazardous journey to the Moluccas in favour of Atlantic plunder. Hawkins's diary alleges that when Fenton offered bribes to those who would support the plunder of returning Portuguese spice carracks at St Helena, he protested that the original instructions of the voyage should be adhered to, though clearly Hawkins was among those who favoured approaching the Moluccas via the Magellan Strait and Peru, rather than round the Cape—an idea probably bruited in England before departure, and clearly demanded by the pilots on board. When the ships reached the coast of Brazil Hawkins opposed abandonment of the voyage through the strait on the grounds that the spice islands presented the best 'hoape of a good releefe for our money' (ibid., 280); he also thought the ships leaked too much for the voyage back to England. When Hawkins refused to sign the agreement to stay at San Vicente on the Brazilian coast '(there) grew foule speeches betweene the Generall, and his lieutenant, after the olde custome' (Donno, 33n.). Hawkins jeered at Fenton's failure to consult and his indecisive navigation: 'all knewe that he understoode not what he did' (Taylor, 282). The ships sailed separately back to England, and the *Galleon* arrived in Kinsale, Ireland, on 15 June 1583. Before it anchored in the Downs Hawkins was disarmed and clapped in irons by Fenton, allegedly because of his drunken and mutinous behaviour. There is no record of Hawkins's being punished once on shore, but no indication of his family's support for his actions. Indeed his uncle gave Fenton (they were brothers-in-law) a post on the navy board (1589).

Hawkins is next heard of (1583–4) bringing into Milford Haven for his father a prize taken in the West Indies the previous year, which had possibly been left in Ireland. It is likely that he was the William Hawkins who (1587) commanded the *Advice* on the Irish coast, and the *Griffin* against the Armada (1588). In his father's will he received a rather beggarly annuity of £40; his uncle Sir John Hawkins left him a share of the prospective profits of his ill-fated last voyage and an annuity of £10.

Hawkins then disappears from history. He may have been the man who, having spent some years in the Levant, spoke fluent Turkish and was familiar with the manners and customs of the orient, and, bearing a letter from James I to the Mughal emperor, Akbar, commanded the *Hector* on the third East India Company voyage, led by William Keeling, which left the Downs on 1 April 1607. But, if he was the same man, it is rather surprising that Hawkins's own knowledge of Sierra Leone is not mentioned as influencing Keeling's decision to call there, whereas the favourable reports of Drake and Cavendish are. The fleet reached the island of Socotra (April 1608) and, while Keeling sailed off for Bantam, Hawkins, in the *Hector*, reached India and rowed the 20 miles up to Surat, the Mughal empire's principal port, to investigate its trading potential. Within days Hawkins encountered Mukarrab Khan, the Mughal official in charge of the Gujarat ports, who impounded the company's goods and was in league with the Portuguese, who had great influence at the Mughal court and policed Indian trade from their base at Hormoz in the Persian Gulf. Despite the Anglo-Spanish peace signed in 1604, the Portuguese had no intention of letting the English intrude on their lucrative Indian trade. They captured two of the *Hector*'s boats and, after Hawkins challenged the local Portuguese commander to a duel, he sent his English prisoners off to Goa. The *Hector* then sailed away to Bantam, leaving only Hawkins and William Finch behind to seek recompense for their confiscated goods and attempt to get permission for a factory. While Finch remained at Surat, Hawkins, after surviving two Portuguese attempts on his life, set out on the 700 mile journey to the Mughal capital, Agra, in February 1609, guarded by a band of Pathans. Ten weeks later he arrived to find that Akbar had died in 1603 and had been succeeded by Jahangir. Despite his inability to offer the costly presents expected by the emperor, Hawkins soon developed a close relationship with Jahangir, who found him an exotic adornment to his court, and he achieved a position

in the imperial entourage closer than any of his successors: the journal of this William Hawkins relates that he was asked to remain indefinitely and offered an annual salary of £3200, the rank of khan, and, initially, permission for a factory at Surat, which lay in a major textile-producing area. At Jahangir's bidding he married the daughter of an Armenian Christian who had been high in Akbar's favour; and he became the emperor's boon companion in his nightly, opium-enhanced, drinking binges and at his lion and elephant fights. But Hawkins's position was now undermined by a combination of circumstances: the return to imperial favour of Mukarrab Khan; Hawkins's obstinate refusal to accept his valuation of the confiscated East India Company goods; the arrival in Surat of drunken and abusive English sailors from the wrecked *Ascension*, and their appearance in Agra in January 1611 led by the factor, John Jourdain, who took an immediate dislike to Hawkins; and the continued jealousy of Jahangir's ministers. When the Portuguese, especially the Jesuits, annoyed at the increased English presence, outbid him for the emperor's favour, Hawkins, his allowance stopped, applied for leave to depart from Agra. He seems to have hoped to be detained with fair promises, but was dismissed without any final grant of a firman for an English factory. In November 1611 he left Agra with his wife and many of her relatives, aiming, with ready Portuguese assistance, to reach Goa and sail from there to Europe. But, changing his plans, he made for Surat, where he found Sir Henry Middleton's fleet, on board which he and his wife sailed to the Red Sea and Java, before finally transferring to the *Hector*, the ship he had commanded on his entry to India five years previously, for the voyage to England. She touched at the Cape in April 1613, but some time after 20 May (when his report to the East India Company directors ceases), together with most on the ship, Hawkins died. His remains were taken to Ireland and there buried. His wife was given a purse of 200 gold sovereigns by the East India Company the following February; the same year she married the Bantam factor (and commander of the *Hector*), Gabriel Towerson, and returned to India. In an interesting final sidelight on Hawkins's identity, after his death a Charles Hawkins, claiming to be his brother, was involved in dealings with the company, but the nephew of Sir John Hawkins seems to have had no such brother or half-brother.

There were at least four men called William Hawkins at sea during the period, so it is very difficult to disentangle their exploits. The Hawkins on Fenton's 1582–3 expedition was obviously a rather impetuous and volatile young firebrand, given in Madox's diary the nickname Glaucus, a naïve Homeric sea-god. Madox calls him (24 September 1582) 'stupid and indiscreet, very boastful, but open and honourable in his fashion'; and (21 December) 'now cruel, now compassionate ... He behaves without reason, like a child ... inconstant every way' (Donno, 196, 255). The Indian Hawkins was unsubtle, vigilant, stubborn, and pugnacious. Chroniclers of British India, comparing him to William Adams (*d.* 1620) in Japan in his willingness to play the oriental courtier, have censured Hawkins's drunkenness and his failure to secure anything of substance. But, given his isolated position at the Mughal court, and the odds stacked against him, it is difficult to see what more he could have achieved.

Hawkins, William (*d.* 1637), schoolmaster and writer, matriculated as a sizar from Christ's College, Cambridge; he graduated BA in 1623 and MA in 1626. The date of his birth is unknown; and Rhoads's suggestion that his birthplace was Oakington or Long Stanton in Cambridgeshire remains merely a guess. He was ordained deacon and priest at Peterborough in 1625, and in the same year served as minister of Fen Drayton. In 1626 he became schoolmaster and by 1634 headmaster at Hadleigh, Suffolk. On 29 June 1637 the parish burial record describes him as curate to the rector, Thomas Goad.

Hawkins's Virgilian pastorals (collected as *Tres eclogae* in 1631) focus on the miseries of exile from Cambridge ('Pestifugium' and 'Postliminium'), or of schoolteaching ('Ludimagistrum'); the 'Corydon aufuga', designed to be recited by Hadleigh schoolboys before the visiting bishop of Rochester in 1632, looks like a bid for a benefice. These poems reappear in *Corolla varia* (1634) with more or less minor revisions of the versions earlier published. Printed along with them is the most ambitious of his Latin poems, 'Nisus verberans et vapulans', a rambling satire in two parts, developed from a shorter version published in 1632 under the title *En Priscianus verberans et vapulans*. It concerns the legal repercussions of his confessed assault on a delinquent pupil; Rhoads (17–27) summarizes it.

Better known is Hawkins's anonymously published English play, *Apollo Shroving*, written for classroom production at Hadleigh as an academic 'by-exercise' for the Shrove Tuesday of 1627 (6 February), and celebrating the rewards of good discipline. The list of players assigns major parts to Joseph Beaumont. Its publisher Robert Milbourn was subsequently involved in all of Hawkins's major publications. Hawkins also contributed complimentary verses to Alexander Gil the younger's *Parerga* (1632), whose poem on Gustavus Adolphus he translated into English in the same year. Beyond that he contributed verses to Cambridge collections on the king's return from Scotland (*Rex redux*, 1633) and the birthdays of the princesses Elizabeth (*Carmen natalitium*, 1635) and Anne

(*Synōdia*, 1637). The British Library's Add. MS 15227 contains, at folios 65–7, versions of 'Pestifugium' and 'Ludimagistrum', with the latter's Nisus (suggesting 'Hawk[ins]') replaced by Leucus ('White', perhaps the 'J. Leucus' who contributed complimentary verses to the *Corolla*); and, folios 63–4, two elegies from 1630 on the Hadleigh apothecary Edward Gale, and a piece of self-promotion imitated from Horace.

Hawkins died in 1637, perhaps of the plague, and was buried at Hadleigh on 29 June. ROBERT CUMMINGS

Hawkins, William (1681/2–1750), serjeant-at-law, was one of at least four sons and one daughter of John Hawkins of London, barrister of the Inner Temple, and his wife, Mary, daughter of Edward Dewe of Islip, Oxfordshire. His father was said to be a descendant of Sir John Hawkins of Devon, the Tudor naval commander. He was sent to Pembroke College, Oxford, at the age of fourteen in 1696, migrated to Oriel College in 1698 (graduating BA in 1699), and was elected a fellow of Oriel in 1700 as of Milton, Oxfordshire. Some authorities have confused him with an older namesake of St John's College, Cambridge, who became a prebendary of St Paul's, and there was another contemporary of the same name in the Middle Temple. Hawkins married first Sarah Jenyns, with whom he had two sons who both became clergymen; and second a Miss Ram of Coleraine, and they had a daughter.

Hawkins was admitted to the Inner Temple on 10 February 1701 and called to the bar in 1707. In 1719 he served as deputy chief justice of the Brecon circuit in south Wales, in the absence of William Wright, and in April 1724 he was advanced to the degree of serjeant-at-law, his patrons being the archbishop of Canterbury and Lord George Parker. His career as a legal writer began as early as 1711 with an abridgement of *Coke upon Littleton*, which reached a fourth edition in 1822. He is best known in the legal profession for his *Pleas of the Crown* (1716–21), a copy of which he presented to Oriel. This treatise may indeed have been his principal qualification for the coif. It was the first substantial exposition of English criminal law to be printed since that by Sir Edward Coke (1552–1634), and it represented a distinct advance in terms of analysis and detail. The masterpiece by Sir Matthew Hale (1609–1676), the *Historia placitorum coronae*, was not published until 1736, and even then it did not supplant Hawkins, being an earlier composition. In the third edition of Hawkins, in 1739, references to Hale were inserted by G. L. Scott. Posthumous editions appeared in 1762, 1771 (by Thomas Leach), 1787, 1795, and 1824 (by John Curwood), and a summary was published in 1728 (second edition 1770). Hawkins also produced a new edition of the *Statutes at Large* in 1734–35, which was soon superseded by the edition of John Cay and Owen Ruffhead. Hawkins settled at Hornchurch, Essex, where he died on 19 February 1750. The eldest son from his first marriage was William *Hawkins (1721–1801), a theologian and poet. J. H. BAKER

Wealth at death approx. £756; plus land leased in London and Islip, Oxfordshire

Hawkins, William (1721–1801), writer and Church of England clergyman, was the eldest son of William Hawkins, serjeant-at-law, and his first wife, daughter of Sir Roger Jenyns and sister of Soame Jenyns. Through his grandmother he was descended from Thomas Tesdale, one of the founders of Pembroke College, Oxford, where Hawkins matriculated on 12 November 1737, aged sixteen. He graduated BA on 26 February 1742 and on 2 March was admitted a fellow on the Tesdale foundation. On 10 April 1744 he proceeded MA and in 1751 succeeded Lowth as professor of poetry, a position he held until 1756. Dr Johnson spoke fondly of Pembroke College as 'a nest of singing birds' and praised its reputation for eminent scholars, among whom he included 'Mr Hawkins the Poetry Professor' (Boswell, *Life*, 1.75). Hawkins had been ordained in the Church of England for some years before he was instituted on 27 August 1764 to the small rectory of Little Casterton, Rutland. In 1764 he also acquired the valuable rectory of Whitchurch Canonicorum, Dorset, which he retained until his death. From 7 March 1767 until his death he also held the prebendal stall of Combe (seventh) in Wells Cathedral. Hawkins was an engaged commentator on theological debate, including the Bangorian controversy. He was also one of the earliest Bampton lecturers.

Very early in life Hawkins contributed 'a few trifling pieces to the magazines' and in 1743, when he was only twenty-one, he published his first work, *The Thimble, an Heroi-Comical Poem in Four Cantos, by a Gentleman of Oxford*, which was revised in 1744 with the addition of a new first line ('What art divine the shining thimble found') and reissued in an expanded five-canto version, with notes of explanation by Scriblerus Secundus, in his *Works* of 1758. The poem, which is an obvious imitation of Pope's *Rape of the Lock* (1714), was dedicated to Miss Anna-Maria Woodford, 'the compleatest housewife in Europe'. Goldsmith classed the piece as a failed satire and as a work in which 'Humour once missed, most effectually turns the author ridiculous' and concluded that 'Mr Hawkins was not born a poet' (*Collected Works*, 1.204, 205). 'Female Empire, or, Winter Celebrated in London' (1746), a panegyric which praises the metropolis in typical eighteenth-century

terms (the first line reads: 'Where proud Augusta, empire of the great'), has been attributed to Hawkins.

Hawkins's next venture was playwriting, which remained his passion for nearly twenty-five years. His first play, *Henry the Second, or, The Fall of Rosamond* (1749), nicely illustrates eighteenth-century notions of the Shakespearian manner, and Shakespeare remained the model for many of Hawkins's dramatic pieces. The play was published in London in 1749 and was at once pirated by the Dublin printers, but was not acted until 1 May 1773 at Covent Garden, when the tragedy was revised by Thomas Hull, who acknowledged that his play was based on a version by William Hawkins (Van Lennep and others, 8.1718). In the advertisement to the play text Hawkins attributed its failure to Garrick, who refused the play because he considered it 'rather a Poem, than a Play' (*Collected Works*, 1.204). Hawkins's *Cymbeline* was accepted by Rich, manager of Covent Garden theatre, in order to match Garrick's Shakespearian revival at Drury Lane. *Cymbeline* was first acted at Covent Garden on 15 February 1759 and again on 19 April (Van Lennep and others, 7.711, 721) but was unfavourably reviewed as being 'entirely ruined by his unpoetical additions and injudicious alterations' (*DNB*). His *Siege of Aleppo* (published in his *Works*, 1758), although refused by both houses, was considered by Goldsmith to be Hawkins's best play and a work that 'really deserves applause' (*Collected Works*, 1.204). The failure of *Siege of Aleppo* instigated heated correspondence between the author and Garrick. In defence of his play Hawkins cited the approval of Dr Johnson, Judge Blackstone, Mr Smart of Cambridge, and Thomas Warton. Garrick rejected the play as being 'wrong in the first concoction' and Hawkins rejoined that he would publish the play in order that 'the world will be a proper judge whether ... I have been candidly treated by you'. The tone of the exchange, as narrated in Boswell's *Life of Johnson*, may be more bluster than serious rupture, as the two continued to correspond in the 1770s, although Hawkins had no better luck with Garrick. In a letter of 1774 signed 'Your much dissatisfied humble servant' he claimed that he did not wish to 'come to an open rupture' with Garrick and offered him 'once more my friendship and my play' to no avail (Boswell, *Life*, 3.259, 1.75 n. 2). He had further dealings with Garrick concerning three more plays: *The Queen of Lombardy, or, The Ambitious Lover*, *Troilus and Cressida*, and *Alfred*. The author accounted for the rejection of these plays by alleging that he had given Garrick some offence in connection with his earlier play, *Henry and Rosamond*. In Garrick's defence, it might be noted that while Hawkins's works reveal a passion for dramatic poetry, in general his plays are studied and lack dramatic engagement.

A volume issued in 1754 under the pseudonym of Gyles Smith, entitled *Serious Reflections on the Dangerous Tendency of the Common Practice of Card-Playing*, has been attributed to Hawkins. In 1758 a collection of his writings in three volumes appeared (at 12 *s.*): volume 1 comprised his writings on divinity (*Tracts in Divinity*), volume 2 his poems, plays, and miscellaneous writings (*Dramatic and other Poems, Letters, Essays, &c.*); and volume 3 his lectures and critical opinions (*Praelectiones poeticae in schola naturalis philosophae, Oxon, habitae*). Goldsmith reviewed the *Works* in the *Critical Review* (*Collected Works*, 1.198–205); although not wholly unfavourable, the review prompted Hawkins to respond with a maladroit defence signed Veridicus and entitled 'A review of the works of the Rev. W. Hawkins and of the remarks made on the same in the "Critical Review" for August and in the "Monthly Review" for September 1759'. Goldsmith then responded in the *Critical Review* (*The Works of Oliver Goldsmith*, ed. J. W. M. Gibbs, 4.399–403). Hawkins's translation of the first six books of the *Aeneid* appeared in 1764 but quickly became a scarce work (Conington, *Miscellaneous Writings*, 1.160). Although the translation of the rest of the books was ready for the press, the reception given to the first portion did not warrant the printing of the remainder. A collection, *Poems on Various Subjects* (1781), has been attributed to Hawkins. Throughout his career he was a prodigious writer of sermons. He died of a fit at Oxford on 13 October 1801, aged seventy-nine.

Hawks family (*per. c.*1750–1863), iron manufacturers and engineers, formed one of the most notable industrial dynasties on Tyneside in the eighteenth and nineteenth centuries. Until its closure in 1889 the family's New Greenwich ironworks at Gateshead was the town's largest employer, and several members of the family firm were prominent in local politics.

The Hawks firm was established by **William** [i] **Hawks** (1708–1755), a foreman smith at the iron manufactory established by Sir Ambrose *Crowley (1658–1713) at Swalwell, 2 miles to the west of Newcastle upon Tyne. Hawks and his wife, Jane, had three sons, the eldest of whom, William [ii], was baptized at Gateshead on 29 June 1730. In the late 1740s Hawks decided to work on his own account and established a set of workshops on waste ground along the river foreshore at Gateshead. His scale of operations was modest when compared to the giant enterprise of the Crowleys and displayed little of the organizational and technological sophistication of that firm. Nevertheless, William [i] Hawks was able to exploit the availability of cheap scrap metal, which was carried up the Tyne as ballast by returning collier vessels. Scrap could be reprocessed into the nails, bolts, chains, shovels, and tools for which there was a brisk demand in the local coal industry and shipping trade. This was to be a lucrative niche, employing cheap materials, cheap energy, and simple technology (a hearth and a hammer), and allowing the accumulation of capital (albeit slowly) from a minimal initial outlay. However, the firm had not progressed much beyond this unspectacular beginning by the time its founder died intestate at the age of forty-six, for the

administrators of his estate posted a bond of only £39. Hawks died at Gateshead on 23 February 1755, but his wife lived on until 28 February 1773. The works passed to the eldest son, **William** [ii] **Hawks** (*bap.* 1730, *d.* 1810); he and his first wife, Elizabeth Dixon (1735/6–1808), whom he married in 1759, are credited with the great expansion of the Hawks industrial empire.

During the 1760s and 1770s William [ii] Hawks featured in several partnerships with local ironmongers and edge tool makers. But it was the formation of a fresh partnership in the late 1770s, with **Thomas Longridge** (*bap.* 1751, *d.* 1803), a Sunderland merchant, that was the springboard for a sudden expansion of the Hawks enterprises: a plating forge was acquired at Beamish, co. Durham, in 1779, the first of four separate metalworking sites operated by Hawks and Longridge along Beamish Burn; additional smiths' shops were rented at Ouseburn on the north bank of the Tyne in 1780; a forge at Lumley, co. Durham, was occupied by the firm in the mid-1780s; and in the late 1780s slitting and rolling mills on the River Blyth in the modern county of Northumberland were taken on. By the 1790s the works at Gateshead comprised a substantial industrial complex, now producing steel, anchors, heavy chains, and steam-engine components, as well as a great diversity of smaller iron wares. The supply of ironware to the Navy Board became a speciality—as the title New Greenwich implied. The firm's products were shipped via Hawks's London partners, the Gordon and Stanley families. These families were involved in a series of partnerships with William [ii] Hawks and his successors, with whom the Stanleys intermarried. William [ii] married for a second time in 1809. His new wife, Elizabeth (*d.* 1831), was the widow of Joseph Atkinson. Both the Hawks and Stanley families, it may be presumed, could supply the merchant capital which William [ii] Hawks lacked, and both had links to the old ordnance industry of the Weald and the naval yards of the Thames and Medway.

These maritime and military markets were evidently profitable, for the estate of William [ii] Hawks was assessed at 'under £30,000' at his death at Gateshead on 4 December 1810, when the works in the north-east passed to his surviving sons: **George Hawks** (1766–1820) of Blackheath, who was born on 19 May 1766 in Gateshead, the firm's London agent, **Sir Robert Shafto Hawks** (1768–1840), born on 17 May 1768, and **John Hawks** (1770–1830), born on 19 February 1770. Increasingly, the firm's activities were focused on Gateshead, where the Hawks works covered 44 acres by the end of the 1830s, supporting a workforce of between 800 and 900. The Ouseburn workshops were relinquished before the eighteenth century was out, while Lumley forge was let to subtenants in the 1840s. The Bedlington works passed eventually to a cousin of the Hawkses, Michael Longridge (1785–1853), a pioneer of railway technology and an associate of Robert Stephenson, under whose superintendence the works became a training ground for a generation of celebrated engineers; some of the most distinguished, such as Sir Daniel Gooch, had links of kinship with the Longridges and the Hawkses. Meanwhile, the Hawkses' industrial eminence in Gateshead was reflected in local political prominence. Robert Shafto Hawks was knighted in 1817 for his role in suppressing riots in the winter of that year and for presenting a loyal address to the prince regent. His nephew and successor as head of the firm, **George Hawks** (1801–1863), was a political notable in a more liberal vein. Born on 7 January 1801, he was a key local supporter of Sir William Hutt, Gateshead's free-trade MP after 1841, and he served as mayor of the borough in 1836, 1848, and 1849. His home at Redheugh Hall became one of the organizing centres of Liberalism in the north east. He married Elizabeth Clark Wright in 1827, and died on 15 October 1863. He was buried at Gateshead.

The firm reached its apogee in the early Victorian period, when its reputation for engineering and bridge building was worldwide, and to which the striking High Level Bridge across the Tyne, completed by the firm in 1849, stands as a fitting memorial. At its height the New Greenwich works could boast a workforce of more than 2000. However, the grip of the Hawks family upon the firm which bore its name was increasingly tenuous. Of the fourth generation, only George Hawks displayed the entrepreneurial ability of his forebears. Hannah, Lady Hawks (*d.* 1863), the widow of Sir Robert Shafto Hawks, and her two sons—the one blind, the other destined for the church—sold their shares in 1840 to George Crawshay (1794–1873), a member of the great iron-making family of south Wales, who had himself recently been bought out of his family's iron merchanting business in London by his brother William *Crawshay (1788–1867). The business developed by William [ii] Hawks had been divided between his three eldest surviving sons in 1810. George Crawshay had thus acquired one of these three blocks. When he was able to acquire the shares of Joseph Stanley Hawks (1790–1875), the only surviving son of George Hawks of Blackheath, he captured a second.

The dominant influence over the firm of Hawks, Crawshay & Sons in its last years was George *Crawshay (1821–1896), the son of George Crawshay and his wife, Louise (*née* Dufaud, of the family of French ironmasters). Like George Hawks, George Crawshay became a considerable political figure in the north-east. It may be that he devoted too much of his time to his political pursuits, however, for by the 1870s and 1880s the overcrowded Gateshead site, home to a great diversity of processes and product lines, compared unfavourably with the more streamlined and specialized engineering yards established along the Tyne by entrepreneurs such as Sir William Armstrong. Product diversity had once been the foundation of the Hawks family's success; it was increasingly a sign of technological senescence. A crisis was reached in 1889, when New Greenwich was suddenly closed. The circumstances surrounding the closure remain somewhat mysterious, for the firm's creditors were paid in full (and the company's archive destroyed). However, the dismantling of the works finally ended the association of the Hawks family with Gateshead.

Hawkshaw, Benjamin (1671/2–1738), Church of Ireland clergyman, was born in Dublin, the son of Richard Hawkshaw (*d.* 1687), of the same city, and his wife, Elinor Parry. He entered Trinity College, Dublin, in 1688, but left Ireland following the revolution of 1688 and entered St John's College, Cambridge, in 1689. He graduated BA there in 1691, and subsequently returned to Dublin, where he proceeded BA in 1693 and MA two years afterwards. He took orders, and from 1704 to 1730 was perpetual curate of St Nicholas-within-the-Walls at Dublin. He was married but the identity of his wife is unknown. He died in Dublin in June 1738, 'in a very poor and melancholy condition' (J. Hawkshaw to F. Price, 17 June 1738, NL Wales, MS 3585C). He published *Poems upon Several Occasions* in 1693. In the dedicatory letter to 'the Learned and Ingineous Dr. Willoughby' prefixed to the volume, the poet described his effusions as 'the essays but of a very young pen, a few by-thoughts in my vacancies from Irish studies'. He also published sermons in 1704, 1706, and 1712, and in 1709 *The reasonableness of constant communion with the Church of England represented to the dissenters*.

Hawkshaw, Sir John (1811–1891), civil engineer, was born on 9 April 1811 at Leeds, one of three children of Henry Hawkshaw (1774–1813), publican of Briggate, Leeds, and his wife, Sarah Carrington. After attending Leeds grammar school Hawkshaw became a pupil of Charles Fowler, a local road surveyor, for about five years, working on turnpike schemes. In 1830 he became assistant to Alexander Nimmo (1783–1832) and helped survey a railway from Liverpool to the Humber via Leeds. The prospective railway company purchased the Manchester, Bolton, and Bury Canal, and obtained parliamentary approval for a railway along its route, but was unsuccessful with the rest of its scheme. Before this railway could be built Nimmo died, in 1832.

Sir John Hawkshaw (1811–1891), by Ernest Edwards, pubd 1865

In July 1832 Hawkshaw became engineer to the Bolivar Mining Association in Venezuela, where he lived until mid-1834, when ill health forced him to return. He described his experiences in *Reminiscences of South America* (1838). This was the first example of a literary work of this type to be written by a civil engineer. Back in England, Hawkshaw worked initially for Jesse Hartley, and subsequently for James Walker. For Walker he surveyed the Leipzig–Dresden Railway, and the Hull and Selby Railway, giving parliamentary evidence for the first time on this line in March 1836.

While working for Walker, at Whixley on 20 March 1835 Hawkshaw married Ann Jackson (1812–1885), the daughter of the Revd James Jackson of Green Hammerton, Yorkshire. In the following year he was appointed engineer to the Manchester, Bury, and Bolton Canal and Railway, still not completed, and shortly afterwards moved to Manchester, where he lived until 1850. His eldest son John Clarke (*d.* 1921) was born there on 17 August 1841, and was to play an important part in his later career.

In 1838 Hawkshaw wrote his famous *Report to the Directors of the Great Western Railway*, which was critical of the broad gauge, particularly for the inconvenience of the break of gauge. This brought him to national prominence for the first time. He maintained his hostility to the break of gauge when giving evidence to the gauge commission in 1845. At that time he also advocated a light rail system, with frequent services, in preference to a network of trunk routes with infrequent express trains. Hawkshaw later opposed the introduction of a new gauge to India in 1872–3.

In the 1840s Hawkshaw was engineer to a series of railways in the Lancashire–Yorkshire area and in 1845 became the engineer to the Manchester and Leeds Railway, the nucleus of the Lancashire and Yorkshire Railway Company, with which he was to remain associated until his retirement. His experience of work in the Pennine valleys led to Hawkshaw's becoming a leading exponent of working steep gradients with locomotive power. The Pennine lines involved major heavy civil engineering works, numerous tunnels, and an impressive series of masonry viaducts of which the most famous was perhaps the Lockwood Viaduct near Huddersfield.

Hawkshaw was also responsible as railway engineer for a large number of iron bridges and viaducts. These included the Junction Railway in Salford, where he constructed a viaduct on iron columns above the street. Extensive tests were carried out in connection with this structure. Hawkshaw noted that the tight bolting-down of the iron plates designed to screen off the New Bailey prison helped counter the expansion and contraction of the metal. Following the 1847 Dee Bridge failure Hawkshaw gave evidence to the commissioners on the application of iron to railway structures in 1849. He was responsible for some of the earliest lattice girder bridges in Britain, such as those over the Leeds and Liverpool Canal in Liverpool (1849).

Hawkshaw thoroughly investigated all aspects of the railways for which he was responsible. In 1850 he produced his *Report on the Rolling Stock and Permanent Way* for the Lancashire and Yorkshire Railway, which dealt with the need for a reserve fund. In that year he moved to London, and set up as a consulting engineer at 33 Great George Street, where he remained for the rest of his career.

His practice, which had essentially been that of a railway engineer for the previous twenty years, was considerably broadened when in 1856 he became engineer for Holyhead harbour on the death of James Meadows Rendel. On completion of these works in 1873 Hawkshaw was knighted. The resident engineer at Holyhead was Harrison Hayter, and he joined Hawkshaw's staff, becoming his chief assistant. From the mid-1850s the practice undertook all kinds of civil engineering work. This included sewerage schemes at Dover, Torquay, Lowestoft, Norwich, and Ayr and the design of the Brighton intercepting sewer, 7 miles long. In 1862, following the failure of the St Germans sluice on the Middle Level Drainage, Hawkshaw advised the construction of thirteen large syphons. He became consultant to the drainage commissioners until his retirement. Land drainage and river works became an important part of his practice. He was consultant to the Witham drainage, and the Thames valley drainage commissioners. He reported on flood works at Lincoln and Norwich in 1877, and at Burton upon Trent in 1879. He recommended improvements to navigation channels on the Humber and Clyde and was consultant to the Weaver Navigation for many years.

Hawkshaw's practice was particularly noted for its dock and harbour works. One of his pupils was L. F. Vernon-Harcourt (1839–1907) who wrote a leading treatise, *Harbours and Docks* (1885). At Hull Hawkshaw was consultant from 1862 until his retirement. Other works were carried out at Bristol, Boston, Penarth, Fleetwood, Maryport, Dover, Belfast, Greenock, Folkestone, Aberdeen, Alderney, and Wick. In London he was engineer for the south dock of the East and West India Dock Company.

In addition to his responsibilities for the Lancashire and Yorkshire Railway Hawkshaw was engineer for the Charing Cross Railway, including its Cannon Street extension, and associated bridge and station works. These involved the demolition of I. K. Brunel's Hungerford suspension bridge. He re-used the chains and completed the Clifton suspension bridge as a tribute to Brunel, in partnership with W. H. Barlow. He was engineer for the South Eastern Railway from 1861–81, and also engineer for the Staines and Wokingham Railway, which involved a bridge across the Thames at Staines. He also designed Londonderry Bridge and South Bridge, Hull. Overseas, Hawkshaw was consultant to railways in Mauritius and Jamaica, and the Madras and East Bengal lines in India. His most important work in India was the Nerbudda Viaduct, nearly 1 mile long. He was also engineer for the West of India Portuguese Railway.

Hawkshaw's international reputation was not, however, reliant on colonial work. He was consultant on the Riga and Dünaberg, and Dünaberg and Vitebsk railways in Russia, and the Franz Josef Canal in Hungary. His name was associated with some of the most important engineering projects of the second half of the nineteenth century. He was invited in July 1862 by Sa'id Pasha, viceroy of Egypt, to report on the proposed Suez Canal, and spent nearly a month there. His favourable report induced Said to let the project proceed, and De Lesseps later acknowledged his debt to him. However, although Hawkshaw attended the international congress on the proposed Panama Canal in 1879, he was critical of De Lesseps's plans for the canal. Hawkshaw himself was engineer with J. Dirks for the Amsterdam Ship Canal (1862–78), 16 miles long, one of the largest ship canals to be built in the nineteenth century.

Hawkshaw's practice was so extensive from the 1860s onwards that it was only possible to manage it with the help of capable assistants. Aside from Hayter, the most important was his own son, John Clarke, who joined the practice after leaving Cambridge in 1865, and then

worked on the Albert Docks, Hull, until their completion in July 1869. In 1870 he and Hayter became partners in the firm, whose prestige can best be gauged by the fact that all three became presidents of the Institution of Civil Engineers. They had many capable assistants including Henry Marc Brunel and Sir John Wolfe Barry. The most important was James Murray Dobson, who in 1885 went to supervise the dock works at Buenos Aires which took ten years to build; from 1890 he was resident partner there. Hawkshaw had himself visited Brazil in 1874 and reported on many of its harbours.

In the 1860s Hawkshaw became interested in the idea of a channel tunnel. By 1867, following investigations by the geologist Hartzinck Day in 1865, H. M. Brunel's marine survey in 1865–6, and deep borings into the chalk near Dover and Calais, paid for by the contractors Brassey and Wythes, Hawkshaw was convinced of the practicability of the scheme. From 1872 until 1886 he acted as joint engineer with James Brunlees to the Channel Tunnel Company.

Hawkshaw was responsible for other important tunnelling works including the completion of the Inner Circle Railway between Mansion House and Aldgate with Barry, and also for the East London Railway, which involved the conversion of Sir Marc Isambard Brunel's Thames Tunnel to railway traffic, and a new tunnel beneath London docks. The contractor on both these railways was Thomas A. Walker (1828–1889).

The Severn railway tunnel was arguably Hawkshaw's greatest engineering achievement. The tunnel was some 4⅓ miles long, with 2¼ miles beneath the Severn, and was the longest railway tunnel in the country at that time, and the longest subaqueous tunnel in the world. It was intended to improve the connection between the Great Western Railway system in south Wales and its main lines in England. The tunnel was originally designed by Charles Richardson, with Hawkshaw as consultant. The problems encountered particularly from underground springs were so great that he took charge in 1879. He felt that it was important to have a competent contractor, and Walker, who had tendered earlier, was appointed on his advice, and had his full confidence. The tunnel was completed in 1886 after thirteen years work.

Hawkshaw's approach to engineering was essentially a practical one, and this is reflected in his reports and professional papers. He was heavily involved in the activities of the Institution of Civil Engineers. He was president 1862–3, and was one of the most prolific contributors to its discussions. He encouraged his assistants and partners to give papers on the works of his practice. He was a member of other learned societies including the Royal Society (elected 1855), the Royal Society of Edinburgh, the Royal Geographical Society, and the Geological Society. His presidential address to the British Association in 1875 attracted considerable press attention.

Hawkshaw stood as an unsuccessful Liberal candidate at Andover in 1863, and intended to do the same at Lyme Regis in 1865, where he had bought an estate in 1864, but was prevented by his holding of government appointments. His son, standing in his stead, lost by nine votes.

Hawkshaw's standing resulted in his being continually consulted by the government. In 1860 he reported on the competing schemes for the Dublin water supply. In 1861 he designed the foundations of the Spithead forts for the War Office. In 1868 he was one of five commissioners selected to report on the country's fortifications. In the same year he was appointed arbitrator to decide on compensation to the shareholders affected by nationalization of the telegraph companies. In 1874 he became the royal commissioner responsible for investigating the pollution of the Clyde. In 1880 he was appointed to the Board of Trade committee on wind pressure on railways structures, established in the wake of the Tay Bridge failure.

Hawkshaw was in his seventies when the Severn Tunnel was completed. On 31 December 1888 he formally retired, his business being continued by John Clarke Hawkshaw, Harrison Hayter, James Murray Dobson, and latterly his grandson Oliver, down to 1920. Although his life was dominated by professional activities he owned a country house at Hollycombe in Sussex, which he purchased in 1865, and enjoyed shooting in Scotland. He died at his town house, Belgrave Mansions, Grosvenor Gardens, London, on 2 June 1891. His wife had predeceased him, dying there on 29 April 1885, at the age of seventy-two. She was the author of several volumes of poetry, including nursery rhymes published under the pseudonym of 'Aunt Effie'. They had two other sons, Oliver and Henry Paul, and a daughter, Editha.

Wealth at death £220,074 19*s.* 4*d.*: resworn probate, Dec 1891, *CGPLA Eng. & Wales*

Hawksley, Bourchier Francis (1851–1915), lawyer and imperialist, was born on 4 April 1851 at Barlborough, near Chesterfield, Derbyshire, the son of John Hawksley, a Church of England priest who in 1874 was commissioner to the bishop of Saskatchewan and in 1883 became an honorary canon of Saskatchewan, and his wife, Henrietta Cordelia, *née* Jackson. Hawksley became a solicitor, after being articled in Bristol in 1866. He moved to London in

1872 and was married there, on 3 April 1873, to Clara Elizabeth, the daughter of Leonard Addison Duncan, gentleman. By 1881 they had a daughter and a son. It was through his appointment as solicitor for the British South Africa Company's London office that he came into contact with Cecil Rhodes and his imperial project. From 1889 until Rhodes's death in 1902 Hawksley was his trusted lawyer and confidant.

Hawksley never set foot in Africa himself, but in 1889 he was entrusted by Rhodes with concluding the legal formalities that turned a supposed grant of authority from Lobengula, paramount chief of the Ndebele (Matabele), into the British South Africa Company charter. The company proved to be Rhodes's vehicle for the conquest and administration of the lands that later became Zimbabwe, Zambia, and Malawi, as well as for ultimately unsuccessful assaults on Mozambique and Zaïre. Hawksley, an austere, combative man, was entirely committed to Rhodes's 'big idea', the quasi-Jesuitical dream of uniting all English-speaking lands into a commonwealth to improve and save the world. Rhodes's 'band of brothers' was the vehicle of mystical imperialism. What Hawksley eventually helped to develop was more practical and lasting. As the drafter of Rhodes's final four versions of his will Hawksley was able to refine what became the Rhodes scholarship scheme, and was almost certainly responsible for the final definition of the qualities to be sought in Rhodes scholars. As an executor of the will, he was an important interpreter of Rhodes's wishes to the committee which implemented the scholarship plan after Rhodes's death.

Hawksley was influential in the selection of the members of the House of Commons select committee of inquiry into the Jameson raid of 1895; he also inspired many of the favourable lines of questions put to Rhodes and his accomplices who testified during the summer of 1897. Under Rhodes's instructions, he refused to reveal a clutch of secret telegrams to the committee. The telegrams, which Hawksley wanted to produce, implicated Joseph Chamberlain (who could protect the company's charter) in the planning of the raid; Rhodes obfuscated, and Hawksley fumed privately. Hawksley also acted to extricate Rhodes from the clutches of Princess Catherine Radziwill, who had been forging his name and causing him financial embarrassment, and, in order to protect the British South Africa Company's share price, managed the news of Rhodes's long illness and death in 1902.

Hawksley was a member of the Liberal Party from the mid-1890s, stood unsuccessfully in 1895 for Holderness, campaigned for several colleagues in 1897, and always hoped that Rhodes would leave Africa for British politics. He died on 22 December 1915 at his home, 14 Hyde Park Gardens, London, and was survived by his wife and at least one daughter. ROBERT I. ROTBERG

Wealth at death under £5000: probate, 14 Jan 1916, *CGPLA Eng. & Wales*

Hawksley, Thomas (1807–1893), civil engineer, son of John Hawksley, a manufacturer, and his wife, Mary Whittle, was born at Arnold, near Nottingham, on 12 July 1807. He was educated at Nottingham grammar school under Dr Wood, then in 1822 articled to Edward Staveley, architect and surveyor, of Nottingham. He subsequently became a partner in this business, known as Staveley, Hawksley, and Jolland. After Staveley's death he continued in partnership with Jolland until 1850 and then continued in practice on his own in Nottingham until he left for London in 1852. While in Nottingham, in 1831 Hawksley married his first wife Phillis (*d.* 1854), daughter of Francis Wright. They had several children of whom two sons and one daughter were to survive him. One son, Charles Hawksley, became his partner in 1866, and was an eminent engineer in his own right. In 1855 Hawksley married Eliza Litt (*d.* 1893).

Hawksley's first important piece of engineering work was a scheme for additional water supply to Nottingham in 1830 for the Trent Waterworks Company. In 1845 he became engineer to the newly amalgamated Nottingham Waterworks Company, and continued in that position until 1880, when the company was bought out by the Nottingham municipal authorities.

Hawksley first rose to national prominence at the time of the health of towns inquiry in 1844. His advocacy of a constant supply of water to consumers brought him immediate acclaim. Edwin Chadwick adopted Hawksley as an ally and he was announced as engineer to Chadwick's Town Improvements Company. It was not long before the two fell out as Chadwick campaigned for a comprehensive solution to urban sanitary problems involving joint water supply and sewerage schemes, whereas Hawksley adopted a more pragmatic approach and was prepared to act for any undertaking.

About 1847 Hawksley invented, in collaboration with the north-eastern industrialist William George Armstrong, a self-acting valve designed to close the pipe automatically when the velocity of the water passing through it exceeds a certain limit, an invention adopted by many water companies.

There is scarcely a large city in the United Kingdom which did not make use of Hawksley's services at one time or another, but the three cities with which he had the closest connection were Liverpool, Sheffield, and Leicester. His connection with the water supply of Liverpool began in 1846, when he recommended the Rivington scheme, completed in 1857. The rapid growth of the city, however, made it necessary to find a further source for the supply of water, and in 1874 Hawksley and John Frederic La Trobe Bateman were asked to consider six potential sources. In the event none proved suitable, and in 1879 Hawksley was

again brought in to act as joint engineer with George Frederick Deacon, the borough engineer, for the parliamentary plans for the Vyrnwy scheme. Following the passage of the act of parliament, in March 1881 he was appointed engineer-in-chief for the scheme by the corporation. Unfortunately at the same time Deacon was appointed joint engineer by the corporation in an incompatible contract. Initially, apparently, Hawksley was unaware of this but when concerns about rising costs were raised by the corporation in 1885 the ambiguity about his position was a factor in Hawksley's resignation. This was an unfortunate end to Hawksley's involvement with the project which Deacon saw through to completion. Apparently Hawksley first suggested the use of masonry for the scheme, and it was his office which prepared all the designs for what was a very large masonry dam across the valley of the Vyrnwy. The result was the creation of an artificial lake almost as large as any natural lake in the British Isles, and it was probably the most important scheme completed in Britain before Hawksley's death.

Hawksley's connection with Sheffield was brought about by the terrible disaster due to the failure of the rockfill dam of the Dale Dike Reservoir on 11 March 1864. He was called in by the water company, with other engineers, to report on this accident and to prepare plans for other works for supplying the city. He remained engineer-in-chief of these works until his death.

At Leicester, where he was involved from 1845, Hawksley was responsible for and planned the Thornton Park Reservoir (1852–60) and the Bradgate Reservoir (1868). Hawksley was also responsible for an important group of dams in the Weardale district, at Waskerley, Smiddy Shaw, and Tunstall reservoirs. Waskerley (1868–72), with the possible exception of Hawksley's Lower Rivington Dam, probably exceeded in volume any other dam previously executed. While Tunstall (1879) was under construction it was discovered water was percolating through rock beyond the puddle clay cut-off. To deal with this cement grout was pumped into the rock, and Tunstall, along with Cowm Embankment (Rochdale, 1877), another Hawksley scheme, were the first two embankment dams in the world where grouting was used.

Hawksley was renowned for his skill as a parliamentary witness. The expertise which he showed in working out his estimates for the water supply of any district upon which he was consulted mainly depended upon the elaborate preliminary calculations he always made, based on rainfall and evaporation measurements taken throughout the district. He developed rules for reservoir yield, which, with modification by A. R. Binnie, remained the basic guidelines for engineers until the 1960s.

In addition to waterworks Hawksley was also responsible for numerous gas supply and sewage works. He was the first president of the Gas Managers' Association (subsequently the Institution of Gas Engineers) from 1864 to 1867; early in his career he was engineer for gasworks at Nottingham and became well known for the quality of his designs. He was consulted in 1857 about the London main drainage scheme: generally he advocated chemical treatment of sewage rather than adoption of sewage farms.

Elected a member of the Institution of Civil Engineers in 1840, Hawksley was elected to the council in 1853, and served as president in 1872–3. He was also president of the Institution of Mechanical Engineers in 1876–7, and became a fellow of the Royal Society in 1878. A good mathematician, he took a keen interest in questions of statistics. In 1876 he gave an address at St George's Hall, Liverpool, as president of the health section of the Association of Social Science, dealing with the application of statistics to various social problems.

For an engineer of his eminence surprisingly few of his reports were published. His writings are almost entirely confined to presidential addresses, although he was a prolific contributor of parliamentary evidence, and to debates at the Institution of Civil Engineers.

Hawksley designed a number of schemes abroad, including gasworks in Bombay and Denmark and waterworks in Stockholm, Altona, and Vienna. As a result of his overseas work, he was awarded several foreign honours. He was made commander of the order of Franz Josef of Austria, was a commander of the Rose of Brazil, and was a member of the Swedish order of the Polar Star, and knight of the Danebrog.

Hawksley was, with John Frederic La Trobe Bateman, the leading British water engineer of the nineteenth century and was personally responsible for upwards of 150 water-supply schemes, in the British Isles and overseas. Professionally active until the end of his life, he died on 23 September 1893 at his home, 14 Phillimore Gardens, Kensington, at the age of eighty-six. His second wife had predeceased him by a few months. He was buried on 27 September 1893 at Woking necropolis.

Wealth at death £104,654 11*s.* 2*d.*: probate, 21 March 1894, *CGPLA Eng. & Wales*

Hawksmoor, Nicholas (1662?–1736), architect, was born probably early in 1662, the son of Nicholas Hawksmoor, a husbandman, of East Drayton, Nottinghamshire; his mother's name is unknown. The traditional birth date of 1661 rests on Hawksmoor's monumental inscription, which records his death in his seventy-fifth year (baptismal records for the 1660s are defective—according to a collateral descendant, papers and even gravestones were unaccountably but deliberately destroyed). A calculation among notes on the back of, but irrelevant to, a drawing of 1707 (now in the British Library) refers to the span of years since 1662, lending support to the belief that he was born in the first quarter of that year. The elder Nicholas, not

Nicholas Hawksmoor (1662?–1736), attrib. Sir Henry Cheere, c.1736

recorded after 1665, left a widow who subsequently married William Theaker; grandchildren of this second marriage ultimately inherited Hawksmoor properties near Drayton after the death of the architect's widow.

Early life and training From Hawksmoor's enduring fondness for Latin inscriptions and the proximity of a grammar school in the nearby village of Dunham, it may be inferred that he received schooling there. At some time he also acquired a working knowledge of applied mathematics, of French, and probably Italian. Youthful promise and enthusiasm rather than accomplishment must have induced Samuel Mellish, a Doncaster justice, to employ Hawksmoor as a clerk. Mellish owned property near East Drayton, and George Vertue implies that in Doncaster Hawksmoor met the celebrated decorative plasterer Edward Gouge, through whom he went to London at the age of eighteen. Here he met Sir Christopher Wren, by whom he was employed as a personal clerk. Little is known of Wren's personal life at this time, but he lived in his official residence (as surveyor of works) at Scotland Yard, Whitehall, and his second wife's death on 4 October 1680 left him with three young children. There is no reason to doubt that young Hawksmoor became part of the household at this time; later he inscribed it as his address in a copy of Claude Perrault's 1684 edition of Vitruvius. Hawksmoor gradually moved from Wren's personal service to a variety of junior posts in the office of works and other concerns under Wren's control, notably from 1687 to 1701 the office for rebuilding the London City churches after the great fire. By 1688 he was designing buildings, and by about 1690 executing them, both under Wren's continued direction and on independent commissions. There was no recognized tuition in architecture—Wren himself was self-taught—but Hawksmoor proved an able pupil, gradually learning not only the routines of an architect's office and a minor government department but also the practice of drawing and the theory of design and construction.

A little topographical sketchbook by Hawksmoor (RIBA BAL) includes his earliest known drawings—two dated 1680 and 1683, his initials, and a blot-impression of his full signature. The handwriting is immature but studied, and the draughtsmanship is naïve but renders vividly the atmosphere and details of buildings. In 1684 he witnessed signatures both at Winchester Palace (then under construction) and in the London City churches office. Specimens of his hand and signature from 1684 onwards show that the characteristic penmanship of his mature years developed slowly through the later 1680s in parallel with growing confidence and expressiveness in the use of drawing instruments. Wren evidently sent him wherever he could be most useful, but a surviving notebook (National Maritime Museum) shows that at Winchester and elsewhere he made his own notes of quantities and prices of materials and workmanship. From 1685 he was paid at Whitehall, and in 1687 he had charge of stationery at the churches office; having begun to write accounts, he was paid in 1693 for a complete transcript and summary of its building accounts. From 1691 (and for almost twenty years) he was the leading draughtsman at St Paul's.

Collaboration with Wren Hawksmoor took it as a reward for his service that in 1689 Wren procured for him the clerkship of works at Kensington House (later Palace), which he held until 1715. This post included an official house, although he was still using Wren's address in 1693. However, this did not immediately affect his collaboration with Wren, whose patronage had made him the best-trained English architect of his generation. A careful free-hand plan dated 1688 for a 'Villa Chetwiniana', a probably unsolicited proposal for Ingestre Hall, Staffordshire, the seat of Walter Chetwynd FRS, is remarkable for one so apparently unpractised. Based on a module of 10 feet, the plan sets out succinctly the essentials of a double-storey entrance hall, a grand staircase, a long gallery, and several state rooms. Even the plan reveals an exterior designed to impress, a sequence of interior spaces designed to captivate the visitor, and an ensemble as novel and as accomplished as anything in English domestic architecture of its date.

In 1690–93 Hawksmoor directed work at Broadfield Hall, Hertfordshire, for James Forester, brother-in-law of the London engraver Peter Vanderbank; the house was rebuilt about 1870 but most of Hawksmoor's brick stable block survives. In the 1690s he was still described as Sir Christopher Wren's 'man', or 'gentleman' (meaning assistant), the most important occasion being at Christ's Hospital, London, where he was paid for designing and

overseeing the new writing school (1692–5, dem. 1902). Like his grander preliminary design, the completed building, of brick and strikingly plain, is a practical interpretation of Wren's theory of architecture as solid geometry made actual and demonstrated.

Soon afterwards Wren delegated to Hawksmoor the commission for Easton Neston, Northamptonshire. This building marked the end of Hawksmoor's apprenticeship and made him one of the leaders of the style known as English baroque. William Fermor, first Baron Leominster, had originally approached Wren as a kinsman. The origins of the house are obscure: both Wren and Hawksmoor were involved in the 1680s but neither designed the service wings built then. Hawksmoor later claimed the main house, finally begun about 1694, as one of his 'owne children' (Webb, 126). On a site limited by the wings he provided a building of exceptional grandeur and elegance, built in the fine local stone and encased in a giant order of Composite pilasters. Here the spatial flexibility and dramatic room sequences of the Ingestre plan were refined and realized; much of the state interior survives, as do the mezzanine suites of small rooms packed into the ends of the house and reached by independent staircases. The house was roofed in 1702, the date it bears, and the interior was fitted a few years later to display some of the Arundel collection of ancient marble sculpture which Leominster had bought in 1691. Hawksmoor's obituary stresses his wide knowledge of historical architecture, and Easton Neston displays not only an understanding of classical design and an intuitive feeling for space and mass, but also an eye for the niceties of detail and the latest trends in design, in particular the work of Hugh May and William Talman. It is only in the light of this independent work that Hawksmoor's creative relationship to the ageing Wren and the young John Vanbrugh can be understood. Although even in the late seventeenth century the head of an office was responsible for all its products, it is impossible even in a small practice for either supervision or invention to rest entirely with one person. It is perhaps not surprising that Wren, as well as delegating private or external commissions to his informal pupil, on occasion shared with him work that would be known publicly by his own name. In the 1920s the first critical historians of the period saw the hand of Sir John Vanbrugh in the larger unit scale and dramatic massing of some of Wren's work towards and beyond the turn of the century. Subsequent study both of original drawings and of written documents, however, has clarified the relationship between Wren and the two younger men. In the first place, Vanbrugh was in no position to influence Wren or Hawksmoor in those years. In the second place, in the 1690s Wren himself developed a more baroque, dramatic, and sculptural style. The question of Hawksmoor's contribution to Wren's work is more complicated: although he made some of the drawings, there is no evidence that he influenced the appearance of Hampton Court or, notwithstanding his industry in the drawing office, of Wren's final achievement at St Paul's, the dome and western towers. Nor do Wren's unexecuted designs for rebuilding Whitehall Palace after the fire of 1698 show more than a very slight contribution from his pupil. On the other hand, the king's gallery forming the south front of the state rooms at Kensington Palace (1695–6) reveals Hawksmoor's idiosyncrasies, and, as resident assistant, specific payments for designs were not necessarily due to him.

In 1696 Hawksmoor again assisted Wren on preparatory work for the new Royal Naval Hospital at Greenwich, founded in 1694; his contribution here is clear to the eye. As Wren's personal clerk from 1696 to 1698 he was paid for drawings, and he was later reimbursed for the making of models; but otherwise he received no *ex gratia* rewards. But in the 1920s it was recognized that Wren, who gave his services for nothing, must have allowed his colleague initiative in parts of the hospital away from the central axis—much of King William court (1699–1707) and the back range of Queen Anne block (1700–03)—which reveal a quite different mind at work. Several ambitious designs for expansion also survive. The obvious candidate was once thought to be Vanbrugh, but Vanbrugh did not take up architecture until 1699, relying heavily on Hawksmoor, and his connections with the office of works and Greenwich began only in 1702, when work on the relevant buildings was well advanced. Surviving drawings as well as stylistic analysis confirm Hawksmoor's responsibility: the abrupt contrasts of scale and the arbitrary placing and shaping of windows to make interesting patterns, so evident in King William court, had already appeared at Easton Neston. Officially too, Hawksmoor's role at Greenwich increased: in 1698 he became clerk of works there; he retained this post until 1735, being also deputy surveyor from 1705 to 1729. Although there was little further creative opportunity after 1705, the worthy completion of Greenwich continued to exercise him for many years.

Hawksmoor and Vanbrugh Hawksmoor's relationship to Vanbrugh was on an altogether different footing from that to Wren. They met before the end of 1699 when Vanbrugh was 'newly turned', in Jonathan Swift's poetic phrase (*The History of Vanbrug's House*, 1706), to architecture. To Vanbrugh, Hawksmoor's skill and experience were indispensable in the design and execution of his first two great houses, Castle Howard (1700–12), where Hawksmoor was paid by the patron, Charles Howard, third earl of Carlisle, and Blenheim Palace (1705–16), where Hawksmoor was assistant surveyor.

It is not uncommon in a successful partnership for responsibility to be, or become, unassignable: such is to some extent the case with Castle Howard. Vanbrugh was without any doubt the architect, but from the start Hawksmoor was indispensable. When Lord Carlisle agreed on his remuneration he had already, with Carlisle's knowledge, been assisting Vanbrugh in practical matters. Moreover, the preliminary drawings for the house range from Vanbrugh's naïve sketches to Hawksmoor's painstaking professional draughtsmanship. Hawksmoor could readily specify, or calculate, the requisite number of masonry courses, the dimensions of an arch, the depth or the unique character of a moulding, the

shape of a finial, the fit of tapestries to a room. On occasion he wrote, as a judicious deputy would, as if he knew Vanbrugh's mind. His obligations included an annual site visit, probably until 1712, when the great house was sufficiently advanced for Carlisle and his family to move in. Years later (in 1722) Hawksmoor compared his feeling for Blenheim, the second commission in which he assisted Vanbrugh, to that of 'the loving nurse, that almost thinks the child her own' (BL, MS 61353, fol. 239). These were not, as Easton Neston was, his 'owne children'.

Hawksmoor's role at Blenheim was defined with greater formality and is documented in greater detail: as a state gift to the victorious duke of Marlborough, Blenheim Palace was in the charge of a miniature version of the office of works. Vanbrugh as surveyor (architect) was the personal choice of the duke; Hawksmoor (again the principal draughtsman) was his official deputy from the start in 1705, and Hawksmoor's letters to the young Henry Joynes, resident clerk of works, with the latter's draft replies between 1705 and 1713, not only show the extent of Hawksmoor's executive directions for detailing and construction but also give some idea of the teaching he had in his turn received, mostly by word of mouth, from Wren. As at Castle Howard, Vanbrugh was unequivocally the architect, but some of Hawksmoor's contributions to the design can be identified. A preliminary design for embellishing the saloon with sculptures was discussed by a contemporary artist (Louis Silvestre) as their joint work—although the proposed statues are drawn by Grinling Gibbons, then chief carver at Blenheim—and other drawings show Hawksmoor suggesting alternative treatments for the entrance hall. The massive stone structures which give Blenheim its romantic roof-line (called by Hawksmoor 'the Eminencys') have a formal complexity and a baroque sculptural excitement unlike anything at Castle Howard but close in spirit and handling to the London church towers of Hawksmoor's later years. Vanbrugh's own expressed preference for the 'figure and proportions' of a building rather than the 'delicacy of the ornaments' is confirmed by comparison with his later independent work: on the whole he used existing formulas, be they the classical orders, the obelisks, or the house plans of Palladio, whereas Hawksmoor patently enjoyed breaking down and recombining the elements of architecture and devising novel and surprising formal and spatial effects.

These distinctions are illustrated in two dissimilar buildings of the first decade of the eighteenth century which involved both architects. At Kimbolton Castle, Huntingdon—the occasion of Vanbrugh's dismissive remark about ornament—Hawksmoor provided advice and drawings in 1707–10, but clearly no more than that. On the other hand, although the orangery at Kensington Palace (1704–5) was officially Wren's responsibility and Hawksmoor is not named in surviving documents, he was still resident architect, and this elegant brick building displays all his talent for external elaboration in windows, blind arches, niches, and roof-top abstractions, as well as his fastidious detailing in the three linked spaces of the interior. The circumstances that Vanbrugh, as comptroller of works, found irregularities in the contracting and that an alteration to the design was proposed by him and accepted by the Treasury are insufficient to overturn the visual evidence of Hawksmoor's authorship.

Work for the universities As he approached the age of fifty, Hawksmoor's creative genius received new stimulus from two quarters which were to occupy the rest of his life: the universities of Oxford and Cambridge and the London 'Queen Anne' churches. Accident has preserved more drawings in these two categories than in any others and, as with the Royal Naval Hospital at Greenwich, he proposed far more than he achieved; nevertheless his six churches and two university commissions are among the finest of his independent works.

The seventeenth and early eighteenth centuries saw considerable, although discontinuous, expansion at Oxford and Cambridge, and much of the designing was shared between the commissioning patrons—senior fellows with private means or fund-raising abilities, some with architectural pretensions—and the local families of stonemasons and other builders. Wren, who made significant contributions to the architecture of both universities in the 1660s and 1670s, was engaged as a distinguished colleague, or in one case as the nephew of the donor. Hawksmoor, coming from outside, depended on the recommendation of his mentor or another academic figure, and on his own demonstrable talent and industry. At King's College, Cambridge, he was approached through Wren by Dr John Adams, the new provost, in 1712. Hawksmoor's ambitious drawings for completing the college followed the general disposition of buildings laid down by its founder, Henry VI. He also made alternative designs for the fellows' building, which are recorded in two detailed wooden models, still in the college. But Adams failed to attract funds, and Hawksmoor's designs were not entirely acceptable; after Adams's death in 1719 James Gibbs was called in, and his fellows' building, completed in 1724, owes less to Hawksmoor's designs than to contemporary criticisms of them.

At Oxford Hawksmoor's success was more material, though not unqualified. His primary contact was with Dr George Clarke, fellow of All Souls, amateur architect and collector of architectural drawings, whom he had probably met in connection with the Royal Naval Hospital during Clarke's term as secretary to the Admiralty (1702–5). By 1708 he was submitting designs for expansion or rebuilding in Oxford. The proximity of Blenheim within an easy ride not only ensured Hawksmoor's passage through Oxford from time to time but also gradually made known there, to scholars and builders alike, the eloquent grandeur of the Hawksmoor–Vanbrugh style. Even so, this was not always to his advantage: in 1734 Sir Nathaniel Lloyd of All Souls complained that 'he designs [too] grandly, for a college' (Downes, *Hawksmoor*, 1979, 99), and it is clear that piecemeal addition was often not only economically more feasible but also more acceptable to conservative tastes.

The old college tradition attributing to Hawksmoor the

library of the Queen's College, built in the 1690s, cannot be sustained, and none of the several designs he sent in 1708–9 to Provost William Lancaster, perhaps introduced by Clarke, was adopted. They offered alternative proposals for a new front quadrangle including a monumental chapel, hall, and gatehouse. While Wadham College, an entirely new foundation built just a century earlier, had introduced to Oxford the idea of arranging hall and chapel symmetrically across the principal axis, Hawksmoor's towers, giant orders, and in some of the projects free-standing central chapels, would have brought to Oxford the monumental architecture of Blenheim and Greenwich. Indeed, his drawings bore indirect fruit in the front quadrangle actually begun in 1714. The closest known designs are by Clarke himself and the Oxford mason William Townesend, but Hawksmoor's influence can be felt in the concept, the overall symmetry, the grandeur of scale, and to some extent in the detailed vocabulary.

Although Clarke may have adjudicated, Provost Lancaster was vice-chancellor in 1710 when Hawksmoor won an informal competition for the design of the 'new printing-house' (now the old Clarendon building) at the end of Broad Street, adjoining the Bodleian Library and Wren's Sheldonian Theatre. The *architypographus* or university printer was responsible for two enterprises, one the lucrative licence to print the Authorized Version of the King James Bible and the Book of Common Prayer, the other a 'learned press' for scholarly works. Upon the opening of the Sheldonian Theatre in 1669 the presses were crammed into its basement and the rooms under its tiered seating. After the profitable publication, in 1703–4, of the first earl of Clarendon's *History of the Great Rebellion*, it was decided to build more suitable premises, constructed in 1712–13. From the common features of Hawksmoor's several proposals and two by other architects it appears that the brief was precise and detailed: the two presses were to be located on either side of a central passage flanked by a columnar portico, on the axis of the Bodleian Library quadrangle to the south.

Hawksmoor met the specification with a building of exceptional grandeur and gravity, using a giant Doric order for the free-standing portico on the north and a similar frontispiece applied to the south side facing the Bodleian. The giant order is not used in the rest of the elevations, only the entablature is carried all around the exterior, and much of the Clarendon building's character comes from other formal devices which Hawksmoor, never having travelled abroad, managed to interpret and re-create imaginatively from engravings of Italian mannerist and baroque architecture.

All Souls College, Oxford Hawksmoor's major Oxford commission was the completion of All Souls College. Here he was consulted as early as 1709 by Clarke, who had outlined a proposal for building a hall, east of the chapel and mirroring it in plan, and, building on the fellows' garden and buying additional land to the north, to make a large new quadrangle the width of both buildings, closed on the north by a range of fellows' lodgings. Clarke also considered the possibility of a complete and symmetrical rebuilding. Hawksmoor's several preliminary designs became obsolete with the death in 1710 of Christopher Codrington, who left £6000 to build a new library. Property purchase was not complete until 1715; meanwhile, by the beginning of 1714 it had been decided, probably at Hawksmoor's instance, to place the library on the north and the lodgings on the east.

Hawksmoor explored the choice not only between additions and complete renewal but also between classical and gothick buildings, or even a mixture of both. In a long 'Explanation' of his designs, dated 17 February 1715, he argued for 'the preservation of Antient durable Publick Buildings', meaning the old south quadrangle in particular. 'What ever is good in its kinde', he wrote, 'ought to be preserv'd ... for destruction can be profitable to none but such as live by it' (Downes, *Hawksmoor*, 1979, 138, 241). His remarks have led to his being claimed as a pioneer of the conservation movement, but his enthusiasm for the old was strictly relative to his creative ambition. His submitted drawings included not only a scheme for rebuilding the old south quadrangle in a gothick style (engraved for fund-raising in 1721) but also one with a gothick hall matching the chapel, the rest of the new buildings being 'after the Antique'.

In fact Hawksmoor's fire was directed, as much as anywhere, at the poor general building and planning standards of the day, and the ignorance of artificers to whom, as he complained in another context, 'it is indifferent ... whether they get Money by destroying or erecting Fabricks' (Bolton and Hendry, 6, 1929, 20). He must also have been sensitive to the fact that in Oxford during the course of the seventeenth century Gothic survival blended seamlessly into revival. He had learned from Wren the occasional need (in the latter's phrase) 'to deviate from a better style' (Downes, *The Architecture of Wren*, 89). In 1697 he had, in Wren's stead, advised on the reconstruction of St Mary's, Warwick, after a fire, although his design was not adopted. His last months in the City churches office saw the start of work on recasing the old tower of St Mary Aldermary, twenty years after the reconstruction of the church in a neo-Gothic style. Around the turn of the century his work is not easy to distinguish from that of William Dickinson, something of a gothick specialist who continued work in that office; nevertheless the outsize corner pinnacles of the Aldermary tower have much in common with Hawksmoor's self-acknowledged rebuilding of the tower of St Michael Cornhill for the Fifty New Churches Commission in 1718–24. He also advised on, and campaigned for, the repair of Beverley Minster about 1716–20. It was against this background that he produced definitive designs for the north quadrangle at All Souls, on which work began in 1716.

The exteriors are based on, but not overburdened by, the wide knowledge of sources for which Hawksmoor's obituarist praised him. His gift was to succeed in re-creating the fall of light and cast of shadow of Gothic

originals, rather than the wealth of detail that characterizes most revivalist architecture; the twin towers flanking the common room on the east were a notable addition to Oxford's picturesque skyline—the only one, of those he proposed, to be realized. On the other hand, although Hawksmoor entertained the prospect of an entirely gothick library, all the interiors of library, hall, and common room are classical; indeed on the outside the windows of the common room and the large lights at either end of the library are barely disguised Venetian windows. In the library, then second in size only to Wren's at Trinity College, Cambridge, Hawksmoor abandoned tradition, keeping the whole floor clear of desks and book-stacks, and ranging all the books around the walls; placing the library not upstairs over a loggia but at ground level, and providing a formal central entrance from the quadrangle which, if used, admits the reader to face a large recess designed for a monumental statue, with the interior, 60 metres long, extending dramatically to left and right.

The foundation stone was laid on 30 June 1716, but construction, after a promising start, became fitful and dependent on further donations. The library was not fitted in Hawksmoor's lifetime, and the understated plaster ceiling executed in 1750 (by Thomas Roberts of Oxford) leaves the visitor with a vague sense of disorientation, which Hawksmoor's intended coffered ceiling would have turned to more positive effect. The most remarkable interiors are the hall, whose billowing plaster vault has a strange affinity with the baroque ceilings of central Europe, and the small but noble buttery, oval in plan with a coffered masonry dome. These were built in the early 1730s, and suggest that Hawksmoor's knowledge (in his obituarist's phrase) 'of all the famous Buildings, both Antient and Modern, in every Part of the World' extended to the most recent European architectural publications.

Hawksmoor closed the quadrangle on the west with a cloister walk, screened from the outside and opening in the middle to a domed and pinnacled gothick gateway for which the mason contracted in 1734. At the same time work was progressing on a similar, but classical, screened walk at the front of the Queen's College, whose gate is surmounted by a delicate circular temple sheltering a figure of Queen Caroline. Thus at Queen's Hawksmoor provided at least the finishing touches to the quadrangle he inspired but did not himself design; his authorship of the screen, recorded on completion in the *Daily Post* of 12 February 1736, is confirmed by surviving drawings indisputably from his office. Moreover, these two fronts must have been, in his mind, complementary. In 1713 he had made several large plans for rebuilding much of the area between the High Street, Broad Street, and New College, embracing All Souls, the Queen's, and Brasenose colleges, the new church of All Saints (on whose steeple he had some influence), and the Clarendon, Sheldonian, and old Ashmolean buildings, with a new university church (a huge peripteral temple) and campanile, and a Trajanic column and forum at Carfax.

The germ of this plan perhaps lay in the Clarendon building, with its portico facing nowhere in particular; a year earlier he had planned the 'reform' of Cambridge around his design for King's College. In both towns he envisaged a network of buildings and vistas that combined Roman and Greek prototypes with the urban planning of Pope Sixtus V and Domenico Fontana in late Renaissance Rome. But one other factor led to his creating not a new building but the setting for one: the Radcliffe Library. In 1712 Dr John Radcliffe decided to contribute to an addition to the Bodleian Library; after considerable discussion he settled on a building attached to the south side of the Bodleian quadrangle, on a site then occupied by small houses. Hawksmoor was soon making drawings, and the library features in his urban plans. Subsequently Radcliffe's executors consulted several architects; in 1734 Hawksmoor and James Gibbs submitted new plans, and a model (now in the Bodleian) was made of Hawksmoor's. Gibbs proposed a traditional long library, but Hawksmoor, scenting that Radcliffe was (in Thomas Hearne's words) 'very ambitious of Glory' (*Oxford Historical Society*, 42, 1901, 2), had looked from the start for prototypes, in the mausoleum and the martyr's shrine, for a circular domed building. The circular library finally begun by Gibbs in 1737 suggests a debt to Hawksmoor's drawings, and while it was Gibbs who made the building free-standing, the square surrounding it had been cleared on Hawksmoor's recommendation. Moreover, it was his principal reason for giving All Souls a gate in that direction.

The fifty new churches From 1711 Hawksmoor was also busy in London. The Fifty New Churches Act of that year sprang from a petition by the parish of Greenwich, whose church had been wrecked in a storm. It was carried on a wave of high-church and tory optimism: with the construction of St Paul's virtually complete, it was suggested that the London coal tax which had paid for it could, if renewed, provide churches in the expanding suburbs east of the City and north and west of the West End. On 10 October 1711 Hawksmoor and William Dickinson were appointed surveyors, initially to find and assess possible sites, and later to oversee every aspect of building on those chosen and approved. Hawksmoor held the post until the virtual winding up of the commission in 1733; Dickinson was soon succeeded by Gibbs and then by John James. The design of churches was not the surveyors' responsibility, and a number of architects submitted designs at various times. Nevertheless, Hawksmoor designed half of the dozen churches built: St Alfege, Greenwich (1712, consecrated 1718), three Stepney churches, begun in 1714—St Anne's, Limehouse (consecrated 1730), St George-in-the-East, Wapping, Stepney (interior destroyed 1941), and Christ Church, Spitalfields (both consecrated 1729)—and two others, begun in 1716: St George's, Bloomsbury (consecrated 1731), and the rebuilding of St Mary Woolnoth, a City church patched up after the great fire (finished 1727). He also adapted a chapel in Red Lion Fields as St George the Martyr, Queen Square (1717–23, extensively remodelled 1867). He produced jointly with James two late churches (1727–33), on which the commission, embarrassed by the excessive cost of

earlier ones, imposed a rigid budget. These were St Luke's, Old Street, whose walls and fluted obelisk steeple remain, and St John Horselydown, Bermondsey (gutted 1940), whose tapering Ionic column steeple was dismantled in 1948. He also designed the rectories at Bermondsey and Spitalfields.

Initially the commission explored ideas of liturgical settings based on research into early Christian practice, and of building the churches to a more or less standard 'general design or forme'. Hawksmoor worked on both ideas before they ran out of momentum; while the second cannot have excited him, the first engaged his historical imagination and was a factor in the prominence of galleries in his designs. Although each is uniquely personal, they are far from uniform, and only the two late, economical, churches follow the traditional basilican plan of Wren's larger parish churches and many other eighteenth-century churches. Instead Hawksmoor's churches—as also the two designed by Thomas Archer—are planned like many European baroque ones, around two main axes at right angles; this applies even to the Spitalfields church, which superficially appears to be basilican. Spatially, nothing is as simple as it seems; this happens in other Hawksmoor interiors, but it may be appropriate to sacred architecture and particularly to the Anglican liturgy of the time, in which there was no single and sole focus of attention. Externally, Hawksmoor exploited the commission's preference for Portland stone and for porticoes and steeples. The tower he designed at Greenwich was not built, but the steeples of the Stepney churches and St Mary Woolnoth are lofty, impressive, and without obvious prototypes. At St George's, Bloomsbury, he finished the tower in a stepped pyramid based on the Mausoleum at Halicarnassus.

Other later work As a local resident Hawksmoor designed the Kensington charity school (1711–12, dem.). In 1715, following a Treasury reorganization of the office of works, he relinquished his Kensington clerkship for a similar one covering the palaces of Whitehall, Westminster, and St James's, together with the post of secretary to a new board of works, nominally under the direction of the aged Wren. In addition to office work he made minor improvements at St James's and Westminster, but in 1718 when—for political reasons—Wren was dismissed from the surveyorship, Hawksmoor also lost his Whitehall posts. Both his successor and Wren's soon proved incompetent, but it was not until 1726, after the death of Vanbrugh and with the help of Lord Carlisle, that he regained the secretaryship, which he then held until his death. From his letters to Lord Carlisle it is clear that he hoped for the surveyorship, or at least the second post of comptroller in place of Vanbrugh. He received neither, and found it increasingly irksome to be passed over in favour of younger and less able men.

Such a man—a cabinet-maker—had been engaged at Blenheim by the duchess of Marlborough for six years after the resignation of Vanbrugh in 1716 and the termination of state funding. When he proved inadequate, and the duke's death in 1722 left her in sole charge, Hawksmoor returned for three years (1722–5) to the building he knew so well. He made a significant contribution in his own name, adding the Woodstock gate (based on an esoteric reconstruction of the arch of Titus in Rome), forming the gallery or long library on the west side into a dramatic sequence of connected spaces, and designing ceilings for state rooms. At Ockham Park, Surrey, he modernized a Jacobean house for Lord Chancellor Peter King (*c.*1723–9); the house was further altered in succeeding centuries, and the main building was burnt down in 1949. His hand can now be traced only in the brick stable block and in the small chapel added to the parish church in 1735 to contain King's monument. However, his most important late work is at Castle Howard and Westminster Abbey.

At Castle Howard Hawksmoor was, for the decade between Vanbrugh's death and his own, sole architect, supervising the building of Vanbrugh's Temple and designing the great mausoleum (1729–42) as well as other structures in the gardens and environs. These included the Pyramid and the medievalizing Carrmire gate. The design and construction of the mausoleum, in whose crypt Lord Carlisle and his successors are buried, are exceptionally documented by Hawksmoor's letters to a patron who, like him, found in later years the journey between London and Yorkshire increasingly tedious. Built of local stone and sited on a small hilltop a mile from the house, and usually seen against the sky, this large building is a domed cylinder rising through a Doric peristyle 19 metres in diameter, its columns severe and closely spaced; it is the most impressive and most evocative of eighteenth-century variations on this ancient Roman theme. The interior is at once luminous and claustrophobic, with none of the coldness that characterizes so many neo-classical funerary chapels. If any one building epitomizes Hawksmoor's art it is the mausoleum.

Hawksmoor's most public work, however, is familiar to millions ignorant of his name. In 1723 he succeeded Wren as surveyor to Westminster Abbey, where in 1725–8 he designed new stalls in Henry VII's chapel for the Order of the Bath, and a choir screen, part of which survives inside the present structure designed by Sir George Gilbert Scott. He made tentative designs for a central spire and for the west front, which for two centuries had risen no higher than the great window. But in 1734 his final design for the towers and gable-end was put in hand, being finished about ten years later. With hardly any Gothic detailing, his restrained completion of this famous building is exceptionally successful.

Conclusion: the man and his work Hawksmoor was, wrote his obituarist, both 'learned and ingenious', and was 'bred a Scholar' (Blackerby); however, his attitude to the past was more imaginative than scholarly, and his tendency to specify his historical sources reflected the need, as he expressed it, for 'some old father to stand by you' (Downes, *Hawksmoor*, 1979, 244) against the swelling tide of eighteenth-century architectural orthodoxy. A child of the Restoration, contemporary of Henry Purcell, and grandchild of the English Renaissance, he declared the

basis of his art ('following the Rules of the Ancients') to lie less in rules and systems than in reason, imagination, experience, and experiment—in his own words, in 'strong reason and good fancy, joyn'd with experience and tryalls, so that we are assured of the good effect of it' (ibid.). His visual geometry was more often intuitive than calculated; rules were a means, not an end. His eclecticism had as much to do with rhetoric and surprise as with what might be appropriate or symbolic. In a culture which received the baroque architecture of Italy and France with increasing suspicion and its emulation in Britain with diminishing enthusiasm, Hawksmoor owed the relative success of his later years less to his creative genius, only adequately recognized during the twentieth century, than to the support and recommendation of Wren and later of Vanbrugh, and to the training, experience, skill, energy, and wisdom that earned the respect of all who engaged him, often in minor matters such as surveys and fire prevention. Even the duchess of Marlborough, notoriously disdainful of architects, commended in 1715 his modesty and honesty, adding that 'everybody that knows him will allow him to bee one of the most able in his profession' (ibid., 272).

The eighteenth and nineteenth centuries thought Hawksmoor industrious but odd; the generosity of the account of him in Horace Walpole's *Anecdotes of Painting* (1780) stemmed from his reading of Hawksmoor's obituary, from the transcript in George Vertue's notebooks. However, among later architects Sir John Soane and C. R. Cockerell studied Hawksmoor with profit, and William Wilkins's gothick additions to King's College, Cambridge, are patently indebted to All Souls.

With the early twentieth-century revival of general interest in the baroque, Hawksmoor's real talents were discerned, and it is hardly accidental that the peak of the Modern Movement in architecture coincided with the recognition of his art as essentially one of masses and spaces rather than of decorative detail. Architects have always worked from precedents; Hawksmoor sought them anywhere in the past or present, from the primitive to the increasingly fashionable neo-Palladianism of his maturity, extracting whatever could be used to move the beholder and eschewing the dogmatic and restrictive taste of Palladian orthodoxy which, for him, was 'but dress[ing] things in Masquerade' (Downes, *Hawksmoor*, 1979, 244). Similarly, Hawksmoor's attitude to his sources was a world away from the arbitrary stylistic eclecticism and mediocre detailing of later twentieth-century postmodernist architecture. His own style was too personal for imitation; Henry Joynes was his informal pupil but not his stylistic follower. His influence on the mostly anonymous buildings of the Board of Ordnance between 1715 and 1724 has been confirmed by the discovery of an autograph sketch for one of them, the barracks at Berwick upon Tweed.

Beyond the obituarist's glimpse of a sincere friend and companion we have no character sketch. But Hawksmoor's correspondence reveals, away from the drawing table, a modest man but one who knew his own mind and expressed it in a forthright and pithy style. This impression of an unassuming individual is suggested, too, by his only portrait, the informally dressed black-painted plaster bust in his buttery at All Souls, made by Sir Henry Cheere in his last years. (In 1961 the college commissioned bronze casts—one is in the National Portrait Gallery.) The draughtsmanship he learned in his twenties speaks equally directly, but the dreams it brings to life are as expansive as any architect's. He would submit designs by the handful, and he did not see a building in isolation. Besides his schemes for Oxford and Cambridge, he planned a precinct of buildings around St Paul's and a succession of grand schemes for the Royal Naval Hospital in Greenwich which occupied him for thirty years. Projects for a central chapel at Greenwich included one with a huge oval forecourt recalling St Peter's piazza in Rome. Still hopeful of proper public funding, he published in 1728 a pamphlet on the hospital, reviving some of his proposals. But in the following year his assistantship was abolished and Thomas Ripley appointed surveyor over his head. 'I once thought', he told Lord Carlisle in 1734, 'it wou'd have been a publick Building, but it will sink into a deformed Barrac' (Webb, 153). In 1735 even his clerkship, by then nominal, was withdrawn. Apart from the creation of Radcliffe Square, his only environmental successes were the obelisk forming the 'market cross' in Ripon (1702–3) and the dramatic little square that opens at the end of the main street of Woodstock to reveal his triumphal gateway to Blenheim.

Although he complained in a late letter (17 February 1736) that 'the world is determined to starve me for my good services' (Webb, 159), Hawksmoor left property in Millbank and James Street, in Lambeth, in Highgate, in Shenley, Ridge, and Aldenham, Hertfordshire, and at Great Drayton. He was fortunate, in an age without pension schemes, to continue working, in spite of over twenty-five years of chronic, and sometimes crippling, affliction by 'the Gout'. His last letter (2 March 1736) concerns his architectural and political efforts to get a bridge built at Westminster; his pamphlet on London Bridge—and some others—was written in support of this project. He died, of 'gout in his stomach' (*Grub Street Journal*, 25 March 1736), at the house in Millbank, where he had lived since 1715, on 25 March 1736 and was buried on 3 April in the churchyard at Shenley, Hertfordshire. The church is now secularized, but his large inscribed grave-slab survives. His widow, Hester Wells (whom he had married in 1696), outlived him by a year. Their daughter, Elizabeth, married first Nicholas Philpot, commissioner for hackney coaches, and second, in 1735, Nathaniel Blackerby, treasurer to the Fifty New Churches Commission, who wrote the informative obituary of Hawksmoor in *Read's Weekly Journal*.

In 1740 Hawksmoor's library was sold at auction, together with some 2000 drawings. Few of these can be identified with about 600 drawings now known, of which two in three reveal his own hand. The largest groups of letters are at Castle Howard and in the British Library.

Sir John Hawkwood (*d.* 1394), by Paolo Uccello, 1436

Hawkwood, Sir John (*d.* 1394), military commander, was the second son of Gilbert Hawkwood, a tanner and minor landowner at Sible Hedingham, Essex, where the family had held land since the beginning of the thirteenth century. The date of his birth is not recorded, but he was evidently in his early manhood by the time of his father's death in 1340, since, along with his elder brother, also called John, and the vicar of Gosfield, he was made one of the executors who secured legal possession and power of administration of the properties mentioned in Gilbert's will.

Military apprenticeship and early campaigns Little is known about Hawkwood's life before 1340, or his whereabouts during the next twenty years. The tradition that he was apprenticed to a London tailor has generally been dismissed, although his father had important connections with the London merchant community, and apprenticeship of sons of the gentry was not uncommon. The story may have arisen from a misreading of Matteo Villani's chronicle, but it is also recounted by the generally reliable Monk of Westminster, who believed the apprenticeship was to a hosier. That he was recruited for service in Edward III's wars in France is certain. This may have been as early as the campaigns in Brittany in 1342–5, and tradition has it that he fought at Crécy and Poitiers, on one of which occasions he may have won his spurs; but it is equally possible that he did not see service in France much before the great campaign of 1359–60. The appearance of his arms in an Anglo-Scottish roll of arms, which can be dated to the years 1357–61, is more likely to indicate his participation in a tournament at Smithfield on St George's day 1358, than his involvement in a crusade to Prussia during these years.

The first real evidence of Hawkwood's life as a soldier is from 1360, when, following the peace concluded at Brétigny in May, he was serving in one of the brigades (*routes*) of freebooters, the 'great companies' (*grandes compagnies*), sometimes known as 'latecomers' (*tard-venus*) because they had formed together from different bands following the conclusion of peace, and were in many cases raiding territories already plundered and devastated in previous raids. During the night of 28–29 December, in an abortive attempt to seize a part of the money collected for the ransom of Jean, king of France, a number of these companies occupied Pont-Saint-Esprit in the Rhône valley and blockaded Avignon, before being bought off by the pope. Some of them (as many as three-fifths of the total, according to Froissart; constituting some 3500 cavalry and 2000 infantry according to Matteo Villani) including Hawkwood, were recruited to serve the marquess of Montferrat in his war against the Visconti of Milan. When they first appeared in Italy, they were known as the great company of English and Germans (*magne societatis Anglicorum et Alamanorum*) and subsequently as the English White Company (*compagne bianca degli inghilesi*; *societatis*

albe Anglicorum), and were commanded by a German mercenary called Albert Sterz, who had seen service in the French wars, and according to the Italian chronicler Piero Azario was 'so valiant in the field as to inspire others with courage' (Azario, col. 380), and who had the advantage that he could speak English. Before advancing into the Milanese, they created havoc in Piedmont, which at the time formed part of the territories of the count of Savoy, who was then allied to the Visconti, taking the count and some of his principal barons prisoner in a surprise attack on the town of Lanzo in the autumn of 1361, and ransoming them for 180,000 florins. Some contingents, Hawkwood apparently among them, may then have returned to France, where they joined forces with other *routes* of the great companies, together defeating a French army commanded by Jacques de Bourbon at Brignais (6 April 1362), before returning to Italy to rejoin Sterz, who remained in Montferrat's service until July 1363. Here, they devastated the countryside on either side of the River Po from Novaro to Pavia and Tortona, crossing the Ticino to proceed within 6 miles of Milan, before returning to Romagnano and defeating the Milanese forces commanded by another German mercenary, Konrad von Landau, at the bridge of Canturino on 22 April.

Following this victory, in July 1363 Sterz was appointed captain-general of the Pisan army for six months, the republic at that time being allied to Milan and at war with Florence; but on the expiry of his contract in December, Hawkwood replaced him as commanding officer, and the companies under his command were reformed. Sterz, an Englishman called Andrew Belmont, and later Haneken Bongard (another German mercenary hired by Montferrat), became Hawkwood's subordinate officers until they deserted Pisan service for that of Florence in the following summer. Thereafter Hawkwood never left Italy, and when he was not fighting on his own account he was successively employed by Bernabò Visconti of Milan (1368–72) principally in his wars with the Florentine league, by Pope Gregory XI in his attempts to restore papal authority in Italy (September 1372–April 1377), and subsequently in the service of the Florentine republic. He fought in the kingdom of Naples for both Charles of Durazzo (1382–3) and Queen Marguerite (1386 and 1388–9), and in the Veronese for Francesco Carrara, marquess of Padua (1386–7). But during the last fourteen years of his life, from the spring of 1380, his services were principally, although by no means exclusively, contracted to Florence, latterly as captain-general of the army of the republic.

Hawkwood was undoubtedly one of the ablest military commanders of his day, and acknowledged as such by his contemporaries; but he was not crowned with success immediately. He suffered several fairly serious set-backs in the 1360s, and fortune did not come his way until several years into the next decade. There was no real stability in the composition, nor continuity in the command, of the various English brigades serving in Italy before they were brought together under his command in the service of the church in 1372; but from that time onwards his reputation was in the ascendant, despite continuing evidence of insubordination in the English forces serving under him. When Sterz and Bongard deserted Pisan service in the summer of 1364, joining forces to form the Company of the Star, which headed south for the kingdom of Naples, the majority of the English contingents formerly serving with Hawkwood had joined a new Anglo-Hungarian White Company, of which Hugh Mortimer, lord of La Zouche, was captain-general, and Hawkwood was left with only 800 of his men in Pisan pay. The war with Florence went badly, and his forces suffered continual set-backs and a serious defeat at the hands of the Florentine army, which had an overwhelming numerical superiority. After a revolution in Pisa, in which he played no small part, the Pisans were obliged to make peace on humiliating terms.

Thereafter, although the Florentine republic twice sought Hawkwood's services (in July 1365 and the spring of 1367), he refused them, preferring to resume his old profession of free-lance in the Perugino, and still hankering after Pisan employ. Perhaps it was a mistake. Defeated with considerable losses in a pitched battle with Bongard on 25 July 1365, he joined his English forces for a while with those of Ambrogio, one of Bernabò Visconti's illegitimate sons, to form the Company of Saint George, but abandoned it in the spring of 1366. In June 1369 he was taken prisoner by two other German mercenaries, Johann Flach von Reischach and Johann von Riedheim, who were then in papal service. While in the service of the Visconti the fortunes of his brigade among predominantly German forces were mixed. Defeated by a Florentine army before Reggio in August 1370, Hawkwood subsequently surprised the forces of the Florentine league in an ambush near Mirandola, taking their commanders-in-chief prisoner. Then, on 2 June 1372, only a matter of months before quitting Milanese service, he defeated a considerably larger army under Lutz von Landau, which was coming to the aid of the marquess of Montferrat, who was once again at war with the Visconti. After switching from Milanese to papal service in the autumn of 1372, he pursued and virtually annihilated the Milanese forces on the Panaro between Modena and Bologna in the following January, but subsequently failed to effect a junction with the count of Savoy's forces when they crossed the Ticino in February, an essential part of the strategic plan of campaign in that year.

The English companies Hawkwood's military fortunes were in part determined by the composition of the forces serving under him. The mercenary companies employed by the different Italian states in the second half of the fourteenth century, placed under the command of one or more captains-general, were made up of a variable number of brigades, each under a captain or constable, depending on the number of units of which they were composed. Among the English contingents the essential unit was the lance, introduced to Italy by the White Company, with its distinctive three-man lance component (two men-at-arms and a page), and its combination with archers, equipped with longbows, some accompanied by

a page. A lance thus normally constituted four or five men. The men-at-arms were mounted on war-horses or dextriers, the archers and their pages on lighter horses or rouncies. Hawkwood's personal brigade was almost always small in comparison to the total forces under his command or in which he served; but it was the essential nucleus, with a greater continuity in its personnel than in the companies under his command, where the number and personnel of the brigades fluctuated, often because of the recruitment policies of rival employers. The Visconti had been accustomed to employing German and Hungarian mercenaries, and it was alongside these contingents, always in the majority, that he had fought for Bernabò from 1368 to 1372. However, following his engagement in papal service in September 1372, the forces which were brought under his command, and which were styled the English Company (*compagnie seu societatis Anglicorum*), was an amalgam of the English brigades that had previously operated under different commanders, and of which he became captain-general following the conclusion of the offensive of 1373. A significant number of the constables serving with him came from Essex, some of the more notable among them from villages and manors in the neighbourhood of Sible Hedingham. The English brigades were also distinguished by their habit of dismounting to fight on foot, and being accustomed to riding at night and fighting deep into the winter.

These essential features of the forces at his disposal served Hawkwood well; but they were brought into play by his real talent as a military commander: in effecting long marches, creating diversions, and pulling victory out of failure. He also built up a well-organized intelligence service, and was adept in the use of disinformation, seeking safe conducts for routes he had no intention of taking, dispatching letters detailing sensitive troop movements which were intended to be leaked to the enemy, feigning a retreat while he placed his troops in ambush, or disguising another with a smokescreen of presence. He was well aware that careless words cost lives, and played his cards close to his chest. Even his closest councillors were frequently kept in the dark about his true intentions until the last minute, and there is ample evidence to show that outside informers were invariably perplexed as to what his next moves might be.

Hawkwood's military achievements These characteristics of Hawkwood's military genius were displayed on many occasions. Following his defeat by Giangaleazzo Visconti at Montechiaro on 8 May 1373, he rallied his forces, pursued the Milanese, routed them, and took their principal officers prisoner. In command of the Paduan forces in 1387, he was pursued by a much larger Veronese army which threatened to cut off his supply lines, and was forced to fall back to Castelbaldo on the northern bank of the Adige. Here he decided to make his stand at Castagnaro, on the south side of the river, where he was able to take up a battleground of his own choosing, with the river at his back, on firmer land with his flanks protected by marshy ground bisected by irrigation canals. Dismounting his cavalry, he drew them up in close array, concealing archers, crossbowmen, and a few cannon on the flanks, pushed forward of the main position. The Veronese thus had to attack him across a difficult terrain, under heavy fire, and Hawkwood only gave orders for his men-at-arms to move in after the archers had done their work and gaps had begun to appear in the Veronese ranks. The Scaliger army collapsed under the onslaught, and the rout was complete. Almost half of the Veronese forces were taken prisoner, including nearly eighty captains and subordinate officers, and the number of killed and wounded was also high.

Four years later, when Florence finally decided to make a stand against Giangaleazzo Visconti, an essential part of the republic's strategy was to take the Milanese armies in a pincer movement in which Hawkwood would join up forces on the Po with a mercenary army recruited in France by the count of Armagnac. On this occasion Hawkwood led an army of 2000 lances and a large number of infantry to within 10 miles of Milan; but the plan for a simultaneous attack on two fronts was shattered by Armagnac's failure to keep to the prearranged timetable, which allowed the Milanese captain, Jacopo dal Verme, to concentrate his attention on Hawkwood's forces and pursue them as far as the Adige, where the enemy had broken the dykes, turning the country into a vast lake around Castagnaro. Hawkwood knew the terrain well, but his success in getting the greater part of his forces through the deep waters and across the river to safety at Castelbaldo was a stroke of military genius which the republic duly acknowledged in a letter to him of 27 July 1391, praising the forces under his command and his 'incomparable leadership', which would be proclaimed and commended throughout Italy; they recalled his 'inextinguishable glory', which they would extol in the future, granting him every favour (Florence, Archivio di Stato, Signori, Missive, 1 Cancelleria, reg. 22, fol. 148). In the following month, when dal Verme invaded Tuscany, Hawkwood impeded his advance by a succession of attacks, forcing him to retreat towards Lucca and driving him into Liguria during the course of September. There can be little doubt that his actions saved Florence from Milanese expansion at a critical juncture. In two further letters, dated 21 and 23 September, and penned, like that of 27 July, by Coluccio Salutati, the chancellor of the republic, the Signoria had encouraged him to achieve a glorious victory, for which they would 'magnanimously carry out that which we owe you, to throw light and glory on your eternal and inextinguishable fame', urging him to emulate Scipio Africanus, one of Rome's greatest generals, skilful alike in strategy and tactics, and with the faculty of inspiring his soldiers with confidence (Florence, Archivio di Stato, Signori, Missive, 1 Cancelleria, reg. 22, fols. 160*v*–161*r*). They did not have long to wait. During the night of 24 September, as the enemy continued to retreat up Monte Albano, Hawkwood forced dal Verme's rearguard to battle, and completely routed it at the entrance to the Val di Nievole to the west of Pistoia. The Signoria had already granted him substantial financial rewards for his services earlier in the campaign, and it seems that they were now thinking of

some monument to commemorate his victories. It was Hawkwood's last major campaign, and it sealed his reputation.

The material rewards of service and Hawkwood's investments There can be little doubt that Hawkwood amassed considerable wealth, not only from ransoms and booty, and in bribes extracted from different Italian communes to secure his departure from their *contados* or to ensure his goodwill, but also in lands and pensions. The extent of his takings in the first category is not easily computed. While in the course of his military career the forces under his command evidently acquired substantial booty and numerous prisoners, of which he had his share, the surviving evidence does not permit his gains to be quantified, or his own ransom payments to be balanced against those extracted from others. More precise calculations can be made of the moneys paid as bribes by the Italian communes, but even here there are difficulties, since the global sums negotiated with the communes had to be divided between him and his subordinate officers, and had frequently also to be shared with one or more fellow commanders. In 1375, for instance, Hawkwood extracted 30,500 florins from Siena; but a further 68,000 florins paid over a period of five years between 1379 and 1385 had to be shared with co-commanders. Moreover, there were often additional payments to the main sums that were paid out to individual captains and officers, and these were frequently substantial. When the companies were operating independently, some of these moneys were effectively in lieu of pay. It is thus easier to compute the cost of the mercenary activities to the communes than it is to calculate the profits of military captains. Nevertheless, the rewards were sometimes considerable. During the course of three months in 1375, the bribes paid by Florence, Pisa, Siena, Lucca, and Arezzo together amounted to more than 204,500 florins, that is, in excess of 723 kilograms of gold.

With regard to his lands and property, some of these were acquired by conquest, or came to him in lieu of pay, which was by no means negligible; others were granted by appreciative employers, or as bribes similar to those referred to above. In April 1391, during the course of the campaign against the Visconti, the annual pension of 1200 florins first awarded to him by the Florentine republic in 1375 to secure his goodwill was raised to 3200 florins, a jointure of 1000 florins per annum settled on his wife, and 2000 florins granted on the marriage of each of his three daughters. In addition he and his male heirs were granted Florentine citizenship, excepting the right to hold office. The lands and property he acquired were extensive and, like the campaigns he fought in, were geographically widely spread. From his service with the church he secured castles and lands in the Romagna and in the marches of Ancona, notably Castrocaro, Bagnacavallo, Cotignola, Conselice, and Montefortino, and a house in Bologna. While in Neapolitan service he acquired estates in Naples, Capua, and Aversa, and secured a number of strongholds in the Aretino (notably the castle of Montecchio and the strongholds of Badia al Pino and Migliari), possibly acquired while returning to central Italy from that service in 1384. He had a house called Polverosa in the Florentine suburb of San Donato di Torre, an estate called La Rochetta in the Val d'Elsa near Poggibonsi, a property at Gazzuolo in the Cremonese (probably granted to him by Ludovico Gonzaga, either in appreciation or as a bribe), and a mansion with a cloister in Perugia, granted to him by the priors of that city in 1381. What explanation can therefore be given for Hawkwood's claim, in the summer of 1393 that, considering his innumerable daily expenses, his income was insufficient to support his family? It is probable that the administrative costs of his numerous estates were high, and there is little doubt that he had been scrupulous in paying and rewarding the men who had served him both in war and peace. He may also have been living beyond his means, or in modern parlance have been capital-rich but income-poor; but there was another factor which sheds much light on his ambitions and how he saw himself in the world.

The lure of the ancestral lands Hawkwood clearly had no desire to carve out a patrimony and establish a dynasty in Italy. From as early as 1375 he had sought and secured an assurance that the annual pension of 1200 florins then offered to him by Florence would be paid to him even if he left that country, and this was confirmed by the Signoria in July 1376. From this period in papal service he was sending some of his pay and subsequently other moneys back to England by way of Luccese merchants operating through Bruges, and these were used to buy property in London and Essex, and to advance some moneys to the English crown in aid of the war in France. Some time between June 1377 and February 1380, through his agents in England (including, perhaps significantly, John Cavendish and Robert Lyndeseye, a draper and tailor of London, respectively), he acquired the reversion of the Leadenhall in London from the widow of Sir John Neville, with whom he may have served in the expedition to Brittany under the earl of Northampton in 1345, and whose family seat was at Wethersfield in Essex, less than 5 miles from Sible Hedingham. However, the story was not altogether a happy one. Other moneys he advanced to the Luccese in 1382 were not passed on to his agents and were the subject of subsequent litigation, and some of the lands that he purchased, and which were enfeoffed to his use, were subsequently detained by his feoffees. Hawkwood's intention to return to England was thus evident, but there were hurdles to be overcome, some of them new, others dating from his past life in France. In the parliament held at Westminster in January 1377 he had sought, and in the following March secured, a royal pardon for his youthful misdemeanours 'in like manner to that granted to Sir Robert Knowles' (*RotP*, 2.372). The latter had embraced, among other things, 'all disobediences, takings of towns, castles and fortresses and prisoners surrendered without licence, breakings of truces and safe-conducts, sales of castles, cities and boroughs, towns, manors, lands, rents, services and prisoners to the king's enemies and others' (*CPR, 1374–7*, 435). In the fragmented political structure of fourteenth-century Italy, where the king of England had no claims and where the royal writ did not run, he had

encountered no such obstacles. But two months after his pardon had been granted he married Donnina, one of Bernabò Visconti's illegitimate daughters, which brought him, in addition to handsome presents and the benefits of a sizeable dowry, powerful family connections, which included his fellow *condottiere*, Count Lutz von Landau, who was married to Donnina's sister, Elisabetta, on the same day, and doubtless for the same reasons. The unity of purpose between Florence and Milan at this juncture was also critical, for it allowed Hawkwood simultaneously to serve two masters, who were subsequently bitterly opposed, to take up his appointment as commander of the forces of the Florentine league, and to enjoy the benefits of the life annuity granted to him by the republic, now apparently backdated, on the conditions already noted.

In 1387, following the conclusion of his services with the Carrara of Padua, Hawkwood may once again have considered returning home. Later that year he disposed of his properties in the kingdom of Naples and was planning the sale of those at San Donato and La Rochetta; but it was not until five years later, on the conclusion of the war with Milan, and when he was doubtless aware that his days were numbered, that the die was cast. During the winter of 1392–3 he was making the necessary dispositions: providing husbands for his two eldest daughters by Donnina, who were of marriageable age, settling his debts, attempting to recover sums of money and other properties due to him and his wife in Milan and Bologna, and seeking the necessary safe conducts for his passage to England. Allowing for the possibility that he might die before his return, he made known to Thomas Coggeshall of Essex, by way of a nuncupative will, his wishes with regard to the disposal of his properties in England. These included the sale of the Leadenhall, and the foundation of chantries in the church at Sible Hedingham and in the priory of Castle Hedingham with some of the proceeds. In the event of Donnina's surviving him and coming to England, she was to be enfeoffed with his properties of Liston in Gosfield and Hostages in Sible Hedingham, to be held during her lifetime with reversion to their son John. Hawkwood's other properties in England were to be held by his feoffees until his son came of age, when they were to be surrendered to him.

A year later, in March 1394, 'weary by reason of his great age', and, as he himself asserted 'weighed down by infirmity' and wishing to return 'to his old country' (Florence, Archivio di Stato, Capitoli, reg. 1, fol. 164*v*), Hawkwood concluded an arrangement with the Florentine Signoria for the commutation of the pensions and other payments granted to himself and his family, and the disposal of his remaining possessions in the Aretino. It is clear that by this time Hawkwood was confined to his house at San Donato, and then to his bed. Five days later, during the night of 16–17 March, he died of a stroke. On the 20th the republic gave him a magnificent funeral, and his body was temporarily laid to rest in the choir of Santa Maria del Fiore (Florence Cathedral). It was left to Sir John's widow and his Florentine attorney to conclude the arrangements for the disposal of the patrimonial estate in Italy and the liquidation of the accounts between Hawkwood's heirs and the Signoria.

Two cenotaphs and two families Even before Hawkwood's death, in August 1393, the Signoria had determined that an elaborate marble tomb would be constructed in his honour, and early in 1395 they commissioned Taddeo Gaddi and Giuliano d'Arrigho to design and paint a monument in fresco on the north wall of the cathedral. In the event the tomb itself was never executed, following a request from Richard II that Hawkwood's body be returned to England, and on 3 June 1395 the Signoria acceded to this request. In 1436 the original fresco was replaced by another in *terra-verde* by Paolo Uccello, which represents Hawkwood mounted on an ambling charger, wearing a short doublet over his armour, a light cap or *berret* in place of the helmet worn in battle on his head, and carrying the baton of a captain of war in his right hand. In the early nineteenth century the painting was transferred to canvas and moved to the west wall of the church. As for Hawkwood's remains, there is no reason to doubt that they were returned to Sible Hedingham, and buried in the parish church of St Peter, where a noble cenotaph was constructed with the moneys raised by his feoffees. The tomb recess, and parts of the canopy with spandrels bearing carvings of a hawk and other animals in a wood, may still be seen; but the tomb chest itself has long since vanished. Unfortunately, there is no mention of the church in John Leland's account of his tour through England and Wales in 1535–43, and by the time John Weever published his *Ancient Funeral Monuments* (1631) the tomb had largely been destroyed. But both Weever and Philip Morant, in his *History and Antiquities of the County of Essex* (1768) were of the opinion that it had been paid for by the abundant money Hawkwood sent back to England, and Morant, who must have seen some old drawings, adds 'From the effigies on this monument it should seem that he had two wives' (Morant, 2.288).

Neither the date nor the fact of Hawkwood's first marriage has been established, but before his marriage to Donnina he had two sons, who may or may not have been legitimate, but who were only boys when they were held hostage in Bologna in 1376. He also had a daughter, Antiocha or Mary, who by March 1379 was married to Sir William Coggeshall, apparently the cousin of Sir Thomas, afterwards of Codham Hall, Essex, then in Hawkwood's service in Italy and residing in Milan. There may also have two other daughters: Fiorentina, who married a Milanese noble, Lancellotto del Mayno, and Beatrice, who married John Shelley, an ancestor of the poet. With Donnina Hawkwood had one son, John, and three daughters. The eldest daughter, Giannetta, was married on 7 September 1392 (aged fifteen) to Brezaglia, son of Count Lodovico di Porciglia, formerly captain of the Bolognese forces, subsequently *podestà* of Ferrara and, for a brief period after Hawkwood's death, captain of the Florentine forces. The second, Caterina, was married on 20 January 1393 (aged fourteen), to Konrad von Prassberg, a German captain who had served with Hawkwood. In March 1395 the

Signoria had envisaged that the son and the third daughter, Anna, who were both under age, would go to England with their mother, as Hawkwood and Donnina had clearly planned. However, it seems unlikely that mother and daughter ever made the journey, and Anna was subsequently married to Ambrogiuolo di Piero della Torre of Milan; but the son, John, went, and settled on the ancestral lands at Sible Hedingham. Naturalized in 1407, two years later he secured possession of the estates in Essex purchased by his father, which were then released by his principal feoffee, who in 1412 also obtained licence to found the two chantries his father had envisaged, where three priests were to incant the offices and pray for the souls of his father and two of his military companions, both from Essex, who had also died in Italy, namely John Oliver and Thomas Newenton. That no will has come to light in Italy is not surprising. Hawkwood had realized his estate there, and made settlements on those members of his family who were to remain behind when he left. Doubtless the greater part of the proceeds were sent to England, but too late to make the formal testamentary bequests, of which the essentials were conveyed orally to Thomas Coggeshall by way of one of Hawkwood's squires, John Sampson, in two of the earliest private letters in the English language to survive. The oral testament was drawn up in the form of an indenture on Sampson's arrival in England, which gave the necessary instructions to his feoffees, who had now become his executors.

Noblesse oblige? There can be no doubt that Hawkwood was one of the greatest military commanders of his day, but what distinguished him from other *condottieri* of his own generation, and others who came before him, was the loyalty that he showed to his principal employers, firstly Pisa and then, more notably, Florence. This was a quality also evident in his relations with the men serving under him, and with his compatriots from Essex. It gave a greater cohesion and *esprit de corps* to his own brigade than was common in other companies (including other English brigades) in the period. His failure to obey Bernabò Visconti's orders during the siege of Asti in 1372, and his desertion of Milanese service, may well have been connected with the position in which he then found himself, rather than a question of pay. For among the opposing forces attempting to relieve the town were other English contingents under his old comrade-in-arms, John Musard, an Englishman from Worcestershire who had risen to eminence and respectability in the service of Count Amadeus (VI) of Savoy, a founder member of the count's order of the Collar, and who had fought with him in France, notably at Pont-Saint-Esprit. Nor was money the reason for his switching from papal to Florentine service in April 1377. He may well have been disillusioned by the way the church leaders were conducting the war, especially after the massacres of significant numbers of the civilian population at Faenza and Cesena in March 1376 and February 1377 respectively, in which the forces under his command had played their part. He had in fact been courted by the Florentine republic for some time, and remained loyal to his employer; but the evidence suggests that the life pension promised to him, and the possibilities of a more permanent contract, if not a contract for life, were a tempting prospect, which held out new opportunities as well as greater stability and the chances of a family life. What he got, initially, was in effect a series of short-term contracts, of which some were a specie of *condotta in aspetto*, which allowed the republic to secure the first option of his services during periods in which he was free to serve elsewhere. It is against this background that his military career after 1377 must be interpreted.

Many questions remain to be answered about Hawkwood's life, not least why he should have wished to return to England when he had been so successful in Italy, was well married and powerfully connected, and probably prosperous enough, for all his protestations to the contrary; he was respected, even revered in governing circles in Florence, with whom he was on easy terms as he was also with some of her leading citizens. That he spoke reasonably fluent Italian seems certain, frequently attending meetings of the war council, the Ten of War, when he was in Florence, and arguing details of military policy with them. Was it some distant memories of youth that beckoned him to return to his native soil, and to Sible Hedingham in particular? For it was there that he early decided to extend the family patrimony, and that ambition never deserted him. KENNETH FOWLER

Hawkyns, Henry (*c.*1553–1630), civil lawyer and diplomatic agent, was the son of John Hawkyns and his wife, Ann Yelverton. He was connected to the leading East Anglian protestant families through his mother, and was probably born at Wisbech on property which she had acquired through her first marriage to Thomas Rede. Hawkyns matriculated at Peterhouse, Cambridge, in 1568, and graduated BA in 1571 or 1572 and MA in 1575. He became a fellow of Peterhouse in 1575 and served as a university proctor in 1583–4. In March 1584 he entered Gray's Inn, where many of his relatives were members, being admitted on the same day as fellow puritans Sir Richard Knightley and Humphrey Davenport. In November 1585 Hawkyns was given leave from Peterhouse to join the staff of Sir Thomas Cecil, newly appointed as governor of Brill. It is unclear how long he served as legal adviser in the Low Countries, but he was nominated to accompany Edward, eleventh Lord Zouche, 'for conference in learning' during his European tour in July 1586 (Walker, 1.267). Hawkyns's name may have been suggested to Zouche by mutual contacts at Gray's Inn.

Zouche's party left England in March 1587 and spent the next few years travelling through Germany, Switzerland, and Italy. Hawkyns apparently left Zouche and returned to England by March 1591, when Archbishop Whitgift wrote to the University of Cambridge and requested that he be made doctor of laws on the basis of his study in European universities, especially Padua, where he had been unable to take his degree for religious reasons. Hawkyns received the degree, but had to perform the requisite exercises in Cambridge. He now began to be 'employed in publick matters of state' (Hammer, 362) and was resident in London, relying upon Whitgift to prevent the forfeiture of his fellowship at Peterhouse on grounds of absenteeism. In 1594 Hawkyns visited Scotland, probably as an aide to Lord Zouche, who served as Elizabeth's special ambassador to James VI during the early months of the year.

In mid-1595 Hawkyns was chosen for a quasi-diplomatic role as gatherer of intelligence and formal representative of the earl of Essex in Venice. Approved by the queen, this venture was intended to co-ordinate intelligence gathering by Italian contacts of Antonio Perez, the exiled former secretary of Philip II of Spain, to recruit new spies in Italy, and to establish an open, but deniable, diplomatic presence for England. More covertly, the agent at Venice was also expected to burnish the earl's international reputation. Hawkyns was chosen for this position in some haste, after the sudden death of the original choice, Peter Wroth. Essex and Elizabeth clearly approved Hawkyns's nomination at the urging of Anthony Bacon, who oversaw the Venice operation on the earl's behalf. Bacon was a distant relative of Hawkyns, a fellow member of Gray's Inn, and regular correspondent and former student of Whitgift. Bacon presumably judged that Hawkyns's expertise and travel, together with his continuing correspondence with foreign contacts such as Richard Willoughby of Padua, made him an ideal choice for Essex's work.

Hawkyns was based at Venice from December 1595 until about March 1598. After an uncomfortable start (which helped to spark a feud between Bacon and Henry Wotton, one of the earl's secretaries), he proved an adequate co-ordinator of intelligence from Venice (Ungerer, vol. 2), but his resolute puritanism made him a less than ideal diplomat in a Catholic country. A complaint by the tutor of Francis Davison, who travelled through Venice in 1596, criticized Hawkyns, perhaps unfairly, for being both petty and excessively proud of his quasi-ambassadorial status (BL, Harley MS 296, fol. 114*v*). Hawkyns visited Vienna and Paris on his journey home to England. He finally resigned from Peterhouse in January 1599. Unfortunately his hopes of further advancement, as promised by Essex and Bacon, were dashed by the earl's declining influence and subsequent collapse into political oblivion. As a well-known partisan of Essex, Hawkyns was arrested after the earl's London insurrection in February 1601 and briefly placed in the custody of Alderman Lee. Although Hawkyns was a commissioner for the admiralty court in Middlesex in 1603, his career apparently never recovered from the fall of Essex and the death soon afterwards of Anthony Bacon.

Hawkyns's will indicates that he spent his old age in the company of influential London puritans such as William Gouge, Richard Sibbs, and John Davenport. His legacies included money for the poor of the French church in London, distressed protestant ministers in England and Germany, and towards the purchase of impropriated livings. He also provided £300 to build almshouses for the godly poor of Wisbech, £100 'for the erecting of twoe new Bible clarks' at Peterhouse, and various bequests (including his books) to members of the Hatcher family of Careby, Lincolnshire, to whom he was related by the marriage of his half-sister, Katherine Rede, the child of his mother's first marriage. Hawkyns apparently never married; he died in London in early December 1630 and was buried on 15 December at St Andrew's, Holborn.

Hawles, Sir John (*bap.* 1645, *d.* 1716), lawyer and politician, was baptized on 18 March 1645, the second son of Thomas Hawles (*d.* 1678) of The Close, Salisbury, Wiltshire, and

Elizabeth (*b. c.*1608, *d.* in or after 1671), daughter and heir of Thomas Antrobus of Heath House, Petersfield, Hampshire. Hawles's father was active in the neutralist Clubmen movement in 1645. Not much is known about Hawles's early career, apart from his education. He attended Winchester College, matriculated at Queen's College, Oxford, on 15 May 1662, and entered Lincoln's Inn on 10 February 1664, being called to the bar on 10 February 1670. No doubt it was his learning which prompted John Aubrey to describe him as 'an exceeding ingenious young man' (*Brief Lives*, 305) and led Anthony Wood to see him as 'a person of note for his profession, but ill-natured, turbulent and inclining to a republic' (Wood, *Ath. Oxon.*, 4.528–9). Hawles's concern with the liberty of the subject was first evinced in his *The English-Man's Right: a Dialogue Between a Barrister at Law, and a Jury-Man* (1680), which was republished frequently in the eighteenth century.

Hawles came to prominence on 25 March 1689 with his election to the convention for Old Sarum and the publication of his *Remarks upon the Trials of Edward Fitzharris*. He was very active in the House of Commons, both as a committee man and as a speaker. He made his first recorded speech on 8 May, and seems to have paid particular attention to events of the previous two reigns, such as the Popish Plot, the tribulations of Titus Oates, and the Indemnity Bill. He was critical of some of those employed by King William, noting that 'if King James II was to come in again, he could not make a better choice of some persons in employment' (HoP, *Commons, 1660–90*, 2.514). Professionally he prospered too, appearing eight times as counsel before the Lords during the Convention. However, Hawles could not find a seat at the 1690 election, losing at both St Ives and Banbury. In October 1691 he failed in his attempt to become recorder of London. In July 1694 Lord Keeper Somers, backed by the duke of Shrewsbury and the earl of Sunderland, recommended Hawles as a king's counsel specifically to engage him for the crown, should he be returned to parliament 'where he was much harkened to formerly' (*CSP dom.*, 1694–5, 246). He was duly appointed a king's counsel on 16 August 1694 and was immediately employed in the prosecution of suspected Jacobite plotters in Lancashire and Cheshire. He was appointed solicitor-general on 12 July 1695, and in the general election of October he was returned for Wilton. The Commons elected him chairman of the committee of privileges and elections and he was knighted on 28 November 1695. As solicitor Hawles undertook the prosecution of Sir John Fenwick by parliamentary act of attainder in 1696, and according to James Vernon spoke very well. His opposition to the earl of Ailesbury's motion for bail saw Hawles 'as fierce as a bull dog' and earned him a rebuke from the lord chief justice as one 'that was in time past so great a stickler for liberty of the subject' (*Memoirs of Thomas, Earl of Ailesbury*, ed. W. E. Buckley, 1890, 2.426). In the 1698 election he was returned for both Mitchell and Bere Alston (and never chose between them). Hawles was clearly a whig in politics and was perceived as a follower of the whig junto; as the ministry came under increasing pressure in this parliament Hawles was often called upon to defend royal policies such as the standing army and the conduct of the whig ministers over such matters as the grant to Captain Kidd. In 1700 he was listed as an adherent of Charles Montagu. It was rumoured in 1700 that Hawles would be made a judge, possibly to make room for Simon Harcourt as solicitor-general, but any ambitions in this regard were probably blocked by another of the junto, Lord Chancellor Somers, who believed that Hawles 'was not orthodox in criminal law, and would never let him be a judge' (HoP, *Commons, 1690–1715*). In the next two parliaments he sat for Truro and St Ives respectively.

Following the accession of Queen Anne, Hawles lost his office as solicitor-general and was not reappointed a queen's counsel. However, he was returned again to the Commons in 1702, sitting for Wilton. In this parliament he played a prominent role in the *Ashby* v. *White* case and in opposition to the tack of the Occasional Conformity Bill to the Land Tax Bill. In the election of 1705 he was returned for Stockbridge, and was again an active speaker in debates in the Commons. Early in 1706 he acted as defence counsel for James Drake and entered into an exchange with the lord chief justice in which he offered the opinion that it was 'uncertain what Revolution principles are' because they 'are new and have as yet obtained no fixed and general construction' (Kenyon, 103). In 1708 he was again returned for Stockbridge, although he retained his connection with Wilton, serving as recorder from 1706 to his death.

Hawles's last prominent role was as a manager of the impeachment of Doctor Sacheverell. He was one of those named to manage the impeachment in December 1709, and took a prominent part in the trial before the Lords in February–March 1710. However, Hawles was significantly out of step with his fellow whig managers when he seemed almost to invite the Lords to impose a light sentence, and when he agreed with Sacheverell that there was a supreme power in the state—although his view that it was in the queen, Lords, and Commons might not accord with Sacheverell's opinion of where it was located. Hawles did not stand at the election of 1710. He died on 2 August 1716, leaving an illegitimate son, presumably the John Hawles Johnson who, in 1733, was living at Monkton up Wimborne, in Cranborne parish, Dorset.

Hawley, Frederick [*performing name* Frederick Haywell] (1827–1889), actor and librarian, was born at Portsea, Hampshire, on 10 January 1827, the only son and eldest of six children of Benjamin Buck Hawley (1785–1838), a soldier, and Mary Anne Wyke (*d.* 1850). Frederick studied law in London, settling, with his wife, Emma Cox (*d.* 1898), at 17 Shepperton Gardens, Islington, London. Of their children, Wyke and John died young, Frederick became a scenic artist at the Prince's Theatre, Manchester, and a daughter took the stage name Miss Ingram. Hawley was admitted as a solicitor on 10 June 1852. He became secretary of the newly established Great Eastern Steamship Company, founded to build Brunel's SS *Great Eastern*, and established his office in Chancery Lane.

Shortly after this Hawley's interest in theatre led him to take the stage name of Frederick Haywell and to appear at Marylebone Theatre on 5 March 1855 as Florizel in *The Winter's Tale*. He toured to Paris with J. W. Wallack, then joined Samuel Phelps at the Sadler's Wells later in 1855, where he remained until 1860. His roles began with small Shakespearian parts including Philostrate (*A Midsummer Night's Dream*) and Polixenes (*The Winter's Tale*), progressing to Sebastian (*Twelfth Night*), Duke Frederick (*As You Like It*), and Albany (*King Lear*). In 1856 his Hortensio in *The Taming of the Shrew* was 'nicely played' (Phelps and Forbes-Robertson, 157). On 30 November 1859 he was Escalus in *Romeo and Juliet* played before Queen Victoria at Windsor Castle. In the following few years he appeared in Birmingham, Bath, Nottingham, Bristol, and Dublin, but continued to be associated with the legal profession at Montague, Leverson and Hawley of 12 St Helen's Place, London. Between 1870 and 1875 he acted at the Prince's Theatre, Manchester, in Shakespearian parts including the Prince of Aragon (*The Merchant of Venice*), as well as in comic afterpieces as he had done in his early days for Phelps's company. He then became stage manager for John Knowles at Manchester's Theatre Royal. His acting also took him to play Ford (*The Merry Wives of Windsor*) at London's Gaiety Theatre where two of his own plays, *Agnes of Bavaria*, dedicated to Louis, king of Bavaria, and his society drama, *Found*, were also produced.

On 17 May 1886 Hawley was appointed librarian at the seven-year-old Shakespeare Memorial Theatre, Stratford upon Avon. The library was dependent on donations for its growing collections and, with the aid of theatre governor Sir Theodore Martin, Hawley organized a meeting on 16 April 1887 at the Lyceum Theatre, London, under the chairmanship of Henry Irving, to promote the library. Following this meeting the Memorial Library Committee attracted gifts including 285 volumes from Dr F. J. Furnivall and many from overseas, which established the theatre's library as a centre for Shakespearian research. Hawley worked on an extensive catalogue of Shakespeariana, based on the collections of Birmingham's Shakespeare Memorial Library, the library of Shakespeare's birthplace, and the Memorial Theatre's collections. Despite constant ill health Hawley fulfilled his role as a scholar-librarian and continued to give occasional lectures and recitals in aid of the Memorial Theatre, and in 1888 wrote an anonymous defence of J. O. Halliwell-Phillipps. He died at home, 46 West Street, Stratford upon Avon, of pneumonia, on 13 March 1889, and was buried five days later in the family grave at Highgate cemetery, Middlesex.

Hawley, Henry (*bap.* 1685, *d.* 1759), army officer, baptized at St Martin-in-the-Fields, Westminster, on 12 January 1685, was the eldest child of Captain (later Colonel) Francis Hawley (1653/4–1692) and his wife, Judith, *née* Hughes (1658/9–*c.*1735). Francis Hawley was later killed at Steenkerke and, dying intestate, left his widow practically penniless. She, however, through the good offices of her husband's half-brother Brigadier-General Thomas Erle was able to secure from King William III commissions in the army for her three sons and a pension for herself. Henry Hawley's commission, dated 10 January 1694, was for an ensigncy in Thomas Erle's own regiment, later the 19th foot; he first saw service in the Low Countries in 1697 as his uncle's aide-de-camp. With the peace of Ryswick, Hawley was put on half pay, and Prince George of Denmark, out of regard for Hawley's father, appointed him page to his son William, duke of Gloucester. Although Hawley was placed an ensign with Sir Richard Temple's newly raised regiment on 10 March 1702, Prince George retained him in his household and secured for him instead a cornetcy in the Royal Horse Guards (11 September 1704). Hawley then, on 27 May 1706, purchased a captaincy in the 4th dragoons, his father's old regiment, and went with it to Spain.

During the peninsular campaign of 1707 and at the battle of Almanza, Hawley served once more as aide-de-camp to his uncle Lieutenant-General Erle, and did so again in the expedition to Cherbourg the following year. In 1709, after service at Ostend, Hawley rejoined his regiment in

Henry Hawley (*bap.* 1685, *d.* 1759), by David Morier, *c.*1748

Scotland. Having been a brevet major since 1 November 1707, he endeavoured to impose on the 4th dragoons the kind of unyielding discipline which in later life earned him the sobriquet the Lord Chief Justice, but which for the present saw him challenged to a duel by a fellow officer, whom Hawley killed. He fled to Berwick and in due course heard that he had been pardoned by Queen Anne; this was largely because she was aware that Hawley had been a favourite of her late husband, Prince George of Denmark. The following year, on 27 January 1711, Hawley succeeded in purchasing his majority, whereupon the lieutenant-colonelcy of the 4th dragoons fell vacant. Although Hawley lacked the funds to purchase this further step in rank, Queen Anne gave him £1000 and on 4 April 1711 he achieved his promotion. A brevet as colonel followed on 16 October 1712.

Between 1713 and 1715 Hawley's regiment served in Ireland before returning to Scotland to combat the Jacobite rising. Hawley took part in the drawn battle of Sheriffmuir, was wounded, but came away with the conviction that the Scottish highlanders could not withstand cavalry: it was a misapprehension which would cost him dear thirty-one years later at Falkirk. On 19 March 1717 Hawley was given command of the 33rd foot and in 1719 he took his regiment on the expedition to Vigo. The colonelcy of the 13th dragoons was conferred upon him on 7 July 1730 and promotions to the rank of brigadier and of major-general followed in 1735 and 1739. On 12 May 1740 he received the colonelcy of the 1st (Royal) Dragoons, which he retained for the remainder of his life.

In 1741 Hawley declined command of the expedition to the West Indies but sailed to Flanders the following year to serve with the pragmatic army. Promoted lieutenant-general on 30 March 1743, he voted in council of war for the advance across the Rhine and in June commanded the left of the second line of cavalry at the battle of Dettingen. He then served during the sterile Flanders campaign of 1744 and was present at the battle of Fontenoy in May 1745. He took command of the right wing of cavalry after Sir James Campbell was mortally wounded. Later that campaign, in October, Hawley successfully led a force to extricate the former British garrison of Ostend from Mons.

On 29 November 1745 Hawley left the Low Countries for England to join the army being assembled in the midlands to face Prince Charles Edward's highlanders. He was present at the skirmish at Clifton on 18 December, and two days later was appointed commander-in-chief in Scotland. An army numbering some 8000 men was subsequently assembled under his command at Edinburgh. Although Hawley considered his force to be over-marched and in poor condition, his disdain for the highlanders ruined his judgement. It never occurred to him, as his army advanced to raise the siege of Stirling Castle, that the highlanders would dare attack him; and when they did so at Falkirk on 17 January 1746 his surprise enabled the enemy to gain of him the advantage of both terrain and weather. Hawley's attempt to retrieve the situation by launching his three regiments of mounted dragoons in an unsupported attack against the highlanders was a disastrous failure. Over half his infantry, their cartridges drenched by the rain blowing in their faces, then proceeded to fly the field. Only the steadfastness of the troops on his right and confusion in the ranks of the highlanders saved Hawley's army from total defeat. In the days that followed Hawley had occasion to confirm his reputation as a fierce disciplinarian. The two sets of gibbets which he had erected in Edinburgh to punish Jacobite rebels were used instead to execute his own deserters. Not for nothing was he known as Hangman Hawley.

The government meanwhile took a generous view of Hawley's setback. When William, duke of Cumberland, arrived in Edinburgh on 30 January to take charge of the army it was impressed upon Hawley that he was not being superseded; indeed, he remained titular commander-in-chief in Scotland. As such he was at Culloden three months later when the Jacobite rising was finally crushed. Cumberland used the cavalry under Hawley's command first to outflank the highlanders and then to mount a bloody pursuit. Hawley was also prominent in the battle's brutal aftermath: 'if his Majesty would leave me the Foot here', he wrote,

> and the Parliament give the men a guinea and a pair of shoes for every rebell's head they brought in, I would still undertake to clear this country .... There's still so many more houses to burn and I hope still some more to be put to deathe. (March, 511–12)

In July 1746, however, Hawley left Scotland and relinquished his command to William Anne Keppel, second earl of Albemarle; he served the campaigns of 1747 and 1748 in the Low Countries.

Hawley had long coveted the governorship of a fortress and in 1748 he was given that of Inverness; the same year he was appointed a general officer on the staff in Ireland. He became governor of Portsmouth in July 1752. With the French invasion alarm of 1755, Hawley took command of the troops in Kent. James Wolfe, who had been Hawley's aide-de-camp at Culloden, was unimpressed: 'They could not make choice of a more unsuitable person, for the troops dread his severity, hate the man, and hold his military knowledge in contempt' (Willson, 280). Yet on the evidence of the military writings among his papers, the traditional view that Hawley was simply an unthinking martinet cannot be sustained, and certainly the duke of Cumberland, who in 1748 considered that 'Hawley is the first I know of in the whole Aly'd army for leading a line of cavalry' (NAM, Hawley MSS, ARC7411-24-112-8), retained his high opinion of Hawley throughout.

Hawley died unmarried at his residence at West Green, near Hook, Hampshire, on 24 March 1759. In his will, which achieved wide publicity because of its objectionable tone ('I hate all priests of all professions', and so on), Hawley left £5000 to his sister Anne, a life interest in his many properties to the widowed Elizabeth Toovey 'for many years my friend and companion, and often my careful nurse', and the reversion to Captain William Toovey of the Royal Dragoons, her second son whom Hawley adopted as his heir and who was obliged by the terms of the will to take Hawley's name (*GM*, 29, 1759, 157–9); it has been speculated that Toovey was Hawley's natural son (Atkinson, 146). Wealth at death houses in Hampshire, Middlesex, and Sussex; land in Hampshire; £7500 in bank annuities (1748): will, *GM*, 157–9

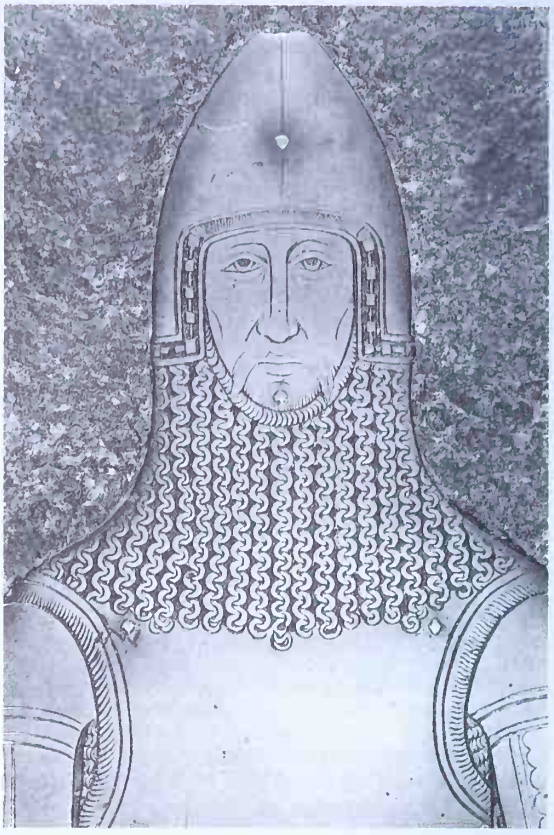
Hawley, Jack. *See* Pilkington, Lionel Scott (1830–1875), *under* Pilkington, William (1758–1848).

Hawley, John, the elder (*c.*1350–1408), pirate, merchant, and administrator, of Dartmouth, Devon, was the younger son of the first John Hawley who settled in Dartmouth some time before 1340. Hawley was elected mayor for the first time in 1374—the beginning of a career which would make him the richest and most important man in Dartmouth. He was in fact mayor a total of fourteen times between 1374 and 1401 and also an MP in the 1390s and in 1402. In the royal service he was involved in the collection of the customs, a job he did not finally relinquish until two years before his death, and escheator of Devon and Cornwall in 1390–91. The first of his two wives, Joan, may have been the daughter of Sir Robert Tresilian, the chief justice of the king's bench who suffered at the hands of the Merciless Parliament in 1388; certainly Hawley bought the forfeited Tresilian lands in Cornwall from the crown and also undertook the wardship of Elizabeth Tresilian, said to be an 'idiot'. It took a series of chancery actions against his tenants, however, and a royal order to the sheriff of Cornwall to secure Hawley's quiet possession of his lands.



John Hawley the elder (*c.*1350–1408), memorial brass

Hawley's prominence comes largely from his activities at sea off the coasts of Devon and Cornwall and in the channel. He was not only a merchant and shipowner but has been described as at best a privateer and at worst a ruthless pirate. The king would at times commission him to 'keep the seas', and at other times summon him before the council to make restitution to the foreign merchants whose goods and ships he and his men were accused of

seizing without any justification. No truce with France was in operation until 1389 and thus Hawley, with a relatively clear conscience, could send his ships to rove the channel as happened in, for example, 1379 and 1388. In 1395, on the other hand, two of his ships, the *Margret* and the *Petre* were in the fleet taking Richard II to Calais for his marriage with Isabella of France.

On the accession of Henry IV Hawley was briefly appointed lieutenant to the earl of Worcester, the admiral of England. The rolls, however, also record an increasing volume of furious complaints, largely by Spanish and Italian merchants, that Hawley's men had made off with their goods on the high seas and taken them into a west-country port. The value of these cargoes could be high; Richard Garner from Piedmont spent years trying to get compensation for the loss of a cargo of wine valued at £398 and one of olive oil valued at £210. The king, it is thought, was prepared to turn a blind eye to the losses of French and Breton merchants as a matter of policy but did not wish to cause unnecessary offence to Italians, Flemings, and Spaniards. Hawley, and even more his seamen, were not always as careful as they might have been about the ownership of the goods and ships they plundered. In late 1406 Hawley's habit of ignoring those royal orders that reached him in the west country caught up with him, and he was arrested and confined in the Tower of London for six weeks until February 1407. This was a severe punishment for an elderly man who, in 1404, had explained to the king that he could not come to London to sort out the ransoms of prisoners taken in an abortive Breton attack on Dartmouth because pains in his leg made riding impossible. He died on 30 December 1408 and was buried between his wives, Joan (*d.* 12 July 1394) and Alice (*d.* 7 Jan 1403), in the chancel of St Saviour's Church, Dartmouth, which he himself had founded.

This did not mean that the name of Hawley was no longer heard in the channel ports; his only son, **John Hawley the younger** (*c.*1384–1436), mariner and administrator, had served the king since 1400 and in many ways followed in his father's footsteps. He had a long career as an MP between 1410 and 1432, was escheator in Devon and Cornwall from 1402 until his death, and a JP for Cornwall from 1422 to 1431. All this did not prevent him from both taking part in royal expeditions to keep the seas and also seizing alien merchant ships when occasion offered. In 1419 and 1420 he was at sea with Sir Hugh Courtenay on royal business; the 1420 expedition is particularly notable as among the vessels engaged was Henry V's enormous *Gracedieu*. Hawley had earlier in 1416 presented the king with the balinger *Cracher* for his own fleet, perhaps to mollify him over the trouble caused when his men took the *Gracedieu* of Brittany only to find the cargo was the property of a Bristol merchant and covered by a safe conduct issued by Henry IV. The *Cracher* was sold in 1422 by the crown to John William of Kingswear, one of Hawley's shipmasters and also master of the great ship *Gracedieu* for the king, showing how narrow was the gap at this date between royal and private service. In 1427 Hawley came close to arrest by the council when he was involved in the seizure of the goods and ship of a Scottish merchant, valued at £220; the resulting court case hinted at some readiness by Hawley to conspire against the law even if he was a JP. He died on 8 May 1436 leaving a son, Nicholas, and a daughter, Elizabeth. SUSAN ROSE

Wealth at death John Hawley the younger; estates valued at £69 10*s.* in Devon and £54 2*s.* 8½*d.* p.a. in Cornwall

Hawley, John, the younger (*c.*1384–1436). *See under* Hawley, John, the elder (*c.*1350–1408).

Hawley, Joseph (1723–1788), lawyer and revolutionary leader, was born on 8 October 1723 in Northampton, Massachusetts, the first of two sons of Lieutenant Joseph Hawley (1682–1735), a trader and cattle drover, and Rebecca Stoddard (1686–1766). After attending local schools and being tutored by his first cousin Jonathan Edwards, Hawley enrolled at Yale College in 1739 and graduated BA in 1742. The Great Awakening, a religious revival promoted by Edwards since the mid-1730s that had contributed to the suicide of Hawley's father in 1735, peaked during Hawley's college years and influenced his later life. Having left Yale he studied theology for several years before serving as chaplain to the 9th Massachusetts regiment, raised for the successful assault on the French fortress at Louisbourg in 1745. On returning to Massachusetts he began to study law. His choice of a secular occupation accompanied a turn towards Arminianism, the moderate theological position acknowledging the role of human moral agency in attaining salvation that Edwards condemned.

On completing his legal studies Hawley assumed leadership of the movement in Northampton that led to the expulsion of Edwards from his pulpit in 1750. Hawley subsequently apologized to Edwards for his role in the dismissal and in 1760 he wrote an agonized letter of contrition to a minister who had participated in the church council hearing the case. Whatever the price to his conscience the Edwards controversy launched Hawley's political career. Northampton elected him a selectman in 1747, a position he continued to occupy until the end of his life. In 1750 he was appointed justice of the peace, and in 1751 he served the first of many terms as the town's representative in the provincial legislature. During the Seven Years' War he was commissioned major in the Massachusetts militia and was active in organizing the military effort of that colony's western territories. In 1760 he was admitted to plead before the colony's superior court.

During the ensuing decade Hawley emerged as western

Massachusetts's foremost revolutionary leader, similar in stature to Samuel Adams in eastern Massachusetts. Doing so required neutralizing the political influence of the loyalist-inclined Williams family, to whom Hawley was related. His 1767 defence of Seth Warner, accused of riotous behaviour during 1765, established his revolutionary credentials in the west. Though the jury had been instructed by the judges to find Warner guilty Hawley managed to sway it in Warner's favour by arguing that the province had been reduced to a state of nature by the Stamp Act. The superior court temporarily disbarred Hawley for libelling it in his account of the case printed in the *Boston Evening-Post* (3 and 6 July 1767).

Hawley's growing prominence enhanced his stature in the provincial legislature, where he took the lead in ensuring that any measure to compensate victims of the Stamp Act riots be accompanied by a general indemnity. Subsequently the house of representatives appointed him to the committee that drafted the Massachusetts circular letter of 1768 initiating the first non-importation movement. During a house debate in 1769 Hawley was the first openly to question parliament's right to legislate for the colonies. In 1772 the house adopted Hawley's resolutions condemning, as a violation of the province's charter rights, the crown's payment of the governor's salary. And in 1773 he was a member of the committee that rebutted the constitutional plea of the governor of Massachusetts for parliamentary supremacy in America.

Parliament's Coercive Acts of 1774 led Hawley to espouse independence. Though he declined to represent Massachusetts in the continental congress he drafted a memorandum for the province's delegation, entitled 'Broken Hints' (1774), which argued that there was no alternative to war and outlined the steps congress needed to take in order to secure America's freedom. When royal authority collapsed in Massachusetts he helped to persuade the provincial congress to resume the charter of 1629. While his primary concern remained nurturing the revolutionary coalition in Massachusetts, he was an early champion of military operations against Quebec and recognized that independence would require the colonies to vest supreme authority in congress.

A crippling depression forced Hawley, in 1776, into prolonged retirement from all but local affairs. He re-emerged briefly to shape Northampton's response to the proposed Massachusetts constitution of 1780, urging that all adult males be eligible to vote for the governor and town representatives. Though he objected to other features of the constitution of 1780 he vigorously supported the government's authority in its western territories. He was active against the insurgency led by Samuel Ely in 1782 and would have exerted himself against Shays's rebellion in 1786, had health permitted. He died on 10 March 1788, survived only by his childless widow, Mercy Lyman (1729–1806), whom he had married on 30 November 1752, much against his mother's wishes, and one adopted child. Hawley, Sir Joseph Henry, third baronet (1813–1875), racehorse owner, was born in Harley Street, London, on 27 October 1813, the eldest son in the family of three sons and seven daughters of Sir Henry Hawley, second baronet (1776–1831), and his wife, Catherine Elizabeth (*d.* 1862), daughter of Sir John Gregory Shaw, bt. In 1832, following his succession to the baronetcy, he became a cornet in the 9th lancers and in the following year a lieutenant. After leaving the army in 1834, he sailed the Mediterranean, visiting Greece, Sicily, and Morocco in his yacht before taking up temporary residence in Florence. On 18 June 1839 he married Sarah Diana (*d.* 1881), third daughter of General Sir John Crosbie of Watergate, Sussex, with whom he had two daughters. While in Italy he took up racing, and on his return to England in 1844 he registered his famous cherry and black cap racing colours. He became a successful owner, winning eight classics—including four Derbys—with eight different horses. In 1851 he retired temporarily from the turf in pique at the hostility in racing circles following the Doncaster Cup, when many believed that he had infringed the rules of racing by running two horses in which he had a part share.

In 1870 Hawley turned his attention to turf reform. He advocated the idea that no two-year-old racing should occur before 1 September to reduce the risk of breakdown to these immature animals. However, the Jockey Club banned it only before 1 May and even this restriction was rescinded within four years because of special pleading by the Lincoln and Northampton spring meetings. Hawley found even less support for his suggestions to make the Jockey Club more representative of racing interests. This was partly because he lacked tact and patience in putting his case, but was also owing to the implacable opposition of Admiral Rous, doyen of the Jockey Club. Rous hated tobacco, heavy gambling, and most jockeys; Hawley smoked, on at least three occasions won over £70,000 in bets, and frequently gave large presents to his winning riders. He retired from the turf on 19 July 1873, selling his racing stud for 23,575 guineas.

Intelligent, well read, and a bibliophile, Hawley created a substantial library at Leybourne Grange, near Maidstone, the family estate from before the Norman conquest. He died at 34 Eaton Place, London, on 20 April 1875, and in the absence of a male heir his title and estate passed to his brother. WRAY VAMPLEW

Wealth at death under £90,000: probate, 15 June 1875, *CGPLA Eng. & Wales*

Hawley, Susan [*name in religion* Mary of the Conception] (1622–1706), Sepulchrine prioress, was born in Brentford, Middlesex, to Thomas Hawley and his wife, Judith, *née* Hawkins. She decided aged nineteen that she wanted to found a religious house for Englishwomen in Flanders. She was clothed at the Convent of the Canonesses Regular of the Holy Sepulchre (Sepulchrines) at Tongres (Tongeren) in 1641 with the name in religion of Mary of the Conception. Shortly afterwards, with two other English nuns, she set out to establish an English house of that order at Liège. Gradually others joined them from England until after seven years there were twenty-two sisters in total. Susan Hawley was elected the first prioress in 1652. Disorders in the town of Liège led to concern about the privacy and safety of the nuns. They applied to the prince-bishop for new premises and were granted occupation of property in the faubourg d'Avroy previously inhabited by a long established local religious order which had fallen into decay; a transfer initially unpopular with local people. The sisters began thorough repairs and the construction of a new church, while increasing numbers led them to start building new accommodation funded by an unexpected legacy. Progress on the work was paid for by careful management of existing resources supervised by the prioress. Several items of donated silver were sold in London to raise cash for the building works and by 1660 the new building was complete. The sisters contributed to their own upkeep by selling items they had made or providing services locally. According to the account books they made surplices and pairs of woollen gloves, they washed, starched, and pleated church clothes, and sold barrels of beer and seeds from the garden.

At the same time as the work on practical construction continued Susan Hawley led her community in establishing a reputation for zeal in regular observance of divine office, which was the primary aim of the canonesses. They laid special emphasis on singing the glory of Christ's resurrection from the sepulchre; from this they derived their name, the Sepulchrines. In Susan Hawley's account of the order attention is drawn to a special category of nun which she said was unique to the canonesses: young gentlewomen who were chronically sick or disabled and thus unable to keep the rigours of daily office. They were not to have a voice in chapter, nor to be allowed to hold senior positions, but their situation could be reviewed should their health improve (Hawley, 51).

From early days the convent contained a girls' boarding-school since educational work was central to the existence of the canonesses. The first entries in the account books are for 1651 which noted the receipt from pensioners of 1409 florins for the year. Susan Hawley explicitly stated that the girls who entered the school were under no obligation to join the order. The curriculum aimed to provide the pupils with the skills and qualities appropriate for young gentlewomen including writing, reading, needlework, French, and music at a cost of £20 per annum.

As prioress for over forty years, Susan Hawley led her convent through the initial challenging period of the foundation and major building works, through the consolidation, continuing to attract new recruits from England, and through the difficult periods when financial concerns threatened to overwhelm the existence of the convent. She provided leadership both in the management skills needed to build the convent, securing the necessary permits, negotiating with builders, and supervising the financial arrangements, and at the same time providing spiritual and pastoral direction for the sisters under her care. The reputation of the house spread, helped partly by her book *A Brief Relation of the Order and Institute of the English Religious Women at Liège* (1652), published to encourage recruitment to the convent: some copies contained directions for travel from England to Liège. In 1663 Susan Hawley founded a confraternity of the Holy Sepulchre, erecting a chapel in Liège where prayers could be said. It became popular with local people and was thronged on feast days. As prioress she was a benefactor of the convent in her own right. In 1667 she provided 24 florins for a recreation to celebrate her silver jubilee, in 1669 she gave a silver basin and two cruets, followed by substantial sums of money in the 1680s, and in 1692 heavy silver candlesticks and a feast to mark her golden jubilee.

In January 1698 Susan Hawley petitioned for permission to retire on the grounds of age and ill health and her last years she spent quietly in continual prayer. The convent recorded that she made a good death in 1706. During her last illness her conversation was always on the happiness of her vocation and the great desire she had to die so that she could possess God. Susan Hawley had established the first English priory of the order which remained in Liège until driven out by the French Revolution and continued thereafter at New Hall in Chelmsford.

Hawley, Thomas (*d.* 1557), herald, was groom porter of the chamber to Queen Margaret of Scotland, daughter of Henry VII, from her marriage in 1503 until 1508. Although said to have been nominated Rose Blanche pursuivant in

the reign of Henry VII, he is merely called 'messenger of the chamber' in Henry VIII's patent of 26 August 1509 appointing him Rouge Croix pursuivant. In the latter capacity he began his lifelong career as a diplomat, employed especially on Scottish affairs. He accompanied the earl of Surrey on the campaign of 1513 against James IV; he was detained prisoner when delivering the English challenge before the battle of Flodden but released before the fighting began and carried news of the victory to the English court. His good judgement is noticed in contemporary chronicles and in the ballad of 'Flodden Field'. On 1 November 1514 he was created Carlisle herald, and on 30 January 1515 the king granted him an annuity of 20 marks for his services at Flodden.

As Carlisle herald Hawley also performed the ceremonial and other duties of an officer of arms. On 16 June 1530 he was appointed deputy to Thomas Benolt, Clarenceux king of arms, and undertook a visitation on Benolt's behalf of London churches from 28 July to 3 September 1530 'to reforme all false armorye & Armes devysed without auctoritie' (Wagner, *Heralds and Heraldry*, 9). His record of the occasion is the earliest extant narrative of heraldic visitation. In 1531–2 he went on a series of diplomatic missions to Scotland. By patent dated 15 June 1534 he was made Norroy king of arms and principal herald in the northern part of England with a salary of £20 a year, but on 2 August 1534, he agreed to make over his power in the north to Sir Thomas Wriothesley, Garter king of arms, for half the profits. This arrangement did not prevent Hawley's subsequently engaging in a long-running dispute with Garter over the privileges of their respective offices. On 19 May 1536 Hawley was appointed Clarenceux king of arms and principal herald of the southern, eastern, and western parts of the kingdom, his patent expressly confirming Clarenceux's authority to grant arms.

At the time of the Pilgrimage of Grace, Hawley was employed by the duke of Norfolk in treating with the northern rebels; in December 1536 he proclaimed the king's pardon at Wakefield, Halifax, and other towns, and he was present in the following year at the execution of Robert Aske and fellow leaders. He also with colleagues gave evidence against Thomas Miller, Lancaster herald, who was hanged at York in August 1538 for supporting the rebellion. Miller's counter-accusations against Hawley—including the claim that his chief delight was gaming ('hassardey')—vividly demonstrate the strife prevailing within the College of Arms at this period. Hawley was successful in retaining his position under successive Tudor regimes, any harm done by his initial support for the cause of Lady Jane Grey being countered by his assistance in pacifying the rebellion of Sir Thomas Wyatt. Visitation commissions were issued to Hawley on 2 July 1541, 28 June 1552, and 19 March 1555, but the only evidence of his acting upon them is contained in a later heraldic visitation of Essex, Surrey, and Hampshire (BL, Add. MS 7098). This purports to include copies of entries made by Hawley during 1553, suggesting a visitation perhaps begun by him but not completed. Original grants of arms, several of them containing portrait initials (such as GL, MS 21734), survive in the British Library, the College of Arms, and the London Guildhall.

Hawley died at his house in the Barbican, London, on 22 August 1557 and was buried on the 24th with elaborate ceremony in the church of St Giles Cripplegate. He is not known to have married, and by his will, dated 21 and proved 25 August 1557, he appointed William Harvey, Norroy, his executor, and gave him all his books (presumably the substantial library he had inherited from his predecessor, Clarenceux Benolt). The will was subsequently contested and administration granted on 27 June 1558 to his kinsman John Skipwith. ANN PAYNE

Haworth, Adrian Hardy (1768–1833), botanist and entomologist, was born on 19 May 1768 at Hull, a younger son of Benjamin Haworth (1728–1790), merchant and landowner, and his wife, Anne Booth (*d.* 1784). He belonged to a wealthy and well-established family who resided at Hullbank (or Haworth) Hall, near Hull. He was educated at Hull grammar school and was then articled to a solicitor, but renounced the legal profession on completion of his articles and settled at his family's dower house at Cottingham, near Hull, where he began to study natural history. He was probably inspired by the example of Gilbert White in recording his observations of the natural history and antiquities of Cottingham and its vicinity, but this work was never published. During his first period there he developed special abilities in the study of plants growing in the wild; the careful observation of live growing plants

(as opposed to dried specimens) became his forte, and the reason for his lasting reputation.

After his father's death, Haworth's elder brother, Benjamin Blaydes Haworth (1763–1836), who inherited the family estates, settled a fixed income upon him sufficient to allow him to continue his studies in comfort. In 1792 Haworth married Eliza Sidney Cumbrey (1768/9–1803); they had four children. Following their marriage he moved to Little Chelsea, a favoured location of gardeners, horticulturists, and botanists, remaining there until 1812. He became a fellow of the Linnean Society in 1798, founded an aurelian society, which never reached twenty members, about 1802, and on its dissolution in 1806 took the lead in establishing the Entomological Society of London, which was afterwards merged in the zoological club of the Linnean Society.

Haworth's first significant publication was his botanical description of pubescent poison ivy, *Rhus toxicodendron*, included in J. Alderson's *An Essay on the Rhus toxicodendron* (1794). This was followed by one of his most important works, *Observations on the Genus Mesembryanthemum* (1794–5), in which he distinguished over 200 species, where previously only about 70 had been clearly described. For his work on *Mesembryanthemum* (as well as on other succulent plants) he made much use of the Royal Botanic Gardens, Kew, where a large number of specimens were newly available as a result of Francis Masson's plant hunts in South Africa. He was also assisted by a number of private nurseries around London.

During his stay at Chelsea, Haworth was also active in entomology, going on extended walking tours around England, alone and with friends, collecting specimens. This work resulted in his *Lepidoptera Britannica* (1803–28), which was the first comprehensive work on English butterflies and moths and remained the standard work on the subject for fifty years. He is, however, probably best known for his *Synopsis plantarum succulentarum* (1812, 2nd edn 1819), where his facility at the careful distinction of small differences in growing plants came out at its strongest, even if the validity of his taxonomic procedures was open to criticism. This work was still of interest to specialists long after his death, and his various works on succulent plants were reprinted in five volumes as Haworth's *Complete Works on Succulent Plants* in 1965.

Following his first wife's death in 1803 Haworth twice remarried, and had children from each marriage. In 1812 he moved back to Cottingham, but in 1817 returned to London where he went to live at 10 Salamanca Terrace, Church Street, Queen's Elm, Little Chelsea. There he established a private natural history museum and botanical garden; by 1833 his collection numbered 40,000 insects, 20,000 specimens in his herbarium, 1600 natural history books in the library, and 500 plants in the garden. He was remarkably amiable and easily approachable, and became something of a celebrity, consulted by the managers of provincial natural history museums and visited by foreign botanists. In 1833 he was struck by cholera; the symptoms appeared suddenly while he was working in his garden during the afternoon of 23 August and he died the following day, one of the last of the 22,000 victims of the epidemic that had begun spreading in Britain in 1829. His collections were sold after his death, part of his herbarium being incorporated in the Fielding herbarium at the University of Oxford.

Haworth, Sir (Walter) Norman (1883–1950), chemist, was born on 19 March 1883 at White Coppice, near Chorley, Lancashire. The second son and fourth child of Thomas and Hannah Haworth, he came from a family of distinguished business and professional men. After attending the local school until the age of fourteen, he entered the Rylands linoleum factory where his father was manager. There he gained a knowledge of the use of dyestuffs which in turn led to an interest in chemistry. Despite active discouragement from family and friends, he studied the subject under a private tutor in Preston, passed the entrance examination and entered Manchester University in 1903. There he took the honours course in chemistry, graduating with a first in 1906. He was a pupil of W. H. Perkin, under whom he began research on the synthesis of terpenes. After three years' work on this subject he was awarded an 1851 Exhibition scholarship, which he elected to hold at Göttingen, where he worked with Otto Wallach. After only one year of study he was awarded a PhD; for the second year of his scholarship he returned to Manchester as a research fellow to continue his work on the terpenes.

In 1911 Haworth was awarded the Manchester DSc degree and appointed senior demonstrator in the chemistry department of the Imperial College of Science and Technology. The following year, he moved to a lectureship in chemistry at the University of St Andrews. There he came into contact with a vigorous research school, headed by Thomas Purdie and James Colquhoun Irvine, which was engaged in investigating the structural chemistry of carbohydrates, especially sugars. Gradually Haworth abandoned terpenes to concentrate on carbohydrates—work interrupted by the First World War.

In 1920 Haworth was elected to the chair of organic chemistry at Armstrong College, Newcastle upon Tyne, in the University of Durham. The following year he became head of department. Despite limited resources he managed to sustain his own research and to attract an increasing number of postgraduate researchers to join him. In 1922 he married Violet Chilton Dobbie, the daughter of Sir James Johnston Dobbie. The couple had two sons, James and David.

In 1925 Haworth was selected to succeed Gilbert Morgan as Mason professor of chemistry at Birmingham University. He took with him from Newcastle a large nucleus of

Sir (Walter) Norman Haworth (1883–1950), by Walter Stoneman, 1943

research students and rapidly developed what was probably the most important school of carbohydrate chemistry in the world, attracting researchers from many other countries. Haworth established a reputation among his collaborators as an enthusiastic, efficient, and inspired leader, as well as sustaining a constant and rapid flow of papers throughout his tenure. In 1929 he published a classic text, *The Constitution of the Sugars*. Among the foremost achievements of his research school were the elucidation of the structures of simple and complex saccharides, work on the chain structure of cellulose, and research into the nature of biologically important bacterial polysaccharides. It was also responsible for the structural determination and synthesis of vitamin C. This was the first chemical synthesis of a vitamin, and it made large-scale production possible. This work, much of it carried out in collaboration with E. L. Hirst, and published in 1933, contributed to the award of the Nobel prize for Chemistry (shared with Paul Karrer) in 1937.

Although Haworth took on many responsibilities within the university—he was dean of the faculty of science (1943–6) and vice-principal (1947–8)—he maintained a range of extramural activities. He had close contacts with industry both directly and through the Society of Chemical Industry, which he joined in 1916 and whose jubilee memorial lecture he delivered in 1938. He played a part in building up the Rubber Producers' Research Association and served on the Colonial Products Research Council from its foundation in 1943. During the Second World War he was a member of the MAUD Committee which oversaw the early stages of the British atomic bomb project, and directed research, in collaboration with ICI, into chemical problems associated with the project, in particular the preparation of highly purified uranium and the search for volatile compounds of the metal. After the war he joined the Atomic Scientists' Association and was a signatory to the memorandum on international control of atomic energy submitted to the United Nations. He chaired the Chemical Research Board of the Department of Scientific and Industrial Research from 1947.

Haworth's achievements were honoured around the world. Elected a fellow of the Royal Society in 1928, he was awarded the Longstaff medal of the Chemical Society (jointly with Irvine) in 1933, and the Davy (1934) and the royal (1942) medals of the Royal Society. At the meeting of the British Association in Norwich in 1935 he presided over the chemistry section. He received honorary degrees from Queen's University Belfast, Oslo, Zürich, Cambridge, and Manchester, and was an honorary member of the academies of science at Haarlem, Brussels, Munich, Vienna, Finland, and Dublin, and of the Swiss Chemical Society. He was president of the Chemical Society in 1944–6 and vice-president of the Royal Society in 1947, the year in which he was knighted.

After his retirement in 1948 Haworth represented the Royal Society at the seventh Pacific science congress, which was held in New Zealand in 1949. He took the opportunity to visit and lecture at a number of universities in Australia and New Zealand. Less than a year after his return he suffered a heart attack and died at his home, Thurcroft, in Barnt Green, Birmingham, on 19 March 1950. He was survived by his wife.

Wealth at death £21,970 17*s.* 9*d.*: probate, 6 Sept 1950, *CGPLA Eng. & Wales*

Haworth, Samuel (*b.* 1659/60), empirical physician, was born probably in St Albans, Hertfordshire, the son of William Haworth (*d.* 1703), and his first wife, Mary (*d.* 1661). William Haworth, initially vicar of St Peter's in St Albans, was ejected from his living and became a Congregational minister; he wrote a series of pamphlets during a fierce dispute with Hertfordshire Quakers during the 1670s. On 24 April 1677 Samuel Haworth was admitted to Sidney Sussex College, Cambridge, as a sizar, at which time it was

noted that he was seventeen years old; there is no record of his taking a degree.

In January 1680 Haworth was lodging in Sighs Lane, near Budge Row, London, and practising medicine. In October he was granted a licence to practise by the Royal College of Physicians, and during the same year he published (in Greek) *Anthropologia*, a discourse on anatomy which was full of pious sentiments and which demonstrated his wide reading in ancient and modern medical authorities but which betrayed little evidence of practical experience in dissection. It concluded by advertising for sale 'excellent and effectual Tablets' (1680, p. 212) to preserve health and an 'approved Tincture' (p. 215) against scurvy. The volume was dedicated to Sir John Hartopp (1637–1722), the dissenting whig and exclusionist MP who had acted as his father's patron; however, Hawarth soon began to move in court circles. He had begun treating patients suffering from consumption using a secret nostrum and this apparently attracted the interest of Charles II, who commanded that he should try his cure upon Kennedy O'Brian, one of the guards. Haworth was evidently successful and his practice prospered.

In 1682 Haworth spent time practising in Paris, but announcements in the *London Gazette* indicate that he was now usually resident in Brompton, near Kensington, to the west of London (*LondG*, 12–15 June 1682; 19–23 Oct 1682) The following year Haworth dedicated *A Description of the Duke's Bagnio* to the duke of York, thanking him for the favour which he had shown him. This pamphlet describes a recently opened Turkish bath and medicinal establishment in Covent Garden in which Haworth and Sir William Jennens (*fl.* 1661–1690) were involved. However, his practice, based as it was on secret remedies, was controversial. In his *True Method of Curing Consumptions* (1683) he complained of many attacks made upon him by rival practitioners. Haworth's name surfaced in debates within the Royal College of Physicians over empirical practice during the same year. In August 1683 he informed the college that he had been awarded the degrees of MD from Paris and MB from Cambridge. (His name does not appear in degree lists of the latter.) The following month the college ordered one of their fellows, Andrew Clench (*d.* 1692), to desist from associating with Haworth, and in September 1683 Richard Darnelly (*d.* 1733) accused Haworth of practising illegally. There is no record that the college took any action against him and no further trace can be found of Haworth's life. MARK S. R. JENNER

(John) Michael [Mike] Hawthorn (1929–1959), by Barham, 1955

Hawthorn, (John) Michael [Mike] (1929–1959), racing motorist, was born in Mexborough, Yorkshire, on 10 April 1929, the only son of Leslie Hawthorn (*d.* 1954), motor engineer and racing motor cyclist, and his wife, Winifred Mary Symonds. Educated at Ardingly, he achieved no great success as a sportsman, being 'indolent by nature'. His parents moved to Farnham in Surrey when his father became involved in motor cycle racing at Brooklands, and when Mike left school in 1946 he was apprenticed to Dennis Brothers, the commercial vehicle builders, in Guildford. Following the wish to join his father in business and become an automobile engineer, he went on from his apprenticeship to Kingston Technical College and then the College of Automobile Engineering at Chelsea. The result of his efforts in this direction only made him certain that he would find his métier in the driving seat rather than at the drawing-board. Not unnaturally, his first interest as a young man was motor cycles and it was in motor cycle sport that the name of Mike Hawthorn first came to the public notice—it was always Mike, a diminutive which fitted his character absolutely; but despite his modest success as a motor cyclist, his parents were understandably anxious to get him on to four wheels, and as soon as was practicable his father provided him with a small car.

For a young man to break into motor racing—as a professional—has always been among the least easily satisfied of dreams, but Mike had a great ally in his father, who was not only keen to see him do it, but wealthy enough to help him toward this end. During 1951 he had his first racing season and achieved some success in a number of club races with a pre-war Riley. His first big chance came early in 1952, when an old friend of the family purchased one of the new Cooper-Bristols with a view to entering it

in international races. He invited Hawthorn to be the driver.

Hawthorn's first appearance with this car was at Goodwood on Easter Monday 1952, when in the opening race he won the Lavant cup. He proceeded to win the Chichester cup, in which he beat a strong field that included the reigning world champion, Juan Fangio, and came a highly creditable second in the main race, the Richmond trophy. These three drives, in a single day's racing, changed his life: he became an overnight sensation and the subject of intense media interest, which afterwards never left him.

Hawthorn's continued success in that year was rewarded by an invitation from Enzo Ferrari to drive for him in the following season. It was during 1953, while he was still a comparatively new boy, that he won the French grand prix at Rheims from Fangio by a matter of seconds only. The sheer dash and courage he displayed on this occasion endeared him to everyone. For a part of this race the cars travelled three abreast along ordinary French roads, approaching speeds of 160 m.p.h., and Hawthorn later recalled that it was 'a bit frightening to see the nose of one of the other cars come alongside, then drop back again as the driver decided he could not make it before the next corner' (Hawthorn, *Challenge Me*, 76). He also acknowledged Fangio's sportsmanship during their tremendous battle:

> We would go screaming down the straight side-by-side absolutely flat out, grinning at each other, with me crouching down ... trying to save every ounce of wind resistance. We were only inches apart and I could clearly see the rev counter in Fangio's cockpit. (Hawthorn, *Challenge Me*, 77)

At the end of the year he found his successes had brought him the coveted gold star of the British Racing Drivers' Club.

The year 1954 was an ill-fated one for Hawthorn. In February the popular press picked up the story that he had not been called up for national service, after a question about him was raised in parliament. Hawthorn's father publicly blamed himself for a misunderstanding with the authorities concerned, but there is no doubt that his son, having established himself as a racing driver, was reluctant to serve. Once he turned twenty-six, in April 1955, he would no longer be eligible, and until then he clearly meant to stay abroad racing and return to Britain as seldom as possible. The *Daily Mirror* was prominent in the press campaign to have Hawthorn called up and devoted three editorials to the subject, one headlined 'Catch this dodger'. Then, on 22 March, he crashed in the Syracuse grand prix and was very badly burnt, and would probably have lost his legs but for the devoted nursing of some nuns in Sicily.

Hawthorn was moved to hospital in Rome, where he was to remain for some time. The lasting effect of these burns would eventually rule him out of nationai service, though Hawthorn proved determined to drive again as soon as possible, and it was while *en route* for the Le Mans twenty-four-hour race in early June that he learned of the death of his father in a motor accident. On his return to Britain for the funeral the *Daily Mirror* renewed its demand for his immediate call-up, and the attitude of officialdom can perhaps be gauged from the fact that a policeman served him with three summonses for minor motoring offences just hours before the service itself. He nevertheless bounced back to win the Spanish grand prix at the end of the year.

In 1955 Hawthorn drove briefly for Tony Vandervell, but the Vanwall team was then having difficulty with its cars and Hawthorn soon left, frustrated by their unreliability. In June he scored a victory for Jaguar at Le Mans, but this success was overshadowed by a tragedy for which many on the continent held Hawthorn responsible. During the race he had braked suddenly approaching his pit lane, causing the Austin-Healey of Lance Macklin behind him to swerve into the path of Pierre Levegh's oncoming Mercedes-Benz. The ensuing crash resulted in the death of Levegh and some eighty spectators. The Mercedes-Benz team pulled out of the race, virtually handing victory to Jaguar, who afterwards vigorously defended their driver. Most observers accepted that if Hawthorn was guilty of a driver error, as seemed likely, he could not be blamed for the disastrous train of consequences that followed.

Despite his normally happy disposition, Mike Hawthorn was unfortunately capable of reacting very badly to press comment, particularly when he felt it to be uninformed, and in such circumstances he was usually his own worst enemy. For a man who led so sophisticated a life he was in some ways quite naïve, and deeply hurt when he thought, to use his own words, that he was 'being got at'. Nevertheless, he brought to motor sport a sense of chivalry and good fun, and his close friendship with Peter Collins and their constant references to each other as 'mon ami, mate' gave even those outside the sport some insight into his ebullient nature.

Hawthorn had a reasonably successful season in 1956 and returned in 1957 to Ferrari, showing that he had lost none of his early ability and had gained much in experience and determination. In 1958 he again won the French grand prix and at Casablanca on 19 October he achieved his highest honour and became the first British driver to be world champion. He had produced a nerveless drive to finish second, one place behind Stirling Moss in the race, but one crucial point ahead in the championship. He was awarded the British Automobile Racing Club's gold medal in recognition.

Within a week of becoming world champion Hawthorn had decided to quit motor racing. He was put off by the intensity of media and public interest now surrounding him. He had also been affected by the death of Peter Collins, following an accident at the German grand prix at the Nürburgring the previous August, which he had witnessed. It was common knowledge that he now hoped to get married and settle down to build up the business he had taken over on his father's death, and also care for his mother in her declining years. He announced his retirement in mid-December. There was some surprise that he

did not feature in the new year's honours list, when Stirling Moss, his great rival, was appointed OBE, but Hawthorn accepted his omission with resignation. Weeks later, on 22 January 1959, he was killed while driving his customized Jaguar at speed against a friend's Mercedes in wintry conditions on the Guildford by-pass in Surrey. Hawthorn was two months short of his thirtieth birthday; to the end his great love of life was matched only by his love of the race.

Wealth at death £68,604 16*s.* 8*d.*: probate, 28 May 1959, *CGPLA Eng. & Wales*

Hawtrey, Sir Charles Henry (1858–1923), actor and theatre manager, was born on 21 September 1858 at Keate's Lane, Eton, the fifth son and eighth of the ten children of the Revd John William Hawtrey (*d.* 1891) and his first wife, Frances Mary Anne, the daughter of Lieutenant-Colonel George Procter, historical writer and superintendent of studies at the Royal Military College, Sandhurst. The Hawtreys had long been numbered among the squirearchy of England, and continuously from the early seventeenth century they were represented at Eton College, whether as masters or boys. Charles Hawtrey's father was a first cousin once removed of Dr Edward Craven Hawtrey, headmaster of Eton from 1834 to 1852, and was a housemaster there when Charles was born. The boy, in his turn, entered the lower school of the college when he was eight years old. Three years later his father left Eton to found St Michael's School at Aldin House, Slough; and there Charles Hawtrey was educated until he returned to Eton in 1872. He moved to Rugby the following year, where he established himself as a sportsman of dash and endurance. Cricket, running, and football he loved, and in later years golf; but the obsession of his life from the age of fourteen, when he placed his first bet, was the turf. In his twenties he owned twelve racehorses, though with scant success. Much of his life was passed in a state of financial precariousness, irrespective of an often lucrative career, and belied by the unfailingly immaculate standard of his personal appearance.

Upon leaving Rugby in 1875 Hawtrey went to Dawson Clark's crammer in Gower Street, London, with a view to entering the army; but his attendance was irregular, especially during the principal race meetings, and the intention was soon abandoned. After working as a private tutor from 1876 to 1879 he secured a start on the stage—a false start, however, for he broke his collarbone while playing football before the opening night. In February 1881 he matriculated at Pembroke College, Oxford, but withdrew in October, having obtained a small part in F. C. Burnand's

Sir Charles Henry Hawtrey (1858–1923), by Bassano

The Colonel at the Prince of Wales's Theatre, Tottenham Street. Uncertain of success, he adopted the stage name Charles Bankes for that engagement only.

Early in 1883, with his actor brothers William and George, Hawtrey took a small touring company to towns in south-east England; but it was on 29 March 1884, again at the Prince of Wales's (known by then as the Prince's), that his managerial flair came into its own with his production of a German farce by Gustav von Moser, *Der Bibliothekar*, rewritten by Hawtrey in an English setting and retitled *The Private Secretary*. This was at first denounced by the critics and played to sparse audiences; but Hawtrey, in the biggest gamble of his life, raised money to transfer the production (now reduced from four acts to three) to the Globe Theatre on 19 May of the same year, when W. S. Penley succeeded Herbert Beerbohm Tree as the Revd Robert Spalding, and Hawtrey, henceforth acting under his own name, took over the part of Douglas Cattermole. He earned from the run at the Globe £123,000; but after that sum had passed through his lands, Hawtrey, the bookmaker's friend, was said to be £13,000 in debt.

As an actor Hawtrey strayed little from the line of smooth, moustached, deceitful men in which he made his mark. As a manager he took at various times eighteen London theatres—including the Globe until 1887 and the Comedy from then until 1893 and again from 1896 to 1898—and produced with great attention to detail about a hundred plays, in many of which he also appeared. Among the most successful were two more adaptations from von Moser, *The Pickpocket* by George Hawtrey and *The*

Arabian Nights by Sydney Grundy; *Jane* by Harry Nicholls and William Lestocq; *One Summer's Day* by H. V. Esmond; *Lord and Lady Algy* by R. C. Carton; *A Message from Mars* by Richard Ganthony; *The Man from Blankley's* by 'F. Anstey'; *Jack Straw* and *Home and Beauty*, both by W. Somerset Maugham; and *Ambrose Applejohn's Adventure* by Walter Hackett, in which Hawtrey played two parts. He produced his own play *Mr Martin* at the Comedy Theatre in 1896. At the Haymarket in the previous year he had been seen as Lord Goring in the first production of Oscar Wilde's *An Ideal Husband*; and it was to Hawtrey, who struggled vainly to raise the required sum, that Wilde first offered *The Importance of being Earnest*. Shortly after, Hawtrey was instrumental in obtaining witnesses to condemn Wilde in the famous libel case.

The knighthood Hawtrey received in 1922 was regarded as a tribute to the art of comedy in its consummate living exponent. Four times between 1906 and 1909 he gave performances for royalty by command. His acting style, derived from the Bancrofts, developed into something distinctive: he seldom raised his voice, gesticulated, or grimaced. Never before had such a level of naturalness been seen on the London stage. Portly, well groomed, and softly spoken, Hawtrey took the audience into his confidence, as if seeing in the people before him a reflection of his character's guilty conscience. He excelled in the portrayal of liars, particularly of erring husbands and incorrigible cads—'Hawtrey parts', as they were known—and his audience, delighting in them, wanted him ever to be the same, extricating himself from a dilemma by widening his expressive blue eyes with an implacable semblance of candour and uttering in tones of easy refinement a cool untruth. As a comic actor he held in unity three exceptional gifts: wonderful repose, deadpan perfection, and impeccable timing.

Hawtrey was twice married: first, on 3 June 1886, at St Peter's, Pimlico, to Madeline ('Mae') Harriet, daughter of Thomas Bowen Sheriffe, of Henstead Hall, Suffolk, who divorced him in 1893 and died in 1905; and second, on 10 November 1919, at the Roman Catholic church of Our Lady of the Assumption, in the London district of St Martin, to Katherine Elsie Emma, known as Elsie (*d.* 1930), the daughter of the Revd William Robinson Clark, and widow of the Hon. Albert Henry Petre, son of William Henry Francis Petre, eleventh Baron Petre. There were no children from either marriage; but with Olive Morris, an unmarried actress twenty-six years his junior and a niece of Dame Ellen Terry's, he had a son, Anthony, who was born in 1906 and himself became an actor and stage producer. The boy—who first bore his mother's surname, and then by deed poll his father's—was raised by his mother only.

After 1920 Hawtrey's health was predominantly poor, and, on 30 July 1923, suffering lobar pneumonia followed by heart failure, he died in a nursing home at 4 Dorset Square, Marylebone, London, a mile and a half from his residence at 37 Hertford Street, Mayfair.

Charles Hawtrey was a paradox. Though often seen in the guise of immorality and deceit, he read the Bible daily and steadfastly believed in the efficacy of prayer. Though stolidly built he was elegant. A *bon viveur*, he was hard up. Seemingly untheatrical, he taught Noël Coward and A. E. Matthews, both of whom he employed, everything they claimed to know about the theatre; others who asserted his influence included Ben Travers, Harley Granville Barker, and J. T. Grein. His easy-going, courtly manner masked an indefatigable worker. Between 1901 and 1912 he took his productions on five tours of the United States, where, for much of 1904, travelling and giving several shows a day, Hawtrey, the suave Old Etonian, became the first English actor to work in American vaudeville. The exertion was characteristic; even in the month of his death he opened in a new play. The man who looked so languid died from overwork. His impact upon English theatrical artistry outlives his name. MICHAEL READ

Wealth at death £1180 12*s.* 2*d.*: probate, 24 Aug 1923, *CGPLA Eng. & Wales*

Hawtrey, Edward Craven (1789–1862), headmaster, was born at Burnham, 4 miles from Eton, on 7 May 1789. He was the only son of Edward Hawtrey, scholar of King's College, Cambridge, fellow of Eton College, and vicar of Burnham. His mother, Elizabeth Foster, was a sister of Dr John Foster, headmaster of Eton from 1765 to 1773. His father's family had been connected with Eton College for nearly 300 years and Hawtrey himself entered the school in 1799. In 1807 he was admitted scholar, and three years later fellow, of King's College, Cambridge. He graduated BA in 1812, MA in 1815, and DD in 1835. For a time he was private tutor to three sons of the earl of Shrewsbury, but in 1814 Dr Keate, the headmaster, appointed him to an assistant mastership at Eton.

Hawtrey proved to be an excellent schoolmaster, with a mind which ranged beyond the classics of the curriculum. He studied a number of modern languages, and published translations from German and Italian. His linguistic skills earned him a reputation as 'the English Mezzofanti'. Under his care an *Eton Atlas of Comparative Geography* was published. He encouraged his personal pupils and the boys he taught in class. He helped the young Winthrop Mackworth Praed not only to start a school library, to which he gave many books, but to publish one of the best of school ephemerals, *The Etonian* (1820–1).

When Dr Keate resigned in 1834, Hawtrey, by then the senior assistant, was chosen as headmaster. He had the good sense to consult Dr Kennedy of Shrewsbury, for he was well aware that Eton needed to reform its teaching;

Edward Craven Hawtrey (1789–1862), by unknown engraver, pubd 1862 (after John Jabez Edwin Mayall)

but he also knew that the provost and fellows, led by the obdurate conservative, Dr Goodall, would only accept minor reforms. He was able to subdivide the school further, in particular limiting his own teaching to the thirty-two top boys, which made his own task far more manageable. It was only, however, when Hodgson succeeded Goodall as provost that more serious changes could occur. In some, for example the improvement of the living conditions of the scholars and the abolition of 'montem' (the custom of collecting money from the public to support the captain of the school at Cambridge—a sort of prototype university rag day), Hodgson may have taken the lead. Mathematics was introduced to the regular curriculum. Modern languages could be taken by boys as extras, and Hawtrey certainly welcomed the language prizes established by the prince consort; he himself founded an English essay prize. A sanatorium was opened, for the building of which the headmaster made himself financially responsible; this was a real innovation. He was also able to secure the closing of the Christopher Inn, a coaching house in the very centre of Eton to which boys had ready access. He improved the lot of the younger Etonians by abolishing cricket fagging, and by the stern line he took against bullying (from which he had himself suffered as a boy). The school increased in size from under 450 to over 750 in the mid-1840s, before dropping back to 600—a measure of Hawtrey's success.

Hawtrey was singularly ugly and curiously dandified, and he lisped; thus he was an easy subject for caricature and mimicry. He was, however, popular with the boys. His generosity was exceptional: he would often reward boys with books, and he personally gave £300 to the captain of the school who would have benefited from the cancelled montem. William Johnson (later Cory) summed up his limitations and his merits:

> Not an accurate scholar, though versed in many tongues; not thoroughly well informed, though he had spent £30,000 on books; not able to estimate correctly the intellectual development of younger men, though he corresponded with the leaders of England and France; ... not one that could be said to organise well, for from first to last he dealt in makeshift and patchwork; yet for all that, a hero among schoolmasters, for he was beyond his fellows candid, fearless, and bountiful; passionate in his indignation against cruelty, ardent in admiring all virtue and all show of genius. (Thackeray, 119–20)

Hawtrey became provost after Hodgson's death in December 1852. Sadly he had to sell part of his library below its worth to furnish the provost's lodge. He had held the King's College living of Ewhurst in Sussex since 1835, and in 1854 he exchanged this for the Eton College living of Mapledurham, where he was a popular figure. His eldest sister, Elizabeth, lived with him, though she became senile by the end of his life. During his rule as provost opposition to change, which has sometime affected those who have lived too long at Eton, gained on him. His last year in particular was distressed by the agitation for reform that preceded the appointment of the Clarendon commission on the public schools. It was perhaps a dispensation that he died on 27 January 1862. He died at the school, and was buried within Eton College chapel, where a substantial monument was erected to him.

Wealth at death under £18,000: administration with will, 11 July 1863, *CGPLA Eng. & Wales*

Hawtrey, Sir Ralph George (1879–1975), economist, was born on 22 November 1879 at Langley, near Slough, the only son and third and last child of George Procter Hawtrey (*b.* 1850), headmaster of St Michael's preparatory school, Slough, and his first wife, Eda Strahan. He was educated at Eton College (1893–8); and at Trinity College, Cambridge, where he read mathematics and graduated as nineteenth wrangler in 1901. At Cambridge he was elected to the Apostles and in that society met G. E. Moore, whose philosophy influenced him deeply for the rest of his life. Many of his Cambridge friends later formed part of the Bloomsbury group, and it was through his continued association with Bloomsbury that Hawtrey met (Hortense) Emilia Sophie d'Aranyi (*d.* 1953), the concert pianist, whom he married on 24 April 1915; they had no children. She was the daughter of Taksony d'Aranyi de Hunyadvar, chief of police of Budapest, and the sister of the violinists Jelly d'Aranyi and Adila Fachiri.

Hawtrey entered the home civil service in 1903, and after one year in the Admiralty moved to the Treasury. He was appointed its director of financial inquiries in 1919, and remained at the Treasury until 1947. In 1928–9 he was given leave of absence to take up a visiting professorship of economics at Harvard University, and from 1947 until 1952 he was Price professor of international economics at the Royal Institute of International Affairs, London.

Although Hawtrey spent his working life as an economic adviser at the Treasury and, under Sir John Bradbury, learnt his monetary economics largely from experience there, outside office hours he wrote and published more contributions to monetary theory than most of his academic contemporaries. The system of analysis that he developed continuously in his writings was based on one central idea: 'inflation; the cyclical alternations of activity and depression; financial crises, disturbances of the balance of payments and rates of exchange—all these were to be traced to changes in the wealth-value or purchasing power of the monetary unit' (R. G. Hawtrey, *Currency and Credit*, 4th edn, 1950, vii). In the first four decades of the twentieth century these 'cyclical alternations of activity and depression' were a main preoccupation of monetary theorists; by 1913 Hawtrey had reached his view that 'the trade cycle is a purely monetary phenomenon', due ultimately to changes in bank credit and short-term interest rates. In the 1920s Hawtrey's ideas and those of his friend J. M. Keynes, at first similar, diverged on this issue, Hawtrey holding that changes in bank rate operated through their effect on the cost to merchants of holding stocks, while Keynes argued that such changes, by altering long-term rates, influenced investment in fixed capital. After 1930 Keynes sought to move to a more general theory of relations between aggregate demand and supply, which was to become the starting point for modern macroeconomics and eclipse Hawtrey's doctrines. However, Hawtrey's very detailed and constructive criticisms of Keynes's *Treatise on Money* (1930), and especially the ideas that these contained about the effect of changes in expenditure on levels of output, were acknowledged by Keynes himself to be 'tremendously useful' in helping him to develop his *General Theory of Employment, Interest and Money* of 1936 (cf. Davis, 216–17 and 231).

The advice on policy that Hawtrey gave at the Treasury also developed consistently from his view that maintaining constancy in the wealth-value of the monetary unit must be the primary objective. In 1919 he therefore supported the policy of a return to the gold standard, but in the form of a gold exchange standard with international agreements on uncovered paper issues and credit control. An opportunity to have the implementation of something like this policy occurred when an international economic conference was convened at Genoa in 1922, and Hawtrey as one of the British delegates secured the incorporation of his proposals into the resolutions adopted by the conference. These were never put into effect, and when it became clear in 1925 that the return to gold involved continued deflation Hawtrey became a persistent critic of the conduct of British monetary policy. Nevertheless, he remained convinced that the economy could best be regulated by monetary methods alone, without the addition of fiscal policies such as public works as advocated by Keynes and the Liberals in 1929. In this connection he admitted in later years that he had assumed 'too readily that money saved would be invested and that money invested would be spent' (*Currency and Credit*, 4th edn, 1950, vi).

Since the 1930s witnessed a decline in the use of interest rate changes in monetary policy it is not surprising that Hawtrey's influence on policy also declined in these years. After the Second World War Hawtrey's doctrines made him critical of the Bretton Woods proposals, and in later years he constantly argued that the 1949 devaluation of sterling had been a policy error comparable in magnitude to the 1925 return to gold, and was the root cause of Britain's later inflationary problems.

Gentle in character and courteous in debate, Hawtrey was nevertheless a tenacious advocate of his ideas, whether or not they were fashionable. As he grew older this led to his being typecast by his critics as holding inflexibly to extreme positions and outdated ideas—a view which does less than justice to the subtlety of Hawtrey's thinking and the pains that he took to revise his work in the light of changes in both facts and theories. Recently the importance of his contributions to macroeconomics has come to be more fairly judged and recognized. His contributions to other areas of economics merit similar recognition but have yet to receive it. Among the best-known of his many books were: *Currency and Credit* (1919; 4th edn, 1950), *The Economic Problem* (1926), *The Art of Central Banking* (1932; 2nd edn, 1962), *Capital and Employment* (1937; 2nd edn, 1952), and *Economic Destiny* (1944).

Hawtrey was elected a fellow of the British Academy in 1935, received the honorary degree of DSc (Econ.) from London University in 1939, was president of the Royal Economic Society in 1946–8, and became an honorary fellow of Trinity College, Cambridge, in 1959. He was appointed CB in 1941 and knighted in 1956. He died at St Stephen's Hospital, London, on 21 March 1975, and was cremated at West London crematorium, Kensal Green, on 26 March.

Wealth at death £43,200: probate, 24 July 1975, *CGPLA Eng. & Wales*

Haxey, Thomas (*d.* 1425), ecclesiastic and administrator, probably came from Haxey, Isle of Axholme, Lincolnshire. Apparently of humble family, his early career and patrons are obscure; his two earliest benefices, Pulham, Norfolk (1384), and Somersham, Huntingdonshire (1388), were obtained at the presentation of Thomas Arundel (*d.* 1414),

then bishop of Ely, but he was later associated with members of the Ravenser–Waltham family, which was influential in late fourteenth-century government. Haxey was described as a king's clerk from October 1382, but it is not known what position he held in crown service; however he acted under commissions from the crown in 1385 and 1386. In spring 1387 he was described as a clerk of John Waltham (*d.* 1395), keeper of the privy seal. On 18 July 1387 Haxey was appointed keeper of the rolls and writs of the court of common pleas and held this post until 8 February 1397. Though its precise duties are unclear, and its remuneration was modest, this office was prestigious; it was in the immediate gift of the crown, and it could afford the holder opportunities to increase his income by other means. In Haxey's case these were ecclesiastical preferment and moneylending. He held a number of benefices but mostly for brief periods. Presentations to the Nottinghamshire churches of Rampton (a prebend of Southwell) in 1388 (until death), and Laxton in 1393 (until 1408), marked a strengthening of ties with his home area. As moneylender and mainpernor he acquired contacts over a very wide area. In 1395 he was an executor of the will of John Waltham, now bishop of Salisbury. Haxey acted as a proctor for the abbot of Selby in the parliaments of 1386, 1391, 1393, 1394, 1395, January 1397, October 1404, and 1406. He was also a proctor for the bishop of Lincoln in 1393 and for the bishop of Lichfield in 1395, while Ramsey Abbey presented him to the rectory of Brington, Huntingdonshire, in 1396. In addition, Haxey acquired the prebends of Tervin (Lichfield) from 1388 to 1425, Beminster Secunda (Salisbury) from 1391 to 1419, and Scamblesby from 1395 to 1402, and Frandon-cum-Balderton from 1402 to 1425 (both Lincoln).

In the parliament of January 1397 the Commons presented to the Lords a four-point petition, which in its concluding section asked that the great cost of the king's household should be reduced and the number of bishops and ladies at court be decreased. The king ordered an inquiry to discover who had brought this bill before the Commons, and Haxey was named. Richard was furious, not least because this controversial proposal had originated with a long-standing royal servant, and the Lords then declared, retrospectively, that it was treasonable to call for reform of the king's household. Condemned as a traitor on 7 February Haxey was in a dangerous position, since benefit of clergy had been abolished for treason, but Thomas Arundel, now archbishop of Canterbury, swiftly claimed custody of him as a criminous clerk, and Haxey was pardoned on 27 May at the request of 'the bishops and multitude of ladies' in the king's household (*CPR, 1396–9*, 141). Meanwhile Haxey was confirmed as warden of Lazenby chapel, Yorkshire, on 25 February and as the holder of his six other benefices on 25 April, and received his back pay on 21 July. In Henry IV's reign he was again referred to several times as a king's clerk, the latest in 1412 when he was ordered to hold an inquiry in York. In July 1423 he was appointed warden and receiver of the profits of the York mint. The focus of his life apparently shifted northwards after 1397: in 1399 he was resident at Rampton, and in 1419 he exchanged his Salisbury prebend for one at Ripon, which in turn was exchanged for a Beverley prebend in 1423.

The fifteenth century saw Haxey's talents turned to ecclesiastical administration and to the disposal of his considerable wealth. By 1408 he was a canon residentiary at York, where he had been prebendary of Barnby since 1405. In December 1418 he became treasurer of York, holding office until his death, and he was keeper of the spiritualities of the diocese *sede vacante* in 1423 and 1424. Haxey was an energetic builder, perhaps at Rampton, and certainly at Southwell, where he built a house for the chaplains of his chantry which stood until 1784, and at York, where, in addition to overseeing building works on the chapter's behalf, he paid for the lead roofing of the minster library, his generosity being rewarded by his arms (or, three buckles in fess, sable) being placed in a window of the room. He established chantries at York and at Southwell, where he drew up both his will and testament. He probably died in the earliest days of 1425 (perhaps 8 January); his will was proved on 23 January. He was buried in York Minster. Haxey left bequests to the poor parishioners of all the churches he had held, and made bequests of cash and clothing to eighteen individuals including relatives, household servants, and the prioress of Broadholme. A notable aspect of his considerable wealth was his collection of precious and jewelled plate; he had a fondness for aquamarines. Collectively the greatest value of his bequests went to the fabric and personnel of York Minster, so that even in 1858 it could be said that Haxey was 'still remembered in York for his piety and munificence' (Raine, 203).

Hay family (*per. c.*1295–*c.*1460), nobility, originated in the seigneurie of La Haye-Hue, by Soulles, south of St Lo in Normandy. It seems certain that the Hays came to Scotland through their connection with Ranulf de Soules, an Anglo-Norman in the service of David I, since one of the earliest recorded Hays in Scotland, William de la Hay, was Soules's nephew. From being knights in the service of Soules, the family became established in central and north-east Scotland, eventually rising sufficiently to hold the important household office of constable of Scotland, formerly the possession of the Comyns. The Hay family

had held the barony of Erroll in the sheriffdom of Perth, by knight service, since the early years of William the Lion's reign, but the foundations of their rise to national prominence were laid by **Sir Gilbert Hay of Erroll** (*d.* 1333), who had succeeded his father by June 1306 and received remittance from Edward I (to whom he had sworn fealty at Aberdeen on 16 July 1296) for the relief due for his lands, severely ravaged during the wars of independence. However, Hay joined the cause of Robert Bruce in March 1306, and in consequence Aymer de Valence, earl of Pembroke, received orders from Edward I to burn and destroy Hay's lands, presumably in Perthshire. Nevertheless Hay continued to serve Robert I loyally and consistently, for which he received a charter of the lands of Slains in Aberdeenshire, together with the office of constable of Scotland, positive evidence for his rise in political importance.

Hay is described as constable in a letter from the nobles of Scotland to Philippe IV of France, dated 16 March 1309, although his tenure of the office was clearly provisional, as it was granted to David, earl of Strathbogie, in 1312. The latter's disgrace in 1314 led to the return and confirmation of the office to the Hays, but now in heredity, being given in a charter by Robert I, dated at Cambuskenneth on 12 November 1314, to Gilbert Hay and his heirs. The duties of the constable included presiding over the judicial court of the household and organizing the king's bodyguard and security wherever he happened to be residing, in addition to various ceremonial duties, some of which were apparently shared with the marischal. A safe conduct was issued to Hay by Edward II on 18 September 1314 as one of the Scottish ambassadors to go to England, and he was a signatory to the letter to Pope John XXII drawn up at Arbroath on 6 April 1320. He was named as one of the conservators of the truce in 1323, and he died in April 1333.

Nicolas Hay was the eldest son of Sir Gilbert, but he appears to have predeceased his father, and may have been the Hay, mistakenly named William, said by Hector Boece to have fallen at the battle of Dupplin in 1332. Sir David Hay of Erroll, who witnessed a charter by David II on 17 June 1341, and who may have been Nicolas's son, was killed at the battle of Nevilles Cross on 17 October 1346.

Sir Thomas Hay of Erroll (*d.* 1406) was the son of Sir David and his first wife, the daughter and heir of Sir John Keith of Innerpeffer. As constable of Scotland, Hay was one of the commissioners appointed to treat with the English for the release of David II in 1353, and was proposed as a hostage for the king's ransom in 1357. He does not appear to have served as such, possibly because of his official duties as constable. However, his primary loyalty was to the Stewarts rather than to the king, as is indicated by the fact that although he does not appear to have attended at court under David II, he was sufficiently in favour with the Stewarts to secure a royal bride, for he married Elizabeth, the third daughter of Robert II and his first wife, Elizabeth Mure. He was present at the coronation of Robert II at Scone on 26 March 1371, where, as constable, he received the oaths of homage and fealty given to the king. On 4 April 1373 he swore to the maintenance of the Act of Settlement entailing the crown on Robert II's male heirs, and his lands of Slains were erected into a free barony by royal charter dated at Dundee on 5 January 1377. But thereafter he seldom appears in official records until his death in July 1406.

Sir William Hay of Erroll (*d.* 1436), who succeeded his father, had on 19 March 1393 obtained an undertaking from Robert III not to ratify or approve any alienations made by his father, Thomas, without either William's consent or that of the king's council, indicating some tension within the family. Hay was one of the commissioners appointed to treat with the English for the release of James I in 1423, and was knighted at the coronation of the king in 1424, his son Gilbert (*d.* 1436) having been sent to England as a hostage for James I's ransom, serving thus until 1427. The king's reliance on Hay as one of his trusted northern councillors is indicated by his inclusion in James I's expedition to the north in 1428, and he followed the king's instructions to coerce a reluctant Coupar Angus Abbey, of which he was patron, into surrendering the church of Erroll near Perth, so that it might be added to the king's endowment of Perth Charterhouse. (In 1446 Hay's grandson, subsequently the first earl of Erroll, attempted to recover his rights in the church, claiming that the grant had been made under duress and through fear of the king.) In 1430 Hay, possibly because he held the office of constable rather than because he had any landed interest in the borders, was appointed one of the wardens of the marches. He was married to Margaret, daughter of Sir Patrick Gray, and he died in 1436, being succeeded by his grandson.

William Hay, first earl of Erroll (*d.* 1462), was the son of Gilbert Hay, who died in the same year as his father, and Alicia, daughter of Sir William Hay of Yester. In the June parliament of 1452 William Hay was raised from the peerage rank of lord of parliament, which he had held in official records at least since 1450, to the earldom of Erroll, resigning all his lands into the king's hands to be erected into the lordship of Erroll and regality of Slains, for which he received royal charters on 31 July 1452. Although the title derived from his estates, Hay's elevation, like that of William Keith, created Earl Marischal in 1458, followed from his hereditary office, reflecting the family's high status as constables of Scotland. It also contributed towards replenishing the then depleted ranks of the higher nobility with loyal supporters of the king, without requiring much expenditure of crown lands or revenue. James II may also have been moved by a desire to secure Hay's allegiance, undermining any ties of kinship the new earl may have had with the Black Douglases, to whom Hay was related through his marriage, before 17 March 1450, to Beatrix Douglas. She was the sister of the eighth earl of Douglas, whom James slew in 1452. The creation of the earldom of Erroll certainly survived the Douglas crisis and the king's act of revocation in 1455. Erroll is mentioned in a charter of 15 November 1461, but was dead by October 1462.

Hay, Alexander, of Easter Kennet, Lord Easter Kennet (*d.* 1594), administrator and judge, was a younger son of John Hay of Lochloy and Park, Moray, and grandson of a parish clerk of Fordyce, Banffshire. His official career began in 1564 when William Maitland of Lethington, secretary to Mary, queen of Scots, chose him as his deputy. He also became clerk of the privy council in 1564 and held that office until 1572. Hay accompanied Moray, the regent, and Lethington to York in 1568 to witness against Queen Mary at her first English trial. From 1567 to 1579, moreover, he was director of chancery and keeper of the quarter seal. In 1579 he reached his highest position, that of clerk register, the government officer responsible for the framing and custody of the principal series of public registers and records. Consequently he became a privy councillor, and was also made a judge in the court of session, the supreme civil court; his judicial title was Lord Easter Kennet. He held these three offices until his death. When James VI sailed to Norway in October 1589 to meet his bride, Anne of Denmark, Hay was one of the government officials left behind to run Scotland, being appointed interim secretary for the Scots language. Nothing is known of his formal education, but that he was not made king's secretary during the royal absence suggests that his education, his command of foreign languages, and perhaps his diplomatic skills were not of the very highest standards. Mary, queen of Scots, had earlier remarked that Hay was 'honest but not of the quickest wit' (*CSP Scot.*, 6.86) There are no sources which refute this biting assessment.

Crown service enabled Hay to enter the ranks of landed men. In 1582 he bought the lands of Easter Kennet in Clackmannanshire from Sir Robert Bruce, father of Edward Bruce, later Lord Kinloss, for £5000 Scots, and had a grant of adjoining lands from John Erskine, earl of Mar, his patron. Hay was granted very little property by James VI directly, but as some of his acquisitions were technically held from the crown, he became a top-level landowner, or laird, with the designation 'of Easter Kennet'. For 2500 merks (£1500 Scots) he bought a property in Edinburgh, the Carsehouse in Conns Close; he also had a property at the head of the Castle Wynd in Stirling, which was convenient during the minority of James VI (1567–78), when the king's guardians conducted much state business from nearby Stirling Castle. Hay, who was undoubtedly a skilled administrator, appears to have maintained his position at court through the support which James VI customarily gave to loyal and hard-working government servants. A protestant in religion, he became a commissioner of the kirk. For his services to Edinburgh he was made a burgess of that town in September 1573. He died there on 16 September 1594 and was buried in Holyrood Abbey church. His estate was valued at £1424 Scots, £580 in cash and £844 in debts, the latter being due for rents from his lands, a pension from the earl of Angus, and his fee as a judge.

Hay married Marion Farquhar, probably before 1573. They had at least four sons, of whom the eldest, John (*d.* 1637), inherited the Easter Kennet estate and Edinburgh house, and became deputy clerk of the privy council. Little is recorded of Andrew and Daniel, but the third son, **Alexander Hay**, Lord Whitburgh (*d.* 1616), enjoyed a career which had much in common with that of the elder Alexander. His father procured a gift under the privy seal to support his tuition at Musselburgh Academy, and he eventually graduated MA at an unidentified university. Thanks to his brother John he became a clerk to the privy council, and he was a clerk to the court of session until 1608. Based in Edinburgh, Hay worked closely with the Scottish officials who remained in Scotland after 1603. He came into prominence in 1608, when he was appointed secretary of state for Scotland after the disgrace of Lord Balmerino. This office required him to travel often between Edinburgh and London. He was made an ordinary lord of the court of session on 3 February 1610 under the designation of Lord Newton, and later took the unusual step of changing his designation to Lord Whitburgh. He was also a royal commissioner to the general assembly in Glasgow in 1610. In 1612 he exchanged the office of secretary of state with Lord Binning for the office of clerk register. One source suggests that Hay was 'prevailed upon' to make the exchange, suggesting an adjustment of patronage on James VI's part. Clearly the office of clerk register was the lesser of the two offices in prominence and responsibility, and the work more sedentary; the trials of travel may have affected Hay's decision. He died in 1616. He was the author of 'Manuscript notes of transactions of King James VI', written for the use of Charles I.

Hay, Alexander, Lord Whitburgh (*d.* 1616). *See under* Hay, Alexander, of Easter Kennet, Lord Easter Kennet (*d.* 1594).

Hay, Alexander (*d.* 1639), army officer in the Swedish service, was born in Scotland of unknown parents. Although there are references to Hay's arriving in Sweden in 1600,

nothing more is known of him there until 1632. There was also a Lieutenant Alexander Hay serving in the kingdom of Denmark–Norway before this time, who achieved the rank of captain and was paid off in 1628. This date coincides with Danish–Norwegian withdrawal from the Thirty Years' War, so it is probable that Hay then entered into Swedish service, as this was a common path for many other Scots in Danish service. Robert Monro mentions one Saunders Hay who became captain for Annan's company and initially remained in Scotland before entering Swedish service. This would fit with Hay's first listing on Swedish military muster rolls in 1632, serving as a major in Patrick Ruthven's regiment. The following year, while serving in Francis Ruthven's recruited regiment, he gained promotion to lieutenant-colonel. He also acted as the chief of a squadron of dragoons. At some point before 1631 Hay married Dorotea Plessen, and they had at least two sons.

Hay was stationed at Memel, a Polish town which had been taken by the Swedish king Gustav II Adolf in 1628 and subsequently handed over to Sweden for six years. While in the service of the governor there, Hay became involved in the Polish authorities' complaints against a certain Captain Thomas Hume who had plundered some Jews in 1633. Hay himself offered to compensate the Jews, but as Hume was already in gaol and could not repay Hay, he turned to Colonel Ruthven for help. Ruthven took great offence at this and made Hay's life so unpleasant that he wanted to leave the regiment. At this time a Polish nobleman, Crispin Kerstenstein, corresponded with Hay, and suggested that he enter Polish service. Hay then approached the Swedish authorities and requested the termination of his commission because of his problems with Colonel Ruthven. However, when the Swedish General Herman Wrangel heard of this Hay was summoned for an interview. Hay explained that he would have served in Polish forces on campaign only against the Russians, never against the Swedish crown, and that this only came about because of Colonel Ruthven's intolerable attitude towards him. General Wrangel did not believe Hay and had him incarcerated pending further investigation, and informed the Swedish chancellor, Axel Oxenstierna, of the matter. Shortly after this Hay was released from prison to attend his young son's funeral in Memel. At the end of November General Wrangel had Hay brought before a military tribunal to answer charges of corresponding with the enemy. The tribunal decided in favour of Hay for two reasons. The relations had been initiated by the enemy, relieving Hay of some of the charges, and Hay had been disadvantaged by his lack of fluency in German, which meant he was liable to have misunderstood the initial proposition. He was therefore not subject to 'the usual' punishment (the latter was not specified) and his verdict would be decided by Oxenstierna. Hay was also in the process of obtaining a copy of his response to the Pole, which he believed had been wrongly worded by his scribe.

There does not appear to be any further mention of Hay after this in Swedish sources so it must be presumed that the issue was settled. Hay died in 1639. There is a further reference to Alexander Hay in Denmark in 1643 where his wife and his brother were involved in litigation over his inheritance. This implies that his wife was Danish and had returned to Denmark after her husband's death. Hay's surviving son, Henrik, was born in Stockholm in 1631 and was ennobled in 1689. A. N. L. GROSJEAN

Hay, Alexander (*c.*1735–1806), topographer, was a master of arts probably of a Scottish university, who was ordained in the Church of England. He settled at Chichester, Sussex, and served as curate of the nearby parish of Selsey from 1769 to 1784, and was chaplain of St Mary's Hospital, Chichester from *c.*1778 to *c.*1786. He was vicar, albeit non-resident, of Wisborough Green, Sussex, from 1785 to 1806. He kept a school at his house in Chapel Street, Chichester, from *c.*1780 to *c.*1805, although he complained in his *History* that he found it 'a very irksome and laborious employment' (Hay, xiii).

About 1784 Hay wrote the first *Chichester Guide*, which passed through several editions. Twenty years afterwards, at the age of nearly seventy, he transmuted it into a single volume of over 600 pages as *The history of Chichester, interspersed with various notes and observations on the early and present state of the city … its vicinity and the county of Sussex in general: with an appendix containing the charters of the city* (1804). The book is as prolix and idiosyncratic as its title suggests, with disproportionate space devoted to somewhat speculative Saxon history, but it is none the less the product of considerable reading and research. For the following century Hay's work provided the basic source for Chichester's history, and even then was not entirely superseded. Even its digressions into county history brought together material not otherwise available to the general reader.

Hay seems to have been a protégé of William Hayley, to whom he dedicated the *History*, and who commemorated him in his 'Epitaph book'. Hayley describes him as a 'humble yet animated Divine' whose career had suffered 'from having conscientiously opposed the electioneering ambition of the late domineering Duke of Richmond' (W. Sussex RO, Add. MS 2758, fol. 41).

Hay married first Mary (*d.* 1777), with whom he had a daughter and three sons, and second, on 3 February 1778,

Elizabeth Rolfe of Chichester, with whom he had two sons and four daughters. He died on 15 November 1806 and was buried at the subdeanery church, Chichester on the 19th.

Hay, Alexander Leith (1758–1838). *See under* Hay, Sir Andrew Leith (1785–1862).

Hay, Andrew (*d.* 1593), Church of Scotland minister, was the son of William Hay, fourth laird of Talla, and his wife, Janet Spottiswood; George *Hay, minister of Eddleston and Rathven, was his brother. Andrew Hay was a university graduate, possibly of Glasgow, and also studied at Paris, where he learned Greek. In 1556 he was a canon of Glasgow Cathedral, holding the prebend of Renfrew—a vicar-pensioner served the parish. Two years later he was himself rector and parson there. In 1559 Hay conformed to the Reformation and then became parson and minister of Hamilton. From no later than 1564 he was also commissary of Hamilton and Dunserf. He was assisted by a reader, William Jackson, who may have been a chaplain in Glasgow Cathedral before 1555. Following the murder of David Riccio, Queen Mary's secretary, on 9 March 1566, Hay was accused of involvement in the crime, and in July he was warded within the burgh of Dunbar and 2 miles around. He was released on the queen's orders on 29 January 1567.

Hay became very active in the administration of the kirk. On the reconstitution of the chapter of Glasgow Cathedral in 1572 he was appointed dean, and early in that year was one of the commissioners who negotiated the convention of Leith, settling the administrative structure of the kirk. He attended almost every general assembly, served on a number of committees, and from 1578 to 1590 acted as one of the assessors to the moderator. He was himself moderator of the assemblies of March 1573 and August 1580. Between 1569 and 1587 Hay was often named to deputations appointed to present petitions from the assembly to, variously, the regent, the privy council, and the king, and from 1569 until 1588 successive assemblies appointed him the commissioner to visit kirks in Clydesdale, Renfrew, and Lennox. On 6 March 1589 the privy council made him a commissioner for the maintenance of the true religion in Clydesdale.

In 1569 Hay became rector of Glasgow University, then in a state of advanced decay; he held the position until 1586. In 1573 he was closely involved in the process whereby the town council of Glasgow not only conveyed former ecclesiastical revenues to the university, thereby stabilizing the latter's finances, but also substantially rewrote the university's constitution. A year later he encouraged Andrew Melville to come to Glasgow as principal of the university, to whose library he himself gave books. In 1580 he tried in vain to oppose Melville's departure from Glasgow for St Mary's College, St Andrews. In the meantime he collaborated with Melville in the production of the second Book of Discipline (1578). Closely involved throughout, he was one of the members of the assembly to whom the preparation of a draft text was entrusted, his responsibility being the section dealing with the kirk's ministry. Like Melville he favoured a presbyterian structure of church government; he was described as one 'wha lyked never those bischopries and wha specialie was the ernest suttar for Mr Andro Melvill' (Kirk, 55). Hay showed his hostility to bishops during the efforts made by successive governments between 1581 and 1585 to install Robert Montgomerie in the see of Glasgow. In 1582 Hay protested to the privy council in the name of the kirk, and so prominent was he in the opposition to the new bishop that in May 1584 he was denounced as a rebel and warded north of the Tay.

In 1586 Hay resigned as rector of Glasgow University. For the rest of his life he was seldom involved in church affairs beyond the bounds of his parish. He was censured in 1592 for shortcomings which included failing to execute discipline at Renfrew and not preaching on Sunday afternoons (which may have been due to old age). No later than 1566 he had married Janet Wallace of Craigie, almost certainly the daughter of the John Wallace who was prominent among the godly lairds of Ayrshire in 1559–60 and who married Margaret Cunningham, daughter of the staunchly protestant fourth earl of Glencairn. Three of their sons became ministers, John at Renfrew, succeeding his father, Theodore at Peebles, and Andrew at Erskine; another son, David, became commissary clerk of Glasgow. Andrew Hay died in 1593.

Hay, Andrew (1762–1814), army officer, son of George Hay of Mount Blairy and Carnousie House, Forglen, Banffshire, was appointed ensign in the 1st or Royal foot on 6 December 1779. He became a captain in the 88th in 1783, and subsequently returned to the 1st Royals. In September 1794, following his retirement on half pay, Hay was appointed major and attached to the 93rd foot, which was broken up in Demerara in 1796. Again on half pay, he raised the Banffshire or Duke of York's Own fencible infantry, and commanded it in Guernsey, Gibraltar and elsewhere between 1798 and 1802.

In 1803 Hay was appointed lieutenant-colonel of the 16th battalion of the army of reserve, and afterwards of a

second battalion of the 72nd, formed out of men enrolled in the army of reserve in Scotland; this he commanded until 1807, when he was transferred to the 3rd battalion 1st Royals, which he led as part of Baird's reinforcements at Corunna. After commanding a brigade at Walcheren, he returned with his battalion to Spain. He took command of a brigade of the 5th division in the Peninsula on 1 June 1810, and participated in the battles of Busaco, Salamanca and Vitoria; the assault on San Sebastian, where his brigade took a leading part; the passage of the Bidassoa, and the succeeding operations on the Adour, during which he was in temporary charge of the 5th division; the battles on the Nive; and the siege of Bayonne.

Hay was appointed major-general on 4 June 1811. He was mortally wounded, when general officer of the day, commanding the outposts during the French sortie from Bayonne on 14 April 1814. The officers of the 3rd battalion, 1st Royals, erected a monument to Hay at St Étienne, Bayonne, and, as usual with general officers killed in action, a public monument was erected, a huge and tasteless composition by Humphrey Hopper, which was placed in St Paul's Cathedral, west of the north door.

Hay married, on 2 April 1784, Elizabeth Robinson of Banff, who, with two sons and four daughters, survived him. The older son, Captain George Hay, 1st Royals, was mortally wounded at the battle of Vitoria in 1813, when serving as his father's aide-de-camp. After selling Mount Blairy in 1801 Hay bought Packham House, Fordingbridge, Hampshire. His widow lived there for a time after his death, and placed a monument to him in Fordingbridge church.

Hay, Sir Andrew Leith (1785–1862), writer on architecture, was born in Aberdeen on 17 February 1785. His father, **Alexander Leith Hay** (1758–1838), army officer, was born in Aberdeen on 21 December 1758, the second son of John Leith (1731–1763) of Leith Hall, Aberdeenshire and his wife, Harriet (*d.* 1780), daughter and heir of Alexander Steuart of Auchluncart. Formerly Alexander Leith, he was appointed a lieutenant in the 7th dragoons immediately on his birth, captain in 1768, and colonel in the army in 1794. He succeeded his elder brother, John, in 1778, and inherited the estate of Rannes in 1789, when he assumed the additional surname and arms of Hay, being descended from that family through his paternal grandmother. On 1 October in the same year he was gazetted colonel of a regiment raised by himself and called by his name. In 1784 he married Mary Forbes (*d.* 1824), the daughter of Charles Forbes of Ballogie, with whom he had two sons and four daughters. He was promoted to be major-general in 1796, lieutenant-general in 1803, and full general in 1838. He was deputy lieutenant and justice of the peace for the county of Aberdeenshire. He died in August 1838.

His eldest son, Andrew Leith Hay, entered the army as an ensign in the 72nd foot on 8 January 1806, went to the Peninsula in 1808 as aide-de-camp to his uncle General Sir James Leith, and served through the war until 1814. He was much employed in gaining intelligence, and was present at many of the actions from Corunna to the storming of San Sebastian. During this time he made many sketches, and in 1831 these were published in two volumes, entitled *A Narrative of the Peninsula War*. On General Leith's being appointed in 1816 to the governorship of Barbados, his nephew accompanied him, and discharged the duties of military secretary and also those of assistant quartermaster-general and adjutant-general. It was also in 1816 that he married Mary Margaret, (*d.* 1859) daughter of William Clark of Buckland House, Devon. Their eldest son, Colonel Leith Hay CB, of the 93rd highlanders, was well known by his service in the Crimea and India. As captain in the 2nd foot Andrew Leith Hay served from 21 November 1817 to 30 September 1819, when he was placed on half pay. He had previously been named a knight commander of the order of Charles III of Spain, and a member of the Légion d'honneur.

Having retired from the army, Hay turned his attention to politics, took an active part in the events preceding the passing of the Reform Bill, and on 29 December 1832 became member for the Elgin burghs. Shortly after entering parliament his readiness as a speaker and his acquaintance with military affairs attracted the notice of Lord Melbourne, who on 19 June 1834 conferred on him the lucrative appointment of clerk of the ordnance and in 1836 made him a KH. On 6 February 1838, on being appointed to the governorship of Bermuda, he resigned his seat in parliament. Circumstances, however, arose which prevented him from going to Bermuda: he inherited his father's estate that year, but poverty prevented him taking up residence in Leith Hall and he and his wife went to live in Belgium before returning to Scotland in 1840.

On 7 July 1841 Hay was again elected for the Elgin burghs and he continued to sit until 1847, when he lost his seat. He contested the city of Aberdeen on 10 July 1852, but was again unsuccessful. He paid much attention to county matters, especially to the affairs of the county of Aberdeen. In 1849 he published *The Castellated Architecture of Aberdeenshire*, which includes large lithographs of the principal baronial residences in the county, all from sketches by himself. Shortly before his death he was made convener of the county of Aberdeenshire. He died at home at Leith Hall on 13 October 1862.

Hay, Archibald (*d.* 1547), humanist scholar and writer on education, whose parents are not known, was a nephew of James *Beaton (archbishop of St Andrews, 1523–39), and a cousin of David *Beaton (cardinal and archbishop of St Andrews, 1539–46). Like many Scots of his generation he studied for much of his career in France. He matriculated at the University of Paris in the rectorial quarter following 16 December 1530, and graduated MA in the quarter following 15 December 1536. By 1538 he was at the Collège de Montaigu, formerly notorious for its austerity and its old-fashioned learning, but which by this stage counted several Scots humanists as members. By 1543 Hay had moved to the Collège du Plessis, from where he published an edition of Erasmus's translation of Euripides' *Hecuba*. At Paris Hay also published his two principal works, *Ad ... D. Jacobum Betoun ... pro collegii erectione ... oratio* and *Ad ... D. Davidem Betoun ... de foelici accessione dignitatis cardinalitiae, gratulatorius panegyricus*.

In each of these books Hay urges the establishment of a new college of liberal arts in the University of St Andrews. Archbishop James Beaton had petitioned the pope over this project as early as 1525, and again, successfully, between 1537 and 1538. The formalities of its foundation were rushed through just before the archbishop's death on 14 February 1539. Cardinal David Beaton proved less dilatory than his predecessor, though progress remained slow. In 1545 Hay returned to St Andrews and was incorporated in the university, being given the unusual description of 'supreme lover of philosophy' in the matriculation register (Anderson, 252). In July 1546 he became principal of the new St Mary's College, on the resignation of the previous head of the college, the long-standing principal regent in arts. However, Hay's career was cut short by his early death, and on 27 September 1547 Hay's friend and colleague from Paris, John Douglas, was appointed to succeed him as principal. From the way in which the transfer of his church benefices is recorded in the registers of the privy seal of Scotland, it seems likely that Hay was one of those who lost their lives in the battle of Pinkie (10 September 1547) and its aftermath.

Hay's Latin prose and verse writings offer the best evidence for the adoption of a Renaissance humanist educational programme by a Scottish scholar in the 1530s. Although the *Oratio* is ostensibly about the founding of the new college, and the *Panegyricus* purports to congratulate David Beaton on his cardinalate, both these works are manifestos. They argue that modern education in the liberal arts is needed to produce a moral and responsible priesthood, and that a good prelate must use his resources to make this possible. They include the by now formulaic humanist denunciation of lazy, greedy, ignorant priests and old-fashioned scholars, and argue that linguistic and literary scholarship in Latin, Greek, and Hebrew should replace the traditional Latinate logic. Coincidentally they give powerful evidence of Hay's own command of rhetoric, poetry, and Renaissance humanist theology. However, Hay's rhetoric works on several levels. In the *Oratio* he quotes copiously, without acknowledgement, from Erasmus's *Praise of Folly*, in a way which implies coded mockery of his patron the archbishop, whose avarice and delay he later criticizes openly in the *Panegyricus*. At other points he shows familiarity with the rationalist attitude to the origins of religion associated with advanced Italian philosophers working at Paris at the time. Had Archibald Hay lived longer, Scottish academic life might have embraced Renaissance values more fully before the Reformation supervened. EUAN CAMERON

Hay, Arthur, ninth marquess of Tweeddale (1824–1878), army officer and naturalist, was born at Yester, East Lothian, on 9 November 1824, the son of George *Hay, eighth marquess of Tweeddale (1787–1876), army officer and agriculturist, and his wife, Lady Susan (1797–1870), daughter of William *Montagu, fifth duke of Manchester (1771–1843). Hay studied at Leipzig, and afterwards at Geneva under D'Aubigné, the historian. He became ensign and lieutenant in the Grenadier Guards in 1841, and four years later he served with distinction in the Sutlej campaign of the First Anglo-Sikh War, acting as aide-de-camp to Sir Henry Hardinge, the governor-general. In 1846, he became lieutenant and captain. In the same year he made a tour in the further Himalayas before returning to his unit in England. In 1851 he travelled in Germany and Austria, and went on to Constantinople. In December 1854 he went to the Crimea as captain and lieutenant-colonel. He served the remainder of the war there, and was noted as never having been absent from duty for a day, except

Arthur Hay, ninth marquess of Tweeddale (1824–1878), by Thomas Richard Williams, *c.*1860

when attacked by cholera. He returned to England in 1856 by way of Greece, Italy, and Switzerland, and did not again go on active service.

On 18 February 1857 Hay married Hélène Eleanore Charlotte Augusta (1836–1871), daughter of Count Kielmansegge, Hanoverian minister in London; she was for some time lady of the bedchamber to the princess of Wales. Having obtained a colonelcy in 1860, Hay retired on half pay in 1863; three years later, shortly after being made lieutenant-colonel of the 17th lancers, he retired from half pay. Despite a military career rewarded by various medals (including the Sardinian medal of valour), he decided to devote his life to ornithology. His interest in the subject dated from before 1845, the year in which he contributed to a Madras journal some descriptions of rare birds from the Straits archipelago. Between 1844 and 1879 his ornithological works appeared in the *Madras Journal of Literature and Science*, the *Proceedings of the Zoological Society*, *The Ibis*, the *Annual and Magazine of Natural History*, and the *Journal of the Asiatic Society of Bengal*.

On the death of his elder brother George, earl of Gifford, in December 1862, Hay became heir to his father's title and estates. He did not assume the courtesy earldom, and was known as Viscount Walden. He settled at Chislehurst, in Kent, where he built a house and grew roses. He was made fellow of the Linnean Society (1865), president of the Zoological Society of London (1868), and fellow of the Royal Society (1871). Following the death of his first wife on 30 September 1871, he married Julia Charlotte Sophie (1846–1937), daughter of Keith William Stewart-Mackenzie of Seaforth, on 8 October 1873. He succeeded his father as ninth marquess on 10 October 1876. At Yester he did much good for his tenants and the neighbourhood, providing them with a medical officer at a fixed salary and founding a library and reading-room, besides giving aid to the schools.

Tweeddale died on 28 December 1878, at the age of fifty-four, at his home, Walden Cottage, Chislehurst, after five days' illness. He was buried on 2 January 1879 at St Nicholas's Church, Chislehurst, beside his first wife. He was survived by his second wife. The *Ornithological Works of Arthur, Ninth Marquis of Tweeddale* was published privately in 1881 in a single volume, edited by Captain Robert Gordon Wardlaw Ramsay (Tweeddale's nephew) and containing a memoir of the author by Sir William Howard Russell, the war correspondent. Tweeddale's contemporaries commented on his shrewdness of observation, diligence in study, and amiable disposition; he appeared shy and retiring to strangers, and was both unselfish and considerate. Hay, Lord Charles, of Linplum (1700?–1760), army officer, was probably born in 1700, the third son of Charles Hay, third marquess of Tweeddale (1667–1715), and his wife, Susan (*d.* 1737), the widow of John Cochrane, second earl of Dundonald, and the third daughter of William Douglas and Anne Hamilton, duke and duchess of Hamilton. He entered the army as an ensign in the 2nd foot guards (the Coldstream Guards) in 1722. In 1727 he was made captain in the 33rd regiment of foot, and in 1729 he was promoted to a troop in the 9th dragoons. He was reported to have been present at the siege of Gibraltar in 1727 and to have served as a volunteer under Prince Eugene during the prince's campaign in 1734 on the Rhine, in the War of the Polish Succession. He was elected MP for Haddingtonshire in 1741, and upon the fall of Walpole supported the new government, in which his eldest brother, John Hay, fourth marquess of Tweeddale, was secretary of state for Scotland.

Hay transferred to the 1st foot guards (the Grenadier Guards) as captain (and lieutenant-colonel) on 7 March 1743. He served with the regiment at Dettingen and later, in December that year, was one of the officers who spoke in the House of Commons in defence of the Hanoverian troops against an opposition motion to disband those in English pay.

As captain of the king's company of the 1st battalion of the 1st foot guards he distinguished himself greatly at the battle of Fontenoy (11 May 1745). At 10 a.m., following the failure of initial flanking attacks by the Dutch forces to take the village of Fontenoy and of British and allied forces to overcome the d'Eu redoubt, William Augustus,

duke of Cumberland, ordered the British and Hanoverian infantry in the centre, now under heavy French artillery fire, to advance. Just as Hay's company was coming up to the crest of a ridge, the French guards, hitherto unseen, came forward to protect their guns and there was a momentary stand-off. According to Hay:

> It was our regiment that attacked the French Guards: and when we came within twenty or thirty paces of them, I advanced before our Regiment; drank to them (the French) and told them that we were the English guards, and hoped that they would stand till we came quite up to them, and not swim the Scheld as they did the Mayn at Dettingen. Upon which I immediately turned about to our own regiment; speeched them, and made them huzzah ... An officer, (d'Auteroche) came out of the ranks and tried to make his men huzzah; however there were not three or four in their brigade that did. (Carlyle, 6.44)

According to all the English accounts the French then opened fire and Hay was wounded in the arm, though he fought on until the close of the battle. His regiment (together with the rest of the guards brigade) replied with a deadly rolling volley and pushed the French guards back in disorder some 300 yards. The British guards continued their advance and repulsed a series of French cavalry charges with disciplined musket fire, but in the absence of support from their own cavalry were eventually forced to withdraw in the face of a withering artillery barrage from the French flanks. By noon Cumberland had restored the line, and a second advance was attempted, again with Hay's regiment in the van. Again the French infantry was broken, but once more the British were forced to withdraw (this time on account of the failure of the Dutch troops to come up in support), unpursued and in good order, in the face of heavy French artillery fire and fresh French infantry reserves (the Irish brigade). Shortly after the battle Hay was reported killed, but he recovered from his wounds. He was complimented on his conduct by both the officers and men of his regiment.

Shortly after the Jacobite rising of 1745 broke out he returned to London. It was reported that at a royal audience where he gave:

> some account of the state of affairs in Flanders, the King said how ungrateful his countrymen were to rise up in rebellion. Lord Hays answered that his majesty need only to order some magistrate to read the proclamation to them and he was sure they would disperse. After the battle of Preston, the King seeing Lord Hays at his levee, told him, 'Well, lord Hays, I think you had best go down and read the proclamation to the rebels'. (*Hastings MSS*, 3.53)

In November 1746 he was reported to be 'confined raving mad' and had been 'tied to his bed some time' (*Polwarth MSS*, 5.187), and as a result of this bout of insanity he did not seek re-election in 1747. In March 1749, presumably having recovered, he was made aide-de-camp to George II, and in 1751 he succeeded to the estate of his kinsman Sir Robert Hay, bt, of Linplum.

In 1752 Hay was made colonel of the 33rd regiment of foot, and in 1757 he was promoted major-general. He immediately received a high command in the force under General Hopson sent to Halifax, Nova Scotia, to join the expedition which was gathering there, under John Campbell, fourth earl of Loudoun, to attack the French at Louisville. Loudoun's dilatoriness (he was later recalled from his command) provoked Hay into publicly criticizing his failure to attack Louisville, whereupon he was arrested and placed aboard ship at Halifax and sent home in late 1758. He demanded and was eventually granted a court martial, which sat from 12 February until 4 March 1760. The decision was not made public, and the case was referred to the king. When preparing his defence Hay requested that Samuel Johnson be introduced to him, and after several visits Johnson pronounced it 'a very good soldierly defence', but advised 'that it was in vain to contend with those who were in possession of power, if they would offer him the rank of Lieutenant-General, and a government, it would be better judged to desist from urging his complaints' (Boswell, *The Life of Samuel Johnson*, ed. R. W. Chapman and J. D. Fleeman, 1980, 1780). Hay died, unmarried, on 1 May 1760, before George II could make up his mind what course to take. Later, Johnson wrote that he suffered a great loss when Hay died: 'he was a mighty pleasing man in conversation, and a reading man' (ibid., 723). Horace Walpole wrote in a different vein: 'The third prisoner and second madman, Lord Charles Hay, is luckily dead, and has saved much trouble' (Walpole, *Corr.*, 21.403).

Hay, David Ramsay (1798–1866), decorative painter and writer on art and design, was born in Edinburgh in March 1798. His mother, Rebecca Carmichael, a cultivated woman who in 1790 had published a volume of poems in Edinburgh, was left entirely destitute on the early death of her husband. David Ramsay, banker and proprietor of the *Edinburgh Evening Courant*, after whom the boy had been named, ensured that he received some education and placed him in a printing office as a 'reading boy'. Hay showed a talent for drawing which led to his apprenticeship, at the age of fourteen, to Gavin Beugo, a heraldic and decorative painter in Edinburgh. A fellow apprentice who became a lifelong friend was the painter David Roberts, of whose work Hay later owned a number of examples including *The Cathedral of Seville during the Ceremony of Corpus Christi* and two designs for the Scott monument (all

three exh. Royal Scottish Academy, 1836). In his spare time Hay made some copies after works by Antoine Watteau and some animal paintings which remained in the possession of his family. The latter drew the attention of Sir Walter Scott for whom he painted a portrait of his favourite cat, and on seeking Scott's advice regarding his early wish to become an artist, was taken into the author's study where they conversed at length. Scott recommended that unless he felt such a 'glow of ambition that [he] would rather run a hundred chances of obscurity and penury than miss *one* of being a Wilkie ... he should resolutely set himself to introducing something of a more elegant style of house-painting' (Lockhart, 7.201–2). Hay was 'modest and wise enough to accept the advice with thankfulness, and to act upon it. After a few years he had qualified himself to take charge of all this delicate limning and blazoning at Abbotsford' (ibid.). By 1820 Hay and his partner George Nicholson had set up a house decorating firm, and were assisted by Nicholson's brother William, who later became a successful portrait painter. By the late 1820s Hay was established at 89 and afterwards at 90 George Street, Edinburgh. Now considered to be an important example of early nineteenth-century interior design, Abbotsford forms one of a select group of houses described by Clive Wainwright in *The Romantic Interior* (1989). Hay's own account of his work for Scott, written many years after the poet's death, is there cited at length (Wainwright, 167). Hay noted that he began work on the dining room with eight assistants on 20 March 1820; in 1824 they began to decorate the library (ibid., 188, photograph, pl. 156) and then progressed to the hall and the armoury (ibid., 200). Scott continued to promote Hay's career and artistic education; in 1823 Hay wrote to Scott:

> do me the honour of accepting the old cabinet which accompanies this as a trifling mark of the gratitude which I feel, for the kindness and liberality with which you encourage my early efforts in painting and especially for the trouble you had the goodness to take in getting me admitted to the Drawing Academy and by your valuable advice directing my future pursuits to that line of business in which by the aid of your support and recommendation I have been so successful. (Wainwright, 167)

Hay was hugely successful in this line of business, carrying out important commissions at Holyrood Palace and the National Gallery of Scotland, Edinburgh, and, about 1846, the hall of the Society of Arts, London. In the early 1840s he was appointed 'decorative painter to Her Majesty, Edinburgh'. In establishing Hay's contribution to the vogue for historicized interior design Wainwright included Hay's comment that in 1822 (when shops scarcely existed outside London):

> there were no shops in Edinburgh, such as those where old carvings can now [1847] be so easily obtained—for I believe Sir Walter Scott's adoption of these articles as a decoration, gave the first impulse to that rage for them which has since existed, and which is now so well responded to by all who deal in other antiquities. (Wainwright, 180)

Several of the leading house decorators in Edinburgh and Glasgow were Hay's pupils, and they founded in memory of their master the Ninety Club, named after the number of his place of business in George Street, a society which, in 1891 when his entry was published in the *Dictionary of National Biography*, continued to hold an annual dinner.

From the outset, Hay took an interest in the theoretical side of his work and in 1828 published a slim volume, the *Laws of Harmonious Colouring*. The work ran to six editions in nineteen years, each edition increasing in scope, and was essentially rewritten after the fourth edition. In a notice of 1843 in the *Edinburgh Review*, the eminent scientist David Brewster acclaimed Hay's work for bringing 'scientific truth' to the otherwise murky speculations abounding on the fine arts. (Hay and Brewster were both involved in the Aesthetical Club, a society with masonic leanings dedicated to founding a science of beauty on fixed mathematical principles, which also included among its members John Goodsir and possibly James Clerk Maxwell.) Heartened by his success, Hay gained confidence in his theoretical positions and proceeded to produce a series of involved works during the 1840s—mostly published in expensive editions by William Blackwood & Sons—on subjects including the harmony of form, the principles of colouring, and the role of symmetry and proportion in defining beauty. Among these works, the most successful was his *Nomenclature of Colours*, the first edition of which was published in 1845, and which earned him the acclaim of much of the British press, as well as the acceptance of scientific authorities as respected as James David Forbes and Clerk Maxwell, both of whom made use of Hay's system. He was subsequently elected a fellow of the Royal Society of Edinburgh and, under the burden of his growing fame, published a catalogue raisonné of his own works in 1849. In 1846 Hay received from the Royal Scottish Society of Arts a silver medal 'for his machine for drawing the perfect egg-oval or composite ellipses', and was a founder member of the Aesthetic Society, established in Edinburgh in 1851.

Subsequent volumes extended Hay's ideas on beauty and proportion to the human head, the human figure, and architecture, culminating in his treatise of 1856, *The Science of Beauty*, largely premised on Pythagorean notions of harmonic numbers and ratios. His theories reflect a curious admixture of influences, ranging from Scottish commonsense philosophy to phrenology, and demonstrating a close proximity to the ideas of George Field, probably the most widely read authority on colour in nineteenth-century Britain and author of the theory of chromatic equivalents, which established specific mathematical proportions for defining colours. Both Field's and Hay's theories were adopted in the 1850s by the Department of Science and Art at South Kensington, and continued to be taught in the British system of government-supported schools of art well into the 1880s, gaining currency through their incorporation into the works of art-educational authorities such as Richard Redgrave and Owen Jones. Despite his evident debt to Field, it would be

wrong to dismiss Hay as a mere follower of the latter. Picking up on Field's ideas of quantitative analogies between music and colour, Hay developed this principle into a complex system of so-called 'harmonic ratios' which supposedly permeated all forms of natural and manmade beauty and which he expounded in great detail in his *Principles of Beauty in Colouring Systematized* (1845). Most of Hay's works were illustrated from his own designs. Although most of his ideas are completely discredited today and dismissed as pseudo-science, Hay's influence in his own time was extensive. Following his death at his home, 7 Jordan Bank, Edinburgh, on 10 September 1866, he was eulogized as nothing less than 'the modern Pythagoras' and described by his obituarist as 'a true philosopher' (*Art Journal*, 28, 363). Hay moved in the most cultivated Edinburgh society of his day, and accumulated a fine collection of pictures by contemporary Scottish painters and other art objects. In 1867 a large series of his 'educational diagrams, illustrative of his theory of the beautiful and its application to architecture, sculpture, and art production in general' was presented to the board of manufactures, Edinburgh, by his family and trustees. An extensive list of Hay's theoretical works is included in his entry in the *Dictionary of National Biography*.

Hay, Edmund (*c.*1534–1591), Jesuit, was a younger son of Peter Hay of Megginch, bailie to the earl of Erroll, and Margaret Crichton of Ruthven, both of Perthshire. After attending St Salvator's College, St Andrews, he graduated bachelor of theology at Rome. In 1562 Hay, recently ordained, volunteered to accompany the Jesuit Nicolas de Gouda as a papal legate to Mary, queen of Scots. A highly secret interview took place at Holyrood in Edinburgh, with Hay acting as Latin interpreter. Based at Megginch, the legate made contact with the bishop of Dunkeld, who had just been condemned for celebrating Easter. After arranging the legate's escape from Scotland with William Crichton, a future Jesuit activist, Hay followed with four youths from Perthshire, who also became Jesuits. After Rome he went to Innsbruck, and then in 1564 he became rector of the new Collège de Clermont in Paris. In 1566 a second papal legate was intended for Scotland but on Mary's insistence travelled no further than Paris. Hay went instead, along with William Chisholm, bishop of Dunblane, but they failed to convince her of the need for strong measures. After her enforced abdication Hay described Mary as 'that sinner' (Pollen, 508), but wrote supportively to her during her English captivity.

Hay's treatment of Thomas Smeaton when the latter, who had moved to France with the idea of becoming a Jesuit, but instead opted for protestantism, has been cited as an example of 'auld Parisiane kyndnes' among Scots abroad (Ross, 370). Though a foreigner, Hay was chosen as provincial superior of France (1571–4) before becoming rector of the new University of Pont-à-Mousson in Lorraine. He was in Scotland for four years from 1585 at a time when Robert Persons still regarded that country, through James VI, as 'our greatest hope' for the conversion of England (Law, 223). Working with James Gordon in the north-east, Hay is credited by a visiting Irish bishop, who confirmed them, with having made at least 10,000 converts in six months. His final appointment was as assistant to the Jesuit general in Rome.

Hay had early made clear his disapproval of Jesuits who confused religion with politics, and the fact that he held such positions of responsibility within the order has been taken to show that 'far from altering his views on so vital a point, he came in the course of years to hold it more strongly than ever' (Chadwick, 'Memoir', 69). Hay died on 4 November 1591 at the Vatican in Rome, and was buried there.

Hay, Edward (*c.*1761–1826), historian and political activist, was born at Ballinkeele, co. Wexford, Ireland, the eldest son of Harvey Hay (*d.* 1796), landowner, and Catherine Fergus, who were Roman Catholics. He studied in France and Germany before returning to Ireland, where he took part in the public movements for effecting a relaxation of the penal laws against Catholics. In 1791 he was elected by the Wexford Catholics to the Catholic committee, whose exertions led to the Catholic Relief Act of 1793. Hay endeavoured at this time to suppress the disturbances in Wexford and to restore peace in the county, and was one of the delegates who, on behalf of the Irish Catholics, presented an address to Lord Fitzwilliam, and laid a petition before George III at London in 1795. Edmund Burke in a letter to Thomas Hussey in that year referred to him as a 'zealous, spirited, and active young man' (*Correspondence*,

264). Hay also devised a project for obtaining a statistical enumeration of the population of Ireland. His plan received the commendation of Lord Fitzwilliam and Burke, as well as of Bishop Milner. His census, which concentrated on his home parish of Ballinkeele, included denominational data in order to provide demographic arguments for Catholic emancipation. Hay was made a member of the Royal Irish Academy in 1795 for his census efforts.

During the disturbances in Wexford in 1798 Hay acted as a negotiator between the rebels and the government forces. His motives were political; however, he was arraigned on a charge of treason, and, although acquitted, he suffered protracted imprisonment until liberated through the intervention of Lord Cornwallis. In 1803 he published at Dublin *History of the insurrection of the county of Wexford, A.D. 1798, including an account of transactions preceding that event, with an appendix*; it was reprinted at Dublin in 1842, 1847, 1848, and 1898, and in New York in 1873. To it he appended statements in contravention of allegations made against him and his brother, John Hay, by Sir Richard Musgrave in his *Memoirs of Various Rebellions in Ireland* (1801). His *History* was written to vindicate and conceal his activities. Contrary to Musgrave's claim that the rebellion was a Catholic act of subversion designed to eliminate all protestants, Hay's book minimized the role of Catholic lay involvement in the rebellion, and he was clearly sympathetic towards the 'intrepid' rebels, though critical of sectarian violence. Hay actively marketed his book and claimed that 3000 copies were sold.

Hay subsequently acted as secretary for various associations for the emancipation of the Irish Catholics between 1807 and 1819. His tasks included routine paperwork, advertising meetings, keeping the public informed about Catholic activities, and circulating policy documents. His voluminous official correspondence suggests that he was relentless in canvassing support for the Catholic cause. Letters between Hay and English Catholics demonstrate his desire for a pan-Catholic league. He was somewhat unjustly superseded as secretary to the Catholic board in 1819, nominally for having without authority opened communication with a cabinet minister, George Canning. Daniel O'Connell left Hay responsible for the debts of the Catholic body when subscriptions dried up as a result of the split over the veto controversy in the 1810s. Hay was reduced to penury in his later years and was imprisoned for debt in 1822. He died of blood poisoning in very necessitous circumstances in Dublin on 13 October 1826 and was buried in St James's Church, Kilmainham, Dublin. He was survived by his wife.

Hay's career spanned the era from Wolfe Tone to O'Connell, from political exclusion to mass mobilization of the Irish Catholics. According to Henry Grattan he was a 'well-meaning person; very busy, always in a bustle, and extremely loquacious' (Grattan, 5.403), and O'Connell described him as the 'servant of eight million people' (Madden, 4.528).

Wealth at death died in penury: *Dublin Evening Post* Oct 1826; *Freeman's Journal* Oct 1826

Hay, Francis, ninth earl of Erroll (*bap.* 1564, *d.* 1631), rebel, was baptized on 30 April 1564, the second of the four children of Andrew Hay, eighth earl (*d.* 1585) and his first wife, Lady Jean Hay (1540–1570), daughter of William Hay, sixth earl of Erroll. His elder brother Alexander, was set aside on account of physical defect, being deaf and dumb. Francis had a charter of the lands of Argath and Inchmichael, Perthshire, on 22 August 1582 and the lands of the barony of Erroll on 29 March 1584. By contracts dated between 22 April and 27 June that year he married Lady Margaret Stewart, daughter of the late James *Stewart, earl of Moray (1531/2–1570), regent of Scotland; they had no children. Following his father's death at Slains on 8 October 1585, he succeeded to the earldom, being still under age. His wife died before 3 August 1586, and by contract dated 17 to 28 January 1587 he married Lady Mary Stewart, daughter of John *Stewart, fourth earl of Atholl (*d.* 1579), but she too died childless in 1589. On 6 February 1588 Erroll had a charter of the Kirktown of Slains.

At an unknown date Erroll was converted to Roman Catholicism by his kinsman Father Edmund Hay (*c.*1534–1591). With George Gordon, sixth earl of Huntly, he became a leader of the pro-Spanish faction which openly desired the re-establishment of the old religion. Following the defeat of the Spanish Armada, in 1589 Erroll entered into a treasonable correspondence with Philip II of Spain hoping to induce the Spanish monarch to undertake a second expedition. A letter from Erroll to the duke of Parma asserting his loyalty to the king of Spain was intercepted in England, and on 17 February was sent by Elizabeth I to James VI.

On 29 February Erroll was ordered to appear before the

privy council on a charge of perverting the true religion, within eight days under pain of rebellion. On 13 March, the earls of Erroll and Huntly had a secret conference with James VI but the king refused to be drawn into the matter and warned them against entering into conspiracies. Erroll failed to appear before the council and was denounced a rebel on 21 March; he was put to the horn (declared an outlaw), his goods and lands were confiscated, and his person was to be pursued as a traitor. The next day, probably ignorant of this, he wrote to Robert Bruce, minister in Edinburgh, denying the accusations made by John Maitland, the chancellor.

On 7 April Erroll was charged to deliver the castles of Slains and Logiealmond but with the earls of Crawford, Huntly, and Bothwell, he responded by raising a rebellion in the north. James VI left Linlithgow on 10 April, and five days later arrived at Cowie, Aberdeenshire. By this time the earls had assembled at the Bridge of Dee with a force of 3000 men. While James aimed to 'wracke and ruine his papistes and disobedient subjectes, and keap his cowtrie from being a receptable to forein forces' (*Reg. PCS*, 4.371), the rebels hoped to liberate a king they saw as sympathetic to their religion but the captive of pressures from the English, the kirk, and Scottish protestants. Erroll was ready to attempt this by force but Huntly surrendered while the king was still in the north, and once he was taken the others fled. One by one they were taken into custody, with Erroll, the most militantly Catholic, the last to surrender in July. Following a second interview with the king, on 4 August 1589 Erroll received his liberty and his goods and lands were declared extant by an act of council in Aberdeen. That month Huntly and Erroll made a bond to have each other as ally, defending the other against enemies, except the king ('Errol papers', 2.279).

Before 10 July 1590 Erroll married his third wife, Lady Elizabeth Douglas, youngest daughter of the protestant magnate William *Douglas, sixth earl of Morton (*c.*1540–1606); they had five sons and eight daughters. This new alliance notwithstanding, Erroll repeatedly committed treasonable acts. On 27 June 1592 he was with the king at Falkland Palace when the earl of Bothwell attempted to capture it. Suspected of involvement in the conspiracy, Erroll was imprisoned in Edinburgh Castle. He was recommitted on 31 July under suspicion of being a papist but after a very short time he was liberated, only to renew his treasonable correspondence with Spain. In December 1592 he was suspected of complicity in the famous conspiracy known as the Spanish blanks, allegedly a Spanish-backed plot to resurrect, first in Scotland and then in England, the enormous enterprise of the Great Armada, in order to restore the Catholic faith in the island. On 8 January 1593 he was summoned to surrender, and on 5 February was denounced a rebel for 'practizing and traffiquing with Jesuites, seminari preistis, and utheris excommunicat and trafficquing papistis, aganis the state of the trew religioun' (Pitcairn, 1.283). On 9 March the earl marischal was deputed to apprehend him, but on 16 March the king, with advice of his council, ordained letters 'to issue to relax the Earls of Angus, Huntly, Erroll, Gordon of Aunchindoun' and others from the horn (*Reg. PCS*, 5.52n.) and summoned them to appear before parliament on 2 June. On 4 August the earl of Erroll 'submitted him selffe to his [the King's] marcy very humbly, and reprented muche, accusynge Huntley of many thinges that the King knew not before' (ibid., 5.131). He had to pay a fine of 2000 crowns and was briefly imprisoned.

After some confusion and petitioning of the king by the earls their trial was held on 26 November. The court decided that the three noblemen and their followers should be exempt from prosecution on condition of not repeating the offences and making a payment of £400 each. It was also decided that by 1 February they should submit to the church and renounce the errors of popery, or be removed from the kingdom. However, by 31 January it had become clear that the earls would not comply with the terms, and they were charged to return to specified prisons within ten days. When Erroll failed to appear at Edinburgh Castle, parliament declared him a traitor. This verdict was confirmed at the end of the trial on 8 June.

Meanwhile Erroll had joined the earl of Huntly in Aberdeenshire with a formidable army. When on 16 July 1594 the crew of a Spanish ship and some Jesuits, including Huntly's uncle James Gordon, were arrested both earls sought their release, threatening to attack and burn the towns of Glenlivet and Glenrinnes. On 3 October 1594 they defeated a royal army of 7000 men commanded by the earl of Argyll at Glenlivet, although Erroll was wounded by an arrow and sustained other severe injuries. When the king himself arrived in the north, the earls swayed by Huntly and against Erroll's more belligerent judgement, withdrew north and avoided further confrontation. Although the king ordered the demolition of Erroll's castle at Slains before he left the north on 9 November, no further reprisals were taken against the rebels. The duke of Lennox, left to secure the north as his lieutenant, obtained for the earls the king's permission to go into exile, in return for forswearing unauthorized return and further conspiracy against the established religion or the peace of the kingdom.

Erroll went to the Netherlands. His lands were given to Lennox 'by way of factorie', but his wife, Elizabeth, remained in the country as 'intrometter therewith' (Calderwood, 5.357). However, rumours of further conspiracy soon led the estates in the Low Countries to arrest Erroll and imprison him at Middelburg. Robert Dennistoun, James VI's conservator of privileges in those countries, was appointed as his keeper but let him escape. In September 1596 Erroll and others returned secretly to Scotland. On 22 November a council proclamation forbade his feudal tenants from making contact with him and ordered them to satisfy the kirk. On 30 November David Black, minister of St Andrews, was summoned for asserting that the rebels had returned with the king's consent. However, James VI desired reconciliation between them and the kirk. On condition of his abjuration of popery and his subscription to the confession of faith, the general assembly decided against excommunicating Erroll; absolution was given on 26 June. In August the earls were relaxed from

the horn at the cross of Edinburgh, and on 16 December 1597 they were restored in their estates and dignities by an act of parliament.

Further signs of royal favour followed. On 10 August 1600 the earl and countess had a charter of the lordship of Erroll and other lands. On 30 October 1601 Erroll was appointed commissioner of justiciary for the king against a group of rebels, including Gordon of Gicht, and on 11 July 1604 he was a commissioner to treat the union with England. During those years, Erroll enjoyed the king's confidence. Although a long-running dispute between Erroll and the earl marischal with regard to the privileges of the high constable, a hereditary office in both families, surfaced in 1606, it does not seem to have had serious political repercussions at this time. Erroll received further charters of land, at Turnaluif on 29 July 1607 and the barony of Crimond on 7 June 1608.

However, the kirk still held Erroll in suspicion. In February 1608 he was summoned for not taking communion; the sentence was a penalty of £1000. In May of that year, the general assembly, meeting at Linlithgow, denounced him as one of the heads of the 'Catholic party' of Scotland and threatened him with excommunication. This became effective on 11 October following Erroll's refusal to conform to the Reformed religion. Subsequently he obeyed a privy council order to enter into ward, and was confined at Dumbarton and elsewhere, but this was not the end of the matter. On 11 March 1609 he lost his life-rent and was put to the horn by a decree of the council. In 1610, a review of his case on his own petition led to further detention in Edinburgh Castle until late May 1611. Six years later he was finally released from his excommunication 'upon some offers given in of him to some bishops convented at Perth' (Calderwood, 8.244).

In the 1610s Erroll was a frequent, but not a prominent attender at parliaments. On 28 March 1620 he was accused of sending his son to France with Patrick Con, a well-known papist. After a long period of sickness, Erroll obtained a royal warrant to go abroad for the benefit of his health, under caution of £10,000. Little is known of his last years. He died on 16 July 1631 at his house of Bownes, erected on the ruins of the ancient castle of Slains, and was buried in the parish church. There was no ceremony because he left instructions that the money which might have been spent on his funeral should be given to the poor. He claimed in his will, dated 9 June 1628, that he died, as he had lived, a true and sincere apostolic Roman Catholic. He was succeeded as tenth earl by his son William Hay (*d.* 1636), who had been educated as a protestant.

Hay, George (*c.*1530–1588), Church of Scotland minister, was the second son of William Hay, fourth laird of Talla and also of Linplum, Peeblesshire, and his wife, Janet Spottiswood. Andrew *Hay, rector of Glasgow University, was his brother. By papal dispensation he held the benefices of Eddleston, Peeblesshire, and Rathven, Aberdeenshire, where he was rector by 10 July 1558. At the Reformation he embraced protestantism and retained both livings, though he employed a reader to serve at Eddleston. At the home of Sir James MacGill, clerk register, in November 1561 he joined John Knox, John Row, and Robert Hamilton in arguing against Lord James Stewart and others that subjects had the right to prevent Queen Mary from having mass in her chapel. Commissioned by the general assembly, Hay preached 'with great fruit' throughout Carrick for a month in 1562 (*Knox's History*, 2.55); his efforts, along with those of John Willock and, in Kyle, of Knox, won numerous converts and resulted in the signing of a covenant at Ayr on 4 September 1562.

Hay also engaged in a disputation with Quintin Kennedy, abbot of Crossraguel, at Maybole, Ayrshire. The abbot was familiar with patristic and scholastic writings, causing Hay concern that he would mislead the uneducated, but he accused Kennedy of self-deception because of his ignorance of Greek. An account of the debate was published as *The Confutation of the Abbote of Crosraguels Masse* (1563), with an epistle to Lord James, now earl of Moray. The records of the general assembly refer to Hay in December 1563 as minister to the privy council, a status he probably attained through his association with Moray. In June 1564 Moray, the earls of Argyll and Morton, and their associates sent him to arrange a conference between them and superintendents and learned ministers at the general assembly. Morton and William Maitland of Lethington urged Hay to condemn Knox's views on the right of subjects to disobey magistrates who ordered them to contravene divine precepts, but he refused. In 1565 the general assembly commissioned him to visit churches, schools, and colleges in Aberdeen and Banff. His second publication, a lecture delivered at King's College, Aberdeen, on 2 July 1569, as part of a campaign to end its continued attachment to Catholicism, appeared in 1571 under the title *M. G. Hayi oratio habita in gymnasio Aberdonensi.*

In 1567 Hay was granted a third of the stipends of his livings at Rathven and Eddleston on condition that he supply the church he did not serve, and he also held the parishes of Bellie and Dundurcas in Moray from this time until his death. Although he was reprimanded in 1568 for not preaching or administering the sacraments at Eddleston, he continued to play a prominent role in church affairs,

serving as moderator of the general assembly at Edinburgh in March 1571 and commissioner to consult with the regent and parliament the same year concerning the selection of qualified men for the superintendency. A committee of the general assembly was assigned to revise his response to the Jesuit James Tyrie's *The Refutation of ane Answer Made be Schir Johne Knox* (1573), but this was apparently not published. In March 1574 the general assembly named him one of the examiners of the chapter of Moray after it approved George Douglas as bishop without examining his qualifications, and the same assembly dispatched him as part of the delegation to confer with the regent and privy council regarding the church's jurisdiction.

Although Hay was charged with allowing the observance of patron and festival days and maintaining inadequate discipline in his province, in August 1575 the general assembly named him commissioner of Caithness. In the same assembly he was assigned, with John Row and David Lindsay, to argue against Andrew Melville and others that bishops as constituted in the Church of Scotland accorded with scripture, and he subsequently helped draft a statement for the regent explaining the church's position on episcopacy. With Melville and Alexander Arbuthnot he was to have represented the Scottish church at the Magdeburg conference on the Augsburg confession in 1577, but the government decided not to send them for financial reasons. At the behest of the general assembly Hay helped draft the second Book of Discipline (1578) and then took part in a conference with the earl of Morton and others to discuss it. On 25 July 1578 he was appointed a visitor of the University of Aberdeen. Although he was responsible for establishing presbyteries in Caithness, Ross, Sutherland, and Moray, the only progress he could report to the general assembly in April 1583 was a plan to constitute them in Moray. This 'man of learning and of modesty', as Knox once called him (*Knox's History*, 2.115–16), died at Rathven in 1588. With his wife, Marion Henderson, or Henryson (*d.* 1577), he had four children, George of Rannes, James of Rannes (*d. c.*1630), William, an Edinburgh tailor, and Janet. RICHARD L. GREAVES

Hay, George, first earl of Kinnoull (*bap.* 1570, *d.* 1634), politician and entrepreneur, was baptized on 4 December 1570, probably at Megginch, Perthshire, the second son of

George Hay, first earl of Kinnoull (*bap.* 1570, *d.* 1634), by Daniel Mytens, 1633

Peter Hay (*d.* 1596), laird of Megginch and bailie to his distant kin the earls of Erroll, and his wife, Margaret (*fl.* 1554–1572), daughter of Patrick Ogilvy of Inchmartin. From 1588 he received a Jesuit education at the Scots College, Pont-à-Mousson, Lorraine, where his uncle Edmund Hay (*c.*1534–1591) was rector, and took minor orders. Sir John Scot of Scotstarvet, who later worked resentfully under him, said that he 'had little or no learning' (Scot of Scotstarvet, 48), but this may be doubted.

Some time in the 1590s Hay went back to Scotland, where, outwardly at least, he conformed to protestantism. His return may have been prompted by the death of his father in 1596. He acquired the estate of Nether Liff from which he took his title for some years. After 1592 he married Margaret Haliburton (*d.* 1633), widow of Patrick Ogilvy the younger of Inchmartin. On 1 February 1599 he became commendator of the Charterhouse of Perth. Having some business with the neighbouring earl of Gowrie, he was present at Gowrie House when King James was allegedly attacked there on 5 August 1600.

Hay seems not to have frequented the Scottish court, but shortly after the accession of James I to the English throne he was introduced at court by his first cousin, the royal favourite James Hay, later earl of Carlisle. He became

a gentleman pensioner, and then (by 1607) a gentleman of the privy chamber. He was knighted some time between May 1606 and July 1607.

Hay used his court connections to establish a business career in Scotland. In July 1605 he became a commissioner of justiciary to assist the syndicate attempting to colonize the Isle of Lewis. The syndicate's two expeditions to the island (1598–1601, 1605–6) were defeated by native resistance. On 18 October 1607 Hay became one of three members of a new syndicate, but their one expedition, in 1609, was also defeated, and the following year they sold out to a neighbouring chief, Kenneth Mackenzie of Kintail.

Hay then moved into the iron and glass businesses, possibly with English financial backing. In 1610 he leased the woods of Letterewe on Loch Maree, Wester Ross, from Mackenzie, in exchange for Hay's Lewis rights. By 1612 Hay and his associates and licensees had established a blast furnace there for iron manufacture, the first in Scotland. He established a glassworks at the same time, probably in the same place—again Scotland's first. He imported skilled English ironworkers and continental (probably Venetian or Dutch) glass-workers. Both industries were successful and Hay soon obtained a monopoly of glass manufacture in Scotland. The Scottish glass market was small but in 1620 he got the English market opened to him—a blow to the English monopolist Sir Robert Mansell. Hay had already trespassed on Mansell's territory in 1616, obtaining an English patent for making smalt (cobalt blue glass). In 1621 he consolidated his Scottish monopoly, with a ban on glass imports. Meanwhile, in May 1615 he and his servant Thomas Murray had received a nineteen-year monopoly of whaling. They sent out two ships in 1616, but it is not known whether the enterprise continued.

In 1616 Hay moved suddenly into Scottish politics. From this time he was frequently at court, and probably through the intercession of his patron, the marquess of Hamilton, obtained two posts that year. On 11 March he became clerk register, though he had never even been a privy councillor and took his seat on the council only on 26 March, and on 4 December he also acquired a more minor position as commissioner for the king's rents. Suspicion over his religion, raised in 1620 when an arrested Catholic messenger was alleged to have been carrying a letter to him, proved no bar to preferment. Further cultivation of Hamilton, the marquess of Buckingham, and their associate the Catholic earl of Nithsdale resulted in his obtaining on 3 July 1622 the chancellorship of Scotland; he retained it until his death.

As chancellor, Hay lacked the standing of his predecessor, and generally co-operated with his senior colleagues, the earls of Mar and Melrose, respectively treasurer and secretary. During the famine of 1623 he went to Perth to encourage his local JPs to take vigorous action on poor relief. In July 1624 he issued a ruling defining conventicles narrowly, impeding the prosecution of religious dissidents. On 22 August 1624 he received a feu of the lands of the forfeited earldom of Orkney, for an annual duty to the crown of 40,000 merks (about £2222 sterling). The previous tacksman (lessee) of Orkney, Sir John Buchanan, initially remained as manager of the rents, paying his tack duty of 45,000 merks to Hay. Hay took over Buchanan's tacks in March 1625.

Following the accession of Charles I, Hay had a difficult relationship with the king, who did not trust his father's councillors. He surrendered his Orkney rights in May 1625 for substantial compensation in cash. At a conference with the king in January 1626, he, Mar, and Melrose led the councillors' opposition to Charles's revocation, disputing hotly with the king and his supporters. Hay also protested against the use of informers by the new commission for grievances, and the king objected that he and Mar had opposed the royal desires at the recent convention of estates. Hay's standing with the king probably never recovered from this. In June he led those who 'crushte in peices' the king's proposals (promoted by Sir James Skene, lord president) to restructure the court of session (Balfour, 2.138). Nevertheless, he remained in post and continued his alliance with Melrose and Mar.

When Hay visited the court early in 1627, the Venetian ambassador reported that he had, 'in the course of a few weeks, allowed himself to be gained by the favourite [Buckingham], notwithstanding his having been hitherto considered a person of integrity and good character' (*CSP Venice*, 20.119–20). The reported price was a third of the 'contribution' of 600,000 merks (about £33,333 sterling) allegedly offered by the Scots in connection with the revocation. But since no such 'contribution' had been offered and since Hay was not a stranger to Buckingham before 1627, the basis for the story remains unclear. On 4 May 1627 he was created Viscount Dupplin; his patent, unusually, was sealed with the privy seal, since as chancellor he was keeper of the great seal.

On 25 May 1633, during Charles's visit to Scotland, Dupplin was further honoured, being created earl of Kinnoull. However, the next day he refused Charles's request to yield precedence to the archbishop of St Andrews in the coronation procession, protesting that 'never a ston'd [stoled?] preist in Scotland should sett a foote befor him so long as his blood wes hotte', whereupon the king referred to him as an 'olde canckered goottishe man' (Balfour, 2.141–2). However, in presiding over the subsequent parliament he was prompt in deflecting opposition calls for a second vote that might have led to defeat for some of the governmental programme.

Kinnoull was active in tax administration, and was said to have devised the innovative tax on annual rents of 1621, though the main author seems to have been Melrose. He took over as collector of the tax of 1625–30 in November 1627, and was from the outset the collector of the next tax (1630–34). As late as May–August 1634 he served on a major financial reform commission. Late in life he suffered from gout and gravel. He died of apoplexy in London on 16 December 1634, and was interred at Kinnoull on 19 August 1635.

Hay, George, eighth earl of Kinnoull (1689–1758), politician and diplomatist, was born in Canongate, Edinburgh, on 23 June 1689, the eldest son of Thomas Hay, seventh earl of Kinnoull (*c.*1660–1719), landowner and politician, and Elizabeth Drummond (*d.* 1696), daughter of William, first viscount of Strathallan, and Elizabeth, *née* Johnston. On his father becoming earl in 1709, George took the title Viscount Dupplin. In September of the same year he married Abigail Harley (*d.* 1750), second daughter of the tory politician Robert Harley (later first earl of Oxford), and his first wife, Edith, *née* Foley; the couple, who endured a bitter relationship brought about by Dupplin's domineering presence, had four sons and six daughters.

A year later Dupplin himself entered politics as MP for Fowey in Cornwall. He briefly supported Harley's tory ministry in the lower house until, on 31 December 1711, he was made Baron Hay of Penwardine, Herefordshire, in the British peerage, one of twelve newly created peers born of Harley's need to defend the tory stance on the treaty of Utrecht. During the Jacobite rising of 1715 Dupplin, like his father, was detained in London on suspicion of support for the Stuart cause, being held until June 1717. His brother John *Hay of Cromlix (1691–1740) was a career Jacobite, but Dupplin was not. On his father's death in January 1719 he succeeded as the eighth earl of Kinnoull.

Kinnoull's Stuart sympathies again came under investigation when he was suspected of involvement in Christopher Layer's conspiracy to enlist noblemen for a Jacobite rising in 1722. After consideration no proceedings were taken by the House of Lords. Later that decade he inherited estates in Perthshire and Argyll formerly in the possession of his father and his cousin Viscount Strathallan.

Between 1729 and 1737 Kinnoull served as the British ambassador to Constantinople. To the job of diplomat the earl brought his own blend of tactlessness and a lingering whiff of Jacobitism. Writing in July 1735 Lord Harrington commented on the king's wish for Kinnoull's immediate recall, 'his conduct being certainly too suspicious to be borne any longer' (to Horace Walpole, *Eglinton MSS*, 257). Several months later Jonathan Swift, in a letter to Kinnoull's brother-in-law, Lord Oxford, wrote both of his dwindling respect for the earl—a man 'I exceedingly loved in the Queen's time. But ... my opinion of him for several years past hath been wholly changed'—and of his ongoing sympathy for his wife who suffered at the hands of her irascible husband (*Portland MSS*, 6.61). Kinnoull's poor family relations had also featured regularly in correspondence between Lord Oxford and his former tutor, William Stratford. Writing in October 1724 Stratford had predicted a downturn in the earl's professional fortunes. 'Should this be true', he concluded, 'whatever was done for his wife and children, I think he ought to be left to die in a ditch' (ibid., 7.386–7).

Two years after his return from Constantinople, Kinnoull was involved in a dispute with the general assembly of the Church of Scotland over his right to nominate his placeman, George Blaikie, to the parish of Madderty, Perthshire. The presbytery rejected Blaikie as unacceptable; the earl in turn refused to waive his right to presentation and attacked what he saw as this challenge to his standing as a patron. The dispute ended with Blaikie's departure for the American colonies.

Kinnoull died on 28 July 1758 at Ashford in Yorkshire where he was buried four days later. His long-suffering wife had predeceased him in July 1750. The eldest of his long-suffering children, Thomas *Hay, Lord Dupplin, now assumed the earldom and achieved celebrity as a politician and promoter of the moderate party within the Church of Scotland; his second son, Robert Hay *Drummond (1711–1776), later became archbishop of York.

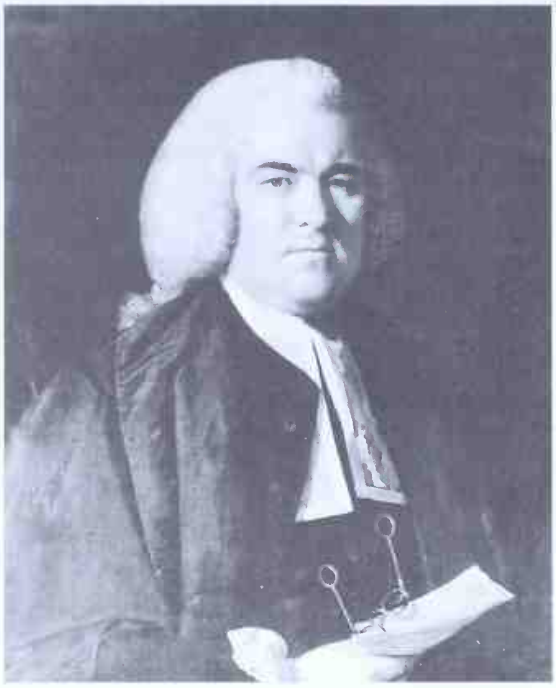
Hay, Sir George (1715–1778), judge and politician, was born on 14 or 25 January 1715, probably in London, the son of John Hay, rector of St Stephen, Coleman Street, London, and his wife, Sarah. He was later described as Scottish, and may have been a kinsman of the earl of Kinnoull. He entered Merchant Taylors' School, London, in 1725 and was elected Sir Thomas White scholar and Merchant Taylors' fellow at St John's College, Oxford, in 1731, where he matriculated on 30 June. He graduated BCL on 29 April 1737 and DCL on 23 February 1742. On 23 October 1742 he was admitted a member of Doctors' Commons, and began to practise in the fields of ecclesiastical and Admiralty law. From early in his career he established a circle of friends that included the painter William Hogarth and the actor David Garrick, and became better known for his social life than his interest in the law. It was for him that Hogarth painted *The Savoyard Girl*, a satire on an unsuccessful sexual pursuit by William, duke of Cumberland, in 1749. In 1751 he was appointed chancellor of the diocese of Worcester, which may have been the news that Garrick found 'surprising' (*Letters*, 1.172).

Hay entered parliament in 1754 as member for Stockbridge, Hampshire, nominated by Sir Robert Henley. In



Sir George Hay (1715–1778), by Sir Joshua Reynolds, 1760–61

1755 he was appointed king's advocate-general and, after appealing to the duke of Newcastle, gained the more lucrative post of vicar-general to the archbishop of Canterbury as well. As king's advocate-general he gave two rulings on Admiralty law that shaped naval practice during and after the Seven Years' War: first, in July 1755, that it was possible to prosecute in a single action the entire crew of a merchant vessel who resisted impressment; and second, in July 1756, that only the officers and men on board ships actually present at the capture of an enemy vessel could share the prize.

Politically Hay detached himself from the war policies of the Newcastle administration in November and December 1755, when he spoke and voted against the subsidy treaties with Hesse and Russia, aligning himself with William Pitt; the two had a mutual friend in Henry Bilson Legge. The government was alarmed at losing a strong orator and did not dismiss Hay from the post of king's advocate-general until May 1756. Horace Walpole had thought Hay's speech on the treaties 'easy, but not striking' (Walpole, *Corr.*, 37.415) but later listed him as one of the twenty-eight best speakers in the Commons during the 1755–6 session. Hay was reinstated by the Devonshire administration, in which Pitt had a leading role, and was also appointed a lord of the Admiralty. He was required to offer himself again for election at Stockbridge but Henry Fox, who had acquired the patronage from Henley, refused to return him, and Hay remained outside the Commons. As a lord of the Admiralty he signed Admiral John Byng's death warrant on 16 February 1757; George II held Hay and his colleagues responsible for the public hostility directed at the king following Byng's execution and refused the suggestion that Hay succeed Byng at Rochester. He lost his place at the Admiralty board in April, on the collapse of the Devonshire administration, but returned in July, when Pitt joined Newcastle's ministry, and was found a seat in the Commons at Calne, in Wiltshire. Hay's complicated search for a seat may have inspired Hogarth to dedicate to him the fourth print in his series *The Election*, published on 1 January 1758. Hogarth painted a portrait of Hay in 1757, now lost, of which John Hoadly wrote:

> if I were like, I would not have my picture drawn: I should not like to meet that figure alive in the fields going to Chelsey, for fear of dying that night in a ditch—With twenty gaping gashes in my crown. (Paulson, 295)

Hay became a prominent government speaker, particularly on naval and legal matters; during a debate on the Habeas Corpus Act in 1758 Alexander Carlyle thought that he spoke 'with a clearness, a force, and a brevity, which pleased us much' (*Autobiography*, ed. Burton, 352). He migrated to the Admiralty borough of Sandwich for the 1761–8 parliament. He was considered for the position of speaker of the House of Commons but Lord Hardwicke wrote to Newcastle that 'The chief objections are that he is too low, and a Scotchman, and ... I doubt whether he would quit his profession for it' (Namier). In the new parliament he grew away from Pitt, whom he apparently disliked and had only supported out of regard to Legge, whose health was in decline. He retained his position as a lord of the Admiralty under the Bute ministry and in the Grenville administration. On 17 February 1764, during the debate on the validity of general warrants inspired by the arrest of John Wilkes in the previous year, Hay moved the government amendment to the opposition motion with the intention of making the motion too complex for debate, a tactic condemned by his former patron Pitt. He also had to excuse his hostility to his old friend Wilkes, arguing that Wilkes had been led astray by bad company. Despite his changes of political allegiance he applied through Newcastle for the positions of judge of the prerogative court of Canterbury, chancellor of the diocese of London, and dean of the arches when the last fell vacant in May 1764; Newcastle agreed to nominate him only after sustained persuasion from Hay's friend Charles Yorke. On appointment he ceased to be king's advocate-general and chancellor of the diocese of Worcester. He continued to speak for the Grenville government in the Commons. He contributed to another debate on general warrants on 29 January 1765, when his statement 'the law of government is superior to the law of the land' (Walpole, *Memoirs of the Reign of King George III*, 2.86)—also quoted by Nathaniel Ryder as 'there is a law superior even to the law of the land, the law of government by public safety' (Namier)—led to accusations that his background as a civil lawyer had led him to introduce notions of arbitrary power alien to English common law. The charges were repeated by Pitt during the debate on the repeal of the Stamp Act on 4 March 1766, although by this time Hay had left office.

Hay left the Admiralty in July 1765, at the fall of Grenville's ministry; Charles Yorke used the Rockingham ministry's refusal to reappoint Grenville as a reason not to

accept its offer of a post. He voted against the repeal of the Stamp Act and mocked the government's American policy. His relations with the administration of Chatham (formerly Pitt) were cautious. The lord chancellor was Charles Pratt, Baron Camden, who was a personal friend—Garrick received an invitation from Camden, through Hay, to meet Camden at Doctors' Commons in June 1766—but Hay did not want to break faith with Charles Yorke and chose instead to 'take his chance' (Namier) and refuse nomination by a borough patron. At the 1768 election he hoped to be elected for Oxford University, but came bottom of the poll and was found a seat by Granville Leveson-Gower, second Earl Gower, at Newcastle under Lyme. He voted with the Grafton and North ministries but was less active in parliament and may have concentrated on his legal career, as in 1773 he was appointed a judge of the high court of Admiralty, retaining his positions as dean of the arches, judge of the prerogative court of Canterbury, and chancellor of the diocese of London. He was knighted on 11 November 1773.

Hay presided at the high court of Admiralty for over four and a half years. There he made a series of rulings that defined the limits of the court's jurisdiction and clarified points of Admiralty law. Among these were the case of *Meake* v. *Lord Holland* (1774), where he refused to decide a dispute between the part-owners of a ship before a suit concerning the ownership of some of the shares had been settled by the court of chancery. In *Fairless* v. *Thorsen* (1774) 'he held that the court had jurisdiction to try the question of whether one ship had damaged another in Greenwich reach' (Holdsworth, *Eng. law*, 12.673). He continued as member for Newcastle under Lyme in the 1774 parliament but made few appearances in the Commons. In December 1775 he spoke in favour of the bill prohibiting trade with the American colonies, and looked to the Admiralty courts in America to compel the Americans to return to their allegiance. When he had to apply what resulted—the Prohibitory Act of 1776, also known as the Intolerable Act—he sought a 'humane interpretation' (ibid., 12.674), attempting to distinguish between those carrying on trade who were loyalists and would probably move to Britain should the colonies become independent, and those who could or would not return. He tried to respect the rights of neutral powers but considered that 'I cannot judge politically, nor have I any discretionary power but on legal grounds' (ibid., 12.673), and where international law was concerned stated that it was for the privy council to interpret treaties and the crown to make rules for the Admiralty courts. He was present, as a judge of the prerogative court of Canterbury, during the trial of Elizabeth Chudleigh, duchess of Kingston and countess of Bristol, for bigamy, in April 1776; Edward Thurlow, attorney-general, said during the trial that 'The most loose and unconsidered notion escaping in any manner from that able and excellent judge, should be received with respect, and certainly will' (ibid.).

Hay remained close to David and Eva Garrick—'Kiss the blooming Wrinkles of my antient Love for my sake, and believe me Always Your's & Her's' (*Letters*, 3.1105), he wrote to them in June 1776, while also chiding Garrick for his formality. He was still active in March 1778, when he was offered but 'positively refused' (*Last Journals of Horace Walpole*, 2.129) a place on the commission to negotiate with the American colonies, and also in that month planned to entertain Garrick, Thurlow, and Richard Rigby to dinner at his house. However, in May his mind became disturbed, and in August he was relieved of the duties of his offices. He died at Battersea on 6 October 1778. According to Horace Walpole:

> the day after his keepers left him, [he] walked deliberately into the Thames at noon in the sight of fifty persons, and when he had waded up to his chin, deliberately plunged his head down and was suffocated, before he was taken out. (Walpole, *Corr.*, 33.59)

Hay was unmarried. He left behind him a substantial library of books and manuscripts covering politics, history, classics, and literature in French and Italian, as well as legal authorities. The collection was sold in 1233 lots, many containing several volumes, by Hutchins in Covent Garden between 19 and 27 April 1779.

Charles Coote wrote that Hay was 'an eloquent, ingenious, and impressive advocate' but that 'if his application had been equal to his talents, he might have excelled all his contemporaries in professional learning' (Coote, 119). William Prideaux Courtney thought that Hay was 'lax in application to the duties of his profession' (*DNB*), but Sir William Holdsworth thought him 'a sounder lawyer' with 'a far more judicial temperament than his successor, Sir James Marriott' (Holdsworth, *Eng. law*, 12.674). He was certainly not single-minded in his devotion to the law, but by no means neglected it. Bishop John Butler, who knew Hay through Henry Bilson Legge, wrote in May 1778 that Hay had deliberately concealed his abilities and the reasons for his inconstant behaviour in politics:

> The true account of it was that he had no opinion of any cause, but considered them all as the pretences under which men carry on their selfish schemes; yet he was a friend to liberty, and did not think it in danger in any hands. (Namier)

Hay owned Hogarth's *The Bench*, which suggests that he did not have high expectations of his legal colleagues. He seems to have been happiest to be thought of as good company among a select circle of friends, and allowed his conviviality to overshadow his abilities as a debater in the House of Commons and as a responsible and influential judge.

Hay, George (1729–1811) vicar apostolic of the lowland district, was born in Edinburgh on 24 August 1729, the second child and only son of James Hay (*d.* 1756x1759), writer to the signet, and his wife, Mary Morrison (*d.* 1756). His parents were Scottish Episcopalian, and his father a Jacobite who had been imprisoned for his part in the rising of 1715. After schooling in Edinburgh, George Hay was apprenticed to a surgeon named George Lauder, which led to his tending the wounded of the battle of Prestonpans (1745) and medically serving Prince Charles's army for four months. For this he was imprisoned in Edinburgh Castle and in London. After the Act of Indemnity of June 1747 he returned to Edinburgh where he was received into the Roman Catholic church by the Jesuit John Seton on 21 December 1748. On his return to Edinburgh he resumed his medical studies for two years under John Rutherford, but being unable to graduate on account of his new religious affiliation he kept a chemist's shop for a year. He next became a ship's surgeon, and when his ship stopped at London, John Gordon of Glencat introduced him to Bishop Richard Challoner of the London district who persuaded him to seek ordination to the priesthood. Consequently on 10 September 1751 Hay was received into the Scots College, Rome, where he began his lifelong friendship with John Geddes, a fellow student who later became his coadjutor bishop. Hay was ordained priest in Rome on 2 April 1758 and returned to Scotland in August of the following year in the company of two other priests, Geddes and William Guthrie. As they travelled without passports it was feared that they might be arrested at Leith and subjected to penal laws against priests. A contrary wind, however, forced their vessel to anchor at Buckhaven, where they jumped ship, and were treated civilly by the inhabitants who mistook them for smugglers.

Hay's first appointment as a priest was to Preshome, where he lived with Bishop James Grant, serving in that mission until appointed procurator in Edinburgh in August 1767. On 5 October 1768 he was nominated titular bishop of Daulis (hence an alias, Dauley) and coadjutor to Bishop Grant, and he was consecrated at Scalan on 21 May 1769. As coadjutor Bishop Hay was based in Edinburgh, caring for the mission there, although his position necessitated sojourns in various parts of Scotland and even a journey to Paris. Hay was deeply involved in all the wider developments of the Scottish mission, which included the appointment of a secular priest as rector of Douai after the expulsion of the Jesuits from France, the reclaiming of the Spanish seminary and its reopening at Valladolid with John Geddes as rector, and the procuration of two places for Scottish students in the Propaganda College at Rome. Hay had printed 10,000 copies of a catechism, assisted Catholic emigrants to America who were escaping from religious harassment in the highlands, and managed to obtain a private agreement with the army whereby Catholics were exempted from that part of the oath that

George Hay (1729–1811), by G. A. Periam (after George Watson)

demanded allegiance to the established religion. After the suppression of the Jesuits, Hay co-ordinated their incorporation into the secular clergy. Hay drew the plans for the building of a new chapel in Leith Wynd, Edinburgh, commenced in 1777, and had to expend much labour not only in raising funds, but also in managing property disputes with a neighbouring landlord. Yet he found time to write his two-volume book *The Scripture Doctrine of Miracles Displayed* (1775), arguably his best work on account of its thoroughness. The appendix on transubstantiation was attacked in print by the Scottish Episcopal clergyman William Abernethy, later the celebrated Bishop Abernethy Drummond, and in 1776 Hay published a reply entitled *Explanatory Remarks on the Dialogue between Philathes and Benevolus*.

When Bishop Grant died on 3 December 1778 Hay succeeded him as vicar apostolic of the lowland district. At this time there were still hopes of a Scottish Catholic relief bill being passed by parliament although considerable opposition to it had been voiced in Scotland in the previous few months. One attack came from the pen of William Abernethy Drummond, whose pamphlet *The Lawfulness of Breaking Faith with Heretius* (1778) was addressed to Hay and called forth his reply, *An Answer to Mr W. A. D.'s Letter to G. H.*. Protest reached a climax on 2 February 1779 when the new chapel and priests' dwelling house were completely destroyed by the Edinburgh mob. Hay, arriving back in Edinburgh in the midst of the riot, was forced to seek refuge in the castle. The Relief Bill had to be set aside, but thanks largely to Hay's efforts Catholics were awarded full compensation for the damage to their property, half being paid by the government, and half by the

city of Edinburgh. At this juncture, Hay thought it expedient not to remain in Edinburgh, and took up residence in Aberdeen, where he remained until 1788. His close friend John Geddes, then rector of the Scots College, Valladolid, was appointed coadjutor, ordained bishop at Madrid on 30 November 1780, and returned to Scotland in the following spring. The year 1781 saw the publication of Hay's second major work, *The Sincere Christian*, an apologetic exposition of the Catholic faith, which went through several editions and was translated into foreign languages. *The Devout Christian*, a comprehensive survey of the law of God, followed in 1783. Though generally reckoned to be excessively dry, a characteristic of all Hay's works, it nevertheless proved to be a valuable reference work for clergy and catechists. A sequel entitled *The Pious Christian* (1786) was an ascetical work with instruction in exercises of piety, to which were added prayers and an examination of conscience. Like his previous works this had several editions and widespread influence.

One of Hay's major concerns was the education of future priests. The colleges abroad, which had been the chief source of supply, gave the bishop great anxiety. In 1781, under the alias of Signor Tommase Scotti, he journeyed to Rome with the main purpose of obtaining a Scottish rector for the Scots College, Rome, and, though he stayed for six months, he failed to achieve his purpose. On the road home he tried in vain while in Paris to retrieve for the Scots College, Douai, funds which had been suspended on the expulsion of the Jesuits from France. A long acrimonious dispute with Principal Gordon of the Scots College, Paris, hindered the achievement of that college, Hay even refusing to send more students after 1783. The colleges at both Douai and Paris collapsed at the time of the French Revolution, and a plan of Hay to turn the monastery at Regensburg into a Scottish seminary came to nothing. On the continent only the Scots College at Valladolid gave the bishop satisfaction. This necessitated the development of the tiny college in Scotland, situated at Scalan in Glenlivet. Hay took up residence there, acting as rector from 1788 until 1793. In 1799 he moved the Scottish seminary to Aquhorties in Aberdeenshire, and once again lived in the seminary, where he taught logic, metaphysics, natural theology, and the rudiments of grammar. The long awaited Catholic Relief Act was passed by parliament in 1793, and was favourably received by almost everyone in the land. This massive change in public opinion had been greatly furthered by the good graces and friendly social intercourse of Bishop Geddes. Hay, however, must be given credit for the appointment of Geddes as coadjutor, and for placing Geddes rather than himself in the capital city. Hay had also insisted on all his Catholic subjects maintaining goodwill towards the government, and it was Hay who, realizing the opportune moment in 1793, ordered Geddes to get his friends to apply for the act. When it became law Hay and Geddes went together to the office of the sheriff-substitute of Midlothian to subscribe the oath, adjuration, and declaration under the act of 33 George III for the relief of Catholics in Scotland.

Almost immediately after this epoch making event, on account of the failed health of his coadjutor, Hay decided to change stations with Geddes. Hay would live in Edinburgh for six years. Geddes lived until 11 February 1799, but was too ill for episcopal duties, and so, on 19 September 1797, Rome nominated a new coadjutor, Alexander Cameron, rector at Valladolid, who was consecrated at Madrid on 28 October 1798, but was unable to return to Scotland until August 1802. Consequently Hay had to undertake the pastoral oversight of the lowland district single-handedly for nine years. In 1796–7 Bishop Hay had new editions of the Bible printed for Catholics, personally subscribing £80. In 1799, after three years' negotiation, he obtained relief from the British government for his straitened Catholic clergy, a benefit which they enjoyed until May 1805.

It was in the period of Hay's residence at Aquhorties that he bought the site for a new church in Edinburgh and most prudently finalized investment arrangements with the Bank of Scotland for the benefit of the mission. His health declined, and his resignation, refused in December 1803, was accepted by Rome on 16 June 1805, and he handed over the reins of office to his coadjutor on 24 August 1805. During a visit to Edinburgh in the winter of 1807–8, he sat for a portrait by George Watson. It is preserved in Blairs College, Aberdeen, and shows the bishop in peaceful mood, with wrinkled brow, large aquiline nose, and pointed chin. He looks hunched or stooped, no doubt the effect of age. In the last two years of his life Hay's reason declined; he died at Aquhorties on 15 October 1811 and was buried in an old graveyard at Fetternear on 21 October.

Hay led the Roman Catholic church in Scotland during a crucial stage of its history, in its evolution from persecution and antipathy to freedom and respect. He won regard for his church by his patient endurance and untiring attention to duty, always urging his people to bear their trials with fortitude, and to be loyal to their country and government. Hay strenuously avoided giving offence to other denominations, perhaps sometimes overcautiously, as with his prohibition of music in Catholic chapels. He was, however, extremely strict with his priests, sometimes excessively, and when prejudiced, could be judgemental and even condemn without evidence. Fortunately, his coadjutor, Bishop Geddes, often succeeded as peacemaker. Hay has been fortunate that his chief biographer, James Augustine Stothert, was a strong admirer who usually defended Hay's side in disputes. Even he, however, had to admit that Hay was immoderately severe at times and generally opposed to schemes not initiated by himself. The Catholic archivist William Anderson was not always so sympathetic, believing, for example, that in the disputes with the Scots College, Paris, Hay was more to blame than the principal. A more human side of the bishop's character was seen when he played the fiddle, when he sang for schoolgirls in Miss Rankine's school in Aberdeen, and when he told the boys at Aquhorties and the children of Fetternear stories from the past, of his father's capture and escape in 1715, or his own adventures in Prince Charles's army. When boys were ill at

Aquhorties he nursed them with his own hands. His habit of chewing tobacco he himself described as disgusting, but claimed it was necessary for health reasons. Hay's achievement, however, was outstanding. His literary output, which included controversial pamphlets, letters to newspapers, pastoral letters, and many manuscript letters, as well as his four major works, met a long felt need in the Roman Catholic church, and had a widespread influence. During his tenure much church building was undertaken; new missions were founded in Glasgow and in Dundee; and the bishop made wise investments which were of benefit for many generations. The Roman Catholic church in Scotland was much better respected at the end of his long episcopate than it had been at the outset of his rule.

Wealth at death fifty shares of the Bank of Scotland stock: Scottish Catholic Archives, Edinburgh, PL 5/70; W. Clapperton, 'Notes on Bishop Hay's bank shares'

Hay, George, eighth marquess of Tweeddale (1787–1876), army officer, was born at Bonnington on 1 February 1787, the son of George Hay, seventh marquess of Tweeddale (1753–1804), and his wife, Lady Hannah Charlotte (*d.* 1804), daughter of James Maitland, seventh earl of Lauderdale. He succeeded to the title and estates on the death of his father in August 1804, having entered the army as an ensign in the 1st foot guards the previous June. In 1806 he went to Sicily, on the staff, and soon after obtaining his company, in May 1807, he joined Wellington's army in the Peninsula. He was made aide-de-camp, and was wounded at the battle of Busaco on 27 September 1810. He subsequently became quartermaster-general, received his majority on 14 May 1812, and was again wounded, at Vitoria on 21 June 1813. He was at once promoted lieutenant-colonel, and went home invalided. As soon as his health was sufficiently restored he joined his regiment, then engaged in the Anglo-American War. He was once more wounded at the hard-fought battle of Niagara in 1813, when, on refusing to surrender, he was after a great struggle overpowered by the enemy. After his return in 1814 he saw no further active service, though he continued on the employed list, and rose through the higher ranks: colonel, 27 May 1825; major-general, 10 January 1837; lieutenant-general, 9 November 1846; general, 20 June 1854; and field marshal, 29 May 1875.

Tweeddale married, on 28 March 1816, Lady Susan Montagu (1797–1870), third daughter of William *Montagu, fifth duke of Manchester. They had seven sons and six daughters; the eldest son, George, earl of Gifford, died in 1862 and the second, Arthur *Hay, succeeded him. Tweeddale settled at Yester House, near Gifford, on his family estates in East Lothian, and in 1824 he was appointed lord lieutenant of the county, where he spent the next eighteen years in the improvement of his estates, acting as a conscientious landed proprietor and county magnate. In 1842 he was made governor of Madras, and also, by special arrangement of the duke of Wellington, commander-in-chief of the Madras army, then in need of reorganization. After a successful tenure of office Tweeddale retired in 1848, when he returned to Yester House and resumed his agricultural pursuits. He led the way in modern draining techniques, in deep ploughing, and in many bold and costly experiments for the benefit of his land. He also showed a keen interest in meteorology and mechanics, and invented machinery useful to farmers. His services were acknowledged by election as president (1869–73) of the Highland Agricultural Society.

Tweeddale was made a CB in 1815, a KT in 1820, KCB in 1862, and GCB in 1867. He was gold-stick in waiting, and was successively colonel of the 30th regiment (1846), 42nd (Royal Highland) regiment (1862), and 2nd Life Guards (1863). He was from 1818 until his death representative peer for Scotland, and was grand master of the freemasons, 1818–20. A man of conspicuous and healthy physique, he was known in the army as a horseman and sabreur. He was also an accomplished coachman, and is said to have once driven the mail coach from London to Haddington without a halt or relief. He died from the effects of an accident, on 10 October 1876, aged eighty-nine, at Yester House, and was buried in Yester on 16 October.

Hay, George Campbell [Mac Iain Deòrsa] (1915–1984), poet, was born on 8 December 1915 at the manse, Elderslie, Renfrewshire, where his father was a minister. His father, John MacDougall *Hay (1879–1919), was born in Tarbert, Loch Fyne, and based his novel *Gillespie* there. George Campbell Hay regarded Tarbert and Kintyre as his home territory, frequently staying there, learning Gaelic in his teens, and sharing the life of the local fishermen. His mother, Catherine, *née* Campbell (*b.* 1883), had Islay connections, and had some knowledge of Gaelic. His father died in 1919 and the family lived in Edinburgh from 1925. In 1934 Hay won a major scholarship in classics and

George Campbell Hay (1915–1984), by Gordon Wright, 1975

took a degree at Corpus Christi College, Oxford, afterwards taking a teacher's training course at Edinburgh and teaching briefly at the Royal High School there.

On the outbreak of the Second World War in 1939 Hay refused conscription (apparently on Scottish nationalist grounds, like his contemporary Douglas Young), spent some time 'on the run' in the Argyll hills, and finally joined the Royal Army Ordnance Corps. During the war he served in north Africa, Italy, and Macedonia, where he learned modern Greek. He was suspected of acting as a communist agitator there, simply because of his friendship with Greek people, and suffered a violent attack. This led to his being invalided out of the army and to severe traumatization in later years, when he developed a drinking problem. He returned to Edinburgh, spending some time in hospitals, and working in the National Library of Scotland for some years.

A versatile linguist, Hay published poetry in Scots, English, and Gaelic, with occasional pieces in French and Norwegian, and he translated from modern Greek, Croatian, Arabic, Italian, Finnish, Icelandic, Irish, and Welsh. In his metrics he was deeply influenced by medieval and early modern Irish verse.

Hay's second book was *Wind on Loch Fyne* (1948), and it is here that he includes his wide-ranging translations, and also a good number of poems in Scots, whether on Loch Fyne and Kintyre subjects or on Edinburgh:

> A windy toon o cloods an' sunny glints;
> pinnacled, turreted, stey an' steep grey toon;
> her soughin' gables sing their norlan' rants
> tae sant an' caller blufferts on her croon.

Hay had published a Gaelic collection in the previous year: *Fuaran slèibh* ('Upland spring') (1947), and this has some evocative poems on Kintyre and the Argyll countryside, as well as a series of poems modelled on Irish courtly love poetry and deeply influenced by its metrics. There are humorous and philosophic poems here too, and the highly effective 'Tilleadh Uiliseis' ('The return of Ulysses'), a dramatic interpretation of the classical story.

Hay's next volume, *O na ceithir àirdean* ('From the Four Airts') appeared in 1952, and here his war experiences, especially in north Africa, and his reflections on the devastation war has caused throughout Europe, are powerfully deployed, producing some of his most memorable poems such as 'Truaighe na h-Eòrpa' ('Europe's wretchedness'), 'Atman', and 'Bisearta' ('Bizerta'). This collection also includes a large number of translations from Italian, Greek, Croatian, and Arabic verse.

Hay's reputation, especially as a Gaelic poet, became firmly established, but there was to be a long wait for another collection. He published spasmodically in periodicals, for example, in the *Akros* anthology of contemporary Gaelic verse (1976) and in *Gairm* over many years, latterly developing very effectively a series of poems/songs in the folk style, founded on surviving fragments. He also published Scots and English verse of a strongly nationalistic sort in the *Scots Independent*.

In the early 1980s it transpired that Hay had written a long poem or sequence in the latter part of the war and early post-war period (writing in Italy, Macedonia, and Tarbert), but had never completed it. He gave permission for this to be published in its unfinished state, and it appeared in 1982 under the title *Mochtàr is Dùghall* ('Mochtar and Dougall'). The original purpose may have been to compare and contrast these two civilizations that had attracted him so strongly: the Arabic and Gaelic ones. But it is only the Arabic section that was virtually completed, while only preliminary sections of the Gaelic one were composed. This Arabic section gives an extraordinarily vivid and colourful account of three generations of an Arab family in the African desert and elsewhere, and this can well be regarded as Hay's most powerful achievement. It is fortunate that it has survived the sad but buoyant chaos of this poet's life. Hay died alone in his house, 6 Maxwell Street, Edinburgh, a victim of alcoholism, on 25 March 1984.

Hay, Sir Gilbert, of Erroll (*d.* 1333). *See under* Hay family (*per. c.*1295–*c.*1460).

Hay, Sir Gilbert (*b. c.*1397, *d.* after 1465), soldier and poet, has been identified with various Gilbert Hays who appear

in the records of the period, and his family background remains elusive. Later to describe himself as master of arts and bachelor of canon law, he was probably a graduate of St Andrews University (a Gilbert Hay is recorded there in 1418 and 1419). Although he also called himself a priest, he seems to have abandoned a career in the church, embarking instead on military service in France. He was probably not the Gilbert Hay knighted at the siege of Liège (1408), and most likely arrived in France as part of the contingent led by John Stewart, earl of Buchan, in 1421. Active in fighting for the French against the English in the 1420s, he was present at the coronation of Charles VII in 1429; he was subsequently knighted by Charles and entered royal service as the French king's 'chaumerlayn'. An unknown scribe later stated that Hay had spent twenty-four years in France. This means that he returned to Scotland about 1445, a decision which may have been prompted by the death that year of Margaret of Scotland, who had married the dauphin in 1436. When she travelled to France for her wedding, she had been escorted by William Sinclair, earl of Orkney and Caithness, which probably explains how Hay later entered the earl's service.

By 1456 Hay was at Roslin, Edinburghshire, where he was remembered in the will of Sinclair's father-in-law, Alexander Sutherland of Dunbeath, Caithness, and also completed his Prose manuscript (NL Scot., Acc. 9253). Consisting of 'The buke of the law of armys', 'The buke of the ordre of knychthede', and 'The buke of the gouernaunce of princis', this was a lively rendition—much more than a straightforward translation—of three popular treatises (known to him in French): Honoré Bonet's *L'arbre des batailles*, Ramon Lull's *L'ordre de chevalerie*, and the pseudo-Aristotelian *Secreta secretorum*. About 1460 he completed 'The buik of King Alexander the Conquerour', written for Thomas, Lord Erskine, and based on Latin and French versions of the popular Alexander romance; this survives in two manuscripts (BL, Add. MS 40732, and NA Scot., GD 112/71/9). Exactly when Hay died is, like so many details of his life, unclear, but it was probably some time after 1465, when a Gilbert Hay, possibly the poet, received a gift from the crown.

Although difficult to pin down, Hay's career is testimony to the close military, political, and cultural links which existed between Scotland and France, to the increased literary sophistication of the fifteenth-century Scottish nobility, and to the growing vitality of vernacular culture. Hay, Sir Harley Hugh Dalrymple- (1861–1940), civil engineer, was born, probably at Rawalpindi, India, on 7 October 1861, the third son of Colonel George James Dalrymple-Hay, of the Bengal Staff Corps, and his wife, Amelia Emily, daughter of Colonel Henry Daniel Maitland, and grandson of Sir James Dalrymple-Hay, second baronet, of Park Place, Glenluce. Educated at a private school in Edinburgh, and by army tutors, he began his engineering career as a pupil of Edward Newcombe, civil engineer, on the south Wales line of the Midland Railway, and in 1882 joined the engineering staff of the London and South Western Railway (LSWR), working on a succession of railway projects in Hampshire. During this time he married, in 1891, Agnes Yelland Waters, daughter of Frederick Waters, a grocer. They had one child, a daughter.

In 1894 Dalrymple-Hay joined the staff of W. R. Galbraith, and became resident engineer on the Waterloo and City Railway. He devised a technique for driving the tunnel under compressed air, through waterbearing ground, whereby small pockets of ground were excavated by hand up to 2 feet ahead of the hooded cutting edge of the shield, and packed with clay; when the shield was advanced, the hood entered the clay pockets, and provided a seal behind the lining. This system, which he patented in 1896, and other improvements in the methods of constructing tube railways also originated by Dalrymple-Hay, were subsequently widely used, both in Britain, and in the United States of America. In 1902 he became civil engineer to the Underground Electric Railways Company of London. Following Galbraith's retirement in 1907, he began his own private practice as a consulting civil engineer in Westminster, remaining consultant to the Underground Electric Railways Company and its successors until his death.

Dalrymple-Hay's tube-railway works comprised over 60 miles of tunnels in London alone, including works on the Bakerloo, Hampstead (Northern), and Piccadilly lines; extensions from Golders Green to Edgware, from Finsbury Park to Cockfosters, and from Highgate to East Finchley; stations at Piccadilly Circus, Leicester Square, Waterloo (Bakerloo Line), King's Cross, Hyde Park Corner, Knightsbridge, Elephant and Castle, and many others; also numerous escalator schemes, among which was the first escalator on the underground system, that at Earls Court, which was completed in 1911. Throughout these works Dalrymple-Hay demonstrated an innovative approach including the application of the François cementation process of ground stabilization to tunnelling.

Dalrymple-Hay was asked in 1921 to report on a system of tube railways for Calcutta, and later designed a tunnel to carry electricity supply cables under the River Hooghly. This tunnel, completed in 1931, was the first shield-driven iron-lined tunnel under a great tidal river in Asia, and its construction was carried out under high air pressures, in difficult climatic conditions, and with the use of unskilled labour. Among other works outside London, for which he

Sir Harley Hugh Dalrymple-Hay (1861–1940), by Maull & Fox, in or before 1884

was responsible, were a system of culverts for Bristol corporation's generating station at Portishead, and tunnels for Edinburgh corporation under the Firth of Forth at Portobello.

Although Dalrymple-Hay's work was mostly concerned with the construction of tunnels and tube railways, a branch of civil engineering in which he was probably the greatest expert of his day, he also was concerned in other engineering projects. Possibly the most interesting of these was the widening of Richmond Bridge. The 150-year-old bridge was strengthened and widened by some 11 feet, without interruption to road or river traffic, and without any alteration to the architectural design; the existing façade stonework and parapet were dismantled, numbered, and later replaced on the widened bridge.

Dalrymple-Hay was consulting engineer for the construction of the Post Office (London) Railway, a system of great ingenuity, which was opened in 1928, and it was for the Post Office that he undertook his last major work. This was a secret system of deep-level tunnels beneath Whitehall designed to allow communication between government offices to continue, despite aerial bombardment.

Dalrymple-Hay was knighted in 1933, and served on the council of the Institution of Civil Engineers from then until his death. As a student of the institution he was awarded a Miller prize in 1885 for a paper on trigonometrical surveying, and in 1900 he won a Telford gold medal for his paper on 'The Waterloo and City Railway' (*Minutes of Proceedings of the Institution of Civil Engineers*, 139, 1899–1900, 25–55). A characteristic of Dalrymple-Hay was his strong belief that practice was preferable to theory, and experience more valuable than scholarship. He had a great human touch, a quality which endeared him to men of all walks of life, who worked under him. A Conservative in politics, he was a member of the Junior Carlton Club. He died at Thorpemead, Chenies Road, Chorleywood, Hertfordshire on 17 December 1940.

Hay [*née* Sheridan], **Helen Selina, countess of Gifford** [*other married name* Helen Selina Blackwood, Lady Dufferin and Claneboye] **(1807–1867)**, author and song writer, was the eldest daughter of Thomas *Sheridan (1775–1817), colonial administrator (younger son of Richard Brinsley *Sheridan), and his wife, Caroline Henrietta Callander (1779–1851), novelist [*see* Sheridan, Caroline Henrietta]. She was taken by her parents in 1813 to the Cape of Good Hope, whence, after her father's death on 12 September 1817, she returned to England, where she grew up in an apartment in Hampton Court Palace. At seventeen she became engaged to Commander Price Blackwood (1794–1841), the youngest of three sons of Hans, Lord Dufferin, and Mehetabel Temple; owing to the deaths of his brothers, he was heir to the title and estate in Ireland of Baron Dufferin and Claneboye. His parents opposed the marriage, on financial grounds. Hence, after their wedding at St George's, Hanover Square, London, on 4 July 1825, the young couple went to Italy. They lived in Florence, where their only child, Frederick Temple Hamilton-Temple *Blackwood, subsequently marquess of Dufferin and Ava, was born on 21 June 1826.

After two years they returned to England, and lived in a cottage at Thames Ditton. When visiting her sisters, Mrs Caroline *Norton and Lady Seymour, in London, Helen Blackwood was introduced to the world of wit and fashion in which they moved, and there she made the acquaintance of the Misses Berry, Samuel Rogers, Henry Taylor, Brougham, Lockhart, Sydney Smith, and Benjamin Disraeli. Her husband succeeded his father as Baron Dufferin and Claneboye in the peerage of Ireland in November 1839, and he died on 21 July 1841, on board the *Reindeer*, off Belfast, aged forty-seven, from an overdose of morphia, taken inadvertently.

Lady Dufferin dedicated herself to her son, with whom

Helen Selina Hay, countess of Gifford (1807–1867), by Camille Silvy, *c.*1860

she enjoyed a particularly close relationship. A trip up the Nile in his company led to the publication, in 1863, of *Lispings from Low Latitudes, or, Extracts from the Journal of the Hon. Impulsia Gushington*, in which she made fun of the genre of travel writing. She also wrote a play called *Finesse, or, A Busy Day in Messina*, which was first performed at the Haymarket Theatre in 1863. The acting of John Baldwin Buckstone and Alfred Wigan contributed to a highly successful run. She neither acknowledged the authorship, nor attended any performance. Her songs and verses were published anonymously, the first dating from her girlhood. Her earliest publication was a collection of songs written with her sister Caroline, for which they were paid £100. She also published several volumes of songs and ballads, the most successful of which were 'The Irish Emigrant' (1845) and 'Terence's Farewell' (1840).

George Hay, earl of Gifford (1822–1862) and son and heir of the marquess of Tweeddale, had been a friend and suitor for some fifteen years when in 1862 he was seriously injured by holding back a stone which was falling on some of his workmen. They were married on 13 October 1862, at Dufferin Lodge, in London, and he died there on 22 December. Lady Dufferin explained her motives to Gifford's father: '[It] gives me the right to devote every hour and every day God spares him to his comfort and relief, and ... the right to mourn him openly' (Dufferin, memoir). She died five years later from breast cancer, on 13 June 1867 at Dufferin Lodge, and was buried with her second husband at Friern Barnet, Middlesex.

Hay, James, first earl of Carlisle (*c.*1580–1636), courtier and diplomat, was the son of Sir James Hay (*d.* 1610) of Fingask, comptroller of Scotland in 1608, who lived in Pitscottie, Fife, and was descended from the earls of Erroll; his mother was probably Sir James's first wife, Margaret Murray. At least two siblings survived until adulthood, Robert and Agnes, but they may have been the children of Sir James's second wife, a widow named Barclay. There is no record of Hay receiving a university degree, but at some point in his life he became fluent in French and Latin. Since his first patron was Charles Cauchon de Maupas, baron du Tour, it seems safe to assume that Hay spent time in France.

Rise to prominence Hay first attracted King James's attention in the wake of baron du Tour's special embassy to Scotland from Henri IV of France in the summer of 1602. In May 1603, at du Tour's request, the king made Hay a gentleman of the privy chamber. No record exists of what drew the king to make Hay one of his favourites. Contemporaries remark on Hay's charm, grace, and taste. As for his appearance, surviving portraits date from Hay's middle age. What they show is a man with a broad forehead and soft eyes. He had a thin-bridged nose, but with flaring nostrils. The general impression is of someone with a triangular shape to his face. In her letters the king's daughter, Elizabeth, addressed Hay as 'camel-face' and it is not difficult to see why.

Although as early as July 1603 Francis Bacon made a note to himself to cultivate Hay, the first mention of the young Scot in England does not occur until the following October. That month, at Queen Anne's request, the king elevated Hay to the bedchamber. In March 1604 James sent him on an extraordinary embassy to Henri IV with condolences on the death of the French king's sister. He became a Scottish knight before being naturalized as an Englishman on 14 May 1604, and was created Lord Hay on 21 June 1606, but without the right to sit in the English parliament. Although the king granted Hay lands in Yorkshire and Northamptonshire he was never active in county affairs and, indeed, throughout his career lived in leased or borrowed houses.

After some years of resistance on the part of his future father-in-law, on 6 January 1607 Hay married Honora Denny (*d.* 1614), daughter of Sir Edward *Denny, later earl of Norwich (1569–1637) [*see under* Denny, Sir Anthony

James Hay, first earl of Carlisle (*c.*1580–1636), by unknown artist, 1628

(1501–1549)] and granddaughter of Thomas Cecil, second Lord Burghley (later earl of Exeter). They had two children who survived to adulthood, James (*b. c.*1612) and Anne. Honora died in August 1614 after a miscarriage, and was buried at night on 16 August at Waltham Abbey.

Domestic career What contemporaries noted about Hay was the extravagance with which he lived. By all reports he followed his family motto, 'Spare naught', and his lavish banquets were the best-known indication.

In December 1605 he received his first appropriation as master of the robes, whose responsibility it was to provide the king with all the clothes he wore ranging from his boots and shoes to his beaver hats. The original annual budget for the post was £2500, but within three years Hay had overspent that appropriation by £7000. From 1608 the budget was adjusted upward to £4000 per annum. Whatever sums of money passed through Hay's hands as master of the robes a great deal more came his way from February 1613 when he became in addition master of the great wardrobe. Whereas his profits from the robes were probably counted in hundreds of pounds a year, running the wardrobe brought him upwards of £4000 per annum and the use of a house in the city of London. The wardrobe was responsible for supplying everything from the liveries worn by royal servants to the carriages in which royalty rode. By the time Hay relinquished both his offices to Sir Lionel Cranfield in 1618 his debt was approximately £42,000. As late as 1641 the second earl of Carlisle found that he still owed between £2000 and £3000 of his father's debt.

Meanwhile Hay, who on 29 June 1615 had become an English baron as Baron Hay of Sawley, Yorkshire, played other useful roles at court. In May 1616 he negotiated a deal with the king's disgraced favourite Robert Carr, earl of Somerset, concerning what Carr could expect after his trial for the murder of Sir Thomas Overbury. Carr had begun his career in England as a page for Hay and specifically requested his former master act as a royal agent to negotiate this settlement.

Diplomatic career It was Hay's tact that was responsible for his frequent appointments as extraordinary ambassador. Perhaps because he was flexible enough to conform to changing orthodoxies in the church under James I and Charles I, Hay was one of the few staunch protestants at the royal court who could effectively negotiate with Roman Catholics from other countries. In March 1616 Hay was appointed extraordinary ambassador to the court of Louis XIII, with the mission of bringing an end to the lengthy marriage negotiations involving Prince Charles and Louis's sister, Christine. When Hay reached the French court in July he found that the dowager queen, Marie de' Medici, and her favourites, the Concinis, controlled the government in the name of the teenaged king. When a month later they arrested the duc de Condé, one of the nobles at the French court favoured by James I, the marriage negotiations collapsed. By October 1616 Hay had received instructions to return home. He did so with reluctance because he recognized that the alternative to a French bride for Prince Charles was a Spanish one, and Hay had too many ties with France to favour such a course of action.

Once back in England, Hay began marriage negotiations of his own. Initially he encountered the same problems as he had the first time. Despite imprisonment in the Tower of London in the wake of the Gunpowder Plot, his prospective father-in-law, Henry *Percy, ninth earl of Northumberland (1564–1632) did his best to prevent his daughter, Lady Lucy Percy (1599–1660) [*see* Hay, Lucy, countess of Carlisle], from marrying Hay. However, after less than a year's courtship, Northumberland relented and the couple married on 6 November 1617. There were no surviving children from this marriage. In the end Hay enjoyed a good relationship with both his fathers-in-law. While his charm undoubtedly played a role he saw to it that Northumberland and Denny received honours and favours from James I, in particular the release of the former from the Tower in 1621. Hay himself received a further mark of royal favour when on 5 July 1618 he was created Viscount Doncaster.

In 1619 Doncaster was again sent on a diplomatic mission, this time as part of James I's effort to mediate peace between the Spanish and Austrian Habsburgs on the one

hand and the Dutch and the German princes on the other. As in France, however, the English embassy was overtaken by events—in this case the crisis precipitated by the acceptance of the throne of Bohemia by James's son-in-law Frederick, the elector palatine—and Doncaster's mission was a total failure. Similarly abortive was an embassy in summer 1621, when, to help in the eyes of a suspicious parliament, James sent Doncaster to France in an effort to mediate a cease-fire between Louis XIII and the Huguenots in their current conflict. Once again the chances of success seemed slight, but Doncaster was willing to undertake the mission regardless of the odds. As matters developed, by December 1621 when he was about to bring both sides together to negotiate a peace agreement, James I dissolved parliament, lost interest in France's difficulties, and recalled his ambassador. None the less, Doncaster's standing was unimpaired and on 30 September 1622 he was created earl of Carlisle.

It was not until 1624, in the aftermath of the collapse of the Spanish marriage negotiations, that Carlisle had his one and only overseas diplomatic success. Working in a joint embassy with his protégé Henry Rich, newly created earl of Holland, he finally arranged a French marriage for Prince Charles with Louis XIII's youngest sister, Henriette Marie (Henrietta Maria). The initial instructions for the embassy were drawn up in April 1624 while Holland was already in Paris, but Carlisle did not arrive until the middle of May. The marriage was part of a political alliance between England and France designed to limit imperial and Spanish power and restore Elector Frederick to his palatinate lands. Both sides knew that a key point of dispute would be the extent of religious toleration the English king would be willing to grant his Roman Catholic subjects. Thanks in large measure to Carlisle's diplomatic skills in late July it looked as if a satisfactory agreement had been reached. Unfortunately for him at that point the French government underwent a major change when Cardinal Richelieu became Louis XIII's chief minister. As this change was in process Carlisle advised James to approve the treaty quickly before the French could make any changes, but the advice went unheeded. At one point, in autumn 1624, Carlisle was so frustrated with Richelieu that he was ready to break off negotiations. The final agreement was not reached until the following year, after Charles I was the king. The marriage took place in May 1625, by which time Carlisle had become embittered toward French policy in general and Cardinal Richelieu in particular.

Over the next four years Carlisle became determined to punish the French government for its failure to support military efforts to reinstate Frederick in the Palatinate. He hoped to drive Cardinal Richelieu from power and have him replaced by someone who was more tolerant of the Huguenots and more willing to challenge the Habsburgs militarily. In 1628 Carlisle went on one last, fruitless diplomatic mission hoping to put together a diverse group of allies including the Dutch republic, Savoy, Venice, and the Huguenots. In the end he returned to England in early 1629 favouring a peace treaty with Spain before one with France.

Final years Carlisle had managed to remain in the good graces of Charles I both before and after his travels abroad. In the aftermath of the murder of the king's favourite, George Villiers, duke of Buckingham, Hay was generally acknowledged as one of the three most important men at the royal court. His appointment in February 1631 as groom of the stole made him first gentleman of the king's bedchamber and meant that he controlled access to Charles I. In terms of governmental policy there is no evidence that Carlisle was able to influence the king to become more militarily active in reinstating Frederick or Frederick's son in the Palatinate. Toward that end in 1633 he reversed his opinions again and finally decided Cardinal Richelieu was someone worth cultivating for this purpose and by March 1635 his relationship with the French was very much what it had been when he first appeared at the royal court.

If the continental European scene continued to be largely politically unproductive from Carlisle's point of view, he did have some financial success in Ireland and more spectacularly in the West Indies. As early as 1607 he claimed the profits from the Irish customs duties on imported wine. By 1615 he asserted the right to license the sale of wine and spirits. Given Carlisle's standard of living, neither venture was especially profitable over the extended time he controlled them. Potentially his most profitable Irish undertaking involved ownership and control of a portion of co. Wicklow, known as Byrnes Country. Carlisle spent the last ten years of his life trying to take possession of this property, but he never succeeded because various Irish government officials, including Lord Deputy Thomas Wentworth, had their own plans for the land. With respect to the Caribbean islands, despite early difficulties, they became his own highly valuable domain. He managed to outmanoeuvre the earls of Marlborough and Montgomery and take possession of all the islands from Barbados and St Kitts. By the time he died the customs revenue alone reached £9000 per annum and from all sources on the island closer to £12,000.

Carlisle had a stroke on 13 March 1636 and died at the Strand, Westminster, on 20 April. After an impressive funeral procession he was buried the next day in St Paul's. He was survived by his wife and his son, James, who became the second earl. James married, on 21 March 1632, Lady Margaret Russell, daughter of Francis Russell, fourth earl of Bedford, but he died childless on 30 October 1660.

Reputation Of all the Scots who came to England with James I, Carlisle was probably the most successful at blending into his new surroundings. He returned to his homeland only twice in over three decades and on both occasions it was because he was required to accompany his royal master on progress there. He was always very careful not to challenge the English power structure by either becoming too closely identified with one of the existing factions, as Robert Carr did with the Howards, or setting up a faction of his own, as many people pressured

him to do after Buckingham's death in 1628. Therefore it is hardly surprising that he was not a major figure in the House of Lords and never had a group associated with him in the House of Commons. He relied on the king to provide him with protection and employment. Thanks to his skills in dealing with people in general and his royal masters in particular, that reliance was not ill-placed or unrewarded.

It is possible to argue that except for his part in the French marriage, Carlisle was a singularly ineffective diplomat. He certainly never was able to negotiate the return of the palatine family to its German territory. Yet he did the best he could under difficult circumstances. In order for diplomacy to succeed even the most skilful of ambassadors must have either military power or money to use in their bargaining. For a whole variety of reasons Carlisle seldom had either. Yet what he wanted most was to keep the French and the various Habsburg rulers from uniting against either James I or Charles I. In this respect he was certainly more successful. ROY E. SCHREIBER

Hay, Jane E. [*known as* Jane Benham Hay] (*b.* 1829). *See under* Pre-Raphaelite women artists (*act.* 1848–1870s).

Hay, John, first Lord Hay of Yester (*c.*1450–1508), landowner, was the eldest son of Sir David Hay of Yester and Mary, daughter of George Douglas, first earl of Angus (*d.* 1403), and Mary, sister of James I. The Hays of Yester were an important baronial family in Edinburghshire, Haddingtonshire, and Tweeddale and ancestors of the earls of Hay. On 12 July 1470 John received Olivercastle in Peeblesshire (inherited by the Hays through marriage to the heiress of Simon Fraser of Olivercastle, executed by Edward I in 1306) from his father, whom he had succeeded by 1 March 1479, inheriting Yester, with its castle, various Haddingtonshire lands, and the sheriffship of Peebles, as well as some lands in Lanarkshire and Perthshire.

A regular attender of parliament in the 1480s, Hay became a lord of parliament on 29 January 1488: James III probably looked to Hay (whose first wife belonged to the family of Lindsay of the Byres, which remained loyal to the king in 1488) to act as a counter in Peeblesshire and Haddingtonshire to the rebellious Hepburns, Humes, and Archibald Douglas, fifth earl of Angus (Hay's mother was an Angus Douglas). Loyal to James III in the civil war of 1488, Hay temporarily lost his family's sheriffship of Peebles and his Haddingtonshire barony of Locherworth: the former was held by the earl of Angus from 1488 to 1491 and the latter by Patrick Hepburn, earl of Bothwell, from 1488 to 20 September 1500. Between July 1501 and 27 January 1502, moreover, the lords of council decided that his (repeated) 'partial process' should again cost him his sheriffship; he was fined £10 for missing a justice ayre at Jedburgh in 1501.

Hay married first Mary (*d.* before 1468), daughter of John, first Lord Lindsay of the Byres (contract dated 1462); they had one son, Thomas, who predeceased him. His second marriage was to Elizabeth (*d.* after February 1509) daughter of Sir George Cunningham of Belton (contract dated 17 December 1468). They had four children: John, who was granted the barony of Snaid in 1505 by James IV, and succeeded his father as second Lord Yester; George, ancestor of the Hays of Menzion; Margaret, who married William *Borthwick, third Lord Borthwick [*see under* Borthwick family]; and Isabel, who married Robert Lauder of Bass. Hay died in late September 1508, possessed of lands worth at least £115 annually: in 1479—with Locherworth—they had been worth £175.

Wealth at death over £115 p.a. in land: Harvey and Macleod, eds., *Calendar of writs*

Hay, John (1547–1607), Jesuit, was born on 25 January 1547, a younger son of the Hay family of Delgaty, Aberdeenshire, where his eldest brother, William, was later to build Delgaty (Delgatie) Castle. At least one other brother lived in the north, and a sister married a Barclay of Towie. Another brother, Edmund, owner of a farm near Dundee and an Edinburgh lawyer, defended the earl of Bothwell after the murder of the queen's husband. The family was related to the earl of Erroll, hereditary constable of Scotland.

Hay went to Rome in 1566 with his cousin Edmund Hay, a Jesuit, and himself entered the Society of Jesus on his nineteenth birthday. Having been a novice for three months alongside Stanislas Kostka, his first posting was in

1572, to the college at Vilna in Lithuania. There he contributed three years of stability to the early teaching of philosophy. In 1576 he was sent to the new university of Pont-à-Mousson in Lorraine, where again he taught philosophy until an outbreak of plague caused the suspension of classes. In Strasbourg to consult a doctor, Hay then stepped into a debate on transubstantiation at the Lutheran university there, triumphing (as Hay reported the opinion of its president) over the renowned John Pappius. Uncertain about the status of his young opponent (in layman's clothes because not yet a priest) Pappius concluded that he was either the devil or a Jesuit. Shortly after this Hay received permission to return to Scotland for his health's sake, on the understanding that there would be no trouble or debating triumphs.

Hay sailed from Bordeaux on the wine route, landing on 20 January 1579 at the strongly protestant port of Dundee for what proved to be a dramatic nine months' stay in Scotland. Despite the protection of relations in Perthshire, Hay found himself the focus of controversy as rumours circulated about the new Jesuit menace. He withdrew to the greater security of Aberdeenshire. There he became an object of wonder in the midst of a religious revival which owed a good deal to the popular discontent which followed the closure of Deer Abbey. Despite his own poor health, Hay was assumed to be capable of effecting cures for invalids who also sought help on pilgrimages to holy wells. Turriff near Delgaty was a particular centre of devotion, with crowds 'clothed only in linen garments imploring the aid of God and the saints, and especially of the Blessed Virgin' (Forbes-Leith, *Narratives of Scottish Catholics*, 161). Rosaries were on sale at the market fair. Summoned to the royal court at Stirling, Hay was interrogated by senior clergy on behalf of the regent's privy council. He declined an invitation for private debate with professors of the University of Glasgow, while his request for a public one before the boy king, James VI, was refused. His last weeks in Scotland, granted by the privy council and guaranteed by Delgaty's £1000 Scots bond, were conditional on his doing 'nothing offensive to the trew and Christiane religion established' (*Reg. PCS*, 1578–85, 204), so that a sense of unfinished business motivated his polemical writing in France.

Hay's *Certain demandes concerning the Christian religion and discipline proposed to the ministers of the new pretended Kirk of Scotland* was published at Paris in 1580. The author described himself as a clerk of the Society of Jesus, although he was ordained priest later that year. 'Reminiscent of the method and style of [Ninian] Winzet' (Taylor, 271), the book was highly influential on the continent. Its 166 questions brought together many points of controversy in an accessible way. One may be quoted in relation to the former dependants of the monks of Deer: 'Quhether maa pure [more poor] was nurished daylie be almes of Abbay places? Or maa househalders maid beggars this day be your preaching?' (Law, 64). The fact that no answer came back from kirk ministers (nor to John Hamilton's *Catholic and Facile Traictise*, 1581), helped to develop a counter-Reformation climate in north-east Scotland. In Europe there were sharp responses to French and German translations of the *Demandes*, in particular from the University of Nîmes, to which Hay (as professor of theology and dean of arts at Tournon) published a reply in 1584. This was followed four years later by a response to Theodore Beza, who had mocked him as a monk.

Latterly Hay lived in several Jesuit houses in Flanders, translating mission reports from Japan and Peru into Latin from Italian, but in 1598 he wrote to James VI from Antwerp drawing a contrast with the state of Scotland as it had been forty years earlier, in his own grandfather's time. Placed as he was near the channel ports, Hay was described by William Crichton, in a letter of 2 August 1598, as desolated at not being trusted by his fellow Jesuits to go to Scotland because he was 'unable to keep silence on hearing heresy'. General Acquaviva, writing to James Gordon 'Huntly' on 24 December 1599, acknowledged Hay's 'well known excessive zeal'. Hay's short visit of 1601 was prolonged on account of the deaths of two of his brothers' heirs—a property matter which on 25 April that year prompted him to reassure the general that 'my hopes remain centred on God alone. I must also clearly acknowledge that my enthusiasm for disputations has weakened' (Jesuit Archives). Latterly Hay was appointed rector of the college at Pont-à-Mousson where he had formerly taught. He died there 'beloved and regretted' on 21 May 1607 and was buried locally, to be commemorated in the society's archives as 'a man of commanding abilities, primitive fervour, apostolic zeal, and infantine docility' (Gordon, 564).

Hay, Sir John, Lord Barro (1578–1654), judge, was the son of William Hay (*d.* 1597), of Barro and Wyndon, Haddingtonshire, and Margaret, daughter of George Hay of Monkton, Haddingtonshire. He was educated at the College (University) of Edinburgh, graduating MA in August 1594. After working some six years in England, in March 1602 he was made clerk-depute of Edinburgh, rising to conjunct clerk in May 1618. Edinburgh commissioned him to prepare a Latin oration for James VI on his visit to the capital in 1617; the text was published in *Muses' Welcome*, printed by Andro Hart. His first marriage, in May 1602, was to Marion, daughter of John Johnston, merchant burgess of Edinburgh, with whom he had one daughter and four sons, including Sir Henry, commissary of Edinburgh. His second marriage, in 1622, was to Rebecca, daughter of Alexander Thomson of Duddingston, with whom he had four sons and two daughters. In 1612 he purchased lands

in the barony of Kinderlock in Kirkcudbrightshire and in 1633, after Charles I's act of revocation saw him lose lands, he repurchased the family estate at Barro near Haddington.

For thirty years Hay represented the interests of Edinburgh and the royal burghs to successive absent kings. Much favoured by Charles I, preferment came quickly in the early 1630s. Knighted on 29 July 1632, on 12 December he was appointed lord clerk register in succession to Sir John Hamilton of Magdalens, joining the privy council and becoming an extraordinary lord of session. In January 1634 he became an ordinary lord of session as Lord Barro. His appointment to the court of high commission that year cemented what was by then his close relationship with episcopacy, and he was now used by Charles I to force Edinburgh to accept his religious policies. Plans to restructure St Giles as a cathedral in 1634 increased Hay's unpopularity in the city. Although he 'inveighed against the [Service] Booke as much as any' (*Letters and Journals of Robert Baillie*, 1.38), his royal nomination as provost of the burgh in October 1637 meant he had the hopeless task of defusing burgh opposition to the new liturgy. With the onset of the first bishops' war in 1639 he fled the country, and was later forced to resign his offices. Although compensated financially, on his return in August 1641, accompanying the king, he was tried inconclusively as an 'incendiary' by the covenanter regime, briefly imprisoned, and excluded from the Act of Oblivion. The king, however, declared Hay innocent on 24 September 1642, and his last act of defiance was to join Montrose at the battle of Philiphaugh (1645), at which he was captured; he was imprisoned in Dumbarton Castle. He was allowed to retire to Duddingston, near Edinburgh, where he died on 20 November 1654; he was buried on 24 November at Greyfriars churchyard, Edinburgh. His will and testament have not survived. A view of his character is not helped by presbyterian invective and political jealousy, but he was an effective servant of crown and burgh.

Hay, John, first marquess of Tweeddale (1626–1697), politician, was the eldest son of John Hay, eighth Lord Hay of Yester and first earl of Tweeddale (*c.*1593–1654), and his

John Hay, first marquess of Tweeddale (1626–1697), by Sir Peter Lely

first wife, Lady Jean Seton (*d.* 1626/7), daughter of Alexander *Seton, first earl of Dunfermline (1556–1622). Styled the master of Yester until 1646, John Hay attended the University of Edinburgh. In 1640 he went to London with his uncle, Charles Seton, second earl of Dunfermline, who was one of the Scottish commissioners appointed to arrange peace with England. Yester returned to Scotland with Charles I in 1641 and he later joined the king at Nottingham in August 1642 at the outbreak of the English civil war. However, he became dissatisfied with the king's stance towards the covenanters and in 1643 he returned to Scotland. By a marriage contract dated 24 September 1644 he married Lady Jean Scott (1629–1688), second daughter of Walter Scott, first earl of Buccleuch (*d.* 1633), and granddaughter of Walter *Scott, first Lord Scott of Buccleuch (1565?–1611). The marriage produced seven sons and two daughters.

Yester had already been appointed colonel of the Linlithgow and Tweeddale foot in the army of the solemn league and covenant, which invaded England in 1644. He fought against the king at the battle of Marston Moor on 2 July 1644, but after the king's surrender to the covenanters on 5 May 1646 he waited on the king at Newcastle. Now known as Lord Hay of Yester, he aligned himself with the engagement and on 4 May 1648 he was appointed a colonel of the foot for Haddingtonshire; the regiment fought at the battle of Preston on 17 August 1648. In the aftermath of defeat, he fled back to Scotland where he reconciled himself with the radical regime of covenanters. He was present at the coronation of Charles II at Scone on 1 January 1651 and on 13 March he was added to the committee

for grievances set up by the committee of estates of 23 December 1650. Yester remained with the king until the invasion of England in 1651. He retired to his house at Neidpath, which he garrisoned for the king; this was the last place that surrendered to the English south of the River Forth. He succeeded his father as earl of Tweeddale in 1654 and he also collaborated in the Cromwellian parliaments, being elected as a member of parliament for Haddingtonshire in 1656 and 1659. It is possible that he was in favour of Cromwell accepting the royal title.

Tweeddale attended the first session of the Restoration parliament in Scotland (1 January – 12 July 1661), and served on several financial and religious commissions. He was admitted as a member of the new privy council on 13 July, but on 13 September the council received instructions from Charles II for him to be imprisoned in Edinburgh Castle for speeches which he was supposed to have made relating to the trial and execution of James Guthry, the protester minister of Stirling, which were deemed prejudicial to the king's authority. Tweeddale wrote to Secretary Lauderdale that he was 'as thunder struke with the order for his commital' (*Lauderdale Papers*, 1.99) and on 17 September he petitioned the privy council to intercede with the king on his behalf and secure his release. After examining him on 2 October about his behaviour concerning the parliamentary vote of 12 April for Guthry's execution the council ordered Tweeddale's release, but he was instructed to remain within a 3 mile radius of his own home until the king's thoughts on the issue were further known, under the pain of 100,000 merks. It was not until 7 May 1662 that Tweeddale's confinement was removed.

Tweeddale attended the 1662 parliament which commenced the following day on 8 May, and the 1663 session commencing on 18 June. The same month he became president of the privy council, and he again served on financial and religious commissions. In January 1664 Tweeddale was appointed to the high commission for the execution of laws in church affairs and in early June he was made an extraordinary lord of session. In September that year, with Sir John Wauchope of Niddrie, he was required to provide thirty men for service in the English navy. In the winter of 1664–5 he was among those charged with taking action against Quakers, while on 3 May 1665 he became a privy council commissioner for Selkirkshire for the apprehension and trial of moss-troopers, robbers, and thieves in the borders (a commission later renewed). He attended the 1665 convention of estates and on 2 August he was included on the committee for inbringing of taxation.

From 1667 to 1674 Tweeddale was one of the leading figures in the administration of Scotland. He used his influence to limit the severity of the government towards the covenanters by pursuing a policy of compromise, embodied especially in the first indulgence of June 1669. He was active in the parliament of 1669–74. Appointed one of the lords of the articles on 19 October 1669, he was also a commissioner in the abortive union project with England in 1670, and for the plantation of kirks and valuation of teinds in 1672. Tweeddale again played an important role on privy council committees reviewing religious policy, both towards Catholics and Quakers, and towards absentees from parish churches, clandestine marriages, and conventicles. On 6 May 1668 he was appointed as a colonel of foot for the militia in Haddingtonshire, and he was involved in discussion on militia policy in Dumfriesshire, Lanarkshire, Ayrshire, and Renfrewshire. His report for the king on the issue of settling the highlands was produced on 8 July 1669. He was involved in formulating privy council procedure and on 20 July 1671 and 7 March 1673 he was appointed as a commissioner for Haddingtonshire to enforce parliamentary legislation concerning highways.

In the early 1670s Tweeddale clashed politically with the influential John Maitland, from 1672 duke of Lauderdale. On 20 November 1673 Lauderdale informed the king that Tweeddale, 'at first an underhand contriver and counsellor' against the policy of the government (concerning the covenanters) had 'now shown himself openly' (*Lauderdale Papers*, 3.17). Through Lauderdale's influence Tweeddale was dismissed from office and deprived of his seat on the privy council. However, in January 1678 Tweeddale subscribed the bond for the peace as part of the presbytery of Kirkcaldy in Fife and on 22 March at Peebles he subscribed the bond by nobles and other men in Peeblesshire concerning conventicles. On 2 May he was reappointed as a commissioner for Haddingtonshire concerning highways and bridges and on 11 March 1679 he was ordered to suppress conventicles in the regality of Pittenweem Easter. With the downfall of Lauderdale in 1680 Tweeddale was appointed as commissioner of the Treasury, but in July, however, Sir George McKenzie of Rosehaugh, king's advocate, complained to the privy council that Tweeddale had failed to suppress the meeting of conventicles in his 'great teind barn', in the burgh of Inverkeithing (*Reg. PCS, 1678–80*, 486–7). On showing that the 'barn held burgage of the town' (ibid.) Tweeddale was assoilzied and the legal process was continued against the magistrates of Inverkeithing. On 10 August the privy council appointed Tweeddale convener of the commissioners of the excise in Peeblesshire.

Tweeddale subscribed the declaration of 28 July 1681, issued on the opening day of parliament, stating that it was unlawful under all circumstances to take up arms against the king, and with other privy councillors subscribed the Test Act on 22 September. On 10 November he was instructed to receive subscriptions to the Test Act in Peeblesshire and the regality of Dunfermline and on 30 December he again subscribed the Test Act as sheriff principal of Peeblesshire and baillie of the regality of Dunfermline in the presence of Sir George Gordon of Haddo, lord president of the session. Following his reappointment to the privy council by the king Tweeddale formally took his seat on 15 May 1682 and in the same month he was appointed as a commissioner for trying the state of the coinage and mint. With the exposure of the Rye House plot in 1683 he was involved in the examination of Alexander Gordon of Earlston and the countess of Argyll. The following year he was again active in committee.

Tweeddale was one of the lords of the articles appointed

on 23 April 1685 at the opening of parliament. He again served on numerous committees and commissions, including those concerned with devising a reply to James VII's letter to parliament, supply for Haddingtonshire and Peeblesshire, trade, the plantation of kirks and valuation of teinds, and the regulation of inferior judicatories. He also attended the 1686 parliamentary session (29 April to 15 June) and later in September he was admitted as a Treasury commissioner. In September he was among privy councillors deputed to consider James VII's letter concerning the free private exercise of religion for Catholics in Scotland as well as the establishment of a chapel at Holyrood. In November 1686 Tweeddale was instructed to oversee the election of the burgh magistrates of Haddington. On 19 January 1687 he was admitted as a Treasury commissioner and on 10 March he was added to the commission for auditing the former treasurer's accounts.

As a supporter of the cause of William of Orange, Tweeddale was present in the 1689 convention which met from 14 March to 24 May. On 14 March he and the earl of Lothian were deputed by the estates to present the order to the duke of Gordon to surrender Edinburgh Castle within 24 hours. Tweeddale subscribed the act of 16 March declaring the meeting of the estates to be free and lawful and on the same day he was appointed to the committee for securing the peace. On 22 March an act was passed approving his conduct in authorizing William Drummond, deputy keeper of the magazine, for providing forty-one barrels of powder for the protestant defence of Londonderry in Ireland. Tweeddale also subscribed the convention's letter of 22 March replying to William as king of England and on 30 March he was named as an additional member on the committee for settling the government. He was included on committees to report on the public accounts (2 April) and to consider the supply of oats and fodder for the troops of horse and dragoons under the command of Major-General McKay (11 April), but on 12 April the convention gave Tweeddale a pass to go to England for health reasons. However, this would appear to be a cover to promote his own interests in England since, on 22 April, as an enthusiast for the project, he was named as one of the convention's commissioners to treat concerning a union between Scotland and England and he shortly afterwards became a commissioner of supply for Haddingtonshire and Edinburghshire.

Tweeddale was one of the privy councillors named in King William's commission from Hampton Court on 18 May 1689 and on 7 December orders from Holland House appointed Tweeddale as one of the Treasury commissioners. On 21 November he had also been appointed by the privy council as a JP for the shire of Edinburgh. He was also named as a privy councillor in 1690 and 1691, but for two and a half years he stayed in England, moving between Tunbridge Wells and London and courting political influence among a variety of episcopalian and presbyterian interests, all of which were opposed to Secretary of State George Melville. He had been promoting his own political advancement in 1689: on 16 July the earl of Crawford, president of parliament, wrote to Secretary of State Melville (from 1690 earl of Melville) informing him that Tweeddale was making 'a strong partie' for Melville's position and that 'the Episcopall partie in our Parliament are strong agents for him' (Melville, 172).

Tweeddale was appointed lord high chancellor of Scotland on 5 June 1692, following a reconstruction of the Scottish administration. In this capacity he spoke in parliament on 18 April 1693 outlining the king's objectives for the forthcoming session. On 17 December 1694 he was created marquess of Tweeddale, earl of Gifford, viscount of Walden and Lord Hay of Yester. He was high commissioner to the 1695 parliamentary session which set up a special commission of enquiry into the controversial issue of the Glencoe massacre, and he played an important role in steering the report through parliament. However, the passing of the act for a Scottish company trading to Africa and the Indies on 26 June 1695, to which Tweeddale gave the royal assent, aroused the hostility of King William (and the English East India Company) and he fell from favour. He had acted 'almost certainly outside the intended limits' of his instructions as commissioner in a matter which, in the aftermath of the 1695 parliament, was 'the only topic to arouse William's anger' (Riley, 98). Tweeddale's political career ended with his dismissal as chancellor in 1696. He died at Edinburgh on 11 August 1697, and was buried at Yester. His wife had died in November 1688; he was succeeded as second marquess of Tweeddale by his son John *Hay (1645–1713).

Hay, John, second marquess of Tweeddale (1645–1713), politician, was the eldest son of John *Hay, first marquess of Tweeddale (1626–1697), and Lady Jean (1629–1688),

John Hay, second marquess of Tweeddale (1645–1713), by Gerard Soest, *c.*1670

daughter of Walter Scott, first earl of Buccleuch (*d.* 1633). From 1654 he was styled Lord Hay of Yester or Lord Yester. He was admitted a fellow of the Royal Society on 23 May 1666, and on 11 December that year he married Lady Mary (*d.* 1702), only daughter of John *Maitland, duke of Lauderdale (1616–1682), at Highgate, Middlesex. They had three sons and two daughters. Their second son was the distinguished army officer Lord John *Hay.

On 6 May 1668, with his father, Lord Yester was appointed a colonel of foot of the militia in Haddingtonshire, a position he held frequently throughout the late 1660s and early 1670s (1668, 1672, 1673, and 1674). Appointed a privy councillor on 25 July 1670, two years later Yester served on a commission for the suppression of crime on the borders. However, on 28 January 1675 George Seton, earl of Winton, replaced Yester and Tweeddale as colonel of the militia in Haddingtonshire, and their commissions were declared null and void. On 1 April 1678 Yester, like other Peeblesshire landowners, subscribed a privy council bond agreeing to abstain from attendance at conventicles. Through the late 1670s and early 1680s he continued on the privy council and sat on various commissions, including that of 1678 for supply in Haddingtonshire and Peeblesshire, for enforcement of legislation prohibiting the destruction of game and fish (1682), for government of the borders in general (1684), and specifically to deal with the 'disaffected and disorderly people in severall of the westerne and southerne shyres' who 'continue in rebellious convocationes, seditions, conventicles and other disorderly practises' (*Reg. PCS*, 9.155–156). Yester, along with one William Hay of Drumellzier, was appointed a commissioner for the shires of Roxburgh, Selkirk, Peebles, and the Merse. An active member of a formal privy council committee anent fines about this time, he worked with James Douglas, earl of Drumlanrig, in considering the cases of several gentlemen and/or their wives in Teviotdale who had been fined. On 10 March 1685 he was a member of a privy council committee appointed to visit and examine prisoners in Leith tolbooth. On 9 April 1685 he was included on the new privy council.

As part of the security measures adopted to deal with the duke of Argyll's invasion of Scotland, Yester was appointed in May 1685 a colonel of the East Lothian regiment. Later that month he was appointed by the Scottish parliament as a commissioner of supply for Haddingtonshire and as a master of game for Peeblesshire. Yester played an important role on the privy council in the aftermath of Argyll's failed uprising. On 7 August Yester joined the important committee for public affairs, which was empowered to examine all prisoners and suspected persons and to sentence and banish prisoners to the plantations. From September he was involved in drawing up a letter to James VII providing details of the council's dealings with informers concerning the Argyll rebellion and he remained a council member in the controversial years of 1686 and 1687. Following anti-Catholic rioting in Edinburgh on 31 January and 1 February 1686, Yester was an official investigator, and in March he was a member of a privy council committee to report on shipping and navigation. In the summer of 1686 Yester and his father examined people who had attended a conventicle near Lauder and imprisoned one of the leading protagonists in Haddington prison.

Despite his previous record, after the revolution Yester became associated with the Williamite regime, even though he has been seen as 'sadly out of his depth at court and, for that matter, in most other places' (Riley, *King William*, 49). Yester's poor interpersonal skills hindered his political advancement and he appears to have been infuriating to his father who was trying to enhance the family's influence, although acting on his father's instructions, Yester presented at court a concocted address from Haddingtonshire which pressed the cause of union between England and Scotland. In the spring of 1689 he was appointed captain of the militia horse in Haddingtonshire, a commissioner for ordering the militia in that shire, and finally captain of a troop of horse for Berwickshire and Haddingtonshire. While his regiment was active in the north-east of Scotland, he had much to keep him in Edinburgh. A member of William's first privy council, he was also appointed sheriff of Haddington and in the early months of 1690 served on committees for peace and for supply in the area. Although not included in the new privy council appointed on 4 June 1690, five years later he made what seems to have been his first appearance in parliament, and did so as lord high treasurer, one of the great officers of state. On 20 June he was appointed as a commissioner of supply for Fife. While he did not attend the 1696 parliamentary session, following the death of his father on 11 August 1697, and his succession as second marquess of Tweeddale, he attended parliament regularly and he

was present in the three parliamentary sessions between 1698 and 1701. He was a defender of the Darien project and he became associated with the parliamentary opposition against the court. On 14 January 1701 he voted in favour of a formal act being passed, as opposed to an address to the king, defending the rights and interests of the kingdom of Scotland in Darien, on 28 January he voted against the continuation of the armed forces until December 1702, and on 31 January he also voted against the continuation for four months of the number of troops over 3000 men.

Absent from the 1702 parliamentary session, Tweeddale was prominent in the parliament of 1703–7. On 19 May 1703 he presented an overture arguing that:

> before all other business the Parliament might proceed to make such conditions of government and regulations in the constitution of this Kingdom to take place after the decease of her Majestie and the heirs of her body as shall be required for the preservation of our religion and liberty. (*APS*, 11.41)

As a spokesman for the country party, Tweeddale was attempting to ensure that the bargaining position of supply was not given away prior to discussion of the succession and future constitutional reform. Nevertheless, he allowed himself to be diverted into presenting a protestation on 13 September against the act allowing the import of French wine and brandy, describing it as 'dishonourable to her Majestie, inconsistent with the grand alliance wherein she is engaged and prejudicial to the honour, safety, interest and trade of this Kingdom' (ibid., 11.217). Following the exposure of the Queensberry plot, James Johnston, King William's former secretary 'in concert with the Marquess of Tweedale and some others in Scotland' (*Bishop Burnet's History*, 4.77), proposed that Queen Anne should empower her commissioner in Scotland to consent to the revival of the 1641 constitutional settlement in Scotland in return for the securing of the Hanoverian succession in Scotland. Tweeddale was appointed as high commissioner to the 1704 parliamentary session which began on 6 July and on 5 August was named as a commissioner of supply for the shires of Edinburgh, Haddington, Berwick, and Fife. No progress was made on securing the succession and an act for the security of the kingdom, which received the royal assent on 5 August, led to increased tension in Anglo-Scottish relations, but when in September Tweeddale went to London, he was well received by Anne. From 17 October he replaced James Ogilvy, earl of Seafield, as lord high chancellor of Scotland, but was unseated on 9 March 1705 and lost his place as high commissioner in the parliamentary session of 28 June to 21 September 1705. However, he still attended and on 1 September he adhered to a protestation by John Murray, first duke of Atholl, against approving the act for a treaty with England.

Tweeddale was one of the leading figures in the *squadrone volante*, the political grouping whose votes were crucial for securing the passage of the treaty of union through the Scottish parliament in its final session from 3 October 1706 to 25 March 1707; Thomas Hay, Viscount Dupplin, dubbed it 'the Marques of Tweddals party' (Hume Brown, 173). He was a member of the important parliamentary committee established on 23 October for examining the calculation of the equivalent, the sum (eventually fixed at £400,000) to be advanced for the discharge of Scottish Treasury debts and to compensate shareholders in the Company of Scotland for the fiscal union. Tweeddale consistently voted in favour of the articles of the treaty of union from 4 November 1706 to 16 January 1707. At the time of the Union, Tweeddale was due arrears of salary of £2577 15*s*. 7*d*. Scots and he received £1000 sterling (£12,000 Scots) out of the £20,000 sterling (£240,000 Scots) sent north for distribution by the Scottish treasurer, David Boyle, first earl of Glasgow. On 13 February 1707 Tweeddale was chosen as one of the sixteen Scottish representative peers to sit in the House of Lords in the new British parliament. Tweeddale died suddenly in a fit of apoplexy on 20 April 1713 at Yester and he was privately buried there.

In writing of the 1704 parliamentary session, the Jacobite George Lockhart commented that Tweeddale was a 'well-meaning, but simple man ... I may safely say he was the least ill-meaning man of his party, either through inclination or capacity' (*'Scotland's Ruine'*, 66). John Macky described him as a:

> great Encourager and Promoter of Trade, and the Welfare of his Country. He hath good Sense, is very modest, much a Man of Honour, and hot when picqued; is highly esteemed in his country, and may make a considerable Figure of it now. (*Memoirs of the Secret Services*, 186)

Although Tweeddale's reputation currently rests on his prominent role in the treaty of union in Scotland, it has been argued that he 'was, and to the end of his life remained, almost entirely devoid, not of ambition, but of the necessary drive and initiative for political success' (Riley, *King William*, 50). Hay, Lord John (*d.* 1706), army officer, was the second son of John *Hay, second marquess of Tweeddale (1645–1713), and his wife, Lady Mary Maitland (*d.* 1702), only child of John Maitland, duke of Lauderdale. He entered the army in the Scots dragoons, became lieutenant-colonel of the regiment in 1694, and commanded it in the campaigns under Marlborough in 1702–3. He became colonel of the

regiment by purchase in 1704, and was made a brigadier-general. Under his command the greys, the Royal Scottish dragoons, or Scots regiment of white horses, as they were sometimes called, greatly distinguished themselves in the succeeding campaigns, particularly at Schellenberg, where, dismounted, in hand-to-hand fighting they turned the battle. Later, remounted and in pursuit, the greys captured the enemy artillery and baggage train. At Ramillies in 1706 they took prisoner the famous French régiment du roi, and, according to tradition, won the distinction of wearing grenadiers' caps since enjoyed by the regiment. Hay married, first, Lady Mary Dalzell, only daughter of James, third earl of Carnwath, and Lady Mary Seton; secondly, Elizabeth, daughter of Sir Thomas Orby, bt, of Crowland, Lincolnshire; she survived him, and later married Major-General Robert Hunter. Hay died of a lingering fever at Courtrai on 25 August 1706. Marlborough wrote that his death was 'generally regretted through the whole army' (*Letters and Dispatches*, 3.105).

Hay, John, of Cromlix, Jacobite duke of Inverness (1691–1740), Jacobite courtier and army officer, was the third son of Thomas Hay, seventh earl of Kinnoull (*c.*1660–1719), and Elizabeth (1669–1696), only daughter of William *Drummond, first viscount of Strathallan. George *Hay, eighth earl of Kinnoull (*d.* 1758), was his elder brother. He inherited an estate at Cromlix, Perthshire, from his grandfather Lord Strathallan. The Hays of Kinnoull were sympathetic to the Jacobite cause, but they did not feel that their loyalty to the Stuarts was compromised by service to Queen Anne. They supported the Harley administration, and in 1714 Hay purchased a company in the foot guards. On 29 May 1715, at Aberdalgie, Perthshire, he married Marjorie Murray (*d.* in or after 1765), daughter of David Murray, fifth Viscount Stormont, and sister of James Murray, later Jacobite earl of Dunbar, and William *Murray (1705–1793), who prospered in the service of the Hanoverians and became lord chief justice of king's bench in England and first earl of Mansfield.

Hay's sister Margaret had died in 1707, but the family still had ties to her husband John *Erskine, twenty-second or sixth earl of Mar. Hay acted as political agent for Mar in Perth, an affiliation which earned him the enmity of John Murray, first duke of Atholl, and his faction. Although his presence was contested by Mar's personal servant, Hay may have accompanied Mar in disguise from Gravesend to Fife on a collier to raise the standard of rebellion in Scotland in summer 1715, and he was privy to his political plans. In Scotland, Hay was dispatched by Mar to offer command of the Jacobite army, under the overall command of James Fitzjames, duke of Berwick, who was to arrive from France, to Atholl, who refused. Instead, Hay was sent with 200 men to seize Perth, which he accomplished on 14 September 1715, after which Mar appointed him governor of the city. This appointment caused great resentment among the other Jacobites, since Hay had no actual military experience, despite his military rank. With Perth secured, Mar sent Hay to France to make contact with James Francis Edward Stuart, the Pretender, and secure more aid for the rebellion. Upon his return, Mar promoted Hay to major-general, and he was himself appointed master of the horse to the Pretender. When the 1715 rising collapsed, Hay did not flee Scotland with Mar and the Pretender, but retreated with John Sinclair, master of Sinclair, and the army to Caithness; from there he then made his way via the Orkney Islands to the Jacobite court at St Germain, France, where he was named groom of the bedchamber to the Pretender, and then with the court to Avignon. Hay was attainted by parliament in 1716, on account of his participation in the rising, and all his property was forfeited.

Joined by his wife, Hay then followed the Pretender and his swelling court of exiles from Avignon to Rome in 1717, where Hay, an episcopalian, was chagrined to have to kiss the slipper of Pope Clement XI when the Pretender visited the pope incognito. Hay was regarded highly by James, however, and on 5 October 1718 was created earl of Inverness, viscount of Innerpaphrie, and Lord Cromlex and Erne in the Jacobite Scots peerage. When a marriage was arranged between the Pretender and (Maria) Clementina Sobieska that year, Hay was dispatched to meet her at Ohlau, Silesia. Marjorie prepared to welcome the princess to Rome, only to learn that she had been imprisoned by the holy Roman emperor, Charles VI, at the request of George I. After returning to James, Hay accompanied him to Urbino and then to Spain while they waited for the princess to arrive in Italy. Hay and his wife were witnesses to the wedding at Montefiascone on 2 September 1719, and Marjorie was named one of Clementina's ladies, a post which placed the couple at the centre of the exiled Jacobite court. From this privileged position, Hay was able to express his long-standing distrust of and misgivings about Mar, who was serving as the Pretender's secretary of state and minister in Paris. In 1723 the Pretender sent Hay as his agent to Brussels, where he met with Francis Atterbury, former bishop of Rochester and architect of the unsuccessful Atterbury plot of 1721–2. While there, Hay and Atterbury, who had become convinced that Mar was a double agent, outlined a plan by which Atterbury would convince the Pretender of Mar's perfidy and Hay would take his place as secretary of state, while Atterbury would replace Mar as minister in Paris. Atterbury's letters succeeded in undermining the Pretender's confidence in Mar, and late in 1724 Hay was offered the position of secretary of state. New circumstances prevented him from accepting immediately. Early in 1723 Hay had stopped receiving money from his elder brother Kinnoull, who wished to build a career in the service of George I. Hay was

anxious to secure further sources of revenue, and sent his wife to Britain to consult members of their families, but she was arrested on 3 / 14 September 1724 on landing at Dover, and imprisoned in Newgate for six months. This was a serious insult, as it placed her among common criminals; there she was interrogated several times by Charles, second Viscount Townshend, secretary of state to George I. Her brother William asked Hay's great-uncle James Johnston, who had been secretary of state in Scotland under William III, for advice, but Johnston only suggested capitulation to the government or a request for safe passage to the continent. In the end, Clementina, who was particularly attached to Marjorie and wanted her to attend the birth of her second child as she had the first, petitioned the British government for Marjorie's release, which was granted, and Marjorie returned in time to witness the delivery of Prince Henry Benedict. With Marjorie no longer a hostage, Hay accepted the position of secretary of state in March 1725, when he began to use the Jacobite earldom awarded in 1718.

Hay was a devoted and trusted servant to the Pretender, but his protestantism, as well as his elder brother's acceptance of a pension and service as a diplomat to George I, made him the object of suspicion among his rivals at the exiled court. Many Jacobites became convinced that during Marjorie's imprisonment the Hays had agreed to become agents for the British government. The rumour may have been originated by Cardinal Giulio Alberoni, who became close to Clementina at this time, and encouraged her deepening resentment of the Hays. He and Mrs Sheldon, the governess to Prince Charles Edward, became the focus of a 'queen's party' that exploited Clementina's depression and religious devotion to turn her against the Hays. Hay had been remarking on the deteriorating state of the Pretender's marriage in letters to Mar at Paris, and Mar had exploited Hay's naivety in confiding in him by circulating Hay's opinions in Paris. About this time Hay wrote to Clementina assuring her that his wife was not the Pretender's mistress as was alleged. Hay was associated with the appointment of his brother-in-law James Murray, a protestant, as governor to Prince Charles Edward in 1725, supplanting Mrs Sheldon, who protested to the Pretender and was ordered from Rome as a result; in response Clementina left James and took up residence in a convent, Mrs Sheldon taking refuge in another, and Hay's position as the Pretender's confidant was cited by Clementina as her grievance.

Meanwhile, Hay and Atterbury seized an opportunity for another try at retrieving the crown for their master. In 1725 the French government, needing to marry off Louis XV so that he could begin producing heirs and avoid a disputed succession, sent home the child Spanish infanta to whom the king had been engaged, outraging Spain, who then formed an alliance with Austria. In the hopes of using this to their advantage, Hay and Atterbury dispatched agents to Vienna and Madrid, and began talks with Russia to attempt to draw her into attacking Britain's allies in northern Europe. This was to be complemented by a rising in the highlands spearheaded by William Mackenzie, fifth earl of Seaforth. Instead of ending in triumph, the plan collapsed as Seaforth double-crossed the Jacobites by using his knowledge of the plot to buy a pardon and the restoration of his estates, and the diplomats of Europe smoothed out their differences before the international embarrassment of the return of the infanta could flare into actual war.

Following this disaster, Hay's influence at court steadily waned under the sniping of Clementina and her Catholic circle of courtiers. Hay's position was undermined further by the enmity of Pope Benedict XIII (who believed the enduring gossip that Marjorie was the Pretender's mistress and feared that Hay and Dunbar were bringing up the Pretender's sons as protestants) and by Clementina herself. With Alberoni's assistance, Clementina wrote to Louis XV, Queen Elisabeth of Spain, Atterbury, and others, describing the Hays as 'persons that have no religion, honour nor conscience' (Miller, 279) and declaring that she would not live under the same roof with them. The breach contributed towards the removal of the Jacobite court, including the Hays, from Rome to Bologna in October 1727. Sympathy at the courts of France and Spain was with Clementina, and Hay realized that his presence was hindering the progress of the Jacobite cause. He resigned as secretary of state on 3 April 1727, and was replaced by Sir John Graham, formerly his agent at Vienna. He was compensated with a Jacobite English peerage, as Baron Hay, and a promotion in the Jacobite Scottish peerage to duke of Inverness.

The Hays moved to Pisa, but the Pretender remained close to his friend, and wrote affectionate letters to him describing the progress of the two princes. In June 1727, upon learning of the death of George I, Hay accompanied the Pretender to Nancy in Lorraine, to discuss options for another rising, which never materialized. When the Pretender was reconciled to Clementina, Hay remained behind. In 1728 he was called to meet the Pretender in Parma and was offered restoration to the secretaryship, which he declined as he did not want to endanger the reconciliation between James and Clementina. The Hays moved in 1731 from Pisa to Avignon, where Hay converted to Catholicism that year. This was a pathetic attempt to win the queen's favour, paralleled by the conversion of Philip, duke of Wharton, in 1726, which had sought to gain support from the Spanish court. To the Catholic Jacobite courtiers, the conversion confirmed their opinion of Hay as a cynical favourite, and Clementina was unmoved. Protestant Jacobites felt the conversion seriously damaged their cause, and Atterbury was convinced that Hay was indeed an agent of the British government bent on destroying the movement's credibility. In April 1736, following the death of Clementina, Hay returned to Rome and rejoined the personal circle of the Pretender as one of the last remaining Jacobites of the Pretender's generation, although with no official position. He was welcomed by Roman society at large, but his enemies at court now said he had come to unseat James Murray, and rather

than be the cause of further disputes he returned to Avignon in July. Suffering from gout, Hay died at Avignon on 24 September 1740 and was buried there, leaving behind no children. His widow was still alive on 25 December 1765, when James Boswell spent Christmas with her and the earl of Dunbar at Avignon—Boswell thought her 'a lively, clever, agreeable woman' (*Boswell on the Grand Tour*, 262). The forfeited Cromlix estate had been retrieved by the family for his nephew Robert Hay *Drummond (1711–1776). Although innocent of the charges of duplicity levelled at him by his rivals at the small and intrigue-ridden Jacobite court, Hay was only a devoted, not a talented, servant, and his lack of qualification and experience did little to advance the Pretender's cause.

Wealth at death estates forfeited; lived on pension which ceased at death

Hay, John, fourth marquess of Tweeddale (1695–1762), politician, was born in 1695, probably at Yester in Haddingtonshire, the eldest son of Charles Hay, third marquess (*c.*1666–1715), and his wife, Lady Susan Hamilton (*d.* 1737), third daughter of Anne *Hamilton, duchess of Hamilton in her own right, and William Douglas, duke of Hamilton [*see* Hamilton, William (1634–1694)]. He may have matriculated at Edinburgh University and may also have undergone some legal training. He succeeded his father as fourth marquess in 1715. Scottish politics at this time was marked by bitter rivalry between the squadrone and the Argathelians, followers of John Campbell, second duke of Argyll, and his brother, Archibald, earl of Ilay. Like his father and grandfather (the second marquess, who had formed the party), Tweeddale adhered to the squadrone. In 1721 he was appointed an extraordinary lord of session and as such repeatedly voted in favour of the nomination of Patrick Haldane, a squadrone supporter, to the bench against bitter Argathelian opposition. Haldane was eventually forced to give up. The government then passed an act in 1724 which provided that when the existing extraordinary lords died, no replacements were to be appointed. The post finally lapsed with Tweeddale's death in 1762.

In 1722 Tweeddale was elected on the squadrone interest as one of the sixteen representative peers to sit in the Lords for Scotland. He was re-elected in 1727. During the 1730s he was active in the opposition to Walpole and along with other squadrone peers unsuccessfully opposed the king's list, from which they had been excluded, at the representative peers election of 1734. For a time he deserted politics, concentrating on improving his estate at Yester, Haddingtonshire.

In opposition Tweeddale had become a friend and political ally of Carteret, who was appointed a secretary of state in the new ministry following the resignation of Walpole in February 1742. On the strength of his connections with Carteret, Tweeddale was appointed on 15 February principal secretary of state for Scotland and keeper of the signet. In April he returned to the Lords as a representative peer following the death of Charles Hope, first earl of Hopetoun. He also became governor of the Bank of Scotland, a post he held until his death. Carteret's intention was to bypass the entrenched position of the Argathelians in Scotland. Tweeddale, however, had little political influence in Scotland, even compared to other squadrone peers, most of whom resented his elevation and withdrew from politics during his secretaryship. Temperamentally he was unsuited to political management; he fussed but rarely took decisive action. His lack of a political power base in Scotland, coupled with the instability of the English ministry, was at the root of all the difficulties he faced in trying to control Scotland over the next four years. He also received little support from Carteret, who was preoccupied with foreign affairs and with safeguarding his own position within the ministry. As far as Scottish affairs were concerned, Carteret lacked the energy to support an overhaul of the administration and despite his earlier intentions was content with a Scotland that was kept out of political controversy. As a result, Tweeddale was able to make little headway and most Argathelian supporters remained in office.

Tweeddale, who went to Scotland only once—in 1742—during his time in office, sought to manage Scotland through a small group of advisers—Lord Advocate Robert Craigie, Robert Dundas, Lord Arniston, his son Solicitor-General Robert Dundas, and the deputy keeper of the signet, Thomas Hay—but they frequently quarrelled among themselves. Their position was further weakened by Tweeddale's obsession with secrecy and by his unwillingness to take his advisers fully into his confidence. His failure to make widespread changes and dismantle the influence which the Argathelians had built up within the administration quickly disillusioned his friends and potential supporters. The appointment of Charles Erskine, previously Argathelian lord advocate, to the bench in November 1744 and the resignation of Carteret later that month 'destroyed any remaining authority Tweeddale had both within the ministry and in Scotland, and effectively ended his administration. He clung to office for another year or so but it was clear to all that he had no real power or influence.

Thus during the first half of 1745 there was a lack of any real government in Scotland, and Tweeddale failed to take any precautionary measures against the Jacobite threat. When the uprising did break out, Tweeddale was not up to the crisis. At first he tried to minimize the threat and then, through a large part of the critical November when the

Jacobite army was marching south, he was unable to get to cabinet meetings because of gout. He was almost totally bypassed as far as official business was concerned and finally resigned on 4 January 1746. The office of secretary for Scotland was not revived until 1885, and not advanced to full secretary of state rank until 1926. Tweeddale's failure also saw the end of the squadrone as a coherent political group.

Tweeddale continued to be returned as a representative peer at the elections of 1747, 1754, and 1761 but played little further active part in politics. On 24 May 1748 he married Carteret's daughter Lady Frances Carteret (*bap.* 1718, *d.* 1758), and they had a family of two sons and four daughters. The marchioness died on 25 December 1758. In 1755 Tweeddale was appointed to the annexed estates commission. In June 1761 he was appointed lord justice general, on Ilay's death, but by this stage he was severely disabled and could barely stand. He died in London on 9 December 1762, and was privately buried at Yester.

Hay, Lord John (1793–1851), naval officer and politician, third son of George Hay, seventh marquess of Tweeddale (1753–1804), and his wife, Hannah Charlotte Maitland (*d.* 8 May 1804), daughter of James Maitland, seventh earl of Lauderdale, was born in Scotland on 1 April 1793. In December 1804 he was nominally entered on the books of the *Monarch*, Lord Keith's flagship in the Downs, but it seems probable that he did not in fact enter the service until December 1806, when he joined the *Sea-horse* (42 guns), going to the Mediterranean. He remained in this ship until June 1811, and saw much active service, losing his left arm in a cutting-out expedition in Hyères Roads in 1807, and sharing in the capture of a Turkish ship of fifty-two guns on 5 July 1808. He was made lieutenant in April 1812 and in June was appointed to the *Pique*, going to the West Indies. In May 1814 he transferred to the *Venerable*, carrying the flag of Sir Philip Durham, and was promoted commander on 15 June. In November he was appointed to the *Bustard* at Lisbon, and in 1815 commissioned the *Opossum*, which he commanded on the channel and Halifax stations until August 1818. He was promoted captain on 7 December.

Hay was MP for Haddington burghs from 1826 to 1830, but as a whig had no employment afloat until September 1832, when he was appointed to the frigate *Castor*. In November 1836 he was transferred to the steamship *Phoenix*, and in March 1837 to the *North Star*, which he paid off in 1840. For a great part of this time he was employed as commander of a small squadron on the north coast of Spain during the First Carlist War, and was frequently landed in command of a naval and marine brigade. In acknowledgement of his services, especially at the siege of Bilbao, he received the CB in February 1837, and the grand cross of Charles III. From August 1841 to October 1843 he commanded the *Warspite* (50 guns) on the North America and West Indies station. He married, on 2 September 1846, Mary Anne (*d.* 30 Nov 1850), eldest daughter of Donald Cameron of Lochiel; they had no children. In 1846 Hay was briefly superintendent of Woolwich Dockyard, and in 1847 was returned to parliament as member for Windsor. From 1846 to 1850 he was a junior sea lord of the Admiralty.

An experienced steam and sail officer, Hay exploded the invasion scare of 1847–8 in an important memorandum (16 January 1848) for Lord Auckland. As a junior sea lord he chaired the committee of reference on designs that was used to engineer the retirement of the surveyor of navy, Sir William Symonds. However, when he tried to direct the development of the steam warship his ideas proved unsound, the committee was broken up, and the task was left to the new surveyor, Captain Sir Baldwin Walker. Hay was appointed commodore-superintendent of Devonport Dockyard on 9 February 1850, and his removal there reflected the desire of the first lord, Sir Francis Baring, to direct the policy of the board himself. Hay was still in this post at the time of his death, at Devonport Dockyard, on 9 September 1851, two days after he had hoisted his flag as rear-admiral on the *St George*.

As a well-connected Scottish whig Hay had the connections to succeed under the earl of Minto. He proved politically adept on the coast of Spain, but he was less influential under Lord Auckland and was removed from office by Baring. He delighted in power, but his outdated views on naval technology—notably the application of the screw propeller to the battle fleet—and his conduct at the board made him a liability.

Hay, Sir John (1816–1892), politician and pastoralist in Australia, was born on 23 June 1816 at Little Ythsie, Aberdeenshire, the eldest son of John Hay (*b.* *c.*1790), a farmer, and his wife, Jean Mair (*b.* *c.*1794). He was educated at King's College, University of Aberdeen (MA, 1834), and then studied law in Edinburgh, but did not enter the profession.

On 28 February 1838 Hay married Mary (*c.*1820–1892), the daughter of James Chalmers. They had no children.

That same year the couple emigrated to Australia and settled at Walaregang in the Upper Murray region of New South Wales, where they established a successful squatting run. Hay was elected, as a conservative, for the seat of Murrumbidgee in 1856, and held the seat until a redistribution in 1858, after which he represented Murray (1858–64) and then Central Cumberland (until 1867). Taking the role of 'the leading squatter in the house' (Hirst, 147), Hay immediately established himself as a political force. He carried a motion of no confidence in the new Cowper ministry on the basis of questions regarding the fitness of Cowper's chosen attorney-general, James Martin, to hold office. Hay became secretary for lands and public works in the subsequent ministry, which itself fell the following year.

In 1860 the issue of land reform was the central political question. The government's proposed bill, which allowed small free selection of land, was strongly opposed by Hay, again representing the squatter interest, on the basis that it 'would destroy the pastoral interest and injure the revenue by diminishing the value of pastoral property' (*Sydney Morning Herald*, 21 Jan 1892). The government was defeated on the bill and resigned, although it won the ensuing election easily.

Hay became speaker of the legislative assembly in October 1862, but resigned in 1865 on account of ill health. In 1867 he was appointed to the legislative council, where he was elected president in 1873. He was knighted in 1878. Although he was respected for his impartiality during his long tenure in the chair's role, Hay's 'artificial and affected' manner (Martin, 'Hay, Sir John') and his tendency to treat 'the locally born and educated with supercilious condescension' (Grainger, 85) were often noted. His politics had a very narrow, but non-party, focus. He had, said one commentator, 'a reverence for No. 1 exceedingly profound' (Martin, 'Hay, Sir John').

Hay died on 20 January 1892 at his home in Rose Bay, Sydney, and was buried two days later at Waverley cemetery, Sydney.

Hay, Lord John (1827–1916), naval officer and politician, was the ninth child and fourth son of George Hay, eighth marquess of Tweeddale (1787–1876) and his wife, Lady Susan Montagu (1797–1870), daughter of the duke of Manchester. He was born in Geneva on 23 August 1827. His namesake uncle significantly furthered his early career. He joined the navy in 1839, and served in the *Vestal* on the China station from 1842 to 1847, including the final stages of the First Anglo-Chinese War. He was promoted lieutenant on 19 December 1846, and came home in the following year with the steam sloop *Spiteful*. Between 1848 and 1851 he served in the *Powerful* (Captain Richard Dundas) in the Mediterranean, and on 28 August 1851 he was promoted commander. He returned to the Mediterranean as commander of the steam screw sloop *Wasp* in 1852 and remained in her during the Eastern crisis of 1853 and Black Sea campaign of 1854, playing a noteworthy part in the defence of Eupatoria in November.

Hay was made captain on 27 November 1854, by which time he and most of his crew were serving ashore with the naval brigade. He left the command of the *Wasp* in February 1855, and was wounded on 9 April while serving ashore. He then returned to Britain, and was made a CB on 5 July 1855. In December he was appointed to command the screw mortar frigate *Forte*, part of the 'great armament' assembled for an assault on Kronstadt in early 1856. After participating in the Spithead review of St George's day, which both celebrated the peace and issued a warning to rival powers, he continued in the ship until November that year. After he came ashore he took the parliamentary seat for Wick, but on the return to office of Palmerston in 1859 he was appointed to the paddle frigate *Odin* for the East Indies and China station. He commanded a division of gunboats during the second capture of the Taku (Dagu) forts in August 1860, and became commodore on the station in 1861, remaining there until 1863.

Having been elected MP for Ripon, a pocket borough controlled by Earl De Grey, in April 1866 Hay joined the Admiralty board, serving out the last three months of Russell's Liberal administration. Defeated at the polls in 1867, he returned to his Ripon seat in 1868 and rejoined the board. His tact and good sense helped to keep naval administration functioning during the turbulent period under Hugh Childers, when the Admiralty board was reduced to a cipher and the senior personnel were engaged in a bitter power struggle. In May 1871, shortly after the resignation of Childers, Hay resigned both his seats and took command of the ironclad *Hotspur* until his promotion to rear-admiral on 7 May 1872. From 1875 to 1876 he was second in command of the Channel Fleet. During this command he married Annie Christina, daughter of Norman Lambert MP, of Denham Court, Buckinghamshire.

Hay was appointed commander-in-chief of the Channel Fleet in November 1877, and was promoted vice-admiral on 21 December 1877. During the strategic redeployment caused by the Russo-Turkish War of 1877–8 and the Russian war scare of 1878 he took three battleships from his fleet to reinforce the Mediterranean Fleet. Under the Cyprus convention he took formal possession of the island from the Turkish authorities on 8 July 1879. In 1880 he returned to the Admiralty as second naval lord on Lord Northbrook's board. He resigned in February 1883 to become commander-in-chief in the Mediterranean, in the *Alexandra* (Captain Rawson), where his fleet supplied naval parties to survey the Nile and support the Gordon relief expedition. While in the Mediterranean, Hay tried to draw

attention to the weakness of the navy, but was largely ignored until the 'truth about the navy' alarm generated by Admiral Sir Geoffrey Hornby and W. T. Stead in 1884. In February 1885 Hay served as commander of an international fleet blockading Crete, then a Turkish possession, against Greek intervention.

Hay left the Mediterranean command in March 1886, and that year was briefly first naval lord, under his old friend and patron the marquess of Ripon. Between May 1887 and December 1888 Hay served as commander-in-chief at Devonport, and on hauling down his flag he was promoted admiral of the fleet. He was placed on the retired list on 23 August 1897, and died at his home, Fulmer Place, Fulmer, Buckinghamshire, on 4 May 1916; his wife survived him. Hay was one of the last 'political' admirals: his family connections and Liberal politics played a vital part in his career, though his service in the Crimea and China justified his promotion. His Admiralty service always coincided with Liberal administrations, as did almost all his seagoing commands. An officer of solid talents, he had a career crowned with a rare distinction, even though he lacked the eminence of his near contemporary Geoffrey Hornby.

Hay, Sir John Charles Dalrymple, third baronet (1821–1912), naval officer and politician, was born at 113 Princes Street, Edinburgh, on 11 February 1821, eldest surviving son of Sir James Dalrymple Hay, second baronet (1788–1861), and his wife, Elizabeth, *née* Maxwell (*d.* 1821). Hay's career was dominated by his close family ties and friendship with prominent Scottish naval officers, including the Cochranes and Sir Houston Stewart. In 1833 Hay entered Rugby School. In 1834 he joined the navy as a first-class volunteer aboard the frigate *Thalia*, flagship of Rear-Admiral Campbell on the Cape of Good Hope station. In 1835 and 1836 he served in the brig *Trinculo* on the west coast of Africa anti-slavery patrol, and was very nearly turned out of the navy by Sir Robert Peel's brief administration, which disapproved of his entry by the preceding Admiralty board. After his return to Britain in 1836 Hay was briefly appointed to the *Minden* (72 guns) in the channel squadron before he joined the frigate *Imogene* (Captain Henry Bruce) for the South America and Pacific station. On 25 January 1837 he became a midshipman. He returned to Britain in November 1839 and then joined the *Benbow* (72 guns, Captain Houston Stewart) in the Mediterranean. During the Syrian campaign of 1840 he was noticed for his conduct during the boat attack on Tortosa on 26 August. Having been passed for lieutenant on 17 February 1841, he joined the steamer *Spiteful* (Captain William Maitland) for the China station in late 1842. Despite a severe illness Hay remained on the station, relying on his relative, the new commander-in-chief Admiral Sir Thomas Cochrane, for promotion. In October 1844 he was appointed by Cochrane his flag lieutenant aboard the *Agincourt*, where he served for a year before promotion to commander of the *Wolverine* on 28 August 1846. He returned home in 1847.

On 18 August 1847 Hay married the Hon. Eliza Napier, third daughter of William Napier, eighth Baron Napier. He was appointed to the brig *Columbine* in December, and joined her in Chinese waters. In 1849 he engaged and destroyed the fleet of the notorious pirate Shap'ngtzai. In the first action with a pirate squadron, on 28–9 September 1849, he was helped by the P. & O. steamer *Canton*. The main pirate fleet was pursued by Hay, with the steamers *Fury* and *Phlegethon*, and destroyed in the Tonkin River. There were no British casualties. For this service Hay was promoted post captain on 20 January 1850. He attended the Royal Naval College at Portsmouth in 1851, and saw no further service until 1853, when he was appointed captain of HMS *Victory*, flagship of Vice-Admiral Sir Thomas Cochrane at Portsmouth. Early in 1854 Vice-Admiral Sir Charles Napier applied for him as flag captain for the Baltic fleet, but Cochrane and Sir James Graham, the first lord, retained him at Portsmouth to supervise the manning of ships being fitted for service.

At the end of 1854 Hay took command of the steam screw battleship *Hannibal* (91 guns) in the Black Sea as flag captain to Rear-Admiral Houston Stewart. He took part in the capture of Kerch and Kinburn and the re-embarkation of the Crimean army. When the *Hannibal* paid off in October 1856 Hay followed Stewart, and in 1857, after an illness, took command of the sailing battleship *Indus* (70 guns), flagship on the North America and West Indies station. He left the *Indus* in September 1859 and came ashore for the last time. In October he served on the royal commission to investigate the Royal Naval Hospital, Greenwich, and the following year he chaired the committee to inquire into armour plate, which sat for nearly five years. This resulted in his election as a fellow of the Royal Society in 1864.

On 19 March 1861 he became third baronet, and in March 1862 Hay was elected Conservative MP for Wakefield and continued in parliament until July 1865. His main themes were the crowded state of the navy list, and the inadequacy of the navy. He secured the payment of the prize money for the capture of Kerch in 1862. In June 1864 he became chairman of the Millwall Shipbuilding Company and several other commercial concerns. On 6 April 1866 he was promoted rear-admiral, missing the offer of a ship. A month later he was elected for Stamford, a seat at the disposal of Lord Exeter, which he retained for the next fourteen years. In 1866 he was appointed junior naval lord in the Derby ministry, and by threatening to

resign helped to secure four new battleships, which did not endear him to Disraeli, who, as chancellor, wanted to keep down the estimates. He directed the transport arrangements of the Abyssinia campaign.

On 1 March 1870 Hay, who had not served afloat as an admiral and was only forty-nine years old, was placed on the list of officers to be retired under the reform introduced by the Liberal first lord, Hugh Childers. When Hay protested in parliament, Childers offered him the East Indies command, but this was refused on the advice of Disraeli. Hay had applied for a command while at the board, but had been dissuaded by his political colleagues. He was offered the post of first or second naval lord in 1874 by Disraeli, but turned this down as he believed that retired officers should not be placed in authority over those still serving. Disraeli did not reappoint him to the active list—Hay's friend Henry Corry had promised to do so, but he had died in 1873. Hay remained on the retired list, serving as chairman of the explosive substances committee. In 1874 he published *Ashanti and the Gold Coast*, which dealt with an area he had visited in his youth (1834–5). During the 1878 Russian war scare, Hay advised Disraeli to reinforce the fleet by purchasing four ironclads that were being built in Britain for foreign powers. In 1880 Hay lost his seat at Stamford, but was returned for the Wigton burghs until he stepped down in 1886. He was made CB (1869), KCB (1885), and GCB (1902). He was one of the last admirals to believe that it was possible for a naval officer to be first lord. In 1898 he published his memoirs, *Lines from my Log-Books*. He died at his London home, 108 St George's Square, on 28 January 1912, leaving three sons and five daughters.

Hay entered the navy surrounded by relatives and close friends, and his marriage to a daughter of Lord Napier increased the family group to include almost every significant Scottish sea officer. An able, hard-working, and well-connected officer, Hay reached the rank of captain through the support of Sir Thomas Cochrane and his own exertions. He never commanded a private ship as a captain, and despite his talents and youth was denied the opportunity for a flag appointment. His later career was dominated by tory politics, and by the animus against him and the navy generally that was evident in Disraeli's conduct before 1878. ANDREW LAMBERT

Hay, Sir John George (1883–1964), East India merchant, was born on 1 February 1883 at 5 Craigholm Crescent, Burntisland, Fife, the seventh child in a family of ten children of Peter Hay, a village shopkeeper, and his wife, Jane Hedderwick Nisbet. He was privately educated. At the age of seventeen he went to work in a draper's shop. Later he obtained an accountancy qualification at night school and moved on to work as a clerk at Aberdeen railway station. In 1904 he followed a friend to London and to the employ of Guthrie & Co. Ltd as an assistant cashier.

Guthries was a traditional agency house based in Singapore and London, and its chairman, Sir John Anderson, was emerging as leader in the development of Malaya's nascent rubber industry through the provision of a wide range of secretarial, accountancy, and other agency services to a large number of publicly quoted plantation companies. Such relationships gave the management of Guthries, a private company, great power, for in effect it controlled the policy, purchases, and sales of the public companies it served. By the time of the First World War, when Malaya's rubber industry was the world's largest, Guthries was reckoned the oldest and greatest mercantile firm in south-east Asia. Hay was to be its most important leader from the 1920s to the 1960s, and a key figure in the international rubber industry.

The early expansion of Malaya's rubber production required considerable capital, which was raised mostly through London stock exchange flotations. To facilitate this, in 1902 Guthries had established a companies department in London, to which Hay was appointed. In the decade before the First World War, when rubber prices and production boomed, he was absorbed in the process of converting privately owned plantations into public companies. His most important creation was the giant Sua Betong Rubber Estates Ltd in 1909, of which he was successively secretary, director, and chairman until his death. In 1910 Hay married his neighbour in London's Forest Hill, Constance Maye (*d.* 1959), daughter of Thomas Leveritt of Bath; they had one son and two daughters.

As the most influential if not the most senior figure in Guthries' London office, Hay dominated his department, where he never learnt to delegate. As his mettle showed through, he competed vigorously with Anderson, who had returned to London in 1912; their relationship ruptured entirely in 1924 when Anderson, from his deathbed, sacked Hay. Anderson, sole owner of the business, appointed his wife to succeed him as chairman but so strong was Hay's grip that within a year he was fully reinstated. He became general manager and acquired a sixth share of the business.

In the context of plummeting prices throughout much of the inter-war period, Hay came into his own as the first industry leader to view rubber production as a global rather than as a local issue. He was too junior to play a part in a discredited scheme in 1922 to control rubber prices through restricting international production, but he became its most vociferous critic, petitioning for its abolition. This was achieved in 1928. Working through the Rubber Growers' Association, in 1934 he brought the rubber producing nations together in the International Rubber Regulation Committee, which effectively controlled international production and prices; undoubtedly he was its most influential and effective member.

Hay foresaw the outbreak of war in 1939 and persuaded

the rubber committee to increase international production of what would be a critical and profitable wartime material. In 1940 and 1941, with plenipotentiary powers, he persuaded the Americans to purchase virtually the entire output of Malaya's rubber industry, thereby establishing a vital wartime stockpile in allied hands. Hay became chairman of very many of the 'managed' companies which comprised the so-called Guthrie group; by 1945 he sat on the boards of twenty-one commodity-producing companies and was chairman of fourteen. Confronted by the devastating fall in rubber prices from the 1920s, he ruthlessly drove down production costs and diversified the companies into new activities such as oil palm production. After the war, to head off competition from synthetic rubber producers, Hay again tackled production costs, pioneered the replacement of existing rubber trees with higher-yielding clones, and established in Malaya a research station and a cadet scheme to train Malay boys as assistants and managers.

In 1950 Hay sold back his sixth share in the business to the Anderson family and in the late 1950s he lobbied hard for a reorganization. This resulted in 1961 in nine of the companies managed by Guthries breaking away to form Guthrie Estates Agency Ltd, essentially a co-operative from which secretarial and agency services were purchased. Hay was chairman of many of these managed companies and was both chairman and managing director of the new business; notwithstanding his seventy-eight years he exercised total control. This produced in 1963 an acrimonious boardroom quarrel, which led to the resignation of almost the entire board. Hay refused to be coerced by such tactics, and he appointed his managers as successor directors and withstood calls in the press for his resignation. He was still chairman and in control when he died in 1964, but the very public dispute was not to his credit; he had stayed in the job for too long and had failed to find his own successor.

Although something of a dandy, the elegant appearance of this strong-willed Scot belied his ruthlessness and his extraordinary determination to have his way. Hay was sharp-tongued and outspoken and made exceptional demands on his colleagues, but no one doubted his ability nor questioned his position as the most important figure in the international rubber industry from the 1930s to the 1950s. He was knighted in 1939 and also received honours in the Netherlands and in Malaya. Hay died at his home, Hawthorn Dene, Westcott, Surrey, on 26 May 1964.

Hay, Sir John Hay Drummond- (1816–1893), diplomatist, was the third son of Edward William Auriol Drummond-Hay (*d.* 1845), and Louisa Margaret, daughter of John Thomason, deputy commissary-general; he was the nephew of Robert Auriol Hay, ninth earl of Kinnoull. Drummond-Hay was born on 1 June 1816 at Valenciennes, where his father was major on Lord Lynedoch's staff in the army of occupation in France. He was educated at Charterhouse School from 1827 to 1832, when he joined his father, then consul-general of Morocco, at Tangier. He entered the diplomatic service as a paid attaché under Ponsonby and, at the relatively early age of twenty-four, served as attaché under Stratford Canning at Constantinople, although he spent most of the year 1840 working in Egypt.

Drummond-Hay's achievements as a diplomatist were mainly identified with his term of over forty years in Morocco. After a visit to England, Stockholm, and Copenhagen, in 1844 he was sent to Morocco as assistant to the acting consul-general to help with communications with the court of Morocco at a time of tension with the French government. Although only a paid attaché, he became consul-general and agent in his own right on 22 March 1845. He subsequently served as chargé d'affaires (1847–60), minister resident (1860–72), and finally as minister-plenipotentiary (1872–86). During his long residence in the country he did much to improve Morocco's relations with European powers, believing this was best achieved by encouraging commerce and improving conditions for the Moors. Besides acting for Britain and working towards the consolidation of British interests in Morocco, he was also agent for Austria and Denmark. He was the first to break with the custom of envoys of presenting their credentials to the sultan on their knees. In 1844 he attempted, without success, to arrange terms between the French and the Moors before the bombardment of Mogador by the prince de Joinville on 15 August. In the same year he published *Western Barbary: its Wild Tribes and Savage Animals*, which reached a second English edition in 1861, was translated into French in 1844, and into Spanish in 1859. In 1845 Drummond-Hay married Annette, daughter of M. Cazytensen of Copenhagen, privy councillor to the king of Denmark. They had at least two daughters, who left a memoir of their father after his death.

In the same year as his marriage, Drummond-Hay mediated between Morocco and Denmark, Sweden, and Spain to negotiate conventions and also mediated between the sultan and the court of Modreal. On 9 December 1856 he successfully negotiated the treaty of friendship, trade, and navigation between Great Britain and Morocco. This treaty supported free trade, the opening of consulates, personal safety, and exemption from taxes with the exception of customs duties. Drummond-Hay reformed customs matters after peace had been established. He supported the sultan's sovereignty and territory throughout his time in Morocco.

In 1848 Drummond-Hay published his *Journal of an Expedition to the Court of Morocco*; the later *Memoir* (1896) also drew on journals kept during this time, which were said to offer, 'valuable insight into local politics and character', and to reflect the mind of 'a keen and careful student' (Meakin, 479). He was created KCB on 20 May 1862, GCMG

on 4 December 1884, and was also KGC of the Danebrog. He retired on 1 July 1886, on a pension of £1333 6*s*. 8*d*., and in the same year was sworn of the privy council.

Drummond-Hay spoke Turkish, Italian, Spanish, French, and Arabic, was a keen sportsman, and travelled to Marrakesh, Fez, Meknès, and Rabat. His diplomatic skills, long residence, and intimate knowledge of Morocco made him a person of influence there. After retirement he divided his time between Ravenrock, a private house near Tangier, and Wedderburn Castle, Duns, Berwickshire, the family seat, where he died of influenza on 27 November 1893. J. M. Hay, John MacDougall (1879–1919), Church of Scotland minister and novelist, was born on 23 October 1879 in Tarbert, Loch Fyne, son of Mary MacDougall and George Hay, a steamship agent. He was educated at Tarbert high school and at the University of Glasgow, where he studied natural and moral philosophy and English literature. He graduated in 1900, and became the headmaster of the Lionel public school, Ness, Lewis, later moving to teach in Ullapool. There, during a bout of rheumatic fever, he decided to enter the Church of Scotland ministry, returning to Glasgow to study divinity in 1905. He gained a first in church history and biblical criticism.

Hay was an intense individual, deeply exercised by the content of his studies. His relentless search for a solution to the problems of evil and suffering was conducted within a tortured Christian profession. Though subject to profound inner struggle, informed by a sharp intellect and a vibrant imagination, he was well liked by contemporaries, one of whom remembered him as 'quiet and reserved, almost shy, ... a man gifted beyond the ordinary, and on the rare occasions when he did talk he never lacked eager listeners' (*Glasgow Herald*).

From his undergraduate days, and particularly during his theological training, Hay helped support himself by writing for newspapers and journals such as *Macmillan's Magazine*, *Chambers*, *The Spectator*, the *Glasgow Herald*, and the *Glasgow Evening News*, whose influential editor, Neil Munro, he later met. As natives of Argyll both men studied the mingling of highland Gaelic and lowland Scottish cultures in that area.

After finishing his divinity studies Hay became a student missionary at Morven and was licensed by the presbytery of Inveraray in 1908. He moved to an urban parish which had Argyll connections and became assistant minister at Govan old parish church. In 1909 he was ordained and moved to a charge in Elderslie, a similarly urban parish near Paisley, Renfrewshire, to which he did not feel wholly suited; he would have preferred a highland parish. On 28 October 1909 he married Catherine Campbell (*b.* 1882/3), daughter of Janet McMillan and Duncan Campbell, a minister. They had two children: Sheena (*b.* 1911) and George Campbell *Hay (1915–1984), who later became a distinguished Gaelic poet.

John MacDougall Hay's first novel, *Gillespie*, was published in 1914 and dedicated to Neil Munro. Though its impact was blunted by the onset of the First World War, *Gillespie* never entirely disappeared from view. The novel is set in the small fishing community of Brieston, based on Tarbert, Loch Fyne. This poor, hard-working, and gossip-ridden community is dominated by Gillespie Strang, an unscrupulous capitalist. *Gillespie*'s characterization and setting demonstrate that the seminal influence on Hay's work was George Douglas Brown's *The House with the Green Shutters*. Both works were regarded by contemporary literary critics as a welcome counterblast against the sentimental Scottish fiction of the kailyard school. Unlike Brown, however, Hay takes a religious stance. *Gillespie* grapples with problems of severe religious doubt expressed in the terrifying nightmares of Gillespie's son, Eoghan, who seeks some creed which will enable him to condemn his father but remain just. The Christ of the gospels seems to offer him this, but Christ's ethic, though deeply attractive, seems powerless against the suffering which Brieston endures in the tragedy of the plague and at the hands of Gillespie. In *Gillespie* a weak Christ cannot modify the overwhelming presence of fate, which is the strongest spiritual reality in the novel, deriving its potency from the superstitious highland background of Eoghan's grandmother.

After the publication of *Gillespie* Hay considered leaving the ministry to take up a career in writing, but did not carry the idea through. He published another novel, *Barnacles* (1916), set around Elderslie and Paisley. In it the struggle between good and evil in its religious dimension is more obvious. Barnacles is a holy fool whose innocence and goodness help save the heroine from the horrific abuse of an evil husband. The violence in the novel is disproportionate to the motivations of the characters and, although derangement accounts for the power of the scenes, it is not one of the novel's ostensible themes. Hay's writing was not always under his literary control.

Hay planned a third novel, *The Martyr*, and published a volume of free verse poetry entitled *Their Dead Sons* (1918). In 1919 'The Agony and after', his sermon commemorating the fallen, was published at the request of his congregation. In it Hay flounders between anguished descriptions and fine writing about the fallen and the meaningfulness of their deaths, 'They won their victories with their knees in the mud, but the sacrifice of their lives was the purest victory of the spirit' ('The Agony and after', 22). These works show Hay's continuing struggle with the problem of evil, particularly in the aftermath of the carnage of the First World War. However, Hay's affirmation of

the doctor in *Gillespie* who cares for the poor and the plague victims demonstrates the move from a religious to a secular outlook which was to characterize the Scottish novel in the twentieth century.

A victim of poor health, Hay remained a parish minister until his death at the manse, Elderslie, from tuberculosis on 10 December 1919, aged forty. He was buried at the abbey cemetery, Elderslie, on 13 December. His early death, though not unexpected, was felt to be a literary loss and, taken together with George Douglas Brown's similarly early death in 1902, denied Scotland the mature vision of two of its most promising writers of the period.

Hay, Josslyn Victor, twenty-second earl of Erroll (1901–1941), colonist in Kenya and philanderer, was born on 11 May 1901 at 17 Hertford Street, Mayfair, the elder son of Victor Alexander Sereld Hay (1876–1928), then styled Lord Kilmarnock, who succeeded as twenty-first earl of Erroll in 1927. His mother was (Mary) Lucy Victoria (1875–1957), only daughter of Sir Allan Mackenzie, second baronet. The hereditary office of lord high constable of Scotland had been conferred upon the Hays by Robert the Bruce in 1314 and was expressly reserved to them by the treaty of union. Its ancient prerogatives, including the command in the king's absence of all his armies in the field, had been reduced by the 1920s to bearing a silver baton in coronation processions. Successive earls of Erroll, however, remained the first subjects in Scotland after the blood royal with precedence before every other hereditary honour. The sale by the twentieth earl in 1916 of Slains Castle, with the family's last 4000 acres in Aberdeenshire, severed the Hays' territorial connection with Scotland; the old man moved to a small property at Ravenglass before settling in the terraced house near Paddington Station where he died.

Josslyn Hay, as the most handsome boy at Eton College, was followed down the street by half 'Pop'; perhaps in consequence of this effect on the older boys he was sacked from the school after two years, in 1916. His father, Kilmarnock, was a diplomat of charm and ability (he learnt Japanese when posted to Tokyo) who acted as chargé d'affaires at Berlin from the resumption of diplomatic relations with Germany until the arrival of the new ambassador, Viscount D'Abernon. On 12 January 1920 Josslyn Hay was appointed honorary attaché at Berlin under his father, who afterwards became British high commissioner on the inter-allied Rhineland commission with the local rank of ambassador (1921–8). Hay, however, remained under D'Abernon in Berlin, until his resignation on 6 March 1922. He had at this time 'wonderful good looks', augmented by 'straight pale gold hair' and 'great sartorial elegance', but an 'impudent' manner and 'scornful way of looking at people—an oblique blue glance under half-closed lids' (Fielding, 93). Though he passed the Foreign Office examinations, the plan that he should follow his father into diplomacy was ruined by his infatuation with an older married woman. Lady (Myra) Idina Sackville (1893–1955), elder daughter of the eighth Earl De La Warr and divorced wife of the Conservative politician Euan Wallace, was then married to Charles Gordon, whom she swiftly divorced. Hay married her at the earliest opportunity, on 22 September 1923, in Kensington. Their only child, a daughter, later inherited Erroll's Scottish titles.

This *mésalliance* mortified Hay's parents and raised a society scandal. In 1924 the Hays settled in Kenya, initially occupying a bungalow which they called Slains, after the lost family castle in Aberdeenshire. The new Slains lay on the slopes of the Aberdare Mountains, where white settlers were establishing high altitude farms. In 1925 the Hays moved to a thatched mansion, Clouds, in a valley beneath the Aberdares, which became notorious as Happy Valley. The Happy Valley set (which also congregated in the Muthaiga country club) were displaced patricians seeking to re-establish their hegemony in a malleable, rural society clean of the taint of modern industrial democracy. 'Life out there was', said Baroness Blixen, 'rather like eighteenth-century England: one might often be hard up for cash, but life was still rich in many ways, with the lovely landscape, dozens of horses and dogs, and a multitude of servants' (*Writers at Work*, 10). Mentally undisciplined and physically restless, Erroll's set pursued a raffish life of adulteries, binge drinking, cocaine, card sharping, bilked tradesmen, spasmodic violence, and insanity. His debts accumulated as did his tally of adulteries. He was a sensualist with no sense of irony, whose conquests were an exercise of power over women and of humiliating dominance over their menfolk. 'To hell with husbands' was one of his favourite sayings. It amused him to borrow fivers from men he had recently cuckolded. His wife divorced him in 1929 because he was cheating her financially. With mercenary motives he swiftly married, at St Martin's register office, on 8 February 1930, another older woman, Edith Mildred Mary Agnes (1893–1939), daughter of Richard Watson Maude (1850–1921); her former husband, Cyril Ramsay-Hill, had cited Erroll in a turbulent divorce. Erroll encouraged his wife in the self-destructive combination of drink, morphine, and heroin. They lived in Oserian, a crenellated, white-washed, Moroccan-style house on the shores of Lake Naivasha.

After his father's death at Koblenz Hay had inherited the earldom, together with the lord high constableship (1928), and rose to prominence among what his friend Ewart Grogan called Kenya's 'large, virile and articulate European population' (Grogan, 83). Erroll joined Sir Oswald Mosley's British Union of Fascists (1934–5), but though his political instincts were both violent and reactionary, his extremism receded. Accordingly he was elected president

of the Convention of Associations, known as the Settlers' Parliament (1935), and to the legislative council as member for Kiambu (1939). Commissioned as a captain in the Kenya regiment (1939), he was an exacting and efficient deputy director of manpower and military secretary to east Africa command from 1940. Though he had coarsened, and weighed 15 stone, Erroll continued to attract women. On 30 November 1940 at the Muthaiga club he met the young, newly married wife of Sir Delves Broughton; they were soon lovers. Broughton played the part of a complaisant husband, but was goaded by spiteful anonymous letters. On 21 January 1941 both men consulted lawyers about the Broughtons' divorce. After an evening which they spent together at the Muthaiga club, Erroll was ambushed and shot under the left ear on 24 January 1941, on the Nairobi–Ngong Road, while motoring in his Buick. He was buried at Nairobi on 25 January.

Sir (Henry John) Delves [Jock] **Broughton**, eleventh baronet (1883–1942), was accused of the murder. Born on 10 September 1883, he was the only surviving child of Sir Delves Louis Broughton, tenth baronet (1857–1914), and his first wife, Rosamond Broughton (1862–1885). A loveless childhood left him with a lifelong sense of deprivation, which did not diminish when he inherited the baronetcy with extensive estates in Cheshire and Staffordshire. He was educated at Eton College (1897–1900), where his father's meanness supposedly drove him to steal, and at a crammer before entrance to the Royal Military College, Sandhurst. Commissioned second lieutenant in the Irish Guards (10 December 1902), he was aide-de-camp to the lieutenant-governor of the United Provinces of Agra and Oudh (1908) and promoted major (15 July 1915) despite evading military action in the European war on the pretext of sunstroke. He retired from the army on 15 April 1919 and was excluded from the published *List of Etonians who Fought in the Great War*. Broughton was a proud, unintelligent man who was easily bored and had few distractions except extravagant living. He lost his fortune not only on racecourses but in foolish speculations in foreign exchange markets, commodity dealing, and mining shares. For a time he was chairman of Dalkeith (Ceylon) Rubber Estates and a director of Pindenioya Rubber and Tea Estates; he also bought coffee plantations in Kenya after 1923. He funded these business forays with characteristic deviousness by selling pictures, heirlooms, and over 30,000 acres in several tranches. These were not his possessions but belonged to family trusts. His son took legal action during 1939 to protect his interests, but Broughton was determined not to be bested, and arranged for a young Harrovian to steal heavily insured pearls from a car on the French riviera that summer, and then blackmailed his accomplice into stealing three heavily insured portraits from his Cheshire seat, Doddington (October 1939). Despite these frauds Broughton (a Cheshire magistrate since 1915) had so wasted his assets that he was obliged to shut Doddington and decamp to Africa.

Broughton had married, on 8 July 1913, at the guards' chapel, Wellington barracks, London, Vera Edyth (1894–1968), daughter of Boscawen Trevor Griffith-Boscawen of Trevalyn Hall, Trefalun, Denbighshire. They had one son and one daughter. Vera Broughton was a hard, pleasure-loving woman whose passion for big-game hunting first took them to Kenya in 1919–20. After affairs with the third earl of Wharncliffe and the first Baron Sherwood, she deserted Broughton in 1935 for Walter Guinness, first Baron Moyne. The aridity of Broughton's marriage increased his tendency to sourness, sulks, loneliness, and self-pity. From 1935 he pursued another cold, hard *femme fatale* of implacable chic, Diana (1913–1987), divorced wife of a society musician, Vernon Motion, daughter of Seymour Caldwell, gambler, and sister of the marchioness of Willingdon. She ran the Blue Goose cocktail club in Bruton Mews, Mayfair, and was a fashionable aviator. Broughton's wife began divorce proceedings in 1939 in expectation of marrying Moyne. Following the dissolution of the marriage, Broughton married Diana Caldwell (5 November 1940) in a register office at Durban, South Africa. Three weeks later his wife met Erroll, who was murdered within three months. Broughton was arrested (10 March 1941) and stood trial from 26 May. The prosecution's ballistic evidence was weak, there was no eyewitness connecting him with the crime, and his witness-box performance was effective. Despite his acquittal on 1 July, evidence of a confession published forty years later confirmed the probability of his guilt. After a miserable interval Broughton returned to England (November 1942) to find that he was the object of police investigations into the insurance frauds. Having injected himself fourteen times with a morphine derivative, he died on 5 December 1942 in an ambulance speeding from the Adelphi Hotel to Northern Hospital, Liverpool, and was interred on 10 December at Broughton church, Eccleshall, Staffordshire. The Erroll murder was depicted in Michael White's film *White Mischief* (1987). RICHARD DAVENPORT-HINES

Wealth at death £8334 16*s.* 1*d.*—Sir Henry John Delves Broughton: probate, 16 Feb 1943, *CGPLA Eng. & Wales*

Hay [*née* Percy], **Lucy, countess of Carlisle (1599–1660)**, courtier, was the daughter of Henry *Percy (1564–1632), the so-called 'wizard' ninth earl of Northumberland, and Dorothy (1563x5?–1619), widow of Sir Thomas Perrott and daughter of Walter *Devereux, first earl of Essex, and Lettice Knollys. Algernon *Percy (1602–1668) and Henry *Percy (*c.*1604–1659) were her brothers. According to Lucy's brother-in-law, the earl of Leicester, she was born about Michaelmas 1599 (*De L'Isle and Dudley MSS*, 6.623). It is unknown when she first attracted the attention of her

Lucy Hay, countess of Carlisle (1599–1660), by Sir Anthony Van Dyck

future husband, James *Hay (*c.*1580–1636). Rumours began as early as February 1617 that the countess of Bedford was acting as a marriage broker, and had brought both Lucy and her mother to favour the idea. The earl of Northumberland proved more difficult to convince. Initially he insisted that his daughter stay with him in the Tower of London, where he was imprisoned in the aftermath of the Gunpowder Plot. When she refused to remain there and went to live at one of Hay's London residences with a £2000 entertainment allowance, Northumberland reportedly offered his daughter £20,000 not to marry Hay. The earl finally gave his approval in October 1617 and the couple married in early November 1617, with James I, Prince Charles, and the new royal favourite, George Villiers, present at the ceremony. In November of the following year Lucy gave birth to a son, but he died in less than a month. Although Lucy was sick from what may have been a failed pregnancy that became a near fatal illness in 1622, after 1618 no one ever again reported her as pregnant. By the time she was twenty-six, stories started to circulate about the impact her beauty and personality had on members of the royal court.

In 1625, with the accession of Charles I and his marriage to Henrietta Maria, Lucy became increasingly influential at court. Initially, however, the new queen did not want Lucy, who became the countess of Carlisle in 1622, as one of her ladies-in-waiting, and if reports of that time are accurate, her objections are reasonable enough. By this time Lucy was having an affair with George Villiers, now duke of Buckingham, and both her husband and her lover intended her to use her talents to ensnare the king. When this scheme failed, the Carlisles chose an alternate path to Charles I. Over the summer of 1627 the two of them spent much time with Henrietta Maria and managed to ingratiate themselves with her. At about this time their alliance with Buckingham collapsed. The earl of Carlisle had political differences with him over his policy of fighting France and Spain at the same time. Lucy's reasons were more personal. The duke was vainly pursuing an affair with the French queen, Anne. It is entirely possible that the story concerning the stolen diamond necklace, related by La Rochefoucauld and used by Dumas as the basis for *The Three Musketeers*, had some truth to it. The reputed thief was Lucy.

Following the political realignments that took place after Buckingham's assassination in August 1628, many letter writers noted that the queen made the countess of Carlisle one of her prime favourites. Yet as early as 1629 Lucy briefly lost favour. Over the next thirty years the relationship between Henrietta Maria and Lucy was anything but constant, because the two women had little in common. The countess admired wit and intelligence. She established a salon where politically influential members of court came to pay their respects and trade stories with her, and where poets and writers of widely varying talents paid her court. The French provided the model for these gatherings, and the duchesse de Chevreuse, a good friend of the countess, undoubtedly encouraged her during her periodic stays in England. Henrietta Maria's tastes centred on the visual arts and participating in masques rather than witty conversations and literature. She also shared her husband's aversion to flagrantly immoral persons.

The earl of Carlisle understood the advantages he could gain from Lucy's inclinations and reputation. In 1635, when he needed help securing the goodwill of Lord Deputy Wentworth for various projects in Ireland, he successfully used Lucy as an intermediary. After Carlisle's death in 1636, by the terms of his will his widow received all of his Irish holdings, consisting of both lands and monopolies. Lucy now had sound economic reasons to keep Wentworth's favourable opinion. She also tried to use his influence and the queen's to place the earl of Leicester as either secretary of state or preferably lord deputy of Ireland when the current holder retired. Leicester did receive the lord deputy's post, but the Irish rising and the civil wars limited his power, and left Lucy with no one to protect her Irish interests. By 1651 the monopolies had long since vanished and at least part of the landed estate was worthless.

After Wentworth's execution in 1641, Lucy did her best to cultivate members of the factions that opposed Charles I, especially John Pym. Numerous reports name her as one of the people who warned Pym that the king planned to arrest him and his associates in the House of Commons. Once the war began, Lucy primarily associated herself with a group of aristocrats and their near relatives, including the earls of Holland and Essex and Denzil Holles, who wanted to make peace with the king and who became increasingly alarmed at the growing influence of the independents and the army. She also maintained contacts

with the members of the French government with the hope that they could mediate a peace; successive French ambassadors to England found her a useful contact. During March 1649, in the wake of Charles I's execution and the second civil war, the council of state imprisoned Lucy in the Tower. She remained there until September 1650, when she was released on bond. Her unrestricted freedom had to wait until March 1652.

None of these experiences lowered Lucy's status as one of the most admired women of her time or inhibited her political involvement. In 1653 young Dorothy Osborne felt that the countess of Carlisle's letters should act as models for wit and good breeding, 'only I am a litle scandalized I confesse that she uses that word faithfull, she that never knew how to bee soe in her life' (*Letters of Dorothy Osborne*, 109). As for the politics, Lucy helped arrange mediation in a dispute between Denzil Holles and the earl of Salisbury, and supported Holles when he tried to convince Charles II to move to France before his restoration. Lucy died at Little Salisbury House, Hertfordshire, on 5 November 1660, as she planned a journey to meet with Henrietta Maria. She was buried that month at Petworth, Sussex.

In the course of her life the countess of Carlisle achieved a status in politics normally reserved for the queen. Confirmation of her eminence comes from a variety of sources, including Edward Hyde, earl of Clarendon, who was far from her friend. In his secret correspondence during the civil wars and interregnum, Lucy is one of the few women to whom he assigns her own cipher. She began as someone who fed her vanity through the personal devotion of a wide variety of prominent men to further her husband's political aims, and, after his death, to protect her own economic interests. Later, however, she developed a political agenda that was more than purely self-interested. She wanted to see the monarchy retained and risked her life to achieve that goal. Unlike many other women of that era, her motivation was not religious. She had no lasting association with those who valued religion as a driving force in politics. As late as 1647 the earl of Leicester related a story he claimed Lucy told him about the sexual escapades of the presbyterian minister Obadiah Sedgwick. In this and other ways the countess of Carlisle anticipates such women as Sarah Churchill, duchess of Marlborough, and Georgiana Cavendish, countess of Devonshire.

Hay, Mary Cecil (1840/41–1886), novelist, born at Market Square, Shrewsbury, Shropshire, was the daughter of Thomas William Hay, watch- and clockmaker, of Market Square, Shrewsbury, and his wife, Cecilia. After her father's death she moved, with her mother and two sisters, to Chiswick, Middlesex. Throughout her life she was a frequent visitor to Cornwall, and she used it as the setting of many of her novels.

Hay's first work to appear in print was *Kate's Engagement*, serialized in *The Belgravia* magazine in 1873. Nearly all her novels were published serially at first, and throughout her career she produced many short stories for various magazines. Later in 1873 a second novel, *Hidden Perils*, was published in three volumes, and a second cheap one-volume edition was released two years later. In 1874 *Victor and Vanquished* appeared, running to a second edition in the following year, and in 1875 she wrote her best-seller, *Old Myddelton's Money*, which was constantly in print over the next forty years. This novel was published in a series of popular sixpenny novels as late as 1914.

Hay was a prolific writer, publishing fifteen novels and collections of short stories over thirteen years. She specialized in light romantic fiction, and, though popular in Britain, her novels had their strongest following in the United States and Australia. After the success of *Old Myddelton's Money* she published one novel a year until 1885, the most successful being *The Squire's Legacy* and *Nora's Love Test*, both of which appeared in 1876. By the early 1880s her health was beginning to fail, and she moved with her mother and sisters to East Preston, near Worthing, Sussex. Her later novels, perhaps reflecting her declining energies, failed to enjoy the popularity of her earlier works. She continued to write, however, and corrected, in the final months of her life, the proofs of a collection of fiction published posthumously as *A Wicked Girl, and other Tales* (1886).

Hay died on 24 July 1886, after a long and painful illness, aged forty-five, at the Bay Trees, East Preston. She was buried on 29 July in Highgate cemetery, Middlesex. *The Athenaeum* described her as 'an excellent and charitable woman, who worked exceedingly hard' (7 Aug 1886).

Hay, Matthew (1855–1932), physician and expert in forensic medicine and public health, was born at Hill Head, Denny, Stirlingshire, on 27 December 1855, the son of Matthew Hay, colliery owner, and his wife, Elizabeth (*née* Stirling). An outstanding scholar, educated at Dollar Academy, Hay studied the arts course for two years and the first

year of medicine at Glasgow University. He then transferred to Edinburgh University and graduated MB, CM, with highest honours, in 1878; he also won the Ettles prize and the Goodsir fellowship. He became assistant to Richard Fraser, professor of materia medica, and during vacations he studied under Schmiedeberg at Strasbourg. In Berlin he reputedly shared rooms with William Osler, and in 1881 his MD thesis on saline cathartics won him the gold medal and the triennial Goodsir prize for physiological research.

Hay worked on the effects of sodium nitrite and nitroglycerine on angina pectoris and developed a test (which now bears his name) for bile acids. The period he spent as Fraser's assistant fostered his studies in toxicology, and these stood him in good stead when, aged twenty-seven, he successfully applied for the Aberdeen chair of forensic medicine vacated on Francis Ogston's retirement. Hay had barely settled into his teaching of forensic medicine when Dyce Davidson died; Hay then also taught his materia medica course until the university appointed a new professor.

In 1884 Hay was offered and accepted the prestigious chair of pharmacology and therapeutics at Johns Hopkins University medical school, Baltimore. He did not take up the position for what his obituarists have politely termed 'family reasons', but these may well have been connected to a wrangle between Hay and Johns Hopkins over Hay's desire to continue treating private patients. He became a director of the Hay family business, the Callendar ironworks. On 27 August 1884 Hay married Margaret Ferguson Crawford (1854/5–1926), daughter of John Crawford, a Grangemouth shipowner; they had four sons and two daughters.

Hay was appointed part-time medical officer of health at Aberdeen in 1888, following two short-term appointments for the post. His own appointment was bitterly contested within the town council, which was split by fears that a part-time medical officer could not give sufficient time to the city's health needs. Hay gave up private practice in exchange for a salary of £300 per annum. He had already introduced public health and hygiene lectures into his forensic medicine course at Aberdeen, thus conforming to the established Scottish pattern of undergraduate teaching of forensic medicine and public health in tandem. Following the example of Sir Douglas Maclagan at Edinburgh, in 1891 Hay instituted postgraduate public health teaching, for a diploma in public health; in addition he provided separate laboratory facilities for public health and forensic medicine.

As well as his medical teaching, by 1890 Hay was also carrying out part-time duties as crown medico-legal examiner, police surgeon, and medical officer of health for Aberdeen city—in positions similar to those held by Henry Duncan Littlejohn in Edinburgh. In 1893 Hay and Littlejohn gave medical and ballistic testimony for opposing counsels in the Monson murder trial at the Edinburgh High Court. As Aberdeen's medical officer of health, Hay brought scientific logic and organization into the realms of mother and child care, the treatment of tuberculosis and venereal disease, medical statistics, and many other areas of public health. His analytical talents were employed not merely in health and sanitary matters, but included the more exotic tasks of ensuring the purity of water used in local whisky distilling and of analysing the city's gas supply. In Aberdeen Hay is remembered mostly for his farsighted plan to centralize the city's municipal and voluntary hospital provision together with university medical teaching, at the Foresterhill site; his plans were brought to fruition by his successor, John Parlane Kinloch.

Hay was a quiet, inventive man. At the age of twenty he planned the processes of the family's newly acquired ironworks. In later life he designed anthropological instruments for his own purposes which were considered valuable by experts. During his teaching career he played a major role in university affairs, which included the building of extensions to Marischal College and which cost more than £250,000. Hay represented Aberdeen University on the General Medical Council and was an original member of the Medical Research Council. As a member of the Carnegie Trust, he drafted the conditions for research fellowships and scholarships. In 1902, together with Leslie Mackenzie, the royal commission appointed him to enquire into the health of schoolchildren. The commission's 1903 recommendation on the medical inspection of schoolchildren was based on their report.

Ill health forced Hay to resign as medical officer of health in 1923 and to resign his chair in 1925. He died at his home, 14 Rubislaw Terrace, Aberdeen, on 30 July 1932. His funeral service on 2 August, held in Marischal College, was a notable Aberdeen town-and-gown occasion, after which his body was buried on the following day at Cameloan cemetery, Stirlingshire. Hay, Richard [*name in religion* Augustine] (1661–1736?), Augustinian canon and antiquary, born at Edinburgh on 16 August 1661, was second son of George Hay (*d. c.*1666), who was the youngest son of Sir John Hay of Barra, lord

clerk register of Scotland. His mother was Jean Spottiswood, daughter of Sir Henry Spottiswood, high sheriff of Dublin. Baptized in the Tron Kirk, Edinburgh, Hay then was brought up with his cousins and attended school at various places in Fife, Lothian, and the Scottish borders. When he was about five his father died, and his mother soon afterwards married James Sinclair of Roslin. Thereafter a Roman Catholic, Richard was eventually sent to the Scots College, Paris, where he remained from March 1673 to August 1677, while attending the Collège de Navarre. His schooling was completed in an ancient abbey of canons regular near Chartres.

On 25 August 1678 Hay took the habit as a canon regular at St Genevieve's in Paris, assuming the religious name Augustine, and after the customary year's noviciate made his vows on 3 September 1679. His further training and studies for the priesthood were carried out in various religious houses, until he was ordained priest at Chartres on 22 September 1685.

A year later, with a commission from the abbot of St Genevieve to establish monasteries of canons regular in England and Scotland, Hay travelled to London and stayed some weeks at court before setting sail for Scotland. James VII and II had at that time established a Catholic chapel, school, and printing press in his palace of Holyrood, on the outskirts of Edinburgh. Hay was present at the opening of the chapel on St Andrew's day, 30 November 1686. This was no doubt the reason for his journey, as Holyrood Abbey had originally been an Augustinian foundation. In May and June 1687 he discussed with the lord chancellor, the earl of Perth, the project of establishing canons regular at Holyrood and he officiated there on occasion. Perth was sympathetic, but the flight of the king in December 1688 put an end to such plans.

Hay remained in Scotland some months longer and has left a valuable detailed record of the happenings following the change of government. Eventually, in May 1689, he sailed for France, made his way to Paris, and resumed life with the canons regular. He was given various placements with the title of sub-prior or prior and finally, in January 1695, was transferred as prior to St Pierremont in northern France. The dignities were apparently merely titular.

Thus far Hay's life was described in circumstantial detail by himself, but after 1700 information has to be gleaned piecemeal. He remained at St Pierremont until 1714, initially in favour with the bishop but later less so. During those years he began his six large compilations of Scottish historical sources, offered to supply documents to J. Mabillon, and planned to return to Scotland to compile a Scottish *Monasticon*. In February 1714 he was transferred to Bourges, again with the title of prior, but his role there is uncertain. In May 1714 it was testified that he had graduated in the faculty of arts and another priest took over his pastoral duties, then in August 1716 he was given leave to return to Scotland. He was, however, still in Bourges in May 1718 when he was given notice of a diocesan visitation.

By August 1719 Hay was resident in Edinburgh and soon after was planning to edit John of Fordun's *Scotichronicon* and its continuation by Walter Bower. Although Thomas Hearne, who was planning much the same, wrote in October 1721 assuring Hay that the two projects did not prejudice each other, Hearne's edition appeared in 1722 but Hay's never did.

In 1722 Hay published a short work entitled *Origine of the royal family of the Stewarts, in answer to Dr Kennedy's ... dissertation ... with an appendix of charters* (1722; repr. 1793). This Kennedy had asserted the royal family's Irish origin. A year later a longer work appeared: *Vindication of Elizabeth More from being a concubine, and her children from the tache of bastardy* (1723; repr. in R. Buchanan, ed., *Scotia rediviva*, 1826). It contained transcripts of about sixty documents aiming to show that Elizabeth Mure was the lawful wife of Robert II, as opponents of the Stuarts were claiming that this marriage was not legal and the Stuart dynasty was therefore illegitimate. The historian Thomas Innes had found in the Scots College in Paris and made public a document proving the legality of the marriage. Hay went further in showing that the marriage took place before the birth of the heir.

Hay is said to have been living in poverty in Edinburgh, and certainly in 1728–31 he sold some of his manuscript collections to the Advocates' Library. He died at Cowgate, Edinburgh, where he was living, before September 1736. At this time his reputation as an antiquary was high; his religious leanings are less clear, for he continued to call himself canon regular but almost certainly did not operate as a priest. Baptized a protestant in a strongly episcopalian family, he came at the age of five under the influence of his Roman Catholic stepfather, and his career in France and at Holyrood was with institutional Catholicism. His comments on Scottish priests and Scottish Catholicism, however, were almost always critical and acid.

Despite his plans to publish and his voluminous collections, Hay's printed work was meagre. He is chiefly known for the extracts from his compilations published long after his death: *Genealogie of the Hayes of Tweeddale ... Including Memoirs of his Own Times* and *Genealogie of the Sainteclaires of Rosslyn ... Including the Chartulary of Rosslyn* (both 1835). Nevertheless he deserves to be better known for his pioneering work as a records scholar, and many later writers have used his collections. MARK DILWORTH

Hay, Robert (1799–1863), Egyptologist, was born on 6 January 1799 at Duns Castle, Berwickshire, Scotland, the fourth son and tenth child of Robert Hay (1731–1807) of Drumelzier and Whittingehame (a great-grandson of John Hay, first earl of Tweeddale) and his wife, Janet, daughter of James Erskine of Cardross. Hay's father was a servant of the East India Company in Sumatra. The son's

promising naval career (February 1812–December 1819) was cut short when he inherited the Linplum estate in East Lothian on the death of his brother James. Fired by G. B. Belzoni's *Narrative*, which described recent discoveries and excavations in Egypt, Hay financed two recording expeditions to Egypt: 8 November 1824 to 25 March 1828 and 29 September 1829 to 19 March 1834. Hay's purpose was to preserve, with plaster casts and drawings, the monuments of ancient Egypt. He was accompanied by a team of artists and architects including Joseph Bonomi the younger, Frederick Catherwood, Francis Arundale, Charles Laver, and Owen Browne Carter. Their forty-nine volumes of drawings, plans, notes, elevations, copies, and maps, now in the British Museum Library, still await publication. Experts praise the material as an accurate and thorough record of monuments and decorations since damaged or destroyed.

Paradoxically, it is for *Illustrations of Cairo*, published in November 1840, that Hay is known. The thirty drawings, executed in 1829–30 by Carter, Laver, and Hay, and lithographed by J. C. Bourne, are the first accurate representations of Cairo's picturesque Islamic urbanism, predating the better-known images by David Roberts. The book failed financially, which discouraged Hay from further publishing ventures. In Egypt, Hay's circle of independent scholar enthusiasts included John Gardner Wilkinson and Edward W. Lane. Hay's contribution to Egyptology has received scant recognition partly because he had neither clear purpose for his portfolio nor application and financial sense.

On 9 May 1828 Hay married Kalitza Psaraki (1814–1885), daughter of the chief magistrate of Apodhulo in Crete, who had been captured by Turks in 1822 during the Greek War of Independence and rescued by Hay in 1824 from the slave market in Alexandria. They had two sons and two daughters. After his return to Scotland in 1834 Hay took pleasure in the life of a country squire, but he experienced financial problems in the management of his estates, and from 1850 to 1858 lived abroad with his family, in Florence and Dresden. Hay died of pneumonia at Amisfield, East Lothian, on 4 November 1863, and was buried in the Tweeddale family chapel at Yester House, Gifford. Of his extensive collection of Egyptian antiquities (about 10,000 objects in 200 cases), the British Museum purchased 529 in 1868 for £1000. The rest were purchased thereafter at auction for £1500, and donated by the Revd C. Granville Way, in 1872, to the newly formed Boston Museum of Fine Arts as the nucleus of its Egyptological collection. Hay's sons, Robert James and James William, in the 1870s married Italian women and lived in Italy. Nunraw, last of the family estates, was sold in 1880. CAROLINE WILLIAMS

Wealth at death £14,163 16*s*. 8*d*.: confirmation, 1864, Scotland

Hay, Robert Edwin [Roy] (1910–1989), horticulturist, was born on 20 August 1910 at Hopetoun Gardens, Abercorn, Linlithgow, the only son of Thomas Hay (1874–1953), horticulturist, and his wife, Annie Buttars, *née* Methven. At the time of Hay's birth his father was head gardener at Hopetoun Gardens, but in the following year he moved to London, where he was superintendent, successively, of Greenwich Park (1911–19), Regent's Park (1919–23), and Royal Central Parks (1923–40), the latter including Hyde Park, St James's Park, and the gardens at Buckingham and Kensington palaces and Marlborough House. His father's profession ensured that Hay (known throughout his life as Roy) grew up in a home where horticulture was never far from the breakfast table and where distinguished horticulturists comprised many of the visitors. It was therefore almost inevitable that when he left Marylebone grammar school in 1928 he should find employment with a wholesale seed merchant. The work soon entailed travelling abroad to negotiate seed-buying contracts, and so he learned about the international horticultural business. This helped him in his subsequent career but, though a committed European, he was later saddened to see how far the British horticultural industry had declined and how heavily the country depended on imported plants and products.

Hay's distinguished career in journalism began in 1936, when he was appointed assistant editor of the leading publication for professional gardeners, the *Gardeners' Chronicle*. He returned to this later when from 1954 to 1964 he served as its editor, but in 1939 he moved to the Royal Horticultural Society, as editor of publications. Following the outbreak of the Second World War he moved again, to the Ministry of Agriculture, and there was responsible for leading the Dig for Victory campaign that so successfully encouraged the growing of produce in home gardens. In 1942 he was in Malta, organizing the growing of food for the island while it was under siege, and then, after the German surrender in 1945, he was controller of the horticulture and seeds division of the British zone of Germany, and was responsible for planning the growing of seed crops there.

For the rest of his life Hay was to be found wherever good gardening was spoken and written about. He was gardening correspondent of *The Times* for more than thirty years and set a standard there that many believed was not subsequently approached. He wrote a regular column in *Amateur Gardening*, and wrote and edited numerous books. He was also an early radio broadcaster, most notably on the BBC programme *Home Grown*, of which he was the compère and which was broadcast at 2.00 p.m. on Sundays, the slot later taken by *Gardeners' Question Time*. He was always an advocate of gardeners moving with the times and absorbing the latest advances and technology. But perhaps his most enduring achievement was Britain in Bloom, the floral competition between towns that he started following a family visit to France in 1963. He was

impressed by the displays in towns and villages and discovered that President de Gaulle had given instructions to the French Tourist Authority to improve the nation's appearance. With the British Tourist Authority he found support and sponsors, and so Britain in Bloom was born in 1964, based on the Fleurissement de France campaign.

Hay was a big man in every sense, with a commanding presence and a deep, firm, though gentle voice. He stood out in a horticultural crowd because of his height, his neat moustache, and, in later life, his fine head of silver hair. He could be daunting in debate and sometimes impatient with those who did not grasp a line of thought or appreciate the significance of a fact as quickly as he did. He was almost universally liked and admired in his profession and honours inevitably came to him. The Royal Horticultural Society awarded him the Veitch medal in gold in 1957 and its highest honour, the Victoria medal of honour, in 1971. In between, in 1970, came the MBE—curiously, many thought, since though recognizing his work with Britain in Bloom it was for services to tourism rather than to horticulture. He received the award of officier du mérite agricole from Belgium in 1956 and from France in 1959.

On 17 November 1938 Hay married Mildred Diana (*b.* 1911/12), daughter of William Griffiths, a Kensington fishmonger, but the union was short-lived and they were later divorced. On 6 December 1946 he married Elizabeth Jessie (*b.* 1909/10), daughter of the Revd Howard Johnston Charter, Baptist missionary; they had two daughters, Susan and Alison. Elizabeth Hay died in 1976, and on 27 July of the following year Hay married his long-time colleague and fellow horticulturist Frances Mary *Perry (1907–1993), to the great delight of their many mutual friends. He died at his home, in Bulls Cross, Enfield, Middlesex, on 21 October 1989, and was survived by Frances Perry and by the two daughters of his second marriage.

Hay, Robert William (1786–1861), civil servant and dilettante, was born and baptized on 9 January 1786 in Brodsworth, Yorkshire, the eldest child of George William Auriol Hay-Drummond (1761–1807)—himself the youngest son of George Henry Hay, eighth earl of Kinnoull—author, poet, prebendary of York, and vicar of Doncaster and Brodsworth, and his first wife, Elizabeth Margaret (1767–1799), the daughter of Captain Sir Samuel Marshall RN, deputy comptroller of the navy, and his wife, Elizabeth Worsley. Robert Hay descended from an illustrious Scottish family. His paternal grandfather, Robert Hay *Drummond (1711–1776), was archbishop of York and preached at George III's coronation.

Hay was educated (like his father and paternal grandfather before him), probably at Westminster School, and at Christ Church, Oxford, where he was nominated to a studentship in December 1803 and graduated BA in 1807 and MA in 1809. His studentship, nominally for those studying medicine or law, required its holder be unmarried: he retained it until his death. During his formative years he befriended many young men, such as Robert Wilmot (later Sir Robert Wilmot-Horton), who went on to distinguished careers in public life.

After completing his education the impecunious Hay served briefly as a captain in the Perthshire militia. However, he eventually found more agreeable employment in London. 'An impeccable Tory' (Snelling and Barron, 147) and consummate political networker, he became in 1812 private secretary to Viscount Melville, first lord of the Admiralty and one of Scotland's most influential peers. Hay also became in 1821 a commissioner of the Royal Navy's victualling office. On 6 July 1825 Lord Liverpool's government appointed him to the important new post of permanent under-secretary of state for the colonies.

Hay's career as a senior bureaucrat proved lacklustre. Generally responsible for the eastern (Mediterranean and African) division of the Colonial Office, he had an impetuous nature, quite unsuited to an administrator and policy maker. Henry Taylor referred to his 'permanent chief' as 'the blindly bold' (Taylor, 1.100). Knaplund has written that Hay was:

> a civil servant of the old school—easygoing and ineffective. He loved gossip and carried on an extensive private correspondence with officials and other individuals in the colonies without paying much attention to the real business of the office entrusted to his care. (Knaplund, *James Stephen*, 40)

However, during his tenure the department dealt with such major issues as the abolition of slavery in the British empire.

In January 1836, succumbing to pressure engineered by Viscount Howick (later Earl Grey) and James Stephen, Baron Glenelg, the whig colonial secretary, reluctantly replaced 'Mr. Hay, the intelligent, patriotic, and urbane under-secretary' (Martin, 4.xiin.). Hay's successor was his able and ambitious assistant Stephen, who immediately overhauled the onerous business of the office, bringing greater efficiency and order. Already in declining health at the age of fifty, Hay was not awarded an honour for his work in the Colonial Office, but he did obtain a dormant pension set up for him before his tory patrons had left office.

Hay was a man of many parts. A bon vivant with numerous interests and a wide circle of admiring, influential friends, he enjoyed society and became a founder member and later a secretary of Grillion's Club in London. While at the Colonial Office he built up a fine botanical collection from specimens sent to him by officials in distant parts of the empire. His expertise 'in various branches of Natural Knowledge' was cited on his certificate of election to FRS in March 1814. He was also an enthusiastic traveller who published two learned papers on New Zealand and Africa in the *Journal* of the Royal Geographical Society, of which he was elected fellow in 1830. His surviving manuscript journals describe his journeys

to Scandinavia, Russia, Spain, Morocco, Italy, Egypt, and other Mediterranean countries, where he visited relatives scattered in imperial service. However, he never set foot in the township in Huron county, Upper Canada (later Ontario) named after him (*c.*1828) by John Galt's Canada Company.

During his final years Hay retired to Southampton, near where his mother's family had lived, and also maintained a residence in Rome. In these soothing climes he sought relief from chronic attacks of rheumatism ('Rheumatiory', according to his will). He continued to travel, draw, and correspond, and published his own English translations of selected poetical works by Horace. On 9 May 1861, while a guest of Lady Hamilton Chichester, he died on Malta, one of his old haunts, and was buried four days later in the British protestant (later Ta'Braxia) cemetery, near Valletta. In his will the 75-year-old bachelor left his estate of £2000 to his close relatives, friends, and servants.

Hay, Sir Thomas, of Erroll (*d.* 1406). *See under* Hay family (*per. c.*1295–*c.*1460).

Hay, Thomas, ninth earl of Kinnoull (1710–1787), politician, was born on 4 June 1710 at Dupplin House, near Perth, the eldest son of George *Hay, eighth earl of Kinnoull (1689–1758), and his wife, Abigail (*d.* 1750), daughter of Robert Harley, first earl of Oxford. After an early childhood marred by parental disagreements, he was educated at Westminster School, which he entered in 1718, and at Christ Church, Oxford, where, as Viscount Dupplin, he matriculated on 13 June 1726. He attained some distinction as a classical scholar and may have been maintained as an undergraduate partly at the crown's expense, through the influence of Walpole. The correspondence of Dr William Stratford, canon of Christ Church, reveals a highly-strung young man—'poor Dupplin'—prone to tearfulness and often unhappy at Oxford (*Portland MSS*, 7.459).

On leaving the university in 1729, Dupplin accompanied his father on the latter's outward journey as ambassador to Constantinople: he was at Lisbon in January 1730. Already known in metropolitan literary circles, in 1735 he was satirized as Balbus in Pope's *Epistle to Dr John Arbuthnott*. Despite his father's erstwhile toryism and the suspicion of Jacobitism which surrounded the family, Dupplin from the outset inclined towards the whigs. In 1736 he was elected MP for Scarborough but was unseated on petition. On 12 June 1741 he married at Oxford Chapel, Marylebone, Middlesex, Constantia (*d.* 1753), only daughter and heir of John Kyrle-Ernlie of Whetham, Wiltshire. They had one son, born in London on 12 August 1742, who died on 14 October 1743. Lady Dupplin died on 29 June 1753 and was buried at Calne, Wiltshire.

In 1741 Dupplin had also become MP for Cambridge and was appointed commissioner of the revenues in Ireland. Noted for his accommodating nature and possessing a firm grasp of detail, Dupplin was to become a fixture in the administrations of Walpole, Pelham, and Newcastle. His competence in fiscal affairs was legendary, and he was often involved in the negotiation of government money matters in the City of London. Commissioner of trade in 1746, and from 1747 chairman of the parliamentary committee on privileges and elections, he became a lord of the Treasury in 1754, joint paymaster of the forces in 1755, and both chancellor of the duchy of Lancaster and a privy councillor in 1758. Horace Walpole, whose letters contain many references to Dupplin, reckoned him among the thirty ablest men in the Commons. Under Newcastle he was simply 'one of the pivots of his political system' (Namier, 130).

In 1758, on the death of his father, Dupplin succeeded to the earldom as ninth earl of Kinnoull. In 1759 he was again in Lisbon, charged with negotiating a settlement following the breach of Portuguese neutrality during Admiral Boscawen's naval victory over the French at Lagos. He also provided tactical advice to the prime minister on the conduct of the general election of 1760. Following Bute's triumph, Kinnoull retired to his Perthshire estate. Despite Newcastle's heartfelt imprecations, he departed political life in 1762, aggrieved at the dismissal of his friend the duke of Devonshire. At Dupplin House he devoted himself

Thomas Hay, ninth earl of Kinnoull (1710–1787), by William Hoare

to improving the commercial management of his property, including the granting of secure tenancies and the planting of 80,000 trees 'besides Scotch firs' in the single year of 1768 (Pennant, 74).

Resident in Scotland, Kinnoull also committed himself to public works, such as Smeaton's Bridge across the Tay at Perth, to whose completion, in 1772, Kinnoull contributed both £500 of his own funds and energetic advocacy of the scheme. From 1765 he was chancellor of the University of St Andrews, whose muniments contain many records of his tenure. He was also in 1768 elected president of the Society in Scotland for the Propagation of Christian Knowledge (SSPCK). When in England he had regularly attended Anglican services (his brother Robert Hay Drummond became archbishop of York in 1761), and in Scotland Kinnoull 'conformed to the usages of the Church of Scotland' (Kemp, 4.290). Both at St Andrews, where he ensured the appointment of theological liberals such as Robert Watson and Joseph McCormick, and in his work with the SSPCK, which endeavoured to spread an enlightened Presbyterian message throughout the Scottish highlands, he was in sympathy with the dominant moderate interest in the contemporary church, and was a dependable supporter of that party's leaders, William Robertson and Hugh Blair.

In old age the stately, heavy-jowled figure portrayed by his compatriot David Martin, Kinnoull was a convivial man, on intimate terms with the literary and political élite of his day. Known to Gay, Pope and Secker, he was also acquainted with lords Mansfield, Portland, Leeds, Rockingham, Seafield, Hopetoun, and the Hardwickes (to each of whom letters are extant). However, his love of minutiae, which made him such a competent manager of the government finances, combined strangely with his diffuse knowledge and interests to make his conversation somewhat wearing and unimaginative. A letter from the Marchioness Grey mocks the 'incessant small talk of my good Lord Duplin, that flows and flows as smoothly as ever, and as uninterrupted in its course' (GEC, *Peerage*, 7.323–4). He was also given to hypochondria, as well as genuine ill-health, throughout his life.

Kinnoull died at Dupplin on 27 December 1787, and was buried the next day at the parish church in Aberdalgie, near Dupplin. A valedictory sermon composed and published for the SSPCK exists. He was succeeded as earl by his nephew Robert Auriol Hay Drummond, eldest son of the English primate. DAVID ALLAN

Hay, Sir William, of Erroll (*d.* 1436). *See under* Hay family (*per. c.*1295–*c.*1460).

Hay, William, first earl of Erroll (*d.* 1462). *See under* Hay family (*per. c.*1295–*c.*1460).

Hay, William, fifth Lord Hay of Yester (1537/8–1586), landowner, was the son of John Hay, fourth Lord Hay of Yester (*c.*1510–1555/6), and his wife, Margaret, daughter of William Livingstone, fourth Lord Livingstone. He succeeded his father between 30 September 1555 and 30 January 1556, and was served heir to him either in 1559 or 1560. In June 1559 Nicholas Throckmorton, the English ambassador to the French court, requested a passport for Hay to travel from Paris via England to Scotland; he had arrived there by November. A contract dated 28 October 1559 arranged his marriage to Margaret, daughter of Sir John Kerr of Ferniehirst; they were married before 12 September 1560. They had eight children: two sons and six daughters.

The Hays of Yester were hereditary sheriffs of Peebles. The provostry of the burgh of Peebles had been secured by the fourth lord, following whose death William obtained the grant of it from Mary of Guise. The burgesses challenged the appointment, but on 30 January 1556 the town agreed to accept Hay as provost when he came of age. This agreement took effect in October 1562.

Hay ratified the treaty of Berwick in May 1560 and sat in the Reformation Parliament in August that year. He supported the proposal for the marriage of the third earl of Arran and Queen Elizabeth, and subscribed the Book of discipline.

Throughout the reign of Queen Mary and the ensuing civil war, Hay vacillated in his allegiance to the queen's and king's parties. Having initially supported the congregation, he came round to approve the Darnley marriage and to lead Mary's army, with Darnley, in the chaseabout raid. Hay was with Mary at Carberry in June 1567 but attended Moray's privy council meeting in December. Following the queen's escape from Lochleven he signed the bonds of 1568 pledging to support her, but then abandoned Mary at Langside when he saw that her defeat was imminent.

Hay's support for Queen Mary caused him to be forfeited by parliament, though this was later suspended at the request of Queen Elizabeth. Hay was with the regent Moray on the borders in 1569 but returned to the queen's party after the former's murder. He can be identified as one of the queen's men in 1570–71, but he shifted his allegiance back to the king and attended Lennox's parliament in 1571. Hay signed the bond of allegiance to the king and Regent Morton in 1576, and then in 1582 acquiesced in the Ruthven raid.

Hay was intermittently a member of the privy council throughout the 1570s, but in his later years he seems to have been involved in numerous feuds and lawsuits. In 1585 he was accused of using his position as sheriff and provost of Peebles to support his son's feud with the Stewarts of Traquair. He was warded in Edinburgh Castle, from which he escaped, only to be warded again.

Hay died in August 1586, and his eldest son, William, was served his heir the following October. His wife was still alive in March 1594. MARY BLACK VERSCHUUR

Hay, William (1695–1755), politician and writer, was born on 21 August 1695 at Glyndebourne, Sussex, the second son of William Hay (1669–1697) and his wife, Barbara (*bap.* 1661, *d.* 1700), youngest daughter of Sir John Stapley, bt, and his wife, Mary. His early life was unsettled. After the death of his parents he was brought up first by his maternal grandparents and then by an aunt, Mary Dobell. In 1705 he was sent to school in the village of Newick, in Sussex, and then to the grammar school at Lewes. Thence he went to Oxford, matriculating at Christ Church on 20 March 1712. However, he left in 1715 without taking a degree. In 1714 he was admitted to Lincoln's Inn and then in 1715 to the Middle Temple. According to Tutté his legal studies were cut short by an attack of smallpox which damaged his eyesight. But, while there is no evidence that he ever worked as a lawyer, he kept rooms at the Middle Temple until his death.

In his twenties Hay travelled widely in Britain and on the continent and he also undertook extensive work on the gardens at Glyndebourne. In 1728 he embarked on a career as a minor 'man of letters', publishing anonymously his *Essay on Civil Government*, a vigorous defence of the revolution settlement of 1688–9 and of whig principles. Two years later there followed his only original poetic composition, *Mount Caburn*, dedicated to the duchess of Newcastle, the wife of the secretary of state. The link with the powerful Newcastle connection at which this dedication hinted was confirmed on 3 May 1731 by Hay's marriage to Elizabeth Pelham (1709–1793), the second daughter of Thomas Pelham of Catsfield Place, Sussex, and a cousin of the duke. By this time Hay was emerging as an influential whig in east Sussex. He had become a JP in 1727 and was appointed chairman of the eastern division of Sussex in 1733. It was hardly surprising, therefore, that he was returned to parliament on Newcastle's interest as MP for Seaford in January 1734, or that he acted as the duke's election agent in the bitterly contested Lewes election later that year.

In parliament Hay quickly emerged as a loyal supporter of the administration of Walpole and then of the Pelhams. On his death in 1755 Newcastle lamented the loss of 'a very faithful, and useful Servant in the House of Commons; Who, in Two and Twenty Years Attendance there, was scarce ever absent at one single Question; and never gave a wrong Vote, to the best of my Remembrance' (BL, Add. MS 32856, fols. 167–8). As both a placeman and a pensioner Hay was undoubtedly a committed ministerial whig, but Newcastle's elogium should not be allowed to obscure the fact that he was capable of demonstrating a certain independence. Even Walpole was not beyond reproach, and Hay condemned the grants which he obtained just before his resignation in 1742 as 'an Abuse of the Kings favour' (Taylor and Jones, 176). Hay was also a dedicated parliamentarian, a fact which emerges clearly from his parliamentary journal, which is one of the best surviving sources for debates in the Commons in the 1730s. The issue to which he devoted most attention was the reform of the poor law, a subject of recurrent debate during his twenty years as an MP. Perhaps drawing on his experience as a JP, he published a major pamphlet on the subject in 1735. *Remarks on the Laws Relating to the Poor*, which was reprinted in 1751, advocated an ambitious reform on the basis of the 'union' of parishes. Thereafter

he was the driving force behind a number of parliamentary initiatives aimed at poor law reform. Almost all of these failed, but despite this Hay, more than any other person, helped to determine the framework of the debate, both in parliament and in the press, in the middle years of the eighteenth century.

To his contemporaries, however, Hay was probably best known as an author. Alexander Pope liked his early poems (*Correspondence of Alexander Pope*, ed. G. W. Sherburn, 1956, 3.173), but his fame rested primarily on works published in the last years of his life. *Religio philosophi*, a discussion of the principles of religion and morality which revealed a strident anti-clericalism, appeared in 1753. This was followed by a translation of Isaac Hawkins Browne's *De animi immortalitate* in 1754 and a selection of the epigrams of Martial in 1755. His most popular, and possibly his most interesting, work, however, was *Deformity: an Essay* (1754), a discussion of his own physical disabilities—he had been born a hunchback dwarf. It attracted some critical acclaim, one contemporary describing it as 'a masterpiece of humour, wit, ingenuity, elegant style, fancy, and good sense. But, above all, it has the simplicity of Montaigne without his vanity' (Nichols, 8.520).

Following an 'apoplectic fit', Hay died at Glyndebourne on 22 June 1755 leaving four children; a son, Henry, and a daughter, Elizabeth, had predeceased him (Tutté). His eldest son, Thomas, followed his father into parliament, serving as MP for Lewes between 1768 and 1780, while his second son, William, became a member of the supreme council at Calcutta and was murdered at Patna in 1763. However, none of the children produced any heirs and, after the deaths in 1794 and 1803 of his daughters, Henrietta and Frances, Glyndebourne passed to his nephew, the Revd Francis Tutté, who composed the memoir which prefaces Hay's collected works. Hay was buried at Glynde, Sussex, on 26 June 1755. STEPHEN TAYLOR

Hay, William Thomson [Will] (1888–1949), comedian and actor, was born on 6 December 1888 in Stockton-on-Tees, the second of the three sons and third of the six children of William Robert Hay (*d.* 1919), engineer, of Inverness-shire, and his wife, Elizabeth Ebden (*d.* 1910), the daughter of a Barnsley fish merchant. He was educated at local authority schools in Lowestoft, Hemel Hempstead, and London, and in evening classes in Manchester. While working as a commercial correspondent in Manchester he married, on 7 October 1907, Gladys, the eighteen-year-old daughter of Thomas Perkins, postmaster of Broughton, Salford. They had three children: Will junior and Gladys (both of whom went on the stage), and Joan. The marriage broke down in 1934, but the couple never divorced; Hay subsequently formed a relationship with Randi Kopstadt, a Norwegian showgirl.

Soon after his marriage Will Hay embarked on a music-hall and concert-party career (he tried several times to enlist for active service in the First World War but was rejected on medical grounds; he served instead with the voluntary training corps, a forerunner of the Home Guard). His initial sketch, 'Bend Down', was based on the anecdotes of his schoolteacher sister, Elspeth. After obtaining valuable experience with the Fred Karno troupes during the war he concentrated on developing his character of the Schoolmaster Comedian. From about 1920 he performed his main sketch, 'The Fourth Form at St Michael's', which soon became something of a national institution and was featured in the royal command variety performance of 1925 (he also appeared at the royal command shows in 1928, 1938, and 1945). After years of apprenticeship, Hay's triumph came suddenly and comprehensively. His first overseas tours, to Australia and New Zealand in 1923–4 and to the USA (where British comedians usually failed) in 1927, were successes, and by the early 1930s 'The Fourth Form at St Michael's' was featured on radio, on record, and in the children's comic *Radio Fun*.

Cautious with money, and often intimidatingly caustic as a theatrical overseer, Hay was more respected than loved by his fellow professionals. His private life was conservative, austere—even niggardly—with little of showbiz glitter about it. He was largely self-educated, with a particular interest in astronomy. He was a fellow of the Royal Astronomical Society; he built his own observatory, and in 1933 discovered a white spot on the surface of Saturn. He published *Through my Telescope* in 1935. Having entertained the troops in the First World War with Fred Karno, he was more likely to have been found in the Second World War offering them lectures on astronomy.

Such private endeavours were far removed from the seedy, blustering, and ineffectual teacher of Hay's stage creation, and the potency of his prototype was so vivid that for decades his name remained a byword for hapless teaching. With a small company of three or four 'boys', he topped variety bills across the country for many years. The verbal character of much of his comedy promoted its transfer to radio; he became a noted broadcaster, among

William Thomson Hay (1888–1949), by John Gilroy, *c.*1945

whose other characters was the failing academic Dr Muffin.

Hay transferred his mastery of comic timing and expression to film more successfully than many other British comedians. Most famously in concert with Graham 'Albert' Moffatt (1919–1965) as the impertinent fat boy, and Moore 'Harbottle' Marriott (1885–1949) as the resilient ancient, he made some seventeen films between 1934 and 1944, many of them directed by Marcel Varnel. Nine were made by Gainsborough Pictures. Hay was adept at ringing the changes on his characterization of grudging, evasive, and inadequate authority, playing, *inter alia*, a prison governor, a fire chief, a civil servant, a sea captain, a disbarred solicitor, and a police sergeant, as well as a schoolmaster. *Oh, Mr Porter!* (1937), with Hay as the troubled stationmaster of Buggleskelly, is regarded as both the popular and critical pick of the genre, and, together with *Good Morning, Boys* (1937), *Ask a Policeman* (1939), *The Ghost of St Michael's* (1941), and *My Learned Friend* (1944), this, his best work, has been favourably compared with the screen antics of the Marx brothers.

Hay played his pathetic, seedy characters with a firm sense of their background and personal histories. This made for three-dimensional portrayals, which, temporizing between guile and befuddlement, led his audiences to feel sympathy as well as disdain. The tilted mortarboard, the crumpled gown, the wispy hair, the devious countenance, the slightly husky voice, the deprecating cough, the disapproving sniff, and above all the pinched eyeglasses which provided a focus for a wide range of facial reactions, from foxiness via smugness and irascibility to dismay, were the physical keynotes of his performance. Like the American comedian Jack Benny he was the master of the slow and silent double take, a skill which was to stand him in glorious stead on film. His fictitious school, Narkover, was adopted from Beachcomber's log of its adventures in the *Daily Express*. It is an interesting cultural reflection that vast audiences, most of whom had no experience of minor private boarding-schools, comprehended every last nuance of Hay's presentation, a tribute to the lengthy popular appeal of the Billy Bunter school of popular literature. Will Hay suffered a stroke in 1946 from which he only partially recovered; another stroke led within hours to his death in the early hours of Easter Monday, 18 April 1949, at his London flat, 16 Chelsea Embankment. He was buried in the garden of remembrance, Streatham. ERIC MIDWINTER
